Dissolve 10.0 g in 100 mL of *water R*, add 100 mL of *ethanol (96 per cent) R* and shake the solution with 3 quantities, each of 50 mL, of *light petroleum R*, adding *sodium chloride R*, if necessary, to promote separation of the 2 layers. Wash the combined organic layers with 3 quantities, each of 50 mL, of *water R*, dry over *anhydrous sodium sulfate R*, filter and evaporate on a water-bath until the solvent has evaporated. Heat the residue at 105 °C for 30 min and cool. The residue weighs a maximum of 0.4 g.

**Sodium chloride and sodium sulfate**: maximum 8.0 per cent for the total percentage content.

*Sodium chloride*. Dissolve 5.00 g in 50 mL of *water R*, add *dilute nitric acid R* dropwise, if necessary, until the solution is neutral, and add 5.0 mL of a 5.84 g/L solution of *sodium chloride R*. Titrate with *0.1 M silver nitrate* using 0.1 mL of a 2 g/L solution of *sodium fluoresceinate R* as indicator, to the first appearance of turbidity with solution colour change from yellowish-green to orange through to yellow. Perform a blank determination.

1 mL of *0.1 M silver nitrate* is equivalent to 5.844 mg of NaCl.

*Sodium sulfate*. Dissolve 1.00 g in 10 mL of *water R*, add 100 mL of *ethanol (96 per cent) R* and heat at a temperature just below the boiling point for 2 h. Filter while hot through a glass filter with a porosity of 5-10 µm and wash with 100 mL of boiling *ethanol (96 per cent) R*. Dissolve the precipitate by washing with 150 mL of *water R*, collecting the washings in a beaker. Add 10 mL of *dilute hydrochloric acid R*, heat to boiling, add 25 mL of a 120 g/L solution of *barium chloride R* and allow to stand overnight. Collect the precipitate and wash with *water R* until the last washing shows no opalescence with *0.1 M silver nitrate*. Dry the precipitate, ignite to constant mass at 500-600 °C by raising the temperature gradually, and weigh as barium sulfate.

1 mg of barium sulfate is equivalent to 0.609 mg of $Na_2SO_4$.

ASSAY

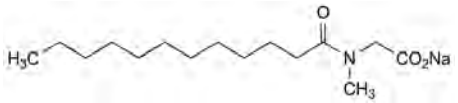
Dissolve 1.50 g in *water R*, warming if necessary, and dilute to 1.0 L with the same solvent. To 10.0 mL of the solution add 15 mL of *methylene chloride R*, 20 mL of *water R* and 25 mL of *methylene blue solution R*. Titrate with *0.004 M benzethonium chloride*, shaking vigorously and allowing the layers to separate before each addition, until almost the same blue colour is obtained in the 2 layers.

1 mL of *0.004 M benzethonium chloride* is equivalent to 1.154 mg of sodium alkyl sulfates, expressed as $C_{12}H_{25}NaO_4S$.

**04/2016:2542**

# SODIUM LAUROYLSARCOSINATE FOR EXTERNAL USE

## Natrii lauroylsarcosinas ad usum externum



$C_{15}H_{28}NNaO_3$ $M_r$ 293.4
[137-16-6]

DEFINITION

Mixture of sodium *N*-acyl-*N*-methylglycinates, mainly consisting of sodium *N*-lauroyl-*N*-methylglycinate (sodium [dodecanoyl(methyl)amino]acetate).

A suitable chelating agent (e.g. edetic acid (EDTA)) may be added.

PRODUCTION

Sodium lauroylsarcosinate is typically obtained using the reaction of lauroyl chloride with sodium sarcosinate (sodium *N*-methylglycinate) under aqueous alkaline conditions.

The production method is validated to ensure a limit of maximum 0.1 per cent of free sodium sarcosinate.

CHARACTERS

*Appearance*: white or almost white powder.

*Solubility*: freely soluble in water giving a clear or slightly turbid solution, sparingly soluble in ethanol 96 per cent.

mp: about 145 °C.

IDENTIFICATION

A. Dissolve 0.1 g in 10 mL of *water R* and shake. Copious foam is formed.

B. Examine the chromatograms obtained in the test for composition of fatty acids.

*Results*: the principal peak in the chromatogram obtained with test solution (b) is similar in retention time and size to the principal peak in the chromatogram obtained with reference solution (c).

C. Place 0.5 g in a silica crucible and ignite in a muffle furnace at 600 ± 25 °C for 1 h. Allow to cool to room temperature and dissolve the residue in 10 mL of *water R*. 0.5 mL of the solution obtained gives reaction (b) of sodium (*2.3.1*). Rub the inside of the tube to initiate the precipitation.

TESTS

**pH** (*2.2.3*): 7.5 to 8.5.

Dissolve 3.0 g in *carbon dioxide-free water R* and dilute to 100 mL with the same solvent.

**Composition of fatty acids**. Gas chromatography (*2.2.28*): use the normalisation procedure.

*Test solution (a)*. To 2.5 g in a 150 mL round-bottomed flask add 30.0 mL of *boron trifluoride-methanol solution R*, fit a reflux condenser and boil for 20 min. Add 120 mL of hot *water R* so that the upper layer is brought into the neck of the flask in order to recover the methyl esters. Dissolve 0.50 g of the methyl esters in 10.0 mL of *heptane R*.

*Test solution (b)*. Dilute 1.0 mL of test solution (a) to 10.0 mL with *heptane R*.

*Reference solution (a)*. Prepare 0.50 g of the mixture of calibrating substances with the composition described in Table 2542.-1, dissolve in *heptane R* and dilute to 50.0 mL with the same solvent.

*Reference solution (b)*. Dilute 1.0 mL of test solution (a) to 100.0 mL with *heptane R*. Dilute 1.0 mL of this solution to 10.0 mL with *heptane R*.

*Reference solution (c)*. To 0.5 g of *sodium lauroylsarcosinate CRS* in a 25 mL round-bottomed flask, add 6.0 mL of *boron trifluoride-methanol solution R*, fit a reflux condenser and boil for 20 min. Add 20.0 mL of hot *water R* so that the upper layer is brought into the neck of the flask in order to recover the methyl esters. Dissolve 0.25 g of the methyl esters in 50.0 mL of *heptane R*.

Table 2542.-1. – *Mixture of calibrating substances*

| Mixture of the following substances | Composition (per cent *m/m*) |
|---|---|
| *Methyl caproate R* | 10 |
| *Methyl caprylate R* | 10 |
| *Methyl decanoate R* | 20 |
| *Methyl laurate R* | 20 |
| *Methyl myristate R* | 40 |

*Column*:

– *material*: fused silica;

– *size*: *l* = 30 m, Ø = 0.25 mm;
– *stationary phase*: *macrogol 20 000 R* (film thickness 0.25 µm).

*Carrier gas*: *helium for chromatography R*.

*Split ratio*: 1:5.

*Temperature*:

| | Time (min) | Temperature (°C) |
|---|---|---|
| Column | 0 - 3 | 100 |
| | 3 - 13 | 100 → 200 |
| | 13 - 19 | 200 → 230 |
| | 19 - 29 | 230 |
| | 29 - 31 | 230 → 250 |
| | 31 - 40 | 250 |
| Injection port | | 250 |
| Detector | | 250 |

*Detection*: flame ionisation.

*Injection*: 1 µL.

*Identification of peaks*: use the chromatogram obtained with reference solution (a) to identify the peaks due to methyl caprylate, methyl decanoate, methyl laurate and methyl myristate.

*System suitability*:
– *resolution*: minimum 4.0 between the peaks due to methyl caprylate and methyl decanoate in the chromatogram obtained with reference solution (a);
– *signal-to-noise ratio*: minimum 20 for the peak due to methyl laurate in the chromatogram obtained with reference solution (b).

Disregard any peak eluting after the peak due to methyl myristate, as well as any peak with an area less than 0.05 per cent of the total area of the peaks used for quantification.

*Composition of the fatty-acid fraction of the substance*: test solution (a):
– *capric acid*: maximum 0.5 per cent;
– *lauric acid*: minimum 98.0 per cent;
– *myristic acid*: maximum 1.5 per cent.

**Sodium laurate**. Proceed as described in the test for composition of fatty acids with the following modifications.

*Internal standard*: *undecanoic acid R*.

*Test solution*. To 2.5 g in a 150 mL round-bottomed flask add 0.100 g of the internal standard. Add 30.0 mL of *boron trifluoride-methanol solution R*, fit a reflux condenser and boil for 20 min. Add 120 mL of hot *water R* so that the upper layer is brought into the neck of the flask in order to recover the methyl esters. Dissolve 0.50 g of the methyl esters in 10.0 mL of *heptane R*.

Calculate the percentage content of sodium laurate using the following expression:

$$\frac{A_1 \times m_2 \times 1.110 \times 100}{A_2 \times m_1}$$

$A_1$ = area of the peak due to methyl laurate in the chromatogram obtained with the test solution;

$A_2$ = area of the peak due to methyl undecanoate in the chromatogram obtained with the test solution;

$m_1$ = mass of the substance to be examined in the test solution, in grams;

$m_2$ = mass of the internal standard in the test solution, in grams;

1.110 = ratio of the molecular mass of sodium laurate to that of lauric acid (222/200).

*Limit*:
– *sodium laurate*: maximum 5.0 per cent.

**Sodium chloride**: maximum 0.5 per cent.

Dissolve 0.500 g in 50 mL of a mixture of equal volumes of *ethanol (96 per cent) R* and *water R*. Add 10 mL of *nitric acid R* and titrate with *0.005 M silver nitrate*, determining the end-point potentiometrically (*2.2.20*).

Calculate the percentage content of sodium chloride using the following expression:

$$\frac{M \times V \times 58.44}{m \times 10}$$

$M$ = molarity of the silver nitrate solution, in moles per litre;

$V$ = volume of *0.005 M silver nitrate* used, in mL;

$m$ = mass of the substance to be examined, in grams.

**Sodium sulfate**: maximum 1.5 per cent.

*Test solution*. In a 150 mL borosilicate-glass beaker, dissolve 0.3 g in 20 mL of *deionised distilled water R*. Add 0.3 mL of *naphtharson solution R1*, 1.0 mL of *perchloric acid R* and 70.0 mL of *2-propanol R*.

Degas the solution obtained under vacuum for 30 s or using an ultrasonic bath for 2 min, then titrate with *0.005 M barium perchlorate*.

Determine the end-point using a suitable autotitrator equipped with a photometric sensor at 523 nm and at 25 °C. Adjust the stirrer speed to avoid the formation of bubbles.

1 mL of *0.005 M barium perchlorate* is equivalent to 0.7102 mg of $Na_2SO_4$.

**01/2017:0849**

# SODIUM METABISULFITE

## Natrii metabisulfis

$Na_2S_2O_5$ $M_r$ 190.1
[7681-57-4]

DEFINITION

Sodium metabisulfite also called sodium disulfite.

*Content*: 95.0 per cent to 100.5 per cent.

CHARACTERS

*Appearance*: white or almost white, crystalline powder or colourless crystals.

*Solubility*: freely soluble in water, slightly soluble in ethanol (96 per cent).

IDENTIFICATION

A. pH (see Tests).
B. To 0.4 mL of *iodinated potassium iodide solution R* add 8 mL of *distilled water R* and 1 mL of solution S diluted 1 to 10 in *distilled water R*. The solution is colourless and gives reaction (a) of sulfates (*2.3.1*).
C. Solution S gives reaction (a) of sodium (*2.3.1*).

TESTS

**Solution S**. Dissolve 5.0 g in *carbon dioxide-free water R* prepared from *distilled water R* and dilute to 100 mL with the same solvent.

**Appearance of solution**. Solution S is clear (*2.2.1*) and colourless (*2.2.2, Method II*).

**pH** (*2.2.3*): 3.5 to 5.0 for solution S.

**Thiosulfates**. To 5 mL of solution S add 5 mL of *dilute hydrochloric acid R*. The solution remains clear (*2.2.1*) for at least 15 min.

**Arsenic** (*2.4.2, Method A*): maximum 5 ppm.

Mix 0.20 g with 2 mL of *water R* in a dish. Add, drop by drop, 1.5 mL of *nitric acid R*. Evaporate the mixture to dryness on a water-bath. Heat over a flame until no more vapour is evolved. Take up the residue in 25 mL of *water R*.

**Iron** (*2.4.9*): maximum 20 ppm, determined on solution S.

ASSAY

Dissolve 0.200 g in 50.0 mL of *0.05 M iodine* and add 5 mL of *dilute hydrochloric acid R*. Titrate the excess of iodine with *0.1 M sodium thiosulfate* using 1 mL of *starch solution R*, added towards the end of the titration, as indicator.

1 mL of *0.05 M iodine* is equivalent to 4.753 mg of $Na_2S_2O_5$.

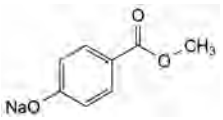
STORAGE

Protected from light.

**01/2017:1262**

# SODIUM METHYL PARAHYDROXYBENZOATE

## Methylis parahydroxybenzoas natricus



$C_8H_7NaO_3$ $M_r$ 174.1
[5026-62-0]

DEFINITION

Sodium 4-(methoxycarbonyl)phenolate.

*Content*: 95.0 per cent to 102.0 per cent (anhydrous substance).

CHARACTERS

*Appearance*: white or almost white, hygroscopic, crystalline powder.

*Solubility*: freely soluble in water, sparingly soluble in ethanol (96 per cent), practically insoluble in methylene chloride.

IDENTIFICATION

*First identification: B, D.*

*Second identification: A, C, D.*

A. Dissolve 0.5 g in 50 mL of *water R*. Immediately add 5 mL of *hydrochloric acid R1*. Filter and wash the precipitate with *water R*. Dry *in vacuo* at 80 °C for 2 h. The precipitate melts (*2.2.14*) at 125 °C to 128 °C.

B. Infrared absorption spectrophotometry (*2.2.24*).
*Preparation*: precipitate obtained in identification test A.
*Comparison*: *methyl parahydroxybenzoate CRS*.

C. Thin-layer chromatography (*2.2.27*).
*Test solution (a).* Dissolve 0.10 g of the substance to be examined in 10 mL of *water R*. Immediately add 2 mL of *hydrochloric acid R* and shake with 50 mL of *1,1-dimethylethyl methyl ether R*. Evaporate the upper layer to dryness and take up the residue with 10 mL of *acetone R*.
*Test solution (b).* Dilute 1 mL of test solution (a) to 10 mL with *acetone R*.
*Reference solution (a).* Dissolve 10 mg of *methyl parahydroxybenzoate CRS* in *acetone R* and dilute to 10 mL with the same solvent.
*Reference solution (b).* Dissolve 10 mg of *ethyl parahydroxybenzoate CRS* in 1 mL of test solution (a) and dilute to 10 mL with *acetone R*.
*Plate*: *TLC octadecylsilyl silica gel $F_{254}$ plate R*.
*Mobile phase*: *glacial acetic acid R*, *water R*, *methanol R* (1:30:70 *V/V/V*).
*Application*: 5 µL of test solution (b) and reference solutions (a) and (b).
*Development*: over 2/3 of the plate.
*Drying*: in air.
*Detection*: examine in ultraviolet light at 254 nm.
*System suitability*: reference solution (b):
– the chromatogram shows 2 clearly separated principal spots.
*Results*: the principal spot in the chromatogram obtained with test solution (b) is similar in position and size to the principal spot in the chromatogram obtained with reference solution (a).

D. To 1 mL of solution S (see Tests) add 1 mL of *water R*. The solution gives reaction (a) of sodium (*2.3.1*).

TESTS

**Solution S**. Dissolve 5.0 g in *carbon dioxide-free water R* prepared from *distilled water R* and dilute to 50 mL with the same solvent.

**Appearance of solution**. Solution S examined immediately after preparation is clear (*2.2.1*) and not more intensely coloured than reference solution $BY_6$ (*2.2.2, Method II*).

**pH** (*2.2.3*). Dilute 1 mL of solution S to 100 mL with *carbon dioxide-free water R*. The pH of the solution is 9.5 to 10.5.

**Related substances**. Liquid chromatography (*2.2.29*).

*Test solution.* Dissolve 50.0 mg of the substance to be examined in 2.5 mL of *methanol R* and dilute to 50.0 mL with the mobile phase. Dilute 10.0 mL of the solution to 100.0 mL with the mobile phase.

*Reference solution (a).* Dissolve 5 mg of *4-hydroxybenzoic acid R* (impurity A) and 5 mg of the substance to be examined in the mobile phase and dilute to 100.0 mL with the mobile phase. Dilute 1.0 mL of the solution to 10.0 mL with the mobile phase.

*Reference solution (b).* Dissolve 50.0 mg of *methyl parahydroxybenzoate CRS* in 2.5 mL of *methanol R* and dilute to 50.0 mL with the mobile phase. Dilute 10.0 mL of the solution to 100.0 mL with the mobile phase.

*Reference solution (c).* Dilute 1.0 mL of the test solution to 20.0 mL with the mobile phase. Dilute 1.0 mL of this solution to 10.0 mL with the mobile phase.

*Column*:
– *size*: *l* = 0.15 m, Ø = 4.6 mm;
– *stationary phase*: *end-capped octadecylsilyl silica gel for chromatography R* (5 µm).

*Mobile phase*: 6.8 g/L solution of *potassium dihydrogen phosphate R*, *methanol R* (35:65 *V/V*).

*Flow rate*: 1.3 mL/min.

*Detection*: spectrophotometer at 272 nm.

*Injection*: 10 µL of the test solution and reference solutions (a) and (c).

*Run time*: 5 times the retention time of methyl parahydroxybenzoate.

*Relative retention* with reference to methyl parahydroxybenzoate (retention time = about 2.3 min): impurity A = about 0.6.

*System suitability*: reference solution (a):
– *resolution*: minimum 2.0 between the peaks due to impurity A and methyl parahydroxybenzoate.

*Limits*:

- *correction factor*: for the calculation of content, multiply the peak area of impurity A by 1.4;
- *impurity A*: not more than 6 times the area of the principal peak in the chromatogram obtained with reference solution (c) (3.0 per cent);
- *unspecified impurities*: for each impurity, not more than the area of the principal peak in the chromatogram obtained with reference solution (c) (0.5 per cent);
- *sum of impurities other than A*: not more than twice the area of the principal peak in the chromatogram obtained with reference solution (c) (1.0 per cent);
- *disregard limit*: 0.2 times the area of the principal peak in the chromatogram obtained with reference solution (c) (0.1 per cent).

**Chlorides** (*2.4.4*): maximum 350 ppm.

To 10 mL of solution S, add 30 mL of *water R* and 1 mL of *nitric acid R* and dilute to 50 mL with *water R*. Shake and filter. Dilute 10 mL of the filtrate to 15 mL with *water R*. Prepare the standard using 14 mL of *chloride standard solution (5 ppm Cl) R* to which 1 mL of *water R* has been added.

**Sulfates** (*2.4.13*): maximum 300 ppm.

To 25 mL of solution S, add 5 mL of *distilled water R* and 10 mL of *hydrochloric acid R* and dilute to 50 mL with *distilled water R*. Shake and filter. Dilute 10 mL of the filtrate to 15 mL with *distilled water R*.

**Water** (*2.5.12*): maximum 5.0 per cent, determined on 0.500 g.

ASSAY

Liquid chromatography (*2.2.29*) as described in the test for related substances with the following modification.

*Injection*: test solution and reference solution (b).

Calculate the percentage content of $C_8H_7NaO_3$ using the declared content of *methyl parahydroxybenzoate CRS* and multiplying by a correction factor of 1.145.

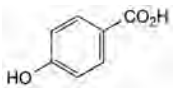
STORAGE

In an airtight container.

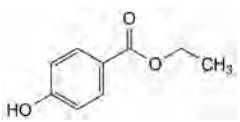
IMPURITIES

*Specified impurities: A.*

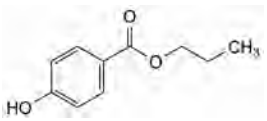
*Other detectable impurities* (the following substances would, if present at a sufficient level, be detected by one or other of the tests in the monograph. They are limited by the general acceptance criterion for other/unspecified impurities and/or by the general monograph *Substances for pharmaceutical use (2034)*. It is therefore not necessary to identify these impurities for demonstration of compliance. See also *5.10. Control of impurities in substances for pharmaceutical use*): *B, C, D.*



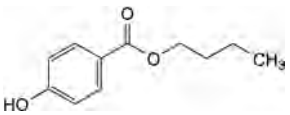
A. 4-hydroxybenzoic acid,



B. ethyl 4-hydroxybenzoate (ethyl parahydroxybenzoate),



C. propyl 4-hydroxybenzoate (propyl parahydroxybenzoate),



D. butyl 4-hydroxybenzoate (butyl parahydroxybenzoate).

**04/2019:1565**

# SODIUM MOLYBDATE DIHYDRATE

## Natrii molybdas dihydricus

$MoNa_2O_4,2H_2O$ $M_r$ 241.9
[10102-40-6]

DEFINITION

*Content*: 98.0 per cent to 100.5 per cent (dried substance).

CHARACTERS

*Appearance*: white or almost white powder or colourless crystals.

*Solubility*: freely soluble in water.

IDENTIFICATION

A. Loss on drying (see Tests).

B. Dissolve 0.2 g in 5 mL of a mixture of equal volumes of *nitric acid R* and *water R* and add 0.1 g of *ammonium chloride R*. Add 0.3 mL of *disodium hydrogen phosphate solution R* and heat slowly at 50-60 °C. A yellow precipitate is formed.

C. Dissolve 0.15 g in 2 mL of *water R*. The solution gives reaction (a) of sodium (*2.3.1*).

TESTS

**Solution S**. Dissolve 5.0 g in *water R* and dilute to 50 mL with the same solvent.

**Appearance of solution**. Solution S is clear (*2.2.1*) and colourless (*2.2.2, Method II*).

**Chlorides**: maximum 50 ppm.

To 10 mL of a mixture of equal volumes of *nitric acid R* and *water R* add 10 mL of solution S with shaking. Add 1 mL of *0.1 M silver nitrate*. Any opalescence in the solution is not more intense after 5 min than that of a standard solution prepared at the same time in the same manner with 10 mL of *chloride standard solution (5 ppm Cl) R*.

**Phosphates**: maximum 200 ppm.

Dissolve 2.0 g by heating in 13 mL of *water R*. In the still-hot solution, dissolve 8.0 g of *ammonium nitrate R1*. Add this solution to 27 mL of a mixture of equal volumes of *nitric acid R* and *water R*. Any yellow colour or opalescence in the solution is not more intense within 3 h than that in a standard solution prepared at the same time in the same manner as follows: dissolve 1.0 g in 12 mL of *water R* and add 1 mL of *phosphate standard solution (200 ppm $PO_4$) R*.

**Ammonium** (*2.4.1, Method B*): maximum 10 ppm, determined on 0.10 g.

Prepare the standard using 1 mL of *ammonium standard solution (1 ppm $NH_4$) R*.

**Loss on drying** (*2.2.32*): 14.0 per cent to 16.0 per cent, determined on 1.000 g by drying in an oven at 140 °C for 3 h.

ASSAY

Dissolve 0.100 g in 30 mL of *water R*, add 0.5 g of *hexamethylenetetramine R* and 0.1 mL of a 250 g/L solution of *nitric acid R*. Heat to 60 °C. Titrate with *0.05 M lead nitrate* using *4-(2-pyridylazo)resorcinol monosodium salt R* as indicator.

1 mL of *0.05 M lead nitrate* is equivalent to 10.30 mg of $MoNa_2O_4$.

**01/2017:1996**

# SODIUM NITRITE

## Natrii nitris

$NaNO_2$ $M_r$ 69.0
[7632-00-0]

DEFINITION

*Content*: 98.5 per cent to 100.5 per cent (dried substance).

CHARACTERS

*Appearance*: colourless crystals or mass or yellowish rods, hygroscopic.

*Solubility*: freely soluble in water, soluble in ethanol (96 per cent).

IDENTIFICATION

A. Dilute 1 mL of solution S1 (see Tests) to 25 mL with *water R*. To 0.1 mL of the solution add 1 mL of *sulfanilic acid solution R1*. Allow to stand for 2-3 min. Add 1 mL of *β-naphthol solution R* and 1 mL of *dilute sodium hydroxide solution R*. An intense red colour develops.

B. To 1 mL of the solution prepared for identification test A add 3 mL of a 20 g/L solution of *phenazone R* and 0.4 mL of *dilute sulfuric acid R*. An intense green colour develops.

C. To 0.15 mL of solution S1, add 0.35 mL of *water R*. The solution gives reaction (b) of sodium (*2.3.1*).

TESTS

**Solution S1**. Dissolve 2.5 g in *carbon dioxide-free water R* and dilute to 50 mL with the same solvent.

**Solution S2**. Dissolve 3 g in *distilled water R*. Cautiously add 10 mL of *nitric acid R* and evaporate to dryness. Dissolve the residue in 10 mL of *distilled water R*, neutralise with *dilute sodium hydroxide solution R* and dilute to 30 mL with *distilled water R*.

**Appearance of solution**. Solution S1 is clear (*2.2.1*) and not more intensely coloured than reference solution $B_6$ (*2.2.2, Method II*).

**Acidity or alkalinity**. To 10 mL of solution S1, add 0.05 mL of *phenol red solution R*. Add 0.1 mL of *0.01 M sodium hydroxide*. The solution is red. Add 0.3 mL of *0.01 M hydrochloric acid*. The solution is yellow.

**Chlorides** (*2.4.4*): maximum 50 ppm.

Dilute 10 mL of solution S2 to 15 mL with *water R*.

**Sulfates** (*2.4.13*): maximum 200 ppm.

Dilute 7.5 mL of solution S2 to 15 mL with *distilled water R*.

**Loss on drying** (*2.2.32*): maximum 1.0 per cent, determined on 1.000 g by drying *in vacuo*.

ASSAY

Dissolve 0.400 g in 100.0 mL of *water R*. Introduce 20.0 mL of the solution, while stirring continuously and keeping the tip of the pipette below the surface of the liquid, into a conical flask containing 30.0 mL of *0.1 M cerium sulfate*. Immediately stopper the flask and allow to stand for 2 min. Add 10 mL of a 200 g/L solution of *potassium iodide R* and 2 mL of *starch solution R*.

While stirring continuously, titrate with *0.1 M sodium thiosulfate* until the blue colour disappears. Carry out a blank titration.

1 mL of *0.1 M cerium sulfate* is equivalent to 3.45 mg of $NaNO_2$.

STORAGE

In an airtight container.

**01/2016:0565**

# SODIUM NITROPRUSSIDE

## Natrii nitroprussias

$Na_2[Fe(CN)_5(NO)],2H_2O$ $M_r$ 298.0
[13755-38-9]

DEFINITION

Sodium pentacyanonitrosylferrate (III) dihydrate.

*Content*: 99.0 per cent to 100.5 per cent (anhydrous substance).

CHARACTERS

*Appearance*: reddish-brown powder or crystals.

*Solubility*: freely soluble in water, slightly soluble in ethanol (96 per cent).

IDENTIFICATION

A. Ultraviolet and visible absorption spectrophotometry (*2.2.25*).

*Test solution*. Dissolve 0.700 g in *water R* and dilute to 100.0 mL with the same solvent. Examine the solution immediately after preparation.

*Spectral range*: 350-600 nm.

*Absorption maximum*: at 395 nm.

*Shoulder*: at about 510 nm.

*Absorption minimum*: at 370 nm.

*Specific absorbance at the absorption maximum*: 0.65 to 0.80.

B. Dissolve about 20 mg in 2 mL of *water R* and add 0.1 mL of *sodium sulfide solution R*. A deep violet-red colour is produced.

C. Dissolve 50 mg in 1 mL of *water R* and acidify the solution by the addition of *hydrochloric acid R*. Place a drop of the solution in an oxidising flame. A persistent yellow colour is produced.

TESTS

**Insoluble matter**: maximum 100 ppm.

Dissolve 10 g without heating in 50 mL of *water R*. Allow to stand for 30 min and filter through a sintered-glass filter (16) (*2.1.2*). Wash the filter with cold *water R* until the filtrate is colourless. Dry the residue on the filter at 105 °C. The residue weighs a maximum of 1 mg.

**Chlorides** (*2.4.4*): maximum 200 ppm.

In a metallic crucible (nickel) mix 1.0 g with 8 mL of a 200 g/L solution of *sodium hydroxide R*. Heat slowly and evaporate carefully to dryness over a small flame, then heat to a dull red colour for 30 min. Allow to cool and transfer the solid residue with 3 quantities, each of 8 mL, of *dilute sulfuric acid R*. Filter the sulfuric acid extracts on a filter paper and collect the filtrates. Render the filtrate acid to *blue litmus paper R* by adding, if necessary, a few drops of *dilute sulfuric acid R*. Wash the crucible and the filter paper with 3 quantities, each

of 10 mL, of *water R*, add the washings to the main sulfuric acid solution and dilute to 60 mL with *water R*. Mix.

**Ferricyanides**: maximum 200 ppm.

Dissolve 1.25 g in *acetate buffer solution pH 4.6 R* and dilute to 50.0 mL with the same buffer solution. Use three 50 mL volumetric flasks (*A, B, C*). To flask *B* add 1.0 mL of *ferricyanide standard solution (50 ppm $Fe(CN)_6$) R*. To flasks *A* and *B* add 1 mL of a 5 g/L solution of *ferrous ammonium sulfate R*. To the 3 flasks add 10.0 mL of the solution of the substance to be examined. Dilute the contents of each flask to 50.0 mL with *water R*. Allow to stand for 30 min. The absorbance (*2.2.25*) of the solution in flask *A* measured at 720 nm using the solution in flask *C* as the compensation liquid is not greater than the absorbance of the solution in flask *B* measured at 720 nm using the solution in flask *A* as the compensation liquid.

**Ferrocyanides**: maximum 200 ppm.

Dissolve 4.0 g in *water R* and dilute to 100.0 mL with the same solvent. Use three 50 mL volumetric flasks (*A*, *B*, *C*). To flask *B* add 2.0 mL of *ferrocyanide standard solution (100 ppm $Fe(CN)_6$) R*. To flasks *A* and *B* add 1 mL of *ferric chloride solution R2*. To the 3 flasks add 25.0 mL of the solution of the substance to be examined. Dilute the contents of each flask to 50.0 mL with *water R*. Allow to stand for 30 min. The absorbance (*2.2.25*) of the solution in flask *A* measured at 695 nm using the solution in flask *C* as the compensation liquid is not greater than the absorbance of the solution in flask *B* measured at 695 nm using the solution in flask *A* as the compensation liquid.

**Sulfates**: maximum 100 ppm.

*Test solution*. Dissolve 3.6 g in 120 mL of *distilled water R*, add with mixing 4 mL of *sulfate standard solution (10 ppm $SO_4$) R* and 20 mL of a 250 g/L solution of *cupric chloride R* and dilute to 150.0 mL with *distilled water R*. Allow to stand for 16 h and filter or centrifuge until a clear light-blue solution is obtained.

*Reference solution*. To 40 mL of *sulfate standard solution (10 ppm $SO_4$) R* add 80 mL of *distilled water R* and 12-13 mL of a 250 g/L solution of *cupric chloride R*. Dilute to 150.0 mL with *distilled water R*. The volume of cupric chloride solution added is such that the colour of the final solution matches that of the test solution.

Allow the solutions to stand. Filter both solutions, discarding the first 25 mL of filtrate. To 100 mL of each filtrate, add 0.5 mL of *acetic acid R*. Mix and add 2 mL of a 250 g/L solution of *barium chloride R* and mix again. The test solution is not more opalescent than the reference solution.

**Water** (*2.5.12*): 9.0 per cent to 15.0 per cent, determined on 0.250 g.

ASSAY

Dissolve 0.250 g in 100 mL of *water R* and add 0.1 mL of *dilute sulfuric acid R*. Titrate with *0.1 M silver nitrate*, determining the end-point potentiometrically (*2.2.20*).

1 mL of *0.1 M silver nitrate* is equivalent to 13.10 mg of $Na_2[Fe(CN)_5(NO)]$.

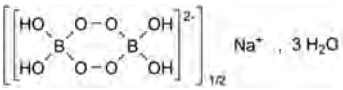
STORAGE

Protected from light.

**01/2017:1997**

# SODIUM PERBORATE, HYDRATED

## Natrii perboras hydricus



$NaBO_3,4H_2O$ or $NaBO_2,H_2O_2,3H_2O$ $M_r$ 153.9

DEFINITION

*Content*: 96.0 per cent to 103.0 per cent.

CHARACTERS

*Appearance*: colourless, prismatic crystals or white or almost white powder, stable in the crystalline form.

*Solubility*: sparingly soluble in water, with slow decomposition. It dissolves in dilute mineral acids.

IDENTIFICATION

A. Dissolve 20 mg in a mixture of 1 mL of *dilute sulfuric acid R* and 1 mL of *water R*. Add 1 mL of *potassium iodide solution R*. A reddish-brown colour appears.

B. The mixture obtained by treating about 100 mg with 0.1 mL of *sulfuric acid R* and 5 mL of *methanol R* burns with a greenish flame when ignited.

C. It gives reaction (a) of sodium (*2.3.1*).

TESTS

**Chlorides** (*2.4.4*): maximum 330 ppm.

Dissolve 0.15 g in 15 mL of *water R*.

**Sulfates** (*2.4.13*): maximum 1.2 per cent.

Dissolve 0.13 g in 150 mL of *distilled water R*.

**Iron** (*2.4.9*): maximum 20 ppm.

Dissolve 2.5 g in 10 mL of *dilute hydrochloric acid R* with heating, evaporate to dryness, with stirring, and dissolve the residue in 25 mL of hot *water R*. Dilute 5 mL of the obtained solution to 10 mL with *water R*.

ASSAY

Dissolve 0.300 g in 50.0 mL of *water R*. Dilute 10.0 mL of the solution to 50 mL with *water R* and add 10 mL of *dilute sulfuric acid R*. Titrate with *0.02 M potassium permanganate*.

1 mL of *0.02 M potassium permanganate* is equivalent to 7.693 mg of $NaH_8BO_7$.

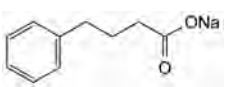
STORAGE

In an airtight container.

**01/2017:2183**
**corrected 10.0**

# SODIUM PHENYLBUTYRATE

## Natrii phenylbutyras



$C_{10}H_{11}NaO_2$ $M_r$ 186.2
[1716-12-7]

DEFINITION

Sodium 4-phenylbutanoate.

*Content*: 99.0 per cent to 101.0 per cent (anhydrous substance).

CHARACTERS

*Appearance*: white or yellowish-white powder.

*Solubility*: freely soluble in water and in methanol, practically insoluble in methylene chloride.

IDENTIFICATION

A. Infrared absorption spectrophotometry (*2.2.24*).
*Comparison*: *sodium phenylbutyrate CRS*.

B. Dissolve 0.15 g in 2 mL of *water R*. The solution gives reaction (a) of sodium (*2.3.1*).

TESTS

**pH** (*2.2.3*): 6.5 to 7.5.

Dissolve 0.20 g in *carbon dioxide-free water R* and dilute to 10 mL with the same solvent.

**Impurity C**. Gas chromatography (*2.2.28*).

*Silylation solution*. To 2 mL of *N,O-bis(trimethylsilyl)trifluoroacetamide R* add 0.04 mL of *chlorotrimethylsilane R* and mix.

*Test solution*. Dissolve 50.0 mg of the substance to be examined in 3 mL of *water R* and add 0.5 mL of *hydrochloric acid R*. Extract with 2 quantities, each of 5 mL, of *methylene chloride R*. Evaporate the combined methylene chloride extracts to dryness in a vial with a screw cap and add 0.5 mL of the silylation solution. Seal the vial and heat at 70 ± 5 °C for 20 min.

*Reference solution (a)*. Dissolve 5.0 mg of *sodium phenylbutyrate impurity C CRS* in *methylene chloride R* and dilute to 10.0 mL with the same solvent.

*Reference solution (b)*. Dilute 1.0 mL of reference solution (a) to 10.0 mL with *methylene chloride R*. Place 1.0 mL of this solution in a vial with a screw cap, evaporate to dryness and add 0.5 mL of the silylation solution. Seal the vial and heat at 70 ± 5 °C for 20 min.

*Reference solution (c)*. Dissolve 10 mg of the substance to be examined in 25 mL of *water R*. To 3 mL of this solution add 0.1 mL of *hydrochloric acid R*. Extract with 2 quantities, each of 5 mL, of *methylene chloride R*. Combine the methylene chloride extracts in a vial with a screw cap and add 2 mL of reference solution (a). Evaporate to dryness and add 0.5 mL of the silylation solution. Seal the vial and heat at 70 ± 5 °C for 20 min.

*Column*:
- *material*: fused silica;
- *size*: *l* = 25 m, Ø = 0.25 mm;
- *stationary phase*: *phenyl(5)methyl(95)polysiloxane R* (film thickness 1.0 µm).

*Carrier gas*: *helium for chromatography R*.

*Flow rate*: 0.9 mL/min.

*Split ratio*: 1:100.

*Temperature*:

| | Time (min) | Temperature (°C) |
|---|---|---|
| Column | 0 - 5 | 50 |
| | 5 - 27 | 50 → 270 |
| | 27 - 32 | 270 |
| Injection port | | 270 |
| Detector | | 270 |

*Detection*: flame ionisation.

*Injection*: 1 µL.

*Relative retention* with reference to phenylbutyrate (retention time = about 20 min): impurity C = about 0.98.

*System suitability*: reference solution (c):
- *resolution*: minimum 3.0 between the peaks due to impurity C and phenylbutyrate.

*Limit*:
- *impurity C*: not more than the area of the corresponding peak in the chromatogram obtained with reference solution (b) (0.1 per cent).

**Related substances**. Liquid chromatography (*2.2.29*).

*Test solution*. Dissolve 0.20 g of the substance to be examined in 10 mL of *methanol R* and dilute to 50.0 mL with *water R*.

*Reference solution (a)*. Dissolve 4.0 mg of *α-tetralone R* (impurity B) in 10 mL of *methanol R* and dilute to 200.0 mL with the same solvent.

*Reference solution (b)*. Dissolve 0.20 g of the substance to be examined in 10 mL of *methanol R*, add 1 mL of reference solution (a) and dilute to 50 mL with *water R*.

*Reference solution (c)*. Dilute 1.0 mL of reference solution (a) to 50.0 mL with *water R*.

*Reference solution (d)*. Dissolve 5.0 mg of *3-benzoylpropionic acid R* (impurity A) in 2.5 mL of *methanol R* and dilute to 50.0 mL with the same solvent. Dilute 1.0 mL of this solution to 50.0 mL with *water R*.

*Column*:
- *size*: *l* = 0.25 m, Ø = 4.6 mm;
- *stationary phase*: *base-deactivated end-capped octadecylsilyl silica gel for chromatography R* (5 µm).

*Mobile phase*: *glacial acetic acid R*, *methanol R*, *water R* (1:49:50 *V/V/V*).

*Flow rate*: 1.3 mL/min.

*Detection*: spectrophotometer at 245 nm.

*Injection*: 20 µL of the test solution and reference solutions (b), (c) and (d).

*Run time*: twice the retention time of phenylbutyrate.

*Relative retention* with reference to phenylbutyrate (retention time = about 17 min): impurity A = about 0.3; impurity B = about 0.7.

*System suitability*: reference solution (b):
- *resolution*: minimum 6 between the peaks due to impurity B and phenylbutyrate.

*Limits*:
- *impurity A*: not more than twice the area of the corresponding peak in the chromatogram obtained with reference solution (d) (0.1 per cent);
- *impurity B*: not more than the area of the corresponding peak in the chromatogram obtained with reference solution (c) (0.01 per cent);
- *unspecified impurities*: for each impurity, not more than the area of the principal peak in the chromatogram obtained with reference solution (d) (0.05 per cent);
- *total*: not more than twice the area of the principal peak in the chromatogram obtained with reference solution (d) (0.1 per cent);
- *disregard limit of impurities other than B*: 0.6 times the area of the principal peak in the chromatogram obtained with reference solution (d) (0.03 per cent).

**Water** (*2.5.12*): maximum 0.5 per cent, determined on 2.00 g.

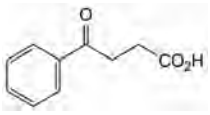
ASSAY

Disperse 0.150 g in 50 mL of *anhydrous acetic acid R*. The opalescence of the solution disappears during the titration. Titrate with *0.1 M perchloric acid*, determining the end-point potentiometrically (*2.2.20*).

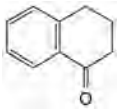
1 mL of *0.1 M perchloric acid* is equivalent to 18.62 mg of $C_{10}H_{11}NaO_2$.

IMPURITIES

*Specified impurities: A, B, C.*



A. 4-oxo-4-phenylbutanoic acid (3-benzoylpropionic acid),



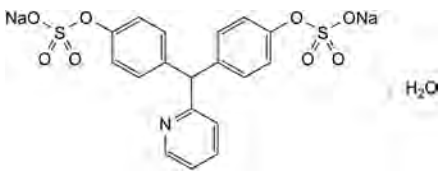
B. 3,4-dihydronaphthalen-1(2*H*)-one (α-tetralone),

C. 4-cyclohexylbutanoic acid.

**01/2013:1031**

# SODIUM PICOSULFATE

## Natrii picosulfas



$C_{18}H_{13}NNa_2O_8S_2,H_2O$ $M_r$ 499.4

DEFINITION

4,4′-[(Pyridin-2-yl)methylene]diphenyl bis(sodium sulfate) monohydrate.

*Content*: 98.5 per cent to 100.5 per cent (anhydrous substance).

CHARACTERS

*Appearance*: white or almost white, crystalline powder.

*Solubility*: freely soluble in water, slightly soluble in ethanol (96 per cent).

IDENTIFICATION

*First identification: A, D.*

*Second identification: B, C, D.*

A. Infrared absorption spectrophotometry (*2.2.24*).
*Comparison*: *sodium picosulfate CRS*.

B. Thin-layer chromatography (*2.2.27*).
*Test solution.* Dissolve 20 mg of the substance to be examined in *methanol R* and dilute to 5 mL with the same solvent.
*Reference solution.* Dissolve 20 mg of *sodium picosulfate CRS* in *methanol R* and dilute to 5 mL with the same solvent.
*Plate*: *TLC silica gel* $GF_{254}$ *plate R*.
*Mobile phase*: *anhydrous formic acid R*, *water R*, *methanol R*, *ethyl acetate R* (2.5:12.5:25:60 *V/V/V/V*).
*Application*: 5 µL.
*Development*: over 1/2 of the plate.
*Drying*: in a current of warm air for 15 min.
*Detection*: examine in ultraviolet light at 254 nm.
*Results*: the principal spot in the chromatogram obtained with the test solution is similar in position and size to the principal spot in the chromatogram obtained with the reference solution.

C. To 5 mL of solution S (see Tests) add 1 mL of *dilute hydrochloric acid R* and heat to boiling. Add 1 mL of *barium chloride solution R1*. A white precipitate is formed.

D. Solution S gives reaction (a) of sodium (*2.3.1*).

TESTS

**Solution S**. Dissolve 2.5 g in *carbon dioxide-free water R* prepared from *distilled water R* and dilute to 50 mL with the same solvent.

**Appearance of solution**. Solution S is clear (*2.2.1*) and not more intensely coloured than reference solution $GY_7$ (*2.2.2, Method II*).

**Acidity or alkalinity**. To 10 mL of solution S add 0.05 mL of *phenolphthalein solution R*. The solution is colourless. Not more than 0.25 mL of *0.01 M sodium hydroxide* is required to change the colour of the indicator to pink.

**Related substances**. Liquid chromatography (*2.2.29*).

*Test solution.* Dissolve 50 mg of the substance to be examined in the mobile phase and dilute to 100.0 mL with the mobile phase.

*Reference solution (a).* Dilute 1.0 mL of the test solution to 100.0 mL with the mobile phase. Dilute 10.0 mL of this solution to 100.0 mL with the mobile phase.

*Reference solution (b).* Dissolve the contents of a vial of *picosulfate for system suitability CRS* (containing impurities A and B) in 1.0 mL of the mobile phase.

*Column*:
- *size*: *l* = 0.25 m, Ø = 4.0 mm;
- *stationary phase*: spherical *end-capped octadecylsilyl silica gel for chromatography R1* (5 µm);
- *temperature*: 40 °C.

*Mobile phase*: dissolve 2.3 g of *disodium hydrogen phosphate dihydrate R* in 800 mL of *water for chromatography R*, add 0.2 g of *cetyltrimethylammonium bromide R*, adjust to pH 7.5 with *phosphoric acid R* and dilute to 1000 mL with *water for chromatography R*; mix 550 mL of this solution and 450 mL of *acetonitrile R* (if necessary vary the buffer/acetonitrile proportion in 10 mL increments in order to fulfil the resolution requirement).

*Flow rate*: 1.0 mL/min.

*Detection*: spectrophotometer at 263 nm.

*Injection*: 40 µL.

*Run time*: twice the retention time of picosulfate.

*Identification of impurities*: use the chromatogram supplied with *picosulfate for system suitability CRS* and the chromatogram obtained with reference solution (b) to identify the peaks due to impurities A and B.

*Relative retention* with reference to picosulfate (retention time = about 7.4 min): impurity B = about 0.5; impurity A = about 0.7.

*System suitability*: reference solution (b):
- *resolution*: minimum 4.0 between the peaks due to impurities B and A.

*Limits*:
- *correction factors*: for the calculation of content, multiply the peak areas of the following impurities by the corresponding correction factor: impurity A = 0.7; impurity B = 0.5;
- *impurities A, B*: for each impurity, not more than twice the area of the principal peak in the chromatogram obtained with reference solution (a) (0.2 per cent);
- *unspecified impurities*: for each impurity, not more than the area of the principal peak in the chromatogram obtained with reference solution (a) (0.10 per cent);
- *total*: not more than 5 times the area of the principal peak in the chromatogram obtained with reference solution (a) (0.5 per cent);

Monographs S

– *disregard limit*: 0.5 times the area of the principal peak in the chromatogram obtained with reference solution (a) (0.05 per cent).

**Chlorides** (*2.4.4*): maximum 200 ppm.

Dilute 5 mL of solution S to 15 mL with *water R*.

**Sulfates** (*2.4.13*): maximum 400 ppm.

Dilute 7.5 mL of solution S to 15 mL with *distilled water R*.

**Water** (*2.5.12*): 3.0 per cent to 5.0 per cent, determined on 0.500 g.

ASSAY

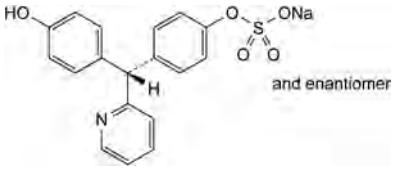
Dissolve 0.400 g in 80 mL of *methanol R*. Titrate with *0.1 M perchloric acid*, determining the end-point potentiometrically (*2.2.20*).

1 mL of *0.1 M perchloric acid* is equivalent to 48.14 mg of $C_{18}H_{13}NNa_2O_8S_2$.

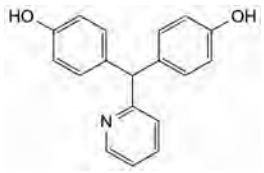
IMPURITIES

*Specified impurities: A, B.*

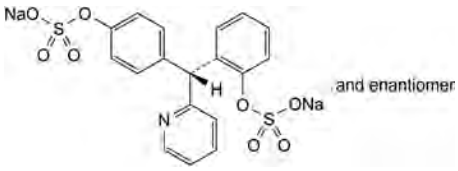
*Other detectable impurities* (the following substances would, if present at a sufficient level, be detected by one or other of the tests in the monograph. They are limited by the general acceptance criterion for other/unspecified impurities and/or by the general monograph *Substances for pharmaceutical use (2034)*. It is therefore not necessary to identify these impurities for demonstration of compliance. See also *5.10. Control of impurities in substances for pharmaceutical use*): *C.*



A. 4-[(*RS*)-(4-hydroxyphenyl)(pyridin-2-yl)methyl]phenyl sodium sulfate,



B. 4,4′-[(pyridin-2-yl)methylene]diphenol,



C. 2-[(*RS*)-(pyridin-2-yl)[4-(sulfonatooxy)phenyl]methyl]-phenyl disodium sulfate.

**01/2017:1909**

# SODIUM POLYSTYRENE SULFONATE

## Natrii polystyrenesulfonas

DEFINITION

Polystyrene sulfonate resin prepared in the sodium form.

*Exchange capacity*: 2.8 mmol to 3.4 mmol of potassium per gram (dried substance).

*Content*: 9.4 per cent to 11.0 per cent of Na (dried substance).

CHARACTERS

*Appearance*: almost white or light brown powder.

*Solubility*: practically insoluble in water, in ethanol (96 per cent) and in methylene chloride.

IDENTIFICATION

A. Infrared absorption spectrophotometry (*2.2.24*).

*Preparation*: discs using finely ground substance.

*Comparison*: *Ph. Eur. reference spectrum of sodium polystyrene sulfonate*.

B. Suspend 0.1 g in *water R*, add 2 mL of a 150 g/L solution of *potassium carbonate R*, and heat to boiling. Allow to cool and filter. To the filtrate add 4 mL of *potassium pyroantimonate solution R* and heat to boiling. Allow to cool in iced water and if necessary rub the inside of the test-tube with a glass rod. A dense white precipitate is formed.

TESTS

**Styrene**. Liquid chromatography (*2.2.29*).

*Test solution*. Shake 10.0 g of the substance to be examined with 10 mL of *acetone R* for 30 min, centrifuge and use the supernatant.

*Reference solution*. Dissolve 10 mg of *styrene R* in *acetone R* and dilute to 100 mL with the same solvent. Dilute 1 mL of this solution to 100 mL with *acetone R*.

*Column*:

– *size*: *l* = 0.25 m, Ø = 4 mm;
– *stationary phase*: *octadecylsilyl silica gel for chromatography R* (5 µm).

*Mobile phase*: *acetonitrile R*, *water R* (1:1 *V/V*).

*Flow rate*: 2 mL/min.

*Detection*: spectrophotometer at 254 nm.

*Injection*: 20 µL.

*Limit*:

– *styrene*: not more than the area of the principal peak in the chromatogram obtained with the reference solution (1 ppm).

**Calcium**: maximum 0.10 per cent.

Atomic emission spectrometry (*2.2.22, Method I*).

*Test solution*. To 1.10 g add 5 mL of *hydrochloric acid R*, heat to boiling, cool and add 10 mL of *water R*. Filter, wash the filter and residue with *water R* and dilute the filtrate and washing to 25.0 mL with *water R*.

*Reference solutions*. Prepare the reference solutions using *calcium standard solution (400 ppm Ca) R*, diluted as necessary with *water R*.

*Wavelength*: 422.7 nm.

**Potassium**: maximum 0.10 per cent.

Atomic emission spectrometry (*2.2.22, Method I*).

*Test solution*. To 1.10 g add 5 mL of *hydrochloric acid R*, heat to boiling, cool and add 10 mL of *water R*. Filter, wash the filter and residue with *water R* and dilute the filtrate and washings to 25.0 mL with *water R*.

*Reference solutions*. Prepare the reference solutions using *potassium standard solution (100 ppm K) R*, diluted as necessary with *water R*.

*Wavelength*: 766.5 nm.

**Loss on drying** (*2.2.32*): maximum 7.0 per cent, determined on 1.000 g by drying in an oven at 105 °C.

**Microbial contamination** (*2.6.13*)

Bile-tolerant gram-negative bacteria: acceptance criterion less than $10^2$ CFU/g.

ASSAY

**Sodium**. Atomic emission spectrometry (*2.2.22, Method I*).

*Test solution.* In a platinum crucible moisten 0.90 g with a few drops of *sulfuric acid R*, ignite very gently and allow to cool. Moisten with a few drops of *sulfuric acid R* again, ignite at 800 ± 50 °C until a carbon-free ash is obtained and allow to cool.

Add 20 mL of *water R* to the crucible, warm gently on a water-bath until dissolution, cool, transfer quantitatively to a 100 mL graduated flask and dilute to 100.0 mL with *water R*. Dilute 5 mL of this solution to 1000.0 mL with *water R*.

*Reference solutions.* Prepare the reference solutions using *sodium standard solution (200 ppm Na) R*, diluted as necessary with *water R*.

*Wavelength*: 589 nm.

**Exchange capacity**. Atomic emission spectrometry (*2.2.22, Method I*).

*Solution A*. 9.533 g/L solution of *potassium chloride R*.

*Test solution.* To 1.6 g of the substance to be examined in a dry 250 mL ground-glass-stoppered flask add 100 mL of solution A, stopper and shake for 15 min. Filter, discard the first 20 mL of the filtrate and dilute 4 mL of the filtrate to 1000 mL with *water R*.

*Reference solutions.* Prepare the reference solutions by diluting 0, 1, 2, 3 and 4 mL of solution A respectively and 4, 3, 2, 1 and 0 mL of a 7.63 g/L solution of *sodium chloride R* to 1000 mL with *water R*.

*Wavelength*: 766.5 nm.

Prepare a calibration curve using the reference solutions and calculate the potassium exchange capacity of the substance to be examined in millimoles per gram taking the concentration of potassium in solution A as 128 mmoles of K per litre.

STORAGE

In an airtight container.

IMPURITIES

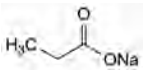
*Specified impurities: A.*

A. styrene.

**01/2017:2041**
**corrected 10.0**

# SODIUM PROPIONATE

## Natrii propionas



$C_3H_5NaO_2$ $M_r$ 96.1
[137-40-6]

DEFINITION

Sodium propanoate.

*Content*: 99.0 per cent to 101.0 per cent (dried substance).

CHARACTERS

*Appearance*: colourless crystals or, white or almost white powder, slightly hygroscopic.

*Solubility*: freely soluble in water, sparingly soluble in ethanol (96 per cent), practically insoluble in methylene chloride.

IDENTIFICATION

*First identification: A, D.*

*Second identification: B, C, D.*

A. Infrared absorption spectrophotometry (*2.2.24*).
*Comparison*: *Ph. Eur. reference spectrum of sodium propionate.*

B. Dissolve 0.1 g in a mixture of 2 mL of *copper sulfate solution R* and 2 mL of *methylene chloride R*. Shake vigorously and allow to stand. Both the upper and the lower layer show a blue colour.

C. To 5 mL of solution S (see Tests) add 2 mL of *0.1 M silver nitrate*. A white precipitate is formed.

D. Solution S gives reaction (a) of sodium (*2.3.1*).

TESTS

**Solution S**. Dissolve 10 g in *carbon dioxide-free water R* prepared from *distilled water R* and dilute to 100 mL with the same solvent.

**Appearance of solution**. Solution S is clear (*2.2.1*) and colourless (*2.2.2, Method II*).

**pH** (*2.2.3*): 7.8 to 9.2.

Dilute 1 mL of solution S to 5 mL with *water R*.

**Related substances**. Liquid chromatography (*2.2.29*).

*Test solution.* Dissolve 0.250 g of the substance to be examined in *water R* and dilute to 100 mL with the same solvent.

*Reference solution (a).* Dissolve 10 mg of the substance to be examined and 10 mg of *sodium acetate R* in *water R* and dilute to 100 mL with the same solvent.

*Reference solution (b).* Dilute 1.0 mL of the test solution to 100.0 mL with *water R*.

*Column*:
- *size*: *l* = 0.25 m, Ø = 4.6 mm,
- *stationary phase*: *octadecylsilyl silica gel for chromatography R* (5 µm).

*Mobile phase*: dilute 1 mL of *phosphoric acid R* to 1000 mL with *water for chromatography R*.

*Flow rate*: 1 mL/min.

*Detection*: spectrophotometer at 210 nm.

*Injection*: 20 µL.

*System suitability*: reference solution (a):
- *resolution*: minimum 5.0 between the peaks due to sodium acetate and sodium propionate.

*Limits*:
- *any impurity*: not more than 0.1 times the area of the principal peak in the chromatogram obtained with reference solution (b) (0.1 per cent),
- *total*: not more than half the area of the principal peak in the chromatogram obtained with reference solution (b) (0.5 per cent),
- *disregard limit*: 0.05 times the area of the principal peak in the chromatogram obtained with reference solution (b) (0.05 per cent).

**Readily oxidisable substances**. In a ground-glass-stoppered conical flask introduce 10 g of the substance to be examined. Add 100 mL of *water R* and stir to dissolve. Add 25 mL of *sodium hypobromite solution R* and 10 mL of a 200 g/L solution of *sodium acetate R*, stopper the flask and allow to stand for 15 min. Add 10 mL of *potassium iodide solution R* and 20 mL of *hydrochloric acid R* while cooling. Titrate with *0.1 M sodium thiosulfate*, adding 2 mL of *starch solution R* towards the end of the titration. Carry out a blank titration. The difference between the volumes used in the 2 titrations is not greater than 2.2 mL.

**Iron** (*2.4.9*): maximum 10 ppm, determined on solution S.

**Loss on drying** (*2.2.32*): maximum 0.5 per cent, determined on 1.000 g by heating in an oven at 105 °C for 3 h.

ASSAY

Dissolve 80.0 mg in 30 mL of *anhydrous acetic acid R*. Titrate with *0.1 M perchloric acid*, determining the end-point potentiometrically (*2.2.20*).

1 mL of *0.1 M perchloric acid* is equivalent to 9.61 mg of $C_3H_5NaO_2$.

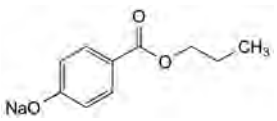
STORAGE

In an airtight container.

**01/2017:1263**

# SODIUM PROPYL PARAHYDROXYBENZOATE

## Propylis parahydroxybenzoas natricus



$C_{10}H_{11}NaO_3$ $M_r$ 202.2
[35285-69-9]

DEFINITION

Sodium 4-(propoxycarbonyl)phenolate.

*Content*: 94.0 per cent to 102.0 per cent (anhydrous substance).

CHARACTERS

*Appearance*: white or almost white, hygroscopic, crystalline powder.

*Solubility*: freely soluble in water, sparingly soluble in ethanol (96 per cent), practically insoluble in methylene chloride.

IDENTIFICATION

*First identification: B, D.*

*Second identification: A, C, D.*

A. Dissolve 0.5 g in 50 mL of *water R*. Immediately add 5 mL of *hydrochloric acid R1*. Filter and wash the precipitate with *water R*. Dry *in vacuo* at 80 °C for 2 h. The precipitate melts (*2.2.14*) at 96 °C to 99 °C.

B. Infrared absorption spectrophotometry (*2.2.24*).

*Preparation*: precipitate obtained in identification test A.

*Comparison*: *propyl parahydroxybenzoate CRS*.

C. Thin-layer chromatography (*2.2.27*).

*Test solution (a).* Dissolve 0.10 g of the substance to be examined in 10 mL of *water R*. Immediately add 2 mL of *hydrochloric acid R* and shake with 50 mL of *1,1-dimethylethyl methyl ether R*. Evaporate the upper layer to dryness and take up the residue with 10 mL of *acetone R*.

*Test solution (b).* Dilute 1 mL of test solution (a) to 10 mL with *acetone R*.

*Reference solution (a).* Dissolve 10 mg of *propyl parahydroxybenzoate CRS* in *acetone R* and dilute to 10 mL with the same solvent.

*Reference solution (b).* Dissolve 10 mg of *ethyl parahydroxybenzoate CRS* in 1 mL of test solution (a) and dilute to 10 mL with *acetone R*.

*Plate*: *TLC octadecylsilyl silica gel $F_{254}$ plate R*.

*Mobile phase*: *glacial acetic acid R*, *water R*, *methanol R* (1:30:70 *V/V/V*).

*Application*: 5 µL of test solution (b) and reference solutions (a) and (b).

*Development*: over 2/3 of the plate.

*Drying*: in air.

*Detection*: examine in ultraviolet light at 254 nm.

*System suitability*: reference solution (b):

– the chromatogram shows 2 clearly separated principal spots.

*Results*: the principal spot in the chromatogram obtained with test solution (b) is similar in position and size to the principal spot in the chromatogram obtained with reference solution (a).

D. To 1 mL of solution S (see Tests) add 1 mL of *water R*. The solution gives reaction (a) of sodium (*2.3.1*).

TESTS

**Solution S**. Dissolve 5.0 g in *carbon dioxide-free water R* prepared from *distilled water R*, and dilute to 50 mL with the same solvent.

**Appearance of solution**. Solution S, examined immediately after preparation, is clear (*2.2.1*) and not more intensely coloured than reference solution $BY_6$ (*2.2.2, Method II*).

**pH** (*2.2.3*): 9.5 to 10.5.

Dilute 1 mL of solution S to 100 mL with *carbon dioxide-free water R*.

**Related substances**. Liquid chromatography (*2.2.29*).

*Test solution*. Dissolve 50.0 mg of the substance to be examined in 2.5 mL of *methanol R* and dilute to 50.0 mL with the mobile phase. Dilute 10.0 mL of the solution to 100.0 mL with the mobile phase.

*Reference solution (a).* Dissolve 5 mg of *ethyl parahydroxybenzoate CRS* (impurity C), 5 mg of *4-hydroxybenzoic acid R* (impurity A) and 5 mg of the substance to be examined in the mobile phase and dilute to 100.0 mL with the mobile phase. Dilute 1.0 mL of the solution to 10.0 mL with the mobile phase.

*Reference solution (b).* Dissolve 50.0 mg of *propyl parahydroxybenzoate CRS* in 2.5 mL of *methanol R* and dilute to 50.0 mL with the mobile phase. Dilute 10.0 mL of the solution to 100.0 mL with the mobile phase.

*Reference solution (c).* Dilute 1.0 mL of the test solution to 20.0 mL with the mobile phase. Dilute 1.0 mL of this solution to 10.0 mL with the mobile phase.

*Column*:

– *size*: *l* = 0.15 m, Ø = 4.6 mm;
– *stationary phase*: *end-capped octadecylsilyl silica gel for chromatography R* (5 µm).

*Mobile phase*: 6.8 g/L solution of *potassium dihydrogen phosphate R*, *methanol R* (35:65 *V/V*).

*Flow rate*: 1.3 mL/min.

*Detection*: spectrophotometer at 272 nm.

*Injection*: 10 µL of the test solution and reference solutions (a) and (c).

*Run time*: 2.5 times the retention time of propyl parahydroxybenzoate.

*Relative retention* with reference to propyl parahydroxybenzoate (retention time = about 4.5 min): impurity A = about 0.3; impurity C = about 0.7.

*System suitability*: reference solution (a):

– *resolution*: minimum 5.0 between the peaks due to impurity C and propyl parahydroxybenzoate.

*Limits*:

– *correction factor*: for the calculation of content, multiply the peak area of impurity A by 1.4;
– *impurity A*: not more than 8 times the area of the principal peak in the chromatogram obtained with reference solution (c) (4.0 per cent);
– *unspecified impurities*: for each impurity, not more than the area of the principal peak in the chromatogram obtained with reference solution (c) (0.5 per cent);

- *sum of impurities other than A*: not more than twice the area of the principal peak in the chromatogram obtained with reference solution (c) (1.0 per cent);
- *disregard limit*: 0.2 times the area of the principal peak in the chromatogram obtained with reference solution (c) (0.1 per cent).

**Chlorides** (*2.4.4*): maximum 350 ppm.

To 10 mL of solution S, add 1 mL of *nitric acid R* and 30 mL of *water R* and dilute to 50 mL with *water R*. Shake and filter. Dilute 10 mL of the filtrate to 15 mL with *water R*. Prepare the standard using 14 mL of *chloride standard solution (5 ppm Cl) R* to which 1 mL of *water R* has been added.

**Sulfates** (*2.4.13*): maximum 300 ppm.

To 25 mL of solution S, add 5 mL of *distilled water R* and 10 mL of *hydrochloric acid R* and dilute to 50 mL with *distilled water R*. Shake and filter. Dilute 10 mL of the filtrate to 15 mL with *distilled water R*.

**Water** (*2.5.12*): maximum 5.0 per cent, determined on 0.500 g.

ASSAY

Liquid chromatography (*2.2.29*) as described in the test for related substances with the following modification.

*Injection*: test solution and reference solution (b).

Calculate the percentage content of $C_{10}H_{11}NaO_3$ from the declared content of *propyl parahydroxybenzoate CRS*, multiplied by a correction factor of 1.122.

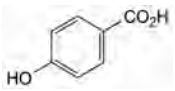
STORAGE

In an airtight container.

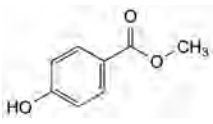
IMPURITIES

*Specified impurities: A.*

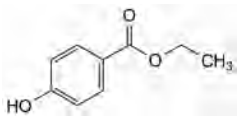
*Other detectable impurities* (the following substances would, if present at a sufficient level, be detected by one or other of the tests in the monograph. They are limited by the general acceptance criterion for other/unspecified impurities and/or by the general monograph *Substances for pharmaceutical use (2034)*. It is therefore not necessary to identify these impurities for demonstration of compliance. See also *5.10. Control of impurities in substances for pharmaceutical use*): *B, C, D.*



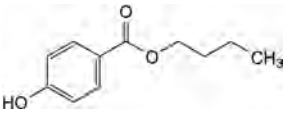
A. 4-hydroxybenzoic acid,



B. methyl 4-hydroxybenzoate (methyl parahydroxybenzoate),



C. ethyl 4-hydroxybenzoate (ethyl parahydroxybenzoate),

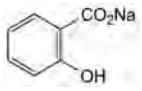


D. butyl 4-hydroxybenzoate (butyl parahydroxybenzoate).

**01/2017:0413**

# SODIUM SALICYLATE

## Natrii salicylas



$C_7H_5NaO_3$ $M_r$ 160.1
[54-21-7]

DEFINITION

Sodium 2-hydroxybenzenecarboxylate.

*Content*: 99.0 per cent to 101.0 per cent (dried substance).

CHARACTERS

*Appearance*: white or almost white, crystalline powder or small, colourless crystals or shiny flakes.

*Solubility*: freely soluble in water, sparingly soluble in ethanol (96 per cent).

IDENTIFICATION

*First identification: A, C.*

*Second identification: B, C.*

A. Infrared absorption spectrophotometry (*2.2.24*).
*Comparison*: *sodium salicylate CRS*.

B. Solution S (see Tests) gives the reactions of salicylates (*2.3.1*).

C. It gives reaction (b) of sodium (*2.3.1*).

TESTS

**Solution S**. Dissolve 5.0 g in *carbon dioxide-free water R* prepared from *distilled water R* and dilute to 50 mL with the same solvent.

**Appearance of solution**. Solution S is clear (*2.2.1*) and not more intensely coloured than reference solution $BY_6$ (*2.2.2, Method II*).

**Acidity**. To 20 mL of solution S add 0.1 mL of *phenol red solution R*. The solution is yellow. Not more than 2.0 mL of *0.01 M sodium hydroxide* is required to change the colour of the indicator to violet-red.

**Chlorides** (*2.4.4*): maximum 200 ppm.

To 5 mL of solution S add 5 mL of *water R* and 10 mL of *dilute nitric acid R* and filter. Dilute 10 mL of the filtrate to 15 mL with *water R*.

**Sulfates** (*2.4.13*): maximum 600 ppm.

Dilute 2.5 mL of solution S to 15 mL with *distilled water R*.

**Loss on drying** (*2.2.32*): maximum 0.5 per cent, determined on 1.00 g by drying in an oven at 105 °C.

ASSAY

Dissolve 0.130 g in 30 mL of *anhydrous acetic acid R*. Titrate with *0.1 M perchloric acid*, determining the end-point potentiometrically (*2.2.20*).

1 mL of *0.1 M perchloric acid* is equivalent to 16.01 mg of $C_7H_5NaO_3$.

STORAGE

In an airtight container, protected from light.

01/2016:2740

# SODIUM SELENITE

## Natrii selenis

$Na_2SeO_3$ $M_r$ 172.9
[10102-18-8]

DEFINITION

*Content*: 98.5 per cent to 101.5 per cent (dried substance).

CHARACTERS

*Appearance*: white or almost white, crystalline deliquescent powder.

*Solubility*: freely soluble in water, practically insoluble in ethanol (96 per cent).

IDENTIFICATION

A. Dissolve 50 mg in 5 mL of a mixture of equal volumes of *dilute hydrochloric acid R* and *water R* and heat to boiling. Add 50 mg of *ascorbic acid R*; a red precipitate is formed which may become black.

B. Dissolve 50 mg in a mixture of 1 mL of *dilute hydrochloric acid R* and 5 mL of *water R*. Add 1 mL of *barium chloride solution R1*; the solution remains clear.

C. It gives reaction (a) of sodium (*2.3.1*).

D. It complies with the limits of the assay.

TESTS

**Solution S**. Dissolve 5.0 g in *carbon dioxide-free water R* and dilute to 50.0 mL with the same solvent.

**Appearance of solution**. Solution S is clear (*2.2.1*) and colourless (*2.2.2, Method II*).

**pH** (*2.2.3*): 9.8 to 10.8 for solution S.

**Chlorides** (*2.4.4*): maximum 50 ppm.

Dissolve 1.0 g in 5 mL of *water R*, add 9 mL of *nitric acid R* and dilute to 15 mL with *water R*.

**Sulfates and selenates** (*2.4.13*): maximum 300 ppm (determined as sulfates).

Dissolve 0.5 g in 10 mL of *distilled water R*, add 0.5 mL of *hydrochloric acid R1* and dilute to 15 mL with *distilled water R*.

**Iron**: maximum 50 ppm.

To 2 mL of solution S add 2 mL of a 200 g/L solution of *sulfosalicylic acid R* and 5 mL of *concentrated ammonia R*, and dilute to 10 mL with *water R*. The solution is not more intensely coloured than a reference solution prepared at the same time and in the same manner using 1 mL of *iron standard solution (10 ppm Fe) R*.

**Loss on drying** (*2.2.32*): maximum 0.5 per cent, determined on 1.000 g by drying in an oven at 130 °C for 2 h.

ASSAY

Dissolve 80.0 mg in 50 mL of *water R*. Add 1.0 mL of *anhydrous formic acid R*, 25.0 mL of *0.1 M sodium thiosulfate* and 0.5 g of *potassium iodide R*. Titrate immediately with *0.05 M iodine* using *starch solution R* as indicator. Carry out a blank titration.

1 mL of *0.1 M sodium thiosulfate* is equivalent to 4.323 mg of $Na_2SeO_3$.

STORAGE

In an airtight container.

01/2016:1677

# SODIUM SELENITE PENTAHYDRATE

## Natrii selenis pentahydricus

$Na_2SeO_3,5H_2O$ $M_r$ 263.0
[26970-82-1]

DEFINITION

*Content*: 98.5 per cent to 101.5 per cent.

CHARACTERS

*Appearance*: white or almost white, crystalline powder, hygroscopic.

*Solubility*: freely soluble in water, practically insoluble in ethanol (96 per cent).

IDENTIFICATION

A. Dissolve 50 mg in 5 mL of a mixture of equal volumes of *dilute hydrochloric acid R* and *water R* and heat to boiling. Add 50 mg of *ascorbic acid R*; a red precipitate is formed which may become black.

B. Dissolve 50 mg in a mixture of 1 mL of *dilute hydrochloric acid R* and 5 mL of *water R*. Add 1 mL of *barium chloride solution R1*; the solution remains clear.

C. It gives reaction (a) of sodium (*2.3.1*).

D. It complies with the limits of the assay.

TESTS

**Solution S**. Dissolve 5.0 g in *carbon dioxide-free water R* and dilute to 50.0 mL with the same solvent.

**Appearance of solution**. Solution S is clear (*2.2.1*) and colourless (*2.2.2, Method II*).

**pH** (*2.2.3*): 9.8 to 10.8 for solution S.

**Chlorides** (*2.4.4*): maximum 50 ppm.

Dissolve 1.0 g in 5 mL of *water R*, add 9 mL of *nitric acid R* and dilute to 15 mL with *water R*.

**Sulfates and selenates** (*2.4.13*): maximum 300 ppm (determined as sulfates).

Dissolve 0.5 g in 10 mL of *distilled water R*, add 0.5 mL of *hydrochloric acid R1* and dilute to 15 mL with *distilled water R*.

**Iron**: maximum 50 ppm.

To 2 mL of solution S add 2 mL of a 200 g/L solution of *sulfosalicylic acid R*, 5 mL of *concentrated ammonia R* and dilute to 10 mL with *water R*. The solution is not more intensely coloured than a reference solution prepared at the same time and in the same manner using 1 mL of *iron standard solution (10 ppm Fe) R*.

ASSAY

Dissolve 0.120 g in 50 mL of *water R*. Add 1.0 mL of *anhydrous formic acid R*, 25.0 mL of *0.1 M sodium thiosulfate* and 0.5 g of *potassium iodide R*. Titrate immediately with *0.05 M iodine* using *starch solution R* as indicator. Carry out a blank titration.

1 mL of *0.1 M sodium thiosulfate* is equivalent to 6.575 mg of $Na_2SeO_3,5H_2O$.

STORAGE

In an airtight container.

**01/2020:0983**

# SODIUM STARCH GLYCOLATE (TYPE A)[3]

## Carboxymethylamylum natricum A

DEFINITION

Sodium salt of a cross-linked partly *O*-carboxymethylated starch.

*Content*: 2.8 per cent to 4.2 per cent of Na ($A_r$ 22.99) (substance washed with ethanol (80 per cent *V/V*) and dried).

♦ CHARACTERS

*Appearance*: white or almost white, fine, free-flowing powder, very hygroscopic.

*Solubility*: practically insoluble in methylene chloride. It gives a translucent suspension in water. ♦

IDENTIFICATION

◊ A. pH (see Tests).

B. Prepare with shaking and without heating a mixture of 4.0 g of the substance to be examined and 20 mL of *carbon dioxide-free water R*. The mixture has the appearance of a gel. Add 100 mL of *carbon dioxide-free water R* and shake. A suspension forms that settles after standing. ◊

C. To an acidified solution, add *iodinated potassium iodide solution R1*. The solution becomes blue or violet.

D. Solution S2 (see Tests) gives reaction (a) of sodium (*2.3.1*).

TESTS

**Solution S1**. Centrifuge the suspension obtained in identification test B at 2500 *g* for 10 min. Collect carefully the supernatant.

**Solution S2**. Place 2.5 g in a silica or platinum crucible and add 2 mL of a 500 g/L solution of *sulfuric acid R*. Heat on a water-bath, then cautiously over a naked flame, raising the temperature progressively, then incinerate in a muffle furnace at 600 ± 25 °C. Continue heating until all black particles have disappeared. Allow to cool, add a few drops of *dilute sulfuric acid R*, heat and incinerate as above. Allow to cool, add a few drops of *ammonium carbonate solution R*, evaporate to dryness and incinerate cautiously. Allow to cool and dissolve the residue in 50 mL of *water R*.

◊ **Appearance of solution S1**. Solution S1 is clear (*2.2.1*) and colourless (*2.2.2, Method II*). ◊

**pH** (*2.2.3*): 5.5 to 7.5.

Disperse 1.0 g in 30 mL of *carbon dioxide-free water R*.

**Sodium glycolate**: maximum 2.0 per cent. *Carry out the test protected from light.*

*Test solution.* Place 0.20 g in a beaker. Add 5 mL of *acetic acid R* and 5 mL of *water R*. Stir until dissolution is complete (about 10 min). Add 50 mL of *acetone R* and 1 g of *sodium chloride R*. Filter through a fast filter paper impregnated with *acetone R*, rinse the beaker and filter with *acetone R*. Combine the filtrate and washings and dilute to 100.0 mL with *acetone R*. Allow to stand for 24 h without shaking. Use the clear supernatant.

*Reference solution.* Dissolve 0.310 g of *glycolic acid R*, previously dried in a desiccator (*2.2.32*) at room temperature overnight, in *water R* and dilute to 500.0 mL with the same solvent. To 5.0 mL of this solution add 5 mL of *acetic acid R* and allow to stand for about 30 min. Add 50 mL of *acetone R* and 1 g of *sodium chloride R*. Filter through a fast filter paper impregnated with *acetone R*, rinse the beaker and filter with *acetone R*. Combine the filtrate and washings and dilute to 100.0 mL with *acetone R*. Allow to stand for 24 h without shaking. Use the clear supernatant.

Heat 2.0 mL of the test solution on a water-bath for 20 min. Cool to room temperature and add 20.0 mL of *2,7-dihydroxynaphthalene solution R*. Shake and heat in a water-bath for 20 min. Cool under running water, transfer to a volumetric flask and dilute to 25.0 mL with *sulfuric acid R*, maintaining the flask under running water. Within 10 min, measure the absorbance at 540 nm (*2.2.25*) using *water R* as the compensation liquid. The absorbance of the solution prepared with the test solution is not greater than that of a solution prepared at the same time and in the same manner with 2.0 mL of the reference solution.

**Sodium chloride**: maximum 7.0 per cent.

Place 0.500 g in a beaker and suspend in 100 mL of *water R*. Add 1 mL of *nitric acid R*. Titrate with *0.1 M silver nitrate*, determining the end-point potentiometrically (*2.2.20*), using a silver-based indicator electrode and a double-junction reference electrode containing a 100 g/L solution of *potassium nitrate R* in the outer jacket and a standard filling solution in the inner jacket.

1 mL of *0.1 M silver nitrate* is equivalent to 5.844 mg of NaCl.

**Iron** (*2.4.9*): maximum 20 ppm, determined on 10 mL of solution S2.

**Loss on drying** (*2.2.32*): maximum 10.0 per cent, determined on 1.000 g by drying in an oven at 130 °C for 1.5 h.

**Microbial contamination**. It complies with the test for *Escherichia coli* and *Salmonella* (*2.6.13*).

ASSAY

Shake about 1 g with 20 mL of *ethanol (80 per cent V/V) R*, stir for 10 min and filter. Repeat the operation until chloride has been completely extracted and verify the absence of chloride using *silver nitrate solution R2*. Dry the residue at 105 °C to constant mass. To 0.700 g of the dried residue, add 80 mL of *glacial acetic acid R* and heat under a reflux condenser for 2 h. Cool the solution to room temperature. Titrate with *0.1 M perchloric acid*, determining the end-point potentiometrically (*2.2.20*). Carry out a blank titration.

1 mL of *0.1 M perchloric acid* is equivalent to 2.299 mg of Na.

♦ STORAGE

In an airtight container, protected from light. ♦

FUNCTIONALITY-RELATED CHARACTERISTICS

*This section provides information on characteristics that are recognised as being relevant control parameters for one or more functions of the substance when used as an excipient (see chapter 5.15). Some of the characteristics described in the Functionality-related characteristics section may also be present in the mandatory part of the monograph since they also represent mandatory quality criteria. In such cases, a cross-reference to the tests described in the mandatory part is included in the Functionality-related characteristics section. Control of the characteristics can contribute to the quality of a medicinal product by improving the consistency of the manufacturing process and the performance of the medicinal product during use. Where control methods are cited, they are recognised as being suitable for the purpose, but other methods can also be used. Wherever results for a particular characteristic are reported, the control method must be indicated.*

*The following characteristics may be relevant for sodium starch glycolate (type A) used as disintegrant in tablets.*

**Settling volume**. Introduce 70 mL of *water R* in a flask, add 1.0 g of the substance to be examined (dried substance) and stir with a glass rod so that no lumps remain. Transfer the

(3) This monograph has undergone pharmacopoeial harmonisation. See chapter *5.8. Pharmacopoeial harmonisation*.

suspension to a 100 mL graduated cylinder, rinse the walls of the flask with *water R* and dilute to 100 mL with the same solvent. Stir again until the substance is evenly distributed. Allow to stand for 2 h. The volume of the sediment is typically less than 45 mL.

**Degree of substitution**. Place 1.000 g (dried substance) in a 500 mL conical flask, add 300 mL of a 100 g/L solution of *sodium chloride R* and 25.0 mL of *0.1 M sodium hydroxide*, stopper the flask and allow to stand for 5 min, shaking occasionally. Add 0.05 mL of *m-cresol purple solution R* and about 15 mL of *0.1 M hydrochloric acid* from a burette. Insert the stopper and shake. If the solution is violet, add *0.1 M hydrochloric acid* in 1 mL portions until the solution becomes yellow, shaking after each addition. Titrate with *0.1 M sodium hydroxide* until the colour turns to violet. Calculate the number of milliequivalents (*M*) of base required to neutralise the equivalent of 1 g of dried substance.

Calculate the degree of acid carboxymethyl substitution (*A*) using the following expression:

$$A = \frac{1150M}{(7102 - 412M - 80C)}$$

*C* = sulfated ash as a percentage, determined as follows.

Introduce 1.3 g of the substance to be examined in a flask and add 20 mL of *ethanol (80 per cent V/V) R*. Shake for 10 min and filter on a sintered-glass filter (*2.1.2*). Repeat this operation 4 times. Add to the residue 10 mL of *ethanol (96 per cent) R* and filter. Collect the residue and place it in an oven at 105 °C for 4 h. Place the dried residue in a mortar and crush. Determine the sulfated ash content (*C*) (*2.4.14*) on 1.000 g of the powder obtained.

Calculate the degree of sodium carboxymethyl substitution (*S*) using the following expression:

$$S = \frac{(162 + 58A)C}{(7102 - 80C)}$$

The degree of substitution is the sum of *A* and *S*.

**Particle-size distribution** (*2.9.31* or *2.9.38*).

**01/2020:0984**

# SODIUM STARCH GLYCOLATE (TYPE B)[4]

## Carboxymethylamylum natricum B

DEFINITION

Sodium salt of a cross-linked partly *O*-carboxymethylated starch.

*Content*: 2.0 per cent to 3.4 per cent of Na ($A_r$ 22.99) (substance washed with ethanol (80 per cent *V/V*) and dried).

♦ CHARACTERS

*Appearance*: white or almost white, fine, free-flowing powder, very hygroscopic.

*Solubility*: practically insoluble in methylene chloride. It gives a translucent suspension in water. ♦

IDENTIFICATION

◊ A. pH (see Tests).

B. Prepare with shaking and without heating a mixture of 4.0 g of the substance to be examined and 20 mL of *carbon dioxide-free water R*. The mixture has the appearance of a gel. Add 100 mL of *carbon dioxide-free water R* and shake. A suspension forms that settles after standing. ◊

C. To an acidified solution, add *iodinated potassium iodide solution R1*. The solution becomes blue or violet.

D. Solution S2 (see Tests) gives reaction (a) of sodium (*2.3.1*).

TESTS

**Solution S1**. Centrifuge the suspension obtained in identification test B at 2500 *g* for 10 min. Collect carefully the supernatant.

**Solution S2**. Place 2.5 g in a silica or platinum crucible and add 2 mL of a 500 g/L solution of *sulfuric acid R*. Heat on a water-bath, then cautiously over a naked flame, raising the temperature progressively, and then incinerate in a muffle furnace at 600 ± 25 °C. Continue heating until all black particles have disappeared. Allow to cool, add a few drops of *dilute sulfuric acid R* and heat and incinerate as above. Allow to cool, add a few drops of *ammonium carbonate solution R*, evaporate to dryness and incinerate cautiously. Allow to cool and dissolve the residue in 50 mL of *water R*.

◊ **Appearance of solution S1**. Solution S1 is clear (*2.2.1*) and colourless (*2.2.2, Method II*). ◊

**pH** (*2.2.3*): 3.0 to 5.0.

Disperse 1.0 g in 30 mL of *carbon dioxide-free water R*.

**Sodium glycolate**: maximum 2.0 per cent. *Carry out the test protected from light.*

*Test solution*. Place 0.20 g in a beaker. Add 5 mL of *acetic acid R* and 5 mL of *water R*. Stir until dissolution is complete (about 10 min). Add 50 mL of *acetone R* and 1 g of *sodium chloride R*. Filter through a fast filter paper impregnated with *acetone R*, rinse the beaker and filter with *acetone R*. Combine the filtrate and washings and dilute to 100.0 mL with *acetone R*. Allow to stand for 24 h without shaking. Use the clear supernatant.

*Reference solution*. Dissolve 0.310 g of *glycolic acid R*, previously dried in a desiccator (*2.2.32*) at room temperature overnight, in *water R* and dilute to 500.0 mL with the same solvent. To 5.0 mL of this solution add 5 mL of *acetic acid R* and allow to stand for about 30 min. Add 50 mL of *acetone R* and 1 g of *sodium chloride R*. Filter through a fast filter paper impregnated with *acetone R*, rinse the beaker and filter with *acetone R*. Combine the filtrate and washings and dilute to 100.0 mL with *acetone R*. Allow to stand for 24 h without shaking. Use the clear supernatant.

Heat 2.0 mL of the test solution on a water-bath for 20 min. Cool to room temperature and add 20.0 mL of *2,7-dihydroxynaphthalene solution R*. Shake and heat in a water-bath for 20 min. Cool under running water, transfer quantitatively to a volumetric flask and dilute to 25.0 mL with *sulfuric acid R*, maintaining the flasks under running water. Within 10 min, measure the absorbance at 540 nm (*2.2.25*) using *water R* as the compensation liquid. The absorbance of the solution prepared with the test solution is not greater than that of a solution prepared at the same time and in the same manner with 2.0 mL of the reference solution.

**Sodium chloride**: maximum 7.0 per cent.

Place 0.500 g in a beaker and suspend in 100 mL of *water R*. Add 1 mL of *nitric acid R*. Titrate with *0.1 M silver nitrate*, determining the end-point potentiometrically (*2.2.20*), using a silver-based indicator electrode and a double-junction reference electrode containing a 100 g/L solution of *potassium nitrate R* in the outerjacket and a standard filling solution in the inner jacket.

1 mL of *0.1 M silver nitrate* is equivalent to 5.844 mg of NaCl.

(4) This monograph has undergone pharmacopoeial harmonisation. See chapter *5.8. Pharmacopoeial harmonisation*.

**Iron** (*2.4.9*): maximum 20 ppm, determined on 10 mL of solution S2.

**Loss on drying** (*2.2.32*): maximum 10.0 per cent, determined on 1.000 g by drying in an oven at 130 °C for 1.5 h.

**Microbial contamination**. It complies with the test for *Escherichia coli* and *Salmonella* (*2.6.13*).

ASSAY

Shake about 1 g with 20 mL of *ethanol (80 per cent V/V) R*, stir for 10 min and filter. Repeat the operation until chloride has been completely extracted and verify the absence of chloride using *silver nitrate solution R2*. Dry the residue at 105 °C to constant mass. To 0.700 g of the dried residue, add 80 mL of *glacial acetic acid R* and heat under a reflux condenser for 2 h. Cool the solution to room temperature. Titrate with *0.1 M perchloric acid*, determining the end-point potentiometrically (*2.2.20*). Carry out a blank titration.

1 mL of *0.1 M perchloric acid* is equivalent to 2.299 mg of Na.

♦ STORAGE

In an airtight container, protected from light. ♦

FUNCTIONALITY-RELATED CHARACTERISTICS

*This section provides information on characteristics that are recognised as being relevant control parameters for one or more functions of the substance when used as an excipient (see chapter 5.15). Some of the characteristics described in the Functionality-related characteristics section may also be present in the mandatory part of the monograph since they also represent mandatory quality criteria. In such cases, a cross-reference to the tests described in the mandatory part is included in the Functionality-related characteristics section. Control of the characteristics can contribute to the quality of a medicinal product by improving the consistency of the manufacturing process and the performance of the medicinal product during use. Where control methods are cited, they are recognised as being suitable for the purpose, but other methods can also be used. Wherever results for a particular characteristic are reported, the control method must be indicated.*

*The following characteristics may be relevant for sodium starch glycolate (type B) used as disintegrant in tablets.*

**Settling volume**. Introduce 70 mL of *water R* in a flask, add 1.0 g of the substance to be examined (dried substance) and stir with a glass rod so that no lumps remain. Transfer the suspension to a 100 mL graduated cylinder, rinse the walls of the flask with *water R* and dilute to 100 mL with the same solvent. Stir again until the substance is evenly distributed. Allow to stand for 2 h. The volume of the sediment is typically less than 45 mL.

**Degree of substitution**. Place 1.000 g (dried substance) in a 500 mL conical flask, add 300 mL of a 100 g/L solution of *sodium chloride R* and 25.0 mL of *0.1 M sodium hydroxide*, stopper the flask and allow to stand for 5 min, shaking occasionally. Add 0.05 mL of *m-cresol purple solution R* and about 15 mL of *0.1 M hydrochloric acid* from a burette. Insert the stopper and shake. If the solution is violet, add *0.1 M hydrochloric acid* in 1 mL portions until the solution becomes yellow, shaking after each addition. Titrate with *0.1 M sodium hydroxide* until the colour turns to violet. Calculate the number of milliequivalents (*M*) of base required to neutralise the equivalent of 1 g of dried substance.

Calculate the degree of acid carboxymethyl substitution (*A*) using the following expression:

$$A = \frac{1150M}{(7102 - 412M - 80C)}$$

*C* = sulfated ash as a percentage, determined as follows.

Introduce 1.3 g of the substance to be examined in a flask and add 20 mL of *ethanol (80 per cent V/V) R*. Shake for 10 min and filter on a sintered-glass filter (*2.1.2*). Repeat this operation 4 times. Add to the residue 10 mL of *ethanol (96 per cent) R* and filter. Collect the residue and place it in an oven at 105 °C for 4 h. Place the dried residue in a mortar and crush. Determine the sulfated ash content (*C*) (*2.4.14*) on 1.000 g of the powder obtained.

Calculate the degree of sodium carboxymethyl substitution (*S*) using the following expression:

$$S = \frac{(162 + 58A)C}{(7102 - 80C)}$$

The degree of substitution is the sum of *A* and *S*.

**Particle-size distribution** (*2.9.31* or *2.9.38*).

**01/2020:1566**

# SODIUM STARCH GLYCOLATE (TYPE C)(5)

## Carboxymethylamylum natricum C

DEFINITION

Sodium salt of a partly *O*-carboxymethylated starch, cross-linked by physical dehydration.

*Content*: 2.8 per cent to 5.0 per cent of Na ($A_r$ 22.99) (substance washed with ethanol (80 per cent *V/V*) and dried).

CHARACTERS

*Appearance*: white or almost white, fine, free-flowing powder, very hygroscopic.

*Microscopic examination*: it is seen to consist of granules, irregularly shaped, ovoid or pear-shaped, 30-100 µm in size, or rounded, 10-35 µm in size; compound granules consisting of 2-4 components occur occasionally; the granules have an eccentric hilum and clearly visible concentric striations; between crossed nicol prisms, the granules show a distinct black cross intersecting at the hilum; small crystals are visible at the surface of the granules. The granules show considerable swelling in contact with water.

*Solubility*: soluble in water, practically insoluble in methylene chloride. It gives a translucent gel-like product in water.

IDENTIFICATION

A. pH (see Tests).

B. Prepare with shaking and without heating a mixture of 4.0 g of the substance to be examined and 20 mL of *carbon dioxide-free water R*. The mixture has the appearance of a gel. Add 100 mL of *carbon dioxide-free water R* and shake: the gel remains stable (difference from types A and B). Keep the gel for the tests for appearance of gel and pH.

C. To 5 mL of the gel obtained in identification test B add 0.05 mL of *iodine solution R1*. A dark blue colour is produced.

D. Solution S (see Tests) gives reaction (a) of sodium (*2.3.1*).

TESTS

**Solution S**. Place 2.5 g in a silica or platinum crucible and add 2 mL of a 500 g/L solution of *sulfuric acid R*. Heat on a water-bath, then cautiously over a naked flame, raising the temperature progressively, and then incinerate in a muffle furnace at 600 ± 25 °C. Continue heating until all black particles have disappeared. Allow to cool, add a few drops of *sulfuric acid R*, heat and incinerate as above. Allow to

(5) In contrast to sodium starch glycolate type A and type B, this monograph has NOT undergone pharmacopoeial harmonisation.

cool, add a few drops of *ammonium carbonate solution R*, evaporate to dryness and incinerate cautiously. Allow to cool and dissolve the residue in 50 mL of *water R*.

**Appearance of gel**. The gel obtained in identification test B is colourless (*2.2.2, Method II*).

**pH** (*2.2.3*): 5.5 to 7.5 for the gel obtained in identification test B.

**Sodium glycolate**: maximum 2.0 per cent. *Carry out the test protected from light.*

*Test solution.* Place 0.20 g in a beaker. Add 5 mL of *acetic acid R* and 5 mL of *water R*. Stir until dissolution is complete (about 10 min). Add 50 mL of *acetone R* and 1 g of *sodium chloride R*. Filter through a fast filter paper impregnated with *acetone R*, rinse the beaker and filter with *acetone R*. Combine the filtrate and washings and dilute to 100.0 mL with *acetone R*. Allow to stand for 24 h without shaking. Use the clear supernatant.

*Reference solution.* Dissolve 0.310 g of *glycolic acid R*, previously dried in a desiccator (*2.2.32*), in *water R* and dilute to 500.0 mL with the same solvent. To 5.0 mL of this solution, add 5 mL of *acetic acid R* and allow to stand for about 30 min. Add 50 mL of *acetone R* and 1 g of *sodium chloride R* and dilute to 100.0 mL with *acetone R*.

Heat 2.0 mL of the test solution on a water-bath for 20 min. Cool to room temperature and add 20.0 mL of *2,7-dihydroxynaphthalene solution R*. Shake and heat on a water-bath for 20 min. Cool under running water, transfer to a volumetric flask and dilute to 25.0 mL with *sulfuric acid R*, maintaining the flask under running water. Within 10 min, measure the absorbance (*2.2.25*) at 540 nm using *water R* as the compensation liquid. The absorbance of the solution prepared with the test solution is not greater than that of a solution prepared at the same time and in the same manner with 2.0 mL of the reference solution.

**Sodium chloride**: maximum 1 per cent.

Shake 1.00 g with 20 mL of *ethanol (80 per cent V/V) R* for 10 min and filter. Repeat the operation 4 times. Dry the residue to constant mass at 100 °C and set aside for the assay. Combine the filtrates. Evaporate to dryness, take up the residue with *water R* and dilute to 25.0 mL with the same solvent. To 10.0 mL of the solution add 30 mL of *water R* and 5 mL of *dilute nitric acid R*. Titrate with *0.1 M silver nitrate*, determining the end-point potentiometrically (*2.2.20*), using a silver-based indicator electrode and a double-junction reference electrode containing a 100 g/L solution of *potassium nitrate R* in the outer jacket and a standard filling solution in the inner jacket.

1 mL of *0.1 M silver nitrate* is equivalent to 5.844 mg of NaCl.

**Iron** (*2.4.9*): maximum 20 ppm, determined on solution S.

**Loss on drying** (*2.2.32*): maximum 7.0 per cent, determined on 1.000 g by drying in an oven at 105 °C for 4 h.

**Microbial contamination**. It complies with the test for *Escherichia coli* and *Salmonella* (*2.6.13*).

ASSAY

To 0.500 g of the dried and crushed residue obtained in the test for sodium chloride add 80 mL of *anhydrous acetic acid R* and heat under a reflux condenser for 2 h. Cool the solution to room temperature. Titrate with *0.1 M perchloric acid*, determining the end-point potentiometrically (*2.2.20*). Carry out a blank test.

1 mL of *0.1 M perchloric acid* is equivalent to 2.299 mg of Na.

STORAGE

In an airtight container, protected from light.

**corrected 7.3**

# SODIUM STEARATE

## Natrii stearas

DEFINITION

Mixture of sodium salts of different fatty acids consisting mainly of stearic (octadecanoic) acid [$C_{17}H_{35}COONa$; $M_r$ 306.5] and palmitic (hexadecanoic) acid [$C_{15}H_{31}COONa$; $M_r$ 278.4].

*Content*:

- *sodium*: 7.4 per cent to 8.5 per cent ($A_r$ 22.99) (dried substance);
- *stearic acid in the fatty acid fraction*: minimum 40 per cent;
- *sum of stearic acid and palmitic acid in the fatty acid fraction*: minimum 90 per cent.

CHARACTERS

*Appearance*: white or yellowish, fine powder, greasy to the touch.

*Solubility*: slightly soluble in water and in ethanol (96 per cent).

IDENTIFICATION

*First identification: C, D.*

*Second identification: A, B, D.*

A. Freezing point (*2.2.18*): minimum 53 °C for the residue obtained in the preparation of solution S (see Tests).

B. Acid value (*2.5.1*): 195 to 210, determined on 0.200 g of the residue obtained in the preparation of solution S dissolved in 25 mL of the prescribed mixture of solvents.

C. Examine the chromatograms obtained in the assay of stearic acid and palmitic acid.

*Results*: the 2 principal peaks in the chromatogram obtained with the test solution are similar in retention time and size to the 2 principal peaks in the chromatogram obtained with the reference solution.

D. Solution S gives reaction (b) of sodium (*2.3.1*).

TESTS

**Solution S**. To 10.0 g add 100 mL of *peroxide-free ether R* and 80 mL of *acetic acid R*. Boil under a reflux condenser until dissolution is complete. Allow to cool. In a separating funnel, separate the aqueous layer and shake the ether layer with 2 quantities, each of 8 mL, of *acetic acid R*. Combine the aqueous layers, wash with 30 mL of *peroxide-free ether R* and dilute to 100 mL with *distilled water R* (solution S). Evaporate the ether layers to dryness on a water-bath and dry the residue at 100-105 °C.

**Acidity or alkalinity**. Suspend 2.0 g in 50 mL of previously neutralised *ethanol (96 per cent) R*. Heat under reflux to dissolve and add 3 drops of *phenolphthalein solution R*; the solution is colourless. Not less than 0.60 mL and not more than 0.85 mL of *0.1 M sodium hydroxide* is required to change the colour of the indicator.

**Chlorides** (*2.4.4*): maximum 0.2 per cent.

Dilute 0.25 mL of solution S to 15 mL with *water R*.

