UNITED STATES OF AMERICA.

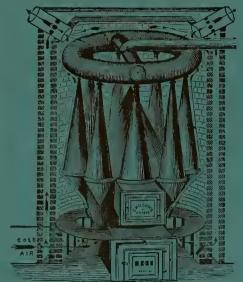

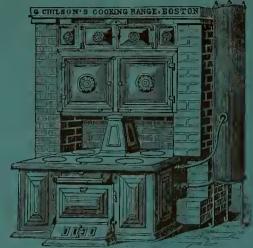

Chilson's Furnace, Range and Stove Warerooms.

WAREROOMS, 99 & 101 BLACKSTONE STREET, BOSTON.

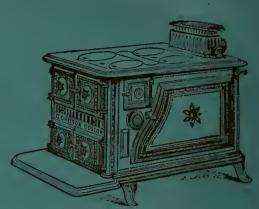

FOUNDRY AT MANSFIELD, MASS.

Chilson's Gold Medal Cone Furnace, Patented in America, England and France, just remodelled and greatly improved, and now stands pre-eminently ahead of all known plans for warming buildings. Sizes for all classes of buildings set either in BRICK OR PORTABLE CASINGS.

Chilson's Patent Elevated Doubleoven Cooking Range. (Remodelled and
greatly improved, 1868.) This celebrated Range
has become an Indispensable fixture in all well
regulated Kitchens. It is truly the COOK'S FAVORITE, as can be proved by the many thousands
of testimooials received.
Sizes, in variety, for Dwellings, Hotels, etc., with
or without Water Backs for Bath Boilers, and other
washing purposes; also, HOT CLOSETS and HOTAIR FIXTURES, for heating additional rooms
when desired. No housekeeper will long use any
other plan of Cooking-range after an examination of
this.

Chilson's New Cooking Stove. This Stove was got up after a long and thorough practical experience in stove-making, and will show the most important improvements ever made in stoves, which should be seen by all in want of a strictly first-class stove.

They are made of sizes for all practical uses, from that of a small family to the largest class of hotels, etc., and are fitted with or without water fronts for baths, boilers, etc.

One of its improvements is, its being vaulted, or double-plated, which retains the heat around the oven, thereby baking in about one-half the time, and with one-third less fuel, than in other stoves.

Any amount of references given to prove all that is claimed for this stove.

Chilson's New Parlor and Store Stoves, Registers, Ventilators, Frame Grates, etc., etc., constantly on hand, and for sale at the subscriber's store, 99 & 101 BLACKSTONE STREET, BOSTON, or at his FOUNDRY IN MANSFIELD, Mass.

GOLDEN EAGLE

FURNACE.

The "Golden Eagle" Furnace is so arranged as to combine the many qualities requisite to warm atmospheric air healthfully; and to do this the material of which It is made must be peculiarly adapted to produce the necessary results. The thick, cast-iron cylinder that contains the fuel, the large wrought-iron heating surface that forms the combustion chambers, the extended air-tubes securing atmospheric pressure, the efficient manner by which we give the necessary humidity to the atmosphere, the peculiar arrangement for effectually con suming and preventing the escape of the deleterious gases, are a few of the many valuable qualities peculiar to this Furnace

There is a direct and indirect draft, the ashes are sifted from the grate with perfect ease, there is no chance whatever for the clogging of the flues, thus avoiding objections common to other furnaces.

ELEVENTH EXHIBITION

- OF -

AMERICAN MANUFACTURES,

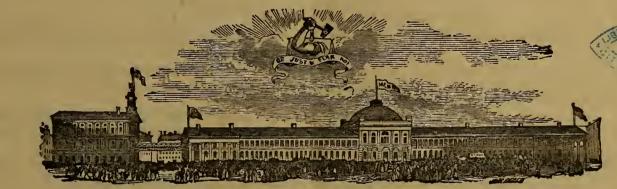

NEW INVENTIONS and WORKS OF ART,

UNDER THE DIRECTION OF THE

Massachusetts Charitable Mechaniq Association,

--- AT ---

FANEUIL AND QUINCY HALLS, BOSTON,

COMMENCING ON

Wednesday, Sept. 15, 1869, and continuing to Wednesday, Oct. 6.

PUBLISHED BY GEORGE COOLIDGE,

AT THE EXHIBITION HALLS,

AND 289 WASHINGTON (ABOVE WINTER) STREET, BOSTON.

Entered according to Act of Congress, in the year 1869, by GEORGE COOLIDGE, in the Clerk's Office of the District Court of the District

Atomizers, Nasal Douche, Trusses, Supporters, ELASTIC HOSE, &c.

Besides a complete assortment of instruments and other articles intended for the exclusive use of the Medical and Dental Professions, we have always in store a great variety of the following, sulted to the wants of the general public; viz:—

ATOMIZERS,

For Treating Diseases of the Throat and Lungs.

The Atomizer furnishes a new and very valuable method of treating all diseases of the throat and lungs, and should be used only with remedies prescribed by a physician. Besides the steam Atomizer, one form of which is represented in figure 15, we have a variety of Hand-Ball Atomizers, (used with a current of air,) and the largest and best assortment of Atomizing Tubes for the various uses required by the specialist and general practitioner, to be found in the world.

Apparatus No. 15. The Complete Steam Atomizer (new). (Patented March 24, All its joints are hard soldered.
It cannot be injured by exhaustion of water, or any attainable pressure, and will last for many years.
It does not throw spirts of hot water; is convenient, durable, portable, compact, and cheap in the best sense of the word. Price \$6.
Neatly made, strong, black wainut box, with convenient handle, additional, \$2.50.

NASAL DOUCHE,

FOR RELIEF AND CURE OF CATARRH,

And all Diseases of the Nasal Cavity, by the method of Professor Thudichum, viz.:

By thoroughly cleansing or medicating the whole interior of the nose by means of a sultable liquid flowing in at one nostrii and out at the other,-the apparatus used being a flexible tube with a nozzle at one end, fitted to the nostril, and connected at its opposite end with a reservoir placed higher than the head. The Nasal Douche is preferably used with a medicated liquid prescribed by a physician, adapted to the particular form of Catarrh, but will be found to afford most grateful relief, and perhaps a cure, cwhen used with a simple solution of salt in water, according to directions furnished with the apparatus.

Nasal Douche No. 6. Eight different varieties at \$1.20 to \$3.50 each.

TRUSSES.

A large assortment of best patterns from which to select, to meet the requirements of each case.

If convenient, persons requiring Trusses should call at our establishment, where they can have a suitable Truss fitted by a competent and experienced person famillar with the anatomy of hernia. When a call in person is impracticable, a careful description should be sent, stating whether the rupture is on the right or left side, also the measure around the person two inches below the top of the hip bone,—or, if the rupture is at the navel, the measure around at the navel. Also,

Elastic and Spring Abdominal Supporters, Spinal Supporters, Shoulder-Braces, Suspensory Bandages, Banning's Supporters, Apparatus for Club-Feet, Bow-Legs, Weak Ankles, and all kinds of Deformities, made to order, and Trusses fitted under the supervision of a Physician of long experience in this branch.

ELASTIC HOSE,

For Varicose Veins, Swollen Limbs, Weak Joints, &c., Elastic Belts for support of Abdomen of obese persons, and for Women during pregnancy.

Of Hose we have several classes, of silk and cotton, possessing different degrees of elasticity and of durability, the "Stout Silk" being usually the most satisfactory. We have them of following lengths. See Cut.

I to B, I to D, I to G, I to H, B to D, D to F. Unusual sizes of Hose, also, Elastic Bands for any part of the body made to order. Price List and diagrams for measurement on application. Also,

Spring Crutches, Plain Crutches, Crutches with Rubber Feet, Hearing Trumpets, Auricles and Conversation Tubes for the Deaf, Galvanic Batteries, Garratt's Electric Disks, Syringes of all kinds, Breast Pumps, Rubber Urinals

to wear on the person day or night, for males and females. RESPIRATORS, to prevent coughing and prevent inhaiation of dust, and very many other articles for the use of the sick and invalids.

Directions for measurements for Trusses, Supporters, Hose, or apparatus of any kind forwarded on application.

A Gold Medai has lately been awarded us by the Middlesex Mechanics' Association, for Atomizing and Surgical Instruments, as will be seen from the following report signed by a leading New England Surgeon and Physician: -

"1503. Codman & Shurtleff, Boston, Mass. One Case Surgical Instruments and

The Committee have no hesitation in awarding for this superb exhibition the highest premium. * * * * * The various other instruments for this ideal instruments for the control of Atomized Liquids, and for Local Anæsthesis, were all apparently faultless, both in design and workmanship. The exhibitors are regarded more especially deserving of the highest token of merit for having produced nothing except of their own manufacture.

(Signed)

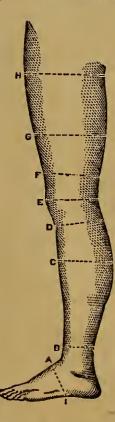

GILMAN KIMBALL, M.D.,

Chairman."

ORGANIZATION OF COMMITTEES.

THE EXECUTIVE COMMITTEE.

OFFICE AT FANEUIL HALL.

The Committee consists of the President, Jonas Fitch; Vice-President, Albert J. Wright; Treasurer, Osymn Brewster; Secretary, Joseph L. Bates; and Messrs. Charles F. Austin and L. A. Huntington, — whose duty it is to prepare all circulars and advertisements, appoint all Judges and give them their instructions, receive their reports, examine the same, award premiums, and deliver the same when awarded.

THE COMMITTEE OF ARRANGEMENTS.

OFFICE, QUINCY HALL, So. MARKET STREET.

This Committee consists of the Vice-President, Albert J. Wright; and Messrs. Theophilus Burr, Ivory Bean, George W. Smith, Andrew J. Morse, Henry A. Lyford, J. Putnam Bradlee, George Ross, Samuel D. Hicks, David Chamberlin, William Leavitt, — whose duty it is to take the entire

charge of the Halls of the Exhibition; to have the same properly prepared; to adopt such rules and regulations as they may deem necessary for the reception, preservation, and display of all articles received, and to attend to the delivery of the same at the close of the Exhibition.

SUPERINTENDENT OF EXHIBITION.

OFFICE, QUINCY HALL, So. MARKET STREET.

The Vice-President, ALBERT J. WRIGHT, as Chairman of the Committee of Arrangements, is to exercise a General Superintendence of their department, and to nominate all sub-committees, clerks, police, and other assistants which may be necessary, said nominations to be confirmed by the Committee. He is also a member of each sub-committee, for consultation, and has charge of the receiving offices.

SUB-COMMITTEES OF SECTIONS,

Are stated on a subsequent page, showing the Sectional Classification of the Exhibition.

TO THE VICTIMS OF THE CANKER V

All persons who wish to get rid of this PEST OF THE FARMER, can do so for the next season by using

GOULD'S ERTILIZER

To be put on some time previous to the transformation of the worm into the grub,

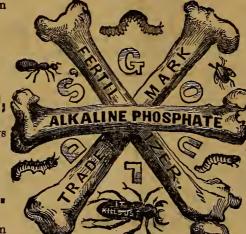

So that the Worm may be Destroyed before being

TRANSFORMED INTO THE

which transformation takes place within 30 to 60 days from the time it descends from the tree. This is

WARRANTED TO BE EFFE

A liberal discount made to those who purchase in quantity.

The Best Disinfectant Known.

FOR SALE BY

JAMES GOULD, 101 STATE ST.

Lang & Delano, 2 India Wharf.

The following certificate is from a distinguished member of the Board of Agriculture in Massachusetts.

In Massachusetts.

CHESTNUT HILL, April 12, 1867.

MR. EDITOR:—In reply to a question as to the efficacy of "Gould's Fertilizer," I feel it my duty to say that in the autumn of 1865 I applied it to my land with the view of destroying the Canker Worm. It was done merely as an experiment, and certain trees were selected in various exposures; not more than two pecks under the largest trees. The effect has been very noticeable, the worm having been nearly exterminated where it was applied. If I had used a larger quantity, say a bushel under each tree, I think the result would have been the destruction of the worm.

I used a little of the Fertilizer, composted with well seasoned muck, as top dressing, upon a bit of grass land which was badly injured by whre worm and grub, with excellent effect, the sod being this year one of the best on my farm.

Respectfully, your obedient servant,

L. SALTONSTALL.

JAMES GOULD, Esq., Sir: — Having occasion to want a Fertilizer, and not knowing which was the best in the market, a friend advised me to try yours. Through him I ordered some, and have tested it. As a dressing for grass it is unequalled; it destroyed the worms, and caused a very heavy crop of clover.

On pear trees I am more than satisfied, as the trees are entirely free from insects; fruit did not drop, and the trees have grown very stocky. Altogether, I consider it invaluable on the farm and fruit garden.

Yours truly,

JOHN D. BRADLEE.

Worcester, Mass., June 14th, 1869.

James Gould, Dear Sir:—I cheerfully indorse the testimony of others in the use of your Fertilizer, for my experience with it the past season has been most satisfactory. For garden vegetables in general It has worked well, peas in particular having outdone themselves by the use of it; and as for the potato crop, no rot was visible on the land where I used your Phosphate, while on land adjoining, without it, at least one-third was decayed when harvested.

I am convinced that it is a sure destroyer of the currant worm, by its frequent use, being equal if not superior to white hellebore, and at a small fraction of its cost.

I am using it liberally the present season, and subjecting it to some severe tests, and if it holds its ground with the results of last year's use, I shall place it far in advance of all other phosphates, of whatever name or cost. But I think my faith in your Fertilizer is better shown by my works than words, for you will remember I have already ordered five tons, and shall probably want more.

I remain very respectfully yours,

JAMES DRAPER.

EFFECTIVE REMEDY AGAINST CANKER WORM.

Experienced farmers and horticulturists may be a little incredulous as to the caption of this article, but at the same time all fair-minded men will be willing to make the proper investigation to ascertain its truth, and when so found will heartily rejoice that science is at last able to conquer the greatest natural enemy with which, from time immemorial, fruit-growers have had to contend It has been obvious, even to the most superficial observer, that for many years past the apple orchards along the New England coast, extending some ten to fifteen miles fuland (and particularly in Massachusetts), have been subject to the ravages of the canker worm in greater or less degree, mitigated only by the tedious process of tarring the trees, or affixing so-called "protectors" of various styles, and all requiring careful watching, and at least faithful periodical attention.

