So the British spoke of the White Man's Burden; the French, of their *mission civilisatrice*; the Germans, of diffusing *Kultur*; the Americans, of the "blessings of Anglo-Saxon protection." Social Darwinism and popular anthropology taught the racist doctrine that the white races were "fitter" or more gifted than the peoples of other races. Some imperialists argued, more reasonably, that the "backwardness" of non-European societies was due to historic, and hence temporary, causes but that for a long period into the future the civilized whites must keep a guardianship over their darker protégés. The psychology of imperialism contained strands of idealism and humanitarianism as well as greed, and numerous Europeans went to the colonies to build schools or hospitals rather than railroads or mines. Young people of good family left the pleasant lands of Devonshire or Poitou to spend long and lonely years in hot, isolated places, sustained by the thought that they were advancing the work of humanity. It

---

*Trade missions*

A belief in the cultural or religious mission of European civilization led to the establishment of European schools, churches, and hospitals in much of Africa and Asia. The Englishwoman in this photograph, Elizabeth Mort, was a Protestant deaconess at a Christian mission in Fukien, China; the man standing behind her suggests the important presence of local workers and assistants in all overseas European institutions.

(Church Mission Society Archives, London)

was a good thing to put down slave raiding, torture, and famine; to combat degrading superstitions; to fight the diseases of neglect and filth; and to promote the ideas and institutions of legal justice (even though colonial legal systems did not treat the colonizers and native people in the same way). But these accomplishments, however real, went along all too obviously with European self-interest and were expressed with unbearable complacency and gross condescension to the larger part of the human race. As Rudyard Kipling wrote in 1899 (in his exhortation to Americans after their taking over of the Philippines):

*Take up the White Man's burden—  
Send out the best ye breed—  
Go bind your sons to exile,  
To serve your captives' need;  
To wait in heavy harness,  
On fluttered folk and wild—  
Your new-caught sullen peoples,  
Half devil and half child.*

## 78. THE AMERICAS

After the general considerations above, let us examine each of the earth's great regions in turn, and first the Americas, where we must begin our discussion earlier in the century, before the age of the "new imperialism."

In America the breakup of the Spanish and Portuguese empires in the first quarter of the nineteenth century, during and after the Napoleonic wars, left the vast tract from Colorado to Cape Horn very unsettled. Most of the people were Indian or a mixture of Indian and white (*mestizo*), with clusters here and there of pure European stock, which the nineteenth-century immigration was greatly to increase. In the former Spanish empire, except in inaccessible spots, the Spanish culture and language predominated. In Brazil, in the former Portuguese empire, the culture was Portuguese, and the country, though independent after 1822, remained a monarchy (or "empire") until 1889, when it became a republic. In the former Spanish domains the disappearance of royal control left a large number of weak and unstable republics, chronically engaged in border disputes with one another. Fortunately for these republics, at the time of independence in the 1820s, European imperialism was at a low ebb. We have seen how the Congress of Verona considered ways of returning them to Spain but was opposed by Great Britain and how the United States, in 1823, supplemented the British action by announcing the Monroe Doctrine. But the first external military threat to one of the new republics actually came from the United States.

### *The United States and Mexico*

Mexico, on becoming independent of Spain, reached almost to the Mississippi and the Rocky Mountains. Hardly was it independent when land seekers from the United States swarmed over its northeastern borders. They brought with them their slaves, to grow the cotton so voraciously demanded in industrial England. The Mexican Republic did not allow slavery. The newcomers proclaimed their own republic, which they called Texas. Agitation developed for annexation to the United States. Mexico objected, but in 1845 the United States annexed Texas. A war followed, in which Mexico lost to the United States not only Texas but the whole region from Texas to the California coast. As is usual in such affairs, the loser preserved a longer memory than the winner. It soon seemed only natural in the United States to possess these regions; in Mexico many decades had to pass before the wound was healed. Mexico had lost half its territory to an aggressive neighbor within the first generation of its independence. Meanwhile, though some Americans condemned the war, most people in the United States justified this vast annexation of Mexican territory by arguing that their nation was far better prepared than Mexico to develop a modern economy and government in the region.

---

*The Mexican-American War*

The next threat to Mexico came from Europe. Mexico, at a time of internal disorders, had contracted large loans on exorbitant terms. When the liberal president Benito Juárez (a pure-blooded Indian and thus at least racially "non-European") repudiated the loans, the European bondholders demanded satisfaction from their governments. The United States was paralyzed by the Civil War. Great Britain, France, and Spain, which had never recognized the Monroe Doctrine, in 1861 sent combined military forces to Veracruz. The British proposed seizure of the customs houses in Mexican ports and appropriation of the custom revenues to pay off the debt (an expedient introduced in China three years before); but the French had more ambitious designs. Unknown both to the British, who wanted only to collect debts, and to the Spanish, who dreamed of setting up a new Bourbon monarchy in Mexico, the Emperor Napoleon III had a secret project for establishing a French satellite state in Mexico, which French capital and exports might subsequently develop. He planned to create a Mexican empire with the Austrian archduke Maximilian as its figurehead emperor. The

---

*European intervention in Mexico*

**Benito Juárez** was born into a Zapotec Indian family in the Mexican city of Oaxaca. His picture conveys the determination of a liberal reformer who opposed the traditional power of the Catholic Church, led the national resistance to a French-backed regime that Napoleon III imposed on Mexico, and became president of the Mexican republic after that regime was overthrown in 1867.

(Getty Images)

British and Spanish disapprovingly withdrew their forces. The French army proceeded into the interior and installed Maximilian on a very shaky imperial throne. Maximilian reigned for some years, but Napoleon III gradually concluded that conquest of Mexico was impossible or too expensive. It further appeared, by 1865, that the United States was not going to collapse after all, as expected and even hoped for by the European governing classes. The United States protested strongly to the French government. The French withdrew, Maximilian was captured and shot, and Juárez and the Mexican liberals came back to power.

The United States before 1870 had thus in turn both despoiled and protected the adjoining part of Latin America. This ambivalent situation became characteristic of the New World. As the United States became a great power, the Monroe Doctrine became an effective barrier to European territorial ambitions. Latin America never became subject to imperialism as completely as did Asia and Africa. On the other hand, the United States became the imperialist power feared above all others south of the border. It was the *Yanqui* menace, the Colossus of the North.

---

*The Monroe Doctrine*

---

*Imperialism's double standard*

In the 1870s in the course of its turbulent politics, both citizens of Mexico and foreign residents were obliged to pay forced loans to rival leaders. The State Department in Washington demanded that American citizens be reimbursed by the Mexican government. The double standard characteristic of imperialism—one standard for “civilized” and one for “uncivilized” states—became clear in the exchange of notes. The Mexican government under Porfirio Díaz attempted to lay down the principle that “foreigners locating in a country accepted the mode of life of the people . . . and participated not only in the benefits of such residence but also in the adversities. Foreigners should enjoy the same guarantees and the same legal protection as natives, but no more.” The Mexicans observed that the United States had never recognized the claims of foreigners for losses sustained in its Civil War. The United

States, under President Hayes, held on the other hand that citizens of advanced states, operating in more primitive regions, should continue to enjoy the security of property characteristic of their home countries. When on another occasion the United States sent troops to the border, and the Mexicans objected, the secretary of state remarked on “the volatile and childish character of these people and their incapacity to treat a general question with calmness and without prejudice.” Mexico retorted that the United States had “disregarded all the rules of international law and practice of civilized nations and treated the Mexicans as savages, as Kaffirs of Africa.”

It was, in fact, a principle of international law in the nineteenth century that “civilized” states might not intervene in each other’s affairs but had the right of intervention in so-called “backward” countries. In the dispute of 1877 the United States classified Mexico as backward and as “volatile and childish.” The Mexicans objected to being treated like “savages and Kaffirs,” and not like a civilized nation. The leaders of both nations thus agreed that there were different legal standards for “civilized” and “uncivilized” nations, but they strongly disagreed on which of the two standards should apply in Mexico.

### *United States Imperialism in the 1890s*

The 1890s saw a crescendo of imperialism both in Europe and in the United States. In 1895, in a resounding restatement of the Monroe Doctrine, President Cleveland forbade the British to deal directly with Venezuela in a boundary dispute affecting British Guiana. The British were obliged to accept international arbitration. When, however, adjacent Colombia faced a revolution in the Isthmus of Panama, the United States supported the revolutionaries and, consulting nobody, recognized Panama as an independent republic. Here the United States leased and fortified a Canal Zone, over which it long kept control, and proceeded to build the Panama Canal. Panama became in effect a protectorate of the United States.

---

---

*The Panama Canal*

Meanwhile what was left of the old Spanish American empire, confined to Cuba and Puerto Rico, was agitated by revolutionary movements that were fighting for national independence. Sympathies in the United States lay with the revolutionaries, but every sign of the new imperialism showed itself unmistakably in the American response to these conflicts. Americans had \$50 million invested in Cuba. They bought the bonds issued by Cuban revolutionaries in New York. Cuban sugar, whose production was disrupted by political troubles, was necessary to the famed American standard of living. An orderly and amenable Cuba was vital to American strategic interests in the Caribbean, in the soon-to-be-built canal and in the Pacific. The barbarity of the Spanish authorities was deplored as an outrage to modern civilization. The newspapers, especially the new “yellow” press, roused the American public to a fury of moral indignation and imperial self-assertion. The climax came when an American warship, the *Maine*, sank under mysterious circumstances in Havana harbor. (Most historians now believe the ship exploded because of a mechanical flaw.)

---

---

*The Spanish-American War*

The United States easily won the ensuing war with Spain in 1898. Puerto Rico was annexed outright, as were the Philippine Islands on the other side of the world. Filipino nationalists fought against the American annexation in a bloody six-year insurgency that took the lives of more than 4,000 Americans, 20,000 Filipino insurgents, and some 200,000 civilians; but the United States eventually managed to turn the Philippines into a new East Asian colony. Meanwhile, Cuba was set up as an independent republic, subject to

the Platt Amendment, a series of provisions by which the United States obtained the right to oversee Cuba's relations with foreign powers and to intervene in Cuba on matters pertaining to "life, property, individual liberty," and "Cuban independence." Thus the United States obtained another protectorate in the Caribbean. The American government proceeded to intervene directly in Cuba on several occasions during the following two decades—interventions that were remembered much longer in Cuba than in the United States. The growth of Cuban nationalism and the subsiding of American imperialism led to repeal of the Platt Amendment in 1934 and recognition of Cuban independence. The United States retained only the right to a permanent lease on a naval base in Guantanamo Bay. Later, after the Second World War, the Philippines formally received independence in 1946 and Puerto Rico became a self-governing commonwealth in 1952.

It was under President Theodore Roosevelt, the peppery "hero of San Juan hill," that the imperial power of the United States was most emphatically trumpeted. He announced in 1904 that weakness or misbehavior "which results in a general loosening of the ties of civilized society may . . . require intervention by some civilized nation," and that the Monroe Doctrine might force the United States "to the exercise of an international police power." In the following year Santo Domingo fell into such financial disorder that European creditors were alarmed. To forestall any pretext for European intervention, the United States sent a financial administrator to Santo Domingo, reformed the economy of the country, and impounded half the customs receipts to pay its debts. Roosevelt declared—in what came to be known as the "Roosevelt Corollary" to the Monroe Doctrine—that, because the United States would not permit European states to intervene in America to collect debts, it must itself assume the duty of intervention to safeguard the investments of the

civilized world. The Monroe Doctrine, initially a negative warning to Europe, now stood with the new corollary as a positive notice of supervision of all the Americas by the United States. A quarter of a century of "dollar diplomacy" followed, in which the United States repeatedly intervened, by military or other means, in the Caribbean and Mexico. But the Roosevelt

Corollary, like the Platt Amendment, created so much anger and hostility in Latin America that the Washington government finally repudiated it.

---

*The Roosevelt  
corollary*

The story of American intervention in the Hawaiian Islands was as typical of the new imperialism as any episode in the history of European empires. Known originally to outsiders as the Sandwich Islands, these spots of land long enjoyed isolation in the vastness of the mid-Pacific. The growth of global navigation in the nineteenth century, however, brought a

new population of sailors, whalers, missionaries, and vendors of rum and cloth to the islands by 1840. The native ruler, lacking the power to control this new situation, almost accepted a British protectorate in 1843 and in 1875 did accept a virtual protectorate by the United States, which guaranteed Hawaiian independence against any third party, obtained trading privileges, and acquired Pearl Harbor as a naval base. American capital and management entered the island. They created huge sugar and pineapple industries, entirely dependent on export to, and investment by, the United States. In 1891, when Queen Liliuokalani came to the throne, she tried to check westernization and Americanization. The American interests, endangered by her nativist policies, overthrew the queen and set up an independent republic, which soon sought annexation to the United States. It was the story of Texas reenacted. For several years the issue hung in the balance because of lingering disapproval in the United States for such strong-arm methods. But after reconsidering the global situation at a time when Japan was revealing its imperial aspirations in Asia, the

Islands*

These American soldiers in a trench near Manila were part of the armed force that drove Spain out of the Philippines, repressed the Filipino independence movement, and transformed the Philippine islands into a colony of the United States. The annexation of the Philippines and Hawaii in the 1890s made the United States an influential imperial power in the Pacific and East Asia.

(Getty Images)

European powers were moving into China, the Philippines were becoming an American colony, and the Panama Canal was being planned to facilitate access to the Pacific Ocean, the United States “accepted its destiny” in the Pacific, and annexed the Hawaiian Republic by joint resolution of Congress in 1898. Hawaii became a state in the American union in 1959.

## 79. THE DISSOLUTION OF THE OTTOMAN EMPIRE

### *The Ottoman Empire in the 1850s*

Of all parts of the non-European world, the Ottoman, or Turkish, Empire was the nearest to Europe. The major European states had a long history of relations with the Ottoman Empire because of its geographical proximity and also because of its strategic dominance in the eastern Mediterranean. The empire still extended in the nineteenth century from Hungary and the Balkan peninsula to the south Russian steppes and from Algeria to the Persian Gulf. The empire was not at all like a European state. Immense in extent, it was a complex social and political system within which people belonged to diverse and often overlapping religious communities. Most of its people were Muslim, including both orthodox Muslims and such reform sects as Druses and Wahabis; some were Jews who had

always lived in the Middle East; many were Christian, principally Greek Orthodox and Armenian, who had also always lived there. The Turks were the ruling class and Islam was the dominant religion. Only Muslims, for example, could serve in the army; non-Muslims were known as *raya*, the “flock” or “herd”—they paid the taxes. Persons of different religion lived side by side, each under the laws, courts, and customs of his or her own religious group. Religious officials—patriarchs, bishops, rabbis, imams, ulemas—were responsible to the Turkish government for their own people, over whom therefore they had a great deal of authority.

Western Europeans had their own special rights. Roman Catholic clergy, living mainly in Palestine, looked to the pope in religion and to France for a mundane protector.

---

*The capitulations*

Western merchants enjoyed the regime of the “capitulations,” or special rights granted by the Ottoman government in numerous treaties going back to the sixteenth century. By the capitulations Turkey could not levy a tariff of more than 8 percent on imported goods. Europeans were exempt from most taxes. Cases involving two Europeans, civil or criminal, could be settled only in a court held by a European consul under European law. Disputes between a European and an Ottoman subject were settled in Turkish courts, but in the presence of a European observer.

The Ottoman Empire, in short, lacked the European idea of nationalism or national unity. European ideas of sovereignty and a uniform law for all its peoples were also absent, as was the idea of the secular state, or of law and citizenship separated from religion. More generally, the empire had fallen behind modern industrial nations in its scientific, mechanical, material, humanitarian, and administrative achievements.

---

*The “sick man of Europe”*

Turkey was called the “sick man of Europe,” and its long decline constituted the Eastern Question. Since the loss of Hungary in 1699 the Ottoman Empire had entered on a long process of territorial disintegration (see map, p. 649). That the empire lasted another two centuries was due to the European balance of power. But by the 1850s the empire was falling away at the edges. Russia had advanced in the Crimea and the Caucasus. Serbia was autonomous, Greece was independent, and Romania was recognized as a self-governing principality. The French occupied Algeria. A native Arab dynasty, the Saudis, of the Wahabi reform sect, ruled over much of Arabia. A former Turkish governor of Egypt, Mehemet Ali, had established his family as hereditary rulers or “khedives” in the Nile valley. Notwithstanding these changes, the Ottoman Empire in the 1850s was still huge. It encompassed not only the Turkish or Anatolian peninsula (including Armenia and territory south of the Caucasus) but also the central portion of the Balkan peninsula from Constantinople to the Adriatic where many Christians of Slavic nationality lived, Tripoli (as Libya was then called) in North Africa, and the islands of Crete and Cyprus. Egypt and Arabia, though autonomous, were still under the nominal suzerainty of the sultan.

The Crimean War of 1854–1856 opened a new phase in Ottoman history as in that of Europe. We have seen how this war was followed by the consolidation of great nation-states in Europe and how the United States, Canada, and Japan consolidated or modernized themselves at the same time. The Turks tried to do the same between 1856 and 1876.

---

*The Crimean War*

In the Crimean War the Turks were on the winning side, but the war affected them as it affected Russia, the loser. Exposing their military and political weakness, it pointed up the need of better organization. The outcome of the war was taken to prove the superiority of the political systems of England and France. It was therefore on Western lines that Turkish reformers wished to remodel. It was not merely that they wished to defend themselves against another of the

periodic wars with Russia. They wished also to avoid being periodically saved from Russia by the West, a process which if continued could lead only to French or British control of Turkey.

### *Attempts at Reform and Revival, 1856–1876*

In 1856 the Ottoman government issued the Hatt-i Humayun, the most far-reaching Turkish reform edict of the century. Its purpose was to create an Ottoman national citizenship for all persons in the empire. It abolished the civil authority of religious hierarchs. Equality before the law was guaranteed, as was eligibility to public office without regard to religion. The army was opened to Christians and Muslims alike, and steps were even taken to include both in nonsegregated military units. The edict announced a reform of taxes, security of property for all, abolition of torture, and reform of prisons. It promised to combat the chronic evils of graft, bribery, and extortion by public officials.

For 20 years there were serious efforts to make the reform decree of 1856 a reality. Western and liberal ideas circulated freely. Newspapers were founded. Writers called for a national Turkish revival, threw off the old Persian style in literature, composed histories of the Ottomans, and translated Montesquieu and Rousseau. Foreign loans entered the country. Railroads joined the Black Sea and the Danube. Abdul Aziz (1861–1876), the first sultan to travel to Europe, visited Vienna, London, and the great Paris world's fair of 1867. But powerful resistance developed against such radical changes. Also, the best efforts of the Turkish reformers miscarried. There were too few Turks with skill or experience in the work required, and there was too much dependence on borrowed money. In 1874 the Ottoman government, having recklessly overborrowed, repudiated half its debt.

A new and more determined reforming minister, Midhat Pasha, goaded by opposition and desperate at the weight of inertia, deposed Abdul Aziz in 1876, deposed the latter's nephew three months later, and set up Abdul Hamid II as sultan. The new sultan at first briskly went along with the reform movement, proclaiming a new constitution in 1876. It declared the Ottoman Empire to be indivisible, and promised personal liberty, freedom of conscience, freedom of education and the press, and parliamentary government. The first Turkish parliament met in 1877. Its members earnestly addressed themselves to reform. But they reckoned without Abdul Hamid, who in 1877 revealed his true intentions. The sultan got rid of Midhat, packed off the parliament, and threw away the constitution.

---

*Abdul Hamid II*

### *Repression after 1876*

Abdul Hamid reigned for 33 years, from 1876 to 1909. For all this time he lived in fear and isolation, fighting ferociously against forces that he could not understand. Once when a consignment of dynamos reached the Turkish customs, it was held up by fearful officials, because the contents were declared to make several hundred revolutions per minute. Again, chemistry books for use in the new American college were pronounced seditious, because their chemical symbols might be a secret cipher. The sultan sensed that tempering with the old Ottoman way would lead to ruin. He dreaded any moves to check his own whim or power. He was thrown into a panic by Turkish reformers and westernizers, who became increasingly driven to terrorist acts in the face of his opposition. Driven away by Abdul Hamid, some tens of thousands of Young Turks, the activists of the reform era before 1876, or their

---

*Abdul Hamid's fears*

The Ottoman Sultan Abdul Hamid II came to power in alliance with a movement for constitutional reform, but he soon became an autocratic ruler who violently suppressed his political opponents, massacred ethnic minorities, and resisted all the currents of modern social and cultural life. He is pictured here in his royal attire, sitting alone in the isolated style that characterized his long reign.

(Bettmann/Corbis)

children and successors, lived in exile in Paris, London, or Geneva, plotting their return to Turkey and vengeance upon Abdul the Damned. The sultan was frightened also by agitation among his non-Turkish subjects. Nationalist Armenians, Bulgars, Macedonians, and Cretans defied and taunted the Ottoman authorities, which responded with the Bulgarian massacres of 1876 and the Armenian massacres of 1894. These horrible butcheries of thousands of peasants by Ottoman troops came as a shock to Europeans, who were no longer accustomed to such violence within their own nation-states. Last, and with good reason, Abdul Hamid lived in a creeping fear of the designs of the imperialist European powers upon his dissolving empire.

A thoroughly reformed, consolidated, and modernized Ottoman Empire was far from what the European governments desired. They might wish for humanitarian reforms in Turkey, for more efficiency and honesty in Turkish government and finance, and even for a Turkish parliamentary system. Such demands were eloquently expressed by liberals like Gladstone in England. But no one in Europe wanted what Turkish reformers wanted, a reinvigorated Ottoman Empire that could deal with Europe politically as an equal.

### *The Russo-Turkish War of 1877–1878: The Congress of Berlin*

In Russia, since the time of Catherine II in the eighteenth century, many had dreamed of installing Russian power on the shores of the Bosphorus. Constantinople they called Tsarigrad, the Imperial City, which Orthodoxy was to liberate from the infidel. Crusading motives, in a nationalist and imperialist age, reappeared anew in the form of Pan-Slavism. This was now a doctrine preached by leading Russians, including the novelist Dostoevski and the publicist Danilevsky.

Danilevsky's *Russia and Europe*, published in 1871, predicted that Russia would enter into a long war with Europe, which would then be followed by the creation of a grand federation of the East. The new eastern federation would include Slavs, Greeks, Hungarians, and parts of Asian Turkey under Russian control. This type of Pan-Slavism was patronized by the Russian government because it diverted attention from internal and revolutionary troubles. As for the Slav peoples of the Ottoman Empire, they were willing to use Russian Pan-Slavism as a means of combating their Turkish rulers. Insurrection against the Turks broke out in the Balkans during the mid-1870s. In 1877 Russia declared war on Turkey. Russia was on the move against the Ottoman Empire for the sixth time in a hundred years.

The British, who had fought Russia over Turkey in 1854, were prepared to do so again. A number of recent developments added to their apprehension. The Suez Canal was completed in 1869, and the Canal's location within the Ottoman Empire restored the Middle East to its ancient position as a crossroads of world trade. In 1874 Benjamin Disraeli, a Conservative and an imperialist, became prime minister of Great Britain. By a sudden coup in the following year he was able to buy up, from the almost bankrupt ruling khedive of Egypt, 44 percent of the shares of the Suez Canal Company. In 1876, in a dramatic affirmation of imperial splendor, he had Queen Victoria take the title of empress of India. British commercial and financial interests in India and the Far East were growing, and the Suez Canal, of which the British government was now the principal stockholder, was becoming the lifeline of the empire. But the Ottoman state, and hence the whole Middle East, was now collapsing before the Russians, whose armies advanced rapidly through the Balkans, reached Constantinople, and forced the Turks to sign a treaty in 1878, the treaty of San Stefano. By this treaty Turkey ceded to Russia strategic territory on the south side of the Caucasus Mountains, gave full independence to Serbia and Romania, promised reforms in Bosnia, and granted autonomy to a new Bulgarian state, whose boundaries were to be very generously drawn and which was expected to fall under Russian domination. England seethed with a popular clamor for war against Russia. The outcry gave the word "jingoism" to the language:

*We don't want to fight, but by jingo, if we do,  
We've got the men, we've got the ships, we've  
got the money too.*

It now appeared that Turkey's inability to fend off foreigners from its borders would precipitate at least an Anglo-Russian and possibly a general European war. But war was averted by diplomacy. Bismarck assembled a congress of all the European great powers at Berlin in 1878. Once again Europe attempted to assert itself as a unity, to restore life to the much-battered Concert of Europe by dealing collectively with the common problem presented by the Eastern Question. The congress in effect initiated a partition of the Ottoman domain, thereby keeping peace in Europe at the expense of Turkey. The European balance now both protected and dismembered Turkey at the same time.

The Russians were persuaded at Berlin to give up the treaty of San Stefano that they had imposed on the Turks, but they held on to the territory they had gained below the Caucasus Mountains and won independence for the Serbs and Romanians. Montenegro, too, was recognized as an independent state. Bulgaria was divided into three zones with varying degrees of autonomy, all still nominally within the Ottoman Empire. Austria-Hungary was authorized by the congress to "occupy and administer" Bosnia (but not annex it) in

---

*The treaty of San  
Stefano*

---

*Weakness of Turkey*

The Suez Canal, which was completed in 1869, quickly became Britain's all-important lifeline to its Asian empire and a busy crossing point for the expanding global economy. This picture shows the ship of Edward, Prince of Wales, entering the canal in 1875, when the prince was en route to India.

(Getty Images)

compensation for the spread of Russian influence in the Balkans. To the British the Turks ceded Cyprus, a large island not far from the Suez Canal. The French were told that they might expand from Algeria into Tunisia. To the Italians (who counted least) it was more vaguely hinted that they might later be allowed to expand across the Adriatic into Albania. As Bismarck put it, “the Italians have such a large appetite and such poor teeth.” Germany took nothing. Bismarck said he was the “honest broker” with no interest except in European peace.

The treaty of Berlin in 1878 dispelled the immediate threat of war. But it left many continuing problems which would contribute to the causes of the First World War 36 years later. Neither the Balkan nationalists nor the Russian Pan-Slavs were satisfied. The Turks, both reactionaries like Abdul Hamid and the revolutionary Young Turks in exile, were indignant that

peace had been made by further dismemberment of their territory. The demonstrated weakness of Turkey was a constant temptation to all concerned. In the years before 1914 German influence grew. Germans and German capital entered Turkey, projecting, and partially completing, a great Berlin to Bagdad railway to be accompanied by the exploitation of Middle Eastern resources. The railroad was all but completed before 1914 despite the protests and representations of the Russians, the French, and particularly the British, who saw in it a direct threat to their empire in India.

*The continuing  
Turkish problem*

### *Egypt and North Africa*

For Egypt, technically autonomous within the Ottoman Empire, the 1850s and 1860s were a time of reform and economic development. The Egyptian government modernized its administration, court system, and property law, cooperated with the French in building the Suez Canal, encouraged shipping on the Red Sea, and let British and French interests construct railroads. Between 1861 and 1865, while the American South was unable to export raw cotton, the annual export of Egyptian cotton rose from 60 million to 250 million pounds. Egypt more than Turkey was drawn into the world market, and the khedive of Egypt became a Westernized ruler. The khedive Ismail built himself a fine new opera

### THE DISSOLUTION OF THE OTTOMAN EMPIRE, 1699–1914

Beginning in 1699, with the loss of Hungary to the Austrian Habsburgs, the Ottoman Empire entered upon a long process of territorial disintegration. Dates shown are those at which territories dropped away. In general, regions lost before 1815 were annexed directly by Austria and Russia. European territories lost in the nineteenth century emerged as independent states, owing to the rise of nationalism and rivalries among the great European powers. In the Arab world, reaching from Algeria to the Persian Gulf, regions lost before the First World War were absorbed into European colonial empires; those lost at the end of the First World War were mostly assigned to France and Britain as mandates, but after the Second World War these regions became independent Arab states and the Republic of Israel. A Turkish nationalist movement blocked European attempts to partition Turkey after the First World War, and in 1923 the Turks established the Turkish Republic.

house in Cairo, where, in 1871, two years after the opening of the Suez Canal, Verdi's *Aida*, written at the khedive's request, was resoundingly performed for the first time.

Such improvements cost a good deal of money, borrowed in England and France. The Egyptian government was soon in financial straits, only temporarily relieved by the sale of canal shares to Disraeli. By 1879 matters reached the point where Western banking interests forced the abdication of Ismail and his replacement by Tewfik, who soon let himself become thoroughly enmeshed by his creditors. This led to nationalistic protests within Egypt, headed by Colonel Arabi. In a pattern repeated in many parts of the colonial world, the nationalists opposed both the foreigners and their own government, charging it with being a mere front for

*British intervention*

foreign interests. Arabi's movement, an early expression of Arab nationalism, led to riots in Alexandria, where Europeans had to flee aboard British and French shipping in the harbor. A British squadron then unceremoniously bombarded Alexandria. British troops (the French, though invited to take part, refused) disembarked in 1882 at Suez and Alexandria, defeated Arabi, and took Tewfik under their protection. The military intervention of 1882 was said by the British to be temporary, but British troops remained there for a long time, through two world wars and well into the twentieth century, not leaving until 1956. Egypt thus became a British protectorate. The British protected the khedive from discontent within his own country, from the claims of the Ottoman court, and from the rival attentions of other European powers.

---

*Egypt as protectorate*

The French strenuously objected when the British stayed on so long in Egypt. It had long been the French who had the greatest investments in the Middle East, and persons in that region who were at all westernized—Egyptians, Syrians, Turks—overwhelmingly preferred French language and culture to English. The French, harboring deep suspicion of British designs in Egypt, compensated themselves by building a North African empire farther west. They developed Algeria, assumed a protectorate over Tunisia, and began to penetrate Morocco. Upon these French advances the British, and soon the Germans, looked with unmitigated disfavor. Rivalry for the spoils of the Ottoman Empire thus created enmity among the Great Powers and constituted a fertile source of the war scares, fears, and diplomatic maneuvers that preceded the First World War.

The dissolution of the Ottoman Empire became indistinguishable from the whole chronic international crisis before 1914. It is enough to say here, to keep the fate of the Ottoman Empire in focus, that Abdul Hamid's frantic defensive policies came to nothing and that the Young Turks won control of the Ottoman government in 1908. They forced the restoration of the constitution of 1876 and introduced many reforms. Finally, when all Europe became involved in war in 1914, Russia again declared war on Turkey, and the Turks came into the war on the side of Germany, whose political and economic influence in the empire had been steadily growing. During the war, with British aid, the Arabs detached themselves from the empire, becoming eventually independent Arab states. Egypt, too, ended all connections with the empire. In 1923 a Turkish republic was proclaimed. It was confined to Constantinople and the Anatolian peninsula, where the bulk of the Turkish people lived. The new republic proceeded to undergo a thorough nationalist and secular revolution.

## 80. THE PARTITION OF AFRICA

South of Mediterranean Africa lay the Sahara desert, and south of that lay sub-Saharan Africa, of which Europeans knew so little that they called it the Dark Continent. Africa is so gigantic that even the part south of the Sahara is almost as large as the whole continent of North America. For centuries Europeans knew only its coasts—the Gold Coast, Ivory Coast, Slave Coast—to which from an inexhaustible interior had come shackled processions of captive slaves, as well as the swelling waters of enormous rivers, like the Nile, Niger, and Congo, whose sources in the dim hinterland were a subject of romantic speculation. The people were black, but diverse both in physique and in culture, and speaking almost a thousand languages. They had been working with iron for more than 2,000 years, and they were adept in many arts, such as bronze sculpture, gold artifacts, weaving, basketry, and the making of ceremonial masks with strikingly symbolic or abstract patterns. Along the northern fringe some had converted to Islam, but mostly they adhered to their traditional religions.

---

*The "Dark Continent"*

They lived mainly in villages in tribal communities, engaged in agriculture or moving herds of cattle from place to place. But great cities or agglomerations had also arisen, from Timbuktu in the north with its old caravan trade across the Sahara, to the vast complex of buildings at Zimbabwe in the south, which was already in ruins when the Europeans first saw it. There had also been extensive kingdoms whose memory was preserved, in the absence of writing, by specially trained narrators from one generation to the next. But these kingdoms had disappeared or declined. They had been weakened by intertribal wars, by the slave trade which set Africans against one another to satisfy the demand of outsiders, or by demographic causes that are now hard to trace. Hence Africa, somewhat like the Ottoman Empire and China, met the assault of the Europeans at a time when its powers of resistance were reduced. Before the mid-nineteenth century there were no permanently resident whites south of the Sahara except for a few Arabs who had been on the east coast since the seventh century and the Europeans who had been at the Cape of Good Hope since 1652. In the Union of South Africa, when it was established in 1910, some 1.1 million whites lived along with about 5 million blacks.

### *The Opening of Africa*

Missionaries, explorers, and individual adventurers first opened this world to Europe. The historic pair, Livingstone and Stanley, well illustrate the drift of Europe. Before the imperialist age, in 1841, the Scot David Livingstone arrived in southeast Africa as a medical missionary. He gave himself to humanitarian and religious work, with some occasional trading and much travel and exploration, but without political or economic aims. Exploring the Zambesi River, he was the first white man to look upon the Victoria Falls. Fully at home in inner Africa, safe and on friendly terms with its native people, he was quite content to be let alone. But the hectic forces of modern civilization sought him out. Word spread in Europe and America that Dr. Livingstone was lost. The New York *Herald*, to manufacture news, sent the roving journalist H. M. Stanley to find him, which he did in 1871. Livingstone soon died, deeply honored by the Africans among whom he worked. Stanley was a man of the new era. Seeing vast economic possibilities in Africa, he went to Europe to solicit backers. In 1878 he found someone with the same ideas, who happened to be a king, Leopold II, king of the Belgians.

---

*Livingstone and Stanley*

Leopold, for all his royalty, was at heart a commercial promoter. China, Formosa, the Philippines, and Morocco had in turn attracted his fancy, but it was the central African basin of the Congo that he decided to develop. Stanley was exactly the man he was looking for, and the two founded at Brussels, with a few financiers, an International Congo Association in 1878. It was a purely private enterprise; the Belgian government and people had nothing to do with it. Europeans considered all Africa inland from the coasts to be, like America in the time of Columbus, a *terra nullius*, without government and claimed by nobody, wide open to the first Western persons who might arrive. Stanley, returning to the Congo in 1882, in a year or two concluded treaties with over 500 chiefs, who in return for a few trinkets or a few yards of cloth put their marks on his mysterious European papers and accepted the blue-and-gold flag of the Association.

Since the Dark Continent was still innocent of internal frontiers, no one could tell how much territory the Association might soon cover by these methods. The German explorer Karl Peters, working inland from Zanzibar, was signing treaties with the chiefs of East Africa. The Frenchman Brazza, departing from the west coast and distributing the tricolor in every village, was claiming on the Congo River itself a territory larger than France. The

Portuguese aspired to join their ancient colonies of Angola and Mozambique into a trans-African empire, for which they required a generous portion of the interior. Britain supported Portugal. In every case the home governments in Europe were still hesitant over involvement in an Africa of which they knew little. But they were pushed on by small organized minorities of colonizing enthusiasts, and they faced the probability that if they missed the moment it would be too late.

Bismarck, who personally thought African colonies an absurdity but was sensitive to the new pressures, called another conference at Berlin in 1885, this time to submit the African question to international regulation. Most European states, as well as the United States, attended. The Berlin conference had two goals: to set up the territories of the Congo Association as an international state, under international auspices and restrictions; and to draft a code governing the way in which European powers wishing to acquire African territory should proceed.

---

*The Berlin conference  
of 1885*

The Congo Free State, which in 1885 took the place of the International Congo Association, was not only an international creation but also embodied in some ways what became known in the next century as international mandates or international trusteeships for non-European peoples. The Berlin conference specified that the new state should not be the colony of any power, including Belgium, but delegated its administration to Leopold. It drew the boundaries, making the Congo Free State almost as large as the United States east of the Mississippi, and it added certain specific provisions: the Congo River was internationalized, persons of all nationalities should be free to do business in the Congo state, there should be no tariff levied on imports, and the slave trade should be suppressed. Leopold in 1889 reassembled the signatory powers in a second conference, held at Brussels. The Brussels conference took further steps to root out the slave trade, which remained a stubborn though declining evil, because the Muslim world was several generations behind the Christian in abolishing slavery. The Brussels conference also undertook to protect the rights of the local people, correct certain glaring abuses, and reduce the traffic in liquor and firearms.

But all this effort at internationalism failed because Europe had no international machinery by which the hard daily work of enforcing general agreements could be carried out. Although slavery was banned, Leopold went his own way in the Congo. His determination to make it commercially profitable for his own benefit led him to unconscionable abuses. Europe and America demanded rubber and the rubber trees of the Congo were at the time one of the world's few sources of supply. The Congo people, already afflicted by the diseases and weakening effects of a lowland equatorial climate, could be made to fulfill assigned quotas of rubber sap only by inhumanly severe coercion. Leopold and his agents, some of whom were African, and the managers of the concessions he leased out extorted forced labor from the native population, compelling them to meet impossible quotas under brutal conditions, with the resulting deaths of thousands. The rubber trees meanwhile were destroyed without any plans for replacement.

---

*The Belgian Congo*

Leopold, by ravaging its resources and virtually enslaving its people, was able to draw from the Congo a handsome income and to amass a personal fortune. He nevertheless could not make the entire enterprise profitable and needed investment capital for further development. He therefore borrowed from his own government in 1889 and 1895 in return for giving the government the right to annex the Congo in 1901. The Belgian parliament turned down the opportunity that year, but beginning in 1904 public outrage mounted after European press revelations of the scandalous atrocities in the Congo. A concerted campaign compelled the Belgian government in 1908 to take the Congo over from Leopold,

Workers in the Congo were forced to remove particles of wood and fiber from the rubber that was harvested for export to Europe and America. This picture of workers, which was published in 1909, shows both the tedious physical labor in the rubber industry and a common Western image of Africans in the era of European colonialism.

(Mary Evans Picture Library/  
The Image Works)

who died the following year. The Congo Free State became the Belgian Congo, a Belgian colony. Under the government's administration the worst excesses of forced labor and other abuses were ended, even though the Congo remained a continuing enticement for enrichment and investment for Europeans and other outsiders.

The Berlin conference of 1885 had also laid down certain rules for imperial claims of African territories—a European power with holdings on the coast had prior rights in the hinterland; occupation must not be on paper only through drawing lines on a map, but must consist in real occupation by administrators or troops; and each power must give proper notice to the others as to what territories it considered its own. A wild scramble for “real occupation” quickly followed. In 15 years the entire continent was parceled out. The sole exceptions were Ethiopia, and, technically, Liberia, founded in 1822 as a colony for emancipated American slaves and virtually a protectorate of the United States.

Everywhere a variant of the same process was repeated. First would appear a handful of white men, bringing their inevitable treaties—sometimes printed forms. To get what they wanted, the Europeans commonly had to ascribe powers to the chief that by the customs of the tribe he did not possess—powers to convey sovereignty, sell land, or grant mining concessions. Thus the Africans were baffled at the outset by foreign legal conceptions. Then the Europeans would build up the position of the chief, since they themselves had no influence over the people. This led to the widespread system of

---

*"Indirect rule"*

---

"indirect rule," by which colonial authorities acted through the existing chiefs and tribal forms. There were many things that only the chief could arrange, such as security for isolated Europeans, porter services, or gangs of workmen to build roads or railroads.

---

*The labor problem*

---

Labor was the overwhelming problem. For pure slavery Europeans now had an abhorrence, and they abolished it wherever they could. But the Africans, so long as they lived in their traditional way, did not react like the free wage earner postulated in European business and economics. They had little expectation of individual gain and almost no use for money. They thus seemed to work only sporadically by European standards, disdaining the continuous and tedious labor that Europeans wanted them to perform. The result was that Europeans all over Africa resorted to forced labor. For road building, systems like the French *corvée* before the Revolution reappeared. Or the chief would be required to supply a quota of able-bodied men for a certain length of time, and frequently he did so gladly to raise his own importance in the eyes of the Europeans. More indirect methods were also used. The colonial government might levy a hut tax or a poll tax, payable only in money, to obtain which the African would have to seek a job. Or the new government, once installed, might allocate so much land to Europeans as private property (another foreign conception) that the local tribe could no longer subsist on the lands that remained to it. Or the whole tribe might be moved to a reservation, like Indians in the United States. In any case, while the women tilled the fields or tended the stock at home, the men would move off to take jobs under the whites for infinitesimal pay. The men then lived in compounds, away from family and tribal kindred; they became demoralized; and the labor they gave, untrained and unwilling, would scarcely have been tolerated in more industrialized societies. In these circumstances everything was done to uproot the Africans, and little was done to benefit them or to protect the social systems in which they had lived before the Europeans arrived.

Conditions improved with the twentieth century as traditions of more enlightened colonial administration were gradually built up. Some colonial officials even came to serve as buffers or protectors of the local peoples against the intruding white man's economic interests. Throughout, it was part of the ethos of imperialism to put down slavery, tribal warfare, superstition, disease, and illiteracy. Slowly a westernized class of Africans grew—chiefs and the sons of chiefs, Catholic priests and Protestant ministers, warehouse clerks and government employees. Young men from Nigeria or Uganda appeared as students at Oxford, the University of Paris, or universities in the United States. Westernized Africans usually resented both exploitation and paternalism. They showed signs of turning nationalistic, like their counterparts in the Ottoman Empire and Asia. If they wanted westernization, it was at a pace and for a purpose of their own, and with methods that recognized the value of their own cultural traditions. As the twentieth century progressed, nationalism in Africa grew more vocal, more intense, and more forceful in challenging the European powers.

### *Friction and Rivalry between the Powers*

Meanwhile, in the 15 years from 1885 to 1900, the Europeans in Africa came dangerously near to open blows. The Portuguese annexed huge domains in Angola and Mozambique. The Italians took over two barren tracts, Italian Somaliland and Eritrea on the Red Sea. They then moved inland, in quest of more imposing possessions, to conquer Ethiopia and the headwaters of the Nile. Some 80,000 Ethiopians, however, defeated and routed 20,000 Ital-

### PRECOLONIAL AFRICA: SITES AND PEOPLES

This map shows Africa before colonization by the Europeans in the nineteenth century. It does not refer to a particular date or to particular kingdoms that the Europeans displaced. Names in burgundy designate important ancient or medieval centers, such as the Ghana and Mali empires, which no longer existed in modern times. Even the most extensive African kingdoms had indefinite and shifting boundaries, which cannot be readily indicated on a map. "Bantu," as used in the phrase "Bantu peoples," refers to a large group of languages spoken from north of the Congo River to the southern African coast. Concentrations of other language groups and peoples are also shown.

ians in pitched battle at Adowa in 1896. It was the first time that Africans successfully defended themselves against the forces of a European imperialist nation, and it discouraged invasion of Ethiopia by the Italians (or other Europeans) for 40 years. Italy and Portugal, like the Congo Free State and Spain (which retained a few vestiges of former days), were able to enjoy sizable holdings in Africa because of mutual fears among the principal contenders. The principal contenders were Great Britain, France, and

**African workers built the new European-owned mines that began sending valuable minerals around the world. The laborers in this picture are digging a new gold mine in southern Africa in the late 1880s.**

(Getty Images)

Germany. Each preferred to have territory held by a minor power rather than by one of its significant rivals.

The Germans were latecomers in the colonial race, which Bismarck entered with reluctance. By the 1880s all the usual imperialist arguments were heard in Germany, though most of them, such as the need for new markets, for emigration to overseas territories, or for the investment of capital, had little or no application in tropical Africa. The Germans established colonies in German East Africa and in the Cameroons and Togo on the west coast, along with a desert area that came to be called German Southwest Africa (where they ruthlessly suppressed the rebellious Herero people). It did not escape the notice of German imperial planners that someday the Congo and the Portuguese colonies might be joined with their colonies in a solid German belt across the African heartland. The French controlled most of West Africa, from Algeria across the Sahara and the Sudan to various points on the Guinea coast. They also occupied Obok on the Red Sea, and after the Italian defeat in 1896 their influence in Ethiopia grew. French planners therefore dreamed of a solid French belt across Africa from Dakar to the Gulf of Aden. The French government in 1898 dispatched Captain J. B. Marchand with a small party eastward from Lake Chad to hoist the tricolor far away on the upper Nile, in the southern part of the Sudan, which no European power as yet “effectively” occupied.

The two presumptive east-and-west belts, German and French, were cut (presumptively) by a north-and-south belt, projected in the British imperial imagination as an “Africa British from the Cape to Cairo.” From the Cape of Good Hope Cecil Rhodes pushed northward into what was later called Rhodesia (now Zimbabwe). Kenya and Uganda in the mid-continent were already under British control. In Egypt, a British protec-

torate since 1882, the British began to support old Egyptian claims to the upper Nile. The first venture proved a disaster when in 1885 a British general popularly known as “Chinese Gordon” for previous military successes in China, leading an Egyptian force, was killed by Muslim troops at Khartoum. In the following decade British opinion turned imperialist in earnest. Another British officer, General Kitchener (with a young man named Winston Churchill under his command), again started southward up the Nile and defeated the local Muslims in 1898 at Omdurman. He then pushed on further upstream. At Fashoda he met Marchand.

The ensuing Fashoda crisis brought Britain and France to the verge of war. Already at odds over Egypt and Morocco, the two governments used the encounter at Fashoda to force a showdown. It was a test of strength, not only for their respective plans for all Africa but also for their relative position in all imperialist and international issues. Both at first refused to yield. The British virtually threatened to fight. The French, fearful of their insecurity against Germany in Europe, at last decided not to take the risk. They backed down and recalled Marchand from Fashoda. A wave of hatred for the British swept over France.

---

*The Fashoda crisis*

The British no sooner won this Pyrrhic victory than they became involved in a major conflict at the other end of the African continent. In 1890 Cecil Rhodes had become prime minister of the Cape Colony. He was a principal sponsor of the Cape-to-Cairo dream. Two small independent neighboring republics, the Transvaal and the Orange Free State, stood in his way. Their people were Afrikaners—descendants of the Dutch who had originally settled the Cape in the seventeenth century and, after 1815, when England annexed the Cape of Good Hope, had made the “great trek” to escape from British rule. The Boers, as the English called them (from the Dutch word for farmer), were simple, obstinate, and old-fashioned. They thought slavery not ungodly and disliked fortune hunters, footloose adventurers, mining-camp people, and other outsiders.

The discovery of diamonds and gold in the Transvaal brought the issue of outsiders to a head. British capital and British people poured in. The Transvaal refused to pass legislation needed by the mining corporations and their employees. In 1895 Rhodes, attempting to precipitate revolution in the Transvaal, sent a party of armed irregulars, under Dr. Jameson, a physician-turned-colonial administrator, over its borders. This Jameson Raid was a failure, but in Europe a great cry went up against British bullying of a small inoffensive republic. The German emperor, William II, dispatched a famous telegram to Paul Kruger, president of the Transvaal, congratulating him on his driving off the invaders “without having to call for the support of friendly powers,” that is, Germany. Three years later, in 1899, the British Empire went to war with the two small republics. The South African (or Boer) War lasted until 1902; the British sent in 300,000 troops, and to combat an elusive and irregular adversary they felt obliged to ravage the country and intern about 120,000 women and children in concentration camps, where about 20,000 died. But once subdued and brought within the British system the two republics were left with their self-governing institutions. In 1910 the Transvaal and the Orange Free State were combined with Cape Colony and Natal to form the Union of South Africa, which received semi-independent status along the lines of the Dominion of Canada.

---

*The South African War*

The Fashoda crisis and the Boer War, coming in rapid succession, revealed to the British the bottomless depths of their unpopularity in Europe. All European governments and peoples were pro-Boer; only the United States, involved at the time in a similar military conquest of the Philippines, showed any sympathy for the British. The British, after the Boer War, began to rethink their international position, as will soon be seen.

### AFRICA, 1914

The map shows the recognized colonial holdings of European nations in 1914. The insert suggests the general directions of European expansion about 1898. These expansionary pressures led to the Fashoda crisis in 1898 and the Boer War in 1899. In 1898 the British and German governments held secret discussions on the possible partitioning of the Portuguese colonies, but no such partitioning took place because the British greatly preferred to have the Portuguese colonies remain in the hands of Portugal.

Embittered  
international relations

As in the case of the Ottoman Empire, rivalry between the Great Powers over the spoils of Africa embittered international relations and helped prepare the way for the First World War. In Africa as a whole, there was little territorial change after the Boer War, although in 1911 Italy took Libya from the Turks. In 1914 the Germans were excluded from their short-lived empire. Had the Germans won the First World War, the map of Africa would probably have been greatly revised, but since they lost it, the only change was to assign the German colonies, under international mandate, to the French, British, and Belgians. With this

The British military campaign against the Transvaal and the Orange Free State between 1899 and 1902 was widely condemned, in part because it was waged against descendants of seventeenth-century Dutch settlers (the Afrikaners or Boers) in South Africa. This picture of British soldiers crossing a river suggests the scale and costs of the Boer War, which became especially notorious when the British interned Afrikaner women and children in concentration camps, where thousands perished.

(Getty Images)

change, and except for Italy's ephemeral conquest of Ethiopia in 1935, the political map of Africa remained what the brief years of partition had made it until the spectacular end of the European empires after the Second World War.

## 81. IMPERIALISM IN ASIA: THE DUTCH, THE BRITISH, AND THE RUSSIANS

### *The Dutch East Indies and British India*

British India and the Dutch East Indies, in the half-century before the First World War, were the Europeans' ideal colonies. They illustrated the kind of empire that all imperialists would have wished to have, and a glance at them suggests the goal toward which imperialism was moving and the system that it was trying to create/

Whereas all countries of western Europe showed a surplus of imports, receiving more goods from the rest of the world than they sent out, India and Indonesia invariably, year after year and decade after decade, showed a surplus of exports, sending out far more goods than they took in. This export surplus was the hallmark of the profitable colonial area, geared closely into the world market, with low purchasing power for the native population and kept going by foreign investment and management. Both regions, in addition, were so large as to have a good deal of internal business—commerce, insurance, banking, transportation—which never appeared in the statistics for world trade, but which, being dominated by Europeans,

---

---

Export surplus

added immeasurably to their profits. Both had rich and varied natural resources, tropical in character, so that they never competed with the products of Europe—though India even before 1914 showed tendencies to industrialization. In both regions the people were adept and quick to learn. But they were divided by religion and language, so that, once conquered, they were relatively easy for Europeans to govern.

Neither region before the First World War had any self-government at the highest levels. Both were ruled by a civil service, honest and high-minded by its own lights, in which the most influential and best-paying positions were reserved for Europeans. Hence upper-class families in England and the Netherlands valued their empires as fields of opportunity for their sons—somewhat as they had formerly valued an established church. In both India and Indonesia the governments were more or less benevolent despotisms, which, by curbing warfare, plague, and famine, at least allowed the population to grow in numbers. Java, with 5 million people in 1815, had 48 million in 1942. India's population in the same years grew from less than 200 million to almost 400 million. Finally, as the last virtue of a perfect colony, no foreign power directly challenged the British in India or the Dutch in their islands.

---

*European colonial rule*

The Dutch in 1815 occupied little more than the island of Java itself. In the following decades the British moved into Singapore, the Malay peninsula, and north Borneo, and made claims to Sumatra. The French in the 1860s appeared in Indochina. The Germans in the 1880s annexed eastern New Guinea and the Marshall and Solomon islands. Ultimately it was the mutual jealousy of these three that preserved the Dutch position.

The Dutch took the initiative themselves. To forestall occupation by other Europeans, and to put down native pirates and find raw materials that the world demanded, the Dutch spread their rule over the whole 3,000-mile extent of the archipelago. They created an empire in place of the old chain of coastal trading posts and suppressed internal revolts in 1830, 1849, and 1888; not till the twentieth century was northern Sumatra or the interior of Celebes brought under control. For some decades the Dutch exploited their huge empire by a kind of forced labor, the "culture system," in which the authorities required farmers to deliver, as a kind of tax, stated amounts of stated crops, such as sugar or coffee. After 1870 a freer system was introduced. The Dutch also, as an important matter of policy, favored instruction in the Malay and Javanese languages, not in Dutch. This preserved the native cultures from westernizing disintegration but at the same time meant that Western ideas of nationalism and democracy entered more slowly.

---

*The "culture system"*

In India in 1857, the British faced a dangerous rebellion, commonly called the Indian Mutiny, as if it had been a revolt of undisciplined soldiers only. The British army in India, with its "sepoys" (native Indian troops), was the only organization through which Indians could exert any collective pressure. The proportion of sepoy in the army was high in 1857 (about five-sixths) because British units had been withdrawn for the Crimean War and for action in China. Many Indians outside the army had been unhappy with British policies for decades. Rulers had been conquered and dethroned. Landowners had lost their property and been replaced by new ones more friendly to the British. Religious sentiments were inflamed. The British too obviously regarded Indian beliefs as repulsive; they had outlawed suttee, or widow burning, the ancient Hindu practice of a widow burning herself to death on the funeral pyre of her deceased husband; suppressed the Thugs, a small sect of holy assassins; and one British officer even declared that in ten years the govern-

---

*The Indian Mutiny*

ment would abolish caste. Many Hindus therefore saw the British as dangerous opponents of their ancient religious traditions. Meanwhile, the Muslims were mobilized by Wahabi fundamentalism, a popular reform movement that sought to purify and defend the religious practices of Islam. Mysterious propaganda circulated over India. It infiltrated the sepoys, announcing to Muslim soldiers that certain newly issued cartridges were greased with the fat of a pig and to Hindus that the same cartridges were greased with the fat of a cow. Since for Hindus the cow was sacred, and for Muslims to touch pork was profane, much agitation was produced. The sepoys mutinied in the Ganges valley; and with them the other injured interests, including the fading Great Mogul and his court, rose against the British.

The British put down the rebellion with much brutality, aided by the fact that western and southern India took no part in it. But the uprising persuaded the British to a radically new course of policy, pursued basically until the end of the Indian empire almost a century later. The British East India Company and the Mogul empire were both finally and forever done away with. British authorities ruled directly, but the British concluded that they must rule India with and through the Indians themselves, not against them. This in practice meant a collaboration between the imperial power and the Indian upper classes. The British began to shelter Indian vested interests. They supported the Indian landlords and became more indulgent toward Indian "superstition." Where before 1857, when they conquered an Indian state, they had simply abolished it and incorporated its territories, after the Mutiny they kept the remaining Indian states as protectorates. States existing in 1857, such as Hyderabad and Kashmir and over 200 others, with their galaxy of rajahs and maharajahs, carried on to the end of British rule in 1947. It was largely to provide a fitting summit for this mountain of Indian royalty that Queen Victoria was proclaimed empress of India in 1877.

---

*British rule in India*

India had been a considerable manufacturing country by preindustrial standards, Indian merchants had once been important throughout the Indian Ocean, and before 1800 Indian exports to Europe had included many textiles and other finished goods. The native crafts collapsed before modern industrialism reinforced by political power. "India," observed a British expert in 1837, "can never again be a great manufacturing country, but by cultivating her connection with England she may be one of the greatest agricultural countries in the world." Free trade (made possible by military superiority, usually overlooked by the economists) turned Britain into the world's workshop and India into a supplier of raw materials. Indian exports in the latter part of the nineteenth century consisted increasingly of raw cotton, tea, jute, oilseeds, indigo, and wheat. The British shipped their manufactures in return. Business in India boomed; India came to have the densest railway network outside of Europe and North America. It is important to note, however, as a commentary on European trade with poor countries that Britain in 1914 did far more trading with the 6 million people of Australia and New Zealand than with the 315 million impoverished people of India.

The British, in contrast to the Dutch, decided in 1835 to favor instruction in English, not in the native languages. The historian T. B. Macaulay, one of the commission to make this recommendation, branded the Indian languages as vehicles of barbarous and unenlightened ideas—a bar to progress. The British also, after the Mutiny, admitted Indians to the civil service and to governors' councils—sparingly indeed, but more than the Dutch in Indonesia. There were also many Indian businessmen. A class of westernized Indians grew up speaking perfect English and often were educated in England. They demanded more of a role in the affairs of their country. In 1885 the predominantly Hindu Indian National Congress was organized; in 1906, the All-India Muslim League. Muslim

The great Sepoy Rebellion in 1857 among local troops in India shook the British Empire more profoundly than any other event of the nineteenth century. Although the Indian Mutiny (as the British called it) was eventually suppressed, this illustration suggests why the violence and brutality left bitter memories on all sides and why the British soon restructured the whole system by which they governed Indian society.

(Getty Images)

#### Indian nationalism

separatism, while favored by the British and sometimes even blamed upon them, was natural to India and exploited by some Indian leaders. Nationalism spread. It became increasingly anti-British; and radical nationalism turned also against the Indian princes, capitalists, and businessmen, as accomplices in imperialism, and so took on the color of socialism. In the period of the First World War, under nationalist pressure, the British granted more representation to Indians, especially in provincial affairs. But the movement toward self-rule was never fast enough to overcome the basic anti-British feeling of the Indian peoples, and Indian nationalism grew rapidly after the First World War.

#### Conflict of Russian and British Interests

While no outsider yet threatened the British in India, British statecraft discerned in the northern sky a large cloud which was clearly approaching. The Russian empire had occu-

This photograph of the future Indian national leader Jawaharlal Nehru indicates the kind of British education that many young Indians received during the imperial era. Nehru studied at Harrow School (where this picture was taken about 1905) and at Cambridge University before joining Gandhi in the independence movement during the 1920s. He later served as the first prime minister of independent India from 1947 until his death in 1964.

(Getty Images)

piet northern Asia since the seventeenth century. About 1850 Russian pressure on inner Asia resumed. It was a type of imperialism in which neither the demand for markets nor for raw materials, nor for the investment of capital, counted for much. In these matters Russia was itself semicolonial with respect to the West. The Russians had, like the Westerners, a sense of spreading their type of civilization; but Russian expansion was distinctively political in that most of the initiative came from the government. Russia was an icebound empire, craving warm-water ports. It was a landlocked empire, so that whichever way it turned it moved toward one ocean or another. The ocean was the domain of the Westerners, and in particular the British.

In the large picture, Russia pushed by land against the Ottoman Empire, Persia, India, and China, all of which the British (and others) reached by sea. In 1860, on the shores of the Sea of Japan, the Russians founded Vladivostok, the farthest-flung of all Slavic cities, whose name meant Lord of the East. But their advance in the mid-century was mainly in the arid and thinly settled regions of western Asia. The British had already fought two Afghan wars to keep Afghanistan as a no-man's land between Russia and India. Contemporaries called the rivalry between Britain and Russia in Central Asia "the great game." In 1864 the Russians took Tashkent in Turkestan. A decade later they touched India itself but were kept away by an Anglo-Russian agreement, which allotted a long tongue of land to Afghanistan and so separated British India and the Russian empire by 20 miles.

### IMPERIALISM IN ASIA, 1840–1914

The map shows boundaries and possessions as they appeared in 1914. During these years the British and Dutch filled out their holdings in India and the East Indies. The Russians pressed southward from Siberia into Central Asia, founded Vladivostok in 1860, and entered Manchuria at the close of the century. The French built their empire in Indochina and the United States took control of the Philippines. The Germans, as latecomers, were confined to miscellaneous parts of the western Pacific. The Japanese won control of Korea and the island of Formosa (now Taiwan). Meanwhile all of the imperial powers obtained special rights and concessions in China.

Russian advances in Turkestan, east of the Caspian, increased the pressure on Persia, which had long felt the same pressure west of the Caspian, where cities like Tiflis and Baku, now Russian, had once been Persian. If Tiflis and Turkestan could fall to the Russian empire, there was no reason why Persia should not do so next—except that Persia had a seacoast and so might also be available for occupancy by the British. In 1864 a British company completed the first Persian telegraph as part of the line from Europe to India. Other British investments and interests followed. Oil became important about 1900. In 1890, to bolster the Persian government against Russia, the British granted it a loan—taking the customs in Persian Gulf ports as collateral. In 1900 the Russian government granted the same favor, making its own loan to Persia, and appropriating as security all Persian customs except those of the Gulf. Clearly Persia was losing control of its own affairs, falling into zones, turning ripe for partition. A Persian nationalist revolution, directed against all foreigners and against the subservient government of the shah, broke out in 1905 and led to the assembly of the first parliament but hardly settled the question of Persian independence. In 1907 the British recognized a Russian “sphere of influence” in northern Persia; the Russians, a British sphere in the south (see map, pp. 664–665).

---

*Foreign interests in Persia*

---

*Spheres of influence*

Imperial ambitions had deepened the hostility between Great Britain and Russia, with disputes over Persia and the Indian borderlands adding fuel to the quarrel they had long waged over the Ottoman Empire. We have seen how the struggle for Africa had at the same time estranged Britain from France and indeed from all Europe.

## 82. IMPERIALISM IN ASIA: CHINA AND THE WEST

### *China before Western Penetration*

In this era of new imperial rivalries, the biggest bone of imperialist contention was China. On this bone every Great Power without exception tried to bite. The Manchu, or Qing (formerly transliterated, and still pronounced, as Ch'ing), dynasty (1644–1912) held a suzerainty over the whole area affected by Chinese civilization, from the mouth of the Amur River (as far north as Labrador) to Burma and Indochina (as far south as Panama), and from the ocean westward into Mongolia and Tibet. In the old Chinese view China was the Middle Kingdom, the civilized center of the world surrounded by less enlightened peoples. The Europeans were outlandish barbarians. A few had trickled through to China since the European Middle Ages. But the Chinese people persistently wanted nothing to do with them.

China was moving into an upheaval of its own even before Western influence became of any importance. For about 4,000 years the country had seen dynasties come and go in cycles. The Qing dynasty in the nineteenth century was clearly nearing its end. It was failing to preserve order or to curb extortion. About 1800 a White Lotus Society revolted and was suppressed. In 1813 a Heavenly Reason Society attempted to seize Peking (now Beijing). In the 1850s a Muslim rebellion set up a temporary independent state in the southwest. Greatest of all the upheavals was the Taiping Rebellion, which lasted for more than a decade (1850–1864) and in which as many as 20 million people are thought to have perished. Except that some fragmentary Christian ideas obtained from missionaries were expressed by some of the Taipings (and its leader claimed to be the younger brother of Jesus), the rebellion was due entirely to Chinese causes. The rebels attacked the Manchus, who had come from

---

*The Taiping Rebellion*

### “THE BRITISH LAKE,” 1918

This map shows the most important parts of the British Empire except for Canada, the Caribbean islands, and the United Kingdom itself. All shores of the Indian Ocean are shown to be British, except for French Madagascar; the politically weak Portuguese, Italian, and Dutch colonies; and the Arabian and Persian coasts, in which British influence was strong. It is easy to see why the Mediterranean and Suez Canal, leading from Europe into the Indian Ocean, were called the lifeline of the British Empire.

Manchuria two centuries before, as corrupt foreigners ruling over China. Their grievances were poverty, extortion, exorbitant rents, and absentee landlords, and their goal was to establish a new dynasty.

The Taipings set up a state in south China and their armies were at first disciplined, but the fighting lasted so long that both the Taiping leaders and the Manchu commanders sent against them got out of control, and much of the country sank into chronic banditry and disorder. It was in this period that China's war lords, men controlling armed forces but obeying no government, appeared. The Manchus managed to put down organized Taiping resistance after 14 years, with some European assistance, led by the British General Gordon, the “Chinese Gordon” who later died at Khartoum. But it is clear that Chinese social conflict, agrarianism, and nationalism (the latter at first only anti-Manchu) antedated the impact of European imperialism.

Into this distracted China the Europeans began to penetrate about 1840. It became their policy to extort concessions from the Manchu empire but at the same time to defend the Qing dynasty against internal opposition, as was shown in the European response to the Taiping Rebellion. This was because they needed some kind of government in China with which they could make treaties, legalizing their claims and binding upon the whole country.

### *The Opening of China to the West*

The modern phase of Chinese relations with the West was inauspiciously opened by the Opium War of 1839–1841. We have already observed how, though Europeans wanted Chinese products, the Chinese had no interest in buying European products in return. Trade

therefore was difficult, and the British East India Company had for decades solved the problem of getting Chinese tea for Europe by shipping Indian-grown opium in return, since opium was one available commodity for which Chinese demand existed. When the Chinese government attempted to control the inflow of opium, the British government went to war. Fifteen years later, in 1857, Britain and France combined in a second war upon China to force the Chinese to receive their diplomats and deal with their traders. The Chinese continued to resist, whereupon 17,000 French and British soldiers entered Beijing and deliberately burned the emperor's very extensive Summer Palace, an appalling act of vandalism from which soldiers brought back enough stolen cultural objects—vases, tapestries, porcelain, enamels, jades, wood carvings—to set a fashion in Europe and America for Chinese art.

From the first of these wars arose the treaty of Nanking (1842); from the second, the treaties of Tientsin (1857), whose terms were soon duplicated in still other treaties signed by China with other European powers and with the United States. The resulting complex

---

*The treaty system*

of interlocking agreements imposed restrictions on China or conferred rights upon foreigners and came to be known as the “treaty system.” To the British in 1842 the Chinese ceded the island of Hong Kong outright and somewhat later granted adjoining territories on a long lease. They opened over a dozen cities, including Shanghai and Canton (now called Guangzhou), to Europeans as “treaty ports.” In these cities Europeans were allowed to make settlements of their own, immune to all Chinese law. Europeans traveling in the Chinese empire remained subject only to their own governments, and European and American gunboats began to police the Yangtse River. The Chinese likewise paid large war indemnities, though it was they themselves who suffered most of the damages. They agreed to levy no import duty over 5 percent and so became a free trade market for European products. To administer and collect the customs a staff of European experts was introduced. Money from the customs, collected with a new efficiency on a swelling volume of imports, went in part to the British and French in payment of the indemnities, but part remained with the Qing government, which, as noted, the Europeans had no desire to overthrow.

### *Annexations and Concessions*

While China was thus permeated at the center by the extraterritorial and other insidious privileges for Europeans, whole blocks of its territory were cut away at the outer rim. The Russians moved down the Amur River, established their Maritime Province, and founded Vladivostok in 1860. The Japanese, now sufficiently westernized to behave like Europeans in such matters, in 1876 recognized the independence of Korea. The British annexed Burma in 1886. The French in 1883 assumed a protectorate over Annam despite Chinese protests; they soon combined five areas—Annam, Cochin China, Tonkin, Laos, and Cambodia—into French Indochina. (The first three were known also as Vietnam, a word not familiar in the West until after the Second World War.) These outlying territories had never, it is true, been integral parts of China proper; but it was with China that they had had their most important political and cultural relations and to the Chinese emperor that they had paid tribute.

---

*Japanese imperialism*

Japan, whose modernization has been described, lost little time in developing an imperialistic urge. An expansionist party already looked to the Chinese mainland and to the south. Japanese imperialism first revealed itself to the rest of the world in 1894, when Japan went to war with China over disputes in Korea. The Japanese soon won, equipped as they were with modern weapons, training, and organiza-

---

## CHRONOLOGY OF NOTABLE EVENTS, 1850–1906

---

1850–1864	Taiping Rebellion in China is suppressed by Qing Dynasty; up to 20 million die
1856	Ottoman Empire launches reforms to modernize the legal and military system
1857	“Indian Mutiny” threatens British control of India and leads to reforms in the imperial administration
1864	Napoleon III of France installs Austrian Archduke Maximilian as Emperor of Mexico
1867	Maximilian is overthrown; Benito Juárez returns as Mexican President
1876	Abdul Hamid takes power as sultan in Ottoman Empire; repressive regime lasts for 33 years
1877–1878	Russo-Turkish War leads to Russian gains in the Balkans
1885	Berlin Conference sets European terms for imperial control of Africa
1885	Hindu Indian National Congress is organized to challenge British power in India
1894–1895	Japan goes to war with China and takes Formosa (later called Taiwan)
1898	United States declares war on Spain and takes control of Cuba, Puerto Rico, and the Philippines
1898	French and English forces come to brink of imperial conflict at Fashoda in Sudan—the “Fashoda Crisis”
1899	Chinese revolt against European powers, the “Boxer Uprising,” is suppressed by European forces
1899–1902	The Boer War enables Britain to consolidate power in South Africa
1904–1905	Japan defeats Russia in Russo-Japanese War and expands into Manchuria
1906	All-India Muslim League is organized to promote Indian nationalism and Muslim rights

---

tion. They obliged the Chinese to sign the treaty of Shimonoseki in 1895, by which China ceded Formosa and the Liaotung peninsula to Japan and recognized Korea as an independent state. The Liaotung was a tongue of land reaching down from Manchuria to the sea; at its tip was Port Arthur. Manchuria was the northeastern part of China itself. This sudden Japanese triumph precipitated a crisis in east Asia. No one had realized how strong Japan had become. Europeans were astounded that a people who were not “European” in their culture or race should show such aptitude for modern war and diplomacy. It was to be supposed that Japan had designs on Manchuria.

It so happened that Russia, not long before, in 1891, had begun to build the Trans-Siberian Railway, whose eastern terminus was to be Vladivostok, the “Lord of the East.”

Manchuria extended northward between central Siberia and Vladivostok. The Russians, whether or not they ever dominated Manchuria themselves, could not allow its domination by another Great Power. It happened also that Germany was at this time looking for a chance to enter the Far Eastern arena, and that France had formed an alliance with Russia, whose good will it was eager to retain. Russia, Germany, and France joined together in demanding that Japan give up the

---

*“Lord of the East”*

Liaotung peninsula. The Japanese hesitated; they were indignant, but they yielded. The Liaotung peninsula went back to China.

In China many alert people were humiliated at the defeat by the Japanese whom they had despised. The Chinese government, at last facing the inevitable, began madly to plan for a program of modernization and reform. Huge loans were obtained from Europe—the customs being pawned as security, following the pattern well established in Turkey, Persia, and Santo Domingo. But the European powers did not wish China to become consolidated too soon. Nor had they forgotten the sudden apparition of Japan. The result was a frantic scramble for further concessions in 1898.

It seemed in 1898 as if the Chinese empire in its turn would be partitioned. The Germans extorted a 99-year lease on Kiaochow Bay, plus exclusive rights in the Shantung peninsula. The Russians took a lease on the Liaotung peninsula from which they had just excluded Japan; they thus obtained Port Arthur and rights to build railroads in Manchuria to interlock with their Trans-Siberian system. The French took Kwangchow and the British Wei-hai-wei, in addition to confirming their sphere of influence in the Yangtse valley. The

Italians demanded a share but were refused. The United States, fearing that all China might soon be parceled out into exclusive spheres, announced its policy of the Open Door. The idea of the Open Door was that China should remain territorially intact and independent and that powers having special concessions or spheres of influence should maintain the five percent Chinese tariff and allow businessmen of all nations to trade without discrimination. The British supported the Open Door as a means of discouraging actual annexations by Japan or Russia, which as the only Great Powers adjacent to China were the only ones that could dispatch real armies into its territory. The Open Door was a program not so much of leaving China to the Chinese as of assuring that all outsiders should find it literally “open.”

If readers will imagine what the United States would be like if foreign warships patrolled the Mississippi as far as St. Louis; if foreigners came and went throughout the country without being under its laws; if New York, New Orleans, and other cities contained foreign settlements outside its jurisdiction but in which all banking and management were concentrated; if foreigners determined the tariff policy, collected the proceeds, and remitted much of the money to their own governments; if the western part of the city of Washington had been burned (the Summer Palace), Long Island and California had been annexed to distant empires (Hong Kong and Indochina), and all New England was coveted by two immediate neighbors (Manchuria); if the national authorities were half in collusion with these foreigners and half victimized by them; and if large areas of the country were prey to bandits, guerrillas, and revolutionary secret societies conspiring against the helpless government and occasionally murdering some of the foreigners—then they can understand how observant Chinese felt at the end of the nineteenth century, and why the term “imperialism” came to be held by so many of the world’s peoples in abomination.

One Chinese secret society, its name somewhat literally translated as the Order of Literary Patriotic Harmonious Fists, dubbed the Boxers by hostile Westerners, broke out in insurrection in 1899. The Boxers pulled up railway tracks, fell upon Chinese Christians, besieged the foreign legations, and killed about 300 foreigners. The European powers, joined by Japan and the United States, sent a combined international force against the insurgents, who were put down. The victors imposed still more severe controls on the Chinese government and inflicted an indemnity of \$330 million. Of this the United States received \$24 million, of which, in 1924, it canceled the balance that was still due. On the other hand, as a

*The Boxer Uprising*

### NORTHEAST CHINA AND ADJOINING REGIONS

Manchuria became an object of dispute among China, to which it belonged historically, Russia, and Japan. It was dominated by the Russians from 1898 to 1905, by the Japanese from 1905 to 1945, and again by the Russians from 1945 to 1950, when they transferred it to the People's Republic of China. Korea was dominated by Japan from about 1895 (and formally annexed by Japan in 1910) until the end of the Second World War. It was then divided into Russian and American occupation zones. After the Korean War (1950-1953) it remained divided into two independent states, North Korea under a Communist regime and a Western-supported South Korea.

Chinese resentments against their government's concessions to Western imperialist powers erupted in the violence of the so-called Boxer Uprising in 1899. This Chinese illustration of an attack on a group of Europeans conveys the anger that fueled the movement and the new national identity that was spreading across China.

(© Trustees of the British Museum)

consequence of the Boxer Uprising, the Qing officials strove desperately to strengthen themselves by modernizing the country. Meanwhile, as we shall see in a later chapter, a new revolutionary movement, aiming at expulsion of Manchus and foreigners alike, spread rapidly throughout China, especially in the south, under the leadership of Sun Yat-sen.

### 83. THE RUSSO-JAPANESE WAR AND ITS CONSEQUENCES

Russia and Japan increasingly opposed each other's intrigues in Manchuria and Korea. The Japanese felt a need for supplying their new factories with raw materials and markets on the Asian mainland, for employment for their modern army and navy and for recognized status as a Great Power in the Western sense. The Russian government needed an atmosphere of crisis and expansion to stifle criticism of tsarism at home; it could not abide the presence of a strong power directly on its East Asian frontier; it could use Manchuria and Korea to strengthen the exposed outpost of Vladivostok, which was somewhat squeezed against the sea and landlocked by Japanese waters. The Russians had obtained a concession from China to build the Chinese Eastern Railway to Vladivostok across the heart of Manchuria. A railway in Manchuria implied special zones, railway guards, mining and timber rights, and other auxiliary activities. The Japanese saw the fruits of their successful war of 1895 against China greedily enjoyed by their rival. In 1902 Japan signed a military alliance with Great Britain. We have seen

how the British were alarmed by their diplomatic isolation after Fashoda and the Boer War and how for many years they had been expecting to have trouble with Russia. The Anglo-Japanese military alliance lasted 20 years.

---

---

*Russo-Japanese  
rivalry*

War broke out in 1904, undeclared, by Japanese naval attack on Russian installations at Port Arthur. Both sides sent large armies into Manchuria. The decisive battle of Mukden (which was fought for control of the important Manchurian city now called Shenyang) engaged more troops than any previous battle in human history—624,000 men. Military observers were present from all the major powers, anxiously trying to learn what the next war in Europe would be like. The Russians sent their Baltic fleet around three continents to the Far East, but to the world's amazement the Russian fleet was met and destroyed at Tsushima Strait by the new and untested navy of Japan. Russian communications by sea were thereby broken, and since the Trans-Siberian Railway was unfinished and since the Japanese also won the battle of Mukden, Russia was beaten.

At this point the president of the United States, Theodore Roosevelt, stepped upon the scene. With an outpost in the Philippines and a growing interest in China, it was to the American advantage to have neither side win too overwhelming a victory in the Far East. The most imperially minded of all American presidents offered his mediation, and plenipotentiaries of the two powers met at Portsmouth, New Hampshire. By the treaty of Portsmouth in 1905, Japan recovered from Russia what it had won and lost in 1895, namely Port Arthur and the Liaotung peninsula; a preferred position in Manchuria, which remained nominally Chinese; and a protectorate in Korea, which remained nominally independent until it was annexed by Japan in 1910. Japan also received from Russia the southern half of the island of Sakhalin. Much of what Russia lost to Japan in 1905 was regained 40 years later at the end of the Second World War.

---

---

*The treaty of  
Portsmouth*

The Russo-Japanese War was the first war between Great Powers since 1870. It was the first war fought under conditions of developed industrialism. It was the first actual war between modern, westernized powers to be caused by competition in the exploitation of undeveloped countries. Most significant of all (except for the Ethiopian rout of the Italians in 1896), it was the first time that a nation of nonwhite people had defeated a nation of white people in modern times. Asians had shown that they could learn and play, in less than half a century, the geopolitical game of the Europeans.

The Japanese victory set off long chains of repercussions in at least three different directions. First, the Russian government, frustrated in its foreign policy in East Asia, shifted its attention back to Europe, where it resumed an active role in the affairs of the Balkans. This contributed to a series of international crises in Europe that led to the First World War. Second, the tsarist government was so weakened by the war, both in prestige and in actual military strength, and opinion in Russia was so disgusted at the clumsiness and incompetency with which the war had been handled, that the various underground movements were able to come to the surface, producing the Revolution of 1905. This in turn was a prelude to the great Russian Revolution of 1917, of which Soviet communism was the outcome. Third, news of Japan's victory over Russia electrified those who heard of it throughout the non-European world. The fact that Japan was itself an imperialist power was overlooked in the excited realization that the Japanese were not a European power. Only half a century ago the Japanese, too, had been "backward"—defenseless, bombarded, and bulldozed by the Europeans.

---

---

*Consequences of  
Japanese victory*

The Japanese victory over the Russians in the battle of Mukden showed the world that Japan had become a major military and industrial power in east Asia. This lithograph from 1905, “Fighting in the Snow,” portrays a decisive attack in the battle and illustrates how the Russo-Japanese War quickly gained symbolic significance in the rise of twentieth-century Japanese nationalism.

(The Art Archive/Hibiya Public Library Tokyo/Laurie Platt Winfrey)

The moral was clear. Everywhere leaders of subjugated peoples concluded, from the Japanese precedent, that they must bring Western science and industry to their own countries, but that they must do it, as the Japanese had done, by ending control by the Europeans, supervising the process of modernization themselves, and preserving their own native national character. New “hybrid elites” in colonized societies combined their growing knowledge of Western culture with a growing pride in their own cultures and traditions, thereby creating the new nationalisms that would become a major, worldwide legacy of modern European imperialism. Nationalist revolutions began in Persia in 1905; in Turkey in 1908; in China in 1911. In India and Indonesia many were stirred by the Japanese achievement. In the face of rising agitation, the British admitted an Indian to the

Viceroy's Council in 1909, and in 1916 the Dutch created a People's Council, to include Indonesian members, in the Dutch East Indies. The self-assertion of Asians was to grow in intensity after the First World War.

The Japanese victory and Russian defeat can therefore be seen as steps in three mighty developments: the First World War, the Russian Revolution, and the Revolt of Asia. These three together put an end to Europe's world supremacy and to confident ideas about the inevitable progress and expansion of European civilization; or at least they so transmuted them as to make the world of the twentieth century far different from that of the nineteenth.

# THE FIRST WORLD WAR

84. The International Anarchy
85. The Armed Stalemate
86. The Collapse of Russia and the Intervention of the United States
87. The Collapse of the Austrian and German Empires
88. The Economic, Social, and Cultural Impact of the War
89. The Peace of Paris, 1919

*Somewhere before 1914 Europe went off its course. At the beginning of the twentieth century, most Europeans believed they were heading for a kind of high plateau, full of a benign progress and more abundant civilization, in which the benefits of modern science and invention would be more widely diffused and even competitive struggle would work out somehow for the best. Instead, Europe stumbled in 1914 into disaster. It is not easy to see exactly where Europe went astray, at what point, that is, the First World War became inevitable, or (since the human mind does not know what is truly inevitable) so overwhelmingly probable that only the most Olympian statesmanship could have avoided it. But no such statesmanship appeared, and Europe fell into a deadly, grinding war that consumed much of its wealth,*

*killed millions of its young men, and ultimately weakened or even destroyed much of its power and influence around the world.*

## 84. THE INTERNATIONAL ANARCHY

The great political questions in mid-nineteenth century Europe had been settled by force. The German Empire was the strongest and most obvious of the new structures which armed power had reared, but all European states had concluded that large military forces were essential for their national existence. Never had the European states maintained such huge armies in peacetime as at the beginning of the twentieth century. One, two, or even three years of compulsory military service for all young men became the rule. In 1914 each of the Continental Great Powers had not only a huge standing army but millions of trained reserves among the civilian population. Few people wanted war; all but a few sensational writers preferred peace in Europe, but many took it for granted that war would

---

*The inevitability of war?*

come someday. The idea that war was bound to break out sooner or later probably made some statesmen in some countries more willing to unleash it. In any case, the popular expectation of future wars as well as the large standing armies helped to produce the Great War that exploded across Europe in 1914; but the war also came from other causes, including the interlocking system of international alliances, Germany's desire for a greater role in world affairs (which challenged Britain's earlier ascendancy and raised nationalist anxieties in France), and the ongoing conflicts in the Balkans.

### *Rival Alliances: Triple Alliance versus Triple Entente*

Political diagnosticians, from Richelieu to Metternich, had long thought that an effective union of Germany would revolutionize the relationships of Europe's peoples. After 1870 their anticipations were more than confirmed. Once united (or almost united), the Germans entered upon their industrial revolution. Manufacturing, finance, shipping, and population grew phenomenally. By 1900, for example, Germany produced more steel than France and Britain combined, though in 1865 the French alone had produced more than the Germans.

---

*A "place in the sun"*

People in Germany felt that they needed and deserved a "place in the sun," by which they vaguely meant some kind of acknowledged supremacy like that of the British. Neither the British nor the French, the leaders of modern Europe since the seventeenth century, could share in such German aspirations. The French nursed the chronic grievance of Alsace and Lorraine, annexed to Germany in 1871. The British as the years passed saw German salesmen appear in their foreign markets, selling goods often at lower prices and using what they viewed as ungentlemanly methods; they saw Germans turn up as colonial rivals in Africa, the Middle East, and the Far East; and they watched other European states gravitate into the Berlin orbit, looking to the mighty German Empire as a friend to advance their interests.

Bismarck after 1871 feared that in another European war his new German Empire might be torn to pieces. He therefore followed, until his retirement in 1890, a policy of diplomacy and peace. We have seen him as the "honest broker" at the Berlin Congress of 1878, helping to adjudicate the Eastern Question, and again offering the facilities of Berlin in 1885 to bring some international order to African affairs. To isolate France, divert it from Europe, and keep it embroiled with Britain, he looked with satisfaction on French colonial expansion. He took no chances, however; in 1879 he formed a military alliance with Austria-Hungary, to which Italy was added in 1882. Thus was formed the Triple Alliance, which lasted until the First World War. Its terms were, briefly, that if any member became involved in war with two or more powers, its allies should come to its aid by force of arms. To be on the safe side,

---

*The Triple Alliance*

Bismarck signed a "reinsurance" treaty with Russia also. Since Russia and Austria were enemies (because of the Balkans), Germany needed considerable diplomatic finesse to stay allied to both at the same time. After Bismarck's retirement his system proved too intricate, or too lacking in candor, for his successors to manage. The Russo-German agreement lapsed. The French, faced by the Triple Alliance, soon seized the opportunity to form their own alliance with Russia, the Franco-Russian Alliance signed in 1894. In its time this was regarded as politically almost impossible. The French Republic stood for everything radical; the Russian empire, for everything reactionary and autocratic. But ideology was thrown to the winds, French capital poured into Russia, and the tsar bared his head to the *Marseillaise*.

The Continent was thus divided by 1894 into two opposed camps, the German-Austrian-Italian against the Franco-Russian. For a time it seemed that this rigid division might soften. Germany, France, and Russia cooperated in the Far Eastern crisis of 1895 to stem the expanding power of Japan. All were anti-British at the time of Fashoda and the Boer War. The Kaiser, William II, outlined tempting pictures of a Continental league against the global hegemony of England and its empire.

Much depended on what the British would do. They had long prided themselves on a "splendid isolation," going their own way, disdaining the kind of dependency that alliance with others always brings. European hostility toward Britain during the Fashoda crisis and the Boer War came as a shock. British relations with France and Russia were going badly. Some in England, including Joseph Chamberlain, therefore thought that a better understanding with Germany was to be sought. Arguments of race, in this race-conscious age, made the English and Germans feel akin. But politically it was hard to cooperate. The Kaiser's Kruger Telegram of 1896, expressing support for the South African Boers in their conflict with Britain, was a studied insult. Then in 1898 the Germans decided to build a navy.

---

---

"Splendid isolation"

A new kind of race now entered the picture, the naval competition between Germany and Great Britain. British sea power for two centuries had been all too successful. The American Admiral Mahan, teaching at the Naval War College and taking his examples largely from British history, argued that sea power had always been the foundation of Britain's greatness and that in the long run sea power must always choke off and ruin a power operating on land. Nowhere were Mahan's books read with more interest than in Germany. The German naval program, mounting rapidly after 1898, in a few years became a source of concern to the British, and by 1912 was felt as a positive menace. The Germans insisted that they must have a navy to protect their colonies, secure their foreign trade, and "for the general purposes of their greatness." The British held with equal resolution that England, as a densely populated industrial island, dependent even for food upon imports, must at all costs control the sea in both peace and war. They adhered stubbornly to their traditional policy of maintaining a navy as large as the next two combined. The naval race led both sides to enormous and increasing expenditures. In the British it produced a sense of profound insecurity, driving them as the years passed ever more inescapably into the arms of Russia and France.

---

---

Naval race

Slowly and cautiously the British emerged from their diplomatic isolation. In 1902 they formed a military alliance with Japan against their common enemy, Russia. The decisive break came in 1904, from which may be dated the immediate series of crises issuing ten years later in the First World War.

In 1904 the British and French governments agreed to forget their conflict at Fashoda and the accumulated bad feeling of the preceding 25 years. The French recognized the British occupation of Egypt, and the British recognized the French penetration of Morocco. They also agreed to support each other against protests by third parties. There was no specific alliance; neither side said what it would do in the event of war; it was only a close understanding, an *entente cordiale*. The French immediately tried to reconcile their new friend to their ally, Russia. After defeat by Japan the Russians proved amenable. The British, increasingly uncertain of German aims, proved likewise willing. In 1907 Britain and Russia, the inveterate adversaries, settled their differences in an Anglo-Russian Convention. In Persia, the British recognized a Russian sphere of influence in the north, while the Russians recognized a British sphere in the south and east. By 1907 England, France,

*Triple Entente*

and Russia were acting together. The older Triple Alliance faced a newer Triple Entente, the latter somewhat the looser, since the British refused to make any formal military commitments.

### *The Crises in Morocco and the Balkans*

*Testing the Entente*

The Germans, who already felt encircled by the alliance of France and Russia, watched with concern the drift of England into the Franco-Russian camp. The entente cordiale was barely concluded when the German government decided to test it by seeing how far the British would go in support of France. The French, now enjoying British backing, were taking over more police powers, concessions, and loans in Morocco. In March 1905 Kaiser William II disembarked from a German warship at Tangier, where he made a startling speech in favor of Moroccan independence. To diplomats everywhere this carefully staged performance was a signal: Germany was attempting to break up the new understanding between France and England. The Germans demanded and obtained an international conference at Algeiras, but the conference, which met in 1906, supported the French claims in Morocco, only Austria voting with Germany.

The German government had thus created an incident and been rebuffed. The British, disturbed by German diplomatic tactics, stood by the French all the more firmly. French and British army and naval officers now began to discuss common plans. Distrust of Germany also inclined the British to bury the hatchet with Russia in the next year. The German attempt to break the Entente simply made it more solid. In 1911 came a second Morocco crisis. A German gunboat, the *Panther*, arrived at Agadir "to protect German interests." It soon developed that the move was a holdup; the Germans offered to make no further trouble in Morocco if they could have the French Congo. This crisis also passed, the Germans obtaining some small accessions in Africa, but it increased British hostility to Germany.

*Crises in the Balkans*

Meanwhile a series of crises rocked the Balkans. The Ottoman Empire, now in an advanced state of dissolution, still held a band of territory from Constantinople westward to the Adriatic (see map, p. 686), which included Bulgarians, Serbs, Albanians, and Macedonians. In the center and west of the peninsula, north of the Turkish belt, was the small, landlocked, independent kingdom of Serbia, adjoined by Bosnia-Herzegovina, which belonged legally to Turkey but had been "occupied and administered" by Austria since 1878. Within the Austro-Hungarian Empire, adjoining Bosnia on the north and west, lay Croatia and Slovenia.

Serbs, Bosnians, Croats, and Slovenes all spoke basically the same language, Serbo-Croatian, the main difference being that Serbs and Bosnians wrote with the eastern or

### ANGLO-GERMAN INDUSTRIAL COMPETITION, 1898 AND 1913

This diagram shows the huge increase in world trade in the years before the First World War and also the fact that German exports grew in these years more rapidly than British exports. The exports of both countries together multiplied no less than threefold in these 15 years. The increase reflected a small rise in prices, but it was mainly due to a real increase in volume of business. In 1913, total German exports about equaled the British, but German exports to the United States and Russia greatly exceeded the British. Note how the Germans even gained exports in British India, where the liberalism of British trade policy freely admitted competitive goods. In merchant marine, though the Germans doubled their tonnage, the British continued to enjoy an overwhelming lead.

Kaiser William II sought to strengthen Germany's international position by undermining the alliance between France and Britain. His visit to Morocco in 1905, as shown in this image of his arrival at Tangiers, exemplified the Kaiser's assertive style of personal diplomacy, but his call for Moroccan independence failed to weaken the French-British entente.

(Getty Images)

Cyrillic alphabet while the Croats and Slovenes wrote with the western or Roman alphabet. The difference reflected deep differences in religion. The Slovenes and Croats had

long been Roman Catholic, and hence affiliated with Western Europe; the Serbs and many Bosnians were Eastern Orthodox and so closer to Russia; and there were also, especially in Bosnia, large numbers of Slavs who were Muslims, converted during the Ottoman domination. With the Slavic

Revival, which emphasized language, many of these peoples came to feel that they were really one people, for which they took the name South Slavs, or Yugoslavs. After the Dual Monarchy was formed in 1867, as we have seen, the Slavs of the Habsburg empire were kept subordinate to the German Austrians and the Hungarian Magyars. By 1900 radical Slav nationalists within the empire had concluded that the Dual Monarchy would never grant them equal status and that all South Slavs should form an independent state of their own. Concretely, this meant that an element of the Austro-Hungarian population, namely, the Croatian and Slovenian nationalists, wished to get out of the empire and join with Serbia across the border. Serbia became the center of South Slav agitation.

This brew was brought to a boil in 1908 by two events. First, the Young Turks, whose long agitation against Abdul Hamid has been noted, managed in that year to carry through a revolution. They obliged the sultan to restore the liberal parliamentary constitution of 1876. They showed, too, that they meant to stop the dissolution of the Ottoman Empire by

Ethnic and religious  
divisions

taking steps to have delegates from Bulgaria and Bosnia sit in the new Ottoman parliament. Second, Russia, its foreign policy in the Far East ruined by the Japanese war, turned actively to the Balkan and Turkish scene. Russia, as always, wanted control at Constantinople. Austria wanted full annexation of Bosnia, the better to discourage pan-Yugoslav ideas.

The Russian and Austrian foreign ministers, Alexander Isvolsky and Alois von Aehrenthal, came to a secret agreement in 1908. They would call an international conference, at which Russia would favor Austrian annexation of Bosnia and Austria would support the opening of the Straits to Russian warships. Austria, without waiting for a conference, proclaimed the annexation of Bosnia without more ado. This infuriated the Serbs, who had marked Bosnia for their own. Meanwhile, that same year, the Bulgarians and the Cretans broke finally with the Ottoman Empire, Bulgaria becoming fully independent, Crete uniting with Greece. Isvolsky was never able to realize the Russian plans for Constantinople. His partners in the Triple Entente, Britain and France, refused to back him, and the projected international conference was never called. In Russia itself public opinion knew nothing of Isvolsky's secret deal. The known fact in Russia was that the Serbs, the little Slav brothers of Russia, had had their toes rudely stepped on by the Austrians by the annexation of Bosnia.

---

*The first Balkan crisis*

This "first Balkan crisis" presently passed. The Russians, weakened by the Japanese war and by the domestic revolutionary turmoil of 1905, accepted the Austrian *fait accompli*. Austrian influence in the Balkans seemed to be growing. And South Slav nationalism was frustrated and inflamed.

In 1911 Italy declared war on Turkey, from which it soon conquered Tripoli and the Dodecanese Islands. With the Ottomans thus embarrassed, Bulgaria, Serbia, and Greece joined forces in their own war against Turkey, hoping to annex certain Balkan territories to which they believed they had a right. Turkey was soon defeated, but the Bulgarians claimed more of Macedonia than the Serbs would yield. The first Balkan war of 1912 was followed in 1913 by a second, in which Albania, a mountainous, mainly Muslim region on the Adriatic, was the subject of angry discord. The Serbs occupied part of it in the two Balkan wars, but Greeks also claimed a part, and it had also on several occasions been vaguely promised to Italy. Russia supported the Serbian claim. Austria was determined to shut off the Serbs from access to the sea, which they would obtain by annexation of Albanian territory. An agreement of the great powers conjured up an independent kingdom in Albania. This confirmed the Austrian policy, kept Serbia from the sea, and aroused vehement outcries in both Serbia and Russia. But Russia again backed down. Serbian expansionism was again frustrated and inflamed.

---

*Two Balkan wars*

The third Balkan crisis proved to be the fatal one. It was fatal because two others had gone before it, leaving feelings of exasperation in Austria, desperation in Serbia, and humiliation in Russia.

### *The Sarajevo Crisis and the Outbreak of War*

On June 28, 1914, a young Bosnian revolutionary, a member of the Serbian secret society called "Union or Death" and commonly known as the Black Hand, acting with the knowledge of certain Serbian officials, assassinated the heir to the Habsburg empire, the Archduke Francis Ferdinand, in the streets of Sarajevo, the Bosnian capital, in the Austrian Empire. The world was shocked at

---

*The assassination at Sarajevo*

this terrorist outrage and at first sympathized with the protests of the Austrian government. Francis Ferdinand, who would soon have become emperor, was known to favor some kind of transformation of Austria-Hungary, in which a more equal place might be given to the Slavs; but the reformer who makes a system work is the most dangerous of all enemies to the implacable revolutionary, and it is perhaps for this reason that the archduke was killed by the Black Hand.

The Austrian government was determined to end the South Slav separatism that was gnawing its empire to pieces. It decided to crush the independence of Serbia, the nucleus of South Slav agitation, though not to annex it, since most Austrians thought too many Slavs were living within the empire already. The Austrian government consulted the German to see how far it might go with the support of its ally. The Germans, issuing their famous "blank check," encouraged the Austrians to be firm. The Austrians, thus reassured of strong German support, dispatched a drastic ultimatum to Serbia, demanding among other things that Austrian officials be permitted to collaborate in investigating and punishing the perpetrators of the assassination. The Serbs counted on Russian support, judging that Russia could not yield in a Balkan crisis, for the third time in six years, without losing its influence in the Balkans altogether. The Russians in turn counted on France; and France, terrified at the possibility of being some day caught alone in a war with Germany and determined to keep Russia as an ally at any cost, in effect gave a blank check to Russia.

---

*The German "blank check"*

The Serbs rejected the critical item in the Austrian ultimatum as an infringement on Serbian sovereignty, and Austria thereupon declared war upon Serbia. Russia prepared to defend Serbia and hence to fight Austria. Expecting that Austria would be joined by Germany, Russia rashly mobilized its army on the German as well as the Austrian frontier. Since the power which first mobilized had all the advantages of a rapid offensive, the German government demanded an end to the Russian mobilization on its border and, receiving no answer, declared war on Russia on August 1, 1914. Convinced that France would in any case enter the war on the side of Russia, Germany also declared war on France on August 3. These German declarations of war would become the basis for later charges that Germany bore complete responsibility, or guilt, for the huge human and financial costs that all European nations would pay over the next four years.

The German decisions were posited on a reckless hope that Great Britain might not enter the war at all. England was bound by no formal military alliance. Even the French did not know for certain, as late as August 3, whether the British would join them in war.

---

*English isolation*

The British clung to scraps of their old proud isolation; they hesitated to make a final choice of sides; and as the foreign secretary Sir Edward Grey repeatedly explained, in England only parliament could declare war, so the foreign office could make no binding promise of war in advance. It has often been said that had the German government known as a positive fact that England would fight, the war might not have come. Hence the evasiveness of British policy is made a contributing cause of the war. In reality, the probability that England would fight was so great that to underestimate it, as the Germans did, was an act of supreme folly. The British government was deeply committed to France, especially through naval agreements, but what swept the British public toward the French was the German invasion of Belgium. The German plan to crush France quickly was such that it could succeed only by crossing Belgium. When the Belgians protested, the Germans invaded anyway, violating the treaty of 1839 which had guaranteed Belgian neutrality. England declared war on Germany on August 4.

Archduke Francis Ferdinand of Austria meets here with leaders of the Catholic church during his visit to Sarajevo on June 28, 1914. Shortly after this meeting, the Archduke (the tall man with a moustache) and his wife were assassinated by a Bosnian nationalist. The ensuing diplomatic crisis mobilized all of the nations in the European alliance system and led to the First World War of 1914–1918.

(Getty Images)

The mere narration of successive crises does not explain why the chief nations of Europe within a few days became locked in combat over the murder of an imperial personage. Among more obvious general causes, the alliance system and nationalist ideologies should be emphasized. Europe was divided into two armed camps. Every incident tended to become a test of strength between the two. A specific national incident, such as German intervention in Morocco, or the assassination of Francis Ferdinand, could not be settled on its own merits, merely by the parties concerned. However it was dealt with, one of the two camps was deemed to have lost or gained and hence to have lost or gained influence in other incidents, of perhaps greater importance, that would arise in the future. Each nation felt that it must stand by its allies whatever the specific issue. This was because all lived in the fear of war, of some nameless future war in which allies would be necessary.

The Germans complained of being “encircled” by France and Russia. They dreaded the day when they might have to face a war on two fronts. Willing to accept even a European-wide war to break their threatened “encirclement” by the Entente powers, they were obliged to hold to their one ally, Austria-Hungary, which was in turn able to sell its support at its own price. The French dreaded a coming conflict with Germany, which in 40

---

*Causes of the First  
World War*

### THE BALKANS, 1878 AND 1914

Austria and Russia had gradually pushed the Ottoman Empire out of Europe since 1699. The Congress of Berlin in 1878 attempted to stabilize the situation by recognizing Romania, Serbia, and Montenegro as independent monarchies, and northern Bulgaria as an autonomous principality within the Ottoman Empire. The ambitions and discontents of these new states, of Greece, and of non-Turkish people remaining within the Ottoman Empire culminated in the Balkan Wars of 1912–1913. Albania then became independent, and Serbia, Bulgaria, and Greece became contiguous. Austrian and Russian pressures meanwhile continued; in 1908 Austria annexed Bosnia, where the South Slav population, like the Serbs, was hostile to the Austrian annexation.

years had far surpassed France in population and industrial strength; they were obliged to cling to their ally Russia, which therefore could oblige the French to yield to Russian wishes. As for Russia and Austria, they were both tottering empires. Especially after 1900, the tsarist regime suffered from endemic revolutionism and the Habsburg empire from chronic nationalistic agitation. Authorities in both empires became desperate. Like the Serbs, they had little to lose and were therefore reckless. It was Russia that drew France and hence England into war in 1914, and Austria that drew Germany. Seen in this light, the tragedy of 1914 is that the instability and nationalist conflicts in the politically bankrupt parts of Europe, through the alliance system, dragged the more advanced parts automatically into ruin.

The German Empire, too, faced an internal crisis. The Social Democrats became the largest party in the Reichstag in 1912. Their sentiments for the most part were antimilitarist and antiwar. But the German imperial government recognized no responsibility to a majority in the chamber. Policy was determined by men of the old unreconstructed upper class, in which army and navy interests, now reinforced by new business interests, were strong; and even moderates and liberals shared in the ambition to make Germany a world power, the equal of any. The perplexities the ruling groups faced at home, the feeling that

their position was being undermined by the Social Democrats, may have made them more willing to view war as a way out. And while it is not true that Germany alone started the war, as its enemies in 1914 popularly believed, it must be granted that its policies had for some years been peremptory, arrogant, devious, and obstinate. In a broad sense, the emergence of a consolidated industrial Germany after 1870, making its bid for world-power status relatively late, was a distant and basic cause of war.

The alliance system was only a symptom of deeper trouble. In a word, the world had an international economy but an anarchic system of competing, sovereign national states. Economically, each European people now required habitual contact with the world as a whole. Each people was to that extent dependent and insecure. Industrial countries were especially vulnerable, relying as they did on import of raw materials and food and on export of goods, services, or capital in return. There was, however, no world state to police the worldwide system, assuring participation in the world economy to all nations under all conditions. Each nation had to take care of itself. Hence came much of the popular support for nationalist political ideologies and much of the drive for imperialism, in which each Great Power tried to stake out part of the world system for itself. And hence also came the quest for allies and for binding alliances. The alliances, in a world that was in the strict sense anarchic (and seemed likely to remain so), were a means by which each nation attempted to bolster its security; to assure that it would not be cut off, conquered, or subjected to another's will; and to obtain some hope of economic success in the competitive struggle for use of the world's goods.

## 85. THE ARMED STALEMATE

The First World War lasted over four years, from 1914 to the end of 1918, the United States entering with effective result in the last year. Germany and its allies were called the Central Powers, while the Entente governments were termed the Allies. The war was appalling in its human costs; on the western front, more men were used and killed in the First World War than in the Second.

At first a short war, as in 1870, was universally expected. The German General Staff had its plans ready for a two-front struggle against France and Russia. The disadvantage of fighting on two fronts was offset by the possession of good rail lines, which allowed the rapid shuttling of troops from one front to the other. The German war plan, known as the Schlieffen Plan, rested upon this fact. The idea was first to defeat France by the rapid wheeling motion of a tremendous army through Belgium and then to turn at more leisure against Russia, whose great size and less-developed railways would make its deployment much slower.

---

*The Schlieffen Plan*

### *The War on Land, 1914–1916*

On August 3, 1914, the Germans launched 78 infantry divisions in the West. They were opposed by 72 French divisions, 5 British, and 6 Belgian. The Germans swept irresistibly forward. The Schlieffen Plan seemed to be moving like clockwork. Germany's civilian authorities made plans for the conquest and annexation of large parts of Europe. Then a hitch occurred: the Russians were fulfilling the terms of their alliance; the 10 billion francs invested by the French in Russia now paid their most significant dividend. The Russians pushed two armies into Germany, penetrating into East Prussia. Moltke

### THE FIRST WORLD WAR

Land fighting in the First World War was mainly confined to the areas shown by the darker horizontal shading. The huge battles on the western front, which produced more casualties than all of the battles in the West during the Second World War, swayed back and forth over an area less than 100 miles wide.

Almost everyone in 1914 expected a short war and a quick resolution of the international crisis. These German soldiers at the Berlin railway station were preparing to board trains that would take them to the front. Accompanied by their wives or girlfriends and carrying flowers, they departed Berlin amid the optimistic fanfare that spread across all Europe in the early days of the war.

(akg-images)

withdrew forces from the German right wing in France, on August 26, for service in the East. The Germans moved on, but their striking arm was weakened and their lines of communication were already overextended. Joffre, the French commander, regrouping his forces, with strong support from the relatively small British contingent and at exactly the right moment, ordered a counterattack.

The ensuing battle of the Marne, fought from September 5 to 12, changed the whole character of the war. The Germans were obliged to

---

*The battle of the  
Marne*

**retreat.** The hope of felling France at a single blow was ended. Each side now tried to outflank and destroy the other until the battle lines extended to the sea. The Germans failed to win control of the Channel ports; French and British communications remained uninterrupted. **For these reverses the great victories meanwhile won by the Germans on the eastern front, though of gigantic proportions** (the battles of Tannenberg and the Masurian Lakes, at which 225,000 Russians were captured), **were in the long run small consolation.**

In the West the war of movement now settled into a war of position. **The armies on the western front became almost immobile.** The units of horse cavalry—the uhlans, hussars, and lancers that had pranced off to war in high spirits—disappeared from the field. Since aviation was barely beginning, and motor transport was still new (the armies had trucks, but no self-propelled guns, and no tanks until very late in the war), the basic soldier more than ever was the man on foot.

---

*War in the trenches*

**The most deadly new weapon was the machine gun, which made it impossible for foot soldiers to advance across open fields without overwhelming artillery preparation. The result was a long military stalemate in which the indispensable infantry sought protection in a vast network of trenches.**

In 1915 the Germans and Austro-Hungarians put their main effort into an attempt to knock out Russia. They pressed far into the tsarist empire. The Russian losses were enormous—two million killed, wounded, or captured in 1915 alone. But at the end of the year the Russian army was still fighting. Meanwhile the British and French, hoping to open up communications with Russia, launched a naval attack on Turkey, aiming at Constantinople by way of the Dardanelles. They poured 450,000 men into the narrow peninsula of Gallipoli, of whom 145,000 were killed or wounded. After almost a year the enterprise was given up as a failure.

In 1916 both sides turned again to northern France in an attempt to break the deadlock. The Allies planned a great offensive along the river Somme, while the Germans prepared one in the neighborhood of Verdun. The Germans attacked Verdun in February. The French commander Joffre put in General Pétain to defend it but resisted committing his main reserves, holding them for the coming offensive on the Somme. Pétain and his troops held to minimum numbers, thus had to take the full weight of the German army. **The battle of Verdun lasted almost ten months, engaged about two million soldiers, and became a legend of determined French resistance (“they shall not pass”).** The Germans finally abandoned the attack because they sustained almost as many casualties as the French—330,000 to 350,000.

---

*The battle of Verdun*

---

*The battle of the Somme*

**While the inferno still raged at Verdun, the Allies opened their offensive on the Somme in July. They brought up unheard of amounts of artillery, and the newly raised British army was present in force.** The idea was to break through the German line simply by stupendous pressure. On both sides, Allied and German, the art of generalship had sunk to an all-time low. Despite a weeklong artillery bombardment the British lost 60,000 men on the first day of the attack. In a week they had advanced only one mile along a six-mile front. In a month they had advanced less than three miles. **The battle of the Somme, lasting from July to October, cost the Germans about 500,000 men, the British 400,000, and the French 200,000. Nothing of any value had been gained. It was, indeed, at the Somme that the British first used the tank, an armored vehicle with caterpillar tracks that could crash through barbed wire, lunge over trenches, and smash into machine gun nests; but the tanks were introduced in**

The miseries and dangers of the muddy trenches on the western front are conveyed in this photograph of soldiers in the battle of Passchendaele in 1917. Human life in such conditions became a raw struggle for survival; most soldiers reported that the grinding, daily experience on a battlefield seemed far removed from the nationalism or political concerns of civilians and government leaders.

(Imperial War Museum, London)

such small numbers, and with such skepticism on the part of many commanders, that they had no effect on the battle.

### *The War at Sea*

With land armies thus helpless, both sides looked to the sea. The long preponderance of British sea power, and the more recent Anglo-German naval race, would now be tested. The British, with French aid, imposed a strict naval blockade. International law at the time placed goods headed for a country at war into two classes. One class was called contraband; it included munitions and certain specified raw materials which might be used in the manufacture of military equipment. The other class, including foodstuffs and raw cotton, was defined as noncontraband. A country was supposed, by international law, to be able to import noncontraband goods even in wartime. These terms of wartime law had been set forth as recently as 1909 at an international conference held in London. The purpose was to make it impossible for a sea power (that is, the British) to starve out an enemy in wartime or even to interfere with normal civilian production. The jealousy of Continental Europe for British sea power was an old story.

---

*Naval blockade*

Such law, if observed, would make the blockade of Germany entirely ineffective, and the Allies did not observe it. To starve out the enemy and ruin his economy was precisely their purpose. Economic warfare took its place alongside armed attack as a military weapon, as in the days of Napoleon. The Allies announced a new international law. The distinction between contraband and noncontraband was gradually abolished. The British navy (aided by the French) proceeded to stop all goods of whatever character destined for Germany or its allies. Neutrals, among whom the Americans, Dutch, and Scandinavians were the ones mainly affected, were not allowed to make for German ports at all.

The United States protested vehemently against these regulations and defended the rights of neutrals. It reasserted the distinction between contraband and noncontraband, claimed the right to trade with other neutrals, and upheld the "freedom of the seas." These claims led to mutual bad feelings between the American and British governments in 1915 and 1916. But when the United States entered the war, it adopted the Allied position, and its navy joined in enforcing exactly the same regulations. International law was in fact changed. In the Second World War the very words "contraband" and "freedom of the seas" were never heard.

The Germans countered with an attempt to blockade England. A few isolated German cruisers were able for some time to destroy British shipping in the several oceans of the world. But the Germans relied mainly on the submarine, against which the British naval power at first seemed helpless. The submarine was an unrefined weapon; a submarine commander could not always tell what kind of ship he was attacking, nor could he remove passengers, confiscate cargo, escort the vessel, or indeed do much except sink it. Citing British abuses of international law in justification, the German government in February 1915 declared the waters surrounding the British Isles to be a war zone, in which Allied vessels would be torpedoed and neutral vessels would be in grave danger.

---

#### *Submarine warfare*

Three months later the liner *Lusitania* was torpedoed off the Irish coast. About 1,200 persons were drowned, including about 120 American citizens. The *Lusitania* was a British ship; it carried munitions of war manufactured in the United States for Allied use, and the Germans had published ominous warnings in the New York papers that Americans should not take passage on it. Americans then believed that they should be able to sail safely, on peaceable errands, on the ship of a belligerent power in wartime. The loss of life shocked the country. President Wilson informed the Germans that another such act would be considered "deliberately unfriendly." The Germans, to avoid trouble, refrained for two years from making full use of their submarines. For two years the Allied use of the sea was only partly impeded.

---

#### *The Lusitania*

Allied access to the sea was confirmed by the one great naval engagement of the war, the battle of Jutland. The German admirals became restless at seeing their newly built navy skulking behind minefields on the German shores, yet they could not presume to challenge the superior British Grand Fleet, posted watchfully at Scapa Flow. They hoped, however, to decoy smaller formations of British ships, destroy them one by one, and perhaps eventually obtain enough of a naval balance in the North Sea to loosen the British blockade by which Germany was slowly being strangled. They were themselves, however, trapped into a major engagement in which the British Grand Fleet of 151 ships took them by surprise in the spring of 1916. After a few hours of furious combat the Germans were able to withdraw into mined waters. They had lost less tonnage and fewer men than the British. They had proved themselves to be dangerously proficient in naval combat. But they had failed to undermine the British preponderance at sea.

### *Diplomatic Maneuvers and Secret Agreements*

With no military solution in sight, both sides looked about for new allies. The Ottoman Empire, fearing Russia, had joined Germany and Austria-Hungary as early as October 1914. The leading new prospect was Italy, which, though formally a member of the Triple Alliance, had long ago drifted away from it. Both sides solicited the Italian government, which bargained imperturbably with both. The Italian public was divided, but extreme nationalists saw a chance to obtain their *irredenta*, the border regions in which Italians lived outside the national territory that had been incorporated at the time of national unification. The Italian government cast its lot with the Allies in the secret treaty of London of 1915. It was agreed that if the Allies won the war, Italy would receive (from Austria) the Trentino, the south Tyrol, Istria and the city of Trieste, and some of the Dalmatian Islands. If Britain and France took over Germany's African colonies, Italy should receive additional territory in Libya and Somaliland. The treaty of London, in short, continued the most brazen prewar practices of territorial expansionism, but the Allies were desperate for additional military support. Italy, thus bought, and probably against the will of most Italians, opened up a front against Austria-Hungary in May 1915.

---

*Italy joins the Allies*

The Allies likewise made plans for a final partition of the Ottoman Empire, which still reached from Constantinople through the Middle East into Arabia and into Mesopotamia (modern Iraq). By a secret treaty they agreed that, upon an Allied victory, Mesopotamia was to go to Britain, Syria and southeastern Asia Minor to France, small portions to Italy, and Kurdistan and Armenia to Russia.

Each side tampered with minorities and discontented groups living within the domains of the other. The Germans promised an independent Poland to embarrass Russia. They stirred up local nationalism in the Ukraine. They raised up a pro-German Flemish movement in Belgium. They persuaded the Ottoman sultan, as caliph, to proclaim a holy war in North Africa, hoping that irate Muslims would drive the British from Egypt and the French from Algeria. This had no success. German agents worked in Ireland and one Irish nationalist, Sir Roger Casement, landed in Ireland from a German submarine, precipitating the Easter Rebellion of 1916, which was suppressed by the British.

To Americans the most amazing of similar activities was the Zimmermann telegram. In 1916 an American military force had crossed the Mexican border in pursuit of bandits, against protests by the Mexican government. Relations between the United States and Germany were also deteriorating. In January 1917 the German state secretary for foreign affairs, Arthur Zimmermann, dispatched a telegram to the German minister at Mexico City, telling him what to say to the Mexican president. He was to say that if the United States went to war with Germany, the Germans would form an alliance with Mexico and if possible Japan, enabling Mexico to get back its "lost territories." These latter referred to the region conquered by the United States from Mexico in the 1840s—Texas, New Mexico, and Arizona (California was not mentioned). Zimmermann's telegram was intercepted and decoded by the British, who sent it to Washington. Printed in the newspapers, it shocked public opinion in the United States.

---

*The Zimmermann telegram*

The Allies were more successful in appealing to nationalist discontent, for the obvious reason that the most active national minorities were within the lands of their enemies. They were able to promise restoration of Alsace-Lorraine to France without difficulty. They promised independence to the Poles, though anticipating some difficulty as long as

Colonel T. E. Lawrence emerged as the key British liaison to Arab forces fighting for independence from the Ottoman Empire during the First World War. He appears in this photograph at Versailles (wearing a British army uniform and Arab headdress) behind the left shoulder of Prince Faisal, who became the British-appointed King of Iraq in 1921.

(Corbis)

the Russian monarchy stood. It was easier for them to favor national independence for Czechs, Slovaks, and South Slavs, since an Allied victory would dissolve the Austro-Hungarian empire.

But the Allied use of nationalist ambitions also extended from Europe into the Ottoman Empire and beyond. Within the Ottoman Empire the British aroused Arab hopes for independence. The British Colonel T. E. Lawrence led an insurrection against the Turks in the northwestern Arabian peninsula—a region called the Hejaz that includes the Muslim holy city of Mecca. Encouraged by Lawrence and the British to pursue aspirations for an independent Arab state, the emir Hussein of Hejaz in 1916 took the title of King of the Arabs and established a kingdom that reached from the Red Sea to the Persian Gulf. Meanwhile, Zionists saw in the impending Ottoman collapse the opportunity to realize their dream for a Jewish state in Palestine. Since Palestine was peopled by Arabs (and had been for over 1,000 years) the Zionist program collided with British plans to sponsor Arab nationalism. Nevertheless, the British Foreign Secretary, Arthur Balfour, issued the famous Balfour Declaration in 1917, promising the British government's support for the idea of a "Jewish

*Disruption in the  
Ottoman Empire*

homeland" in Palestine (though with protection for the rights of non-Jewish peoples) and also setting the foundations for a clash between Jewish and Arab nationalism, which has afflicted the Middle East down to the present.

For the Armenians these years were especially disastrous. They were a Christian people living in the eastern part of the Anatolian peninsula where it abuts on Russia, and like other peoples in the Ottoman Empire, including the Turks themselves, they had developed aspirations for a national state of their own, which conflicted with the plans of Turkish reformers to Turkify the empire. It was only 20 years since such clashes had produced the horrifying Armenian massacres of 1894. Now in 1915 the Turkish government, as the Russian army threatened its eastern frontier, ordered the deportation of Armenians from the war zone as potential sympathizers with Russia and the Western Allies. Supposedly they were to be resettled in Syria and Palestine. In fact, in the atmosphere of military crisis, political hatred, bureaucratic contempt, and wartime scarcities hundreds of thousands of Armenians perished in what many later defined as a genocidal massacre. Virtually no Armenians remained within what became the Turkish republic a few years later. The surviving Armenians became another of the world's scattered peoples with no state of their own except for a small Armenian republic, briefly independent after 1918, then part of the Soviet Union for 70 years, and finally independent again after 1991.

At the same time that they were seeking to disrupt and dismember the Ottoman Empire, the British and French were using the war as an opportunity to take control of the German colonies in Africa. The British foreign secretary, Sir Edward Grey, revealed to Colonel House, President Wilson's personal emissary, that the Allies did not intend that Germany should ever get its colonies back, though it also became clear that they did not intend to grant true independence to the people who lived there.

In China, too, the third important area of imperialist competition, the war accelerated the tendencies of preceding years. The Japanese saw their own opportunity in the self-slaughter of the Europeans. Japan had been allied to Britain since 1902, and in August 1914 the Japanese declared war on Germany. They soon overran the German concessions in China and the German islands in the Pacific, the Marshalls and Carolines. In January 1915 Japan presented its Twenty-One Demands on China, a secret ultimatum for further concessions, most of which the Chinese were obliged to accept. Japan thereby proceeded to turn Manchuria and north China into an exclusive protectorate.

---

---

*Japan in China*

As for the Germans, their war aims were even more expansionist and more menacing to existing boundaries in Europe itself. Early in September 1914, when a quick victory seemed within their grasp, Bethmann-Hollweg, who remained chancellor until the summer of 1917, drew up a list of German war aims which stayed unaltered until the end of hostilities. The plans called for an enlarged German Empire dominating all central Europe and annexations or satellites in both western and eastern Europe. In the east, Lithuania and other parts of the Baltic coast were to become German dependencies, large sections of Poland were to be directly annexed, and the remainder was to be joined with Austrian Galicia to form a German-dominated Polish state. In the west, Belgium was to become a German dependency to provide more direct access to the Atlantic, and French Lorraine with its rich iron ore was to be added to the already German parts of Alsace-Lorraine. Colonial adjustments, including the acquisition of most of central Africa from coast to coast, were also projected. The political map of Europe and of colonial Africa would thus be transformed in Germany's favor.

---

---

*German expansionism*

All these developments, especially the Allied negotiations, whether accomplished facts or secret agreements, affecting Europe, the Middle East, Asia, or Africa, became very troublesome later at the peace conference. They continued some of the most unsettling tendencies of European politics before the war. It does not appear that the Allies, until driven by Woodrow Wilson, gave any thought to means of controlling nationalism and what could be called international anarchy. As president of the United States, Wilson for a long time could see little to choose between the warring alliances, though his personal sympathies were with England and France. In 1916 he attempted to mediate, entering into confidential discussions with both sides; but both still hoped to win on their own terms, so negotiation was fruitless. Wilson judged that most Americans wished to remain uninvolved, and in November 1916 he was reelected to a second term, on the popular cry "he kept us out of war." Wilson urged a true neutrality of thought and feeling, or a settlement, as he said, that should be a "peace without victory."

---

A "peace without victory"

As of the end of 1916, it is hard to see how the First World War would have turned out had not two new sets of forces altered the stalemate.

## 86. THE COLLAPSE OF RUSSIA AND THE INTERVENTION OF THE UNITED STATES

### *The Withdrawal of Russia: Revolution and the Treaty of Brest-Litovsk*

The first victim of the First World War, among governments, was the Russian empire. As the Russo-Japanese War had led to the Revolution of 1905 in Russia, so the more ruinous conflict in Europe led to the far greater Revolution of 1917. The story of the Russian Revolution is told in the following chapter. It is enough to say here that war offered a test that the tsarist government could not meet. Bungling, dishonest, and secretive, incapable of supplying the materiel required for modern fighting, driving hordes of peasants into battle in some cases even without rifles, losing men by the millions yet offering no goal to inspire sacrifice, the tsarist regime lost the loyalty of all elements of its people.

In March 1917 the troops in St. Petersburg mutinied, while strikes and riots desolated the city. The Duma, or Russian parliament, used the occasion to press its demands for reform. On March 15 Nicholas II abdicated. A Provisional Government took over, made up of liberal noblemen and middle-class leaders, generally democrats and constitutionalists, with at first only one socialist. The Provisional Government held power from March to November 1917. Its members, who shared in the liberalism of western Europe, believed that a liberal and parliamentary regime could not succeed in Russia unless the German Empire were defeated. They took steps, therefore, to prosecute the war with a new vigor. In July 1917 a new offensive was opened, but the demoralized Russian armies again collapsed.

---

The Provisional Government

The mass of the Russian people were wearied of a war in which they were asked to suffer so much for so little. Nor did Russian peasants or workers feel any enthusiasm for the westernized intellectuals and professional men who headed the Provisional Government. Ordinary Russians, so far as they had any politics, were drawn to one or another of numerous forms of socialism, Marxist and non-Marxist. The Russian Marxist party, the Social Democrats, was divided between Menshevik and Bolshevik factions, the latter being more radical. The Bolshevik leaders had for some time lived as exiles in western

Europe. Their principal spokesman, V. I. Lenin, with a few others, had spent the war years in Switzerland. In April 1917 the German government offered safe passage to Lenin through Germany to Russia. A railway car full of Bolsheviks, carefully "sealed" to prevent infection of Germany, was thus hauled by a German train to the frontier, whence it passed on to St. Petersburg, or Petrograd, as the city was renamed during the war. The aim of the Germans, in this affair, as in the sending of Roger Casement to Ireland in a submarine, was of course to use a kind of psychological warfare against the enemy's home front. It was to promote rebellion against the Provisional Government and thus at last to eliminate Russia.

---

---

*The Bolsheviks return from exile*

The position of the Provisional Government became rapidly more untenable until by November 1917 the situation was so confused that Lenin and the Bolsheviks were able to seize power. The Bolsheviks stood for peace with Germany, partly to win popular favor in Russia and partly because they regarded the war as a struggle among capitalist, imperialist powers which should be left to exhaust and destroy each other for the benefit of socialism. On December 3, 1917, a peace conference opened between the Bolsheviks and the Germans at Brest-Litovsk. Meanwhile the peoples within the western border of the old Russia—Poles, Ukrainians, Bessarabians, Estonians, Latvians, Finns—with German backing, proclaimed their national independence. The Bolsheviks, since they would not or could not fight, were obliged to sign with Germany a treaty to which they vehemently objected, the treaty of Brest-Litovsk of March 3, 1918. By this treaty they acknowledged the "independence," or at least the loss to Russia, of Poland, the Ukraine, Finland, and the Baltic provinces.

---

---

*The treaty of Brest-Litovsk*

For the Germans the treaty of Brest-Litovsk represented their maximum success during the First World War; it accomplished some of the war aims formulated at the beginning of hostilities. Not only had they neutralized Russia, they also now dominated eastern Europe through puppets placed at the head of the new independent states. A certain number of German troops remained in the East to preserve the new arrangements. But it was no longer a two-front war. Masses of the German army were shifted from east to west. The High Command, under Hindenburg and Ludendorff since August 1916, prepared to concentrate for a last blow in France to end the war in 1918.

The year 1918 was essentially a race to see whether American aid could reach Europe soon enough, in sufficient amount, to offset the added strength which Germany drew from the collapse of Russia. In March of that year the Germans, beginning with gas attacks and a bombardment by 6,000 artillery pieces, opened a formidable offensive before which the French and British both recoiled. On May 30, 1918, the Germans again stood at the Marne, 37 miles from Paris. At this time there were only two American divisions in action, though the United States had been at war for over a year. At this point in the story there are therefore two open questions: how the United States entered the war and the length of time required for the buildup of its forces overseas.

---

---

*American intervention*

### *The United States and the War*

We have seen how President Wilson clung persistently to neutrality. The American people were divided. Many had been born in Europe or were the children of immigrants. Those of Irish origin were anti-British; those of German origin were often sympathetic to Germany. On the other hand, since the time of the

---

---

*America divided*

Spanish-American and Boer wars, a noticeable current of friendliness to the English had been running stronger than ever before in American history. The sale of war materiel to the Allies and the purchase of the bonds of Allied governments had given certain limited though influential circles a material interest in an Allied victory. American idealism was on the side of England and France, so far as it was not isolationist. An Allied victory would clearly advance the cause of democracy, freedom, and progress far more than a victory of the German Empire. On the other hand, England and France were suspected of somewhat impure motives, and they were allied with the Russian autocracy, the reactionary and brutal tsardom.

The fall of tsarism made a great impression. Democrats and progressives now came forward even in Russia. No one had ever heard of Lenin or foresaw the Bolshevik Revolution. It seemed in the spring of 1917 that Russia was struggling along the path that England, France, and America had already taken. An ideological barrier had dropped away, and the demand for American intervention to safeguard democracy became more insistent.

The Germans gave up the attempt to keep the United States out. Constricted ever more tightly by the blockade, and failing to get a decision on land, the German government and High Command listened more readily to the submarine experts, who declared that if given a free hand they could force British surrender in six months. It was the chief example in the First World War of the claim that one branch of the service could win the war alone. Civilian and diplomatic members of the government objected, fearing the consequences of war with the United States. They were overruled; it was a good example of

the way in which, in Germany, the army and navy had taken the highest policy into their hands. Unrestricted submarine warfare was to be resumed on February 1, 1917. It was foreseen that the United States would declare war, but the German High Command believed that this would make no immediate difference. They estimated in 1917 (correctly) that between the

time when the United States entered a European war and the time when it could take part with its own army about a year must intervene. Meanwhile, the planners said, in six months they could force Britain to accept defeat.

On January 31, 1917, the Germans notified Wilson of the resumption of unrestricted submarine attacks. They announced that they would sink on sight all merchant vessels found in a zone around the British Isles or in the Mediterranean. Wilson broke off diplomatic relations and ordered the arming of American freighters. Meanwhile, the publication of the Zimmermann telegram convinced many Americans of German aggressiveness. German secret agents also had been at work in America, fomenting strikes and causing explosions in factories engaged in the manufacture of munitions for the Allies. In February and March several American ships were sunk. Americans regarded all these activities as an

interference with their rights as neutrals. Wilson at last concluded that Germany was a menace. Having made his decision, Wilson saw a clear-cut issue between right and wrong, and he obtained a rousing declaration of war from Congress, on April 6, 1917. The United States went to war "to make the world safe for democracy."

At first the German campaign realized and even exceeded the predictions of its sponsors. In February 1917 the Germans sank 540,000 tons of shipping; in March, 578,000 tons; in April, as the days grew longer, 874,000 tons. Something akin to terror seized the government in London. Britain was reduced to a six-week reserve of food. Gradually countermeasures were developed—mine barges, hydrophones, depth charges, airplane reconnaissance, and most of all the convoy. It was found that a hundred or more freighters

---

Unrestricted  
submarine warfare

---

"To make the world  
safe for democracy"

together, though all had to steam at the pace of the slowest, could be protected by a sufficient concentration of warships to keep submarines away. The United States navy, which, unlike the army, was of considerable size and ready for combat, supplied enough additional force to the Allies to make convoying and other antisubmarine measures highly effective. By the end of 1917 the submarine was no more than a nuisance. For the Germans the great plan produced the anticipated penalty without the reward—its net result was only to add America to their enemies.

On the western front in 1917, while the Americans desperately got themselves ready for the war they had entered, the French and British continued to hold the line. The French, finding in General Nivelle a commander who still believed in the breakthrough, launched an offensive so unsuccessful and so bloody that mutiny spread through the French army. Pétain replaced Nivelle and restored discipline to the exhausted and disillusioned soldiers, but he had no thought of further attack. "I am waiting for the Americans and the tanks," he said. The British then assumed the main burden. For three months late in 1917 they fought the dismal battle of Passchendaele. They advanced five miles, near Ypres, at a cost of 400,000 men. At the very end of 1917 the British surprised the Germans with a raid by 380 tanks, which penetrated deep into the German lines, but were obliged to withdraw, since no reserve of fresh infantry was at hand to exploit their success.

---

---

*The French and  
British hold the line*

Meanwhile the Austro-Hungarians, strongly reinforced by German troops, overwhelmed the Italians at the disastrous battle of Caporetto. The Central Powers streamed into northern Italy, but the Italians, with British and French reinforcements, were able to hold the line. The net effect of the campaigns of 1917 and of the repulse of the submarine at the same time was to reemphasize the stalemate in Europe, incline the weary Allies to await the Americans, and give the Americans what they most needed—time.

The Americans made good use of the time given them. Conscription, which was democratically called selective service, was adopted immediately after the declaration of war. The United States army, whose professionals in 1916 numbered only 130,000, performed the mammoth feat of turning over 3.5 million civilians into soldiers. With the navy, the United States came to have over 4 million in its armed services (which may be compared with over 12 million in the Second World War). Aid flowed to the Allies. To the loans already made through private bankers were added some \$10 billion lent by the American government itself. The Allies used the money mainly to buy food and munitions in the United States. American farms and factories, which had already prospered by selling to the Allies during the period of neutrality, now broke all records for production. Civilian industry was converted to war uses; radiator factories turned out guns, and piano factories manufactured airplane wings. Every possible means was employed to build up ocean shipping, without which neither American supplies nor American armies could reach the theater of war. Available shipping was increased from one million to ten million tons.

---

---

*America mobilizes for  
war*

Civilian consumption was drastically reduced. Eight thousand tons of steel were saved in the manufacture of women's corsets and 75,000 tons of tin were spared in the making of children's toy wagons. Every week people observed meatless Tuesday, and sugar was rationed. Daylight-saving time, invented in Europe during the war, was introduced to save coal. By such means the United States made enormous stocks available for its Allies as well as itself, though for some items, notably airplanes and artillery ammunition, the American armies, when they reached France, drew heavily on British and French manufactures.

*The Final Phase of the War*

The Germans, as we have seen, victorious in the east, opened a great final offensive in the west in the spring of 1918, hoping to force a decision before American participation turned the balance forever. To oppose it, a unity of command was achieved for the first time when a French general, Ferdinand Foch, was made commander in chief of all Allied forces in France, with the national commanders subordinate to him, including Pershing for the Americans. In June the Germans first made contact with American troops in significant force, meeting the Second Division at Château-Thierry. The German position was so favorable that civilians in the German government thought it opportune to make a last effort at a compromise peace. The military, headed by Hindenburg and Ludendorff, successfully blocked any such attempts; they preferred one final gamble. The German armies reached their farthest advance on July 15 along the Marne.

There were now nine American divisions in the Allied line. Foch used them to spearhead his counterattack on July 18. The badly overstrained Germans began to falter. Over 250,000 American troops were now landing in France every month. The final Allied offensive which opened in September, with American troops in the Argonne occupying an eastern sector, proved more than the Germans could withstand. The German High Command notified its government that it could not win the war. The German foreign office made peace overtures to President Wilson. An armistice was arranged, and on November 11, 1918, firing ceased on the western front.

*The armistice*

Since Germany's allies had surrendered during the preceding weeks, the deadly, grinding battles were finally over, but the war continued to affect almost every aspect of European politics and society. The horror it brought to individual lives cannot be told by statistics, which dryly report that almost 10 million men had been killed and 20 million had been wounded. Each of the European Great Powers (except Italy) lost from one million to two million in killed alone. The United States, with some 330,000 casualties of all types (of whom 115,000 died) lost in the entire war fewer men than the main combatants had lost in such a single battle as Verdun or Passchendaele. American assistance was decisive in the defeat of Germany. It came late in the war, when the others had been struggling for almost four years, so that the mere beginnings of American military action were enough to turn the scale. On the date of the armistice there were two million American soldiers in France, and another million were on the way. But the American army had really been in combat only four months. During the whole year 1918, out of every hundred artillery shells that were fired by the three Allied armies, the French fired 51, the British fired 43, and the Americans fired only 6.

The war was thus less costly for the United States than for any of the other major military powers. About 50,000 Americans were killed in battle. Most other deaths were caused by disease, including the deadly influenza epidemic of 1918—which killed as many as 43,000 U.S. soldiers over several months. The horrible toll of military deaths in all countries during the World War was actually far surpassed in 1918–1919 by the worldwide influenza pandemic that caused at least 50 million deaths across the globe. A virulent new strain of virus (called the Spanish flu) was the source of the disease, and some historians now believe that perhaps up to 100 million persons died as it moved through much of Africa, Latin America, and Asia as well as Europe and North America. This rapidly spreading pandemic became one of the most deadly events in all of world history, and it added to the profound sense of loss that affected people everywhere after the Great War.

These American soldiers were part of the divisions that began to arrive in France during 1917, but the American military presence did not become significant until the following year. The steady arrival of fresh troops from the United States enabled the Allied commanders to launch a decisive final offensive and forced the German high command to recognize that Germany could not win the war.

(Getty Images)

## 87. THE COLLAPSE OF THE AUSTRIAN AND GERMAN EMPIRES

The war proved as fatal to the German and Austro-Hungarian empires as to the Russian. The subject nationalities in the Austro-Hungarian Empire, or the “national councils” representing them in the Western capitals, obtained recognition from the Allies, and in October 1918 declared their independence. The last Habsburg emperor, Charles I, abdicated on November 12, and on the next day Austria was proclaimed a republic, as was Hungary in the following week. Before any peace conference could convene, the new states of Czechoslovakia, Yugoslavia, an enlarged Romania, a republican Hungary, and a miniature republican Austria were in existence by their own action.

*Nationalities gain independence*

The German Empire stood solid until the closing weeks. Liberals, democrats, and socialists had lately begun to press for peace and democratization. Yet it was the High

Command itself that precipitated the debacle. In the last years of the war dictatorial powers had become concentrated in the hands of General Ludendorff, and in September 1918 only he and his closest military associates realized that the German cause was hopeless. On September 29, at supreme headquarters at Spa in Belgium, Ludendorff informed the Kaiser that Germany must ask for peace. He urged that a new government be formed in Berlin reflecting the majority in the Reichstag, on democratic, parliamentary principles.

In calling for immediate peace negotiations, he seems to have had two ideas in mind. First, he might win time to regroup his armies and prepare a new offensive. Or if collapse became unavoidable, then the civilian or democratic elements in Germany would be the ones to sue for peace.

The liberal Prince Max of Baden was found to head a cabinet in which even socialists were included. In October various reforms were enacted, the Bismarckian system was ended, and Germany became a liberal constitutional monarchy. These changes served the purpose of Ludendorff and other generals because the German military caste, at the moment of Germany's crisis, was more eager to save the army than to save the empire. The army must never admit surrender; that was an affair for small men in business suits. Emperor, High Command, officers, and aristocrats were unloading frantically upon civilians.

President Wilson unwittingly played into their hands. Speaking now as the chief of the Allied coalition, the one to whom peace overtures were first made, he insisted that the German government must become more democratic. It may be recalled how Bismarck, after defeating France in 1871, demanded a general election in France before making peace. Wilson, unlike Bismarck, really believed in democracy; but in a practical way his position was the same. He wanted to be sure that he was dealing with the German people rather than with a discredited elite. He wanted it to be the real Germany that applied for and accepted the Allied terms. In Germany, as realization of the military disaster spread, many people began to regard the Kaiser as an obstacle to peace. Or they felt that Germany would obtain better terms if it appeared before the Allies as a republic. Even the officer corps, to halt the fighting before the army disintegrated, began to talk of abdication. Sailors mutinied at Kiel on November 3, and councils of workers and soldiers were formed in various cities. The socialists threatened to withdraw from the newly formed cabinet (that is, go into opposition and end the representative nature of the new government) unless William II abdicated. A general strike, led by minority socialists and syndicalists, began on November 9. "Abdication," Prince Max told the emperor, "is a dreadful thing, but a government without the socialists would be a worse danger for the country." William II abdicated on November 9, and slipped across the frontier into Holland, where despite cries to try him as a "war criminal" he lived quietly until his death in 1941. Germany was proclaimed a republic on the day he abdicated. Two days later the war stopped.

The fall of the empire in Germany, with the consequent adoption of the republic, did not arise from deep revolutionary action or change of basic sentiment in the German people. It was an episode of the war. The republic (soon called the Weimar Republic) arose because the victorious enemy demanded it, because the German people craved peace, because they wished to avoid forcible revolution, and because the old German military class, to save its face and its future strength, wished at least temporarily to be excused. When the war

ended, the German army was still in France, its discipline and organization still apparently unimpaired. No hostile shot had been fired on German soil. It was said later, by some, that the army had not been defeated, that it had been "stabbed in the back" by a dissolving civilian home front. This was untrue; it was the panic-stricken Ludendorff who first cried

---

Democracy in  
Germany

---

The Weimar  
Republic

for “democracy.” But the circumstances in which the German republic originated made its later history, and hence all later history, very troubled.

## 88. THE ECONOMIC, SOCIAL, AND CULTURAL IMPACT OF THE WAR

### *Effects on Capitalism: Government-Regulated Economies*

European society was forced by the First World War into many basic changes that were to prove more lasting than the war itself. First of all, **the war profoundly affected capitalism as previously known**. Essential to the older capitalism (or economic liberalism, or free private enterprise) had been the idea that government should leave business alone, or at the most regulate certain general conditions under which businesses went about their affairs. Before 1914 **governments had increasingly entered the economic field**. They had put up tariffs, protected national industries, searched for markets or raw materials by imperialist expansion, or passed protective social legislation to benefit the wage-earning classes. **During the war all belligerent governments controlled the economic system far more minutely**. Indeed, the idea of the “planned economy” was first applied in the First World War as the warring states attempted to direct all the wealth, resources, and moral purpose of their societies to a single end.

---

---

*The “planned  
economy”*

Since no one had expected a long war, no one had made any plans for industrial mobilization. Everything had to be improvised. **By 1916 each government had set up a system of boards, bureaus, councils, and commissions to coordinate its war effort**. The aim was to see that all labor was effectively utilized and that all natural resources within the country, and all that could possibly be imported, were employed where they would do the most good. In the stress of war free competition was found to be wasteful; undirected private enterprise was found to be too uncertain and too slow. The profit motive came into disrepute. Those who exploited shortages to make big profits were stigmatized as profiteers. **Production for civilian use, or for mere luxury purposes, was cut to a minimum**. Businesses were **not** allowed to set up or close down factories as they chose. It was impossible to start a new business without government approval, because the flotation of stocks and bonds was controlled and raw materials were made available only as the government permitted. It was equally impossible to shut down a business engaged in war production. If a factory was inefficient or unprofitable, the government kept it going anyway, making up the losses, so that in some cases management came to expect government support. **Here too the tests of competition and profitability were abandoned**.

---

---

*The “rationalization”  
of production*

The new goal was coordination or “rationalization” of production **in the interests of the country as a whole**. Labor was discouraged from protesting against hours or wage scales, and the **big unions** generally agreed to **refrain from strikes**. For the upper and middle classes it became embarrassing to show their comforts too openly. **It was patriotic to eat meagerly and to wear old clothes**. War gave a new impetus even to the idea of economic equality, if only to enlist rich and poor alike in a common cause.

---

---

*The allocation of  
manpower*

**Military conscription was the first step in the allocation of manpower**. Draft boards told some men to report to the army, granting exemptions to others to work safely in war industries. **Given the casualty rates at the front, state determination over individual life could hardly go farther**. With the insatiable need

for troops, drawing in men originally exempted or at first rejected as physically inadequate, great numbers of women poured into factories and offices, and in Britain even into newly organized women's branches of the armed forces. Women took over many jobs which it had been thought only men could do. Women did not remain in the labor force after the war in such large numbers, most making way for the returning veterans; but the wartime experience in this and the Second World War was part of the social transition by which the labor force in all countries was enlarged, women's place in modern society was revolutionized, and the lives and outlook of millions of individual women were turned more actively toward participation in national economies. The First World War thus contributed to the redefinition or reorganization of women's work—a social process that had begun in the early Industrial Revolution and that would be intensified during the Second World War and in the years that followed.

During the war governments did not directly force men or women to drop one job and take another. There was no systematic labor conscription except in Germany. But by influencing wage scales, granting draft exemptions, forcing some industries to expand and others to contract or stand still, and propagandizing the idea that work in an arms factory was patriotic, the state shifted vast numbers of workers to war production. Impressed or "slave" labor was not used in the First World War, nor were prisoners of war obliged to give labor service, though there were some abuses of these rules of international law by the Germans, who were possibly the least scrupulous and certainly the most hard-pressed.

---

#### Export controls

Governments controlled all foreign trade. It was intolerable to let private citizens ship off the country's resources at their own whim. It was equally intolerable to let them use up foreign exchange by importing unneeded goods or to drive up prices of necessities by competing with one another. Foreign trade became a state monopoly, in which private firms operated under strict licenses and quotas. The greatest of the exporting countries was the United States, whose annual exports rose from \$2 billion to \$6 billion between 1914 and 1918. The endless demand for American farm and factory products naturally drove up prices, which, however, were fixed by law in 1917, for the most important items.

As for the European Allies, which even before the war had exported less than they imported and were now exporting as little as possible, they could make purchases in the United States only by enormous loans from the American government. British and French citizens, under pressure from their own governments, sold off their American stocks and bonds, which were bought up by Americans. The former owners received pounds sterling or francs from their own governments, which in return took and spent the dollars paid by the new American owners. In this way the United States ceased to be a debtor country (it had owed some \$4 billion to Europeans in 1914), and became the world's leading creditor country. By 1919 Europeans were in debt to the United States by about \$10 billion.

---

#### Shipping and imports

The Allies controlled the sea, but they never had enough shipping to meet rising demands, especially with German submarines taking a steady though fluctuating toll. Each government set up a shipping board to expand shipbuilding at any cost and to assign available shipping space to whatever purposes—troop movements, rubber imports, foodstuffs—the government considered most urgent in view of overall plans. Control and allocation eventually became international under the Interallied Shipping Council, of which the United States was a member after entering the war. In England and France, where all manufactures depended

The need for workers during the First World War opened opportunities for women in jobs that were traditionally open only to men. These German women, who were working in an armaments factory in 1917, exemplified this trend in the workforce and also the general mobilization of an entire population to serve the demands of modern warfare.

(akg-images)

on imports, government control of shipping and hence of imports was itself enough to give control over the whole economy.

Germany, denied access to the sea and also to Russia and western Europe, was obliged to adopt unprecedented measures of self-sufficiency. The Germans went with less food than other belligerents. Their government controls became more thorough and more efficient, producing what they called "war socialism." In Walter Rathenau they found a man with the necessary ideas. He was a Jewish industrialist, son of the head of the German electrical trust. One of the first to foresee a long war, he launched a program for the mobilization of raw materials. Early in the war it seemed that Germany might be soon defeated by lack of nitrogen, necessary to make explosives. Rathenau sweepingly requisitioned every conceivable natural source, including the very manure from the farmers' barnyards, until German chemists succeeded in extracting nitrogen from the air. The German chemical industry developed many other substitute products, such as synthetic rubber. German production was organized into war companies, one for each line of industry, with private business firms working under close government supervision.

---

*German "war socialism"*

The other belligerent governments also replaced competition between individual firms and factories with coordination. Consortiums of industrialists in France allocated raw materials and government orders within each industry. The War Industries Board did the same in the United States. In Britain, similar methods became so efficient that by 1918, for example, the country produced every two weeks as many shells as in the whole first year of the war and turned out 70 times as much heavy artillery.

*Inflation, Industrial Changes, Control of Ideas*

No government, even by heavy taxes, could raise all the funds it needed except by printing paper money, selling huge bond issues, or obliging banks to grant it credit. The result, given heavy demand and acute shortages, was rapid inflation of prices. Prices and wages were regulated but were never again so low as before 1914. The hardest hit by this development were those whose money income could not easily be augmented—people living on supposedly safe investments, those drawing annual salaries, professional people, government employees. These classes had been one of the most stabilizing influences in Europe before the war. Everywhere the war threatened their status, prestige, and standard of living. The huge national debts meant higher taxes for years to come. The debt was most

---

*Mortgaging the future*

serious when it was owed to a foreign country. During the war the Continental Allies borrowed from Britain, and they and the British both borrowed from the United States. They thereby mortgaged their future. To pay the debt, they were bound for years to export more than they imported—or, roughly, to produce more than they consumed. It may be recalled that in

1914 every advanced European country habitually imported more than it exported. That fact, basic to the European standard of life, was now threatened with reversal.

---

*Industry spreads*

Moreover, with Europe torn by war for four years, the rest of the world accelerated its own industrialization. The productive capacity of the United States increased immensely. The Japanese began to sell in China, in India, and in South America the cotton textiles and other civilian goods which

these countries for the time being could not obtain from Europe. Argentina and Brazil, unable to get locomotive parts or mining machinery from England, created their own industries to manufacture such items for themselves. In India the Tata family, controlling \$250 million of native Indian capital, developed numerous manufacturing enterprises, one of which became the largest iron and steel works in the British Empire. With Germany entirely out of the world market, with Britain and France producing desperately for their armies, and with the world's shipping commandeered for war uses, the position of western Europe as the world's workshop was undermined. After the war Europe had new competitors. The economic foundations of the nineteenth century had slipped away. The age of European supremacy was in its twilight.

All the belligerent governments during the war attempted to control ideas as they did economic production. Freedom of thought, respected everywhere in Europe for half a century, was discarded. Propaganda and censorship became more effective than any government, however despotic, had ever been able to devise. No one was allowed to sow doubt by raising any basic questions.

It must be remembered that the facts of the prewar crises, as related above, were then largely unknown. People were trapped in a nightmare whose causes they could not comprehend. Each side wildly charged the other with having started the war from pure malevolence. The long attrition, the fruitless fighting, the unchanging battle lines, and the appalling casualties were a severe ordeal to morale. Civilians, deprived of their usual liberties, working harder, eating dull food, seeing no victory, had to be kept emotionally at a high pitch. Placards,

---

*Propaganda and public opinion*

posters, diplomatic white papers, schoolbooks, public lectures, solemn editorials, and slanted news reports conveyed the message. The new mass press and the new motion pictures proved to be ideal media for the direction of popular thinking. Intellectuals and professors advanced complicated reasons, usually historical, for loathing and crushing the enemy. In

Every nation in the First World War used propaganda posters to rally public support, recruit soldiers, and show the evil actions of the enemy. The picture on the left is an Austrian postcard with the typical image of a soldier defending the “Fatherland, Family, and Future.” The child represents the nation’s future. The poster on the right portrays the female symbol of the French Republic, Marianne, who is calling on the French to buy war bonds “for the flag and for victory.” This money will support the soldiers who stand behind Marianne and defend the French nation.

(Left: akg-images; right: Corbis)

Allied countries the Kaiser was portrayed as a demon, with glaring eyes and abnormally bristling mustaches, bent on the mad project of conquest of the world. In Germany people were taught to dread the day when Cossacks and Senegalese should rape German women and to hate England as the inveterate enemy which inhumanly starved little children with its blockade. Each side convinced itself that all right was on its side and all wrong, wickedness, and barbarity were on the other. An inflamed opinion helped to sustain men and women in such a fearsome struggle. But when it came time to make peace the rooted convictions, fixed ideas, profound aversions, hates, and fears became an obstacle to political judgment.

### Cultural Pessimism

We have seen how many European intellectuals in the decades before 1914 began to question the theories of classical liberalism and to celebrate the social value of human struggle

Wilfred Owen, pictured here in his army uniform, was one of the English war poets who described the horrors of the First World War. He was killed in France, one week before the armistice in November 1918.

(Imperial War Museum, London (Q79045))

and violence. Such ideas, widely disseminated by popular writers and intellectuals, contributed to the public enthusiasm that accompanied each nation's entry into the Great War. Indeed, some of the best-known younger writers, including Charles Péguy in France and Rupert Brooke in England, went off to die in the early battles, leaving literary testaments about the spiritual nobility of sacrifices for the nation. But as the war dragged on through more than four murderous years, much of the early literary patriotism turned into cynicism, pessimism, and despair. By 1918, famous war poets such as Siegfried Sassoon and Wilfred Owen were condemning the horrors of a senseless war and mocking the propaganda that flowed from every national government. Irony and bitterness became pervasive themes in the creative works of post-World War I European culture.

---

War poets

The war's most widespread cultural consequence thus emerged in new forms of cultural pessimism. The psychological studies of Sigmund Freud, for example, increasingly emphasized the raw power of human aggression—what Freud began to call the death instinct—which could never be completely tamed in even the most advanced modern societies. His famous postwar book, *Civilization and its Discontents*, offered pessimistic descriptions of the endless struggle between humanity's deep irrational drives and civilized moral standards, a struggle in which the unconscious instincts of both individuals and social groups seemed constantly to overwhelm the precarious defenses of civilization. A different kind of pessimism appeared in the influential work of Oswald Spengler, the German philosopher-historian whose book *The Decline of the West* (1918) became a best-selling account of how Western civilization had fallen into crisis and decay. Drawing on cyclical theories of life and

---

Freud and Spengler

death, Spengler traced the history of the West from its energetic youth (the Renaissance) to a creative middle passage (the eighteenth century) to a declining old age (the twentieth century). Spengler's historical theories, so alien to the nineteenth-century liberal confidence in Western progress and expansion, attracted attention far beyond Germany because they offered explanations for events that seemed otherwise to be simply chaotic and absurd.

This sense of a crisis in Western culture spread also through new literary and artistic movements, most notably perhaps, in the nonsensical productions of Dadaism. The Dada movement, developing in Switzerland after 1915 and promoted by the poet Tristan Tzara, rejected the structures of traditional literature and generated nihilistic criticisms of Western rationality, aesthetic ideals, and social conventions. After a brief moment of postwar popularity in Paris, Dadaism vanished from the scene, but its fascination with irrational impulses, "spontaneous" writing, and strange dreams passed into the more enduring ideas of Surrealism. Meanwhile, even the most sober-minded European authors believed that the war had exposed a sickness in the heart of European civilization. The great German writer Thomas Mann, for example, set his postwar novel *The Magic Mountain* within a Swiss sanatorium, where everyone is ill and where tubercular characters from all parts of Europe debate the flawed traditions of Western civilization. And the Irish poet W. B. Yeats, also seeing that something in Europe had gone terribly wrong, summarized the anxiety of a whole generation in his famous poem "The Second Coming" (1919):

---

Tzara, Mann, Yeats

*Mere anarchy is loosed upon the World,  
The blood-dimmed tide is loosed, and everywhere  
The ceremony of innocence is drowned;  
The best lack all conviction, while the worst  
Are full of passionate intensity.*

## 89. THE PEACE OF PARIS, 1919

The late ally, Russia, was in the hands of the Bolsheviks by 1919, ostracized like a leper colony, and taking no part in international relations. The late German and Austro-Hungarian empires were already defunct, and more or less revolutionary regimes struggled to replace them. New republics already existed along the Baltic coast, in Poland, and in the Danube basin but without effective governments or acknowledged frontiers. Europe east of France and Italy was in a state approaching chaos, with revolution on the Russian style threatening. Western Europe was wrenched out of all resemblance to its former self. The Allied blockade of Germany continued. In these circumstances the victors assembled in Paris, in the bleak winter of 1919, to reconstruct the world. During 1919 they signed five treaties, all named after Paris suburbs—St.-Germain with Austria, Trianon with Hungary, Neuilly with Bulgaria, Sèvres with Turkey (1920), and most especially, with Germany the Treaty of Versailles.

The world looked with awe and expectation to one man—the president of the United States. Woodrow Wilson occupied a lone eminence and enjoyed a universal prestige. Victors, vanquished, and neutrals admitted that American intervention had decided the conflict. Everywhere people who had been long tried, confused, bereaved, were stirred by Wilson's thrilling language in favor of a higher cause, of a great concert of right in which peace would be forever

---

Woodrow Wilson

secure and the world itself would be at last free. Wilson reached Europe in January 1919, visiting several Allied capitals. He was wildly acclaimed, and almost mobbed, greeted as the man who would lead civilization out of its wasteland.

### *The Fourteen Points and the Treaty of Versailles*

Wilson's views were well known. He had stated them in January 1918 in his Fourteen Points—principles upon which, after victory, peace was to be established. The Fourteen Points demanded an end to secret treaties and secret diplomacy (or in Wilsonian language, “open covenants openly arrived at”); freedom of the seas “alike in peace and in war”; removal of barriers and inequalities in international trade; reduction of armaments by all powers; colonial readjustments; evacuation of occupied territory; self-determination of nationalities and a redrawing of European boundaries along national lines; and, last but not least, an international political organization to prevent war. On the whole, Wilson stood for the fruition of the democratic, liberal, progressive, and nationalistic movements of the century past, for the ideals of the Enlightenment, the French Revolution, and the revolutions of 1848. As Wilson saw it, and as many believed, the World War should end in a new type of treaty. There was thought to be something sinister about peace conferences of the past, for example, the Congress of Vienna of 1815. The old diplomacy was blamed for leading to war. Lenin in his own way and for his own purposes was saying this in Russia too. It was felt that treaties had too long been wrongly based on a politics of power or on unprincipled deals and bargains made without regard to the people concerned. Democracy having defeated the Central Powers, people hoped that a new settlement, made in a democratic age, might be reached by general agreement in an atmosphere of mutual confidence. There was a real sense that a new political era was dawning.

---

*A new era*

Wilson had had some difficulty, however, in persuading the Allied governments to accept his Fourteen Points. The French demanded a guarantee of German payment for war damages. The British vetoed the freedom of the seas “in peace and war”; it was naval rivalry that had estranged them from Germany, and they had fought the war to preserve British command of the sea. But with these two reservations the Allies expressed their willingness to follow Wilson's lead. The Germans who asked for the armistice believed that peace would be made along the lines of the Fourteen Points with only the two modifications described. In addition, the socialists and democrats now trying to rule Germany thought that having overthrown the Kaiser and the war lords, they would be treated by the victors with moderation and that a new democratic Germany would reemerge to take its rightful place in the world.

Twenty-seven nations assembled at Paris in January 1919, but the full or plenary sessions were unimportant. Matters were decided by conferences among the Big Four—Wilson himself, Lloyd George for England, Clemenceau for France, Orlando for Italy. The conjunction of personalities was not a happy one. Wilson was stern and stubbornly righteous; Lloyd George, a fiery and unpredictable Welshman; Clemenceau, an aged patriot, the “tiger of France,” who had been politically active since the Franco-Prussian War of 1870; Orlando, a passing phenomenon of Italian politics. None of them was especially equipped for the task in hand. Clemenceau was a pronounced nationalist, Lloyd George had always been concerned with domestic reforms, Orlando was by training a professor like Wilson, and Wilson, a former college president, imbued with a sense of mission, lacked concrete knowledge of peoples other than his own. However, they democratically represented the governments and peoples of their respective countries, and thus spoke with an authority denied to professional diplomats of the old school.

---

## CHRONOLOGY OF NOTABLE EVENTS, 1879–1920

---

1879	Germany signs military alliance with Austria-Hungary
1894	France and Russia create the Franco-Russian alliance
1904	France and Britain establish close relations in the <i>entente cordiale</i>
1905	Germany challenges French-English relations by calling for Moroccan independence from France
1912–1913	Two Balkan wars contribute to Serbian and Russian hostility toward Austria
June 1914	Austrian Archduke Francis Ferdinand is assassinated by Bosnian terrorist in Sarajevo
August 1914	Germany declares war on Russia and France; England declares war on Germany
September 1914	Battle of the Marne stops German advance in France and leads to trench warfare on the Western front
1916	Battles of Verdun and the Somme confirm military stalemate in France
March 1917	Revolution in Russia overthrows Tsar Nicholas II; provisional government takes power and continues the war
April 1917	United States declares war on Germany
November 1917	Britain issues “Balfour Declaration,” promising support for a Jewish homeland in Palestine
March 1918	Treaty of Brest-Litovsk ends war between Russia and Germany
November 1918	Collapse of German and Austrian Empires
November 1918	Armistice ends the fighting on the Western Front
March 1919	Western Allies complete the Versailles Treaty, creating new nations in eastern Europe; Germany is charged with “war guilt” and reparations
1920	Treaty of Sèvres breaks up the Ottoman Empire and leads to French and British “mandates” in Middle East

---

Wilson first fought a hard battle for a League of Nations, a permanent international body in which all nations, without sacrificing their sovereignty, should meet together to discuss and settle disputes, each promising not to resort to war. Few European statesmen had any confidence in such a League. But they yielded to Wilson, and the covenant of the League of Nations was written into the treaty with Germany. In return, Wilson had to make concessions to Lloyd George, Clemenceau, Orlando, and the Japanese. He was thus obliged to compromise the idealism of the Fourteen Points. Probably compromise and bargaining would have been necessary anyway, for such general principles as national self-determination and colonial readjustment invariably led to differences of opinion in concrete cases. Wilson allowed himself to believe that if a League of Nations were established and operating, faults in the treaty could later be corrected at leisure by international discussion.

---

*A League of Nations*

A special kind of disagreement arose over the covenant of the League. Wilson wished to include a clause endorsing religious freedom. The Japanese insisted that it be broadened to condemn racial discrimination as well. The Americans and British were opposed to the

latter for fear that an international authority might interfere with their immigration practices. In the end both proposals were abandoned.

The great demand of the French at the peace conference was for security against Germany. On this subject the French were almost rabid. The war in the West had been fought almost entirely on their soil. To trim Germany down more nearly to French size, they proposed that the part of Germany west of the Rhine be set up as an independent state under Allied auspices. Wilson and Lloyd George objected, sagely observing that the resulting German resentment would only lead to another war. The French yielded, but only on condition that they obtain their security in another way, namely, by a promise from both Britain and the United States to join them immediately if they were again attacked by the Germans. An Anglo-French-American guarantee treaty, with these provisions, was in fact signed at Paris. France obtained control over the Saar coal mines for 15 years; during that time, a League commission would administer the Saar territory and in 1935 a plebiscite would be held. Lorraine and Alsace were returned to France. German fortifications and troops were banned from a wide belt in the Rhineland. Allied troops would occupy the Rhineland for 15 years to ensure German compliance with the treaty.

---

*Alsace and Lorraine*

In eastern Europe the Allies wished to set up strong buffer states against Bolshevism in Russia. Sympathies with Poland ran high. Those parts of the former German Empire that were inhabited by Poles, or by mixed populations of Poles and Germans—Posen and West Prussia—were assigned to the new Polish state. This gave Poland a corridor to the sea, but at the same time cut off the bulk of Germany from East Prussia. Danzig, an old German town, became a free city, belonging to no country. Upper Silesia, a rich mining country, went to Poland after a disputed plebiscite. In Austria and among the Sudeten Germans of Bohemia, now that there was no longer a Habsburg empire (whose existence had blocked an all-German union in 1848 and also a few years later in the time of Bismarck), a feeling developed for annexation to the new German republic. But the feeling was unorganized, and in any case the Allies naturally refused to make Germany bigger than it had been in 1914. Austria remained a dwarf republic; and Vienna, a former imperial capital cut off from its empire—a head severed from its body and scarcely more capable of sustaining life. The Sudeten Germans became disgruntled citizens of the new state of Czechoslovakia.

---

*Germany loses its colonies*

Germany lost all its colonies. Wilson and the South African General Smuts, to preserve the principle of internationalism against any imputation of raw conquest, saw to it that the colonies were actually awarded to the League of Nations. The League, under “mandates,” then assigned them to various powers for administration. In this way France and Great Britain divided the best of the African colonies; the Belgian Congo was slightly enlarged; and the Union of South Africa took over German Southwest Africa. In the colonial world, Italy got nothing. Japan received the mandate for the German Pacific islands north of the equator; Australia, for German New Guinea and the Solomon Islands; New Zealand, for German Samoa. The Japanese claimed rights over the German concessions in China. The Chinese at the Paris conference tried to get all special concessions and extraterritorial rights in China abolished. No one listened to such proposals. By a compromise, Japan received about half the former German rights. The Japanese were dissatisfied, and the Chinese walked out of the conference. Meanwhile, the young Vietnamese nationalist Ho Chi Minh, who was then living in Paris, wanted Wilson to recognize that France was violating the principles of national self-determination in Indochina, but such criticisms of European colonialism were ignored at Versailles.

The Allies took over the German fleet, but the German crews, rather than surrender it, solemnly scuttled it at Scapa Flow. The German army was limited to 100,000. Since the Allies forbade conscription, or the annual training of successive groups of young civilians, the army became exclusively professional, the officer class retained political influence in it, and the means used by the Allies to demilitarize Germany served if anything the contrary purpose. The treaty forbade Germany to have any heavy artillery, aviation, or submarines. Wilson saw his plan for universal disarmament applied to Germany alone.

The French, even before the armistice, had stipulated that Germany must pay for war damages. The other Allies made the same demand. Wilson, at the conference, was stupefied at the size of the bills presented. The Belgians suggested, for their own share, a sum larger than the entire wealth of all Belgium according to officially published Belgian statistics. The French and British proposed to charge Germany with the entire expenses, including war pensions, incurred by them during the war. Wilson observed that "total" reparation, while not strictly unjust, was absolutely impossible, and even Clemenceau noted that "to ask for over a trillion francs would lead to nothing practical." The insistence on enormous reparations was in fact largely emotional. No one knew or considered how Germany would pay, though all dimly realized that such sums could only be made up by German exports, which would then compete with the Allies' own economic interests. The Germans, to avoid worse, even offered to repair physical damages in Belgium and France, but were brusquely refused on the ground that the Belgians and French would thereby lose jobs and business. No monetary total was set for reparations in the treaty; it was made clear that the sum would be very large, but it was left for a future commission to determine. The Allies, maddened by the war and themselves loaded with fantastic debts to the United States, had no desire to listen to economic reason and regarded the reparations as simply another means of righting a wrong and of putting off the dangers of a German revival. As a first payment on the reparations account the treaty required Germany to surrender most of its merchant marine, make coal deliveries, and give up all property owned by German private citizens abroad. This last proviso ended Germany's prewar career as an exporter of capital.

---

---

*War damages*

It was with the specific purpose of justifying the reparations that the famous "war guilt" clause was written into the treaty. By this clause Germany explicitly "accepted the responsibility" for all loss and damage resulting from the war "imposed upon them" (the Allies) by the aggression of Germany and her allies. The Germans themselves felt no such responsibility as they were now obliged formally to accept. They considered their honor as a people to be impugned. The war guilt clause gave a ready opening to agitators in Germany and made even moderate Germans regard the treaty as something to be escaped from as a matter of self-respect.

---

---

*The "war guilt" clause*

The Treaty of Versailles was completed in three months. The absence of the Russians, the decision not to give the Germans a hearing, and the willingness of Wilson to make concessions in return for obtaining the League of Nations, made it possible to dispose of intricate matters with considerable facility. The Germans, when presented with the completed document in May 1919, refused to sign. The Allies threatened a renewal of hostilities. A government crisis ensued in Berlin. No German wished to damn himself, his party, or his principles, in German eyes, by putting his name to a document which all Germans regarded as outrageous. A combination drawn from the Social Democratic and Catholic parties finally consented to shoulder the hateful burden. Two abashed and virtually

---

---

*The Treaty of Versailles*

These four men represented the leading Allied powers at the Versailles peace conference in 1918: (from left to right) Vittorio Emanuele Orlando of Italy, David Lloyd George of Great Britain, Georges Clemenceau of France, and Woodrow Wilson of the United States. Neither the Germans nor the Russians were represented at Versailles. The decisions of the peace conference, including a “war guilt” clause that blamed Germany for the recent war, produced deep resentments among the excluded peoples.

(Corbis)

unknown representatives appeared at the Hall of Mirrors at Versailles and signed the treaty for Germany in the presence of a large concourse of Allied dignitaries.

The other treaties drafted by the Paris conference, in conjunction with the Versailles treaty, laid out a new map for eastern Europe and registered the recession of the Russian, Austrian, and Turkish empires. Seven new independent states now existed: Finland, Estonia, Latvia, Lithuania, Poland, Czechoslovakia, and Yugoslavia. Romania was enlarged by adding areas formerly Hungarian and Russian; Greece was enlarged at the expense of Turkey. Austria and Hungary were now small states, and there was no connection between them. The belt of states from Finland to Romania was regarded as a *cordon sanitaire*, a quarantine zone, to prevent the infection of Europe by communism. The creation of Yugoslavia (or the Kingdom of the Serbs, Croats, and Slovenes, as it was called until 1929), although dominated by the Serbs and under the Serbian monarchy, seemed to fulfill the aims of the South Slav movement which had set off the fatal crisis of 1914. The fact, however, that Italy received Trieste and some of the Dalmatian Islands (in keeping with the secret treaty of 1915) left the more ambitious South Slavs discontented.

The treaty of Sèvres transformed the political order in the Middle East. The Ottoman Empire completely disappeared. Turkey emerged as a republic confined to Asia Minor and the area around Constantinople, but most other people in the former Empire fell under the control of France or Britain. Syria and Lebanon went to France as mandates of the League of Nations. Palestine and Iraq went to Great Britain on the same basis, though the British had to suppress strong nationalist resistance in Iraq before they could establish a cooperative government under the ruler they had chosen, King Faisal. The Kingdom of Hejaz in Arabia was recognized as an independent state; by 1924, however, it fell under the control of what was to become the kingdom of Saudi Arabia. In general, the breakup of the Ottoman Empire left a vast area of the Middle East unsettled. Indeed, the complex legacy of the Ottoman Empire as well as the British and French mandates continued to shape the internal conflicts and wars in this region down through the early years of the twenty-first century.

### *Significance of the Paris Peace Settlement*

The most general principle of the Paris settlement was to recognize the right of national self-determination, at least in Europe. Each European people or nation, as defined by language, was in principle set up with its own sovereign and independent national state. Czechoslovakia, a special case, had two national components, as its originally hyphenated name Czecho-Slovakia made clear. Nationalism triumphed in the belief that it went along naturally with liberalism and democracy. It must be added that the peacemakers at Paris had little choice in this matter, for the new states had already declared their independence. Since in eastern Europe the nationalities were in many places intermixed, and since the peacemakers did not contemplate the actual movement and exchange of populations to sort them out, each new state found alien minorities living within its borders or could claim that people of its own kind still lived in neighboring states under foreign rule. Hence minority problems and irredentism troubled eastern Europe, as they had before 1914. Eventually it was the complaint of Germans in the Sudetenland of Czechoslovakia that they were an oppressed minority, together with the irredentist demand of Germany to join these outlying Germans to the fatherland, that produced the Munich crisis preceding the Second World War.

---

---

*National self-determination*

The Treaty of Versailles was designed to put an end to the German menace. It was not a successful treaty. The wisdom of the treaty has been debated without end, but a few comments may safely be made. For practical purposes, with respect to Germany, the treaty was either too severe or too lenient. It was too severe to conciliate and not severe enough to destroy.

Possibly the victors should have dealt more moderately with the new German republic, which professed their own ideals, as the monarchical victors over Napoleon, in 1814, had dealt moderately with the France of the restored Bourbons, regarding it as a regime akin to their own. As it was, the Allies imposed upon the German Republic about the same terms that they might have imposed upon the German Empire. They innocently played the game of Ludendorff and the German reactionaries; it was the Social Democrats and liberals who bore the "shame" of Versailles. The Germans from the beginning showed no real intention to live up to the treaty. On the other hand, the treaty was not sufficiently disabling to destroy Germany's economic and political strength. Even the degree of severity that it incorporated soon proved to be more than the Allies were willing to enforce.

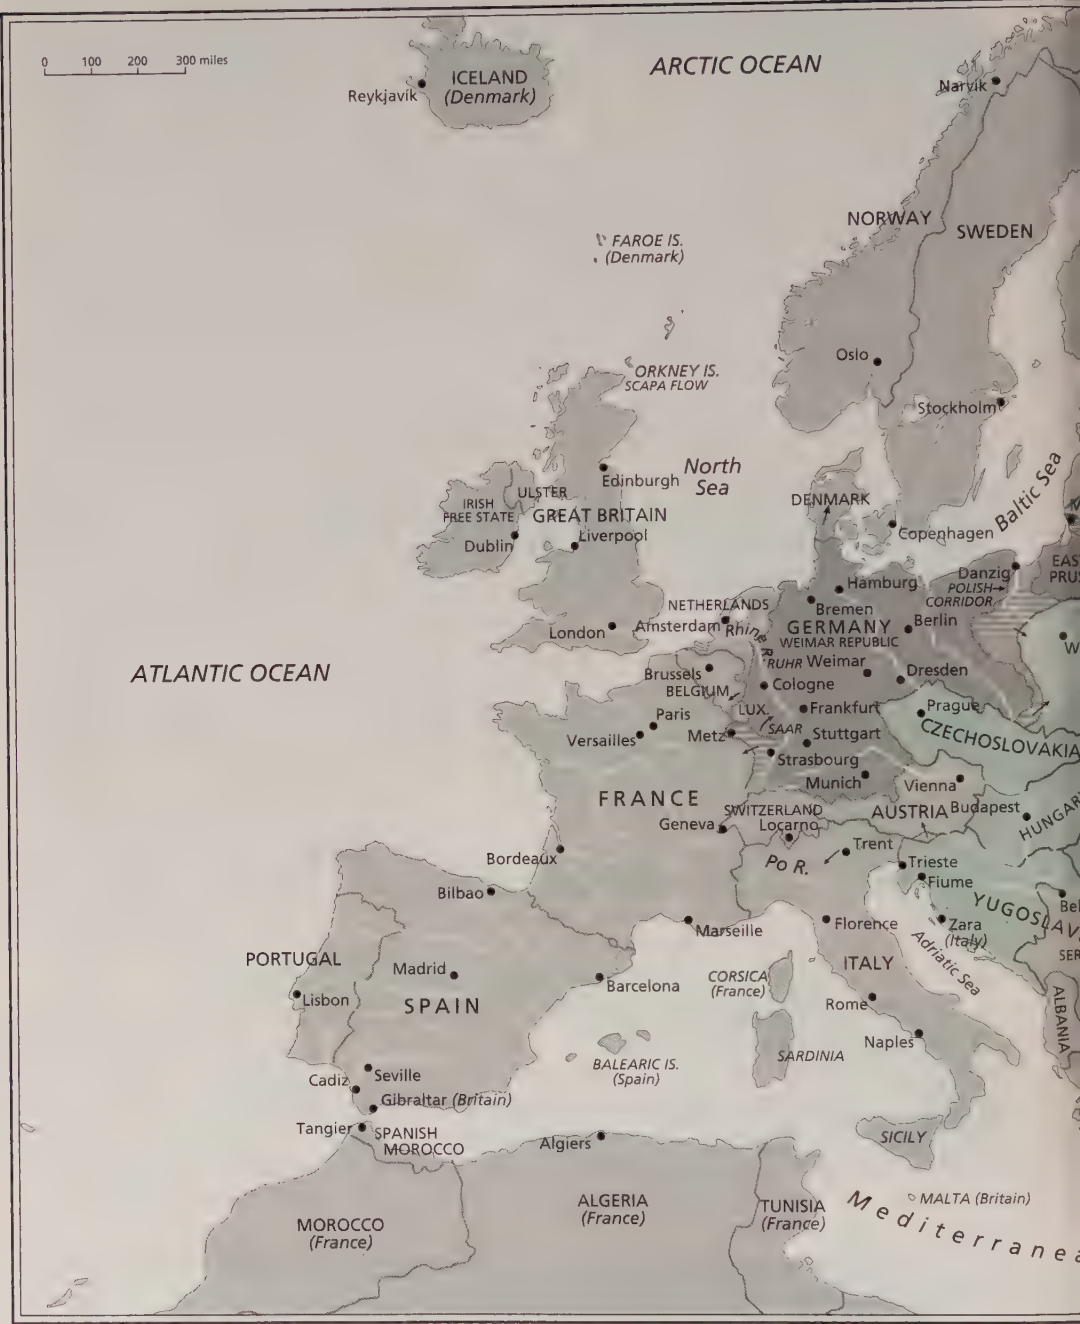

---

---

*The failure of Versailles*

The treaty makers at Paris in 1919, working hastily and still in the heat of war, under pressure from press and propaganda in their own countries, drafted a set of terms which

### EUROPE, 1923

The map shows European boundaries between the two World Wars after the Peace of Versailles and certain other agreements. Germany returned Alsace-Lorraine to France and lost the region around Danzig (the "Polish corridor") to Poland. In place of the Austro-Hungarian empire we find the "succession states"—Austria, Hungary, Czechoslovakia, Yugoslavia, and Romania. Poland regained its independence, and Finland and the three Baltic states—Estonia, Latvia, and Lithuania—emerged from the tsarist empire. Most of Ireland became a "free state" in the British Commonwealth of Nations, only Ulster remaining in the United Kingdom. These boundaries lasted until 1938, when Germany annexed Austria and the Sudeten part of Czechoslovakia.

the test of time showed that they themselves did not in the long run wish to impose. As the years passed, many people in Allied countries declared various provisions of the Versailles treaty to be unfair or unworkable. The loss of faith by the Allies in their own treaty only made easier the task of those German agitators who demanded its repudiation. The door was opened for Adolf Hitler.

---

*Victors' uneasiness*

Even at the beginning the Allies showed doubts. Lloyd George, in the last weeks before the signing, tardily called for certain amendments, though in vain; for in 1919 British opinion shifted somewhat from fear of Germany to the fear of Bolshevism, and already the idea of using Germany as a bulwark against communism was expressed. The Italians disliked the whole settlement from the beginning; they observed that the spoils of Africa and the Middle East went only to France and Great Britain. The Chinese were also deeply dissatisfied. The Russians, when they reentered the international arena some years later, found a situation that they did not like and had had no part in making. They objected to being faced with a *cordon sanitaire* from Finland to Romania and soon remembered that most of this territory had once belonged to the Russian empire.

The United States never ratified the Treaty of Versailles at all. A wave of isolationism and disgust with Europe spread over the country; and this feeling, together with some rational criticism of the terms and a good deal of party politics, caused the Senate to repudiate Wilson's work. The Senate likewise refused to make any advance promises of military intervention in a future war between Germany and France and hence also declined to ratify the Anglo-French-American guarantee treaty on which Wilson had persuaded Clemenceau to rely. The French considered themselves duped, deprived both of the Rhineland and of the Anglo-American guarantee. They raised more anguished cries over their insecurity. This led them to try to hold Germany down while it was still weak, in turn raising many further complications.

---

*The League of Nations*

The League of Nations was established at Geneva. Its mere existence marked a great step beyond the international anarchy before 1914. Wilson's vision did not die. But the United States never joined; Germany was not admitted until 1926, nor was Russia until 1934. The League could handle and dispatch only such business as the Great Powers were willing to allow. It was associated with a West European ascendancy that no longer corresponded to the facts of the world situation. Its covenant was part of the Versailles treaty, and many people in many countries, on both sides in the late war, saw in it not so much a system for international adjudication as a means for maintaining a new status quo in favor of Britain and France.

The First World War dealt a last blow to the ancient institutions of monarchy and aristocratic feudalism. Thrones toppled in Turkey, in Russia, in Austria-Hungary, in the German Empire and the individual German states; and with the kings went the courtly retainers and all the social preeminence and special advantage of the old landed aristocracies. The war was indeed a victory for democracy, though a bitter one. It carried further a process as old as the French and American revolutions. But for the basic problems of modern civilization, industrialism and nationalism, economic security and international stability, it gave no answer. And it left the major European nations much weaker than before to face the rising economic power of the United States, the revolutionary government of the Soviet Union, and the emerging anticolonial movements of Africa and Asia.

# THE RUSSIAN REVOLUTION AND THE SOVIET UNION

90. Backgrounds
91. The Revolution of 1905
92. The Revolution of 1917
93. The Union of Soviet Socialist Republics
94. Stalin: The Five-Year Plans and the Purges
95. The International Impact of Communism, 1919–1939

*The Russian Revolution* became almost as important as the First World War in its influence on later twentieth-century events and global conflicts. Although the war of 1914–1918 was one of the decisive, short-term causes of the revolution, the far-reaching upheaval came also from numerous other social and political problems in Russian society—and the revolutionary ideas of the Bolshevik party attracted followers far beyond Russia itself. The Russian Revolution of 1917 can thus be compared in its historical magnitude with the French Revolution of 1789. Both originated in deep-lying and distant causes, and both made their repercussions felt in many countries for many

years. The present chapter will examine the revolutionary process in Russia over half a century. We begin with the old regime before 1900, pass through the two revolutions of 1905 and 1917, and survey the Union of Soviet Socialist Republics down to 1939, at which time a new order had been consolidated under Joseph Stalin, a form of “planned economy” had been realized, and the last of the original revolutionaries, or Old Bolsheviks, either had been silenced or put to death.

The comparison of the Russian Revolution to the French is enlightening in many ways. Both claimed to be movements of liberation—the one against “feudalism” and “despotism”; the other against “capitalism” and “imperialism.” Neither was a strictly national movement dealing with merely domestic troubles; both addressed their message to all the world.

Both attracted followers in all countries. Both aroused a strong reaction on the part of those whose view of life was endangered. And both showed the same pattern of revolutionary politics: a relative unity of opinion so long as the problem was to overthrow the old regime, followed by disunity and conflict over the founding of the new, so that one set

*French and Russian  
revolutions*

of revolutionaries eliminated others, until a small, organized, and determined minority (Jacobin democrats in 1793; Bolshevik communists in 1918) suppressed all opposition in order to defend or advance the revolutionary cause; and in short order (within a matter of months in France; years in Russia), many of the most intensely revolutionary leaders were themselves suppressed or liquidated.

The differences are equally deserving of notice. Relatively speaking, or compared by many criteria with other European countries, Russia in 1900 was in the rear, and France in 1780 in many ways was in the lead. The main strength of the French Revolution lay in the middle classes, who soon managed to prevail over more extreme pressures. In the Russian Revolution middle-class people were also active, especially at first, but they proved unable to cope with mass discontents and succumbed to a more radical party which appealed to workers and peasants. In France the Revolution just “happened,” so to speak, in that ordinary people from many walks of life unexpectedly found themselves in a revolutionary situation, and even the Jacobin dictatorship was improvised by individuals who had spent their lives thinking of other things. In Russia professional revolutionaries worked for the revolution long in advance, and the dictatorship of the Bolsheviks realized the plans and preparations of 20 years.

In France the revolution was followed by a reaction in which émigrés returned, dispossessed classes reappeared in politics, and even the Bourbons were restored. The French Revolution was followed by a century of uneasy compromise. The Russian Revolution effectively wiped out its opposition; few émigrés returned; no Romanovs regained their throne. The Russian Revolution was in this sense more immediately successful. But in the long run the differences reemerged. By the 1990s the ideas proclaimed in Russia in 1917 were in ruins, while those proclaimed in France in 1789 were widely accepted—representative constitutional government, equal civil rights under national sovereignty, and legal safeguards for persons and property.

---

*Repercussions of the  
revolution in Russia*

The repercussions of the Russian Revolution were felt widely around the world because of Russia's special position in global politics and economic affairs. Since the days of Peter the Great and before, it had always faced toward both Europe and Asia. It was European, yet it was also outside Europe and even opposed to it. If about 1900 it was the least developed of the major European countries, it was at the same time one of the most developed, industrialized, or modernized parts of the non-European world. Its revolution could win sympathy on the left in Europe because it reinforced the old European socialist objections to capitalism. It aroused the interests of peoples in other continents because it also denounced economic imperialism and the possession of colonies by Europeans, affirming that imperialism was merely the “highest stage” of capitalism and that both must be overthrown together. The Soviet Union, once established, came to occupy an intermediate position between the West and the colonial world (or what later came to be called the Third World). In the West it would long be feared or admired as the last word in social revolution. In the colonial, or formerly colonial, world it suggested new beginnings, a new way to become modern without being capitalistic or Western, a step in a worldwide rebellion against Western supremacy. The Russian Revolution thus not only produced communism and hence fascism in Europe but also added strength to the emerging anticolonial movements in Asia and elsewhere.

Although professional revolutionaries worked for revolution in Russia, they did not “cause” it. Lenin and the Bolsheviks did not bring about the Russian Revolution. They captured it after it had begun. They boarded the ship in midstream. The Russian Revolu-

tion, like all great revolutions, originated in a totality of previous history, in diverse local causes, and in the prolonged dissatisfaction of many kinds of people.

## 90. BACKGROUNDS

### *Russia after 1881: Reaction and Progress*

We have seen in earlier chapters how the tsarist autocracy arose, how it ruled as a machine superimposed upon its subjects, how the upper class became westernized while the masses sank further into serfdom, and how an intelligentsia developed, divorced both from the work of government and the activities of the people. It has been explained in Chapter 13 how Alexander II freed the serfs in 1861 and created provincial and district councils or zemstvos, elected mainly by landowners, which attended to such matters as roads, schools, and hospitals.

In 1881 Alexander II was assassinated by members of the revolutionary group called the People's Will. His son, Alexander III (1881–1894), tried to stamp out revolutionism and to silence even peaceable criticism of the government. Revolutionaries and terrorists were driven into exile. The People's Will as an organized group became extinct. Jews were subjected to pogroms, by far the worst of any (until then) in modern times. For the first time the empire adopted a program of systematic Russification. Poles, Ukrainians, Lithuanians, the peoples of the Caucasus, the scattered German communities, the Muslim groups in central Asia—all faced the prospect of forcible assimilation to Russian culture. The philosopher and chief official of this movement was Pobiedonostsev, procurator of the Holy Synod, or layman head, under the tsar, of the Russian Orthodox church. Pobiedonostsev saw in the West something alien and doomed; and he dreamed of turning Holy Russia into a kind of churchly community, in which a disciplined clergy should protect the faithful from the insidious influence of the West.

---

*Russification in the  
old regime*

This is not, however, what happened. In the closing decades of the nineteenth century Russia became more than ever before a part of European civilization. Almost overnight it presented Europe with great works of literature and music that Europeans could appreciate. The nineteenth-century Russian novel became known throughout the Western world. All could read the novels of Tolstoy (1828–1910) without a feeling of strangeness; and if characters in the novels of Turgenev (1818–1883) and of Dostoevski (1821–1881) behaved more strangely, the authors themselves were obviously within the great European cultural family. The melodies of Tchaikovsky (1840–1893) and of Rimsky-Korsakov (1844–1908) became familiar throughout Europe and America; if they sometimes seemed hauntingly wild, distant, or sad, they still betrayed no more than the usual amount of national idiosyncrasy. Russians also contributed to the sciences, notably chemistry. They were known to be especially talented in the more abstruse intellectual exercises, such as higher mathematics, physics, or chess.

Russia also, from the 1880s, began to pass through the Industrial Revolution and take its place as an integral part of the world economic system. European capital entered the country, financing railways, mines, and factories (as well as government and the army) until by 1914 Europeans had about the same amount invested in Russia as in the United States, some \$4 billion in each case. In 1897, under the reforming ministry of Count Witte, Russia adopted the gold standard, making its currency readily convertible with all others. In

---

*Industrialization  
before 1914*

the quarter-century between 1888 and 1913 the Russian railway mileage more than doubled, the miles of telegraph wires multiplied fivefold, the number of post offices trebled, and the number of letters carried by the mails multiplied seven times.

Although still industrially undeveloped by Western standards, Russia was industrializing rapidly. Exports rose in value from 400 million rubles in 1880 to 1.6 billion in 1913. Imports, though smaller, grew more rapidly, quintupling in the same period. They consisted of such items as tea and coffee and of the machines and industrial goods made in western Europe.

Industrialization, in Russia as in all countries, brought an increase both of the business and of the wage-earning classes, or, in socialist terminology, of the bourgeoisie and of the proletariat. Though growing, they were still not numerous by standards of the West. Factory workers, laboring for 11 or more hours a day for low wages under hard conditions, were in somewhat the same position as in England or France before 1850. Unions were illegal and strikes were prohibited. Nevertheless, great strikes in the 1890s called attention to the misery of the new industrial workers. There was one distinctive feature to the Russian proletariat. Russian industry was heavily concentrated; half of Russia's industrial workers were employed in factories employing over 500 persons. It was easier for workers under such circumstances to be organized economically and at the proper time to be mobilized politically. As for the Russian business and capitalist class, it was relatively the weaker because of several features in the situation. Ownership of much of Russia's new industrial plant was in foreign hands. Much was owned by the tsarist government itself; Russia already had the largest state-operated economic system in the world. Moreover, in Russia (unlike the United States at the time) the government itself was a heavy borrower from Europe; hence it was less dependent financially on its own people and more able to maintain an absolutist regime.

Nevertheless, the rising business and professional classes, reinforced by enterprising landowners, were strong enough to form a liberal segment of public opinion, which emerged in 1905 as the Constitutional Democratic party (or "Cadets"). Many of those who were active in the provincial zemstvos also became Constitutional Democrats. They were liberals, progressives, or constitutionalists in the Western sense, thinking less about the troubles of factory workers and peasants than about the need for a nationally elected parliament to control the policies of state.

---

*The "Cadets"*

Russia remained predominantly agricultural. Its huge exports were mainly farm and forest products. The peasants formed four-fifths of the population. Free from their former lords since 1861, they lived in village communes called *mirs*. In most communes much of the land was divided and redivided among peasant households by agreement of the village community, nor could anyone leave without communal permission. The peasants still carried a considerable burden. Until 1906 they paid redemption money arising from the Emancipation of 1861, and even after that, other forms of onerous payments. They also paid high taxes, for the government defrayed the interest on its foreign loans from taxes raised at home. The constantly rising export of cereals (also used to pay off debts contracted by Russia in the West) tended to keep food from the farmer's table; many peasants raised the best wheat for sale and ate black bread themselves. The farm population, in short (as in other countries in similar stages of their development), bore a considerable share of the costs of industrialization.

---

*Peasant demands*

Under such pressures, and because of their crude methods of cultivation, the peasants were forever demanding more land. "Land hunger" was felt both by individual families and by the *mirs*. The Emancipation had turned over roughly half the land to peasant ownership, individual and col-

lective; and in the following half-century the peasants added to their share by buying from nonpeasant owners. The *mirs* were by no means obsolescent. They were in fact flourishing; they acquired far more land by purchase than did individual buyers, and perhaps half or more of the peasants valued communal security above the uncertain pleasures of private property. The exceptions were the minority of more enterprising and wealthier peasants, later called the kulaks. These “big farmers” stood out conspicuously from the impoverished mass of peasants, by whom they were often disliked.

### *The Emergence of Revolutionary Parties*

The peasants were the ancient source of revolutionary disturbance in Russia. After the Emancipation in 1861 they continued to believe that they had some kind of rights in *all* the land of former estates on which they had formerly been serfs—not merely in the portion that had been allotted to peasant possession. They demanded (and obtained) credit from the government to buy from the big landowners or former masters. Their land hunger could not be appeased. They remained jealous of the landed aristocrat’s very existence. In Russia, as elsewhere in Europe, and unlike the United States, the rural population was divided into two sharply distinct classes—on the one hand, the peasants of all types who worked the soil, and on the other, the gentry who resided upon it. The two never intermarried. They differed not merely economically but in speech, dress, and manners, and even in the looks of their faces and hands. But in the last three decades of the nineteenth century the Russian peasants were notably quiet. Insurrectionism seemingly subsided.

The other traditional source of revolutionary disturbance lay among the intelligentsia. Revolutionary intelligentsia (as distinguished from those who were simply liberal or progressive) held a violent contempt for the Russian empire and yearned for a catastrophic overthrow of the tsardom. Since the days of the Decembrists in 1825 they had formed secret organizations, comprising a few hundred or thousands of members, engaged in outwitting the tsarist police, by whom they were bafflingly interpenetrated. At a Bolshevik party congress held in 1913, out of 22 delegates present, no fewer than five, unknown to the others, were government spies.

---

*The intelligentsia*

The revolutionary intelligentsia, since there was normally little that they could do, spent their time in vehement discussion and interminable refinement of doctrine. By 1890 the terrorism and nihilism of the 1870s were somewhat passé. The great question was where these willing officers of a revolutionary movement could find an army. Disputation turned upon such topics as whether the peasants or the new factory workers were the true revolutionary class, whether the peasants were potentially proletarian or incurably petty bourgeois, whether Russia was bound to experience the same historical process as the West, or whether it was different; and, specifically, whether Russia had to go through capitalism or might simply skip the capitalist stage in reaching the socialist society.

Most of the revolutionary intelligentsia were “populists.” Some had once belonged to the now broken People’s Will. Some continued to approve of terrorism and assassination as morally necessary in an autocratic country. They generally had a mystical faith in the vast inchoate might of the Russian people, and since most Russians were peasants, the populists were interested in peasant problems and peasant welfare. They believed that a great native revolutionary tradition existed in Russia, of which the peasant rebellion of Pugachev, in 1773, was the chief example. The populists admired the *mir*, in which they saw the European

---

*Populism*

Although new industries began to develop in Russia during the early twentieth century, most people continued to live and work in the countryside. This picture of peasants harvesting hay before the First World War shows that women performed much of the labor and that modern machinery had not yet reached Russian farms.

(Library of Congress)

socialist idea of a “commune” represented. They read and respected Marx and Engels (indeed, a populist first translated the *Communist Manifesto* into Russian); but they did not believe that an urban proletariat was the only true revolutionary class or that socialism had to evolve historically out of capitalism. They said that in Russia the horrors of capitalism could be skipped. They addressed themselves to the plight of the farmer and the evils of landlordism, favored strengthening the *mir* and equalizing the shares of all peasants in it; and, since they did not believe that socialism would have to emerge from the prior triumph of capitalism in Russia, they thought that revolution might come quite soon. This populist sentiment crystallized in the founding in 1901 of the Social Revolutionary party.

Two populists, Plekhanov and Axelrod, fleeing to Switzerland in the 1870s, founded in exile the organization from which the Russian Social Democratic or Marxist party was to grow. A few Marxists began to declare themselves (though not publicly) in Russia itself. When the youthful Lenin met his future wife N. K. Krupskaya in 1894, she already belonged to a circle of argumentative Marxists. The fact that the peasants in the 1890s were disappointingly quiescent while machine industry, factory labor, and strikes were developing rapidly turned many of the revolutionary intelligentsia, though only a minority,

from populism to Marxism. To Plekhanov and Axelrod were added, as young leaders, Vladimir Ilyich Lenin (1870–1924), Leon Trotsky (1879–1940), Joseph V. Stalin (1879–1953), and others.

---

---

Marxism

Of these it was Lenin who, after Marx, was to be claimed by communism as a father. Lenin was a short almost rotund man, with a bounding quickness and intense, penetrating gaze. High cheekbones and somewhat slanting eyes showed an Asian strain on the paternal side. His hair receded in early youth, leaving a massive forehead, behind which a restless mind was inexhaustibly at work. Even in his 20s he was called the Old One. He was of upper-middle-class origin, son of an inspector of schools who rose in the civilian bureaucracy to a rank equivalent to major general. His boyhood was comfortable and even happy, until the age of 17, when his elder brother, a student at St. Petersburg, became somewhat incidentally involved in a plot to assassinate Alexander III, for which he was put to death by order of the tsar himself. Because of the blot on the family record it became impossible for Lenin to continue with his law studies. He soon joined the ranks of professional revolutionaries, having no other occupation and living precariously from the party funds, which came mainly from the donations of well-to-do sympathizers.

---

---

Lenin

Arrested as a revolutionary, he spent three years of exile in Siberia. Here the tsarist government treated educated political prisoners with an indulgence not later shown by the Soviet regime. Lenin and most of the others lived in cottages of their own or boarded with local residents. No labor was required of them. They borrowed books from Europe; met and visited with one another; debated, played chess, went hunting, and wrote. They chafed, however, at being cut off from the mainstream of Russian political life back home. Lenin, his term over, proceeded in 1900 to western Europe, where except for short secret trips to Russia he remained until 1917. His intellectual vigor, irresistible drive, and shrewdness as a tactician soon made him a force in the party. Genius has been called the faculty for everlasting concentration upon one thing. Lenin, said his one-time close associate Axelrod, “for twenty-four hours of the day is taken up with the revolution, has no thoughts but thoughts of revolution, and even in his sleep dreams of nothing but revolution.”

In 1898 the Marxists in Russia, spurred on by émigrés, founded the Social Democratic Labor party. They were not more revolutionary than the larger group of Social Revolutionaries. They simply had a different conception of the revolution. First of all, as good Marxists, they were more inclined to see the revolution as an international movement, part of the dialectical process of world history in which all countries were involved. Russia for them was no different from other countries except that it was less advanced. They expected the world revolution to break out first in the industrial societies of western Europe. They particularly admired the German Social Democratic party, the largest and most flourishing of all the parties that acknowledged the fatherhood of Marx.

---

---

The Social  
Democrats

If the Social Democrats were more oriented to Europe than the Social Revolutionaries, it was because so many of their spokesmen lived there in exile. They tended to think that Russia must develop capitalism, an industrialist proletariat, and the modern form of class struggle before there could be any revolution. Seeing in the urban proletariat the true revolutionary class, they looked upon the peasantry with suspicion, ridiculed the *mir*, and abhorred the Social Revolutionaries. Like Marx himself, the Russian Marxists disapproved of sporadic terrorism and assassination. For this reason, and because their doctrine seemed somewhat academic and their revolution seemed rather conditional and far in the

future, the Marxists were for a time actually favored by the tsarist police, who regarded them as less dangerous than the Social Revolutionaries.

### *Split in the Social Democrats: Bolsheviks and Mensheviks*

The Russian Marxists held a second party congress in Brussels and London in 1903, attended by émigrés like Lenin and delegates from the underground in Russia, and by Social Democrats and members of lesser organizations. The purpose of the congress was to unify all Russian Marxism, but in fact it split it forever. The two resulting factions called themselves Bolshevik, or majority, and Menshevik, or minority. Lenin was the main author of the split and hence the founder of Bolshevism. Although after 1903 it was usually the Mensheviks who had the majority, Lenin clung proudly and stubbornly to the term Bolshevism, with its favorable connotation of a majority in his support. For a number of years after 1903 the Social Democrats remained at least formally a single Marxist party, but they were now irreconcilably divided into two wings. In 1912 the Bolshevik wing organized itself as a separate party.

---

#### *Leninism*

Bolshevism, or Leninism, originally differed from Menshevism mainly on matters of organization and tactics. Lenin believed that the party should be a small revolutionary elite, a hard core of reliable and zealous workers. Those who favored a larger and more open party, with membership for mere sympathizers, became Mensheviks. Lenin insisted upon a strongly centralized party, without autonomy for national or other component groups. He demanded strong authority at the top, by which the central committee would determine the doctrine (or party line) and control personnel at all levels of the organization. The Mensheviks favored a greater degree of influence by the membership as a whole. Lenin thought that the party would strengthen itself by purges, expelling all who developed deviations of opinion. The Mensheviks favored covering up or bridging over all but the most fundamental disagreements. The Mensheviks came to recommend cooperation with liberals, progressives, and bourgeois democrats. Lenin regarded such cooperation as purely tactical and temporary, never concealing that in the end the Bolsheviks must impose their views through a dictatorship of the proletariat. The Mensheviks, in short, came to resemble the Marxists of western Europe, so far as that was possible under Russian conditions. Lenin stood for the rigid reaffirmation of Marxian fundamentals—dialectical materialism and irreconcilable class struggle.

Lenin accepted and added little to Marx's governing ideas: that capitalism exploited the workers; that history was shaped by economic forces and was moving toward socialism; that class struggle was the law of society; and that existing forms of religion, government, philosophy, and morals were weapons of the ruling class. He did, however, develop and transform certain theories of imperialism and of the "uneven development of capitalism" that had been propounded in only general terms by Marx and Engels. According to this Leninist elaboration of earlier Marxist theory, "imperialism" was exclusively a product of monopoly capitalism, that is, capitalism in its "highest" and "final" stage, which develops differently and at different times in each country. Monopoly capitalism was bent on exporting surplus capital and investing it in underdeveloped areas for greater profits. The unceasing drive for colonies and markets in a world already almost completely partitioned leads inevitably to international imperialist wars for the redistribution of colonies, as well as to

---

#### *Imperialism and development*

Lenin built the Russian Bolshevik party into a disciplined revolutionary movement by insisting that a small, centralized elite should make all of the party's key strategic decisions. When the opportunity for revolutionary action finally arrived during the First World War, the Bolsheviks had an effective, centralized political organization, a well-defined Marxist conception of class conflict, and the strong-willed leadership of Lenin—who is shown here addressing a crowd in the spring of 1920.

(SOVFOTO)

intensified national colonial struggles for independence; both provide new revolutionary opportunities for the proletariat.

In other respects, Lenin roundly denounced all who attempted to “add” anything to the fundamental principles of Marx. Nothing infuriated him so much as revisionist efforts to tone down the class struggle or hints that Marxism might in the last analysis perhaps find room for some kind of religion. As he wrote in 1908: “From the philosophy of Marxism, cast of one piece of steel, it is impossible to expunge a single basic premise, a single essential part, without deviating from objective truth, without falling into the arms of bourgeois-reactionary falsehood.” Lenin was a convert. He discovered Marxism; he did not invent it. He found in it a theory of revolution which he accepted without reservation as scientific and on which he was more outspokenly dogmatic even than Marx himself. His powers of mind, which were great, were spent in demonstrating how the unfolding events of the twentieth century confirmed the analysis of the master.

It was by his powers of will that Lenin was most distinguished, and if Leninism contributed little to Marxism as a theory, it contributed a great deal to it as a movement. Lenin was an activist. He was the supreme agitator, a field commander in the class war who could dash off a polemical pamphlet, dominate a party congress, or address throngs of workers with equal ease.

Beside him, Marx and Engels seem almost to be mere recluses or sociologists. Marx and Engels had preferred to believe that the dictatorship of the proletariat, when it came, would represent the wishes of the great majority in a society in which most people had become proletarians. Lenin more frankly foresaw the possibility that the proletarian dictatorship might represent the conscious wishes of a small vanguard and might have to impose itself on great masses by an unshrinking use of force.

---

*Lenin as activist*

*The party*

Above all, Lenin developed Marx's idea of the role of the party. He drew on the rich experience of pre-Marxist revolutionaries in Russia—the mysterious use of false names, invisible ink, secret ciphers, forged passports, and hidden meeting places—the whole conspiratorial wonderland which, when it existed to a lesser degree in the West before 1848, drew Marx's scorn and laughter. Lenin's conception of the party was basically Marx's, reinforced by his own experience as a Russian. The party was an organization in which intellectuals provided leadership and understanding for workers, who could not see so clearly for themselves. For trade unionism, concerned only with the day-to-day demands of workers, Lenin had even less patience than Marx. "The unconscious growth of the labor movement," he wrote, "takes the form of trade unionism, and trade unionism signifies the mental enslavement of the workers to the bourgeoisie." The task of intellectuals in the party was to make the trade unions and the workers class-conscious and hence revolutionary. Armed with "objective" knowledge, known to be correct, the party leadership naturally could not listen to the subjective opinions of others—the passing ideas of laborers, peasants, mistaken party subordinates, or other parties pretending to know more than Marx himself. The idea that intellectuals supply the brains and workers the brawn, that an elite leads while the toilers meekly follow, is understandable enough in view of the Russian background, which had created on the one hand a highly self-conscious intelligentsia and on the other a repressed working class and peasantry deprived of all opportunity for political experience of their own. The insistence on a leading and powerful role for the party elite became one of the most distinctive traits of Leninism and one of the most foreign to the democratic movements of the West.

Leninism accomplished the marriage of Russian revolutionary traditions with the Western doctrine of Marxism. It was an improbable marriage, whose momentous offspring was to be communism. But at the time, when Bolshevism first appeared in 1903, it had little or no effect. When revolution first broke out in Russia in 1905, it took the revolutionary émigrés almost entirely by surprise.

## 91. THE REVOLUTION OF 1905

### *Background and Revolutionary Events*

The almost simultaneous founding at the turn of the century of the Constitutional Democratic, Social Revolutionary, and Social Democratic parties was clearly a sign of mounting discontent. None of these was as yet a party that tried to get candidates elected to office, for there were no elections in Russia above the provincial zemstvo level. All three parties were propaganda agencies, made up of leaders without followers, intellectuals who followed various lines of thought. All, even those who became Constitutional Democrats, were watched by the police and obliged to do most of their work underground. At the same time, after 1900, there were signs of growing popular unrest. Peasants were trespassing on lands of the gentry and even rising in local insurrections against landlords and tax collectors. Factory workers sporadically refused to work. But with these popular movements none of the new parties had formed any solid links.

*Growing discontent*

The government refused to make concessions of any kind. The tsar, Nicholas II, who had mounted the throne in 1894, was a man of narrow outlook. Tutoed in his youth by Pobiedonostsev, the lay leader of the Russian Orthodox church, he regarded all ideas ques-

tioning autocracy, Orthodoxy, and Great Russian nationalism as un-Russian. That persons in the government should be controlled by interests outside the government—the mildest liberalism or most orderly democracy—seemed to the tsar, the tsarina, and the leading officials to be a monstrous aberration. Autocracy, for them, was the best and only, as it was the God-given, form of government for Russia.

The chief minister, Plehve, and the circles at court hoped that a short successful war with Japan would create more attachment to the government. The war went so badly that its effect was the reverse. Critics of the regime (except for the handful of the most internationalist Marxists) were sufficiently patriotic to be ashamed at the ease with which Russia was defeated by an upstart, Asian power. As after the Crimean War, there was a general feeling that the government had exposed its incompetence to all the world. Liberals believed that its secret methods, its immunity to criticism or control, had made it sluggish, obstinate, and inefficient, unable either to win a war or to lead the economic modernization that was taking place in Russia. But there was little that the liberals could do.

The police had recently allowed a priest, Father Gapon, to try to organize the St. Petersburg factory workers, hoping thus to counter the propaganda of revolutionaries. Father Gapon took up their grievances in all seriousness. They believed, as uneducated peasants only recently transplanted to the city, that if only they could reach the ear of the tsar, whom they called the Little Father, he would hear their complaints with shocked surprise and rectify the evils that afflicted Russia. They drew up a petition, asking for an eight-hour day, a minimum daily wage of one ruble (50 cents), a repudiation of bungling bureaucrats, and a democratically elected Constituent Assembly to introduce representative government into the empire. Unarmed, peaceable, respectful, singing “God save the Tsar,” a crowd of 200,000—men, women, and children—gathered before the tsar’s Winter Palace one Sunday in January 1905. But the tsar was not in the city, and his officials were fearful. Troops marched up and shot down the demonstrators in cold blood, killing several hundred.

“Bloody Sunday” in St. Petersburg snapped the moral bond upon which all stable government rests. The horrified workers saw that the tsar was not their friend. The autocracy stood revealed as the force behind the hated officials, the tax collectors, the landlords, and the owners of the industrial plants. A wave of political strikes broke out. Social Democrats (more Mensheviks than Bolsheviks) appeared from the underground or from exile to give revolutionary direction to these movements. Councils or “soviets” of workers were formed in Moscow and St. Petersburg. The peasants, too, in many parts of the country spontaneously began to erupt, overrunning the lands of the gentry, burning manor houses and doing violence to their owners. Social Revolutionaries naturally tried to take over this movement. The liberal Constitutional Democrats—professors, engineers, business people, lawyers, and leaders in the provincial zemstvos founded 40 years before—tried also to seize leadership or at least use the crisis to force the government’s hand. All agreed on one demand: that there should be more democratic representation in the government.

The tsar yielded grudgingly and as little as possible. In March 1905 he promised to call to office men “enjoying the confidence of the nation.” In August (after the ruinous defeat in the naval battle of Tsushima) he agreed to call a kind of Estates General, for which peasants, landowners, and city people should vote as separate classes. Still the revolution raged unchecked. The St. Petersburg Soviet, or workers’ council, led mainly by Mensheviks (Lenin had not yet reached Russia), declared a great general strike in October.

---

*Response to military defeat*

---

*Reactions to “Bloody Sunday”*

The angry response to “Bloody Sunday” in early 1905 erupted in a wave of strikes, demands for political reform, and militant demonstrations, including this protest march in St. Petersburg. Most of the protestors in this photograph were students, and they were marching behind red flags that had become a modern symbol for revolutionary political movements.

(SOVFOTO)

Railroads stopped, banks closed, newspapers ceased to appear, and even lawyers refused to go to their offices. The strike spread to other cities and to the peasants. With the government paralyzed, the tsar issued his October Manifesto. It promised a constitution, civil liberties, and a Duma to be elected by all classes alike, with powers to enact laws and control the administration.

---

*The October  
Manifesto*

The tsar and his advisers intended to divide the opposition by releasing the October Manifesto, and in this they succeeded. The Constitutional Democrats, with a Duma promised, allowed themselves to hope that social problems could henceforth be dealt with by parliamentary methods. Liberals were now afraid of revolutionaries, industrialists feared the strength shown by labor in the general strike, and landowners demanded a restoration of order among the peasants. Aroused peasants and workers were not yet satisfied: the former still wanted more land and less taxation; the latter, a shorter working day and a living wage. The several branches of revolutionary intellectuals worked upon the continuing popular agitation, hoping to carry matters forward until the tsarist monarchy was abolished and a socialist republic was established with themselves at its head. They believed also (and correctly) that the October Manifesto was in any case a deception, which the tsar would refuse to adhere to as soon as revolutionary pressure was removed. The soviets continued to seethe, local strikes went on, and there were mutinies among soldiers at Kronstadt and sailors in the Black Sea fleet.

But the government was able to maintain itself. With the middle-class liberals now inactive or demanding order, the authorities arrested the members of the St. Petersburg Soviet. Peace was hastily made with Japan, and reliable troops were recalled from the Far East. The revolutionary leaders fled back to Europe, or again went underground, or were

caught and sent to prison or to Siberia; executions were carried out in the countryside. The Revolution of 1905 would prove to be only a dress rehearsal for the revolution to come in 1917.

### *The Results of 1905: The Duma*

The chief apparent result of the Revolution of 1905 was to make Russia, at least ostensibly, into a parliamentary type of state like the rest of Europe. The promised Duma was convoked. For ten years, from 1906 to 1916, Russia had at least the superficial attributes of a semiconstitutional monarchy.

But Nicholas II soon showed that he did not intend to yield much. He drew the teeth of the new Duma before the assembly could even be born, by announcing in advance, in 1906, that it would have no power over foreign policy, the budget, or government personnel. His attitude toward constitutional monarchy continued until 1917 to be entirely negative; the one concession that tsarism would not allow was any real participation in government by the public. Within this "public" the two extreme fringes were equally impervious to liberal constitutionalism. On the Right, stubborn upholders of pure autocracy and the Orthodox church organized the Black Hundreds, terrorizing the peasantry and urging them to boycott the Duma. On the Left, in 1906, the Social Revolutionaries and both the Bolshevik and Menshevik wings of the Social Democrats likewise refused to recognize the Duma, urged workers to boycott it, and refused to put up any candidates for election.

The short-lived first Duma was elected in 1906 by a system of indirect and unequal voting, in which peasants and workers voted as separate classes, and with proportionately far less representation than was granted to the landlords. In the absence of socialist candidates, workers and peasants voted for all sorts of people, including the liberal Constitutional Democrats (the Cadets), who obtained a sweeping majority. The Cadets, when the Duma met, found themselves still fighting for the bare principle of constitutional government. They demanded true universal male suffrage and the responsibility of ministers to a parliamentary majority. The tsar's response was to dismiss the Duma after two months.

---

---

*The first Duma*

A second Duma was elected in 1907, with the government trying to control the elections through suppression of party meetings and newspapers, but since Social Revolutionaries and Mensheviks now consented to take part, some 83 socialists were elected. The Cadets, becoming fearful of the revolutionary Left, concluded that constitutional progress must be gradual and showed a willingness to cooperate with the government. But the Duma came to an abrupt end when the government denounced and arrested some 50 socialists as revolutionaries bent only on destruction. A third Duma, elected after an electoral change that gave increased representation to the landed propertied class and guaranteed a conservative majority, managed to hold several sessions between 1907 and 1912, as did a fourth Duma from 1912 to 1916. The deputies, by following the lead of the government, by addressing themselves only to concrete issues, by losing themselves in committee work, and by avoiding the basic question of where supreme power lay, kept precariously alive a modicum of parliamentary institutions in the tsarist empire.