**Sulfates** (*2.4.13*): maximum 0.3 per cent.

Dilute 0.5 mL of solution S to 15 mL with *distilled water R*.

**Nickel**: maximum 5 ppm.

Atomic absorption spectrometry (*2.2.23, Method II*).

*Test solution.* Place 50.0 mg of the substance to be examined in a polytetrafluoroethylene digestion flask and add 0.5 mL of a mixture of 1 volume of *heavy metal-free hydrochloric acid R* and 5 volumes of *heavy metal-free nitric acid R*. Allow to digest at 170 °C for 5 h. Allow to cool. Dissolve the residue in *water R* and dilute to 5.0 mL with the same solvent.

*Reference solutions.* Prepare the reference solutions using *nickel standard solution (10 ppm Ni) R*, diluting as necessary with *water R*.

*Source*: nickel hollow-cathode lamp.

*Wavelength*: 232.0 nm.

*Atomisation device*: furnace.

**Loss on drying** (*2.2.32*): maximum 5.0 per cent.

In a weighing glass introduce 1.0 g of previously washed *sand R*, dry at 105 °C and weigh. Add 0.500 g of the substance to be examined and 10 mL of *ethanol (96 per cent) R*. Evaporate at 80 °C and dry the residue at 105 °C for 4 h.

**Microbial contamination**

TAMC: acceptance criterion $10^3$ CFU/g (*2.6.12*).

TYMC: acceptance criterion $10^2$ CFU/g (*2.6.12*).

Absence of *Escherichia coli* (*2.6.13*).

Absence of *Salmonella* (*2.6.13*).

ASSAY

**Sodium**. Dissolve 0.250 g with gentle heating in a mixture of 5 mL of *acetic anhydride R* and 20 mL of *anhydrous acetic acid R*. Cool and add 20 mL of *dioxan R*. Titrate with *0.1 M perchloric acid*, determining the end-point potentiometrically (*2.2.20*).

1 mL of *0.1 M perchloric acid* is equivalent to 2.299 mg of Na.

**Stearic acid and palmitic acid**. Gas chromatography (*2.2.28*): use the normalisation procedure.

*Test solution.* In a conical flask fitted with a reflux condenser, dissolve 0.10 g of the substance to be examined in 5 mL of *boron trifluoride-methanol solution R*. Boil under a reflux condenser for 10 min. Add 4 mL of *heptane R* through the condenser and boil again under a reflux condenser for 10 min. Allow to cool. Add 20 mL of *saturated sodium chloride solution R*. Shake and allow the layers to separate. Remove about 2 mL of the organic layer and dry over 0.2 g of *anhydrous sodium sulfate R*. Dilute 1.0 mL of the solution to 100.0 mL with *heptane R*.

*Reference solution.* Prepare the reference solution in the same manner as the test solution using 50.0 mg of *palmitic acid CRS* and 50.0 mg of *stearic acid CRS* instead of the substance to be examined.

*Column*:

- *material*: fused silica;
- *size*: *l* = 30 m, Ø = 0.32 mm;
- *stationary phase*: *macrogol 20 000 R* (film thickness 0.5 µm).

*Carrier gas*: *helium for chromatography R*.

*Flow rate*: 2.4 mL/min.

*Temperature*:

| | Time (min) | Temperature (°C) |
|---|---|---|
| Column | 0 - 2 | 70 |
| | 2 - 36 | 70 → 240 |
| | 36 - 41 | 240 |
| Injection port | | 220 |
| Detector | | 260 |

*Detection*: flame ionisation.

*Injection*: 1 µL.

*Relative retention* with reference to methyl stearate (retention time = about 40 min): methyl palmitate = about 0.88.

*System suitability*: reference solution:

- *resolution*: minimum 5.0 between the peaks due to methyl palmitate and methyl stearate.

Calculate the content of stearic acid and palmitic acid.

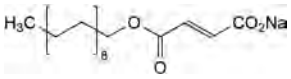
STORAGE

In an airtight container, protected from light.

**07/2010:1567**
**corrected 10.0**

# SODIUM STEARYL FUMARATE

## Natrii stearylis fumaras



$C_{22}H_{39}NaO_4$ $M_r$ 390.5
[4070-80-8]

DEFINITION

Sodium octadecyl (*E*)-butenedioate.

*Content*: 99.0 per cent to 101.5 per cent (anhydrous substance).

CHARACTERS

*Appearance*: white or almost white, fine powder with agglomerates of flat, circular particles.

*Solubility*: practically insoluble in water, slightly soluble in methanol, practically insoluble in acetone and in anhydrous ethanol.

IDENTIFICATION

Infrared absorption spectrophotometry (*2.2.24*).

*Comparison*: *sodium stearyl fumarate CRS*.

TESTS

**Related substances**. Gas chromatography (*2.2.28*): use the normalisation procedure.

*Silylation solution.* To 2 mL of *N,O-bis(trimethylsilyl)trifluoroacetamide R* add 0.02 mL of *chlorotrimethylsilane R* and mix.

*Test solution.* Introduce 15.0 mg of the substance to be examined in a vial with a screw cap and add 1 mL of the silylation solution. Seal the vial and heat at about 70 °C for 1 h. After the reaction a precipitate remains in the vial; filter the solution through a nylon filter (pore size 0.45 µm).

*Reference solution.* Introduce 1.0 mg of *sodium stearyl maleate CRS* and 1.0 mg of *sodium stearyl fumarate CRS* into a vial with a screw cap and add 1 mL of the silylation solution. Seal the vial and heat at about 70 °C for 1 h.

*Column*:

- *material*: fused silica;
- *size*: *l* = 15 m, Ø = 0.53 mm;
- *stationary phase*: *methylpolysiloxane R* (film thickness 0.15 µm).

*Carrier gas*: *helium for chromatography R*.

*Flow rate*: 2 mL/min.

*Split ratio*: 1:25.

*Temperature*:

| | Time (min) | Temperature (°C) |
|---|---|---|
| Column | 0 - 1 | 180 |
| | 1 - 21 | 180 → 320 |
| | 21 - 26 | 320 |
| Injection port | | 250 |
| Detector | | 320 |

*Detection*: flame ionisation.

*Injection*: 2 µL.

*Relative retention* with reference to stearyl trimethylsilyl fumarate (retention time = about 9 min): stearyl alcohol = 0.30; stearyl trimethylsilyl ether = 0.35; palmityl trimethylsilyl fumarate = 0.80; heptadecyl trimethylsilyl fumarate = 0.85; stearyl trimethylsilyl maleate = 0.90; nonadecyl trimethylsilyl fumarate = 1.05; eicos-11-enyl trimethylsilyl fumarate = 1.15; distearyl fumarate = 2.25.

*System suitability*:

– *resolution*: minimum 1.5 between the peaks in the chromatogram obtained with the reference solution.

*Limits*:

– *any impurity*: maximum 0.5 per cent;
– *total*: maximum 5.0 per cent.

**Water** (*2.5.12*): maximum 5.0 per cent, determined on 0.250 g.

ASSAY

Dissolve 0.250 g, accurately weighed, in 10 mL of *methylene chloride R* and add 30 mL of *anhydrous acetic acid R*. Titrate with *0.1 M perchloric acid*, determining the end-point potentiometrically (*2.2.20*).

1 mL of *0.1 M perchloric acid* is equivalent to 39.05 mg of $C_{22}H_{39}NaO_4$.

FUNCTIONALITY-RELATED CHARACTERISTICS

*This section provides information on characteristics that are recognised as being relevant control parameters for one or more functions of the substance when used as an excipient (see chapter 5.15). Some of the characteristics described in the Functionality-related characteristics section may also be present in the mandatory part of the monograph since they also represent mandatory quality criteria. In such cases, a cross-reference to the tests described in the mandatory part is included in the Functionality-related characteristics section. Control of the characteristics can contribute to the quality of a medicinal product by improving the consistency of the manufacturing process and the performance of the medicinal product during use. Where control methods are cited, they are recognised as being suitable for the purpose, but other methods can also be used. Wherever results for a particular characteristic are reported, the control method must be indicated.*

*The following characteristics may be relevant for sodium stearyl fumarate used as a lubricant in tablets and capsules.*

**Particle-size distribution** (*2.9.31*).

**Specific surface area** (*2.9.26, Method I*).

**01/2019:0099**

# SODIUM SULFATE, ANHYDROUS

## Natrii sulfas anhydricus

$Na_2SO_4$ $M_r$ 142.0
[7757-82-6]

DEFINITION

Anhydrous disodium sulfate.

*Content*: 98.5 per cent to 101.0 per cent (dried substance).

CHARACTERS

*Appearance*: white or almost white powder, hygroscopic.

*Solubility*: freely soluble in water.

IDENTIFICATION

A. It gives reaction (a) of sulfates (*2.3.1*).

B. It gives reaction (a) of sodium (*2.3.1*).

C. Loss on drying (see Tests).

TESTS

**Solution S**. Dissolve 2.2 g in *carbon dioxide-free water R* prepared from *distilled water R* and dilute to 100 mL with the same solvent.

**Appearance of solution**. Solution S is clear (*2.2.1*) and colourless (*2.2.2, Method II*).

**Acidity or alkalinity**. To 10 mL of solution S add 0.1 mL of *bromothymol blue solution R1*. Not more than 0.5 mL of *0.01 M hydrochloric acid* or *0.01 M sodium hydroxide* is required to change the colour of the indicator.

**Chlorides** (*2.4.4*): maximum 450 ppm.

Dilute 5 mL of solution S to 15 mL with *water R*.

**Calcium** (*2.4.3*): maximum 450 ppm, if intended for use in the manufacture of parenteral preparations.

Dilute 10 mL of solution S to 15 mL with *distilled water R*.

**Iron** (*2.4.9*): maximum 90 ppm, if intended for use in the manufacture of parenteral preparations.

Dilute 5 mL of solution S to 10 mL with *water R*.

**Magnesium**: maximum 200 ppm, if intended for use in the manufacture of parenteral preparations.

To 10 mL of solution S add 1 mL of *glycerol (85 per cent) R*, 0.15 mL of *titan yellow solution R*, 0.25 mL of *ammonium oxalate solution R* and 5 mL of *dilute sodium hydroxide solution R* and shake. Any pink colour in the test solution is not more intense than that in a standard prepared at the same time in the same manner using a mixture of 5 mL of *magnesium standard solution (10 ppm Mg) R* and 5 mL of *water R*.

**Loss on drying** (*2.2.32*): maximum 0.5 per cent, determined on 1.000 g by drying in an oven at 130 °C.

ASSAY

Pack 20 g of *strongly acidic ion-exchange resin R* into a glass column, at least 20 cm long and 20 mm in internal diameter, and cover it with *water R*. After 5 min, wash the resin with *water R* until the pH of the eluate is about 6 to 7 using a *pH indicator strip R*. Keep the resin covered with *water R*. Dissolve 0.500 g of the substance to be examined in 10 mL of *water R* in a beaker. Load the solution onto the column and pass through the resin at a flow rate of about 4 mL/min until the resin is just covered with the solution. Using about 200 mL of *water R*, rinse the beaker and pass the rinsings through the column at the same flow rate. Check that the pH of the last eluate is about 6 to 7 using a *pH indicator strip R*.

Titrate the eluate with *1 M sodium hydroxide*, determining the end-point potentiometrically (*2.2.20*).

1 mL of *1 M sodium hydroxide* is equivalent to 71.00 mg of $Na_2SO_4$.

STORAGE

Store in an airtight container.

LABELLING

The label states, where applicable, that the substance is suitable for use in the manufacture of parenteral preparations.

**01/2019:0100**

# SODIUM SULFATE DECAHYDRATE

## Natrii sulfas decahydricus

$Na_2SO_4,10H_2O$ $M_r$ 322.2
[7727-73-3]

DEFINITION

Disodium sulfate decahydrate.

*Content*: 98.5 per cent to 101.0 per cent (dried substance).

CHARACTERS

*Appearance*: white or almost white, crystalline powder or colourless, transparent crystals.

*Solubility*: freely soluble in water, practically insoluble in ethanol (96 per cent). It partly dissolves in its own water of crystallisation at about 33 °C.

IDENTIFICATION

A. It gives reaction (a) of sulfates (*2.3.1*).

B. It gives reaction (a) of sodium (*2.3.1*).

C. Loss on drying (see Tests).

TESTS

**Solution S**. Dissolve 5.0 g in *carbon dioxide-free water R* prepared from *distilled water R* and dilute to 100 mL with the same solvent.

**Appearance of solution**. Solution S is clear (*2.2.1*) and colourless (*2.2.2, Method II*).

**Acidity or alkalinity**. To 10 mL of solution S add 0.1 mL of *bromothymol blue solution R1*. Not more than 0.5 mL of *0.01 M hydrochloric acid* or *0.01 M sodium hydroxide* is required to change the colour of the indicator.

**Chlorides** (*2.4.4*): maximum 200 ppm.

Dilute 5 mL of solution S to 15 mL with *water R*.

**Calcium** (*2.4.3*): maximum 200 ppm, if intended for use in the manufacture of parenteral preparations.

Dilute 10 mL of solution S to 15 mL with *distilled water R*.

**Iron** (*2.4.9*): maximum 40 ppm, if intended for use in the manufacture of parenteral preparations.

Dilute 5 mL of solution S to 10 mL with *water R*.

**Magnesium**: maximum 100 ppm, if intended for use in the manufacture of parenteral preparations.

To 10 mL of solution S add 1 mL of *glycerol (85 per cent) R*, 0.15 mL of *titan yellow solution R*, 0.25 mL of *ammonium oxalate solution R* and 5 mL of *dilute sodium hydroxide solution R* and shake. Any pink colour in the test solution is not more intense than that in a standard prepared at the same time in the same manner using a mixture of 5 mL of *magnesium standard solution (10 ppm Mg) R* and 5 mL of *water R*.

**Loss on drying** (*2.2.32*): 52.0 per cent to 57.0 per cent, determined on 1.000 g by drying at 30 °C for 1 h, then at 130 °C.

ASSAY

Pack 20 g of *strongly acidic ion-exchange resin R* into a glass column, at least 20 cm long and 20 mm in internal diameter, and cover it with *water R*. After 5 min, wash the resin with *water R* until the pH of the eluate is about 6 to 7 using a *pH indicator strip R*. Keep the resin covered with *water R*. Dissolve 1.100 g of the substance to be examined in 10 mL of *water R* in a beaker. Load the solution onto the column and pass through the resin at a flow rate of about 4 mL/min until the resin is just covered with the solution. Using about 200 mL of *water R*, rinse the beaker and pass the rinsings through the column at the same flow rate. Check that the pH of the last eluate is about 6 to 7 using a *pH indicator strip R*.

Titrate the eluate with *1 M sodium hydroxide*, determining the end-point potentiometrically (*2.2.20*).

1 mL of *1 M sodium hydroxide* is equivalent to 0.161 g of $Na_2SO_4,10H_2O$.

LABELLING

The label states, where applicable, that the substance is suitable for use in the manufacture of parenteral preparations.

**01/2017:0775**

# SODIUM SULFITE

## Natrii sulfis

$Na_2SO_3$ $M_r$ 126.0
[7757-83-7]

DEFINITION

*Content*: 95.0 per cent to 100.5 per cent of $Na_2SO_3$.

CHARACTERS

*Appearance*: white or almost white powder.

*Solubility*: freely soluble in water, very slightly soluble in ethanol (96 per cent).

IDENTIFICATION

A. Solution S (see Tests) is slightly alkaline (*2.2.4*).

B. To 5 mL of solution S add 0.5 mL of *0.05 M iodine*. The solution is colourless and gives reaction (a) of sulfates (*2.3.1*).

C. Solution S gives reaction (a) of sodium (*2.3.1*).

D. It complies with the limits of the assay.

TESTS

**Solution S**. Dissolve 5 g in *water R* and dilute to 100 mL with the same solvent.

**Solution S1**. To 10.0 g add 25 mL of *water R*. Shake until mostly dissolved, carefully and progressively add 15 mL of *hydrochloric acid R*. Heat to boiling. Cool and dilute to 100.0 mL with *water R*.

**Appearance of solution**. Solution S is clear (*2.2.1*) and colourless (*2.2.2, Method I*).

**Thiosulfates**: maximum 0.1 per cent.

To 2.00 g add 100 mL of *water R*. Shake, add 10 mL of *formaldehyde solution R* and 10 mL of *acetic acid R*. Allow to stand for 5 min. Add 0.5 mL of *starch solution R* and titrate with *0.05 M iodine*. Carry out a blank titration. The difference between the volumes used in the titrations is not more than 0.15 mL.

**Iron** (*2.4.9*): maximum 10 ppm, determined on solution S1.

**Selenium**: maximum 10 ppm.

To 3.0 g add 10 mL of *formaldehyde solution R*, carefully and progressively add 2 mL of *hydrochloric acid R*. Heat on a water-bath for 20 min. Any pink colour in the solution is not more intense than that of a standard prepared at the same time and in the same manner using 1.0 g of the substance to be examined to which 0.2 mL of *selenium standard solution (100 ppm Se) R* has been added.

**Zinc**: maximum 25 ppm.

Atomic absorption spectrometry (*2.2.23, Method I*).

*Test solution.* Dilute 2.0 mL of solution S1 to 10.0 mL with *water R*.

*Reference solutions.* Prepare the reference solutions using *zinc standard solution (100 ppm Zn) R*, diluting with *water R*.

*Source*: zinc hollow-cathode lamp.

*Wavelength*: 213.9 nm.

*Atomisation device*: air-acetylene flame.

ASSAY

Introduce 0.250 g into a 500 mL conical flask containing 50.0 mL of *0.05 M iodine*. Shake until completely dissolved. Add 1 mL of *starch solution R* and titrate the excess of iodine with *0.1 M sodium thiosulfate*. Carry out a blank titration.

1 mL of *0.05 M iodine* is equivalent to 6.30 mg of $Na_2SO_3$.

**01/2017:0776**

# SODIUM SULFITE HEPTAHYDRATE

## Natrii sulfis heptahydricus

$Na_2SO_3,7H_2O$ $M_r$ 252.2
[10102-15-5]

DEFINITION

*Content*: 48.0 per cent to 52.5 per cent of $Na_2SO_3$.

CHARACTERS

*Appearance*: colourless crystals.

*Solubility*: freely soluble in water, very slightly soluble in ethanol (96 per cent).

IDENTIFICATION

A. Solution S (see Tests) is slightly alkaline (*2.2.4*).

B. To 5 mL of solution S add 0.5 mL of *0.05 M iodine*. The solution is colourless and gives reaction (a) of sulfates (*2.3.1*).

C. Solution S gives reaction (a) of sodium (*2.3.1*).

D. It complies with the limits of the assay.

TESTS

**Solution S**. Dissolve 10 g in *water R* and dilute to 100 mL with the same solvent.

**Solution S1**. To 20.0 g add 25 mL of *water R*. Shake until mostly dissolved, and carefully and progressively, add 15 mL of *hydrochloric acid R*. Heat to boiling. Cool and dilute to 100.0 mL with *water R*.

**Appearance of solution**. Solution S is clear (*2.2.1*) and colourless (*2.2.2, Method I*).

**Thiosulfates**: maximum 0.05 per cent.

To 4.00 g add 100 mL of *water R*. Shake to dissolve, add 10 mL of *formaldehyde solution R* and 10 mL of *acetic acid R*. Allow to stand for 5 min, then add 0.5 mL of *starch solution R* and titrate with *0.05 M iodine*. Carry out a blank titration. The difference between the volumes used in the titrations is not more than 0.15 mL.

**Iron** (*2.4.9*): maximum 5 ppm, determined on solution S1.

**Selenium**: maximum 5 ppm.

To 6.0 g add 10 mL of *formaldehyde solution R*, carefully and progressively add 2 mL of *hydrochloric acid R*. Heat on a water-bath for 20 min. Any pink colour in the solution is not more intense than that of a standard prepared at the same time and in the same manner using 2.0 g of the substance to be examined to which 0.2 mL of *selenium standard solution (100 ppm Se) R* has been added.

**Zinc**: maximum 12 ppm.

Atomic absorption spectrometry (*2.2.23, Method I*).

*Test solution.* Dilute 2.0 mL of solution S1 to 10.0 mL with *water R*.

*Reference solutions.* Prepare the reference solutions using *zinc standard solution (100 ppm Zn) R*, diluting with *water R*.

*Source*: zinc hollow-cathode lamp.

*Wavelength*: 213.9 nm.

*Atomisation device*: air-acetylene flame.

ASSAY

Introduce 0.500 g into a 500 mL conical flask containing 50.0 mL of *0.05 M iodine*. Shake until completely dissolved. Add 1 mL of *starch solution R* and titrate the excess of iodine with *0.1 M sodium thiosulfate*. Carry out a blank titration.

1 mL of *0.05 M iodine* is equivalent to 6.30 mg of $Na_2SO_3$.

**01/2017:0414**

# SODIUM THIOSULFATE

## Natrii thiosulfas

$Na_2S_2O_3,5H_2O$ $M_r$ 248.2
[10102-17-7]

DEFINITION

*Content*: 99.0 per cent to 101.0 per cent of $Na_2S_2O_3,5H_2O$.

CHARACTERS

*Appearance*: transparent, colourless crystals, efflorescent in dry air.

*Solubility*: very soluble in water, practically insoluble in ethanol 96 per cent. It dissolves in its water of crystallisation at about 49 °C.

IDENTIFICATION

A. It decolourises *iodinated potassium iodide solution R*.

B. To 0.5 mL of solution S (see Tests) add 0.5 mL of *water R* and 2 mL of *silver nitrate solution R2*. A white precipitate is formed which rapidly becomes yellowish and then black.

C. To 2.5 mL of solution S add 2.5 mL of *water R* and 1 mL of *hydrochloric acid R*. A precipitate of sulfur is formed and gas is evolved which gives a blue colour to *starch iodate paper R*.

D. 1 mL of solution S gives reaction (a) of sodium (*2.3.1*).

TESTS

**Solution S**. Dissolve 10.0 g in *carbon dioxide-free water R* prepared from *distilled water R* and dilute to 100 mL with the same solvent.

**Appearance of solution**. The freshly prepared solution is clear (*2.2.1*) and colourless (*2.2.2, Method II*).

Dissolve 10.0 g in 50 mL of *distilled water R*, add 1 mL of *0.1 M sodium hydroxide* and dilute to 100 mL with the same solvent.

**pH** (*2.2.3*): 6.0 to 8.4 for the freshly prepared solution S.

**Sulfates and sulfites** (*2.4.13*): maximum 0.2 per cent.

Dilute 2.5 mL of freshly prepared solution S to 10 mL with *distilled water R*. To 3 mL of this solution first add 2 mL of *iodinated potassium iodide solution R* and continue the addition dropwise until a very faint persistent yellow colour appears. Dilute to 15 mL with *distilled water R*.

**Sulfides**. To 10 mL of solution S add 0.05 mL of a freshly prepared 50 g/L solution of *sodium nitroprusside R*. The solution does not become violet.

ASSAY

Dissolve 0.500 g in 20 mL of *water R* and titrate with *0.05 M iodine*, using 1 mL of *starch solution R*, added towards the end of the titration, as indicator.

1 mL of *0.05 M iodine* is equivalent to 24.82 mg of $Na_2S_2O_3,5H_2O$.

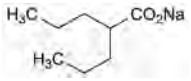
STORAGE

In an airtight container.

**01/2017:0678**

# SODIUM VALPROATE

## Natrii valproas



$C_8H_{15}NaO_2$ $M_r$ 166.2

[1069-66-5]

DEFINITION

Sodium 2-propylpentanoate.

*Content*: 98.5 per cent to 101.0 per cent (dried substance).

CHARACTERS

*Appearance*: white or almost white, crystalline, hygroscopic powder.

*Solubility*: very soluble in water, freely soluble in ethanol (96 per cent).

It shows polymorphism (*5.9*).

IDENTIFICATION

A. Infrared absorption spectrophotometry (*2.2.24*).

*Comparison*: *sodium valproate CRS*.

If the spectra obtained in the solid state show differences, record new spectra using discs prepared by placing 50 µL of a 100 g/L solution in *methanol R* on a disc of *potassium bromide R* and evaporating the solvent *in vacuo*. Examine immediately.

B. 2 mL of solution S (see Tests) gives reaction (a) of sodium (*2.3.1*).

TESTS

**Solution S**. Dissolve 1.25 g in 20 mL of *distilled water R* in a separating funnel, add 5 mL of *dilute nitric acid R* and shake. Allow the mixture to stand for 12 h. Use the aqueous lower layer.

**Appearance of solution**. The solution is not more opalescent than reference suspension II (*2.2.1*) and not more intensely coloured than reference solution $Y_6$ (*2.2.2, Method II*).

Dissolve 2.0 g in *water R* and dilute to 10 mL with the same solvent.

**Acidity or alkalinity**. Dissolve 1.0 g in 10 mL of *water R*. Add 0.1 mL of *phenolphthalein solution R*. Not more than 0.75 mL of *0.1 M hydrochloric acid* or *0.1 M sodium hydroxide* is required to change the colour of the indicator.

**Related substances**. Gas chromatography (*2.2.28*).

*Test solution*. Dissolve 0.500 g of the substance to be examined in 10 mL of *water R*. Add 5 mL of *dilute sulfuric acid R* and shake with 3 quantities, each of 20 mL, of *heptane R*. Dilute the combined upper layers to 100.0 mL with *heptane R*.

*Reference solution (a)*. Dissolve 5 mg of *valproic acid for system suitability CRS* (containing impurity K) in 1.0 mL of *heptane R*.

*Reference solution (b)*. Dilute 1.0 mL of the test solution to 100.0 mL with *heptane R*.

*Column*:

- *material*: wide-bore fused silica;
- *size*: *l* = 30 m, Ø = 0.53 mm;
- *stationary phase*: *macrogol 20 000 2-nitroterephthalate R* (film thickness 0.5 µm).

*Carrier gas*: *helium for chromatography R*.

*Flow rate*: 8 mL/min.

*Temperature*:

| | Time (min) | Temperature (°C) |
|---|---|---|
| Column | 0 - 5 | 80 |
| | 5 - 15 | 80 → 150 |
| | 15 - 28.3 | 150 → 190 |
| | 28.3 - 30 | 190 |
| Injection port | | 220 |
| Detector | | 220 |

*Detection*: flame ionisation.

*Injection*: 1 µL.

*Relative retention* with reference to valproic acid (retention time = about 17 min): impurity K = about 0.97.

*System suitability*: reference solution (a):

- *resolution*: minimum 2.0 between the peaks due to impurity K and valproic acid.

*Limits*:

- *impurity K*: not more than 0.15 times the area of the principal peak in the chromatogram obtained with reference solution (b) (0.15 per cent);
- *unspecified impurities*: for each impurity, not more than 0.05 times the area of the principal peak in the chromatogram obtained with reference solution (b) (0.05 per cent);
- *total*: not more than 0.2 times the area of the principal peak in the chromatogram obtained with reference solution (b) (0.2 per cent);
- *disregard limit*: 0.03 times the area of the principal peak in the chromatogram obtained with reference solution (b) (0.03 per cent).

**Chlorides** (*2.4.4*): maximum 200 ppm.

To 5 mL of solution S add 10 mL of *water R*.

**Sulfates** (*2.4.13*): maximum 200 ppm, determined on solution S.

**Loss on drying** (*2.2.32*): maximum 2.0 per cent, determined on 1.000 g by drying in an oven at 105 °C.

ASSAY

Dissolve 0.150 g in 25 mL of *anhydrous acetic acid R*. Titrate with *0.1 M perchloric acid*, determining the end-point potentiometrically (*2.2.20*).

1 mL of *0.1 M perchloric acid* is equivalent to 16.62 mg of $C_8H_{15}NaO_2$.

STORAGE

In an airtight container.

IMPURITIES

*Specified impurities*: *K*.

*Other detectable impurities* (the following substances would, if present at a sufficient level, be detected by one or other of the tests in the monograph. They are limited by the general acceptance criterion for other/unspecified impurities and/or by the general monograph *Substances for pharmaceutical use (2034)*. It is therefore not necessary to identify these

Monographs S

impurities for demonstration of compliance. See also *5.10. Control of impurities in substances for pharmaceutical use*): *A, B, C, D, F, G, I, J, L.*

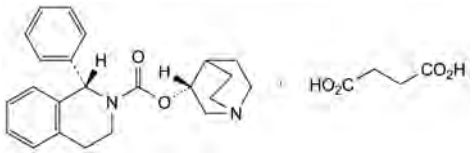
# SOLIFENACIN SUCCINATE

## Solifenacini succinas



$C_{27}H_{32}N_2O_6$ $M_r$ 480.6
[242478-38-2]

DEFINITION

(3*R*)-1-Azabicyclo[2.2.2]octan-3-yl (1*S*)-1-phenyl-3,4-dihydroisoquinoline-2(1*H*)-carboxylate hydrogen butanedioate.

*Content*: 99.0 per cent to 101.0 per cent (dried substance).

CHARACTERS

*Appearance*: white or light yellow powder.

*Solubility*: very soluble or freely soluble in water, soluble in ethanol (96 per cent), practically insoluble in heptane.

IDENTIFICATION

A. Infrared absorption spectrophotometry (*2.2.24*).
*Comparison*: *solifenacin succinate CRS*.

B. Isomeric purity (see Tests).

TESTS

**Isomeric purity**. Liquid chromatography (*2.2.29*).

*Test solution.* Dissolve 50 mg of the substance to be examined in the mobile phase and dilute to 20.0 mL with the mobile phase.

*Reference solution (a).* Dissolve the contents of a vial of *solifenacin for system suitability CRS* (containing impurities F, G and H) in 1.0 mL of the mobile phase.

*Reference solution (b).* Dilute 1.0 mL of the test solution to 100.0 mL with the mobile phase. Dilute 1.0 mL of this solution to 10.0 mL with the mobile phase.

*Column*:

- *size*: *l* = 0.25 m, Ø = 4.6 mm;
- *stationary phase*: *amylose derivative of silica gel for chiral separation R* (5 µm);
- *temperature*: 35 °C.

*Mobile phase*: *diethylamine R*, *anhydrous ethanol R*, *heptane R* (0.1:200:800 *V/V/V*).

*Flow rate*: 0.8 mL/min.

*Detection*: spectrophotometer at 220 nm.

*Injection*: 10 µL.

*Run time*: 1.5 times the retention time of solifenacin.

*Identification of impurities*: use the chromatogram supplied with *solifenacin for system suitability CRS* and the chromatogram obtained with reference solution (a) to identify the peaks due to impurities F, G and H.

*Relative retention* with reference to solifenacin (retention time = about 17 min): impurity F = about 0.7; impurity H = about 0.76; impurity G = about 0.84.

*System suitability*: reference solution (a):

- *resolution*: minimum 1.5 between the peaks due to impurities F and H;

– *peak-to-valley ratio*: minimum 10, where $H_p$ = height above the baseline of the peak due to impurity G and $H_v$ = height above the baseline of the lowest point of the curve separating this peak from the peak due to impurity H.

*Calculation of percentage contents*:

– for each impurity, use the concentration of solifenacin succinate in reference solution (b).

*Limits*:

– *impurities F, G, H*: for each impurity, maximum 0.15 per cent.

**Impurity E**. Thin-layer chromatography (*2.2.27*).

*Test solution*. Dissolve 0.500 g of the substance to be examined in *methanol R* and dilute to 5.0 mL with the same solvent.

*Reference solution*. Dissolve 5.0 mg of *3-quinuclidinol R* (impurity E) in *methanol R* and dilute to 50.0 mL with the same solvent.

*Plate*: *TLC silica gel plate R* (2-10 µm).

*Mobile phase*: *concentrated ammonia R*, *anhydrous ethanol R*, *toluene R* (6:31:63 *V/V/V*).

*Application*: 10 µL.

*Development*: over 2/3 of the plate.

*Drying*: at 100-105 °C for 1 h.

*Detection*: expose to iodine vapour for at least 2 h.

*Relative retention* with reference to solifenacin ($R_F$ = about 0.6): impurity E = about 0.2.

*Limit*:

– *impurity E*: any spot due to impurity E is not more intense than the corresponding spot in the chromatogram obtained with the reference solution (0.1 per cent).

**Related substances**. Liquid chromatography (*2.2.29*).

*Solvent mixture*. Dissolve 0.6 g of *ammonium phosphate R* in 1 L of *water R*, add 1.0 mL of *diethylamine R* and adjust to pH 11 with *concentrated ammonia R*.

*Test solution*. Dissolve 0.100 g of the substance to be examined in mobile phase A and dilute to 100.0 mL with mobile phase A.

*Reference solution (a)*. Dissolve 5 mg of *1-phenyl-1,2,3,4-tetrahydroisoquinoline R* (impurity A) in the test solution and dilute to 25.0 mL with the test solution.

*Reference solution (b)*. Dilute 1.0 mL of the test solution to 100.0 mL with mobile phase A. Dilute 1.0 mL of this solution to 10.0 mL with mobile phase A.

*Column*:

– *size*: *l* = 0.10 m, Ø = 2.1 mm;

– *stationary phase*: *end-capped ethylene-bridged polar-embedded octadecylsilyl silica gel for chromatography (hybrid material) R* (1.7 µm);

– *temperature*: 40 °C.

*Mobile phase*:

– *mobile phase A*: *acetonitrile R1*, solvent mixture (45:55 *V/V*);

– *mobile phase B*: *acetonitrile R1*;

| Time (min) | Mobile phase A (per cent *V/V*) | Mobile phase B (per cent *V/V*) |
|---|---|---|
| 0 - 0.5 | 90 | 10 |
| 0.5 - 10.5 | 90 → 68 | 10 → 32 |
| 10.5 - 12.5 | 68 | 32 |

*Flow rate*: 0.4 mL/min.

*Detection*: spectrophotometer at 215 nm.

*Injection*: 2.5 µL.

*Identification of impurities*: use the chromatogram obtained with reference solution (a) to identify the peak due to impurity A.

*Relative retention* with reference to solifenacin (retention time = about 2 min): succinate = about 0.2; impurity A = about 0.7.

*System suitability*: reference solution (a):

– *resolution*: minimum 4.0 between the peaks due to impurity A and solifenacin.

*Calculation of percentage contents*:

– for each impurity, use the concentration of solifenacin succinate in reference solution (b).

*Limits*:

– *unspecified impurities*: for each impurity, maximum 0.10 per cent;

– *total*: maximum 0.3 per cent;

– *reporting threshold*: 0.05 per cent; disregard the peak due to succinate.

**Loss on drying** (*2.2.32*): maximum 0.5 per cent, determined on 1.000 g by drying in an oven at 105 °C for 3 h.

**Sulfated ash** (*2.4.14*): maximum 0.1 per cent, determined on 1.0 g.

ASSAY

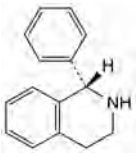
Dissolve 0.400 g in 50 mL of *anhydrous acetic acid R*. Titrate with *0.1 M perchloric acid*, determining the end-point potentiometrically (*2.2.20*).

1 mL of *0.1 M perchloric acid* is equivalent to 48.06 mg of $C_{27}H_{32}N_2O_6$.

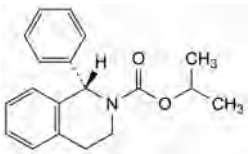
IMPURITIES

*Specified impurities: E, F, G, H.*

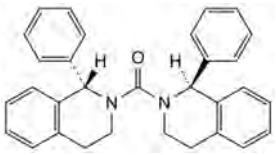
*Other detectable impurities* (the following substances would, if present at a sufficient level, be detected by one or other of the tests in the monograph. They are limited by the general acceptance criterion for other/unspecified impurities and/or by the general monograph *Substances for pharmaceutical use (2034)*. It is therefore not necessary to identify these impurities for demonstration of compliance. See also *5.10. Control of impurities in substances for pharmaceutical use*): *A, B, C, D, I.*



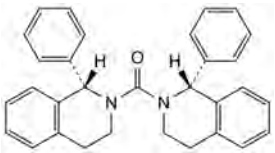
A. (1*S*)-1-phenyl-1,2,3,4-tetrahydroisoquinoline,



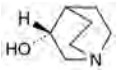
B. propan-2-yl (1*S*)-1-phenyl-3,4-dihydroisoquinoline-2(1*H*)-carboxylate,



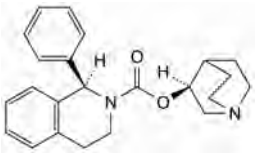
C. bis[(1*S*)-1-phenyl-3,4-dihydroisoquinolin-2(1*H*)-yl]methanone,



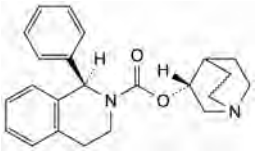
D. [(1*R*)-1-phenyl-3,4-dihydroisoquinolin-2(1*H*)-yl][(1*S*)-1-phenyl-3,4-dihydroisoquinolin-2(1*H*)-yl]methanone,



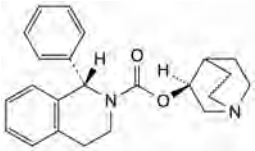
E. (3*R*)-1-azabicyclo[2.2.2]octan-3-ol (3-quinuclidinol),



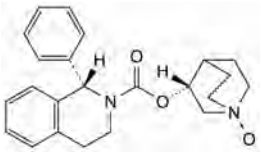
F. (3*S*)-1-azabicyclo[2.2.2]octan-3-yl (1*R*)-1-phenyl-3,4-dihydroisoquinoline-2(1*H*)-carboxylate,



G. (3*R*)-1-azabicyclo[2.2.2]octan-3-yl (1*R*)-1-phenyl-3,4-dihydroisoquinoline-2(1*H*)-carboxylate,



H. (3*S*)-1-azabicyclo[2.2.2]octan-3-yl (1*S*)-1-phenyl-3,4-dihydroisoquinoline-2(1*H*)-carboxylate,



I. (3*R*)-3-[[(1*S*)-1-phenyl-3,4-dihydroisoquinoline-2(1*H*)-carbonyl]oxy]-1-azabicyclo[2.2.2]octane 1-oxide (solifenacin *N*-oxide).

**01/2020:1264**

# SOLUTIONS FOR ORGAN PRESERVATION

## Solutiones ad conservationem partium corporis

DEFINITION

Solutions for organ preservation are sterile, aqueous preparations, intended for storage, protection and/or perfusion of mammalian body organs that are in particular destined for transplantation.

They contain electrolytes that are typically at a concentration close to the intracellular electrolyte composition.

They may contain carbohydrates (such as glucose or mannitol), amino acids, calcium-complexing agents (such as citrate or phosphate), hydrocolloids (such as starch or gelatin derivatives) and other excipients, for example to make the preparation isotonic with blood, to adjust or buffer the pH, to prevent deterioration of the ingredients, but not to adversely affect the intended action of the preparation or, at the concentration used, to cause toxicity or undue local irritation. Solutions for organ preservation may also contain active substances or these may be added immediately before use.

Solutions for organ preservation, examined under suitable conditions of visibility, are clear and practically free from particles.

Solutions for organ preservation may also be presented as concentrated solutions. They are diluted to the prescribed volume with a prescribed liquid immediately before use. After dilution, they comply with the requirements for solutions for organ preservation.

Before use, the solutions for organ preservation are cooled below room temperature, typically to 2 °C to 6 °C, to reduce the temperature of the body organ and its metabolism.

Where applicable, the containers for solutions for organ preservation comply with the requirements for *Materials used for the manufacture of containers* (*3.1* and subsections) and *Containers* (*3.2* and subsections). Solutions for organ preservation are supplied in glass containers (*3.2.1*) or in other containers such as plastic containers (*3.2.2* and *3.3.8*). The tightness of the container is ensured by suitable means. Closures ensure a good seal, prevent the access of micro-organisms and other contaminants and usually permit the withdrawal of a part or the whole of the contents without removal of the closure. The plastic materials or elastomers of which the closure is composed are sufficiently firm and elastic to allow the passage of a needle with the least possible shedding of particles.

PRODUCTION

Solutions for organ preservation are prepared using materials and methods designed to ensure their sterility and to avoid the introduction of contaminants and the growth of micro-organisms; recommendations on this aspect are provided in the text on *Methods of preparation of sterile products* (*5.1.1*).

Unless otherwise justified and authorised, solutions for organ preservation are prepared from *water for injections R* and do not contain antimicrobial preservatives.

TESTS

**pH** (*2.2.3*): 5.0 to 8.0.

**Osmolality** (*2.2.35*): 250 mosmol/kg to 380 mosmol/kg.

**Hydroxymethylfurfural**. If the solution contains glucose, it complies with the following test: to a volume of the preparation to be examined containing the equivalent of 25 mg of glucose, add 5.0 mL of a 100 g/L solution of *p-toluidine R* in *2-propanol R* containing 10 per cent *V/V* of *glacial acetic acid R* and 1.0 mL of a 5 g/L solution of *barbituric acid R*. The absorbance (*2.2.25*), determined at 550 nm after allowing the mixture to stand for 2 min to 3 min, is not greater than that of a standard prepared at the same time in the same manner using a solution containing 10 µg of *hydroxymethylfurfural R* in the same volume as the preparation to be examined.

**Particulate contamination**. Carry out the test for sub-visible particles (*2.9.19*) using 50 mL of preparation to be examined. The solution contains not more than 50 particles per millilitre larger than 10 µm and not more than 5 particles per millilitre larger than 25 µm.

Products for which the label states that the product is to be used with a final filter are exempted from these requirements.

**Sterility** (*2.6.1*). The solution complies with the test for sterility.

**Bacterial endotoxins** (*2.6.14*): less than 0.5 IU/mL.

**Pyrogens** (*2.6.8*). Solutions for which a validated test for bacterial endotoxins cannot be carried out comply with the test for pyrogens. Inject per kilogram of the rabbit's mass 10 mL of the solution, unless otherwise justified and authorised.

LABELLING

The label states:

- that the solution is not to be used for injection;
- the formula of the solution for organ preservation expressed in grams per litre and in millimoles per litre;
- the nominal volume of the solution for organ preservation in the container;
- the osmolality, expressed in milliosmoles per kilogram;
- that any unused portion of the ready-to-use solution, of the concentrated solution or of the diluted solution must be discarded;
- the storage conditions;
- if applicable, that the solution is to be used in conjunction with a final filter.

In addition, for concentrated solutions the label states that the solution must be diluted with a suitable liquid immediately before use.

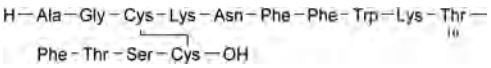
# SOMATOSTATIN

## Somatostatinum



$C_{76}H_{104}N_{18}O_{19}S_2$ $M_r$ 1638
[38916-34-6]

DEFINITION

L-Alanylglycyl-L-cysteinyl-L-lysyl-L-asparaginyl-L-phenylalanyl-L-phenylalanyl-L-tryptophyl-L-lysyl-L-threonyl-L-phenylalanyl-L-threonyl-L-seryl-L-cysteine cyclic (3→14)-disulfide.

Synthetic cyclic tetradecapeptide having the structure of the hypothalamic hormone that inhibits the release of human growth hormone. It contains a variable quantity of acetic acid. It is available in the freeze-dried form.

*Content*: 95.0 per cent to 104.0 per cent (anhydrous and acetic acid-free substance).

CHARACTERS

*Appearance*: white or almost white, hygroscopic, amorphous powder.

*Solubility*: freely soluble in water and in acetic acid, practically insoluble in methylene chloride.

IDENTIFICATION

A. Examine the chromatograms obtained in the assay.

*Results*: the principal peak in the chromatogram obtained with the test solution is similar in retention time to the principal peak in the chromatogram obtained with reference solution (a).

B. Amino acid analysis (*2.2.56*). Method 1 for hydrolysis and method 1 for analysis are suitable.

Express the content of each amino acid in moles. Calculate the relative proportions of the amino acids taking 1/8 of the sum of the number of moles of aspartic acid, alanine, lysine, glycine and phenylalanine as equal to 1. The values fall within the following limits: aspartic acid: 0.90 to 1.10; glycine: 0.90 to 1.10; alanine: 0.90 to 1.10; phenylalanine: 2.7 to 3.3; serine: 0.7 to 1.05; threonine: 1.4 to 2.1; half-cystine: 1.4 to 2.1; lysine: 1.8 to 2.2. Not more than traces of other amino acids are present.

TESTS

**Specific optical rotation** (*2.2.7*): – 47 to – 37 (anhydrous and acetic acid-free substance).

Dissolve 2.0 mg in 1.0 mL of a 1 per cent *V/V* solution of *glacial acetic acid R*.

**Related substances**. Liquid chromatography (*2.2.29*): use the normalisation procedure. *Prepare the solutions immediately before use.*

*Test solution*. Dissolve the substance to be examined in *water R* to obtain a concentration of 1.0 mg/mL.

*Reference solution (a)*. Dissolve the contents of a vial of *somatostatin CRS* in *water R* to obtain a concentration of 1.0 mg/mL.

*Reference solution (b)*. Dissolve the contents of a vial of *somatostatin CRS* in a 1 mg/mL solution of *dithioerythritol R* to obtain a concentration of 1.0 mg/mL. Allow to stand at room temperature for about 1 h. Mix 1 volume of this solution and 1 volume of reference solution (a).

*Column*:

- *size*: *l* = 0.25 m, Ø = 4.6 mm;
- *stationary phase*: *octadecylsilyl silica gel for chromatography R* (5 µm) with a pore size of 10 nm.

*Mobile phase*:

- *mobile phase A*: *trifluoroacetic acid R*, *acetonitrile R*, *water R* (0.1:20:80 *V/V/V*);
- *mobile phase B*: *trifluoroacetic acid R*, *acetonitrile R*, *water R* (0.1:45:55 *V/V/V*);

| Time (min) | Mobile phase A (per cent *V/V*) | Mobile phase B (per cent *V/V*) |
|---|---|---|
| 0 - 25 | 100 → 0 | 0 → 100 |
| 25 - 30 | 0 | 100 |
| 30 - 32 | 0 → 100 | 100 → 0 |

*Flow rate*: 1.5 mL/min.

*Detection*: spectrophotometer at 220 nm.

*Injection*: 15 µL of the test solution and reference solution (b).

*Relative retention* with reference to somatostatin (retention time = about 12 min): reduced somatostatin = about 1.09.

*System suitability*: reference solution (b):

- *resolution*: minimum 3.5 between the peak due to reduced somatostatin and the principal peak;
- *number of theoretical plates*: minimum 15 000, calculated for the principal peak;
- *symmetry factor*: maximum 2.7 for the principal peak.

*Limits*:

- *any impurity*: maximum 1 per cent;
- *total*: maximum 2 per cent;
- *disregard limit*: 0.1 per cent.

**Acetic acid** (*2.5.34*): 3.0 per cent to 15.0 per cent.

*Test solution*. Dissolve 7.0 mg of the substance to be examined in a mixture of 5 volumes of mobile phase B and 95 volumes of mobile phase A, then dilute to 10.0 mL with the same mixture of mobile phases.

**Water** (*2.5.32*): maximum 8.0 per cent, determined on 10.0 mg.

**Bacterial endotoxins** (*2.6.14*): less than 10 IU/mg, if intended for use in the manufacture of parenteral preparations without a further appropriate procedure for the removal of bacterial endotoxins.

ASSAY

Liquid chromatography (*2.2.29*) as described in the test for related substances with the following modification.

*Injection*: 10 µL of the test solution and reference solution (a).

Calculate the content of somatostatin ($C_{76}H_{104}N_{18}O_{19}S_2$) taking into account the assigned content of $C_{76}H_{104}N_{18}O_{19}S_2$ in *somatostatin CRS*.

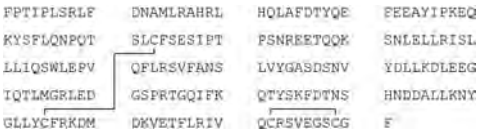
STORAGE

In an airtight container, protected from light, at a temperature of 2 °C to 8 °C. If the substance is sterile, store in a sterile, airtight, tamper-evident container.

**01/2008:0951**
**corrected 10.0**

# SOMATROPIN

## Somatropinum



$C_{990}H_{1528}N_{262}O_{300}S_7$ $M_r$ 22 125

DEFINITION

Protein having the structure (191 amino-acid residues) of the major component of growth hormone produced by the human pituitary.

*Content*: 91.0 per cent to 105.0 per cent (anhydrous substance).

By convention, for the purpose of labelling somatropin preparations, 1 mg of anhydrous somatropin ($C_{990}H_{1528}N_{262}O_{300}S_7$) is equivalent to 3.0 IU of biological activity.

PRODUCTION

Somatropin is produced by a method based on recombinant DNA (rDNA) technology. During the course of product development, it must be demonstrated that the manufacturing process produces a product having a biological activity of not less than 2.5 IU/mg, using a validated bioassay based on growth promotion and approved by the competent authority.

Somatropin complies with the following additional requirements.

**Host-cell-derived proteins**. The limit is approved by the competent authority.

**Host-cell- and vector-derived DNA**. The limit is approved by the competent authority.

CHARACTERS

*Appearance*: white or almost white powder.

IDENTIFICATION

A. Capillary electrophoresis (*2.2.47*) as described in the test for charged variants with the following modifications.

*Injection*: test solution (b); under pressure or vacuum, using the following sequence: sample injection for at least 3 s then CZE buffer injection for 1 s.

*Results*: in the electropherogram obtained, only 1 principal peak, corresponding to somatropin, is detected: no doubling of this peak is observed.

B. Examine the chromatograms obtained in the test for related proteins.

*Results*: the principal peak in the chromatogram obtained with the test solution is similar in retention time and size to the principal peak in the chromatogram obtained with the reference solution.

C. Peptide mapping (*2.2.55*).

*SELECTIVE CLEAVAGE OF THE PEPTIDE BONDS*

*Test solution.* Prepare a solution of the substance to be examined in *0.05 M tris-hydrochloride buffer solution pH 7.5 R* to obtain a solution containing 2.0 mg/mL of somatropin and transfer about 1.0 mL to a tube made from a suitable material such as polypropylene. Prepare a 1 mg/mL solution of *trypsin for peptide mapping R* in *0.05 M tris-hydrochloride buffer solution pH 7.5 R* and add 30 µL to the solution of the substance to be examined. Cap the tube and place in a water-bath at 37 °C for 4 h. Remove from the water-bath and stop the reaction immediately, for example by freezing. If analysed immediately using an automatic injector, maintain at 2-8 °C.

*Reference solution.* Prepare at the same time and in the same manner as for the test solution, but using *somatropin CRS* instead of the substance to be examined.

*CHROMATOGRAPHIC SEPARATION.* Liquid chromatography (*2.2.29*).

*Column*:

- *size*: *l* = 0.25 m, Ø = 4.6 mm;
- *stationary phase*: *octylsilyl silica gel for chromatography R* (5-10 µm) with a pore size of 30 nm;
- *temperature*: 30 °C.

*Mobile phase*:

- *mobile phase A*: dilute 1 mL of *trifluoroacetic acid R* to 1000 mL with *water for chromatography R*;
- *mobile phase B*: to 100 mL of *water for chromatography R*, add 1 mL of *trifluoroacetic acid R* and dilute to 1000 mL with *acetonitrile R1*;

| Time (min) | Mobile phase A (per cent *V/V*) | Mobile phase B (per cent *V/V*) |
|---|---|---|
| 0 - 20 | 100 → 80 | 0 → 20 |
| 20 - 40 | 80 → 75 | 20 → 25 |
| 40 - 65 | 75 → 50 | 25 → 50 |
| 65 - 70 | 50 → 20 | 50 → 80 |

*Flow rate*: 1 mL/min.

*Detection*: spectrophotometer at 214 nm.

*Injection*: 100 µL.

*System suitability*: the chromatogram obtained with the reference solution is qualitatively similar to the chromatogram of somatropin digest supplied with *somatropin CRS*.

*Results*: the profile of the chromatogram obtained with the test solution corresponds to that of the chromatogram obtained with the reference solution.

D. Examine the chromatograms obtained in the assay.

*Results*: the principal peak in the chromatogram obtained with the test solution is similar in retention time and size to the principal peak in the chromatogram obtained with the reference solution.

TESTS

**Related proteins**. Liquid chromatography (*2.2.29*): use the normalisation procedure. *Maintain the solutions at 2-8 °C and use within 24 h. If an automatic injector is used, maintain it at 2-8 °C.*

*Test solution.* Prepare a solution of the substance to be examined in *0.05 M tris-hydrochloride buffer solution pH 7.5 R*, containing 2.0 mg/mL of somatropin.

*Reference solution.* Prepare a solution of *somatropin CRS* in *0.05 M tris-hydrochloride buffer solution pH 7.5 R*, containing 2.0 mg/mL of somatropin.

*Resolution solution.* Dissolve the contents of a vial of *somatropin/desamidosomatropin resolution mixture CRS* in *0.05 M tris-hydrochloride buffer solution pH 7.5 R* to obtain a concentration of 2 mg/mL of somatropin.

*Column*:

- *size*: *l* = 0.25 m, Ø = 4.6 mm;
- *stationary phase*: *end-capped butylsilyl silica gel for chromatography R* (5 µm) with a pore size of 30 nm; a silica saturation column is placed between the pump and the injector valve;
- *temperature*: 45 °C.

*Mobile phase*: *propanol R*, *0.05 M tris-hydrochloride buffer solution pH 7.5 R* (29:71 *V/V*).

*Flow rate*: 0.5 mL/min.

*Detection*: spectrophotometer at 220 nm.

*Preconditioning of the column*: rinse with 200-500 mL of a 0.1 per cent *V/V* solution of *trifluoroacetic acid R* in a 50 per cent *V/V* solution of *acetonitrile R*; repeat as necessary, to improve column performance.

*Injection*: 20 µL.

*Relative retention* with reference to somatropin (retention time = about 33 min; if necessary adjust the concentration of *propanol R* in the mobile phase): desamidosomatropin = about 0.85.

*System suitability*: resolution solution:

- *resolution*: minimum 1.0 between the peaks due to desamidosomatropin and somatropin;
- *symmetry factor*: 0.9 to 1.8 for the peak due to somatropin.

*Limit*:

- *total*: maximum 6.0 per cent.

**Dimer and related substances of higher molecular mass**. Size-exclusion chromatography (*2.2.30*): use the normalisation procedure.

*Test solution.* Prepare a solution of the substance to be examined in *0.025 M phosphate buffer solution pH 7.0 R*, containing 1.0 mg/mL of somatropin.

*Reference solution.* Dissolve the contents of a vial of *somatropin CRS* in *0.025 M phosphate buffer solution pH 7.0 R* and dilute with the same solution to obtain a concentration of 1.0 mg/mL.

*Resolution solution.* Place 1 vial of *somatropin CRS* in an oven at 50 °C for a period sufficient to generate 1-2 per cent of dimer (typically 12-24 h). Dissolve its contents in *0.025 M phosphate buffer solution pH 7.0 R* and dilute with the same solution to obtain a concentration of 1.0 mg/mL.

*Column*:

- *size*: *l* = 0.30 m, Ø = 7.8 mm;
- *stationary phase*: *hydrophilic silica gel for chromatography R* of a grade suitable for fractionation of globular proteins in the relative molecular mass range of 5000 to 150 000.

*Mobile phase*: *2-propanol R*, *0.063 M phosphate buffer solution pH 7.0 R* (3:97 *V/V*); filter and degas.

*Flow rate*: 0.6 mL/min.

*Detection*: spectrophotometer at 214 nm.

*Injection*: 20 µL.

*Relative retention* with reference to somatropin monomer (retention time = 12 min to 17 min): related substances of higher molecular mass = about 0.65; somatropin dimer = about 0.9.

*System suitability*: resolution solution:

- *peak-to-valley ratio*: minimum 2.5, where $H_p$ = height above the baseline of the peak due to the dimer and $H_v$ = height above the baseline of the lowest point of the curve separating this peak from the peak due to the monomer.

*Limit*:

- *sum of the peaks with retention times less than that of the principal peak*: maximum 4.0 per cent.

**Charged variants**. Capillary electrophoresis (*2.2.47*).

*Test solution (a).* Prepare a solution of the substance to be examined containing 1 mg/mL of somatropin.

*Test solution (b).* Mix equal volumes of test solution (a) and the reference solution.

*Reference solution.* Dissolve the contents of a vial of *somatropin CRS* in *water R* and dilute with the same solvent to obtain a concentration of 1 mg/mL.

*Capillary*:

- *material*: uncoated fused silica;
- *size*: effective length = at least 70 cm, Ø = 50 µm.

*Temperature*: 30 °C.

*CZE buffer*: 13.2 g/L solution of *ammonium phosphate R* adjusted to pH 6.0 with *phosphoric acid R* and filtered.

*Detection*: spectrophotometer at 200 nm.

*Set the autosampler to store the samples at 4 °C during analysis.*

*Preconditioning of the capillary*: rinse with *1 M sodium hydroxide* for 20 min, with *water R* for 10 min and with the CZE buffer for 20 min.

*Between-run rinsing*: rinse with *0.1 M sodium hydroxide* for 2 min and with the CZE buffer for 6 min.

*Note: rinsing times may be adapted according to the length of the capillary and the equipment used.*

*Injection*: test solution (a) and the reference solution; under pressure or vacuum, using the following sequence: sample injection for at least 3 s then CZE buffer injection for 1 s.

The injection time and pressure may be adapted in order to meet the system suitability criteria.

*Migration*: apply a field strength of 217 V/cm (20 kV for capillaries of 92 cm total length) for 80 min, using the CZE buffer as the electrolyte in both buffer reservoirs.

*Relative migration* with reference to somatropin: deamidated forms = 1.02 to 1.11.

*System suitability*: reference solution:

- the electropherogram obtained is similar to the electropherogram of somatropin supplied with *somatropin CRS*; 2 peaks ($I_1$, $I_2$) eluting prior to the principal peak and at least 2 peaks ($I_3$, $I_4$) eluting after the principal peak are clearly visible.

  *Note: peak $I_2$ corresponds to the cleaved form and peak $I_4$ corresponds to the deamidated forms, eluting as a doublet.*

*Limits*:

- *deamidated forms*: maximum 5.0 per cent;
- *any other impurity*: for each impurity, maximum 2.0 per cent;
- *total*: maximum 10.0 per cent.

**Water** (*2.5.32*): maximum 10.0 per cent.

**Bacterial endotoxins** (*2.6.14*): less than 5 IU/mg, if intended for use in the manufacture of parenteral preparations without a further appropriate procedure for removal of bacterial endotoxins.

ASSAY

Size-exclusion chromatography (*2.2.30*) as described in the test for dimer and related substances of higher molecular mass.

Calculate the content of somatropin ($C_{990}H_{1528}N_{262}O_{300}S_7$) from the declared content of $C_{990}H_{1528}N_{262}O_{300}S_7$ in *somatropin CRS*.

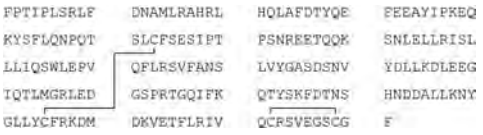
STORAGE

In an airtight container, at a temperature of 2 °C to 8 °C. If the substance is sterile, store in a sterile, airtight, tamper-evident container.

**01/2008:0950**
**corrected 10.0**

# SOMATROPIN CONCENTRATED SOLUTION

## Somatropini solutio concentrata



$C_{990}H_{1528}N_{262}O_{300}S_7$ $M_r$ 22 125

DEFINITION

Solution containing a protein having the structure (191 amino-acid residues) of the major component of growth hormone produced by the human pituitary. It may contain buffer salts and other auxiliary substances.

*Content*: 91.0 per cent to 105.0 per cent of the amount of somatropin stated on the label.

By convention, for the purpose of labelling somatropin preparations, 1 mg of anhydrous somatropin ($C_{990}H_{1528}N_{262}O_{300}S_7$) is equivalent to 3.0 IU of biological activity.

PRODUCTION

Somatropin concentrated solution is produced by a method based on recombinant DNA (rDNA) technology. During the course of product development, it must be demonstrated that the manufacturing process produces a product having a biological activity of at least 2.5 IU/mg, using a validated bioassay based on growth promotion and approved by the competent authority.

Somatropin concentrated solution complies with the following additional requirements.

**Host-cell-derived proteins**. The limit is approved by the competent authority.

**Host-cell- and vector-derived DNA**. The limit is approved by the competent authority.

CHARACTERS

*Appearance*: clear or slightly turbid, colourless solution.

IDENTIFICATION

A. Capillary electrophoresis (*2.2.47*) as described in the test for charged variants with the following modifications.

*Injection*: test solution (b); under pressure or vacuum, using the following sequence: sample injection for at least 3 s then CZE buffer injection for 1 s.

*Results*: in the electropherogram obtained, only 1 principal peak, corresponding to somatropin, is detected: no doubling of this peak is observed.

B. Examine the chromatograms obtained in the test for related proteins.

*Results*: the principal peak in the chromatogram obtained with the test solution is similar in retention time and size to the principal peak in the chromatogram obtained with the reference solution.

C. Peptide mapping (*2.2.55*).

*SELECTIVE CLEAVAGE OF THE PEPTIDE BONDS*

*Test solution.* Dilute the solution to be examined with *0.05 M tris-hydrochloride buffer solution pH 7.5 R* so that it contains 2.0 mg/mL of somatropin and transfer about 1.0 mL to a tube made from a suitable material such as polypropylene. Prepare a 1 mg/mL solution of *trypsin for peptide mapping R* in *0.05 M tris-hydrochloride buffer solution pH 7.5 R* and add 30 µL to the solution of the substance to be examined. Cap the tube and place in a water-bath at 37 °C for 4 h. Remove from the water-bath and stop the reaction immediately, for example by freezing. If analysed immediately using an automatic injector, maintain at 2-8 °C.

*Note: If a 2 mg/mL somatropin concentration is not obtainable, a similar digest relationship (micrograms of trypsin per milligram of somatropin) may be used.*

*Reference solution.* Prepare at the same time and in the same manner as for the test solution, but using *somatropin CRS* instead of the substance to be examined.

*CHROMATOGRAPHIC SEPARATION*. Liquid chromatography (*2.2.29*).

*Column*:

– *size*: *l* = 0.25 m, Ø = 4.6 mm;
– *stationary phase*: *octylsilyl silica gel for chromatography R* (5-10 µm) with a pore size of 30 nm;
– *temperature*: 30 °C.

*Mobile phase*:

– *mobile phase A*: dilute 1 mL of *trifluoroacetic acid R* to 1000 mL with *water for chromatography R*;
– *mobile phase B*: to 100 mL of *water for chromatography R*, add 1 mL of *trifluoroacetic acid R* and dilute to 1000 mL with *acetonitrile R1*;

| Time (min) | Mobile phase A (per cent *V/V*) | Mobile phase B (per cent *V/V*) |
|---|---|---|
| 0 - 20 | 100 → 80 | 0 → 20 |
| 20 - 40 | 80 → 75 | 20 → 25 |
| 40 - 65 | 75 → 50 | 25 → 50 |
| 65 - 70 | 50 → 20 | 50 → 80 |

*Flow rate*: 1 mL/min.

*Detection*: spectrophotometer at 214 nm.

*Injection*: 100 µL.

*System suitability*: the chromatogram obtained with the reference solution is qualitatively similar to the chromatogram of somatropin digest supplied with *somatropin CRS*.

*Results*: the profile of the chromatogram obtained with the test solution corresponds to that of the chromatogram obtained with the reference solution.

D. Examine the chromatograms obtained in the assay.

*Results*: the principal peak in the chromatogram obtained with the test solution is similar in retention time and size to the principal peak in the chromatogram obtained with the reference solution.

TESTS

**Related proteins**. Liquid chromatography (*2.2.29*): use the normalisation procedure. *Maintain the solutions at 2-8 °C and use within 24 h. If an automatic injector is used, maintain it at 2-8 °C.*

*Test solution.* Dilute the solution to be examined in *0.05 M tris-hydrochloride buffer solution pH 7.5 R*, so as to contain 2.0 mg/mL of somatropin. A weaker solution may be prepared, in which case the injection volume is adjusted accordingly.

*Reference solution.* Prepare a solution of *somatropin CRS* in *0.05 M tris-hydrochloride buffer solution pH 7.5 R*, containing 2.0 mg/mL of somatropin.

*Resolution solution.* Dissolve the contents of a vial of *somatropin/desamidosomatropin resolution mixture CRS* in *0.05 M tris-hydrochloride buffer solution pH 7.5 R* to obtain a concentration of 2 mg/mL of somatropin.

*Column*:

– *size*: *l* = 0.25 m, Ø = 4.6 mm;

– *stationary phase*: *end-capped butylsilyl silica gel for chromatography R* (5 µm) with a pore size of 30 nm; a silica saturation column is placed between the pump and the injector valve;
– *temperature*: 45 °C.

*Mobile phase*: *propanol R*, *0.05 M tris-hydrochloride buffer solution pH 7.5 R* (29:71 *V/V*).

*Flow rate*: 0.5 mL/min.

*Detection*: spectrophotometer at 220 nm.

*Preconditioning of the column*: rinse with 200-500 mL of a 0.1 per cent *V/V* solution of *trifluoroacetic acid R* in a 50 per cent *V/V* solution of *acetonitrile R*; repeat as necessary, to improve column performance.

*Injection*: 20 µL.

*Relative retention* with reference to somatropin (retention time = about 33 min; if necessary adjust the concentration of *propanol R* in the mobile phase): desamidosomatropin = about 0.85.

*System suitability*: resolution solution:
– *resolution*: minimum 1.0 between the peaks due to desamidosomatropin and somatropin;
– *symmetry factor*: 0.9 to 1.8 for the peak due to somatropin.

*Limit*:
– *total*: maximum 6.0 per cent.

**Dimer and related substances of higher molecular mass**. Size-exclusion chromatography (*2.2.30*): use the normalisation procedure.

*Test solution*. Dilute the solution to be examined in *0.025 M phosphate buffer solution pH 7.0 R*, so as to contain 1.0 mg/mL of somatropin.

*Reference solution*. Dissolve the contents of a vial of *somatropin CRS* in *0.025 M phosphate buffer solution pH 7.0 R* and dilute with the same solution to obtain a concentration of 1.0 mg/mL.

*Resolution solution*. Place 1 vial of *somatropin CRS* in an oven at 50 °C for a period sufficient to generate 1-2 per cent of dimer (typically 12-24 h). Dissolve its contents in *0.025 M phosphate buffer solution pH 7.0 R* and dilute with the same solution to obtain a concentration of 1.0 mg/mL.

*Column*:
– *size*: *l* = 0.30 m, Ø = 7.8 mm;
– *stationary phase*: *hydrophilic silica gel for chromatography R* of a grade suitable for fractionation of globular proteins in the relative molecular mass range of 5000 to 150 000.

*Mobile phase*: *2-propanol R*, *0.063 M phosphate buffer solution pH 7.0 R* (3:97 *V/V*); filter and degas.

*Flow rate*: 0.6 mL/min.

*Detection*: spectrophotometer at 214 nm.

*Injection*: 20 µL.

*Relative retention* with reference to somatropin monomer (retention time = 12 min to 17 min): related substances of higher molecular mass = about 0.65; somatropin dimer = about 0.9.

*System suitability*: resolution solution:
– *peak-to-valley ratio*: minimum 2.5, where $H_p$ = height above the baseline of the peak due to the dimer and $H_v$ = height above the baseline of the lowest point of the curve separating this peak from the peak due to the monomer.

*Limit*:
– *sum of the peaks with retention times less than that of the principal peak*: maximum 4.0 per cent.

**Charged variants**. Capillary electrophoresis (*2.2.47*).

*Test solution (a)*. Dilute the solution to be examined so as to obtain a concentration of 1 mg/mL of somatropin.

*Test solution (b)*. Mix equal volumes of test solution (a) and the reference solution.

*Reference solution*. Dissolve the contents of a vial of *somatropin CRS* in *water R* and dilute with the same solvent to obtain a concentration of 1 mg/mL.

*Capillary*:
– *material*: uncoated fused silica;
– *size*: effective length = at least 70 cm, Ø = 50 µm.

*Temperature*: 30 °C.

*CZE buffer*: 13.2 g/L solution of *ammonium phosphate R* adjusted to pH 6.0 with *phosphoric acid R* and filtered.

*Detection*: spectrophotometer at 200 nm.

*Set the autosampler to store the samples at 4 °C during analysis.*

*Preconditioning of the capillary*: rinse with *1 M sodium hydroxide* for 20 min, with *water R* for 10 min and with the CZE buffer for 20 min.

*Between-run rinsing*: rinse with *0.1 M sodium hydroxide* for 2 min and with the CZE buffer for 6 min.

*Note: rinsing times may be adapted according to the length of the capillary and the equipment used.*

*Injection*: test solution (a) and the reference solution; under pressure or vacuum, using the following sequence: sample injection for at least 3 s then CZE buffer injection for 1 s. The injection time and pressure may be adapted in order to meet the system suitability criteria.

*Migration*: apply a field strength of 217 V/cm (20 kV for capillaries of 92 cm total length) for 80 min, using the CZE buffer as the electrolyte in both buffer reservoirs.

*Relative migration* with reference to somatropin: deamidated forms = 1.02 to 1.11.

*System suitability*: reference solution:
– the electropherogram obtained is similar to the electropherogram of somatropin supplied with *somatropin CRS*; 2 peaks ($I_1$, $I_2$) eluting prior to the principal peak and at least 2 peaks ($I_3$, $I_4$) eluting after the principal peak are clearly visible.

*Note: peak $I_2$ corresponds to the cleaved form and peak $I_4$ corresponds to the deamidated forms, eluting as a doublet.*

*Limits*:
– *deamidated forms*: maximum 5.0 per cent;
– *any other impurity*: for each impurity, maximum 2.0 per cent;
– *total*: maximum 10.0 per cent.

**Bacterial endotoxins** (*2.6.14*): less than 5 IU in the volume that contains 1 mg of somatropin, if intended for use in the manufacture of parenteral preparations without a further appropriate procedure for removal of bacterial endotoxins.

ASSAY

Size-exclusion chromatography (*2.2.30*) as described in the test for dimer and related substances of higher molecular mass.

Calculate the content of somatropin ($C_{990}H_{1528}N_{262}O_{300}S_7$) from the declared content of $C_{990}H_{1528}N_{262}O_{300}S_7$ in *somatropin CRS*.

STORAGE

In an airtight container at a temperature of – 20 °C. Avoid repeated freezing and thawing. If the solution is sterile, store in a sterile, airtight, tamper-evident container.

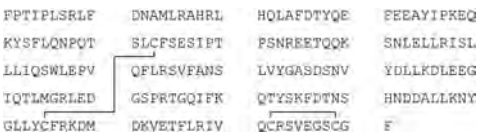
LABELLING

The label states:
– the content of somatropin in milligrams per millilitre;
– the name and concentration of any auxiliary substance.

**01/2008:0952**
**corrected 10.0**

# SOMATROPIN FOR INJECTION

## Somatropinum iniectabile



$C_{990}H_{1528}N_{262}O_{300}S_7$ $M_r$ 22 125

DEFINITION

Freeze-dried, sterile preparation of a protein having the structure (191 amino-acid residues) of the major component of growth hormone produced by the human pituitary.

*Content*: 89.0 per cent to 105.0 per cent of the amount of somatropin stated on the label.

By convention, for the purpose of labelling somatropin preparations, 1 mg of anhydrous somatropin ($C_{990}H_{1528}N_{262}O_{300}S_7$) is equivalent to 3.0 IU of biological activity.

Somatropin for injection complies with the requirements of the monograph *Parenteral preparations (0520)*.

PRODUCTION

Somatropin for injection is prepared either from *Somatropin (0951)* or from *Somatropin concentrated solution (0950)*, or by a method based on recombinant DNA (rDNA) technology in which the injectable preparation is produced without the isolation of an intermediate solid or liquid bulk. In the latter case, during the course of product development, it must be demonstrated that the manufacturing process produces a product having a biological activity of not less than 2.5 IU/mg, using a validated bioassay based on growth promotion and approved by the competent authority. The purified preparation, to which buffers and stabilisers may be added, is filtered through a bacteria-retentive filter, aseptically distributed in sterile containers of glass type I (*3.2.1*) and freeze-dried. The containers are immediately sealed so as to exclude microbial contamination and moisture.

Somatropin for injection complies with the following additional requirements.

**Host-cell-derived proteins**. The limit is approved by the competent authority.

**Host-cell- and vector-derived DNA**. The limit is approved by the competent authority.

*Where somatropin for injection is prepared from Somatropin (0951) or from Somatropin concentrated solution (0950), compliance with the requirements for host-cell-derived proteins, host-cell- and vector-derived DNA, identification test A, identification test C and charged variants need not be reconfirmed by the manufacturer during subsequent production of somatropin for injection.*

CHARACTERS

*Appearance*: white or almost white powder.

IDENTIFICATION

A. Capillary electrophoresis (*2.2.47*) as described in the test for charged variants with the following modifications.

*Injection*: test solution (b); under pressure or vacuum, using the following sequence: sample injection for at least 3 s then CZE buffer injection for 1 s.

*Results*: in the electropherogram obtained, only 1 principal peak, corresponding to somatropin, is detected: no doubling of this peak is observed.

B. Examine the chromatograms obtained in the test for related proteins.

*Results*: the principal peak in the chromatogram obtained with the test solution is similar in retention time and size to the principal peak in the chromatogram obtained with the reference solution.

C. Peptide mapping (*2.2.55*).

*SELECTIVE CLEAVAGE OF THE PEPTIDE BONDS*

*Test solution.* Prepare a solution of the substance to be examined in *0.05 M tris-hydrochloride buffer solution pH 7.5 R* to obtain a solution containing 2.0 mg/mL of somatropin and transfer about 1.0 mL to a tube made from a suitable material such as polypropylene. Prepare a 1 mg/mL solution of *trypsin for peptide mapping R* in *0.05 M tris-hydrochloride buffer solution pH 7.5 R* and add 30 µL to the solution of the substance to be examined. Cap the tube and place in a water-bath at 37 °C for 4 h. Remove from the water-bath and stop the reaction immediately, for example by freezing. If analysed immediately using an automatic injector, maintain at 2-8 °C.

*Reference solution.* Prepare at the same time and in the same manner as for the test solution, but using *somatropin CRS* instead of the substance to be examined.

*CHROMATOGRAPHIC SEPARATION*. Liquid chromatography (*2.2.29*).

*Column*:

- *size*: *l* = 0.25 m, Ø = 4.6 mm;
- *stationary phase*: *octylsilyl silica gel for chromatography R* (5-10 µm) with a pore size of 30 nm;
- *temperature*: 30 °C.

*Mobile phase*:

- *mobile phase A*: dilute 1 mL of *trifluoroacetic acid R* to 1000 mL with *water for chromatography R*;
- *mobile phase B*: to 100 mL of *water for chromatography R* add 1 mL of *trifluoroacetic acid R* and dilute to 1000 mL with *acetonitrile R1*;

| Time (min) | Mobile phase A (per cent *V/V*) | Mobile phase B (per cent *V/V*) |
|---|---|---|
| 0 - 20 | 100 → 80 | 0 → 20 |
| 20 - 40 | 80 → 75 | 20 → 25 |
| 40 - 65 | 75 → 50 | 25 → 50 |
| 65 - 70 | 50 → 20 | 50 → 80 |

*Flow rate*: 1 mL/min.

*Detection*: spectrophotometer at 214 nm.

*Injection*: 100 µL.

*System suitability*: the chromatogram obtained with the reference solution is qualitatively similar to the chromatogram of somatropin digest supplied with *somatropin CRS*.

*Results*: the profile of the chromatogram obtained with the test solution corresponds to that of the chromatogram obtained with the reference solution.

D. Examine the chromatograms obtained in the assay.

*Results*: the principal peak in the chromatogram obtained with the test solution is similar in retention time and size to the principal peak in the chromatogram obtained with the reference solution.

TESTS

**Related proteins**. Liquid chromatography (*2.2.29*): use the normalisation procedure. *Maintain the solutions at 2-8 °C and use within 24 h. If an automatic injector is used, maintain at 2-8 °C.*

*Test solution.* Prepare a solution of the substance to be examined in *0.05 M tris-hydrochloride buffer solution pH 7.5 R*, containing 2.0 mg/mL of somatropin.

*Reference solution.* Prepare a solution of *somatropin CRS* in *0.05 M tris-hydrochloride buffer solution pH 7.5 R*, containing 2.0 mg/mL of somatropin.

*Resolution solution.* Dissolve the contents of a vial of *somatropin/desamidosomatropin resolution mixture CRS* in *0.05 M tris-hydrochloride buffer solution pH 7.5 R* to obtain a concentration of 2 mg/mL of somatropin.

*Column*:

– *size*: *l* = 0.25 m, Ø = 4.6 mm;
– *stationary phase*: *end-capped butylsilyl silica gel for chromatography R* (5 µm) with a pore size of 30 nm; a silica saturation column is placed between the pump and the injector valve;
– *temperature*: 45 °C.

*Mobile phase*: *propanol R*, *0.05 M tris-hydrochloride buffer solution pH 7.5 R* (29:71 *V/V*).

*Flow rate*: 0.5 mL/min.

*Detection*: spectrophotometer at 220 nm.

*Preconditioning of the column*: rinse with 200-500 mL of a 0.1 per cent *V/V* solution of *trifluoroacetic acid R* in a 50 per cent *V/V* solution of *acetonitrile R*; repeat as necessary, to improve column performance.

*Injection*: 20 µL.

*Relative retention* with reference to somatropin (retention time = about 33 min; if necessary adjust the concentration of *propanol R* in the mobile phase): desamidosomatropin = about 0.85.

*System suitability*: resolution solution:

– *resolution*: minimum 1.0 between the peaks due to desamidosomatropin and somatropin;
– *symmetry factor*: 0.9 to 1.8 for the peak due to somatropin.

*Limit*:

– *total*: maximum 13.0 per cent.

**Dimer and related substances of higher molecular mass**. Size-exclusion chromatography (*2.2.30*): use the normalisation procedure.

*Test solution.* Prepare a solution of the substance to be examined in *0.025 M phosphate buffer solution pH 7.0 R*, containing 1.0 mg/mL of somatropin.

*Reference solution.* Dissolve the contents of a vial of *somatropin CRS* in *0.025 M phosphate buffer solution pH 7.0 R* and dilute with the same solution to obtain a concentration of 1.0 mg/mL.

*Resolution solution.* Place 1 vial of *somatropin CRS* in an oven at 50 °C for a period sufficient to generate 1-2 per cent of dimer (typically 12-24 h). Dissolve its contents in *0.025 M phosphate buffer solution pH 7.0 R* and dilute with the same solution to obtain a concentration of 1.0 mg/mL.

*Column*:

– *size*: *l* = 0.30 m, Ø = 7.8 mm;
– *stationary phase*: *hydrophilic silica gel for chromatography R* of a grade suitable for fractionation of globular proteins in the relative molecular mass range of 5000 to 150 000.

*Mobile phase*: *2-propanol R*, *0.063 M phosphate buffer solution pH 7.0 R* (3:97 *V/V*); filter and degas.

*Flow rate*: 0.6 mL/min.

*Detection*: spectrophotometer at 214 nm.

*Injection*: 20 µL.

*Relative retention* with reference to somatropin monomer (retention time = 12 min to 17 min): related substances of higher molecular mass = about 0.65; somatropin dimer = about 0.9.

*System suitability*: resolution solution:

– *peak-to-valley ratio*: minimum 2.5, where $H_p$ = height above the baseline of the peak due to the dimer and $H_v$ = height above the baseline of the lowest point of the curve separating this peak from the peak due to the monomer.

*Limit*:

– *sum of the peaks with retention times less than that of the principal peak*: maximum 6.0 per cent.

**Charged variants**. Capillary electrophoresis (*2.2.47*).

*Test solution (a).* Prepare a solution of the substance to be examined containing 1 mg/mL of somatropin.

*Test solution (b).* Mix equal volumes of test solution (a) and the reference solution.

*Reference solution.* Dissolve the contents of a vial of *somatropin CRS* in *water R* and dilute with the same solvent to obtain a concentration of 1 mg/mL.

*Capillary*:

– *material*: uncoated fused silica;
– *size*: effective length = at least 70 cm, Ø = 50 µm.

*Temperature*: 30 °C.

*CZE buffer*: 13.2 g/L solution of *ammonium phosphate R* adjusted to pH 6.0 with *phosphoric acid R* and filtered.

*Detection*: spectrophotometer at 200 nm.

*Set the autosampler to store the samples at 4 °C during analysis.*

*Preconditioning of the capillary*: rinse with *1 M sodium hydroxide* for 20 min, with *water R* for 10 min and with the CZE buffer for 20 min.

*Between-run rinsing*: rinse with *0.1 M sodium hydroxide* for 2 min and with the CZE buffer for 6 min.

*Note: rinsing times may be adapted according to the length of the capillary and the equipment used.*

*Injection*: test solution (a) and the reference solution; under pressure or vacuum, using the following sequence: sample injection for at least 3 s then CZE buffer injection for 1 s.

The injection time and pressure may be adapted in order to meet the system suitability criteria.

*Migration*: apply a field strength of 217 V/cm (20 kV for capillaries of 92 cm total length) for 80 min, using CZE buffer as the electrolyte in both buffer reservoirs.

*Relative migration* with reference to somatropin: deamidated forms = 1.02 to 1.11.

*System suitability*: reference solution:

– the electropherogram obtained is similar to the electropherogram of somatropin supplied with *somatropin CRS*; 2 peaks ($I_1$, $I_2$) eluting prior to the principal peak and at least 2 peaks ($I_3$, $I_4$) eluting after the principal peak are clearly visible.

*Note: peak $I_2$ corresponds to the cleaved form and peak $I_4$ corresponds to the deamidated forms, eluting as a doublet.*

*Limits*:

– *deamidated forms*: maximum 6.5 per cent;
– *any other impurity*: for each impurity, maximum 2.0 per cent;
– *total*: maximum 11.5 per cent.

**Water** (*2.5.32*): maximum 3.0 per cent, unless otherwise justified and authorised.

**Bacterial endotoxins** (*2.6.14*): less than 5 IU/mg.

ASSAY

Size-exclusion chromatography (*2.2.30*) as described in the test for dimer and related substances of higher molecular mass.

Calculate the content of somatropin ($C_{990}H_{1528}N_{262}O_{300}S_7$) from the declared content of $C_{990}H_{1528}N_{262}O_{300}S_7$ in *somatropin CRS*.

STORAGE

In a sterile, airtight, tamper-evident container, at a temperature of 2 °C to 8 °C.

LABELLING

The label states:

- the content of somatropin in the container, in milligrams;
- the composition and volume of the liquid to be added for reconstitution;
- the time within which the reconstituted solution shall be used and the storage conditions during this period;
- the name and quantity of any excipient;
- the storage temperature;
- that the preparation shall not be shaken during reconstitution.

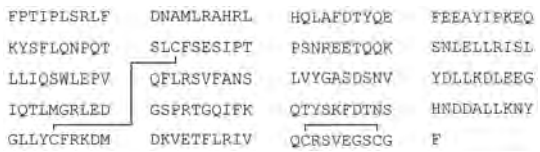
**corrected 10.0**

# SOMATROPIN SOLUTION FOR INJECTION

## Somatropini solutio iniectabilis



$C_{990}H_{1528}N_{262}O_{300}S_7$ $M_r$ 22 125

DEFINITION

Sterile preparation of a protein having the structure (191 amino-acid residues) of the major component of growth hormone produced by the human pituitary.

*Content*: 90.0 per cent to 110.0 per cent of the amount of somatropin stated on the label.

By convention, for the purpose of labelling somatropin preparations, 1 mg of anhydrous somatropin ($C_{990}H_{1528}N_{262}O_{300}S_7$) is equivalent to 3.0 IU of biological activity.

PRODUCTION

Somatropin solution for injection is prepared either from *Somatropin (0951)* or from *Somatropin concentrated solution (0950)*.

CHARACTERS

*Appearance*: colourless solution.

IDENTIFICATION

A. Examine the chromatograms obtained in the test for related proteins.

*Results*: the principal peak in the chromatogram obtained with the test solution is similar in retention time and size to the principal peak in the chromatogram obtained with reference solution (a).

B. Examine the chromatograms obtained in the assay.

*Results*: the principal peak in the chromatogram obtained with the test solution is similar in retention time and size to the principal peak in the chromatogram obtained with reference solution (a).

TESTS

**Related proteins** (excluding deamidated forms). Liquid chromatography (*2.2.29*): use the normalisation procedure. *Maintain the solutions at 2-8 °C and use within 24 h.*

*Solution A*. Dilute 5 µL of *strong hydrogen peroxide solution R* to 100 mL with *water for chromatography R*.

*Test solution*. Dilute the preparation to be examined with an appropriate buffer, for example *0.025 M phosphate buffer solution pH 7.0 R*, to obtain a concentration of 1.6 mg/mL.

*Reference solution (a)*. Dissolve the contents of a vial of *somatropin CRS* in *water for chromatography R* to obtain a concentration of 1.6 mg/mL.

*Reference solution (b)*. Dissolve the contents of a vial of *somatropin CRS* in solution A to obtain a concentration of 1.6 mg/mL. Allow to stand for 1-7 days to obtain a sufficient amount of sulfoxide forms.

*Column*:

- *size*: *l* = 0.25 m, Ø = 4.0 mm;
- *stationary phase*: *octadecylsilyl silica gel for chromatography R* (7 µm) with a pore size of 100 nm;
- *temperature*: 45 °C.

*Mobile phase*:

- *mobile phase A*: dissolve 82.6 g of *ammonium sulfate R* and 34.5 g of *sodium dihydrogen phosphate monohydrate R* in 2950 mL of *water for chromatography R*; add 25.0 mL of *perchloric acid R*, 2000 mL of *acetonitrile for chromatography R* and dilute to 5000 mL with *water for chromatography R*;
- *mobile phase B*: to 4000 mL of *acetonitrile for chromatography R* add 1000 mL of *water for chromatography R*;

| Time (min) | Mobile phase A (per cent *V/V*) | Mobile phase B (per cent *V/V*) |
|---|---|---|
| 0 – 60 | 77 → 72 | 23 → 28 |
| 60 – 61 | 72 → 77 | 28 → 23 |
| 61 – 72 | 77 | 23 |

*Flow rate*: 1.0 mL/min.

*Detection*: spectrophotometer at 215 nm.

*Injection*: 20 µL.

*Relative retention* with reference to somatropin (retention time = about 40 min): [MetO$^{125}$]somatropin (double peak) = about 0.40; [β-Asp$^{107}$]somatropin = about 0.78; [MetO$^{14}$]somatropin = about 0.91; 130,131-anhydrosomatropin = about 1.27; [seco-130/131]somatropin = about 1.31.

If necessary, adjust the percentage of mobile phase B in the gradient so that the main peak elutes at about 40 min.

*System suitability*: reference solution (b):

- *peak-to-valley ratio*: minimum 2.0, where $H_p$ = height above the baseline of the peak due to [MetO$^{14}$]somatropin and $H_v$ = height above the baseline of the lowest point of the curve separating this peak from the peak due to somatropin.

*Limit*:

- *total*: maximum 10 per cent.

**Dimer and related substances of higher molecular mass**. Size-exclusion chromatography (*2.2.30*): use the normalisation procedure.

*Test solution*. Dilute the preparation to be examined with *0.025 M phosphate buffer solution pH 7.0 R* to obtain a concentration of 1.0 mg/mL.

*Reference solution (a)*. Dissolve the contents of a vial of *somatropin CRS* in *0.025 M phosphate buffer solution pH 7.0 R* and dilute with the same solution to obtain a concentration of 1.0 mg/mL.

*Reference solution (b).* Place a vial of *somatropin CRS* in an oven at 50 °C for a period sufficient to generate 1-2 per cent of dimer (typically 12-24 h). Dissolve its contents in *0.025 M phosphate buffer solution pH 7.0 R* and dilute with the same solution to obtain a concentration of 1.0 mg/mL.

*Column*:

– *size*: *l* = 0.30 m, Ø = 7.8 mm;

– *stationary phase*: *hydrophilic silica gel for chromatography R* of a grade suitable for fractionation of globular proteins in the relative molecular mass range of 5000 to 150 000.

*Mobile phase*: *2-propanol R*, *0.063 M phosphate buffer solution pH 7.0 R* (3:97 *V/V*); filter and degas.

*Flow rate*: 0.6 mL/min.

*Detection*: spectrophotometer at 214 nm.

*Injection*: 20 µL of the test solution and reference solution (b).

*Relative retention* with reference to somatropin monomer (retention time = 12 min to 17 min): related substances of higher molecular mass = about 0.65; somatropin dimer = about 0.9.

*System suitability*: reference solution (b):

– *peak-to-valley ratio*: minimum 2.5, where $H_p$ = height above the baseline of the peak due to the dimer and $H_v$ = height above the baseline of the lowest point of the curve separating this peak from the peak due to the monomer.

*Limit*:

– *sum of the areas of the peaks with retention times less than that of the principal peak*: maximum 4.0 per cent.

**Deamidated forms**. Capillary electrophoresis (*2.2.47*).

*Test solution.* Dilute the preparation to be examined to obtain a concentration of 1 mg/mL.

*Reference solution.* Dissolve the contents of a vial of *somatropin CRS* in *water for chromatography R* and dilute with the same solvent to obtain a concentration of 1 mg/mL.

*Capillary*:

– *material*: uncoated fused silica;

– *size*: effective length = at least 70 cm, Ø = 50 µm.

*Temperature*: 30 °C.

*CZE buffer*: 13.2 g/L solution of *ammonium phosphate R* adjusted to pH 6.0 with *phosphoric acid R* and filtered.

*Detection*: spectrophotometer at 200 nm.

*Autosampler*: set at 8 °C.

*Preconditioning of the capillary*: rinse with *1 M sodium hydroxide* for 20 min, with *water for chromatography R* for 10 min and with the CZE buffer for 20 min.

*Between-run rinsing*: rinse with *0.1 M sodium hydroxide* for 2 min and with the CZE buffer for 6 min.

*NOTE: rinsing times may be adapted according to the length of the capillary and the equipment used.*

*Injection*: test solution and reference solution; under pressure or vacuum, using the following sequence: sample injection for at least 3 s then CZE buffer injection for 1 s.

The injection time and pressure may be adapted in order to meet the system suitability criteria.

*Migration*: apply a field strength of 217 V/cm (20 kV for capillaries of 92 cm total length) for 80 min, using CZE buffer as the electrolyte in both buffer reservoirs.

*Relative migration* with reference to somatropin: deamidated forms = 1.02 to 1.11.

*System suitability*: reference solution:

– the electropherogram obtained is similar to the electropherogram supplied with *somatropin CRS*; 2 peaks ($I_1$, $I_2$) eluting prior to the principal peak and at least 2 peaks ($I_3$, $I_4$) eluting after the principal peak are clearly visible.

*NOTE: peak $I_2$ corresponds to the cleaved form and peak $I_4$ corresponds to the deamidated forms, eluted as a doublet.*

*Limit*:

– *deamidated forms*: maximum 20 per cent of the total area of the peaks.

ASSAY

Size-exclusion chromatography (*2.2.30*) as described in the test for dimer and related substances of higher molecular mass with the following modification.

*Injection*: test solution and reference solution (a).

Calculate the content of somatropin ($C_{990}H_{1528}N_{262}O_{300}S_7$) taking into account the assigned content of $C_{990}H_{1528}N_{262}O_{300}S_7$ in *somatropin CRS*.

STORAGE

In a sterile, airtight, tamper-evident container, protected from light, at a temperature of 2 °C to 8 °C.

**01/2017:0592**

# SORBIC ACID

## Acidum sorbicum

$C_6H_8O_2$ $M_r$ 112.1

[110-44-1]

DEFINITION

(*E,E*)-Hexa-2,4-dienoic acid.

*Content*: 99.0 per cent to 101.0 per cent (anhydrous substance).

CHARACTERS

*Appearance*: white or almost white, crystalline powder.

*Solubility*: slightly soluble in water, freely soluble in ethanol (96 per cent).

IDENTIFICATION

*First identification: A, C.*

*Second identification: A, B, D.*

A. Melting point (*2.2.14*): 132 °C to 136 °C.

B. Ultraviolet and visible absorption spectrophotometry (*2.2.25*).

*Test solution.* Dissolve 50.0 mg in *water R* and dilute to 250.0 mL with the same solvent. Dilute 2.0 mL of this solution to 200.0 mL with *0.1 M hydrochloric acid*.

*Spectral range*: 230-350 nm.

*Absorption maximum*: at 264 nm.

*Specific absorbance at the absorption maximum*: 2150 to 2550.

C. Infrared absorption spectrophotometry (*2.2.24*).

*Comparison*: *sorbic acid CRS*.

D. Dissolve 0.2 g in 2 mL of *ethanol (96 per cent) R* and add 0.2 mL of *bromine water R*. The solution is decolorised.

TESTS

**Solution S**. Dissolve 1.25 g in *ethanol (96 per cent) R* and dilute to 25 mL with the same solvent.

**Appearance of solution**. Solution S is clear (*2.2.1*) and colourless (*2.2.2, Method II*).

**Aldehydes**: maximum 0.15 per cent, calculated as $C_2H_4O$.

Dissolve 1.0 g in a mixture of 30 mL of *water R* and 50 mL of *2-propanol R*, adjust to pH 4 with *0.1 M hydrochloric acid* or *0.1 M sodium hydroxide* and dilute to 100 mL with *water R*. To 10 mL of this solution add 1 mL of *decolorised fuchsin solution R* and allow to stand for 30 min. Any colour in the

solution is not more intense than that in a standard prepared at the same time by adding 1 mL of *decolorised fuchsin solution R* to a mixture of 1.5 mL of *acetaldehyde standard solution (100 ppm $C_2H_4O$) R*, 4 mL of *2-propanol R* and 4.5 mL of *water R*.

**Water** (*2.5.12*): maximum 1.0 per cent, determined on 2.000 g.

**Sulfated ash** (*2.4.14*): maximum 0.2 per cent, determined on 1.0 g.

ASSAY

Dissolve 0.1000 g in 20 mL of *ethanol (96 per cent) R*. Using 0.2 mL of *phenolphthalein solution R* as indicator, titrate with *0.1 M sodium hydroxide* until a pink colour is obtained.

1 mL of *0.1 M sodium hydroxide* is equivalent to 11.21 mg of $C_6H_8O_2$.

STORAGE

Protected from light.

**04/2017:1040**

## SORBITAN LAURATE

### Sorbitani lauras

DEFINITION

Mixture usually obtained by partial esterification of sorbitol and its mono- and di-anhydrides with lauric (dodecanoic) acid.

CHARACTERS

*Appearance*: brownish-yellow, viscous liquid.

*Solubility*: practically insoluble but dispersible in water, miscible with ethanol (96 per cent).

*Relative density*: about 0.98.

IDENTIFICATION

A. Hydroxyl value (see Tests).

B. Iodine value (see Tests).

C. Composition of fatty acids (see Tests).

TESTS

**Acid value** (*2.5.1*): maximum 7.0, determined on 5.0 g.

**Hydroxyl value** (*2.5.3, Method A*): 330 to 358.

**Iodine value** (*2.5.4*): maximum 10.

**Peroxide value** (*2.5.5*): maximum 5.0.

**Saponification value** (*2.5.6*): 158 to 170.

Carry out the saponification for 1 h.

**Composition of fatty acids**. Gas chromatography (*2.4.22, Method C*).

Prepare reference solution (a) as indicated in tables 2.4.22.-1 and 2.4.22.-2.

*Composition of the fatty acid fraction of the substance*:

- *caproic acid*: maximum 1.0 per cent;
- *caprylic acid*: maximum 10.0 per cent;
- *capric acid*: maximum 10.0 per cent;
- *lauric acid*: 40.0 per cent to 60.0 per cent;
- *myristic acid*: 14.0 per cent to 25.0 per cent;
- *palmitic acid*: 7.0 per cent to 15.0 per cent;
- *stearic acid*: maximum 7.0 per cent;
- *oleic acid*: maximum 11.0 per cent;
- *linoleic acid*: maximum 3.0 per cent.

**Water** (*2.5.12*): maximum 1.5 per cent, determined on 1.00 g.

**Total ash** (*2.4.16*): maximum 0.5 per cent.

STORAGE

Protected from light.

FUNCTIONALITY-RELATED CHARACTERISTICS

*This section provides information on characteristics that are recognised as being relevant control parameters for one or more functions of the substance when used as an excipient (see chapter 5.15). Some of the characteristics described in the Functionality-related characteristics section may also be present in the mandatory part of the monograph since they also represent mandatory quality criteria. In such cases, a cross-reference to the tests described in the mandatory part is included in the Functionality-related characteristics section. Control of the characteristics can contribute to the quality of a medicinal product by improving the consistency of the manufacturing process and the performance of the medicinal product during use. Where control methods are cited, they are recognised as being suitable for the purpose, but other methods can also be used. Wherever results for a particular characteristic are reported, the control method must be indicated.*

*The following characteristics may be relevant for sorbitan laurate used as emulsifier and co-solubiliser in creams.*

**Composition of fatty acids** (see Tests).

**Hydroxyl value** (see Tests).

**04/2017:1041**

## SORBITAN OLEATE

### Sorbitani oleas

DEFINITION

Mixture usually obtained by esterification of 1 mole of sorbitol and its mono-and di-anhydrides per mole of oleic ((9*Z*)-octadec-9-enoic) acid. A suitable antioxidant may be added.

CHARACTERS

*Appearance*: brownish-yellow, viscous liquid.

*Solubility*: practically insoluble but dispersible in water, soluble in fatty oils producing a hazy solution, miscible with ethanol (96 per cent).

*Relative density*: about 0.99.

IDENTIFICATION

A. Hydroxyl value (see Tests).

B. Iodine value (see Tests).

C. Composition of fatty acids (see Tests).

*Margaric acid*: maximum 0.2 per cent for oleic acid of vegetable origin and maximum 4.0 per cent for oleic acid of animal origin.