After long study and years of experimenting, Mr. James Gould has succeeded in making a chemical compound which gives remarkable proofs of its complete power to destroy canker worms and the whole tribe of injurious insects, while it invigorates the growth and fruitage of all trees and vegetation to which it is applied. Chemists have long been aware that the use of carbolic acid was fatal to insect life, and it would also be destructive to vegetation but for the combination of other ingredients with It in Mr. Gould's preparation, which neutralizes the effect of the acid on plants and supplies them with superior fertilizing elements. This grand result has apparently been most successfully achieved by Mr. Gould, and, if so, none can gainsay the value of his discovery to cultivators of the soil, and all who partake of its products.

In the fine rural and historic town of Lexington, where Mr. Gould resides, there is at the present time ocular demonstration of the practical effects and great benefits of his same excellent condition, while many otherwise thrifty orchards in the vicinity, receiving no application, present the usual burned or poisoned appeara

GRASS RENOVATOR.

The object of this machine is to cut off the thick swarded grass that is made on most land after being seeded from three to four years from first laying down to grass. This is cut by the machine into sections, leaving squares of about six inches and three deep. At the same time the Phosphate is spread under the roller, the seed deposited, and ground rolled down, all at one operation; and it is estimated that with a pair of horses, an acre can be laid down in two hours, and that by an annual application, that grass land that would under ordinary circumstances have to be turned over every three years to insure a full crop, may by this process be made to produce full crops every year for twenty or more years in succession.

OULD'S MEDICATED CARBOLA. This article will cure the ITCH, SALT RHEUM, PILES, and all DISEASES OF THE SKIN; also the bite of polsonous insects, such as Fica, Musquito, bee or spider, and is strongly recommended for bathing and purifying the body. Put up in pint and quart bottles. FOR SALE BY ALL DRUGGISTS, and JAMES GOULD, 101 State Street, Boston.

RULES AND REGULATIONS

FOR THE

ELEVENTH EXHIBITION

OF THE

Massachusekks Charikable Mechanic Association,

FOR THE ENCOURAGEMENT OF

MANUFACTURES AND THE MECHANIC ARTS,

TO BE OPENED IN BOSTON, ON WEDNESDAY, SEPT. 15, 1869.

I.

Articles intended for Exhibition and Premium will be received at Quincy and Faneuil Halls, from Monday, September 6, to Saturday, September 11. Checks for the same will be given, which must be presented when the articles are returned.

II.

The Exhibition will be opened for the reception of visitors, on Wednesday, September 15, at noon, and will continue to the evening of October 6.

III.

Articles intended for sale will be labelled accordingly, but cannot be removed until the close of the Exhibition, except by written permission of the Committee.

IV.

Proof of origin must be furnished, if required, for every article offered for premium.

77

A Board of Judges will be appointed to examine and report upon all articles presented, unless the owners shall, at the time of their entry, give notice that they are for Exhibition only, and the Executive Committee will award premiums on such articles as shall be declared most worthy. The premiums to be delivered as soon as they can be prepared.

VI.

The morning of each day, until nine o'clock, will be appropriated to the Judges; and no other persons will be admitted during the time thus appropriated.

VII.

It is particularly requested that every person who offers a new machine, or an improvement on an old

one, will leave at the Clerk's office a description of its peculiarities, that the attention of the Judges may be called thereto. Contributors or Judges desiring to communicate with each other will leave their communications with the Clerk, at the central office.

VIII

Whenever the articles will permit, the Contributors are requested to exhibit their goods in glass cases. High upright cases are far better than the common counter cases. All articles deposited will be at the RISK OF THE OWNERS. The most effectual means will be taken, through the agency of the police and otherwise, to guard and protect the property in the Exhibition; but the Managers cannot be responsible for losses that may be occasioned by theft, accident, or damage of any kind.

IX.

Gunpowder, Fireworks, and dangerous implements, will not be allowed in the halls; and the Managers reserve the right to reject any article that they may deem objectionable.

X.

Contributors to the Exhibition will not be permitted to furnish samples or make gifts to any one within the halls, whether employed or not, unless by permission first obtained; and it will be the endeavor of the Managers that all articles shall be returned to the owners without diminution or loss.

XI

Owners or agents, offering articles for premium or exhibition, will receive Tickets of Admission; but in no case transferable. If transferred, the right of admission will be forfeited.

BRASS TUBES FOR PLUMBING.

AMERICAN TUBE WORKS,

103 State Street, Boston,

SOLE MANUFACTURERS IN AMERICA OF GREEN & ALSTON'S PATENT

SEAMLESS DRAWN BRASS TUBES.

AND ADAMS' PATENT

SEAMLESS DRAWN COPPER TUBES.

SEAMLESS DRAWN BRASS TUBES for water purposes have for several years been growing in favor, and have proved so satisfactory in every respect that we feel warranted in recommending them to all interested, as being better than any others in use. They are cheaper than lead pipe, and, being put together with fittings similar to gas pipe, are very readily used, and

MERICAN TUBE WORKS

all the trouble and expense of repairs attending the use of lead pipe is avoided. We make them of all sizes generally used by Plumbers, and can furnish fittings of all kinds at short notice. They are now being extensively used in hotels, public buildings, and private residences, in this and other cities, with satisfactory results.

TESTIMONIALS.

JOSEPH H. COTTON, Treasurer.

ST. JAMES HOTEL, BOSTON.

江

召

0

About a year since, we contracted with Wm. Mills & Co., Plumbers, of this city, to put in, for the use of this house, a very extensive system of plumbing, adopting the Seamless Drawn Brass Tubes in place of Lead. The work was done promptly, and in a workmanlike manner, and has proved entirely satisfactory, after a year's trial. In no instance have these pipes required repairs of any sort, and I consider them vastly superior to any material which I have ever used for a similar purpose, after many years of building and plumbing experience. I therefore most cheerfully give my testimony in their favor, and you are at liberty to refer to me at any time in corroboration of their especial excellence.

Yours truly,

M. M. BALLOU.

J. H. COTTON, Eaq., Treas.

DEAR SIR: I approve and highly recommend your Seamless Drawn Brass Tubes as a substitute for Lead Pipe in Plumbing. Those put up under my direction prove entirely satisfactory.

Very truly yours, &c.,

JOHN R. HALL, Architect,
Old State House, Boston.

AMERICAN TUBE WORKS, Boston.

AMERICAN TUBE WURKS, Boston.

GENTLEMEN: I have the highest opinion of the Seamless Drawn Brass Tubes made by you for "Plumbing Tubes," having used them in my own house, both for hot and cold water, for the past eight or nine years. They are much neater, more readily fitted up, and last longer than any other kind of pipe, and any one wishing a perfect house should certainly use Brass Water Tubes.

Yours truly, WM. S. CARR,

106, 108, and 110 Centre Street, cor. Franklin.

28 AND 30 CONGRESS ST., BOSTON, April 9, 1869.

We are convinced, by careful trial, that your Scanless Drawn Brass Tubes are far superior to any kind of pipe in use, to convey hot or cold water under heavy pressure. The new method, originated by us, of connecting the tubes, fittings, and faucets with screw threads and couplings, is very simple and strong, well sdapted for general use, and much

neater, cheaper, and more durable than ordinary plumbing work. In one instance, some work fitted up in this manner was subjected, by accident, to a high pressure of steam, which did not injure the tubes in the least, but gave convincing proof of their remarkable strength. We think these tubes will soon, for obvious reasons, in a great measure, supersede all other kinds of pipe for plumbing work.

JOSEPH H. COTTON, Respectfully yours, WM. MILLS & CO. Treas. Am. Tube Works, Boston.

Boston, April 14, 1869.

TO THE AMERICAN TUBE WORKS.

GENTLEMEN: We have used your Brass Tubes for some ten years in our business, and cheerfully recommend them, for either hot or cold water. We have used them successfully in the Parker House, Young's Hotel, La Grange House, Pemigewasset House, Plymouth, N. H., Falmouth, Hotel, Portland, Mc., and in very many private residences and factories, all giving entire satisfaction.

Yours very truly,

LOCKWOOD & LUMB.

JOSEPH H. COTTON, Treas. Am. Tube Works.

Boston, April 9th, 1869.

DEAR SIR: Your Seamless Drawn Brass Tubes have been in use in my Hotel, for water pipes, since 1860, and have proved satisfactory in every respect. I have had no trouble of any kind from them, and been free from the annoyance and expense of repairs always needed on other kinds of pipes. I willingly recommend them as the best article for the purpose that I know of.

Yours truly, GEORGE YOUNG, Young's Hotel.

PARKER HOUSE, BOSTON, April 12, 1869.

JOSEPH H. COTTON, Esq., Treas. Am. Tube Works.

DEAR SIR: We have had your Tubes in our Plumbing Works of the Parker House for eight years, have never had any trouble or repairs, and should use them always in preference to any others.

Yours respectfully,

H. D. PARKER & CO.

OFFICIAL PUBLICATIONS

OF THE

MECHANICS' EXHIBITION.

The undersigned, having received from the Managers the appointment of SOLE PUBLISHER OF THE EXHIBITION, will issue the following publications:

1. A Quarto Pamphlet Circular,

FOR GRATUITOUS CIRCULATION IN ADVANCE OF THE EXHIBITION, Containing useful information of the Exhibition, with General Advertisements and Illustrations.

2. Complete Catalogue and Journal of the Exhibition,

to be issued in Editions, the first containing a complete Catalogue by Entries, and subsequent editions by Sectional Arrangement and Classification of Goods, to be sold to visitors in the Exhibition Halls, or mailed postpaid by the Publisher. Price 25 cents.

Illustrated and general Advertisements and Notices will be inserted for contributors or others, at reasonable rates.

ILLUSTRATIONS OF MACHINERY, or any other articles, engraved by first-class artists, can be promptly furnished, on application to the undersigned.

PUBLISHER'S CREDENTIAL.

"This is to certify that Mr. GEORGE COOLIDGE, No. 289 Washington Street, has been appointed publisher of the Magazine to comprise the Catalogue of the Eleventh Exhibition of American Manufactures, to be held in Boston, in September next, under the direction of the Massachusetts Charitable Mechanic Association; and that no general Advertising Publication has been authorized, or will be permitted at the Exhibition, issued by any other publisher.

(Signed)

A. J. WRIGHT,

Boston, June 3, 1869.

Vice-President and Superintendent of Exhibition."

SPECIAL NOTICE TO CONTRIBUTORS AND ADVERTISERS.

It appears by the above Certificate, that the undersigned is the only authorized Publisher for the Exhibition. An attempt to interfere with his rights has been stopped by Injunction from the Supreme Judicial Court.

GEORGE COOLIDGE,

Office in Section 5 of the Exhibition.

SOLE PUBLISHER OF THE EXHIBITION,

289 Washington Street, Boston.

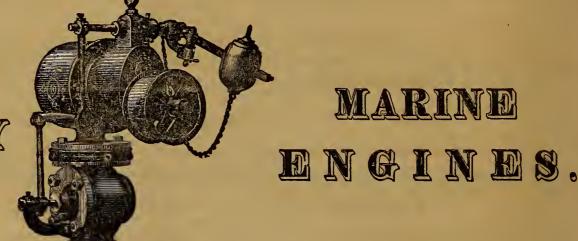

HUNTOON'S

PATENT GOVERNOR,

FOR

STATIONARY

AND

NOTE. We desire to call the attention of users of steam power to the fact, that within the past two years we have attached this Governor to upwards of five hundred engines, of every possible construction, on which they are now in successful operation. We therefore speak from experience in recommending its trial upon engines when the changes of work are necessarily sudden and severe. And to any parties desiring to test the machine practically, we offer terms which will enable them to be satisfied of its great usefulness, before requiring payment.

OUR OFFICE IS AT

103 STATE STREET, BOSTON,

Nearly opposite Head of Merchants Row, and but a few steps from the Exhibition, where we shall be pleased to see any parties interested in steam engineering.

R. K. HUNTOON.

J. AUGUSTUS LYNCH.

103 State Street, Boston.

SECTIONAL CLASSIFICATION OF THE EXHIBITION.

SECTION 1. Upper Faneuil Hall. Furniture, etc.

Committee in Charge, HENRY A. LYFORD.

SECTION 2. Faneuil Hall and Gallery.

Manufactures of Wool, Silk, Cotton, Ladies' Goods, Pianos,
Photographs, etc.

Committee in Charge, J. P. BRADLEE.

The Office of the Executive Committee is in Faneuil Hall; also, Weber's Café, for visitors.

SECTION 3. First Division of Quincy Hall.

Furnaces, Ranges, Stoves, Boots and Shoes, Leather, and
Fancy Iron Work.

Committee in Charge, D. CHAMBERLIN.

SECTION 4. Second Division of Quincy Hall.

Agricultural Implements, Household Articles, Washing

Machines, Carriages, Harnesses, etc.

Committee in Charge, S. D. HICKS.

SECTION 5. Third Division of Quincy Hall.

Building Materials, Plumbers' Work, Hardware, Platform
Scales, etc.

Committee in Charge, WM. LEAVITT.

In Section 5 are the Offices of the Superintendent, the Committee of Arrangements, and the Board of Judges; also, the Official Catalogue and Journal Office; and Heilge's Café.

SECTION 6. Rotunda of Quincy Hall.

Fancy Goods, Pictures, Paintings, Photographs, Sewing
Machines, Clocks, Surgical and Dental Instruments,
Fine Cutlery, Fishing Tackle, Fire-arms, Gas-Fixtures,

Glass and Earthen Ware, Books, Blank Books, etc.

Committee in Charge, THEOPHILUS BURR, GEO. ROSS.

SECTIONS 7, 8, 9. From Rotunda to end of Hall. Steam-Engines and Machinery, Motive Power, Iron Forgings and Castings.

Committee in Charge, ANDREW J. MORSE, GEORGE W. SMITH, IVORY BEAN.

RECEIVING OFFICES.

IN QUINCY HALL.

GEORGE B. HANOVER, Chief Clerk. HENRY A. SNOW, Assistant Clerk. IN FANEUIL HALL.

FREDERICK L. CUTTING, Chief Clerk. WM. H. PALMER, Assistant Clerk.