---

---

*The second Duma*

### *The Stolypin Reforms*

Some officials believed that the way to checkmate the revolutionaries and strengthen the hold of the monarchy was for the government, while keeping all controls in its own hands,

to attract the support of reasonable and moderate people by a program of reforms. One of these reformers was Peter Stolypin, whom the tsar retained as his principal minister from 1906 to 1911. It was Stolypin who dissolved the first two Dumas. But it was not his policy merely to stand still. His aim was to build up the propertied classes as friends of the state. He believed, perhaps rightly, that a state actively supported by widespread private property had little to fear from doctrinaire intellectuals, conspirators, and émigrés. He therefore favored and broadened the powers of the provincial zemstvos, in which the larger landowners took part in administering local affairs. For the peasantry he put through legislation more sweeping than any since the Emancipation, allowing peasants to sell their shares in the communal land of the *mir*s and leave their villages. Peasants also gained the right to acquire private control over land and to buy property from the communes or the gentry.

---

Success of the  
Stolypin program

The Stolypin policy was successful. Between 1907 and 1916, 6.2 million families out of 16 million who were eligible applied for legal separation from the *mir*. There was no mistaking the trend toward individual property and independent farming. But the results of the Stolypin program must not be exaggerated. The *mir* was far from broken. A vast majority of

peasants were still involved in the old system of common rights and communal restrictions. The land shortage was still acute in the agricultural areas where yields were highest. Land hunger and poverty continued in the countryside. There were the new big farmers—the *kulaks*—to be resented and envied, but the largest landed proprietors were still the gentry. About 30,000 landlords owned nearly 200 million acres of land, and another 200 million acres made up other large landed estates.

Stolypin was not left long to carry on his program. The tsar gave him only an unwilling support. Reactionary circles disliked his tampering ways and his Western orientation. Social Revolutionaries naturally cried out against dissolution of the communes. Even Marxists, who should in theory have applauded the advance of capitalism in Russia, feared that Stolypin's reforms might do away with agrarian discontent. "I do not expect to live to see the revolution," said Lenin in these years. Stolypin was shot dead while attending the theater in Kiev, in the presence of the tsar and tsarina, in 1911. The assassin, a member of the terrorist wing of the Social Revolutionaries, is thought also to have been a secret agent of the reactionary tsarist police. It may be added that Stolypin's predecessor, Plehve, and about a dozen other high officials within the past few years had similarly died at the hands of assassins.

---

Westernization

But all in all, despite its violence and repression, the Russian empire on the eve of the First World War was moving in a Western direction. Its industries were growing, its railways were expanding, and its exports were almost half as great in value as those of the United States. It had a parliament, if not a parliamentary government. Private property and individualist capitalism

were spreading to new layers of the people. There was a guarded freedom of the press, illustrated, for example, by the legal and open establishment of the Bolshevik party paper, *Pravda* (or *Truth*), in St. Petersburg in 1912. It is not possible to say how far this development might have gone, for it was menaced on both the Right and the Left by obstinate reactionaries upholding the absolute tsardom and by revolutionaries whom nothing but the end of tsardom and wholesale transformation of society could appease. But both extremes were discouraged. The desperation of extreme reactionaries in the government, the feeling that they might in any case soon lose their position, perhaps made them the more willing to precipitate a European war by armed support of Serbian nationalists. As for the revolutionary parties, and especially the Bolsheviks, they were losing in membership on the eve of

the war; their leaders lived year after year in exile, dreaming of the great days of 1905 which stubbornly failed to repeat themselves and sometimes pessimistically admitting, as Lenin did, that there might be no revolution in their time.

## 92. THE REVOLUTION OF 1917

### *End of the Tsardom: The Revolution of March 1917*

War again put the tsarist regime to a test that it could not meet. In this war, more total than any had ever been, willing cooperation between government and people was indispensable to success. This essential prerequisite the tsarist empire did not have. National minorities—Poles, Ukrainians, the peoples of the Caucasus, Jews, and others—were disaffected. As for the socialists, who in every other European parliament voted for funds to finance the war, the dozen otherwise disunited socialists in the Duma refused to do so and were promptly jailed. The ordinary worker and peasant marched off with the army, but without the sense of personal conviction felt by common people in Germany and the West. More decisive was the attitude of the middle class. Because they patriotically wished Russia to win, the glaring mismanagement of the government was the more intolerable to them. The Russian disasters at the battles of Tannenberg and the Masurian Lakes, with which the war opened in 1914, were followed by the advance of the Central Powers into Russia in 1915, at the cost of 2 million Russian soldiers killed, wounded, or captured.

At the war's outbreak middle-class people, as in all countries, offered their assistance to the government. The provincial zemstvos formed a union of all zemstvos in the empire to facilitate the mobilization of agriculture and industry. Business groups at Petrograd (as St. Petersburg was renamed during the war) formed a commercial and industrial committee to get the factories into maximum production. The government distrusted these signs of public activity arising outside official circles. On the other hand, organized in this way, middle-class people became conscious of their own strength and more critical of the bureaucracy. Rumors spread that some officials in the war ministry itself were pro-German, reactionaries who feared the liberalism of England and France with which Russia was allied.

---

*Middle-class support*

Life at court was bizarre even for Russia. The tsarina Alexandra, German by origin, looked upon all Russians outside her own circle with contempt, incited her husband to play the proud and pitiless autocrat, and took advice from a self-appointed holy man, the mysterious Rasputin. She was convinced that Rasputin possessed supernatural and prophetic powers, because he had apparently cured her young son of hemophilia. Rasputin, by his influence over her, had a voice in appointments to high office. All who wished an audience with the imperial pair had to go through him. Patriotic and enlightened persons of all classes vainly protested. In these circumstances, and given the military defeats, the union of zemstvos and other such wartime bodies complained not merely of faults of administration but of fundamental conditions in the state. The government responded by holding them at arm's length. The tsarist regime, caught in a total war, was afraid of the help offered by its own people.

During the war, in September 1915, the Duma was suspended. The war thus revived all the basic political issues that had been latent since the Revolution of 1905. The union of zemstvos demanded restoration of the Duma, which reassembled in November 1916 and expressed loud indignation at the way affairs were conducted. Among all elements of the population,

---

*Deepening of political divisions*

Tsar Nicholas II, the last of the Romanov rulers in Russia, sought to wage war against Germany without mobilizing the popular support of the Russian people. This photograph shows the tsar with his wife and children during the first year of the war. Nicholas abdicated the throne in March 1917, and the Bolsheviks put the entire family to death in the following year. (TASS/SOVFOTO)

The mystical monk Rasputin gained a much-resented influence over tsarina Alexandra and the affairs of the Russian government because he seemed to cure the illness of the royal family's young son. Rasputin's mysterious personality is evoked in this picture, which was taken shortly before his enemies at court murdered him in 1916.

(The Art Archive/Musée des 2 Guerres Mondiales Paris/Dagli Orti)

dissatisfaction with the course of the war and with the government's ineptitude mounted. In December Rasputin was assassinated by nobles at the court. The tsar began to consider repression and again adjourned the Duma. Machine guns were issued to the police. Members of the Duma and of the new extragovernmental bodies concluded that the situation could be saved only by force. It is when moderate persons, normally concerned with their own business, come to such conclusions that revolution becomes a political possibility. The shift of moderates and liberals, their need of a coup d'état to save themselves from

reactionaries, likewise raised the long-awaited prospects of the minority of professional revolutionaries.

Again it was the workers of Petrograd who precipitated the crisis. Food had become scarce, as in all the belligerent countries. But the tsarist administration was too clumsy and too demoralized by graft to institute the controls that had become usual elsewhere, such as maximum prices and ration cards. It was the poorest who felt the food shortage most keenly. On March 8, 1917, food riots broke out, which soon developed, doubtless with the help of revolutionary intellectuals, into political insurrection. Crowds shouted, "Down with the tsar!" Troops within the city refused to fire on the insurgents; mutiny and insubordination spread from unit to unit. Within a few days a Soviet of Workers' and Soldiers' Deputies, on the model of 1905, had been organized in Petrograd.

Middle-class leaders, with the government now helpless, demanded dismissal of the ministry and formation of a new one commanding the confidence of a majority of the Duma. The tsar retaliated by disbanding the Duma. The Duma set up an executive committee to take charge until the situation clarified. There were now two new authorities in the city: one, the Duma committee, essentially moderate, constitutionalist, and relatively legal; the other, the Petrograd Soviet, representing revolutionary forces arising by spontaneous upsurge from below. The Petrograd Soviet (or workers' "council") was to play in 1917 a role like that of the Paris Commune of 1792, constantly pushing the supposedly higher and more nationwide authority to the left. The Soviet became the public auditorium and administrative center of the working-class upheaval. Since it was generally socialist in its outlook, all the factions of doctrinaire socialists—Social Revolutionaries, Mensheviks, Bolsheviks—tried to win it over and utilize it for their own ends.

---

*The Petrograd Soviet*

The Duma committee, under pressure from the Petrograd Soviet, on March 14 set up a Provisional Government under Prince Lvov. The Duma liberals, as a concession to the Soviet, admitted one socialist to the new government, Alexander Kerensky, a moderate, legal-minded Social Revolutionary; and they furthermore consented to demand the abdication of Nicholas II. The tsar was then at the front. He tried to return to his palace near Petrograd, but the imperial train was stopped and turned back by troops. The army, fatefully, was taking the side of the revolution. The very generals in the field, unable to vouch for the loyalty of their men, advised abdication. Nicholas yielded; his brother, the grand duke, declined to succeed him; and on March 17, 1917, Russia became a republic.

### *The Bolshevik Revolution: November 1917*

The Provisional Government, following the best precedents of European revolutions, called for elections by universal male suffrage to a Constituent Assembly, which was to meet late in the year and prepare a constitution for the new regime. It tried also to continue the war against Germany. In July an offensive was mounted, but the demoralized Russian armies were quickly routed. Pending final decision by the Constituent Assembly, the Provisional Government promised wholesale redistribution of land to the peasants but took no action. Meanwhile, the peasants, driven by the old land hunger, were already overrunning the rural districts, burning and looting. At the front the armies melted away; many high officers refused to serve the republic, and masses of peasant soldiers simply turned their backs and went home, unwilling to be absent while land was being handed out. The Petrograd Soviet, opposing the Provisional Government, called for speedy termination of the war. Fearing reactionary officers, it issued on March 14 its Order No. 1, entrusting command within the army to committees elected by both officers and soldiers. Discipline collapsed.

Russia's costly military defeats and the food shortages that developed because of the long war contributed decisively to the revolutionary uprising that overthrew Tsar Nicholas II. Similar discontents soon undermined popular support for the Provisional Government, which tried to continue the war. These women in Petrograd were demanding increased food rations for Russian soldiers, but their demonstration in 1917 is an example of the wider political mobilization that swept across Russia during that revolutionary year.

(SOVFOTO)

*Revolution  
advancing*

The revolution was thus already well advanced when Lenin and the other Bolsheviks arrived in Petrograd in the middle of April. They immediately took sides with the Petrograd Soviet against the Provisional Government, and with similar soviets that had sprung up in other parts of the country. In July an armed uprising of soldiers and sailors, which the Bolshevik central committee disapproved of as premature, was put down. The Bolsheviks were blamed, and Lenin had to flee to Finland. But as a bid for popular support the Provisional Government named the socialist Alexander Kerensky as its head in place of Prince Lvov in an uneasy coalition of moderate socialists and liberals. Kerensky's middle position was next threatened from the Right. The newly appointed military commander, General Kornilov, dispatched a force of cavalry to restore order. Not only conservatives but liberals wished him success in the hope that he would suppress the soviets. Kornilov's movement was defeated, but with the aid of the Bolsheviks, who rallied with other socialists, and of revolutionary-minded soldiers in the city who offered armed resistance. Radicals denounced liberals as accomplices in Kornilov's attempt at counterrevolution, and both camps blamed Kerensky for having allowed the plot to be hatched under his government. Both

liberals and moderate socialists abandoned Kerensky, and he had to form a government of uncertain political support. Meanwhile the food shortage worsened with transport disarranged and the farm population in turmoil, so that workers in the city listened more willingly to the most extreme speakers.

The Bolsheviks adapted their program to what the most aroused elements in a revolutionary people seemed to want. Lenin concentrated on four points: first, immediate peace with the Central Powers; second, redistribution of land to the peasants; third, transfer of factories, mines, and other industrial plants from the capitalists to committees of workers in each plant; and, fourth, recognition of the soviets as the supreme power instead of the Provisional Government. Lenin, though a rigid dogmatist on abstract questions, was a flexible and bold tactician, and his program in 1917 was dictated more by the immediate situation in Russia than by considerations of theoretical Marxism. What was needed was to win over soldiers, peasants, and workers by promising them "peace, land, and bread." With this program, and by infiltration and parliamentary stratagems, as well as by their accuracy as political prophets—predicting the Kornilov counterrevolution and "unmasking" the trend of middle-way liberals to support it—the Bolsheviks won a majority in the Petrograd Soviet and in soviets all over the country.

Lenin thereupon raised the cry, "All power to the Soviets!" to crush Kerensky and forestall the coming Constituent Assembly. Kerensky, to broaden the base on which he stood, and unable to wait for the Constituent Assembly, convoked a kind of pre-parliament representing all parties, labor unions, and zemstvos. Lenin and the Bolsheviks boycotted his pre-parliament. Instead they called an all-Russian Congress of Soviets.

---

*"All power to the Soviets!"*

Lenin now judged that the hour had come for the seizure of power. The Bolsheviks themselves were divided, but Lenin was backed by Trotsky, Stalin, and a majority of the party Central Committee. Troops garrisoned in Petrograd voted to support the soviets, which the Bolsheviks now controlled. On the night of November 6–7, 1917, the Bolsheviks took over telephone exchanges, railway stations, and electric power plants in the city. A warship turned its guns on the Winter Palace, where Kerensky's government sat. The latter could find almost no one to defend it. The hastily assembled Congress of Soviets pronounced the Provisional Government defunct and named in its place a Council of People's Commissars, of which Lenin became the head. Trotsky was named commissar for foreign affairs; Stalin, commissar for nationalities. Kerensky fled, eventually arriving in the United States, where he died in 1970.

At the Congress of Soviets Lenin introduced two resolutions. One called upon the belligerent governments to negotiate a "just democratic peace," without annexations and without indemnities; the second "abolished all landlord property" immediately and without compensation.

---

*Resolutions on peace and property*

Although determined to establish a proletarian dictatorship, the Bolsheviks knew the importance of the Russian peasants. The millions of acres belonging to the large estates that were now expropriated provided a base of support for the new regime without which it could hardly have survived.

Thus was accomplished the Bolshevik or November Revolution.<sup>1</sup> But the long-awaited Constituent Assembly remained to be dealt with. It met in January 1918. Thirty-six million persons had voted for it. Of these, 9 million had voted for Bolshevik deputies,

<sup>1</sup>Also known as the October Revolution, since according to the Julian calendar used in Russia until 1918, the events described took place in October.

showing that the Bolshevik program, launched less than a year before by a small band of émigrés, had a widespread mass appeal. But almost 21 million had voted for Kerensky's party, the agrarian, populist, peasant-oriented Social Revolutionaries. However, said Lenin, "to hand over power to the Constituent Assembly would again be compromising with the malignant bourgeoisie." The Assembly was broken up on the second day of its sessions; armed sailors dispatched by the people's commissars simply surrounded it. The dissolution of the Constituent Assembly was a frank repudiation of majority rule in favor of "class rule"—to be exercised for the proletariat by the Bolsheviks. The dictatorship of the proletariat was now established. Two months later, in March 1918, the Bolsheviks renamed themselves the Communist party.

### *The New Regime: The Civil War, 1918–1922*

In these same months, the Communists, or Bolsheviks, signed the peace of Brest-Litovsk with Germany, surrendering to Germany control over the Baltic provinces, Poland, and the Ukraine. The Russian conquests of two centuries were thus abandoned, but to Lenin it made no difference. He was convinced that the events that he had just mastered in Russia were the prelude to a general upheaval; that the war, still raging in the West, would bring all Europe to the inevitable proletarian or Marxist revolution; that Imperial Germany was therefore doomed; and that Poles, Ukrainians, and others would soon emerge, like the Germans themselves, as free socialist peoples. In any case, it was largely by promising peace that Lenin had won enough backing to overthrow Kerensky, who on this deep popular demand had delayed too long, waiting for England and France to release Russia from its treaty obligations as an ally. But real peace did not come, for the country sank immediately into civil war.

Not only old tsarist reactionaries, and not only liberals, bourgeois, zemstvo members, and Constitutional Democrats, but all types of anti-Leninist socialists as well, Mensheviks and Social Revolutionaries, scattered in all directions to organize resistance against the regime of soviets and people's commissars; and they obtained aid from the Western Allies. Both sides competed for the support of the peasants.

As for the new regime, the oldest of its institutions was the party, founded as a wing of the Social Democrats in 1903; the next oldest were the soviets, dating from 1905 and 1917; and then came the Council of People's Commissars set up on the day of the coup d'état. The first institution founded under the new order was a political police, an Extraordinary All-Russian Commission of Struggle Against Counterrevolution, Speculation, and Sabotage, commonly known from its Russian initials as the Cheka and in later years, without basic change of methods or purpose, under such successive names as the OGPU, the NKVD, the MVD, and the KGB. It was established on December 7, 1917. In January 1918 the Red Army was founded, with Leon Trotsky as war commissar and virtually its creator. In July a constitution was promulgated.

In social policy the Bolsheviks at first adopted no long-range plans, contenting themselves with a mixture of principle and expediency known as "war communism." They nationalized some of the largest industrial enterprises but left the bulk under the control of workers' committees. The pressing problem was to find food, which had ceased to move through any normal channels.

The peasants, very much as in the French Revolution under similar conditions—worthless money, insecure property titles, unruly hired hands, armed marauding, and a doubtful future—were producing less food than usual, consuming it themselves, or hoarding it on their own farms. The response of the government and city workers was also much as in

---

"War communism"

1793. The new government levied requisitions, required the peasants to make stated "deliveries," and invited labor unions to send armed detachments into the country to procure food by force. Since it was naturally the big farmers who had the surplus, they came into disrepute as starvers of the people. Class war broke out, rabid, ferocious, and elemental, between farmers who feared that their very subsistence as well as their property would be taken away and city people, often supported by hungry agricultural laborers, who were driven to desperation by famine. Many peasants, especially the larger farmers, therefore rallied to anti-Bolshevik political leaders.

Centers of resistance developed on every side. In the Don valley a small force assembled under Generals Kornilov and Denikin, with many army officers, gentry landowners, and expropriated business people taking part in it. The Social Revolutionaries gathered followers on the middle Volga. Their most significant military support came from a force of some 45,000 Czechs, who had deserted or been captured from the Austro-Hungarian armies and had then been organized as a Czech Legion to fight on the side of Russia and the Allies. After the November Revolution and the peace of Brest-Litovsk, these Czechs decided to leave Russia by way of the Trans-Siberian Railroad, return to Europe by sea, and resume fighting on the western front. When Bolshevik officials undertook to disarm them, they allied with the Social Revolutionaries on the Volga.

The Allied governments believed that Bolshevism was a temporary madness that with little effort could be stopped. They wished above all to bring Russia back into the war against Germany, an objective they sought to achieve by launching a military intervention in East Asia, through Vladivostok. The Japanese, who had declined military aid to their allies in any other theater, viewed this action favorably, seeing in the ruin of the Russian empire a rare opportunity to develop their sphere of influence in East Asia. It was agreed that an interallied military force should land at Vladivostok, cross Siberia, join with the Czechs, break up Bolshevism, and fall upon the Germans in eastern Europe. For this ambitious scheme Britain and France could supply no soldiers, engaged as they were on the western front. The force turned out to be American and Japanese, but predominantly Japanese; Japan contributed 72,000 men and the United States only 8,000. They landed at Vladivostok in August 1918.

---

*Allied responses*

The civil war lasted until 1920, or even later in some places. It became a confused melee in which the Bolsheviks struggled against Russian opponents, independence-minded nationalities, and foreign intervention. The Red Army fought in Ukraine first against the Germans and then against the French, who occupied Odessa as soon as the war ended in Europe. It reconquered Ukraine, Armenia, Georgia, and Azerbaijan, all of which had declared their independence in 1918; put to flight a hundred thousand "Whites," as the counterrevolutionaries were called, in the south; and fought off Admiral Kolchak, who in Siberia proclaimed himself ruler of all Russia. In 1920, the Bolsheviks carried on a war with the new republic of Poland, which was scarcely organized when it set out to recover the huge Ukrainian and Byelorussian territories that had been Polish before 1772. A small force of British, French, and American troops occupied the northern Russian city of Archangel until the end of 1919, and the Japanese remained at Vladivostok until the end of 1922.

But the anti-Bolshevik forces could never unite. The anti-Communist Russians represented every hue of the political spectrum from unregenerate tsarists to left-wing Social Revolutionaries. Many of the rightist anti-Bolsheviks openly antagonized the peasants by proceeding to restore expropriated landed estates in areas they occupied; many engaged in vindictive reprisals in a kind of "white terror." Leon Trotsky, on the other hand, shaped in the

---

*Disunity among anti-Bolshevik forces*

Leon Trotsky commanded the Red Army that defeated the Bolsheviks' many enemies in the Civil War of 1918–1922. He is seen here in the early years of the revolution, when he emerged as a key political and military leader of the Bolshevik party and an influential theorist of international communism.

(Getty Images)

civil wars a disciplined, effective Red Army, recruiting it, organizing it, unifying it, and equipping it as best he could, assigning political commissars to watch it, and assuring that trustworthy officers occupied its high command. The Bolsheviks could denounce the foreign intervention and appeal to national patriotism, and they could win peasant support by the distribution of land.

By 1922 the Bolsheviks, or Communists, had established themselves up to the frontiers of the former tsarist empire in every direction except on the European side. There the band of Baltic states—Finland, Estonia, Latvia, and Lithuania—remained independent; Romania had acquired Bessarabia, the new Romanian frontier reaching now almost to Odessa. Poland, as a result of the war of 1920, retained a frontier farther east than the Allies themselves had intended. Russia thus lost thousands of square miles of territory and buffer areas acquired over the centuries by the tsars. They remained lost until the Second World War. But peace was won and the regime stood.

It was during these civil wars that the Red Terror broke out in Russia.

Like the famous Terror in France in 1793, it was in part a response to civil and foreign war. Before the Bolshevik Terror, however, the old Jacobin

#### *The Red Terror*

Terror paled. Thousands were shot in Russia merely as hostages (a practice unknown to Europe for some time); and other thousands were killed without even the summary formalities of revolutionary tribunals. The Cheka was the most formidable political police that had yet appeared. The Bolshevik Terror was aimed at the physical extermination of all who opposed the new regime. A bourgeois class background would go far to confirm the guilt of the person charged with conspiring against the Soviet state. As a chief of the Cheka said: "The first questions you should put to the accused person

The Bolsheviks' consolidation of power depended on the carefully controlled Red Army. This is a Red Army artillery battalion that was engaged in the suppression of the Kronstadt sailors' uprising in 1921.

(ITAR-TASS/ISOVOTO)

are, To what class does he belong, what is his origin, what was his education, and what is his profession? These should determine the fate of the accused. This is the essence of the Red Terror."

But a working-class background for a man or a woman made little difference. In 1918 a young woman named Fanny Kaplan shot at Lenin and wounded him. She deposed that she had favored the Constituent Assembly, that her parents had emigrated to America in 1911, that she had six working-class brothers and sisters; and she admitted that she had intended to kill Lenin. She was of course executed, as were others in Petrograd. When the sailors at Kronstadt, who were among the first adherents of the Bolsheviks, rose in 1921, objecting to domination of the soviets by the party (threatening a kind of leftist renewal of the revolution, like the Hébertists who had opposed Robespierre), they were branded as petty bourgeois and shot down by the thousands. The Terror struck at the revolutionists themselves quite as much as it did the bourgeoisie; it was to continue to do so long after the revolution was secure.

The Terror succeeded in its purpose. Together with the victories of the Red Army, it established the new regime. Those "bourgeois" who survived took on the protective coloration of "toilers." No bourgeois as such presumed to take part in the politics of Russia. Mensheviks and other socialists fleeing to

---

*A new regime*

Europe told appalling stories of the human toll taken by Lenin. Horrified European socialists repudiated communism as an atrocious, Russian perversion of Marxism. But, at whatever cost, Lenin and his followers were now able to start building the socialist society as they understood it.

## 93. THE UNION OF SOVIET SOCIALIST REPUBLICS

*Government: The Nationalities and Federalism*

With the end of the civil wars and foreign intervention, and with the termination of the war with Poland, it became possible in 1922 to establish the Union of Soviet Socialist Republics. There were at first four such republics in the Union, but political reorganization and the occupation of new territories at the beginning of the Second World War increased the number to 15 (see map, pp. 746–747). Although many of these new republics were established in central Asia, most of the Soviet Union's population lived in three large Slavic regions: the Russian Soviet Federated Socialist Republic, the Ukrainian Soviet Socialist Republic, and the Byelorussian Soviet Socialist Republic. In the new Union, which geographically replaced the old Russian empire, the name Russia was not officially used. The guiding conception was a blend of the national and the international: to recognize nationality by granting autonomy to national groups, while holding these groups together in a higher union and allowing new groups to enter regardless of historic frontiers. In 1922 the expectation of world revolution was still alive. The constitution, formally adopted in 1924, pronounced the founding of the U.S.S.R. to be “a decisive step by way of uniting the workers of all countries into one World Soviet Socialist Republic.” It made the Union, in principle, fluid and expansible, declared that any member republic might secede and that newly formed soviet socialist republics might join (none ever did voluntarily). When the U.S.S.R. occupied contiguous territories (once part of the tsarist empire) after the outbreak of the Second World War, these territories were also transformed into Soviet Socialist republics—the three independent Baltic states, Estonia, Latvia, and Lithuania; Bessarabia, detached from Romania; and Karelia, taken from Finland after the Russo-Finnish War. Bessarabia became the Moldavian S.S.R., and Karelia temporarily, from 1940 to 1956, had the status of a Karelo-Finnish S.S.R., a 16th Soviet Socialist republic.

*An answer to the  
problem of  
nationalism*

The federal principle in the U.S.S.R. was designed to resolve the problem of nationalism. The tsardom, in its last decades, had tried to deal with this problem by systematic Russification. The nationalities had resisted, and nationalist discontent had been one of the forces fatally weakening the empire. Nationalism, the demand that national groups should have their own political sovereignty, had not only broken up the Austro-Hungarian empire but “Balkanized” central and eastern Europe. This might have happened after 1917 in Russia except for the fact that the Red Army during the civil wars occupied large parts of the tsarist empire which had broken away and declared their independence. As it turned out, by 1922 the U.S.S.R. occupied a sixth of the world's land area.

A hundred languages were spoken in the Soviet Union, and 50 distinct nationalities were recognized within its borders. Many of these were small splinter groups or isolated communities left by the ebb and flow of humanity in inner Asia over thousands of years. All recognized nationalities received a cultural autonomy, or the right to use their own language, have their own schools, wear their own dress, and follow their own folkways with-

A good example of early “socialist realism” in Soviet art, this Soviet political poster from 1918 celebrates “One Year of Proletarian Dictatorship,” and portrays the early achievements of the revolution. A worker and a peasant stand on the symbols and chains of the old regime. The happy people in the background are celebrating their triumph and moving confidently toward a prosperous, industrialized future.

(SOVFOTO)

out interference. Indeed, the Soviet authorities favored the growth of cultural nationalism, and some 50 local languages were put into written form for the first time.

Administratively the nationalities were put on various levels, with varying degrees of separate identity according to their size and importance.

*The Soviet republics*

The most important were the soviet republics themselves, but in practice the Russian S.F.S.R., with over half the population and three-fourths of the territory of the Union, predominated over all the others. When to the Russian were added the Ukrainian and the Byelorussian republics, the overwhelmingly Russian and Slavic character of the Union was marked. Moreover all political and economic rights were severely limited by the concentration of authority in the hands of the central government. There was little substance in the formal claim that each constituent republic was sovereign and had the right to conduct its own foreign affairs. During the Second World War there was evidence that separatism had not wholly died down, remaining especially alive in Ukraine, and several autonomous areas were officially dissolved for separatist activities or even for collusion with the German invaders. By the late 1980s it became increasingly apparent that the Soviets could not prevent the disintegration of the multinational empire that they had inherited from the tsars.

*Government: State and Party*

Government in the Union, and in each component republic, followed a pattern worked out during the revolution and written into the constitutions of 1924 and 1936. In theory, a principle of parallelism was adopted. On the one hand was the state; on the other, paralleling the state but technically not part of it, was the party. But the close interlocking relationship between the two made the parallelism virtually meaningless because the party actually controlled all of the state institutions.

*Elections*

The distinctive state institution was the council or soviet. Here elections took place, and authority proceeded from the bottom upward to the top through an ascending hierarchy of local, provincial, and national Soviets. Under the constitution of 1924 only "toilers" had the right to vote. In the later constitution of 1936 a more direct democratic procedure was introduced. Voters henceforth directly elected members of the higher soviets, a secret ballot was adopted, no class was any longer denied the vote, and a bicameral parliament was created. On the state side, as set forth in the constitution of 1936, the government embodied many seemingly democratic features.

*The Central Committee of the party*

Yet alongside the state, at all levels and in all localities, was the party. Only one party was allowed, the Communist, though nonparty members might be elected to the soviets or to other official positions. In the party, authority began at the top and proceeded downward. At its apex stood the Central Committee, whose membership varied from about 70 in the 1930s to more than double that in later years. Within the Central Committee a powerful Politburo, or political bureau, of about a dozen members dominated discussions of policy and personnel. An even more powerful general secretary, the office that Stalin virtually fashioned, dominated the entire structure and apparatus with authority over appointments, assignments, and decisions at all levels. Thus power and authority in the Communist Party flowed downward and outward, as in an army, or as in a highly centralized government agency or large private corporation in the West, except that the party was not subject to any outside control. Discipline was likewise enforced in ways not used in liberal countries, the fearsome machinery of the secret police being available for use against party members as well as those outside.

*Growth and nature of the party*

The number of party members, men and women, which could not have been more than 70,000 at the time of the revolution, rose to about 2 million by 1930, 3 million by 1940, and to 19 million in the late 1980s. The Leninist ideal of a highly disciplined party, made up of faithful and zealous workers who willingly carried out orders, the ideal on which the Bolsheviks had separated from the Mensheviks in 1903, continued to characterize the Communist party in the Soviet Union. A party of 2 million members, though small in contrast to the population of the U.S.S.R., still represented an enormous growth for the party itself; for each old member who had joined before 1917 there were thousands of new ones. To preserve party unity under the new conditions strict uniformity was enforced. Members intensively studied the principles of Marxism-Leninism, embraced dialectical materialism as a philosophy and even as a kind of religion, learned to take orders without question or compunction and to give authoritative leadership to the mass of nonparty members among whom they worked. The base of the party structure consisted of small nuclei or cells. In each factory, in each mine, in each office, in each class at the universities and technical schools, in each labor union, in each at least of the larger villages, a few people belonged to the party and imparted party views and party momentum to the whole.

The function of the party, in Marxist terms, was to carry out the dictatorship of the proletariat. It was to lead the people as a whole to the realization of socialism and, in day-to-day affairs, to coordinate the ponderous mechanism of government and make it work. Party members were present at all levels of the government. Throughout the whole structure, the party decided what the state should do.

The party in the U.S.S.R. by the 1930s functioned as a tightly knit, highly disciplined leadership group. Those who joined it were willing to work hard, devote themselves to party matters day and night, absorb and communicate the party policy (or "party line"), go where they were sent, attend meetings, speak up, perceive and explain the significance of passing events for the Soviet Union or the world revolution, and master intricate technical details of farming, manufacturing, or the care of machinery. The party was a specially trained elite whose members were in constant touch with each other. It was the thin stream of lifeblood which, by circulating through all the diverse tissues of the U.S.S.R., kept the whole complex body unified, functioning, and alive.

---

*The party's leadership role*

If the party was a leadership group, the corollary was that more than 95 out of 100 persons were condemned to be followers, and while it is perhaps true (as apologists for the system maintained) that under any system true leadership is exercised by a tiny fraction of people, the difference between Communist and non-Communist in the U.S.S.R. became a clear matter of social status. As the years passed, many Communists in the U.S.S.R. were less the revolutionary firebrand type than the successful and efficient man or woman in any social system. They represented the satisfied, not the dissatisfied. They enjoyed extensive material privileges, not only for themselves but also for their children. They became a new vested interest. Within the party, members had to be not so much leaders as followers. A homogeneous and monolithic organization had to present a solid front to the far more numerous outsiders. From time to time a good deal of difference of opinion and open discussion was tolerated (since there was only one party all political questions were intraparty disputes), but in the end the entire membership had to conform. The party favored a certain fertility of mind in looking for ways to get tasks accomplished, but it did not favor, and in fact repressed, originality, boldness, risk-taking, or freedom of thought or action. The dangers of stagnation in such a system became apparent within the Soviet Union itself in later times.

### *The New Economic Policy, 1921–1927*

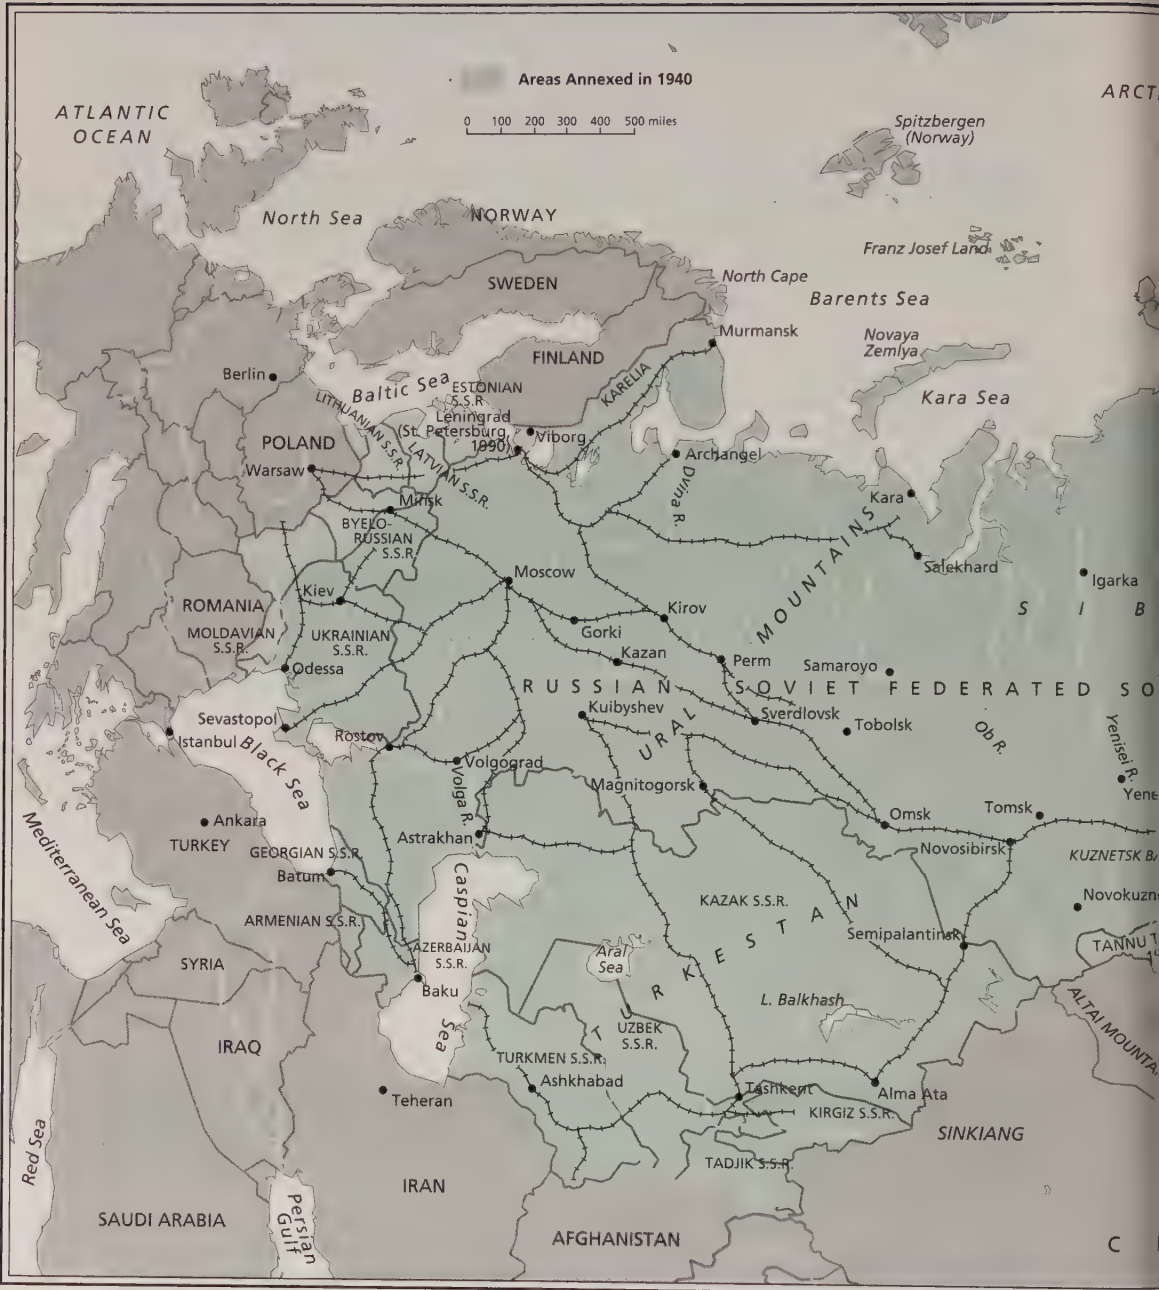

By 1920 "war communism" had hopelessly antagonized the peasants, who were cultivating less than two-thirds as much land as in 1914. This fact, together with a severe drought and the breakdown of transportation, produced a great famine. Millions of people died. The ravages of eight years—of the First World War, the revolution, the civil wars, the Terror, the famine—had left the country in ruins, its productive facilities thrown back by decades as compared with 1914. The mutiny of the Kronstadt sailors in 1921 revealed profound disillusionment in the revolutionary ranks themselves. Lenin concluded that socialization had advanced too fast. He openly advocated a compromise with capitalism, a strategic retreat. The New Economic Policy, or NEP, adopted in 1921, lasted until 1927. Most of the decade of the 1920s saw a relaxation of tempo (and of terror) for most people in the U.S.S.R.

Under the NEP, while the state controlled the "commanding heights" of the economy, maintaining state ownership of the basic productive industries, it allowed a great deal of private trading for private profit. The basic problem was to restore trade between town and country. The peasants would produce only for their own subsistence unless they could exchange a surplus for

---

*Private enterprise under the NEP*

city-made wares such as clothing or tools. The city people had to be fed from the country if they were to turn out factory products or even continue to live in the city. Under the NEP, peasants were allowed to sell their farm products freely. Middlemen were allowed to buy and sell farm products and manufactured articles at will, selling to whom they pleased at market prices and at a profit to themselves. The NEP thus fostered a new commercial class in the cities and favored the big individualist farmer or kulak in the countryside. Indeed, rural

### THE UNION OF SOVIET SOCIALIST REPUBLICS, 1922–1991

The U.S.S.R. was over 5,000 miles long and covered one-sixth of the land area of the globe. It was the only state that immediately adjoined so many important political areas—Europe in the west, the Middle East in the south, China along a long frontier, Japan across a narrow sea, and the United States on the coast near Alaska. The Union had 15 member republics (for a short time 16), of which the Russian was by far the largest. Most of it lay farther north than the Great Lakes of North America, but around Tashkent, in the latitude of New York and Chicago, cotton and citrus fruits were grown by irrigation. The diversion of rivers for this purpose led to environmental disasters such as the spread of deserts and the gradual drying up of the Aral Sea.

changes initiated before 1914 were still at work; peasant families consolidated millions of acres as private property in 1922, 1923, and 1924. Correspondingly, other peasants became “proletarians,” wage-earning hired hands. Under the NEP the worst damages of war and revolution were repaired. But there was no real progress, for in 1928 Russia was producing only about as much grain, raw cotton, cattle, coal, and oil as in 1913, and far less than it presumably would have produced (given the rate of growth before 1913) had there been no revolution.

*Social and Cultural Changes after the Revolution*

Most Bolsheviks wanted their revolution to accomplish much more than the reconstruction of the state and economy; they wanted to revolutionize the daily lives of the workers, peasants, and “toilers,” whom they now expected to construct a new classless society. The new Soviet society was supposed to destroy traditional gender hierarchies as well as the hierarchies of class and wealth. Under the legal reforms of the revolutionary regime, women received equal voting rights, the right to divorce, and access to birth control and abortion—which was legalized in 1920. The new theoretical rights, however, did not have much immediate effect on the social or economic lives of most women in the Soviet Union. Some of the new rights soon lost significance (for example, the right to vote) or disappeared (for example, abortion became illegal again in the 1930s and 1940s), and traditional social relations among the rural masses could not simply be transformed by revolutionary decrees. But it is also true that many girls and young women, like the boys and young men from the working classes, began to receive more education, especially after the turmoil of the Civil War subsided in the early 1920s.

---

*Women's rights*

The campaign to improve prerevolutionary literacy rates was only one example of the early Bolshevik aspirations for radical cultural changes. Writers and artists rallied to the revolutionary cause, seeing the social upheaval as part of a wider rejection of traditional ideas and artistic forms. The creative film director, Sergei Eisenstein, joined with avant-garde theatrical groups to create imaginative new techniques for editing films, portraying dramatic action, and representing political themes. Using his new techniques, Eisenstein produced a famous film about the Russian Revolution of 1905, *Potemkin* (1925), which was commissioned by the Soviet government and which is still regarded by many critics as one of the most innovative films in the history of cinema. Meanwhile, some radical artists sought to combine “futurist” art with the socialist revolution, and the young Russian poet Vladimir Mayakovsky moved on from a famous “Ode to Revolution” to innovative experiments with a new poetic language. In the end, though, Mayakovsky fell into despair and committed suicide as Soviet society entered the Stalinist era of rigid social control. By the late 1920s the period of experimental art was over, and the new cultural orthodoxy of “socialist realism” was celebrating the beauty of large factories and tractors rather than the abstract mysteries of the artistic avant-garde. Like all other spheres of Soviet life, art fell under the strict control of the Communist party and government institutions.

*Art, literature, and film*

*Stalin and Trotsky*

Lenin died in 1924 prematurely at the age of 54 after a series of paralyzing strokes that left him incapacitated in the last two years of his life. His embalmed remains were put permanently on view in the Kremlin; Petrograd was renamed Leningrad; a leader cult was built up around his name and image. The party presented him as a deified equal of Marx himself, and it became necessary for all schools of communist thought to claim unflinching fidelity to the Leninist tradition. Actually, in his own lifetime, the Old Bolsheviks had never regarded Lenin as infallible. They had often differed with him and with each other. As he lay dying, and after his death, his old companions and contemporaries, carrying on the feuding habits of the émigré days, fought with each other for control of the party in Lenin's name. They disputed over Lenin's intentions, but behind the scenes, the general secretary of the party, Joseph Stalin, whom Lenin had warned against, was drawing all the

strings of party control into his own hands. More openly and vociferously, Leon Trotsky, who as war commissar in the critical years had been only less conspicuous than Lenin himself, raised the basic issues of the whole nature and future of the movement.

Trotsky, in 1925 and 1926, inveighed against the lassitude that had descended upon socialism.<sup>2</sup> The NEP with its tolerance of bourgeois and kulaks excited his contempt. He developed his doctrine of "permanent revolution," an incessant drive for proletarian objectives on all fronts in all parts of the world. He championed world revolution, which many in the party were beginning to discard in favor of first building socialism in one country. He denounced the tendency to bureaucratic ossification in the party and urged a new movement of the masses to give it life. He called for more forceful development of industry and for the collectivization of agriculture, which had figured in Communist manifestos ever since 1848. Above all, he demanded immediate adoption of an overall plan, a central control and operation of the whole economic life of the country.

---

*Permanent revolution*

Trotsky failed to carry the party with him. He was charged with leftist deviationism, machinations against the Central Committee, and inciting public discussion of controversial issues outside the party. Stalin wove his web. At a party congress in 1927, 95 percent of the delegates dutifully voted for Stalin and the Central Committee and fewer than 5 percent voted for Trotsky. Trotsky was first exiled to Siberia, then banished from the U.S.S.R.; he lived in Europe and then in Mexico, writing and propagandizing for the "permanent revolution," stigmatizing developments in the U.S.S.R. as a monstrous betrayal of Marxism-Leninism, and organizing an underground against Stalin as he had done in former days against the tsar. He was murdered in Mexico in 1940 under mysterious circumstances, presumably by a Soviet agent. Not until the late 1980s was anyone in the U.S.S.R. permitted to talk or write about him and his contributions to the revolution.

## 94. STALIN: THE FIVE-YEAR PLANS AND THE PURGES

### *Economic Planning*

Hardly had Trotsky been expelled when Stalin and the party appropriated certain fragments of his program. In 1928 the party launched the First Five-Year Plan, aimed at rapid industrialization and the collectivization of agriculture. "Planning," or the central planning of a country's whole economic life by government officials, was to become the distinctive feature of Soviet economics and the one that for a time was to have the greatest influence on other parts of the world.

In retrospect, it seems strange that the Communists waited ten years before adopting a plan. The truth seems to be that the Bolsheviks had only vague ideas of what to do after their seizure of power. Marxism for the most part gave only general descriptions of a future classless society, which offered no specific guidance for the operation of a modern industrial system. The main constructive idea had been mapped out, most clearly by Engels. Within each private enterprise, Engels had observed, harmony and order reigned; it was only between private enterprises that capitalism was chaotic. In the individual factory, he noted, the various departments did not compete with each other; the output of all

<sup>2</sup>For communists, though not for socialists, the terms "communism" and "socialism" were almost interchangeable, since Russian Communists regarded their own system as true socialism and all other socialism as opportunistic, reactionary, or false. Communism was also defined, in the U.S.S.R., as a future state of society toward which socialism, that is, Soviet socialism, was the intermediate stage.

departments was planned and coordinated by management. In an approximate way, the great capitalist mergers and trusts, controlling many factories, prevented competition between them, assigned specific quotas to each, anticipated, coordinated, and stabilized the work of each plant and each person by an overall policy. With the growth of large corporate enterprise, observed Engels, the area of economic life under free competition was

---

Engels' centralized  
economy

constantly reduced, and the area brought under rational planning was constantly enlarged. The obvious next step, according to Engels and other socialists, was to treat *all* the economic life of a country as a single factory with many departments, a single enormous monopoly with many members under one unified, far-seeing management.

During the First World War the governments of belligerent countries had in fact adopted such centralized controls, not because they were socialist but because in time of war people were willing to subordinate their usual liberties to a single undisputed social

---

Wartime conditions  
and economic  
planning

purpose—victory. The “planned society” therefore made its first actual (though incomplete) appearance in the First World War. It was partly from socialist doctrine as exemplified by Engels, partly from experience of the war, and in even larger measure from the pressure to meet the continuing chronic problems of the country by raising its productive level that Stalin and the party in Russia developed the idea of an economic plan.

The U.S.S.R. decided to plan for five years into the future, beginning with the First Five-Year Plan in 1928. The aim of the plan was to strengthen and enrich the country, make it militarily and industrially self-sufficient, lay the groundwork for a true workers' society, and overcome the Russian reputation for backwardness. As Stalin said in a speech in 1929: “We are becoming a country of metal, a country of automobiles, a country of tractors. And when we have put the U.S.S.R. in a motor car and the *muzhik* in a tractor. . . . we shall see which countries may then be ‘classified’ as backward and which as advanced.” The Plan was declared fulfilled in 1932, and a Second Five-Year Plan was launched, lasting until 1937. The Third, inaugurated in 1938, was interrupted by the war with Germany in 1941. New plans were introduced after 1945.

---

The First Five-Year  
Plan

The First Five-Year Plan (like its successors) listed the economic goals to be achieved. It was administered by an agency called the Gosplan. Within the frame of general policy set by the party, the Gosplan determined how much of every article the country should produce, what wages all

classes of workers should receive, and at what prices all goods should be exchanged. Because all decisions were made at the top, it was as much a command economy as a planned economy. At the bottom level, in the individual factory, the local management drew up its requirements, or estimates of what it would need, in raw material, machinery, trained workers, plant facilities, and fuel, if it was to deliver the planned quantity of its product at a stated date. Thousands of estimates were passed up the planning ladder until they reached the Gosplan, which, balancing them against each other and against other needs as seen at the top, determined what should be produced and in what qualities and grades; how many workers should be trained in technical schools and in what particular skills; how many machines should be manufactured and how many spare parts; and how, where, when, and to whom the workers and manufactured goods should be made available. The plan, in short, undertook to control, by conscious management, the flow of resources and workforce which was regulated in capitalist economies by shifts in demand and supply and through changes in prices, wage levels, profits, and interest rates.

The system was exceedingly intricate. It was not easy to have the right number of ball bearings, for example, arrive at the right place at the right time, in exact correspondence to

the amounts of other materials or to the number of workers waiting to use them. Sometimes there was overproduction; sometimes, underproduction. Countless reports, check-ups, and exchanges of information were necessary. A huge class of bureaucrats came into existence to handle the paperwork. The plan achieved some of its goals, exceeded a few, and failed in some. The criteria for fulfillment were almost always quantitative, often to the complete neglect of quality control.

The primary objective of the First Five-Year Plan was to build up the heavy industry, or capital wealth, of the U.S.S.R. The aim was to industrialize without the use of foreign loans.<sup>3</sup> Russia in 1928 was still chiefly an agricultural country. The world offered hardly any case of a country shifting from agriculture to industry without borrowing capital from abroad. Britain, the original home of the Industrial Revolution, was the best example, although even there in the eighteenth century a great deal of capital invested in England was owned by the Dutch. An agricultural country could industrialize from its own resources only by drawing upon agriculture itself. An agricultural revolution had been prerequisite to an industrial revolution in England. By enclosure of land, the squeezing out of small independent farmers, the introduction of scientific cultivation, and under the auspices of a growing class of wealthy landowners, England had both increased its production of food and released many of the rural population to find employment in industry. The First Five-Year Plan called for a similar agricultural revolution in Russia, without benefit to landlords and under the auspices of the state, but no one foresaw its consequences!

---

*Building capital wealth*

### *The Collectivization of Agriculture*

The agricultural plan of 1929 set up collective farms, averaging a few thousand acres apiece, which were considered to be the property not of the state but of the peasants collectively who resided on them. (A few state-operated collective farms were also established, as models for the others.) Individual peasants were to pool their privately owned fields and livestock in these collectives. When those peasants who possessed fields or stock in considerable amount—the prosperous peasants or kulaks—resisted surrendering them to the new collectives, they were ruthlessly liquidated as a class. Zealous detachments of Communists from the cities used violence; poor peasants turned upon rich ones; hundreds of thousands of kulaks and their families were killed and many more were transported to labor camps in remote parts of the Soviet Union. The trend that had gone on since the nineteenth-century Emancipation, building up a class of property-owning, labor-hiring, and “bourgeois” peasants, was now abruptly reversed. Collectivization was intended to convert the peasantry into a class more nearly resembling the proletariat of Marxian doctrine, a class of people who as individuals owned no capital and employed no labor, and so would better fit into a proletarian, socialist state. The year 1929, not 1917, was the memorable revolutionary year for most people in Russia.

Collectivization was accomplished at the cost of village class war in which many of the most capable farmers perished and at the cost also of a wholesale destruction of livestock. The big farmers slaughtered their horses, cattle, pigs, and poultry rather than give them up. Even middling and small farmers did the same, caring nothing about animals that were no longer their

---

*The human costs of collectivization*

<sup>3</sup>The Bolsheviks had repudiated the entire debt of the tsarist empire. Their credit in capitalist countries was therefore not good, so that, in addition to fearing dependence upon foreign lenders, they were in any case for a long time unable to borrow large sums.

The creation of collective farms during Stalin's First Five-Year Plan was one of the most radical and most resented economic actions of the new Communist regime. Millions of farm animals were destroyed by angry peasants and millions of people died in the subsequent period of repression and famine. But the creation of large-scale agriculture and tractor stations gradually made it possible for farmers to use new machinery in Russian fields. These farmers were heading for work on new tractors in the early 1930s.

(SOVFOTO)

own. The ruinous loss of animals was the worst unforeseen calamity of the First Five-Year Plan. The agricultural disorders led to a deadly famine in southeast Russia and the Ukraine in 1932 that cost millions of lives. Despite the famine Stalin refused to cut back on cereal and other food exports because they were needed to pay for industrial imports under the Five-Year Plan.

By introducing thousand-acre units in place of small ones, collectivization made it possible to apply capital to the soil. Formerly the average peasant had been far too poor to buy a tractor and his fields had been too tiny and dispersed for him to use one; only a few kulaks had employed any such machinery. In the course of the First Five-Year Plan hundreds of Machine Tractor Stations were organized throughout the country. In its region each maintained a force of tractors, harvesting combines, and expert agronomists, which could be dispatched from one collective farm to another by local arrangement. The new collectivized system made it easier

for higher authorities to control the agricultural surplus (products not consumed by the village itself). Each collective was assigned a quota. Members of the collective could sell in a free market any products they raised beyond this quota. Meanwhile the government knew the quantity of agricultural produce it could count on, either to feed the cities and other regions that did not produce their own food or for export in the world market to pay for imports of machinery from the West. By 1939 all but a negligible fraction of the peasantry was collectivized, but collectivization failed to increase agricultural output. The new collectives denied peasants the freedom to make their own economic decisions, destroyed their incentive to improve the land they worked, and prevented them from passing land on to their heirs. Agriculture therefore remained a troubled sector of the economy. Collectivization made possible, however, the success of industrialization by augmenting the supply of industrial workers. Since the villages needed less labor, 20 million people moved from country to city between the years 1926 and 1939 and were available for jobs in the new industries.

### *The Growth of Industry*

While the agricultural base was being revolutionized, industrialization went rapidly forward. At first there was considerable dependence on the capitalist countries. Engineers and other technicians from western Europe and the United States went to work in the Soviet Union. Much machinery was imported. But the worldwide depression that set in about 1931, bringing a catastrophic fall of agricultural prices, made foreign-made machines more costly in terms of the cereals that were the chief Soviet export. The international situation also deteriorated. While the U.S.S.R. always considered the whole outside world hostile to it, both Japan and Germany in the 1930s showed overt hostility and posed a new military threat. The Second Five-Year Plan, launched in 1933, though in some ways less ambitious than the first, showed an even greater determination to cut down imports and achieve national self-sufficiency, especially in the heavy industry basic to war production.

No ten years in the history of any Western country ever showed such a rate of industrial growth as the decade of the first two plans in the Soviet Union. In Great Britain industrialization had been gradual; in Germany and the United States it had been more rapid, and in each country there had been decades in which output of coal or iron doubled; but in the U.S.S.R., from 1928 to 1938, production of iron and steel expanded four times and that of coal expanded three and a half times. In 1938 the U.S.S.R. was the world's largest producer of farm tractors and railway locomotives. Four-fifths of all its industrial output came from plants built in the preceding ten years. In 1939 the U.S.S.R., as measured by purely quantitative standards, was surpassed in gross industrial output only by the United States and Germany.

---

*Rates of industrial growth*

The plans called for a marked development of industry east of the Urals and brought a modernization of life for the first time to inner Asia. New industrial cities rose in the old Turkestan (divided into the five Central Asian Soviet socialist republics) and in Siberia. The opening of all these new areas demanded a revolution in transportation, and by 1938 the railroads were carrying five times as much freight as in 1913.

These astounding developments were enough to change the relative economic strength of the world's peoples with respect to one another. It was significant that inner Asia was for the first time turning industrial. In part because of these developments in Asia, the Russia that went to war with Germany in 1941 proved to be a different antagonist from the Russia of 1914.

---

*Changes brought by modernization*

---

## CHRONOLOGY OF NOTABLE EVENTS, 1894–1937

---

1894	Creation of Russian Marxist organization, the Social Democratic Party
1903	Social Democrats split into two factions, Bolsheviks and Mensheviks; Lenin leads Bolsheviks
January 1905	Economic hardship, “Bloody Sunday,” and Russo-Japanese War spark Revolution of 1905 in St. Petersburg
October 1905	Tsar’s “October Manifesto” establishes new parliamentary body, the Duma
1906–1911	Stolypin’s reforms promote growth of prosperous farmers ( <i>kulaks</i> )
1914	Russia enters war with Germany and suffers crushing military defeats
March 1917	Tsar Nicholas II abdicates; Russia becomes a republic under provisional government and continues war with Germany
April 1917	Germany provides safe passage for Bolshevik leaders to enter Russia
November 1917	The Bolshevik Revolution: Lenin and followers overthrow the provisional government in Petrograd
January 1918	Bolsheviks dissolve Constituent Assembly and establish the Red Army
1918–1922	Bolsheviks consolidate power and suppress all opponents in Civil War and “Red Terror”
1919–1920	Creation of Third, or Communist, International (the Comintern)
1921–1927	New Economic Policy allows more independent commercial activity
1922	Establishment of the Union of Soviet Socialist Republics (USSR)
1925–1927	Stalin prevails over Trotsky to take control of the Bolshevik Central Committee
1928	Stalin launches the first Five-Year Plan for economic development
1929	Soviet regime begins the collectivization of agriculture; resistance from <i>kulaks</i> and others leads to widespread repression and famine
1936–1937	Public “purge trials” remove Old Bolsheviks from Communist party; many are executed or imprisoned

---

Industrialization in the Urals and in Asia enabled the U.S.S.R. (with Allied assistance) to survive the German occupation and destruction of the older industrial areas in the Don valley. The new “socialist fatherland” proved able to absorb terrible losses and strike back. A great deal of the increased industrial output had gone to equip and modernize the Red Army.

At the same time, the degree of industrialization of the U.S.S.R. can easily be exaggerated. It was phenomenal because it started from so little. Qualitatively, by Western criteria, standards of production were low. Many of the hastily constructed new plants were shoddy and suffered from rapid depreciation. In efficiency, as shown by output per worker employed, the U.S.S.R. continued to lag behind the West. In intensity of modernization, as shown by output of certain items in proportion to the whole population, it also lagged. Per capita comparisons with other industrial nations, in 1937, show that the U.S.S.R. produced

less coal, electricity, cottons, woolens, leather shoes, or soap than did the United States, Britain, Germany, France, or Japan, and less iron and steel than any of them except Japan. Production of paper is revealing because paper is used in so many different aspects of modern education, economic activity, communications, government affairs, and household life. Where the United States about 1937 produced 103 pounds of paper per person, Germany and Great Britain each produced 92, France produced 51, and Japan produced 17, the U.S.S.R. produced only 11.

### *Social Costs and Social Effects of the Plans*

Industrialization in Russia demanded huge and continuing sacrifices on the part of the people. It was not merely that kulaks lost their lives, or that millions of others, whose exact numbers have never been known, were found to be enemies of the system and sent off to correctional labor camps. All were required to accept a program of austerity and self-denial, going without the better food, housing, and other consumer goods that might have been produced, in order that the capital wealth and heavy industry of the country might be built up. The plan required hard work and low wages. Better housing, better food, better clothing, and more leisure would follow once the basic industries had been built. Morale was sustained by propaganda. One of the chief functions of party members was to explain why sacrifices were necessary. In the late 1930s life began to ease; food rationing was abolished in 1935, and a few more products of light industry, such as dishes and fountain pens, began to appear in Soviet retail stores. Living standards were at least up to those of 1927 with prospects brighter for raising them. But the need for war preparations, as the world again approached chaos, again drove back the vision of the Promised Land.

---

---

*Sacrifices and  
rewards*

Socialism, as realized in the plans, did away with some of the evils of unrestrained free enterprise. There was no acknowledged unemployment. There was no cycle of boom and depression. There was less misuse of women and children than in the early days of industrialism in the West. There was a minimum below which no one was supposed to fall. On the other hand, there was no economic equality. Marxism, indeed, had never seen complete equality of income as a principal objective. While there were no very rich people, as in the West (where the income of the very rich often came from inherited property), the differences in income were nevertheless great. High government officials, managers, engineers, and favored artists and intellectuals received the highest rewards. People with large incomes could build precarious little fortunes for themselves and their children. They could not, however, under socialism, own any industrial capital, that is, buy shares of stock or other equities. There was, of course, no stock exchange.

Competition of a special kind developed. In 1935 a miner named Stakhanov greatly increased his daily output of coal by devising improvements in his methods of work. He also greatly increased his wages, since Soviet workers were paid at piece rates. His example proved contagious; workers all over the country began to break records of all kinds. The government publicized their achievements, called them Stakhanovites and "labor heroes," and pronounced the movement to be "a new and higher stage of socialist competition." In labor circles in the United States such straining to increase output was called a speed-up, and piecework wages had long been anathema to the organized labor of all countries. Nor was management free from competitive pressure. A factory manager who failed to show the net income (or "profit") upon

---

---

*Competition*

The rapid industrialization of the Soviet Union emphasized heavy machinery rather than consumer goods, but the Soviets also began to produce their own cars. This automobile factory in the city of Gorky (a city renamed by the Soviets for the Russian writer) represented the new industrial economy and also expressed the requisite political loyalty to Stalin.

(SOVFOTO)

which the plan counted, or who failed to meet his quota of output, might lose not only his job but also his social status—or even his life.

---

*The price of  
solidarity*

Solidarity was purchased at the price of totalitarianism. The government supervised everything. There was no room for skepticism, independence of thought, or any criticism that weakened the will to achieve. As in tsarist times, no one could leave the country without special permission, which was given far more rarely than before 1914. There was, of course, only one political party. There were no free labor unions, no free press, no freedom of association, and at best only an irritable tolerance for religion. Soviet Jews who adapted to the system found themselves in a more favorable position than ever before; some even attained positions of high importance. Many still faced lingering suspicion and distrust, however, and in religious matters they met harassment. Art, literature, and even science became vehicles of political propaganda; creative, experimental works—and the people who promoted them—disappeared from Soviet cultural life. Conformity was the ideal, and the very passion for solidarity made for fear and suspicion of all who might go astray. As for the number of people sacrificed to Stalin's brutal Juggernaut—liquidated bourgeois, liquidated peasants, purged party members, disaffected persons sentenced to long terms in labor camps—a precise figure is difficult to arrive at, but it

certainly reached many millions over the years in which the various Soviet plans were implemented.

### *The Purge Trials of the 1930s*

In 1936 socialism was judged to have proved so successful that a new constitution for the U.S.S.R. was proclaimed. It enumerated, as rights of Soviet citizens, not merely the usual civil liberties of Western democracy but the rights to steady employment, rest, leisure, economic security, and a comfortable old age. All forms of racism were condemned. It reorganized the Soviet republics and granted equal and direct universal suffrage. The constitution of 1936 received favorable comment in the West, where it was hoped that the Russian Revolution, like former revolutions, had at last turned into more peaceable and quiet channels. It was nonetheless apparent that the Communist party remained the sole governing group in the country, that Stalin was tightening his dictatorship, and that the party was racked by internal troubles.

It was natural that the rapid changes of the 1930s should provide divergences of opinion among the party leaders, but Stalin acted preemptorily to suppress all dissent. As early as 1933, the party underwent a drastic purge, in which a third of its members were expelled. Even the faithful were appalled at Stalin's growing ruthlessness. Serge Kirov, an old friend and revolutionary companion of Stalin since 1909, head of the Leningrad party apparatus, and member of the Politburo since 1930, showed signs of leading the disaffected. In 1934 he was assassinated in his office, it is now thought by a police agent of Stalin's. Stalin used the assassination as an excuse to strike out at his opponents, imagined or real, by a revival of terror, immediately executing over a hundred persons and launching the extraordinary purges of the next four years.

---

*Diverging opinions*

A series of sensational trials took place. In 1936 sixteen Old Bolsheviks were brought to trial. Some, like Zinoviev and Kamen'ev, had been expelled from the party in 1927 for supporting Trotsky and subsequently, after the proper recantations, had been readmitted. Now they were charged with the murder of Kirov, with plotting the murder of Stalin, and with having organized in 1932 under Trotsky's inspiration a secret group to disrupt and terrorize the Central Committee. To the amazement of the world, all the accused made full confession to the charges in open court. All blamed themselves as unworthy and erring reprobates. All were put to death. In 1937, after similar trials, 17 other Old Bolsheviks met the same fate or received long prison sentences; and in 1938 a group of "rightists" were executed after they were charged with wanting to restore bourgeois capitalism. The same confessions and self-accusations followed in almost every case, with no other verifiable evidence adduced. How these confessions were obtained in open court from hardened revolutionaries apparently in full possession of their faculties and bearing no sign of physical harm mystified the outside world. Only later did it become clear that psychological torture had broken the will of those accused and that threats against their families (or promises to spare them) had played the major part.

---

*Trials of the Old Bolsheviks*

In addition to these public trials there were other arrests, private inquisitions, and executions. In 1937, in a secret court martial, Marshal Tukhachevski and seven other top generals were accused of Trotskyism and of conspiring with the Germans and Japanese and were summarily shot. The purges embraced the highest levels of the party, government, military, intellectual, and scientific circles and reached down to the lesser echelons as well. In later years the KGB itself disclosed that in the years 1930–1953 (the year of Stalin's

Soviet propaganda depicted Stalin as the benevolent national leader and as the worthy successor to Lenin. This typical poster shows a thoughtful, visionary Stalin with a new hydroelectric plant in the background. The artist, Konstantin Ivanov, quoted Lenin on the poster and gave this work a straightforward political title: “To communism—along the path laid by Lenin.”

(SOVFOTO)

death) 3,778,334 persons had been tried and sentenced for “counterrevolutionary” activity and crimes against the state, most of them in the Great Terror of 1934–1938, and that 786,098 were executed; unknown others died in prison camps, later to be known as the Gulag. In later years, the innocence of many of Stalin’s victims was officially confirmed and their reputations posthumously restored.

By these purges Stalin rid himself of all possible rivals for his own position. He disposed of the embarrassment of having colleagues about him who could remember the old days, who could quote Lenin as a former friend, or belittle the reality of 1937 by recalling the dreams of 1917. After 1938 there were virtually no Old Bolsheviks left. The aging but still explosive professional revolutionaries were now dead. A younger group, products of the new order, practical, constructive, impatient of “agitators,” and acquiescing in Stalin’s dictatorship, were operating what was now an established system.

Reinforcing the dictatorship

## 95. THE INTERNATIONAL IMPACT OF COMMUNISM, 1919–1939

### *The Background: Socialism and the First World War*

Marxism had always been international in its outlook. To Marx and the early Marxists existing states (like other institutions) owed their character to the class struggle. They were no more than committees of the bourgeoisie to govern the proletariat, destined to be dismantled and pass away in the course of inevitable historic processes. After Marx's death, as Marxist parties grew in numbers, and as states of western Europe became more democratic, most people who called themselves Marxists accepted the national state, seeing in it a means by which the workers' lot could be gradually improved. This view was part of the movement of revisionism, or what more rigorous Marxists called "opportunism." In the First World War national loyalty proved its strength. The socialist parties in the Reichstag, the French Chamber, and other parliamentary bodies voted for war credits without hesitation. Socialist workers reported for mobilization like everyone else.

Small minorities of socialists in every country, however, refused to accept the war. Marxian socialism had long taught that workers of all nations were bound by the supreme loyalty of class, that their real enemies were the capitalists of their own countries, that international wars were capitalist and imperialist quarrels, and that class struggle was the only kind of warfare that the proletariat should accept. These socialists denounced the action of the socialist majorities as a sellout to capitalism and imperialism. They met in international conferences with each other and with socialists from the neutral countries. Active among them had been Lenin and other Russian Social Democrats then in Switzerland. "The only task for socialists," wrote Lenin in 1914, "is to convert the war of peoples into a civil war." The minority or antiwar socialists met at the small Swiss town of Zimmerwald in 1915, where they drew up a "Zimmerwald program," calling for immediate peace without annexations or indemnities. This had no effect on most socialists in the belligerent countries. The Zimmerwald group itself soon began to split. Most Zimmerwalders regarded peace, or the repudiation of the war, as their aim. But a "Zimmerwald Left" began to develop, inspired mainly by Lenin and the Russian émigrés. This faction made its aim not peace but revolution. It hoped that the war would go on until it caused social revolution in the belligerent countries.

---

*Class solidarity  
versus nationalism*

Then in April 1917, as we have seen, with the German imperial government arranging their trip, Lenin and the other Bolsheviks went back to Russia and accomplished the November Revolution. Lenin, until his death in 1924, believed that the Russian Revolution was only a local phase of a world revolution—of the revolution of strict Marxian doctrine. Russia, for him, was the theater of currently most active operations in the international class war. Because he expected proletarian upheaval to follow soon in Germany, Poland, the Danube valley, and the Baltic regions, he accepted the treaty of Brest-Litovsk. He took no pride in Russia; he was no patriot or "social-chauvinist," to use his own term. In the founding of the U.S.S.R. in 1922 he saw a nucleus around which other and greater soviet republics of any nationality might coalesce.

The First World War was in fact followed by attempted revolutions in Germany and eastern Europe. With the German and Austro-Hungarian empires wrecked, socialists and liberals of all descriptions strove to establish new regimes. Among socialists the old differences persisted, between those favoring gradual, nonviolent, and parliamentary methods and a more extreme group

---

*Attempted revolutions  
in Europe*

who saw in postwar disintegration a chance to realize the international proletarian revolution. The first group looked upon the Bolshevik Revolution with horror; the second looked upon it with admiration. The first group included not only trade union officials and practical socialist politicians but also such prewar giants of Marxian exegesis as Karl Kautsky and Eduard Bernstein. Even Kautsky, who had upheld pure Marxism against the revisionism of Bernstein, could not stomach the methods of Lenin. The mass of European socialists, with their fiercest leaders removed, were to remain characterized by relative moderation. Marxist in principle, they were in fact more than ever wedded to gradual, peaceable, and parliamentary methods. The second group, radical Leninists, continued to agitate for the forcible overthrow of European capitalism and European political institutions; and they began to join together in the Bolsheviks' new organization for promoting world revolution, the Third, or Communist, International, which was created in March 1919.

### *The Founding of the Third International*

The Second International, which since its foundation in 1889 had met every two or three years until 1914, held its first postwar meeting at Berne in 1919. It represented socialist parties and labor organizations of all countries. The Berne meeting was stormy, for a small minority vehemently demanded "revolution as in Russia, socialization of property as in Russia, application of Marxism as in Russia." Overruled at Berne, they repaired to Moscow and there founded a new International in conjunction with the Russian Communist party, and with Lenin and the Russians dominating it completely. It was Lenin's hope, by founding a new International of his own, to discredit moderate socialism and to claim for the Communists the true line of succession from the First International of Karl Marx.

---

#### *The Third International*

The first congress of the Third International in 1919 was somewhat haphazard, but at the second, in 1920, the extreme left parties of 37 countries were represented. The Russian party was supposedly only one component. Actually, it supplied most of the personnel and most of the funds; the Bolshevik Zinoviev was its first president, remaining in this office until his disgrace as a Trotskyist in 1927. The Third, or Communist, International—the Comintern—was in part a spontaneous rallying of Marxists from all countries who accepted the Bolshevik Revolution as the true fruition of Marxism and were willing to follow the Russian lead; but, even more, it was the creation and weapon of the Bolsheviks themselves, by which they wished to discredit and isolate the moderate socialists and bring about world revolution. Of all enemies the Communists hated the socialists most, reserving for them even stronger epithets than they bestowed upon capitalists and imperialists, because Communists and socialists were competing for the same objective, the leadership of the world's working class.

---

#### *Lenin's Twenty-One Points*

The second congress of the International, in 1920, endorsed a program of Twenty-One Points, written by Lenin. These included the requirements that each national party must call itself Communist, repudiate "reformist" socialism, propagandize labor unions and get Communists into the important union offices, infiltrate the army, impose an iron discipline upon members, require submission to the orders of the international Executive, use both legal channels and secret underground methods, and expel promptly any member not hewing to the party line. Making no pretense of respect for parliamentary democracy, the second congress ruled that "the only question can be that of utilizing bourgeois state institutions

The Russian Revolution brought about a split between socialists who favored parliamentary politics and those who supported the revolutionary methods of the Bolsheviks. The latter group met in Russia to form the Third, or Communist, International. It adhered to the views of Lenin, who is speaking here to a meeting of the Third International in 1920.

(Hulton-Deutsch Collection/Corbis)

for their own destruction.” The Comintern was not an assemblage of humanitarians engaged in welfare work; it was a weapon for revolution, organized by revolutionaries who knew what revolution was. In most countries, as in France, there were many socialists who could not accept the Twenty-One Points. Once unified socialist parties therefore broke up. Communists and socialists went their separate ways.

For several years the U.S.S.R., using the Comintern or more conventional diplomatic channels, promoted world revolution as best it could. Communists from many countries went to Russia for indoctrination. Native-born or Russian agents proceeded to the Dutch Indies, China, Europe, and America. Until 1927 the Chinese revolutionists welcomed assistance from Moscow; the Russian Borodin became an adviser in their affairs. In 1924, in England, publication of the “Zinoviev letter,” in which the Comintern allegedly urged British workers to provoke revolution, led to a great electoral victory for the Conservative party. The Bolshevik menace, real and imagined, produced everywhere a strong reaction. It was basic to the rise of fascism described in the chapters to follow.

---

*Promoting world  
revolution*

In 1927, with the suppression of Trotskyism and world revolutionism in Russia, and with the concentration under Stalin on a program of building socialism in one country, the Comintern moderated its activities. In 1935, as fascist dictators became noisily bellicose and threatened the Soviet Union, the U.S.S.R. through the Comintern instructed all Communist parties to enter into coalitions with socialists and activist liberals in what were called “popular fronts” to combat fascism and reaction and support the national defense of

their own countries. During the Second World War (in 1943), as a gesture of goodwill to Great Britain and the United States, the U.S.S.R. abolished the Comintern entirely. It reappeared for a few years from 1947 to 1956 under a new name, the Communist Information Bureau or Cominform, and was then disbanded.

---

*The U.S.S.R.'s  
impact*

It was not through the Comintern that the U.S.S.R. exerted its greatest influence on the world in the years after 1917. It exerted its influence by the massive fact of its very existence. By 1939 it was clear that a new type of economic system had emerged. Before 1917 no one in Europe or Asia had thought that anything was to be learned from Russia. Twenty years later even critics of the U.S.S.R. feared that it might represent the wave of the future. Its sheer power was soon demonstrated in the Second World War. Marxism was no longer merely a theory; there was an actual society, embracing a sixth of the globe, which called itself Marxist.

In every country those who were most critical of capitalist institutions compared them unfavorably to those of the Soviet Union. Some believed that something like Soviet results might be obtained without the use of Soviet methods, which were dismissed as typically Russian, a deplorable heritage from the tsars. With the appearance of Communism and Communist parties, socialism and socialist ideas seemed in contrast to be middling and respectable. Everywhere in the 1930s the idea of planning began to find favor. Workers obtained more security against the fluctuations of capitalism. Colonial and formerly colonial peoples, especially in Asia, were particularly impressed by the achievement of the U.S.S.R., which had shown how a traditional society could modernize without falling under the influence of foreign capital or foreign guidance.

---

*Waning Soviet  
influence in later  
years*

For a long time the Communist party in the Soviet Union presented itself as the leader of world revolution and tried to exert control over Communist parties in all other countries. This became increasingly difficult. Over the years the U.S.S.R. pursued diplomatic and military policies and engaged in acts of aggression and territorial expansion, such as the tsarist state might have done. By the late 1980s the U.S.S.R. was no longer an innovative, or some would say, a viable society. Its economic system was in a shambles; the component republics demanded autonomy or independence. The revelation from within the Soviet Union itself of the persecution and deaths of tens of millions of innocent victims, along with the restiveness of its own nationalities, undermined its role as leader of oppressed peoples elsewhere. European Communist parties proclaimed their independence from Moscow. Meanwhile a new form of dynamic communism emerged in 1949 in the People's Republic of China. Yet all Communist parties, including the Chinese, are derived from Marxism and from the Russian Revolution of 1917, once hailed as the first great victory over capitalism and imperialism. It was thus a revolution that profoundly influenced fervent supporters and passionate opponents throughout the twentieth century. But the repressive political system, stifling cultural policies, and economic failures of the Soviet state also produced a widespread hostility to Communism, even among many of its former advocates and supporters.

# DEMOCRACY, ANTI-IMPERIALISM, AND THE ECONOMIC CRISIS AFTER THE FIRST WORLD WAR

96. The Advance of Democracy after 1919
97. The German Republic and the Spirit of Locarno
98. Anti-Imperialist Movements in Asia
99. The Great Depression: Collapse of the World Economy

*We have followed* events in the Soviet Union in detail to about the year 1939 but have left the story of Europe and the rest of the world at the signing of the peace treaties of 1919. **We turn now to the wider history of political and economic change during the period of just 20 years that elapsed between the formal close of the First World War in 1919 and the outbreak of the Second World War in 1939.** In these 20 years the world made a dizzy passage from confidence to disillusionment and from hope to fear. It went through a few years of superficial prosperity, abruptly followed by unparalleled economic disaster. For a time, in the 1920s, democracy and democratic reforms seemed

to be advancing; then, in the difficult economic conditions of the 1930s, dictatorship began to spread in countries that had earlier tried to move toward greater democracy. Let us first examine the apparent triumphs of democracy and the growing opposition to European imperialism in the 1920s, turn next to the devastating worldwide effects of the Great Depression that began in 1929, and then, in the following chapter, trace the new conflicts and rising dangers of the 1930s.

## 96. THE ADVANCE OF DEMOCRACY AFTER 1919

**The first years following the war were troubled. The victors and losers alike faced serious difficulties in reconversion from war to peace.** Veterans demobilized from the huge armies found themselves unemployed and psychologically restless. Farms and factories geared to maximum production during the war faced a sudden disappearance of markets. They produced more than could now be sold, so that the war was followed by a sharp postwar depression, which, however, had run its course by 1922. Basically, the economic position even of the victors was seriously damaged, for the war had disjoined the world of 1914, in

which industrial western Europe had lived by exchange with eastern Europe and with overseas countries.

### *Gains of Democracy and Social Democracy*

The war, President Wilson had said, was fought to make the world safe for democracy. Political democracy, to be sure, now made numerous advances. The new states that emerged from the war all adopted liberal democratic principles such as written constitutions and universal suffrage. Democracy made advances even in countries that had long been in large measure democratic. Great Britain, for example, dropped the last barriers to universal male suffrage in 1918. The most conspicuous innovation in many countries was the growing enfranchisement of women. We have seen how the women's suffrage movement in Great Britain achieved an important breakthrough in 1918, when women received a somewhat restricted right to vote; in 1928 the restrictions were dropped and the vote was granted on an equal basis with men. In 1920, through an amendment to the constitution, female suffrage became general in the United States. Women voted also in Germany and in most of the new states of Europe. In the Soviet Union women received the vote on an equal basis with men after the revolution in 1917.

In most European countries the successors of the old prewar socialists gained in strength. With the left wings of the old socialists generally seceding, calling themselves Communists, and affiliated with each other and with Moscow in the Communist International, the European socialists or social democrats were preponderantly parties of peaceable or revisionist Marxism, entirely willing to pursue their political and social goals by parliamentary and legislative methods. Labor unions, with new self-confidence gained from the role they had played in the war, grew in membership, prestige, and importance.

---

Social legislation  
enacted

Social legislation that before the war would have seemed radical was now enacted in many places. An eight-hour legal working day became common; and government-sponsored insurance programs against sickness, accident, and old age were either adopted or extended; an act of 1930, in France, insured almost 10 million workers. An air of progressive democracy pervaded Europe and the European world. The social service, or welfare, state, already under way in the late nineteenth century, was becoming more firmly established.

Only in Italy in the early postwar years, of the states that might have been expected to continue their prewar democratic gains, did democracy receive a sharp setback. Italy had been a parliamentary state since 1861 and had introduced a democratic male suffrage in the elections of 1913. In 1919 the Italians held their second such elections. But Italian

---

Mussolini

democracy soon abruptly ended. In 1922 an agitator named Benito Mussolini, leading a movement which he called Fascism (thereby adding a new word to the world's political vocabulary), ended Italian parliamentary government and founded his Fascist regime. Lenin in his way had already created the first single-party state; Mussolini became the first of the dictators of postwar Europe outside the Soviet Union. Fascist Italy in the 1920s was the chief exception in what seemed to be a rising tide of democracy.

### *The New States of Central and East-Central Europe*

In central and east-central Europe—in Germany, in the territory of the former Austro-Hungarian empire, and in the western fringe of former tsarist Russia—new states and new governments struggled to establish themselves. The new postwar states included, besides

The 19th amendment to the Constitution gave American women the right to vote in all elections. This poster, which was published by the League of Women Voters shortly after the amendment was approved in 1920, urged women to use their new voting rights by going to the polls.

(Getty Images)

republican Germany, the four successor states to the Habsburg empire—Austria, Hungary, Czechoslovakia, and Yugoslavia; and the five states that had broken away from the Russian empire—Poland, Finland, Estonia, Latvia, and Lithuania (see map, pp. 716–717). The other small states in eastern Europe, Romania, Bulgaria, Greece, and Albania, had already been independent before 1914; their boundaries underwent some modification and their governments underwent considerable reorganization after the war. Turkey, the successor to the Ottoman Empire, was also a new republic.

Although many people in all countries had developed nationalist identities and aspirations, the new states in Europe were to a large extent accidents of the war. Nowhere, except possibly in Poland, did they represent a deeply felt, long-maturing, or widespread revolutionary sentiment.

Only an infinitesimal number of Germans in 1914 would have voted for a republic. Even among the nationalities of Austria-Hungary in 1914 few persons would have chosen the complete breakup of the Habsburg empire. The republicans, moderate socialists, agrarians, or nationalists who now found themselves in power had to improvise governments for which there had been little preparation. They had to contend with reactionaries,

---

*Accidents of war*

monarchists, and members of the old aristocracy. They had also to deal with the real revolutionaries, who, inspired by Lenin's success, hoped to bring about a dictatorship of the proletariat. A Communist revolt broke out in Germany in 1919 but was quickly suppressed; Soviet regimes that were actually set up were soon crushed in Hungary and in the German state of Bavaria; and as late as 1923 there was a Communist uprising in the German state of Saxony.

---

#### Self-determination

The new states all embodied the principle of national self-determination, which held that each nationality should enjoy political sovereignty—one nation, one government. But people in this region were and always had been locally intermixed. Each of the new states therefore included minority nationalities; with the exception of an exchange of populations between Greece and Turkey arranged in 1923, there was no thought of the actual physical removal of “alien” groups. Poland, Czechoslovakia, and Yugoslavia were the most composite of the new states. Poland and Czechoslovakia each had many disaffected Germans. In Czechoslovakia the Slovaks resented Czech domination and in Yugoslavia, where the Serbs were in control, Croatian and other separatist movements actively opposed the Serb domination.

Nevertheless, despite economic and nationalist troubles, the new states and governments attempted at the outset to make themselves democratic. All the newly created states were republics except Yugoslavia, where the monarchy was under the older Serbian dynasty. Hungary started out in 1918 as a republic, but the attempt of the Communist leader Béla Kun to found a Hungarian Soviet Republic in 1919 brought back the counter-revolutionaries who restored the Habsburg monarchy in principle, though they were prevented by foreign pressure from restoring the king in person. Hungary emerged in 1920 as a monarchy with a perennially vacant throne, under an authoritarian regency exercised by Admiral Horthy. All smaller states of Europe, including Hungary, possessed at least the machinery of democracy until the 1930s; that is, they had constitutions, parliaments, elections, and a diversity of political parties. If civil liberty was sometimes violated, the right to civil liberty was not denied; and if elections were sometimes rigged, they were at least in principle supposed to be free.

#### *Economic Problems of Eastern Europe, Land Reform*

Eastern Europe for centuries had been an agrarian region of large landed estates, which supported on the one hand a wealthy landowning aristocracy of almost feudal outlook, and on the other an impoverished mass of agricultural workers with little or no property of their own. The landed aristocracy had been the chief support of the Austro-Hungarian empire and an important pillar of the old order in the tsarist empire and in eastern Prussia. The mass of the rural population through all this region had been free from serfdom only since the middle of the preceding century. The middle class of business and professional people was small except in Austria and Bohemia, the western portion of Czechoslovakia. In general, the whole region was conscious of lagging behind western Europe, not only in industry, factories, railroads, and great cities, but also in literacy, schooling, reading habits, health, death rates, length of life, and material standard of living.

---

#### Obstacles to modernization

The new states set out to modernize themselves, generally on the model of the West. In addition to introducing democratic and constitutional ideas, they put up protective tariffs, behind which they tried to develop fac-

tories and industries of their own. But the new national boundaries created difficulties. Where Europe had 6,000 miles of frontiers in 1913, it had almost 10,000 after the war, and all the increase was in eastern Europe. Goods circulated much less easily. Protected industries in the old agricultural regions produced inefficiently and at high cost. Old and established industries in Austria, Czechoslovakia, and western Poland, cut off by the new frontiers and new tariffs from their former markets, fell upon hard times. The working class of Vienna lived in misery. Vienna, a city of 2 million persons, formerly the capital of an empire of 50 million, was now the capital of a republic of 6 million. In Czechoslovakia the German minority living in the Sudetenland complained that in hard times the German businesspeople and workers, because of government policies, always suffered more than their Czech counterparts. Economically, the carving up of eastern Europe into a dozen independent states was self-defeating.

The greatest of reforms undertaken by the new east-European states was the reform of landownership. Although it far from solved basic economic problems in the area, it did have substantial effect on the pattern of land distribution. The whole traditional agrarian base of society was overturned. The work of the revolutions of 1848, which, in the Habsburg lands, had liberated the peasants but left them landless, was now carried a step further. The example of the Russian Revolution provided a powerful stimulus, for in Russia in 1917 peasants had driven off landlords, and Communists won a hearing among discontented and propertyless peasants from Finland to the Balkans. Not until 1929, it should be recalled, did the Soviet Union embark on the collectivization of agriculture; until then, communism appeared to favor the small individual farmer. But it may be said with equal truth that the model for agrarian reform lay in the West, especially in France, the historic land of the small peasant proprietor.

---

---

*Land reform*

Land reform worked out differently in different countries, but large estates were generally broken into smaller farms throughout the Baltic states and in much of Czechoslovakia. This transformation reflected nationalist sentiment as well as a new social policy because most of the large landowners in all of these places were German. In Romania and Yugoslavia the breakup of large estates, though considerable, was less thorough. In Finland, Bulgaria, and Greece the issue hardly arose, since small landownership was already common. Land reform had least success in Poland and Hungary, where the landed magnates were exceptionally strong and well-rooted.

After the land reforms, political parties of small landholders became the chief democratic force within the various states on the western border of Russia. Often they inclined to socialism, especially since capitalism was associated in their minds with foreign investors and outsiders. On the other hand, the great landowners, the former aristocrats of the prewar empires, whether already expropriated or merely threatened with expropriation, were confirmed in a reactionary outlook. The land reforms did not solve basic economic problems. The new small farms were small, frequently no more than ten acres. The peasant owners lacked capital, agricultural skill, and knowledge of the market. Farm productivity did not rise. In place of old differences between landlord and tenant there developed new differences between the more comfortable peasants and the proletarian hired hands. The continuance of relative poverty, the obstinacy of reactionary upper classes, the new economic tensions among the peasants themselves, the economic distortions produced by numerous tariff walls, and the lack of any sustained tradition of self-government all helped to frustrate the democratic experiments launched in the 1920s.

smallholder parties*

## 97. THE GERMAN REPUBLIC AND THE SPIRIT OF LOCARNO

The keystone of Europe was Germany, which also had its revolution in 1918. But it was a revolution without revolutionaries, a negative revolution caused more by the disappearance of the old than by any decisive arrival of the new. The emperor and the High Command of the army, in the last weeks of the war, had bowed out of the picture, leaving it to others to face defeat and humiliation. For a time after November 1918, the political leaders in charge of affairs were mainly Social Democrats. The Social Democrats were Marxists, but their Marxism was the tamed, toned down, and revisionist Marxism that had prevailed for 20 years before the advent of Lenin. They were trade union officials and party managers. They could look back, in 1918, on decades spent in developing labor organizations and building up the Social Democratic party, which in 1912 had become the largest single party in the Reichstag. Now, in 1918, they were a cautious and prudent group, essentially conservative, more anxious to preserve what they had already achieved than to launch audacious new social experiments. Before 1917 the Social Democrats considered themselves well to the Left. But the Bolshevik Revolution in Russia and the emergence of a pro-Bolshevik or Communist element in Germany put the Social Democrats in the middle. The middle is an awkward spot, especially in disturbed times; the Communists regarded the Social Democrats as reactionaries, despicable traitors to the working-class movement, whereas the true reactionaries, recruited from old monarchists, army officers, Junker landowners, and big business groups, saw in social democracy, or professed to see in it, a dangerous flirtation with Bolshevism.

The middle group in Germany, the Social Democrats reinforced by the Catholic Center party and others, was more afraid of the Left than of the Right. They were appalled in 1918 and 1919 by the stories brought out of Russia, not merely by fugitive bourgeois or tsarist aristocrats but by refugee Social Democrats, Mensheviks, and anti-Leninist Bolsheviks, many of whom the socialists had long known and trusted in the Second International.

### *The Spartacists*

In January 1919 the Spartacists,<sup>1</sup> led by Karl Liebknecht and Rosa Luxemburg, attempted to bring about a German proletarian revolution, like that in Russia. Lenin and the Russian Bolsheviks aided them. For a time, there seemed to be a possibility that the Spartacists might succeed in imposing a communist dictatorship of the proletariat in Germany. But the Social Democratic Provisional Government crushed the Spartacist uprising, turning for that purpose to demobilized army officers and volunteer vigilantes recruited from the disbanding army. The Spartacist leaders Liebknecht and Luxemburg were arrested and shot while in police custody. The events of "Spartacus Week" widened the chasm between Social Democrats and Communists.

Shortly after, elections were held for a National Constituent Assembly. No single party received a majority, but the Social Democrats were the leading party. A coalition of Social Democrats, Center party, and liberal democrats dominated the Assembly. After several months of deliberations at the city of Weimar, in July 1919, a constitution was adopted establishing a democratic republic. The Weimar Republic (as the regime in Germany from 1919 to the advent of Hitler in 1933 is called) was soon threatened ominously from the Right. In 1920 a group of disaffected army officers staged a *Putsch*, or armed revolt, put the republican government to flight, and attempted to place a puppet of their own, one Dr.

<sup>1</sup>So named from Spartacus, a Roman slave who led a slave revolt in south Italy in 72 B.C.

The Spartacists in Germany tried to provoke a Soviet-style, Communist revolution in early 1919, but their uprising was suppressed by the Social Democratic Provisional Government. These people are burning political pamphlets that they had seized from Spartacist newspaper offices.

(Getty Images)

Kapp, at the head of the state. The Berlin workers, by turning off public utilities, stopped the Kapp Putsch and saved the republic. But the Weimar government never took sufficiently firm measures to put down private armed bands led by reactionary or outspokenly antidemocratic agitators. One of these was soon to be Adolf Hitler, who as early as 1923 staged an abortive revolt in Munich. Being democratic and liberal, the Weimar government would not deny the rights of free speech or of election to the Reichstag to even the most radical antidemocratic groups on the Left or the Right.

The Weimar Republic was in principle highly democratic. The constitution embodied all the devices then favored by the most advanced democrats, not only universal suffrage, including the vote for women, but also proportional representation and the initiative, referendum, and recall. But except for the legal eight-hour day and a few other such safeguards to the workers' welfare (and traditional demands of organized labor) the republic of which the Social Democrats were the main architects in its formative years was remote from anything socialist. No industries were nationalized. No property changed hands. No land laws or agrarian reforms were undertaken, as in the new states of eastern Europe; the East Elbian Junkers remained untouched in their landed estates. The very statues of emperors, kings, princes, and grand dukes were left standing in the streets and squares. Officials, civil servants, police agents, professors, and schoolteachers of old imperial Germany remained at their respective duties. The army, though limited by the Versailles treaty to 100,000 men, remained the old army in miniature, with all its essential organs intact, and lacking only in numbers. In the officer corps the old professional and aristocratic influences remained strong.

Never had there been a revolution so mild, so reasonable, so tolerant. There was no terror, no fanaticism, no stirring faith, no expropriation, and no émigré migration. There had in truth been no revolution at all in the sense in which England, France, the United States, Russia, and other countries either recently or in the more distant past had experienced revolutions.

### *The German Democracy and Versailles*

The supreme question for Europe and the world was how Germany would adjust to the postwar conditions. How would the Germans accept the new internal regime of democracy? How would they accept the new German frontiers and other provisions of the Treaty

---

*The Weimar  
Republic*

of Versailles? The two questions were unfortunately interconnected. The Weimar Republic and the Treaty of Versailles were both products of the defeat of Germany in the war. There were many in Germany who favored democracy, notably the numerous Social Democrats, and many more possibly could have been won over to it, given time and favorable conditions. But no one, not even the Social Democrats, accepted the Treaty of Versailles or the new German frontiers as either just or final. If democracy in Germany meant the perpetual acceptance of the treaty without amendment, or if it meant economic distress or hardship which could either reasonably or unreasonably be explained as consequences of the treaty, then democracy would lose such appeal as it had for the Germans.

The German republicans, we have seen, protested against the Versailles treaty before signing, and signed only under pressure. The Allies continued the wartime naval blockade after the armistice; this confirmed, in German eyes, the argument that the Treaty of Versailles was a *Diktat*, a vengeful, dictated peace. The "war guilt" clause, while it perhaps on the one hand satisfied a peculiar Anglo-American sense of morality, on the other hand offended a peculiar German sense of honor. Neither the reparations demanded of them nor the new frontiers were accepted by the Germans as settled. Reparations they regarded as a perpetual mortgage on their future. They generally expected some day to revise their eastern frontier, recover at least the Polish corridor, and merge with German-speaking Austria.

---

*The Versailles treaty  
as "Diktat"*

The French lived in fear of the day when Germany would recover. Their plans for their own security and for the collective security of Europe against a German revival had been disappointed. They had been unable to detach the Rhineland from Germany. The United States Senate had refused

---

*French fear*

to ratify the treaty signed at Paris by Wilson, by which the United States was to guarantee France against German invasion in the future. Both Britain and the United States showed a tendency to isolation, to pull away from the Continent, to get back to "normalcy," to work mainly for a restored trade in which a strong Germany would be a large customer. The League of Nations, of which the United States was not a member and in which every member nation had a veto, offered little assurance of safety to the French. The French began to form alliances against a potentially resurgent Germany with Poland, Czechoslovakia, and other East European states. They insisted also on German payment of reparations. The amount of reparations, left unstated in the treaty, was fixed by a Reparations Commission in 1921 at 132 billion gold marks (the equivalent of \$35 billion), a sum that even non-German economists said was more than Germany could possibly pay.

The Weimar government in these circumstances looked to the Soviet Union, which had been no party to the Versailles treaty and claimed no reparations. The Soviet government meanwhile, concluding from the failure of proletarian revolution in Germany and Hungary that the time was not ripe for the sovietizing of Europe, prepared to enter into normal diplomatic relations with established governments. Germany and the Soviet Union, despite ideological repugnance, thus signed the treaty of Rapallo in 1922. In the following years the Soviet Union obtained needed manufactures from Germany, and German factories

---

*Soviet-German  
relations*

and workers were kept busy by orders from the Soviets. The German army dispatched officers and technicians to give instruction to the Red Army. Obligated by the Treaty of Versailles to restrict its activities, the German army was in fact able, through its work in Russia and through a number of subterfuges at home, to maintain a high standard of training and technical knowledge of new weapons and equipment.

### *Reparations, the German Inflation of 1923, Recovery*

The French, blocked in the attempt to collect reparations and assisted by the Belgians, in 1923 sent units of the French army to occupy the industrial sites of the Ruhr valley. The Germans responded by general strikes and passive resistance. To sustain the workers the Weimar government paid them benefits, grinding paper money off the printing presses for this purpose. Germany, like other belligerent countries, had suffered from inflation during and after the war; neither the imperial nor the Weimar government had been willing to impose heavier taxes to offset it. But what now swept Germany was different from ordinary inflation. It was of catastrophic and utterly ruinous proportions. Paper money became literally worthless. By the end of 1923 it took over 4 trillion paper marks to equal a dollar.

This inflation brought far more of a social revolution than the fall of the Hohenzollern empire had ever done. Debtors paid off debts in worthless money. Creditors received baskets full of meaningless paper. Salaries even when raised lagged behind the soaring cost of living. Annuities, pensions, proceeds of insurance policies, savings accounts in the banks, income from bonds and mortgages—every form of revenue which had been arranged for at some time in the past, and which often represented the economy, foresight, and personal planning of many years—now turned to nothing. The middle class was pauperized and demoralized. Middle-class people were now materially in much the position of workers and proletarians. Their whole view of life, however, made it impossible for them to identify themselves with the laboring class or to accept its Marxist or socialist ideologies. They had lost faith in society itself, in the future, in the old burgher codes of self-reliance and rational planning of their own lives in an understandable world. A kind of moral void was created, with nothing for them to believe in, hope for, or respect.

---

*A social revolution*

The inflation, however, by wiping out all outstanding indebtedness within the country, made it possible, once the losses were written off and accepted, to start up economic production afresh. The United States was persuaded to play a reluctant role, in part because it was demanding the payment of huge war debts by the Allies. The Allies—Britain, France, Belgium—insisted that they could not pay these debts to the United States unless they collected reparations from Germany. In 1924 the Dawes Plan, named for the American Charles G. Dawes, was instituted in Germany to assure the flow of reparations. By the Dawes Plan the French evacuated the Ruhr, the reparations payments were cut down, and arrangements were made for the German republic to borrow abroad. A good deal of American private capital was invested in Germany in the following years, both in German government bonds and in German industrial enterprises. Gradually, so at least it seemed, Germany was put on its feet. For four or five years the Weimar Republic even enjoyed a bustling prosperity, and there was a good deal of new construction in roads, housing, factories, and ocean liners. But the prosperity rested in good measure on foreign loans, and the Great Depression that began in 1929 reopened all the old questions.

---

*The Dawes Plan*

### *The Spirit of Locarno*

These years of economic prosperity were years also of relative international calm. Yet none of the fundamental international issues were addressed or resolved. The universal German hatred for the Treaty of Versailles elicited no concessions from the Allies.

**The catastrophic German inflation of 1923 destroyed the value of wages, savings, and investments. Consumers paid for goods with baskets of paper money, forcing merchants such as this baker and his employees to calculate their daily sales with trillions of almost worthless German marks.**

(akg-images)

Conceivably, had the Allies been willing at this time to amend the treaty by international agreement, they might have taken the wind from the sails of nationalistic rabble-rousers in Germany and so spared themselves much later grief. It may be, however, that no possible concession would have sufficed. The great problem was to prevent a German overthrow of the treaty structure by violence, especially in eastern Europe where the Germans regarded the new frontiers as very much subject to reconsideration. After the Ruhr incident in 1923 and adoption of the Dawes Plan in 1924, a group of moderate and peace-loving men shaped the foreign policy of the principal countries—Gustav Stresemann in Germany, Édouard Herriot and Aristide Briand in France, and Ramsay MacDonald in England.

The charter of the League of Nations provided for international sanctions against potential aggressors. Like the system of congresses after the Peace of Vienna, the League was designed to assure compliance with the peace treaties or at the very least their modification without resort to force. No one expected the League, by any authority of its own, to prevent war between Great Powers; but the League achieved various minor pacifications in the 1920s, and in any case its headquarters at Geneva offered a convenient meeting place in which statesmen could talk.

As a further assurance against war, in 1925, the European powers signed a number of treaties at Locarno, Switzerland. These marked the highest point in international goodwill reached between the two World

---

---

*The Locarno treaties*

Wars. Germany signed a treaty with France and Belgium guaranteeing their respective frontiers unconditionally. It signed arbitration treaties with Poland and Czechoslovakia—not guaranteeing these frontiers as they stood but undertaking to attempt changes in them only by international discussion, agreement, or arbitration. France signed treaties with Poland and Czechoslovakia promising military aid if they were attacked by Germany. France thus fortified its policy of balancing German power in the East by its own diplomatic alliances and by supporting the Little Entente, as the alliance of Czechoslovakia, Yugoslavia, and Romania was called. Great Britain “guaranteed”—that is, promised military aid in the event of violation—the frontiers of Belgium and France against Germany. It did not give an equivalent guarantee with respect to Czechoslovakia or Poland. The British policy was based on the view that their security would be threatened by German expansion westward, but not by German expansion to the east. It was on the borders of Czechoslovakia and Poland, 14 years later, that the Second World War began. Had Britain gone along with France in 1925 in guaranteeing these two countries, then abided by the guarantee, the Second World War might possibly have been prevented. On the other hand, no war ever depends on any single decision; it is the accumulation of many decisions that matters.

In 1925 people talked with relief of the “spirit of Locarno.” In 1928 international harmony was again strengthened when the French foreign minister Briand and the United States Secretary of State Frank B. Kellogg arranged for the Pact of Paris. Ultimately signed by 65 nations, it condemned recourse to war for the solution of international controversies (though it provided no measures of enforcement).

In the mid-1920s the outlook was therefore full of hope. At Locarno, Germany had of its own volition accepted its borders both east and west, to the extent of abjuring violence and unilateral action even in the east. In 1926 Germany joined the League of Nations. Germany appeared to be a going concern as a democratic republic. Democracy seemed to work, as well as could be expected, in most of the new states of eastern Europe, and Communist Russia itself had halted its postwar revolutionary offensive. The world was again prosperous, or seemed to be. World production was at or above the prewar level. World trade, by 1929, measured in hard money—gold—had almost doubled since 1913. The war and the postwar troubles were remembered as a nightmare from which Europe had finally escaped. It seemed that, after all, the world had been made safe for democracy.

---

---

*A hopeful outlook*

But complacency was shattered by the great world depression, by the growth of a malignant nationalism in Germany, due in part to the depression, and by the assertion of a new militancy in Japan, which also was not unrelated to the depression. But let us turn first to the postwar years in Asia, where new nationalisms and political movements confronted Europe’s colonial empires and challenged its once-dominant position in the global economy.

## 98. ANTI-IMPERIALIST MOVEMENTS IN ASIA

### *Resentments in Asia*

The peoples of Asia had never been satisfied with the position in which they found themselves after the great European expansion of the nineteenth century. Increasingly they

condemned everything associated with “imperialism.” In this respect there was little difference between countries actually governed by Europeans as parts of European empires in the nineteenth century, such as British India, the Netherlands Indies, French Indochina (or the American Philippines), and countries that remained nominally independent under their own government, such as China, Persia, and the Ottoman Empire. In the former, as new national movements began to develop, there was objection to the monopoly of Europeans in the important offices of government. In the latter, there was objection to the special rights and privileges enjoyed by Europeans, the widespread impounding of customs revenues to pay foreign debts, the special privileges for foreigners in Turkey, the extraterritorial rights in China, and the spheres of influence in Persia which divided the country between British and Russians.

---

*Imperialism in Asia*

By imperialism, in either case, aroused Asians meant a system whereby the affairs of their own country were conducted, its resources exploited, and its people employed for the benefit of foreigners, Europeans, or white people. They meant the system of absentee capitalism, by which the plantations, docks, or factories on which they themselves labored, were the property of owners thousands of miles away whose main interest was a regular flow of profits. They meant the constant threat that an alien civilization would disintegrate and eat away their own ancient cultures. They meant the burden of having to speak a European language or the disagreeable prospect of having to fight in wars originated by Europeans. And they meant the airs of superiority assumed by whites, the race consciousness exhibited by all Westerners, though perhaps most of all by the British and Americans, the color line that was everywhere drawn, the attitudes varying between contempt and condescension, the relation of native “boy” and European “sahib.” Imperialism to them signified the gentlemen’s clubs in Calcutta to which no Indian was ever admitted, the hotels in Shanghai from which Chinese were carefully kept out, or the park benches in various cities on which no “native” could ever sit. In deeper psychology, as well as in economics and politics, the revolt of self-conscious Asians was a rebellion against an imperial system that reduced them to social inferiority and humiliation in their own societies.

The revolt against the West was generally ambivalent or two-sided. It was a revolt against Western supremacy; but at the same time, in most cases those who revolted meant to learn from and imitate the West in order that, by taking over Western science, industry, organization, and other sources of Western power, they might preserve their own identity and achieve political and economic equality with the Western nation-states. Anti-imperialist movements and intellectuals thus borrowed from Western culture even as they vehemently rejected Western ideologies that assumed the superiority of European institutions or races.

---

*Anti-imperialist revolts*

The crisis in Asia had broken out with the Russo-Japanese War, when an Asian people in 1905 defeated a great European power for the first time. In 1906 revolution began in Persia, leading to the assembly of the first *majlis*, or parliament. In 1908 the Young Turks staged a successful revolution in Constantinople and summoned a parliamentary assembly to represent all regions then in the Ottoman Empire. In 1911 the revolutionists in China, led by Sun Yat-sen, overthrew the Manchu (or Qing) dynasty and proclaimed the Chinese Republic. In each case the rebels charged their old monarchs—shah, sultan, emperor—with subservience to Western imperialists. In each case they summoned national assemblies on the prevailing democratic model of Europe, and they proposed to revive, modernize, and westernize their countries to the degree necessary to avoid domination by the West.

## *First World War and Russian Revolution*

In the First World War almost all the Asian peoples were somehow involved. The Ottoman Empire, allied with Germany, immediately repudiated all the capitulations, or special legal rights of Europeans. In Persia, where Russian and British intervention in 1907 had blocked the developing movement for constitutional reform, there was a concerted attempt to maintain Persian neutrality in the war and to get rid of the foreign spheres of influence that Russia and Britain had imposed through agreements between themselves. Persian territory became a battleground of British, Russian, and Turkish forces; and a large number of Persians died from wartime violence, disruption, and disease. China, which joined the Allies, attempted at the peace conference to have the extraterritorial rights in China abolished. We have seen how this request of the Chinese Republic was refused, and how the Allies instead transferred many of the prewar German concessions to the Japanese. The dependent regions of Asia, the Dutch, French, and British possessions, were stimulated economically by the war. The Netherlands Indies, though remaining neutral, increased its output of foodstuffs, oil, and raw materials. India developed its steel industry and textile manufactures and contributed over a million soldiers, combat and service troops, to the British cause. All the dependent regions were stirred by Woodrow Wilson's call to make the world safe for democracy.

The home governments made concessions. They were naturally afraid to go too far; they insisted that their subject peoples were not yet capable of self-government. Huge investments were at stake, and the whole world economy depended on the continuing flow of raw materials from tropical and subtropical countries. But they did compromise. In 1916 the Dutch created a legislative assembly to advise the governor general of the Indies; half its members were Indonesians. In 1917 the British agreed to a measure of self-government in India; an Indian legislative assembly was set up with 140 members, of whom 100 were elected, and in the provinces of British India the number of elected representatives and of local Indian officials was increased. The French in 1922 provided for a somewhat similar assembly in Indochina. Thus all three colonial powers at about the same time began to experiment with consultative bodies whose membership was partly elective and partly appointive, partly non-European and partly European. The United States introduced an elected assembly in the Philippine Islands in 1916.

---

---

*Home government  
concessions*

The Russian Revolution added a new stimulus to unrest in Asia. The Bolsheviks denounced not only capitalism but also imperialism. In Marxist-Leninist ideology imperialism was an aspect of capitalism, which Lenin had called the "highest" or "final" phase of capitalist societies. Colonial peoples also tended to identify the two, not so much for Marxist reasons as because modern capitalism was a foreign or "imperialist" phenomenon in colonial countries, where the ownership and the management of large enterprises were foreign. Nationalism in Asia, the movement for independence or for more equality with the West, thus easily shaded off into socialism and the denunciation of capitalist exploitation. The Bolsheviks were quick to see the advantages for themselves in this situation. As it became clear that the world revolution, as expected by Lenin, would not soon come to pass in Europe, the Russian Communists turned to Asia as the theater in which world capitalism might be attacked by a great flanking movement. In September 1920 a "congress of oppressed Eastern peoples" assembled at Baku, on the coast of the Caspian Sea. Zinoviev, head of the Communist International, called for war upon "the wild beasts of British capitalism." In the following years a few future radical leaders from Asian countries sojourned

---

---

*Bolshevik  
anti-imperialism*

in Moscow. Meanwhile, Communists dispatched from Moscow stirred up the discontents which existed, quite without Russian instigation, all over Asia.

The postwar situation in Asia was thus extremely fluid. People who were not Communists hailed communism as a liberating force. Anti-Westerners declared that their countries must westernize, at least in certain aspects of science, technology, and social organization. Nationalism overshadowed all other “isms.” In the Indian National Congress rich Indian capitalists worked together with socialist leaders in relative harmony so long as the common enemy was the British.

### *The Turkish and Persian Revolutions*

The most immediately successful of the revolutionary movements took place in Turkey. The Young Turks at first, in 1908, had meant to prevent the further dissolution of the Ottoman Empire. This proved to be impossible. In the Balkan wars of 1912–1913 the Ottoman power was almost totally excluded from the Balkan peninsula. In the First World War, in which the Turks were on the losing side, the Arabs with a great deal of British assistance broke away. After the war, in 1921, the Greeks invaded the Anatolian peninsula. They dreamed of a greater Greece embracing both sides of the Aegean. Europeans still regarded Turkey as the sick man of Europe, the Ottoman state as doomed to extinction, and the Turkish people as barbarous and incompetent. The Allies had agreed in 1915 to partition Turkey; and after the war the Western powers favored the Greek invasion. Italian and French forces occupied parts of Anatolia; and Italians, French, and British undertook to take Constantinople from Turkish rule, though its disposition remained uncertain. In these circumstances a powerful army officer named Mustapha Kemal rallied Turkish national resistance. Within two years, and with aid from the Soviet Union, the Turks drove out the Greeks and the Western Allies. They affirmed their hold on the Anatolian peninsula, and on both shores of the Straits, including Constantinople, which in 1930 was renamed Istanbul.

---

*The Turkish Republic*

The Nationalists, under the energetic drive of Mustapha Kemal, now put through a sweeping revolution. They abolished the sultanate and the caliphate, since the sultan had compromised himself with foreigners and was also, as caliph or commander of the faithful, a religious leader for all Islam and hence a conservative link with the past. The Turkish Republic was promulgated in 1923.

Whereas the Ottoman Empire had been a composite organization made up of diverse religious communities, among which the Muslims were the ruling group, the Turkish Republic was conceived as a national state in which the “people,” that is, the Turkish people, were sovereign. Universal suffrage was introduced, along with a parliament, a ministry, and a president with strong powers. Non-Turks in Asia Minor now became “foreign” in a way they had not been before. We have seen that the Armenians were deported and massacred during the First World War. The other large non-Turkish and Christian people were the Greeks. After the war about 1.4 million Greeks either fled or were officially transported from Asia Minor to Greece and in exchange some 400,000 Turks residing in northern Greece were transported to Turkey. The exchange of populations caused great hardship, it uprooted most of the Greek population that had lived in Asia Minor since antiquity, and it overwhelmed the impoverished Greek kingdom by obliging it suddenly to absorb a mass of destitute refugees, who were a quarter as numerous as the population of Greece itself. But it enabled the Turkish Republic to acquire a relatively homogeneous

population (except for a Kurdish minority in eastern Turkey), and it ended minority disputes between Greece and Turkey until new problems arose after the Second World War.

For the first time in any Muslim country the spheres of government and religion were sharply distinguished. The Turkish Republic affirmed the total separation of church and state. It declared religion to be a private belief, and it tolerated all religions. Government was reorganized on secular and nonreligious principles stemming from the French Revolution. The law of the Qur'an was thrust aside. The new law was modeled on the Swiss Code, the most recently codified European legislation, itself derived from the Code Napoleon.

---

*Separation of church  
and state*

Mustapha Kemal urged women to put aside the veil, to come out of the harem, to vote, and to occupy public office. He made polygamy a crime. Men he required by law to discard the fez. He fought against the fez as Peter the Great had fought against the beard, and for the same reason, seeing in it the symbol of backward habits. The hat, "headgear of civilization," correspondingly became the symbol of progress. The people shifted to Western dress. The Western alphabet became mandatory; literate Turks had to learn to read again, and illiteracy was reduced. The Western calendar and the metric system were adopted. Turks were required to assume hereditary family surnames, like Westerners; Kemal himself took the name Atatürk, or Great Turk. The capital was moved from Istanbul to Ankara. The republic put up a high tariff. In 1933 it adopted a five-year plan for economic development. The Turks, having shaken off foreign influence, were determined not to become again dependent on Western capital or capitalism. The five-year plan provided for mines, railroads, and factories, mainly under government ownership. At the same time, while willing to accept Russian aid against the Western powers, the republic had no patience with communism, which it suppressed. The Turks wanted a modern Turkey—by and for the Turks.

Persia experienced a different kind of political revolution, but there were comparable attempts to reduce the influence of foreign powers. When the British tried to establish a postwar colonial protectorate there in 1919, they were stymied by strong national resistance. Meanwhile, the new Soviet regime withdrew from Persia and renounced all claims of the previous Russian government. In 1921 an army officer named Reza Khan overthrew the older ruling Qajar dynasty and in 1925 became shah (with British and Soviet support). Henceforth known as Reza Shah Pahlavi, he established a repressive regime that sought to modernize the country and to break away from various agreements with the British government. Earlier concessions, capitulations, and spheres of influence were abolished, and Reza Shah renegotiated the British oil contracts. There were also efforts to assert greater control over foreign corporations and to collect more taxes, though revenues still fell below what the shah hoped to extract. Beginning in 1935, the government affirmed its national identity by changing the country's official international name to Iran, which had for some time been used within the nation itself.

---

*New regime in Persia*

### *The National Movement in India: Gandhi and Nehru*

India at the close of the First World War was on the verge of revolution against British rule. Discontented Indians looked for leadership to Mohandas K. Gandhi, the Mahatma, or Holy One, who in the following decades, though hardly typical of modern Asia, attained a worldwide eminence as the champion of subjected peoples. Gandhi had been educated in England in the 1890s and had practiced law in South Africa, where he became aware of

The president of the new Turkish Republic, Mustapha Kemal Atatürk, sought to reduce the influence of Islam. In this photograph from about 1925, he shows his support for Westernizing policies by wearing European-style clothes and by dancing at his daughter's wedding.

(Getty Images)

racial discrimination as a worldwide problem. In India, after 1919, he led a movement for self-government and economic and spiritual independence from Great Britain. He also sought greater tolerance within India itself, both between Hindus and Muslims, and between upper-caste Hindus and the depressed outcastes and untouchables. The weapons he favored were those of nonviolence, passive resistance, civil disobedience, and the boycott. He took to self-imposed fasts and hunger strikes to cope with his British jailers and later with the Indians themselves.

Gandhi and his most loyal followers, as the troubles mounted, refused to be elected to or take part in the partially representative institutions that the British had cautiously introduced. They also undermined the British economic position in India by refusing to buy or use goods imported from England. The latter touched the British in a sensitive spot. Before the World War half of all exports of British cotton cloth went to India, but by 1932 this proportion had fallen to a quarter. Gandhi turned against all industrialism, even the mechanized industry that was growing up in India itself. He put aside Western costume, took to using a spinning wheel and living on goat's milk, urged Indian peasants to revive their old handicrafts, and appeared on solemn occasions clad in no more than a homespun loincloth. By the high level of his principles Gandhi made himself an inspiration to many groups that differed on more mundane matters. Even in the West he was regarded as one of the great spiritual leaders of all time.

#### Gandhi's campaign

#### Divisions in society and politics

India was very much divided within, and the British maintained that because of these divisions the ending of British rule would precipitate anarchy. There were Hindus and Muslims, between whom clashes and terrorist outrages were chronic. (Gandhi was himself assassinated in 1948 by an anti-Muslim Hindu fanatic.) There were the hundreds of minor potentates

of the native states. There were Indian capitalists and wealthy industrialists, like the Tata family, and growing masses of proletarians produced by Indian industrialization. There were the higher castes and the outcastes, and there were hundreds of millions of peasants living in rural poverty. In politics, there were those who demanded full independence, boycotted the British, and spent years in jail, as did Gandhi and his more practical-minded but devoted follower Jawaharlal Nehru; and there were the moderates who believed that they might best advance the welfare of India by accepting government office, cooperating with the British, and working for dominion status within the British Empire. Marxism exerted a strong appeal, not indeed on the spiritual and pacific Gandhi, but on Nehru and even many of the less radical leaders. In the 1920s the Soviet Union stood in their eyes for the overthrow of imperialism; in the 1930s it pointed the way toward economic development by its adoption of five-year plans. For a people wishing to move from poverty to industrial strength and higher living standards without loss of time, and without dependence on foreign capital and capitalism, the Soviet Union with its economic planning seemed to offer a more appropriate model and more practical lessons than the rich democracies of the West, with their centuries of gradual progress behind them.

The 20 years between world wars were years of repeated disturbance, rioting and repression, sporadic violence despite the exhortations of Gandhi, conferences and round tables, reforms and promises of reform, with a shift in the 1930s toward more participation of Indians in the affairs of the Indian empire. Independence was not won until after the Second World War; with it took place a partition of the Indian subcontinent into two new nations, a predominantly Hindu India and a predominantly Muslim Pakistan.

*Continuing struggle  
for independence*

In the Netherlands Indies, where the nationalist movement was less developed, the interwar years were quieter than in India. A serious rebellion, in which communists took part, broke out in 1922 but was suppressed by the Dutch. The peoples of the Indonesian archipelago were almost as diverse as those of India. Only the Dutch empire had brought them politically together. Opposition to the Dutch gave them a common program. In 1937 the legislative council petitioned for dominion status. But not until after the Second World War and the failure of a military effort to repress the nationalists did the Dutch, in 1949, concede independence.

### *The Chinese Revolution: The Three People's Principles*

The Chinese Revolution had opened in 1911 with the overthrow of the Manchu (Qing) dynasty, which itself had belatedly begun to introduce modernizing reforms. The Chinese Republic was proclaimed, but the first immediate result was the establishment in Peking (now Beijing) of a military dictatorship exercised by General Yüan Shih-kai, who had been a close adviser to the Manchus and who, until his death in 1916, never ceased to cast covetous eyes on the now empty imperial throne itself. In the south the veteran revolutionary Dr. Sun Yat-sen reorganized the Guomintang (National People's, or Nationalist party), successor to the prerevolutionary network of underground societies of which he had been the chief architect.<sup>2</sup> Sun,

*Sun Yat-sen and the  
Nationalists*

<sup>2</sup>The Pinyin system, adopted in 1979 by The People's Republic of China, is now widely used for the transliteration of Chinese into languages like English that use the Latin alphabet, replacing the older Wade-Giles spelling. Kuomintang is now rendered as Guomintang, Mao Tse-tung as Mao Zedong, Peking as Beijing, Nanking as Nanjing, Chou En-lai as Zhou Enlai, Teng Hsiao-p'ing as Deng Xiaoping, and so on. For a few names like Sun Yat-sen or Chiang Kai-shek the original spellings are often retained.

The nonviolent principles of Mohandas Gandhi profoundly shaped the Indian movement for national independence after the First World War. He is shown here in typically simple clothing as he led his followers on a “walk to the sea” to collect salt as part of a boycott of British goods and to promote his nonviolent campaign for Indian national independence.

(Corbis)

elected the first president of the republic by a revolutionary provisional assembly, resigned within a few months in favor of General Yüan, who he mistakenly believed would unite the country under a parliamentary regime. Subsequently, in the confusion that followed the struggle for power in Peking after Yüan's death in 1916, Sun was proclaimed president of a rival government in the south at Canton (now Guangzhou), which exercised a nominal power over the southern provinces. Not until 1928 could any government have any basis for claiming actual rule over China—and even then, there were important exceptions. For most of these years the country was virtually in the hands of contending war lords, each of whom pocketed the customary taxes in his own locality, maintained his own army, and recognized no superior authority.

It was Sun Yat-sen who best expressed the ideas of this phase of the Chinese Revolution. Born in 1867 and educated under American influence in the Hawaiian Islands, he had received a medical degree at Hong Kong, had traveled and lived around the world, studied Western ideas, lectured to Chinese audiences in America, collected money for his conspiracies against the Manchus, and had returned from Europe to take part in the revolution. Shortly before his death in 1925 Sun gathered the lectures which he had been expounding for years into a book, *The Three People's Principles*. The book sheds much light on the revolt of China and of all Asia against the supremacy of the West.

The three people's principles, according to Sun Yat-sen, were democracy, nationalism, and livelihood. Livelihood meant social welfare and economic reform—a more equitable distribution of wealth and land, a gradual end to poverty and unjust economic exploitation. By nationalism Dr. Sun meant that the Chinese who had always lived mainly in the clan and family had now to learn the importance of the nation and the state. They were in fact a great nation, he taught, the world's most cultured, and had once prevailed from the mouth of the Amur to the East Indies. But they had never been cohesive. The Chinese had been “a sheet of loose sand”; they must now “break down individual liberty and become pressed together into an unyielding body like the firm rock which is formed by the addition of cement to sand.”

---

*Democracy,  
nationalism,  
livelihood*

By democracy Sun Yat-sen meant the sovereignty of the people. Like Rousseau, he gave little attention to voting, elections, or parliamentary processes. He believed that while the people were sovereign, the able should govern. Adhering in this respect to traditional Confucian teachings, he believed that government should be conducted by experts, a principle he criticized the West for neglecting. Dr. Sun felt a warm sympathy for Lenin. Yet he was by no means a doctrinaire Marxist. Marxism he thought inapplicable to China, arguing that the Chinese must take Marxism as they took all other Western ideas, avoiding slavish imitation, using, adapting, amending, or rejecting as they saw fit. China had no native capitalism in any Marxist or Western sense. The “capitalists” in China, he said, were owners of land, especially in cities such as Shanghai, where the coming of Westerners had raised land values to dizzy heights. Hence if China could get rid of imperialism it would take a long step toward getting rid of capitalism also; it could begin to equalize landowning and confiscate unearned rents. Since China, he observed, had no true capitalists, the state itself must undertake capitalist and industrial development. This would require loans of foreign capital and the services of foreign managers and technicians, adding another reason why the Chinese state, to maintain control, must be strong.

With Sun Yat-sen, in short, democracy easily shaded off into a theory of benevolent and constructive dictatorship. Marxism, communism, socialism, “livelihood,” the planned society, welfare economics, and antiforeign and anti-imperialist sentiment were all mixed together—in some ways as many of the ideas of the Chinese Communists would later be.

---

*Antiforeign sentiments*

The first aim of Sun Yat-sen and of the revolutionists in China was to shake off the “treaty system” that had bound China to outside interests since 1842. In this respect the Paris peace conference had been disappointing; the Chinese not only failed to obtain the abolition of Western privileges and extraterritorial rights but also could not win back the former German concessions that the Japanese had taken over during the war. Widespread student and worker demonstrations directed against the Western powers took place at the time of the Paris peace conference on May 4, 1919. The May Fourth movement heightened anti-foreign consciousness.

---

*Alliances with Russia*

As the Western powers proved obdurate, Sun and the Guomindang turned to Russia. They declared the Russian and Chinese revolutions to be two aspects of the same worldwide movement of liberation. The Chinese Communist party, organized in 1921, became allied with the Guomindang in 1923. The latter accepted Russian Communist advisers, notably the veteran revolutionist Borodin, whom Sun Yat-sen had known years before in the United States. The Soviet Union, following its strategy of outflanking world capitalism by penetrating Asia, sent military equipment, army instructors, and party organizers into China. It also surrendered the Russian concessions and extraterritorial rights acquired in China by the tsars. The Chinese policy of friendliness to Russia began to produce the hoped-for effects; the British, to draw China from Russia, gave up a few of their lesser concessions at Hankow and other cities.

*China: Nationalists and Communists*

The Guomindang, its armies reorganized and strengthened, displayed a fresh vitality and after 1924 launched a military and political offensive. The new offensive was planned by the ever-active Russian advisers, supported by the Chinese Communists, and headed by Chiang Kai-shek, who succeeded to the leadership of the Nationalist party upon Sun’s death in 1925. Chiang’s main objectives were to compel the independent war lords and the regime still holding office in Beijing to accept the authority of a single Nationalist government. By the end of 1928 Chiang’s armies had swept northward, occupied Beijing, and transferred the seat of government to Nanjing. Chiang now exercised at least nominal control over most of China, although effective control was still limited by the recalcitrance of many provincial war lords. The outside powers, acknowledging the accomplishments of the Guomindang, extended diplomatic recognition to the Nanjing government and conceded its right to organize and run the country’s tariff and customs affairs. They also partially surrendered their extraterritorial privileges and pledged to abolish them completely in the near future.

In 1927, while a measure of national unity was being forged in the country, an open break occurred between the Guomindang and its left wing. In the course of the northern military campaign, and particularly in the seizure of Nanjing, popular disturbance and excesses, including the killing of a number of foreigners, had taken place, allegedly fomented by the Communists. These radical disturbances frightened and alienated the wealthier and more conservative element in the Guomindang and jeopardized Chiang’s chief source of financial assistance for his government and army. Chiang himself had never apparently considered the alliance with either the Communists or the Russians as anything more than one of convenience. He now took decisive action, purging Communists and Russian advisers from the party, and executing many people who were affiliated with left-wing groups. Borodin and others fled to Moscow, and a Communist-led uprising in Guangzhou was forcefully suppressed. A number of armed Communist groups fled to the safety of the mountain

---

*Communists purged from the Guomindang*

regions in the south and joined other guerrilla contingents. In that way the Chinese Red Army was formed; among its leaders was Mao Zedong, a former librarian, teacher, newspaper editor, and union organizer, who had been one of the founding members of the party.

Chiang, with the renewed financial and moral support of the Guomindang bankers, resumed the northern offensive. But the original revolutionary impulse of the Guomindang was now dissipated. Made up of men who feared social upheaval and who often regarded their own maintenance in power as their chief goal, it exercised a kind of one-party dictatorship over most of China under Chiang's leadership. Chiang himself recognized mounting popular dissatisfaction with the reluctance or inability of the party to initiate reforms, but he was busy consolidating the regime and after 1931 he had to contend with Japanese aggression. During these years he developed a deadly hatred for Communists and those who agitated for revolutionary reform.

The Communists, operating in southeast China, fed on popular discontent and drew support from the peasantry by a systematic policy of expropriation and distribution of large landed estates as well as by intensive propaganda. They succeeded in fighting off Chiang's armies and even in winning over part of his troops. Organizing a network of local soviets, in 1931 they proclaimed a Chinese Soviet Republic in the southeast. When the Nationalist armies succeeded in dislodging them, the Communists, under Mao's leadership, undertook in 1934–1935 an amazing 6,000-mile march over near-insuperable terrain to north-central Yenan, where they were closer to Soviet supply lines. About 90,000 began the Long March, of which only half survived. They entrenched themselves again, fought off the Nationalist armies, and built up a popular following among the rural masses. With the Japanese invasion of north China under way, they abandoned their revolutionary offensive and pressed Chiang to end the civil war and to create a united front against the Japanese aggressor. Chiang reluctantly consented. By 1937 an alliance was formed between the Nationalists and the Communists, and the Chinese Red Army was placed under Nationalist control; a united China would face the Japanese. But the uneasy alliance was not to last even until the defeat of Japan in the Second World War. Guomindang and Communists would soon engage in a deadly struggle for power.

Japan*

### *Japan: Militarism and Aggression*

The Nationalist movement in China caused apprehension in Japan, whose rise as a modern power has already been traced. The Japanese, at least since the Sino-Japanese War of 1895, had looked upon the political weakness and disorder in China as a field for expansion of their own interests, in this scarcely differing from Europeans except that they were closer to the scene. During the First World War they had presented their Twenty-One Demands on China, had taken over the German concessions in Shantung, and had sent troops into eastern Siberia. During the war the industrialization of Japan proceeded rapidly; Japan captured new markets while the Europeans were locked in struggle; and after the war the Japanese remained one of the chief suppliers of textiles for Asia. The Japanese could produce at lower prices than the Europeans, prices at which the penniless masses of Asia were more able to buy. They themselves sustained their standard of living by importing raw materials and selling manufactures. But the Chinese Nationalists hoped to erect a protective tariff; it was for this reason, among others, that they denounced the treaty system, which for almost a century had bound China to international free trade. The Chinese, like the Turks, hoped to industrialize and develop their own country behind a high tariff wall, which would shut out Japanese manufactures as well as others.

**Mao Zedong and Zhou Enlai led nearly 100,000 Communists on the famous “Long March” from southeast China to the northwest province of Yenan in 1934–1935. They were escaping the armies of the Nationalist Guomindang and seeking to establish new bases near the Soviet Union. This picture shows Mao and Zhou as they appeared at the time of the march, which crossed almost 6,000 miles of remote terrain and became a legendary event in the history of the Chinese Communist party.**

(Getty Images)

During the 1920s the civilian, liberal, Western-oriented element in Japan remained in control of the government. In 1925 universal male suffrage was adopted. Europeans and Americans generally viewed the Japanese with sympathetic approval, as the most progressive of all non-Europeans, the one Asian people who had ably learned to play its part in the advancing worldwide civilization. But there was another facet to Japan. The constitution of 1889 and the parliamentary system were a façade that concealed the true nature of Japanese political power. Only in Japan of all modern countries did a constitutional law prescribe that the war and navy ministers must be active generals or admirals. The diet itself functioned under sharply restricted powers. Ministers governed in the name of the supreme and sacred authority of the emperor, to whom they were alone responsible. Economically, the government's sponsorship of industrial growth had resulted in a tremendous concentration of economic power in the hands of four family trusts known collectively as the Zaibatsu. The business interests and the civilian political leaders all looked to an expanding empire and growing markets. The most restless group in Japan drew its strength from the nationalist revival which, even before the “opening” of Japan in 1854, had cultivated Shinto, emperor worship, and the way of the warrior as a new and modern way of life. This group was recruited in large part from the old clansmen and samurai, whom the “abolition of feudalism” had uprooted from their accustomed ways and who in many cases found no outlet for their energies in the new regime. Many of these men now served as officers in the army. Often they regarded the West as decadent. They dreamed of the day when Japan would dominate all East Asia.

---

*Nationalist revival*

About 1927 this group began to hold ministries in the Japanese government and to turn Japanese policy into increasingly aggressive and militaristic attitudes toward China. In 1931 Japanese army units in southern Manchuria (where the Japanese had been stationed since defeat of the Russians in 1905), alleging the murder of a Japanese officer at Mukden, seized Chinese arsenals and spread northward over Manchuria. In 1932, charging the Chinese with economic warfare against Japan (Chinese boycotts were in fact damaging the Japanese export trade), the Japanese landed 70,000 troops at Shanghai. They soon withdrew, preferring to concentrate at this stage on the occupation of northern China. They declared Manchuria to be an independent state under an emperor they selected (they chose the last Chinese emperor, the “boy-emperor” Pu Yi, who had been deposed in 1911) and renamed the state Manchukuo.

To protest the Japanese invasion of Manchuria the Chinese appealed to the League of Nations. The League sent a commission of inquiry, which found Japan at fault for disturbing the peace. Japan defiantly withdrew from the League. The small powers in the League called for military sanctions, but the Great Powers, knowing that they would bear the burden of military intervention against Japan, and in any case inclined to see no threat to their own immediate security, refused to take any stronger measures. The Japanese remained in occupation of Manchuria and northeast China. With the Japanese conquest of Manchuria one tributary of the coming military torrent had begun to flow. But the world at this time was also stunned by economic depression. Each government was preoccupied with its own internal social problems.

Manchuria*

## 99. THE GREAT DEPRESSION: COLLAPSE OF THE WORLD ECONOMY

The capitalist economic system was a delicate and interlocking mechanism in which any disturbance was rapidly transmitted with accelerating impact through all the parts. For many basic commodities prices were determined by the free play of supply and demand in a worldwide market. There was much regional division of labor; large areas lived by producing a few specialized articles for sale to the world as a whole. A great deal of production, both local and international, especially in the 1920s, was financed by credit, that is, by promises of repayment in the future. The system rested upon mutual confidence in the processes of mutual exchange—on the belief of lenders, creditors, and investors that they would get their money back and on the belief of borrowers that they could pay their debts. This vast interlocking system also depended on the ability of farms and factories to market their products at prices high enough to bring a net return, so that farmers and factory people might purchase the output of other factories and farms—all this round and round in countless circles of mutual interdependence and throughout the world as a whole.

### *The Prosperity of the 1920s and Its Weaknesses*

The five years after 1924 were a period of prosperity in that there was a good deal of international trade, building, and development of new industries. The automobile, for example, still an oddity in 1914, became an article of mass production after the war. Its widespread use increased the demand for oil, steel, rubber, and electrical equipment, caused the building of tens of thousands of miles of roads, and created whole new occupations for truck-drivers, garage mechanics, and filling-station attendants. Similarly the new mass popularity of radios and movies had repercussions in all directions. The economic expansion was most phenomenal in the United States, but almost all countries enjoyed it in

CHRONOLOGY OF NOTABLE EVENTS, 1911–1935

1911	Revolution in China ends the Qing (Manchu) Dynasty
January 1919	Spartacist attempt at proletarian revolution is suppressed in Berlin
July 1919	Weimar Republic is established in Germany
1919	Gandhi launches campaign in India for independence from Britain
1922	Germany and the Soviet Union agree to diplomatic relations in Treaty of Rapollo
1923	French occupation of the Ruhr Valley and ruinous German inflation
1923	Turkish Republic is established under the leadership of Kemal Atatürk, who launches modernizing reforms
1925	Treaties at Locarno recognize the postwar European national borders
1925	Reza Khan becomes shah of Iran and seeks to curb British and other foreign concessions
1925	Death of Sun Yat-sen is followed by conflicts between Nationalists and Communists in China
October 1929	Stock market crash in New York leads to the Great Depression
1931–1932	Japanese forces expand control of Manchuria
1932	Governments respond to economic crisis with national protectionism
1932–1939	Writers respond to social crisis with new “social realism”
1934–1935	Chinese communists make the 6,000-mile Long March

greater or lesser degree. “Prosperity” became a magical term, and some thought that it would last indefinitely, that the secret of human plenty and of progress had been found, and that science and invention were at last realizing the hopes of ages.

But there were weaknesses in this prosperity, various imperfections in this or that gear or valve of the mechanism, flaws which, under stress, were to bring the whole intricate structure to a halt. The expansion was largely financed by credit, or borrowing. Laboring people received less than a proportionate share; wages lagged behind profits and dividends; mass purchasing power, even when inflated by installment buying (another form of credit), was inadequate to pay for the vast output that it was technically possible to produce. And throughout the world the whole decade of the 1920s was a time of chronic agricultural depression, so that farmers could neither pay their debts nor purchase manufactures to the degree required for the smooth functioning of the system.

*A prosperity financed by credit*

*Worldwide agricultural depression*

Military operations in the First World War had reduced wheat fields under cultivation in Europe by a fifth. The world price of wheat went up, and farmers in the United States, Canada, and elsewhere increased their acreage. Often, to acquire land at high prices, they assumed mortgages which in later years they were unable to repay. After the war Europe restored its wheat production, and eastern Europe reentered the world market. Agriculture everywhere was increasingly mechanized, and farmers rapidly increased their output of wheat by using a tractor-drawn harvester-thresher combine. At the same

Movie companies used their distinctive, popular form of modern entertainment to develop one of the prosperous, expansive industries of the 1920s. The cinema attracted large audiences in all modern cities, including this festive crowd that gathered at a New York theater in 1926 for the premiere of *Don Juan*—starring the famous actor John Barrymore.

(The Art Archive/National Archives, Washington, D.C.)

time dry farming opened up new land, and science increased the yield per acre. The result of all these agricultural developments was a superabundant output of wheat. But the demand for wheat was what economists call “inelastic.” By and large, within the area of the Western world, people already ate as much bread as they wanted and would buy no more; and the undernourished masses of Asia, who in pure theory could have consumed the excess, could not pay even low costs of production or transportation. The world price of wheat fell incredibly. In 1930 a bushel of wheat, in terms of gold, sold for the lowest price in 400 years.

Wheat growers in all continents were faced with ruin. Growers of many other crops faced the same dismal prospect. Cotton and corn, coffee and cocoa all collapsed. Brazilian and African planters were caught by overproduction and falling prices. In Java, where the acreage in sugar had been extended and the unit yield from the sugar cane had also multiplied ten times under scientific cultivation over the past century, prices bottomed out of the world market. There were indeed other and more profitable forms of agricultural production—for example, in oranges and eggs, of which world consumption was steadily growing. But the coffee planter could not shift to eggs, nor the Iowa farmer to oranges. Not to mention the requirements of climate, the ordinary farmer or peasant lacked the capital, the special knowledge, or the access to refrigerated transportation that these newer branches of

agriculture demanded. For the one thing that the average farmer or peasant knew how to do—grow wheat and other cereals—the new wonderful world of science and machinery had little place.

The acute phase of the Great Depression, which began in 1929, was made worse by this chronic background of agricultural distress, since there was no reserve of purchasing power on the farms. The farmer's plight became even worse when city people, struck by depression in industry, cut down their expenditures for food. Agricultural depression, rather than industrial depression, was at the root of widespread troubles in the inter-war years throughout eastern Europe and the colonial world.

### *The Crash of 1929 and the Spread of Economic Crisis*

The depression, in the strict sense, began as a stock market and financial crisis. Prices of stocks had been pushed upward by years of continuing expansion and high dividends. At the beginning of 1929 prices on the European stock exchanges began to weaken. But the real crisis, or turning point, came with the crash on the New York Stock Exchange in October 1929. Here values had been driven to fantastic heights by excessive speculation. Not only professional speculators, but quite ordinary people bought stock with borrowed funds. Often trading on "margin," they "owned" five or ten times as much stock as the amount of their own money put into it; the rest they borrowed from brokers, and the brokers borrowed from banks, the purchased stock in each case serving as collateral. With money so easy to obtain, people pushed up American stock prices by bidding against each other and enjoyed huge fortunes on paper; but if prices fell, even a little, the hapless owners would be obliged to sell their stock to pay off the money they had borrowed. Hence the weakening of values on the New York Stock Exchange set off uncontrollable tidal waves of selling, which drove stock prices down irresistibly and disastrously. In a month stock values dropped by 40 percent, and in three years, from 1929 to 1932, the average value of 50 industrial stocks traded on the New York Stock Exchange dropped from 252 to 61. In these same three years 5,000 American banks closed their doors.

---

*Crisis reaches the rest of the world*

The crisis passed from finance to industry and from the United States to the rest of the world. The export of American capital came to an end. Americans not only ceased to invest in Europe but sold the foreign securities that they had. This pulled the foundations from under the postwar revival of Germany and hence indirectly of much of Europe. Americans, their incomes falling, ceased to buy foreign goods; people everywhere saw their American markets slip away, and prices tumbled. In 1931 the failure of a leading Vienna bank, the *Creditanstalt*, sent a wave of shivers, bankruptcies, and business calamities over Europe. Everywhere business firms and private people could not collect what was owed them or even draw on money that they thought they had in the bank. They could not buy, and so the factories could not sell. Factories slowed down or closed entirely. Between 1929 and 1932, the latter year representing the depth of the depression, world production is estimated to have declined by 38 percent, and the world's international trade fell by two-thirds. In the United States national income fell from \$85 billion to \$37 billion.

---

*Unemployment*

Unemployment, a chronic disease ever since the war, assumed the proportion of a plague. In 1932 there were 30 million unemployed persons reported in the world; and this figure did not include the further millions who could find work only for a few hours in the week, or the masses in Asia or Africa for whom no statistics were to be had. The worker's wages were gone, the farmer's income

touched bottom; and the decline of mass purchasing power forced more idleness of machinery and more unemployment. People in the prime of life spent years out of work. Young people could not find jobs or establish themselves in an occupation. Skills and talents of older people grew rusty. Millions were reduced to living and supporting their families on the pittance of charity, doles, or relief. Great modern cities saw an outburst of sidewalk art, in which jobless able-bodied men drew pictures on the pavement with colored chalk, in the hope of attracting a few sixpence or dimes. People were crushed in spirit by a feeling of uselessness; months and years of fruitless job hunting left them demoralized, bored, embittered, and resentful. Never had there been such waste, not merely of machinery which now stood idle but also of the trained and disciplined labor force on which all modern societies were built. And people chronically out of work turned to new and disturbing political ideas.

### *Political and Economic Reactions to the Crisis*

Optimists at the time, of whom President Herbert Hoover in the United States was one, declared that this depression, though a severe one, was basically only another periodic low point in the business cycle, or alternation of expansion and contraction, which had ebbed and flowed in the Western world for over a century. Prosperity, they blithely said, was "just around the corner." Others came to believe that the crisis represented the breakdown of the whole system of capitalism and free private enterprise. These people in many cases looked for signs of the future in the planned economy then being introduced in the U.S.S.R. There was some truth in both views. After 1932, in part for purely cyclical reasons—because the depression cut down indebtedness and reduced the costs of doing business—it again became possible to produce and sell. World steel production, for example, which had stood at 121 million tons in 1929, and then collapsed to 50 million in 1932, by 1936 again reached 122 million. To a considerable degree, to be sure, revival was due to rearmament. On the other hand, the Great Depression did put an end to some aspects of the older free-market economic system. Even if such a stricken economy had internal powers of full recuperation, people would not stand for such terrifying insecurity in their personal lives. The horrors of mass unemployment were long remembered.

All governments took new steps to provide work and incomes for their people. All in one way or another strove to free themselves from dependency on the uncertainties of the world market. The interlocking world economy collapsed both from the depression itself and from the measures adopted to cure it. One of the most marked economic consequences of the depression was a strong movement toward economic nationalism—toward greater self-sufficiency within the sphere which each government could hope to control.

---

*Economic nationalism*

The internationalism of money, the gold standard, and the free convertibility of currencies were gradually abandoned. Countries specializing in agricultural exports were among the first to be pinched. Agricultural prices were so low that even a large quantity of exports failed to produce enough foreign currency to pay for needed imports; hence the exporting country's currency fell in value. The currencies of Argentina, Uruguay, Chile, Australia, and New Zealand all depreciated in 1929 and 1930. Then came the turn of the industrial countries. England, also, as the depression went on, could not sell enough exports to pay for imports. It had to pay for imports in part by sending gold out of the country; thus the gold reserve supporting the pound sterling declined, and people who

This picture by the American photographer Dorothea Lange conveys some of the personal dimensions of the social and economic crisis of the 1930s. An idle, unemployed man stands outside a vacant store on an empty street in San Francisco. The photograph suggests the sense of failure and social disorientation that spread across much of the industrialized world during the decade of the Great Depression.

had pounds sterling began to convert their pounds into dollars or other currencies for which they thought the gold basis was more secure. This was known, in the poetic language of economics, as the “flight from the pound.” In 1931 Great Britain went off the gold standard, which is to say that it devalued the pound. But after Britain devalued, some 20 odd other countries, to protect their own exports and their own industries, did the same. Hence somewhat the same relative position reappeared. Even the United States, which possessed most of the world’s gold supply, renounced the gold standard and devalued the dollar in 1934. The purpose was mainly to help American farmers; with dollars cheaper in terms of foreign currencies, foreigners could afford to buy more American agricultural products. But it became harder for foreigners to sell to the United States.

Hence the depression, adding its effects to those of the World War and postwar inflation, led to chaos in the international monetary exchanges. Governments manipulated their currencies to uphold their sagging exports. Or they imposed exchange controls, which required that foreigners from whom their own people purchased, and to whom they gave their own currency, should use this currency to buy from them in return. Trade, which had been multilateral, became increasingly bilateral. Where Brazilian importers of steel, for example, had formerly bought steel wherever they wished at the prices or quality they preferred, they now had to obtain steel, often regardless of price or precise quality, from a country to which Brazil had sold enough of its own products to make payment possible. Sometimes, notably in the relations between Germany and East European countries in the 1930s, bilateralism degenerated into actual barter. The Germans would exchange a certain number of cameras with Yugoslavia in return for a certain number of pigs. In such cases the very conception of a market disappeared.

---

---

*International  
monetary exchanges  
in chaos*

Currency control was one means of keeping one's own factories from idleness by holding or capturing export markets in time of depression. Another way of keeping one's own factories going was to shut out competitive imports by the old device of protective tariffs. The United States enacted the unprecedentedly high Hawley-Smoot tariff in 1930, which soon contributed to the further decline of international trade. Other countries, equally or more distressed, now could sell less to America and hence buy fewer American goods. Other countries likewise raised their own tariffs in the desperate hope of reserving national markets for their own people. Even Great Britain, citadel of free trade in the nineteenth century, turned to protectionism. It also revived and adopted Joseph Chamberlain's old idea of an imperial tariff union. In 1932, by the Ottawa agreements, Britain and the British dominions adopted a policy of lower tariffs against one another and higher tariffs against the rest of the world.

Even tariffs were not always enough for economic nationalists. Quotas or quantitative restrictions were adopted in many nations. By this system a government said in effect not merely that goods brought into the country must pay a high tariff duty but that above a certain amount no goods could be brought in at all. Increasingly both importers and exporters worked under government licenses, in order that a country's entire foreign trade could be centrally planned and managed.

---

---

*Quotas*

Thus the world economy disintegrated into fiercely competing national economic systems. In the oceanic wreckage of the Great Depression, each state tried to create an island of economic security for its own people. Some efforts were made to break down the rising barriers. An International Monetary and Economic Conference, meeting in London in 1933, attempted to open the clogged channels of world trade; it ended in failure, as did attempts to stabilize the exchange rates of various currencies. Soon thereafter, the wartime Allies defaulted on their postwar debt payments to the United States. Legislation in Congress then denied them the right to float bonds or obtain new loans in the American securities market. American actions thus reinforced economic nationalism. The era that had opened with Woodrow Wilson's dream of international economic cooperation was ending with an unprecedented intensification of economic rivalry and national self-centeredness; it was only one of the promises of the postwar world to be blasted by the Great Depression.

### *Cultural Reactions to the Crisis*

The effects of the economic crisis spread to the cultural and intellectual life of the 1930s. Responding to the despair and social dislocation of the masses of unemployed, artists and

### AUTOUR D'ELLE

by Marc Chagall (Russian, then French, 1887–1984)

Although this painting clearly does not represent the social realism that emerged in the 1930s, it exemplifies the diversity of twentieth-century art. It was painted by Chagall in 1945 in memory of his wife. At the center is the Russian city of Smolensk, where they had been married 30 years before. The surrounding faces and figures are individually quite distinct, but they float disconnectedly like the vivid images in a dream. Past and present, memory and perception, fantastic and real objects flow together in a free play of the unconscious mind. These qualities characterized surrealism, of which the younger Chagall had been a forerunner.

(Scala/Art Resource, NY/© 2007 Artists Rights Society (ARS), New York/ADAGP, Paris)

*Le Moulin de La Galette*

by **Pierre-Auguste Renoir** (French, 1841–1919)

Renoir helped create the impressionist style of painting, which used contrasting colors to convey subtle variations of sunlight and shadows. This painting of dancers and friends at a popular Parisian dancehall is an example of the impressionists' interest in the everyday life and leisure of late nineteenth-century French society.

(Metropolitan Museum of Art/Art Resource, NY)

***Ia Orana Maria***

by **Paul Gauguin** (French, 1848–1903)

Gauguin moved to Tahiti in the early 1890s, searching for non-European alternatives to the culture and art he had known in France. His use of color and his portrayal of Tahitians influenced avant-garde European artists, but Gauguin also continued to draw on (classical) Western artistic themes. The title of this painting means "Hail Mary," an allusion to the Biblical Annunciation in which the angel Gabriel told the Virgin Mary that she would give birth to a child.

(The Metropolitan Museum of Art, Bequest of Sam A. Lewisohn, 1951 (51.112.2) Photograph ©1983 The Metropolitan Museum of Art)

***The Boating Party, 1893***

by **Mary Cassatt** (American, then in France, 1844–1926)

Cassatt developed her most distinctive works under the influence of both Impressionism and the traditions of Japanese art. She painted many pictures of mothers with their children, including this colorful and slightly mysterious image of a man rowing two people across a European lake.

[*The Boating Party*, 1893, Mary Cassatt.] Chester Dale Collection, Photograph © 2001 Board of Trustees, National Gallery of Art, Washington [1963.10.94]

*Self-Portrait with Beret, 1898-1899*  
by **Paul Cézanne** (French, 1839–1906)

Cézanne went beyond early Impressionist art to develop a new emphasis on the shapes or contours of natural objects, buildings, and people. He also applied his innovative techniques to portraits of himself, striving to depict his identity as a painter through both the style and the content of such works.

***Panel for Edwin R. Campbell No. 1, 1914***

by **Vasily Kandinsky** (Russian, then in Germany and France, 1866–1944)

Kandinsky was one of the first artists to paint purely abstract works. This painting, which Kandinsky completed in 1914, conveys an early twentieth-century artistic desire to use shapes and colors without reference to physical objects. Modernist artists wanted their colors to represent a personal vision rather than objective, external realities.

(Vasily Kandinsky, *Panel for Edwin R. Campbell No. 1*. 1914. Oil on canvas, 64 x 31 1/2" [162.5 x 80 cm]. The Museum of Modern Art, New York. Mrs. Simon Guggenheim Fund. Photograph ©2001 The Museum of Modern Art, New York/©2001 Artists Rights Society [ARS], New York/ADAGP, Paris)

***Composition With The Ace of Clubs***

by **Georges Braque** (French, 1883–1963)

This painting is an example of the Cubist movement in the early twentieth century. Braque and the Cubists broke up the visual world into lines and planes, stressing almost mathematical patterns and multiple perspectives rather than the bursts of color or pure abstractions that appeared in other works of modern art.

(Giraudon/Art Resource, NY/© 2001 Artists Rights Society [ARS], New York/ADAGP, Paris)

### *The Assembly Line*

by **Diego Rivera** (Mexican, 1886–1957)

Twentieth-century artists have often depicted modern social realities as well as personal visions or abstract uses of color. This detail from a mural, *Detroit Industry*, that Diego Rivera painted in Detroit during the 1930s emphasizes stark social divisions between the workers on an automobile assembly line and the visitors who are watching them work.

Mural: *Detroit Industry*, South Wall [detail], 1932–1933. Diego M. Rivera, Gift of Edsel B. Ford. Photograph © 2001 The Detroit Institute of Arts. Photograph: Cenidiap/INBA, Mexico. México, D.F.)

*The Survivor*

by **George Grosz** (German, then American, 1893–1959)

Grosz was a refugee from Nazi Germany. This picture, which he painted in 1945, vividly portrays the horrors of modern warfare, the brutal collapse of civilization, and the terrified emotions of an isolated, filthy survivor. Note the symbolism of a broken swastika in the arrangement of the man's body and the debris.

(AKG London/© Estate of George Grosz/Licensed by VAGA, New York, NY)

writers turned to describing painful social realities and committed themselves to political activism.

All this was in contrast to the 1920s. The postwar decade had been a period of great achievement in what is generally called “modernist” art and literature. Painters projected disjointed dreamlike scenes evoking their personal memories or disorienting personal experiences and writers emphasized their own personal vision and the innermost lives of the characters whom they depicted. These writers were responsible for remarkable explorations of memory, time, and the internal workings of the human mind. The Irish writer James Joyce published his famous novel *Ulysses* portraying the life and thoughts of its leading character during a single day in Dublin, contributing with it to a new literary fascination with interior monologues and “stream of consciousness” writing, which was soon followed by the dramas of the American playwright Eugene O’Neill. The French novelist Marcel Proust developed lengthy descriptions of personal and emotional experiences in his multivolume *Remembrance of Things Past*, and the English writer Virginia Woolf examined the complex passage of time through the characters she created in novels such as *To the Lighthouse*. A generation of American writers, including Gertrude Stein and Ernest Hemingway, had even settled in Paris after the First World War to pursue experimental forms of literature and art. The political and social world by no means disappeared from “modernist” literature, but these writers were more concerned with exploring the inner complexities of human psychology.

---

#### Modernism

Now, under the harsh economic conditions of the 1930s, it became common to reject the literary exploration of psychological anxieties as inadequate or even as self-indulgent. A new kind of “realist” literature and a literature of political engagement won support from intellectuals in all industrial societies, especially among those who believed that the Great Depression had grown out of fundamental flaws and injustices in the capitalist economy. Some writers, like the French novelist André Gide, as well as some poets, artists, and film-makers, temporarily embraced communism and praised the social experiments of the Soviet Union. Others simply decided that they should set aside the arcane language of the literary avant-garde and write about the social suffering of the day. A new genre of proletarian literature came into being. Many who had settled in Paris returned to the United States in the early 1930s. As the American critic Malcolm Cowley noted in his *Exile’s Return*, the new social problems called for new kinds of writing. Where *Ulysses* was a classic modernist work of the 1920s, John Steinbeck’s *The Grapes of Wrath* may be seen as a classic “social novel” of the 1930s. Steinbeck wrote about the social miseries of America’s impoverished, displaced farmers rather than the personal memories of an alienated intellectual. His themes and those elaborated by others exemplified the cultural anxiety that spread across the world in the wake of the unprecedented economic crisis. Meanwhile, the anxiety that fostered a new literary and artistic “realism” also contributed in very different ways to the rise of an angry political extremism, which, as we shall see, was now attracting new support in Europe, the United States, and other parts of the world.

# DEMOCRACY AND DICTATORSHIP IN THE 1930S

100. The United States:  
Depression  
and New Deal
101. Trials and Adjustments  
of Democracy in Britain  
and France
102. Italian Fascism
103. Totalitarianism:  
Germany's Third Reich

*In the 1920s*, people in a general way believed that despite the horrors of the World War the twentieth century was realizing the material and political goals summed up in the idea of progress. In the 1930s, they began to fear that “progress” was a phantom, to speak the word self-consciously with mental quotation marks, and to be content if only they could prevent a relapse into positive barbarism and a new world war.

The Great Depression ushered in the nightmare of the 1930s. Everywhere the demand was for security. Each nation tried to live, so far as possible,

within itself. Each regulated, controlled, guided, planned, and tried to rescue its own economic system, attempting to be as little influenced as possible by the unpredictable behavior of other countries. Within each country the same search for security encouraged the advancement of the welfare state and social democracy.

Where democratic institutions were strong and resilient, governments took steps to protect individuals against the ravages of unemployment and destitution and to help guard against future catastrophes. On the other hand, where democratic governments were not well established or taken for granted, which was the case in many countries after the First World War, dictatorship spread alarmingly in the 1930s with the coming of the depression. Democracy was said to be suited only to wealthy or prosperous countries. Unemployed people generally cared far more for economic help or for promises of economic help than for any theory of how persons wielding public power should be selected. The cry was for a leader, someone who would act, make decisions, get results, inspire confidence, and restore national pride. The Great Depression opened the way for unscrupulous and ambitious political adventurers, for dictators like Adolf Hitler in Germany, whose solution to all political and international problems, it turned out, was war.

## 100. THE UNITED STATES: DEPRESSION AND NEW DEAL

Profound changes took place in the United States, where the stock market crash of 1929 had precipitated the great economic collapse. In 1932 national income had dropped to less than half of what it had been in 1929; 12 million to 14 million were unemployed. The Republican President Herbert Hoover, elected in 1928 at the floodtide of prosperity, was identified in the public mind with the hard times. Hoover viewed with disfavor any large-scale government intervention, convinced that the business cycle that had brought the depression would in turn bring prosperity and that once business confidence was restored, recovery would begin. His administration did act, proposing for the world economy a one-year suspension of payments on all intergovernmental debts and at home giving financial assistance to banks and railroads, expanding credit facilities, and helping to save the mortgages of some farmers and small home owners.

But Hoover would go no further; he opposed immediate direct federal relief to the jobless; veterans seeking payment of their wartime bonuses to tide them over the bad times were forcibly ejected from Washington; unemployment, business failures, and farm foreclosures continued. In the election of 1932 the millions of unemployed workers, disheartened urban lower middle classes, and distressed farmers swept the Republican administration from office and elected the first Democratic president since Woodrow Wilson. The new president was Franklin Delano Roosevelt. The combination of recovery, relief, and reform legislation that he introduced is known as the New Deal.

---

*FDR's recovery,  
relief, and reform  
legislation*

The new president embarked rapidly on a program of improvisation and experimentation, but with such dispatch and vigor as to generate at once an electric enthusiasm. Within a short time an impressive array of legislation was put through Congress. The modest program of assistance to farmers, small home owners, and industry initiated under the Hoover

administration was expanded so widely that it was no longer recognizable.

The government provided financial assistance for the relief of the unemployed and sponsored a broad public works program to absorb the jobless, first by loans to the states for the construction of housing, roads, bridges, and schools; later by a direct federal works program. To meet the financial crisis, the banks were temporarily closed and then reopened under stricter supervision. The dollar was taken off the gold standard and devalued, principally to help the farmers compete in foreign markets. In agriculture, the government offered subsidies to farmers who agreed to curtail farm production, even to the point of subsidizing the destruction of crops and livestock, so that ruinous surpluses which had been one cause of the agricultural distress might be eliminated. It was a paradox, to be sure, for the government to reduce acreage and destroy farm products while city populations were in want. But the administration sought to confront the deep-seated agricultural crisis that antedated the depression as well as to cope with the immediate situation. Subsequently, farmers received subsidies mostly for devoting part of their land to soil-conserving crops. A Civilian Conservation Corps promoted conservation and reforestation and helped relieve unemployment by giving jobs to almost 3 million young people. For industry a National Recovery Administration (the NRA) encouraged business firms to set up voluntary "codes of fair competition," which helped to regulate prices and production.

All these measures were designed to set the ailing capitalist system on its feet again by creating purchasing power and stimulating industrial activity. The major innovation was

government spending, or “deficit financing.” Although never following any consistent economic philosophy, the New Deal policies indirectly reflected the theories of the British economist John Maynard Keynes. In his earlier writings and in his most famous book *The General Theory of Employment, Interest, and Money* published in 1936, he argued that if private investment funds were idle, government funds must be employed to encourage economic activity and to increase purchasing power until such time as private funds flowed again. In order to get money into circulation and to “prime the pump” of industrial production, the New Deal government undertook a huge borrowing and spending program. Unorthodox as deficit financing was, it seemed to many at the time (and to many since) the only direct and rapid method of preventing economic collapse in a capitalist system. In all these recovery and reform activities the federal government assumed a role that it had hitherto played only in wartime. New government agencies proliferated, the federal payroll grew, and the government debt more than doubled between 1932 and 1940.

---

---

Keynes's “deficit  
financing”

From the beginning some longer-range reform measures were adopted in addition to the recovery measures. To prevent overspeculation and the recurrence of a stock market crash such as that of 1929, a Securities and Exchange Commission was created to regulate the issuance of stock and to supervise the operations of the stock exchange. Bank deposits were guaranteed by federal insurance so that depositors would not lose their lifetime savings. A Tennessee Valley Authority served as a pilot program in flood control, regional economic development, and cheap public power production, bringing electricity to farms and rural households.

After 1935 the focus shifted to regulation and reform. Sound economic recovery had not been achieved; there were still at least 5 million persons who could not find jobs in private industry. Business leaders who at first had been responsive to the government's new role in the economy now resisted the government's regulation of finance and industry. The Supreme Court declared the NRA and other New Deal measures unconstitutional.

---

---

Resistance to  
regulation and reform

The major New Deal reforms after 1935 were designed to improve the condition of labor and to cope with various kinds of economic insecurity. A broad national Social Security Act in 1935 provided for unemployment, old-age, and disability insurance. Here the United States was a latecomer. Germany, Britain, and other European countries had already enacted such legislation before the First World War. A Fair Labor Standards Act established 40 hours as a maximum normal workweek and set a minimum hourly wage; child labor was ended. A third measure, the National Labor Relations (or Wagner) Act, virtually transformed the American industrial scene. The act guaranteed the right of workers to set up and bargain through unions of their choice, outlawed company unions, and prohibited employers from interfering with union organizing or discriminating against union members. Under its aegis the older American Federation of Labor (AFL) was revitalized and a new vigorous Congress of Industrial Organizations (CIO) came into being, which now organized workers on an industrywide basis and reached down to unskilled workers in such industries as automobile, steel, textile, maritime, and rubber. Millions never before organized became part of powerful labor unions with expanding treasuries. Total union membership rose from about 4 million in 1929 to 9 million by 1940. Militant and conscious of its new strength but hardly touched by revolutionary ideology, American labor chose not to create a third party but to operate within the traditional two-party system, generally supporting Roosevelt's Democratic party.

---

---

Labor and unions

**The economic crisis of the 1930s and changes in the laws governing labor relations contributed to the rapid growth and new militancy of labor unions in the United States. This picture of an automobile factory in Flint, Michigan, in the late 1930s shows workers engaged in a sit-down strike. Such strikes became one of the strategies that workers used to express their grievances about wages, working conditions, or restrictions on the organizing of labor unions.**

(Library of Congress)

---

*Slow and partial  
recovery*

Government spending and renewed confidence in the soundness of the country's institutions created a slow and partial recovery. By 1939 national income had risen to double what it had been at the depth of the depression but still short of June 1929. Resistance from the business community itself may have played a part in the failure to achieve full recovery. The rising public debt, antibusiness pronouncements by the government, heavier corporate and income taxes, and the concessions to labor undoubtedly frightened off business investments and led to what was called a "sit-down strike" of capital. Some claimed that wage rates had risen too sharply, adding to production costs and therefore discouraging business expansion. The New Deal did much to help economic recovery, but it did not end the depression. Complete recovery, the elimination of unemployment, and the full use (and expansion) of the nation's productive capacity had to wait upon the huge war expenditures to come. By 1938 or so the New Deal was virtually over; the administra-

tion turned its attention from domestic reform to the gathering storm in Europe and the Far East.

The changes were substantial under what some called the "Roosevelt Revolution." Enlarging the role of the federal government as no previous administration had done, the New Deal helped transform the noninterventionist state into a social service or welfare state. The government imposed controls on business, increased labor's power and influence and its share of the national income, and introduced a broad social security system. It established the responsibility of public authority for the social and economic welfare of the people. When the Republican party later returned to power, it opposed in principle the further growth of the welfare state and the expanding role of the federal government, but it retained many of the New Deal reforms, a tacit admission that the New Deal had not intended to destroy capitalism but to preserve and revive it.

The New Deal, however, engendered violent feelings, which lingered on. Roosevelt, himself of patrician and well-to-do background, denounced the "economic royalists"; in turn he was called a "traitor to his class." When the Supreme Court declared some New Deal measures unconstitutional, he made plans to reorganize (or "pack") the Court, which aroused more political hostility. Despite vociferous opposition, in the election of 1936 Roosevelt won all but two states, and he was subsequently reelected in 1940 and 1944 (during the war, to be sure), for unprecedented third and fourth terms. A constitutional amendment in 1951 limited presidents to two terms.

---

Reelection of  
Roosevelt

Roosevelt's opponents, at the time and later, argued that the New Deal had created an enormous regulatory bureaucracy, which was expensive, cumbersome, and a threat to the freedom and self-reliance of the citizenry. Others contended that despite its unorthodox financial policies, enlargement of the executive power, and expansion of the bureaucracy, it represented a bold and humanitarian way of meeting the economic crisis, and that it also preserved and reaffirmed American faith in its democratic system at a time when democracy was succumbing or was threatened elsewhere.

## 101. TRIALS AND ADJUSTMENTS OF DEMOCRACY IN BRITAIN AND FRANCE

### *British Politics: The 1920s and the Depression*

Britain, like the United States, even in the troubles of the depression, remained firmly attached to representative institutions and democratic principles. The Great Depression aggravated and intensified Britain's older economic difficulties. More dependent on overseas markets than any other people, the British until 1914 had managed to hold their lead, exporting industrial products and investment capital, selling insurance and other services, and importing foodstuffs. But in the years before 1914 the British were increasingly losing markets because of the emergence of other economically aggressive industrial nations, the growth of tariff barriers, the development of indigenous textile and other industries in India and elsewhere in the East, the competition of new textile products with British cottons and woollens, and the substitution of new sources of fuel for British coal. The losses were accelerated by the economic disruption of the First World War, the disappearance of many overseas investments, and the postwar disorganization and impoverishment of markets. The widespread rise in tariffs after the war and the customs barriers in the new small states of Europe also hurt British exports. After 1918 Britain lived in a world no longer

The British coal miners' strike in 1926 generated a massive "general strike" by sympathetic workers throughout Britain. These striking engineers marched across London to show their solidarity with the miners, but the government soon responded to this broad-based labor action with legislation that made all such sympathy strikes illegal.

(Getty Images)

dependent on, or eager for, its manufactures. Britain's very historical primacy as the pioneer industrial country was also a handicap. Both labor and management had become adjusted to older conditions, and the more recently industrialized countries had newer techniques and machinery.

The net result of all this was that in the interwar years, even in times of relative prosperity for the rest of the world, Britain was in depression and suffered severely from unemployment. The unemployment insurance adopted in 1911 was called heavily into play. By 1921 over 2 million unemployed were receiving benefit payments, contemptuously called the "dole" by those who disliked it. Unemployment insurance, an expanded old-age pension system, medical aid, government-subsidized housing, and other social welfare measures helped to relieve economic distress and to prevent any drastic decline in the living standards of British workers. The welfare state was well established in Britain before the Labour party took office after the Second World War.

The labor unions made a strenuous effort to retain wage gains and other concessions won in wartime. Industry, hard-pressed itself, resisted. This situation reached a climax in 1926 in the coal-mining industry, which was in a particularly bad plight; government subsidies had not helped and even conservative investigators had recommended some form of amalgamation and public management. A strike by the coal miners led to a "general strike" supported by the other British unions; about half of the 6 million organized workers in Britain left their jobs as a token of sympathy and solidarity. But the government declared a

state of emergency and made use of army and navy personnel and middle-class volunteers to take over essential services. The strike ended in failure, and even in a setback for the trade unions. They were put under stricter control by the Trades Disputes Act of 1927, which declared all general or sympathy strikes illegal and even forbade the unions from raising money for political purposes.

After the election of 1922, the Labour party displaced the Liberal party as the second of the two great parties of the country and faced the Conservatives as the official opposition. The Labour party, which had been no more than a loose federation of trade union and socialist organizations before the war, tightened its organizational structure, promoted labor legislation, and, bridging the gap between the trade unionists and the socialists, committed itself to a program of socialism. But it was a program of gradualist, democratic socialism operating through customary British parliamentary procedures and hence able to gain the goodwill of large sections of the middle classes.

---

*The Labour party*

Twice, in 1924 and in 1929, Labour governed the country with Ramsay MacDonald as prime minister, in each case as a coalition government. In 1924 Labour demonstrated its moderation. It did no more than extend unemployment relief and inaugurate housing and public works projects; indeed it acted firmly in the face of strikes that broke out. But it aroused opposition when it gave diplomatic recognition to the Soviet Union and pledged a loan to the Soviets for the purchase of British goods. Meanwhile newspapers published the so-called Red (or Zinoviev) letter purporting to be secret instructions from the head of the Communist International for British Labour groups to prepare for a Communist uprising in Britain. The document's authenticity has never been established, but the Conservatives successfully exploited it and won the election of 1924.

In the election of May 1929, however, Labour's representation almost doubled, and the Conservative representation dropped proportionately. MacDonald again became prime minister. The Wall Street crash and the worldwide depression came while the Labour party government was in office. The effects of the depression were quickly felt. Unemployment, which had hovered about the 1 million mark in 1929, soon approached the 3 million figure. The government expended large sums to supplement the unemployment insurance payments, and the public debt began to grow. Alarmed by the mounting deficit, MacDonald made plans to introduce a severe retrenchment policy, even to the extent of reducing the "dole" payments. The Labour party was outraged; some of the Labour ministers in his cabinet refused to support him. He was read out of the party, along with those ministers who had gone along with him. MacDonald thereupon formed an all-party coalition cabinet known as the National government, which in an election of 1931 won an overwhelming victory, but it was the Conservative members of the coalition who took a majority of the seats in Parliament.

---

*The formation of the  
National government*

The National government coped with the depression chiefly along retrenchment lines, under Ramsay MacDonald from 1931 to 1935, Stanley Baldwin to 1937, and Neville Chamberlain after 1937. In addition to retrenchment and budget balancing, the government encouraged industry to reorganize and rationalize production by providing low-interest loans. Mainly, the government concentrated on economic nationalist measures rather than on fundamental changes in the capitalist economic system. As in the United States, despite some recovery from the depths of the depression, none of the steps taken brought full recovery or full employment. Unemployment persisted until military conscription and an expanded armament program absorbed the jobless.

*Britain and the Commonwealth: Imperial Relations*

To the older British Empire—India, the crown colonies, protectorates, and spheres of influence—the postwar settlement added a number of League of Nations mandates. British rule in its various forms extended to almost 500 million people, a fourth of the earth's population and land surface. It was principally in Palestine, Egypt, India, and Ireland that the British faced complex imperial problems after the First World War. In Palestine, where Britain exercised a League of Nations mandate following the breakup of the Ottoman Empire, a bitter conflict developed as Jewish emigrants moved into the territory after 1919 (at which time there had been a relatively small population of about 570,000 Muslims, 75,000 Christians, and 60,000 Jews). The emigration increased rapidly during the 1930s, when Jews were escaping from Nazism and the rising anti-Semitism in Europe. Arabs and Jews began to struggle with each other and with Britain for control of lands that both groups claimed on the basis of long ancestries and ancient religions, inflamed now by modern nationalisms. In Egypt in 1922, Britain, although retaining the right to station some troops there, formally ended the protectorate it had established 40 years earlier; but many questions, especially the status of the Sudan, remained unresolved. In India the agitation for national independence, as we have seen, grew more intense. In all of these areas, from the Middle East to South Asia, nothing resembling a solution was arrived at until after the Second World War. In Ireland the independence movement managed to establish a separate republic.

*The Irish question*

The Irish question had disoriented English politics for 40 years. Home rule, authorized by Parliament in 1914, had been deferred for the duration of the war. During the hostilities the Irish nationalists even accepted German support and rose in rebellion against the British in 1916. The rebellion was suppressed, but after the war the Irish nationalists, led by the Sinn Féin party, fought a small but savage war of independence against the British. In 1922 the British finally recognized the Irish Free State, granting it dominion status within the British Commonwealth. But the Protestants in Ulster, the northern counties of Ireland where Presbyterians of Scottish origin had lived for three centuries and where they comprised a majority of the population, insisted on remaining outside the new state. Despite the vehement dissatisfaction of Irish nationalists, Ulster continued to be part of what was now called the United Kingdom of Great Britain and Northern Ireland. In 1937 the Irish Free State affirmed its full sovereignty and took the name Eire. In 1949 it broke all ties with the British Commonwealth and renamed itself the Republic of Ireland. The Irish question, however, remained unsettled throughout the rest of the century and beyond because the Irish agitated for the annexation of Ulster. The conflict pitted Irish moderates against Irish extremists, the latter perpetrating assassinations, bombings, and other disturbances to further their cause of uniting all Ireland with the Irish Republic. The Protestants in Ulster meanwhile remained obdurate about retaining their own religious and cultural identity and maintaining their political affiliation with Britain.

*The dominions*

As for the dominions, the political status of these areas of European settlement overseas was now more clearly defined than ever before. The dominions—Canada, Australia, New Zealand, and the Union of South Africa—had long pursued their own independent policies, even levying tariffs against British goods. They had all joined loyally with Great Britain in the First World War, but all were stirred by a nationalism of their own and desired their independence to be regularized and promulgated to the world. An imperial conference in 1926 defined “dominion status,” which was then corroborated by the Statute of Westminster of 1931. The domin-

ions became legally equal with each other and with Great Britain. No act passed by the British Parliament would apply to a dominion except by the dominion's own consent. Despite independent policies in economic matters and even in foreign affairs, the bonds between the dominions and Britain remained firm; the support of the dominions in the Second World War was to be vital in Britain's survival. In the postwar world, with decolonization, the Commonwealth became a larger, more heterogeneous, and even more flexible institution.

### *France: The 1920s and the Coming of the Depression*

When the depression came to France, right-wing agitation of fascist type made more headway than in Britain or the United States. Earlier, in the 1920s, France was preoccupied with recovery from the physical destruction of the war, the instability of public finances, and the fear of a resurgent Germany. Immediately after 1919, and for most of the 1920s, the government was run by coalitions of parties of the conservative Right, that is, parties supported by business and financial interests, well disposed toward the army and church, and determined to maintain stability in domestic affairs. For a brief time, from 1924 to 1926, the Radical Socialists were in control; this party of the moderate left, whose leader was Edouard Herriot, served as spokesman for the lower classes, small business, and farmers; it advocated progressive social legislation but only so long as increased taxes were not necessary. Despite its name, a carryover from an earlier era, it was firmly committed to private enterprise and private property (and was often described as "neither radical nor socialist"); it was staunch in its defense of individual liberties and fervently anticlerical; sometimes, it seemed, its anticlericalism was a substitute for any more positive program.

Although the Radical Socialists cooperated in parliamentary elections with the Socialists, the other major party of the Left, the two parties differed too profoundly on economic policies to preserve stable coalitions. In the 1920s the Socialists were still recovering from the secession of the more orthodox Marxists who had formed a French Communist party. Both Left and Right in France shaded off into antidemocratic groups that were hostile to the parliamentary republic. These included the Communists on the Left, who sat in Parliament and took part in elections; and on the extreme Right, royalists of the *Action Française* and other antirepublican organizations, which operated principally outside the Chamber as militant and noisy pressure groups.

---

Hostility to the  
republic

The outstanding figure of the moderate conservative right was Raymond Poincaré, who sent troops into the Ruhr in 1923 when the Germans failed to pay reparations, and who also "saved" the franc. The reparations question was extremely important for French finances. The country had undertaken a large-scale reconstruction program to repair the wartime devastation of northern and eastern France and had counted upon the defeated enemy to pay. When German reparations were not paid as anticipated, the public debt mounted, a balanced budget became impossible, and the franc declined precipitously. The huge war expenditures, heavy loss of foreign investments, notably in Russia, and an outmoded taxation program which invited widespread evasion added to French difficulties. After 1926, when the financial crisis reached a climax, a "national union" ministry under Poincaré inaugurated new taxes, tightened tax collection, cut down drastically on government expenditures to balance the budget, and eventually stabilized the franc—at about one-fifth its prewar value. The internal debt was thus in effect largely repudiated, to the despair of many bondholders, but the threat of a runaway inflation like that of the Weimar Republic was avoided. From

Poincaré's measures

**Britain repeatedly used its armed forces to suppress the movement for Irish independence during and after the First World War. The British army thus operated in Ireland's cities as a kind of special police force. These troops were holding back the crowd in a Dublin street while other soldiers conducted a raid on Irish nationalists in 1921.**

(Getty Images)

1926 to 1929 the country prospered. New factories, replacing those destroyed in the war, were modern and up to date. The index of industrial production rose; tourists flocked in. As in many other countries, however, workers did not share proportionately in the prosperity of the 1920s, and labor unions still had little influence on the French government's social policies.

The Great Depression came later to France and was less severe than in the United States or Germany. Trade declined. Unemployment increased; in 1935, close to 1 million

workers were unemployed, and half of those employed worked part-time. Industrial production, which in 1930 was 40 percent above the prewar level, sank by 1932 to 1913 figures. The government displayed its older pattern of unstable, short-lived ministries; in 1933 five ministries rapidly succeeded one another (there were some 40 in the 20 interwar years). The depression cabinets followed a policy of retrenchment and economy, clung to the gold standard, and faced the threat of an aggressive new government in Germany, where Adolf Hitler had become chancellor in 1933.

### *Depression Ferment and the Popular Front*

In the uneasy years of the depression, the latent right-wing hostility to the republic came to the surface. Fascist-type "leagues" appeared in open imitation of Italian and German fascist organizations, many obtaining funds from wealthy industrialists; the older *Action Française* and right-wing veterans' associations like Colonel de le Rocque's *Croix de Feu* continued to be active. The same elements that had been antirepublican, antidemocratic, or monarchist since the French Revolution, and which in the nineteenth century had rallied behind Boulanger and denounced Dreyfus, now grew more strident in their attacks on the parliamentary republic.

In 1934 it seemed for a moment that the opportunity awaited by the antirepublican elements had come. A political and financial scandal shook the country. A financial manipulator and adventurer with important political connections, Serge Alexandre Stavisky, induced the municipal authorities at Bayonne to launch a flotation of worthless bonds. Faced with exposure, he fled and apparently committed suicide; the sensationalist press and right-wing political agitators encouraged the rumor that Stavisky had been shot by the police to prevent the implication of high-ranking politicians. A clamor went up accusing the government of involvement in the financial scandal. Where elsewhere such an affair would have called only for turning the incumbents out of office, in France it supplied ammunition for those who demanded the end of the republic itself, which they now equated with corruption and venality.

---

#### *Scandals*

The agitation reached a climax in the riots of February 1934. A crowd of angry antirepublican activists and other right-wing extremists assembled in Paris at the Place de la Concorde, where they threatened the nearby Chamber of Deputies and battled violently with the police; several were killed and hundreds were injured. French liberals and democrats, organized labor, and socialists were outraged by the threat to the republic from violent agitators who resembled the fascist groups that had seized power elsewhere in Europe. The Communists, hostile to the fascist groups, were unfriendly to the government too, but soon, guided by the Comintern, they sensed the danger to the Soviet Union in the event of a French fascist triumph and joined with the antifascists. As elsewhere, in the 1930s the Communists emerged from their sectarian revolutionary isolation, adopted patriotic programs, and widened their prestige, influence, and appeal. An impressive labor-sponsored general strike was held a week after the riots. Shortly thereafter, Radical Socialists, Socialists, and Communists drew together in a political coalition that came to be known as the Popular Front, of the kind that was being organized, or advocated, in many countries in the 1930s. It campaigned on a pledge to defend the republic against fascism, to take measures against the depression, and to introduce labor reforms. In the spring of 1936 it won a decisive victory at the polls. The French Socialists for the first time in their history became the leading party in the Chamber; their chief, Léon Blum, long a spokesman for democratic and reformist

---

#### *The emergence of the French Socialists*

The French Popular Front brought the leftist, antifascist political parties together in a governing coalition that held power for about a year in 1936–1937. Despite its brevity, the Popular Front government introduced numerous reforms that became permanent features of French social and economic life. This photograph shows Premier Léon Blum addressing supporters of the Popular Front on Bastille Day in 1936.

(akg-images)

socialism, became premier of a coalition cabinet of Socialists and Radical Socialists; the Communists, who had increased their representation in the Chamber from 10 to 72 seats, did not join the cabinet but pledged their support.

### *The Popular Front and After*

Blum's Popular Front ministry, although it lasted little more than a year, put through a program of far-reaching legislation. In part, this was due to the Popular Front election program, in part to unforeseen events, for the tremendous enthusiasm generated by the victory led to a spontaneous nationwide wave of "sit-down strikes," in which the striking workers refused to leave their factories or shops until Blum pledged a number of immediate reforms.

Parliament in short order passed laws providing for a 40-hour week, vacations with pay, and a collective bargaining law. As in the case of the Wagner Act in the United States, the encouragement given to collective bargaining led to the nationwide signing of collective contracts for the first time in the country's history and to enormous growth in trade union membership, from about 1 million to 5 million in a year's time. Other legislation was important too. Steps were taken to nationalize the armaments and aviation industry; the fascist armed leagues were, at least in theory, dissolved; the Bank of France was reorganized and placed under government control to break the power of the nation's close-knit economic elite, the so-called "two hundred families." Machinery was established for the arbitration of labor disputes. Aid was given to farmers through price fixing and government purchases of wheat. As in the United States all these measures aimed at both recovery and reform; Blum spoke openly of his program as a "French New Deal." But French conservatives, and the quasi-fascists to their Right, cried revolution; they uttered dark predictions that a French Lenin would follow Blum. They did not conceal their sullen resentment at

*Overdue measures for reform and recovery*

what had come to pass: the fate of Catholic France in the hands of a leftist, a Socialist, and a Jew. Even salvation by a warrior from outside the country, one who had demonstrated his anti-Bolshevism, would be preferable. They envied the protection given to established interests by Mussolini, and there were those who, it was said, even muttered "better Hitler than Léon Blum."

The Popular Front reforms, long overdue though they were, came to France at a time when the sands were rapidly running out. While France had a 40-hour week, German arms plants were operating at full capacity. In the shadow of Nazi remilitarization a rearmament program had to be undertaken at the very same time as reform; even moderates argued that the country could not afford both. Opposition from many quarters hindered success. French employers balked at cooperating in the new labor reforms and tried to pass on rising production costs to the consumer. Labor was disgruntled at the price rises that canceled out its wage gains. Both employers and labor applied the 40-hour week in such a manner that plants were shut down for two days a week instead of operating in shifts, as the law had made possible. Nothing could check the flight of gold from the country. Industrial production hardly rose; even in 1938, when it had shown substantial recovery in other countries, it was only 5 percent higher in France than at the depth of the depression.

In July 1936 the Spanish Civil War had broken out. The Communists attacked the Blum government for refusing aid to the hard-pressed Spanish Popular Front government, which was fighting fascist forces across the Pyrenees; Blum, following the lead of Britain and fearful also of involving a divided France, resisted. In 1937, after a year in office, the Blum government was overthrown by the Senate, which refused to grant it emergency financial powers. The Popular Front coalition rapidly disintegrated. By mid-1938 the Radical Socialists had abandoned their allies on the Left and under Edouard Daladier formed a conservative ministry, whose attention was increasingly occupied by the international crisis. Little remained of the Popular Front, or indeed of the strength of labor, which declined rapidly and exhausted itself further by an unsuccessful general strike in 1938 in protest against nullification of the 40-hour week. Although the conservative government did not overturn all of the recent social reforms, French workers found that 1936 had gone the way of other "great years" in French history; the comfortable classes had been thrown into panic by the social turmoil; internal division and class hatreds had grown sharper. Yet the French democracy, the Third Republic itself, had been successfully preserved and its domestic enemies repulsed, at least for a time.

*The overthrow of  
Blum's government*

### *Western Europe and the Depression*

Britain and France, and indeed all western Europe, Europe's inner zone, never fully recovered from the Great Depression before the Second World War. When economic expansion resumed after the war, the interwar years seemed like a deep trough in Europe's economic history. Western Europe barely maintained its old industrial equipment in the depression and was unable to utilize even its existing machinery to capacity. Moreover, as the events of 1929 had clearly shown, Europe's economic dependence on the United States was pronounced, and the U.S.S.R. was becoming an industrial giant. The economic destiny of Europeans in the 1930s was very much in doubt.

There were other signs of decline. The birth rate in western Europe in the 1930s fell to its lowest recorded levels as people postponed marriage or limited the size of their families because of economic and psychological stresses. Birth rates did not run significantly higher than death rates; the population was stagnating and growing older. There was a scarcity of middle-age men because of the casualties of the First World War. Politically neither British nor French democratic political leaders were able to cope with the economic dilemmas of the depression era. Nor could the

Socialists, who found little practical guidance in the ideas of Marxian economics or class struggle, but failed to renew or reinvigorate their own doctrines in any significant way.

## 102. ITALIAN FASCISM

Though they shade into each other imperceptibly, it is possible to distinguish dictatorship from totalitarianism. Dictatorship, an old phenomenon in history, has commonly been regarded as a mere expedient, designed for emergencies and believed to be temporary; at most, it is a theory of government to justify the authoritarian exercise of state power. Totalitarianism, as it arose after the First World War, was not merely a theory of government but a theory of life and of human nature. It claimed to be no expedient but a permanent form of society and civilization, and so far as it appealed to emergency for justification, it regarded life itself as an everlasting emergency. This new kind of totalitarianism, when it emerged in Western Europe, came from the political Right and carried significant theoretical differences from Russian Communism—which it vehemently rejected and yet in its repressive methods, its cult of the leader, and its one-party rule it often resembled. The first of the new right-wing totalitarian movements to seize power in Europe appeared somewhat unexpectedly in Italy in the form of fascism.

### *Mussolini and the Fascist Seizure of Power*

The belief widely held in the 1920s that democracy was generally advancing was not deeply disturbed by the failure of Russia or Turkey or China to develop effective parliaments or liberal institutions. These were regarded as “backward” countries, in the throes of revolution; someday, when conditions quieted down, it could be supposed, they would move forward to democracy as known in the West. Italy thus became a jarring exception to the apparent victory of democracy in western societies because the Italians had always been an integral part of Europe and European history. Although Italy had accepted parliamentary liberalism and other democratic institutions since 1861, Benito Mussolini seized control of the Italian government in 1921 and proclaimed the new ruling ideology and political system of *Fascismo*.

The birth of  
Fascismo

Mussolini, born in 1883, the son of a blacksmith, was a fiery and pugnacious character, who before the war had followed the career of professional revolutionary, left-wing socialist, and radical journalist. He had read and digested Marxist writings but also works such as Sorel's *Reflections on Violence* and the writings of Nietzsche. During the war he turned intensely nationalist, clamored for Italian intervention on the side of the Allies, and demanded the conquest from Austria of *Italia irredenta*, the “unredeemed” Italian lands to the north and across the Adriatic. In the war he served as a corporal. In March 1919 he organized, mainly from demobilized and restless ex-soldiers, his first fighting band, or *fascio di combattimento*. *Fascio* meant a bunch or bundle, as of sticks; it called to mind the Latin *fasces*, or bundle of rods, carried by the lictors in ancient Rome as a symbol of state power—for Mussolini loved to conjure up ancient glories.

In 1919 Italian glories were dim. Italy had entered the war on the side of the Allies quite frankly for territorial and colonial spoils; the secret treaty of London in 1915 had promised the Italians certain Austrian lands and a share in German and Turkish possessions. During the war Italian arms did not especially shine; Italian troops were routed at Caporetto in 1917. Yet Italy lost over 600,000 lives in the war, and the Italian delegates

came to the peace conference confident that their sacrifices would be recognized and their territorial aspirations would be satisfied. They were rapidly disappointed. Wilson refused to honor the provisions of the London secret treaty and other demands of the Italians. Britain and France displayed no eagerness to side with Italy. The Italians received some of the Austrian territories promised to them, but to their resentment they were given no part of the former German or Turkish possessions as mandates.

After the war Italy, like other countries, suffered from the burden of wartime debt and from acute postwar depression and unemployment. Social unrest spread. In the countryside land seizures took place, not in any significant proportions but enough to spread concern among landowners; tenant farmers refused to pay rents; peasants burned crops and destroyed livestock. In the cities great strikes broke out in heavy industry and in transportation. Some of the strikes turned into sit-down strikes, the workers refusing to leave the plants; demands were raised even for worker control of the factories. Moderate socialist and labor leaders disavowed all such extremism, but left-wing socialists who, as elsewhere, had turned Communist and joined the Third International, fanned the existing discontents. Meanwhile, armed bands of young men, most prominent of whom were the Blackshirts or Fascists, brawled with Communists and ordinary workers in the streets. By the late summer of 1920 the strikes and the agrarian unrest had subsided, although violence in the streets persisted.

---

---

*Social unrest*

During the months of turmoil the government refrained from any bold action, and the already low respect for Italy's parliamentary system sank even lower. In 1919 the first postwar election gave impressive victories to the Socialists and a new Catholic Popular party (the latter were also called Christian Socialists). In 1921, in the wake of the postwar disturbances, new elections were held. Despite concerns about the recent social turmoil, liberals and democrats, moderate socialists, and the Catholic Popular Party were all returned in large numbers. Mussolini's Fascist movement won only 35 of the 500-odd seats. This less than impressive showing was the best the Fascists ever achieved in a free election, but the Fascist ranks were nonetheless swelling outside the regular channels of electoral politics—in the backwash, as it were, of the postwar unrest.

Mussolini and the Fascists at first went along with the radical tide; they did not disapprove the factory seizures; they inveighed against plutocracy and war profiteers and called for a high levy on capital and profits. But Mussolini, never one to sacrifice opportunity for principles or doctrine, soon came forward with his Fascists as the upholders of national law and order, and hence property; he now pledged battle "against the forces dissolving victory and nation." Although the social agitation subsided, burning itself out on its own, and there had never been any real threat of a Soviet-style revolution, the propertied classes had gone through a great fright; they found comfort in the Fascist movement and were willing to lend it financial support. Patriots and nationalists of all classes rallied to it, as well as the lower middle class, which was pinched by economic inflation and, as elsewhere, was unable to find protection or solace in labor unions or socialist movements. The black-shirted upholders of national order proceeded methodically to administer beatings (and doses of castor oil) to Communists and alleged Communists, to Socialists and Christian Socialists, and to ordinary persons who did not support them; nor did they refrain from arson and murder. Vigilante fascist squadrons, the *squadristi*, broke up strikes, demolished labor union headquarters, and drove from office duly elected Socialist and Communist mayors and town officials. Mussolini nevertheless reinforced his claim as paladin of law,

---

---

*Mussolini: upholding order and property*

Fascist groups joined a “March on Rome” that sought to displace Italy’s liberal-democratic government in October 1922. Mussolini joined the March as the Blackshirts entered the capital, and he is seen here (in civilian clothes) leading his fascist followers through the city—shortly before he became prime minister in a new coalition ministry.

(akg-images)

authority, and order by declaring his loyalty to king and church; a few years earlier he had been a rabid republican and anticlerical.

*The “March on Rome”*

In October 1922 the “March on Rome” took place. The Blackshirts mobilized for a threatened coup and began to converge from various directions on the capital; Mussolini remained at a safe distance in Milan. The liberal-democratic coalition cabinet had viewed the events of the past two years with disapproval but at the same time saw with satisfaction that the Blackshirts were serving a useful national purpose by suppressing troublemakers on the Left. Now they made belated but ineffectual gestures to save the situation by an effort to have martial law declared, but the king refused to approve. The cabinet resigned and Mussolini was named premier. It was all quite legal, or almost so. Indeed Italy was still in form a constitutional and parliamentary monarchy. Mussolini headed only a coalition ministry and received from parliament no more than a year’s grant of full emergency powers to restore order and introduce reforms.

But soon it was clear in whose hands power rested. Before the expiration of his emergency powers Mussolini forced through parliament a law providing that any party securing the largest number of votes in an election should automatically receive two-thirds of the seats in the legislature. The two-thirds law was not even necessary. In the 1924 elections, although seven opposition slates appeared, the Fascists, aided by control of the electoral machinery and the use of *squadristi*, received well over three-fifths of the total vote.

Benito Mussolini liked to portray his Fascist regime in Italy as a restoration of the power and grandeur of ancient Rome. Speaking here at a Fascist rally in 1932 and surrounded by uniformed followers as well as symbols of the Roman Empire, Mussolini struck a characteristic stance to convey a public image of decisive, powerful leadership in the authoritarian Italian state.

(Getty Images)

After the elections of 1924 the highly respected Socialist deputy Matteotti publicly exposed hundreds of cases of armed Fascist violence, fraud, and chicanery.

He was murdered by Fascists. There was widespread indignation in the country, and the press clamored for Mussolini's resignation. The left and centrist parties, in an act that proved to be a serious miscalculation, seceded in protest from the Chamber, wanting to have nothing to do with such a government. Mussolini, not directly involved in the assassination, expressed a willingness to punish the perpetrators but eventually took full responsibility and moved to consolidate his dictatorship. Within a few years he reduced the Italian parliament to a nonentity, placed the press under censorship, abolished the labor unions, deprived labor of the right to strike, and abolished all political parties except the Fascist party.

---

*Matteotti's murder*

### *The Fascist State*

Fascism in the 1920s was an innovation which the rest of the world was slow to understand. In his more flamboyant moments Mussolini strutted, stuck out his jaw, and glared ferociously; he jumped through flaming hoops to show his virility and had his chief subordinates do likewise; to the outside world this seemed an odd way of demonstrating fitness for public office. He denounced democracy as historically outmoded and declared that it accentuated class struggle, split people into countless minority parties, and led to selfishness, futility, evasion, and empty talk. In place of democracy he preached the need of vigorous action under a strong leader; he himself took the title of Leader, or *Duce*. He denounced liberalism, free trade, laissez-faire, and capitalism, along with Marxism,

materialism, socialism, and class consciousness, which he said were the evil offspring of liberal ideas and capitalist economies. In their place he preached national solidarity and state management of economic affairs under the same Leader's farseeing and audacious vision. And in fact Mussolini seemed to bring a limited kind of new efficiency to Italian society; as the saying went, he made the trains run on time.

---

*The corporative state*

Mussolini introduced, at least in theory, the syndical, or corporative state, which had been discussed in both left- and right-wing circles for many years. Left-wing syndicalism, especially before the First World War, looked to revolutionary labor unions to expropriate the owners of industry and then to assume the direction of political and economic life. A more conservative syndicalism had been endorsed and encouraged by the Catholic church, with which Mussolini made his peace when he signed with the papacy the Lateran accord in 1929 recognizing the independence and sovereignty of Vatican City. The more conservative type of syndicalism looked nostalgically toward a revival of the medieval guilds, or "corporations," in which master and journeymen, employer and employees, had labored side by side in a supposedly golden age of social peace.

The Fascist corporative system really resembled neither of the older syndicalist theories because in practice the hand of the state was writ large, something that neither of the older corporative doctrines had anticipated. The system went through a number of complicated stages, but as it finally emerged in the 1930s, it provided for the division of all economic life into 22 major areas, for each of which a "corporation" was established. In each corporation representatives of Fascist-organized labor groups, employers, and the government determined working conditions, wages, prices, and industrial policies; and in a national council these representatives were supposed jointly to devise plans for Italy's economic self-sufficiency. In each case the role of government was decisive and the whole structure was under the jurisdiction of a minister of corporations. As a final step, these corporative economic chambers were integrated into the government proper so that in 1938 the old Chamber of Deputies was superseded by a Chamber of Fasces and Corporations representing the corporations and the Fascist party, all of its members selected by the government and not subject to popular ratification. The upper house, the Senate, continued to exist in its older form.

None of this was democratic, but this was an improvement over democracy, the Fascists asserted. A legislature in an advanced economic society, they said, should represent not political parties and geographical constituencies but economic occupations. Organization along such lines would do away with the anarchy and class conflict engendered by free capitalism, which only sap the strength of the national state. In the end real authority rested with the government—the head of the government, the *Duce*, who settled most matters by decree. In point of fact, social unrest and class conflict were "ended," not by the corporative system as such, but by the prohibition of strikes and lockouts and the abolition of independent labor unions. The corporative system represented the most extreme form of state control over economic life within a framework of private enterprise and a capitalist economy, that is, one in which ownership continued to rest in private hands. It was the Fascist answer to Western-style democracy and to Soviet proletarian dictatorship. Fascism, said Mussolini, is the "dictatorship of the state over many classes cooperating."

---

*State control of economic life*

When the depression struck, none of Italy's economic controls availed very much. Mussolini was eager to lay upon the world depression the blame for Italy's continuing economic ills. He turned to a vigorous program of public works and to increasing economic

self-sufficiency. A "battle of wheat" was launched to increase food production; progress was made in reclaiming swamp areas in central Italy and in developing hydroelectric power as a substitute for the coal that Italy lacked. Throughout the Fascist era no fundamental reform changed the status of the farmers and peasants. The existing structure of society, which in Italy meant social extremes of wealth and poverty, remained unaltered. Fascism provided neither the economic security nor the material well-being for which it had demanded the sacrifice of individual freedom and democracy. It undeniably, however, substituted a widespread psychological exhilaration, a feeling that Italy was undergoing a heroic national revival; and after 1935 to support that feeling Mussolini turned increasingly to military and imperialist adventures.

Fascism came to be regarded in other countries as a possible alternative to democratic or parliamentary government, as an actual corrective to troubles whose reality no one could deny. All Communists hated it, and so did all Socialists, labor leaders, moderate leftists, idealistic liberals, and many traditional conservatives. Wealthier or established people, because of fear of Bolshevism, made more allowances in its favor. In East European countries, often highly nationalistic, or influenced by disgruntled landowners, or simply unused to settling questions by majority vote, fascism made a considerable appeal. In the Latin countries, in Spain, Portugal, and France, Mussolini's corporative state found champions and admirers. Sometimes, in Europe and elsewhere intellectuals spun sophisticated theories about the new order of discipline and authority, forgetting how Mussolini himself with unusual candor had written, "Fascism was not the nursling of a doctrine worked out beforehand with detailed elaboration; it was born of the need for action."

---

*The appeal of fascism*

## 103. TOTALITARIANISM: GERMANY'S THIRD REICH

### *The Rise of Adolf Hitler*

It was in Germany that Mussolini found his aptest pupil. Born in Austria in 1889, Adolf Hitler did little before the war. He was not an intellectual, like the prewar leftist journalist Mussolini. He was never a socialist, but he fell into a restless and racist type of radicalism. Son of an Austrian customs official, he lost his father at 14 and his mother a few years later. He dropped out of high school at 16 and at 19 came to the great metropolis of Vienna as an art student but was never accepted into the academy to which he sought admission. When the small inheritance left by his parents ran out and a government grant for orphan students ended, he drifted into various menial jobs, occasionally selling a few of his postcard and poster paintings but mainly eking out a marginal existence with hardly any friends, money, or livelihood.

The young Hitler did not like what he saw in Vienna: neither the trappings of the Habsburg court, nor the nobility of eastern Europe who rode by in their carriages, nor the mixed nationalities of the Danubian empire, nor the Vienna worker's attachment to international Marxism, nor above all the Jews, who thanks to a century of liberal influences had become assimilated into the German culture and now occupied many distinguished positions in business, law, medicine, and journalism in the city. He became exceedingly race conscious and racist, not unlike others in many countries at the time. The youthful Hitler took a special satisfaction in thinking of himself as a pure German of the good old German stock. He became violently

---

*Hitler's dislikes*

The small Nazi party gained enough followers by 1923 for Adolf Hitler to believe that a popular revolt or *Putsch* might cause the collapse of Germany's Weimar Republic. Hitler appears here (holding a hat) with his supporters at the time of the "beer hall *Putsch*" in Munich, an almost farcical event for which he was sentenced to a brief term in prison. (Getty Images)

anti-Semitic, and he also disliked aristocracy, capitalism, socialism, cosmopolitanism, internationalism, and "hybridization."

His aversion to Austria led him in 1913 to move to Munich, capital of the South German state of Bavaria. Once again he drifted without livelihood except by occasionally selling a few of his watercolors. When the war broke out, he volunteered for the German army. He served as a dispatch runner to the front line, and at one point was the victim of a gas attack that temporarily blinded him and injured his vocal cords. Although he rose in rank only to the rough equivalent of corporal, he received important military decorations. For Hitler, as for Mussolini and others, the war was a thrilling, noble, and liberating experience. The average individual in modern society led a pretty dull existence. Peace, for many, was a drab routine from which war was an exciting emancipation. Human atoms, floating in an impersonal and unfriendly world, they were stirred by the nationalism which the war aroused into a sense of belonging to, believing in, and fighting for something greater than themselves, but which was yet their own. When peace returned, they felt a letdown.

When the war ended, Hitler remained for a time on active duty and was transferred to Munich. Bavaria in 1919 was a principal focus of the Communist expansion in central Europe; a Bavarian Soviet Republic even existed for about three weeks until crushed by the federal government in Berlin. The Communist threat made Bavaria a busy center for anticommunist, antisocialist, antirepublican, and antidemocratic agitation of all kinds, and the seat of a disgruntled illiberalism. It swarmed with secret societies and paramilitary organizations led by discontented army officers or others who fitted with difficulty into the new Weimar democracy. Hitler, working with the army's political instruction program, which had been created to combat socialist and democratic propaganda among the demobilized veterans and workers, joined at the army's behest a tiny party called the German Workers' party and soon became its leader. Early in 1920 he proclaimed its 25-point program, the party now calling itself the National Socialist German Workers' party. Thus were born the Nazis, so called from the German way of pronouncing the first two syllables of "National." Now demobilized, Hitler was fully launched on a career of radical politics.

---

*Nazi origins*

We have earlier noted the beginnings of the Weimar Republic and the burdens it was compelled to bear from the start—the Versailles peace, reparations, the catastrophic inflation of 1923. Something has been said also of the failure of the republicans to inaugurate

the kind of deeper social changes that might have democratized the political and social structure of German society and thereby strengthened republican forces. For five years after the war, violence remained sporadic in Germany. Communist agitation continued; but more dangerous, because they attracted more sympathy among the Germans, were the maneuvers of monarchist and antirepublican organizations, which maintained armed bands and staged uprisings like the unsuccessful Kapp *Putsch* of 1920. One such private "army" was the Brownshirts or Storm Troopers maintained by the Nazis. Such bands even resorted to assassination. Thus Walter Rathenau was murdered in 1922; he had organized German production during the war, and in 1922 he was foreign minister, but he had democratic and internationalist inclinations—and was a Jew. Another victim was Matthias Erzberger, a leading moderate politician of the Catholic Center party—he had helped "betray" the army by signing the armistice.

In 1923, when reparations payments were not forthcoming, the French army occupied the Ruhr. A clamor of national indignation swept over Germany. Hitler and the National Socialists, who since 1919 had obtained a considerable following, denounced the Weimar government for shameful submission to the French. They judged the moment opportune for seizing power; and at the end of 1923, in imitation of Mussolini's march on Rome the year before, the Brownshirts staged the "beer hall *Putsch*" in Munich. Hitler jumped on the platform, fired a revolver at the ceiling, and shouted that the "national revolution has broken out." But the police suppressed the disturbance, and Hitler was sentenced to five years in prison. He was released in less than a year; the Weimar democracy dealt mildly with its enemies.

---

The "beer hall  
*Putsch*"

In prison Hitler wrote his book, *Mein Kampf* (*My Struggle*), a turbid stream of personal recollection, racism, nationalism, collectivism, theories of history, Jew-baiting, and political comment. *Mein Kampf* sold widely. The book and the publicity that had accompanied the five-week trial converted Hitler into a political figure of national prominence. The former soldier was not alone in his ideas; no less a person than General Ludendorff, who had distinguished himself in the war, and after the war became one of the most grotesquely unbalanced of the old officer class, gave his warm support to Hitler and even took part in the beer hall *Putsch*.

---

*Mein Kampf*

Beginning in 1924, with the French out of the Ruhr, reparations adjusted, a new and stable currency adopted, and loans from foreign countries, mainly the United States, Germany began to enjoy an amazing economic revival. National Socialism lost its appeal; the party lost members. Hitler was regarded as a charlatan, and his followers as a lunatic fringe. All seemed quiet. Then came the Great Depression in 1929. Adolf Hitler, who might have faded out of history, was transformed by the circumstances attending the depression in Germany into a figure of Napoleonic proportions.

No country suffered more than Germany from the worldwide economic collapse. Foreign loans abruptly ceased. Factories ground to a halt. There were 6 million unemployed. The middle class had not really recovered from the great inflation of 1923; struck again, after so brief a respite, they lost all faith in the economic system and in its future. The Communist vote steadily mounted; large numbers of the middling masses, who saw in communism their own death warrant, looked about desperately for someone to save them from Bolshevism. The depression also stirred up the universal German loathing for the Treaty of Versailles. Many Germans explained the ruin of Germany by the postwar treatment it had received from the Allies—the constriction of its frontiers; the loss of its colonies, markets, shipping, and

---

The crisis confronting  
Germany

foreign investments; the colossal demand for reparations; the occupation of the Ruhr; the inflation; and much else.

Any people in such a trap would have been bewildered and resentful. But many Germans responded to their crisis with ideas and actions that may have reflected or grown out of Germany's political experience and position in Europe over the previous three or four centuries. Democracy—the agreement to obtain and accept majority verdicts, to discuss and compromise, to adjust conflicting interests without wholly satisfying or wholly crushing either side—was hard enough to maintain in any country in a crisis. In Germany democracy was itself an innovation, which had yet to prove its value, which could easily be called un-German, an artificial and imported doctrine, a foreign system foisted upon Germany by the victors in the late war.

---

*Hitler's propaganda*

Hitler inflamed all such feelings by his propaganda. He denounced the Treaty of Versailles as a national humiliation. He denounced the Weimar democracy for producing class struggle, division, weakness, and wordy futility. He called for “true” democracy in a vast and vital stirring of the people, or *Volk*, behind a Leader who was a man of action. He declared that Germans, pure Germans, must rely only on themselves. He inveighed against Marxists, Bolsheviks, communists, and socialists, throwing them all together in a deliberate beclouding of the issues; but he claimed to favor the right kind of socialism for the little man, that is, the doctrine of the National Socialist German Workers’ party. He ranted against unearned incomes, war profits, the power of the great trusts and chain stores, land speculators, interest slavery, and unfair taxes. Above all, he denounced the Jews, who, like individuals in other social and religious groups, could be found in all political camps. They now came under attack from anti-Semitic extremists on all sides of the political spectrum. To the Left, Jewish capitalists were anathema. To the Right, Jewish revolutionaries were a horror. In anti-Semitism Hitler found a lowest common denominator upon which to appeal to all parties and classes. At the same time the Jews were a small minority (only 600,000 in all Germany), so that in an age of mass politics it was safe enough to attack them.

In the election of 1930 the Nazis won 107 seats in the Reichstag; in 1928 they had won only 12; their popular vote went up from 800,000 to 6.5 million. The Communist representation rose from 54 to 77. By July 1932 the Nazis more than doubled their popular vote, won 230 seats, and were now by far the largest single party though because of the multiplicity of parties they fell well short of a majority. In another election, in November 1932, the Nazis, though still well out in front, showed some loss of strength, losing 2 million votes, and dropping to 196 seats. The Communist vote had risen progressively to a peak of 100 in November 1932.

After the relative setback of November 1932 Hitler feared that his movement was passing. But certain conservative, nationalist, and antirepublican elements—old aristocrats, Junker landowners, army officers, Rhineland steel magnates, and other industrialists—had conceived the idea that Hitler could be useful to them. From such sources, which supported other reactionary causes as well, came a portion of Nazi funds. This influential group, mainly from the small Nationalist party, was confident that it would be able to control Hitler and hence control the wave of national and mass discontent that he was leading.

After Brüning’s resignation in June 1932, Franz von Papen headed a Nationalist cabinet with the backing of the influential army leader General Kurt von Schleicher. In December 1932 Schleicher forced Papen’s downfall and succeeded him. When he too was compelled to resign a month later, both men, intriguing separately and against each other, prevailed upon President Hindenburg to name Hitler chancellor of a coalition cabinet. On January 30, 1933, by

---

*Hitler named  
chancellor*

entirely legal means, Adolf Hitler became chancellor of the German Republic; other positions in the new cabinet were filled by the Nationalists, with whom the Nazis were to share power.

But to share power was not the Nazis' aim. Hitler called for another election. A week before election day in March the Reichstag building caught fire. The Nazis, without any real evidence, blamed it on the Communists. They frightened the population with a Red scare, suspended freedom of speech and press, and set loose the Brownshirts to bully the voters. Even so, in the election, the Nazis won only 44 percent of the vote; with their Nationalist allies, they had 52 percent. Hitler, trumpeting a national emergency, was voted dictatorial powers by a pliant Reichstag from which the Communist deputies by now had been excluded. The Nazi revolution began.

### *The Nazi State*

Hitler called his new order the Third Reich. He declared that following the First Reich, or Holy Roman Empire, and the Second Reich, the empire founded by Bismarck that had ended with the war in 1918, the Third Reich would carry on the process of true German history, of which, he said, it was the organic outgrowth and natural culmination. The Third Reich, he prophesied, would last a thousand years.