TESTS

**Acid value** (*2.5.1*): maximum 8.0, determined on 5.0 g.

**Hydroxyl value** (*2.5.3, Method A*): 190 to 210.

**Iodine value** (*2.5.4*): 62 to 76.

**Peroxide value** (*2.5.5*): maximum 10.0.

**Saponification value** (*2.5.6*): 145 to 160.

Carry out the saponification for 1 h.

**Composition of fatty acids**. Gas chromatography (*2.4.22, Method C*).

*Composition of the fatty acid fraction of the substance*:

- *myristic acid*: maximum 5.0 per cent;
- *palmitic acid*: maximum 16.0 per cent;

– *palmitoleic acid*: maximum 8.0 per cent;
– *stearic acid*: maximum 6.0 per cent;
– *oleic acid*: 65.0 per cent to 88.0 per cent;
– *linoleic acid*: maximum 18.0 per cent;
– *linolenic acid*: maximum 4.0 per cent;
– *fatty acids with chain length greater than $C_{18}$*: maximum 4.0 per cent.

**Water** (*2.5.12*): maximum 1.5 per cent, determined on 1.00 g.

**Total ash** (*2.4.16*): maximum 0.5 per cent, determined on 1.5 g.

STORAGE

Protected from light.

LABELLING

The label states the origin of the oleic acid used (animal or vegetable).

# SORBITAN PALMITATE

## Sorbitani palmitas

DEFINITION

Mixture usually obtained by partial esterification of sorbitol and its mono- and di-anhydrides with palmitic (hexadecanoic) acid.

CHARACTERS

*Appearance*: yellow or yellowish powder, waxy flakes or hard masses.

*Solubility*: practically insoluble in water, soluble in fatty oils, slightly soluble in ethanol (96 per cent).

IDENTIFICATION

A. Melting point (*2.2.15*): 44 °C to 51 °C.
   Introduce the melted substance into the glass capillary tubes and allow to stand at a temperature below 10 °C for 24 h.
B. Hydroxyl value (see Tests).
C. Composition of fatty acids (see Tests).

TESTS

**Acid value** (*2.5.1*): maximum 8.0, determined on 5.0 g.

**Hydroxyl value** (*2.5.3, Method A*): 270 to 305.

**Peroxide value** (*2.5.5*): maximum 5.0.

**Saponification value** (*2.5.6*): 140 to 155.

Carry out the saponification for 1 h.

**Composition of fatty acids**. Gas chromatography (*2.4.22, Method C*).

*Composition of the fatty acid fraction of the substance*:
– *palmitic acid*: minimum 92.0 per cent;
– *stearic acid*: maximum 6.0 per cent.

**Water** (*2.5.12*): maximum 1.5 per cent, determined on 1.00 g.

**Total ash** (*2.4.16*): maximum 0.5 per cent.

STORAGE

Protected from light.

**Composition of fatty acids** (see Tests).

**Hydroxyl value** (see Tests).

**04/2017:1916**

# SORBITAN SESQUIOLEATE

## Sorbitani sesquioleas

DEFINITION

Mixture usually obtained by esterification of 2 moles of sorbitol and its mono- and di-anhydrides per 3 moles of oleic ((9*Z*)-octadec-9-enoic) acid. A suitable antioxidant may be added.

CHARACTERS

*Appearance*: pale yellow or slightly brownish-yellow paste, which becomes a viscous, oily, brownish-yellow liquid at about 25 °C.

*Solubility*: dispersible in water, soluble in fatty oils, slightly soluble in ethanol (96 per cent).

*Relative density*: about 0.99.

IDENTIFICATION

A. Hydroxyl value (see Tests).
B. Iodine value (see Tests).
C. Composition of fatty acids (see Tests).
   *Margaric acid*: maximum 0.2 per cent for oleic acid of vegetable origin and maximum 4.0 per cent for oleic acid of animal origin.

TESTS

**Acid value** (*2.5.1*): maximum 16.0, determined on 5.0 g.

**Hydroxyl value** (*2.5.3, Method A*): 180 to 215.

**Iodine value** (*2.5.4*): 70 to 95.

**Peroxide value** (*2.5.5*): maximum 10.0.

**Saponification value** (*2.5.6*): 145 to 166.

Carry out the saponification for 1 h.

**Composition of fatty acids**. Gas chromatography (*2.4.22, Method C*).

*Composition of the fatty acid fraction of the substance*:

- *myristic acid*: maximum 5.0 per cent;
- *palmitic acid*: maximum 16.0 per cent;
- *palmitoleic acid*: maximum 8.0 per cent;
- *stearic acid*: maximum 6.0 per cent;
- *oleic acid*: 65.0 per cent to 88.0 per cent;
- *linoleic acid*: maximum 18.0 per cent;
- *linolenic acid*: maximum 4.0 per cent;
- *fatty acids with chain length greater than* $C_{18}$: maximum 4.0 per cent.

**Water** (*2.5.12*): maximum 1.5 per cent, determined on 1.00 g.

**Total ash** (*2.4.16*): maximum 0.5 per cent, determined on 1.5 g.

STORAGE

Protected from light.

LABELLING

The label states the origin of the oleic acid used (animal or vegetable).

# SORBITAN STEARATE

## Sorbitani stearas

DEFINITION

Mixture usually obtained by partial esterification of sorbitol and its mono- and di-anhydrides with *Stearic acid 50 (1474)* or *Stearic acid 70 (1474)*.

CHARACTERS

*Appearance*: pale yellow, waxy solid.

*Solubility*: practically insoluble but dispersible in water, slightly soluble in ethanol (96 per cent).

IDENTIFICATION

A. Melting point (*2.2.15*): 50 °C to 60 °C.

Introduce the melted substance into the capillary tubes and allow to stand at a temperature below 10 °C for 24 h.

B. Hydroxyl value (see Tests).

C. Composition of fatty acids (see Tests).

TESTS

**Acid value** (*2.5.1*): maximum 10.0, determined on 5.0 g.

**Hydroxyl value** (*2.5.3, Method A*): 235 to 260.

**Peroxide value** (*2.5.5*): maximum 5.0.

**Saponification value** (*2.5.6*): 147 to 157.

Carry out the saponification for 1 h.

**Composition of fatty acids**. Gas chromatography (*2.4.22, Method C*).

*Composition of the fatty acid fraction of the substance:*

| | Type of fatty acid used | Composition of fatty acids |
|---|---|---|
| Sorbitan stearate (type I) | Stearic acid 50 | *Stearic acid*: 40.0 per cent to 60.0 per cent,<br>*Sum of the contents of palmitic and stearic acids*: minimum 90.0 per cent. |
| Sorbitan stearate (type II) | Stearic acid 70 | *Stearic acid*: 60.0 per cent to 80.0 per cent,<br>*Sum of the contents of palmitic and stearic acids*: minimum 90.0 per cent. |

**Water** (*2.5.12*): maximum 1.5 per cent, determined on 1.00 g.

**Total ash** (*2.4.16*): maximum 0.5 per cent.

STORAGE

Protected from light.

LABELLING

The label states the type of sorbitan stearate.

FUNCTIONALITY-RELATED CHARACTERISTICS

*This section provides information on characteristics that are recognised as being relevant control parameters for one or more functions of the substance when used as an excipient (see chapter 5.15). Some of the characteristics described in the Functionality-related characteristics section may also be present in the mandatory part of the monograph since they also represent mandatory quality criteria. In such cases, a cross-reference to the tests described in the mandatory part is included in the Functionality-related characteristics section. Control of the characteristics can contribute to the quality of a medicinal product by improving the consistency of the manufacturing process and the performance of the medicinal product during use. Where control methods are cited, they are recognised as being suitable for the purpose, but other methods can also be used. Wherever results for a particular characteristic are reported, the control method must be indicated.*

*The following characteristics may be relevant for sorbitan stearate used as emulsifier and co-solubiliser in creams.*

**Composition of fatty acids** (see Tests).

**Hydroxyl value** (see Tests).

**04/2017:1044**

# SORBITAN TRIOLEATE

## Sorbitani trioleas

DEFINITION

Mixture usually obtained by esterification of 1 mole of sorbitol and its mono-anhydride per 3 moles of oleic ((9*Z*)-octadec-9-enoic) acid. A suitable antioxidant may be added.

CHARACTERS

*Appearance*: pale yellow, light yellowish or brown solid, which becomes a viscous, oily, brownish-yellow liquid at about 25 °C.

*Solubility*: practically insoluble but dispersible in water, soluble in fatty oils, slightly soluble in ethanol (96 per cent).

*Relative density*: about 0.98.

IDENTIFICATION

A. Hydroxyl value (see Tests).

B. Iodine value (see Tests).

C. Composition of fatty acids (see Tests).

*Margaric acid*: maximum 0.2 per cent for oleic acid of vegetable origin and maximum 4.0 per cent for oleic acid of animal origin.

TESTS

**Acid value** (*2.5.1*): maximum 16.0, determined on 5.0 g.

**Hydroxyl value** (*2.5.3, Method A*): 55 to 75.

**Iodine value** (*2.5.4*): 76 to 90.

**Peroxide value** (*2.5.5*): maximum 10.0.

**Saponification value** (*2.5.6*): 170 to 190.

Carry out the saponification for 1 h.

**Composition of fatty acids**. Gas chromatography (*2.4.22, Method C*).

*Composition of the fatty acid fraction of the substance:*

- *myristic acid*: maximum 5.0 per cent;
- *palmitic acid*: maximum 16.0 per cent;
- *palmitoleic acid*: maximum 8.0 per cent;
- *stearic acid*: maximum 6.0 per cent;
- *oleic acid*: 65.0 per cent to 88.0 per cent;
- *linoleic acid*: maximum 18.0 per cent;
- *linolenic acid*: maximum 4.0 per cent;
- *fatty acids with chain length greater than* $C_{18}$: maximum 4.0 per cent.

**Water** (*2.5.12*): maximum 1.5 per cent, determined on 1.00 g.

**Total ash** (*2.4.16*): maximum 0.5 per cent, determined on 1.5 g.

STORAGE

Protected from light.

LABELLING

The label states the origin of the oleic acid used (animal or vegetable).

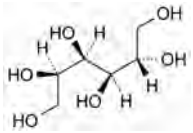
# SORBITOL

## Sorbitolum



$C_6H_{14}O_6$ $M_r$ 182.2

[50-70-4]

DEFINITION

D-Glucitol (D-sorbitol).

*Content*: 97.0 per cent to 102.0 per cent (anhydrous substance).

CHARACTERS

*Appearance*: white or almost white, crystalline powder.

*Solubility*: very soluble in water, practically insoluble in ethanol (96 per cent).

It shows polymorphism (*5.9*).

IDENTIFICATION

*First identification: A.*

*Second identification: B, C, D.*

A. Examine the chromatograms obtained in the assay.

*Results*: the principal peak in the chromatogram obtained with the test solution is similar in retention time and size to the principal peak in the chromatogram obtained with reference solution (a).

B. Dissolve 0.5 g with heating in a mixture of 0.5 mL of *pyridine R* and 5 mL of *acetic anhydride R*. After 10 min, pour the solution into 25 mL of *water R* and allow to stand in iced water for 2 h. The precipitate, recrystallised from a small volume of *ethanol (96 per cent) R* and dried *in vacuo*, melts (*2.2.14*) at 98 °C to 104 °C.

C. Thin-layer chromatography (*2.2.27*).

*Test solution*. Dissolve 25 mg of the substance to be examined in *water R* and dilute to 10 mL with the same solvent.

*Reference solution (a)*. Dissolve 25 mg of *sorbitol CRS* in *water R* and dilute to 10 mL with the same solvent.

*Reference solution (b)*. Dissolve 25 mg of *mannitol CRS* and 25 mg of *sorbitol CRS* in *water R* and dilute to 10 mL with the same solvent.

*Plate*: *TLC silica gel plate R*.

*Mobile phase*: *water R*, *ethyl acetate R*, *propanol R* (10:20:70 *V/V/V*).

*Application*: 2 µL.

*Development*: over 2/3 of the plate.

Monographs S

*Drying*: in air.

*Detection*: spray with *4-aminobenzoic acid solution R*; dry in a current of cold air until the acetone is removed; heat at 100 °C for 15 min; allow to cool and spray with a 2 g/L solution of *sodium periodate R*; dry in a current of cold air; heat at 100 °C for 15 min.

*System suitability*: reference solution (b):

– the chromatogram shows 2 clearly separated spots.

*Results*: the principal spot in the chromatogram obtained with the test solution is similar in position, colour and size to the principal spot in the chromatogram obtained with reference solution (a).

D. Specific optical rotation (*2.2.7*): + 4.0 to + 7.0 (anhydrous substance).

Dissolve 5.00 g of the substance to be examined and 6.4 g of *disodium tetraborate R* in 40 mL of *water R*. Allow to stand for 1 h, shaking occasionally, and dilute to 50.0 mL with *water R*. Filter if necessary.

TESTS

**Appearance of solution**. The solution is clear (*2.2.1*) and colourless (*2.2.2, Method II*).

Dissolve 5 g in *water R* and dilute to 50 mL with the same solvent.

**Conductivity** (*2.2.38*): maximum 20 $\mu S \cdot cm^{-1}$.

Dissolve 20.0 g in *carbon dioxide-free water R* prepared from *distilled water R* and dilute to 100.0 mL with the same solvent. Measure the conductivity of the solution while gently stirring with a magnetic stirrer.

**Reducing sugars**: maximum 0.2 per cent, expressed as glucose equivalent.

Dissolve 5.0 g in 6 mL of *water R* with the aid of gentle heat. Cool and add 20 mL of *cupri-citric solution R* and a few glass beads. Heat so that boiling begins after 4 min and maintain boiling for 3 min. Cool rapidly and add 100 mL of a 2.4 per cent *V/V* solution of *glacial acetic acid R* and 20.0 mL of *0.025 M iodine*. With continuous shaking, add 25 mL of a mixture of 6 volumes of *hydrochloric acid R* and 94 volumes of *water R* and, when the precipitate has dissolved, titrate the excess of iodine with *0.05 M sodium thiosulfate* using 1 mL of *starch solution R*, added towards the end of the titration, as indicator. Not less than 12.8 mL of *0.05 M sodium thiosulfate* is required.

**Related substances**. Liquid chromatography (*2.2.29*).

*Test solution.* Dissolve 5.0 g of the substance to be examined in 20 mL of *water R* and dilute to 100.0 mL with the same solvent.

*Reference solution (a).* Dissolve 0.50 g of *sorbitol CRS* in 2 mL of *water R* and dilute to 10.0 mL with the same solvent.

*Reference solution (b).* Dilute 2.0 mL of the test solution to 100.0 mL with *water R*.

*Reference solution (c).* Dilute 5.0 mL of reference solution (b) to 100.0 mL with *water R*.

*Reference solution (d).* Dissolve 0.5 g of *sorbitol R* and 0.5 g of *mannitol R* (impurity A) in 5 mL of *water R* and dilute to 10 mL with the same solvent.

*Column*:

– *size*: *l* = 0.3 m, Ø = 7.8 mm;
– *stationary phase*: *strong cation-exchange resin (calcium form) R* (9 µm);
– *temperature*: 85 ± 1 °C.

*Mobile phase*: degassed *water for chromatography R*.

*Flow rate*: 0.5 mL/min.

*Detection*: differential refractometer maintained at a constant temperature (e.g. 35 °C).

*Injection*: 20 µL of the test solution and reference solutions (b), (c) and (d).

*Run time*: twice the retention time of sorbitol.

*Relative retention* with reference to sorbitol (retention time = about 27 min): impurity C = about 0.6; impurity A = about 0.8; impurity B = about 1.1.

*System suitability*: reference solution (d):

– *resolution*: minimum 2.0 between the peaks due to impurity A and sorbitol.

*Limits*:

– *any impurity*: for each impurity, not more than the area of the principal peak in the chromatogram obtained with reference solution (b) (2.0 per cent);
– *total*: not more than 1.5 times the area of the principal peak in the chromatogram obtained with reference solution (b) (3.0 per cent);
– *disregard limit*: the area of the principal peak in the chromatogram obtained with reference solution (c) (0.1 per cent).

**Water** (*2.5.12*): maximum 1.5 per cent, determined on 1.00 g. Use a mixture of 1 volume of *formamide R1* and 2 volumes of *anhydrous methanol R* as solvent.

**Microbial contamination**

If intended for use in the manufacture of parenteral preparations:

– TAMC: acceptance criterion $10^2$ CFU/g (*2.6.12*).

If not intended for use in the manufacture of parenteral preparations:

– TAMC: acceptance criterion $10^3$ CFU/g (*2.6.12*);
– TYMC: acceptance criterion $10^2$ CFU/g (*2.6.12*);
– absence of *Escherichia coli* (*2.6.13*);
– absence of *Salmonella* (*2.6.13*).

**Bacterial endotoxins** (*2.6.14*). If intended for use in the manufacture of parenteral preparations without a further appropriate procedure for the removal of bacterial endotoxins:

– less than 4 IU/g for parenteral preparations having a concentration of less than 100 g/L of sorbitol;
– less than 2.5 IU/g for parenteral preparations having a concentration of 100 g/L or more of sorbitol.

ASSAY

Liquid chromatography (*2.2.29*) as described in the test for related substances with the following modification.

*Injection*: test solution and reference solution (a).

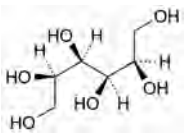
Calculate the percentage content of $C_6H_{14}O_6$ taking into account the assigned content of *sorbitol CRS*.

LABELLING

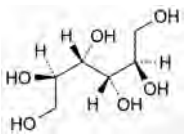
The label states:

– where applicable, the maximum concentration of bacterial endotoxins;
– where applicable, that the substance is suitable for use in the manufacture of parenteral preparations.

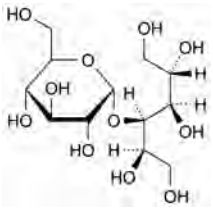
IMPURITIES



A. D-mannitol,



B. D-iditol,



C. 4-*O*-α-D-glucopyranosyl-D-glucitol (D-maltitol).

FUNCTIONALITY-RELATED CHARACTERISTICS

*This section provides information on characteristics that are recognised as being relevant control parameters for one or more functions of the substance when used as an excipient (see chapter 5.15). Some of the characteristics described in the Functionality-related characteristics section may also be present in the mandatory part of the monograph since they also represent mandatory quality criteria. In such cases, a cross-reference to the tests described in the mandatory part is included in the Functionality-related characteristics section. Control of the characteristics can contribute to the quality of a medicinal product by improving the consistency of the manufacturing process and the performance of the medicinal product during use. Where control methods are cited, they are recognised as being suitable for the purpose, but other methods can also be used. Wherever results for a particular characteristic are reported, the control method must be indicated.*

*The following characteristics may be relevant for sorbitol used as filler and binder in tablets.*

**Particle-size distribution** (*2.9.31* or *2.9.38*).

**Powder flow** (*2.9.36*).

**07/2019:0436**

# SORBITOL, LIQUID (CRYSTALLISING)

## Sorbitolum liquidum cristallisabile

DEFINITION

Aqueous solution of a hydrogenated, partly hydrolysed starch.

*Content*:

- anhydrous substance: 68.0 per cent *m/m* to 72.0 per cent *m/m*,
- D-glucitol (D-sorbitol, $C_6H_{14}O_6$): 92.0 per cent to 101.0 per cent (anhydrous substance).

CHARACTERS

*Appearance*: clear, colourless, syrupy liquid, miscible with water.

IDENTIFICATION

A. Examine the chromatograms obtained in the assay.

*Results*: the principal peak in the chromatogram obtained with the test solution is similar in retention time to the principal peak in the chromatogram obtained with reference solution (a).

B. To 7.0 g add 40 mL of *water R* and 6.4 g of *disodium tetraborate R*, allow to stand for 1 h, shaking occasionally, and dilute to 50.0 mL with *water R*. Filter if necessary. The angle of rotation (*2.2.7*) is 0° to + 1.5°.

C. It is a clear, syrupy liquid at a temperature of 25 °C.

TESTS

**Appearance of solution**. The solution is clear (*2.2.1*) and colourless (*2.2.2, Method II*).

Dilute 7.0 g to 50 mL with *water R*.

**Conductivity** (*2.2.38*): maximum 10 $\mu S \cdot cm^{-1}$ measured on the undiluted liquid sorbitol (crystallising) while gently stirring with a magnetic stirrer.

**Reducing sugars**: maximum 0.2 per cent calculated as glucose equivalent.

To 5.0 g add 6 mL of *water R*, 20 mL of *cupri-citric solution R* and a few glass beads. Heat so that boiling begins after 4 min and maintain boiling for 3 min. Cool rapidly and add 100 mL of a 2.4 per cent *V/V* solution of *glacial acetic acid R* and 20.0 mL of *0.025 M iodine*. With continuous shaking, add 25 mL of a mixture of 6 volumes of *hydrochloric acid R* and 94 volumes of *water R* and, when the precipitate has dissolved, titrate the excess of iodine with *0.05 M sodium thiosulfate* using 1 mL of *starch solution R*, added towards the end of the titration, as indicator. Not less than 12.8 mL of *0.05 M sodium thiosulfate* is required.

**Water** (*2.5.12*): 28.0 per cent to 32.0 per cent *m/m*, determined on 0.100 g.

ASSAY

Liquid chromatography (*2.2.29*).

*Test solution.* Mix 1.00 g of the substance to be examined with 20 mL of *water R* and dilute to 50.0 mL with the same solvent.

*Reference solution (a).* Dissolve 65.0 mg of *sorbitol CRS* in 2 mL of *water R* and dilute to 5.0 mL with the same solvent.

*Reference solution (b).* Dissolve 65 mg of *mannitol R* and 65 mg of *sorbitol R* in 2 mL of *water R* and dilute to 5 mL with the same solvent.

*Column*:

- *size*: *l* = 0.3 m, Ø = 7.8 mm,
- *stationary phase*: *strong cation-exchange resin (calcium form) R* (9 µm),
- *temperature*: 85 ± 1 °C.

*Mobile phase*: degassed *water for chromatography R*.

*Flow rate*: 0.5 mL/min.

*Detection*: differential refractometer maintained at a constant temperature (e.g. 35 °C).

*Injection*: 20 µL.

*Run time*: twice the retention time of sorbitol.

*Relative retention* with reference to sorbitol (retention time = about 27 min): mannitol = about 0.8.

*System suitability*: reference solution (b):

- *resolution*: minimum 2.0 between the peaks due to mannitol and to sorbitol.

Calculate the percentage content of $C_6H_{14}O_6$ taking into account the assigned content of *sorbitol CRS*.

**07/2019:0437**

# SORBITOL, LIQUID (NON-CRYSTALLISING)

## Sorbitolum liquidum non cristallisabile

DEFINITION

Aqueous solution of a hydrogenated, partly hydrolysed starch.

*Content*:

- anhydrous substance: 68.0 per cent *m/m* to 72.0 per cent *m/m*,
- D-glucitol (D-sorbitol, $C_6H_{14}O_6$): 72.0 per cent to 92.0 per cent (anhydrous substance).

CHARACTERS

*Appearance*: clear, colourless, syrupy liquid, miscible with water.

IDENTIFICATION

A. Examine the chromatograms obtained in the assay.
*Results*: the principal peak in the chromatogram obtained with the test solution is similar in retention time to the principal peak in the chromatogram obtained with reference solution (a).

B. To 7.0 g add 40 mL of *water R* and 6.4 g of *disodium tetraborate R*. Allow to stand for 1 h, shaking occasionally, and dilute to 50.0 mL with *water R*. Filter if necessary. The angle of rotation (*2.2.7*) is + 1.5° to + 3.5°.

C. It is a clear, syrupy liquid at 25 °C.

TESTS

**Appearance of solution**. The solution is clear (*2.2.1*) and colourless (*2.2.2, Method II*).

Dilute 7.0 g to 50 mL with *water R*.

**Conductivity** (*2.2.38*): maximum 10 µS·cm$^{-1}$ measured on the undiluted liquid sorbitol (non crystallising) while gently stirring with a magnetic stirrer.

**Reducing sugars**: maximum 0.2 per cent calculated as glucose equivalent.

To 5.0 g add 6 mL of *water R*, 20 mL of *cupri-citric solution R* and a few glass beads. Heat so that boiling begins after 4 min and maintain boiling for 3 min. Cool rapidly and add 100 mL of a 2.4 per cent *V/V* solution of *glacial acetic acid R* and 20.0 mL of *0.025 M iodine*. With continuous shaking, add 25 mL of a mixture of 6 volumes of *hydrochloric acid R* and 94 volumes of *water R* and, when the precipitate has dissolved, titrate the excess of iodine with *0.05 M sodium thiosulfate* using 1 mL of *starch solution R*, added towards the end of the titration, as indicator. Not less than 12.8 mL of *0.05 M sodium thiosulfate* is required.

**Reducing sugars after hydrolysis**: maximum 9.3 per cent calculated as glucose equivalent.

To 6.0 g add 35 mL of *water R*, 40 mL of *1 M hydrochloric acid* and a few glass beads. Boil under a reflux condenser for 4 h. Cool and neutralise with *dilute sodium hydroxide solution R* using 0.2 mL of *bromothymol blue solution R1* as indicator. Cool and dilute to 100.0 mL with *water R*. To 3.0 mL of the solution add 5 mL of *water R*, 20 mL of *cupri-citric solution R* and a few glass beads. Heat so that boiling begins after 4 min and maintain boiling for 3 min. Cool rapidly and add 100 mL of a 2.4 per cent *V/V* solution of *glacial acetic acid R* and 20.0 mL of *0.025 M iodine*. With continuous shaking, add 25 mL of a mixture of 6 volumes of *hydrochloric acid R* and 94 volumes of *water R*. When the precipitate has dissolved, titrate the excess of iodine with *0.05 M sodium thiosulfate* using 1 mL of *starch solution R*, added towards the end of the titration, as indicator. Not less than 8.0 mL of *0.05 M sodium thiosulfate* is required.

**Water** (*2.5.12*): 28.0 per cent to 32.0 per cent *m/m*, determined on 0.100 g.

ASSAY

Liquid chromatography (*2.2.29*).

*Test solution.* Mix 1.00 g of the substance to be examined with 20 mL of *water R* and dilute to 50.0 mL with the same solvent.

*Reference solution (a).* Dissolve 55.0 mg of *sorbitol CRS* in 2 mL of *water R* and dilute to 5.0 mL with the same solvent.

*Reference solution (b).* Dissolve 55 mg of *mannitol R* and 55 mg of *sorbitol R* in 2 mL of *water R* and dilute to 5 mL with the same solvent.

*Column*:
- *size*: *l* = 0.3 m, Ø = 7.8 mm,
- *stationary phase*: *strong cation-exchange resin (calcium form) R* (9 µm),
- *temperature*: 85 ± 1 °C.

*Mobile phase*: degassed *water for chromatography R*.

*Flow rate*: 0.5 mL/min.

*Detection*: differential refractometer maintained at a constant temperature (e.g. 35 °C).

*Injection*: 20 µL.

*Run time*: twice the retention time of sorbitol.

*Relative retention* with reference to sorbitol (retention time = about 27 min): mannitol = about 0.8.

*System suitability*: reference solution (b):
- *resolution*: minimum 2.0 between the peaks due to mannitol and to sorbitol.

Calculate the percentage content of $C_6H_{14}O_6$ taking into account the assigned content of *sorbitol CRS*.

**07/2019:2048**

# SORBITOL, LIQUID, PARTIALLY DEHYDRATED

## Sorbitolum liquidum partim deshydricum

DEFINITION

Partially dehydrated liquid sorbitol is obtained by acid-catalysed partial internal dehydration of liquid sorbitol. It contains not less than 68.0 per cent *m/m* and not more than 85.0 per cent *m/m* of anhydrous substances, composed of a mixture of mainly D-sorbitol and 1,4-sorbitan, with mannitol, hydrogenated oligo- and disaccharides, and sorbitans.

*Content* (nominal value):
- 1,4-sorbitan ($C_6H_{12}O_5$): minimum 15.0 per cent (anhydrous substance);
- D-sorbitol ($C_6H_{14}O_6$): minimum 25.0 per cent (anhydrous substance).

The contents of 1,4-sorbitan and D-sorbitol are within 95.0 per cent to 105.0 per cent of the nominal values.

CHARACTERS

*Appearance*: clear, colourless, syrupy liquid.

*Solubility*: miscible with water, practically insoluble in mineral oils and vegetable oils.

IDENTIFICATION

Examine the chromatograms obtained in the assay.

*Results*: the 2 principal peaks in the chromatogram obtained with the test solution are similar in retention time and size to the peaks in the chromatogram obtained with reference solution (a).

TESTS

**Solution S**. Dilute the substance to be examined with *carbon dioxide-free water R* prepared from *distilled water R* to obtain a solution containing 50.0 per cent *m/m* of anhydrous substance.

**Appearance of solution**. Solution S is clear (*2.2.1*) and colourless (*2.2.2, Method II*).

**Conductivity** (*2.2.38*): maximum 20 µS·cm$^{-1}$.

Measure the conductivity of solution S, while gently stirring with a magnetic stirrer.

**Reducing sugars**: maximum 0.3 per cent, calculated as glucose (anhydrous substance).

To an amount of the substance to be examined equivalent to 3.3 g of anhydrous substance, add 3 mL of *water R*, 20.0 mL of *cupri-citric solution R* and a few glass beads. Heat so that boiling begins after 4 min. Maintain boiling for 3 min. Cool rapidly and add 100 mL of a 2.4 per cent *V/V* solution of *glacial acetic acid R* and 20.0 mL of *0.025 M iodine*. With continuous

shaking, add 25 mL of a mixture of 6 mL of *hydrochloric acid R* and 94 mL of *water R*. When the precipitate has dissolved, titrate the excess of iodine with *0.05 M sodium thiosulfate* using 2 mL of *starch solution R*, added towards the end of the titration, as indicator. Not less than 12.8 mL of *0.05 M sodium thiosulfate* is required.

**Water** (*2.5.12*): 15.0 per cent to 32.0 per cent, determined on 0.100 g.

**Microbial contamination**

TAMC: acceptance criterion $10^3$ CFU/g (*2.6.12*).

TYMC: acceptance criterion $10^2$ CFU/g (*2.6.12*).

Absence of *Escherichia coli* (*2.6.13*).

Absence of *Salmonella* (*2.6.13*).

ASSAY

Liquid chromatography (*2.2.29*).

*Test solution*. Dissolve 0.400 g of the substance to be examined in *water R* and dilute to 20.0 mL with the same solvent.

*Reference solution (a)*. Dissolve 50.0 mg of *sorbitol CRS* and 20.0 mg of *1,4-sorbitan CRS* in *water R* and dilute to 5.0 mL with the same solvent.

*Reference solution (b)*. Dissolve 0.100 g of *mannitol R* and 0.100 g of *sorbitol R* in *water R* and dilute to 10 mL with the same solvent.

*Column*:

- *size*: *l* = 0.3 m, Ø = 7.8 mm;
- *stationary phase*: *strong cation-exchange resin (calcium form) R* (9 µm);
- *temperature*: 80 ± 5 °C.

*Mobile phase*: degassed *water for chromatography R*.

*Flow rate*: 0.5 mL/min.

*Detection*: differential refractometer maintained at a constant temperature (e.g. 30-35 °C).

*Injection*: 40 µL.

*Relative retention* with reference to D-sorbitol (retention time = about 25 min): 1,4-sorbitan = about 0.5; mannitol = about 0.8.

*System suitability*: reference solution (b):

- *resolution*: minimum 2.0 between the peaks due to mannitol and D-sorbitol.

Calculate the percentage contents of 1,4-sorbitan ($C_6H_{12}O_5$) and D-sorbitol ($C_6H_{14}O_6$) taking into account the assigned contents of *1,4-sorbitan CRS* and *sorbitol CRS*.

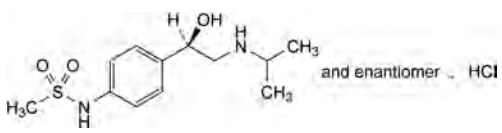
LABELLING

The label states the content of D-sorbitol and the content of 1,4-sorbitan (= nominal values).

**01/2017:2004**

# SOTALOL HYDROCHLORIDE

## Sotaloli hydrochloridum



$C_{12}H_{21}ClN_2O_3S$ $M_r$ 308.8

[959-24-0]

DEFINITION

*N*-[4-[(1*RS*)-1-Hydroxy-2-[(1-methylethyl)amino]ethyl]-phenyl]methanesulfonamide hydrochloride.

*Content*: 99.0 per cent to 101.0 per cent (dried substance).

CHARACTERS

*Appearance*: white or almost white powder.

*Solubility*: freely soluble in water, soluble in alcohol, practically insoluble in methylene chloride.

IDENTIFICATION

A. Infrared absorption spectrophotometry (*2.2.24*).
*Comparison*: *sotalol hydrochloride CRS*.

B. It gives reaction (a) of chlorides (*2.3.1*).

TESTS

**Solution S**. Dissolve 5.0 g in *carbon dioxide-free water R* and dilute to 50.0 mL with the same solvent.

**Appearance of solution**. Solution S is not more opalescent than reference suspension III (*2.2.1*) and not more intensely coloured than reference solution $Y_6$ (*2.2.2, Method II*).

**pH** (*2.2.3*): 4.0 to 5.0.

Dilute 5.0 mL of solution S to 10.0 mL with *carbon dioxide-free water R*.

**Optical rotation** (*2.2.7*): − 0.10° to + 0.10°.

Dilute 25.0 mL of solution S to 50.0 mL with *water R*.

**Related substances**. Liquid chromatography (*2.2.29*).

*Test solution*. Dissolve 20.0 mg of the substance to be examined in the mobile phase and dilute to 10.0 mL with the mobile phase.

*Reference solution (a)*. Dilute 1.0 mL of the test solution to 100.0 mL with the mobile phase. Dilute 3.0 mL of this solution to 10.0 mL with the mobile phase.

*Reference solution (b)*. Dissolve 8.0 mg of *sotalol impurity B CRS* in the mobile phase and dilute to 10.0 mL with the mobile phase.

*Reference solution (c)*. Dilute 1.0 mL of reference solution (b) to 100.0 mL with the mobile phase.

*Reference solution (d)*. Dilute 1.5 mL of reference solution (b) to 100 mL with the mobile phase. To 1 mL of this solution add 1 mL of reference solution (a).

*Column*:

- *size*: *l* = 0.25 m, Ø = 4.6 mm;
- *stationary phase*: *octadecylsilyl silica gel for chromatography R* (5 µm).

*Mobile phase*: dissolve 2 g of *sodium octanesulfonate R* in 790 mL of *water R*. Adjust to pH 3.0 with *phosphoric acid R* and add 210 mL of *acetonitrile R*.

*Flow rate*: 1 mL/min.

*Detection*: spectrophotometer at 228 nm.

*Injection*: 10 µL; inject the test solution and reference solutions (a), (c) and (d).

*Run time*: 2.5 times the retention time of sotalol.

*System suitability*: reference solution (d):

- *resolution*: minimum 4.0 between the peaks due to sotalol and to impurity B.

*Limits*:

- *impurity B*: not more than 0.25 times the area of the principal peak in the chromatogram obtained with reference solution (c) (0.1 per cent);
- *any other impurity*: not more than the area of the principal peak in the chromatogram obtained with reference solution (a) (0.3 per cent), and not more than 1 such peak has an area greater than 0.3 times the area of the principal peak in the chromatogram obtained with reference solution (a) (0.1 per cent);
- *total of other impurities*: not more than 1.65 times the area of the principal peak in the chromatogram obtained with reference solution (a) (0.5 per cent);

– *disregard limit*: 0.17 times the area of the principal peak in the chromatogram obtained with reference solution (a) (0.05 per cent).

**Palladium**: maximum 0.5 ppm.

Atomic absorption spectrometry (*2.2.23, Method I*).

*Test solution.* Dissolve 1.00 g in a mixture of 0.25 volumes of *nitric acid R*, 0.75 volumes of *hydrochloric acid R* and 99.0 volumes of *water R* and dilute to 20.0 mL with the same mixture of solvents.

*Reference solutions.* Use solutions containing 0.02 µg, 0.03 µg and 0.05 µg of palladium per millilitre, freshly prepared by dilution of *palladium standard solution (0.5 ppm Pd) R* with a mixture of 0.25 volumes of *nitric acid R*, 0.75 volumes of *hydrochloric acid R* and 99.0 volumes of *water R*.

*Source*: palladium hollow-cathode lamp.

*Wavelength*: 247.6 nm.

Use a graphite tube.

**Loss on drying** (*2.2.32*): maximum 0.5 per cent, determined on 1.000 g by drying in an oven at 105 °C.

**Sulfated ash** (*2.4.14*): maximum 0.1 per cent, determined on 1.0 g.

ASSAY

*In order to avoid overheating during the titration, mix thoroughly throughout and stop the titration immediately after the end-point has been reached.*

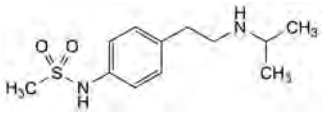
Dissolve 0.250 g in 10 mL of *anhydrous formic acid R*, if necessary with the aid of ultrasound. Add 40 mL of *acetic anhydride R* and titrate immediately with *0.1 M perchloric acid*. Determine the end-point potentiometrically (*2.2.20*).

1 mL of *0.1 M perchloric acid* is equivalent to 30.88 mg of $C_{12}H_{21}ClN_2O_3S$.

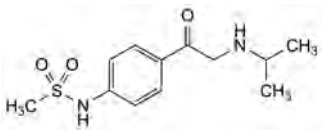
STORAGE

Protected from light.

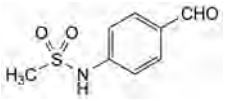
IMPURITIES



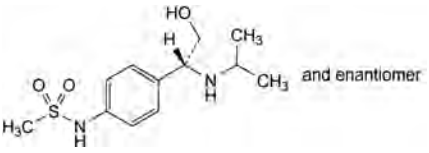
A. *N*-[4-[2-[(1-methylethyl)amino]ethyl]phenyl]-methanesulfonamide,



B. *N*-[4-[[(1-methylethyl)amino]acetyl]phenyl]-methanesulfonamide,



C. *N*-(4-formylphenyl)methanesulfonamide,



D. *N*-[4-[(1*RS*)-2-hydroxy-1-[(1-methylethyl)amino]ethyl]-phenyl]methanesulfonamide.

**07/2019:2316**

# SOYA PHOSPHOLIPIDS FOR INJECTION

## Phospholipida ex soia ad iniectabile

Soya lecithins: [8030-76-0]
Soya phosphatidylcholines: [97281-47-5]

DEFINITION

Mixture of natural phospholipids of soya, and fractions thereof, for injection. A suitable stabiliser such as α-tocopherol may be added.

*Content*:

– *phosphatidylcholine*: minimum 60.0 per cent (anhydrous substance);
– *phosphatidylethanolamine*: maximum 12.0 per cent (anhydrous substance);
– *lysophosphatidylcholine*: maximum 4.0 per cent (anhydrous substance).

CHARACTERS

*Appearance*: light yellow or brownish, porous agglomerates or waxy solid mass.

*Solubility*: practically insoluble in water, slightly soluble in ethanol (96 per cent) and in heptane.

IDENTIFICATION

*Carry out either test A or test B. If N-acyl-phosphatidylethanolamine is not detected with test A or B, carry out test C.*

A. Thin-layer chromatography (*2.2.27*).

*Test solution.* Dissolve 25 mg of the substance to be examined in *methanol R* and dilute to 50.0 mL with the same solvent.

*Reference solution (a).* Dissolve 10 mg of *phosphatidylethanolamine from soya bean CRS* in *methanol R* and dilute to 10.0 mL with the same solvent.

*Reference solution (b).* Dissolve 20 mg of *lysophosphatidylcholine from soya bean CRS* and 20 mg of *N-acyl-phosphatidylethanolamine from soya bean CRS* in *methanol R* and dilute to 20.0 mL with the same solvent.

*Reference solution (c).* Dissolve 15 mg of *phosphatidylcholine from soya bean CRS* in *methanol R*, add 3 mL of reference solution (a) and 1 mL of reference solution (b) and dilute to 50.0 mL with *methanol R*.

*Plate*: *TLC silica gel plate R* (2-10 µm).

*Mobile phase*: *water R*, *methanol R*, *chloroform R* (4:25:65 *V/V/V*).

*Application*: 4 µL of the test solution and reference solution (c), as slim bands.

*Development*: over 2/3 of the plate.

*Detection*: spray with *copper sulfate solution R1* and heat at 170 °C for 5-15 min; the phospholipids appear as brownish-grey bands.

*Retardation factors*: lysophosphatidylcholine = about 0.15; phosphatidylcholine = about 0.3; phosphatidylethanolamine = about 0.6; *N*-acyl-phosphatidylethanolamine = about 0.8.

*System suitability*: reference solution (c):

– the chromatogram shows 4 clearly separated bands.

*Results*:

- the principal band in the chromatogram obtained with the test solution is similar in position and colour to the band due to phosphatidylcholine in the chromatogram obtained with reference solution (c);
- the band due to *N*-acyl-phosphatidylethanolamine is visible in the chromatogram obtained with the test solution.

B. Liquid chromatography (*2.2.29*) as described in the assay with the following modifications.

*Injection*: test solution and reference solution (h).

*Identification of peaks*: use the chromatogram obtained with reference solution (h) to identify the peak due to *N*-acyl-phosphatidylethanolamine.

*Relative retention* with reference to phosphatidylcholine (retention time = about 9 min): *N*-acyl-phosphatidyl-ethanolamine = about 0.2 (may be eluted as 1 or 2 peaks).

*Results*:

- the principal peak in the chromatogram obtained with the test solution is due to phosphatidylcholine;
- the peak due to *N*-acyl-phosphatidylethanolamine in the chromatogram obtained with the test solution has a signal-to-noise ratio not less than 3.

C. Composition of fatty acids (*2.4.22, Method B*). Use the mixture of calibrating substances in Table 2.4.22.-3.

*Composition of the fatty-acid fraction of the substance*:

- *linoleic acid (C18:2)*: 59 per cent to 71 per cent;
- *palmitic acid (C16:0)*: 10 per cent to 17 per cent;
- *oleic acid (C18:1)*: 6 per cent to 15 per cent;
- *α-linolenic acid (C18:3)*: 4 per cent to 9 per cent;
- *stearic acid (C18:0)*: 2 per cent to 5 per cent.

TESTS

**Acid value** (*2.5.1*): maximum 12.

Dissolve 2.00 g in 50 mL of a mixture of equal volumes of *ethanol (96 per cent) R* and *ether R*, previously neutralised with *0.1 M potassium hydroxide*, using 0.5 mL of *phenolphthalein solution R1* as indicator.

**Peroxide value** (*2.5.5, Method A*): maximum 5.

Titrate with *0.01 M sodium thiosulfate*, determining the end-point potentiometrically (*2.2.20*).

**Iodine value** (*2.5.4, Method A*): minimum 83.

**Free fatty acids**. Thin-layer chromatography (*2.2.27*). *Carry out the test at room temperature.*

*Solvent mixture*: *water R*, *heptane R*, *2-propanol R* (8:40:50 *V/V/V*).

*Test solution.* Dissolve 0.200 g of the substance to be examined in the solvent mixture and dilute to 10.0 mL with the solvent mixture.

*Reference solution.* Dissolve 10.0 mg of *oleic acid R* and 10 mg of *refined soya-bean oil R* in the solvent mixture and dilute to 10.0 mL with the solvent mixture. Dilute 1.0 mL of the solution to 10.0 mL with the solvent mixture.

*Plate*: *TLC silica gel plate R.*

*Mobile phase*: *acetic acid R*, *ether R*, *heptane R* (1:30:70 *V/V/V*).

*Application*: 20 µL.

*Development*: over 2/3 of the plate.

*Detection*: spray with *copper sulfate solution R1* and heat at 170 °C for 5-15 min.

*Retardation factors*: oleic acid = about 0.3; soya-bean oil = about 0.5.

*System suitability*: reference solution:

- the chromatogram shows 2 clearly separated spots.

*Limit*: any spot due to oleic acid is not more intense than the corresponding spot in the chromatogram obtained with the reference solution (0.5 per cent).

**Water** (*2.5.12*): maximum 2.0 per cent, determined on 0.500-1.00 g.

**Microbial contamination**

TAMC: acceptance criterion $10^2$ CFU/g (*2.6.12*).

Absence of *Escherichia coli* (*2.6.13*).

Absence of *Salmonella* (*2.6.13*).

**Bacterial endotoxins** (*2.6.14, Method A*): less than 6 IU/g. The suitability of the method must be verified and a risk assessment must be carried out according to general chapter *5.1.10. Guidelines for using the test for bacterial endotoxins* since the phospholipids can interfere with the test.

ASSAY

Liquid chromatography (*2.2.29*).

*Solvent mixture.* Mix 8 volumes of *water R* and 46 volumes of *2-propanol R*, then add 46 volumes of *hexane R*.

*Test solution.* Dissolve 0.100 g of the substance to be examined in the solvent mixture and dilute to 25.0 mL with the solvent mixture.

*NOTE: if saturation of the peak due to phosphatidylcholine is observed, the test solution may be diluted with the solvent mixture to quantify this compound.*

*Reference solution ($a_1$).* Dissolve 60 mg of *phosphatidylcholine from soya bean CRS* in the solvent mixture and dilute to 10.0 mL with the solvent mixture.

*Reference solutions ($b_1$), ($c_1$), ($d_1$), ($e_1$), ($f_1$).* Dilute reference solution ($a_1$) with the solvent mixture to obtain 5 reference solutions, the concentrations of which span 60 per cent to 140 per cent of the expected content of phosphatidylcholine in the test solution.

*Reference solution ($a_2$).* Dissolve 40 mg of *phosphatidylethanolamine from soya bean CRS* in the solvent mixture and dilute to 10.0 mL with the solvent mixture.

*Reference solutions ($b_2$), ($c_2$), ($d_2$), ($e_2$), ($f_2$).* Dilute reference solution ($a_2$) with the solvent mixture to obtain 5 reference solutions, the concentrations of which span 60 per cent to 140 per cent of the expected content of phosphatidylethanolamine in the test solution.

*Reference solution ($a_3$).* Dissolve 40 mg of *lysophosphatidylcholine from soya bean CRS* in the solvent mixture and dilute to 10.0 mL with the solvent mixture.

*Reference solutions ($b_3$), ($c_3$), ($d_3$), ($e_3$), ($f_3$).* Dilute reference solution ($a_3$) with the solvent mixture to obtain 5 reference solutions, the concentrations of which span 60 per cent to 140 per cent of the expected content of lysophosphatidylcholine in the test solution.

*Reference solution (g).* Mix 5 mL of reference solution ($a_1$) and 5 mL of reference solution ($a_2$).

*Reference solution (h).* Dissolve 5 mg of *N-acyl-phosphatidylethanolamine from soya bean CRS* in the solvent mixture and dilute to 50.0 mL with the solvent mixture.

*Column*:

- *size*: *l* = 0.125 m, Ø = 4.0 mm;
- *stationary phase*: *diol silica gel for chromatography R* (5 µm);
- *temperature*: 55 °C.

*Mobile phase*:

- *mobile phase A*: mix 0.08 volumes of *triethylamine R*, 1.5 volumes of *glacial acetic acid R*, 17 volumes of *2-propanol R* and 81.42 volumes of *hexane R*;
- *mobile phase B*: mix 0.08 volumes of *triethylamine R*, 1.5 volumes of *glacial acetic acid R*, 14 volumes of *water for chromatography R* and 84.42 volumes of *2-propanol R*;

Monographs S

| Time (min) | Mobile phase A (per cent *V/V*) | Mobile phase B (per cent *V/V*) |
|---|---|---|
| 0 - 2.0 | 95 | 5 |
| 2.0 - 7.0 | 95 → 80 | 5 → 20 |
| 7.0 - 10.5 | 80 → 60 | 20 → 40 |
| 10.5 - 17.0 | 60 → 0 | 40 → 100 |
| 17.0 - 19.5 | 0 | 100 |

*Flow rate*: 1.0 mL/min.

*Detection*: evaporative light-scattering detector; the following settings have been found to be suitable; if the detector has different setting parameters, adjust the detector settings so as to comply with the system suitability criteria:

- *carrier gas*: *nitrogen R*;
- *flow rate*: 2.5 mL/min;
- *evaporation temperature*: 50 °C.

*Injection*: 20 µL of the test solution and reference solutions ($b_{1,2,3}$), ($c_{1,2,3}$), ($d_{1,2,3}$), ($e_{1,2,3}$), ($f_{1,2,3}$) and (g).

*Identification of peaks*: use the chromatograms obtained with reference solutions ($f_1$), ($f_2$) and ($f_3$) to identify the peaks due to phosphatidylcholine, phosphatidylethanolamine and lysophosphatidylcholine.

*Relative retention* with reference to phosphatidylcholine (retention time = about 9 min): phosphatidylethanolamine = about 0.8; lysophosphatidylcholine = about 1.2.

Establish calibration curves with the logarithm of the concentration of phosphatidylcholine, phosphatidylethanolamine and lysophosphatidylcholine in reference solutions ($b_{1,2,3}$), ($c_{1,2,3}$), ($d_{1,2,3}$), ($e_{1,2,3}$) and ($f_{1,2,3}$) as the abscissa and the logarithm of the corresponding peak areas as the ordinate.

*System suitability*:

- *resolution*: minimum 2.0 between the peaks due to phosphatidylethanolamine and phosphatidylcholine in the chromatogram obtained with reference solution (g);
- *phosphatidylcholine*:
  - *repeatability*: maximum relative standard deviation of 5.0 per cent determined on 6 injections of reference solution ($f_1$);
  - *correlation coefficient*: minimum 0.995;
- *phosphatidylethanolamine*:
  - *repeatability*: maximum relative standard deviation of 5.0 per cent determined on 6 injections of reference solution ($f_2$);
  - *correlation coefficient*: minimum 0.995;
- *lysophosphatidylcholine*:
  - *repeatability*: maximum relative standard deviation of 5.0 per cent determined on 6 injections of reference solution ($f_3$);
  - *correlation coefficient*: minimum 0.99.

Calculate the percentage contents of phosphatidylcholine, phosphatidylethanolamine and lysophosphatidylcholine using the calibration curves.

STORAGE

Under nitrogen, protected from light, at − 15 °C or below.

LABELLING

The label states:

- the specified content range of phosphatidylcholine;
- the specified content range of phosphatidylethanolamine.

01/2020:1265

# SOYA-BEAN OIL, HYDROGENATED

## Soiae oleum hydrogenatum

DEFINITION

Product obtained by refining, bleaching, hydrogenation and deodorisation of oil obtained from seeds of *Glycine max* (L.) Merr. (*G. hispida* (Moench) Maxim.). The product consists mainly of triglycerides of palmitic and stearic acids.

CHARACTERS

*Appearance*: white or almost white mass or powder which melts to a clear, pale yellow liquid when heated.

*Solubility*: practically insoluble in water, freely soluble in methylene chloride, in light petroleum (bp: 65-70 °C) after heating and in toluene, very slightly soluble in ethanol (96 per cent).

IDENTIFICATION

A. Melting point (see Tests).

B. Composition of fatty acids (see Tests).

TESTS

**Melting point** (*2.2.15*): 66 °C to 72 °C.

**Acid value** (*2.5.1*): maximum 0.5.

Dissolve 10.0 g in 50 mL of a hot mixture of equal volumes of *ethanol (96 per cent) R* and *toluene R*, previously neutralised with *0.1 M potassium hydroxide* using 0.5 mL of *phenolphthalein solution R1* as indicator. Titrate the solution immediately while still hot.

**Peroxide value** (*2.5.5, Method A*): maximum 5.0.

**Unsaponifiable matter** (*2.5.7*): maximum 1.0 per cent, determined on 5.0 g.

**Alkaline impurities** (*2.4.19*). Dissolve 2.0 g with gentle heating in a mixture of 1.5 mL of *ethanol (96 per cent) R* and 3 mL of *toluene R*. Add 0.05 mL of a 0.4 g/L solution of *bromophenol blue R* in *ethanol (96 per cent) R*. Not more than 0.4 mL of *0.01 M hydrochloric acid* is required to change the colour to yellow.

**Composition of fatty acids**. Gas chromatography (*2.4.22, Method A*) with the following modifications. Use the mixture of calibrating substances in Table 2.4.22.-3.

*Column*:

- *material*: fused silica;
- *size*: *l* = 25 m, Ø = 0.25 mm;
- *stationary phase*: *cyanopropylpolysiloxane R* (film thickness 0.2 µm).

*Carrier gas*: *helium for chromatography R*.

*Flow rate*: 0.65 mL/min.

*Split ratio*: 1:100.

*Temperature*:

- *column*: 180 °C for 20 min;
- *injection port and detector*: 250 °C.

*Detection*: flame ionisation.

*Composition of the fatty-acid fraction of the substance*:

- *saturated fatty acids of chain length less than $C_{14}$*: maximum 0.1 per cent;
- *myristic acid*: maximum 0.5 per cent;
- *palmitic acid*: 9.0 per cent to 16.0 per cent;
- *stearic acid*: 79.0 per cent to 89.0 per cent;
- *oleic acid and isomers*: maximum 4.0 per cent;
- *linoleic acid and isomers*: maximum 1.0 per cent;

– *linolenic acid and isomers*: maximum 0.2 per cent;
– *arachidic acid*: maximum 1.0 per cent;
– *behenic acid*: maximum 1.0 per cent.

STORAGE

Protected from light.

**01/2020:1473**

# SOYA-BEAN OIL, REFINED

## Soiae oleum raffinatum

DEFINITION

Fatty oil obtained from seeds of *Glycine max* (L.) Merr. (*Glycine hispida* (Moench) Maxim.) by extraction and subsequent refining. It may contain a suitable antioxidant.

PRODUCTION

The oil is prepared using materials and methods designed to ensure that the content of brassicasterol (*2.4.23*) in the sterol fraction of the oil is not greater than 0.3 per cent.

CHARACTERS

*Appearance*: clear, pale yellow liquid.

*Solubility*: practically insoluble in ethanol (96 per cent), miscible with light petroleum (bp: 50-70 °C).

*Relative density*: about 0.922.

*Refractive index*: about 1.475.

IDENTIFICATION

*First identification: B.*

*Second identification: A.*

A. Identification of fatty oils by thin-layer chromatography (*2.3.2*).
*Results*: the chromatogram obtained is similar to the corresponding chromatogram shown in Figure 2.3.2.-1.

B. Composition of fatty acids (see Tests).

TESTS

**Acid value** (*2.5.1*): maximum 0.5.

**Peroxide value** (*2.5.5, Method A*): maximum 10.0, or maximum 5.0 if intended for use in the manufacture of parenteral preparations.

**Unsaponifiable matter** (*2.5.7*): maximum 1.5 per cent, determined on 5.0 g.

**Alkaline impurities** (*2.4.19*). It complies with the test.

**Composition of fatty acids** (*2.4.22, Method A*). Use the mixture of calibrating substances in Table 2.4.22.-3.

*Composition of the fatty-acid fraction of the oil*:
– *saturated fatty acids of chain length less than $C_{14}$*: maximum 0.1 per cent;
– *myristic acid*: maximum 0.2 per cent;
– *palmitic acid*: 9.0 per cent to 13.0 per cent;
– *palmitoleic acid*: maximum 0.3 per cent;
– *stearic acid*: 2.5 per cent to 5.0 per cent;
– *oleic acid and isomer*: 17.0 per cent to 30.0 per cent;
– *linoleic acid*: 48.0 per cent to 58.0 per cent;
– *linolenic acid*: 5.0 per cent to 11.0 per cent;
– *arachidic acid*: maximum 1.0 per cent;
– *eicosenoic acid*: maximum 1.0 per cent;
– *behenic acid*: maximum 1.0 per cent.

**Water** (*2.5.32*): maximum 0.1 per cent, determined on 1.00 g.

STORAGE

In a well-filled container, protected from light, at a temperature not exceeding 25 °C. If intended for use in the manufacture of parenteral preparations, store under an inert gas.

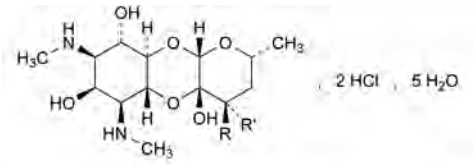
LABELLING

The label states, where applicable, that the substance is suitable for use in the manufacture of parenteral preparations and the name of the inert gas.

**01/2008:1152**
**corrected 10.0**

# SPECTINOMYCIN DIHYDROCHLORIDE PENTAHYDRATE

## Spectinomycini dihydrochloridum pentahydricum



| Compound | R | R' | Molec. Formula | $M_r$ |
|---|---|---|---|---|
| spectinomycin | R + R' = O | | $C_{14}H_{26}Cl_2N_2O_7,5H_2O$ | 495.4 |
| (4*R*)-dihydro-spectinomycin | OH | H | $C_{14}H_{28}Cl_2N_2O_7,5H_2O$ | 497.4 |

DEFINITION

Mixture of (2*R*,4a*R*,5a*R*,6*S*,7*S*,8*R*,9*S*,9a*R*,10a*S*)-4a,7,9-trihydroxy-2-methyl-6,8-bis(methylamino)decahydro-4*H*-pyrano[2,3-*b*][1,4]benzodioxin-4-one dihydrochloride pentahydrate (spectinomycin dihydrochloride pentahydrate) and of (2*R*,4*R*,4a*S*,5a*R*,6*S*,7*S*,8*R*,9*S*,9a*R*,10a*S*)-2-methyl-6,8-bis(methylamino)decahydro-2*H*-pyrano[2,3-*b*][1,4]-benzodioxine-4,4a,7,9-tetrol dihydrochloride pentahydrate ((4*R*)-dihydrospectinomycin dihydrochloride pentahydrate).

It is produced by *Streptomyces spectabilis* or by any other means.

*Content*:
– *(4R)-dihydrospectinomycin dihydrochloride*: maximum 9.0 per cent (anhydrous substance);
– *sum of the contents of spectinomycin dihydrochloride and (4R)-dihydrospectinomycin dihydrochloride*: 93.0 per cent to 102.0 per cent (anhydrous substance).

CHARACTERS

*Appearance*: white or almost white, slightly hygroscopic powder.

*Solubility*: freely soluble in water, very slightly soluble in ethanol (96 per cent).

IDENTIFICATION

A. Infrared absorption spectrophotometry (*2.2.24*).
*Comparison*: *spectinomycin hydrochloride CRS*.

B. Dilute 1.0 mL of solution S (see Tests) to 10 mL with *water R*. The solution gives reaction (a) of chlorides (*2.3.1*).

TESTS

**Solution S**. Dissolve 2.50 g in *carbon dioxide-free water R* and dilute to 25.0 mL with the same solvent.

**Appearance of solution**. The solution is clear (*2.2.1*) and colourless (*2.2.2, Method II*).

Dilute 2.0 mL of solution S to 20.0 mL with *water R*.

**pH** (*2.2.3*): 3.8 to 5.6 for solution S.

**Specific optical rotation** (*2.2.7*): + 15.0 to + 21.0 (anhydrous substance), determined on solution S within 20 min of preparation.

**Related substances**. Liquid chromatography (*2.2.29*). *In order to avoid formation of anomers, prepare the solutions immediately before use.*

*Test solution.* Dissolve 15.0 mg of the substance to be examined in the mobile phase and dilute to 100.0 mL with the mobile phase.

*Reference solution (a).* Dissolve 3 mg of *spectinomycin for system suitability CRS* in the mobile phase and dilute to 20 mL with the mobile phase.

*Reference solution (b).* Dilute 1.0 mL of the test solution to 100.0 mL with the mobile phase.

*Reference solution (c).* Dilute 3.0 mL of reference solution (b) to 10.0 mL with the mobile phase.

*Column*:

- *size*: *l* = 0.25 m, Ø = 4.6 mm;
- *stationary phase*: *octylsilyl silica gel for chromatography R* (5 µm);
- *temperature*: ambient and constant.

*Mobile phase*: dissolve 4.2 g of *oxalic acid R* and 2.0 mL of *heptafluorobutyric acid R* in *water R* and dilute to 1000 mL with *water R*; adjust to pH 3.2 with *sodium hydroxide solution R*, add 105 mL of *acetonitrile R* and mix; filter through a 0.45 µm filter and degas with *helium for chromatography R* for 10 min.

*Flow rate*: 1.0 mL/min.

*Post-column solution*: *carbonate-free sodium hydroxide solution R* diluted with *carbon dioxide-free water R* to obtain a final concentration of NaOH of 21 g/L. Degas the solution with *helium for chromatography R* for 10 min before use. Add it pulse-less to the column effluent using a 375 µL polymeric mixing coil.

*Post-column flow rate*: 0.5 mL/min.

*Detection*: pulsed amperometric detection or equivalent with a gold indicator electrode having preferably a diameter of 1.4 mm or greater, a suitable reference electrode and a stainless steel counter electrode, held at + 0.12 V detection, + 0.70 V oxidation and – 0.60 V reduction potentials respectively, with pulse durations according to the instrument used. Keep the detection cell at ambient and constant temperature. Clean the gold indicator electrode with an eraser and damp precision wipe prior to start-up of the system to enhance the detector sensitivity and increase the signal-to-noise ratio.

*Injection*: 20 µL.

*Run time*: 1.5 times the retention time of spectinomycin.

*Identification of impurities*: use the chromatogram supplied with *spectinomycin for system suitability CRS* and the chromatogram obtained with reference solution (a) to identify the peaks due to impurities A, D and E.

*Relative retention* with reference to spectinomycin (retention time = 11 min to 20 min): impurity A = about 0.5; impurity F = about 0.53; impurity G = about 0.6; impurity D = about 0.7; impurity E = about 0.9; (4*R*)-dihydrospectinomycin = about 1.3; impurity C = about 1.4.

*System suitability*: reference solution (a):

- *resolution*: minimum 1.5 between the peaks due to impurity E and spectinomycin.

*Limits*:

- *correction factor*: for the calculation of content, multiply the peak area of impurity A by 0.4;
- *impurities A, C, F, G*: for each impurity, not more than the area of the principal peak in the chromatogram obtained with reference solution (b) (1.0 per cent);
- *impurities D, E*: for each impurity, not more than 4 times the area of the principal peak in the chromatogram obtained with reference solution (b) (4.0 per cent);
- *any other impurity*: for each impurity, not more than the area of the principal peak in the chromatogram obtained with reference solution (b) (1.0 per cent);
- *total*: not more than 6 times the area of the principal peak in the chromatogram obtained with reference solution (b) (6.0 per cent);
- *disregard limit*: the area of the principal peak in the chromatogram obtained with reference solution (c) (0.3 per cent); disregard the peak due to (4*R*)-dihydrospectinomycin.

**Water** (*2.5.12*): 16.0 per cent to 20.0 per cent, determined on 0.100 g.

**Sulfated ash** (*2.4.14*): maximum 1.0 per cent, determined on 1.0 g.

**Bacterial endotoxins** (*2.6.14*): less than 0.09 IU/mg, if intended for use in the manufacture of parenteral preparations without a further appropriate procedure for the removal of bacterial endotoxins. Prepare the solutions using a 0.42 per cent *m/m* solution of *sodium hydrogen carbonate R*.

ASSAY

Liquid chromatography (*2.2.29*) as described in the test for related substances with the following modifications.

*Test solution.* Dissolve 40.0 mg of the substance to be examined in *water R* and dilute to 50.0 mL with the same solvent. Allow to stand for not less than 15 h and not more than 72 h (formation of anomers). Dilute 5.0 mL of this solution to 50.0 mL with the mobile phase.

*Reference solution.* Dissolve 40.0 mg of *spectinomycin hydrochloride CRS* (containing (4*R*)-dihydrospectinomycin) in *water R* and dilute to 50.0 mL with the same solvent. Allow to stand for the same period of time as the test solution (formation of anomers). Dilute 5.0 mL of this solution to 50.0 mL with the mobile phase.

*System suitability*:

- *repeatability*: maximum relative standard deviation of 3.0 per cent for the principal peak after 6 injections of the reference solution.

Calculate the sum of the percentage contents of spectinomycin dihydrochloride and (4*R*)-dihydrospectinomycin dihydrochloride from the declared contents of $C_{14}H_{26}Cl_2N_2O_7$ and $C_{14}H_{28}Cl_2N_2O_7$ in *spectinomycin hydrochloride CRS*.

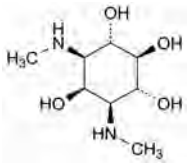
STORAGE

In an airtight container. If the substance is sterile, store in a sterile, airtight, tamper-evident container.

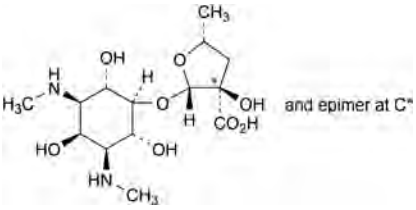
IMPURITIES

*Specified impurities*: *A, C, D, E, F, G*.

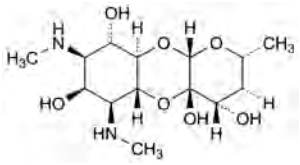
*Other detectable impurities* (the following substances would, if present at a sufficient level, be detected by one or other of the tests in the monograph. They are limited by the general acceptance criterion for other/unspecified impurities and/or by the general monograph *Substances for pharmaceutical use (2034)*. It is therefore not necessary to identify these impurities for demonstration of compliance. See also *5.10. Control of impurities in substances for pharmaceutical use*): *B*.



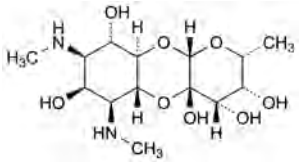
A. 1,3-dideoxy-1,3-bis(methylamino)-*myo*-inositol (actinamine),



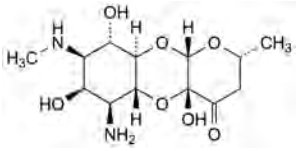
B. (2*S*,3*RS*,5*R*)-3-hydroxy-5-methyl-2-[[(1*r*,2*R*,3*S*,4*r*,5*R*,6*S*)-2,4,6-trihydroxy-3,5-bis(methylamino)cyclohexyl]oxy]-tetrahydrofuran-3-carboxylic acid (actinospectinoic acid),



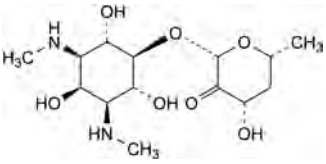
C. (2*R*,4*S*,4a*S*,5a*R*,6*S*,7*S*,8*R*,9*S*,9a*R*,10a*S*)-2-methyl-6,8-bis(methylamino)decahydro-2*H*-pyrano[2,3-*b*][1,4]benzodioxine-4,4a,7,9-tetrol ((4*S*)-dihydrospectinomycin),



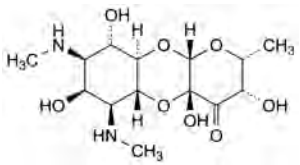
D. (2*R*,3*R*,4*S*,4a*S*,5a*R*,6*S*,7*S*,8*R*,9*S*,9a*R*,10a*S*)-2-methyl-6,8-bis(methylamino)decahydro-2*H*-pyrano[2,3-*b*][1,4]benzodioxine-3,4,4a,7,9-pentol (dihydroxyspectinomycin),



E. (2*R*,4a*R*,5a*R*,6*S*,7*R*,8*R*,9*S*,9a*R*,10a*S*)-6-amino-4a,7,9-trihydroxy-2-methyl-8-(methylamino)decahydro-4*H*-pyrano[2,3-*b*][1,4]benzodioxin-4-one (*N*-desmethylspectinomycin),



F. (2*S*,4*S*,6*R*)-4-hydroxy-6-methyl-2-[[(1*r*,2*R*,3*S*,4*r*,5*R*,6*S*)-2,4,6-trihydroxy-3,5-bis(methylamino)cyclohexyl]oxy]-dihydro-2*H*-pyran-3(4*H*)-one (triol spectinomycin),



G. (2*R*,3*S*,4a*R*,5a*R*,6*S*,7*S*,8*R*,9*S*,9a*R*,10a*S*)-3,4a,7,9-tetrahydroxy-2-methyl-6,8-bis(methylamino)decahydro-4*H*-pyrano[2,3-*b*][1,4]benzodioxin-4-one (tetrahydroxyspectinomycin).

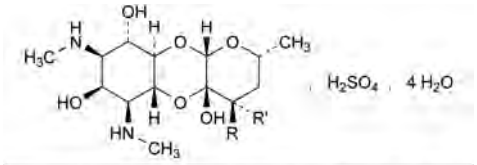
# SPECTINOMYCIN SULFATE TETRAHYDRATE FOR VETERINARY USE

## Spectinomycini sulfas tetrahydricus ad usum veterinarium



| Compound | R | R' | Molec. Formula | $M_r$ |
|---|---|---|---|---|
| spectinomycin | R + R' = O | | $C_{14}H_{26}N_2O_{11}S,4H_2O$ | 502.5 |
| (4*R*)-dihydro-spectinomycin | OH | H | $C_{14}H_{28}N_2O_{11}S,4H_2O$ | 504.5 |

DEFINITION

Mixture of (2*R*,4a*R*,5a*R*,6*S*,7*S*,8*R*,9*S*,9a*R*,10a*S*)-4a,7,9-trihydroxy-2-methyl-6,8-bis(methylamino)decahydro-4*H*-pyrano[2,3-*b*][1,4]benzodioxin-4-one sulfate tetrahydrate (spectinomycin sulfate tetrahydrate) and (2*R*,4*R*,4a*S*,5a*R*,6*S*,7*S*,8*R*,9*S*,9a*R*,10a*S*)-2-methyl-6,8-bis(methylamino)decahydro-2*H*-pyrano[2,3-*b*][1,4]-benzodioxine-4,4a,7,9-tetrol sulfate tetrahydrate ((4*R*)-dihydrospectinomycin sulfate tetrahydrate).

It is produced by *Streptomyces spectabilis* or by any other means.

*Content*:

– *(4R)-dihydrospectinomycin sulfate*: maximum 2.0 per cent (anhydrous substance);
– *sum of the contents of spectinomycin sulfate and (4R)-dihydrospectinomycin sulfate*: 93.0 per cent to 102.0 per cent (anhydrous substance).

CHARACTERS

*Appearance*: white or almost white powder.

*Solubility*: freely soluble in water, insoluble in ethanol (96 per cent).

IDENTIFICATION

A. Infrared absorption spectrophotometry (*2.2.24*).
*Comparison*: *spectinomycin sulfate tetrahydrate CRS*.

B. Dilute 1.0 mL of solution S (see Tests) to 10 mL with *water R*. The solution gives reaction (a) of sulfates (*2.3.1*).

TESTS

**Solution S**. Dissolve 2.50 g in *carbon dioxide-free water R* and dilute to 25.0 mL with the same solvent.

**Appearance of solution**. Solution S is clear (*2.2.1*) and colourless (*2.2.2, Method II*).

**pH** (*2.2.3*): 3.8 to 5.6 for solution S.

**Specific optical rotation** (*2.2.7*): + 10.0 to + 14.0 (anhydrous substance).

Dissolve 2.50 g in an 8 mL/L solution of *concentrated ammonia R1* and dilute to 25.0 mL with the same solvent. Allow the solution to stand at room temperature for not less than 30 min and not more than 2 h prior to determination.

**Related substances**. Liquid chromatography (*2.2.29*). *In order to avoid the formation of anomers, prepare the solutions immediately before use.*

*Test solution.* Dissolve 15.0 mg of the substance to be examined in the mobile phase and dilute to 100.0 mL with the mobile phase.

*Reference solution (a).* Dissolve 3 mg of *spectinomycin for system suitability CRS* in the mobile phase and dilute to 20 mL with the mobile phase.

*Reference solution (b).* Dilute 1.0 mL of the test solution to 100.0 mL with the mobile phase.

*Reference solution (c).* Dilute 3.0 mL of reference solution (b) to 10.0 mL with the mobile phase.

*Column*:

- *size*: *l* = 0.25 m, Ø = 4.6 mm;
- *stationary phase*: *octylsilyl silica gel for chromatography R* (5 µm);
- *temperature*: ambient and constant.

*Mobile phase*: dissolve 4.2 g of *oxalic acid R* and 2.0 mL of *heptafluorobutyric acid R* in *water R* and dilute to 1000 mL with *water R*; adjust to pH 3.2 with *sodium hydroxide solution R*; add 105 mL of *acetonitrile R* and mix; filter through a 0.45 µm filter and degas with *helium for chromatography R* for 10 min.

*Flow rate*: 1.0 mL/min.

*Post-column solution*: *carbonate-free sodium hydroxide solution R* diluted with *carbon dioxide-free water R* to obtain a final concentration of NaOH of 21 g/L. Degas the solution with *helium for chromatography R* for 10 min before use. Add it pulse-less to the column effluent using a 375 µL polymeric mixing coil.

*Post-column flow rate*: 0.5 mL/min.

*Detection*: pulsed amperometric detection or equivalent with a gold indicator electrode having preferably a diameter of 1.4 mm or greater, a suitable reference electrode and a stainless steel counter electrode, held at + 0.12 V detection, + 0.70 V oxidation and – 0.60 V reduction potentials respectively, with pulse durations according to the instrument used. Keep the detection cell at ambient and constant temperature. Clean the gold indicator electrode with an eraser and damp precision wipe prior to start-up of the system to enhance the detector sensitivity and increase the signal-to-noise ratio.

*Injection*: 20 µL.

*Run time*: 1.5 times the retention time of spectinomycin.

*Identification of impurities*: use the chromatogram supplied with *spectinomycin for system suitability CRS* and the chromatogram obtained with reference solution (a) to identify the peaks due to impurities A, D and E.

*Relative retention* with reference to spectinomycin (retention time = 11 min to 20 min): impurity A = about 0.5; impurity D = about 0.7; impurity E = about 0.9; (4*R*)-dihydrospectinomycin = about 1.3.

*System suitability*: reference solution (a):

- *resolution*: minimum 1.5 between the peaks due to impurity E and spectinomycin.

*Limits*:

- *correction factor*: for the calculation of content, multiply the peak area of impurity A by 0.4;
- *impurities A, E*: for each impurity, not more than the area of the principal peak in the chromatogram obtained with reference solution (b) (1.0 per cent);
- *impurity D*: not more than 4 times the area of the principal peak in the chromatogram obtained with reference solution (b) (4.0 per cent);
- *any other impurity*: for each impurity, not more than the area of the principal peak in the chromatogram obtained with reference solution (b) (1.0 per cent);
- *total*: not more than 6 times the area of the principal peak in the chromatogram obtained with reference solution (b) (6.0 per cent);
- *disregard limit*: the area of the principal peak in the chromatogram obtained with reference solution (c) (0.3 per cent); disregard the peak due to (4*R*)-dihydrospectinomycin.

**Water** (*2.5.12*): 12.0 per cent to 16.5 per cent, determined on 0.100 g.

**Sulfated ash** (*2.4.14*): maximum 1.0 per cent, determined on 1.0 g.

**Bacterial endotoxins** (*2.6.14*): less than 0.17 IU/mg, if intended for use in the manufacture of parenteral preparations without a further appropriate procedure for the removal of bacterial endotoxins. Prepare the solutions using a 0.42 per cent *m/m* solution of *sodium hydrogen carbonate R*.

ASSAY

Liquid chromatography (*2.2.29*) as described in the test for related substances with the following modifications.

*Test solution.* Dissolve 40.0 mg of the substance to be examined in *water R* and dilute to 50.0 mL with the same solvent. Allow to stand for not less than 15 h and not more than 72 h (formation of anomers). Dilute 5.0 mL of this solution to 50.0 mL with the mobile phase.

*Reference solution.* Dissolve 40.0 mg of *spectinomycin hydrochloride CRS* (containing (4*R*)-dihydrospectinomycin) in *water R* and dilute to 50.0 mL with the same solvent. Allow to stand for the same period of time as the test solution (formation of anomers). Dilute 5.0 mL of this solution to 50.0 mL with the mobile phase.

*System suitability*:

- *repeatability*: maximum relative standard deviation of 3.0 per cent for the principal peak after 6 injections of the reference solution.

Calculate the sum of the percentage contents of spectinomycin sulfate and (4*R*)-dihydrospectinomycin sulfate from the declared contents of $C_{14}H_{26}Cl_2N_2O_7$ and $C_{14}H_{28}Cl_2N_2O_7$ in *spectinomycin hydrochloride CRS*, applying a correction factor of 1.062.

STORAGE

In an airtight container. If the substance is sterile, store in a sterile, airtight, tamper-evident container.

IMPURITIES

*Specified impurities*: *A, D, E.*

*Other detectable impurities* (the following substances would, if present at a sufficient level, be detected by one or other of the tests in the monograph. # SPIRAMYCIN

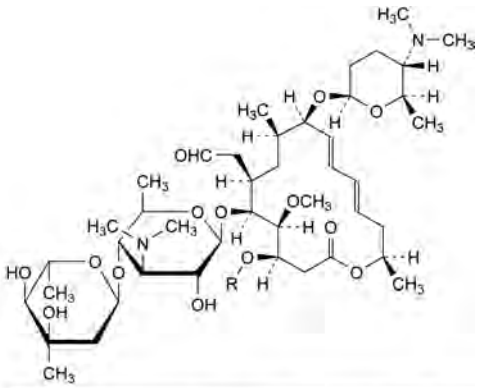
## Spiramycinum



| Compound | R | Molec Formula | $M_r$ |
|---|---|---|---|
| Spiramycin I | H | $C_{43}H_{74}N_2O_{14}$ | 843.1 |
| Spiramycin II | CO-$CH_3$ | $C_{45}H_{76}N_2O_{15}$ | 885.1 |
| Spiramycin III | CO-$CH_2$-$CH_3$ | $C_{46}H_{78}N_2O_{15}$ | 899.1 |

DEFINITION

Macrolide antibiotic produced by the growth of certain strains of *Streptomyces ambofaciens* or obtained by any other means. The main component is (4*R*,5*S*,6*S*,7*R*,9*R*,10*R*,11*E*,13*E*,16*R*)-6-[[3,6-dideoxy-4-*O*-(2,6-dideoxy-3-*C*-methyl-α-L-*ribo*-hexopyranosyl)-3-(dimethylamino)-β-D-glucopyranosyl]oxy]-4-hydroxy-5-methoxy-9,16-dimethyl-7-(2-oxoethyl)-10-[[2,3,4,6-tetradeoxy-4-(dimethylamino)-D-*erythro*-hexopyranosyl]oxy]oxacyclohexadeca-11,13-dien-2-one (spiramycin I; $M_r$ 843). Spiramycin II (4-*O*-acetylspiramycin I) and spiramycin III (4-*O*-propanoylspiramycin I) are also present.

*Potency*: minimum 4100 IU/mg (dried substance).

CHARACTERS

*Appearance*: white or slightly yellowish powder, slightly hygroscopic.

*Solubility*: slightly soluble in water, freely soluble in acetone, in ethanol (96 per cent) and in methanol.

IDENTIFICATION

A. Ultraviolet and visible absorption spectrophotometry (*2.2.25*).

*Test solution.* Dissolve 0.10 g of the substance to be examined in *methanol R* and dilute to 100.0 mL with the same solvent. Dilute 1.0 mL of this solution to 100.0 mL with *methanol R*.

*Spectral range*: 220-350 nm.

*Absorption maximum*: at 232 nm.

*Specific absorbance at the absorption maximum*: about 340.

B. Thin-layer chromatography (*2.2.27*).

*Test solution.* Dissolve 40 mg of the substance to be examined in *methanol R* and dilute to 10 mL with the same solvent.

*Reference solution (a).* Dissolve 40 mg of *spiramycin CRS* in *methanol R* and dilute to 10 mL with the same solvent.

*Reference solution (b).* Dissolve 40 mg of *erythromycin A CRS* in *methanol R* and dilute to 10 mL with the same solvent.

Monographs S

*Plate*: *TLC silica gel G plate R*.

*Mobile phase*: the upper layer of a mixture of 4 volumes of *2-propanol R*, 8 volumes of a 150 g/L solution of *ammonium acetate R* previously adjusted to pH 9.6 with *strong sodium hydroxide solution R*, and 9 volumes of *ethyl acetate R*.

*Application*: 5 µL.

*Development*: over 3/4 of the plate.

*Drying*: in air.

*Detection*: spray with *anisaldehyde solution R1* and heat at 110 °C for 5 min.

*Results*: the principal spot in the chromatogram obtained with the test solution is similar in position, colour and size to the principal spot in the chromatogram obtained with reference solution (a). If in the chromatogram obtained with the test solution 1 or 2 spots occur with $R_F$ values slightly higher than that of the principal spot, these spots are similar in position and colour to the secondary spots in the chromatogram obtained with reference solution (a) and differ from the spots in the chromatogram obtained with reference solution (b).

C. Dissolve 0.5 g in 10 mL of *dilute sulfuric acid R1* and add 25 mL of *water R*. Adjust to about pH 8 with *0.1 M sodium hydroxide* and dilute to 50 mL with *water R*. To 5 mL of this solution add 2 mL of a mixture of 1 volume of *water R* and 2 volumes of *sulfuric acid R*. A brown colour develops.

TESTS

**pH** (*2.2.3*): 8.5 to 10.5.

Dissolve 0.5 g in 5 mL of *methanol R* and dilute to 100 mL with *carbon dioxide-free water R*.

**Specific optical rotation** (*2.2.7*): − 80 to − 85 (dried substance).

Dissolve 1.00 g in a 10 per cent *V/V* solution of *dilute acetic acid R* and dilute to 50.0 mL with the same acid solution.

**Composition**. Liquid chromatography (*2.2.29*) as described in the test for related substances.

*Injection*: test solution and reference solution (a).

Calculate the percentage content using the declared content of spiramycins I, II and III in *spiramycin CRS*.

*Limits* (dried substance):

- *spiramycin I*: minimum 80.0 per cent;
- *spiramycin II*: maximum 5.0 per cent;
- *spiramycin III*: maximum 10.0 per cent;
- *sum of spiramycins I, II and III*: minimum 90.0 per cent.

**Related substances**. Liquid chromatography (*2.2.29*). *Prepare the solutions immediately before use*.

*Solvent mixture*: *methanol R*, *water R* (30:70 *V/V*).

*Test solution*. Dissolve 25.0 mg of the substance to be examined in the solvent mixture and dilute to 25.0 mL with the solvent mixture.

*Reference solution (a)*. Dissolve 25.0 mg of *spiramycin CRS* in the solvent mixture and dilute to 25.0 mL with the solvent mixture.

*Reference solution (b)*. Dilute 2.0 mL of reference solution (a) to 100.0 mL with the solvent mixture.

*Reference solution (c)*. Dissolve 5 mg of *spiramycin CRS* in 15 mL of *buffer solution pH 2.2 R* and dilute to 25 mL with *water R*, then heat in a water-bath at 60 °C for 5 min and cool under cold water.

*Blank solution*. The solvent mixture.

*Column*:

- *size*: *l* = 0.25 m, Ø = 4.6 mm;
- *stationary phase*: *end-capped polar-embedded octadecylsilyl amorphous organosilica polymer R* (5 µm) (polar-embedded octadecylsilyl methylsilica gel), with a pore size of 12.5 nm and a carbon loading of 15 per cent;
- *temperature*: 70 °C.

*Mobile phase*: mix 5 volumes of a 34.8 g/L solution of *dipotassium hydrogen phosphate R* adjusted to pH 6.5 with a 27.2 g/L solution of *potassium dihydrogen phosphate R*, 40 volumes of *acetonitrile R* and 55 volumes of *water R*.

*Flow rate*: 1.0 mL/min.

*Detection*: spectrophotometer at 232 nm.

*Injection*: 20 µL of the blank solution, the test solution and reference solutions (b) and (c).

*Run time*: 3 times the retention time of spiramycin I.

*Identification of spiramycins*: use the chromatogram supplied with *spiramycin CRS* and the chromatogram obtained with reference solution (a) to identify the peaks due to spiramycins I, II and III.

*Relative retention* with reference to spiramycin I (retention time = 20 min to 30 min): impurity F = about 0.41; impurity A = about 0.45; impurity D = about 0.50; impurity G = about 0.66; impurity B = about 0.73; impurity H = about 0.87; spiramycin II = about 1.4; spiramycin III = about 2.0; impurity E = about 2.5.

If necessary adjust the composition of the mobile phase by changing the amount of acetonitrile.

*System suitability*: reference solution (c):

- *resolution*: minimum 10.0 between the peaks due to impurity A and spiramycin I.

*Limits*:

- *impurities A, B, D, E, F, G, H*: for each impurity, not more than the area of the principal peak in the chromatogram obtained with reference solution (b) (2.0 per cent);
- *any other impurity*: for each impurity, not more than the area of the principal peak in the chromatogram obtained with reference solution (b) (2.0 per cent);
- *total*: not more than 5 times the area of the principal peak in the chromatogram obtained with reference solution (b) (10.0 per cent);
- *disregard limit*: 0.05 times the area of the principal peak in the chromatogram obtained with reference solution (b) (0.1 per cent); disregard the peaks due to spiramycins I, II and III.

**Loss on drying** (*2.2.32*): maximum 3.5 per cent, determined on 0.500 g by drying *in vacuo* at 80 °C at a pressure not exceeding 0.7 kPa for 6 h.

**Sulfated ash** (*2.4.14*): maximum 0.1 per cent, determined on 1.0 g.

ASSAY

Carry out the microbiological assay of antibiotics (*2.7.2*).

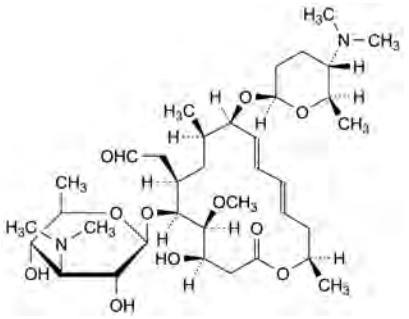
STORAGE

In an airtight container.

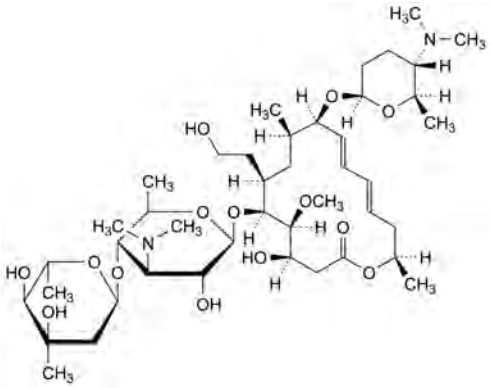
IMPURITIES

*Specified impurities: A, B, D, E, F, G, H.*

*Other detectable impurities* (the following substances would, if present at a sufficient level, be detected by one or other of the tests in the monograph. They are limited by the general acceptance criterion for other/unspecified impurities and/or by the general monograph *Substances for pharmaceutical use (2034)*. It is therefore not necessary to identify these impurities for demonstration of compliance. See also *5.10. Control of impurities in substances for pharmaceutical use*): *C.*



A. (4*R*,5*S*,6*S*,7*R*,9*R*,10*R*,11*E*,13*E*,16*R*)-6-[[3,6-dideoxy-3-(dimethylamino)-β-D-glucopyranosyl]oxy]-4-hydroxy-5-methoxy-9,16-dimethyl-7-(2-oxoethyl)-10-[[2,3,4,6-tetradeoxy-4-(dimethylamino)-β-D-*erythro*-hexopyranosyl]oxy]oxacyclohexadeca-11,13-dien-2-one (neospiramycin I),



B. (4*R*,5*S*,6*S*,7*R*,9*R*,10*R*,11*E*,13*E*,16*R*)-6-[[3,6-dideoxy-4-*O*-(2,6-dideoxy-3-*C*-methyl-α-L-*ribo*-hexopyranosyl)-3-(dimethylamino)-β-D-glucopyranosyl]oxy]-4-hydroxy-7-(2-hydroxyethyl)-5-methoxy-9,16-dimethyl-10-[[2,3,4,6-tetradeoxy-4-(dimethylamino)-β-D-*erythro*-hexopyranosyl]oxy]oxacyclohexadeca-11,13-dien-2-one (spiramycin IV),

C. # SPIRAPRIL HYDROCHLORIDE MONOHYDRATE

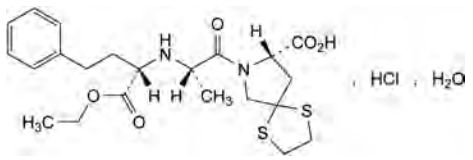
## Spiraprili hydrochloridum monohydricum



$C_{22}H_{31}ClN_2O_5S_2,H_2O$ $M_r$ 521.1

DEFINITION

(8*S*)-7-[(2*S*)-2-[[(1*S*)-1-(Ethoxycarbonyl)-3-phenylpropyl]-amino]propanoyl]-1,4-dithia-7-azaspiro[4.4]nonane-8-carboxylic acid hydrochloride monohydrate.

*Content*: 97.0 per cent to 102.0 per cent (anhydrous substance).

CHARACTERS

*Appearance*: white or almost white, fine crystalline powder.

*Solubility*: very slightly soluble in water, soluble in methanol, slightly soluble in acetonitrile, practically insoluble in methylene chloride.

IDENTIFICATION

A. Specific optical rotation (see Tests).

B. Infrared absorption spectrophotometry (*2.2.24*).
*Comparison*: *spirapril hydrochloride monohydrate CRS*.

C. It gives reaction (a) of chlorides (*2.3.1*).

TESTS

**Specific optical rotation** (*2.2.7*): – 13.0 to – 11.0 (anhydrous substance).

Dissolve 0.200 g in *dimethylformamide R* and dilute to 20.0 mL with the same solvent.

**Related substances**. Liquid chromatography (*2.2.29*).

*Solvent mixture*: *acetonitrile R1*, *water R* (20:80 *V/V*).

*Test solution*. Dissolve 50.0 mg of the substance to be examined in the solvent mixture and dilute to 20.0 mL with the solvent mixture.

*Reference solution (a)*. Dissolve 6 mg of *spirapril for system suitability CRS* (containing impurities B and D) in the solvent mixture and dilute to 20 mL with the solvent mixture.

*Reference solution (b)*. Dilute 5.0 mL of the test solution to 100.0 mL with the solvent mixture. Dilute 5.0 mL of this solution to 50.0 mL with the solvent mixture.

*Reference solution (c)*. Dilute 1.0 mL of reference solution (b) to 10.0 mL with the solvent mixture.

*Column*:
- *size*: *l* = 0.125 m, Ø = 4.6 mm;
- *stationary phase*: *octadecylsilyl silica gel for chromatography R* (5 µm);
- *temperature*: 70 °C.

*Mobile phase*:
- *mobile phase A*: dissolve 4.5 g of *tetramethylammonium hydroxide R* in 900 mL of *water R*, add 100 mL of *acetonitrile R1* and adjust to pH 2.2 with *phosphoric acid R*;
- *mobile phase B*: dissolve 4.5 g of *tetramethylammonium hydroxide R* in 400 mL of *water R*, add 600 mL of *acetonitrile R1* and adjust to pH 2.2 with *phosphoric acid R*;

| Time (min) | Mobile phase A (per cent *V/V*) | Mobile phase B (per cent *V/V*) |
|---|---|---|
| 0 - 4 | 90 | 10 |
| 4 - 14 | 90 → 10 | 10 → 90 |
| 14 - 20 | 10 | 90 |

*Flow rate*: 2.0 mL/min.

*Detection*: spectrophotometer at 210 nm.

*Injection*: 20 µL.

*Relative retention* with reference to spirapril (retention time = about 10 min): impurity C = about 0.6; impurity B = about 0.7; impurity A = about 1.26; impurity D = about 1.38.

*System suitability*: reference solution (a):
- *resolution*: minimum 3.5 between the peaks due to impurity B and spirapril, and minimum 5.5 between the peaks due to spirapril and impurity D.

*Limits*:
- *impurity D*: not more than 0.8 times the area of the principal peak in the chromatogram obtained with reference solution (b) (0.4 per cent);
- *impurity B*: not more than 0.6 times the area of the principal peak in the chromatogram obtained with reference solution (b) (0.3 per cent);
- *impurities A, C*: for each impurity, not more than 0.4 times the area of the principal peak in the chromatogram obtained with reference solution (b) (0.2 per cent);
- *unspecified impurities*: for each impurity, not more than 0.2 times the area of the principal peak in the chromatogram obtained with reference solution (b) (0.10 per cent);

– *total*: not more than twice the area of the principal peak in the chromatogram obtained with reference solution (b) (1.0 per cent);

– *disregard limit*: area of the principal peak in the chromatogram obtained with reference solution (c) (0.05 per cent).

**Water** (*2.5.12*): 3.0 per cent to 4.0 per cent, determined on 0.200 g.

**Sulfated ash** (*2.4.14*): maximum 0.1 per cent, determined on 1.0 g.

ASSAY

Liquid chromatography (*2.2.29*).

*Solvent mixture.* Mix equal volumes of *acetonitrile R1* and *water R*.

*Test solution.* Dissolve 20.0 mg of the substance to be examined in the solvent mixture and dilute to 100.0 mL with the solvent mixture.

*Reference solution (a).* Dissolve 20.0 mg of *spirapril hydrochloride monohydrate CRS* in the solvent mixture and dilute to 100.0 mL with the solvent mixture.

*Reference solution (b).* Dissolve 6.0 mg of *spirapril for system suitability CRS* (spirapril spiked with impurity B and impurity D) in a mixture of 2 volumes of *acetonitrile R* and 8 volumes of *water R* and dilute to 20 mL with the same mixture of solvents.

*Solution A.* Dissolve 4.5 g of *tetramethylammonium hydroxide R* in 900 mL of *water R*, adjust to pH 1.75 with *phosphoric acid R* and add 100 mL of *acetonitrile R1*.

*Solution B.* Dissolve 4.5 g of *tetramethylammonium hydroxide R* in 400 mL of *water R*, adjust to pH 1.75 with *phosphoric acid R* and add 600 mL of *acetonitrile R1*.

*Column*:

– *size*: *l* = 0.125 m, Ø = 4.6 mm;

– *stationary phase*: *octadecylsilyl silica gel for chromatography R* (5 µm);

– *temperature*: 70 °C.

*Mobile phase*: solution A, solution B (45:55 *V/V*).

*Flow rate*: 2.0 mL/min.

*Detection*: spectrophotometer at 210 nm.

*Injection*: 20 µL.

*Retention time*: spirapril = 1.6 min to 2.9 min; impurity D = about 13 min. Adjust the proportion of solution B in the mobile phase if necessary.

*System suitability*: reference solution (b):

– *resolution*: minimum 15 between the peaks due to spirapril and impurity D.

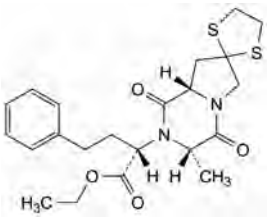
Calculate the percentage content of $C_{22}H_{31}ClN_2O_5S_2$ using the chromatogram obtained with reference solution (a) and taking into account the assigned content of *spirapril hydrochloride monohydrate CRS*.

STORAGE

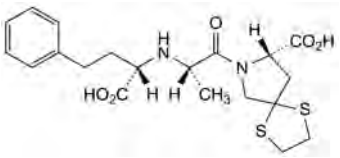
In an airtight container, protected from light.

IMPURITIES

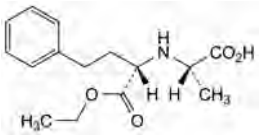
*Specified impurities: A, B, C, D.*



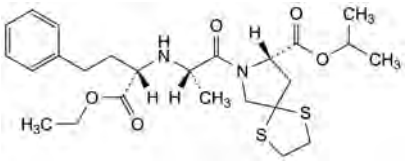
A. ethyl (2*S*)-2-[(3′*S*,8′a*S*)-3′-methyl-1′,4′-dioxohexahydrospiro[1,3-dithiolane-2,7′(6′*H*)-pyrrolo[1,2-*a*]pyrazin]-2′-yl]-4-phenylbutanoate,



B. (8*S*)-7-[(2*S*)-2-[[(1*S*)-1-carboxy-3-phenylpropyl]amino]propanoyl]-1,4-dithia-7-azaspiro[4.4]nonane-8-carboxylic acid (spiraprilat),



C. (2*S*)-2-[[(1*S*)-1-(ethoxycarbonyl)-3-phenylpropyl]amino]propanoic acid,

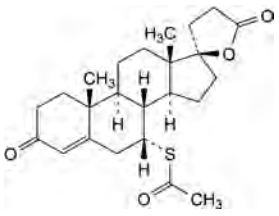


D. 1-methylethyl (8*S*)-7-[(2*S*)-2-[[(1*S*)-1-(ethoxycarbonyl)-3-phenylpropyl]amino]propanoyl]-1,4-dithia-7-azaspiro[4.4]nonane-8-carboxylate.

**07/2019:0688**

# SPIRONOLACTONE

## Spironolactonum



$C_{24}H_{32}O_4S$ $M_r$ 416.6

[52-01-7]

DEFINITION

*S*-[(2′*R*)-3,5′-Dioxo-3′,4′-dihydro-5′*H*-spiro[androst-4-ene-17,2′-furan]-7α-yl] ethanethioate.

*Content*: 97.5 per cent to 102.0 per cent (dried substance).

CHARACTERS

*Appearance*: white or yellowish-white powder.

*Solubility*: practically insoluble in water, soluble in ethanol (96 per cent).

It shows polymorphism (*5.9*).

IDENTIFICATION

*First identification*: *A*.

*Second identification*: *B, C*.

A. Infrared absorption spectrophotometry (*2.2.24*).

*Comparison*: *spironolactone CRS*.

If the spectra obtained in the solid state shows differences, dissolve the substance to be examined and the reference substance separately in the minimum volume of *methanol R*, evaporate to dryness and record new spectra using the residues.