VISITORS

Procure their Tickets of Admission at the Ticket Office, located on the sidewalk at the principal entrance of Faneuil Hall (also sold at the Stores of Messrs. Crocker & Brewster, 47 Washington Street, and Joseph L. Bates, 129 Washington Street). Price of Tickets, 50 cents, entitling one person to one admission; Package of 5 Tickets, \$2.00.

The Catalogue and Journal of the Exhibition may be purchased within the Halls, or at No. 289 Washington Street. Price, 25 cents. (Mailed postpaid.)

Visitors first view Section No. 2, and next examine Section No. 1.

Passing down from Section No. 1, visitors cross the Bridge to Quincy Hall, observing the notice as they enter on the Bridge, "NO RECROSSING OF THE BRIDGE."

Sections 3, 4, 5, 6, 7, 8, and 9, extend the entire length of Quincy Hall. In Sections 5 and 8 are passages out of the Hall to South Market Street.

Hours of Exhibition, from 9 o'clock A. M. till 9 P. M.

OWN PRINTING, WITH A NOVELTY

ich for durability, simplicity, ease of working, and general excellence, far surpasses any other Press ever invented. The very finest printing may be done upon it by perfect novices in the art, at a great saving of expense, and with a degree of pleasure that few other employments are capable of affording.

employments are capable of affording.

THE NOVELTY PRESS was invented to meet the want long felt, by business men and others, of a Press, low in price, simple in construction, and durable, that would do Good work. That they most admirably answer the purpose is evidenced by their great popularity, and by hundreds of testimonials received by the proprietor, a few of which are appended. Many of the wealthiest business and manufacturing firms in the country, and several colleges and academies, are using them with profit; and no greater convenience could be added to any business than one of these Presses, and a few dollars' worth of type.

Each Press is packed for transportation in a chestnut box, which is used as a stand to work the Press upon.

TESTIMONIALS.

The following correspondence is self-explanatory: -

The following correspondence is self-explanatory:—

EXECUTIVE MANSION, WASHINGTON, D. C., June 3, 1869.

BENJ. O. Woods, Esq., 351 Federal Street, Boston:

Sir, — Please send by express — collect on delivery — one of your "Novelty" Printing Presses, complete, price \$15. This Press is for the son of the President. Please address it to "The President, Executive Mansion, Washington, D. C."

Very truly yours, O. E. BABCOCK, Secretary.

EXECUTIVE MANSION, WASHINGTON, D. C., June 22, 1869.

BENJ. O. WOODS, Esq., 351 Federal Street, Boston:

Sir, — The President requests me to acknowledge the receipt of your letter of the 19th inst., and also the receipt of the Press and material by express.

The President wishes me to thank you for the kindness in supplying so much material for his son. Master Jesse is much pleased with it all.

I am, sir, your ob't serv't, O. E. BABCOCK, Secretary.

The Novelty Press, wherever used, has given great satisfaction; doing excellent work and being a marvel of simplicity. Merchants, druggists and business men generally can make a great saving of time and expense by its use. — Boston Journal, June 26.

Office of the New Brunswick Water Co.,

New Brunswick, N. J., June 23, 1869.

Benj. O. Woods: Dear Sir, — The Octavo Press and furniture came safely to hand and works upon the first trial to my entire satisfaction.

Yours, &c., THOMAS N. DOUGHTY, Secretary.

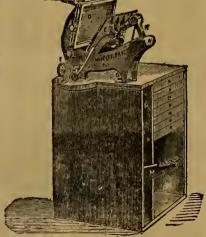

MR. BENJ. O. Woods: Dear Sir, — The Quarto Press I ordered from you in Nov. 1867, was received O. K., and gave perfect satisfaction, proving itself in every particular to be all that you represented it to be.

Respectfully, C. H. PHELPS, General Ticket Agent W. & G. Railroad.

B. O. Woods: Dear Sir,—In my opinion the Novelty Press is the best amateur printing press yet Invented. As nice work can be done upon it as can be done on the Gordon, Degener, or any other press. It not only is the ne plus ultra of presses for amateurs, but answers admirably for country printing offices.

Very truly yours, JUSTIN JONES, "Yankee Blade" Office, 32 Congress St., Boston.

MR. B. O. Woods: Sir, — We can say, as a firm, that the working of the Novelty Press cannot be surpassed; the regulation of the gauge correct; and as nice work can be done on it as on any press we have yet seen. Yours, &c., FIELD & FORD, Job Printers, 32 Congress St.

BURR'S PATENT Nursing Bottle b

The most Perfect and Convenient Nursing Bottle in the World.

Combining La Forme's Patent of 1859, re-issued Jan. 14. 1868, and Burr's Patent of August 27, 1867.

This Bottle possesses all the advantages of La Forme's patent, so universally admired, to which are now added "Burr's Improvements," consisting in part of a combined Mouth Guard and Nipple and Tube Connector composed of one piece of Boxwood, conveniently adspted to the use of Two Sizes of Nipples when required. The cork is secured by the boxwood tube running through it, to prevent any liability to breakage, or injury by constant use. The flexible rubber tube in the bottle always adjusts itself to any position, and the baby never draws any wind into the stomach. It is made of the very best materials, is free from all metallic substances, finished in the most reliable manner, and is pronounced by competent judges to be the very rest Nursing Bottle ever invented.

Packed in a neat box, with a silvered Wire Brush for cleansing the tubes and mouthguard, also an Extra Nieple of larger size, fitting on the large shoulder of the monthguard, when preferred to the small one. In a word, it is only necessary for any mother to compare Burr's Improved Nursing Bottle with all others, to see at once its great superiority in every respect, as it is no small recommendation that it costs no more than inferior and worthless bottles.

We supply the trade with all parts of the battle separately, when required, including

We supply the trade with all parts of the battle separately, when required, including BURR'S SILVERED WIRE BRUSH, which is of INESTIMABLE value to the infant, as it keeps the tube perfectly sweet and free from acid, especially in warm weather. (Price of Brush, 10 cents.)

The public are cautioned against any imitations or infringements of the above patents, and, to guard you against worthless imitations, see that "M. S. Burr's Patent, August 27, 1867," is stamped on the mouth-guard, and that the words "Burr's Patent Nursing Bottle," are blown in the Glass Bottle.

MILO S. BURR, PATENTEE AND PROPRIETOR.

MANUFACTURED BY BURR & PERRY,

(Successors to M. S. BURR & Co.,)

Wholesale Druggists, No. 26 Tremont Street, Boston, Mass., And sold by Druggists and Fancy Goods Dealers everywhere.

Dr. WARREN'S BITTERS!

The Great Blood Purifier and Regulator,

CURES

Liver Complaint, Janudice, Biliousness, Weakness, Debility, Colds and Fevers, Fever and Agne, Headache, Dizziness, Eruptions on the Skin, Humors of the Blood, Loss of Appetite, Female Complaints, Costiveness, Piles,

AND ALL COMPLAINTS CAUSED BY

Impure Blood, Imperfect or Obstructed Circulation, or a Deranged and Diseased Condition of the Stomach, Liver, Kidneys and Bowels.

For Cleansing, Strengthening, Invigorating and Putting in Order the Weak, Debilitated and Diseased Human System, Dr. Warren's Bilious Bitters are unequalled by any other Medicine in the World. Persons suffering from a complication of diseases of a chronic nature, will find sure and speedy relief in the use of this invaluable medicine. It quickens the circulation, restores the lost appetite, regulates all the functions of the body, cleanses the blood, carries off all morbid and unhealthy secretions, and imparts strength and vigor to the whole system.

Mr. Daniel Smith, of Barton, Vt., who had been out of health for a long time, writes: "I have taken one bottle and part of another; find my health quite restored. My son, who had been sefflicted for years with sores under his srms, has been cured by taking one bottle of Dr. Warren's Billous Bitters."

E. A. Johnston, Esq., of Dunleith, Ill., writes: "I hope you will establish Agencies for these Bitters through the West, for I consider them invaluable to people living here."

N. B. Observe a fac-simile Signature of the Proprietor (JOHN A. PERRY) on the wrapper, without which none is genuice.

Price 50 Cents and \$1 per Bottle.

JOHN A. PERRY, CHEMIST, BOSTON, Proprietor.

MANUFACTURED BY BURR & PERRY,

(Successors to M. S. BURR & Co.,)

Florence Sewing Machine!

LIKE "COLD TRIED IN THE FIRE."

Is neither consumed nor injured by competition and opposition, fair or unfair. Although companies, OLD and WEALTHY, combine to crush the Young and JUSTLY POPULAR "FLORENCE," their efforts are unavailing.

IT IS A FIXED FACT

That its reputation is STRENGTHENED by every fuir, practical and intelligent trial. It stands the practical test of PRACTICAL SEWING, upon a greater range of work than any other Family Sewing Machine in use.

It is Simple in its Construction.

If some interested person tells you that it is "complicated," come and examine the Machine for yourself. It will do ALL that it is recommended to do. If you are told by the "disinterested" that the "Florence" will not run with linen thread, come and see it tried, and you will be thoroughly convinced that said statement is wholly wrong.

THE "FLORENCE" NEVER FAILS TO GIVE ENTIRE SATISFACTION,

After a Fair, Practical, Intelligent Trial. Every Machine is warranted.

No risk sustained in purchasing these Machines, as they can be returned at any time, and for any reason, and the money paid will be refunded, after deducting at rate of of \$5.00 per month for usage, and also amount of damage, if any, sustained from time of sale.

All are respectfully invited to call, and investigate the PRACTICAL WORKING of the above-mentioned machines, at

Salesrooms { 141 Washington Street, BOSTON. 505 Broadway, NEW YORK.

MANUFACTURERS OF CARVED AND PLAIN SAWED

Devoting our attention to this business exclusively, we keep on hand a larger stock and of greater variety of designs than any other house in the United States.

Our goods are all made from carefully selected, well-seasoned stock, finished either in oil or shellac, and warranted not to injure the finest room-paper.

Photographs and price-lists may be had on application by dealers, or we will forward orders to responsible parties of twenty-five, fifty, or one hundred dollars in amount, and allow them to return such as they do not want.

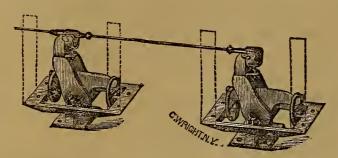

THE CELEBRATED STANDARD AMERICAN WATER WHEEL CO. SAMPSON SCALE.

Manufactured at the NOVELTY IRON WORKS, New York City.

Perfect accuracy obtained with light, or heavy loads, upon any part of the platform. Upright levers only nine inches in length, for ten-ton Hay Scale, instead of fifteen feet, as in long lever scales. Oscillation of platform, comes upon a system of yokes and links, (as in engraving): hence no wear to knife edges. This scale has no check rods, no balls, and its levers are protected from freezing, dirt and water.

The Sampson Scale Co. manufactures Weigh Lock, Railroad Track, Hay, Coal, Cattle, and WAREHOUSE SCALES, under the Sampson Patents, and every variety of small Scale after the most approved patterns.
Send for Pamphlet of Public Tests to full capacity of Scales in daily use in the principal cities of New England.

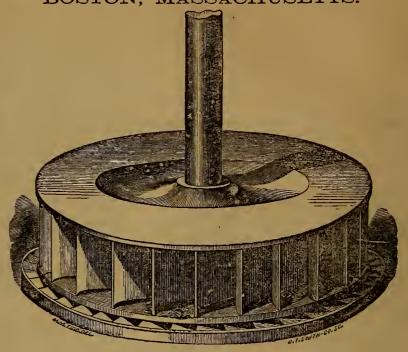

CONSTANTLY ON HAND AND FOR SALE BY

A. A. FRAZAR & CO.,

General Agents for New England and Canada,

116 FEDERAL STREET, BOSTON, MASS.

BOSTON, MASSACHUSETTS.

Manufacturers of Warren's Celebrated

TURBINE WATER

And MILL WORK of every Description.

The late improvements in this Turbine render it the most economical, durable, simple, and the cheapest of any now in use.

A pamphlet containing complete engravings of the Warren Turbine, a Treatise on Hydraulics, prices, &c., will be forwarded to applicants, to any part of the Union.

ALONZO WARREN, Agent,

THIS MACHINE WAS

AWARDED

No. 31 EXCHANGE STREET, BOSTON,

Manufactory, 1263 Federal Street.

WILL LIKE

THE

BARTRAM & FANTON

IS UNAPPROACHABLE IN Simplicity, Compactness, Durability, PARIS EXPOSITION and Beauty. 1867.

It does the greatest variety of work of any machine in the market, and IS ALWAYS IN ORDER, requiring no frequent adjusting, so annoying to operators of Shuttle Machines, and RUNS LIGHTLY, EASILY and QUIETLY. The wheel being at the back, renders it impossible

for a lady to soil her dress.

Every machine is provided with the celebrated FANTON CASTOR, and can be moved without trouble, yet stands perfectly firm when in use.

THIS MOST PERFECT MACHINE DOES ALL OF THE FOLLOWING KINDS OF WORK:

Hemming, Felling, Ruffling, Tucking, Frilling, Cording, Binding, Braiding, Embedidering, Gimp Trimming,

Reversions Plaiting, and makes Button-Holes.

PHOTOGRAPHS

Of every description taken in the best manner, plain finish, colored, or in India ink, at prices ranging from \$3 to \$150.

Excellent copies of old or partially faded Daguerrotypes taken. Persons having such Daguerrotypes of deceased relatives will find this a very useful branch of the art.

CARTES DE VISITE,

Colored, plain, full figure, or "Vignette," single or in groups.

Particular attention is invited to the new

PHOTOGRAPHS TAKEN ON PORCELAIN,

which are very much admired by all who see them. For softness and delicacy of finish they are unequalled. Being transparent, they may be used for shades; and, when illuminated, they present a beautiful appearance. They can be colored in oil, and are warranted not to fade. Prices from \$3 to \$25.

Hours for sittings from 9, A.M., to 3, P.M.

RICHARD BRIGGS.

WEBB'S Adding Machine.

[The above cut is about one-third real size.]

Only Practical Adding Machine in the World.

COMPACT, CONVENIENT, CERTAIN, CHEAP.