Like Mussolini, Hitler took the title of Leader, or, in German, the *Führer*. He claimed to represent the absolute sovereignty of the German people. Jews were considered un-German. Democracy, parliamentarianism, and liberalism were condemned and together with communism were labeled as "Jewish." Concentration camps were set up for opponents of the regime. The new "racial science" classified Jews as non-Aryans and included as Jewish anyone who had one Jewish grandparent. Almost at once Jews were driven from public office, the civil service, teaching, and other professions. The Nuremberg laws of 1935 deprived Jews of all citizenship rights and forbade intermarriage or even sexual relations between Jews and non-Jews. On November 9, 1938, *Kristallnacht*, the "night of broken glass," the anti-Semitism of Nazi Germany turned to fierce violence. When a 17-year-old Polish-Jewish student, distraught by the mistreatment of his parents, shot and killed a German diplomatic official in the German Embassy in Paris, Nazi storm troopers in a savage orgy of vandalism, looting, and incendiarism smashed Jewish shops, businesses, and synagogues in German cities; beat up thousands of Jews; and rounded up 30,000 to be sent to concentration camps. Party and government leaders moved in to control the storm troopers and to use anti-Semitism for their own purposes. The government levied a one billion-mark fine on the Jewish community for provoking the assault and collected the insurance payments for the shattered glass and other property damage. Jews who in the wake of these events belatedly tried to flee the country discovered that neither they nor their families could readily find places of refuge; the doors in Europe and the United States were for the most part closed to them. The events of 1938 in Germany still resembled an older-style pogrom, but they also expressed a radical new racism and foreshadowed the state-organized systematic destruction, in the Holocaust, of six million European Jews and of others in the grisly death camps.

---

Anti-Semitism

The new totalitarian order was thought of as absolutely solid, and monolithic, like one huge single slab of rock in which no particle had any separate structure. Germany ceased to be federal; all the old states such as Prussia and Bavaria were abolished. All political parties except the National Socialists were destroyed. The Nazi party was itself violently purged on the night of June 30, 1934, when many of the old Brownshirt leaders, those who

The Nazi-orchestrated attack on Jewish shops and businesses in November 1938 carried the official anti-Semitism of the Nazi state to a new level of violence in German cities. The shattered windows and signs at this Jewish store in Berlin convey the meaning of *Kristallnacht*—the night of broken glass.

(akg-images)

represented the more social revolutionary wing of the movement, were accused of plotting against Hitler and were summarily shot. A secret political police, the Gestapo (*Geheime Staatspolizei*) and a system of permanent concentration camps in which thousands were detained without trial or sentence suppressed all persons who were deemed to be “un-German” and all ideas at variance with the Leader’s.

Law itself was defined as the will of the German people operating in the interests of the Nazi state (and with the Nazi regime as the sole interpreter of the German “will”). Churches, both Protestant and Catholic, continued to function but were “coordinated” with the new regime; their clergy were forbidden to criticize its activities, international religious ties were discouraged, and efforts were made to keep children out of religious schools. The government encouraged anti-Christian pagan movements and worship of the old Teutonic gods, but nothing was sponsored so much as worship of Nazism and its *Führer*. A Nazi Youth Movement and schools and universities indoctrinated the rising generation in the new concepts. The total, all-encompassing repression thwarted the efforts of a few dedicated Germans to develop a broad resistance movement.

---

“Coordinating”  
German society

Labor unions also were “coordinated”; they were replaced by a National Labor Front. Strikes were forbidden. Under the “leadership principle” employers were set up as small-scale *Führers* in their factories and industries and given extensive control, subject to close government supervision. On the positive side, an extensive public works program was launched, reforestation and swamp drainage projects were organized, housing and super-highways were built. A vast rearmament program absorbed the unemployed and within a short time unemployment disappeared. Even under Nazi statistics labor’s share in the national income was reduced, but workers had jobs; and an organization called Strength Through Joy attended to the needs of people with small incomes, providing entertainment, vacations, and travel for many who could never otherwise afford them.

The government assumed increasing controls over industry, while leaving ownership in private hands. In 1936 it adopted a Four-Year Plan of economic development. All countries after the Great Depression tended to economic nationalism, but Nazi Germany set up the goal of autarky and self-sufficiency—absolute independence from foreign trade. German chemists developed artificial rubber, plastics, synthetic textiles, and many other substitute products to enable the country to do without raw materials imported from overseas.

---

*Economic autarky  
and self-sufficiency*

For Europe as a whole one of the basic economic problems, especially after the World War, was that while the Continent was economically a unit dependent on exchange between diverse regions, politically it was cut to pieces by tariff restrictions, currency differences, and hothouse industries artificially nurtured by nationalist ambition. The Nazis claimed to have a solution for this problem in a network of bilateral trade agreements assuring all neighboring peoples an outlet for their products. But it was a solution in which Germans were to be the most industrial and most advanced, the most powerful and wealthiest. Other Europeans were to be relegated to permanently inferior status. What could not be accomplished under trade agreements and economic penetration could be accomplished by conquest and war. Within a few years after 1933, although the regime had its share of bureaucratic confusion and personal rivalries, the Nazi revolution had turned Germany into a huge disciplined war machine, its internal foes liquidated or silenced, its mesmerized masses roaring their approval in giant demonstrations, ready to follow the Führer in storming new Valkyrian heights. “Today Germany,” went an ominous phrase; “tomorrow the whole world.”

### *Totalitarianism: Some Origins and Consequences*

Totalitarianism was a many-sided thing. It had appeared first with the Bolshevik Revolution, for in the denial of individual liberty the Communist regime did not differ from the most extreme right-wing totalitarianism as manifested in Germany. Although Mussolini was the first to use the term “totalitarian,” and advance it explicitly as an ideology, the Fascist regime that he established lacked the all-embracing control over people’s lives to merit that term in its full political meaning. The Catholic Church came to terms with the regime, anti-Semitism did not appear until much later, the upper legislative house or Senate continued to function, and the king retained many of his prerogatives. As to the differences between Soviet totalitarianism and Naziism, they were important, at least in principle. Theoretically, the proletarian dictatorship was temporary, it did not at first glorify the individual Leader; and it was not nationalistic, for it rested on a principle of worldwide class struggle in all nations alike. It adopted a democratic-sounding constitution and paid at least lip service to individual rights. Its constitution officially condemned racism, and it

did not deliberately and consciously cultivate an ethics of war and violence. But as time passed, Soviet totalitarianism or Communism became harder to distinguish from totalitarian regimes like Naziism. The Soviet dictatorship and one-party state seemed permanent; the hollowness of the constitution and the guarantee of individual rights became more apparent; a cult developed around the person of Stalin; the emphasis became more nationalistic, falling less on the workers of the world and more on the glories of the Soviet motherland; and it sent untold numbers to perish in the harsh labor camps of the Gulag.

---

*The evolution of totalitarianism*

Totalitarianism, as distinct from mere dictatorship, though it appeared rather suddenly after the First World War, was no historic freak. It was an outgrowth of a good deal of development in the past. The state was an institution that had continuously acquired new powers ever since the Middle Ages. The First World War continued and advanced the process. The twentieth-century totalitarian state, mammoth and monolithic, claiming absolute dominion over every department of life, carried this old development of state sovereignty to a new extreme. For centuries, for example, the state had clashed with the church. The twentieth-century dictators did the same. In addition, however, they were in most cases not merely anticlerical but explicitly anti-Christian, offering, or imposing, a “total” philosophy of life.

---

*Reliance on historic nationalism*

This new philosophy drew heavily upon historic nationalism, which it distorted and exaggerated. It rejected classical liberalism, which stressed the autonomy of rational individuals, and promoted instead an organic theory of society. It held that society was a kind of living organism within which the individual person was but a single cell. Individuals, in this theory, had no independent existence; they received life itself and all their ideas from the society, people, nation, or culture into which they were born and by which they were nurtured. In Marxism, the absolute subordination of individuals to their class came to much the same thing. Individuals were a microscopic cell, meaningless outside the social body. It made little sense, given such theories, to speak of the individual’s “reason” or “freedom,” to allow individuals to have their own opinions or to count up individual opinions to obtain a merely numerical majority. Valid ideas were those of the group as a whole, of the people or nation (or, in Marxism, the class) as a solid block. Even science was a product of specific societies; there was a “Nazi science” which was bound to differ in its conclusions from democratic bourgeois, Western, or “Jewish” science; and for the Soviets there was a Soviet science, consistent with dialectical materialism and better equipped to see the truth than the decadent bourgeois, capitalistic, or “fascist” science of the non-Soviet world. All art, too—music, painting, poetry, fiction, architecture, sculpture—was good art insofar as it expressed the society or nationality in which it appeared.

The avowed philosophy of totalitarian regimes was subjective. Whether an idea was held to be true depended on whose idea it was. Ideas of truth or beauty or right were not supposed to correspond to any outer or objective reality; they had only to correspond to the inner nature, interests, or point of view of the people, nation, society, or class that entertained such ideas. The older Enlightenment concepts of reason, natural law, natural right, and the ultimate likeness of all mankind, or of a common path of all mankind in one course of progress, disappeared.

The totalitarian regimes did not simply declare, as a dry finding of social science, that peoples’ ideas were shaped by environment. They set about actively shaping ideas through the constant use of propaganda and by establishing propaganda offices as a principal branch of government. Propaganda was hardly new, but in the past, and still in the democratic countries, it had been a piecemeal affair, urging the public to accept this or that political

## CHRONOLOGY OF NOTABLE EVENTS, 1922–1938

---

1922	Britain recognizes the Irish Free State with dominion status; first step toward full sovereignty as Republic of Ireland
October 1922	Mussolini takes power in Italy after the Fascist “March on Rome”
1923	Nazis fail to mobilize political support during an attempted <i>Putsch</i> in Munich
1924	First Labour government is elected in Britain under Ramsey MacDonald
January 1933	Hitler comes to power in Germany; Nazis soon take control of all state institutions and suppress opposition
March 1933	Franklin D. Roosevelt introduces the “New Deal” in America to mitigate economic effects of the Great Depression
1934	Right-wing and fascist groups in France challenge the Third Republic with riots during the Stavisky Affair
1935	Nazis adopt Nuremberg laws against Jews
1936	Left-wing “Popular Front” comes to power in France under Léon Blum and enacts notable social reforms
1938	The Nazi regime encourages violent attacks on Jews and Jewish property during <i>Kristallnacht</i> —the night of “broken glass”

---

party, or rally to this or that campaign. Now, like all else, it became “total.”

Propaganda was monopolized by the state, and it demanded faith in a whole view of life and in every detail of this coordinated whole. Formerly the control of books and newspapers had been mainly negative; under Napoleon or Metternich, for example, censors had forbidden statements on particular subjects, events, or persons. Now, in totalitarian countries, control of the press became frighteningly positive. The government manufactured thought. It manipulated opinion. It rewrote history. Writers were required to adopt whole ideologies; books, newspapers, magazines, and the radio diffused an endless and overwhelming cloud of words. Loudspeakers blared in the streets; gigantic blown-up photographs of the Leader looked down in public places. The propaganda experts were sometimes fanatics, but often they were cynics like Dr. Joseph Goebbels in Germany, too intelligent to be duped by the rubbish with which they duped their country.

---

*Propaganda*

The very idea of empirical truth evaporated. No norm of human utterance remained except political expediency—the wishes and self-interest of those in power. No one could learn anything except what the government wanted people to know. No one could escape the omnipresent official doctrine, the insidious penetration of the very recesses of the mind by ideas planted by outsiders for their own purposes. People came to accept and even to believe the most extravagant statements when they were endlessly repeated, year after year. Barred from all independent sources of information, having no means by which any official allegation could be tested, the peoples of totalitarian countries became increasingly, in fact and not merely in sociological theory, incapable of the use of reason.

Racism, more characteristic of Nazi Germany than of totalitarianism in general, was a further exaggeration, or degradation, of older ideas of nationalism and national solidarity. It defined the nation in a tribal sense, as a biological entity, a group of persons possessing the same physical ancestry and the same or similar physical characteristics. Anti-Semitism was the most venomous form of racism

---

*Racism*

The Nazis promoted racist definitions of German nationhood and created racial propaganda to show the “ideal” German family. This image of the “new people” was produced for a 1938 calendar that conveyed the Nazis’ biological view of gender identities as well as the regime’s racial portrait of the German nation.

(akg-images)

in Europe. While a latent hostility to Jews had always been present in the Christian world, modern anti-Semitism had little to do with Christianity. It arose in part from the fact that in the nineteenth century with the removal of religious barriers, the Jews entered into general society and many achieved positions of prominence, especially in Germany, so that from the point of view of any resentful individual they could be represented as dangerous competitors in business or the professions. But most of all, anti-Semitism was inflamed by propagandists who wished people to feel their supposed racial purity more keenly or to forget the deeper problems of society, including poverty, class divisions, and economic inequities.

Totalitarianism  
“resolves” class  
conflict

Totalitarianism was an escape from the realities of class conflict. It was a way of pretending that differences between rich and poor were of minor importance. Typically, a totalitarian regime came into power by stirring up class fears, then remained in power, and represented itself as indispensable by declaring that it had settled the class problem. Thus Mussolini, Hitler, and certain lesser dictators before seizing office pointed alarmingly to the dark menace of Bolshevism, and once in power, declared that all classes stood shoulder to shoulder in slablike solidarity behind the Leader.

Nor were events in Russia (or in China after the Second World War) altogether different. The Bolsheviks in 1917, armed with the ideas of Marx, aroused the workers against

The Nazi regime used public spectacles to send a message of irresistible national power to both the German people and foreign observers. The annual Nazi rallies at Nuremberg became the most carefully organized expressions of allegiance to the Third Reich and the Nazi ideology. The salute to Hitler, as shown in this photograph of the Führer leading his officers between rows of soldiers at Nuremberg in 1938, was a typical example of the fervent loyalty and emotion that such events were designed to evoke.

(Bettmann/Corbis)

capitalists, landlords, the middle classes, and rich peasants; once in power and after extensive liquidations, they declared that the classless society had arrived, that no true social classes any longer existed, and that all citizens stood solidly behind a regime from which, they said, all good citizens benefited equally. Only the democracies admitted that they suffered from internal class problems, from maldistribution of wealth, or from social distinctions between favored and unfavored groups in society.

The dictatorships blamed their troubles on forces outside the country. They accused dissatisfied persons of conspiring with foreigners or refugees—with being the tools of Trotskyism, imperialism, or international Jewry. Or they talked of the struggle (as Mussolini did) between rich nations and poor nations, the “have” and the “have not” countries, and thus transformed the problem of poverty into an international struggle. In the distinction between “have” and “have not” countries there was, of course, more than a grain of truth; in more old-fashioned language some countries (such as the European democracies, as well as the United States and the British dominions of the 1930s) had progressed farther than others in their economic productivity and accumulation of wealth. It is probable that any propaganda is more effective if partly true. But when the totalitarians blamed their troubles on other countries and transformed the conflict between “have” and “have not” into a struggle between nations, they gave the signal that war might be a solution for social ills.

Violence, the acceptance and even glorification of violence, was indeed the characteristic most clearly distinguishing the totalitarian from the democratic systems. We have seen how a cult of violence, or belief that struggle was beneficial, had arisen before the First World War. The war itself habituated people to violence and direct action. Lenin and his followers showed how a small group could seize the helm of state under revolutionary or chaotic conditions. Mussolini in 1922 taught the same lesson, with further refinements; for the Italy in which

---

*The glorification of violence*

he seized power was not at war, and it was merely the threat or possibility of revolution, not revolution itself, that provided him with his opportunity. In the 1920s, for the first time since the seventeenth century, some of the most civilized parts of Europe, in time of peace, saw private armies marching about the country, bands of uniformed and organized ruffians, Blackshirts or Brownshirts, who manhandled, abused, and even killed law-abiding citizens with impunity. Nor would anyone in the 1920s have believed that by the 1930s Europe would see the reintroduction of torture.

The very ethics of totalitarianism was violent and neopagan. It borrowed from and distorted Nietzsche and other prewar theoreticians, who, safe and civilized, had declared that people should live dangerously, avoid the flabby weakness of too much thought, and throw themselves with red-blooded vigor into a life of action. The new regimes all instituted youth movements. They appealed to a kind of juvenile idealism in which young people believed that by joining some kind of squad, donning some kind of uniform, and getting into the fresh air they contributed to a great moral resurgence of their country. Young men were taught to value their bodies but not their minds, to be tough and hard, and to regard mass gymnastics as patriotic demonstrations. Young women were taught to breed large families without complaint, to be content in the kitchen, and to look with awe upon their virile mates.

The body cult flourished while the mind decayed. Especially in National Socialism the ideal was to turn the German people into a race of splendid blond Nordics. Contrariwise, euthanasia was adopted for the chronically ill and the insane and was proposed for the aged. Nazi ideologists produced pseudoscientific racist theories to explain and justify their actions. Later, in the Second World War, when the Nazis overran eastern Europe, they committed Jews and others to gas chambers, destroying over six million human beings by the most scientific methods. Human beings were viewed as animals; one bred the kind one wanted and killed the kind one did not.

### *The Spread of Dictatorship*

The trend toward dictatorship, if not necessarily of the totalitarian variety, spread in Europe in the 1930s. By 1938 only 10 out of 27 European countries remained democratic, in the sense that different political parties honestly competed for office and that citizens within generous limits thought and acted as they pleased. They were Great Britain and France; Holland, Belgium, and Switzerland; Czechoslovakia and Finland; and the three Scandinavian countries Denmark, Norway, and Sweden.

The promise of the early 1920s that constitutional and democratic government would flourish was thwarted. The weakness or absence of a parliamentary or democratic tradition, low education and literacy standards, the hostility of reactionary elements, the fear of Bolshevism, and the dissatisfaction of existing national minorities, all coupled with the economic strains resulting from the Great Depression, contributed to the collapse of representative institutions. Apart from the avowedly totalitarian or fascist regimes of Germany and Italy, the new dictatorships and authoritarian systems generally rested on a combination of personal and military power, but several reflected or absorbed some of the ideological features of a generic fascism. In Portugal, Salazar inaugurated a clerical-corporative dictatorship in 1932 that lasted for over four decades. In Austria, Dollfuss fused various right-wing political and military elements into a clerical-fascist "Christian" dictatorship which violently suppressed the Socialists and sought in vain to counter the

---

*The collapse of  
democratic  
governments*

German threat. In Spain General Franco established a right-wing authoritarian government after a bloody civil war (described in the next chapter). In many respects the dictatorships of Latin America under their caudillos and military juntas resembled the European military dictatorships; and similar repressive one-party regimes have reappeared in other parts of the world down to the present.

The authoritarian regimes were alike in repressing individual liberties, banning opposition parties, and abolishing or nullifying parliamentary institutions. Many borrowed features of fascism, establishing a corporative state, outlawing independent labor organizations, and forbidding strikes; many, like Hungary, Romania, and Poland, enacted anti-Semitic legislation. None of the right-wing regimes went so far as Hitler's Third Reich in the total coordination of all political, economic, intellectual, and biological activities in a revolutionary mass-based dictatorship.

The acceptance and glorification of violence, it has been noted, was the feature most clearly distinguishing the totalitarian from the democratic systems. War in the Nazi and Fascist ethics was a noble thing, and the love of peace a sign of decadence. The Soviet regime by its own theory regarded war with non-Soviet powers as inevitable some day, but did not preach it as a positive moral good. The exaltation of war and struggle, the need for maintaining national solidarity, and the habit of blaming foreign countries for social troubles helped to make violence seem like a normal and appropriate means for strengthening the nation. These general ideological themes were intensified by the considerable armaments programs on which the dictatorships embarked and by the personal ambition and egotistical mania of individual dictators. All of this made the decade of the 1930s a time not only of domestic reaction but of recurrent international crises that led finally, in 1939, to a second and even greater world war.

## THE SECOND WORLD WAR

- 104. The Weakness  
of the Democracies:  
Again to War
- 105. The Years of Axis Triumph
- 106. The Western-Soviet  
Victory
- 107. The Foundations  
of the Peace

*Peace in the abstract*, the peace that is the mere absence of war, does not exist in international relations. Peace is never found apart from certain conditions; it means peaceable acceptance of given conditions, or peaceable and orderly transformation of conditions by negotiation and agreement. The conditions in the 1930s were basically those laid down by the Paris peace conference of 1919—the states recognized, the frontiers drawn, the terms agreed to, at the close of the First World War. In the 1930s neither Germany, Italy, Japan, nor the U.S.S.R. was content with these conditions;

they were “revisionist” or dissatisfied powers; and the first three were willing to undertake war itself to make a change. Great Britain, France, and the United States were satisfied powers, expecting no benefit from change in the conditions; but on the other hand they had lost faith in the conditions and were unwilling to risk war for the sake of upholding them. They had written a treaty in 1919 which a dozen years later they were unwilling to enforce. They stood idly by, as long as they could, while the dissatisfied powers tore to pieces the states recognized, the frontiers drawn, and the terms agreed to at the Peace of Paris. From the Japanese invasion of Manchuria in 1931 to the outbreak of European war in 1939, force was used by those who wished to upset international order, but never by those who wished to maintain it. A new world war was therefore launched by nations that had never accepted the outcome of the last one.

The war that raged across the world from 1939 to 1945 was the most destructive conflict in human history. It was also the most widely dispersed global war that has ever been fought. The Second World War affected nations on every continent; caused the deaths of almost 60 million people (at least two-thirds of whom were civilians); produced vast physical damage in cities, factories, and countrysides; generated new forms of genocidal mass murder as well as new military weapons of mass destruction; and contributed decisively to the new global influence of two superpower nations—the United States and the Soviet Union.

Historians often disagree about the social or political consequences of warfare, but the Second World War was unquestionably one of the definitive, shaping events in modern world history. Both the haunting memories and complex legacy of the Second World War still influence modern cultures and people everywhere in the twenty-first century.

## 104. THE WEAKNESS OF THE DEMOCRACIES: AGAIN TO WAR

### *The Pacifism and Disunity of the West*

While dictators stormed in the 1930s, the Western democracies were swayed by a profound pacifism, which may be defined as an insistence on peace regardless of consequences. Many people, especially in England and the United States, came to believe that the First World War had been a mistake, that little or nothing had been gained by it, that they had been deluded by wartime propaganda, and that wars were really started by armaments manufacturers. They believed also that Germany had not really caused the war of 1914, that the Treaty of Versailles was too hard on the Germans, that democracy was after all not suited to all nations, that it took two to make a quarrel, and that there need be no war if one side refused to be provoked—a whole system of pacific and tolerant ideas in which there was perhaps both truth and misunderstanding.

---

*The pacifism of the  
West*

The pacifism of the West had other roots, most evident in France. About 1.4 million Frenchmen had died in the First World War; half of all French males between the ages of 20 and 32 in 1914 had been killed. To the French it was inconceivable that such a human disaster should be repeated.

French strategy was therefore defensive and sparing of manpower. If war came, the French expected to fight it mainly in the elaborate fortifications, called the Maginot Line, which they built on their eastern frontier facing Germany, from the Swiss to the Belgian border; to its north the Ardennes forest was to be a barrier to any invader. During the depression France was torn by internal class conflict and by fascist and quasi-fascist agitation. Many French on the Right, historically unsympathetic to the republic and seeing, or claiming to see, in such movements as the Popular Front the threat of social revolution, did not conceal their admiration for Mussolini or even for Hitler. Abandoning their traditional role as ardent nationalists, they would do nothing to oppose the dictators. On the other hand, many on the Left looked with sympathy upon the Soviet Union. France was ideologically too divided in the 1930s to possess any firm foreign policy, and all elements took false comfort from the supposed impregnability of the carefully constructed Maginot Line.

A similar situation, in lesser degree, prevailed in Great Britain and the United States. The loss and bloodshed of the First World War were remembered with both mourning and anger. It was well known that another world war would be even more horrible; there was an unspeakable dread of the bombing of cities. Typical of the time was a resolution adopted by students at Oxford in 1933 that they would never take up arms for their country under any conditions; peace movements appeared among American college students too. The pull between Left and Right was felt in England and America. In the 1930s, when any international action seemed to favor either the U.S.S.R. on the one hand, or Hitler and Mussolini on the other, it was hard to establish any foreign policy on a firm basis of national unity. In Britain some members of the upper classes were overtly sympathetic to the fascist dictators or saw in them a bulwark against communism. The government itself tried to be noncommittal; it believed that some means of satisfying or appeasing the more

legitimate demands of the dictators might be found. Neville Chamberlain, prime minister after 1937, became the principal architect of the appeasement policy.

The United States government, despite President Roosevelt's repeated denunciation of the aggressors, followed in practice a policy of rigid isolation. Neutrality legislation, enacted by a strong isolationist bloc in Congress in the years 1935 to 1937, forbade loans, export of munitions, and use of American shipping facilities to any belligerent once the president had recognized a state of war in a given area. Many believed that the United States had been drawn into the First World War by such economic involvement. From this American neutrality legislation the aggressors of the 1930s derived great benefit, but not the victims of aggression.

As for the rulers of the U.S.S.R., they were revisionist and dissatisfied in that they did not accept the new frontiers of eastern Europe nor the territorial losses incurred by Russia in the First World War. They resented the *cordon sanitaire* created in 1919 against the spread of Bolshevism, the ring of small states on their borders from Finland to Romania, which were almost without exception vehemently anti-Soviet. They had no fondness for the international status quo, nor had they abandoned their long-range revolutionary objectives. But, as Communists and as Russians, they were obsessed by fear of attack and invasion. Their Marxist doctrine taught the inherent hostility of the entire capitalist world; the intervention of the Western Allies in the revolution and civil wars confirmed their Marxist theory. Resentful and suspicious of the outside world, in the 1930s the men in the Kremlin were alarmed primarily by Germany. Hitler, in *Mein Kampf* and elsewhere, had declared that he meant to obliterate Bolshevism and subordinate large stretches of eastern Europe to Germany.

---

Russian resentment

The Soviets became interested in collective security, in international action against aggression. In 1934 they joined the League of Nations. They instructed Communist parties to work with socialists and liberals in popular fronts. They offered assistance in checking fascist aggressors, signing mutual assistance pacts with France and Czechoslovakia in 1935. But many people fled from the Soviet embrace with a shudder. They distrusted Soviet motives, or they were convinced that the purges and trials of the 1930s had left the Soviets weak and undependable as allies, or they felt that the fascist dictators might be diverted eastward against the Soviets and so spare the Western democracies. Here again, though the Soviet Union was ostensibly willing, no effective coalition against aggression could be formed.

### *The March of Nazi and Fascist Aggression*

Adolf Hitler perceived these weaknesses with uncanny genius. Determined to wreck the whole treaty system, which most Germans, to be sure, found humiliating, he employed tactics of gradual encroachment that played on the hopes and fears of the democratic peoples. He inspired in them alternating tremors of apprehension and sighs of relief. He would rage and rant, arouse the fear of war, take just a little, declare that it was all he wanted, let the former Allies naïvely hope that he was now satisfied and that peace was secure, then rage again, take a little more, and proceed through the same cycle.

Each year he precipitated some kind of emergency, and each time the French and British saw no alternative except to let him have his way. In 1933, soon after seizing power, he took Germany out of the League and out of the Disarmament Conference then taking place. He successfully wooed Poland, long France's ally, and in 1934 the two countries signed a nonaggression

---

Hitler's triumphs

Hitler lived in Vienna as an unknown artist before the First World War, but he returned as the all-powerful German *Führer* after the union of Austria and Germany in March 1938. Proceeding through Vienna in this triumphant motorcade, he was hailed by Austrian Nazis and others who celebrated the long-anticipated *Anschluss* on the city's streets.

(akg-images)

treaty. That same year the Nazis of Austria attempted a *Putsch*, assassinated the Austrian chancellor, Dollfuss, and demanded the union of Austria with Germany. The Western powers did nothing. It was Mussolini who acted. Not desiring to see Germany installed at the Brenner Pass, he mobilized large Italian forces on the frontier, discouraged Hitler from intervening openly in Austria, and so preserved the independence of Austria for four more years. In January 1935 a plebiscite was conducted in the Saar by the League of Nations as stipulated under the Versailles treaty. Amidst intense Nazi agitation, the Saar voted for reunion with the Reich. Two months later, in March 1935, Hitler dramatically repudiated those clauses in the Versailles treaty intended to keep Germany disarmed; he now openly built up the German armed forces. France, England, and Italy protested such arbitrary and one-sided denunciation of an international treaty but did nothing about it. Indeed, Great Britain entered into a naval agreement with Germany, to the consternation of the French.

On March 7, 1936, using as his justification the new Franco-Soviet pact, Hitler repudiated the Locarno agreements (which had confirmed post-World War I national borders) and reoccupied the Rhineland; that is, he sent German troops into the German territory west of the Rhine, which by the Treaty of Versailles was supposed to be a demilitarized zone. The French government considered possible military action to force the German army to leave the Rhineland; and at this time Hitler might have been checked, for German military strength was still weak and the German army was prepared to withdraw, or at least consult, at signs of resistance. But the French government was divided and unwilling to act without Britain; and the British would not risk war to keep German troops from occupying

**German soil!** The next year, 1937, was a quiet one, but Nazi agitation flared up in Danzig, which the Treaty of Versailles had set up as a free city. In March 1938 German forces moved into Austria, and the union of Austria and Germany, the *Anschluss*, was at last consummated. In September 1938 came the turn of Czechoslovakia and the Munich crisis. To understand it we must first pick up other threads in the story.

Mussolini, too, had his ambitions and required sensational foreign triumphs to magnetize the Italian people. Since 1919 the Italians had been dissatisfied with the peace arrangements. They had received nothing of the former Turkish territories and German colonies that had been liberally parceled out as mandates to Great Britain, France, Belgium, Japan, South Africa, Australia, and New Zealand. They had never forgotten the humiliating defeat of Italian forces by Ethiopia at Adowa in 1896, which had blocked Italy's imperial ambitions in northeast Africa. Ethiopia remained the only part of black Africa (with the exception of Liberia) that was still independent.

---

*Mussolini's ambitions*

In 1935 Italy invaded Ethiopia. The League of Nations, of which Ethiopia was a member, pronounced the Italian action an unwarranted aggression and imposed sanctions on Italy, by which members of the League were to refrain from selling Italy either arms or raw materials—oil was excepted. The British even gathered large naval forces in the Mediterranean in a show of strength. In France, however, there was considerable sympathy for Mussolini in important quarters, and in England there was the fear that if sanctions became too effective, by refusal of oil or by closure of the Suez Canal, Italy might be provoked into a general war. Mussolini was thus able to defeat Ethiopia in 1936 and to combine it with Italian Somaliland and Eritrea in an Italian East African empire. Haile Selassie, the Ethiopian emperor, made futile pleas for further action at Geneva. The League of Nations again failed, as in the earlier occupation of Manchuria by Japan, to provide machinery for disciplinary action against a wayward Great Power.

### *The Spanish Civil War, 1936–1939*

Hardly had the Ethiopian crisis been disposed of, to the entire satisfaction of the aggressor, when another serious crisis broke out in Spain. In 1931, after a decade of political disturbance, a rather mild revolution had driven out Alfonso XIII, of the Bourbon family, and brought about the establishment of a democratic Spanish Republic. Old hostilities within the country came to a head. The new republican government undertook a program of social and economic reform. To combat the old entrenched power of the church, anticlerical legislation was enacted: church and state were separated, the Jesuit order was dissolved and its property confiscated, and the schools were removed from clerical control. An old movement for Catalan independence was somewhat mollified by the grant of considerable local autonomy. To placate the peasantry the government began to break up some of the larger landed estates and to redistribute the land. The government's program was never pushed vigorously enough to satisfy extremist elements, who manifested their dissatisfaction in strikes and uprisings, particularly in industrial Barcelona, the Catalan capital, and the mining areas of the Asturias, but it was radical enough to antagonize the great property owners and the church. After 1933 the government fell into the hands of rightist and conservative parties, who ruled through ineffective and unpopular ministries. An insurrection of the miners in the Asturias was put down with much brutality. Agitation for Catalan independence was repressed.

In February 1936 new elections were held. All groups of the Left—republicans, socialists, syndicalists, anarchists, communists—joined in a Popular Front against

Right-wing forces launched a military insurrection against Spain's Republican government in July 1936. In the civil war that followed, Germany and Italy sent aid to General Francisco Franco, but anti-fascist groups mobilized everywhere to fight for the Republic. This anti-fascist rally in Spain was one of the many meetings that supported the Republic and the armed forces that were ultimately unable to restore it.

(David Seymour/Magnum Photos)

monarchists, clericals, army officers, other adherents of the old regime, and Falangists, or Spanish fascists. The Left won a victory at the polls, and pressed forward with a reform program. In July 1936, a group of military men led an insurrection against the Republican government; General Francisco Franco emerged as leader. The parties of the Left united in resistance and the whole country fell into civil war. It was the most devastating war in all Spanish history; over 600,000 human beings lost their lives, and it was accompanied by extreme cruelties on both sides. For nearly three years the republican or loyalist forces held their own before finally succumbing to the insurgents led by Franco, who in March 1939 established an authoritarian, fascist-type rule over the exhausted country.

Francisco Franco

Spain provided a rehearsal for the greater struggle soon to come. The republican government could legitimately have looked forward to the purchase of arms abroad to suppress the rebellion, but Britain and France were resolved not to let the war expand into a general conflict. Although pro-republican groups and individuals in Europe and the United States wanted to send military assistance to the antifascist forces, the British and French governments forbade the shipment of all war materials to Spain; even the French Popular Front government put obstacles in the way of aid to the hard-pressed Spanish Popular Front. The United States extended its neutrality legislation to cover

civil wars and placed an embargo on the export of arms to Spain. At British and French instigation 27 nations, including all the major European powers, agreed not to intervene or take sides. But the nonintervention policy proved a fiasco. Germany, Italy, and the Soviet Union intervened anyway. The former two supported Franco and denounced the republicans as the tools of Bolshevism, while the U.S.S.R. supported the republic, reinforced the growing strength of the Spanish Communists, and stigmatized the rebels under Franco as the agents of international fascism. Germans, Italians, and Russians sent military equipment to Spain, testing their tanks and planes in battle. The fascist bombings of Guernica, Madrid, and Barcelona horrified the democratic world. The Germans and Italians sent troops (the Italians over 50,000); the Soviets if only for geographical reasons did not send troops but sent technicians and political advisers. Thousands of volunteers of leftist or liberal sympathy from the United States and Europe went to Spain to serve with the republican forces. Spain became the battlefield of contending ideologies. The Spanish Civil War split the world into fascist and antifascist camps.

---

*Spain splits the world*

As in the case of Ethiopia, the war in Spain helped bring Germany and Italy together. Mussolini had at first, like others, feared the revival of a militant Germany. He had outpaced Hitler when the latter threatened to absorb Austria in 1934. The Ethiopian war, Italian ambitions in Africa, and a clamorous Italian demand for ascendancy in the Mediterranean, the *mare nostrum* of the ancient Romans, estranged Italy from France and Britain. In 1936, soon after the outbreak of the Spanish Civil War, Mussolini and Hitler came to an understanding, which they called the Rome-Berlin Axis—the diplomatic axis around which they hoped the world might turn. That year Japan signed with Germany an Anti-Comintern Pact, soon ratified by Italy too; ostensibly an agreement to oppose communism, it was actually the foundation for a diplomatic alliance. Each, thus furnished with allies, was able to push its demands with more success. In 1938 Mussolini accepted what he had denied to Hitler in 1934—the German absorption of Austria.

Meanwhile, in 1937, Japan, using as a pretext the firing upon Japanese troops at the Marco Polo Bridge near Beijing, launched a brutal full-scale invasion of eastern China and within a short time controlled most of the country. The Japanese occupation of Nanjing in 1937, then the Chinese capital, was accompanied by such violence and atrocities on the part of the Japanese military that it came to be known and long remembered as the “rape of Nanjing.” In a terrible prelude to the impending world war, Japanese troops murdered some 250,000 people, raped thousands of Chinese women, and burned huge piles of corpses in the streets. (Government officials in Japan later denied that the Nanjing atrocities took place on the scale that eyewitnesses had reported, which partly explains why the memory of such crimes would become an enduring, contentious issue in Chinese-Japanese relations.)

---

*The “rape of  
Nanjing”*

The Chinese lost their main coastal cities, but they continued to fight from the hinterland. The League of Nations again ineffectually condemned Japan. The United States refrained from applying its neutrality legislation since no war was officially declared. This made possible the extension of loans to China, the victim of aggression, but also made possible the purchase by the Japanese of vitally needed scrap iron, steel, oil, and machinery from American industry. The Japanese were left free to pursue their expansionist ambitions in Asia, in part because the Western nations were distracted and divided by the mounting tensions in Europe.

## GUERNICA

by Pablo Picasso (Spanish, 1881–1973)

Picasso painted this famous picture shortly after the fascist bombing of the Spanish city of Guernica in 1937. Although it expressed Picasso's response to a specific event in the Spanish Civil War, its disjointed images of the death, suffering, and destruction in modern warfare quickly gave this work a haunting, universal meaning.

## *The Munich Crisis: Climax of Appeasement*

### *Czechs divided*

By annexing Austria in March 1938 Hitler added about 6 million Germans to the Reich. Another 3 million Germans lived in Czechoslovakia (see maps, pp. 455, 716–717). All those who were adults in 1938 had been born under the Habsburg empire. They had never, since 1918, been content with their new position as a minority in a Slavic state and had long complained about various forms of subtle discrimination. There were Polish, Ruthenian, and Hungarian minorities also, and since even the Slovaks had a strong sense of separate identity, there was in actuality no preponderant national majority of any kind. The fact that Czechoslovakia had one of the most enlightened minorities policies in Europe, enjoyed the highest living standard east of Germany, and was the only country in central Europe in 1938 that was still democratic only demonstrated the difficulty of maintaining a multinational state even under the most favorable of conditions.

Czechoslovakia was strategically the keystone of Europe. It had a firm alliance with France, by which the French pledged to defend it against German attack, and an alliance with the Soviet Union, which, however, was contingent on the functioning of the French alliance. With Romania and Yugoslavia it formed the Little Entente, upon which France relied to maintain the existing boundaries in that part of Europe. It had a well-trained army, important munitions industries, and strong fortifications against Germany, which, however, were located in precisely the Sudeten border area where the population was almost all German. When Hitler annexed Austria—since Vienna is further east than Prague—he enclosed Czechoslovakia in a vise. From the German point of view it could now be said

Japan's military occupation of Nanjing in 1937 was so violent that it came to be called the "rape of Nanjing." This picture of Japanese soldiers using Chinese prisoners for bayonet drills shows some of the atrocities that were committed during the occupation.

(Bettmann/Corbis)

that western Czechoslovakia, which was almost a third German anyway, formed a bulge protruding into the German Reich.

The Sudeten Germans of Czechoslovakia, whether Nazis or not, fell under the influence of agitators whose aim was less to relieve their grievances than to promote National Socialism. Hitler fomented their demands for union with Germany. In May 1938 rumors of an imminent German invasion caused the Czechs to mobilize; Russia, France, and England issued warnings to Germany. Hitler gave assurances but was nevertheless determined to smash the Czechs in the autumn. France and England were appalled by their narrow escape from war. The nervous French acquiesced in the leadership of Britain, which in the following months strove to avoid any firm stand that might precipitate war. The Czechs, under pressure from Britain and France, accepted British mediation on the Sudeten issue and in the summer of 1938 offered wide concessions to the Sudeten Germans amounting to regional autonomy, but this was not enough to satisfy Hitler, who loudly proclaimed that the plight of the Germans in Czechoslovakia was intolerable and must be corrected. The Soviets urged a firm stand, but the Western powers had little confidence in Soviet military strength and, given the Soviet geographical situation, their ability to render assistance to Czechoslovakia. Moreover, they feared that firmness might mean war. They could not be sure whether Hitler was bluffing. He might, if opposed, back down; but it seemed equally likely, or indeed more so, that he was entirely willing to fight.

As the crisis grew in September 1938, the British prime minister, Neville Chamberlain, who had never flown in his life before, flew to Germany twice to sound out Hitler on his terms. The second time Hitler raised his demands so that even the British and French could not accept them. Mobilization began; war seemed imminent. Suddenly, in the midst of the unbearable tension, Hitler invited Chamberlain and Edouard Daladier, the French premier, to a four-power conference at Munich, to be attended by his ally, Mussolini. The Soviet Union and Czechoslovakia itself were excluded. At Munich Chamberlain and Daladier accepted Hitler's terms and then put enormous pressure on the Czech government to yield—to sign its own death warrant. France, urged on by England in an appeasement

course that it was only too willing to follow, repudiated its treaty obligation to protect Czechoslovakia, ignored the Soviets who reaffirmed their willingness to aid the Czechs if the French acted, and abandoned its whole system of a Little Entente in the East. The

Appeasement: the  
Munich agreement

Munich agreement permitted Germany to annex the adjoining fringe of Bohemia in which the majority of the people were Germans. This fringe contained the mountainous approaches and the fortifications, so that its loss left Czechoslovakia militarily defenseless. After promises to guarantee the integrity of what remained of Czechoslovakia, the conference disbanded.

Chamberlain and Daladier were welcomed home with cheers. Chamberlain reported that he had brought “peace in our time.” Again the democracies sighed with relief, hoped that Hitler had made his last demand, and told themselves that, with wise concessions, there need be no war.

Western democratic  
weakness

The Munich crisis, with its death sentence to Czechoslovakia, revealed the helpless weakness into which the Western democracies had fallen by 1938. It may be that there was in fact little that the French and British could do at Munich to save Czechoslovakia. Their countries lagged behind Germany in military preparedness. They had little confidence in and were suspicious of the Soviets; and they were impressed by the might of the German army and air force. Bolder leaders than Daladier and Chamberlain, knowing the state of their own armed forces, would have declined to risk a quarrel. They desperately wanted peace and would buy it at a high price, not daring to believe that they were dealing with a blackmailer whose price would always be raised.

They suffered, too, from another moral uncertainty. By the very principle of national self-determination, accepted by the victors after the First World War, Germany could argue that it had a right to all that it had hitherto demanded. Hitler, in sending German troops into the German Rhineland, annexing Austria, stirring up Danzig, and incorporating the Bohemian Germans, had only asserted the right of the German people to have a sovereign German state. Moreover, if Hitler could be diverted eastward, enmeshed in a war with Russia, then communism and fascism might destroy each other—so one might hope. Possibly it was one of Hitler’s motives, in the Munich crisis, to isolate Russia from the West and the West from Russia. If so, he succeeded well enough.

### *End of Appeasement*

The final disillusionment came in March 1939. Hitler marched into Bohemia-Moravia, the really Czech part of Czechoslovakia, which he transformed into a German protectorate. Exploiting Slovak nationalism, he declared Slovakia “independent.” Czechoslovakia, merely trimmed down at Munich, now disappeared from the map. Having promised to take only a bite, Hitler swallowed the whole. He then seized Memel from Lithuania and raised demands for Danzig and the Polish Corridor. A horrible realization now spread in France and Britain. It was clear that Hitler’s most solemn guarantees were worthless, that his designs were not limited to Germans, but reached out to all eastern Europe and beyond, that he was essentially insatiable, that he could not be appeased. In April 1939 his partner in aggression, Mussolini, took over Albania.

The Western powers belatedly began to make preparations for a military stand. Britain, changing its East European policy at the eleventh hour, gave a guarantee to Poland and followed that with guarantees to Romania and Greece. That spring and summer the British tried to form an anti-German alliance with the U.S.S.R. But Poland and the Baltic

states were unwilling to allow Soviet armies within their borders, even for the purpose of defending themselves against the Germans. The Anglo-French negotiators refused to put pressure on them. Since the Poles, in 1920, had conquered more territory than the Allies had meant them to have, pushing their eastern border well into Byelorussia, almost to Minsk, the Anglo-French scruples seemed to the Soviets unnecessarily delicate. They did not wish the Germans to launch an attack on them from a point as far east as Minsk. They may have thought also that what the French and British really wanted was for the Soviet Union to take the brunt of the Nazi attack. They considered it an affront that the British sent lesser officials as negotiators to Moscow when the prime minister himself had three times flown personally to deal with Hitler.

The climax came when the Soviets, having quietly undertaken negotiations earlier that spring, on August 23, 1939, openly signed a treaty of nonaggression and friendship with Nazi Germany. In a provision kept secret at the time, it was agreed that in any future territorial rearrangement the Soviet Union and Germany would divide Poland between them, that the Soviet Union would enjoy a preponderant influence in the Baltic states and have its claim to Bessarabia, lost to Romania in 1918, recognized. In return the Soviets pledged to stay out of any war between Germany and Poland or between Germany and the Western democracies.

---

*The Nazi-Soviet  
Pact*

The Nazi-Soviet Pact stupefied the world. Communism and Nazism, supposed to be ideological opposites, had come together. A generation more versed in ideology than in power politics was dumbfounded. The pact was recognized as the signal for war; all last-minute negotiations failed. The Germans invaded Poland on September 1. On September 3 Great Britain and France declared war on Germany. The second European war in a generation, soon to be the Second World War, began.

## 105. THE YEARS OF AXIS TRIUMPH

*Nazi Europe, 1939–1940: Poland and the Fall of France*

The Second World War opened with an assault on Poland. German forces totaling over 1 million men, spearheaded by armored divisions and supported by the massed air power of the *Luftwaffe*, rapidly overran western Poland and subdued the ill-equipped Polish armies. The outcome of the campaign, a spectacular example of *Blitzkrieg*, or lightning warfare, was clear within the first few days; organized resistance ended within a month. The Germans set about to integrate their Polish conquest into the Reich.

---

*German Blitzkrieg*

Simultaneously, the Soviet Union, acting under the secret clauses of the Nazi-Soviet Pact, moved into the eastern half of Poland two weeks after the German invasion; the territory occupied was roughly equivalent to that lost to Poland in 1920. The Soviets proceeded also to establish fortified bases in the Baltic states—Estonia, Latvia, and Lithuania. Finland resisted Soviet demands. It refused to cede border territories sought by the Russians or to yield military rights within their country. The Soviets insisted; Leningrad, the second major city of the U.S.S.R., lay only 20 miles from the Finnish frontier. When negotiations foundered, the Soviets attacked in November 1939. Finnish resistance was valiant and at first effective, but the small country was no match for the U.S.S.R. Western democratic sympathies were with the Finns; the British and French sent equipment and supplies and planned an expeditionary force. The Soviet Union was expelled from the League of Nations for the act of aggression—the only power ever to be expelled. By March 1940 the

The German army launched the brutal violence of the Second World War with its motorized assault on Poland. The new term *Blitzkrieg* was used to describe this kind of rapid military advance, which is represented here by the arrival of German troops in a bombed-out Polish village. Closely supported by air power and moving quickly on motorcycles, trucks, and armored vehicles, the Germans showed how the new tactics of offensive warfare could overwhelm the defensive strategies that had stopped advancing armies in the First World War.

(akg-images)

fighting was over. Finland had to yield somewhat more territory to the U.S.S.R. than originally demanded but retained its independence.

Meanwhile all was deceptively quiet in the West. The pattern of 1914, when the Germans reached the Marne in the first month of hostilities, failed to repeat itself. The French remained behind their Maginot Line; the British had few troops; the Germans did not stir from behind their Siegfried Line, or West Wall, in the Rhineland. Hardly any air action took place. It was called the “phony war.” The Western democracies rejected Hitler’s peace overtures after the conquest of Poland but clung to their peacetime outlook. The hope still lingered that somehow a real clash might even yet be averted. During this same strange winter, a cold and bitter one, the Germans put their forces through special training, whose purpose became

The “phony war”

apparent in the spring.

On April 9, 1940, the Germans suddenly attacked and overran Norway, ostensibly because the British were laying mines in Norwegian waters in an endeavor to cut off German sources of Swedish iron ore. Denmark, too, was overrun, and an Allied expeditionary force with inadequate air strength had to withdraw. Then on May 10, the Germans delivered their main blow, striking at the Netherlands, Belgium, Luxembourg, and France itself. Nothing could stand against the German armored divisions and dive bombers. The Nazi use of massed tanks, though already demonstrated in Poland, took the French and British by surprise. Strategically, the Allies expected the main advance to be in central Belgium, as in 1914, and indeed as in the original German plan, which had been altered only a few

months earlier. Hence the French and British sent into Belgium the best-equipped troops they had.

But the Germans delivered their main armored thrust, seven divisions, through Luxembourg and the Ardennes forest, long considered by the French General Staff impassable to tanks. In France, skirting the northwestern end of the Maginot Line, which had never been extended to the sea, the German armored divisions crossed the Meuse, drove deep into northern France, against confused and ineffective resistance and, racing westward toward the Channel ports, cut off the Allied armies in Belgium. The Dutch, fearful of further air attack on their crowded cities, capitulated. The Belgian king sued for an armistice, and a large part of the French armies surrendered. The British fell back upon Dunkirk and could hope only to salvage their broken forces before the trap closed completely. Fortunately Hitler had halted the advance of his overextended armored divisions. In the week ending June 4 an epic evacuation of over 330,000 British and French troops was successfully executed from the beaches of Dunkirk, under air cover, with the help of all kinds of British vessels, manned in part by civilian volunteers, even though the precious equipment of the shattered army was almost totally abandoned.

In June the mechanized German forces drove relentlessly southward. Despite attempts at fragmented resistance by French forces (about 100,000 French soldiers died in the Battle of France), Paris itself was occupied on June 13, and Verdun was occupied two days later; by June 22 France sued for peace and an armistice was signed. Hitler danced with glee.

France, obsessed by a defensive military psychology at the outset of the war, its armies unprepared for mechanized warfare, its government divided, its people split into hostile and suspicious factions, had fallen into the hands of an openly defeatist group of leaders. The fall of France left the world agliss. Everyone knew that France was no longer its former self, but it had still been considered a Great Power, and its collapse in one month seemed inconceivable.

Some French, fleeing to England, established a Free French movement under General Charles de Gaulle; others formed a resistance movement in France. The British made the bitter decision to destroy a part of the French fleet anchored in the Algerian harbor of Oran to prevent its falling into enemy hands.

France itself under the terms of the armistice was occupied in its northern two-thirds by the Germans. The Third Republic, its capital now at Vichy in the unoccupied southern third, was transformed by vote of a confused and stunned parliament into an authoritarian regime headed by the 84-year-old Marshal Pétain and the cynical and unscrupulous Pierre Laval. The republic was dead; the very slogan "Liberty, Equality, Fraternity" was banned from official use. French fascist groups, long frustrated in their campaigns to destabilize or destroy the Third Republic, now saw their opportunity to undermine republican traditions in French politics and society. Pétain, Laval, and others, claiming that they were acting to shield France from further suffering, proceeded to collaborate with the Nazis and to integrate Vichy France into the "new order" in Europe (see map, p. 847).

The Vichy government cooperated in sending hundreds of thousands of French workers as slave laborers to Germany and even took the initiative in identifying and deporting thousands of French Jews to what were eventually Nazi death camps. The French people themselves had hard choices to make. Some chose to cooperate with the collaborators and the victorious Germans; others chose in a variety of ways to resist, some even joining the underground Resistance; most went about their daily lives waiting out the trying times until the fortunes of war might change. Not for many years after the war did the French admit responsibility as a nation for the misdeeds of the Vichy era.

*Fall of France*

---

---

*Vichy France*

Mussolini attacked France in June 1940, as soon as it was clear that Hitler had defeated it. Shortly thereafter, he invaded Greece and moved against the British in Africa. The Duce tied his own destinies, for good or ill, to those of the Führer. Since the Germans were emphatically the senior partner in this combination, since they were on good terms with Franco in Spain, and since the U.S.S.R. was benevolently neutral, they now dominated the European continent.

History seemed to repeat itself, in the distant and unreal way in which it ever repeats. The Germans controlled almost exactly the same geographical area that Napoleon had controlled in the early nineteenth century. Organizing a new “continental system,” they made plans to govern, exploit, and coordinate the resources, industry, and labor of Europe. Not having planned for a long war, and only belatedly mobilizing their resources for a sustained military effort, they intensified the exploitation of their conquered subjects. They impressed millions, prisoners of war or civilians, as slave labor, to work under close control in the German war industries. They garrisoned Europe with

their soldiers, creating what they called *Festung Europa*, the Fortress of Europe. In every country they found sympathizers, collaborators, or “quislings”—the prototype was Vidkun Quisling, who had organized a Norwegian Fascist party in 1933 and was Norwegian premier from 1942

---

*Festung Europa*

to 1945. When Hitler later was at war with the Soviet Union, some Europeans joined Hitler in the crusade against Bolshevism; 500,000 non-Germans fought in the divisions of the Waffen SS.

### *The Battle of Britain and American Aid*

In 1940, as in 1807, only Great Britain remained at war with the conqueror of Europe. After Dunkirk the British awaited the worst, momentarily expecting invasion. Winston Churchill, who replaced Chamberlain as prime minister in May 1940 during the military debacle, rose to the summit of leadership in adversity. To Parliament and the British people he promised nothing but “blood, toil, tears, and sweat.” He pledged implacable war against “a monstrous tyranny, never surpassed in the dark, lamentable catalogue of human crime.” To the American democracy across the Atlantic he appealed, “Give us the tools, and we will finish the job.” The United States began to respond.

---

American  
“neutrality”

Since 1939, and even before, the American government had been anything but neutral. Opinion was excitedly divided. One group, called isolationists, opposed involvement in the European war, believing that Europe was hopeless, or that the United States could not save it, or that the Germans would win anyway before America could act, or that Hitler, even if victorious in Europe, constituted no danger to the United States. Another group, the interventionists, urged immediate aid to the Allies, believing that Hitler was a menace, that fascism must be destroyed, or that the Nazis, if they subjugated all Europe, would soon tamper with the Latin American republics. President Roosevelt was an interventionist, convinced that American security and vital interests were endangered; he tried to unite national opinion by declaring that the United States might openly assist the Allies without itself fighting, by using “measures short of war.”

The neutrality legislation of the mid-1930s was amended in November 1939, when the ban on the sale of arms was repealed. Roosevelt described Britain as “the spearhead of resistance to world conquest”; the United States was to be “the great arsenal of democracy.” Both were fighting for a world, he said, in which the Four Freedoms were to be secure—freedom of speech,

---

“The great arsenal of  
democracy”

The rapid, complete military collapse of France in 1940 stunned the French people and indeed the entire world. Parisians faced this humiliating sight of German troops marching through the great symbol of French nationalism, the Arc de Triomphe, as they began to cope with an oppressive German military occupation that would last more than four years.

(Bettmann/Corbis)

freedom of worship, freedom from want, and freedom from fear. In June 1940, immediately after Dunkirk, the United States sent a small initial shipment of arms to Britain. A few months later the United States gave the British 50 overage destroyers in return for the right to maintain American bases in Newfoundland, the Bermudas, and the British Caribbean islands. In 1941 it adopted Lend-Lease, a policy of providing arms, raw materials, and food to powers at war with the Axis. At the same time, in 1940 and 1941, the United States introduced conscription, built up its army and air force, and projected a

two-ocean navy. To protect its shipping it secured bases in Greenland and Iceland and convoyed Allied shipping as far as Iceland.

After the fall of France, the Germans stood poised for an invasion of Britain. But they had not calculated on such rapid and easy successes in Europe, they had no immediately practical plan for an invasion, and they needed to win control of the air before a sea invasion could take place. Moreover, there was always the hope, in Hitler's mind at least, that the British might sue for peace, or even become an ally of Germany. The air assault on Britain began that summer and reached its climax in the autumn of 1940. Never until then had any bombing been so severe. But the Germans were unable to win control over the air in the battle of Britain. Gradually the British Royal Air Force fought off the bombers with more success; new radar devices helped detect the approach of enemy planes. Although Coventry was wiped out, the life and industry of other cities badly disrupted, and thousands of people killed, 20,000 in London alone, still the productive activity of the country carried on. Nor, contrary to the predictions of air power theorists, did the bombings break the morale of the civilian population.

---

*Air war over Britain*

In the winter of 1940–1941 the Germans began to shift their weight to the east. Hitler set aside the planned invasion of Britain, for which he seems never to have had much enthusiasm anyway. He had already decided, like Napoleon before him, that before committing his resources to an invasion of England he must dispose of the U.S.S.R., a project much closer to his ideology and his illusions!

### *The Nazi Invasion of Russia: The Russian Front, 1941–1942*

The Nazi-Soviet Pact of 1939, which had precipitated the war, like the alliance between Napoleon and Alexander I, was never a warm or harmonious understanding. Both parties probably entered it mainly to gain time. The Soviets gained space as well, pushing their borders westward. Stalin, incredibly, seems to have convinced himself that he could remain uninvolved in the war going on. But he and the Nazis soon began to dispute over eastern Europe. The Soviets, with the Nazis preoccupied by the war, hoped to win complete control over the Baltic and to gain influence in the Balkans as well. They had already occupied eastern Poland and the three Baltic states and won territory from Finland. In June 1940, to the chagrin of the Germans, they aggressively sovietized and converted the three Baltic states into member republics of the U.S.S.R. The old German landowning class, the famous “Baltic barons,” who had lived there for centuries, were uprooted. At the same time, the Soviets seized from Romania the Bessarabian province that they had lost in the First World War and incorporated it too as a Soviet republic. The Russians were expanding toward the Balkans, an area of historic Russian interest, and seemed bent on winning control over eastern Europe.

This the Germans viewed with dismay. They wished to reserve eastern Europe for themselves as a counterpart to industrial Germany. Hitler moved to bring the Balkans under German control. By early 1941 he blackmailed or, by territorial concessions, cajoled Romania, Bulgaria, and Hungary into joining the Axis; they became Axis lesser partners and were occupied by German troops; Yugoslavia also was occupied despite resistance by the army and population. Greece, too, was subjugated, the Germans coming to the rescue of Mussolini's hard-pressed troops. Hitler thus barred Soviet expansion in the Balkans and made the Balkan states part of the Nazi new order. The Balkan campaigns delayed his plans, but

---

*Hitler takes the  
Balkans*

now, to crush the Soviets and to gain the wheat harvests of the Ukraine and the oil wells of the Caucasus, the core of the Eurasian "heartland," Hitler struck, and on June 22, 1941, invaded the U.S.S.R. Stalin, refusing to heed several warnings he had received, was caught completely by surprise, and momentarily seemed incapable of mounting any kind of defense.

The German army threw 3 million men into Russia along a vast 2,000-mile front. The Russians gave way. One swift moving battle melted into another. By the autumn of 1941 the Germans had overrun Byelorussia and most of the Ukraine, where the brutal military occupation led immediately to Nazi mass murders of Jews, Bolshevik government officials, and other civilians. In the north, Leningrad was in a state of siege; in the south, the Germans had entered the Crimean peninsula and were besieging Sebastopol. And toward the center of the vast front, the Germans stood, exhausted, but apparently victorious, within 25 miles of Moscow. But the overconfident German forces had not calculated on the stubbornness of Soviet resistance once Stalin recovered from his initial shock, replaced some of his military commanders, and rallied the country to the defense of the Russian motherland. Nor were the Germans prepared to fight in an early and extraordinarily bitter Russian winter, which suddenly descended upon them. A counteroffensive, launched by the Red Army that winter, saved Moscow.

---

*The Nazi invasion of  
Russia*

Hitler, disgusted and impatient with his subordinates, took over direct command of military operations; he shifted the main attack to the south and began a great offensive in the summer of 1942 directed toward the oil fields of the Caucasus. Sebastopol soon fell; the siege of Stalingrad began. After the failure to take Moscow, Hitler, aware now that the war would not be brief, took steps to mobilize the German economy on a fuller wartime basis. Germany had been ready for war in 1939 as no other major power had been, but lacked preparation in depth for a protracted conflict. In the early months of 1942 Hitler found in Albert Speer an organizing genius who, despite all kinds of obstacles from party leaders and government functionaries, coordinated labor and resources in the next two years and tripled armaments production.

*1942, the Year of Allied Dismay: Russia, North Africa, the Pacific*

A year after the invasion of the Soviet Union, in the summer of 1942, the German line reached from beleaguered Leningrad in the north, past the western outskirts of Moscow, past Stalingrad on the Volga southward to the Caucasus Mountains; the Germans were within a hundred miles of the Caspian Sea. But the Russians had traded space for time. Though the industrial Don basin and the food-producing Ukraine were overrun, and the deliveries of Caucasus oil rendered hazardous and uncertain, the Russians continued to fight. Industries were shifted to the new Ural and Siberian cities; and neither the Soviet economy nor the Soviet government was yet struck in a vital spot. A "scorched earth" policy, in which the retreating Russians destroyed crops and livestock, and guerrilla units wrecked industrial and transportation facilities, guaranteed that Russian resources would not fall into the hands of the advancing conqueror.

Simultaneously, late in 1942 the Axis also moved forward in North Africa. Here the desert campaigns started in September 1940 with an Italian eastward offensive from Libya, which succeeded in crossing over into Egypt. The stakes were high—control over Suez and the Mediterranean. At the height of the battle of Britain, Churchill made the decision to send troops and supplies,

---

*The desert campaigns*

The German army's advance across the Soviet Union opened the way for murder squads to execute large civilian populations whom the Nazis deemed to be "inferior" people. These grieving Russians searched for dead family members after the Nazis had moved through their city in early 1942.

(SOVFOTO/EASTFOTO)

much needed at home, to North Africa. A British counteroffensive against vastly superior numbers swept the Italians out of Egypt and by early 1941 the British moved deep into Libya. Shortly thereafter the British overran Ethiopia and ended Mussolini's short-lived East African empire. But in North Africa fortunes were fickle. A German elite force, the Afrika Korps under General Rommel, in the spring of 1941 attacked in Libya and drove the British back to the Egyptian frontier. A few months later, once more on the offensive, the British advanced into Libya. Again fortunes shifted. By mid-1942 Rommel had repulsed the British and penetrated Egypt. The British took up a stand at El Alamein, 70 miles from Alexandria, their backs to the Suez Canal. Here they held the Germans.

But it seemed in 1942 that the Axis armies, breaking through the Soviet Caucasus and across the isthmus of Suez in North Africa, might enclose the whole Mediterranean and Middle East in a gigantic vise, and even, moving farther east, make contact with their allies the Japanese, who were at this time penetrating into the Indian Ocean. For the Pacific situation in the latter half of 1941 had also exploded. It was Japan that finally drew the United States into war.

The Japanese, in 1941, had conducted a war against China for ten years. With the war raging in Europe, Japanese expansionists saw a propitious moment to assert themselves throughout east Asia. In 1940 they cemented their alliance with Germany and Italy in a new three-power pact; the following year they concluded a neutrality treaty with the Soviet Union. From the Vichy French the Japa-

nese obtained a number of military bases and other concessions in Indochina. The United States belatedly placed an embargo on the export of such materials as scrap iron and steel to Japan. Hesitating to precipitate any all-out drive of the Japanese toward the Dutch East Indies and elsewhere, the United States still sought some definition of Japanese ambitions in southeast Asia. The new Japanese prime minister, General Hideki Tojo, a staunch champion of the Axis, publicly proclaimed that the influence of Britain and the United States was to be totally eliminated from Asia, but he agreed to send representatives to Washington for negotiations.

At the very time that the Japanese representatives in Washington were carrying on conversations with the Americans, on December 7, 1941, without warning, the Japanese launched a heavy air raid on the American naval base at Pearl Harbor in Hawaii and began to invade the Philippines. Simultaneously, they launched attacks on Guam, Midway, Hong Kong, and Malaya. The Americans were caught off guard at Pearl Harbor: close to 2,500 were killed, the fleet was crippled, and the temporary disablement of the American naval forces allowed the Japanese to roam at will in the western Pacific. The United States and Great Britain declared war on Japan on December 8. Three days later Germany and Italy declared war on the United States, as did the Axis puppet states; the war had become a global struggle.

---

Pearl Harbor

The Japanese, working overland through Malaya, two months later captured Singapore, a British naval base long famous for its supposed impregnability, the veritable Gibraltar of the East. In 1942 the Japanese conquered the Philippines, Malaya, and the Netherlands Indies. They invaded New Guinea and threatened Australia; they moved into the Aleutians. They streamed into the Indian Ocean, occupied Burma, and seemed about to invade India. Everywhere they found ready collaborators among enemies of European imperialism. They held up the idea of a Greater East Asia Co-Prosperity Sphere under Japanese leadership, in which the one clear element (apart from the dominance of Japan) was that the Europeans should be ejected.

Meanwhile, as noted, the Germans stood at the Caucasus and almost at the Nile. And in the Atlantic, German submarines were sinking Allied ships at a disastrous rate. The Mediterranean was unusable. For the Soviet-Western alliance, 1942 was the year of dismay. Despite Allied naval and air victories in the Pacific, the late summer and autumn of 1942 was the worst period of the war. Few realized, wrote the United States Chief of Staff General George C. Marshall some years later, how "close to complete domination of the world" were Germany and Japan and "how thin the thread of Allied survival had been stretched." That Germany and Japan had no plans to concert their strategy and operations was no small factor in the eventual Allied victory.

The year of dismay

## 106. THE WESTERN-SOVIET VICTORY

### *Plans and Preparations, 1942–1943*

By January 1942 twenty-six nations, including the three Great Powers—Britain, the United States, and the U.S.S.R.—and representing every continent, were aligned against the Axis, a combination to which President Roosevelt gave the name the United Nations. Each pledged to use all its resources to defeat the Axis and never to make a separate peace. The Grand Alliance against the Axis aggressors, which could not be created in the 1930s, had at last been consummated.

---

---

*A unified strategy*

The two Atlantic democracies, the United States and Great Britain, pooled their resources under a Combined Chiefs of Staff. Never had any two sovereign states formed so close a coalition. In contrast with the First World War an overall strategy was in effect from an early date. It was decided that Germany was the main enemy, against which it was necessary to concentrate first. For the time being the Pacific war was relegated to the background. Australia became the chief base for operations against the Japanese. The American navy and air force soon brought Japanese southward expansion to a halt and frustrated Japanese efforts to cut off supply lines to Australia; naval and air victories were won in the spring of 1942 in the battle of the Coral Sea and at Midway, the only relief to the overall gloom of that period. In the summer American forces landed at Guadalcanal in the Solomon Islands. A long ordeal of “island hopping” began.

---

---

*War preparations*

In Europe the first point of concentration was an air bombardment of Germany. But meanwhile Stalin called for a true “second front,” an immediate invasion by Allied ground forces that would relieve the pressure of the German divisions that were devastating the Soviet Union. Suspicious of the West as ever, the Soviet government regarded the failure to establish a second front as new evidence of anti-Soviet feeling. But neither the United States nor Britain, in 1942, was ready to undertake land action by a direct assault on *Festung Europa*. Although in the Second World War, as in the First, more than two years elapsed between the outbreak of war in Europe and the intervention of the United States; and although in the second war American military preparations began much sooner, the United States in 1942 was still involved in the cumbersome processes of mobilization, converting industry to the production of war materials for itself and its Allies, imposing controls on its economy to prevent a runaway inflation, and giving military training to its profoundly civilian-minded people, of whom over 12 million men and women eventually served in the armed forces—over three times as many as in the First World War.

---

---

*The home front*

The American home front was transformed like the societies of other warring nations into a war economy. The government carefully rationed the sale of food and essential materials such as oil and rubber, sold millions of “war bonds,” distributed thousands of war posters to sustain civilian morale, collected countless tons of scrap metal, and worked closely with the nation’s industrial companies to produce vast quantities of ships, warplanes, tanks, and every kind of military armament and equipment. Persons of all racial and ethnic groups found new jobs in the expanding industrial workforce. The total mobilization, however, led also to new forms of racial exclusion. Black Americans remained segregated in the armed forces. More than 100,000 Japanese-Americans on the west coast were forcibly evacuated to internment camps, where they remained until the end of the war. The national mobilization also affected the social and economic positions of women. Large numbers of women, as in Britain, and more so than in the First World War, took wartime jobs in defense and other industries. In contrast, almost to the end, Nazi ideology placed obstacles in the way of utilizing women in German factories.

During the first year after the United States entered the war, German submarines controlled enough of the Atlantic shipping lanes to threaten the transport of American troops and war supplies. In effect, the risk of Atlantic crossings blockaded much of the American army in the United States. The American and British navies, however, gradually won the battle of the Atlantic; the submarine menace was reduced to tolerable proportions by the first part of 1943. The Americans and British decided to begin the assault upon Germany,

The destruction of cities and loss of life on the eastern front during the Second World War went far beyond the destruction and losses in all other theaters of the war. This photograph of Stalingrad at the time of the huge, extended battle for that city suggests the incredible desolation and losses that resulted from the fighting and the vast movement of armies across the Soviet Union and all of eastern Europe.

(akg-images)

### *The Turning of the Tide, 1942–1943: Stalingrad, North Africa, Sicily*

Meanwhile, at the end of 1942 the tide had begun to turn. In November an Anglo-American force under the command of General Dwight D. Eisenhower gained control of the French-held territories in Algeria and Morocco after an amphibious operation of unprecedented proportions. In the competition that developed in the succeeding months for leadership of the French liberation committee, newly established in Algiers, General de Gaulle, though virtually ignored by President Roosevelt, pushed aside all rivals and moved forward with plans for France's revival.

After the North African landings, the Germans took over control of unoccupied France as well; they were frustrated, however, in the effort to seize the remainder of the French fleet when French crews scuttled their ships at Toulon. In North Africa the Allied forces fought their way eastward into Tunisia. Meanwhile British forces under General Montgomery, having held the Germans at El Alamein in June 1942, had already launched their third (and final) counteroffensive in October; they now pushed the Germans westward from Egypt until a large German force was crushed between the two Allied armies in Tunisia. By May 1943 Africa was cleared of Axis forces. Mussolini's dream of an African empire had been thwarted; the Mediterranean was open; the threat to Egypt and the Suez Canal ended.

---

*Africa cleared of Axis forces*

At the same time it became clear, in the winter of 1942–1943, that the Germans had suffered a catastrophic reversal in the Soviet Union in the titanic battle of Stalingrad. In August 1942 massive German forces, an army of well over a quarter million, began an all-out assault on Stalingrad, the vital key to all transport on the lower Volga River; by September they had penetrated the city itself. Stalin ordered his namesake city held at all costs; Russian soldiery and the civilian population mounted a desperate defense. Hitler, still gambling on one big victory, was as obstinate in ordering the city taken. After weeks of fighting, the Germans occupied most of the city when suddenly a great Red Army counterattack, led by General Zhukov,

---

*Stalingrad*

trapped the German army and took a terrible toll; fewer than 100,000 were left to surrender in February 1943. The Soviets followed up their victory with a new counteroffensive, a great westward drive that regained for them what they had initially lost in the first year of the war. After Stalingrad, despite some setbacks, the Soviet Union was on the offensive for the remainder of the war. Stalingrad (or Volgograd as it was later renamed) became a turning point not only in the history of the war but in the history of central and eastern Europe as well.

American equipment meanwhile arrived in the Soviet Union in prodigious quantities. The terms of Lend-Lease were liberally extended to the Soviets; a stream of American vehicles, clothing, food, and supplies of all kinds made its way laboriously to the U.S.S.R. through the Arctic Ocean and through the Persian Gulf. Machinery and equipment were sent for the Soviet arms plants, which were themselves vastly increasing their output. Anglo-American bombing meanwhile was cutting into German airplane production at home. The Allied contribution to the Soviet war effort was indispensable, but Russian human losses were tremendous. Between 20 and 25 million people in the Soviet Union died from war-related causes. More than two-thirds of these casualties were civilians; many had been killed early in the war by Nazi murder squads whose assignment was to eliminate all so-called "undesirable" persons from territories occupied by the German army. But the number of battle deaths alone went far beyond Allied losses in other military theaters of the war. The Soviet Union lost more men in the battle of Stalingrad, for example, than the United States lost in combat during the entire war in all theaters combined.

With contemporary American successes against Japanese forces in the Solomon Islands at the end of 1942 and the slow throttling of German submarines in the Atlantic, the beginning of the year 1943 brought new hope for the Allies in all quarters. In a spectacular campaign in July–August 1943, the British, Canadians, and Americans conquered the island of Sicily. Mussolini fell from power, and the 21-year-old Fascist regime came to an end. Mussolini set up an "Italian Social Republic" in the north, but it was no more than a German puppet government. Some months later, in April 1945, the Duce, as he attempted to flee the country, was seized and shot by anti-Fascist Italians. When the new Italian government under Marshal Badoglio, in August 1943, tried to make peace, the German army occupied Italy. The Allies, having crossed to the Italian mainland from Sicily, attacked from the south. In October the Badoglio government declared war on Germany, and Italy was recognized by the Allies as a "cobelligerent." But the Germans stubbornly blocked the advance of the Allies to Rome despite new Allied landings and beachheads. The Italian campaign turned into a long and disheartening stalemate because the Western Allies, concentrating troops in Britain for the approaching cross-Channel invasion, could never spare enough for the Italian front.

---

*New hope for the  
Allies*

### *The Allied Offensive in Europe, 1944–1945*

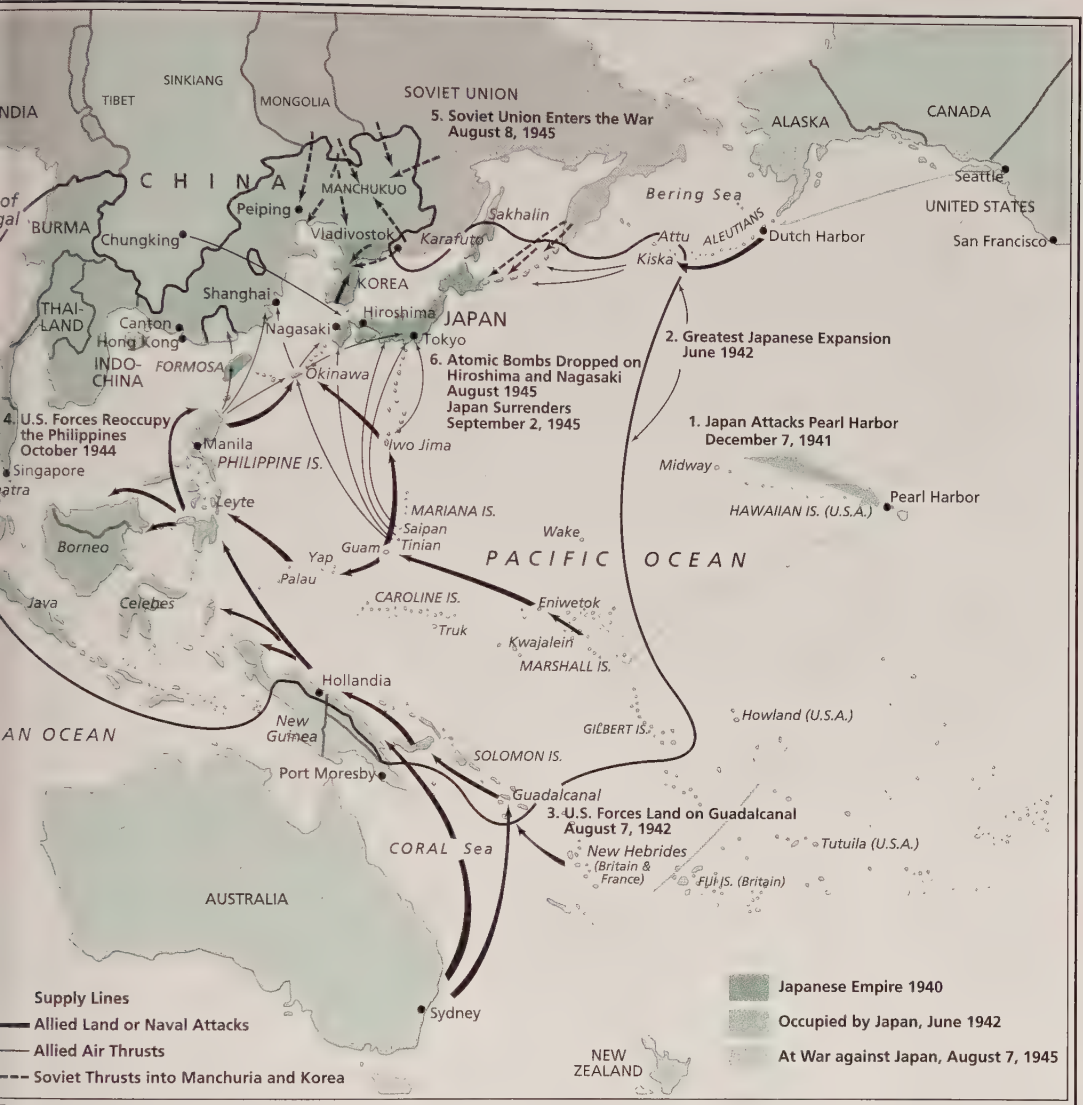

*Festung Europa*, especially along its western approaches, the coasts of Holland, Belgium, and France, bristled with every kind of fortification that German scientific and military ingenuity could devise. A seaborne attack upon these coasts clearly differed from the earlier amphibious attacks on Algeria, Sicily, or the Pacific islands in that the defender in Europe, in the very part of Europe where the road and railway network was thickest, could immediately rush overwhelming reserves to the spot attacked—except insofar as feinting tactics kept him uncertain, air power destroyed his transport, or the Russians held the bulk of his forces in the East. Precise and elaborate plans had been worked out. Ten thousand

THE SECOND WORLD WAR

These two maps show the global character of the war and the central position of the United States with respect to the European and Pacific theaters. The numbered legends summarize the successive stages of the war in both the Eastern and Western hemispheres. In 1942, with the Germans reaching as far east as Egypt and Stalingrad and the Japanese as far west as Burma, the great danger to the Soviet-Western alliance was that these two might join forces, dominate southern Asia, control the oil resources of the Persian Gulf, and stop the flow of Western supplies to the Soviet Union from this direction. The almost simultaneous Soviet-Western successes, late in 1942, at Stalingrad and El Alamein, and in the invasion of Morocco-Algeria and of Guadalcanal, proved to be the turning point of the war. In 1943 the German submarine campaign in the Atlantic was defeated, so that American troops and supplies could

move more freely to Europe. The invasion of Normandy in June 1944, with continuing Russian pressure from the east, brought about the German surrender in May 1945. Meanwhile, in the Pacific, American occupation of the islands and reoccupation of the Philippines prepared the way for the surrender of Japan, which followed the dropping of two atomic bombs in August 1945.

aircraft were to provide aerial protection, scores of warships were to bombard the coast, 4,000 ships were to carry the invading troops and their supplies across the Channel, and artificial harbors were to be created where none existed.

The invasion of western Europe began before dawn on June 6, 1944. The spot selected was the coast of Normandy directly across the Channel from England; false intelligence reports, planted by the Allies, led the Germans to expect the main thrust, when it occurred, to be at Calais. An

*The invasion of  
Europe*

unparalleled combination of forces—British, Canadian, and American, land, sea, and air, backed up by huge accumulations of supplies and troops assembled in Great Britain, and the whole under the unified command of General Eisenhower—assaulted the French coast, established a beachhead, and maintained a front. The Allies poured in their strength, over 130,000 men the first day, 1 million within a month. After heavy fighting around the town of Saint-Lô in early July, the Germans were thrown back more easily than had been expected. By August Paris was liberated, by September the Allies crossed the frontier of Germany itself. In France, Italy, and Belgium the Resistance movements, which had grown up in secret during the years of German occupation, came into the open and drove out Germans and pro-German collaborators. In Germany itself no widespread or deeply rooted Resistance movement ever developed, but a small group of Germans, military and civilian, formed an underground. On July 20, 1944, after the failure of earlier efforts, it attempted to assassinate Hitler by exploding a bomb at his military headquarters in East Prussia; Hitler was only injured and took a fearsome revenge on the conspirators.

In August, in another amphibious operation, the Allies landed on the French Mediterranean coast and swept up from southern France to join the Allied forces advancing against stiffening resistance. At one point, momentarily, the Allied offensive suffered a serious reversal. A sudden German drive under Hitler's direct personal orders in December 1944 was launched against thinly held American lines on the Belgian sector in the Ardennes, created a "bulge" in the advancing armies, and caused heavy losses and confusion. But the Allies rallied, and Hitler used up his armored reserves in the effort. Neither the Ardennes counteroffensive nor the new destructive weapons rained on Britain, jet-propelled flying bombs and rockets, opening up the missile age, availed the Germans. All this time the Americans and British kept up their massive air bombardments, destroying many of Germany's industrial cities and killing over 50,000 civilians in the fire-bombing of Dresden in February 1945. On the ground they pushed on and smashed through the heavily fortified Siegfried Line. The last natural obstacle, the Rhine, was crossed when in March 1945 American forces by a stroke of luck discovered an undestroyed bridge at Remagen; they poured troops over it and established a bridgehead—the first troops to cross the Rhine in combat since the armies of Napoleon. The main crossing, under the British, subsequently took place farther to the north. Soon the Allies were accepting wholesale surrenders in the Ruhr valley.

Meanwhile in 1944 the Russian armies swept the Germans from the

---

*The eastern front*

Ukraine, Byelorussia, the Baltic states, and eastern Poland. By August they reached the suburbs of Warsaw. The Polish underground rose against the Germans, but the Soviets, determined that Poland not be liberated by non-

Communist Polish leadership, refused to permit aid to the rising, and it was crushed, with a heavy loss of Polish lives. Earlier, in 1943, the mass graves of thousands of Polish prisoners of war, mainly officers, had been found by the Germans in the Katyn Forest. Despite continuing Soviet denials at the time, documents in the Russian archives later revealed that they had been shot by the Red Army on Stalin's orders in 1940, after the Soviet Union had joined with Germany in partitioning Poland. The Russians, their lines now overextended, and checked for several months by German strength in Poland, pushed southward into Romania and Bulgaria; both countries changed sides and declared war against Germany. Early in 1945 the Soviets, reopening their offensive, forced their way into East Prussia and Silesia and by February reached the Oder River, 40 miles from Berlin, where Zhukov paused to regroup his forces. In March and April Russian forces occupied Budapest and Vienna.

## THE HOLOCAUST

This map shows the loss of life that resulted from what the Nazis called their “Final Solution”—that is, their systematic program of destroying the Jews and Judaism. Before the Second World War most European Jews lived in Poland and the adjoining parts of the Soviet Union. The Germans occupied all of these areas during the war, and most deaths occurred in these territories. The map shows both the number killed in each country and the percentage of its Jewish population that were victims of this deliberate genocide. The numbers add up to about 6 million men, women, and children, or an estimated two-thirds of the Jewish population of Europe as a whole. Although word of this annihilation policy reached the outside world through the Vatican and other sources, the Allied leaders at first disbelieved the reports, and then, giving priority to their military objectives, did nothing to stop the systematic slaughter.

The final drive on Germany began. Hitler moved troops from the collapsing western front to reinforce German positions on the Oder and to protect his capital. In April the Americans reached the Elbe, about 60 miles from Berlin, with hardly any obstacles before them; but here they halted, by decision of General Eisenhower. The Americans, whose supply lines were already overextended, wanted a clear line of demarcation from the Russians; they also believed it necessary to divert forces southward against a possible German last stand in the Alps. But mainly the decision was made as a gesture of goodwill toward the Russians, who were to

*The final drive on Germany*

Allied troops found horrifying evidence of mass murder as they entered death camps and concentration camps that the Nazis had constructed throughout Germany and central Europe. These emaciated survivors were liberated from the camp at Buchenwald, where they had been forced to work as slave laborers and where more than 40,000 people had died. This group includes Elie Wiesel (seventh from left in second level, near the vertical beam), who would later write searing descriptions of the camps and of the Holocaust.

(The Art Archive/National Archives, Washington, D.C.)

be permitted to take Berlin as compensation for their heavy sacrifices in the common cause, and to preserve the Western-Soviet coalition until final victory. Similarly, the American troops that moved southward were held back from taking Prague, and the Soviets were permitted to take the Czech capital too. At the end of the war the Soviets were therefore in control of all the major capitals of central and eastern Europe—a military situation that would carry major political consequences.

The Western Allies and the Soviets offered no terms to Hitler nor to any Germans. They demanded unconditional surrender, and the Germans fought on in the very streets of Berlin. On the last day of April Hitler perished by his own hand in the ruins of his capital after denouncing some of his closest party subordinates as traitors. Admiral Doenitz, designated by Hitler as his successor, went through the formalities of surrender on May 8, 1945. Since fighting had already ceased on the Italian front a few days earlier, the war in Europe was over.

## *The Holocaust*

Meanwhile a generation reared to mistrust the fabricated atrocity tales of the First World War painfully and belatedly became aware of the real German horrors of the Second—hostages rounded up and shot in reprisal for resistance; whole villages like Lidice in Czechoslovakia or Oradour-sur-Glane in France razed to the ground and their inhabitants slain or deported; concentration camps like Dachau and Buchenwald, where the prisoners were given minimal rations and worked to death, and where Allied troops found only pitifully emaciated survivors; above all, the mass death camps with gas chambers and crematory ovens at Auschwitz (where at its peak 12,000 victims a day were gassed to death), Treblinka, Belzéc, Sobibor, and others, where peoples whom the Nazis deemed “inferior” could be systematically liquidated.

In the areas of Nazi domination in eastern Europe, the Nazis first used special firing squads and mobile gas units to kill “undesirables,” but Hitler’s murderous ambitions could not be achieved through such temporary or improvised methods of killing in the countryside. As the war went on, the more unstructured forms of mass murder were replaced by a systematically organized, European-wide system for gathering people at “collection” centers and transporting millions of men, women, and children in railroad cattle cars to the mass death camps where some were worked to death and others were put to death at once. By far the largest proportion killed were some 6 million Jews, but millions of other Poles, Russians, other Slavic peoples, Gypsies, and others were slain as well—either in the death camps or in various killing fields throughout Europe.

Many of the plans for systematic annihilation of the Jews, which would come to be known and remembered after the war as the Holocaust, were decided upon at a high-level Nazi meeting at Wannsee in January 1942. In the genocidal view of Nazi planners such as Heinrich Himmler, these policies would provide the wartime “Final Solution” to the so-called “Jewish problem” that Hitler had agitated with maniacal racist fury for so many years. Genocide, the planned, systematic effort to destroy a whole people, was the greatest of the Nazi sins against humanity. Although there have been mass murders in many other places and eras of human history, the genocidal attack on European Jews had a uniquely modern scale and scientific organization, which explains in part why it has produced such painful memories and questions for later generations. How could such murderous events occur in the heart of modern European civilization? The fact that the Holocaust was carried out by ordinary people and bureaucrats raises pointed questions about individual and collective responsibilities for deadly government policies, about the danger of misused, modern technologies, and about the destructive consequences of racist ideologies.

---

*The “final solution”*

Survivors have described extraordinary acts of courage and human will among the prisoners in Nazi death camps, but the Holocaust has become the modern world’s most terrifying example and memory of systematic murder and human brutality. And although it was easy enough to blame the Holocaust on Hitler and the other rabid leaders of the Nazi regime, the most haunting aspect of these massive crimes may have come from the unquestioning participation of so many anonymous followers. One of the few survivors from the camp at Auschwitz, the Italian Jewish writer Primo Levi, summarized the problem that reappears constantly in later historical, ethical, and political reflections on the Holocaust and suggests why this event remains so memorable in modern world history. “We must remember,” Levi wrote, “that these faithful followers, among them the diligent executors of inhuman orders, were not born torturers, were not (with a few exceptions)

monsters: they were ordinary men. Monsters exist, but they are too few in number to be truly dangerous. More dangerous are the common men, the functionaries ready to believe and to act without asking questions.”

### *The Last Phase of the War in the Pacific: 1944–1945*

In the Pacific, American operations against Japan had dragged on for three years, hampered by the strategic decision to concentrate against Germany first. Slowly, from points in the Solomon Islands, the easternmost fringe of the Indonesian archipelago, American forces, at first small, worked their way in a northwesterly direction toward faraway Japan. They had to fight in turn for Guadalcanal, for New Guinea, for the reconquest of the Philippines, all against stubborn entrenched Japanese resistance and at heavy cost. They had to fight for the Japanese islands in the mid-Pacific taken by Japan from the Germans after the First World War and converted into powerful naval bases—the Gilbert Islands, the Marshalls, the Carolines, the Marianas. In October 1944 the American navy won a decisive victory over the Japanese in the battle of Leyte Gulf. In March 1945 they fought with heavy casualties to take the eight-square-mile strategic island of Iwo Jima. Finally, in a protracted and bloody battle lasting over 2½ months, in the spring of 1945 they won the island of Okinawa, only 300 miles from Japan itself. Okinawa was captured just as the Germans collapsed in Europe. From the new Allied bases that had been won, from Saipan in the Marianas, from Iwo Jima, from Okinawa, and from aircraft carriers at sea, a crushing air offensive was launched against Japan, shattering Japanese industry, destroying the remnants of the Japanese navy, and compelling the Japanese government to give serious thought to suing for peace. The Allied leaders refused to believe that Japanese defenses were ready to crumble or that the Japanese were ready to negotiate. The American army prepared to shift combat troops from the European theater to Asia. The stage was being set for a full-scale invasion of Japan itself.

---

#### *The atomic bomb*

Then, on August 6, 1945, an American aircraft dropped an atomic bomb—built in the United States in utmost secrecy by European refugee and American scientists—on the city of Hiroshima, with a population of 200,000 people. The city was destroyed in this single explosion, and about 100,000 lives were lost; thousands of others were injured or suffered the long-term effects of radiation. Two days later, the Soviet Union, which had pledged to enter the conflict in the East within three months after the surrender of Germany, declared war on Japan and invaded Manchuria. On August 9 a second American atomic bomb struck Nagasaki and killed approximately 60,000 more. The atomic bombs and the Soviet declaration of war drove the Japanese to make peace at once. On September 2, 1945, the formal surrender was signed. The emperor was permitted to remain as head of state, but Japan was placed under a United States army of occupation.

Meanwhile, the atomic bomb, like the death camps of the Holocaust, soon became another haunting memory and symbol of the new forms of violence and mass destruction that a staggeringly costly global war had bequeathed to humanity. It was probably true, as American leaders insisted at the time and in retrospect, that the atomic bomb was the least costly way (in terms of American lives) for the United States to bring the war in Japan to a rapid, victorious conclusion; but it is also true that the introduction of this hugely destructive weapon created an unprecedented new threat to human survival and an endless danger that has loomed over the modern world ever since.

The human consequences of Nazi brutalities appear in this picture of a Nazi concentration camp near the German city of Ohrdruf in early May 1945. American soldiers were making their way through the camp, where the Nazis had subjected Poles, Czechs, German Jews, and German political prisoners to forced labor and then shot or flogged to death the internees who could no longer work.

(Bettmann/Corbis)

**The atomic bomb that was dropped on Hiroshima was the most destructive weapon in the long history of warfare. This photograph shows a view of the city after the single American bomb had reduced the buildings to rubble and killed 100,000 people. The bomb helped to end the Second World War in Japan, but it also created a new and enduring atomic threat to the future of human civilization.**

(Associated Press, U.S. SIGNAL CORPS)

The Second World War of the twentieth century was over, the greatest conflict in human history. The same cold impersonal statistics that had recorded 10 million killed in the First World War reported 15 million military deaths and (unlike the First World War) more than twice as many civilian fatalities. Soviet military deaths were estimated at over 6 million, German at 3.5 million, Chinese at 2.2 million, Japanese at 1.3 million, Polish at 700,000. British and Commonwealth losses were over 400,000, American about 300,000, French about 200,000. Over 25 million suffered battle wounds. The military death figures would have been higher except that one of every two of those wounded was saved by new sulfa and penicillin drugs and blood plasma transfusions. None of these statistics could be more than approximate; and no one could estimate the complete toll of human lives lost from Allied and Axis bombings, Nazi mass slayings of Jews in the Holocaust and of other

## CHRONOLOGY OF NOTABLE EVENTS, 1935–1945

---

1935	Mussolini launches an Italian invasion and conquest of Ethiopia
March 1936	German troops enter Rhineland; France and Britain do not intervene
July 1936	Fascist groups under General Franco in Spain rise against the Spanish Republic; Franco takes power after three-year Civil War
March 1938	Hitler annexes Austria to Nazi Germany
September 1938	French and British leaders meet with Hitler in Munich and accept German takeover of Sudetenland in Czechoslovakia
August 1939	Nazi-Soviet Nonaggression Pact includes plan for division of Poland
September 1939	Nazi invasion of Poland begins the Second World War
May–June 1940	Nazis conquer the Netherlands, Belgium, and France
July 1940	French collaborators set up a pro-fascist regime in Vichy
September 1940	German air attacks on Britain are repelled in Battle of Britain
June 1941	Germany launches massive invasion of the Soviet Union
December 1941	Japanese attack on U.S. Pacific fleet at Pearl Harbor brings the United States into war with Japan and then Germany
January 1942	Nazi leaders launch plans to build death camps for genocidal killing of European Jews and others
February 1943	Soviet forces defeat the Germans in decisive battle at Stalingrad
June 1944	Allied Armies open a “western front” in France after D-Day landings at Normandy
February 1945	Churchill, Roosevelt, and Stalin agree on postwar arrangements at meeting in Yalta
May 1945	Germany surrenders after Hitler commits suicide in Berlin
September 1945	Japan surrenders after the United States drops two atomic bombs and the Soviet Union declares war on Japan

---

people in all the German-occupied nations, Nazi and Soviet deportation policies, and postwar famines and epidemics. Some estimates place the total at 60 million men, women, and children, but at such figures the human mind retreats and human sensitivities are dulled.

## 107. THE FOUNDATIONS OF THE PEACE

Whereas the First World War had been concluded by a peace conference a few months after the close of hostilities, the Second World War ended in no such clear-cut settlement. Nothing like the Treaty of Versailles of 1919 followed the defeat of Germany in 1945. The peace terms emerged episodically, at first during a series of conferences among the Allied nations during the war, and then in a series of de facto arrangements in the years after 1945.

The foundations of a peaceable postwar world were being laid, it was thought, at a number of meetings where the strategy of the war itself was being planned. As early as August 1941, before the United States had entered the war, Roosevelt and Churchill met at sea off the coast of Newfoundland and drew up the Atlantic Charter. Later, there were meetings in 1943 at Casablanca, at Cairo, and at Teheran (which was close enough to the Soviet Union for Stalin to participate); and in the final phase of the war, in February 1945, at Yalta (a Crimean resort city in the Soviet Union), and in July 1945 at Potsdam in the environs of shattered Berlin.

The Atlantic Charter, issued jointly by Roosevelt and Churchill at their first meeting, resembled in spirit the Fourteen Points of Woodrow Wilson. It pledged that sovereign rights and self-government would be restored to all who had been forcibly deprived of them, that all nations would have equal access to world trade and world resources, that all peoples would work together to achieve improved living standards and economic security. The postwar peace, it promised, would assure people of all lands freedom from fear and want and end force and aggression in international affairs. Here, and in the Four Freedoms enunciated by President Roosevelt, the ideological basis of the peace was proclaimed. At the 1943 conferences, and through other consultations, the Allies endeavored to concert their military plans. At Casablanca in January 1943, they resolved to accept nothing less than the “unconditional surrender” of the Axis powers. This vague formula, adopted somewhat cavalierly at American initiative, and without much thought to possible political implications, was intended mainly to prevent a recurrence of anything like the ambiguity surrounding the armistice of 1918, when nationalist Germans complained

that Germany had not been defeated on the battlefield but had been “stabbed in the back” by a dissolving home front.

At Teheran in December 1943, Roosevelt and Churchill met with Stalin for the first of two wartime meetings. They discussed the postwar occupation and demilitarization of Germany, laid plans for a postwar international organization, and debated strategy for winning the war. Throughout the war Roosevelt, unwilling to disturb the unity of the Western-Soviet coalition in the global struggle in which America was engaged, followed a policy of postponing controversial territorial and political decisions until victory was assured. Churchill was more apprehensive. Steeped in traditional balance-of-power politics, he sensed that without prior diplomatic bargaining and political arrangements, the victory over the Nazis would leave Russia dominant over central and eastern Europe. At Teheran he proposed operations in the Mediterranean and an invasion through the Balkans, both for political reasons and out of concern for the casualties that a cross-Channel invasion would involve. But Roosevelt persuaded him otherwise. It was agreed that a landing in France would take place in the spring of 1944; thus the major second front that Stalin had been promised would finally be opened. Stalin pledged that he would launch a simultaneous offensive on the eastern front.

The strategy that would win the war in the next 18 months was decided upon at Teheran, but that strategy, without prior political agreements, all but guaranteed the Soviet domination of eastern Europe. Later, in October 1944, as the Russian armies advanced westward, Churchill visited Stalin and sketched out a demarcation of spheres of influence for the Western powers and the Soviets in the Balkan states (a Soviet preponderance in Romania and Bulgaria, a Western preponderance in Greece, and an even division of influence in Hungary and Yugoslavia). Soviet control over the Baltic states had virtually been conceded by the British earlier. Roosevelt, however, would not agree to any such arrange-

---

“Unconditional  
surrender”

ment, which he considered old-fashioned and a dangerous revival of the worst features of pre-1914 diplomacy.

The two conferences that arrived at the most important political decisions were the meetings at Yalta and at Potsdam in 1945. The Yalta meeting in February 1945 took place when the Allies were close to final victory—closer, events disclosed, than anyone at the time realized. The three Allied statesmen met at the old tsarist Crimean summer resort on the Black Sea, toasted their common triumphs, and, as at Teheran, took the measure of each other. Roosevelt thought of himself as a mediator between Churchill and Stalin where European issues were involved. He took pains to avoid giving Stalin the impression that he and Churchill were in any sense united against him; in point of fact, Roosevelt was suspicious of Churchill's devotion to empire and colonial ties, which he considered anachronistic for the postwar world. Despite differences, the Big Three reached agreements, at least formally, on Poland and eastern Europe, the future of Germany, the war in Asia, and the projected postwar international organization—the United Nations.

---

*The agreements at  
Yalta*

The discussion of Poland and eastern Europe raised the most serious difficulties. Stalin's armies, having driven the Nazi forces to within 40 miles of Berlin, were in control of Poland and of almost all eastern and central Europe. The Russians remembered these areas as anti-Soviet, and Poland particularly as the perpetrator of aggression against Soviet territory in 1920. Stalin had already taken steps to establish a "friendly" government in Poland, that is, a government subservient to the Soviets. Neither Roosevelt nor Churchill had fought the war against the Nazis to leave the Soviet Union the undisputed master of central and eastern Europe and in a position to impose a totalitarian political system on all this vast area. At Yalta, Roosevelt and Churchill extracted from Stalin a number of promises for the areas he controlled. In accordance with the Atlantic Charter, the liberated states were to be permitted provisional governments "broadly representative of all democratic elements in the population," that is, not consisting merely, as in the case of the provisional government of Poland already established, of authorities subservient to the Soviets. They pressed Stalin to pledge also the "earliest possible establishment through free elections of governments responsive to the will of the people." The pledge was a verbal concession that cost the Soviet leader little; he rejected the suggestion of international supervision over the elections. The Declaration on Liberated Europe, promising sovereign rights of democratic self-determination, provided a false sense of agreement; there were to be no free elections in Soviet-controlled eastern Europe.

---

*Poland and eastern  
Europe*

A number of territorial changes were also accepted, pending final settlement at a postwar peace conference. The Russian-Polish boundary would be set roughly at the so-called Curzon line, the Polish frontier contemplated by the Allies in 1919 before the Poles conquered territory to their east. The Poles would be compensated, in the north and west, at the expense of Germany (see map, p. 893). On this and on other matters relating to Germany there was a large area of accord; the three were united in their hatred of German Nazism and militarism. Germany was to be disarmed and divided into four occupation zones under the administration of the Big Three powers and France—the latter at the insistence of Churchill. There was vague talk, at Yalta and earlier, of dismembering Germany, of undoing the work of Bismarck; but the difficulties of such an undertaking were understood and the proposal was eventually discarded. The Americans and British rejected as excessive the Soviet proposals for reparations, a sum of \$20 billion to be paid in kind, half to the Soviets. It was agreed, however, that reparations would go to those countries that

The final meeting of Roosevelt, Churchill, and Stalin took place in the Crimean resort city of Yalta in February 1945. Roosevelt's position here between the other two leaders suggests his mediating position at the conference. The agreements reached at Yalta shaped the postwar organization of eastern Europe, laid the foundation for the United Nations, and eventually brought the Soviet Union into the war against Japan, but some critics in the West later complained that the Yalta accords made too many concessions to Stalin and opened the way for Soviet expansion into central Europe.

had borne the main burdens of the war and suffered the heaviest losses. The Soviet Union was to receive half of whatever total sum was set.

To the satisfaction of everyone, the participants agreed on plans for a postwar international organization, to be called the United Nations. Roosevelt believed it essential to win the Soviets over to the idea of an international organization. He was convinced that the Great Powers, cooperating within the framework of the United Nations and acting as international police, could preserve the future peace and security of the world. No less than Stalin or Churchill, he emphasized the importance of the Great Powers in the new organization, although he accepted a dignified role for the smaller nations as well. All agreed that each of the Great Powers, the permanent members of the new organization's Security Council, would have a veto power on important decisions. The Soviets pressed for 16 votes in the General Assembly of the new organization, arguing that their constitution gave sovereign rights to each of their then 16 constituent republics and also that the British dominions would each have a seat. In the interests of harmony, at Churchill's behest, they were given three.

---

#### *The United Nations*

Critical agreements were reached on East Asia. Here political and military decisions were inextricably linked. The Soviets had remained neutral in the Pacific war despite their historic interests in that part of Asia. Given the magnitude of the Soviet war effort on the European front, no one had pressed them to enter the Pacific war earlier. It was agreed to wait at least until the Germans were on the verge of defeat. At Yalta, Stalin agreed to enter the war against Japan, but Soviet "public opinion," he averred, would demand compensation. The U.S.S.R. would enter the war against Japan "two to three months" after Germany

had surrendered. In return, the Soviets would receive territories and rights that tsarist Russia had lost to Japan 40 years before in the Russo-Japanese war of 1904–1905 (see map, p. 671), with the addition of the Kurile Islands, which had never been Russian before.

Roosevelt made controversial concessions at Yalta because he believed he needed Soviet support in the last phase of the war against Japan and because he wished to preserve the Western-Soviet coalition until final victory was guaranteed. He believed also that wartime cooperation would produce postwar harmony. Churchill, less sanguine about the future and about “diplomacy by friendship,” would have preferred a franker definition of spheres of influence. Such ideas were ruled out as the thinking of a bygone era. Yet the spirit of the Atlantic Charter, so closely identified with the American president, the pledge of sovereign self-determination for all peoples, was already being contravened.

At Potsdam, in July 1945, after the German collapse, the Big Three met again. A new American president, Harry S. Truman, represented the United States; President Roosevelt had died in April, on the eve of final victory. Churchill, in the midst of the conference, was replaced by a new British prime minister, Clement Attlee, after the Labour party’s victory at the polls. Stalin still represented the Soviet Union. By now, disagreements between the Western Allies and the Soviets had deepened, not only over Soviet control in Poland, eastern Europe, and the Balkans, but over German reparations and other matters. Yet the Western leaders were still prepared to make concessions in the hope of establishing harmonious relations. Agreements were announced on the postwar treatment of Germany—on German disarmament, demilitarization, “denazification,” and the punishment of war criminals. Each power could take reparations in kind from its occupation zone and the Russians would get substantial additional deliveries from the Western zones so that the original \$10 billion Soviet demand was virtually met.

---

---

*The Potsdam  
Conference*

Pending the final peace treaty, German territory east of the Oder-Neisse rivers was committed to Polish administration. The details of this decision had earlier been postponed; the Polish-German boundary was now set at the western Neisse, even further west than originally envisaged. Poland thus extended its territorial boundaries about a hundred miles westward as compensation for Russian westward expansion at Polish expense. German East Prussia was divided between the Soviet Union in the north and Poland in the south. Königsberg, founded by the Teutonic Knights and for centuries the coronation city of Prussian kings, became the Russian city of Kaliningrad. The ancient German cities of Stettin and Breslau became the Polish cities of Szczecin and Wrocław. Danzig became Gdansk. The de facto administration of these areas hardened into permanent rule. The transfer of the German population in these eastern areas was supposed to be effected in an orderly and humane fashion, but millions of Germans were driven from their homes or fled within a few months. For them (and for the Sudeten Germans who were expelled from Czechoslovakia) it was the final consummation of the war that Hitler had unleashed.

---

---

*Germany divided*

The Potsdam participants agreed that peace treaties would be signed as soon as possible with the former German satellite states; the task of preparing them was entrusted to a council of foreign ministers representing the United States, Britain, France, the Soviet Union, and China. In the months that followed, the widening chasm between the Soviets and the West manifested itself in stormy meetings in London, Paris, and New York, as well as in a peace conference held in Paris in 1946, at which were represented the 21 states that had contributed substantial military forces to the defeat of the Axis powers. In February 1947 treaties were signed with Italy, Romania, Hungary, Bulgaria, and Finland, all of

which paid reparations and agreed to certain territorial adjustments. In 1951 a peace treaty was signed with Japan, but not by the Soviets, who signed their own treaty in 1956. The years went by, but no final treaty was signed with Germany, which for many years to come remained divided into western and eastern zones. The wartime Western-Soviet coalition had fallen apart, shattering the dreams and aspirations for a lasting peace of those who had fought the Second World War to a triumph over one kind of aggression and totalitarianism, and who now found themselves confronted with a new age of crisis.

# THE COLD WAR AND RECONSTRUCTION AFTER THE SECOND WORLD WAR

108. The Cold War:  
The Opening Decade  
1945–1955
109. Western Europe:  
Economic Reconstruction
110. Western Europe:  
Political Reconstruction
111. Reshaping the Global  
Economy
112. The Communist World:  
The U.S.S.R. and Eastern  
Europe
113. The Communist World:  
Mao Zedong and the  
People's Republic of China

 *Every age* has its share of social conflicts, economic problems, political upheavals, wars, and cultural changes, but the first half of the twentieth century must surely be ranked as one of the most deadly and disorienting periods that people have ever known. During these decades, over the course of a single lifetime, the world passed through the Great War of 1914–1918, a global influenza pandemic (which killed at least 50 million people), the collapse of longstanding dynasties in Europe and the Middle East, the Russian Revolution, a worldwide economic depression, the rise of aggressive fascist and Nazi dictatorships, the Second World War (stretching from Europe and North Africa to all of east and southeast Asia), the Holocaust in Nazi-occupied Europe, the first use of atomic bombs, the rise of Communist China, and the breakup of the Ottoman and European empires into new nations in the eastern Mediterranean and South Asia.

These events brought massive disruptions to individual lives, caused more millions of deaths than can ever be accurately counted, and produced far-reaching changes in global political and economic systems—including the rapid, international ascendancy of the United States and a steady decline in Europe's previous control over people or economies in much of the non-European world. In short, the upheavals of the early twentieth century profoundly transformed the course of modern world history. Yet people everywhere, like their ancestors after earlier upheavals, moved on from these cataclysms to rebuild their lives, their societies, their political institutions, and their economic activities. History did not end, of course, and the age-old resilience of human beings and their cultures appeared again in the decades that followed the Second World War.

The end of that titanic war marks a transition for historians as well as for the people who lived through it, because the decades after 1945 or 1950 are the beginning of what historians usually call “contemporary history.” Although the postwar era is increasingly distant from our own time, the historical consequences of many events and changes since the Second World War are still evolving and are still part of our contemporary world. Contemporary history arouses strong feelings, leads to many of the world’s current conflicts, and directly shapes the experiences and attitudes of most people who are now alive. For historians, the complexities of contemporary history can pose even more challenges than those of earlier eras, because many sources are still unavailable, or because present-day conflicts distort historical perspectives, or because the lasting influence of recent events cannot yet be known. These distinctive, open-ended aspects of contemporary history will begin to emerge in this chapter and those that follow as we examine the unsettled events and trends of the contemporary world, which continues to evolve more rapidly and in more ways than any historical narrative can describe with the long-range perspectives of historical analysis.

## 108. THE COLD WAR: THE OPENING DECADE, 1945–1955

Certain issues that had confronted humankind for over a century became even more complex and more urgent in the second half of the twentieth century. Three can be singled out: science, the organization of industrial society, and national sovereignty.

### *The atomic bomb*

The atomic bomb dramatized the new problem of science. The world shuddered at the instantaneous destruction of Hiroshima. The postwar contest to produce more sophisticated nuclear weapons spurred the realization that a third world war would be unthinkable. Human beings now possessed the means to annihilate not only civilization but even human existence on the planet, a thought especially shocking to a world that set one of its highest values on scientific progress.

Science, and its partner, invention, had for a long time transformed both industry and war. It had conquered many of the dreaded plagues and diseases of the world. Everyone had long known that science could be applied either constructively or destructively. It was the magnitude of the new destructive possibilities that now made thoughtful people worry. Scientists themselves, after the first atomic explosion, affirmed the need for a moral regeneration. They insisted that science was neutral, free from blame for the horrors of Hiroshima and Nagasaki, that the trouble lay not with science but with the uses to which scientific knowledge was put.

### *Organizing industrial society*

The problem of organizing industrial society was also unresolved after 1945. There were in theory two opposite social poles. At one, best represented by the Union of Soviet Socialist Republics (until its demise in 1991), all capital was owned by the state and supplied to managers and workers as needed, and all production and interchange were planned in advance by public authorities. In the Soviet form of socialism (as well as in the People’s Republic of China after 1949), which the outside world called communism because it had come about through revolution and been maintained through dictatorship, the government’s role was all-encompassing. At the other pole, best exemplified by the United States, economic exchange took place through the mechanism of the market, and capital was owned by private persons who chose the channels of investment and determined the avail-

ability of jobs. Neither the socialist nor the capitalist system was pure in practice, and even in capitalist countries mixed economies became the rule, with varying degrees of government intervention. The chief drawback in the Soviet system was the lack of political and economic freedom and its stifling of individual initiative; in the American system, its periodic economic crises and its threats to the economic security of individual workers. In the years after the Second World War, Americans expended a good deal more effort trying to correct the lack of economic security than the Soviets did to correct the lack of freedom.

Another postwar question hinged on the unity of the modern world. It was indisputably one world in the sense that there existed a close-knit, interdependent economy, that political events and environmental changes affected the whole globe, and that world cultures and religions interacted as never before. But it was far from homogeneous. All admired the steam turbine and stood in awe of nuclear fission, but beyond the material level schemes of values diverged. No people wished to be subordinated to another, or to an international body, or to lose its way of life in a uniform global civilization.

After the Second World War, as after the First, an international organization was set up to prevent war in the future. A conference of all anti-Axis powers, held at San Francisco in 1945, founded the United Nations (UN) and drew up its charter. The new organization was designed to maintain international peace and security and to encourage cooperative solutions to international problems. Although it was widely acknowledged that peace would depend primarily on the Great Powers, all states, regardless of size, would be represented. Two agencies were central. The General Assembly was a deliberative body in which all member states, however small, had an equal vote. The Security Council, whose primary responsibility was to preserve peace, consisted of the five Great Powers, who were to be permanent members, and ten rotating members chosen for two-year terms. Apart from the two superpowers, the United States and the U.S.S.R., it was not easy to define the Great Powers in 1945, but the permanent seats were assigned to the United States, the Soviet Union, Great Britain, France, and China.<sup>1</sup>

---

*The United Nations*

Each permanent member had a veto power. Thus the Security Council could act on important matters only if the Great Powers were unanimous. Although widely criticized, the veto was accepted as necessary. In major crises the agreement of the Great Powers would be needed to maintain world peace. The U.S.S.R. demanded the veto most frankly, but the United States would not have joined without this safeguard. In the following years, however, even small countries refused to abide by judgments of the United Nations. No nation, large or small, was yet willing to forgo its independence or subordinate itself to an international body with the authority to put down violence, but there was much hope, and even confidence, that the authority and prestige of the UN would grow with time.

The United Nations had 51 original members. To symbolize the strong American commitment (and the contrast with America's earlier refusal to join the League of Nations), its headquarters was located in New York. The charter provided for the admission of new members, including the former Axis countries and their satellites, and also wartime neutrals, so that it could be truly international. From 1947 to 1955 a few additional states were

---

<sup>1</sup>Nationalist China (the Republic of China, or Taiwan) occupied the seat until 1971, when the People's Republic of China (Communist China) replaced it. By the early twenty-first century there were growing demands to expand the number of permanent seats on the Security Council by adding other large nations from Asia, Africa, and Latin America.

The United Nations was established to resolve international conflicts and to foster peaceful exchanges between nations, but it also adopted a Declaration of Universal Human Rights. This picture of an early UN meeting shows a representative of the Philippines, Pedro Lopez, calling for the establishment and protection of a free press in all nations of the world.

(Hulton-Deutsch Collection/Corbis)

#### *Membership expands*

admitted; in 1955, 16 more; and in the next several decades, after decolonization and other changes, the organization expanded so that by 2005 it counted over 190 members. In 1948, in good part because of the persuasive powers of the American delegate Eleanor Roosevelt, it adopted a sweeping Declaration of Universal Rights, but left unanswered the means of implementing it.

The United Nations and its Security Council failed to fulfill the role projected for it in the early postwar era because of the tensions between the American-led Western powers and the Soviets. Although the UN remained one of the few arenas where the Americans and Soviets could meet and debate, it was powerless to prevent the two superpowers from drifting further and further apart. On the other hand it helped from the beginning to mediate regional disputes and to play a role in peacekeeping missions. With the later expansion of the UN to include the nations of the Third World—a term devised to describe the developing countries, mostly former colonial countries, not directly aligned with either the Western or Soviet camp—the General Assembly became a forum for debate in which the developing nations, critical of the wealthier West, vehemently voiced their social and economic grievances.

#### *The Cold War: Origins and Nature*

The Second World War left only the United States and the Soviet Union still standing in any strength. The United States emerged physically unscathed from the war, its economy

stronger than ever before. Although it demobilized much of its wartime military force, it alone possessed the atomic bomb. The Soviet Union had been devastated by the war, in which over 20 million of its population had perished, but it was still a formidable military power, with 4 million soldiers under arms and in control of populations and territories in central and eastern Europe well beyond its pre-1939 boundaries. It became common to speak of the two countries as superpowers—continental land giants, possessing enormous resources, overshadowing all other states, including the long-dominant nations of western Europe.

In the kind of two-superpower system that emerged after the Second World War, each power can readily identify its only dangerous enemy. A diplomatic equilibrium is more difficult to sustain in such situations because each views the other power's every action as possible aggression or provocation; and each, ignorant of the other's strength, exaggerates the power and danger of its enemy. After 1945 the United States and the U.S.S.R. fell into this unhappy relationship. It was compounded by a deep-seated ideological tension between capitalist democracy and Marxist-Leninist communism that dated back to the Bolshevik Revolution of 1917. The widening diplomatic, geopolitical, and ideological clash of interests came to be known as the Cold War, so called because the antagonisms and rivalries, intense though they were, always fell short of open or direct military hostilities between the two powers.

---

---

*The Cold War*

It was not possible for anyone to know what Stalin, who dictated all decisions, or his lieutenants in the Kremlin, really believed or intended at the end of the Second World War. Probably they considered a clash between the U.S.S.R. and the Western capitalist powers as inevitable at some point in the future. Probably they were disturbed by the ambitious goals of American capitalism, which sought markets in eastern Europe and elsewhere, and by the American monopoly of the atomic bomb. They themselves undoubtedly saw an opportunity to consolidate their hold over territories gained during the war (or regained, since the new Soviet state had lost control of some of these territories at the end of the First World War), and to create an outer buffer zone for Soviet national security. Undoubtedly they also saw in the aftermath of the Second World War, as of the First, an opportunity to promote the international Communist cause.

Whether the Soviets were acting to protect their national security, fulfill old Russian territorial ambitions antedating communism, or promote communism on a world scale, President Truman and his advisers and a great majority of the American people became convinced that the Soviets were bent on consolidating their grip on central and eastern Europe and then embarking on a worldwide Communist offensive. The American government therefore developed a global strategy of "containment," by which the United States and its allies would seek to "contain" this new Soviet offensive. Although the American government would take direct military steps mainly in reaction to Soviet expansion or threats of expansion, many people in the United States came to ascribe almost all of the complex social and political unrest on the globe to initiatives launched by the Kremlin.

---

---

*Containment*

In Europe, at the close of hostilities, Soviet armies occupied eastern Europe and Germany as far west as the Elbe River. American, British, and French armies held the remainder of Germany, most of Austria, and all of Italy. During the war, the armed forces liberating an area exercised political authority. In that way, the sweep of the Red Army gave the Soviets political control over much of central and eastern Europe; 100 million people passed under Soviet domination. On the other hand, the United States excluded the Soviets from any active role in its occupation of Italy (and, in Asia, of Japan). For the

The Allied military victory over Nazi Germany was followed by new distrust and conflict in Europe. The Soviet Union took control over Communist satellite states, creating what Winston Churchill called an “iron curtain” against free institutions and ideas. This picture shows Churchill giving a famous speech in March 1946 in Fulton, Missouri, where he first described the new iron curtain that had descended across Eastern Europe.

(Associated Press, AP)

Soviet Union, occupation meant full control over a nation’s political, economic, and social institutions and the right to shape the occupied country in its own image. The Western powers, on the other hand, had hoped for pluralist and democratic societies, which would have been open to Western trade and influence. During the war the Americans and British had conceded Soviet predominance in eastern Europe, which the Soviets had liberated from the Nazis, but they soon resented the transformation of Poland and other East European countries into Soviet-dominated Communist states.

For Stalin, however, this kind of transformation was the only way to guarantee “friendly regimes” on his borders. Beginning as early as the Potsdam conference in July 1945, Truman denounced the Soviets for violating their pledge of free elections for the East European states and for failing to cooperate in the joint occupation of Germany. American diplomats began to believe that Soviet control over eastern Europe was similar to the Nazi and

Concerns about  
Soviet expansion

Fascist aggression of the 1930s, to which Truman himself frequently compared it. Stalin may have been acting more as a Russian nationalist bent on protecting Russian national security than as a champion of worldwide Communist revolution, but his stubbornness and paranoia about capitalist encirclement, and his lack of concern for world public opinion, made it difficult for the West to deal with him in the Cold War or to distinguish between legitimate Soviet security needs and an expansionist, Communist missionary zeal.

A series of Soviet actions fed the belief that Stalin’s ambitions transcended eastern Europe. In Asia, as pledged at Yalta, the Soviets had declared war on Japan in August 1945 and moved into Manchuria, where they were well positioned to help the Chinese Communists. In Korea, once the Japanese were defeated, the Soviets by agreement occupied the northern part of the country but also took steps to consolidate their occupation zone into a Communist government. Iran was another trouble spot. The Americans, British, and Russians had jointly occupied Iran during the war to forestall a Nazi takeover, but the Soviets refused to evacuate their troops at the stipulated time and pressed for oil concessions (such as the British and Americans already enjoyed).

The Soviets also sought a trusteeship over the former Italian colonies in North Africa, within easy reach of the Suez Canal; and they massed troops on the Turkish border, pressing for joint control over the Black Sea straits and for naval access to the Mediterranean through the Dardanelles—an old tsarist goal. The British, acting again in their earlier role as the “Western” guardians of the Mediterranean and Middle East, bolstered the Turkish defenses despite their own financial weakness. In Greece, in a civil war which raged from 1946 to 1949, Communist guerrillas battled the British-supported royalist, or nationalist, army. Stalin, perhaps recognizing his wartime agreement with Churchill that Greece would remain in the Western sphere of influence, lent little aid to the Communists, but Tito’s new Communist regime in Yugoslavia helped the Communist guerrillas. The Communist pressures on Turkey, Greece, and Iran aroused British and American concerns about Soviet strategic designs on the eastern Mediterranean and on the oil reserves of the Middle East.

One casualty of the postwar tension was a plan for international supervision of nuclear weapons. The United States knew that it was only a matter of time before the Soviets (and other nations) could build the atomic bomb, since the scientific basis for it was known. At the moment the British alone shared the secret. The United States proposed in 1946 that atomic energy be controlled by an international authority and that its use be limited to peaceful purposes. Such an international body would have the right to send inspectors into any country to check violations and enforce sanctions that would not be subject to veto in the Security Council. The Soviets objected and would not give up their veto. The idea of foreigners freely examining their society was repugnant to them. They questioned the good faith of the United States, which would not destroy its atomic bombs or halt further testing and production until the proposed international authority was established (many Americans also opposed international controls on their own nuclear arms). The British, in turn, fearful of an American relapse into isolationism, undertook to become a nuclear power on their own. The plan for international control foundered on mutual suspicion and mistrust. The Soviets proceeded with their own atomic research (and efficient espionage), which yielded results even sooner than expected. In 1949 the Soviets successfully tested an atomic bomb, and the nuclear arms race, universally dreaded, now began.

---

*Mutual mistrust*

The political conflicts had meanwhile deepened in 1946 and 1947. The American policy of containment, as formulated by the State Department, postulated that the Russians would expand wherever a power vacuum existed. Advocates for the strategy of containment argued that the West should show both patience and firmness, and in time Soviet society itself might change. In the meantime, however, the West needed to maintain its military strength and use economic and other counterpressures to resist the Soviets. Containment, the cornerstone of American policy, came to be interpreted in more rigorously military terms than some of its early proponents had intended. Meanwhile Churchill, even before the Soviets had fully completed the transformation of eastern Europe into Communist satellites, made an eloquent speech in March 1946 in which he described the “iron curtain” that had descended between eastern and western Europe—“from Stettin in the Baltic to Trieste in the Adriatic.” That spring the United States turned down a pending Soviet request for a reconstruction loan, Congress having decided that Lend-Lease should end with the war, and also cut off reparations deliveries to the Soviets from the American occupation zone of Germany.

In 1947 financially strained Great Britain, forced to cut back on its commitments in the Mediterranean, informed Washington that it could no longer aid the anti-Communist forces in Greece or support Turkey in its resistance to Soviet pressures. The United States quickly moved to fill the vacuum. Truman not only agreed to provide the necessary assistance in the Mediterranean but at the same time also formulated in March 1947 a broad

national policy to contain communism everywhere—"to assist free peoples who are resisting attempted subjugation by armed minorities or by outside pressures."

---

*The Truman Doctrine*

The Truman Doctrine committed the United States to unprecedented involvement in global military and economic affairs. The Marshall Plan, designed to hasten European economic recovery and hence check Communist expansion, was also announced in the spring of 1947.

The American national security state began to take shape. A National Security Council was created to advise the president on security matters, and a Central Intelligence Agency (CIA) was created to coordinate the gathering of intelligence. The CIA soon received authorization to conduct covert operations as well. The authority of the executive branch to conduct foreign policy grew. In 1948 the United States adopted its first peacetime military draft.

The Soviets in their turn denounced the American capitalist and imperialist "warmongers." With the United States arming Greece and Turkey; American air bases established in the Middle East; American armed forces in occupation of Japan, Okinawa, and South Korea; and the Americans possessing the atomic bomb, the Soviets felt threatened and encircled. Soviet suspicions mounted after 1947, but they also drew on memories that went back to Western intervention in the Russian Revolution and civil war in 1917–1920, the Soviets' exclusion from the Munich Pact, and the delay in opening up a second front in the Second World War as well as the cessation of Lend-Lease at the end of the war and the rejection of a requested post-war loan.

---

*Soviet suspicions*

In 1947 the Soviets decided they needed to reassert closer control over all Communist parties in every part of the world. They therefore reestablished in new form the old Communist International, or Comintern, which had been abandoned in 1943 as a gesture of wartime cooperation and goodwill, renaming it the Communist Information Bureau, or Cominform. The Soviets also replaced coalition governments in central and eastern Europe, in which the Communists had formerly shared power, with regimes dominated by Communist parties. In Czechoslovakia, for example, where President Benes's democratic coalition had been viewed as a possible bridge between East and West, the Czech Communist party, faced with defeat in a forthcoming election, seized power in February 1948. By this time, the postwar Soviet-American suspicions and conflicts had created a mutual perception of permanent dangers, which each side sought to counter by its own assertive political or military actions. The increasingly bitter Cold War therefore spread into the local disputes and political confrontations that were constantly developing in Europe, Asia, and elsewhere around the globe.

*Germany: The Berlin Blockade and the Airlift of 1948–1949*

The key to the rebuilding of Europe, and the most critical area of Soviet-Western contention, was Germany, divided by Allied agreement into four zones and occupied by the United States, the Soviet Union, Britain, and France. The Allies had agreed to joint Allied policies for a defeated Germany, even though each of the four powers was to occupy its separate zone. Berlin also was divided into four separate Allied sectors, with joint administration for the city as a whole. All had agreed that Germany should pay reparations, both in capital equipment and current production, mainly to the Soviet Union, which had suffered most from German military destruction, and that limits should be placed on German productive capacity.

The Soviet closure of the railways and roads into Berlin provoked one of the most dramatic events of the early Cold War: the Berlin Airlift. For almost a year (1948–1949) the Americans and their Western allies flew supplies into the isolated city on military aircraft such as the plane in this picture. Images of the airlift became part of the evolving Cold War struggle for international public opinion and an enduring symbol of the links between West Berlin and the Western Allies.

(Hulton-Deutsch Collection/Corbis)

At the war's end the Americans, supported by the British, quickly came to favor the economic reconstruction of Germany to accelerate European recovery and to reduce European dependence on American financial aid. The Ruhr, in the western zone, was still Europe's industrial heartland. The Soviets, on the other hand, were determined to use German resources to repair the devastation in their own country. They removed large amounts of food and stripped entire plants of machinery in their zone. The Western Allies refused to

DEPORTATION AND RESETTLEMENT, 1939-1950

The age-old distribution of nationalities in central and eastern Europe was radically transformed between 1939 and 1950. About 6 million Jews died in the Holocaust, with over 300,000 survivors emigrating to Israel by 1950, and millions of Germans, Poles, and others were forcibly uprooted.

*Left panel:* The first stage began with the Nazi-Soviet Pact of 1939, after which the Germans occupied western Poland, while the Russians annexed eastern Poland and the three Baltic republics. Western Poland received Poles expelled from Germany, while in eastern Poland about 2 million Poles were deported to Siberia, being replaced by about the same number of Russians and Ukrainians. Many Estonians, Latvians, and Lithuanians were moved to other parts of the Soviet Union. Thousands of Germans were “returned” to Germany from the Baltic republics and from places such as Romania, where they had long formed German enclaves. The “Volga Germans,” Tatars, and others in south Russia were sent to Siberia.

permit the dismantling of factories in their zones and insisted that the Soviets take their share of current production only from their own zone. By May 1946 joint administration of Germany had all but broken down. Early in 1947 the United States and Britain united their two zones; the French, overcoming their initial reluctance to see a revived Germany, soon merged their zone as well. The Western powers encouraged the reconstruction of governments in the individual German states and the convening of a constituent assembly to set up a federal republic. The Soviets, in their zone, took steps to establish a Communist-dominated government. Two Germans were emerging.

Two Germanys  
emerge

*Right panel:* A second stage of displacements came with the Soviet victory and collapse of Hitler's Reich. The German–Polish frontier was now moved westward to the Oder River. Millions of Germans from east of the Oder, along with other millions from the Sudeten regions of Czechoslovakia, from Hungary, and from Romania, were thrown back into what remained of Germany, most fleeing to the Western zone. Poles streamed into what had been Germany east of the Oder; others came into Poland from Ukraine. Russians moved into what had been eastern Poland and the Baltic states. Ukrainians and various non-Russian minorities were sent to Siberia. Some Balts escaped to the West; others were redistributed to various places in the Soviet Union.

Amid all of these movements of people, the most conspicuous, long-term changes, in addition to the virtual disappearance of East European Jews, were the expulsion of the Germans from Eastern Europe and a westward movement of Poles and Russians.

(*Westermanns Atlas zur Weltgeschichte*)

In June 1948 the Western powers, recognizing the need for drastic currency reform to cope with inflation and encourage West German economic revival, suddenly revoked the old worthless currency and at a 1-to-10 ratio issued a new German mark, the Deutsche mark. The Soviets, who had not been consulted, objected to this violation of the wartime agreement to treat Germany as a single economic unit. In retaliation they blockaded all road and rail access to Berlin, which lay 100 miles deep within the Soviet zone. The blockade was a sharp challenge and test of will. If the West abandoned Berlin, it could lose authority in all Europe and open the way for Soviet westward expansion, and perhaps expansion

*Berlin blockade and  
airlift*

elsewhere. Knowing that they could not resort to military measures against the much stronger Soviet ground forces, the Allies responded with a massive airlift. For close to a year, American and Western aircraft flew in thousands of tons of food and other supplies to the occupation forces and to the 3 million inhabitants of West Berlin. The Soviets harassed the planes but avoided direct confrontation and, finally, in May 1949 lifted the blockade.

Each side now proceeded with the formation of a German government. The Federal Republic of Germany, its capital in the small Rhineland city of Bonn, came into existence in September 1949; the German Democratic Republic, its capital in the eastern sector of Berlin, one month later. There were now two Germanys, and the division of Europe had hardened along a rigid new political boundary.

### *The Atlantic Alliance*

In 1948 Britain, France, Belgium, the Netherlands, and Luxembourg formed a West European Union for collective self-defense, but it had only limited military resources. In 1949 the United States took the lead in creating a larger military alliance and collective security system. The United States, Canada, and ten European nations met in Washington and agreed to military arrangements for the joint defense of western Europe. The Atlantic Pact was a military alliance of unlimited duration and broad scope: "an armed attack against one or more" was to be considered "an attack against all." The United States formally committed itself to the security of western Europe and agreed to supply funds and equipment for European rearmament. It was the first such military alliance of its kind in American history.

---

#### NATO

The North Atlantic Treaty Organization (NATO) emerged with a network of military arrangements and a chain of command headed by General Eisenhower. Because West Germany remained the most vulnerable target for Soviet expansion, large numbers of American troops (eventually over 300,000) were stationed there as the nucleus of the NATO armed forces. But with overwhelming Soviet superiority in ground forces, the NATO defense strategy was based primarily on American air power rather than on ground troops alone. The treaty solemnly affirmed American determination not to abandon the Continent. In later years the West Europeans became restive with American leadership, or, alternatively, feared an American decoupling from Europe, but NATO remained western Europe's shield against Soviet aggression. The Truman Doctrine, the Marshall Plan, and the North Atlantic Treaty Organization were the three prongs of the American and Western response to a potential Soviet challenge.

Meanwhile the West European countries, with the aid of the Marshall Plan, were making an impressive economic recovery and cooperating with each other (the Marshall Plan is discussed in the next section of this chapter). The Soviets could not be expected to view with equanimity the revival and growing unity of western Europe. American financial and military assistance, NATO, the containment policy, all defensive in Western eyes, and indeed provoked by Soviet expansionism, were hostile acts from the Soviet perspective. The Soviet Union drew its six satellite or client states, variously styled people's republics or people's democracies, closer to it. It formalized economic ties by creating in 1949 a Council for Mutual Economic Aid and a few years later coordinated the existing network of military alliances in the Warsaw Pact of 1955. The Soviets added to their military and air power and continued their nuclear research.

By 1949 Stalin's postwar expansion seemed contained and Truman could claim success for his policies. The Soviets had dropped their demands on Turkey and departed from Iran. Insurrectionary strikes launched by Communist parties in western Europe had failed, as did a Communist bid for power in Italy in the elections of 1948, in which the Vatican and the United States strongly supported the anti-Communist camp. Marshal Tito in 1948 successfully defied the Cominform, and Yugoslavia went its separate Communist way. In Greece the American- and British-backed Greek royalists triumphed in 1949 against the Communist guerrillas. The Soviet blockade of Berlin had failed to drive the West from the city.

The rivalry over Europe thus led to a stalemate by about 1950. The Soviet threat to western Europe diminished. The continent remained divided into a western and eastern Europe, Germany into two Germanys, Berlin into West and East Berlin. After the failure of the Soviet blockade of Berlin, there was no such overt conflict in Europe. Despite renewed threats to Berlin, each side recognized the strength and security concerns of the other. But any thoughts that the world might settle into peace, no matter how uneasy, were shattered in June 1950. The Western-Soviet struggle shifted to Asia.

---

---

*Stalemate in Europe*

### *The Revival of Japan*

In Asia events and new conflicts also developed rapidly in the early postwar years. The Chinese Communists triumphed over the Nationalists and Mao Zedong proclaimed the People's Republic of China in 1949. In Japan the United States used its military occupation from 1945 to 1952 to foster parliamentary institutions and revive the Japanese economy.

Rejecting Soviet demands for a share in the occupation of Japan, the United States, with British and French approval, lodged full authority in General Douglas MacArthur as supreme commander of the occupation forces. Responding in part to the new Cold War tensions, the American occupation encouraged economic revival and political reconstruction, not vindictiveness; and the Japanese, stunned by their disastrous defeat, were willing to cooperate. In the interests of stability the emperor received special status and was shielded from trial or even criticism. A new constitution in 1946 ended divine-right rule, transferred sovereignty from the emperor to the people, established machinery for parliamentary government, gave women the vote, and encouraged local self-government. The constitution "forever" renounced war and the threat or use of force as a means of settling international disputes; the small Japanese armed forces were to be restricted to defensive purposes. Although trials of Japanese war criminals were held, there were no extensive purges. The Japanese paid reparations to Asian nations that had been the victims of Japanese conquest but did not even years later fully acknowledge the brutality that had accompanied these conquests.

---

---

*The occupation of Japan*

Efforts at social and economic reform under the occupation were less sweeping than originally planned. The large family holdings in heavy industry and banking were dissolved, but within a short time new forms of economic concentration replaced them. Labor unions were reinstituted but their powers were curtailed. When the occupation inaugurated a program of land redistribution, with a limit on large landholdings, small farmers lacked the means to purchase the land offered them. Although a moderate Socialist party emerged and militant activists in later years frequently demonstrated their discontent, political

control remained in the hands of conservatives drawn from the upper social classes. By the end of the occupation the Liberal Democratic party (a conservative party) dominated the government and long continued to do so.

---

#### *Economic recovery*

The conservative-led political consensus emphasized a strong commitment to economic recovery and growth. Like western Europe, Japan, too, recovered rapidly. In 1945 it had been prostrate, a fourth of its housing destroyed, agricultural and industrial output reduced to half its prewar level, its shipping and financial reserves gone. Under the occupation, and with American help, the economy revived and expanded; by 1954 its gross national product reached prewar levels. Labor self-discipline and social patterns of deference and loyalty kept industrial unrest to a minimum. Close cooperation between government and business encouraged savings, investment, research, and economic growth. The very need to rebuild and renovate the economy from the bottom up proved an advantage.

Beginning in the early 1950s the economy grew at an amazing rate of nearly 10 percent each year; manufacturing output, at 14 percent. Despite the repatriation of millions of Japanese from Manchuria, Korea, and other parts of Asia and the addition of large numbers of rural workers to the labor force, Japan still had a labor shortage. The response was an intense level of automation. Japan became a pioneer in advanced high technology, and technological innovations sustained its economic growth. Japanese consumer products soon entered the world economy, creating a flow of exports that came to rival those of the Americans and the Europeans. Because a large military establishment was forbidden, expenditures that might have gone into the military, as in the past, were now plowed into industrial investments. By the 1950s Japan was once again a major economic power, a bastion of social stability, and a major new element in the global economy. For the Soviets the revival of Japan under American auspices, which they saw as a counterweight to Soviet influence and as a bulwark against revolution in Asia, loomed as still another threat.

#### *Containment in Asia: The Korean War*

The Western Allies and the Soviet Union had agreed during the Second World War that Korea, once an object of imperialist rivalry between Japan and tsarist Russia, but under Japanese rule since 1910, would become free and independent after Japan's defeat. In 1945 the United States, for reasons of military expediency, proposed that Soviet troops temporarily occupy the northern part of the country down to the 38th parallel; United States troops would temporarily occupy the southern half. But postwar negotiations for a unified Korea foundered. The U.S.S.R. established a satellite government in its occupation zone under the Communist leader Kim Il Sung and built up North Korean military strength. The United States developed its own client state in the south and lent economic and military assistance. In 1947 a UN commission sought to sponsor nationwide elections, but the Soviet Union would not permit supervision of elections in the north. The elections in the south in May 1948 resulted in the presidency of Syngman Rhee, who, despite superficial forms of democracy, governed autocratically. Anticommunism in Korea and elsewhere did not necessarily equate with democracy. After the elections the United States withdrew its occupation forces but continued to provide military and economic support. The Soviet Union also removed its occupation forces but left behind a well-trained and well-equipped North Korean army. Despite the original intention, two Koreas had come into existence.

By 1950 the situation in East Asia, as we have seen, had altered dramatically. Japan had revived. The United States through its postwar occupation had helped to create a stable Japan, friendly to the West and with a prospering economy. In addition, the Chinese Communists, with only limited and grudging Soviet support, had triumphed over the Nationalists in a long civil war and in 1949 had proclaimed the Chinese People's Republic. Although relations between the Chinese Communists and the Soviets were neither warm nor cordial, the two countries shared similar concerns about the revival of Japan and the growth of American influence in East Asia. They therefore drew together in a mutual defense pact in February 1950, and the U.S.S.R. campaigned to have the People's Republic of China replace Nationalist China in the United Nations. When this campaign failed, the Soviets in protest boycotted the Security Council meetings.

---

*East Asia in 1950*

Although border skirmishes between North and South Korea had been frequent, the sudden, full-scale North Korean invasion of the south in June 1950 came as a surprise. In the West it was seen as an open act of military aggression, the first such clear-cut military aggression of the Cold War. Because of the boldness of their initiative and their superior forces, the North Koreans expected a quick victory. They gambled that the United States would not intervene and that the outside world would lodge no more than a moral protest, thus allowing the Communists to gain control of the entire Korean peninsula.

The precise inspiration for the invasion remains somewhat unclear. North Korea, concerned over the south's avowed ambition to unite the country on pro-Western terms, seems to have taken the initiative on its own. It is known, however, that Stalin was aware of the North Korean intentions and even allowed the Soviet military to help plan aspects of the invasion, counting on a quick victory and a limited international response. Yet the timing of the invasion seems to have surprised the Soviets who, as noted, were boycotting the Security Council, unable to exercise their veto when the Council condemned the invasion and authorized military countermeasures. The Chinese, recovering from their civil war, barely established in power, and still facing a challenge from the Nationalists in Taiwan, seemed unlikely to have initiated it. In any case, even if the attack caught their Communist allies somewhat off guard, the sweeping initial successes of the North Koreans offered the Soviets and the Chinese an opportunity to check the growing American influence in Japan and East Asia. The Soviets quietly furnished military aid to North Korea and denounced the United States for intervening in Asian affairs—on the very doorsteps of the U.S.S.R. and the People's Republic of China.

For the American government, and for most Americans, it was difficult to believe that the attack had not been secretly engineered in Moscow or that the North Koreans were capable of independent action. The Americans assumed that the Soviets, probing in Asia for weak spots as they had elsewhere, had found one and now must be halted. Korea, like Berlin, became another test of American and Western will. Truman, already concerned about the "loss of China" (the formula used at the time by his political critics for the Chinese Communist victory in 1949), saw the North Korean invasion as a test of the "free world's commitment to liberty." The attack challenged the entire system of collective security and containment built to stem the tide of Soviet communism. The Soviets, he said, had passed "beyond the use of subversion" to "armed invasion and war." Without asking for an American declaration of war because it was deemed to be a "police action," Truman, in conformity with the Security Council resolution, ordered American combat troops to Korea and called for air strikes above the 38th parallel. General MacArthur, the wartime

---

*A test of will*

The Korean War was a key test for President Harry Truman's policy of containing communism, yet, like all modern wars, it disrupted the lives of millions of civilians, including those who knew little about the larger political issues at stake. This Korean girl and her baby brother were photographed near an American tank in the summer of 1951, but their expressions convey some of the timeless, local struggle to survive amid the violent international conflicts of governments and global powers. (Time Life Pictures/Getty Images)

hero of the Pacific who had successfully presided over the occupation of Japan, was named commander of the UN multinational forces, of which the Americans made up the major part.

In the early fighting in the summer of 1950 the American-led United Nations forces were driven south to the very water's edge, where they faced expulsion from the peninsula. But in September MacArthur made a remarkable amphibious landing on the western side of the peninsula, drove the North Koreans back above the 38th parallel, and then rapidly moved north toward the Yalu River, the boundary between Korea and the People's Republic of China. Mao, incensed at the arrival of a multinational army on the Chinese border, took action to assert China's international importance. In late October, a large Chinese "voluntary" army suddenly appeared and within two weeks drove the advancing UN armies back below the 38th parallel. It was an entirely new war, to which China was now committed. The European allies, at first gratified by the American show of determination, grew worried that the war could escalate into a global, possibly nuclear, conflict.

Meanwhile the battle lines seesawed. MacArthur forced the Chinese and North Korean troops to retreat, again crossed the 38th parallel, and demanded unconditional surrender. He proposed to blockade the Chinese coast, bomb Chinese cities, encourage the Chinese Nationalists to attack the Chinese mainland, and even seal off Korea from China by a field of radioactive waste. Truman recognized, however, that MacArthur's threats could lead to full-scale war with China, to Soviet intervention, and to a wider war in which the United States would lack the full support of its European allies. When the general publicly flouted the president's authority, Truman replaced him with another commander and sought to negotiate a truce.

In July 1951 a cease-fire agreement brought large-scale fighting to a halt, but armistice negotiations dragged on, deadlocked over the repatriation of North Korean prisoners who did not wish to return home. In July 1953 under General Eisenhower's presidency an armistice was signed, the line of partition drawn roughly where the fighting had begun three years earlier, at the 38th parallel, with provision for a demilitarized buffer zone. The partition

hardened into another long-term division. North Korea became a rigid Communist dictatorship, and increasingly so under Kim Il Jong, son of the founder of the North Korean state. South Korea, unable to achieve political democracy under Syngman Rhee or for a long time under his successors, nonetheless developed a dynamic capitalist economy, far outstripping North Korea in economic strength. At the beginning of the next century, many decades later, over 40,000 American troops remained stationed in South Korea and the increasingly isolated North Korean regime was trying to build a small arsenal of nuclear weapons; but negotiations were beginning to reduce some of the tensions between the two Koreas.

The Korean War was costly for all sides. The United States, which furnished half the ground troops and almost all the naval and air power for the 15-nation UN force, suffered over 54,000 deaths in the undeclared war, close to half as many as in the First World War; the American wounded were estimated at over 100,000. But the South Koreans suffered over 1 million casualties in dead, wounded, and missing; and the North Koreans and the Chinese each lost about equal numbers. In all some 3 to 4 million lives may have been lost in a war that the Soviets had fought by proxy.

---

---

*Results of the Korean War*

The war also affected the global economy. The United States alone spent over \$15 billion, but the U.S. economy could not by itself supply all of America's military needs. The war therefore stimulated the economic growth of western Europe and Japan, and it also quickened the pressures for German rearmament. In American eyes, such costs were justified because a flagrant act of aggression had been checked, and the global containment strategy had achieved success in Asia. Most people in western Europe, even those who were concerned about MacArthur's recklessness, also found reassurance in the firm American response to a communist military invasion.

As seen in the Communist world, however, and indeed in many of the nonaligned countries in Asia such as India or Indonesia, the Korean War had prevented the United States, the great capitalist power, from reasserting Western imperialist supremacy in the East. In its efforts to create regional security pacts in Asia, the United States found little enthusiasm among the larger non-Communist Asian powers who disliked communism but also distrusted the West. Although the United States had been the least involved of all the Great Powers in nineteenth-century territorial imperialism in Asia, its new leadership of the Western world made it a symbol of Western oppression, buttressed by the suspicion that its free-world rhetoric only masked a drive to create world markets for American capitalism—an image assiduously cultivated by the Soviets and by the Chinese Communists.

On the other hand, its success in checking the North Korean act of aggression by force of arms reinforced the American belief that military strength and decisiveness could check Communist expansion anywhere in the world; containment would be global. The Korean War inaugurated an era of deep American involvement in Asia and served as prelude to an even longer and more costly conflict, the war in Vietnam in the following decade.

---

---

*American involvement in Asia*

The Korean War also had its political repercussions in Europe. Despite continuing misgivings in France and in other parts of Europe over a revival of German military strength, the Americans pressed for West German rearmament. When a French proposal for a European Defense Community (with a "European army," in which the Germans were to serve as "European soldiers") failed to pass the French legislature in 1954, West Germany was authorized to create an army of its own under the overall command of

NATO. Concern over a resurgent German militarism was receding. The West German constitution guaranteed civilian control over the military, and a strong antimilitarist movement had emerged in the country itself. In 1955 the Federal Republic of Germany became a full member of NATO.

Meanwhile, the Korean War hastened a formal peace treaty with Japan.

#### *Peace with Japan*

In the peace treaty signed in 1951 in San Francisco by 50 nations, but without Soviet participation, no general reparations were exacted, but individual countries were to work out their own reparations agreements. In a separate security pact the United States retained military rights in Japan and occupied nearby islands, where, under agreement, the United States would remain as long as necessary for peace and security. A year later the American occupation of Japan formally ended. The Soviets made no move to return the Kurile Islands, which they had occupied at the end of the Second World War. The United States meanwhile signed security pacts with Australia, New Zealand, and the Philippines, reinforcing its global commitments.

The decades that followed the troubled international relations of the early Cold War brought new confrontations and crises—over Berlin, Cuba, Vietnam, the Middle East, and Africa, to name only the most important—and above all, a mounting nuclear arms race between the two superpowers and the stockpiling of the most formidable weaponry ever assembled. The nuclear arms race moved on to an even more deadly level of competition in late 1952, when the United States successfully tested its first thermonuclear or hydrogen bomb, hundreds of times more powerful than the atomic bomb used at Hiroshima. The Soviets at almost the same time, in 1953, also developed a hydrogen bomb. Both sides developed strategic delivery systems as well, thereby ensuring that neither side could gain a decisive military advantage in the evolving Cold War. But before continuing with the Cold War, we must examine in this and the following chapter many other developments of these years—the remarkable economic recovery and political reconstruction of western Europe, the reshaping of the global economy, the world of the Communist countries, and the emergence of new nations from the old Western colonial empires.

## 109. WESTERN EUROPE: ECONOMIC RECONSTRUCTION

The Second World War had left Europe in a worse state of disorder than the First. It had ruined one of the world's chief industrial areas and brought its economic system to collapse. Even when the worst local devastation was repaired, suffering and distress persisted. Europe could no longer pay for the imports that it needed. During the war the West Europeans, and especially the British, had used up their overseas investments and lost a good share of the shipping services they had once provided. Overseas countries had built up their own industries and needed those of Europe less, and the United States had taken over markets once in European hands.

At the same time, western Europe was not to be written off. Its population exceeded that of either of the superpowers. Even in ruins, it still possessed one of the world's leading industrial plants and the skills needed to rehabilitate and run it. The Europeans did not wish to be rescued by either of the superpowers. Most rejected communism as a modern form of enslavement. Yet they feared excessive dependence on the United States. Memories of the stock-market crash of 1929, the economic collapse of Europe after the with-

drawal of American capital, and the Great Depression bred skepticism about American capitalism.

### *The Marshall Plan and European Recovery*

For the non-Communist world, the single most important economic reality in the early postwar years was the productivity of the American economic system. The American economy had expanded enormously during the war. At the war's end the United States accounted for two-thirds of the world's industrial production and held two-thirds of the world's gold. Its gross national product was two and a half times higher than in 1939; its exports were three times greater. Despite predictions about postwar economic collapse, its economy grew at unprecedented rates in the 1950s and 1960s.

---

*U.S. economic strength*

When Lend-Lease ended after the war, the United States sent billions of dollars worth of goods to western Europe to relieve distress and made loans to individual states, especially to Britain. But the Europeans themselves quickly set about to rebuild their economies. Within two years, by 1947, the economies of western Europe were approaching prewar levels of production. American aid was still desperately needed, however, to continue the purchase of food, fuel, raw materials, and industrial parts essential to full recovery. By the spring of 1947 that recovery appeared at risk. The poorest harvest in a century was feared. With Cold War tensions mounting, Communist parties in France and Italy moved away from earlier cooperation in postwar reconstruction and launched a wave of strikes. Even if the Soviet Union was not actively promoting revolution in western Europe, understanding perhaps that the West would not tolerate overt revolution there, the Americans were concerned about European stability. Between the two superpowers the Soviets had more to gain by chaos in western Europe and the United States had more to gain by its rebuilding.

American economic aid so far had been improvised and piecemeal. In June 1947 Secretary of State George C. Marshall used the occasion of his Harvard commencement address to invite the Europeans to cooperate in drawing up blueprints for a broad program of reconstruction, for which the United States would provide the financial support. The plan, as formulated, was "directed not against country or doctrine, but against hunger, poverty, desperation, and chaos." To reinforce its nonpolitical character, the United States extended the invitation to all European governments, including the Soviet Union and the East European states. The Soviet Union rejected the proposal and forbade the participation of its East European satellites, denouncing the plan as "a new venture in American imperialism."

---

*The Marshall Plan*

The West European countries responded eagerly. Under the Marshall Plan, or European Recovery Program, as enacted by Congress, American aid was coordinated with each country's needs and with joint European priorities to maximize the benefits. The Office for European Economic Cooperation (OEEC) in Paris, with which the Americans worked closely, identified projects, coordinated the planning, and allocated the funds.

The results of the Marshall Plan exceeded the boldest anticipations of its American sponsors. The West Europeans utilized their technical and managerial skills to improve transportation facilities, modernize their infrastructure, and expand their productive capacity. They reduced trade barriers among themselves and facilitated trade by setting up a payments union. Hard currency, now available for imports, reduced the financial pressures on West

---

*Results of the Marshall Plan*

European governments and the need for further austerity. The Marshall Plan accelerated the recovery already under way, smoothed the recovery process, and encouraged the economic cooperation of the European countries with each other.

While the United States thus used its economic resources to help revive its competitors, the Marshall Plan also served American interests by restoring a world market, of which the United States would be a principal beneficiary. By creating markets for American exports, it helped fuel the postwar economic boom in the United States. The Americans satisfied their humanitarian impulse, served their economic needs, and reduced the drift of Europeans into the Communist camp. At the same time the Marshall Plan sharpened the division between the Soviet bloc and the West.

### *Economic Growth in Western Europe*

For West Germany the currency reform of 1948, Marshall Plan aid, and the economic opportunities opened up by the Korean War ignited a stunning economic revival and expansion, the *Wirtschaftswunder*, or “economic miracle.” By 1950 the Federal Republic of Germany was exceeding prewar Germany’s production levels, and by 1958 it was the leading industrial country of western Europe. France, Italy, and other West European countries experienced an “economic miracle” also. For two and a half decades, from 1948

to 1974 (when a global recession set in), the western European economies grew at unprecedented and uninterrupted rates of growth. The West Europeans basked in prosperity and rising living standards. Europeans would

---

*The silver '50s and golden '60s*

later speak of the “silver ’50s” and the “golden ’60s”; the French would speak also of the “30 glorious years.” Although Britain’s economy, burdened by older industries and the loss of overseas markets, lagged behind the growth in

other countries, it too grew faster than at any time in the interwar years.

The prosperity of western Europe derived from a competitive, capitalist, free-market and private-enterprise economy, but it was accompanied almost everywhere by varying degrees of extensive economic planning, systematic government intervention, and a network of social services to help cope with the instability of competitive capitalism and the business cycle. No one anywhere wished to repeat the hard times and suffering of the Great Depression. Keynes’s theories, first formulated in the 1930s but without many adherents at that time, took hold in the postwar era and dominated government policy in the 1950s

---

*Economic planning and government intervention*

and 1960s even when conservative governments were in control. Governments kept their economies under close surveillance and used their fiscal and monetary powers to promote investment, production, and employment and to control inflation. They took “countercyclical” measures; that is, at signs of decline in the business cycle they increased government spending. Full employment was accepted as a goal. Improved statistical techniques and economic forecasting, although far from precision instruments, made economic planning and “fine-tuning” feasible. Such planning, however, took the form of guidance and direction, not coercion, and differed markedly from the rigid, detailed, and doctrinaire centralized planning of the Soviet Union and Soviet bloc.

In Britain, France, and Italy (less so in West Germany, which had lived through state control under the Nazis), the postwar governments also nationalized a number of the key sectors of the economy to bring them under government control. But even in these mixed economies, the private capitalist sector represented the major share of economic activity. In all western Europe economic growth became virtually an obsession as both governments and people came to expect growth rates far exceeding those of the past.

The European “economic miracle” of the 1950s and 1960s brought new jobs and wealth to workers throughout Europe. This picture of British workers in 1957 shows women assembling circuit panels for television sets, one of the important new consumer products in post–World War II economies and social life.

(Getty Images)

When the sustained economic growth led to a labor shortage, West Germany and other countries invited foreign workers to join their labor force. Turks, Greeks, Yugoslavs, Spaniards, Portuguese, and Italians (mostly from southern Italy) were invited in as “guest workers.” Four and a half million workers arrived in the Federal Republic of Germany alone, over half of them Turks, who did not return home but often formed large unassimilated enclaves. After the postwar collapse of the European colonial empires, immigrants from the former European colonies in Asia, Africa, and the Caribbean also arrived in western Europe in large numbers. Beginning in the 1950s, a steady stream of immigrants flowed into Britain from India, Pakistan, the West Indies, and Africa. France drew large numbers from its former North African colonies, especially Algeria. The Netherlands became home for many Indonesians.

*A steady stream of immigrants*

Later political refugees also arrived in Europe from Vietnam and other parts of Asia. The new Europeans were often of different cultures, religion, racial composition, or skin color. Mosques became a common sight in European cities. The influx of guest workers and immigrants by the millions later created new social conflicts and resentments, especially in less affluent times. The growing presence of large immigrant communities led to new social friction, often overtly racial, testing the flexibility and tolerance of a European society that was becoming increasingly multiethnic and multicultural.

A postwar baby boom and an influx of at least 13 million immigrants and refugees increased the population of western Europe by 25 percent between 1945 and 1970. But by the 1960s the birth rate of the West Europeans began to level off and western Europe's population began to show signs of long-term decline.

---

*Growth of the welfare state*

In these same postwar years the welfare state grew, going well beyond its pre-1914 origins or its expansion in the interwar years. The postwar governments gave a high priority to social objectives, to what the French Resistance charter had called "a more just social order": the right to a suitable job, government compensation in the event of unemployment or disability, social security in old age, free or subsidized health care, and the redistribution of wealth and income through progressive taxation. The protection of the welfare state was intended to be universal, not confined, as in earlier times, to the poor and disadvantaged. Its social objectives could be achieved in the 1950s and 1960s because of a salutary interplay of government, management, and labor, which all shared in the consensus about investment and growth. Only later, from the late 1970s on, did the argument gather strength that all these entitlements had become excessive and an impediment to economic growth and competitiveness.

## 110. WESTERN EUROPE: POLITICAL RECONSTRUCTION

Western Europe also confronted overwhelming challenges of political reconstruction at the end of the war. Britain was economically exhausted and in the process of liquidating its empire. France, recovering from the collapse of 1940, the occupation, and the wartime Vichy regime, became engaged in costly colonial wars in Indochina and Algeria. Italy had to renew its political life after two decades of fascism. Germany, after the Nazi defeat, was divided and under military occupation. Nevertheless political reconstruction went forward. Britain resumed its role as the world's oldest parliamentary democracy; France and Italy adopted new constitutions; out of the western zone of occupied Germany the Federal Republic of Germany emerged in 1949.

The smaller states of western Europe also resumed their parliamentary democracies. Only Spain and Portugal remained under prewar dictatorships until those regimes also came to an end in the mid 1970s. The right to participate in political life continued to expand throughout western Europe. Women finally received the vote in France and Italy as the war drew to a close and in Switzerland in 1971. And in another suffrage reform that went almost unnoticed, the legal voting age in most countries was quietly reduced to 18 in the 1970s.

---

*The spirit of reform*

The earliest postwar elections showed the political strength of a new desire for social reforms. Wartime Resistance movements had called for a federal union of Europe to prevent future wars and had emphasized the need for economic and social rights as well as political freedom. Postwar governments were therefore asked to provide protection against the insecurities of old age,

disability, ill health, and unemployment. Such ideals shaped the political debates and social reforms in the first years after 1945, but politics soon reverted to older patterns of bargain and compromise.

The welfare state idea persisted, as did the impulse for an integrated Europe, but politics became more pragmatic and less ideological. Socialists, following the Scandinavian model, became Social Democratic reformists, accepting capitalism but insisting that they could manage capitalist economies more effectively than liberals, centrists, or conservatives. In France and Italy the presence of large Communist parties, with strong attachments to the Soviet Union in the early postwar years, complicated matters. In the Federal Republic of Germany, Italy, and France, the Christian Democrats, drawing inspiration from Roman Catholic religious and ethical precepts, played a key role in shaping and governing the new regimes. They accepted the welfare state but backed away from the egalitarianism of the socialists and, over time, increasingly came to represent conservative and business interests.

### *Great Britain: Labour and Conservative*

In Great Britain, the first parliamentary elections in ten years, in July 1945, unseated Winston Churchill and the Conservative-led wartime coalition and voted in a Labour government. For the first time in its history Labour had a majority of its own. Governing from 1945 to 1951, with Clement Attlee as prime minister, it set Britain on a new course of parliamentary socialism and the modern welfare state.

On the premise that the country's basic industries could not be left to the unplanned anarchy of capitalism and unregulated competition, the Labour government nationalized the Bank of England, the coal mines, electricity and gas, iron and steel, and other parts of the economy. Because four-fifths of industry remained in private hands, it was a mixed economy that emerged. At the same time Labour greatly expanded and revamped the social insurance program inherited from the Liberal reforms of 1906–1914. During the war, in 1942, the British economist William Henry Beveridge had prepared a government report that proposed to guarantee “full employment in a free society” and social security for all “from the cradle to the grave.” Drawing on the Beveridge Report, Labour now extended insurance coverage for unemployment, old age, and other contingencies; inaugurated a comprehensive national health service; and increased income and inheritance taxes.

---

*Labour government*

In the elections of 1951 Labour lost its majority in Parliament. The Conservatives returned to office and governed for the next 13 years under a succession of prime ministers. After 1964 the two parties alternated in office. The shifting electoral fortunes stemmed from disagreement within the country over the welfare state, dissatisfaction with the performance of the economy, and frustration at Britain's diminished global status.

During their years in office, the Conservatives restored some nationalized industries to private control but did little else to dismantle the welfare state. Both parties recognized, however, that the social reforms of the welfare state could be absorbed only if the economy prospered. But there were nagging economic problems. The liquidation of investments to pay for the Second World War, the loss of export markets, and a decline in income from shipping and other services adversely affected Britain's balance of payments and undermined the pound. With American financial aid, an intensified export drive, an austerity program that reduced imports, and a curtailment of military and imperial commitments, the economy improved and the country began to experience a modest

---

*A modest prosperity*

prosperity. But the British failed at the time to rebuild their obsolescent capital equipment and infrastructure as effectively as their West European neighbors across the Channel.

Such problems impeded the growth of Britain's economy and made British workers vulnerable to competition from more efficient foreign industries. When inflation set in during the late 1960s and intensified in the 1970s, the trade unions demanded wage increases to match rising prices. Strikes and prolonged work stoppages troubled the economy and divided British society. Until the late 1970s, when a new era opened, the question was whether Labour or the Conservatives could better manage British decline, not how they could overcome it.

---

*Troubles in Northern Ireland*

Meanwhile troubles in Northern Ireland persisted. After the partition in 1922, as noted earlier, the six predominately Protestant counties of Northern Ireland, had remained part of the United Kingdom. The Catholic minority, about one-third of the population, protested militantly that they were victims of political and economic discrimination and pressed for annexation to the Republic of Ireland. Open violence broke out in 1969, inflamed by the Irish Republican Army on the one hand and Protestant extremists on the other. In the sectarian violence that followed, over 3,000 persons lost their lives.

### *The French Republic: Fourth and Fifth*

After the liberation of France, General Charles de Gaulle, the very incarnation of the Resistance, became provisional president and elections were held for a Constituent Assembly. Because no one wanted to reestablish the discredited Third Republic, the French undertook the process of creating a new republican government. The parties of the Right were discredited by their role in the Vichy regime, but the Left emerged from the war with new strength and prestige. The Communists, the Socialists, and the Popular Republican Movement (*Mouvement Républicain Populaire*, or MRP), a Catholic progressive party akin to Christian Democrats elsewhere on the Continent, formed the provisional government. The Left pressed for a systematic purge of collaborators, despite the difficulties in determining levels of guilt. The purge had begun as soon as the army

---

*Purging collaborators*

reached French soil, taking the form of angry drumhead trials and executions. Gradually, the process was brought under more orderly judicial procedures. Even so, the trials of Marshal Pétain and Pierre Laval were impassioned showpieces. The debate over collaboration and trials of collaborators continued to divide the country in later decades, in part because some of the most egregious acts of violence against the French Jews and others had originated with the French Vichy government and not the Nazi occupiers.

The Fourth Republic's machinery of government differed in only a few details from the Third. Once again the presidency was only ceremonial and the premier and cabinet were responsible to an all-powerful National Assembly. De Gaulle made no secret of his dislike for the new constitution, the return of party rivalries, and the dominant role of the legislature, all of which interfered with his vision of a strong France ready to resume a leadership role in world affairs. He resigned in protest in December 1946. The Communists, Socialists, and MRP continued their tripartite coalition under Socialist leadership until the Communists, in the heightened tensions of the Cold War, fomented a series of strikes and were expelled from the cabinet in May 1947.

Parliamentary division and ministerial instability grew more acute. Periodically de Gaulle returned to the political scene, heading a movement called the "Rally of the French People," which he described as "above parties." Except for the brief reform ministry of Pierre Mendès-France in 1954–1955, governmental ineffectiveness in the midst of domestic and foreign crises filled the public with cynicism and hostility.

---

*"Rally of the French People"*

---

Yet despite its record of political instability—25 cabinets from 1946 to 1958—the Fourth Republic enacted significant legislation. The provisional government had nationalized several key industries, and as in Britain a mixed economy gradually emerged. The existing social security legislation was expanded. An economic plan, drawn up by Jean Monnet, a farsighted economist and public official who later played a large role in the creation of the European Economic Community, enlarged and modernized the country's economic base and paved the way for industrial expansion. A flexible form of economic planning, inspired by Monnet, in which government, management, and labor played mutually reinforcing roles, became an accepted part of French economic life. By 1952 production levels were 1½ times those of 1938, and industrial output was growing at an annual rate of over 5 percent. From 1946 to 1966 production tripled. (In the half-century from 1889 to 1940, it had no more than doubled.) The country also displayed a demographic vitality, at least for a time, that confounded pessimists who had long worried about France's low birth rate.

What finally brought down the Fourth Republic was the strain of trying to preserve the old French colonial empire. France alone, of all the major powers, was almost continuously at war for close to 15 years, fighting colonial wars. It could almost envy the lot of Germany, Italy, and Japan who lost the Second World War but emerged from their defeats with no restless colonies to subdue. The new French constitution of 1946 gave the colonies representation in Paris but such reforms did not satisfy nationalists pressing for independence. From 1946 to 1954 the French forces unsuccessfully fought against independence movements in Indochina until they finally had to withdraw. Then, within a matter of months, the Arab movement for independence in Algeria rose up in another anticolonial war, which further drained France's material resources, political morale, and national confidence. The European settlers in Algeria and army leaders adamantly opposed French withdrawal and staged an insurrectionary coup in Algiers in May 1958. When civil war threatened, the country turned to the one man it believed could save the situation—Charles de Gaulle, then living quietly in self-imposed retirement. The army leaders, the settlers in Algeria, and the parties of the Right were convinced, given de Gaulle's solicitude for the army and French national pride, that he would maintain French control of Algeria. De Gaulle accepted the summons. In June 1958 the National Assembly invested him as premier, giving him emergency powers for six months, including the authority to prepare a new constitution.

---

*Colonial wars*

---

The Fifth French Republic thus emerged from the crisis in Algeria and from the political program of Charles de Gaulle. In the autumn of 1958 the new constitution was overwhelmingly accepted in a popular referendum, and de Gaulle was shortly thereafter elected president. The presidency, as de Gaulle had long urged, became the fulcrum of power. The president was the final authority in foreign affairs and national defense. The president named the prime minister (as the premier was now called) and had the right to dissolve the National Assembly, call for new elections, submit important questions to popular referendums, and assume emergency powers, all of which de Gaulle did during his

years in office. Political instability disappeared in the first 11 years of the Fifth Republic there were only three cabinets.

---

France under  
De Gaulle

DeGaulle settled the Algerian crisis in his own way. Sensitive to the revolution sweeping the colonial world, he came to recognize that France must accept a policy of independence for Algeria, which the country approved in a referendum in July 1962. Even earlier he granted independence to all of the French colonies in sub-Saharan Africa. With peace, governmental stability, and economic prosperity, the French reconciled themselves to the loss of empire and looked for new ways to play a leading role on the world scene under de Gaulle. France became the world's fifth industrial power in the 1960s, behind only the United States, the U.S.S.R., West Germany, and Japan. In 1960 France became the fourth nation, along with the United States, the U.S.S.R., and Britain, to develop a nuclear bomb. De Gaulle even created an independent nuclear strike force, but France also became western Europe's largest producer of nuclear energy for peacetime energy needs.

After the settlement of the Algerian crisis, de Gaulle built a kind of plebiscitary democracy by direct appeals to the electorate. Although civil liberties were preserved and free elections were maintained, the old democratic ferment disappeared. Skilled technicians ran the affairs of state, and de Gaulle, an uncrowned republican monarch, presided as arbiter over the nation's destinies.

---

May 1968

The nation grew restless. There was increasing skepticism about de Gaulle's technocratic system of government and his extravagant posturing in world affairs. Suddenly, in May 1968, grievances in the overcrowded universities sparked a revolt that led to demonstrations by hundreds of thousands of students and then brought 10 million workers out on strike, paralyzing the economy and threatening the regime itself. De Gaulle survived the revolt but only after assuring himself of army support. Stressing the threat of communism and domestic chaos, he won an overwhelming majority for his party in new elections. Although there was wide support for institutional reforms in French society, the country as a whole rejected the outburst of radical political agitation, which was similar to revolts of students and young people all over the globe in 1968. Educational reforms and other changes were introduced, but the strikes and social disruptions of 1968 hurt the French economy. In 1969 de Gaulle chose to turn a referendum on various constitutional and regional reforms into a vote of confidence in himself. When his proposed reforms lost by a small margin, he resigned and retired to his country estate, where he died a year later, an august, heroic, austere, and always controversial figure whose exploits in war and peace assured him a lasting place in France's history.

### *The Federal Republic of Germany*

To communicate to the German people and to the entire world the enormity of the Nazi crimes, the four wartime Allies had convened an international trial in 1945–1946 at Nuremberg. Hitler, Himmler, and Goebbels were already dead, but 22 other Nazi leaders and the major Nazi organizations were indicted for crimes against peace, that is, plotting and waging a war of aggression; war crimes, which were defined as violations of the accepted laws and conventions of warfare; and crimes against humanity, that is, acts of mass murder and genocide. The evidence of evil deeds, massive and incontrovertible, was set down for posterity in many volumes of recorded testimony. Despite the high moral purpose of the

---

The Nuremberg  
Trials

Demonstrations and strikes swept across France in May 1968, evoking memories of nineteenth-century revolutionary battles in the barricaded streets of Paris, but President de Gaulle was more successful than earlier French kings in quelling crowds and protests. As this photograph suggests, however, clashes between the police and student demonstrators produced strong reactions among all groups in French society during the weeks before de Gaulle and his followers consolidated their power by winning new national elections.

(Sipa Press)

trials and an honest effort to establish fair judicial procedures for the accused, some critics questioned their appropriateness, especially the decision to try the leaders of a defeated sovereign nation for planning and waging war and to indict an agency like the General Staff. Some also questioned the propriety of having the Soviet Union sit in judgment of the Nazis. These critics argued that the Soviets were themselves guilty of crimes because they had contributed to the outbreak of the war, shared in the partition of Poland, and incorporated the Baltic states into the Soviet Union. Others dismissed the trials as victors' justice. Yet the Nuremberg trials served in a singular way to reinforce international standards of civilized behavior. The court condemned 12 of the defendants to execution. Seven received prison terms of varying length, including life sentences; three were acquitted.

The four occupation authorities also carried out a "denazification" program, which produced mixed results. Because so many professional Germans had been members of Nazi organizations, it became difficult to exclude them from public life if the normal processes of government were to resume. Some individuals guilty of the more heinous Nazi crimes fled the country and

---

Denazification

were still being apprehended and tried many decades after the war's end by the Germans themselves or in French or Israeli courts. But the people who survived the Nazi camps and the families of Nazi victims only began to receive some financial restitution at the end of the twentieth century.

Divided Germany (and Berlin) became a central arena of the Cold War. The German Democratic Republic became one of the most loyal client states of the Soviet Union. The Federal Republic of Germany became a prosperous parliamentary democracy, a full partner of the West. It faced up to and made efforts to atone for the horrors of the Nazi regime.

The West German government encouraged private industry and a capitalist, competitive economy; but it also shaped overall economic policies and provided broad social services, so that West Germany emerged with what became known as a "social market economy." The guaranteed benefits came to exceed those of other major industrial Western countries. The Federal Republic also pioneered in bringing labor and capital together. The labor unions accepted a role as social partners in the expanding economy, moderating wage demands to avoid inflation. A "codetermination" law gave workers seats on the boards of directors of larger firms.

---

A "social market economy"

After independent state governments had been set up in each state (or *Land*) in West Germany with the encouragement of the occupying powers, a constitutional convention representing the ten German states met in 1948–1949 in Bonn. The convention produced a Basic Law (or *Grundgesetz*) and officially established the Federal Republic of Germany. The Basic Law, by design not called a constitution, was to be temporary, valid only until at some future date the two parts of Germany could be reunited. An extensive bill of rights was one of its most prominent features. Power was decentralized under a federal system.

The founders deliberately set out to avoid the weaknesses of the Weimar Republic. The president, elected indirectly and not by popular vote, was a ceremonial figure with limited political power; a president of stature could, however, as the years revealed, exercise substantial moral authority. The head of government, or real executive, was the chancellor, responsible, along with the cabinet, to the majority in the popularly elected lower house, the *Bundestag*. To avoid instability, a chancellor could be overthrown only when a new majority was ready with an immediate replacement. Proportional representation guaranteed that

---

The power of the chancellor

each party would be apportioned seats equivalent to its share of the popular vote, but to prevent splinter parties and political fragmentation, a party received seats in the legislature only if it won at least five percent of the national vote. The Christian Democratic Union and the Social Democrats emerged as the two chief parties and shared between them a large proportion of the popular vote.

The Christian Democratic Union governed uninterruptedly for 20 years, from 1949 to 1969. In reaction to the Nazi barbarism, it sought to infuse politics with a moral idealism and ethical purpose. Not a confessional party, it appealed to Protestants and Catholics alike, who were almost equally represented in West Germany, and it received strong support from the business community and large segments of the middle classes. The dominating figure in the party and government in the early years was the Christian Democratic leader, Konrad Adenauer, who had begun his career in the pre-1914 imperial era. A patriarchal, strong-willed personality, his ambition was to regain for Germany a position of dignity and international respect. He became chancellor in 1949 at the age of 73<sup>1</sup> (with only a slim majority)

### GERMANY AND ITS BORDERS, 1919–1990

*Upper panel:* the boundaries established after the Treaty of Versailles. Note the Free City of Danzig and the Polish Corridor. *Middle panel:* Germany's borders at the height of the Second World War in 1942. The Reich proper had then annexed (1) Luxembourg, (2) Alsace and Lorraine from France, (3) Carniola from Yugoslavia, (4) Austria, (5) the Sudeten regions and a Bohemian–Moravian protectorate from Czechoslovakia, (6) the Free City of Danzig, and (7) Poland. *Lower panel:* Germany after Hitler's defeat. East Prussia was divided between Poland and the U.S.S.R., and Poland reached westward almost to Berlin. A Communist East Germany (the German Democratic Republic) and a democratic West Germany (the Federal Republic of Germany) grew out of the zones occupied respectively by the Soviets and the West. After the fall of the Communist regime in East Germany, Germany was reunited in 1990.

and governed for 14 years. Opponents criticized *der Alte* ("the old man") for creating a "chancellor's democracy"; but he provided the resolute leadership, stability, and continuity that made possible the remarkable economic expansion of the 1950s and the regaining of full West German sovereignty.

Adenauer successfully integrated the Federal Republic of Germany into the emerging political, economic, and military structures of western Europe, strengthening ties with France, cooperating in the movement for European economic integration, and winning the

The new spirit of international cooperation in postwar Europe was expressed in the collaboration of French President Charles de Gaulle and German Chancellor Konrad Adenauer (standing next to de Gaulle here and waving to a crowd). The two leaders met often to create a partnership that became the foundation for a new Europe. After fighting three major wars in the heart of Europe over a period of 75 years, Germany and France established a peaceful alliance that brought stability to the continent and eliminated the traditional problem of warfare between two former enemies. (Dalmas/Sipa Press)

support and confidence of the United States and the other Western powers. Indeed, within a decade after the disastrous military defeat that had left a shattered and occupied country, West Germany was a major economic power, a coveted ally of the West and an equal member of the North Atlantic Treaty Organization. The major opposition party, the Social Democrats, heirs to the Social Democratic party founded in the 1870s, criticized Adenauer for his overly close identification with the United States and for ignoring the issue of national reunification. But the Social Democrats abandoned their Marxist ideology at a party congress in 1959 and broadened their appeal to the middle classes and younger voters.

In 1965 the Social Democrats, who had softened their neutralist stand in foreign affairs, joined the Christian Democrats and the Free Democrats (a small liberal centrist party) in a “grand coalition.” Willy Brandt, the former Social Democratic mayor of West Berlin, became foreign minister and launched his “Eastern policy,” or *Ostpolitik*, a policy that encouraged building bridges to the Soviet Union and eastern Europe, including East Germany.

---

Willy Brandt's  
“grand coalition”

In 1969, with the support of the Free Democrats, he became chancellor of a new coalition that ended the 20-year tenure of the Christian Democrats. Brandt negotiated treaties with the Soviet Union and Poland in 1971, formally accepting the German eastern frontier at the Oder and West Neisse River line. His government officially recognized the German Democratic Republic and promoted close economic ties with it and other countries of eastern Europe. When a spy scandal in his own entourage cut short his chancellorship in 1974, his Social Democratic colleague Helmut Schmidt took over and continued his policies. Not until 1982 would the Christian Democrats return to office with Helmut Kohl as chancellor. Meanwhile, in the early 1980s, reunification with East Germany still seemed unlikely, only a remote possibility.

## *The Italian Republic*

During the struggle to oust the German armies from the Italian peninsula after the fall of Mussolini in 1943, the Italian political parties, repressed for over two decades under Fascism, sprang to life. All supported the provisional governments in postwar reconstruction and committed themselves to democratic renewal. In 1946 the country voted by a narrow margin to abolish the Savoy monarchy, never distinguished, and now tarnished by its cooperation with the Fascist regime. A constitution for the new Italian Republic established a ceremonial presidency, cabinet government, and legislative supremacy. Proportional representation guaranteed equitable representation for all political parties, large and small.

The Christian Democrats quickly became the dominant party. It appealed to all classes and sectors of Italian society, successfully blending support for democratic political principles, a moderately regulated free-enterprise economy, and the labor tenets of social Catholicism. Although the party remained independent of the Roman Catholic church, it remained close to the hierarchy. In Alcide De Gasperi, who had survived the Fascist years as a librarian in the Vatican, it found an effective leader. For seven formative years from 1946 to 1953 he presided over a series of coalition governments, which made possible postwar economic reconstruction and expansion. In the Cold War he kept Italy firmly in the Western camp. As in France, the Communist party's role in the resistance to Fascism helped to establish its position as a leading party in postwar politics. Communists at first held seats in the cabinet and cooperated in economic reconstruction, but when they fomented politically inspired strikes in 1947, De Gasperi dismissed them from his ministry. In 1948, in the early years of the Cold War, the United States intervened openly for the first time in its history to influence a European election, throwing its weight behind the Christian Democrats to thwart the Communists. The Christian Democrats for the first and only time won an absolute majority in the legislature. The Communists, despite their continuing parliamentary strength and support by a third to a fourth of the electorate, remained excluded from the cabinet.

---

Alcide De Gasperi's  
Christian Democrats

After De Gasperi's disappearance from the political scene in 1953, the Christian Democrats governed under a succession of short-lived coalition cabinets formed with small centrist parties. Over the years the Christian Democrats became faction-ridden and less interested in reform than in patronage. Abandoning their initial idealism, they catered to propertied and narrow interests, and many in the party profited from business connections. In the early 1960s the Socialists became part of the governing coalition, but this "opening to the Left" did not alter political rigidities, and the country grew impatient with the uninterrupted tenure of the Christian Democrats.

The Communists gained further strength in the 1960s. They weakened their ties with Moscow, renounced tenets of Marxist-Leninist orthodoxy such as the dictatorship of the proletariat, and tempered their assault on religion. Architects, with the French party, of what came to be known as "Eurocommunism," they declared that each nation, without deferring to Moscow, must find its own way to a new society through parliamentary democracy and national consensus. The strongest Communist party in the Western world, the Italian party counted 1.8 million members at its peak in the mid-1970s and won the support of 35 percent of the electorate. Communist mayors and municipal councils governed in many major cities, including Rome. But the Christian Democrats continued to reject the Communist bid for seats in the national government.

---

Eurocommunism

---

*A prosperous  
economy*

The unstable political scene did not interfere with unprecedented economic growth and prosperity. The industrial triangle of Genoa, Milan, and Turin in northern Italy provided the nucleus for recovery and expansion. A prosperous economy emerged. By 1949 industrial production reached 1939 levels, and by the early 1950s Italy's rate of industrial growth rivaled that of West Germany and France. Italy was transformed from the primarily agricultural country it had been before the Second World War into one of the world's leading industrial nations. An economic revolution had dramatically elevated living standards for most Italians. Only the underdeveloped south remained a troubled economic region, even in times of advancing prosperity. In general, however, Italy joined the other nations of Western Europe in a remarkably rapid political and economic recovery from the catastrophic events of the Second World War.

## 111. RESHAPING THE GLOBAL ECONOMY

Even before the close of hostilities the United States, with British support, developed a bold initiative to reshape the postwar world economy. Determined to avoid the economic nationalism, trade restrictions, and currency instability of the interwar years, the planners sought to restore the free flow of trade and the stable currencies of the pre-1914 era. In 1944 the United States convened an international conference of 44 nations at Bretton Woods, New Hampshire. The participants pledged to reduce trade barriers and work for stable currencies in the postwar world.

An effort to establish a formal world trade organization to oversee international commerce foundered, but an alternative strategy proved successful. The United States had earlier negotiated bilateral trade agreements with a number of countries to reduce tariffs on a reciprocal basis, with each agreement carrying a "most-favored nation" clause whereby concessions to one country were extended to all. These piecemeal arrangements led in 1948 to a broader arrangement, the General Agreement on Tariffs and Trade (GATT), embodying the same negotiating principle. Subscribed to initially by 23 nations, GATT became the foundation of postwar global commerce.

---

GATT

The General Agreement laid down rules to prevent discrimination in international trade, set up procedures for handling complaints, and provided a framework for continuing negotiation through lengthy bargaining sessions, or "rounds," designed to lower tariffs and remove nontariff barriers. By the 1990s over 100 countries were participating. GATT was only a partial substitute for a formal international trade organization, but it contributed to the vast expansion of world trade beginning in the 1950s. Not until 1997 was a formal World Trade Organization (WTO) established, with enlarged powers to mediate agreements and settle trade disputes. The WTO in its turn faced new problems and recurring controversies as it tried to resolve the conflicting claims of different nations in the global economy.

The "world economy" in the early postwar years meant the world's non-Communist or free-market economies. The strategic centers were North America and western Europe, with the addition of Japan, which doubled its share of world trade between 1951 and 1960. Integrated into the world economy were Latin America, Asia, the Middle East, Australasia, and Africa, so that it was truly an economy of global dimensions. The Soviet Union played no part in any of the postwar trade negotiations and restricted its commerce principally to its East European bloc of satellites. In

---

*Global participation*

Japan's dynamic new influence in the postwar global economy grew out of the nation's willingness and ability to develop technological innovations in the 1950s and 1960s. This super-express train, which went into service between Tokyo and Osaka in 1964 and is shown here passing Mount Fuji, became one of the well-known symbols of modern Japanese society. Reaching speeds of over 150 miles per hour, these trains set a standard for the later development of other very high-speed trains in Europe.

(George Gester/Photo Researchers)

the late 1960s the Soviets and the East European countries opened up trade and economic relations with the West, but not until the late 1980s did they seek integration into the global economy.

### *Currency Stability: Toward the "Gold-Dollar" Standard*

If the first objective of the wartime Bretton Woods conference was to liberalize trade, the second was to stabilize the world's currencies. The chaos of the interwar years when nation after nation abandoned the gold standard and competed in currency devaluations to

gain trade advantages haunted everyone. The Bretton Woods conference sought to restore the equivalent of the pre-1914 gold standard, which had provided for fixed exchange rates and the convertibility of all currencies into gold or into the equivalent at the time, British pounds sterling.

---

Currency  
stabilization

Currency stabilization, however, turned out to be more difficult than anticipated. The stable conversion of different currencies into gold or dollars at fixed exchange rates did not become possible until the end of 1958. For about a dozen years, until 1971, each major currency had a par value in gold and in dollars. For that same short time the American dollar, like the British pound before 1914, was accepted as the equivalent of gold itself. But the postwar economic scene changed rapidly; the era of the “gold-dollar standard” proved short-lived, and a system of “floating currencies” and fluctuating exchange rates took its place.

---

The IMF and the  
World Bank

Meanwhile two important agencies established after the war helped in international financial settlements. The International Monetary Fund (IMF) provided loans to governments to manage temporary balance of payments difficulties and to help reduce the need for currency devaluations. The International Bank for Reconstruction and Development (or World Bank) made long-term loans to the governments of poorer countries for economic development. Both agencies played a larger role in later years than in the immediate postwar era, and both became controversial when critics complained that their policies did not really benefit the world’s poorer nations or people. Both were located in Washington, their major funding provided by the United States. The economic center of gravity for the West, like the political and the military, lay after 1945 on the American side of the Atlantic.

### *European Integration: From the Common Market to the European Community*

---

Expansion and unity

As western Europe expanded economically, it also drew closer together in a more integrated economic system. There had been numerous proposals in the interwar years for a European federation. The war, the wartime Resistance movements, the Marshall Plan, European cooperative recovery efforts, and the threat from the Soviet Union in the Cold War all reinforced the idea that western Europe’s future lay in unity. A number of European leaders pressed for the creation of a “United States of Europe.” In 1949 delegates representing the parliaments of ten countries met in Strasbourg to establish a Council of Europe with the hope that it might become a legislative body for a federated Europe. Although the Council of Europe grew in membership over the years and continued to support the idea of federation, it never became an important political force. It confined itself to humanitarian, cultural, and social issues. In 1958 it set up a European Court of Human Rights to protect the rights of individuals in its member nations against arbitrary government actions. It banned corporal punishment in the schools and outlawed the death penalty for convicted criminals.

European integration itself took a different path, beginning in the economic area. In 1948 Belgium, the Netherlands, and Luxembourg created a customs union, called Benelux, which provided the benefits of a sizable free trade area for the three small countries. At the same time the visionary but pragmatic French administrator Jean Monnet, who had helped reorganize the postwar French economy, recognized that the first steps toward greater European unity had to develop along modest economic lines and begin with specific objectives.

In 1952, under a plan designed by Monnet, six West European countries—France, the Federal Republic of Germany, Italy, and the three Benelux nations—placed their coal and steel industries under a form of supranational authority. They established the European Coal and Steel Community, its headquarters in Luxembourg. The six nations not only agreed to eliminate import duties and quotas on coal and steel but also placed production under a common High Authority with decision-making powers. A council of ministers represented the six governments, but the High Authority carried out major administrative functions.

---

---

*The European Coal  
and Steel Community*

Monnet was the first president of the European Coal and Steel Community, which paved the way for economic integration that would extend far beyond a single sector of the West European economy. In a momentous second step, the same six nations on March 25, 1957, signed the Treaty of Rome, creating a large free-trade area or customs union, the European Economic Community, or Common Market, its headquarters in Brussels, with the goal of moving toward full economic and even political integration. The six nations pledged to eliminate tariff barriers, develop a common tariff with respect to the outside world, harmonize social and economic policies, and work toward the free movement of capital and labor. Under a separate treaty the member countries also agreed to coordinate their nonmilitary atomic research and technology in a European Atomic Community.

---

---

*The Common Market*

The six-nation Common Market, encompassing 175 million people in 1958, quickly became one of the thriving economic aggregates of the expanding world economy. By 1968, even earlier than anticipated, the last internal tariff was dropped and trade among the six nations grew at a rate double that of trade with outside countries. Its influence spread to the former European colonies, with which it worked out preferential trade arrangements. Through the Common Market, western Europe set about to recapture a key role in the new configuration of global affairs, which had been dominated since 1945 by the two superpowers. The Common Market also helped further absorb a revived democratic West Germany into western Europe and to nurture reconciliation between France and Germany, ending the internecine rivalries that had devastated the European continent in the first half of the twentieth century.

In 1967 the three “Communities” consolidated themselves into what was now designated the European Community. Their high commissions became the European Commission and their assemblies became the European Parliament, meeting in Strasbourg. The members of the European Parliament took seats by party affiliation and not by nation. In 1979, for the first time, they were not chosen by their respective governments but were elected by a Europeanwide electorate. The Parliament enjoyed only limited legislative authority, but it supervised the budget and the European Commission and kept alive the idea of unity. Final decision making still rested with the council of ministers representing each of the member nations, whose decisions on important matters had to be unanimous.

---

---

*The European  
Community*

Great Britain initially refrained from joining the Common Market. Its economic ties to the Commonwealth, its dependence on low-priced food imports, and its unwillingness to accept any supranational authority kept both Labour and Conservative governments from joining. But Britain's economy continued to lag behind the economic growth of the major West European nations, prompting the British government eventually to seek Common Market membership in 1963. Britain's request was vetoed by President de Gaulle, however, because he regarded Britain and its admittedly “special relationship” with the

United States as a threat to French leadership on the Continent. Not until after de Gaulle retired from the political scene in 1969 did Britain gain admission.

---

*Advance toward  
political unity*

If the years 1958–1968 showed remarkable gains in economic integration, the advance toward political unity was slower. Although de Gaulle understood the contribution of the Common Market to the prosperity of western Europe and envisioned a strong western Europe as a counterpoise to the two “hegemonic superpowers,” he opposed political or supranational authority for the Community. Europe had to be a Europe of sovereign states, a *Europe des patries*. The more dedicated Europeanists were disappointed. Yet the supranational economic and political machinery of the Community, the day-to-day cooperation of the European civil servants or bureaucrats (inevitably called “Eurocrats”) in Brussels and Strasbourg, and the close consultation on common interests were favorable signs for unity, even apart from the military and defense ties that brought the western Europeans together in NATO. French-German friendship, cemented by de Gaulle and Adenauer and reinforced by their successors, remained the linchpin of cooperation within the Community.

The Europeans showed no haste to surrender their national sovereignty and independence, but the European Community created a strong sense of common destiny, a shared faith in democratic institutions and market economies and a concern for human rights and social needs. It not only contributed immeasurably to the economic and political strength of western Europe but also helped restore it to a larger role in world affairs; and by the beginning of the twenty-first century the European Community was projecting its own transnational military force.

---

*West European  
competition*

Western Europe accounted in the 1960s for one-fourth of all imports and one-fifth of all exports in the world economy; for a time its exports equaled those of the United States and Japan combined. One-third of the largest multinational corporations, that is, corporations which set up subsidiaries outside their own country for manufacturing or sales, were European. London, Frankfurt, and Paris were again important financial centers. In 1971 West European steel production surpassed that of the United States. European (and Japanese) automobiles cut sharply into American domestic and foreign markets. Self-sufficient in food, western Europe became the world’s largest exporter of dairy products. The Federal Republic of Germany, in the 1960s, enjoyed a gross national product exceeded only by the economies of the United States and the U.S.S.R., even though it had only one-fourth the population of each; it accounted for one-third of the Common Market’s gross national product. Western Europe and Japan were whittling away at the American economic lead in production and trade and bringing to a close the era of the dollar’s supremacy.

### *End of the Gold-Dollar Standard, 1971*

---

*Trade imbalances*

The new trading patterns created monetary problems. Because America’s exports no longer exceeded its imports, American trade shifted to an unfavorable balance of payments. The United States spent more abroad than it earned abroad. The postwar dollar shortage in other countries gave way to a “dollar glut.” Western Europe accumulated large dollar reserves (or “Eurodollars”), some \$50 billion by 1971; oil-rich Arab states held “petrodollars.” The number of dollars held abroad exceeded American gold reserves.

The shift in the American economic position undermined confidence in a dollar which many now viewed as overvalued. De Gaulle, resentful of American political and economic

The global economy of the 1970s and the “floating” of national currencies gave an ever-growing importance to the world’s leading stock exchanges and financial markets. Governments in all parts of the world found their money, debts, and economic stability significantly affected by the speculations or judgments of influential investors and financial traders. This picture of the New York Stock Exchange in 1979 suggests the scale of the modern financial systems and the bustling activity of a typical trading day.

(Bettmann/Corbis)

power, demanded an end to the gold-dollar standard and a return to gold itself. In 1965 France redeemed hundreds of millions of its dollar holdings for gold. Other central banks in Europe and Japan did not follow suit, but private investors speculated against the dollar. American gold and foreign currency reserves dropped precipitously.

In 1971 President Nixon unilaterally suspended gold convertibility and thus devalued the dollar, with a second devaluation in 1973. The global monetary system projected at Bretton Woods ended. Despite many proposals, there was no formal reform. Instead, on a day-to-day basis and with considerable success, the world’s major currencies were allowed to “float,” that is, to fluctuate daily

---

*Floating currencies*

against each other and against the dollar in world markets. Gold itself fluctuated freely and official gold prices were abolished. Although the American dollar remained the world's principal reserve currency, the West German mark and the Japanese yen took their place beside the dollar as key currencies.

The breakdown of the postwar monetary arrangements did not seriously affect the world economy. Currencies did not collapse because they were no longer exchangeable for gold. For currency stability the world learned to rely mainly on international consultation and rapid exchange of information, but governments found their currencies and economic policies vulnerable to a global financial system that crossed all national boundaries.

## 112. THE COMMUNIST WORLD: THE U.S.S.R. AND EASTERN EUROPE

### *Stalinism in the Postwar Years*

In March 1953 Russia's twentieth-century Peter the Great died. Like his eighteenth-century tsarist predecessor, Stalin had a massive impact during his close to 30 years in power. He was responsible for industrialization in the 1930s, the rallying of the country in the Great Patriotic War, the expansion of the nation's borders, the consolidation of Communist regimes in eastern Europe, and the emergence of the Soviet Union as a nuclear power. But the human costs of the Stalinist transformation of the country were staggering. Millions had fallen victim in the 1930s to his forced collectivization of the countryside and the ensuing famine, and additional millions had died as a result of his purges. Western and Soviet scholars alike have estimated the total figure of Stalin's victims at least as high as 20 million, quite apart from the millions of lives lost in the Second World War. Because the civil war and war communism earlier under Lenin had also taken millions of lives, the Communist regime from its emergence in 1917 to its demise in 1991 must be counted among the costliest experiments in social engineering in all history.

---

#### *Stalinist terror*

The Stalinist terror had continued during the war. Entire ethnic groups like the Crimean Tatars and the Volga Germans, suspected of collaboration with the Nazis, were forcibly moved east to Siberia. Mass deportations took place from Estonia, Latvia, and Lithuania, the three Baltic republics that had been formally annexed in 1940. At the war's end, returning Soviet soldiers who had been prisoners of war and civilian deportees forced to work for the Nazis in Europe were sent off to labor camps because their exposure to the West made them suspect. The unbridled authority of the secret political police, (the NKVD, later the KGB) continued to increase, and the network of forced labor camps grew in size. Ideological restrictions tightened. Stalin's personal suspicions, growing sharper with the passage of the years, filled even his closest associates with dismay. In later years, in a freer atmosphere, the country debated whether Stalin's dictatorship represented a logical outgrowth of the Bolshevik Revolution itself and of many of Lenin's policies or was his own personal distortion.

Controls over intellectual life in the postwar years took on a vehemently nationalistic and xenophobic tone; deviations from Stalin's "line" in economics, music, genetics, history, and linguistics were forbidden. An officially inspired anti-Semitism, thinly disguised as anti-Zionism, accused Jewish intellectuals of being "rootless cosmopolitans." The political police meanwhile fabricated conspiracies to justify the terror. In the fictitious "doc-

tors' plot," officially announced in early 1953, a score of Jewish doctors were arrested for plotting to poison Stalin and other Kremlin leaders; one month after Stalin died, his successors withdrew the charges and freed the imprisoned physicians.

### *Khrushchev: The Abortive Effort at Reform*

After Stalin's death the party leaders resolved to exercise collective control, determined that no single leader should again dominate party and government. In the struggle for power, however, authority gradually shifted to Nikita S. Khrushchev. Outwardly jovial and ebullient, Khrushchev was a tough and hardened party stalwart who had enforced Stalin's purges in Ukraine and had long been a member of the Central Committee and Politburo, but he was shrewd enough to recognize the need for change.

In part to win allies against those in the party who were opposed to change, Khrushchev encouraged a greater measure of cultural and intellectual freedom—a "thaw." He put restraints on the still formidable powers of the political police. He surprised many with an attack on Stalin's record. In a speech to the twentieth party congress in 1956, he officially revealed or corroborated the "crimes of the Stalin era," making partial but nonetheless startling disclosures of the Stalinist terror. Stalin had been personally responsible for the purges and executions of the 1930s, and millions of victims had been innocent of the charges against them; his most intimate colleagues had lived in fear for their lives. Khrushchev also revealed Stalin's initial loss of nerve and ineptitude at the time of the German invasion in June 1941.

---

Khrushchev's "thaw"

Although Khrushchev criticized Stalin, the thaw in Soviet society was never systematic or thorough. In 1958 Boris Pasternak was forbidden to accept the Nobel Prize in literature because his novel, *Dr. Zhivago*, by stressing individual freedom, implicitly condemned the oppressiveness of Soviet society. But in 1962 Alexander Solzhenitsyn was permitted to publish his *One Day in the Life of Ivan Denisovich*, a depiction of human suffering in the world of the forced labor camps. Khrushchev continued the de-Stalinization campaign. Cities named in Stalin's honor were renamed: Stalingrad, the most famous, became Volgograd. Stalin's body was removed from the mausoleum on Red Square, where it had lain next to Lenin's, and buried outside the Kremlin Wall.

For the economy Khrushchev pressed decentralization, attempting to loosen tight central economic controls by creating regional economic councils and offering factory managers greater autonomy and incentives for efficiency and profitability. Meanwhile the country successfully tested the hydrogen bomb; launched its first space satellite, *Sputnik*, in 1958; and built its first intercontinental ballistic missiles. The Soviet economy was second only to that of the United States in gross national product. Within a decade, Khrushchev boasted in the early 1960s, the Soviet economy would surpass the American. The stress on heavy industry and on military expenditures meant, of course, continuing privation for the ordinary citizen, and the emphasis on quantity to the neglect of quality concealed deep flaws in the system as a whole.

---

Decentralization

Khrushchev's most ambitious effort lay in agriculture, the weakest sector of the economy ever since Stalin's forced collectivization. He sought to bring under cultivation the "virgin lands" of Soviet Central Asia, in Kazakhstan and elsewhere, but crop failures thwarted the experiment. His reforms did little to alter the bureaucratized system of collective and state farms inherited from Stalin or inspire the collective farmers to increase their

The Cold War did not end after the death of Joseph Stalin, but the new Soviet leader Nikita Khrushchev spoke of “peaceful coexistence” with Western nations and traveled to the United States. Wearing his Soviet medals, Khrushchev appears in a congenial mood during a White House meeting in 1959 with the American President Dwight Eisenhower and Vice President Richard Nixon.

(RIA-Novosti/SOVFOTO)

output.<sup>1</sup> For the party itself he unsuccessfully sought fixed terms of office for important party posts. Few of his reforms were acceptable to the government and party bureaucrats, the *apparatchiki*, who saw their privileged positions threatened and who mustered opposition to his “hare-brained” schemes.

Khrushchev pursued a truculent foreign policy. Proclaiming that war was not inevitable with the United States and other capitalist countries, he spoke of “peaceful coexistence,” and relations for a time improved. But in 1960 he scuttled a summit meeting with Allied leaders and in 1962 overreached himself in the confrontation with the United States during the Cuban missile crisis (to be described in a subsequent chapter). He also clashed openly with Communist China. His boastfulness and recklessness, his retreat in Cuba, the failure of his agricultural and other economic policies, and his attempt to reform the party itself led to his downfall. In 1964 the party leadership ousted him from office. He lived quietly in Moscow until his death in 1971. In the post-Stalin era, a reformer did not necessarily have to fear for his life, but there were clear limits to the reforms the party and bureaucracy would tolerate. Leonid I. Brezhnev, who had helped engineer Khrushchev’s downfall, soon emerged as the new Soviet leader.

---

Khrushchev's fall

*Eastern Europe: The Decades of Dictatorship*

Although nothing like the Russian Revolution of 1917 erupted in Europe after the Second World War, communism made dramatic advances in central and eastern Europe through the Red Army's military presence and the support given to local Communist leaders. Eleven European states and 100 million Europeans fell under Communist-style governments. The areas considered in 1919 by the Allied peacemakers to be a protective buffer against Bolshevism were now under Communist domination.

The three Baltic states, Estonia, Latvia, and Lithuania, came under Soviet control under the terms of the Nazi-Soviet pact, and in 1940 they were incorporated into the U.S.S.R. as Soviet socialist republics. Later, in the sweep of military operations during the last months of the war, Poland, Hungary, Romania, Bulgaria, and Czechoslovakia fell into the orbit of Soviet influence. East Germany, initially part of the joint Allied occupation of Germany, was shaped into a sixth Soviet satellite as the German Democratic Republic. Yugoslavia and Albania, liberated by their own partisan leaders rather than by the Red Army, were governed by Communist regimes but with looser ties to the Soviet Union and soon broke with the Soviets. Despite its defeat in the Soviet-Finnish War in 1940, Finland escaped Communist domination. Accepting its wartime territorial losses, it maintained its independence by a cautious neutrality in foreign policy and a discreetly correct relationship with the Soviets. Austria, after a decade of joint occupation by the four Allied powers, gained independence as a neutral state in 1955.

---

---

*Soviet satellites*

*Consolidation of Communist Control*

The Soviets consolidated control in eastern Europe in stages. Soviet military occupation made it possible for local Communist leaders, many returning from exile in Moscow, to dominate Left coalition governments. In the early coalition governments everywhere, the Communists shared power but held the key ministries of interior, propaganda, and justice, and controlled the police, the army, and the courts. Individuals alleged to have been "fascist" or to have collaborated with the Nazis were barred from public life and from voting; the loose definition of "fascist" and "reactionary" barred many who were only anti-Communist. In the first elections, in Poland and elsewhere, purges and disfranchisement made a mockery of Stalin's pledge at Yalta to hold "free and unfettered elections" in eastern Europe. Protests by the United States and Great Britain only hardened the Soviet position.

The new regimes confiscated and redistributed large estates and put uncultivated land to use, so that 3 million peasant families acquired about 6 million acres of land; the agrarian reforms were the final blow to the landed aristocracy that had once ruled in eastern Europe. They also nationalized the economy. As they struggled with postwar reconstruction, the new regimes had lent a sympathetic ear to the American invitation in 1947 to accept Marshall Plan aid. But Stalin was not disposed to permit the East European countries to drift into the Western economic orbit. After the summer of 1947, wherever non-Communists were still strong, the Communists ousted their political rivals and banned or reduced to impotence all other political parties. In Czechoslovakia the coalition government lasted longer than elsewhere but fell victim to a Communist coup in February 1948.

## CHRONOLOGY OF NOTABLE EVENTS, 1945–1967

---

1945	The United Nations is established at a conference in San Francisco
1947	Secretary of State George C. Marshall announces U.S. plan to aid the rebuilding of Europe
1948–1949	American airlift of supplies sustains West Berlin during Soviet blockade
1949	The Soviet Union successfully tests an atomic bomb
1949	United States and Western Europe create NATO
1949	Mao Zedong and the Communist party proclaim the People's Republic of China
1950–1953	Korean War demonstrates new American policy to “contain” communism
1953	Death of Stalin opens new era in Soviet and East European history
1956	Unsuccessful revolts against Soviet control in Poland and Hungary
1957	Six West-European nations establish a new Common Market for trade
1957	Mao launches “Great Leap Forward” in China; leads to deadly famine
1958	France establishes the Fifth Republic with Charles de Gaulle as president
1962	French war in Algeria ends with recognition of Algerian independence
1966–1967	The “Cultural Revolution” creates disruptions throughout China

---

Poland and Hungary, clashed also with the Roman Catholic church; high-ranking prelates were brought to public trial and imprisoned, and church property was confiscated. The Communist leaders themselves soon became Stalin's victims. From 1949 to 1953, reflecting the repression in the Soviet Union in Stalin's last years, purges, arrests, trials, confessions, and executions occurred in the highest ranks of each party. Leaders were accused of nationalist deviations and of conspiring with Tito, the independent-minded Communist leader of Yugoslavia.

The new “people's democracies” took steps to collectivize agriculture. In Bulgaria, the most docile of the satellites, over half the arable land was collectivized; but in Hungary, only about a third. In Poland, where resistance was strongest, collectivization was halted after a short time. Agriculture in the people's republics, as in the Soviet Union, remained the weakest part of the economy. Peasants diligently cultivated their individual plots of land but worked reluctantly on the large collectives. All of the East European societies also entered a new phase of industrialization. But the emphasis on heavy industry to the neglect of consumer goods and pressures to complement the economy of the Soviet Union severely limited the improvement of East European living standards.

The Soviets formalized their economic relationship with Eastern Europe through the Council for Mutual Economic Assistance, but the Council (established in 1949) never worked as cooperation among equals. The Soviets provided low-cost raw materials and oil and provided a large market for East European goods, regardless of their quality, but much of the economic cooperation principally benefited the Soviet Union. Militarily, the Warsaw Pact,

---

Collectivization

---

Economic and  
political cooperation

signed in 1955, brought the six East European countries together into a mutual defense alliance, and Soviet troops remained stationed in eastern Europe in large numbers.

Yugoslavia, freed from the Nazis largely by its own partisan armies, made a remarkable show of resistance to the Soviets. The Yugoslav Communist leader, Marshal Tito, kept a tight grip on the multinational state but loosened centralized controls over the economy and abandoned collectivization of agriculture. He pursued an independent foreign policy, openly defied Moscow, and took his stand with the neutralist nonaligned nations of Asia and Africa. The first major Communist figure to declare his independence from Moscow, Tito established a model of national autonomy for other Communist leaders and parties to follow.

### *Ferment and Repression in East Germany, Poland, and Hungary, 1953–1956*

The changes in the Soviet Union after Stalin's death directly affected the Soviet satellites. The East Europeans chafed at collectivization, forced industrialization, austere living standards, subservience to the Soviets, and harsh rule by Stalinist-type leaders who remained in power for years after Stalin disappeared. An initial outburst, riots in East Berlin in June 1953, was quickly suppressed. New ferment rose to the surface, however, after Khrushchev denounced the brutal character of the Stalin dictatorship and, in an attempt to win back Yugoslavia, made the official concession that "different roads to socialism" were possible. This concession and his de-Stalinization speech in 1956 opened a Pandora's box; undermining Stalin's infallibility undermined Soviet infallibility as well.

In 1956 open revolt broke out in Poland and Hungary, led by the East European Communist party leaders themselves. In Poland, where national sentiment and church attachments ran deep, pressures for internal freedom and for independence from Moscow led to riots and demonstrations. The Communist leader Władysław Gomułka relaxed political and economic controls, halted collectivization, improved relations with the church, and took steps to loosen the bonds to Moscow. The country welcomed an alternative to direct Soviet control. Khrushchev threatened military action but backed down. For a few years, Gomułka curbed police terror and created a freer atmosphere, but the reform era was short-lived, and Gomułka's regime controlled Poland with growing repression throughout the 1960s.

---

*Revolt in Poland and  
Hungary*

In Hungary, in 1956, events took a tragic turn. When news of Gomułka's success in Poland reached Budapest, demonstrations broke out; young rioters even toppled a statue of Stalin. The reform-minded Communist leader Imre Nagy, who had earlier been driven from the premiership, returned to power. His reform program and release of political prisoners ignited pressures not only for democratization and parliamentary government but also for the severance of ties to Moscow. Alarmed, the Soviets forced the party leadership to remove Nagy from power and to replace him with the more subservient János Kádár, who accepted Soviet intervention. Khrushchev dispatched troops, tanks, and artillery to suppress the "counterrevolution" and forcefully reestablished Communist rule. Severe reprisals followed. Nagy himself was imprisoned, then tried and hanged, and his body was thrown into a mass grave. In the wake of the repression, 200,000 Hungarians fled into exile, mainly to the United States, a larger number than at any time since the crushing of the European revolutions of 1848–1849. The Soviet tanks in Budapest weakened any remaining illusions about the liberalism of Stalin's successors, provoked international condemnation, and drove many Communists in western Europe and elsewhere to renounce their affiliations with Communist parties.

The demand for reforms spread rapidly in Hungary during the fall of 1956. Emboldened by changes in Communist Poland and by the policies of Hungarian reformer Imre Nagy, the people of Budapest protested the repressive policies of the Soviet Union, destroyed statues of Communist leaders, and (like the group in this picture) defiantly burned portraits of Joseph Stalin. The Soviets soon intervened with decisive military force. Nagy was executed, and the new Soviet-supported Hungarian regime crushed all forms of anti-Communist dissent.

### 113. THE COMMUNIST WORLD: MAO ZEDONG AND THE PEOPLE'S REPUBLIC OF CHINA

#### *The Civil War*

The proclamation on October 1, 1949, of the People's Republic of China by Mao Zedong and the Chinese Communist party was among the most momentous of events shaping the world after 1945.

The long civil war between the Guomindang, or Nationalists, and the Communists had been fought intermittently across much of China since 1927. In 1937 Nationalists and Communists entered into an uneasy alliance to fight the Japanese. Mao agreed to place the People's Liberation Army under the command of Chiang Kai-shek and the Nationalists, but Mao actually waged a separate guerrilla war against the Japanese from the northern bases

he controlled and over which he imposed his own Communist regime, winning peasant support through land reforms. The Nationalists, cut off by the Japanese from the urban centers of eastern China, suffered from chaotic economic conditions and severe inflation and became increasingly corrupt, authoritarian, and repressive.

---

Nationalists and  
Communists

The victory over Japan in 1945 set the stage for renewed civil war. Nationalist troops, with American aid, returned to eastern China. The Communists, moving out from their guerrilla bases, poured into the northern provinces and made contact with the Russians in Manchuria. When Mao refused to surrender the northern provinces, disband his army, and accept Nationalist political control, the civil war resumed. An American-sponsored truce temporarily halted hostilities, but when the U.S.S.R. withdrew from Manchuria in the spring of 1946 (after removing Manchurian industrial assets as reparations), Nationalists and Communists clashed over control of Manchuria.

In the fighting from 1946 to 1949, the Nationalists, despite substantial American support, lost ground steadily. By the autumn of 1949 the Communists had routed the demoralized Guomindang armies. Chiang withdrew his shattered forces to the island of Taiwan, where he established a small but soon prospering Republic of China. The mainland regime never gave up its claim to Taiwan, and the fate of Taiwan remained a contentious international issue for later generations. In 1971 Taiwan had to surrender to the People's Republic of China the Chinese seat in the United Nations, which also carried with it permanent membership on the Security Council.