B. Thin-layer chromatography (*2.2.27*).

*Test solution*. Dissolve 20 mg of the substance to be examined in *methylene chloride R* and dilute to 10 mL with the same solvent.

*Reference solution*. Dissolve 20 mg of *spironolactone CRS* in *methylene chloride R* and dilute to 10 mL with the same solvent.

*Plate*: *TLC silica gel $F_{254}$ plate R*.

*Mobile phase*: *water R*, *cyclohexane R*, *ethyl acetate R* (1:24:75 *V/V/V*).

*Application*: 5 µL.

*Development*: over 3/4 of the plate.

*Drying*: in air.

*Detection*: examine in ultraviolet light at 254 nm.

*Results*: the principal spot in the chromatogram obtained with the test solution is similar in position and size to the principal spot in the chromatogram obtained with the reference solution.

C. To about 10 mg add 2 mL of a 50 per cent *V/V* solution of *sulfuric acid R* and shake. An orange solution with an intense yellowish-green fluorescence is produced. Heat the solution gently; the colour becomes deep red and hydrogen sulfide, which blackens *lead acetate paper R*, is evolved. Add the solution to 10 mL of *water R*; a greenish-yellow solution is produced, showing opalescence or a precipitate.

TESTS

**Specific optical rotation** (*2.2.7*): − 46 to − 41 (dried substance).

Dissolve 0.100 g in *ethanol (96 per cent) R* and dilute to 10.0 mL with the same solvent.

**Related substances**. Liquid chromatography (*2.2.29*). *Prepare the solutions immediately before use.*

*Solvent mixture*: *acetonitrile R*, *water R* (50:50 *V/V*).

*Test solution (a)*. Dissolve 50.0 mg of the substance to be examined in 2.5 mL of *tetrahydrofuran R* and dilute to 25.0 mL with the solvent mixture.

*Test solution (b)*. Dilute 1.0 mL of test solution (a) to 100.0 mL with the solvent mixture.

*Reference solution (a)*. Dilute 1.0 mL of test solution (b) to 10.0 mL with the solvent mixture.

*Reference solution (b)*. Dissolve with the aid of ultrasound the contents of a vial of *spironolactone for system suitability CRS* (containing impurities A, C, D, E and I) in 1.0 mL of the solvent mixture.

*Reference solution (c)*. Dissolve 50.0 mg of *spironolactone CRS* in 2.5 mL of *tetrahydrofuran R* and dilute to 25.0 mL with the solvent mixture. Dilute 1.0 mL of this solution to 100.0 mL with the solvent mixture.

*Reference solution (d)*. Dissolve 5.0 mg of *canrenone CRS* (impurity F) in 2.5 mL of *tetrahydrofuran R* and dilute to 25.0 mL with the solvent mixture. Dilute 3.0 mL of this solution to 100.0 mL with the solvent mixture.

*Column*:

- *size*: *l* = 0.15 m, Ø = 4.6 mm;
- *stationary phase*: *end-capped octadecylsilyl silica gel for chromatography R* (3 µm);
- *temperature*: 40 °C.

*Mobile phase*: *acetonitrile R*, *tetrahydrofuran R*, *methanol R1*, *water for chromatography R* (15:20:425:540 *V/V/V/V*).

*Flow rate*: 1.0 mL/min.

*Detection*: spectrophotometer at 254 nm.

*Injection*: 20 µL of test solution (a) and reference solutions (a), (b) and (d).

*Run time*: 2.5 times the retention time of spironolactone.

*Identification of impurities*: use the chromatogram supplied with *spironolactone for system suitability CRS* and the chromatogram obtained with reference solution (b) to identify the peaks due to impurities A, C, D, E and I; use the chromatogram obtained with reference solution (d) to identify the peak due to impurity F.

*Relative retention* with reference to spironolactone (retention time = about 26 min): impurity A = about 0.95; impurity F = about 1.2; impurity C = about 1.5; impurity D = about 1.6; impurity E = about 1.7; impurity I = about 1.9.

*System suitability*: reference solution (b):

- *peak-to-valley ratio*: minimum 1.5, where $H_p$ = height above the baseline of the peak due to impurity A and $H_v$ = height above the baseline of the lowest point of the curve separating this peak from the peak due to spironolactone.

*Limits*:

- *correction factor*: for the calculation of content, multiply the peak area of impurity F by 2.3;
- *impurity I*: not more than 5 times the area of the principal peak in the chromatogram obtained with reference solution (a) (0.5 per cent);
- *impurities E, F*: for each impurity, not more than 3 times the area of the principal peak in the chromatogram obtained with reference solution (a) (0.3 per cent);
- *impurities A, C*: for each impurity, not more than twice the area of the principal peak in the chromatogram obtained with reference solution (a) (0.2 per cent);
- *impurity D*: not more than 1.5 times the area of the principal peak in the chromatogram obtained with reference solution (a) (0.15 per cent);
- *unspecified impurities*: for each impurity, not more than the area of the principal peak in the chromatogram obtained with reference solution (a) (0.10 per cent);
- *total*: not more than 7 times the area of the principal peak in the chromatogram obtained with reference solution (a) (0.7 per cent);
- *disregard limit*: 0.5 times the area of the principal peak in the chromatogram obtained with reference solution (a) (0.05 per cent).

**Free thiol compounds**. To 2.0 g add 20 mL of *water R*, shake for 1 min and filter. To 10 mL of the filtrate add 0.05 mL of *0.01 M iodine* and 0.1 mL of *starch solution R* and mix. A blue colour develops.

**Loss on drying** (*2.2.32*): maximum 0.5 per cent, determined on 1.000 g by drying in an oven at 105 °C for 3 h.

**Sulfated ash** (*2.4.14*): maximum 0.1 per cent, determined on 1.0 g.

ASSAY

Liquid chromatography (*2.2.29*) as described in the test for related substances with the following modification.

*Injection*: test solution (b) and reference solution (c).

Calculate the percentage content of $C_{24}H_{32}O_4S$ from the assigned content of *spironolactone CRS*.

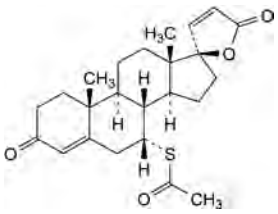
STORAGE

Protected from light.

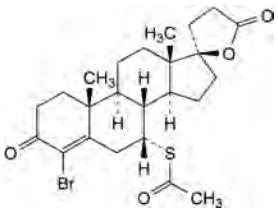
IMPURITIES

*Specified impurities*: *A, C, D, E, F, I.*

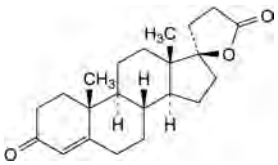
*Other detectable impurities* (the following substances would, if present at a sufficient level, be detected by one or other of the tests in the monograph. They are limited by the general acceptance criterion for other/unspecified impurities and/or by the general monograph *Substances for pharmaceutical use (2034)*. It is therefore not necessary to identify these impurities for demonstration of compliance. See also *5.10. Control of impurities in substances for pharmaceutical use*): *B, G, H.*



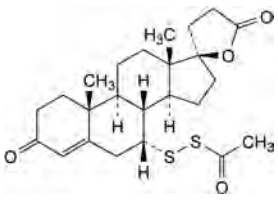
A. *S*-[(2′*R*)-3,5′-dioxo-5′*H*-spiro[androst-4-ene-17,2′-furan]-7α-yl] ethanethioate (Δ20-spironolactone),



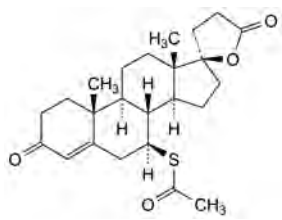
B. *S*-[(2′*R*)-4-bromo-3,5′-dioxo-3′,4′-dihydro-5′*H*-spiro[androst-4-ene-17,2′-furan]-7α-yl] ethanethioate (4-bromospironolactone),



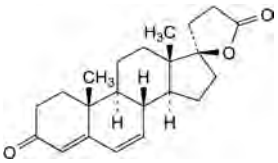
C. (2′*R*)-3′,4′-dihydro-5′*H*-spiro[androst-4-ene-17,2′-furan]-3,5′-dione (aldone),



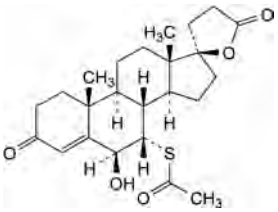
D. *S*-[(2′*R*)-3,5′-dioxo-3′,4′-dihydro-5′*H*-spiro[androst-4-ene-17,2′-furan]-7α-yl] ethane(dithioperoxate) (disulfanyl-spironolactone),



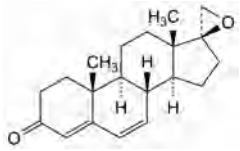
E. *S*-[(2′*R*)-3,5′-dioxo-3′,4′-dihydro-5′*H*-spiro[androst-4-ene-17,2′-furan]-7β-yl] ethanethioate (7β-spironolactone),



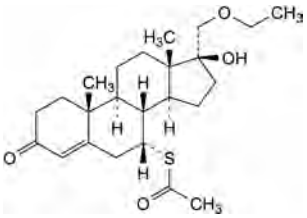
F. (2′*R*)-3′,4′-dihydro-5′*H*-spiro[androst-4,6-diene-17,2′-furan]-3,5′-dione (canrenone),



G. *S*-[(2′*R*)-6β-hydroxy-3,5′-dioxo-3′,4′-dihydro-5′*H*-spiro[androst-4-ene-17,2′-furan]-7α-yl] ethanethioate (6β-hydroxy-spironolactone),



H. (2′*S*)-spiro[androst-4,6-diene-17,2′-oxiran]-3-one,

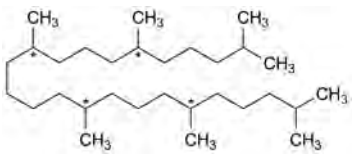


I. *S*-[17α-(ethoxymethyl)-17β-hydroxy-3-oxoandrost-4-en-7α-yl] ethanethioate.

**01/2020:1630**

# SQUALANE

## Squalanum



$C_{30}H_{62}$ $M_r$ 422.8

[111-01-3]

DEFINITION

(6*E*,10*E*,15*E*,19*E*)-2,6,10,15,19,23-Hexamethyltetracosane (perhydrosqualene). It may be of vegetable (unsaponifiable matter of olive oil), animal (shark liver oil) or synthetic origin.

*Content*: 96.0 per cent to 103.0 per cent.

CHARACTERS

*Appearance*: clear, colourless, oily liquid.

*Solubility*: practically insoluble in water, miscible with most fats and oils, freely soluble in acetone and in cyclohexane, practically insoluble in ethanol (96 per cent).

*Relative density*: about 0.815.

IDENTIFICATION

A. Infrared absorption spectrophotometry (*2.2.24*).
*Comparison*: *squalane CRS*.

B. Refractive index (see Tests).

C. Examine the chromatograms obtained in the assay.
*Results*: the principal peak in the chromatogram obtained with the test solution is similar in retention time and size to the principal peak in the chromatogram obtained with reference solution (a).
The chromatogram obtained with squalane of animal origin does not show a peak due to cyclosqualane and does not show a peak with a relative retention of 1.1 with reference to squalane (Figure 1630.-1).
The chromatogram obtained with squalane of vegetable origin shows a peak due to cyclosqualane (Figure 1630.-2).
The chromatogram obtained with squalane of synthetic origin shows a peak with a relative retention of 1.1 with reference to squalane (Figure 1630.-3).

TESTS

**Appearance**. The substance to be examined is clear (*2.2.1*) and colourless (*2.2.2, Method II*).

**Refractive index** (*2.2.6*): 1.450 to 1.454.

**Acid value** (*2.5.1*): maximum 0.2.

**Iodine value** (*2.5.4, Method A*): maximum 4.0.

**Saponification value** (*2.5.6*): maximum 3.0.

**Total ash** (*2.4.16*): maximum 0.5 per cent, determined on 1.000 g.

ASSAY

Gas chromatography (*2.2.28*).

*Internal standard solution.* To 1.0 mL of *dimethylacetamide R* (DMA) add 100.0 mL of *heptane R*.

*Test solution.* Dissolve 0.100 g of the substance to be examined in the internal standard solution and dilute to 25.0 mL with the same solution.

*Reference solution (a).* Dissolve 0.100 g of *squalane CRS* in the internal standard solution and dilute to 25.0 mL with the same solution.

*Reference solution (b).* To 0.1 mL of *methyl erucate R* add 0.100 g of the substance to be examined, dissolve in the internal standard solution and dilute to 25.0 mL with the same solution.

*Column*:

- *material*: fused silica;
- *size*: *l* = 30 m, Ø = 0.32 mm;
- *stationary phase*: *methylpolysiloxane R* (film thickness 1 µm).

*Carrier gas*: *helium for chromatography R*.

*Flow rate*: 1.7 mL/min.

*Split ratio*: 1:12.

*Temperature*:

| | Time (min) | Temperature (°C) |
|---|---|---|
| Column | 0 - 39 | 60 - 290 |
| | 39 - 50 | 290 |
| Injection port | | 275 |
| Detector | | 300 |

*Detection*: flame ionisation.

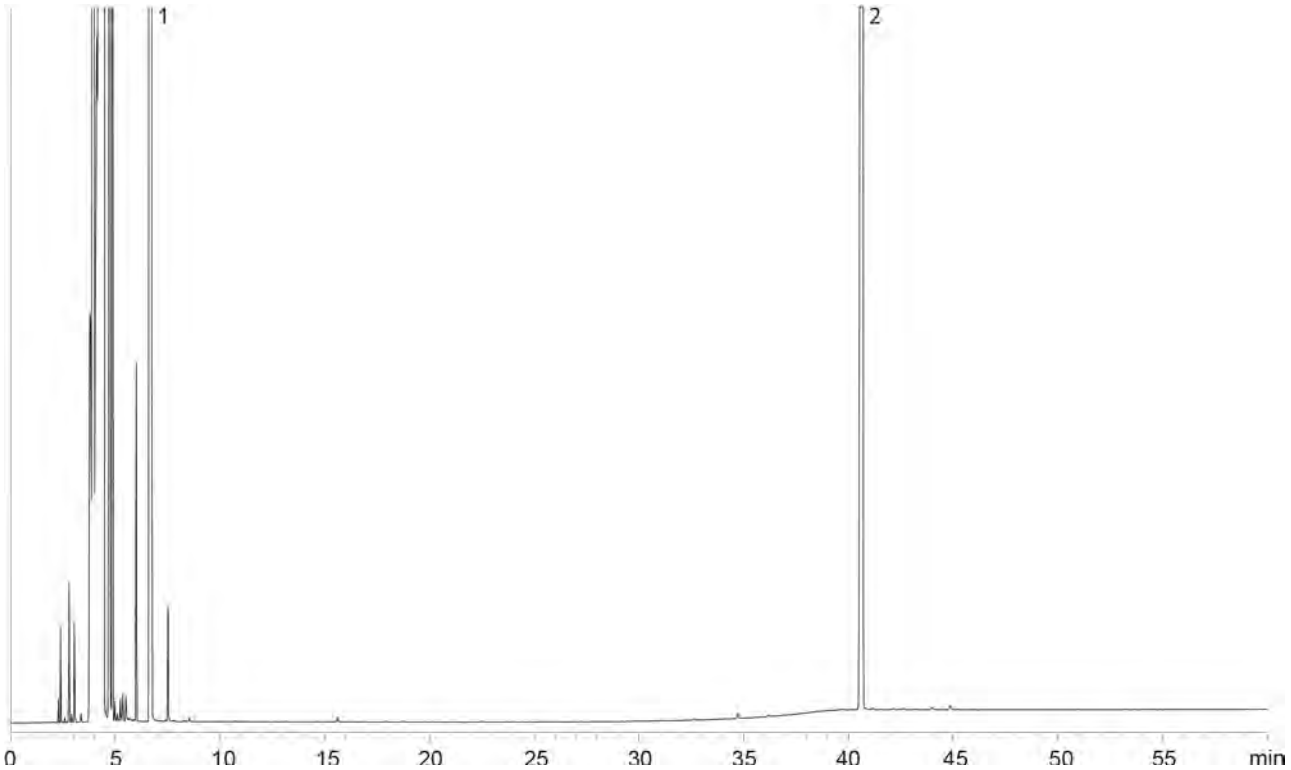
*Injection*: 1 µL.

*Relative retention* with reference to squalane (retention time = about 41 min): internal standard = about 0.2; methyl erucate = about 0.9; cyclosqualane = 1.05.

*System suitability*: reference solution (b):

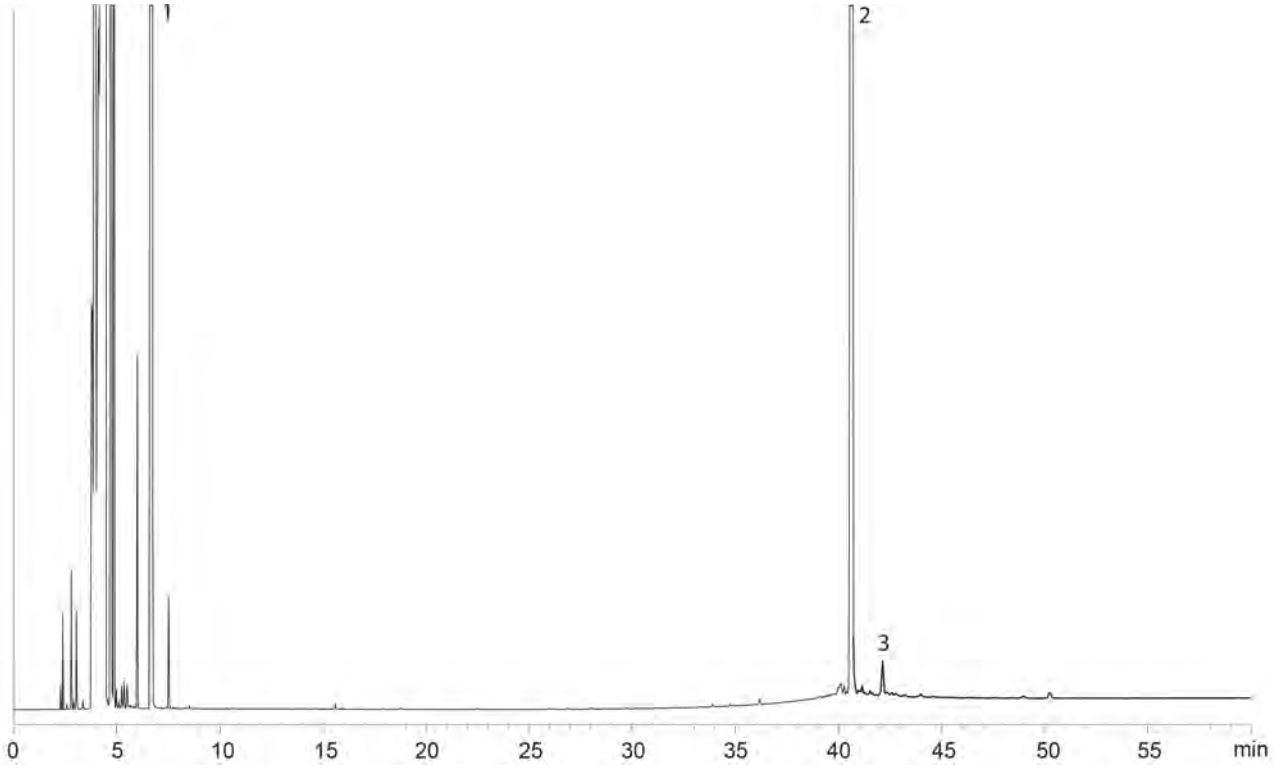
- *resolution*: minimum 5 between the peaks due to methyl erucate and squalane.

Calculate the percentage content of $C_{30}H_{62}$ taking into account the assigned content of *squalane CRS*.



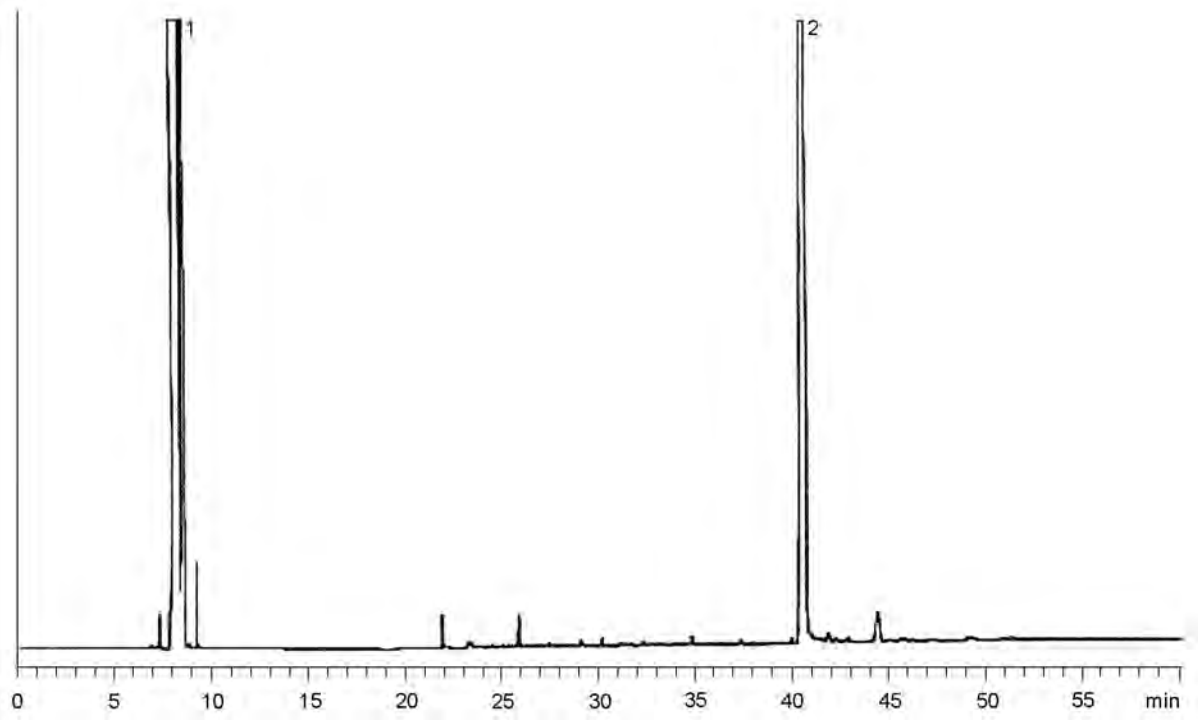
1. DMA 2. squalane

Figure 1630.-1. – *Chromatogram of squalane of animal origin*



1. DMA 2. squalane 3. cyclosqualane

Figure 1630.-2. – *Chromatogram of squalane of vegetable origin*



1. DMA 2. squalane

Figure 1630.-3. – *Chromatogram of squalane of synthetic origin*

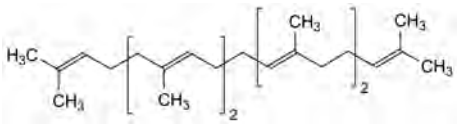
LABELLING

The label states the origin of squalane (vegetable, animal or synthetic).

01/2020:2805

# SQUALENE

## Squalenum



$C_{30}H_{50}$ $M_r$ 410.7

[111-02-4]

DEFINITION

(6*E*,10*E*,14*E*,18*E*)-2,6,10,15,19,23-Hexamethyltetracosa-2,6,10,14,18,22-hexaene. It may be of vegetable or animal origin.

*Content*: 97.0 per cent to 103.0 per cent (anhydrous substance).

This monograph applies to squalene used as an adjuvant in vaccines.

CHARACTERS

*Appearance*: clear, colourless or light yellow, oily liquid.

*Solubility*: practically insoluble in water, freely soluble in acetone and in cyclohexane, soluble in ethanol (96 per cent).

*Relative density*: about 0.86.

IDENTIFICATION

Infrared absorption spectrophotometry (*2.2.24*).

*Comparison*: *squalene CRS*.

TESTS

**Appearance**. The substance to be examined is clear (*2.2.1*) and not more intensely coloured than reference solution $Y_6$ (*2.2.2, Method II*).

**Refractive index** (*2.2.6*): 1.491 to 1.499.

**Acid value** (*2.5.1*): maximum 1.0.

**Iodine value** (*2.5.4, Method B*): 350 to 450, determined on 0.06 g.

**Peroxide value** (*2.5.5, Method A*): maximum 5.0.

**Saponification value** (*2.5.6*): maximum 5.0.

**Water** (*2.5.32*): maximum 0.2 per cent, determined on 2.00 g.

ASSAY

Gas chromatography (*2.2.28*). *Prepare the solutions immediately before use.*

*Test solution.* Dissolve 0.100 g of the substance to be examined in *heptane R* and dilute to 100.0 mL with the same solvent.

*Reference solution (a).* Dissolve 0.100 g of *squalene CRS* in *heptane R* and dilute to 100.0 mL with the same solvent.

*Reference solution (b).* Dissolve 0.100 g of the substance to be examined and 0.100 g of *methyl lignocerate R* in *heptane R* and dilute to 100.0 mL with the same solvent.

*Column*:

- *material*: fused silica;
- *size*: *l* = 30 m, Ø = 0.32 mm;
- *stationary phase*: *methylpolysiloxane R* (film thickness 1 µm).

*Carrier gas*: *helium for chromatography R*.

*Flow rate*: 1.7 mL/min.

*Split ratio*: 1:12.

*Temperature*:

| | Time (min) | Temperature (°C) |
|---|---|---|
| Column | 0 - 12 | 290 |
| Injection port | | 275 |
| Detector | | 300 |

*Detection*: flame ionisation.

*Injection*: 1 µL.

*Relative retention* with reference to squalene (retention time = about 8.1 min): methyl lignocerate = about 0.9.

*System suitability*: reference solution (b):

- *resolution*: minimum 5.0 between the peaks due to methyl lignocerate and squalene.

Calculate the percentage content of $C_{30}H_{50}$ taking into account the assigned content of *squalene CRS*.

STORAGE

In an airtight container, protected from light.

LABELLING

The label states the origin of squalene (vegetable or animal).

01/2017:1266

# STANNOUS CHLORIDE DIHYDRATE

## Stannosi chloridum dihydricum

$SnCl_2,2H_2O$ $M_r$ 225.6
[10025-69-1]

DEFINITION

*Content*: 98.0 per cent to 102.0 per cent.

CHARACTERS

*Appearance*: white or almost white, crystalline powder or colourless crystals, efflorescent in air.

*Solubility*: freely soluble in water (the solution becomes cloudy after standing or on dilution), freely soluble in ethanol (96 per cent). It dissolves in dilute hydrochloric acid.

IDENTIFICATION

A. To 1 mL of solution S1 (see Tests) add 5 mL of *water R* and 0.05 mL of *mercuric chloride solution R*. A blackish-grey precipitate is formed.

B. Dissolve 1.0 g in 3.0 mL of *water R*. Add 0.5 mL of *dilute sodium hydroxide solution R* to the cloudy solution; a yellowish flocculent precipitate is formed. Add 6.5 mL of *water R*. To 1.0 mL of the previously shaken suspension add 1.0 mL of *strong sodium hydroxide solution R*; the precipitate dissolves and the resulting solution is clear and colourless.

C. Dissolve 10 mg in 2 mL of *dilute nitric acid R*. The solution gives reaction (a) of chlorides (*2.3.1*).

TESTS

**Solution S1**. To 0.40 g add 1 mL of *dilute hydrochloric acid R* and dilute to 20 mL with *distilled water R*.

**Solution S2**. Dissolve 1.0 g in *dilute hydrochloric acid R* and dilute to 30 mL with the same acid. Heat to boiling. Add 30 mL of *thioacetamide solution R* and boil for 15 min (solution A). Take 5 mL, filter and heat the filtrate to boiling. Add 5 mL of *thioacetamide solution R* and boil for 15 min. If a precipitate is formed, add the remainder of solution A (solution A′) to the mixture. Add 10 mL of *thioacetamide solution R* and boil. Repeat the series of operations from "Take

5 mL" until a precipitate is no longer formed on addition of *thioacetamide solution R* to the filtrate obtained from the 5 mL of solution A (solution A′, solution A″, etc. respectively). If no precipitate is formed or if no more precipitate is formed combine the solution obtained with the remainder of solution A (solution A′, solution A″, etc. respectively), filter and wash the precipitate with 10 mL of *water R*. Heat the filtrate until the resulting vapour no longer turns a moistened piece of *lead acetate paper R* blackish-grey. Allow to cool and dilute to 50 mL with *water R*.

**Appearance of solution**. The solution is clear (*2.2.1*) and colourless (*2.2.2, Method II*).

Dissolve 10.0 g in *dilute hydrochloric acid R* and dilute to 20 mL with the same acid.

**Substances not precipitated by thioacetamide**: maximum 0.2 per cent.

Evaporate 25 mL of solution S2 to dryness and ignite at 600 ± 50 °C. The residue weighs a maximum of 1 mg.

**Sulfates** (*2.4.13*): maximum 500 ppm, determined on solution S1.

**Iron** (*2.4.9*): maximum 100 ppm.

Dilute 5 mL of solution S2 to 10 mL with *water R*.

ASSAY

Dissolve 0.100 g in 50 mL of *water R*, freed from oxygen by purging with carbon dioxide or nitrogen for 15 min. Add 1.5 mL of *hydrochloric acid R1*, 5 g of *sodium potassium tartrate R*, 10 g of *sodium hydrogen carbonate R* and 1 mL of *starch solution R*. Titrate immediately with *0.05 M iodine*. Carry out a blank titration.

1 mL of *0.05 M iodine* is equivalent to 11.28 mg of $SnCl_2,2H_2O$.

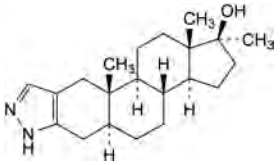
STORAGE

In an airtight container.

**04/2012:1568**

# STANOZOLOL

## Stanozololum



$C_{21}H_{32}N_2O$ $M_r$ 328.5
[10418-03-8]

DEFINITION

17-Methyl-2′*H*-5α-androst-2-eno[3,2-*c*]pyrazol-17β-ol.

*Content*: 98.5 per cent to 101.0 per cent (dried substance).

CHARACTERS

*Appearance*: white or almost white, hygroscopic, crystalline powder.

*Solubility*: practically insoluble in water, soluble in dimethylformamide, slightly soluble in ethanol (96 per cent), very slightly soluble in methylene chloride.

It shows polymorphism (*5.9*).

IDENTIFICATION

A. Infrared absorption spectrophotometry (*2.2.24*).

*Comparison*: *stanozolol CRS*.

If the spectra obtained in the solid state show differences, dissolve the substance to be examined and the reference substance separately in the minimum volume of *methylene chloride R*, evaporate to dryness at room temperature under an air-stream and record new spectra using the residues.

B. Liquid chromatography (*2.2.29*) as described in the test for related substances with the following modification.

*Injection*: test solution and reference solution (c).

*Results*: the principal peak in the chromatogram obtained with the test solution is similar in retention time and size to the principal peak in the chromatogram obtained with reference solution (c).

TESTS

**Specific optical rotation** (*2.2.7*): + 37 to + 41 (dried substance).

Dissolve 60.0 mg in *methanol R* and dilute to 20.0 mL with the same solvent.

**Impurities A and B**. Thin-layer chromatography (*2.2.27*).

*Solvent mixture*: *methanol R1*, *methylene chloride R* (10:90 *V/V*).

*Test solution*. Dissolve 20 mg of the substance to be examined in 1.0 mL of the solvent mixture.

*Reference solution*. Dissolve 2 mg of *stanozolol CRS*, 2.0 mg of *stanozolol impurity A CRS* and 2.0 mg of *stanozolol impurity B CRS* in 1.0 mL of the solvent mixture. Dilute 0.1 mL of the solution to 2.0 mL with the solvent mixture.

*Plate*: *TLC silica gel plate R*.

*Mobile phase*: *glacial acetic acid R*, *ethyl acetate R*, *cyclohexane R* (2:48:50 *V/V/V*).

*Application*: 10 µL.

*Development*: over 3/4 of the plate.

*Drying*: in air.

*Detection*: spray with *vanillin reagent R* and heat at 120 °C.

*System suitability*: reference solution:

– the chromatogram shows 3 clearly separated spots, due to stanozolol, impurity A and impurity B, in order of increasing $R_F$ value.

*Limits*:

– *impurity A*: any spot due to impurity A is not more intense than the corresponding spot in the chromatogram obtained with the reference solution (0.5 per cent);
– *impurity B*: any spot due to impurity B is not more intense than the corresponding spot in the chromatogram obtained with the reference solution (0.5 per cent).

**Related substances**. Liquid chromatography (*2.2.29*).

*Test solution*. Dissolve 15.0 mg of the substance to be examined in *methanol R* and dilute to 5.0 mL with the same solvent.

*Reference solution (a)*. Dilute 1.0 mL of the test solution to 100.0 mL with *methanol R*. Dilute 1.0 mL of this solution to 10.0 mL with *methanol R*.

*Reference solution (b)*. Dissolve 1 mg of *stanozolol CRS* and 1 mg of *stanozolol impurity B CRS* in *methanol R* and dilute to 20.0 mL with the same solvent.

*Reference solution (c)*. Dissolve 15.0 mg of *stanozolol CRS* in *methanol R* and dilute to 5.0 mL with the same solvent.

*Column*:

– *size*: *l* = 0.15 m, Ø = 4.6 mm;
– *stationary phase*: *end-capped octadecylsilyl silica gel for chromatography R* (5 µm).

*Mobile phase*: 1 g/L solution of *sodium dihydrogen phosphate R* adjusted to pH 3.0 with *phosphoric acid R*, *methanol R* (30:70 *V/V*).

*Flow rate*: 1.5 mL/min.

*Detection*: spectrophotometer at 228 nm.

Monographs S

*Injection*: 25 µL of the test solution and reference solutions (a) and (b).

*Run time*: 3 times the retention time of stanozolol.

*Identification of impurities*: use the chromatogram obtained with reference solution (b) to identify the peak due to impurity B.

*Relative retention* with reference to stanozolol (retention time = about 12 min): impurity B = about 1.3.

*System suitability*: reference solution (b):

– *resolution*: minimum 4.0 between the peaks due to stanozolol and impurity B.

*Limits*:

– *unspecified impurities*: for each impurity, not more than the area of the principal peak in the chromatogram obtained with reference solution (a) (0.10 per cent);
– *total*: not more than 5 times the area of the principal peak in the chromatogram obtained with reference solution (a) (0.5 per cent);
– *disregard limit*: 0.5 times the area of the principal peak in the chromatogram obtained with reference solution (a) (0.05 per cent).

**Loss on drying** (*2.2.32*): maximum 1.0 per cent, determined on 1.000 g by drying at 105 °C at a pressure not exceeding 0.7 kPa.

ASSAY

Dissolve 0.250 g in 50 mL of *anhydrous acetic acid R*. Titrate with *0.1 M perchloric acid*, determining the end-point potentiometrically (*2.2.20*).

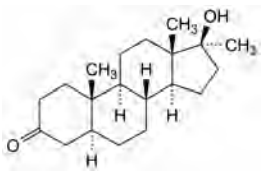
1 mL of *0.1 M perchloric acid* is equivalent to 32.85 mg of $C_{21}H_{32}N_2O$.

STORAGE

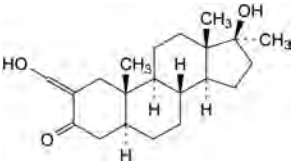
In an airtight container, protected from light.

IMPURITIES

*Specified impurities*: *A, B.*



A. 17β-hydroxy-17-methyl-5α-androstan-3-one (mestanolone),



B. 17β-hydroxy-2-(hydroxymethylene)-17-methyl-5α-androstan-3-one (oxymetholone).

**01/2013:2165**
**corrected 10.0**

# STARCH, HYDROXYPROPYL

## Amylum hydroxypropylum

[9049-76-7]

DEFINITION

Hydroxypropyl starch is a partially substituted 2-hydroxypropylether of *Maize starch (0344)*, *Potato starch (0355)*, cassava starch, *Rice starch (0349)* or *Pea starch (2403)* chemically modified by etherification with the reagent propylene oxide. In addition, this starch may be partially hydrolysed using acids or enzymes to obtain 'thinned starch' with reduced viscosity.

*Content*:

– *hydroxypropyl groups*: 0.5 per cent to 7.0 per cent.

PRODUCTION

The production of hydroxypropyl starch shall be in compliance with the requirements of the European legislation for food additives.

Mixing of starches from different botanical sources prior to chemical modification is not allowed.

CHARACTERS

*Appearance*: white or slightly yellowish powder.

*Solubility*: practically insoluble in cold water and in ethanol (96 per cent).

IDENTIFICATION

A. Examined under a microscope, using not less than 20 × magnification and using a mixture of equal volumes of *glycerol R* and *water R*, it appears as follows according to the botanical source stated on the label.
   – *Maize-based hydroxypropyl starch*: it presents either angular polyhedral granules of irregular sizes with diameters of about 2-23 µm or rounded or spheroidal granules of irregular sizes with diameters of about 25-35 µm; the central hilum consists of a distinct cavity or 2-to-5-rayed cleft and there are no concentric striations; between orthogonally orientated polarising plates or prisms, the starch granules show a distinct black cross intersecting at the hilum.
   – *Potato-based hydroxypropyl starch*: it presents granules, either irregularly shaped, ovoid or pear-shaped, usually 30-100 µm in size but occasionally exceeding 100 µm, or rounded, 10-35 µm in size; there are occasional compound granules having 2-4 components; the ovoid and pear-shaped granules have an eccentric hilum and the rounded granules a centric or slightly eccentric hilum; all granules show clearly visible concentric striations; between orthogonally orientated polarising plates or prisms, the starch granules show a distinct black cross intersecting at the hilum.
   – *Cassava-based hydroxypropyl starch*: it presents spherical granules with one truncated side, typically 5-35 µm in diameter and having a circular or several-rayed central cleft; some granules may also be egg-shaped or cap-shaped; the hilum is centric, sometimes slightly fissured; between orthogonally orientated polarising plates or prisms, the starch granules show a distinct black cross intersecting at the hilum.
   – *Rice-based hydroxypropyl starch*: it presents polyhedral, simple granules 1-10 µm, mostly 4-6 µm, in size; these simple granules often gather in ellipsoidal, compound granules 50-100 µm in diameter; the granules have a poorly visible central hilum and there are no concentric striations; between orthogonally orientated polarising plates or prisms, the starch granules show a distinct black cross intersecting at the hilum.
   – *Pea-based hydroxypropyl starch*: it presents a majority of large elliptical granules, 25-45 µm in size, sometimes irregular or reniform; it also presents a minority of small rounded granules, 5-8 µm in size; granules can present cracks or irregularities; sometimes, granules show barely visible concentric striations; exceptionally,

granules show a slit along the main axis; between orthogonally orientated polarising plates or prisms, the starch granules show a distinct black cross.

B. Suspend 1 g in 50 mL of *water R*, boil for 1 min and cool. A translucent or clear mucilage is formed.

C. To 1 mL of the mucilage obtained in identification test B add 0.05 mL of *iodine solution R1*. An orange-red or dark blue colour is produced, which disappears on heating.

D. Introduce 0.1 g into a 100 mL volumetric flask and add 12.5 mL of *dilute sulfuric acid R*. Place the flask in a water-bath and heat until the sample is dissolved. Cool and dilute to 100 mL with *water R*. Introduce 1 mL of this solution into a 25 mL graduated test-tube with glass stopper and, with the tube immersed in cold water, add dropwise 8 mL of *sulfuric acid R*. Mix well and place the tube in a water-bath for exactly 3 min. Immediately transfer the tube to an ice-bath until the solution is chilled. Add 0.6 mL of *ninhydrin solution R2*, carefully allowing the reagent to run down the walls of the test-tube. Immediately shake well, and place the tube in a water-bath at 25 °C for 100 min. Dilute to 25 mL with *sulfuric acid R* and mix by inverting the tube several times. Do not shake. A violet colour develops within 5 min.

TESTS

**pH** (*2.2.3*): 4.5 to 8.0.

Shake 5.0 g with 25.0 mL of *carbon dioxide-free water R* for 60 s. Allow to stand for 15 min.

**Foreign matter**. Examined under a microscope using a mixture of equal volumes of *glycerol R* and *water R*, not more than traces of matter other than starch granules are present.

**Oxidising substances** (*2.5.30*): maximum 20 ppm, calculated as $H_2O_2$.

**Sulfur dioxide** (*2.5.29*): maximum 50 ppm.

**Iron** (*2.4.9*)

– For hydroxypropyl starch obtained from maize, potato, cassava or rice: maximum 20 ppm.

  Shake 1.0 g with 20 mL of *dilute hydrochloric acid R*. Filter. The filtrate complies with the test for iron.

– For hydroxypropyl starch obtained from pea: maximum 50 ppm.

  Shake 1.0 g with 50 mL of *dilute hydrochloric acid R*. Filter. The filtrate complies with the test for iron.

**Loss on drying** (*2.2.32*) determined on 1.000 g by drying in an oven at 130 °C for 90 min:

– maximum 15.0 per cent for hydroxypropyl starch obtained from maize, cassava, rice or pea;

– maximum 20.0 per cent for hydroxypropyl starch obtained from potato.

**Sulfated ash** (*2.4.14*): maximum 0.6 per cent, determined on 1.0 g.

**Microbial contamination**

TAMC: acceptance criterion $10^3$ CFU/g (*2.6.12*).

TYMC: acceptance criterion $10^2$ CFU/g (*2.6.12*).

Absence of *Escherichia coli* (*2.6.13*).

Absence of *Salmonella* (*2.6.13*).

ASSAY

Nuclear magnetic resonance spectrometry (*2.2.33*).

*Internal standard solution*. Disperse 50.0 mg of *3-trimethylsilyl-1-propanesulfonic acid sodium salt CRS* in about 5 g of *deuterium oxide R1*, weighed to the nearest 0.1 mg. Store in a sealed bottle.

*Test solution*. Disperse 20 g of the substance to be examined in 200.0 mL of *carbon dioxide-free water R* at room temperature. Agitate for 15 min and filter. Repeat the operation twice.

If problems of poor dispersibility or slow filtration are encountered, use cooled *carbon dioxide-free water R* for the washing operation. Dry the washed starch for at least 4 h in an oven *in vacuo* at 30 ± 5 °C. Determine the moisture content ($W$) on 5 g of this washed and dried sample using the test for loss on drying. Weigh 12.0 mg (dried substance) of the washed and dried sample in a 5 mm NMR tube. Add 0.1 mL of *deuterium chloride solution R* and 0.75 mL of *deuterium oxide R1*. Cap the tube, mix, and place it in a water-bath until a clear solution is obtained (3 min to 1 h maximum). When a clear solution is obtained, allow to cool to room temperature. Dry the exterior of the tube and weigh to the nearest 0.1 mg. Add 0.05 mL of the internal standard solution and weigh to the nearest 0.1 mg. Determine the mass of the internal standard solution introduced. Mix thoroughly.

*Apparatus*: FT-NMR spectrometer at minimum 300 MHz.

*Acquisition of $^1H$ NMR spectra*. The following parameters may be used:

– *sweep width*: 8 ppm (– 1.0 to + 7 ppm);

– *irradiation frequency offset*: none;

– *time domain*: 64 K at least;

– *pulse width*: 90°;

– *pulse delay*: 10 s;

– *dummy scans*: 0;

– *number of scans*: 8.

Use the $CH_3$ signal of the internal standard for shift referencing. The shift of the singlet is set to 0 ppm.

Record the FID signal.

Call the integration sub-routine after phase corrections and baseline correction between – 0.5 ppm and + 6 ppm.

Measure the peak areas of the doublet from the methyl groups of the hydroxypropyl function at + 1.2 ppm ($A_2$), and of the methyl groups at 0 ppm of the internal standard ($A_1$) without $^{13}C$-satellites.

*Results*: measure the signal coming from the 3 protons of the methyl group in the hydroxypropyl function; calculate the hydroxypropyl groups content as a percentage *m/m* (dried substance) using the following expression:

$$\frac{3A_2}{A_1} \times \frac{P}{100} \times \frac{W_1 \times m_1}{218} \times 59 \times \frac{100}{m} \times \frac{100}{100 - W}$$

3 = numerical value representing the 3 methyl groups in the internal standard;

$A_1$ = area of the methyl groups in the internal standard;

$A_2$ = area of the methyl groups of hydroxypropyl;

$P$ = percentage content of *3-trimethylsilyl-1-propanesulfonic acid sodium salt CRS*;

$W_1$ = mass fraction of the internal standard in the internal standard solution, in milligrams per gram;

$m_1$ = mass of the internal standard solution in the NMR tube, in grams;

218 = molar mass of the internal standard, in grams per mole;

59 = molar mass of the hydroxypropyl group, in grams per mole;

$m$ = mass of the washed and dried sample in the NMR tube, in milligrams;

$W$ = moisture content, as a percentage *m/m*.

LABELLING

The label states the botanical source of the starch and the type of modification.

07/2013:2645
corrected 10.0

# STARCH, HYDROXYPROPYL, PREGELATINISED

## Amylum hydroxypropylum pregelificatum

DEFINITION

Pregelatinised hydroxypropyl starch is prepared from *Starch, hydroxypropyl (2165)* by mechanical processing in the presence of water, with or without heat, to rupture all or part of the starch granules, and subsequent drying.

*Content*:

– *hydroxypropyl groups*: 0.5 per cent to 7.0 per cent.

PRODUCTION

The production of pregelatinised hydroxypropyl starch shall be in compliance with the requirements of the European legislation for food additives.

CHARACTERS

*Appearance*: white or slightly yellowish powder.

IDENTIFICATION

A. It swells in cold water.

B. Disperse 0.5 g in 2 mL of *water R*, without heating, and add 0.05 mL of *iodine solution R1*. A reddish-violet or greyish-blue colour is produced.

C. To 0.1 g add 12.5 mL of *dilute sulfuric acid R*. Heat in a water-bath until the sample is dissolved. Cool and dilute to 100 mL with *water R*. Introduce 1 mL of the solution into a 25 mL graduated test-tube with a ground-glass stopper and, with the tube immersed in cold water, add dropwise 8 mL of *sulfuric acid R*. Mix well and place the tube in a water-bath for exactly 3 min. Immediately transfer the tube to an ice-bath until the solution is chilled. Add 0.6 mL of *ninhydrin solution R2*, carefully allowing the reagent to run down the walls of the test-tube. Immediately shake well, and place the tube in a water-bath at 25 °C for 100 min. Dilute to 25 mL with *sulfuric acid R* and mix by inverting the tube several times. Do not shake. A violet colour develops within 5 min.

TESTS

**pH** (*2.2.3*): 4.5 to 8.0.

Progressively add 3.0 g to 100.0 mL of *carbon dioxide-free water R*, stirring continuously. Determine the pH when a homogeneous solution is obtained.

**Impurity A**. Gas chromatography (*2.2.28*).

*Internal standard solution.* Mix 50.0 mg of *propane-1,3-diol R* with *anhydrous pyridine R* and dilute to 100.0 mL with the same solvent.

*Test solution.* To 0.200 g of the substance to be examined add 1.0 mL of the internal standard solution and 9.0 mL of *anhydrous pyridine R*. Heat under a reflux condenser for 20 min. Allow to cool. Transfer 1.0 mL of this solution to a 2 mL vial with a screw cap fitted with a septum. Add 0.1 mL of *chlorotrimethylsilane R* and 0.2 mL of *hexamethyldisilazane R*. Close and mix. Allow to stand for 15 min.

*Reference solution.* Mix 50.0 mg of *propane-1,3-diol R* and 50.0 mg of *propylene glycol CRS* (impurity A) with *anhydrous pyridine R* and dilute to 100.0 mL with the same solvent. Transfer 0.1 mL of the solution to a 2 mL vial with a screw cap fitted with a septum. Add 0.1 mL of *chlorotrimethylsilane R*, 0.2 mL of *hexamethyldisilazane R* and 0.9 mL of *anhydrous pyridine R*. Close and mix. Allow to stand for 15 min.

*Column*:

– *material*: fused silica;

– *size*: *l* = 30 m, Ø = 0.32 mm;

– *stationary phase*: *methylpolysiloxane R* (film thickness 0.25 µm).

*NOTE: the column must be desorbed regularly. Conditions: temperature program of 70 °C to 300 °C at a rate of 7 °C/min. Maintain for 10 min at 300 °C.*

*Carrier gas*: *helium for chromatography R*.

*Flow rate*: 3 mL/min.

*Split ratio*: 1:30.

*Temperature*:

– *column*: 70 °C;

– *injection port and detector*: 250 °C.

*Detection*: flame ionisation.

*Injection*: 1 µL.

*Relative retention* with reference to the trimethylsilyl derivative of propane-1,3-diol (retention time = about 8.5 min): trimethylsilyl derivative of propylene glycol = about 0.7.

*System suitability*: reference solution:

– *resolution*: minimum 5.0 between the peaks due to the trimethylsilyl derivative of propylene glycol and the trimethylsilyl derivative of propane-1,3-diol.

*Calculation of percentage contents*: use the internal standard method.

*Limit*:

– *impurity A*: maximum 0.1 per cent.

**Oxidising substances** (*2.5.30*): maximum 20 ppm, calculated as $H_2O_2$.

Use a mixture of equal volumes of *methanol R* and *water R* as solvent.

**Sulfur dioxide** (*2.5.29*): maximum 50 ppm.

**Iron** (*2.4.9*)

– For pregelatinised hydroxypropyl starch obtained from maize, potato, cassava or rice: maximum 20 ppm.

  Dissolve the residue obtained in the test for sulfated ash in 20 mL of *dilute hydrochloric acid R* and filter. The filtrate complies with the test for iron.

– For pregelatinised hydroxypropyl starch obtained from pea: maximum 50 ppm.

  Dissolve the residue obtained in the test for sulfated ash in 50 mL of *dilute hydrochloric acid R* and filter. The filtrate complies with the test for iron.

**Loss on drying** (*2.2.32*) determined on 1.000 g by drying in an oven at 130 °C for 90 min:

– maximum 15.0 per cent for pregelatinised hydroxypropyl starch obtained from maize, cassava, rice or pea;

– maximum 20.0 per cent for pregelatinised hydroxypropyl starch obtained from potato.

**Sulfated ash** (*2.4.14*): maximum 0.6 per cent, determined on 1.0 g.

**Microbial contamination**

TAMC: acceptance criterion $10^3$ CFU/g (*2.6.12*).

TYMC: acceptance criterion $10^2$ CFU/g (*2.6.12*).

Absence of *Escherichia coli* (*2.6.13*).

Absence of *Salmonella* (*2.6.13*).

ASSAY

Nuclear magnetic resonance spectrometry (*2.2.33*).

*Internal standard solution.* Disperse 50.0 mg of *3-trimethylsilyl-1-propanesulfonic acid sodium salt CRS* in about 5 g of *deuterium oxide R1*, weighed to the nearest 0.1 mg. Store in a sealed bottle.

*Test solution.* Dry 5.000 g of the substance to be examined at 130 °C for 90 min. Weigh 12.0 mg of the dried substance in a 5 mm NMR tube. Add 0.1 mL of *deuterium chloride solution R* and 0.75 mL of *deuterium oxide R1*. Cap the tube, mix, and place it in a water-bath until a clear solution is obtained (3 min to maximum 1 h). When a clear solution is obtained, allow to cool to room temperature. Dry the exterior of the tube and weigh to the nearest 0.1 mg. Add 0.05 mL of the internal standard solution and weigh to the nearest 0.1 mg. Determine the mass of the internal standard solution introduced. Mix thoroughly.

*Apparatus*: FT-NMR spectrometer operating at minimum 300 MHz.

*Acquisition of $^1$H NMR spectra.* The following parameters may be used:

- *sweep width*: 8 ppm (– 1.0 to + 7 ppm);
- *irradiation frequency offset*: none;
- *time domain*: at least 64 K;
- *pulse width*: 90°;
- *pulse delay*: 10 s;
- *dummy scans*: 0;
- *number of scans*: 8.

Use the $CH_3$ signal of the internal standard for shift referencing. The shift of the singlet is set to 0 ppm.

Record the FID signal.

Call the integration sub-routine after phase corrections and baseline correction between – 0.5 ppm and + 6 ppm.

Measure the peak areas of the doublet from the methyl groups of the hydroxypropyl function at + 1.2 ppm ($A_2$), and of the methyl groups at 0 ppm of the internal standard ($A_1$) without $^{13}$C-satellites.

*Results*: measure the signal coming from the 3 protons of the methyl group in the hydroxypropyl function; calculate the percentage content of hydroxypropyl groups using the following expression:

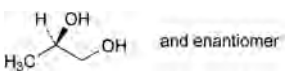
$$\frac{3A_2}{A_1} \times \frac{P}{100} \times \frac{W_1 \times m_1}{218} \times 59 \times \frac{100}{m}$$

| | | |
|---|---|---|
| 3 | = | numerical value representing the 3 methyl groups in the internal standard; |
| $A_1$ | = | area of the methyl groups in the internal standard; |
| $A_2$ | = | area of the methyl groups of hydroxypropyl; |
| $P$ | = | percentage content of *3-trimethylsilyl-1-propanesulfonic acid sodium salt CRS*; |
| $W_1$ | = | mass fraction of the internal standard in the internal standard solution, in milligrams per gram; |
| $m_1$ | = | mass of the internal standard solution in the NMR tube, in grams; |
| 218 | = | molar mass of the internal standard, in grams per mole; |
| 59 | = | molar mass of the hydroxypropyl group, in grams per mole; |
| $m$ | = | mass of the substance to be examined in the NMR tube, in milligrams. |

LABELLING

The label states the botanical source of the starch and the type of modification.

IMPURITIES



A. (2*RS*)-propane-1,2-diol (propylene glycol).

**01/2010:1267**
**corrected 9.0**

# STARCH, PREGELATINISED

## Amylum pregelificatum

DEFINITION

Pregelatinised starch is prepared from *Maize starch (0344)*, *Potato starch (0355)* or *Rice starch (0349)* by mechanical processing in the presence of water, with or without heat, to rupture all or part of the starch granules, and subsequent drying. It contains no added substances but it may be modified to render it compressible and to improve its flow characteristics.

CHARACTERS

*Appearance*: white or yellowish-white powder.

It swells in cold water.

IDENTIFICATION

A. Examined under a microscope using a mixture of equal volumes of *glycerol R* and *water R* it presents irregular, translucent, white or yellowish-white flakes or pieces with an uneven surface. Under polarised light (between crossed nicol prisms), starch granules with a distinct black cross intersecting at the hilum may be seen.

B. Disperse 0.5 g in 2 mL of *water R* without heating and add 0.05 mL of *iodine solution R1*. A reddish-violet or blue colour is produced.

TESTS

**pH** (*2.2.3*): 4.5 to 7.0.

Progressively add 3.0 g to 100.0 mL of *carbon dioxide-free water R*, stirring continuously. Determine the pH when a homogeneous solution is obtained.

**Oxidising substances** (*2.5.30*). It complies with the test for oxidising substances. Use a mixture of equal volumes of *methanol R* and *water R* as solvent.

**Sulfur dioxide** (*2.5.29*): maximum 50 ppm.

**Iron** (*2.4.9*): maximum 20 ppm.

Dissolve the residue obtained in the test for sulfated ash in 20 mL of *dilute hydrochloric acid R*. Filter. The filtrate complies with the test.

**Foreign matter**. Examined under a microscope using a mixture of equal volumes of *glycerol R* and *water R*, not more than traces of matter other than starch granules are present.

**Loss on drying** (*2.2.32*): maximum 15.0 per cent, determined on 1.000 g by drying in an oven at 130 °C for 90 min.

**Sulfated ash** (*2.4.14*): maximum 0.6 per cent, determined on 1.0 g.

**Microbial contamination**

TAMC: acceptance criterion $10^3$ CFU/g (*2.6.12*).

TYMC: acceptance criterion $10^2$ CFU/g (*2.6.12*).

Absence of *Escherichia coli* (*2.6.13*).

Absence of *Salmonella* (*2.6.13*).

LABELLING

The label states the type of starch used as starting material.

FUNCTIONALITY-RELATED CHARACTERISTICS

*This section provides information on characteristics that are recognised as being relevant control parameters for one or more functions of the substance when used as an excipient (see chapter 5.15). Some of the characteristics described in the Functionality-related characteristics section may also be*

Monographs S

*present in the mandatory part of the monograph since they also represent mandatory quality criteria. In such cases, a cross-reference to the tests described in the mandatory part is included in the Functionality-related characteristics section. Control of the characteristics can contribute to the quality of a medicinal product by improving the consistency of the manufacturing process and the performance of the medicinal product during use. Where control methods are cited, they are recognised as being suitable for the purpose, but other methods can also be used. Wherever results for a particular characteristic are reported, the control method must be indicated.*

*The following characteristics may be relevant for pregelatinised starch used as filler, binder or disintegrant in tablets and in hard capsules.*

**Cold-water-soluble matter**. Transfer 100 mL of *water R* at 25 ± 1 °C into a beaker and add 1.000-3.000 g of the substance to be examined while stirring. Continue to stir for 10 min. Transfer 35 mL of the dispersion to a centrifuge tube and centrifuge at 3000 *g* for 15 min. Transfer 25 mL of the supernatant to a crucible that has previously been dried in an oven at 120 ± 2 °C for 4 h and weighed to the nearest 0.1 mg. Evaporate to dryness on a water-bath, then place the crucible in an oven at 120 ± 2 °C for 4 h. Allow to cool in a desiccator. Weigh the crucible to the nearest 0.1 mg again.

Determine the percentage of cold-water-soluble matter using the following expression:

$$\frac{(B - A) \times \frac{100}{25} \times 100}{S \times \frac{100 - C}{100}}$$

*A* = initial crucible mass, in grams;

*B* = final crucible mass, in grams;

*C* = loss on drying, in per cent;

*S* = sample mass, in grams.

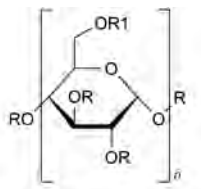
**Particle-size distribution** (*2.9.31* or *2.9.38*).

**Powder flow** (*2.9.36*).

**01/2019:1785**
**corrected 10.0**

# STARCHES, HYDROXYETHYL

## Amyla hydroxyethyla



R = -[$CH_2CH_2O$]$_{n'}$H (*n'* = 0, 1, 2...)

R1 = -[$CH_2CH_2O$]$_{n''}$H (*n''* = 0 or 1) or glucose

[$C_6H_{10}O_5(C_2H_4O)_x$]$_n$ with *x* = molar substitution
[9005-27-0]

DEFINITION

Hydroxyethyl starches are partially substituted poly(2-hydroxyethyl)ethers of waxy maize starch or potato starch, which primarily consist of amylopectine. The type of hydroxyethyl starch is defined by 2 numbers: the mean molecular weight (*Mw*) and the number of hydroxyethyl groups per anhydroglucose unit expressed as the molar substitution (*MS*). Hydroxyethyl starch is also characterised by the number of hydroxyethyl groups located at the C2 group over the number of hydroxyethyl groups located at C6, expressed as the C2/C6 ratio. The parameters *Mw*, *MS* and C2/C6 ratio are determined by the reaction conditions of the production.

PRODUCTION

Hydroxyethyl starches are produced from waxy maize starch or potato starch by acidic hydrolysis and reaction with ethylene oxide and purified by ultrafiltration.

CHARACTERS

*Appearance*: white or almost white powder.

*Solubility*: freely soluble in water and in dimethyl sulfoxide, practically insoluble in anhydrous ethanol.

Hydroxyethyl starches are hygroscopic until they reach a water content of about 12 per cent to 15 per cent.

IDENTIFICATION

*First identification: A, C.*

*Second identification: B, C.*

A. Infrared absorption spectrophotometry (*2.2.24*).
*Comparison*: *medium Mw hydroxyethyl starch CRS.*
*Results*: the spectrum obtained shows the same absorption bands as the spectrum obtained with *medium Mw hydroxyethyl starch CRS*. Due to the difference in the substitution of the substance, the intensity of some absorption bands can vary.

B. To 5 mL of solution S (see Tests), add 0.1 mL of *0.05 M iodine*. A reddish-brown or blue-violet colour appears.

C. Molecular weight (see Tests).

TESTS

**Solution S**. Dissolve 5.0 g of the substance to be examined (dried substance) in *carbon dioxide-free water R* and dilute to 100.0 mL with the same solvent.

**Appearance of solution**. Solution S is not more opalescent than reference suspension II (*2.2.1*).

**pH** (*2.2.3*): 4.5 to 7.0.
To 25 mL of solution S, add 0.2 mL of a saturated solution of *potassium chloride R*.

**Absorbance** (*2.2.25*): maximum 0.025, determined at 400 nm on solution S filtered through a 0.2 µm filter.

**Molecular weight (*Mw*) and molecular weight distribution**. Size-exclusion chromatography (*2.2.30*).

*Buffer solution*. Dissolve 54.34 g of *sodium acetate R* in *water R*, add 100.0 mL of *glacial acetic acid R* and dilute to 1000.0 mL with *water R*.

*Test stock solution*. Dissolve 2.0 g of the substance to be examined (dried substance) in *water R* and dilute to 50 mL with the same solvent. Add 10.0 mL of the buffer solution and dilute to 100.0 mL with *water R*.

*Reference solution (a)*. To prepare reference solution (a):
- if the nominal *Mw* of the substance to be examined is below 300 000, use *medium Mw hydroxyethyl starch CRS*;
- if the nominal *Mw* of the substance to be examined is above 300 000, use *high Mw hydroxyethyl starch CRS*.

Dissolve 0.4 g of *medium Mw hydroxyethyl starch CRS* or *high Mw hydroxyethyl starch CRS* in 10 mL of *water R*. Add 2.0 mL of the buffer solution and dilute to 20.0 mL with *water R*.

*Reference solution (b)*. Dilute 10.0 mL of reference solution (a) to 20.0 mL with the mobile phase.

*Reference solution (c)*. Dilute 10.0 mL of reference solution (b) to 20.0 mL with the mobile phase.

*Reference solution (d)*. Dilute 10.0 mL of reference solution (c) to 20.0 mL with the mobile phase.

*Column*:
- *stationary phase*: *hydroxylated polymethacrylate gel R*;

– 4 columns to be connected in series:

| Length in m | Internal diameter in mm | Particle size in µm | Pore size in nm |
|---|---|---|---|
| 0.30 | 7.5 | 17 | > 100 |
| 0.30 | 7.5 | 17 | 100 |
| 0.30 | 7.5 | 10 | 20 |
| 0.30 | 7.5 | 10 | 12.5 |

*Mobile phase*. Dilute 100.0 mL of the buffer solution to 1000 mL with *water for chromatography R*.

*Flow rate*: 0.5-1.0 mL/min.

*Detection*: multiple-angle light scattering (MALS) detector and refractometer maintained at a constant temperature, connected in series.

*Injection volume*: 50 µL.

Determine the suitable working solution as follows: inject reference solutions (a) and (b), the mean *Mw* determined with reference solution (b) does not deviate by more than 3 per cent from the mean *Mw* determined with reference solution (a). If the deviation meets the requirement, use reference solution (a) to check the system suitability criterion.

If the deviation is higher, inject reference solution (c) and determine the mean *Mw*. The mean *Mw* determined with reference solution (c) does not deviate by more than 3 per cent from the mean *Mw* determined with reference solution (b). If the deviation meets the requirement, use reference solution (b) to check the system suitability criterion.

If the deviation is higher, inject reference solution (d) and determine the mean *Mw*. The mean *Mw* determined with reference solution (d) does not deviate by more than 3 per cent from the mean *Mw* determined with reference solution (c). If the deviation meets the requirement, use reference solution (c) to check the system suitability criterion.

*System suitability*:

– *mean Mw*: within 5 per cent of the value assigned to the *medium Mw hydroxyethyl starch CRS* or *high Mw hydroxyethyl starch CRS*.

If necessary, dilute the test stock solution in order to have the same concentration as that of the reference solution used to check the system suitability.

*Results*: use a suitable integrator to determine the mean *Mw* and the *Mw* of the lowest and highest 10 per cent mass fraction.

| Low *Mw* 2000 - 100 000 | Medium *Mw* 100 000 - 300 000 | High *Mw* 300 000 - 900 000 |
|---|---|---|
| Determined *Mw* = nominal *Mw* ± 15 per cent | | |
| *Mw* at 10 per cent lowest fraction > 10 per cent of nominal *Mw* | *Mw* at 10 per cent lowest fraction > 15 000 | *Mw* at 10 per cent lowest fraction > 15 000 |
| *Mw* at 10 per cent highest fraction < 300 per cent of nominal *Mw* | *Mw* at 10 per cent highest fraction < 300 per cent of nominal *Mw* | *Mw* at 10 per cent highest fraction < 500 per cent of nominal *Mw* |

**C2/C6 ratio**. Gas chromatography (*2.2.28*).

*Solution A*. Mix equal volumes of *dilute sulfuric acid R* and *water R*.

*Test solution*. Introduce 0.18 g of the substance to be examined into a 5 mL vial. Add 3.0 mL of solution A, cap, seal the vial and shake until dissolution. Heat the vials for 4 h in a heating block already preheated to 100 °C, shaking them from time to time. Cool to room temperature. Open the vial and carefully add 0.9 g of *barium carbonate R*. Shake carefully and then centrifuge at about 9000 *g* for about 15 min. Test the clear supernatant for neutral pH with pH paper. If the solution is still acid, add more *barium carbonate R* in portions of 0.2 g until the solution is neutral. Filter the clear supernatant (pore size 0.45 µm). Introduce 0.5 mL of the filtrate into a autosampler vial and evaporate to dryness at 40 °C (several hours are usually needed). Take up the residue with 0.50 mL of *pyridine R*, 0.25 mL of *N,O-bis(trimethylsilyl)acetamide R* and 25 µL of *chlorotrimethylsilane R*. Seal the vial and heat to 40 °C for 1 h shaking from time to time. Cool to room temperature. Place the vial into the autosampler and perform 3 injections from each vial. Prepare in duplicate.

*Reference solution*. Prepare as prescribed for the test solution but using *medium Mw hydroxyethyl starch CRS* instead of the substance to be examined.

*Column*:

– *size*: *l* = 15 m, Ø = 0.32 mm;
– *stationary phase*: *methylpolysiloxane R* (film thickness 0.25 µm).

*Carrier gas*: *hydrogen for chromatography R* at a constant pressure of 69 kPa.

*Split ratio*: 1:20.

| | Time (min) | Temperature (°C) |
|---|---|---|
| Column | 0 - 1 | 150 |
| | 1 - 25 | 150 → 270 |
| | 25 - 28 | 270 |
| Injection port | | 250 |
| Detector | | 300 |

*Detection*: flame ionisation.

*Injection*: 1 µL.

*Identification of peaks*: use the chromatogram supplied with *medium Mw hydroxyethyl starch CRS* and the chromatogram obtained with the reference solution to identify the peaks due to derivatised product 1, derivatised product 2, derivatised product 3, 2-*O*-hydroxyethyl-α-D-glucose, 6-*O*-hydroxyethyl-α-D-glucose, 2-*O*-hydroxyethyl-β-D-glucose and 6-*O*-hydroxyethyl-β-D-glucose.

*System suitability*: reference solution:

– *resolution*: minimum 1.5 between the peaks due to 2-*O*-hydroxyethyl-β-D-glucose and 6-*O*-hydroxyethyl-β-D-glucose;
– *symmetry factor*: 0.6 to 1.5 for the peak due to derivatised product 1;
– *repeatability*: maximum relative standard deviation of 5.0 per cent for derivatised product 1 after 3 injections.

Calculate the C2/C6 ratio using the following expression:

$$\frac{A_1 + A_2 + A_3 + A_4 + A_5}{A_6 + A_7}$$

$A_1$ = area of the peak due to derivatised product 1;

$A_2$ = area of the peak due to derivatised product 2;

$A_3$ = area of the peak due to derivatised product 3;

$A_4$ = area of the peak due to 2-*O*-hydroxyethyl-α-D-glucose;

$A_5$ = area of the peak due to 2-*O*-hydroxyethyl-β-D-glucose;

$A_6$ = area of the peak due to 6-*O*-hydroxyethyl-α-D-glucose;

$A_7$ = area of the peak due to 6-*O*-hydroxyethyl-β-D-glucose.

Calculate the mean C2/C6 ratio from the values obtained with the 2 test solutions.

The test is not valid unless the difference of the 2 values is not more than 5 per cent.

*Limit*: within 20.0 per cent of the nominal value.

**Molar substitution (*MS*)**. Gas chromatography (*2.2.28*).

The content of hydroxyethyl groups is determined after hydrolysis with hydriodic acid as iodoethane.

*Internal standard solution*. Dilute 1.0 mL of *toluene R* to 200.0 mL with *xylene R*.

*Test solution*. Introduce 50.0 mg of the substance to be examined and about 0.10-0.15 g of *adipic acid R* in a 5 mL vial. Add 1.0 mL of the internal standard solution and 2.0 mL of *hydriodic acid R*. Tightly seal and cap the vial with a septum and an aluminium, centre tear-off seal. Prepare the test solution 5 times.

*Reference solutions*. In each of 7 vials of 5 mL, introduce about 0.10-0.15 g of *adipic acid R*. To each vial add 1.0 mL of the internal standard solution and 2.0 mL of *hydriodic acid R*. Tightly seal and cap the vials with a septum and an aluminium, centre tear-off seal. Weigh the vials with an accuracy of 0.01 mg. Introduce respectively 10 mg, 20 mg, 30 mg, 40 mg, 50 mg, 60 mg and 70 mg of *iodoethane R* with a 100 µL syringe piercing the septa carefully. Weigh the vials again with an accuracy of 0.01 mg and calculate the exact amount of *iodoethane R* added.

Determine the mass of the vials to the nearest 1 mg. Place the vials for 10 h into a heating block already preheated to 150 °C. After cooling to room temperature, determine the mass of each vial to the nearest 1 mg. Disregard any vial with a loss in mass of more than 5 mg. From 4 vials of the test solution and 5 of the reference solutions, take-up 100 µL of the upper layer. Introduce in an autosampler vial and dilute with 1.0 mL of *xylene R*. Seal immediately the vials and shortly shake.

*Column*:

- *material*: fused silica;
- *size*: *l* = 30 m, Ø = 0.53 mm;
- *stationary phase*: *cyanopropyl(3)phenyl(3)methyl(94)polysiloxane R* (film thickness 3 µm).

*Carrier gas*: *helium for chromatography R*.

*Flow rate*: 8 mL/min.

*Split ratio*: 1:20.

| | Time (min) | Temperature (°C) |
|---|---|---|
| Column | 0 - 4 | 50 |
| | 4 - 16 | 50 → 230 |
| | 16 - 20 | 230 |
| Injection port | | 200 |
| Detector | | 280 |

*Detection*: flame ionisation.

*Injection volume*: 1 µL; inject each solution twice.

*Relative retention* with reference to toluene (retention time = about 7.5 min): iodoethane = about 0.5.

*System suitability*: reference solutions:

- *resolution*: minimum 1.5 between the peaks due to iodoethane and toluene;
- calculate the ratio of the area of the peak due to *iodoethane R* to the area of the peak due to the internal standard for each chromatogram. Calculate the linear regression curve plotting the ratios calculated for the reference solutions against the quantity of *iodoethane R* added (in milligrams). The coefficient of determination $R^2$ is not less than 0.990.

*Results*: calculate the quantity (*T*) of iodoethane in milligrams present in the test solution using the following expression:

$$\frac{A - B}{M}$$

$A$ = ratio of the area of the peak due to iodoethane to the area of the peak due to the internal standard in the chromatogram obtained with the test solution;

$B$ = y-intercept of the curve;

$M$ = slope of the curve.

Then calculate the percentage content of ethylene oxide (*C*) using the following expression:

$$\frac{44.05 \times T \times 100}{155.97 \times m}$$

$m$ = mass of the substance to be examined, in milligrams;

44.05 = molecular mass of ethylene oxide;

155.97 = molecular mass of iodoethane.

Then calculate the *MS* using the following expression:

$$\frac{C \times 162.14}{(100 - C) \times 44.05}$$

162.14 = molecular mass of anhydroglucose;

44.05 = molecular mass of ethylene oxide.

Calculate the mean *MS* from the values obtained with the 4 test solutions.

*Limit*: 0.05 to 2.4, and within 8.0 per cent of the nominal value.

**Ethylene glycol**. Liquid chromatography (*2.2.29*).

*Test solution*. Dissolve 1.0 g of the substance to be examined (dried substance) in *water R* and dilute to 50.0 mL with the same solvent.

*Reference solution*. Dissolve 0.800 g of *ethylene glycol R* in *water R* and dilute to 100.0 mL with the same solvent. Dilute 2.0 mL of the solution to 200.0 mL with *water R*. Dilute 2.0 mL of this solution to 200.0 mL with *water R*.

*Precolumn*:

- *size*: *l* = 0.01 m, Ø = 4.0 mm;
- *stationary phase*: *octadecylsilyl silica gel for chromatography compatible with 100 per cent aqueous mobile phases R* (5 µm).

*Column*:

- *size*: *l* = 0.25 m, Ø = 4.6 mm;
- *stationary phase*: *octadecylsilyl silica gel for chromatography compatible with 100 per cent aqueous mobile phases R* (5 µm);
- *temperature*: 30 °C.

*Mobile phase*: *water for chromatography R*.

*Flow rate*: 1.0 mL/min.

*Post-column solution*. Dilute 750 mL of *2 M sodium hydroxide R* to 1000 mL with *water for chromatography R*.

*Flow rate of post-column solution*: 0.2 mL/min.

*Detection*: pulsed amperometric detector.

*Injection*: 20 µL.

*Run time*: 2.5 times the retention time of ethylene glycol.

*Retention time*: ethylene glycol = about 4 min.

*System suitability*: reference solution:

- *signal-to-noise ratio*: minimum 10 for the principal peak;
- *repeatability*: maximum relative standard deviation of 10.0 per cent determined on 6 injections.

After a maximum of 8 sample injections, wash the column using the following program.

*Rinsing solution*: *acetonitrile for chromatography R*, *water for chromatography R* (20:80 *V/V*).

| Time (min) | Mobile phase (per cent *V/V*) | Rinsing solution (per cent *V/V*) |
|---|---|---|
| 0 - 15 | 75 | 25 |
| 15 - 20 | 75 → 0 | 25 → 100 |
| 20 - 25 | 0 | 100 |
| 25 - 30 | 0 → 100 | 100 → 0 |
| 30 - 100 | 100 | 0 |

*Limit*:

– *ethylene glycol*: not more than the area of the corresponding peak in the chromatogram obtained with the reference solution (40 ppm).

**2-Chloroethanol**. Gas chromatography (*2.2.28*).

*Solvent mixture*: *methanol R*, *acetonitrile R* (25:75 *V/V*).

*Internal standard solution.* Dissolve 0.250 g of *2,6-dimethylaniline R* in the solvent mixture and dilute to 50.0 mL with the solvent mixture. Dilute 0.5 mL of the solution to 50.0 mL with the solvent mixture.

*Test solution.* Introduce 1.0 g of the substance to be examined into a 20 mL vial. Add 10.0 mL of the solvent mixture. Close tightly. Treat in an ultrasonic bath for 3.5 h. Allow to cool to room temperature. To 1.0 mL of this solution add 0.8 mL of the internal standard solution.

*Reference solution.* Dissolve 0.250 g of *2-chloroethanol R* in the solvent mixture and dilute to 50.0 mL with the solvent mixture. Dilute 1.0 mL of the solution to 100.0 mL with the solvent mixture. Dilute 1.0 mL of this solution to 100.0 mL with the solvent mixture. To 1.0 mL of this solution add 0.8 mL of the internal standard solution.

*Precolumn*:

– *material*: fused silica;
– *size*: *l* = 10 m, Ø = 0.53 mm;
– *stationary phase*: *polar-deactivated macrogol R*.

*Column*:

– *material*: fused silica;
– *size*: *l* = 30 m, Ø = 0.32 mm;
– *stationary phase*: *macrogol 20 000 R* (film thickness 0.25 µm).

*Carrier gas*: *hydrogen for chromatography R*.

*Flow rate*: 2.9 mL/min.

*Split program*:

| Time (min) | Split state | Split ratio |
|---|---|---|
| initial | on | 1:20 |
| 0.01 | off | 1:20 |
| 0.50 | on | 1:20 |

*Temperature*:

| | Time (min) | Temperature (°C) |
|---|---|---|
| Column | 0 - 4 | 45 |
| | 4 - 23.5 | 45 → 240 |
| | 23.5 - 28.5 | 240 |
| Injection port | | 250 |
| Detector | | 270 |

*Detection*: flame ionisation.

*Injection*: 1 µL.

*System suitability*: reference solution:

– *signal-to-noise ratio*: minimum 10 for the peak due to 2-chloroethanol;
– *repeatability*: maximum relative standard deviation of 10.0 per cent after 6 injections.

*Limit*:

– *2-chloroethanol*: calculate the ratio (*R*) of the area of the peak due to 2-chloroethanol to the area of the peak due to the internal standard from the chromatogram obtained with the reference solution; calculate the ratio of the area of the peak due to 2-chloroethanol to the area of the peak due to the internal standard from the chromatogram obtained with the test solution: this ratio is not greater than *R* (5 ppm).

**Ethylene oxide**. Head-space gas chromatography (*2.2.28*).

*Test solution.* Dissolve 1.0 g of the substance to be examined in 1.0 mL of *water R*. Close the vial tightly. Prepare in duplicate.

*Reference stock solution.* Introduce 80 mL of *water R* in a 100 mL volumetric flask. Cool at about 4 °C for at least 30 min. Place the flask on an analytical balance and slowly introduce 1.0 g of *ethylene oxide R*. Determine the precise quantity of ethylene oxide by differential weighing. Dilute to 100.0 mL with *water R*. Store in the refrigerator and use within 4 weeks.

*Reference solution (a).* Dilute 1.0 mL of the reference stock solution to 100.0 mL with *water R*. Dilute 1.0 mL of this solution to 100.0 mL with *water R*. Use within 24 h.

*Reference solution (b).* Dissolve 1.0 g of the substance to be examined in 1.0 mL of reference solution (a). Close the vial tightly. Prepare in duplicate.

*Column*:

– *material*: quartz;
– *size*: *l* = 30 m, Ø = 0.32 mm;
– *stationary phase*: *cyanopropyl(3)phenyl(3)methyl(94)polysiloxane R* (film thickness 1.5 µm).

*Carrier gas*: *helium for chromatography R* at a pressure of 110.3 kPa.

*Split ratio*: 1:35.

*Static head-space conditions which may be used*:

– *equilibration temperature*: 80 °C;
– *equilibration time*: 40 min;
– *transfer-line temperature*: 150 °C;
– *pressurisation time*: 2.0 min;
– *injection time*: 3 s.

*Temperature*:

| | Time (min) | Temperature (°C) |
|---|---|---|
| Column | 0 - 20 | 40 |
| | 20 - 30 | 40 → 240 |
| | 30 - 40 | 240 |
| Injection port | | 140 |
| Detector | | 250 |

*Detection*: flame ionisation.

*Injection*: inject a suitable volume of the gaseous phase of the test solution and reference solution (b).

*System suitability*:

– *signal-to-noise ratio*: minimum 10 for the peak due to ethylene oxide in the chromatogram obtained with reference solution (b).

*Limit*:

– *ethylene oxide*: not more than 0.5 times the area of the corresponding peak in the chromatogram obtained with reference solution (b) (1 ppm).

**Sodium chloride**: maximum 0.1 per cent.

*Test solution.* In a 250 mL conical flask, dissolve 10.0 g of the substance to be examined in 100 mL of *water R*. Add 2 mL of *dilute nitric acid R* and 5.0 mL of a 9 g/L solution of *sodium chloride R*.

Monographs S

*Reference solution.* In a 250 mL conical flask, dilute 5.0 mL of a 9 g/L solution of *sodium chloride R* with 100 mL of *water R*. Add 2 mL of *dilute nitric acid R*.

Carry out a potentiometric titration (*2.2.20*) with *0.1 M silver nitrate*. Calculate the percentage content of sodium chloride using the following expression:

$$\frac{(n_1 - n_2) \times 5.844 \times 100}{m}$$

$n_1$ = volume of *0.1 M silver nitrate* used for the test solution, in millilitres;

$n_2$ = volume of *0.1 M silver nitrate* used for the reference solution, in millilitres;

$m$ = mass of the substance to be examined in the test solution, in milligrams.

**Loss on drying** (*2.2.32*): maximum 15.0 per cent, determined on 1.000 g by drying at 105 °C.

**Bacterial endotoxins** (*2.6.14*): less than 2.5 IU/g.

**Microbial contamination**

TAMC: acceptance criterion $10^2$ CFU/g (*2.6.12*).

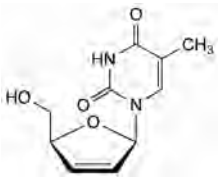
LABELLING

The label states the mean molecular weight, molar substitution and C2/C6 ratio (nominal values).

**01/2015:2130**

# STAVUDINE

## Stavudinum



$C_{10}H_{12}N_2O_4$ $M_r$ 224.2

[3056-17-5]

DEFINITION

1-(2,3-Dideoxy-β-D-*glycero*-pent-2-enofuranosyl)-5-methylpyrimidine-2,4(1*H*,3*H*)-dione.

*Content*: 97.0 per cent to 102.0 per cent (anhydrous substance).

CHARACTERS

*Appearance*: white or almost white powder.

*Solubility*: soluble in water, sparingly soluble in ethanol (96 per cent), slightly soluble in methylene chloride.

It shows polymorphism (*5.9*).

IDENTIFICATION

A. Specific optical rotation (*2.2.7*): – 45.9 to – 39.5 (anhydrous substance).

Dissolve 0.100 g in *water R* and dilute to 10.0 mL with the same solvent.

B. Infrared absorption spectrophotometry (*2.2.24*).

*Comparison*: *stavudine CRS*.

If the spectra obtained show differences, dissolve the substance to be examined and the reference substance separately in *anhydrous ethanol R*, evaporate to dryness and record new spectra using the residues.

TESTS

**Related substances**. Liquid chromatography (*2.2.29*). *Prepare the solutions immediately before use or store them at 2-8 °C until use.*

*Test solution.* Dissolve 25.0 mg of the substance to be examined in *water R* and dilute to 50.0 mL with the same solvent.

*Reference solution (a).* Dilute 0.5 mL of the test solution to 100.0 mL with *water R*.

*Reference solution (b).* Dilute 20.0 mL of reference solution (a) to 100.0 mL with *water R*.

*Reference solution (c).* Dissolve 5 mg of *stavudine for system suitability CRS* (containing impurities A, B, C, E and G) in *water R* and dilute to 10.0 mL with the same solvent.

*Column*:

- *size*: *l* = 0.25 m, Ø = 4.6 mm;
- *stationary phase*: *base-deactivated end-capped octadecylsilyl silica gel for chromatography R* (5 µm).

*Mobile phase*:

- *mobile phase A*: mix 35 volumes of *acetonitrile for chromatography R* and 965 volumes of a 0.77 g/L solution of *ammonium acetate R*;
- *mobile phase B*: mix 250 volumes of *acetonitrile for chromatography R* and 750 volumes of a 0.77 g/L solution of *ammonium acetate R*;

| Time (min) | Mobile phase A (per cent *V/V*) | Mobile phase B (per cent *V/V*) |
|---|---|---|
| 0 - 10 | 100 | 0 |
| 10 - 20 | 100 → 0 | 0 → 100 |
| 20 - 30 | 0 | 100 |

*Flow rate*: 2.0 mL/min.

*Detection*: spectrophotometer at 254 nm.

*Injection*: 10 µL.

*Identification of impurities*: use the chromatogram supplied with *stavudine for system suitability CRS* and the chromatogram obtained with reference solution (c) to identify the peaks due to impurities A, B, C, E and G.

*Relative retention* with reference to stavudine (retention time = about 10 min): impurity A = about 0.3; impurity B = about 0.50; impurity C = about 0.53; impurity E = about 1.1; impurity G = about 1.9.

*System suitability*: reference solution (c):

- *peak-to-valley ratio*: minimum 1.5, where $H_p$ = height above the baseline of the peak due to impurity C and $H_v$ = height above the baseline of the lowest point of the curve separating this peak from the peak due to impurity B; minimum 1.5, where $H_p$ = height above the baseline of the peak due to impurity E and $H_v$ = height above the baseline of the lowest point of the curve separating this peak from the peak due to stavudine.

*Calculation of percentage contents*:

- *correction factor*: multiply the peak area of impurity A by 0.7;
- for impurity A, use the concentration of stavudine in reference solution (a);
- for impurities other than A, use the concentration of stavudine in reference solution (b).

*Limits*:

- *impurity A*: maximum 0.5 per cent;
- *impurity G*: maximum 0.2 per cent;
- *unspecified impurities*: for each impurity, maximum 0.10 per cent;
- *total*: maximum 1.0 per cent;
- *reporting threshold*: 0.05 per cent.

**Impurity I**. Liquid chromatography (*2.2.29*). *Prepare the solutions immediately before use or store them at 2-8 °C until use.*

*Test solution.* Dissolve 50.0 mg of the substance to be examined in the mobile phase and dilute to 50.0 mL with the mobile phase.

*Reference solution (a).* Dissolve 2 mg of *stavudine impurity I CRS* in the mobile phase and dilute to 50.0 mL with the mobile phase. Dilute 1.0 mL of the solution to 20.0 mL with the mobile phase.

*Reference solution (b).* Dilute 1.0 mL of the test solution to 100.0 mL with the mobile phase. Dilute 1.0 mL of this solution to 10.0 mL with the mobile phase.

*Column*:

- *size*: *l* = 0.25 m, Ø = 4.6 mm;
- *stationary phase*: *end-capped octylsilyl silica gel for chromatography R* (5 µm).

*Mobile phase*: mix 30 volumes of *acetonitrile for chromatography R* and 70 volumes of a 1.15 g/L solution of *ammonium dihydrogen phosphate R* previously adjusted to pH 6.8 with *triethylamine R*.

*Flow rate*: 1.0 mL/min.

*Detection*: spectrophotometer at 266 nm.

*Injection*: 20 µL.

*Run time*: 7 times the retention time of stavudine.

*Identification of impurities*: use the chromatogram obtained with reference solution (a) to identify the peak due to impurity I.

*Relative retention* with reference to stavudine (retention time = about 3 min): impurity I = about 6.0.

*System suitability*: reference solution (b):

- *signal-to-noise ratio*: minimum 40 for the principal peak.

*Calculation of percentage content*:

- *correction factor*: multiply the peak area of impurity I by 1.7;
- for impurity I, use the concentration of stavudine in reference solution (b).

*Limit*:

- *impurity I*: maximum 0.15 per cent.

**Water** (*2.5.12*): maximum 0.5 per cent, determined on 0.500 g.

**Sulfated ash** (*2.4.14*): maximum 0.1 per cent, determined on 1.0 g.

ASSAY

Liquid chromatography (*2.2.29*). *Prepare the solutions immediately before use or store them at 2-8 °C until use.*

*Test solution.* Dissolve 10.0 mg of the substance to be examined in *water R* and dilute to 100.0 mL with the same solvent. Dilute 10.0 mL of the solution to 50.0 mL with *water R*.

*Reference solution (a).* Dissolve 10.0 mg of *stavudine CRS* in *water R* and dilute to 100.0 mL with the same solvent. Dilute 10.0 mL of the solution to 50.0 mL with *water R*.

*Reference solution (b).* Dissolve 5 mg of *thymine R* (impurity A) and 7.5 mg of *thymidine R* (impurity C) in *water R* and dilute to 100.0 mL with the same solvent. Dilute 10.0 mL of the solution to 50.0 mL with *water R*.

*Column*:

- *size*: *l* = 0.033 m, Ø = 4.0 mm;
- *stationary phase*: *base-deactivated end-capped octadecylsilyl silica gel for chromatography R* (3 µm).

*Mobile phase*: mix 5 volumes of *acetonitrile for chromatography R* and 95 volumes of a 0.77 g/L solution of *ammonium acetate R*.

*Flow rate*: 0.7 mL/min.

*Detection*: spectrophotometer at 254 nm.

*Injection*: 25 µL.

*Run time*: twice the retention time of stavudine.

*Identification of impurities*: use the chromatogram obtained with reference solution (b) to identify the peaks due to impurities A and C.

*Relative retention* with reference to stavudine (retention time = about 4 min): impurity A = about 0.4; impurity C = about 0.6.

*System suitability*:

- *resolution*: minimum 3.5 between the peaks due to impurities A and C in the chromatogram obtained with reference solution (b);
- *symmetry factor*: maximum 1.6 for the peak due to stavudine in the chromatogram obtained with reference solution (a).

Calculate the percentage content of $C_{10}H_{12}N_2O_4$ using the chromatograms obtained with the test solution and reference solution (a) and taking into account the assigned content of *stavudine CRS*.

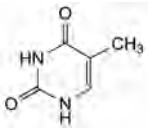
STORAGE

Protected from light and humidity.

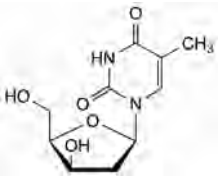
IMPURITIES

*Specified impurities: A, G, I.*

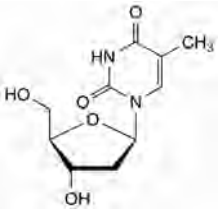
*Other detectable impurities* (the following substances would, if present at a sufficient level, be detected by one or other of the tests in the monograph. They are limited by the general acceptance criterion for other/unspecified impurities and/or by the general monograph *Substances for pharmaceutical use (2034)*. It is therefore not necessary to identify these impurities for demonstration of compliance. See also *5.10. Control of impurities in substances for pharmaceutical use*): *B, C, D, E, F, H.*



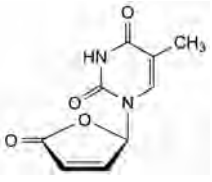
A. 5-methylpyrimidine-2,4(1*H*,3*H*)-dione (thymine),



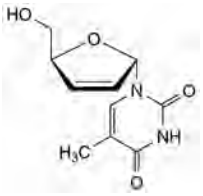
B. 1-(2-deoxy-β-D-*threo*-pentofuranosyl)-5-methylpyrimidine-2,4(1*H*,3*H*)-dione (3′-epithymidine),



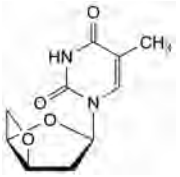
C. 1-(2-deoxy-β-D-*erythro*-pentofuranosyl)-5-methylpyrimidine-2,4(1*H*,3*H*)-dione (thymidine),



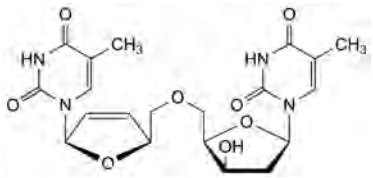
D. 1-[(2*R*)-5-oxo-2,5-dihydrofuran-2-yl]-5-methylpyrimidine-2,4(1*H*,3*H*)-dione,



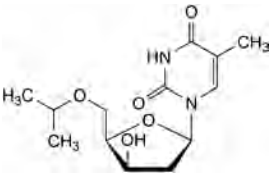
E. 1-(2,3-dideoxy-α-D-*glycero*-pent-2-enofuranosyl)-5-methylpyrimidine-2,4(1*H*,3*H*)-dione (stavudine anomer α),



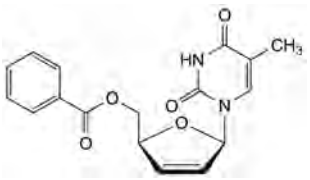
F. 1-(3,5-anhydro-2-deoxy-β-D-*threo*-pentofuranosyl)-5-methylpyrimidine-2,4(1*H*,3*H*)-dione,



G. 1-[2-deoxy-5-*O*-[[(2*S*,5*R*)-5-[5-methyl-2,4-dioxo-3,4-dihydropyrimidine-1(2*H*)-yl]-2,5-dihydrofuran-2-yl]methyl]-β-D-*threo*-pentofuranosyl]-5-methylpyrimidine-2,4(1*H*,3*H*)-dione,



H. 1-[2-deoxy-5-*O*-(1-methylethyl)-β-D-*threo*-pentofuranosyl]-5-methylpyrimidine-2,4(1*H*,3*H*)-dione,



I. 1-(5-*O*-benzoyl-2,3-dideoxy-β-D-*glycero*-pent-2-enofuranosyl)-5-methylpyrimidine-2,4(1*H*,3*H*)-dione.

**04/2015:1474**
**corrected 9.0**

# STEARIC ACID[(6)]

## Acidum stearicum

DEFINITION

Mixture consisting mainly of stearic (octadecanoic) acid ($C_{18}H_{36}O_2$; $M_r$ 284.5) and palmitic (hexadecanoic) acid ($C_{16}H_{32}O_2$; $M_r$ 256.4) obtained from fats or oils of vegetable or animal origin.

*Content*:

| | |
|---|---|
| Stearic acid 50 | *Stearic acid*: 40.0 per cent to 60.0 per cent.<br>*Sum of the contents of stearic and palmitic acids*: minimum 90.0 per cent. |
| Stearic acid 70 | *Stearic acid*: 60.0 per cent to 80.0 per cent.<br>*Sum of the contents of stearic and palmitic acids*: minimum 90.0 per cent. |
| Stearic acid 95 | *Stearic acid*: minimum 90.0 per cent.<br>*Sum of the contents of stearic and palmitic acids*: minimum 96.0 per cent. |

♦CHARACTERS

*Appearance*: white or almost white, waxy, flaky crystals, white or almost white hard masses, or white or yellowish-white powder.

*Solubility*: practically insoluble in water, soluble in ethanol (96 per cent) and in light petroleum (bp: 50-70 °C).♦

IDENTIFICATION

A. Freezing point (see Tests).

B. Acid value (*2.5.1*): 194 to 212, determined on 0.5 g.

C. Examine the chromatograms obtained in the assay.
*Results*: the principal peaks in the chromatogram obtained with the test solution are similar in retention time to those in the chromatogram obtained with the reference solution.

TESTS

◊**Appearance**. Heat the substance to be examined to about 75 °C. The resulting liquid is not more intensely coloured than reference solution $Y_7$ or $BY_7$ (*2.2.2, Method I*).◊

**Acidity**. Melt 5.0 g, shake for 2 min with 10 mL of hot *carbon dioxide-free water R*, cool slowly and filter. To the filtrate add 0.05 mL of *methyl orange solution R*. No red colour develops.

**Iodine value** (*2.5.4*). See Table 1474.-1.

**Freezing point** (*2.2.18*). See Table 1474.-1.

Table 1474.-1.

| Type | Iodine value | Freezing point (°C) |
|---|---|---|
| Stearic acid 50 | maximum 4.0 | 53 - 59 |
| Stearic acid 70 | maximum 4.0 | 57 - 64 |
| Stearic acid 95 | maximum 1.5 | 64 - 69 |

♦**Nickel** (*2.4.31*): maximum 1 ppm.♦

ASSAY

Gas chromatography (*2.2.28*): use the normalisation procedure.

*Test solution*. In a conical flask fitted with a reflux condenser, dissolve 0.100 g of the substance to be examined in 5 mL of *boron trifluoride-methanol solution R*. Boil under reflux for 10 min. Add 4.0 mL of *heptane R* through the condenser and boil again under reflux for 10 min. Allow to cool. Add 20 mL of a saturated solution of *sodium chloride R*. Shake and allow the layers to separate. Remove about 2 mL of the organic layer and dry it over 0.2 g of *anhydrous sodium sulfate R*. Dilute 1.0 mL of this solution to 10.0 mL with *heptane R*.

*Reference solution*. Prepare the reference solution in the same manner as the test solution using 50 mg of *palmitic acid CRS* and 50 mg of *stearic acid CRS* instead of the substance to be examined.

*Column*:
- *material*: fused silica;
- *size*: *l* = 30 m, Ø = 0.32 mm;
- *stationary phase*: *macrogol 20 000 R* (film thickness 0.5 µm).

*Carrier gas*: *helium for chromatography R*.

(6) This monograph has undergone pharmacopoeial harmonisation. See chapter *5.8. Pharmacopoeial harmonisation*.

*Flow rate*: 2.4 mL/min.

*Temperature*:

| | Time (min) | Temperature (°C) |
|---|---|---|
| Column | 0 - 2 | 70 |
| | 2 - 36 | 70 → 240 |
| | 36 - 41 | 240 |
| Injection port | | 220 |
| Detector | | 260 |

*Detection*: flame ionisation.

*Injection*: 1 µL.

*Relative retention* with reference to methyl stearate: methyl palmitate = about 0.9.

*System suitability*: reference solution:

- *resolution*: minimum 5.0 between the peaks due to methyl palmitate and methyl stearate;
- *repeatability*: maximum relative standard deviation of 3.0 per cent for the areas of the peaks due to methyl palmitate and methyl stearate, determined on 6 injections; maximum 1.0 per cent for the ratio of the areas of the peaks due to methyl palmitate to the areas of the peaks due to methyl stearate, determined on 6 injections.

LABELLING

The label states the type of stearic acid (50, 70, 95).

FUNCTIONALITY-RELATED CHARACTERISTICS

*This section provides information on characteristics that are recognised as being relevant control parameters for one or more functions of the substance when used as an excipient (see chapter 5.15). Some of the characteristics described in the Functionality-related characteristics section may also be present in the mandatory part of the monograph since they also represent mandatory quality criteria. In such cases, a cross-reference to the tests described in the mandatory part is included in the Functionality-related characteristics section. Control of the characteristics can contribute to the quality of a medicinal product by improving the consistency of the manufacturing process and the performance of the medicinal product during use. Where control methods are cited, they are recognised as being suitable for the purpose, but other methods can also be used. Wherever results for a particular characteristic are reported, the control method must be indicated.*

*The following characteristics may be relevant for stearic acid used as a lubricant in tablets and capsules.*

**Particle-size distribution** (*2.9.31*).

**Specific surface area** (*2.9.26, Method I*).

**04/2017:1268**

# STEAROYL MACROGOLGLYCERIDES

## Macrogolglyceridorum stearates

DEFINITION

Mixtures of monoesters, diesters and triesters of glycerol and monoesters and diesters of macrogols with a mean relative molecular mass between 300 and 4000.