The above cut represents the Adding Machine one-third size. It is as simple in its principle and its working as a pair of shears. There are no mysteries to be mastered, and no mental process whatever is required. The first trial the operator can add up any account with accuracy. Rapidity, of course, comes with practice and familiarity with the figures, which are soon found almost mechanically. The machine carries up two columns at once, and is the only machine that will.

chine carries up two columns at once, and is the only machine that will.

It is invaluable to Lumber Dealers, Weighers, Gaugers, and Entry Clerks, as a tallying machine being perfectly correct; and, in fact, to any one who has anything to do with figures, whether tallying, keeping cash account, adding up extended columns, or in any of the numberless ways in which figures are used, being a great brain-saver, relieving the mind entirely, but still doing its work correctly. No longer an experiment, it has passed into very general use, and has the indorsement of all who have seen or employed it.

"No accountant need fear that he will be bit by buying it."—Henry Ward Beecher.

"I cheerfully certify to its correctness and rapldity."—H. J. Storrs, City Comptroller's Office, New York.

"It relieves the mind entirely, and reduces arithmetic to a simple motion of the hand."—S. C. Thompson, President First National Bank, New York.

"By its use, a column of figures of any length or size can be added up with an accuracy and ease seldom attained by the most rapid or most careful mathematician."—O. H. Perry, with A. A. Low & Bros., 31 Burling Slip, New York.

"Your Adder works like a charm in counting lumber."

York.

"Your Adder works like a charm in counting lumber.
We think we could not get along without it." — C. M. Crandall, Montrose, Pa.

As a tallying machine, it is invaluable in our business, taking the place of an extra shipping clerk.— C. W. Stearns & Co., Cleveland, O.

Wholesale and Retail Manufacturers of

GENTLEMEN'S, LADIES' AND BOYS'

NO. 716 CHESTNUT STREET. PHILADELPHIA.

Our establishment has been in existence for upwards of 35 years as a first-class boot and shoe house for Fine Custom Work. We have also been supplying since 1850 the trade of California, and to some extent China and the Sandwich Islands, with our finest goods. Our work is of standard quality, the best that can be produced — whether made to measure or ready-made — whether sold at wholesale or retail. We also make Boys' Boots and Shoes of a quality nearly equal to our gentlemen's goods, and far superior to any other establishment in regard to quality, style and fit.

F. R. SMITH'S BRANCH

CLEVELAND LIGHTNING ROD CO.

Is permanently located in the City of Boston, where it contemplates remaining for a series of years. We take pleasure in referring to the following distinguished Scientific Men who have given their testimony to its superiority, as may be seen by reference to our Circulars: -

GRAMERCY PARK, NEW YORK, January 23, 1868.

Sir, - It is in my opinion a great advantage to have a Continuous Lightning Rod without joints, like the sample you have shown me. You will place them upon my house at your earliest convenience, and I hope you will be successful in introducing them.

Yours respectfully,

CYRUS W. FIELD.

F. R. SMITH, Proprietor.

AMERICAN

GLASS WINDOW PULLEY.

Manufactured only by the

Am. Glass Window Pulley Co., NO. 56 CONGRESS STREET, BOSTON.

Harness Coupling.

Colburn & Belcher's Patent Method of

Coupling the Horse with the Carriage.

This style of Harnessing a Horse is as simple as it is novel, and saves some 25 per cent in the cost of a harness, doing away entirely with Traces, Lugs, Breeching and Whitfletree, but Breeching may be used if desired. It can be readily applied to any harness, without additional expense. The first premium at the New England Agricultural Fair, in 1868, was awarded for this invention.

This is the safest and strongest manner in which a horse can be harnessed. In case of accident, the horses can be detached from the earriage in two seconds.

This improvement can be applied to any carriage, sleigh or harness, without any other expense or alteration, except the cost of the coupler.

S. C. CHEEVER & CO.,

No. 25 Court Street & 7 Tremont Street, Boston, Mass.

PRICE LIST. — Full Set, Japanned, with Patent Girt, \$8; Full Set, Japanned, with Patent Girt, \$10; Full Set, Silver, with Patent Girt, \$12; Full Set, Gilt, with Patent Girt, \$14.

A liberal discount to the Wholesale Dealers.

Read below what that leading paper, The Providence Post, says:

A DESIRABLE INVENTION.—At the recent Horse Fair at the Narragansett Park, we noticed a very desirable invention for hitching horses to carriages, doing away entirely with the old style lug and whiffletree. Mr. Geo. W. Thayer had one on his carriage. The invention was also exhibited at Lafayette Hall; and it seems to be attracting attention from old horsemen all over the country. It is destined to take the place of the present arrangement for attaching a horse to a carriage; and many have been sold to our citizens.

ľ	No. 1,	with	144 n	eedles, j	price								. \$75.00
ŀ	No. 2,	"	200	66	4.6								. 85.00
ı	No. 3,	"	both	eylinde	rs,	prie	ee				٠		. \$75.00 . 85.00 . 100,00

Is the most complete and desirable Machine ever yet introduced for spinning purposes.

It is small, compact, and simple in its construction, run by a balance wheel propelled by the foot, and can be attached to any table, at which a lady can sit quietly down to her work, and with little or no fatigue spin a very much larger quantity in the same space of time than it is possible to do on the old-fashioned spinning-wheel. It is an article much needed in every family, and once possessed—like the Knitting Machine—would never be dispensed with. The price is low, only \$10, placing it within the reach of all.

BICKFORD

Spinner and Knitting Machine Co., 260 WASHINGTON STREET, Boston, Mass.

PREVENTION IS SAFETY!

No more Lives and Proper'y Bacrificed by Elevator Accidents.

BALDWIN ELEVATOR SAFETY CO.

We are applying our Patent SAFETY STOP to both new and old Elevators, which makes them perfectly safe against all accidents caused by the breaking of ropes, chains, or driving works, thereby providing perfect protection to life

with property.

We have also a GOVERNOR which acts upon the Safety, and stops the carriage at once, if from any cause it runs inster than intended.

Perfect satisfaction guaranteed. Send for Circular.

Address

ELISHA STONE, Treas., 57 Washington Street, Boston.

${ t SAFETY}$ ${ t BUTTON-HOLE}$ ${ t CUFF}$

FOLDED EDGES. PATENTED BY

GEORGE K. SNOW,

MAY 25th, 1869.

This new Cuff we have no doubt will meet a want which has been long felt for a first-class Cuff without the many objections which have been raised to paper or cloth and paper Cuffs; one of which is, the sharp edges which come in contact with the wrists of the wearer, thereby causing irritation and soreness. This difficulty is obviated by the edges being folded in, and on curved lines, so that they fit better and present smooth rounded edges to the wrists, the imitation of hand-stitched linen Cuffs being perfect. The folds also prevent the edges from breaking, as is the case on Cuffs without folded edges.

Another great objection has been on account of the difficulty experienced in readily buttoning or unbuttoning sleeve buttons while upon the wrist, and the loss of the same in case of accidental unbuttoning. This objection and difficulty has been overcome by making the button-holes through one end of the Cuff of the usual shape, thus —, which retains the button, and those through the other end shaped thus —, which enables the wearer to readily button or unbutton the Cuff while upon the wrist.

We are confident that there has not been an article (made from paper, or cloth and paper) introduced to the public prior to this time, which has so much real merit as this new Pateut Safety Button-Hole Cuff, for which a patent was issued to Geo. K. Snow, May 25, 1869.

These Cuffs are made in two grades, —the HERCULES, from fine muslin backed with paper and finished like fine liner, the Snow Flake, from superior paper, impressed in imitation of fine linen, and lined with cambric for strength. Both grades packed with five pairs in each box. Sizes 9, 9½ and 10 inches.

Ladies' Cuffs are made of the same pattern and material as the Hercules, and labeled Lily Cuffs. Sizes 8, 8½, and 9 inch. Packed five pairs in each box.

The Reversible Collar Company,

in introducing this new Cuff to the trade, will say that they have bullt new machinery especially adapted to their rapid production in all sizes.

GEO. K. SNOW, Pres't.

These Cuffs are sold at retail at the principal Gentlemen's Furnishing Goods Stores.

To insure prompt delivery, orders from dealers should be sent in at once to

THE NEW COMFORT.

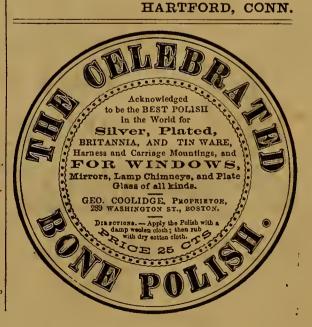

THE NEW COMFORT.

Clean, Comfortable, Noiseless.

THE WOVEN WIRE MATTRESS.

Address,

GEO. C. PERKINS, Sup't, Woven Wire Mattress Co.,

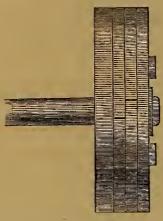

CHUBBUCK'S PATENT STEAM PISTON,

Patented February 25, 1868.

MANUFACTURED AT THE

MACHINE WORKS OF S. E. CHUBBUCK & SONS.

971 Tremont Street, Boston (Roxbury District).

Long experience in Steam-Engine building has convinced us that a Packing more perfect than has been made is needed; one that will work free on the cylinder, and at the same time be steam-tight. We now offer one, the extreme simplicity, equalized, free and efficient working of which must commend it to all practical Engineers as superior to any Piston in use. Its peculiar advantages are,—

1st. Perfect accessibility to all its parts for inspection.

2d. The weight is supported entirely independent of the packing.

3d. The packing is automatic in action, or self-adjusting.

4th. The construction is such that the correct self-adjusting quality of the packing is not deranged or rendered inefficient by a large amount of wear.

5th. A comparatively perfect steam joint is secured, with the least possible amount of friction.

Orders solicited for old or new Engines. Other information obtained of

S. E. CHUBBUCK & SONS.

DURABLE HANDLE

A WHITE HANDLE MORE SERVICEABLE THAN ANY OTHER KNOWN,-RESEMBLING IVORY,-CHEAPER THAN IVORY, - WITH BLADES OF BEST CAST STEEL.

ELECANT-ECONOMICAL-DURABLE.

HANDLES THAT WILL NOT CRACK, - UNAFFECTED BY HEAT OR COLD, -THAT WILL NOT BREAK,-HOT OR COLD WATER ALIKE HARMLESS.

None genuine unless bearing the trade-mark, "DURABLE HANDLE CUTLERY CO."

SOLD BY DEALERS IN TABLE CUTLERY.

Manufactured exclusively by BRADFORD & ANTHONY, 178 Washington St., Boston.

SOLD BY

T. R. Fairbanks & Co.,

131 FEDERAL STREET,

GUEST'S PATENT

FIRE AND IMPROVED

Burglar Alarm TELECRAPH.

Mankind is benefited by this invention, which is described in the author's own words as follows, to wit:-

"The two principles involved in the operation of my apparatus are well-known and established

"It is a well-known fact that Electricity, when applied to certain instruments, such as sounders, apparatus, bells, etc., will produce certain sounds, by which intelligence is communicated from one point to another; and it is also known that these several results are produced by the closing of a circuit; or, in other words, two metal wires (or their equivalent) are so arranged that, when touching one to the other so as to make one continuous and unbroken line through a battery, and an instrument planned for the purpose, will operate the above-named instrument. This is one of the principles by which my invention is operated.

"Those facts are not new, nor my invention; but, however well known, there is credit due to the one who has invented the best combination by which

these results may be produced.

"There have been many attempts to register heat by the expansion of wires, or strips of metal so fixed that, by their expansion, an alarm bell might be rung. I do not deny that bells can be so rung, but that a correct guage of the temperature of atmosphere can be given by such means, I do deny.

"Therefore, seeing and knowing these facts by actual experiments, I turned my attention toward introducing, in combination with Electricity, the well-known conductor of the same, - mercury. This is used for thermometers, and also for closing circuits, but the practical application of it for the purpose of a Fire Alarm, combined with platina conducting wires, I claim as my invention; and assert it is the only true method, as other metal than platina cannot be buried in mercury for any length of time without corroding, thereby oxydizing the mercury and ruining the instrument for that purpose. My plan of conducting platina with mercury makes a durable Fire Alarm, which, from its thermometrical proper-

Fire Alarm, which, from its thermometrical properties, must register heat truly and correctly.

"As to my 'Improved Burglar Alarm': The old method of attaching doors is defective, as 'the pin' projecting from the jamb can be easily got at and held in by the burglar, so as to render the alarm bell inoperative. This most important defect has been overcome by the peculiar construction of my spring, making it, practically, the reverse.

"I also claim that my alarm bell is so constructed as to be easily adjusted, as there is but one screw used for the purpose; whereas in the older instrument several screws, springs and other contrivances are so combined that each particular screw must be so adjusted as to the setting that cach one must accord or harmonize with the other in order to get a precise position of the bell-staff and armatune to the magnets, so as to work effectually. These improvements nets, so as to work effectually. These improvements are most important when considered in connection with the additional protection thus afforded to life and property."

H. P. ROBINSON,

19 Washington Street, Boston

SOLE AGENT FOR THE STATES OF

Massachusetts, Rhode Island, Maine, New Hampshire, Vermont.

ADDENDA

To Catalogue by Sections.

The attempt was never made to catalogue any of the former Exibitions by Sections; and was undertaken, in the present instance, with a full understanding of its great difficulty, but in confidence of success which the result will be seen to justify.

The first edition contained the "Catalogue of Entries" on the Receiving Books up to the opening day. Since the morning of that day, more than one-third of all the entries of the Exhibition have been added. Under the conditions of the great confusion and pressure for places arising from so large a proportion of untimely entries, the Sectional Catalogue has been compiled. The publisher trusts it will be found fully to meet the needs of the visitors for a serviceable guide, before and during their visits to the Exhibition Halls.

The following are all the entries not classified in the preceding Catalogue by sections. Like the turmoil of the street, they have slipped aside in passing, perhaps losing or never receiving their designating tags, or gone down like shallops in turbulent waters. A later edition may reclaim many of these estrays, and give them their due position in the Catalogue.

The above note appeared in the Second Edition of the Catalogue. In this Third Edition, we are able to present the following List of Entries almost completely classified in their places.

ENTRIES NOT COMPRISED IN THE PRECEDING CATALOGUE BY SECTIONS.

IMPROVED COMPOSITION DRAWING OR ROVING CAN,

For Use in the Manufacture of Yarns. Patented by Peter Lawson, May 18, 1869.