Taiwan

### *Mao: The New Regime*

From 1949 until his death in 1976, Chairman Mao, as uncontested head of the party, molded the destinies of China. Much more is known about him now than at the time. He had earlier imposed his iron rule on the party and on the populations under his control. He had ruthlessly eliminated all party rivals in periodic purges during the long struggle with the Guomindang. Having finally gained power over all of China, he was determined to bring about the total transformation of the agrarian and undeveloped Chinese society, which had been the victim of foreign intervention and invasion for well over a century. Mao wanted to create a new proud China in which the social order of domineering landlords and oppressed peasants would be reversed, the country would be industrialized and modernized, and China would be internationally respected. In many ways he personified the Chinese resentment of Western imperialism, which had humiliated China and all but carved the country to pieces in the nineteenth century. He was resolved to set China on the path to modernity, no matter what the cost.

---

---

Mao Zedong

In 1949, for the first time since the revolution of 1911, and indeed for generations before that, a unified central government controlled China, able to direct and mobilize the most populous nation in the world. Even before the Communist triumph Chairman Mao, despite his modest title, already saw himself as something of a successor to the ancient Chinese emperors. He would link Marx's world view, which since 1920 he had adopted as the instrument for Chinese liberation, to the 4,000-year-old imperial tradition of an all-powerful emperor ruling together with mandarin scholar-officials. The traditional emperor was to rule with the mandate of Heaven in accordance with Confucian moral precepts, as interpreted by his learned officials. They were obligated to criticize the emperor, but if they went too far they could meet a grim end—in ancient times buried alive. The new regime inherited also an ancient tradition of Chinese preeminence in the East Asian world. With traditional ways of life disrupted by decades of revolution, civil struggle, and the war against Japan, Mao's communism in some ways provided a modern surrogate for the older Confucian values.

---

*The Soviet example*

Mao leaned heavily on Soviet experience. The Communist party controlled and policed each level of government and manipulated all organs of information and political indoctrination. The party also added “thought control” and “rectification” labor camps, and it inaugurated a reign of terror. In the first six months of 1950, by Mao’s own estimate, some 700,000 “local bullies and evil gentry” labeled “counterrevolutionaries” lost their lives. In the next two years, from 1950 to 1952, a campaign directed against the “landlords” as a class sent some half million more men, women, and children to death or to repressive labor camps. The purges then took a different turn. In 1956, in what seemed to be a burst of enthusiasm for greater diversity and toleration in the country, Mao proclaimed: “Let a hundred flowers bloom, let a hundred schools of thought contend.” But as soon as critics were encouraged to come forward, he quickly instituted a new period of repression, an “antirightist” campaign that dispatched more than a half million “rightists,” and “class enemies” to prisons or forced labor camps, many never to return.

Mao relentlessly mobilized the nation to rebuild the war-devastated economy and then to transform the country into an industrial power. Eliminating the old land regime in the countryside, the party established agricultural cooperatives as a prelude to collectivization. The country’s first Five-Year Plan, launched in 1953 with Soviet economic and technical assistance during an initial period of friendly relations, concentrated on heavy industry, with significant results even if all targets were not reached. In agriculture the same floods and droughts that had troubled China for centuries refused to obey government decrees.

---

*The Great Leap Forward*

Impatient with what he considered the slow progress of social change, Mao in 1957 launched the “Great Leap Forward,” designed to transform the country’s industry and agriculture more rapidly. The program adopted by the Communist party proclaimed that China would “catch up with Britain” in a few years’ time. The cooperatives in the countryside were amalgamated into larger “people’s communes.” Tightly organized in military fashion as production brigades, they were responsible for mechanizing production on the farms and developing local rural industry. Communal kitchens, nurseries, and schools left women freer to work on an equal basis in the fields and factories. Borrowing from some of the discredited Soviet experiments of Stalin, the government ordered farmers to abandon their traditional farming and to plant grain and rice everywhere, whether in suitable soil or not, and to crossbreed crops. Farmers were also encouraged to set up metallurgical furnaces in their backyards and learn to make steel.

The Great Leap Forward turned into disaster. Despite the image Mao had cultivated as the champion of the peasantry, he miscalculated on its ability to resist change. The persistent opposition of the peasants, severe crop failures, and the more bizarre experiments brought a disastrous famine. Up to 30 million died of hunger in what may have been the most disastrous agricultural experiment of all time. The outside world at the time knew little of what was going on. Visitors to China were shielded from the disaster, which later scholars called “Mao’s secret famine.” Eventually moderates within the party curbed Mao’s excessive zeal. Although the land remained collectivized, the party suspended the more rigid aspects of the communal experiment. Farmers were even permitted to sell or barter a portion of their crops.

---

*Industrial gains*

But the industrial sector made progress. In the years before the Communist regime, annual steel production had never reached 1 million tons; by 1960 it exceeded 18 million. China’s industrial output in 1960 ranked among the top ten powers in the world, and its factories had created a base for further expansion. The

The Cultural Revolution in China was led by millions of young “Red Guards” who—with the encouragement of Mao Zedong—sought to rekindle the revolutionary fervor of the Communist revolution and to disrupt or overthrow the bureaucratic order in Chinese society. These young people in Shanghai demonstrated their militant support for Chairman Mao during a typical Red Guard rally at the height of the Cultural Revolution in early 1967.

(Bettmann/Corbis)

government also marshaled the country’s scientific and technological talents for the new technological age. It successfully tested an atomic bomb in 1964 and a hydrogen bomb in 1967, and it orbited space satellites in the 1970s.

The regime transformed modern Chinese life in many ways. Road, rail, and air transport physically unified the country. Public sanitation and public health received a high national priority. Labor gangs systematically drained and filled snail-infested canals, curbing the spread of diseases like schistosomiasis. Progress was made in overcoming illiteracy. The government reformed and simplified the written Chinese language and moved toward a single spoken tongue. It also adopted a new transliteration system for spelling Chinese names and words in the Latin alphabet. Women, encouraged to reject traditional Confucian virtues of obedience and deference, received legal equality with men and could count on new opportunities, even if few entered the higher ranks of political power. Old abuses such as child marriage and concubinage were outlawed; foot-binding had been eliminated earlier in the century. More profoundly than the Russian, the Chinese Revolution refashioned the habits and ethos of a gigantic population, reaching remote villages and hamlets untouched for centuries. Within a generation an agrarian, semif feudal country was developing into a modern industrial society. Mao’s transformation was succeeding—at tremendous cost, to be sure.

---

---

*The Cultural Revolution*

Suddenly, beginning in 1966, Mao disrupted the country by unleashing the Cultural Revolution. Fearful that the revolution would not survive him and that its purity was endangered, he called for a purge of the highest ranks of government and party and for the removal of those who had succumbed to bureaucratic routine or lacked the zeal to push on with the social revolution. For his cause he mobilized millions of teenage students and other young people as Red Guards, or armed shock troops. Converging on Beijing and other cities, they denounced bourgeois ways, attacked Western imperialist culture, and brutally harassed and humiliated government and party officials as well as cultural and educational leaders. The worst effects of the Cultural Revolution fell on intellectuals. Men and women of all backgrounds were arrested, marched through the streets in dunce caps, beaten, and maimed.

Because Mao proclaimed the virtues of the land, white-collar workers, teachers, students, and party officials were forcibly sent off to the countryside to labor in the fields and experience rural life. The economy and the entire educational system broke down. When fanatical mobs threatened to tear the country apart, army leaders finally intervened and received Mao's authorization to restore order. By the time the worst disturbances were over in 1969, hundreds of thousands of lives had been lost. Three million persons had been sent to labor camps or to work in the fields. Thousands of high-ranking officials in the government and party, including two-thirds of the party's central committee, had been purged. The impact of the Cultural Revolution lingered on in an authoritarian pall that settled over the country. Mao himself retreated after 1971 into a kind of self-indulgent isolation in Beijing.

The pragmatic and moderate Zhou Enlai, who had little influence in restraining Mao's more radical experiments, faithfully served him for many years as premier and foreign minister. Had he outlived Mao, he might well have been his successor, but Zhou Enlai died in early 1976. Later that same year, Mao died. The Great Helmsman was widely mourned as the towering father of the revolution for over half a century and as one of the giant figures in the history of China. He had forged a revolutionary party and a revolutionary army; fought the Japanese; defeated the Nationalists; and presided over a revolution that had unified, revitalized, and modernized the country.

---

---

*The Great Helmsman*

His theoretical teachings on the struggle against imperialism and on the vanguard role of the peasantry, and his practical successes in guerrilla warfare, influenced revolutionaries all over the world. His most famous precept, that "political power grows out of the barrel of a gun," reinforced revolutionary zeal everywhere. His homilies, published in a little red book called *The Living Thoughts of Chairman Mao*, were widely quoted and assiduously studied. Mao's revolution had brought self-respect and self-confidence, industrialization, technological progress, unity, and pride to the country.

But his radical experiments and the uncontrolled violence he had repeatedly unleashed also did irreparable harm. His experiments in social engineering in some ways outdid Stalin's and must also be counted among the most costly in all history. By any criteria he ranks among the most brutal of dictators. His successors a few years later tempered their praise for Mao, still lauding his monumental achievements as a revolutionary leader but criticizing him for his "grave blunders."

---

---

*Foreign Affairs*

The emergence of China as a second major Communist power undermined the ideological leadership of the Soviet Union. Stalin, playing his own game, had not always wholeheartedly supported the Chinese Communists in their civil war with the Guomindang. But once

the Communist regime was established, the U.S.S.R. surrendered to it the concessions acquired in Manchuria under the Yalta agreement. In the 1950s the Chinese received military aid, capital loans, and technical assistance from the Soviets. The Korean War, in which Chinese troops fought the Americans as alien intruders who threatened their very borders, for a time drew them closer to the Soviet Union. Western leaders became even more firmly convinced that a monolithic world Communist movement existed. The Chinese Communists resented American support for the regime in Taiwan and the American effort over two decades to bar the People's Republic of China from the United Nations.

Although professing peace, the People's Republic pursued an aggressive foreign policy. In 1950, pressing old Chinese claims of suzerainty over Tibet and in the guise of liberating the country from clerical, that is, Buddhist, despotism, China occupied Tibet and forcibly maintained its rule there over the years. Monasteries were closed; the Dalai Lama, the country's ruler, was forced into exile; and large numbers of Chinese arrived as settlers. Unresolved tensions continued to affect the people of Tibet and the Tibetan borders. In 1962 China clashed with India in border disputes along India's northeastern frontier, although India from the beginning had been one of the staunchest defenders of the Chinese Revolution.

---

*An aggressive foreign policy*

In the 1960s relations with the Soviet Union became strained. The two states hurled polemics at each other in their rivalry for ideological leadership and for control of the lands of inner Asia into which Russia had expanded in the age of the tsars. Mao, undaunted by nuclear arms, accused Khrushchev of pusillanimous behavior in the Cuban missile crisis of 1962. In 1972 the two countries clashed over border territory that divided Manchuria and Russia's maritime provinces, and they continued to confront one another with large armies in other areas. Although both countries supported North Vietnam in the Vietnam War, China after the war opposed the Soviet-backed intervention by Vietnam in Cambodia. Not until the 1980s was there a rapprochement and the promise of troop reductions along the Chinese-Soviet borders.

With time, relations with the United States improved. In 1971, when the United States withdrew its objections, the People's Republic of China replaced Taiwan in the United Nations. The following year Mao welcomed President Nixon on a dramatic visit to China. Diplomatic channels opened and relations were normalized. The United States conceded that one day Taiwan would be reunited with the mainland, with its different social and economic system respected, but let it be known that it firmly opposed any forcible annexation.

---

*Mao meets Nixon*

The Chinese People's Republic had emerged as one of the great potential centers of global power. And in 1976 it was about to embark on an impressive new era of more peaceful modernization under Mao's successors.

Meanwhile, the history of Mao's "anti-imperialist" Chinese revolution had attracted wide interest in many parts of the postwar colonial world, to which we now turn. Most of this far-flung colonial world entered a new stage of nationalist agitation after the Second World War; and the new nations that emerged from this agitation in Asia, Africa, and the Middle East soon entered also into both the global conflicts of the Cold War and the fast-flowing global currents of the turbulent world economy.

# POSTCOLONIAL NATIONS IN ASIA AND LATIN AMERICA

- 114. The Emergence  
of Independent Nations  
in South Asia
- 115. The Emergence  
of Independent Nations  
in Southeast Asia
- 116. Changing Latin America

 *Of all the political changes* in the history of the modern world, affecting hundreds of millions of people, nothing was more revolutionary, more dramatic, or perhaps more unexpected than the end of the European overseas colonial empires in the decades after the Second World War. In 1945 the British, the French, the Dutch, the Belgians, and the Portuguese still governed large parts of the world's population, but within 30 years each of these colonial empires disappeared. Europe's world supremacy came to an end.

The Second World War reinforced nationalist agitation for independence and freedom. It was difficult to wage war in the name of self-determination and democracy, often with the colonial countries as allies, without encouraging the idea of freedom among subject peoples. The Japanese conquests in Asia had also undermined the image of European invincibility. After the war the Europeans, economically exhausted, learned that they could rule only at prohibitive military cost and in embarrassing contradiction to their professed ideals of self-government.

In some instances the colonial powers, bowing to agitation for independence, liquidated their colonial holdings without armed struggle, as in the British withdrawal from the Indian subcontinent in 1947. Elsewhere the European powers withdrew only after protracted bloody wars, as in the case of the Dutch in Indonesia, the French in Indochina and Algeria, and the Portuguese in Angola and Mozambique. The United States also played a part in the transformation. It gave independence to the Philippines, granted Puerto Rico commonwealth status, took in Alaska and Hawaii as equal members of the federal union, and surrendered its privileges in the Panama Canal. The last prominent vestiges of the European empires in Asia ended when Britain surrendered Hong Kong to China in 1997 and Portugal transferred Macao to China in 1999. The second half of the twentieth century witnessed the largest liberation of colonial peoples and transfer of power in all history.

*Contradictions  
of empire*

---

*New nations*

The end of the colonial empires and the emergence of over 100 new nations must count among the most far-reaching consequences of the two World Wars, and especially of the Second. But many of the new nations were nations only in a limited sense. They were now sovereign territorial entities, with definite boundaries, internationally recognized, with seats in the United Nations; but many of them lacked the internal coherence and shared experience of nations in the older sense of the word. Nor did nationhood for the most part carry with it democracy, civil rights, or the rule of law, nor alleviate deep-seated social and economic problems—even in Latin America (where most nations had already gained political independence in the nineteenth century).

The imperialist colonial experience left these regions of the world underdeveloped economically. In an uneven exchange they had depended on the industrial nations for capital, technology, and manufactures, while they in turn furnished the industrial countries with raw materials, foodstuffs, minerals, oil, and other primary commodities. With assistance from the industrially developed world, they now undertook modernization programs—against many obstacles and with mixed results. The winning of political independence in Asia and Africa, the mixed record of democratic self-government after independence, the effort to share in the earth's advanced technology and financial riches, and the struggle to reconcile older cultural values with modernization all contributed to the saga of what came to be called the “developing world” in the years after 1945. The emergence of postcolonial nations was affected everywhere by the rapid growth of national populations; the legacy of colonial and regional wars; the struggle to develop modern, competitive economies; and the international conflicts of the Cold War. All of these postcolonial issues continued to affect Latin America as well as the newly independent nations in Asia, Africa, and the Middle East, so that the nations of Latin America were usually included within that broadly defined list of peoples who constituted the “developing world.”

---

*Third World*

The so-called developing nations were also described in the Cold War era as the “Third World,” which became a widely used term to distinguish the less economically advanced regions or societies from the two “industrial” worlds: the American-led bloc of capitalist nations and the Soviet-led Communist bloc. In addition to this economic meaning, however, the term “Third World” frequently carried the political connotation of nonalignment in the Cold War. Many of the formerly colonized countries sought to remain uncommitted to either the American-led or Soviet-led alliances as they struggled to establish their own independent states and national cultures. Although this specific political meaning disappeared after the collapse of Soviet communism in 1991, the term “Third World” (in its economic sense) has persisted and may survive as a synonym for the poorer nations in the contemporary global economy.

The present chapter examines the history of the new Asian nations during their first half-century of modern independence and also discusses the post-1945 political and economic changes in Latin America. The Cold War rivalries of this era often affected the course of local political or economic conflicts on both of these continents. The following chapter looks at the history of postcolonial transformations in Africa and the Middle East (where the Cold War also had important consequences) and then returns to the broad problem of economic development that has affected postcolonial and impoverished nations in all parts of the world. The nations that emerged from the various colonial empires differed widely in their struggles for independence, in their later political systems, and in their cul-

tural traditions, but they often faced similar postcolonial economic and political challenges as they sought to establish stable, modern nation-states.

## 114. THE EMERGENCE OF INDEPENDENT NATIONS IN SOUTH ASIA

### *The End of British Rule*

The end in 1947 of British rule in India, the largest and most populous of all colonial areas ruled by Europeans, was epoch-making. Unfortunately, it fueled an explosion of ethnic and religious conflicts on the Indian subcontinent. The Indian National Congress, founded in 1885, had developed strength in the interwar years under the leadership of Gandhi and Nehru. The Congress party leaders demanded independence but also wished to avoid social revolution in the complex multiethnic country. Along with the British-trained Indian civil service, they considered themselves well prepared to govern an independent state. But the Muslim League, founded in 1906, claimed to speak, under Muhammad Ali Jinnah's leadership, for millions of Muslims unwilling to live in an India dominated by the Hindus and the Congress party. The Muslims insisted on their own national state, rooted in Islam. The Congress leaders, in contrast, pressed for a unified, secular India, with religion separated from politics and with freedom of worship for all religions.

During the Second World War India supported the British, but at the same time the Congress party and the Muslim League stepped up a "quit India" campaign. To retain Indian support for the war effort and to counter Japanese anti-Western propaganda, the British pledged independence. At the war's end, the British under Labour party leadership were poised to honor their pledge, but the Congress party and the Muslim League continued to have irreconcilable differences as plans were developed for an independent Indian state. To end the impasse the British decided on partition. In 1947 Britain granted independence to two nations: to India, predominantly Hindu, with a population of 350 million at the time, which became the Republic of India; and to Pakistan, mainly Muslim, with a population of 75 million, which became the Islamic Republic of Pakistan. Large Muslim populations were concentrated in two widely separated regions of Britain's former Indian empire, and Pakistan was established as a state with two disconnected parts, West and East Pakistan, separated by a thousand miles of Indian territory. About 60 million Muslims were also left in India, which helped keep India the multireligious secular state that Gandhi and Nehru desired. Ceylon (later renamed Sri Lanka) and Burma (later called Myanmar) in South Asia also received independence from Britain at this time.

---

*Partition of India*

The partition, overly hasty and ill-conceived, led immediately to violence and a vast social upheaval. Independence in August 1947 brought with it terrible communal riots between the Hindu and Muslim communities costing at least a million lives in a matter of weeks; some 17 million Hindus and Muslims were caught up in mass expulsions and turbulent migrations. In the worst of the tragedies, in the northern province of Punjab, Hindu and Sikh religious zealots ambushed and slaughtered trainloads of Muslim refugees fleeing west to Pakistan, and Muslim fanatics did the same to Hindus and Sikhs migrating east to India. Gandhi, while praying for civil peace, was himself assassinated in 1948 by a Hindu extremist protesting his program for religious toleration. Only after the uglier features of the communal warfare subsided could the tasks of governing begin.

With his Congress party dominant, Nehru governed India as prime minister from 1947 until his death in 1964, setting the country on the path of British-style parliamentary democracy and even a kind of Fabian socialism. With no effective opposition, Nehru's program was more paternalistic than democratic. The masses looked to him to resolve the country's enormous problems of poverty; rapidly growing population; and ethnic, religious, and linguistic diversity. In addition to Hindi and English, 16 other languages received official recognition. In economic matters Nehru, a moderate socialist, understood the need for private capitalist enterprise but believed that economic planning, government controls, and the nationalization of key industries were also necessary. Under his leadership a modern industrial India with a mixed economy began to take shape and in many ways grew impressively in the years that followed.

---

*Nehru's paternalism*

Meanwhile, India and Pakistan fell into a recurring pattern of conflict, centered in part on the former princely state of Kashmir (officially, Jammu and Kashmir) in the Himalayas. Although three-fourths of the population were Muslim, the Hindu maharajah after procrastinating opted to take Kashmir into India. Open fighting over the issue of Kashmir broke out between India and Pakistan in 1948, and tense relations and intermittent conflicts have continued ever since. War again broke out over Kashmir in 1965–1966, ending in an uneasy truce. In 1971 India went to war with Pakistan, but this time to support Bangladesh in its bloody war of secession from Pakistan.

---

*Neutralism and nonalignment*

In international affairs Nehru's defense of neutralism and nonalignment in the Cold War, which he forcefully articulated at a milestone conference of emergent Asian and African nations in 1955 in Bandung, Indonesia, struck a responsive chord in many parts of the Third World. Although firmly committed to democracy, Nehru retained a deep antagonism toward Western imperialism and capitalism, which reinforced his neutralism in the Cold War. As to China, although Nehru championed the right of the People's Republic of China to pursue its own path of social development, he condemned the Chinese occupation of Tibet and, as we have seen, actual hostilities broke out over border disputes between India and China in 1962.

### *Nehru's Successors*

---

*Indira Gandhi*

When Nehru's immediate successor died in office in 1966, the Congress party leaders chose Nehru's daughter Indira Gandhi to be prime minister. Gandhi was her name through marriage, not through any kinship to the famous founder of Indian nationalism. She turned out to be a strong-willed political leader in her own right, but subordinated some of her father's more idealistic principles to political opportunism. More than Nehru, she looked for support from the masses, who idolized her for her carefully publicized pledges to abolish poverty. To win continuing support at the polls she made deals with Hindu nationalists, Muslims, and Sikhs. Corruption, already common, became even more fully entrenched.

In 1975 Gandhi, fearing losses in a coming election, proclaimed emergency rule, suspended constitutional government, and had hundreds of opponents arrested. This violation of basic democratic principles aroused strong opposition, and after close to two years an outraged parliament drove her from office. But Gandhi retained enough political support to return as prime minister in 1980 and to govern subsequently by constitutional means. Confronting a Sikh secessionist movement in the Punjab, she misguidedly sent army troops to

The British partition of its South Asian colonial empire into mostly Muslim Pakistan and preponderantly Hindu India led to chaotic mass migrations and expulsions as people fled across the new borders in all directions. These trains in Amritsar, India, were swamped with Indian refugees who were trying to move to other Indian cities after fleeing from West Pakistan in October 1947.

(Bettmann/Corbis)

invade their sacred Golden Temple at Amritsar. A few years later, in 1984, she was assassinated by Sikh soldiers of her own personal security guard.

The Congress party turned to her older son, Rajiv Gandhi, who had earlier shown little interest in politics. Governing not very effectively over the next five years, from 1984 to 1989, he seemed at times out of touch with the country's pressing social problems. By now the long-entrenched Congress party was in decline, and in 1989 it lost its parliamentary majority.

The very concept of a tolerant secular India came under siege. A strong Hindu revivalist movement grew in strength during the 1990s, preaching "Hindu values" and pledging to restore India to a Hindu "golden age" antedating the Muslim conquests and British colonial rule. A right-wing political party, the Indian People's party (the Bharatiya Janata, or BJP), used the movement for its own political ends, and through it Hindu

By the early twenty-first century, India had become a leading country in the development of computer software and other technological research. Although much of India's population remained impoverished, skilled workers at facilities such as this computer training center were increasingly prosperous participants in the contemporary global economy.

(Associated Press, AP)

---

### *Hindu revivalism*

revivalism entered the mainstream of Indian politics. The consequences were hostility, suspicion, and outright violence directed against the country's now 120 million Muslims.

Successfully exploiting widespread dissatisfaction with the Congress party, the BJP continued to increase its strength. Nonetheless, when Rajiv Gandhi was assassinated at a campaign rally in 1991, a sympathetic backlash helped the Congress party to win the new elections.

For the next five years, from 1991 to 1996, the Congress party again held office, but the Nehru-Gandhi dynasty had come to an end. The veteran reform-minded party leader V. Narasimha Rao took steps to reform the party, reduce bureaucracy, and curb widespread corruption. Rao also relaxed the economic controls that had become obstacles to economic growth in a country that was now a major economic power, restoring several nationalized industries to private ownership. He encouraged foreign investment and reduced or eliminated excessive protectionist barriers. In the 1990s India began to emerge as a global leader in the development of new computer technologies, and the Indian economy became steadily more integrated into the worldwide system of transnational commerce.

---

### *Congress party reforms*

While the economic results were impressive, the political scene grew more troubled. In December 1992 Hindu extremists clashed with Muslims over religious sites sacred to Islam, and riots erupted in major cities. The Congress Party, which was weakened by internal divisions and new corruption scandals, lost popular support and suffered a crushing electoral defeat in 1996. A series of unstable coalition governments followed until the Hindu revivalist party, the BJP, finally achieved a clear majority in 1999. The leader of the BJP, Atal Bhari Vajpayee, became Prime Minister and sought to enhance India's global standing as both an economic and military power.

Fears of a radical nationalist domestic program gradually dissipated, however, and Vajpayee did not promote the more extreme agenda of activists in the BJP. Meanwhile, the Congress Party reorganized itself for parliamentary elections in 2004 and (somewhat surprisingly) was able to return to power. The new government had to cope with the catastrophic effects of a major tsunami in 2004, which killed thousands of people along the Indian coastline, and it faced the perennial issue of relations with Pakistan—which were slowly improving by 2005, even along the contested borders of Kashmir and even as both nations continued to develop nuclear weapons.

Although Nehru had worked for a non-nuclear India, his successors took a different path. In May 1974, after refusing to sign nonproliferation or comprehensive test ban treaties, India tested an underground nuclear device and became the world's sixth nuclear nation. Two decades later, in 1998, Pakistan demonstrated its nuclear prowess by test detonating a nuclear bomb. India responded with nuclear tests of its own. Armed conflict between India and Pakistan thus took on the dimensions of a global danger, and the older dispute over Kashmir attracted worldwide attention in the early twenty-first century. Despite the welcome progress in Indian-Pakistani relations after 2004, South Asia remained one of the world's threatening trouble spots and a site of continuing religious and nationalist clashes.

*Nuclear concerns*

### *Fifty Years of Independence*

In 1997 India celebrated 50 years of independence. After over a half-century India remained a land of many contradictions. It could boast of a large, well-educated, ambitious middle class benefiting from an increasingly modern economy. Although the traditional caste system was officially illegal, its effects persisted in many places, and particularly outside the larger cities. But many born into the lower castes had moved into the mainstream of the business and professional world. In 1997 India elected its first president born an "untouchable," President V. R. Narayan.

Through medical advances, better nutrition, and a decline in infant mortality, death rates had declined and population almost tripled in the first 50 years, reaching more than 1 billion by the early twenty-first century. But economic growth and rising consumer standards for some classes hardly affected village India—where most of the population still lived. Poverty, illiteracy, disease, and malnutrition remained widespread. Over half the country was illiterate; for women and girls the number was higher and they labored under additional disadvantages as well. Over 200 million people were without safe drinking water and 650 million were without basic sanitation. Population growth continued to threaten economic advances. A sporadic but ineffective family planning program was still widely resisted. Although poverty had declined in the past 50 years, over 40 percent of the population remained impoverished by internationally accepted standards. The cities were

---

*A land of contradictions*

congested and slum-ridden, swollen by millions who had left the villages to find jobs. India, despite its economic and technological advances, remained a Third World country, divided into social groups with very different levels of education, wealth, and access to the products of the global economy.

---

*The status of women*

Much remained to be done to improve the status of women. Old forms of discrimination persisted, accompanied at times by outright violence in matters of dowries, divorce, and inheritance, and in the plight of widows who were thrown on the mercy of their husbands' families for survival. The highly visible presence of women in high political ranks in India and elsewhere in South Asia belied their lower status in general. In India, as in Pakistan, Burma, Indonesia, Bangladesh, Sri Lanka, the Philippines, and elsewhere, women became presidents, prime ministers, or opposition leaders; but they almost always came to office as daughters or widows in leading political families similar to the Nehru-Gandhi "dynasty."

---

*The invisible majority*

The Congress party, in power for most of the years since independence, had undoubtedly provided the stability needed for survival of the diverse country as a united nation. Parliamentary democracy, the rule of law, a free press, and an effective judiciary prevailed; and by the end of the twentieth century over 600 million people were exercising their right to vote (on ballots still marked by party symbols because of the widespread illiteracy). Yet bribery, venality, and corruption continued to affect all levels of government and the country's "invisible majority"—its needy millions—remained neglected. Nehru's appeal at the time of independence for India's "tryst with destiny" had to be postponed. And the enduring problem of ethnic and religious tensions, which continued to disrupt Indian society in the early twenty-first century, often threatened to undermine India's democracy and destroy the multireligious tolerance that India's founders had originally envisaged.

### *The Islamic Republic of Pakistan*

Pakistan's independence leader, Muhammad Ali Jinnah, a British-educated lawyer, was by no means an Islamic extremist and might have made a significant difference in the country's history, but he died shortly after independence, and his successor was assassinated. Despite the machinery of parliamentary democracy, the Islamic Republic of Pakistan soon succumbed to military rule and over the years oscillated between periods of military rule, restoration of constitutional government, which generally meant civilian misrule, and the return of military dictatorship. By the end of the century military dictators had run the country for half of its years of independence. It remained predominantly agricultural, and was still one of Asia's poorest and least developed nations.

---

*Bengali secession and war*

The awkward postcolonial arrangement for uniting the widely separated Muslim populations of South Asia in a single nation collapsed in violence. In East Pakistan, which had been carved out of the old Indian state of Bengal during the hasty partition in 1947, most of the population lived in congested, impoverished conditions that fueled political and social resentments against the West Pakistani leaders who dominated the government of Pakistan. These resentments exploded into a war of secession in 1971, when East Pakistan proclaimed its independence as the new state of Bangladesh (or "Bengali nation"). The Pakistani government vehemently opposed the secession movement and dispatched a large army to suppress the rebellion; hundreds of thousands were killed in a brutal and unequal civil war. At that point, however, India massively intervened with military force and compelled the

### THE INDIAN SUBCONTINENT, 2000

The map shows nations that emerged from the dissolution of the British Empire in South Asia. East Pakistan was part of Pakistan until its war of secession in 1971 led to the establishment of an independent Bangladesh; Pakistan and Bangladesh are predominantly Muslim. India is predominantly Hindu, but large Muslim and Sikh minorities live there. The political ascendancy of a Hindu nationalist party in the 1990s altered India's pluralistic political culture and also changed the names of cities that have long been known as Bombay, Calcutta, and Madras (Mumbai, Kolkata, and Chennai). Political movements have changed other colonial-era names in the region, including the name of the country now called Myanmar, which was known as Burma throughout the era of British control and early independence. The island once called Ceylon is now Sri Lanka. The dispute between India and Pakistan over the status of Jammu and Kashmir has remained unresolved. Conflicts in this disputed territory, intensified by the development of nuclear weapons in India and Pakistan, as well as continuing internal conflicts in Sri Lanka and Myanmar, made South Asia one of the world's politically volatile regions at the beginning of the twenty-first century.

recognition of independence. Bangladesh became one of the world's most populous, predominantly Muslim nations (the population would grow to about 145 million by 2005), but its high population density contributed to persistent economic problems. It remained one of the world's poorest nations, suffering from floods, drought, and famine as well as recurring cycles of political violence and military coups.

Civilian rule was restored in Pakistan for a short time after the war over Bangladesh, but in 1977 the now familiar Pakistani political pattern continued. The military took power and executed President Ali Bhutto. Even when civilian rule was restored, the army kept a watchful eye on the political scene. In 1988 Benazir Bhutto, the Western-educated daughter of the former president, returned from exile and in new elections became the first woman prime minister of a major Islamic nation. Promising liberalization and reform, she

The steady increase of the population in India—more than 1 billion people at the beginning of the twenty-first century—continued to affect the status of women and the economic conditions of the nation's impoverished classes. Seeking to reduce the rate of population growth, the Indian government has promoted a campaign for family planning. This large sign in New Delhi portrays a woman, but its question seems to be directed at men and women alike: Do you want joy and comfort with two children, or destitution with four?

(François Lochon/Liaison Agency)

provoked opposition from militant Muslim groups and members of the military, who used evidence of corruption to discredit her leadership and eventually force her from office. Meanwhile the Islamic religious movements grew larger and more militant, bolstered by Muslim refugees and guerrilla fighters fleeing Afghanistan after the Soviet Union invaded that country in 1979. Muslim extremism continued to grow, and by the early 1990s the government ruled that Islamic law should take precedence over the constitution.

When the Soviet Union invaded Afghanistan in 1979, Pakistan was caught up in the contest between the superpowers in the Cold War. The United States used Pakistan as a conduit for arms being shipped to the Muslim guerrillas fighting the Soviets, and over 2 million Afghan refugees fled to Pakistan—where they remained until the Soviet army withdrew from Afghanistan in 1989 (and where many returned during later conflicts in the 1990s). The rise of a radical Islamic Afghan regime, the Taliban, contributed to the further development of militant Islamic movements within Pakistan; and the Pakistani government became one of the only governments in the world to establish relations with the Taliban regime.

In 1997 Benazir Bhutto's successor and chief opponent so thoroughly undermined the authority of parliament, the judiciary, and the provincial legislatures that the country was in political disarray and in financial straits. Relations with India, as we have seen, deteriorated. The military suffered a humiliating defeat when it crossed the border into Indian territory in Kashmir in 1999.

Later that year, as economic matters worsened and renewed political instability threatened, the army leader General Musharraf staged a military coup. The new government included a number of civilian leaders and promised future elections. The coup was not unpopular because the Pakistani people were desperate for change, but the nation's political record of military rule aroused skepticism about the return to civilian government, let alone to parliamentary democracy.

Musharraf's military regime faced widespread popular opposition after 2001, when Pakistan entered a new era of cooperation with the United States. Following the terrorist attack on the United States by Islamic extremists in September 2001, Musharraf supported the American military campaign that overthrew the Taliban regime which had sheltered the Al Qaeda terrorist organizers of the attacks against America. Although his cooperation with the United States gave Musharraf a prominent new role in international affairs and new sources of foreign support, he faced continuing criticism from Islamic militants, some of whom tried twice to assassinate him. Other Pakistanis resented his unconstitutional hold on the presidency without new elections. The radicals were also unhappy with his efforts to improve relations with India.

The gradual improvement in relations between India and Pakistan offered some promise for a more stable political future in South Asia. At the same time, however, the uncertain future of Pakistan's military government, the presence of foreign Islamic radicals within Pakistani society, the development of nuclear weapons, and the continuing militancy of both Islamic and Hindu radicals all pointed to the danger and likelihood of more upheavals or religious conflicts in South Asia. And the lingering violence in Afghanistan after the overthrow of the Taliban regime gave Pakistan a pivotal (though unpredictable) role in the global political and military strategies of the United States.

## 115. THE EMERGENCE OF INDEPENDENT NATIONS IN SOUTHEAST ASIA

### *The Union of Burma (Myanmar)*

Burma, India's neighbor to the east, embarked on a unique path of isolation and repression after it gained independence in 1948. Britain had annexed the country to its Indian empire in 1885; and gradually, over the next half century, the British built a railway network, developed the country's mining and forest resources, and encouraged rice cultivation. Burma became for a time the world's largest exporter of rice. In the interwar years the British encouraged limited self-government but also imprisoned nationalist leaders like Aung San who pressed for immediate independence. After the Japanese invasion of Burma in the Second World War the nationalist leaders took up arms against the Japanese but also took advantage of the Japanese conquest to advance Burma's independence from Britain.

---

*Burmese independence*

After the war the British recognized Burma's independence, but Aung San, who was to become prime minister, was assassinated and his associate, U Nu, a devout Buddhist and somewhat doctrinaire socialist, became the first prime minister. To the new leaders of the nation anti-imperialism meant anticapitalism and the new government was determined to socialize the country rapidly. With little money, however, it was difficult to import machinery and to train workers; "the Burmese path to socialism," as it was styled, became impossible. In addition to economic chaos, Burma faced armed rebellion from insurgent separatist minorities, many of them reinforced after 1949 by the new Communist regime in China. Ethnic minorities made up about one-third

**Aung San Suu Kyi emerged as the charismatic, determined leader and symbol of the democratic movement in Myanmar. She is pictured here in 1989 at the kind of political meeting that led Myanmar's repressive military regime to place her under prolonged house arrest and the Nobel committee to grant her the honor of a Nobel peace prize.**

(Time Life Pictures/Getty Images)

of the country's population. Many of these minorities were incensed by Nu's plan to make Buddhism the official state religion.

Despite the official political framework of a multiparty parliamentary democracy, the military exercised a parallel power with the civilian authorities. As the ethnic insurgencies became more threatening in 1962, the army head General Ne Win staged a military takeover. He would retain power for the next 26 years in a one-party state still dedicated to pursuing the "Burmese path to socialism," but in effect a military regime.

---

*Isolation and  
repression*

As economic difficulties and ethnic turbulence steadily worsened, the country retreated into deeper isolation. By the early 1970s insurgent groups controlled one-third of the country. Popular discontent mounted and in the 1980s a new opposition party emerged, the National League for Democracy, headed by Aung San Suu Kyi, the daughter of the country's martyred founder. Educated in India, she also spent some 20 years at Oxford where she pursued graduate studies and married an Oxford don. An immensely popular and charismatic figure, she incorporated in her person the nonviolence of traditional Buddhism with Western democratic values. When in 1988 the military dictator resigned, she addressed large crowds of supporters and proclaimed that Burma's "second struggle for independence" was under way. But in the end a repressive military junta took power and placed her under house arrest. During this same period, in 1989, the military government emphasized its break from the country's previous colonial and national history by changing the nation's name to Myanmar.

Confronted with continuing massive demonstrations, the military agreed to open elections in 1990, the first in 30 years. But when the democratic opposition won 90 percent of the popular vote and over four-fifths of the parliamentary seats, the stunned military declared the elections null and void and took reprisals against the party leaders. Aung San Suu Kyi remained under strict surveillance, her movements and visitors severely

restricted. But she became an international symbol of democratic aspirations; in 1991 she received the Nobel Peace Prize. Meanwhile military repression thwarted the popular desire for democratic self-government and civilian rule, and the leaders of the democracy movement remained virtually imprisoned throughout much of the 1990s and into the first decade of the new century. Although international human rights groups protested the regime's repressive policies and helped some refugees escape the country, the military maintained tight control over all aspects of political and public life in Myanmar. The movement for democratic reforms, represented by the determined leadership of Aung San Suu Kyi, was still unable to achieve its political goals almost 60 years after the nation had gained its independence from Britain.

## *Malaysia*

In the Malayan peninsula British plans for independence after the Second World War were delayed because of tensions between the country's Muslim Malay majority and its sizable Chinese and Indian minorities. These large minority populations had lived in Malaysia since the nineteenth century when the British had imported workers from China and India to work in the tin and rubber mines. The Chinese had come to play a dominant role in the economy. At the same time a militant Communist movement had emerged, and the British for several years fought a Communist insurgency. In 1957, with the rebellion mostly subdued, Britain granted independence. Five years later Malaya joined with Singapore and other former British dependencies to create the Federation of Malaysia.

Singapore withdrew in 1965 to become a small island-nation with a flourishing modern economy and high living standards but governed by a semi-authoritarian, paternalistic regime under Lee Kuan Yew. Singapore thus resembled other East Asian countries such as Taiwan and South Korea in making rapid economic advances without establishing full-fledged democracies. There was no absolute repression, but no genuine democracy either. Under more or less authoritarian regimes, the ruler or ruling group brought all political parties under the umbrella of "national unity" and discouraged militant opposition or open dissent. Not until late in the twentieth century did democracy make headway in Taiwan and South Korea. Political life in Singapore also began to evolve, though Lee Kuan Yew remained a guiding force in government affairs and his son became prime minister in 2004.

Ethnic conflicts had flared up in Malaysia in 1969, and riots led to the suppression of parliamentary rule for about two years. After that difficult period, although the Malay political dominance remained clear, multiethnic coalitions gradually helped to ease tensions. Already prospering because of tin, oil, rubber, and lumber resources, Malaysia in the 1980s developed new high-technology industries, and its economy became one of the fastest growing in Asia, attracting foreign investment as well. The long-serving Prime Minister, Mahathir bin Mohamad, promoted an ambitious economic program that included large-scale construction projects. Malaysia had climbed out of its previous "Third World" economic status by the late 1990s, but a series of financial and currency crises weakened the nation's financial position at the end of the century. Radical Islamic groups became active among the nation's large Muslim population, and the economic problems led to the expulsion of numerous foreign workers. But Malaysia remained one of the most prosperous and stable Asian nations to emerge from the twentieth-century British empire.

The British thus surrendered all but small outposts of their vast empire within a decade or so after the end of the Second World War. However, most of the former British

---

*Economic growth*

Malaysia's growing role in the global economy is reflected in the soaring, contemporary office buildings of the capital city, Kuala Lumpur. The Petronas Towers, which rise to a height of almost 1,500 feet and loom over the other offices in this picture, were the tallest buildings in the world at the beginning of the twenty-first century.

(© John Dakers; Eye Ubiquitous/Corbis)

colonies in Asia (as well as in Africa, the Caribbean, and the Pacific) agreed to retain a voluntary association with Britain and each other in a new Commonwealth of Nations. Both Malaysia and Singapore, for example, became members of this Commonwealth, which grew into an association of over 50 independent nations. The Commonwealth did not force its members to act in concert on international issues, but it helped to promote useful interchange between the diverse peoples who had once lived within Britain's far-flung empire.

### *Indonesia*

Another great empire in Southeast Asia, the Dutch East Indies, also came to an end. Agitation for independence, as in India, went back to pre-1914 days, but the Indonesian Nationalist party, founded in 1927, and a growing Communist party had met with little success in the interwar years. The Japanese, as elsewhere in Asia, exploited anti-Western sentiment during the Second World War and found Indonesian nationalist leaders to use as collaborators in their military occupation. At the same time a broad resistance movement emerged in which the Communists played a major part. Once the Japanese were ousted at the war's end in August 1945, before the Dutch could return, the Indonesian Nationalist leader Sukarno (Indonesians often use only their family name in public life) proclaimed the country's independence. For four years the Dutch stubbornly fought the nationalist movement, but they finally ceded independence in 1949.

By the early twenty-first century Indonesia's population exceeded 240 million, making it the fourth most populous country in the world. An archipelago situated along the equator with thousands of islands strung together over 3,000 miles, it is rich in oil, natural gas, timber, and other resources. A modified form of Malay is the official language, but the people of Indonesia speak over 300 languages and dialects. With some 88 percent of the population Muslim, it has the largest Islamic population in the world. The first and

---

*A large, multiethnic country*

Indonesian President Sukarno became a leader of the world's new and developing nations during the era of decolonization. He is shown here in 1955, addressing the international meeting at Bandung, where representatives of nonaligned nations affirmed their independence, pledged to remain neutral in the Cold War, and condemned the legacies of Western imperialism.

(Time Life Pictures/Getty Images)

continuing task was to establish and maintain a sense of national identity in so large and multiethnic a country.

Sukarno began with a parliamentary constitutional program and a democratic ideology derived from the struggle against the Dutch, but the democratic phase did not last. In 1959 he dissolved the Constituent Assembly and governed in the following years under a populist dictatorship that he called "guided democracy"; before long he insisted upon being elected "president for life," and he sought to play a prominent, independent role in Cold War diplomacy.

---

*Sukarno's "guided democracy"*

Sukarno became one of the chief spokesmen for the developing nations of Asia and Africa. He hosted the meeting in Bandung in 1955 at which leaders of 29 of the new nations celebrated their new sovereignty, condemned Western imperialist and capitalist exploitation, and pledged neutralism and nonalignment in the Cold War. Sukarno cultivated friendship with the Soviet Union and Communist China and loosened economic ties with the West. Meanwhile the Indonesian Communist party, backed by the People's Republic of China, had quietly grown into the third largest Communist party in the world with some 2 million members.

For a time Sukarno managed to work with and control the large Communist party, but in 1965 leftist army officers attempted a coup. A relatively unknown army leader, General Suharto, quickly moved to suppress what was alleged to be a Communist rebellion, but he also ousted Sukarno. What ensued, as the army stood by, was the dreadful slaughter by Islamic militants of hundreds of thousands of Communists and leftists in a bloodbath that ranks among the larger atrocities of the twentieth century. A half million Communists and leftist suspects were murdered, 2 million were arrested and thousands were imprisoned. The violence also took a racial turn when many ethnic Chinese fell victim. The repression destroyed the Indonesian Communist party.

---

*Suharto's war on the Communists*

Over the next 32 years General Suharto retained power, running his island empire from the capital in Jakarta under a system of controlled elections in which he was dutifully reelected president every five years. He was supported within the country and abroad by

those who claimed that his authoritarian methods were needed to maintain Indonesian unity and to prevent the resurgence of Communism or the spread of Islamic extremism. The military presence, which had loomed in Indonesian politics ever since independence, became pervasive. A single governing party ruled with uncontested power.

---

*An impressive  
economy*

Suharto's anti-Communist credentials brought him Western support in the Cold War and attracted foreign investment to the country. He presided over an impressive economy, which showed annual growth rates that became another of the success stories of the developing world. The economy expanded sixfold over 30 years, and Indonesia ranked as one of the ten strongest emerging markets of the world. New construction changed the face of the nation, especially of the capital. A few in Indonesia became very rich; the middle classes grew in number and comfort; and there was a general decline in poverty throughout the country.

---

*Spread of corruption*

At the same time a culture of corruption grew. Suharto, his family, his political entourage, and an inner circle of bankers, business leaders, and technocrats enriched themselves to the growing resentment of people outside the ruling elite. Suharto aroused opposition in other ways. In 1975, when Portugal withdrew from East Timor, an enclave it had long ruled adjacent to Indonesian territory, Suharto moved aggressively to annex it. The population of almost 1 million, many of whom were Christian, wanted independence and resisted the brutal annexation. Close to 100,000 lives were lost in a violent, systematic repression that provoked worldwide denunciation of Suharto. Indonesia continued to suppress the movement for East Timor's independence until the end of the twentieth century, when the United Nations sent peacekeeping troops and safeguarded a political process that finally established the independent nation of East Timor in 2002.

Much of Indonesia's economic success depended on foreign loans, and its foreign debt mounted, but the overexpansion of credit threatened the country's financial stability. In the latter half of 1997 a financial panic swept Indonesia (and other parts of southeast Asia as well). In 1997–1998 the currency lost four-fifths of its value and the poverty rate tripled.

---

*Suharto ousted*

The economic crisis brought about Suharto's downfall. When he insisted on reelection for a seventh term as president and the servile parliament permitted it, riots and demonstrations broke out. Suharto was forced to relinquish power in May 1998, naming as his successor his vice president and protege H. J. Habibie. The country was in economic chaos but also in political ferment. The press was freed, political parties reemerged, new elections were organized, and a new president, Abdurrahman Wahid, took office in 1999. As a concession to the opposition, Megawati Sukarnoputri, the daughter of the country's independence leader and first president (Sukarno), became vice president. Two years later she succeeded Wahid when the legislature removed him from office. President Megawati brought new stability to the Indonesian government and the economy began to revive. Extremist Islamic groups sometimes resorted to terrorism, however, and there were repeated military clashes with rebels who were seeking autonomy or independence for the provinces of Aceh and Papua. Following a pattern that appeared in many parts of the world, the advocates of religious or regional identities challenged the economic and political policies of a government that was seeking to integrate the nation into global economic and political institutions.

---

*Steps toward  
democracy*

Mounting political unrest led in 2004 to the election of the first directly elected Indonesian president—a political innovation that exemplified the continuing development of Indonesian democracy. But the new government faced ongoing economic and domestic

political challenges as well as the aftereffects of the catastrophic tsunami that struck southeast Asia in December 2004. Indonesia was a rapidly growing and evolving large nation of pivotal importance in Asian affairs and in the global resurgence of Muslim religious identities.

### *The Independence Movement in Indochina*

The French colonial empire also fell apart, not, however, without a long struggle. The first of France's postwar colonial wars, as noted in the previous chapter, was fought over Indochina. When France offered autonomy to the states of Indochina at the end of the Second World War within a French federation, Cambodia and Laos accepted; but Vietnam (as Cochinchina, Tonkin, and Annam jointly came to be called) demanded full independence. Open warfare broke out in 1946, and French armies and Communist-led Vietnamese forces fought each other for over seven years.

The Communist leader Ho Chi Minh, who headed the independence movement in Vietnam, had spent many earlier years in London, in Paris (where he had first called for the "self-determination" of Indochina during the Versailles peace conference and witnessed the founding of the French Communist party in 1920), and in Moscow. He returned to Vietnam in 1941, organized a Vietnamese independence movement (the Viet Minh), and mobilized guerrilla armies to fight the Japanese. At the war's end he proclaimed Vietnam's independence. The French tried to reassert control by using an ineffectual former emperor of Annam as a puppet. When negotiations failed, Ho turned his armies against the French. Because the Communists led the independence movement, the French could claim that they were fighting to stem the tide of world communism, not to preserve nineteenth-century colonial privileges. Yet communism here, as often in Asia, was linked to nationalism, anticolonialism, anti-Westernism, and genuine popular discontent.

---

---

*Communism and  
imperialism*

Under President Eisenhower the United States, anticolonial but ready to champion anti-Communist causes in the Cold War, aided the French financially but refrained from open military intervention. The war drained French morale and resources. In the spring of 1954 at the very time that an international conference was meeting in Geneva to arrange a settlement in Indochina, the French army after a long, costly siege suffered a severe defeat at the battle of Dien Bien Phu. The conference, with French acquiescence, recognized the independence of Vietnam, as well as of Cambodia and Laos. The colonial empire in French Indochina came to an end.

Vietnam was provisionally partitioned at the 17th parallel into a northern and southern sector until elections could be held for the entire country, but the elections never took place. Neither Ho nor the Western-backed regime in the south was satisfied with the settlement of 1954, and a civil war of increasing intensity soon began. The United States, as we shall see, became deeply involved in the war by the early 1960s, seeing the struggle in Vietnam as part of the global Communist challenge that had to be contained. The Vietnam War became one of the most protracted conflicts of the entire Cold War era, and we shall return to this war when we examine the broader context of American-Soviet confrontations after 1960 in Chapter 25. Meanwhile, by the mid-1950s, France's entire colonial empire in Indochina had given way to new national states.

### *The Americans and the Philippines*

The Americans, too, shared in the liquidation of colonial empires in Asia. In the Philippines a strong independence movement had emerged in the late nineteenth century

**Opponents of Ferdinand Marcos rallied in 1986 to Corazón Aquino when she challenged the Filipino president in a contested election after almost two decades of authoritarian rule. Aquino appears here among enthusiastic supporters on the eve of her electoral victory, which Marcos tried to overturn until a popular uprising forced him to flee the Philippines.**

directed against the decaying Spanish empire. Revolution under the leadership of Emilio Aguinaldo was well under way when the Spanish-American War broke out in 1898. With American encouragement Aguinaldo joined the war against Spain and unilaterally declared independence, promulgating the first democratic and republican constitution in Asia. But Filipino nationalists were stymied when Spain transferred the islands to the United States at the end of the war. Aguinaldo and his followers rebelled and took up arms against the United States. The suppression of the Filipino independence movement over the next three years cost the United States more money and more lives than the war against Spain itself.

Independence remained a pressing issue both in the islands and in the United States, which after semimilitary rule in the 1920s proposed a transition to self-rule and eventual independence. An act of Congress in 1934 granted self-governing commonwealth status with a pledge of full independence in the near future. Delayed by the Second World War, independence was finally granted in July 1946.

In the early years of independence a succession of governments did little to help the impoverished peasants or even maintain political order. Communist-led guerrilla movements pressing for land redistribution added to instability. President Ferdinand E. Marcos, who was elected in 1965, declared martial law in 1972 and ruled the nation as an authoritarian dictator until the 1980s. The Americans

cooperated with the Marcos regime because of its staunch anticommunism, but poverty and government corruption steadily increased while Marcos and his family grew wealthy and spent money extravagantly.

After the assassination in 1983 of the popular opposition leader Benigno Aquino upon his return to the islands from exile, his widow Corazón Aquino spearheaded the opposition and contested Marcos in presidential elections that finally took place in 1986. When Marcos, despite clear evidence of fraud, attempted to declare himself the winner, the country turned decisively against him, and his support eroded even in the United States. The ensuing popular upheaval forced him into exile.

President Aquino faced continuing pressures from Right and Left, but restored democratic elections and civil rights. She also slowly inaugurated land and other reforms, setting an example for those who followed her. In the early 1990s the Filipino legislature opposed the renewal of leases for America's military bases, and the United States agreed to withdraw. Another chapter of Western imperialism came to an end. Later governments struggled to develop the Filipino economy, to suppress Muslim secessionist groups in the southern islands, and to overcome persistent charges of corruption and electoral fraud. The Supreme Court forced a later president from office in 2001 because of a corruption scandal; and his successor, Gloria Macapagal-Arroyo, would also arouse widespread suspicion of fraudulent electoral practices. Filipino political life remained unsettled as successive governments lost the confidence of the nation's political elites as well as of the general population.

---

*American withdrawal*

The transition from colonialism to postcolonial political and social systems posed complex historical challenges throughout South Asia and Southeast Asia, even after more than a half-century of constant political and economic change. People in all Asian societies had welcomed national independence and celebrated the demise of the Western empires, but the struggles for independence gave way everywhere to new struggles for political stability, democratic institutions, economic development, and national unity. The complex domestic evolution of every newly independent nation-state was further complicated by the international conflicts of the Cold War and by the global pressures of a world economy that often affected the postcolonial nations even more profoundly after they had gained their political freedom from the European imperial systems. More generally, the transition to independence stimulated ongoing debates about cultural, religious, and national identities that were still creating new political movements and conflicts within every postcolonial Asian society in the early twenty-first century.

## 116. CHANGING LATIN AMERICA

Unlike the new nations that emerged after the Second World War in Asia, most of the Latin American nations had been independent for well over a century by 1945. Yet the legacy of colonialism had left the region, like other parts of the Third World, with unbalanced economic development, heavily dependent on the outside world, and burdened with unresolved political, social, and economic problems.

A region of over 7 million square miles stretching from the Rio Grande to the southern tip of Argentina and Chile, Latin America includes Mexico, Central America, South America, and the islands of the Caribbean. It is mainly Spanish in language and culture, but Portuguese is the language of Brazil, the continent's largest and most populous country. English and French are spoken

## CHRONOLOGY OF NOTABLE EVENTS, 1946–2000

---

1946	The United States grants independence to the Philippines
1947	Britain ends its imperial rule in South Asia, partitioning the region into the two new nations of India and Pakistan
1949	Indonesia wins independence from the Netherlands
1954	France withdraws from Indochina; two governments emerge in North and South Vietnam
1955	Leaders of 29 “new nations” meet in Bandung, Indonesia, and affirm “nonalignment” in the Cold War
1959–1961	Fidel Castro establishes Communist government in Cuba
1965	General Suharto overthrows Sukarno; begins 32-year rule in Indonesia
1970–1973	Leftist government in Chile; overthrown by coup and Pinochet dictatorship
1971	India helps Bangladesh gain independence from Pakistan
1974	India develops nuclear weapons
1976–1983	Dictatorship in Argentina represses leftist opposition
1979	Soviet Union invades Afghanistan and begins war with Muslim guerillas
1989	Soviets withdraw from Afghanistan; radical Muslim (Taliban) government follows
1989	Military rulers in Burma repress dissent; nation is renamed Myanmar
1994	Mexican-U.S.-Canadian Free Trade Agreement (NAFTA) goes into effect
1996–1999	Rising power of Indian People’s Party (BJP) fosters Hindu-based nationalism in India
1998	Pakistan detonates a nuclear bomb
1998	General Suharto is ousted from power in Indonesia
1998	Hugo Chávez becomes president of leftist government in Venezuela
2000	Vincente Fox is elected president of Mexico; ends 71 years of rule by Institutional Revolutionary Party (PRI)

---

in some islands of the Caribbean, and a variant of French is spoken in Haiti. The many indigenous Indian languages and dialects, though still widely used in many rural areas, are generally submerged in the majority cultures; but the indigenous peoples have also reasserted or defended their cultural identities in many parts of Latin America during recent decades.

It is a region of great racial diversity and mixture. Argentina, because of the flood of immigration in the nineteenth century, is overwhelmingly European in composition, but in Bolivia over half the population is of indigenous Indian origin. In Brazil, the population consists of whites of European background, indigenous Indians, blacks, and mainly an amalgam of mixed peoples. Because of the once flourishing slave trade and slavery, half the Brazilian population is wholly or in part of West African ancestry. Almost everywhere, however, European whites and mestizos (that is, people of mixed European and Indian ancestry) tend to dominate their societies. With high growth rates, the population of Latin

America more than tripled after 1945, increasing from 160 million in 1950 to over 500 million by the end of the century. The two largest cities in Latin America, Mexico City and São Paulo, Brazil, were among the ten most populous urban agglomerations in the world at the beginning of the twenty-first century.

*The Colonial Experience and the Wars for Independence*

The three centuries of colonial rule after the Spanish *conquista* left an ineradicable mark. Wherever the Spanish had found large Indian populations, as in Mexico and in the area then known as Peru, they had incorporated them into their colonial system and imposed upon them the hierarchical social structure of the home country. To encourage settlement the crown had granted (or “entrusted”) large estates to Spanish nobles sent out from Spain to the New World.

Spanish colonialism

The arrival of the Europeans had led in many places to demographic disaster. In the first generation the new diseases brought by the Europeans decimated the indigenous Indian populations. To work on the sugar plantations in the lowland areas in South America and throughout the Caribbean, the Europeans imported black slave laborers from Africa, eventually in the millions. Slavery was nominally abolished in most areas by the 1850s (although in Brazil not until 1888), but more or less disguised forms of servitude, like peonage, persisted. Indians and blacks remained at the bottom economic rung of a social system that was dominated by the American-born descendants of European settlers and immigrants—the Creoles.

A long-enduring pattern of economic exchange developed during the colonial period. Mineral wealth and other commodities flowed from the colonies to the mother country, and Spain in turn provided the needed finished goods or arranged for their shipment from other European countries. Although Spain did not develop a strong commercial class either at home or in the colonies, ranching and mining became large-scale colonial operations, and a variety of commercial enterprises sprang up.

The colonial economy

As the years passed, the American-born Creole elite grew wealthy and chafed at European control. They found an opportunity to break away when Napoleon occupied Spain and Portugal and displaced the two royal houses, but the Creole leaders were also frightened by the popular violence of the French Revolution. They intended to control their struggle for independence and protect their privileged social positions and landed wealth. From 1808 to 1826 they fought and won a series of bitterly contested wars for independence; in Brazil members of the Portuguese royal family led the country peacefully into independence. The wars for independence scarcely improved the status of the lower classes who fought the battles, or prepared the way for a more fluid society. Independence, in effect, mainly allowed local elites to wield political power commensurate with their wealth. From the wars for independence and from the subsequent conflicts among the new republics there emerged in Latin America a large military establishment, a powerful military class, and a succession of caudillos, or dictators, emerging from the military.

Latin American independence

The withdrawal of the Spanish and Portuguese transformed Latin America’s political elites, but the older patterns of economic exchange and dependency did not disappear. There was, however, a change in the network of trade partners because the British, as pioneers in the Industrial Revolution, were now able to move widely into Latin American markets. Because the Creole landowners wanted low-priced manufactured imports, British-manufactured goods met with little resistance or competition. British capital also financed the infrastructure, the docks, the

Dependency

roads, and eventually the railroads to support the expanding trade. Economic penetration by Britain (and soon by the United States) represented a new form of colonialism, or neo-colonialism, an economic domination that did not require the acquisition of territory. In the late nineteenth century European and American investments and a flood of European immigration further tied Latin America to the outside world.

### *The Colossus to the North*

Independence left the region politically fragmented and unstable, and many of the new republics became mired in civil and national wars. European political control might have been reimposed except for the American Monroe Doctrine, which (with British support) strongly opposed Continental interference with the independence of the new states. Later in the century the United States also made clear that in cases of civil disorder anywhere in the hemisphere it would not permit the Europeans to intervene to restore stability, protect investments, or collect debts, as was their custom in the era of expansive European imperialism. In what came to be known as the corollary to the Monroe Doctrine, President Theodore Roosevelt announced in 1904 that the United States alone would assume the responsibility of intervention for such purposes.

---

#### *The Monroe Doctrine*

Over the next quarter of a century the United States followed a policy of active armed intervention, or “dollar diplomacy,” mainly in Central America and the Caribbean until gradually modifying its more overt interventionism in the mid-1930s.

In the opening years of the twentieth century the United States began to rival the British as the dominant trading partner of Latin America, exporting its manufactures and purchasing many of the region’s primary agricultural and mineral products. After the First World War it gradually displaced Britain as the leading source of loans and capital investment. Although centers of manufacturing emerged, Latin America remained industrially underdeveloped, in part because of its dependency on the industrial world and in part because its impoverished masses provided a weak consumer base for industrial expansion. Meanwhile prices of the region’s agricultural and mining products became increasingly hostage to the world’s markets.

### *Economic Growth and Its Problems*

Latin America suffered heavily when commodity prices plummeted in the dismal years of the Great Depression of the 1930s and foreign investment also dried up. The economic crisis encouraged the Latin Americans to look to their own resources and to attempt to industrialize, as Brazil did under the populist dictator Getulio Vargas in the years 1930 to 1945. When during the Second World War the region was cut off from traditional foreign sources of consumer goods, industrialization received additional stimulus.

After 1945 the economic structure of the entire region began to undergo significant transformation. It benefited from the increased demand for its raw materials and agricultural products and from an influx of foreign investment. The Alliance for Progress, sponsored by the United States in the early 1960s under President Kennedy, signaled a new North American commitment to the economic development of the region, even though Latin Americans repeatedly complained of being slighted in favor of other parts of the developing world. In the three decades from 1945 to 1975, Latin American economies grew steadily at impressive rates; steel production multiplied 20 times and electrical energy, metals, and machinery multiplied 10 times.

---

#### *Alliance for Progress*

Mexico, Argentina, Brazil, and Chile, despite many internal problems, could justifiably be classified among the newly industrialized countries of the world. Latin Americans manufactured industrial products in larger volume than ever before and no longer relied heavily on foreign imports for their industrial needs. The presence of American and European multinational corporations further stimulated economic progress. Much of this new industrialization, however, developed within a network of protective tariffs, subsidies, and state-controlled enterprises. Moreover, the region had only begun to utilize advanced technology, and low mass-purchasing power continued to impede growth. Economic expansion mostly benefited the social elites, increasing the gap between rich and poor.

To support economic development the major Latin American governments borrowed heavily in the 1970s from Western (mainly American) banks and international lending agencies, thereby becoming the most heavily indebted nations in the world; for many countries foreign debt nearly quadrupled. By the 1980s the failure to meet debt payments posed a serious financial threat to international creditors, and foreign banks and lending agencies took steps to ease interest payments. The austerity measures imposed by the lending agencies, however, threatened to reduce already depressed living standards. Even in better times many of the Latin American governments assigned a low priority to funding for schools, hospitals, roads, and public health facilities. Large military establishments and bureaucracies also consumed scarce resources. Driven by development ambitions and burdened by other expenditures, many governments simply printed paper money, debasing the currency and promoting extraordinary price rises. In the 1980s several countries suffered “quadruple-digit” annual inflation rates of over 1,000 percent.

---

---

*Debt and inflation*

The social difficulties of these unstable economies were compounded when agricultural commodity prices collapsed in the hyperinflation of the 1980s. Economic growth in Latin America slowed to below one percent, or even at times turned negative. As in other developing areas, the 1980s were in many ways a “lost decade.” In 1989 production per capita was lower than in 1980. But growth gradually resumed as many of the Latin American countries abandoned state controls, encouraged freer market economies, introduced sounder public finances, and brought inflation under control. With renewed confidence in the region’s economic prospects, foreign bankers and investors once again provided capital for Latin American companies and governments.

---

---

*A lost decade*

Despite economic advances, population growth rates remained a source of concern. As elsewhere in all of the developing world, death rates declined dramatically in the later decades of the twentieth century, and population growth surged. In Latin America it was even more difficult to cope with rising growth rates because of the Catholic church’s prohibition of artificial birth control, although such prohibition was often circumvented or ignored by the upper and middle classes. Growing in many years at three percent annually, the population tripled between 1950 and the 1990s, and the increase all but canceled economic and social gains for the masses of people. On the positive side, population began to stabilize in the more industrialized Latin American countries.

---

---

*Population growth*

Over the years landless rural workers fled the impoverished countryside in all parts of Latin America, settling in the slums of the congested and polluted cities. A privileged upper-class minority kept many of its financial assets safely abroad but monopolized land and wealth at home. The per capita income in all Latin American nations still lagged well

Most Latin American nations became steadily more industrialized during the decades after 1945. The workers in this picture are assembling cars at a Volkswagen factory in São Paulo, Brazil. Such factories exemplify the growing role of Latin American cities in the global economy and also the transnational operations of the contemporary world's large industrial corporations.

(Camera Tres/Black Star)

below the incomes of the wealthiest industrialized societies. By the early twenty-first century, the more prosperous countries such as Brazil, Mexico, and Chile had per capita incomes at about one-third the per capita income of nations such as Germany, Japan, France, or the United States. Although the economic elites in Latin America had become wealthy participants in the global economy, countries such as Haiti and Honduras ranked among the very poorest nations in the world. Bolivia, whose mineral wealth had once enriched the Incas and the Spanish, had the lowest per capita income of all the South American republics. Beginning in the 1960s, many priests and nuns responded to the economic inequities in Latin America on their own by preaching “liberation theology,” or “the church of the poor.” Despite opposition from the Vatican, they threw themselves into efforts to improve the lot of the impoverished. Other reformers showed renewed interest in the economic problems and cultural traditions of the indigenous peoples.

### *End of Yankee Imperialism?*

Did the second half of the twentieth century change relationships with the economic colossus to the north? In its “good neighbor” policy in the 1930s the United States appeared to adopt an important step toward surrendering its interventionist prerogatives. Military interventions before 1933 in Mexico, Nicaragua, Panama, Cuba, the Dominican Republic, and Haiti formed a

historical pattern that aroused resentment throughout Latin America. But American marines and troops continued to land in Latin America even after 1945, especially in Central America and the Caribbean, in such countries as Guatemala in 1954, the Dominican Republic in 1965–1966, Grenada in 1983, and Panama in 1989. At times the interventions were tied to American Cold War policies of “containment,” which were designed to oppose communism everywhere in the world.

As a goodwill gesture after the Second World War, the United States promoted the establishment in 1948 of the Organization of American States (or OAS). In the OAS 35 nations of the Western Hemisphere, including the United States and Canada, joined together to provide a mechanism for settling disputes among the republics. The OAS provided a more dignified alternative to traditional North American interventionism. Another step signaling a new era was the agreement by the United States in 1977 to hand over the Panama Canal to Panama, which took place in 1999.

Among the signs of change in the Western Hemisphere was a growing sense of economic interdependence. The United States needed a stable and prospering Latin America for its own economy. In 1994, at American initiative, the United States, Canada, and Mexico subscribed to the North American Free Trade Agreement, which over a period of time would eliminate all trade barriers among the three countries, and later be extended to other countries as well. Meanwhile large numbers of immigrants from Mexico, the Caribbean, and other parts of Latin America streamed northward, changing the ethnic composition of the United States itself and expanding the connections among peoples in this region of the world.

---

*Growing sense of  
interdependence*

### *The Political Systems and Conflicts in Latin American Societies*

Politically, the Latin American record for much of the twentieth century was mostly a history of insecure constitutional regimes and repressive military dictatorships, civil wars and social revolutions, ethnic tensions and labor unrest, coups and countercoups, and agitation against foreign, notably American, interests. There were also episodes of broad-based populist dictatorships with wide mass support, as in Brazil under Vargas, mentioned earlier, and in Argentina under Juan Perón from 1946 to 1955 (with *peronismo* exerting a continuing influence in later years). Disheartening cycles of reform and repression recurred. Central America reflected even greater volatility. Instability from the 1950s to the 1980s was intensified by American anti-Communist commitments in the Cold War and by American support for rightist elements in Central America, particularly in Nicaragua and El Salvador.

---

*Cycles of reform and  
repression*

When leftist regimes were overthrown in Latin America in those years, frequently with unofficial United States help, as in Guatemala in 1954, Brazil in 1964, Chile and Uruguay in 1973, Argentina in 1976, and El Salvador in 1980, harsh repression often followed. Political opponents simply “disappeared”—they were imprisoned, tortured, and often executed, as the later record showed. Two of the most extreme examples occurred in Argentina and Chile. Argentina’s “Dirty War” against leftists claimed over 30,000 lives between 1976 and 1983. Even under democratic regimes in later years those responsible long went unpunished, although the misdeeds were openly acknowledged. A second striking example of military repression occurred in Chile, where a Left coalition elected in 1970 and committed to land reform as well as the nationalization of American-owned copper mines, was toppled three years later by a military coup with the involvement of the United States. The country’s democratically elected leftist president, Salvador Allende,

The Cuban Revolution became a notable event in the Cold War after Fidel Castro's new government broke decisively with the United States, initiated radical social changes, and established a repressive, one-party Communist regime. Castro is shown here addressing a crowd during his revolutionary "March to Havana" in January 1959—before he had declared himself a Communist and forged close ties with the Soviet Union.

(© Bettmann/CORBIS)

and thousands of his supporters lost their lives, and brutal repression followed under a military regime headed for many years by General Augusto Pinochet. The Pinochet era, unlike many dictatorships, left a substantial record of economic growth but also produced bitter memories and a divided country. Arrested in later years while living abroad, Pinochet narrowly escaped trial on human rights charges in Europe but still faced trial in Chile.

The most sweeping attempt at social revolution in Latin America in the second half of the twentieth century occurred in Cuba. In 1933 Cuba had fallen under the heavy-handed repressive dictatorship of Fulgencio Batista. In 1959 Fidel Castro and a small band of leftist guerrillas returning from exile (among them Castro's chief lieutenant Ernesto Che Guevara) succeeded in overthrowing the Batista dictatorship. Castro pledged to institute land reform and end economic dependence on the United States. When his government confiscated American corporate investments and landholdings, the United States retaliated with a trade embargo. Castro, not initially a Moscow-oriented Communist, moved into the Soviet orbit, and tensions over Cuba in 1962 in the context of the Cold War, as we shall see in Chapter 25, brought the United States and the Soviet Union to the brink of nuclear war.

Cuba became the only professedly Marxist state in the Western Hemisphere. Castro championed anti-imperialism worldwide, aided leftist movements in Bolivia and in Central America, and sent troops across the Atlantic to support anticolonial guerrilla armies in Africa. At home he created an advanced network of social services, promoted public health and literacy, and improved life for the rural masses; but economic failures and totalitarian coercion overshadowed these achievements. He became increasingly dependent on the Soviet bloc for economic aid, receiving favorable terms for the export of sugar and the import of oil. Castro ruled as a dictator. Political opponents fled into exile or were imprisoned. His militarized regime and global adventurism cost him support among

the reform-minded in Latin America and elsewhere. When Soviet communism collapsed in 1989–1991, Castro lost the economic subsidies on which he depended and became a somewhat isolated figure in international affairs. Yet *fidelismo* had once been regarded as a threat to the United States and as an opening wedge to communism in the Western Hemisphere. Castro himself continued to govern Cuba in the early twenty-first century, leading a regime that remained in power almost 50 years after the revolution that swept the country in 1959.

### *Mexico and Brazil at the Beginning of the Twenty-First Century*

The political implications of Latin America's long postcolonial struggle for economic development could be seen in the region's most populous nations, Mexico and Brazil. In Mexico, a large proportion of its more than 100 million people lived at subsistence levels at the beginning of the twenty-first century and, as in most of Latin America, wealth remained highly concentrated in the upper echelons of society. Yet Mexico had passed through numerous episodes of social revolution beginning in 1910, during which the power of the church and the military was curbed and land redistribution programs were introduced.

The dominant Mexican political organization, the Institutional Revolutionary Party (PRI), heir to the Revolution of 1910, had long been revolutionary in name only. Opposition parties existed, but the PRI and a small business elite protected their own privileges and interests. The government promoted modernization but slighted social needs; nepotism and corruption flourished. As elsewhere, the human cost of social neglect was malnutrition, disease, infant mortality, limited schooling, illiteracy, and lower life expectancy for all but the social elite. The armed revolt in 1994 of an Indian-led peasant movement in the poor southern state of Chiapas dramatized the broad social and economic problems of Mexico's poorest people. The PRI had retained the allegiance of the poor through subsidies and handouts, but its notorious corruption and its tight grip on power through years of controlled elections had left most Mexicans distrustful of all politicians. Despite industrialization and steadily expanding international trade, the economic gulf between rich and poor, and between north and south, increased in Mexico during the 1990s.

In the presidential election of 2000 the PRI candidate was defeated for the first time by a centrist business leader, Vicente Fox, whose victory brought the more conservative National Action Party to power and ended the 71-year era of PRI control. President Fox promised major economic and political reforms, but he faced strong opposition in the Mexican Congress and was unable to enact most of the changes he wanted to introduce. The Free Trade agreement with the United States (NAFTA), which went into effect in 1994, did not significantly enhance the economic conditions for most poor Mexicans, many of whom sought work by migrating into the United States. Economic problems continued to affect Mexican politics and contributed to the popularity of left-leaning political leaders such as the mayor of Mexico City, who rallied the opposition in a political movement that gained wide support from the nation's lower classes.

Populist opposition to the traditional economic-political elites also emerged in Brazil, where a former leader of the Metalworkers' Union, Lula da Silva, was elected president in 2002. Lula (as he was called) entered office after the first successful transfer of power between elected presidents in Brazil since the early 1960s, raising popular expectations for both the democratic political system and the economic conditions of Brazil's poorest people. The new government's policies were less radical than many had expected, however,

and Lula's popular support declined as he struggled to solve the problems of unemployment and to deal with corruption scandals among his own political allies. Brazil's economy nevertheless showed a steady rate of growth, giving this largest of all South American nations an increasingly prominent role in the international economic system. A healthy Brazilian economy and political system had become essential for the stability and development of the whole continent.

### *The Advance of Latin American Democracy*

---

#### *A diverse region*

In the early years of the twenty-first century, Latin America continued to be a diverse region economically and politically. Many Latin American countries were moving toward more stable constitutional government, trying to soften ideological conflict and working to loosen rigid state controls over their economies. Inflation, heavy debt, currency crises, and population growth, however, still made it difficult to meet the fundamental social needs of the region's impoverished lower classes.

The constitutional democracies often remained fragile. In the 1990s military insurrections broke out in Argentina, Ecuador, and Venezuela; and the civilian president of Peru trampled on the constitution before he eventually was forced from office. In Colombia large-scale drug trafficking disrupted orderly government, and a left-wing guerrilla insurgency generated recurring cycles of political violence. In Central America the military often sought to gain or hold on to political power, claiming to protect public order against the dangers of mounting crime or the unrest of impoverished social groups. Poverty and deep-seated social inequities remained legacies of the region's history.

---

#### *Democracy emergent and receding*

Democracy thus continued to emerge and recede and to develop unevenly throughout Latin America. In 1960 virtually every nation in South America had an elected civilian leader, yet by 1976 all but a few countries in Central and South America had fallen under the control of military or rightist dictatorships. In the 1980s and into the 1990s, however, the trend shifted to democracy. For most of the 1990s no elected civilian president was overthrown by the military, but electorates were often frustrated and angered by the ineptitude and corruption of democratic political parties unable to cope effectively with social and economic issues.

Venezuela became an especially significant case of political discontent. Since 1958 it had been a leader in civilian democratic rule and orderly government. Two major parties shared patronage and political spoils for over 40 years, but, despite the country's oil wealth, did little to relieve poverty and inequality. The election of Hugo Chávez in 1998 as president caused alarm in both of the traditional political parties. Chávez, a former colonel and paratrooper who in 1992 had led a bloody but unsuccessful military coup, won a landslide electoral victory, called for a "peaceful social revolution," convened an assembly to write a new constitution, and after 18 months, in the summer of 2000, won reelection. Chávez soon thereafter gained authority from the National Assembly to enact legislation by decree. In the following years, he took new control of Venezuela's state oil company, withstood a prolonged strike in the oil industry, and managed to prevail in a referendum that would have removed him from office. Critics complained bitterly that Chávez had revived the worst practices of past Latin American demagogues and repressive regimes, but he retained significant support among the lower classes, became an ardent supporter of Cuba's Castro, and rallied nationalist sentiment by warning against the dangers of American intervention in Venezuelan politics. As a symbolic identification of his link to the

Despite the growing economic connections between all Latin American nations and the modern, international trading system, many people on the continent continue to live and work in long-established, agricultural communities. Like generations before them, these people were harvesting barley in rural Ecuador during the late 1990s, but their economic lives were also linked to a global economy that profoundly affected the price of their crops as well as the value of their wages.

(© Pablo Corral V/Corbis)

nation's revolutionary past and its nineteenth-century liberator, Simón Bolívar, he officially renamed the country the Bolivarian Republic of Venezuela.

The political practices of earlier eras in Latin American history were therefore still appearing in some places during the first decade of the twenty-first century. By the early years of the new century, however, most of Latin America had followed the lead of other industrial countries in moving toward privatization, free trade, open markets, and globalization. Despite periodic setbacks, democracy was growing to be the prevalent pattern of government. But integration into the global economy had not yet brought prosperity or a more balanced distribution of wealth for the vast majority of Latin Americans. The region was also subject to severe financial crises, including the destabilization of national currencies in countries such as Mexico in 1994 and Brazil in 1998.

---

*A mixed record*

A new cluster of leftist governments emerged in the early twenty-first century — Hugo Chavez in Venezuela; Lula da Silva in Brazil; Evo Morales in Bolivia; the first indigenous Indian president ever to be elected to that position in Latin America; and Michelle

Bachelet in Chile, the first woman to be elected president of a major country on the continent, and a Socialist. They and older leftist movements still made their presence felt, and a rising generation of young activists strongly criticized the global free market economy (and the United States as its leading champion) for benefiting only the wealthier nations and neglecting the needs of the impoverished.

Many of the economic and political challenges that confronted the postcolonial nations of Asia after 1945 could therefore be found also in most of Latin America: a legacy of unequal economic exchange with the more industrialized countries, for example, and enduring political conflicts that carried forward an earlier history of political violence from both the left and right wings of the continent's various national and regional cultures. It was nevertheless clear by the early twenty-first century that the nations of Latin America, like the nations of modern Asia, Africa, and the Middle East, had all moved irrevocably into the global economy and the mainstream of contemporary international affairs.

# EMPIRES INTO NATIONS: AFRICA AND THE MIDDLE EAST AFTER THE SECOND WORLD WAR

- 117. The African Revolution
- 118. Ferment in the Middle East
- 119. Revolution and War  
in the Persian Gulf
- 120. The Developing World

*The demise* of European empires led to the establishment of new nations throughout Africa and the Middle East after 1945, but this momentous and widely celebrated transition also generated numerous new trouble zones during the Cold War and new regional, ethnic, or religious conflicts that persisted after Soviet-American rivalries faded in the late 1980s. Given their geographical proximity to Europe, the vast lands and diverse popula-

tions of Africa and the Middle East had long been affected by waves of European expansion—from the medieval crusades to the imperial competition of powerful nineteenth-century nation-states and the League of Nations' post-1919 distribution of territorial "mandates" to Britain and France. By the mid-twentieth century, however, nationalist movements had emerged everywhere (as in Asia) to oppose such outside intervention. Facing this opposition and weakened by two world wars, Europeans gradually lost the political will and the resources to maintain imperial rule in their African colonies and in the Middle Eastern mandates that they had controlled after the breakup of the Ottoman Empire at the end of the First World War.

Although the French resisted the nationalist upsurge in Algeria, the British suppressed anticolonial militants in Kenya, and the Portuguese fought to keep their colonies in Angola and Mozambique, the new wave of independence movements would ultimately manage to free every African country from European control. The emergence of new nations was nevertheless complicated by the fact that they generally encompassed diverse ethnic and linguistic groups whom the colonial powers had brought together within the artificial boundaries of a single political territory. This legacy of colonial administration often led to ethnic conflicts that destabilized African political systems or produced authoritarian governments.

Meanwhile, the Arab countries of North Africa and the Middle East entered into a prolonged conflict with the new Jewish state of Israel, which was established in 1948 after the British withdrew from the mandate they had exercised over Palestine. The creation of

Israel represented the triumphant fulfillment of a Zionist movement that had grown steadily since the late nineteenth century and gained new support after the devastating Nazi Holocaust, but it also brought about the displacement of a large Palestinian Arab population, a series of regional wars, the resurgence of an Islamic and Arabic religious fervor, and an intractable international issue that would involve the major world powers. The recurring conflicts in Africa and the Middle East also became entangled in the Cold War and in the global competition for key natural resources such as oil and minerals, so that the economic and political stability of the wider global system was much affected by the turmoil in these regions of the world.

We take up the postcolonial history of Africa and the Middle East in the first sections of this chapter and then conclude the chapter with the more general problems of Third World economic development previously encountered in the modern histories of Asia and Latin America. Contemporary analysis of the global economy often focuses on commodity production, labor costs, currency exchanges or the distribution of goods and services; but the modern history of Africa and the Middle East shows that economic history cannot be easily separated from the powerful currents of religion, nationalism, and ethnicity that swirl constantly around the global trade of oil, agricultural products, money, and advanced technologies.

## 117. THE AFRICAN REVOLUTION

Africa is a large continent, considerably larger than North and Central America combined. With an estimated population of 220 million in 1950 and almost 900 million in 2000, it has had one of the fastest-growing populations in the world, although the ravages of AIDS have taken a serious toll since the 1980s. A distinction may be made between North Africa and sub-Saharan Africa. North Africa, stretching from Mauritania and Morocco to Egypt, mostly Muslim and Arab, belongs as much to the Mediterranean world (and even more to the Islamic Middle East) in ethnic composition, culture, geography, and history. In sub-Saharan

*North and sub-Saharan Africa*

Africa, to the south, below the Sahara Desert, lives a population of over 600 million people, where Islam, Christianity, and traditional African animist faiths are found and where the population is predominantly black. An ethnographic and linguistic map of Africa would reveal hundreds of different ethnic groups and some 800 African languages, of which about 50 are spoken by a half million people or more. A large number of Africans since the colonial era also speak English or French, and there are also numerous descendants of European and South Asian settlers and immigrants, most notably in South Africa.

In 1945 the map of Africa was scarcely different from what it had been in 1914. All of Africa was European-governed with the exceptions of Egypt, Liberia, and Ethiopia (the latter had regained its independence from Italy during the Second World War). By the early 1960s, however, there were 35 independent states, and most of Africa was either independent or close to achieving independence. By the early twenty-first century there were 53 independent African states, making up more than a fourth of the membership of the United Nations. Of

*Independence movements*

the 53 states, all but five were in sub-Saharan Africa.

The new states differed from older nations in many ways. Africa's territorial boundaries, as we have seen, were drawn hastily during the era of European imperial expansion in the late nineteenth century, and the new states often contained highly diverse ethnic and linguistic groups. These groups usually lacked the "national" affinities that are associated

with the concept of a “nation-state,” while ethnically related peoples were frequently distributed over two or more countries. When independence brought the African states the full panoply of national sovereignty, the people in these states had a less unified national heritage than those in most older nations of Europe and Asia, and the new African governments faced the daunting challenge of welding their disparate ethnic groups into nationhood. The age of imperialism had left the African states economically underdeveloped, dependent on world markets, and with little experience in self-governing institutions; the very rapidity of the transition to independence added to their difficulties. Ethnic or civil wars and regional conflicts marked much of Africa’s first half-century of independence. The following survey of important developments in postcolonial Africa can only sketch the broad outlines of African history in these years.

### *French North Africa*

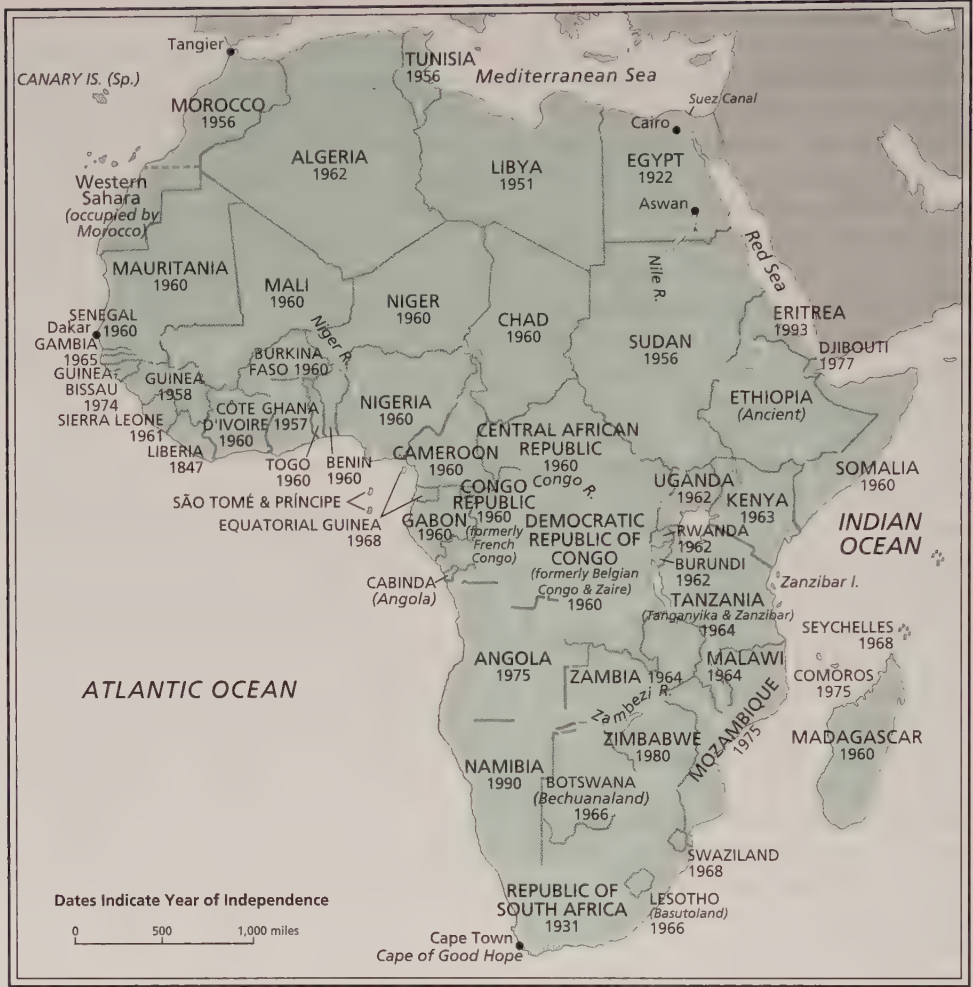

During the Second World War the Allied leaders had made various commitments to self-determination. With Italy defeated (and Ethiopia liberated), the wartime Allies in 1951 granted independence also to the former Italian colony of Libya, and the British took steps to end what was left of their privileged position in Egypt. These events galvanized French North Africa, where Arab nationalist leaders, often French-educated, had pressed for independence since the 1920s. In Morocco, Tunisia, and Algeria—the Maghreb, as these Arab states of northwest Africa are called—the nationalists mounted a vigorous campaign. Morocco and Tunisia were not outright colonies but French protectorates under their traditional rulers, the Moroccan sultan and the Tunisian bey. The French in 1956 granted independence to both countries. The Moroccan sultan became king as a constitutional monarch, but as the years went by, the monarchy increasingly enlarged its powers. Tunisia became a republic and was governed for its first 30 years by Habib Bourguiba, who introduced many democratic reforms (including rights of divorce for women) but insisted on being named president for life. In both countries modernization and pressures for liberalization continued long after independence, often against counterpressures from Muslim traditionalists.

Algeria’s story was very different. In the early nineteenth century the French entered Algeria, part of the decaying Ottoman Empire, and after several brutal military campaigns it became a fully controlled French colony by mid-century. Later in the century French and other Europeans settled there in substantial numbers, creating large immigrant communities that came to dominate the political and economic life of the country and its Arab population. The French meanwhile provided a few limited measures for Algerian self-rule and representation along with a promise that further concessions could be made when the country became fully assimilated to French and European ways. Some additional political concessions were granted in the interwar years, but after 1945 Algerian nationalists pressed for full independence. Although Algeria was represented in the French legislature in Paris, the suffrage in Algeria was heavily weighted in favor of the European settlers to the distinct disadvantage of the Arab majority. Of the 9 million or so inhabitants, about 1 million were Europeans. The *colons*, or European settlers, mostly French, like the family of the French writer Albert Camus, had lived there for generations. Because the Europeans controlled the economy and owned most of the land and industry, they feared for their political and economic privileges if Algeria were cut loose from France and governed by an Arab Muslim majority smarting from years of unequal treatment. The

Algeria*

CONTEMPORARY AFRICA

This map shows the emergence of independent African states and may be compared with earlier maps for precolonial Africa (p. 655) and for Africa in 1914 at the height of European imperialism (p. 658). The first of the new sub-Saharan states was Ghana, which gained independence from Britain in 1957 and took its name from a medieval African kingdom that had been located further north. The more recently established states include Zimbabwe (1980) and Namibia (1990) in southern Africa and Eritrea (1993) in northeastern Africa. By the end of the twentieth century all of the European colonial empires had disappeared and the white-controlled apartheid regime in South Africa had given way to a nonracial, democratic political system.

French military suppressed initial postwar uprisings, but the nationalist movement grew, and in the autumn of 1954 the National Liberation Front (FLN) launched a fierce guerrilla war against the French.

The French-Algerian war lasted 7½ years, involving at its peak 500,000 French troops and provoking sharp political divisions within France itself. The Algerian armed forces received aid and support from Egypt and other Arab states. Torture and cruelty became common on both sides. In the spring of 1958, during a French cabinet crisis in which the Europeans in Algeria feared that a negotiated settlement might be arranged, an insurrection by army leaders and diehard settlers in Algiers brought political changes in Paris and General Charles de Gaulle's return to power. To the dismay of the army leaders, however, de Gaulle unexpectedly arranged a cease-fire and soon spoke of autonomy and self-determination for the Algerians. In 1962, in a referendum, he won the backing of the French electorate for full independence. Army leaders thereupon rebelled, and some of his closest former associates helped form a secret army of terrorists who bombed and killed, and even attempted his assassination. Nevertheless, de Gaulle pressed on with negotiations for Algerian independence, and in 1962 French rule ended. The long and brutal war had cost the lives of 10,000 French and 100,000 Algerian combatants as well as many thousands of Algerian civilians.

---

---

*The French-Algerian War*

After independence there was a mass exodus of Europeans from Algeria, but most of the French and Algerians were grateful that de Gaulle had ended the ordeal. The French accepted the loss of Algeria and of other parts of their large African empire, and with a prospering economy in the 1960s turned their attention to other matters. Although staunchly anti-Western, the Algerians accepted French technical assistance for the development of Algeria's extensive oil and natural gas resources.

The FLN retained power and governed the country under a military-dominated one-party regime for the next 30 years. The party became increasingly corrupt, and it mismanaged the cumbersome state-owned planned economy, which survived only through the country's oil and gas revenues. In the 1980s about three-fourths of all young Algerians were without jobs and many were homeless as well. An additional 2 million Algerians migrated in search of jobs, mainly to France, where they were not always warmly welcomed. In 1988 general frustration in Algeria with the political and economic situation exploded into urban riots.

---

---

*The FLN*

In its effort to cement ties with other Arab states, the Algerian military leaders had allowed Islamic fundamentalists to teach and to grow in political influence. Among the parties that emerged was an extremist Islamic Salvation Front. It organized itself into a mass political movement, offered itself as a substitute for the FLN and won broad support. It vehemently opposed the Western-style secularization that had emancipated women from Islamic rules in dress and other matters and pressed for the reimposition of fundamentalist rules of dress and comportment. In late 1991 the Islamic party overwhelmingly won the first multiparty parliamentary elections ever held in the country, but the army leaders peremptorily canceled the election results and declared the Islamic party illegal.

---

---

*Islamic fundamentalism*

After 1992 the social and political life of Algeria entered a violent phase. The armed movement of the Islamic extremists unleashed a reign of terror, attacking whole villages and settlements. Moderate Islamic leaders were helpless. The military responded with brutal terror of its own, and well over 100,000 people died in the insurgent attacks or in the repression that followed. The violence eventually declined after the Islamic radicals

The Algerian war for independence from France was one of the most bitter, protracted struggles for decolonization, in part because a large French population had lived in Algeria for several generations. France had about 500,000 soldiers in Algeria, including these troops in the city of Oran, but the French army could not defeat the Algerian National Liberation Front or regain control of the Algerian countryside. Algeria became an independent nation in 1962.

(Getty Images)

declared a cease-fire and after the government, in 2000, proclaimed a broad amnesty for the rebels. But the large underclass still faced pressing economic problems, and ethnic tensions also strained relations between the nation's Arab and indigenous minority Berber population, which was Muslim but not Arab. Algeria was thus affected by the assertion of local ethnic identities as well as the powerful force of Islamic political movements, and it was still struggling to sustain a stable, democratic state almost a half century after the end of its long war for independence from France.

### *End of British Rule in West Africa*

In North Africa nationalist agitation for independence, already under way in the interwar years, might have been expected, but south of the Sahara the movement for liberation was never as far advanced. Here black African populations still lived in colonial empires that Europeans had carved out either in the colonial age that opened in the fifteenth century or in the "scramble for Africa" in the brief decade and a half of European imperialist competition after 1885.

Ghana was the first African nation to gain independence from Great Britain during the 1950s. The president of the new nation, Kwame Nkrumah, appears in this picture, waving to supporters at a national celebration in 1957. Nkrumah led the struggle for independence and became a key figure in the Pan-African movement, but his autocratic methods of governing and his extravagances provoked a military coup that ousted him from power in 1966.

(Bettmann/Corbis)

Yet independence movements, barely in existence before 1945, soon announced their presence. The British first resisted the mounting nationalist pressures, imprisoning or exiling nationalist leaders, but then, recognizing the strength of the liberation movements and the pressures of their own postwar economic problems, they decided in the 1950s to change their imperial policies. Britain thereafter moved quickly to grant autonomy to its colonies, which soon became dominions and then independent republics.

*From colonies to  
independent republics*

For many years the postcolonial republics were mostly ruled by authoritarian governments more interested in sustaining their own power than in developing democratic societies. Although there was a trend toward democratization across parts of the continent in the 1990s, serious economic challenges persisted almost everywhere. African economies remained underindustrialized and therefore highly dependent on international development assistance and on the fluctuating price of commodities in the global economy.

The Gold Coast (soon renamed Ghana) was the first British colony to win independence, and its subsequent history showed the kind of postcolonial economic and political patterns that would reappear in many former African colonies. The British initially resisted a militant civil disobedience movement led by the nationalist leader Kwame Nkrumah and even imprisoned him. But in 1951 they freed Nkrumah and conceded self-government.

Nkrumah's party overwhelmingly won the elections that followed, and he became prime minister. In 1957 the colony won full independence with dominion status, and in 1960

---

#### *Nkrumah's Ghana*

Nkrumah transformed it into a republic with himself as president. With independence, the country shed the name of Gold Coast, which was too closely identified with the centuries of imperialist exploitation and the slave trade. It called itself Ghana, recalling an African kingdom somewhat to the

north which had flourished from the sixth to the eleventh centuries. Nkrumah quickly gathered extensive power into his own hands, banned opposition parties, governed autocratically, and declared himself president for life. The early postcolonial history of Ghana thus showed a pattern that would recur in Africa (and in Asia): charismatic nationalist leaders who led the struggles for independence repeatedly turned into personal dictators once independence was won, and the party of the independence movement often became the basis for one-party governments.

Nkrumah adopted an anti-Western stance, championed a nonalignment policy in the Cold War, and sought a leading role in a pan-African movement, hosting in 1958 the first All-African People's Congress in Ghana's capital, Accra. He cultivated close ties with the Soviet Union and the People's Republic of China. He introduced, and his successors continued, a program of "African socialism," placing the economy under rigorous state control. In these new forms of socialism in Asia, Africa, and the Middle East, the state ran the economy, the ruling elite accumulated power and wealth, and there was little of the egalitarianism promised by traditional socialist doctrines and theories. The Ghanaian economy was generally prosperous when the nation gained its independence, largely because Ghana was the world's largest producer of cocoa and the source of a tenth of the world's gold. But the economy declined in the 1960s, in part because of ill-conceived development projects, and Ghana became heavily dependent on foreign loans.

---

#### *Power of the military*

Fed up with Nkrumah's arbitrary rule, unbridled extravagances, and cult of personality, military leaders ousted him in 1966. There then followed a series of military coups with only brief sporadic efforts to return to constitutional and civilian rule. Finally, in 1979 a junior air force officer,

Flight Lieutenant Jerry John Rawlings, seized control. He introduced a program of self-sufficiency and austerity and curbed a number of state controls of the economy. With financial assistance from the World Bank and market reforms the economy in the late 1980s began to show significant growth. By the early 1990s Rawlings was offering the promise of a more liberal political regime, including free, multiparty elections. At the opening of the new century, after two decades in power, Rawlings voluntarily surrendered the presidency in accordance with the terms of a constitution that had been introduced in the early 1990s. His elected successor, John Agyekum Kufuor, was returned to office in democratic elections at the end of 2004, providing new evidence that Ghana was continuing to move toward a more stable and open political system. Every phase of Ghana's postindependence history—especially the gradual evolution from authoritarian rule toward more democratic government in the early twenty-first century—resembled general trends that could be seen in much of postcolonial Africa; the democratization in Ghana became part of a wider African movement for political reform.

#### *Nigeria*

Nigeria, the largest British-governed colonial territory in Africa, has remained the most populous country in postcolonial Africa, with a population of over 125 million by the early

twenty-first century, and with 250 ethnic groups. The four largest, the Hausa and Fulani in the north and the Yoruba and Ibo in the south, all of which had had distinctive important cultures, trading economies, and city-state organizations in precolonial times, comprise two-thirds of the population. Britain had established its hold over the country through conquests and treaties in the mid-nineteenth century, but it had governed “indirectly” through local traditional rulers, excluding Nigerians from any significant role in self-government at higher levels.

Western-educated Nigerians, who had pressed for political representation in the 1920s, stepped up pressure after the Second World War. In 1960 Britain granted Nigeria independence and in 1963 it became a republic, with the respected nationalist leader Nnandi Azikewe as its first president. To cope with the country’s ethnic diversity, the constitution established three large geographical regions and 21 federal states. With a constitution, democratic machinery, a federal structure, political parties, and guarantees of civil rights the Nigerian republic held the promise of serving as a democratic model for the rest of the continent.

Unfortunately, regional and ethnic tensions, civil war, and a succession of military coups thwarted that promise. Only six years after independence a brutal civil war broke out. Because the northern region had come to dominate the government, the educated and economically advanced Ibos in the south, mostly Christian, saw themselves as excluded from an appropriate national role. In 1966 Ibo army officers staged a coup, but a Hausa-led military takeover almost immediately followed and became the signal for a widespread slaughter of Ibos. Large numbers of Ibos fled to the east, where in 1967 they proclaimed an independent state of Biafra. A terrible civil war and blockade lasted 2½ years, from 1967 to 1970, and resulted in close to a million deaths from the blockade and starvation. The Ibo secession collapsed. After the war the federal government followed a policy of reconciliation, reintegrated the Ibos into national life, and sought, with some success, to overcome other regional and ethnic differences as well.

But more coups and assassinations took place and the military remained in control. In 1979 General Olusegun Abusanjo after three years of military rule restored civilian government, but in 1985 a new coup returned the military to power. Although they promised to restore free elections, they did not do so until eight years later.

For a time, in the early 1970s, Nigeria enjoyed a booming economy, based on its large oil resources, which made it the world’s sixth largest oil producer. Lagos, the Nigerian capital at the time, quadrupled in size. But the oil wealth failed to stimulate broader economic development and corruption was endemic. Severe drought and a growing population forced dependence on food imports, which led to inflation and debt.

The 1990s brought important political changes. When the military eventually permitted presidential elections in 1993, the popular opposition leader Moshood Abiola clearly won, but the ruling general nullified the results and imprisoned Abiola. His death in prison five years later, allegedly of a heart attack, sparked nationwide protests that eventually brought a restoration of civilian government. In the 1999 elections the voters turned to General Obasanjo, who 20 years earlier had been the first Nigerian military ruler to give up power voluntarily to a civilian regime, and Obasanjo was reelected to the presidency in 2003.

Nigeria’s early promise of parliamentary democracy, repeatedly frustrated over the past four decades, was showing clear signs of renewal. The widespread

regime*

**Nigeria has become one of the world's most important producers and exporters of crude oil since the 1970s. This oil derrick in the delta of the Niger River is part of the booming petroleum industry, which accounts for much of Nigeria's income from international trade but also makes the economy vulnerable to rapid, global fluctuations in the price of oil.**

(Liaison Agency)

problems of government corruption and poverty persisted, however, and even the steady rise in global oil prices brought little direct economic benefit to most of Nigeria's growing population. The country also suffered from renewed ethnic tensions and from a cycle of violence between Muslims and Christians, which caused numerous deaths in northern Nigeria. Despite such internal problems, the nation's oil production and sheer size gave it a major role in African affairs, which included the dispatch of Nigerian soldiers to serve as peacekeepers in various regional conflicts.

### *End of British Rule in East Africa: Kenya, Tanzania, Uganda*

In East Africa, especially in Kenya, the independence movements after 1945 encountered obstacles, but the struggles to establish new nations moved through the usual political stages to achieve sovereign statehood. European settlers, who had arrived early in the century in considerable numbers, dominated economic and political life. They had dispossessed the Kikuyu and Maasai peoples to create large coffee and tea plantations on the most desirable land. Many Indians had also arrived from South Asia as merchants and traders. Africans, restricted to working as subsistence small farmers, agricultural laborers, and unskilled workers in the cities, resented their second-class economic and social status.

In the 1920s young nationalist leaders, many of whom, like Jomo Kenyatta, had studied abroad, agitated for land reform and African representation in government. After the Second World War a movement for independence led by Kenyatta and his party gathered momentum. When the European settlers stubbornly resisted pressures for independence, the militants responded with violence and acts of terrorism. The settlers retaliated, and as

the violence mounted, the British declared a state of emergency and imprisoned or removed from the troubled area many of the nationalist leaders. Eventually, however, the British faced up to the inevitable. They ended the state of emergency, released Kenyatta, and in 1963 granted Kenya independence. Over 55,000 Europeans left the country.

---

---

*Kenyatta and  
Kenyan independence*

Kenya became a republic in 1964 with Kenyatta as its first president. Until his death 14 years later he completely dominated political life, following the all-too-familiar pattern of the independence leader's turning dictator after independence. Like other new African leaders he championed pan-Africanism and neutralism in the Cold War.

When he died in office in 1978, Daniel arap Moi, who had been his vice president, governed under the same kind of authoritarian one-party regime, rejecting pressures for liberalization. The economy deteriorated and unemployment ran high, but international lending agencies refused to provide aid until reforms were undertaken. Democratic elections were finally instituted in the 1990s, and Moi left office in 2002; but the transfer of power to the opposition leader did not end the country's political unrest. New disputes arose over proposed revisions in the constitution, and there were persistent charges of widespread corruption. Other issues in Kenyan political life, including controversial questions of land ownership and long-term leases, were still influenced by the legacy of British colonialism, so that postcolonial transitions were still affecting Kenya in the early twenty-first century.

---

---

*Tanzania*

The other main East African states, Tanzania and Uganda, also passed through a series of domestic political changes after gaining independence in the early 1960s. Tanzania was established after a revolutionary movement merged the former British-controlled territories of Tanganyika and Zanzibar in 1964. Its political life was dominated by the nationalist leader Julius Nyerere, who did not allow opposition parties or free elections during the 25 years in which he held office. Nyerere therefore stymied the development of democratic political life, but he introduced a number of useful reforms.

By promoting literacy and establishing Swahili along with English as the official language of public life, he helped unite the country's ethnic and linguistic groups. His economic policies were less successful and the country remained impoverished. Also a champion of "African socialism," he nationalized much of the economy, including agriculture. In the Cold War he drew close to the Soviet Union and to China, and for a time Tanzania served as a principal bridgehead for Chinese Communist influence on the African continent. Under Nyerere's successors, the government denationalized many state industries, sought to end overly rigid economic controls, and restored collective farms to family cultivation. In 1995 it held its first multiparty elections, which brought to power another long-serving president—Benjamin William Mkapa. The country's economic problems were soon aggravated by a flood of hundreds of thousands of refugees from civil wars in neighboring states and by the deadly AIDS epidemic, but Mkapa was able to maintain a stable government and to win reelection in 2002.

---

---

*Uganda*

Uganda, which Winston Churchill once described as the "pearl of Africa" because of its natural beauty, won independence in 1962. It, too, encompassed many ethnic groups, who had been brought together in a British protectorate during the 1890s. Uganda was the scene of much missionary activity. Both Protestantism and Roman Catholicism made many converts so that the population became two-thirds Christian. While some permanent European settlers established large plantations, the African farmers cultivated small plots of cotton, tea, and coffee. South Asians arrived to play a leading role as merchants. In 1921 Britain established a legislative

council, but the first African members were admitted only in 1945, and not until several years later did they receive a substantial number of seats. Pressure for independence continued.

With independence near, political parties emerged, ethnic rivalries sharpened, and the traditional, central kingdom of Buganda demanded a separate state. Political organizations that were resentful and suspicious of Bugandan intentions coalesced into the leading party, and Milton Obote, its leader, became prime minister. In 1963 a constitution transformed Uganda into a republic. As a compromise, the king of Buganda, the *kabaka*, was elected ceremonial president. But in 1966 Obote, bent on centralizing authority, forced the *kabaka* to flee the country. Obote promptly concentrated more and more power into his own hands, and over the next five years alienated many in the country. In 1971 a flamboyant, ruthless

soldier, Idi Amin, rose from the ranks to become commanding general, seized power, and for eight years brutalized the country, shocking Africa and the world with executions, massacres, and torture. As many as 300,000 Ugandans may have lost their lives; entire ethnic groups were singled out for destruction. A once prosperous agricultural economy with thriving cof-

fee, tea, and cotton exports lay in ruins. Professionals and intellectuals fled. In 1972 he expelled some 60,000 Asians, mostly Indians, who had been a strong presence in the country's commerce and industry. In 1976 he declared himself president for life. At last, in 1979, after he had invaded northern Tanzania over disputed border territory and devastated the area, a Tanzanian army, accompanied by Ugandan exiles, moved into Uganda and overthrew the dictator.

Obote, the former president, returning with the Tanzanian army, regained power and crushed all opposition forces. Additional tens of thousands lost their lives or fled to neighboring states. Eventually a guerrilla army under Yoweri Museveni, which had fought a guerrilla war against Idi Amin, now helped to overthrow Obote. Museveni took power in 1986 and began to restore a measure of constitutional government. He also took the first steps to rehabilitate the devastated country. Economic production in Uganda in 1989 was one-fifth what it had been at the time of independence; but a measure of political stability, international financial assistance, and foreign investment made economic growth once again possible. The political atmosphere became freer. The government pioneered in aggressive steps to check the spread of the AIDS epidemic that was ravaging the country.

In the early twenty-first century Uganda still faced guerrilla warfare in the countryside led by a fanatical, self-styled Christian religious leader, whose military tactics included the mass abduction of young children who were then used as slave labor or armed as soldiers. Museveni also became involved in the complicated and shifting warfare in Congo. Violence thus remained a problem in Uganda, and the country had not yet established an open, democratic political culture. Museveni disappointed many of his democratic supporters when he took steps in disregard of the constitution to renew his presidency. But Uganda had moved beyond the brutal excesses and ethnic repressions of the 1960s and 1970s.

### *Southern Africa*

In southern Africa the British peacefully transferred power in the early 1960s to black majority governments in Zambia (formerly Northern Rhodesia), Malawi, and Botswana. But elsewhere in this part of the African continent a white colonial minority held out against yielding or even sharing power.

---

*Idi Amin's reign of  
terror*

In Southern Rhodesia (now Zimbabwe) the British government in London tried to negotiate political rights for the black majority before granting independence, but the small white community resisted, and in 1965 it unilaterally proclaimed independence from Britain. After 15 years of escalating guerrilla warfare and international political and economic pressure, the white leaders yielded. In 1980 Southern Rhodesia became Zimbabwe, with a black majority government. Within a few years the independence leader Robert Mugabe, combining the posts of president and prime minister, created a one-party state, which he continued to govern for more than twenty-five years. Frustrated by the country's continuing economic difficulties, he allowed and even encouraged armed Africans to seize land that had long been in the hands of white fellow Zimbabweans; violence erupted in many parts of the country, creating alarming episodes of unrest and lawlessness, but opposition political groups were unable to influence government policies or to compete for parliamentary seats in free and fair elections. President Mugabe clung to power in the first decade of the new century—though he was an increasingly isolated “strongman” who had lost the support of both the international community and many of his compatriots who had once supported his leadership of the struggle for national independence.

*Zimbabwe*

### *The Union of South Africa*

In the extreme south of the continent, in the Union of South Africa, a special drama unfolded. In the late 1980s in a population of just over 40 million, about 6 million whites lived uneasily with 30 million blacks, 3 million people of mixed background (denominated “coloureds”), and 1 million Asians; both of the latter groups were classified as non-whites. The whites, though a minority, were far more numerous than elsewhere in Africa south of the Sahara and had lived there for a long time. They were numerous enough to constitute a social and cultural outpost of European civilization and to develop an expanding, prosperous economy, but they were greatly outnumbered, and many feared losing their dominant status. About half the whites, the Afrikaners, were mainly descendants of Dutch Calvinist immigrants from as far back as the founding of Cape Town in 1652; the other half represented immigration from Great Britain since the 1820s. The two halves did not easily mix. The Afrikaners, during their long isolation from Europe, developed a new language of their own, Afrikaans, derived from Dutch; and they retained unpleasant memories of British expansion, especially of the Boer war in the late nineteenth century.

In 1948 the Afrikaner-controlled Nationalist party came to power for the first time, campaigning for racial separation and the preservation of a white-dominated society. It legislated a sweeping policy of *apartheid* (the Afrikaans word for separation or segregation). The new laws excluded blacks from political life and imposed blatant forms of racial discrimination in housing, transportation, land ownership, and employment. Between 1950 and 1980 well over 1 million nonwhites in the cities were forced to leave white areas of residence and to relocate. Permits to blacks for urban jobs were granted only as industry required workers. Under a program of “separate development,” the government also established four of a projected ten autonomous homelands (*bantustans*) for various black ethnic groups, but they met with little favor or outside acceptance. The land was poor and movement from the “homelands” to the rest of the country was strictly regulated. The practices of apartheid and the racist laws enforcing it were internationally condemned. Finding itself

*Apartheid and  
separate development*

increasingly isolated from the rest of the world, the South African government in 1961 broke all official ties with Britain and the Commonwealth and proclaimed itself the Republic of South Africa.

Opponents, black and white, of the restrictive laws encountered police brutality, torture, preventive detention, and prison sentences. Nelson Mandela, the black leader of the African National Congress, was sentenced to life imprisonment. Despite the prolonged detention of Mandela and other leaders, the African National Congress waged a determined campaign for racial equality which included demonstrations, strikes, and armed struggle. The regime attempted to suppress the black movement with military force, and there were tragic clashes at Sharpeville in 1960 and at Soweto in 1976, among others, costing the lives of hundreds of black protesters. By the 1970s increasing numbers of whites were protesting apartheid, and the United Nations had imposed sanctions. The United States, which had gone through its own much needed civil rights movement in the 1960s, joined in the economic sanctions and encouraged business corporations to withdraw or withhold investments.

The international political and economic pressures began to have an impact on the regime. A more enlightened wing of the Nationalist party attempted to moderate the apartheid laws, but initial reforms aroused opposition from Afrikaner diehards. In 1989 President F. W. de Klerk, anxious to defuse the explosive situation and sensitive to international opinion as well as the threatened deterioration of the economy, accelerated the reform program. In 1990 the government freed Nelson Mandela, who had become an internationally acclaimed hero and martyr after his more than 27 years in prison. In 1991 the government repealed all of the apartheid laws, ending over a half-century of enforced legal segregation. A year later the white electorate voted overwhelmingly in a referendum to end white minority rule. In Mandela's words, the "countdown to democracy" had begun.

---

*Countdown to  
democracy*

In 1994 the first democratic nonracial elections, in which 22 million voters participated, brought Mandela and the African National Congress to power with provisions for a multiparty government of national unity during the period of transition. In 1996 the country adopted a constitution with the broadest bill of rights to be found anywhere in the world. It not only guaranteed political freedoms, but it also proclaimed social and economic entitlement to adequate food, housing, education, and health care. Meanwhile a Truth and Reconciliation Commission held hearings that disclosed the former government's full panoply of cruel abuses and acts of violence. In what many considered a model worthy of imitation in other post-autocratic regimes, amnesty was guaranteed to all who came forward with confessions of wrongdoing.

---

*Freedom and  
challenges*

After its long travail, and with enormous challenges, South Africa at last had the opportunity to create a nonracial democratic political system. The government in its first five years brought electricity and clean water to millions. During the country's second post-apartheid elections, in 1999, the African National Congress party came under heavy criticism for not accomplishing more but again won a sweeping victory and Thabo Mbeki replaced Nelson Mandela, who was voluntarily retiring, as the country's president. Mbeki, who was elected to a second term in 2004, sought to improve economic conditions for the country's black majority; but he lacked Mandela's skills, and he also stubbornly refused to recognize the true dimensions and causes of the AIDS epidemic. South Africa still faced poverty, unemployment, and a high crime rate, all heightened by the continuing spread of AIDS. Land ownership remained predominantly in white hands; 85 percent of the population was

Black protestors often clashed with the police during the long era of official racial segregation under South Africa's apartheid laws. This picture shows one such clash in 1976 in Soweto, where numerous demonstrations were violently repressed and several hundred people were ultimately killed.

(Hulton-Deutsch Collection/Corbis)

black, but they owned only about 20 percent of the land. The standard of living for white South Africans, it was estimated, ranked 24th in the world; that of black South Africans, 126th. But the battle for the most elementary political and social freedoms had been won.

The political transformation in South Africa affected the whole region because the white-dominated earlier regime had intervened to oppose black-led independence movements in other African countries. At the same time it had refused to surrender its international trusteeship over what had once been German Southwest Africa. The black leadership there, with the support of the United Nations, sought independence as the new state of Namibia, but it required a long guerrilla war before Namibia's independence was officially recognized in 1990.

### *The French Sub-Saharan Empire*

The French, largely as a consequence of the bloody war in Algeria, dissolved the remainder of their vast colonial empire in sub-Saharan Africa peacefully. After the Second World War they had hoped that a French-educated and assimilated African elite would maintain ties to France in a loosely organized French Union. They gave the African colonies representation in the French National Assembly and promised self-governing institutions, but

**The long campaign for equal civil and political rights in South Africa led finally to democratic, nonracial elections in 1994. The nation's first black president, Nelson Mandela, had emerged from more than 27 years in prison as an internationally known symbol of the struggle for human rights. He is shown here taking the oath of office to lead the first government freely elected by a vote of all South Africans.**

(Associated Press, AP)

control remained centralized in Paris, and by the mid-1950s the African colonies, inspired by nationalist movements elsewhere, pressed for independence. De Gaulle recognized the inexorable pressure for independence and offered the sub-Saharan colonies their freedom of choice. By 1960 all 15 colonies had chosen independence.

Many, however, retained close ties with France for economic aid and cultural cooperation. France remained a strong presence among the African francophone nations (and indeed the strongest presence of all the Western countries on the African continent), training the armies of the new states, lending financial assistance, and taking a leading role in economic develop-

ment.<sup>1</sup> On numerous occasions after 1960 the French intervened in Africa with military force. In 1979, for example, they helped overthrow a brutal dictator who had seized power

---

*French aid and  
cooperation*

---

<sup>1</sup>The francophone, or French-speaking, sub-Saharan African states emerging from the French colonial empire in 1960 were Benin (until 1975 called Dahomey), Cameroon, Central African Republic, Chad, Republic of Congo (Brazzaville), Gabon, Guinea, Ivory Coast, Madagascar (or Malagasy Republic), Mali, Mauritania, Niger, Senegal, Togo, and Burkina Faso (until 1984 called Upper Volta). Comoros became independent in 1975; Djibouti, in 1977. Morocco, Algeria, and Tunisia, in North Africa, are also part of francophone Africa as former French protectorates. The former Belgian colonial territories must also be included: the Democratic Republic of Congo (once the Belgian Congo, and from 1971 to 1997 called Zaire), and Burundi and Rwanda (once Belgian trusteeships).

in the Central African Republic in 1966 and for 13 years ruled as head of a self-proclaimed Central African Empire. In Chad, they intervened when rebels in the north backed by Libya threatened to overthrow the government; and in 2004 they intervened in the Côte d'Ivoire (Ivory Coast), where French peacekeepers were killed during a civil war that unexpectedly erupted in that hitherto peaceful country.

France thus continued to see itself as a key international power in African affairs. The French organized the African Financial Community, helped stabilize African currencies, and became the largest donor of aid to the continent. While some African leaders criticized such actions as neocolonialism, others viewed the French presence more as a partnership than an intrusion. As elsewhere in Africa, the promise of democratic government in the former French colonies turned for the most part into civilian or military dictatorships, even if the degree of repression varied. Here too the independence party often became the sole legally recognized political party. Presidents concentrated power in their own hands, often holding office for 20 years or more.

### *The Belgian Congo: From Mobutu's Zaire to the Democratic Republic of Congo*

The Belgian Congo was a byword for European imperialist exploitation and cruelty in the late nineteenth century. The most abusive features were remedied before 1914, but political control remained concentrated in Brussels and little was done to prepare the large colony (it was 80 times the size of Belgium) for self-government. Agitation for independence intensified when the neighboring French Congo, its capital at Brazzaville, won independence in 1960 and became the Republic of Congo.

Faced with pressure for independence, the Belgian government, which had first proposed a transition period of 30 years, decided against gradualism and in 1960 announced its withdrawal in six months' time. Chaos followed. The two key nationalist leaders, one of them the leftist leader Patrice Lumumba, were at odds with one another. Ethnic and regional antagonisms ran deep, and no one was prepared to carry out governmental responsibilities. The army mutinied, and the soldiers turned against their European officers. Meanwhile the copper-producing province of Shaba (then called Katanga) attempted to secede. Belgian paratroopers hastily flew back, and a United Nations international military force was sent to restore order. When Lumumba was assassinated in 1961 (with evidence of American connivance), the troubled situation became even more volatile because of a threatened Soviet-Western confrontation. The Soviets charged the Europeans and their American supporters with deliberately creating the chaos so that the Europeans might return.

---

*Cold War  
entanglement*

The Shaba secession was halted, but the government with Belgian and American support continued to battle leftist rebels. Eventually, in 1965, Colonel Joseph Désiré Mobutu established a dictatorship that would last for the next 32 years. He at once nationalized the large mining enterprises and other parts of the economy. To symbolize the new era, all geographical and personal names were Africanized. He himself took the name Mobutu Sese Seko. The country became Zaire, as did the famous river. The capital city of Leopoldville and the second largest city, Stanleyville, both carrying names reminiscent of European imperialism, became Kinshasa and Kisangani; Lake Albert became Lake Mobutu.

---

*Mobutu and Zaire*

Zaire, the third largest country in size in Africa (second only to Sudan and Algeria), its cities widely separated and with poor, overgrown roads, had vast copper, diamond, cobalt, and other mineral resources; but its potential riches remained undeveloped and

Mobutu's extravagances over the years drove the country to the brink of economic ruin. By his last years it had fallen heavily into debt, was dependent on imported food, and had become increasingly corrupt. The United States, to prevent the expansion of Communist influence, continued its financial assistance and used the country as a base for operations against neighboring countries like Angola, where leftist regimes were fighting to establish themselves.

When in 1987 Mobutu could no longer count on American support, he met his mounting domestic opposition by agreeing to multiparty elections, but he ignored the results and continued his dictatorial rule over the next several years. Meanwhile guerrilla forces, the principal one led by Laurent Kabila, with support from Zaire's neighbors, Rwanda and Uganda, gathered strength and in 1996 swept through the country in a seven-month campaign, meeting little resistance. Kabila's forces gained control of the capital in 1997 and forced Mobutu to flee. Zaire officially became the Democratic Republic of Congo. One of the most repressive, corrupt, and ruthless dictatorships of postcolonial Africa came to an ignominious end and Mobutu died in exile a few months later.

---

*Democratic Republic  
of Congo*

But the country's troubles were not over. Satisfaction over Mobutu's downfall faded when Kabila, assuming a dictatorial role himself, banned all political parties except his own, arrested rival opposition leaders, and refused to permit a UN-sponsored human rights investigation into the repressive actions of his army. Because he relied on troops from neighboring countries and made no effort to build a national army, many in the country came to view him as a puppet of neighboring states who were eager to pillage Congo's vast resources. Because Kabila's weak hold on power disturbed his former allies, Rwanda and Uganda opened a military campaign to overthrow him and soon controlled half the country. By 2000 five separate nations had armed forces warring in Congo, supporting or opposing Kabila, and Rwanda and Uganda were fighting each other. The following year Kabila was assassinated, and a hasty effort was made to provide stability by swearing in his son as his successor. Foreign troops gradually withdrew from the country, but a civil war continued until UN peacekeepers and a tenuous truce agreement brought an end to most of the violence in 2003. President Joseph Kabila remained in office, but elections were postponed and the Democratic Republic of Congo was still far from achieving democratization or peace in the first decade of the new century—as in so many of the other African states that had emerged from European empires during the 1960s.

### *Burundi and Rwanda*

Belgium, which had governed colonial Congo directly, had also administered under a League mandate and a UN trusteeship two small territories that had been part of German East Africa before 1914. In 1962 they became the independent states of Burundi and Rwanda. Both were predominantly Christian, divided between Roman Catholics and Anglicans. Although the two states went their separate ways, there were many parallels. Long-standing tensions between the dominant Tutsi minority and a resentful Hutu majority, partly a legacy of colonial policies, had led to power struggles and internecine warfare over the years but nothing comparable to the tragic events that took place in the mid-1990s.

The Hutu, a Bantu people, the original settlers, were agricultural farmers. The Tutsi (or Watusi) arrived, possibly from Ethiopia, in the late fifteenth century. A tall warrior people who were cattle herders, they came to dominate the more numerous Hutu who worked the land for them in a kind

---

*The Hutu and the  
Tutsi*

of semifeudal relation. The German and later the Belgian colonial administrators favored the Tutsi, treating them as an elite group and enlisting their assistance in governing. After the Second World War, however, a new generation of Belgian administrators shifted to the view of redressing the balance in favor of the Hutu majority. When independence came, the Tutsi were still in control of the army and government, but the Hutu saw an opportunity to avenge themselves for the years of subjugation.

In Burundi a series of conflicts between the Tutsi-controlled government and Hutu rebels led to ethnic violence that killed thousands of people, Tutsi and Hutu alike, in the 1970s and early 1980s. Tutsi military regimes succeeded one another. In 1987 one such regime pledged itself to work for ethnic reconciliation and in 1993 allowed presidential elections. A Hutu, the first ever, was elected president. His efforts to form a stable, ethnically balanced government proved difficult. In Rwanda, meanwhile, similar efforts at reconciliation had led to the election of a Hutu president who proceeded to show good faith by appointing Tutsi ministers to the cabinet. In April 1994 an unexpected catastrophe occurred. A plane carrying the Hutu presidents of Burundi and Rwanda returning from a conference was shot down under mysterious circumstances, killing both presidents.

In Rwanda the event set off a wild outburst of revenge by Hutu extremists, who broadcast radio calls for a wholesale massacre of Tutsi. In a few weeks' time over a half million Tutsi were killed, along with Hutu moderates who refused to go along. The killings were accompanied by all kinds of atrocities. Men, women, and children seeking refuge in churches were tracked down and slain, at times with the complicity of Hutu Roman Catholic and Anglican clergy. The international community, meanwhile, stood aside while the massacres went on unchecked. The worst carnage ended when Tutsi armed exiles, many of whom had been living in Uganda, swept back into the country, subdued the Hutu extremists, and reestablished a government pledged to work out some form of reconciliation.

---

---

*Outburst of revenge*

But armed Hutu extremists in considerable numbers had fled to the eastern borderlands of neighboring Congo, and Rwanda became enmeshed in Congo's civil war, which soon turned into a regional multinational war. All these events posed problems for the international community. It could not intervene in all cases of civil war to prevent human rights atrocities, but there was wide agreement that some middle ground had to be found between international intervention and the almost complete failure to act during the racist brutality and wholesale slaughter in Rwanda in 1994 that could justifiably be called genocide. Meanwhile, the Rwandan political situation began to stabilize. The Tutsi leader Paul Kagame was elected president in 2003, and in 2005 the largest group of Hutu rebels (many of whom were still in the Democratic Republic of the Congo) decided to end its armed campaign against the government. But the mass murder of the mid-1990s remained a haunting memory for the whole world as well as an impediment to full reconciliation within Rwanda itself.

---

*Regional warfare*

### *End of the Portuguese Colonial Empire*

Of all the colonial powers Portugal, itself under authoritarian dictatorship until 1974, clung longest to its colonies, symbols of grandeur from the days of Vasco da Gama's explorations and the early age of European expansion. To retain Angola, on the southwestern African coast, and Mozambique, on the southeastern, both of which at one time had been flourishing centers of the slave trade and had been under Portuguese rule for over 400 years, the Portuguese dictatorship stubbornly suppressed anticolonial revolts which broke out in 1961. It was in the course of the fighting that disaffected officers and

**The violence of rampaging Hutu extremists in Rwanda sent a flood of refugees into the neighboring countries of central Africa in 1994. Hundreds of thousands of people in Tutsi communities were massacred, along with many thousands of Hutu moderates. Both Tutsi and Hutu families fled from the atrocities and joined other refugees in places such as this makeshift “camp” in the Congolese city of Goma. The people in this group were mostly Hutus, but the violence and displacement tragically affected everyone in Rwanda.**

(Mark Peters/Sipa Press)

soldiers in the army, radicalized by the prolonged colonial war, turned against the Portuguese regime and overthrew it in 1974. The following year Portugal granted independence to Angola, Mozambique, and its smaller African colonies. Hundreds of thousands of Portuguese fled.

---

#### *Angola*

In Angola independence touched off a struggle for power by competing groups in which outside powers intervened—the Soviet Union and Cuba on the one side; the United States and South Africa, still under its apartheid regime, on the other. The Soviet bloc provided weapons and advisers to a Marxist faction, and the Cuban dictator Fidel Castro, who projected himself as a Marxist-Leninist defender of oppressed colonial peoples everywhere, dispatched 50,000 troops. Although the leftist group won out, proclaiming a “people’s republic” in 1976, anti-Communist rebel groups with the support of the United States and South Africa continued the struggle. The war dragged on and cost hundreds of thousands of lives. Not until the early 1990s did the outside powers withdraw, the arduous task of economic reconstruction begin, and UN-supervised elections take place, but violence continued until antigovernment rebels finally agreed to a cease-fire after the death of a key rebel leader in 2002.

---

#### *Mozambique*

Mozambique, also a “people’s republic,” became engaged for the next 16 years in similar fighting with a militant rightist insurgency. The continuing wars and natural disasters such as drought and famine cost the

small country over half a million lives and created 1½ million refugees. Both Angola and Mozambique gradually abandoned Marxism, loosened economic controls, and turned to the West for desperately needed economic assistance; and both countries were still struggling to recover from their internal wars, even in the first decade of the twenty-first century.

### *Ethiopia, Eritrea, Somalia, and Sudan*

The postcolonial campaign to establish stable governments evolved fitfully over many years in northeastern Africa, where Ethiopia, Eritrea and Somalia had all formed part of Italy's short-lived East African empire. Italian armies, which had occupied Ethiopia after Mussolini invaded the country in 1936, were routed in the early years of the Second World War. Haile Selasse returned as emperor, but he was deposed by a military coup in 1974, whereupon Ethiopia became a client state of the Soviet Union in the Cold War conflicts of the era. The pro-Soviet regime was unable to defeat an Eritrean secessionist movement, however, and by 1993 a new Ethiopian government agreed to recognize the independent state of Eritrea on its northeastern border. Conflicts nevertheless continued to break out along this border in the 1990s, and both countries struggled with droughts, the movement of refugees, and recurring threats to peace and democratic political processes in the next century.

Political instability and internal violence also troubled the post-independence history of neighboring Somalia, which had been partly under Italian control before 1914 and eventually under a UN trusteeship before becoming an independent state in 1960. Somali governments later sent troops into Ethiopia during the period of the Soviet-Ethiopian alliance (seeking control of an area where many Somalis lived), but this intervention failed. Somalia was subsequently disrupted by ongoing rivalries among competing "war lords," who resisted both a strong centralized government and the creation of democratic institutions. Although Somalia would come to be viewed as a dangerous transit point for radical Islamic militants and other anti-Western groups, neither American troops nor UN peacekeeping forces were able to establish political order during their intervention in the 1990s; and regional war lords would continue to dominate Somalia in the first decade of the new century. The American setback in Somalia for a time reinforced American reluctance to intervene in troubled areas elsewhere, including Rwanda.

The largest country in Africa, Sudan, entered its own era of internal violence as it gained independence from joint English-Egyptian rule in the late 1950s. The black population in southern Sudan, who were mainly Christian or followers of traditional animist faiths, rose in rebellion against the Arab government in the north, which sought to impose Islamic law on the entire country. Religious and ethnic violence dominated Sudanese life throughout much of the later twentieth century, as people in southern or western Sudan resisted the Islamic regime and as militia groups allied with the central government waged campaigns of violence, rape, and land appropriation. Although rebel groups in southern Sudan finally signed a peace accord with the government in early 2005, the situation was destabilized when the principal southern leader was killed in an accident. Meanwhile, the non-Arab, black peoples in the western Sudanese territory of Darfur came under widespread attacks from Arab militias, whose murderous destruction of whole villages (with the apparent sanction of the Sudanese government) was widely condemned by the international community in 2004–2005.

The recurring wars, government repression, famine, and drought thus kept most of the population of Ethiopia, Eritrea, Somalia, and Sudan in a vulnerable, impoverished condition. The turmoil also displaced a steady stream of refugees and precluded the kind of sustained economic development that was needed to support more stable political institutions.

### *The African Revolution*

The preceding summary of postcolonial African history has stressed political and social conflicts that developed in the former European colonies, but it would be wrong to assume that the African Revolution was only a story of violence and disappointments. Independence provided a deep source of self-esteem. The word *uhuru*, freedom, rang through the continent in the heady days of decolonization. Léopold Senghor, the poet-president of the formerly French colony of Senegal, gave voice to the idea of *négritude*, a powerful far-reaching black self-consciousness and pride in ancient cultural roots. This new pride spread far beyond the African continent itself, striking a responsive chord in North and South Americans of African descent whose ancestors had been brought in chains from lands that were now modern sovereign states. Black Africa exulted when the Nigerian playwright, poet, and novelist Wole Soyinka, who blended Yoruba and Western traditions in his writings, received the Nobel Prize for literature in 1986. Meanwhile Chinua Achebe's novel about Nigeria during the early years of European colonialism, *Things Fall Apart* (1959), entered the canon of world literature.

---

Uhuru and  
négritude

The African revolution ended Western colonialism and ushered in a new era of independence and national sovereignty, but it did not automatically bring democratic government, civil and human rights, the resolution of ethnic and regional antagonisms (some of which were the residue of Europe's colonial policies and arbitrary boundary divisions), or a meaningful improvement in the quality of human lives. In the countryside ethnic loyalties often transcended national loyalties. Natural disasters, drought and floods, eroding soil, and diseases added to the continent's tribulations, which derived also from the fact that African agriculture and other economic activities remained hostage to world price fluctuations.

---

A new era

The social and economic situation was often grim. At the end of the twentieth century close to one-half of sub-Saharan Africa's population of 600 million survived on less than \$1 a day. The continent's debt burdens amounted collectively to \$200 billion. Many of the world's older infectious diseases such as malaria and many childhood diseases were still prevalent. The death toll from AIDS and the rate of infection from the HIV virus was devastating. Of the 36 million people in the world living with HIV, the virus that causes AIDS, over two-thirds were in sub-Saharan Africa. Some 15 million Africans had already died from it, and 11 million had been left orphans. Scientists and others agreed that AIDS could well be the most serious infectious disease in recorded human history. For Africa it was described as the worst social disaster since the slave trade. A broad-based campaign to control the pandemic thus gained international support at the beginning of the twenty-first century—in part because of the widespread human suffering and in part because the hard-won gains in development, economic growth, and quality of life were in danger of reversal.

The new states began independence with constitutions, elected parliaments, independent judiciaries, and formal guarantees of civil liberties. But under the pressure of ethnic conflict, economic burdens, and political instability, the machinery of constitutional government quickly succumbed to dictatorship, generally military. In country after country, generals, admirals,

---

Constitutional  
governments fall

**Postcolonial Africa** faced numerous challenges at the end of the twentieth century, including the spread of the AIDS pandemic and the need to produce more food. These men in Botswana are thrashing a harvest of sorghum, a grain that has become one of the key agricultural products in the commodity-based economies of most African nations.

(Peter Essick/Aurora Photos)

colonels, majors, and officers of lesser rank pushed aside the civilian rulers. The warrior caste, often a law unto themselves, became the accomplices and tools of the new rulers, tyrannizing the population. Nigeria, which at least made sporadic efforts to preserve constitutional government (and its federal system for the multiethnic state), counted six military coups in the years from 1966 to 1985. Of over 150 African heads of state in the first three decades of independence, only six voluntarily relinquished their offices, and most presided over governments that were repressive, corrupt, and tyrannical. Until the late 1980s there were few examples of free elections, multiparty systems, political pluralism, orderly changes of government, or freedom from censorship.

But in the late 1980s and in the 1990s the spread of democracy worldwide caught up in Africa as well. By 1999, 32 of 53 African states had free or partly free elections of some credibility, and this trend continued into the new century. The orderly election and presidency in South Africa of Nelson Mandela and the transition to his successor provided reassurances of South Africa's democratic progress. Nigeria ended years of repressive and corrupt military rule when the country was restored to civilian rule. A new generation of leaders paid increasing attention to health care, education, and women's needs and rights. In the 1990s more than 30 sub-Saharan countries adopted economic reforms liberalizing trade and investment, stabilizing currencies, and privatizing cumbersome and wasteful state enterprises. A small group of states showed economic growth rates of over 6 percent. The Organization of African Unity pledged to punish with economic sanctions any African government that came to power by military coup.

---

*Spread of democracy*

Yet talk of an African renaissance could not ignore the continent's continuing social and economic crises. In the early twenty-first century sub-Saharan countries still filled all the bottom ranks in global tables of economic growth. Fewer than half of young Africans were attending schools, and the economic gap between Africa and the rest of the world was widening.

No single theory could explain African problems. Some pointed to nineteenth-century European imperialist rule and exploitation as the root cause. Colonial rule lasted only a few generations but perhaps long enough to undermine African societies and institutions or to hinder the development of autonomous new ways of life. Above all, it had undeniably eroded African confidence and experience in self-governing institutions. On the other hand, postcolonial failure seemed to

---

*Africa's problems*

be largely a failure of political leadership. When the European colonial rulers departed, they left highly centralized authoritarian states in the hands of small elite groups with little political experience. Europeans had established colonies like the Belgian Congo to be exploited for profit, and their postcolonial African successors often followed in the same path. The new rulers transformed the national independence party into the sole or dominant government party. Although ostensibly opposed to ethnic separatism, the political leaders often manipulated ethnic rivalries to enhance their own power. The Cold War also contributed to the setback of democracy in that the Western-Soviet competition for client states led to the support of dictators. American policy was designed to win and retain reliable allies in the fight against communism, and the Americans applied no litmus tests of democracy before giving financial aid. In the 1980s, for example, the four largest African recipients of American economic aid were the rightist dictators in Liberia, Somalia, and Zaire, and the anti-Communist rebel leader in Angola.

The key question for much of the African continent was how to anticipate and prevent crises leading to war, a goal that required institutional safeguards to ensure that the military remained subordinate and accountable to civilian authority. For the outside world the question was how to provide economic assistance that would be used constructively and improve the quality of life for all.

Some Africans argued that to counter separatist ethnic and regional forces, cope with economic underdevelopment, and provide the cohesion necessary for national unity, strong, single-party governments were more effective than multiparty democratic systems. President Museveni, who had accomplished so much in Uganda to overcome the chaos and torment of the early years of independence, put his concept of a “no-party democracy” to a referendum in 2000, and voters accepted his recommendation that what he called “the Movement” be the sole governing party. Western-style democracy was still difficult to nurture in societies with high rates of illiteracy or disease, a small middle class, and cultural traditions of lifetime tenure for chiefs and kings. But other Africans rejected such arguments and maintained that they should choose and control their rulers, and the governments they lived under, and one day would do so.

---

*“No-party  
democracy”*

Many of the African states for a time were professedly Marxist. They spoke of “African socialism” and styled their regimes “people’s democratic republics.” In Mozambique the main avenues were named for Lenin and Mao Zedong; the flag of the People’s Republic of the Congo (in colonial times the French Congo) flying in Brazzaville displayed a hammer and sickle. Such regimes turned away from free enterprise, which they identified with the profit-making, exploitation, and racial humiliation of Western colonialism. They looked to government, public ownership, and centralized planning to oversee new economic structures that would hasten development and provide a more egalitarian society. They nationalized their industries and collectivized agriculture. In the years of the Cold War many of these countries received technical and material assistance from the U.S.S.R., the Soviet bloc, and the People’s Republic of China. But rigid state control and overly centralized planning (as in the Communist countries themselves) led to economic stagnation and corruption.

---

*African socialism*

Once self-sufficient in food, Africa after 1964 became an importer of food. Wars and preparations for wars were costly, so that expenditures on arms often exceeded the international financial assistance received for economic development. Yet in spite of the painfully slow progress in improving the quality of life, Africans in the first generations of independence felt a new sense of control over their own destiny. They were not eager to cast them-

### THE MODERN ARAB WORLD

The Arabic language zone is one of the most extensive in the world, reaching from the Atlantic Ocean to the Persian Gulf. In 1945 the Arab states formed a League, which came to have 22 members. The League proved to be rather loose and its members often disagreed, but after 1948 all Arab nations expressed varying levels of suspicion and hostility toward the Israeli state in the midst of an otherwise predominantly Arab world.

selves in the Western democratic image or simply to follow Western economic models, although globalization might well limit or preclude other options. Economic growth was nevertheless a prerequisite to survival and to the improvement of human lives, as were political stability and peace. African nations were still moving toward these often elusive goals almost a half-century after independence.

## 118. FERMENT IN THE MIDDLE EAST

### *The Islamic and the Arab World*

In the Islamic, or Muslim, world, the age of colonial domination also ended, and a powerful renewed sense of identity emerged. Much of the Islamic world was determined to share in modernization and material advances, but many Muslims wanted to develop or reform their societies without assimilating Western cultural patterns. Religious and cultural traditions slowed the pace of modernization or influenced emerging new institutions. An elitist organization of society, traditional obstacles to full equality for women, and widespread illiteracy presented powerful obstacles to social change. The 40 or so identifiable Islamic countries, Arab and non-Arab, differed vastly from each other so that the Islamic world had no single sense of identity; Sunni and Shiite Muslims were often in conflict and sometimes in violent confrontation with each other. Although the pace of transformation was uneven, older life styles were being undermined everywhere. In many cases strong tensions developed as Islamic traditionalists resisted secular changes. Turkey made a concerted effort to protect

---

*Islamic identity*

the secular society decreed by its founder, Kemal Atatürk; but elsewhere, in Saudi Arabia, Iran, Afghanistan, Sudan, and other countries, Islamic fundamentalism created virtual theocracies.

The heartland of Islam was the Arab world and the Arabian peninsula, where the Muslim religion was founded by Muhammad in the seventh century, but under the caliphs who succeeded Muhammad and who commanded both religious and secular authority, Islam had swept from the Arabian peninsula into non-Arab lands. Turks and other non-Arab peoples who were converted to Islam continued the expansion. The Ottoman Empire, founded by the Ottoman Turks, ruled at its height in the sixteenth century over Arab and non-Arab peoples and included Palestine, with sites holy to Judaism, Christianity, and Islam. When the empire gradually disintegrated in the modern centuries, the Europeans expanded their economic and political influence in the Middle East. From the Ottoman Empire emerged many of the states of the contemporary Muslim world, Arab and non-Arab, at first as international trusteeships and mandates and then as independent nations.

---

#### *The Middle East*

The term “Middle East” itself is imprecise but widely used. For the Europeans who coined the term it meant the geographic area midway between Europe and East Asia, but “Middle East” is used now to designate that part of the world that is predominantly Islamic in religion and culture stretching from the states of North Africa to Western Asia. The major non-Arab Muslim states include Indonesia (with the world’s largest Islamic population), Malaysia, Pakistan, Bangladesh, Afghanistan, and Iran (the only country where the Shiite rather than the Sunni branch of Islam prevails).<sup>2</sup> The Islamic world also includes a half-dozen states in central Asia in the former Soviet Union. Millions of Muslims, non-Arab and Arab, also live in India, in Africa, in the Balkans, and increasingly in western Europe and the United States. At the opening of the twenty-first century there were about 1.1 billion Muslims, or close to one-fifth the world’s population, second in numbers only to Christianity in all its branches.

About one-fifth of the world’s Muslims, or some 200 million, are Arabs, that is, people whose primary language is Arabic. Because the language of the Qur’an (or Koran), used in the religious practices of Muslims worldwide, is Arabic, it is in a sense the second language of non-Arab Muslims as well. The Arab states stretch from the Atlantic coast of North Africa to the Persian Gulf, from Morocco to Iraq.<sup>3</sup> In that part of the Middle East lies a large part of the world’s petroleum reserves on which the economic activity of the industrial world depends, and the region has been one of the modern world’s most troubled areas.

---

#### *The Arab states*

The Arab states that emerged from the collapse of the Ottoman Empire at the end of the First World War became League of Nations mandates under British or French administration, with the expectation of one day receiving independence. Egypt became nominally independent in 1922 and Iraq, in 1932, although the

---

<sup>2</sup>The schism originated in an armed struggle over the succession to Muhammad after the prophet’s death in 632, in which the Shiite faction supported Ali, Muhammad’s son-in-law, and the Sunni favored another line of succession. The schism became permanent. There are also differences in doctrine and ritual between the two important divisions. The Shiite form of Islam became the state religion in Persia (Iran) in the sixteenth century and has remained dominant in Iran, but there are important Shiite communities in Iraq, Pakistan, Yemen, and elsewhere.

<sup>3</sup>The principal Arab states are Morocco, Algeria, Tunisia, Egypt, and Libya, in North Africa; Lebanon, Syria, Jordan, and Iraq (Israel’s neighbors), close to the eastern Mediterranean; and Saudi Arabia, Yemen, Oman, the United Arab Emirates, Qatar, Bahrain, and Kuwait, in the Arabian peninsula.

British retained treaty rights in each until after 1945. The other Arab states became independent during or after the Second World War, when the British and French ended their mandates. In 1945 Egypt, Iraq, Lebanon, Saudi Arabia, Syria, and Jordan formed the influential League of Arab States, or Arab League. Libya, after gaining independence in 1951, also became a member. In the decades that followed, newly independent Arab states as well as the Palestinian National Authority joined so that it grew to have 22 members by the end of the twentieth century.

The unity of the Arab world is more fragile than often thought. Diver-  
sive rivalries persist. The pan-Arabism advocated by Egypt's Colonel Nasser in the 1950s and Libya's Colonel Qaddafi in the 1980s failed to rally lasting support. A United Arab Republic joining Egypt and Syria in 1958 was short-lived. After the Second World War, however, the Arab states found common cause in their opposition to the state of Israel, which itself had emerged as a new sovereign state in the Middle East in 1948. The Arab states viewed Israel as a Western-backed intrusion into their land, and the result was a series of continuing tensions and conflicts that frequently brought wider international forces into play.

*Arab rivalries*

### *The Emergence of Israel*

Zionism, evolving in the late nineteenth century as a response to European anti-Semitism, became a movement to establish (or reestablish) a Jewish homeland in Palestine, then part of the Ottoman Empire. A small number of Jewish pioneers from Russia and eastern Europe made their way to Palestine before 1914. During the First World War, while at war with the Ottoman Empire, the British by the Balfour Declaration of 1917 voiced support for "a Jewish homeland in Palestine" but in other ways supported emergent Arab nationalism. In 1923, after the demise of the Ottoman Empire, the British received a League of Nations mandate for Palestine, and a growing number of Jewish settlers arrived in the 1920s and 1930s.

The whole question of Palestine poignantly reemerged at the end of the Second World War when the homeless survivors of the Nazi Holocaust, which had all but wiped out central and eastern Europe's Jews, sought out Palestine as a place of refuge. But in deference to Arab protests the British limited immigration and turned away whole shiploads of refugees. The Jewish leaders pressed their cause with the United Nations and sympathetic American political circles and contested the British restrictions, at times resorting even to terrorist activities directed against the British. In 1947 the United Nations in a vote supported by both the United States and the Soviet Union recommended partition of Palestine into two parts: a Jewish sector and an Arab sector, with the area around Jerusalem under international control.

---

---

*The question of Palestine*

The Arabs, who had boycotted the UN committee hearings, rejected the partition, complaining that they were being asked to make sacrifices for Europe's persecution of the Jews. Both sides prepared for conflict. On May 14, 1948, when the Zionist leaders proclaimed the Republic of Israel, Israel's five Arab neighbors—Syria, Lebanon, Jordan, Egypt, and Iraq—refused recognition and invaded the new state. The Israelis (as the citizens of the new republic called themselves) not only defended themselves but also counterattacked. In the course of the fighting at least 600,000 Palestinian Arabs fled, or were forced by the Israelis to flee, to Jordan, Lebanon, Syria, and other Arab states. During the war Jordan took over the West Bank of the Jordan River, and part of Jerusalem and Egypt took the Gaza Strip, but elsewhere Israel gained territory.

The creation of the State of Israel in 1948 marked the triumphant culmination of a long-developing campaign to establish an independent Jewish state in the Middle East. The first prime minister of Israel, David Ben-Gurion, is pictured here, signing the proclamation that established the new Israeli state, opened an important new era in Jewish history, and led to a long conflict with the surrounding Arab nations.

(Associated Press, AP)

By the end of hostilities and the armistice of 1949 Israel had increased its originally allotted land by about half. Jerusalem came under divided control. The plan for international control was abandoned. Jordan now governed East Jerusalem, but Israel retained control of West Jerusalem. The Arab states, unwilling to negotiate peace or even recognize the existence of Israel as a sovereign state, made little effort to absorb the Palestinian refugees who had fled to the Arab states and who continued to live in overcrowded, squalid refugee camps for decades to come.

### *The New State of Israel*

---

#### *A Jewish homeland*

The Israelis saw themselves as creating a Jewish homeland after the Holocaust, so that persecuted Jews would never again be without a refuge. Under a Law of Return Jewish immigrants from anywhere in the diaspora were automatically entitled to citizenship. Secular-minded founders of the state like David Ben-Gurion did not define the role of religion too closely. Freedom of religion and freedom of conscience were equally to be protected, but rabbinical authorities were to control such matters as marriage and divorce, definitions of Jewishness, and observance of the Sabbath. Ultra-Orthodox Jews eventually came to exert influence out of proportion to their numbers and to create a larger political voice for themselves than originally envisaged.

After independence Israel over the years built a modern, Western-style, urban, industrial society with a democratically elected parliament, the Knesset, and a lively political culture. For many years the moderately socialist Labor party governed. The country provided a large role for labor unions and agricultural cooperatives (famous as *kibbutzim*), extensive health and educational services, and support for scientific and technological research.

About half the economy was government-controlled until a later shift to privatization.

---

#### *Economic growth*

Economic development took off swiftly. Through ingeniously engineered irrigation schemes the Israelis reclaimed vast stretches of the Negev desert. The amount of land under cultivation more than doubled. In 1948 Israel produced only one-third of its food; by the early 1970s it was producing enough to meet almost all of its domestic needs and began to export. Industry expanded. Before long the Israelis exported electronic products, precision instruments, and military hardware. Extensive for-

The creation of Israel and the subsequent Arab-Israeli war of 1948–1949 drove some 600,000 Palestinian Arabs into neighboring countries and refugee camps. These Palestinians were living in 1956 at a camp on the West Bank of the Jordan River—an area that came under Israeli control after the Six Day War in 1967 and remained a source of conflict as the Palestinians later sought to establish an independent state in this territory.

(Getty Images)

Foreign investment, especially from the United States, further stimulated economic development. Living standards exceeded those of other countries in the Middle East and compared favorably to those of western Europe.

Over 2 million immigrants arrived in the decades after 1948. Many Jews arrived from the Arab states in North Africa and from Arab and non-Arab Muslim states in Asia, forced to abandon established communities where their families had lived for centuries but where Jews were now persecuted. From 1989 to 1992 about 400,000 Soviet Jews, finally permitted by the Soviet government to migrate, reached Israel. The population of 870,000 in 1948 reached about 5,750,000 by the opening of the twenty-first century. In the 1990s problems of unemployment, housing shortages, and a lack of skilled jobs surfaced, especially for the former Soviet Jews. At great financial strain, but benefiting from American foreign aid, the Israelis also developed powerful modern military forces and air power. They built nuclear reactors for the production of electric power and quietly created a nuclear military capacity.

### *The Arab-Israeli Wars after Independence*

Four more Arab-Israeli wars were fought after 1948–1949, one in each of the next four decades, in 1956, 1967, 1973, and 1982. Israel, with Britain and France as allies, went to war with Egypt in 1956 when Egypt nationalized the Suez Canal and attempted to bar Israeli shipping. In 1967 Israel waged the Six-Day War against Egypt, Syria, and Jordan, when Egypt moved to close the Gulf of Aqaba

---

*Territorial struggles*

to Israel, which would have strangled the Israeli economy. The outcome of the brief fighting in 1967 was momentous. After defeating the three Arab armies, Israel took from Jordan the West Bank of the Jordan River and East Jerusalem; from Syria, the Golan Heights (from which the Syrians had been able to shell Israeli settlements); and from Egypt, the Sinai Peninsula and Gaza Strip. Israel emerged with territory four times its original size; a rapidly growing population of over 1 million additional Arabs came under Israeli rule. The Israeli occupation of Palestinian towns and the later development of Israeli settlements in the occupied territories provoked the further development of Palestinian nationalism, new demands for an independent Palestinian state, and the emergence of radical Palestinian groups that began to launch terrorist attacks against Israel.

The next war broke out in 1973 when Egyptian and Syrian forces attacked the Israelis on the Jewish holy day Yom Kippur. Israel recovered from the surprise attack, defeated the Syrian army, and trapped the Egyptian forces in the Sinai Peninsula. With the Israelis near victory and in control of additional Arab territory, the League of Arab States suddenly introduced a new strategic weapon in support of Egypt and Syria, an embargo on oil shipments. Although the embargo was lifted a few months later, early in 1974, the oil-producing nations had quadrupled the price of oil, with global economic consequences far beyond the conflict in the Middle East. Meanwhile, the war ended with an American-mediated settlement. Israel withdrew from the west bank of the Suez Canal, but continued to occupy most of the Sinai Peninsula.

In 1982 Israel invaded war-torn Lebanon, where a divisive civil war had created virtual anarchy in Lebanese society. Israel had become the target of repeated raids from Lebanese territory organized by the Palestine Liberation Organization (PLO) and by guerrilla forces of Islamic sects armed by Islamic states, including Syria, Iraq, and Iran. Israeli forces pushed as far north as Beirut, forced the expulsion of the PLO, and then withdrew, although continuing for many years to hold a narrow security zone in southern Lebanon. No brief summary of these wars can convey the grief and suffering that each brought to the Israelis, the Palestinians, and the people in neighboring Arab states.

---

*Middle East and the  
Cold War*

The Middle East became a theater of Cold War rivalries as well. The United States had disapproved of the British-French-Israeli Suez Canal intervention in 1956, but after that crisis it generally supported Israel and also provided extensive economic assistance. France, originally a staunch Israeli ally, for a time turned against Israel when de Gaulle in the 1960s decided he needed to help restore a balance of power in the region by supporting the Arab states. The U.S.S.R., one of the original backers of the Jewish state, reversed itself and sent arms to Egypt and other Arab states. The United States, following its Cold War strategy of containment, remained determined to prevent Soviet influence from expanding in the Middle East. The Eisenhower Doctrine, which pledged American support to countries in the Middle East resisting communism, was welcomed by Israel, while many of the Arab states resented it and looked to the Soviets for support—though they did not favor Communism within their own nations.

---

*The PLO*

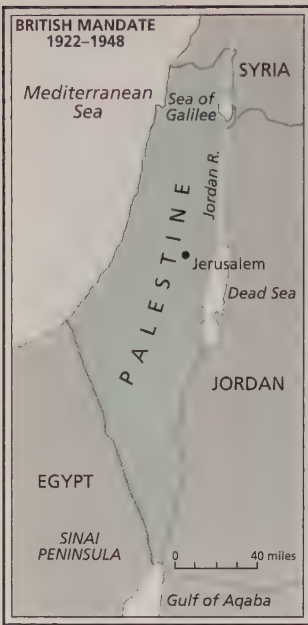

The Palestinian Arabs grew steadily more militant, conducting guerrilla warfare against Israel and engaging in terrorist activities within Israel and in other parts of the world. Under the leadership of Yasir Arafat, the PLO became a full member of the Arab League in 1964 and received recognition in many quarters as a government-in-exile for the Palestinian Arabs. The PLO professed to speak for all Palestinians, not only the 1.5 million under Israeli occupation but also those who had fled as refugees and who by this time numbered as many as 3 million. The PLO demanded the evacuation of all territories occupied by Israel after 1967 and

In one of the recurring cycles of Middle Eastern violence, Israel responded to attacks from guerrilla bases in Lebanon by sending its army as far north as Beirut in 1982. These Israeli troops were patrolling streets in the Muslim sector of the Lebanese capital during the military operation that drove the Palestine Liberation Organization out of Beirut. Although the Israeli army soon withdrew to southern Lebanon, Israel retained control over a small “security zone” within Lebanese territory until 2000.

(Nackstrand/Sipa Press)

## ISRAEL AND ADJOINING REGIONS

“Palestine” is the term by which Europeans long designated a small region of predominantly Arab population on the east coast of the Mediterranean. The area belonged to the Ottoman Empire until the end of the First World War. In 1922 the League of Nations made the territory a mandate of Great Britain, which soon responded to Arab dissatisfactions by placing restrictions on the migration of European Jews, who had been moving into Palestine since the rise of Zionism in the late nineteenth century. After the deaths of millions of Jews in the Holocaust during the Second World War, the Zionist aspiration for an independent Jewish state won new international support. In 1947 the United Nations proposed a partition of Palestinian lands to create a new Jewish state and a division of the city of Jerusalem into separate zones. The Arabs

rejected this plan, but in the Arab-Israeli war of 1948 the Israelis won control of wider boundaries than those first proposed. The Arab states still refused to recognize Israel. In the Six-Day War of 1967 the Israelis occupied additional territory, as shown in the fourth panel, labeled AFTER 1967. In 1973, in the Yom Kippur War, Egypt and Syria attacked to regain their lost lands, but Israel defeated them and continued to occupy the Sinai Peninsula and other territories, although Egypt eventually won control of the east bank of the Suez Canal. Under a peace treaty that Israel and Egypt negotiated in 1979, Israel returned the Sinai to Egypt, but retained the small area known as the Gaza Strip. In 1993 Israel agreed to begin withdrawing from some areas of the occupied territories and allow the first steps toward self-government for the Palestinians. A new Palestinian Authority emerged to govern the autonomous Palestinian communities, but a long series of later conflicts and negotiations had still not led to a final peace settlement or an independent Palestinian state in the early twenty-first century. In 2005, however, Israel removed all Jewish settlements and its military forces from the Gaza Strip.

called for the establishment of a sovereign independent Palestinian state in the West Bank of the Jordan River and the Gaza Strip, but the Israelis continued their occupation.

The Arab states meanwhile rejected proposals for a comprehensive peace agreement, condemning the post-1967 Israeli military occupation and even refusing to recognize Israel's right to exist as a nation. In 1975 the Arab states persuaded the UN General Assembly, where the former colonial states of Asia and Africa now held a majority, to adopt a resolution condemning Zionism as a form of racism, even though Zionism had originated as a defense against anti-Semitism and Israel had been established, in part, as a response to the Nazi Holocaust. The resolution remained in effect until it was repealed in 1992.

Palestinian terrorist attacks within Israel and elsewhere altered the political scene in Israel itself. In 1977 Labor for the first time lost control of the government to a conservative, nationalist party of the center-right, Likud, founded by religious groups. Likud could govern only through coalitions, but it retained its parliamentary majority by receiving the support of the religious parties. The Israeli posture toward the Palestinians became more

---

*Israelis vs.  
Palestinians*

intransigent. Menachem Begin as Likud prime minister encouraged Israelis to make permanent settlements in the occupied West Bank of the Jordan River (for which he even used the Biblical names of Judea and Samaria) and the Gaza Strip, and he rejected negotiations with the PLO. In 1980 the government unified the Israeli capital by unilaterally annexing East Jerusalem, which it had occupied since 1967.

Without a settlement new and even deadlier conflicts threatened to break out. At issue were the disposition of the territories occupied by Israel since 1967, the demand of the Palestinian Arabs for an independent national state, assistance to the Palestinian Arab refugees, and the recognition and guarantee of Israel's legitimacy and security. The Egyptian president Anwar al-Sadat, recognizing the impasse and eager to recover lost Egyptian territory, broke the united Arab front against Israel when in 1978 he visited Israel and addressed the Knesset in Jerusalem. In 1979, with the United States acting as mediator, Sadat and Begin signed a peace treaty in Washington in the presence of President Carter. Israel agreed to withdraw from the Sinai Peninsula except for the Gaza Strip and was guaranteed the free use of the Suez Canal. Outraged at Sadat's recognition of Israel's legitimacy as a sovereign state, the other Arab states expelled Egypt from the Arab League. Sadat himself was later assassinated by Islamic extremists in his own army. His successor, President Mubarak, remained cautiously friendly to Israel, as did King Hussein of Jordan. Syria, Libya, and Iraq assumed the lead in rejecting any wider settlement. To thwart Iraq's threatened nuclear capacity Israel in 1982 took the bold step of bombing a nuclear facility near Baghdad but meanwhile continued to build up its own unannounced nuclear capacity.

### *Israel, the Occupied Territories, and Peace Negotiations*

In the 1980s over 1.5 million Palestinian Arabs lived in the West Bank and Gaza Strip, occupied by Israel since the 1967 war. At the end of 1987 nationalist agitation by young Palestinians flared up into a sustained uprising, the *intifada*, as it was called in Arabic. The Israeli military met the stone-throwing, fire-bombing, and civil disobedience with armed force, and casualties mounted.

The suppression of the rebellion polarized Israel politically, hurt its economy, and threatened to undermine its democracy. The PLO exploited the popular uprising to press for recognition of an independent Palestinian state.

As the Cold War wound down in the late 1980s, the Arab states could no longer be certain of Soviet support, and the United States continued to encourage negotiations. Any genuine settlement would have to revolve around the formula "land for peace": Israel to give up some or all of the territory occupied since 1967 in return for Arab recognition of Israel's legitimacy and existence. The status of the Palestinians would have to be resolved in favor of some form of self-government or statehood. Israel's continuing insecurity lay rooted in the fact that its small population lived in a hostile Middle East. A politically divided Israel, still haunted by Holocaust memories, feared for the nation's security and the safety of its citizens. For some, territorial expansion was one answer. Begin's successors continued the Likud party's support for increased Jewish settlement in the occupied territories. Many other Israelis recognized the legitimate grievances of the Palestinian Arabs, accepting the fact that Jews and Arabs had to find ways to live together in the small land.

In 1992 the possibilities of peace negotiations with the Arabs revived when a Labor coalition formed a new government headed by Yitzhak Rabin and Shimon Peres. Rabin halted additional settlements in the West Bank and reopened peace talks. Although official

*The intifada*

---

*"Land for peace"*

Israeli Prime Minister Yitzhak Rabin and PLO Chairman Yasir Arafat signed the Oslo accords in Washington in September 1993. This diplomatic event marked the first official agreement between Israel and the Palestinians, and it set the agenda for later, inconclusive negotiations throughout the 1990s. Radicals on both sides condemned the terms of the Oslo agreement, however, and they soon turned to violence. Rabin became one of the victims when he was assassinated by a Jewish extremist in 1995. In this picture, Chairman Arafat is standing next to President Clinton as they both observe the Israeli prime minister signing the accords.

(Time Life Pictures/Getty Images)

negotiations continued, it was secret talks carried on between Israelis and Palestinians in Oslo, Norway, outside regular diplomatic channels, that led in 1993 to an extraordinary agreement between Prime Minister Yitzhak Rabin and Yasir Arafat, which was signed in Washington at a ceremonial event with President Bill Clinton. Under the Oslo accords Israel recognized the Palestine Liberation Organization as the representative of the Palestinian people and agreed to initial steps for Palestinian self-government, including its own security forces. The PLO in turn recognized Israel's legitimate existence as a sovereign state and agreed to abjure acts of violence. Despite many unresolved issues, Arab-Israeli relations seemed to be moving toward a settlement with the PLO, in which other Arab states might eventually join. In accordance with the agreement Israel withdrew its armed forces from most of the Gaza Strip and from Jericho in the West Bank and took steps to allow Palestinian self-rule under a "Palestinian National Authority" in the West Bank and in Gaza.

But intransigent groups on both sides began to derail the fragile agreement. Violence erupted again, and in 1995 a fanatical Jewish extremist assassinated Prime Minister Rabin. In 1996 Peres and the Labor coalition lost the elections to the hard-line Likud leader Benjamin Netanyahu, who immediately relaxed the freeze on new Jewish settlements in the West Bank and Gaza Strip. Even so, Netanyahu, yielding to pressure from the United States, met with Arafat in 1998 and agreed to carry out the Oslo agreement calling for surrender in stages of the occupied West Bank. Even these moderate concessions cost Netanyahu conservative and rightist support. Ehud Barak, a military man and former Israeli chief of staff, representing Labor, centrist, and some religious parties, campaigned on a pledge to move forward with peace negotiations and defeated Netanyahu in new elections. Under continuing American brokering, negotiations resumed. Israel began its withdrawal from the West Bank, and Barak, as he had promised, withdrew Israeli armed forces from its southern Lebanon security zone.

*A fragile agreement  
derailed*

Barak also made overtures to Syria over the return of all or part of the Israeli-held Golan Heights. His concessions alarmed many Israelis and he lost his majority in the Knesset. Still determined to represent what he considered the popular will for peace, he nonetheless met once again with Arafat in Washington in July 2000, but the new talks foundered, principally over the status of Jerusalem. Despite all that had been offered him, Arafat insisted on his obligation to the entire Arab and Muslim world to claim sovereignty over East Jerusalem and its Muslim holy places and make it the capital of the Palestinian state. Violence erupted again. Arafat, the Israelis protested, seemed unable to control his

people. A second *intifada* broke out in the streets of Jerusalem and rapidly spread, provoked initially by an unannounced visit to Muslim sites in East Jerusalem by the hard-line Ariel Sharon, a former top military commander in earlier wars, a determined opponent of Barak's concessions, and now

---

A new *intifada*

seeking to replace him. As Palestinian violence escalated, public opinion turned against Barak, and in early 2001 Sharon became prime minister by a sweeping popular vote. Many Israelis remained troubled. Some were willing to support the surrender of the occupied territories to the Palestinian Arabs and to work out compromises on the Israeli settlements and other issues. But many more believed that the concessions had gone too far. They too wanted peace but with firmer guarantees of security.

The opportunity for a peace settlement on the basis of the Oslo accords seemed to slip away, and the troubled region plunged into a new cycle of terrorist attacks, Israeli reprisals, and mounting casualties on both sides. The Israeli and Palestinian leaders, Sharon and Arafat, remained intransigent, but the impasse began to break after Arafat's death in 2004. The Palestinian National Authority chose a more moderate president, Mahmoud Abbas, and progress seemed possible. The United States took a more active part in furthering a "road map" to peace; and Sharon removed Israeli settlers and troops from the Gaza Strip, ending the 38-year occupation of that small, crowded territory. At the same time, however, Sharon's government built a controversial new wall along the border between Israeli and Palestinian lands (incorporating some formerly Palestinian land) and continued to support the extensive network of Jewish settlements that was interspersed among the territories of the Palestinian National Authority on the West Bank. The new Palestinian president was meanwhile unable to control the radical Hamas party (which won Palestinian parliamentary elections in 2006), and terrorist attacks by Palestinian extremists continued to cause death and disruption within Israel. The idea of exchanging "land for peace" had still not produced a general peace agreement, and Palestinian aspirations for a fully independent, stable nation-state had not yet become a political reality. Although the extremists on both sides were unwilling to compromise, most Israelis and Palestinians favored some kind of peaceful resolution to a conflict that had taken countless lives, disrupted economic life, and distorted political cultures in the entire region for more than five decades. Despite all the setbacks and the continuing violence, new political alignments in Israel offered a new promise of progress toward peace; but the "road map" did not lead directly or quickly to a comprehensive peace plan that the two sides would accept and implement.

### *Libya and Syria*

Libya and Syria both added to the explosiveness in the Middle East. The discovery of oil in Libya in 1959 transformed a country of 4 million people into a leading petroleum producer. In 1969 Colonel Muḥammad al-Qaddafi ousted the existing monarchy, established a personal dictatorship, and agi-

---

Muḥammad al-Qaddafi

tated for an extremist Arab nationalism. Using his country's oil wealth for political purposes, he projected himself as a spokesman for pan-Arabism and aspired to a leadership role in African affairs as well. Libya became headquarters for terrorist activities in Europe and elsewhere. Neither economic sanctions nor even military reprisals deterred Qaddafi. In 1997 the United States officially included Libya on its short list of states actively sponsoring international terrorism. Qaddafi continued to hold dictatorial power into the twenty-first century, but he moved away from his earlier nationalist radicalism, renounced international terrorism, and abandoned efforts to develop and stockpile chemical weapons.

The early years of the Syrian Arab Republic were marked by extreme political instability and a succession of military coups. In 1963 one such coup brought the pan-Arab Baath party to power and led to a new one-party government. In 1971, in the tenth coup of its kind, Hafez al-Assad, a former defense minister, took power and ruled dictatorially for close to 30 years until his death in 2000. Assad ruthlessly suppressed all opposition, including an insurrection of the Muslim Brotherhood in 1982, in which his air force killed tens of thousands.

---

*Hafez al-Assad*

Assad remained one of the most resolute enemies of Israel, intent on recovering all the Arab territory lost since 1967, especially Syria's strategic Golan Heights. In the chaotic civil war in Lebanon he had supported radical Arab militant sects and sent some 35,000 troops as a "peacekeeping force." In the end, to the resentment of many Lebanese, he was virtually in control of Lebanon. At his death Assad's son was quickly named the new president in a carefully prearranged succession. The new president, Bashar al-Assad, continued most of his father's policies, but bowing to a popular uprising and international pressure he eventually withdrew Syrian troops from Lebanon. The Baath party meanwhile clung to power in Syria, even as war in neighboring Iraq threatened to spill over the Syrian border in the years after 2003.

## 119. REVOLUTION AND WAR IN THE PERSIAN GULF

### *The Revolution in Iran*

Where change occurred rapidly in the Middle East, it was clear that traditionalists often resented the Westernizing influence of modern economic and cultural forces. They opposed secularism and the disruption of older religious and cultural institutions as a Western subversion. Yet the outside world was not prepared for the fierce anti-Westernism of the Islamic revolution that erupted in 1979, not in an Arab state, but in Iran, where the principal language was Persian (or Farsi). Iran was a Shiite state, whereas nine-tenths of the Islamic world adhered to the Sunni branch of Islam, but the Shiite revolutionary leaders in Iran helped to foment a new religious revivalism everywhere in the Muslim world.

Over the centuries Persia (or Iran, as it was known after 1935) had a long history of foreign domination. At the opening of the twentieth century, as we have seen, Britain and Russia, coveting its newly discovered oil resources, divided it into spheres of influence. After the First World War the British had tried to retain control, but in 1921 an army officer, Reza Khan, seized power, assumed the title of shah, or hereditary ruler, in 1925, and embarked on a program of modernization. During the Second World War, however, in 1941, when some of his machinations brought him threateningly close to the Axis, the British and Russians occupied the country and forced him to abdicate in favor of his son, Muhammad Reza. The young shah identified with the West.

---

*Foreign domination*

After the war American influence became dominant. When Prime Minister Mossadegh and a leftist parliament moved to nationalize and control the oil industry in the early 1950s, the shah, with clandestine support from the American CIA, ousted him and blocked the attempt. With oil wealth and extensive American military and economic aid, the shah embarked upon an ambitious development program. He broke up estates controlled by feudal landowners and the Islamic clergy, reorganized the armed forces, and sent students in large numbers to study abroad. The pace and breadth of secularization and modernizing reforms pleased urban business and professional interests but alienated others, especially in the countryside. Moreover the shah presided over an increasingly authoritarian regime, crushing opposition and dissent with his secret police. His huge personal wealth also did not go unnoticed. The United States, pleased with the modernization of its anti-Soviet ally in a strategic part of the world, ignored the swelling internal restlessness. In 1978 religious-inspired protests and strikes and riots broke out as the opposition coalesced. A tidal wave of demonstrations forced the shah to flee the country in January 1979.

In February the aged leader of the religious community, Ayatollah Ruhollah Khomeini (ayatollah is the highest rank in the Shiite religious hierarchy), returned from exile in Paris, where for the past 15 years he had been denouncing the shah's pro-Western, anticlerical, and irreligious regime. He quickly assumed leadership of the revolution and proclaimed an "Islamic republic." His newly formed revolutionary guards routed the shah's troops. Supreme control rested with the ayatollah and his council of religious guardians, appointed to guarantee the new regime's strict commitment to Islam and to ensure control of the revolution through a network of mosques.

---

*Ayatollah Khomeini's  
"Islamic republic"*

The revolutionary authorities forcefully restored traditional Islamic ways of life. Women were ordered to wear the chador, the traditional long black dress covering them from head to toe. The necktie was outlawed for men, who were also encouraged to grow beards. The authorities banned Western music, classical and popular, from radio and television and enforced the Islamic prohibition on alcohol. Islamic law, to be interpreted by the clerics, took precedence over secular law. Soon revolutionary justice, in the form of drum-head trials and public execution for religious, moral, or political offenses, cost the lives of thousands. The ayatollah's theocracy pushed aside moderate leaders, even those who had welcomed the overthrow of the shah. The first president was forced to flee into exile; the foreign minister was executed. The new regime imposed tight state control over the economy and nationalized many industries. In the chaos, oil production and revenues fell.

---

*"The great Satan"*

Militants, many of them university students, aroused to frenzied heights by the ayatollah's fervid denunciations of the United States as "the great Satan," took action on their own. Reacting to the admission of the ailing shah to the United States in the autumn of 1979, revolutionary guards and students seized the American embassy in Tehran in retaliation and held 50 American hostages for close to 15 months, demanding the return of the shah and his wealth to Iran. The hostage crisis weakened the administration of President Carter, and the failure of an ill-conceived rescue mission added to American humiliation.

### *The War between Iran and Iraq*

Iran made no secret of its desire to establish a position of leadership in the Muslim world and to project its Shiite theocracy as a model for others. In 1980 war broke out when Iraq,

The revolution in Iran brought on a wave of militant, anti-Western demonstrations. These Iranian women, wearing the chador to assert their strong Islamic values, showed their determined support for Islamic religious traditions and the new political order by wielding powerful, modern weapons.

(Christine Spengler/Sygma/Corbis)

its Arab neighbor to the west, launched an attack on Iranian territory. Iraq, rich in oil, was an aggressively nationalistic Arab state under a secular military regime headed by Saddam Hussein, who ruled as a dictator. His party, the Arab Baath party, was dedicated to Arab revival. A competing branch of the movement ruled in Syria. But ideology was less important to Hussein than the concentration of political power at home and the use of military power for national ends abroad.

The Ayatollah Khomeini had denounced Iraq both for persecuting its large Shiite community and for abandoning Islamic principles. The Shiites comprised a large majority of the Iraqi population, but the Sunni minority dominated the dictatorship and the Baath party. Both the Shiites and a sizable ethnic group, the Kurds, suffered brutal oppression and severe mistreatment under the Iraqi regime. The war itself erupted over a long-smoldering border dispute between the two states concerning a waterway that served as a vital outlet for Iraq to the Persian Gulf. Although awarded to Iraq by an international commission, it had fallen under Iran's control. Iraq, seizing an opportunity to exploit the revolutionary turmoil in Iran and gambling on a quick victory, bombed Iranian oil fields in 1980, invaded Iran, and occupied the disputed territory. Iran rallied after the initial invasion, expelled the Iraqi forces from its borders in 1982, and pushed deep into Iraq, hoping to overthrow Hussein and his regime. When Iraq stiffened its defenses, Iran dispatched assault waves of young conscripts, reminiscent of warfare during the First World War. In one of the rare instances

---

*Long-smoldering  
border dispute*

since that war, both sides also used poison gas on the battlefield. Iraq used it as well against its Kurdish minority, which it accused of collaborating with Iran.

As the war dragged on, it assumed a larger international dimension. The land war became a tanker war in the Persian Gulf, involving Saudi Arabia, Kuwait, and other Arab Gulf states dependent on trade with the West and unsympathetic to Iran's Shiite fundamentalism. Both Iran and Iraq attacked neutral shipping in the Persian Gulf to prevent arms deliveries. When the attacks threatened the flow of oil, the United States, supported by the British and French, stepped up its naval presence. The Western navies kept oil shipments flowing and reinforced what had become the continuing strategic objective of preserving Western influence in the Gulf.

---

#### *Cease-fire*

By 1987 the Iranian counteroffensive had failed. In August 1988 Iran accepted a cease-fire. The eight-year war had cost tens of thousands of lives on both sides. The Iranian economy was in shambles; its armed forces were exhausted and depleted. The ayatollah's appeal for a holy war had gone unheeded by other Muslim nations and had alienated the Arab Gulf states. But he retained a dedicated following in Iran and still sought to assert his authority in the Islamic world. His call to the Islamic faithful for the assassination of the novelist Salman Rushdie for allegedly blaspheming Muhammad in one of his books shocked the international community. After Khomeini's death in 1989 moderate and pragmatic elements within the Islamic government urged economic reconstruction and the reestablishment of the country's ties to the outside world. In 1992 a new president with moderate economic and foreign policies won a parliamentary majority. President Rafsanjani was able to restrain the most radical excesses of the revolution, but the nation now had a new spiritual leader, Ayatollah Ali Khamenei, who retained paramount power.

---

#### *Changing Iran*

Iran in the 1990s became a land of continuing paradoxes and contradictions. A dual power structure existed and the country was no longer a completely closed society or theocracy as in the revolutionary decade. The middle classes assumed an active economic life. There was outspoken criticism of clerical power. In 1997, when the religious authorities gave voters an even freer choice of presidential candidates, 70 percent of the voters (the voting age was 15) chose an even more reform-minded president, Muhammed Khatami. He was a cleric himself and a descendant of religious leaders, but he had a broad intellectual outlook and had studied and written on Western political philosophy. Khatami committed himself to political and economic reform, a civil society, the rule of law, and a freer atmosphere, including a free press. He and others like him believed that Islam and democracy were not incompatible. Yet he had to work within the religious system established by the revolution. The religious authorities controlled the military, the police, the courts, and much of the media, and even held a veto power over the eligibility of candidates for office. While the president called for dialogue with the outside world, the religious leaders kept up their denunciations of the West, America, and Israel. The president moved and spoke cautiously.

---

#### *A new generation*

Meanwhile a new generation of liberal-minded clerics loosened their stranglehold. The stringent dress and behavior codes were relaxed. Globalization had its effect. Western consumer products were in demand, alcohol became available, and music from the outside world could now be heard. Women dressed as they wished in private circles even if they still wore head scarves and cloaks in public. President Khatami and his program received wide support, and he easily won election to a second term in 2001. Many Iranians, especially young people, recognized that without change the country faced economic stagnation and political isolation, and they resented the social and moral straitjacket in which they found themselves. Iranian theologians were

## CHRONOLOGY OF NOTABLE EVENTS, 1948–2005

---

1948	Republic of Israel is established; Arab states go to war against Israel
1948	Afrikaner Nationalist Party expands rigid racial segregation in South Africa through <i>apartheid</i> laws
1954–1962	Algerian nationalists wage war for independence from France
1956	Britain, France, and Israel attack Egypt after it nationalizes Suez Canal
1957	Ghana is the first British colony in Africa to win independence
June 1967	Six-Day War leads to Israel's military occupation of Palestinian lands on West Bank of Jordan River and the Gaza Strip
1967–1970	In Nigeria Ibo secession movement in Biafra is suppressed
1971–1972	Idi Amin takes power in Uganda and begins expulsion of Asians
1973	Yom Kippur War: Egypt and Syria fight a new war with Israel; conflict leads to Arab oil embargo as a strategic geopolitical weapon
1979	Ayatollah Khomeini leads Islamic Revolution in Iran
1982	Israel invades Lebanon to suppress Palestinian guerrilla groups
1993	Oslo agreement between Palestinians and Israelis; recognizes Israel's right to exist and a new Palestinian National Authority
1991	American military campaign drives Iraq's Saddam Hussein from Kuwait
1994	First nonracial, democratic elections in South Africa; Nelson Mandela is elected president
1994	Hutus attack Tutsi communities in Rwanda, killing over 500,000 people
2000–2001	Palestinian uprising ( <i>intifada</i> ) erupts after breakdown of Israeli-Palestinian peace negotiations
2004–2005	Death of Palestinian leader Yasir Arafat; Israel withdraws from Gaza Strip

---

themselves arguing that believers in Islam had to be free in their private lives from outside coercion and pressure.

Despite the growing support for a more liberal interpretation of Islam, Iran's conservative clerics still retained a strong following in the country and exercised great political power, including control over candidates in elections. Many wanted to reimpose the Islamic orthodoxy of the revolutionary decade. President Khatami seemed more and more powerless. When he denounced the American intervention in Iraq, however, he expressed a sentiment in Iran that transcended all ideological lines. The Iranian presidential elections in 2005 did not offer voters a wide choice, yet the results of the elections were somewhat unexpected. The more moderate candidate lost decisively to the conservative young mayor of Tehran, Mahmoud Ahmadinejad, who won support for his populist economic program but was also known for his strict adherence to conservative clerical values and for keeping faith with the Islamic revolution of 1979. Popular support for the conservatives seemed to grow stronger after the American-led invasion of Iraq in 2003 and after the United States led the international opposition to Iran's development of nuclear capacities. Ironically, the American war in Iraq meanwhile accomplished two of Iran's long-sought international

objectives—the overthrow of Saddam Hussein and the political ascendancy of Iraq’s Shi’ite majority.

The Iranian population at large, envious of the economic growth and prosperity of the outside world, had increasingly supported the relaxed political order during the 1990s. Education, available only for the urban rich before 1979, was now widespread and included wide opportunities for women. In the 1990s the number of young women entering universities and training themselves for modern skills tripled. With government encouragement, the population grew from 34 million in 1976 to over 68 million in 2005.

---

*Traditional vs.  
modern*

The Iranian revolution raised the larger question of whether traditional Islamic values, rigidly enforced as they were in the revolutionary decade, could accommodate modernization, democracy, and a pluralist society. The revolution in Iran had unsettled the entire Islamic world, but if Iran were to succeed in following a more moderate course, it could perhaps temper Islamic extremism in other Muslim countries too. The new president, however, could set the clock back and revert to tightened clerical control over Iranian society. He was vehement in insisting on Iran’s nuclear rights and denouncing the Americans who had taken the lead in opposing them.

### *Iraq and the Persian Gulf War of 1990–1991*

Iraq, for its part, emerged from the war with Iran with battle-seasoned armed forces but without real victory and with a troubled economy. Saddam Hussein was resolved to recoup his country’s economic fortunes. Unable to persuade the other oil-producing states, particularly Kuwait, to curb production and raise oil prices, he denounced his small Arab neighbor to the south, pressed vague territorial claims (going back to the Ottoman Empire and the British protectorate), and in August 1990 invaded and annexed Kuwait. Many in the West feared that he might move next against Saudi Arabia, expand his influence over the Persian Gulf, and acquire a stranglehold over the world’s oil resources.

---

*Operation Desert  
Storm*

President George Bush took the lead in winning support from the international community, including several Arab nations, and from the UN Security Council for economic sanctions against Iraq and for military measures if necessary. Over the next few months the United States with the support of a multinational Western and Arab coalition pursued a massive buildup in the deserts of Saudi Arabia. When Iraq refused to withdraw from Kuwait, the Americans and their allies unleashed in early 1991 a crushing air attack and followed with a ground assault, which quickly forced Iraq’s withdrawal. Operation Desert Storm was remarkably successful, but no effort was made to continue on to Baghdad to dislodge Hussein from power. In defiance of the cease-fire terms, Iraq over the next several years appeared to challenge the UN-imposed ban on the manufacture of nuclear, chemical, and other weapons of mass destruction and obstructed international inspection. Western governments believed at the time that Iraq was developing such weapons and could one day deploy them.

The maintenance of stability in this vital area of the Middle East with its many rivalries and competing interests remained critical not only for the states of the Persian Gulf, the Arab nations, and Israel but also for the international community as well. The installation of American military forces in Saudi Arabia after the Gulf War of 1991 contributed to the emergence of a new radical Islamic terrorist group called Al-Qaida. It was led by a wealthy Saudi exile, Osama bin Laden, who set up his secret headquarters first in Sudan and then in the mountains of Afghanistan. Al-Qaida proclaimed its violent intention to

drive the United States from the “holy lands” of Islam, where Mecca and other Muslim holy places were located. The region thus remained a highly unsettled site of both religious and political tensions, and the new terrorist organization extended its reach to other parts of the world. Meanwhile some in the West called for Saddam Hussein’s removal from power in Iraq, while others worried that his removal could create a power vacuum and generate further instability. Sanctions were imposed on Iraq after the war in order to restrain Hussein’s military ambitions, but the economic restrictions brought more hardship to the Iraqi people than to the dictator. A later momentous American decision to overthrow the Iraqi regime would lead to a new war that would open in 2003—a conflict to which we shall return in Chapter 27.

### *Changes in the Middle East*

The Islamic world in the Middle East was therefore in the midst of flux and ferment, caught between traditional social and religious beliefs and modern economic and cultural changes. Beginning with the Iranian revolution of 1979, a wave of religious radicalism had accelerated across the region. Islamic fundamentalists rejected such ideas as separation of religion and state and challenged secular tenets. Many sought Islamic theocracies. Women were often the chief targets. Ostensibly to protect them from the dangers of the modern world, religious radicals demanded their segregation and deprived them of educational and vocational opportunities. During the 1990s, for example, Afghanistan fell victim to the extremist Taliban movement, which had emerged in control of the country after a long war, supported by the United States, against the Soviet Union. The Taliban government imposed the strictest forms of repression, refusing women the right to attend schools or work outside the home and enforcing rigid dress codes. For the population as a whole, they wished to mete out punishments in accordance with the sharia, the centuries-old Islamic legal code. Although it was shunned by virtually all other nations and government leaders, the Taliban-controlled Afghan society became an important meeting place for Islamic radicals who sought to introduce strict Islamic laws in their own countries.

---

*Islam in flux and  
ferment*

In Egypt the government responded to religious extremism by outlawing the Muslim Brotherhood, which it held responsible for assassinations and other acts of violence. Yet Islamic leaders could rally thousands of young people in Cairo to force the secular government to drop the sponsorship of books considered blasphemous to Islam. In Turkey the army, guardians of the Turkish secular state, took measures against attempts to undermine its secular tradition. In Algeria, as we have seen, the military’s nullification of the Islamic party’s victory at the polls in 1991 led to the formation of armed militant groups that fell upon parts of the population with wholesale massacres. In Sudan the Islamic regime in the north continued its military campaign to enforce Islam on the entire country.

But cultural changes were also transforming many Islamic nations, as in Iran. Many Muslims favored an Islamic framework for society, but not a rigid Islamic state. Sentiment grew for more flexible interpretations of ancient Koranic law. In Saudi Arabia, where women could not drive cars or dine unaccompanied in public in the presence of men and where the authorities decreed ancient punishments like amputation for theft and beheading for more serious crimes, a new generation urged the modification of such practices. Egypt saw a remarkable breakthrough for women in 2000, when it enacted one of the Muslim world’s most far-reaching reforms of family law. Under the new law in Egypt a woman was henceforth free to divorce a husband with or without his consent. Reformers successfully argued that such

*Cultural changes*

### THE PERSIAN GULF AND THE MIDDLE EAST

The map shows important pipelines that move oil across this strategically important region of the world. The oil is exported both by sea from the Persian Gulf and by pipelines that connect the oil-producing centers to the Mediterranean and to the Red Sea. To protect the flow of this vital commodity, the Western oil-consuming countries sent naval forces to the Gulf during the Iran-Iraq war of 1980–1988 and reacted to a later Iraqi assault on its neighbors by driving Iraq’s army out of Kuwait in 1991.

reforms should be viewed as a modern updating of the equal rights accorded women by the Qur’an. When in Kuwait the emir decreed that women were eligible to vote and compete in elections, the courts and the legislature at first blocked the decree, but the Kuwaiti parliament eventually changed course and voted in 2005 to give political rights to women. Many of the cultural changes in law and social patterns were taking place in smaller Arab states like Kuwait.

The nations of the Middle East often lacked independent political parties and credible parliaments, and the region remained a stronghold of authoritarianism. Although elections were held, their outcomes were generally predictable. What did make a social and political difference, however, was the greater access to the outside world. Satellite television, the Internet, electronic

The city of Jiddah, a thriving port on the Red Sea, is one of the rapidly growing urban centers in contemporary Saudi Arabia. These men have stopped along one of the city's busy streets to engage in one of the daily prayers prescribed by Islam. Surrounded by high-rise apartments, automobiles, and modern traffic problems, they show how people in Islamic societies are blending important religious traditions into the patterns of contemporary social life.

(Liaison Agency)

communications, and close commercial interactions with the rest of the world had a powerful impact. The new era of globalization was opening horizons, and the world of Islam, from its heartland in the Arab countries to the far reaches of Africa and Asia was steadily evolving in new and diverse directions.

## 120. THE DEVELOPING WORLD

At the beginning of the twentieth century, or even in 1945, the sweeping nature and extent of the anticolonial revolution was unanticipated. At best the Western leaders of the colonial empires expected their colonies to evolve slowly toward self-government. The rapid and complete dissolution of the colonial systems was therefore astounding. The age of imperialism had been accompanied by exploitation, brutality, and degradation; and it left an enduring scar on subject peoples all over the globe. Yet paradoxically Western imperialism was also the instrument whereby many of the scientific, material, intellectual, and humanitarian achievements of the West spread to the rest of the world. The West no longer dominated these areas politically; but its culture, technology, and institutions carried a lasting impact. Industry, science, secularization, social mobility, the rule of law, the idea of individual freedom, and other new values or institutions created dislocations and tensions throughout much of the decolonized world. In some instances, as in Iran's Islamic revolution and in radical Islamic or religious movements elsewhere, resentments at the Western

intrusion exploded, but mostly there was hope that some amalgam could be forged of modernization and traditional values.

In few parts of the formerly colonial world did Western-style liberal and democratic institutions prevail during the early years of national independence. Economically, neither the newly independent nations nor the international assistance programs were able to raise per capita levels of agricultural and industrial production significantly. Illiteracy and disease persisted, and living standards still lagged behind those of the industrialized nations. Independence brought a new sense of dignity, but it did not automatically bring freedom, self-government, human rights, and the improvement of the human condition. In many parts of the world the campaign for political and economic liberalization did not begin to show results until the 1980s.

### *The Development Experience*

The United States took the lead after 1945 in assisting the developing countries with money and technical aid, but other industrial countries, as they recovered from the Second World War, also committed growing shares of their annual gross national product (GNP) to development assistance. (By the early twenty-first century, the top ten nations making grants of international aid—ranked by gifts as a percentage of GNP—were all in Europe; the United States still gave the most money but its percentage of GNP ranked twentieth). International agencies provided additional funding and expertise. With modern science, technology, and financial assistance, it was believed that the developing countries could look forward to modernization, economic growth, and social progress. Many of the new leaders of the postcolonial nations, however, believed that central planning, nationalized economies, and government controls would accomplish these ends more rapidly. Nehru's moderate socialism and economic planning in India provided one model. Others turned to the Communist models of the Soviet Union or China. Still others followed the Japanese example of private capitalism in partnership with government. South Korea, Taiwan, Singapore, and Hong Kong in Asia, adopting the Japanese pattern, industrialized and created remarkably successful export economies with high living standards for their people.

In the postwar decades international agencies helped finance projects for agriculture, industry, health, and education. The 1960s were the "development decade."

---

*The development decade*

President Kennedy spoke of raising the "banner of hope" for the poor and hungry. Dams and wells, irrigation schemes, hydroelectric projects, factories and processing mills, and education at all levels became part of the program. Industrialization, it was believed, could end or reduce excessive dependence on imports. In agriculture a "Green Revolution" pioneered by agricultural scientists in the United States, involving the use of chemical fertilizers, new high-yield hybrids, and modern planting and harvesting techniques, enabled farmers to increase productivity. The initial results were promising. Many of the developing countries experienced significant progress, achieving targets of 5 to 6 percent growth annually; per capita income rose; infant mortality rates fell. In the 1960s it seemed possible to speak of "a revolution of rising expectations."

But advances in the poorer nations did not bring much change in their relative global economic position. They still did not share proportionately in the industrial world's spectacular postwar economic expansion, in the course of which per capita income in the wealthier nations tripled. The gap between richer and poorer nations widened rather than narrowed. Using the United Nations and other organizations as a forum, the developing nations in the late 1960s argued for a reshaping of the international economy—a "new

international economic order”—to offer them greater access to the investment funds, technology, and markets of the West and to shift international financing from Western-dominated agencies like the World Bank to wider international control.

In the tensions of the Cold War the developing nations had formed a bloc of neutralist, nonaligned states. Beginning with 25 states in 1961, the Third World bloc steadily increased in numbers, and although it was non-aligned, it was always more critical of the wealthier West than of the Soviet Union. Because the states were situated mainly in the southern parts of the two hemispheres, their challenges to the wealthiest nations also assumed the configuration of a “north-south” contest.

*The “nonaligned states”*

The recession that began in 1974 brought a decline in international trade and a shrinkage of international assistance funds. In the 1980s, the developing countries staggered under heavy debts incurred during the earlier optimistic years. Oil-producing countries, particularly, had overcommitted themselves because they calculated on a continuing rise in oil prices, but oil prices either dropped or remained stagnant during most of the 1980s. Debt, principally to private commercial banks, soared, one-third of it owed by the four Latin American countries, Argentina, Brazil, Mexico, and Venezuela.

After five decades of the development experience, per capita income in the poorest countries had scarcely risen. Almost everywhere the agricultural sector had received a lower priority than the industrial. Agricultural production, even when it increased, often failed to keep up with explosive population growth. To earn the foreign exchange needed to finance the development of an industrial infrastructure, governments encouraged export crops and neglected the production of food for their own people—an agricultural economy was considered a sign of inferiority. Although the developing countries began building their own industries, many of their products failed to compete successfully either at home or in the world market. Much of the economic aid and foreign investment had been channeled to industrial projects in the capitals or other large cities, sometimes to nonproductive and extravagant showpieces.

*Development's impact*

In the rush for development, government control frequently led to clumsy bureaucracies, extravagance, and corruption. Many governments used development funds to boost national prestige and pride rather than to improve the economic conditions of their people. Inadequate assistance failed to help the rural poor, who sank into deeper poverty. Millions meanwhile fled the countryside for the presumed attractions of city life, only to face joblessness, live in congested shantytowns or slums, and breathe polluted air. Some industrial projects in the Third World were undertaken at enormous cost to the environment.

### *Changing Worlds and Persistent Problems*

In the 1980s economic growth regressed. Forty-three developing countries finished the decade with a decline in per capita real income. The percentage of the world's population living in poverty, slowly shrinking in earlier decades, rose again. Because of population growth, the numbers of the impoverished were far larger than before. As the twentieth century drew to a close well over one billion human beings lived in poverty, mainly in sub-Saharan Africa, Asia, Latin America, and the Middle East. Hundreds of millions suffered from disease and malnutrition.

*One billion impoverished*

The developing countries, of course, were far from homogeneous. The People's Republic of China (generally not included as part of the Third World but occupying a separate and unique category of its own) continued to industrialize and modernize in its own way. The “little tigers” in East Asia built powerful

The developing countries in Asia, Africa, and Latin America had all entered the global economy by the early twenty-first century, but they continued to struggle with unemployment, rapid population growth, congested cities, and environmental problems. This traffic jam in Bandung, Indonesia, exemplifies the stream of people and vehicles that now flows through crowded city streets in every nation of the developing world.

(Joanna B. Pinneo/Aurora Photos)

export economies and raised living standards. In South Korea per capita income rose spectacularly in the years 1970 to 1990 from \$270 to \$5,400. India, Indonesia, Malaysia, and Thailand as well as Argentina, Brazil, Chile, and Mexico were all industrializing and modernizing. These nations, or at least large numbers of people within these nations, were leaving the Third World behind and forming an intermediate category of their own as “newly industrialized countries.” The oil-rich states of the Middle East and elsewhere had the potential, if they chose to do so, to turn their national wealth into the further modernization of their economies and societies. Meanwhile at the very bottom of the economic performance scale were the “least developed countries,” among them a number of sub-Saharan African states; Bangladesh in South Asia; and Haiti in the Western Hemisphere. Together they formed a kind of “Fourth World,” an impoverished group of hundreds of millions of people lacking bare necessities.

The countries with the greatest success in development had progressed within a framework of market economies, but the debate continued over the role of government in stimulating economic development. Even in the successful market economies, governments played a significant supporting role; and government support for schools, transportation, and infrastructure remained essential for all developing economies. In many of the poorer developing coun-

tries, however, the overriding presence of the state, government ownership and controls, bureaucratic interference, and imprudent fiscal policies had choked off growth and progress.

The maldistribution of wealth was particularly acute in nations where there were fewer goods and services to distribute and where they were often distributed with gross inequity between the elite who cultivated ever higher standards of luxury and the impoverished masses. Despite some success stories, the rising expectations and hopeful visions of the early postwar decades often turned into ever deeper frustrations for many of the world's peoples. In point of fact at the opening of the twenty-first century there was no Third World. There were only two worlds, one relatively rich, one poor. And the relations between these worlds remained critically important in the evolving global economy.

### *Reappraising Development*

In the closing years of the twentieth century a spirited debate emerged in development circles and international donor agencies about the nature and direction of development assistance. The discussions and criticisms attracted broad public attention and at times ignited confrontational street demonstrations. The major international lending agencies admitted the disappointing progress in reducing poverty and accepted their share in the blame. The number of people living in extreme poverty in the world, that is, surviving on \$1 a day, fell only slightly, from 1.3 billion in 1990 to 1.2 billion at the end of the decade. In sub-Saharan Africa it had barely changed.

The two major international agencies, the World Bank and the International Monetary Fund (IMF), both under new leadership, acknowledged a need to shift from "growth and development" to a more explicit commitment to "poverty reduction." Over the years the World Bank had generously financed the building of roads, dams, bridges, and power plants, judging their success solely in quantitative terms, asking only, to cite one example, how much new electricity a project had generated but failing to ask how it had improved lives, reduced poverty, or affected local cultures. The catalogue of inappropriate projects was long and sometimes bizarre. Electrical equipment arrived in villages where no electricity was available, recycled clothing was sent to areas where it hurt local weavers, and grain shipments were sent to countries where they adversely affected local growers. Historically, foreign aid had gone to central governments, but it was now apparent that local governments and communities would have to play a larger role than in the past. Human development indexes were to be prepared, focusing not on per capita income alone but on literacy, life expectancy, health, nutrition, and the status of women and children. Donor governments meanwhile agreed to cancel the debt of many of the world's poorest countries in Africa, Asia, and Latin America and to help Third World countries gain freer access to the markets of the industrial world.

---

*Reduction of poverty*

The IMF came under heavy criticism. It had intervened in many currency crises over the years, generally pressuring governments to reduce spending and imposing overly rigid austerity measures that ignored the nation's social needs. Exceeding its original mission, it had reoriented development policies in directions it considered economically desirable but with little recognition of the social or political consequences. Agreement emerged that the IMF should restrict itself to resolving currency and other short-time financial crises, no small task in itself, and leave development policies to the World Bank.

Another large and contentious issue was the impact of the global economic integration. Its most extreme critics argued that global trading systems and financial markets increased poverty, sharpened social divisions,

---

*Impact of global integration*

Postcolonial nations in Africa and Asia have sought to develop the new technologies and communication systems that are essential for contemporary economic and cultural life, in part because a growing “digital divide” threatens to widen other economic differences between wealthy and poor nations. These young men were working on computer problems at Ibadan University in Nigeria during the early years of computer technology, but their concentration and perplexity reflect the universal effort to comprehend and manage new information technologies in modern societies around the world.

(Marc & Evelyn Bernheim/Woodfin Camp & Associates)

hurt the environment, exploited local working people, used child labor shamelessly, and shifted control over people’s lives to multinational corporations and the pursuit of profit. Although economic evidence did suggest that globalization had accomplished far less to relieve poverty and inequality than originally predicted, others maintained that free trade and information technology stimulated economic growth and would help the poor to improve their lives in the coming decades of the twenty-first century.

The vigorous debates on development policies may have shaped new priorities for future governmental and international development aid. A related debate explored the extent to which the developing countries might be left behind by the new information technology. The world of computers and the Internet, like other technological innovations, further widened the economic gap between rich and poor nations and raised new questions about how best to reduce the growing digital divide. All such debates about the development experience reflected the linkage between the historical legacy of the former colonial empires, the rapid process of decolonization, the expansion of the global economy, and the emergence in the second half of the twentieth century of the largest number of independent nation-states that the world had ever seen.

# COEXISTENCE, CONFRONTATION, AND THE NEW GLOBAL ECONOMY

*We must turn* from our account of the new and emerging nations of the world, which at times has carried us into the twenty-first century, to the international political tensions and the vicissitudes of the global economy in the decades following the early postwar era. By the late 1950s western Europe and Japan had drawn on American aid and their own technical expertise to rebuild their war-damaged cities and factories. Responding to the new challenges of a bipolar world and the global ambitions of two competing superpowers,

- 121. Confrontation and  
Détente, 1955–1975
- 122. Collapse and Recovery  
of the Global Economy:  
The 1970s and 1980s
- 123. The Cold War Rekindled
- 124. China after Mao

western Europe had joined more closely together economically in the evolving European Community and buried many of its old antagonisms. Regions of the world that formerly were part of European colonial empires were everywhere asserting their independence. China was positioning itself as another major Communist power. The global economy grew increasingly interdependent and the vicissitudes of economic expansion and contraction reverberated worldwide. Older distinctions became blurred. The emergence of Japan made it impossible to identify industrial and financial might with the West, and even the Soviet bloc expanded its trade and financial exchanges with non-communist countries.

Yet the Cold War continued to manifest itself in an escalating nuclear arms race and in the worldwide confrontation of the two superpowers, each of which attempted to prevent the other from gaining the ascendancy. The stockpiling of nuclear arms and the development of sophisticated long-range delivery systems led to the accumulation of unparalleled destructive power. The nuclear missiles supposedly were built for deterrence and not for use, and a new kind of balance of power emerged that preserved the peace. The world nonetheless lived under the threat of a possible nuclear catastrophe, and neither economic nor intellectual life could fully escape from the global shadow of the Cold War.

As time passed, the phenomenon of “bipolarity,” or the predominance of the two superpowers, the United States and the Soviet Union, gradually gave way to new global

configurations. But while the charged atmosphere lasted, despite periods of *détente*, the world was forced to live with repeated crises. As late as 1985 no one could foresee how or when the Cold War would end.

## 121. CONFRONTATION AND DÉTENTE, 1955–1975

The Soviet leaders who succeeded Stalin after 1953 seemed at times more conciliatory and willing to acknowledge the need for arms control and cooperation in the nuclear age. An alternative of peaceful coexistence and competing world systems promised to open up, and there were even recognizable periods of *détente*, or formal relaxation of tensions. But dangerous confrontations recurred, the nuclear arms buildup assumed unprecedented forms and dimensions, and relations saw-sawed over the next several decades between conciliation and crisis.

*Periods of détente*

By 1955 the Cold War had stabilized. In Asia the Korean War was over. In Europe the North Atlantic Treaty Organization (NATO), strengthened by the West German armed forces, faced the Warsaw Pact nations. The iron curtain still divided Europe, but the threat of direct military confrontation receded. The Western powers and the Soviet Union were even able to agree in 1955 on a treaty with Austria, ending the joint Allied occupation and leaving Austria independent and neutral.

We have seen how Khrushchev had emerged as the dominant Soviet leader. Sharp-tongued, volatile, boastful, he announced that the Soviets would abandon their revolutionary principles only “when shrimp learn to whistle” and pledged that the Soviets would “bury” Western capitalism. Nonetheless he rejected the inevitability of war and emphasized the “possibility and necessity of peaceful coexistence.” President/

*Pressures for coexistence*

Eisenhower, in office from 1953 to 1961, continued the policy of containment and the American military buildup. Eisenhower’s secretary of state, John Foster Dulles, who saw the Cold War in almost apocalyptic terms as a Manichean contest between good and evil, at one point urged a “rollback” of Soviet power. Despite his rhetoric, and despite active American military support for anti-Communist forces in Central America, Asia, Africa, and elsewhere, American policy remained limited to containment. Both superpowers recognized the need for coexistence in the nuclear age.

In 1955 President Eisenhower, along with the British and French, met at Geneva with Soviet leaders in a friendlier atmosphere than any since the Second World War. Although they reached no new agreements, the American president could speak of “a new spirit of conciliation and cooperation.” But tensions mounted over Berlin. The Soviets, incensed that East Germans were fleeing in large numbers to West Berlin and then to the Federal Republic of Germany, demanded that the Western powers end their occupation of West Berlin, but Eisenhower forcefully rejected the ultimatum, and the crisis passed. In 1959, when Khrushchev visited President Eisenhower at his weekend retreat in Camp David, they spoke of peaceful coexistence and even of mutual disarmament.

At a second summit conference in Paris, the superpowers continued to recognize their common interests in preserving stability and peace. But by then Khrushchev, under criticism at home and from Mao in China for being too conciliatory toward the West, produced irrefutable evidence of American reconnaissance flights over Soviet territory and broke up the conference. By the summer of 1960 the “spirit of Geneva” and the “spirit of Camp David” had faded. When Khrushchev

*Cooperation fades*

spoke before the United Nations, he boasted of Soviet arms production and denounced the United States. Crises over Berlin and elsewhere were far from settled.

The United States, unwavering in its resolve to maintain the defense of western Europe, accepted Soviet hegemony east of the iron curtain. The Americans protested but did not intervene when in 1953 the Soviets put down antigovernment riots in East Berlin, or when in 1956 the Soviets exerted pressure on Poland to curb its reform movement, or when the Soviets, even more dramatically, sent troops and tanks that year to crush the Hungarian revolt, or later, in 1968, the Czech uprising. The United States offered little more than moral encouragement to dissident groups in all of these eastern European states.

At the same time one part of the world after another was being brought into the American strategic defense system. In the Suez crisis in 1956 (which broke out simultaneously with the troubles in Hungary) the United States deterred Britain, France, and Israel from pressing military action against Egypt, at least in part because it might have encouraged Soviet intervention. The three countries were frustrated, but the Soviets were kept out. The “Eisenhower Doctrine” asserted American primacy in the defense of the Middle East and pledged protection to any government in that region against “international Communism.” Under that policy, Eisenhower dispatched marines to Jordan and Lebanon in 1958 when their pro-Western governments were threatened. In the Western Hemisphere the United States rallied the Latin American republics to resist domination or control of any American state by the “international Communist movement.” American foreign policy in the Cold War remained based on the premise that unrest on every continent was Soviet-inspired. That premise sometimes prevented Americans from understanding the complex local causes of regional conflicts around the world.

---

*American Cold War  
policy*

The nuclear arms race continued. In October 1957 the Soviets, to the world’s astonishment, demonstrated their prowess in the new era of rocket technology when they successfully launched *Sputnik*, the first artificial satellite to orbit in outer space. A few months later the United States launched its own space satellite, *Explorer I*. The space age had opened, and the military implications of space rocketry quickly became apparent. The same principles of propulsion could launch both satellites and armed missiles over long distances. In 1958 the Soviets developed the first intercontinental ballistic missile (or ICBM) capable of delivering nuclear warheads to North America and elsewhere thousands of miles away. The United States in turn developed its own intercontinental ballistic missiles and proceeded to build an arsenal of nuclear weapons far larger than that of the Soviets.

A new kind of arms race, based on “mutual deterrence,” emerged; it was useless to speak of “massive retaliation.” Now that American cities were vulnerable to nuclear destruction, anxiety spread in western Europe that the United States might not so readily defend it. De Gaulle, the French president, voiced these and other misgivings in the 1960s and called for a more independent role for the West Europeans. Rejecting the rigid bipolar patterns of the Cold War and viewing postwar international relations as a traditional struggle between great powers rather than as a conflict of ideologies, he called for a return to a more open recognition of spheres of national interest and for Europe’s reunification—“from the Atlantic to the Urals.” He declined to follow the American lead in foreign policy in Europe or elsewhere. Although he kept France in the Atlantic alliance, in a gesture of independence he withdrew France from the integrated NATO military command in 1966 and pressured NATO into moving its headquarters from French soil. His aspirations for a

race*

### THE WORLD ABOUT 1970

This political map of the world about 1970 shows a number of important changes after the end of the Second World War: the breakup of the European colonial empires in Asia and Africa, the emergence of some 50 independent republics in Africa and of several new states in Asia, the emergence of the People's Republic of China, and the peripheral expansion of the Soviet Union.

leadership role on the international scene troubled many Europeans, but he nevertheless articulated European uneasiness with American hegemony over the West in world affairs.

*The Kennedy Years, 1961–1963*

The gravest direct Soviet-American confrontations came during the Kennedy presidency. President John F. Kennedy heightened the rhetoric of the Cold War, proclaiming that the United States “had to pay any price, bear any burden, meet any hardship, support any

friend or oppose any foe in order to assure the success and survival of liberty.” He took steps to close what was termed the “missile gap.” Alarmed by Soviet successes in space, he pledged that the Americans would reach the moon before the end of the decade and encouraged large expenditures for space exploration. At the same time Kennedy increased foreign aid to the developing countries and sponsored the Peace Corps, which took young Americans to Latin America, Asia, and Africa to aid in social and economic development programs designed to improve life and reduce the attractions of communism. For Latin America, which resented the large sums that had gone to Europe, he organized the Alliance for Progress to encourage investment and growth.

In Cuba, Kennedy inherited an explosive situation. Many in the United States and elsewhere had initially regarded Fidel Castro as a progressive leader favorably disposed to democracy and committed to much needed change in a country where a dictatorship had long kept the population impoverished and repressed. But Castro, no simple reformer, inaugurated a sweeping agrarian program,

---

*Kennedy and Cuba*

expropriated large American corporate holdings, and imprisoned or executed political opponents. Thousands of Cubans fled to the United States, settling in large numbers around Miami. Although Castro originally kept his movement aloof from the Cuban Communist party, he now openly joined ranks with the Communists. President Eisenhower, who dealt with Castro's leftist regime before Kennedy came to office, became alarmed by the threat of communism in the Western Hemisphere and imposed a strict embargo on imports from Cuba. Castro for his part moved closer to the Soviet Union. Within a short time, four-fifths of Cuban trade was with the Soviets and eastern Europe. The United States broke off diplomatic relations, and the CIA secretly trained a small group of Cuban refugees for an armed invasion of the island.