They are obtained by partial alcoholysis of saturated oils containing mainly triglycerides of stearic (octadecanoic) acid, using macrogol, or by esterification of glycerol and macrogol with saturated fatty acids, or by mixing glycerol esters and condensates of ethylene oxide with the fatty acids of these hydrogenated oils.

The hydroxyl value is within 15 units of the nominal value. The saponification value is within 10 units of the nominal value.

CHARACTERS

*Appearance*: pale yellow waxy solid.

*Solubility*: dispersible in warm water and in warm liquid paraffin, freely soluble in methylene chloride, soluble in warm anhydrous ethanol.

IDENTIFICATION

A. Thin-layer chromatography (*2.2.27*).

*Test solution.* Dissolve 1.0 g of the substance to be examined in *methylene chloride R* and dilute to 20 mL with the same solvent.

*Plate*: *TLC silica gel plate R*.

*Mobile phase*: *hexane R*, *ether R* (30:70 *V/V*).

*Application*: 10 µL.

*Development*: over a path of 15 cm.

*Drying*: in air.

*Detection*: spray with a 0.1 g/L solution of *rhodamine B R* in *ethanol (96 per cent) R* and examine in ultraviolet light at 365 nm.

*Results*: the chromatogram shows a spot due to triglycerides with an $R_F$ value of about 0.9 ($R_{st}$ 1) and spots due to 1,3-diglycerides ($R_{st}$ 0.7), to 1,2-diglycerides ($R_{st}$ 0.6), to monoglycerides ($R_{st}$ 0.1) and to esters of macrogol ($R_{st}$ 0).

B. Hydroxyl value (see Tests).

C. Saponification value (see Tests).

D. Composition of fatty acids (see Tests).

TESTS

**Acid value** (*2.5.1*): maximum 2.0, determined on 2.0 g.

**Hydroxyl value** (*2.5.3, Method A*): within 15 units of the nominal value, determined on 1.0 g.

**Peroxide value** (*2.5.5, Method A*): maximum 6.0, determined on 2.0 g.

**Saponification value** (*2.5.6*): within 10 units of the nominal value, determined on 2.0 g.

**Alkaline impurities**. Introduce 5.0 g into a test-tube and carefully add a mixture, neutralised if necessary with *0.01 M hydrochloric acid* or with *0.01 M sodium hydroxide*, of 0.05 mL of a 0.4 g/L solution of *bromophenol blue R* in *ethanol (96 per cent) R*, 0.3 mL of *water R* and 10 mL of *ethanol (96 per cent) R*. Shake and allow to stand. Not more than 1.0 mL of *0.01 M hydrochloric acid* is required to change the colour of the upper layer to yellow.

**Free glycerol**: maximum 3.0 per cent.

Dissolve 1.20 g in 25.0 mL of *methylene chloride R*. Heat if necessary. After cooling, add 100 mL of *water R*. Shake and add 25.0 mL of *periodic acetic acid solution R*. Shake and allow to stand for 30 min. Add 40 mL of a 75 g/L solution of *potassium iodide R*. Allow to stand for 1 min. Add 1 mL of *starch solution R*. Titrate the iodine with *0.1 M sodium thiosulfate*. Carry out a blank titration.

1 mL of *0.1 M sodium thiosulfate* is equivalent to 2.3 mg of glycerol.

**Composition of fatty acids**. Gas chromatography (*2.4.22, Method A*).

*Composition of the fatty-acid fraction of the substance*:

- *lauric acid*: maximum 5.0 per cent;
- *myristic acid*: maximum 5.0 per cent;
- *stearic acid and palmitic acid*: different nominal amounts and minimum 90.0 per cent for the sum of $C_{18}H_{36}O_2$ and $C_{16}H_{32}O_2$.

**Ethylene oxide and dioxan** (*2.4.25*): maximum 1 ppm of ethylene oxide and maximum 10 ppm of dioxan.

**Water** (*2.5.12*): maximum 1.0 per cent, determined on 1.00 g. Use a mixture of 30 volumes of *anhydrous methanol R* and 70 volumes of *methylene chloride R* as solvent.

**Total ash** (*2.4.16*): maximum 0.2 per cent.

LABELLING

The label states:

- the nominal hydroxyl value;
- the nominal saponification value;
- the type of the macrogol used (mean relative molecular mass) or the number of moles of ethylene oxide reacted per mole of substance (nominal value).

FUNCTIONALITY-RELATED CHARACTERISTICS

*This section provides information on characteristics that are recognised as being relevant control parameters for one or more functions of the substance when used as an excipient (see chapter 5.15). Some of the characteristics described in the Functionality-related characteristics section may also be present in the mandatory part of the monograph since they also represent mandatory quality criteria. In such cases, a cross-reference to the tests described in the mandatory part is included in the Functionality-related characteristics section. Control of the characteristics can contribute to the quality of a medicinal product by improving the consistency of the manufacturing process and the performance of the medicinal product during use. Where control methods are cited, they are recognised as being suitable for the purpose, but other methods can also be used. Wherever results for a particular characteristic are reported, the control method must be indicated.*

*The following characteristics may be relevant for stearoyl macrogolglycerides used as self-emulsifying agents, solubilisers, modified-release agents and wetting agents.*

**Hydroxyl value** (see Tests).

**Saponification value** (see Tests).

**Composition of fatty acids** (see Tests).

**01/2008:0753**
**corrected 10.0**

# STEARYL ALCOHOL

## Alcohol stearylicus

DEFINITION

Mixture of solid alcohols, mainly octadecan-1-ol ($C_{18}H_{38}O$; $M_r$ 270.5), of animal or vegetable origin.

*Content*: minimum 95.0 per cent of $C_{18}H_{38}O$.

CHARACTERS

*Appearance*: white or almost white, unctuous flakes, granules or mass.

*Solubility*: practically insoluble in water, soluble in ethanol (96 per cent). When melted, it is miscible with fatty oils, with liquid paraffin and with melted wool fat.

IDENTIFICATION

Examine the chromatograms obtained in the assay.

*Results*: the principal peak in the chromatogram obtained with the test solution is similar in retention time to the principal peak in the chromatogram obtained with reference solution (b).

TESTS

**Appearance of solution**. The solution is clear (*2.2.1*) and not more intensely coloured than reference solution $B_6$ (*2.2.2, Method II*).

Dissolve 0.50 g in 20 mL of boiling *ethanol (96 per cent) R*. Allow to cool.

**Melting point** (*2.2.14*): 57 °C to 60 °C.

**Acid value** (*2.5.1*): maximum 1.0.

**Hydroxyl value** (*2.5.3, Method A*): 197 to 217.

**Iodine value** (*2.5.4, Method A*): maximum 2.0.

Dissolve 2.00 g in *methylene chloride R*, warming if necessary and dilute to 25 mL with the same solvent.

**Saponification value** (*2.5.6*): maximum 2.0.

ASSAY

Gas chromatography (*2.2.28*): use the normalisation procedure.

*Test solution*. Dissolve 0.100 g of the substance to be examined in *ethanol (96 per cent) R* and dilute to 10.0 mL with the same solvent.

*Reference solution (a)*. Dissolve 50 mg of *cetyl alcohol R* in *ethanol (96 per cent) R* and dilute to 10 mL with the same solvent.

*Reference solution (b)*. Dissolve 50 mg of *stearyl alcohol CRS* in *ethanol (96 per cent) R* and dilute to 5 mL with the same solvent.

*Reference solution (c)*. Mix 1 mL of reference solution (a) and 1 mL of reference solution (b) and dilute to 10 mL with *ethanol (96 per cent) R*.

*Column*:

- *size*: *l* = 30 m, Ø = 0.32 mm,
- *stationary phase*: *methylpolysiloxane R* (1 µm).

*Carrier gas*: *helium for chromatography R*.

*Flow rate*: 1 mL/min.

*Split ratio*: 1:100.

*Temperature*:

| | Time (min) | Temperature (°C) |
|---|---|---|
| Column | 0 - 20 | 150 → 250 |
| | 20 - 40 | 250 |
| Injection port | | 250 |
| Detector | | 250 |

*Detection*: flame ionisation.

*Injection*: 1 µL of the test solution and reference solutions (b) and (c).

*System suitability*: reference solution (c):

- *resolution*: minimum 5.0 between the peaks due to cetyl alcohol and stearyl alcohol.

Calculate the percentage content of $C_{18}H_{38}O$.

**01/2019:0356**
**corrected 10.0**

# STREPTOKINASE CONCENTRATED SOLUTION

## Streptokinasi solutio concentrata

DEFINITION

Streptokinase concentrated solution is a preparation of a protein obtained from culture filtrates of certain strains of haemolytic *Streptococcus* group C; it has the property of combining with human plasminogen to form plasminogen activator. It may contain buffer salts and other excipients. The potency is not less than 510 IU per microgram of nitrogen.

CHARACTERS

*Appearance*: clear, colourless liquid.

IDENTIFICATION

A. Place 0.5 mL of citrated human plasma in a polystyrene tube maintained in a water-bath at 37 °C. Add 0.1 mL of a dilution of the preparation to be examined containing 10 000 IU of streptokinase activity per millilitre in *phosphate buffer solution pH 7.2 R* and 0.1 mL of a solution of *human thrombin R* containing 20 IU/mL in *phosphate buffer solution pH 7.2 R*. Mix immediately. A clot forms and lyses within 30 min. Repeat the procedure using citrated bovine plasma. The clot does not lyse within 60 min.

B. Perform an immunochemical test using double immunodiffusion techniques (*2.7.1*). Place in the central cavity about 80 µL of goat or rabbit antistreptokinase serum containing about 10 000 units of antistreptokinase activity per millilitre; place in each of the surrounding cavities about 80 µL of a dilution of the preparation to be examined containing 125 000 IU of streptokinase activity per millilitre. Allow the plates to stand in a humidified tank for 24 h. Only one precipitation arc appears and it is well defined.

TESTS

**pH** (*2.2.3*): 6.8 to 7.5.

Dilute the preparation to be examined in *carbon dioxide-free water R* to obtain a solution containing at least 1000 000 IU of streptokinase activity per millilitre.

**Streptodornase**: maximum 10 IU of streptodornase activity per 100 000 IU of streptokinase activity.

*Test solution.* Dilute the preparation to be examined in *imidazole buffer solution pH 6.5 R* to obtain a solution containing 150 000 IU of streptokinase activity per millilitre.

*Reference solution.* Dissolve in *imidazole buffer solution pH 6.5 R* a reference preparation of streptodornase, calibrated in International Units against the International Standard of streptodornase, to obtain a solution containing 20 IU of streptodornase activity per millilitre. The equivalence in International Units of the International Standard is stated by the World Health Organization.

To each of 8 numbered centrifuge tubes, add 0.5 mL of a 1 g/L solution of *sodium deoxyribonucleate R* in *imidazole buffer solution pH 6.5 R*. To tube number 1 and tube number 2 add 0.25 mL of *imidazole buffer solution pH 6.5 R*, 0.25 mL of the test solution and, immediately, 3.0 mL of perchloric acid (25 g/L $HClO_4$). Mix, centrifuge at about 3000 *g* for 5 min and measure the absorbances (*2.2.25*) of the supernatant liquids at 260 nm, using as the compensation liquid a mixture of 1.0 mL of *imidazole buffer solution pH 6.5 R* and 3.0 mL of perchloric acid (25 g/L $HClO_4$) (absorbances $A_1$ and $A_2$). To the other 6 tubes (numbers 3 to 8) add 0.25 mL, 0.25 mL, 0.125 mL, 0.125 mL, 0 mL and 0 mL respectively of *imidazole buffer solution pH 6.5 R*; add to each tube 0.25 mL of the test solution and 0 mL, 0 mL, 0.125 mL, 0.125 mL, 0.25 mL and 0.25 mL respectively of the reference solution. Mix the contents of each tube and heat at 37 °C for 15 min. To each tube add 3.0 mL of perchloric acid (25 g/L $HClO_4$), mix and centrifuge. Measure the absorbances (*2.2.25*) of the supernatant liquids at 260 nm using the compensation liquid described above (absorbances $A_3$ to $A_8$). The absorbances comply with the following requirement:

$$(A_3 + A_4) - (A_1 + A_2) < \frac{(A_5 + A_6 + A_7 + A_8)}{2} - (A_3 + A_4)$$

**Streptolysin**. In a polystyrene tube, use a quantity of the preparation to be examined equivalent to 500 000 IU of streptokinase activity and dilute to 0.5 mL with a mixture of 1 volume of *phosphate buffer solution pH 7.2 R* and 9 volumes of a 9 g/L solution of *sodium chloride R*. Add 0.4 mL of a 23 g/L solution of *sodium thioglycollate R*. Heat in a water-bath at 37 °C for 10 min. Add 0.1 mL of a solution of a reference preparation of human antistreptolysin O containing 5 IU/mL. Heat at 37 °C for 5 min. Add 1 mL of *rabbit erythrocyte suspension R*. Heat at 37 °C for 30 min. Centrifuge at about 1000 *g*. In the same manner, prepare a polystyrene tube in which the solution of the preparation to be examined has been replaced by 0.5 mL of a mixture of 1 volume of *phosphate buffer solution pH 7.2 R* and 9 volumes of a 9 g/L solution of *sodium chloride R*. Measure the absorbances (*2.2.25*) of the supernatant liquids at 550 nm. The absorbance of the test solution is not more than 50 per cent greater than that of the reference solution.

**Related substances**. Liquid chromatography (*2.2.29*): use the normalisation procedure.

*Test solution.* Dilute the preparation to be examined with *water R* to obtain a concentration of about 0.5-1 g/L, depending on the chromatographic system used.

*Reference solution.* Dilute 1 volume of *streptokinase for system suitability CRS* with 49 volumes of *water R*.

*Column*:

- *size*: *l* = 0.10 m, Ø = 4.6 mm;
- *stationary phase*: *styrene-divinylbenzene copolymer R* (10 µm) with a pore size of 200 nm;
- *temperature*: 25 °C.

*Mobile phase*:

- *mobile phase A*: *trifluoroacetic acid R*, *water for chromatography R* (1:1000 *V/V*); degas;
- *mobile phase B*: *trifluoroacetic acid R*, *acetonitrile for chromatography R* (1:1000 *V/V*); degas;

| Time (min) | Mobile phase A (per cent *V/V*) | Mobile phase B (per cent *V/V*) |
|---|---|---|
| 0 - 1 | 68 | 32 |
| 1 - 4 | 68 → 52 | 32 → 48 |
| 4 - 5 | 52 | 48 |
| 5 - 7 | 0 | 100 |
| 7 - 10 | 68 | 32 |

The above conditions may be modified to improve the separation efficiency of the chromatographic system.

*Flow rate*: 5 mL/min.

*Detection*: spectrophotometer at 280 nm.

*Injection*: 20 µL.

*Retention time*: streptokinase = 2.3 min to 2.8 min.

*System suitability*: reference solution:

- *symmetry factor*: maximum 1.9 for the peak due to streptokinase;

– *peak-to-valley ratio*: minimum 2, where $H_p$ = height above the baseline of the 1st peak eluting after the principal peak and $H_v$ = height above the baseline of the lowest point of the curve separating this peak from the 2nd peak eluting after the principal peak;
– the chromatogram obtained with the reference solution is similar to the chromatogram supplied with *streptokinase for system suitability CRS*.

*Limit*:

– *total*: maximum 5 per cent.

**Bacterial endotoxins** (*2.6.14*): less than 0.02 IU per 100 IU of streptokinase activity, if intended for use without a further appropriate procedure for the removal of bacterial endotoxins.

ASSAY

**Nitrogen** (*2.5.9*).

**Potency**

The potency of streptokinase is determined by comparing its capacity to activate plasminogen to form plasmin with the same capacity of a reference preparation of streptokinase calibrated in International Units; the formation of plasmin is determined using a suitable chromogenic substrate.

The International Unit is the activity of a stated amount of the International Standard for streptokinase. The equivalence in International Units of the International Standard is stated by the World Health Organization.

*Reference and test solutions*

Prepare 2 independent series of at least 3 dilutions of each of the preparation to be examined and of the reference preparation of streptokinase in *tris(hydroxymethyl)aminomethane sodium chloride buffer solution pH 7.4 R1*, in the linear range of the assay (a range of 0.5-4.0 IU/mL has been found suitable). Prepare and maintain all solutions at 37 °C.

*Substrate solution*

Mix 1.0 mL of *tris(hydroxymethyl)aminomethane buffer solution pH 7.4 R* with 1.0 mL of *chromogenic substrate R3*. Add 5 µL of a 100 g/L solution of *polysorbate 20 R*. Keep at 37 °C in a water-bath. Immediately before commencing the activation assay, add 45 µL of a 1 mg/mL solution of *human plasminogen R*.

*Method*

Analyse each streptokinase dilution, maintained at 37 °C, in duplicate. Initiate the activation reaction by adding 60 µL of each dilution to 40 µL of substrate solution. For blank wells, use 60 µL of *tris(hydroxymethyl)aminomethane sodium chloride buffer solution pH 7.4 R1* instead of the reference and test solutions. Allow the reaction to proceed at 37 °C for 20 min and read the absorbance (*2.2.25*) at 405 nm. If a suitable thermostatted plate reader is available, this may be used to monitor the reaction. Alternatively, it may be necessary to stop the reaction after 20 min using 50 µL of a 50 per cent *V/V* solution of *glacial acetic acid R*. Best results are obtained when the absorbance for the highest streptokinase concentration is between 0.1 and 0.2 (after blank subtraction). If necessary, adjust the time of incubation in order to reach this range of absorbances.

Calculate the regression of the absorbance on log concentrations of the solutions of the preparation to be examined and of the reference preparation of streptokinase and calculate the potency of the preparation to be examined using a suitable statistical method, for example the parallel-line assay (*5.3*).

The estimated potency is not less than 90 per cent and not more than 111 per cent of the stated potency. The confidence limits ($P$ = 0.95) are not less than 80 per cent and not more than 125 per cent of the estimated potency.

STORAGE

In an airtight container, protected from light and at a temperature of – 20 °C. If the preparation is sterile, store in a sterile, airtight, tamper-evident container.

LABELLING

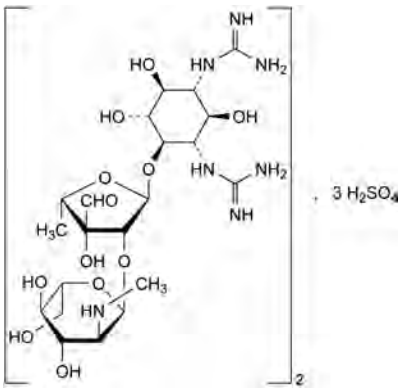
The label states:

– the number of International Units of streptokinase activity per milligram, calculated with reference to the dried preparation;
– that the preparation is suitable for use in the manufacture of parenteral preparations.

**01/2019:0053**
**corrected 10.0**

# STREPTOMYCIN SULFATE

## Streptomycini sulfas



$C_{42}H_{84}N_{14}O_{36}S_3$ $M_r$ 1457
[3810-74-0]

DEFINITION

Bis[$N^1$,$N^3$-dicarbamimidoyl-4-*O*-[5-deoxy-2-*O*-[2-deoxy-2-(methylamino)-α-L-glucopyranosyl]-3-*C*-formyl-α-L-lyxofuranosyl]-D-streptamine] trisulfate, a substance produced by the growth of certain strains of *Streptomyces griseus* or obtained by any other means. Stabilisers may be added. The potency is not less than 720 IU/mg, calculated with reference to the dried substance.

PRODUCTION

It is produced by methods of manufacture designed to eliminate or minimise substances lowering blood pressure.

CHARACTERS

A white or almost white powder, hygroscopic, very soluble in water, practically insoluble in anhydrous ethanol.

IDENTIFICATION

A. Examine by thin-layer chromatography (*2.2.27*), using a plate coated with a 0.75 mm layer of the following mixture: mix 0.3 g of *carbomer R* with 240 mL of *water R* and allow to stand, with moderate shaking, for 1 h; adjust to pH 7 by the gradual addition, with continuous shaking, of *dilute sodium hydroxide solution R* and add 30 g of *silica gel H R*.

Heat the plate at 110 °C for 1 h, allow to cool and use immediately.

*Test solution*. Dissolve 10 mg of the substance to be examined in *water R* and dilute to 10 mL with the same solvent.

*Reference solution (a).* Dissolve 10 mg of *streptomycin sulfate CRS* in *water R* and dilute to 10 mL with the same solvent.

*Reference solution (b).* Dissolve 10 mg of *kanamycin monosulfate CRS*, 10 mg of *neomycin sulfate CRS* and 10 mg of *streptomycin sulfate CRS* in *water R* and dilute to 10 mL with the same solvent.

Apply separately to the plate 10 µL of each solution. Develop over a path of 12 cm using a 70 g/L solution of *potassium dihydrogen phosphate R*. Dry the plate in a current of warm air, and spray with a mixture of equal volumes of a 2 g/L solution of *1,3-dihydroxynaphthalene R* in *ethanol (96 per cent) R* and a 460 g/L solution of *sulfuric acid R*. Heat at 150 °C for 5 min to 10 min. The principal spot in the chromatogram obtained with the test solution is similar in position, colour and size to the spot in the chromatogram obtained with reference solution (a). The test is not valid unless the chromatogram obtained with reference solution (b) shows three clearly separated spots.

B. Dissolve 5 mg to 10 mg in 4 mL of *water R* and add 1 mL of *1 M sodium hydroxide*. Heat in a water-bath for 4 min. Add a slight excess of *dilute hydrochloric acid R* and 0.1 mL of *ferric chloride solution R1*. A violet colour develops.

C. Dissolve 0.1 g in 2 mL of *water R*, add 1 mL of *α-naphthol solution R* and 2 mL of a mixture of equal volumes of *strong sodium hypochlorite solution R* and *water R*. A red colour develops.

D. Dissolve about 10 mg in 5 mL of *water R* and add 1 mL of *1 M hydrochloric acid*. Heat in a water-bath for 2 min. Add 2 mL of a 5 g/L solution of *α-naphthol R* in *1 M sodium hydroxide* and heat in a water-bath for 1 min. A faint yellow colour develops.

E. It gives the reactions of sulfates (*2.3.1*).

TESTS

**Solution S**. Dissolve 2.5 g in *carbon dioxide-free water R* and dilute to 10 mL with the same solvent.

**Appearance of solution**. Solution S is not more intensely coloured than intensity 3 of the range of reference solutions of the most appropriate colour (*2.2.2, Method II*). Allow to stand protected from light, at a temperature of about 20 °C for 24 h. Solution S is not more opalescent than reference suspension II (*2.2.1*).

**pH** (*2.2.3*). The pH of solution S is 4.5 to 7.0.

**Methanol**. Examine by gas chromatography (*2.2.28*).

*Test solution.* Dissolve 1.00 g of the substance to be examined in *water R* and dilute to 25.0 mL with the same solvent.

*Reference solution.* Dilute 12.0 mg of *methanol R* to 100 mL with *water R*.

The chromatographic procedure may be carried out using:

– a column 1.5 m to 2.0 m long and 2 mm to 4 mm in internal diameter, packed with *ethylvinylbenzene-divinylbenzene copolymer R* (150 µm to 180 µm),

– *nitrogen for chromatography R* as the carrier gas at a constant flow rate of 30 mL to 40 mL per minute,

– a flame-ionisation detector.

Maintain the column at a constant temperature between 120 °C and 140 °C and the injection port and the detector at a temperature at least 50 °C higher than that of the column. Inject the test solution and the reference solution. The area of the peak due to methanol in the chromatogram obtained with the test solution is not greater than the area of the peak in the chromatogram obtained with the reference solution (0.3 per cent).

**Streptomycin B**. Examine by thin-layer chromatography (*2.2.27*), using *silica gel G R* as the coating substance.

*Test solution.* Dissolve 0.2 g of the substance to be examined in a freshly prepared mixture of 3 volumes of *sulfuric acid R* and 97 volumes of *methanol R* and dilute to 5 mL with the same mixture of solvents. Heat under a reflux condenser for 1 h, cool, rinse the condenser with *methanol R* and dilute to 20 mL with the same solvent (10 g/L solution).

*Reference solution.* Dissolve 36 mg of *mannose R* in a freshly prepared mixture of 3 volumes of *sulfuric acid R* and 97 volumes of *methanol R* and dilute to 5 mL with the same mixture of solvents. Heat under a reflux condenser for 1 h, cool, rinse the condenser with *methanol R* and dilute to 50 mL with the same solvent. Dilute 5 mL of the solution to 50 mL with *methanol R* (0.3 g/L solution expressed as strepto-mycin B; 1 mg of *mannose R* is equivalent to 4.13 mg of streptomycin B).

Apply separately to the plate 10 µL of each solution. Develop over a path of 13 cm to 15 cm using a mixture of 25 volumes of *glacial acetic acid R*, 25 volumes of *methanol R* and 50 volumes of *toluene R*. Allow the plate to dry in air and spray with a freshly prepared mixture of equal volumes of a 2 g/L solution of *1,3-dihydroxynaphthalene R* in *ethanol (96 per cent) R* and a 20 per cent *V/V* solution of *sulfuric acid R* and heat at 110 °C for 5 min. Any spot corresponding to streptomycin B in the chromatogram obtained with the test solution is not more intense than the spot in the chromatogram obtained with the reference solution (3.0 per cent).

**Loss on drying** (*2.2.32*). Not more than 7.0 per cent, determined on 1.000 g by drying at 60 °C over *diphosphorus pentoxide R* at a pressure not exceeding 0.1 kPa for 24 h.

**Sulfated ash** (*2.4.14*). Not more than 1.0 per cent, determined on 1.000 g.

**Sulfate**. 18.0 per cent to 21.5 per cent of sulfate ($SO_4$), calculated with reference to the dried substance. Dissolve 0.250 g in 100 mL of *water R* and adjust the solution to pH 11 using *concentrated ammonia R*. Add 10.0 mL of *0.1 M barium chloride* and about 0.5 mg of *phthalein purple R*. Titrate with *0.1 M sodium edetate* adding 50 mL of *ethanol (96 per cent) R* when the colour of the solution begins to change and continue the titration until the violet-blue colour disappears.

1 mL of *0.1 M barium chloride* is equivalent to 9.606 mg of sulfate ($SO_4$).

**Colorimetric test**. Dry the substance to be examined and *streptomycin sulfate CRS* at 60 °C over *diphosphorus pentoxide R* at a pressure not exceeding 0.1 kPa for 24 h. Dissolve 0.100 g of the dried substance to be examined in *water R* and dilute to 100.0 mL with the same solvent. Prepare a reference solution in the same manner using 0.100 g of the dried *streptomycin sulfate CRS*. Place 5.0 mL of each solution separately in two volumetric flasks and in a third flask place 5 mL of *water R*. To each flask add 5.0 mL of *0.2 M sodium hydroxide* and heat for exactly 10 min in a water-bath. Cool in ice for exactly 5 min, add 3 mL of a 15 g/L solution of *ferric ammonium sulfate R* in *0.5 M sulfuric acid*, dilute to 25.0 mL with *water R* and mix. Exactly 20 min after the addition of the ferric ammonium sulfate solution measure the absorbance (*2.2.25*) of the test solution and the reference solution in a 2 cm cell at the maximum at 525 nm, using as compensation liquid the solution prepared from 5 mL of *water R*. The absorbance of the test solution is not less than 90.0 per cent of that of the reference solution.

**Bacterial endotoxins** (*2.6.14*): less than 0.25 IU/mg, if intended for use in the manufacture of parenteral preparations without a further appropriate procedure for removal of bacterial endotoxins.

ASSAY

Carry out the microbiological assay of antibiotics (*2.7.2*).

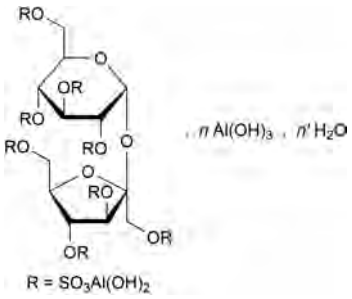
STORAGE

Store in an airtight container. If the substance is sterile, store in a sterile, airtight, tamper-evident container.

01/2020:1796

# SUCRALFATE

## Sucralfatum



$C_{12}H_{30}Al_8O_{51}S_8[Al(OH)_3]_n[H_2O]_{n'}$

in which $n$ = 8 to 10 and $n'$ = 22 to 31

DEFINITION

β-D-Fructofuranosyl-α-D-glucopyranoside octakis(dihydroxyaluminium sulfate) with 8-10 molecules of aluminium hydroxide and 22-31 molecules of water.

*Content*:

- *β-D-fructofuranosyl-α-D-glucopyranoside octakis(sulfate)* (*sucrose octasulfate*) ($C_{12}H_{14}O_{35}S_8^{8-}$; $M_r$ 975): 30.0 per cent to 38.0 per cent;
- *aluminium* (Al; $A_r$ 26.98): 15.5 per cent to 18.5 per cent.

CHARACTERS

*Appearance*: white or almost white, amorphous powder.

*Solubility*: practically insoluble in water, in ethanol (96 per cent) and in methylene chloride. It dissolves in dilute solutions of mineral acids and alkali hydroxides.

IDENTIFICATION

A. Infrared absorption spectrophotometry (*2.2.24*).

*Comparison*: *sucralfate CRS*.

B. To 2 g add 10 mL of a 10.3 g/L solution of *hydrochloric acid R* and boil. Cool and neutralise with a 4 g/L solution of *sodium hydroxide R*. To 5 mL of the solution add 0.15 mL of freshly prepared *copper sulfate solution R* and 2 mL of freshly prepared *dilute sodium hydroxide solution R*. The solution is blue and clear and remains so after boiling. To the hot solution add 4 mL of *dilute hydrochloric acid R* and boil for 1 min. Add 4 mL of *dilute sodium hydroxide solution R*; an orange precipitate is formed immediately.

C. Dissolve about 15 mg in a mixture of 0.5 mL of *dilute hydrochloric acid R* and 2 mL of *water R*. The solution gives the reaction of aluminium (*2.3.1*).

TESTS

**Impurity A**. Liquid chromatography (*2.2.29*).

*Test solution.* Dissolve 450.0 mg of the substance to be examined in a mixture of equal volumes of an 88 g/L solution of *sodium hydroxide R* and a 196.2 g/L solution of *sulfuric acid R* and dilute to 10.0 mL with the same mixture of solvents. Without delay, while shaking at a moderate rate, add a volume (*V*), accurately measured in millilitres, of a 4 g/L solution of *sodium hydroxide R* to adjust the solution to approximately pH 2.3. Dilute the solution with (15.0 − *V*) mL of *water R*. Shake for 1 min. If the pH is not between 2.3 and 3.5, repeat the test using a different volume of a 4 g/L solution of *sodium hydroxide R*.

*Reference solution (a).* Dissolve 40.0 mg of *potassium sucrose octasulfate CRS* in the mobile phase and dilute to 5.0 mL with the mobile phase.

*Reference solution (b).* Dilute 1.0 mL of reference solution (a) to 10.0 mL with the mobile phase.

*Column*:

- *size*: *l* = 0.25 m, Ø = 4.0 mm;
- *stationary phase*: *aminopropylsilyl silica gel for chromatography R* (5 µm).

*Mobile phase*: 70 g/L solution of *ammonium sulfate R*, adjusted to pH 3.5 with *phosphoric acid R*.

*Flow rate*: 1 mL/min.

*Detection*: differential refractometer.

*Injection*: 50 µL of the test solution and reference solution (b).

*Relative retention* with reference to sucrose octasulfate (retention time = about 6 min): impurity A = about 0.6.

*System suitability*: reference solution (b):

- *number of theoretical plates*: minimum 400;
- *symmetry factor*: maximum 4.0.

*Limit*:

- *impurity A*: not more than 1.5 times the area of the principal peak in the chromatogram obtained with reference solution (b) (5.0 per cent).

**Neutralising capacity**. Disperse 0.25 g in 100.0 mL of *0.1 M hydrochloric acid*, previously heated at 37 °C, stir continuously for 1 h in a water-bath at 37 °C and cool. Titrate 20.0 mL of this solution with *0.1 M sodium hydroxide* to pH 3.5; not more than 14.0 mL of *0.1 M sodium hydroxide* is required.

**Chlorides** (*2.4.4*): maximum 0.50 per cent.

Dissolve 0.10 g in 5 mL of *dilute nitric acid R* and dilute to 50 mL with *water R*. Dilute 5 mL of this solution to 15 mL with *water R*.

ASSAY

**Aluminium**. Disperse 1.0 g in 10 mL of *6 M hydrochloric acid R*. Heat with continuous stirring in a water-bath at 70 °C for 5 min. Cool to room temperature, transfer quantitatively to a volumetric flask, dilute to 250.0 mL with *water R*, and mix. Filter the solution, discarding the 1st portion of the filtrate. To 10.0 mL of the solution, add 10.0 mL of *0.1 M sodium edetate* and 30 mL of a mixture of equal volumes of *ammonium acetate solution R* and *dilute acetic acid R*. Heat in a water-bath at 70 °C for 5 min, then cool. Add 25 mL of *ethanol (96 per cent) R* and 1 mL of a freshly prepared 0.25 g/L solution of *dithizone R* in *ethanol (96 per cent) R*. Titrate the excess of sodium edetate with *0.1 M zinc sulfate* until the colour changes to pink.

1 mL of *0.1 M sodium edetate* is equivalent to 2.698 mg of Al.

**Sucrose octasulfate**. Liquid chromatography (*2.2.29*) as described in the test for impurity A with the following modifications.

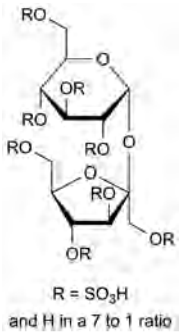
*Mobile phase*: 132 g/L solution of *ammonium sulfate R*, adjusted to pH 3.5 with *phosphoric acid R*.

*Injection*: test solution and reference solution (a).

Calculate the percentage content of $C_{12}H_{14}O_{35}S_8$ taking into account the assigned content of *potassium sucrose octasulfate CRS* and by multiplying the potassium sucrose octasulfate content by 0.757.

IMPURITIES

*Specified impurities: A.*

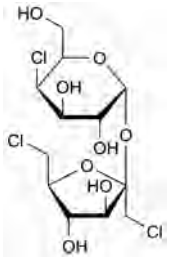


A. β-D-fructofuranosyl-α-D-glucopyranoside heptakis(hydrogen sulfate).

**07/2017:2368**

# SUCRALOSE

## Sucralosum



$C_{12}H_{19}Cl_3O_8$ $M_r$ 397.6
[56038-13-2]

DEFINITION

1,6-Dichloro-1,6-dideoxy-β-D-fructofuranosyl 4-chloro-4-deoxy-α-D-galactopyranoside.

*Content*: 98.0 per cent to 102.0 per cent (anhydrous substance).

CHARACTERS

*Appearance*: white or almost white, crystalline powder.

*Solubility*: freely soluble in water, soluble in anhydrous ethanol, slightly soluble in ethyl acetate.

IDENTIFICATION

A. Specific optical rotation (see Tests).

B. Infrared absorption spectrophotometry (*2.2.24*).
*Comparison*: *sucralose CRS*.

TESTS

**Specific optical rotation** (*2.2.7*): + 84.0 to + 87.5 (anhydrous substance).

Dissolve 2.50 g in *water R* and dilute to 25.0 mL with the same solvent.

**Impurities H and I**

*Test solution*. Dissolve 2.5 g of the substance to be examined in *methanol R* and dilute to 10.0 mL with the same solvent.

*Reference solution (a)*. Dissolve 1.0 g of *mannitol R* in *water R* and dilute to 10.0 mL with the same solvent.

*Reference solution (b)*. Dissolve 1.0 g of *mannitol R* and 4.0 mg of *fructose R* in *water R* and dilute to 10.0 mL with the same solvent.

*Plate*: *TLC silica gel plate R*.

*Application*: 5 µL by applying the solution slowly in 1 µL aliquots and allowing the plate to dry between applications; the 3 spots must be of a similar size.

*Detection*: spray with a solution prepared as follows: dissolve 1.23 g of *p-anisidine R* and 1.66 g of *phthalic acid R* in 100 mL of *methanol R*; store the solution in darkness and in a refrigerator to prevent it becoming discoloured; discard if the solution becomes discoloured; heat the plate at 100 ± 2 °C for 15 min and examine immediately against a dark background.

*System suitability*: the spot due to mannitol obtained with reference solution (a) is colourless; darkening of the mannitol spot indicates that the plate has been held for too long in the oven and a 2nd plate has to be prepared.

*Limit*:

– *sum of impurities H and I*: any spot is not more intense than the spot due to fructose obtained with reference solution (b) (0.1 per cent).

**Related substances**. Thin-layer chromatography (*2.2.27*).

*Test solution*. Dissolve 1.0 g of the substance to be examined in *methanol R* and dilute to 10.0 mL with the same solvent.

*Reference solution (a)*. Dilute 0.5 mL of the test solution to 100.0 mL with *methanol R*.

*Reference solution (b)*. Dissolve the contents of a vial of *sucralose impurity B CRS* in 1.0 mL of the test solution.

*Plate*: *TLC octadecylsilyl silica gel plate R*.

*Mobile phase*: *acetonitrile R*, 50 g/L solution of *sodium chloride R* (30:70 *V/V*).

*Application*: 5 µL.

*Development*: over 3/4 of the plate.

*Drying*: in air.

*Detection*: spray with a 15 per cent *V/V* solution of *sulfuric acid R* in *methanol R* and heat at 125 °C for 10 min.

*Retardation factors*: impurity A = about 0.3; impurity B = about 0.35; sucralose = about 0.45; impurity F = about 0.67; impurity G = about 0.70; impurity E = about 0.72; impurity D = about 0.8.

*System suitability*: reference solution (b):

– the chromatogram shows 2 clearly separated spots due to impurity B and sucralose.

*Limits*:

– *impurities A, B, D, E, F, G*: any spot, apart from the principal spot, is not more intense than the spot in the chromatogram obtained with reference solution (a) (0.5 per cent).

**Water** (*2.5.12*): maximum 2.0 per cent, determined on 0.500 g.

**Sulfated ash** (*2.4.14*): maximum 0.7 per cent, determined on 1.0 g.

ASSAY

Liquid chromatography (*2.2.29*).

*Test solution*. Dissolve 0.25 g of the substance to be examined in the mobile phase and dilute to 25.0 mL with the mobile phase.

*Reference solution*. Dissolve 0.25 g of *sucralose CRS* in the mobile phase and dilute to 25.0 mL with the mobile phase.

*Column*:

– *size*: *l* = 0.10 m, Ø = 4.6 mm;

– *stationary phase*: *octadecylsilyl silica gel for chromatography R* (5 µm).

*Mobile phase*: *acetonitrile R*, *water R* (15:85 *V/V*).

*Flow rate*: 1.5 mL/min.

*Detection*: refractometer maintained at a constant temperature.

*Injection*: 20 µL.

*Retention time*: sucralose = about 3 min.

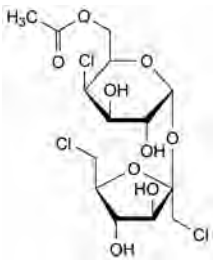
*System suitability*: reference solution:

– *symmetry factor*: maximum 2.0 for the peak due to sucralose.

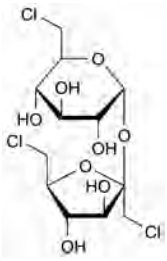
Calculate the percentage content of $C_{12}H_{19}Cl_3O_8$ taking into account the assigned content of *sucralose CRS*.

IMPURITIES

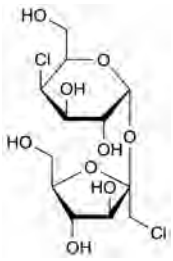
*Specified impurities*: *A, B, D, E, F, G, H, I.*



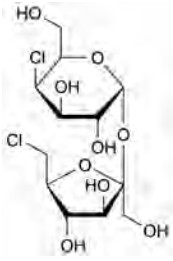
A. 1,6-dichloro-1,6-dideoxy-β-D-fructofuranosyl 6-*O*-acetyl-4-chloro-4-deoxy-α-D-galactopyranoside (6-*O*-acetylsucralose),



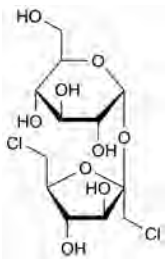
B. 1,6-dichloro-1,6-dideoxy-β-D-fructofuranosyl 6-chloro-6-deoxy-α-D-glucopyranoside (1′,6,6′-trichloro-1′,6,6′-trideoxysucrose),



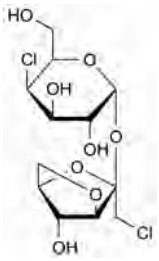
D. 1-chloro-1-deoxy-β-D-fructofuranosyl 4-chloro-4-deoxy-α-D-galactopyranoside (1′,4-dichloro-1′,4-dideoxygalactosucrose),



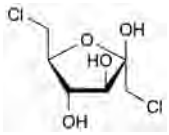
E. 6-chloro-6-deoxy-β-D-fructofuranosyl 4-chloro-4-deoxy-α-D-galactopyranoside (4,6′-dichloro-4,6′-dideoxygalactosucrose),



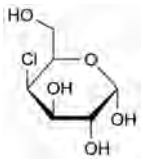
F. 1,6-dichloro-1,6-dideoxy-β-D-fructofuranosyl α-D-glucopyranoside (1′,6′-dichloro-1′,6′-dideoxysucrose),



G. 3,6-anhydro-1-chloro-1-deoxy-β-D-fructofuranosyl 4-chloro-4-deoxy-α-D-galactopyranoside (3′,6′-anhydro-1′,4-dichloro-1′,4-dideoxygalactosucrose),



H. 1,6-dichloro-1,6-dideoxy-β-D-fructofuranose,

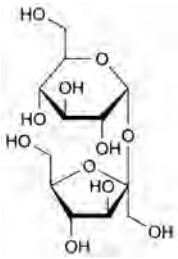


I. 4-chloro-4-deoxy-α-D-galactopyranose.

**01/2016:0204**

# SUCROSE[7]

## Saccharum



$C_{12}H_{22}O_{11}$ $M_r$ 342.3

[57-50-1]

DEFINITION

β-D-Fructofuranosyl α-D-glucopyranoside.

It contains no additives.

♦CHARACTERS

*Appearance*: white or almost white, crystalline powder, or lustrous, colourless or white or almost white crystals.

*Solubility*: very soluble in water, slightly soluble in ethanol (96 per cent), practically insoluble in anhydrous ethanol.

IDENTIFICATION

*First identification: A.*

*Second identification: B, C.*

A. Infrared absorption spectrophotometry (*2.2.24*).
*Comparison*: *sucrose CRS.*

B. Thin-layer chromatography (*2.2.27*).

(7) This monograph has undergone pharmacopoeial harmonisation. See chapter *5.8. Pharmacopoeial harmonisation.*

*Test solution.* Dissolve 10 mg of the substance to be examined in a mixture of 2 volumes of *water R* and 3 volumes of *methanol R* and dilute to 20 mL with the same mixture of solvents.

*Reference solution (a).* Dissolve 10 mg of *sucrose CRS* in a mixture of 2 volumes of *water R* and 3 volumes of *methanol R* and dilute to 20 mL with the same mixture of solvents.

*Reference solution (b).* Dissolve 10 mg of *fructose R*, 10 mg of *glucose R*, 10 mg of *lactose monohydrate R* and 10 mg of *sucrose R* in a mixture of 2 volumes of *water R* and 3 volumes of *methanol R* and dilute to 20 mL with the same mixture of solvents.

*Plate*: *TLC silica gel G plate R.*

*Mobile phase*: *cold saturated boric acid solution R*, 60 per cent *V/V* solution of *glacial acetic acid R*, *anhydrous ethanol R*, *acetone R*, *ethyl acetate R* (10:15:20:60:60 *V/V/V/V/V*).

*Application*: 2 µL.

*Development*: in an unsaturated tank, over 3/4 of the plate.

*Drying*: in a current of warm air.

*Detection*: spray with a solution of 0.5 g of *thymol R* in a mixture of 5 mL of *sulfuric acid R* and 95 mL of *ethanol (96 per cent) R*. Heat the plate at 130 °C for 10 min.

*System suitability*: the chromatogram obtained with reference solution (b) shows 4 clearly separated spots.

*Results*: the principal spot in the chromatogram obtained with the test solution is similar in position, colour and size to the principal spot in the chromatogram obtained with reference solution (a).

C. Dilute 1 mL of solution S (see Tests) to 100 mL with *water R*. To 5 mL of the solution add 0.15 mL of freshly prepared *copper sulfate solution R* and 2 mL of freshly prepared *dilute sodium hydroxide solution R*. The solution is blue and clear and remains so after boiling. To the hot solution add 4 mL of *dilute hydrochloric acid R* and boil for 1 min. Add 4 mL of *dilute sodium hydroxide solution R*. An orange precipitate is formed immediately. ♦

TESTS

**Solution S**. Dissolve 50.0 g in *water R* and dilute to 100 mL with the same solvent.

**Appearance of solution**. Solution S is clear (*2.2.1*).

**Conductivity** (*2.2.38*): maximum 35 µS·cm$^{-1}$ at 20 °C.

Dissolve 31.3 g in *carbon dioxide-free water R* prepared from *distilled water R* and dilute to 100 mL with the same solvent. Measure the conductivity of the solution ($C_1$), while gently stirring with a magnetic stirrer, and that of the water used for preparing the solution ($C_2$). The readings must be stable within 1 per cent over a period of 30 s. Calculate the conductivity of the solution of the substance to be examined using the following expression:

$$C_1 - 0.35\,C_2$$

**Specific optical rotation** (*2.2.7*): + 66.3 to + 67.0.

Dissolve 26.0 g in *water R* and dilute to 100.0 mL with the same solvent.

♦**Colour value**: maximum 45.

Dissolve 50.0 g in 50.0 mL of *water R*. Mix, filter (diameter of pores 0.45 µm) and degas. Measure the absorbance (*2.2.25*) at 420 nm, using a minimum path length of 4 cm (a path length of 10 cm or more is preferred).

Calculate the colour value using the following expression:

$$\frac{A \times 1000}{b \times c}$$

$A$ = absorbance measured at 420 nm;

$b$ = path length in centimetres;

$c$ = concentration of the solution, in grams per millilitre, calculated from the refractive index (*2.2.6*) of the solution; use Table 0204.-1 and interpolate the values if necessary.

Table 0204.-1

| $n_D^{20}$ | $c$ (g/mL) |
|---|---|
| 1.4138 | 0.570 |
| 1.4159 | 0.585 |
| 1.4179 | 0.600 |
| 1.4200 | 0.615 |
| 1.4221 | 0.630 |
| 1.4243 | 0.645 |
| 1.4264 | 0.661 |

*System suitability*:

– *repeatability*: the absolute difference between 2 results is not greater than 3. ♦

**Dextrins**. If intended for use in the manufacture of large-volume parenteral preparations, it complies with the test for dextrins. To 2 mL of solution S add 8 mL of *water R*, 0.05 mL of *dilute hydrochloric acid R* and 0.05 mL of *0.05 M iodine*. The solution remains yellow.

**Reducing sugars**. To 5 mL of solution S in a test-tube about 150 mm long and 16 mm in diameter add 5 mL of *water R*, 1.0 mL of *1 M sodium hydroxide* and 1.0 mL of a 1 g/L solution of *methylene blue R*. Mix and place in a water-bath. After exactly 2 min, take the tube out of the bath and examine the solution immediately. The blue colour does not disappear completely. Ignore any blue colour at the air/solution interface.

**Sulfites**: maximum 10 ppm, calculated as $SO_2$.

Determine the sulfites content by a suitable enzymatic method based on the following reactions. Sulfite is oxidised by sulfite oxidase to sulfate and hydrogen peroxide which in turn is reduced by nicotinamide-adenine dinucleotide-peroxidase in the presence of reduced nicotinamide-adenine dinucleotide (NADH). The amount of NADH oxidised is proportional to the amount of sulfite.

*Test solution.* Dissolve 4.0 g of the substance to be examined in freshly prepared *distilled water R* and dilute to 10.0 mL with the same solvent.

*Reference solution.* Dissolve 4.0 g of the substance to be examined in freshly prepared *distilled water R*, add 0.5 mL of *sulfite standard solution (80 ppm $SO_2$) R* and dilute to 10.0 mL with freshly prepared *distilled water R*.

*Blank solution.* Freshly prepared *distilled water R*.

Separately introduce 2.0 mL each of the test solution, the reference solution and the blank in 10 mm cuvettes and add the reagents as described in the instructions in the kit for sulfite determination. Measure the absorbance (*2.2.25*) at the absorption maximum at about 340 nm before and at the end of the reaction time and subtract the value obtained with the blank.

The absorbance difference of the test solution is not greater than half the absorbance difference of the reference solution.

**Loss on drying** (*2.2.32*): maximum 0.1 per cent, determined on 2.000 g by drying in an oven at 105 °C for 3 h.

**Bacterial endotoxins** (*2.6.14*): less than 0.25 IU/mg, if intended for use in the manufacture of large-volume parenteral preparations.

LABELLING

The label states, where applicable, that the substance is suitable for use in the manufacture of large-volume parenteral preparations.

**04/2018:2797**

# SUCROSE, LIQUID

## Saccharum liquidum

DEFINITION

Aqueous solution of sucrose.

*Content*:

– *dry matter*: 66.0 per cent *m/m* to 67.5 per cent *m/m*.

CHARACTERS

*Appearance*: clear, colourless or pale yellow, viscous liquid.

*Solubility*: miscible with glycerol.

IDENTIFICATION

A. Liquid chromatography (*2.2.29*) as described in the test for related substances with the following modification.

*Injection*: test solution (b) and reference solution (c).

*Results*: the principal peak in the chromatogram obtained with test solution (b) is similar in retention time and size to the principal peak in the chromatogram obtained with reference solution (c).

B. Dilute 75 g to 100 mL with *water R*. Dilute 1 mL of the solution to 100 mL with *water R*. To 5 mL of this solution add 0.15 mL of freshly prepared *copper sulfate solution R* and 2 mL of freshly prepared *dilute sodium hydroxide solution R*. The solution is blue and clear and remains so after boiling. To the hot solution add 4 mL of *dilute hydrochloric acid R* and boil for 1 min. Add 4 mL of *dilute sodium hydroxide solution R*. An orange precipitate is formed immediately.

TESTS

**Colour value**: maximum 30.

Dilute a quantity of the substance to be examined corresponding to 50.0 g of dry matter (see Tests) to 100.0 g with *water R*. Filter through a membrane filter (nominal pore size 0.45 µm) and allow to stand for about 15 min. Measure the absorbance (*2.2.25*) at 420 nm, using a minimum path length of 5 cm (a path length of 10 cm or more is preferred).

Calculate the colour value using the following expression:

$$\frac{A \times 1000}{b \times c}$$

$A$ = absorbance measured at 420 nm;

$b$ = path length, in centimetres;

$c$ = concentration of the solution obtained, in grams per millilitre, calculated from the refractive index (*2.2.6*) of the solution; use Table 2797.-1 and interpolate the values if necessary.

Table 2797.-1

| $n_D^{20}$ | $c$ (g/mL) |
|---|---|
| 1.4138 | 0.570 |
| 1.4159 | 0.585 |
| 1.4179 | 0.600 |
| 1.4200 | 0.615 |
| 1.4221 | 0.630 |
| 1.4243 | 0.645 |
| 1.4264 | 0.661 |

*System suitability*:

– *repeatability*: the absolute difference between 2 results is not greater than 3.

**Conductivity** (*2.2.38*): maximum 35 µS·cm$^{-1}$ at 20 °C.

Dilute a quantity of the substance to be examined corresponding to 31.3 ± 0.1 g of dry matter (see Tests) to 100.0 mL with *carbon dioxide-free water R*. Measure the conductivity of the solution ($C_1$), while gently stirring with a magnetic stirrer, and that of the water used for preparing the solution ($C_2$). The readings must be stable within 1 per cent over a period of 30 s. Calculate the conductivity of the solution of the substance to be examined using the following expression:

$$C_1 - 0.35\ C_2$$

**Related substances**. Liquid chromatography (*2.2.29*).

*Test solution (a)*. Dilute 0.200 g of the substance to be examined to 10.0 mL with *water R*.

*Test solution (b)*. Dilute 1.0 mL of test solution (a) to 20.0 mL with *water R*.

*Reference solution (a)*. Dilute 1.0 mL of test solution (a) to 200.0 mL with *water R*.

*Reference solution (b)*. Dissolve 10.0 mg of *raffinose pentahydrate R* (impurity A) and 14.0 mg of *glucose R* (impurity C) in *water R* and dilute to 50.0 mL with the same solvent. To 1.0 mL of the solution add 26.0 mg of *sucrose CRS* and dilute to 2.0 mL with *water R*.

*Reference solution (c)*. Dissolve 33.0 mg of *sucrose CRS* in *water R* and dilute to 5.0 mL with the same solvent. Dilute 1.0 mL of the solution to 10.0 mL with *water R*.

*Precolumn*:

– *size*: *l* = 0.03 m, Ø = 8.0 mm;

– *stationary phase*: *strong cation-exchange resin (calcium form) R* (9 µm).

*Column*:

– *size*: *l* = 0.30 m, Ø = 7.8 mm;

– *stationary phase*: *strong cation-exchange resin (calcium form) R* (9 µm);

– *temperature*: 80 ± 1 °C.

*Mobile phase*: *water for chromatography R*.

*Flow rate*: 0.5 mL/min.

*Detection*: differential refractometer maintained at a constant temperature (about 40 °C).

*Injection*: 10 µL of test solution (a) and reference solutions (a) and (b).

*Run time*: 3 times the retention time of sucrose.

*Identification of impurities*: use the chromatogram obtained with reference solution (b) to identify the peaks due to impurities A (or B) and C.

Impurity A is present in sucrose obtained from sugar beet and impurity B is present in sucrose obtained from sugar cane.

*Relative retention* with reference to sucrose (retention time = about 10 min): impurities A and B = about 0.9; impurity C = about 1.2.

*System suitability*: reference solution (b):

– *peak-to-valley ratio*: minimum 2.5, where $H_p$ = height above the baseline of the peak due to impurity A and $H_v$ = height above the baseline of the lowest point of the curve separating this peak from the peak due to sucrose; minimum 2.5, where $H_p$ = height above the baseline of the peak due to impurity C and $H_v$ = height above the baseline of the lowest point of the curve separating this peak from the peak due to sucrose.

*Calculation of percentage contents*:

– for each impurity, use the concentration of sucrose in reference solution (a).

*Limits*:

– *impurity C*: maximum 0.7 per cent;

– *unspecified impurities*: for each impurity, maximum 0.5 per cent;

– *total*: maximum 2.0 per cent;

– *reporting threshold*: 0.05 per cent.

**Sulfites**: maximum 10 ppm, calculated as $SO_2$.

Determine the sulfites content by a suitable enzymatic method based on the following reactions. Sulfite is oxidised by sulfite oxidase to sulfate and hydrogen peroxide which in turn is reduced by nicotinamide-adenine dinucleotide-peroxidase in the presence of reduced nicotinamide-adenine dinucleotide (NADH). The amount of NADH oxidised is proportional to the amount of sulfite.

*Test solution*. Dilute 4.0 g of the substance to be examined to 10.0 mL with freshly prepared *distilled water R*.

*Reference solution*. To 4.0 g of the substance to be examined add 0.5 mL of *sulfite standard solution (80 ppm $SO_2$) R* and dilute to 10.0 mL with freshly prepared *distilled water R*.

*Blank solution*: freshly prepared *distilled water R*.

Separately introduce 2.0 mL each of the test solution, the reference solution and the blank solution into 10 mm cuvettes and add the reagents as described in the instructions in the kit for sulfite determination. Measure the absorbance (*2.2.25*) at the absorption maximum at about 340 nm before and at the end of the reaction time and subtract the value obtained with the blank.

The absorbance difference of the test solution is not greater than half the absorbance difference of the reference solution.

**Dry matter**. Determine the refractive index (*2.2.6*). Use Table 2797.-2 and interpolate the values if necessary.

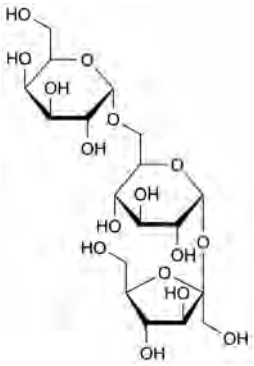
Table 2797.-2

| Dry matter (per cent *m/m*) | $n_D^{20}$ |
|---|---|
| 65 | 1.453478 |
| 66 | 1.455839 |
| 67 | 1.458217 |
| 68 | 1.460613 |
| 69 | 1.463026 |

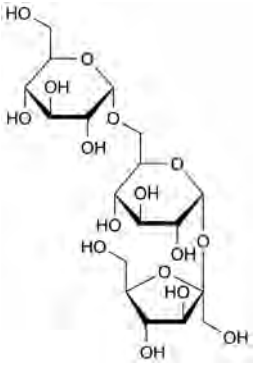
IMPURITIES

*Specified impurities: C.*

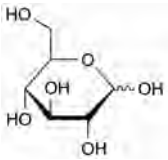
*Other detectable impurities* (the following substances would, if present at a sufficient level, be detected by one or other of the tests in the monograph. They are limited by the general acceptance criterion for other/unspecified impurities. It is therefore not necessary to identify these impurities for demonstration of compliance. See also *5.10. Control of impurities in substances for pharmaceutical use*): *A, B, D.*



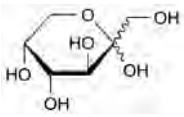
A. β-D-fructofuranosyl α-D-galactopyranosyl-(1→6)-α-D-glucopyranoside (raffinose),



B. β-D-fructofuranosyl α-D-glucopyranosyl-(1→6)-α-D-glucopyranoside (theanderose),



C. D-glucopyranose (glucose),



D. D-*arabino*-hex-2-ulopyranose (fructose).

**01/2017:2319**

# SUCROSE MONOPALMITATE

## Sacchari monopalmitas

DEFINITION

Mixture of sucrose monoesters, mainly sucrose monopalmitate, obtained by transesterification of palmitic (hexadecanoic) acid methyl esters of vegetable origin with *Sucrose (0204)*. The manufacture of the fatty acid methyl esters includes a distillation step.

It contains variable quantities of mono-, di-, tri- and polyesters.

*Content*:

– *monoesters*: minimum 55.0 per cent;

– *diesters*: maximum 40.0 per cent;

– *sum of triesters and polyesters*: maximum 20.0 per cent.

CHARACTERS

*Appearance*: white or almost white, unctuous powder.

*Solubility*: very slightly soluble in water, sparingly soluble in ethanol (96 per cent).

IDENTIFICATION

A. Composition of fatty acids (see Tests).

B. It complies with the limits of the assay.

TESTS

**Acid value** (*2.5.1*): maximum 6.0, determined on 3.00 g.

Use a freshly neutralised mixture of 1 volume of *water R* and 2 volumes of *2-propanol R* as solvent and heat gently.

**Composition of fatty acids** (*2.4.22, Method C*). Use the mixture of calibrating substances in Table 2.4.22.-1.

*Composition of the fatty-acid fraction of the substance:*

- *lauric acid*: maximum 3.0 per cent;
- *myristic acid*: maximum 3.0 per cent;
- *palmitic acid*: 70.0 per cent to 85.0 per cent;
- *stearic acid*: 10.0 per cent to 25.0 per cent;
- *sum of the contents of palmitic acid and stearic acid*: minimum 90.0 per cent.

**Free sucrose**. Liquid chromatography (*2.2.29*).

*Solvent mixture*: *water for chromatography R*, *tetrahydrofuran for chromatography R* (12.5:87.5 *V/V*).

*Test solution.* Dissolve 0.200 g of the substance to be examined in the solvent mixture and dilute to 4.0 mL with the solvent mixture.

*Reference solution (a).* Dissolve 20.0 mg of *sucrose CRS* in the solvent mixture and dilute to 10.0 mL with the solvent mixture. Dilute 1.0 mL of this solution to 10.0 mL with the solvent mixture.

*Reference solution (b).* In 4 volumetric flasks, introduce respectively 5.0 mg, 10.0 mg, 20.0 mg and 25.0 mg of *sucrose CRS*, dissolve in the solvent mixture and dilute to 10.0 mL with the solvent mixture.

*Column*:

- *size*: *l* = 0.25 m, Ø = 4.6 mm;
- *stationary phase*: spherical *aminopropylsilyl silica gel for chromatography R* (4 µm).

*Mobile phase*:

- *mobile phase A*: 0.01 g/L solution of *ammonium acetate R* in *acetonitrile for chromatography R*;
- *mobile phase B*: 0.01 g/L solution of *ammonium acetate R* in a mixture of 10 volumes of *water for chromatography R* and 90 volumes of *tetrahydrofuran for chromatography R*;

| Time (min) | Mobile phase A (per cent *V/V*) | Mobile phase B (per cent *V/V*) | Flow rate (mL/min) |
|---|---|---|---|
| 0 - 1 | 100 | 0 | 1.0 |
| 1 - 9 | 100 → 0 | 0 → 100 | 1.0 |
| 9 - 16 | 0 | 100 | 1.0 |
| 16 - 16.01 | 0 | 100 | 1.0 → 2.5 |
| 16.01 - 32 | 0 | 100 | 2.5 |

*Detection*: evaporative light-scattering detector; the following settings have been found to be suitable; if the detector has different setting parameters, adjust the detector settings so as to comply with the system suitability criterion:

- *carrier gas*: *nitrogen R*;
- *flow rate*: 1.0 mL/min;
- *evaporator temperature*: 45 °C;
- *nebuliser temperature*: 40 °C.

*Injection*: 20 µL.

*Retention time*: about 26 min.

*System suitability*: reference solution (a):

- *signal-to-noise ratio*: minimum 10.

*Limit*: maximum 4.0 per cent.

**Water** (*2.5.12*): maximum 4.0 per cent, determined on 0.20 g.

**Total ash** (*2.4.16*): maximum 1.5 per cent.

ASSAY

Size-exclusion chromatography (*2.2.30*): use the normalisation procedure.

*Test solution.* Dissolve 60.0 mg of the substance to be examined in *tetrahydrofuran R* and dilute to 4.0 mL with the same solvent.

*Column*:

- *size*: *l* = 0.6 m, Ø = 7 mm;
- *stationary phase*: *styrene-divinylbenzene copolymer R* (5 µm) with a pore size of 10 nm.

*Mobile phase*: *tetrahydrofuran R*.

*Flow rate*: 1.2 mL/min.

*Detection*: differential refractometer.

*Injection*: 20 µL.

*Relative retention* with reference to monoesters (retention time = about 13 min): diesters = about 0.93; triesters and polyesters = about 0.91.

*Calculations*:

- *disregard limit*: disregard the peaks having a signal-to-noise ratio less than 10;
- *free fatty acids*: calculate the percentage content of free fatty acids (*C*), using the following expression:

$$\frac{I_A \times 256}{56.11 \times 10}$$

$I_A$ = acid value (see Tests);

256 = rounded molar mass of palmitic acid, in grams per mole;

56.11 = molar mass of potassium hydroxide, in grams per mole.

- *monoesters*: calculate the percentage content of monoesters using the following expression:

$$\left[\frac{X}{X+Y+Z}\,(100-A-B)\right]-C$$

$A$ = percentage content of free sucrose (see Tests);

$B$ = percentage content of water (see Tests);

$C$ = percentage content of free fatty acids;

$X$ = area of the peak due to monoesters and free fatty acids;

$Y$ = area of the peak due to diesters;

$Z$ = area of the peak due to triesters and polyesters.

- *diesters*: calculate the percentage content of diesters using the following expression:

$$\frac{Y}{X+Y+Z}\,(100-A-B)$$

- *sum of triesters and polyesters*: calculate the sum of the percentage contents of triesters and polyesters using the following expression:

$$\frac{Z}{X+Y+Z}\,(100-A-B)$$

STORAGE

Protected from humidity.

**01/2017:2318**

# SUCROSE STEARATE

## Sacchari stearas

DEFINITION

Mixture of sucrose esters, mainly sucrose stearate, obtained by transesterification of stearic (octadecanoic) acid methyl esters of vegetable origin with *sucrose (0204)*. The manufacture of the fatty acid methyl esters includes a distillation step.

It contains variable quantities of mono-, di-, tri- and polyesters.

*Content*:

*Sucrose stearate type I*:

- *monoesters*: minimum 50.0 per cent;
- *diesters*: maximum 40.0 per cent;
- *sum of triesters and polyesters*: maximum 25.0 per cent;

*Sucrose stearate type II*:

- *monoesters*: 20.0 per cent to 45.0 per cent;
- *diesters*: 30.0 per cent to 40.0 per cent;
- *sum of triesters and polyesters*: maximum 30.0 per cent;

*Sucrose stearate type III*:

- *monoesters*: 15.0 per cent to 25.0 per cent;
- *diesters*: 30.0 per cent to 45.0 per cent;
- *sum of triesters and polyesters*: 35.0 per cent to 50.0 per cent.

CHARACTERS

*Appearance*: white or almost white, unctuous powder.

*Solubility*: very slightly soluble in water, sparingly soluble in ethanol (96 per cent).

IDENTIFICATION

A. Composition of fatty acids (see Tests).

B. It complies with the limits of the assay.

TESTS

**Acid value** (*2.5.1*): maximum 6.0, determined on 3.00 g.

Use a freshly neutralised mixture of 1 volume of *water R* and 2 volumes of *2-propanol R* as solvent and heat gently.

**Composition of fatty acids** (*2.4.22, Method C*). Use the mixture of calibrating substances in Table 2.4.22.-1.

*Composition of the fatty-acid fraction of the substance:*

- *lauric acid*: maximum 3.0 per cent;
- *myristic acid*: maximum 3.0 per cent;
- *palmitic acid*: 25.0 per cent to 40.0 per cent;
- *stearic acid*: 55.0 per cent to 75.0 per cent;
- *sum of the contents of palmitic acid and stearic acid*: minimum 90.0 per cent.

**Free sucrose**. Liquid chromatography (*2.2.29*).

*Solvent mixture*: *water for chromatography R*, *tetrahydrofuran for chromatography R* (12.5:87.5 *V/V*).

*Test solution.* Dissolve 0.200 g of the substance to be examined in the solvent mixture and dilute to 4.0 mL with the solvent mixture.

*Reference solution (a).* Dissolve 20.0 mg of *sucrose CRS* in the solvent mixture and dilute to 10.0 mL with the solvent mixture. Dilute 1.0 mL of this solution to 10.0 mL with the solvent mixture.

*Reference solution (b).* In 4 volumetric flasks, introduce respectively 5.0 mg, 10.0 mg, 20.0 mg and 25.0 mg of *sucrose CRS*, dissolve in the solvent mixture and dilute to 10.0 mL with the solvent mixture.

*Column*:

- *size*: *l* = 0.25 m, Ø = 4.6 mm;
- *stationary phase*: spherical *aminopropylsilyl silica gel for chromatography R* (4 µm).

*Mobile phase*:

- *mobile phase A*: 0.01 g/L solution of *ammonium acetate R* in *acetonitrile for chromatography R*;
- *mobile phase B*: 0.01 g/L solution of *ammonium acetate R* in a mixture of 10 volumes of *water for chromatography R* and 90 volumes of *tetrahydrofuran for chromatography R*;

| Time (min) | Mobile phase A (per cent *V/V*) | Mobile phase B (per cent *V/V*) | Flow rate (mL/min) |
|---|---|---|---|
| 0 - 1 | 100 | 0 | 1.0 |
| 1 - 9 | 100 → 0 | 0 → 100 | 1.0 |
| 9 - 16 | 0 | 100 | 1.0 |
| 16 - 16.01 | 0 | 100 | 1.0 → 2.5 |
| 16.01 - 32 | 0 | 100 | 2.5 |

*Detection*: evaporative light-scattering detector; the following settings have been found to be suitable; if the detector has different setting parameters, adjust the detector settings so as to comply with the system suitability criterion:

- *carrier gas*: *nitrogen R*;
- *flow rate*: 1.0 mL/min;
- *evaporator temperature*: 45 °C;
- *nebuliser temperature*: 40 °C.

*Injection*: 20 µL.

*Retention time*: about 26 min.

*System suitability*: reference solution (a):

- *signal-to-noise ratio*: minimum 10.

*Limit*:

- *sucrose*: maximum 4.0 per cent.

**Water** (*2.5.12*): maximum 4.0 per cent, determined on 0.20 g.

**Total ash** (*2.4.16*): maximum 1.5 per cent.

ASSAY

Size-exclusion chromatography (*2.2.30*): use the normalisation procedure.

*Test solution.* Dissolve 60.0 mg of the substance to be examined in *tetrahydrofuran R* and dilute to 4.0 mL with the same solvent.

*Column*:

- *size*: *l* = 0.6 m, Ø = 7 mm;
- *stationary phase*: *styrene-divinylbenzene copolymer R* (5 µm) with a pore size of 10 nm.

*Mobile phase*: *tetrahydrofuran R*.

*Flow rate*: 1.2 mL/min.

*Detection*: differential refractometer.

*Injection*: 20 µL.

*Relative retention* with reference to monoesters (retention time = about 13 min): diesters = about 0.94; triesters and polyesters = about 0.92.

*Calculations*:

- *disregard limit*: disregard the peaks having a signal-to-noise ratio less than 10;
- *free fatty acids*: calculate the percentage content of free fatty acids (*C*) using the following expression:

$$\frac{I_A \times 284}{56.11 \times 10}$$

Monographs S

$I_A$ = acid value (see Tests);

284 = rounded molar mass of stearic acid, in grams per mole;

56.11 = molar mass of potassium hydroxide, in grams per mole.

– *monoesters*: calculate the percentage content of monoesters using the following expression:

$$\left[\frac{X}{X+Y+Z}\ (100-A-B)\right]-C$$

$A$ = percentage content of free sucrose (see Tests);

$B$ = percentage content of water (see Tests);

$C$ = percentage content of free fatty acids;

$X$ = area of the peak due to monoesters and free fatty acids;

$Y$ = area of the peak due to diesters;

$Z$ = area of the peak due to triesters and polyesters.

– *diesters*: calculate the percentage content of diesters using the following expression:

$$\frac{Y}{X+Y+Z}\ (100-A-B)$$

– *sum of triesters and polyesters*: calculate the sum of the percentage contents of triesters and polyesters using the following expression:

$$\frac{Z}{X+Y+Z}\ (100-A-B)$$

LABELLING

The label states the type of sucrose stearate (type I, II or III).

STORAGE

Protected from humidity.

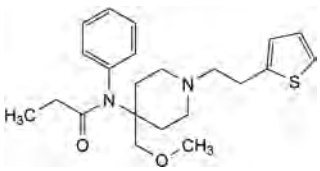
# SUFENTANIL

## Sufentanilum



$C_{22}H_{30}N_2O_2S$ $M_r$ 386.6

[56030-54-7]

DEFINITION

*N*-[4-(Methoxymethyl)-1-[2-(thiophen-2-yl)ethyl]piperidin-4-yl]-*N*-phenylpropanamide.

*Content*: 99.0 per cent to 101.0 per cent (dried substance).

CHARACTERS

*Appearance*: white or almost white powder.

*Solubility*: practically insoluble in water, freely soluble in ethanol (96 per cent) and in methanol.

mp: about 98 °C.

IDENTIFICATION

Infrared absorption spectrophotometry (*2.2.24*).

*Comparison*: *Ph. Eur. reference spectrum of sufentanil.*

TESTS

**Appearance of solution**. The solution is clear (*2.2.1*) and colourless (*2.2.2, Method II*).

Dissolve 0.10 g in *methanol R* and dilute to 20 mL with the same solvent.

**Related substances**. Liquid chromatography (*2.2.29*).

*Test solution.* Dissolve 0.100 g of the substance to be examined in *methanol R* and dilute to 10.0 mL with the same solvent.

*Reference solution (a).* In order to produce impurity E *in situ*, dissolve 10 mg of the substance to be examined in 10.0 mL of *dilute hydrochloric acid R*. Heat on a water-bath under a reflux condenser for 4 h. Add 10.0 mL of *dilute sodium hydroxide solution R*. Evaporate to dryness on a water-bath. Cool and take up the residue in 10 mL of *methanol R*. Filter.

*Reference solution (b).* Dilute 1.0 mL of the test solution to 100.0 mL with *methanol R*. Dilute 5.0 mL of this solution to 20.0 mL with *methanol R*.

*Column*:

– *size*: *l* = 0.1 m, Ø = 4.6 mm;

– *stationary phase*: *octadecylsilyl silica gel for chromatography R* (3 µm).

*Mobile phase*:

– *mobile phase A*: 5 g/L solution of *ammonium carbonate R* in a mixture of 10 volumes of *tetrahydrofuran R* and 90 volumes of *water R*;

– *mobile phase B*: *acetonitrile R*;

| Time (min) | Mobile phase A (per cent *V/V*) | Mobile phase B (per cent *V/V*) |
|---|---|---|
| 0 - 15 | 90 → 40 | 10 → 60 |
| 15 - 20 | 40 | 60 |

*Flow rate*: 1.5 mL/min.

*Detection*: spectrophotometer at 220 nm.

*Injection*: 10 µL.

*Relative retention* with reference to sufentanil (retention time = about 13 min): impurity D = about 0.85; impurity E = about 0.9; impurity F = about 0.95; impurity H = about 1.1.

*System suitability*: reference solution (a):

– *resolution*: minimum 4.0 between the peaks due to impurity E and sufentanil.

*Limits*:

– *impurities D, F, H*: for each impurity, not more than the area of the principal peak in the chromatogram obtained with reference solution (b) (0.25 per cent);

– *unspecified impurities*: for each impurity, not more than 0.4 times the area of the principal peak in the chromatogram obtained with reference solution (b) (0.10 per cent);

– *total*: not more than twice the area of the principal peak in the chromatogram obtained with reference solution (b) (0.5 per cent);

– *disregard limit*: 0.2 times the area of the principal peak in the chromatogram obtained with reference solution (b) (0.05 per cent).

**Loss on drying** (*2.2.32*): maximum 0.5 per cent, determined on 1.000 g by drying *in vacuo* at 60 °C for 2 h.

ASSAY

Dissolve 0.300 g in 50 mL of a mixture of 1 volume of *anhydrous acetic acid R* and 7 volumes of *methyl ethyl ketone R* and titrate with *0.1 M perchloric acid*, using 0.2 mL of *naphtholbenzein solution R* as indicator.

1 mL of *0.1 M perchloric acid* is equivalent to 38.66 mg of $C_{22}H_{30}N_2O_2S$.

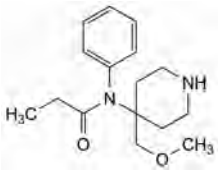
STORAGE

Protected from light.

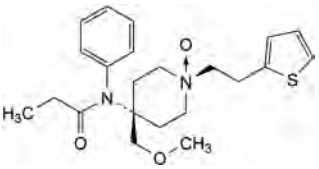
IMPURITIES

*Specified impurities*: *D, F, H.*

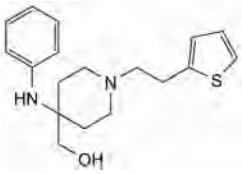
*Other detectable impurities* (the following substances would, if present at a sufficient level, be detected by one or other of the tests in the monograph. They are limited by the general acceptance criterion for other/unspecified impurities and/or by the general monograph *Substances for pharmaceutical use (2034)*. It is therefore not necessary to identify these impurities for demonstration of compliance. See also *5.10. Control of impurities in substances for pharmaceutical use*): *A, B, C, E, G, I.*



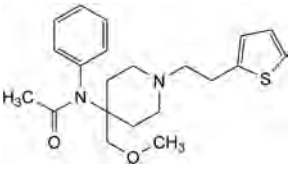
A. *N*-[4-(methoxymethyl)piperidin-4-yl]-*N*-phenylpropanamide,



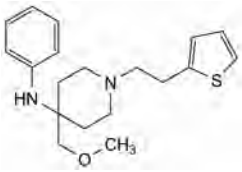
B. *cis*-4-(methoxymethyl)-4-(phenylpropanoylamino)-1-[2-(thiophen-2-yl)ethyl]piperidine 1-oxide,



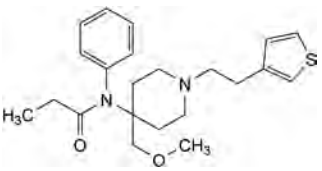
C. [4-(phenylamino)-1-[2-(thiophen-2-yl)ethyl]piperidin-4-yl]methanol,



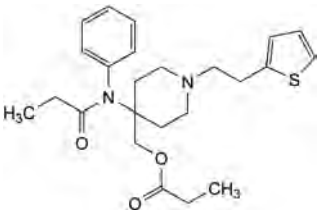
D. *N*-[4-(methoxymethyl)-1-[2-(thiophen-2-yl)ethyl]piperidin-4-yl]-*N*-phenylacetamide,



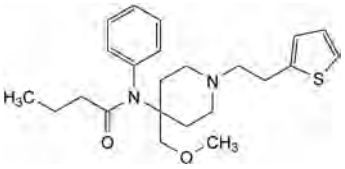
E. 4-(methoxymethyl)-*N*-phenyl-1-[2-(thiophen-2-yl)ethyl]piperidin-4-amine,



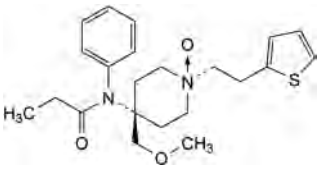
F. *N*-[4-(methoxymethyl)-1-[2-(thiophen-3-yl)ethyl]piperidin-4-yl]-*N*-phenylpropanamide,



G. [4-(phenylpropanoylamino)-1-[2-(thiophen-2-yl)ethyl]piperidin-4-yl]methyl propanoate,



H. *N*-[4-(methoxymethyl)-1-[2-(thiophen-2-yl)ethyl]piperidin-4-yl]-*N*-phenylbutanamide,

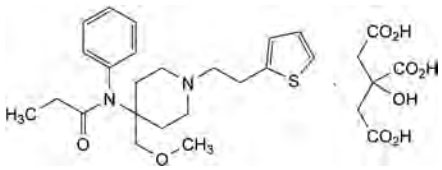


I. *trans*-4-(methoxymethyl)-4-(phenylpropanoylamino)-1-[2-(thiophen-2-yl)ethyl]piperidine 1-oxide.

**01/2012:1269**
**corrected 10.0**

# SUFENTANIL CITRATE

## Sufentanili citras



$C_{28}H_{38}N_2O_9S$ $M_r$ 578.7
[60561-17-3]

DEFINITION

*N*-[4-(Methoxymethyl)-1-[2-(thiophen-2-yl)ethyl]piperidin-4-yl]-*N*-phenylpropanamide citrate.

*Content*: 99.0 per cent to 101.0 per cent (dried substance).

CHARACTERS

*Appearance*: white or almost white powder.

*Solubility*: soluble in water, freely soluble in methanol, soluble in ethanol (96 per cent).

mp: about 140 °C, with decomposition.

IDENTIFICATION

Infrared absorption spectrophotometry (*2.2.24*).

*Comparison*: *Ph. Eur. reference spectrum of sufentanil citrate.*

TESTS

**Appearance of solution**. The solution is clear (*2.2.1*) and colourless (*2.2.2, Method II*).

Dissolve 0.2 g in *water R* and dilute to 20 mL with the same solvent.

**Related substances**. Liquid chromatography (*2.2.29*).

*Test solution*. Dissolve 0.100 g of the substance to be examined in *methanol R* and dilute to 10.0 mL with the same solvent.

*Reference solution (a)*. In order to produce impurity E *in situ*, dissolve 10 mg of the substance to be examined in 10.0 mL of *dilute hydrochloric acid R*. Heat on a water-bath under a reflux condenser for 4 h. Add 10.0 mL of *dilute sodium hydroxide solution R*. Evaporate to dryness on a water-bath. Cool and take up the residue in 10 mL of *methanol R*. Filter.

*Reference solution (b)*. Dilute 5.0 mL of the test solution to 100.0 mL with *methanol R*. Dilute 1.0 mL of this solution to 10.0 mL with *methanol R*.

*Column*:

- *size*: *l* = 0.1 m, Ø = 4.6 mm;
- *stationary phase*: *octadecylsilyl silica gel for chromatography R* (3 µm).

*Mobile phase*:

- *mobile phase A*: 5 g/L solution of *ammonium carbonate R* in a mixture of 10 volumes of *tetrahydrofuran R* and 90 volumes of *water R*;
- *mobile phase B*: *acetonitrile R*;

| Time (min) | Mobile phase A (per cent *V/V*) | Mobile phase B (per cent *V/V*) |
|---|---|---|
| 0 - 15 | 90 → 40 | 10 → 60 |
| 15 - 20 | 40 | 60 |

*Flow rate*: 1.5 mL/min.

*Detection*: spectrophotometer at 220 nm.

*Injection*: 10 µL.

*Relative retention* with reference to sufentanil (retention time = about 13 min): impurity A = about 0.3; impurity B = about 0.4; impurity I = about 0.45; impurity C = about 0.7; impurity D = about 0.85; impurity E = about 0.9; impurity F = about 0.95; impurity G = about 1.05; impurity H = about 1.1.

*System suitability*: reference solution (a):

- *resolution*: minimum 4.0 between the peaks due to impurity E and sufentanil.

*Limits*:

- *impurities A, B, C, D, E, F, G, H, I*: for each impurity, not more than the area of the principal peak in the chromatogram obtained with reference solution (b) (0.5 per cent);
- *unspecified impurities*: for each impurity, not more than 0.2 times the area of the principal peak in the chromatogram obtained with reference solution (b) (0.10 per cent);
- *total*: not more than twice the area of the principal peak in the chromatogram obtained with reference solution (b) (1 per cent);
- *disregard limit*: 0.1 times the area of the principal peak in the chromatogram obtained with reference solution (b) (0.05 per cent); disregard any peak with a relative retention with reference to sufentanil of 0.05 or less.

**Loss on drying** (*2.2.32*): maximum 0.5 per cent, determined on 1.000 g by drying *in vacuo* at 60 °C.

ASSAY

Dissolve 0.400 g in 50 mL of a mixture of 1 volume of *anhydrous acetic acid R* and 7 volumes of *methyl ethyl ketone R* and titrate with *0.1 M perchloric acid*, using 0.2 mL of *naphtholbenzein solution R* as indicator.

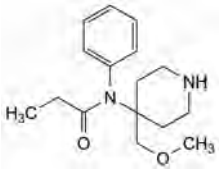
1 mL of *0.1 M perchloric acid* is equivalent to 57.87 mg of $C_{28}H_{38}N_2O_9S$.

STORAGE

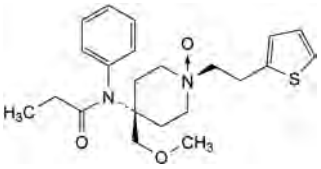
Protected from light.

IMPURITIES

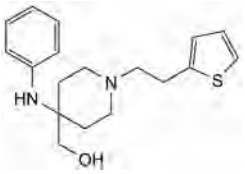
*Specified impurities*: *A, B, C, D, E, F, G, H, I.*



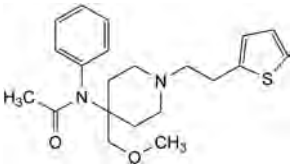
A. *N*-[4-(methoxymethyl)piperidin-4-yl]-*N*-phenylpropanamide,



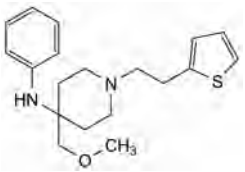
B. *cis*-4-(methoxymethyl)-4-(phenylpropanoylamino)-1-[2-(thiophen-2-yl)ethyl]piperidine 1-oxide,



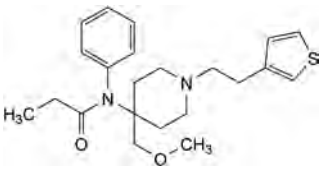
C. [4-(phenylamino)-1-[2-(thiophen-2-yl)ethyl]piperidin-4-yl]methanol,



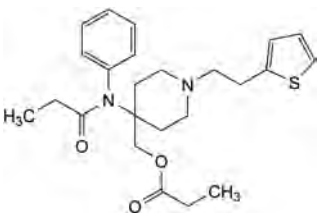
D. *N*-[4-(methoxymethyl)-1-[2-(thiophen-2-yl)ethyl]piperidin-4-yl]-*N*-phenylacetamide,



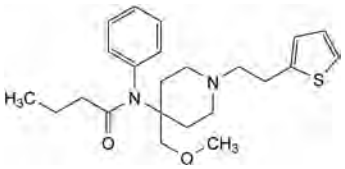
E. 4-(methoxymethyl)-*N*-phenyl-1-[2-(thiophen-2-yl)ethyl]piperidin-4-amine,



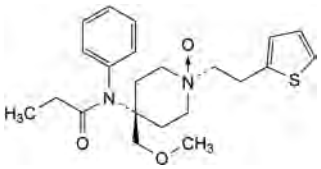
F. *N*-[4-(methoxymethyl)-1-[2-(thiophen-3-yl)ethyl]piperidin-4-yl]-*N*-phenylpropanamide,



G. [4-(phenylpropanoylamino)-1-[2-(thiophen-2-yl)ethyl]piperidin-4-yl]methyl propanoate,



H. *N*-[4-(methoxymethyl)-1-[2-(thiophen-2-yl)ethyl]piperidin-4-yl]-*N*-phenylbutanamide,



I. *trans*-4-(methoxymethyl)-4-(phenylpropanoylamino)-1-[2-(thiophen-2-yl)ethyl]piperidine 1-oxide.

**01/2017:1570**

# SUGAR SPHERES

## Sacchari sphaerae

DEFINITION

Sugar spheres contain not more than 92 per cent of sucrose, calculated on the dried basis. The remainder consists of maize starch and may also contain starch hydrolysates and colour additives. The diameter of sugar spheres varies usually from 200 µm to 2000 µm and the upper and lower limits of the size of the sugar spheres are stated on the label.

IDENTIFICATION

A. Examine by thin-layer chromatography (*2.2.27*), using a *TLC silica gel G plate R*.

*Solvent mixture*: *water R*, *methanol R* (2:3 *V/V*).

*Test solution.* Mix 2 mL of solution S (see Tests) with 3 mL of *methanol R* and dilute to 20 mL with the solvent mixture.

*Reference solution (a).* Dissolve 10 mg of *sucrose CRS* in the solvent mixture and dilute to 20 mL with the solvent mixture.

*Reference solution (b).* Dissolve 10 mg of *fructose R*, 10 mg of *glucose R*, 10 mg of *lactose monohydrate R* and 10 mg of *sucrose R* in the solvent mixture and dilute to 20 mL with the solvent mixture.

Apply to the plate 2 µL of each solution and thoroughly dry the points of application. Develop over a path of 15 cm using a mixture of 10 volumes of *water R*, 15 volumes of *methanol R*, 25 volumes of *anhydrous acetic acid R* and 50 volumes of *ethylene chloride R*, measured accurately as a slight excess of water causes cloudiness of the solution. Dry the plate in a current of warm air. Repeat the development immediately after renewing the mobile phase. Dry the plate in a current of warm air and spray evenly with a 5 g/L solution of *thymol R* in a mixture of 5 volumes of *sulfuric acid R* and 95 volumes of *ethanol (96 per cent) R*. Heat at 130 °C for 10 min. The principal spot in the chromatogram obtained with the test solution is similar in position, colour and size to the principal spot in the chromatogram obtained with reference solution (a). The test is not valid unless the chromatogram obtained with reference solution (b) shows 4 clearly separated spots.

B. To a water slurry of the insoluble portion obtained in the assay, add 0.05 mL of *iodine solution R1*. A dark-blue colour is produced, which disappears on heating.

C. To 5 mL of solution S add 0.15 mL of freshly prepared *copper sulfate solution R* and 2 mL of freshly prepared *dilute sodium hydroxide solution R*. The solution is blue and clear and remains so after boiling. To the hot solution add 4 mL of *dilute hydrochloric acid R* and boil for 1 min. Add 4 mL of *dilute sodium hydroxide solution R*. An orange precipitate is formed immediately.

TESTS

**Solution S**. To 0.5 g in a 100 mL volumetric flask add 80 mL of *water R* and shake until the sucrose is dissolved. Dilute to 100.0 mL with *water R*. Filter under vacuum to obtain a clear solution.

**Fineness** (*2.9.35*): not less than 90 per cent *m/m* of the sugar spheres are between the lower and the upper limits of the size of the sugar spheres stated on the label.

**Loss on drying** (*2.2.32*): maximum 5.0 per cent, determined on 1.000 g by drying in an oven at 105 °C for 4 h.

**Sulfated ash** (*2.4.14*): maximum 0.2 per cent, determined on 2 g.

**Microbial contamination**

TAMC: acceptance criterion $10^3$ CFU/g (*2.6.12*).

TYMC: acceptance criterion $10^2$ CFU/g (*2.6.12*).

Absence of *Escherichia coli* (*2.6.13*).

Absence of *Salmonella* (*2.6.13*).

ASSAY

**Sucrose content**

Weigh 10.000 g of ground sugar spheres in a 100 mL flask and make up to 100.0 mL with *water R*. Stir and decant. Filter under vacuum to obtain a clear solution (the insoluble portion is used for identification test B). Measure the angle of optical rotation (*2.2.7*) and calculate the sucrose percentage content using the following expression:

$$\frac{10^6 \times \alpha}{66.5 \times l \times m \times (100 - H)}$$

$\alpha$ = angle of rotation;

$l$ = length of the polarimeter tube, in decimetres;

$m$ = exact mass of the sample, in grams;

$H$ = loss on drying.

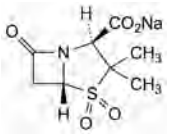
LABELLING

The label states the upper and the lower limits of the size of the sugar spheres.

**01/2017:2209**
**corrected 10.0**

# SULBACTAM SODIUM

## Sulbactamum natricum



$C_8H_{10}NNaO_5S$ $M_r$ 255.2

[69388-84-7]

DEFINITION

Sodium (2*S*,5*R*)-3,3-dimethyl-7-oxo-4-thia-1-azabicyclo[3.2.0]heptane-2-carboxylate 4,4-dioxide.

Semi-synthetic product derived from a fermentation product.

*Content*: 97.0 per cent to 102.0 per cent (anhydrous substance).

CHARACTERS

*Appearance*: white or almost white, hygroscopic, crystalline powder.

*Solubility*: freely soluble in water, sparingly soluble in ethyl acetate, very slightly soluble in ethanol (96 per cent). It is freely soluble in dilute acids.

IDENTIFICATION

A. Infrared absorption spectrophotometry (*2.2.24*).
*Comparison*: *sulbactam sodium CRS*.

B. It gives reaction (a) of sodium (*2.3.1*).

TESTS

**Appearance of solution**. The solution is clear (*2.2.1*).

Dissolve 2.0 g in *water R* and dilute to 20 mL with the same solvent.

**Absorbance** (*2.2.25*): maximum 0.10 at 430 nm.

Dissolve 1.0 g in *water R* and dilute to 100.0 mL with the same solvent.

**pH** (*2.2.3*): 4.5 to 7.2; if the substance is sterile: 5.2 to 7.2.

Dissolve 1.0 g in *carbon dioxide-free water R* and dilute to 20 mL with the same solvent.

**Specific optical rotation** (*2.2.7*): + 219 to + 233 (anhydrous substance).

Dissolve 0.500 g in *water R* and dilute to 50.0 mL with the same solvent.

**Related substances**. Liquid chromatography (*2.2.29*).

*Solution A*. 2.72 g/L solution of *potassium dihydrogen phosphate R* adjusted to pH 4.0 with *dilute phosphoric acid R*.

*Solution B*. Dilute 2 mL of *acetonitrile R1* to 100.0 mL with solution A.

*Test solution*. Suspend 77.0 mg of the substance to be examined in 2 mL of *acetonitrile R1*, sonicate for about 5 min and dilute to 100.0 mL with solution A.

*Reference solution (a)*. Suspend 70.0 mg of *sulbactam CRS* in 2 mL of *acetonitrile R1*, sonicate for about 5 min and dilute to 100.0 mL with solution A.

*Reference solution (b)*. Dilute 1.0 mL of reference solution (a) to 100.0 mL with solution B. Dilute 1.0 mL of this solution to 10.0 mL with solution B.

*Reference solution (c)*. Dissolve 15.0 mg of *6-aminopenicillanic acid R* (impurity B) in solution A and dilute to 50.0 mL with solution A.

*Reference solution (d)*. Mix 1 mL of reference solution (a) and 1 mL of reference solution (c) and dilute to 25.0 mL with solution B.

*Reference solution (e)*. Dissolve 8 mg of *sulbactam for peak identification CRS* (containing impurities A, C, D, E and F) in 1 mL of *acetonitrile R1*, sonicate for about 5 min and dilute to 10 mL with solution B.

*Column*:

- *size*: *l* = 0.10 m, Ø = 4.0 mm;
- *stationary phase*: *end-capped octadecylsilyl silica gel for chromatography R* (3.0 µm);
- *temperature*: 40 °C.

*Mobile phase*:

- *mobile phase A*: 5.44 g/L solution of *potassium dihydrogen phosphate R* adjusted to pH 4.0 with *dilute phosphoric acid R*;
- *mobile phase B*: mobile phase A, *acetonitrile R1* (40:60 *V/V*);

| Time (min) | Mobile phase A (per cent *V/V*) | Mobile phase B (per cent *V/V*) |
|---|---|---|
| 0 - 2.0 | 98 | 2 |
| 2.0 - 9.5 | 98 → 50 | 2 → 50 |
| 9.5 - 12.0 | 50 | 50 |

*Flow rate*: 1.0 mL/min.

*Detection*: spectrophotometer at 215 nm.

*Injection*: 20 µL of the test solution, solution B and reference solutions (b), (d) and (e).

*Identification of impurities*: use the chromatogram supplied with *sulbactam for peak identification CRS* and the chromatogram obtained with reference solution (e) to identify the peaks due to impurities A, C, D, E and F; use the chromatogram obtained with reference solution (d) to identify the peak due to impurity B.

*Relative retention* with reference to sulbactam (retention time = about 3 min): impurity A = about 0.4; impurity B = about 0.7; impurity C = about 2.3; impurity D = about 3.1; impurity E = about 3.3; impurity F = about 3.9.

*System suitability*: reference solution (d):

- *resolution*: minimum 5.0 between the peaks due to impurity B and sulbactam.

*Calculation of percentage contents*:

- *correction factors*: multiply the peak areas of the following impurities by the corresponding correction factor: impurity A = 0.6; impurity B = 0.5; impurity D = 0.5; impurity F = 0.6;
- for each impurity, use the concentration of sulbactam in reference solution (b).

*Limits*:

- *impurity A*: maximum 0.5 per cent;
- *impurities C, E*: for each impurity, maximum 0.2 per cent;
- *impurities B, D, F*: for each impurity, maximum 0.1 per cent;
- *unspecified impurities*: for each impurity, maximum 0.10 per cent;
- *total*: maximum 1.0 per cent;
- *reporting threshold*: 0.05 per cent.

**2-Ethylhexanoic acid** (*2.4.28*): maximum 0.5 per cent *m/m*.

**Water** (*2.5.12*): maximum 1.0 per cent, determined on 1.00 g.

**Bacterial endotoxins** (*2.6.14, Method A*): less than 0.17 IU/mg, if intended for use in the manufacture of parenteral preparations without a further appropriate procedure for the removal of bacterial endotoxins.

ASSAY

Liquid chromatography (*2.2.29*) as described in the test for related substances with the following modification.

*Injection*: test solution and reference solution (a).

Calculate the percentage content of $C_8H_{10}NNaO_5S$ taking into account the assigned content of *sulbactam CRS* and a conversion factor of 1.094.

STORAGE

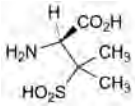
In an airtight container. If the substance is sterile, store in a sterile, the container is also sterile and tamper-evident.

IMPURITIES

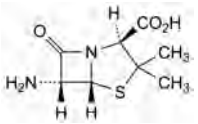
*Specified impurities: A, B, C, D, E, F.*

*Other detectable impurities* (the following substances would, if present at a sufficient level, be detected by one or other of the tests in the monograph. They are limited by the general acceptance criterion for other/unspecified impurities and/or by the general monograph *Substances for pharmaceutical*

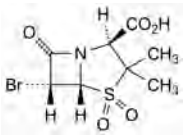
*use (2034)*. It is therefore not necessary to identify these impurities for demonstration of compliance. See also *5.10. Control of impurities in substances for pharmaceutical use*): *G.*



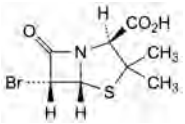
A. (2*S*)-2-amino-3-methyl-3-sulfinobutanoic acid,



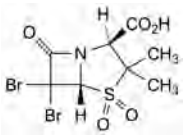
B. (2*S*,5*R*,6*R*)-6-amino-3,3-dimethyl-7-oxo-4-thia-1-azabicyclo[3.2.0]heptane-2-carboxylic acid (6-aminopenicillanic acid),



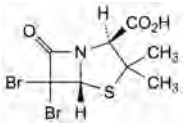
C. (2*S*,5*R*,6*R*)-6-bromo-3,3-dimethyl-7-oxo-4-thia-1-azabicyclo[3.2.0]heptane-2-carboxylic acid 4,4-dioxide (6-bromopenicillanic acid sulfone),



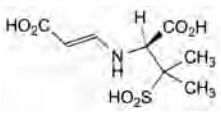
D. (2*S*,5*R*,6*R*)-6-bromo-3,3-dimethyl-7-oxo-4-thia-1-azabicyclo[3.2.0]heptane-2-carboxylic acid (6-bromopenicillanic acid),



E. (2*S*,5*R*)-6,6-dibromo-3,3-dimethyl-7-oxo-4-thia-1-azabicyclo[3.2.0]heptane-2-carboxylic acid 4,4-dioxide (6,6-dibromopenicillanic acid sulfone),



F. (2*S*,5*R*)-6,6-dibromo-3,3-dimethyl-7-oxo-4-thia-1-azabicyclo[3.2.0]heptane-2-carboxylic acid (6,6-dibromopenicillanic acid),

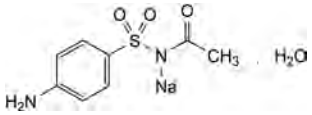


G. (2*S*)-2-[[(2*E*)-2-carboxyethenyl]amino]-3-methyl-3-sulfinobutanoic acid.

**01/2017:0107**

# SULFACETAMIDE SODIUM

## Sulfacetamidum natricum



$C_8H_9N_2NaO_3S,H_2O$ $M_r$ 254.2

DEFINITION

Sodium acetyl[(4-aminophenyl)sulfonyl]azanide monohydrate.