The common cans are usually made of sheet-metal. Even when made of the lightest metal, of snfliclent strength, they are quite heavy,—too heavy to be conveniently lifted and carried by the class of female operatives usually assigned to this work, without serious injury to their health.

These sheet-metal cans are also casily indented and bruised, more especially at the bottom, when they run out of true, and cannot be used on the turn-table, as the presser or plunger cannot act till repaired, at an expense as great as the original cost of my can.

The object of my invention is to produce a lighter, cheaper and more durable can from fibrous and pulpy materials.

The material which I prefer is

materials.

The material which I prefer is paper, either iu the form of sheets, or moulded from pulp, or from raw, felted or woven fibre.

These Cans are 20 per cent cheaper than Tin Cans, and much lighter.

The subscriber is happy to refer to the following Certificates received:-

BOOTT COTTON MILLS, LOWELL, MASS., Aug. 25, 1869.

Hon. Peter Lawson. Dear Sir, — In reference to your "Paper Drawing Cans," I would say that after a trial of five months they show but little wear. They are very much lighter, much easier to handle, thus saving labor on part of the drawing hands; also a saving in the wear of the floors. Cans being much lighter, they do not drag them so much over the floors. On the whole, I consider your can a success, and preferable to the tin cans now in use.

Yours truly,

A. G. CUMNOCK, Agent.

BOOTT COTTON MILLS, LOWELL, MASS., Sept. 10, 1869.

Hon. Peter Lawson. Dear Sir, — About six months past I have been and am still using your Patent Paper Drawing Cans, and like them much hetter than the tin can now in use. They are much lighter and easier to handle than the tin can, and therefore will prove a great saving in the wear of the floors. Also, the Drawing Tenders; prefer them to the tin can. I have subjected them to a severe test, which would have very much injured if not ruined the tin can, and still they retain their proper shape without leaving a dent. I consider them the best can in use.

R. J. WALKER, Overseer Nos. 1 and 2 Card Rooms,

BOOTT COTTON MILLS, LOWELL, Sept. 11, 1869.

HON. PETER LAWSON. Dear Sir, - In regard to your Paper Drawing Can, I would say that I have had some of them in use in the rooms under my charge for the past five months, and like them much. They are light, cause no wear to the floor, and, above all, they are so elastic they will not stay bruised, like the tin can now in use. In a word, I would recommend their adoption.

Yours truly,

A. L. PRESCOTT, Overseer of Carding Rooms Nos. 3 and 4.

PETER LAWSON, Proprietor, Lowell, Mass.

JOURNAL OF THE EXHIBITION.

(THIRD EDITION.)

Documentary.

CIRCULAR ISSUED BY THE BOARD OF MANAGERS.

THE Massachusetts Charitable Mechanic Association, believing their previous Exhibitions to have been the cause of the diffusion of much useful knowledge, and the means of inspiring renewed efforts for the advancement of mechanical skill, by bringing to public notice and friendly competition the productions of those who aim for progress, improvement, and perfection in their chosen occupations, respectfully announce their ELEVENTH EXHIBITION of American Manufactures and Mechanic Arts, at Faneuil and Quincy Halls, in Boston.

The present year, free from the tumults and perplexities which tend to disturb the regular industry and the usual course of business operations, promises well for the abundant success of a Mechanics' Exhibition.

The best results of the thought, labor, skill, and taste, in the production and multiplication of whatever will add to the convenience and comfort of mankind, wherever made, throughout our common country, will be welcome to the halls; and the Board of Managers pledge their best exertions to make the Exhibition, as far as is possible, attractive to the public, impartial in its awards, and satisfactory to the contributors.

Steam motive power will be provided, that Machinery of all kinds may be seen in actual operation; and the Managers respectfully suggest to Inventors and Proprietors, that this arrangement will afford an invaluable opportunity for displaying the advantages and capabilities of their various machines, in competition with others, under one view; so that there can be no question as to their relative merits.

Medals of Gold, Silver, and Bronze, with an engraved Diploma, will be awarded to such articles as may be found to merit distinction.

Arrangements have been made with the several Railroads which terminate in this city, by which merchandise intended for this Exhibition may be brought to the city at greatly reduced cost for freight.

Faneuil and Quincy Halls will be connected, as heretofore, by a bridge; and the Managers will be ready for the reception of contributions intended for exhibition and premium on Monday, September 6th.

Annexed to this circular are the Rules and Regulations adopted by the Board of Managers. (See page 5.)

called to the necessity of all contributions being sent to the Halls at an early day before the opening, in order that they may be suitably arranged, and ready for the inspection of visitors.

All persons intending to contribute to the Exhibition articles requiring large space, and those wishing for more particular Information, can address Joseph L. Bates, Secretary of the Association, Boston.

INSTRUCTIONS TO THE BOARD OF JUDGES.

THE Judges are invited to examine with great care every article submitted to their inspection, and to make such reports as its merits may, in their opinion, warrant.

The Board of Managers would advise an early examination, while the goods are in their best condition.

There will be four grades of awards, viz: -

No. 1. A GOLD MEDAL, which will be granted only for very valuable and meritorious inventions or improvements.

No. 2. A SILVER MEDAL, for articles of superior workmanship, new applications of material, and improvements in construction.

No. 3. A BRONZE MEDAL, for articles of superior workmanship, but of less importance

No. 4. A DIPLOMA, for all other articles deserving a favorable testimonial.

Each Committee of Judges will appoint its own Chairman, and notify the Secretary of the same; and report through their Chairman to the Executive Committee on or before Saturday, the 2d October.

Each Committee will receive a book containing a list of the articles they are to examine, and also a book in which to write their reports.

Should the Judges require the attendance of a contributor for the purpose of explaining an article submitted, they will please give notice at the office in Quincy Hall.

The Halls will be open for the Judges each morning, from half-past 7 to 9 o'clock.

Should any vacancy occur in the Board of Judges, it is desired that notice may be given to the Executive Committee without delay.

It has always been the wish of the Board of Managers, and of the contributors, that the Awards of Premiums may be announced before the close of the Exhibition; the Managers have not heretofore been able to do this, in conse-

The attention of exhibitors is particularly quence of the delay of the Judges in sending in their Reports. It is therefore earnestly desired that the present Board of Judges will send in their Reports on the day above specified, to enable the Managers to effect this desirable object. The office of the Executive Committee will remain open till nine o'clock, on the evening of October 2d, for their reception.

> N. B. Whenever a medal is given, it will be accompanied by a Diploma.

Exhibition.

AFTER four years elapse, the progress of skilled industry, art and invention, as here exhibited, is again submitted to its two hundred thousand eager observers.

To the cultivated intelligence of this great people, this Exhibition appears as a volume of practical instruction in a rapidly advaucing civilization; and it possesses the very best educational influence on all students of its immense collections.

If it be a question whether the schools and colleges lack a practical element in their systems, here are three weeks of most precious opportunity for remedial results. Every advanced scholar in the public schools of New England, every student in the higher seminaries, should spend some days in these exhibition halls. The formulas of the schools are for the development of the mental powers by disciplinary processes. The practical application of those well-disciplined powers, in the subsequent conditions of social life, is quite another subject of consideration. The school-terms ended, - what next? The classical education acquired, - thence, forth into what social conditions, in the exercise of professional or other pursuits? Let every young man, with the fair, open page of life before him, spend what time he can in a careful study of this Exhibition. It cannot fail to render him essential benefit.

To the mature in active life, of either sex, we need offer no words of inducement to visit the Exhibition. Their experiences in the cares and duties, the perplexities, the rough friction of life, and their satisfaction with many devices substituted for old-fashioned methods, draw them instinctively to examine this new collection of agencies for the comfort and delight of the home, the good of the community, the benefit of man-

We leave the brief lines in the long catalogue of entries to indicate the thousands of articles on exhibition, and refer the visitor to many descrip-

PROPERT

Especial attention is called to the above Engine, as from its portability it is available at all times and in all circumstances, and possesses the following marked advantages, viz:

1st. Its force is positive, being worked by a

2d. It is portable, and easily carried to any part of a building.

3d. Can be charged instantly and worked continuously.

4th. When charged with chemicals, renders the wood non-combustible.

5th. For washing carriages and windows is more convenient than any other apparatus.

6th. For sprinkling a garden and syringing off worms it cannot be beat.

The Insurance Companies are making an abatement of their rates where our engines are introduced.

A good opportunity is now open to Agents to engage in their introduction.

F. BAILEY, General Agent,

FIRST PREMIUM TAKEN AT THE NEW P. S. ENGLAND AND MAINE STATE FAIRS, SEPTEMBER,

1869.

tions and details of excellence to be found in the advertising pages of the Catalogue, and the Special Notices of the Journal pages. The successive editions of the Catalogue and Journal will present the complete Exhibition, in all its stages, during its continuance of three weeks; the final edition stating the awards of prizes, the members of the Board of Judges, and all other closing subjects of interest.

In thus committing and commending the Exhibition to a faithful examination by its many thousand daily visitors, as to those whose present opportunity it is a duty to themselves not to neglect, we are led on in spirit to discern still opening and widening relations which it bears to the present and the future time.

Here to the eye are the splendid and unique products of skill and fancy, and thoughtful deliberation and experiment. They have been produced and are here for a purpose; which is, the accomplishment of the desires of their producers in their relations with the outside world around them.

Ah the infinite complexities of that outside world,—the subtilty of the laws of its order and its disorder! Who can note the changes upspringing in its daily existence? What systems of human device can coequal its requirements, its yearnings for the orderly, the peaceful, the satisfying enjoyments of life? Inefficient are all its systems of exchange, withes of straw and ropes of sand, for transferring with equal measure the products of human labor from man to man.

There is an over-beyond to the chronic disorders of the social life of the world, when production and consumption shall rest on the Christian basis of the best good of man.

Until that better era in the world's advance, indications of progress, in the mastery of man over his conditions of servile dependence, are to be observed with the interest of a renewed delight.

May this Exhibition be found full of evidences of better means of living and doing, which shall contribute much to the world's acquisitions, and aid it rapidly on in its progressive career!

REPORT OF THE EXHIBITION.

After the close of the Exhibition, the Board of Managers prepare and issue to the Members of the Massachusetts Charitable Mechanic Association a full report of the Exhibition, comprising also the Reports of the Judges.

THE AWARDS OF THE EXHIBITION.

No announcement of Awards can be made until after the close of the Exhibition; when made, an edition of the "Catalogue and Journal" will be issued, containing the list of awards.

At the last Exhibition, the announcement of the Awards was not made until November, the number of Awards being as follows:—

Gold Medals,					33
Silver Medals,					140
Bronze Medals,				•	200
Diplomas,	•	•	•		355
Total					798

REPRESENTATION OF THE MEDALS AWARDED.

GOLD MEDAL.

SILVER AND BRONZE MEDALS.

DESCRIPTION OF THE DIPLOMA.

[Designed by Hammatt Billings, and Engraved on Steel by S. A. Schoff.]

In the centre, upon a high dais, stands Pallas (Minerva), holding in her right hand a wreath, and with her left resting upon a shield bearing

the insignia of the State of Massachusetts; at her left hand is Justice, pointing out those worthy of the rewards of skill and industry; and on her right sits a scribe recording their names.

On the left of the principal group a procession of artisans approaches, with specimens of their handleraft, as candidates for the prizes; on the right, corresponding to these, are figures representative of the Fine Arts, Music, etc.

The background is occupied by an Exhibition Hall, filled with various objects of manufacture, and a crowd of visitors.

In the centre, below the principal figures, is the crest of the Association.

THE DAILY PRESS.

There can be nothing in the Halls of Exhibition more wonderful or interesting to a thoughtful observer than the evolutions of the Daily Press. Even the electric cable is but a synonym of its celerity in flashing the light of its intelligence over the length and breadth of the land.

In the "Journal of the Exhibition" we attempt no statements of news items or racy comments, leaving these matters to the reporters of the Daily Press. Our editions, however rapid of their kind, are no match for the newspapers. We are obliged to content ourselves with those expositions more especially in the province of our "Journal." well assured that the public are instant in their attention to the News Press, and duly appreciate the ability and fidelity with which they are served.

THE CLOCK

In Section 6, over the central passageway, is a present from Mayor Shurtleff to the new Shurtleff School, at 215 Dorchester street, South Boston. The clock bears the following inscription:

"GIVEN BY
NATHANIEL B. SHURTLEFF,
A.D. MCCCLXIX.
Time Flies."

The design of the case is by Hammatt Billings, and contains many appropriate emblems, such as the scholar's lamp, book and pen, laurel wreath, and hour-glass, with wings; and the chaste style of the clock is creditable to the manufacturers, the Howard Watch and Clock Company

CLOSE OF THE EXHIBITION.

The Exhibition will close on the evening of Saturday, October 9th, thus continuing three days longer than formerly announced.

The hours for admission are from 9 A.M. to 9 P.M., the halls closing at 10 P.M.

DANIEL WEBSTER'S OLD COMPASS.

The last hunt for the missing articles entered for exhibition was for this single entry. By the telegraph to other States, and inquiries by post and otherwise, everything but this was found and placed. Our inquiries brought the contributor to the rescue, but the last of the missing entries is not yet accounted for. "Daniel Webster's old Compass" has a history; a part of it too quaint for statement here, but the joke is around among the knowing ones. It probably "appears as venerable as ever." It was presented to its distinguished recipient by his friends, of the merchants of Boston.

PORTRAITS OF THE PRESIDENTS OF THE MASSACHUSETTS CHARITABLE MECHANICS ASSOCIATION.

On the Gallery fronts, in Section 6, are the Portraits of the Presidents and of the Treasurer of the Association, arranged in order, as fol-

THE DECORATIONS

Of the Exhibition have been supplied by MESSRS. LAMPRELL & MARBLE, 357 Commercial Street. Their tasty ornamentation contributes much to the general display in the halls.

In Section 2, in Show Case on the Platform, this firm have on exhibition some fine specimens of American Flags and Flags of the Order of Odd Fellows.

ASSISTANTS IN THE EXHIBITION.

On pages 3 and 9 will be seen the organization of the Board of Managers, Committees, and Entry Clerks. The following is a list of persons appointed as Assistants in the Sections, and as otherwise stated.

EXECUTIVE COMMITTEE OFFICE, FANEUIL HALL. Hubbard W. Swett, Clerk.