Kennedy inherited the plans for the invasion and, without seriously reassessing the situation resolved to go forward with it to end the Communist menace 90 miles from the American mainland. The invasion at the Bay of Pigs in April 1961, without adequate air protection, turned into a failure; most of the 1,500 invaders were captured. Castro now inflated his revolutionary rhetoric, openly projected himself as a Marxist-Leninist, affirmed the country's ties with the Soviet Union, and championed the cause of international revolution throughout Latin America and elsewhere. The United States tightened its embargo.

---

#### *The Bay of Pigs*

At a meeting with Kennedy in Vienna that year, Khrushchev, the Soviet leader, delivered a new ultimatum for the Western powers to leave Berlin. Kennedy, smarting over the Bay of Pigs defeat, reaffirmed the Western resolve to remain in Berlin. He asked Congress to expand American military forces, inaugurated a civil defense program, and made plans for fall-out shelters in the event of nuclear war. The Atlantic alliance backed him. The immediate crisis passed. But in the summer of 1961 the Soviets, exasperated at the continuing exodus from East Berlin (over 3 million East Germans had already fled), constructed the Berlin Wall, a 28-mile rampart of concrete and barbed wire, with armed sentry stations. The Wall stood as a grim physical reminder of the Cold War; hundreds of East Germans who attempted to cross the barrier met their deaths. The Soviet Union also ended a three-year moratorium on nuclear testing; both countries resumed tests underground and in the atmosphere.

---

#### *The Berlin Wall*

### *The Cuban Missile Crisis of 1962*

The most dangerous Western-Soviet confrontation occurred not in Berlin but in Cuba, where in the fall of 1962 Khrushchev showed an unanticipated recklessness. Announcing his intention to defend Cuba against a second American invasion (plans for which existed), he dispatched Soviet soldiers and technicians to the island to construct missile sites that would have brought the American mainland within target range. For the United States this Soviet intrusion on America's own doorstep was unthinkable and could even inalterably change the nuclear balance between the two superpowers.

During 13 tense days in October President Kennedy and his advisers resolved not to take any hasty military action but to stand firm against the Soviet military presence in Cuba, fully aware that the showdown could lead to nuclear war. Kennedy imposed a blockade (or quarantine) of the island, forbidding further deliveries of arms and supplies. The launching of any nuclear missile from Cuba, he made clear, would lead to a "full retaliatory response upon the Soviet Union." At the height of the emergency American planes carrying nuclear bombs were airborne. Although Khrushchev blustered that

The bleak, concrete Berlin Wall became both a physical and symbolic expression of the bitter divisions in Europe during the Cold War. This picture, which shows a section of the newly constructed Wall near the famous Brandenburg Gate, illustrates the stark separation between East and West Berlin that the Soviets sought to establish when they built the Wall in 1961. Although the Wall accomplished the Soviets' short-term political objective by stopping the exodus of East Germans, it also confirmed the repressive character of Soviet-controlled states in eastern Europe.

(Sipa Press)

the blockade was illegal, he backed down; on October 24 two Soviet ships and their submarine escort turned back. In one note Khrushchev agreed to remove the missile sites in return for an American pledge not to invade Cuba. In a second note, more aggressive in tone, he demanded the removal of American missile sites in Turkey. Kennedy replied only to the first message, but privately let it be known that the United States would

---

*An eyeball-to-eyeball  
confrontation*

eventually remove its missiles in Turkey. By October 28 the most ominous crisis of the Cold War, an “eyeball-to-eyeball” confrontation, as the American Secretary of State Dean Rusk described it, was over.

Khrushchev had lost face; he was weakened still further at home, and in 1964, for this and for other reasons, he was ousted from power. The People’s Republic of China, which was assuming the role of spokesman for the Third World, ridiculed his capitulation in the Cuban missile confrontation. Even though tensions once again eased, and the Soviet leaders would never again show such recklessness, the Cuban crisis had a direct effect on the arms race. Both the Soviet Union and the United States moved to expand their nuclear arsenals, and the Soviets under Khrushchev’s successors were determined to achieve nuclear parity.

### *The United States and the Vietnam War*

The resolve to contain Communist expansion entangled the United States in deepening hostilities in Southeast Asia. In Vietnam, as we have seen, the Communist leader Ho Chi Minh had led an anticolonial war against the French that lasted over eight years, from 1946 to 1954. After France acknowledged its military defeat, an international conference at Geneva in 1954 formally recognized the independence of Vietnam (temporarily dividing it into a northern and southern sector), as well as the independence of Laos and Cambodia, all part of former French Indochina.

---

*Vietnam divided*

But in Vietnam Communists and anti-Communists now confronted each other in a divided country. In the north Ho Chi Minh consolidated his Communist regime, its capital at Hanoi. A Western-backed regime under Ngo Dinh Diem governed the south, its capital in Saigon. Neither regime wanted a divided country, but the Geneva conference had partitioned Vietnam at the 17th parallel until general elections for a unified country could be held in 1956. In the interval the armies of the rival regimes were to withdraw behind the stipulated boundary, across which there was to be free movement of peoples. In the months that followed, close to 1 million Vietnamese fled southward. In South Vietnam a referendum in 1955 established an independent republic.

The government in South Vietnam, already aware that the Communists had acquired a large popular following in the wars against the Japanese and French, refused to participate in the scheduled countrywide elections. Communist guerrilla forces, known as the Viet Cong, who had stayed behind when the main army withdrew under the 1954 Geneva agreement, began a campaign to undermine the South Vietnamese government. The National Liberation Front emerged as a rival civil authority. Skilled in insurgent warfare, the Viet Cong won popular support by distributing land and by denouncing South Vietnam as a puppet of the West. Regular army units from North Vietnam soon reinforced the Communist guerrilla units in the south. Ho Chi Minh, while never sacrificing his political independence, received generous aid for his regime from the U.S.S.R. and from the People’s Republic of China. South Vietnam, hard-pressed despite technical advice and assistance from the United States, appealed for more and more American aid.

---

*“Like a tumbling row  
of dominoes”*

The United States, from President Eisenhower on, saw a need to fill the vacuum created by the French withdrawal and to check Communist expansion in Indochina. To prevent the other states in Southeast Asia from toppling one by one—“like a tumbling row of dominoes,” in his phrase—Eisenhower

sent some limited aid and military advisers, but Kennedy further bolstered the Diem regime with additional military advisers, financial backing, and arms. The United States acted on the premise that this was not a civil war among the Vietnamese but a war between two independent states, one anti-Communist and therefore to be supported, and the other Communist, receiving aid and support from the Soviet Union and Communist China. Vietnam was seen as part of the global struggle between communism and democracy. While the repressive character of the regime in the north was apparent, the southern regime's authoritarian practices, ineptitude, corruption, and acts of coercion, especially against its large Buddhist population, became increasingly embarrassing to its American sponsors.

American involvement deepened and spanned the administrations of five presidents, Eisenhower, Kennedy, Johnson, Nixon, and Ford. Under Eisenhower a few hundred military advisers were present, and military and economic aid began; as early as 1959 two American military advisers were killed in an attack north of Saigon. In 1961, under Kennedy, additional military advisers and American support troops arrived; a year later 4,000 military personnel were on hand, and the first battle deaths were reported. The Kennedy administration, through the CIA, intervened in South Vietnamese politics; the Americans first propped up and then in 1963 helped to overthrow the increasingly repressive government of Diem, in the course of which Diem and his brother were murdered.

After Kennedy's assassination in November 1963, and the succession of Lyndon B. Johnson to the presidency, American military intervention in Vietnam gained added momentum. In 1964, on the alleged ground that North Vietnamese torpedo boats in the Gulf of Tonkin had attacked United States destroyers, an allegation that later proved unfounded, Johnson ordered immediate air strikes against North Vietnam and secured support for a joint congressional resolution empowering him to take "all necessary measures" to defend the United States and its ally. The Gulf of Tonkin resolution was the only explicit congressional sanction for the deepening American involvement. In 1965 American marines arrived. After 1965 heavy air raids on supply bases in the north and on Communist-controlled areas in the south became an almost daily occurrence. American bombers attacked as far north as Hanoi.

---

*Gulf of Tonkin  
resolution*

To root out the elusive Viet Cong in the countryside, American soldiers conducted "search and destroy" missions among the villagers, and American planes dropped incendiary materials and chemicals, burning whole villages, defoliating hundreds of thousands of acres of land, and turning the survivors into homeless refugees. The bombing raids, the commitment of American ground troops, and the casualties mounted. In 1966 there were close to 200,000 American troops in Vietnam; by 1969 at their maximum there were close to 550,000. In the massive bombings from 1965 to 1969 the Americans dropped more tons of explosives than against the Axis powers in the Second World War.

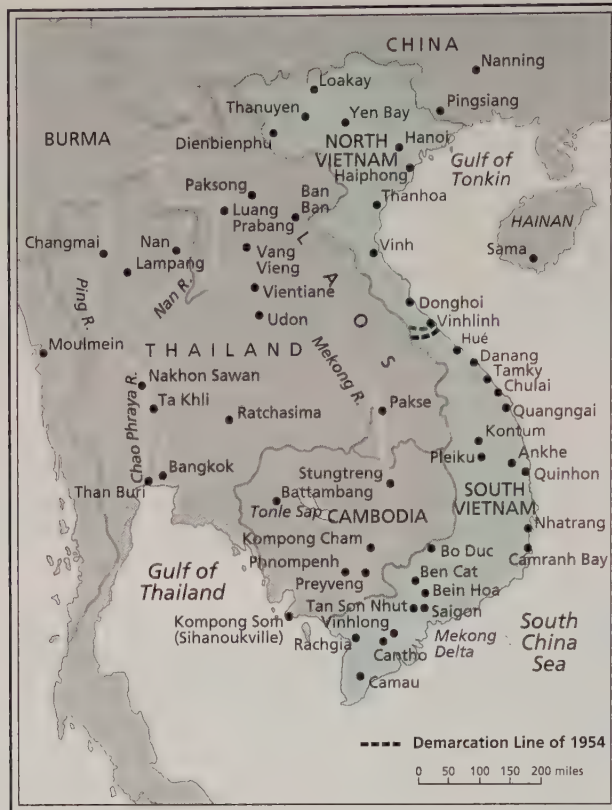

The large-scale American military intervention was unable to overcome the persistence of the North Vietnamese, aided by the Soviet Union, which never directly intervened with combat troops but lent assistance of other kinds. American military reports about the "pacification" of the countryside and about the number of enemy casualties (or "body counts") were confounded by the Communists' Tet, or New Year's, offensive at the opening of 1968.

---

*The Tet offensive*

Although unsuccessful, the scale of the Communist offensive shook American complacency about the outcome of the war. To many it became clear that a negotiated settlement would be necessary.

## VIETNAM AND ITS NEIGHBORS ABOUT 1970

The French built up their colonial empire in Indochina during the 60 years before the Second World War, controlling the old Asian territories of Cambodia, Laos, and Vietnam. Shaken by Japanese occupation of the region during the Second World War, the French were unable to defeat a postwar Vietnamese movement for independence that drew strength also from Communist affiliations. When the French withdrew in 1954, the Geneva Accords provided for partition of Vietnam until national elections could take place and unity could be restored, but the elections never took place. Since the north was now Communist, the United States provided economic and military support for an anti-Communist regime in South Vietnam. This involvement grew in the 1960s as the conflict between North and South Vietnam developed into a large-scale war. The United States intervened with over 500,000 troops and heavy air bombardments, but the American forces (like the French before them) could not defeat the Vietnamese Communists. American troops were gradually withdrawn in the early 1970s, and North Vietnam eventually won the war. Hostilities ended in 1975 with Communist regimes in control of a unified Vietnam and of Laos and Cambodia.

America's allies in western Europe were critical of the deepening American involvement. De Gaulle, a moralizer when it suited his purposes, called it "detestable" for "a great nation to ravage a small one." In the United States the war became a root cause of disorders and protests on college campuses and in the cities. Criticism of American policy added fuel to the worldwide student demonstrations of 1968. A wide array of public opinion turned against the war. Some opponents raised larger issues. They questioned whether the United

States, despite its enormous strength, should assume the responsibility, or even had the capability, to police the world against Communist aggression; whether the American presence in Vietnam was an unwanted foreign intervention reminiscent of Western intrusion in the age of imperialism; whether the South Vietnamese regime could be stabilized and democratized to make the sacrifices worthwhile; and whether the air raids and continued hostilities might not end in the tragic devastation of the unfortunate country. Some critics with a knowledge of Asian history argued that the Vietnamese had a long record of independence and that even a Vietnam united under the Communists would not lead to subordination to the Soviets, or to China, with which Vietnam historically had had many differences.

The need to win the war became an obsession with President Johnson. Like his predecessors, he was convinced that it was in America's vital interest to contain communism in Southeast Asia; otherwise the Communists would be "in Hawaii and next they will be in San Francisco." Like his predecessors, he too refused to repeat what he took to be the lessons of appeasement of the 1930s. Above all, he could not see himself presiding over the first war lost by the United States, even when the war jeopardized his unquestionably important domestic reform program. But with victory remote, and with resentment against the war rising, he decided not to seek reelection in 1968 and announced a halt to the bombing in the north so that peace negotiations could go forward. By November 1968 all bombing ceased—for a time.

Peace talks opened in Paris even though the fighting went on. Johnson's successor, President Nixon, pledged an early end to the war, promised "Vietnamization," that is, to shift to South Vietnam the major responsibility for its own defense, so that American troops could begin to withdraw. Yet the United States in the next three years in some ways became even more deeply involved. In response to stalemated peace talks and continuing Communist advances, Nixon and his national security adviser and later secretary of state, Henry Kissinger, called for the resumption of heavy air attacks and widened the war by invading Cambodia to cut off North Vietnamese supply lines. The war spread to Laos as well.

---

*Vietnamization*

Demonstrations mounted in the United States at the widening of the unpopular war. Meanwhile Kissinger opened up secret talks with North Vietnam representatives and finally brought about a cease-fire agreement in January 1973. The agreement ended direct military involvement for the United States and concluded the longest war—like the Korean, an undeclared one—the country had ever fought. Over eight years elapsed from the arrival of the first Marine contingent in 1965 to the withdrawal of the last troops at the end of March 1973, or 12 years, if the involvement is dated from 1961.

---

*U.S. withdrawal*

Following the withdrawal of American troops, hostilities between North and South Vietnam continued as each sought additional territory before a final settlement was reached. Both sides violated the cease-fire, and fighting resumed on a major scale in 1973. Although the administration remained committed to the defense of South Vietnam, Congress refused additional expenditures for military aid. Corruption and demoralization in South Vietnam grew worse; army desertions mounted. The end, nevertheless, came as a surprise. At the close of 1974, the North Vietnamese captured key cities in the southern provinces. The government of South Vietnam lost heart and ordered withdrawal to the coast; a planned retreat degenerated into rout. North Vietnam, with victory in its grasp, poured thousands of troops south across the demilitarized zone. Swarms of refugees fleeing south added to the confusion. By April 1975 North Vietnam's armies controlled three-fourths of South Vietnam, and Saigon fell.<sup>9</sup>

North Vietnamese troops entered Saigon and renamed the capital Ho Chi Minh City in honor of the Communist leader who had meanwhile died in 1969. After more than 30 years of almost continuous fighting—against the Japanese, against the French, and in the civil war between north and south in which the United States had massively intervened—peace had finally come to the country, and with it Communist victory. Reunification and reorganization of the country proceeded quickly. The new regime launched a “political reeducation” campaign, nationalized property, and forcibly moved large numbers of the population from the cities to the countryside. Thousands, mostly ethnic Chinese, tried to flee in makeshift, overcrowded boats, many perishing in the attempt or discovering that the countries which they reached would not offer them a haven.

---

*Peace and Communist victory*

In the wake of North Vietnam’s victory, Cambodia and Laos also fell under Communist control. Thirty years after the end of the Second World War, all of former French Indochina was in Communist hands, and a reunified Vietnam emerged as a new military power in Southeast Asia.

---

*The costs of war*

The Vietnam War was extremely costly for the Vietnamese people; 1.3 million Vietnamese died in the fighting and bombings. For the United States the war was a searing experience. Battle and battle-related deaths exceeded 58,000, higher than in the Korean War. The domestic impact of the military expenditures was heightened by the failure to place taxes on a wartime basis, contributing to inflationary pressures. The political and moral costs were enormous. The war created a mistrust of presidential power in the United States—of an “imperial presidency.” In 1973 Congress adopted legislation to curb presidential initiatives that could lead to future episodes like the war in Vietnam. The war had left Americans with a disturbing series of painful images and memories: the deadly bombings, the gruesome battle scenes visible in the first war reported in detail on television, the revelation of atrocities and war crimes committed by American troops (as at My Lai in 1968, first covered up and then made the subject of a public inquiry and trial), and the demoralization of veterans, who were convinced that their sacrifices in the unpopular war had brought them little recognition. America’s giant industrial and military power had failed to bring victory. Technological superiority in armaments and air power proved inadequate against an enemy skilled in insurgent warfare and imbued with a revolutionary zeal.

The travail of Southeast Asia did not end. During the war North Vietnam had infiltrated border areas of Cambodia and helped arm Communist insurgents, the Khmer Rouge, which, after a lengthy civil war, overthrew the Cambodian government. In 1975 the leader of the Cambodian Communists, the ruthless Pol Pot, subjected Cambodia to brutal dictatorship and grisly terror; an unknown number, but over 2 million people, died in the small Buddhist country from 1975 to 1978 as a result of mass executions, forced labor, and famine.

The Khmer Rouge turned out to be more pro-Chinese than suited Vietnam or the Soviet Union. In 1979 Vietnam invaded Cambodia and overthrew the Pol Pot regime: China took retaliatory steps, but could not force Vietnam to withdraw from Cambodia until the Soviets themselves encouraged the Vietnamese withdrawal in the late 1980s. Ancient rivalries between China and Vietnam and between Vietnam and Cambodia, as well as tensions between the Soviet Union and China, prolonged the agonies of Southeast Asia. There was no monolithic communism in this part of the globe, where nationalism was as important as Communism in shaping the violent conflicts of the postcolonial era.

---

*Communism and nationalism*

This photograph of terrified children fleeing from the bombing of their village in South Vietnam suggests how the disturbing pictures and television images of the Vietnam War raised painful moral questions and contributed to the development of a strong antiwar movement in the United States.

(Associated Press, AP)

### *Brezhnev: The "Prague Spring"*

Leonid I. Brezhnev, who emerged as the dominant Soviet leader after Khrushchev's fall from power in 1964 and came to head both party and state, was intent, with reckless disregard for the costs to the economy, on building the country's military and naval strength to compete with the United States. Yet he avoided direct confrontation and saw political and economic advantages in a relaxation of tensions and arms negotiations. The open rift with Communist China made détente with the West even more important. But the two superpowers continued to vie with each other for influence in the Middle East, Africa, and other strategic areas of the world; and the Soviets consolidated their hold on eastern Europe.

Despite the failure of the Hungarian uprising in 1956, the longing for freedom and independence in eastern Europe could not be suppressed. When in 1968 the reforms of Alexander Dubček threatened the one-party state in Czechoslovakia, Brezhnev and the party leadership ruthlessly crushed the "Prague spring." They dispatched 250,000 troops, including token Polish, Hungarian, and East German contingents, to suppress the incipient revolution and remove Dubček and his reformist allies from power. The

The citizens of Prague responded angrily to the Soviet military forces in their city in August 1968, but they could do little against the 250,000 well-armed troops. These young people celebrated the destruction of a Soviet tank; elsewhere in the city, however, the Soviets were destroying the reformist government of Alexander Dubček and suppressing the movement that had attempted to create a more democratic political system in Czechoslovakia.

(Getty Images)

---

#### *The Brezhnev Doctrine*

“Brezhnev Doctrine” that year proclaimed the Soviet right to intervene in the name of “proletarian internationalism” in any Communist country to protect “socialism” against “internal or external forces” and prevent the “restoration of a capitalist regime.” It was in its own way a kind of mirror

image of the Truman Doctrine. Czechoslovakia returned to a tight dictatorship ruled by party bosses with close ties to Moscow. The United States did no more than protest the armed intervention in Czechoslovakia, demonstrating once again that it would not openly challenge Soviet control over eastern Europe in what was tacitly accepted as a sphere of Soviet influence. But the invasion of Czechoslovakia, like the suppression of the 1956 Hungarian uprising, alienated the Communist faithful in many parts of the world and undermined the Soviet leadership of Western Communist parties, which strongly denounced the military intervention.

#### *Brezhnev and Nixon*

Although President Nixon, who took office in 1969, continued and even intensified the war in Vietnam, he introduced greater flexibility into the American policy of containment and pursued a policy of systematic détente in the Cold War. With Kissinger (and somewhat like de Gaulle) he believed in the balance of power diplomacy of an earlier age, and he assumed that each country’s long-range

---

#### *Nixon and détente*

national self-interest and geopolitical concerns should count more than ideology. The growing importance of the People's Republic of China had to be recognized. The United States would be unable to curb Soviet expansion altogether, but it could offer economic concessions and other inducements for cooperation and peace.

Under the Nixon-Kissinger policy the United States linked Western technology, trade, and investment to Soviet cooperation in international affairs. The economic inducements were important because the Soviet Union's economic difficulties were aggravated by its growing arms burden. Khrushchev's earlier boast of surpassing the West economically had proved hollow. The Soviets badly needed Western technology, Western investment credits, and, because of their persistent agricultural crises, Western grain. In the new atmosphere American and West European private bankers made large loans to the East European nations, which benefited even more than the Soviets from détente. The two Germanys moved closer together in economic relations, recognized each other diplomatically, and were admitted to the United Nations in 1973 as two separate sovereign states.

The Nixon-Kissinger policies developed out of a reassessment of global realities. Unlike the bipolar situation in 1945 when there were only two superpowers, there were now other emergent power centers, and the most important of them was the People's Republic of China. In 1971 the United States withdrew its objections to the entry of the People's Republic of China into the United Nations as a replacement for Taiwan, although it would still recognize "two Chinas" and work toward their peaceful reunification one day as "one country, two systems." Then in an unannounced move in 1972, after careful secret preparations, Nixon, who had built his domestic political career on anticommunism, took the dramatic step of visiting Mao in Beijing to initiate diplomatic and economic relations with China.

---

*The opening to China*

The American opening to China increased pressure on the Soviets to pursue détente. The Soviet arms buildup under Brezhnev signified that the Soviets were approaching nuclear parity, and both the United States and the Soviet Union found it to their advantage to negotiate arms reduction. The Strategic Arms Limitation (or SALT) talks begun under President Johnson were resumed. In 1972 Nixon and the Soviet leaders reaffirmed the goal of "peaceful coexistence" and signed the SALT I treaty. Each nation agreed to reduce its antimissile defense system to make it possible to work toward equality in offensive weapons. They agreed also to hold offensive weapons to a fixed number for a period of five years. The treaty did not halt the arms race, but it reduced fears on both sides of a preemptive strike and promised continued negotiations. After Nixon resigned from the presidency in 1974 following the Watergate scandal, détente continued under his successor, President Gerald Ford.

---

*SALT I*

Détente offered an opportunity to settle or phase out some unresolved issues of the Second World War. In 1975, in what resembled a peace conference for Europe, three decades after the Second World War had ended, 35 nations—the 16 members of NATO, the 7 Warsaw Pact states, and 12 European countries not formally members of either alliance—met at Helsinki over a period of two years in a Conference on Security and Cooperation in Europe. They pledged to work for peace, economic and cultural cooperation, and the protection of human rights. The Helsinki accords, although not a formal treaty, ratified the European territorial boundaries established after the Second World War and set up "Helsinki watch committees" for the surveillance of human rights in nations that signed the agreements. The U.S.S.R. considered the commitment to human rights a small price to pay in exchange for

---

*The Helsinki accords*

the economic and other benefits of détente. It still expected to keep strict limits on dissent within its own country and in its East European satellites, but it failed to see how much the Helsinki accords would encourage dissenters to defy repression. The Helsinki conference was the high point of Cold War détente; not long thereafter, in 1979, Soviet-Western relations took another downward turn. But we must first turn to the changing world economy, to which the Soviet Union and the Eastern bloc were now more closely tied than ever before.

## 122. COLLAPSE AND RECOVERY OF THE GLOBAL ECONOMY: THE 1970S AND 1980S

Interdependence is a form of dependency, and the expansion of the global economy after the Second World War made each country more vulnerable to events in distant places. In 1974, after two and a half decades of spectacular growth, the Western economic boom came to an abrupt end. Signs of economic slowdown and inflationary pressures were already visible in the late 1960s, and recession might have occurred in any event, but it was the oil embargo growing out of the Arab-Israeli war in the autumn of 1973 that precipitated the crisis.

Oil had replaced coal as a major source of energy. Readily available at low prices, it came primarily from the vast reserves of the Middle East and was transported easily and economically by tanker through the Persian Gulf and Suez Canal. The major international oil companies, mostly American, for a long time controlled prices and production, and purchasers paid for the oil in dollars. The Western economies, the Japanese, and others in Asia had come to depend on cheap oil. In 1960, 14 of the oil-exporting countries in the Middle East, Africa, and Latin America formed the Organization of Petroleum Exporting Countries (or OPEC) to curb the monopoly concessions enjoyed by foreign companies and to assume a larger share of authority over production and prices.

---

OPEC

Within OPEC the Arab states of the Middle East were the most assertive. The oil issue turned intensely political during the Arab-Israeli war of October 1973 when the Arab oil-producing states embargoed the shipment of oil to states accused of supporting Israel. The OPEC cartel cut back production and quadrupled oil prices. Apprehension spread in western Europe and Japan, and in the United States, which needed foreign oil to supplement its domestic resources. Never had an essential commodity risen in price so rapidly; the entire global industrial complex seemed vulnerable. The oil shortage and the price escalation, coming on the heels of the international monetary difficulties and devaluations of the dollar in 1971–1973, sharply increased the balance of payment deficits for all oil-importing countries, undermined currencies, accelerated an inflationary spiral already underway, and seriously interrupted the spectacular growth of the West European economies.

---

Dependence on oil

The immediate panic caused by the oil embargo passed, but prices remained at a much higher level. Later in the decade, in 1979, a second oil crisis occurred when Iran, in the midst of its revolution, halted oil exports and the OPEC cartel again doubled prices. In the 1980s the Iran-Iraq War once more reduced global oil supplies and threatened the free movement of tankers through the Persian Gulf, prompting the United States and other Western countries to take naval action. Eventually, however, the oil cartel proved less cohesive and intimidating than originally feared. Additional energy resources became available. After the discovery of oil

in the North Sea, Britain and Norway became exporters of oil. The Netherlands and other countries turned to natural gas; France, to nuclear energy. Many countries initiated energy conservation measures. When prices declined in the 1980s as a result of falling demand, oil-producing countries like Nigeria and Mexico found themselves deeply in debt because they had geared their economies and government expenditures to the sale of high-priced oil. The decline in oil revenues led to restlessness in the Arab states, and later events in the Middle East showed the critical role that oil and oil prices continued to play in international affairs.

### *The Recession: Stagnation and Inflation*

The recession that began in 1974 was severe, although it never approximated the depths of the Great Depression. What set it apart from previous economic declines was the accompanying inflation, which raced on in major industrial countries at double-digit annual figures.

In some European countries the annual rate of inflation rose to over 20 percent; it reached 27 percent in Britain in 1975. In the United States prices doubled over the course of the decade. For a time economic growth ground to a standstill in western Europe. By the late 1970s the recession was worldwide. Bankruptcies shook several countries; production declined; economic growth slowed or even halted. Over 10 percent of the American and West European labor force were unemployed. From a low point of 3.4 percent in 1969 unemployment in the United States rose to 10.8 percent in 1982. American factories operated at two-thirds their capacity. Unemployment once more became the bane of industrial capitalism.

---

---

*The bane of industrial capitalism*

The economic troubles were somewhat cushioned for the unemployed in industrial countries. Labor unions were still active, although declining in membership and influence, and welfare benefits were more advanced than they had been in the 1930s. Workers in Essen, Turin, Liverpool, or Detroit could count on severance pay, trade union benefits, and government unemployment compensation far beyond the welfare payments and dole of earlier generations. These benefits reduced human suffering and also limited the decline in consumer purchasing power. The recession, however, aggravated the problem of "structural unemployment." Because of automation, high technology, and the dwindling importance of older, less-efficient sectors (such as coal mining, shipbuilding, and other so-called smokestack industries), many workers would never return to their old jobs or use their old skills again.

---

---

*Structural unemployment*

The combination of stagnation and inflation (dubbed "stagflation" by journalists) created unprecedented problems for governments. Keynesian theory, which had gained a wide following after 1945, called for government spending and deficit financing in slow times to buoy demand and keep employment stable. With inflation rampant, such measures became questionable. The dilemma centered on whether curbing inflation or reducing unemployment should claim the highest priority. Efforts to fight inflation by tight money and high interest rates would discourage investment, aggravate the business slowdown, and swell the ranks of the unemployed. Government spending to prime the pump or reducing interest rates to facilitate private borrowing could feed inflation.

---

---

*Stagflation*

With the American economy troubled, the Western industrial countries looked to the Federal Republic of Germany and its powerful economy and trade surpluses to take the

lead in expanding investment and production. Germany, however, mindful of the hyperinflation of the 1920s, set its highest priority on controlling inflation; it kept interest rates high and rejected expansionist policies. Other countries followed the same track. By the early 1980s inflation was brought under control in the United States and in western Europe, but in Europe unemployment continued at levels unheard of in the early postwar decades. The high unemployment put new pressures on government budgets, which had risen steadily in all the “welfare state” societies of the industrial world.

From 1950 to the mid-1970s the percentage of gross national product spent on social measures in the industrial countries had more than doubled, creating a pattern of rising taxes and government expenditures that came to be criticized as an obstacle to economic growth.

---

*Faith in Keynes  
shaken*

The established tenets of Keynesian economics were now challenged as never before. The British Conservative party leader Margaret Thatcher, who became prime minister in 1979, led the campaign against the welfare state and was soon joined by Ronald Reagan, the American Republican president from 1981 to 1989. Both leaders attacked the welfare state as costly, wasteful, paternalistic, and bureaucratic and blamed it for eroding individual initiative and responsibility. Nationalized industries, where they existed, also came under criticism.

Although conservative governments continued heavy expenditures for national defense, they curbed government spending on social measures. Meanwhile to stimulate production they offered numerous incentives to private enterprise, including tax reductions, deregulation, and restraints on unions that interfered with technological innovation. “Supply side” economics, as these ideas were labeled, emphasized increased production rather than the hitherto prevailing notion of increased consumer demand as most important for economic growth. The results were then expected to “trickle down” for everyone’s benefit, with a safety net in place for the truly disadvantaged.

---

*Supply side  
economics*

The gradual return of prosperity, especially in the United States from about 1982 on, reinforced faith in the free-market economy, despite uneasiness about the continuing vicissitudes of the business cycle. Conservative economic theories and policies appeared to be confirmed by a worldwide movement toward market economies and away from centralized planning, which in its rigidly Marxist form had manifestly failed in the Soviet Union and eastern Europe. Defenders of the welfare state, however, continued to stress the importance of supplementing market economies with direct action by governments to meet individual and social needs. The welfare, or interventionist, state still served important social needs and seemed destined to survive, even if in modified form. A new generation of liberal, labor, and socialist leaders came to preach the virtues of a “new middle way” that leaned heavily on market economies as the key to economic growth but without surrendering the prerogatives of government in confronting the social and economic problems of modern societies.

### *Economic and Political Change in Western Europe*

Britain was especially hard hit by the recession of the 1970s. Of all the industrial nations, it suffered the highest rate of inflation. Unemployment climbed, and the pound dropped to a new low in global financial markets. The trade unions refused to accept the sacrifices that even their own Labour party believed necessary to revive the economy, and disruptive strikes in coal and transportation exasperated much of the country. Radical factions in the

Conservatives sought to dismantle or reduce the social programs of the modern welfare state after they won control of the national governments in Great Britain and the United States during the 1980s. Prime Minister Margaret Thatcher and President Ronald Reagan, shown here at a meeting of Western government leaders in 1984, became close political allies and friends in these years. They both promoted conservative policies by reducing the government's participation in domestic economic life, though they increased national spending for military forces and believed that their governments should play a strong, activist role in international affairs.

(Getty Images)

Labour party pressed for increased nationalization of industry and for nonalignment in the Cold War. Alienated by the economic confusion and collapse of moral authority, which they blamed on Labour governments that had been in power since 1974, the voters in 1979 turned to the Conservatives.

---

*Margaret Thatcher*

Margaret Thatcher, the first woman prime minister in any major Western country, headed a Conservative government resolved to change matters. She immediately and decisively cut government expenditures, reduced imports, and resisted trade union wage demands. The focus shifted to investment, productivity, and economic growth. Inflation was curbed, but unemployment rose. The Thatcher government in its early years seemed headed for political trouble, but in 1982 Thatcher stirred old patriotic and imperial memories by dispatching a small armada 8,000 miles to the coast of South America, thwarting the attempted takeover of the Falkland (or Malvinas) Islands by Argentina. The Conservatives won a sweeping parliamentary majority the following year.

For a time in the 1980s the Thatcher policies were successful. The government curtailed the power of the unions, returned over one-third of the nationalized industries to private enterprise, and made credit more readily available for business and for home buyers. Britain could soon point to the highest economic growth rate of all the European countries, rising productivity, low inflation, a stronger pound, a higher standard of living for most people, widened home ownership, and buoyant self-confidence. Unemployment, however, remained high; fiscal retrenchment hurt education, especially the universities; and pockets of deep depression persisted, especially in the north of England and in Scotland and Wales where traditional industries such as coal mining and shipbuilding faced difficulties competing in the new global economy. The south and southeast enjoyed a bustling prosperity, especially in the high-technology industries around London and Cambridge. Meanwhile London reinforced its position as a world financial center, and the United Kingdom became once again a leading creditor nation. Decades of economic decline and demoralization seemed to have been reversed. The opposition was disunited and in disarray. In the elections of 1987, Labour's popular vote dropped to its lowest point in decades, and union membership declined.

But when economic growth slowed after the stimulus of privatization and deregulation wore off, Thatcher introduced a number of fiscal measures that led to her fall in 1990. Her successor as prime minister, John Major, had to cope with a new recession that set in after 1990, a weakened pound, and unemployment. Labour, meanwhile, under new leadership that abandoned older ideas of class struggle and attracted a broad range of middle-class support, continued to challenge the Conservatives, arguing that the Thatcher era had favored the rich and fostered a less equitable society. Finally, under the moderate "New Labour" leadership of Tony Blair, the Labour party won the parliamentary elections in 1997 and regained control of the government for the first time since 1979. Blair and the increasingly moderate Labour

---

*New Labour*

party would remain in power on into the opening decade of the twenty-first century, winning a third consecutive electoral victory in 2005.

In France, politics in the 1980s veered toward the Left. An austerity program adopted in the 1970s by the conservative parties to combat inflation was unpopular, and the government's aloofness, elitism, and seeming unconcern with social issues under de Gaulle's successors helped the Socialist-led opposition grow in strength. In 1981 François Mitterrand achieved the goal he had set for himself and the Socialist party. He himself had had a varied career, some aspects of which were unknown until the last years of his life, includ-

ing his association with right-wing causes in the early 1930s and his wartime service to the Vichy government before joining the Resistance movement. He was known as a moderate Socialist, whose socialism owed more to liberal idealism than to Marxism. A consummate politician, he revitalized the Socialist party and reached out to many who chafed at the social insensitivities of the Gaullists and Conservatives. "Changer la vie"—change life for everyone—was his campaign slogan. Not only did he win the presidency, but his Socialist party triumphantly gained an absolute majority in the National Assembly.

---

Mitterrand and  
"Changer la vie"

Labor reforms were immediately introduced. The workweek was reduced from 40 to 39 hours and a fifth week of annual paid vacation was added. Following up on the nationalizations of 1945, Mitterrand nationalized the remaining large banks as well as several leading industrial corporations. One of the few European leaders still faithful to Keynesian precepts in the 1980s, he expected government pump priming and labor reforms to raise purchasing power, stimulate the economy, and thus absorb the costs of the expanded welfare state. But increased labor costs reduced French competitiveness abroad, and private investment also dried up. The immediate consequences were slow economic growth, trade deficits, inflation, unemployment, and a weakening franc. Within two years Mitterrand abruptly changed course. He halted further nationalization and other reforms, insisted on retrenchment and austerity to cope with inflation, and placed a strong emphasis on modernization. Cutting off subsidies to decaying industries, he shifted government support to high technology. The new policies encouraged economic growth but contributed little to reducing unemployment. His Socialist followers were disenchanted and frustrated. Others in the country, however, were relieved to see him concentrate on strengthening the nation's economy rather than on sectarian politics.

Renewed economic problems, however, cost the Socialist party popular support. It lost its parliamentary majority in 1986 and Mitterrand was forced to govern with a Conservative prime minister. The term "cohabitation" entered the political language to signify a popularly elected president of one party governing with a prime minister who represented the opposing parliamentary majority. It was a precedent that de Gaulle never foresaw. But as an established practice that was repeated over the years to come, it became a legacy of Mitterrand that demonstrated the resiliency of the Fifth Republic. In the Gaullist tradition, however, the president continued to determine defense and foreign policy.

---

"Cohabitation"

When in 1988 Mitterrand was reelected president, the Socialists regained a small plurality in the National Assembly. But unemployment, scandals involving Socialist ministers, and inroads by environmental and other groups led to a socialist rout in 1993 and the return of a large conservative majority. Cohabitation resumed under the conservative Gaullist Prime Minister Jacques Chirac, who was then elected to the presidency in the elections of 1995 and 2002, and the seesaw pattern of French politics continued in his administration. While the French economy strengthened impressively in the 1990s, unemployment remained a persistent problem, especially for young people. One measure, adopted by the Socialist prime minister, Lionel Jospin, reduced the workweek from 39 to 35 hours to create new jobs, but met with strong opposition from most employers. During these years women played a much larger role in French government and public institutions than ever before, occupying key ministries and high-level posts in business and professional life. A new law, to be implemented in stages, provided that women were to be candidates in elections for representative bodies in equal numbers with men. A few women writers and scholars were even admitted to the French Academy, a male bastion since 1635.

French workers, like workers in all the major industrial countries of Europe, were increasingly drawn from the immigrant communities that grew rapidly during the later decades of the twentieth century. These workers, who were protesting working conditions at a French automobile factory in 1982, represent some of the diverse ethnic and cultural origins of the contemporary French workforce.

---

*West European  
Socialists*

Socialists and Social Democrats holding office in western Europe in these years championed modernization, market economies, and economic growth as the path to the good society; and their policies won broad support. Moderation and pragmatism succeeded in overshadowing if not entirely replacing older ideologies. Helmut Schmidt, the Social Democratic chancellor in West Germany from 1974 to 1982, was one leading exemplar. In Italy, Bettino Craxi and a Socialist coalition in 1983 ended the long tenure of the Christian Democrats, who had formed 40 consecutive cabinets since 1945. The Italian Socialists governed for an unprecedented four years but were barely distinguishable in policies and practices from the long-entrenched Christian Democratic establishment. In Spain the popular Socialist party leader, Felipe Gonzalez, in 1982 headed the first Left government since the Spanish Civil War of the 1930s and governed on into the mid-1990s. In Portugal, after the revolutionary turbulence of 1974, a Socialist and a Social Democratic party competed with each other on moderate platforms.

In West Germany Helmut Schmidt's Social Democratic government moved to control inflation through policies of retrenchment and fiscal conservatism; but the industrial slowdown of the late 1970s brought unemployment to a country which for years had known only labor scarcity. Even after recovery, unemployment persisted at about eight percent. The doors once open to guest workers began to close; bonuses were offered to those who would

return home; activist reactionary groups (as in Britain, France, and Austria) alarmingly exploited antiimmigrant and antiforeign sentiment. In 1982 the Christian Democrats were returned to office with Helmut Kohl as chancellor, who would remain in office for the next 16 years. Economic growth resumed, although at more modest rates, and the mark maintained itself as one of the world's strongest currencies. The German Federal Republic remained the most productive nation in western Europe, accounting for a third of the combined output of the European Community. But heavy labor costs, resulting from high wages and generous social benefits, burdened the economy and reduced its competitiveness in world markets. Meanwhile the prospects in the 1980s for reunification of the two Germanys still seemed remote—Germany would apparently remain “one nation and two states,” in Willy Brandt’s phrase.

*“One nation and two states”*

### *The American Economy*

The United States recovered from the post-1974 recession sooner and more completely than the Europeans. The American economy suffered business slowdowns and serious inflation from 1974 to 1982; but once inflation was brought under control, the economy began to grow in the 1980s. Deregulation of industry, encouraged under the Reagan and George H. W. Bush presidencies, and corporate streamlining or restructuring (often called downsizing) produced greater profits and stimulated economic growth, as did the beginnings of the computer revolution. Continuing interventions by the Federal Reserve Board, which raised or lowered interest rates, helped to protect against inflation. The stock market began to rise, as did real estate values. In the 1980s unemployment dropped below 6 percent, and the labor force grew at a time when unemployment was still a persistent problem in Europe, though many of the newly employed in the United States were entering lower-paying service industries. There were setbacks, including a dramatic but temporary fall in stock prices in 1987 and a failure of savings and loans banks, which had overextended their credit. A more general economic slowdown again set in after 1989, and unemployment rose to 7.8 percent. Campaigning on the poor performance of the economy, the Democratic candidate Bill Clinton was able to defeat President Bush in the election of 1992. At the time few recognized that by the spring of 1991 the economy was already embarking on an extraordinary expansion that would continue throughout the decade and into the opening of the new century.

There were still many areas of economic concern in the 1980s. The trading strength of the United States accentuated some of its economic problems. The oil crisis of the 1970s had ultimately reinforced the dollar (oil profits were invested in dollars), and the dollar’s value rose steadily in the early 1980s, raising the cost of American goods in global markets. American exports also faced strong competition from western Europe and Japan, and from the newly industrialized small states in Asia, where labor costs were low and newer highly mechanized plants provided a competitive edge. The strong dollar made it difficult for the United States to sell its products and aggravated its already heavy trade deficit. The United States therefore sought to bring down the high value of the dollar by 1985. Over the next three years the dollar lost almost 50 percent of its value in relation to foreign currencies, declining to its lowest level since 1945 and creating a new challenge for the American economy. Japanese, West Europeans, Canadians, Arabs, and others seized the opportunity to buy into American corporations, banks, brokerage houses, and real estate. By the late 1980s foreign holdings of American assets totaled \$1 trillion.

---

*Economic concerns*

Meanwhile the Japanese economy reached such giant dimensions that corporations like the Fujita Bank and the Toyota Corporation were valued at five to ten times the market

value of the largest American companies. The Nomura Securities Corporation of Tokyo became at the time the largest brokerage firm in the world. Not one of the world's ten largest banks in the 1980s was American. From 1985 on, for the first time since 1914, the United States was a debtor nation. Foreign interests owned more assets in the United States than Americans owned abroad, which meant a steady outflow of interest, dividends, and rents. Even when American exports expanded, imports continued to grow and the trade balance remained unfavorable. The annual budget deficit mounted and the national debt soared from less than \$1 trillion in 1981 to well over \$4 trillion by 1990. Foreign capital financed the American debt and profited from the interest on American bonds.

Concern mounted, even as the American economy was recovering, over the weakness in exports, the balance-of-payments deficits, the burden of defense expenditures, the growing national debt, the large annual budget deficits, and the foreign acquisition of American assets. Analysts pointed to inadequate American savings and investment, a relative slowdown in productivity gains since the 1960s, a lag in industrial research and development, and shortcomings in American education for an increasingly competitive world. The American economy was still the largest in the world; in the early 1990s its gross domestic product exceeded \$5 tril-

---

*Relative decline in growth*

lion, far ahead of Japan and Germany. But it had shown a relative decline in growth in relation to the other major industrial nations. Deep pockets of poverty and racial tensions persisted within the country. It was debated at the time whether the United States, still the premier political, economic, and military power, might lose its primacy because of economic weaknesses—as Spain, the Netherlands, France, and Britain had in earlier centuries.

The prospects that opened up in the late 1980s of winding down the Cold War and of a measure of relief from the burden of arms expenditures brought some reassurances. Meanwhile, the Japanese economy, which had become increasingly based on an overinflated stock market and real estate values, entered in 1989 on a long period of difficulties that persisted throughout and beyond the following decade. Before long, American productivity, economic growth, technological innovation, and international competitiveness in the 1990s made most of the earlier jeremiads seem hollow or short-sighted.

### *The Financial World*

The world's largest stock exchanges and financial markets were centered in New York City. Deregulation in the 1980s brought with it a sharp increase in financial acquisitions and mergers. New forms of trading in options and futures and widening participation by small investors contributed to the stock market's growth and volatility. Once again, as in the 1920s, the lines between speculation and investment became blurred. In October 1987,

---

*Speculation and investment*

a tremor ran through the United States and world markets when stocks on the New York Stock Exchange in one day lost close to one-fourth their value, conjuring up memories of the October 1929 crash and the ensuing Great Depression. But the market recovered, and in the following decade it went on to reach new heights—and to experience also new periods of extreme volatility. The 1987 episode clearly demonstrated the interdependence of the world's financial markets. Reverberations of the 1987 shock in New York were felt instantly in London, Frankfurt, Tokyo, Hong Kong, Singapore, Taipei, Sydney, and elsewhere. The financial markets, like the currency markets, were decentralized but were more interwoven than ever before. With new systems of telecommunications and other advanced computer technology, a single financial market operated around the world and around the clock.

The sense of mutual interdependence in the global economy came to be widely shared. The United States, western Europe, and Japan recognized that the prosperity of each depended on the smooth functioning of the world economy. The heads of state of the seven largest industrial powers with market economies (the "Group of Seven"—the United States, Britain, France, the Federal Republic of Germany, Italy, Canada, and Japan) met from the 1970s on in annual economic summits to consult on the state of the economy. The leading central banks made efforts to stabilize interest and exchange rates. The Organization for Economic Cooperation and Development (OECD) brought together the 24 leading industrial nations of the world, and GATT continued its "rounds" of negotiations to reduce tariffs. The integration of the Soviet Union and eastern Europe into the global economy, initiated in the 1970s in the first period of détente, and the rapid political changes taking place there after the late 1980s provided further opportunities for international cooperation. The developing nations, however, remained somewhat on the economic periphery, their heavy debt and slow economic growth intensifying their dependence on the industrial world. They remained critical of a globalization that seemed to ignore or pay inadequate attention to their needs.

*Mutual  
interdependence*

### *The Enlarged European Community: Problems and Opportunities*

After de Gaulle passed from the political scene in 1969, the way had opened for enlarging the six-nation European Community (EC). In 1973 Britain, Denmark, and Ireland were admitted; the 6 became 9. In the next decade, with the admission of Greece in 1981 and Spain and Portugal in 1986, the 9 became 12. In 1995, with the admission of Austria, Finland, and Sweden, the numbers grew to 15. The largest expansion made possible by momentous changes in Eastern Europe after 1989 and by the collapse of Soviet communism, would take place at the beginning of the twenty-first century, in 2004, when ten more nations from eastern and southern Europe (from Estonia to Malta) joined what had come to be known as the European Union.<sup>1</sup>

Enlargement brought new difficulties, aggravated by the economic slowdown of the 1970s and then by the wage differentials between richer and poorer countries. A food importer, Britain objected to the "common agricultural policy" agreed upon in 1968, whereby countries such as France and Italy received large subsidies for their farmers, whose products were withheld from the open market and stored at great expense to keep prices artificially high. The admission of the less industrially advanced southern Mediterranean states in the 1980s (and of eastern nations in the early twenty-first century) introduced serious regional differences. Despite the original promise and accomplishments of the Community as a whole, the free trading area remained far from complete. Countries still placed quotas on agricultural imports; France kept out Italian wines. Burdensome administrative regulations at the borders persisted.

---

---

*Growing pains*

Except for a limited circle of Europeanists, the enthusiasm for close political integration seemed to have dimmed. With enlargement and greater diversity, the Community became even more intergovernmental and less supranational. Britain was always reluctant

<sup>1</sup>By 2005 the European Union member states were Austria, Belgium, Cyprus, Czech Republic, Denmark, Estonia, Finland, France, Germany, Greece, Hungary, Ireland, Italy, Latvia, Lithuania, Luxembourg, Malta, Netherlands, Poland, Portugal, Slovakia, Slovenia, Spain, Sweden, and the United Kingdom. There was also a growing debate over the question of whether Turkey should become the next member of the EU.

Japan's financial markets developed into an important component of the international economy, attracting investments from all parts of the world. These traders at the Tokyo Stock Exchange in the early 1990s use advanced technologies to manage the sale of stocks and to keep track of the information that flows constantly through such markets and the international economic networks that they support.

(Sipa Press)

to support additional supranational authority for the Community. In periods of economic slowdown and monetary instability the national governments themselves had to cope with the problems. In 1973 the heads of government leaders began meeting as a council on a regular basis, the presidency rotating among the member states. The first elections to the European Parliament in 1979 were more symbolic than substantial, and the Parliament's role as a legislature failed to grow significantly. While the more ambitious dream of a United States of Europe went unrealized, the Community, for all its problems, remained an important institution, poised for further growth.

### *Toward a "Single Europe": the European Union*

Even during the prosperous 1960s, the European economy did not maintain its growth in all areas. But in the 1970s the world itself was entering a new phase of industrialism, a "third industrial revolution," marked by the introduction of automation, computers, and other forms of advanced technology. Progress would no longer be measured in coal and steel or in ships and textiles but in nuclear reactors, microelectronics, telecommunications, computers, robotics, and space technology. In the "postindustrial" age data processing, information storage and retrieval, and more and more sophisticated communications capabilities were the keys to competitive success. In 1977 the first personal computer was produced for what would become a mass market, with rapid improvements to follow in speed and capacity. More workers

were employed in the service sector than in the older basic industries, and the service economy was growing faster than either agriculture or industry. It was widely noted that the global economy was eroding the economic and political autonomy of the nation-state. Using new technologies, the multinational corporations of the industrial world invested capital and set up shop across the globe, independent of all national boundaries.

In the new forms of technology, the Europeans found themselves for a time outdistanced by the Americans and the Japanese. American multinational corporations controlled most of the high-technology industries in Europe—before the Japanese arrived to compete. Trade competition from Japan and the rapidly developing industrial countries of the Pacific Rim grew. The post-1974 recession made it difficult for the Europeans to promote research and development. Western Europe lagged behind other parts of the world in recovering economically after 1974 or in coping with unemployment.

The European Community set about to reinvigorate itself in the 1980s. Although internal tariffs had disappeared, nontariff obstacles still impeded the flow of trade. Nationally dictated, and therefore varying, standards of production and quality prevailed. In 1987, by the “Single European Act” the 12 member-nations agreed to establish common production standards, remove impediments to the flow of capital, seek uniform tax rates, recognize each other’s professional and commercial licensing, and honor a common charter of labor rights. They would create an integrated “single Europe,” a “Europe without borders.” A unified European currency and central banking system were projected for the end of the 1990s, and even a common defense and foreign policy were envisaged for the future. These arrangements were confirmed in a Treaty of European Union signed at Maastricht in the Netherlands at the close of 1991, and ratified after protracted debate by the parliaments or electorates of the member states by the end of 1992. Opponents in several countries raised objections to the loss of national control in so many areas, but the treaty was adopted. The European Community became the European Union (EU). The way was open to closer integration.

---

*The Single European Act*

The European Union represented a domestic market of 345 million people (one-third larger than that of the United States) and by the early 1990s was the largest trading bloc in the global economy, accounting for 40 percent of all international trade. With the new steps toward integration and the later expansion of EU membership, Europeans hoped to enlarge investment, develop high technology, stimulate productivity, end the lagging rate of economic growth, and reduce an unemployment rate that was still distressingly high. For the world as a whole, a return to protectionism was always a lurking danger. Advocates of tariffs on imported goods could be found in most industrial nations, and the industrial nations might divide into large regional trading blocs. New competitive barriers could interfere with the free trade that had contributed so much to post-1945 prosperity.

---

*Dangers of protectionism*

## 123. THE COLD WAR REKINDLED

We must go back in time to pick up the flow of international affairs. In the summer of 1974 President Nixon resigned his office to avoid impeachment over his role in the Watergate scandal. His vice president, Gerald Ford, succeeded him. But in the next election the Democratic candidate Jimmy Carter won and took office in 1977. President Carter sought to infuse American foreign policy with moral idealism. Human rights, he declared, must be “the soul of our foreign policy.” Détente with the Soviet Union was now more closely linked than before to respect for human

---

*Human rights*

rights; economic aid would be forthcoming only if the Soviets permitted freedom to dissenters, the right of emigration for Soviet Jews and others, and an end to the coercion of Poland. The Soviets did not take kindly to these public pressures. Both sides meanwhile reinforced their military and nuclear strength.

On the other hand both countries continued strategic arms talks and after tortuous negotiations signed a second strategic arms treaty in January 1979. They agreed to parity in strategic, or long-range, nuclear missiles. Although the number of powerful missiles remained high and nothing prevented the development of new sophisticated weapons, the agreement might have been an important breakthrough in arms control. But before it could

be ratified by the Senate, the Soviet Union moved troops into the neighboring state of Afghanistan to bolster a weak pro-Soviet leftist regime. It was the first Soviet military intervention of that kind outside eastern Europe.

---

Soviet invasion of  
Afghanistan

Carter denounced the invasion as a new phase of expansion by the Soviets threatening the entire Middle East—"a stepping stone in their possible control over much of the world's oil supplies." He warned that an attempt by any outside force to gain control of that region would be regarded as "an assault on the vital interests of the United States" and would be repulsed "by any means necessary, including military force." He withdrew the arms treaty from the Senate, embargoed sales of grain and high technology to the Soviets, took measures to increase the military budget, and set up procedures at home for a renewal of the draft.

The invasion of Afghanistan, Carter informed the U.S.S.R., was the most serious threat to world peace since 1945. The European allies were not as convinced. Some argued that the Afghanistan episode was a regional matter, that the Soviet Union was acting to prevent instability on its borders, and that détente should continue. Unwilling to disturb commercial relations with the Soviets and eastern Europe, they refused to support the economic embargo which, among other consequences, would have interfered with the completion of a Soviet natural gas pipeline to western Europe. As it developed, Afghanistan turned out to be the U.S.S.R.'s Vietnam. Some 100,000 troops fought for over 8½ years before withdrawing ignominiously in 1989. Like the Americans in Vietnam, the Soviets were unable to use their overwhelming military power to defeat the Muslim guerrillas who, armed with American weapons and supported by Pakistan, fought stubbornly from their Afghan mountain strongholds.

At the very time of the Soviet intervention in Afghanistan, the United States had become preoccupied with the Iran hostage crisis, the seizing of American hostages by Iranian revolutionary militants in Tehran. It was a heavy blow to American prestige, compounded by the failure of an ill-fated rescue attempt. To add to Carter's humiliation, the American hostages were freed on the day that his Republican successor, Ronald Reagan, took office in January 1981.

Hostages in Iran

### *The Reagan Years: From Revived Cold War to New Détente*

There was no doubt of the new president's commitment to a hard line in the Cold War. The Soviet Union, Reagan asserted in 1983, represented "the focus of evil in the modern world." It was "an evil empire" with "dark purposes." Despite the strain on its economy, the Soviet Union during the 1970s had built up its military strength, modernized its conventional fighting forces, created a powerful navy, and achieved nuclear parity. With congressional support Reagan substantially increased defense appropriations, sponsored the largest peacetime military spending in the nation's history, and took a confrontational stand against communism

Reagan and the "evil  
empire"

---

## CHRONOLOGY OF NOTABLE EVENTS, 1957–1995

---

1957	Soviet Union launches first satellite into outer space
1961	Soviet Union constructs the Berlin wall to stop exodus from East Germany
1962	United States compels the withdrawal of Soviet missiles from Cuba
1965	United States begins more intensive military buildup and large-scale bombing in Vietnam
1968	Soviet troops enter Czechoslovakia to crush reform movement in Prague
1972	United States withdraws its last troops from Vietnam
1974	High oil prices and inflation contribute to global economic recession
1975	Communist forces in Vietnam take control of the country; Saigon becomes Ho Chi Minh City
1978	Deng Xiaoping, successor to Mao, launches sweeping economic reforms in China
1979	Margaret Thatcher becomes prime minister in England
1979	Soviet Union invades Afghanistan to protect left-wing regime
1980	Ronald Reagan is elected president of the United States
1981	François Mitterrand is elected president of France
1982	Helmut Kohl becomes chancellor of West Germany
1989	Democracy movement is suppressed in China
1992	Treaty of Maastricht establishes the European Union
1995	European Union membership expands to include 15 nations; in 2004 it expands to 25 nations

---

everywhere. He stepped up arms shipments to the Muslim guerrillas in Afghanistan and sent aid to Pakistan, which was backing the Afghan rebels. Against the Communist government in Poland he applied economic sanctions when, under pressure from the Soviets, it imposed martial law in 1981 to suppress the Solidarity trade union movement. He reinforced the embargo on the sale of high technology to the Soviets and to eastern Europe, but the embargo on grain sales was dropped because of opposition from American farmers.

In Central America and the Caribbean, Reagan accused the Soviets of using Castro's Cuba and the leftist Sandinista regime in Nicaragua as proxies to spread communism in the Western Hemisphere. The United States armed anti-Communist opponents of the regime in Nicaragua and reinforced dictatorial anti-Communist regimes in neighboring states and other parts of Latin America. In 1983 American forces invaded the small Caribbean island of Grenada to overthrow a leftist government that was permitting the Cubans to build an airport of potential military use.

Even more than his predecessors, Reagan and his foreign policy advisers supported repressive authoritarian regimes so long as they were anti-Communist, on the theory that one day such regimes might be liberalized; Communist governments, they believed, transformed their societies irreversibly. Critics, on the other hand, argued that revolutionary movements in Latin America and elsewhere sprang not from the Cold War but from protests against systems of privilege and exploitation; they opposed military solutions and support to repressive regimes as inappropriate responses.

---

*Military actions,*

In Libya, the administration demonstrated the American willingness to take unilateral military action. American planes bombed military installations in retaliation for what it was convinced were Libyan-sponsored terrorist activities. In Lebanon, in the throes of civil war, the United States organized a multinational peacekeeping force in 1982. The American fleet landed marines, and Islamist terrorists retaliated by blowing up the American embassy and the American and French command centers, killing hundreds of American marines and French soldiers. The peacekeeping force withdrew.

---

*Asserting American leadership*

In the war between Iran and Iraq that broke out in 1980, when attacks on tankers in the Persian Gulf threatened the flow of oil from the Arab Gulf states, the United States escorted a selected number of tankers under the protection of the American flag. The United States was intent on asserting American leadership in world affairs and on keeping the Soviets, insofar as possible, out of the Middle East.

---

*Nuclear Arms Control*

---

*The ultimate threat*

No nuclear weapons were used in any conflict in the years after 1945, yet over every crisis hung the ultimate threat of a nuclear clash. We have seen how the earliest negotiations on nuclear disarmament, at a time when the United States alone possessed the atomic bomb, were broken off in 1947; how in 1949 the Soviets successfully tested their first atomic bomb, ending the American monopoly; and how the United States in 1952 and the Soviet Union shortly thereafter developed the hydrogen or thermonuclear bomb, which by its chain reaction had vastly more destructive capacity than the mere 20,000 tons of TNT of the Hiroshima bomb. By the 1960s both superpowers were building strategic long-range missiles, that is, intercontinental ballistic missiles, capable of delivering their nuclear warheads accurately and swiftly to targets in each other's homeland. They could be launched from land (from either stationary or mobile sites), from sea (from ships or submarines), or from bombers in the air. Guided missiles were the key strategic weapons of the modern age. Because of their immense destructive power, the nuclear weapons could not be used without unleashing unspeakable damage; they were different and distinct, it was agreed, from conventional weapons. The arms experts insisted that nuclear arms were built not for use but for deterrence.

Because nuclear testing threatened to poison the earth's atmosphere, and perhaps even damage the genetic endowment of present and future generations, controls were imperative. In 1963, despite Cold War tensions, the United States and the U.S.S.R. initiated a partial test-ban treaty, which banned testing in the atmosphere and permitted only underground testing. Concern over the spread of nuclear weapons prompted the two superpowers to propose a nonproliferation treaty, which was endorsed by the UN General Assembly in 1968 and eventually signed by over 130 states. It lacked binding force, however, and was ignored by those countries bent on developing nuclear power.

The United States had led the way in the development of nuclear weapons, with Britain also participating from the beginning. The Soviet Union had then followed; France in 1960 became a fourth nuclear power. The People's Republic of China in 1964 became a fifth; India in 1974, a sixth. By the early twenty-first century the list of countries that had achieved a nuclear capacity included Israel, Pakistan, and perhaps North Korea; and others such as Iran were suspected of seeking to develop nuclear weapons.

The fear that states that had demonstrated a flagrant disregard for international law or that terrorist organizations might come to possess nuclear materials prompted even greater concerns.

So long as the peaceful use of nuclear energy was encouraged, it was difficult to prevent proliferation. Nations purchasing nuclear power plants from industrial countries, ostensibly for peaceful purposes, could reprocess the plutonium from the spent fuel and build nuclear bombs, as India did. The search for alternative energy sources to replace oil stimulated many nations to build nuclear power plants that could be transformed for nonpeaceful purposes. Accidents at nuclear power plants, the most notorious of which were at Three Mile Island, Pennsylvania, in 1979 and, even more serious, at Chernobyl in Ukraine in 1986, did not deter the building of nuclear power plants but underscored the need for safer construction. From Chernobyl radioactive materials in the atmosphere traveled as far as western Europe.

---

Concerns about  
nuclear proliferation

From the 1960s on debate continued in the United States about the missile gap, about the comparative numbers of the American and Soviet missile systems deployed on land and sea and in the air, and about the vulnerability of the American land-based missile systems. Following the Soviet missile buildup after the Cuban crisis of 1962, the two superpowers had achieved a rough parity by the 1970s. Although both recognized superiority as an elusive goal, nothing restrained them from adding more and more strategic arms. Strategists on each side supported the buildup. Using advanced computer programs, they calculated the potential casualties in a nuclear exchange between the superpowers in millions of deaths (or “megadeaths”) and evaluated the effects of deterrents and counterdeterrents and of “first strikes” and “counterstrikes” on each nation’s ability to wage and survive nuclear war. The balance of power was spoken of as a “balance of terror”; experts referred to “mutually assured destruction” (the acronym for which, ironically, was MAD). Deterrence was the accepted formula.

---

MAD: mutually  
assured destruction

Each side amassed huge stockpiles of arms, capable of destroying each other many times over, in what was described as “overkill.” The two superpowers were also under continuing pressure to modernize their systems competitively—at exorbitant cost. When the Soviets developed defense systems, that is, antiballistic missiles, which undermined deterrence, the American response was to build its own defense systems and more powerful offensive weapons—such as the MIRV (a “multiple independently targeted reentry vehicle”), a delivery system carrying up to ten nuclear warheads, each independently guided to separate targets, each warhead many times more powerful than the Hiroshima bomb. The Russians developed their own multiwarhead systems—all leading to an even higher level of armaments and greater uncertainty. Both sides had satellite reconnaissance systems, but for a time neither could determine the number of warheads on the other side and hence know with accuracy the other’s capability. After the first SALT (or strategic arms limitation) treaty, signed in 1972, each side developed new weapons outside the classes that were limited. The United States developed cruise missiles, designed to fly low to the ground and hence protected from defense systems; the Soviets, supersonic bombers. A second arms treaty, signed in 1979 but not ratified until later, produced tentative agreement on equality in the total number of strategic long-range weapons, but protracted discussions continued.

---

Overkill

At the close of the 1980s each superpower possessed about 25,000 nuclear weapons, of which about 12,000 on each side were strategic, that is, long-range, or intercontinental. Together the two arsenals exceeded 500,000 megatons (millions of tons) of explosive

The rapid development of intercontinental missile systems in the 1960s led finally to a “balance of terror” or system of deterrence called “mutually assured destruction.” According to this theory, all nations would be deterred from launching nuclear assaults because they could expect a retaliatory attack that would destroy their own cities and people. This is the prototype of a Titan Intercontinental Ballistic Missile (ICBM), which the United States began to store in underground silos during the Cold War arms race. Since the 1960s missiles with nuclear weapons have been kept ready for immediate launching as part of the strategic deterrence plan.

(Getty Images)

power, dwarfing the total explosive power used in all previous wars. If only a small number of these nuclear arms reached their targets, the two countries could destroy each other's major cities and countryside and kill millions in the attack and in the radioactive after-effects, which would spread to neighboring areas. In the “nuclear winter” that might follow, human survival itself was at risk. There was always the dread possibility of accident, miscalculation, or failure of communication. So deliberately suspended over the human race was the nuclear sword of Damocles that a direct communication link, or “hot line,” was installed between the Kremlin and the White House in 1963, soon after the Cuban missile crisis; and in the following decades it was modernized and improved. It was designed to prevent the accidental outbreak of a nuclear war because of political misunderstanding, human error, or mechanical slipup; direct communication between the tribal

chieftains was necessary in the nuclear age. No more than a 20-minute warning might be available.

The debate over security in the Cold War went beyond that of the defense strategist. Many pointed to the danger, the paradox, and even the immorality of building vast nuclear arsenals to prevent nuclear war; some (in the West) even urged unilateral disarmament. Others argued that without a high level of armaments a nation could be subject to nuclear blackmail. They maintained that the nuclear balance between the two opposing camps and the principle of deterrence had protected the peace. Everyone, to be sure, affirmed the need to reduce the political tensions and insecurity that fed the arms competition. Yet in the rekindled Cold War tensions of the early 1980s there seemed to be no solution to the impasse. Reluctantly, the world reconciled itself to the existing “balance of terror,” except for piecemeal negotiations on arms limitations. It was only the unanticipated changes in the Soviet Union, its breakup, and the ending of the Cold War that brought unprecedented opportunities for nuclear arms reduction. But the altered situation would raise different dangers, leave proliferation a continuing threat, and still require constant reassessments of global safety.

*Security debates*

## 124. CHINA AFTER MAO

After Mao died in 1976, moderates and radicals competed for leadership. Mao's widow Jiang Qing, one of the firebrands of the Cultural Revolution, together with a small group of Maoist radicals, sought to win control and purge the moderates, but the attempt failed and she and her three associates—the so-called “gang of four”—were arrested and imprisoned. From behind the scenes Deng Xiaoping, the leader of the moderates, emerged by 1977 to become the most powerful figure in the country. Deng was a veteran party leader who had fallen out of favor with Mao in 1956–1957, was purged and humiliated in 1967 during the Cultural Revolution for having taken the “capitalist road,” and purged for a third time in 1976 by the Maoist radicals. To counteract the Maoist cult of personality Deng over the years declined to accept the leading post in either government or party and instead placed his protégés in top positions, but everyone knew who was in command.

### *Deng's Reforms*

By late 1978 Deng won the party over to a sweeping reform program designed to curb the radical and utopian phases of the revolution, deemphasize Marxist ideology and class struggle, and focus on economic growth and modernization. Deng proposed to transform the central economic planning, nationalized industry, and collectivized agriculture inherited from Mao—and indirectly from the Soviet Union. Without abandoning socialism as the eventual goal, he sanctioned numerous capitalist practices; he encouraged private enterprise, production for profit, and a competitive marketplace, at first in limited areas of the country and then more extensively. For state-owned industries he demanded profitability and accountability. The new system would be “a marriage,” he said, “between a planned and a market economy.” Dismantling the collectivized farms and communes, which had proved disastrous for agriculture, he allowed cultivation of the land by individual farmers and their families. He opened the country to foreign investment and welcomed Western

---

*Both a planned and a market economy*

science, technology, and management techniques. Although heavy industry was not neglected, Deng placed a new emphasis on consumer goods; factories that once manufactured military hardware began to produce refrigerators, washing machines, bicycles, and motorcycles.

---

*China transformed*

Deng's reforms transformed Chinese society. Their most striking success was in the countryside, where farmers sold a significant portion of their product on the open market. Within a decade output doubled; more food became available for the cities, and even for export. In other parts of the economy retail outlets, repair shops, and other small businesses were in private hands. Special economic enclaves were established along the southern coast to encourage foreign enterprise and investment, much of it from Hong Kong. Foreign capital flowed in; a stock exchange was introduced. Gross domestic product, which had never risen by more than 2 or 3 percent annually under Mao, grew at an average 9 percent annually in the 1980s and then at even higher rates. By the calculations of some international agencies China's economic output was the third largest in the world. Many of the new entrepreneurs (and some farmers) became wealthy. The big cities took on aspects of a consumer society. Temporary joblessness was tempered by a state network of social services—an "iron rice bowl." The country enjoyed an unprecedented rise in living standards. The People's Liberation Army was reduced in size, but was modernized and made more professional, and the government bureaucracy was trimmed down. State-owned industries still accounted for a major share of production, but the growing private sector, flourishing in the coastal regions, represented the most vigorous part of the economy.

Even if China remained a one-party state, a "people's democratic dictatorship" in one of the official phrases, and individual human rights (especially freedom of religion) were frequently violated, a more open and relaxed cultural and intellectual atmosphere prevailed. People tuned in on radio and television programs from the outside world. Students traveled and studied abroad. Many Western books were translated into Chinese. At no time since the Communist triumph in 1949 were the people so free to absorb ideas from the outside world. Foreign tourists visited in large numbers to see the new China. What earlier patriots and reformers like Sun Yat-sen had dreamed of, and Mao had failed to achieve because of his revolutionary excesses, Deng seemed to be accomplishing. Ideology was edged out by material advance, by the idea of a "rich and strong China."

Deng wished to provide an orderly succession. He therefore dislodged veterans of the older generation (many, like him, survivors of the Long March of 1934–1935) who had clung to older Maoist ways, resisted Western political and economic ideas, and tried to block reform. The old guard retained a network of influence, and the country deferred to Deng as a central authority figure, but younger leaders began to emerge.

---

*Economic difficulties*

As the decade progressed, Deng's reform program, for all its accomplishments, showed serious imperfections. The rapid economic growth fueled inflation (a 20 to 30 percent annual rate in the late 1980s). The emphasis on rising levels of consumption strained resources. Despite its avowals, the government did not liquidate its unprofitable state-owned industries, one-fifth of which operated at a loss. An erratic system of price controls encouraged a black market. Even agricultural production slowed down. The consumer society bred extravagance, conspicuous consumption, and wastefulness. Corruption, endemic in China, became widespread because government and party leaders were closely tied to business enterprises, government and private. Idealistic critics voiced dissatisfaction with the corruption and with growing inequities in a socialist society. In

Economic reforms in the People's Republic of China after Mao's death in 1976 stimulated rapid expansion in the nation's economic output and gave China's low-wage industries a steadily growing role in global trade. These workers at a factory in Shanghai in the early 1980s were assembling components for televisions, which became one of the many products that China exported to consumer markets around the world.

(Richard Melloul/Sygma/Corbis)

response to these cumulative problems Deng in 1988 called for retrenchment and a pause in further reform.

With time and vigilance the economic difficulties in the transitional economy might have been overcome. What interrupted Deng's memorable decade of reform was the refusal to permit political reform and democratization to accompany the economic changes. Deng and others in the party believed that the country, for all its social advances, was unprepared for political democracy, which in their opinion would only breed chaos and confusion, as it had in the Cultural Revolution, and interfere with the order and stability necessary for economic growth and modernization. Further, nothing could be permitted to weaken the stewardship of the party, the heir to the old imperial dynasties, over the country's destiny.

---

*Rejection of  
democracy*

Yet in the freer atmosphere that Deng had encouraged, many of the country's intellectual leaders and younger people destined to be its future leaders pressed for a loosening of the party's political controls, a freer press, and the right to criticize the corruption and other shortcomings of the system. Political liberalization and democratic advances elsewhere in the world in the 1980s reinforced the restlessness in China.

### *The "Democracy Movement"*

When at the end of 1986, Hu Yaobang, general secretary of the party and at the time the 82-year-old Deng's designated successor, encouraged the belief that greater political freedom might be permitted, students took to the streets to show their support. Hu vacillated in suppressing the demonstrations and the party summarily replaced him. Two years later the democratic ferment came to a head. Hu's death in April 1989 set off a series of student

---

#### *Tiananmen Square*

demonstrations in the huge central square in Beijing—Tiananmen Square, or Gate of Heavenly Peace. The demonstrators demanded democratization. Students from other parts of the country arrived to join what came to be called the "democracy movement," and ordinary citizens lent their support.

The demonstrations mounted in intensity. At one point a statue of the Goddess of Liberty (its name and Phrygian cap recalling both the American and French revolutions) appeared. For seven weeks the demonstrators brought the capital and other parts of the country to a standstill. At the height of the ferment as many as a million people were massed in and around Tiananmen Square.

For a time the party seemed likely to accede to some demands. Zhao Ziyang, who had succeeded Hu as party leader, pressed for conciliation. But Deng, who took the side of the hard-liners, would not tolerate a recurrence of anarchy and turmoil as in the Cultural Revolution, nor permit the continuing embarrassment and humiliation of the party, army, and government. The government imposed martial law. Although their numbers had somewhat declined, the students refused to abandon the square. In the predawn hours of June 4, the army moved in with tanks, trucks, and armored cars and opened fire, with hundreds of victims. Perhaps no government could have tolerated such defiance of law and order and loss of prestige; but even modest concessions, patience, or the exhaustion of the demonstrators might have brought the demonstrations to a peaceful end. The army and the Deng regime now had the people's blood on their hands. Deng's enormous popularity plummeted.

---

#### *A "Western-inspired conspiracy"*

In the repressive atmosphere that followed, Deng and the party attributed the "counterrevolutionary" rebellion to a "Western-inspired conspiracy." For his conciliatory stance Zhao was dismissed from his posts. The new party and government leaders, echoing Deng, alleged that counterrevolutionaries "had attempted to install capitalism in China and make it

dependent on certain foreign countries." While the nation still urgently needed Western technology and foreign investment and wished to continue with its "socialist market economy," the party vowed to supervise the private sector closely, reinforce Marxist ideology and political education, and determine the pace and timetable of change. Thousands remained political prisoners, and the government resisted and resented all international pressures for their release.

In the distant past Confucian scholars, trained to enter the emperor's service, accepted the right of the emperor to rule autocratically but reserved the right to criticize harsh or incompetent rule. A ruler governed not by force alone but by moral example, virtue, and rectitude—or risked losing the "mandate of Heaven." The democracy movement brought into question the right of the party to rule in the old way, especially when authoritarianism was itself in decline in other parts of the world. The democracy movement demonstrated

---

#### *Pressures for political change*

how deeply liberal values—"bourgeois liberalism," as it was denounced—had penetrated China and how powerful were the pressures for political change. Continuing economic modernization, even under authoritarian control, could still lead to political liberalization. Fortunes were fickle in China, as Deng's own career demonstrated; moderate leaders might

Enormous crowds gathered in Beijing's Tiananmen Square in the spring of 1989 to demand democratic reforms in the Chinese political system. The "democracy movement" drew students and others from many parts of the country. It also generated new political publications and popular symbols, including this statue of a Goddess of Liberty. The statue evoked memories of earlier political revolutions and became a prominent image of the democracy movement. The Chinese government ultimately suppressed the demonstrations by imposing martial law and dispersing the protestors, many of whom were killed or injured when the army opened fire.

(Peter Turnley/Corbis)

reemerge. After the passing of Deng and his aged contemporaries, a new generation was preparing to come to power.

Deng, a shadow of his former self, died in 1997, or as he had said earlier, he "went to meet Marx." His successor Jiang Zemin in some ways proved surprisingly moderate. He had been mayor of Shanghai and hence could distance himself from the events of 1989. He pursued Deng's goals of modernization even more vigorously and sought reconciliation with the West and closer integration into the global economy. Jiang remained the leader of the Communist party until 2002, seeking constantly to develop the Chinese economy and to strengthen China's growing influence as an international trading party. China was admitted to membership in the World Trade Organization in 2001, and Jiang gave Chinese business leaders an increasingly prominent role in the Communist party. Chinese factories (using the comparative advantage of low-wage labor) became leading global exporters of clothing, high-technology equipment, machinery, furniture, and many other products for the international consumer society; and an energetic entrepreneurial class emerged in the prosperous, expanding Chinese cities.

Jiang's economic policies were carried forward by Hu Jintao after he became party leader and in 2003 President of China. The country's dynamic economic development and

huge population gave China an increasingly pivotal role in the international economy and political order of the twenty-first century, but the Chinese government was still criticized for human rights abuses, its belligerent stance on reunification with Taiwan, and its failure to develop a more open and democratic political system.

### *Population Growth in China*

On a less dramatic front (beneath the surface of mere “events”) the pressure of the expanding population on the economy remained serious. Not irrelevantly, the character for “population” in the Chinese language depicts a mouth. Of all the larger developing countries, however, China was the most successful in coping with population growth.

---

#### *Population policies*

Through a system of central and local control, including forms of outright coercion that Western societies would find difficult to accept, a one-child-per-family rule, massive education programs, and social pressures, the birth rate declined significantly. In the years of relative prosperity under Deng and his successors the government found it difficult to enforce the one-child rule because affluent families, both in the city and countryside, were willing to risk fines for having more than one child. Nor were contraceptive devices always the most modern or most efficient. Yet on balance the program was effective.

In 1982 the Chinese population passed the 1 billion mark, and it was still growing at the rate of 15 million annually in the early twenty-first century, reaching 1.3 billion by 2005. The need to feed, clothe, and house this immense population at rising consumption levels made enormous demands on the economy, no matter how modernized, and on the country's natural resources.

The dramatic growth in China's international trade and economic production demonstrated that international rivalries and conflicts had moved beyond the bipolar divisions that had shaped global politics as well as the global economy in the decades after 1945. Meanwhile, the Cold War threat of communist expansion, which had so preoccupied Western governments from the 1940s to the 1980s, rapidly disappeared in a series of revolutionary changes that swept through Eastern Europe in 1989—creating an unexpected upheaval that foreshadowed the collapse of the Soviet Union itself.

# THE INTERNATIONAL REVOLT AGAINST SOVIET COMMUNISM

- 
- 125. The Crisis in the Soviet Union
  - 126. The Collapse of Communism in Central and Eastern Europe
  - 127. The Collapse of the Soviet Union
  - 128. After Communism
- 

 *The world was* astonished in the mid-1980s to see some of the basic structures of Soviet communism, as they had evolved since the Russian Revolution of 1917, begin to come apart. It was equally surprised by a series of extraordinary events in 1989 in central and eastern Europe, where the existing Communist regimes collapsed one by one and were replaced with virtually no violence. In an even more epochal event in 1991, the Communist regime of the Soviet Union itself, in power for 74 years, ended; and the U.S.S.R. disintegrated into Russia and its other component republics.

In a strict sense there was no actual revolution in 1989–1991, and indeed it was a source of wonder and satisfaction that such sweeping change could occur without armed struggle. The older regimes disappeared less by explosion than by implosion—a breakup from within. The “revolution” could remain peaceful because it faced no strong internal resistance or threat of foreign intervention. Yet the upheavals were revolutionary in that they demolished existing repressive authorities and brought abrupt, radical change. They reasserted ideals that were revolutionary when proclaimed in America in 1776, in France in 1789, throughout Europe in 1848, and in the West in 1919 and 1945 and were now called human rights and civil society. These ideals had been incorporated into the American Declaration of Independence and the French Declaration of the Rights of Man, and they had become the guiding ideals for democracies in most of the modern world. Democracy meant representative and constitutional government and freely contested elections; and freedom and independence meant guarantees against repression by one’s own government or dictatorial foreign rule. Such ideas were now invoked again to support the new political revolutions of 1989.

With the Revolution of 1989 the people of central and eastern Europe could decide their own destiny. With the collapse of the U.S.S.R. one of the two superpowers that had dominated international affairs since 1945 disappeared. The Cold War, as the world had known it, came to an end, even if Russia remained a large and important power. A new

global political era opened, understandably with new challenges and frustrations, but also with expectations for a more peaceful international order.

## 125. THE CRISIS IN THE SOVIET UNION

Neither the transformation of central and eastern Europe nor of the Soviet Union could have taken place as they did without the changes in the U.S.S.R. that began in 1985. It is not easy to explain how the reformist Soviet leader Mikhail S. Gorbachev could have risen to supreme power from within the Soviet system except that the country was in dire straits and the party leadership itself was desperate. As a young man Gorbachev studied at the university in Moscow and at the agricultural institute in Stavropol, his home city in south-western Russia. After working as an agricultural researcher, he received a full-time party assignment in the region and came to the attention of Yuri V. Andropov (soon to be the party general secretary) and other party leaders in Moscow. His appointment to the party secretariat in Moscow in 1978, with special responsibility for agriculture, afforded him a privileged view of the country's deep economic troubles. By 1980 he was a member of the Politburo, and by 1984 he was being groomed by Andropov for top party leadership. After the frustrating experience of an incapacitated Brezhnev clinging to power and of Andropov and Konstantin U. Chernenko, his two successors, dying in office after only brief terms, the Politburo in March 1985 decided that it was time for a more forceful, younger leader. At 54, Gorbachev was by far its youngest member. Andrei Gromyko, for many years foreign minister of the U.S.S.R., ultimately endorsed Gorbachev and is said to have reassured those with doubts: "He has a nice smile but he has iron teeth."

Gorbachev at once demonstrated a dynamism and vigor that had been absent from recent Soviet leadership. His first task was to convince the party and country of the need for fundamental economic restructuring if economic stagnation was to be overcome—*perestroika* he called it. By *perestroika* he meant a drastic modification of the centrally planned command economy inherited from Stalin and carried forward with only minor changes since. However well the older system had served the industrialization of the country, the test of the Second World War, and postwar reconstruction, it was ill-suited for the contemporary industrial world. Industry and agriculture urgently needed freedom from restraints to release creative energies, provide incentives for productivity, raise quality levels, and satisfy consumer needs. Gorbachev's proposed remedies were decentralization; self-management for industry and agriculture; an end to the rigidity imposed by the party and government bureaucracy; and incentives for productivity. He moved cautiously, believing that exhortation and a sense of urgency would bring results, but his appeals and initial moderate reforms quickly clashed with the vested interests of the entrenched bureaucrats.

For his economic restructuring to succeed, Gorbachev had to have the support of the country, which he hoped to win through political change. Thus he also called for *glasnost*, or "openness," which he closely linked to economic reform. By *glasnost* he meant the right to voice the need for change, the freedom to criticize the existing system, and the willingness even to reexamine past mistakes and wrongdoings. Even if it originally had a more limited objective, *glasnost* soon took on a dynamic of its own. It led to an unprecedented liberalization of Soviet society, a freer press, and an end to the decades of totalitarian control over political, cultural, and intellectual life. The ferment choked off after Khrushchev's "thaw" was

*Perestroika*

*Glasnost*

reborn. Newspapers, theater, the arts, and political discourse opened up as at no time before. Books and plays written in the 1960s or earlier but never permitted publication or performance made their appearance, including Pasternak's *Dr. Zhivago* and eventually even Solzhenitsyn's *Gulag Archipelago*, the novel that gave the outside world the name for Stalin's network of forced labor camps. Gorbachev permitted the physicist Andrei Sakharov, a leading dissenter and committed opponent of the regime, to return to Moscow from exile and take an active part in political life. Soviet Jews, who had earlier been refused permission to leave the country, were allowed to emigrate in larger numbers. The atmosphere changed visibly. People became freer and less fearful. [The legal codes were revised to encompass a measure of civil liberties, allow freedom of expression, and reduce police abuses. The KGB itself came under public and legislative scrutiny. Gorbachev even spoke of freedom of conscience and tolerance for religion, negotiating a rapprochement with the Orthodox church.]

In 1987, on the very occasion of the 70th anniversary of the Bolshevik Revolution, Gorbachev spoke openly of "Stalin's enormous and unforgivable crimes." A monument to Stalin's victims was planned, while the press openly discussed their total number, clearly in the tens of millions. New history textbooks were prepared, as well as a revised history of the party. Gorbachev told the country that there should be "no forgotten names or blanks in history or literature."

Although Gorbachev did not challenge the role of the Communist party as the directing agent of Soviet society, he was clearly introducing changes that would curb its monopoly on power. Remembering how Khrushchev had been dislodged after only a few years, he set out to mobilize a wide popular base for himself. Reform could not simply be imposed from above. The people, he said, needed more than a "good tsar." Constitutional reforms in 1988 created a new national legislature, and multicandidate elections were to replace the traditional one-party slate of nominees. What began as a technocratic vision of a more efficient economy was moving the country to a sweeping transformation of Soviet life and society.

---

Gorbachev's  
constitutional reforms

In the freer atmosphere the government released long-suppressed information about poor grain harvests, inefficient state enterprises, and nuclear accidents before the disaster at Chernobyl in 1986. At party meetings and at the new Congress of People's Deputies the public heard for the first time outspoken critiques of Soviet society: descriptions of poverty, corruption, crime, alcoholism, and drugs; of serious shortcomings in medicine, health, and housing; of environmental decay. Tens of millions, perhaps one-fifth the population, lived in poverty.

Gorbachev soon recognized that the country's economic problems were more intractable than he had thought, but he persisted with his gradualist reform program. Private enterprise and state industries were one day to be integrated into a market-based economy, linked to the outside world. Foreign capital for trade and investment and joint ventures with foreign firms were to be welcomed. Soviet managers were encouraged to travel abroad to learn advanced (sometimes elementary) business and accounting practices. But many of these reforms remained paper decrees only; party officials and government bureaucrats helped checkmate others. [The older economic system remained virtually unchanged. Gorbachev shrank from moving more rapidly to a market-oriented competitive economy. His concerns about painful short-term dislocations and political unrest reinforced his commitment to reform rather than abandon the older system in its entirety.]

---

Limited economic  
reforms

Gorbachev's reforms in agriculture also fell far short of what was needed. Accepting the existing structure of state and collective farms, he did little more than allow them greater managerial autonomy. Production did not rise. Belatedly, he launched a more extensive agrarian policy. Farmers and farm families would be permitted to work with state and collective farms on a share-crop basis, or farm their own land. They could lease land for their lifetime and even bequeath this right to their children. But the state remained the legal owner of the land—not as in China, where Deng had at the very beginning of his reforms dismantled the collective farms, returned the land outright to the farmers, and reaped the benefit in increased production. Despite Gorbachev's overtures to small independent farmers, little more than one percent of the land shifted to private hands.

---

*The party's grip loosened*

But the constitutional and political changes he had initiated significantly loosened the monopoly grip of the party. In March 1989 openly contested, multicandidate elections were held, the first since 1917, though well over half the seats were reserved for the party and various state-sponsored associations. Voters elected a Congress of People's Deputies, which in turn

chose a smaller standing legislative body to meet more frequently. Both were empowered to initiate legislation and freely debate issues. In 1990, under another constitutional reform, the Congress of People's Deputies created a presidency with broad executive powers modeled on the American and French examples. The Congress elected Gorbachev president.

---

*Criticisms of Gorbachev*

Gorbachev brought about stunning political changes, unprecedented in the years since the revolution. Western political leaders in the era of the Great Depression had sought to save capitalism by reforming it. Gorbachev was likewise bent on saving the Communist system by reform. Yet the country remained divided and disoriented. It was torn between the old guard, who resisted the Gorbachev changes, and a growing group of democratic reformers in the central legislature and in the newly elected parliaments of the restless component republics who believed that Gorbachev had not gone far enough in either political or economic matters. As time went by, praise for his policies gave way to criticism for the continuing dismal economic record; his indecisive, sometimes contradictory, steps in shaping a market economy; and his reluctance to revamp the collectivized agricultural system. He also seemed determined to repress ethnic unrest and was rejecting the demands of the constituent republics for greater freedom from central control. The military, the industrial bureaucrats, and the party were still in command.

The loosening of totalitarian controls unleashed long-suppressed ethnic tensions in the country. Azerbaijan and Armenia fought over a disputed enclave within Azerbaijan, where the majority of the inhabitants were Armenian; violence also flared up in Georgia and elsewhere. Every one of the 15 federated constituent republics of the Soviet Union began to raise demands for independence. Secessionist pressures understandably went furthest in the three Baltic republics. People in Latvia, Lithuania, and Estonia remembered their 20 years of independence between the two world wars; how they had fallen victim to the Nazi-Soviet pact of 1939; and how one-third of their population had been killed, deported, or driven into exile in the war and postwar years. In the freer atmosphere of *glasnost*, the constituent republics, which had come to consider themselves trapped within the Soviet empire, were able to denounce Soviet control. For his part Gorbachev was willing to create a federation council to advise on matters relating to the republics but would not risk the wrath of the old guard by going beyond that.

Mikhail Gorbachev advocated economic and cultural reforms that came to be known in general terms as the call for *glasnost*, or “openness,” and *perestroika*, or “structural reforms.” Gorbachev expected the reforms to benefit agriculture as well as the industrial sector of the Soviet economy, and he campaigned for his program among both farmers and workers. He is shown here (smiling, on the left) during a meeting with potato farmers near Moscow in 1987. Such contacts with people in the countryside affirmed the spirit of *glasnost*, but the reforms on state-owned farms did not go far enough to bring about a rise in agricultural production.

### *Gorbachev and the West*

As the new era evolved, Communist ideology and the view of world affairs that had helped to create and prolong the Cold War were also transformed. Gorbachev repudiated ideological struggle. He cited the progress of science and technology as requiring “a different road to the future.” In an interdependent globe besieged by nuclear, ecological, and economic dangers, the highest concern must be “universal human interests” and the “universal human idea.” Since Marx and Lenin had taught their followers to reject “universal” ideals as a smoke screen for class rule and oppression, the turnabout was startling.

[Gorbachev changed the image of the Soviet Union as a military threat and promoter of world revolution. He became a familiar and popular figure in Western capitals as a negotiator, diplomat, and often Western-style politician.] He followed his conciliatory words with deeds. He removed troops and weapons from eastern Europe, negotiated nuclear arms reduction agreements with the United States, ended the war in Afghanistan, and helped to resolve Cold War regional conflicts. And he accepted, even encouraged, reforms in eastern Europe,

*Encouraging détente*

probably not foreseeing how far they would go. He spoke up for human rights, paid tribute to the standards embodied in the Helsinki accords, and called for a “common European home” for western and eastern Europe. The Cold War of the post-1945 years, which had been brought on, or intensified, by Soviet revolutionary ideology and expansionism—which in turn had led to the American containment policy and countercrusade—gave promise of ending. [For Gorbachev, as a matter of policy, détente and arms reduction were essential to relieve the intolerable military burden on the Soviet economy; détente went hand in hand with domestic reform.] From their low point in the early 1980s Soviet–United States relations abruptly changed after 1985. A new and more genuine spirit of détente emerged, holding out higher expectations for peace and disarmament than at any time since 1945.

Early in the Reagan administration, in 1981, Soviet–American discussions had resumed on strategic arms limitations, but in an atmosphere of mistrust, suspicion, and continuing arms buildup. Especially disturbing was the deployment in eastern Europe in the late 1970s of new Soviet intermediate-range nuclear missiles capable of reaching targets within a radius of 600 to 1,500 miles. Together with its European allies the United States had reinforced existing defenses in western Europe with equally modern American nuclear missiles while simultaneously pressing the Soviets to reduce or remove theirs. The construction of the American missile sites touched off mass popular protest demonstrations in western Europe, but the West European governments remained firm in their support. In Reagan’s first term of office he had not met with the incapacitated Brezhnev or with either of the two ailing Soviet leaders who in quick succession followed him. But in 1985, after the emergence of Gorbachev, the possibilities for arms limitation opened up.

[Unlike his predecessors, Gorbachev seemed to view détente as a means to help the ailing Soviet economy and as an essential diplomatic process for avoiding catastrophe in the nuclear age.] For his part, Reagan, confident that the United States had rebuilt its own military strength, held four summit meetings with Gorbachev over the next two and a half years.

---

#### *End of the Cold War*

At their third meeting, in Washington in December 1987, the two presidents made a remarkable breakthrough by consenting to remove the intermediate-range missiles each had installed in Europe. Gorbachev agreed also to reduce the number of short-range nuclear missiles. The Soviets were willing to destroy over four times as many missiles as the United States. Even more unprecedented was the Soviet willingness to permit the United States to verify the destruction of the weapons—the on-site verification which had long been a stumbling block to arms reduction. Finally, the two leaders agreed to continue negotiations on the reduction of strategic, or long-range, nuclear weapons.

In summit meetings in Washington and Moscow, the two presidents had closer contact with each other’s people than ever before. Gorbachev mingled with throngs in crowded Washington streets. Reagan, in the shadow of Lenin’s tomb in Moscow, spoke openly about the Soviet repression of dissidents, the refusal to permit Jews to emigrate, religious persecution, and the ongoing war in Afghanistan. Gorbachev in turn committed his country to the withdrawal of Soviet troops from Afghanistan—a “bleeding wound” he called it. Meanwhile Gorbachev lent encouragement to the vast changes taking place in eastern Europe. In 1990 Gorbachev and President George H. W. Bush, Reagan’s successor, could jointly hail the end of the Cold War. In 1991 they signed a strategic arms treaty pledging each nation to scale down by about a third its arsenal of long-range nuclear missiles.

## 126. THE COLLAPSE OF COMMUNISM IN CENTRAL AND EASTERN EUROPE

Meanwhile in the mid-1980s central and eastern Europe remained under Stalinist-type party bosses, some in office for over 30 years, impervious to pressure for reform. But cracks and fissures were apparent even before Gorbachev's reforms in the Soviet Union. The years of détente had already opened up the East European states to Western loans and investments and to closer contacts with the West. Dissidents called for a recognition of the human rights guaranteed by the Helsinki accords in 1975, to which the Soviet Union and the East European bloc had subscribed. They wrote about ending party-state dictatorships and the restoration one day of a "civil society," in which people could live their lives free from the dictates of the state.

As in the Soviet Union itself, East Europeans discussed the shortcomings of their centrally planned economies, which had stagnated since the 1970s. Initiative and productivity were stifled, and large subsidies propped up inefficient state-run monopolies unchallenged by competition. The older plants and industrial infrastructure were decaying; the environment was deteriorating. A scarcity of investment capital prevented the growth of new industries. Only in Hungary had decentralizing reforms and tentative steps toward a market economy been adopted. In East Germany, the showcase for achievements under central planning, economic growth had slowed and consumer goods were scarce. Even if state-run planned economies were to continue, many argued for new market competition, incentives for entrepreneurs and workers, and encouragement of joint ventures with the outside capitalist world.

---

*Economic stagnation*

### *Poland: The Solidarity Movement*

In the 1970s and 1980s demands for economic reform and political liberalization surfaced almost everywhere, but nowhere so forcefully as in Poland. Gomulka, who governed Poland for 14 years after 1956, disappointed the reformers. He used troops to put down strikes, persecuted church leaders, and in 1968 permitted an anti-Semitic campaign against the small number of Jews still living in Poland. In 1970, after riots over food prices, the party replaced him with the reform-minded Edmund Gierek, who embarked on an ambitious economic development program, financed by heavy borrowing from the West. The initial results were promising, but to meet its rising debt obligations, the country expanded exports at the expense of domestic consumption. Economic conditions steadily deteriorated.

In 1980 the rise in food prices led to widespread strikes, which began in the Lenin shipyards in Gdansk and spread rapidly. A somewhat freer political atmosphere made it possible for workers to create an aggressive independent trade union federation, Solidarity, the first of its kind in any Communist country. It found a militant leader and national symbol of protest in Lech Walesa. Before long Solidarity claimed a national membership of 10 million industrial and agricultural workers. With church backing, its leaders called for free elections and a role for Solidarity in government. The Soviets, then still in the Brezhnev era, once again saw a socialist regime threatened. They put heavy pressure on the Polish government and party to curb Solidarity, oust Gierek, and install the dependable and steely General Jaruzelski as party head and premier. When strikes and demonstrations continued, raising the threat of Soviet

---

*Lech Walesa*

military intervention, Jaruzelski in 1981 imposed martial law, banned Solidarity, and arrested its leaders.

But once the power of Solidarity was curbed and the Soviet threat of intervention passed, Jaruzelski himself took a different tack. To placate labor he lifted martial law and initiated a reform program of his own. International pressure also contributed to liberalization. John Paul II, the first Polish pope to head the Roman Catholic church, inspired huge demonstrations for freedom during visits to Poland after his elevation to the papacy in 1978; and Lech Walesa was honored with a Nobel Peace Prize in 1983.

Jaruzelski's efforts at economic reform failed to improve the economy or mollify widespread resentments. Meanwhile, in the later 1980s, Gorbachev's liberalizing reforms in the Soviet Union encouraged further reforms in Poland and suggested that the Soviets would not intervene to check liberalization in eastern Europe. The growing recognition that the "Brezhnev Doctrine" was dead even encouraged a movement for reform within the Polish Communist party itself.

In 1989 Jaruzelski and the party leadership permitted parliamentary elections, in which Solidarity and other groups were free to put forward candidates, although the Communist party was guaranteed a fixed number of seats. The first open elections in Poland in over 40 years gave Solidarity a landslide victory in all contested seats. A Solidarity-led coalition cabinet was formed in which the Communists were a minority. The party took steps to transform itself into a Western-type socialist party, but many of its members drifted away. The party-state dictatorship ended without bloodshed. The dike in eastern Europe was breached.

The new government moved at once to restructure the economy along free-market lines. Sharp differences emerged between Lech Walesa, elected president in 1990, and his one-time political allies; and former Communists soon returned to the political scene, but Poland was henceforth in charge of its own destiny.

### *Hungary: Reform into Revolution*

In Hungary the attempt at reform in 1956, initiated by the Communist party leadership itself, had been brusquely interrupted when the Soviets intervened with troops and tanks to suppress the "counterrevolution." Imre Nagy, the party leader, and other leaders of the revolt were hanged. For the next 32 years, hard-liner János Kádár ran the country. But even under Kádár the party, without relinquishing its monopoly on political control, moved away from an inflexible centrally planned economy, encouraged a degree of private enterprise, and turned to the West for capital investment. For a time the economy expanded and standards of living rose, but the limited reforms accomplished no fundamental change. After 1985, in the wake of Gorbachev's reforms in the Soviet Union, some of which were modeled on the Hungarian example itself, a new drive for political and social change began to develop.

In 1988 the party, eager to encourage change and still maintain power, eased Kádár out of office. The new leadership opened the way to opposition parties and multiparty elections and began to dismantle the older party-state apparatus. It dissolved the Communist party, reconstituting it along socialist and social-democratic lines, and a wide range of independent political groups came forward. Reform, initiated by the party itself, had turned into revolution, and without bloodshed. The new leaders reclaimed the 1956 uprising as a progressive movement and for-

---

---

*Party initiatives*

The independent Polish trade union movement, Solidarity, gained the support of millions of workers in the early 1980s. Solidarity organized strikes and demonstrations, demanding better wages for workers and major reforms in the Communist political system. These demonstrators gathered to support Solidarity at a rally outside the court buildings in Warsaw in November 1980. The Solidarity movement was suppressed after martial law was imposed the following year, but the Polish Communist party could never destroy the movement's popular appeal. Solidarity eventually won control of Poland's first new government in free elections that took place at the end of the decade.

(Getty Images)

mally condemned those who had invited Soviet intervention. Nagy's body was exhumed from a mass grave and given a hero's reburial. By sweeping aside the humiliation of 1956, the country reasserted its national independence, restored self-government and civic freedom, and opened the way to a market-oriented economy and a pluralist democracy.

The developments in Hungary precipitated even more dramatic events. The new Hungary, looking westward, symbolically demolished a portion of the barbed-wire barrier on

its Austrian border. A few months later, in September 1989, when large numbers of East Germans vacationing in Hungary sought to emigrate to the West, Hungary opened its border with Austria and allowed the Germans to exit. For the first time since 1961 East Germans found a safe way to leave their country.

### *The German Democratic Republic: Revolution and Reunification*

Given Gorbachev's positive attitude toward reform, it was understandable that the pace of change in eastern Europe would accelerate, but neither he nor anyone else could have anticipated its full dimensions. In the four hard-line dictatorships—the German Democratic Republic, Czechoslovakia, Bulgaria, and Romania—there still appeared to be little chance for a Communist sharing of power in the spring of 1989, let alone a revolutionary transformation. Yet by the end of that year the Communist regimes had fallen in all of these countries.

In the German Democratic Republic Erich Honecker, in power since 1961, stubbornly held the line against reform. Although the country boasted the strongest economy and highest per capita income in eastern Europe, its citizens enjoyed far fewer amenities than the West Germans. The Berlin Wall built in 1961 still barred their exodus to the West. Even though Honecker had agreed after 1970 to the closer economic and political relations with West Germany initiated by Willy Brandt's *Ostpolitik* in 1969, he refused to relax controls at home. But the East Germans excitedly watched the Gorbachev changes in the Soviet Union and the rush of events in Poland and Hungary. When in the autumn of 1989 Hungary opened the way for them to leave, thousands seized the opportunity.

The trickle soon became a flood. The East Germans, many of them skilled workers and professionals, fled the repression and drabness of the German Democratic Republic for the Federal Republic of Germany, where as Germans they were entitled by law to receive citizenship and assistance in find-

ing homes and jobs. By the end of 1989, 350,000 of East Germany's population of 17 million had left, and many more emigrated in the early months of 1990.

When demonstrations against the East German government mounted, Gorbachev clearly signaled that Honecker could not expect the Soviet troops stationed in East Germany to save the regime, and he even warned against the use of force to prevent reform. In Leipzig, over 100,000 demonstrators, assembling in churches, marched in solemn procession with lighted candles, calling for the resignation of party and government leaders and for an end to the police state. The party forced Honecker to resign.

The new leadership promised elections and confirmed the right of free and unrestricted travel. On November 9, 1989, when the government opened up the hated symbol of confinement itself, the Berlin Wall, excited Berliners on both sides of the barrier tore it down. The exodus to West Germany continued. By now even the new freedom of movement, the end of censorship, the new parliamentary supervision over the state security police, and the pledge of free elections did not suffice. Many East Germans were infuriated

by public disclosure of the corruption and luxurious living that Honecker and the party elite had enjoyed while ordinary people suffered over the years. The entire party structure now came crashing down. The Politburo and Central Committee resigned. Honecker and other leaders were arrested

on charges of corruption and embezzlement, and younger reformers assumed control. Delegates from a wide variety of opposition groups, exultant over their "gentle" revolution, met with reform-minded representatives of the former Communist party to oversee the transition to a new constitutional regime, which many still envisaged as a socialist but democratic society.

---

*Flight from  
Honecker's rule*

---

*Corruption within the  
party*

Once the German Democratic Republic was no longer Communist, however, pressure for reunification began to build. Helmut Kohl, the Christian Democratic chancellor in West Germany, took the initiative to reunite the two Germanys. For many of the wartime Allies the prospect of a reunified Germany of close to 80 million people, possessing one of the world's most powerful economies, stirred grim ghosts of the past. The "German question" resurfaced. The entire postwar settlement stood at issue. Since no final peace treaty had ever been signed, reunification required the approval of the four major Allied powers of the Second World War. There was hesitation, especially in France and Britain, but it was difficult, as the Americans argued, to deny the German people the right of self-determination 45 years after the end of the war. Moreover, the Federal Republic of Germany had demonstrated its commitment to democracy. There was confidence that a reunified Germany could integrate East Germany and remain part of democratic western Europe and the European Community. Despite the unspeakable crimes of the Nazi era, it seemed unreasonable to insist upon unalterable traits of national character or to punish future generations for atrocities of the past.

---

*The "German question" revived*

Reunification moved forward swiftly. The four Allied powers, including the U.S.S.R., gave their approval and relinquished their occupation rights. Germany confirmed the earlier cession of territories in the east to the U.S.S.R. and Poland and pledged the inviolability of the German-Polish border. The two German states merged their economies and the West German mark became the common currency. On October 3, 1990, the two states formally united to become an enlarged Federal Republic of Germany, its capital to be reestablished within a few years in Berlin. In the first nationwide elections, Chancellor Kohl and his Christian Democrats, who played a key role in the reunification, won a sweeping victory. Although the postelection exhilaration was soon tempered by the gigantic problems of modernizing and absorbing the thoroughly decayed East German economy, Germany had been reunited under democratic auspices.

### *Czechoslovakia: "'89 is '68 Upside Down"*

In Czechoslovakia the ruling hard-liners who took power after Soviet military forces had ruthlessly crushed the "Prague spring" in 1968 disapproved of Gorbachev's reforms in the Soviet Union and stifled dissent at home. But the dissidents quietly grew in numbers and influence. Charter '77, an organization of intellectuals formed after the Helsinki accords of 1975, became a rallying point for the struggle against the dictatorship. The Czech public followed with intense interest the disintegration of Communist power in Poland, Hungary, and East Germany. When demonstrations broke out in the autumn of 1989, the government arrested the dissident leaders, but thousands of demonstrators in Prague called for the release of the imprisoned dissidents and for the government's resignation. Reformers came together in a loose coalition and found inspiring leadership in the dissident writer Václav Havel, an outspoken opponent of the regime who had repeatedly suffered persecution and imprisonment for his views.

The demonstrations grew in intensity. When 350,000 demonstrators in Prague on November 24 furiously demanded an end to the party-state dictatorship and a general strike threatened to bring the country to a standstill, the government and party leaders all at once resigned. Alexander Dubček, the hero of 1968, dramatically appeared on a balcony alongside a new reform-minded Communist prime minister, who appointed opposition leaders to his cabinet, pledged a free press and free elections, dissolved the secret police, and abolished the compulsory teaching of Marxism-Leninism in the universities.

The destruction of the Berlin Wall in November 1989 provided dramatic physical and symbolic evidence of the collapse of Communist regimes in eastern Europe. Young people shattered the Wall in a great celebration that released long-suppressed political anger and marked the culmination of a nonviolent revolution in East Germany. Within a year, the two postwar German states were united in a new, enlarged Federal Republic of Germany, which faced the social and economic challenges of bringing two different societies into an integrated national political system.

(Robert Wallis/Sipa Press)

The party's 41-year monopoly on power ended. Havel became provisional president and led a new cabinet in which the Communists were a minority. Gorbachev took steps to withdraw the 75,000 Soviet troops stationed in the country since 1968. In the excitement someone exultantly observed: "'89 is '68 upside down." The people had wrested control without bloodshed in a "velvet" revolution that liberated the country.

Of all the nations in the Eastern bloc Czechoslovakia had the strongest democratic tradition. Despite long-standing ethnic tensions, it had developed a genuine parliamentary democracy in the interwar years and was the last of the East European states to fall under Communist dictatorship after the Second World War. Even though its economy was one of the strongest of the Eastern bloc, it lagged far behind the West and required large infusions of capital to modernize its older technology. It moved rapidly toward a market-oriented economy and a pluralist democracy—the civil society that Havel, now elected president of the republic, and others had sought. But an unexpected political sequel followed within three years. The country came apart when Slovak political leaders pressed for an independent Slovakia, which some had wanted since 1918. A negotiated settlement arranged for the peaceful division of the country in January 1993 into two independent and sovereign nations—the Czech Republic and Slovakia.

### *Bulgaria's Palace Revolution, Bloodshed in Romania*

Even Bulgaria, considered the most docile of the Soviet client states, succumbed to the new revolutionary contagion. Mass demonstrations in Sofia demanded an end to the Communist dictatorship, and pressure from within the party forced the resignation of the party chief who had run the country for 35 years. His foreign minister, who replaced him, pledged parliamentary elections, economic reforms, and an end to the party's absolute control of power. New political groups emerged, fragmented yet strong enough to press for reform.

The revolution in Bulgaria was essentially a palace coup within the party, but it, too, arose in response to deep mass resentments. In a country that had known little freedom even in the pre-Communist years, the question was whether the reform-minded former Communists who, like many others elsewhere, renamed themselves Socialists, could work together with the new opposition to create a true democracy.

Only in Romania did events take a violent turn in 1989. It seemed at first as though the revolution would not even reach Bucharest. Since 1965, the dictator Nicolae Ceausescu had firmly controlled party and government, ruling with the help of his wife and family and building a cult of personality around himself. He remained isolated in a rigid autocracy with a large private security force, which he favored over the regular army. His Stalin-like ambition was to transform a backward agrarian society into a modern industrial society regardless of the human cost. For his modernization program he borrowed heavily from the West, but to remain independent of the outside world he insisted that the country regularly pay the burdensome interest on its debt. He used state resources to build an enormous presidential palace. All dissent was kept under tight surveillance and control. What was distinctive about Ceausescu was his break from Moscow and his independent position in foreign and military affairs. Unlike the other members of the Warsaw Pact, he had supported Israel in the Arab-Israeli wars and had refused to join the invasion of Czechoslovakia in 1968.

Throughout the revolutionary autumn of 1989 Ceausescu ignored the upheavals in central and eastern Europe. But in December protest riots broke out in Timisoara, a key provincial capital. The military refused to fire on the demonstrators, but the dictator's security forces took over, killing hundreds. Word of the brutality spread, sparking new protests. When the security forces attempted to suppress demonstrators in Bucharest, angry crowds forced the dictator to flee the capital.

For days a battle raged between the security forces and regular army units supporting the revolutionists until the security forces were routed. Ceausescu and his wife were

---

*The Ceausescu regime*

---

*Ceausescu's security forces*

apprehended in the provinces and executed by a firing squad. A National Salvation Front, consisting of former officials of the Ceausescu regime and emergent opposition leaders, took control. Although former Communists dominated the new regime and the strength of the democratic forces remained limited, the party's authority ended and the most repressive dictatorship of the Eastern bloc came to an ignominious end.

### *The Revolutions of 1989 in Central and Eastern Europe*

Except in Romania, the revolution was carried out everywhere by placards and candles, not by rifles. Solidarity's early struggle in Poland and Gorbachev's liberalization in the Soviet Union made it possible for revolutionary changes in central and eastern Europe to take place as they did. With a suddenness that took even the closest observers by surprise, smoldering discontents flared up all at once. [Gorbachev, committed to curtailing economic and military obligations for the sake of the Soviet economy, accepted the end of the Communist regimes imposed by Stalin after the Second World War.]

[The groundwork for change had been prepared by the growing economic ties and contacts with the West during the years of détente, the Helsinki accords, the stubborn challenge of Solidarity, and the courage of the dissidents. But it was Gorbachev's clear signal that the Soviets would not intervene outside their own borders that made the stupendous chain of revolutionary events possible, toppling one regime after another.] The dramatic flight of the East Germans symbolized the desire of all eastern Europe to escape from behind the iron curtain. The revolutionists, armed only with a moral cause, would have found it difficult to prevail if any of their own governments had chosen to use the full power of the army and police. The repression at Tiananmen Square in China in June 1989 might have been repeated in eastern Europe. But the ruling elites, without Soviet support to bolster them, yielded; they simply lacked the will to govern under a system that had lost legitimacy and credibility, even among those who controlled it.

Gorbachev's decisive  
role

## 127. THE COLLAPSE OF THE SOVIET UNION

Before the stunning developments in eastern Europe could be fully absorbed, an even more epochal event occurred. An all but bloodless revolution brought the collapse of communism in 1991 in the very epicenter of world communism, undoing the Russian Revolution of 1917 and ending three-quarters of a century of Communist party rule. The Union of Soviet Socialist Republics, heir to the one-time tsarist empire, dissolved into its component republics. Russia reemerged.

How did this collapse of a seemingly impregnable regime with a heavy apparatus of military and police security occur? We have already seen how Gorbachev in the years after 1985 opened up Soviet society to revitalize the system but avoided the more decisive measures that might have ended the hegemony of the Communist party. Gorbachev vacillated between the reformers and the hard-line conservatives. A superb political tactician — no one could have brought the party and the system as far as he had — he nonetheless gave the impression that he did not know how thorough a transformation he would ultimately permit. The old guard became further embittered as they witnessed the loss of Soviet control over eastern Europe. Meanwhile the economy worsened, and by 1990 production was in steep decline. Gorbachev tried plan after plan, but the economic structure remained virtually unchanged. In addition, not only the Baltic republics, as might have been expected,

but the Russian republic itself and all the other component republics of the U.S.S.R. were pressing for sovereignty—self-government and control over their political and economic fortunes.

### *The “Creeping Coup d’État”*

In the autumn of 1990 Gorbachev again was maneuvering. He replaced reform-minded ministers and other key officials with old-guard appointees unsympathetic to his reform program. He summarily abandoned an important “500-Day” economic plan that would have freed prices and moved more swiftly to a market economy. The plan would also have curtailed the military budget and given broad economic powers to the republics. It now appeared that military force was to be deployed against the secessionist Baltic republics, which earlier, in the spring of 1990, had proclaimed their independence. In January 1991 Soviet troops, apparently taking matters into their own hands without Gorbachev’s prior approval, used military force against demonstrators in Lithuania, with a loss of lives; and there was anxiety about where the military might move next.

The democratic reformers grew alarmed by the turn of events. Some spoke of “six wasted years of reform communism” and of a “creeping coup d’état.” They had concluded that the country’s economic problems could not be resolved short of demolishing the entire central planning structure, and also that each republic must be allowed to work out its own destiny. To the reformers Gorbachev seemed a barrier to further change, and he in turn grew increasingly hostile to them, convinced that he alone knew the proper pace of reform.

---

*Uneasiness of  
reformers*

The democratic reformers turned to a political figure who on the surface seemed an unlikely choice as their leader. Boris N. Yeltsin was blunt and outspoken, not by any definition an intellectual. His personal style made a striking contrast to the suave, smooth, and urbane Gorbachev, but Yeltsin knew the Communist party well, and all its secrets. He had been party boss in Moscow and a member of the Politburo. When in 1987 he openly attacked the privileges, perquisites, and downright incompetence of the party officials, he had been dismissed from his posts, vilified in the press, and sent off into the political wilderness. Humiliated by Gorbachev and the party, he found allies among the democratic reformers, who saw in him a populist figure around whom they could rally public support. They helped polish some of his rough edges, undertook his political reeducation, and converted him into an opposition leader of stature.

Elected to the Soviet legislature in March 1989, he played a key role in the opposition. With the encouragement of his political allies, however, he turned to a new, and seemingly unpromising, power base, the Russian legislature, that is, the legislature of the Russian constituent republic. Elected to it in 1990, he became chairman and used his position to step up his attacks on Gorbachev, the party, and the central government. Then, benefiting from a Gorbachev concession permitting the constituent republics to choose their presidents in direct popular elections, he won election in June 1991 as president of the Russian republic in an overwhelming victory over his Communist opponents—the first president in Russian history to be elected by popular vote. It was a distinction that Gorbachev, elected president of the U.S.S.R. solely by the Soviet Congress, could not claim. (It was at the time of Yeltsin’s election that Russia’s second largest city voted to change its name from Leningrad back to St. Petersburg, as it had been called before 1914.) From his new position of strength Yeltsin demanded immediate independence for the three Baltic states and self-government for Russia and the other Soviet constituent republics.

---

*Yeltsin becomes  
opposition leader*

Gorbachev, intent on keeping the country and the union intact, began negotiations with the presidents of the republics. He agreed to surrender considerably more autonomy to the 15 republics, including substantial control over the economic and financial resources that Moscow had always tightly guarded. The three Baltic republics, insisting on full independence, refused to participate in the negotiations, as did Georgia, now embroiled in its own internal turmoil. But in August 1991 the Russian republic and eight other constituent republics agreed to sign Gorbachev's "union treaty," which created a framework for the republics to share power within a new political federation.

### *The Failed August Coup*

For the old-guard hard-liners in the party, the military, and the secret police the treaty was the final straw—the end of the union as originally created by Lenin in 1922 after the Bolshevik Revolution of 1917 and the ensuing civil wars. Despite lip service to the sovereignty of the republics and the federal structure set forth in the Soviet constitution, the Soviet Union was from the beginning, and increasingly under Stalin, a Russian-dominated centralized nation, virtually the successor to the empire of the tsars. To abandon the union was more than many of the old guard could tolerate. The day before the treaty was to be signed, a small coterie of eight hard-liners acted to seize power. They included high-ranking party and government functionaries, among them, the head of the KGB and the commander of the Soviet land forces. All key figures were Gorbachev appointees. Several of the plotters, including the chief of Gorbachev's personal cabinet, arrived at Gorbachev's summer home in the Crimea, possibly hoping to win him to their side. When under forced detention he refused to cooperate or yield to pressure, they proclaimed a Committee of State Emergency to replace him.

The *Putschists* expected the coup to be a simple operation. Resistance in the country, they were convinced, could be overcome by a simple show of military strength. But they miscalculated, underestimating the new political forces alive in the country. Gorbachev disavowed the plotters. In Moscow Yeltsin gained additional stature when he rallied the Russian legislature in defense of Gorbachev, warned that anyone supporting the coup would be subject to grave criminal charges, and appealed for popular support against any military show of force. But the assault never came. At least one KGB unit disobeyed orders to attack; other tank units advanced only half-heartedly. There was some sporadic street fighting, and three civilian deaths. The coup failed within four days. The plotters turned out to be feckless and irresponsible bunglers. The Central Committee of the party did not speak out during these events, but its silence seemed to sanction the attempted coup.

Gorbachev, his ordeal over, returned to Moscow. He had demonstrated with courage that he was not the prisoner of the old guard and now went further. Because of the party's complicity in the affair, he resigned as general secretary. Yet he still failed to comprehend how far matters had gone. He believed it sufficient only to replace the traitors and "return to the business of reform." Once again he defended "socialism" as "the choice made in 1917" and stressed the need to preserve the unity of the U.S.S.R. so that the country would not fall apart.<sup>1</sup>

Yeltsin acted immediately and decisively on an entirely different agenda. As president of the Russian republic, he issued a series of decrees, describing the Communist party as "not a political party but an unlawful apparatus that took over the Soviet state" and denouncing it as "one of the principal villains" in the attempted coup. Suspending its activities through-

---

*The failed coup*

---

*Yeltsin dissolves the regime*

out the Russian republic, he transferred to the state the party's vast property, along with its files and archives. The Soviet Congress of People's Deputies meeting in Moscow soon validated the decrees for the entire country before voting itself out of existence. In many ways what happened in the aftermath of the failed coup was the culmination of the Gorbachev six-year reform era. But the dissolution of the party-state regime, at Yeltsin's hands, was the revolution.

All that remained of the earlier framework was a federation council consisting of the presidents of the constituent republics, over which Gorbachev continued to preside. It immediately recognized the independence of the three Baltic republics. For the country as a whole Gorbachev still hoped to salvage his older idea, a "union of sovereign states," which, while granting self-government to the republics, would retain a central authority. But the republics pressed for full independence; hostility toward central authority had intensified after the bungled coup. The very party leaders, as in the Ukrainian S.S.R., who themselves once suppressed separatist movements, had by now taken over the leadership of nationalist independence movements.

The Ukrainian S.S.R. proclaimed itself independent as Ukraine (no longer to be referred to as *the* Ukraine) immediately after the August coup. In December, Yeltsin announced that Russia would not remain in the union without Ukraine. Thereupon the three Slavic states—Russia, Ukraine, and Belarus (the new name for Byelorussia), the states that had originally created the Union of Soviet Socialist Republics in December 1922—dissolved it. Gorbachev resigned as president. Yeltsin at once occupied his office in the Kremlin.

---

*The U.S.S.R.  
dissolves*

The other republics of the Soviet Union also agreed to its dissolution. A loose organization called the Commonwealth of Independent States (CIS) consisting of Russia and ten other republics came into existence.<sup>1</sup> The Baltic states had already gone their separate ways. Georgia, still in turmoil, did not join until a few years later. The Union of Soviet Socialist Republics, for close to seven decades the world's largest multinational state, stretching over one-sixth the earth's surface and 11 time zones, with close to 300 million people, one of the world's two superpowers for over 40 years after the Second World War, simply disappeared as a geographic entity. Russia, still the world's largest nation in area and itself a mixture of many peoples, succeeded to the Soviet Union's permanent seat on the UN Security Council.

Gorbachev returned to private life, declaring "the main task" of his life to have been accomplished. He has to be counted as one of the great reformers in history. The "Gorbachev factor," as it has been called, made an immeasurable difference. His tragedy was that he failed to build a new system to replace the communism that he had undermined. He unleashed powerful winds of change that ultimately he could not direct or control. He drastically altered a totalitarian system yet refused to recognize that the demolition of the entire structure was necessary. Eventually he became a danger to the old order and an impediment to the new. Yeltsin, who took undisguised satisfaction in the fall of his once all-powerful rival, said of him:

---

*Gorbachev's legacy*

---

<sup>1</sup>The 11 republics affiliating themselves with the Commonwealth of Independent States, created December 25, 1991, as successor to the U.S.S.R. in order of population (with their capitals in parentheses) were as follows: Russian Federation (Moscow), Ukraine (Kiev), Uzbekistan (Tashkent), Kazakhstan (Alma-Ata), Belarus (Minsk), Azerbaijan (Baku), Tajikistan (Dushanbe), Moldova (Chisinau), Kyrgyzstan (Bishkek), Turkmenistan (Ashkhabad), and Armenia (Yerevan). Georgia (Tbilisi) joined in 1993. Former Communist leaders retained control of most of the new governments until the early twenty-first century, when revolutionary, democratizing changes took place in several of the republics.

Boris Yeltsin's firm resistance to an attempted coup against the government of Mikhail Gorbachev by old-guard Communists in August 1991 confirmed Yeltsin's stature as the most popular political figure at the time. He is shown here waving to the huge crowd that gathered outside the Parliament building to show its support for the political reforms that were transforming the Soviet Union. Yeltsin was the first popularly elected president of Russia when it was still part of the U.S.S.R., a position he continued to occupy after the formal dissolution of the Soviet Union in December 1991.

(Reuters/CORBIS)

"We, like the world, respect him for what he did, especially in the first years of *perestroika* beginning with 1985 and 1986." After that, he said, the "errors" began. Russia, predicted George Kennan, one of America's preeminent diplomat-historians and Russian specialists, would eventually regard Gorbachev as the "person who led it out of bondage" even if "he was unable to reach the Promised Land." But it was not yet time to render final historical judgments. For the vast lands and peoples that had once been the Soviet Union, and for Russia and Yeltsin himself in 1991, the future held many uncertainties, a future in which the entire world had an enormous stake.

## 128. AFTER COMMUNISM

Marxist-Leninist ideology as the undergirding for one-party dictatorship still persisted at the opening of the twenty-first century in the People's Republic of China, the world's most

populous country, and in the smaller states of North Korea, Vietnam, and Cuba. Albania, the last of the Communist regimes in Europe, and the most impoverished, threw off Communist rule in 1991. Yugoslavia's disintegration after the end of communism, as we shall see, unfolded separately. In western Europe, most notably in France, Italy, Spain, and Portugal, once strong Communist parties reexamined their beliefs, at times abandoned the party name, and adapted to changed circumstances. Marxism, born in the mid-nineteenth century in response to the instability and inequities of industrial capitalism, would survive as a scholarly, analytical tool; but it held little or no popular appeal as a political philosophy and program of political action. Proletarian internationalism likewise lost much of its appeal because it had been used to support an ill-concealed Soviet hegemony.

The revolutions of the late twentieth century in the Soviet Union and central and eastern Europe seemed to herald the international triumph of the historic political liberalism of Western societies. The democratic reformers sought free elections, political and civil rights, and respect for human dignity. Their people had too long been the pawns of totalitarian party-state regimes which self-righteously demanded sacrifice and subservience in the name of an ultimate utopia. The reformers objected to the centrally planned bureaucratic command economies, which had deprived almost everyone of decent living standards. They envied the immeasurably more prosperous economies of the United States, western Europe, and elsewhere, even if they, too, had their share of inequalities, economic insecurity, and social and ethnic problems. The official formula that all citizens enjoyed the rights and privileges of an egalitarian "socialist" society had only concealed political repression, economic stagnation, and social immobility. For many, the public revelation of the Communist party elite's special privileges and luxuries proved the final shock.

---

*Triumph of liberalism*

The revolutionary changes made possible, but did not guarantee, democratic and pluralist societies in which the citizens themselves through responsible government could shape their political and economic future. The road to democracy and free economies was not an easy one. If democratic governments failed to take root, new authoritarian political parties and repressive governments could reemerge. The revolutionary changes released many ugly currents, ominous for the future—anti-Semitism, xenophobia, chauvinistic nationalism, irredentism—all easily mobilized when discontented people seek scapegoats for their frustrations.

Russia, the other former Soviet republics, and the countries of central and eastern Europe entered a period of difficult transition. In principle, they were transforming their political systems into representative democracies and their centrally planned economies into competitive market economies. But bureaucrats and managers of the old order often remained in control under new labels. Many, especially in Russia, used the knowledge and networks of privileged positions in the older regimes to benefit financially from the newly privatized enterprises. Despite infusions of international aid, the new regimes struggled to cope with the disorienting challenges of a free market, capitalist economy, new technologies, and a global financial system.

---

*Difficult economic  
and political  
transitions*

The market economy could take many forms. The state had always played a large role in central and eastern Europe. It was unlikely that the new regimes would turn to a pure laissez-faire model of private enterprise, which did not actually exist in even the most capitalist Western economies. Governments would remain actively engaged, seeking to ensure a protective network of social services. As for socialism, marginal as it was in American life, democratic socialism and social democracy still had considerable appeal in Europe.

The Soviet experience had tarnished, even poisoned, the image of socialism; but its egalitarian message retained an attraction when linked to respect for democracy and individual rights as propounded by various European Socialist and Social Democratic parties. Meanwhile all countries with capitalist market economies and democratic political systems, in the West and elsewhere, were challenged to create societies that could overcome economic instability, individual insecurity, unemployment, and gross social and economic injustices. Democracies and market economies offered a means toward desired ends, not final goals in themselves. It was now generally assumed, however, that prosperity and productivity could do far more to overcome social inequities than would-be utopias.

### *Russia after 1991*

At the close of 1991 the Russian flag replaced the Soviet hammer and sickle over the Kremlin. As of January 1, 1992, the Union of Soviet Socialist Republics ceased to exist. The 15 Soviet republics were independent states. Officially, the Russia that emerged from the Soviet Union was the Russian Federation, with 21 “federated republics” of its own and with numerous additional ethnic-based territorial units. With almost twice the land area of the United States and a population of almost 150 million, Russia, even if in desperate economic straits, was still a significant world power.

The most pressing international concern was the nuclear weaponry of the former U.S.S.R. Yeltsin had worked out an agreement with the other former Soviet republics whereby Russia alone was to retain nuclear weapons. Although four-fifths of the nuclear weapons were located on Russian soil, nuclear arms were positioned in Ukraine, Kazakhstan, and Belarus. The United States mediated an agreement under which the three republics consented to dismantle their weapons in return for generous financial reimbursement. Russia for its part soon began the initial stage of dismantling its vast arsenal of strategic weapons in accordance with the arms reduction treaty that had been signed with the United States in 1991.

---

*Nuclear arms*

---

*Separatist pressures*

The new Russia, like the Soviet Union in its final stages, faced separatist threats. Several of its “federated republics” adopted their own constitutions, flags, and anthems and before long enjoyed considerable de facto independence from Moscow. Only in the southern Chechen Republic did the secessionist threat become reality, and before long Russia was involved in a brutal, draining war to prevent secession by Chechnya. Meanwhile 25 million Russians who had long made their home in other parts of the former Soviet Union came to be regarded in those places as foreigners and in some instances were treated with hostility.

In domestic affairs Yeltsin faced severe economic problems. He and his succession of prime ministers met with little success in making the transition to a market economy. In the first four years of Yeltsin’s presidency production declined, the ruble fell in value, and standards of living sank. Life at times seemed more trying for the average citizen than before the collapse of communism. The regional and local governments tended to ignore Moscow and even withheld tax collections. The erosion of government authority contributed to widening corruption and crime throughout the country.

Despite large infusions of capital from the United States and international lending agencies, the Russian economy and financial institutions remained in deep disorder. After temporizing at first, Yeltsin turned to a Western-oriented economist as his key adviser and economics minister in the belief that a swift transition to a market economy would be the

least painful course. From late 1991, a flood of decrees deregulated prices, ended or cut subsidies to state-owned industries, and moved forward with privatization. But most Russians suffered a serious decline in living standards by the spring of 1992 while privatization enriched others who bought into former state industries at bargain prices. An industrial and financial oligarchy of “robber barons” developed a system of crony capitalism; and a shadow economy run by mafia-type gangsters appeared on the borderlines of the legal system.

The failure of the economic program intensified Yeltsin’s struggle with the legislature, where a mixed group of Communists and nationalists rejected the austerity program and attacked the “elite theorists” who had allowed prices to rise. In the spring of 1993 a frustrated Yeltsin appealed to the country to support a new constitution that would provide for “a strong presidential republic.” That September Yeltsin dissolved the legislature and called for new elections as well as for a referendum on his proposed constitution. For two weeks the lawmakers, denouncing the dissolution as “a coup d’État,” refused to leave the parliament building. Demonstrators, incited by the legislative leaders, threatened insurrection. Yeltsin felt bound to act. On October 4 tanks fired on the building and set it ablaze. The legislators were evacuated and the leaders were arrested. Over 100 persons died in the confrontation and many more were injured. In point of fact, both sides shared in the blame for the conflict, but the violence showed that Russia was still going through its revolution!

---

*Yeltsin’s new  
constitution*

The new constitution, approved in December 1993, gave broad political authority to the president, including the right to dissolve the legislature. A popularly elected lower house, the State Duma, the old name deliberately chosen because of its pre-Soviet roots, replaced the former Congress of People’s Deputies. The elections to the new Duma proved a setback for the candidates of the reform parties, who had underestimated popular discontent. The Communist party and its political allies won a good share of the seats. The top popular vote winner, an ultranationalist, Vladimir Zhirinovskiy by name, spoke openly in inflammatory rhetoric of reuniting the old Russian empire and reviving Russia’s military might.

In a stinging rebuke to Yeltsin, the new Duma in one of its first acts voted amnesty to the legislative leaders arrested in October—and to the hard-line old-guard plotters against Gorbachev in the failed coup of August 1991. Lacking the necessary political support, Yeltsin’s ministers abandoned many of the economic reforms and restored government controls on wages, prices, and profits. Yeltsin himself as president now possessed greatly expanded executive powers but diminishing authority. He was showing physical and emotional strain. Erratic and impulsive, with worsening health problems and given to excessive drinking, he was frequently absent from his Kremlin office over the remaining years of his presidency, and at times vanished from public view.

---

*Yeltsin’s problems*

Meanwhile, Yeltsin’s political troubles continued in the Chechen Republic. Chechnya, in the oil-rich Caucasus, its population mostly Islamic, had a long tradition of rebellion and stubborn resistance to Russian domination. In 1991, as the Soviet Union was collapsing, the Chechens had demanded independence, or at least equal partnership with Russia. Militant guerrilla forces now proclaimed independence, but Russia was intent on retaining control of its southern borderlands and the links to central Asia as well as strategic oil resources and pipelines. The threat of a secessionist precedent for other federal republics was also an ongoing concern.

RUSSIAN FEDERATION IN 2000

The map shows the territories of the Russian Federation, the largest and most important of the republics to emerge from the breakup of the former Soviet Union (U.S.S.R.) in 1991. The hatched lines indicate the lands of the other former Soviet republics, which are clustered to the south and west of the Russian Federation. The Federation itself consists of some 21 “federated units,” including Chechnya, where the Russians have waged a military campaign to suppress a Chechen independence movement. The vast lands of the Russian Federation make it territorially the largest nation in the world. Much of this land is sparsely populated, however, and Russia’s population has been declining. The Federation’s 144 million people ranked eighth on the list of the world’s most populous nations in 2005.

Chechnya invaded

For three years Yeltsin did nothing except to support covert efforts to overthrow the rebel regime. Suddenly, toward the end of 1994, at the urging of his entourage who saw an opportunity to make political capital out of a quick victory, Yeltsin gave orders to invade Chechnya. In a grievous failure of military intelligence the invasion led to disastrous results. For close to two years the Russian army sank into a frustrating guerrilla war for which its poorly trained conscript army was ill-prepared and ill-equipped. When the army failed to take the capital city of Grozny, the military resorted to air bombing and rockets, killing thousands of civilians. In April 1996 Yeltsin, admitting that the military action in Chechnya was “the greatest mistake” of his first four years as president, withdrew the army. Chechen cities, towns, and villages had been destroyed and some 20,000 to 40,000 of Russia’s Chechen citizens had

The Russian military campaign to suppress a secessionist movement in the Republic of Chechnya during the 1990s led to a difficult war against Chechen guerilla forces. The Russian army eventually regained control of Chechen towns and the capital city of Grozny, but only after bombardments had killed thousands of civilians and forced people such as this woman in Grozny to flee from their homes and bombed-out neighborhoods.

(Thomas Dworzak/Magnum Photos)

been killed. The war was widely criticized at home and abroad, and the Chechen independence struggle was not yet over.

In the presidential elections of June 1996 Yeltsin, agile politician that he was, won reelection but only after he was forced into a run-off with the Communist party's candidate. The Chechen war cost Yeltsin some support, but the weak state of the economy was his most serious handicap. The economic stagnation and draining budgetary deficits continued well into Yeltsin's second term. In March 1998 Yeltsin appointed a cabinet of young reformers who in turn met with opposition. Economic difficulties assumed enormous proportions: a deep slide in the ruble, currency devaluation, and default in payments on the country's foreign debt. The International Monetary Fund (IMF) and Western banks stepped in to prevent utter bankruptcy.

The deteriorating economy brought further political instability. Yeltsin made a whole series of short-lived cabinet appointments and changed his prime minister five times in 18 months. Finally, in August 1999, he appointed as his prime minister Vladimir V. Putin, a former intelligence operative who had been stationed in East Germany and then served as head of the domestic security agency, the reorganized KGB. It was transparent that Yeltsin was choosing his successor to run in the presidential elections in 2000.

---

*Putin chosen as  
successor*

Suddenly trouble broke out anew in Chechnya. Chechen guerrillas crossed over into the neighboring republic of Dagestan in an unsuccessful effort to agitate for support. In the

fall of 1999 mysterious explosions in Moscow and nearby cities took the lives of some 300 civilians. Prime Minister Putin at once blamed the explosions on Chechen terrorists and the government proceeded to take drastic military measures. Intent on avoiding the costly Russian mistakes of the earlier war, the army launched large-scale air and artillery attacks on the Chechen cities and countryside. The results for the Chechen population were deadly, with a minimal loss of Russian troops. Over 4,000 deaths were reported and over 200,000 refugees were forced to flee their homes. The Chechen capital was destroyed. The United States and its allies condemned the Russian response, but the government's aggressive action was popular in Russia and Putin's decisiveness enhanced his political stature.

On the last day of December 1999 Yeltsin dramatically announced his resignation and, in accordance with the constitution, appointed Putin acting president. The date of the presidential elections was advanced by three months. Yeltsin had found his successor. In the elections that followed in the spring of 2000 Putin readily won election.

Yeltsin left a mixed record. He had not been a pioneering champion of reform in the U.S.S.R. as Gorbachev had been in 1985, but once ousted from the inner circles of the party he allied himself with the reformers. He was the first democratically elected president of the Russian republic while it was still part of the U.S.S.R., and he supported the independence movements of the other Soviet republics. He rallied the population to reject the hard-liners' coup against Gorbachev and became a chief architect of the Soviet Union's dissolution. His efforts to introduce Western-style market reforms met with only limited success. He had supported the disastrous intervention in Chechnya in 1994–1996, which exposed the incompetence of the army and alienated international opinion, and the renewed assault on Chechnya a few years later. In his second term it seemed possible that reforms might turn the economy around, but within two years his economic program was in shambles. Yeltsin enjoyed the trappings of power, but he was uninterested in the details of government. Power in the country had shifted to a group of industrial tycoons allied with a coterie of Kremlin insiders. His two terms as president disappointed his Western sympathizers and democratic reformers within Russia as well. Yet he left the country with a constitutional system intact, and the way was still open for democracy to take root.

---

*An ambiguous legacy*

Yeltsin's historical legacy would depend in part on the policies and democratic commitments of his successor. Putin's newfound reputation was based largely on his vigorous prosecution of the war in Chechnya. Yet he knew how to pledge commitment to democracy, pay his respect to the reformers of the 1980s, and hail the protection of private property as one of the "hallmarks of civilization." To some, however, his proclaimed dedication to a "strong state" aroused concerns, and Putin's governing methods seemed to become more authoritarian over the course of his first term and after he won reelection to the presidency in 2004. Responding in part to the continuing problem of Chechen terrorism (which included shocking terrorist attacks on a large Moscow theater and a public school in a small town), Putin promoted the centralization of state power and suppressed his opponents in the government, in the media, and in elite business circles. In international affairs, Putin sought to shape a more independent and assertive Russian foreign policy, openly opposing American military intervention in Iraq in 2003 and steadily improving relations with China. A gradually strengthening Russian economy enabled Putin to develop a more forceful assertion of Russia's international interests, but the nation's future role in the evolving global economy and international political order remained uncertain.

Almost two decades after the collapse of the Soviet Union, the old Leninist-Stalinist communism was gone. No one expected Russia to return to a command economy and the

2000–2001	Slobodan Milosevic is forced out of power in Serbia and sent to stand trial at the war crimes tribunal in the Hague

---

rigidities of central planning or to put together the pieces of the old Russian empire of the tsars or the Soviets. Although Putin’s critics complained about growing threats to democratic political institutions, Russia had a constitution, civil rights, freedom of religion, and free, contested elections. That more was not accomplished in Russian economic and political life after the disappearance of the Soviet Union had to be balanced against the seven decades of twentieth-century dictatorship.

### *The Resurgence of Nationalism: the Breakup of Yugoslavia*

Of all the explosive issues that confronted Europe after the downfall of communism in 1989, ethnic nationalism proved the most intractable. Nationalist passions resurfaced after a long period of political suppression during the decades of Communist rule. Czechoslovakia, as we have seen, divided peacefully in 1993 in response to Slovak pressures. But in Yugoslavia, the large multiethnic, multinational federation that had been created at Versailles in 1919, politically ambitious leaders stirred up old national and even religious tensions which tore the state apart and confronted Europe and the international community with violence, armed combat, atrocities, floods of refugees, and civilian suffering not seen in Europe since the Second World War.

---

*Political leaders and  
historical animosities*

What happened in Yugoslavia was deeply rooted in historical animosities that were awakened and exploited for selfish political purposes by nationalist political leaders in the wake of communism's collapse in eastern Europe. To go back in time, the Balkan peninsula had been conquered by the Ottoman Turks in the fourteenth century. Serbia, once a powerful medieval kingdom attached to the Eastern Orthodox church, fell under Ottoman rule in 1389 and remained under Turkish rule for close to 500 years. In 1878 it broke away from the decaying Ottoman Empire and with the backing of the European Great Powers regained its status as an independent kingdom. Its neighbors Croatia and Slovenia had also been ruled by the Ottomans, but Croatia and Slovenia rejoined the Austrian Habsburg empire in the late seventeenth century and reaffirmed their ties with Roman Catholicism and central Europe. Bosnia (more precisely Bosnia and Herzegovina) long had a mixed population of Serbs, Croats, and Muslims; many Bosnians of Slavic blood in the long years of Turkish rule had adopted Islam. It too was freed from Ottoman rule in 1878 but was taken over by the Habsburg empire.

When both the Austrian and Ottoman empires collapsed at the end of the First World War, Serbia together with other South Slav nationalists in 1918 proclaimed a "Kingdom of the Serbs, Croats, and Slovenes." At the Paris Peace Conference in 1919 it was permitted also to annex Bosnia, Montenegro (also ethnically Serb), and other formerly Ottoman territories. All were now joined together under the Serb monarchy in a large multinational federation. For many years the nationalities held together in a somewhat uneasy alliance under a kind of royal dictatorship. In 1929 King Alexander in a symbolic effort at achieving greater unity changed the country's name to Yugoslavia (or South Slav state). Croat separatism remained alive and a Croat nationalist assassinated King Alexander in 1934. Yet many people spoke of themselves as Yugoslavs and regarded Belgrade as their capital, and the outside world accepted a Yugoslav national identity.

During the Second World War, after the Nazis invaded Yugoslavia in 1941, the internal tensions in the Serb-dominated country reemerged. Croatia proclaimed its independence and for a time was governed as a separate Nazi puppet state. A Croat fascist organization, the Ustachi, collaborated with the Nazis in rounding up and brutally mistreating Serbs, Jews, and others. For the country as a whole the Yugoslav military resistance to Hitler turned divisive and eventually evolved into a civil war between the royalist (mostly Serb) army and guerrilla forces (mainly non-Serb) led by the prewar Communist leader Marshal Tito. By his greater effectiveness against the Nazis, Tito won the support of Churchill and Roosevelt and then triumphed in the civil war.

---

*Marshal Tito*

After its wartime ordeal, with some 2 million of its people dead, Yugoslavia emerged in the postwar years under a Communist regime headed by Tito, who soon broke with Moscow. In 1946 he set up a federal republic with six component "republics" (Serbia, Croatia, Slovenia, Bosnia, Montenegro, and Macedonia), along with two "autonomous provinces," one of which was Kosovo. Although himself a Croat, he suppressed all separatist movements with an iron hand, but allowed each of the republics a degree of autonomy. In Bosnia he recognized the Bosnian Muslims as a distinct "national group" and gave them equal status with the Serbs and Croats. So long as Tito lived, Yugoslavia retained its national unity and identity. It was when he died in 1980 that latent separatist movements reemerged. His successors in the next several years, who had to struggle with a troubled economy also, tried various solutions, including a rotating federal presidency, but with little success. When in

### NATIONALITIES IN CENTRAL AND EASTERN EUROPE

The map shows national boundaries and the location of various peoples at the end of the twentieth century. East Germany has been reunited with the rest of Germany. Czechoslovakia has broken into the Czech Republic and Slovakia. The state of Yugoslavia has lost control over Slovenia, Croatia, Bosnia, and Macedonia, all of which are now independent nations. Yugoslavia consists now of only Serbia and Montenegro. A numerous Serbian population remains in Bosnian territory, along with Croats and a large number of Slavic-speaking Muslims. The population in Macedonia includes many Albanians. The region of Kosovo, though officially part of Serbia, has a preponderantly Albanian Muslim population; it remained under the control of NATO military forces after the Balkan war in 1999. There are many Hungarians in the countries that surround Hungary, and about 1 million Turks live in Bulgaria. Moldova has been an independent nation since 1991 (it was part of the Soviet Union from 1940 to 1991), but much of its population speaks Romanian. Although the region's diverse ethnic groups have often lived together peacefully for long periods of their history, the modern nationalist emphasis on cultural differences and identities, at times inflamed by political leaders, has produced strong ethnic hostilities and recurring cycles of violence.

After the breakup of Yugoslavia in 1991, Serbs and Croats sought to create their own national enclaves in Bosnia by driving Bosnian Muslims from territories where they had lived for centuries. This violent process of “ethnic cleansing” led to Serbian massacres of Muslims in cities such as Srebrenica and Sarajevo, where these people were marking the graves of victims in a Muslim cemetery.  
(Abbas/Magnum Photos)

1989 communism collapsed all over eastern Europe, the regime in Yugoslavia collapsed as well. Yugoslavia’s reform Communists (now calling themselves Socialists) relaxed the party’s authoritarian grip on the country, faced up to its nationalities problem, and held open elections on the country’s future. Only Serbia and Montenegro (the two Serb states were always closely allied) voted to maintain the federal republic. Croatia, Slovenia, Macedonia, and Bosnia all voted for parties committed to independence.

Former Communist leaders, like Slobodan Milosevic in Serbia and Franjo Tudjman in Croatia, seeing power slip away, placed themselves at the head of nationalist crusades. Milosevic, the Serbian president, rallied Serbs in Bosnia, Croatia, and Slovenia to fight to remain under Serb control whenever secession took place. His fiery speeches and tactics backfired. Alarmed by Serb militancy, Croatia and Slovenia each held a referendum and in 1991 proclaimed its independence. They received immediate recognition from the international community, which was persuaded that prompt recognition would forestall Serb military action.

In Bosnia, the situation was even more complicated. The Serbs and Croats together comprised over half the population, but the Muslims, as the largest single national group, dominated the government; over the opposition of the Serb and Croat representatives, the Muslim nationalist leaders declared Bosnia’s independence. The secession of Croatia, Slovenia, and Bosnia and their immediate international recognition infuriated Milosevic,

Nationalist secessions

who now governed the former Yugoslavia as a rump state consisting of only Serbia and Montenegro.

Open warfare broke out in mid-1991. Local Serb paramilitary forces, reinforced by army units from Belgrade, proceeded to carve out enclaves in the secessionist states, where Serbs lived in significant numbers, and to drive out non-Serbs. In the fighting in Croatia and Slovenia Serb forces continued to seize territory until a temporary cease-fire was arranged.

Tudjman meanwhile goaded the Croat nationalists into action. The worst violence occurred when both Serbs and Croats attempted to create enclaves for themselves in Bosnia. For years the mixed population there, despite ethnic and religious differences, had lived peacefully side by side and had even intermarried. In the war that ensued, the Serb military forces brutalized the Muslim population. The barbaric deeds, labeled "ethnic cleansing," included large-scale expulsions, wholesale civilian slaughter, pillage, and rape. A prolonged siege of Sarajevo took place. At Srebrenica in eastern Bosnia Serb militia executed some 8,000 Muslim men and buried them in mass graves. A shocked world could scarcely believe such events were occurring in civilized Europe in the closing decade of the twentieth century.

But the international community could not agree on measures to cope with the situation. United Nations contingents were unable even to deliver food and medical supplies. Given the historical complexity of the Balkans and the memories of earlier ferocious conflicts, neither the European powers, which might have been expected to take the lead, nor the United States would intervene with any meaningful show of force. The Security Council, however, imposed economic sanctions against the former Yugoslavia (which, as we have seen, consisted now of only Serbia and its historical ally, Montenegro), embargoed the shipment of arms, and made plans for war crimes trials at The Hague.

In 1994, to end the siege of Sarajevo, the United Nations, the United States, and the North Atlantic Treaty Organization (NATO) mediated a cease-fire and threatened air strikes if it were violated. For Bosnia a partial diplomatic settlement was negotiated. Croats and Muslims agreed to create a Croat-Muslim federation in what remained of Bosnian territory after the Serb conquests. The Serbs now occupied two-thirds of Bosnia and one-third of Croatia, with no intention of surrendering their gains. By 1994, 200,000 people were dead or missing, mostly in the fighting in Bosnia since 1991; there were about 4.4 million displaced persons. And still the fighting went on. In 1995 the Croatian army repulsed the Serb military and recovered most of the territory it had lost to the Serbs four years earlier. The Croats undertook their own "ethnic cleansing" program, expelling over 200,000 Serbs. In Bosnia the Serb offensive failed as well. Finally, in 1996, Serbia agreed to terms mediated by the United States at a meeting in Dayton, Ohio, accepting the new boundaries of Croatia and Bosnia and agreeing that UN peacekeepers would supervise the settlement in Bosnia.

---

*UN and U.S.  
mediation*

An additional source of trouble soon developed, this time within Serbia itself in its province of Kosovo, where a growing separatist movement alarmed the Serbs. As early as 1989 Milosevic, as part of his initial pro-Serb agitation throughout Yugoslavia, had rescinded the province's autonomy. Ethnic Albanians, Muslim in religion, had long lived in Kosovo; through immigration from Albania and with large families, they had grown in such numbers that they now made up 90 percent of the population of two million. The Kosovars, as they were known, considered themselves related in religion, language, and culture to fellow Albanians in Albania. The Serbs were especially concerned because they

themselves viewed Kosovo as a kind of holy land, where their ancestors had fought and lost the famous battle of Kosovo in 1389 to the Ottoman Turks.

The separatist movement grew at first under moderate leadership, but the Kosovars soon turned to their small but militant liberation army. In 1998 Milosevic launched a military offensive aimed at wiping out the Kosovar forces. Serb military and police units blasted villages and towns to root out the rebels, killing civilian men, women, and children as well. International efforts to mediate failed. In 1998 the United States and NATO, acting not only because of the egregious human rights violations but because of the threat to the stability of the wider Balkan region, warned Milosevic that it would not allow the Serbs to do in Kosovo what they done in Bosnia a few years earlier. Milosevic nonetheless continued the wholesale Serb offensive, with mandates for “ethnic cleansing” that seemed intended to destroy the Kosovars or drive them into exile. By that time over 800,000 Kosovars had been forced to flee; at least 10,000 were dead.

---

*Kosovar separatism  
repressed*

In March 1999 NATO, for the first time in its 50-year history, undertook a military offensive, launching large-scale air attacks against Serbia. The bombing, led by the United States, continued for 78 days with severe damage in Belgrade and elsewhere before Milosevic yielded. It was, to be sure, an attack upon a sovereign European state not charged with external aggression, and it seemed to violate a fundamental principle of national sovereignty. But the egregious abuses by Serbia and the violations of human rights against its own citizens were viewed as illegal, murderous actions that required and justified what President Clinton described as “humanitarian intervention.” New international law was being made. The United States and its European allies were compensating for the failure of the international community to act against the mass killings in Bosnia (and in Rwanda) a few years earlier.

---

*The NATO air  
offensive*

The refusal of the American leadership in the bombing offensive to commit ground troops, as some of its NATO allies urged, or even to announce it as an option, may have prolonged the bombing, but made it easier for the American president to retain political support at home. In the end Milosevic had to yield, but a Russian-backed UN Security Council resolution confirmed Yugoslav sovereignty over Kosovo even if Milosevic had to accept 50,000 armed NATO troops as peacekeepers there.

That summer Kosovars returned under international protection. The UN forces faced the difficult task of relief and reconstruction and of providing security for both Kosovars and Serbs. The indictment of Milosevic as a war criminal by the international court at The Hague and his international isolation added to his unpopularity, but he did not give up power until he unexpectedly lost an election in the fall of 2000 and was forced to resign after massive demonstrations demanded the recognition of his opponent, a respected law professor who had kept aloof from the regime. Vojislav Kostunica took office with broad popular and international support, but he faced enormous economic problems as well as the unsettled future of Kosovo. Under international pressure, Milosevic was handed over in 2001 to the war crimes tribunal to face trial at The Hague, where his trial did not begin until 2005. Meanwhile, the Serbian political situation remained unsettled as die-hard nationalists continued to oppose those who favored closer economic and political relations with western Europe. The twentieth-century name, Yugoslavia, was no longer used after Serbia and Montenegro created a new federation in 2003; and by 2005 a new president was struggling to introduce reforms in the country’s economic and political institutions. Tensions continued in Kosovo, which remained under UN administration.

---

*Milosevic ousted*

Economic sanctions, military setbacks, and Serbia's isolation from other European societies helped fuel the growing opposition to Serbian president Slobodan Milosevic. This crowd in the streets of Belgrade was part of a massive protest movement that demanded Milosevic's resignation after he lost an election in the fall of 2000. The protests forced Milosevic to accept the electoral victory of his opponent, Vojislav Kostunica, thus demonstrating again the important influence of popular mobilization in the former Communist states of central and eastern Europe.

(Spasa Dakic/Sipa Press)

### *Central and Eastern Europe after 1989*

But we must return to central and eastern Europe, where developments took place more peacefully than in Yugoslavia. Following the revolutionary changes of 1989, Europe was no longer divided into East and West. The former Communist nations were moving toward democracy, the rule of law, and a free economy. But as in Russia, law and government had fallen into disrepute during the more than four decades of Soviet control; crime, corruption, and cynicism toward authority had become a method of survival. The success in open elections of former Communists, who had helped reconstruct their parties under various names and with varying degrees of reform, resulted from the hard times associated with the traumas of transition; but the new reform Communists, it must be said, learned to live and work with the democratic parties. Virtually every country in the former Soviet bloc for a time had either a head of state or head of government who had once been a Communist political leader. Poland in 1993 had its first ex-Communist prime minister and in 1995 an ex-Communist president. Many of the post-Communist societies experienced a repetition of the greed and rapaciousness of early Western capitalism. As in Russia, the former ruling and managerial elites profited personally from the newly privatized state industries, accumulating economic power and wealth.

---

*The 1989 revolution  
assessed*

Some observers judged the “revolution” of 1989 harshly, arguing that despite its significance in overthrowing a failed system and casting off foreign domination, the new regimes were bent mainly on emulating the material successes of the West. The goal of a democratic, civil society to supplement the organized state seemed to have faded. Party politics and party maneuvering became the rule. Because the revolution was peaceful, some speculated, a revolutionary catharsis may have been missing.

---

*Confronting the past*

Yet there was a partial effort to reckon with the past. The former German Democratic Republic conducted trials and purges and opened the files of the East German secret security police (the Stasi), dramatically revealing wide networks of informers. The Czechs tried to ban men and women accused of serving as informers or collaborators from participation in political life for stipulated time periods, but that led to abuses and was abandoned. The Poles at first sought to draw a “thick line,” as they described it, between past and present, but then they too conducted purges and opened police files. Some said the Europeans might have benefited from “truth commissions,” as in Latin America or South Africa before which past offenders against human rights could come forward to admit their misdeeds without necessarily expecting forgiveness.

Poland, Hungary, and the Czech Republic took the lead in the transition to democratic freedoms, market economies, the rule of law, and pluralist societies, closely followed by the three Baltic states, Estonia, Latvia, and Lithuania. They all looked forward to admission to the European Union, which would eventually take place in 2004. From 1995 on economies in central and eastern Europe were growing. The most prosperous countries were those that adopted the most drastic economic measures, even though the initial social consequences at the time were painful. Poland was the best example of a country that benefited from such “shock therapy” and from the mid-1990s enjoyed a vigorous expanding economy. Despite persistent problems, the overall economic balance sheets showed progress throughout central and eastern Europe. The revolutionary upheavals of 1989 and their aftermath would long be remembered as the final events in the Cold War of the second half of the twentieth century, which now gave way to the conflicts of a new era.

## THE CHANGING MODERN WORLD

- 129. Western Europe  
after the Cold War
- 130. Nation-States and  
Economies in the Age  
of Globalization
- 131. Intellectual and  
Social Transitions  
in Modern Cultures
- 132. International Conflict in  
the Twenty-First Century
- 133. Social Challenges in  
the Twenty-First Century

*The demise of Soviet-style Communist regimes in Europe after 1989–1991 suggested to some observers that the history of the modern world would henceforth evolve in only one direction. All modern societies, according to such theorists, were in fact already moving on their own erratic paths toward a universal system of liberal democracies and free market economies. But it soon became evident that this imagined “end of history” was by no means the only direction in which history could evolve. New movements arose to challenge the global capitalist economy, the ascendancy of Western political theories, the secularism of modern cultures, and the powerful influence of the United States—which had emerged from the Cold War as the world’s sole superpower.*

There were new and continuing conflicts among competing religious or ethnic groups and among nations that competed for power and commercial advantages in the global economy. Warfare itself changed when militant, extremist groups increasingly dramatized their grievances or waged violent political campaigns through the indiscriminate tactics of terrorist bombings. Facing such opponents, the most powerful national governments found that traditional methods of international warfare—invasions, the surrender of enemy governments, military occupations—could no longer achieve the decisive political and military closure that modern nation-states expected to reach at the end of their wars.

No sooner had the Cold War receded into historical memory than global struggles over natural resources, economic interests, and cultural values began to shape a new series of international conflicts and wars. By the early twenty-first century, the United States and some other Western nations had become deeply involved in the long-simmering conflicts of the Middle East, preoccupied by the dangers of terrorism, and entangled in protracted military campaigns against Islamic groups in Afghanistan and Iraq. The much-anticipated

post-Cold War “peace dividend” disappeared almost immediately in a new cycle of military interventions, shadowy intelligence operations, and deadly terrorist attacks.

Amid these cycles of violence and conflict, however, the deeper historical patterns of human migration, global economic exchange, technological innovation, transnational cultural interaction, and changing social mores continued to appear in all regions of the world. Computer technologies and communications systems now moved information around the globe with instantaneous speed; a global “culture industry” spread the same music, films, foods, and fashions throughout the world; evolving conceptions of knowledge and scientific research reshaped intellectual debates as well as artistic creativity; and new opportunities for the education, professional careers, and social and political rights of women continued to expand in almost every modern nation. The pace of change seemed to be increasing in all spheres of modern life, creating a “global village” that was both united and divided by the processes of contemporary globalization.

## 129. WESTERN EUROPE AFTER THE COLD WAR

### *Economic and Political Uncertainties in the New International Context*

It was generally expected that the nations of central and eastern Europe would at first suffer in the post-Communist transition to democracies and market economies. What was unanticipated was the burden of economic and political troubles that western Europe found itself confronting. Buoyant and self-confident because of continuing prosperity during the 1950s and 1960s, the people of western Europe were first jolted by the recession of the 1970s that combined economic stagnation with inflation. By the mid-1980s the European democracies had recovered, although with lower growth rates than in the past and with discomfiting levels of unemployment.

---

Costs of German  
reunification

In Germany the economic situation after 1989 was complicated by the reunification with East Germany. The steep costs of absorbing East Germany's decayed economy and the decision to convert the East German mark on an equal basis with the West German made inflation a threat. To combat it the German Bundesbank kept interest rates high. But tight money

choked off credit and investment when downturns occurred as in the early 1990s, delaying economic recovery for itself and its European neighbors and leading to currency devaluations and instability. The German economy remained sluggish long after political unification was completed.

Despite recovery, many West Europeans had remained unemployed. By the early 1990s unemployment rose to postwar highs. For the members of the European Union the unemployment figure approached 19 million, or more than 12 percent of the workforce. Long-term unemployment became a recognized phenomenon, as well as the disconcerting corollary that many workers would never again be employed at their old skills. Young people especially were hurt by shrinking job prospects.

---

Persistent  
unemployment

The Europeans slowly came to realize what had only been suspected in the earlier recession, that the problem of unemployment was not temporary, limited to the business cycle, but was deep-seated and structural. High labor costs that included generous welfare-state benefits for unemployment, disability, retirement, and extended paid vacations undercut western Europe's ability to compete globally. Many corporations, like their American counterparts, began to restructure, sharply reducing employment rolls and introducing other economies. Ameri-

can and European multinational corporations shifted manufacturing operations to developing countries in Asia and other parts of the world where labor costs and benefits were lower. For the first time in the years since 1945 the West European nations, echoing the British example under the Thatcher government, took steps to roll back the welfare state as it had evolved by consensus since the end of the Second World War.

### *Western Europe: Political Crises and Discontents*

There was widespread dissatisfaction with the governing political parties of the center and center-left, which were judged to have held office too long and seemed incapable of providing fresh vision for the future. Shocking revelations of scandal and corruption tarnished the Christian Democratic and Socialist parties in several major countries.

The rising dissatisfaction with European political cultures could perhaps be seen most clearly in Italy, where anger against the governing elite became symptomatic of the wider European response to political cronyism. For years the Christian Democrats had dominated the political scene, forming successive coalition governments, with the Right in the 1950s and with the Socialists and other parties in the 1960s. By the 1970s in the midst of economic setbacks their popular support shrank rapidly. In the 1980s the Socialists replaced them, heading a cabinet for a record four years. Meanwhile the country's second strongest party, the Italian Communist party, which had earlier demonstrated its independence from Moscow, was excluded from government at the national level but won numerous mayoralties and control of municipal councils. In 1989, with the collapse of communism and end of the Cold War, the party renamed itself the Democratic Party of the Left and began a new quest for participation in the national government.

---

---

*Italy's Christian Democrats*

Over the years the Christian Democrats had kept a tight grip on power and patronage and maintained close ties both to state-owned enterprises and private business. In good part because the Christian Democrats projected themselves as Italy's defenders against communism they were shielded from scrutiny or criticism. But in the early 1990s evidence surfaced of bribes, kickbacks, and payoffs for government contracts up to the highest political levels. There had been illegal payments to the political parties and even widespread collusion with organized crime. Former prime ministers, cabinet ministers, and parliamentary deputies of all political parties as well as top business executives were implicated. So tainted was the Christian Democratic party that it returned to an earlier name for itself, the Popular Party. The aroused electorate in 1993 approved a new electoral system, one feature of which was to abandon proportional representation.

In the elections in 1994 both the former Christian Democratic party and the Socialist party were routed. Three new parties won and formed a Center-Right coalition. But the new parties inspired little confidence and their political leaders were unable to provide stability or serve as civic models. All the governments inherited public deficits, economic slowdown, unemployment, social tensions, and the continuing corruption inquiries. In 1998 the Popular Party joined with the Democratic Party of the Left to form a cabinet, and Massimo d'Alema, the head of the former Communist party, became prime minister. The reconstructed Communists were committed to financial stability, private enterprise, and economic growth as the best means of advancing social needs. But this cabinet lasted only briefly. In 2001 the conservative media magnate Silvio Berlusconi headed a coalition that won the elections; its Center-Right majority promised stability but also aroused misgivings about the ambitious

---

*New parties*

The populations of all modern nations have become increasingly diverse as immigrants and mobile workers stream across national borders in search of better jobs, education, cultural freedom, and basic human rights. These children at a primary school in contemporary London exemplify the diverse racial, ethnic, and cultural backgrounds of the people who now live in contemporary multicultural nations. Immigration is constantly changing the workforce, schools, food, music, and neighborhoods of modern cities; it also at times provokes anti-immigrant political movements and affects the political culture of every nation.

(© Christine Osborne/Corbis)

prime minister and his assertive *Forza Italia* party (the name itself derived from the championship soccer team that he owned). Berlusconi nevertheless remained in office longer than most of his predecessors. Fending off charges of corruption and criticism of his support for the U.S.-led invasion of Iraq, he overcame losses in a number of elections and managed to retain power in the face of mounting domestic opposition. In 2005 he reintroduced proportional representation in order to divide his opponents.

### *Europe's Immigrants and Refugees*

We have already seen how the influx of millions of immigrants and refugees since the 1960s was altering the nature of European societies. In the 12 years from 1980 to 1992, 15 million new immigrants arrived to make their home in western Europe. Some sought political asylum, but mainly they came in search of wider economic opportunities than could be found in their own impoverished countries. They were usually willing to fill the lower-paid, less-desirable jobs that the Europeans did not want. When the Cold War ended and Communist barriers came down, a flood of refugees left eastern Europe, and additional refugees streamed in from war-torn Yugoslavia.

The steady flow of immigrants visibly changed the ethnic composition of Europe. In Germany Turkish workers settled in with their families as permanent residents; many reared their children as Muslims. In France in a population of 57 million in the mid-1990s, 4 million, or 7 percent, were foreign-born—mainly Arabs from North Africa and immigrants from other former French African colonies but also Vietnamese from Southeast Asia. In Britain, with a population of 56 million, at least 2.5 million could be counted as “ethnic minorities,” mainly from various parts of Asia, Africa, and the Caribbean. Nations that had long sent emigrants to all parts of the world now found themselves absorbing large new populations from abroad.

The xenophobic hostility which had manifested itself earlier in western Europe again flared up. In Germany there were physical assaults on Turks, firebombings, and other acts of violence. Neo-Nazis in Germany, “skinheads” in Britain (who dated from the 1950s), neo-Fascists in Italy, and followers in France of Jean-Marie Le Pen’s National Front agitated the immigrant issue and even resorted to racist violence. Governments adopted laws to reduce or eliminate further immigration. Germany in 1993 repealed a constitutional provision that had offered asylum to “all persecuted on political grounds,” but it became virtually impossible to distinguish between political and economic refugees. France moved toward “near-zero” immigration and abandoned a tradition going back to the Revolution of granting citizenship to any child born on French soil. Unemployment and troubled economies made the social tensions potentially explosive and fed prejudices of all kinds, including anti-Semitism. But western Europe was only one outpost of a global crisis of refugees and migrants on the move.

Western Europe seemed to be settling into an era of persistent gloom, pessimism, and political frustration during the early 1990s. The end of the Cold War had not automatically ushered in peace, prosperity, and harmony. Unemployment, especially for the young, marred the economic scene. In the euphoria following the collapse of communism, few had anticipated the resurgence of the explosive nationalism that brought bloodshed to the Balkans. Western Europe, for all its announced commitment to democratic institutions and for all its military strength, feared the entanglements of intervention so much that until the American-led air offensive in Kosovo it refrained from decisive action. On the political scene conservative and centrist political leaders offered few new initiatives, and the Left seemed in disarray. On the other hand, many still believed, or hoped, that western Europe would reach out to central and eastern Europe, continue to work toward a united Europe, and reassume a central role in the world’s economy and international affairs. But even the most optimistic Europeans increasingly recognized that the pursuit of such goals would require bold new economic or political initiatives.

## 130. NATION-STATES AND ECONOMIES IN THE AGE OF GLOBALIZATION

### *Economic Recovery and a “Third Way” in Politics*

In the 1990s the American President Bill Clinton set the tone for a new type of democratic politics. Taking his lead from Republican pro-business policies, Clinton promoted a program that favored economic growth and productivity but combined it with such social issues as health care and education and concern for the disadvantaged and minorities. He was favored by an upturn in the business cycle. In 1992, the American economy began to

embark on a peacetime expansion that exceeded the previous nine-year record of the 1960s. Unemployment dropped to an all-time low, trade and production expanded, the stock market rose to unprecedented heights. The economy benefited from earlier corporate cost-cutting and restructuring as well as from the emergence and growth of the revolutionary new computer industries and information economy. Before long the global economy, buoyed by American prosperity, followed suit despite financial crises in Asia, Latin America, and elsewhere. Clinton also pursued an activist foreign policy, especially in the Arab-Israeli conflict in the Middle East. His second term as president was marred, however, when his denial of sexual indiscretions with a young woman intern led to a vote of impeachment by the House of Representatives; the Senate after a trial came short of the two-thirds vote needed for his removal from office.

Clinton found a kindred political spirit in the buoyant British Labour Party leader

---

*Clinton and Blair*

Tony Blair, who also adopted many conservative pro-business policies. Blair persuaded his party to abandon what still remained of its earlier socialist and welfare-state platform. Neutralizing the party's older trade union and left-wing bastions, he projected an image of the party as "New Labour." The best prescription for prosperity was to encourage economic growth and industry but without satisfying "pure selfish individualism" or neglecting social needs, which he accused Thatcher and the Conservative party of doing. A market economy and private enterprise would unleash productive forces that would benefit everyone. After four Conservative electoral victories since 1979 and 18 years of Conservative leadership, the country gave the Labour Party in 1997 its largest margin of victory since 1945.

As in the United States, the economy turned upward in Britain. Blair's political strength and popularity also enabled him to institute a number of constitutional changes. The United Kingdom had long had a highly centralized government, with all power emanating from the Westminster Parliament in London. The Labour party with its large majority in the House of Commons took unprecedented steps toward a devolution of power to a new parliament in Scotland, where the reform was intended to defuse a strong separatist movement, and to a new legislative assembly in Wales. Each gained broad jurisdiction over its internal affairs. Voters in Scotland for the first time since the Act of Union of 1707 went to the polls to elect their own parliament, and in Wales voters elected an assembly for the first time ever. Critics saw the devolution of authority as the "undoing of Britain" and an erosion of parliamentary sovereignty. Others recognized that stability did not necessarily mean resistance to change. No one wished to repeat the mistakes of earlier years when Britain's resistance to home rule for Ireland had led to continuing violence, partition, and prolonged strife.

In Northern Ireland matters seemed to be taking a more peaceful turn.

---

*The settlement in Northern Ireland*

The Protestant and Catholic parties reached an agreement in 1998, moving to end a violent conflict that over the past 30 years had cost the lives of over 3,000 people. The new arrangements authorized a legislative council of representatives from Britain, Northern Ireland, and the Republic of Ireland, and a sharing of power in a joint cabinet. Northern Ireland thus gained a new opportunity for self-government, but the introduction of the new self-governing institutions was delayed when the Irish Republican Army (IRA) and other paramilitary groups resisted calls for complete disarmament. By 2005, however, the IRA had in fact given up its weapons, and there was reason to believe that the long, violent conflict between Catholics and Protestants might finally be giving way to a more peaceful era in Northern Ireland's politics and society.

In another momentous break with tradition a reform bill in 1998 stripped the hereditary peers in the House of Lords of their parliamentary seats. The hereditary seats, it was

widely recognized, represented a political anachronism, untenable in a contemporary democracy. A reorganized House of Lords would consist only of lifetime peers. Many in Britain were opposed, but others placed the reform in the established tradition of broadening the suffrage and other democratic innovations.

In Germany and in France political leaders also represented the new politics of the Left and Left-Center. In Germany the Social Democratic Chancellor, Gerhard Schröder, replaced Helmut Kohl in 1998 after the Christian Democratic chancellor's 16 years in office. Schröder, whose party's moderate wing had triumphed over its more radical elements, was committed to curbing the generous provisions of the postwar welfare state, which had driven up labor costs and made it difficult to hire new workers. He too spoke of his program as a "middle way," and—despite the problem of chronic unemployment—the Social Democrats held on to power in the elections of 2002. Subsequent elections in 2005, however, failed to produce a clear majority for either of the major German parties, and a coalition government emerged after extended negotiations. Angela Merkel, the leader of the Christian Democrats, became not only Germany's first woman chancellor but also the first chancellor to reach that office from the former East Germany. Half of the cabinet ministries went to Social Democrats, however, creating an unusual Left-Right collaboration.

---

Schröder

In France Daniel Jospin, a long-time moderate Socialist leader who hoped to continue President Mitterrand's reformist policies, became prime minister in 1997. Two years earlier he had lost the presidential elections to his conservative Gaullist opponent Jacques Chirac, but the Socialists soon won a majority in the legislature; under the now established practice of "cohabitation" the president appointed Jospin prime minister. Jospin, though still resolutely committed to a large role for government on social issues, believed in moderation and pragmatism, favored a market economy and moved forward with the privatization of state-owned industries. The constitution meanwhile was amended to curtail the powerful role of the Gaullist-inspired French presidency by reducing the term of office from seven to five years. The Socialist party was now so fragmented, because of its dissatisfaction with Jospin, that in the 2002 presidential election it could not muster enough votes for Jospin even to remain a candidate in the second round of the election. It was the extremist right-wing candidate Jean-Marie Le Pen who faced Chirac. Leftist and other voters, to their consternation, had to rally to Chirac, who easily won reelection.

---

Jospin

Despite such setbacks in various national elections, the political leaders who advocated a "middle" or "third" way between conservatism and welfare-state socialism continued to promote a moderate reform agenda in the early twenty-first century. Although they insisted that governments should play an active role in dealing with social and economic problems, they also called for reduced public spending, budget balancing, limits on regulation, and a climate of opportunity for business enterprise. Pragmatism and moderation seemed to be triumphant over older socialist views and the welfare-state ideology that had prevailed in the years after the Second World War.

### *Japan in the 1990s*

The 1990s were an economic and political watershed for Japan. Its economy had expanded almost uninterrupted since the postwar years. In the 1970s and 1980s capital investment in industry, and especially in advanced technology, grew at times at twice the rate of American and West European investment. But in the summer of 1991 Japan suffered a severe financial crisis and sank into a deep and stubborn recession.

---

*The price of speculation*

The downturn signaled a problem that was more than a swing in the business cycle. The country was paying the price for years of uncontrolled speculation at home and abroad. Investors, including the largely unregulated banks, had made risky forays into real estate and financial markets. Government control over monetary policy had been lax. A very rapid rise in the price of stocks and real estate had created a “bubble economy,” not unlike the economy of the 1920s in the United States that had led to the Great Depression. When the price bubble burst in 1991, Japan suffered bank failures and bankruptcies, and as the downturn continued, the government unsuccessfully tried to revive the economy with belated and ineffective fiscal and monetary policies. Japan’s export economy added to its difficulties. Over the years the country had exported freely while sharply restricting imports, and other nations finally rebelled. New low-cost competition was now invading Japan’s own markets. Japan also was forced to deal with social pressures. Although wages, educational opportunities, and living standards remained high, housing was scarce and expensive and the country’s infrastructure suffered from neglect.

In the midst of its economic troubles a political crisis, unprecedented in the years since the Second World War, shook the country. Cumulative evidence mounted of bribery, corruption, and ties to organized crime among high-ranking political and business leaders. In 1993 the Liberal Democratic party, which had dominated political life and served as the political pillar of Japan’s prosperity and stability, for the first time lost its parliamentary majority in the Diet and fell from office. New faces and new parties emerged to replace the old guard, even though the country’s bureaucracy remained entrenched. The recession dragged on and currency and financial crises in much of Asia in 1998 set recovery back, but the economy showed signs of renewed growth by the middle of the following decade. Unemployment began to decline, stock prices rose again, and industrial investments steadily increased. The crisis and prolonged recession had transformed the country, but Japan was not to be counted out as one of the world’s leading political and economic powers. Efforts at political reform stimulated a reexamination of the past and aroused hopes for a revived economy, a more democratic future, and a more flexible society. But in the early twenty-first century Japan had somewhat faded as the model of postwar industrial and financial success and served instead as a cautionary example of a “bubble economy” that had burst.

### *The European Union: Widening and Deepening*

By the opening of the twenty-first century European integration had made remarkable progress since six West-European nations had created the Common Market in the 1950s. The European Economic Community, established in 1957, became the European Community in 1965, and it in turn became the European Union (EU) under the Treaty of Maastricht signed in 1991. Having grown to 25 member nations after 2004 (with more countries seeking to join), the EU was an economic superpower. It had become the world’s largest single economic market with over 440 million people, closely bound together in non-economic ways as well.

---

*A common currency*

As agreed under the Maastricht treaty, the EU embarked in the 1990s on one of its most ambitious enterprises, the voluntary adoption of a common currency. Twelve EU nations began to use the new “euro” in 2002 for financial transactions and the cash payments of daily life, replacing such historic national currencies as the franc, the mark, and the lira. The euro’s value fluctuated in

global financial markets, but it quickly became a major international currency and competed strongly against the American dollar. Three EU members—Britain, Sweden, and Denmark—chose not to adopt the euro, and the ten new states that joined the EU in 2004 remained outside the euro currency zone, pending further internal economic reforms. In another unprecedented step a European Central Bank was established in Frankfurt with the authority to set monetary policy for the member countries. The effects of this monetary policy on each country's social and economic policies became a new controversial issue in European politics as the various national economies came under a more centralized system of monetary management.

Meanwhile the requirements for admission to the European Union remained firmly attached to liberal political and economic models. An applicant nation had to demonstrate its commitment to "liberty, democracy, respect for human rights and fundamental freedoms, and the rule of law." A functioning free market economy was also required. In contrast to its slow expansion earlier, the EU now welcomed all European nations meeting its specifications, and it was also considering the possible admission of Turkey.

The EU was also "deepening" in additional ways. The Maastricht treaty had called for the continued development of common foreign and defense policies. The failure of the Europeans to prevent or halt the bloody events in Bosnia or in Rwanda in the early 1990s and the later failure to thwart Serbia's assault on Kosovo had embarrassed the Europeans. In June 1999 the EU foreign ministers resolved to develop a capacity for collective military action of their own. The EU began to move toward creating an armed force supplementary to but not supplanting NATO. The Atlantic alliance would remain firm, but a new "European Defense Agency" came into full operation after 2005. The new military cooperation signaled Europe's intention to end its long-term dependence on the United States and to reject the status of "an American protectorate." These developments both pleased and disturbed American policy makers who wanted Europe to play an independent role, especially in European matters, but did not wish to see resources drained off from NATO.

---

*Common foreign and  
defense policies*

The EU political and bureaucratic structures did not change as rapidly as the evolving economic or defense policies. The European Commission, with an extensive civil service bureaucracy in Brussels, served as its executive and administrative branch and had the right to initiate proposals for legislation. The European Parliament, elected by a European-wide electorate, supervised the budget and debated Commission proposals. This representative body never aroused much enthusiasm, and voter turnout in the member nations at election time remained low. Although the heads of government held regularly scheduled meetings, the foreign ministers of the member-nations meeting as a council convened frequently to discuss and vote on matters of common interest. The meetings of this council provided an opportunity for the EU to take positions on international issues that extended well beyond Europe itself. It had not been anticipated that the ministers would evolve into the chief policy-making body, but in some ways it tied the EU to democratic support in a way that the European Commission had failed to do.

The early impetus for supranationalism in the Union faded, but what remained was the close cooperation of the ministers representing the member-states, discussing and making decisions on the basis of a half-century of common values and experience and a large body of jurisprudence and legal principles under the jurisdiction of the Union's Court of Justice. Each nation saw its stability, prosperity, and security enhanced by membership in the Union and recognized that the loss of sovereignty had been less than feared.

---

*Cooperation or  
supranationalism?*

---

*Opposition to EU  
Constitution*

But there was strong opposition to a proposed EU constitution that would have created the framework for a more coherent, integrated political union. Although some countries supported the proposed constitution, voters in France and the Netherlands rejected the proposal in 2005, throwing open the whole question of how the EU might proceed with further integration. Many Europeans favored the proposed constitution, particularly for its broad guarantees of social and economic rights and entitlements, but many others expressed concern about perceived threats to European living standards and social values or to specific national interests—especially after the major expansion of the EU membership in 2004. The European Union was therefore not likely to develop in the near future as its more visionary advocates had anticipated, even if in its present form it had become an unprecedented example of economic and political cooperation that fundamentally altered Europe. After centuries of European warfare, the continent had reached a historical turning point in which war between the leading European powers seemed unimaginable.

French-German cooperation, which had been the original driving force behind the success of European integration, still remained crucial. Many people in both countries looked forward to an even closer French-German alliance, partly to give leadership to the newer EU members from Eastern Europe and partly to offset British influence. No one could predict, however, the future evolution of an enlarged and still growing European Union that could be seen as a potential alternative or even rival to the global political and economic power of the United States. In Europe the older strategic threat from the Soviet Union was gone, but many Europeans now saw a threat to the European way of life in American-led “globalization,” which Europeans criticized as a worship of mass consumerism and a materialistic abandonment of social and cultural values. To Europeans, even among admirers of American accomplishments, the EU provided an essential balance to American hegemony in world affairs.

American-led  
globalization*

### *The “New Economy”: The 1990s and Beyond*

The global economy that reemerged after the Second World War seemed to enter a new phase in the 1990s. Globalization was the key word. It meant the more rapid and efficient movement of capital and technology worldwide across all geographical and political boundaries. The United States took the lead in globalization and in the development of what came to be known as the “new economy,” but large multinational corporations of other nations also had operations in all regions of the world.

---

*An information  
economy*

The new economy was an information economy. At its base was the computer revolution and the Internet, a word scarcely known at the decade’s beginning. By the late 1990s it was in everyone’s vocabulary, and at the disposal of tens of millions in offices and homes worldwide. It provided instant access to information of all kinds. It was as if a new industrial revolution was setting in and at an accelerated speed exceeding all previous industrial changes. Trade expanded. The flow of private investment capital from the industrial nations to the developing countries quickened. Living standards in many parts of the world rose, all tied to growing trade and investment. Globalization, driven by the profit motive, arguably held greater potential for Third World countries than foreign aid or loans from governments and international agencies.

The United States was the driving force in the new global economy. The American economy began an initial period of quiet growth and expansion in 1982. The inflation of

The European Union fostered political cooperation as well as close economic collaboration among its member nations. This picture shows the president of the European Commission addressing members of the European Parliament in Brussels—the city that served as headquarters for the European Commission’s civil service bureaucracy and as the site for regular meetings of the European Union’s foreign ministers. (Associated Press, AP)

This office of International Business Machines stands near a mosque in Istanbul, Turkey, suggesting a cultural and economic juxtaposition of the new and the old that also often appears beside Gothic cathedrals in Europe and Buddhist temples in Thailand—wherever modern technologies enter into long-established societies. The international economy now depends upon computers and digital information systems that link East and West as well as the newest and oldest forms of human cultural expression.

(Courtesy of IBM Archives, Somers, New York)

the 1970s had been brought under control by high interest rates imposed by the Federal Reserve Board, the nation's politically independent central bank, which continued its periodic interventions to adjust to economic changes. There were setbacks and brief recessions, but by 1992 the economy began a period of uninterrupted growth. Unemployment declined to 4 percent, the lowest since the 1960s. Government revenues were available for many purposes, and some were used to reduce the national debt. American productivity, aided by computer technology, rose. Inflation with respect to consumer prices, although not for equities and real estate values, was kept in check. Consumer confidence and purchases, buoyed by the rising values of stocks and homes and the availability of credit, remained high. The long boom finally stalled in the early years of the new century when both the stock market and the rate of economic growth began to decline. By that time, however, the country had experienced the longest period of uninterrupted economic expansion in its history.

---

*Troubled areas*

But there were troubled areas elsewhere in the industrial world. Japan, still suffering from a long severe recession after its financial collapse in 1989, only began to recover at the end of the 1990s; and there were continuing crises in Russia's unsettled economy, including the drastic devaluation of the ruble in 1998. Especially serious were currency and financial crises in 1997–1998 in several of the hitherto golden economies of Asia. The troubles there began with a loss of confidence and collapse of the currency in Thailand and led to a withdrawal of foreign investment that sent currencies tumbling in Malaysia, South Korea, Indonesia, Hong Kong, and Singapore—the very countries that had helped create the “Asian miracle.” Speculation in real estate and equities in these countries had gone wild. Imprudent business practices came home to roost.

---

*Japan's difficulties*

Responding to Asia's economic problems, the IMF made multibillion-dollar loans but imposed austerity measures that brought social hardships and contributed to new tensions and difficult adjustments within various Asian nations. Many workers feared that the economic opportunities of globalization would be offset by the continuing quest for cheap labor or by a breakdown in the services or assistance available for the poorest social classes. To enhance competitive power in the global marketplace large corporations in the United States, Europe, and Asia were turning to low-wage labor in poorer countries and buying other companies to become even larger, within and across national lines. Multinational corporations grew in numbers and size everywhere, and there seemed to be little concern over foreign companies' taking over domestic corporations. London regained much of its financial prestige and strength as the financial center for European mergers and amalgamations, which accelerated as never before.

---

*The computer technology revolution*

As the American stock market boomed in the 1990s and new computer technology companies soared in value, some observers recalled the prosperity and speculative excesses of the 1920s and the American stock market crash in October 1929. Despite warnings from some quarters against “irrational exuberance,” stock values kept climbing. Some also saw warnings in the collapse of the Japanese bubble after 1989. Still others recalled past speculative fever and manias in history: tulips in the seventeenth century; colonization schemes in the eighteenth; canals, railroads, gold, and silver in the nineteenth.

The computer revolution and the emergence of the new computer technology companies created a new economy in many ways. They helped the economy to grow through greater productivity and helped fuel the rising

prices in global stock markets. Computer wizards as well as brokers, financial executives, and entrepreneurs of all kinds became wealthy, often at an early age. Inventions in makeshift garage workplaces by hitherto obscure individuals, backed by venture capital, led to the establishment of multibillion-dollar corporations. The president of Microsoft, Bill Gates, became the richest man in the world, counting a fortune in the billions.

The new global economy generated unprecedented wealth, but the vast system of industrial production and financial exchange was also vulnerable to regional economic crises or political upheavals, all of which could now affect economies around the world. Optimistic economists responded to the Cassandras who worried about a future financial “crash” by arguing that this was a “new economy” and that market prices would be sustained on a new high plateau. But some economists had made somewhat similar predictions in 1929. There were indeed grounds for believing that the market did reflect profound changes in the American and global economy closely related to increased productivity, but there were warning signs in the early years of the new century that speculative fever had gone too far. Shock waves reverberated throughout the economy when high-technology computer stocks, which had risen in price all out of proportion to their earnings, lost much of their value in the early years of the new century, and real estate values began to soften.

The two most important developments in the computer revolution of the 1990s were the Internet and the World Wide Web. The Internet began from modest beginnings in the late 1960s in the United States as a government-sponsored project to enhance communications. Computer scientists around the world enlarged its scope and made it easier for individuals and companies to utilize in their daily work. The World Wide Web was first developed in 1980 at a nuclear physics research center near Geneva when the young English physicist Tim Berners-Lee developed a program to process information through electronic associations and linkages. For a time it remained neglected, but by 1990 he and others had revived and perfected it. By means of the Internet, the World Wide Web became a mass medium navigated by hundreds of millions around the world every day, and its users continued to multiply. It revolutionized communications; people could send electronic mail to each other, negotiate financial transactions, make purchases, tap all kinds of sources for information and education, and use the Web for entertainment as well. Many compared the significance of the new computer technology to the invention of the printing press in the fifteenth century. So rapidly was the new technology developing in speed, efficiency, and versatility that new, more powerful computer models became available almost immediately after earlier ones had first come into use.

---

---

*The Internet*

Nearly half of the world's Internet users at the beginning of the new century were to be found in the United States, and English became the dominant language of the Internet. Some Europeans and Asians expressed concern that the Internet represented not only an immense step toward globalization but also toward Americanization. However, global competition continued. A Finnish company held the lead in the cellular phone market, computer specialists developed innovative software programs in India, and companies in Taiwan manufactured many of the most advanced computer chips. But a serious gap opened up meanwhile between those who had the opportunity and means to avail themselves of the new computer technology and those who did not. A “digital divide” emerged both within countries and between the wealthy and poorer countries of the world.

Many raised questions about the spectacular American economy of the 1990s and its impact on American society. The economic boom seemed to have left those at the bottom

The computer revolution of the 1990s transformed modern culture and education as well as the management of government and economic institutions. These students at a university computer center were working in what had become a “virtual library” for the distribution of knowledge, information, opinion and entertainment in the contemporary world.

---

*Gap between rich and poor*

of the economic ladder falling behind. The gap between rich and poor was widening. In the years from 1988 to 1998 the income of the wealthiest fifth of American families rose by 15 percent as against less than 1 percent for the poorest fifth. The incomes of the poor and of many working-class and middle-class families fell or stagnated even when entire families worked. The gap grew wider between those who could save, invest, and build more wealth and those who could not. More Americans were living below the poverty line in 1999 than in 1969, and the economic gap between the rich and poor continued to grow in the first decade of the new century. Lack of opportunity for education and training in the new skills presented a new kind of challenge for the poor and for workers whose jobs disappeared in the global quest for lower-cost labor.

The worldwide faith in the market and market forces presented other challenges as well. Faith in a kind of oversimplified laissez-faire market economy spread globally, a kind of “market fundamentalism,” not unlike a religious faith. The invisible hand would make it all right for everyone in the end, its supporters said, and a rising tide would lift all boats. Globalization and the world’s market economy, its advocates claimed, made intervention by governments unnecessary. The argument found critics everywhere. In France, where unemployment was high, some argued that it was immoral for corporations to earn large profits while at the same time laying off workers in what were described as “abusive job cuts.”

Meanwhile the growth in world commerce led to the creation in 1994 of a more formal World Trade Organization (WTO) to replace the General Agreement on Tariffs and Trade (GATT) in effect since 1948. GATT had been immensely successful in lowering tariffs and enlarging world trade through informal bargaining procedures and agreements. By 1986 it had grown to include 92 nations. In 1995 the United States succeeded in creating a permanent, more formal organization. The WTO was authorized to draw up and oversee agreements, enforce trade rules, and settle disputes. It grew to 150 participants by 2005 but at its first new-style open bargaining sessions in Seattle, it met with opposition and demonstrations in the streets, as would soon become the pattern at subsequent meetings elsewhere. The negotiated free trade agreements, the critics protested, paid little attention to environmental and labor conditions, or even to the widespread exploitation of child labor in large parts of the developing world. The developing nations, for their part, saw themselves at risk of losing out on cheaper labor costs, one of their chief competitive advantages; and they pointedly underscored the large share of ecological damage for which the industrial nations were responsible. Subsidies to agriculture in wealthier countries placed the less industrial nations, dependent on either the export or import of food, at a disadvantage. Critics of the new international trade system rejected arguments for free trade as a means of enhancing living standards for all. The violence of the popular protests offended many, but they aroused new sensitivities to social issues worldwide.

---

*The founding of the  
WTO*

Globalization, already visible in earlier periods of the world's history, and especially so in the nineteenth and twentieth centuries, seemed to be the defining social and economic theme for the new century. National boundaries, though not disappearing, were increasingly transcended by cross-boundary transactions and global exchanges in the world of communications, industry, culture, travel, food, popular entertainment, even apparel. To some, globalization was still thought of as "Westernization" or "Americanization." By the early twenty-first century, however, it defined only the latest phase of modernization, shared by many more of the world's people than ever before. The giant multinational corporations, no longer exclusively European or American but home-based in nations all over the world, depended as never before on the movement of capital, goods, trained personnel, technology, and ideas that flowed across traditional national boundaries.

*Critics of  
globalization*

## 131. INTELLECTUAL AND SOCIAL TRANSITIONS IN MODERN CULTURES

Intellectual and cultural life does not usually evolve through the dramatic public events or conflicts that reshape politics or economic relations. Yet the transitions in modern intellectual life and social mores have transformed modern history during all the years of international conflict and revolutionary change that we have discussed. People define themselves and their cultures in activities that go far beyond politics and economics. They constantly develop new forms of knowledge, philosophy, religious belief, creative art, and social life, all of which both influence and respond to the transformations of the modern world. Although much of twentieth-century culture had its origins in the years 1871 to 1914, science, philosophy, the arts, and religion crossed new frontiers or took new directions over the course of the twentieth century and set the stage for the new century. Even to single out a few of these developments will suggest the vast changes of the contemporary era.

One sign of globalization—or what some critics have called “Westernization”—is the growing popularity of similar foods and consumer products in different societies and national cultures. This Chinese child is enjoying a famous American beverage as he sits on the Great Wall of China. Most of the present wall dates from the seventeenth century, but some parts were built 2,000 years ago to protect Chinese culture from the foreign intrusions of that day. Although such walls no longer impede the flow of cultures, fashions, or products across national borders, different societies still find distinctive ways to use the consumer goods and ideas that reach them through the global economy.

(Andanson James/Corbis Sygma)

### *The Advance of Science and Technology*

Science and technology expanded rapidly in the half-century before the First World War, but the pace quickened in the following years. Scientific discovery advanced more rapidly in the years after 1919 than in all previous human history. For one thing, more scientists were at work. At the opening of the twentieth century, about 15,000 scientists were exploring scientific problems; in the latter half of the century, over a half-million scientists were engaged in research, more than in all previous centuries combined. Over 85 percent of all scientists who have ever lived are at work in our own age.

---

#### *Medicine and public health*

The average person experienced the triumphs of science most dramatically in medicine and public health. Nothing in previous medical discovery could equal the contributions of sulfa drugs, antibiotics, cortisone, and other substances used to combat formerly crippling or deadly diseases, including pneumonia and tuberculosis; hormones, adrenaline, and insulin were also available to promote health or relieve suffering. Vaccines combated a number of dread diseases, including, after 1955, poliomyelitis; by 1975 smallpox had been all but eradicated worldwide. Remarkable accomplishments in surgery included the transplanting of vital organs. Apart from the advances in medical science, people benefited from modern

technology in almost every aspect of their daily lives. For entertainment, radio and the motion picture were available and, after the Second World War, television. Washing machines, freezers, frozen foods, and microwave ovens lightened household duties. After 1947 airplanes could fly faster than the speed of sound; giant aircraft could traverse huge distances in a few hours; tourist travel to distant parts of the earth became commonplace. A world of electronics, robotics, rocketry, and space technology opened. Many people came to believe that technological solutions could be found for every problem.

It was therefore a shattering experience when the fatal disease AIDS (Acquired Immuno-Deficiency Syndrome) appeared in the early 1980s and by the 1990s was assuming global epidemic proportions. The first case was reported in the United States in mid-1981, but the disease seems to have originated earlier and elsewhere. Deaths from the disease mounted, and it was estimated that tens of millions had the disease or were infected with HIV, the human immunodeficiency virus that caused it. While medical scientists worked in the early twenty-first century to devise a preventive vaccine or to prolong the lives of its victims, educational efforts to stop its spread focused on sexual practices, intravenous drug use, and the protection of blood supplies. Uncertainty and anguish increased as time went by without a cure for what loomed as the greatest threat since the Black Death of the fourteenth century. Meanwhile, the threat of other pandemics also emerged in the new century, including a new avian or “bird” flu that began to spread in Asia and appeared to resemble the flu virus that had caused the deadly worldwide pandemic of 1918.

### *Nuclear Physics*

In pure, or theoretical, science the transformation of physics in the twentieth century could be compared only to the scientific revolution of the sixteenth and seventeenth centuries. Early in the twentieth century scientists had discovered the natural radioactivity of certain elements, physicists like Max Planck and Albert Einstein had developed quantum physics and relativity theory, and Einstein had propounded his now famous formula for the conversion of mass into energy ( $E = mc^2$ ). After 1919 a series of discoveries led to a deeper understanding of the atom. The cyclotron, developed by British scientists in 1932 at Cambridge University, made it possible to penetrate or “bombard” the nucleus of the atom at high speed. The nucleus, scientists learned, consisted not only of protons but of other particles like neutrons as well. In 1938 the German chemist Otto Hahn discovered that when he bombarded the atomic nucleus of the heavy radioactive element uranium with neutrons, it became unstable and split into two, which meant that energy trapped within the atom could be released. Additional scientists, including Lise Meitner, a German-Jewish scientist who had been forced to flee Nazi Germany, helped to expand upon these findings. In 1939 Nils Bohr, a Danish physicist, brought word of these developments to American scientists.

The implications of this breakthrough in theoretical science were clear. If the atoms in a large amount of uranium were split in a chain reaction, enormous amounts of energy would be released. In the troubled atmosphere of 1939 the possibility arose of its use for military purposes. When the war came, scientists in the United States, including Einstein, who had fled the Nazis in 1934, prevailed upon the American government to explore its military use before the Germans succeeded in doing so. In 1942 American and British scientists and European refugee scientists like the Italian Enrico Fermi brought about the first sustained nuclear chain reaction. This in turn led to the secret preparation of the atomic bomb at Los

---

*The first atomic bomb*

Alamos, New Mexico and to its use by the United States against Japan at Hiroshima and Nagasaki in August 1945.

After the war even more staggering technical developments followed. The hydrogen or thermonuclear bomb was built independently by the Americans and by the Soviets in 1952–1953; it involved nuclear fusion, or the joining together of hydrogen and other elements at great heat, using the atomic or fission bomb as a detonator with a stupendous chain reaction. Such thermonuclear fusion is responsible for the energy of the sun itself.

The first use of nuclear energy was therefore for military purposes, but it held constructive peacetime potential; a tiny grain of uranium (or plutonium, another radioactive element) could produce power equal to almost three tons of coal. By the 1990s over 15 percent of the world's electricity was generated by nuclear power plants; in France, over 65 percent. At the same time the awesome explosive powers unleashed by the scientists and the dangers of radioactivity were alarming. Accidents in nuclear power plants threatened the surrounding population and environs with the release of radioactive gases; nor could nuclear meltdowns be ruled out. Popular opposition to the building of nuclear power plants grew, as did concern over their proper design and the disposition of nuclear waste.

---

*The nuclear danger*

In military affairs a true nuclear clash of arms could mean apocalypse. Scientists such as Robert Oppenheimer who had helped to develop the first atomic bomb believed it to be so awesome a weapon as to make its future use unthinkable and in that way bar future major wars. In part they were correct; a balance of terror emerged so that over the years since August 1945 no nuclear weapon has been used in warfare. But nuclear bombs became part of the world's arsenal, an ever-present threat to human life and to the planet itself.

In later years scientists used linear accelerators like the cyclotron and even more powerful colliders and supercolliders as atom smashers to explore the nature of the atom and the behavior of its subatomic particles. Theoretical physicists continued to advance complex new concepts such as string theory and thus persisted in their search for an overarching theory that would explain the interrelationship of gravity, electromagnetism, and nuclear force, all of which were to be found in the subatomic world and in the cosmos as a whole.

### *Social Implications of Science and Technology*

As in the case of nuclear physics, science in the contemporary age was closely allied with technology and the organized effort to exploit new scientific findings. Government and industry subsidized most scientific research. Laboratory equipment was expensive, and complex investigation required large-scale collaborative efforts; the solitary scientific investigator virtually disappeared. The subsidization of research for national purposes raised fears that scientific discoveries might serve political goals rather than meet pressing social or human needs.

Science had always affected the way people thought about themselves and their universe. The Copernican revolution had removed the earth from its central position in the scheme of things; Darwinian evolution had demonstrated that *Homo sapiens* was biologically a species that had evolved and survived. The philosophical implications of contemporary physics were only vaguely understood, yet they reinforced theories of relativism in all spheres. Ironically, at the very time that the average person was awed by the capabilities of science, scientists themselves recognized that they did not possess a magic key to the nature of things. Generally they claimed no more than the ability to determine, or guess

at, relationships, which in the world of the atom (as in the cosmos itself) remained mysterious and uncertain.

Some thoughtful persons questioned scientific and technological advance and asked whether modern technology had grown beyond human control. Ecologists pointed to the wastage and despoliation of natural resources and the threat to the environment. In another way the life-preserving features of medicine and public health could result in overpopulation and in perhaps unmanageable pressure upon the limited resources of the globe. The techniques developed to save or prolong human life also raised ethical and legal issues, including new definitions of life and death, and the rights in such matters of patients, families, hospitals, and physicians. Questions arose over test-tube fertilization and other forms of artificial conception made possible in the late 1970s, and later over stem-cell research using human embryos. Those who condemned modern technology extolled the virtues of a prescientific and preindustrial age; others called for sharper awareness of how scientific advances posed new dangers or new ethical dilemmas. In an age of destructive weaponry and threats to the environment, no longer was the advance of science and technology unequivocally equated with the idea of progress.

---

*Questioning scientific  
advances*

Meanwhile, in the quest to understand nature the old divisions between the sciences broke down and new sciences appeared. Biochemistry, cell and molecular biology, biophysics, astrophysics, geophysics, and other subdisciplines arose; and all made intensive use of mathematics. In biology genetics made striking advances. While physicists discovered new atomic particles, biochemists isolated the organic substance found in the genes of all living cells, the chemical carriers of all hereditary characteristics. When scientists deciphered the genetic “code” and synthesized the basic substance of heredity (DNA), it became possible by splicing genes to alter the characteristics of plant and animal species and to clone or reproduce in the laboratory an animal such as a frog or a sheep with desired hereditary characteristics. The implications for the possibility of even human cloning at some future date were staggering. Meanwhile biotechnologists were revolutionizing food production by genetically engineering new varieties of crops, which provoked strong objections in various quarters. Medical scientists could also hope to conquer inherited diseases, a goal that moved closer to reality when researchers announced in 2000 that they had decoded the human genome—the more than 3 billion chemical units of DNA that control the human body and also contribute to genetic-based illnesses.

The other life sciences and social sciences also grew in importance. Psychological exploration of human behavior, as well as the treatment of mental and emotional disorders through psychiatry and psychoanalysis, expanded rapidly. Freud, who had first developed his theories of psychoanalysis before 1914, became more widely known in the 1920s. His emphasis on the human sex drive and sexual repression was later much modified. Many students of human behavior argued that his contributions were not universally or scientifically valid but reflected the values of pre-1914, middle-class, male-dominated Viennese society. A variety of schools emerged with different interpretations and techniques, and drugs were developed to treat psychological depression and other mental illnesses. But the search, initiated by Freud, for the unconscious sources of individual and collective human conduct remained a hallmark of contemporary thought and culture.

---

*Impact of Freud*

Anthropologists and other social scientists increasingly stressed the relativism of all culture. They denied notions of cultural superiority or hierarchies of cultural values, or even that there were objective criteria of historical progress. If Western society, they noted,

made notable progress in science and technology, other cultures accomplished more in self-discipline, individual integrity, and human happiness. The adjective “primitive,” as opposed to “civilized,” tended to disappear, and a cultural humanism emerged that recognized and esteemed values distinct from the Western tradition.

### Space Exploration

#### U.S.-Soviet competition

Among the most dramatic developments in science and technology in the second half of the twentieth century was space exploration. In the 1950s the Soviets and the Americans competed with each other as part of the Cold War; each made important advances in rocket research. Both the U.S. and the U.S.S.R. mastered multistage rocket launching. The Soviets opened the space age when in 1957 they launched *Sputnik*, the world’s first artificial satellite; in 1961 they sent the first human, Yuri A. Gagarin, in orbital flight around the earth. The Americans sent their own astronauts into space in 1961 and 1962. In the 1960s both countries launched unmanned automated spaceships to probe and explore the moon and then the planets of the solar system and their satellites. Early in the 1960s President Kennedy pledged that Americans would land on the moon before the end of the decade. In 1969 three American astronauts, as planned in Project Apollo, made the quarter-million-mile journey to the moon, and millions of viewers around the globe watched on television as Neil Armstrong took his first steps on the moon. The Americans made five additional trips to the moon over the next three years. Automated robot spaceships were launched in the 1960s and later on long journeys to explore the planets of the solar system. The American spaceships approached or orbited the planets and soft-landed instrument packages, which over a period of years sent back a rich harvest of data, providing more knowledge than ever before possessed about the nature and origins of the planets and the earth itself. The later space probes explored the more distant planets. *Voyager 2*, launched in 1977, traveling close to 4.5 billion miles over 12 years’ time, reached the outermost planets before flying into interstellar space. In 1990 the United States placed in orbit the Hubble space telescope, capable of seeing light years away into distant galaxies and reporting back its findings.

The Soviets also conducted impressive space probes to the moon, to Mars, and to Halley’s comet, whose behavior had been predicted in the seventeenth century and which once again returned close enough for observation in 1986. The Soviets also built a permanent space station and set records in testing human endurance in weightless space.

As time went on, Cold War rivalries played less of a role in space exploration, but military objectives were never completely absent. The U.S. and U.S.S.R., and later other countries, launched spy satellites for reconnaissance and information gathering. The United States initiated research in the 1980s into an enormously costly strategic defense initiative that would deploy laserlike weapons in outer space (hence called “Star Wars”) as a defensive shield against nuclear missile attacks. The project was abandoned in 1990 but was revived again in the following decade, with ardent champions and equally vehement critics.

#### International cooperation

In the 1980s space enterprise showed promise of international cooperation and was no longer confined to the military superpowers. France, Japan, China, and other countries became spacefaring nations, planning and launching satellites and space probes of their own. The European Space Agency carried out its own operations. A multinational human expedition to Mars sometime in the

Exploration of outer space marked an important new phase in the modern search for knowledge about the Earth and other planets of the solar system. In contrast to earlier explorations such as the European voyages to the New World, millions of people were watching on television when the first human beings walked on the surface of the moon. The American astronaut Neil Armstrong took this picture of Edward E. Aldrin, Jr., as the two men made one of their “moonwalks” in July 1969. Although this dramatic event was a famous milestone in the history of human exploration, later space programs focused principally on unmanned space exploration and on orbiting space stations.

(NASA)

twenty-first century was discussed. After the Cold War the Americans and the Russians began to cooperate in space, most notably in the development and joint use of a Russian-built space station. On the other hand, the need for human expeditions came under serious scrutiny. Dismayed by the human cost of deadly accidents (including the disintegration of the American space shuttle *Columbia* as it reentered the earth's atmosphere after a flight in 2003), some critics contended that unmanned space flights might accomplish more, at less cost, and at less risk to human life. Many objected to the enormous expense of space exploration when acute social needs at home remained unfulfilled. But its champions defended it as part of the continuing human effort to cross new frontiers, expand horizons, and explore the unknown. The twentieth century may ultimately be remembered, apart from the destructiveness of its terrible wars, as the century in which humans first set foot on the moon, and with robot spaceships devised and guided by human intelligence, began to explore the universe.

### *Philosophy: Existentialism in the Postwar Years*

In the early years after the Second World War, a new group of philosophers in Europe and North America developed a loosely organized body of ideas called “existentialism.” The existentialists formed no one school of thought and held no coherent body of principles. There were religious and atheist existentialists. Yet all held some beliefs and attitudes in common. All reflected a troubled civilization, a world disturbed by war and oppression, a

civilization of material progress and moral uncertainty in which the individual could be crushed by the very triumphs of science and technology, and in which human life itself seemed to have lost higher purpose or inherent meaning.

Existentialist thought owed a debt to Pascal, Nietzsche, and others who had underscored the tragic element in human existence and the limitations on the power of human reason. More directly it owed a debt to Søren Kierkegaard, the nineteenth-century Danish religious philosopher. But it was French writers, and especially Jean-Paul Sartre, who after the Second World War developed existentialist thought in literature and philosophy in a form that for a time gave it a wide popular following. In a hostile world, the existentialists contended, human beings

---

Jean-Paul Sartre

had to make choices and commitments on their own. They were “condemned to be free” and were alone responsible for the choices and actions that defined their very existence; for most existentialists, the nature of a human being’s existence was defined by what he or she did rather than by some deeper spiritual essence. Authentic existentialists therefore had to move beyond philosophical contemplation and take action in the world, even though they were aware that human action might fail to change the world. Albert Camus, influenced by the existentialists, drew upon the myth of Sisyphus, who was condemned continuously to roll his stone uphill, though it always rolled back down again. The very humanity of Sisyphus grew out of courage and perseverance at a hopeless and absurd task. Existentialism emphasized the anguish of human existence, the frailty of human reason, the fragility of human institutions, and the need to reassert and redefine human freedom. Although its popular following waned and Sartre himself was dislodged from his earlier lofty eminence, existentialism never completely disappeared from contemporary philosophy or religion.

### *Philosophy: Logic and Language, Literary Criticism, History*

Professional philosophy in the twentieth century seemed to contribute less to an understanding of contemporary problems than in the past. Always concerned with the origins and nature of knowledge, it had also shared an interest in metaphysics and ethics. In the early twentieth century it became highly analytical, focusing especially on the limits and criteria of knowledge. In the formal study of logic, mathematical symbols replaced the use of traditional language. On the eve of the First World War Bertrand Russell and Alfred North Whitehead had explored logic and mathematics in their monumental *Principia Mathematica*. In the 1920s an influential group of philosophers and mathematicians in Vienna, among them Ludwig Wittgenstein, sought to introduce the methodology and precision of mathematics into the study of philosophy as a whole, in what they called logical positivism. They rejected the ambiguities of language used in traditional speculation on morals and values, turning away from the nondemonstrable—that is, “God, death, what is higher,” in Wittgenstein’s phrase. The Vienna group disintegrated in the 1930s, but logical positivism remained influential. Most professional philosophers continued to emphasize scientific rigor and linguistic analysis. A smaller but growing number, responsive to contemporary ethical concerns, devoted themselves to unresolved human and social dilemmas.

New studies in philosophy, linguistic analysis, and semiotics (that is, the study of signs and symbols in communication) drew attention to the complex relation between language and reality. Philosophers also challenged many of the dualisms taken for granted in Western thought. In literary studies “deconstruction” theory emerged after the 1960s to offer new methods of analysis and criticism. Its

---

Deconstruction

proponents sought to analyze, or “deconstruct,” a body of writing or “text” (which could be a painting or other kind of cultural object as well) to examine its implicit cultural assumptions and its indebtedness to its cultural traditions. No single valid meaning was to be attached to any individual work. According to its advocates, deconstruction made it possible to reveal the philosophical, class, racial, ethnocentric, or sexual assumptions hidden in the language of a work. It also contested older hierarchical standards of literary quality, blurred distinctions between elite and popular culture, made less of a dichotomy between fact and fiction (and other dualisms), and broadened the existing canon of writings studied in literature, history, law, religion, and other disciplines.

The work of the critic was said to be as much a creative enterprise as literary or artistic creation itself. Propounded originally in the late 1960s in broad philosophical terms by the French philosopher Jacques Derrida, and developed further by other writers and scholars of various disciplines and nationalities, deconstruction won its largest following in the United States. Its opponents viewed it as abandoning traditional literary history and rejecting rational, critical standards that had shaped modern thought since the Enlightenment.