*Content*: 99.0 per cent to 101.0 per cent (anhydrous substance).

CHARACTERS

*Appearance*: white or yellowish-white, crystalline powder.

*Solubility*: freely soluble in water, slightly soluble in anhydrous ethanol.

IDENTIFICATION

*First identification: B, F.*

*Second identification: A, C, E, F.*

A. Ultraviolet and visible absorption spectrophotometry (*2.2.25*).

*Test solution*. Dissolve 0.1 g in *phosphate buffer solution pH 7.0 R* and dilute to 100.0 mL with the same buffer solution. Dilute 1.0 mL of this solution to 100.0 mL with *phosphate buffer solution pH 7.0 R*.

*Spectral range*: 230-350 nm.

*Absorption maximum*: at 255 nm.

*Specific absorbance at the absorption maximum*: 660 to 720 (anhydrous substance).

B. Infrared absorption spectrophotometry (*2.2.24*).

*Comparison*: *sulfacetamide sodium CRS*.

C. Melting point (*2.2.14*): 181 °C to 185 °C.

Dissolve 1 g in 10 mL of *water R*, add 6 mL of *dilute acetic acid R* and filter. Wash the precipitate with a small quantity of *water R* and dry at 100-105 °C for 4 h.

E. Dissolve about 1 mg of the precipitate obtained in identification C, with heating, in 1 mL of *water R*. The solution gives the reaction of primary aromatic amines (*2.3.1*) with formation of an orange-red precipitate.

F. Solution S (see Tests) gives the reactions of sodium (*2.3.1*).

TESTS

**Solution S**. Dissolve 1.25 g in *carbon dioxide-free water R* and dilute to 25 mL with the same solvent.

**Appearance of solution**. Solution S is clear (*2.2.1*) and not more intensely coloured than reference solution $GY_4$ (*2.2.2, Method II*).

**pH** (*2.2.3*): 8.0 to 9.5 for solution S.

**Related substances**. Liquid chromatography (*2.2.29*). *Prepare the solutions immediately before use and carry out the test protected from light.*

*Test solution*. Dissolve 0.200 g of the substance to be examined in the mobile phase and dilute to 10.0 mL with the mobile phase.

*Reference solution (a)*. Dissolve 5 mg of *sulfacetamide sodium CRS* and 5 mg of *sulfanilamide R* (impurity A) in 1.0 mL of the mobile phase.

*Reference solution (b).* Dilute 1.0 mL of the test solution to 100.0 mL with the mobile phase. Dilute 1.0 mL of this solution to 10.0 mL with the mobile phase.

*Column*:

– *size*: *l* = 0.125 m, Ø = 4 mm;

– *stationary phase*: *end-capped octadecylsilyl silica gel for chromatography R* (5 µm).

*Mobile phase*: *glacial acetic acid R*, *methanol R*, *water for chromatography R* (1:10:89 *V/V/V*).

*Flow rate*: 0.8 mL/min.

*Detection*: spectrophotometer at 254 nm.

*Injection*: 10 µL.

*Run time*: 7 times the retention time of sulfacetamide.

*Relative retention* with reference to sulfacetamide (retention time = about 5 min): impurity A = about 0.5.

*System suitability*: reference solution (a):

– *resolution*: minimum 5.0 between the peaks due to impurity A and sulfacetamide.

*Limits*:

– *correction factor*: for the calculation of the content, multiply the peak area of impurity A by 0.5;

– *impurity A*: not more than twice the area of the principal peak in the chromatogram obtained with reference solution (b) (0.2 per cent);

– *unspecified impurities*: for each impurity, not more than the area of the principal peak in the chromatogram obtained with reference solution (b) (0.10 per cent);

– *total*: not more than 5 times the area of the principal peak in the chromatogram obtained with reference solution (b) (0.5 per cent);

– *disregard limit*: 0.5 times the area of the principal peak in the chromatogram obtained with reference solution (b) (0.05 per cent).

**Sulfates** (*2.4.13*): maximum 200 ppm.

Dissolve 2.5 g in *distilled water R* and dilute to 25 mL with the same solvent. Add 25 mL of *dilute acetic acid R*, shake for 30 min and filter. 15 mL of the filtrate complies with the limit test for sulfates.

**Water** (*2.5.12*). 6.0 per cent to 8.0 per cent, determined on 0.200 g.

ASSAY

Dissolve 0.500 g in a mixture of 50 mL of *water R* and 20 mL of *dilute hydrochloric acid R*. Cool the solution in a bath of iced water and carry out the determination of primary aromatic amino-nitrogen (*2.5.8*), determining the end-point electrometrically.

1 mL of *0.1 M sodium nitrite* is equivalent to 23.62 mg of $C_8H_9N_2NaO_3S$.

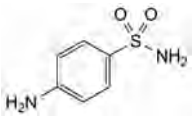
STORAGE

Protected from light.

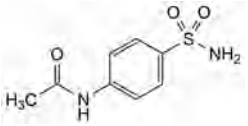
IMPURITIES

*Specified impurities: A.*

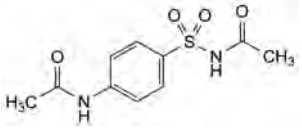
*Other detectable impurities* (the following substances would, if present at a sufficient level, be detected by one or other of the tests in the monograph. They are limited by the general acceptance criterion for other/unspecified impurities and/or by the general monograph *Substances for pharmaceutical use (2034)*. It is therefore not necessary to identify these impurities for demonstration of compliance. See also *5.10. Control of impurities in substances for pharmaceutical use*): *B, C, D.*



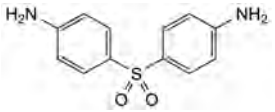
A. 4-aminobenzenesulfonamide (sulfanilamide),



B. *N*-(4-sulfamoylphenyl)acetamide,



C. *N*-[[4-(acetylamino)phenyl]sulfonyl]acetamide,

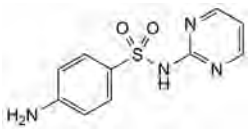


D. 4,4′-sulfonyldianiline (dapsone).

**01/2017:0294**

# SULFADIAZINE

## Sulfadiazinum



$C_{10}H_{10}N_4O_2S$ $M_r$ 250.3

[68-35-9]

DEFINITION

4-Amino-*N*-(pyrimidin-2-yl)benzenesulfonamide.

*Content*: 99.0 per cent to 101.0 per cent (dried substance).

CHARACTERS

*Appearance*: white, yellowish-white or pinkish-white, crystalline powder or crystals.

*Solubility*: practically insoluble in water, slightly soluble in acetone, very slightly soluble in ethanol (96 per cent). It dissolves in solutions of alkali hydroxides and in dilute mineral acids.

IDENTIFICATION

*First identification: A.*

*Second identification: B, C, D.*

A. Infrared absorption spectrophotometry (*2.2.24*).
*Comparison*: *sulfadiazine CRS.*

B. Thin-layer chromatography (*2.2.27*).
*Solvent mixture*: *concentrated ammonia R*, *methanol R* (4:96 *V/V*)
*Test solution.* Dissolve 20 mg of the substance to be examined in 3 mL of the solvent mixture and dilute to 5.0 mL with the solvent mixture.
*Reference solution.* Dissolve 20 mg of *sulfadiazine CRS* in 3 mL of the solvent mixture and dilute to 5.0 mL with the solvent mixture.
*Plate*: *TLC silica gel* $F_{254}$ *plate R.*

*Mobile phase*: *dilute ammonia R1*, *water R*, *nitromethane R*, *dioxan R* (3:5:40:50 *V/V/V/V*).

*Application*: 5 µL.

*Development*: over 3/4 of the plate.

*Drying*: at 105 °C.

*Detection*: examine in ultraviolet light at 254 nm.

*Results*: the principal spot in the chromatogram obtained with the test solution is similar in position and size to the principal spot in the chromatogram obtained with the reference solution.

C. Place 3 g in a dry tube. Immerse the lower part of the tube, inclined at 45°, in a silicone oil bath and heat to about 270 °C. The substance to be examined decomposes and a white or yellowish-white sublimate is formed, which, after recrystallisation from *toluene R* and drying at 100 °C, melts (*2.2.14*) at 123 °C to 127 °C.

D. Dissolve about 5 mg in 10 mL of a 103 g/L solution of *hydrochloric acid R*. Dilute 1 mL of the solution to 10 mL with *water R*. The solution, without further acidification, gives the reaction of primary aromatic amines (*2.3.1*).

TESTS

**Appearance of solution**. The solution is not more intensely coloured than reference solution $Y_5$, $BY_5$ or $GY_5$ (*2.2.2, Method II*).

Dissolve 0.8 g in a mixture of 5 mL of *dilute sodium hydroxide solution R* and 5 mL of *water R*.

**Acidity**. To 1.25 g, finely powdered, add 25 mL of *carbon dioxide-free water R*. Heat at about 70 °C for 5 min. Cool in iced water for about 15 min and filter. To 20 mL of the filtrate add 0.1 mL of *bromothymol blue solution R1*. Not more than 0.2 mL of *0.1 M sodium hydroxide* is required to change the colour of the indicator.

**Related substances**. Liquid chromatography (*2.2.29*).

*Solvent mixture*: 40 g/L solution of *sodium hydroxide R*, *acetonitrile R*, *water R* (2:20:60 *V/V/V*).

*Test solution*. Dissolve 50.0 mg of the substance to be examined in the solvent mixture and dilute to 100.0 mL with *water R*.

*Reference solution (a)*. Dissolve 5.0 mg of *sulfadiazine impurity A CRS* and 5.0 mg of *sulfanilic acid RV* (impurity B) in the solvent mixture and dilute to 10.0 mL with *water R*. Dilute 1.0 mL of the solution to 100.0 mL with the mobile phase. Dilute 3.0 mL of this solution to 10.0 mL with the mobile phase.

*Reference solution (b)*. Dilute 1.0 mL of the test solution to 100.0 mL with the mobile phase. Dilute 1.0 mL of this solution to 10.0 mL with the mobile phase.

*Reference solution (c)*. Dissolve the contents of a vial of *acetylsulfadiazine CRS* (impurity E) in 1 mL of the mobile phase.

*Reference solution (d)*. Dissolve 5 mg of *sulfadiazine for identification of impurity F CRS* in the solvent mixture and dilute to 10.0 mL with *water R*.

*Column*:

- *size*: *l* = 0.25 m, Ø = 4.6 mm;
- *stationary phase*: *octadecylsilyl silica gel for chromatography R* (5 µm).

*Mobile phase*: *acetonitrile R*, 2.8 g/L solution of *phosphoric acid R* (10:90 *V/V*).

*Flow rate*: 1.2 mL/min.

*Detection*: spectrophotometer at 260 nm.

*Injection*: 20 µL.

*Run time*: 7 times the retention time of sulfadiazine.

*Identification of impurities*: use the chromatogram obtained with reference solution (a) to identify the peaks due to impurities A and B; use the chromatogram obtained with reference solution (c) to identify the peak due to impurity E; use the chromatogram obtained with reference solution (d) to identify the peak due to impurity F.

*Relative retention* with reference to sulfadiazine (retention time = about 8.5 min): impurity A = about 0.26; impurity B = about 0.30; impurity E = about 2.1; impurity F = about 6.0.

*System suitability*: reference solution (a):

- *resolution*: minimum 2.0 between the peaks due to impurities A and B.

*Limits*:

- *correction factor*: for the calculation of content, multiply the peak area of impurity E by 0.7;
- *impurities A, B*: for each impurity, not more than the area of the corresponding peak in the chromatogram obtained with reference solution (a) (0.3 per cent);
- *impurity E*: not more than twice the area of the principal peak in the chromatogram obtained with reference solution (b) (0.2 per cent);
- *impurity F*: not more than 1.5 times the area of the principal peak in the chromatogram obtained with reference solution (b) (0.15 per cent);
- *unspecified impurities*: for each impurity, not more than 0.5 times the area of the principal peak in the chromatogram obtained with reference solution (b) (0.05 per cent);
- *total*: maximum 0.5 per cent;
- *disregard limit*: 0.3 times the area of the principal peak in the chromatogram obtained with reference solution (b) (0.03 per cent).

**Loss on drying** (*2.2.32*): maximum 0.5 per cent, determined on 1.000 g by drying in an oven at 105 °C.

**Sulfated ash** (*2.4.14*): maximum 0.1 per cent, determined on 1.0 g.

ASSAY

Dissolve 0.200 g in a mixture of 20 mL of *dilute hydrochloric acid R* and 50 mL of *water R*. Cool the solution in iced water. Carry out the determination of primary aromatic amino-nitrogen (*2.5.8*), determining the end-point electrometrically.

1 mL of *0.1 M sodium nitrite* is equivalent to 25.03 mg of $C_{10}H_{10}N_4O_2S$.

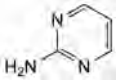
STORAGE

Protected from light.

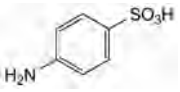
IMPURITIES

*Specified impurities: A, B, E, F.*

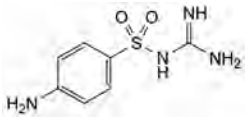
*Other detectable impurities* (the following substances would, if present at a sufficient level, be detected by one or other of the tests in the monograph. They are limited by the general acceptance criterion for other/unspecified impurities and/or by the general monograph *Substances for pharmaceutical use (2034)*. It is therefore not necessary to identify these impurities for demonstration of compliance. See also *5.10. Control of impurities in substances for pharmaceutical use*): *C, D.*



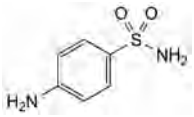
A. pyrimidin-2-amine,



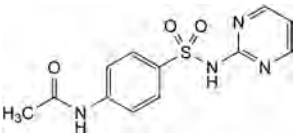
B. 4-aminobenzenesulfonic acid (sulfanilic acid),



C. [(4-aminophenyl)sulfonyl]guanidine (sulfaguanidine),



D. 4-aminobenzenesulfonamide (sulfanilamide),



E. *N*-[4-(pyrimidin-2-ylsulfamoyl)phenyl]acetamide (acetylsulfadiazine),

F. unknown structure.

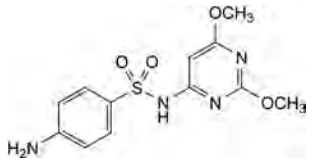
# SULFADIMETHOXINE

## Sulfadimethoxinum



$C_{12}H_{14}N_4O_4S$ $M_r$ 310.3
[122-11-2]

DEFINITION

4-Amino-*N*-(2,6-dimethoxypyrimidin-4-yl)benzene-1-sulfonamide.

*Content*: 97.5 per cent to 102.0 per cent (dried substance).

CHARACTERS

*Appearance*: white or almost white, crystalline powder.

*Solubility*: practically insoluble in water, slightly soluble in methylene chloride, very slightly soluble in ethanol (96 per cent).

It is freely soluble in dilute sodium hydroxide and sparingly soluble in dilute hydrochloric acid.

mp: 197 °C to 202 °C.

IDENTIFICATION

Infrared absorption spectrophotometry (*2.2.24*).

*Comparison*: *sulfadimethoxine CRS*.

TESTS

**Acidity**. Suspend 0.5 g in 25 mL of *carbon dioxide-free water R*. Heat the suspension at 70 °C for 5 min, cool quickly to room temperature and filter. Not more than 0.1 mL of *0.1 M sodium hydroxide* is required to reach pH 7.0.

**Related substances**. Liquid chromatography (*2.2.29*).

*Solution A*. Dissolve 6.0 g of *sodium dihydrogen phosphate R* in 950 mL of *water for chromatography R*, adjust to pH 7.0 with *dilute sodium hydroxide solution R* and dilute to 1000 mL with *water for chromatography R*.

*Test solution*. Dissolve 20.0 mg of the substance to be examined in 25 mL of *methanol R* and dilute to 100.0 mL with solution A.

*Reference solution (a)*. Dissolve 20.0 mg of *sulfadimethoxine CRS* in 25 mL of *methanol R* and dilute to 100.0 mL with solution A.

*Reference solution (b)*. Dilute 1.0 mL of the test solution to 100.0 mL with mobile phase A. Dilute 1.0 mL of this solution to 10.0 mL with mobile phase A.

*Reference solution (c)*. Dissolve 4 mg of *sulfadimethoxine for peak identification CRS* (containing impurities A and F) in 5 mL of *methanol R* and dilute to 20 mL with solution A.

*Column*:

- *size*: *l* = 0.25 m, Ø = 4.6 mm;
- *stationary phase*: *end-capped ethylene-bridged octadecylsilyl silica gel for chromatography (hybrid material) R* (5 µm);
- *temperature*: 25 °C.

*Mobile phase*:

- *mobile phase A*: *methanol R*, solution A (25:75 *V/V*);
- *mobile phase B*: *methanol R*, *acetonitrile R*, solution A (25:35:40 *V/V/V*);

| Time (min) | Mobile phase A (per cent *V/V*) | Mobile phase B (per cent *V/V*) |
|---|---|---|
| 0 - 10 | 100 | 0 |
| 10 - 30 | 100 → 0 | 0 → 100 |
| 30 - 35 | 0 | 100 |

*Flow rate*: 1.0 mL/min.

*Detection*: spectrophotometer at 254 nm.

*Injection*: 10 µL of the test solution and reference solutions (b) and (c).

*Identification of impurities*: use the chromatogram supplied with *sulfadimethoxine for peak identification CRS* and the chromatogram obtained with reference solution (c) to identify the peaks due to impurities A and F.

*Relative retention* with reference to sulfadimethoxine (retention time = about 11 min): impurity F = about 0.4; impurity A = about 1.2.

*System suitability*:

- *resolution*: minimum 2.5 between the peaks due to sulfadimethoxine and impurity A in the chromatogram obtained with reference solution (c);
- *signal-to-noise ratio*: minimum 40 for the principal peak in the chromatogram obtained with reference solution (b).

*Calculation of percentage contents*:

- *correction factors*: multiply the peak areas of the following impurities by the corresponding correction factor: impurity A = 1.4; impurity F = 1.7;
- for each impurity, use the concentration of sulfadimethoxine in reference solution (b).

*Limits*:

- *impurities A, F*: for each impurity, maximum 0.15 per cent;
- *unspecified impurities*: for each impurity, maximum 0.10 per cent;
- *total*: maximum 0.5 per cent;
- *reporting threshold*: 0.05 per cent.

**Loss on drying** (*2.2.32*): maximum 0.5 per cent, determined on 1.000 g by drying in an oven at 105 °C.

**Sulfated ash** (*2.4.14*): maximum 0.1 per cent, determined on 1.0 g.

ASSAY

Liquid chromatography (*2.2.29*) as described in the test for related substances with the following modification.

*Injection*: test solution and reference solution (a).

Calculate the percentage content of $C_{12}H_{14}N_4O_4S$ taking into account the assigned content of *sulfadimethoxine CRS*.

STORAGE

Protected from light.

IMPURITIES

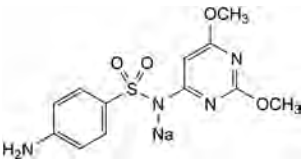
# SULFADIMETHOXINE SODIUM FOR VETERINARY USE

## Sulfadimethoxinum natricum ad usum veterinarium



$C_{12}H_{13}N_4NaO_4S$ $M_r$ 332.3
[1037-50-9]

DEFINITION

Sodium [(4-aminophenyl)sulfonyl](2,6-dimethoxypyrimidin-4-yl)azanide.

*Content*: 97.5 per cent to 102.0 per cent (anhydrous substance).

CHARACTERS

*Appearance*: white or almost white, crystalline powder, hygroscopic.

*Solubility*: freely soluble in water, slightly soluble in ethanol (96 per cent), practically insoluble in methylene chloride.

IDENTIFICATION

A. Infrared absorption spectrophotometry (*2.2.24*).

*Preparation*: dissolve 1 g in 20 mL of *water R*; add 0.20 mL of *glacial acetic acid R*; filter the precipitate, wash with 1 mL of *water R* and dry at 105 °C for 2 h.

*Comparison*: *sulfadimethoxine CRS*.

B. 2 mL of the filtrate obtained in identification test A gives reaction (a) of sodium (*2.3.1*).

TESTS

**Appearance of solution**. The solution is clear (*2.2.1*) and not more intensely coloured than reference solution $BY_5$ (*2.2.2, Method II*).

Dissolve 0.5 g in *water R* and dilute to 10 mL with the same solvent.

**pH** (*2.2.3*): 8.5 to 10.0.

Dissolve 0.2 g in *carbon dioxide-free water R* and dilute to 20 mL with the same solvent.

**Related substances**. Liquid chromatography (*2.2.29*).

*Solution A*. Dissolve 6.0 g of *sodium dihydrogen phosphate R* in 950 mL of *water for chromatography R*, adjust to pH 7.0 with *dilute sodium hydroxide solution R* and dilute to 1000 mL with *water for chromatography R*.

*Test solution*. Dissolve 22.0 mg of the substance to be examined in 76 mL of solution A and dilute to 100.0 mL with *methanol R*.

*Reference solution (a)*. Dissolve 20.0 mg of *sulfadimethoxine CRS* in 25 mL of *methanol R* and dilute to 100.0 mL with solution A.

*Reference solution (b)*. Dilute 2.0 mL of the test solution to 100.0 mL with mobile phase A. Dilute 1.0 mL of this solution to 10.0 mL with mobile phase A.

*Reference solution (c)*. Dissolve 4 mg of *sulfadimethoxine for peak identification CRS* (containing impurities A and F) in 5 mL of *methanol R* and dilute to 20 mL with solution A.

*Column*:
- *size*: *l* = 0.25 m, Ø = 4.6 mm;
- *stationary phase*: *end-capped ethylene-bridged octadecylsilyl silica gel for chromatography (hybrid material) R* (5 µm);
- *temperature*: 25 °C.

*Mobile phase*:
- *mobile phase A*: *methanol R*, solution A (25:75 *V/V*);
- *mobile phase B*: *methanol R*, *acetonitrile R*, solution A (25:35:40 *V/V/V*);

| Time (min) | Mobile phase A (per cent *V/V*) | Mobile phase B (per cent *V/V*) |
|---|---|---|
| 0 - 10 | 100 | 0 |
| 10 - 30 | 100 → 0 | 0 → 100 |
| 30 - 35 | 0 | 100 |

*Flow rate*: 1.0 mL/min.

*Detection*: spectrophotometer at 254 nm.

*Injection*: 10 µL of the test solution and reference solutions (b) and (c).

*Identification of impurities*: use the chromatogram supplied with *sulfadimethoxine for peak identification CRS* and the chromatogram obtained with reference solution (c) to identify the peaks due to impurities A and F.

*Relative retention* with reference to sulfadimethoxine (retention time = about 11 min): impurity F = about 0.4; impurity A = about 1.2.

*System suitability*:
- *resolution*: minimum 2.5 between the peaks due to sulfadimethoxine and impurity A in the chromatogram obtained with reference solution (c);
- *signal-to-noise ratio*: minimum 40 for the principal peak in the chromatogram obtained with reference solution (b).

*Calculation of percentage contents*:
- *correction factors*: multiply the peak areas of the following impurities by the corresponding correction factor: impurity A = 1.4; impurity F = 1.7;
- for each impurity, use the concentration of sulfadimethoxine sodium in reference solution (b).

*Limits*:
- *impurities A, F*: for each impurity, maximum 0.2 per cent;
- *unspecified impurities*: for each impurity, maximum 0.20 per cent;
- *total*: maximum 0.5 per cent;
- *reporting threshold*: 0.10 per cent.

**Heavy metals** (*2.4.8*): maximum 20 ppm.

*Solvent*: *water R*.

0.5 g complies with test H. Prepare the reference solution using 1 mL of *lead standard solution (10 ppm Pb) R*.

**Water** (*2.5.12*): maximum 5.0 per cent, determined on 0.200 g.

ASSAY

Liquid chromatography (*2.2.29*) as described in the test for related substances with the following modification.

*Injection*: test solution and reference solution (a).

Calculate the percentage content of $C_{12}H_{13}N_4NaO_4S$ taking into account the assigned content of *sulfadimethoxine CRS* and a conversion factor of 1.071.

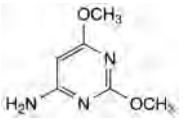
STORAGE

In an airtight container, protected from light.

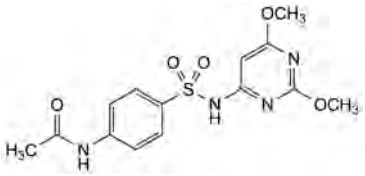
IMPURITIES

*Specified impurities: A, F.*

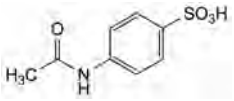
*Other detectable impurities* (the following substances would, if present at a sufficient level, be detected by one or other of the tests in the monograph. They are limited by the general acceptance criterion for other/unspecified impurities and/or by the general monograph *Substances for pharmaceutical use (2034)*. It is therefore not necessary to identify these impurities for demonstration of compliance. See also *5.10. Control of impurities in substances for pharmaceutical use*): *B, C, D, E.*



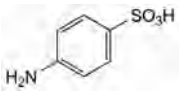
A. 2,6-dimethoxypyrimidin-4-amine,



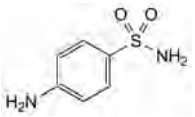
B. *N*-[4-[(2,6-dimethoxypyrimidin-4-yl)sulfamoyl]phenyl]-acetamide,



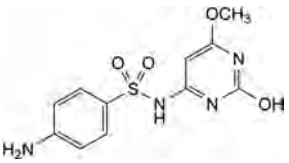
C. 4-(acetylamino)benzene-1-sulfonic acid,



D. 4-aminobenzene-1-sulfonic acid (sulfanilic acid),



E. 4-aminobenzene-1-sulfonamide (sulfanilamide),



F. 4-amino-*N*-(2-hydroxy-6-methoxypyrimidin-4-yl)benzene-1-sulfonamide.

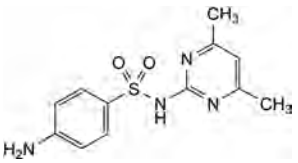
# SULFADIMIDINE

## Sulfadimidinum



$C_{12}H_{14}N_4O_2S$ $M_r$ 278.3

[57-68-1]

DEFINITION

4-Amino-*N*-(4,6-dimethylpyrimidin-2-yl)benzenesulfonamide.

*Content*: 99.0 per cent to 101.0 per cent (dried substance).

CHARACTERS

*Appearance*: white or almost white powder or crystals.

*Solubility*: very slightly soluble in water, soluble in acetone, slightly soluble in ethanol (96 per cent). It dissolves in solutions of alkali hydroxides and in dilute mineral acids.

IDENTIFICATION

*First identification: A.*

*Second identification: B, C, D.*

A. Infrared absorption spectrophotometry (*2.2.24*).
*Comparison*: *sulfadimidine CRS*.

B. Thin-layer chromatography (*2.2.27*).
*Solvent mixture*: *concentrated ammonia R*, *methanol R* (4:96 *V/V*).
*Test solution.* Dissolve 20 mg of the substance to be examined in 3 mL of the solvent mixture and dilute to 5.0 mL with the solvent mixture.
*Reference solution.* Dissolve 20 mg of *sulfadimidine CRS* in 3 mL of the solvent mixture and dilute to 5.0 mL with the solvent mixture.
*Plate*: *TLC silica gel* $GF_{254}$ *plate R*.
*Mobile phase*: *dilute ammonia R1*, *water R*, *nitromethane R*, *dioxan R* (3:5:40:50 *V/V/V/V*).
*Application*: 5 µL.
*Development*: over 2/3 of the plate.
*Drying*: at 100-105 °C for 30 min.
*Detection*: examine in ultraviolet light at 254 nm.
*Results*: the principal spot in the chromatogram obtained with the test solution is similar in position and size to the principal spot in the chromatogram obtained with the reference solution.

C. Place 3 g in a dry tube. Immerse the lower part of the tube, inclined at 45°, in a silicone-oil bath and heat to about 270 °C. The substance to be examined decomposes and a white or yellowish-white sublimate is formed which, after recrystallisation from *toluene R* and drying at 100 °C, melts (*2.2.14*) at 150 °C to 154 °C.

D. Dissolve about 5 mg in 10 mL of a 103 g/L solution of *hydrochloric acid R*. Dilute 1 mL of the solution to 10 mL with *water R*. The solution, without further acidification, gives the reaction of primary aromatic amines (*2.3.1*).

TESTS

**Appearance of solution**. The solution is not more intensely coloured than reference solution $Y_5$, $BY_5$ or $GY_5$ (*2.2.2, Method II*).

Dissolve 0.5 g in a mixture of 5 mL of *dilute sodium hydroxide solution R* and 5 mL of *water R*.

**Acidity**. To 1.25 g of the finely powdered substance to be examined, add 25 mL of *carbon dioxide-free water R*. Heat at about 70 °C for 5 min. Cool in iced water for about 15 min and filter. To 20 mL of the filtrate add 0.1 mL of *bromothymol blue solution R1*. Not more than 0.2 mL of *0.1 M sodium hydroxide* is required to change the colour of the indicator.

**Related substances**. Liquid chromatography (*2.2.29*).

*Solvent mixture*: 40 g/L solution of *sodium hydroxide R*, *acetonitrile R*, *water R* (2.5:25:75 *V/V/V*).

*Test solution.* Dissolve 50.0 mg of the substance to be examined in 41 mL of the solvent mixture and dilute to 50.0 mL with *water R*.

*Reference solution (a).* Dissolve 5 mg of *sulfacetamide sodium CRS* (impurity E) and 5 mg of *sulfaguanidine CRS* (impurity C) in 41 mL of the solvent mixture and dilute to 100.0 mL with *water R*.

*Reference solution (b).* Dilute 1.0 mL of the test solution to 100.0 mL with mobile phase B. Dilute 1.0 mL of this solution to 10.0 mL with mobile phase B.

*Reference solution (c).* Dissolve 20 mg of *sulfadimidine for peak identification CRS* (containing impurity G) in 16.4 mL of the solvent mixture and dilute to 20.0 mL with *water R*.

*Column*:
- *size*: *l* = 0.25 m, Ø = 4.6 mm;
- *stationary phase*: *end-capped octylsilyl silica gel for chromatography R* (5 µm);
- *temperature*: 35 °C.

*Mobile phase*:
- *mobile phase A*: mix 10 volumes of *acetonitrile R* and 90 volumes of a 0.6 per cent *V/V* solution of *acetic acid R* previously adjusted to pH 6.5 with a 250 g/L solution of *ammonia R*;
- *mobile phase B*: mix equal volumes of *acetonitrile R* and a 0.6 per cent *V/V* solution of *acetic acid R* previously adjusted to pH 6.5 with a 250 g/L solution of *ammonia R*;

| Time (min) | Mobile phase A (per cent *V/V*) | Mobile phase B (per cent *V/V*) |
|---|---|---|
| 0 - 25 | 100 | 0 |
| 25 - 35 | 100 → 0 | 0 → 100 |
| 35 - 45 | 0 | 100 |

*Flow rate*: 1.3 mL/min.

*Detection*: spectrophotometer at 241 nm.

*Injection*: 20 µL.

*Identification of impurities*: use the chromatogram supplied with *sulfadimidine for peak identification CRS* and the chromatogram obtained with reference solution (c) to identify the peak due to impurity G.

*Relative retention* with reference to sulfadimidine (retention time = about 20 min): impurity E = about 0.13; impurity C = about 0.15; impurity D = about 0.2; impurity G = about 1.7.

*System suitability*: reference solution (a):
- *resolution*: minimum 2.0 between the peaks due to impurities E and C.

*Limits*:
- *impurities C, D, G*: for each impurity, not more than the area of the principal peak in the chromatogram obtained with reference solution (b) (0.10 per cent);
- *unspecified impurities*: for each impurity, not more than 0.5 times the area of the principal peak in the chromatogram obtained with reference solution (b) (0.05 per cent);
- *total*: not more than 5 times the area of the principal peak in the chromatogram obtained with reference solution (b) (0.5 per cent);
- *disregard limit*: 0.3 times the area of the principal peak in the chromatogram obtained with reference solution (b) (0.03 per cent).

**Loss on drying** (*2.2.32*): maximum 0.5 per cent, determined on 1.000 g by drying in an oven at 105 °C.

**Sulfated ash** (*2.4.14*): maximum 0.1 per cent, determined on 1.0 g.

ASSAY

Dissolve 0.250 g in a mixture of 20 mL of *dilute hydrochloric acid R* and 50 mL of *water R*. Cool the solution in iced water. Carry out the determination of primary aromatic amino-nitrogen (*2.5.8*), determining the end-point electrometrically.

1 mL of *0.1 M sodium nitrite* is equivalent to 27.83 mg of $C_{12}H_{14}N_4O_2S$.

STORAGE

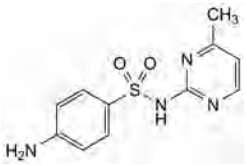
Protected from light.

IMPURITIES

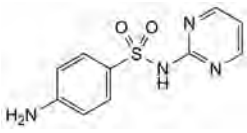
*Specified impurities: C, D, G.*

Monographs S

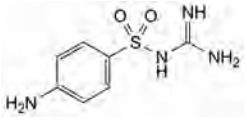
*Other detectable impurities* (the following substances would, if present at a sufficient level, be detected by one or other of the tests in the monograph. They are limited by the general acceptance criterion for other/unspecified impurities and/or by the general monograph *Substances for pharmaceutical use (2034)*. It is therefore not necessary to identify these impurities for demonstration of compliance. See also *5.10. Control of impurities in substances for pharmaceutical use*): *A, B, E, F.*



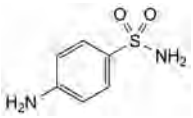
A. 4-amino-*N*-(4-methylpyrimidin-2-yl)benzenesulfonamide (sulfamerazine),



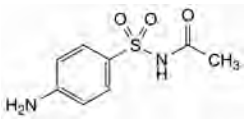
B. 4-amino-*N*-pyrimidin-2-ylbenzenesulfonamide (sulfadiazine),



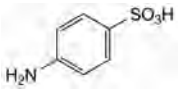
C. (4-aminophenylsulfonyl)guanidine (sulfaguanidine),



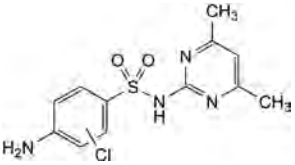
D. 4-aminobenzenesulfonamide (sulfanilamide),



E. *N*-[(4-aminophenyl)sulfonyl]acetamide (sulfacetamide),



F. 4-aminobenzenesulfonic acid (sulfanilic acid),



G. 4-amino-2-chloro-*N*-(4,6-dimethylpyrimidin-2-yl)benzenesulfonamide or 4-amino-3-chloro-*N*-(4,6-dimethylpyrimidin-2-yl)benzenesulfonamide.

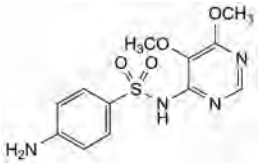
# SULFADOXINE

## Sulfadoxinum



$C_{12}H_{14}N_4O_4S$ $M_r$ 310.3
[2447-57-6]

DEFINITION

Sulfadoxine contains not less than 99.0 per cent and not more than the equivalent of 101.0 per cent of 4-amino-*N*-(5,6-dimethoxypyrimidin-4-yl)benzenesulfonamide, calculated with reference to the dried substance.

CHARACTERS

White or yellowish-white crystalline powder or crystals, very slightly soluble in water, slightly soluble in alcohol and in methanol. It dissolves in solutions of alkali hydroxides and in dilute mineral acids.

It melts at about 198 °C, with decomposition.

IDENTIFICATION

*First identification: A, C.*

*Second identification: B, C, D.*

A. Examine by infrared absorption spectrophotometry (*2.2.24*), comparing with the spectrum obtained with *sulfadoxine CRS*. Examine the substances prepared as discs.

B. Examine the chromatograms obtained in the test for related substances. The principal spot in the chromatogram obtained with test solution (b) is similar in position and size to the principal spot in the chromatogram obtained with reference solution (a).

C. Dissolve 0.5 g in 1 mL of a 40 per cent *V/V* solution of *sulfuric acid R*, heating gently. Continue heating until a crystalline precipitate appears (about 2 min). Allow to cool and add 10 mL of *dilute sodium hydroxide solution R*. Cool again. Add 25 mL of *ether R* and shake for 5 min. Separate the ether layer, dry over *anhydrous sodium sulfate R* and filter. Evaporate the solvent by heating in a water-bath. The residue melts (*2.2.14*) at 80 °C to 82 °C or at 90 °C to 92 °C.

D. Dissolve about 5 mg in 10 mL of *1 M hydrochloric acid*. Dilute 1 mL of the solution to 10 mL with *water R*. The solution, without further acidification, gives the reaction of primary aromatic amines (*2.3.1*).

TESTS

**Appearance of solution**. Dissolve 1.0 g in a mixture of 5 mL of *dilute sodium hydroxide solution R* and 5 mL of *water R*. The solution is not more intensely coloured than reference solution $Y_5$, $BY_5$ or $GY_5$ (*2.2.2, Method II*).

**Acidity**. To 1.25 g, finely powdered, add 25 mL of *carbon dioxide-free water R*. Heat at 70 °C for 5 min. Cool in a bath of iced water for about 15 min and filter. To 20 mL of the filtrate add 0.1 mL of *bromothymol blue solution R1*. Not more than 0.2 mL of *0.1 M sodium hydroxide* is required to change the colour of the indicator.

**Related substances**. Examine by thin-layer chromatography (*2.2.27*), using *silica gel* $GF_{254}$ *R* as the coating substance.

*Test solution (a).* Dissolve 0.10 g of the substance to be examined in 3 mL of a mixture of 2 volumes of *concentrated*

*ammonia R* and 48 volumes of *methanol R* and dilute to 5 mL with the same mixture of solvents.

*Test solution (b).* Dilute 1 mL of test solution (a) to 5 mL with a mixture of 2 volumes of *concentrated ammonia R* and 48 volumes of *methanol R*.

*Reference solution (a).* Dissolve 20 mg of *sulfadoxine CRS* in 3 mL of a mixture of 2 volumes of *concentrated ammonia R* and 48 volumes of *methanol R* and dilute to 5 mL with the same mixture of solvents.

*Reference solution (b).* Dilute 2.5 mL of test solution (b) to 100 mL with a mixture of 2 volumes of *concentrated ammonia R* and 48 volumes of *methanol R*.

Apply to the plate 5 µL of each solution. Develop over a path of 15 cm using a mixture of 3 volumes of *dilute ammonia R1*, 5 volumes of *water R*, 40 volumes of *nitromethane R* and 50 volumes of *dioxan R*. Dry the plate at 100 °C to 105 °C and examine in ultraviolet light at 254 nm. Any spot in the chromatogram obtained with test solution (a), apart from the principal spot, is not more intense than the spot in the chromatogram obtained with reference solution (b) (0.5 per cent).

**Loss on drying** (*2.2.32*). Not more than 0.5 per cent, determined on 1.000 g by drying in an oven at 105 °C.

**Sulfated ash** (*2.4.14*). Not more than 0.1 per cent, determined on 1.0 g.

ASSAY

Carry out the determination of primary aromatic amino-nitrogen (*2.5.8*), using 0.250 g and determining the end-point electrometrically.

1 mL of *0.1 M sodium nitrite* is equivalent to 31.03 mg of $C_{12}H_{14}N_4O_4S$.

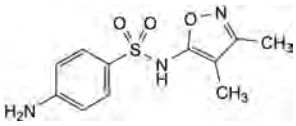
STORAGE

Store protected from light.

**01/2017:0741**

# SULFAFURAZOLE

## Sulfafurazolum



$C_{11}H_{13}N_3O_3S$ $M_r$ 267.3
[127-69-5]

DEFINITION

Sulfafurazole contains not less than 99.0 per cent and not more than the equivalent of 101.0 per cent of 4-amino-*N*-(3,4-dimethylisoxazol-5-yl)benzenesulfonamide, calculated with reference to the dried substance.

CHARACTERS

White or yellowish-white, crystalline powder or crystals, practically insoluble in water, sparingly soluble in alcohol, slightly soluble in methylene chloride. It dissolves in solutions of alkali hydroxides and in dilute mineral acids.

It melts at about 197 °C, with decomposition.

IDENTIFICATION

*First identification: A, C.*

*Second identification: B, C, D.*

A. Examine by infrared absorption spectrophotometry (*2.2.24*), comparing with the spectrum obtained with *sulfafurazole CRS*. Examine the substances prepared as discs.

B. Examine the chromatograms obtained in the test for related substances. The principal spot in the chromatogram obtained with test solution (b) is similar in position and size to the principal spot in the chromatogram obtained with reference solution (a).

C. To 0.5 g add 1 mL of a 40 per cent *V/V* solution of *sulfuric acid R* and heat over a low flame to dissolve. Continue heating until a crystalline precipitate appears (about 2 min). Allow to cool and add 10 mL of *dilute sodium hydroxide solution R*. Cool. Shake the solution for 5 min with 25 mL of *ether R*. Separate the ether layer, dry over *anhydrous sodium sulfate R* and filter. Evaporate the solvent by heating on a water-bath. The residue melts (*2.2.14*) at 119 °C to 123 °C.

D. Dissolve about 5 mg in 10 mL of *1 M hydrochloric acid*. Dilute 1 mL of the solution to 10 mL with *water R*. The solution, without further acidification, gives the reaction of primary aromatic amines (*2.3.1*).

TESTS

**Appearance of solution**. Dissolve 0.4 g in a mixture of 5 mL of *dilute sodium hydroxide solution R* and 5 mL of *water R*, with gently warming if necessary. The solution is not more intensely coloured than reference solution $Y_6$, $BY_6$ or $GY_6$ (*2.2.2, Method II*).

**Acidity**. To 1.25 g, finely powdered, add 25 mL of *carbon dioxide-free water R*. Heat at 70 °C for 5 min. Cool in iced water for about 15 min and filter. To 20 mL of the filtrate add 0.1 mL of *bromothymol blue solution R1*. Not more than 0.2 mL of *0.1 M sodium hydroxide* is required to change the colour of the indicator.

**Related substances**. Examine by thin-layer chromatography (*2.2.27*), using *silica gel* $GF_{254}$ *R* as the coating substance.

*Test solution (a).* Dissolve 0.10 g of the substance to be examined in 3 mL of a mixture of 2 volumes of *concentrated ammonia R* and 48 volumes of *methanol R* and dilute to 5 mL with the same mixture of solvents.

*Test solution (b).* Dilute 1 mL of test solution (a) to 5 mL with a mixture of 2 volumes of *concentrated ammonia R* and 48 volumes of *methanol R*.

*Reference solution (a).* Dissolve 20 mg of *sulfafurazole CRS* in 3 mL of a mixture of 2 volumes of *concentrated ammonia R* and 48 volumes of *methanol R* and dilute to 5 mL with the same mixture of solvents.

*Reference solution (b).* Dilute 1.25 mL of test solution (b) to 50 mL with a mixture of 2 volumes of *concentrated ammonia R* and 48 volumes of *methanol R*.

Apply to the plate 5 µL of each solution. Develop over a path of 15 cm using a mixture of 1 volume of *concentrated ammonia R*, 25 volumes of *methanol R* and 75 volumes of *methylene chloride R*. Dry the plate at 100 °C to 105 °C and examine in ultraviolet light at 254 nm. Any spot in the chromatogram obtained with test solution (a), apart from the principal spot, is not more intense than the spot in the chromatogram obtained with reference solution (b) (0.5 per cent).

**Loss on drying** (*2.2.32*). Not more than 0.5 per cent, determined on 1.000 g by drying in an oven at 105 °C.

**Sulfated ash** (*2.4.14*). Not more than 0.1 per cent, determined on 1.0 g.

ASSAY

Dissolve 0.200 g in 50 mL of *acetone R*. Titrate with *0.1 M tetrabutylammonium hydroxide* using a 4 g/L solution of *thymol blue R* in *methanol R* as indicator.

1 mL of *0.1 M tetrabutylammonium hydroxide* is equivalent to 26.73 mg of $C_{11}H_{13}N_3O_3S$.

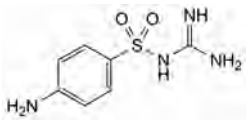
STORAGE

Store protected from light.

**01/2017:1476**
**corrected 10.0**

# SULFAGUANIDINE

## Sulfaguanidinum



$C_7H_{10}N_4O_2S$ $M_r$ 214.3
[57-67-0]

DEFINITION

Sulfaguanidine contains not less than 99.0 per cent and not more than the equivalent of 101.0 per cent of (4-aminophenylsulfonyl)guanidine, calculated with reference to the dried substance.

CHARACTERS

A white or almost white, fine crystalline powder, very slightly soluble in water, slightly soluble in acetone, very slightly soluble in ethanol (96 per cent), practically insoluble in methylene chloride. It dissolves in dilute solutions of mineral acids.

IDENTIFICATION

*First identification: A, B.*

*Second identification: A, C, D, E.*

A. Melting point (*2.2.14*): 189 °C to 193 °C, determined on the dried substance.

B. Examine by infrared absorption spectrophotometry (*2.2.24*), comparing with the spectrum obtained with *sulfaguanidine CRS*.

C. Examine the chromatograms obtained in the test for related substances. The principal spot in the chromatogram obtained with test solution (b) is similar in position and size to the principal spot in the chromatogram obtained with reference solution (a).

D. Dissolve about 5 mg in 10 mL of *1 M hydrochloric acid*. Dilute 1 mL of the solution to 10 mL with *water R*. The solution, without further acidification, gives the reaction of primary aromatic amines (*2.3.1*).

E. Suspend 0.1 g in 2 mL of *water R*, add 1 mL of *α-naphthol solution R* and 2 mL of a mixture of equal volumes of *water R* and *strong sodium hypochlorite solution R*. A red colour develops.

TESTS

**Solution S**. To 2.5 g, add 40 mL of *carbon dioxide-free water R*. Heat at about 70 °C for 5 min. Cool while stirring in iced water for about 15 min, filter and dilute to 50 mL with *carbon dioxide-free water R*.

**Acidity**. To 20 mL of solution S, add 0.1 mL of *bromothymol blue solution R1*. Not more than 0.2 mL of *0.1 M sodium hydroxide* is required to change the colour of the indicator.

**Related substances**. Examine by thin layer chromatography (*2.2.27*), using a *TLC silica gel $GF_{254}$ plate R*.

*Test solution (a).* Dissolve 50 mg of the substance to be examined in *acetone R* and dilute to 5 mL with the same solvent.

*Test solution (b).* Dilute 2 mL of test solution (a) to 10 mL with *acetone R*.

*Reference solution (a).* Dissolve 10 mg of *sulfaguanidine CRS* in *acetone R* and dilute to 5 mL with the same solvent.

*Reference solution (b).* Dilute 5 mL of test solution (b) to 200 mL with *acetone R*.

*Reference solution (c).* Dilute 5 mL of reference solution (b) to 10 mL with *acetone R*.

*Reference solution (d).* Dissolve 10 mg of *sulfanilamide R* in test solution (b) and dilute to 5 mL with the same solution.

Apply to the plate 10 µL of each solution. Develop over a path of 15 cm using a mixture of 10 volumes of *anhydrous formic acid R*, 20 volumes of *methanol R* and 70 volumes of *methylene chloride R*. Allow the plate to dry in air and examine in ultraviolet light at 254 nm. Any spot in the chromatogram obtained with test solution (a), apart from the principal spot, is not more intense than the spot in the chromatogram obtained with reference solution (b) (0.5 per cent) and at most one such spot is more intense than the spot in the chromatogram obtained with reference solution (c) (0.25 per cent). The test is not valid unless the chromatogram obtained with reference solution (d) shows two clearly separated principal spots.

**Loss on drying** (*2.2.32*): not more than 8.0 per cent, determined on 1.000 g by drying in an oven at 105 °C.

**Sulfated ash** (*2.4.14*): not more than 0.1 per cent, determined on 1.0 g.

ASSAY

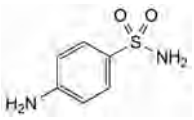
Dissolve 0.175 g in 50 mL of *dilute hydrochloric acid R*. Cool the solution in iced water. Carry out the determination of primary aromatic amino-nitrogen (*2.5.8*), determining the end-point electrometrically.

1 mL of *0.1 M sodium nitrite* is equivalent to 21.42 mg of $C_7H_{10}N_4O_2S$.

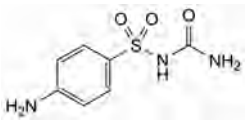
STORAGE

Store protected from light.

IMPURITIES



A. 4-aminobenzenesulfonamide (sulfanilamide),

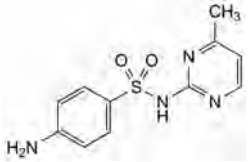


B. *N*-[(4-aminophenyl)sulfonyl]urea (sulfacarbamide).

**01/2017:0358**
**corrected 10.0**

# SULFAMERAZINE

## Sulfamerazinum



$C_{11}H_{12}N_4O_2S$ $M_r$ 264.3
[127-79-7]

DEFINITION

Sulfamerazine contains not less than 99.0 per cent and not more than the equivalent of 101.0 per cent of 4-amino-*N*-(4-methyl-2-pyrimidinyl)benzenesulfonamide, calculated with reference to the dried substance.

CHARACTERS

White, yellowish-white or pinkish-white, crystalline powder or crystals, very slightly soluble in water, sparingly soluble in acetone, slightly soluble in alcohol, very slightly soluble in methylene chloride. It dissolves in solutions of alkali hydroxides and in dilute mineral acids.

It melts at about 235 °C, with decomposition.

IDENTIFICATION

*First identification: A, B.*

*Second identification: B, C, D.*

A. Examine by infrared absorption spectrophotometry (*2.2.24*), comparing with the spectrum obtained with *sulfamerazine CRS*. Examine the substances as discs.

B. Examine the chromatograms obtained in the test for related substances. The principal spot in the chromatogram obtained with test solution (b) is similar in position, colour and size to the principal spot in the chromatogram obtained with reference solution (a).

C. Place 3 g in a dry tube. Incline the tube by about 45°, immerse the bottom of the tube in a silicone-oil bath and heat to about 270 °C. The substance decomposes, producing a white or yellowish-white sublimate which, after recrystallisation from *toluene R* and drying at 100 °C, melts (*2.2.14*) at 157 °C to 161 °C.

D. Dissolve about 20 mg in 0.5 mL of *dilute hydrochloric acid R* and add 1 mL of *water R*. The solution gives, without further addition of acid, the identification reaction of primary aromatic amines (*2.3.1*).

TESTS

**Appearance of solution**. Dissolve 0.8 g in a mixture of 5 mL of *dilute sodium hydroxide solution R* and 5 mL of *water R*. The solution is not more intensely coloured than reference solution $Y_4$, $BY_4$ or $GY_4$ (*2.2.2, Method II*).

**Acidity**. To 1.25 g, finely powdered, add 40 mL of *carbon dioxide-free water R* and heat at about 70 °C for 5 min. Cool for about 15 min in iced water and filter. To 20 mL of the filtrate add 0.1 mL of *bromothymol blue solution R1*. Not more than 0.2 mL of *0.1 M sodium hydroxide* is required to change the colour of the indicator.

**Related substances**. Examine by thin-layer chromatography (*2.2.27*) using *silica gel* $GF_{254}$ *R* as the coating substance.

*Test solution (a).* Dissolve 0.10 g of the substance to be examined in 3 mL of a mixture of 2 volumes of *concentrated ammonia R* and 48 volumes of *methanol R* and dilute to 5 mL with the same mixture of solvents.

*Test solution (b).* Dilute 1 mL of test solution (a) to 10 mL with a mixture of 2 volumes of *concentrated ammonia R* and 48 volumes of *methanol R*.

*Reference solution (a).* Dissolve 10 mg of *sulfamerazine CRS* in 3 mL of a mixture of 2 volumes of *concentrated ammonia R* and 48 volumes of *methanol R* and dilute to 5 mL with the same mixture of solvents.

*Reference solution (b).* Dilute 2.5 mL of test solution (b) to 50 mL with a mixture of 2 volumes of *concentrated ammonia R* and 48 volumes of *methanol R*.

Apply to the plate 5 µL of each solution. Develop over a path of 15 cm with a mixture of 3 volumes of *dilute ammonia R1*, 5 volumes of *water R*, 40 volumes of *nitromethane R* and 50 volumes of *dioxan R*. Dry the plate at 100 °C to 105 °C and examine in ultraviolet light at 254 nm. Any spot in the chromatogram obtained with test solution (a), apart from the principal spot, is not more intense than the spot in the chromatogram obtained with reference solution (b) (0.5 per cent).

**Loss on drying** (*2.2.32*). Not more than 0.5 per cent, determined on 1.000 g by drying in an oven at 105 °C.

**Sulfated ash** (*2.4.14*). Not more than 0.1 per cent, determined on 1.0 g.

ASSAY

Dissolve 0.2500 g in a mixture of 20 mL of *dilute hydrochloric acid R* and 50 mL of *water R*. Cool the solution in iced water. Carry out the determination of primary aromatic amino-nitrogen (*2.5.8*), determining the end-point electrometrically.

1 mL of *0.1 M sodium nitrite* is equivalent to 26.43 mg of $C_{11}H_{12}N_4O_2S$.

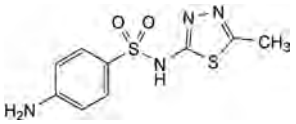
STORAGE

Store protected from light.

**01/2017:0637**

# SULFAMETHIZOLE

## Sulfamethizolum



$C_9H_{10}N_4O_2S_2$ $M_r$ 270.3

[144-82-1]

DEFINITION

Sulfamethizole contains not less than 99.0 per cent and not more than the equivalent of 101.0 per cent of 4-amino-*N*-(5-methyl-1,3,4-thiadiazol-2-yl)benzenesulfonamide, calculated with reference to the dried substance.

CHARACTERS

White or yellowish-white crystalline powder or crystals, very slightly soluble in water, soluble in acetone, sparingly soluble in alcohol. It dissolves in dilute solutions of alkali hydroxides and in dilute mineral acids.

It melts at about 210 °C.

IDENTIFICATION

*First identification: A, B.*

*Second identification: B, C, D.*

A. Examine by infrared absorption spectrophotometry (*2.2.24*), comparing with the spectrum obtained with *sulfamethizole CRS*. Examine the substances prepared as discs.

B. Examine the chromatograms obtained in the test for related substances. The principal spot in the chromatogram obtained with test solution (b) is similar in position and size to the principal spot in the chromatogram obtained with reference solution (a).

C. Dissolve 50 mg in 4 mL of *methanol R* and add 0.2 mL of a 40 g/L solution of *copper acetate R*. A flocculent, yellowish-green precipitate is formed, changing to dark green.

D. Dissolve about 5 mg in *1 M hydrochloric acid* and dilute to 10 mL with the same solvent. Dilute 1 mL of this solution to 10 mL with *water R*. The solution, without further acidification, gives the reaction of primary aromatic amines (*2.3.1*).

TESTS

**Appearance of solution**. Dissolve 1.0 g in a mixture of 5 mL of *dilute sodium hydroxide solution R* and 5 mL of *water R*. The solution is not more intensely coloured than reference solution $Y_5$, $BY_5$ or $GY_5$ (*2.2.2, Method II*).

**Acidity**. To 1.25 g add 25 mL of *carbon dioxide-free water R* and heat at 70 °C for 5 min. Cool for about 15 min in iced water and filter. To 20 mL of the filtrate add 0.1 mL of *bromothymol blue solution R1*. Not more than 0.5 mL of *0.1 M sodium hydroxide* is required to change the colour of the indicator.

**Related substances**. Examine by thin-layer chromatography (*2.2.27*), using *silica gel* $GF_{254}$ *R* as the coating substance.

*Test solution (a)*. Dissolve 0.30 g of the substance to be examined in *acetone R* and dilute to 10 mL with the same solvent.

*Test solution (b)*. Dilute 1 mL of test solution (a) to 10 mL with *acetone R*.

*Reference solution (a)*. Dissolve 30 mg of *sulfamethizole CRS* in *acetone R* and dilute to 10 mL with the same solvent.

*Reference solution (b)*. Dilute 1 mL of test solution (b) to 20 mL with *acetone R*.

Apply to the plate 2 µL of each solution. Develop over a path of 15 cm using a mixture of 15 volumes of *methanol R* and 80 volumes of *chloroform R*. Dry the plate at 100 °C to 105 °C and examine in ultraviolet light at 254 nm. Any spot in the chromatogram obtained with test solution (a), apart from the principal spot, is not more intense than the spot in the chromatogram obtained with reference solution (b) (0.5 per cent).

**Loss on drying** (*2.2.32*). Not more than 0.5 per cent, determined on 1.000 g by drying in an oven at 105 °C.

**Sulfated ash** (*2.4.14*). Not more than 0.1 per cent, determined on 1.0 g.

ASSAY

Carry out the determination of primary aromatic amino-nitrogen (*2.5.8*), using 0.2500 g and determining the end-point electrometrically.

1 mL of *0.1 M sodium nitrite* is equivalent to 27.03 mg of $C_9H_{10}N_4O_2S_2$.

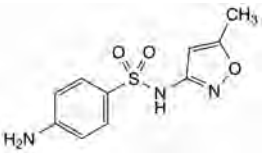
STORAGE

Store protected from light.

**01/2017:0108**

# SULFAMETHOXAZOLE

## Sulfamethoxazolum



$C_{10}H_{11}N_3O_3S$ $M_r$ 253.3
[723-46-6]

DEFINITION

4-Amino-*N*-(5-methylisoxazol-3-yl)benzenesulfonamide.

*Content*: 99.0 per cent to 101.0 per cent (dried substance).

CHARACTERS

*Appearance*: white or almost white, crystalline powder.

*Solubility*: practically insoluble in water, freely soluble in acetone, sparingly soluble in ethanol (96 per cent). It dissolves in dilute solutions of sodium hydroxide and in dilute acids.

IDENTIFICATION

*First identification*: *A, B*.

*Second identification*: *A, C, D*.

A. Melting point (*2.2.14*): 169 °C to 172 °C.

B. Infrared absorption spectrophotometry (*2.2.24*).

*Comparison*: *sulfamethoxazole CRS*.

C. Thin-layer chromatography (*2.2.27*).

*Test solution*. Dissolve 20 mg of the substance to be examined in 3 mL of a mixture of 2 volumes of *concentrated ammonia R* and 48 volumes of *methanol R* and dilute to 5 mL with the same mixture of solvents.

*Reference solution*. Dissolve 20 mg of *sulfamethoxazole CRS* in 3 mL of a mixture of 2 volumes of *concentrated ammonia R* and 48 volumes of *methanol R* and dilute to 5 mL with the same mixture of solvents.

*Plate*: *TLC silica gel* $F_{254}$ *plate R*.

*Mobile phase*: *dilute ammonia R1*, *water R*, *nitromethane R*, *dioxan R* (3:5:41:51 *V/V/V/V*).

*Application*: 5 µL.

*Development*: over 3/4 of the plate.

*Drying*: at 100-105 °C.

*Detection*: examine in ultraviolet light at 254 nm.

*Results*: the principal spot in the chromatogram obtained with the test solution is similar in position and size to the principal spot in the chromatogram obtained with the reference solution.

D. Dissolve about 5 mg in 10 mL of *1 M hydrochloric acid*. Dilute 1 mL of the solution to 10 mL with *water R*. The solution, without further acidification, gives the reaction of primary aromatic amines (*2.3.1*).

TESTS

**Appearance of solution**. The solution is clear (*2.2.1*) and not more intensely coloured than reference solution $Y_5$, $BY_5$ or $GY_5$ (*2.2.2, Method II*).

Dissolve 1.0 g in a mixture of 5 mL of *dilute sodium hydroxide solution R* and 5 mL of *water R*.

**Acidity**. To 1.25 g, finely powdered, add 25 mL of *water R*. Heat at 70 °C for 5 min. Cool in iced water for about 15 min and filter. To 20 mL of the filtrate add 0.1 mL of *bromothymol blue solution R1*. Not more than 0.3 mL of *0.1 M sodium hydroxide* is required to change the colour of the indicator.

**Related substances**. Liquid chromatography (*2.2.29*).

*Test solution*. Dissolve 50.0 mg of the substance to be examined in 45 mL of the mobile phase, sonicate at about 45 °C for 10 min, cool and dilute to 50.0 mL with the mobile phase.

*Reference solution (a)*. Dilute 1.0 mL of the test solution to 10.0 mL with the mobile phase. Dilute 1.0 mL of this solution to 100.0 mL with the mobile phase.

*Reference solution (b)*. Dissolve 1 mg of the substance to be examined and 1 mg of *sulfamethoxazole impurity A CRS* in the mobile phase and dilute to 10.0 mL with the mobile phase.

*Reference solution (c)*. Dissolve 1.0 mg of *sulfamethoxazole impurity F CRS* in the mobile phase and dilute to 10.0 mL with the mobile phase. Dilute 1.0 mL of this solution to 100.0 mL with the mobile phase.

*Column*:

- *size*: *l* = 0.25 m, Ø = 4.0 mm,
- *stationary phase*: *octylsilyl silica gel for chromatography R* (5 µm),
- *temperature*: 30 °C.

*Mobile phase*: mix 35 volumes of *methanol R2* and 65 volumes of a 13.6 g/L solution of *potassium dihydrogen phosphate R* previously adjusted to pH 5.3 with a 20 g/L solution of *potassium hydroxide R*.

*Flow rate*: 0.9 mL/min.

*Detection*: spectrophotometer at 210 nm.

*Injection*: 20 µL.

*Run time*: 3 times the retention time of sulfamethoxazole.

*Relative retention* with reference to sulfamethoxazole (retention time = about 10 min): impurity D = about 0.3; impurity E = about 0.35; impurity F = about 0.45; impurity C = about 0.5; impurity A = about 1.2; impurity B = about 2.0.

*System suitability*: reference solution (b):

– *resolution*: minimum 3.5 between the peaks due to sulfamethoxazole and impurity A.

*Limits*:

– *impurities A, B, C, D, E*: for each impurity, not more than the area of the principal peak in the chromatogram obtained with reference solution (a) (0.1 per cent),
– *impurity F*: not more than the area of the principal peak in the chromatogram obtained with reference solution (c) (0.1 per cent),
– *any other impurity*: for each impurity, not more than the area of the principal peak in the chromatogram obtained with reference solution (a) (0.1 per cent),
– *total*: not more than 3 times the area of the principal peak in the chromatogram obtained with reference solution (a) (0.3 per cent),
– *disregard limit*: 0.25 times the area of the principal peak in the chromatogram obtained with reference solution (a) (0.025 per cent).

**Loss on drying** (*2.2.32*): maximum 0.5 per cent, determined on 1.000 g by drying in an oven at 105 °C.

**Sulfated ash** (*2.4.14*): maximum 0.1 per cent, determined on 1.0 g.

ASSAY

Carry out the assay of primary aromatic amino-nitrogen (*2.5.8*), using 0.200 g and determining the end-point electrometrically.

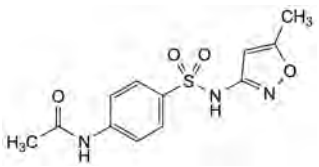
1 mL of *0.1 M sodium nitrite* is equivalent to 25.33 mg of $C_{10}H_{11}N_3O_3S$.

STORAGE

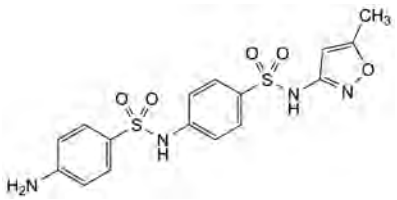
Protected from light.

IMPURITIES

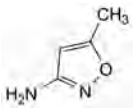
*Specified impurities: A, B, C, D, E, F.*



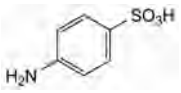
A. *N*-[4-[(5-methylisoxazol-3-yl)sulfamoyl]phenyl]acetamide,



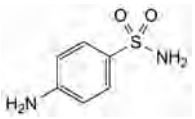
B. 4-[[(4-aminophenyl)sulfonyl]amino]-*N*-(5-methylisoxazol-3-yl)benzenesulfonamide,



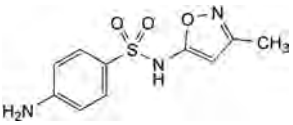
C. 5-methylisoxazol-3-amine,



D. 4-aminobenzenesulfonic acid (sulfanilic acid),



E. 4-aminobenzenesulfonamide (sulfanilamide),

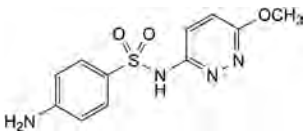


F. 4-amino-*N*-(3-methylisoxazol-5-yl)benzenesulfonamide.

**01/2008:0638**
**corrected 6.0**

# SULFAMETHOXYPYRIDAZINE FOR VETERINARY USE

## Sulfamethoxypyridazinum ad usum veterinarium



$C_{11}H_{12}N_4O_3S$ $M_r$ 280.3
[80-35-3]

DEFINITION

Sulfamethoxypyridazine for veterinary use contains not less than 99.0 per cent and not more than the equivalent of 101.0 per cent of 4-amino-*N*-(6-methoxypyridazin-3-yl)-benzenesulfonamide, calculated with reference to the dried substance.

CHARACTERS

A white or slightly yellowish, crystalline powder, colouring slowly on exposure to light, practically insoluble in water, sparingly soluble in acetone, slightly soluble in alcohol, very slightly soluble in methylene chloride. It dissolves in solutions of alkali hydroxides and in dilute mineral acids.

It melts at about 180 °C, with decomposition.

IDENTIFICATION

*First identification: A, B.*

*Second identification: B, C, D.*

A. Examine by infrared absorption spectrophotometry (*2.2.24*), comparing with the spectrum obtained with *sulfamethoxypyridazine CRS*. Examine the substances prepared as discs.

B. Examine the chromatograms obtained in the test for related substances. The principal spot in the chromatogram obtained with test solution (b) is similar in position and size to the principal spot in the chromatogram obtained with reference solution (a).

C. Dissolve 0.5 g in 1 mL of a 40 per cent *V/V* solution of *sulfuric acid R*, heating gently. Continue heating until a crystalline precipitate appears (about 2 min). Cool and add 10 mL of *dilute sodium hydroxide solution R*. Cool again, add 25 mL of *ether R* and shake the solution for 5 min. Separate the ether layer, dry over *anhydrous sodium sulfate R* and filter. Evaporate the ether by heating in a water-bath. An oily residue is obtained which becomes crystalline on cooling; if necessary, scratch the wall of the container with a glass rod. The residue melts (*2.2.14*) at 102 °C to 106 °C.

D. Dissolve about 5 mg in 10 mL of *1 M hydrochloric acid*. Dilute 1 mL of the solution to 10 mL with *water R*. The solution, without further acidification, gives the reaction of primary aromatic amines (*2.3.1*).

TESTS

**Appearance of solution**. Dissolve 1.0 g in a mixture of 10 mL of *1 M sodium hydroxide* and 15 mL of *water R*. The solution is clear (*2.2.1*) and not more intensely coloured than reference solution $Y_4$ or $BY_4$ (*2.2.2, Method II*).

**Acidity**. To 1.25 g, finely powdered, add 25 mL of *carbon dioxide-free water R*. Heat at 70 °C for 5 min. Cool in iced water for about 15 min and filter. To 20 mL of the filtrate add 0.1 mL of *bromothymol blue solution R1*. Not more than 0.5 mL of *0.1 M sodium hydroxide* is required to change the colour of the indicator.

**Related substances**. Examine by thin layer chromatography (*2.2.27*), using *TLC silica gel $GF_{254}$ plate R*.

*Test solution (a)*. Dissolve 0.10 g of the substance to be examined in *acetone R* and dilute to 5 mL with the same solvent.

*Test solution (b)*. Dilute 1 mL of test solution (a) to 10 mL with *acetone R*.

*Reference solution (a)*. Dissolve 20 mg of *sulfamethoxypyridazine CRS* in *acetone R* and dilute to 10 mL with the same solvent.

*Reference solution (b)*. Dilute 2.5 mL of test solution (b) to 50 mL with *acetone R*.

Apply separately to the plate 5 µL of each solution. Develop over a path of 15 cm using a mixture of 1 volume of *dilute ammonia R1*, 9 volumes of *water R*, 30 volumes of *2-propanol R* and 50 volumes of *ethyl acetate R*. Dry the plate at 100-105 °C and examine in ultraviolet light at 254 nm. Any spot in the chromatogram obtained with test solution (a), apart from the principal spot, is not more intense than the spot in the chromatogram obtained with reference solution (b) (0.5 per cent).

**Heavy metals** (*2.4.8*). 1.0 g complies with test D for heavy metals (20 ppm). Prepare the reference solution using 2 mL of *lead standard solution (10 ppm Pb) R*.

**Loss on drying** (*2.2.32*). Not more than 0.5 per cent, determined on 1.000 g by drying in an oven at 105 °C.

**Sulfated ash** (*2.4.14*). Not more than 0.1 per cent, determined on 1.0 g.

ASSAY

Carry out the assay of primary aromatic amino-nitrogen (*2.5.8*), using 0.2500 g, determining the end-point electrometrically.

1 mL of *0.1 M sodium nitrite* is equivalent to 28.03 mg of $C_{11}H_{12}N_4O_3S$.

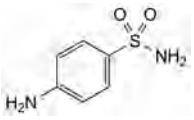
STORAGE

Protected from light.

**01/2017:1571**

# SULFANILAMIDE

## Sulfanilamidum



$C_6H_8N_2O_2S$ $M_r$ 172.2
[63-74-1]

DEFINITION

Sulfanilamide contains not less than 99.0 per cent and not more than the equivalent of 101.0 per cent of 4-aminobenzenesulfonamide, calculated with reference to the dried substance.

CHARACTERS

White or yellowish-white crystals or fine powder, slightly soluble in water, freely soluble in acetone, sparingly soluble in alcohol, practically insoluble in methylene chloride. It dissolves in solutions of alkali hydroxides and in dilute mineral acids.

IDENTIFICATION

*First identification: B.*

*Second identification: A, C, D.*

A. Melting point (*2.2.14*): 164.5 °C to 166.0 °C.

B. Examine by infrared absorption spectrophotometry (*2.2.24*), comparing with the spectrum obtained with *sulfanilamide CRS*. Examine the substances prepared as discs.

C. Examine the chromatograms obtained in the test for related substances. The principal spot in the chromatogram obtained with test solution (a) is similar in position and size to the principal spot in the chromatogram obtained with reference solution (a).

D. Dissolve about 5 mg in 10 mL of *1 M hydrochloric acid*. Dilute 1 mL of the solution to 10 mL with *water R*. The solution, without further acidification, gives the reaction of primary aromatic amines (*2.3.1*).

TESTS

**Solution S**. To 2.5 g add 50 mL of *carbon dioxide-free water R*. Heat at about 70 °C for about 5 min. Cool in iced water for about 15 min and filter.

**Acidity**. To 20 mL of solution S add 0.1 mL of *bromothymol blue solution R1*. Not more than 0.2 mL of *0.1 M sodium hydroxide* is required to change the colour of the indicator.

**Related substances**. Examine by thin-layer chromatography (*2.2.27*), using a *TLC silica gel $F_{254}$ plate R*.

*Test solution (a)*. Dissolve 20 mg of the substance to be examined in 3 mL of a mixture of 2 volumes of *concentrated ammonia R* and 48 volumes of *methanol R* and dilute to 5 mL with the same mixture of solvents.

*Test solution (b)*. Dissolve 0.10 g of the substance to be examined in 0.5 mL of *concentrated ammonia R* and dilute to 5 mL with *methanol R*. If the solution is not clear, heat gently until dissolution is complete.

*Reference solution (a).* Dissolve 20 mg of *sulfanilamide CRS* in 3 mL of a mixture of 2 volumes of *concentrated ammonia R* and 48 volumes of *methanol R* and dilute to 5 mL with the same mixture of solvents.

*Reference solution (b).* Dilute 1.25 mL of test solution (a) to 50 mL with a mixture of 2 volumes of *concentrated ammonia R* and 48 volumes of *methanol R*.

*Reference solution (c).* Dissolve 20 mg of the substance to be examined and 20 mg of *sulfamerazine CRS* in 3 mL of a mixture of 2 volumes of *concentrated ammonia R* and 48 volumes of *methanol R* and dilute to 5 mL with the same mixture of solvents.

Apply to the plate 5 µL of each solution. Develop over a path corresponding to two-thirds of the plate height using a mixture of 3 volumes of *dilute ammonia R1*, 5 volumes of *water R*, 40 volumes of *nitromethane R* and 50 volumes of *dioxan R*. Dry the plate at 100 °C to 105 °C and examine in ultraviolet light at 254 nm. Any spot in the chromatogram obtained with test solution (b), apart from the principal spot, is not more intense than the spot in the chromatogram obtained with reference solution (b) (0.5 per cent). The test is not valid unless the chromatogram obtained with reference solution (c) shows two clearly separated principal spots.

**Loss on drying** (*2.2.32*). Not more than 0.5 per cent, determined on 1.000 g by drying in an oven at 105 °C.

**Sulfated ash** (*2.4.14*). Not more than 0.1 per cent, determined on 1.0 g.

ASSAY

Carry out the determination of primary aromatic amino-nitrogen (*2.5.8*), using 0.140 g and determining the end-point electrometrically.

1 mL of *0.1 M sodium nitrite* is equivalent to 17.22 mg of $C_6H_8N_2O_2S$.

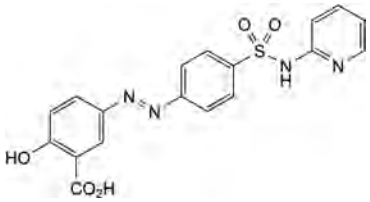
STORAGE

Store protected from light.

**01/2017:0863**
**corrected 9.2**

# SULFASALAZINE

## Sulfasalazinum



$C_{18}H_{14}N_4O_5S$ $M_r$ 398.4
[599-79-1]

DEFINITION

2-Hydroxy-5-[2-[4-(pyridin-2-ylsulfamoyl)phenyl]diazenyl]-benzoic acid.

*Content*: 97.0 per cent to 101.5 per cent (dried substance).

CHARACTERS

*Appearance*: bright yellow or brownish-yellow, fine powder.

*Solubility*: practically insoluble in water, very slightly soluble in ethanol (96 per cent), practically insoluble in methylene chloride. It dissolves in dilute solutions of alkali hydroxides.

IDENTIFICATION

Infrared absorption spectrophotometry (*2.2.24*).

*Preparation*: discs.

*Comparison*: *sulfasalazine CRS*.

TESTS

**Related substances**. Liquid chromatography (*2.2.29*).

*Test solution.* Dissolve 25.0 mg of the substance to be examined in *dilute ammonia R3* and dilute to 25.0 mL with the same solvent.

*Reference solution (a).* Dilute 1.0 mL of the test solution to 100.0 mL with *dilute ammonia R3*.

*Reference solution (b).* Dissolve 1.0 mg of *sulfasalazine derivative for resolution CRS* in 10.0 mL of reference solution (a). Dilute 1.0 mL of this solution to 10.0 mL with reference solution (a).

*Column*:

- *size*: *l* = 0.25 m, Ø = 4.6 mm;
- *stationary phase*: *octadecylsilyl silica gel for chromatography R* (5 µm).

*Mobile phase*:

- *mobile phase A*: in a 1000 mL volumetric flask dissolve 1.13 g of *sodium dihydrogen phosphate R* and 2.5 g of *sodium acetate R* in 900 mL of *water R*; adjust to pH 4.8 with *glacial acetic acid R* and dilute to 1000 mL with *water R*;
- *mobile phase B*: mobile phase A, *methanol R* (10:40 *V/V*);

| Time (min) | Mobile phase A (per cent *V/V*) | Mobile phase B (per cent *V/V*) |
|---|---|---|
| 0 - 15 | 60 → 45 | 40 → 55 |
| 15 - 25 | 45 | 55 |
| 25 - 60 | 45 → 0 | 55 → 100 |
| 60 - 65 | 0 | 100 |

*Flow rate*: 1 mL/min.

*Detection*: spectrophotometer at 320 nm.

*Injection*: 20 µL.

*Relative retention* with reference to sulfasalazine: impurity H = about 0.16; impurity I = about 0.28; impurity C = about 0.80; impurity F = about 0.85; impurity G = about 1.39; impurity E = about 1.63; impurity B = about 1.85; impurity D = about 1.90; impurity A = about 2.00.

*System suitability*: reference solution (b):

- *resolution*: minimum 3.0 between the peaks due to sulfasalazine and sulfasalazine derivative for resolution.

*Limits*:

- *impurities A, B, C, D, E, F, G, I*: for each impurity, not more than the area of the principal peak in the chromatogram obtained with reference solution (a) (1 per cent);
- *total*: not more than 4 times the area of the principal peak in the chromatogram obtained with reference solution (a) (4 per cent);
- *disregard limit*: 0.05 times the area of the principal peak in the chromatogram obtained with reference solution (a) (0.05 per cent); disregard any peak with a retention time less than 6 min (due to impurities H and J).

**Impurities H and J**. Liquid chromatography (*2.2.29*).

*Test solution.* Dissolve 25.0 mg of the substance to be examined in *dilute ammonia R3* and dilute to 25.0 mL with the same solvent.

*Reference solution (a).* Dissolve 5.0 mg of *salicylic acid R* (impurity H) and 5.0 mg of *sulfapyridine CRS* (impurity J) in *dilute ammonia R3* and dilute to 10.0 mL with the same solvent.

*Reference solution (b).* Dilute 2.0 mL of reference solution (a) to 100.0 mL with *dilute ammonia R3*.

*Column*:

– *size*: *l* = 0.25, Ø = 4.6 mm;

– *stationary phase*: *octadecylsilyl silica gel for chromatography R* (5 µm).

*Mobile phase*: mobile phase B (described in the test for related substances), mobile phase A (described in the test for related substances) (30:70 *V/V*).

*Flow rate*: 1 mL/min.

*Detection*: spectrophotometer at 300 nm.

*Injection*: 20 µL of the test solution and reference solution (b).

*Run time*: 10 min.

*Retention time*: impurity H = about 6 min; impurity J = about 7 min.

*System suitability*: reference solution (b):

– *resolution*: minimum 2 between the peaks due to impurities H and J.

*Limits*:

– *impurities H, J*: for each impurity, not more than 0.5 times the area of the corresponding peak in the chromatogram obtained with reference solution (b) (0.5 per cent);

– *disregard limit*: 0.05 times the area of the principal peak in the chromatogram obtained with reference solution (b) (0.05 per cent).

**Chlorides** (*2.4.4*): maximum 140 ppm.

To 1.25 g add 50 mL of *distilled water R*. Heat at about 70 °C for 5 min. Cool and filter. To 20 mL of the filtrate add 1 mL of *nitric acid R*, allow to stand for 5 min and filter to obtain a clear solution.

**Sulfates** (*2.4.13*): maximum 400 ppm.

To 20 mL of the filtrate prepared for the test for chlorides add 1 mL of *dilute hydrochloric acid R*, allow to stand for 5 min and filter.

**Loss on drying** (*2.2.32*): maximum 1.0 per cent, determined on 1.000 g by drying in an oven at 105 °C for 2 h.

**Sulfated ash** (*2.4.14*): maximum 0.5 per cent, determined on 1.0 g.

ASSAY

Dissolve 0.150 g in *0.1 M sodium hydroxide* and dilute to 100.0 mL with the same solvent. Transfer 5.0 mL of this solution to a 1000 mL volumetric flask containing about 750 mL of *water R*. Add 20.0 mL of a 6 g/L solution of *glacial acetic acid R* and dilute to 1000.0 mL with *water R*. Prepare a standard solution at the same time and in the same manner using 0.150 g of *sulfasalazine CRS*. Measure the absorbance (*2.2.25*) of the 2 solutions at the absorption maximum at 359 nm.

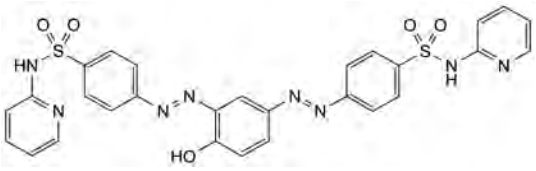
Calculate the content of $C_{18}H_{14}N_4O_5S$ from the absorbances measured and the concentration of the solutions.

STORAGE

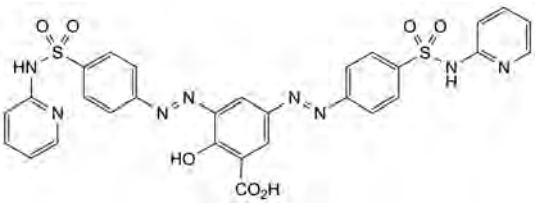
Protected from light.

IMPURITIES

*Specified impurities*: *A, B, C, D, E, F, G, H, I, J.*



A. 4,4′-[(4-hydroxy-1,3-phenylene)bis(diazenediyl)]bis[*N*-(pyridin-2-yl)benzenesulfonamide],



B. 2-hydroxy-3,5-bis[2-[4-(pyridin-2-ylsulfamoyl)phenyl]-diazenyl]benzoic acid,

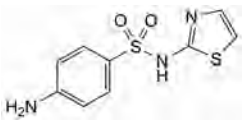
J. 4-amino-*N*-(pyridin-2-yl)benzenesulfonamide (sulfapyridine).

**01/2017:0742**

# SULFATHIAZOLE

## Sulfathiazolum



$C_9H_9N_3O_2S_2$ $M_r$ 255.3
[72-14-0]

DEFINITION

Sulfathiazole contains not less than 99.0 per cent and not more than the equivalent of 101.0 per cent of 4-amino-*N*-(thiazol-2-yl)benzenesulfonamide, calculated with reference to the dried substance.

CHARACTERS

A white or slightly yellowish, crystalline powder, practically insoluble in water, slightly soluble in alcohol, practically insoluble in methylene chloride. It dissolves in dilute solutions of alkali hydroxides and in dilute mineral acids.

IDENTIFICATION

*First identification: A, B.*

*Second identification: A, C, D, E.*

A. Melting point (*2.2.14*): 200 °C to 203 °C. Melting may occur at about 175 °C, followed by solidification and a second melting between 200 °C and 203 °C.

B. Examine by infrared absorption spectrophotometry (*2.2.24*), comparing with the spectrum obtained with *sulfathiazole CRS*. Examine the substances prepared as discs. If the spectra obtained show differences, dissolve the substance to be examined and the reference substance separately in *alcohol R*, evaporate to dryness *in vacuo* and record the spectra again using the residues.

C. Examine the chromatograms obtained in the test for related substances. The principal spot in the chromatogram obtained with test solution (b) is similar in position, colour and size to the principal spot in the chromatogram obtained with reference solution (a).

D. Dissolve about 10 mg in a mixture of 10 mL of *water R* and 2 mL of *0.1 M sodium hydroxide* and add 0.5 mL of *copper sulfate solution R*. A greyish-blue or purple precipitate is formed.

E. Dissolve about 5 mg in 10 mL of *1 M hydrochloric acid*. Dilute 1 mL of the solution to 10 mL with *water R*. The solution, without further addition of acid, gives the reaction of primary aromatic amines (*2.3.1*).

TESTS

**Appearance of solution**. Dissolve 1.0 g in 10 mL of *1 M sodium hydroxide*. The solution is clear (*2.2.1*) and not more intensely coloured than reference solution $GY_4$ (*2.2.2, Method II*).

**Acidity**. To 1.0 g add 50 mL of *carbon dioxide-free water R*. Heat to 70 °C for 5 min. Cool rapidly to 20 °C and filter. To 25 mL of the filtrate add 0.1 mL of *bromothymol blue solution R1*. Not more than 0.1 mL of *0.1 M sodium hydroxide* is required to change the colour of the indicator.

**Related substances**. Examine by thin-layer chromatography (*2.2.27*), using *silica gel H R* as the coating substance.

*Test solution (a).* Dissolve 0.10 g of the substance to be examined in a mixture of 1 volume of *concentrated ammonia R* and 9 volumes of *alcohol R* and dilute to 10 mL with the same mixture of solvents.

*Test solution (b).* Dilute 1 mL of test solution (a) to 5 mL with a mixture of 1 volume of *concentrated ammonia R* and 9 volumes of *alcohol R*.

*Reference solution (a).* Dissolve 20 mg of *sulfathiazole CRS* in a mixture of 1 volume of *concentrated ammonia R* and 9 volumes of *alcohol R* and dilute to 10 mL with the same mixture of solvents.

*Reference solution (b).* Dissolve 50 mg of *sulfanilamide R* in a mixture of 1 volume of *concentrated ammonia R* and 9 volumes of *alcohol R* and dilute to 100 mL with the same mixture of solvents. Dilute 1 mL of this solution to 10 mL with the same mixture of solvents.

Apply to the plate 10 µL of each solution. Develop over a path of 15 cm using a mixture of 18 volumes of *ammonia R* and 90 volumes of *butanol R*. Dry the plate at 100 °C to 105 °C for 10 min and spray with a 1 g/L solution of *dimethylaminobenzaldehyde R* in *alcohol R* containing 1 per cent *V/V* of *hydrochloric acid R*. Any spot in the chromatogram obtained with test solution (a), apart from the principal spot, is not more intense than the spot in the chromatogram obtained with reference solution (b) (0.5 per cent).

**Loss on drying** (*2.2.32*). Not more than 0.5 per cent, determined on 1.000 g by drying in an oven at 105 °C.

**Sulfated ash** (*2.4.14*). Not more than 0.1 per cent, determined on 1.0 g.

ASSAY

Carry out the determination of primary aromatic amino-nitrogen (*2.5.8*), using 0.200 g, determining the end-point electrometrically.

1 mL of *0.1 M sodium nitrite* is equivalent to 25.53 mg of $C_9H_9N_3O_2S_2$.

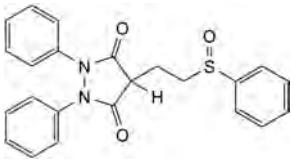
STORAGE

Store protected from light.

**01/2017:0790**

# SULFINPYRAZONE

## Sulfinpyrazonum



$C_{23}H_{20}N_2O_3S$ $M_r$ 404.5
[57-96-5]

DEFINITION

1,2-Diphenyl-4-[2-(phenylsulfinyl)ethyl]pyrazolidine-3,5-dione.

*Content*: 99.0 per cent to 101.0 per cent (dried substance).

CHARACTERS

*Appearance*: white or almost white powder.

*Solubility*: very slightly soluble in water, sparingly soluble in ethanol (96 per cent). It dissolves in dilute solutions of alkali hydroxides.

IDENTIFICATION

*First identification: A, C.*

*Second identification: A, B, D.*

A. Melting point (*2.2.16*): 131 °C to 135 °C.

B. Ultraviolet and visible absorption spectrophotometry (*2.2.25*).

*Test solution.* Dissolve 30.0 mg in *0.01 M sodium hydroxide* and dilute to 100.0 mL with the same alkaline solution. Dilute 1.0 mL of this solution to 20.0 mL with *0.01 M sodium hydroxide*.

*Spectral range*: 230-350 nm.

*Absorption maximum*: at 260 nm.

*Specific absorbance at the absorption maximum*: 530 to 580.

C. Infrared absorption spectrophotometry (*2.2.24*).

*Comparison*: *sulfinpyrazone CRS*.

D. Dissolve about 10 mg in 3 mL of *acetone R* and add a mixture of 0.2 mL of *ferric chloride solution R2* and 3 mL of *water R*. A red to violet colour develops.

TESTS

**Appearance of solution in acetone**. The solution is clear (*2.2.1*) and its absorbance (*2.2.25*) at 420 nm using a path length of 4 cm is not greater than 0.10.

Dissolve 1.25 g in *acetone R* and dilute to 25 mL with the same solvent.

**Appearance of solution in 1 M sodium hydroxide**. The solution is clear (*2.2.1*) and its absorbance (*2.2.25*) at 420 nm using a path length of 4 cm is not greater than 0.15.

Dissolve 1.25 g, heating gently if necessary, in 25 mL of *1 M sodium hydroxide*.

**Related substances**. Liquid chromatography (*2.2.29*). *Prepare the solutions immediately before use.*

*Solvent mixture*: *water R*, *acetonitrile R* (10:40 *V/V*).

*Test solution.* Dissolve 10.0 mg of the substance to be examined in the solvent mixture and dilute to 10.0 mL with the solvent mixture.

*Reference solution (a).* Dilute 1.0 mL of the test solution to 100.0 mL with the solvent mixture.

*Reference solution (b).* Dissolve 5.0 mg of *sulfinpyrazone impurity A CRS* and 5.0 mg of *sulfinpyrazone impurity B CRS* in the solvent mixture and dilute to 5.0 mL with the solvent mixture.

*Reference solution (c).* Dilute 1.0 mL of reference solution (b) to 100.0 mL with the solvent mixture.

*Reference solution (d).* Dissolve the contents of a vial of *sulfinpyrazone for system suitability CRS* (containing impurity C) in 1.0 mL of the solvent mixture.

*Reference solution (e).* Dilute 1.0 mL of reference solution (a) to 10.0 mL with the solvent mixture.

*Column*:

– *size*: *l* = 0.125 m, Ø = 4.6 mm;
– *stationary phase*: *end-capped octadecylsilyl silica gel for chromatography R* (5 µm).

*Mobile phase*: *tetrahydrofuran for chromatography R*, *acetonitrile R*, 0.3 per cent *V/V* solution of *phosphoric acid R* (7:35:58 *V/V/V*).

*Flow rate*: 2.0 mL/min.

*Detection*: spectrophotometer at 235 nm.

*Injection*: 20 µl.

*Run time*: 7 times the retention time of sulfinpyrazone.

*Identification of impurities*: use the chromatogram supplied with *sulfinpyrazone for system suitability CRS* and the chromatogram obtained with reference solution (d) to identify the peak due to impurity C; use the chromatogram obtained with reference solution (b) to identify the peaks due to impurities A and B.

*Relative retention* with reference to sulfinpyrazone (retention time = about 3.5 min): impurity C = about 0.8; impurity A = about 1.6; impurity B = about 4.8.

*System suitability*: reference solution (d):

– *resolution*: minimum 2.0 between the peaks due to impurity C and sulfinpyrazone.

*Limits*:

– *impurities A, B*: for each impurity, not more than the area of the corresponding peak in the chromatogram obtained with reference solution (c) (1.0 per cent);
– *impurity C*: not more than twice the area of the principal peak in the chromatogram obtained with reference solution (e) (0.2 per cent);
– *unspecified impurities*: for each impurity, not more than the area of the principal peak in the chromatogram obtained with reference solution (e) (0.10 per cent);
– *total*: not more than twice the area of the principal peak in the chromatogram obtained with reference solution (a) (2.0 per cent);
– *disregard limit*: 0.5 times the area of the principal peak in the chromatogram obtained with reference solution (e) (0.05 per cent).

**Loss on drying** (*2.2.32*): maximum 0.5 per cent, determined on 1.000 g by drying in an oven at 105 °C.

**Sulfated ash** (*2.4.14*): maximum 0.1 per cent, determined on 1.0 g.

ASSAY

Dissolve 0.300 g in 25 mL of *acetone R*. Add 0.5 mL of *bromothymol blue solution R1*. Titrate with *0.1 M sodium hydroxide* until the colour changes from yellow to blue.

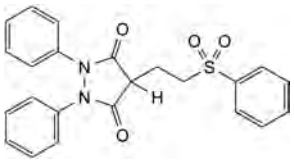
1 mL of *0.1 M sodium hydroxide* is equivalent to 40.45 mg of $C_{23}H_{20}N_2O_3S$.

STORAGE

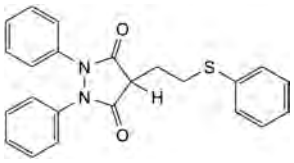
Protected from light.

IMPURITIES

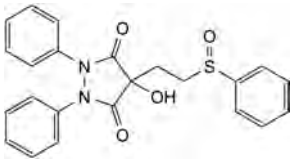
*Specified impurities*: *A, B, C.*



A. 1,2-diphenyl-4-[2-(phenylsulfonyl)ethyl]pyrazolidine-3,5-dione,



B. 1,2-diphenyl-4-[2-(phenylsulfanyl)ethyl]pyrazolidine-3,5-dione,

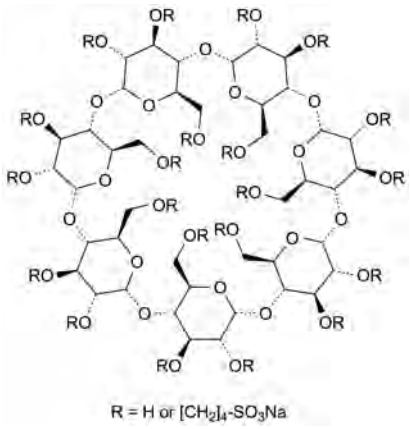


C. 4-hydroxy-1,2-diphenyl-4-[2-(phenylsulfinyl)ethyl]-pyrazolidine-3,5-dione.

**07/2019:2804**
**corrected 10.0**

# SULFOBUTYLBETADEX SODIUM

## Sulfobutylbetadexum natricum



$C_{42}H_{70-n}O_{35}(C_4H_8SO_3Na)_n$ $M_r$ 2163 when $n$ = 6.5
[182410-00-0]

DEFINITION

Sulfobutylbetadex sodium (β-cyclodextrin, sodium 4-sulfonatobutyl ether) is the sodium salt of a partially substituted poly(sulfobutyl) ether of betadex.

*Content*:

– *sulfobutylbetadex sodium*: 95.0 per cent to 105.0 per cent (anhydrous substance);
– *average number of sulfobutyl groups per cyclodextrin ring, expressed as average degree of substitution (DS)*: 5.9 to 6.6.

CHARACTERS

*Appearance*: white or almost white, hygroscopic powder.

*Solubility*: freely soluble in water, practically insoluble in anhydrous ethanol and in methylene chloride.

IDENTIFICATION

A. Infrared absorption spectrophotometry (*2.2.24*).

*Comparison*: *sulfobutylbetadex sodium CRS*.

*Results*: the spectrum obtained with the substance to be examined shows the same absorption bands as the spectrum obtained with *sulfobutylbetadex sodium CRS*. Due to differences in the degree of substitution of the substance, the relative intensity of some absorption bands may vary.

B. It gives reaction (a) of sodium (*2.3.1*).

TESTS

**Solution S**. Dissolve 7.50 g in *carbon dioxide-free water R* and dilute to 50.0 mL with the same solvent.

**Appearance of solution**. Solution S is clear (*2.2.1*) and colourless (*2.2.2, Method II*).

**pH** (*2.2.3*): 5.0 to 7.5 for solution S.

Use intensive nitrogen purging to avoid carbon dioxide absorption during measurement.

**Reducing sugars**: maximum 0.05 per cent.

*Reagent solution.* Dissolve 1.0 g of *triphenyltetrazolium chloride R* in 100 mL of *aldehyde-free methanol R*.

*Test solution.* Dissolve 0.45 g of the substance to be examined in 2.0 mL of *dimethyl sulfoxide R* in a test tube and add 0.5 mL of a 40 g/L solution of *sodium hydroxide R* and 7.5 mL of the reagent solution. Mix and store at room temperature.

*Reference solution.* Prepare at the same time and in the same manner as for the test solution, using 0.10 mL of a 2.25 g/L solution of *glucose R* instead of the substance to be examined.

After 1 h, measure the absorbance (*2.2.25*) of the solutions at the absorption maximum at 482 nm. The absorbance of the test solution is not greater than that of the reference solution.

**Impurities A, C and D**. Liquid chromatography (*2.2.29*).

*Test solution.* Dissolve 0.300 g of the substance to be examined in *water R* and dilute to 5.0 mL with the same solvent.

*Reference solution (a).* Dissolve 15.0 mg of *betadex CRS* (impurity A) in *water R* and dilute to 5.0 mL with the same solvent. Dilute 1.0 mL of the solution to 50.0 mL with *water R*.

*Reference solution (b).* Dissolve 15.0 mg of *sulfobutylbetadex impurity C CRS* in *water R* and dilute to 5.0 mL with the same solvent. Dilute 1.0 mL of the solution to 10.0 mL with *water R*.

*Reference solution (c).* Dissolve 15.0 mg of *sulfobutylbetadex impurity D CRS* in *water R* and dilute to 5.0 mL with the same solvent. Dilute 1.0 mL of the solution to 10.0 mL with *water R*.

*Reference solution (d).* Dissolve 0.300 g of *sulfobutylbetadex sodium CRS* in 1.0 mL of reference solution (b) and 0.5 mL of reference solution (c), and dilute to 5.0 mL with *water R*.