SEWING MACHINES.

Special attention is called to the Elias Howe Sewing Machines, contributed by Plummer & Wilder, General New England Agents, 57 & 59 Bromfield street. The Sewing Machines are in the Gallery, Section 6.

The Elias Howe Sewing Machines are celebrated for doing the best work of any machines in the market. All kinds of work can be done on these machines in a superior manner. The "Howe Stitch," commonly called the "Lock Stitch," is well known to be the best made, as it cannot be ravelled. The machines are made of the best materials, simple and business must certainly develop into surprising durable, free from noise, and not liable to get out of results. Their advertisement, on page 30th, gives order.

ENGINEERS, SURVEYORS AND OTHERS

Must be interested in the fine display of instruments in the Rotunda, contributed by the well-established firm of F. W. LINCOLN, Jr., & Co., 126 Commercial Street, Boston. We are glad to hear that there is an universal call for these instrument, those already sold have proved so eminently satisfactory to that class of men who aim to secure the most perfect accuracy in their surveys. The city has availed itself of their quality in the construction of the Chestnut Hill Reservoir and other engineering work growing out of the recent widening of our Streets, and the surveys of our highways connected with the annexation of Roxbury.

All these instruments are examined and tested by the manufacturer in person, and are sent to the purchaser adjusted and ready for immediate use.

They are warranted correct in all their parts, - the manufacturer agreeing, in the event of any defect appearing after reasonable use, to repair or replace with a new and perfect instrument, promptly at his own cost, express charges included, or to refund the money and the express charges paid by the customer.

SEWING MACHINES.

The Noiseless Sewing Machines, by Willcox & Gibbs, are in operation in Section 6. The merits of these Maclines are stated in their Advertisement on page 21.

DRAIN PIPE.

In Section 5, back of the catalogue office, can be seen specimens of the New England Drain Pipe Company, contributed by Benjamin Noyes, the agent, 22 State street. Contractors, Dealers, Farmers and others interested in land drainage, will examine the land tile. It is the only perfect land drain in the country. Mr. Noyes also exhibits Fire Kindlings, the best in use.

PATENT ICE-CREAM SERVER.

A very excellent article for serving Ice Cream. Just the thing for Dinner or Supper Parties. Highly reccommended for its simplicity and utility. In fact, it is the only thing of the kind that will save all trouble and awkwardness. Invented by Jorge Oyarzabal, box 5,005 P. O., Boston, and exhibited in Section 6.

PATENT RUBBER-LINED HORSE COLLARS AND PADS.

Manufactured by the American Horse Collar Co., 100 Milk street, exhibited in Sec. 4. Their great superiority over all others consists in the superior workmanship, and from the fact that they are a sure cure and preventive of galling. Call and examine.

A WONDERFUL PRODUCTION.

One of the most interesting features of the Exhibition is to be seen in the articles contributed by the UNION STONE COMPANY, 32 Pemberton Square, Boston.

The Visitor sees some very handsome specimens of Mantel Pieces, Table Tops, Soapstone Sinks in solid forms, Building Stones, Bricks, Tiles, etc. Well, if the visitor be a careless observer, perhaps he gives them a passing glance, and passes on. But these beautiful articles are MANUFACTURED STONE, not wrought, being made and [moulded 'as clay in the hands of the potter."

The Company are introducing their various productions, as a new article of manufacture. The further information of this most interesting subject.

MANUFACTURERS

Of every description of merchandise, desirons of securing sales in the most direct and expeditious manner, should get their patterns photographed. These pictorial illustrations placed in the hands of agents, or sent through the mails, will tell their own story more effectually than volumes of manuscript, and save threefold their cost in travelling expenses. Mr. Loomis,7 Tremont Row, has been remarkably successful in this branch of business. Samples of his productions may be seen on exhibition in Alcove 10, Section 2.

S. T. SANBORN & CO.

Show sample of STEAM & GAS PIPE and BRASS WORK manufactured by them at their factory at East Boston. The fact that an article of merchandise is manufactured in New England is generally a good guarantee for its superior quality; and, after an experience of twenty years in their line of goods, very fine specimens are produced by this firm. S. T. S. & Co., being the pioneers in manufacturing Wroughtiron Pipe in Massachusetts, and still holding the field alone for Boston, and for twenty-five miles outside of Boston, would seem to be entitled to the very generous patronage they are receiving from those in want of their goods. Those who desire to purchase of the manufacturer will do well to remember the above firm, 113 Milk Street.

PLUMBING WORK.

We observe in Section 5 some fine specimens of materials for plumbing work from the well-known establishment of William Mills & Co., 28 and 30 Congress Street. They exhibit as a specialty seamless brass tubes, with fittings adapted for plumbing work, now being extensively used in this vicinity, and found to be far superior to any other materials in use.

IMPROVEMENT.

We have at 137 Congress Street, Boston, the largest manufactory of Trimmings used for Hanging Window Blinds, and of the material used in the putting together and glazing Sash, also material for the manufacture of Doors and Blinds, IN THIS OR ANY OTHER COUNTRY.

When a business grows to a magnitude far exceeding others in same line, improvement in quality and style will be found, as well as greater economy in the manufacture. The proprietor of WASHBURN'S MANUFAC-TORY OF BLIND AND SASH MAKERS' SUPPLIES claims that improved machinery and advantages in purchasing stock enable him to sell better goods at prices often below cost to his competitors.

No one interested in having the best Hinges and Fastenings for Blinds should fail to examine the goods made at this manufactory (to be displayed in this hall). Builders and mechanics are also invited to examine THE ZINC SHINGLE, pronounced the best method for covering roofs or sides of buildings in the world. Manufactured exclusively by Washburn, 137 Congress Street, Boston.

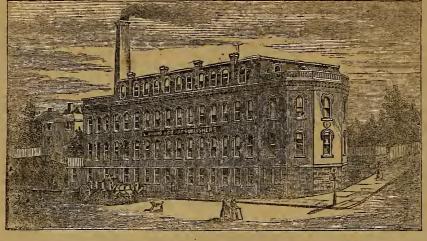

THE BEST SEWING MACHINE.

The Wheeler and Wilson Sewing Machine is the standard sewing machine of the world. Its simplicity, durability and adaptation to all kinds of material are a sufficient recommendation over other machines in the market. They have taken the HIGHEST PREMIUM at the principal fairs in this country and in Europe, and are considered by competent judges the VERY BEST MACHINE IN THE WORLD.

PICTURES FOR THE PEOPLE.

ART WORKSHOP. AN

If we should say that out in Roxbury a 20-horse-power Corliss engine was turning out oil-paintings at the rate of hundreds per day, the public would think that a modern Munchausen was writing for the BULLETIN; but when we say that such an engine is turning out pictures, so soft, so spirited and so accurately reproduced that the average observer cannot distinguish them from oil-paintings, we should be stating a simple fact. In the last Atlantic Monthly, Mr. Parton gave a long and very interesting account of the art of chromolithography, derived from an inspection of the works of Louis Prang & Co. Under his graphic and skilful handling chromo-lithography was made to assume its proper rank as an art; and, as such, -as a novel and important de-

L. PRANG & CO.'S FINE ART PUBLISHING HOUSE.

velopment of industrial science, which this paper regards as one of its peculiar fields, -it seems to demand a more than casual notice at our hands.

The works of Louis Prang & Co., of Boston, are the largest of their kind in the world, trebling in extent and facilities the largest chromo establishment in England. Whether chromo-lithographic painting be regarded as fine art or as mere mechanical aptness and skill, as some critics will have it, the possession of the principal studio or workshop in the world is something to boast of. And when it is remembered that this great establishment, running 45 printing presses and giving employment to 90 hands, has grown up virtually within six years, one experiences an excess of astonishment and pride. If chromo-lithography is not an art, it is in one sense better, since it goes where pure Art cannot go, and does a work in popular æsthetic culture which the latter could never accomplish.

Six years of success - success so full as to establish the merit of his work beyond a doubt, and to assure a market for all the chromo-lithographs he could possibly produce - having supplied the pecuniary wherewithal, Mr. Prang proceeded to carry out a long-cherished plan, in the erection of a factory adapted in all respects for his work, and which should afford facilities for supplying the rapidly increasing demand for his products. .This factory was completed last fall, and has now been in operation four or five months. It stands in Roxbury (now a part of Boston since its annexation), near the station of the Boston and Providence Railroad, a majn structure of brick, 80 by 34 feet, and three and one-half stories high, with French roof, and an addition at each end, 30 by 20 feet, and three stories, with flat roofs and balustrades. A screw elevator runs from basement to upper story, carrying passengers or freight as desired. At the left of the main entrance is a room which contains the very foundation of chromo-lithography, — the stones from which, covered with drawings, the finished pictures are produced. These stones all come from Bavaria, none having been found elsewhere so well fitted for this work. In this room the stones are ground, polished and grained, and brought to that peculiar condition which qualifies them to receive the drawings of the artist. Adjoining are the engine and boiler rooms, where a beautiful 20-horse-power Corliss does its noiseless task, and a hinge boiler of 60-horse-power supplies steam for heating and propulsion. Thence the visitor passes to the treasure-house of the establishment, a spacious fire-proof vault, where are carefully stored many tons of stones, from which chromos have been printed, and which constitute the wealth of the firm, as stereotype plates are the wealth of publishers.

Stepping on board the elevator the visitor is in a moment landed in the second story, and finds himself between two long rows of presses, all giving out a pleasant clatter. The room is 100 feet long and flooded with light. At the farther end is an apartment devoted to the use of the foreman of the printing-room. Here he can sit and through the glass partition watch the swift-moving presses and the busy figures of the pressmen, or, turning, treat his eyes to a charming outlook of trees and sky and pleasant honses. A dozen or more presses are driven by steam; others by hand-power. The process of printing seems to be the simplest thing in the world, as one sees it here; merely the adjustment of the stone on the press, the laying on of a sheet of paper, the turning of a crank and the removal of the sheet. But this work requires an apprenticeship of years; a slight inattention of a printer may spoil a stone and the whole edition of a picture. Everything in the press-room is neat and orderly, and the work goes on as if by clock-work.

One story higher from basement to upper story, carrying passengers or freight as desired. At

specimens of many of the chromos produced in the establishment. The upper story is used for the storage of stock, but the constant and heavy demands of the public have not permitted a fair test of its capacity. Here too is the finishing room, where the final touches of skilful hands fit the pictures for their frames; here they are mounted, sized and varnished.

It would be impossible, in the limits of an article like this, to convey a just idea of the process of chromo-lithography; but its most important steps may be briefly indicated.

The stone is first ground and polished or grained, as the character of the

drawing to be made on it requires; the drawing is next made; then follow the etching, proving, and preparing the plates for the press; next comes the printing, and lastly the finishing, mounting, sizing, etc. This is a comparatively brief catalogue of stages, and the inference would be natural that chromolithography is a very simple and easy process. But, when it is added that an artist is often engaged for months in the reproduction on stone of a single picture, that, in lithographing some nictures, more than thirty different stones have ture, that, in lithographing some pictures, more than thirty different stones have to be used, and that, throughout the whole work, a degree of skill—to say nothing of artistic genius, patience and care—is requisite such as is demanded in few other employments of the human brain and hands, it will be seen that such an inference is unwarranted.

Everybody knows what lithography is, or rather knows that it is the process of printing from stone; and chromos, such as are made almost exclusively at Prang & Co's establishment, are the reproduction of oil or water-color paintings by this process of chromo-lithography, which in its application to this end reaches in the hands of skilful artists the climax of its adaptability to artistic purposes. To produce such chromos requires conditions for success other than mere excellence of stone and material, and the perfection of the printer's skill; there is something more important than either or all of this. The hand that reproduces on the stone the painting to be copied must be that of a true artist. No dauber or botcher can do this work, which demands in him who does, it not merely manual skill and fine artistic vision, but a thorough understanding of and earnest sympathy with the purpose of the painter whose work is before him, strong powers of analysis and rare knowledge of colors. Few men possess these qualifications in the requisite degree; but that, of these few, Prang's establishment has its full share, is attested by the fidelity and general artistic excellence of his chromos.

sess these qualifications in the requisite degree; but that, of these few, Prang's establishment has its full share, is attested by the fidelity and general artistic excellence of his chromos.

Within six years Prang's chromo-lithographs have attained a popularity unprecedented in the history of Art. It is less than twenty years since the first chromos, from England and Germany, were brought to this country. Their circulation was very limited, owing to their high cost, and other reasons; but to-day there is hardly a person of moderate education who is not familiar with Prang's American chromos, and few families who do not possess one or more of them. Of a single picture, Tait's "Chickens," over 30,000 copies have been sold; and the "Barefoot Boy," published only a few months ago, the "Easter Morning," the "Reading Magdalen," and a dozen others, bid fair to become its rivals in popularity. These facts tend to disprove the common assertion that the mass of the people have no taste for or appreciation of art. It has not been a question of taste, but a question of money. Nine persons out of ten covet a fine painting, wherever they see one; but eight of the nine have not the means to gratify their longing. Mr. Prang has made possession an easy sequence of desire. For ten dollars the working man may glorify his house with one of Correggio's masterpieces; for the same sum he may delight his eyes and his soul with the harmonious richness of Bierstadt's "Sunset in California;" he may warm his patriotism and feed his ambition by contemplating "The Boyhood of Lincoln;" or he may renew his youth in gazing on the inimitable portrait of Whittier's "Barefoot Boy."

As an educator Mr. Prang deserves a high place in our annals. He has made "things of beauty," and put them within the attainment of the humblest; and the love of the beauiful, before dormant in many a soul, has been aronsed by his works to an activity which clothes the whole world in brighter hues, and makes life itself a poem. — Commercial Bulletin.

**Prang's Chr

 \hfill Prang's Chromos are sold in all the principal Λrt and Picture Stores throughout the United States.

throughout the United States.

They are for sale in Boston, on Washington Street, by Messrs. Williams & Everett, L. A. Elliot, Dodge, Collier & Perkins, Jos. Ward & Son, Benj. Freuch & Co., and the American Tract Society; on Tremont Street by Messrs. A. A. Childs & Co., C. & G. H. Drew, and the Amer. S. S. Society; on Cornhill, by Messrs. H. A. Loring & Co., Henry Hoyt, D. Lothrop & Co., and M. Bargent; and on Court Street, by Messrs. J. & E. Hoch.