The writing of history also underwent a profound change. A group of French historical scholars (called the *Annales* school, from a journal with which they were associated) gained wide influence after the Second World War. They focused on long-term elements in historical change such as population, economy, climate, and natural resources; relegated politics to a lesser role; and avoided the traditional narrative of “events.” They studied also the lives of ordinary people in the past and tried to reconstruct the collective outlook of social classes. The newer social history in France, England, and the United States also paid special attention to the inarticulate and illiterate and to all those with strong oral traditions, such as the American slaves in the antebellum South, the English working classes, and the peoples of Africa, reconstructing their culture and lives despite scarce written sources. Another new emphasis greatly expanded the historical study of women from antiquity to the present, leading, among other results, to cultural and social reassessments of entire historical eras. A variety of social themes also received new historical attention: marriage, divorce, the family, childhood, sexuality, even insanity and death through the ages. For their part, many traditional historians who had not been wholly insensitive to these concerns widened their own narratives to include such social and cultural themes.

*New interests among historians*

### *The Creative Arts*

The revolution against older traditions in the creative arts assumed new dimensions. Ever since the Renaissance visual artists had followed certain norms of representation and space perspective. But much of twentieth-century art prided itself on being nonobjective; it rejected the idea of imitating or reconstructing nature, or mirroring it with realism or photographic fidelity. The artistic revolution inaugurated in France before 1914 accelerated in the interwar years and after 1945. It seemed to mirror the political turbulence of the times and the disillusionment with rationalism and optimism. It reflected the influence of Freudian and other schools of psychology and the emphasis on the unconscious and irrational, as well as the relativity of the new physics and its uncertainties about the nature of matter, space, and time.

Artists in the contemporary era continued the pre-1914 experimentation in color, form, and use of materials, but went well beyond, seeing the world around them in new

### INVASION OF THE NIGHT

By Roberto Sebastian Matta Echaurren (Chilean, lived in France, United States, Italy, 1911–2002 )

This work is an example of the modern trend toward abstract art, though it also shows the influence of European surrealism. Painted in New York in 1941 by a Chilean artist who worked in Europe during the 1930s and later lived mostly in Italy, this picture suggests the sense of dread or dislocation that creative artists often expressed during and after the Second World War. The figures in this painting cannot be identified, but the artist uses forms, colors, and shapes to convey the chaos and disorder of a world that is falling into darkness. Matta’s artistic abstractions as well as his migratory life on three continents represent recurring tendencies in both the work and personal experiences of many twentieth-century artists.

(San Francisco Museum of Modern Art, Bequest of Jacqueline Marie Onslow-Ford (82.50). Photography by Ben Blackwell.)

---

Seeing the world in  
new ways

ways. The innovative work of earlier artists such as Picasso—whose cubist paintings had systematically distorted and deformed material objects or human figures—was followed by increasingly abstract artistic experiments during the later twentieth century, as may be seen by comparing Picasso’s *Les Demoiselles d’Avignon* on p. 619 with Matta Echaurren’s *Invasion of the Night* at the top of this page. Some artists expressed themselves through geometric form; others left reality behind and tried to represent their own unconscious fears or

The movement toward abstract art culminated in paintings such as Jackson Pollock's *Number 1, 1950, Lavender Mist*. Using patterns and colors rather than images of people or natural objects, Pollock sought to convey an atmosphere or sensibility that could be at once baffling and fascinating. Pollock and other artists working in New York helped to make the United States a leading center of modern art after the Second World War.

(Jackson Pollock (1912–56), *Lavender Mist: Number 1, 1950*. National Gallery of Art, Washington, DC/Bridgeman Art Library © 2007 Artists Rights Society (ARS), New York)

desires. The results were fascinating but frequently baffling, as in the painting by Jackson Pollock, *Number 1, 1950, Lavender Mist*, which appears above. After the Second World War, the United States took over from Europe the leadership role in the visual arts and evolved new forms of abstract art.

Contemporary art resulted in original and striking expressions of form and color, but the conscious subjectivism widened still further the gap between artist and public. The artist, painter, and sculptor (and the poet, musician, playwright, and novelist, who were also rejecting the older conventions) were conveying their own visions of the world, not an objective reality that could easily be understood by others. Perhaps the greatest innovation was that the public, baffled as it was by much of contemporary art, came to accept the avant-garde as normal, even if on occasion it rebelled against it. Democratic societies accepted the need for artistic experimentation and innovation, which had been frowned upon or banned as degenerate or socially dangerous in totalitarian societies like Nazi Germany and the Soviet Union. Representational art, of course, never completely disappeared anywhere, and many artists reaffirmed it, contributing to a growing pluralism in contemporary art.

Non-representational art became as common in sculpture as it was in twentieth-century painting. This work by the influential English sculptor Henry Moore, *Mother and Child* (1959), shows how the modern representation of classical artistic themes radically altered Western sculptural traditions that went back to the Renaissance and even to antiquity.

(Scala/Art Resource, NY © The Henry Moore Foundation.)

---

*Subjectivism and the unconscious in literature*

The focus on subjectivism and the unconscious was reflected in literature too. The reconstruction of lost time and the unfolding of the individual's innermost experience through a stream of consciousness and flood of memories, which had appeared first in the work of Marcel Proust and James Joyce before and shortly after the First World War, remained important for a new generation of novelists and playwrights after 1945. Not only writers but also cinematographers experimented with probing the unconscious in evocative but mystifying ways. All of this cultural experimentation contrasted with the popular entertainment provided through the mass media, especially movies and daily diets of television "soap operas" and "sit-coms."

---

*Postmodernism*

Sometime in the early 1970s the phenomenon of postmodernism emerged in architecture, literature, and other art forms. In all areas the postmodernists borrowed from the past and mixed the old and new, and the popular and elite, to suit their tastes. Unlike modernists from the late nineteenth century on, the postmodernists did not reject the commercialization and materialism of contemporary culture but embraced it and incorporated it in new ways, often with humor. The American architect Robert Venturi and his collaborators wrote a book called *Learning from Las Vegas* (1972). Composers introduced street noises (and silences) into their music. Repetition, as in the commercial world of packaging, marketing, and television advertising, was adopted as an artistic technique. The artist Andy Warhol painted serial pictures of Coca-Cola bottles and of the film star Marilyn Monroe. In fiction the

postmoderns mingled actual events and fantasy. A play by Harold Pinter, winner of the Nobel Prize for literature in 2005, Samuel Beckett, or Eugène Ionesco challenged traditional theatrical conventions. Indeed, a Pinter play such as *The Homecoming* or a Beckett play such as *Waiting for Godot* could be as baffling as a work of postmodernist art; and it was very different from a play by Shakespeare, Molière, Ibsen, or Shaw. The postmoderns also rejected traditional ideas of structure, seeing no need in literature or art for a beginning, a middle, and an end. Postmodernism was both a phase of the modernist rebellion against traditionalism and a fragmented sequel to it with new messages. Where modernism typically sought to convey an artist's unique personal vision, postmodernists insisted that writers inevitably expressed the language and values of their culture rather than a distinctive individual consciousness. Because the writer's life and personal experience were now deemed less important for the study of literature, it was possible to speak metaphorically of the "death of the author."

### *Religion in the Modern World*

Religion was in flux in the modern world. With the continuing inroads of secularism, the challenges of science, and the post-1945 advances of communism in eastern Europe, China, and elsewhere, organized religion encountered many obstacles. But the churches survived Marxist regimes and retained their vitality. Statistics on religious affiliation are never exact, but some figures on the religions with the largest number of adherents in the opening years of the twenty-first century were clear. Islam, with well over 1 billion adherents, was the fastest-growing faith; it made large inroads in postcolonial Africa. There were close to 800 million Hindus and 350 million Buddhists in the world. Christianity, if all branches are added together, remained the largest religion, counting close to 2 billion adherents, of which more than half were Roman Catholic, a fourth were Protestant, and a fourth were Eastern Orthodox.

The ecumenical movement in Christianity, that is, the organized effort to unite the many branches of Protestantism, and eventually all Christianity, which began in the nineteenth century, made headway throughout the half-century after the Second World War. A World Council of Churches was founded in 1948. In historic breakthroughs toward the end of the century Lutheran churches announced a reconciliation and alliance with the Episcopalian churches, and Lutherans and Calvinists resolved theological differences over Luther's definition of salvation, "justification by faith." When in the 1960s the Roman Catholic church abandoned its insistence on a privileged position within Christianity, it too encouraged ecumenicism. All Christian churches moved toward a closer dialogue with non-Christian world faiths as well.

---

---

*The ecumenical  
movement*

As in the late nineteenth century, tensions between modernism (in its religious sense) and fundamentalism continued. Many of the Protestant churches in the twentieth century for the most part reconciled their traditional teachings with science and Biblical scholarship, minimized the supernatural and dogmatic aspects of their faith, and sought to adapt the teachings of the gospel to the social needs of the contemporary world. But the two world wars and other social and cultural upheavals dealt a blow to theological modernism and to the inherent optimism of the social gospel. In the 1920s, not only did fundamentalism revive but an intellectual reaction also set in among Protestant theologians who emphasized revealed religion and elements of faith. The Swiss theologian Karl Barth in his writings from 1919 to the 1960s

---

---

*Religious tensions*

endeavored to lead Protestantism back to the root principles of the Reformation. There was much interest in Kierkegaard who, like Luther, had resolved his own deep anguish by a personal commitment to religious experience. After the Second World War, as a result of the work of Barth, Paul Tillich, and others, a powerful movement in Protestantism reasserted its dependence on revealed religion and denied that human reason could ever properly judge divine revelation. Some church writers, unable to explain the wrenching experience of the Second World War and the Holocaust, spoke of “post-Auschwitz theology” and of “God’s removal from history.” Evangelical Protestantism, with its literal adherence to the gospel, spellbinding preachers, and revivalist emotional appeal also flourished, especially in the United States, and conducted a continuing crusade against the teaching of Darwin and evolution in the schools. But other Protestants generally accepted religious scholarship and the intellectual validity of modern scientific knowledge.

The Roman Catholic church was passing through one of its great historic phases beginning in the second half of the century. Although the church no longer actively suppressed all forms of modernism, the Vatican in the early postwar years reaffirmed dogmatic training in the seminaries. In 1950 Pius XII (1939–1958), who headed the church during the Second World War (and was criticized in some quarters for insufficiently opposing the terrible Nazi atrocities against the Jews), proclaimed the Assumption, the literal, or bodily ascent of the Virgin Mary into heaven, the only new Roman Catholic dogma to be promulgated in the entire twentieth century.

Pius XII was succeeded in 1959 by John XXIII. Although elected at the age of 77, and reigning for only four years until his death in 1963, John proved to be one of the most innovative popes of modern times, working to bring the church and its teachings into greater harmony with the contemporary world. His powerful encyclicals gave a global emphasis to the older social teachings of the church and called upon the wealthier nations to share their resources with the less favored. The first encyclical ever addressed to Catholics and non-Catholics alike, *Pacem in Terris* (1963), appealed for peace and human rights. A champion of ecumenicism, he opened dialogues with other faiths. In 1962, against the advice of his own theologians, he convened the Second Vatican Council, the first such council since 1870, and as it turned out, the most important since the sixteenth-century Council of Trent. Vatican II, as it came to be called, reshaped contemporary Catholicism.

---

#### Vatican II

John did not live to see the Council’s labors completed, but was the principal inspiration for its reforms. His successor Paul VI (1963–1978) shared John’s social concerns and encouraged ecumenicism, but was more conservative in other ways. The Council completed its work in 1965. Accepting the principle of religious pluralism, it abandoned the older insistence on a Catholic monopoly on religious truth. It affirmed the principle of collegiality, which had gone into eclipse in the modern centuries, the view that the pope must share his authority with the prelates of the church, thus strengthening the authority of the national churches on substantive matters. It revised the liturgy and various church practices. The Mass, henceforth, would be conducted in vernacular tongues instead of in Latin, which had been the rule for centuries. The Council relaxed restrictions on dress for priests and nuns. In one historic declaration, the Council explicitly absolved the Jewish people from the charge of deicide that had fed and inflamed anti-Semitism over the ages. John XXIII’s goal—the revitalization and updating of church teachings and practices—was amply fulfilled by the Council. There were limits to the changes, to be sure. The Council reaffirmed celibacy for the clergy and refused to sanction the ordination of women as priests. Paul VI, meanwhile, upheld papal supremacy and took

Pope John Paul II combined his defense of the traditional values of Roman Catholic Christianity with a reliance on the most advanced forms of travel and communications. He is shown here on an airplane during the early years of his pontificate. Traveling more widely than any of his predecessors, John Paul II contributed to the growth and visibility of the Roman Catholic church throughout the world. The rapidly growing number of Roman Catholics in Asia, Africa, and Latin America (along with the many adherents in Europe and North America) gave the Roman Catholic church and its pope a wider global presence than at any time in history. (Getty Images)

a firm conservative stance on moral issues, especially against all artificial means of birth control.

After Paul VI's death in 1978 (and when a successor, John Paul I, died after only 34 days in office), John Paul II, the archbishop of Cracow, became the new head of the church, the first Polish pope ever elected, and the first non-Italian pontiff in over 450 years. Robust, earthy, energetic, versatile in languages, and with a keen sense of pageantry and papal majesty, he brought an added dynamism to the church. Not only did he encourage the Christian ecumenical movement, but he also reached out to non-Christians as well, traveling widely in Asia, Africa, and Latin America. During the Cold War years he entered into diplomatic negotiations with the Soviet Union and the Communist countries of eastern Europe to improve the status of the church and contributed much to the revolutionary transformation of his own country and eastern Europe in the 1980s.

---

*John Paul II*

In his indefatigable global travels John Paul presided over Mass for millions of Roman Catholics, and he offered apologies for past wrongs going back to the Crusades and including the abuses of the Inquisition, whose archives he opened to historians. He apologized for the Inquisition's condemnation of scientists like Galileo. In formal statements and documents he offered specific apologies to the Jews for abuses they had suffered over the centuries and especially for the ordeal of the Holocaust, and in a historic visit to Jerusalem he prayed at the Western Wall.

Although on global, social, and economic issues John Paul held progressive views and was sharply critical of unbridled capitalism and irresponsible materialism, in matters of church doctrine and governance he favored orthodoxy and papal supremacy. He appointed conservative archbishops, bishops, and cardinals, silenced dissenting theologians, and curbed the growing assertiveness of national churches. He would not countenance marriage

for the clergy, the ordination of women as priests (an innovation accepted by the Church of England in 1994), rights of divorce (or of remarriage for the divorced), or homosexuality.

---

*Objections to  
Vatican centralism*

John Paul's stance on many issues engendered protest against the "new Roman centralism," the failure to modernize the church more thoroughly, and the unwillingness to respect the spirit of shared authority promised by the Council. His defenders argued that in upholding tradition he was restoring a balance upset by overly rapid changes in the church introduced by Vatican II. Although weakened by declining health in his later years, John

Paul remained active in setting church policies and in defending his theological principles until the last days of his life in 2005. The church cardinals quickly chose a 78-year-old German theologian who had been a close aide of John Paul to serve as the next pope. Entering office as a well-known spokesman for his predecessor's policies, the new pope, Benedict XVI, undertook to defend the ideas and administrative system that the Vatican had promoted during the long and momentous pontificate of John Paul II.

---

*Judaism*

Judaism was haunted in the years after 1945 by the traumatic experience of the Holocaust. At the beginning of the twenty-first century there were about 14 million Jews in the world, including 5.8 million in the United States, 4.6 million in Israel, and 2.4 million in Europe. The earlier trend to

secularism persisted, but more striking was the vitality of all its branches, Orthodox, Conservative, and Reform. Jews everywhere, and especially in the United States, many not Zionists, lent moral and financial support to the state of Israel, although many were troubled by Israeli militancy and intransigence and by the role in domestic politics of ultraorthodox religious groups that refused to accept a secular state. Anti-Zionism, not only in the Arab world but elsewhere as well, at times served as a thin screen for anti-Semitism. In the former Soviet Union (as in several Islamic states in the Middle East), Jews had met harassment and persecution and, when permitted, emigrated in large numbers. The collapse of communism reignited older currents of anti-Semitism in eastern Europe.

The major non-Western religions, Islam, Hinduism, and Buddhism, also made efforts to adjust millennia-old doctrines to the secular tendencies of the contemporary age; but in some instances such changes were adamantly rejected. Eastern religions attracted new adherents in the West: Islam drew many new believers in the multicultural cities of Europe and North America; Buddhist meditative teachings and practices gained new followings among Western students, intellectuals, and others. The large numbers of African and Asian immigrants to western Europe, and of Asian and Hispanic immigrants to the United States, brought their religious faiths with them, transforming both religious and cultural life in the increasingly diverse nations of the modern world.

---

*Spread of  
fundamentalism*

The latter part of the twentieth century also saw the rise and spread of militant religious reform movements (often called "fundamentalist" by outsiders), especially in the Islamic world. All such movements rejected modern secularism and turned to the literal reading of ancient texts for their own guidance and to impose rules of conduct on others. Nowhere did popu-

lar frenzy and the adulation of a religious leader reach such heights as in Iran in 1979; but Muslim activists were also at work in Egypt, Algeria, Nigeria, and elsewhere seeking to subvert secular regimes, impose theocracies, and use state power to enforce religious views. Iran after its revolution in 1979 and Afghanistan under the Taliban regime were among the most extreme examples of countries where Islamic law, or sharia, took precedence over all other law. In several states, as in Sudan, militant regimes also attempted to impose Islamic law on nonbelievers.

The fundamentalists in all societies typically demanded an unswerving adherence to the sacred texts regardless of changing times and circumstances; an identification of religion with political and moral values; and a strict moral code extending to diet, dress, and the relationship of the sexes—all interpreted and enforced by messianic religious leaders who mobilized mass followings to accomplish these ends. Muslim fundamentalism had a counterpart in an extremist Hindu movement in India, which unleashed violence against the Muslims in the country and threatened the secular state.

Fundamentalism could be found in evangelical Christian sects and in extremist Orthodox Jewish quarters as well. It easily bred intolerance and separatism, and ran counter to the blending of cultures in the contemporary world. In the West the separation of political and religious authority had become so widely accepted that it often became difficult to understand the strength and appeal of the new religious ferment.

### *Activism: The Youth Rebellion of the 1960s*

In the second half of the twentieth century young people acquired a collective cultural and generational identity that young people seemed not to have possessed in earlier historical periods. It was now possible to speak of a youth market, a youth culture, youth movements. In part the phenomenon was demographic in origin, the result of the extraordinary number of births in the decade and a half after the Second World War—the “baby boom.” A large cohort grew up in a rapidly changing world, and they developed a generational identity through a new popular culture that appeared in music, fashion, films, and advertising. Youth culture became a key component of modern global culture.

In the 1960s a youth political activism made a startling appearance, marked by a widespread student rebellion. A generation came to college age and attended institutions of higher learning in larger numbers than ever before. It was a generation that grew up in an era of global change and scientific breakthroughs, to which their elders were not dependable guides. They took for granted the scientific, technological, and other accomplishments of their world and concentrated on its deficiencies—the flagrant contradictions of wealth and poverty within and among nations, racial injustice, discrimination, colonialism, the impersonal quality of mechanized society and bureaucratized institutions (including colleges and universities), the violence that destroyed human beings in continuing wars, and always the threat of nuclear destruction. The rebelliousness extended beyond the traditional generation gap; it was directed at all established society and reiterated romantic or utopian themes that had influenced social criticism since the beginnings of modern history.

---

*Youth activism*

The revolt burst forth in the late 1960s in widely separate parts of the world. The cultural revolution in China, although in an entirely different context, was not unrelated and indirectly inspired it. At the peak of the movement in 1967–1968 students demonstrated and rioted on campuses and battled police all over the world; American, Canadian, Mexican, West German, French, Italian, and Spanish universities were heavily involved.

---

1968

France was one center of the storm. Demonstrations there reached near-revolutionary dimensions in the spring of 1968 and threatened to overthrow the regime when 10 million workers also went out on strike, partly in sympathy with students and partly for their own grievances. But the government eventually restored order, and many of the initial grievances in the overcrowded, impersonal universities were almost forgotten in the wider, but quickly passing, French upheaval.

A global youth culture emerged in the 1960s and 1970s, creating distinctive styles of dress and an international market for new forms of popular music. Rock musicians such as this English band, The Rolling Stones, toured the world and wrote songs that helped to shape a generational identity spanning nations and cultures. The band's lead singer Mick Jagger is seen here with guitarist Keith Richards at a concert in Los Angeles in 1973.

(Neal Preston/Corbis)

Some of the earliest and largest political demonstrations took place in the United States, sparked by the African-American struggle for civil rights and heightened by resistance to American involvement in the unpopular Vietnam War. The assassinations in 1968 of the dedicated black leader of the civil rights movement, Martin Luther King, Jr., and of Robert Kennedy, brother of the slain president, fueled further anger in the ranks of the young.

The rebelling students often defined their collective identities through rock music, unconventional styles of dress, and a language of their own. Some activists also made icons out of controversial revolutionary leaders who symbolized opposition to the established Western political order: Fidel Castro and his martyred Lieutenant Che Guevara, Ho Chi Minh, Mao Zedong, militant American black leaders like Malcolm X, the heralds of the colonial revolution such as Frantz Fanon (the West Indian author of *The Wretched of the Earth*), and others. They read the neo-Marxist philosopher Herbert Marcuse, who warned that the very tolerance of bourgeois society was a trap to prevent true protest against injustice; they learned from him that the industrial working class, co-opted by the

existing system, was no longer a revolutionary force. A "New Left" dismissed older revolutionaries in the Soviet Union as stodgy bureaucrats and affirmed that revolutionary leadership would come from Maoist China or other places in the Third World. They attacked materialism, affluence, and conformity, and the power structure of contemporary society. Many

believed in militant confrontations that recalled an older anarchism and nihilism. They called on each other to transform or destroy various social, political, and cultural traditions, assuming that their generation could overcome the social hierarchies and injustices in modern democratic societies.

The rebellion in its mass phase faded by the early 1970s. In the United States it helped bring the Vietnam War to an end. Only a small number of extremists carried on a kind of urban guerrilla war through underground terrorist organizations—the Bader-Meinhof

gang in Germany, the Red Brigades in Italy, the Weathermen in the United States. Mostly, the rebels of 1968 moved on to places in established society. While many people shuddered at the attack on traditional institutions and orderly processes, others were shaken out of their complacency about social or racial inequities. Efforts were made to reform university administration and to provide more adequate teaching facilities. The youth movement, even after its political radicalism subsided, had a continuing effect on all age groups in loosening older standards of language, dress, and sexual mores.

### *The Women's Liberation Movement*

The feminist, or women's liberation, movement was another, but more enduring, manifestation of twentieth-century and contemporary social ferment. From the time of the French Revolution, as noted earlier, a few thinkers in France and England had raised the question of equal rights for women, and a women's political movement had also developed in the United States by the mid-nineteenth century. Elizabeth Cady Stanton and a small group of associates in 1848, inspired in part by revolutionary developments in Europe that year, had proclaimed a declaration of independence for women, demanding the right to vote, equal compensation for work, legal equality in property and other matters, and expanded educational opportunities. In Britain, later in the century, the suffragettes raised similar demands in their militant campaign for the vote. Women won the right to vote before the First World War in a few American states and in a few of the smaller countries; after 1918, in many more nations, including the United States and Britain; and after 1945, in almost all other countries. But other objectives went unrealized.

The militant twentieth-century phase of the women's movement began in the United States in the mid-1960s, partly as a parallel to the civil rights movement of the African-American population. The women's liberation movement, inspired by such books as Simone de Beauvoir's *The Second Sex*, published in France in 1949, and Betty Friedan's *The Feminine Mystique*, which appeared in the United States in 1963, contended that women, half or more of the human race, had always been and continued to be oppressed by a male-dominated society and that women were systematically denied access to positions of authority, leadership, property, and power. Although the more blatant forms of legal discrimination, in such matters as property rights for example, had been or were being removed, twentieth-century feminists demanded an end to all barriers to equal participation in the economy and society. Betty Friedan's influential book appealed to women to give up traditional lives devoted mainly to the home and family and utilize their education, skills, and abilities in the outside world as well. Large numbers of women entered the job market for the first time in the 1970s. Between 1970 and 1990 the ratio of women to men working in the economy in the United States or actively seeking employment rose from 37 women per 100 men to 62 per 100 men. The new role for women required adjustments in family responsibilities, which were not always easily arranged or accepted.

The campaign for equal rights called upon a different agenda in the poorer, less developed countries of the world, where women generally had to overcome centuries-old patterns of repression, abuse, and disregard of the most elementary human rights. The United Nations from the time of its founding had committed itself to equal political, economic, and educational rights for women. But in many parts of Africa, Asia, and Latin America adult illiteracy rates were still significantly higher for women and were declining more slowly. In 2000 it was estimated that of 110 million children worldwide not attending

---

*Inspirations and  
demands*

The French writer Simone de Beauvoir, shown here in 1947, wrote about the social position of women in her widely read book *The Second Sex* (1949). Beauvoir analyzed the constraints and myths that affected women in what she described as patriarchal societies and called for the independence or liberation of women in contemporary social and political life. Her work became an influential statement of themes and ideas that helped shape a new international women's movement in the 1960s and 1970s.

(Hulton-Deutsch Collection/Corbis)

schools two-thirds were female. Yet in the developing world, where a majority of the world's women lived, opportunities for women, especially in education, could help accelerate social advances for the entire population.

At UN-sponsored international conferences government delegates and representatives from nongovernmental organizations affirmed the “universal rights of women” and insisted on their right to decide freely on matters relating to all aspects of their lives free from “coercion, discrimination, or violence.” Discrimination, it turned out, was not confined to capitalist societies. Despite Communist verbal promises, the advance to equality, or even to equality of opportunity, in the former Soviet Union and in the People's Republic of China did not match the official rhetoric.

UN support for  
women

Some women, more so than in the past (when only a few reigning women sovereigns were able to exercise political power), came to hold positions of the highest authority in their countries in the years after 1945. Among them were Indira Gandhi in India, Golda Meir in Israel, Corazón Aquino in the Philippines, Benazir Bhutto in Pakistan, Margaret Thatcher in Britain, and a growing list of other women presidents or prime ministers in such widely differing countries as Sri Lanka, Portugal, Norway, Iceland, Nicaragua, Ireland, Bangladesh, France, Poland, Turkey, Finland, Canada, Indonesia, Germany, Liberia and Chile. Women were thus entering widely into modern political life, but it was also true, as feminists and others continued to stress, that men still dominated legislative assemblies and governments in general in most countries of the world at the beginning of the twenty-first century.

Meanwhile the development of advanced contraceptive technology, especially of the birth control pill in the early 1960s, and the legalization and greater access to safer abortion procedures in a growing number of modern societies, provided a new biological freedom and autonomy for women. Changing social patterns tolerating sexual freedom and

new and more equal forms of relationships between the sexes in marriage also contributed to social liberation. In the first decade of the twenty-first century women were filling a larger share of places in higher education and in professional schools than ever before. In the United States women students made up more than half the number of undergraduate students in colleges and universities and were close to that ratio in law and medical schools. As more women became part of the labor force at all levels, the demand arose not only for equal compensation for equal work, still far from realized, but also for better pay for jobs that were poorly compensated because they had been traditionally filled by women. Although there were disagreements within and outside the women's liberation movement on the methods and tempo of change, wide agreement existed on the need to utilize fully all of society's human resources in every part of the globe. If that could be accomplished, it would count among the most memorable of the revolutionary changes of the contemporary era.

## 132. INTERNATIONAL CONFLICT IN THE TWENTY-FIRST CENTURY

The end of the Cold War and the demise of the U.S.S.R. in 1991 transformed the foundations on which international relations had rested since 1945. The Western campaign to contain communism, for which there had been a broad consensus in American public opinion, was over. The United States was now the sole superpower, the leading economic and military power of the globe. The key question was whether it could handle this power with restraint and with consideration for its allies and other nations. International stability in good part depended on how it conceived of its responsibilities in world affairs and how it shaped its relationships with the UN, its European allies, Russia, China, and the developing world. A new configuration of world affairs began to emerge, but its outlines and the American role were only roughly apparent. Peace and security remained the world's most pressing problems. Two new challenges appeared: the eruption of conflicts more frequently within nations than between nations and the danger of terrorism, which spread into almost every region of the world.

The twentieth century, heralded in its opening years for its promise of peace and progress, had seen more than 200 million people perish as victims of wars and brutal regimes. Five million deaths resulted directly or indirectly from armed conflict in the last decade alone. It was clear that the end of the Cold War had not brought peace to the world, but the older patterns of warfare between nation-states seemed to be breaking down by the early twenty-first century. The new wars tended to be conflicts between religious or ethnic groups within a national territory or between guerrilla forces and high-tech national armies that sought to suppress them. These new wars could last for years, in part because they were no longer waged by opposing national governments that were able to negotiate a truce or a peace settlement.

Some close analysts of international affairs maintained that the new world order might best be understood in the context of rivalries and conflicts between religion-based civilizations, not between nation-states. There was already some evidence of this. The Russian offensive against Chechnya had anti-Islamic overtones, as did the Serb and Croat attacks on Muslims in Bosnia and the Serb war against the Albanian Muslims in Kosovo. In turn, Orthodox Christian church leaders in Russia and Greece condemned the Western air offensive against Serbia. India, once intended as a haven for a tolerant secularism, was now

---

*Religious divisions  
could shape conflicts*

increasingly Hindu-oriented, and its clashes with Islamic Pakistan over Kashmir and other matters were sharpened by religious tensions. The conflicts between Israel and its Arab neighbors in the Middle East had distinctive religious overtones. The extremist Muslim Taliban rulers in Afghanistan willfully destroyed ancient Buddhist sculptures as offensive to their faith. Chinese communism displayed something of the older Confucian and imperial traditions hostile to the outside world and was intolerant of religious threats to its rule. The wars launched by the United States against the Muslim countries of Afghanistan and Iraq in the early twenty-first century also took on religious meaning because some saw these conflicts as a battle between different religious and cultural traditions and values, or even as a revival of the medieval Crusades.

But nonreligious factors remained preponderant in international affairs, and even in religion-based civilizations there was marked diversity. A common faith in Islam did not prevent Iran and Iraq from their bloody war in 1980–1988 or protect Kuwait from invasion by Iraq in 1990. The world's religions were far from homogeneous, and all had been touched to some degree by secularism and globalization. There were enduring conflicts between branches of the major religions—Catholics and Protestants in Northern Ireland, for example, and Shiites and Sunnis in the many parts of the Middle East. The two great wars of the twentieth century had originated in conflicts between nations in the Christian West itself.

---

*Recognizing global  
diversity*

It was nevertheless important to call attention to the global diversity of traditions, cultures, and religions if only to shed any illusions in the West that it was destined to spread its ideas and values across the world unchallenged. Western civilization, with its Judeo-Christian heritage, had been enriched by interaction with other civilizations. By the twenty-first century its global influence was undeniable, but people in the West needed to recognize the existence of deep-seated cultural allegiances in every part of the world and to understand the enduring importance of cultural differences in diplomatic affairs, economic exchanges, and political conflicts.

### *The United Nations*

The much-used term “international community” was indispensable but defied precise definition. The closest approximation to it was the United Nations. Here the Security Council was the dominant institution. The original roster of five permanent members of the Council, the victors in the Second World War, had been modified only in 1971 when the People's Republic of China replaced Nationalist China and in 1991 when Russia succeeded to the seat of the dissolved U.S.S.R. The political and economic changes in the world spurred proposals for giving other large powers permanent seats, so that they might exercise international responsibilities commensurate with their economic and military resources. Even the veto power of the five permanent powers came into question.

---

*UN membership  
expands*

The United Nations counted over 190 member nations by the first decade of the twenty-first century, and even the smallest new nations were permitted to join. The 80 smallest members of the UN, it turned out, represented less than ten percent of the world's population.

It was in the General Assembly that the new states mainly exercised their authority. Regardless of size, each member deliberated and voted in full equality. As we have seen,

## CHRONOLOGY OF NOTABLE EVENTS, 1949–2004

---

- 1949 Simone de Beauvoir's publication of *The Second Sex* helps to launch a new international campaign for women's rights
  - 1968 Youth movements in many nations press for political and social change
  - 1969 American astronauts land on the surface of the moon
  - 1978 John Paul II becomes Pope—the first Pole ever elected to the papacy
  - 1991 Treaty of Maastricht establishes the new European Union
  - 1994 World Trade Organization is established to mediate international trade
  - 1997 Financial crises disrupt the economies of east and southeast Asia
  - 1997 Labour Party wins elections in Great Britain; Tony Blair becomes Prime Minister
  - 1998 Political agreement in Northern Ireland offers plan to end violence between Protestants and Catholics
  - 1998 Social Democrats win elections in Germany; Gerhard Schröder becomes Chancellor
  - 2001 Al-Qaeda terrorist attacks on New York and Washington; United States and its allies overthrow Taliban regime in Afghanistan
  - 2002 The "euro" becomes the common currency of 12 European nations
  - 2003 American and British forces invade Iraq and overthrow the regime of Saddam Hussein, but face prolonged war against "insurgents"
  - 2004 European Union membership grows to 25 nations
- 

the General Assembly frequently served as a forum for the grievances of the developing nations against the wealthier industrial world. Several of the UN's agencies played significant roles in dealing with population, health, social welfare, and humanitarian issues. After the Cold War, the developing nations somewhat tempered their anti-Westernism, but they continued to demand a high priority for their enormous economic needs, including debt relief.

Debate went on in the United Nations, the European Union, and elsewhere over the interpretation of human rights. The Universal Declaration of Human Rights, adopted by the UN in 1948, had focused on political and civil rights, emphasizing protection from arbitrary arrest, imprisonment, and torture. Pressure later mounted to broaden the largely political definition to include economic rights, the necessity of meeting human needs within each country, and the right to international development assistance for those purposes.

An even more complex issue troubled the United States, the UN, and the broader international community: The developing nations at times contended that even the political and civil rights generally described as universal were really Western and should be modified to fit the culture, history, and religions of other parts of the world. Equality for women or the rights of children, in this interpretation, could have different meanings in countries whose cultural traditions differed from those of the West. But many across the globe maintained that human rights, no matter how difficult to define, of Western origin or not, represented a common core of values that should protect every individual human

---

*Defining human rights*

being against enslavement, violation, or discrimination. Respect for cultural pluralism or local traditions should not cover or excuse any form of human indignity.

---

*Implications of  
Western definitions*

The practical implications of such debates were significant. In many Islamic countries there were fewer opportunities for women to attend school, work outside the home, drive cars, or vote. The governing regime in Sudan was still sanctioning slavery and forcibly converting its non-Islamic population to Islam. Polygamy was still widely practiced and sanctioned by some religions and cultures. Some African peoples still practiced female genital mutilation. In many parts of the world young children, boys and girls, were forced to serve in combat by guerrilla military units. To abolish cruel and unusual punishments many nations would have to ban flogging, mutilation, and maiming as punishments. The United States itself had a large prison population and retained capital punishment, the latter now banned in the European Union. There was little desire to meddle in the internal affairs of other peoples, but it was difficult to ignore egregious violations of human rights or to accept the argument that Western values were being imposed on others.

Politically, the explosion of virulent ethnic and religious-based nationalism after the end of the Cold War confronted the UN with new issues of humanitarian assistance and intervention. UN peacekeeping came to include help in the reconstruction of devastated countries and peoples as well as a protective military presence. Supporters of the UN's expanding role urged advanced planning for troubled areas to prevent the escalation of conflict. They projected rapid deployment forces, as once envisaged, with contingents drawn from the member states. Much depended on the support of the United States, which maintained its leadership role in the Security Council but refused to place any of its own troops in UN-controlled peacekeeping forces, criticized the UN's large bureaucracy, and demanded reforms in the administration and financial management of UN activities.

Although the UN was often criticized for its inability to prevent wars or act decisively on global social problems, its broad goals remained as formulated in 1945: to control and reduce the scourge of war, advance human rights, promote equality, protect the independence of nations, encourage social progress, raise living standards, and work for peace and security. But the world's nations, large and small, were not ready to subordinate their national interests or sovereignty to any international organization. Without armed power of its own, the United Nations could not prevent powerful sovereign nations from going to war or stop such wars or civil wars after they began.

---

*U.S. leadership in  
international affairs*

The United States, as the sole superpower after 1991, exercised the leading role in international affairs, even if in concert with its European allies and other major powers. At times, however, it took initiatives that made it difficult to distinguish between American unilateralism and international action. The Security Council in 1990 condemned Iraq's aggression against Kuwait, but it was the United States that assembled a formidable multinational military force, including over a half-million American troops, and in 1991 forced the Iraqi withdrawal from Kuwait.

In 1992, toward the close of the first President Bush's administration, American troops were used for the first time to reinforce UN peacekeeping forces in Somalia, in northeast Africa, where warring militias had made it impossible to deliver food and other supplies to the starving population. President Clinton in the next administration continued the policy, calling for an "assertive multilateralism." But peace had not yet been achieved and more than peacekeeping was required. In a failed military mission in October 1993, American military units under American command were attacked by Somali paramilitary groups and 18 American soldiers were killed. Publicly televised scenes of corpses dragged

## WHEEL MAN

By Ernest Trova (American, 1927– )

Trova has created a dehumanized, life-size bronze figure of no particular sex, age, race, culture, or environment. Compressed between the two wheels, it seems to present humanity as the victim of its own complicated inventions. The wheels may also symbolize the rolling vicissitudes of human fortune. The date 1965 is inscribed on the base, and the whole faceless assemblage suggests that the wheels of human progress and civilization have not exactly carried human beings to the happy condition that an earlier, more optimistic age had expected.

(Solomon R. Guggenheim Museum, New York, Gift of John G. Powers Fund, 1965 (65.1777) Photograph by David Heald © Solomon R. Guggenheim Foundation, New York)

through the streets incited Congress to sweep away “assertive multilateralism” and for a time restrict similar intervention.

Recommendations to enlarge the authority and functions of the UN lost support and even seemed to threaten the peacekeeping role that the UN had successfully pursued for some 40 years in places like Zaire (now Congo), southern Lebanon, Cyprus, Cambodia, Angola, and elsewhere. In part the new attitude explained the failure of the UN or the United States and its allies to act in Bosnia in 1992–1993, when outside intervention might have stopped the terrible atrocities against Bosnia’s Muslim population. The same misgivings were behind the failure to take timely action to prevent the massacre of the Tutsi people in 1994 in Rwanda, in which some 800,000 Tutsi were killed and hundreds of thousands were driven into exile; and there was little concerted action to stop the atrocities sanctioned by the Islamic government in Sudan against the non-Islamic black peoples in Darfur.

In some later crises, however, the international community did take action. As we have noted earlier, the massive American-led air offensive by NATO against the former Yugoslavia in 1999 set a precedent for multinational “humanitarian intervention” within a sovereign state, although no ground troops were used. The UN did not join the war, but played a major role in postwar peacekeeping in Kosovo. International war crimes trials were held for political and military leaders charged with war crimes and crimes against humanity in Rwanda and in the former Yugoslavia. An international force also intervened to protect the people of East Timor after they voted in a UN-sponsored referendum for independence from Indonesia and then faced virtual butchery by Indonesian paramilitary forces.

---

*Multinational  
humanitarian  
intervention*

It was a formidable challenge to decide on the legitimate use of international force against sovereign nations to protect threatened or abused populations. As President Clinton noted, the UN's mission from the time of its charter was to protect the world from the scourge of war.<sup>4</sup> "If so," he announced in 2000 to a special planning and celebratory millennium meeting of the United Nations, "we must respect sovereignty and territorial integrity but still find a way to protect people as well as borders." UN Secretary General Kofi Annan strongly endorsed his plea.

### *NATO, Russia and the New International Cooperation*

Many in the United States favored military intervention when American national interests were involved, and many supported the American role in mediation as pursued by successive administrations in troubled areas, such as the Middle East. The new American president, elected in late 2000, George W. Bush, son of the former President Bush, reassessed the concept of "humanitarian intervention," but soon initiated other military actions when he decided that American interests were at risk. Meanwhile the Europeans took steps to strengthen the independent military and defense role for the European Union. The French, following the precedent of de Gaulle in the Cold War years, called for recognition of a "multipolar world," in which the EU would be a more equal partner, and they objected, if only in rhetoric, to the hegemony of the "American hyperpower."

---

*Russia's role  
undefined*

The role of Russia in the new world order was critical but not yet precisely defined. That it was still a major power and not ready to abandon aspirations to an important role in world affairs was evident in its pro-Serb stance in the Balkans. How to deal with an assertive Russia still armed with thousands of nuclear weapons was a major challenge. NATO, meanwhile, at American initiative, admitted Hungary, Poland, and the Czech Republic as full members in 1999; and seven other countries of formerly Soviet-controlled central and eastern Europe joined in 2004. The Central and East European nations not only wished to be full partners in Europe but also saw their membership in NATO as the best guarantee of their future security. The admission of several states on the very borders of Russia, however, was regarded by many Russians as a provocation. On the other hand, Russia's president became a member of what was now the Group of 8, the heads of government of the major industrial democracies; and there were regular consultations with NATO through a council established in 2002 to facilitate cooperation on various international issues.

Nuclear disarmament loomed as another key issue in the post-Cold War international order. The collapse of the U.S.S.R. promised to end the "balance of terror" that had resulted from the nuclear buildup of the two superpowers. Despite some initial obstacles, the United States and Russia agreed on the voluntary reduction of nuclear arms. The number of nuclear warheads in the world, of which the largest number were held by the United States and the U.S.S.R., was reduced in the 15 years between the mid-1980s and 2000. Nonetheless the head of the UN's nuclear monitoring agency reported at the close of 2005 that there were still 27,000 nuclear warheads in various parts of the world, which, he said, could mean "the destruction of entire nations in a matter of minutes."

The threat of nuclear proliferation persisted, keeping the issue high on the international agenda. By the end of the twentieth century 187 nations had signed the 1968 Non-Proliferation Treaty. At one of the periodic meetings held to review the status of the treaty, in May 2000, the five major nuclear powers—the United States, Russia, Britain, France, and China—in the first such declaration ever made pledged themselves "unequivocally" to

the eventual elimination of all nuclear weapons. There was satisfaction and reassurance also that since August 1945 no nuclear bomb had been exploded in warfare. That additional nations such as North Korea and Iran might be developing nuclear arms nevertheless gave cause for continuing concern. A major setback to the progress of nuclear arms control was the refusal of the United States Senate in late 1999 to ratify the Comprehensive Nuclear Test Ban Treaty because the U.S. insisted that the nation's security and the security of other states required periodic testing of the American nuclear arsenal. Almost all other countries ratified this treaty, which would have prohibited all nuclear weapons testing. In addition, President George W. Bush's proposals to resume work on a missile defense shield and to pursue the development of smaller bombs called "nuclear earth penetrators" threatened to upset existing arms control policy, which since the Antiballistic Missile Treaty of 1972 had focused on the reduction of offensive weapons and banned the building of defensive ones.

If relations with Russia were important, so also were Western relations with the People's Republic of China. Some saw engagement with Communist China through trade and other forms of peaceful interchange as the path to take. Others insisted that the West could not keep silent in the face of human rights violations, the suppression of religious groups, and the mistreatment of Tibet. The United States was committed to a two-China policy that recognized the continuing existence of a non-Communist Taiwan until peaceful union could take place, but there were alarming Chinese threats of forcible annexation. China could be expected to make its considerable weight felt in world affairs and to oppose future international intervention for human rights abuses.

---

*Relations with the  
People's Republic of  
China*

Meanwhile the world's attention turned to the pressing problems of international terrorism and to new wars in Afghanistan and Iraq.

### *Terrorism and War after September 11, 2001*

We have seen how the United States became steadily more involved in the Middle East during the latter part of the twentieth century—in the Iran-Iraq War of the 1980s, in the Persian Gulf War of 1991, and in other episodes; but American involvement entered a new phase of extended military conflict in the new century, when on September 11, 2001, radical Islamic terrorists carried out a surprise attack against the United States. Dispatched to America by the extremist Islamic organization known as al-Qaeda, committed terrorists from the Middle East set out on a carefully prepared suicide mission. Fifteen of the 19 terrorists were from Saudi Arabia. They had spent considerable time in the United States, where several had even undergone flight training. The terrorists hijacked four large American commercial airliners, each loaded with passengers, and crashed two of the planes into the towers of the World Trade Center in New York; the third plane crashed into the Pentagon in northern Virginia; the fourth crashed to the ground in rural Pennsylvania without reaching its intended target.

---

*September 11, 2001*

The hijackers managed to accomplish their mission on a busy weekday morning, causing complete destruction of the World Trade Center, crowded with people at work, and significant damage to one side of the vast Pentagon complex. There were 3,000 deaths. No one was prepared for such an attack. There had never been a terrorist attack of this kind and on this scale in the history of the United States or indeed in the whole deadly history of terrorism throughout the world. The closest parallel in the American experience was the

Terrorists linked to the extremist Islamic organization al-Qaeda crashed hijacked commercial airplanes into the World Trade Center in New York City and the Pentagon in northern Virginia on September 11, 2001. This picture shows the World Trade Towers just after the crash of a second aircraft. The United States responded to these devastating attacks by launching a global “war on terror” that would include American-led military campaigns to overthrow hostile regimes in Afghanistan and Iraq.

(Reuters/Corbis)

Japanese attack on Pearl Harbor in 1941, but that had not taken place in the continental United States and was directed against military targets. Many saw the terrorist attack in September 2001 as a turning point in modern American history, in part because it destroyed the long-held assumption that wide oceans protected the United States from foreign enemies.

President George W. Bush received authorization from the American Congress for the use of all necessary resources to mount a counter-attack against enemies who, he said, “hate our freedom of religion, our freedom of speech, our freedom to vote. . . .” The “war on terror,” which began in September 2001, was defined in terms that in some ways evoked the language of the Cold War against the Soviet Union. Under new legislation called the “Patriot Act,”

the president also acquired wide executive powers to deal with terrorist threats within the United States. There was, however, no national enemy that loomed like the Soviet Union as the obvious military opponent in a new global conflict. American intelligence agencies had been tracking the al-Qaeda organization, and there was some later evidence that an intimation of such an impending attack had become available, but little of this was known to the public at the time.

The al-Qaeda leader, Osama bin Laden, had found welcome support from the radical Islamic Taliban regime in Afghanistan, yet he controlled no government or armies or industrial infrastructure that might be attacked in conventional military operations. From time to time he delivered fiery speeches about his self-appointed mission. The al-Qaeda

---

*War on terror*

organization had emerged in the aftermath of the first Gulf War against Iraq, when American forces came to be permanently stationed in Saudi Arabia and when the Saudi monarchy entered into a new close alliance with the United States. The “founding statement” of al-Qaeda accused the United States of “occupying the lands of Islam in the holiest of places, the Arabian peninsula, plundering its riches, dictating to its rulers, humiliating its people, . . . and turning its bases . . . into a spearhead through which to fight the neighboring Muslim peoples.” Al-Qaeda called on its followers to launch attacks against America, which had begun in the 1990s with the bombing of American embassies in Africa, continued with a destructive assault on an American naval ship near the Arabian peninsula in 2000, and then escalated in the devastating attack of September 11, 2001.

---

---

*al-Qaeda*

American forces, with the backing of a strong coalition of NATO allies, at once mounted a large-scale air assault on Afghanistan and, with the aid of Afghan forces opposed to the Taliban, quickly brought about the overthrow of the regime in Kabul. A large number of al-Qaeda militants were captured or killed, but bin Laden himself escaped and remained at large years after the campaign ended. A new Afghan government under President Hamid Karzai, with the help of American and other financial aid, began to rebuild the country, while a continuing but more limited American war against guerrilla forces continued in the mountainous border areas. There was reason to believe that a stable regime in Kabul, together with the support of the neighboring government in Pakistan under President Musharraf, could block the further operations of Islamic radicals and the still active guerrilla forces in Afghanistan.

---

---

*War in Afghanistan*

Although the attempt to capture bin Laden and permanently crush al-Qaeda had proved unsuccessful in the Afghan campaign, the Bush administration decided that the dictatorial Iraqi regime of Saddam Hussein posed an equally serious threat to the United States. Iraq was an oil-rich nation of strategic importance for the entire Middle East, and it now stood accused of stockpiling chemical, biological, and nuclear weapons of mass destruction. The Bush administration had become persuaded that the United States had a mission after the end of the Cold War to curb dictatorships and help spread democracy, even unilaterally if necessary; and it seemed to have harbored for some time a desire to overthrow Saddam Hussein’s regime in Iraq. The war on terror was thus expanded to include plans for a preemptive assault on Iraq, although no imminent threat from that country seemed to be present. To be sure, American and British intelligence reports indicated that Iraq was developing weapons of mass destruction, but other sources were less confident. The Bush administration also linked Iraq to the threats from Islamic terrorism, but there seemed to be no hard evidence of such links. Although some critics decried the impending action against Iraq as a diversion from the true war on terror, the American Congress in October 2002 authorized President Bush to use all necessary force to defend the United States and to compel Iraqi compliance with weapons inspections.

---

---

*American view of Iraq*

Responding to American concerns, the UN Security Council passed a resolution demanding that teams of UN-appointed weapons inspectors be allowed to enter Iraq and search for the weapons of mass destruction that Saddam Hussein was allegedly hiding. The inspectors were unable to find such weapons, but the American and British governments insisted that the Iraqis were concealing evidence and that the UN should sanction military action to enforce compliance with UN resolutions that Iraq had apparently refused to accept. Britain was the only permanent member of the Security Council to support the

United States. When France, Germany, and Russia refused to support the resolution that would have authorized an invasion of Iraq, President Bush and Prime Minister Blair resolved to go to war without the authorization of a UN resolution. A small group of other nations also agreed to provide limited assistance so that it became possible to speak of a coalition force.

---

#### *War in Iraq*

The American invasion began in March 2003. Powerful American forces, with the support of Britain and a few small contingents from the coalition, quickly swept north from bases in Kuwait to overthrow Saddam Hussein's government in Baghdad. Armed resistance melted away, and Saddam Hussein himself fled. Despite massive looting and a general breakdown of law and order, which the strategists of the invasion had failed to foresee, major combat operations appeared to be over. In May 2003 President Bush announced that the mission had been accomplished, and optimistic American planners expected Iraqi oil revenues to finance much of the nation's reconstruction. But a violent insurgency soon erupted, especially in the Sunni Arab region to the north and west of Baghdad, where much of the population feared the political ascendancy of Iraq's Shiite majority. The Americans had not fully taken into account the country's sharp ethnic and religious divisions, which Saddam had kept under tight control. Under Saddam's officially secular regime and Baathist party dictatorship, the minority of Sunni Arabs, about one fifth of the nation's 27 million people, had brutally victimized the Shiites, who comprised about three fifths of the population, as well as the Kurds, who were not Arabs but were Muslims, and made up the remaining fifth.

The insurgency had not been expected. Most American strategists had counted on Iraqis to accept the Americans as liberators, not as invaders or occupiers. Within weeks the Americans appointed a "Coalition Provisional Authority" to manage the occupation. It seemed logical for the Americans and the provisional authority they had set up to disband the Iraqi army and police forces and to prevent former Baathists from assuming any new role in the country. But many of the disaffected Sunnis and former Baathists joined the insurgent forces that now sprang up across Iraq. Although the Sunnis, resenting the loss of their former power, were the most active participants in the insurgency, many Iraqis of all backgrounds seemed arrayed against the invasion by the American and Western "infidels." The insurgents were reinforced by militant Islamic sympathizers who infiltrated from Syria and other Islamic states. The Kurds meanwhile preserved order in their northern region of the country through their own paramilitary forces.

---

#### *Insurgent forces in Iraq*

The growing violence seriously disrupted the plans for reconstructing Iraq's oil industry and technological infrastructure. Electric power and other necessities became scarce, and living conditions were difficult for most Iraqis. In the meantime, a comprehensive American search of the entire country found no weapons of mass destruction—whose alleged existence had been the principal and urgent rationale for the invasion. American forces responded to the new violence by waging campaigns against insurgents in the countryside and major cities, imprisoning large numbers of suspects, and capturing Saddam Hussein and many of his former officials. They undertook to train Iraqis for service in the country's new security and police forces, many of whom soon became victims themselves of insurgent violence. American casualties also steadily mounted. Roadside bombs destroyed trucks and tanks, and suicide bombers killed or maimed both American soldiers and thousands of Iraqi civilians.

---

#### *Campaigns against insurgents*

On the political front the Americans took steps toward creating a more independent Iraqi government. In 2004 the Coalition Provisional Authority was dissolved and political authority was transferred to an interim Iraqi government. Three successive elections in the following year brought Iraqis to the polls in large numbers. The first election, in January 2005, chose a transitional parliament whose main task was to write a new Iraqi constitution, but most Sunni Arabs boycotted the election and thereby lost the opportunity to participate in the drafting of the constitution. The constitution was subsequently adopted in a second, nationwide vote in October, and the Sunni Arabs again for the most part refused to participate.

---

---

*Elections in Iraq*

The new constitution generally satisfied the Shiites and the Kurds because it gave virtual autonomy to a large Shiite region in the south and to the Kurds in the north, each with control over the oil resources and revenues in those regions. The Sunnis were frustrated by this political decentralization and by the growing influence of Shiite religious authorities in the new government. With American prodding, it was agreed that the next parliament would take steps to amend the constitution and submit the changes to another national referendum. When the third Iraqi election was held in December 2005, this time for a parliament of 275 seats elected for a four-year term, there was wide participation by all of the nation's ethnic and religious groups, including the Sunnis, and by a coalition of secular parties. The major Shiite religious parties won the largest number of seats in the new parliament, the Kurds won the expected majorities in their northern region, and the Sunnis gained some seats by winning in the Sunni-dominated provinces and in parts of Baghdad. Both the Sunni and secular political parties, however, charged their opponents with electoral fraud, and a new wave of violence spread across the country. The political situation thus remained unsettled and deeply affected by sectarian and ethnic conflicts, despite the impressive, courageous turnout of Iraqi voters and the widespread desire for a stable, effective, and more democratic government.

---

---

*Results of Iraqi elections*

The Bush administration refused to set a timetable for the departure of American troops. As the number of American deaths and casualties mounted into the thousands (and Iraqi deaths and casualties increased into the tens of thousands), support for the war declined in the United States, in Britain, and in much of the rest of the world, where public opinion had never really favored the American invasion from the beginning. Criticism grew even sharper when the elections seemed unlikely to produce the stable democratic political culture that had been anticipated and when the results raised fears that militant Shiites might try to establish an Islamic theocracy on the Iranian model. There was also concern that the American departure, whenever it came, would leave divisive ethnic and religious tensions that could lead to a prolonged civil war.

---

---

*Declining support for war*

The war caused additional dismay in the United States and elsewhere when news reports accompanied by shocking photographs revealed that American soldiers had humiliated and tortured Iraqi prisoners. Some of the abuses resembled brutal methods that had been common under the dictatorial regime of Saddam Hussein. Although they may have been encouraged by loosely veiled instructions from their superiors who sought information from suspected insurgents, only a few low-rank soldiers were tried and punished. Large numbers of suspects were also imprisoned and apparently tortured by the new Iraqi police. Amid reports of such practices in Iraq and of abusive interrogation techniques at secret American detention centers in other

---

---

*Abuse of prisoners*

locations, the United States Senate voted overwhelmingly in 2005 to adopt a resolution banning the use of torture by Americans.

---

*Terrorism continues*

Meanwhile, terrorist attacks by al-Qaeda and its sympathizers continued to kill people around the world—from resort hotels in Indonesia to the trains and subways in Spain and Britain. There was growing anxiety that the United States had entered another Vietnam-style “quagmire,” that the war in Iraq had distracted from the wider war on terrorism, and that military action alone would never eliminate the Islamic terrorist threats. Others worried that the war was creating new hostility for America and the West, driving more disaffected and enraged young Muslims into extremist terrorist camps.

President Bush, who won election to a second term in 2004, stressed that the war on terror was strengthening America and its allies. He pointed to the political progress in Afghanistan and Iraq, where millions had turned out to vote, as evidence of a new democratic culture in the Middle East. Much of the American public, however, became skeptical about the president’s defense of the war and his expansion of presidential powers, which included the wire-tapping of American citizens without following established legal procedures. Yet he had pledged to be a “war president,” and he repeatedly reminded the country that the terrorist threat had not passed.

How events might evolve or what might happen in neighboring countries remained unclear. It was certain, however, that the long-anticipated end to the Cold War had not brought the “end of history” or the end of human conflict. In the opening years of the twenty-first century the world was enmeshed in conflicts that reflected the deep-seated forces of contemporary nationalism, global economic competition, and militant ethnic or cultural identities; and such conflicts gained intensity everywhere from deeply held religious beliefs and long historical memories.

---

*Conflict in twenty-first century*

### 133. SOCIAL CHALLENGES IN THE TWENTY-FIRST CENTURY

#### *The Population Explosion*

Of all the social developments in the second half of the twentieth century one of the most spectacular was the growth of the world’s population. From about 1950, as a result of medical discoveries, improved health and sanitation measures, declining infant mortality, and more efficient food production and distribution, death rates declined dramatically while birth rates rose. In India, for example, the death rate in 2000 was half the 1950 figure and its population rose from 350 million in 1950 to over 1 billion at the beginning of the twenty-first century. Globally, the number of human beings grew so rapidly that demographers spoke of a population explosion. In 1950, when the contemporary takeoff began, world population totaled 2.5 billion; at the end of the century it exceeded 6 billion. Never before had human beings lived through a doubling of the world’s population in their own lifetime.

It took the world millions of years for its human population to reach the quarter-billion mark some 2,000 years ago. Not until about 1650 did the population double to a half-billion. It then doubled in less than two centuries to reach its first billion about 1830. By about 1930, in only one century, it again doubled to reach 2 billion. By 1960, in a little over 30 years, it grew to 3

---

*Growth in the late twentieth century*

billion; 14 years later, in 1974, to 4 billion; 13 years later, by 1988, to 5 billion; and in 1999 after only 11 years, it passed the 6 billion mark. The time required to add a billion people to the world's population, and for the population to double in size, had grown shorter than ever before in history. The annual growth rate for much of this time, close to 2 percent, meant the addition of well over 80 million people annually.

Although predictions were never certain, demographers began to find indications of a slowdown in the rate of growth. Sometime between 1965 and 1970 the global annual growth rate seems to have peaked at about 2 percent and then began to decline, unevenly and irregularly, to about 1.5 percent. Nonetheless, because of the huge population base demographers still pushed well into the future the time and estimated figure at which stabilization might be achieved. Even with a reduced growth rate, the world population figure was projected for 2050 at a range of from 8 to 12.5 billion, with some thought that it could peak at just over 11 billion. A debate continued over the "carrying capacity" of the earth, the maximum number of humans that the earth's resources could sustain.

The population growth rate after about 1965 was showing signs of decline because of declining birth rates, a pattern manifesting itself not only in the industrial world but in the developing world as well. The population increase in the second half of the twentieth century, it will be recalled, was largely a phenomenon of the developing world in Asia, Africa, and Latin America, where three-fourths of the world lived and where birth rates were highest. By contrast, in North America and in Europe birth rates were already lower. Industrialization, urban life, education, and social pressures for smaller families had begun to reduce birth rates ever since the late nineteenth century. In many industrially developed countries in Western Europe as well as in Japan, Canada, Australia, and elsewhere growth rates were now below the population replacement rate of 2.1 children. Italy and Spain had the lowest rates with an average of 1.2 children per woman of child-bearing age, and Italy was expected to decline from a population of 57 million to 51 million in the next 25 years unless considerable immigration took place. In the United States the population was still growing, in good part because of immigration and immigrant families. Measured against the dramatic rise in global figures and in the developing world, Europe and North America were experiencing a shrinking share of world population.

A new social factor was that after earlier resistance to Western calls for control over family size, the developing countries were now accepting the need to limit population growth. In 1970 women in the less developed countries were having an average of six children, but by the opening of the twenty-first century, only 30 years later, women in these countries were having an average of four children. Whether the decline was due to voluntary control over family size, the availability of family planning counseling, or a greater empowerment of women over their lives and access to education and employment was still under discussion.

Although fertility rates began to decline in the developing countries, population growth still threatened to cancel economic advances. Even with lower birth rates the total number of births annually would not decline sharply because of the large population base. Contraceptive technology, with its many advances, was increasingly accessible but still not available to everyone. The number of couples in the developing world with access to family planning is judged to have grown from 10 percent to 60 percent in recent decades. But at least 100 million women of child-bearing age, it has been estimated, still lacked access to fertility control. Several of the world's major religions continued to forbid artificial birth control measures, numerous societies restricted educational and vocational opportunities for

---

---

*Changing birth rates*

---

---

*Population and economic growth*

women, and traditional patterns of life in many parts of the world, especially the poorest, encouraged large families for the sustenance and support of the elderly. The impact of the global population explosion in the second half of the twentieth century would be felt far into the future.

*The Environment*

*Environmental  
pollution and damage*

As serious a threat as growing numbers posed for the world's resources, the planet also faced other dangers. From 1950 to 2000 world industrial production grew more than fivefold, burning coal, oil, and natural gas, and consuming a variety of synthetic chemicals, all of which emitted heat-trapping gases into the atmosphere. Although the full implications remained controversial, many scientists and aroused citizens were convinced that these emissions were eroding the protective upper ozone layer in the atmosphere that shields the earth from excessive solar heat and harmful radiation, and that the resulting global warming of the climate would have serious consequences. One troubling sign was that the decade of the 1990s was the warmest globally in 600 years, and the warming trend continued in the new century. The ongoing debate prompted governments worldwide to convene periodic conferences to try to agree on regulatory measures.

Industrial pollution also caused the acid rain that laid waste to many forests, lakes, and rivers in the industrial nations. Severe environmental damage in the former Soviet Union, the Soviet-bloc nations, and the People's Republic of China confirmed that pollution was not confined to any single economic system; central planners had pressed development with little regard for the ecological consequences. Developing nations also paid little attention to their environment. Under the pressure of expanding population and rapid urbanization, they permitted the slashing and burning of tropical forests for ranching, timber exports, and resettlement. Arable acreage declined; pasture land turned into desert. From 1950 to 2000 the world lost over one-fifth of its topsoil and one-fifth of its tropical rain forests. Plant and animal species were endangered. Nowhere was this more striking than in Latin America and Africa. The partial loss of the Amazon Forest in Brazil before preventive measures were taken dramatized the extent of the damage.

*Sustainable economic  
growth*

From the 1970s on a newly sensitized world began to speak of sustainable growth rates, growth that could be maintained without the destruction of humanity's natural habitat. Alternative forms of energy, some as old as the sun and the wind, others new, like nuclear energy (with proper safeguards, to be sure) were proposed. Emissions from industrial factories and from vehicles came under stricter controls. The United States Environmental Protection Agency came into existence in 1970. In 1973 representatives of 80 nations signed an agreement to protect endangered species. In 1989 a number of industrial nations agreed to stop production of chlorofluorocarbons, which released dangerous amounts of chlorine into the upper atmosphere and were widely used in air-conditioning and in aerosol propellants. Other meetings and treaties followed. In 1992, at the first "Earth Summit" meeting in Rio de Janeiro, representatives of 178 countries pledged to protect plant and animal species and to take steps in a "climate treaty" to halt global warming. In 1997 representatives from 150 countries met at Kyoto, where they agreed to reduce the emission of so-called greenhouse gases by 50 percent by 2010.

As awareness of ecological dangers grew, grass-roots environmental organizations multiplied, and in several countries emerged as "Green" political parties. Despite the

### THE POPULATION EXPLOSION

The world's population has more than tripled in size since 1930, but the growth has been most rapid over the last five decades, especially in Latin America, Africa, and Asia. Before the twentieth century, world population had never before doubled in any half-century, so the recent increase can truly be called an "explosion." The world's population passed the 6 billion mark in 1999. Although wealthy societies have lower growth rates than most poor nations, the wealthy societies consume the largest portion of the world's resources. Future population growth is expected to occur mainly in the less industrialized regions of the globe, but demands on the earth's limited resources will continue to grow in both the wealthy and poor nations. The question is whether the growth of population and the growing demand for resources can be slowed in ways that will protect the earth's increasingly overstrained environment.

(United Nations Demographic Yearbook)

numerous pledges and measures to counter the threat of environmental deterioration, there was opposition to strict environmental regulations in some poor countries and in industrialized countries, including China, India, Australia, and the United States (which withdrew from the Kyoto agreement in 2001). Meanwhile, the developing nations slowed the adoption and enforcement of environmental laws that were viewed as impediments to economic progress.

Population growth and the threat to the environment added to the world's concerns at the beginning of the twenty-first century and the new millennium. Many of the most pressing concerns, however, were not new: the implications for society of contemporary science and technology, the sovereignty of nations, peace among nations, and the quest within nations for freedom, dignity, and economic well-being. All were aspects of one overriding problem. How could human beings in each generation on earth, regardless of sex, color, creed, religion, nationality, or ethnic background—beings said by some to be made in the image of God, by others to have a natural right to life, liberty and happiness, by still others to have the freedom to create meaning in a meaningless universe—live out their lives in peace, fulfill their destiny, and pass on their heritage to future generations?

The constant changes and upheavals in contemporary human history might be compared to cataclysms in the natural world. A cataclysm is not a time of downfall only. Mountains crumble, but others are thrust up. Lands vanish, but others rise from the sea. So it is with the political and social cataclysm of our times. Old landmarks are worn down. Empires pass away; new nations arise in their place. Subjugated peoples regain independence; rigid ideologies collapse. The ascendancy of Europe, the West, and the European nations closes; they learn to negotiate with others, not to rule them. There is a greater fluidity in social relationships. Women and minorities struggle for equal places in society. But social justice and peace remain elusive goals. The gap between rich and poor among nations, and within nations, is not easily overcome. Old and new diseases, natural catastrophes, and armed conflicts exact their toll. Resurgent nationalism feeds on intolerance and hatred. Never has war been so potentially destructive; the menace of a nuclear war that would blight much of civilization wanes but does not disappear. Uncontrolled economic development threatens the environment, and population growth presses on natural resources. International cooperation and intervention are needed to protect human rights, end or prevent wars, and sustain the earth's billions.

But there is a growing global recognition of all these concerns. To close this long history on a note of placidity would indeed be inappropriate, but it would also be wrong to close on a note of doom. The history of the modern world shows the astonishing range of human imagination and ingenuity, and there are good historical reasons to believe that people will continue to confront future problems and challenges with determination and creativity.

# APPENDIX, SUGGESTIONS FOR FURTHER READING, INDEX

## RULERS AND REGIMES

### *In Principal European Countries since 1500*

#### **HOLY ROMAN EMPIRE**

##### **Habsburg Line**

Maximilian I, 1493–1519

Charles V, 1519–1556

Ferdinand I, 1556–1564

Maximilian II, 1564–1576

Rudolph II, 1576–1612

Matthias, 1612–1619

Ferdinand II, 1619–1637

Ferdinand III, 1637–1657

Leopold I, 1658–1705

Joseph I, 1705–1711

Charles VI, 1711–1740

Charles VI was succeeded by a daughter, Maria Theresa, who as a woman could not be elected Holy Roman Emperor. French influence in 1742 secured the election of

##### **Bavarian Line**

Charles VII, 1742–1745

On Charles VII's death the Habsburg control of the emperors was resumed.

##### **Lorraine Line**

Francis I, 1745–1765 (husband of Maria Theresa)

##### **Habsburg-Lorraine Line**

Joseph II, 1765–1790 (son of Francis I and Maria Theresa)

Leopold II, 1790–1792

Francis II, 1792–1806

The Holy Roman Empire became extinct in 1806.

#### **AUSTRIAN DOMINIONS**

The rulers of Austria from 1438 to 1740, and at least titular kings of Hungary from 1526 to 1740, were the same as the Holy Roman Emperors. After 1740:

##### **Habsburg Line (through female heir)**

Maria Theresa, 1740–1780

Joseph II, 1780–1790

Leopold II, 1790–1792

Francis II, 1792–1835

In 1804 Francis II took the title of Emperor, as Francis I of the Austrian Empire. Austria was declared an "empire" because Napoleon proclaimed France an empire in that year, and because the demise of the Holy Roman Empire could be foreseen.

Ferdinand I, 1835–1848

Francis Joseph, 1848–1916

Charles I, 1916–1918

The Austrian Empire became extinct in 1918.

#### **BRITISH ISLES**

##### **Tudor Line**

Kings of England and Ireland

Henry VII, 1485–1509

Henry VIII, 1509–1547

Edward VI, 1547–1553

Mary I, 1553–1558

Elizabeth I, 1558–1603

In 1603 James VI of Scotland, a great-great-grandson of Henry VII, succeeded to the English throne.

### **Stuart Line**

Kings of England and Ireland, and of Scotland

James I, 1603–1625

Charles I, 1625–1649

### **Republican Interregnum**

*The Commonwealth*, 1649–1653

*The Protectorate*

Oliver Cromwell, 1653–1658, Lord Protector

Richard Cromwell, 1658–1660

### **Restored Stuart Line**

Charles II, 1660–1685

James II, 1685–1688

In 1688 James II was forced out of the country, but Parliament kept the crown in a female branch of the Stuart family, calling in Mary, the daughter of James II, and her husband William III of the Netherlands. Mary died in 1694.

William III and Mary II, 1689–1702/1694

Anne, 1702–1714

In 1707, through the Union of England and Scotland, the royal title became King (or Queen) of Great Britain and Ireland. The Stuart family having no direct Protestant heirs, the throne passed in 1714 to the German George I, Elector of Hanover, a great-grandson of James I.

### **Hanoverian Line**

Kings of Great Britain and Ireland

George I, 1714–1727

George II, 1727–1760

George III, 1760–1820

George IV, 1820–1830

William IV, 1830–1837

William IV having no heirs, the British throne passed in 1837 to Victoria, a granddaughter of George III. Though the British family has continued in direct descent from George I, it has dropped the Hanoverian designation and is now known as the House of Windsor. From 1877 to 1947 the British rulers bore the additional title of Emperor (or Empress) of India.

Victoria, 1837–1901

Edward VII, 1901–1910

George V, 1910–1936

Edward VIII, 1936

George VI, 1936–1952

Elizabeth II, 1952–

## **FRANCE**

### **Valois Line**

Louis XI, 1461–1483

Charles VIII, 1483–1498

Louis XII, 1498–1515

Francis I, 1515–1547

Henry II, 1547–1559

Francis II, 1559–1560

Charles IX, 1560–1574

Henry III, 1574–1589

In 1589 the Valois line became extinct, and the throne passed to Henry of Bourbon, a remote descendant of French kings of the fourteenth century.

### **Bourbon Line**

Henry IV, 1589–1610

Louis XIII, 1610–1643

Louis XIV, 1643–1715

Louis XV, 1715–1774

Louis XVI, 1774–1792

### **The Republic**

*Convention*, 1792–1795

*Directory*, 1795–1799

*Consulate*, 1799–1804

### **The Empire**

Napoleon I, 1804–1814, Emperor of the French and King of Italy

### **Restored Bourbon Line**

Louis XVIII, 1814–1824

(Royalists count a Louis XVII, 1793–1795, and date the reign of Louis XVIII from 1795.)

Charles X, 1824–1830

The Revolution of 1830 gave the throne to the Duke of Orleans, descendant of Louis XIII.

### **Orleans Line**

Louis-Philippe, 1830–1848

**Second Republic**

1848–1852

**Second Empire**

Napoleon III, 1852–1870, Emperor of the French

**Third Republic**

1870–1940

**Vichy Regime**

1940–1944

**Provisional Government**

1944–1946

**Fourth Republic**

1946–1958

**Fifth Republic**

1958–

**PRUSSIA (AND GERMANY)**

A continuous Hohenzollern line ruled until 1918.

**Electors of Brandenburg and Dukes of Prussia**

George William, 1619–1640

Frederick William, 1640–1688, the “Great Elector”

Frederick III, 1688–1713

In 1701 Frederick III was permitted by the Holy Roman Emperor to entitle himself King in Prussia, as Frederick I.

**Kings of Prussia**

Frederick I, 1701–1713

Frederick William I, 1713–1740

Frederick II, the “Great,” 1740–1786

Frederick William II, 1786–1797

Frederick William III, 1797–1840

Frederick William IV, 1840–1861

William I, 1861–1888

In 1871 William I took the title of German Emperor.

**German Emperors**

William I, 1871–1888

Frederick III, 1888

William II, 1888–1918

The German Empire became extinct in 1918. It was succeeded by the

**Weimar Republic**

1919–1933

(The Weimar Republic is an unofficial title for what was still called the Deutsches Reich, a phrase not easy to translate accurately.)

**The Third Reich**

1933–1945

(The Third Reich is an unofficial title for the Deutsches Reich under Adolf Hitler.)

Allied Military Government in 1945 was followed by

**German Federal Republic (West Germany)**

1949–1990

**German Democratic Republic (East Germany)**

1949–1990

The two Germanys were united in 1990.

**German Federal Republic**

1990–

**SARDINIA (AND ITALY)**

In 1720 Victor Amadeus II, Duke of Savoy, took the title of King of Sardinia, having acquired the island of that name. The kingdom was often called Piedmont because of the king’s older mainland domain.

**Kings of Sardinia**

Victor Amadeus II, 1720–1730

Charles Emmanuel III, 1730–1773

Victor Amadeus III, 1773–1796

Charles Emmanuel IV, 1796–1802

Victor Emmanuel I, 1802–1821

Charles Felix, 1821–1831

Charles Albert, 1831–1849

Victor Emmanuel II, 1849–1878

In 1861 Victor Emmanuel II took the title of King of Italy.

**Kings of Italy**

Victor Emmanuel II, 1861–1878

Humbert I, 1878–1900

Victor Emmanuel III, 1900–1946  
Humbert II, 1946

In 1946 the Kingdom of Italy became extinct and was succeeded by the

**Italian Republic**  
1946–

## SPAIN

Ferdinand and Isabella, 1479–1504/1516

Isabella died in 1504, but Ferdinand lived until 1516, whereupon the Spanish thrones were inherited by their grandson Charles, who became Charles V of the Holy Roman Empire, but was known in Spain as Charles I.

**Habsburg Line**  
Charles I, 1516–1556  
Philip II, 1556–1598  
Philip III, 1598–1621  
Philip IV, 1621–1665  
Charles II, 1665–1700

With Charles II the Spanish Habsburg line became extinct, and the throne passed to the French Bourbon grandson of Louis XIV of France and great-grandson of Philip IV of Spain.

**Bourbon Line**  
Philip V, 1700–1746  
Ferdinand VI, 1746–1759  
Charles III, 1759–1788  
Charles IV, 1788–1808

**Bonaparte Line**  
Joseph, 1808–1813 (brother of Napoleon)

**Restored Bourbon Line**  
Ferdinand VII, 1813–1833  
Isabella II, 1833–1868

In 1868 Isabella abdicated; after a regency, and a brief reign by Amadeus I (Savoy), 1871–1873, there was a short-lived First Republic, 1873–1874, succeeded by

Alfonso XII, 1874–1885  
Alfonso XIII, 1885–1931

In 1931 a republican revolution unseated Alfonso XIII.

**Second Spanish Republic**  
1931–1936

**Spanish Civil War**  
1936–1939

**Regime of General Francisco Franco**  
1939–1975

Upon the death of Franco the Bourbon family was restored.

Juan Carlos I, 1975–

## RUSSIA (AND U.S.S.R.)

**Grand Dukes of Moscow**  
Ivan III, the “Great,” 1462–1505  
Basil III, 1505–1533  
Ivan IV, the “Terrible,” 1533–1584

In 1547 Ivan IV took the title of Tsar of Russia.

**Tsars of Russia**  
Ivan IV, the “Terrible,” 1547–1584  
Theodore I, 1584–1598  
Boris Godunov, 1598–1605

**Time of Troubles**  
1604–1613

**Romanov Line**  
Michael, 1613–1645  
Alexis, 1645–1676  
Theodore II, 1676–1682  
Ivan V and Peter I, 1682–1689  
Peter I, the “Great,” 1689–1725  
Catherine I, 1725–1727  
Peter II, 1727–1730  
Anna, 1730–1740  
Ivan VI, 1740–1741  
Elizabeth, 1741–1762  
Peter III, 1762  
Catherine II, the “Great,” 1762–1796  
Paul, 1796–1801  
Alexander I, 1801–1825  
Nicholas I, 1825–1855  
Alexander II, 1855–1881  
Alexander III, 1881–1894  
Nicholas II, 1894–1917

In 1917 the tsardom became extinct.

**Provisional Government**  
1917

**Communist Revolution**  
1917

**Union of Soviet Socialist Republics**  
1922–1991

In 1991 the Communist regime ended and the U.S.S.R. dissolved into its component republics (Russia, Ukraine, Belarus, etc.), loosely associated with each other in a Commonwealth of Independent States.

**Russian Federation**  
1991–

# Suggestions for Further Reading

---

The following bibliographical guide is intended for the convenience of students, teachers, and general readers. Although professional students of history may also find it useful, no attempt has been made to provide comprehensive coverage of special areas or topics or to include specialized monographs. Although many older volumes have been included, the aim throughout has been to call attention to recent historical works to which the reader may turn for additional bibliographical guidance. Classification follows the plan of chapters in the present book. For reasons of space, untranslated works in foreign languages have been excluded, as have been general textbooks, articles in periodicals, and (with a few exceptions) primary source materials. When a second date of publication for a book is given without further specification, it is generally the date of the most recent reprinting or reissue. We have also included up-to-date information on useful Web sites that may be consulted for additional information or sources on the themes of each chapter. Such sites often change and evolve, but the Web addresses were all “active” when this book went to press.

Many of the book titles are available in paperback; up-to-date listings may be found in *Books in Print* and in the *Paperback Book Guide for Colleges*.

## INTRODUCTION

### Guides, Reference Works, and Special Topics

An invaluable bibliographical tool for historical works published prior to 1992 is the American Historical Association's *Guide to Historical Literature* (3rd ed., 2 vols., 1995). Much expanded since its second edition in 1961, the *Guide* consists of 48 sections organized into regional, national, chronological, and topical categories, with coverage from prehistory to the present. It provides annotated entries for thousands of books and articles as well as an introductory essay for each section, all carefully indexed. The *Guide*'s first section, “Theory and Practice in Historical Study,” provides a convenient introduction to historical method, historiography, philosophy of history, demography, the many varieties of history, and other important subjects. To keep up with the outpouring of historical books, however, it is important to read the book reviews and listings of new books in the *American Historical Review*, the *Journal of Modern History*, the *Journal of World History*, the (London) *Times Literary Supplement*, the *New York Review of Books*, and other periodicals, and the book reviews in the daily and weekend press. A valuable source of information on relevant articles is *Historical Abstracts*, which is also available in an electronic database. Many historical resources are now accessible on the Internet, though readers must use such materials with careful assessments of their reliability. For a helpful guide to history on the Internet, organized by thematic categories, readers may consult D. A. Trinkle and S. A. Merriman (eds.), *The History Highway: A 21st-Century Guide to Internet Resources* (rev. 2006).

Brief descriptions of major events and historical figures as well as a chronology of world history may be found in the *Oxford Encyclopedia of World History* (1998); there are also useful chronologies in J. Paxton and E. W. Knapman (eds.), *The Wilson Calendar of World History* (1999), and in P. N. Stearns (ed.), *Encyclopedia of World History: Ancient, Medieval, and Modern* (2001), the most recent edition of an invaluable reference for chronology. Of the many multivolume encyclopedias, the *Encyclopedia Britannica* (rev. 2005, with CD-ROM) remains the most valuable, and articles may also be found electronically at [www.britannica.com](http://www.britannica.com). Convenient one-volume reference tools are the *Cambridge Encyclopedia* (rev. 2000), and the *Columbia Encyclopedia* (6th ed., 2000), which is now updated regularly in an electronic edition.

Several encyclopedias provide excellent up-to-date articles on themes and events in both world history and European history. See, for example, W. H. McNeill, et al. (eds.), *Berkshire Encyclopedia of World History* (5 vols., 2005), and J. Dewald (ed.), *Europe, 1450–1789: Encyclopedia of the Early Modern World* (6 vols., 2004).

Among historical atlases that place European history in its world setting, G. Parker (ed.), the (London) *Times Atlas of World History* (rev. 1993) and N. Grove (ed.), *National Geographic Society Atlas of World History* (1997) are impressive. Also useful, and periodically updated, are the *Rand McNally Atlas of World History*, Hammond's *Historical Atlas of the World*, and the Penguin Historical Atlas series. Of

many geographical atlases one of the best is the *National Geographic Atlas of the World* (8th ed., 2005).

Of multivolume historical series, the *New Cambridge Modern History* (14 vols., 1957–1979) remains useful, though it is no longer “new.” The volumes, which will be referred to in the chapters below, contain outstanding contributions by specialists from all over the world. There are other series, to which reference will be made below, under the auspices of various publishers.

Geographical influences on European history are discussed in N. J. G. Pounds, *An Historical Geography of Europe* (3 vols., 1973–1985) and in the essays in E. Genovese and L. Hochberg (eds.), *Geographic Perspectives in History* (1989). The case for new conceptualizations in geography is made in M. W. Lewis and K. E. Wigen, *The Myth of Continents: A Critique of Metageography* (1997). I. G. Simmons, *Changing the Face of the Earth: Culture, Environment, and History* (rev. 1996) traces the human impact on the planet over the centuries; E. Le Roy Ladurie examines an important subject in *Times of Feast, Times of Famine: A History of Climate since the Year 1000* (trans. 1971).

For the impact of famine, disease, and the movement of peoples, one may read W. H. McNeill, *Plagues and Peoples* (1976) and *The Global Condition: Conquerors, Catastrophes, and Community* (1992); T. McKeown, *The Origins of Human Disease* (1988); A. Crosby, *Germs, Seeds and Animals: Studies in Ecological History* (1994); and K. F. Kiple (ed.), *The Cambridge World History of Human Disease* (1993), a valuable reference work. On cultural advantages and disadvantages in the encounters between peoples, J. Diamond, *Guns, Germs, and Steel: The Fate of Human Societies* (rev. 2005), is rewarding; the same author examines various cultural responses to changing environmental conditions in *Collapse: How Societies Chose to Fail or Succeed* (2005).

Of the many books on military history treating war as a social and human phenomenon, three outstanding studies ranging from earliest times to the present are A. Jones, *The Art of War in the Western World* (1989); R. L. O’Connell, *Of Arms and Men: A History of War, Weapons, and Aggression* (1990); and J. Keegan, *A History of Warfare* (1993); the latter, like others of Keegan’s books, is especially noteworthy. Of interest in a related category is M. Walzer, *Just and Unjust Wars* (rev. 1992). The importance of technology is stressed in B. Brodie and F. Brodie, *From Crossbow to H-Bomb* (rev. 1973); W. H. McNeill, *The Pursuit of Power: Technology, Armed Force, and Society since A.D. 1000* (1982); and M. van Creveld, *Technology and War: From 2000 B.C. to the Present* (1988).

A few books of special interest deserve mention here: W. H. McNeill, *The Rise of the West: A History of the Human Community* (rev. 1991), a notable effort to recount the human experience in a global setting,

which has been continued in J. R. McNeill and W. H. McNeill, *The Human Web: A Bird’s-eye View of Human History* (2003); E. R. Wolf, *Europe and the People without History* (1982), by an anthropologist, which portrays Western history as seen by non-Western societies in Asia, Africa, and the Americas; P. Kennedy, *The Rise and Fall of the Great Powers: Economic Change and Military Conflict from 1500 to 2000* (1987), which examines the political and economic fortunes of the European nations that successively played the leading role in world affairs in the modern centuries; and J. Barzun, *From Dawn to Decadence: 500 Years of Cultural Life, 1500 to the Present* (2000), a provocative study of Western thought since the sixteenth century. Two wide-ranging efforts at a synthesis of European history are N. Davies, *Europe: A History* (1996), a highly idiosyncratic but challenging work; and J. M. Roberts, *A History of Europe* (1996), a more conventional, thoughtful account. F. Fernández-Armesto, *Millennium: A History of the Last Thousand Years* (1995), is an ambitious attempt at global history. K. A. Appiah and H. L. Gates, Jr., *The Dictionary of Global Culture* (1998) is a pioneer effort to integrate the contributions of Western and non-Western cultures.

### Changing Directions in Historical Writings

For a sampling of insights into contemporary trends in historical writing, one may turn to M. Kammen (ed.), *The Past before Us: Contemporary Historical Writing in the United States* (1980); T. K. Rabb and R. I. Rotberg (eds.), *The New History: The 1980s and Beyond* (1982); P. Burke (ed.), *New Perspectives on Historical Writing* (rev. 2001); J. Appleby, L. Hunt, and M. Jacob, *Telling the Truth about History* (1994); G. Iggers, *Historiography in the Twentieth Century: From Scientific Objectivity to the Postmodern Challenge* (1997); L. Kramer and S. Maza, *A Companion to Western Historical Thought* (2002); M. T. Gilderhus, *History and Historians: A Historiographical Introduction* (rev. 2003); and two challenging books by B. Southgate, *History: What and Why? Ancient, Modern, and Postmodern Perspectives* (rev. 2001), and *What Is History For?* (2005).

One of the major contemporary interests of historians has been social history. Stimulated by the *Annales* school of historical writing in France (the name derived from the French periodical *Annales: économies, sociétés, civilisations*, which in 1994 was renamed *Annales: histoire, sciences sociales*), and by newer kinds of working-class history in England, in which E. P. Thompson, *The Making of the English Working Class* (1963), was a pioneer, historians have concerned themselves with a social history distinct from traditional interests in social classes and labor and laboring conditions. They have been examining such subjects as the history of the family, women, sexuality, marriage, the everyday lives and outlook (or

*mentalité*) of the urban and rural poor, and popular culture—all studied as history “from the bottom up.” Many such works are listed below in the appropriate chapters. An introduction to the newer social history and to popular culture is provided in O. Zung (ed.), *Reliving the Past: The Worlds of Social History* (1985); P. Burke, *Popular Culture in Early Modern Europe* (rev. 1994); C. Mukerjee and M. Schudson (eds.), *Rethinking Popular Culture* (1990); and L. Berlanstein (ed.), *Rethinking Labor History: Essays on Discourse and Class Analysis* (1993). A useful collection of recent contributions to the newer social history is available in R. M. Goldin (ed.), *The Social Dimension of Western Civilization* (4th ed., 1999).

Although the *Annales* historians have contributed a good deal to the newer social history, they have also been important for their emphasis, often quantitative and interdisciplinary, on long-term factors that influence the course of historical change, such as geography, environment, resources, climate, population, diet, and disease, which in their view often merit closer attention than “events.” Here F. Braudel, *The Mediterranean and the Mediterranean World in the Age of Philip II* (2 vols., 1949; trans. 1974; rev. and abridged 1 vol. ed., 1992), was a pioneering work; his other books are described in the chapters below.

There has been much attention in recent decades to the history of women. Many of the writings call for reassessments of various historical eras from the viewpoint of women’s status in the era and for the fuller integration of the history of women into general history. Contributions to the history of women in Europe and the West may be sampled in R. Bridenthal, S. Stuard, and M. Wiesner (eds.), *Becoming Visible: Women in European History* (rev. 1998), with essays covering ancient times to the twentieth century; M. J. Boxer and J. H. Quataert (eds.), *Connecting Spheres: European Women in a Globalizing World, 1500 to the Present* (rev. 2000), case studies with informative overview chapters; B. S. Anderson and J. P. Zinsser, *A History of Their Own: Women in Europe from Prehistory to the Present* (2 vols.; rev. 2000), thematically organized; and B. G. Smith, *Changing Lives: Women in European History since 1700* (1989), a helpful narrative account. G. Duby and M. Perrot (gen. eds.), *A History of Women in the West* (trans. 1992–1994), is a multivolume history from ancient times to the present. Important theoretical perspectives on the role of gender in historical understanding can be found in *Women, History and Theory: The Essays of Joan Kelly* (1984); J. W. Scott, *Gender and the Politics of History* (rev. 1999); and B. G. Smith, *The Gender of History: Men, Women, and Historical Practice* (1998). The role of gender in both ancient and modern global history is examined in B. G. Smith (ed.), *Women’s History in Global Perspective* (2004). G. Lerner provides many insights into women and history in *The Creation of Patriarchy* (1986) and *The Creation of Feminist Con-*

*sciousness: From the Middle Ages to 1870* (1993). Diverse collections of documents on women’s history can be found in J. C. Fout and E. Reimer (eds.), *European Women: A Documentary History, 1789–1945* (1980); J. O’Faolain and L. Martines (eds.), *Not in God’s Image: Women in History from the Greeks to the Victorians* (1973); E. O. Hillerstein, L. P. Hume, and K. M. Offen (eds.), *Victorian Women: Women’s Lives in England, France, and the United States* (1981); and S. G. Bell and K. M. Offen (eds.), *Women, the Family, and Freedom: The Debate in Documents* (2 vols.; 1983).

Psychological approaches to the writing of history are explored in S. Friedländer, *History and Psychoanalysis* (trans. 1978); P. Loewenberg, *Decoding the Past: The Psychohistorical Approach* (1982); P. Gay, *Freud for Historians* (1985); and the more theoretical work of D. LaCapra, *History in Transit: Experience, Identity, Critical Theory* (2004). For an introduction to the quantitative analysis of historical data, one may turn to K. H. Jarausch and K. A. Hardy, *Quantitative Methods for Historians: A Guide to Research, Data, and Statistics* (1991). Two useful introductions to a crucial component of contemporary historical work are J. L. Reiff, *Structuring the Past: The Use of Computers in History* (1991) and D. I. Greenstein, *A Historian’s Guide to Computing* (1994). There is much practical information on historical research and writing in J. Barzun and H. F. Graff, *The Modern Researcher* (rev. 2004).

The tapping of neglected sources through the methods of oral history is examined in P. Thompson, *The Voice of the Past: Oral History* (1978); D. Henige, *Oral Historiography* (1982); D. K. Dunaway and W. K. Baum (eds.), *Oral History: An Interdisciplinary Anthology* (1984); and K. Howarth, *Oral History* (1999). A contemporary medium is explored in J. E. O’Connor (ed.), *Image as Artifact: The Historical Analysis of Film and Television* (1990); R. Rosenstone (ed.), *Revisioning History: Film and the Construction of a New Past* (1995) and *Visions of the Past: The Challenge of Film to Our Idea of History* (1995).

Changing assessments of cultural and intellectual history, borrowing from philosophy, linguistics, anthropology, and literary criticism, which may remain elusive for many readers, may be sampled in L. Hunt (ed.), *The New Cultural History* (1989); V. E. Bonnell and L. Hunt (eds.), *Beyond the Cultural Turn: New Directions in the Study of Society and Culture* (1999); D. LaCapra, *Rethinking Intellectual History: Texts, Contexts, Language* (1983); C. Ginzburg, *Clues, Myths, and the Historical Method* (trans. 1992); D. R. Kelley, *The Descent of Ideas: The History of Intellectual History* (2002); and two helpful books by P. Burke, *Varieties of Cultural History* (1997) and *What Is Cultural History?* (2004).

Some books critical of the trends in historical writing that have emerged since the 1970s include

J. Barzun, *Clio and the Doctors: Psychohistory, Quantohistory, and History* (1974); J. H. Hexter, *On Historians: Some of the Makers of Modern History* (1979); T. S. Hamerow, *Reflections on History and Historians* (1987); G. R. Elton, *Return to Essentials: Some Reflections on the Present State of Historical Study* (1993); G. Himmelfarb, *The New History and the Old* (1987) and *On Looking into the Abyss: Untimely Thoughts on Culture and Society* (1994); and E. Fox-Genovese and E. Lasch-Quinn (eds.), *Reconstructing History: The Emergence of a New Historical Society* (1999). Two probing accounts of the historical profession in the United States, with insights into past and present historiographical debates, are J. Higham, *History: Professional Scholarship in America* (rev. 1989); and P. Novick, *That Noble Dream: The "Objectivity Question" and the American Historical Profession* (1988).

On the relationship of history to other disciplines and its own distinctive role, one may turn to such varied explorations as E. H. Carr, *What Is History?* (1962); P. Gay, *Style in History* (1974); L. Gottschalk, *Understanding History* (rev. 1969); A. Marwick, *The Nature of History* (rev. 1989); L. Gossman, *Between History and Literature* (1990); D. LaCapra, *History and Criticism* (1985); and H. V. White, *Metahistory: The Historical Imagination in Nineteenth-Century Europe* (1973). Of special interest for the relationship of the discipline to the social sciences are P. Burke, *History and Social Theory* (1993); T. J. McDonald (ed.), *The Historic Turn in the Human Sciences* (1996); J. Elster, *The Cement of Society: A Study of Social Order* (1991) and *Nuts and Bolts from the Social Sciences* (1991); and J. Gaddis, *The Landscape of History: How Historians Map the Past* (2002).

Among thoughtful reflections by historians who have themselves made notable contributions to the writing of history, the following may be suggested: F. Gilbert, *History: Choice and Commitment* (1977); W. H. McNeill, *Mythistory and Other Essays* (1986); C. Vann Woodward, *Thinking Back: The Perils of Writing History* (1986) and *The Future of the Past* (1989); L. Stone, *The Past and the Present Revisited* (1987); D. Cannadine, *The Pleasures of the Past* (1989); W. J. Bouwsma, *A Usable Past* (1990); M. Beloff, *An Historian in the Twentieth Century* (1992); G. Lerner, *Why History Matters: Life and Thought* (1997); C. E. Schorske, *Thinking with History* (1998); and E. J. Hobsbawm, *Interesting Times: A Twentieth-Century Life* (2002). An insightful study of how historians write about themselves can be found in J. D. Popkin, *History, Historians, and Autobiography* (2005). Other interesting historical reflections appear in two collections of interviews with contemporary historians: H. Abelove (ed.), *Visions of History* (1984), and R. Adelson (ed.), *Speaking of History: Conversations with Historians* (1997).

## Useful Web Sites

For interactive historical maps, readers might consult *Mapping History: The Darkwing Atlas Project* at <http://darkwing.uoregon.edu/~atlas/>, a well-designed site that includes maps and images of Europe, the Americas, and global history. Useful chronological information can be found at the *WebChron Project*, <http://campus.northpark.edu/history/WebChron/>, and at *World History: Hyper History*, [www.hyperhistory.com/online\\_n2/History\\_n2/a.html](http://www.hyperhistory.com/online_n2/History_n2/a.html). An accessible, general introduction to historical timelines, maps, and images is also available through the site of the *History Channel* at [www.historychannel.com/](http://www.historychannel.com/). Readers might also visit the site of the *American Historical Association* for reports on developments in contemporary historical scholarship and teaching, [www.historians.org](http://www.historians.org).

## 1. THE RISE OF EUROPE

### Prehistoric and Ancient Times

For prehistory, the reader may wish to consult B. Fagan, *People of the Earth: An Introduction to World Prehistory* (rev. 2004); P. Phillips, *The Prehistory of Europe* (1980); T. Champion et al., *Prehistoric Europe* (1984); and B. Cunliffe (ed.), *The Oxford Illustrated Prehistory of Europe* (1994). Of special interest are M. R. Ehrenberg, *Women in Prehistory* (1989) and W. W. Barber, *Women's Work: The First 20,000 Years: Women, Cloth, and Society in Early Times* (1994).

Informative accounts for the ancient world include T. B. Jones, *From the Tigris to the Tiber* (rev. 1983); C. G. Starr, *A History of the Ancient World* (rev. 1991); and H. Howe and R. T. Howe, *The Ancient World* (1987). For Mesopotamia and Egypt one may read J. Hawkes, *The First Great Civilizations* (1973); H. Saggs, *The Greatness That Was Babylon* (1991); M. A. Murray, *The Splendor That Was Egypt* (rev. 2004); and C. Freeman, *Egypt, Greece, and Rome: Civilizations of the Ancient Mediterranean* (1999).

Excellent summaries of Greek and Roman antiquity, from the eighth century B.C. through the second century A.D., are found in J. Boardman, J. Griffin, and O. Murray (eds.), *The Oxford History of the Classical World* (1986); other valuable accounts of the ancient world include L. de Blois and R. J. van der Spek, *An Introduction to the Ancient World* (1997) and M. Grant, *The Founders of the Western World: A History of Greece and Rome* (1991). There are rewarding insights in M. I. Finley's many writings on Greece and Rome, among them *The Legacy of Greece: A New Appraisal* (1981) and *Politics in the Ancient World* (1983). An outstanding study of women in Greece and Rome is S. B. Pomeroy, *Goddesses, Whores, Wives, and Slaves: Women in Classical Antiquity* (1975, 1995); one may also read S. Blundell, *Women in Ancient Greece* (1995).

In addition to numerous surveys of classical Greece, the reader will profit from S. B. Pomeroy et

al., *Ancient Greece: A Political, Social, and Cultural History* (1999). For Alexander the Great, one should read P. Green, *Alexander of Macedon, 356–323 B.C.* (1974, 1991). On the rise and fall of the Hellenistic civilization that Alexander helped create, one may read E. S. Gruen, *The Hellenistic World and the Coming of Rome* (2 vols., 1984); P. Green's critical *Alexander to Actium: The Historical Evolution of the Hellenistic Age* (1991); and G. W. Bowersock, *Hellenism in Late Antiquity* (1990), a more sympathetic brief assessment.

Among many surveys of Rome and Roman civilization, one may suggest H. H. Scullard, *A History of the Roman World, 753–146 B.C.* (rev. 2002); and for all aspects of Roman society, see K. Christ, *The Romans: An Introduction to Their History and Civilization* (trans. 1984) and M. T. Boatwright, D. J. Gargola, and R. J. A. Talbert, *The Romans: From Village to Empire* (2004). Earlier Roman history is examined in H. MacDonald, *Republican Rome* (1966) and C. Nicolet, *The World of the Citizen in Republican Rome* (trans. 1980). Books on the Empire include P. Garnsey and R. Saller, *The Roman Empire: Economy, Society and Culture* (1987) and C. M. Wells, *The Roman Empire* (rev. 1992). There is also an important account of Rome's relations with other ancient cultures in P. Wells, *The Barbarians Speak: How the Conquered Peoples Shaped Roman Europe* (1999).

For the coming of Christianity, comprehensive introductions may be found in W. H. C. Frend, *The Rise of Christianity* (1984) and in R. A. Fletcher, *The Barbarian Conversion: From Paganism to Christianity* (1998). Early Christianity's interaction with both the politics and philosophy of the ancient world is examined in C. Freeman, *The Closing of the Western Mind: The Rise of Faith and the Fall of Reason* (2002). The many efforts to reconstruct the historical Jesus include A. N. Wilson, *Jesus* (1992) and J. D. Crossan, *Jesus: A Revolutionary Biography* (1994). On St. Augustine and his times, there is a sensitive account by P. Brown, *Augustine of Hippo* (rev. 2000) and a lively appraisal by G. Wills, *Saint Augustine* (1999). For all aspects of theology there is the magisterial work of J. Pelikan, *The Christian Tradition* (5 vols., 1971–1989), the first three volumes of which relate to the Middle Ages.

### The Middle Ages: The Formation of Europe

Among many surveys of the medieval era as a whole, B. Tierney and S. Painter, *Western Europe in the Middle Ages, 300–1475* (rev. 1999); and C. W. Hollister and J. M. Bennett, *Medieval Europe: A Short History* (rev. 2006) are excellent. A successful effort emphasizing social history is E. Peters, *Europe and The Middle Ages* (rev. 1997). G. Holmes (ed.), *The Oxford Illustrated History of Medieval Europe* (1988), available also in abridged form (1992), is a collaborative work of distinction and J. Le Goff, *Medieval Civiliza-*

*tion, 400–1500* (trans. 1988), is a remarkable synthesis by a leading French historian of the *Annales* school. Historians who have reshaped our understanding of the medieval era are examined in N. Cantor, *Reinventing the Middle Ages* (1992).

Fundamental to the reassessment of Europe's emergence in the early medieval centuries is R. W. Southern, *The Making of the Middle Ages* (1953, 1993). Another important work of synthesis is P. Brown, *The Rise of Western Christendom: Triumph and Diversity, A.D. 200–1000* (rev. 2003), building on the author's numerous other works on late antiquity. Also available are D. Hay, *Europe: The Emergence of an Idea* (rev. 1968); G. Barraclough, *The Crucible of Europe: The Ninth and Tenth Centuries in European History* (1976); C. Brooks, *Europe in the Central Middle Ages, 916–1154* (rev. 2000); and G. Duby, *The Making of the Christian West, 980–1140* (trans. 1968). For the era of Charlemagne one may read P. Geary, *Before France and Germany: The Creation and Transformation of the Merovingian Empire* (1988); R. Collins, *Charlemagne* (1998); M. Becher, *Charlemagne* (trans. 2003); and P. Riché, *Daily Life in the World of Charlemagne* (trans. 1978).

### The Byzantine Empire and the Islamic World

There are many books on the two civilizations in the Middle East that flourished while Europe in the early medieval centuries was in the so-called Dark Ages. For the Byzantine, or Eastern Roman, Empire, one may read the comprehensive, scholarly account by W. Treadgold, *A History of the Byzantine State and Society* (1998), and a shorter work by the same author, *A Concise History of Byzantium* (2001); T. E. Gregory, *A History of Byzantium* (2005); and J. J. Norwich, *A Short History of Byzantium* (1997). The essence of Byzantine culture is captured in H. C. Evans (ed.), *The Glory of Byzantine Art and Culture of the Byzantine Medieval Era, A.D. 893–1261* (1997). The end of the empire is graphically described in S. Runciman, *The Fall of Constantinople, 1453* (1965). Valuable for all aspects of Byzantine civilization is A. P. Kazhdan (ed.), *The Oxford Dictionary of Byzantium* (3 vols., 1991).

Good starting points for the study of Islam include B. Lewis, *Islam in History: Ideas, People and Events in the Middle East* (rev. 1993), *Islam and the West* (1993), and his many other writings; W. M. Watt, *The Majesty That Was Islam: The Islamic World, 661–1100* (rev. 1990); and M. G. S. Hodgson, *The Venture of Islam: Conscience and History in a World Civilization* (3 vols., 1974), from the beginnings to the mid-twentieth century. Accounts of the founder of Islam include T. W. M. Watt, *Muhammad: Prophet and Statesman* (1961), a condensation of a detailed two-volume study; M. H. Haykal, *The Life of Muhammad* (trans. 1976); M. Rodinson, *Muhammad* (trans.

1971, 2002); and K. Armstrong, *Muhammad: A Biography of the Prophet* (1993). The historical legacy of early Islam is examined in R. Asian, *No God but God: The Evolution of Islam* (2005). The best introduction to Arab history is A. Hourani, *A History of the Arab Peoples* (rev. 2002); other informative accounts include B. Lewis, *The Arabs in History* (rev. 1993); P. Mansfield, *The Arabs* (rev. 1985); and M. Rodinson, *The Arabs* (1981). There are many interesting cultural insights in R. Bulliet, *The Camel and the Wheel* (1975), while S. N. Fisher and W. Ochenwal, *The Middle East: A History* (rev. 1997) studies the region from pre-Islamic times on. D. J. Geanakoplos focuses on the interrelationships of the three civilizations in *Medieval Western Civilization and the Byzantine and Islamic Worlds: Interaction of Three Cultures* (1979), while M. L. Colish, *Medieval Foundations of the Western Intellectual Tradition, 400–1400* (1998), provides a valuable comparative survey of the three cultures.

Readers can find contrasting accounts of European views of Islamic societies in E. Said, *Orientalism* (1978, 1995), and M. Rodinson, *Europe and the Mystique of Islam* (trans. 1987); and a helpful, brief overview is available in R. M. Easton, *Islamic History as Global History* (1990).

### The Middle Ages: Economy, Politics, Society

For economic development, the pioneering books by H. Pirenne on the origins of the cities, revival of trade, and other social and economic developments still merit reading, but they have been superseded by more recent research. Among useful histories are R. S. Lopez, *The Commercial Revolution of the Middle Ages, 950–1350* (rev. 1976); G. Duby, *The Growth of the European Economy* (1974); and J. L. Bolton, *The Medieval Economy, 1150–1500* (1980). Also informative are N. J. G. Pounds, *An Economic History of Medieval Europe* (rev. 1994); C. M. Cipolla, *Before the Industrial Revolution: European Society and Economy, 1000–1700* (rev. 1980); and J. Day, *Medieval Market Economy* (1987). The volumes in the collaborative *Cambridge Economic History of Europe* (1941 ff.) provide authoritative but highly specialized accounts. The second volume, M. M. Postan and E. Miller (eds.), *Trade and Industry in the Middle Ages* (1952, 1987), was thoroughly revised for its new edition. L. White, Jr., *Medieval Technology and Social Change* (1962) and *Medieval Religion and Technology* (1978) illustrate some of the scholarship which has dispelled the image of the early medieval years as technologically stagnant.

E. Ennen, *The Medieval Town* (trans. 1979), incorporates the considerable research since Pirenne, but it may be supplemented by D. Nichols, *The Growth of the Medieval City* (1997); and K. D. Lilley, *Urban Life in the Middle Ages, 1000–1450* (2002). On feudalism and manorialism, useful introductions are available in F. L. Ganshof, *Feudalism* (rev. 1964), and J. S. Critch-

ley, *Feudalism* (1978). An imaginative effort at comparing ideal models and material realities is G. Duby, *The Three Orders: Feudal Society Imagined* (trans. 1980). M. Bloch's classic contributions include *Feudal Society* (1938–40; trans. 1961) and *Slavery and Serfdom in the Middle Ages* (trans. 1975).

Studies of the emergent monarchical states include B. Guenée, *States and Rulers in Later Medieval Europe* (trans. 1985), and S. Reynolds, *Kingdoms and Communities in Western Europe, 900–1300* (rev. 1997), which stresses cultural bonds. An important collaborative work is C. Tilley (ed.), *The Formation of National States in Western Europe* (1975). Of the many books available for the national formations the following are a sampling. For Germany: G. Barraclough, *Origins of Modern Germany* (rev. 1984); and T. Reuter, *Germany in the Early Middle Ages, c. 800–1056* (1991); For England: M. T. Clanchy, *England and Its Rulers, 1066–1272* (rev. 1998); and T. Rowley, *The High Middle Ages, 1200–1540* (1986) in the *Making of Britain* series. For Spain: A. MacKay, *Spain in the Middle Ages: From Frontier to Empire 100–1500* (1989); and there is valuable information in L. P. Harvey, *Islamic Spain, 1250 to 1500* (1990). For France: J. Dunbabin, *France in the Making, 843–1180* (rev. 2000); E. M. Hallam, *Capetian France, 987–1328* (1983); and E. James, *The Origins of France: From Clovis to the Capetians, 500–1000* (1980). For the Italian city-states one may read D. Waley, *The Italian City Republics* (rev. 1988) and P. J. Jones, *The Italian City-State: From Commune to Signoria* (1997).

### Social History

The first two volumes of *A History of Private Life*, P. Veyne (ed.), *From Pagan Rome to Byzantium* (1987) and G. Duby (ed.), *Revelations of the Medieval World* (1988), explore aspects of social history, as do R. Fossier, *Peasant Life in the Medieval West* (trans. 1988) and H. W. Goetz, *Life in the Middle Ages: From the Seventh to the Thirteenth Century* (1993). For women in the Middle Ages, their constraints and opportunities, one may read A. Lucas, *Women in the Middle Ages: Religion, Marriage, and Letters* (1984); S. Shahar, *The Fourth Estate: A History of Women in the Middle Ages* (1984); D. Herlihy, *Opera Muliebria: Women at Work in Medieval Europe* (1990); E. Ennen, *The Medieval Woman* (1990); and a useful, concise summary by J. M. Bennett, *Medieval Women in Modern Perspective* (2000). Informative collections of essays include J. M. Bennett et al. (eds.), *Sisters and Workers in the Middle Ages* (1989); M. Erler and M. Kowaleski (eds.), *Women and Power in the Middle Ages* (1988); M. Erler and M. Kowaleski (eds.), *Gendering the Master Narrative: Women and Power in the Middle Ages* (2003); and J. M. Bennett and A. M. Froide (eds.), *Single Women in the European Past* (1999). The transformation of the household is master-

fully explored in D. Herlihy, *Medieval Households* (1985), which may be supplemented by the important works of B. A. Hanawalt, *The Ties That Bind: Peasant Families in Medieval England* (1986) and *Of Good and Ill Repute: Gender and Social Control in Medieval England* (1998). Special subjects are explored in C. Brooke, *The Medieval Idea of Marriage* (1989), in J. A. Brundage, *Law, Sex, and Christian Society in Medieval Europe* (1990), and in N. Orme, *Medieval Children* (2001).

### The Middle Ages: Intellect and Piety

Intellectual developments and scholasticism are discussed in many of the books already cited but are also examined with insight in R. C. Dales, *The Intellectual Life of Western Europe* (rev. 1992); B. B. Price, *Medieval Thought: An Introduction* (1992); M. L. Colish, *Medieval Foundations of the Western Intellectual Tradition, 400–1400* (1997); and J. Pelikan, *The Growth of Medieval Theology, 600–1300* (1981), Vol. III of his *The Christian Tradition* referred to earlier. For political thought and philosophy one may also turn to J. B. Morrall, *Political Thought in Medieval Times* (rev. 1980); and W. Ullman, *A History of Political Thought in the Middle Ages* (1965).

For the universities one may read C. H. Haskins, *The Rise of the Universities* (1923, 1979); H. Rashdall's monumental *The Universities of Europe in the Middle Ages* (3 vols., 1895; revised and reissued 1936, 1987); and H. de Ridder-Symoens (ed.), *Universities in the Middle Ages* (1992). For ancient and medieval scientific activities as background to the emergence of modern science, an excellent synthesis is D. C. Lindberg, *The Beginnings of Western Science: The European Scientific Tradition in Philosophical, Religious, and Institutional Context, 600 B.C. to A.D. 1450* (1992).

Valuable introductions to the church as an institution are M. Deanesley, *A History of the Medieval Church, 590–1500* (rev. 1969); C. Morris, *The Papal Monarchy: The Western Church from 1050 to 1250* (1989); J. Lynch, *The Medieval Church: A Brief History* (1992); and I. W. Frank, *A History of the Medieval Church* (trans. 1995). For the popes from the earliest times on, a wealth of information is available in J. N. D. Kelly (ed.), *The Oxford Dictionary of Popes* (1986); and in E. Duffy, *Saints and Sinners: A History of the Popes* (rev. 2002); and for all aspects of church history one may turn to J. McManners, *The Oxford Illustrated History of Christianity* (1990). Of special interest is J. Sayers, *Innocent III: Leader of Europe, 1198–1216* (1994).

For the lives of the saints and the society in which they lived, one may read D. Weinstein and R. M. Bell, *Saints and Society: The Two Worlds of Western Christendom, 1000–1700* (1983). Other insights into religious life may be obtained from C. Brooke, *The Monastic World, 1000–1300* (1974), and C. H. Laurence, *Medieval Monasticism* (1989).

For the treatment of heresy in medieval society one may read E. Le Roy Ladurie, *Montaillou: The Promised Land of Error* (trans. 1978); and E. Peters, *Inquisition* (1988). Peters has also written a broad study, *Torture* (rev. 1996), which includes its incorporation into medieval law and practice. A sweeping indictment of medieval intolerance toward "outside" groups is presented in R. I. Moore, *The Formation of a Persecuting Society: Power and Deviance in Western Europe, 950–1250* (1987), while scholarly explorations of medieval attitudes toward such groups can be found in J. Boswell, *Christianity, Sexual Tolerance, and Homosexuality: Gay People in Western Europe from the Beginning of the Christian Era to the Fourteenth Century* (1980). On medieval Jewry one may turn to K. R. Stow, *Alienated Minority: The Jews of Medieval Latin Europe* (1992); L. B. Glick, *Abraham's Heirs: Jews and Christians in Medieval Europe* (1999); and R. Chazan, *Fashioning Jewish Identity in Medieval Western Christendom* (2004). The roots of anti-Semitism are explored in R. S. Wistrich, *Anti-Semitism: The Longest Hatred* (1992).

### The Crusades

The expansion and conquests of medieval Europeans are described in J. R. S. Phillips, *The Medieval Expansion of Europe* (rev. 1998), and in R. Bartlett, *The Making of Europe: Conquest, Colonization, and Cultural Change, 950–1350* (1993), an important synthesis. The Crusades may be approached through J. R. Smith, *The Crusades: A Short History* (1987); T. F. Madden, *The New Concise History of the Crusades* (rev. 2005); T. Asbridge, *The First Crusade: A New History: The Roots of Conflict between Christianity and Islam* (2005); the detailed, colorful S. Runciman, *A History of the Crusades* (3 vols., 1951–54, 1987); H. E. Mayer, *The Crusades* (rev. and trans. 1988); and the collaborative multivolume K. M. Setton (ed.), *History of the Crusades* (6 vols., 1955–90). The assault on Jewish communities in the Rhineland as a consequence of the First Crusade is carefully examined in R. Chazan, *European Jewry and the First Crusade* (1987), while the twelfth-century Muslim foe of the Crusaders is studied in A. S. Ehrenkrentz, *Saladin* (1978).

### Useful Web Sites

A vast range of documents and modern scholarly works on the ancient and medieval world can be found at numerous university-sponsored Web sites; see, for example, the *Ancient World Mapping Center* at the University of North Carolina, [www.unc.edu/awmc/](http://www.unc.edu/awmc/); the *Perseus Digital Library* at Tufts University, [www.perseus.tufts.edu/cache/perscoll\\_Greco-Roman.html](http://www.perseus.tufts.edu/cache/perscoll_Greco-Roman.html); and the *Internet Ancient History Sourcebook* at Fordham University, [www.fordham.edu/halsall/ancient/asbook2.html](http://www.fordham.edu/halsall/ancient/asbook2.html), where readers will also find an excellent *Internet Medieval Sourcebook*, [www.fordham.edu/](http://www.fordham.edu/)

halsall/sbook.html. Other comprehensive sites focusing on the medieval era include *The Labyrinth* at Georgetown University, <http://labyrinth.georgetown.edu/>, which provides helpful information on Islam and Byzantium as well as every aspect of medieval Europe; and valuable resources on medieval women are available at the Haverford College library site, *Feminae: Medieval Women and Gender Index*, [www.haverford.edu/library/reference/mshcaus/mfi/mfi.html](http://www.haverford.edu/library/reference/mshcaus/mfi/mfi.html).

## 2. THE UPHEAVAL IN WESTERN CHRISTENDOM, 1300–1560

Two books by J. R. Hale, *The Civilization of Europe in the Renaissance* (1993) and *Renaissance Europe, 1480–1520* (rev. 2000), are outstanding. Other helpful overviews for these years encompassing the later Middle Ages, the Renaissance, and the Reformation include S. E. Ozment, *The Age of Reform, 1250–1550: An Intellectual and Religious History of Late Medieval and Reformation Europe* (1980); H. F. Koenigsberger, *Early Modern Europe, 1500–1789* (1987); E. F. Rice, Jr., and A. Grafton, *The Foundations of Early Modern Europe* (rev. 1993); and D. Nicholas, *The Transformation of Europe, 1300–1600* (1999). There are informative chapters in G. R. Potter (ed.), *The Renaissance, 1493–1520* (rev. 1991) and G. R. Elton (ed.), *The Reformation, 1520–1599* (rev. 1990). Vols. I and II of the *New Cambridge Modern History*. T. K. Rabb, *Renaissance Lives: Portraits of an Age* (rev. 2001) provides vivid accounts of notable figures. War and diplomacy are explored in G. Mattingly, *Renaissance Diplomacy* (1971); M. S. Anderson, *The Rise of Modern Diplomacy, 1450–1919* (1993); and J. R. Hale, *War and Society in Renaissance Europe, 1450–1620* (1985, 1998); while E. L. Eisenstein explores the printing press as a direct and indirect agent of cultural change in *The Printing Revolution in Early Modern Europe* (1984).

Much newer social history has centered on the early modern centuries. Here P. Burke, *Popular Culture in Early Modern Europe* (rev. 1994), ranging in time from 1500 to 1800, is a fundamental analysis. C. Ginzburg, *The Cheese and the Worms: The Cosmos of a Sixteenth-Century Miller* (trans. 1980) reconstructs the mentality of an obscure Italian miller of the age. N. Z. Davis, *Society and Culture in Early Modern France* (1975) illuminates the religious and other beliefs of nonliterate peasants and *The Return of Martin Guerre* (1983) recounts a fascinating episode in village life. R. Chartier (ed.), *Passions of the Renaissance* (1988), the third volume of the *History of Private Life* series, opens the door to aspects of life among all classes in this era. G. Huppert, *After the Black Death: A Social History of Early Modern Europe* (rev. 1998) is a valuable study. Other aspects of social history are examined in K. von Greyerz (ed.), *Religion and Society in Early Modern Europe,*

*1500–1800* (1984) and in R. Jütte, *Poverty and Deviance in Early Modern Europe* (1994), a volume in the *New Approaches to European History* series. The ambivalent position of women in the Renaissance is ably conveyed in M. L. King, *Women of the Renaissance* (1991), an outstanding study; I. Maclean, *The Renaissance Notion of Women* (1980); O. Hufton, *The Prospect Before Her: A History of Women in Western Europe, 1500–1800* (1995), and M. E. Wiesner, *Women and Gender in Early Modern Europe* (rev. 2000), also a volume in the *New Approaches to European History* series.

## Disasters of the Fourteenth Century

Two brief surveys of the era are R. E. Lerner, *The Age of Adversity: The Fourteenth Century* (1968) and M. McKisack, *The Fourteenth Century, 1307–1399* (1959, 1991). B. W. Tuchman, *A Distant Mirror: The Calamitous Fourteenth Century* (1978) is a vivid account of war, disease, and religious schism written for the general reader. G. Leff, *The Dissolution of the Medieval Outlook: An Essay on Intellectual Change in the Fourteenth Century* (1976), despite the title, stresses the continuity of medieval thought. J. Kaye, *Economy and Nature in the Fourteenth Century: Money, Market Exchange, and the Emergence of Scientific Thought* (1998) explores the influence of economic life on early scientific thought. The growing restlessness within the church before the Reformation is described in F. Oakley, *The Western Church in the Later Middle Ages* (1979) and R. N. Swanson, *Church and Society in Late Medieval England* (1989). Heresies of the period may be examined in H. Kaminsky, *A History of the Hussite Revolution* (1967); in R. Rex, *The Lollards* (2002); and in M. Lambert, *Medieval Heresy: Popular Movements From the Gregorian Reform to the Reformation* (rev. 2002).

The devastating fourteenth-century plague that swept Europe and other parts of the globe from 1347 to 1351 is examined in W. H. McNeill, *Plagues and Peoples* (1976), cited earlier; R. S. Gottfried, *The Black Death: Natural and Human Disaster in Medieval Europe* (1983); D. Herlihy, *The Black Death and the Transformation of the West* (1997); N. F. Cantor, *In the Wake of the Plague* (2001); J. Kelley, *The Great Mortality: An Intimate History of the Black Death* (2005); and S. K. Cohn, *The Black Death Transformed: Disease and Culture in Early Renaissance Europe* (2002), which challenges the usual physiological explanations for the plague. A useful work, which includes documents from the era, is J. Alberth, *The Black Death: The Great Mortality of 1348–1350: A Brief History with Documents* (2005). The long war between France and England over the years 1337 to 1453 may be studied in A. Curry, *The Hundred Years War* (rev. 2003). The works by D. Seward, *The Hundred Years War: The English in France, 1337–1453* (rev. 1999) and C. Allmand, *The Hundred Years' War: England and France*

at War, c. 1300–c. 1450 (1988) explore the war's impact on both countries. Of the large literature on the "Maid of Orléans" a recent brief account with fresh interpretations is M. Gordon, *Joan of Arc* (2000) in the *Penguin Lives* series.

For the *jacqueries* and other popular revolts one may read M. Mollat and P. Wolff, *The Popular Revolutions of the Late Middle Ages* (trans. 1972) and G. Fourquin, *The Anatomy of Popular Rebellion in the Middle Ages* (trans. 1978).

The phenomenon of witchcraft in the early modern centuries between 1450 and 1750 has understandably attracted a good deal of attention. During those years more than 100,000 people, mainly but not exclusively women, were prosecuted in secular and ecclesiastical courts, and many were put to death. To understand the phenomenon, K. Thomas, *Religion and the Decline of Magic* (1971) is of fundamental importance, but one may also turn to J. Klaitz, *Servants of Satan: The Age of the Witch Hunts* (1985); C. Lerner, *Witchcraft and Religion: The Politics of Popular Belief* (1985); C. Ginzburg, *Ecstasies: Deciphering the Witches' Sabbath* (1991); and B. P. Levack, *The Witch-Hunt in Early Modern Europe* (rev. 1995), which synthesizes the literature. Available also are M. D. Bailey, *Battling Demons: Witchcraft, Heresy, and Reform in the Later Middle Ages* (2003); G. K. Waite, *Heresy, Magic, and Witchcraft in Early Modern Europe* (2003); W. Behringer, *Witches and Witch-Hunts: A Global History* (2004); and R. Briggs, *Witches and Neighbors: The Social and Cultural Context of European Witchcraft* (1997), based on a wide range of materials from all parts of Europe.

## The Renaissance in Italy

In addition to the general accounts already cited, one may turn for all aspects of the Renaissance to the now-classic study by M. P. Gilmore, *The World of Humanism, 1453–1517* (1952, 1983). The concept of the "Renaissance" itself, which is still debated, was skillfully explored in classic works by J. Burckhardt, *The Civilization of the Renaissance in Italy* (1860, 1990) and W. K. Ferguson, *The Renaissance in Historical Thought: Five Centuries of Interpretation* (1948). Readers will also find important interpretations of Renaissance culture and its enduring influence in W. J. Bouwsma, *The Waning of the Renaissance* (2000). For the quickening of activities in the Italian city-states one turns to D. Hay and J. Law, *Italy in the Age of the Renaissance, 1380–1530* (1989); P. Burke, *The Italian Renaissance: Culture and Society in Italy* (rev. 1999); F. Braudel, *Out of Italy, 1450–1650* (trans. 1992), by the *Annales* historian; J. Najemy (ed.), *Italy in the Renaissance, 1300–1550* (2004); E. Welch, *Art and Society in Italy, 1350–1500* (1997); and I. Rowland, *From Heaven to Arcadia: The Sacred and the Profane in the Renaissance* (2004). The revived interest in the classics is examined in R. Weiss, *The Renaissance Discov-*

*ery of Classical Antiquity* (1969, 1988), and the philosophical debates of the time are examined in B. P. Copenhaver and C. B. Schmitt, *Renaissance Philosophy* (1992), and in A. Levi, *Renaissance and Reformation: The Intellectual Genesis* (2002). Some additional insights into Renaissance culture are offered in L. Jardine, *Worldly Goods: A New History of the Renaissance* (1997). The fusion of politics and humanism (or "civic humanism") is traced in a pioneering work by H. Baron, *The Crisis of the Early Italian Renaissance: Civic Humanism and Republican Liberty in an Age of Classicism and Tyranny* (1955, 1966). The relationship of politics and cultural life is also graphically portrayed in L. Martines, *Power and Imagination: City States in Renaissance Italy* (1979); and the interaction between commercial and intellectual life is explored in T. Parks, *Medici Money: Banking, Metaphysics, and Art in Fifteenth-Century Florence* (2005). A famous Renaissance prelate is portrayed in C. Shaw, *Julius II: The Warrior Pope* (1993).

Of the large literature on Machiavelli, there is a brief, insightful study by J. R. Hale, *Machiavelli and Renaissance Italy* (1960) and a more recent study by the intellectual historian Q. Skinner, *Machiavelli: A Very Short Introduction* (2000); S. de Grazia, *Machiavelli in Hell* (1989), an intriguing intellectual biography; A. J. Parel, *The Machiavellian Cosmos* (1992); and M. Viroli, *Machiavelli* (1998). A provocative study of political thought and discourse as influenced by the Renaissance from the fifteenth to the eighteenth centuries is J. G. A. Pocock, *The Machiavellian Moment: Florentine Political Thought and the Atlantic Republican Tradition* (rev. 2003). J. R. Hale (ed.), *A Concise Encyclopedia of the Italian Renaissance* (1981) is a convenient reference tool.

Numerous studies focusing on each of the Italian city-states have helped illuminate the world of humanism, of which only a few titles can be cited here. Much of the focus has been on Florence, for which G. Brucker, *Renaissance Florence* (rev. 1983) and G. Holmes, *The Florentine Enlightenment, 1400–50* (1992) are the most helpful. Other informative studies include J. R. Hale, *Florence and the Medici: The Pattern of Control* (1978), an especially insightful account; R. A. Goldthwaite, *The Building of Renaissance Florence: An Economic and Social History* (1980); M. Becker, *Florence in Transition* (2 vols., 1967–69); D. Weinstein, *Savonarola and Florence* (1970); and C. Fusaro, *The Borgias* (trans. 1973). A colorful popular account is C. Hibbert, *Florence: The Biography of a City* (1993).

Outstanding studies of Venice with varying perspectives include F. C. Lane, *Venice: A Maritime Republic* (1973); W. H. McNeill, *Venice, The Hinge of Europe, 1081–1797* (1974); R. Finlay, *Politics in Renaissance Venice* (1980); and E. Muir, *Civic Ritual in Renaissance Venice* (1981). Valuable studies in social and cultural history include the books by G. Ruggiero,

*The Boundaries of Eros: Sex Crime, and Sexuality in Renaissance Venice* (1985); S. Chojnacki, *Women and Men in Renaissance Venice* (2000); and P. F. Brown, *Private Lives in Renaissance Venice: Art, Architecture, and the Family* (2004). For Rome one may read P. Partner, *Renaissance Rome, 1500–1559: A Portrait of a Society* (1976) and C. L. Stinger, *The Renaissance in Rome* (reissued 1998).

### The Renaissance outside Italy

One of the best introductions to the northern Renaissance can still be found in the classic work by J. Huizinga, *The Autumn of the Middle Ages* (1924; new trans., 1996); one should also read the same author's *Erasmus and the Age of Reformation* (1924, 1984). For the Dutch humanist one may also read R. M. Bainton, *Erasmus of Christendom* (1969, 1988); E. Rummel, *Erasmus* (2004); J. McConica, *Erasmus* (1991); and L. Halkin, *Erasmus: A Critical Biography* (trans. 1993). For Christian humanism in general and its contribution to the religious changes of the age, one turns to J. H. Overfield, *Humanism and Scholasticism in Late Medieval Germany* (1984).

### The New Monarchies

A good overview is provided in R. Bonney, *The European Dynastic States, 1494–1660* (1991). For England, J. Youngs, *Sixteenth-Century England* (1984) examines all aspects of the age. J. R. Lander, *Government and Community: England, 1450–1509* (1980) describes in detail the curbing of feudal power and the evolution of the modern state. Also helpful for England are E. F. Jacob, *The Fifteenth Century* (1961, 1993) and A. Goodman, *The New Monarchy: England, 1471–1534* (1988). For France several books are illuminating: L. Febvre, *Life in Renaissance France* (trans. 1977); and H. A. Lloyd, *The State, France, and the Sixteenth Century* (1983). Two good biographies of “new monarchs” are J. M. Tyrell, *Louis XI* (1980) and R. J. Knecht, *Renaissance Warrior and Patron: The Reign of Francis I* (1982, rev. 1994), the latter a biography of distinction.

### General Works on the Reformation

Syntheses of the sixteenth-century upheaval in church and society may be found in L. W. Spitz, *The Protestant Reformation, 1517–1559* (1985) and in M. Gray, *The Protestant Reformation: Belief, Practice, and Tradition* (2003). Other informative accounts are available in E. Cameron, *The European Reformation* (1991); D. MacCulloch, *The Reformation: A History* (2004); and P. Collinson, *The Reformation: A History* (2004).

For political and social background one may turn to H. Holborn, *A History of Modern Germany: The Reformation* (1959), the first volume of his three-volume history of Germany; R. P. Hsia (ed.), *The German People and the Reformation* (1988); and R. W. Scribner, *Popular Culture and Popular Movements in*

*Reformation Germany* (1987). Recent accounts of the leading ruler of the age are available in W. S. Maltby, *The Reign of Charles V* (2002) and H. Kleinschmidt, *Charles V: The World Emperor* (2004).

Biographical accounts of Luther include R. H. Bainton, *Here I Stand: A Life of Martin Luther* (1950, 1994); H. Oberman, *Luther: Man Between God and the Devil* (trans. 1990); M. Brecht, *Martin Luther* (2 vols., trans. 1985, 1990); and M. Marty, *Martin Luther* (2004), an interesting analysis by a noted American historian of religion. E. H. Erikson offers psychoanalytic insights into the religious leader's identity crisis in *Young Man Luther: A Study in Psychoanalysis and History* (1962). Among other studies are H. G. Haile, *Luther: An Experiment in Biography* (1980); M. U. Edwards, Jr., *Luther's Last Battles: Politics and Polemics, 1531–1546* (1983); and G. Brendler, *Martin Luther: Theology and Revolution* (1989). The appeal of Lutheran ideas is skillfully analyzed in R. W. Scribner, *For the Sake of Simple Folk: Popular Propaganda in the German Reformation* (1981); in P. Blickle, *The Revolution of 1525: The German Peasants' War from a New Perspective* (trans. 1981); and in B. Scribner and G. Benecke (eds.), *The German Peasant War, 1525: New Viewpoints* (1979).

An admirable biography of Calvin, capturing the spirit of the man and his times, is W. J. Bouwsma, *John Calvin: A Sixteenth Century Portrait* (1987). Studies of the reformer's thought and influence include F. Wendel, *Calvin: The Origins and Development of His Religious Thought* (trans. 1963, reissued 1987) and P. Helm, *John Calvin's Ideas* (2004). The wider development of the Calvinist movement is examined in P. Benedict, *Christ's Churches Purely Reformed: A Social History of Calvinism* (2002). An outstanding biography of another reformer is G. R. Potter, *Zwingli* (1977), on whom W. P. Stephens has also written *Zwingli: An Introduction to His Thought* (1992). R. H. Bainton, *Hunted Heretic: The Life and Death of Michael Servetus* (1960) may be compared with J. Friedman, *Michael Servetus: A Case Study in Total Heresy* (1978). Studies of another important religious reformer can be found in W. S. Reid, *Trumpeter of God: A Biography of John Knox* (1975) and R. K. Marshall, *John Knox* (2000).

The cities in which the major events of the Reformation occurred are examined in W. Monter, *Calvin's Geneva* (1967) and S. E. Ozment, *The Reformation in the Cities: The Appeal of Protestantism to Sixteenth Century Germany and Switzerland* (1975). S. E. Ozment, *When Fathers Ruled: Family Life in Reformation Europe* (1983) describes the patriarchal household as less tyrannical than traditionally portrayed. R. H. Bainton, *Women of the Reformation* (3 vols., 1971–77) studies the contributions of women to the religious changes of the era; and S. Marshall (ed.), *Women in Reformation and Counter-Reformation Europe: Public and Private Worlds* (1989) provides in-

formative essays on women of the time in various social contexts.

## The Reformation in England

The course of the Reformation in England may be approached through a number of helpful syntheses: A. G. Dickens, *The English Reformation* (rev. 1989); J. J. Scarisbrick, *The Reformation and the English People* (1986); and R. Rex, *Henry VIII and the English Reformation* (1993). Recent scholarship is also communicated in P. Marshall and A. Ryrie (eds.), *The Beginnings of English Protestantism* (2002); in W. I. P. Hazleett, *The Reformation in Britain and Ireland: An Introduction* (2003); and in S. Doran and C. Durston, *Princes, Pastors, and People: The Church and Religion in England, 1529–1689* (rev. 2003).

The influential English scholar, statesman, and martyr is studied in R. Marius, *Thomas More: A Biography* (1985), a somewhat critical and unsympathetic account; while P. Ackroyd, *The Life of Thomas More* (1998) and J. A. Guy, *Thomas More* (2000) create a more balanced appraisal of a complex personality. Also available is L. L. Martz, *Thomas More: The Search for the Inner Man* (1990). The conflicts between English Catholics and Protestants are examined in E. Duffy, *The Stripping of the Altars* (rev. 2005) and in A. F. Marotti, *Religious Ideology and Cultural Fantasy: Catholic and Anti-Catholic Discourses in Early Modern England* (2005).

Three older but still provocative books dealing with the social and economic implications of the Reformation for the future course of England are R. H. Tawney, *Religion and the Rise of Capitalism* (1926, 1962), insightful even if modified by later research; C. Hill, *Reformation to Industrial Revolution: The Making of Modern English Society* (1967), also emphasizing class interests; and H. R. Trevor-Roper, *Religion, the Reformation, and Social Change* (rev. 1984), which is less persuaded by the connection between religion and class.

A distinguished biography focusing on the king as well as the events of his reign is J. J. Scarisbrick, *Henry VIII* (1968, 1986); also thoughtful is L. B. Smith, *Henry VIII: The Mask of Royalty* (1971), which may be supplemented by the more recent work of M. A. R. Graves, *Henry VIII, A Study in Kingship* (2000) and A. Weir, *Henry VIII: The King and His Court* (2001). On the history of Henry's wives, in addition to several individual biographies for each, one may read A. Fraser, *The Wives of Henry VIII* (1992); A. Weir, *Six Wives of Henry VIII* (1992); and D. Starkey, *Six Wives: The Queens of Henry VIII* (2003). Henry VIII's two immediate successors and their brief reigns are described in S. Alford, *Kingship and Politics in the Reign of Edward VI* (2002); D. M. Loades, *Mary Tudor* (1989); and C. Erickson, *Bloody Mary: The Life of Mary Tudor* (1993). Books on Elizabeth will be described in the next chapter, but for

studies of religion in all or part of her reign one may turn to A. Morey, *The Catholic Subjects of Elizabeth I* (1978) and P. Collinson's two books, *The Elizabethan Puritan Movement* (1967, 1990) and *The Religion of Protestants: The Church in English Society, 1559–1625* (1983).

## Other Reformation Themes

The various forms of Protestantism are placed in doctrinal perspective in B. M. G. Reardon, *Religious Thought in the Reformation* (rev. 1995) and A. McGrath, *Reformation Thought* (1988), while the radical movements of the era may be studied in G. H. Williams, *The Radical Reformation* (rev. 1992); N. Cohn, *The Pursuit of the Millennium: Revolutionary Messianism in Medieval and Reformation Europe* (rev. 1970); and M. A. Mullett, *Radical Religious Movements in Early Modern Europe* (1980). An important subject is explored in H. Kamen, *The Rise of Toleration* (1967).

On the relation between economic change and Protestant religious doctrine, especially Calvinism, a debate that was opened by Max Weber in *The Protestant Ethic and the Spirit of Capitalism* (1904, 1985) and further developed by R. H. Tawney in the 1920s, one may read G. Marshall, *In Search of the Spirit of Capitalism: An Essay on Max Weber's Protestant Ethic Thesis* (1982), a balanced review; and the essays in H. Lehmann and G. Roth (eds.), *Weber's Protestant Ethic* (1993) and in W. H. Swatos Jr. and L. Kaelber (eds.), *The Protestant Ethic Turns 100: Essays on the Centenary of the Weber Thesis* (2005), which add many new insights.

The Catholic response to the Reformation is studied in N. S. Davidson, *The Counter Reformation* (1987), which provides a brief overview, and in M. D. W. Jones, *The Counter Reformation: Religion and Society in Early Modern Europe* (1995). Important for the Catholic response and other matters is J. Pelikan, *Reformation of Church and Dogma, 1300–1700* (1983), Vol. IV of his *The Christian Tradition*. H. Jedin, *The Council of Trent* (2 vols., 1957–61) presents the fullest account of the important council and its reforms. Introductions to the literature on the Society of Jesus are provided in W. B. Bangert, *A History of the Society of Jesus* (1972) and J. P. Donnelly, *Ignatius of Loyola: Founder of the Jesuits* (2004). A masterful review of the early Jesuits is J. O'Malley, *The First Jesuits* (1999). There are also biographies of Loyola by P. Caramon (1990) and W. Meissner (1992), the latter a psychoanalytical study.

## Useful Web Sites

Several Web sites provide access to information on the crisis of the later middle ages; see, for example, information about the plague in Britain at the useful site of the British radio network, *BBC-History*, [www.bbc.co.uk/history/society\\_culture/welfare/black\\_01.shtml](http://www.bbc.co.uk/history/society_culture/welfare/black_01.shtml); the excellent *Internet Medieval Sourcebook* at

Fordham University, cited earlier, includes materials on the disasters of the fourteenth century at [www.fordham.edu/halsall/sbook1w.html](http://www.fordham.edu/halsall/sbook1w.html). For sources on the history of witchcraft, one may visit *The Witch Hunts* at <http://history.hanover.edu/early/wh.html>. There are helpful links to diverse themes in the history of both the Renaissance and Reformation at the Web site of the *History Department, University of Colorado, Colorado Springs*, <http://web.uccs.edu/history/globalhistory/renaissance.htm>. More links to the history of all European countries in the Renaissance era can be found at *Medieval and Renaissance Europe: Primary Historical Documents*, [www.lib.byu.edu/~rdh/eurodocs/](http://www.lib.byu.edu/~rdh/eurodocs/), where readers can also locate helpful material on the early monarchical states. The evolution of the French state is examined with useful documents and images at a Library of Congress site called *Creating French Culture*, which is available at [www.loc.gov/exhibits/bnf/bnf0001.html](http://www.loc.gov/exhibits/bnf/bnf0001.html). The Reformation can be explored through Fordham University's *Internet Modern History Sourcebook* at [www.fordham.edu/halsall/mod/modsbook.html](http://www.fordham.edu/halsall/mod/modsbook.html); and see also the excellent links at the Web site of *The Centre for Reformation and Renaissance Studies*, affiliated with the University of Toronto, at [www.crrs.ca/library/webresources/webresources.htm](http://www.crrs.ca/library/webresources/webresources.htm).

### 3. ECONOMIC RENEWAL AND WARS OF RELIGION, 1560–1648

Of general treatments for these years, covering institutional and international developments, the best guides are G. Parker, *Europe in Crisis, 1598–1648* (rev. 2001); H. Kamen, *Early Modern European Society* (2000), which describes the evolving social history of the era; V. G. Kiernan, *State and Society in Europe, 1550–1650* (1987); and J. H. Elliott, *Europe Divided, 1559–1598* (rev. 2000). F. Braudel's magisterial work stressing broad geographic, demographic, and economic developments, *The Mediterranean and the Mediterranean World in the Age of Philip II* (rev. and abr. ed., 1992), has been cited in the introductory section.

Analytical treatments focusing on the concept of crisis in the seventeenth century (and useful for this and the following chapter) include T. Aston (ed.), *Crisis in Europe, 1560–1660: Essays from Past and Present* (1966); G. Parker and L. M. Smith, *The General Crisis of the Seventeenth Century* (1978); T. K. Rabb, *The Struggle for Stability in Early Modern Europe* (1976); and T. Munck, *Seventeenth-Century Europe: State, Conflict, and the Social Order in Europe, 1598–1700* (rev. 2005). Agrarian and urban unrest is studied in P. Zagorin, *Rebels and Rulers, 1500–1660* (2 vols., 1982); J. A. Goldstone's sociological study, *Revolution and Rebellion in the Early Modern World* (1991); and C. Tilly, *European Revolutions, 1492–*

*1992* (1992). The impact on society of military change is examined in G. Parker, *The Military Revolution: Military Innovation and the Rise of the West, 1500–1800* (rev. 1996) and in J. Black, *A Military Revolution? Military Change and European Society, 1550–1800* (1991). B. M. Downing, *The Military Revolution and Political Change: The Origins of Democracy and Autocracy in Early Modern Europe* (1992) is intended to revise and supplement B. Moore, *The Social Origins of Dictatorship and Democracy: Lord and Peasant in the Making of the Modern World* (1966, reissued 1993).

### The Opening of the Atlantic

Good introductions to European exploration and settlement, beginning in the pre-Columbian age, are F. Fernández-Armesto, *Before Columbus: Exploration and Colonization from the Mediterranean to the Atlantic, 1229–1492* (1987); J. H. Parry, *The Age of Reconnaissance: Discovery, Exploration, and Settlement, 1450–1650* (rev. 1981); and G. Scammell, *The First Imperial Age: European Overseas Expansion, 1400–1715* (1989). Still interesting is S. E. Morison, *The European Discovery of America* (2 vols., 1971–74, 1993), but a more analytical overview of European imperial expansion is available in D. B. Abernethy, *The Dynamics of Global Dominance: European Overseas Empires, 1415–1980* (2000); and there is a helpful survey of European expansion throughout the world in D. R. Ringrose, *Expansion and Global Interaction* (2001). C. M. Cipolla stresses the importance of technology for the European explorations in *Guns, Sails, and Empires: 1400–1700* (1965, reissued 1985), as does A. W. Crosby in a far-ranging study, *The Measure of Reality: Quantification and Western Society, 1250–1600* (1997). China's naval exploits in the early 15th century are described in L. E. Leviathes, *When China Ruled the Seas* (1994).

The 500th anniversary of Columbus's first voyage stimulated the appearance of numerous books, many vehemently critical of the European impact on the New World and seeing the voyages less as discovery than intrusion or conquest, or at best as an encounter between very different peoples and cultures. Three examples of this critical literature are K. Sale, *Christopher Columbus and the Conquest of Paradise* (rev. 2006); T. Todorov, *The Conquest of America: The Question of the Other* (trans. 1984, reissued 1999); and D. E. Stannard, *American Holocaust: Columbus and the Conquest of the New World* (1993). Two balanced accounts placing Columbus in the context of his time without overlooking the consequences of the European arrival are W. D. Phillips, Jr., and C. R. Phillips, *The Worlds of Christopher Columbus* (1991) and F. Fernández-Armesto, *Columbus* (1991); the latter author provides additional assessments in *Columbus and the Conquest of the Impossible* (rev. 2000), ambitious but not as satisfactory as some of his other

books. Other scholarly efforts to examine much that remains obscure about the explorer are D. Heinge, *In Search of Columbus: The Sources for the First Voyage* (1991) and V. Flint, *The Imaginative Landscape of Christopher Columbus* (1992). P. K. Liss, *Isabel the Queen* (1992) is a thoughtful biography of his patron.

A splendidly illustrated catalog prepared for an exhibition to commemorate the quincentenary, J. A. Levenson (ed.), *Circa 1492: Art in the Age of Exploration* (1991), presents the impressive art and artifacts of people from all over the globe in this age, including the New World. In two thoughtful books A. W. Crosby demonstrates that European plants, animals, and diseases had as much to do with the success of European expansion and the consequent devastation of the indigenous peoples as military conquest: *The Columbian Exchange: Biological and Cultural Consequences of 1492* (rev. 2003) and *Ecological Imperialism: The Biological Expansion of Europe, 900–1900* (1986), a broader study. C. C. Mann describes the diversity of Native American societies before the arrival of Europeans in *1491: New Revelations of the Americas before Columbus* (2005). For the impact of the discoveries on European thought, one may turn to W. Brandon, *New Worlds for Old: Reports from the New World and Their Effect on the Development of Social Thought in Europe, 1500–1800* (1986); J. H. Elliott, *The Old World and the New, 1492–1650* (1970, 1992); and A. Pagden's two books, *European Encounters with the New World: From Renaissance to Romanticism* (1992) and *Lords of All the World: Ideologies of Empire in Spain, Britain, and France, c. 1500–c. 1850* (1995). The latter may be compared with the two works of P. Seed, *Ceremonies of Possession in Europe's Conquest of the New World, 1492–1640* (1995) and *American Pentimento: The Invention of Indians and the Pursuit of Riches* (2001). On European interactions with native peoples in the years after the initial explorations, see the important books of J. Axtell, *Beyond 1492: Encounters in Colonial North America* (1993) and *Natives and Newcomers: The Cultural Origins of North America* (2001).

### Portugal and Spain in Europe and Overseas

The best introduction to the overseas exploits of both countries is L. N. McAlister, *Spain and Portugal in the New World, 1492–1700* (1983). Portuguese maritime and colonial enterprises are recounted in C. R. Boxer, *The Portuguese Seaborne Empire: 1415–1825* (rev. 1991); one may also read B. W. Diffie and G. D. Winius, *Foundations of the Portuguese Empire, 1415–1580* (1977). On Portugal, there are sound histories by J. M. Anderson, *The History of Portugal* (2000) and D. Birmingham, *A Concise History of Portugal* (rev. 2003); and on the Iberian peninsula as a whole, S. G. Payne, *A History of Spain and Portugal* (2 vols., 1973).

The best accounts for Spain in the early modern centuries are J. H. Elliott, *Imperial Spain, 1469–1714*

(1964, reissued, 2002), which may be supplemented by his *Spain and Its World, 1500–1700* (1986); J. Lynch, *Spain under the Habsburgs, 1516–1700* (2 vols.; rev. 1992); and H. Kamen, *Empire: How Spain Became a World Power, 1492–1763* (2003). Social trends in Spanish society are discussed in J. Casey, *Early Modern Spain: A Social History* (1999). For the Spanish monarch one may read P. Pierson, *Philip II of Spain* (1975) and G. Parker, *Philip II* (rev. 1995) and *The Grand Strategy of Philip II* (1998). H. Kamen, *Philip of Spain* (1997) is more sympathetic than other biographical accounts. On the Spanish arm of the Counter-Reformation H. Kamen, *The Spanish Inquisition: A Historical Revision* (1997) attempts to redress the balance in favor of a less harsh judgment, to which even his own earlier writings contributed. However, the works of B. Netanyahu, *The Origins of the Inquisition in Fifteenth-Century Spain* (rev. 2001) and J. Perez, *The Spanish Inquisition: A History* (trans. 2005) stress the human costs of religious persecutions.

Although G. Mattingly, *The Armada* (1959, 1989) remains the classic study of this dramatic episode in its diplomatic and ideological setting, readers will wish to turn also to C. Martin and G. Parker, *The Spanish Armada* (rev. 1999); F. Fernández-Armesto, *The Spanish Armada: The Experience of War in 1588* (1989); and the more recent works of J. McDermott, *England and the Spanish Armada: The Necessary Quarrel* (2005) and N. Hanson, *The Confident Hope of a Miracle: The True History of the Spanish Armada* (2005).

Books examining Spain after the age of Philip II include R. A. Stradling, *Philip IV and the Government of Spain, 1621–1665* (1988) and two outstanding studies by J. H. Elliott: *The Revolt of the Catalans: A Study in the Decline of Spain, 1598–1640* (1963, 1984) and *The Count-Duke of Olivares: The Statesman in an Age of Decline* (1986), on Philip IV's principal adviser from 1621 to 1643.

For the Spanish empire in the new world one may read C. Gibson, *Spain in America* (1966, 1990); J. H. Parry, *The Spanish Seaborne Empire* (1966); S. J. Stein and B. H. Stein, *Silver, Trade, and War: Spain and America in the Making of Early Modern Europe* (2000); D. J. Weber, *The Spanish Frontier in North America* (1995); and C. M. MacLachlan, *Spain's Empire in the New World: The Role of Ideas in Institutional and Social Change* (1988). A pioneer inquiry into the impact of the discovery of silver upon economic changes in Europe was E. J. Hamilton, *American Treasure and the Price Revolution in Spain, 1501–1650* (1934, 1965), although some of its conclusions have been modified. The subject is also examined in P. Vila, *A History of Gold and Money, 1450–1920* (trans. 1976) and in J. N. Ball, *Merchants and Merchandise: The Expansion of Trade in Europe, 1500–1630* (1977). For the Spanish conquest, readers may turn to M. Wood, *Conquistadors* (2000), the work

of a writer who has also produced a documentary film on the subject. Modern historical scholarship is reflected in R. L. Marks, *Cortés: The Great Adventurer and the Fate of Aztec Mexico* (1993) and in H. Thomas, *Conquest: Montezuma, Cortés, and the Fall of Old Mexico* (1994). On attempts by the church and others to mitigate the evils of the conquest one still turns to L. Hanke, *The Spanish Struggle for Justice in the Conquest of America* (1949, reissued 2002). The best scholarly accounts of the enforced labor and demographic consequences of the conquest may be found in the chapters contributed to L. Bethell (ed.), *The Cambridge History of Latin America*, Vols. I and II: *Colonial Latin America* (1988). An informative survey for all aspects of Latin America in the colonial era is M. A. Burkholder and L. L. Johnson, *Colonial Latin America* (rev. 2003).

The Atlantic slave trade and slavery, which launched the massive migrations of people that historians now call the African Diaspora, can be studied in numerous important historical works. Among the most informative are H. S. Klein, *African Slavery in Latin America and the Caribbean* (1987); V. B. Thompson, *The Making of the African Diaspora in the Americas, 1441–1900* (1988); R. Blackburn, *The Making of New World Slavery* (1997); D. Eltis, *The Rise of African Slavery in the Americas* (2000); and W. Klooster and A. Padula (eds.), *The Atlantic World: Essays on Slavery, Migration, and Imagination* (2005). The writings of D. B. Davis, *Slavery and Human Progress* (1984) and *The Problem of Slavery in Western Culture* (1988), as well as his other volumes cited in later chapters, offer penetrating insights, as do O. Patterson's books *Slavery and Social Death: A Comparative Study* (1982) and *Freedom in the Making of Western Culture* (1991). The historical background is presented in W. D. Phillips, *Slavery from Roman Times to the Early Transatlantic Trade* (1985), carrying the story to 1650, and in B. Lewis, *Race and Slavery in the Middle East* (1990). E. Williams, *Capitalism and Slavery* (1944, reissued 1994) early emphasized that the emerging Atlantic economy was supported by African slavery, a theme on which there are informative essays in B. L. Solow (ed.), *Slavery and the Rise of the Atlantic System* (1991). The grim story of the slave trade is recounted in many books, among them J. Pope-Hennessy, *Sins of the Fathers: A Study of the Atlantic Slave Traders 1441–1807* (1968); P. D. Curtin, *The Atlantic Slave Trade* (1969); H. S. Klein, *The Middle Passage* (1978); J. A. Rawley, *The Transatlantic Slave Trade* (1981); and C. A. Palmer, *Human Cargo: The British Slave Trade to Spanish America, 1700–1739* (1981). H. Thomas, *The Slave Trade: The Story of the Atlantic Slave Trade, 1440–1870* (1997) graphically conveys its multinational character. A case study of slavery on a Caribbean plantation is available in T. Burnard, *Mastery, Tyranny, and Desire: Thomas Thistlewood and*

*His Slaves in the Anglo-Jamaican World* (2004). Two valuable syntheses of historical writings on slavery in its North American setting are P. Kolchin, *American Slavery, 1619–1877* (1993) and I. Berlin, *Many Thousands Gone: The First Two Centuries of Slavery in North America* (1998).

### Changing Social Structures, Early Capitalism, Mercantilism

A key study of early economic history is J. De Vries, *The Economy of Europe in an Age of Crisis, 1600–1750* (1976). One will wish to consult also R. Davis, *The Rise of the Atlantic Economies* (1973); C. M. Cipolla, *Before the Industrial Revolution: European Society and Economy, 1000–1700* (rev. 1994); P. Kriedte, *Peasants, Landlords, and Merchant Capitalists: Europe and the World Economy 1500–1800* (1983); and A. K. Smith, *Creating a World Economy: Merchant Capital, Colonialism, and World Trade, 1400–1825* (1991). The reasons why rapid economic change took place in western Europe rather than elsewhere are explored in E. L. Jones, *The European Miracle: Environments, Economics, and Geopolitics in the History of Europe and Asia* (rev. 2003) and in J. Baechler et al. (eds.), *Europe and the Rise of Capitalism* (1988).

A remarkable though often impressionistic account of social and economic change in the early modern centuries is the three-volume work of F. Braudel, *Civilization and Capitalism, 15th–18th Century* (trans. 1981–84; reissued 1992): Vol. I, *The Structures of Everyday Life*; Vol. II, *The Wheels of Commerce*; and Vol. III, *The Perspective of the World*. The broad themes of the work are summarized in *Afterthoughts on Material Civilization and Capitalism* (trans. 1977). Another large-scale study, reflecting the influence of Braudel and focusing on the shifting of economic power is I. Wallerstein, *The Modern World-System* (3 vols. 1974), analyzing the origins of the world economy, mercantilism, and the expansion of the global economy from 1730 to the 1840s. The development of a capitalist economy is also traced in W. N. Parker, *Europe, America, and the Wider World: Essays on the Economic History of Western Capitalism* (2 vols., 1984, 1991); and important intercultural dimensions are added in P. D. Curtin, *Cross-Cultural Trade in World History* (1984).

Much of the debate on the early modern centuries focuses on the continuity of European economic history since the Middle Ages and on early industrialization. The debate on “protoindustrialization” is examined in P. Kriedte (ed.), *Industrialization before Industrialization: Rural Industry and the Genesis of Capitalism* (1981) and in M. P. Gutmann, *Toward the Modern Economy: Early Industry in Europe, 1500–1800* (1988).

For demography one may turn to M. W. Flynn, *The European Demographic System, 1500–1820*

(1981); and for the growth of cities one may consult P. M. Hohenberg and L. H. Lees, *The Making of Urban Europe, 1000–1994* (rev. 1995) and J. De Vries, *European Urbanization, 1500–1800* (1984). There are valuable chapters in C. M. Cipolla (ed.), *The Fontana Economic History of Europe: The Sixteenth and Seventeenth Centuries* (1974) and in E. E. Rich and C. H. Wilson (eds.), *Cambridge Economic History of Europe*, Vol. IV (1976) and Vol. V (1977).

### Revolt of the Netherlands

G. Parker, *The Dutch Revolt* (1977), an admirable comprehensive study, may be compared with P. Geyl's masterful older account, *The Revolt of the Netherlands, 1555–1609* (1932; trans. 1958) and *The Netherlands in the Seventeenth Century, 1609–1715* (2 vols.; trans. 1961–64). Dutch political culture is examined in H. H. Rowen, *The Princes of Orange: the Stadholders in the Dutch Republic* (1988); and W. S. Maltby, *Alba: A Biography* (1983) studies the Duke of Alba, the Spanish governor sent to suppress the Dutch in the mid-sixteenth century and who thereby helped to create the Dutch nation.

### The Tudor Age: Elizabethan England

The best syntheses for the Tudor monarchs are G. R. Elton, *England under the Tudors* (rev. 1991); and J. Guy, *Tudor England* (1988); a useful collection of articles is available in J. Guy (ed.), *The Tudor Monarchy* (1997). Informative for the Tudors and their successors are D. M. Loades, *Politics and Nation: England, 1450–1660* (rev. 1999) and J. Guy and J. Morrill, *The Tudors and Stuarts* (1993), a volume in the *Oxford History of Britain*.

For the Elizabethan era one may read W. T. MacCaffrey's trilogy of distinction—*The Shaping of the Elizabethan Regime* (1968), *Queen Elizabeth and the Making of Policy, 1572–1588* (1981), and *Elizabeth I: War and Politics, 1588–1603* (1992). For the religious question in these years one may turn to D. MacCulloch, *The Later Reformation in England, 1547–1603* (rev. 2001). A survey of foreign affairs is available in R. B. Wernham, *The Making of Elizabethan Foreign Policy* (1980). On the naval and imperial side one may also read D. B. Quinn and A. N. Ryan, *England's Sea Empire, 1550–1642* (1983) and K. R. Andrews, *Trade, Plunder, and Settlement: Maritime Enterprise and the Genesis of the British Empire, 1480–1630* (1985).

Of the numerous biographies of Elizabeth one may read A. Somerset, *Elizabeth I* (1992, 2003), a lively volume; S. Bassnett, *Elizabeth I: A Feminist Perspective* (1988); D. M. Loades, *Elizabeth I* (2003); and the concise account in S. Doran, *Queen Elizabeth I* (2003). There are other commendable studies by L. B. Smith (1976), E. Erickson (1983), A. Weir (1998), and C. Haigh (rev. 2001). A. Fraser, among her many notable volumes, has written *Mary Queen of Scots* (1969, 1993). On Elizabeth's devoted courtier,

H. Kelsey, *Sir Francis Drake: The Queen's Pirate* (1998) is a scholarly account.

An overview of society and economy is helpfully presented in D. M. Palliser, *The Age of Elizabeth: England under the Later Tudors, 1547–1603* (rev. 1992). Social and economic changes of the age, or that take their start in this age, are masterfully explored in L. Stone, *The Crisis of the Aristocracy, 1558–1641* (1965; abr. ed., 1967) and in L. Stone and J. C. Stone, *An Open Elite?: England, 1540–1880* (1984; abr. ed., 1986), which questions upward social mobility in England. Other important studies are G. E. Mingay, *The Gentry: The Rise and Fall of a Ruling Class* (1976); A. Macfarlane, *The Origins of English Individualism: The Family, Property, and Social Transition* (1978); and I. W. Archer, *The Pursuit of Stability: Social Relations in Elizabethan London* (1991).

Historical research to reconstruct the history of the family is brilliantly exemplified in L. Stone's several works: *The Family, Sex, and Marriage in England, 1500–1800* (1977; abr. ed., 1979), *Road to Divorce: England, 1530–1987* (1990), and in a volume of revealing case studies, *Uncertain Unions and Broken Lives: Marriage and Divorce in England, 1660–1857* (1995). Other recommended studies are R. A. Houlbrooke, *The English Family, 1450–1700* (1984); J. R. Gillis, *For Better, For Worse: British Marriages, 1600 to the Present* (1985); A. Macfarlane, *Marriage and Love in England: Modes of Reproduction, 1300–1840* (1987); and B. J. Harris, *English Aristocratic Women 1450–1550: Marriage and Family, Property and Careers* (2002). R. A. Houlbrooke's *Death, Religion, and the Family in England, 1480–1750* (1998) examines views of death in this era.

Two important books are P. Laslett, *The World We Have Lost: England before the Industrial Age* (1965, rev. 2004), a pioneering work that presents a somewhat overly stable picture of these years, and E. A. Wrigley and R. S. Schofield, *The Population History of England, 1541–1871* (1981), a model of demographic research.

### Disintegration and Reconstruction of France

Informative introductions to the religious and dynastic turmoil in sixteenth-century France include R. Briggs, *Early Modern France, 1560–1715* (rev. 1998); H. A. Lloyd, *The State, France, and the Sixteenth Century* (1983); and R. J. Knecht, *French Renaissance Monarchy: Francis I and Henry II* (rev. 1996). J. H. M. Salmon's two books are of special value: *Society in Crisis: France in the Sixteenth Century* (rev. 1979) and *Renaissance and Revolt: Essays in the Intellectual and Social History of Early France* (1987). Major French works available in translation are R. Mandrou, *Introduction to Modern France, 1500–1640: An Essay in Historical Psychology* (trans. 1976); E. Le Roy Ladurie's two studies *The French Peasantry, 1450–1660* (rev. and trans. 1986) and *Early Modern*

*France, 1460–1610* (trans. 1993); and R. Mousnier, *The Institutions of France under the Absolute Monarchy, 1598–1789* (2 vols., trans. 1979–84), an exhaustive study of society and the state.

The religious wars are also explored in N. M. Sutherland's *The Massacre of St. Bartholemew and the European Conflict, 1559–1572* (1973) and *The Huguenot Struggle for Recognition* (1980); B. B. Diefendorf, *Beneath the Cross: Catholics and Huguenots in Sixteenth-Century Paris* (1991); H. Heller, *Iron and Blood: Civil Wars in Sixteenth-Century France* (1991); M. P. Holt, *The French Wars of Religion, 1562–1629* (1996); and R. J. Knecht, *The French Civil Wars, 1562–1598* (2000). The intellectual dimension is examined in D. R. Kelley, *The Beginning of Ideology: Consciousness and Society in the French Reformation* (1981). An illuminating biography of the first Bourbon king, D. Buisseret, *Henri IV* (1984) may be supplemented by M. Greengrass, *France in the Age of Henri IV: The Struggle for Stability* (rev. 1995); R. S. Love, *Blood and Religion: The Conscience of Henry IV, 1553–1593* (2001); and the comprehensive work of N. M. Sutherland, *Henry IV of France and the Politics of Religion: 1572–1596* (2 vols., 2002).

Constitutional developments are comprehensively explored in J. R. Major, *Representative Government in Early Modern France* (1980), stressing the vitality of the early representative bodies; in P. Anderson, *Lineages of the Absolutist State* (1974); in H. H. Rowen, *The King's State: Proprietary Dynasticism in Early Modern France* (1980), examining the state as royal property; and in E. Le Roy Ladurie, *The Royal French State, 1460–1610* (trans. 1994), describing the changing public functions of the royal government. The cultural values of the early modern nobility are examined in E. Schalk, *From Valor to Pedigree: Ideas of Nobility in France in the Sixteenth and Seventeenth Centuries* (1986) and K. B. Neuschel, *Word of Honor: Interpreting Noble Culture in Sixteenth-Century France* (1989).

For the era of Louis XIII and the minister who overshadowed him one reads V. L. Tapié, *France in the Age of Louis XIII and Richelieu* (trans. 1974; reissued 1984). The king himself is studied in A. Lloyd Moote, *Louis XIII, The Just* (1989). The scholarship on Richelieu includes W. F. Church, *Richelieu and Reason of State* (1972); J. Bergin, *Cardinal Richelieu: Power and the Pursuit of Wealth* (1985) and *The Rise of Richelieu* (1991); R. J. Knecht, *Richelieu* (1991); D. Parrott, *Richelieu's Army: War, Government, and Society In France, 1624–1642* (2001); and A. Levi, *Cardinal Richelieu and the Making of France* (2000). The strengthening of royal power under Richelieu and his successor is examined in R. Bonney, *Society and Government in France under Richelieu and Mazarin, 1624–1661* (1988) and in J. Bergin and L. Brockless (eds.), *Richelieu and His Age* (1992). An important work by J. B. Collins, *The State in Early Modern France* (1995), stresses the close connection between

the monarchy and social elites; and a penetrating comparative study of Richelieu and of his Spanish contemporary and rival, the Count-Duke of Olivares, can be found in J. H. Elliott, *Richelieu and Olivares* (1984).

### The Thirty Years' War, 1618–1648

The most up-to-date authoritative account is G. Parker (ed.), *The Thirty Years' War* (rev. 1997), which includes chapters on all phases of the war. A useful, brief survey is available in P. Limm, *The Thirty Years' War* (1984). Other accounts include the classic work by C. V. Wedgwood (1938, reissued 2005), and other accounts by G. Pagès (trans. 1971), and J. V. Polisensky (trans. 1971). Biographical accounts of key leaders can be found in G. Mann, *Wallenstein: His Life Narrated* (trans. 1976) and M. Roberts, *Gustavus Adolphus* (1992). A detailed treatment of all aspects of Swedish history is to be found in the books of M. Roberts: *The Early Vasas: A History of Sweden, 1523–1611* (1968, 1986); *Gustavus Adolphus and the Rise of Sweden* (1973); *The Swedish Imperial Experience, 1560–1718* (1979); and *The Age of Liberty: Sweden, 1719–1772* (1986). The conversion to Catholicism of Gustavus Adolphus's daughter and her abdication is told in G. Masson, *Queen Christina* (1968) and in S. Svolpe, *Christina of Sweden* (trans. and abr. 1966), by a Swedish historian.

### Useful Web Sites

Print and artistic resources on European exploration in the Atlantic world are available at an excellent Web site, *American Journeys*, at the Wisconsin Historical Society, [www.americanjourneys.org](http://www.americanjourneys.org). There are additional sources on the age of explorations at *European Voyages of Exploration*, which may be found at [www.ucalgary.ca/applied\\_history/tutor/eurvoyal/](http://www.ucalgary.ca/applied_history/tutor/eurvoyal/), and at a site maintained by the Library of Congress, *1492 Exhibit*, [www.ibiblio.org/expo/1492.exhibit/intro.html](http://www.ibiblio.org/expo/1492.exhibit/intro.html). A helpful collection of links is available at the *African Diaspora in Latin America*, which is part of a comprehensive site on Latin American history at the University of Texas, <http://lanic.utexas.edu/la/region/african/>. For a well-organized site on all aspects of Tudor England, readers may visit *Tudor History* at <http://tudorhistory.org/>; and there is a useful Web site for current research on this era in French history at *Historians of Early Modern France*, [www.history.emory.edu/BEIK/index.htm](http://www.history.emory.edu/BEIK/index.htm). Helpful material on an important conflict may be found at *The Thirty Years War*, [www.pipeline.com/~cwa/tywhome.htm](http://www.pipeline.com/~cwa/tywhome.htm). Readers will also find numerous other sites on early modern European history by visiting *Best of History Web Sites* at [www.besthistorysites.net/EarlyModernEurope.shtml](http://www.besthistorysites.net/EarlyModernEurope.shtml).

## 4. THE GROWING POWER OF WESTERN EUROPE, 1640–1715

General accounts of the seventeenth century overlap with many of the books described in the preceding

chapter. Informative general works include D. H. Pennington, *Europe in the Seventeenth Century* (rev. 1989) and J. Bergin (ed.) *The Seventeenth Century: Europe, 1598–1715* (2001). Two commendable general histories that begin with these years are W. Doyle, *The Old European Order, 1660–1800* (rev. 1992) and G. R. R. Treasure, *The Making of Modern Europe, 1648–1780* (1985). For international affairs, diplomacy, and war, two thoughtful accounts are D. McKay and H. M. Scott, *The Rise of the Great Powers, 1648–1815* (1983) and J. Black, *The Rise of the European Powers, 1679–1793* (1990). The diplomatic practices and institutions of the age are described in W. J. Roosen, *The Age of Louis XIV: The Rise of Modern Diplomacy* (1976), while the nature of warfare is examined in J. Childs, *Armies and Warfare in Europe, 1648–1789* (1982) and in M. S. Anderson, *War and Society in Europe of the Old Regime, 1618–1789* (rev. 1998).

### The Dutch Republic

For the Netherlands in the seventeenth century one may read C. Wilson, *The Dutch Republic and the Civilization of the Seventeenth Century* (1968), an excellent brief introduction, and S. Schama, *The Embarrassment of Riches: An Interpretation of Dutch Culture in the Golden Age* (1988), an exemplary synthesis of art history and social history. Of special interest are three books by J. I. Israel: *The Dutch Republic: Its Rise, Greatness, and Fall, 1477–1806* (1995), *The Dutch Republic and the Hispanic World, 1606–1661* (1982), and *Dutch Primacy in World Trade, 1585–1740* (1989). Colonial expansion is described in C. R. Boxer, *The Dutch Seaborne Empire, 1600–1800* (1965); the Dutch economy is examined in J. A. van Houtte, *An Economic History of the Low Countries, 800–1800* (1977) and J. De Vries, *The Dutch Rural Economy in the Golden Age, 1500–1700* (1974).

For William of Orange, the best study is S. B. Baxter, *William III and the Defense of European Liberty, 1650–1702* (1966). A comprehensive biography of a leading Dutch statesman is H. H. Rowen, *Jan de Witt: Statesman of "True Freedom"* (1978; abr. 1986). Rowen also examines the later stadholders in a book that was noted earlier, *The Princes of Orange: The Stadholders in the Dutch Republic* (1988).

### Seventeenth-Century England

Three judicious accounts of the seventeenth-century political and religious conflicts are D. Hirst, *Authority and Conflict: England, 1603–1658* (1986); D. Hirst, *England in Conflict, 1603–1660: Kingdom, Community, Commonwealth* (1999); and G. E. Aylmer, *Rebellion or Revolution?: England, 1640–1660* (1986). Other recommended general works include A. Stroud, *Stuart England* (1999); R. Lockyer, *The Early Stuarts: A Political History of England, 1603–1642* (rev. 1999) and, by the same author, *Tudor and Stuart Britain, 1485–1714* (rev. 2005); B. Coward, *The Stuart Age:*

*England 1603–1714* (rev. 2003); and R. Bucholz and N. Key, *Early Modern England, 1485–1714* (2004).

For social and economic developments, illuminating studies include C. Wilson, *England's Apprenticeship, 1603–1763* (rev. 1984); K. Wrightson, *English Society, 1580–1680* (1982); and J. A. Sharpe, *Early Modern England: A Social History, 1550–1760* (rev. 1997). Books on the gentry and aristocracy have been cited in Chapter 3; to them should be added J. V. Beckett, *The Aristocracy in England, 1660–1914* (1988).

Few subjects have been as debated as the political and religious conflicts in seventeenth-century England. Some historians stress class and ideological conflict and interpret the events as the first modern European revolution. Others downplay what they see as anachronistic ideological interpretations, emphasize local rivalries, and insist on the importance of day-to-day contingencies. As an introduction to divergent interpretations one may compare L. Stone, *The Causes of the English Revolution, 1629–1642* (rev. 2002) and three books with much the same title by C. Russell (1990), A. Hughes (rev. 1998), and N. Carlin (1999).

For the general reader, the narrative excitement of the events is captured in C. V. Wedgwood's trilogy *The King's Peace, 1637–1641* (1955, reissued 1983), *The King's War, 1641–1647* (1959), and *A Coffin for King Charles: The Trial and Execution of Charles I* (1964), in which she demonstrates that the "why" (the analysis) must flow from the "how" (the narrative). A dramatic account, with considerable attention to military aspects, is C. Hibbert, *Cavaliers and Roundheads: The English Civil War, 1642–1649* (1993). For the opening episodes of these years A. Fletcher, *The Outbreak of the English Civil War* (1981) and K. Sharpe, *The Personal Rule of Charles I* (1992), both of which tend to minimize long-term social and economic causes, may be compared with L. J. Reeve, *Charles I and the Road to Personal Rule* (1989); R. Cust, *The Forced Loan and English Politics* (1986); and R. Brenner, *Merchants and Revolution* (1992). Of special interest also is C. Carlton, *Going to the Wars: The Experience of the British Civil Wars, 1638–1651* (1992).

Studies that downplay broader ideological interpretations but provide detailed narrative and analysis include C. Russell's books, *The Crisis of Parliaments* (1971), *Parliaments and English Politics, 1621–1629* (1979), and *The Fall of the British Monarchies, 1637–1742* (1991), which may be read along with J. Morrill, *The Revolt of the Provinces: Conservatism and Revolution in the English Civil War, 1630–1650* (1980) and *The Nature of the English Revolution* (1993), a collection of essays.

Studies of the first Stuart king in England include R. Lockyer, *James VI and I* (1998) and W. B. Patterson, *King James VI and I and the Reunion of Christendom* (1997). Assessments of his ill-fated successor appear in C. Carlton, *Charles I: The Personal*

*Monarch* (rev. 1995) and P. Gregg, *King Charles I* (1984). On the prelate who reinforced the king's persecution of the Puritans, H. R. Trevor-Roper's impressive *Archbishop Laud, 1573–1645* (rev. 1988) has not been superseded but should be read along with C. Carlton, *Archbishop William Laud* (1988).

For Cromwell many maintain that C. Firth, *Oliver Cromwell and the Rule of the Puritans in England* (1900; reissued many times) remains the best biographical account, but more recent studies include A. Fraser, *Cromwell, The Lord Protector* (1973); C. Hill, *God's Englishman* (1972); J. Morrill, *Oliver Cromwell and the English Revolution* (1990), generally unsympathetic; B. Coward, *Oliver Cromwell* (1991); and D. L. Smith, *Oliver Cromwell: Politics and Religion in the English Revolution, 1640–1658* (1991). Cromwell's military leadership is examined in A. Marshall, *Oliver Cromwell: Soldier: The Military Life of a Revolutionary at War* (2004), while an impressive study of Cromwell's army is available in I. Gentles, *The New Model Army in England, Ireland, and Scotland, 1645–1653* (1992). A good introduction to the Cromwellian era and the interregnum is R. Hutton, *The British Republic, 1649–1660* (1990), while a more detailed study is A. Woodrych, *Commonwealth to Protectorate* (1982).

Christopher Hill has done much to influence class and ideological interpretations of seventeenth-century events. His several Marxist-inspired but not dogmatic studies emphasize that the ideas of the age reflected economic class interests and that many contemporary political and social issues first emerged in the radicalism of the period. Among his books are *Puritanism and Revolution* (1958), *The Century of Revolution, 1603–1714* (1961, 1980), *Intellectual Origins of the English Revolution* (rev. 1997), *The World Turned Upside Down: Radical Ideas during the English Revolution* (1972), *Change and Continuity in Seventeenth-Century England* (rev. 1991), and *England's Turning Point: Essays on 17th-Century English History* (1998). Additional examples of inquiries into the radicalism of the age are M. Walzer, *The Revolution of the Saints: A Study in the Origins of Radical Politics* (1965); P. G. Rogers, *The Fifth Monarchy Men* (1966); G. E. Aylmer, *The Levelers in the English Revolution* (1975); and B. Manning, *The English People and the English Revolution, 1640–1649* (1976). An important assessment is J. O. Appleby, *Economic Thought and Ideology in Seventeenth-Century England* (1978, reissued 2004), while an intriguing study in social history relating popular culture to the political ferment of the age is D. Underdown, *Revel, Riot, and Rebellion: Popular Politics and Culture in England, 1603–1660* (1985). The same author has also written *Pride's Purge: Politics and the Puritan Revolution* (1971, 1985), *Fire from Heaven: Life in an English Town in the Seventeenth Century* (1992), and *A Freeborn People: Politics and the Nation in Seventeenth-Century England* (1996).

Class and ideological interpretations may also be sampled in R. Cust and A. Hughes (eds.), *Conflict in Early Stuart England: Studies in Religion and Politics, 1603–1642* (1991); J. P. Somerville, *Politics and Ideology in England, 1603–1642* (1986); and T. Cogswell, *The Blessed Revolution: English Politics and the Coming of War, 1621–1624* (1989).

For Ireland good introductions beginning with this age are provided in J. C. Beckett, *The Making of Modern Ireland, 1603–1921* (rev. 1981) and R. F. Foster, *Modern Ireland, 1600–1972* (1988); for the Cromwellian years there are several important studies: P. B. Ellis, *Ireland, 1652–1660* (1975); T. C. Barnard, *Cromwellian Ireland: English Government and Reform in Ireland, 1649–1660* (1975); and J. S. Wheeler, *Cromwell in Ireland* (1999). Many other aspects of Irish history are explored in R. F. Foster (ed.), *The Oxford Illustrated History of Ireland* (1989).

### **The Restoration: Charles II; James II; The Revolution of 1688**

Two of the best accounts of this and the age that followed are J. R. Jones, *Country and Court: England, 1658–1714* (1978) and G. Holmes, *The Making of a Great Power: Late Stuart and Early Georgian Britain, 1660–1722* (1993). For the end of the Protectorate and the restoration of the monarchy, one also turns to P. Seaward, *The Restoration, 1660–1688* (1991) and R. Hutton, *The Restoration: A Political and Religious History of England and Wales, 1658–1667* (1985, 1993). The king's abilities are assessed in A. Fraser, *Royal Charles: Charles II and the Restoration* (1971), perhaps the best of her many biographies; in J. R. Jones, *Charles II: Royal Politician* (1987); and in R. Hutton, *Charles II: King of England, Scotland, and Ireland* (1990). For his successor M. Ashley, *James II* (1977) is fair and factual, as is J. Miller, *James II: A Study of Kingship* (1977, 1989), which stresses the monarch's personal integrity but failure as a king.

For the background to the Revolution of 1688 and subsequent events one may read, among other accounts, D. Ogg, *England in the Reign of James II and William III* (1955, 1984); S. Prall, *The Bloodless Revolution: England, 1688* (1972); J. R. Jones, *The Revolution of 1688 in England* (1972); and J. Childs, *The Army, James II, and the Glorious Revolution* (1980). Brief surveys are available in J. Miller, *The Glorious Revolution* (rev. 1997) and in M. Mullett, *James II and English Politics, 1678–1688* (1994). A special subject is admirably studied in L. G. Schworer, *The Declaration of Rights, 1689* (1981). G. M. Trevelyan, *The English Revolution 1688–1689* (1939, 1965), a classic defense of the revolution, argues that the revolution strengthened conservatism for the eighteenth century but that the long-run consequences made it a turning point in history. The Whig historian is himself studied in D. Cannadine, *G. M. Trevelyan: A Life in History* (1993). Another assessment of the revolution, W. A.

Speck, *Reluctant Revolutionaries: Englishmen and the Revolution of 1688* (1988) sees the events as a decisive though not inevitable step toward parliamentary government. A more recent work by E. Cruickshanks, *The Glorious Revolution* (2000) challenges the Whig interpretation and portrays James II as an enlightened advocate of religious toleration. Evolving historical interpretations are discussed in J. I. Israel (ed.), *The Anglo-Dutch Movement: Essays on the Glorious Revolution and Its World Impact* (1991); in L. G. Schworer (ed.), *The Revolution of 1688–1689: Changing Perspectives* (1992); and in S. C. A. Pincus (ed.), *England's Glorious Revolution: A Brief History with Documents* (2005); and there are additional insights in H. R. Trevor-Roper's essays, *From Counter Reformation to Glorious Revolution* (1992).

For the role played in international affairs by William of Orange after he took the English throne in 1689, one may read D. W. Jones, *War and Economy in the Age of William III and Marlborough* (1988). Winston Churchill's detailed biography of John Churchill, the military commander who was his ancestor, is available as W. S. Churchill, *Marlborough: His Life and Times* (4 vols., 1933–38; abr. ed., 1968). G. M. Trevelyan, *England under Queen Anne* (3 vols., 1930–34) vividly portrays the succeeding age; and on the sovereign herself, E. Gregg, *Queen Anne* (1980) is excellent. The background to the Act of Union of 1707 joining England and Scotland is explored in B. P. Levack, *The Formation of the British State: England, Scotland, and the Union, 1603–1707* (1987).

For women in seventeenth-century England one may turn to A. Fraser, *The Weaker Vessel: Woman's Lot in Seventeenth Century England* (1985), a series of portraits, mostly of upper-class women. The scholarly essays in M. Prior (ed.), *Women in English Society, 1500–1800* (1985) relate to women of all classes. A pioneering work in social history of continuing value is A. Clark, *Working Life of Women in the Seventeenth Century* (1919, 1993), and R. Thompson, *Women in Stuart England and America* (1974) is a successful comparative study. More recent works, with an emphasis on social history, include S. D. Amussen, *An Ordered Society: Gender and Class in Early Modern England* (1988); A. Hughes, *English Revolution and Gender* (2006); and A. Lawrence, *Women in England, 1500–1760* (1994). L. G. Schworer illuminates the independent life of a seventeenth-century woman in *Lady Rachel Russell: "One of the Best of Women"* (1987), while S. Rowbotham ranges across a much wider historical era in *Hidden from History: Rediscovering Women in History, from the 17th Century to the Present* (1974, 1989).

## The France of Louis XIV

Many of the general accounts cited at the beginning of this chapter focus on the French predominance in this age. In addition, the following books explore various

aspects of Louis XIV and his reign: J. B. Wolf, *Louis XIV* (1968), a comprehensive biography, may be supplemented by I. Dunlap, *Louis XIV* (2000), and by A. Levi, *Louis XIV* (2004). Readers may also turn to A. Lossky, *Louis XIV and the French Monarchy* (1994); and F. Bluche, *Louis XIV* (1990), a detailed narrative. Available also are the essays in P. Sonnino et al. (eds.), *The Reign of Louis XIV* (1991), while P. Burke, *The Fabrication of Louis XIV* (1992) examines the molding of the king's image over his long reign. A broader study of the whole era can be found in W. Doyle (ed.), *Old Regime France, 1648–1789* (2001).

Other interpretive volumes include V. L. Tapié, *The Age of Grandeur* (rev. 1966), and O. Ranum, *Paris in the Age of Absolutism* (rev. 2002). Three studies by P. Goubert—*Louis XIV and Twenty Million Frenchmen* (trans. 1970), his more detailed *The Ancien Regime: French Society, 1600–1750* (trans. and abr. 1974), and *The French Peasantry in the Seventeenth Century* (trans. 1986)—are invaluable studies of French society and the people of the time. C. Tilly, *The Contentious French: Four Centuries of Popular Struggle* (1986), an incisive study of popular restlessness and collective action, begins with these years; and W. Beik, *Urban Protest in Seventeenth-Century France: The Culture of Retribution* (1997) examines popular resistance to authority. A comprehensive study of the mid-century challenge to royal authority is O. Ranum, *The Fronde: A French Revolution, 1648–1652* (1993).

Three books focusing on provincial institutions and other limitations of royal authority, and providing added insights into the methods by which Louis XIV ruled, are W. Beik, *Absolutism and Society in Seventeenth-Century France: State Power and Provincial Aristocracy in Languedoc* (1985); R. Mettam, *Power and Faction in Louis XIV's France* (1988); and S. Kettering, *Patrons, Brokers, and Clients in Seventeenth-Century France* (1986). J. M. Smith, *The Culture of Merit: Nobility, Royal Service, and the Making of Absolute Monarchy in France, 1600–1789* (1996) describes the king's response to noble aspirations for recognition and glory. Two older books that examine constraints on royal authority are A. L. Moote, *The Revolt of the Judges: The Parlement of Paris and the Fronde, 1643–1652* (1971) and L. Rothkrug, *Opposition to Louis XIV: The Political and Social Origins of the Enlightenment* (1965).

A biography of the French finance minister is available in A. Trout, *Jean-Baptiste Colbert* (1978). Financial matters are examined on a broad scale in J. Dent, *Crisis in France: Crown, Financiers, and Society in Seventeenth-Century France* (1973) and in R. Bonney, *The King's Debts: Finance and Politics in France, 1589–1661* (1981). The global expansion of French trade is discussed in C. J. Ames, *Colbert, Mercantilism, and the French Quest for Asian Trade* (1996).

Religious matters are explored in E. I. Perry, *From Theology to History: French Religious Controversy and the Revocation of the Edict of Nantes* (1973); A. Sedgwick, *Jansenism in Seventeenth-Century France* (1977); W. Doyle, *Jansenism: Catholic Resistance to Authority from the Reformation to the French Revolution* (2000); and in a special way in W. Scoville, *The Persecution of the Huguenots and French Economic Development, 1680–1720* (1960). On the colonial empire one may read W. J. Eccles, *The French in North America, 1500–1783* (rev. 1998); and various religious aspects of French expansion in the new world are examined in A. Greer, *Mohawk Saint: Catherine Tekakwitha and the Jesuits* (2005) and in N. Z. Davis, *Women on the Margins: Three Seventeenth-Century Lives* (1995).

C. C. Lougee, *Le Paradis des Femmes: Women, Salons, and Social Stratification in Seventeenth Century France* (1976) examines the evolving cultural influence of French women, a theme also explored in E. C. Goldsmith (ed.), *Going Public: Women and Publishing in Early Modern France* (1995); a more general work is W. Gibson, *Women in Seventeenth-Century France* (1989); and an outstanding woman of letters is studied in J. A. Ojala and W. T. Ojala, *Madame de Sévigné: A Seventeenth-Century Life* (1990). An important cultural theme is treated in J. DeJean, *Ancients Against Moderns: Culture Wars and the Making of a Fin de Siècle* (1997).

On Louis XIV's military policies one may read an excellent survey, J. A. Lynn, *The Wars of Louis XIV, 1667–1714* (1999). Other works on the subject include P. Sonnino, *Louis XIV and the Origins of the Dutch War* (1988) and H. Kamen, *The War of Succession in Spain, 1700–1715* (1969). Two books about the final stages of Habsburg rule in Spain are H. Kamen, *Spain in the Later Seventeenth Century, 1665–1700* (1980), in which he sees revival rather than decline on the eve of the French attack, and R. A. Stradling, *Europe and the Decline of Spain, 1580–1720* (1981). For Spain in the century after the Habsburgs, an outstanding account is J. Lynch, *Bourbon Spain, 1700–1808* (1989).

### Useful Web Sites

For an introduction to the Dutch republic, one may visit *The Williamite Universe*, <http://let.uu.nl/ogc/William/>, a site that provides information on William III and other aspects of Dutch history. Readers will find useful information on Cromwell and the wider history of the English Civil wars by visiting *The Oliver Cromwell Website*, <http://olivercromwell.org/index/htm>; and *BBC-History* provides additional resources for research on all major events of the seventeenth century through the links at [www.bbc.co.uk/history/](http://www.bbc.co.uk/history/). *The Official Web Site of the British Monarchy* provides information about the history of every British king, including those who faced opposition in the seventeenth century at <http://royal.gov.uk/output/page5>

.asp. Valuable materials on France and wider European developments can be located through *The Society for Seventeenth Century French Studies* in Britain, at <http://solinuxbrookes.ac.uk/mark/17/webres.html>.

Interesting images and information about Louis XIV's great palace are available in English; see the *Chateau de Versailles*, [www.chateauversailles.fr/en/index.php](http://www.chateauversailles.fr/en/index.php); and there are very helpful links to Web sites on the history of early modern European women at *Early Modern Resources*, [www.earlymodernweb.org.uk/emr/index.php/category/themes/gender/](http://www.earlymodernweb.org.uk/emr/index.php/category/themes/gender/).

## 5. THE TRANSFORMATION OF EASTERN EUROPE, 1648–1740

J. H. Shennan, *Liberty and Order in Early Modern Europe: The Subject and the State, 1650–1800* (1986), focusing on France and Russia, highlights differences in the development of western and eastern Europe. Informative books that explain the complexities of central and eastern Europe, carrying their accounts toward the present, are L. C. Tihany, *A History of Middle Europe: From the Earliest Times to the Age of the World Wars* (1976); P. Wandycz, *The Price of Freedom: A History of East Central Europe from the Middle Ages to the Present* (rev. 2001); P. D. Longworth, *The Making of Eastern Europe: From Prehistory to Postcommunism* (rev. 1997); R. Bideleux and Ian Jeffries, *A History of Eastern Europe: Crisis and Change* (1998); and E. Niederhauser, *A History of Eastern Europe Since the Middle Ages* (trans. 2003). P. R. Magocsi, *Historical Atlas of East Central Europe* (1993), Vol. I of the series *A History of Central Europe*, is an impressive work of reference. J. W. Sedlar, *East Central Europe in the Middle Ages, 1000–1500* (1994) synthesizes the medieval period, while A. Maczak et al., *East Central Europe in Transition* (1985) focuses on the fourteenth to the seventeenth centuries. For the Balkans, valuable studies are L. S. Stavrianos, *The Balkans since 1453* (1958, 2000); B. Jelavich and C. Jelavich, *The Balkans* (1965); R. Ristelheuber, *A History of the Balkan Peoples* (trans. 1971); and P. F. Sugar, *Southeastern Europe under Ottoman Rule, 1354–1804* (1977), in the series on Central Europe cited above.

### The Ottoman Empire

Readers will find informative accounts of the Ottoman empire in a number of recent works, including J. McCarthy, *The Ottoman Turks: An Introductory History to 1923* (1997); C. Imber, *The Ottoman Empire, 1300–1650: The Structure of Power* (2002); and S. Turnbull, *The Ottoman Empire, 1326–1699* (2003), which is a concise survey. Important coverage of Ottoman history is also found in J. Goodwin, *Lords of the Horizon: A History of the Ottoman Empire* (1999); and in D. Quataert, *The Ottoman Empire, 1700–1922* (2000). The social foundations of Ottoman power are described in H. Inalcik and D. Quataert (eds.), *An Eco-*

*nomie and Social History of the Ottoman Empire, 1300–1914* (1994), while L. P. Peirce, *The Imperial Harem: Women and Sovereignty in the Ottoman Empire* (1993) describes the political role and influence of women. Ottoman relations and interactions with Europe, which are currently attracting historical attention, are explored in K. M. Setton, *Venice, Austria, and the Turks in the Seventeenth Century* (1991); R. Schwoebel, *The Shadow of the Crescent: The Renaissance Image of the Turk, 1453–1517* (1967); N. Bisaha, *Creating East and West: Renaissance Humanists and the Ottoman Turks* (2004); and D. Goffman, *The Ottoman Empire and Early Modern Europe* (2002). C. E. Bosworth, *The New Islamic Dynasties: A Chronological and Genealogical Manual* (1996) is a useful reference tool.

### Austria and the Habsburgs: To 1740

Basic for these years are R. A. Kann, *A History of the Habsburg Empire, 1526–1918* (1974); R. J. Evans, *The Making of the Habsburg Empire, 1550–1770* (1979); C. Ingrao, *The Habsburg Monarchy, 1618–1815* (rev. 2000); J. Bérenger, *The History of the Habsburg Empire, 1273–1700* (trans. 1994); and P. S. Fichtner, *The Habsburg Monarchy, 1490–1848: Attributes of Empire* (2003). A number of important essays on social and political history have been collected in C. Ingrao (ed.), *State and Society in Early Modern Austria* (1994). J. P. Spielman has written *Leopold I of Austria* (1977), a balanced treatment of the seventeenth-century emperor; and for Eugene of Savoy, an outstanding biography is D. McKay, *Prince Eugene of Savoy* (1977). A vivid account of the Turkish siege of 1683 is available in J. Stoye, *The Siege of Vienna* (rev. 2000).

### The Holy Roman Empire:

#### The German States

A good introductory survey of German history is M. Fulbrook, *A Concise History of Germany* (rev. 2004). H. Holborn, in his *History of Modern Germany, Vol. II: 1648–1840* (1975), covers the fluid situation in the Holy Roman Empire after the Thirty Years' War, as does J. Gagliardo, *Germany under the Old Regime, 1600–1790* (1991). A useful, brief survey is P. H. Wilson, *The Holy Roman Empire, 1495–1806* (1999), which summarizes recent historical challenges to older assumptions about the Empire's flaws and failures. One will also wish to read E. Sagor, *A Social History of Germany, 1648–1914* (1977), with many fascinating insights, and R. Vierhaus, *Germany in the Age of Absolutism* (1988), which studies the years 1618–1763. G. Benecke, *Society and Politics in Germany, 1500–1750* (1974) presents the case for the Empire as a viable constitutional entity, while two important contributions to understanding the formation of the German political tradition are F. L. Carsten, *Princes and Parliaments in Germany* (1959) and M. Walker, *German Home Towns: Community, State,*

*and General Estate, 1648–1871* (1971). J. A. Vann thoroughly explores the evolving social structure and institutions of a key principality in *The Making of a State: Württemberg, 1593–1793* (1984).

For Prussia, convenient introductions are F. L. Carsten, *The Origins of Prussia* (1954) and H. W. Koch, *A History of Prussia* (1978). A thoughtful evocation of the state (dissolved after the Second World War) is T. von Thadden, *Prussia: The History of a Lost State* (1986). An invaluable study going well beyond the scope of this chapter is G. A. Craig, *The Politics of the Prussian Army, 1640–1945* (1956, 1964). Important also is H. Rosenberg, *Bureaucracy, Aristocracy, and Autocracy: The Prussian Experience, 1660–1815* (1958), which may be supplemented by the essays in P. G. Dwyer, *The Rise of Prussia, 1700–1830* (2002). On the early Hohenzollerns, one may read F. Schevill, *The Great Elector* (1974) and R. Ergang, *The Potsdam Führer: Frederick William I, Father of Prussian Militarism* (1941, 1972). Books on Frederick the Great are cited in Chapter 8.

### Russia: To 1725

There are many excellent narrative accounts of Russian history with good coverage of the early years; for example, one may read N. V. Riasanovsky and M. D. Steinberg, *A History of Russia* (rev. 2004); R. Bartlett, *A History of Russia* (2005); and P. Dukes, *A History of Russia, c. 882–1996* (1998). For the early years and the expansion and transformation of Muscovy, one may turn to R. O. Crumme, *The Formation of Muscovy, 1304–1613* (1987), while P. Dukes, *The Making of Russian Absolutism, 1613–1801* (rev. 1990) traces the tsardom from the beginning of the Romanov dynasty over the next two centuries. The military side to Russian society and the “service state” are ably examined in J. L. H. Keep, *Soldiers of the Tsar: Army and Society in Russia, 1462–1874* (1985) and the rural scene is studied in J. Blum, *Lord and Peasant in Russia from the Ninth to the Nineteenth Century* (1961). P. Avrich examines social upheavals in *Russian Rebels, 1600–1800* (1972), while R. Mousnier treats agrarian unrest comparatively in *Peasant Uprisings in Seventeenth-Century France, Russia, and China* (trans. 1970).

The early rulers are studied in A. Pavlov and M. Perrie, *Ivan the Terrible* (2003); and in I. de Madariaga, *Ivan the Terrible: First Tsar of Russia* (2005), an outstanding study of the brutal ruler. W. B. Lincoln, *Autocrats of All the Russias* (1981) is a remarkable large-scale study of the Romanovs, the 15 tsars and 4 tsarinas who ruled Russia between 1613 and 1917. A more recent study of the changes in the early modern period can be found in S. Dixon, *The Modernisation of Russia, 1676–1825* (1999); and Russia's early imperial expansion is examined in the important work by J. P. LeDonne, *The Grand Strategy of the Russian Empire, 1650–1831* (2004). An absorbing impressionistic cultural history is J. H. Billington, *The*

*Icon and the Axe: An Interpretive History of Russian Culture* (1966), while a provocative reassessment of Russia's relationship to European intellectual and cultural history is M. Malia, *Russia under Western Eyes: From the Bronze Horseman to the Lenin Mausoleum* (1999).

On Peter and the reforms of his reign, an older outstanding biography, M. Klyuchevsky, *Peter the Great* (trans. 1958), may be compared with the briefer, more recent accounts by S. J. Lee, *Peter the Great* (1993); M. S. Anderson, *Peter the Great* (rev. 1995); and L. Hughes, *Peter the Great, A Biography* (2002). Peter's interest in western Europe is discussed in L. Hughes (ed.), *Peter the Great and the West: New Perspectives* (2001). An excellent account of Russian society, culture, and government in this era appears in the comprehensive, insightful study by L. Hughes, *Russia in the Age of Peter the Great* (1998), in which she neglects no aspect of Peter's rule. R. K. Massie, *Peter the Great: His Life and World* (1980) is a long, vivid, and colorful popular account, less critical of Peter than other studies. N. V. Riasanovsky, *The Image of Peter the Great in Russian History and Thought* (1985) examines the ruler's long-range cultural impact, while one aspect of his cultural revolution is examined in J. Cracraft, *The Petrine Revolution in Russian Architecture* (1988). An admirable study in comparative cultural history is D. W. Treadgold, *The West in Russia and China: Religious and Secular Thought in Modern Times* (2 vols., 1973), the first volume of which covers Russia for the years 1472–1917. For Sweden, and for Peter's great Swedish rival, an outstanding biography is R. N. Hatton, *Charles XII of Sweden* (1969). A number of important studies by M. Roberts and others have been cited in Chapter 3; for these years M. Roberts, *The Swedish Imperial Experience, 1560–1718* (1979) deserves mention. The Baltic shore is explored in S. P. Oakley, *War and Peace in the Baltic, 1560–1790* (1992).

### Useful Web Sites

Resources on Ottoman history can be found at *World Civilizations*, [www.wsu.edu:8080/~dee/OTTOMAN/OTTOMAN1.HTM](http://www.wsu.edu:8080/~dee/OTTOMAN/OTTOMAN1.HTM), which is part of an excellent Web site at Washington State University, and at *Internet Islamic History Sourcebook*, [www.fordham.edu/halsall/islam/islamsbook.html](http://www.fordham.edu/halsall/islam/islamsbook.html), where readers may locate links to Ottoman materials from the outstanding internet resources at Fordham University. On the Habsburgs and the Austrian empire, readers will find useful resources at *The Imperial House of Hapsburg*, [www.hapsburg.com/home.htm](http://www.hapsburg.com/home.htm), and at the helpful links from this site. There is concise, well-organized information on early modern Prussia, Poland, Russia, and other European states at the wide-ranging British Web site, *History World*, [www.historyworld.net/](http://www.historyworld.net/), where readers will find valuable timelines as well as other interactive materials. On Russian imperial history in the

age of Peter the Great, one may consult the materials pertaining to the *History and Culture of Russia* at [www.geographica.com/russia.rushis.01.htm](http://www.geographica.com/russia.rushis.01.htm); and readers will find excellent links to a wide range of resources on the early history of Russia at Bucknell University's *Russian Studies Program*, [www.bucknell.edu/Russian](http://www.bucknell.edu/Russian).

## 6. THE SCIENTIFIC VIEW OF THE WORLD

### Histories of Science

An outstanding, broad-ranging study is B. L. Silver, *The Ascent of Science* (1998). A valuable new series on the history of modern science is available in D. C. Lindberg and R. Numbers (eds.), *The Cambridge History of Science* (2003–06), a collaborative project that will eventually include eight volumes. An older, but still useful collaborative survey is L. P. Williams and H. J. Steffens (eds.), *The History of Science in Western Civilization* (3 vols., 1977–78), from antiquity to the twentieth century. Other excellent historical accounts include R. Olson, *Science Deified and Science Defied: The Historical Significance of Science in Western Culture* (2 vols., 1982–91), a far-reaching study ranging from prehistory to 1820. Ancient and medieval science is also explored in D. C. Lindberg, *The Beginnings of Western Science* (1992), cited in Chapter 2. Other important perspectives on the long history of science appear in M. Serres (ed.), *A History of Scientific Thought: Elements of a History of Thought* (trans. 1995) and in the comprehensive analysis of the historical study of science by H. F. Cohen, *The Scientific Revolution: A Historiographical Inquiry* (1994). For individual scientists one may consult the *Dictionary of Scientific Biography* (8 vols., 1970–80) and for new works in the history of science, the annual bibliographies published in *Isis*.

### The Scientific Revolution

For the fundamental reorientation of thinking about nature and the universe in early modern times, three older but still valuable introductions are H. Butterfield, *The Origins of Modern Science* (rev. 1965); A. Koyré, *From the Closed World to the Infinite Universe* (1968); and A. R. Hall, *The Revolution in Science, 1500–1750: The Formation of the Modern Scientific Attitude* (rev. 1983). These works may now be supplemented by K. Park and L. Daston, *Early Modern Science* (2006), which is the third volume in *The Cambridge History of Science*. Other informative accounts include A. G. Debus, *Man and Nature in the Renaissance* (1978) and R. S. Westfall, *The Construction of Modern Science* (1971). Of special interest are I. B. Cohen's *The Newtonian Revolution* (1980) and *Revolution in Science* (1985), an encyclopedic study of the transformation of scientific ideas. Useful shorter surveys of this era may be found in J. R. Jacob, *The Scientific Revolution: Aspirations and Achievements, 1500–1700* (1998);

J. Henry, *The Scientific Revolution and the Origins of Modern Science* (rev. 2002); and S. Shapin, *The Scientific Revolution* (1996), which examines the cultural dimensions of scientific knowledge. On the nature of revolutionary breakthroughs in science a highly influential work has been T. S. Kuhn, *The Structure of Scientific Revolution* (1962, rev. 1970, reissued 1989), which challenges the belief in progressive, cumulative scientific advance and emphasizes the role of shifting cultural assumptions in the development of scientific knowledge. Kuhn has also written *The Copernican Revolution* (1957, 1985). Some historians of science have questioned traditional views of the scientific revolution, arguing that the changes in thought proceeded slowly and that most early modern scientists retained decidedly unmodern views of human knowledge. For discussion of these issues, readers may turn to M. J. Osler (ed.), *Rethinking the Scientific Revolution* (2000). P. B. Medawar, *Pluto's Republic* (1982), humorously entitled but a serious book, explores the persistence of pseudo- and quasi-scientific thinking from Bacon to the present.

For all aspects of technology and the practical application of science, one may consult C. Singer et al., *A History of Technology* (8 vols., 1954–84). Three related books are A. Pacey, *The Maze of Ingenuity* (1976); S. Shapin and S. Schaffer, *Leviathan and the Air Pump* (1985); and L. Jardine, *Ingenious Pursuits: Building the Scientific Revolution* (2000). Technology as a social force is explored in the classic study of L. Mumford, *Technics and Civilization* (1934, reissued 1963) and in O. Mayr, *Authority, Liberty, and Automatic Machinery in Early Modern Europe* (1986). A brief, informative survey appears in E. D. Brose, *Technology and Science in the Industrializing Nations, 1500–1914* (1998).

A number of provocative studies relate the scientific revolution to the political and social ferment and economic developments in seventeenth-century England and stress the practical implications for a commercial society. Here two pioneer studies were R. K. Merton, *Science, Technology, and Society in Seventeenth Century England* (1970) and C. Webster, *The Great Instauration: Science, Medicine, and Reform, 1626–1660* (1975). An admirable synthesis is M. C. Jacob, *The Cultural Meaning of the Scientific Revolution* (1988), a work that has been revised and expanded in *Scientific Culture and the Making of the Industrial West* (1997). The applications of Newtonian science are examined in M. C. Jacob and L. C. Stewart, *Practical Matter: Newton's Science in the Service of Industry and Empire, 1687–1851* (2004). Connections between early scientific writing and early modern literature are analyzed in E. Spiller, *Science, Reading, and Renaissance Literature: The Art of Making Knowledge, 1580–1670* (2004).

### Biographically Oriented Accounts

The contributions of the pioneer astronomers are described in many of the books already cited and in

A. Armitage, *The World of Copernicus* (1972); J. M. Caspar, *Kepler* (reissued 1993); and K. Ferguson, *Tycho and Kepler: The Unlikely Partnership that Forever Changed Our Understanding of the Heavens* (2002), an accessible double biography of two major scientists and their times. For Galileo one may read A. Koyré, *Galileo Studies* (1978); while a study of his scientific activities is available in S. Drake, *Galileo at Work: His Scientific Biography* (1978), in which the author has reconstructed the scientist's instruments and examined his notebooks; the same author has written a concise biographical study, *Galileo* (2001). The condemnation that Galileo aroused from the Church and other authorities is described in J. J. Langford, *Galileo, Science, and the Church* (rev. 1992), while P. Redondi, *Galileo: Heretic* (trans. 1987) is a provocative, not entirely convincing, revisionist account. Galileo's links to the culture of patronage are examined in M. Biagioli, *Galileo, Courtier* (1993); and helpful accounts of the wider culture in which he worked can be found in J. Renn (ed.), *Galileo in Context* (2001). For Newton, R. S. Westfall, *Never at Rest: A Biography of Isaac Newton* (1982, 1993) is a biography of distinction; D. Berlinski, *Newton's Gift: How Sir Isaac Newton Unlocked the System of the World* (2000) is illuminating on the man and his accomplishments; and there are also notable biographies by G. E. Christianson (1984), A. R. Hall (1992), and J. Gleick (2003). Newton's fascination with other forms of thought is described in the influential revisionist work of B. J. T. Dobbs, *The Janus Face of Genius: The Role of Alchemy in Newton's Thought* (1991).

### Science and Thought

Three informative studies of a key figure in the new science are P. Zagorin, *Francis Bacon* (1998), which is especially strong on Bacon's intellectual contributions; L. Jardine and A. Stewart, *Hostage to Fortune: The Troubled Life of Francis Bacon* (1998), which describes in detail all aspects of his complex career; and C. Whitney, *Francis Bacon and Modernity* (1986). B. H. G. Wormald, *Francis Bacon: History, Politics, and Science, 1561–1626* (1993) remains a major appraisal. Descartes and his influence are described in T. Sorell, *Descartes* (1987), and in P. A. Schouls, *Descartes and the Enlightenment* (1989). Readers may turn to H. M. Bracken, *Descartes* (2002) for a concise account of his life and ideas. The complexities of Cartesian thought are examined from new perspectives in S. Bordo (ed.), *Feminist Interpretations of René Descartes* (1999).

The role played by women in the scientific revolution is skillfully explored in L. Schiebinger, *The Mind Has No Sex? Women in the Origins of Modern Science* (1989), the title derived from Descartes. It may be read along with the same author's *Nature's Body: Gender in the Making of Modern Science* (1993, reissued 2004), focusing on eighteenth-century studies of plants and animals. An important book by

E. Harth, *Cartesian Women: Versions and Subversions of Rational Discourse in the Old Regime* (1992), compares the role of women intellectuals in the seventeenth and eighteenth centuries.

For Pascal one may read A. Krailsheimer, *Pascal* (1980); H. M. Davidson, *Blaise Pascal* (1983); and J. R. Cole, *Pascal: The Man and His Two Loves* (1995), which offers debatable psychological interpretations of the writer's life and work. There is a perceptive, brief study of Pierre Bayle by E. Labrousse, *Bayle* (trans. 1983). Skepticism is further explored in F. L. Baumer, *Religion and the Rise of Skepticism* (1960) and in R. H. Popkin, *The History of Skepticism from Savonarola to Spinoza* (rev. 2003); Montaigne, its sixteenth-century exemplar, is studied in excellent biographies by D. M. Frame (1965) and H. Friedrich (trans. 1991), which may be compared with G. Hoffmann, *Montaigne's Career* (1998). A judicious, balanced biography of the seventeenth-century Dutch philosopher is S. Nadler, *Spinoza: A Life* (1999). The cultural influence of Spinoza and other skeptical thinkers is analyzed in the wide-ranging work of J. I. Israel, *The Radical Enlightenment: Philosophy and the Making of Modernity 1650–1750* (2002). A provocative book exploring the relationship of rationalism to Western thought from the seventeenth century on is E. Gellner, *Reason and Rationalism* (1990).

For the political thought of the period an overview is provided in F. L. Baumer, *Modern European Thought: Continuity and Change in Ideas, 1600–1950* (1977). On Locke one may read J. Dunn, *The Political Thought of John Locke* (1969), and the same author's *Locke: A Very Short Introduction* (rev. 2003); R. Ashcraft, *Locke's Two Treatises of Government* (1986); and E. J. Lowe, *Locke* (2005). There are also useful accounts of Locke's life and work in W. M. Spellman, *John Locke* (1997) and in K. L. Cope, *John Locke Revisited* (1999). Hobbes is studied in two notable books by A. Martinich, *Hobbes, A Biography* (1999), and *Hobbes* (2005); in A. A. Rogow, *Thomas Hobbes: Radical in the Service of Reaction* (1986); and in R. Tuck, *Hobbes* (1989), a brief appraisal. Useful for French thinkers in these years is N. O. Koe-hane, *Philosophy and the State in France: The Renaissance to the Enlightenment* (1980). Two important studies of modern conceptions of individual identity also discuss the intellectual history of this era: C. Taylor, *Sources of the Self: The Making of the Modern Identity* (1989) and J. Seigel, *The Idea of the Self: Thought and Experience in Western Europe Since the Seventeenth Century* (2005).

### Useful Web Sites

Resources on European science in the sixteenth and seventeenth centuries can be found at Rice University's *Galileo Project* at <http://galileo.rice.edu/index.html>, an excellent site that focuses on Galileo but includes many other valuable materials and links. Addi-

tional information on early astronomy and other sciences is available at *History of Astronomy*, [www.astro.uni-bonn.de/%Epbrosche/astoria.html](http://www.astro.uni-bonn.de/%Epbrosche/astoria.html). There are useful materials and helpful links on seventeenth-century science at the Web site of the *Newton Project*, at Imperial College, London, <http://newtonproject.ic.ac.uk/>. The history of early modern philosophy, including bibliographic materials and links to sites on Bacon, Descartes, Spinoza, Bayle and others, can be explored through the excellent *Stanford Encyclopedia of Philosophy* at <http://plato.stanford.edu/>.

## 7. THE STRUGGLE FOR WEALTH AND EMPIRE

For the years covered in this chapter, helpful syntheses include T. C. W. Blanning (ed.), *The Eighteenth Century* (2000) and Blanning's more recent book, *The Culture of Power and the Power of Culture: Old Regime Europe, 1660–1789* (2002); I. Woloch, *Eighteenth Century Europe: Tradition and Progress, 1715–1798* (1982); M. S. Anderson, *Europe in the Eighteenth Century, 1713–1783* (rev. 2000); J. Black, *Eighteenth-Century Europe* (rev. 1999); and W. Doyle, *The Old European Order, 1660–1800* (rev. 1992). Europe's colonial empires and the new global trading system are examined in J. Black, *Europe and the World, 1650–1830* (2002). A useful reference work is J. Black and R. Porter (eds.), *A Dictionary of Eighteenth-Century World History* (1993).