*Column*:

– *size*: *l* = 0.15 m, Ø = 4.0 mm;
– *stationary phase*: *4-dimethylaminobenzylcarbamidesilyl silica gel for chromatography R* (3 µm);
– *temperature*: 25 °C.

*Mobile phase*:

– *mobile phase A*: to 4.0 mL of *triethylamine R* add 900 mL of *water for chromatography R* and adjust to pH 4.5 with *anhydrous formic acid R*; dilute to 1000 mL with *water for chromatography R*;
– *mobile phase B*: *acetonitrile R*;

| Time (min) | Mobile phase A (per cent *V/V*) | Mobile phase B (per cent *V/V*) |
|---|---|---|
| 0 - 2 | 90 | 10 |
| 2 - 8 | 90 → 60 | 10 → 40 |
| 8 - 14 | 60 → 40 | 40 → 60 |
| 14 - 20 | 40 | 60 |

*Flow rate*: 1.1 mL/min.

*Detection*: evaporative light-scattering detector; the following settings have been found to be suitable; if the detector has different setting parameters, adjust the detector settings so as to comply with the system suitability criteria.

– *carrier gas*: *nitrogen R*;

– *flow rate*: 1.5 L/min;

– *evaporator temperature*: 50 °C.

*Equilibration*: at initial isocratic conditions for 10 min.

*Injection*: 10 µL of the test solution and reference solutions (a) and (d).

*Identification of impurities*: use the chromatogram obtained with reference solution (a) to identify the peak due to impurity A; use the chromatogram obtained with reference solution (d) to identify the peaks due to impurities C and D.

*Relative retention* with reference to impurity A (retention time = about 2.9 min): impurity C = about 0.7; impurity D = about 2.0; sulfobutylbetadex elutes as several peaks after impurity D unless heart-cutting is applied.

*System suitability*:

– *resolution*: minimum 2.0 between the peaks due to impurities C and A in the chromatogram obtained with reference solution (d);

– *repeatability*: maximum relative standard deviation of 3.0 per cent for the area of the peak due to impurity A determined on 5 injections of reference solution (a), using the initial isocratic conditions for 4 min.

*Limits*:

– *impurity A*: not more than the area of the corresponding peak in the chromatogram obtained with reference solution (a) (0.1 per cent);

– *impurity C*: not more than the area of the corresponding peak in the chromatogram obtained with reference solution (d) (0.1 per cent);

– *impurity D*: not more than the area of the corresponding peak in the chromatogram obtained with reference solution (d) (0.05 per cent);

– disregard the peak due to the sodium counter-ion (corresponding to the dead volume of the column) and any peak eluting after impurity D (due to sulfobutylbetadex).

**Impurity B**. Gas chromatography (*2.2.28*). *Prepare the solutions immediately before use.*

*Internal standard solution.* Dissolve 25.0 mg of *diethyl sulfone R* in 10.0 mL of *dimethylformamide R* and dilute to 1000.0 mL with *water R*. Dilute 1.0 mL of the solution to 100.0 mL with *water R*.

*Test solutions (a), (b), (c) and (d).* In 4 test tubes with screw caps, prepare 4 solutions as indicated in Table 2804.-1. Mix each test tube on a vortex mixer for 30 s and allow to stand for at least 5 min or until complete separation of the phases. Decant the organic phase into a vial and seal.

*Reference solution (a).* Dissolve 50.0 mg of *sulfobutylbetadex impurity B CRS* in 5.0 mL of *dimethylformamide R* and dilute with *water R* to obtain a concentration of 2.0 µg/mL.

*Reference solution (b).* Dilute 1.0 mL of reference solution (a) to 2.0 mL with *water R*.

*Reference solution (c).* Dilute 1.0 mL of reference solution (a) to 4.0 mL with *water R*.

*Blank solution.* Prepare as described for test solution (d), but omitting the substance to be examined.

*Column*:

– *material*: fused silica;

– *size*: *l* = 30 m, Ø = 0.32 mm;

– *stationary phase*: *cyanopropyl(7)phenyl(7)methyl(86)polysiloxane R* (film thickness 0.5 µm).

*Carrier gas*: *helium for chromatography R*.

*Flow rate*: 2.4 mL/min.

*Temperature*:

| | Time (min) | Temperature (°C) |
|---|---|---|
| Column | 0 - 10 | 100 → 200 |
| | 10 - 11.5 | 200 → 250 |
| | 11.5 - 16.5 | 250 |
| Injection port | | 250 |
| Detector | | 270 |

*Detection*: flame ionisation.

*Injection*: 1 µL.

*Relative retention* with reference to the internal standard (retention time = about 6.5 min): impurity B = about 1.4.

*System suitability*:

– *repeatability*: maximum relative standard deviation of 10.0 per cent for the corrected ratios (as described under Calculation of content) determined on 5 injections of test solution (b).

*Calculation of content*: calculate the ratio of the area of the peak due to impurity B to the area of the peak due to the internal standard in the chromatograms obtained with test solutions (a), (b), (c) and (d) respectively. Subtract from these values the ratio of the area of the peak due to impurity B to the area of the peak due to the internal standard in the chromatogram obtained with the blank solution (diethyl sulfone may contain trace amounts of impurity B). Plot the

Table 2804.-1.

| | Substance to be examined (g) | Internal standard solution (mL) | Solvent/solution (mL) | *Methylene chloride R* (mL) | Final content of *sulfobutylbetadex impurity B CRS* (µg) |
|---|---|---|---|---|---|
| *Blank solution* | 0 | 4.0 | *Water R*, 1.0 | 1.0 | 0 |
| *Test solution (a)* | 1.000 | 4.0 | Reference solution (a), 1.0 | 1.0 | 2.0 |
| *Test solution (b)* | 1.000 | 4.0 | Reference solution (b), 1.0 | 1.0 | 1.0 |
| *Test solution (c)* | 1.000 | 4.0 | Reference solution (c), 1.0 | 1.0 | 0.5 |
| *Test solution (d)* | 1.000 | 4.0 | *Water R*, 1.0 | 1.0 | 0 |

added quantity of impurity B (in micrograms) as the abscissa and the corrected ratios as the ordinates. Extrapolate the line joining the points on the graph until it meets the *x*-axis. The distance between this point and the origin corresponds to the content of impurity B in micrograms per gram (ppm) of the substance to be examined.

*Limit*:

– *impurity B*: maximum 0.5 ppm.

**Chlorides** (*2.4.4*): maximum 0.12 per cent (corresponding to 0.20 per cent expressed as sodium chloride).

Dissolve a quantity of the substance to be examined corresponding to 42 mg of anhydrous substance in 15.0 mL of *water R*.

**Water** (*2.5.12*): maximum 10.0 per cent, determined on 0.200 g.

**Microbial contamination**

If intended for use in the manufacture of parenteral preparations:

– TAMC: acceptance criterion $10^2$ CFU/g (*2.6.12*).

If not intended for use in the manufacture of parenteral preparations:

– TAMC: acceptance criterion $10^3$ CFU/g (*2.6.12*);
– TYMC: acceptance criterion $10^2$ CFU/g (*2.6.12*);
– absence of *Escherichia coli* (*2.6.13*);
– absence of *Salmonella* (*2.6.13*).

ASSAY

**Sulfobutylbetadex sodium**. Size-exclusion chromatography (*2.2.30*).

*Test solution.* Dissolve 0.100 g of the substance to be examined in the mobile phase and dilute to 10.0 mL with the mobile phase.

*Reference solution.* Dissolve 0.100 g of *sulfobutylbetadex sodium CRS* in the mobile phase and dilute to 10.0 mL with the mobile phase.

*Column*:

– *size*: *l* = 0.30 m, Ø = 7.8 mm;
– *stationary phase*: *polymethacrylate gel R*.

*Mobile phase*: dissolve 10.11 g of *potassium nitrate R* in a mixture of 1 volume of *acetonitrile for chromatography R* and 4 volumes of *water for chromatography R* and dilute to 1000 mL with the same mixture of solvents.

*Flow rate*: 1.0 mL/min.

*Detection*: differential refractometer maintained at 35 ± 2 °C.

*Injection*: 20 µL.

*Between-run rinsing*: rinse the column with a mixture of 1 volume of *acetonitrile for chromatography R* and 9 volumes of *water for chromatography R*.

*System suitability*: reference solution:

– *repeatability*: maximum relative standard deviation of 2.0 per cent for the area of the peak due to sulfobutylbetadex, determined on 5 injections.

Calculate the percentage content of sulfobutylbetadex sodium taking into account the assigned content of *sulfobutylbetadex sodium CRS*.

**Average degree of substitution**. Nuclear magnetic resonance spectrometry (*2.2.33*).

The average degree of substitution (*DS*) is calculated from the ratio between the signals of the inner-chain protons of the sulfobutyl ether groups (-O-$CH_2$-**$CH_2$**-**$CH_2$**-$CH_2$-$SO_3H$) and the signals of the glycosidic protons attached to the C1 carbon of the anhydroglucose units.

*Test solution.* Introduce not less than 10.0 mg of the substance to be examined, previously dried for at least 1 day in a desiccator, into a 5 mm NMR tube. Add about 0.70 mL of *deuterium oxide R1*. Cap the tube and mix thoroughly.

*Apparatus*: FT-NMR spectrometer operating at minimum 250 MHz and suitable for recording at 25 °C.

*Acquisition of $^1H$ NMR spectra.* The following parameters may be used:

– *sweep width*: 10 ppm (0 to + 10.0 ppm);
– *irradiation frequency offset*: none;
– *time domain*: 32 K;
– *pulse width*: 90°;
– *pulse delay*: 15 s;
– *dummy scans*: 2;
– *number of scans*: 16.

Call the integration sub-routine after phase corrections and baseline correction between − 1 ppm and + 9 ppm.

The signal of exchangeable protons (solvent) at + 4.8 ppm is used as reference.

Make a zero filling at least twice in size relative to the acquisition data file and transform the FID to the spectrum without any correction of the Gaussian broadening factor (GB = 0) and with a line broadening factor not greater than 0.3 Hz (LB ≤ 0.3). Adjust integral level and tilting.

Measure the peak areas of the signals between 1.43 ppm and 2.12 ppm ($A_1$, -O-$CH_2$-**$CH_2$**-**$CH_2$**-$CH_2$-$SO_3H$), and the signals of the glycosidic protons between 4.95 ppm and 5.41 ppm ($A_2$, -O-**CH**-O-).

Calculate the average degree of substitution (*DS*) using the following expression:

$$\frac{7 \times A_1}{4 \times A_2}$$

$A_1$ = area of the peaks due to the inner methylene protons (indicated in bold) of the sulfobutyl ether functional group;

$A_2$ = area of the peaks due to the glycosidic protons (indicated in bold).

STORAGE

In an airtight container.

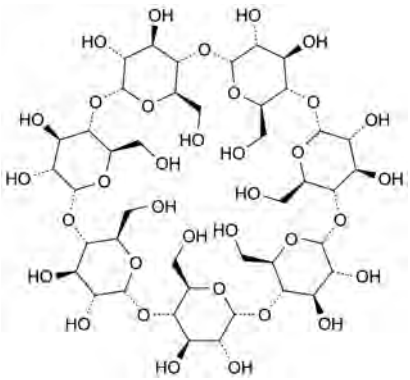
LABELLING

The label states:

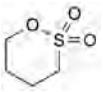
– the average degree of substitution (*DS*);
– where applicable, that the substance is suitable for use in the manufacture of parenteral preparations.

IMPURITIES

*Specified impurities: A, B, C, D.*



A. cycloheptakis-(1→4)-(α-D-glucopyranosyl) (betadex or cyclomaltoheptaose or β-cyclodextrin),



B. 1,2λ⁶-oxathiane-2,2-dione,

C. 4-hydroxybutane-1-sulfonic acid,

D. 4,4′-oxydi(butane-1-sulfonic acid).

**01/2008:0953**

# SULFUR FOR EXTERNAL USE

## Sulfur ad usum externum

S $A_r$ 32.07
[7704-34-9]

DEFINITION

*Content*: 99.0 per cent to 101.0 per cent.

CHARACTERS

*Appearance*: yellow powder.

*Solubility*: practically insoluble in water, soluble in carbon disulfide, slightly soluble in vegetable oils.

mp: about 120 °C.

The size of most of the particles is not greater than 20 µm and that of almost all the particles is not greater than 40 µm.

IDENTIFICATION

A. Heated in the presence of air, it burns with a blue flame, emitting sulfur dioxide which changes the colour of moistened *blue litmus paper R* to red.

B. Heat 0.1 g with 0.5 mL of *bromine water R* until decolourised. Add 5 mL of *water R* and filter. The solution gives reaction (a) of sulfates (*2.3.1*).

TESTS

**Solution S**. To 5 g add 50 mL of *carbon dioxide-free water R* prepared from *distilled water R*. Allow to stand for 30 min with frequent shaking and filter.

**Appearance of solution**. Solution S is colourless (*2.2.2, Method II*).

**Odour** (*2.3.4*). It has no perceptible odour of hydrogen sulfide.

**Acidity or alkalinity**. To 5 mL of solution S add 0.1 mL of *phenolphthalein solution R1*. The solution is colourless. Add 0.2 mL of *0.01 M sodium hydroxide*. The solution is red. Add 0.3 mL of *0.01 M hydrochloric acid*. The solution is colourless. Add 0.15 mL of *methyl red solution R*. The solution is orange-red.

**Chlorides** (*2.4.4*): maximum 100 ppm.

Dilute 5 mL of solution S to 15 mL with *water R*.

**Sulfates** (*2.4.13*): maximum 100 ppm, determined on solution S.

**Sulfides**. To 10 mL of solution S add 2 mL of *buffer solution pH 3.5 R* and 1 mL of a freshly prepared 1.6 g/L solution of *lead nitrate R* in *carbon dioxide-free water R*. Shake. After 1 min any colour in the solution is not more intense than that in a reference solution prepared at the same time using 1 mL of *lead standard solution (10 ppm Pb) R*, 9 mL of *carbon dioxide-free water R*, 2 mL of *buffer solution pH 3.5 R* and 1.2 mL of *thioacetamide reagent R*.

**Sulfated ash** (*2.4.14*): maximum 0.2 per cent, determined on 1.0 g.

ASSAY

Carry out the oxygen-flask method (*2.5.10*), using 60.0 mg in a 1000 mL combustion flask. Absorb the combustion products in a mixture of 5 mL of *dilute hydrogen peroxide solution R* and 10 mL of *water R*. Heat to boiling, boil gently for 2 min and cool. Using 0.2 mL of *phenolphthalein solution R* as indicator, titrate with *0.1 M sodium hydroxide* until the colour changes from colourless to red. Carry out a blank titration under the same conditions.

1 mL of *0.1 M sodium hydroxide* is equivalent to 1.603 mg of S.

STORAGE

Protected from light.

**01/2017:1572**

# SULFURIC ACID

## Acidum sulfuricum

$H_2SO_4$ $M_r$ 98.1
[7664-93-9]

DEFINITION

*Content*: 95.0 per cent *m/m* to 100.5 per cent *m/m*.

CHARACTERS

*Appearance*: colourless, oily liquid, very hygroscopic.

*Solubility*: miscible with water and with ethanol (96 per cent) producing intense heat.

*Relative density*: about 1.84.

IDENTIFICATION

A. Carefully add 1 mL to 100 mL of *water R*. The solution is strongly acid (*2.2.4*).

B. The solution obtained in identification test A gives reaction (a) of sulfates (*2.3.1*).

TESTS

**Appearance of solution**. The solution is clear (*2.2.1*) and colourless (*2.2.2, Method II*).

Carefully pour, while cooling, 5 mL into 30 mL of *water R* and dilute to 50 mL with the same solvent.

**Chlorides** (*2.4.4*): maximum 50 ppm.

Mix carefully, while cooling, 3.3 g with 30 mL of *water R*. Neutralise with *ammonia R* and dilute to 50 mL with *water R*.

**Nitrates**. Add 5 mL to 5 mL of *water R*. Cool to room temperature and add 0.5 mL of *indigo carmine solution R*. The blue colour persists for at least 1 min.

**Arsenic** (*2.4.2, Method A*): maximum 1 ppm.

Mix, while cooling, 1 g with 20 mL of *water R* and dilute to 25 mL with the same solvent.

**Iron** (*2.4.9*): maximum 25 ppm.

Cautiously evaporate 10.0 g and ignite to dull redness. Dissolve the ignition residue in 1 mL of *dilute hydrochloric acid R* with gentle heating and dilute to 25 mL with *water R*. Dilute 1 mL of this solution to 10 mL with *water R*.

ASSAY

Weigh accurately a ground-glass-stoppered flask containing 30 mL of *water R*. Introduce 0.2 mL, cool and weigh again. Titrate with *1 M sodium hydroxide*, determining the end-point potentiometrically (*2.2.20*).

1 mL of *1 M sodium hydroxide* is equivalent to 49.04 mg of $H_2SO_4$.

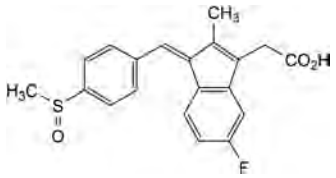
STORAGE

In an airtight container.

**01/2017:0864**

# SULINDAC

## Sulindacum



$C_{20}H_{17}FO_3S$ $M_r$ 356.4

[38194-50-2]

DEFINITION

(*Z*)-[5-Fluoro-2-methyl-1-[4-(methylsulfinyl)benzylidene]-1*H*-inden-3-yl]acetic acid.

*Content*: 99.0 per cent to 101.0 per cent (dried substance).

CHARACTERS

*Appearance*: yellow, crystalline powder.

*Solubility*: very slightly soluble in water, soluble in methylene chloride, sparingly soluble in ethanol (96 per cent). It dissolves in dilute solutions of alkali hydroxides.

It shows polymorphism (*5.9*).

IDENTIFICATION

*First identification: C.*

*Second identification: A, B, D, E.*

A. Melting point (*2.2.14*): 182 °C to 186 °C.

B. Ultraviolet and visible absorption spectrophotometry (*2.2.25*).

*Test solution.* Dissolve 50 mg in a 0.3 per cent *V/V* solution of *hydrochloric acid R* in *methanol R* and dilute to 100 mL with the same acid solution. Dilute 2 mL of this solution to 50 mL with a 0.3 per cent *V/V* solution of *hydrochloric acid R* in *methanol R*.

*Spectral range*: 230-350 nm.

*Absorption maxima*: at 284 nm and 327 nm.

*Shoulder*: at about 258 nm.

*Absorbance ratio*: $A_{284}/A_{327}$ = 1.10 to 1.20.

C. Infrared absorption spectrophotometry (*2.2.24*).

*Preparation*: discs.

*Comparison*: *sulindac CRS*.

If the spectra obtained show differences, dissolve the substance to be examined and the reference substance separately in the minimum volume of hot *methanol R*, evaporate to dryness and record new spectra using the residues.

D. Thin-layer chromatography (*2.2.27*).

*Test solution.* Dissolve 10 mg of the substance to be examined in *methylene chloride R* and dilute to 10 mL with the same solvent.

*Reference solution (a).* Dissolve 10 mg of *sulindac CRS* in *methylene chloride R* and dilute to 10 mL with the same solvent.

*Reference solution (b).* Dissolve 10 mg of *diflunisal CRS* in *methylene chloride R* and dilute to 10 mL with the same solvent. Dilute 1 mL of this solution to 2 mL with reference solution (a).

*Plate*: *TLC silica gel $GF_{254}$ plate R.*

*Mobile phase*: *glacial acetic acid R, methylene chloride R, acetone R* (1:49:50 *V/V/V*).

*Application*: 5 µL.

*Development*: over a path of 15 cm.

*Drying*: in a current of warm air.

*Detection*: examine in ultraviolet light at 254 nm.

*System suitability*: reference solution (b):

– the chromatogram shows 2 clearly separated principal spots.

*Results*: the principal spot in the chromatogram obtained with the test solution is similar in position and size to the principal spot in the chromatogram obtained with reference solution (a).

E. Mix about 5 mg with 45 mg of *heavy magnesium oxide R* and ignite in a crucible until an almost white residue is obtained (usually less than 5 min). Allow to cool, add 1 mL of *water R*, 0.05 mL of *phenolphthalein solution R1* and about 1 mL of *dilute hydrochloric acid R* to render the solution colourless. Filter. Add 1.0 mL of the filtrate to a freshly prepared mixture of 0.1 mL of *alizarin S solution R* and 0.1 mL of *zirconyl nitrate solution R*. Mix, allow to stand for 5 min and compare the colour of the solution with that of a blank prepared in the same manner. The test solution is yellow and the blank is red.

TESTS

**Related substances**. Liquid chromatography (*2.2.29*).

*Test solution.* Dissolve 0.10 g of the substance to be examined in the mobile phase and dilute to 50.0 mL with the mobile phase.

*Reference solution (a).* Dilute 1.0 mL of the test solution to 100.0 mL with the mobile phase. Dilute 5.0 mL of this solution to 10.0 mL with the mobile phase.

*Reference solution (b).* Dissolve 20.0 mg of *sulindac CRS* (which has an assigned content of (*E*)-isomer) in the mobile phase and dilute to 10.0 mL with the mobile phase.

*Column*:

– *size*: *l* = 0.25 m, Ø = 4.6 mm;

– *stationary phase*: *silica gel for chromatography R* (10 µm).

*Mobile phase*: *glacial acetic acid R, ethanol (96 per cent) R, ethyl acetate R, ethanol-free chloroform R* (1:4:100:400 *V/V/V/V*).

*Flow rate*: 2 mL/min.

*Detection*: spectrophotometer at 280 nm.

*Injection*: 20 µL.

*Run time*: twice the retention time of sulindac.

*Identification of peaks*: the chromatogram obtained with reference solution (b) shows a principal peak due to sulindac and a peak due to the (*E*)-isomer.

*Relative retention* with reference to sulindac: (*E*)-isomer = about 1.75.

From the chromatograms obtained with the test solution and reference solution (b), determine the percentage content of (*E*)-isomer, taking into account the assigned content of this isomer in *sulindac CRS*.

*Limits*:

– (*E*)-isomer: maximum 0.5 per cent;

– *impurities A, B, C*: for each impurity, not more than the area of the principal peak in the chromatogram obtained with reference solution (a) (0.5 per cent);

– *total*: not more than twice the area of the principal peak in the chromatogram obtained with reference solution (a) (1 per cent).

**Loss on drying** (*2.2.32*): maximum 0.5 per cent, determined on 1.000 g by drying in an oven at 105 °C at a pressure not exceeding 0.7 kPa.

**Sulfated ash** (*2.4.14*): maximum 0.1 per cent, determined on 1.0 g.

ASSAY

Dissolve 0.300 g in 50 mL of *methanol R*. Titrate with *0.1 M sodium hydroxide*, determining the end-point potentiometrically (*2.2.20*).

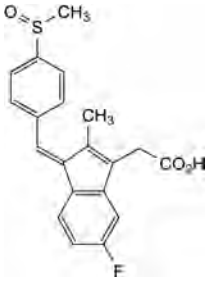
1 mL of *0.1 M sodium hydroxide* is equivalent to 35.64 mg of $C_{20}H_{17}FO_3S$.

STORAGE

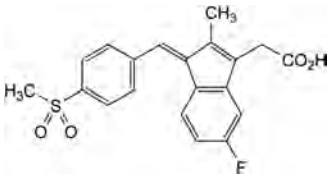
Protected from light.

IMPURITIES

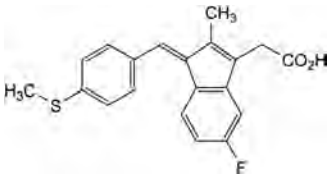
*Specified impurities*: *A, B, C.*



A. (*E*)-[5-fluoro-2-methyl-1-[4-(methylsulfinyl)benzylidene]-1*H*-inden-3-yl]acetic acid,



B. (*Z*)-[5-fluoro-2-methyl-1-[4-(methylsulfonyl)-benzylidene]-1*H*-inden-3-yl]acetic acid,

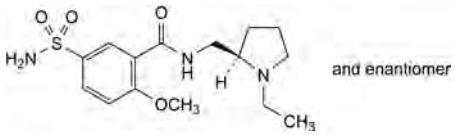


C. (*Z*)-[5-fluoro-2-methyl-1-[4-methylsulfanyl)-benzylidene]-1*H*-inden-3-yl]acetic acid.

**01/2017:1045**

# SULPIRIDE

## Sulpiridum



$C_{15}H_{23}N_3O_4S$ $M_r$ 341.4

[15676-16-1]

DEFINITION

*N*-[[(2*RS*)-1-Ethylpyrrolidin-2-yl)]methyl]-2-methoxy-5-sulfamoylbenzamide.

*Content*: 98.5 per cent to 101.0 per cent (dried substance).

CHARACTERS

*Appearance*: white or almost white, crystalline powder.

*Solubility*: practically insoluble in water, sparingly soluble in methanol, slightly soluble in ethanol (96 per cent) and in methylene chloride. It dissolves in dilute solutions of mineral acids and alkali hydroxides.

IDENTIFICATION

*First identification: B.*

*Second identification: A, C, D.*

A. Melting point (*2.2.14*): 177 °C to 181 °C.

B. Infrared absorption spectrophotometry (*2.2.24*).
*Comparison*: *sulpiride CRS*.

C. Examine the chromatograms obtained in the test for impurity A.
*Detection*: examine in ultraviolet light at 254 nm.
*Results*: the principal spot in the chromatogram obtained with test solution (b) is similar in position and size to the principal spot in the chromatogram obtained with reference solution (a).

D. To about 1 mg in a porcelain dish, add 0.5 mL of *sulfuric acid R* and 0.05 mL of *formaldehyde solution R*. Examined in ultraviolet light at 365 nm, the solution shows blue fluorescence.

TESTS

**Appearance of solution**. The solution is clear (*2.2.1*) and not more intensely coloured than reference solution $Y_6$ (*2.2.2, Method I*).

Dissolve 1.0 g in *dilute acetic acid R* and dilute to 10 mL with the same acid.

**Impurity A.** Thin-layer chromatography (*2.2.27*).

*Test solution (a).* Dissolve 0.20 g of the substance to be examined in *methanol R*, sonicate until dissolution is complete and dilute to 10.0 mL with the same solvent.

*Test solution (b).* Dilute 1.0 mL of test solution (a) to 10.0 mL with *methanol R*.

*Reference solution (a).* Dissolve 20 mg of *sulpiride CRS* in *methanol R* and dilute to 10.0 mL with the same solvent.

*Reference solution (b).* Dissolve 5.0 mg of *sulpiride impurity A CRS* in *methanol R* and dilute to 25.0 mL with the same solvent. Dilute 1.0 mL of the solution to 10.0 mL with *methanol R*.

*Plate*: *TLC silica gel $F_{254}$ plate R*.

*Mobile phase*: *concentrated ammonia R*, *dioxan R*, *methanol R*, *methylene chloride R* (2:10:14:90 *V/V/V/V*).

*Application*: 10 µL.

*Development*: over 1/2 of the plate.

*Drying*: in air.

*Detection*: examine in ultraviolet light at 254 nm for identification test C and then spray with *ninhydrin solution R*; heat at 100-105 °C for 15 min and examine in daylight.

*Limit*: test solution (a):

– *impurity A*: any spot due to impurity A is not more intense than the corresponding spot in the chromatogram obtained with reference solution (b) (0.1 per cent).

**Related substances**. Liquid chromatography (*2.2.29*).

*Test solution.* Dissolve 0.100 g of the substance to be examined in the mobile phase and dilute to 100.0 mL with the mobile phase.

*Reference solution (a).* Dilute 1.0 mL of the test solution to 100.0 mL with the mobile phase. Dilute 1.0 mL of this solution to 10.0 mL with the mobile phase.

*Reference solution (b).* Dissolve 5 mg of the substance to be examined and 5 mg of *sulpiride impurity B CRS* in the mobile phase and dilute to 50.0 mL with the mobile phase.

*Column*:

– *size*: *l* = 0.25 m, Ø = 4.6 mm;

– *stationary phase*: *end-capped octylsilyl silica gel for chromatography R* (5 µm).

*Mobile phase*: mix 10 volumes of *acetonitrile R*, 10 volumes of *methanol R* and 80 volumes of a solution containing 6.8 g/L of *potassium dihydrogen phosphate R* and 1 g/L of *sodium octanesulfonate R*, previously adjusted to pH 3.3 with *phosphoric acid R*.

*Flow rate*: 1.5 mL/min.

*Detection*: spectrophotometer at 240 nm.

*Injection*: 10 µL.

*Run time*: twice the retention time of sulpiride.

*Identification of impurities*: use the chromatogram obtained with reference solution (b) to identify the peak due to impurity B.

*Relative retention* with reference to sulpiride (retention time = about 15 min): impurity B = about 0.7.

*System suitability*: reference solution (b):

– *resolution*: minimum 2.5 between the peaks due to impurity B and sulpiride.

*Calculation of percentage contents*:

– for each impurity, use the concentration of sulpiride in reference solution (a).

*Limits*:

– *unspecified impurities*: for each impurity, maximum 0.10 per cent;
– *total*: maximum 0.3 per cent;
– *reporting threshold*: 0.05 per cent.

**Chlorides** (*2.4.4*): maximum 100 ppm.

Shake 1.0 g with 20 mL of *water R*. Filter through a sintered-glass filter (40) (*2.1.2*). To 10 mL of the filtrate add 5 mL of *water R*.

**Iron** (*2.4.9*): maximum 10 ppm.

Ignite 1.0 g in a silica crucible. To the residue add 1 mL of *1 M hydrochloric acid*, 3 mL of *water R* and 0.1 mL of *nitric acid R*. Heat on a water-bath for about 5 min. Place the solution in a test-tube. Rinse the crucible with 4 mL of *water R*. Collect the rinsings in the test-tube and dilute to 10 mL with *water R*.

**Loss on drying** (*2.2.32*): maximum 0.5 per cent, determined on 1.000 g by drying in an oven at 105 °C.

**Sulfated ash** (*2.4.14*): maximum 0.1 per cent, determined on 1.0 g.

ASSAY

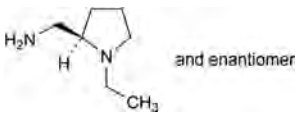
Dissolve 0.250 g in 80 mL of *anhydrous acetic acid R*. Titrate with *0.1 M perchloric acid*, determining the end-point potentiometrically (*2.2.20*).

1 mL of *0.1 M perchloric acid* is equivalent to 34.14 mg of $C_{15}H_{23}N_3O_4S$.

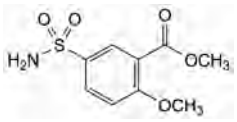
IMPURITIES

*Specified impurities: A.*

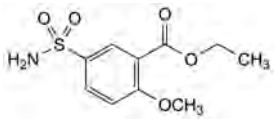
*Other detectable impurities* (the following substances would, if present at a sufficient level, be detected by one or other of the tests in the monograph. They are limited by the general acceptance criterion for other/unspecified impurities and/or by the general monograph *Substances for pharmaceutical use (2034)*. It is therefore not necessary to identify these impurities for demonstration of compliance. See also *5.10. Control of impurities in substances for pharmaceutical use*): *B, C, D, E, F, G.*



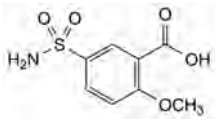
A. [(2*RS*)-1-ethylpyrrolidin-2-yl]methanamine,



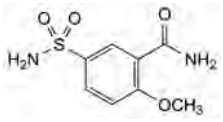
B. methyl 2-methoxy-5-sulfamoylbenzoate,



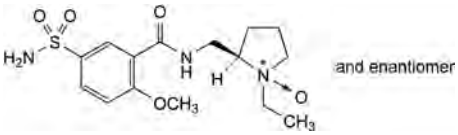
C. ethyl 2-methoxy-5-sulfamoylbenzoate,



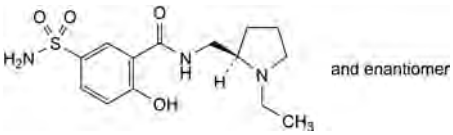
D. 2-methoxy-5-sulfamoylbenzoic acid,



E. 2-methoxy-5-sulfamoylbenzamide,



F. *N*-[[(2*RS*)-1-ethyl-1-oxidopyrrolidin-2-yl]methyl]-2-methoxy-5-sulfamoylbenzamide,

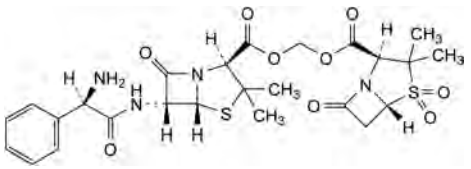


G. *N*-[[(2*RS*)-1-éthylpyrrolidin-2-yl]méthyl]-2-hydroxy-5-sulfamoylbenzamide.

**01/2017:2211**
**corrected 10.0**

# SULTAMICILLIN

## Sultamicillinum



$C_{25}H_{30}N_4O_9S_2$ $M_r$ 594.7
[76497-13-7]

DEFINITION

Methylene (2*S*,5*R*,6*R*)-6-[[(2*R*)-aminophenylacetyl]amino]-3,3-dimethyl-7-oxo-4-thia-1-azabicyclo[3.2.0]heptane-2-carboxylate (2*S*,5*R*)-3,3-dimethyl-4,4,7-trioxo-4λ⁶-thia-1-azabicyclo[3.2.0]heptane-2-carboxylate.

Semi-synthetic product derived from a fermentation product.

*Content*: 96.0 per cent to 102.0 per cent (anhydrous substance).

CHARACTERS

*Appearance*: white or almost white, slightly hygroscopic, crystalline powder.

*Solubility*: practically insoluble in water, very slightly soluble in methanol, practically insoluble in ethanol (96 per cent).

IDENTIFICATION

Infrared absorption spectrophotometry (*2.2.24*).

*Comparison*: *sultamicillin CRS*.

TESTS

**Specific optical rotation** (*2.2.7*): + 190 to + 210 (anhydrous substance).

Dissolve 0.500 g in *dimethylformamide R* and dilute to 50.0 mL with the same solvent.

**Related substances**. Liquid chromatography (*2.2.29*). *Prepare the solutions immediately before use or keep at 2-8 °C for not more than 6 h.*

*Solution A*: *methanol R1*, *acetonitrile R1* (20:80 *V/V*).

*Solution B*. Dissolve 1.56 g of *sodium dihydrogen phosphate R* in 900 mL of *water R*. Add 7.0 mL of *phosphoric acid R* and dilute to 1000 mL with *water R*.

*Blank solution*: solution B, solution A (30:70 *V/V*).

*Test solution*. Dissolve 50.0 mg of the substance to be examined in 35 mL of solution A and sonicate for about 1 min. Add 13 mL of solution B, mix and sonicate for about 1 min. Dilute to 50.0 mL with solution B and mix.

*Reference solution (a)*. Dissolve 70.0 mg of *sultamicillin tosilate CRS* in 35 mL of solution A and sonicate for about 1 min. Add 13 mL of solution B, mix and sonicate for about 1 min. Dilute to 50.0 mL with solution B and mix.

*Reference solution (b)*. Suspend 15 mg of *sultamicillin tosilate CRS* in 20 mL of a 0.4 g/L solution of *sodium hydroxide R* and sonicate in an ultrasonic bath for about 5 min. Add 20 mL of a 0.36 g/L solution of *hydrochloric acid R* and dilute to 100 mL with *water R*.

*Reference solution (c)*. Dilute 1.0 mL of reference solution (a) to 100.0 mL with the blank solution.

*Reference solution (d)*. Dissolve 17.3 mg of *ampicillin trihydrate CRS* (impurity C) and 15.0 mg of *sulbactam CRS* (impurity A) in *water R* and dilute to 50.0 mL with the same solvent. Dilute 1.0 mL of this solution to 100.0 mL with *water R*.

*Reference solution (e)*. Dissolve 5 mg of *sultamicillin for peak identification CRS* (containing impurity G) in 7.0 mL of solution A and sonicate for about 1 min. Dilute to 10.0 mL with solution B, mix and sonicate for about 1 min.

*Column*:

- *size*: *l* = 0.10 m, Ø = 4.6 mm;
- *stationary phase*: *octadecylsilyl silica gel for chromatography R* (3.5 µm);
- *temperature*: 25 °C.

*Mobile phase*:

- *mobile phase A*: 4.68 g/L solution of *sodium dihydrogen phosphate R* adjusted to pH 3.0 with *phosphoric acid R*;
- *mobile phase B*: *acetonitrile R1*;

| Time (min) | Mobile phase A (per cent *V/V*) | Mobile phase B (per cent *V/V*) |
|---|---|---|
| 0 - 15 | 95 → 30 | 5 → 70 |
| 15 - 16 | 30 | 70 |
| 16 - 16.5 | 30 → 95 | 70 → 5 |
| 16.5 - 20 | 95 | 5 |

*Flow rate*: 1.0 mL/min.

*Detection*: spectrophotometer at 215 nm.

*Injection*: 5 µL of the blank solution, the test solution and reference solutions (b), (c), (d) and (e).

*Identification of impurities*: use the chromatogram supplied with *sultamicillin for peak identification CRS* and the chromatogram obtained with reference solution (e) to identify the peak due to impurity G.

*Relative retention* with reference to sultamicillin (retention time = about 9.3 min): impurity A = about 0.41; ampicillin penicilloic acid = about 0.47; impurity B = about 0.50; impurity C = about 0.55; impurity D = about 0.94; impurity E = about 1.09; impurity F = about 1.26; impurity G = about 1.42.

*System suitability*: reference solution (b):

- *resolution*: minimum 2.5 between the peaks due to ampicillin penicilloic acid and impurity B and minimum 2.5 between the peaks due to impurities B and C.

*Limits*:

- *impurity G*: not more than the area of the peak due to sultamicillin in the chromatogram obtained with reference solution (c) (1.0 per cent);
- *impurity A*: not more than the area of the corresponding peak in the chromatogram obtained with reference solution (d) (0.3 per cent);
- *impurity B*: not more than the area of the corresponding peak in the chromatogram obtained with reference solution (c) (0.3 per cent);
- *impurity C*: not more than the area of the corresponding peak in the chromatogram obtained with reference solution (d) (0.3 per cent);
- *impurities D, E, F*: for each impurity, not more than 0.3 times the area of the peak due to sultamicillin in the chromatogram obtained with reference solution (c) (0.3 per cent);
- *any other impurity*: for each impurity, not more than 0.3 times the area of the peak due to sultamicillin in the chromatogram obtained with reference solution (c) (0.3 per cent);
- *total*: not more than 3 times the area of the peak due to sultamicillin in the chromatogram obtained with reference solution (c) (3.0 per cent);
- *disregard limit*: 0.1 times the area of the peak due to sultamicillin in the chromatogram obtained with reference solution (c) (0.1 per cent).

**Ethyl acetate**. Head-space gas chromatography (*2.2.28*).

*Test solution*. Dissolve 0.200 g in 7.0 mL of a mixture of 1 volume of *water R* and 99 volumes of *dimethylformamide R*.

*Reference solution*. Dissolve 0.200 g of *ethyl acetate R* in 240 mL of a mixture of 1 volume of *water R* and 99 volumes of *dimethylformamide R* and dilute to 250.0 mL with the same mixture of solvents. Dilute 5.0 mL of this solution to 7.0 mL with a mixture of 1 volume of *water R* and 99 volumes of *dimethylformamide R*.

*Close the vials immediately with a tight rubber membrane stopper coated with polytetrafluoroethylene and secure with an aluminium crimped cap. Shake to obtain a homogeneous solution.*

*Column*:

- *material*: fused silica;
- *size*: *l* = 50 m, Ø = 0.32 mm;
- *stationary phase*: *methylpolysiloxane R* (film thickness: 1.8 µm or 3 µm).

*Carrier gas*: *helium for chromatography R*.

*Linear velocity*: 35 cm/s.

*Split ratio*: 1:5.

*Static head-space conditions that may be used:*

- *equilibration temperature*: 105 °C;
- *equilibration time*: 45 min;

– *transfer-line temperature*: 110 °C;

– *pressurisation time*: 30 s.

*Temperature*:

| | Time (min) | Temperature (°C) |
|---|---|---|
| Column | 0 - 6 | 70 |
| | 6 - 16 | 70 → 220 |
| | 16 - 18 | 220 |
| Injection port | | 140 |
| Detector | | 250 |

*Detection*: flame ionisation.

*Injection*: 1 mL.

*Relative retention* with reference to dimethylformamide (retention time = about 14 min): ethyl acetate = about 0.7.

*Limit*:

– *ethyl acetate*: maximum 2.5 per cent.

**Water** (*2.5.12*): maximum 1.0 per cent, determined on 0.50 g.

**Sulfated ash** (*2.4.14*): maximum 0.1 per cent, determined on 1.0 g.

ASSAY

Liquid chromatography (*2.2.29*) as described in the test for related substances with the following modifications.

*Injection*: test solution and reference solution (a).

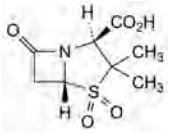
Calculate the percentage content of sultamicillin ($C_{25}H_{30}N_4O_9S_2$) from the declared content of $C_{25}H_{30}N_4O_9S_2$ in *sultamicillin tosilate CRS* and by multiplying the sultamicillin tosilate content by 0.7752.

STORAGE

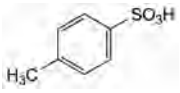
In an airtight container.

IMPURITIES

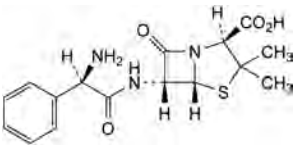
*Specified impurities: A, B, C, D, E, F, G.*



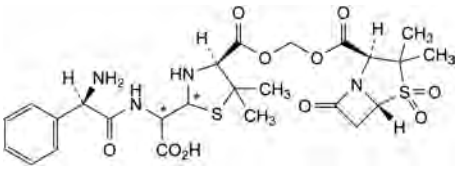
A. (2*S*,5*R*)-3,3-dimethyl-7-oxo-4-thia-1-azabicyclo[3.2.0]-heptane-2-carboxylic acid 4,4-dioxide (sulbactam),



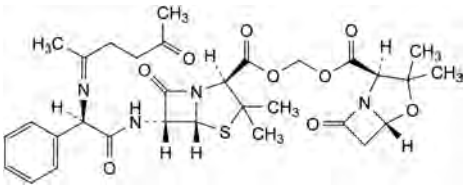
B. 4-methylbenzenesulfonic acid (*p*-toluenesulfonic acid),



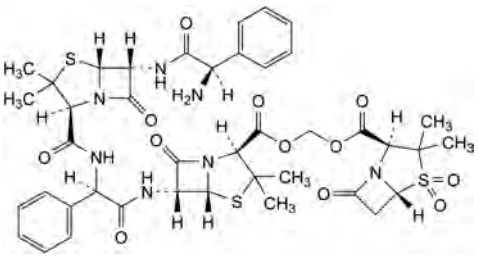
C. (2*S*,5*R*,6*R*)-6-[[(2*R*)-2-amino-2-phenylacetyl]amino]-3,3-dimethyl-7-oxo-4-thia-1-azabicyclo[3.2.0]heptane-2-carboxylic acid (ampicillin),



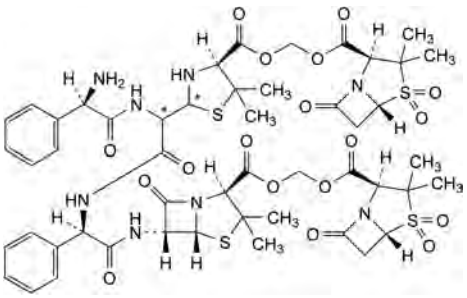
D. [[(2*R*)-aminophenylacetyl]amino][(4*S*)-4-[[[[[(2*S*,5*R*)-3,3-dimethyl-4,4,7-trioxo-4λ⁶-thia-1-azabicyclo[3.2.0]-hept-2-yl]carbonyl]oxy]methoxy]carbonyl]-5,5-dimethyl-thiazolidin-2-yl]acetic acid (penicilloic acids of sultamicillin),



E. methylene (2*S*,5*R*,6*R*)-3,3-dimethyl-6-[[(2*R*)-[(1-methyl-4-oxopentylidene)amino]phenylacetyl]amino]-7-oxo-4-thia-1-azabicyclo[3.2.0]heptane-2-carboxylate (2*S*,5*R*)-3,3-dimethyl-7-oxo-4-oxa-1-azabicyclo[3.2.0]heptane-2-carboxylate,



F. methylene (2*S*,5*R*,6*R*)-6-[[(2*R*)-[[[(2*S*,5*R*,6*R*)-6-[[(2*R*)-aminophenylacetyl]amino]-3,3-dimethyl-7-oxo-4-thia-1-azabicyclo[3.2.0]hept-2-yl]carbonyl]amino]phenylacetyl]amino]-3,3-dimethyl-7-oxo-4-thia-1-azabicyclo[3.2.0]heptane-2-carboxylate (2*S*,5*R*)-3,3-dimethyl-4,4,7-trioxo-4λ⁶-thia-1-azabicyclo-[3.2.0]heptane-2-carboxylate (ampicillin sultamicillin amide),



G. methylene (2*S*,5*R*,6*R*)-6-[[(2*R*)-[[[[(2*R*)-aminophenyl-acetyl]amino][(4*S*)-4-[[[[[(2*S*,5*R*)-3,3-dimethyl-4,4,7-trioxo-4λ⁶-thia-1-azabicyclo[3.2.0]hept-2-yl]carbonyl]-oxy]methoxy]carbonyl]-5,5-dimethylthiazolidin-2-yl]acetyl]amino]phenylacetyl]amino]-3,3-dimethyl-7-oxo-4-thia-1-azabicyclo[3.2.0]heptane-2-carboxylate (2*S*,5*R*)-3,3-dimethyl-4,4,7-trioxo-4λ⁶-thia-1-azabicyclo-[3.2.0]heptane-2-carboxylate (sultamicillin dimer).

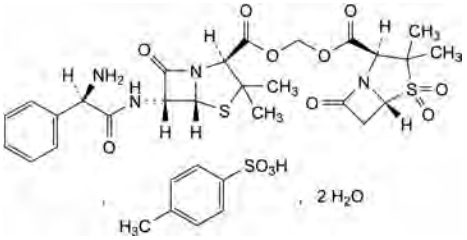
# SULTAMICILLIN TOSILATE DIHYDRATE

## Sultamicillini tosilas dihydricus



$C_{32}H_{38}N_4O_{12}S_3,2H_2O$ $M_r$ 803

DEFINITION

4-Methylbenzenesulfonate of methylene (2*S*,5*R*,6*R*)-6-[[(2*R*)-aminophenylacetyl]amino]-3,3-dimethyl-7-oxo-4-thia-1-azabicyclo[3.2.0]heptane-2-carboxylate (2*S*,5*R*)-3,3-dimethyl-4,4,7-trioxo-4λ$^6$-thia-1-azabicyclo[3.2.0]heptane-2-carboxylate dihydrate.

Semi-synthetic product derived from a fermentation product.

*Content*: 95.0 per cent to 102.0 per cent (anhydrous substance).

PRODUCTION

It is considered that alkyl toluenesulfonate esters are genotoxic and are potential impurities in sultamicillin tosilate dihydrate. The manufacturing process should be developed taking into consideration the principles of quality risk management, together with considerations of the quality of starting materials, process capability and validation. The general method *2.5.40. Methyl, ethyl and isopropyl toluenesulfonate in active substances* is available to assist manufacturers.

CHARACTERS

*Appearance*: white or almost white, crystalline powder.

*Solubility*: practically insoluble in water, sparingly soluble in ethanol (96 per cent).

IDENTIFICATION

Infrared absorption spectrophotometry (*2.2.24*).

*Comparison*: *sultamicillin tosilate CRS*.

TESTS

**Specific optical rotation** (*2.2.7*): + 178 to + 195 (anhydrous substance).

Dissolve 1.000 g in *dimethylformamide R* and dilute to 50.0 mL with the same solvent.

**Related substances**. Liquid chromatography (*2.2.29*). *Prepare the solutions immediately before use or keep at 2-8 °C for not more than 6 h.*

*Solution A*: *methanol R1*, *acetonitrile R1* (20:80 *V/V*).

*Solution B*. Dissolve 1.56 g of *sodium dihydrogen phosphate R* in 900 mL of *water R*. Add 7.0 mL of *phosphoric acid R* and dilute to 1000 mL with *water R*.

*Blank solution*: solution B, solution A (30:70 *V/V*).

*Test solution*. Dissolve 70.0 mg of the substance to be examined in 35 mL of solution A and sonicate for about 1 min. Add 13 mL of solution B, mix and sonicate for about 1 min. Dilute to 50.0 mL with solution B and mix.

*Reference solution (a)*. Dissolve 70.0 mg of *sultamicillin tosilate CRS* in 35 mL of solution A and sonicate for about 1 min. Add 13 mL of solution B, mix and sonicate for about 1 min. Dilute to 50.0 mL with solution B and mix.

*Reference solution (b)*. Suspend 15 mg of the substance to be examined in 20 mL of a 0.4 g/L solution of *sodium hydroxide R* and sonicate in an ultrasonic bath for about 5 min. Add 20 mL of a 0.36 g/L solution of *hydrochloric acid R* and dilute to 100.0 mL with *water R*.

*Reference solution (c)*. Dissolve 0.200 g of the substance to be examined in 70.0 mL of solution A and sonicate for about 1 min. Add 25.0 mL of solution B, mix and sonicate for about 1 min. Dilute to 100.0 mL with solution B and mix. Dilute 1.0 mL of this solution to 100.0 mL with the blank solution.

*Reference solution (d)*. Dissolve 32.3 mg of *ampicillin trihydrate CRS* (impurity B) and 7.0 mg of *sulbactam CRS* (impurity A) in *water R* and dilute to 1000 mL with the same solvent.

*Column*:

- *size*: *l* = 0.10 m, Ø = 4.6 mm;
- *stationary phase*: *octadecylsilyl silica gel for chromatography R* (3.5 µm);
- *temperature*: 25 °C.

*Mobile phase*:

- *mobile phase A*: 4.68 g/L solution of *sodium dihydrogen phosphate R* adjusted to pH 3.0 with *phosphoric acid R*;
- *mobile phase B*: *acetonitrile R1*;

| Time (min) | Mobile phase A (per cent *V/V*) | Mobile phase B (per cent *V/V*) |
|---|---|---|
| 0 - 15 | 95 → 30 | 5 → 70 |
| 15 - 16 | 30 | 70 |
| 16 - 16.5 | 30 → 95 | 70 → 5 |
| 16.5 - 20 | 95 | 5 |

*Flow rate*: 1.0 mL/min.

*Detection*: spectrophotometer at 215 nm.

*Injection*: 5 µL of the blank solution, the test solution and reference solutions (b), (c) and (d).

*Relative retention* with reference to sultamicillin (retention time = about 9.3 min): impurity A = about 0.41; ampicillin penicilloic acid = about 0.47; tosilate = about 0.50; impurity B = about 0.55; impurity C = about 0.94; impurity D = about 1.09; impurity F = about 1.23; impurity E = about 1.26; impurity G = about 1.42.

*System suitability*: reference solution (b):

- *resolution*: minimum 2.5 between the peaks due to ampicillin penicilloic acid and tosilate and minimum 2.5 between the peaks due to tosilate and impurity B.

*Limits*:

- *impurity B*: not more than the area of the corresponding peak in the chromatogram obtained with reference solution (d) (2.0 per cent);
- *impurity A*: not more than the area of the corresponding peak in the chromatogram obtained with reference solution (d) (0.5 per cent);
- *impurities C, D, E, F, G*: for each impurity, not more than 0.5 times the area of the peak due to sultamicillin in the chromatogram obtained with reference solution (c) (0.5 per cent);
- *any other impurity*: for each impurity, not more than 0.5 times the area of the peak due to sultamicillin in the chromatogram obtained with reference solution (c) (0.5 per cent);
- *total*: not more than 4 times the area of the peak due to sultamicillin in the chromatogram obtained with reference solution (c) (4.0 per cent);

– *disregard limit*: 0.1 times the area of the peak due to sultamicillin in the chromatogram obtained with reference solution (c) (0.1 per cent).

**Ethyl acetate**. Head-space gas chromatography (*2.2.28*).

*Test solution*. Dissolve 0.200 g in 7.0 mL of a mixture of 1 volume of *water R* and 99 volumes of *dimethylformamide R*.

*Reference solution*. Dissolve 0.200 g of *ethyl acetate R* in 240 mL of a mixture of 1 volume of *water R* and 99 volumes of *dimethylformamide R* and dilute to 250.0 mL with the same mixture of solvents. Dilute 5.0 mL of this solution to 7.0 mL with a mixture of 1 volume of *water R* and 99 volumes of *dimethylformamide R*.

*Immediately close the vials with a tight rubber membrane stopper coated with polytetrafluoroethylene and secure with an aluminium crimped cap. Shake to obtain a homogeneous solution.*

*Column*:

– *material*: fused silica;
– *size*: *l* = 50 m, Ø = 0.32 mm;
– *stationary phase*: *methylpolysiloxane R* (film thickness: 1.8 µm or 3 µm).

*Carrier gas*: *helium for chromatography R*.

*Linear velocity*: 35 cm/s.

*Split ratio*: 1:5.

*Static head-space conditions that may be used:*

– *equilibration temperature*: 105 °C;
– *equilibration time*: 45 min;
– *transfer-line temperature*: 110 °C;
– *pressurisation time*: 30 s.

*Temperature*:

| | Time (min) | Temperature (°C) |
|---|---|---|
| Column | 0 - 6 | 70 |
| | 6 - 16 | 70 → 220 |
| | 16 - 18 | 220 |
| Injection port | | 140 |
| Detector | | 250 |

*Detection*: flame ionisation.

*Injection*: 1 mL.

*Relative retention* with reference to dimethylformamide (retention time = about 14 min): ethyl acetate = about 0.7.

*Limit*:

– *ethyl acetate*: maximum 2.0 per cent.

**Water** (*2.5.12*): 4.0 per cent to 6.0 per cent, determined on 0.200 g.

**Sulfated ash** (*2.4.14*): maximum 0.2 per cent, determined on 1.0 g.

ASSAY

Liquid chromatography (*2.2.29*) as described in the test for related substances with the following modification.

*Injection*: test solution and reference solution (a).

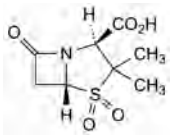
Calculate the percentage content of sultamicillin tosilate ($C_{32}H_{38}N_4O_{12}S_3$) from the declared content of *sultamicillin tosilate CRS*.

STORAGE

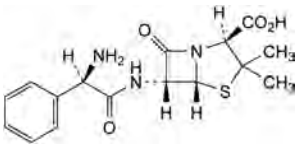
In an airtight container.

IMPURITIES

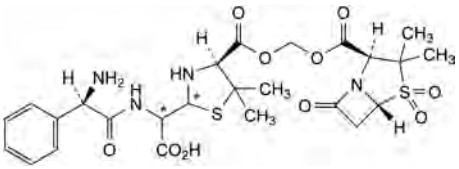
*Specified impurities: A, B, C, D, E, F, G.*



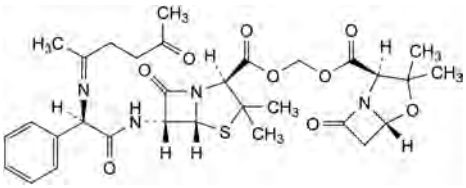
A. (2*S*,5*R*)-3,3-dimethyl-7-oxo-4-thia-1-azabicyclo[3.2.0]-heptane-2-carboxylic acid 4,4-dioxide (sulbactam),



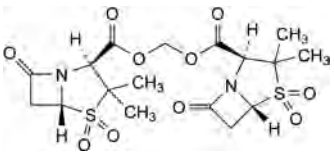
B. (2*S*,5*R*,6*R*)-6-[[(2*R*)-2-amino-2-phenylacetyl]amino]-3,3-dimethyl-7-oxo-4-thia-1-azabicyclo[3.2.0]heptane-2-carboxylic acid (ampicillin),



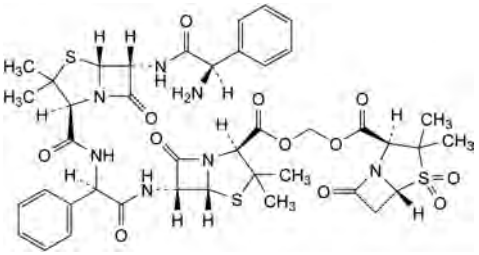
C. [[(2*R*)-aminophenylacetyl]amino][(4*S*)-4-[[[[[(2*S*,5*R*)-3,3-dimethyl-4,4,7-trioxo-4λ⁶-thia-1-azabicyclo[3.2.0]-hept-2-yl]carbonyl]oxy]methoxy]carbonyl]-5,5-dimethylthiazolidin-2-yl]acetic acid (penicilloic acids of sultamicillin),



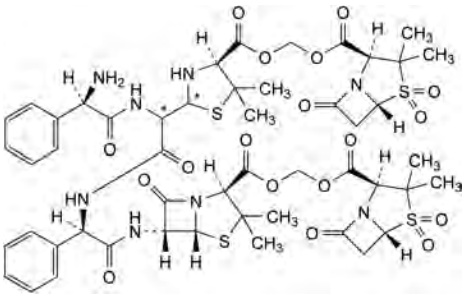
D. methylene (2*S*,5*R*,6*R*)-3,3-dimethyl-6-[[(2*R*)-[(1-methyl-4-oxopentylidene)amino]phenylacetyl]amino]-7-oxo-4-thia-1-azabicyclo[3.2.0]heptane-2-carboxylate (2*S*,5*R*)-3,3-dimethyl-7-oxo-4-oxa-1-azabicyclo[3.2.0]heptane-2-carboxylate,



E. methylene bis[(2*S*,5*R*)-3,3-dimethyl-4,4,7-trioxo-4λ⁶-thia-1-azabicyclo[3.2.0]heptane-2-carboxylate] (sulbactam methylene ester),



F. methylene (2*S*,5*R*,6*R*)-6-[[(2*R*)-[[[(2*S*,5*R*,6*R*)-6-[[(2*R*)-aminophenylacetyl]amino]-3,3-dimethyl-7-oxo-4-thia-1-azabicyclo[3.2.0]hept-2-yl]carbonyl]amino]-phenylacetyl]amino]-3,3-dimethyl-7-oxo-4-thia-1-azabicyclo[3.2.0]heptane-2-carboxylate (2*S*,5*R*)-3,3-dimethyl-4,4,7-trioxo-4λ⁶-thia-1-azabicyclo[3.2.0]heptane-2-carboxylate (ampicillin sultamicillin amide),



G. methylene (2*S*,5*R*,6*R*)-6-[[(2*R*)-[[[[(2*R*)-amino-phenylacetyl]amino][(4*S*)-4-[[[[[(2*S*,5*R*)-3,3-dimethyl-4,4,7-trioxo-4λ⁶-thia-1-azabicyclo[3.2.0]hept-2-yl]-carbonyl]oxy]methoxy]carbonyl]-5,5-dimethylthiazolidin-2-yl]acetyl]amino]phenylacetyl]amino]-3,3-dimethyl-7-oxo-4-thia-1-azabicyclo[3.2.0]heptane-2-carboxylate (2*S*,5*R*)-3,3-dimethyl-4,4,7-trioxo-4λ⁶-thia-1-aza-bicyclo[3.2.0]heptane-2-carboxylate (sultamicillin dimer).

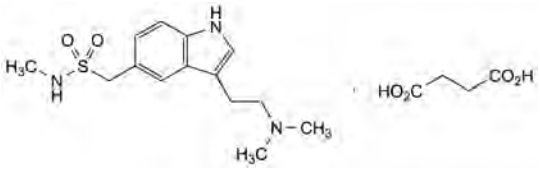
# SUMATRIPTAN SUCCINATE

## Sumatriptani succinas



$C_{18}H_{27}N_3O_6S$ $M_r$ 413.5
[103628-48-4]

DEFINITION

1-[3-[2-(Dimethylamino)ethyl]-1*H*-indol-5-yl]-*N*-methylmethanesulfonamide hydrogen butanedioate.

*Content*: 97.5 per cent to 102.0 per cent (anhydrous substance).

CHARACTERS

*Appearance*: white or almost white powder.

*Solubility*: freely soluble in water, sparingly soluble in methanol, practically insoluble in methylene chloride.

IDENTIFICATION

Infrared absorption spectrophotometry (*2.2.24*).

*Comparison*: *sumatriptan succinate CRS*.

TESTS

**Solution S**. Dissolve 1.0 g in *carbon dioxide-free water R* and dilute to 25.0 mL with the same solvent.

**pH** (*2.2.3*): 4.5 to 5.3.

Dilute 2.5 mL of solution S to 10 mL with *carbon dioxide-free water R*.

**Absorbance** (*2.2.25*): maximum 0.10, determined at 440 nm on solution S.

**Impurities A and H**. Liquid chromatography (*2.2.29*).

*Test solution*. Dissolve 30.0 mg of the substance to be examined in the mobile phase and dilute to 10.0 mL with the mobile phase.

*Reference solution (a)*. Dilute 1.0 mL of the test solution to 100.0 mL with the mobile phase. Dilute 1.0 mL of this solution to 10.0 mL with the mobile phase.

*Reference solution (b)*. Dissolve 3 mg of *sumatriptan for system suitability CRS* (containing impurities A and H) in the mobile phase and dilute to 1.0 mL with the mobile phase.

*Column*:

– *size*: *l* = 0.25 m, Ø = 4.6 mm;
– *stationary phase*: *silica gel for chromatography R* (5 µm).

*Mobile phase*: mix 10 volumes of a 771 g/L solution of *ammonium acetate R* and 90 volumes of *methanol R*.

*Flow rate*: 2.0 mL/min.

*Detection*: spectrophotometer at 282 nm.

*Injection*: 20 µL.

*Run time*: 5 times the retention time of sumatriptan.

*Identification of impurities*: use the chromatogram supplied with *sumatriptan for system suitability CRS* and the chromatogram obtained with reference solution (b) to identify the peaks due to impurities A and H.

*Relative retention* with reference to sumatriptan (retention time = about 2 min): impurity A = about 1.9; impurity H = about 2.6.

*System suitability*: reference solution (b):

– *resolution*: minimum 3.0 between the peaks due to impurities A and H.

*Limits*:

– *correction factor*: for the calculation of content, multiply the peak area of impurity A by 0.6;
– *impurity A*: not more than 6 times the area of the principal peak in the chromatogram obtained with reference solution (a) (0.6 per cent);
– *impurity H*: not more than 3 times the area of the principal peak in the chromatogram obtained with reference solution (a) (0.3 per cent).

**Related substances**. Liquid chromatography (*2.2.29*).

*Solution A*. Dissolve 2.925 g of *sodium dihydrogen phosphate R* in 600 mL of *water R*, adjust to pH 6.5 with *strong sodium hydroxide solution R*, dilute to 750 mL with *water R*, add 250 mL of *acetonitrile R* and mix.

*Test solution (a)*. Dissolve 30.0 mg of the substance to be examined in the mobile phase and dilute to 10.0 mL with the mobile phase.

*Test solution (b)*. Dissolve 15.0 mg of the substance to be examined in solution A and dilute to 100.0 mL with solution A.

*Reference solution (a)*. Dilute 1.0 mL of test solution (a) to 100.0 mL with the mobile phase. Dilute 1.0 mL of this solution to 10.0 mL with the mobile phase.

*Reference solution (b)*. Dissolve the contents of a vial of *sumatriptan impurity mixture CRS* (containing impurities B, C, D and E) in the mobile phase and dilute to 1 mL with the mobile phase.

*Reference solution (c)*. Dissolve 15.0 mg of *sumatriptan succinate CRS* in solution A and dilute to 100.0 mL with solution A.

*Column*:

– *size*: *l* = 0.25 m, Ø = 4 mm;
– *stationary phase*: *octadecylsilyl silica gel for chromatography R* (5 µm).

*Mobile phase*: mix 25 volumes of *acetonitrile R* with 75 volumes of a solution prepared as follows: dissolve 0.970 g of *dibutylamine R*, 0.735 g of *phosphoric acid R* and 2.93 g of *sodium dihydrogen phosphate R* in 750 mL of *water R*, adjust to pH 6.5 with *strong sodium hydroxide solution R* and dilute to 1000 mL with *water R*.

*Flow rate*: 1.5 mL/min.

*Detection*: spectrophotometer at 282 nm.

*Injection*: 10 µL of test solution (a) and reference solutions (a) and (b).

*Run time*: 4 times the retention time of sumatriptan.

*Identification of impurities*: use the chromatogram supplied with *sumatriptan impurity mixture CRS* and the chromatogram obtained with reference solution (b) to identify the peaks due to impurities B, C, D and E.

*Relative retention* with reference to sumatriptan (retention time = about 7 min): impurity E = about 0.5; impurity B = about 0.6; impurity D = about 0.7; impurity C = about 0.8.

*System suitability*: reference solution (b):

- *resolution*: minimum 1.5 between the peaks due to impurity C and sumatriptan;
- the chromatogram shows 5 clearly separated peaks.

*Limits*:

- *impurities B, C, D*: for each impurity, not more than 5 times the area of the principal peak in the chromatogram obtained with reference solution (a) (0.5 per cent);
- *impurity E*: not more than 1.5 times the area of the principal peak in the chromatogram obtained with reference solution (a) (0.15 per cent);
- *unspecified impurities*: for each impurity, not more than the area of the principal peak in the chromatogram obtained with reference solution (a) (0.10 per cent);
- *total*: not more than 6 times the area of the principal peak in the chromatogram obtained with reference solution (a) (0.6 per cent);
- *disregard limit*: 0.5 times the area of the principal peak in the chromatogram obtained with reference solution (a) (0.05 per cent).

**Water** (*2.5.12*): maximum 1.0 per cent, determined on 0.500 g.

**Sulfated ash** (*2.4.14*): maximum 0.1 per cent, determined on 1.0 g.

ASSAY

Liquid chromatography (*2.2.29*) as described in the test for related substances with the following modification.

*Injection*: test solution (b) and reference solution (c).

Calculate the percentage content of $C_{18}H_{27}N_3O_6S$ taking into account the assigned content of *sumatriptan succinate CRS*.

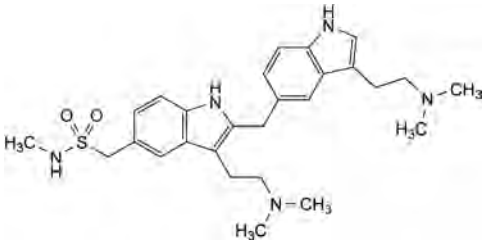
STORAGE

Protected from light.

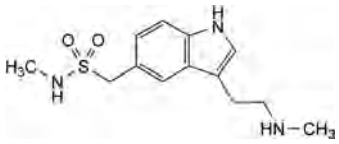
IMPURITIES

*Specified impurities: A, B, C, D, E, H.*

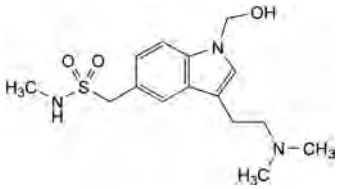
*Other detectable impurities* (the following substances would, if present at a sufficient level, be detected by one or other of the tests in the monograph. They are limited by the general acceptance criterion for other/unspecified impurities and/or by the general monograph *Substances for pharmaceutical use (2034)*. It is therefore not necessary to identify these impurities for demonstration of compliance. See also *5.10. Control of impurities in substances for pharmaceutical use*): *F, G.*



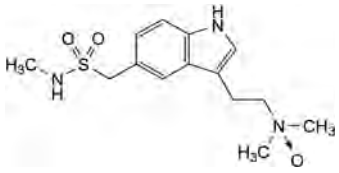
A. 1-[3-[2-(dimethylamino)ethyl]-2-[[3-[2-(dimethylamino)-ethyl]-1*H*-indol-5-yl]methyl]-1*H*-indol-5-yl]-*N*-methyl-methanesulfonamide,



B. *N*-methyl-1-[3-[2-(methylamino)ethyl]-1*H*-indol-5-yl]-methanesulfonamide,



C. 1-[3-[2-(dimethylamino)ethyl]-1-(hydroxymethyl)-1*H*-indol-5-yl]-*N*-methylmethanesulfonamide,



D. *N*,*N*-dimethyl-2-[5-[(methylsulfamoyl)methyl]-1*H*-indol-3-yl]ethan-1-amine *N*-oxide,

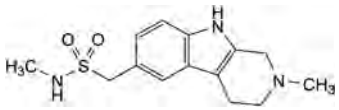
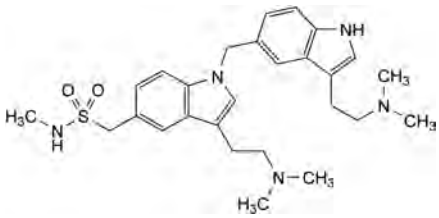
F. *N*-methyl-1-(2,3,4,9-tetrahydro-1*H*-pyrido[3,4-*b*]indol-6-yl)methanesulfonamide,



G. *N*-methyl-1-(2-methyl-2,3,4,9-tetrahydro-1*H*-pyrido[3,4-*b*]indol-6-yl)methanesulfonamide,



H. 1-[3-[2-(dimethylamino)ethyl]-1-[[3-[2-(dimethylamino)-ethyl]-1*H*-indol-5-yl]methyl]-1*H*-indol-5-yl]-*N*-methyl-methanesulfon amide.

01/2010:1371

# SUNFLOWER OIL, REFINED

## Helianthi annui oleum raffinatum

DEFINITION

Fatty oil obtained from the seeds of *Helianthus annuus* L. by mechanical expression or by extraction. It is then refined. A suitable antioxidant may be added.

CHARACTERS

*Appearance*: clear, light yellow liquid.

*Solubility*: practically insoluble in water and in ethanol (96 per cent), miscible with light petroleum (bp: 40-60 °C).

*Relative density*: about 0.921.

*Refractive index*: about 1.474.

IDENTIFICATION

Identification of fatty oils by thin-layer chromatography (*2.3.2*).

*Results*: the chromatogram obtained is similar to the corresponding chromatogram shown in Figure 2.3.2.-1.

TESTS

**Acid value** (*2.5.1*): maximum 0.5, determined on 10.0 g.

**Peroxide value** (*2.5.5, Method A*): maximum 10.0.

**Unsaponifiable matter** (*2.5.7*): maximum 1.5 per cent, determined on 5.0 g.

**Alkaline impurities** (*2.4.19*). It complies with the test.

**Composition of fatty acids** (*2.4.22, Method A*). Use the mixture of calibrating substances in Table 2.4.22.-3.

*Composition of the fatty-acid fraction of the oil:*

- *palmitic acid*: 4.0 per cent to 9.0 per cent,
- *stearic acid*: 1.0 per cent to 7.0 per cent,
- *oleic acid*: 14.0 per cent to 40.0 per cent,
- *linoleic acid*: 48.0 per cent to 74.0 per cent.

**Water** (*2.5.32*): maximum 0.1 per cent, determined on 1.00 g.

STORAGE

In an airtight, well-filled container, protected from light.

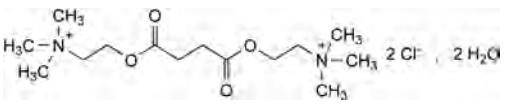
LABELLING

The label states whether the oil is obtained by mechanical expression or by extraction.

01/2008:0248

# SUXAMETHONIUM CHLORIDE

## Suxamethonii chloridum



$C_{14}H_{30}Cl_2N_2O_4,2H_2O$ $M_r$ 397.3

[6101-15-1]

DEFINITION

Suxamethonium chloride contains not less than 98.0 per cent and not more than the equivalent of 102.0 per cent of 2,2′-[butanedioylbis(oxy)]bis(*N,N,N*-trimethylethanaminium) dichloride, calculated with reference to the anhydrous substance.

CHARACTERS

A white or almost white, crystalline powder, hygroscopic, freely soluble in water, slightly soluble in alcohol.

It melts at about 160 °C, determined without previous drying.

IDENTIFICATION

*First identification: A, D.*

*Second identification: B, C, D.*

A. Examine by infrared absorption spectrophotometry (*2.2.24*), comparing with the spectrum obtained with *suxamethonium chloride CRS*. Examine the substances prepared as discs.

B. To 1 mL of solution S (see Tests) add 9 mL of *water R*, 10 mL of *dilute sulfuric acid R* and 30 mL of *ammonium reineckate solution R*. A pink precipitate is formed. Allow to stand for 30 min, filter, wash with *water R*, with *alcohol R* and then with *ether R* and dry at 80 °C. The melting point (*2.2.14*) of the precipitate is 180 °C to 185 °C.

C. Dissolve about 25 mg in 1 mL of *water R* and add 0.1 mL of a 10 g/L solution of *cobalt chloride R* and 0.1 mL of *potassium ferrocyanide solution R*. A green colour is produced.

D. About 20 mg gives reaction (a) of chlorides (*2.3.1*).

TESTS

**Solution S**. Dissolve 1.0 g in *carbon dioxide-free water R* and dilute to 20 mL with the same solvent.

**Appearance of solution**. Solution S is clear (*2.2.1*). Dilute 4 mL of solution S to 10 mL with *water R*. The solution is colourless (*2.2.2, Method II*).

**pH** (*2.2.3*). Dilute 1 mL of solution S to 10 mL with *carbon dioxide-free water R*. The pH of the solution is 4.0 to 5.0.

**Choline chloride**. Examine by thin-layer chromatography (*2.2.27*), using *cellulose for chromatography R1* as the coating substance.

*Test solution.* Dissolve 0.4 g of the substance to be examined in *methanol R* and dilute to 10 mL with the same solvent.

*Reference solution.* Dissolve 0.4 g of *suxamethonium chloride CRS* and 2 mg of *choline chloride R* in *methanol R* and dilute to 10 mL with the same solvent.

Apply to the plate 5 µL of each solution. Prepare the mobile phase as follows: shake together for 10 min, 10 volumes of *anhydrous formic acid R*, 40 volumes of *water R* and 50 volumes of *butanol R*; allow to stand and use the upper layer. Develop over a path of 15 cm. Dry the plate in a current of air and spray with *potassium iodobismuthate solution R*. Any spot in the chromatogram obtained with the test solution, apart from the principal spot, is not more intense than the spot corresponding to choline chloride in the chromatogram obtained with the reference solution (0.5 per cent). The test is not valid unless the chromatogram obtained with the reference solution shows two clearly separated spots.

**Water** (*2.5.12*). 8.0 per cent to 10.0 per cent, determined on 0.30 g by the semi-micro determination of water.

**Sulfated ash** (*2.4.14*). Not more than 0.1 per cent, determined on 1.0 g.

ASSAY

Dissolve 0.150 g in 50 mL of *acetic anhydride R*. Titrate with *0.1 M perchloric acid*, determining the end-point potentiometrically (*2.2.20*).

1 mL of *0.1 M perchloric acid* is equivalent to 18.07 mg of $C_{14}H_{30}Cl_2N_2O_4$.

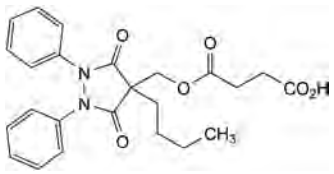
STORAGE

Store in an airtight container, protected from light.

**01/2017:1574**

# SUXIBUZONE

## Suxibuzonum



$C_{24}H_{26}N_2O_6$ $M_r$ 438.5
[27470-51-5]

DEFINITION

4-[(4-Butyl-3,5-dioxo-1,2-diphenylpyrazolidin-4-yl)methoxy]-4-oxobutanoic acid.

*Content*: 99.0 per cent to 101.0 per cent (dried substance).

CHARACTERS

*Appearance*: white or almost white, crystalline powder.

*Solubility*: practically insoluble in water, freely soluble in acetone, soluble in ethanol (96 per cent), practically insoluble in cyclohexane.

IDENTIFICATION

Infrared absorption spectrophotometry (*2.2.24*).

*Comparison*: *suxibuzone CRS*.

TESTS

**Appearance of solution**. The solution is clear (*2.2.1*) and colourless (*2.2.2, Method II*).

Dissolve 1 g in *anhydrous ethanol R* and dilute to 20 mL with the same solvent.

**Related substances**. Liquid chromatography (*2.2.29*).

*Test solution.* Dissolve 0.10 g of the substance to be examined in *acetonitrile R* and dilute to 25.0 mL with the same solvent.

*Reference solution (a).* Dissolve 2.8 mg of *phenylbutazone CRS* (impurity A), 2.8 mg of *suxibuzone impurity B CRS* and 2.8 mg of *suxibuzone impurity C CRS* in *acetonitrile R* and dilute to 10.0 mL with the same solvent. Dilute 1.0 mL of the solution to 10.0 mL with *acetonitrile R*.

*Reference solution (b).* Dissolve 4 mg of *phenylbutazone CRS* (impurity A) in *acetonitrile R* and dilute to 100.0 mL with the same solvent. Dilute 1.0 mL of the solution to 10.0 mL with *acetonitrile R*.

*Reference solution (c).* Dissolve 10 mg of *phenylbutazone CRS* (impurity A) in *acetonitrile R* and dilute to 25.0 mL with the same solvent. Mix 10.0 mL of this solution with 1.0 mL of the test solution and dilute the mixture to 25.0 mL with *acetonitrile R*.

*Column*:

- *size*: *l* = 0.125 m, Ø = 4.0 mm;
- *stationary phase*: *octadecylsilyl silica gel for chromatography R* (5 µm).

*Mobile phase*: mix 44 volumes of *acetonitrile R* and 56 volumes of a solution prepared as follows: dissolve 6.7 g of *citric acid monohydrate R* and 2.4 g of *tris(hydroxymethyl)aminomethane R* in 950 mL of *water R*, adjust to pH 3.0 with *citric acid monohydrate R* and dilute to 1000 mL with *water R*.

*Flow rate*: 1 mL/min.

*Detection*: spectrophotometer at 250 nm.

*Injection*: 10 µL.

*Relative retention* with reference to suxibuzone (retention time = about 7 min): impurity C = 0.7; impurity A = 1.4; impurity B = 3.3.

*System suitability*: reference solution (c):

- *resolution*: minimum of 2.0 between the peaks due to suxibuzone and impurity A.

*Limits*:

- *impurity A*: not more than the area of the corresponding peak in the chromatogram obtained with reference solution (a) (0.7 per cent);
- *impurity B*: not more than the area of the corresponding peak in the chromatogram obtained with reference solution (a) (0.7 per cent);
- *impurity C*: not more than the area of the corresponding peak in the chromatogram obtained with reference solution (a) (0.7 per cent);
- *unspecified impurities*: for each impurity, not more than the area of the principal peak in the chromatogram obtained with reference solution (b) (0.10 per cent);
- *total*: not more than 10 times the area of the principal peak in the chromatogram obtained with reference solution (b) (1.0 per cent);
- *disregard limit*: 0.1 times the area of the peak due to impurity A in the chromatogram obtained with reference solution (a) (0.07 per cent).

**Loss on drying** (*2.2.32*): maximum 0.5 per cent, determined on 1.000 g by drying in an oven *in vacuo* at 60 °C.

**Sulfated ash** (*2.4.14*): maximum 0.1 per cent, determined on 1.0 g.

ASSAY

Dissolve 0.400 g in previously neutralised *anhydrous ethanol R* and dilute to 10 mL with the same solvent. Carry out a potentiometric titration (*2.2.20*) using *0.1 M sodium hydroxide*.

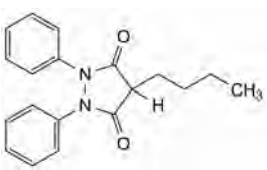
1 mL of *0.1 M sodium hydroxide* is equivalent to 43.85 mg of $C_{24}H_{26}N_2O_6$.

STORAGE

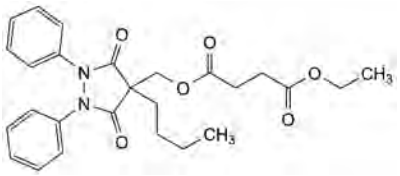
Protected from light.

IMPURITIES

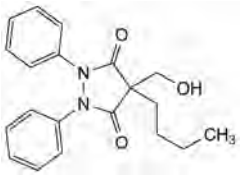
*Specified impurities*: *A, B, C*.



A. 4-butyl-1,2-diphenylpyrazolidine-3,5-dione (phenylbutazone),



B. (4-butyl-3,5-dioxo-1,2-diphenylpyrazolidin-4-yl)methyl ethyl butanedioate,



C. 4-butyl-4-(hydroxymethyl)-1,2-diphenyl-1,2-dihydro-4*H*-pyrazole-3,5-dione.

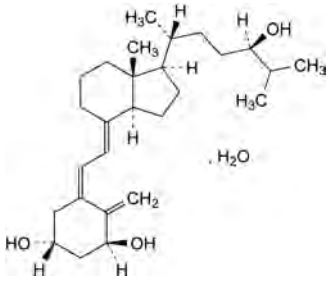
# TACALCITOL MONOHYDRATE

## Tacalcitolum monohydricum



$C_{27}H_{44}O_3,H_2O$ $M_r$ 434.7
[93129-94-3]

DEFINITION

(5*Z*,7*E*)-(24*R*)-9,10-Secocholesta-5,7,10(19)-triene-1α,3β,24-triol.

*Content*: 98.0 per cent to 102.0 per cent (anhydrous substance).

A reversible isomerisation to pre-tacalcitol takes place in solution, depending on temperature and time. The activity is due to both compounds.

It is sensitive to air, heat and light.

CHARACTERS

*Appearance*: white or almost white, crystalline powder.

*Solubility*: practically insoluble in water, freely soluble in anhydrous ethanol and in ethyl acetate.

IDENTIFICATION

A. Infrared absorption spectrophotometry (*2.2.24*).
*Comparison*: *Ph. Eur. reference spectrum of tacalcitol monohydrate*.

B. It complies with test B for related substances (see Tests).

C. Water (see Tests).

TESTS

**Related substances**.

A. Liquid chromatography (*2.2.29*). *Prepare the solutions immediately before use avoiding exposure to light and air.*

*Test solution.* Dissolve 5.0 mg of the substance to be examined in *acetonitrile R* and dilute to 25.0 mL with the same solvent.

*Reference solution (a).* Dissolve 5.0 mg of *tacalcitol monohydrate CRS* in *acetonitrile R* and dilute to 25.0 mL with the same solvent.

*Reference solution (b).* Heat 3 mL of the test solution at 80 °C for 30 min. Cool the solution to room temperature.

*Reference solution (c).* Dilute 1.0 mL of the test solution to 100.0 mL with *acetonitrile R*. Dilute 1.0 mL of this solution to 10.0 mL with *acetonitrile R*.

*Reference solution (d).* Dissolve the contents of a vial of *tacalcitol impurity A CRS* in 1 mL of the test solution.

*Column*:
- *size*: *l* = 0.25 m, Ø = 4.6 mm;
- *stationary phase*: *end-capped octadecylsilyl silica gel for chromatography R* (5 μm).

*Mobile phase*: *water for chromatography R*, *acetonitrile R* (40:60 *V/V*).

*Flow rate*: 2 mL/min.

*Detection*: spectrophotometer at 265 nm.

*Injection*: 50 μL of the test solution and reference solutions (b), (c) and (d).

*Run time*: 2.5 times the retention time of tacalcitol.

*Identification of impurities*: use the chromatogram obtained with reference solution (d) to identify the peak due to impurity A; use the chromatogram obtained with reference solution (b) to identify the peak due to pre-tacalcitol.

*Relative retention* with reference to tacalcitol (retention time = about 11 min): pre-tacalcitol = about 0.8; impurity A = about 0.9.

*System suitability*: reference solution (d):
- *resolution*: minimum 1.5 between the peaks due to impurity A and tacalcitol.

*Calculation of percentage contents*:
- for each impurity, use the concentration of tacalcitol monohydrate in reference solution (c).

*Limits*:
- *impurity A*: maximum 0.3 per cent;
- *unspecified impurities*: for each impurity, maximum 0.10 per cent;
- *total*: maximum 0.5 per cent;
- *reporting threshold*: 0.05 per cent; disregard the peak due to pre-tacalcitol.

B. Liquid chromatography (*2.2.29*).

*Test solution.* Dissolve 2.0 mg of the substance to be examined in the mobile phase and dilute to 20.0 mL with the mobile phase.

*Reference solution (a).* Dissolve the contents of a vial of *tacalcitol for system suitability CRS* (containing impurity B) in 0.5 mL of the mobile phase.

*Reference solution (b).* Dilute 5.0 mL of the test solution to 100.0 mL with the mobile phase. Dilute 1.0 mL of this solution to 10.0 mL with the mobile phase.

*Column*:
- *size*: *l* = 0.25 m, Ø = 4.6 mm;
- *stationary phase*: *amylose derivative of silica gel for chiral separation R* (10 μm).

*Mobile phase*: *anhydrous ethanol R*, *heptane R* (14:86 *V/V*).

*Flow rate*: 1 mL/min.

*Detection*: spectrophotometer at 265 nm.

*Injection*: 50 μL.

*Run time*: 2.5 times the retention time of tacalcitol.

*Identification of impurities*: use the chromatogram supplied with *tacalcitol for system suitability CRS* and the chromatogram obtained with reference solution (a) to identify the peak due to impurity B.

*Relative retention* with reference to tacalcitol (retention time = about 12 min): impurity A = about 0.7; impurity B = about 0.85.

*System suitability*: reference solution (a):
- *resolution*: minimum 1.5 between the peaks due to impurity B and tacalcitol.

*Calculation of percentage contents*:
- for each impurity, use the concentration of tacalcitol monohydrate in reference solution (b).

*Limits*:
- *impurity B*: maximum 1.0 per cent;
- *unspecified impurities*: for each impurity, maximum 0.10 per cent;
- disregard any peak with a relative retention with reference to tacalcitol of about 0.7 (impurity A).

**Water** (*2.5.32*): 3.8 per cent to 4.8 per cent, determined on 10.0 mg by direct sample introduction.

Monographs T

ASSAY

Liquid chromatography (*2.2.29*) as described in test A for related substances with the following modification.

*Injection*: test solution and reference solutions (a) and (b).

Calculate the percentage content of $C_{27}H_{44}O_3$ taking into account the assigned content of *tacalcitol monohydrate CRS* and, if present, the peak due to pre-tacalcitol.

STORAGE

In an airtight container, under an inert gas, protected from light at a temperature not exceeding − 15 °C.

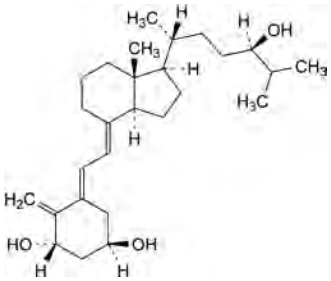
IMPURITIES

**Test A for related substances:** A.

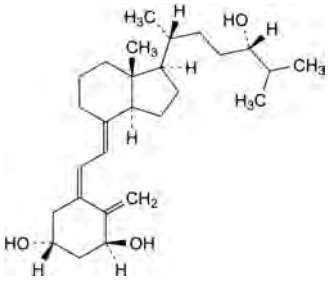
**Test B for related substances:** B, C.

*Specified impurities: A, B.*

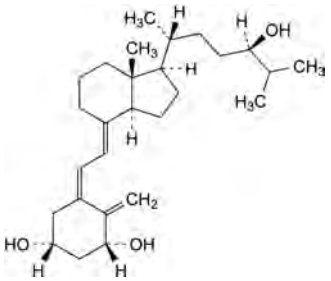
*Other detectable impurities* (the following substances would, if present at a sufficient level, be detected by one or other of the tests in the monograph. They are limited by the general acceptance criterion for other/unspecified impurities and/or by the general monograph *Substances for pharmaceutical use (2034)*. It is therefore not necessary to identify these impurities for demonstration of compliance. See also *5.10. Control of impurities in substances for pharmaceutical use*): *C.*



A. (5*E*,7*E*)-(24*R*)-9,10-secocholesta-5,7,10(19)-triene-1α,3β,24-triol (*trans*-tacalcitol),



B. (5*Z*,7*E*)-(24*S*)-9,10-secocholesta-5,7,10(19)-triene-1α,3β,24-triol ((24*S*)-tacalcitol),

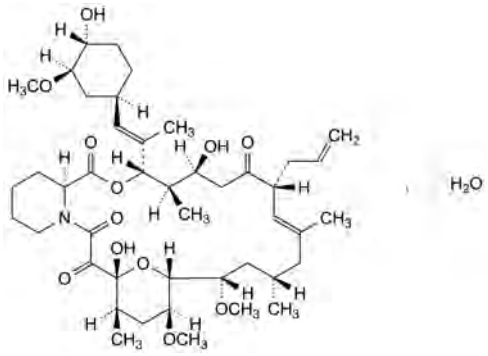


C. (5*Z*,7*E*)-(24*R*)-9,10-secocholesta-5,7,10(19)-triene-1β,3β,24-triol (1β-tacalcitol).

**01/2018:2244**
**corrected 10.0**

# TACROLIMUS MONOHYDRATE

## Tacrolimusum monohydricum



$C_{44}H_{69}NO_{12},H_2O$ $M_r$ 822

[109581-93-3]

DEFINITION

(3*S*,4*R*,5*S*,8*R*,9*E*,12*S*,14*S*,15*R*,16*S*,18*R*,19*R*,26a*S*)-5,19-dihydroxy-3-[(1*E*)-1-[(1*R*,3*R*,4*R*)-4-hydroxy-3-methoxycyclohexyl]prop-1-en-2-yl]-14,16-dimethoxy-4,10,12,18-tetramethyl-8-(prop-2-en-1-yl)-3,4,5,6,8,11,12,13,14,15,16,17,18,19,24,25,26,26a-octadecahydro-7H-15,19-epoxypyrido[2,1-*c*][1,4]oxaazacyclotricosine-1,7,20,21(23*H*)-tetrone monohydrate.

Substance produced by the growth of certain strains of *Streptomyces tsukubaensis*.

*Content*: 97.0 per cent to 102.0 per cent for the sum of tacrolimus, tacrolimus compound I and tacrolimus compound II (anhydrous substance).

CHARACTERS

*Appearance*: white or almost white, crystalline powder.

*Solubility*: practically insoluble in water, soluble in ethanol (96 per cent), practically insoluble in heptane.

IDENTIFICATION

Infrared absorption spectrophotometry (*2.2.24*).

*Comparison*: *tacrolimus monohydrate CRS*.

TESTS

**Appearance of solution**. The solution is clear (*2.2.1*) and not more intensely coloured than reference solution $GY_7$ (*2.2.2, Method II*).

Dissolve 0.20 g in *ethanol (96 per cent) R* and dilute to 20.0 mL with the same solvent.

**Related substances**. Liquid chromatography (*2.2.29*). *Carry out the test protected from light. Allow the test and reference solutions to stand for 3 h at room temperature before use.*

*Solvent mixture*: *water R*, *acetonitrile R* (30:70 *V/V*).

*Test solution*. Dissolve 30.0 mg of the substance to be examined in the solvent mixture and dilute to 10.0 mL with the solvent mixture.

*Reference solution (a)*. Dissolve 30.0 mg of *tacrolimus monohydrate CRS* in the solvent mixture and dilute to 10.0 mL with the solvent mixture.

*Reference solution (b)*. Dissolve 3.0 mg of *tacrolimus for system suitability CRS* (containing impurity A) in the solvent mixture and dilute to 1.0 mL with the solvent mixture.

*Reference solution (c).* Dilute 1.0 mL of the test solution to 100.0 mL with the solvent mixture. Dilute 1.0 mL of this solution to 10.0 mL with the solvent mixture.

*Column*:

- *size*: *l* = 0.15 m, Ø = 4.6 mm;
- *stationary phase*: *end-capped octadecylsilyl silica gel for chromatography R* (3 µm);
- *temperature*: 60 °C.

*Mobile phase*:

- *mobile phase A*: mix 20 volumes of a mixture of 19 volumes of *1,1-dimethylethyl methyl ether R* and 81 volumes of *acetonitrile for chromatography R* with 80 volumes of a 0.04 per cent *V/V* solution of *phosphoric acid R*;
- *mobile phase B*: mix 20 volumes of a 0.04 per cent *V/V* solution of *phosphoric acid R* with 80 volumes of a mixture of 19 volumes of *1,1-dimethylethyl methyl ether R* and 81 volumes of *acetonitrile for chromatography R*;

| Time (min) | Mobile phase A (per cent *V/V*) | Mobile phase B (per cent *V/V*) |
|---|---|---|
| 0 - 30 | 72 | 28 |
| 30 - 53 | 72 → 15 | 28 → 85 |

*Flow rate*: 1.5 mL/min.

*Detection*: spectrophotometer at 220 nm.

*Autosampler*: set at 4 °C.

*Injection*: 20 µL of the test solution and reference solutions (b) and (c).

*Identification of impurities*: use the chromatogram supplied with *tacrolimus for system suitability CRS* and the chromatogram obtained with reference solution (b) to identify the peak due to impurity A.

*Relative retention* with reference to tacrolimus (retention time = about 24 min): tacrolimus compound I = broad peak at about 0.5; impurity B = sharp peak at about 0.5; tacrolimus compound II = about 0.6; impurity A = about 0.9.

*System suitability*: reference solution (b):

- *resolution*: minimum 3.0 between the peaks due to impurity A and tacrolimus.

*Integration*: the peak due to impurity B, which co-elutes with tacrolimus compound I, is a rider peak that is to be integrated using tangential skimming. It is necessary that the integration area of the peak due to tacrolimus compound I preserves the Gaussian peak shape.

*Calculation of percentage contents*:

- for each impurity, use the concentration of tacrolimus monohydrate in reference solution (c).

*Limits*:

- *impurity A*: maximum 0.5 per cent;
- *unspecified impurities*: for each impurity, maximum 0.15 per cent;
- *total*: maximum 1.0 per cent;
- *reporting threshold*: 0.05 per cent; disregard the peaks due to tacrolimus compound I and tacrolimus compound II.

**Water** (*2.5.12*): 1.5 per cent to 4.0 per cent, determined on 0.250 g.

**Sulfated ash** (*2.4.14*): maximum 0.1 per cent, determined on 1.0 g.

ASSAY

Liquid chromatography (*2.2.29*) as described in the test for related substances with the following modification.

*Injection*: test solution and reference solution (a).

Calculate the percentage content of the sum of tacrolimus, tacrolimus compound I and tacrolimus compound II taking into account the assigned content of *tacrolimus monohydrate CRS*.

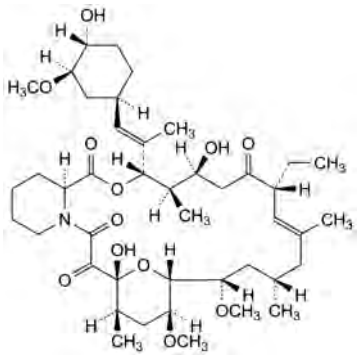
STORAGE

In an airtight container. If the substance is sterile, the container is also sterile and tamper-evident.

IMPURITIES

*Specified impurities: A.*

*Other detectable impurities* (the following substances would, if present at a sufficient level, be detected by one or other of the tests in the monograph. They are limited by the general acceptance criterion for other/unspecified impurities. It is therefore not necessary to identify these impurities for demonstration of compliance. See also *5.10. Control of impurities in substances for pharmaceutical use*): *B, C, D, E, H, I.*



A. (3*S*,4*R*,5*S*,8*R*,9*E*,12*S*,14*S*,15*R*,16*S*,18*R*,19*R*,26a*S*)-8-ethyl-5,19-dihydroxy-3-[(1*E*)-1-[(1*R*,3*R*,4*R*)-4-hydroxy-3-methoxycyclohexyl]prop-1-en-2-yl]-14,16-dimethoxy-4,10,12,18-tetramethyl-3,4,5,6,8,11,12,13,14,15,16,17,18,19,24,25,26,26a-octadecahydro-7*H*-15,19-epoxypyrido[2,1-*c*][1,4]oxaazacyclotricosine-1,7,20,21(23*H*)-tetrone,

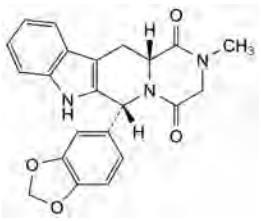
# TADALAFIL

## Tadalafilum



$C_{22}H_{19}N_3O_4$ $M_r$ 389.4
[171596-29-5]

DEFINITION

(6*R*,12a*R*)-6-(1,3-Benzodioxol-5-yl)-2-methyl-2,3,6,7,12,12a-hexahydropyrazino[1′,2′:1,6]-pyrido[3,4-*b*]indole-1,4-dione.

*Content*: 97.5 per cent to 102.0 per cent (dried substance).

CHARACTERS

*Appearance*: white or almost white powder.

*Solubility*: practically insoluble in water, freely soluble in dimethyl sulfoxide, slightly soluble in methylene chloride.

IDENTIFICATION

Carry out either tests A, B or tests A, C.

A. Infrared absorption spectrophotometry (*2.2.24*).
*Comparison*: *tadalafil CRS*.

B. Liquid chromatography (*2.2.29*) as described in the test for impurities A, B and C with the following modification.
*Injection*: test solution and reference solution (a).
*Results*: the principal peak in the chromatogram obtained with the test solution is similar in retention time and size to the principal peak in the chromatogram obtained with reference solution (a).

C. Specific optical rotation (*2.2.7*): + 78.0 to + 84.0 (dried substance).
Dissolve 0.250 g in *dimethyl sulfoxide R* and dilute to 25.0 mL with the same solvent.

TESTS

**Impurities A, B and C**. Liquid chromatography (*2.2.29*).

*Solvent mixture*: *acetonitrile R*, *hexane R*, *2-propanol R* (20:40:40 *V/V/V*).

*Solution A*. Dissolve 27 g of *tetrabutylammonium hydroxide R* in *methanol R* and dilute to 100.0 mL with the same solvent.

*Test solution*. Dissolve 25.0 mg of the substance to be examined in the solvent mixture and dilute to 100.0 mL with the solvent mixture.