Prang's "Chromo Journal," issued quarterly, contains a complete descriptive catalogue of our Chromos, with special information about the art. Specimen copies of the "Journal" sent to any address on receipt of stamp.

L. PRANG & CO., Boston.

CAFÉ IN FANEUIL HALL.

Mr. Weber, the well-known Confectioner of Temple Place, has a commodious room, up one flight, to the right from the bridge entrance. Ice creams, coffee, or a substantial repast, are here available to visitors; and they cannot do better, before crossing the bridge ("no re-crossing the bridge"), than to pause a while for refreshments in Weber's cafe.

Mr. Weber exhibits a bouquet manufactured of sugar, which is a remarkable specimen of artistic skill.

CLOTH PRINTING.

seen in Section 2, Alcove 10, from the well-known firm attachment is warranted to give entire satisfaction. ment in the country, and the first in this line of busi- of Section 6. ness in the United States. Manufacturers and Merchants interested in printing, sponging and finishing cloth, will do well to examine. Their place of business is 23 and 25 Morton Place.

SEWING MACHINES.

Our readers who are interested in Sewing Machines should not fail to see the Folsom Sewing Machine. It has all the requisites of a family machine, being well made, tastefully ornamented, simple in its construction, run easily, and is noiseless. The last item will be appreciated by every one. The various attachments for hemming, tucking, braiding, &c., are included with every machine, and the whole is sold for one-half the usual price of other machines. These who cannot examine it thoroughly at the fair should call at the office of the General Agents, 106 Tremont street, where it will be shown with pleasure.

NURSING BOTTLE.

On the right, in Section 6, can be seen Burr's Patent Nursing Bottle, contributed by Messrs. Burr & Perry, wholesale druggists, 26 Tremont street. It is the most perfect and convenient nursing bottle in the world. The value of this bottle can be fully known only to mothers, who understand better than others how delicate are the influences that affect the health of their infants. Many means have been devised, and a great variety of Nursing Bottles have been invented with more or less objectionable features. Burr's Patent is perfect in all its parts, and is the one that will supersede all others. It is made of the best materials, and is free from all metallic substances. It is superior to all others. Mothers, besure to see it, and examine its perfect mechanical construction.

MESSRS. NEWELL HARDING & CO.,

The well-known Boston silversmiths of the last halfcentury, offer a splendid assortment of fine manufactures in their line, at their new location, 35 School street. The established reputation of this house ensures to the customer reliable goods in dealing directly with the manufacturer.

STEREOSCOPES AND VIEWS.

A very important specialty of the fancy goods business of Mr. Joseph L. Bates, at 129 Washington Street. is the department of Stereoscopes and Stereographs. His collection is unequalled, and enlarges daily with all important additions. The Holmes Stereoscope, introduced and improved by Mr. Bates, supplies, at a very low cost, the means of viewing the famous sights of all travelled lands, at one's own parlor table, in the quiet and comfort of home. Can any family well dispense with this agreeable diversion?

"THE HALL TREADLE ATTACHMENT"

For the Sewing Machine will commend itself to the appreciative judgment of the public as a labor-saving and health-preserving invention. An ordinary sewing-machine requires one hundred and fifty movements of the foot a minute to make six hundred stitches, but by the use of "the Hall Treadle Attachment" with thirty movements of the foot a minute the machine can make sixty or twelve hundred stitches, as the case may require. The rate of speed is not regulated by the number of movements of the foot, but by the strength of each movement. This attachment can be applied to all sewing machines now in use by manufacturers and families, at a cost of ten dollars. It is also applicable to all other Samples of cloth printing and sponging can be kinds of machinery worked by foot-power. Every of J. J. BERKMAIER & BURNS, proprietors of the Frank Tripp, proprietor, Nos. 70 Milk street and 75 Boston Print works. This is the oldest establish- Congress street, Boston. To be seen in the Gallery

THE BICKFORD KNITTING MACHINE,

On exhibition in Section 6, Gallery, attracts considerable attention. Every description of knitting, plain or fancy, is done to perfection with the greatest ease and rapidity. The price is so reasonable as to place it within the reach of every family, and it will be found a very economical investment. For particulars THE UNIVERSAL DRILLING AND BORING see advertisement, page 37.

Special attention is called to the display of clocks and chronometers contributed by William Bond & Son, 17 Congress street. Owners of vessels, and all others interested in chronometers, will do well to examine. William Bond & Son are the oldest manufacturers in the country, and makers to the U.S. Government.

The boys' clothing, on exhibition at Faneuil Hall, by Geo. W. Carnes & Co., 43 and 45 Summer street, will bear the closest inspection. The work is of a superior order, and indicates what may be produced by them at any time, their facilities for manufacturing nice work not being equalled by any other house.

BOOTS.

In Section 3 may be found a very elegant display of what are termed "Perfect Fitting Boots," manufactured and contributed by William Leathe & Co., of Woburn, Mass. The novelty of these bootsand it is a recently patented invention - consists of a combination of the various styles of fastening in vogue, in such a manner that a perfect, and at the same time an easy, fit is secured, while the foot is in motion or while it is stationary. The specimens shown are for Ladies' wear and are of very fine workmanship, but the device is equally applicable to those for Misses' or Children's wear, and also to Men's boots of the gaiter pattern. They need only be seen to find favor.

BOOK-LETTERING, BADGES, ETC.

MR. WILLIAM P. CHASE, of 49 Washington Street, Boston, exhibits some fine specimens of gilding and stamping, in Binders' work and badges, in Section 6.

WILLIAM DOOGUE, FLORIST,

Has extensive greenhouses in the city, opening on Floral Place, at 679 Washington Street. He fills many orders from other cities and places, for bridal and other occasions. A superb Monogram in Flowers, supplied by Mr. Doogue, recently decorated a fashionable wedding in Providence.

WHEELER'S PATENT ANTI-SNOWBALL PAD.

The attention of horse-owners and others interested in the comfort and safety of horses, is respectfully invited to the Patent Snow Pad contributed by Chas. L Wheeler, 3 Custom-house street. Samples can be seen on exhibition in Section 4. The pad must be seen to be appreciated. If you own a horse, don't fail to see the pad.

BURR & PERRY, the famous Druggists, contribute a case of Dr. Warron's Bilious Bitters. It is in Section 6, on the right. If the contents of the bottles are as pleasing to the stomach as the labels on the outside are to the eye, we would certainly indulge if we felt bilious. Messrs. Burr and Perry, the selling agents, propose to make the bilious happy.

Among the noticeable articles in the rotunda (Section 6) is a case of Masonic jewels, manufactured by GUILD & DELANO, No. 2 Winter street, Boston. They have devoted special attention to this branch of their business of late years, and some of the finest jewels now in use in this and other cities were made by them. We would call special attention of visitors, to jewels on exhibition made for the Grand Lodges of Massachusetts and New Hampshire.

MACIHNE.

This valuable piece of mechanism can be seen on exhibition in Section 8. Workers of Iron and Wood will do well to examine. It will do more work and better work with less labor than any machine in the market. E. M. Montague is the proprietor, - 55 Kilby street, Boston.

GLASS WINDOW PULLEY.

In Section 5, back of the catalogue office, can be seen the American Glass Window Pulley. This is the most simple pulley in use. It is made entirely of glass free from noise and will not rust. The Company's office is 56 Congress street.

THE SAMPSON SCALES.

in Section 5, have perhaps received as much attention as any articles in the Fair. Over 30,000 people have been weighed upon them. The Ten Tons Scale exhibited is finished in the most elegant manner; the weights, beam and appurtenances of the scale being all silver plated. This huge scale, with a platform of 14 feet by 8 feet, is so sensitive as to turn easily with a sheet of paper. This scale is constructed upon entirely new principles - having vertical levers only 9 inches in height and motionless knife edges. A similar scale is kept in operation at the warehouse of A. A. Frazer & Co., 116 Federal Street, Boston, agents for N. E. States and Canada-See advertisement on page 18.

BAILEY'S PATENT INPROVED SWITCH,

For Street Railroads. The best and most practical ever invented. Saves labor. Works perfectly. Exhibited in Section 6. Rights for sale at 11 School

IMPROVED PEGGING MACHINE.

Chas. Varney, of East Brimfield, Mass., exhibits a very handsome machine for pegging boots and shoes. It is adapted to all kinds of work, and is easily adjusted to peg from four to eight to the inch, and any distance from the edge. The machine is in Section 7, where Mr. Varney, or his assistant, will be in attendance to show it. His office in Boston is 85 Kilby street.

FURNACES.

LARRABEE BROS. & Co, of 15 and 17 Court street, have on exhibition in Section 3 the Self-Feeding and Base-Burning Furnace. The Henderson Furnace, although comparatively new to this market, is fast becoming the popular one of the day. The principle upon which it is based having received the acknowledgment of all the leading manufacturers, by their adoption of it in stoves, confirms entirely the nature and worth of the improvement. The letters-patent on the furnace serve as a safeguard against the principle being applied to furnaces generally.

Parties intending to purchase, or interested in the subject of heating, will do well to give Messrs. Larrabee Bros. & Co. a call. The sample in the Fair is on the left after you cross the bridge.

MESSRS. CROSBY, MORSE AND FOSS,

Jewellers and Silversmiths, No. 240 Washington Street, Boston, have on exhibition in Section 6 (left side), a showcase of their Silver Ware, most excellent in design and workmanship. This firm have the merit of being the only American firm to engage successfully in the cutting of diamonds; and for specimens of their skill in this branch of their art they received a Gold Medal at the last Exhibition, They invite the public to visit the "Pompeian Room," at their place of business, and examine their stock of the celebrated "Gorham Ware," and other silver manufactures. Their assortment of fine Watches Jewelry, etc., is also very large, and of the best; and purchasers cannot fail to be pleased, and reliably served; at this leading jewelry establishment.

WAX-THREAD SEWING MACHINES.

Wm. Butterfield exhibits the Improved Wax-Thread Sewing Machines. There are three grades of these celebrated Machines, -A, B and C. A is for stitching goat, kid, morocco, and light calf shoe work. B is for boot and shoe manufacturers' use, and for all purposes, especially heavy harness or boot work. C is for siding boots, stitching counters, straps, etc. harnesses, military equipments, etc. These machines are superior to any in the market, made of the best materials, perfect in construction and not liable to get out of order.

Mr. Butterfield also exhibits the New Era Pegging Machine. This is the only perfect pegging machine in the market. It is capable of pegging in the channel, and will make stronger and more durable work than can be made by hand. This wonderful machine will peg 800 pairs of shoes per day. Just think what one of these machines is capable of doing: 800 pairs per day, three hundred working days to the year, would give a total of 240,000 pairs for a year's work, more than enough to shoe all the people in Boston!

Another noticeable machine is the Patent Eyeleting Machine, exhibited by the same firm. This machine will set any sized eyelet; it is adapted in a moment to the eyelet to be used; it is very rapid and simple, and will not get out of order. Mr. Butterfield's place of business is 26 Pearl street, where the most perfect boot and shoe machinery, of all kinds, can be seen, comprising rolling, splitting, stripping, sole cutting, boot treeing, burnishing, and buffing machines, also cutters or dies of the best manufacture. In fact, Mr. Butterfield is the general boot and shoe machinery man of this market. In his stock can be found everything connected with boot and done, and shows that Mr. Andrén is master of his shoe manufacturing.

Parties interested in the manufacture of boots and shoes should not fail to see the machines in working order. They are in Section 7, on the left, where is field in every respect. they will be shown with pleasure.

THE BRIDGE

Between Faneuil and Quincy Halls was designed and built under the direction of Mr. E. H. Hewins, Constructing Engineer, 32 Washington street, Bos-

MEDICATED CARBOLA AND MINERAL PAINT

Is a medicinal combination, and is one of the many excellent results of modern Chemistry, and is of very great sanitary value. This preparation is intended to be used internally as well as externally, and is commended for Neuralgia, Nerve-ache, Inflammatory and Chronic Rheumatism, Pains in the Side, Breast and Back; also for Inflammation of the Bowels, Contraction of the Cords and Muscles, Chilblains, Cold and Benumbed Limbs, Conghs, Colds, Burns, Mosquito Bites, Nervous Headache, Sleeplessness, Salt Rheum, Tetter, Ringworm, and Sores of every description, and, in cases of exhaustion from heat or fatigue, it will be found of inestimable value. Although but recently discovered, it is daily achieving new victories, and making giant strides in public favor. Its value as a remedial agent is not only endorsed by analytical chemists of distinction, but by our leading medical men. It is put up in pint and quart bottles at 50 and 75 cents each.

CARBOLATED CHEMICAL MINERAL PAINT.

This is made principally from the products of the ocean, and can be applied at about half the price of ordinary paints. It is more particularly adapted for roofing, making old shingles equal to new. It is invaluable for the bottoms of vessels, the component parts preventing the adhering of barnacles and other shell-fish to the bottoms of vessels.

These articles are exhibited by James Gould, Esq., 101 State street. They are in Section 4, on the left.

FLORENCE SEWING MACHINE CO.

In Section 6, rotunda, can be seen very fine specimens of Sewing Machines contributed by Foster & Richardson, General New England Agents, 144 Washington street. The object of this Company is to offer to the public a sewing machine that is perfect in its mechanical construction, combining in the highest degree simplicity and durability. The Florence makes four different stitches with as much ease as ordinary machines make one, the stitch being the same on both sides. The Florence possesses many advantages over other machines; a careful examination will satisfy that it is the best sewing machine in the world. The Florences warrant every machine. and give a written warranty, if required. Parties about to purchase will do well to examine.

Reliable insurance is a question affecting the interests of every property owner, and in that connection we would call the attention of our readers to the advertisement of Edwin B. Dorr & Co., on page 10. These gentlemen have a large experience in placing fire insurance on factories, mills, and other good property in the best offices in New England, at fair rates, irrespective of the local tariffs; and parties making application to them can have their risks personally examined by them, and rates made in accordance with the hazard. Merchants and manufacturers would consult their best interests by corresponding with or calling upon these gentlemen at No. 19 Kilby street, Boston.

MECHANICAL DRAWING.