### Popular Culture and Everyday Life

The differences between elite and popular culture emerge from three books mentioned earlier: P. Burke, *Popular Culture in Early Modern Europe* (rev. 1994); K. Thomas, *Religion and the Decline of Magic* (1971); and F. Braudel, *The Structures of Everyday Life* (trans. 1981, 1991), the first volume of his three-volume study. They may be supplemented by the essays in A. Mitchell and I. Deák (eds.), *Everyman in Europe: Essays in Social History* (2 vols., rev. 1997). There are also studies of English social mores in K. Olsen, *Daily Life in 18th-Century England* (1999) and in P. Langford, *Englishness Identified: Manners and Character, 1650–1850* (2000). The role of language in shaping social identities is examined in an insightful work by P. Burke, *Languages and Communities in Early Modern Europe* (2004).

### The Global Economy and the Colonial Empires

The final two volumes of Braudel's work, *The Wheels of Commerce* (trans. 1983) and *The Perspectives of the World* (both reissued in 1991), offer remarkable accounts of the global economy. A far-ranging study relevant for the years after 1650 is S. W. Mintz, *Sweetness and Power: The Place of Sugar in Modern History* (1985). The celebrated speculative ventures of

the age are graphically described in J. Carswell, *The South Sea Bubble* (1960); in the relevant chapters of C. P. Kindleberger, *Manias, Panics, and Crashes: A History of Financial Crises* (1978); in J. K. Galbraith, *A Short History of Financial Euphoria: A Hymn of Caution* (1993); and in R. Dale, *The First Crash: Lessons from the South Sea Bubble* (2004).

Several books on European overseas expansion listed for Chapters 3 and 4 also discuss the eighteenth century. To these must be added H. Furber's excellent synthesis, *Rival Empires of Trade in the Orient, 1600–1800* (1976); J. H. Parry, *Trade and Dominion: The European Overseas Empires in the Eighteenth Century* (1971); two works by G. Williams, *The Expansion of Europe in the Eighteenth Century: Overseas Rivalry, Discovery, and Exploitation* (1966) and *The Great South Sea: English Voyages and Encounters, 1570–1750* (1997); P. K. Liss, *Atlantic Empires: The Network of Trade and Revolution, 1713–1826* (1983); P. D. Curtin, *Cross-Cultural Trade in World History* (1984), cited earlier; and A. K. Smith, *Creating a World Economy: Merchant Capital, Colonialism, and World Trade, 1400–1825* (1991). One may also read the relevant chapters of D. K. Fieldhouse, *The Colonial Empires: A Comparative Survey from the Eighteenth Century* (rev. 1982). A valuable, collaborative work under the general editorship of W. R. Louis, *The Oxford History of the British Empire* (5 vols., 1998–1999), offers up-to-date research by specialists and includes two volumes on the early era of global expansion: N. Canny (ed.), *British Overseas Enterprise to the Close of the Seventeenth Century* and P. J. Marshall (ed.), *The Eighteenth Century*.

The impact of Asia on Europe in the early modern centuries from the sixteenth century on is studied in great detail in D. F. Lach, *Asia in the Making of Europe* (3 vols., 1965–93), of which E. J. Van Kley is coauthor of volume 3. A useful collaborative work is A. T. Embree and C. Gluck (eds.), *Asia in Western and World History: A Guide for Teaching* (1997).

P. Lawson, *The East India Company: A History* (1993) describes its activities from its beginnings in 1603 to its demise in 1857; a wide-ranging collection of early and recent historical writings on the same subject has been brought together in P. Tuck, *The East India Company, 1600–1858* (6 vols., 1998). The eighteenth-century impact on India is further explored in P. Woodruff [Mason], *The Men Who Ruled India* (2 vols., 1954–57) and in P. J. Marshall, *The Making and Unmaking of Empires: Britain, India, and America, c. 1750–1783* (2005), which examines how Britain expanded its imperial role in India while it was losing imperial control of its American colonies. A recent study of the controversial British governor general is available in J. Bernstein, *Dawning of the Raj: The Life and Trials of Warren Hastings* (2000). For India itself the best introductions appear in P. Spear, *The Oxford History of Modern India, 1740–1975* (rev.

1978); S. Wolpert, *A New History of India* (rev. 2000); J. Keay, *India: A History* (2000); and H. Kulke and D. Rothermund, *A History of India* (rev. 2004), and P. Robb, *A History of India* (2002). J. E. Schwartzberg (ed.), *A Historical Atlas of South Asia* (rev. 1992) is a superb atlas.

For the French in North America one may read W. J. Eccles, *The French in North America, 1500–1783* (rev. 1998), cited earlier, and *The Canadian Frontier, 1534–1760* (1974); P. Boucher, *Les Nouvelles Frances: France in America, 1500–1815* (1989), a brief illustrated account; and D. H. Usner, Jr., *Indians, Settlers, & Slaves in a Frontier Exchange Economy: The Lower Mississippi Valley Before 1783* (1992). The importance of the West Indies for the Atlantic economy emerges from N. F. Crouse, *The French Struggle for the West Indies, 1665–1713* (1944); R. S. Dunn, *Sugar and Slaves* (1972); and S. W. Mintz's *Sweetness and Power* (1985), cited above.

### British Politics and Society in the Eighteenth Century

Books on eighteenth-century France are listed below in Chapter 8, but two works should be mentioned here: C. Pevitt, *The Man Who Would Be King: The Life of Philippe, Duc d'Orléans: Regent of France* (1998); and R. Butler, *Choiseul* (1980).

There is a growing literature on eighteenth-century British politics and society after the settlement of 1688–1689. L. B. Namier, who wrote with precision and depth but insisted on narrow political and parliamentary history, long had an enormous influence. His most important books were *The Structure of Politics at the Accession of George III* (2 vols., 1920; 1957) and *England in the Age of the American Revolution* (rev. 1961). He also launched a large-scale collaborative project in prosopography, or collective biography, seeking to reconstruct in minute detail the composition of the modern British parliaments. His approach, adopted by other historians, downplayed the importance of ideology in the seventeenth-century revolutions, as discussed in Chapter 4, and even the triumph of Parliament over crown in 1688. His continuing influence is demonstrated in J. P. Kenyon, *Revolution Principles: The Politics of Party, 1689–1720* (1977, 1990) as well as in J. C. D. Clark's two books: *English Society, 1688–1832* (1985) and *Revolution and Rebellion* (1986).

J. Brewer has widened the political arena in two innovative works, *Party Ideology and Popular Politics at the Accession of George III* (1976) and *The Sinews of Power: War, Money, and the English State, 1688–1783* (1989). At the same time E. P. Thompson's interest in social history has influenced eighteenth-century studies. Thompson's own work on this era includes *Whigs and Hunters: The Origin of the Black Act* (1976). For other books affording broad insights into eighteenth-century British politics and society one

may turn to G. S. Holmes, *British Politics in the Age of Anne* (1967, 1987) and *The Age of Oligarchy: Pre-Industrial Britain, 1722–1783* (1993); N. Rogers, *Whigs and Cities: Popular Politics in the Age of Walpole and Pitt* (1989); W. A. Speck, *The Birth of Britain: A New Nation, 1700–1710* (1994) and *Stability and Strife: England, 1714–1760* (1977); and J. Black, *Eighteenth-Century Britain, 1688–1783* (2001).

For the economy and society one may read three informative accounts: N. McKendrick, J. Brewer, and J. H. Plumb, *The Birth of a Consumer Society: The Commercialization of Eighteenth-Century England* (1982); P. Langford, *A Polite and Commercial People: England, 1727–1783* (1989); and R. Porter, *English Society in the Eighteenth Century* (rev. 1990). One may also read P. Mathias, *The First Industrial Nation: An Economic History of Britain, 1700–1914* (rev. 1983); C. P. Hill, *British Economic and Social History, 1700–1982* (rev. 1985); and P. Langford and C. Harvie, *The Eighteenth Century and the Age of Industry* (1992), in the *Oxford History of Britain*. F. M. L. Thompson, *The Cambridge Social History of Britain, 1750–1950* (rev. 1993) begins with these years. For an excellent, wide-ranging study of the era's cultural history, one may turn to J. Brewer, *The Pleasures of the Imagination: English Culture in the Eighteenth Century* (1997).

Biographical accounts include R. N. Hatton, *George I, Elector and King* (1979); J. H. Plumb, *Sir Robert Walpole* (2 vols., 1951–56), a biography of distinction, and *The First Four Georges* (1956); H. T. Dickinson, *Walpole and the Whig Supremacy* (1973); and J. Black, *Robert Walpole and the Nature of Politics in Early Eighteenth-Century England* (1990). There are biographies of the elder Pitt by S. Ayling (1976), P. D. Brown (1978), and J. Black (rev. 1999). The Jacobite uprisings are discussed in books by B. Lenman (1995), P. K. Monod (1983), J. L. Roberts (2002), C. Duffy (2003), and F. McLynn (1981). McLynn has also written a biography of the Young Pretender, *Bonnie Prince Charlie: Charles Edward Stuart* (1991) as well as *Crime and Punishment in Eighteenth-Century England* (1989), which traces the prevailing insecurity to the Jacobite threat. The latter may be supplemented by P. Linebaugh, *The London Hanged: Crime and Punishment in the Eighteenth Century* (1992), an impressive study.

Especially insightful on the formation of the British national identity in these years is L. Colley, *Britons: Forging the Nation, 1707–1837* (1992), which may be supplemented by H. F. Kearney, *The British Isles: A History of Four Nations* (1989). W. A. Speck's informative survey, *A Concise History of Britain, 1707–1975* (1993) begins with these years.

### The Great War of the Mid-Eighteenth Century, 1740–1763

R. Browning, *The War of the Austrian Succession* (1993) is an outstanding wide-ranging study of the

first phase of the mid-eighteenth century conflict; and there is an excellent comprehensive account of the second important war in F. Anderson, *Crucible of War: The Seven Years' War and the Fate of Empire in British North America, 1754–1766* (2000); a briefer account is available from the same author in *The War that Made America: A Short History of the French and Indian War* (2005); and in D. Marston, *The Seven Years' War* (2001). The latter subject is studied also in J. Keegan in *Fields of Battle: The Wars for North America* (1996).

J. Brewer, *The Sinews of Power: War, Money, and the English State, 1688–1783* (1989), noted earlier, persuasively demonstrates that it was the fiscal strength and war-making capacities of the British parliamentary government after 1688 that made possible Britain's ascent as a global power. For the crisis created by the mid-century wars, in addition to the biographical accounts of Pitt already cited, one may read M. Peters, *Pitt and Popularity: The Patriot Minister and London Opinion during the Seven Years' War* (1980) and R. Middleton, *The Pitt-Newcastle Ministry and the Conduct of the Seven Years' War, 1757–1762* (1985).

C. Duffy, *The Army of Maria Theresa: The Armed Forces of Imperial Austria, 1740–1780* (1977) ably explores the nature of the Habsburg army, and the same author examines Frederick's skill in statecraft and military prowess in *Frederick the Great: A Military Life* (1985). Other aspects of Frederick's military and foreign policies are discussed with perceptive insights in T. Schieder, *Frederick the Great* (trans. 2000). Additional works on Frederick are listed below in Chapter 8.

### Some Useful Web Sites

For information and links on the financial panics of the era, see the *Bubble Project* at Dalhousie University, <http://myweb.dal.ca/dmcneil/bubble.html>. There are useful materials and links on the early British empire at *BBC-History*, <http://bbc.co.uk/history/state/empire>. The history of France's role in early America can be explored through the links at the *Virtual Museum of New France*, <http://www.vmnf.civilization.ca/vmnf/vmnf.asp>. The Web site of *The Royal Historical Society*, at <http://www.rhs.ac.uk/bibl/bibw1.asp>, offers links to numerous resources on eighteenth-century history and culture. The themes of both early modern and modern global history are addressed regularly at *World History Connected*, <http://worldhistoryconnected.press.uiuc.edu/>, the site of an excellent "e-journal" that offers up-to-date information and analysis of the transnational exchanges in world history.

## 8. THE AGE OF ENLIGHTENMENT

For background, the eighteenth-century accounts listed at the beginning of Chapter 7 should be consulted and to them should be added A. Goodwin (ed.), *The American and French Revolutions, 1763–1793*

(1965), Vol. VIII of *The New Cambridge Modern History*. There are helpful essays in D. E. D. Beales, *Enlightenment and Reform in Eighteenth-Century Europe* (2005) and a valuable overview in O. Hufton, *Europe: Privilege and Protest: 1730–1789* (rev. 2000). Readers will also find an intriguing, comprehensive account of the later eighteenth century in F. Venturi, *The End of the Old Regime in Europe, 1776–1789* (2 vols., trans. 1991).

## Enlightenment Thought

The most wide-ranging survey of the thought of the era is P. Gay, *The Enlightenment: An Interpretation* (2 vols., 1966–69), a comprehensive work that praises the rationalist themes of many eighteenth-century writers; the author also explores some of his theses in *The Party of Humanity: Essays on the French Enlightenment* (1964). Other influential, older interpretations are to be found in E. Cassirer, *The Philosophy of the Enlightenment* (1932; trans. 1951); A. Cobban, *In Search of Humanity: The Role of the Enlightenment in Modern History* (1960); N. Hampson, *A Cultural History of the Enlightenment* (1969); and I. O. Wade, *The Structure and Form of the French Enlightenment* (2 vols., 1977). An informative concise introduction is M. Cranston, *Philosophers and Pamphleteers: Political Theorists of the Enlightenment* (1986), while two useful, brief surveys entitled *The Enlightenment* are available by R. Porter (rev. 2001) and D. Outram (1995). G. Himmelfarb, *The Roads to Modernity: The British, French, and American Enlightenments* (2004) is provocative but not always convincing when it elevates British and American contributions above those of the French. Readers may also turn to M. C. Jacob (ed.), *The Enlightenment: A Brief History with Documents* (2001).

Many recent works on the Enlightenment stress the role of social and cultural institutions that promoted the circulation of ideas and new forms of intellectual debate. This approach to the Enlightenment has been influenced by the challenging work of J. Habermas, *The Structural Transformation of the Public Sphere* (trans. 1989). Among the many recent studies that examine institutions of the Enlightenment “public sphere,” readers will find valuable insights in D. Goodman, *The Republic of Letters: A Cultural History of the French Enlightenment* (1994), which discusses the role of women in French salons; D. Gordon, *Citizens Without Sovereignty: Equality and Sociability in French Thought, 1670–1789* (1994); A. Goldgar, *Impolite Learning: Conduct and Community in the Republic of Letters* (1995); and T. Munck, *The Enlightenment: A Comparative Social History, 1721–1794* (2000), which argues that the new ideas spread widely beyond the elite centers of intellectual life. Other important books include U. Im Hof, *The Enlightenment* (trans. 1994) and D. Roche, *France in the Enlightenment* (1993, trans. 1998), a balanced, informative, and entertaining work by a leading French historian. Inter-

esting work on more specific topics may be found in M. C. Jacob, *Living the Enlightenment: Freemasonry and Politics in Eighteenth-Century Europe* (1991) as well as in O. P. Grell and R. Porter (eds.), *Toleration in Enlightenment Europe* (2000). M. Vovelle (ed.), *Enlightenment Portraits* (1997) brings to life many of the people of the age; and D. M. McMahon examines the critics of Enlightenment thought in *Enemies of the Enlightenment: The French Counter-Enlightenment and the Making of Modernity* (2001).

On the theme of progress, readers may consult the classic work by J. B. Bury, *The Idea of Progress: An Inquiry into Its Origin and Growth* (1920, 1955) and R. Nisbet, *History of the Idea of Progress* (rev. 1994), which treats the concept on a broad time scale. The idea has also been examined in A. M. Melzer, J. Weinberger, and M. R. Zinman (eds.), *History and the Idea of Progress* (1995). On economic thought and the early advocates of free trade, there is E. Fox-Genovese, *The Origins of Physiocracy: Economic Revolution and Social Order in Eighteenth-Century France* (1976) and the important work of P. Groenwegen, *Eighteenth-Century Economics: Turgot, Beccaria and Smith and Their Contemporaries* (2002).

## The Philosophes

There are numerous books on the leading thinkers of the Enlightenment. On Voltaire, P. Gay, *Voltaire's Politics: The Poet as Realist* (rev. 1988) reveals Voltaire's pragmatic reactions to the events of his day; H. Mason, *Voltaire: A Biography* (1981) is a concise authoritative account; J. Gray, *Voltaire* (1999) offers a brief introduction; and A. J. Ayer, *Voltaire* (1986) stresses Voltaire as crusader. More recent studies include R. Pearson, *Voltaire Almighty: A Life in Pursuit of Freedom* (2005) and I. Davidson, *Voltaire in Exile* (2005), which focuses on the philosophe's later life and career. For Montesquieu one may read an outstanding study by R. Shackleton, *Montesquieu: A Critical Biography* (1961) and an illuminating brief examination of his thought in J. N. Shklar, *Montesquieu* (1987). On Diderot, A. M. Wilson's biography (2 vols., 1957, 1972) is admirable and P. N. Furbank, *Diderot: A Critical Biography* (1992) is equally impressive and adds new materials.

For the elusive Rousseau, a comprehensive introduction is L. G. Crocker, *Jean-Jacques Rousseau* (2 vols., 1968), while E. Cassirer, *The Question of Jean-Jacques Rousseau* (trans. 1963) remains fundamental. In addition to many other studies, readers may turn to J. H. Huizinga, *Rousseau: The Self-Made Man* (1975); R. Grimsley, *Jean-Jacques Rousseau* (1983); and M. Cranston's important reassessment, *Jean-Jacques: The Early Life and Works of Jean-Jacques Rousseau, 1712–1754* (1982), with a sequel, *The Noble Savage: Jean-Jacques Rousseau, 1754–1762* (1991). Two challenging books are J. Miller, *Rousseau: Dreamer of Democracy* (1984) and J. N. Shklar, *Men and Citizens: A Study of Rousseau's Social Theory* (1985). The work

of M. Hulliung, *The Autocritique of Enlightenment: Rousseau and the Philosophes* (1994), describes Rousseau's critical analysis of his own era's intellectual culture. Rousseau's life and thought are also examined in L. Damrosch, *Jean-Jacques Rousseau, Restless Genius* (2005), an excellent biography.

On Condorcet, K. M. Baker has written the exhaustive *Condorcet: From Natural Philosophy to Social Mathematics* (1975), while D. Williams, *Condorcet and Modernity* (2005) discusses both the ideas and political vision of a philosophe who also participated in the French Revolution. On the leading biologist or "natural historian" of the age, one may read J. Roger, *Buffon* (trans. 1998). On a lesser known philosophe sympathetic to the poorer classes, an excellent account is D. G. Levy, *The Ideas and Careers of Simon-Nicholas-Henri Linguet* (1980). H. G. Payne, *The Philosophes and the People* (1971) traces the divergent views of the famous writers toward the lower classes, as does H. Chisick, *The Limits of Reform in the Enlightenment* (1981).

For the connection between the ideas of the Enlightenment and the Revolution one still reads the classic work of D. Mornet, *Intellectual Origins of the French Revolution* (trans. 1933), which saw a more direct link than some contemporary scholars would concede. Three major reassessments are F. Furet, *Interpreting the French Revolution* (trans. 1981); K. M. Baker, *Inventing the French Revolution: Essays in the Political Culture of the Eighteenth Century* (1990); and R. Chartier, *The Cultural Origins of the French Revolution* (trans. 1991). Two books on the use and abuse of the ideas of the philosophes by the later revolutionaries are N. Hampson, *Will and Circumstance: Montesquieu, Rousseau, and the French Revolution* (1984) and C. Blum, *Rousseau and the Republic of Virtue: The Language of Politics in the French Revolution* (1986).

Intellectual ties between France and America are discussed in L. Gottschalk and D. F. Lach, *Toward the French Revolution: Europe and America in the Eighteenth-Century World* (1973) and in S. Schiff, *A Great Improvisation: Franklin, France, and the Birth of America* (2005). On Franklin one may also read C. A. Lopez, *Mon Cher Papa: Franklin and the Ladies of Paris* (rev. 1990) and two excellent biographies by E. S. Morgan (2002) and W. Isaacson (2005). Books that explore the significance of the Americas for European life and thought include A. Gerbi, *The Dispute of the New World, 1750–1900* (1973); S. Brandon, *New Worlds for Old* (1986), cited in Chapter 3; and C. Vann Woodward, *The Old World's New World* (1991), on changing European perceptions of America. An outstanding effort to explore the most important collaborative work of the French Enlightenment is R. Darnton, *The Business of Enlightenment: A Publishing History of the Encyclopédie, 1775–1800* (1979). The same author's other books, among them

*Mesmerism and the End of the Enlightenment in France* (1968), *The Literary Underground of the Old Regime* (1985), and *The Great Cat Massacre and Other Episodes in French Cultural History* (1984) help explain popular culture and radical political thought among ordinary men and women of the age. An engaging recent study of the philosophes' cultural and political ambitions is available in P. Blom, *Enlightening the World: Encyclopédie, the Book that Changed the Course of History* (2005). The growth of literacy is explored, especially for the years after 1680, in F. Furet and J. Ozouf, *Reading and Writing: Literacy in France from Calvin to Jules Ferry* (trans. 1983); the history of reading is also examined in R. Chartier, *The Cultural Uses of Print in Early Modern France* (trans. 1987). W. Roberts, *Morality and Social Class: Eighteenth-Century French Literature and Painting* (1974) links the creative arts to political and social life, as do A. Boime, *Art in an Age of Revolution, 1750–1800* (1987) and M. Craske, *Art in Europe, 1700–1830* (1997).

### The Enlightenment: Scotland, England, Italy, Germany

An informative introduction to Scotland in this age is D. Allan, *Scotland in the Eighteenth Century* (2001), and valuable assessments of the important Scottish thinkers are available in A. C. Chitnis, *The Scottish Enlightenment: A Social History* (1976) and in G. Davie, *The Scotch Metaphysics: A Century of Enlightenment in Scotland* (2001), which also describes the influence of Scottish philosophy in the nineteenth century. Other helpful books are K. Haakonssen, *The Science of a Legislator: The Natural Jurisprudence of David Hume and Adam Smith* (1981); D. Forbes, *Hume's Philosophical Politics* (1984); A. Fitzgibbons, *Adam Smith's System of Liberty, Wealth, and Virtue: the Moral and Political Foundations of the Wealth of Nations* (1995); and J. Dwyer, *The Age of the Passions: An Interpretation of Adam Smith and Scottish Enlightenment Culture* (1998). The essays in three collaborative volumes are rewarding: I. Hont and M. Ignatieff (eds.), *Wealth and Virtue in the Shaping of the Political Economy in the Scottish Enlightenment* (1984); D. Daiches et al. (eds.), *A Hotbed of Genius: The Scottish Enlightenment, 1730–1790* (1987); and J. Dwyer and R. B. Sher (eds.), *Sociability and Society in Eighteenth-Century Scotland* (1993).

For the Enlightenment in its British setting, one may read J. Redwood, *Reason, Ridicule, and Religion: The Age of Enlightenment in England, 1660–1750* (1976) and R. Porter, *The Creation of the Modern World: The Untold Story of the British Enlightenment* (2000), a wide-ranging work that stresses Britain's distinctive contributions to Enlightenment culture. The relation between religion and new democratic movements is examined in B. Semmel, *The Methodist Revolution* (1973), which sees Wesleyan evangelicalism as

the English counterpart to democratic stirrings in Europe and America; and R. Hattersley, *A Brand from the Burning: The Life of John Wesley* (2002) examines a key leader. J. G. A. Pocock subtly reexamines a number of British thinkers, including Hume, Gibbon, and Burke, in *Virtue, Commerce, and History: Essays in Political Thought and History* (1985). For Gibbon the brief J. W. Burrow, *Gibbon* (1985) and P. B. Craddock's admirable two-volume biography (1982–88) are available, but readers should also turn to the monumental work of J. G. A. Pocock, *Barbarism and Religion* (4 vols., 1999–2005), which examines Gibbon's work and places it in a wider context of Enlightenment historical writing. For the German poet-philosopher Goethe, one may turn to N. Boyle, *Goethe: The Poet and the Age* (2 vols., 1991, 2000).

H. Maestro has written a comprehensive biography of the Italian jurist and reformer who served the Austrian state, *Cesare Beccaria and the Origins of Penal Reform* (1973). For the Italian city-states in this age there are available D. Carpanetto and G. Ricuperati, *Italy in the Age of Reason, 1685–1789* (1987) and F. Venturi, *Italy and the Enlightenment: Studies in a Cosmopolitan Century* (1972). The leading Italian philosopher of the Enlightenment, little known in his own time but increasingly influential in recent years, is studied in L. Pompa, *Vico: A Study of the "New Science"* (1975); P. Burke's brief *Vico* (1985); M. Lilla, *G. B. Vico: The Making of an Anti-Modern* (1993); G. Mazzotta, *The New Map of the World: The Poetic Philosophy of Giambattista Vico* (1999); and R. C. Miner, *Vico, Genealogist of Modernity* (2002).

## Other Enlightenment Themes

Religion and related themes are examined in R. R. Palmer, *Catholics and Unbelievers in Eighteenth Century France* (1939); F. E. Manuel, *The Changing of the Gods* (1983); J. M. McManners, *Death and Enlightenment: Changing Attitudes to Death among Christians and Unbelievers in Eighteenth Century France* (1982); J. M. Byrne, *Religion and the Enlightenment: From Descartes to Kant* (1997); and the wide-ranging survey by W. R. Ward, *Christianity Under the Ancien Régime, 1648–1789* (1999). An important episode is studied in D. D. Bien, *The Calas Affair: Persecution, Toleration, and Heresy in Eighteenth Century Toulouse* (1960), while M. C. Jacob, *The Radical Enlightenment: Pantheists, Freemasons, and Republicans* (1981) explores radical ideas that flourished in Dutch literary circles. J. Riskin, *Science in the Age of Sensibility: The Sentimental Empiricists of the French Enlightenment* (2002) challenges older assumptions about the era's pervasive rationalism; and there is an intriguing study of the philosophes' conception of truth and falsehood in D. W. Bates, *Enlightenment Aberrations: Error and Revolution in France* (2002).

For an introduction to women in the Enlightenment, their accomplishments and the constraints upon

them, one may turn to K. Rogers, *Feminism in Eighteenth-Century England* (1976); the essays in S. I. Spencer (ed.), *French Women and the Age of Enlightenment* (1985); the important work on the salons by D. Goodman (1994), cited earlier; N. R. Gelbart, *Feminine and Opposition Journalism in Old Regime France: Le Journal des dames* (1987); and S. C. Maza, *Private Lives and Public Affairs: The Causes Célèbres of Prerevolutionary France* (1993), which discusses the images of women in late eighteenth-century legal disputes. The life of the marquise who headed the best known of the many salons in France is recounted in B. Craveri, *Madame du Deffand and Her World* (trans. 1994).

On a special subject, A. Hertzberg, *The French Enlightenment and the Jews* (1968) contends that by downgrading all religions the philosophes (and especially Voltaire) contributed to anti-Semitism; also critical of the Enlightenment is J. Katz, *Out of the Ghetto: The Social Background of Jewish Emancipation, 1770–1870* (1973). But Jewish integration into European society in these years is explored in R. Mahler, *A History of Modern Jewry, 1780–1815* (1971); J. Israel, *European Jewry in the Age of Mercantilism, 1550–1750* (rev. 1998); and F. Malino and D. Sorkin (eds.), *From East to West: Jews in a Changing Europe* (1990), which focuses on the years 1750 to 1870. The views of eighteenth-century intellectuals are examined in excellent recent books by A. Sutcliffe, *Judaism and the Enlightenment* (2003) and J. M. Hess, *Germans, Jews, and the Claims of Modernity* (2002). H. Sachar, *A History of the Jews in the Modern World* (2005) provides a scholarly, highly readable account focusing on the years from the Enlightenment to the present.

## France in the Old Regime

Several books on modern France examine developments in the eighteenth century; among them are C. Jones, *The Great Nation: France from Louis XV to Napoleon, 1715–99* (2002) and R. Price, *An Economic History of Modern France 1730–1914* (1981). Price has also written *A Concise History of France* (rev. 2005). A. Moulin, *Peasantry and Society in France since 1789* (1991) examines important social themes.

Books that study the era for its own sake and not merely as a prologue to the Revolution include P. R. Campbell, *The Ancien Regime in France* (1988) and E. Le Roy Ladurie, *The Ancien Regime: A History of France, 1610–1774* (trans. 1996). The financial crisis is explored in depth in J. F. Bosher, *French Finances, 1770–1795: From Business to Bureaucracy* (1970).

The changing role of the nobility may be studied in older works by F. L. Ford, *Robe and Sword: The Regrouping of the French Aristocracy after Louis XIV* (1953) and R. Forster, *The Nobility of Toulouse in the Eighteenth Century* (1960), as well as in Forster's other books. G. Chaussinand-Nogure, *The French Nobility in the Eighteenth Century* (1985) portrays the

prerevolutionary nobility as socially productive; and J. M. Smith examines the nobility's contribution to conceptions of French nationhood in *Nobility Reimagined: The Patriotic Nation in Eighteenth-Century France* (2005). The response to problems of poverty and hunger in eighteenth-century France may be examined in O. Hufton, *The Poor of Eighteenth-Century France, 1750–1789* (1974); in S. L. Kaplan's detailed and impressive *Bread, Politics, and Political Economy in the Reign of Louis XV* (2 vols., 1976) and his two later volumes on related themes (1994, 1996); and in S. M. Adams, *Bureaucrats and Beggars: French Social Policy in the Age of Enlightenment* (1990). Parisian life at the time is graphically reconstructed in D. Roche, *The People of Paris* (trans. 1987). The status of domestic servants as a key to broader social relations is examined in S. C. Maza, *Servants and Masters in Eighteenth Century France: The Uses of Loyalty* (1983) and in C. Fairchild, *Domestic Enemies: Servants and Their Masters in Old Regime France* (1984). Maza also discusses French conceptions of social class in *The Myth of the French Bourgeoisie: An Essay on the Social Imaginary, 1750–1850* (2003), which argues that the bourgeoisie did not exist as the coherent social group that its critics imagined.

### Enlightened Despotism in Europe

A thoughtful brief introduction is J. G. Gagliardo, *Enlightened Despotism* (1967), while L. Krieger, *An Essay on the Theory of Enlightenment and Despotism* (1975) is a difficult but rewarding analysis.

German political fragmentation and cultural stirrings are examined in J. G. Gagliardo's *Reich and Nation: The Holy Roman Empire as Idea and Reality, 1763–1806* (1980) and *Germany under the Old Regime, 1600–1790* (1991). R. Vierhaus, *Germany in the Age of Absolutism* (1988) is a brief survey, while J. J. Sheehan, *Germany, 1770–1866* (1989) is an outstanding larger history that begins with this period. For Prussia and Frederick the Great, one may turn to D. B. Horn, *Frederick the Great and the Rise of Prussia* (1969) and R. B. Asprey, *Frederick the Great: The Great Enigma* (1986) as well as to the recent biographies by G. MacDonogh, *Frederick the Great: A Life in Deed and Letters* (1999) and D. Fraser, *Frederick the Great* (2000). His bureaucracy is examined in H. C. Johnson, *Frederick the Great and His Officials* (1975).

A concise introduction to eighteenth-century Austria is E. Wangemann, *The Austrian Achievement, 1700–1800* (1973). D. F. Good, *The Economic Rise of the Habsburg Empire, 1750–1914* (1984) begins with these years, while P. G. M. Dickinson, *Finance and Government under Maria Theresa, 1740–1780* (2 vols., 1988) is an in-depth economic study. The Habsburg empress may be studied in E. Crankshaw, *Maria Theresa* (1969); her son may be studied in P. P. Bernard, *Joseph II* (1968), a brief, balanced account;

in T. C. W. Blanning, *Joseph II* (1994); and in D. Beales, *Joseph II*, Vol. I: *In the Shadow of Maria Theresa, 1741–1780* (1987), which shows in detail how Joseph attempted to shape policy even before his own reign began in 1780.

Enlightened despotism in Russia is examined in a judicious large-scale study by I. de Madariaga, *Russia in the Age of Catherine the Great* (1981), available in abridged form as *Catherine the Great: A Short History* (1990), and in her *Politics and Culture in Eighteenth-Century Russia: Collected Essays* (1998). For a somewhat different appraisal, one may read J. T. Alexander, *Catherine the Great: Life and Legend* (1988). There are also biographies of Catherine by C. Erickson (1995) and S. Dixon (2001). Other valuable studies of eighteenth-century Russia include two works by M. Raeff, *Origins of the Russian Intelligentsia: The Eighteenth-Century Nobility* (1966) and *Political Ideas and Institutions in Imperial Russia* (1994), as well as D. Ransel, *The Politics of Catherinean Russia* (1975). Additional insights are provided in J. Burbank and D. L. Ransel (eds.), *Imperial Russia: New Histories for the Empire* (1998). Economic developments are traced in A. Kahan, *The Plow, the Hammer, and the Knout: An Economic History of Eighteenth-Century Russia* (1985), and revolts and social stirrings may be studied in P. Avrich, *Russian Rebels, 1600–1800* (1972), cited earlier, and in two books by J. T. Alexander on the Pugachev uprising: *Autocratic Politics in a National Crisis* (1969) and *Emperor of the Cossacks* (1973).

### Poland: The Partitions

For Poland in these years one may turn to N. Davies, *A History of Poland: God's Playground* (2 vols., rev. 2005), Vol. I: *The Origins to 1795* and *Heart of Europe: A Short History of Poland* (1984) as well as the accounts in J. Lukowski and H. Zawadzki, *A Concise History of Poland* (2001) and A. J. Prazmowska, *A History of Poland* (2004). The quarrel over the succession to the Polish throne is recounted in J. L. Sutton, *The King's Honor and the King's Cardinal [Fleury]: The War of the Polish Succession* (1980). On the eighteenth-century partitions, J. Lukowski, *The Partitions of Poland, 1772, 1793, 1795* (1999) updates and expands upon older studies. For the years that followed the partitions, one turns to P. Wandycz, *The Lands of Partitioned Poland, 1795–1918* (1974), Vol. VII of *A History of East Central Europe*. A special subject is treated in B. D. Weinryb, *The Jews of Poland: A Social and Economic History of the Jewish Community in Poland from 1100 to 1800* (rev. 1976), and in the essays in C. Abramsky et al. (eds.), *The Jews in Poland* (1986). K. Friedrich, *The Other Prussia: Royal Prussia, Poland, and Liberty, 1569–1772* (2000) examines the history of Polish-Prussian relations.

## The American Revolution and Britain

Major works by R. R. Palmer, J. Godechot, and others exploring the American and French Revolutions in a broader eighteenth-century revolutionary setting are described in the next chapter. H. F. May, *The Enlightenment in America* (1976) and H. S. Commager, *The Empire of Reason: How Europe Imagined and America Realized the Enlightenment* (1977) are both challenging books. For background to the revolution one should read B. Bailyn, *The Ideological Origins of the American Revolution* (1967; 1992). The link with events and ideas in seventeenth-century England is stressed in E. S. Morgan, *Inventing the People: The Rise of Popular Sovereignty in England and America* (1988); and the influence of Enlightenment ideas on American leaders is discussed in D. Staloff, *Hamilton, Adams, Jefferson: The Politics of Enlightenment and the American Founding* (2005).

For a sampling of interpretive studies one may turn to I. R. Christie and B. W. Labaree, *Empire or Independence, 1760–1776: A British-American Dialogue on the Coming of the American Revolution* (1976); B. Bailyn, *Faces of Revolution: Personalities and Themes in the Struggle for American Independence* (1990); J. P. Greene, *Understanding the American Revolution: Issues and Actors* (1995); and two books by G. S. Wood, *The Radicalism of the American Revolution* (1991) and *The American Revolution: A History* (2002). Important examples of the expanding research on the history of women in this era may be found in L. K. Kerber, *Women of the Republic: Intellect and Ideology in Revolutionary America* (1980); in M. B. Norton, *Liberty's Daughters: The Revolutionary Experience of American Women* (1980, 1996); and in C. Berkin, *Revolutionary Mothers: Women in the Struggle for America's Independence* (2005). British responses to the revolutionary events in America are discussed in K. Perry, *British Politics and the American Revolution* (1990); in H. T. Dickinson (ed.), *Britain and the American Revolution* (1998); and in S. Conway, *The British Isles and the War of American Independence* (2000).

For the military aspects of the war one may turn to J. Shy, *A People Numerous and Armed: Reflections on the Military Struggle for American Independence* (rev. 1990) and S. Conway, *The War of American Independence* (1995). The French contribution is examined in J. Dull, *The French Navy and American Independence* (1975); in L. Kennett, *The French Forces in America, 1780–1783* (1978); and in S. F. Scott, *From Yorktown to Valmy: The Transformation of the French Army in an Age of Revolution* (1998).

For diplomacy and international affairs there are F. W. Brecher, *Securing American Independence: John Jay and the French Alliance* (2003) and H. M. Scott, *British Foreign Policy in the Age of the American Revolution* (1991); and on the peace negotiations, R. B. Morris, *The Peacemakers: The Great Powers and*

*American Independence* (1965) is an outstanding study.

For Britain in the eighteenth century one should also consult the books described in Chapter 7. In addition, on movements for parliamentary reform informative studies include J. R. Pole, *Political Representation in England and the Origins of the American Revolution* (1967); P. D. G. Thomas, *John Wilkes: A Friend to Liberty* (1996); M. Turner, *British Politics in an Age of Reform* (1999); and E. H. Gould, *The Persistence of Empire: British Political Culture in the Age of the American Revolution* (2000). Two books by I. R. Christie, *Wars and Revolutions: Britain, 1760–1815* (1982) and *Stress and Stability in Late Eighteenth-Century Britain: Reflections on the British Avoidance of Revolution* (1984) are rewarding.

## Useful Web Sites

The *International Centre for Eighteenth-Century Studies* maintains a comprehensive Web site at [www.cl8.org](http://www.cl8.org), where readers will find links to diverse materials on all aspects of eighteenth-century history and culture; and there are more useful links at the *International Society for Eighteenth-Century Studies*, [www.issecs.org](http://www.issecs.org). The *Voltaire Foundation*, [www.voltaire.ox.ac.uk](http://www.voltaire.ox.ac.uk), is another good starting point for further research on the Enlightenment as well as the life and work of France's best-known philosophe. Two valuable sites for resources on early American history and the American Revolution are maintained by the *Gilder Lehrman Institute of American History* at [www.gilderlehrman.org](http://www.gilderlehrman.org) and by the *History Matters* project at George Mason University, [www.historymatters.gmu.edu](http://www.historymatters.gmu.edu), both of which have outstanding links to other materials. The collection of electronic sources at Fordham University, *Internet Modern History Sourcebook*, includes links to many valuable eighteenth-century materials at [www.fordham.edu/halsall/mod/modsbook2.html](http://www.fordham.edu/halsall/mod/modsbook2.html).

## 9. THE FRENCH REVOLUTION

Still useful works on the revolutionary era include A. Goodwin (ed.), *The American and French Revolutions, 1763–1793* (1965), Vol. VIII of the *New Cambridge Modern History*, and its sequel volume, C. W. Crawley (ed.), *War and Peace in an Age of Upheaval, 1793–1830* (1965). Books encompassing the revolutionary era as a whole include E. J. Hobsbawm, *The Age of Revolution: Europe, 1789–1848* (1962, reissued 1996); N. Hampson, *The First European Revolution, 1776–1850* (1969); and C. Breunig and M. Levinger, *The Revolutionary Era, 1789–1850* (rev. 2002); of special value is G. Best, *War and Society in Revolutionary Europe, 1770–1870* (1982).

## The French Revolution

As the bicentennial in 1989 of the French Revolution demonstrated, the French themselves are less divided

than formerly over the legacy of 1789, but wide differences in scholarly interpretation, emphasis, and conceptualization persist. The reader may assess current scholarship through F. Furet and M. Ozouf (eds.), *A Critical Dictionary of the French Revolution* (trans. 1989), which consists of 99 encyclopedia-type articles covering events, institutions, persons, and ideas, as well as historians of the Revolution. Another informative compendium is S. F. Scott and B. Rothaus, *Historical Dictionary of the French Revolution, 1787–1799* (2 vols., 1985). Four impressive volumes incorporating the contributions of many international scholars have been published as *The French Revolution and the Creation of Modern Political Culture*: Vol. I, K. M. Baker (ed.), *The Political Culture of the Old Regime* (1987); Vol. II, C. Lucas (ed.), *The Political Culture of the French Revolution* (1989); Vol. III, F. Furet (ed.), *The Influence of the French Revolution on Nineteenth-Century Europe* (1989); and Vol. IV, K. M. Baker (ed.), *The Terror* (1994). The Revolution is viewed in thoughtful perspective for the general reader by eight scholars in G. Best (ed.), *The Permanent Revolution: The French Revolution and Its Legacy, 1789–1989* (1989); in depth by specialists in C. Lucas (ed.), *Rewriting the French Revolution* (1991); and in E. J. Hobsbawm, *Echoes from the Marseillaise: Two Centuries Look Back on the French Revolution* (1990), an insightful examination of liberal, Marxist, and revisionist interpretations.

Of narrative histories S. Schama, *Citizens: A Chronicle of the French Revolution* (1989), carrying the events to 1794, effectively captures their color and drama. Comprehensive political narratives are available in W. Doyle, *The Oxford History of the French Revolution* (rev. 2002); J. F. Bosher, *The French Revolution* (1988); D. G. M. Sutherland, *France, 1789–1815: Revolution and Counterrevolution* (1986), and by the same author, *The French Revolution and Empire, the Quest for a Civic Order* (2003); and A. Forrest, *The French Revolution* (1995). Other useful recent surveys include J. Popkin, *A Short History of the French Revolution* (rev. 2002); P. McPhee, *The French Revolution, 1789–1799* (2002); and D. Andress, *French Society in Revolution, 1789–1799* (1999). One still reads with profit the older work of C. Brinton, *A Decade of Revolution, 1789–1799* (1934, 1962); and the wider meaning of the Revolution is discussed in the influential work of F. Furet, *Revolutionary France, 1770–1880* (trans. 1992).

For special aspects the reader may turn to E. Kennedy, *A Cultural History of the French Revolution* (1989), which ably communicates the cultural effervescence of the age; F. Aftalion, *The French Revolution: An Economic Interpretation* (trans. 1990); and R. Cobb, *The French and Their Revolution* (1998), a collection of writings by an English historian interested in the history of the lower classes. The popular response to revolutionary events is examined in

D. Andress, *The French Revolution and the People* (2004); and D. Bell discusses the emergence of French nationalism before and during the Revolution in *The Cult of the Nation in France: Inventing Nationalism, 1680–1800* (2001). The art of the era comes alive in R. Paulson, *Representations of Revolution, 1750–1800* (1987), cited in the previous chapter, while architectural design is explored imaginatively in J. A. Leith, *Space and Revolution* (1991). In another area R. R. Palmer, *The Improvement of Humanity: Education and the French Revolution* (1985) examines the educational institutions which sought to disseminate revolutionary ideals.

There is a helpful introduction to the wide range of historical interpretations of the French Revolution in M. R. Cox (ed.), *The Place of the French Revolution in History* (1998). Recent debates among historians may be sampled in T. C. W. Blanning (ed.), *The Rise and Fall of the French Revolution* (1996) and in G. Kates (ed.), *The French Revolution: Recent Debates and New Controversies* (1998). A comprehensive summary of French views during the Revolution's bicentennial is available in S. L. Kaplan, *Farewell Revolution* (2 vols., 1995). There are numerous older volumes, now more important to historiography than to history, by writers of such vastly differing viewpoints as Jules Michelet, Jean Jaurès, Hippolyte Taine, Thomas Carlyle, Louis Madelin, Pierre Gaxotte, Alphonse Aulard, and Albert Mathiez.

Many twentieth-century scholars emphasized the class basis of the Revolution and saw political differences emerging from the economic self-interest of groups and factions. A classical synthesis of this approach, which nonetheless retains a judicious balance, is G. Lefebvre, *The French Revolution* (1951; 2 vols. in trans. 1962–64). A more extreme example, stressing class struggle, is A. Soboul, *The French Revolution, 1789–1799: From the Storming of the Bastille to Napoleon* (trans. 1977). The class struggle is also highlighted in G. Rudé, *The French Revolution* (1988). Two books by A. Cobban, *The Myth of the French Revolution* (1953) and *The Social Interpretation of The French Revolution* (1964), vigorously rejected the notion of a “bourgeois revolution.”

New ways to study the Revolution as a cultural phenomenon rather than as a revolution of social classes are explored in F. Furet, *Interpreting the French Revolution* (1978; trans. 1981), cited earlier. The new methodology is exemplified in two books by L. Hunt: *Politics, Culture, and Class in the French Revolution* (1984) and *The Family Romance of the French Revolution* (1992), which approaches the questions of legitimacy and authority by examining the wide use of family metaphors during the Revolution. Cultural aspects of the Revolution are also explored in J. R. Censor and L. Hunt, *Liberty, Equality, Fraternity: Exploring the French Revolution* (2001), an innovative book that includes a CD-ROM disk with images

and songs from the revolutionary era. The emphasis on symbolic meanings appears also in M. Ozouf, *Festivals and the French Revolution* (1988) and in H. J. Lesebrink, *The Bastille: A History of a Symbol of Despotism and Freedom* (trans. 1997).

### The Events of the Revolution

For the immediate background of the Revolution, including the financial crisis, one may read M. Vovelle, *The Fall of the French Monarchy, 1787–1792* (trans. 1984); W. Doyle, *Origins of the French Revolution* (rev. 1999); J. Egret, *The French Pre-Revolution, 1787–1788* (trans. 1977); and the two older volumes by G. Lefebvre: *The Coming of the French Revolution* (trans. 1947) and *The Great Fear of 1789: Rural Panic in Revolutionary France* (trans. 1982). The final effort at financial reconstruction is recounted in R. D. Harris, *Necker: Reform Statesman of the Ancien Regime* (1979) and *Necker and the Revolution of 1789* (1988). J. Hardman's two books, *Louis XVI* (1992) and *Louis XVI: The Silent King* (2000), provide thoughtful accounts of the king and his reputation. The famous queen is described in E. Lever, *Marie Antoinette: The Last Queen of France* (trans. 2000) and in a biography by A. Fraser, *Marie Antoinette: The Journey* (2002). The fate of the royal family is also examined in M. Price, *Louis XVI, Marie Antoinette, and the Fall of the French Monarchy* (2004); and the king's attempted escape from France is the subject of an excellent book by T. Tackett, *When the King Took Flight* (2003).

The reform phase of the Revolution under the first two legislative bodies is studied in N. Hampson, *Prelude to Terror: The Constituent Assembly and the Failure of Consensus, 1789–1791* (1989) and C. J. Mitchell, *The French Legislative Assembly of 1791* (1988). The coming of the war in 1792 and the radicalization of the Revolution may be studied in M. Bouloiseau, *The Jacobin Republic, 1792–1794* (trans. 1984), and in M. J. Sydenham, *The First French Republic 1792–1804* (1974). Other studies of the Jacobins and their ideas may be found in M. Kennedy, *The Jacobin Clubs in the French Revolution, 1793–1795* (2000) and in P. Higonnet, *Goodness Beyond Virtue: Jacobins during the French Revolution* (1998), which offers a more sympathetic view of the Jacobins than most recent works.

For the year of the Terror the reader may turn to A. Soboul, *The Parisian Sans-Culottes and the French Revolution, 1793–1794* (trans. 1964); R. R. Palmer, *Twelve Who Ruled: The Year of the Terror in the French Revolution* (1941; reissued 2005); C. Lucas, *The Structure of the Terror* (1973); and D. Andress, *The Terror: The Merciless War for Freedom in Revolutionary France* (2006). A dramatic episode foreshadowing the Terror is recounted in D. J. Jordan, *The King's Trial: Louis XVI vs. The French Revolution* (1979).

Different aspects of the Revolution are explored in M. Vovelle, *The Revolution Against the Church:*

*From Reason to the Supreme Being* (trans. 1991); P. Jones, *The Peasantry in the French Revolution* (1988); and J. Markoff, *The Abolition of Feudalism: Peasants, Lords and Legislators in the French Revolution* (1996). A. Forrest, *The French Revolution and the Poor* (1981) examines the welfare legislation adopted in the revolutionary decade. Changes in family life and gender relations are discussed in S. Desan, *The Family on Trial in Revolutionary France* (2004). For a summary of how the revolutionaries conceived of human rights, one may turn to the analysis and documents in L. Hunt (ed.), *The French Revolution and Human Rights* (1996); and an important study of social changes across the entire revolutionary and Napoleonic era appears in I. Woloch, *The New Regime: Transformations of the French Civic Order: 1789–1820s* (1994).

The role of women in this era is explored in J. B. Landes, *Women and the Public Sphere in the Age of the French Revolution* (1988), which argues that the Revolution reduced the rights of women in France; L. Kelly, *Women of the French Revolution* (1989); S. E. Meltzerand and L. W. Rabine (eds.), *Rebel Daughters: Women and the French Revolution* (1992); and J. Heuer, *The Family and the Nation: Gender and Citizenship in Revolutionary France, 1789–1830* (2005). The essays in D. G. Levy and H. B. Applewhite (eds.), *Women and Politics in the Age of the Democratic Revolution* (1990) study women activists in revolutionary Europe and America; and the work by M. Yalom, *Blood Sisters: The French Revolution in Women's Memory* (1993) examines accounts by women who participated in the revolutionary events. The expansion of women's writing during the revolutionary decade is the subject of C. Hesse, *The Other Enlightenment: How French Women Became Modern* (2001); and the relation between gender and the new French nationalism is analyzed in J. B. Landes, *Visualizing the Nation: Gender, Representation, and Revolution in Eighteenth-Century France* (2001).

Among R. Cobb's illuminating books about the life and activism of the lower classes are *The Police and the People: French Popular Protest, 1789–1820* (1970); *Paris and Its Provinces, 1792–1802* (1975); and *The People's Armies* (1961, 1987), an impressive study of the armed groups that scoured the countryside for food and other military needs of the revolutionary government. For the counterrevolution one turns to the broader narratives cited above and to J. Godechot, *The Counter-Revolution* (trans. 1971); J. Roberts, *The Counter-Revolution in France, 1787–1830* (1990); C. Tilly, *The Vendée* (1964); and M. Hutt, *Chouannerie and the Counter-Revolution* (1984).

For the reaction after Robespierre's downfall and the regime that followed, one may turn to D. Woronoff, *The Thermidorean Regime and the Directory, 1794–1799* (trans. 1984) and to M. Lyons, *France under the Directory* (1975). The crushing of

the Babeuf uprising is described in R. B. Rose, *Gracchus Babeuf: The First Revolutionary Communist* (1978); Babeuf's ideas are also discussed in I. H. Birchall, *The Spectre of Babeuf* (1997).

### War and Diplomacy

On the coming of the war in 1792 and the first two coalitions one may read T. C. W. Blanning, *The Origins of the French Revolutionary Wars* (1989) and the same author's *The French Revolutionary Wars, 1781–1802* (1996); there is also a useful, brief account in G. Fremont-Barnes, *The French Revolutionary Wars* (2001). The French army that fought the war is described in impressive detail in J. P. Bertaud, *The Army of the French Revolution: From Citizen-Soldiers to Instrument of Power* (trans. 1988); it may be supplemented by A. Forrest, *Conscripts and Deserters: The Army and French Society during the Revolution and Empire* (1989). Military technologies are discussed in K. Alder, *Engineering the Revolution: Arms and Enlightenment in France, 1763–1815* (1997). On the emergence of Bonaparte one may turn to M. Crook, *Napoleon Comes to Power: Democracy and Dictatorship in Revolutionary France, 1795–1804* (1998). Additional books on Napoleon are listed in the following chapter.

### Biographical Accounts

J. M. Thomson, *Leaders of the French Revolution* (1929, 1988), sketching 11 outstanding personalities, is a classic account that still merits reading. Specific biographical accounts include B. Luttrell, *Mirabeau* (1990); M. Forsyth, *Reason and Revolution: The Political Thought of the Abbé Sieyès* (1987); W. H. Sewell, *A Rhetoric of Revolution: The Abbé Sieyès and "What is the Third Estate?"* (1994); L. Gottschalk's two volumes on Lafayette in the French Revolution (1969, 1973); and C. D. Connor, *Jean Paul Marat: Scientist and Revolutionary* (1997), sympathetic to Marat's radicalism. N. Hampson has written the most fair-minded account of a controversial political leader in *Danton* (1978, 1988), while G. May, *Madame Roland and the Age of Revolution* (1970) sympathetically portrays a Girondist leader who fell victim to the Terror. A. G. Sepinwall examines the ideas and actions of another influential leader in *The Abbé Grégoire and the French Revolution: The Making of Modern Universalism* (2005).

A full biography of the most prominent figure on the Committee of Public Safety is J. M. Thompson, *Robespierre* (1935, 1988). One also may read M. Gallo, *Robespierre, the Incorruptible: A Psychobiography* (trans. 1971), provocative but not completely convincing; G. Rudé, *Robespierre: Portrait of a Revolutionary Democrat* (1975), which makes the best possible case for the Jacobin leader; N. Hampson, *The Life and Opinions of Maximilien Robespierre* (1974, 1988), which asks observers to react to the often contradictory evidence; D. P. Jordan, *The Revolutionary*

*Career of Maximilien Robespierre* (1985); and J. Hardman, *Robespierre* (1999). A useful collection of recent scholarship is available in C. Haydon and W. Doyle (eds.), *Robespierre* (1999). Robespierre's associates are studied in N. Hampson, *Saint-Just* (1991) and in L. Gershoy, *Bertrand Barère: A Reluctant Terrorist* (1962).

### The Revolution outside France

For the view of the French Revolution as part of a broader European and Atlantic movement, one may turn to R. R. Palmer, *The Age of the Democratic Revolution: A Political History of Europe and America, 1760–1800* (2 vols., 1959–64); the first volume, *The Challenge*, carries the account to 1792 and the second, *The Struggle*, to 1800; see also by the same author *The World of the French Revolution* (1970). The conclusions of the French scholar J. Godechot are available in summary form as *France and the Atlantic Revolution, 1770–1799* (1975). Along related lines P. Higonnet traces the genesis of the republican idea in *Sister Republics: The Origins of French and American Republicanism* (1988), while M. Durey, *Transatlantic Radicals and the Early American Republic* (1997) looks at British political activists who migrated to America during the era of the French Revolution. There is a useful survey of the Revolution's enduring international influence in J. Klaitz and M. H. Haltzel (eds.), *The Global Ramifications of the French Revolution* (1994). The German states are studied in T. C. W. Blanning, *The French Revolution in Germany: Occupation and Resistance in the Rhineland, 1792–1802* (1983); and in J. M. Diefendorf, *Businessmen and Politics in the Rhineland, 1789–1834* (1980).

Events in the Netherlands are examined in S. Schama, *Patriots and Liberators: Revolution and Government in the Netherlands, 1780–1813* (1977) and in northern Europe in H. A. Barton, *Scandinavia in the Revolutionary Era, 1760–1815* (1986). The Irish rebellion of 1798 is placed in its European setting in M. Elliott, *Partners in Revolution: The United Irishmen in France* (1982) and Wolfe Tone: *Prophet of Irish Independence* (1989); and in the wide-ranging work of R. B. McDowell, *Ireland in the Age of Imperialism and Revolution, 1760–1801* (1979).

For repercussions in Haiti and the African-American world, one may read the classic work of C. L. R. James, *The Black Jacobins: Toussaint L'Ouverture and the San Domingo Revolution* (1938, 1963), which should be supplemented by D. P. Geggus, *Slavery, War, and Revolution: The British Occupation of Saint Domingue, 1793–1798* (1982), and by the same author, *Haitian Revolutionary Studies* (2002); M. Duffy, *Soldiers, Sugar, and Seapower: The British Expeditions to the West Indies and the War against Revolutionary France* (1987); and L. Dubois, *Avengers of the New World: The Story of the Haitian Revolution* (2004), an excellent recent account. The struggle against slavery in Haiti and elsewhere is also

the subject of A. Hochschild, *Bury the Chains: Prophets and Rebels in the Fight to Free an Empire's Slaves* (2005). There are helpful essays in D. B. Gaspar and D. P. Geggus (eds.), *A Turbulent Time: The French Revolution and the Greater Caribbean* (1997), and in D. P. Geggus (ed.), *The Impact of the Haitian Revolution in the Atlantic World* (2001).

An outstanding study of British reaction to the Revolution is A. Goodwin, *The Friends of Liberty: The English Democratic Movement in the Age of the French Revolution* (1979), while an informative brief essay is H. T. Dickinson, *British Radicalism and the French Revolution, 1789–1815* (1985). A more recent brief survey appears in C. Emsley, *Britain and the French Revolution* (2000); longer discussions of the era's political debates and conflicts can be found in M. Morris, *The British Monarchy and the French Revolution* (1998) and in J. Mori, *Britain in the Age of the French Revolution* (2000). An informative older book that focuses on popular unrest in both France and England is G. Rudé, *The Crowd in History: A Study of Popular Disturbances in France and England, 1730–1848* (1964).

The revolutionary career in England, America, and France of a leading revolutionist of the age is studied in J. Keane, *Tom Paine: A Political Life* (1995) and in E. Foner, *Tom Paine and Revolutionary America* (rev. 2005). Paine's political thought is examined in A. J. Ayer, *Thomas Paine* (1989) and in M. Philip, *Paine* (1989). For the thought and career of a leading Englishwoman of the age, a pioneer feminist sympathetic to the Revolution, one may read J. Todd, *Mary Wollstonecraft: A Revolutionary Life* (2000); C. Franklin, *Mary Wollstonecraft: A Literary Life* (2004); and L. Gordon, *Vindication: A Life of Mary Wollstonecraft* (2005).

In a comparative study C. B. A. Behrens, *Society, Government, and the Enlightenment: The Experiences of Eighteenth-Century France and Prussia* (1985) seeks to explain the different responses to the challenges of the age, while J. C. Lamberti, *Tocqueville and the Two Democracies* (trans. 1989) grapples with Tocqueville's explanations of why revolution led to an era of instability in France and to stable constitutional government in the United States.

Early efforts to study the phenomenon of revolution on a comparative basis include C. Brinton, *The Anatomy of Revolution* (1935, 1965) and H. Arendt, *On Revolution* (1963). J. Talmon in *The Origins of Totalitarian Democracy* (1952) and his other books saw the roots of twentieth-century dictatorship in the radical phase of the French Revolution—a controversial theme that has attracted strong criticism as well as some new support in recent scholarship. There is also a stimulating comparative analysis in A. J. Mayer, *The Furies: Violence and Terror in the French and Russian Revolutions* (2000).

### Useful Web Sites

Readers will find an excellent collection of documents, images, and accounts of the French Revolution

by visiting a Web site at George Mason University, *Liberty, Equality, Fraternity: Exploring the French Revolution*, which is located at <http://chnm.gmu.edu/revolution/>. There are additional sources to explore in the *Internet Modern History Sourcebook*, [www.fordham.edu/halsall/mod/modsbook13.html](http://www.fordham.edu/halsall/mod/modsbook13.html), and there is a helpful site called *Links on the French Revolution* at the University of Portsmouth in Britain, <http://userwww.port.ac.uk/andressd/frlinks.htm>.

## 10. NAPOLEONIC EUROPE

Many of the books on the Revolution cited in the previous chapter continue on into the Napoleonic age. Informative surveys of Europe in the age of Napoleon are available in O. Connelly, *The French Revolution and Napoleonic Era* (rev. 1991) and M. Broers, *Europe Under Napoleon, 1799–1815* (1996); and the latter author also examines Napoleon's imperial policies in *The Napoleonic Empire in Italy, 1796–1814: Cultural Imperialism in a European Context?* (2005). Other useful accounts include S. J. Woolf, *Napoleon's Integration of Europe* (1991); M. Lyons, *Napoleon Bonaparte and the Legacy of the French Revolution* (1994); O. Bernier, *The World in 1800* (2000); and A. Grab, *Napoleon and the Transformation of Europe* (2003). Two reference works for the age are O. Connelly et al. (eds.), *Historical Dictionary of Napoleonic France* (1985) and C. Emsley, *The Longman Companion to Napoleonic Europe* (1993).

### Napoleon and Napoleonic France

For Napoleonic France a valuable synthesis of French society is L. Bergeron, *France under Napoleon* (trans. 1981), while R. Holtman, *The Napoleonic Revolution* (1967) is a brief judicious assessment. A more recent account may be found in A. Horne, *The Age of Napoleon* (2004). A. Boime continues his *Social History of Modern Art* with Vol. II: *Art in the Age of Bonapartism, 1800–1815* (1992).

Of the many biographies and biographically oriented studies of Napoleon, several may be singled out: J. M. Thompson, *Napoleon Bonaparte: His Rise and Fall* (1952); G. Lefebvre, *Napoleon* (2 vols., 1935; trans. 1969), a work of distinction; F. M. Markham, *Napoleon* (1964); and the comprehensive A. Schom, *Napoleon Bonaparte* (1997). Other accounts—all entitled *Napoleon*—by R. Dufraisie (trans. 1990), G. Ellis (1997), and R. S. Alexander (2001) may also be recommended. I. Woloch, *Napoleon and His Collaborators: The Making of a Dictatorship* (2001) shows how Napoleon rose to power and controlled his empire. The empire that Napoleon governed is studied in O. Connelly, *Napoleon's Satellite Kingdoms* (1965, 1990); G. Ellis, *The Napoleonic Empire* (rev. 2003); and C. Emsley, *Napoleonic Europe* (1993). Napoleon as a military leader is appraised in G. E. Rothenberg, *The Art of Warfare in the Age of Napoleon* (1978) and in the same author's *The Napoleonic Wars* (1999);

O. Connelly, *Blundering to Glory: Napoleon's Military Campaigns* (1987); and J. R. Elting, *Swords around a Throne: Napoleon's Grande Armée* (1988); D. Gates, *The Napoleonic Wars, 1803–1815* (1997); and A. Horne, *How Far from Austerlitz? Napoleon, 1805–1815* (1997).

The Continental blockade is studied in G. Ellis, *Napoleon's Continental Blockade* (1991). The Spanish military effort, along with popular resistance, is studied in books on the Peninsular War by D. Gates (1986) and C. J. Esdaile (1988). On the campaign in Russia, readers may consult N. Nicolson, *Napoleon: 1812* (1986). Britain's role in the later Napoleonic wars is described in R. Muir, *Britain and the Defeat of Napoleon, 1807–1815* (1996). On the final phase of the emperor's career one may read N. MacKenzie, *The Escape from Elba: The Fall and Flight of Napoleon, 1814–1815* (1982) and A. Schom, *One Hundred Days: Napoleon's Road to Waterloo* (1992).

The career of Napoleon's famous diplomat is examined in P. Dwyer, *Talleyrand* (2002). Studies of prominent women in this era include A. Stuart, *The Rose of Martinique: A Life of Napoleon's Josephine* (2004); E. Bruce, *Napoleon and Josephine: The Improbable Marriage* (1995); J. C. Herold's older biography of Madame de Staël, *Mistress to an Age* (1958, 1979); R. Winegarten, *Mme de Staël* (1985); G. R. Besser, *Germaine de Staël Revisited* (1994); M. Fairweather, *Madame de Staël*; and M. Gutwirth et al. (eds.), *Germaine de Staël: Crossing the Borders* (1991). Napoleon's family is studied in F. Markham, *The Bonapartes* (1975).

### Britain in the Time of Napoleon

The war era receives special attention in J. Ehrmann, *William Pitt the Younger* (2 vols., 1969–84) and in P. Mackesy, *War without Victory: The Downfall of Pitt, 1799–1802* (1984). There are biographies of Lord Nelson by B. Lavery (2003), and by R. Knight (2005), the latter providing perhaps the best scholarly study to date. Other accounts of the famous naval commander include the excellent works of J. Sugden, *Nelson: A Dream of Glory, 1758–1797* (2004) and J. S. A. Hayward, *For God and Glory: Lord Nelson and His Way of War* (2003). For Wellington one may turn to J. Strawson, *The Duke and the Emperor: Wellington and Napoleon* (1994) and R. Holmes, *Wellington: The Iron Duke* (2002). The impact of the war and other economic changes of the age are explored in C. Emsley, *British Society and the French Wars, 1793–1814* (1980) and in A. D. Harvey, *Britain in the Early Nineteenth Century* (1978). British expansion overseas is examined in C. A. Bayly, *Imperial Meridian: The British Empire and the World, 1780–1830* (1989). Important books on the slave trade in this era are D. B. Davis, *The Problem of Slavery in the Age of Revolution, 1770–1823* (1975, reissued 1999); J. Walvin, *Making the Black Atlantic: Britain and the African Di-*

*aspora* (2000); and R. Anstey, *The Atlantic Slave Trade and British Abolition, 1760–1810* (1975).

### Other Countries in Napoleonic Times

For Anglo-American relations in the decades from 1795 to 1823, there are the three volumes of B. Perkins: *The First Rapprochement* (1955), *Prologue to War* (1961), and *Castlereagh and Adams* (1964). American developments during this era are examined in M. Smelser, *The Democratic Republic, 1801–1815* (1986) and in R. Horsman, *The New Republic: The United States of America 1789–1815* (2000). D. R. Hickey, *The War of 1812: A Forgotten Conflict* (1989) provides a useful description of the war; and a more recent military history is available in W. R. Borneman, *1812, The War that Forged a Nation* (2004).

For the German states, in addition to books cited in the two previous chapters, one may read H. Kohn, *Prelude to Nation-States: The French and German Experience, 1789–1815* (1967); H. Brunschwig, *Enlightenment and Romanticism in Eighteenth Century Prussia* (trans. 1974); and B. Giesen, *Intellectuals and the German Nation: Collective Identity in an Axial Age* (1998), a sociological account of German national identity in the Napoleonic era. For the reactions in Prussia there is the older, but still valuable, assessment of W. M. Simon, *The Failure of the Prussian Reform Movement, 1807–1819* (1955); one may also read W. O. Shanahan, *Prussian Military Reforms, 1786–1813* (1966). On the Prussian military theorist, P. Paret has written a comprehensive biography, *Clausewitz and the State* (1976, reissued 1985) and has edited the famous tract *On War* written in 1832 (ed. 1989).

For Russia in this era one may read the early sections of D. Saunders, *Russia in the Age of Reaction and Reform, 1801–1881* (1992); and for Alexander, one may consult A. McConnell, *Tsar Alexander I: Paternalistic Reformer* (1970); A. Palmer, *Alexander I, Tsar of War and Peace* (1975); and J. M. Hartley, *Alexander I* (1994).

The best account of Spain in the Napoleonic era is G. H. Lovett, *Napoleon and the Birth of Modern Spain* (2 vols., 1965), which may be supplemented by C. J. Esdaile, *Fighting Napoleon: Guerillas, Bandits and Adventurers in Spain, 1808–1814* (2004). The revolutionary events in the Western Hemisphere ignited by Napoleon's invasion of Spain are recounted in J. Lynch, *The Spanish American Revolutions, 1808–1820* (rev. 1986); in J. E. Rodríguez, *The Independence of Spanish America* (1998); in the wide-ranging, detailed account of L. D. Langley, *The Americas in the Age of Revolution 1750–1850* (1996); and in the relevant sections of L. Bethell (ed.), *The Cambridge History of Latin America, Vol. II: Colonial Latin America* (1988).

## Wartime Diplomacy and the Congress of Vienna

An informative study of the era's decisive diplomatic event can be found in T. Chapman, *The Congress of Vienna: Origins, Processes and Results* (1998). Detailed accounts of Metternich's role are available in E. E. Krahe, *Metternich's German Policy, Vol. I: The Contest with Napoleon, 1799–1814* (1963) and Vol. II: *The Congress of Vienna, 1814–1815* (1983). H. Kissinger, *A World Restored: Metternich, Castlereagh and the Problem of Peace, 1812–1822* (1957, 1973) is a penetrating study by a scholar who later turned diplomat; it should now be supplemented with P. W. Schroeder, *The Transformation of European Politics, 1763–1848* (1994).

## Useful Web Sites

A wide-ranging commercial site, *The Napoleonic Guide*, offers a valuable collection of sources, helpful links, and many other materials on the Napoleonic era at [www.napoleonguide.com/](http://www.napoleonguide.com/). Readers will find other useful information at the site of *The Institute on Napoleon and the French Revolution*, [www.fsu.edu/~napoleon/](http://www.fsu.edu/~napoleon/), which is maintained at Florida State University, and at the site of the *Napoleon Series*, [www.napoleon-series.org](http://www.napoleon-series.org), which is a comprehensive, well-maintained resource on all aspects of Napoleon's career and empire.

## 11. INDUSTRIES, IDEAS, AND THE STRUGGLE FOR REFORM, 1815–1848

The resettling of European institutions after the French Revolution and Napoleon in many ways marked the opening of a new historical era. There are thus numerous general, national, and topical histories that take their starting point around 1815.

### Nineteenth-Century Europe

Helpful guides to all aspects of nineteenth-century history include M. S. Anderson, *The Ascendancy of Europe, 1815–1914* (rev. 2003); W. Simpson and M. Jones, *Europe, 1783–1914* (2000); and R. Gildea, *Barricades and Borders: Europe, 1800–1914* (rev. 2003). Useful discussion of European politics, society, and economic life is available in T. C. W. Blanning (ed.), *Short Oxford History of Europe: The Nineteenth Century* (2000); and the first half of the century may be surveyed in J. Sperber, *Revolutionary Europe, 1780–1850* (2000).

For a valuable work on the social history of the nineteenth century one may read M. Perrot (ed.), *From the French Revolution to the Great War* (1987), Vol. IV of the *History of Private Life*. Numerous other works on social and on women's history in these years are cited in chapter 15. For social classes one may turn to J. Kocka and A. Mitchell (eds.), *Bourgeois Society in Nineteenth-Century Europe* (1993); P. M. Pilbeam, *The Middle Classes in Europe, 1789–1914: France,*

*Germany, Italy, and Russia* (1990); G. Crossick and H. G. Haupt, *The Petite Bourgeoisie in Europe, 1780–1914: Enterprise, Family and Independence* (1995); and for the upper classes, D. Lieven, *The Aristocracy in Europe, 1815–1914* (1992). For rural change in the late eighteenth and nineteenth centuries, there are J. Blum, *The End of the Old Order in Rural Europe* (1978) and A. Moulin, *Peasantry and Society in France since 1789* (trans. 1991). For religion one may read H. McLeod, *Religion and the People of Western Europe, 1789–1970* (1981); and O. Chadwick, *The Secularization of the European Mind in the Nineteenth Century* (1976). On women in the nineteenth century, in addition to general works already cited, useful books are P. Branca, *Women in Europe since 1750* (1978); S. Delamont and L. Duffin (eds.), *The Nineteenth-Century Woman: Her Cultural and Physical World* (1978); and P. S. Robertson, *An Experience of Women: Patterns and Change in Nineteenth-Century Europe* (1982). More recent works on women in this era include L. Abrams, *The Making of Modern Woman: Europe, 1789–1918* (2002); and R. G. Fuchs and V. E. Thompson, *Women in Nineteenth-Century Europe* (2005).

### Europe, 1815–1848

General guides to the reorientation after 1815 may be found in W. L. Langer, *Political and Social Upheaval, 1832–1852* (1969); in J. Droz, *Europe Between Revolutions, 1815–1848* (trans. 1980); in Vol. IX of the *New Cambridge Modern History*, C. W. Crawley (ed.), *War and Peace in an Age of Upheaval, 1793–1830* (1965); and in Vol. X, of the same series, J. P. T. Bury (ed.), *The Zenith of European Power, 1830–1870* (1960). E. J. Hobsbawm has written one of his provocative interpretive histories on this era, *The Age of Revolution, 1789–1848* (1962, reissued 1996), the first volume of a trilogy on what he calls the “long nineteenth century,” 1789–1914. Changes in art and culture are examined in A. Boime, *Art in An Age of Counterrevolution* (2004); and for the papacy in the revolutionary ferment of the age, one may read O. Chadwick, *The Popes and European Revolution* (1981).

### Industrial Revolution

One of the best introductions to economic history during and since the Industrial Revolution is D. S. Landes, *The Unbound Prometheus: Technological Change and Industrial Development in Western Europe from 1750 to the Present* (1969). Other informative accounts are S. Pollard, *Peaceful Conquest: The Industrialization of Europe, 1760–1970* (1981); C. Trebilcock, *The Industrialization of the Continental Powers, 1780–1914* (1981); and T. Kemp, *Industrialization in Nineteenth Century Europe* (rev. 1985). There are thoughtful essays in R. Sylla and G. Toniolo (eds.), *Patterns of European Industrialization: The Nineteenth Century* (1991); in P. Mathias and J. A.

Davis (eds.), *The First Industrial Revolutions* (1990); and in M. Teich and R. Porter (eds.), *The Industrial Revolution in National Context: Europe and the USA* (1996). The social and political implications of an industrial civilization are examined in J. McManners, *European History: Men, Machines, and Freedom* (1967); and in E. A. Wrigley, *People, Cities, and Wealth: The Transformation of Traditional Society* (1987). S. M. Beaudoin (ed.), *Industrial Revolution* (2003) provides a summary and sampling of recent historical studies.

The complexities surrounding the emergence of industrialism in England are examined in numerous books. Brief informative accounts include a classic account by T. S. Ashton, *The Industrial Revolution, 1760–1830* (1948, reissued 1998); and other surveys by P. Deane, *The First Industrial Revolution* (rev. 1979); P. Mathias, *The First Industrial Nation: An Economic History of Britain, 1700–1914* (rev. 1983); and K. Morgan, *The Birth of Industrial Britain: Economic Change 1750–1850* (1999). Morgan has also written a companion volume, *The Birth of Industrial Britain: Social Change, 1750–1850* (2004). Additional interpretive accounts include M. Berg, *The Age of Manufactures, 1700–1820: Industry, Innovation, and Work in Britain* (1985); E. A. Wrigley, *Continuity, Chance, and Change: The Character of the Industrial Revolution in England* (1988); and P. Hudson, *The Industrial Revolution* (1992).

Insights into the nineteenth-century manufacturers are provided in A. Howe, *The Cotton Masters, 1830–1860* (1984); F. Crouzet, *The First Industrialists* (1985); L. Davidoff and C. Hall, *Family Fortunes: Men and Women of the English Middle Class, 1780–1850* (1987); and R. S. Fitton, *The Arkwrights: Spinners of Fortune* (1989). Changes in British agriculture may be studied in D. B. Grigg, *English Agriculture* (1989); K. D. M. Snell, *Annals of the Labouring Poor: Social Change and Agrarian England 1660–1900* (1985); and M. Overton, *Agricultural Revolution in England: The Transformation of the Agrarian Economy 1500–1850* (1996).

### Social Consequences of Industrialism

There is a large and controversial literature on the effects of industrial change on the British working classes. F. Engels, *The Condition of the Working Class in England* [1844; reissued, D. McLellan (ed.), 1993] and A. Toynbee, *Lectures on the Industrial Revolution in England* (1884, 1969) were classic descriptions of such exploitation. Meanwhile J. L. Hammond and B. Hammond in several vehement books, such as *The Town Labourer, 1760–1832: The New Civilization* (1919) and *The Age of the Chartist* (1930), also stressed the economic abuse of the working classes. For somewhat modified views one may read M. I. Thomas, *Responses to Industrialization: The British Experience 1780–1850* (1976); and R. Gray, *The Fac-*

*tory Question and Industrial England, 1830–1860* (1996). P. Laslett, *The World We Have Lost: England before the Industrial Age* (rev. 1973) contrasts the new age with what he saw as the stability of the early modern centuries. The social experiences of workers are also discussed in H. J. Voth, *Time and Work in England 1750–1830* (2000). E. P. Thompson, *The Making of the English Working Class* (1963), in a highly influential book presents the picture of a militant working-class culture emerging to resist industrial society. For a helpful synthesis the reader may turn to two books by J. Rule: *The Experience of Labour in Eighteenth-Century English Industry* (1984) and *The Labouring Classes in Early Industrial England, 1750–1850* (1986). Agrarian labor is examined in R. Barry, *Rural England: Labouring Lives in the Nineteenth Century* (2004).

Working-class experiences are also depicted in D. Vincent, *Bread, Knowledge and Freedom: A Study of Nineteenth-Century Working Class Autobiography* (1981); I. Pinchbeck, *Women Workers and the Industrial Revolution, 1750–1850* (1930, reissued 1981); I. Pinchbeck and M. Hewitt, *Children in English Society* (2 vols., 1969–1973); and G. Holloway, *Women and Work in Britain since 1840* (2005). In a very different vein G. Himmelfarb, *The Idea of Poverty: England in the Early Industrial Age* (1984) and *Poverty and Compassion: The Moral Indignation of the Late Victorians* (1991) examine the writings of these years to demonstrate the complexities involved in defining poverty and social responsibilities.

For protest movements of the age D. G. Wright, *Popular Radicalism: The Working Class Experience, 1780–1880* (1988) is helpful as a summary; it may be supplemented by C. Tilley, *Popular Contention in Great Britain, 1758–1834* (1995, reissued 2005). Special studies include M. I. Thomas, *The Luddites: Machine-Breaking in Regency England* (1970); R. Reid, *The Peterloo Massacre* (1989); E. J. Hobsbawm and G. Rudé, *Captain Swing* (1969), a study of the rural poor and agrarian unrest; and J. Knott, *Popular Opposition to the 1834 Poor Law* (1986).

For the Chartists recommended books include T. Ward, *Chartism* (1973); D. Jones, *Chartism and the Chartists* (1975); D. Thompson, *The Chartists: Popular Politics in the Industrial Revolution* (1984); R. Brown, *Chartism* (1998); and J. K. Walton, *Chartism* (1999). The development of a political culture among British workers is described in J. Epstein, *In Practice: Studies in the Language and Culture of Popular Politics in Modern Britain* (2003). The creation in England and Ireland of a modern police system to suppress popular protest is studied in S. H. Palmer, *Police and Protest in England and Ireland, 1780–1850* (1988).

An overall view of social policy and reform is available in S. G. Checkland, *British Public Policy, 1776–1939* (1985). For the pressures to repeal the tar-

iffs on grain, one may read P. A. Pickering and A. Tyrell, *The People's Bread: A History of the Anti-Corn Law League* (2000). On the Reform Bill of 1832, M. Brock, *The Great Reform Act* (1973) is an outstanding study; and N. D. LoPatin, *Political Unions, Popular Politics, and the Great Reform Act of 1832* (1999) discusses the mass political mobilizations of this period.

Several books study the antislavery movement as part of this age of protest. Slavery as an institution is masterfully explored in several books by D. B. Davis, including for these years, *The Problem of Slavery in the Age of Revolution, 1770–1823* (1975). The final phases of slavery in the Atlantic world are examined in R. Blackburn, *The Overthrow of Colonial Slavery* (1989); D. Eltis, *Economic Growth and the Ending of the Transatlantic Slave Trade* (1988); A. Hochschild, *Bury the Chains: Prophets and Rebels in the Fight to Free an Empire's Slaves* (2005), cited earlier; and S. Drescher's four books: *Econocide: British Slavery in the Era of Abolition* (1977), *Capitalism and Anti-Slavery: British Mobilization in Comparative Perspective* (1988), *From Slavery to Freedom: Comparative Studies in the Rise and Fall of Atlantic Slavery* (1999), and *The Mighty Experiment: Free Labor versus Slavery in British Emancipation* (2002). There are useful source materials on the abolitionist movement in the third volume of K. Morgan (ed.), *The British Transatlantic Slave Trade* (4 vols. 2003). Other useful books on the antislavery movement include D. Turley, *The Culture of English Antislavery, 1780–1860* (1991) and J. Walvin, *Making the Black Atlantic: Britain and the African Diaspora* (2000), cited earlier, which provides a concise description of both the slave trade and the movement to abolish it.

For Britain after 1815 and the Victorian age that opened in 1837, readers may turn to W. A. Hay, *The Whig Revival, 1808–1830* (2005), and the older survey by N. Gash, *Aristocracy and People: Britain, 1815–1865* (1979). A. Briggs, *The Age of Improvement, 1783–1867* (rev. 2000) and his other books on social history are also useful. Of special importance are J. W. Osborne, *The Silent Revolution: The Industrial Revolution in England as a Source of Cultural Change* (1972); and H. Perkin, *The Origins of Modern English Society, 1780–1880* (1969, 1985).

Among the many biographies of the political leaders and reformers of the age, one may read F. A. Smith, *Lord Grey, 1764–1845* (1990); J. W. Derry, *Charles, Earl Grey: Aristocratic Reformer* (1992); N. Gash's outstanding study of Peel: *Mr. Secretary Peel and Sir Robert Peel* (2 vols.; rev. 1985); J. Pollock, *Wilberforce* (1978), and by the same author, *Shaftesbury, The Poor Man's Earl* (1985); J. Dyck, *William Cobbett and Rural Popular Protest* (1992); and N. C. Edsall, *Richard Cobden: Independent Radical* (1986). There are biographies of Robert Owen by G. D. H. Cole (rev. 1966) and M. I. Cole (1953, 1969);

and a more recent study by I. L. Donnachie, *Robert Owen: Owen of New Lanark and New Harmony* (2000). Radical social criticism is also studied in W. Stafford, *Socialism, Radicalism, and Nostalgia, 1775–1830* (1986). For women in the era one may turn to J. Perkin, *Victorian Women* (1993); K. Gleadle, *British Women in the Nineteenth Century* (2001); and two useful anthologies of writings by and about women: J. H. Murray, *Strongminded Women and Other Lost Voices from Nineteenth-Century England* (1982), and M. Sanders (ed.), *Women and Radicalism in the Nineteenth Century* (4 vols. 2001).

## France, 1815–1848

Among general accounts that begin in this era are A. Jardin and A. J. Tudesq, *Restoration and Reaction, 1815–1848* (1973; trans. 1983); R. Magraw, *France, 1815–1914: The Bourgeois Century* (1983); J. P. T. Bury, *France, 1814–1940* (rev. 2003); R. Price, *A Social History of Nineteenth-Century France* (1988); W. Fortescue, *Revolution and Counter-Revolution in France, 1815–1852* (1988); and R. Tombs, *France, 1814–1914* (1996). A helpful work of reference is E. L. Newman (ed.), *Historical Dictionary of France from the 1815 Revolution to the Second Empire* (2 vols.; 1987). Of special interest is F. Furet, *Revolutionary France, 1770–1880* (trans. 1992), which describes the struggle in the nineteenth century to absorb the changes introduced by the Revolution. For economic developments one may turn to F. Caron, *An Economic History of Modern France* (trans. 1979) and R. Price, *An Economic History of Modern France, 1730–1914* (1981). An insightful monograph illuminating the sexual division of labor in French rural industry is G. L. Gullickson, *The Spinners and Weavers of Aulnay* (1986). The essays in K. S. Vincent and A. Clairmont-Lingo (eds.), *The Human Tradition in Modern France* (2000), covering the years 1789 to the present, seek to restore the human and personal element in French historical writing for these years.

For the years 1815–1830 G. de Bertier de Sauvigny, *The Bourbon Restoration* (trans. 1966) remains valuable, while S. Mellon, *The Uses of History: A Study of Historians in the French Restoration* (1958) and A. B. Spitzer, *The French Generation of 1820* (1987) add special insights. The evolving liberal movements of this era are discussed in L. Kramer, *Lafayette in Two Worlds* (1996), which also describes the links between France and America; and the liberal opposition is further examined in R. S. Alexander, *Re-Writing the French Revolutionary Tradition: Liberal Opposition and the Fall of the Bourbon Monarchy* (2003). Conservative ideas and activities are analyzed in D. Porch, *Army and Revolution: France, 1815–1848* (1974); and R. Rémond, *The Right Wing in France: From 1815 to de Gaulle* (trans. 1966), useful for this period and for the twentieth century. An insightful study of an important conservative thinker is

available in O. Bradley, *A Modern Maistre: The Social and Political Thought of Joseph de Maistre* (1999). For religion A. Dansette, *The Religious History of Modern France* (2 vols.; trans. 1961) may be supplemented by R. Gibson, *A Social History of French Catholicism, 1789–1914* (1989) and N. Ravitch, *The Catholic Church and the French Nation, 1685–1985* (1990).

### The July Monarchy

For the revolutionary events of 1830 one may read D. H. Pinkney, *The French Revolution of 1830* (1972); P. Pilbeam, *The 1830 Revolution in France* (1991), an insightful analytical study rather than a narrative; and C. H. Church, *Europe in 1830: Revolution and Political Change* (1983), which places the revolution in its Europeanwide setting. Other aspects of the July Revolution, with attention to developments outside Paris, are examined in J. Popkin, *Press, Revolution, and Social Identities in France, 1830–1835* (2002). For Louis Philippe's reign one may read H. A. C. Collingham, *The July Monarchy* (1988), a detailed political account, and D. H. Pinkney, *Decisive Years in France, 1840–1847* (1986), which presents the years of the July Monarchy as a watershed in French social and economic development. Labor and popular stirrings are examined in R. J. Bezucha, *The Lyon Uprising of 1834* (1974) and E. Berenson, *Populist Religion and Left-Wing Politics in France, 1830–1852* (1984).

An impressive study in cultural and social history focusing on the importance of the Revolution in the political culture and lives of the people is M. Agulhon, *The Republic in the Village: The People of the Var from the French Revolution to the Second Republic* (1971; trans. 1982). Diverse approaches to social history are found also in W. H. Sewell, Jr., *The Language of Labor from the Old Regime to 1848* (1980) and two books by W. M. Reddy, *The Rise of Market Culture: The Textile Trade and French Society, 1750–1900* (1984) and *The Invisible Code: Honor and Sentiment in Postrevolutionary France, 1814–1848* (1997). P. N. Stearns explores class relationships in *Paths to Authority: The Middle Class and the Industrial Labor Force in France, 1820–1848* (1978). Studies in urban history include J. M. Merriman, *The Red City: Limoges and the French Nineteenth Century* (1985) and *The Margins of City Life: Explorations of the French Urban Frontier, 1815–1851* (1991); and W. H. Sewell, Jr., *Structure and Mobility: The Men and Women of Marseille, 1820–1870* (1985). L. Kramer, *Threshold of a New World: Intellectuals and the Exile Experience in Paris, 1830–1848* (1988) conveys the cultural vitality of the city as it appeared to exiles like Marx and others. An older study of importance is L. Chevalier, *Laboring Classes and Dangerous Classes in Paris during the First Half of the Nineteenth Century* (trans. 1973).

Biographical accounts of two historians who became important political leaders in these years are

J. P. T. Bury and R. P. Tombs, *Thiers, 1797–1877* (1986) and D. Johnson, *Guizot: Aspects of French History, 1787–1874* (1963, 1975). For the last Bourbon king one may read V. D. Beach, *Charles X of France* (1971); and for Louis Philippe, T. Howarth, *Citizen-King* (1961). Readers will find an excellent introduction to the lives of women in this era in J. B. Margadant (ed.), *The New Biography: Performing Femininity in Nineteenth-Century France* (2000).

### Germany, 1815–1848

J. J. Sheehan, *German History, 1770–1866* (1990) is invaluable for these years. Also informative are D. Blackbourn, *History of Germany, 1780–1918: The Long Nineteenth Century* (rev. 2003); F. B. Tipton, *A History of Modern Germany Since 1815* (2003); W. Carr, *A History of Germany, 1815–1990* (1991); and H. James, *A German Identity, 1770–1990* (1990), perceptive on economic and other matters. Two important inquiries into the failure of German liberal democracy before 1914 are J. J. Sheehan, *German Liberalism in the Nineteenth Century* (1978) and J. L. Snell and H. A. Schmitt, *The Democratic Movement in Germany, 1789–1914* (1976). There are thoughtful essays in J. Breuilly (ed.), *19th-Century Germany: Politics, Culture, and Society 1780–1918* (2001); and in L. E. Jones and K. H. Jarausch (eds.), *In Search of a Liberal Germany: German Liberalism from 1789 to the Present* (1990).

### Austria, Russia, Poland, Greece, Spain, Italy, and Other Countries

On the Habsburg monarchy after 1815, C. A. Macartney, *The Habsburg Empire, 1790–1918* (1969) is a masterful survey with full treatment of the nationalities. Recommended also are A. Sked, *The Decline and Fall of the Habsburg Empire 1815–1918* (rev. 2001); and R. Okey, *The Habsburg Monarchy, c. 1765–1918: From Enlightenment to Eclipse* (2000). Foreign affairs are emphasized in B. Jelavich, *The Habsburg Empire in European Affairs, 1814–1918* (1969) and F. R. Bridge, *The Habsburg Monarchy among the Great Powers, 1815–1918* (1991). All aspects of Austrian history on into the twentieth century are ably treated in B. Jelavich, *Modern Austria: Empire and Republic, 1815–1986* (1987).

For Europe from the Baltic to the Aegean, R. Okey, *Eastern Europe, 1740–1985* (rev. 1986) covers these years; and another well-informed, comparative study of the region may be found in T. I. Behrend, *History Derailed: Central and Eastern Europe in the Long Nineteenth Century* (2003). For Russia, two outstanding accounts are H. Seton-Watson, *The Russian Empire, 1801–1917* (1967) and D. Saunders, *Russia in the Age of Reaction and Reform, 1801–1881* (1993). On the life of the early nineteenth-century tsar, there is the work of J. M. Hartley, *Alexander I* (1994). A major study of Alexander's successor is W. B. Lincoln, *Nicholas I: Emperor and Autocrat of All the Russias*

(1978). For these years one may also read M. Zetling, *The Decembrists* (1985); M. Raeff, *The Decembrist Movement* (1966), a narrative with documents; and P. O'Meara, *The Decembrist Pavel Pestel: Russia's First Republican* (2003), which describes the life of a key participant. For Poland, one may turn to the second volume of N. Davies, *A History of Poland: God's Playground* (2 vols.; 1981); his briefer *Heart of Europe: A Short History of Poland* (1986); and P. Wandycz, *The Lands of Partitioned Poland 1795–1918* (1974).

For the Balkans in these years informative volumes are B. Jelavich, *History of the Balkans* (2 vols.; 1983); B. Jelavich and C. Jelavich, *The Establishment of the Balkan National States, 1804–1920* (1980); and S. Pavlowitch, *A History of the Balkans, 1804–1945* (1999). For Greece a balanced authoritative study is R. Clogg, *A Concise History of Greece* (rev. 2002). Stirrings in this period are described in C. M. Woodhouse, *The Greek War of Independence* (1952); D. Brewer, *The Greek War of Independence* (2003); and R. Clogg (ed.), *The Struggle for Greek Independence* (1973), a collection of essays.

For the initial phases of the ferment in Italy good introductions are D. Beales, *The Risorgimento and the Unification of Italy* (1971); H. Hearder, *Italy in the Age of the Risorgimento, 1790–1870* (1983); S. Woolf, *A History of Italy, 1700–1860* (1986); and C. M. Lovett, *The Democratic Movement in Italy, 1830–1876* (1982).

For Belgium and the Dutch Netherlands in these and subsequent years, a discerning account by an eminent Dutch historian is E. H. Kossman, *The Low Countries, 1780–1940* (1978). The emerging importance of Belgium in international affairs is traced in J. E. Helmreich, *Belgium and Europe: A Study of Small-Power Diplomacy* (1976). For Spain, a balanced, comprehensive account is R. Carr, *Spain, 1808–1975* (rev. 1982), which may be supplemented by the more recent accounts in C. J. Esdaile, *Spain in the Liberal Age: From Constitution to Civil War, 1808–1939* (2000); and in C. J. Ross, *Spain, 1812–1996* (2000).

## Nineteenth-Century Thought

Two overall surveys carrying cultural and intellectual history forward to the twentieth century are G. L. Mosse, *The Culture of Western Europe: The Nineteenth and Twentieth Centuries* (rev. 1988) and R. N. Stromberg, *European Intellectual History since 1789* (rev. 1993). A special theme is skillfully explored in O. Chadwick, *The Secularization of the European Mind in the Nineteenth Century* (1976). Older general works include W. H. Coates, H. V. White, and J. S. Schapiro, *The Emergence of Liberal Humanism: An Intellectual History of Western Europe* (2 vols. 1966, 1970), which examines the nineteenth century in the second volume; M. Peckham, *Beyond the Tragic Vision: The Quest for Identity in the Nineteenth Century*

(1962); and M. Mandelbaum, *History, Man, and Reason: A Study in Nineteenth-Century Thought* (1971).

Among the many books on Hegel and Hegelian thought one may turn to L. Dickey, *Hegel: Religion, Economics, and the Politics of Spirit, 1770–1807* (1987); T. Pinkard, *Hegel: A Biography* (2000); F. C. Beiser, *Hegel* (2005); and J. E. Toews, *Hegelianism: The Path toward Dialectical Humanism 1805–1841* (1985), a difficult but rewarding book.

## The “Isms”

On the nature of ideology, the best introduction is D. McLellan, *Ideology* (rev. 1995). Also helpful are D. Hawkes, *Ideology* (rev. 2003); and G. Rudé, *Ideology and Popular Protest* (1980); and for political alignments, D. Caute, *The Left in Europe since 1789* (1966); and H. Rogger and E. Weber (eds.), *The European Right: A Historical Profile* (1965).

The vast literature on nationalism, including many older studies by C. J. H. Hayes and H. Kohn, may be approached through P. Alter, *Nationalism* (rev. 1994); E. J. Hobsbawm, *Nations and Nationalism since 1780* (rev. 1992); E. Gellner, *Nations and Nationalism* (1983); several books by A. D. Smith, *The Ethnic Origins of Nations* (1986), *National Identity* (1991), and *Chosen Peoples* (2003); and L. Kramer, *Nationalism: Political Cultures in Europe and America, 1775–1865* (1998). A useful collection of essays is available in G. Eley and R. G. Suny (eds.), *Becoming National: A Reader* (1996). B. Anderson's book, *Imagined Communities: Reflections on the Origin and Spread of Nationalism* (rev. 1991), has contributed an influential conceptual framework for much of the recent scholarship on nationalist movements. An impressive comparative work on nationalism, studying England, the United States, France, Germany, and Russia, is L. Greenfeld, *Nationalism: Five Roads to Modernity* (1992); and her more recent critical analysis of nationalist thought is available in *Nationalism: A Critical Introduction* (2002).

Political and cultural meanings of romanticism are examined from diverse political perspectives in J. Barzun, *Classic, Romantic, and Modern* (rev. 1961, 1975) and *Berlioz and the Romantic Century* (1950, 1982); M. H. Abrams, *Natural Supernaturalism: Tradition and Revolution in Romantic Literature* (1971); J. McGann, *The Romantic Ideology: A Critical Investigation* (1983); N. Rosenblum, *Another Liberalism: Romanticism and the Reconstruction of Liberal Thought* (1987); N. V. Riasanovsky, *The Emergence of Romanticism* (1992); and M. Cranston, *The Romantic Movement* (1994).

For classical liberalism, a thoughtful introduction is J. Gray, *Liberalism* (rev. 1995), which may be read along with A. Arblaster, *The Rise and Decline of Western Liberalism* (1984); J. G. Merquior, *Liberalism, Old and New* (1991); P. Kelly, *Liberalism* (2005); and J. Rawls, *Political Liberalism* (rev. 2005), a searching philosophical inquiry. An influential earlier

account was H. J. Laski, *The Rise of European Liberalism* (1936, reissued 1997). An insightful collection of essays by Isaiah Berlin, *The Crooked Timber of Humanity* (1990, 1998), stresses a liberal's suspicion of utopian schemes to change human beings in revolutionary ways. The interaction between liberal theory and political practice is examined in A. S. Kahan, *Liberalism in Nineteenth-Century Europe: The Political Culture of Limited Suffrage* (2003). Readers will find a useful anthology in D. Sidorsky (ed.), *The Liberal Tradition in European Thought* (1970).

Among books on the leading exemplar of classical liberalism, one may read, W. Stafford, *John Stuart Mill* (1998), a concise introductory account; N. Capaldi, *John Stuart Mill: A Biography* (2004); G. Himmelfarb, *On Liberty and Liberalism: The Case of John Stuart Mill* (1974); B. Semmel, *John Stuart Mill and the Pursuit of Virtue* (1984); and the unsympathetic M. Cowling, *Mill and Liberalism* (rev. 1990). Diverse views of Mill's key themes may be found in J. Skorupski, (ed.), *The Cambridge Companion to Mill* (1998). In an area where Mill and Harriet Mill pioneered, A. Rossi has edited John Stuart Mill and Harriet Taylor Mill, *Essays on Sex Equality* (1970). Mill and others are studied in S. R. Letwin, *The Pursuit of Certainty: David Hume, Jeremy Bentham, John Stuart Mill, Beatrice Webb* (1963). Bentham is also studied in a biography by M. Mack (1963) and in brief appraisals by J. Dinwiddy (1989), and J. E. Crimmins (2003). For the French setting an admirable study is G. A. Kelly, *The Humane Comedy: Constant, Tocqueville, and French Liberalism* (1992), which may be supplemented by B. Fontana, *Benjamin Constant and the Post-Revolutionary Mind* (1991).

For the persistence of conservatism one may read P. Viereck, *Conservatism Revisited: The Revolt against Revolt, 1815–1949* (rev. 2005); J. Weiss, *Conservatism in Europe, 1770–1945* (1977); R. A. Nisbet, *Conservatism: Dream and Reality* (1986); T. Honderich, *Conservatism* (1991); and P. Suvanto, *Conservatism from the French Revolution to the 1990s* (trans. 1997). An influential analysis of conservative thought is available in A. O. Hirshman, *The Rhetoric of Reaction* (1991).

Good starting places for the study of the socialist and revolutionary tradition are F. E. Manuel, *The Prophets of Paris: Turgot, Condorcet, Saint-Simon, Fourier, Comte* (1962), which stresses the link between Enlightenment ideas and nineteenth-century social thought, and J. H. Billington, *Fire in the Minds of Men: Origins of the Revolutionary Faith* (1980), which focuses on the more conspiratorial revolutionaries. F. E. Manuel and F. P. Manuel masterfully trace an important theme in *Utopian Thought in the Western World* (1979), which may be supplemented with two books by K. Kumar, *Utopia and Anti-Utopia in Modern Times* (1987), and *Utopianism* (1991).

Books on Marx and Marxism will be cited in the following chapter. The best one-volume introduction

to the origins and evolution of socialism is A. S. Lindemann, *A History of European Socialism* (1983). Informative also are L. Derfler, *Socialism since Marx: A Century of the European Left* (1973); W. Lerner, *A History of Socialism and Communism in Modern Times* (rev. 1994); and B. Crick, *Socialism* (1987). G. Lichtheim, *The Origins of Socialism* (1969), *A Short History of Socialism* (1970), and his other writings are especially valuable. Two large-scale comprehensive studies are G. D. H. Cole, *A History of Socialist Thought* (4 vols.; 1953–1956), covering the years 1789–1939; and C. Landauer and others, *European Socialism* (2 vols.; 1960), which covers about the same years. Utopian socialists are studied in two excellent books by J. F. Beecher: *Charles Fourier: The Visionary and His World* (1987) and *Victor Considérant and the Rise and Fall of French Romantic Socialism* (2001). Other early socialists are examined in F. E. Manuel, *The New World of Henri Saint-Simon* (1956); G. G. Iggers, *The Cult of Authority: The Political Cult of the Saint-Simonians* (rev. 1970); and R. B. Carlisle, *The Proffered Crown: Saint Simonianism and the Doctrine of Hope* (1987).

Early feminist thought is discussed in J. Rendall, *The Origins of Modern Feminism: Women in Britain, France and the United States, 1780–1860* (1985); M. LeGates, *In Their Time: A History of Feminism in Western Society* (2001); K. Offen, *European Feminisms, 1700–1950: A Political History* (2000); G. Bock, *Women in European History* (trans. 2002); S. K. Foley, *Women in France Since 1789* (2004); and C. G. Moses and L. W. Rabine, *Feminism, Socialism, and French Romanticism* (1993), a valuable book that includes excerpts from the texts of early feminist authors. Recent biographies on important women writers in this era include S. Grogan, *Flora Tristan* (1998); B. Jack, *George Sand* (2000); R. Bolster, *Marie d'Agoult: the Rebel Countess* (2001); and P. Stock-Morton, *The Life of Marie d'Agoult, alias Daniel Stern* (2001). The ideas of writers such as Sand and d'Agoult are also examined in W. Walton, *Eve's Proud Descendants: Four Women Writers and Republican Politics in Nineteenth-Century France* (2000).

On the link between socialism and women activists, one may read M. J. Boxer and J. H. Quataert (eds.), *Socialist Women: European Socialist Feminism in the Nineteenth and Early Twentieth Centuries* (1978) and other books to be cited in Chapter 15. A. Fried and R. Sanders, *Socialist Thought: A Documentary History* (rev. 1993) is a handy anthology.

### Economic Thought

An innovative and rewarding book is M. Berg, *The Machinery Question and the Making of Political Economy, 1815–1848* (1980). There are valuable accounts of key thinkers in D. P. O'Brien, *The Classical Economists Revisited* (rev. 2004); in J. K. Galbraith, *The Age of Uncertainty* (1977), a sprightly series of es-

says on economic thinkers from Adam Smith to the present; and in R. Heilbroner, *The Worldly Philosophers* (rev. 1999), which is useful on the economic liberals. For Adam Smith's moral and economic ideas, an especially thoughtful overview is J. Z. Muller, *Adam Smith in His Time and Ours: Designing the Decent Society* (1992). Muller has expanded his history of economic ideas in *The Mind and the Market: Capitalism in Modern European Thought* (2002). Informative also are D. Winch, *Adam Smith's Politics* (1978); and P. H. Werhane, *Adam Smith and His Legacy for Modern Capitalism* (1991). For Malthus, a useful biographical account is P. James, *Population Malthus: His Life and Times* (1979), while S. Hollander, *The Economics of Thomas Robert Malthus* (1996) analyzes his ideas.

### International Affairs after the Congress of Vienna

For diplomacy and international affairs, two valuable surveys are F. R. Bridge and R. Bullen, *The Great Powers and the European States System, 1851–1914* (rev. 2005) and N. Rich, *Great Power Diplomacy, 1815–1914* (1980). An important reevaluation is P. W. Schroeder, *The Transformation of European Politics, 1763–1848* (1994), which sees the era after 1815 not as a restoration but as a revolutionary transformation of international relations; Schroeder has also written *Metternich's Diplomacy at Its Zenith, 1820–1823* (1962). H. Kissinger, the former American Secretary of State, discusses the post-1815 years in *Diplomacy* (1994). In addition to older studies by C. K. Webster and other historians of the era of Castlereagh and Palmerston, one may turn to C. J. Bartlett, *Castlereagh* (1967); J. Derry, *Castlereagh* (1976); W. Hinde, *George Canning* (1989); K. Bourne, *Palmerston: The Early Years* (1982); and P. R. Ziegler, *Palmerston* (2003). American foreign policy in these years is assessed in B. Perkins, *The Creation of a Republican Empire, 1776–1865* (1993).

The involvement of the European powers and the United States in Latin America is studied in R. Miller, *Britain and Latin American in the Nineteenth and Twentieth Centuries* (1993); D. Perkins, *A History of the Monroe Doctrine* (1941, 1963); and E. R. May, *The Making of the Monroe Doctrine* (1975, reissued 1992). A special perspective is provided in J. J. Johnson, *A Hemisphere Apart: The Foundations of United States Policy toward Latin America* (1990), which focuses on the years 1815–1830. For all aspects of the colonial revolutions one may turn to J. Lynch, *The Spanish American Revolutions, 1808–1821* (rev. 1986); M. P. Costeloe, *Response to Revolution: Imperial Spain and the Spanish American Revolutions, 1810–1840* (1986); D. Bushnell and N. Macaulay, *The Emergence of Latin America in the Nineteenth Century* (rev. 1994); and the chapters in Vol. III of L. Bethell (ed.), *The Cambridge History of Latin America* (1988). Biographical studies are available in

D. Bushnell, *Simón Bolívar: Liberation and Disappointment* (2003); J. L. Salcedo-Bastardo, *Bolívar: A Continent and its Destiny* (trans. 1977); and J. Kinsbrunner, *Bernardo O'Higgins* (1968).

### Useful Web Sites

Readers will find excellent sources for this era through the links in Fordham University's *Internet Modern History Sourcebook* at [www.fordham.edu/halsall/mod/modsbook.html](http://www.fordham.edu/halsall/mod/modsbook.html); this outstanding resource includes materials on the Industrial Revolution; "isms" such as socialism, romanticism, feminism, and nationalism; the history of major European nations; and the new nineteenth-century nations in the Americas. There are also valuable materials on nineteenth-century thought and the "isms" at *The Stanford Encyclopedia of Philosophy*, <http://plato.stanford.edu/>; other helpful sites include *The Nationalism Project* at [www.nationalismproject.org](http://www.nationalismproject.org); *Utilitarian Resources* at [www.utilitarianism.com](http://www.utilitarianism.com), with links to numerous works on this influential nineteenth-century intellectual and political movement; and *BBC History, Industrialisation* at [www.bbc.co.uk/history/society\\_culture/industrialisation](http://www.bbc.co.uk/history/society_culture/industrialisation), which provides interesting material on the new industrial economy in Britain.

## 12. REVOLUTIONS AND THE REIMPOSITION OF ORDER, 1848–1870

An older but still useful synthesis for the revolutions of 1848 is W. L. Langer, *Political and Social Upheaval, 1832–1852* (1969). Other informative studies include P. N. Stearns, *1848: The Revolutionary Tide in Europe* (1974); P. Jones, *The 1848 Revolutions* (rev. 1991); J. Sperber, *The European Revolutions, 1848–1851* (rev. 2005); and the essays in R. J. W. Evans and H. P. Von Strandmann, *The Revolutions in Europe, 1848–1849* (2000). Of special interest is L. B. Namier, *1848: The Revolution of the Intellectuals* (1944, 1992), which sees the events in central and eastern Europe as ushering in an age of nationalism, not of liberalism. E. J. Hobsbawm continues his provocative trilogy for the years 1789–1914 with *The Age of Capital, 1848–1875* (1976). A. J. P. Taylor, *The Struggle for Mastery in Europe, 1848–1918* (1954, reissued 1971) remains unequalled as a study of international affairs for these years.

### Revolutions in Various Countries

FRANCE. General histories include G. Duveau, *The Making of a Revolution* (trans. 1968); R. Price, *The French Second Republic: A Social History* (1972); and W. Fortescue, *France and 1848: The End of Monarchy* (2005). Informative also are the essays edited by R. Price, *Revolution and Reaction: 1848 and the Second French Republic* (1976), while M. Agulhon, *The Republican Experiment, 1848–1852* (1983) subtly examines republican and revolutionary symbolism.

Studies offering insights into popular militancy include P. H. Amann, *Revolutions and Mass Democracy: The Paris Club Movement in 1848* (1976); M. Traugott, *The Armies of the Poor* (rev. 2002); J. M. Merriman, *The Agony of the Republic: The Repression of the Left in Revolutionary France, 1848–1851* (1978); and T. W. Margadant, *French Peasants in Revolt: The Insurrection of 1851* (1979).

**HABSBURG LANDS.** For Austria there are several volumes on the Habsburg empire cited in Chapter 11, but for more specific studies of Francis Joseph and his long reign from 1848 to 1916 one may read A. Palmer, *Twilight of the Habsburgs: The Life and Times of Emperor Francis Joseph* (1995) and S. Beller, *Francis Joseph* (1996).

For the empire in revolt one may read R. J. Rath, *The Viennese Revolution of 1848* (1957); H. J. Hahns, *The 1848 Revolutions in German-Speaking Europe* (2001), which also discusses events in Germany; S. Z. Pech, *The Czech Revolution of 1848–1849* (1979); and I. Deák, *The Lawful Revolution: Louis Kossuth and the Hungarians, 1848–1849* (1979), a vivid account. The end of the revolution is described in A. Sked, *The Survival of the Habsburg Empire* (1979) and I. W. Roberts, *Nicholas I and the Russian Intervention in Hungary* (1991).

**ITALY.** Books on the beginnings of the Risorgimento have been cited in Chapter 11; others on unification will be described in the chapter that follows. Studies relevant to 1848 are G. M. Trevelyan's classic account, *Garibaldi's Defense of the Roman Republic, 1848–1849* (1907, reissued 1988) and P. Ginsborg, *Daniele Manin and the Venetian Revolution of 1848–49* (1979). There is also useful information on the people and events of this era in J. A. Davis (ed.), *Italy in the Nineteenth Century: 1796–1900* (2000).

**GERMANY AND THE FRANKFURT ASSEMBLY.** In addition to L. B. Namier, *1848: The Revolution of the Intellectuals* (1946, 1992), cited earlier, which is sharply critical of the Frankfurt Assembly, informative studies include E. Eyck, *The Frankfurt Parliament, 1848–1849* (1968), a detailed account of the assembly itself; W. Siemann, *The German Revolution of 1848–49* (trans. 1998); and J. Sperber, *Rhineland Radicals: The Democratic Movement and the Revolution of 1848–1849* (1991), which focuses on the more radical elements in the revolution.

**ENGLAND AND IRELAND.** The confrontations with both Chartism and Irish nationalism are recounted in J. Saville, *1848: The British State and the Chartist Movement* (1987); other books on Chartism have been noted in Chapter 11. A special subject is graphically treated in C. B. Woodham-Smith, *The Great Hunger: Ireland 1845–1849* (1962), which may be supplemented by J. S. Donnelly, *The Great Irish Potato Famine* (2001).

### Marx and Marxism

D. McLellan, *Karl Marx: A Biography* (rev. 1995) is an outstanding account of Marx's life and thought;

other insightful studies include J. Seigel, *Marx's Fate: The Shape of a Life* (1978, 1993); I. Berlin, *Karl Marx: His Life and Environment* (rev. 1996); S. K. Padover, *Karl Marx: An Intimate Biography* (1978); B. Mazlish, *The Meaning of Karl Marx* (1984); and A. W. Wood, *Karl Marx* (rev. 2004), a work that examines Marx's philosophy. An amusing but overly flip-pant account is F. Wheen, *Karl Marx: A Life* (2000). Helpful for the life and thought of Engels are studies by S. Marcus (1974); D. McLellan (1978); T. Carver (1990); J. D. Hunley (1990), and S. H. Rigby (1992).

On Marxism and the theoretical foundations of socialism, there is an enormous and controversial literature, to which the books cited for the beginnings of socialism in Chapter 11 and for the years after 1870 in Chapter 15 may offer some additional guidance. Recommended studies include J. Elster, *An Introduction to Karl Marx* (1986); R. N. Hunt, *The Political Ideas of Marx and Engels* (2 vols., 1976–1984); R. Tucker, *The Marxian Revolutionary Idea* (1969) and *Philosophy and Myth in Karl Marx* (rev. 2001); G. Lichtheim, *Marxism: An Historical and Critical Study* (1961); and S. Avineri, *The Social and Political Thought of Karl Marx* (1968, 1990). The intellectual context that shaped Marx's early work is examined in W. Breckman, *Marx, The Young Hegelians, and the Origins of Radical Social Theory* (1999).

E. Wilson's older book, *To the Finland Station: A Study in the Writing and Acting of History* (1940, reissued 1972), is an imaginative discussion of the use of history by socialists and non-socialists. Insights into the Marxist interpretation of history are provided in G. A. Cohen, *Karl Marx's Theory of History: A Defence* (rev. 2001), an especially cogent analysis; W. H. Shaw, *Marx's Theory of History* (1978); and M. Rader, *Marx's Interpretation of History* (1979). R. Williams, *Marxism and Literature* (1977) demonstrates one aspect of the wider applicability of Marx's theories.

For Auguste Comte and positivism there are available A. R. Standley, *Auguste Comte* (1981), the best brief introduction; M. Pickering, *Auguste Comte: An Intellectual Biography* (1992); W. M. Simon, *European Positivism in the Nineteenth Century* (1963); D. G. Charlton, *Positivist Thought in France during the Second Empire* (1959); and T. R. Wright, *The Religion of Humanity: The Impact of Comtean Positivism on Victorian Britain* (1986). G. Lenzer has edited *Auguste Comte and Positivism: The Essential Writings* (rev. 1998).

### Napoleon III and Bonapartism

The best overviews are in A. Plessis, *The Rise and Fall of the Second Empire, 1852–1871* (trans. 1985) and in R. Price, *The French Second Empire: An Anatomy of Political Power* (2001). Other informative accounts are J. M. Thompson, *Louis Napoleon and the Second Empire* (1954, 1967); G. P. Gooch, *The Second Empire* (1960), a collection of judicious essays; J. P. T. Bury, *Napoleon III and the Second Empire* (1964); and

W. H. C. Smith, *Second Empire and Commune: France, 1848–1871* (rev. 1996), which emphasizes the regime's disastrous foreign policy and collapse. A useful reference tool is W. E. Echard (ed.), *Historical Dictionary of the French Second Empire* (1985).

Biographical treatments include T. A. B. Corley, *Democratic Despot: A Life of Napoleon III* (1961); W. H. C. Smith, *Napoleon III* (1973); J. F. McMillan, *Napoleon III* (1991); and F. Bresler, *Napoleon III* (1999). There are three evocative explorations of the age by R. L. Williams: *The World of Napoleon III* (1957), *The Mortal Napoleon III* (1971), and *Manners and Murders in the World of Louis Napoleon* (1975); and a study by D. Bagley, *Napoleon III and His Regime: An Extravaganza* (2000). On the reconstruction of Paris in these years, one may read D. H. Pinkney, *Napoleon III and the Rebuilding of Paris* (1958); D. P. Jordan, *Transforming Paris: The Life and Labors of Baron Haussmann* (1995); and N. Pappayanis, *Planning Paris Before Haussmann* (2004), a study of the ideas that preceded and influenced Haussmann. A recent, sympathetic biography of the empress may be found in D. Seward, *Eugénie: The Empress and Her Empire* (2004). Tendencies in later years to praise Napoleon III for presiding over political stability are explored in S. L. Campbell, *The Second Empire Revisited: A Study in French Historiography* (1978).

### Useful Web Sites

Readers will find an extensive collection of writings on all aspects of the revolutions by visiting the *Encyclopedia of Revolutions of 1848* at [www.cats.ohiou.edu/~Chastain](http://www.cats.ohiou.edu/~Chastain). There are useful materials on the history of Marxism, beginning with Marx but including many other writers and political activists at the *Marxists Internet Archive*, [www.marxists.org](http://www.marxists.org); and additional information on the era of 1848 is available at the previously cited *Internet Modern History Sourcebook*, which is located at the Fordham University site, [www.fordham.edu/halsall/mod/modsbook.html](http://www.fordham.edu/halsall/mod/modsbook.html). Further information on Napoleon III may be found at Napoleon.Org, a site that includes images and other materials on the French Second Empire as well as the history of Napoleon I at [www.napoleon.org](http://www.napoleon.org).

## 13. THE GLOBAL CONSOLIDATION OF LARGE NATION-STATES, 1859–1871

J. P. T. Bury (ed.), *The Zenith of European Power, 1830–1871* (1966), cited in Chapter 11, offers many informative chapters; and N. Rich, *The Age of Nationalism and Reform, 1850–1890* (1970), provides a balanced synthesis. Analytical books on nationalism have been cited in Chapter 11.

### The Crimean War

For the war itself and its complexities one may read A. Palmer, *The Banner of Battle, The Story of the Crimean War* (1987); T. Royle, *Crimea: The Great Crimean War, 1854–1856* (2001); and a concise ac-

count by J. Sweetman, *The Crimean War* (2001). The diplomatic aspects are studied in W. Baumgart, *The Peace of Paris, 1856* (1981); N. Rich, *Why the Crimean War? A Cautionary Tale* (1985); D. Wetzel, *The Crimean War: A Diplomatic History* (1985); and D. M. Goldfrank, *The Origins of the Crimean War* (1993). An impressive book rehabilitating Austrian policy is P. W. Schroeder, *Austria, Great Britain, and the Crimean War: The Destruction of the European Concert* (1972), while J. S. Curtiss, *Russia's Crimean War* (1979) sees the Western powers as more responsible than Russia for the outbreak. The famous "Charge of the Light Brigade" is skillfully recounted in C. B. Woodham-Smith, *The Reason Why* (1953); and the same author has written a biography of Florence Nightingale (1951, reissued 1983). For the founding spirit behind modern nursing two more recent biographies are available by H. Small (2000) and by B. Dossey (2001).

### Unification of Italy

To the books on unification that have already been cited should be added F. J. Cappa, *The Origins of the Italian Wars of Independence* (1992); M. Clark, *The Italian Risorgimento* (1998); and the concise account by L. Riall, *The Italian Risorgimento* (1994). For the unification leaders, D. Mack Smith has written the most informative studies: *Cavour and Garibaldi in 1860* (1954, 1985); *Giuseppe Garibaldi* (1956); *Cavour* (1985), which is critical of the Piedmontese statesman's opportunism; and *Mazzini* (1994). One may also read C. Hibbert, *Garibaldi and His Enemies* (1966), a vivid popular account; and J. Ridley, *Garibaldi* (1975), a detailed, authoritative study. An outstanding history of Italy after unification is D. Mack Smith, *Modern Italy* (rev. 1997). The same author's *Italy and Its Monarchy* (1990) is an unflattering portrait of the House of Savoy.

### Bismarck and the Founding of the Second Reich

G. A. Craig, *Germany, 1866–1945* (1978) is a masterful account covering the years from Bismarck to Hitler, with many insights into German society and culture; a companion volume, *The Germans* (1982), equally perceptive, is a series of thematic essays; and the same author's *The Politics of the Prussian Army, 1640–1945* (1956, 1964) is as useful for the nineteenth and twentieth centuries as for the earlier years.

For Bismarck two comprehensive accounts are O. Pflanze, *Bismarck and the Development of Germany* (3 vols.; 1990), demonstrating how Bismarck controlled the dynamic social and economic forces of his day; and L. Gall, *Bismarck: The White Revolutionary* (2 vols.; trans. 1986–1987). E. Eyck, *Bismarck and the German Empire* (1950, 1984) summarizes this German historian's larger critical work. Other biographical accounts include A. Palmer, *Bismarck* (1976), a

judicious, well-balanced account; A. J. P. Taylor, *Bismarck: The Man and the Statesman* (1955, 1987), less judicious but provocative; J. E. Rose, *Bismarck* (1987); and E. Feuchtwanger, *Bismarck* (2002). D. G. Williamson, *Bismarck and Germany, 1862–1890* (rev. 1998) is a useful brief introduction; and B. Waller, *Bismarck* (rev. 1997) is an informative essay. G. O. Kent, *Bismarck and His Times* (1978) is especially useful for the historiographical debate on Bismarck.

Social and economic aspects of unification are studied in W. O. Henderson, *The Rise of German Industrial Power, 1834–1914* (1976) and T. S. Hamerow, *The Social Foundations of German Unification, 1858–1871* (2 vols.; 1969–1972). An interesting account of Bismarck's Jewish financial adviser, illuminating much of German history during these years, is F. Stern, *Gold and Iron: Bismarck, Bleichröder, and the Building of the German Empire* (1977). W. J. Mommsen, *Imperial Germany, 1867–1918* (trans. 1995) is a collection of essays by an influential German historian.

For the events of 1870–1871, recommended studies include W. Carr, *The Origins of the Wars of German Unification* (1991); M. Howard, *The Franco-Prussian War: The German Invasion of France, 1870–1871* (rev. 2001), a major study of the war and related events; and G. Wawro's two books for these years, *The Austro-Prussian War: Austria's War with Prussia and Italy in 1866* (1996), and *The Franco-Prussian War: The German Conquest of France in 1870–1871* (2003).

### Austria-Hungary

For the Compromise of 1867 and the creation of the Dual Monarchy, the volumes by C. A. Macartney and other studies cited in Chapter 11 will be helpful. W. S. Johnston, *The Austrian Mind: An Intellectual and Social History* (1976) covers broad aspects of Austrian life, while Jewish contributions to Habsburg culture and society are sympathetically assessed in R. S. Wistrich, *The Jews of Vienna in the Age of Franz Joseph* (1989); S. Beller, *Vienna and the Jews* (1989); and W. O. McCagg, Jr., *A History of Habsburg Jews, 1670–1918* (1993). For the military, there are studies by G. E. Rothenberg, *The Army of Francis Joseph* (1976) and I. Deák, *Beyond Nationalism: A Social and Political History of the Habsburg Officer Corps, 1848–1918* (1990), which illuminates the Dual Monarchy in other ways. For Hungary, G. Szabod, *Hungarian Political Trends between the Revolution and the Compromise, 1849–1867* (1977) provides insights into Magyar politics and society, while the story is carried forward to a later era in J. K. Hoensch, *A History of Modern Hungary, 1867–1994* (1996), and in B. K. Kiraly, *Basic History of Modern Hungary: 1867–1999* (2001).

### The Russia of Alexander II, 1855–1881

An authoritative treatment for these years is provided in D. Saunders, *Russia in the Age of Reaction and Re-*

*form, 1801–1881* (1992), cited in Chapter 11, and R. Pipes, *Russia under the Old Regime* (1974). On the reign of the last five rulers from Alexander I to Nicholas II, S. Harcave has written *Years of the Golden Cockerel: The Last Romanov Tsars, 1814–1917* (1968), a subject covered also in the latter portions of W. B. Lincoln, *The Romanovs: Autocrats of All the Russias* (1981). The Romanov exercise of power is described in the wide-ranging work of R. S. Wortman, *Scenarios of Power: Myth and Ceremony in Russian Monarchy* (2 vols. 1995, 2000).

On the reforms of Alexander II one may turn to D. Lieven, *Russia's Rulers Under the Old Regime* (1989), which describes Alexander's efficient bureaucracy, and to the recent account in E. Radzinsky, *Alexander II: The Last Great Tsar* (2005), informative for Russian society of the era and the man himself. The peasant emancipation may be studied in J. Blum, *The End of the Old Order in Rural Europe* (1978); G. T. Robinson, *Rural Russia under the Old Regime* (1930, 1980); T. Emmons, *The Russian Landed Gentry and the Peasant Emancipation of 1861* (1968); and D. Moon, *The Abolition of Serfdom in Russia, 1762–1907* (2001).

For the activist world of nineteenth-century Russia and the world of the Russian exiles, there is a helpful synthesis: F. Venturi, *A History of the Populist and Socialist Movements in Nineteenth-Century Russia* (trans. 1983); and many special studies, among them E. H. Carr, *The Romantic Exiles: A Nineteenth-Century Portrait Gallery* (1933, 1949) and *Michael Bakunin* (1937, reissued 1975); M. A. Miller, *The Russian Revolutionary Emigrés 1825–1870* (1986); A. P. Mendel, *Michael Bakunin: Roots of Apocalypse* (1982); M. E. Malia, *Alexander Herzen and the Birth of Russian Socialism* (1961); V. Broido, *Apostles into Terrorists: Women and the Revolutionary Movement in the Russia of Alexander II* (1977); and I. Berlin, *Russian Thinkers* (1978), which is especially rewarding.

### United States

The Civil War and Reconstruction have been the subject of many histories, but two books present each with remarkable narrative skill and analytical insight: J. M. McPherson, *Battle Cry of Freedom: The Civil War Era* (1988) and E. Foner, *Reconstruction: America's Unfinished Revolution, 1863–1877* (1988); the latter author has continued his analysis of this pivotal era in *Forever Free: The Story of Emancipation and Reconstruction* (2005). The essays in S. Forster and S. Nagler (eds.), *On the Road to Total War: The American Civil War and the German Wars of Unification, 1861–1871* (1997), model studies in comparative history, demonstrate the origins of twentieth-century warfare in these two conflicts.

Books by D. B. Davis and others on slavery and the slave trade as a Western institution have been cited earlier. To them may be added O. Patterson, *Slavery and Social Death: A Comparative Study* (1982), which

examines the institution and practice in various cultures and eras. A large literature has developed on the slave experience in North America, which P. Kolchin, *American Slavery, 1619–1877* (1993), skillfully synthesizes; the same author has also written two outstanding comparative studies, *Unfree Labor: American Slavery and Russian Serfdom* (1987), and *A Sphinx on the American Land: The Nineteenth-Century South in Comparative Perspective* (2003). Two leading examples of the literature on American slavery are E. D. Genovese, *Roll, Jordan, Roll: The World the Slaves Made* (1974) and H. G. Gutman, *The Black Family in Slavery and Freedom, 1750–1925* (1976). Two valuable surveys of African-American history are J. H. Franklin and A. A. Moss, Jr., *From Slavery to Freedom: A History of African Americans* (rev. 2000) and M. F. Berry and J. Blassingame, *Long Memory: The Black Experience in America* (1982).

### Canada, Australia, New Zealand

Informative introductions to the history of Canada include M. Conrad and A. Finkel, *Canada, A National History* (2003); J. M. Bumsted, *A History of the Canadian Peoples* (2003); G. Woodcock, *A Social History of Canada* (1988); J. L. Granatstein and others, *Nation: Canada since Confederation* (rev. 1991); and J. L. Finlay and D. N. Sprague, *The Structure of Canadian History* (2 vols.; 1992), which is especially insightful. The growth of Canadian self-government within an imperial framework is described in J. M. Ward, *Colonial Self-Government: The British Experience, 1759–1856* (1976); and the emergence of the dominion idea, beginning in these years, is comprehensively treated in W. D. McIntyre, *The Commonwealth of Nations: Origins and Impact, 1869–1971* (1977). *The Encyclopedia of Canada* (4 vols.; 1988) is a valuable reference tool. The Australian story is ably recounted in S. Macintyre, *A Concise History of Australia* (rev. 2004); G. Blainey, *A Shorter History of Australia* (1994); and J. Rickard, *Australia: A Cultural History* (rev. 1996). A valuable reference tool is J. Bassett, *The Oxford Illustrated Dictionary of Australian History* (1993). The wider regional history is discussed in D. Denoon, P. Mein-Smith, and M. Wyndham, *A History of Australia, New Zealand and the Pacific* (2000). An excellent introduction to New Zealand is G. W. Rice (ed.), *The Oxford History of New Zealand* (rev. 1992).

### Japan and the West

Two books by C. Totman provide comprehensive overviews of Japan before and during the modern era: *Early Modern Japan* (1993) and *A History of Japan* (rev. 2005). Other informative histories include E. O. Reischauer, *Japan: The Story of a Nation* (rev. 1989); W. G. Beasley, *The Rise of Modern Japan: Political, Economic and Social Change Since 1850* (rev. 2000); and M. B. Jansen, *The Making of Modern Japan* (2000).

The best account of the Meiji era is W. G. Beasley's *The Meiji Restoration* (1972), but it may be supplemented by K. B. Pyle, *The Making of Modern Japan* (rev. 1996) and C. Gluck, *Japan's Modern Myths: Ideology in the Late Meiji Period* (1985). For the Japanese occupation of Korea, P. Duus, *The Abacus and the Sword: The Japanese Penetration of Korea, 1895–1900* (1998) is rewarding.

### Useful Web Sites

Interesting visual materials and other sources on the Crimean war can be found in the collection of the Library of Congress, *Roger Fenton Crimean War Photographs*, which is at [www.loc.gov/rr/print/coll/251\\_fen.html](http://www.loc.gov/rr/print/coll/251_fen.html). A helpful site on the reform-minded Russian Tsar, *Alexander II and His Times*, is maintained at Eastern Michigan University, [www.emich.edu/public/history/moss/](http://www.emich.edu/public/history/moss/); and readers will find useful information and links to other Web sites on modern Japan at Columbia University's *Asia for Educators*, <http://afe.easia.columbia.edu/>. Additional resources for examining the consolidation of nation states in Asia, Europe, and North America are at Fordham University's *Internet Modern History Sourcebook*, [www.fordham.edu/halsall/mod/modsbook.html](http://www.fordham.edu/halsall/mod/modsbook.html), which has been noted in previous chapters. For excellent links to materials pertaining to the era of the American Civil War and Reconstruction, one may also visit the previously noted *History Matters* at <http://historymatters.gmu.edu/>, a site maintained in conjunction with the American Social History Project/Center for Media & Learning at the City University of New York and the Center for History and New Media at George Mason University.

## 14. EUROPEAN CIVILIZATION, 1871–1914: ECONOMY AND POLITICS

Books on cultural and social history are mainly described in Chapter 15, but many titles overlap. Two older volumes that help to provide a still useful synthesis for these years are C. J. H. Hayes, *A Generation of Materialism, 1871–1900* (1941, 1983), portraying the dual nature of the age as climax of enlightenment and seedtime of future turmoil; and O. J. Hale, *The Great Illusion, 1900–1914* (1971), exploring the many accomplishments of the early twentieth-century years and the widespread belief in continuing peace and progress. E. J. Hobsbawm completes his books on the years 1879–1914 with *The Age of Empire, 1875–1914* (1988). The early chapters of J. Joll, *Europe Since 1870* (rev. 1990) are helpful for this period. G. Barraclough, *An Introduction to Contemporary History* (1964), a provocative essay, emphasizes the need for a global approach to the years since 1890, a theme developed at length in J. Romein, *The Watershed of Two Eras: Europe in 1900* (trans. 1978). Also of interest are N. Stone, *Europe Transformed, 1878–1919* (rev. 1999), and R. W. Winks and R. J. Q. Adams, *Europe, 1890–1945: Crisis and Conflict* (2003).

There are informative chapters in F. H. Hinsley (ed.), *Material Progress and Worldwide Problems, 1870–1898* (1962) and C. L. Mowat (ed.), *The Shifting Balance of World Forces, 1898–1945* (rev. 1968). C. Nicholls (ed.), *Power: A Political History of the Twentieth Century* (1990) and S. Pollard (ed.), *An Economic History of the Twentieth Century* (1990) begin with these years.

### The European and World Economy

For Europe economic and social development is studied in F. B. Tipton and R. Aldrich, *An Economic and Social History of Europe, 1890–1939* (1987), with a sequel volume for later years. For industrial growth on the Continent, one may also turn to A. S. Milward and S. B. Saul, *The Development of the Economies of Continental Europe, 1850–1914* (1977); C. P. Kindleberger, *Economic Growth in France and Britain, 1851–1950* (1963); and W. O. Henderson, *The Rise of German Industrial Power, 1834–1914* (1976), cited earlier.

For the global economy during these years, W. W. Rostow, *The World Economy: History and Prospect* (1978) is an ambitious effort to study industrial growth from its origins in eighteenth-century Britain to its global diffusion. Other useful works include W. Ashworth, *A Short History of the International Economy since 1850* (rev. 1987); W. Woodruff, *The Impact of Western Man: A Study of Europe's Role in the World Economy, 1750–1960* (1966); and A. G. Kenwood and A. L. Longheed, *The Growth of the International Economy, 1820–2000* (rev. 2000). K. Pomeranz, *The Great Divergence: Europe, China, and the Making of the Modern World Economy* (2000) discusses European colonialism in a comparative study of the evolving world economic system.

International finance is examined in C. P. Kindleberger, *A Financial History of Western Europe* (rev. 1992), cited earlier; M. DeCecco, *The International Gold Standard: Money and Empire* (rev. 1984); R. S. Sayers, *The Bank of England, 1891–1944* (2 vols., 1985); and R. C. Michie, *Capitals of Finance: The London and New York Stock Exchanges, 1850–1914* (1987). The role of foreign capital in the economy of the United States is analyzed in M. Wilkins, *The History of Foreign Investment in the United States to 1914* (1989).

### Demography and Migration

Several books on population growth, also useful here, have been cited earlier. C. M. Cipolla, *The Economic History of World Populations* (1962) and T. H. Hollingsworth, *Historical Demography* (1969) are good guides. Recommended studies include T. McKee, *The Modern Rise of Population* (1977); D. Grigg, *Population Growth and Agrarian Change* (1980); C. Tilly (ed.), *Historical Studies of Changing Fertility* (1978); and two books by M. Livi Bacci, *The Population of Europe* (2000) and *A Concise History of*

*World Population* (rev. 2001), which carries the story of population growth into the contemporary era.

For the movement of peoples, two collections of essays are helpful: W. H. McNeill and R. S. Adams (eds.), *Human Migration; Patterns and Politics* (1978) and I. Glazier and L. deRosa (eds.), *Migration across Time and Nations: Population Mobility in Historical Contexts* (1986). Additional informative works include P. Taylor, *The Distant Magnet: European Migration to the United States* (1971); L. P. Moch, *Moving Europeans: Migration in Western Europe since 1650* (rev. 2003); K. J. Bade, *Migration in European History* (2003); and T. J. Hatten and J. G. Williamson, *Global Migration and the World Economy* (2006). On the absorption of America's immigrants, S. Thernstrom and others (eds.), *Harvard Encyclopedia of American Ethnic Groups* (1980) is a valuable work of reference.

### France, 1871–1914

For France in this era the reader may turn to J. M. Mayeur and M. Rebérioux, *The Third Republic from Its Origins to the Great War, 1871–1914* (trans. 1984) and M. Agulhon, *The French Republic, 1879–1992* (trans. 1993), a challenging interpretive study. Concise surveys are available in R. Gildea, *France, 1870–1914* (rev. 1996) and R. D. Anderson, *France, 1870–1914: Politics and Society* (1977). A provocative Marxist analysis is provided in S. Elwitt's two-volume study: *The Making of the Third Republic* (1975) and *The Third Republic Defended* (1988). Readers will also find a helpful analysis of this period in C. Sowerwine, *France Since 1870: Culture, Politics and Society* (2001). Recent treatments of the revolutionary uprising that ushered in the Third Republic include R. Tombs, *The Paris Commune, 1871* (1999) and D. Shafer, *The Paris Commune: French Culture, Politics, and Society at the Crossroads of the Revolutionary Tradition and Revolutionary Socialism* (2005).

A valuable guide to major themes in French history and to writings on France beginning with these years is J. F. McMillan, *Twentieth-Century France: Politics and Society in France, 1898–1991* (1992), while two works of reference are P. Hutton (ed.), *Encyclopedia of the French Third Republic* (2 vols., 1986) and D. Bell and others (eds.), *A Biographical Dictionary of French Political Leaders since 1870* (1990).

Outstanding biographies include J. P. T. Bury's three-volume study (1936–1981) of Gambetta; D. R. Watson, *Georges Clemenceau* (1974), on the Radical parliamentarian and premier; and H. Goldberg, *The Life of Jean Jaurès* (1962), on the Socialist tribune. Informative studies of the Dreyfus affair may be found in D. Johnson, *France and the Dreyfus Affair* (1967); E. Cahm, *The Dreyfus Affair in French Society and Politics* (1996); M. P. Johnson, *The Dreyfus Affair* (1999); L. Derflur, *The Dreyfus Affair* (2002); and C. E. Forth, *The Dreyfus Affair and the Crisis of*

*French Manhood* (2004), which examines wider cultural responses to the Affair.

### Great Britain, 1871–1914

E. J. Feuchtwanger, *Democracy and Empire: Britain, 1865–1914* (1985) places the period in broad context. Other useful surveys include N. McCord, *British History, 1815–1906* (1991); D. Read, *The Age of Urban Democracy: England, 1868–1914* (rev. 1994); and K. Robbins, *The British Isles, 1901–1951* (2003). The economy is studied in F. Crouzet, *The Victorian Economy* (trans. 1982); S. Pollard, *British Economy, 1870–1914* (1989); E. J. Hobsbawm, *Industry and Empire* (rev. 1999); and B. W. E. Alford, *Britain in the World Economy since 1880* (1996). Special insights are added in A. L. Friedberg, *The Weary Titan: Britain and the Experience of Relative Decline, 1895–1905* (1989) and B. Porter, *Britain, Europe, and the World, 1850–1886* (rev. 1987). Two valuable bibliographical guides are H. J. Hanham (ed.), *Bibliography of British History, 1851–1914* (1977) and A. F. Havighurst, *Modern England, 1901–1984* (rev. 1988).

The patterns of urban and rural life and the shift to an urban society are examined in two outstanding collaborative histories: H. J. Dyos and M. Wolff (eds.), *The Victorian City* (2 vols.; 1973) and G. E. Mingay (ed.), *The Victorian Countryside* (2 vols.; 1981); the shift to an urban society is examined in detail in G. E. Mingay, *The Transformation of Britain, 1830–1939* (1986). The changing fortunes of the landed aristocracy are studied in F. M. L. Thompson, *English Landed Society in the Nineteenth Century* (1989) and D. Cannadine, *The Decline and Fall of the British Aristocracy* (1990), which focuses with telling detail on the 1870s to the present.

In addition one may read G. M. Young, *Portrait of an Age: Victorian England* (2 vols.; 1934, 1977); three books by A. Briggs: *Victorian People* (1954), *Victorian Cities* (1963), and *Victorian Things* (1989); G. S. R. Kitson Clark, *The Making of Victorian England* (1967); and the descriptions of Victorian society in A. N. Wilson, *The Victorians* (2003). Of the many biographies of Victoria, one may still turn to E. Longford, *Queen Victoria* (1965), a sympathetic yet balanced account, and S. Weintraub's two books: *Victoria* (rev. 1996), a reappraisal with interesting insights, and *Uncrowned King: The Life of Prince Albert* (1997); a more recent analysis may be found in W. L. Arnstein, *Queen Victoria* (2003).

In addition to many older studies of Gladstone, there are useful biographies by E. J. Feuchtwanger (1975), P. Stansky (1979), and R. Jenkins (1997); there are also concise accounts by E. F. Biagini (2000) and M. Partridge (2003). For Disraeli, older biographies have been superseded by R. Blake, *Disraeli* (1967, 1998), a biography of distinction; there are other studies by G. Bradford (1983), J. Vincent (1990), S. Weintraub (1993), and E. J. Feuchtwanger (2000). One may also read R. Shannon, *The Age of Disraeli,*

*1868–1881: The Rise of Tory Democracy* (1992). In addition to older biographies, useful works on Joseph Chamberlain include R. Jay, *Joseph Chamberlain* (1981) and M. Balfour, *Britain and Joseph Chamberlain* (1985). There is a comprehensive four-volume biography of David Lloyd George by J. Grigg (1973–2002); briefer accounts are available by M. Pugh (1988), S. Constantine (1991), C. Wrigley (1992), and I. Packer (1998). For Asquith one may read R. Jenkins, *Asquith* (rev. 1986); and for Balfour, R. F. Mackay, *Balfour: Intellectual Statesman* (1985).

On the extension of the suffrage in 1867 one may read M. Cowling, *1867: Disraeli, Gladstone, and Revolution: The Passing of the Second Reform Bill* (1967) and F. B. Smith, *The Making of the Second Reform Bill* (1966). The transformation of the Liberals in the early twentieth century is studied in G. L. Bernstein, *Liberalism and Liberal Politics in Edwardian England* (1986) and D. Powell, *The Edwardian Crisis: Britain, 1910–1914* (1996). An important account of a critical event is B. K. Murray, *The People's Budget, 1909–1910: Lloyd George and Liberal Politics* (1980). The emergence of the “new liberalism” in the early twentieth century is clarified in D. Roberts, *Origins of the British Welfare State* (1960); P. Clarke, *Liberals and Social Democrats* (1978); M. Freedman, *The New Liberalism: An Ideology of Social Reform* (1978); and J. Brown, *The Welfare State in Britain* (1993). J. Gray, *Isaiah Berlin* (1996), and Berlin's own writings exemplify the later evolution of twentieth-century liberalism.

The Irish question is discussed in J. C. Beckett, *The Making of Modern Ireland* (rev. 1981), cited earlier; K. T. Hoppen, *Ireland since 1800: Conflict and Conformity* (rev. 1999); O. Walsh, *Ireland's Independence* (2002); and in two books by D. G. Boyce: *Ireland, 1828–1923* (1992) and *Nationalism in Ireland* (rev. 1995). There is a remarkable study focusing on the years 1912–1921 by G. Dangerfield, *The Damnable Question: A Study of Anglo-Irish Relations* (1976). The same author's *The Strange Death of Liberal England* (1935, 1997) remains provocative as a searching study of the tensions in English society between 1910 and 1914. For informative essays on Britain's global influence in this era, one may turn to Vols. 3 and 4 of *The Oxford History of the British Empire*: A. Porter (ed.), *The Nineteenth Century* (1999) and J. M. Brown and W. R. Louis (eds.), *The Twentieth Century* (1999).

### The German Empire, Italy

To books for Germany in the nineteenth century already cited may be added: H. U. Wehler, *The German Empire, 1871–1918* (1973; trans. 1985), reflecting the thinking of an influential generation of German historians; V. R. Berghahn, *Imperial Germany, 1871–1918* (rev. 2005) and *Modern Germany: Society, Economy, and Politics in the Twentieth Century* (rev. 1987); the concise surveys by M. Sturmer, *The German Empire,*

1870–1918 (2000), and by M. S. Seligmann and R. R. McLean, *Germany from Reich to Republic, 1871–1918* (2000); and the important comprehensive study by M. L. Anderson, *Practicing Democracy: Elections and Political Culture in Imperial Germany* (2000).

Other stimulating, interpretive works on imperial Germany and class relationships include D. Blackbourn and G. Eley, *The Peculiarities of German History: Bourgeois Society and Politics in Nineteenth-Century German History* (1984); G. Eley, *From Unification to Nazism: Reinterpreting the German Past* (1986); D. Blackbourn, *Populists and Patricians: Essays in Modern German History* (1987); R. J. Evans, *Rethinking German History: Nineteenth Century Germany and the Origins of the Third Reich* (1990); and the essays in two useful collections: J. C. Fout (ed.), *Politics, Parties, and the Authoritarian State: Imperial Germany, 1871–1918* (2 vols.; 1986), and G. Eley (ed.), *Society, Culture, and the State in Germany, 1870–1930* (1996).

For developments in the immediate post-Bismarckian years one may read J. C. G. Röhl, *Germany without Bismarck: The Crisis of Government in the Second Reich, 1890–1900* (1968). Two outstanding biographies of William II are M. Balfour, *The Kaiser and His Times* (1964) and L. Cecil's two-volume work: *William II: Prince and Emperor, 1859–1900* (1989) and *Emperor and Exile, 1900–1941* (1996). T. A. Kohut, *Wilhelm II and the Germans* (1991) is an insightful study, as is J. C. G. Röhl, *The Kaiser and His Court: Wilhelm II and the Government of Germany* (1996). The universities in this era are examined in K. H. Jarausch, *Students, Society, and Politics in Imperial Germany: The Rise of Academic Liberalism* (1982); and the same author has also written an illuminating biographical study of Bethmann-Hollweg (1973). Of special interest for pre-1914 German society are R. Gay, *The Jews of Germany* (1992) and F. Stern, *Einstein's German World* (1999).

The best narrative accounts of Italy since unification are D. Mack Smith, *Modern Italy* (rev. 1997), cited earlier, and M. Clark, *Modern Italy, 1871–1995* (rev. 1996). For the years after unification, an illuminating account is C. Seton-Watson, *Italy from Liberalism to Fascism, 1870–1925* (1967), which may be supplemented by J. A. Thayer, *Italy and the Great War: Politics and Culture, 1870–1915* (1964); S. Saladino, *Italy from Unification to 1919* (1970); and R. A. Webster, *Industrial Imperialism in Italy, 1908–1915* (1976).

### Useful Web Sites

Useful materials on economic history are available through the Web site of Binghamton University's *Fernand Braudel Center for the Study of Economies, Historical Systems, and Civilizations* at <http://fbc.binghamton.edu/>, where historians stress the develop-

ment of global economic exchanges. Readers will also find links to helpful resources at Leiden University's *History of International Migration*, [www.let.leidenuniv.nl/history/migration/](http://www.let.leidenuniv.nl/history/migration/), a site that includes information on migration patterns over several centuries. There is an excellent collection of French images and sources on the Paris commune at Northwestern University's site, *The Siege and Commune of Paris*, [www.library.northwestern.edu/spec/siege/](http://www.library.northwestern.edu/spec/siege/). Accessible historical overviews and other materials on Britain have been collected at [www.bbc.co.uk/history/timelines/britain/o\\_early\\_20cent.shtml](http://www.bbc.co.uk/history/timelines/britain/o_early_20cent.shtml), which is a component of the informative *BBC-History* Web site.

## 15. EUROPEAN CIVILIZATION, 1871–1914: SOCIETY AND CULTURE

Many books on the social, cultural, and intellectual history of the nineteenth century have been listed in earlier chapters, beginning with Chapter 11.

### Labor, Social Democracy, Socialism

Overall introductions include H. Mitchell and P. N. Stearns, *Workers and Protest: The European Labor Movement, the Working Classes, and the Origins of Social Democracy, 1890–1914* (1971); A. Przeworski, *Capitalism and Social Democracy* (1985); D. Sassoon, *One Hundred Years of Socialism: The West European Left in the Twentieth Century* (1996), taking its start in 1889; and G. Eley, *Forging Democracy: the History of the Left in Europe, 1850–2000* (2002).

There are many specific studies of Socialist parties in each country. For Germany, informative books include C. E. Schorske, *German Social Democracy, 1905–1917* (1955); P. Gay, *The Dilemma of Democratic Socialism: Eduard Bernstein's Challenge to Marx* (rev. 1962); M. B. Steger, *The Quest for Evolutionary Socialism: Eduard Bernstein and Social Democracy* (1997); S. Pierson, *Marxist Intellectuals and the Working Class Mentality in Germany, 1887–1912* (1993); W. M. Maehl, *August Bebel: Shadow Emperor of the German Workers* (1980); S. Berger, *Social Democracy and the Working Class in Nineteenth and Twentieth Century Germany* (2000); and V. L. Lidtke, *The Outlawed Party: Social Democracy in Germany, 1878–1890* (1966). Lidtke has also written an outstanding study of the working-class culture that developed around the German Socialist movement: *The Alternative Culture: Socialist Labor in Imperial Germany* (1985).

For Britain N. MacKenzie and J. MacKenzie, *The Fabians* (1977) skillfully combines biography and social and intellectual history, while two leading Fabians, Sidney and Beatrice Webb, are studied in R. J. Harrison, *The Life and Times of Sidney and Beatrice Webb* (2000) and P. Beilharz and C. Nyland (eds.), *The Webbs, Fabianism, and Feminism* (1998). Informative works on George Bernard Shaw include biographies

by M. Holroyd (1998), which condenses a comprehensive, multivolume study, and L. Hugo (1999). The origins of British socialism are probed in S. Pierson, *Marxism and the Origins of British Socialism* (1973) and *British Socialists: The Journey from Fantasy to Politics* (1979); and a related subject is studied in R. Moore, *The Emergence of the Labour Party, 1880–1924* (1978), a thoughtful synthesis. The role of women in early British socialism is examined in J. Hannam and K. Hunt, *Socialist Women: Britain, 1880s to 1920s* (2002).

For France, for an overall view with many interesting insights, one may read T. Judt, *Marxism and the French Left: Studies in Labour and Politics in France, 1830–1981* (1986); R. Magraw, *A History of the French Working Class* (2 vols.; 1992), the first volume studying the years 1815–1870; the second, 1871–1939; P. M. Pilbeam, *French Socialists Before Marx: Workers, Women and the Social Question in France* (2000); and R. Stuart, *Marxism at Work: Ideology, Class, and French Socialism during the Third Republic* (1992). There are informative biographical studies of Socialist leaders; among them H. Goldberg on Jean Jaurès (1962), cited earlier; L. Derfler (1977) and M. M. Farrar (1991) on Alexandre Millerand; L. Derfler on Paul Lafargue (2 vols.; 1991, 1998); and K. S. Vincent on Pierre-Joseph Proudhon (1985) and Benoît Malon (1992).

On the Socialist international organization, J. Joll, *The Second International, 1889–1914* (rev. 1974) is a concise survey; and J. Braunthal, *History of the International* (3 vols.; trans. 1961–1980) is a detailed study. The breakup of the International is described in G. Haupt, *Socialism and the Great War: The Collapse of the Second International* (1972). The most comprehensive introduction to anarchism is G. Woodcock, *Anarchism: A History of Libertarian Ideas and Movements* (1962), but also useful are J. Joll, *The Anarchists* (rev. 1981); R. D. Sonn, *Anarchism* (1992); and C. Ward, *Anarchism: A Very Short Introduction* (2004).

### Labor History in Cultural Context

Recent labor history has attempted to convey the experiences of laboring men and women apart from organized labor movements and to integrate labor protest into a broader cultural context. Here E. P. Thompson's works have been cited earlier. Another exemplar, E. J. Hobsbawm, has written, among other books, *Primitive Rebels* (rev. 1971), *Labouring Men* (1964), and *Workers: Worlds of Labour* (1985). A successful study of the English experience in these years is S. Meacham, *A Life Apart: The English Working Class, 1890–1914* (1977). Other interesting works for British labor are J. Benson, *The Working Class in Britain, 1850–1939* (1989); D. M. MacRaild and D. E. Martin, *Labour in British Society, 1830–1914* (2000); J. Bourke, *Working-Class Cultures in Britain, 1890–1960: Gen-*

*der, Class, and Ethnicity* (1994); and A. McIvor, *A History of Work in Britain, 1880–1950* (2001).

For France examples of labor history include J. W. Scott, *The Glassmakers of Carmaux: French Craftsmen and Political Action in a Nineteenth-Century City* (1974); B. H. Moss, *The Origins of the French Labor Movement, 1830–1914: The Socialism of Skilled Workers* (1976); L. R. Berlanstein, *The Working People of Paris, 1871–1914* (1984); M. P. Hanagan, *The Logic of Solidarity: Artisans and Workers in Three French Towns, 1871–1914* (1980); D. Reid, *The Miners of Decazeville* (1986) and *Paris Sewers and Sewermen* (1991); J. G. Coffin, *The Politics of Women's Work: The Paris Garment Trades, 1750–1915* (1996); and N. L. Green, *Ready-to-Wear and Ready-to-Work: A Century of Industry and Immigrants in Paris and New York* (1997), an excellent study of twentieth-century labor that exemplifies the cross-cultural themes of comparative social history. A comprehensive study is G. Noiriel, *Workers in French Society in the 19th and 20th Centuries* (trans. 1990); and the strike as a social phenomenon in these years is studied in M. Perrot, *Workers on Strike: France, 1871–1890* (trans. 1987). The importance of syndicalism is examined in several older books and in S. Milner, *French Syndicalism and the International Labor Movement, 1900–1914* (1990).

For Germany books providing broad insights into politics, society, and class include D. Crew, *Town in the Ruhr: A Social History of Bochum, 1860–1914* (1979); D. Blackbourn, *Class, Religion, and Local Politics in Wilhelmine Germany* (1980); M. Nolan, *Social Democracy and Society: Working Class Radicalism in Düsseldorf, 1890–1920* (1980); and S. H. F. Hickey, *Workers in Imperial Germany: The Miners of the Ruhr* (1985).

### Women's History, Women's Rights, Feminism

Books on recent themes in women's history have been cited in the introductory section and in earlier chapters. For the background to women's history in modern Europe, one may turn to K. Offen, *European Feminisms, 1700–1950: A Political History* (2000); P. Branca, *Women in Europe since 1750* (1978); S. Delamont and L. Duffin (eds.), *The Nineteenth-Century Woman: Her Cultural and Physical World* (1978); P. S. Robertson, *An Experience of Women: Patterns and Change in Nineteenth-Century Europe* (1982); and I. Bloom, K. Hagemann, and C. Hall (eds.), *Gendered Nations: Nationalisms and Gender Order in the Long Nineteenth Century* (2000), which examines conceptions of manhood and womanhood in this era. Women's lives and activities are documented in E. O. Hellerstein, L. P. Hume, and K. M. Offen (eds.), *Victorian Women: A Documentary Account of Women's Lives in Nineteenth-Century England, France, and the United States* (1981). S. Rowbotham, *A Century of Women: The History of Women in Britain and the*

*United States* (1997) begins with chapters on the era before The First World War.

For Britain in this era a sampling of the many studies that examine the status and role of women of various backgrounds would include M. Vicinus, *Suffer and Be Still: Women in the Victorian Age* (1973), and the volume she has edited, *A Widening Sphere: Changing Roles of Victorian Women* (1977); P. Branca, *Silent Sisterhood: Middle Class Women in the Victorian Home* (1975); E. Longworth, *Eminent Victorian Women* (1981); and B. Caine, *Victorian Feminists* (1982). J. Giles, *Women, Identity and Private Life in Britain, 1900–50* (1995) describes the experiences of women in the early twentieth century.

Working-class women are studied in N. C. Solden, *Women in British Trade Unions, 1874–1976* (1978) and E. Roberts, *A Woman's Place: An Oral History of Working Class Women* (1985). A key social problem is thoughtfully examined in J. R. Walkowitz, *Prostitution and Victorian Society: Women, Class, and the State* (1980); the same author has also written *City of Dreadful Delight: Narratives of Sexual Danger in Late-Victorian London* (1992). One may also read P. McHugh, *Prostitution and Victorian Social Reform* (1980).

The struggle for women's suffrage is studied in C. Rover, *Women's Suffrage and Party Politics in Britain, 1866–1914* (1967); D. Morgan, *Suffragists and Liberals: the Politics of Woman Suffrage in England* (1975); A. Rosen, *Rise Up Women!: The Women's Social and Political Union, 1903–1914* (1974); C. Law, *Suffrage and Power: The Women's Movement, 1918–1928* (1997); and J. Liddington and J. Norris, *One Hand Tied Behind Us: The Rise of the Women's Suffrage Movement* (rev. 2000). D. Mitchell's popular account, *The Fighting Pankhursts: A Study in Tenacity* (1967), may be supplemented by P. W. Romero, *E. Sylvia Pankhurst: Portrait of a Radical* (1987); and B. Winslow, *Sylvia Pankhurst: Sexual Politics and Political Activism* (1996). In addition, S. S. Holton, *Feminism and Democracy: Women's Suffrage and Reform Politics in Britain, 1900–1918* (1986) focuses on less known provincial suffragists, and S. K. Kent, *Sex and Suffrage in Britain, 1860–1914* (1990) sees the suffrage campaign as part of a broader movement for a reformed society.

The history of women in the Third French Republic is examined in J. F. McMillan, *Housewife or Harlot: The Place of Women in French Society, 1870–1940* (1981), the title derived from a remark by Proudhon, and in the same author's excellent *France and Women, 1789–1914: Gender, Society, and Politics* (2000). S. C. Hause with A. R. Kenney, *Women's Suffrage and Social Politics in the French Third Republic* (1984) explores the failed movement in these years to extend the suffrage to women.

Other works on French women in this age include B. G. Smith, *Ladies of the Leisure Class: The Bourgeoises of Northern France in the Nineteenth Century*

(1982); C. G. Moses, *French Feminism in the Nineteenth Century* (1984); J. W. Scott, *Only Paradoxes to Offer: French Feminists and the Rights of Man* (1996); M. L. Roberts, *Disruptive Acts: The New Woman in Fin-de-Siècle France* (2002); and E. A. Accampo and others, *Gender and the Politics of Social Reform in France, 1870–1914* (1995). An informative comparative study is T. McBride, *The Domestic Revolution: The Modernization of Household Service in England and France, 1820–1920* (1976). The essays in J. B. Margadant (ed.), *The New Biography: Performing Femininity in Nineteenth-Century France* (2000) have been cited earlier.

On the activist role of women in the Socialist movement one may turn to R. J. Evans, *Comrades and Sisters: Feminism, Socialism, and Pacifism in Europe, 1870–1945* (1987); and M. J. Boxer and J. H. Quataert (eds.), *Socialist Women: European Socialist Feminism in the Nineteenth and Early Twentieth Centuries* (1978), cited earlier. For the German Socialists there is J. H. Quataert, *Reluctant Feminists in German Social Democracy, 1865–1917* (1979); and for the French, C. Sowerwine, *Sisters or Citizens: Women and Socialism in France since 1876* (1982); and P. Hilden, *Working Class Women and Socialist Politics in France: A Regional Study, 1880–1914* (1986). For Rosa Luxemburg and her contributions to German and international socialism, J. P. Netti, *Rosa Luxemburg* (2 vols., 1966; abridged 1 vol., 1969) is an admirable biography. Other studies include books by N. Geras (1976), E. Eltinger (1987), R. Abraham (1989), S. E. Bronner (1990), D. E. Shepardson (1996), and J. Mathilde (trans. 2000).

The role of women in German society is examined in R. F. B. Joeres and M. J. Maynes (eds.), *German Women in the Eighteenth and Nineteenth Centuries* (1986); J. C. Fout (ed.), *German Women in the Nineteenth Century: A Social History* (1984); and U. Frevert, *Women in German History: From Bourgeois Emancipation to Sexual Liberation* (1989).

R. J. Evans provides a comparative study in *The Feminists: Women's Emancipation Movements in Europe, America, and Australia, 1840–1920* (1977) and focuses on a single country in *The Feminist Movement in Germany, 1894–1933* (1976). On the transatlantic and international campaign in the nineteenth century, one may turn to B. S. Anderson, *Joyous Greetings: The First International Women's Movement, 1830–1860* (2000). The scene in Russia is studied in R. Stites, *The Women's Liberation Movement in Russia: Feminism, Nihilism, and Bolshevism, 1860–1930* (rev. 1991). On the two pioneer women leaders of emancipation in the United States, one may read G. C. Ward, *Not for Ourselves Alone: The Story of Elizabeth Cady Stanton and Susan B. Anthony* (1999).

### Cultural and Intellectual History

Helpful surveys of cultural and intellectual history are available in G. L. Mosse, *The Culture of Western Eu-*

rope: *The Nineteenth and Twentieth Centuries* (rev. 1988) and R. N. Stromberg, *European Intellectual History Since 1789* (rev. 1994), both cited earlier; and the more recent work by J. Winders, *European Culture Since 1848* (2001). A few special books on this period also deserve mention. R. Wohl, *The Generation of 1914* (1979) relates the restlessness of the postwar generation to the prewar ferment; B. W. Tuchman, *The Proud Tower: A Portrait of the World before the War, 1890–1914* (1966) is an older, popular account with colorful vignettes; and E. R. Tannenbaum, *1900: The Generation Before the Great War* (1976) offers a potpourri of insights into the social history of the times. A. J. Mayer, *The Persistence of the Old Regime: Europe to the Great War* (1981) contends that aristocratic values dominated European society and culture down to 1914. A positive assessment of the closing years of the nineteenth century emerges from the essays in M. Teich and R. Porter (eds.), *Fin de Siècle and Its Legacy* (1990). Changing conceptions of European selfhood and individual experience are explored in three notable works of European intellectual history, J. Seigel, *The Idea of the Self: Thought and Experience in Western Europe Since the Seventeenth Century* (2005); J. E. Goldstein, *The Post-Revolutionary Self: Politics and Psyche in France, 1750–1850* (2005); and M. Jay, *Songs of Experience: Modern American and European Variations on a Universal Theme* (2005).

In a special category and a major contribution to social and cultural history of this era is P. Gay, *The Bourgeois Experience: Victoria to Freud* (5 vols.; 1984–1998); the five volumes illuminate in fascinating detail how Victorian men and women in their emotional life were not inhibited by social restraints. One should also read D. Newcome, *The Victorian World Picture* (1997), on how the world perceived the Victorians and how they perceived themselves. The cultural history of homosexuality in this era is examined in a wide-ranging account by G. Robb, *Strangers: Homosexual Love in the 19th Century* (2004).

For France an unconventional social history with absorbing details and insights is T. Zeldin, *France, 1848–1945* (2 vols.; 1973–1977, 1992): Vol. I, *Ambition, Love and Politics*, and Vol. II, *Intellect, Taste and Anxiety*. Other aspects of French social and cultural history are studied in E. Weber, *France, Fin de Siècle* (1986), which offers vignettes and anecdotal insights into French society and life; the same author demonstrates that French national unity was accomplished only belatedly by such agencies as the schools and army in *Peasants into Frenchmen: The Modernization of Rural France, 1870–1914* (1976). The arts and cultural life are examined in R. Shattuck, *The Banquet Years: The Arts in France, 1885–1918* (1958); T. J. Clark, *Image of the People* (1973) and *The Painting of Modern Life: Paris in the Art of Monet and His Followers* (1984, 1999); and J. Seigel, *Bohemian Paris: Culture, Politics, and the Boundaries of Bourgeois*

*Life, 1830–1930* (1986). J. H. Rubin, *Impressionism* (1999) offers a useful introduction to this influential group of artists.

Three introductions to the origins of modern art in France and subsequent developments are H. H. Arnason, *History of Modern Art* (rev. 2004); S. Pendergast and T. Pendergast (eds.), *Contemporary Artists* (rev. 2002); and R. R. Brettell, *Modern Art, 1851–1929: Capitalism and Representation* (1999), which relates the major avant-garde innovations to the rapid social, economic, and political changes of the age. S. Kern, *The Culture of Time and Space, 1880–1918* (1983) also stresses the cultural responses to changing modern technologies.

C. E. Schorske, *Fin de Siècle Vienna: Politics and Culture* (1979) is a remarkable study of political, artistic, and intellectual responses to the failures of late-nineteenth-century liberalism in central Europe. Important also is A. Janik and S. Toulmin, *Wittgenstein's Vienna* (1973), while an evocative portrait of life and creativity in the second city of the empire is J. Lukacs, *Budapest 1900* (1989).

## New Movements in Science

A general introduction to science in the nineteenth and early twentieth centuries is available in D. Knight, *The Age of Science* (1986). On biology, evolution, and Darwinism there is a considerable literature, much of it published in recent years. One may turn to A. Desmond, *The Politics of Evolution* (1989); A. Desmond and J. Moore, *Darwin* (1991); D. I. Hull, *Darwin and His Critics* (1993); and a two-volume study by J. Browne, *Charles Darwin: Voyaging* (1995) and *Charles Darwin: The Power of Place* (2002). Desmond has also written an extraordinary biography of Darwin's forceful champion, Huxley: *From Devil's Disciple to Evolution's High Priest* (1997). The ongoing debate about Darwin's theories may be sampled in N. Eldridge, *Reinventing Darwin* (1995); the same author's *The Triumph of Evolution and the Failures of Creationism* (2000); and D. J. Depew and B. H. Weber, *Darwinism Evolving* (1995). S. Jones, *Darwin's Ghost: "The Origins of the Species" Updated* (2000) is a remarkable rewriting of Darwin in light of the evolutionary biology that has developed since his day. Other books on evolution written by P. J. Bowler (1990), J. Bowlby (1991), and D. Young (1993) also merit attention.

Brief biographical accounts of two other key biologists of this era are L. J. Jordanova, *Lamarck* (1985) and V. Orel, *Mendel* (1985). The breakthrough in geology and its cultural impact may be studied in C. C. Gillispie, *Genesis and Geology* (1951); R. Porter, *The Making of Geology* (1977); D. R. Dean, *James Hutton and the History of Geology* (1992); and S. J. Gould, *Time's Arrow, Time's Cycle: Myth and Metaphor in the Discovery of Geological Time* (1987).

For the impact of these scientific developments on religion, informative studies include W. Irvine,

*Apes, Angels, and Victorians* (1955, 1983); J. R. Moore, *The Post-Darwinian Controversies* (1979); D. C. Lindberg and R. L. Numbers (eds.), *Historical Essays on the Encounter between Christianity and Science* (1986); and H. J. Brooke, *Science and Religion: Some Historical Perspectives* (1991). On the famous Scopes trial of 1925 in the United States, an even-handed scholarly account is E. J. Larson, *Summer for the Gods: The Scopes Trial and America's Continuing Debate over Science and Religion* (1998).

Debates on the nature of scientific discovery still refer often to the influential work of T. S. Kuhn, *The Structure of Scientific Revolutions* (1962, 1989). On the emergence of modern physics and the transformation of Newtonian concepts one may turn to V. F. Weisskopf, *Physics in the Twentieth Century* (1972) and B. L. Cline, *Men Who Made a New Physics* (1965, 1987). Einstein may be approached through two major biographies: A. Pais, *"Subtle is the Lord" The Science and the Life of Albert Einstein* (1982), and A. Folsing, *Albert Einstein* (1993, trans. 1997), excellent both for Einstein's science and his personal life. There are informative accounts also by R. W. Clark (1971), J. Bernstein (1973), M. White and J. Gribbon (1994), D. Brian (1996), and P. D. Smith (2003). Recommended biographies of two other contributors to the new physics are S. Quinn, *Marie Curie* (1995) and R. L. Sime, *Lise Meitner: A Life in Physics* (1997).

For Freud there is an older biography by E. Jones, an English co-worker (1 vol. abridged; 1974), and many other studies including the thoughtful work by P. Gay, *Freud: A Life for Our Time* (1988). A. Storr, *Freud* (1989) is a good brief assessment; and J. Lear, *Freud* (2005) examines his contributions to modern thought. To sample the large literature critical of Freud one may read A. Esterson, *Seductive Mirage: An Exploration of the Work of Sigmund Freud* (1993) and the essays in M. S. Roth (ed.), *Freud: Conflict and Culture* (1998).

### Social Thought

Outstanding works are H. S. Hughes, *Consciousness and Society: The Reorientation of European Social Thought, 1890–1930* (1958); G. Masur, *Prophets of Yesterday: Studies in European Culture, 1890–1914* (1961); M. Biddis, *Age of the Masses: Ideas and Society Since 1870* (1977); W. R. Everdell, *The First Moderns: Profiles in the Origins of Twentieth-Century Thought* (1997); and J. W. Burrow, *The Crisis of Reason: European Thought, 1848–1914* (2000). Virtually a history of thought from Herbert Spencer to the recent past is W. W. Wagar, *Good Tidings: The Belief in Progress from Darwin to Marcuse* (1972); on that theme one may also read R. Nisbet, *History of the Idea of Progress* (1980, reissued 1994), and a thoughtful collaborative volume, G. Almond and others (eds.), *Progress and Its Discontents* (1982).

The best studies of Nietzsche are W. A. Kaufmann, *Nietzsche: Philosopher, Psychologist, An-*

*tichrist* (rev. 1974); R. Hayman, *Nietzsche: A Critical Life* (1980); R. J. Hollingdale, *Nietzsche: The Man and His Philosophy* (rev. 1999); and T. B. Strong, *Friedrich Nietzsche and the Politics of Transfiguration* (rev. 2000). There are other biographical and analytical studies by C. Brinton (1941, 1965), J. P. Stern (1979), R. Schacht (1983), G. Clive (1984), and R. Wicks (2002). Useful anthologies for these years include R. N. Stromberg (ed.), *Realism, Naturalism, and Symbolism: Modes of Thought and Expression in Europe, 1848–1914* (1968); E. Weber (ed.), *Movements, Currents, Trends: Aspects of European Thought in the Nineteenth and Twentieth Centuries* (1991); and A. Fried and R. Sanders, *Socialist Thought: A Documentary History* (rev. 1993).

### Religion since 1871

The relationship between secularized European civilization and its Christian origins is ably treated in O. Chadwick, *The Secularization of the European Mind in the Nineteenth Century* (1976), cited in Chapter 11, and H. McLeod, *Religion and the People of Western Europe, 1789–1989* (rev. 1997). For religious thought J. Pelikan, *Christian Doctrine and Modern Culture: Since 1700* (1990), the final volume of his comprehensive *The Christian Tradition*, may be read along with C. Welch, *Protestant Thought in the Nineteenth Century* (2 vols.; 1985), the second volume studying the years 1870–1914. For the Roman Catholic reactions to the changes in science and religious scholarship, one may read T. M. Looze, *Liberal Catholicism, Reform Catholicism, and Modernism* (1979) and L. R. Kurtz, *The Politics of Heresy: The Modernist Crisis in Roman Catholicism* (1986).

For Judaism H. M. Sachar, *The Course of Modern Jewish History* (rev. 1990) and *A History of Israel: From the Rise of Zionism to Our Time* (rev. 1996) relate the nineteenth-century background; the same author has written the comprehensive survey, *A History of Jews in the Modern World* (2005), cited earlier. The fullest account of Zionism's emergence as an ideology is the impressive three-volume study by D. Vital: *The Origins of Zionism* (1975); *Zionism: The Formative Years* (1982); and *Zionism: The Crucial Phase* (1987), which carries the story to 1919. A more concise account may be found in M. Brenner, *Zionism: A Brief History* (trans. 2003); and another insightful work is S. Avineri, *The Making of Modern Zionism: The Intellectual Origins of the Jewish State* (1981).

### The Assault on Liberalism: Racism, the Cult of Violence

Many of the books cited earlier in this chapter under Social Thought examine the undermining of liberal values in the late nineteenth century, with implications for the years that followed. Two classic studies are H. Arendt, *The Origins of Totalitarianism* (rev. 1973), an influential, far-reaching work; and J. Barzun, *Darwin, Marx, Wagner: Critique of a Heritage* (rev.

1981), which stresses similarities as the author sees them in the way each of these figures undermined classical liberalism. These books may be supplemented by J. W. Burrow, *The Crisis of Reason: European Thought, 1848–1914* (2000), cited earlier.

For racism and anti-Semitism in these years one may read P. Pulzer, *The Rise of Political Anti-Semitism in Germany and Austria* (rev. 1988); L. Poliakov, *The Aryan Myth: A History of Racist and Nationalist Ideas in Europe* (trans. 1974); J. Katz, *From Prejudice to Destruction: Anti-Semitism, 1700–1933* (1980); G. L. Mosse, *Toward the Final Solution: A History of European Racism* (1978); and two books by P. L. Rose, *Revolutionary Anti-Semitism in Germany from Kant to Wagner* (1991) and *Wagner: Race and Revolution* (1992). Anti-Semitism is placed in broad historical perspective in R. S. Wistrich, *Anti-Semitism: The Longest Hatred* (1992), a remarkable account ranging from pre-Christian times through the twentieth century; G. I. Langmuir, *History, Religion, and Anti-Semitism* (1990) and *Toward a Definition of Anti-Semitism* (1991); and two works by A. S. Lindemann, *Esau's Tears: Modern Anti-Semitism and the Rise of the Jews* (1997) and *Anti-Semitism before the Holocaust* (2000). European racial ideologies during these years are also examined in P. Brantlinger, *Dark Visions: Discourses on the Extinction of Primitive Races, 1800–1930* (2003).

Books on anti-Semitism in France relating to the Dreyfus Affair include S. Wilson, *Ideology and Experience: Anti-Semitism in Modern France at the Time of the Dreyfus Affair* (1982), which is especially insightful; books on the affair itself have already been cited. A. S. Lindemann, *The Jew Accused: Three Anti-Semitic Affairs: Dreyfus, Beilis, Frank, 1894–1915* (1991) skillfully compares the French affair with episodes in tsarist Russia and the United States. For comparative insights in other frameworks, one may read G. Fredrickson, *The Comparative Imagination: On the History of Racism, Nationalism, and Social Movements* (1998). J. J. Roth, *The Cult of Violence: Sorel and the Sorelians* (1980) is illuminating on the inspiration behind syndicalism. The origins of twentieth-century fascist ideology are studied in Z. Sternhell, *Neither Right Nor Left: Fascist Ideology in France* (1986) and, in collaboration with others, *The Birth of Fascist Ideology: From Cultural Rebellion to Political Revolution* (trans. 1994); these two much debated, controversial books find the roots of fascist thought in the ideas and ideology of the Left. A precursor of fascism is studied in C. S. Doty, *From Cultural Rebellion to Counterrevolution: The Politics of Maurice Barrès* (1976) and R. Soucy, *Fascism in France: The Case of Maurice Barrès* (1972).

### Useful Web Sites

There are links to all aspects of the modern history of labor and workers at *WWW Virtual Library Labour History*, which is maintained at the International Insti-

tute of Social History in Amsterdam at [www.iisg.nl/~w3vl/](http://www.iisg.nl/~w3vl/). Readers will also find links from this site to materials on the history of socialism, and the same Dutch Institute maintains *WWW Virtual Library Women's History* at [www.iisg.nl/w3vlwomenshistory/](http://www.iisg.nl/w3vlwomenshistory/), an excellent resource in English. Documents expressing the ideas of the new labor and women's movements as well as the themes of new intellectual trends such as Darwinism and Freudianism are available at Fordham University's *Internet Modern History Sourcebook*, [www.fordham.edu/halsall/mod/modsbook.html](http://www.fordham.edu/halsall/mod/modsbook.html), which has been cited in earlier chapters. There are excellent examples of Impressionism and other late nineteenth-century art at the site of the French *Musée d'Orsay*, [www.musee-orsay.fr](http://www.musee-orsay.fr), which may be searched in English, and at *The Art Institute of Chicago*, [www.artic.edu](http://www.artic.edu). Information and valuable links to other materials on Einstein and the science of his era may be found at the *Albert Einstein Archives*, <http://www.albert-einstein.org/>, a site based at The Hebrew University of Jerusalem. There are links to multiple sites on modern religious thought at the *Virtual Religion Index*, <http://virtualreligion.net/vri/>, a useful gateway to diverse materials on the history of all the world's major religions.

## 16. EUROPE'S WORLD SUPREMACY, 1871–1914

Many of the general accounts for the years 1871–1914 cited in the two previous chapters will also be helpful here. Informative introductions, some moving on into the twentieth century, include W. D. Smith, *European Imperialism in the Nineteenth and Twentieth Centuries* (1982); V. G. Kiernan, *From Conquest to Collapse: European Empires from 1815 to 1960* (1982); J. N. Pieterse, *Empire and Emancipation* (1980); and H. L. Wesseling, *The European Colonial Empires, 1815–1919* (trans. 2004). W. L. Langer, *The Diplomacy of Imperialism, 1890–1902* (2 vols.; 1935, 1951, 1965) remains valuable. The connections between imperialism and European political cultures are discussed in J. Pitts, *A Turn to Empire: The Rise of Imperial Liberalism in Britain and France* (2005); and the role played by Western technology in European expansion is examined in D. R. Headrick, *The Tools of Empire* (1981) and *The Tentacles of Progress* (1988). Similar themes are addressed in M. Adas, *Machines as the Measure of Men: Science, Technology, and Ideologies of Western Dominance* (1989). The role played by disease is examined in S. Watts, *Epidemics and History: Disease, Power, and Imperialism* (2000). A long-range view of European imperialism is provided in D. B. Abernathy, *The Dynamics of Global Dominance: European Overseas Empires, 1415–1980* (2001).

### Imperialism in General

Debate about the nature of imperialism has in part been stimulated by the seminal study of R. Robinson

and J. Gallagher, *Africa and the Victorians: The Official Mind of Imperialism* (1961, 1981), comparing political and economic motives; the debate is summarized in W. R. Louis (ed.), *Imperialism: The Robinson-Gallagher Controversy* (1976). Informative studies include D. Fieldhouse's two books, *Economics and Empire, 1830–1914* (1973) and *Colonialism, 1870–1945* (1981); and P. J. Cain and A. G. Hopkins, *British Imperialism: Innovation and Expansion, 1688–1914* (2 vols.; 1993). French imperial ideas and practices are examined in A. L. Conklin, *A Mission to Civilize: The Republican Idea of Empire in France and West Africa, 1895–1930* (1997). Motives and justifications for nineteenth-century imperialism are also analyzed in C. Reynolds, *Modes of Imperialism* (1981); T. Smith, *The Pattern of Imperialism* (1982); W. J. Mommsen, *Theories of Imperialism* (trans. 1980); and A. L. Conklin and I. C. Fletcher (eds.), *European Imperialism, 1830–1930: Climax and Contradiction* (1999). For the earlier phase of European imperialist expansion and cultural interaction in Egypt and India, see the colorful account in M. Jasanoff, *Edge of Empire: Lives, Culture, and Conquest in the East, 1750–1850* (2005).

Provocative discussions of the confrontation between Europeans and non-Europeans include R. Munnier, *The Sociology of Colonies: An Introduction to the Study of Race Contact* (2 vols.; 1949); D. Mannoni, *Prospero and Caliban: The Psychology of Colonization* (1956), which stresses the psychological impact on both rulers and the governed; T. Geiger, *The Conflicted Relationship: The West and the Transformation of Asia, Africa, and Latin America* (1967); G. W. Goug, *The Standards of "Civilization" in International Society* (1984); V. G. Kiernan, *The Lords of Human Kind: Black Man, Yellow Man, and White Man in the Age of Empire* (1987); and P. D. Curtin, *The World and the West: The European Challenge and the Overseas Response in the Age of Empire* (2000). European views of other cultures are also examined in M. L. Pratt, *Imperial Eyes: Travel Writing and Transculturation* (1992). E. Said, in an influential book, *Culture and Imperialism* (1994), explains how imperialism affected European culture itself. The issue of gender in European empires is examined in N. Chaudhuri and M. Strobel (eds.), *Western Women and Imperialism: Complicity and Resistance* (1992); and P. Levine (ed.), *Gender and Empire* (2004), which focuses on the British Empire.

### British and Other European Imperialisms

Recommended studies for British imperialism include B. Porter, *The Lion's Share: A Short History of British Imperialism, 1850–2004* (rev. 2004), a lively and informative account; R. Hyam, *Britain's Imperial Century, 1815–1914* (1976); and C. A. Bayly, *The Imperial Meridian: The British Empire and the World, 1780–1830* (1989). Domestic responses to imperial-

ism are examined in B. Porter, *The Absent-Minded Imperialists: Empire, Society, and Culture in Britain* (2004); and the opponents of imperialism are discussed in the same author's *Critics of Empire: British Radical Attitudes to Colonialism in Africa, 1895–1914* (1968). Excellent discussions of British colonial expansion may be found in W. R. Louis (ed.), *The Oxford History of the British Empire* (5 vols.; 1998–1999), of which the relevant volumes for this period are A. Porter (ed.), *The Nineteenth Century* (1999) and J. M. Brown (ed.), *The Twentieth Century* (1999). Accounts of people living within the empire may be found in P. D. Morgan and S. Hawkins (eds.), *Black Experience and the Empire* (2004).

The imperial activities of the other European powers are described in W. D. Smith, *The German Colonial Empire* (1978); H. Brunschwig, *French Colonialism, 1871–1914* (1960; trans. 1966); B. Singer and J. Landgon, *Cultured Force: Makers and Defenders of the French Colonial Empire* (2004); and M. Kuietenbrouwer, *The Netherlands and the Rise of Modern Imperialism* (trans. 1991). On both the theory and practice of imperialism an important comparative study is W. Baumgart, *Imperialism: The Idea and Reality of British and French Colonial Expansion, 1880–1914* (trans. 1982). Cross-cultural and interracial interactions are studied in J. Clancy-Smith and F. Gouda (eds.), *Domesticating the Empire: Race, Gender, and Family Life in French and Dutch Colonialism* (1998).

### The Americas

For all aspects of relationships with Latin America, the essays in the first five volumes of L. Bethell (ed.), *The Cambridge History of Latin America* (1988) are valuable: Vols. I and II, *Colonial Latin America*; Vol. III, *From Independence to c. 1870*; and Vols. IV and V, *From 1870 to 1930*. D. Bushnell and N. Macaulay, *The Emergence of Latin America in the Nineteenth Century* (rev. 1994) is a helpful survey; it may be supplemented by E. B. Burns, *The Poverty of Progress: Latin America in the Nineteenth Century* (1980) and by chapters on this period in J. Chasteen, *Born in Blood and Fire: A Concise History of Latin America* (rev. 2006).

The background to Napoleon III's fiasco in Mexico and the French intervention during the 1860s is discussed in N. N. Baker, *The French Experience in Mexico, 1821–1861* (1979) and M. Cunningham, *Mexico and the Foreign Policy of Napoleon III* (2001). Informative histories of Mexico are R. E. Ruiz, *Triumphs and Tragedy: A History of the Mexican People* (1992); E. Krauze, *Mexico, Biography of Power: A History of Modern Mexico, 1810–1996* (trans. 1997); and B. Hamnett, *A Concise History of Mexico* (1999). The nineteenth-century Mexican leader Benito Juárez is studied in B. Hamnett, *Juárez* (1994); and the Indian revolutionary leader Emiliano Zapata, in biographies

by J. Womack (1968) and R. Parkinson (1980). The last Brazilian monarch and his attempts at modernization are studied in R. J. Barman, *Citizen-Emperor: Pedro I and the Making of Brazil, 1825–1891* (2000).

For the imperialist activities of the United States in these years, one may consult W. LaFeber, *The New Empire* (1963); F. Merk, *Manifest Destiny and Mission in American History* (1963); and J. Dobson, *America's Ascent: The United States Becomes a Great Power, 1880–1914* (1978). Interpretive studies include W. A. Williams, *The Tragedy of American Diplomacy* (rev. 1988), highly critical of American imperialism; and E. R. May, *Imperial Democracy* (1961, reissued 1973) and *American Imperialism: A Speculative Essay* (1968), which are balanced assessments of American motives.

For the Spanish-American War one may read D. F. Trask, *The War with Spain in 1898* (1981); I. Musicant, *Empire by Default: The Spanish American War and the Dawn of the American Century* (1998); and the provocative analysis by L. Perez, Jr., *The War of 1898: The United States and Cuba in History and Historiography* (1998). Other studies of American expansion include S. Karnow, *In Our Image: America's Empire in the Philippines* (1989); B. M. Linn, *The Philippine War, 1899–1902* (2000); M. Tate, *The United States and the Hawaiian Kingdom* (1965); D. McCullough, *The Path between the Seas: The Creation of the Panama Canal, 1870–1914* (1977); and W. LaFeber, *The Panama Canal* (rev. 1989).

### The Ottoman Empire, the Middle East, and the Balkans

An informative synthesis for the years since the founding of Islam is S. N. Fisher and W. Ochenwald, *The Middle East: A History* (rev. 1997); the region's nineteenth-century history is examined in E. Karsh and I. Karsh, *Empires of the Sand: The Struggle for Mastery in the Middle East, 1789–1923* (1999). An excellent study of late Ottoman history is available in D. Quataert, *The Ottoman Empire, 1700–1922* (2000). For the role of the Ottoman Empire in European diplomacy and for national stirrings in the Empire, the books cited in Chapter 11 by M. S. Anderson (1966) and M. E. Yapp (1988) are instructive.

S. Deringil, *The Well-Protected Domains: Ideology and the Legitimation of Power in the Ottoman Empire, 1876–1909* (2001) describes the positive aspects of the often maligned Empire. J. Haslip, *The Sultan: The Life of Abdul Hamid II* (1958) is a vivid scholarly biography. The attempts at reform are discussed in D. Kushner, *The Rise of Turkish Nationalism, 1876–1908* (1977) and M. S. Hanioglu, *Preparation for a Revolution: The Young Turks, 1902–1908* (2001). For Egypt, there are available D. S. Landes, *Bankers and Pashas: International Finance and Economic Imperialism in Egypt* (1958); R. L. Tignor, *Modernization and British Colonial Rule in Egypt,*

*1882–1914* (1966); and T. Mitchell, *Colonising Egypt* (1988), a cultural history of European attitudes and policies. Carrying the story toward the present is P. J. Valikiotis, *The History of Modern Egypt: From Muhammad Ali [Mehemet Ali] to Mubarek* (rev. 1991). The diplomacy surrounding the construction of the Suez Canal may be studied in J. Pudney, *Suez: De Lesseps' Canal* (1969); and Z. Karabel, *Parting the Desert: The Creation of the Suez Canal* (2003). The French experience in Lebanon is examined in J. F. Spagnolo, *French and Ottoman Lebanon, 1861–1914* (1977), and the Italian occupation of Libya is studied in C. G. Segrè, *Fourth Shore: The Italian Colonialization of Libya* (1975).

For the rivalries in the Balkans and the emergent nationalist movements, in addition to books cited in Chapter 11, one may turn to B. H. Sumner, *Russia and the Balkans, 1870–1880* (1974) and B. Jelavich, *Russia's Balkan Entanglements, 1806–1914* (1991).

### Africa

Excellent introductions to African history are R. Oliver, *The African Experience: From the Olduvai Gorge to the 21st Century* (2000); J. Iliffe, *Africans: The History of a Continent* (1995); J. Reader, *Africa: A Biography of the Continent* (1998); and J. D. Fage with W. Tordoff, *A History of Africa* (rev. 2002), with chapters on the colonial era. Other valuable introductions include B. Davidson, *Africa in History* (rev. 1991); R. W. July, *A History of the African People* (rev. 1998); and P. D. Curtin and others, *African History* (rev. 1995). African historians, including A. E. Afigbo, E. A. Ayandele, and others study the continent over the past two centuries in *The Making of Modern Africa* (2 vols.; rev. 1986). The years of colonial domination and the African response are also studied by African scholars in J. F. A. Ajayi (ed.), *Africa in the Nineteenth Century until the 1880s* (1989) and A. A. Boahen (ed.), *Africa under Colonial Domination, 1880–1935* (1985; abridged ed. 1990). The use of oral histories in the reconstruction of African history is elucidated in J. Vansina, *Oral Tradition as History* (1985) and is demonstrated by the same author in *Kingdoms of the Savanna* (1966).

P. Duignan and L. H. Gann, *Burden of Empire: An Appraisal of Western Colonialism South of the Sahara* (1967) and their other writings emphasize a “benevolent imperialism.” In the same tradition, T. Pakenham has written a detailed narrative, *The Scramble for Africa: The White Man's Conquest of the Dark Continent from 1870 to 1912* (1992). These books may be compared with A. A. Boahen, *African Perspectives on Colonialism* (1989); F. McLynn, *Hearts of Darkness: The European Exploration of Africa* (1993); and M. E. Chamberlain, *The Scramble for Africa* (rev. 1999).

Available also are H. S. Wilson, *The Imperial Experience in Sub-Saharan Africa since 1870* (1977),

a well-balanced synthesis; and for the French experience, W. B. Cohen, *Rulers of Empire: The French Colonial Service in Africa* (1971) and *The French Encounter with Africans: White Response to Blacks, 1530–1880* (1980). On the slave trade and its abolition, in addition to works cited in Chapters 3, 9, 10, and 11, one may read B. Davidson, *Black Mother: Africa and the Atlantic Slave Trade* (rev. 1980); and on the Brussels Conference of 1889, S. Miers, *Britain and the Ending of the Slave Trade* (1975).

There are biographical studies of Livingstone by, among others, O. Ransford (1978) and M. Buxton (2001). Other leading figures are examined in R. Hall, *Stanley: An Adventurer Explored* (1976), highly informative; F. J. McLynn, *Stanley* (2 vols.; 1989, 1991); J. Bierman, *Dark Safari: The Life Behind the Legend of Henry Morton Stanley* (1990); J. H. Waller, *Gordon of Khartoum* (1988); J. Pollock, *Gordon: The Man Behind the Legend* (1993); and M. F. Perham, *Lugard* (2 vols.; 1956, 1960), an impressive older work. J. Pollock, *Kitchener: Architect of Victory, Artisan of Peace* (2001) and P. Warner, *Kitchener: The Man behind the Legend* (1986), somewhat adulatory, may be compared with T. Royle, *The Kitchener Enigma* (1986), which is more critical. The brief biography of Cecil Rhodes by J. Flint (1976) merits reading, but R. I. Rotberg, *The Founder: Cecil Rhodes and the Pursuit of Power* (1988, 1990) is an outstanding study enriched by psychological insights. For a biography of the African leader who defeated the Italians at Adowa, one may read H. G. Marcus, *The Life and Times of Menelik II: Ethiopia, 1844–1913* (1975).

The best studies of the Belgian atrocities in the Congo are R. Slade, *King Leopold's Congo* (1962); R. Anstey, *King Leopold's Legacy* (1966); and the vivid A. Hochschild, *King Leopold's Ghost: A Story of Greed, Terror, and Heroism in Colonial Africa* (1998).

For the emergence of the Union of South Africa and later events, L. Thompson, *A History of South Africa* (rev. 2000), is a superb synthesis; also available is R. Ross, *A Concise History of South Africa* (1999). The South African War of 1899–1902 is recounted in B. Farwell, *The Great Boer War* (1999) and T. Pakenham, *The Boer War* (1979). A thoughtful biographical account relating to these years is K. Ingham, *Jan Christian Smuts: The Conscience of a South African* (1986).

## Asia

Among informative general surveys of the European impact on Asia are the older works by K. M. Pannikar, *Asia and Western Dominance: The Vasco da Gama Epoch of Asian History, 1498–1945* (rev. 1959); E. S. Dodge, *Islands and Empires: Western Impact on the Pacific and East Asia* (1976); R. Murphey, *The Outsiders: The Western Experience in India and China* (1977); and later chapters in the same author's *East Asia: A New History* (rev. 2004). Case studies of Euro-

pean expansion in Asia are provided in I. Copeland, *The Burden of Empire: Perspectives on Imperialism and Colonialism* (1991). A number of more recent books have argued that the economic and social institutions of Asian societies should be studied for their own importance and should not be viewed simply as a response to the arrival of the Europeans. These arguments are developed in R. B. Wong, *China Transformed: Historical Change and the Limits of European Experience* (1997); A. G. Frank, *Reorient: Global Economy in the Asian Age* (1998); and K. Pomeranz, *The Great Divergence: Europe, China, and the Making of the Modern World Economy* (2000).

For India, one may read W. Golant, *The Long Afternoon: British India, 1601–1947* (1975); M. E. Chamberlain, *Britain and India: The Interactions of the Peoples* (1974); C. A. Bayly, *Indian Society and the Making of the British Empire* (1990); J. M. Brown, *Modern India: The Origins of an Asian Democracy* (rev. 1994); and L. James, *Raj: The Making and Unmaking of British India* (1999). The revolt of 1857 is studied in C. Hibbert, *The Great Mutiny: India, 1857* (1978); E. Stokes and C. A. Bayly, *The Peasant Armed: The Indian Rebellion of 1857* (1986); and T. R. Metcalf, *The Aftermath of Revolt: India, 1857–1870* (1964). The contest between Britain and Russia for remote parts of central Asia is recounted in K. E. Meyer and S. B. Brysac, *Tournament of Shadows: The Great Game and the Race for Empire in Central Asia* (2000).

One of the best introductions to East Asia is J. K. Fairbank, E. O. Reischauer, and A. M. Craig, *East Asia: Tradition and Transformation* (1989, with periodic revisions); and for China, J. K. Fairbank and M. Goldman, *China: A New History* (rev. 1998). Other overviews of China include J. A. G. Roberts, *A Concise History of China* (1999); and I. C. Y. Hsu, *The Rise of Modern China* (rev. 2000). J. E. Wills, Jr., *Mountain of Fame: Portraits in Chinese History* (1994) provides a valuable biographical approach to Chinese history. J. D. Spence, *The Search for Modern China* (rev. 1999) goes back over four centuries with perceptive insights into China's relations with the West. The same author's *The Gate of Heavenly Peace: The Chinese and Their Revolution, 1895–1980* (1981) links earlier history to twentieth-century revolutions, the subject also of J. K. Fairbank, *The Great Chinese Revolution, 1800–1985* (1986).

A detailed authoritative study of the mid-nineteenth century Taiping upheaval is Jen Yu-wen, *The Taiping Revolutionary Movement* (1973), but one may also read S. Y. Teng, *The Taiping Rebellion and the Western Powers* (rev. 1977); and on its self-professed Christian leader, J. D. Spence, *God's Chinese Son: The Taiping Heavenly Kingdom of Hong Xiuquan* (1996). The Opium Wars are studied in J. K. Fairbank, *Trade and Diplomacy on the China Coast: The Opening of the Treaty Ports, 1842–1854* (2 vols.; 1953); H. G. Gelber, *Opium, Soldiers and Evangeli-*

*cals: Britain's 1840–42 War with China and its Aftermath* (2004); and in books by P. W. Fay (1975, 1997) and B. Inglis (1976). The antiforeshing upheaval of 1898–1900 is examined in J. W. Esherick, *The Origins of the Boxer Uprising* (1987); D. Preston, *Besieged In Peking: The Story of the 1900 Boxer Rising* (1999); L. Xiang, *The Origins of the Boxer War: A Multinational Study* (2003); and P. A. Cohen, *History in Three Keys: The Boxers as Event, Experience, and Myth* (1997), which describes both Chinese and European interpretations of the events at the time and in historical memory.

On the American role in the Far East and the Open Door policy one may read W. Cohen, *America's Response to China* (rev. 2000); J. C. Thomsen, Jr., P. W. Stanley, and J. C. Perry, *Sentimental Imperialists: The American Experience in East Asia* (1981); and A. Iriye, *Pacific Estrangement: Japanese and American Expansion, 1897–1911* (1972). The confrontation between Russia and Japan is studied in I. Nish, *The Origins of the Russo-Japanese War* (1985); and D. Walder, *The Short Victorious War: The Russo-Japanese Conflict, 1904–1905* (1975). The Japanese occupation of Korea is recounted in P. Duus, *The Abacus and the Sword: The Japanese Penetration of Korea* (1998).

## Useful Web Sites

There are helpful sources and links on imperialism, Africa, South Asia, and East Asia at the extraordinary site created by Paul Halsall at Fordham University (and often cited in previous chapters). For imperialism in general, visit the *Internet Modern History Sourcebook*, [www.fordham.edu/halsall/mod/modsbook.html](http://www.fordham.edu/halsall/mod/modsbook.html), which also includes materials on postcolonial Latin America; for Africa, there is the *Internet African History Sourcebook*, at [www.fordham.edu/halsall/africa/africasbook.html](http://www.fordham.edu/halsall/africa/africasbook.html); and for Asia, readers will find the *Internet Indian History Sourcebook*, [www.fordham.edu/halsall/india/indiasbook.html](http://www.fordham.edu/halsall/india/indiasbook.html); and the *Internet East Asian History Sourcebook*, [www.fordham.edu/halsall/eastasia/eastasiasbook.html](http://www.fordham.edu/halsall/eastasia/eastasiasbook.html), which includes excellent materials on China and Japan as well as links to helpful sources on European imperialism. Valuable resources and links on the Ottoman Empire are included in the *Internet Islamic History Sourcebook*, [www.fordham.edu/halsall/islam/islamsbook.html](http://www.fordham.edu/halsall/islam/islamsbook.html). An accessible introduction to the British Empire may be found at *BBC-History-Empire*, [www.bbc.co.uk/history/state/empire](http://www.bbc.co.uk/history/state/empire).

## 17. THE FIRST WORLD WAR

Accounts of international relations emphasizing the shift in the twentieth century from a European to a global balance of power include G. Ross, *The Great Powers and the Decline of the European States System, 1914–1945* (1983); F. R. Bridge and R. Bullen, *The Great Powers and the European States System,*

*1814–1914* (rev. 2005), which traces prewar international relations from the nineteenth century to the eve of the war; C. J. Bartlett, *The Global Conflict: The International Rivalry of the Great Powers, 1880–1990* (rev. 1994); and W. R. Keylor, *The Twentieth-Century World: An International History* (rev. 2001).

## Diplomatic Background, Origins, Responsibilities

The most judicious account of the war's complex origins, assessing both the evidence and divergent interpretations, is J. Joll, *The Origins of the First World War* (rev. 1992), which may be supplemented by G. Martel, *The Origins of the First World War* (rev. 2003). Attempts to examine and synthesize the continuing debate over war responsibility are J. W. Langdon, *July 1914: The Long Debate: 1918–1990* (1991); R. J. W. Evans and H. P. Van Strandmann (eds.), *The Coming of the First World War* (1989); A. Mombauer, *The Origins of the First World War: Controversies and Consensus* (2002); and D. Fromkin, *Europe's Last Summer: Who Started the Great War in 1914?* (2004), which blames Germany for the outbreak of the war.

The controversy reopened after 1945 when the West German scholar Fritz Fischer, on the basis of new archival materials, argued the case for German culpability in *Germany's Aims in the First World War* (1961; trans. 1967) and in several later books. He argued that Germany had to grasp for "world power" or face decline and that elite groups in Germany pressed this objective to thwart democratization.

On diplomacy in the decades after 1870, there is a masterful diplomatic account in two volumes by G. F. Kennan: *The Decline of Bismarck's European Order: Franco-Russian Relations, 1875–1890* (1979) and *The Fateful Alliance: France, Russia, and the Coming of the First World War* (1984). A colorful reconstruction of the era for the general reader, focusing on monarchs, military leaders, and diplomats is available in R. K. Massie, *Dreadnought: Britain, Germany, and the Coming of the First World War* (1992). N. Ferguson, *The Pity of War* (1999), despite many striking insights into diplomatic and military matters, argues, not convincingly, that there was no compelling reason for the British to become involved and that the consequences were disastrous for Britain.

D. E. Lee's careful study, *Europe's Crucial Years: The Diplomatic Background of World War I, 1902–1914* (1974), reaffirms the argument that each state acted out of desperate concern for its own presumed interests. The influence of national elites is examined in R. F. Hamilton and H. H. Herwig, *Decisions for War, 1914–1917* (2004). Domestic and foreign considerations are linked in a British series of books that includes V. R. Berghahn, *Germany and the Approach of War in 1914* (rev. 1993); Z. S. Steiner, *Britain and the Origins of the First World War* (1977); R. J. B. Bosworth, *Italy, the Least of the Great Powers: Italian*

*Foreign Policy before the First World War* (1980); J. F. V. Keiger, *France and the Origins of the First World War* (1984); D. C. B. Lieven, *Russia and the Origins of the First World War* (1984); and S. R. Williamson, Jr., *Austria-Hungary and the Origins of the First World War* (1991).

For prewar diplomacy and strategic planning, readers will find especially useful three books by P. Kennedy: *The Rise of the Anglo-German Antagonism, 1860–1914* (1980), *Strategy and Diplomacy, 1870–1945* (1984), and a collaborative volume he has edited, *War Plans of the Great Powers, 1880–1914* (1979). The Balkan antecedents of the war are examined in R. C. Hall, *The Balkan Wars, 1912–1913: Prelude to the First World War* (2000).

The involvement of the United States in the war is studied in E. R. May, *The World War and American Isolation, 1914–1917* (1959), an outstanding study; R. Gregory, *The Origins of American Intervention in the First World War* (1971); R. H. Ferrell, *Woodrow Wilson and World War I* (1985); M. Harries and S. Harries, *The Last Days of Innocence: America at War, 1917–1918* (1997).

## The War

For the war readers may turn to the comprehensive accounts in H. Strachan, *The First World War* (2004); D. Stevenson, *Cataclysm: The First World War as Political Tragedy* (2004); and M. S. Neiberg, *Fighting the Great War: A Global History* (2005). Other informative narratives appear in works by M. Gilbert (1995), J. Keegan (1999), and M. Howard (2002). Books focusing on the social impact of the war include M. Ferro, *The Great War, 1914–1918* (trans. 1973); K. Robbins, *The First World War* (1984); B. E. Schmitt and H. C. Vedeler, *The World in the Crucible, 1914–1919* (1984); and J. M. Winter, *The Experience of World War I* (1989).

Books that seek to convey the ordeal of trench warfare on the western front include E. J. Leed, *No Man's Land: Combat and Identity in World War I* (1979); T. Ashworth, *Trench Warfare, 1914–1918: The Live and Let-Live System* (1980); and J. Ellis, *Eye-Deep in Hell: Trench Warfare in World War I* (1989). J. Keegan, *The Face of Battle* (1976), in one memorable chapter evokes the horrors of the Somme. For the American military experience, one may read E. M. Coffman, *The War to End All Wars* (1968, 1998). The naval war is described in R. K. Massie, *Castles of Steel: Britain, Germany, and the Winning of the Great War at Sea* (2003).

## The Home Front: Social, Economic, and Cultural Impact of the War

For the impact of war and of preparations for war on European society, one should read B. Bond, *War and Society in Europe, 1870–1970* (rev. 1998); A. Marwick, *War and Social Change in the Twentieth Cen-*

*tury* (1975), a comparative examination of five countries; and G. Hardach, *The First World War, 1914–1918* (1977), focusing on the economic aspects of the war and its consequences.

For the war on the home front one may turn to J. Williams, *The Other Battleground: The Home Fronts—Britain, France and Germany, 1914–1918* (1972); N. M. Heyman, *Daily Life During World War I* (2002); and the essays in R. Wall and J. Winter (eds.), *The Upheaval of War: Family, Work, and Welfare in Europe, 1914–1918* (1989). For Britain, one may read J. M. Winter, *The Great War and the British People* (1986), an outstanding volume; B. Waites, *A Class Society at War: England, 1914–1918* (1988); and J. Bourne, *Britain and the Great War, 1914–1918* (1989). For Germany: J. Kocka, *Facing Total War: German Society, 1914–1918* (trans. 1984); L. V. Meyer, *Victory Must Be Ours: Germany in the Great War, 1914–1918* (1995); and R. Chickering, *Imperial Germany and the Great War, 1914–1918* (1998). The dictatorial powers that the German generals preempted are examined with telling detail in M. Kitchen, *The Silent Dictatorship: The Politics of the German High Command under Hindenburg and Ludendorff, 1916–1918* (1976). For France: J. J. Becker, *The Great War and the French People* (trans. 1986); P. J. Flood, *France, 1914–1918: Public Opinion and the War Effort* (1989); and L. V. Smith, S. Audoin-Rouzeau, and A. Becker, *France and the Great War, 1914–1918* (2003). For the United States D. M. Kennedy, *Over Here: The First World War and American Society* (1980, reissued 2004) is informative.

The contributions of women to the war effort are examined in S. R. Grayzel, *Women and the First World War* (2002); G. Braybon, *Women Workers in the First World War: The British Experience* (1981); M. W. Greenwald, *Women, War, and Work: The Impact of World War I on Women Workers in the United States* (1980); and D. Schneider and C. Schneider, *Into the Breach: American Women Overseas in World War I* (1991).

The devastating worldwide influenza epidemic that doubled the combat toll is described in A. W. Crosby, *America's Forgotten Pandemic: The Influenza of 1918* (1976, 1990); G. Kolata, *The Story of the Great Influenza Pandemic of 1918* (2000); and J. M. Barry, *The Great Influenza: The Epic Story of the Deadliest Plague in History* (2004).

One of the tragedies of the war, the forced deportation of the Armenians by the Turkish authorities, and the ensuing mass deaths, is recounted in C. J. Walker, *Armenia: The Survival of a Nation* (rev. 1990); D. M. Lang, *The Armenians: A People in Exile* (1989); R. Melson, *Revolution and Genocide: On the Origins of the Armenian Genocide and the Holocaust* (1993), which sees the episode as the first chapter in twentieth-century ethnic destruction; and D. Bloxham, *The Great Game of Genocide: Imperialism, National-*

ism, and the Destruction of the Ottoman Armenians (2005), a well-researched study of the international context in which the assault on the Armenians took place.

The cultural meaning of the war is examined in P. Fussell, *The Great War and Modern Memory* (1975, 2000), a moving account of how the miseries of the war became part of contemporary literature and culture; S. Hynes, *A War Imagined: The First World War and English Culture* (1992); and G. Robb, *British Culture and the First World War* (2002). Other studies of the war's impact on intellectual life are R. Wohl, *The Generation of 1914* (1979); R. N. Stromberg, *Redemption by War: The Intellectuals and 1914* (1982); J. Cruickshank, *Variations on Catastrophe: Some French Responses to the Great War* (1982); F. Field, *British and French Writers of the First World War* (1991); A. Roshwald and R. Stites (eds.), *European Culture in the Great War: The Arts, Entertainment and Propaganda, 1914–1918* (1999); M. Ecksteins, *The Rites of Spring: The Great War and the Birth of the Modern Age* (1989, 2000), an inquiry into the shaping of a new cultural consciousness; and G. Mosse, *Sites of Mourning: The Great War in European Cultural History* (1996).

### Wartime Diplomacy

For wartime diplomacy one profits from D. Stevenson, *The First World War and International Politics* (1988). Two provocative studies focusing on the diplomatic duel between the United States and Russia are V. S. Mamatey, *The United States and East Central Europe, 1914–1918* (1975) and A. J. Mayer, *Wilson vs. Lenin: The Political Origins of the New Diplomacy* (1959). The fate of the German colonial empire is explored in W. R. Louis, *Great Britain and Germany's Lost Colonies, 1914–1919* (1967).

For Allied activities in the Middle East, and on the revolt of the Arabs against the Turks, one may begin with T. E. Lawrence, *Seven Pillars of Wisdom* (1926, 1935), fascinating but to be read with caution, and J. Wilson, *Lawrence of Arabia: The Authorized Biography of T. E. Lawrence* (1989), the fullest account. Focusing on the Middle East and the end of the Ottoman Empire are C. E. Dawn, *From Ottomanism to Arabism* (1973); H. M. Sachar, *The Emergence of the Middle East, 1914–1924* (1969); P. C. Helmreich, *From Paris to Sèvres: The Partition of the Ottoman Empire at the Peace Conference of 1919–1920* (1974); D. Fromkin, *A Peace to End All Peace: Creating the Modern Middle East, 1914–1922* (1989), especially informative; and the previously cited work by E. Karsh and I. Karsh, *Empires of the Sand: The Struggle for Mastery in the Middle East, 1789–1923* (1999), providing the background to the postwar settlement.

The emergence of the British mandate for Palestine is studied in impressive detail in L. Stein, *The Balfour Declaration* (1961) and R. Sanders, *The High*

*Walls of Jerusalem: A History of the Balfour Declaration and the Birth of the British Mandate* (1984).

### The Peace

For the armistice, one may turn to S. Weintraub, *A Stillness Heard Round the World: The End of the Great War, November 1918* (1987), a colorful evocation of the war's end, and B. Lowry, *Armistice 1918* (1996), a thorough diplomatic analysis. The postwar revolutionary mood is described in G. Schulz, *Revolution and Peace Treaties, 1917–1920* (trans. 1972); and F. L. Carsten, *Revolution in Central Europe, 1918–1919* (1972). The end of the Dual Monarchy is studied in A. J. May, *The Passing of the Habsburg Monarchy, 1914–1918* (2 vols.; 1966) and Z. A. B. Zeman, *The Breakup of the Habsburg Empire, 1914–1918* (1961).

On the Paris peace conference, the best introductions are A. Sharp, *The Versailles Settlement: Peacemaking in Paris* (1991), and the more comprehensive M. MacMillan, *Paris 1919: Six Months that Changed the World* (2002). The decision-making process itself is studied in H. Elcock, *Portrait of a Decision: The Council of Four and the Treaty of Versailles* (1972). The debates are available in P. Mantoux (ed.), *The Paris Peace Conference, 1919: Proceedings of the Council of Four* (1955; trans. 1964).

On Wilson's role, the best study is A. Walworth, *Wilson and His Peacemakers: American Diplomacy at the Paris Peace Conference, 1919* (1987); also helpful are K. A. Clements, *The Presidency of Woodrow Wilson* (1992), a concise appraisal; A. Heckscher, *Woodrow Wilson* (1992), a detailed full-length biography; and insightful brief biographies by L. Auchincloss (2000) and H. W. Brands (2003). There are also two insightful studies by A. S. Link, the editor of Wilson's collected papers: *Wilson the Diplomatist* (1957) and *Woodrow Wilson: War, Revolution, and Peace* (1979). Biographies of Clemenceau by D. R. Watson (1974) and D. S. Newhall (1991), and of David Lloyd George by J. Grigg (1973–1985) and others have been cited in Chapter 14; to them should be added J. F. V. Keiger, *Raymond Poincaré* (1997).