We notice in Section 6, on lower floor, left hand wall, a splendid Locomotive Engine Drawing, executed by Alban Andrén, Engineer and Draughtsman, of 61 Water street, Boston. The work is handsomely profession. We would advise Inventors and Machinists in want of Designing and Mechanical Drawings to call on Mr. Andrén, where they are sure to be sat-

SHOW-CARDS AND FANCY LETTERING.

MR. A. S. COMEE, at 951 Washington Street, executes this description of work very tastily and written cards. Many contributors will want his services.

BRIGGSS' SECRETARY AND BUREAU BED-STEADS.

In preparing a former edition for the press, the name of the inventor of these useful artieles (No. 2161) was accidentally omitted. Mrs. M. G. Briggs, a lady who has evidently made good use of her inventive genius, has here two very desirable forms of articles of ordinary use, transformed by cunning hands into luxurious comforts. Mrs. Briggs is in daily attendance in Section 1, where she will be happy to explain to the numerous patrons of the Fair her ingenious invention.

Joseph H. Adams, Solicitor of American and Foreign Patents, having been appointed by the Commissioner of Patents to prepare the annual Patent Office Reports, will necessarily be absent from Boston a great portion of the time.

During his absence the business of the office will be conducted by Carroll D. Wright, who is entirely familiar with the duties appertaining to patents.

On and after the first day of October, 1869, the business of the above office will be carried on at No. 12 School street.

Inventors will find the office open at all times, where they will be at liberty to consult patent reports, and other books of reference peculiarly adapted to their wants.

We are pleased to be able to announce that Mr. M. S. G. Wilde, the able Mechanical Engineer and Draughtsman, so long connected with Mr. Adams, will continue to have charge of his particular depart-

Mr. Wright holds himself in readiness to undertake the management of all causes whatever connected with patents.

Particular attention given to prosecuting applications which have been rejected by the United States Patent Office.

This office is so well established that a list of references is unnecessary, but Mr. Wright will be pleased to furnish them when desired.

We would call your attention to our new turn-up toe, contributed by the Bullivant Boot, Shoe and Last Company. It is the best thing yet produced to prevent the wearing out of the toes of Children's Shoes, and will take the place of a copper tip, and be used when a copper tip would not be, as it does not detract from the beauty or style of the shoe. It can be used with success on all styles of boots and shoes. All information can be obtained and royalties purchased of the Secretary, Albert A. Pope, 47 Pearl street, Boston.

N. Berry & Sons, the well-known and long-established coffee and spice manufacturers, exhibit a very handsome case of pure coffees and spices. The case is well stocked, and shows what these gentlemen have in their store. It is the handsomest display of the kind in the fair, and well deserves public notice. Messrs. Berry & Sons' place of business is 28 Central street, where they will continue to deal out pure articles.

In Section 7, right side, can be seen Wiley's Patent Car Starter and Break. This patent is applicable to any car, particularly street cars, and will save threefourths of the starting power. John Wiley, proprietor, corner First and Granite streets, South Boston.

SAVE THE PIECES! GLUENE!

The best thing that we know of for mending Wood, Glass, Crockery, Earthenware, Bone, Ivory, Marble, or almost anything that needs mending, is GLUENE. It does not rquire heating, is easily applied, and always ready for use. It is impervious to water, and is not affected by heat or cold. Articles promptly. He also executes engraved, printed and mended by it will break sooner in any other place than in the mended part. It ought to be in every amily, workshop, store and office in the land.

GOULD'S UNION FERTILIZER AND WORM AND INSECT EXTERMINATOR.

These articles are in Section 4, on the left. Agriculturists, Market Gardeners, and others, should peruse the pamphlet issued by Mr. James Gould as to the merits of this extraordinary Fertilizer and Insect destroyer. It is, without doubt, the most economical concentrated Fertilizer in the world, as it gives better and fuller crops the second and third years after it has been used.

The easy and quick solubility of the Fertilizer causes it to be the most approved Fertilizer extant. It forces and sustains the crops, destroys all insects, acts at once on the soil, and imparts to it the substantial food so necessary for all vegetation. By its adoption poor land is enriched, and the consequence is, large crops are harvested.

It is not only valuable in its more intrinsic qualities, but its use introduces a very large element of ECONOMY IN LABOR, which cannot be computed at less than one-half of the entire cost of other manures. It is a recorded fact that few, if any fertilizers, have of late years done as much to increase the agricultural produce of various parts of this country as this Fertilizer. It has positively been proved that fruits and vegetables have not only grown larger, but much more plentiful and of finer flavor.

Practical tests and experiments have been made with it, and the benefit accrning from its use, proved highly satisfactory: hence there is a large demand for it. In fact, such is its superiority over other FERTILIZERS that it is in great request not only in New England, but in our Sister States; and so valuable a Fertilizer and Insect-destroyer is it KNOWN TO BE, that companies have been formed and are in full operation in New York, New Jersey, and more remote States, for the purpose of introducing it more fully to the Agricultural population, thereby increasing the usefulness of its great Fertilizing and Insect-destroying powers. It is truly for the interest of Farmers and others concerned to investigate the merits of this extraordinary and valuable Fertilizer and Insect-destroyer.

Mr. James Gould is the patentee and proprietor, 101 State street, Boston.

The Washburn Steam Pump, on exhibition in Section 8, is the only Steam Pump which has no exhaust steam. It has a "vacuum" upon the steam piston, being a condensing pump, and gives a hot feed.

FURNACES, RANGES AND STOVES.

We would call attention to Chilson's celebrated Furnaces, Ranges and Stoves, advertised on the front cover. His work stands unrivalled, being manufactured by himself, for strictly superior, first-class work, which shows for itself, at his warerooms, 99 and 101 Blackstone street, Boston.

MASSACHUSETTS CHARITABLE MECHANIC ASSOCIATION.

THE Board of Managers of the Eleventh Mechanics' Exhibition, now being held in this city, gave their customary entertainment last evening at the Revere House to the judges and leading contributors. A social hour was passed in the drawing rooms by some three hundred gentlemen, among whom were ex-Governor Washburn, Col. Marshall P. Wilder, Hon. Josiah Quincy; Past Presidents of the Association, Lincoln, Wightman and Stimson; Osmyn Brewster, Cyrus Wakefield, Seth Adams, and others. At nine o'clock a generous and elegant entertainment was served, the guests and others being ushered in under the direction of Mr. C. F. Austin, the Chief Marshall of the occasion. Before partaking, the company was welcomed by Mr. Jonas Fitch, President of the Association, in the following brief address:

Gentlemen: It is customary, at some time during the exhibition under the auspices of the Massachusetts Charitable Mechanic Association, for the Gov- England States. Rights for sale in all other States. 55 Devonshire Street, Boston, Mass.

ernment to recognize the ardnons labors of the Board of Judges in the performance of the duties entrusted to them, to invite them to meet together and to pass an hour or two in social converse, and also to partake with us of such entertainment as might seem appropriate. I am glad to welcome you, therefore, on this oecasion, and to thank you in behalf of the Association for your kind response to our invitation to act as our Committee of Examination. The duty is not always one of thanks, but I trust that on this occasion it has not proved altogether an unpleasant task. We are happy, also, to greet some of our contributors, to all of whom we are greatly indebted for the interest they have manifested in the success of our exhibition. The large number of new and important inventions not only shows that the inventive genius of our people has not diminished, but that such an exhibition as ours stimulates improvements of great value to all mankind. We are under many obligations to you, gentlemen, and we trust that the result of the exhibition may prove beneficial to you, and that it will tend to the promotion of the mechanic arts.

I am also happy to recognize the presence of a number of our friends who have accepted our invitation to be present. Among them are some of the past officers of our Association, who labored well in their day; some honorary members, who have done us good service; some well known in the councils of our State and city; our friends of the press, who have also had a kind word for us. To these and to all who honor us with their presence this evening I extend a cordial greeting.

A blessing was then asked by Rev. Dr. Manning, of the Old South Church. The tables, though severely attacked, were constantly replenished, and all efforts to impoverish the resources of the Revere House having failed, the President appointed Col. Albert J. Wright, Vice-President of the Association, Toastmaster of the evening. In a series of appropriate toasts he brought out the speakers, who made pithy and telling remarks. Ex-Governor Washburn, Mayor Shurtleff, Col. Wilder, Dr. George B. Loring, Hon. Richard Frothingham, Hon. A. K. P. Welch, Hon. L. J. Knowles, of Worcester, ex-Mayor Wightman and others, spoke during the evening. The levee was one of the most successful ever held by the Association. A band of music was present and discoursed very excellent selections.—Boston Journal, Oct. 8.

FINE POCKET BOOKS.

In Section 6, on the right side, is a fine display of pocket-books manufactured by John W. Hodgdon, 40 Kilby St., Boston. Mr. H. has in stock a large variety of these goods manufactured from Turkey Morocco, Russia, English and French calf; among which are some new styles and novelties, very attractive and meeting with a ready sale. He also makes to order pocket-books of any pattern. Those in want will do well to examine his stock before purchasing elsewhere.

WILLOW AND RATTAN WARE.

MESSRS. HARPER & Co., of the Fayal Store, 44 Temple Place, have a selection of these goods, such as Work, Flower and Fancy Baskets, Chairs, &c., from the finest material to the coarsest. A visit to their establishment will amply repay any one. See advertisement, page 60.

MILLER'S PATENT SOCKET JOINT WEATHER STRIP may be seen on exhibition in Section 4, under the "Weather Vanes." Competent judges pronounce it the strip. Just look at it! Manufactured at 49

PATENT

PERMUTATION LOCKS

Store and other Doors.

THE ONLY THING OF THE KIND IN THE WORLD!

500 to 50,000 CHANGES EACH.

ABSOLUTELY PROOF AGAINST

False, Skeleton,

Duplicate Keys, Which can be said of no other Lock

ever made for like purpose.

Equally as reliable for the purpose intended as is the best Bank Lock for a Bank.

TO BE HAD ONLY OF THE

U. S. LOCK COMPANY,

55 Devonshire Street, Boston, Mass.

THE TRAVELLER'S

A COMBINATION LOCK AND CHAIN FOR THE SAFETY AND CONVENIENCE OF TRAVELLERS.

NO KEY REQUIRED!

No Two in Nineteen Thousand Unlock by the same Combination.

Each Lock sold is accompanied with a Tab, giving the Combination by which it is Locked and Unlocked.

NO MORE LOST OR MISLAID BAGGAGE! NO MORE STOLEN CARPET SACKS! NO MORE COAT THIEVES!

The Traveller's Constant and Unfailing Friend!

Price, \$1.00 each. Sent to any address.

U. S. LOCK COMPANY, .. BOSTON, MASS.

COMBINATION PADLOCKS.

WITHOUT KEY OR KEYHOLE.

SUSCEPTIBLE OF 100,000 CHANGES EACH.

ADAPTED TO ALL PURPOSES WHERE A RELIA-BLE LOCK IS DESIRED.

Price, \$1.50 and \$3.00 each.

U. S. LOCK COMPANY,

THREE MORE ENTRIES.

1004 Tilton, McFarland Safe Man'f'g. Co., New York.
Iron and Steel Burglar-Proof Safe and
Model of same.

The Safe may be found on the Derrick Platform in So. Market st., and the Model in Section 6, right side, on floor next to gallery stairs.

1005 Augur & Burnap, Poughkeepsie, N. Y.

Patent Steel Buggy Gearing Side Spring;
and patent Eliptic Buggy Steel Gearing.

May be found in Section 4, right side, on floor.

1006 Octavius Cate, Boston.Cate's Patent Burglar-Proof Sash Lock.May be found in Section 5.

Robbins' Book Rest, on exhibition in Sec. 6, is just the thing needed by every person who reads,—especially by those ladies who wish to do some light work while reading; and it is just the thing to keep scholars from growing round shouldered. For sale by J. L. Hammett, 37 and 39 Brattle street, Boston.

A NEW IMPROVEMENT IN SAFES.

Visitors to the Fair who have had their attention called to a number of very excellent safes on exhibition have probably not yet seen the latest improvement in the celebrated safes of Tilton & McFarland.

The improvement consists in an arrangement by which far greater strength is given to the corners of the safe than in any yet made. Persons about purchasing would do well to call and see them at 110 Sudbury street, Boston.

WOODWARD & BROWN,

PIANO-FORTE

MANUFACTURERS,

No. 137 Washington street, BOSTON.

This firm received the FIRST PREMIUM for BEST SQUARE PIANO-FORTE in the Exhibition of 1853, when examination was made without knowing the makers of the instruments, and when all the principal manufacturers of Boston were represented. No entry has been made by the firm at any subsequent exhibition, but would be under a similar method of examination.

A. T. STEARNS,

Manufacturer of

PATENT WORKED GUTTERS, CONDUCTORS,

MOULDINGS, and BATTENS, For the Trade,

By Improved Patent Machines of my own manufacture, with rights to sell and to use for the United States and Territories.

These machines save much labor and stock in the manufacture of Wooden Gutters, which, wherever introduced, find an ever-increasing sale for nearly all kinds of buildings, and are the most desirable Gutters in use.

NOTE.

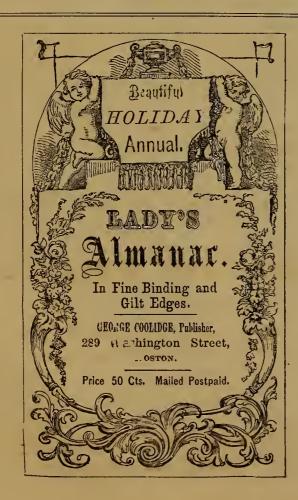

Diplomas will be given with the Medals named in the preceding list, certifying for what the awards are made.

The preparation of the Diplomas will require about four weeks time.

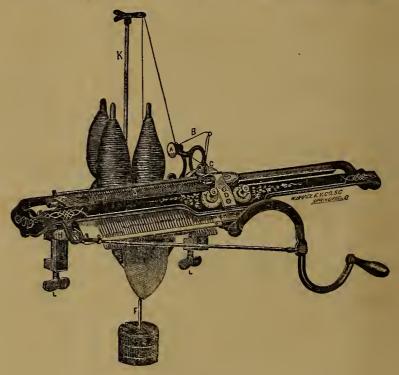

When ready, they will be delivered with the medals, at Mechanics Hall, corner of Bedford and Chauncy Streets.

Due notice will be given to the parties interested.

The reports of the Judges will be printed in a pamphlet form and ready for distribution early in December.