A study arguing that the major preoccupation underlying decisions at Versailles was the threat of Bolshevism and domestic radicalism is A. J. Mayer, *Politics and Diplomacy of Peacemaking: Containment and Counter-Revolution at Versailles, 1918–1919* (1967); it may be compared with J. M. Thompson, *Russia, Bolshevism, and the Versailles Peace* (1966), which views the revolutionary threat as important but not dominating. Important balanced reappraisals, many based on new archival materials, may be found in the contributions to M. F. Boemeke, G. D. Feldman, and E. Glaser (eds.), *The Treaty of Versailles: A Re-assessment After 75 Years* (1998). The emergence of new nations in central Europe is described in S. Bon-sal, *Suitors and Suppliants: The Little Nations at Versailles* (1964), and the Polish question is carefully

examined by a Danish historian, K. Lundgreen-Nielsen, *The Polish Problem at the Paris Peace Conference* (trans. 1979). On the disputed issue of reparations, J. M. Keynes, *The Economic Consequences of the Peace* (1920), became the single most influential book, vehemently critical of the entire peace settlement. E. Mantoux, *The Carthaginian Peace—or the Economic Consequences of Mr. Keynes* (1946), provided a vigorous later reply to Keynes. The first volume of a valuable three-volume study, R. Skidelsky, *John Maynard Keynes: A Biography: Vol. 1, Hopes Betrayed, 1883–1920* (1986), carries Keynes through the peace conference; there is also a one-volume edition of Skidelsky's biographical study, *John Maynard Keynes, 1883–1946: Economist, Philosopher, Statesman* (2005).

### Useful Web Sites

There are numerous links to both documents and images from the First World War at *The World War I Document Archive*, a site at the Brigham Young University Library, [www.lib.byu.edu/~rdh/wwi/](http://www.lib.byu.edu/~rdh/wwi/). Other resources may be found at *The Museum of the Great War*, a French museum that provides English-language materials at [www.historial.org/](http://www.historial.org/); and there are materials focusing on Britain at *BBC-History-World War One*, [www.bbc.co.uk/history/wwar/wwone/](http://www.bbc.co.uk/history/wwar/wwone/). Helpful materials on the postwar settlement are available at *Paris Peace Conference*, [www.nv.cc.us/home/cevans/Versailles/Index.html](http://www.nv.cc.us/home/cevans/Versailles/Index.html).

## 18. THE RUSSIAN REVOLUTION AND THE SOVIET UNION

With the collapse of the Soviet Union in 1991 new archival materials have made it possible to confirm, modify, or refute earlier works and to rethink twentieth-century Russian history. Recent histories include O. Figes, *A People's Tragedy: A History of the Russian Revolution* (1997) and G. Hosking, *Russia and the Russians* (2001), an excellent one-volume narrative. The same author's *Russia: Empire and Nation* (1997) may be compared with D. Lieven, *The Russian Empire and Its Rivals* (2001). Other surveys include C. Evtuhov and R. Stites, *A History of Russia: Peoples, Legends, Events, Forces since 1800* (2004); and R. Service, *A History of Modern Russia: From Nicholas II to Putin* (2003), which begins with the pre-revolutionary era. M. E. Malia, *The Soviet Tragedy: A History of Socialism in Russia, 1917–1991* (1993) maintains that the Revolution's utopian goals were doomed from the beginning; the same author's *Russia Under Western Eyes: From the Bronze Horseman to the Lenin Mausoleum* (1999) argues that Russia at least since Peter the Great was always more Western-oriented than most observers believed. M. Lewin, *The Soviet Century* (2005) is an insightful assessment by a long-time student of the Soviet regime. Additional accounts will be listed in later chapters.

### Russia before 1917: Late Tsarist Russia

A number of books on nineteenth-century Russia have been cited earlier. For late tsarist Russia one may read L. Kochan, *Russia in Revolution, 1890–1918* (1966) and H. Rogger, *Russia in the Age of Modernization and Revolution, 1881–1917* (1983).

Political thought and ferment may be studied in F. Venturi, *Roots of Revolution* (trans. 1983), cited earlier; A. Vucinich, *Social Thought in Tsarist Russia* (1976); and P. Pomper, *The Russian Revolutionary Intelligentsia* (rev. 1993). Two books stressing the non-revolutionary progressive views of many pre-1914 Russian intellectuals are I. Berlin, *Russian Thinkers* (1978), cited earlier, and A. H. Kelly, *Toward Another Shore: Russian Thinkers between Necessity and Choice* (1998). The world of labor is examined in V. E. Bonnell, *Roots of Rebellion: Workers' Politics and Organizations in St. Petersburg and Moscow, 1900–1914* (1983) and in the volume she has edited of workers' autobiographical accounts, *The Russian Worker: Life and Labor under the Tsarist Regime* (1983). Cultural life in this period is the subject of L. McReynolds, *Russia at Play: Leisure Activities at the End of the Tsarist Era* (2003).

An important political leader who served the tsar is described in R. Pipes, *Struve* (2 vols.; 1970–1980), informative on the fate of liberalism. Right-wing extremism linked to anti-Semitic pogroms is explored in W. Laqueur, *Black Hundred: The Rise of the Extreme Right in Russia* (1993). For the emergent revolutionary leaders one may read L. Haimson, *The Russian Marxists and the Origins of Bolshevism* (1955); I. Getzler, *Martov* (1967); S. H. Baron, *Plekhanov* (1963); and A. Ascher, *Pavel Axelrod and the Development of Menshevism* (1972). On the anarchists, there is P. Avrich, *The Russian Anarchists* (1967), and on a leading exemplar, M. A. Miller, *Kropotkin* (1976) and C. Cahm, *Peter Kropotkin and the Rise of Revolutionary Anarchism* (1989).

The events of 1905 are narrated and analyzed in a valuable two-volume account by A. Ascher: *The Revolution of 1905: Vol. I, Russia in Disarray* (1988) and Vol. II, *Authority Restored* (1992), carrying the story to 1907. Also informative is A. M. Verner, *The Crisis of Russian Autocracy: Nicholas II and the 1905 Revolution* (1990).

Explorations of the ill-fated effort to establish a constitutional monarchy after 1905 include A. E. Healy, *The Russian Autocracy in Crisis, 1905–1907* (1976); and G. Hosking, *The Russian Constitutional Experiment: Government and Duma, 1906–1914* (1973). The Russian wartime experience is vividly described in W. B. Lincoln, *In War's Dark Shadow* (1983) and *Passage through Armageddon* (1986). The confusion at the court graphically emerges from R. K. Massie's *Nicholas and Alexandra* (1967, 2000). For the last Romanoff one may also read M. Ferro, *Nicholas II: The Last of the Tsars* (1993) and R. D.

Warth, *Nicholas II: The Life and Reign of Russia's Last Monarch* (1998). E. Radzinsky, *The Last Tsar: The Life and Death of Nicholas II* (trans. 1992) reconstructs the execution of the royal family in 1918; the same author has also used a newly available dossier on Rasputin to write a vivid biography of the mad monk who became the royal family's close adviser, *The Rasputin File* (trans. 2000).

### The Revolutions of 1917

The best account of the earlier revolution is T. Hasegawa, *The February Revolution: Petrograd, 1917* (1981); there are other informative studies by G. Katkov (1967), M. Ferro (1971), and E. N. Burdzhakov (1987). The ill-fated Kerensky is studied in R. Abraham, *Alexander Kerensky: The First Love of the Revolution* (1987).

For the fullest and most comprehensive account of the revolutionary years one turns to R. Pipes, *The Russian Revolution* (1990) and *Russia Under the Bolshevik Regime* (1994), the latter carrying the story through Lenin's death in 1924. Available also is C. Read, *From Tsar to Soviets: The Russian People and the Revolution, 1917–1921* (1996). Focusing on the social breadth and depth of the revolution are two books by M. Ferro: *The Fall of Tsarism and the Origins of Bolshevik Power* (trans. 1967) and *October 1917: A Social History of the Russian Revolution* (trans. 1980).

The best introductions to the civil war, the formation of the Soviet state, and foreign intervention are E. Mawdsley, *The Russian Civil War* (1987); W. B. Lincoln, *Red Victory: A History of the Russian Civil War* (1990); V. N. Brovkin, *Behind the Front Lines of the Civil War: Political Parties and Social Movements in Russia, 1918–1922* (1994); and D. J. Raleigh, *Experiencing Russia's Civil War: Politics, Society, and Revolutionary Culture in Saratov, 1917–1922* (2002). For the withdrawal from the war and the subsequent Allied intervention, one may turn to G. F. Kennan, *Soviet-American Relations, 1917–1920* (2 vols.; 1956–1958) and R. H. Ullman, *Anglo-Soviet Relations, 1917–1921* (3 vols.; 1961–1972). The peace imposed by Germany is described in an older work by J. W. Wheeler-Bennett, *The Forgotten Peace: Brest-Litovsk, March 1918* (1939, 1966); the stormy relations of the Soviet Union with newly independent Poland are described in P. S. Wandycz, *Soviet-Polish Relations, 1917–1921* (1969). A helpful reference guide for all these events is H. Shukman (ed.), *The Blackwell Encyclopedia of the Russian Revolution* (rev. 1994).

### The U.S.S.R.

For the early years one should read R. Pipes, *Russia Under the Bolshevik Regime* (1994), cited earlier, which examines in detail the consolidation of the dictatorial regime by 1924. P. Avrich, *Kronstadt, 1921* (1970, 1991), describes the leftist uprising and its suppression. An institution that was destined to endure is

studied in L. D. Gerson, *The Secret Police in Lenin's Russia* (1976) and G. Leggett, *The Cheka: Lenin's Political Police* (1981).

For the years under Lenin and the early years of Stalin's rule one may consult E. H. Carr's synthesis of his massive 14-volume study (1950–1979), *The Russian Revolution: From Lenin to Stalin* (1979, reissued 2004), in which Carr seeks to make the best possible case for the reconstruction of Soviet society in the years 1917–1929. Focusing on sociological and cultural aspects of this period are R. Stites, *Revolutionary Dreams: Utopian Vision and Experimental Life in the Russian Revolution* (1988); V. Brovkin, *Russia after Lenin: Politics, Culture and Society, 1921–1929* (1998); G. Hosking, *The First Socialist Society: A History of the Soviet Union from Within* (rev. 1990), which carries a comprehensive social history through to the end of the Soviet experiment; and S. Fitzpatrick's three books: *The Russian Revolution, 1917–1932* (1982), *The Cultural Front: Power and Culture in Revolutionary Russia* (1992), and *Everyday Stalinism: Ordinary Life in Extraordinary Times* (1999). For all aspects of economic developments from 1917 on, one may turn to A. Nove, *An Economic History of the U.S.S.R.* (rev. 1992). A good general account of the years from the Revolution to Stalin's death is H. Carrère d'Encausse, *A History of the Soviet Union, 1917–1953* (2 vols.; trans. 1982).

Stalin's collectivization of agriculture may be studied in M. Lewin, *Russian Peasants and Soviet Power* (trans. 1975) and R. Conquest, *The Harvest of Sorrow: Soviet Collectivization and the Terror-Famine* (1986), which graphically reconstructs the ruthlessness of collectivization and the accompanying famine of 1932.

For the political terror in the Stalin era the most revealing studies are R. Medvedev, *Let History Judge: The Origins and Consequences of Stalinism* (trans. 1989), by a Soviet dissident historian; and for the party purges and terror of 1936–1938, stressing the enormity of the now officially conceded blood bath, R. Conquest, *The Great Terror: A Reassessment* (1968, 1990). Some of the corroborative new evidence surfacing in the years after 1985 is discussed in R. Pipes, *The Unknown Lenin: From the Soviet Archives* (1997); W. Laqueur, *Stalin: The Glasnost Revelations* (1990); and A. Appelbaum, *Gulag: A History* (2003). The origins of the party purges are examined in R. Conquest, *Stalin and the Kirov Murder* (1989), and from a different perspective in the controversial J. A. Getty, *Origins of the Great Purges: The Soviet Communist Party Reconsidered, 1933–1938* (1986). Stalin's tyrannical repression of the Communist inner circle is described in S. S. Montefiore, *Stalin: The Court of the Red Tsar* (2003).

### Biographical Accounts

Among older biographical accounts for these years are B. D. Wolfe, *Three Who Made a Revolution: A Biographical History* [Lenin, Trotsky, Stalin] (1948,

1964); H. Shukman, *Lenin and the Russian Revolution* (1987); and A. B. Ulam, *Lenin and the Bolsheviks* (1965, 1969). There are also lives of Lenin by D. Shub (1948, 1966), R. Conquest (1972), R. H. W. Theen (1973), and M. Lewin (1978); and a more recent work by R. Service, *Lenin—A Biography* (2000), a well-researched study. Lenin's wife and her fate in the Stalin years are ably studied in R. H. McNeal, *Bride of the Revolution: Krupskaya and Lenin* (1972).

I. Deutscher's overly sympathetic three-volume *Life of Trotsky* (1954–1963), and R. Segal, *Leon Trotsky* (1979), also sympathetic, may be compared with the more balanced appraisals by R. S. Wistrich, *Trotsky: Fate of a Revolutionary* (1979); I. Howe, *Leon Trotsky* (1979); and I. D. Thatcher (2003). S. F. Cohen, *Bukharin and the Bolshevik Revolution: A Political Biography, 1888–1938* (1973, 1980) is an outstanding study of a leading Old Bolshevik who helped shape Lenin's New Economic Policy and, had he prevailed, who might have averted Stalin's dictatorship.

For an outstanding study of Stalin in the years before the Second World War one may read R. C. Tucker, *Stalin as Revolutionary, 1879–1929* (1973) and *Stalin in Power: The Revolution from Above, 1928–1941* (1990). Other biographical accounts are A. B. Ulam, *Stalin: The Man and His Era* (1973); the imaginative but uncritical I. Deutscher, *Stalin: A Political Biography* (1967); R. H. McNeal, *Stalin: Man and Ruler* (1988); and R. Service, *Stalin: A Biography* (2005), which examines both public policies and Stalin's private life.

In a special category, a series of biographies by D. Volkogonov has appeared in English translation. Volkogonov was for many years a top-ranking Soviet military intelligence official with unique access to key archival sources, and his books provide indispensable special information. Among them are *Stalin: Triumph and Tragedy* (trans. 1992), *Lenin: A New Biography* (trans. 1994), *Trotsky: The Eternal Revolutionary* (trans. 1996), and for his overall review of Soviet history, *Autopsy for an Empire: The Seven Leaders Who Built the Soviet Regime* [Lenin to Gorbachev] (trans. 1998).

Among thoughtful earlier efforts to assess the Russian experience from the revolution on into the interwar years and beyond are T. H. Von Laue, *Why Lenin? Why Stalin? A Reappraisal of the Russian Revolution, 1900–1930* (rev. 1993); E. Acton, *Rethinking the Russian Revolution* (1990); S. F. Cohen, *Rethinking the Soviet Experience: Politics and History since 1917* (1985); and two books by M. Lewin: *The Making of the Soviet System: Essays in the Social History of Interwar Russia* (1985) and *The Gorbachev Phenomenon: A Historical Interpretation* (rev. 1991). Books on the last years of the Soviet regime and on its collapse in 1991 will be described in Chapter 26.

### Other Themes and Institutions

On other subjects and institutions one may read R. Kolkowitz, *The Soviet Military and the Communist*

*Party* (1967); L. R. Graham, *Science and Philosophy in the Soviet Union* (1972) and his other writings; and C. V. James, *Soviet Socialist Realism* (1973), on the arts and literature. For Soviet policies toward various nationalities, one may turn to T. Martin, *The Affirmative Action Empire: Nations and Nationalism in the Soviet Union, 1923–1939* (2001). Accounts of Soviet religious policies are available in S. P. Ramet (ed.), *Religious Policy in the Soviet Union* (1992) and N. Davis, *A Long Walk to Church: A Contemporary History of Russian Orthodoxy* (1995). The Jewish question is thoughtfully explored in Z. Gitelman, *The Jews of Russia and the Soviet Union* (1988); A. Vaksberg, *Stalin Against the Jews* (1994); G. Kostyrchenko, *Out of the Red Shadows: Anti-Semitism in Stalin's Russia* (1996); and J. Brent and V. Naumov, *Stalin's Last Crime: The Plot Against the Jewish Doctors, 1948–1953* (2003).

The role of women in the prerevolutionary and postrevolutionary years may be studied in R. Stites, *The Women's Liberation Movement in Russia: Feminism, Nihilism, and Bolshevism, 1860–1930* (rev. 1991); L. Engelstein, *The Keys to Happiness: Sex and the Search for Modernity in Fin-de-Siècle Russia* (1992), on the late nineteenth century; G. W. Lapidus, *Women in Soviet Society: Equality, Development, and Social Change* (1978); B. E. Clements and others (eds.), *Russia's Women: Accommodation, Resistance, Transformation* (1990); L. Edmondson (ed.), *Women and Society in Russia and the Soviet Union* (1992); and S. Fitzpatrick and Y. Slezkine (eds.), *In The Shadow of Revolution: Life Stories of Russian Women from 1917 to the Second World War* (2000).

### Soviet Foreign Relations and World Communism

Still useful for Soviet foreign policy are A. B. Ulam, *Expansion and Coexistence: The History of Soviet Foreign Policy, 1917–1973* (rev. 1974) and his other writings; and the volumes by L. F. Fischer: *The Soviets in World Affairs, 1917–1929* (rev. 1960) and *Russia's Road from Peace to War: Soviet Foreign Relations, 1917–1941* (1969).

On the Comintern, one may turn to K. E. McKenzie, *Comintern and World Revolution, 1928–1943* (1964); K. McDermott and J. Agnew, *The Comintern: A History of International Communism from Lenin to Stalin* (1997); and the essays in T. Rees and A. Thorpe (eds.), *International Communism and the Communist International, 1919–43* (1998). The clash of Bolshevism with French, Italian, and German socialism is ably explored in A. S. Lindemann, *The "Red Years": European Socialism vs. Bolshevism, 1918–1920* (1974), while R. Wohl examines the French experience with insight and depth in *French Communism in the Making, 1919–1924* (1966).

## Useful Web Sites

The *Internet Modern History Sourcebook* includes linked documents on the Russian Revolution at [www.fordham.edu/halsall/mod/modsbook39.html](http://www.fordham.edu/halsall/mod/modsbook39.html); and there are links to additional resources on early twentieth-century Russia at the previously cited *Russian Studies at Bucknell University*, [www.departments.bucknell.edu/russian/](http://www.departments.bucknell.edu/russian/). Readers will also find excellent materials on the revolutionary era and later periods of Russian history at the Web sites of the *School of Slavonic and East European Studies* in London, [www.ssees.ac.uk/index/htm](http://www.ssees.ac.uk/index/htm); the University of Pittsburgh's *Russian and East European Studies Virtual Library*, [www.ucis.pitt.edu/reesweb/](http://www.ucis.pitt.edu/reesweb/); and the *Russian and East European Network Information Center* at the University of Texas, <http://reenic.utexas.edu/eenic/index.html>. These sites provide up-to-date links to other sites with documents, images, biographical narratives, and historical information on Russia and other republics that were part of the U.S.S.R.

## 19. DEMOCRACY, ANTI-IMPERIALISM, AND THE ECONOMIC CRISIS AFTER THE FIRST WORLD WAR

A number of general histories of the twentieth century begin with the First World War and the revolutionary changes that accompanied it. Among these are E. J. Hobsbawm, *The Age of Extremes: A History of the World, 1914–1991* (1994), an insightful book on the years between the First World War and the collapse of the Soviet Union, which he calls the “short twentieth century”; J. A. S. Grenville, *A History of the World from the 20th to the 21st Century* (rev. 2005), a detailed narrative; and H. Evans and others, *The American Century* (1998), an interpretive account of major developments and issues. Informative also are the essays in R. W. Bulliet (ed.), *The Columbia History of the Twentieth Century* (1998) and M. Howard and R. Louis (eds.), *The Oxford History of the Twentieth Century* (1998, 2000). A useful reference book for twentieth-century world history is C. Cook and J. Stevenson, *The Routledge Companion to World History since 1914* (2005).

For Europe in the twentieth century one may read S. M. Di Scala, *Twentieth Century Europe: Politics, Society, Culture* (2004); R. O. Paxton, *Europe in the Twentieth Century* (rev. 2004), especially informative; H. James, *Europe Reborn: A History, 1914–2000* (2003); and M. Mazower, *Dark Continent: Europe's Twentieth Century* (1999), a thoughtful book which sees more negative than positive features in Europe's history during these years.

The attempt in the interwar years to put together a shattered polity in Europe is described in M. Kitchen, *Europe Between the Wars* (1988) and Z. Steiner, *The Lights that Failed: European International History, 1919–1933* (2005), an insightful account that stresses the constructive efforts to rebuild

postwar European societies and diplomacy. Two efforts to examine the pattern of reconstruction in Europe after the war are C. S. Maier, *Recasting Bourgeois Europe: Stabilization in France, Germany and Italy in the Decade after World War I* (1975), stressing the link between interest groups and conservative governments, and D. P. Silverman, *Reconstructing Europe after the Great War* (1982). Additional books for the interwar years, including works on the new states of central and eastern Europe, are described in the chapter that follows.

## International Relations in the 1920s

Introductions to international affairs in this era are P. Renouvin, *War and Aftermath, 1914–1929* (1968); S. Marks, *The Illusion of Peace: International Relations in Europe, 1918–1933* (1976); and A. P. Adamthwaite, *The Lost Peace: International Relations in Europe, 1918–1939* (1981). The high point of reconciliation with Germany is ably treated in J. Jacobson, *Locarno Diplomacy: Germany and the West, 1925–1929* (1972). For American foreign policy encompassing the interwar years and the two world wars, A. Iriye, *The Globalizing of America, 1913–1945* (1993) is illuminating.

B. Kent, *The Spoils of War: The Politics, Economics, and Diplomacy of Reparations, 1918–1932* (1989) synthesizes the considerable literature on the complex reparations question, on which related studies include M. Trachtenberg, *Reparations in World Politics: France and European Economic Diplomacy, 1916–1923* (1980); S. A. Schuker, *The End of French Predominance in Europe* (1976); B. F. Martin, *France and the Après Guerre, 1918–1924* (1999); and A. P. Adamthwaite, *Grandeur and Misery: France's Bid for Power in Europe, 1914–1940* (1995), which describes French objectives in this period. The American role in these years is studied in M. P. Leffler, *The Elusive Quest: America's Pursuit of European Stability and French Security* (1979), and on a broader scale in F. Costigliola, *Awkward Dominion: American Political, Economic, and Cultural Relations with Europe, 1919–1933* (1984). America's growing economic and cultural influence is examined in V. de Grazia, *Irresistible Empire: America's Advance Through Twentieth-Century Europe* (2005). On the British role one may read A. Orde, *British Policy and European Reconstruction after the First World War* (1990). The response of the United States and Britain to the revolutionary events of the era, and not only to the revolution in Russia, is examined critically in L. C. Gardner, *Safe for Democracy: The Anglo-American Response to Revolution, 1913–1923* (1984).

The cooperation between the Soviet Union and Weimar Germany is studied in K. Rosenbaum, *Community of Fate: German-Soviet Diplomatic Relations, 1922–1928* (1965); and H. L. Dyck, *Weimar Germany and Soviet Russia, 1926–1933* (1966). The wider diplomatic context is the subject of S. Salzmann,

*Great Britain, Germany, and the Soviet Union: Rapollo and After, 1922–1934* (2003); and Germany's leading diplomat is described in J. R. C. Wright, *Gustav Stresemann: Weimar's Greatest Statesman* (2002).

For the League of Nations one may read F. S. Northedge, *The League of Nations: Its Life and Times, 1920–1946* (1986), which notes that despite its shortcomings it helped to transform the older diplomacy; and E. Goldstein, *The First World War Peace Settlements, 1919–1925* (2002), which includes the early history of the League. A special problem in which the League played an important role is discussed in a wide-ranging study, M. R. Marrus, *The Unwanted: European Refugees in the Twentieth Century* (1985). Books on efforts at disarmament include R. Dingman, *Power in the Pacific: The Origins of Naval Arms Limitation, 1914–1922* (1976) and E. W. Bennett, *German Rearmament and the West, 1932–1933* (1979).

### Anticolonialism in Asia: East Asia

For China in the early part of the twentieth century, in addition to books cited in Chapter 16, there are informative introductions in F. Wakeman, *The Fall of Imperial China* (1975); and in the essays in F. Wakeman and R. L. Edmonds (eds.), *Reappraising Republican China* (2000). The story of the last Manchu (or Qing) ruler (later appointed by the Japanese to rule in conquered Manchuria) is recounted in B. Power, *The Puppet Emperor: The Life of Pu Yi, Last Emperor of China* (1986).

Biographical studies for Sun include C. M. Wilbur, *Sun Yat-sen: Frustrated Patriot* (1976) and M. C. Bergère, *Sun Yat-Sen* (trans. 1998). On the resentments stirred by the Chinese treatment at Versailles, one should read V. Schwarcz, *The Chinese Enlightenment: Intellectuals and the Legacy of the May Fourth Movement of 1919* (1986). The era of Chiang Kai-shek and Guomindang rule is studied in L. Eastman, *The Abortive Revolution: China under Nationalist Rule, 1927–1937* (1974, 1990); J. C. Strauss, *Strong Institutions in Weak Politics: State Building in Republican China, 1927–1940* (1998) and in the comprehensive biographical study by J. Fenby, *Chiang Kai Shek* (2004). On the emergent Communist movement one may read A. Dirlik, *The Origins of Chinese Communism* (1988), and the accounts of the Long March of 1934–1935 by D. Wilson (1972), H. Salisbury (1984), and B. Yang (1990).

General books on Japan have been cited in Chapter 13. On the rise of militarism in Japan one should read J. B. Crowley, *Japan's Quest for Autonomy: National Security and Foreign Policy, 1930–1938* (1966). Japanese-American relations and the failure to arrive at an international settlement in East Asia is traced in A. Iriye, *Pacific Estrangement: Japanese and American Expansion, 1897–1911* (1972, 1994) and *After Imperialism: The Search for New Order in the Far East, 1921–1931* (1965, 1990). M. Harries and S. Harries,

*Soldiers of the Sun: The Rise and Fall of the Japanese Imperial Army* (1992) carries its subject from 1904 to military collapse in 1945.

Accounts of the Japanese intervention in China during the 1930s are available in M. Dryburgh, *North China and Japanese Expansion, 1933–1937* (2000), and in P. Duara, *Sovereignty and Authenticity: Manchukuo and the East Asian Modern* (2003). The brutal Japanese assault on Nanjing in 1937 is described in I. Chang, *The Rape of Nanking* (1997) and H. Katsuichi, *The Nanjing Massacre* (trans. 1999); its continuing effects on national memories in China and Japan are analyzed in J. A. Fogel (ed.), *The Nanjing Massacre in History and Historiography* (2000) and F. F. Lei, R. Sabella, and D. Liu (eds.), *Nanking 1937: Memory and Healing* (2002).

### Anticolonialism in Asia:

#### The Middle East and South Asia

An older study of the nationalist ferment is provided in J. Romein and J. E. Romein, *The Asian Century: A History of Modern Nationalism in Asia* (trans. 1962), which may be supplemented by H. Grimal, *Decolonization: The British, French, Dutch, and Belgian Empires, 1919–1963* (1978) and the essays in P. Duara (ed.), *Decolonization: Perspectives from Now and Then* (2003). In addition to books cited in Chapters 16 and 17, introductions to the Middle East and the continuing importance of the “Eastern question” include P. Mansfield, *The Ottoman Empire and Its Successors* (1973); W. L. Cleveland, *A History of the Modern Middle East* (2004); J. L. Gelvin, *The Modern Middle East: A History* (2005), which includes analysis of both the Ottoman Empire and modern Arab nationalism; E. Monroe, *Britain's Moment in the Middle East, 1914–1971* (rev. 1981); and M. E. Yapp, *The Near East since the First World War* (rev. 1996). French imperial policies during this period are examined in M. Thomas, *The French Empire Between the Wars: Imperialism, Politics, and Society* (2005).

For the Turkish Revolution, B. Lewis, *The Emergence of Modern Turkey* (rev. 2002) remains the best introduction. Among other useful studies are E. J. Zürcher, *Turkey: A Modern History* (rev. 2004); W. F. Weiker, *The Modernization of Turkey* (1981); and F. Ahmad, *The Making of Modern Turkey* (1993). Biographical accounts of the Turkish statesman-reformer include J. P. D. Balfour [P. Kinross], *Atatürk: A Biography of Mustafa Kemal* (1965, 1992) and A. Mango, *Atatürk: The Biography of the Founder of Modern Turkey* (2001), a balanced, comprehensive account that distributes both praise and criticism. An insightful book carrying the story to the end of the century is N. Pope and H. Pope, *Turkey Unveiled: A History of Modern Turkey* (1999).

Arab stirrings in the Middle East in these years are discussed in Z. B. Zeine, *Struggle for Arab Independence* (1977); J. E. Kedouri, *Islam and the Modern*

*World* (1980); two notable books by J. L. Gelvin, *Divided Loyalties: Nationalism and Mass Politics in Syria at the Close of the Empire* (1999), and *The Israel-Palestine Conflict: One Hundred Years of War* (2005); J. Jankowski and I. Gershoni (eds.), *Rethinking Nationalism in the Arab Middle East* (1997); and B. M. Nafi, *Arabism, Islamism and the Palestine Question, 1908–1941* (1998). The response of the European powers is described in A. Williams, *Britain and France in the Middle East and North Africa, 1914–1967* (1969).

For the Indian subcontinent, two histories that try to understand developments in Indian terms and not as reactions to the West are P. Spear, *The Oxford History of Modern India* (rev. 1979) and S. Wolpert, *A New History of India* (rev. 2004). Recommended also is S. Sarkar, *Modern India, 1885–1947* (rev. 1989). The origins of Indian nationalism are discussed in A. Seal, *The Emergence of Indian Nationalism* (1968); Ian Talbot, *India and Pakistan* (2000), which describes the development of both Hindu and Muslim national identities; and W. Gould, *Hindu Nationalism and the Language of Politics in Late Colonial India* (2004).

Of many existing studies of Gandhi one may turn to J. M. Brown's impressive trilogy: *Gandhi's Rise to Power in Indian Politics* (1972); *Gandhi and Civil Disobedience* (1977), carrying the story to 1934; and *Gandhi: Prisoner of Hope* (1990). Informative also are S. Wolpert, *Gandhi's Passion: The Life and Legacy of Mahatma Gandhi* (2001); A. Copley, *Gandhi* (1987), a good brief account; D. Arnold, *Gandhi* (2001); and M. B. Steger, *Gandhi's Dilemma: Nonviolent Principles and Nationalist Power* (2000), which thoughtfully examines Gandhi's complex ideas. For Nehru, among many studies there are S. Gopal, *Jawaharlal Nehru: A Biography* (1 vol. abridged ed.; 1993); S. Wolpert, *Nehru: A Tryst with Destiny* (1996); and J. M. Brown, *Nehru* (1999). Nehru's autobiography, *Toward Freedom* (1941), and his other writings provide insights into the anticolonial mind. For the career and life of Nehru's daughter, his successor in office, one may read K. Frank, *The Life of Indira Nehru Gandhi* (2001).

## The Depression:

### Collapse of the World Economy

Books on the impact of the depression on politics and society in various countries will appear in the following chapter.

The economy of the post-1919 world may be studied in D. N. Aldcroft, *From Versailles to Wall Street: The International Economy in the 1920s* (1977) and G. Ziebur, *World Economy and World Politics* (trans. 1990). For the stock market collapse, J. K. Galbraith, *The Great Crash, 1929* (1955, 1988) is a vivid account, while a comprehensive analysis of the worldwide depression is C. P. Kindleberger, *The*

*World in Depression, 1929–1939* (rev. 1986). Informative too are P. Fearon, *The Origins and Nature of the Great Slump, 1929–1932* (1979); M. Klein, *Rainbow's End: The Crash of 1929* (2001), focusing on the United States; and D. Rothermund, *The Global Impact of the Great Depression, 1929–1939* (1996), which describes the economic crisis in all parts of the world.

There are helpful essays in W. Laqueur and G. L. Mosse (eds.), *The Great Depression* (1970) and K. Brunner (ed.), *The Great Depression Revisited* (1981). An often neglected subject is examined in A. J. H. Latham, *The Depression and the Developing World, 1914–1939* (1981). Two informative international studies are E. W. Bennett, *Germany and the Diplomacy of the Financial Crisis, 1931* (1962) and A. Schubert, *The Credit-Anstalt Crisis of 1931* (1992), on the Austrian bank failure.

For Keynes, there is the illuminating second volume of the three-volume biography by R. Skidelsky, *John Maynard Keynes: The Economist as Saviour, 1920–1937* (1993). There are also biographical accounts by D. E. Moggridge (1992), the editor of Keynes's papers, and by C. Hession (1989). One may also read P. Clarke, *The Keynesian Revolution in the Making, 1924–1936* (1989).

There are useful descriptions of modernist literature in R. J. Quinones, *Mapping Literary Modernism* (1985) and M. Levenson (ed.), *The Cambridge Companion to Modernism* (1999). For examples of the social themes in interwar literature, readers may turn to the relevant chapters of W. B. Rideout, *The Radical Novel in the United States, 1900–1954: Some Interrelations of Literature and Society* (1956, 1992); and L. Browder, *Rousing the Nation: Radical Culture in Depression America* (1998).

## Useful Web Sites

Excellent materials and links to numerous other sites on diplomacy and the League of Nations may be found in the *Research Guide to League of Nations Documents and Publications*, at the library of Northwestern University, [www.library.northwestern.edu/govpub/collections/league/background.html](http://www.library.northwestern.edu/govpub/collections/league/background.html). There are also links and readings on modern international relations and anticolonial movements at *Resources for the Study of International Relations and Foreign Policy*, a Web site of V. Ferraro in the International Relations Program at Mount Holyoke College, [www.mtholyoke.edu/acad/intrel/feros-pg.htm](http://www.mtholyoke.edu/acad/intrel/feros-pg.htm). Useful materials on Asia, the Middle East, and decolonization are available at the indispensable *Internet Modern History Sourcebook*, [www.Fordham.edu/halsall/mod.modsbook.html](http://www.Fordham.edu/halsall/mod.modsbook.html). Documents, images, and other materials on the leader of India's national independence movement may be found at *The Complete Site on Mahatma Gandhi*, [www.mkgandhi.org/](http://www.mkgandhi.org/).

## 20. DEMOCRACY AND DICTATORSHIP IN THE 1930s

Some general accounts for the interwar years and the Great Depression have been described in the previous chapter, and books on the international crisis of the 1930s will appear in the chapter that follows. Helpful introductions to the democracies and dictatorships in this era are P. Brendon, *The Dark Valley: A Panorama of the 1930s* (2000); R. W. Winks and R. J. Q. Adams, *Europe, 1890–1945: Crisis and Conflict* (2003), cited earlier; D. C. Large, *Between Two Fires: Europe's Path in the 1930s* (1990); and J. Jackson (ed.), *Europe, 1900–1945* (2002).

### The United States and the New Deal

The interwar years, the impact of the depression, and the New Deal may best be approached through W. E. Leuchtenburg, *The Perils of Prosperity, 1914–1932* (rev. 1993) and Franklin D. Roosevelt and the New Deal, 1932–1940 (1963); T. H. Watkins, *The Great Depression: America in the 1930s* (1993); and a more recent, impressive account, D. M. Kennedy, *Freedom from Fear: The American People in Depression and War, 1929–1945* (1999).

Several biographical accounts of Roosevelt offer insights into his presidency and the bold but pragmatic efforts to cope with the Great Depression. Among the most illuminating are A. M. Schlesinger, Jr., *The Age of Roosevelt* (3 vols.; 1956–1960); J. M. Burns, *Roosevelt: The Lion and the Fox* (1956); the more recent, concise study by R. Jenkins, *Franklin Delano Roosevelt* (2003); and A. L. Hamby, *For the Survival of Democracy: Franklin Roosevelt and the World Crisis of the 1930s* (2004), a well-balanced analysis. The effect on those who lived through the economic crisis is vividly portrayed in C. Bird, *The Invisible Scar* (1966); S. Terkel, *Hard Times: An Oral History of the Great Depression* (1970, 1986); and R. S. McElvaine (ed.), *Down and Out in the Great Depression* (1983). The growth of the labor movement in these years may be studied in I. Bernstein, *The Turbulent Years* (1970), and the impact on women in W. D. Wandersee, *Women's Work and Family Values, 1920–1940* (1981). Two informative comparative studies are S. Salter and J. Stevenson, *The Working Class and Politics in Europe and America, 1929–1945* (1989) and J. A. Garraty, *The Great Depression* (1986), which examines diverse national responses to the crisis in the United States and Europe.

### Britain between the Wars

General accounts for Britain, some extending beyond the interwar years, are A. J. P. Taylor, *English History, 1914–1945* (1965), written with the author's usual verve; A. Marwick, *A History of the Modern British Isles, 1914–1999* (2000); and M. Beloff, *Wars and Welfare: Britain, 1914–1945* (1984). An overview of the British economic scene is provided in S. Pollard,

*The Development of the British Economy, 1914–1990* (rev. 1992).

An outstanding account of changes in British life is provided in J. Stevenson, *British Society, 1914–1945* (1984). Other suggested studies include S. Glynn and J. Oxborrow, *Interwar Britain: Social and Economic History* (1976); J. Stevenson and C. Cook, *The Slump: Society and Politics during the Depression* (1978); S. Hynes, *The Auden Generation: Literature and Politics in the 1930s* (1977); R. Blythe, *The Age of Illusion: Some Glimpses of Britain between the Wars, 1919–1940* (rev. 1984); and R. McKibben, *Classes and Cultures: England 1918–1951* (1998). The post-war lot of the British wartime women workers is portrayed in D. Beddoe, *Back to Home and Duty: Women between the Wars, 1919–1939* (1989), and women activists are described in B. Harrison, *Prudent Revolutionaries: Portraits of British Feminists between the Wars* (1987). The campaign for women's rights is also examined in M. Pugh, *Women and the Women's Movement in Britain, 1914–1999* (2000).

On the decline of the Liberal party and the rise of Labour, one may read M. Freedon, *Liberalism Divided: British Political Thought, 1914–1938* (1986). For the general strike of 1926 and the cabinet crisis of 1929, the best synthesis is P. Williamson, *National Crisis and National Government: British Politics, the Economy, and the Empire, 1926–1932* (1992); and the new role of the Labour party is examined in D. Howell, *MacDonald's Party: Labour Identities and Crisis, 1922–1931* (2002). Among many biographies, there are studies of Ramsay MacDonald by D. Marquand (1977) and by A. Morgan (1987); and of his rival conservative leader by R. Jenkins, *Baldwin* (1987). K. Rose, *King George V* (1984) is a scholarly biography of the monarch.

On British relations with the empire and dominions one may turn to D. Kennedy, *Britain and Empire, 1880–1945* (2002); N. Mansergh, *The Commonwealth Experience* (rev. 1982); and M. Kitchen, *The British Empire and Commonwealth: A Short History* (1996). An outstanding study of Ireland in this era is J. M. Curran, *The Birth of the Irish Free State, 1921–1923* (1980) and on a broader time scale, J. J. Lee, *Ireland, 1912–1985: Politics and Society* (1990). The thorny issue of Northern Ireland is examined in N. Mansergh, *The Unresolved Question: The Anglo-Irish Settlement and Its Undoing, 1912–1972* (1991) and M. Mulholland, *The Longest War: Northern Ireland's Troubled History* (2002).

### France between the Wars

General accounts for these years are P. Bernard and H. Dubief, *The Decline of the Third Republic, 1914–1938* (trans. 1985); J. P. Azéma, *From Munich to the Liberation, 1938–1944* (trans. 1985), somewhat more probing; and W. Fortescue, *The Third Republic in France, 1870–1940: Conflicts and Continuities*

(2000), which provides excellent source materials. There are incisive essays in S. Hoffmann and others, *In Search of France: The Economy, Society, and Political System in the Twentieth Century* (1963). An illuminating study of government planning, which was less successful in the interwar years than later, is R. F. Kuisel, *Capitalism and the State in Modern France: Renovation and Economic Management in the Twentieth Century* (1981). The political and social divisions within France are colorfully conveyed in E. Weber, *The Hollow Years: France in the 1930s* (1994).

The response to the depression and the threat to the Third Republic are explored in two books by J. Jackson: *The Politics of Depression in France, 1932–1936* (1985) and *The Popular Front in France: Defending Democracy, 1934–1938* (1988). For the Socialist leader of the Popular Front one may read J. Colton, *Léon Blum: Humanist in Politics* (1966, 1987) and J. Lacouture, *Léon Blum* (1977; trans. 1982). Other studies of the political left in the Popular Front era include N. Greene, *Crisis and Decline: The French Socialist Party in the Popular Front Era* (1969); D. Caute, *Communism and the French Intellectuals, 1914–1960* (1965); and D. R. Brower, *The New Jacobins: The French Communist Party and the Popular Front* (1968). For right-wing and fascist-type movements, in addition to books cited in Chapter 15, one may read R. Soucy, *French Fascism: The First Wave, 1924–1933* (1985) and *French Fascism: The Second Wave, 1933–1939* (1995). French national identity is examined in H. Lebovics, *True France: The Wars over Cultural Identity, 1900–1945* (1992). Studies of the countryside include G. Wright, *Rural Revolution in France: The Peasantry in the Twentieth Century* (1964) and R. O. Paxton, *French Peasant Fascism: Henry Dorgères' Greenshirts and the Crisis of French Agriculture, 1929* (1997). French responses to the rise of Nazism are examined in several useful recent books: R. Davis, *Anglo-French Relations before the Second World War: Appeasement and Crisis* (2001); B. F. Martin, *France in 1938* (2005); and J. B. Duroselle, *France and the Nazi Threat: The Collapse of French Diplomacy, 1932–1939* (trans. 2004).

### Italy: The Fascist Experience

A helpful introduction to the general development of modern Italy may be found in S. M. Di Scala, *Italy: From Revolution to Republic, 1700 to the Present* (rev. 2004). The rise of Italian Fascism is examined in E. Wiskemann, *Fascism in Italy* (1969) and in F. Chabod, *A History of Italian Fascism* (1963), concise but perceptive. There is also an impressive account of the early years, A. Lyttelton, *The Seizure of Power: Fascism in Italy, 1919–1929* (1973), and a concise survey of the entire Fascist era in P. Morgan, *Italian Fascism, 1915–1945* (2004). Mussolini's flamboyant precursor is studied in J. Woodhouse, *Gabriele d'Annunzio: Defiant Archangel* (1998).

The Fascist state is examined in R. Sarti, *Fascism and the Industrial Leadership in Italy, 1919–1940* (1971) and M. Gallo, *Mussolini's Italy: Twenty Years of the Fascist Era* (1973). The Fascist impact on Italian society is comprehensively examined in E. R. Tannenbaum, *The Fascist Experience: Italian Society and Culture, 1922–1945* (1972); V. de Grazia, *The Culture of Consent: Mass Organization of Leisure in Fascist Italy* (1981) and *How Fascism Ruled Women: Italy, 1922–1945* (1991); and E. Gentile, *The Socialization of Politics in Fascist Italy* (1994), portraying fascism as a civic and political religion.

The compromise with the church is explored in J. F. Pollard, *The Vatican and Italian Fascism, 1920–1932* (1985). Mussolini's racial policy, moving on into the war years, is studied in M. Michaelis, *Mussolini and the Jews: German-Italian Relations and the Jewish Question in Italy, 1922–1945* (1978); S. Zucotti, *The Italians and the Holocaust: Persecution, Rescue, and Survival* (1988); and A. Stille, *Benevolence and Betrayal: Five Italian Jewish Families under Fascism* (1993), a poignant portrayal.

On Il Duce, the best studies are by D. Mack Smith, *Mussolini* (1982), straightforward and comprehensive, and the more recent biography by R. J. B. Bosworth, *Mussolini* (2002); the latter is now complemented by his valuable *Mussolini's Italy* (2006), which examines the impact of fascism on Italian society. There are also informative biographies by I. Kirkpatrick, *Mussolini: Study of a Demagogue* (1964); J. Ridley, *Mussolini* (1997); M. Clark, *Mussolini* (2005); and A. L. Cardoza, *Benito Mussolini: The First Fascist* (2006). Other useful studies include A. J. Gregor, *Young Mussolini and the Intellectual Origins of Fascism* (1979) and Z. Sternhell, *The Birth of Fascist Ideology: From Cultural Rebellion to Political Revolution* (1993), a controversial but outstanding study cited earlier.

Foreign and colonial policy is examined in G. Barclay, *The Rise and Fall of the New Roman Empire: Italy's Bid for World Power, 1890–1943* (1973) and D. Mack Smith, *Mussolini's Roman Empire* (1976). The last phase of the dictator's career is narrated in detail in F. W. Deakin, *The Brutal Friendship: Mussolini, Hitler, and the Fall of Italian Fascism* (1962), the final chapters of which are available as *The Six Hundred Days of Mussolini* (1966).

### Germany, 1919–1933: The Weimar Republic

For the collapse of the Weimar Republic and the emergence of Hitler, several of the longer-range histories of Germany by G. A. Craig and others, cited in Chapters 13 and 14, will also be helpful. For accounts of Weimar one may turn to A. J. Nicholls, *Weimar and the Rise of Hitler* (rev. 2000); S. Taylor, *Revolution and Counter-Revolution in Germany 1918–1933* (1984); E. Kolb, *The Weimar Republic* (trans. 1988); H. Heiber, *The Weimar Republic: Germany, 1918–1933* (1986); H. Mommsen, *The Rise and Fall of*

*Weimar Democracy* (trans. 1996); and R. J. Evans, *The Coming of the Third Reich* (2003), the first volume of his projected trilogy.

The most informed inquiry into German efforts to cope with the depression is H. James, *The German Slump: Politics and Economics, 1924–1936* (1986). The inability of the political parties and diverse interest groups to cooperate is examined in L. E. Jones, *German Liberalism and the Dissolution of the Weimar Party System, 1918–1933* (1989). W. L. Guttman, *The German Social Democratic Party, 1875–1933* (1981) examines a major party of the Left. The resort to extra-parliamentary tactics receives attention in J. M. Riehl, *Paramilitary Politics in Weimar Germany* (1977); P. Fritzsche, *Rehearsals for Fascism: Populism and Political Mobilization in Weimar Germany* (1990); and E. Rosenhaft, *Beating the Fascists? The German Communists and Political Violence, 1929–1933* (1984). The question of army loyalties is examined in depth in F. L. Carsten, *The Reichswehr and Politics, 1918 to 1933* (trans. 1966); J. W. Wheeler-Bennett, *The Nemesis of Power: The German Army in Politics, 1918–1945* (rev. 1964); and G. A. Craig, *The Politics of the Prussian Army, 1640–1945* (1956, 1964), cited earlier.

Among thoughtful efforts to explore the ideological roots of Weimar's failure are F. Stern, *The Politics of Cultural Despair: A Study in the Use of the Germanic Ideology* (1961) and G. L. Mosse, *The Crisis of German Ideology: Intellectual Origins of the Third Reich* (1964). Cultural history in these years is examined in P. Gay, *Weimar Culture: The Outsider as Insider* (1968, 2001); W. Laqueur, *Weimar: A Cultural History, 1918–1933* (1974); and D. J. K. Peukert, *The Weimar Republic: The Crisis of Classical Modernity* (trans. 1992). A helpful discussion of key political figures is available in P. Stachura, *Political Leaders in Weimar Germany: A Biographical Study* (1993).

### Germany, 1933–1945: The Third Reich

A valuable introduction to the vast literature on the Third Reich is I. Kershaw, *The Nazi Dictatorship: Problems and Perspectives of Interpretation* (rev. 2000), while P. Ayçoberry, *The Nazi Question: An Essay on the Interpretation of National Socialism, 1922–1975* (trans. 1981) and J. Lukacs, *The Hitler of History* (1997) are helpful historiographical studies. Two successful recent efforts to provide a thoughtful overview of the Nazi era are K. P. Fischer, *Nazi Germany* (1995) and M. Burleigh, *The Third Reich* (2000); there is also an excellent account of the Nazi regime in R. J. Evans, *The Third Reich in Power, 1933–1939* (2005), the second volume of his projected trilogy, informative on the lives of people as well as the politics and ideology of the regime.

On the coming to power of the Nazis one may first turn to M. Broszat, *Hitler and the Collapse of Weimar Germany* (trans. 1987), focusing on the years

1929–1933. An informative study is H. A. Turner, *German Big Business and the Rise of Hitler* (1985), which may be supplemented by his *Hitler's Thirty Days to Power: January 1933* (1997). Two studies illuminate the Nazi appeal to diverse segments of the population: W. S. Allen, *The Nazi Seizure of Power: The Experience of a Single German Town, 1922–1945* (rev. 1989) and J. H. Grill, *The Nazi Movement in Baden, 1920–1945* (1984). Two efforts to assess the Nazi appeal at the polls are R. F. Hamilton, *Who Voted for Hitler?* (1982) and T. Childers, *The Nazi Voter: The Social Foundations of Fascism in Germany, 1919–1933* (1983), which both tend to confirm that Nazi support came from all segments of the population, not only from the lower-middle class. How the movement's "populist nationalism" rallied wide support is recounted in P. Fritzsche, *Germans Into Nazis* (1998).

M. H. Kater, *The Nazi Party: A Social Profile of Members and Leaders, 1919–1945* (1983) is an exhaustive sociological analysis of those who joined and led the party, while D. Orlow, *The History of the Nazi Party* (2 vols.; 1969–1973) is a comprehensive organizational history. There are many studies of such key Nazi institutions as the SS, the Gestapo, and the courts, too numerous to cite here. For the military one may read O. Bartov, *Hitler's Army: Soldiers, Nazis, and War in the Third Reich* (1991).

Religion and related matters are examined in E. C. Helmreich, *The German Churches under Hitler* (1979); D. Bergen, *Twisted Cross: The German Christian Movement in the Third Reich* (1996); G. Lewy, *The Catholic Church and Nazi Germany* (1964); and S. Friedländer, *Pius XII and the Third Reich* (1966). Books on Hitler's persecution of the Jews, and on the death camps and the Holocaust, will be described in the next chapter, but one should mention here L. S. Dawidowicz, *The War against the Jews, 1933–1945* (1976); S. Gordon, *Hitler, Germans, and the Jewish Question* (1984); and S. Friedländer, *Nazi Germany and the Jews: The Years of Persecution, 1933–1939* (1997).

On the Nazi state four outstanding analyses are K. D. Bracher, *The German Dictatorship* (trans. 1970); M. Broszat, *The Hitler State* (trans. 1981); K. Hildebrand, *The Third Reich* (1984); and M. Burleigh and W. Wippermann, *The Racial State: Germany, 1933–1945* (1992). D. Schoenbaum, *Hitler's Social Revolution: Class and Status in Nazi Germany, 1933–1939* (1966) sees a leveling effect not accomplished by earlier German regimes. Studies exploring new avenues to understanding popular responses include I. Kershaw, *The "Hitler Myth": Image and Reality in the Third Reich* (1987); D. J. K. Peukert, *Inside Nazi Germany: Conformity, Opposition, and Racism in Everyday Life* (trans. 1987); P. Ayçoberry, *The Social History of the Third Reich* (trans. 2000); and C. Koonz, *The Nazi Conscience* (2003), which argues

that the Nazis gained support by claiming to represent the virtues of the German people. There are also perceptive insights into life under the Nazis in R. Bessel (ed.), *Life in the Third Reich* (1987) and G. L. Mosse, *Nazi Culture: Intellectual, Cultural, and Social Life in the Third Reich* (1966).

The best study of women in the Third Reich, with special attention to those who supported and those who resisted the regime, is C. Koonz, *Mothers in the Fatherland: Women, the Family, and Nazi Politics* (1987). It may be supplemented by J. Stephenson, *Women in Nazi Society* (1976) and *The Nazi Organization of Women* (1981); E. Heineman, *What Difference Does a Husband Make: Women and Marital Status in Nazi and Postwar Germany* (1999); and the essays in R. Bridenthal and others, *When Biology Became Destiny: Women in Weimar and Nazi Germany* (1989).

That there was no mass resistance but opposition only from resolute individuals and small groups emerges from two comprehensive accounts: P. Hoffmann, *German Resistance to Hitler* (rev. 1988) and M. Balfour, *Withstanding Hitler in Germany 1933–1945* (1989). These accounts may be supplemented by J. Fest, *Plotting Hitler's Death* (trans. 1997). One may also consult D. C. Lodge (ed.), *Contending with Hitler: Varieties of German Resistance in the Third Reich* (1992) and on the Resistance legacy, M. Geyer and J. W. Boyer (eds.), *Resistance Against the Third Reich, 1933–1990* (1994).

Of the many biographies of Hitler the two volumes of I. Kershaw are undoubtedly now the most authoritative: *Hitler, 1889–1936: Hubris* (1998) and *Hitler, 1936–1945: Nemesis* (1999), a remarkable study explaining how Germans identified with Hitler and how his arrogance and pride brought him initial success and then disaster. Two earlier biographies are outstanding: A. Bullock, *Hitler: A Study in Tyranny* (1952, 1964), and J. C. Fest, *Hitler* (trans. 1975). Bullock has also written a remarkable in-depth comparative study, *Hitler and Stalin: Parallel Lives* (1992). Hitler's early years in Vienna have been reexamined in B. Hamann, *Hitler's Vienna: A Dictator's Apprenticeship* (1999). R. Binion, *Hitler among the Germans* (1976) uses psychoanalytical methods to explain the inner wellsprings of the obsessed leader, while R. L. Waite, *The Psychopathic God: Adolf Hitler* (1977) effectively combines psychoanalytical and more conventional techniques. Two interpretive essays that raise pertinent questions are S. Haffner, *The Meaning of Hitler* (trans. 1980) and W. Carr, *Hitler: A Study in Personality and Politics* (1979). The end of the leader and his regime is vividly recounted in H. R. Trevor-Roper, *The Last Days of Hitler* (rev. 1966).

Some of Hitler's associates are studied in J. C. Fest, *The Face of the Third Reich: Portraits of the Nazi Leadership* (trans. 1977); B. F. Smith, *Heinrich Himmler: A Nazi in the Making, 1900–1926* (1971); R. Smelser, *Robert Ley: Hitler's Labor Front Leader*

(1989); and R. G. Reuth, *Goebbels* (trans. 1994). Hitler's foreign minister is studied in M. Bloch, *Ribbentrop* (1993), a detailed diplomatic account, and J. Weitz, *Hitler's Diplomat: The Life and Times of Joachim Ribbentrop* (1992). G. Serenz, *Albert Speer: His Battle with Truth* (1995) is highly critical of Hitler's wartime economic planner. Two convenient handbooks on the institutions and personalities of the regime are R. S. Wistrich, *Who's Who in Nazi Germany* (rev. 1995) and C. Zentner and F. Bedürftig, *The Encyclopedia of the Third Reich* (2 vols.; 1991).

## Defining Totalitarianism and Fascism

The origins and nature of twentieth-century ideologies are explored in many books, notably in K. D. Bracher's comprehensive *A History of Political Thought in the Twentieth Century* (trans. 1984). Among efforts to examine totalitarianism, Left and Right, are C. J. Friedrich and Z. K. Brzezinski, *Totalitarian Dictatorship and Autocracy* (rev. 1965); H. Arendt, *Origins of Totalitarianism* (rev. 1966), cited in Chapter 15; H. Buchheim, *Totalitarian Rule* (trans. 1967); and S. P. Soper, *Totalitarianism: A Conceptual Approach* (1985). An important comparative study is the collection of essays in I. Kershaw and M. Levin (eds.), *Stalinism and Nazism: Dictatorships in Comparison* (1997). R. O. Paxton, *The Anatomy of Fascism* (2004) is the best recent effort to arrive at a general definition of fascist ideas and political movements.

For other insightful studies of fascism as a phenomenon of the interwar years, one must turn to S. G. Payne, *A History of Fascism, 1914–1945* (1995); F. L. Carsten, *The Rise of Fascism* (rev. 1980); H. R. Kedward, *Fascism in Western Europe, 1900–1945* (1969); R. De Felice, *Fascism* (1976), by the Italian biographer of Mussolini; and W. Laqueur, *Fascism: Past, Present, Future* (1996). Readers will find E. Nolte, *Three Faces of Fascism: Action Française, Italian Fascism, National Socialism* (trans. 1966), provocative but difficult.

## Other European Developments in the Interwar Years

Spain and the Spanish Civil War are discussed in the following chapter. The most informative volumes on central and eastern Europe are J. Rothschild, *East Central Europe between the Two World Wars* (1975); A. Palmer, *The Lands Between: A History of East-Central Europe since the Congress of Vienna* (1970); and I. T. Berend, *Decades of Crisis: Central and Eastern Europe Before World War II* (1998). A special subject is ably explored in E. Mendelsohn, *The Jews of East Central Europe between the World Wars* (1983).

A few titles may be suggested for some of the successor states. For Austria: C. E. Edmondson, *The Heimwehr and Austrian Politics, 1918–1936* (1978); M. Kitchen, *The Coming of Austrian Fascism* (1980); F. L. Carsten, *Fascist Movements in Austria: From*

Schönerer to Hitler (1977); B. F. Pauley, *Hitler and the Forgotten Nazis: A History of Austrian National Socialism* (1981) and *From Prejudice to Persecution: A History of Austrian Anti-Semitism* (1998). For Hungary: C. A. Macartney, *October Fifteenth: A History of Modern Hungary, 1929–1945* (2 vols.; rev. 1962); R. L. Tönes, *Bela Kun and the Hungarian Soviet Republic* (1967), on the short-lived Communist regime of 1919; and T. Sakmyster, *Hungary's Admiral on Horseback: Miklós Horthy, 1918–1944* (1999). For Czechoslovakia: J. Kolvoda, *The Genesis of Czechoslovakia* (1985); Z. A. B. Zeman, *The Masaryks: The Making of Czechoslovakia* (1976, 1991); E. Wiske-mann, *Czechs and Germans* (rev. 1967); V. Olivova, *The Doomed Democracy: Czechoslovakia in a Disrupted Europe, 1918–1938* (1972); and C. S. Leff, *National Conflict in Czechoslovakia: The Making and Remaking of a State, 1918–1987* (1988), which carries the story toward the present. For Yugoslavia: I. Banac, *The National Question in Yugoslavia* (1985), an informative inquiry into the genesis of the multiethnic state, for which other books will be cited in Chapter 26; F. Singleton, *A Short History of the Yugoslav Peoples* (1985); and R. West, *Black Lamb and Grey Falcon* (1941, 1992), a gifted journalist's older insightful account. For Poland: M. K. Dziewanowski, *Poland in the Twentieth Century* (1977); A. Polonsky, *Politics in Independent Poland, 1921–1939* (1972); and the volumes of N. Davies cited in Chapter 11. For Finland and the Baltic states: J. H. Wuorinen, *A History of Finland* (1965); D. G. Kirby, *Finland in the Twentieth Century* (1979); and G. von Rauch, *The Baltic States—Estonia, Latvia, and Lithuania: The Years of Independence, 1917–1940* (trans. 1974, 1995).

### Useful Web Sites

There are excellent links to documents, images, and other materials on America in the 1930s at the *New Deal Network*, a site maintained by the Franklin and Eleanor Roosevelt Institute, <http://newdeal.feri.org/>. Readers will find links to information and resources on all aspects of European society and politics in the 1930s (and other eras too) at the helpful British site, *Spartacus Educational*, which provides a convenient student-level guide to information on key events and influential historical figures at [www.spartacus.schoolnet.co.uk/](http://www.spartacus.schoolnet.co.uk/).

## 21. THE SECOND WORLD WAR

### Spain and the Spanish Civil War

The most comprehensive narrative account of the Spanish conflict, including the international ramifications, is H. Thomas, *The Spanish Civil War* (rev. 2001), in which Franco's skill as a manipulator and survivor clearly emerges. But other recommended accounts are G. Jackson, *The Spanish Republic and the Civil War, 1931–1939* (1965; abridged ed., 1974); B. Bolloten, *The Spanish Civil War: Revolution and*

*Counterrevolution* (1991); P. Broué and E. Témime, *The Revolution and the Civil War in Spain* (trans. 1972); A. Beevor, *The Spanish Civil War* (1982, 2001); and H. Browne, *Spain's Civil War* (rev. 1996). Brief overviews are available in F. Ribeiro de Menezes, *Franco and the Spanish Civil War* (2001), and F. Lannon, *The Spanish Civil War* (2002). G. Esenwein and A. Shubert, *Spain at War: The Spanish Civil War in Context, 1931–1939* (1995), and R. Carr, *The Spanish Tragedy: The Civil War in Perspective* (1977, 2000), add broader analytical insights.

The American response to the war is examined in A. Guttman, *The Wound in the Heart: America and the Spanish Civil War* (1962) and R. P. Traina, *American Diplomacy and the Spanish Civil War* (1968). The emotions stirred by the events are evoked by S. Weintraub, *The Last Great Cause: The Intellectuals and the Spanish Civil War* (1968). The volunteers who fought for the Republic are studied in C. Geiser, *Prisoners of the Good Fight: The Spanish Civil War, 1936–1938* (1994); M. Jackson, *The International Brigades in the Spanish Civil War, 1936–1938* (1994); and P. N. Carroll, *The Odyssey of the Abraham Lincoln Brigade: Americans in the Spanish Civil War* (1994). A large-scale critical study of Franco is P. Preston, *Franco: A Biography* (1995); but one may also read S. Ellwood, *Franco* (1994) and G. A. Hodges, *Franco: A Concise Biography* (2000), which offers a psychological interpretation of Franco's actions. S. G. Payne has written a comprehensive study, *Fascism in Spain, 1923–1977* (1999); an earlier study on Franco's years in power, *The Franco Regime, 1936–1975* (1987); and an account of the Soviet role in the war, *The Spanish Civil War, the Soviet Union, and Communism* (2004).

### Background to the Second World War

Although there is no one comprehensive treatment taking into account all the sources now available for the diplomacy of the interwar years and the background to the Second World War, there are a number of important books on the subject. Among the most informative general inquiries into the coming of the war are P. Renouvin, *World War II and Its Origins: International Relations 1929–1945* (trans. 1969); M. Baumont, *The Origins of the Second World War* (trans. 1978); P. M. H. Bell, *The Origins of the Second World War in Europe* (rev. 1997); R. Overy with A. Wheatcroft, *The Road to War* (1999); and A. J. Crozier, *The Causes of the Second World War* (1997).

On the 11 months between Munich and the outbreak of the war, D. C. Watt, *How War Came: The Immediate Origins of the Second World War, 1938–1939* (1989) is a masterful study. One may also read S. Aster, *1939: The Making of the Second World War* (1973) and M. J. Carley, *The Alliance That Never Was and the Coming of World War II* (1999) on the failure to create a Western-Soviet alliance at the time. A. J. P. Taylor's *The Origins of the Second World War* (1961)

depicts Hitler as one who did not desire war but took advantage of his opponents' uncertainty. On the Taylor thesis one may read the evaluations in G. Martel (ed.), *"The Origins of the Second World War" Reconsidered: The A.J.P. Taylor Debate after Twenty-Five Years* (1986) and R. Boyce and E. M. Robertson (eds.), *Paths to War: New Essays on the Origins of the Second World War* (1989).

A major study of German foreign policy based on exhaustive use of the documents and strongly emphasizing Hitler's responsibilities and initiatives is G. L. Weinberg, *Hitler's Foreign Policy: The Road to World War II, 1933–1939* (1970, 2005). A second study with similar conclusions is N. Rich, *Hitler's War Aims* (2 vols.; 1973–1974). For assessments of German foreign policy one may also read K. Hildebrand, *The Foreign Policy of the Third Reich* (1974); J. Hiden, *Germany and Europe, 1919–1939* (rev. 1993); E. Jäckel, *Hitler's World View* (1981); and the essays in V. R. Berghahn and M. Kitchen (eds.), *Germany and the Age of Total War* (1981).

British policy in the 1930s, including the economic and political constraints on a more assertive policy, is examined in M. Cowling, *The Impact of Hitler: British Politics and British Policy, 1933–1940* (1975); R. P. Shay, Jr., *British Rearmament in the Thirties: Politics and Profits* (1977); G. C. Peden, *British Rearmament and the Treasury, 1932–1939* (1979); and F. McDonough, *Neville Chamberlain, Appeasement, and the British Road to War* (1998), which shows the links between domestic and foreign policies. The opposition to appeasement is examined in W. R. Rock, *Appeasement on Trial: British Foreign Policy and Its Critics, 1938–1939* (1966); N. Thompson, *The Anti-Appeasers* (1971); and two books by R. A. C. Parker, *Chamberlain and Appeasement* (1993) and *Churchill and Appeasement* (2000). K. Robbins, *Appeasement* (rev. 1997) provides a brief overview of the debate.

For the 1930s Winston Churchill's *The Gathering Storm* (1948), covering his years in the opposition, the first volume of his indispensable six-volume history, described below, offers valuable perspectives. Biographical studies focusing on British foreign policy include two studies of Anthony Eden, one highly critical, by D. Carlton (1981); the second more defensive, by R. Rhodes James (1987); and a study of Sir Samuel Hoare by J. A. Cross (1977). For Neville Chamberlain there is a study by J. Charmley (1990), somewhat defensive, and a balanced assessment by W. R. Rock (1969).

Among the several impressive studies that examine British foreign policy in long-range perspective are F. S. Northedge, *The Troubled Giant: Britain among the Great Powers, 1916–1939* (1966); P. Kennedy, *The Realities behind Diplomacy: Background Influences on British External Policy, 1865–1980* (1983); and C. J. Bartlett, *British Foreign Policy in the Twentieth Century* (1989).

For French foreign policy in these years the fullest accounts are by A. P. Adamthwaite, *France and the Coming of the Second World War, 1936–1939* (1977) and *Grandeur and Misery: France's Bid for Power in Europe, 1914–1940* (1995), cited earlier. They may be supplemented by R. J. Young, *France and the Origins of the Second World War* (1996). The limited options of the Popular Front are carefully examined in N. Jordan, *The Popular Front and Central Europe: The Dilemmas of French Impotence, 1918–1940* (1992).

There are many books on specific episodes and subjects. The German militarization of the Rhineland is examined in J. T. Emerson, *The Rhineland Crisis, 7 March 1936* (1977). On the annexation of Austria, one may read J. Gehl, *Austria, Germany and the Anschluss, 1931–1938* (1963) and D. Wagner and G. Tomkowitz, *Anschluss: The Week Hitler Seized Vienna* (1971). For Munich the best detailed account is T. Taylor, *Munich: The Price of Peace* (1978), but there are informative essays in I. Lukes and E. Goldstein (eds.), *The Munich Crisis, 1938: Prelude to World War II* (1999); and the Soviet response is examined in H. Ragsdale, *The Soviets, the Munich Crisis, and the Coming of World War II* (2004). G. A. Craig and F. Gilbert (eds.), *The Diplomats, 1919–1938* (1953, 1994) includes valuable chapters on the individuals who helped make foreign policy in the era.

Studies focusing on eastern Europe include A. Cienciala, *Poland and the Western Powers, 1938–1939* (1968); S. Newman, *March 1939: The British Guarantee to Poland* (1976); and A. J. Prazmowska, *Britain, Poland, and the Eastern Front, 1939* (1987). The origins and subsequent history of the German-Soviet Pact of August 23, 1939, are recounted in A. Read and D. Fisher, *The Deadly Embrace: Hitler, Stalin and the Nazi-Soviet Pact, 1939–1941* (1989).

The role of the United States in these years is traced in two comprehensive volumes by W. L. Langer and S. E. Gleason, *The Challenge to Isolation, 1937–1940* (1952, 1964) and *The Undeclared War, 1940–1941* (1953, 1968). Other important studies include C. A. MacDonald, *The United States, Britain, and Appeasement, 1930–1939* (1981); D. Reynolds, *The Creation of the Anglo-American Alliance, 1937–1941* (1982); and W. R. Rock, *Chamberlain and Roosevelt: British Foreign Policy and the United States, 1937–1940* (1989). The most informative study of Roosevelt's foreign policy, sympathetic yet critical, is R. Dallek, *Franklin D. Roosevelt and American Foreign Policy, 1932–1945* (1979, 1995). For the war years it may be supplemented by J. M. Burns, *Roosevelt: The Soldier of Freedom* (1970); F. Marks, *Wind over Sand: The Diplomacy of Franklin Roosevelt* (1988); and W. F. Kimball, *The Juggler: Franklin Roosevelt as Wartime Statesman* (1991) and *Roosevelt, Churchill, and the Second World War* (1997).

For the widening of the Japanese invasion of China in 1937 and the later expansion of the European

conflict into a global war, one may read A. Iriye, *The Origins of the Second World War in Asia and the Pacific* (1987); and W. Carr, *Poland to Pearl Harbor* (1985). The attack of December 7, 1941, is studied in R. Wohlstetter, *Pearl Harbor: Warning and Decision* (1962); G. W. Prange, *At Dawn We Slept: The Untold Story of Pearl Harbor* (1981); and H. C. Clausen and B. Lee, *Pearl Harbor: Final Judgment* (1992), an updating of an official inquiry first published in 1946.

### The War: Military Aspects

Of the numerous narrative histories of the war, the most comprehensive and up-to-date syntheses are J. Keegan, *The Second World War* (1989, 2005) and G. L. Weinberg, *A World at Arms: A Global History of World War II* (rev. 2005). Also available are M. Gilbert, *The Second World War* (rev. 1991); H. P. Willmott, *The Great Crusade* (1990); P. Calvocoressi, G. Wint, and J. Pritchard, *Total War: Causes and Courses of the Second World War* (rev. 1989); R. A. C. Parker, *The Second World War: A Short History* (rev. 1997); A. W. Purdue, *The Second World War* (1999), a concise overview of the main events; S. Tucker, *The Second World War* (2004); and M. Hastings, *Armageddon: The Battle for Germany, 1944–1945* (2004), which focuses on the war's final military campaigns. *The Oxford Companion to World War II* (1995) helps provide encyclopedic coverage of all aspects of the war, and D. Flower and J. Reeves, *The War, 1939–1945: A Documentary History* (1960, 1997) is a helpful anthology. J. Keegan has edited the superb *Times Atlas of the Second World War* (1989), and he analyzes historical and other writings on the war, including the myths and controversies surrounding it, in *The Battle for History: Re-fighting World War II* (1996). W. S. Churchill, *The Second World War* (6 vols.; 1948–1953; 1 vol. abridged, 1959), already mentioned, is a valuable, full-dress history by the historian-statesman written in the grand style, but it should be read in conjunction with other studies now available. M. Gilbert, *Churchill: A Life* (1992) synthesizes Gilbert's monumental official biography (8 vols.; 1966–1989). Of many other biographies K. Robbins, *Churchill* (1992) and J. Keegan, *Winston Churchill* (2002) provide balanced brief studies; J. Lukes, *Churchill: Visionary, Statesman, Historian* (2002) examines Churchill's strategic ideas; and I. S. Wood, *Churchill* (2000) surveys the historical literature on the British prime minister. Churchill's view of the war is also examined in G. Weinberg, *Visions of Victory: The Hopes of Eight World War II Leaders* (2005), an important work that includes analysis of other key figures such as Hitler, Stalin, and Roosevelt.

Many volumes of the detailed official histories of the United Kingdom, Canada, and the United States appeared in the decades after the war. Of special note is S. E. Morison, *The Two-Ocean War* (1963), which summarizes the multivolume U.S. Navy official his-

tory. On naval warfare, R. Hough, *The Longest Battle: The War at Sea, 1939–1945* (1986) is also available. Another important aspect is examined in R. J. Overy, *The Air War, 1939–1945* (1980), and the greatest air battle is described in R. Hough and D. Richards, *The Battle of Britain* (1989). C. K. Webster and N. N. Frankland, *Strategic Air Offensive against Germany, 1939–1945* (1961) demonstrates that Allied strategic bombing was less effective than thought at the time.

The Allied penetration and use of the highest secret German military code in Operation Ultra is recounted in F. Winterbotham, *The Ultra Secret* (1974) and R. Lewin, *Ultra Goes to War* (1979). A comprehensive account of cryptography covering all theaters of the war is S. Budiansky, *Battle of Wits: The Complete Story of Codebreaking in World War II* (2000).

The military aspects of France's defeat in 1940 may be approached through A. Horne, *To Lose a Battle: France, 1940* (1969); G. Chapman, *Why France Fell: The Defeat of the French Army in 1940* (1969); A. Beaufre, *1940: The Fall of France* (trans. 1968); A. Shennan, *The Fall of France, 1940* (2000); J. Jackson, *The Fall of France: The Nazi Invasion of 1940* (2003); and E. R. May, *Strange Victory: Hitler's Conquest of France* (2001), a provocative in-depth study, which concludes that the German victory was far from inevitable. The background to the defeat is explored in R. F. Young, *In Command of France: French Foreign Policy and Military Planning, 1933–1940* (1978) and M. S. Alexander, *The Republic in Danger: General Maurice Gamelin and the Politics of French Defence, 1938–1940* (1993). The relationship with Britain is studied in E. M. Gates, *End of the Affair: The Collapse of the Anglo-French Alliance, 1939–1940* (1981). W. L. Shirer, *The Collapse of the Third Republic: An Inquiry into the Fall of France in 1940* (1969) is a thoughtful older account by a reflective journalist; and M. Bloch, *Strange Defeat* (1940) is an incisive memoir by the eminent medievalist later executed as a member of the Resistance. J. Blatt (ed.), *The French Defeat of 1940: Reassessments* (1997) is a valuable set of essays.

The Russo-Finnish conflict of 1939–1940 is narrated in R. W. Condon, *The Winter War* (1972); F. Chew, *The White Death* (1971); and W. Trotter, *A Frozen Hell: The Russo-Finnish Winter War of 1939–1940* (1991, 2000). For the war in eastern Europe after the German invasion one may read A. Clark, *Barbarossa: The Russian-German Conflict, 1941–1945* (1965, 1996); two works by A. Seaton, *The Russo-German War* (1971, 1993), and *Stalin as Military Commander* (1976); and two works by J. Erickson, *The Road to Stalingrad* (1975, 1999) and *The Road to Berlin* (1984, 1999). A. Paul, *Katyn: The Untold Story of Stalin's Polish Massacre* (1991), and G. Stanford, *Katyn and the Soviet Massacre of 1940* (2005) describe the early episode of the war in which over 4,000 Polish officers and soldiers captured in 1939 were exe-

cuted at Stalin's orders, as confirmed by recently opened archives.

The war in the Pacific is ably presented in C. Bateson, *The War with Japan* (1968); S. Ienaga, *The Pacific War: World War II and the Japanese, 1931–1945* (trans. 1978), by a distinguished Japanese historian; and A. Iriye, *Power and Culture: The Japanese-American War, 1941–1945* (1981), offering important insights. M. Harries and S. Harries, *Soldiers of the Sun* (1992), cited earlier, recounts the story of the imperial army in conquest and collapse, while H. T. Cooke and T. F. Cooke, *Japan at War: An Oral History* (1992) provides unusual eyewitness testimony to Japanese military conduct. A far-reaching study examining the impact of the war on Asia is C. Thorne, *The Far Eastern War: States and Societies, 1941–1945* (1985, 1988). On the last phase in the Pacific, W. Craig, *The Fall of Japan* (1968) helps illuminate debates over how inevitable or imminent Japan's surrender was. This issue is also addressed in the controversial work of T. Hasegawa, *Racing the Enemy: Stalin, Truman, and the Surrender of Japan* (2005), which argues that the Soviet Union's entry into the war against Japan was the key factor in the Japanese decision to surrender.

On the development of the atomic bomb and its first use one may read R. Rhodes, *The Making of the Atomic Bomb* (1986), a remarkably comprehensive account, which may be supplemented by J. S. Walker, *Prompt and Utter Destruction: Truman and the Use of Atomic Bombs against Japan* (rev. 2004). M. Walker, *German National Socialism and the Quest for Nuclear Power, 1939–1949* (1990) describes the German effort to create an atomic bomb.

## The War: Social and Economic Impact

For the social and economic impact of the war the best one-volume synthesis is A. S. Milward, *War, Economy, and Society, 1939–1945* (1977). For the British wartime scene, A. Calder, *The People's War: Britain, 1939–1945* (1969) is highly informative, while A. Marwick, *The Home Front: The British and the Second World War* (1977) is a graphic documentary and photographic account. E. S. Beck, *The European Home Fronts, 1939–1945* (1993) is a useful brief synthesis. The wartime Soviet scene is studied in detail in J. Barber and M. Harrison, *The Soviet Home Front, 1941–1945* (1992). Various phases of the American domestic scene are treated in D. M. Kennedy, *Freedom from Fear* (1999), already cited; R. J. Maddox, *The United States and World War II* (1992); and A. M. Winkler, *Home Front U.S.A.* (1986). A spirited treatment of the GI's, civilians-turned-soldiers, appears in various books by S. E. Ambrose, which are synthesized in *The Victors: Eisenhower and His Boys, the Men of World War II* (1998). The American troops stationed in Britain are studied with good humor in D. Reynolds, *The American Occupation of Britain,*

*1942–1945* (1995). On the other hand W. L. O'Neill, *America's Fight at Home and Abroad in World War II* (1993), M. C. C. Adams, *The Best War Ever: America and World War II* (1994), and P. Fussell, *Wartime: Understanding and Behavior in the Second World War* (1989) deflate military and civilian leadership.

The entry of women into the wartime labor force is examined in K. Anderson, *Wartime Women: Sex Roles, Family Relations, and the Status of Women during World War II* (1981); L. J. Rupp, *Mobilizing Women for War: German and American Propaganda, 1939–1945* (1978); and the essays in M. R. Higonnet and others, *Behind the Lines: Gender and the Two World Wars* (1987). Women's wartime experiences are also described in N. A. Dombrowski (ed.), *Women and War in the Twentieth Century* (1999); H. Diamond, *Women and the Second World War in France, 1939–1948* (1999); E. Yellin, *Our Mothers' War: American Women at Home and at the Front during World War II* (2004); and J. B. Litoff and D. C. Smith (eds.), *American Women in a World at War* (1997), which includes writings by women who served in the military or worked in war industries.

Many aspects of the home front in Germany are covered in books cited in the previous chapter. That Hitler did not prepare for war in depth because he expected a quick victory emerges from B. A. Carroll, *Design for Total War: Arms and Economics in the Third Reich* (1968) and A. S. Milward, *The German Economy at War* (1965). R. J. Overy, *War and Economy in the Third Reich* (1995), by contrast, argues that the German economy was well prepared for prolonged military production.

## Hitler's New Order: Collaboration and Resistance

The first attempt to study the German occupation of Europe as a whole appeared in A. Toynbee and V. Toynbee (eds.), *Hitler's Europe* (1954). Numerous studies have since appeared on individual countries, many on the French experience.

Among the most informative books on the French responses to the Nazi occupation are J. Jackson, *France: The Dark Years, 1940–1944* (2001), a comprehensive analysis; P. Burrin, *France Under the Germans: Collaboration and Compromise* (trans. 1997); I. Ousby, *Occupation: The Ordeal of France* (1997); and R. Gildea, *Marianne in Chains: Daily Life in the Heart of France during the German Occupation* (2002). A concise overview is available in P. Davies, *France and the Second World War: Occupation, Collaboration and Resistance* (2001). R. O. Paxton, *Vichy France: Old Guard and New Order, 1940–1944* (1972) examines the ideology and policies of the Vichy regime. Paxton and M. R. Marrus, *Vichy France and the Jews* (1981, 1995) demonstrates the French initiative for many actions against the Jews, on which one should also read S. Zucotti, *The Holocaust, the*

*French, and the Jews* (1993). J. F. Sweets, *Choices in Vichy France: The French under Nazi Occupation* (1986) poignantly demonstrates the complexities of collaboration and resistance in an industrial city. A. S. Milward, *The New Order and the French Economy* (1970) surveys the economic aspects of the regime, while cultural aspects may be approached through A. Kaplan, *Fascism, Literature, and French Intellectual Life* (1986); G. Hirshfeld and P. Marsh (eds.), *Collaboration in France: Politics and Culture during the Nazi Occupation, 1940–1944* (1989); and M. C. Cone, *Artists under Vichy* (1992). For the French postwar struggle to face up to the Vichy trauma one should read H. Roussio, *The Vichy Syndrome: History and Memory in France since 1944* (trans. 1991); E. Conan and H. Roussio, *Vichy: The Ever-Present Past* (trans. 1998); and R. J. Golsan, *Vichy's Afterlife: History and Counterhistory in Postwar France* (2000).

The Resistance in France may be studied in D. Schoenbrun, *Soldiers of the Night: The Story of the French Resistance* (1980); J. F. Sweets, *The Politics of Resistance in France, 1940–1944* (1976); H. R. Kedward, *Resistance in Vichy France* (1978) and *In Search of the Maquis* (1993); and M. L. Rossiter, *Women in the Resistance* (1985). The liberation is dramatically described in R. Aron, *France Reborn* (trans. 1964); related events, in P. Novick, *The Resistance versus Vichy: The Purge of Collaborators in Liberated France* (1969) and H. R. Lottman, *The Purge* (1986). The divisions in France over the purge are studied in M. Koreman, *The Expectation of Justice: France, 1944–1946* (1999). On the trials of collaborators, some of them years later, one may read R. J. Golsan (ed.), *Memory, the Holocaust, and French Justice: The Bousquet and Tournier Affairs* (1996) and A. Kaplan, *The Collaborator: The Trial and Execution of Robert Brassillach* (2000). For the years from the 1930s to liberation, Charles de Gaulle's *War Memoirs* (3 vols.; trans. 1958–1960) are indispensable. De Gaulle's wartime difficulties with London and Washington are described in F. Kersaudy, *Churchill and de Gaulle* (1982) and R. Aglion, *Roosevelt and de Gaulle: Allies in Conflict* (trans. 1988), by one of de Gaulle's diplomats. For de Gaulle, J. Lacouture's biography (2 vols.; trans. 1992) is the outstanding account: Vol. I, *The Rebel, 1890–1944*, and Vol. II, *The Ruler, 1945–1970*; there is a more recent brief account in J. Jackson, *Charles de Gaulle* (2003).

A sampling of studies of other countries under the German occupation include W. Warmbrunn, *The Dutch under German Occupation, 1940–1945* (1963); G. Hirschfeld, *Nazi Rule and Dutch Collaboration, 1940–1945* (trans. 1988); A. S. Milward, *The Fascist Economy in Norway* (1972); R. L. Braham, *The Hungarian Labor Service System, 1939–1945* (1977); J. Gillingham, *Belgian Business and the Nazi New Order* (1977); and M. Mazower, *Inside Hitler's Greece: The Experience of Occupation, 1941–1944*

(1993). The Polish experience is recounted in J. T. Gross, *Polish Society under German Occupation* (1979) and R. C. Lukas, *The Forgotten Holocaust: The Poles under German Occupation, 1939–1944* (1986). N. Davies, *Rising '44: "The Battle for Warsaw"* (2003) recounts the Polish uprising against the Germans, which was crushed in 1944. In its Norwegian setting, collaborationism is illustrated in detail in O. K. Hoidal, *Quisling: A Study in Treason* (1989). The Nazi purloining of Europe's art treasures is described in L. H. Nicholas, *The Rape of Europa: The Fate of Europe's Treasures in the Third Reich and the Second World War* (1994). The role of the Swiss banks in concealing the looted gold used for the Nazi war effort is disclosed in I. Vincent, *Silent Partners: Swiss Bankers, Nazi Gold, and the Pursuit of Justice* (1998).

For the Europeanwide Resistance there is the informative study by H. Michel, *The Shadow War: The European Resistance, 1939–1945* (trans. 1972); the useful M. R. D. Foot, *Resistance: European Resistance to Nazism, 1940–1945* (1977); and J. Haestrup, *European Resistance Movements, 1939–1945* (rev. 1981), a comprehensive account. The renovative spirit of the Resistance and its message for the postwar world are captured in J. D. Wilkinson, *The Intellectual Resistance in Europe* (1981). The ethical aspects of collaboration and resistance are explored in R. Bennett, *Under the Shadow of the Swastika: The Moral Dilemmas of Resistance and Collaboration in Hitler's Europe* (1999). Books on the German Resistance have been cited in Chapter 20.

## The Holocaust

There is a large literature on the grim subject of the Nazis' systematic, willful, mass slaughter of the European Jews during the war years. The most informative and comprehensive study is R. Hilberg, *The Destruction of the European Jews* (3 vols.; rev. 2003), which may be supplemented by the same author's *Perpetrators, Victims, Bystanders: The Jewish Catastrophe, 1933–1945* (1992). The early organization of the Nazi system of mass murder is described in C. R. Browning, *The Origins of the Final Solution: The Evolution of Nazi Jewish policy, September 1939–March 1942* (2004), an outstanding, carefully researched study. Other important studies are M. Gilbert, *The Holocaust: The History of the Jews of Europe during the Second World War* (1986); L. S. Dawidowicz, *The War against the Jews, 1933–1945* (1976), cited earlier; Y. Bauer, *A History of the Holocaust* (1982) and *Rethinking the Holocaust* (2001); and L. Yahil, *The Holocaust: The Fate of European Jewry, 1932–1945* (trans. 1990). A provocative interpretive account is A. J. Mayer, *Why Did the Heavens Not Darken? The "Final Solution" in History* (1989), which sees the root cause in earlier twentieth-century destructiveness. An exhaustive reference work, with contributions by many scholars and with bibliographies in many lan-

guages, is I. Gutman (ed.), *Encyclopedia of the Holocaust* (4 vols.; 1990), while the best one-volume coverage is in W. Laqueur (ed.), *The Holocaust Encyclopedia* (2001). M. Gilbert has edited an *Atlas of the Holocaust* (1993).

H. Fein, *Accounting for Genocide: National Responses and Jewish Victimization during the Holocaust* (1979) examines the diversity of the experience in different countries, while R. L. Brahm, *The Politics of Genocide: The Holocaust in Hungary* (2 vols.; 1981) is an outstanding study of one country. A key episode of Jewish resistance is recounted in I. Gutman, *The Jews of Warsaw, 1939–1943: Ghetto, Underground, Revolt* (trans. 1982).

Among many studies of the concentration and death camps one should read Primo Levi's moving accounts of his experience, *Survival in Auschwitz* (trans. 1947; 1958) and *The Drowned and the Saved* (trans. 1986). One may also read E. Kogon, *The Theory and Practice of Hell* (1950); T. Des Pres, *The Survivor: An Anatomy of a Life in the Death Camps* (1976); T. Segev, *Soldiers of Evil: The Commandants of the Nazi Concentration Camps* (trans. 1989); and W. Sofsky, *The Order of Terror: The Concentration Camp* (trans. 1997). On the link between the medical profession and the killings R. J. Lifton, *The Death Doctors: Medical Killing and the Psychology of Genocide* (1987) may be read along with H. Friedlander, *The Origins of Nazi Genocide* (1995), focusing on its prewar program of euthanasia for the sick and the handicapped.

For the debate over the origin of the Holocaust, that is, between "intentionalists," who see the genocidal destruction as motivated from the beginning by Hitler and his ideology, and "functionalists," who see it as developing incrementally once the Nazis controlled eastern Europe, the best synthesis is C. Browning, *The Path to Genocide: Essays on Launching the Final Solution* (1992). Hitler's fundamental responsibility is described in G. Fleming, *Hitler and the Final Solution* (1984) and R. Breitman, *The Architect of Genocide: The Final Solution* (1991).

The subject of much discussion and controversy, D. Goldhagen, *Hitler's Willing Executioners: Ordinary Germans and the Holocaust* (1996) argues that ordinary Germans, not only Nazi extremists, participated in the brutal killings because they shared a German legacy of "eliminationist anti-Semitism." On the other hand, C. Browning, *Ordinary Men: Reserve Police Battalion 101 and the Final Solution in Poland* (1992, 1999) demonstrates that peer pressures on the German participants seemed to be more important than any historical legacy of anti-Semitism.

How historians have written about the subject is explored in L. S. Dawidowicz, *The Holocaust and the Historians* (1981); M. R. Marrus, *The Holocaust in History* (1987); and D. Cesarani (ed.), *After Eichman: Collective Memory and the Holocaust since 1961*

(2005). A much discussed essay on the question of responsibility and guilt is H. Arendt, *Eichmann in Jerusalem: A Report on the Banality of Evil* (1963, 1994), written at the time of the trial of the high-ranking bureaucrat who carried out much of the operation. Y. Bauer, *The Holocaust in Historical Perspective* (1978) argues the uniqueness of the episode and disputes later misuses of the word "genocide"; on that issue, one may also read L. Kuper, *Genocide: Its Political Use in the Twentieth Century* (1982).

The acrimonious debate among German historians in the mid-1980s, in which E. Nolte and others sought to mitigate the evils of the Holocaust by comparing it to other twentieth-century atrocities such as those of Stalin, is thoughtfully explored in C. S. Maier, *The Unmasterable Past: History, Holocaust, and German National Identity* (1988) and R. J. Evans, *In Hitler's Shadow: West German Historians and the Attempt to Escape from the Nazi Past* (1989). On a related subject one may read J. Kramer, *The Politics of Memory: Looking for Germany in the New Germany* (1996). Broader efforts to deny or minimize the Holocaust are critically scrutinized in two persuasive books: D. E. Lipstadt, *The Growing Assault on Truth and Memory* (1993) and P. Vidal-Naquet, *Assassins of Memory: Essays on the Denial of the Holocaust* (trans. 1992).

There is a large literature on the failure of the authorities in the United States, Britain, and the Vatican to rescue the doomed European Jews; among the more searching inquiries are B. Wasserstein, *Britain and the Jews of Europe, 1939–1945* (1979); M. Gilbert, *Auschwitz and the Allies* (1981); and R. Breitman, *Official Secrets: What the Nazis Planned, What the British and Americans Knew* (1998). On the role of the Vatican in these years one may read J. F. Morley, *Vatican Diplomacy and the Jews during the Holocaust, 1939–1945* (1980) and M. Phayer, *The Catholic Church and the Holocaust, 1930–1965* (2000), a comprehensive account. Two studies indicting the wartime pope for failure to take more decisive action are J. Cornwell, *Hitler's Pope: The Secret History of Pius XII* (1999) and S. Zucotti, *Under the Very Windows: The Vatican and the Holocaust in Italy* (2001).

For the Nazi atrocities against other ethnic groups in Europe, including Russians, Poles, Gypsies, and others, one may read B. Wytwicky, *The Other Holocaust: Many Circles of Hell* (1986), a brief introduction and the essays in M. Berenbaum (ed.), *A Mosaic of Victims: Non-Jews Persecuted and Murdered by the Nazis* (1992). For the fate of the Gypsies, or Roma, one may read I. Fonseca, *Bury Me Standing: The Gypsies and Their Journey* (1995).

The proceedings of the Nuremberg trials were published by the postwar International Military Tribunal as *Trial of the Major War Criminals before the International Military Tribunal, 1945–1946* (42 vols.; 1947–1949) and *Nazi Conspiracy and Aggression* (8

vols., 2 supplements; 1946–1958). B. F. Smith's two books, *Reaching Judgment at Nuremberg* (1977) and *The Road to Nuremberg* (1981) argue that the trials prevented an anarchic bloodbath and should not be dismissed as merely "victor's justice." Other thoughtful discussions are found in E. Davidson, *The Trial of the Germans: Nuremberg, 1945–1946* (1966); W. Maser, *Nuremberg: A Nation on Trial* (1979); R. E. Conot, *Justice at Nuremberg* (1983); J. E. Persica, *Nuremberg: Infamy on Trial* (1995); and T. Taylor, *The Anatomy of the Nuremberg Trials* (1993), by a chief prosecutor who analyzes deficiencies in the procedures and questions the effectiveness of the trials as a deterrent to later wrongdoing. M. R. Marrus, *The Nuremberg War Crimes Trial, 1945–46: A Documentary History* (1997) provides a concise analysis as well as excerpts from key documents. The trials of the Japanese war leaders are critically analyzed in R. Min-ear, *Victor's Justice: The Tokyo War Crimes Trial* (1979), which should be supplemented by P. R. Piccigallo, *The Japanese on Trial: Allied War Crimes Operations, in the East, 1945–1951* (1979) and A. C. Brackman, *The Other Nuremberg: The Untold Story of the Tokyo War Crimes Trials* (1987). On national responses in later years to these events one may read an insightful study by I. Buruma, *The Wages of Guilt: Memories of War in Germany and Japan* (1994).

### Wartime Diplomacy and Origins of the Cold War

A large literature has emerged stressing the origins of the Cold War in Soviet-American wartime relations. The volumes of H. Feis, sympathetic to the Western leaders, are indispensable as an introduction: *Churchill, Roosevelt, Stalin: The War They Waged and the Peace They Sought* (1957), covering the years from 1941 to the collapse of Germany; *Between War and Peace: The Potsdam Conference* (1960); and on the last phase, *The Atomic Bomb and the End of the War in the Pacific* (1961, 1966). Of special value are G. Smith, *American Diplomacy during the Second World War, 1941–1945* (rev. 1985); J. L. Gaddis, *The United States and the Origins of the Cold War, 1941–1947* (rev. 2000); and the early chapters of the same author's *The Cold War: A New History* (2005); V. Mastny, *Russia's Road to the Cold War* (1979); and R. V. Daniels, *Russia: The Roots of Confrontation* (1985).

On the American use of the atomic bomb one may read M. J. Sherwin, *A World Destroyed: The Atomic Bomb and the Grand Alliance* (1975), an impressive, balanced study, and G. Herken, *The Winning Weapon: The Atomic Bomb in the Cold War, 1945–1950* (1980, 1988). For the debate over the dropping of the bomb, a debate that was renewed on its 50th anniversary, one may read G. Alperowitz and others, *The Decision to Use the Atomic Bomb and the Architecture of an American Myth* (1995), highly criti-

cal; while R. V. Maddox, *The Hiroshima Decision Fifty Years Later* (1995) defends the use of the bomb. The continuing moral dilemma is ably presented in R. J. Lifton and G. Mitchell, *Hiroshima in America: Fifty Years of Denial* (1995). The use of the bomb is critically assessed in G. Alperowitz, *Atomic Diplomacy: Hiroshima and Potsdam* (rev. 1994).

On population movements during and following the war there are available J. B. Schechtman, *European Population Transfer, 1939–1945* (1946); E. M. Kulischer, *Europeans on the Move: War and Population Changes, 1917–1947* (1948); M. J. Proudfoot, *European Refugees, 1939–1952* (1957); M. R. Marrus, *The Unwanted: European Refugees in the Twentieth Century* (1985, 2002), cited earlier; and M. Wyman, *DP: Europe's Displaced Persons, 1945–1951* (1989, 1998).

### Useful Web Sites

A comprehensive, well-organized listing of Web sites on every aspect of the Second World War may be found at *World War II Links on the Internet*, <http://history.acusd.edu/gen/ww2.links.html>, which was compiled by S. Schoenherr at the University of San Diego. Additional materials on the war, focusing somewhat on Great Britain, are available at *BBC-History-World War Two*, at [www.bbc.co.uk/history/war/wwtwo/](http://www.bbc.co.uk/history/war/wwtwo/), a component of the informative BBC historical site; and other resources may be consulted at the Belgian-based *Centre for Historical Research and Documentation on War and Contemporary Society*, at [www.cegesoma.be/](http://www.cegesoma.be/). Readers will find helpful links to diverse sources on France during the war and the Nazi occupation at *Vichy Web*, <http://artsweb.gham.ac.uk/vichy/>, an excellent site maintained in Great Britain by S. Kitson at the University of Birmingham. The best starting point for Web-based materials on the Holocaust is the *The United States Holocaust Memorial Museum*, at [www.ushmm.org/](http://www.ushmm.org/).

## 22. COLD WAR AND RECONSTRUCTION AFTER THE SECOND WORLD WAR

### The Cold War

Informative narratives for the global history of the post-1945 years include P. Calvocoressi, *World Politics, 1945–2000* (rev. 2001) and D. Reynolds, *One World Divisible: A Global History since 1945* (2000); and for the twentieth century as a whole, J. M. Roberts, *Twentieth Century: The History of the World, 1901 to 2000* (2000); C. Pointing, *The Twentieth Century: A World History* (1999); E. J. Hobsbawm, *The Age of Extremes, 1914–1991* (1994), cited earlier; and W. R. Keylor, *The Twentieth-Century World and Beyond: An International History Since 1900* (rev. 2006). Studies examining the Cold War with new historical perspectives after the collapse of the Soviet Union include M. Walker, *The Cold War: A History* (1994); R. Crockett, *The Fifty Years' War: The United States*

and the Soviet Union in World Politics, 1941–1991 (1995); S. J. Ball, *The Cold War: An International History, 1947–1991* (1998); and J. L. Gaddis, *The Cold War: A New History* (2005). In addition to other books on the wartime origins of the Cold War, cited in the previous chapter, thoughtful works include D. Sharnik, *Inside the Cold War* (1987); W. LaFeber, *America, Russia, and the Cold War, 1945–2000* (rev. 2002); W. I. Cohen, *America in the Age of Soviet Power, 1945–1991* (1993); and F. J. Harbutt, *The Cold War Era* (2002). J. L. Gaddis has helped to evaluate interpretations of the Cold War on the basis of archival evidence now available from the Soviet files in *We Now Know: Rethinking Cold War History* (1997), much of which confirms many earlier interpretations. For a judicious assessment of the Cold War compromises in Europe one may read M. Trachtenberg, *A Constructed Peace: The Making of the European Settlement, 1945–1963* (1999).

Two early efforts to examine the tensions in broader historical perspective, going back to 1917, are L. Halle, *The Cold War as History* (1967) and A. Fontaine, *History of the Cold War* (2 vols.; trans. 1968–1969). A large revisionist literature blamed American postwar political and economic ambitions or miscalculations for the Cold War. One of the most cogent of such interpretations is W. A. Williams, *The Tragedy of American Diplomacy* (rev. 1988), cited earlier. For guidance to the literature as a whole, including the revisionist accounts, one may turn to J. L. Black, *Origins, Evolution and Nature of the Cold War: An Annotated Bibliography* (1986) and J. W. Young, *The Longman Companion to America, Russia, and the Cold War, 1941–1998* (rev. 1999). E. H. Judge and J. W. Langdon (eds.), *The Cold War: A History through Documents* (1999) provides a helpful selection of key documents.

The transition from the Second World War to the postwar years is explored in R. Douglas, *From War to Cold War, 1942–1948* (1981); J. L. Gormly, *The Collapse of the Grand Alliance, 1945–1948* (1987); H. Thomas, *Armed Truce: The Beginnings of the Cold War, 1945–1946* (1986); and F. J. Harbutt, *The Iron Curtain: Churchill, America, and the Origins of the Cold War* (1986). D. McCullough, *Truman* (1992), is a colorful, carefully researched biography; Secretary of State Dean Acheson is studied in biographies by D. Brinkley, *Dean Acheson: The Cold War Years, 1953–1971* (1992) and J. Chace, *Acheson* (1998), a detached and comprehensive treatment. On the diplomat who helped shape the American containment policy and later regretted the heavy emphasis on military force that it came to assume, one should read G. F. Kennan, *American Diplomacy* (rev. 1984), among his several other books. Kennan, Acheson, and other key American foreign policy figures are studied in W. Isaacson and E. Thomas, *The Wise Men* (1986). On the “Munich syndrome,” the

resolve by Truman and others not to repeat the appeasement of the 1930s, one may read G. Rystad, *Prisoners of the Past* (1982); E. R. May, *The Lessons of the Past: The Use and Misuse of History in American Foreign Policy* (1973); and D. Halberstam, *The Best and the Brightest* (1972), principally on the war in Vietnam.

Two informative volumes on the nuclear dangers confronting the postwar world are D. Holloway, *Stalin and the Bomb: The Soviet Union and Atomic Energy, 1939–1956* (1994) and R. Rhodes, *Dark Sun: The Making of the Hydrogen Bomb* (1995), a sequel to his book on the atomic bomb cited in the previous chapter. The revolutionary implications of nuclear weapons for the post-1945 world are discussed in M. Mandelbaum, *The United States and Nuclear Weapons, 1946–1976* (1979) and *The Nuclear Revolution: International Politics before and after Hiroshima* (1981). Additional books on nuclear arms and disarmament will be suggested in later chapters.

The origins, founding, and subsequent history of the United Nations are studied in T. Hoopes and D. Brinkley, *FDR and the Creation of the UN* (1998); S. Meisler, *United Nations: The First Fifty Years* (1998); and S. C. Schlesinger, *Act of Creation: The Founding of the United Nations* (2003). The limitations of international cooperation are astutely assessed in T. M. Franck, *Nation against Nation* (1985) and A. Roberts, *United Nations, Divided World* (1988).

## Economic Reconstruction and the Reshaping of the World Economy

Informative studies of postwar economic reconstruction and of the economic growth that followed for close to three decades are H. van der Wee, *Prosperity and Upheaval: The World Economy, 1945–1980* (1986) and P. Armstrong, A. Glyn, and J. Harrison, *Capitalism since World War II: The Making and Breakup of the Great Boom* (1984). They may be supplemented by the analysis of European developments in D. H. Aldcroft, *The European Economy, 1914–2000* (rev. 2001) and by the essays in S. A. Marglin and J. B. Schor (eds.), *The Golden Age of Capitalism: Reinterpreting the Postwar Experience* (1990).

The Bretton Woods monetary arrangements and their evolution are examined in R. Solomon, *The International Monetary System, 1945–1981* (1982) and, in a sequel volume, *Money on the Move: The Revolution in International Finance since 1980* (1999). More general studies, which include valuable information on the postwar era, include S. Pollard, *The International Economy since 1945* (1997); J. Mills, *Managing the World Economy* (2000), a useful survey of the twentieth century as a whole; and R. K. Schaeffer, *Understanding Globalization* (rev. 2005).

Thoughtful surveys of Europe for the first several decades of the postwar era include C. E. Black and others, *Rebirth: A Political History of Europe since World*

*War II* (rev. 1999); D. Urwin, *A Political History of Europe since 1945* (rev. 1997); P. Thody, *Europe Since 1945* (2000); M. Fulbrook (ed.), *Europe since 1945* (2001), which includes helpful essays on politics, social history, economic changes, and culture; and T. Judt, *Postwar: A History of Europe Since 1945* (2005), an excellent, wide-ranging survey and analysis.

For the American role in reconstruction M. J. Hogan, *The Marshall Plan: America, Britain, and the Reconstruction of Western Europe, 1947–1952* (1987) is outstanding. Other books that merit attention are A. S. Milward, *The Reconstruction of Western Europe, 1945–1951* (1984), which credits European initiative and skills as much as American aid; C. L. Mee, *The Marshall Plan and the Launching of the Pax Americana* (1980); D. W. Ellwood, *Rebuilding Europe: Western Europe, America, and Postwar Reconstruction, 1945–1955* (1992); and the essays in M. Schain (ed.), *The Marshall Plan: Fifty Years After* (2001). An impressive synthesis on postwar reconstruction in all aspects is P. Duignan and L. H. Gann, *The Rebirth of the West: The Americanization of the Democratic World, 1945–1958* (1992). The same authors have extended their analysis of transatlantic relations in *The USA and the New Europe, 1945–1993* (1994).

Some of the social consequences of the economic changes in Europe are also explored in S. Rothman, *European Society and Politics: Britain, France, and Germany* (1976) and G. Therborn, *European Modernity and Beyond* (1995). An important social issue receives attention in three books by S. Castles: *Here for Good: Western Europe's New Ethnic Minorities* (1984); *Migrant Workers in European Societies* (1989); and, with M. J. Miller, *The Age of Migration: International Population Movements in the Modern World* (rev. 2003). Other works on the growing multiculturalism of European societies include G. Dale and M. Cole (eds.), *The European Union and Migrant Labour* (1999) and S. Castles and A. Davidson, *Citizenship and Migration: Globalization and the Politics of Belonging* (2000).

The postwar welfare state is examined in D. E. Ashford, *The Emergence of the Welfare States* (1987). On Keynes and Keynesianism, influential in the managed economies of the early postwar decades, one may read R. Lekachman, *The Age of Keynes* (1966) and books on Keynes cited in Chapter 20. R. Skidelsky, *John Maynard Keynes: Fighting for Britain, 1937–1946* (2000) concludes his three-volume biography, which is also available in a concise one-volume edition (2005). On the postwar role of governments one may also read S. Lieberman, *The Growth of the European Mixed Economies, 1945–1970* (1977) and the essays in A. Graham with A. Seldon (eds.), *Government and Economies in the Postwar World* (1990).

On western European economic integration, A. S. Milward, *The European Rescue of the Nation-State* (rev. 2000) is an outstanding study that explores

and interprets the origins of the European Community, while J. Lukacs, *Decline and Rise of Europe* (1965, 1976) provides additional historical background. Informative also for these years are J. Gillingham, *Coal, Steel, and the Rebirth of Europe, 1945–1955: The Germans and the French from Ruhr Conflict to Economic Community* (1991) and D. W. Urwin, *The Community of Europe: A History of European Integration since 1945* (rev. 1995). A good brief introduction is F. Lewis, *Europe: Road to Unity* (1992). For a key architect of European unity, one may turn to M. Bromberger and S. Bromberger, *Jean Monnet and the United States of Europe* (trans. 1969) and D. Brinkley and C. Hackett (eds.), *Jean Monnet: The Path to European Unity* (1991). Additional books on European integration will be cited in Chapter 27.

### The Western Countries and Japan after 1945

BRITAIN. K. O. Morgan, *British History since 1945: The People's Peace* (rev. 2001) and D. Childs, *Britain since 1945: A Political History* (rev. 2001) provide good overviews. Britain's loss of primacy and world power is discussed in M. W. Kirby, *The Decline of British Economic Power since 1870* (1981); R. Blake, *The Decline of Power, 1915–1964* (1985); B. Porter, *Britain, Europe, and the World, 1850–1986: Delusions of Grandeur* (1987); and in two incisive analyses by C. Barnett: *The Collapse of British Power* (1986) and *The Pride and the Fall: The Dream and Illusion of Britain as a Great Nation* (1987). That the reasons for decline remained controversial, however, emerges from the debate and discussion in A. Sked, *Britain's Decline: Problems and Perspectives* (1987) and from the essays in B. Collins and K. Robbins (eds.), *British Culture and Economic Decline* (1990).

The best account of the postwar Labour governments and the emergence of the welfare state is K. O. Morgan, *Labour in Power, 1945–1951* (1984), a balanced study with in-depth portraits of Clement Attlee and other key figures; informative also is H. Pelling, *The Labour Governments, 1945–1951* (1984). The creation and consolidation of the welfare state is studied in P. Gregg, *The Welfare State* (1969); and T. O. Lloyd, *Empire, Welfare State, Europe: History of the United Kingdom, 1906–2001* (rev. 2002). For the social impact one may read A. Marwick, *British Society since 1945* (rev. 2003) and A. Sampson, *The Changing Anatomy of Britain* (rev. 1983). Special subjects are explored in two books by Z. A. Layton-Henry: *The Politics of Race in Britain* (1984) and *The Politics of Immigration: "Race" and "Race" Relations in Postwar Britain* (1992).

FRANCE. Fourth and Fifth Republics. A concise survey is available in R. Gildea, *France since 1945* (rev. 2002); and a useful reference tool is W. Northcutt (ed.), *Historical Dictionary of the French Fourth and Fifth Republics, 1946–1991* (1991). The best syntheses for the short-lived Fourth Republic are J. P. Rioux,

*The Fourth Republic, 1944–1958* (trans. 1987) and F. Giles, *The Locust Years: The Story of the French Fourth Republic, 1946–1958* (1996). I. M. Wall's two books, *The United States and the Making of Postwar France, 1945–1954* (1991) and *France, The United States, and the Algerian War* (2001), and R. Kuisel, *Seducing the French: The Dilemma of Americanization* (1993) are insightful on American political and cultural influences. Kuisel's *Capitalism and the State in Modern France* (1981), cited in Chapter 20, places government direction of the postwar economy in historical perspective. The reform minister Mendès-France's reform efforts in the early 1950s are sympathetically portrayed in J. Lacouture, *Pierre Mendès-France* (trans. 1984). Incisive on the cultural and political scene are T. Judt, *Past Imperfect: French Intellectuals, 1944–1956* (1992), a critique of the political influence of Sartre and other intellectuals in the early postwar years, and *The Burden of Responsibility: Blum, Camus, Aron and the French Twentieth Century* (1998), on three influential figures who he believes made more positive contributions.

Of the colonial wars that helped bring down the Fourth Republic, the war in Indochina is graphically portrayed in B. B. Fall, *Street without Joy: Indochina at War, 1946–1954* (rev. 1964) and *Hell in a Very Small Place: The Siege of Dien Bien Phu* (1967); and in M. Woodrow, *The Last Valley: Dien Bien Phu and the French Defeat in Vietnam* (2004). Other books on Vietnam and Indochina will be cited in Chapter 25. The ill-fated effort to retain Algeria is described in A. Horne, *A Savage War of Peace: Algeria, 1954–1962* (rev. 1987), a comprehensive account and J. Talbott, *The War without a Name: France in Algeria, 1954–1962* (1980). Subsequent relationships with Algeria are traced in J. Reudy, *Modern Algeria: The Origins and Development of a Nation* (rev. 2005). For the Fifth Republic there are available S. Bernstein, *The Republic of de Gaulle, 1958–1969* (trans. 1993), an excellent synthesis; S. Hoffmann's informative *Decline or Renewal? France since the Popular Front: Government and People, 1936–1986* (1988); and M. Larkin, *France since the Popular Front: Government and People, 1936–1996* (rev. 1997). J. Lacouture's authoritative biography of de Gaulle (2 vols.; trans. 1992) has been mentioned in Chapter 21; there are also biographical accounts by B. Ledwidge (1983), D. Cook (1984), A. Shennan (1993), C. Williams (1997), and J. Jackson (2003).

GERMANY. For West Germany during the years of partition an impressive comprehensive narrative is D. L. Bark and D. R. Gress, *A History of West Germany* (2 vols.; rev. 1993). A briefer account is M. Balfour, *West Germany: A Contemporary History* (rev. 1982). For the West German "economic miracle" one may read J. C. Van Hook, *Rebuilding Germany: The Creation of the Social Market Economy, 1945–1957* (2004) and A. Kramer, *The West German Economy, 1945–1955*

(1991); and for the powerful economy that emerged, E. Hartrich, *The Fourth and Richest Reich* (1980). Of special interest is V. R. Berghahn, *The Americanization of West German Industry, 1945–1973* (1986). Konrad Adenauer's accomplishments are assessed in biographical studies by R. Irving, *Adenauer* (2002) and C. Williams, *Adenauer: The Father of the New Germany* (2000); and the career of another important German leader is examined in B. Marshall, *Willy Brandt* (1990).

For West and East Germany, including the relationship of the two states over the four postwar decades of partition, two informative accounts are H. A. Turner, Jr., *Germany from Partition to Reunification* (rev. 1992) and M. Fulbrook, *History of Germany, 1918–2000: The Divided Nation* (rev. 2002). T. Garton Ash, *In Europe's Name: Germany and the Divided Continent* (1993) incisively reassesses Willy Brandt's efforts to improve East-West relations. For the formation and early years of the German Democratic Republic, one should read N. M. Naimark, *The Russians in Germany* (1995). The East German Communist state is examined in P. Major and J. Osmond (eds.), *The Workers' and Peasants' State: Communism and Society in East Germany under Ulbricht* (2002); and the history of Berlin and the Berlin Wall is the subject of A. Tusa, *The Last Division: A History of Berlin, 1945–1989* (1997).

There are provocative insights into the German search for self-understanding in R. Dahrendorf, *Society and Democracy in Germany* (1967); F. Stern, *Dreams and Delusions: The Drama of German History* (1987, 1999); and two books cited earlier: G. A. Craig, *The Germans* (1982) and H. James, *A German Identity, 1770–1990* (1990).

ITALY AND SPAIN. Three insightful studies of Italian political life are F. Spotts and T. Wieser, *Italy: A Difficult Democracy* (1986); J. LaPalombara, *Democracy, Italian Style* (1987); and R. Putman, *Making Democracy Work: Civic Traditions in Modern Italy* (1993). All three describe the paradox whereby the country has known remarkable social and economic progress despite political difficulties. For the postwar years one may also read D. W. Ellwood, *Italy, 1943–1945* (1985); N. Kogan, *A Political History of Postwar Italy* (2 vols.; 1966–1981); P. Ginsborg, *A History of Contemporary Italy: Society and Politics, 1943–1988* (1990, 2003); and the essays in P. McCarthy, *Italy since 1945* (2000). The American role in the early years is assessed in J. L. Harper, *America and the Reconstruction of Italy, 1945–1948* (1986). The special role of the Italian Communist party from liberation to the mid-1980s is examined in J. B. Urban, *Moscow and the Italian Communist Party: From Togliatti to Berlinguer* (1986) and A. De Grand, *The Italian Left in the Twentieth Century: A History of the Socialist and Communist Parties* (1989).

For Spain changes under Franco are well conveyed in J. Grugel and T. Rees, *Franco's Spain* (1997);

the transition to a modern democracy after Franco is described in K. Maxwell and S. Spiegel, *The New Spain: From Isolation to Influence* (1994) and V. Pérez-Díaz, *Spain at the Crossroads* (1999).

**JAPAN.** One of the best introductions to contemporary Japan is E. O. Reischauer and M. B. Jansen, *The Japanese Today: Change and Continuity* (rev. 1995). Books that analyze Japanese changes after the wartime defeat and occupation include J. W. Dower, *Embracing Defeat: Japan in the Wake of World War II* (1999), an insightful account of the American occupation, and *Japan in War and Peace* (1993); D. Irokawa, *The Age of Hirohito: In Search of Modern Japan* (1998), for the years 1926–1989, a remarkable social history of transition from an agrarian to an industrial society; P. Smith, *Japan: A Reinterpretation* (1997); and H. P. Bix, *Hirohito and the Making of Modern Japan* (2001). For the postwar years one may also turn to P. J. Bailey, *Postwar Japan, 1945 to the Present* (1996), an excellent, brief narrative account. Of special interest are C. Johnson, *MITI and the Japanese Miracle: The Growth of Industrial Policy, 1925–1974* (1982), on the government research and development agency and W. W. Lockwood, *State and Economic Enterprise in Japan* (1986). A critical assessment of the troubled Japanese economy in the 1990s is C. Wood, *The Bubble Economy* (1992).

### The Soviet Union: From Stalin to Brezhnev

Of the many volumes for the Stalin years listed in Chapter 18, one of the best assessments is A. B. Ulam, *Stalin: The Man and His Era* (1987). The postwar years and the evolution of the Soviet system after Stalin are explored in A. Nove, *Stalinism and After: The Road to Gorbachev* (rev. 1989); S. Bialer, *Stalin's Successors: Leadership, Stability, and Change in the Soviet Union* (1980) and *The Soviet Paradox: External Expansion, Internal Decline* (1986); and A. Nove, *An Economic History of the USSR, 1917–1991* (rev. 1992). Foreign policy is studied in R. Edmonds, *Soviet Foreign Policy: The Brezhnev Years* (1983) and V. Mastny, *The Cold War and Soviet Insecurity* (1996); and the origins and nature of the Soviet involvement in Afghanistan are studied in M. Urban, *The War in Afghanistan* (rev. 1990).

For the Soviet dissenters one may turn to R. Conquest, *The Politics of Ideas in the USSR* (1967); P. Reddaway, *Russia's Underground Intellectuals* (1970); A. Rothberg, *The Heirs of Stalin: Dissidence and the Soviet Regime, 1953–1970* (1972); and R. T. Tökes (ed.), *Dissent in the U.S.S.R.: Politics, Ideology, and People* (1975). M. Scammell, *Solzhenitsyn* (1984) provides a balanced assessment of the controversial novelist. A. Knight, *The KGB: Police and Politics in the Soviet Union* (rev. 1990) carries the story of the secret police to the mid-1980s. Anti-Semitism in these years may be studied in L. Rapoport, *Stalin's War against the Jews: The Doctors' Plot and the Soviet So-*

*lution* (1990); B. Pinkus, *The Soviet Government and the Jews, 1948–1967* (1985), cited earlier; and R. O. Freedman (ed.), *Soviet Jewry in the Decisive Decade, 1971–1980* (1987). For the international Communist movement in the postwar years, A. Westoby, *Communism since World War II* (rev. 1989) provides in-depth coverage. An initial effort to assess Soviet archival material is V. Zubak and C. Pleshakov, *Inside the Kremlin's Cold War: From Stalin to Khrushchev* (1996).

### Eastern Europe under Soviet Domination

How communism was imposed on eastern Europe was explored in an early work by H. Seton-Watson, *The East European Revolution* (rev. 1956). The years of Communist domination and the mounting restiveness in eastern Europe are studied in J. Rothschild and N. M. Wingfield, *Return to Diversity: A Political History of East Central Europe since World War II* (rev. 2000) and G. Schöpfung, *Politics in Eastern Europe, 1945–1992* (1993).

For Hungary and the uprising of 1956 one may read P. C. Zinner, *Revolution in Hungary* (1962); B. Kovrig, *Communism in Hungary from Kun to Kádár* (1979); and C. Gati, *Hungary and the Soviet Bloc* (1988). Czechoslovakia as victim, first of Hitler, then of Stalin, is examined in E. Toborsky, *President Eduard Benes: Between East and West, 1938–1948* (1981). The crisis of 1968 is studied in G. Golan, *The Czechoslovak Reform Movement: Communism in Crisis, 1962–1968* (1971); K. N. Skoug, Jr., *Czechoslovakia's Lost Fight For Freedom, 1967–1969* (1999), by a former American diplomat who was in Prague at the time; and books by V. Kusin (1971), Z. A. B. Zeman (1969), and K. Dawisha (1984).

For the emergence of communism in Yugoslavia, A. Djilas, *The Contested Country: Yugoslav Unity and Communist Revolution, 1919–1953* (1991) is an outstanding study. Informative on Tito's efforts to govern the multinational state are D. Rusinow, *The Yugoslav Experiment, 1948–1974* (1977); D. Wilson, *Tito's Yugoslavia* (1979); H. Lydall, *Yugoslavia in Crisis* (1989); and J. Ridley, *Tito* (1994). Additional books for the former Yugoslavia and for other East European countries after communism will be described in Chapter 26.

### China under Mao

As background to the emergence of communism, and for a sense of the continuing revolution in China in modern times, books cited in Chapters 16 and 19 will also be helpful. One of the best overall histories is J. K. Fairbank and M. Goldman, *China: A New History* (rev. 1998), cited earlier. For the years after 1949 informative overviews are M. Meisner, *Mao's China and After* (rev. 1999) and L. Ditmer, *China's Continuous Revolution: The Post-Liberation Era, 1949–1981* (1987). There are authoritative chapters in the collaborative *Cambridge History of China*, R. MacFarquhar and J. K. Fairbank (eds.), Vol. 15: *The People's Repub-*

lic, published in two parts for the years 1949–1982 (1987, 1992). J. Becker, *Hungry Ghosts: Mao's Secret Famine* (1996) carefully reconstructs the three terrible years of famine 1959–1961 precipitated by Mao's Great Leap Forward. For the upheaval of 1966–1969, R. MacFarquhar, *The Origins of the Cultural Revolution* (3 vols., 1974–1997) is indispensable. Two biographies of Mao are rewarding: P. Short, *Mao: A Life* (2000), detailed, colorful, and comprehensive; and J. D. Spence, *Mao Zedong* (1999), a concise, insightful account. They may be supplemented by Mao's personal physician's revealing memoir, Li Zhisui, *The Private Life of Chairman Mao* (trans. 1994) and by J. Chang and J. Halliday, *Mao: The Unknown Story* (2005), which describes Mao as an exceptionally cruel, ruthless, and personally ambitious figure.

### The Korean War

For background J. Matray, *The Reluctant Crusade: American Foreign Policy in Korea, 1941–1950* (1985) is helpful. The fullest inquiry into the origins of the Korean War, openly revisionist, is B. Cumings, *The Origins of the Korean War* (2 vols., 1981–1990); it may be compared with P. Lowe, *The Origins of the Korean War* (rev. 1997). There are concise narratives of the war in P. Lowe, *The Korean War* (2000) and S. H. Lee, *The Korean War* (2001). The war's strategic significance is examined in W. Stueck, *Rethinking the Korean War: A New Diplomatic and Strategic History* (2004). The Chinese role is studied in S. G. Zhang, *Mao's Military Romanticism: China and the Korean War, 1950–1953* (1995). The military aspects are emphasized in A. Bevin, *Korea* (1987) and J. B. Toland, *In Mortal Combat: Korea, 1950–1953* (1992). An interesting biographical study is D. S. Suh, *Kim Il Sung: The North Korean Leader* (1988). For the two Koreas after the war one may read B. Cumings, *Korea's Place in the Sun* (1997), critical of both Koreas, and D. Oberdorfer, *The Two Koreas: A Contemporary History* (rev. 2001).

### Useful Web Sites

Helpful resources for the international history of the postwar era are available at *Cold War Policies*, which, like a previously noted site on the Second World War, is maintained by S. Shoenherr at the University of San Diego, <http://history/acusd.edu/gen/20th/coldwar0.html>; this may be supplemented with materials compiled by V. Ferraro at *Documents Relating to American Foreign Policy, The Cold War*, [www.mtholyoke.edu/acad/intrel/coldwar.htm](http://www.mtholyoke.edu/acad/intrel/coldwar.htm), a valuable collection at Mount Holyoke College cited in Chapter 19, and by the useful information at the *Cold War International History Project*, which is one of the numerous programs at the Woodrow Wilson International Center for Scholars, [www.wilsoncenter.org/](http://www.wilsoncenter.org/). There are also informative interviews, images, and other sources at *CNN-Cold War*, which was created in conjunction with a documentary series and may be visited at [www.cnn.com/specials/cold.war/](http://www.cnn.com/specials/cold.war/). The best gateway to materials on the Soviet Union and all of eastern Europe in this period is the University of Pittsburgh's *Russian and East European Studies Virtual Library*, [www.ucis.pitt.edu/reesweb/](http://www.ucis.pitt.edu/reesweb/), which was cited in Chapter 18. Numerous documents and other materials on the postwar history of all the larger European and Asian nations are available at the *Internet Modern History Sourcebook*, [www.fordham.edu/halsall/mod/modsbook.html](http://www.fordham.edu/halsall/mod/modsbook.html).

.cnn.com/specials/cold.war/. The best gateway to materials on the Soviet Union and all of eastern Europe in this period is the University of Pittsburgh's *Russian and East European Studies Virtual Library*, [www.ucis.pitt.edu/reesweb/](http://www.ucis.pitt.edu/reesweb/), which was cited in Chapter 18. Numerous documents and other materials on the postwar history of all the larger European and Asian nations are available at the *Internet Modern History Sourcebook*, [www.fordham.edu/halsall/mod/modsbook.html](http://www.fordham.edu/halsall/mod/modsbook.html).

## 23. POSTCOLONIAL NATIONS IN ASIA AND LATIN AMERICA

### Anticolonial Movements and the Breakup of European Empires

Many of the books mentioned in Chapters 16 and 19 should also be consulted for the background to the anticolonial revolutions after 1945. There are useful introductions in two works by R. F. Betts, *Uncertain Dimensions: Western Overseas Empires in the Twentieth Century* (1985) and *Decolonization* (rev. 2004), and in an older work by R. Emerson, *From Empire to Nation: The Rise to Self-Assertion of Asian and African Peoples* (1960). The end of colonial rule is comprehensively treated in F. Ansprenger, *The Dissolution of Colonial Empires* (1989), while informative briefer accounts are available in M. E. Chamberlain, *Decolonization: The Fall of the European Empires* (rev. 1999) and J. Springhall, *Decolonization since 1945* (2001). There is a useful collection of essays by historians in James D. Le Sueur (ed.), *The Decolonization Reader* (2003) and excerpts from the writings of theorists who opposed colonialism in P. Williams and L. Chrisman (eds.), *Colonial Discourse and Post-Colonial Theory* (1994). Books that examine colonial administration in the final phases before independence include M. Perham, *Colonial Sequence, 1930–1949* (1976); R. F. Holland, *European Decolonization, 1918–1981* (1985); F. Furedi, *Colonial Wars and the Politics of Third World Nationalism* (1994); and H. Spruyt, *Ending Empire: Contested Sovereignty and Territorial Partition* (2005). American responses to the breakup of empires are examined in D. Ryan and V. Pungong (eds.), *The United States and Decolonization* (2000) and D. D. Newsom, *The Imperial Mantle: The United States, Decolonization, and the Third World* (2001), which argues that the United States came to be viewed as an imperial nation as the European empires receded. There are vignettes of selected Asian and African nationalist leaders in H. Tinker, *Men Who Overturned Empires: Fighters, Dreamers, and Schemers* (1987). A widely read, impassioned brief for anticolonialism was F. Fanon, *The Wretched of the Earth* (trans. 1963), by a French West Indian physician and political activist.

On nationalism and the emergent nations, many of the books cited in Chapter 11 on the older nationalism should also be consulted. To them should be added

E. Kedourie (ed.), *Nationalism in Asia and Africa* (1971); A. D. Smith: *Nationalism in the Twentieth Century* (1979), *The Ethnic Origins of Nations* (1986), *Nations and Nationalism in a Global Era* (1995), and *Nationalism: Theory, Ideology, History* (2001); and B. Anderson, *Imagined Communities: Reflections on the Origin and Spread of Nationalism* (rev. 1991), cited earlier. A challenging work by D. Chakrabarty, *Provincializing Europe: Postcolonial Thought and Historical Difference* (2000), examines postcolonial efforts to define national cultures in opposition to European cultural traditions.

### End of European Empires in Asia

The disintegration of the British empire is studied in J. Darwin, *Britain and Decolonization: The Retreat from Empire in the Post-War World* (1988) and his briefer accounts, *End of Empire* (1991), and *The End of the British Empire: The Historical Debate* (1991); D. A. Low, *Eclipse of Empire* (1991); D. W. McIntyre, *British Decolonization, 1946–1997* (1998); D. Judd, *Empire: The British Imperial Experience from 1765 to the Present* (1996); and J. Lawrence, *The Rise and Fall of the British Empire* (1996). There are valuable essays in Vol. 5 of the *Oxford History of the British Empire*: J. M. Brown (ed.), *The Twentieth Century* (1999). Wartime controversies between Churchill and Roosevelt are skillfully analyzed in W. R. Louis, *Imperialism at Bay: The United States and the Decolonization of the British Empire 1941–1945* (1978). Of special interest for Britain's continuing global role are P. J. Cain and A. G. Hopkins, *British Imperialism: Crisis and Deconstruction, 1914–1990* (1993) and J. G. A. Pocock, *The Discovery of Islands: Essays in British History* (2005), which analyzes Britain's enduring global influence. British and French reactions to the loss of empire are compared in M. Kahler, *Decolonization in Britain and France* (1984).

The Indian nationalist struggle, the British withdrawal from the Indian subcontinent, and the early years of independence are examined in S. Sarkar, *Modern India, 1885–1947* (rev. 1989); H. V. Hodson, *The Great Divide: Britain-India-Pakistan* (rev. 1985, 1997); J. M. Brown, *Modern India: The Origins of an Asian Democracy* (rev. 1994); and A. Read and D. Fisher, *The Proudest Day: India's Long Road to Independence* (1998). For India, and the politics and culture of South Asia in general, one may turn for guidance to S. Wolpert, *A New History of India* (rev. 2004). Biographies of Gandhi and Nehru have been cited in Chapter 19. For the years of independence after August 15, 1947, one may turn to P. Brass, *The Politics of India since Independence* (rev. 1994); S. Tharoor, *India from Midnight to the Millennium* (1997); and G. Das, *India Unbound: The Social and Economic Revolution from Independence to the Global Information Age* (2000). Among the thoughtful assessments of contemporary India are A. T. Embree,

*Utopias in Conflict: Religion and Nationalism in Modern India* (1990); B. Crossette, *India: Facing the Twenty-First Century* (1993); and S. Khilnani, *The Idea of India* (1998). The resurgence of Hindu nationalism is studied in P. Van der Veer, *Religious Nationalism: Hindus and Muslims in India* (1994); C. Jaffrelot, *The Hindu Nationalist Movement in India* (1997); T. B. Hansen, *The Saffron Wave: Democracy and Hindu Nationalism in Modern India* (1999); and C. Bhatt, *Hindu Nationalism: Origins, Ideologies and Modern Myths* (2001). For an introduction to cultural debates in which Indian theorists have had an important global influence, readers may turn to B. Moore-Gilbert, *Postcolonial Theory: Contexts, Practices, Politics* (1997).

For Pakistan and its founder informative studies are A. Jalal, *The Sole Spokesman: Jinnah, the Muslim League, and the Demand for Pakistan* (1985); S. Wolpert, *Jinnah of Pakistan* (1984); and A. S. Ahmed, *Jinnah, Pakistan, and Islamic Identity* (1997). The failure to integrate East Pakistan with the new state and the secession of Bangladesh are studied in R. Jakan, *Pakistan: Failure in National Integration* (1972). Informative for India, Pakistan, and South Asia in general is S. Bose and A. Jalal, *Modern South Asia: History, Culture, Political Economy* (rev. 2004).

For all East Asia the best introduction is J. K. Fairbank, E. M. Reischauer, and A. M. Craig, *East Asia: Tradition and Transformation* (rev. 1989). For developments in Southeast Asia, the best introduction is D. R. SarDesai, *Southeast Asia, Past and Present* (rev. 2003). A brief thematic survey of culture and politics in the region may be found in M. S. Heidhues, *Southeast Asia, A Concise History* (2000). The war fought by the British in the Malay peninsula is described in R. Jackson, *The Malayan Emergency: The Commonwealth Wars, 1948–1966* (1990). For the British success in attracting the newly independent states to membership in the transformed Commonwealth of Nations, one may read R. J. Moore, *Making the New Commonwealth* (1987).

The French response to anticolonial movements is examined in R. F. Betts, *France and Decolonization* (1991); A. Clayton, *The Wars of French Decolonization* (1994); and E. T. Jennings, *Vichy in the Tropics: Petain's National Revolution in Madagascar, Guadeloupe, and Indochina, 1940–44* (2004). The struggle against the Dutch in Indonesia and the years of independence may be approached through L. De Jong, *The Collapse of a Colonial Society: The Dutch in Indonesia During the Second World War* (2002); A. Vickers, *A History of Modern Indonesia* (2005); and two biographical accounts: J. D. Legge, *Sukarno: A Political Biography* (rev. 2003) and R. E. Elson, *Suharto: A Political Biography* (2001). The American colonial system in Asia is described in S. Karnow, *In Our Image: America's Empire in the Philippines* (1989).

## Changing Latin America

Changes in Latin America are examined in T. E. Skidmore and P. H. Smith, *Modern Latin America* (rev. 2005); L. Bethell (ed.), *Latin America since 1930* (1994); and R. Thorp, *Progress, Poverty, and Exclusion: An Economic History of Latin America in the Twentieth Century* (1998). An especially rewarding book is P. H. Smith, *Democracy in Latin America: Political Change in Comparative Perspective* (2005). A helpful reference work is S. Collier and others, *The Cambridge Encyclopedia of Latin America and the Caribbean* (rev. 1992).

The vicissitudes of American policies toward Latin America are explored in L. Langley, *America and the Americas* (1989); R. A. Pastor, *Whirlpool: United States Foreign Policy toward Latin America and the Caribbean* (1992); and W. LaFeber, *Inevitable Revolutions: The United States in Central America* (rev. 1993). Readers will find helpful accounts of the largest nations in R. M. Levine, *The History of Brazil* (1999), B. Fausto, *A Concise History of Brazil* (1999), K. Burton, *The History of Mexico* (2000), and B. R. Hamnett, *A Concise History of Mexico* (1999). An excellent guide, including cultural interactions, is R. H. Holden and E. Zolov (eds.), *Latin America and the United States: A Documentary History* (2000).

## Useful Web Sites

A useful Web site on South Asia is *Manas: History and Politics of India*, [www.sscnet.ucla.edu/southasia/history/mainhist.html](http://www.sscnet.ucla.edu/southasia/history/mainhist.html), which is at UCLA. Readers will also find excellent materials on modern India and Pakistan at the *Internet Indian History Sourcebook*, [www.fordham.edu/halsall/india/indiasbook.html](http://www.fordham.edu/halsall/india/indiasbook.html), a component of the comprehensive Internet site on historical sources at Fordham University. Helpful gateways to materials on modern southeast Asia are available at *Southeast Asia Web*, [www.gunung.com/seasiaweb/](http://www.gunung.com/seasiaweb/); and at *East and Southeast Asia: An Annotated Directory of Internet Resources*, <http://newton.uor.edu/Departments&Programs/AsianStudiesDept/>, a site maintained by R. Y. Eng at the University of Redlands. The best links on modern Latin American history will be found at the *Latin American Network Information Center (LANIC)* at the University of Texas, <http://lanic.utexas.edu/>, where one finds material on the history and culture of every Latin American country.

## 24. EMPIRES INTO NATIONS: AFRICA AND THE MIDDLE EAST AFTER THE SECOND WORLD WAR

Readers will find valuable discussions of modern Africa and the Middle East in many of the general books on European empires, anticolonial movements, and postcolonial nationalisms that were cited in Chap-

ter 23. The following works therefore focus on more specific regional and national themes.

## A New Africa

To the histories of Africa cited in Chapter 16 should be added the informative J. Iliffe, *Africans: The History of a Continent* (1996). The two best recent surveys of modern African history are F. Cooper, *Africa Since 1940: The Past of the Present* (2002) and P. Nugent, *Africa Since Independence: A Comparative History* (2004). For decolonization two indispensable volumes are P. Gifford and W. R. Louis (eds.), *The Transfer of Power in Africa: Decolonization, 1940–1960* (1982) and *Decolonization and African Independence: The Transfer of Power, 1960–1980* (1988). Good overviews are provided in J. D. Hargeaves, *Decolonization in Africa* (rev. 1996) and H. S. Wilson, *African Decolonization* (1994). An insightful survey for the years 1914 to the present is available in B. Davidson, *Modern Africa: A Social and Political History* (rev. 1994). There is a comprehensive analysis of social changes in F. Cooper, *Decolonization and African Society: The Labor Question in French and British Africa* (1996); and the same historian has examined the legacy of imperial systems in *Colonialism in Question: Theory, Knowledge, History* (2005). Important additional perspectives by African historians are provided in A. A. Mazrui (ed.), *Africa since 1935* (1993). Assessments of the years of independence include B. Davidson, *The Black Man's Burden: Africa and the Curse of the Nation-State* (1992), which sees the Western model of the nation-state as an artificial importation into the continent; C. Young, *The African Colonial State in Comparative Perspective* (1994), stressing the harmful legacy bequeathed by colonialism; G. B. N. Agithey, *Africa in Chaos* (1998), an angry critique of African governments and economic policies by a writer from Ghana; and M. Meredith, *The Fate of Africa: From the Hopes of Freedom to the Heart of Despair* (2005), a wide-ranging survey of postcolonial history. The obstacles to democracy are examined in L. A. Villalón and P. VonDoepp (eds.), *The Fate of Africa's Democratic Experiments: Elites and Institutions* (2005). Francophone Africa is studied in E. Mortimer, *France and the Africans, 1944–1960* (1969) and J. F. Clark and D. E. Gardinier (eds.), *Political Reform in Francophone Africa* (1997). The career of the poet-statesman of Senegal is portrayed in J. G. Vaillant, *Black, French, and African: A Life of Léopold Sédar Senghor* (1990).

The best historical account of South Africa and its peoples is L. Thompson, *A History of South Africa* (rev. 2000), cited in Chapter 16, while a good brief introduction is N. Worden, *The Making of Modern South Africa* (rev. 2000). One may also read F. Welsh, *South Africa: A Narrative History* (1998), informative but somewhat Eurocentric, and R. Ross, *A Concise History of South Africa* (1999). Thoughtful accounts of

two brutal episodes are R. R. Lemarchand, *Burundi: Ethnic Conflict and Genocide* (1996); G. Prunier, *The Rwanda Crisis: History of a Genocide* (1996); and M. Mamdani, *When Victims Become Killers: Colonialism, Nativism, and the Genocide in Rwanda* (2001). On Darfur one may read J. Flint and A. de Waal, *A Short History of a Long War* (2006) and G. Prunier, *Darfur: The Ambiguous Genocide* (2005). Among the many studies of the struggle against apartheid are D. Ottoway, *Chained Together* (1992); M. Meredith, *In the Name of Apartheid: South Africa in the Postwar Period* (1989); and three works by A. Sparks, *The Mind of South Africa* (1990), *Tomorrow Is Another Country: The Inside Story of South Africa's Road to Change* (1995), and *Beyond the Miracle: Inside the New South Africa* (2003). A. Sampson, *Mandela: The Authorized Biography* (2000) also merits reading.

### The Middle East

Good introductions to the modern history of this complex region of the world include M. Kamrava, *The Modern Middle East: A Political History Since the First World War* (2005); I. Pappé, *The Modern Middle East* (2005), stressing the region's social history; and two previously cited works by J. L. Gelvin, *The Modern Middle East: A History* (2004) and W. L. Cleveland, *A History of the Modern Middle East* (2004). There is also a useful collection of essays in A. H. Hourani, P. Khoury, and M. Wilson (eds.), *The Modern Middle East* (rev. 2004).

Books that examine the variety and complexity of Islam and its political manifestations include H. Munson, Jr., *Islam and Revolution in the Middle East* (1988); E. Swan, *Radical Islam: Medieval Theology and Modern Politics* (rev. 1990); B. Lewis, *The Political Language of Islam* (1988) and *Islam and the West* (1993); J. I. Esposito, *The Islamic Threat: Myth or Reality?* (1992); B. B. Lawrence, *Shattering the Myth: Islam Beyond Violence* (1998); F. Halliday, *Islam and the Myth of Confrontation: Religion and Politics in the Middle East* (2003); and L. Diamond, M. F. Plattner, and D. Brumberg (eds.), *Islam and Democracy in the Middle East* (2003). Two books that examine the ideologies of contemporary religious movements are B. Tibi, *The Challenge of Fundamentalism: Political Islam and the New World Disorder* (rev. 2002) and R. S. Appleby (ed.), *Spokesmen for the Despised: Fundamentalist Leaders of the Middle East* (1997).

For Iraq informative studies include W. R. Polk, *Understanding Iraq* (2005), with informative historical background material; P. Marr, *The Modern History of Iraq* (rev. 2004); M. F. and P. Sluglett, *Iraq since 1958: From Revolution to Dictatorship* (rev. 2001); and S. Khalil [K. Makiya], *Republic of Fear: The Politics of Modern Iraq* (rev. 1998). The Iraqi dictator and the Baath party dictatorship are also studied in E. Karsh and I. Rautsi, *Saddam Hussein: A Political Biography* (rev. 2002).

Three introductions to the history of modern Israel are H. M. Sachar, *A History of Israel* (2 vols.; rev. 1996); M. Gilbert, *Israel A History* (1998); and A. Bregman, *A History of Israel* (2003). Two biographies that help explain the early idealism of Zionism are J. Reinhartz, *Chaim Weizmann* (2 vols.; 1985–1993), and S. Teveth, *Ben-Gurion: The Burning Ground, 1866–1948* (1987); there are studies also of Golda Meir by E. Ayres (1969) and P. Mann (rev. 1973). Two books that examine conflicting ideals of labor Zionism, nationalism, and religious conservatism are M. Cohen, *Zion and State: Nation, Class, and the Shaping of Modern Israel* (1987) and Z. Sternhell, *The Founding Myths of Israel: Nationalism, Socialism, and the Making of the Jewish State* (trans. 1998). Insights into ultra-Orthodox pressures are provided in D. Landau, *Piety and Power: The World of Jewish Fundamentalism* (1993).

The Arab-Israeli wars from 1948 to 1973 are traced in R. Ovendale, *The Origins of the Arab-Israeli Wars* (rev. 1999); A. Bregman, *Israel's Wars: A History since 1947* (2002); and in a concise survey by T. G. Fraser, *The Arab-Israeli Conflict* (rev. 2004). Two moving accounts of Israeli-Palestinian tensions are T. L. Friedman, *From Beirut to Jerusalem* (rev. 1991) and D. K. Shipler, *Arab and Jew: Wounded Spirits in a Promised Land* (rev. 2002). Thoughtful studies focusing on the Palestinians are B. Kimmerling and J. S. Migdal, *Palestinians: The Making of a People* (1993); C. P. Smith, *Palestine and the Arab-Israeli Conflict* (rev. 2001); J. L. Gelvin, *The Israel-Palestine Conflict: One Hundred Years of War* (2005), cited in Chapter 19; and two books by Israeli revisionist historians: A. Shlaim, *The Iron Wall: Israel and the Arab World since 1948* (2000) and B. Morris, *A History of the Zionist-Arab Conflict, 1881–1999* (1999), synthesizing his earlier books on Arab-Israeli relations and the Palestinian refugees.

### The Revolution in Iran

The revolutionary events in Iran may be studied in N. R. Keddie, *Modern Iran: Roots and Results of Revolution* (rev. 2003); D. Wilber, *Iran Past and Present: From Monarchy to Islamic Republic* (rev. 1981); S. Bakhash, *The Reign of the Ayatollahs: Iran and the Islamic Revolution* (rev. 1990); M. M. Milani, *The Making of Iran's Islamic Revolution* (rev. 1994); and R. Mottahedeh, *The Mantle of the Prophet: Religion and Politics in Iran* (1985, 2000). R. Wright's three books carry the story toward the present: *In the Name of God: The Khomeini Decade* (1989), *Sacred Rage: The Wrath of Militant Islam* (1989), and *The Last Great Revolution: Turmoil and Transformation in Iran* (2000). An informative biography is B. Moine, *Khomeini: Life of the Ayatollah* (2000). For the American involvement one may read J. A. Bill, *The Eagle and the Lion: The Tragedy of American-Iranian Relations* (1988) and K. M. Pollack, *The Persian Puzzle: The Conflict Between Iran and America* (2004), in-

formative for the historical background on Iran and on the years since 1979. The eight-year war between Iran and Iraq is described in D. Hiro, *The Longest War: The Iran-Iraq Military Conflict* (1991) and E. Karsh (ed.), *Iran-Iraq War: Impact and Implications* (1990).

### Modernization and Development in the Third World

The impact of modernization is examined historically and comparatively in works that show a growing skepticism about earlier views of how modernity would develop around the world. Examples of this debate appear in I. R. Sinai, *The Challenge of Modernisation* (1964) and *In Search of the Modern World* (1968); L. S. Stavrianos, *Global Rift: The Third World Comes of Age* (1981); T. H. Von Laue, *The World Revolution of Westernization: The Twentieth Century in Global Perspective* (1987), which stresses the destabilizing effects of modernization; A. Y. So, *Social Change and Development: Modernization: Dependency and World System Theories* (1990), which examines three influential views of economic development; and D. K. Fieldhouse, *The West and the Third World: Trade, Colonialism, Dependence, and Development* (1999). J. D. Sachs, *The End of Poverty: Economic Possibilities for Our Time* (2005) is an especially thoughtful book. On the world refugee crisis of the era one may read S. Ogato, *The Turbulent Decade: Confronting the Refugee Crisis of the 1990s* (2005) by the UN High Commissioner at the time.

For development models followed in the post-1945 years, one may also read A. Bagchi, *The Political Economy of Underdevelopment* (1982), an important study; H. W. Arndt, *Economic Development: The History of an Idea* (1987); W. W. Rostow, *Theorists of Economic Growth from David Hume to the Present* (1990); B. L. Billet, *Modernization Theory and Economic Development: Discontent in the Developing World* (1993); M. Wolfe, *Elusive Development* (1996); B. Hettne, *Development Theory and the Three Worlds* (rev. 1995); L. E. Harrison, *Underdevelopment Is a State of Mind* (rev. 2000); R. D. Stone, *The Nature of Development* (1992); and A. Sen, *Development as Freedom* (2000). Many of these are critical of efforts to introduce Western-style development in different cultural contexts or without adequate preparation.

For the development experience in Africa one may turn to R. Dumont, *False Start in Africa* (1966); C. Young, *Ideology and Development in Africa* (1982); D. K. Fieldhouse, *Black Africa, 1945–1980: Economic Decolonization and Arrested Development* (1986), which studies both British and French former colonies; L. Cockcroft, *Africa's Way: A Journey from the Past* (1990); and J. Iliffe, *The African Poor: A History* (1987).

For Asia one may read R. A. Scalapini, *The Politics of Development: Perspectives on Twentieth-Century Asia* (1989), an insightful small book, and A. Richards and J. Waterbury, *A Political Economy of*

*the Middle East* (rev. 1996). Available also are J. Mayall and A. Payne (eds.), *The Fallacies of Hope: The Post-Colonial Record of the Commonwealth Third World* (1991) and T. Kemp, *Industrialization in the Non-Western World* (rev. 1989).

An important, early introduction to the North-South debate over a new international economic order was the report by the Independent Commission on International Development chaired by Willy Brandt: *North-South: A Program for Survival* (1980). It may be supplemented by W. A. Lewis, *The Evolution of the International Economic Order* (1978); A. Fishlow and others, *Rich and Poor Nations in the World Economy* (1978); B. Nossiter, *The Global Struggle for More: Third World Conflicts with the Rich Nations* (1986); and J. W. Warnock, *Politics of Hunger: The Global Food System* (1987). Other themes of the debate emerge in C. Thomas and P. Wilkin (eds.), *Globalization and the South* (1997), which argues that new global economic patterns are adding to global social inequalities; and in two concise, balanced surveys by M. Waters, *Globalization* (rev. 2001); and M. B. Steger, *Globalization: A Very Short Introduction* (2003).

### Useful Web Sites

Readers will find useful materials on African and Middle Eastern History at the *Internet African History Sourcebook*, the *Internet Islamic History Sourcebook*; and the *Internet Jewish History Sourcebook*, all of which are available as links at Fordham University's *Internet Modern History Sourcebook*, [www.fordham.edu/halsall/mod/modsbook.html](http://www.fordham.edu/halsall/mod/modsbook.html). There are also excellent sources and images at the *African Online Digital Library*, [www.africanonline.org/](http://www.africanonline.org/); and other useful links may be found through the Web sites of Michigan State University's *African Studies Center*, <http://africa.msu.edu/>, and Stanford University's *Africa South of the Sahara* at [www.sul.stanford.edu/depts/ssrg/africa/guide.html](http://www.sul.stanford.edu/depts/ssrg/africa/guide.html). Links to diverse sources of information on the modern history of all Middle Eastern nations and societies are maintained at *The Middle East Network Information Center*, <http://menic.utexas.edu/menic/>, a site at the University of Texas.

## 25. COEXISTENCE, CONFRONTATION AND THE NEW GLOBAL ECONOMY

### International Relations: Confrontation and Détente

To the books described in Chapters 21 and 22 that focus on the postwar decades of Soviet-American relations may be added R. Levering, *The Cold War* (1994); S. Brown, *The Faces of Power: United States Foreign Policy from Truman to Clinton* (rev. 1994); and G. A. Craig and F. Loewenheim (eds.), *The Diplomats, 1939–1979* (1994), a valuable set of essays.

How the developing world became involved in the Soviet-Western confrontation is explored in R. J. Barnett, *Intervention and Revolution: The United*

*States in the Third World* (1968); G. Kolko, *Confronting the Third World: U.S. Foreign Policy, 1945–1980* (1988), critical of U.S. policies; B. D. Porter, *The U.S.S.R. in Third World Conflicts: Soviet Arms and Diplomacy in Local Wars, 1945–1980* (1984); and G. Lundestad, *East, West, North, South: Major Developments in International Politics since 1945* (rev. 2005), by a Norwegian historian.

For the background and nature of Castro's revolution in Cuba one may read L. A. Perez, Jr., *Cuba: Between Reform and Revolution* (rev. 2006); J. M. del Aquila, *Cuba: Dilemmas of a Revolution* (rev. 1994), which includes an account of Castro's military activities in Africa; and M. Merez-Stable, *The Cuban Revolution: Origins, Course, Legacy* (1993). R. E. Quirk, *Fidel Castro* (1993) is a critical biographical assessment. Other biographies by T. Szulc (1986), T. M. Leonard (2004), and B. Skierka (2004) also analyze Castro's life and career. There are good biographies of Che Guevara by L. L. Anderson (1997) and J. Castañeda (1997).

The best introduction to the Kennedy years is M. R. Beschloss, *The Crisis Years: Kennedy and Khrushchev, 1960–1963* (1991). The Bay of Pigs episode is described in T. Higgins, *The Perfect Failure* (1987) and the essays in J. G. Blight and P. Kornbluh (eds.), *The Politics of Illusion: The Bay of Pigs Invasion Reexamined* (1998). The missile crisis of 1962 is studied in L. Brune, *The Missile Crisis* (rev. 1996); G. T. Allison and P. D. Zelikow, *Essence of Decision: Explaining the Cuban Missile Crisis* (rev. 1999); A. L. George, *Awaiting Armageddon: How Americans Faced the Cuban Missile Crisis* (2003); S. M. Stern, *The Week the World Stood Still: Inside the Secret Cuban Missile Crisis* (2005); and A. Fursenko and T. Naftali, *"One Hell of a Gamble": Khrushchev, Castro, and Kennedy, 1958–1964* (1997), by a Russian and an American scholar with access to Khrushchev's papers. The deliberations of Kennedy and his advisers are available in E. R. May and P. D. Zelikow, *The Kennedy Tapes: Inside the White House during the Cuban Missile Crisis* (1998).

On the American relationship with its NATO allies in the Cold War years, one may read R. J. Barnett, *The Alliance* (1983); D. P. Calleo, *Beyond American Hegemony* (1987); and L. S. Kaplan, *NATO and the United States* (rev. 1994).

### The Vietnam War

Two studies that place post-1945 events in Vietnam in historical perspective are A. B. Woodside, *Community and Revolution in Modern Vietnam* (1976) and W. J. Duiker, *The Rise of Nationalism in Vietnam, 1900–1941* (1976). The struggle for independence is recounted in J. P. Harrison, *The Endless War: Vietnam's Struggle for Independence* (1989); A. Short, *The Origins of the Vietnam War* (1989); D. R. SarDesai, *Vietnam: The Struggle for National Identity* (rev.

1992); M. B. Young, *The Vietnam Wars, 1945–1990* (1991), a valuable synthesis; and W. J. Duiker, *The Communist Road to Power in Vietnam* (rev. 1996). Duiker has also written a scholarly biographical account of the Vietnamese leader, *Ho Chi Minh* (2000).

The American involvement is skillfully explored in G. McT. Kahin, *Intervention: How America Became Involved in Vietnam* (1986), which perceives the United States as ignoring the nationalist aspects of the war and seeing it as Communist aggression only. American miscalculations are heavily emphasized in D. Halberstam, *The Best and the Brightest* (1972), cited in Chapter 22; L. Berman, *Lyndon Johnson's War* (1989); and D. Kaiser, *American Tragedy: Kennedy, Johnson, and the Origins of the Vietnam War* (2000). R. S. McNamara, *In Retrospect: The Tragedy and Lessons of Vietnam* (1995) looks back with regret on his role as defense secretary from 1961 to his resignation in 1968. A defense of the American involvement as essential to its global containment policy is M. Lind, *Vietnam: The Necessary War: A Reinterpretation of America's Most Disastrous Conflict* (1999).

American military actions are studied in S. Karnow, *Vietnam: A History* (rev. 1994, 1997); R. D. Schulzinger, *A Time for War: The United States and Vietnam, 1941–1975* (1997); L. H. Addington, *America's War in Vietnam* (2000), a concise, informative narrative; and D. L. Anderson, *The Vietnam War* (2005). On the extension of the war under Nixon and Kissinger one may read W. Shawcross, *Kissinger, Nixon, and the Destruction of Cambodia* (1979) and S. Hersh, *The Price of Power* (1983). For Cambodia there are three valuable studies by D. P. Chandler: *The Tragedy of Cambodian History: Power, War, and Revolution since 1945* (1991), *A History of Cambodia* (rev. 2000), and *Brother Number One: Pol Pot* (rev. 1999). An especially insightful book examining Cambodian cultural traditions is A. L. Hinton, *Why Did They Kill? Cambodia in the Shadow of Genocide* (2005). M. van Creveld, *The Transformation of War* (1991) is a searching reassessment of guerrilla warfare and other patterns of modern conflict.

### The Nuclear Arms Buildup

There are numerous books on the nuclear arms buildup, the apocalyptic dangers the world has learned to live with, and the contributions of strategic deterrence to the armed peace in the Cold War years. An outstanding exhaustive study is McG. Bundy, *Danger and Survival: Choices about the Bomb in the First Fifty Years* (1988); only gradually, he notes, was it recognized that the bomb could not be thought of as an instrument of war like other weapons. Other counsels on strategy, accepting deterrence but calling for continuing efforts at nuclear arms control, are G. F. Kennan, *The Nuclear Delusion: Soviet-American Relations in the Atomic Age* (1983); S. Zuckerman, *Nuclear Illusion and Reality* (1982); G. Gasteyer,

*Searching for World Security* (1987); M. Mandelbaum, *The Fate of Nations: The Search for National Security in the Nineteenth and Twentieth Centuries* (1988); and J. Newhouse, *War and Peace in the Nuclear Age* (1989). Another kind of literature has called for a fundamental rethinking about nuclear arms. Representative are J. Schell's two books, *The Fate of the Earth* (1982) and *The Abolition* (1984), both now available in a one-volume edition (2000); the same author's *The Gift of Time: The Case for Abolishing Nuclear Weapons Now* (1998); and F. Dyson, *Weapons and Hope* (1984), by an eminent physicist. A thoughtful contribution to the discussion is J. Finnis, J. M. Boyle, Jr., and G. Grisez, *Nuclear Deterrence, Morality, and Realism* (1987). The worldwide movement for nuclear disarmament is examined in A. Carter, *Peace Movements: International Protest and World Politics since 1945* (1992).

Books that illuminate the successes and failures of détente include R. L. Garthoff, *Détente and Confrontation* (rev. 1994); R. W. Stevenson, *The Rise and Fall of Détente* (1985); and W. Bundy, *A Tangled Web: The Making of Foreign Policy in the Nixon Presidency* (1998), an in-depth critical assessment. Also available are R. D. Schulzinger, *Henry Kissinger: Doctor of Diplomacy* (1989); W. Isaacson, *Kissinger: A Biography* (1992); R. C. Thornton, *The Carter Years: Toward a New Global Order* (1991); and T. G. Patterson, *Meeting the Communist Threat: Truman to Reagan* (1989). For assessments of American foreign policy and the search for security in the perspective of over four decades one should read the important works of J. L. Gaddis, *The Long Peace: Inquiries into the History of the Cold War* (1987), *We Now Know: Rethinking Cold War History* (1997), and *Strategies of Containment: A Critical Appraisal of American National Security During the Cold War* (rev. 2005). T. J. McCormick, *America's Half-Century: United States Foreign Policy in the Cold War and After* (rev. 1995); and N. Friedman, *The Fifty Years' War: Conflict and Strategy in the Cold War* (2000). The collapse of the Soviet Union in 1991 and the altered international scene have brought additional books, cited in Chapter 26.

### The World Economy: Global Recession

To books on the global economy as it developed in the first four decades after 1945 may be added W. M. Scammell, *The International Economy since 1945* (rev. 1983); A. G. Kenwood and A. I. Lougheed, *The Growth of the International Economy, 1820–1980* (1983); and S. Pollard, *The International Economy since 1945* (1997). For the multinational corporations as they evolved in this era one may turn to R. Vernon, *Storm over the Multinationals* (1977); and R. J. Barnett and J. Cavanagh, *Global Dreams: Imperial Corporations and the New World Order* (1994). The role of oil in the economy and in global politics is admirably described in D. Yergin, *The Prize: The Epic Quest for*

*Oil, Money, and Power* (1991) and P. R. Odell, *Oil and World Power* (rev. 1986).

The historic link between economic strength and political and military hegemony is traced masterfully in P. Kennedy, *The Rise and Fall of the Great Powers: Economic Change and Military Conflict from 1500 to 2000* (1987), cited earlier; it may be read along with M. Olson, *The Rise and Decline of Nations* (1982). Kennedy's volume and other books in the 1970s and 1980s raised the question of America's relative decline in economic leadership. The Japanese challenge, in particular, was described in C. V. Prestowitz, Jr., *Trading Places: How We Allowed Japan to Take the Lead* (1988). On the challenge from more than one source one may read L. Thurow, *Head to Head: The Coming Economic Battle among Japan, Europe, and America* (1992), which describes the "geo-economic" struggle. The phenomenal economic growth of Hong Kong, Taiwan, Singapore, and South Korea is described in E. F. Vogel, *The Four Little Dragons* (1991); and the role of governments in such economies is examined in R. Wade, *Governing the Market: Economic Theory and the Role of Government in East Asian Industrialization* (rev. 2004). The decline of older American industry is examined in B. Bluestone and B. Harrison, *The Deindustrialization of America* (1982), but the continuing importance of the American economy is emphasized in M. Feldstein (ed.), *The United States in the World Economy* (1988); H. R. Nye, *The Myth of American Decline* (1990); and two books by J. S. Nye, *Bound to Lead: The Changing Nature of American Power* (1990) and *Power in the Global Information Age* (2004).

The impact of the global recession that began in 1974 and the dilemmas it posed for policymakers are studied in several of the books on the global economy cited in Chapter 22; to them should be added L. Anel, *Recession, the Western Economies, and the Changing World Order* (1981); E. S. Einhorn and J. Logue, *Welfare States in Hard Times* (1982); and R. Skidelsky (ed.), *The End of the Keynesian Era* (1977).

In addition to books cited in Chapter 22, the operations, accomplishments, and problems of the European Community may be studied in D. Swann, *The Economics of the Common Market* (rev. 1988) and *European Economic Integration* (1996) and H. Bruggmans (ed.), *Europe: Dream, Adventure, Reality* (1987), assessing the first 30 years of West European integration. On progress toward closer unity and the transformation of the European Community (EC) into the European Union (EU) under the Maastricht treaty, good guides are available in two books by J. Pinder, *European Community: The Building of a Union* (rev. 1995) and *The European Union: A Very Short Introduction* (2001); and in T. Bainbridge and A. Teasdale, *The Penguin Companion to European Union* (rev. 2004).

## Western Europe:

### Politics and Society since 1974

For Britain, Margaret Thatcher's conservative leadership and the changes in Britain in the decade after 1979 are assessed in P. Jenkins, *Mrs. Thatcher's Revolution: The Ending of the Socialist Era* (1988); P. Riddell, *The Thatcher Era and Its Legacy* (rev. 1991); H. Young, *The Iron Lady: A Biography of Margaret Thatcher* (1989); and A. Seldon and D. Collings, *Britain Under Thatcher* (2000). The historical legacy of Conservative rule is examined in E. A. Reitan, *The Thatcher Revolution: Margaret Thatcher, John Major, and Tony Blair, 1979–2001* (2003). Two comparative studies of the conservative efforts in the United States and Britain in the 1980s to curb the welfare state, encourage entrepreneurial spirit, and revive national pride are J. Krieger, *Reagan, Thatcher, and the Politics of Decline* (1986); A. Gamble, *The Free Economy and the Strong State* (rev. 1994); and P. Pierson, *Dismantling the Welfare State? Reagan, Thatcher, and the Politics of Retrenchment* (1994).

For France, Mitterrand's leadership of the Socialist party and his presidency are assessed in J. W. Friend, *Seven Years in France: François Mitterrand and the Unintended Revolution, 1981–1988* (1989) and *The Long Presidency: France in the Mitterrand Years, 1981–1995* (1998); in M. Mclean (ed.), *The Mitterrand Years: Legacy and Evaluation* (1998); and in D. S. Bell, *François Mitterrand: A Political Biography* (2005).

For the evolution of socialism one may read M. Harrington, *Socialism: Past and Future* (1989); S. Padgett and W. Patterson, *A History of Social Democracy in Postwar Europe* (1991); and D. Sasson, *One Hundred Years of Socialism: The West European Left in the Twentieth Century* (1997), cited earlier; and G. Eley, *Forging Democracy: The History of the Left in Europe, 1850–2000* (2002).

On developments in Spain one may read R. Carr and J. P. Fusi-Azpurúa, *Spain: Dictatorship to Democracy* (rev. 1981); P. Preston, *The Triumph of Democracy in Spain* (1986); and K. Maxwell and S. Spiegel, *The New Spain: From Isolation to Influence* (1994). F. J. R. Salvadó, *Twentieth-Century Spain* (1999) places recent events in a wider historical context. For Portugal, the revolution of 1974 and the gradual emergence of political stability are studied in H. G. Ferreira and M. W. Marshall, *Portugal's Revolution: Ten Years On* (1986); T. Gallagher, *Portugal: A Twentieth Century Interpretation* (1983); and the later chapters of D. Birmingham, *A Concise History of Portugal* (rev. 2003).

### The Communist World: China after Mao

Several of the volumes cited for the Mao era also describe Deng's program of modernization and liberalization. To these may be added H. E. Salisbury, *The New Emperors: China in the Era of Mao and Deng* (1992), by an insightful journalist; R. Evans, *Deng Xi-*

*aoping and the Making of Modern China* (rev. 1997); M. Goldman, *Sowing the Seeds of Democracy: Political Reform in the Deng Xiaoping Era* (1994); and J. Gittings, *The Changing Face of China: From Mao to Market* (2005).

Assessments providing balanced judgments on Deng's reforms, the post-Deng years, and the prospects for democratization since the setbacks at Tiananmen Square are J. B. Starr, *Understanding China: A Guide to China's Economy, History, and Political Structure* (1997); J. Miles, *The Legacy of Tiananmen: China in Disarray* (1997); C. J. Calhoun, *Neither Gods nor Emperors: Students and the Struggle for Democracy in China* (1994); A. J. Nathan, *China's Transition* (1998); B. Gilley, *Tiger on the Brink: Jiang Zemin and China's New Elite* (1999); and R. L. Kuhn, *The Man Who Changed China: The Life and Legacy of Jiang Zemin* (2004). Informative also are the essays in R. MacFarquhar (ed.), *The Politics of China: The Eras of Mao and Deng* (1997) and D. Shambaugh (ed.), *Deng Xiaoping: Portrait of a Chinese Statesman* (1997). One of the most detailed accounts of the setback to democracy at Tiananmen Square in 1989 is J. Wong's colorfully entitled *Red China Blues: My Long March from Mao to Now* (1996). O. Schell and D. Shambaugh (eds.), *The China Reader: The Reform Era* (1999) is an excellent collection of documents and commentaries on recent Chinese politics, society, and economic change.

### Useful Web Sites

The Woodrow Wilson International Centre for Scholars provides a helpful Web site with materials on all regions of the contemporary world and on themes such as international security and the global economy, accessible through a link to "programs" at [www.wilsoncenter.org/](http://www.wilsoncenter.org/). A well-organized Web site, *The Wars for Vietnam*, edited by R. Brigham at Vassar College, <http://vietnam.vassar.edu/>, offers a concise narrative of major events and links to documents; other materials may be found at *Vietnam Online*, [www.pbs.org/wgbh/amex/vietnam/](http://www.pbs.org/wgbh/amex/vietnam/), a Web site created to accompany an excellent documentary film for the Public Broadcasting Service. Current debates on international conflicts and security issues may be explored through the Web site of Stanford University's Center for International Security and Cooperation, at <http://cisac.stanford.edu/>. There are helpful links to resources on the global economy at *Understanding the Face of Globalization: Internet Resource Guide*, [www.uwm.edu/Dept/CIE/Resources/globalization/](http://www.uwm.edu/Dept/CIE/Resources/globalization/), a site developed by A. Dye at the University of Wisconsin, Milwaukee. Readers will find current information on the European Union and other aspects of contemporary Europe at the *UCLA Center for European and Eurasian Studies*, [www.international.ucla.edu/euro/](http://www.international.ucla.edu/euro/); and additional information is available at the EU Web site, *Europa—The European Union On-Line*, <http://europa.eu.int/>. There are useful links to materials on

contemporary China at the University of Hawaii's Center for Chinese Studies, [www.chinesestudies.hawaii.edu/](http://www.chinesestudies.hawaii.edu/).

## 26. THE INTERNATIONAL REVOLT AGAINST SOVIET COMMUNISM

It is difficult to assess the durable value of the literature dealing with the events and developments of recent years. For new books the reviews and bibliographies published in the periodical and daily press and in the professional journals should be consulted.

### The Soviet Union: Crisis, Reform, and Collapse

Efforts to assess the Gorbachev reforms in their historical context include A. Nove, *Glasnost in Action: Cultural Renaissance in Russia* (1989); A. Aslund, *Gorbachev's Struggle for Economic Reform* (rev. 1991); B. Kerblay, *Gorbachev's Russia* (1989); G. Hosking, *The Awakening of the Soviet Union* (1991); A. Brown, *The Gorbachev Factor* (1996), a convincing assessment; and G. W. Breslauer, *Gorbachev and Yeltsin as Leaders* (2002). The final phase of the Cold War is examined in J. F. Matlock, *Reagan and Gorbachev: How the Cold War Ended* (2004), an important work by a former American diplomat. Especially valuable also is J. B. Dunlop, *The Rise of Russia and the Fall of the Soviet Empire* (1993), while M. E. Malia, *The Soviet Tragedy: A History of Socialism in Russia, 1917–1991* (1994), cited earlier, critically evaluates the more than seven decades. F. Furet, *The Passing of an Illusion* (trans. 1999), by a distinguished French historian, assesses the ending of an era in which many in the West and elsewhere were attracted to communism.

### The Collapse of Communism and the Dissolution of the Soviet Union

For the events of 1991 and the dissolution of the U.S.S.R., one may turn to D. Remnick, *Lenin's Tomb: The Last Days of the Soviet Empire* (1993), by a perceptive journalist-observer; J. F. Matlock, Jr., *Autopsy on an Empire* (1995), a compelling contribution by the American ambassador at the time; and R. V. Daniels, *The End of the Communist Revolution* (1993). On the ethnic and national tensions that led to the dissolution of the union one may read H. Carrère d'Encausse, *The End of the Soviet Empire: The Triumph of the Nations* (trans. 1993); G. I. Mirsky, *On Ruins of Empire: Ethnicity and Nationalism in the Former Soviet Union* (1997); and R. G. Suny, *The Soviet Experiment: Russia, the U.S.S.R., and the Successor States* (1998).

Assessments of the Yeltsin presidency and efforts at economic reform may be found in R. W. Davies, *Soviet History in the Yeltsin Era* (1997); D. Remnick, *Resurrection: The Struggle for a New Russia* (1997); T. Gustafson, *Capitalism Russian Style* (1997), especially informative for the economy; and A. Shleifer and D. Treisman, *Without a Map: Political*

*Tactics and Economic Reform in Russia* (2000). The suppression of the Chechen rebellion is studied in J. Dunlop, *Russia Confronts Chechnya* (1998) and in M. Evangelista, *The Chechen Wars* (2002).

### The Transformation of Central and Eastern Europe, 1989

Several books have already been cited in Chapter 22 for central and eastern Europe in the post-1945 years. The growing restiveness under Soviet domination also emerges from M. Charlton, *The Eagle and the Small Birds: Crisis in the Soviet Union from Yalta to Solidarity* (1984) and G. Schöpfung and N. Woods (eds.), *In Search of Central Europe* (1989); the opposition to the Soviets is also described in M. Pittaway, *Eastern Europe, 1939–2000* (2004).

T. Garton Ash, a British journalist-historian, vividly describes the collapse of the Communist regimes in central and eastern Europe in 1989 as he witnessed and reflected on these events in *The Uses of Adversity: Essays on the Fate of Central Europe* (1989) and *The Magic Lantern: The Revolution of '89 Witnessed in Warsaw, Budapest, Berlin, and Prague* (1990). Other informative studies include Z. A. B. Zeman, *The Making and Breaking of Communist Europe* (1991); the essays in I. Banac (ed.), *Eastern Europe in Revolution* (1992); G. Stokes, *The Walls Came Tumbling Down: The Collapse of Communism in Eastern Europe* (1993); and V. Bunce, *Subversive Institutions: The Design and the Destruction of Socialism and the State* (1999). Of special interest is J. Lévesque, *The Enigma of 1989: the U.S.S.R. and the Liberation of Eastern Europe* (1997), an effort to assess the Soviet Union's reactions.

Careful assessments of the events leading to German reunification are T. Garton Ash, *In Europe's Name: Germany and the Divided Continent* (1993), cited in Chapter 22; K. H. Jarausch, *The Rush to German Unity* (1994); E. Pond, *Beyond the Wall: Germany's Road to Unification* (1993); C. S. Maier, *The Crisis of Communism and the End of East Germany* (1997), with special insights into the decayed East German economy; and P. Zelikow and C. Rice, *Germany Unified and Europe Transformed: A Study in Statecraft* (1997), with early access to key documents.

A few additional books on the Revolution of 1989 in the central and eastern European countries merit citing. For Poland one may read A. Kemp-Welch, *The Birth of Solidarity* (1991) and J. Harrison, *The Solidarity Decade: Poland, 1980–1991* (1993). For Czechoslovakia there are available B. Wheaton and Z. Kavan, *The Velvet Revolution* (1992); two biographical accounts of its leader, communicating the playwright-statesman's thought and influence: E. Křiváček, *Václav Havel: The Authorized Biography* (1993), somewhat uncritical; J. Keane, *Václav Havel* (2000), exploring in depth his political career both as dissident activist and as president. An informative survey of Czech history carrying the story toward the

present is D. Sayer, *The Coasts of Bohemia: A Czech History* (1999), while E. Stein, *Czechoslovakia: Ethnic Conflict, Constitutional Fissure, Negotiated Breakup* (1997) helps explain the peaceful separation of the Czech Republic and Slovakia in 1993. For the revolt against the Romanian dictator one may read N. Ratesh, *Romania: The Entangled Revolution* (1992), an informative brief account, and P. Siani-Davies, *The Romanian Revolution of December 1989* (2005), the best comprehensive study.

The Baltic states, where the independence movements helped catalyze the dissolution of the U.S.S.R., are studied in A. Lieven, *The Baltic Revolution: Estonia, Latvia, Lithuania and the Path to Independence* (1993) and R. J. Misiunas and R. Taagepera, *The Baltic States: Years of Dependence, 1940–1990* (1993), a detailed account of the years under Soviet rule.

### The Disintegration of Yugoslavia

To books cited earlier on Balkan history one should add M. Glenny, *The Balkans: Nationalism, War, and the Great Powers, 1804–1999* (2000) and M. Mazour, *The Balkans: A Short History* (2000), an insightful distillation of the complex story. For the background and nature of the Tito years one should read A. Djilas, *The Contested Country: Yugoslav Unity and Communist Revolution, 1919–1953* (1991), cited earlier; R. West, *Tito and the Rise and Fall of Yugoslavia* (1995); and J. R. Lampe, *Yugoslavia as History: Twice There Was a Country* (1996), focusing on the years 1918–1941, the Second World War, and the years 1945–1991.

The events of the 1990s may be followed in T. Judah, *The Serbs: History, Myth and the Destruction of Yugoslavia* (2000), which graphically demonstrates that the breakup was the consequence of demagogic incitement of ethnic animosities, not the ethnic differences themselves; L. Silber and A. Little, *Yugoslavia: Death of a Nation* (1999); and M. Glenny, *The Fall of Yugoslavia: The Third Balkan War* (rev. 1996). The Serb dictator and his regime are studied in R. Thomas, *Serbia Under Milosevic: Politics in the 1990s* (1999), and in D. Bujosevic and I. Radovanovic, *The Fall of Milosevic: The October 5th Revolution* (2003). Additional biographical details are provided in D. Dodier and L. Branson, *Milosevic: Portrait of a Tyrant* (2000); and in A. Lebor, *Milosevic: A Biography* (2002). Secession and the wars that followed are studied in M. Tanner, *Croatia: A Nation Forged in War* (rev. 2001) and N. Malcolm, *Bosnia: A Short History* (rev. 1996).

For the international reactions to the ethnic warfare one may turn to J. Gow, *Triumph of the Lack of Will: International Diplomacy and the Yugoslav War* (1997); W. Bert, *The Reluctant Superpower: United States Policy in Bosnia, 1991–1995* (1997); D. Rohde, *Endgame: The Betrayal and Fall of Srebrenica: Europe's Worst Massacre since World War II* (1997), on the mass slaying of Bosnian Muslims; and R. Hol-

brooke, *To End a War* (1998), by the American diplomat who helped negotiate the Dayton accords. M. Ignatieff, *The Warrior's Honor: Ethnic War and the Modern Conscience* (1998) reflects on the moral dilemmas the events posed to the international community; and S. J. Kaufman, *Modern Hatreds: The Symbolic Politics of Ethnic War* (2001) and V. R. Gagnon, *The Myth of Ethnic War* (2004) provide additional insights on eastern Europe.

For the suppression of the rebellion in Kosovo one may read N. Malcolm, *Kosovo: A Short History* (1998) and M. Vickers, *Between Serb and Albanian: A History of Kosovo* (1998); and for the American-led NATO air offensive against Serbia, M. Ignatieff, *Virtual War: Kosovo and Beyond* (2000) and T. Judah, *Kosovo: War and Revenge* (2000).

### After Communism: Central and Eastern Europe

Insightful books include R. Dahrendorf, *Reflections on the Revolution in Europe* (1991); T. Rosenberg, *The Haunted Land: Facing Europe's Ghosts after Communism* (1995); and R. Skidelsky, *The Road from Serfdom: The Economic and Political Consequences of the End of Communism* (1996). There are also well-informed analyses of central European societies in T. Garton Ash, *History of the Present: Essays, Sketches, and Dispatches from Europe in the 1990s* (1999). The efforts to establish stable democracies are assessed in R. Rose and others, *Democracy and Its Alternatives: Understanding Post-Communist Societies* (1998); P. Juviler, *Freedom's Ordeal: The Struggle for Human Rights and Democracy in Post-Soviet States* (1997); and V. Tismaneanu, *Fantasies of Salvation: Democracy, Nationalism and Myth in Post-Communist Europe* (1998). Some unsavory aspects of the postliberation era are described in P. Hockenos, *Free to Hate: The Rise of the Right in Post-Communist Eastern Europe* (1993).

### Useful Web Sites

There are useful links to diverse resources on the recent history of central and eastern Europe and the countries of the former Soviet Union at REENIC: Russian and East European Network Information Center, a site at the University of Texas, <http://reenic.utexas.edu/reenic/>; at the East Central European Center of Columbia University, [www.columbia.edu/cu/sipa/REGIONAL/ECE/homepage.html](http://www.columbia.edu/cu/sipa/REGIONAL/ECE/homepage.html); and at the University of Pittsburgh's Russian and East European Studies Virtual Library, [www.ucis.pitt.edu/reesweb/](http://www.ucis.pitt.edu/reesweb/), an excellent starting point for links to materials on both the fall of Soviet communism and the later history of the former communist nations in central Europe.

## 27. THE CHANGING MODERN WORLD Europe since the 1990s

Books that examine the new configuration of European relationships and the evolving European Union

include A. E. Stent, *Russia and Germany Reborn: Unification, the Soviet Collapse, and the New Europe* (1999); E. Pond, *The Rebirth of Europe* (rev. 2002); M. Keens-Soper, *Europe in the World: The Persistence of Power Politics* (1999); and M. Emerson, *Rethinking the Map of Europe* (1999). There are helpful accounts of international cooperation in E. Bomberg and A. Stubb (eds.), *The European Union—How Does it Work*; and D. Dinan, *Europe Recast: A History of the European Union* (2004). T. Judt, *A Grand Illusion? An Essay on Europe* (1996) expresses pessimism on the future of European unity, but he has provided further analysis of this process in his comprehensive *Postwar: A History of Europe since 1945* (2005), cited earlier. The most optimistic view on this subject is the stimulating if not entirely convincing M. Leonard, *Why Europe Will Run the 21st Century* (2005). A fresh overview of Britain in the postwar half-century is presented in H. Young, *This Blessed Plot: Britain and Europe from Churchill to Blair* (1999); and Tony Blair's "new Labour" program is examined in A. Giddens, *The Third Way: The Renewal of Social Democracy* (1998); and M. A. Sully, *The New Politics of Tony Blair* (2000). For Italy three books that examine the unseating of the Christian Democrats in the 1990s and the attempts to deal with the corruption that tarnished the regime include A. Stille, *Excellent Cadavers: The Mafia and the Death of the Italian Republic* (1995); M. Frei, *Italy: The Unfinished Revolution* (1996); and P. McCarthy, *The Crisis of the Italian State* (1995).

### Culture, Science, and Thought

Many of the books described in Chapter 15 should be consulted, including H. S. Hughes, *Consciousness and Society: The Reorientation of European Social Thought, 1890–1930* (1958), which examines post-Enlightenment ways of looking at science and the social sciences, and G. L. Mosse, *The Culture of Western Europe* (rev. 1988). An informative survey, focusing especially on the twentieth century, is J. Winders, *European Culture since 1848* (2001).

For distinctions between "modernism" and "postmodernism" in various contexts, one may read S. Toulmin, *Cosmopolis: The Hidden Agenda of Modernity* (1989); Z. Bauman, *Legislators and Interpreters: On Modernity, Post-Modernity, and Intellectuals* (1987); J. McGowan, *Postmodernism and Its Critics* (1991); M. Sarup, *An Introductory Guide to Poststructuralism and Postmodernism* (rev. 1993); and E. Heartney, *Postmodernism* (2001). Newer trends in historical writing are assessed in J. Appleby, L. Hunt, and M. Jacob, *Telling the Truth about History* (1994), cited in the Introduction, and W. Thompson, *What Happened to History?* (2000). There are provocative insights in W. H. McNeill, *The Pursuit of Truth: A Historian's Memoir* (2005). Two helpful surveys are available in C. Butler, *Postmodernism: A Very Short Introduction* (2002); and C. Belsey, *Poststruc-*

*turalism: A Very Short Introduction* (2002). A post-modern critique of historical studies is developed in K. Jenkins, *Why History?* (1999); while K. Windchuttle, *The Killing of History* (1998) strongly objects to the assault by literary critics, social theorists, and others on more traditional conceptions of historical knowledge. Other works on modern historical thought are cited in the Introduction.

A helpful survey of intellectual trends after the Second World War is R. N. Stromberg, *After Everything: Western Intellectual History since 1945* (1975); the same author has written *Makers of Modern Culture: Five Twentieth-Century Thinkers* (1991), exploring Freud, Einstein, Wittgenstein, Joyce, and Sartre. N. E. Cantor, *The American Century: Varieties of Culture in Modern Times* (1997) is vehemently critical of contemporary cultural trends. A very different critical view appears in the Marxist analysis in F. Jameson, *Postmodernism, or the Cultural Logic of Late Capitalism* (1991) and T. Eagleton, *The Idea of Culture* (2000).

Useful introductions to the professional philosophers are available in J. Passmore, *Recent Philosophers* (rev. 1985) and A. J. Ayer, *Philosophy in the Twentieth Century* (1982). Two recommended biographical accounts of twentieth-century philosophers are C. Moorehead, *Bertrand Russell: A Life* (1993) and R. Monk, *Ludwig Wittgenstein: The Duty of Genius* (1990). Of special interest is J. Maritain, *On the Use of Philosophy* (1961), by an influential Roman Catholic philosopher. The origins and nature of existentialism may be studied in R. C. Solomon, *From Rationalism to Existentialism: The Existentialists and Their Nineteenth-Century Backgrounds* (1972, 2001); R. Aronson, *Camus and Sartre* (2004); A. Cohen-Salal, *Sartre* (trans. 1987); and T. R. Koenig, *Existentialism and Human Existence* (1992). For Michel Foucault, several of whose influential historical works have been cited in the Introduction, an unflattering personal portrait emerges from D. Eribon, *Michel Foucault* (trans. 1991) and J. Miller, *The Passion of Michel Foucault* (1993); his ideas are examined in S. Mills, *Michel Foucault* (2003). Another influential French thinker is described in N. Royle, *Jacques Derrida* (2003). L. E. Cahoon (ed.), *From Modernism to Postmodernism: An Anthology* (rev. 2003), provides a useful collection of readings from key figures in modern and contemporary cultural and intellectual movements. The debate on Freud, referred to in Chapter 15, continues with numerous books, among them P. Robinson, *Freud and His Critics* (1993), which defends Freud but explores the challenges to his influence.

Introductions to the complexities of contemporary art are provided in A. Neumeyer, *The Search for Meaning in Modern Art* (trans. 1964); L. Parmesani, *Art of the Twentieth Century: Movements, Theories, Schools, and Trends 1900–2000* (2000); and S. Hunter

and J. Jacobus, *Modern Art: Painting, Sculpture, Architecture* (rev. 1985). A. Appel, Jr., *The Art of Celebration: Twentieth-Century Painting, Literature, Sculpture, Photography, and Jazz* (1992), stresses the vitality of contemporary culture, including popular culture; while R. Templin (ed.), *The Arts: A History of Expression in the Twentieth Century* (1991), is informative on both the visual arts and literature.

Western religious thought is explored in J. Macquarrie, *Twentieth-Century Religious Thought* (rev. 2002), and J. C. Livingston, *Modern Christian Thought: From the Enlightenment to Vatican II* (1971). R. N. Bellah, *Beyond Belief: Essays on Religion in a Post-Traditional World* (1970, 1991) explores the major world religions in diverse cultural contexts. The rise and growing strength of religious fundamentalist movements in Judaism, Christianity, and Islam is studied in K. Armstrong, *The Battle for God* (2000); and M. E. Marty, *When Faiths Collide* (2005), examines conflicts among religions in the contemporary world.

The continuing debate between science and religion is studied in S. L. Jaki, *The Road of Science and the Ways to God* (1978); J. H. Brooke, *Science and Religion: Some Historical Perspectives* (1991); and M. H. Barnes, *The Co-Evolution of Religious Thought and Science* (2000). For the profound doctrinal and social changes in contemporary Roman Catholicism one may turn to J. D. Holmes, *The Papacy in the Modern World, 1914–1978* (1981); and E. O. Hanson, *The Catholic Church in World Politics* (1987). For the recent popes there are biographies of John XXIII by M. Trevor (1967) and L. Elliott (1973); of Paul VI by P. Hebblethwaite (1993), a detailed and documented account; and valuable assessments of John Paul II in J. Kwitny, *Man of the Century: The Life and Times of John Paul II* (1998), and in G. O'Connor, *Universal Father: A Life of Pope John Paul II* (2005).

Books on Einstein and early twentieth-century physics have been cited in Chapter 15. Two good introductions are B. L. Cline, *Men Who Made a New Physics* (1965, 1987), cited earlier, and B. Greene, *The Elegant Universe* (1999). A. Pais has followed up his biography of Einstein (1982) with *Niels Bohr's Times: In Physics, Philosophy, and Polity* (1992). For contemporary physics one may turn also to H. C. Von Baeyer, *The Taming of the Atom: The Emergence of the Visible Microworld* (1992) and J. Bernstein, *Quantum Profiles* (1991) and Cranks, *Quarks, and the Cosmos* (1993). A remarkable biographical account of the leading architect of the first atomic bomb is K. Bird and M. J. Sherwin, *American Prometheus: The Triumph and Tragedy of J. Robert Oppenheimer* (2005). Of special interest to the general reader will be L. M. Krauss, *Fear of Physics: A Guide for the Perplexed* (1993).

On the biological revolution, an excellent introduction is S. Jones, *The Language of the Genes: Biol-*

*ogy, History and the Evolutionary Future* (1994), while E. F. Keller, *The Century of the Gene* (2000), is informative but somewhat technical. One may also read R. Olby, *The Path to the Double Helix* (1974); H. F. Judson, *The Eighth Day of Creation: The Makers of Revolution in Biology* (1979); and B. Wallace, *The Search for the Gene* (1993). In J. Watson, *The Double Helix: A Personal Account of the Discovery of the Structure of DNA* (rev. 1980), a scientist describes himself and other biologists at work. On the need for communication between scientists and nonscientists, an indispensable book remains C. P. Snow, *The Two Cultures and the Scientific Revolution* (1959; new critical ed., with introduction by S. Collini, 1993). It may be supplemented by B. Appleyard, *Understanding the Present* (1993), on the links of science, philosophy, and society; and F. J. Dyson, *The Sun, the Genome, and the Internet* (1999), by a renowned physicist.

To study modern medicine in perspective one should turn to R. Porter, *The Greatest Benefit to Mankind: A Medical History of Humanity* (1998). The setback to medical science and the challenges to society posed by the appearance of AIDs are studied in M. D. Grmek, *History of AIDs: Emergence and Origin of a Modern Pandemic* (trans. 1990); E. Fee and D. Fox (eds.), *AIDS: The Making of a Chronic Disease* (1991); V. Berridge and P. Strong (eds.), *AIDS and Contemporary History* (1993, 2002); and K. R. Hope, Sr. (ed.), *AIDS and Development in Africa* (1999), which examines the pandemic's social effects on the continent that has been most affected by the disease. Of special interest for health matters is L. Garrett, *Betrayal of Trust: The Collapse of Global Public Health* (2000).

For space exploration in all its aspects, one should read W. A. McDougall, *The Heavens and the Earth: A Political History of the Space Age* (1985); W. J. Walter, *Space Age* (1992); and W. E. Burrows, *This New Ocean: The Story of the Space Age* (1998), a comprehensive survey. Special dimensions are added in J. S. Lewis and R. A. Lewis, *Space Resources: Breaking the Bonds of Earth* (1987).

### Activist Movements: 1968 and Its Legacy

A comprehensive account of the student upheaval of 1968 as a worldwide phenomenon is D. Cate, *The Year of the Barricades: A Journey through 1968* (1988); it may be supplemented by G. Katsiafacis, *The Imagination of the New Left: A Global Analysis of 1968* (1987); T. Gitlin, *The Sixties* (1987); A. Marwick, *The Sixties: Cultural Revolution in Britain, France, Italy, and the United States* (1998); M. Kurlansky, *1968: The Year that Rocked the World* (2004); and the essays in C. Fink and others (eds.), *1968: The World Transformed* (1999). The turbulent French scene in 1968 is studied in R. Aron, *The Elusive Revolution* (trans. 1969); A. Touraine, *The May Movement: Revolt and Reform* (trans. 1979); and M. Seidman, *The Imaginary Revolution: Parisian Students and Workers in*

1968 (2004). K. Reader, *The May 1968 Events in France* (1993) includes documents from the period as well as a wide range of historical interpretations. P. Berman, *Power and the Idealists* (2005) sympathetically explores the legacy of 1968 through the career of Joachim Fischer, youthful activist at the time and later German foreign minister.

### The Women's Liberation Movement

For the background to the women's liberation movement, the books on the history of women described in the Introduction and in Chapter 15 will also serve as a guide. A thoughtful survey is O. Banks, *Faces of Feminism: A Study of Feminism as a Social Movement* (1981, 1986); J. S. Chafetz and A. G. Dworkin, *Female Revolt: The Rise of Women's Movements in World and Historical Perspective* (1986); and D. Dahlerup (ed.), *The New Women's Movement* (1986). I. Whelehan, *Modern Feminist Thought: From the Second Wave to "Post-Feminism"* (1995) describes the historical development of feminist theories that shaped the modern women's movement; and M. Schneir, *Feminism in Our Time: The Essential Writings: World War II to the Present* (1994), provides a useful collection of influential writings. The links in the United States between feminism and the civil rights movement and the changing status of American women are studied in W. R. Chafe, *The Paradox of Change: American Women in the 20th Century* (rev. 1992). For the European context, good introductions are J. Lovenduski, *Women and European Politics: Contemporary Feminism and Public Policy* (1986) and G. Kaplan, *Contemporary Western European Feminism* (1992); while J. Gelb, *Feminism and Politics* (1990) compares American and European experiences. The British scene is studied in S. Rowbotham, *The Past Is Before Us: Feminism in Action since the 1960s* (1989) and in her impressive comparative study, *A Century of Women: The History of Women in Britain and the United States* (1997). For the United States a recent synthesis with helpful bibliographical guidance is R. Rosen, *The World Split Open: How the Modern Women's Movement Changed America* (2000). For France one may turn to C. Duchén, *Feminism in France: From May '68 to Mitterrand* (1986) and *Women's Rights and Women's Lives in France, 1944–1968* (1994); D. M. Stetson, *Women's Rights in France* (1987); J. W. Scott, *Parité: Sexual Equality and the Crisis of French Universalism* (2005); and a selection of readings in E. Marks and I. De Courtivron (eds.), *New French Feminisms: An Anthology* (1980). A convenient anthology for the German scene is H. Altbach and others (eds.), *German Feminism: Readings in Politics and Literature* (1984); for Italy one may read L. C. Birnbaum, *Liberazione della Donna: Feminism in Italy* (1986).

On women's changing role in various settings and cultures a sampling of additional books would in-

clude C. Coquery-Vidrovitch, *African Women: A Modern History* (trans. 1997); N. R. Keddie and B. Baron (eds.), *Women in Middle Eastern History: Shifting Boundaries in Sex and Gender* (1991); M. L. Meriwether and J. E. Tucker (eds.), *Social History of Women and Gender in the Modern Middle East* (1999); L. A. Brand, *Women, the State, and Political Liberalization: Middle Eastern and North African Experiences* (1998); J. Nash and H. I. Safa (eds.), *Women and Change in Latin America* (1986); and F. Miller, *Latin America: Women and the Search for Social Justice* (1991), an impressive study. Valuable comparative assessments are I. Tinker (ed.), *Persistent Inequalities: Women and World Development* (1990) and the insightful A. Sen, *Inequality Reexamined* (1996), by a leading development economist and social philosopher. The failure to achieve promised equality in socialist societies is examined in books on the Soviet Union cited in Chapter 18; to them may be added F. du P. Gray, *Soviet Women: Walking the Tight Rope* (1990). For China one may read J. Stacey, *Patriarchy and Socialist Revolution in China* (1983); the essays in T. E. Barlow (ed.), *Gender Politics in Modern China* (1994), and C. K. Gilmartin (ed.), *Engendering China: Women, Culture and the State* (1994); E. R. Judd, *The Chinese Women's Movement Between State and Market* (2002); and P. Ngai, *Made in China: Women Factory Workers in a Global Marketplace* (2005).

### Population, Resources, Environment

One of the best introductions to the global demographic explosion of our times and the pressure on natural resources is J. E. Cohen, *How Many People Can the Earth Support?* (1997), a provocative demographic analysis relating population numbers to living standards; and L. R. Brown, *Outgrowing the Earth: The Food Security Challenge in an Age of Falling Water Tables and Rising Temperatures* (2005) examines the environmental problem of water supplies and global warming. The "fertility collapse" in the West and its social and political implications are studied in M. S. Teitelbaum and J. M. Winter, *A Question of Numbers: High Migration, Low Fertility, and the Politics of National Identity* (1998). The growing proportions of the elderly in the population, especially in industrial countries, is the subject of P. G. Peterson, *Gray Dawn: How the Coming Age Wave Will Transform America—and the World* (1999). The Chinese dilemma is analyzed in E. C. Economy, *The River Runs Black: The Environmental Challenge to China's Future* (2005).

Good introductions to environmental issues are D. Worster (ed.), *The Ends of the Earth: Perspectives on Modern Environmental History* (1988); A. Gore, *Earth in the Balance: Ecology and the Human Spirit* (1992); J. R. McNeill, *Something New Under the Sun: An Environmental History of the Twentieth-Century World* (2000); and J. Hughes, *An Environmental History of the World: Humankind's Changing Role in the*

*Community of Life* (2001), which describes both the premodern and modern history of human interaction with the environment. Environmentalism is also examined in C. O. Paepke, *The Evolution of Progress: The End of Economic Growth and the Beginning of Human Transformation* (1993); C. Ponting, *A Green History of the World: The Environment and the Collapse of Great Civilizations* (1991); and J. Diamond, *Collapse: How Societies Choose to Fail or Succeed* (2005).

### International Conflicts After the Cold War

The end of the Cold War brought a number of thoughtful studies on the changing international scene, among them W. G. Hyland, *The Cold War Is Over* (1991); J. L. Gaddis, *The United States and the End of the Cold War* (1992); *We Now Know: Rethinking Cold War History* (1997); and *The Cold War: A New History* (2005), all cited earlier; and J. Chace, *The Consequences of the Peace: The New Internationalism and American Foreign Policy* (1992). Additional insightful studies include M. Mandelbaum, *The Dawn of Peace in Europe* (1996), and his other books; S. Hoffmann, *World Disorder: Troubled Peace in the Post-Cold War Era* (1999) and *The Ethics and Politics of Humanitarian Intervention* (1996); and M. Howard, *The Invention of Peace: Reflections on War and International Order* (2001). H. Kissinger, *Diplomacy* (1994), and in his three volumes of memoirs, offers historical and other perspectives on international relations from the viewpoint of an influential policymaker.

For the United States the tensions between American national interests and the assumption of international leadership in the contemporary era emerge from these books and from G. Bush and B. Scowcroft, *A World Transformed* (1998), by the former president and his national security adviser. These themes are explored for the Clinton administration in R. W. Haass, *The Reluctant Sheriff: The United States after the Cold War* (1998), and D. Callahan, *Unwinnable Wars: American Power and Ethnic Conflict* (1998). A. J. Bacevich, *American Empire: The Realities and Consequences of U.S. Diplomacy* (2002), describes America's international role as a new form of imperial ascendancy; and Bacevich, a former American military officer, further examines the global political situation in a collection of essays by experts in international relations, Bacevich (ed.), *The Imperial Tense: Prospects and Problems of American Empire* (2003).

China's role in the new era is studied in C. Paten, *East and West: China, Power, and the Future of Asia* (1998), written by the last British governor of Hong Kong, while American relationships with China are studied in J. H. Mann, *About Face: A History of America's Curious Relationship with China, from Nixon to Clinton* (1999).

The continuing nuclear threat is explored in McG. Bundy, W. J. Crowe, Jr., and S. D. Drell, *Reduc-*

*ing Nuclear Danger: The Road Away from the Brink* (1993); M. van Creveld, *Nuclear Proliferation and the Future of Conflict* (1993); and W. E. Burrows and R. Windrem, *The Dangerous Race for Superweapons in a Fragmenting World* (1994). For terrorism and its implications for contemporary society one may turn to R. E. Rubinstein, *Alchemists of Revolution: Terrorism in the Modern World* (1987); P. Wilkinson, *Terrorism in the Modern World* (1987); B. Hoffman, *Inside Terrorism* (1998), a concise but comprehensive, historically informed account; and C. Townshend, *Terrorism: A Very Short Introduction* (2002). There are insightful essays in W. Gutteridge (ed.), *The New Terrorism* (1986) and W. Reich (ed.), *Origins of Terrorism: Psychologies, Ideologies, Theologies, States of Mind* (1990). American vulnerability is studied in R. A. Falkenrath and others, *America's Achilles Heel* (1998), examining nuclear, biological, and chemical threats. M. Juergensmeyer, *Terror in the Mind of God: The Global Rise of Religious Violence* (rev. 2003) and J. Burke, *Al-Qaeda: The True Story of Radical Islam* (rev. 2004) describe the history of a now well-known religious-based terrorism.

For the Persian Gulf War of 1990–1991 one may read D. Hiro, *Desert Shield to Desert Storm: The Second Gulf War* (1992), excellent on the military aspects; L. Freedman and E. Karsh, *The Gulf Conflict, 1900–1991: Diplomacy and War in the New World Order* (1993), a comprehensive account; and a briefer study in A. Finlan, *The Gulf War 1991* (2003). The dictator's continued hold on power is examined in A. Cockburn and P. Cockburn, *Out of the Ashes: The Resurrection of Saddam Hussein* (1994).

The terrorist attack on America in 2001 is analyzed by F. Halliday in *Two Hours that Shook the World: September 11, 2001: Causes and Consequences* (2002); M. Ruthven, *A Fury for God: The Islamist Attack on America* (2002); M. L. Dudziak (ed.), *September 11 in History: A Watershed Moment?* (2003); and J. Randal, *Osama: The Making of a Terrorist* (2004) describes the Al-Qaeda leader whose terrorist group organized the attack. There is much valuable information in *The 9/11 Commission Report: Final Report of the National Commission on the Terrorist Attacks Upon the United States* (2004), both literate and probing; B. Lawrence has compiled a collection of bin Laden's speeches in *Messages to the World: The Statements of Osama bin Laden* (2005). Books on the Iraq War include G. Packer, *The Assassins' Gate: America in Iraq* (2005); A. Shadid, *Night Draws Near: Iraq's People in the Shadow of America's War* (2005), by a journalist who was in Baghdad in the months after the American invasion; and L. Diamond, *Squandered Victory: The American Occupation and the Bungled Effort to Bring Democracy to Iraq* (2005), by a former advisor to the Coalition Provisional Authority in Iraq. C. Hitchens, *A Long Short War: The Postponed Liberation of Iraq* (2003) describes the war

as a much-needed American intervention to depose a brutal dictator, which may be compared with N. Soderberg, *The Superpower Myth: The Use and Misuse of American Might* (2005).

The explosive ethnic tensions in the contemporary world are thoughtfully examined in D. P. Moynihan, *Pandemonium: Ethnicity in International Politics* (1993); W. Pfaff, *The Wrath of Nations: Civilization and the Furies of Nationalism* (1993); and A. D. Smith, *Myths and Memories of the Nation* (2000). Of interest also are M. Juergensmeyer, *The New Cold War? Religious Nationalism Confronts the Secular State* (1993); M. Ignatieff, *Blood and Belonging: Journeys into the New Nationalism* (1994); and M. J. Esman, *An Introduction to Ethnic Conflict* (2004).

A much-discussed, controversial book, S. P. Huntington, *The Clash of Civilization and the Remaking of World Order* (1996), sees future conflicts among civilizations shaped by the world's major historic religions and warns against Western "universalist" missions in international affairs. The complex historical nature of Western culture as opposed to simplistic notions of democracy and market capitalism is well conveyed in D. Gress, *From Plato to NATO: The Ideas of the West and Its Opponents* (1998). Two books exposing the failures of twentieth-century regimes that sought to reshape human society are R. Conquest, *Reflections on a Ravaged Century* (1999), describing the human costs of war and totalitarianism, and J. C. Scott, *Seeing Like a State: How Certain Schemes to Improve the Human Condition Have Failed* (1998). Both may be read in conjunction with Isaiah Berlin's rejection of utopianism and social engineering in *The Crooked Timber of Humanity* (1990, 1998), cited earlier, and his other writings in defense of pluralist liberalism.

## Human Rights

On the increasing importance of human rights issues in international affairs readers may find informative historical studies in P. G. Lauren, *The Evolution of Human Rights: Visions Seen* (1999); J. Morsink, *The Universal Declaration of Human Rights: Origins, Drafting, and Intent* (1999); and the essays in Y. Danieli and others (eds.), *The Universal Declaration of Human Rights: Fifty Years and Beyond* (1999). An eloquent statement by a Roman Catholic philosopher is J. Maritain, *The Rights of Man and Natural Law* (1986), cited earlier. W. T. de Bary, *Asian Values and Human Rights* (1998) makes clear that cultural relativism should not affect universal human rights.

A key study examining past and present efforts to judge and punish crimes against humanity and human rights abuses is Y. Beigbeder, *Judging War Criminals: The Politics of International Justice* (1999); other informative books, inspired by events in Bosnia, Rwanda, and elsewhere, include W. Shawcross, *Deliver Us from Evil: Peacekeepers, Warlords, and a World of Endless Conflict* (2000); A. Neier, *War*

*Crimes: Brutality, Genocide, Terror, and the Struggle for Justice* (1999), strongly supportive of international jurisdictions; and M. Minow, *Between Vengeance and Forgiveness: Facing History after Genocide and Mass Violence* (1999), less convinced of the efficacy of international tribunals.

On the question of political justice and retribution by postdictatorial regimes in Europe and elsewhere, a large-scale study is available in N. J. Kritz (ed.), *How Emerging Democracies Reckon with Former Regimes* (3 vols., 1995). For Europe, informative books on the subject are J. McAdams, *Judging the Past in Unified Germany* (2000); J. Borneman, *Settling Accounts: Violence, Justice, and Accountability in Postsocialist Europe* (1997); and the essays in I. Deák, J. T. Gross, and T. Judt (eds.), *The Politics of Retribution in Europe: World War II and Its Aftermath* (2000).

## Modern Society, Information Technology, Globalization

The present and future impact of information technology on contemporary society may be studied in M. Dertouzos, *What Will Be: How the New World of Information Will Change Our Lives* (1997); and F. Cairncross, *The Death of Distance: How the Communications Revolution Is Changing Our Lives* (rev. 2001), an updated edition to keep pace with technological changes.

On the much discussed issue of globalization helpful introductions include T. L. Friedman, *The Lexus and the Olive Tree* (1999), on the gap between modernization and traditional values as well as on attempts to narrow the gap by such instruments as the Internet; and by the same author, *The World Is Flat: A Brief History of the Twenty-First Century* (2005), which describes the contemporary processes of global economic exchange. The debate on globalization continues in P. Kennedy, *Preparing for the Twenty-First Century* (1993); J. N. Rosenau, *Along the Domestic-Foreign Frontier: Exploring Governance in a Turbulent World* (1997), touching on such questions as the erosion of sovereignty; R. Gilpin, *The Challenge of Global Capitalism* (2000), an especially helpful, balanced study; and R. Heilbroner, *Twenty-First Century Capitalism* (1999). Highly critical of efforts to remake the world on Western economic models are W. Greider, *One World, Ready or Not: The Manic Logic of Global Capitalism* (1997); J. Gray, *The Delusions of Global Capitalism* (1999); and E. Luttwak, *Turbo-Capitalism: Winners and Losers in the Global Economy* (1999), the title referring to unregulated market economies. Other illuminating books include D. Yergin, *The Commanding Heights: The Battle Between Government and the Marketplace That Is Reshaping the Modern World* (1998); J. H. Mittleman, *The Globalization Syndrome: Transformation and Resistance* (2000), informative on the opposition to international

lending agencies and the World Trade Organization; J. Micklethwaite and A. Wooldridge, *A Future Perfect: The Essentials of Globalization* (2000), which sees the benefits of present trends outweighing the disadvantages; and J. Bhagavati, *In Defense of Globalization* (2004). In G. Soros, *The Crises of Global Capitalism* (1998) an investment banker–philanthropist argues that the emphasis on free markets has overshadowed social responsibilities.

On the related question of the role played by cultural values in economic development thoughtful analyses include H. De Soto, *The Mystery of Capital: Why Capitalism Triumphs in the West and Fails Everywhere Else* (2000); D. S. Landes, *The Wealth and Poverty of Nations* (1998), an important book cited earlier; and the essays in L. E. Harrison and S. P. Huntington (eds.), *Culture Matters: How Values Shape Human Progress* (2000). The lessons of financial history from the seventeenth century to the present are ably conveyed in E. Chancellor, *Death Take the Hindmost: A History of Financial Speculation* (1999), while financial markets in the United States and elsewhere at the turn of the twenty-first century are shrewdly scrutinized in R. J. Shiller, *Irrational Exuberance* (2000). Studying the financial crises of the 1990s in various parts of the world and the prolonged recession in Japan, P. R. Krugman in *The Accidental Theorist: And Other Dispatches from the Dismal Science* (1998) and *The Return of Depression Economics* (1999) argues for neo-Keynesian expansionist government policies. One of the most discussed books in recent years, F. Fukuyama, *The End of History and the Last Man* (1992), perceptive in some ways, proved to be overly optimistic about the triumph of liberal

democracy after the fall of Soviet communism. On predictions in general, R. Heilbroner, *Visions of the Future: The Distant Past, Yesterday, Today, Tomorrow* (1995) explores the expectations of earlier generations about their future and the fate of those expectations. R. D. Germain (ed.), *Globalization and Its Critics* (2000) provides useful writings by economists on recent debates about the international economy.

### Useful Web Sites

Useful sites for materials on eastern and western Europe have been noted in earlier chapters, but readers should also visit Brigham Young University's *Center for the Study of Europe*, <http://kennedy.byu.edu/partners/CSE/>, which provides excellent links to diverse materials on contemporary European history. This site may be supplemented by the resources at *Europa—The European Union On-Line*, <http://europa.eu.int/>. For the history of women in all parts of the world, the best place to begin is *H-Women Internet Links*, at [www.h-net.org/~women/links/](http://www.h-net.org/~women/links/). There is helpful information on global population trends, economic development, environmental changes, human rights, and other issues at the Web site of the *United Nations*, [www.un.org](http://www.un.org). Valuable, updated materials on the economic, political, and cultural components of globalization are available at the *Yale Center for the Study of Globalization*, [www.ycsg.yale.edu/center/](http://www.ycsg.yale.edu/center/), where readers will also find resources on subjects such as terrorism, international conflicts, health care, and the environment. The Yale Center's Internet publication, *YaleGlobal Online*, <http://yaleglobal.yale.edu/>, provides current, well-informed perspectives on events and conflicts in all regions of the world.

Dates given after names of rulers and popes are the years of reigns or pontificates; those given for all others are the years of birth and death.

Pronunciation is indicated where it is not obvious. With foreign words the purpose is not to show their exact pronunciation in their own language but to suggest how they may be acceptably pronounced in English. Fully Anglicized pronunciations are indicated by the abbreviation *Angl.* Pronunciation is shown by respelling, not by symbols, except that the following symbols are used for vowel sounds not found in English:

- ø indicates the sound of ö as in Göttingen. To form this sound, purse the lips as if to say *o*, and then say *ay* as in *ate*.
- U indicates the sound of the French *u*, or of German *ü*. To form this sound, purse the lips as if to say *oo*, and then say *ee* as in *eat*.
- aN, oN, uN, iN indicate the sounds of the French nasal vowels. Once learned, these are easily pronounced, roughly as follows: For aN, begin to pronounce the English word *on*, but avoid saying the consonant *n* and “nasalize” the *ah* sound instead. For oN do the same with the English *own*; for uN, with the English prefix *un-*; for iN, with the English word *an*.

The sound of *s* as in the word *treasure* is indicated by *zh*. This sound is common in English, though never found at the beginning or end of a word. *igh* always indicates the so-called long *i* as in *high*. The vowel sound of *hoot* is indicated by *oo*, that of *hood* by *öo*.

Compared with English, the European languages are highly regular in their spelling, in that the same letters or combinations of letters are generally pronounced in the same way.

The tenth edition of *A History of the Modern World* remains one of the most highly praised history texts ever published. The new edition reflects the authors' continuing search for historical perspectives on complex events of our age, guided by the assumption that the events, cultures, and conflicts of the contemporary world are always rooted in long-evolving processes of historical change.

## NEW TO THE TENTH EDITION

- The discussion of cultural, social, and intellectual history has been expanded to include the role of women in various historical contexts and eras; descriptions of cultural and intellectual movements from the early modern to the contemporary period; and new analyses of the political, economic, and cultural interactions that have shaped modern global history.
- Chapter 6 (formerly Chapter 7) on the Scientific Revolution now precedes Chapter 7 (formerly Chapter 6) on the early global economy to show more clearly the chronology of notable cultural and economic developments.
- The two longest chapters on the world since 1945 have been divided into four new, more concise chapters that will be easier for students to read and for instructors to teach, with clearer thematic organization.
- New information is provided on current issues such as terrorism, recent upheavals in the Middle East, and the continuing struggle for economic development in the world's poorest countries.
- The expanded art program includes new images of important works by modern artists such as Pablo Picasso, Berthe Morisot, Jackson Pollock, and Henry Moore.
- The maps are newly drawn, easier to read, and presented in sharper color.
- New timelines have been incorporated into each chapter to give a convenient summary of the notable events and dates in every historical era.
- The entries for the comprehensive Suggestions for Further Reading include new listings of useful Web sites and significant new scholarly publications.
- The Online Learning Center ([www.mhhe.com/palmer10](http://www.mhhe.com/palmer10)) has been updated and expanded to include an interactive glossary.

## What people are saying about *A History of the Modern World*

There is no doubt that the latest edition of Palmer, Colton, and Kramer retains the status of one of the best introductory textbooks on the market.

—GEORGE J. MARCOPOULOS AND DAVID J. PROCTOR, *Tufts University*

The text has always been strong in its coverage of political history and international relations. . . . The range of topics and their in-depth treatment is impressive.

—MARC BAER, *Hope College*

A marvelous feature of the Palmer, Colton, and Kramer text is the style of writing. It is clear and generally engaging.

—NATHANAEL GREENE, *Wesleyan University*