*Reference solution (a)*. Dissolve 25.0 mg of *tadalafil CRS* in the solvent mixture and dilute to 100.0 mL with the solvent mixture.

*Reference solution (b)*. Dilute 1.0 mL of the test solution to 100.0 mL with the solvent mixture. Dilute 1.0 mL of this solution to 10.0 mL with the solvent mixture.

*Reference solution (c)*. In order to prepare impurity A *in situ*, dissolve 25 mg of the substance to be examined in 40 mL of the solvent mixture. Add 1 mL of solution A, mix well and allow to stand for 20 min. Add 1 mL of *trifluoroacetic acid R* and dilute to 100 mL with the solvent mixture.

*Reference solution (d)*. To 1 mL of the test solution add 1 mL of reference solution (c) and dilute to 50 mL with the solvent mixture.

*Column*:
- *size*: *l* = 0.25 m, Ø = 4.6 mm;
- *stationary phase*: *amylose derivative of silica gel for chiral separation R* (10 µm);
- *temperature*: 30 °C.

*Mobile phase*: *hexane R*, *2-propanol R1* (50:50 *V/V*).

*Flow rate*: 0.75 mL/min.

*Detection*: spectrophotometer at 222 nm.

*Injection*: 20 µL of the test solution and reference solutions (b) and (d).

*Run time*: 2.2 times the retention time of tadalafil.

*Identification of impurities*: use the chromatogram obtained with reference solution (d) to identify the peak due to impurity A.

*Relative retention* with reference to tadalafil (retention time = about 11 min): impurity A = about 0.8.

*System suitability*: reference solution (d)
- *resolution*: minimum 2.0 between the peaks due to impurity A and tadalafil.

*Limits*:
- *impurity A*: not more than 1.5 times the area of the principal peak in the chromatogram obtained with reference solution (b) (0.15 per cent);
- *unspecified impurities*: for each impurity, not more than the area of the principal peak in the chromatogram obtained with reference solution (b) (0.10 per cent).

**Related substances**. Liquid chromatography (*2.2.29*). *Do not use sonication during the preparation of the solutions.*

*Solvent mixture*: *acetonitrile R*, *2-propanol R* (50:50 *V/V*).

*Solution A*. Dissolve 27 g of *tetrabutylammonium hydroxide R* in *methanol R* and dilute to 100.0 mL with the same solvent.

*Test solution (a)*. Dissolve 40 mg of the substance to be examined in 50 mL of *acetonitrile R* and dilute to 100.0 mL with mobile phase A.

*Test solution (b)*. Dissolve 50.0 mg of the substance to be examined in 50 mL of *acetonitrile R* and dilute to 100.0 mL with mobile phase A. To 10.0 mL of this solution add 25.0 mL of *acetonitrile R* and dilute to 50.0 mL with mobile phase A.

*Reference solution (a)*. To 1.0 mL of test solution (a) add 50 mL of *acetonitrile R* and dilute to 100.0 mL with mobile phase A. To 1.0 mL of this solution add 5 mL of *acetonitrile R* and dilute to 10.0 mL with mobile phase A.

Monographs T

*Reference solution (b).* In order to prepare impurity A *in situ*, dissolve 4 mg of the substance to be examined in 50 mL of the solvent mixture. Add 1 mL of solution A, mix, and allow to stand for 40 min. Add 1 mL of *trifluoroacetic acid R* and dilute to 100 mL with the solvent mixture.

*Reference solution (c).* Dilute 1 mL of reference solution (b) to 50 mL with test solution (a).

*Reference solution (d).* Dissolve 50.0 mg of *tadalafil CRS* in 50 mL of *acetonitrile R* and dilute to 100.0 mL with mobile phase A. To 10.0 mL of this solution add 25.0 mL of *acetonitrile R* and dilute to 50.0 mL with mobile phase A.

*Column*:

- *size*: *l* = 0.25 m, Ø = 4.6 mm;
- *stationary phase*: *octylsilyl silica gel for chromatography R* (5 µm);
- *temperature*: 40 °C.

*Mobile phase*:

- *mobile phase A*: mix 1.0 mL of *trifluoroacetic acid R* with *water for chromatography R* and dilute to 1000 mL with the same solvent;
- *mobile phase B*: *acetonitrile R*;

| Time (min) | Mobile phase A (per cent *V/V*) | Mobile phase B (per cent *V/V*) |
|---|---|---|
| 0 - 3 | 85 | 15 |
| 3 - 30 | 85 → 5 | 15 → 95 |
| 30 - 33 | 5 | 95 |

*Flow rate*: 1.0 mL/min.

*Detection*: spectrophotometer at 285 nm.

*Injection*: 20 µL of test solution (a) and reference solutions (a) and (c).

*Identification of impurities*: use the chromatogram obtained with reference solution (c) to identify the peak due to impurities A + C.

*Relative retention* with reference to tadalafil (retention time = about 16 min): impurities A and C = about 1.03.

*System suitability*: reference solution (c):

- *peak-to-valley ratio*: minimum 3.3, where $H_p$ = height above the baseline of the peak due to impurities A + C and $H_v$ = height above the baseline of the lowest point of the curve separating this peak from the peak due to tadalafil.

*Limits*:

- *unspecified impurities*: for each impurity, not more than the area of the principal peak in the chromatogram obtained with reference solution (a) (0.10 per cent);
- *total*: not more than 3 times the area of the principal peak in the chromatogram obtained with reference solution (a) (0.3 per cent);
- *disregard limit*: 0.5 times the area of the principal peak in the chromatogram obtained with reference solution (a) (0.05 per cent); disregard any peak due to impurity A and/or C.

**Loss on drying** (*2.2.32*): maximum 0.5 per cent, determined on 1.000 g by drying *in vacuo* at 105 °C for 3 h.

**Sulfated ash** (*2.4.14*): maximum 0.1 per cent, determined on 1.0 g.

ASSAY

Liquid chromatography (*2.2.29*) as described in the test for related substances with the following modifications.

*Mobile phase*: *acetonitrile R*, mobile phase A (45:55 *V/V*).

*Flow rate*: 1.5 mL/min.

*Injection*: test solution (b) and reference solution (d).

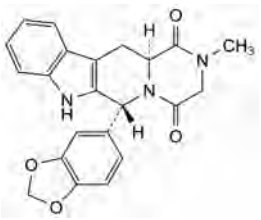
*Run time*: twice the retention time of tadalafil (retention time = about 4.5 min).

Calculate the percentage content of $C_{22}H_{19}N_3O_4$ from the declared content of *tadalafil CRS*.

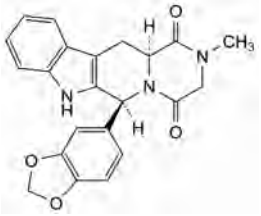
IMPURITIES

*Specified impurities*: *A*.

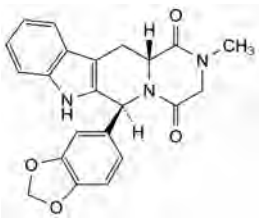
*Other detectable impurities* (the following substances would, if present at a sufficient level, be detected by one or other of the tests in the monograph. They are limited by the general acceptance criterion for other/unspecified impurities and/or by the general monograph *Substances for pharmaceutical use (2034)*. It is therefore not necessary to identify these impurities for demonstration of compliance. See also *5.10. Control of impurities in substances for pharmaceutical use*): *B, C, D, E, F, G, H, I*.



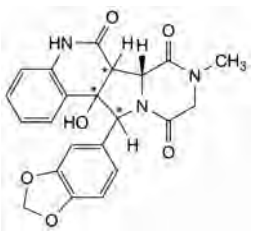
A. (6*R*,12a*S*)-6-(1,3-benzodioxol-5-yl)-2-methyl-2,3,6,7,12,12a-hexahydropyrazino[1′,2′:1,6]pyrido[3,4-*b*]indole-1,4-dione,



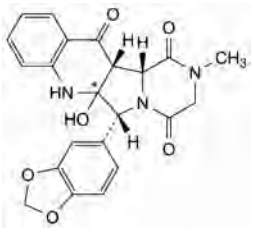
B. (6*S*,12a*S*)-6-(1,3-benzodioxol-5-yl)-2-methyl-2,3,6,7,12,12a-hexahydropyrazino[1′,2′:1,6]pyrido[3,4-*b*]indole-1,4-dione,



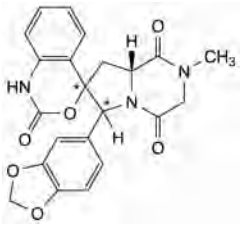
C. (6*S*,12a*R*)-6-(1,3-benzodioxol-5-yl)-2-methyl-2,3,6,7,12,12a-hexahydropyrazino[1′,2′:1,6]pyrido[3,4-*b*]indole-1,4-dione,



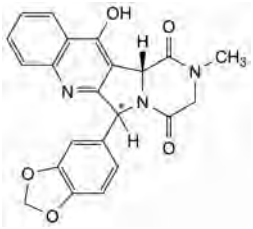
D. (6b*R*)-12-(1,3-benzodioxol-5-yl)-12a-hydroxy-8-methyl-6a,6b,8,9,12,12a-hexahydropyrazino[1′,2′:1,2]-pyrrolo[3,4-*c*]quinoline-6,7,10(5*H*)-trione,



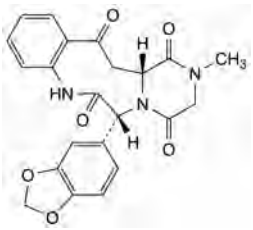
E. (6*R*,12a*R*,12b*R*)-6-(1,3-benzodioxol-5-yl)-6a-hydroxy-2-methyl-2,3,6a,7,12a,12b-hexahydropyrazino[1′,2′:1,5]-pyrrolo[3,4-*b*]quinoline-1,4,12(6*H*)-trione,



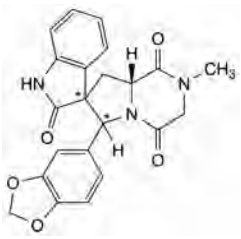
F. (8a′*R*)-6′-(1,3-benzodioxol-5-yl)-2′-methyl-2′,3′,8′,8a′-tetrahydro-6′*H*-spiro[3,1-benzoxazine-4,7′-pyrrolo[1,2-*a*]pyrazine]-1′,2,4′(1*H*)-trione,



G. (12b*R*)-6-(1,3-benzodioxol-5-yl)-12-hydroxy-2-methyl-2,3,6,12b-tetrahydropyrazino[1′,2′:1,5]pyrrolo-[3,4-*b*]quinoline-1,4-dione,



H. (6*R*,14a*R*)-6-(1,3-benzodioxol-5-yl)-2-methyl-2,3,14,14a-tetrahydropyrazino[1,2-*d*][1,4]benzodiazonine-1,4,7,13-(6*H*,8*H*)-tetrone,



I. (8a′*R*)-6′-(1,3-benzodioxol-5-yl)-2′-methyl-2′,3′,8′,8a′-tetrahydro-6′*H*-spiro[indole-3,7′-pyrrolo[1,2-*a*]pyrazine]-1′,2,4′(1*H*)-trione.

**04/2012:0438**

# TALC

## Talcum

[14807-96-6]

DEFINITION

Powdered, selected, natural, hydrated magnesium silicate. Pure talc has the formula $Mg_3Si_4O_{10}(OH)_2$ ($M_r$ 379.3). It may contain variable amounts of associated minerals among which chlorites (hydrated aluminium and magnesium silicates), magnesite (magnesium carbonate), calcite (calcium carbonate) and dolomite (calcium and magnesium carbonate) are predominant.

PRODUCTION

Talc derived from deposits that are known to contain associated asbestos is not suitable for pharmaceutical use. The manufacturer is responsible for demonstrating by the test for amphiboles and serpentines that the product is free from asbestos. The presence of amphiboles and of serpentines is revealed by X-ray diffraction or by infrared spectrophotometry (see A and B). If detected, the specific morphological criteria of asbestos are investigated by a suitable method of optical microscopy to determine whether tremolite asbestos or chrysotile is present, as described below.

A. Infrared absorption spectrophotometry (*2.2.24*).

*Preparation*: discs of *potassium bromide R*.

In the range 740 $cm^{-1}$ to 760 $cm^{-1}$ using scale expansion, any absorption band at 758 ± 1 $cm^{-1}$ may indicate the presence of tremolite or of chlorite. If the absorption band remains after ignition of the substance to be examined at 850 ± 50 °C for at least 30 min, it indicates the presence of the tremolite. In the range 600 $cm^{-1}$ to 650 $cm^{-1}$ using scale expansion, any absorption band or shoulder may indicate the presence of serpentines.

B. X-ray diffraction.

*Preparation*: place the sample on the sample holder; pack and smooth its surface with a polished glass microscope slide.

*Radiation*: Cu Kα monochromatic, 40 kV, 24-30 mA.

*Incident slit*: 1°.

*Detection slit*: 0.2°.

*Goniometer speed*: 1/10° 2θ/min.

*Scanning range*: 10-13° 2θ and 24-26° 2θ.

*Sample*: not oriented.

*Results*: the presence of amphiboles is detected by a diffraction peak at 10.5 ± 0.1° 2θ, the presence of serpentines is detected by diffraction peaks at 24.3 ± 0.1° 2θ and at 12.1 ± 0.1° 2θ.

*If, by one of the 2 methods, amphiboles and/or serpentine are detected, examine by a suitable method of optical microscopy to determine the asbestos character.*

The presence of asbestos is shown if the following 2 criteria are met:

– a range of length to width ratios of 20:1 to 100:1, or higher for fibres longer than 5 μm;
– capability of splitting into very thin fibrils;

and if at least 2 of the following 4 criteria are met:

– parallel fibres occurring in bundles;
– fibre bundles displaying frayed ends;
– fibres in the form of thin needles;

Monographs T

– matted masses of individual fibres and/or fibres showing curvature.

CHARACTERS

*Appearance*: light, homogeneous, white or almost white powder, greasy to the touch (non abrasive).

*Solubility*: practically insoluble in water, in ethanol (96 per cent) and in dilute solutions of acids and alkali hydroxides.

IDENTIFICATION

*First identification: A.*

*Second identification: B, C.*

A. Infrared absorption spectrophotometry (*2.2.24*).

*Preparation*: discs of *potassium bromide R.*

*Absorption bands*: at 3677 ± 2 $cm^{-1}$, 1018 ± 2 $cm^{-1}$ and 669 ± 2 $cm^{-1}$.

B. In a platinum crucible, melt a mixture of 0.2 g of *anhydrous sodium carbonate R* and 2.0 g of *potassium carbonate R*. To the melted mass add 0.1 g of the substance to be examined and heat until the mixture is completely melted. Allow to cool and transfer the melted mass into an evaporating dish with 50 mL of hot *water R*. Add *hydrochloric acid R* until effervescence ceases. Add 10 mL of *hydrochloric acid R* and evaporate to dryness on a water-bath. Allow to cool. Add 20 mL of *water R*, heat to boiling and filter (the residue is used for identification test C). To 5 mL of the filtrate add 1 mL of *ammonia R* and 1 mL of *ammonium chloride solution R* and filter. To the filtrate add 1 mL of *disodium hydrogen phosphate solution R*. A white, crystalline precipitate is formed.

C. The residue obtained in identification test B gives the reaction of silicates (*2.3.1*).

TESTS

**Solution S1**. Weigh 10.0 g into a conical flask fitted with a reflux condenser, gradually add 50 mL of *0.5 M hydrochloric acid* while stirring and heat on a water-bath for 30 min. Allow to cool. Transfer the mixture to a beaker and allow the undissolved material to settle. Filter the supernatant through medium-speed filter paper into a 100 mL volumetric flask, retaining as much as possible of the insoluble material in the beaker. Wash the residue and the beaker with 3 quantities, each of 10 mL, of hot *water R*. Wash the filter with 15 mL of hot *water R*, allow the filtrate to cool and dilute to 100.0 mL with the same solvent.

**Solution S2**. *Perchlorates mixed with heavy metals are known to be explosive. Take proper precautions while performing this procedure.* Weigh 0.5 g in a 100 mL polytetrafluoroethylene dish, add 5 mL of *hydrochloric acid R*, 5 mL of *lead-free nitric acid R* and 5 mL of *perchloric acid R*. Stir gently then add 35 mL of *hydrofluoric acid R* and evaporate slowly to dryness on a hot plate. To the residue, add 5 mL of *hydrochloric acid R*, cover with a watch-glass, heat to boiling and allow to cool. Rinse the watch-glass and the dish with *water R*. Transfer into a volumetric flask, rinse the dish with *water R* and dilute to 50.0 mL with the same solvent.

**Acidity or alkalinity**. Boil 2.5 g with 50 mL of *carbon dioxide-free water R* under reflux. Filter *in vacuo*. To 10 mL of the filtrate add 0.1 mL of *bromothymol blue solution R1*; not more than 0.4 mL of *0.01 M hydrochloric acid* is required to change the colour of the indicator to green. To 10 mL of the filtrate add 0.1 mL of *phenolphthalein solution R1*; not more than 0.3 mL of *0.01 M sodium hydroxide* is required to change the colour of the indicator to pink.

**Water-soluble substances**: maximum 0.2 per cent.

To 10.0 g add 50 mL of *carbon dioxide-free water R*, heat to boiling and maintain boiling under a reflux condenser for 30 min. Allow to cool, filter through a medium-speed filter paper and dilute to 50.0 mL with *carbon dioxide-free water R*. Take 25.0 mL of the filtrate, evaporate to dryness and heat at 105 °C for 1 h. The residue weighs a maximum of 10 mg.

**Aluminium**: maximum 2.0 per cent.

Atomic absorption spectrometry (*2.2.23, Method I*).

*Test solution.* To 5.0 mL of solution S2 add 10 mL of a 25.34 g/L solution of *caesium chloride R*, 10.0 mL of *hydrochloric acid R* and dilute to 100.0 mL with *water R*.

*Reference solutions.* Into 4 identical volumetric flasks, each containing 10.0 mL of *hydrochloric acid R* and 10 mL of a 25.34 g/L solution of *caesium chloride R*, introduce respectively 5.0 mL, 10.0 mL, 15.0 mL and 20.0 mL of *aluminium standard solution (100 ppm Al) R* and dilute to 100.0 mL with *water R*.

*Source*: aluminium hollow-cathode lamp.

*Wavelength*: 309.3 nm.

*Atomisation device*: nitrous oxide-acetylene flame.

**Calcium**: maximum 0.9 per cent.

Atomic absorption spectrometry (*2.2.23, Method I*).

*Test solution.* To 5.0 mL of solution S2 add 10.0 mL of *hydrochloric acid R*, 10 mL of *lanthanum chloride solution R* and dilute to 100.0 mL with *water R*.

*Reference solutions.* Into 4 identical volumetric flasks, each containing 10.0 mL of *hydrochloric acid R* and 10 mL of *lanthanum chloride solution R*, introduce respectively 1.0 mL, 2.0 mL, 3.0 mL and 5.0 mL of *calcium standard solution (100 ppm Ca) R1* and dilute to 100.0 mL with *water R*.

*Source*: calcium hollow-cathode lamp.

*Wavelength*: 422.7 nm.

*Atomisation device*: nitrous oxide-acetylene flame.

**Iron**: maximum 0.25 per cent.

Atomic absorption spectrometry (*2.2.23, Method I*).

*Test solution.* To 2.5 mL of solution S1, add 50.0 mL of *0.5 M hydrochloric acid* and dilute to 100.0 mL with *water R*.

*Reference solutions.* Into 4 identical volumetric flasks, each containing 50.0 mL of *0.5 M hydrochloric acid*, introduce respectively 2.0 mL, 2.5 mL, 3.0 mL and 4.0 mL of *iron standard solution (250 ppm Fe) R* and dilute to 100.0 mL with *water R*.

*Source*: iron hollow-cathode lamp.

*Wavelength*: 248.3 nm.

*Atomisation device*: air-acetylene flame.

*Correction*: deuterium lamp.

**Lead**: maximum 10 ppm.

Atomic absorption spectrometry (*2.2.23, Method I*).

*Test solution.* Use solution S1.

*Reference solutions.* Into 4 identical volumetric flasks, each containing 50.0 mL of *0.5 M hydrochloric acid*, introduce respectively 5.0 mL, 7.5 mL, 10.0 mL and 12.5 mL of *lead standard solution (10 ppm Pb) R1* and dilute to 100.0 mL with *water R*.

*Source*: lead hollow-cathode lamp.

*Wavelength*: 217.0 nm.

*Atomisation device*: air-acetylene flame.

**Magnesium**: 17.0 per cent to 19.5 per cent.

Atomic absorption spectrometry (*2.2.23, Method I*).

*Test solution.* Dilute 0.5 mL of solution S2 to 100.0 mL with *water R*. To 4.0 mL of the solution, add 10.0 mL of *hydrochloric acid R*, 10 mL of *lanthanum chloride solution R* and dilute to 100.0 mL with *water R*.

*Reference solutions.* Into 4 identical volumetric flasks, each containing 10.0 mL of *hydrochloric acid R* and 10 mL of *lanthanum chloride solution R*, introduce respectively 2.5 mL, 3.0 mL, 4.0 mL and 5.0 mL of *magnesium standard solution (10 ppm Mg) R1* and dilute to 100.0 mL with *water R*.

*Source*: magnesium hollow-cathode lamp.

*Wavelength*: 285.2 nm.

*Atomisation device*: air-acetylene flame.

**Loss on ignition**: maximum 7.0 per cent, determined on 1.00 g by ignition to constant weight at 1050-1100 °C.

**Microbial contamination**

If intended for cutaneous administration:

– TAMC: acceptance criterion $10^2$ CFU/g (*2.6.12*).

If intended for oral administration:

– TAMC: acceptance criterion $10^3$ CFU/g (*2.6.12*);

– TYMC: acceptance criterion $10^2$ CFU/g (*2.6.12*).

LABELLING

The label states, where applicable, that the substance is suitable for oral or cutaneous administration.

FUNCTIONALITY-RELATED CHARACTERISTICS

*This section provides information on characteristics that are recognised as being relevant control parameters for one or more functions of the substance when used as an excipient (see chapter 5.15). Some of the characteristics described in the Functionality-related characteristics section may also be present in the mandatory part of the monograph since they also represent mandatory quality criteria. In such cases, a cross-reference to the tests described in the mandatory part is included in the Functionality-related characteristics section. Control of the characteristics can contribute to the quality of a medicinal product by improving the consistency of the manufacturing process and the performance of the medicinal product during use. Where control methods are cited, they are recognised as being suitable for the purpose, but other methods can also be used. Wherever results for a particular characteristic are reported, the control method must be indicated.*

*The following characteristics may be relevant for talc used as antisticking agent or glidant in tablets and capsules or as antiadhesive in coated and film-coated tablets.*

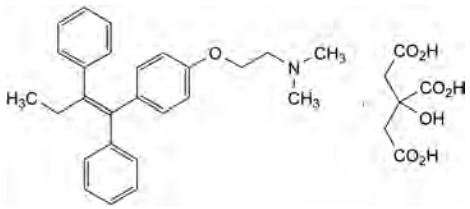
**Particle-size distribution** (*2.9.31*).

**Specific surface area** (*2.9.26*).

**04/2016:1046**

# TAMOXIFEN CITRATE

## Tamoxifeni citras



$C_{32}H_{37}NO_8$ $M_r$ 563.6

[54965-24-1]

DEFINITION

2-[4-[(*Z*)-1,2-Diphenylbut-1-en-1-yl]phenoxy]-*N*,*N*-dimethylethan-1-amine dihydrogen 2-hydroxypropane-1,2,3-tricarboxylate.

*Content*: 99.0 per cent to 101.0 per cent (dried substance).

CHARACTERS

*Appearance*: white or almost white, crystalline powder.

*Solubility*: slightly soluble in water, soluble in methanol, slightly soluble in acetone.

It shows polymorphism (*5.9*).

IDENTIFICATION

*First identification*: *B*.

*Second identification*: *A, C*.

A. Ultraviolet and visible absorption spectrophotometry (*2.2.25*).

*Test solution.* Dissolve 20 mg in *methanol R* and dilute to 50.0 mL with the same solvent. Dilute 5.0 mL of the solution to 100.0 mL with *methanol R*.

*Spectral range*: 220-350 nm.

*Absorption maxima*: at 237 nm and 275 nm.

*Absorbance ratio*: $A_{237}/A_{275}$ = 1.45 to 1.65.

B. Infrared absorption spectrophotometry (*2.2.24*).

*Comparison*: *tamoxifen citrate CRS*.

If the spectra obtained in the solid state show differences, dissolve the substance to be examined and the reference substance separately in *acetone R*, evaporate to dryness and record new spectra using the residues.

C. Thin-layer chromatography (*2.2.27*).

*Test solution.* Dissolve 10 mg of the substance to be examined in *methanol R* and dilute to 10 mL with the same solvent.

*Reference solution (a).* Dissolve 10 mg of *tamoxifen citrate CRS* in *methanol R* and dilute to 10 mL with the same solvent.

*Reference solution (b).* Dissolve 10 mg of *clomifene citrate CRS* and 10 mg of *tamoxifen citrate CRS* in *methanol R* and dilute to 10 mL with the same solvent.

*Plate*: *TLC silica gel $F_{254}$ plate R*.

*Mobile phase*: *triethylamine R*, *toluene R* (10:90 *V/V*).

*Application*: 5 µL.

*Development*: over 3/4 of the plate.

*Drying*: in air.

*Detection*: examine in ultraviolet light at 254 nm.

*System suitability*: reference solution (b):

– the chromatogram shows 2 clearly separated spots.

*Results*: the principal spot in the chromatogram obtained with the test solution is similar in position and size to the principal spot in the chromatogram obtained with reference solution (a).

TESTS

**Related substances**. Liquid chromatography (*2.2.29*). *Prepare the solutions immediately before use and protect from light.*

*Test solution.* Dissolve 15 mg of the substance to be examined in the mobile phase and dilute to 10.0 mL with the mobile phase.

*Reference solution (a).* Dissolve 3 mg of *tamoxifen citrate for performance test CRS* (containing impurities A and F) in the mobile phase and dilute to 2.0 mL with the mobile phase.

*Reference solution (b).* Dilute 1.0 mL of the test solution to 100.0 mL with the mobile phase. Dilute 1.0 mL of this solution to 10.0 mL with the mobile phase.

*Column*:

– *size*: *l* = 0.25 m, Ø = 4.6 mm;

– *stationary phase*: *end-capped octadecylsilyl silica gel for chromatography R* (5 µm).

*Mobile phase*: mix 40 volumes of *acetonitrile R* and 60 volumes of *water R* containing 0.9 g/L of *sodium dihydrogen phosphate R* and 4.8 g/L of *N,N-dimethyloctylamine R*; adjust to pH 3.0 with *phosphoric acid R*.

*Flow rate*: 1.2 mL/min.

*Detection*: spectrophotometer at 240 nm.

*Injection*: 10 µL.

*Run time*: twice the retention time of tamoxifen.

*Identification of impurities*: use the chromatogram supplied with *tamoxifen citrate for performance test CRS* and the chromatogram obtained with reference solution (a) to identify the peaks due to impurities A and F.

*Relative retention* with reference to tamoxifen (retention time = about 20 min): impurity A = about 0.8; impurity F = about 0.9.

*System suitability*: reference solution (a):

– *resolution*: minimum 3.0 between the peaks due to impurities A and F; baseline separation between the peaks due to impurity F and tamoxifen.

*Limits*:

– *impurity A*: not more than 3 times the area of the principal peak in the chromatogram obtained with reference solution (b) (0.3 per cent);
– *impurity F*: not more than twice the area of the principal peak in the chromatogram obtained with reference solution (b) (0.2 per cent);
– *unspecified impurities*: for each impurity, not more than the area of the principal peak in the chromatogram obtained with reference solution (b) (0.10 per cent);
– *total*: not more than 5 times the area of the principal peak in the chromatogram obtained with reference solution (b) (0.5 per cent);
– *disregard limit*: 0.5 times the area of the principal peak in the chromatogram obtained with reference solution (b) (0.05 per cent); disregard any peak due to the citrate.

**Loss on drying** (*2.2.32*): maximum 0.5 per cent, determined on 1.000 g by drying *in vacuo* at 65 °C for 4 h.

**Sulfated ash** (*2.4.14*): maximum 0.1 per cent, determined on 1.0 g.

ASSAY

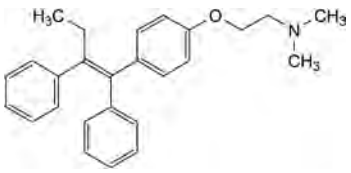
Dissolve 0.400 g in 75 mL of *anhydrous acetic acid R*. Titrate with *0.1 M perchloric acid*, determining the end-point potentiometrically (*2.2.20*).

1 mL of *0.1 M perchloric acid* is equivalent to 56.36 mg of $C_{32}H_{37}NO_8$.

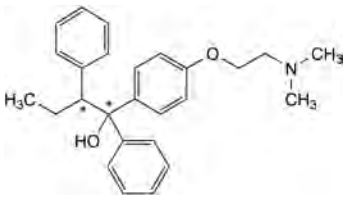
IMPURITIES

*Specified impurities*: *A, F*.

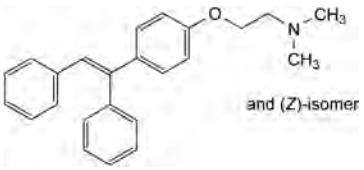
*Other detectable impurities* (the following substances would, if present at a sufficient level, be detected by one or other of the tests in the monograph. They are limited by the general acceptance criterion for other/unspecified impurities and/or by the general monograph *Substances for pharmaceutical use (2034)*. It is therefore not necessary to identify these impurities for demonstration of compliance. See also *5.10. Control of impurities in substances for pharmaceutical use*): *B, C, D, E, G, H*.



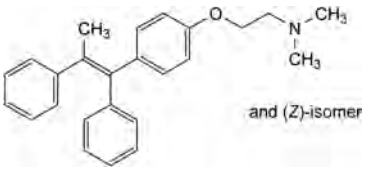
A. 2-[4-[(*E*)-1,2-diphenylbut-1-en-1-yl]phenoxy]-*N*,*N*-dimethylethan-1-amine ((*E*)-isomer),



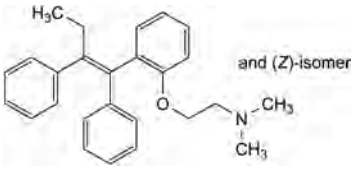
B. 1-[4-[2-(dimethylamino)ethoxy]phenyl]-1,2-diphenylbutan-1-ol,



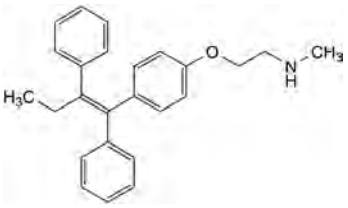
C. 2-[4-[(*EZ*)-1,2-diphenyleth-1-en-1-yl]phenoxy]-*N*,*N*-dimethylethan-1-amine,



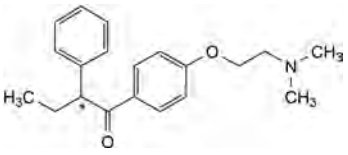
D. 2-[4-[(*EZ*)-1,2-diphenylprop-1-en-1-yl]phenoxy]-*N*,*N*-dimethylethan-1-amine,



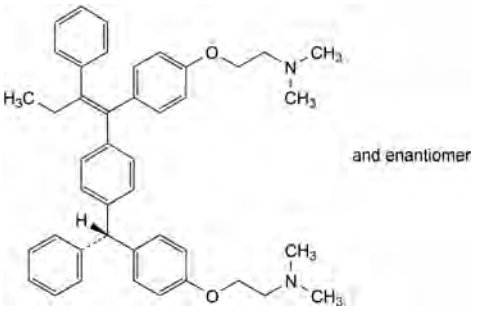
E. 2-[2-[(*EZ*)-1,2-diphenylbut-1-en-1-yl]phenoxy]-*N*,*N*-dimethylethan-1-amine,



F. 2-[4-[(*Z*)-1,2-diphenylbut-1-en-1-yl]phenoxy]-*N*-methylethan-1-amine,



G. 1-[4-[2-(dimethylamino)ethoxy]phenyl]-2-phenylbutan-1-one,



H. 2-[4-[(*RS*)-[4-[(*Z*)-1-[4-[2-(dimethylamino)-ethoxy]phenyl]-2-phenylbut-1-en-1-yl]phenyl]-(phenyl)methyl]phenoxy]-*N*,*N*-dimethylethan-1-amine.

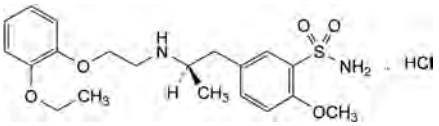
**corrected 10.0**

# TAMSULOSIN HYDROCHLORIDE

## Tamsulosini hydrochloridum



$C_{20}H_{29}ClN_2O_5S$ $M_r$ 445.0
[106463-17-6]

DEFINITION

5-[(2*R*)-2-[[2-(2-Ethoxyphenoxy)ethyl]amino]propyl]-2-methoxybenzenesulfonamide hydrochloride.

*Content*: 98.5 per cent to 101.0 per cent (dried substance).

CHARACTERS

*Appearance*: white or almost white powder.

*Solubility*: slightly soluble in water, freely soluble in formic acid, slightly soluble in anhydrous ethanol.

mp: about 230 °C.

IDENTIFICATION

Carry out either tests A, C, D or tests A, B, D.

A. Infrared absorption spectrophotometry (*2.2.24*).
*Comparison*: *tamsulosin hydrochloride CRS*.

B. Specific optical rotation (*2.2.7*): – 20.5 to – 17.5 (dried substance).
Dissolve with heating 0.15 g in *water R* and dilute to 20.0 mL with the same solvent.

C. Enantiomeric purity (see Tests).

D. Dissolve with heating 0.75 g in *water R* and dilute to 100.0 mL with the same solvent. Take 5 mL of the solution and cool in an ice-bath. Add 3 mL of *dilute nitric acid R* and shake. Allow to stand at room temperature for 30 min and filter. The filtrate gives reaction (a) of chlorides (*2.3.1*).

TESTS

**Related substances**

A. Impurities eluting before tamsulosin. Liquid chromatography (*2.2.29*).
*Test solution*. Dissolve 50.0 mg of the substance to be examined in the mobile phase and dilute to 10.0 mL with the mobile phase.
*Reference solution (a)*. Dilute 1.0 mL of the test solution to 100.0 mL with the mobile phase. Dilute 1.0 mL of this solution to 10.0 mL with the mobile phase.
*Reference solution (b)*. Dissolve 4 mg of *tamsulosin impurity D CRS* and 4 mg of the substance to be examined in the mobile phase and dilute to 20 mL with the mobile phase. Dilute 2 mL of the solution to 20 mL with the mobile phase.
*Reference solution (c)*. Dissolve 4 mg of *tamsulosin impurity H CRS* and 4 mg of the substance to be examined in the mobile phase and dilute to 20 mL with the mobile phase. Dilute 2 mL of the solution to 20 mL with the mobile phase.
*Column*:
– *size*: *l* = 0.15 m, Ø = 4.6 mm;
– *stationary phase*: *end-capped octadecylsilyl silica gel for chromatography R* (5 µm);
– *temperature*: 40 °C.
*Mobile phase*: dissolve 3.0 g of *sodium hydroxide R* in a mixture of 8.7 mL of *perchloric acid R* and 1900 mL of *water for chromatography R*; adjust to pH 2.0 with *0.5 M sodium hydroxide* and dilute to 2000 mL with *water for chromatography R*; to 1400 mL of this solution add 600 mL of *acetonitrile for chromatography R*.
*Flow rate*: 1.3 mL/min.
*Detection*: spectrophotometer at 225 nm.
*Injection*: 10 µL of the test solution and reference solutions (a) and (b).
*Run time*: 1.5 times the retention time of tamsulosin (retention time = about 6 min).
*System suitability*: reference solution (b):
– *resolution*: minimum 6.0 between the peaks due to impurity D and tamsulosin.
*Limits*:
– *unspecified impurities*: for each impurity, not more than the area of the principal peak in the chromatogram obtained with reference solution (a) (0.10 per cent);
– *disregard limit*: 0.5 times the area of the principal peak in the chromatogram obtained with reference solution (a) (0.05 per cent).

B. Impurities eluting after tamsulosin. Liquid chromatography (*2.2.29*) as described in test A with the following modifications.
*Mobile phase*: dissolve 3.0 g of *sodium hydroxide R* in a mixture of 8.7 mL of *perchloric acid R* and 1900 mL of *water for chromatography R*; adjust to pH 2.0 with *0.5 M sodium hydroxide* and dilute to 2000 mL with *water for chromatography R*; add 2000 mL of *acetonitrile for chromatography R*.
*Flow rate*: 1.0 mL/min.
*Injection*: 10 µL of the test solution and reference solutions (a) and (c).
*Run time*: 5 times the retention time of tamsulosin (retention time = about 2.5 min).
*System suitability*: reference solution (c):
– *resolution*: minimum 2.0 between the peaks due to tamsulosin and impurity H.
*Limits*:
– *unspecified impurities*: for each impurity, not more than the area of the principal peak in the chromatogram obtained with reference solution (a) (0.10 per cent);
– *sum of impurities eluting before tamsulosin in test A and after tamsulosin in test B*: not more than twice the area of the principal peak in the chromatogram obtained with reference solution (a) (0.2 per cent);
– *disregard limit*: 0.5 times the area of the principal peak in the chromatogram obtained with reference solution (a) (0.05 per cent).

**Enantiomeric purity**. Liquid chromatography (*2.2.29*).
*Test solution*. Dissolve 50.0 mg of the substance to be examined in *methanol R* and dilute to 25.0 mL with the same solvent.
*Reference solution (a)*. Dilute 1.0 mL of the test solution to 100.0 mL with *methanol R*. Dilute 1.0 mL of this solution to 10.0 mL with *methanol R*.
*Reference solution (b)*. Dissolve 5 mg of *tamsulosin racemate CRS* in *methanol R* and dilute to 25 mL with the same solvent. Dilute 2 mL of the solution to 10 mL with *methanol R*.
*Column*:
– *size*: *l* = 0.25 m, Ø = 4.6 mm;
– *stationary phase*: *amylose derivative of silica gel for chiral separation R*;
– *temperature*: 40 °C.
*Mobile phase*: *diethylamine R*, *methanol R1*, *anhydrous ethanol R*, *hexane R* (1:150:200:650 *V/V/V/V*).

*Flow rate*: 0.5 mL/min.

*Detection*: spectrophotometer at 225 nm.

*Injection*: 10 µL.

*Relative retention* with reference to tamsulosin (retention time = about 14 min): impurity G = about 0.8.

*System suitability*: reference solution (b):

– *resolution*: minimum 2.0 between the peaks due to impurity G and tamsulosin.

*Limit*:

– *impurity G*: not more than the area of the principal peak in the chromatogram obtained with reference solution (a) (0.1 per cent).

**Loss on drying** (*2.2.32*): maximum 0.5 per cent, determined on 1.000 g by drying in an oven at 105 °C for 2 h.

**Sulfated ash** (*2.4.14*): maximum 0.1 per cent, determined on 1.0 g.

ASSAY

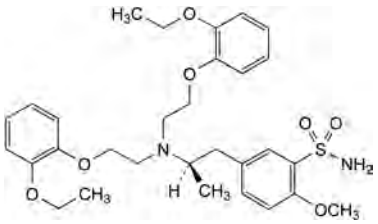
Dissolve 0.350 g in 5.0 mL of *anhydrous formic acid R*, add 75 mL of a mixture of 2 volumes of *acetic anhydride R* and 3 volumes of *glacial acetic acid R*. Titrate immediately with *0.1 M perchloric acid*, determining the end-point potentiometrically (*2.2.20*). Carry out a blank titration.

1 mL of *0.1 M perchloric acid* is equivalent to 44.50 mg of $C_{20}H_{29}ClN_2O_5S$.

IMPURITIES

*Specified impurities: G.*

*Other detectable impurities* (the following substances would, if present at a sufficient level, be detected by one or other of the tests in the monograph. They are limited by the general acceptance criterion for other/unspecified impurities and/or by the general monograph *Substances for pharmaceutical use (2034)*. It is therefore not necessary to identify these impurities for demonstration of compliance. See also *5.10. Control of impurities in substances for pharmaceutical use*): *A, B, C, D, E, F, H, I.*



A. 5-[(2*R*)-2-[bis[2-(2-ethoxyphenoxy)ethyl]amino]propyl]-2-methoxybenzenesulfonamide,

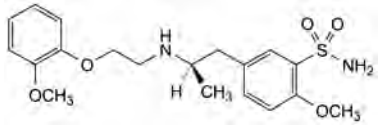
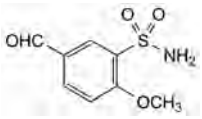
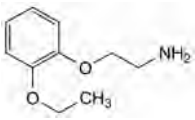
C. 2-methoxy-5-[(2*R*)-2-[(2-phenoxyethyl)amino]propyl]-benzenesulfonamide,



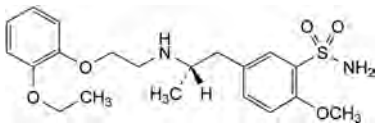
D. 2-methoxy-5-[(2*R*)-2-[[2-(2-methoxyphenoxy)ethyl]-amino]propyl]benzenesulfonamide,



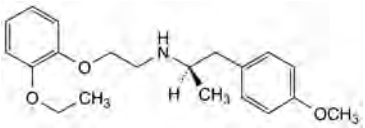
E. 5-formyl-2-methoxybenzenesulfonamide,



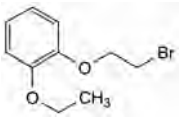
F. 2-(2-ethoxyphenoxy)ethanamine,



G. 5-[(2*S*)-2-[[2-(2-ethoxyphenoxy)ethyl]amino]propyl]-2-methoxybenzenesulfonamide,



H. (2*R*)-*N*-[2-(2-ethoxyphenoxy)ethyl]-1-(4-methoxyphenyl)-propan-2-amine,



I. 1-(2-bromoethoxy)-2-ethoxybenzene.

**01/2008:1477**
**corrected 6.0**

# TANNIC ACID

## Tanninum

DEFINITION

Mixture of esters of glucose with gallic acid and 3-galloylgallic acid.

CHARACTERS

*Appearance*: yellowish-white or slightly brown amorphous light powder or shiny plates.

*Solubility*: very soluble in water, freely soluble in acetone, in ethanol (96 per cent) and in glycerol (85 per cent), practically insoluble in methylene chloride.

IDENTIFICATION

A. Dilute 0.1 mL of solution S (see Tests) to 5 mL with *water R*. Add 0.1 mL of *ferric chloride solution R1*. A blackish-blue colour is produced which becomes green on the addition of 1 mL of *dilute sulfuric acid R*.

B. To 1 mL of solution S, add 3 mL of a 1 g/L solution of *gelatin R*. The mixture becomes turbid and a flocculent precipitate is formed.

C. Dilute 0.1 mL of solution S to 5 mL with *water R*. Add 0.3 mL of *barium hydroxide solution R*. A greenish-blue precipitate is formed.

TESTS

**Solution S**. Dissolve 4.0 g in *carbon dioxide-free water R* and dilute to 20 mL with the same solvent.

**Appearance of solution**. Solution S is not more opalescent than reference suspension II (*2.2.1*).

**Dextrins, gum, salts, sugars**. To 2 mL of solution S, add 2 mL of *ethanol (96 per cent) R*. The solution is clear. Add 1 mL of *ether R*. The solution remains clear for at least 10 min.

**Resins**. To 5 mL of solution S, add 5 mL of *water R*. The mixture remains clear (*2.2.1*) for at least 15 min.

**Loss on drying** (*2.2.32*): maximum 12.0 per cent, determined on 0.200 g by drying at 105 °C.

**Sulfated ash** (*2.4.14*): maximum 0.1 per cent, determined on 1.0 g.

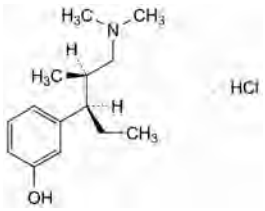
STORAGE

Protected from light.

**01/2020:3035**

# TAPENTADOL HYDROCHLORIDE

## Tapentadoli hydrochloridum



$C_{14}H_{24}ClNO$ $M_r$ 257.8
[175591-09-0]

DEFINITION

3-[(2*R*,3*R*)-1-(Dimethylamino)-2-methylpentan-3-yl]phenol hydrochloride.

*Content*: 98.0 per cent to 102.0 per cent (anhydrous substance).

PRODUCTION

It is considered that alkyl methanesulfonate esters are genotoxic and are potential impurities in tapentadol hydrochloride. The manufacturing process should be developed taking into consideration the principles of quality risk management, together with considerations of the quality of starting materials, process capability and validation. The general methods *2.5.37. Methyl, ethyl and isopropyl methanesulfonate in methanesulfonic acid*, *2.5.38. Methyl, ethyl and isopropyl methanesulfonate in active substances* and *2.5.39. Methanesulfonyl chloride in methanesulfonic acid* are available to assist manufacturers.

CHARACTERS

*Appearance*: white or almost white powder.

*Solubility*: freely soluble in water and in methanol, soluble in anhydrous ethanol, very slightly soluble in heptane.

IDENTIFICATION

A. Infrared absorption spectrophotometry (*2.2.24*).
*Comparison*: *tapentadol hydrochloride CRS*.

B. It gives reaction (a) of chlorides (*2.3.1*).

C. Enantiomeric purity (see Tests).

TESTS

**Enantiomeric purity**. Liquid chromatography (*2.2.29*).

*Solvent mixture*: *diethylamine R*, *2-propanol R*, *heptane R* (0.2:10:89.8 *V/V/V*).

*Test solution*. Dissolve 10.0 mg of the substance to be examined in a mixture of 40 µL of *diethylamine R* and 2 mL of *2-propanol R* using sonication and dilute to 20.0 mL with *heptane R*.

*Reference solution (a)*. Dilute 1.0 mL of the test solution to 100.0 mL with the solvent mixture. Dilute 1.0 mL of this solution to 10.0 mL with the solvent mixture.

*Reference solution (b)*. Dissolve 5 mg of *tapentadol impurity A CRS* and 5 mg of the substance to be examined in a mixture of 0.2 mL of *diethylamine R* and 10 mL of *2-propanol R* using sonication and dilute to 100 mL with *heptane R*.

*Column*:
- *size*: *l* = 0.25 m, Ø = 4.6 mm;
- *stationary phase*: *amylose derivative of silica gel for chiral separation R* (5 µm).

*Mobile phase*: *diethylamine R*, *2-propanol R*, *heptane R* (0.1:2:98 *V/V/V*).

*Flow rate*: 1 mL/min.

*Detection*: spectrophotometer at 270 nm.

*Injection*: 20 µL.

*Run time*: 1.5 times the retention time of tapentadol.

*Relative retention* with reference to tapentadol (retention time = about 13 min): impurity A = about 1.2.

*System suitability*: reference solution (b):
- *resolution*: minimum 2.0 between the peaks due to tapentadol and impurity A.

*Limit*:
- *impurity A*: maximum 1.0 per cent, calculated as the ratio of the area of the peak due to impurity A to the sum of the areas of the peaks due to tapentadol and impurity A;
- *reporting threshold*: 0.10 per cent (reference solution (a)).

**Related substances**. Liquid chromatography (*2.2.29*).

*Solvent mixture*: *phosphoric acid R*, *methanol R*, *water R* (0.1:20:80 *V/V/V*).

*Test solution (a)*. Dissolve 30.0 mg of the substance to be examined in the solvent mixture and dilute to 50.0 mL with the solvent mixture.

*Test solution (b)*. Dilute 5.0 mL of test solution (a) to 50.0 mL with the solvent mixture.

*Reference solution (a)*. Dissolve 30.0 mg of *tapentadol hydrochloride CRS* in the solvent mixture and dilute to 50.0 mL with the solvent mixture. Dilute 5.0 mL of the solution to 50.0 mL with the solvent mixture.

*Reference solution (b)*. Dilute 1.0 mL of test solution (a) to 100.0 mL with the solvent mixture. Dilute 1.0 mL of this solution to 10.0 mL with the solvent mixture.

*Reference solution (c)*. Dissolve 3 mg of *tapentadol impurity C CRS* in the solvent mixture and dilute to 5 mL with the solvent mixture. Add 0.5 mL of the solution to 30 mg of the substance to be examined and dilute to 50 mL with the solvent mixture.

*Column*:
- *size*: *l* = 0.15 m, Ø = 4.6 mm;
- *stationary phase*: *end-capped octadecylsilyl silica gel for chromatography R* (5 µm);
- *temperature*: 35 °C.

*Mobile phase*:
- *mobile phase A*: *phosphoric acid R*, *methanol R2*, *water for chromatography R* (0.1:10:90 *V/V/V*);
- *mobile phase B*: *phosphoric acid R*, *water for chromatography R*, *methanol R2* (0.1:10:90 *V/V/V*);

Monographs T

| Time (min) | Mobile phase A (per cent *V/V*) | Mobile phase B (per cent *V/V*) |
|---|---|---|
| 0 - 2 | 100 | 0 |
| 2 - 44 | 100 → 61 | 0 → 39 |
| 44 - 44.5 | 61 → 0 | 39 → 100 |

*Flow rate*: 1.5 mL/min.

*Detection*: spectrophotometer at 215 nm.

*Injection*: 20 µL of test solution (a) and reference solutions (b) and (c).

*Relative retention* with reference to tapentadol (retention time = about 15 min): impurity C = about 0.9.

*System suitability*: reference solution (c):

– *resolution*: minimum 1.5 between the peaks due to impurity C and tapentadol.

*Calculation of percentage contents*:

– for each impurity, use the concentration of tapentadol hydrochloride in reference solution (b).

*Limits*:

– *unspecified impurities*: for each impurity, maximum 0.10 per cent;
– *total*: maximum 0.4 per cent;
– *reporting threshold*: 0.05 per cent.

**Water** (*2.5.12*): maximum 0.5 per cent, determined on 0.250 g.

**Sulfated ash** (*2.4.14*): maximum 0.1 per cent, determined on 1.0 g.

ASSAY

Liquid chromatography (*2.2.29*) as described in the test for related substances with the following modification.

*Injection*: test solution (b) and reference solution (a).

Calculate the percentage content of $C_{14}H_{24}ClNO$ taking into account the assigned content of *tapentadol hydrochloride CRS*.

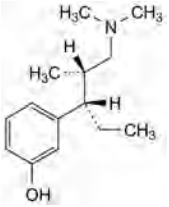
STORAGE

Protected from light.

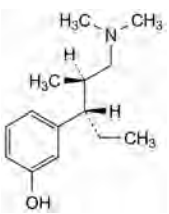
IMPURITIES

*Specified impurities: A.*

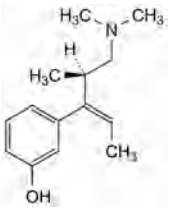
*Other detectable impurities* (the following substances would, if present at a sufficient level, be detected by one or other of the tests in the monograph. They are limited by the general acceptance criterion for other/unspecified impurities and/or by the general monograph *Substances for pharmaceutical use (2034)*. It is therefore not necessary to identify these impurities for demonstration of compliance. See also *5.10. Control of impurities in substances for pharmaceutical use*): *B, C, D, E.*



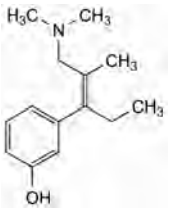
A. 3-[(2*S*,3*S*)-1-(dimethylamino)-2-methylpentan-3-yl]phenol,



B. 3-[(2*R*,3*S*)-1-(dimethylamino)-2-methylpentan-3-yl]phenol,



C. 3-[(2*Z*,4*R*)-5-(dimethylamino)-4-methylpent-2-en-3-yl]phenol,



D. 3-[(2*Z*)-1-(dimethylamino)-2-methylpent-2-en-3-yl]phenol,

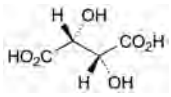
# TARTARIC ACID

## Acidum tartaricum



$C_4H_6O_6$ $M_r$ 150.1

[87-69-4]

DEFINITION

(2*R*,3*R*)-2,3-Dihydroxybutanedioic acid.

The substance is of natural origin, obtained by extraction of lees during winemaking.

*Content*: 99.5 per cent to 101.0 per cent (dried substance).

CHARACTERS

*Appearance*: white or almost white, crystalline powder or colourless crystals.

*Solubility*: very soluble in water, freely soluble in ethanol (96 per cent).

IDENTIFICATION

A. Solution S (see Tests) is strongly acid (*2.2.4*).

B. It gives the reactions of tartrates (*2.3.1*).

TESTS

**Solution S**. Dissolve 5.0 g in *distilled water R* and dilute to 50 mL with the same solvent.

**Appearance of solution**. Solution S is clear (*2.2.1*) and not more intensely coloured than reference solution $Y_6$ (*2.2.2, Method II*).

**Specific optical rotation** (*2.2.7*): + 12.0 to + 12.8 (dried substance).

Dissolve 5.00 g in *water R* and dilute to 25.0 mL with the same solvent.

**Oxalic acid**: maximum 360 ppm, calculated as anhydrous oxalic acid.

Dissolve 0.80 g in 4 mL of *water R*. Add 3 mL of *hydrochloric acid R* and 1 g of *zinc R* in granules and boil for 1 min. Allow to stand for 2 min. Collect the liquid in a test-tube containing 0.25 mL of a 10 g/L solution of *phenylhydrazine hydrochloride R* and heat to boiling. Cool rapidly, transfer to a graduated cylinder and add an equal volume of *hydrochloric acid R* and 0.25 mL of a 50 g/L solution of *potassium ferricyanide R*. Shake and allow to stand for 30 min. Any pink colour in the solution is not more intense than that in a standard prepared at the same time in the same manner using 4 mL of a 0.1 g/L solution of *oxalic acid R*.

**Chlorides** (*2.4.4*): maximum 100 ppm.

Dilute 5 mL of solution S to 15 mL with *water R*.

**Sulfates** (*2.4.13*): maximum 150 ppm.

Dilute 10 mL of solution S to 15 mL with *distilled water R*.

**Calcium** (*2.4.3*): maximum 200 ppm.

To 5 mL of solution S add 10 mL of a 50 g/L solution of *sodium acetate R* in *distilled water R*.

**Loss on drying** (*2.2.32*): maximum 0.2 per cent, determined on 1.000 g by drying in an oven at 105 °C.

**Sulfated ash** (*2.4.14*): maximum 0.1 per cent, determined on 1.0 g.

ASSAY

Dissolve 0.650 g in 25 mL of *water R*. Titrate with *1 M sodium hydroxide* using 0.5 mL of *phenolphthalein solution R* as indicator, until a pink colour is obtained.

1 mL of *1 M sodium hydroxide* is equivalent to 75.05 mg of $C_4H_6O_6$.

**07/2019:2358**

[61036-62-2]

DEFINITION

Mixture of glycopeptides produced by certain strains of *Actinoplanes teichomyceticus sp.*; the 6 principal components of the mixture are teicoplanins $A_{2\text{-}1}$ to $A_{2\text{-}5}$ and teicoplanin $A_{3\text{-}1}$, and 2 minor components are teicoplanins $A_{2\text{-}1a}$ and $A_{2\text{-}1b}$.

Fermentation product.

*Potency*: minimum 900 IU/mg (anhydrous and sodium chloride-free substance).

CHARACTERS

*Appearance*: white or yellowish, amorphous powder.

*Solubility*: freely soluble in water, sparingly soluble in dimethylformamide, practically insoluble in ethanol (96 per cent).

Monographs T

IDENTIFICATION

A. Infrared absorption spectrophotometry (*2.2.24*).

*Comparison*: *teicoplanin for identification CRS*.

B. Examine the chromatograms obtained in the test for composition.

*Results*: the principal peaks (teicoplanins $A_{3\text{-}1}$, $A_{2\text{-}1}$, $A_{2\text{-}2}$, $A_{2\text{-}3}$, $A_{2\text{-}4}$ and $A_{2\text{-}5}$) and the 2 minor peaks (teicoplanins $A_{2\text{-}1a}$ and $A_{2\text{-}1b}$) in the chromatogram obtained with the test solution are similar in retention time and size to the principal peaks in the chromatogram obtained with reference solution (a).

TESTS

**Appearance of solution**. The solution is clear (*2.2.1*) and not more intensely coloured than reference solution $BY_3$ or $B_4$ (*2.2.2, Method I*).

Dissolve 0.8 g in 10 mL of *water R*.

**pH** (*2.2.3*): 6.5 to 7.5.

Dissolve 0.50 g in *carbon dioxide-free water R* and dilute to 10 mL with the same solvent.

**Composition**. Liquid chromatography (*2.2.29*): use the normalisation procedure.

*Test solution*. Dissolve 0.100 g of the substance to be examined in *water R* and dilute to 50.0 mL with the same solvent.

*Reference solution (a)*. Dissolve 20 mg of *teicoplanin for identification CRS* in *water R* and dilute to 10.0 mL with the same solvent.

*Reference solution (b)*. Dilute 1.0 mL of reference solution (a) to 10.0 mL with *water R*. Dilute 1.0 mL of this solution to 20.0 mL with *water R*.

*Reference solution (c)*. Dissolve 50.0 mg of *mesityl oxide CRS* (impurity A) in *water R* and dilute to 25.0 mL with the same solvent. Dilute 1.0 mL of the solution to 10.0 mL with *water R*. Dilute 1.0 mL of this solution to 100.0 mL with *water R*.

*Column*:

- *size*: *l* = 0.25 m, Ø = 4.6 mm;
- *stationary phase*: spherical *end-capped octadecylsilyl silica gel for chromatography R* (5 µm).

*Mobile phase*:

- *mobile phase A*: mix 900 mL of a 3.0 g/L solution of *anhydrous sodium dihydrogen phosphate R*, adjusted to pH 6.0 with a 40 g/L solution of *sodium hydroxide R*, and 100 mL of *acetonitrile R*;
- *mobile phase B*: mix 300 mL of a 3.0 g/L solution of *anhydrous sodium dihydrogen phosphate R*, adjusted to pH 6.0 with a 40 g/L solution of *sodium hydroxide R*, and 700 mL of *acetonitrile R*;

| Time (min) | Mobile phase A (per cent *V/V*) | Mobile phase B (per cent *V/V*) |
|---|---|---|
| 0 - 30 | 100 → 50 | 0 → 50 |
| 30 - 31 | 50 → 10 | 50 → 90 |
| 31 - 35 | 10 | 90 |

*Flow rate*: 2.3 mL/min.

*Detection*: spectrophotometer at 254 nm.

*Injection*: 20 µL of the test solution and reference solutions (a) and (b).

*Identification*: use the chromatogram supplied with *teicoplanin for identification CRS* and the chromatogram obtained with reference solution (a) to identify the groups and components.

*Relative retention* with reference to teicoplanin $A_{2\text{-}2}$ (retention time = about 18 min):

- teicoplanin $A_3$ group ≤ 0.70:
  - teicoplanin $A_{3\text{-}1}$ = about 0.43.
- teicoplanin $A_2$ group > 0.70 including:
  - teicoplanin $A_{2\text{-}1}$ group > 0.70 and < 1.00:
    - teicoplanin $A_{2\text{-}1a}$ = about 0.85;
    - teicoplanin $A_{2\text{-}1b}$ = about 0.88;
    - teicoplanin $A_{2\text{-}1}$ = about 0.93;
  - teicoplanin $A_{2\text{-}2}$ = 1.00;
  - teicoplanin $A_{2\text{-}3}$ group > 1.00 and < 1.12:
    - teicoplanin $A_{2\text{-}3}$ = about 1.03;
  - teicoplanin $A_{2\text{-}4}$ = about 1.12;
  - teicoplanin $A_{2\text{-}5}$ group > 1.12 and < 1.25:
    - teicoplanin $A_{2\text{-}5}$ = about 1.15;
  - teicoplanin $A_{2\text{-}6}$ group ≥ 1.25:
    - teicoplanin-like related substance RS $A_{2\text{-}6a}$ = about 1.25;
    - teicoplanin-like related substance RS $A_{2\text{-}6b}$ = about 1.30;
    - teicoplanin-like related substance RS $A_{2\text{-}6c}$ = about 1.38.

*System suitability*:

- the chromatogram obtained with reference solution (a) is similar to the chromatogram supplied with *teicoplanin for identification CRS*;
- *resolution*: minimum 1.0 between the peaks due to teicoplanin $A_{2\text{-}4}$ and teicoplanin $A_{2\text{-}5}$ in the chromatogram obtained with reference solution (a);
- *signal-to-noise ratio*: minimum 40 for the peak due to teicoplanin $A_{2\text{-}2}$ in the chromatogram obtained with reference solution (b).

Calculate the percentage contents using the following equations:

$$\text{teicoplanin } A_3 \text{ group} = \frac{0.83 \times S_3}{S_2 + 0.83 \times S_3} \times 100$$

$$\text{teicoplanin } A_2 \text{ group} = \frac{S_2}{S_2 + 0.83 \times S_3} \times 100$$

$$\text{teicoplanin } A_{2\text{-}1} \text{ group} = \frac{S_{2-1}}{S_2 + 0.83 \times S_3} \times 100$$

$$\text{teicoplanin } A_{2\text{-}1a} = \frac{A_{2-1a}}{S_2 + 0.83 \times S_3} \times 100$$

$$\text{teicoplanin } A_{2\text{-}1b} = \frac{A_{2-1b}}{S_2 + 0.83 \times S_3} \times 100$$

$$\text{teicoplanin } A_{2\text{-}1} = \frac{A_{2-1}}{S_2 + 0.83 \times S_3} \times 100$$

$$\text{teicoplanin } A_{2\text{-}2} = \frac{A_{2-2}}{S_2 + 0.83 \times S_3} \times 100$$

$$\text{teicoplanin } A_{2\text{-}3} \text{ group} = \frac{S_{2-3}}{S_2 + 0.83 \times S_3} \times 100$$

$$\text{teicoplanin } A_{2\text{-}3} = \frac{A_{2-3}}{S_2 + 0.83 \times S_3} \times 100$$

$$\text{teicoplanin } A_{2\text{-}4} = \frac{A_{2-4}}{S_2 + 0.83 \times S_3} \times 100$$

$$\text{teicoplanin } A_{2\text{-}5} \text{ group} = \frac{S_{2-5}}{S_2 + 0.83 \times S_3} \times 100$$

$$\text{teicoplanin } A_{2\text{-}5} = \frac{A_{2-5}}{S_2 + 0.83 \times S_3} \times 100$$

$$\text{teicoplanin } A_{2\text{-}6} \text{ group} = \frac{S_{2-6}}{S_2 + 0.83 \times S_3} \times 100$$

$S_2$ = sum of the areas of the peaks due to teicoplanin $A_2$ group in the chromatogram obtained with the test solution;

$S_3$ = sum of the areas of the peaks due to teicoplanin $A_3$ group in the chromatogram obtained with the test solution; disregard any peak due to impurity A;

$S_{2\text{-}6}$ = sum of the areas of the peaks with a relative retention greater than or equal to 1.25 in the chromatogram obtained with the test solution;

$S_{2\text{-}1}$ = sum of the areas of the peaks due to teicoplanin $A_{2\text{-}1}$ group in the chromatogram obtained with the test solution;

$A_{2\text{-}1a}$ = area of the peak due to teicoplanin $A_{2\text{-}1a}$ in the chromatogram obtained with the test solution;

$A_{2\text{-}1b}$ = area of the peak due to teicoplanin $A_{2\text{-}1b}$ in the chromatogram obtained with the test solution;

$A_{2\text{-}1}$ = area of the peak due to teicoplanin $A_{2\text{-}1}$ in the chromatogram obtained with the test solution;

$A_{2\text{-}2}$ = area of the peak due to teicoplanin $A_{2\text{-}2}$ in the chromatogram obtained with the test solution;

$S_{2\text{-}3}$ = sum of the areas of the peaks due to teicoplanin $A_{2\text{-}3}$ group in the chromatogram obtained with the test solution;

$A_{2\text{-}3}$ = area of the peak due to teicoplanin $A_{2\text{-}3}$ in the chromatogram obtained with the test solution;

$A_{2\text{-}4}$ = area of the peak due to teicoplanin $A_{2\text{-}4}$ in the chromatogram obtained with the test solution;

$S_{2\text{-}5}$ = sum of the areas of the peaks due to teicoplanin $A_{2\text{-}5}$ group in the chromatogram obtained with the test solution;

$A_{2\text{-}5}$ = area of the peak due to teicoplanin $A_{2\text{-}5}$ in the chromatogram obtained with the test solution;

*Limits*:

- *teicoplanin $A_2$ group*: 84.0 per cent to 98.0 per cent;
- *teicoplanin $A_{2\text{-}2}$*: 37.0 per cent to 50.0 per cent;
- *teicoplanin $A_{2\text{-}1}$ group*: 10.0 per cent to 19.0 per cent;
- *teicoplanin $A_{2\text{-}5}$ group*: 7.0 per cent to 17.0 per cent;
- *teicoplanin $A_{2\text{-}4}$*: 7.0 per cent to 15.0 per cent;
- *teicoplanin $A_{2\text{-}5}$*: 7.0 per cent to 15.0 per cent;
- *teicoplanin $A_{2\text{-}3}$ group*: 5.0 per cent to 11.0 per cent;
- *teicoplanin $A_3$ group*: 4.0 per cent to 12.0 per cent;
- *teicoplanin $A_{2\text{-}3}$*: 4.0 per cent to 8.5 per cent;
- *teicoplanin $A_{2\text{-}1}$*: 2.0 per cent to 7.0 per cent;
- *teicoplanin $A_{2\text{-}1a}$*: 0.5 per cent to 5.5 per cent;
- *teicoplanin $A_{2\text{-}1b}$*: 0.5 per cent to 4.0 per cent;
- *teicoplanin $A_{2\text{-}6}$ group*: maximum 5.0 per cent;
- *disregard limit*: 0.25 per cent.

**Related substances**. Liquid chromatography (*2.2.29*) as described in the test for composition. Use the normalisation procedure.

Use the chromatogram obtained with reference solution (a) to identify all peaks present above the disregard limit as teicoplanin-like related substances. Any peak present in any part of the chromatogram obtained with the test solution that cannot be correlated to a peak above the disregard limit in reference solution (a) should be considered as a non-teicoplanin-like impurity, unless it is characterized by other means.

A teicoplanin-like related substance is defined as a substance that shares the same glycopeptide core structure of the parent molecule, composed of a linear heptapeptide aglycone, an α-D-mannose and an acetyl-β-D-glucosamine.

The R′ side chains in the teicoplanin-like related substances RS $A_{2\text{-}6a}$, RS $A_{2\text{-}6b}$ and RS $A_{2\text{-}6c}$ are unknown.

Calculate the percentage contents using the following equations:

$$\text{teicoplanin-like related substance (x)} = \frac{A_{RSTLx}}{(S2 + 0.83 \times S_3)} \times 100$$

$A_{RSTLx}$ = area of the peak due to the teicoplanin-like related substance (x) in the chromatogram obtained with the test solution;

$$\text{non-teicoplanin-like impurity (x)} = \frac{A_{Ix}}{(S2 + 0.83 \times S_3)} \times 100$$

$A_{Ix}$ = area of the peak due to the non-teicoplanin-like impurity (x) in the chromatogram obtained with the test solution.

*Limits*:

- *teicoplanin-like related substance RS $A_{2\text{-}6c}$*: maximum 2.5 per cent;
- *teicoplanin-like related substance RS $A_{2\text{-}6a}$*: maximum 1.5 per cent;
- *teicoplanin-like related substance RS $A_{2\text{-}6b}$*: maximum 1.5 per cent;
- *any non-teicoplanin-like impurity other than impurity A*: maximum 0.5 per cent;
- *total non-teicoplanin-like impurities other than impurity A*: maximum 1.5 per cent.

**Impurity A**. Liquid chromatography (*2.2.29*) as described in the test for composition with the following modifications.

*Injection*: 20 µL of the test solution and reference solution (c).

*Relative retention* with reference to teicoplanin $A_{2\text{-}2}$ (retention time = about 18 min): impurity A = about 0.6.

*Calculation of percentage content*:

- for impurity A, use the concentration of impurity A in reference solution (c).

*Limit*:

- *impurity A*: maximum 0.2 per cent.

**Chlorides**: maximum 5.0 per cent, expressed as sodium chloride (anhydrous substance).

Dissolve 1.000 g in 300 mL of *water R*, stir and acidify with 2 mL of *nitric acid R*. Titrate with *0.1 M silver nitrate*, determining the end-point potentiometrically (*2.2.20*).

1 mL of *0.1 M silver nitrate* is equivalent to 5.844 mg of NaCl.

**Water** (*2.5.12*): maximum 15.0 per cent, determined on 0.300 g.

ASSAY

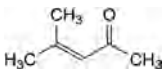
Carry out the microbiological assay of antibiotics (*2.7.2*), using the diffusion method. Use *teicoplanin CRS* as the reference substance.

STORAGE

Protected from light, at a temperature of 2 °C to 8 °C.

IMPURITIES

*Specified impurities: A.*

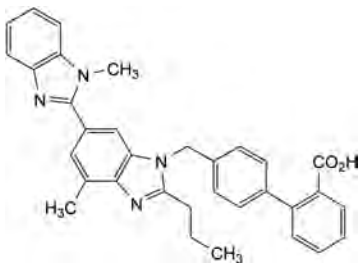


A. 4-methylpent-3-en-2-one (mesityl oxide).

**04/2019:2154**

# TELMISARTAN

## Telmisartanum



$C_{33}H_{30}N_4O_2$ $M_r$ 514.6

[144701-48-4]

DEFINITION

4′-[[4-Methyl-6-(1-methyl-1*H*-benzimidazol-2-yl)-2-propyl-1*H*-benzimidazol-1-yl]methyl][1,1′-biphenyl]-2-carboxylic acid.

*Content*: 99.0 per cent to 101.0 per cent (dried substance).

CHARACTERS

*Appearance*: white or slightly yellowish, crystalline powder.

*Solubility*: practically insoluble in water, slightly soluble in methanol, sparingly soluble in methylene chloride. It dissolves in a 40 g/L solution of *sodium hydroxide R*.

It shows polymorphism (*5.9*).

IDENTIFICATION

Infrared absorption spectrophotometry (*2.2.24*).

*Comparison*: *telmisartan CRS*.

If the spectra obtained in the solid state show differences, dissolve the substance to be examined and the reference substance separately in hot *anhydrous ethanol R*, evaporate to dryness and record new spectra using the residues.

TESTS

**Appearance of solution**. The solution is not more intensely coloured than reference solution $Y_4$ (*2.2.2, Method II*).

Dissolve 0.5 g in a 40 g/L solution of *sodium hydroxide R* and dilute to 10 mL with the same solvent.

**Related substances**. Liquid chromatography (*2.2.29*).

*Test solution*. To 25 mg of the substance to be examined add about 5 mL of *methanol R* and 100 µL of a 40 g/L solution of *sodium hydroxide R*. Dissolve using sonication and dilute to 50.0 mL with *methanol R*.

*Reference solution (a)*. Dilute 1.0 mL of the test solution to 10.0 mL with *methanol R*. Dilute 1.0 mL of this solution to 100.0 mL with *methanol R*.

*Reference solution (b)*. Dissolve the contents of a vial of *telmisartan for system suitability CRS* (containing impurities A, B, C, E and F) in 2 mL of *methanol R*.

*Reference solution (c)*. To 5 mg of *telmisartan for peak identification CRS* (containing impurity D) add about 5 mL of *methanol R* and 100 µL of a 40 g/L solution of *sodium hydroxide R*. Dissolve using sonication and dilute to 10 mL with *methanol R*.

*Column*:

- *size*: *l* = 0.125 m, Ø = 4.0 mm;
- *stationary phase*: *end-capped octadecylsilyl silica gel for chromatography R* (5 µm) with a pore size of 10 nm;
- *temperature*: 40 °C.

*Mobile phase*:

- *mobile phase A*: dissolve 2.0 g of *potassium dihydrogen phosphate R* and 3.8 g of *sodium pentanesulfonate monohydrate R1* in 900 mL of *water for chromatography R*, adjust to pH 3.0 with *dilute phosphoric acid R* and dilute to 1000 mL with *water for chromatography R*;
- *mobile phase B*: *methanol R1*, *acetonitrile for chromatography R* (20:80 *V/V*);

| Time (min) | Mobile phase A (per cent *V/V*) | Mobile phase B (per cent *V/V*) |
|---|---|---|
| 0 - 3 | 70 | 30 |
| 3 - 28 | 70 → 20 | 30 → 80 |

*Flow rate*: 1 mL/min.

*Detection*: spectrophotometer at 230 nm.

*Injection*: 10 µL.

*Identification of impurities*: use the chromatogram supplied with *telmisartan for system suitability CRS* and the chromatogram obtained with reference solution (b) to identify the peaks due to impurities A, B, C, E and F; use the chromatogram supplied with *telmisartan for peak identification CRS* and the chromatogram obtained with reference solution (c) to identify the peak due to impurity D.

*Relative retention* with reference to telmisartan (retention time = about 15 min): impurity A = about 0.2; impurity E = about 0.6; impurity F = about 0.7; impurity B = about 0.9; impurity C = about 1.5; impurity D = about 1.6.

*System suitability*: reference solution (b):

- the chromatogram obtained with reference solution (b) is similar to the chromatogram supplied with *telmisartan for system suitability CRS*;
- *resolution*: minimum 3.0 between the peaks due to impurity B and telmisartan.

*Limits*:

- *impurities C, D*: for each impurity, not more than twice the area of the principal peak in the chromatogram obtained with reference solution (a) (0.2 per cent);

– *impurities A, B*: for each impurity, not more than 1.5 times the area of the principal peak in the chromatogram obtained with reference solution (a) (0.15 per cent);
– *unspecified impurities*: for each impurity, not more than the area of the principal peak in the chromatogram obtained with reference solution (a) (0.10 per cent);
– *total*: not more than 10 times the area of the principal peak in the chromatogram obtained with reference solution (a) (1.0 per cent);
– *disregard limit*: 0.5 times the area of the principal peak in the chromatogram obtained with reference solution (a) (0.05 per cent).

**Loss on drying** (*2.2.32*): maximum 0.5 per cent, determined on 1.000 g by drying in an oven at 105 °C.

**Sulfated ash** (*2.4.14*): maximum 0.1 per cent, determined on 1.0 g.

ASSAY

Dissolve 0.190 g in 5 mL of *anhydrous formic acid R*. Add 75 mL of *acetic anhydride R*. Titrate with *0.1 M perchloric acid*, determining the end-point potentiometrically (*2.2.20*).

1 mL of *0.1 M perchloric acid* is equivalent to 25.73 mg of $C_{33}H_{30}N_4O_2$.

IMPURITIES

*Specified impurities: A, B, C, D.*

*Other detectable impurities* (the following substances would, if present at a sufficient level, be detected by one or other of the tests in the monograph. They are limited by the general acceptance criterion for other/unspecified impurities and/or by the general monograph *Substances for pharmaceutical use (2034)*. It is therefore not necessary to identify these impurities for demonstration of compliance. See also *5.10. Control of impurities in substances for pharmaceutical use*): *E, F, G, H, I, J.*

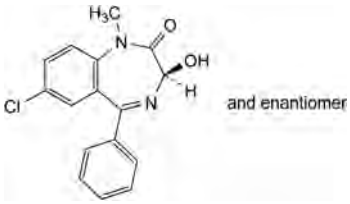
# TEMAZEPAM

## Temazepamum



$C_{16}H_{13}ClN_2O_2$ $M_r$ 300.7
[846-50-4]

DEFINITION

(3*RS*)-7-Chloro-3-hydroxy-1-methyl-5-phenyl-1,3-dihydro-2*H*-1,4-benzodiazepin-2-one.

*Content*: 99.0 per cent to 101.0 per cent (dried substance).

CHARACTERS

*Appearance*: white or almost white, crystalline powder.

*Solubility*: practically insoluble in water, freely soluble in methylene chloride, sparingly soluble in ethanol (96 per cent).

IDENTIFICATION

Infrared absorption spectrophotometry (*2.2.24*).

*Comparison*: *temazepam CRS*.

TESTS

**Impurity A**: maximum 0.05 per cent.

Dissolve 0.400 g in *methylene chloride R* and dilute to 20.0 mL with the same solvent. The absorbance (*2.2.25*) is not greater than 0.30 at 409 nm.

**Related substances**. Liquid chromatography (*2.2.29*).

*Test solution.* Dissolve 10.0 mg of the substance to be examined in a mixture of 1 volume of *water R* and 9 volumes of *methanol R* and dilute to 50.0 mL with the same mixture of solvents.

*Reference solution (a).* Dilute 1.0 mL of the test solution to 100.0 mL with a mixture of 1 volume of *water R* and 9 volumes of *methanol R*. Dilute 2.0 mL of this solution to 10.0 mL with a mixture of 1 volume of *water R* and 9 volumes of *methanol R*.

*Reference solution (b).* Dissolve 1 mg of *oxazepam R*, 1 mg of *temazepam impurity F CRS* and 1 mg of *temazepam impurity G CRS* in a mixture of 1 volume of *water R* and 9 volumes of *methanol R* and dilute to 25 mL with the same mixture of solvents.

*Reference solution (c).* Dissolve 1 mg of *temazepam impurity C CRS* and 1 mg of *temazepam impurity D CRS* with a mixture of 1 volume of *water R* and 9 volumes of *methanol R* and dilute to 25 mL with the same mixture of solvents.

*Column*:

- *size*: *l* = 0.15 m, Ø = 4.6 mm;
- *stationary phase*: *end-capped octadecylsilyl silica gel for chromatography R* (3.5 µm).

*Mobile phase*:

- *mobile phase A*: solution containing 4.9 g/L of *sodium dihydrogen phosphate R* and 0.63 g/L of *disodium hydrogen phosphate dodecahydrate R* (pH 5.6);
- *mobile phase B*: *methanol R*;
- *mobile phase C*: *acetonitrile R*;

| Time (min) | Mobile phase A (per cent *V/V*) | Mobile phase B (per cent *V/V*) | Mobile phase C (per cent *V/V*) |
|---|---|---|---|
| 0 - 18 | 54 | 39 | 7 |
| 18 - 25 | 54 → 22 | 39 → 63 | 7 → 15 |
| 25 - 31 | 22 | 63 | 15 |
| 31 - 37 | 22 → 54 | 63 → 39 | 15 → 7 |

*Flow rate*: 1.5 mL/min.

*Detection*: spectrophotometer at 230 nm.

*Injection*: 20 µL.

*Relative retention* with reference to temazepam (retention time = about 16 min): impurity E = about 0.55; impurity F = about 0.67; impurity G = about 0.73; impurity B = about 0.8; impurity D = about 1.2; impurity C = about 1.3; impurity A = about 1.5.

*System suitability*: reference solution (b):

- *resolution*: minimum 1.5 between the peaks due to impurity F and impurity G;
- *peak-to-valley ratio*: minimum 1.7, where $H_p$ = height above the baseline of the peak due to impurity G and $H_v$ = height above the baseline of the lowest point of the curve separating this peak from the peak due to impurity B.

*Limits*:

- *correction factors*: for the calculation of contents, multiply the peak areas of the following impurities by the corresponding correction factor: impurity F = 3.2; impurity G = 3.1;
- *impurities B, C, D, E, F, G*: for each impurity, not more than the area of the principal peak in the chromatogram obtained with reference solution (a) (0.2 per cent);
- *unspecified impurities*: for each impurity, not more than 0.5 times the area of the principal peak in the chromatogram obtained with reference solution (a) (0.10 per cent);
- *total*: not more than 2.5 times the area of the principal peak in the chromatogram obtained with reference solution (a) (0.5 per cent);
- *disregard limit*: 0.25 times the area of the principal peak in the chromatogram obtained with reference solution (a) (0.05 per cent).

**Loss on drying** (*2.2.32*): maximum 0.5 per cent, determined on 1.000 g by drying in an oven at 105 °C for 4 h.

**Sulfated ash** (*2.4.14*): maximum 0.1 per cent, determined on 1.0 g.

ASSAY

Dissolve 0.250 g in 50 mL of *nitroethane R*. Titrate with *0.1 M perchloric acid*, determining the end-point potentiometrically (*2.2.20*).

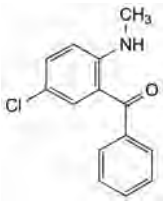
1 mL of *0.1 M perchloric acid* is equivalent to 30.07 mg of $C_{16}H_{13}ClN_2O_2$.

STORAGE

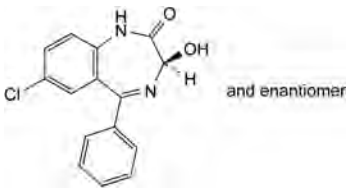
Protected from light.

IMPURITIES

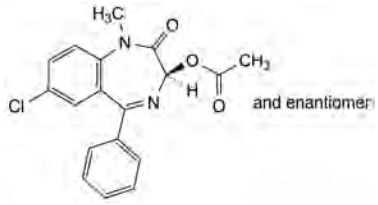
*Specified impurities: A, B, C, D, E, F, G.*



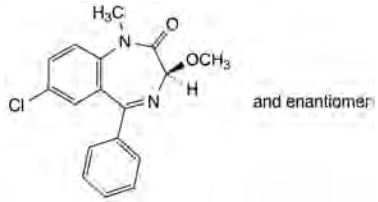
A. [5-chloro-2-(methylamino)phenyl]phenylmethanone,



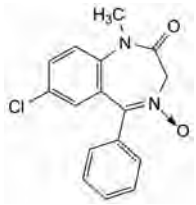
B. (3*RS*)-7-chloro-3-hydroxy-5-phenyl-1,3-dihydro-2*H*-1,4-benzodiazepin-2-one (oxazepam),



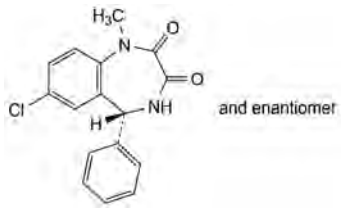
C. (3*RS*)-7-chloro-1-methyl-2-oxo-5-phenyl-2,3-dihydro-1*H*-1,4-benzodiazepin-3-yl acetate,



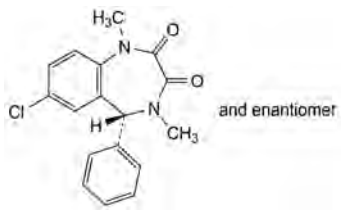
D. (3*RS*)-7-chloro-3-methoxy-1-methyl-5-phenyl-1,3-dihydro-2*H*-1,4-benzodiazepin-2-one,



E. 7-chloro-1-methyl-5-phenyl-1,3-dihydro-2*H*-1,4-benzodiazepin-2-one 4-oxide,



F. (5*RS*)-7-chloro-1-methyl-5-phenyl-4,5-dihydro-1*H*-1,4-benzodiazepine-2,3-dione,

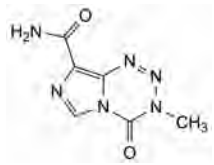


G. (5*RS*)-7-chloro-1,4-dimethyl-5-phenyl-4,5-dihydro-1*H*-1,4-benzodiazepine-2,3-dione.

**04/2019:2780**

# TEMOZOLOMIDE

## Temozolomidum



$C_6H_6N_6O_2$ $M_r$ 194.2
[85622-93-1]

DEFINITION

3-Methyl-4-oxo-3,4-dihydroimidazo[5,1-*d*][1,2,3,5]tetrazine-8-carboxamide.

*Content*: 98.0 per cent to 102.0 per cent (anhydrous substance).

CHARACTERS

*Appearance*: white or slightly brown or slightly pink powder.

*Solubility*: sparingly soluble in water, soluble in dimethyl sulfoxide, very slightly soluble in ethanol (96 per cent), practically insoluble in toluene.

IDENTIFICATION

A. Infrared absorption spectrophotometry (*2.2.24*).
*Comparison*: *temozolomide CRS*.

B. Examine the chromatograms obtained in the assay.
*Results*: the principal peak in the chromatogram obtained with test solution (b) is similar in retention time and size to the principal peak in the chromatogram obtained with reference solution (d).

TESTS

**Related substances**. Liquid chromatography (*2.2.29*).

*Test solution (a)*. Dissolve 25.0 mg of the substance to be examined in *dimethyl sulfoxide R* and dilute to 25.0 mL with the same solvent.

*Test solution (b)*. Dilute 1.0 mL of test solution (a) to 10.0 mL with *dimethyl sulfoxide R*.

*Reference solution (a)*. Dilute 1.0 mL of test solution (a) to 100.0 mL with *dimethyl sulfoxide R*. Dilute 1.0 mL of this solution to 10.0 mL with *dimethyl sulfoxide R*.

*Reference solution (b)*. In order to prepare impurities A, B and E *in situ*, mix 5 mL of a 10.3 g/L solution of *hydrochloric acid R* and 5 mL of test solution (a). Heat the mixture in a water-bath for 1 h.

*Reference solution (c)*. Dissolve 2 mg of *temozolomide for peak identification CRS* (containing impurity D) in 2 mL of *dimethyl sulfoxide R*.

*Reference solution (d)*. Dissolve 25.0 mg of *temozolomide CRS* in *dimethyl sulfoxide R* and dilute to 25.0 mL with the same solvent. Dilute 1.0 mL of the solution to 10.0 mL with *dimethyl sulfoxide R*.

*Column*:
- *size*: *l* = 0.15 m, Ø = 4.6 mm;
- *stationary phase*: *end-capped octadecylsilyl silica gel for chromatography R* (5 µm).

*Mobile phase*: 0.94 g/L solution of *sodium hexanesulfonate R* in a mixture of 4 volumes of *methanol R* and 96 volumes of a 0.5 per cent *V/V* solution of *glacial acetic acid R*.

*Flow rate*: 1.0 mL/min.

*Detection*: spectrophotometer at 270 nm.

Monographs T

*Injection*: 10 µL of test solution (a) and reference solutions (a), (b) and (c).

*Run time*: 3 times the retention time of temozolomide.

*Identification of impurities*: use the chromatogram obtained with reference solution (b) to identify the peaks due to impurities A, B and E; use the chromatogram supplied with *temozolomide for peak identification CRS* and the chromatogram obtained with reference solution (c) to identify the peak due to impurity D.

*Relative retention* with reference to temozolomide (retention time = about 11 min): impurity E = about 0.4; impurity D = about 0.5; impurity B = about 0.9; impurity A = about 1.7. The peak due to impurity A in the chromatogram obtained with test solution (a) may be split.

*System suitability*: reference solution (b):

– *resolution*: minimum 1.5 between the peaks due to impurity B and temozolomide.

*Calculation of percentage contents*:

– *correction factors*: multiply the peak areas of the following impurities by the corresponding correction factor: impurity A = 0.4; impurity E = 0.6;
– for each impurity, use the concentration of temozolomide in reference solution (a).

*Limits*:

– *impurity D*: maximum 0.5 per cent;
– *impurity A* (*sum of the peaks*): maximum 0.15 per cent;
– *impurities B, E*: for each impurity, maximum 0.15 per cent;
– *unspecified impurities*: for each impurity, maximum 0.10 per cent;
– *total*: maximum 0.8 per cent;
– *reporting threshold*: 0.05 per cent.

**Water** (*2.5.32*): maximum 0.4 per cent, determined on 50.0 mg.

**Sulfated ash** (*2.4.14*): maximum 0.1 per cent, determined on 1.0 g.

ASSAY

Liquid chromatography (*2.2.29*) as described in the test for related substances with the following modification.

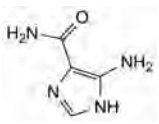
*Injection*: test solution (b) and reference solution (d).

Calculate the percentage content of $C_6H_6N_6O_2$ taking into account the assigned content of *temozolomide CRS*.

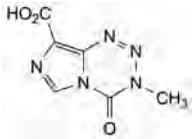
IMPURITIES

*Specified impurities: A, B, D, E.*

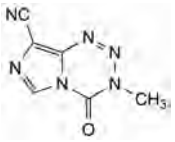
*Other detectable impurities* (the following substances would, if present at a sufficient level, be detected by one or other of the tests in the monograph. They are limited by the general acceptance criterion for other/unspecified impurities and/or by the general monograph *Substances for pharmaceutical use (2034)*. It is therefore not necessary to identify these impurities for demonstration of compliance. See also *5.10. Control of impurities in substances for pharmaceutical use*): *C.*



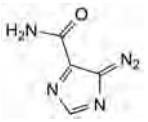
A. 5-amino-1*H*-imidazole-4-carboxamide,



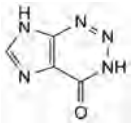
B. 3-methyl-4-oxo-3,4-dihydroimidazo[5,1-*d*][1,2,3,5]-tetrazine-8-carboxylic acid,



C. 3-methyl-4-oxo-3,4-dihydroimidazo[5,1-*d*]-[1,2,3,5]tetrazine-8-carbonitrile,



D. 4-diazo-4*H*-imidazole-5-carboxamide,

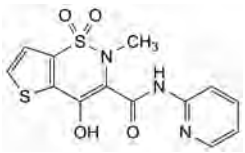


E. 3,7-dihydro-4*H*-imidazo[4,5-*d*][1,2,3]triazin-4-one (2-azahypoxanthine).

**01/2017:1156**
**corrected 9.4**

# TENOXICAM

## Tenoxicamum



$C_{13}H_{11}N_3O_4S_2$ $M_r$ 337.4
[59804-37-4]

DEFINITION

4-Hydroxy-2-methyl-*N*-(pyridin-2-yl)-2*H*-thieno[2,3-*e*]1,2-thiazine-3-carboxamide 1,1-dioxide.

*Content*: 99.0 per cent to 101.0 per cent (anhydrous substance).

CHARACTERS

*Appearance*: yellow, crystalline powder.

*Solubility*: practically insoluble in water, sparingly soluble in methylene chloride, very slightly soluble in anhydrous ethanol. It dissolves in solutions of acids and alkalis.

It shows polymorphism (*5.9*).

IDENTIFICATION

Infrared absorption spectrophotometry (*2.2.24*).

*Comparison*: *tenoxicam CRS*.

If the spectra obtained in the solid state show differences, dissolve the substance to be examined and the reference substance separately in the minimum volume of *methylene chloride R*, evaporate to dryness and record new spectra using the residues.

TESTS

**Appearance of solution**. The solution is clear (*2.2.1*).

Dissolve 0.10 g in *methylene chloride R* and dilute to 20 mL with the same solvent.

**Related substances**. Liquid chromatography (*2.2.29*). *Carry out the test protected from light.*

*Solvent mixture.* Mix equal volumes of *acetonitrile R* and *water R*. Adjust to apparent pH 3.2 with *dilute phosphoric acid R1*.

*Test solution.* Dissolve 35 mg of the substance to be examined in the solvent mixture, sonicate and dilute to 50.0 mL with the solvent mixture.

*Reference solution (a).* Dilute 1.0 mL of the test solution to 100.0 mL with the solvent mixture. Dilute 1.0 mL of this solution to 10.0 mL with the solvent mixture.

*Reference solution (b).* Dissolve 7 mg of *pyridin-2-amine R* (impurity A) in the solvent mixture and dilute to 100.0 mL with the solvent mixture. Dilute 1.0 mL of this solution to 100.0 mL with the solvent mixture.

*Reference solution (c).* Dissolve the contents of a vial of *tenoxicam impurity mixture CRS* (impurities B, G and H) in 1.0 mL of the test solution.

*Column*:

- *size*: *l* = 0.15 m, Ø = 4.6 mm;
- *stationary phase*: *diisopropylcyanosilyl silica gel for chromatography R* (3.5 µm);
- *temperature*: 35 °C.

*Mobile phase*:

- *mobile phase A*: mix 25 volumes of *methanol R2* and 75 volumes of *water for chromatography R* and adjust to apparent pH 3.2 with *dilute phosphoric acid R1*;
- *mobile phase B*: mix 25 volumes of *water for chromatography R* and 75 volumes of *methanol R2* and adjust to apparent pH 3.2 with *dilute phosphoric acid R1*;

| Time (min) | Mobile phase A (per cent *V/V*) | Mobile phase B (per cent *V/V*) |
|---|---|---|
| 0 - 5 | 96 | 4 |
| 5 - 16 | 96 → 76 | 4 → 24 |
| 16 - 25 | 76 | 24 |

*Flow rate*: 1.0 mL/min.

*Detection*: spectrophotometer at 230 nm.

*Injection*: 20 µL.

*Identification of impurities*:

- use the chromatogram obtained with reference solution (b) to identify the peak due to impurity A;
- use the chromatogram supplied with *tenoxicam impurity mixture CRS* and the chromatogram obtained with reference solution (c) to identify the peaks due to impurities B, G and H; for identification of impurities G and H, which may be inverted in the elution order, take into account the heights of the corresponding peaks in the chromatogram supplied with *tenoxicam impurity mixture CRS*.

*Relative retention* with reference to tenoxicam (retention time = about 12 min): impurity A = about 0.1; impurity G = about 0.85; impurity H = about 0.9; impurity B = about 1.3.

*System suitability*: reference solution (c):

- *resolution*: minimum 1.3 between the peaks due to impurity H (or G if peaks are inverted) and tenoxicam, and between the peaks due to impurities G and H; if necessary, optimise the apparent pH of the mobile phases within the range 3.0-3.4.

*Limits*:

- *correction factors*: for the calculation of content, multiply the peak areas of the following impurities by the corresponding correction factor: impurity A = 0.2; impurity B = 2.0;
- *impurities A, B*: for each impurity, not more than 1.5 times the area of the principal peak in the chromatogram obtained with reference solution (a) (0.15 per cent);
- *unspecified impurities*: for each impurity, not more than the area of the principal peak in the chromatogram obtained with reference solution (a) (0.10 per cent);
- *total*: not more than 3 times the area of the principal peak in the chromatogram obtained with reference solution (a) (0.3 per cent);
- *disregard limit*: 0.5 times the area of the principal peak in the chromatogram obtained with reference solution (a) (0.05 per cent).

**Water** (*2.5.12*): maximum 0.5 per cent, determined on 1.000 g.

**Sulfated ash** (*2.4.14*): maximum 0.1 per cent, determined on 1.0 g.

ASSAY

Dissolve 0.250 g in 5 mL of *anhydrous formic acid R*. Add 70 mL of *anhydrous acetic acid R*. Titrate with *0.1 M perchloric acid*, determining the end-point potentiometrically (*2.2.20*).

1 mL of *0.1 M perchloric acid* is equivalent to 33.74 mg of $C_{13}H_{11}N_3O_4S_2$.

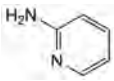
STORAGE

Protected from light.

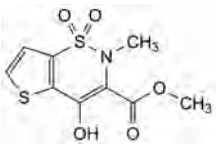
IMPURITIES

*Specified impurities: A, B.*

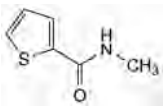
*Other detectable impurities* (the following substances would, if present at a sufficient level, be detected by one or other of the tests in the monograph. They are limited by the general acceptance criterion for other/unspecified impurities and/or by the general monograph *Substances for pharmaceutical use (2034)*. It is therefore not necessary to identify these impurities for demonstration of compliance. See also *5.10. Control of impurities in substances for pharmaceutical use*): *C, D, E, F, G, H.*



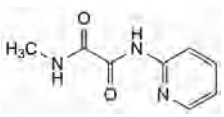
A. pyridin-2-amine,



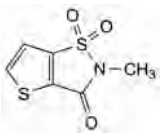
B. methyl 4-hydroxy-2-methyl-2*H*-thieno[2,3-*e*]1,2-thiazine-3-carboxylate 1,1-dioxide,



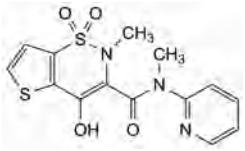
C. *N*-methylthiophene-2-carboxamide,



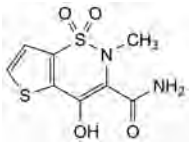
D. *N*-methyl-*N'*-(pyridin-2-yl)-ethanediamide,



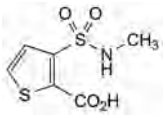
E. 2-methylthieno[2,3-*d*]isothiazol-3(2*H*)-one 1,1-dioxide,



F. 4-hydroxy-*N*,2-dimethyl-*N*-(pyridin-2-yl)-2*H*-thieno[2,3-*e*]1,2-thiazine-3-carboxamide 1,1-dioxide,



G. 4-hydroxy-2-methyl-2*H*-thieno[2,3-*e*]1,2-thiazine-3-carboxamide 1,1-dioxide,

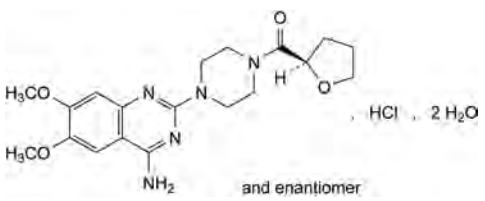


H. 3-[(methylamino)sulfonyl]thiophene-2-carboxylic acid.

**01/2017:2021**

# TERAZOSIN HYDROCHLORIDE DIHYDRATE

## Terazosini hydrochloridum dihydricum



$C_{19}H_{26}ClN_5O_4,2H_2O$ $M_r$ 459.9
[70024-40-7]

DEFINITION

1-(4-Amino-6,7-dimethoxyquinazolin-2-yl)-4-[[(2*RS*)-tetrahydrofuran-2-yl]carbonyl]piperazine hydrochloride dihydrate.

*Content*: 99.0 per cent to 101.0 per cent (anhydrous substance).

CHARACTERS

*Appearance*: white or slightly yellow, crystalline powder.

*Solubility*: sparingly soluble in water, slightly soluble in methanol, very slightly soluble in ethanol (96 per cent), practically insoluble in acetone.

IDENTIFICATION

A. Infrared absorption spectrophotometry (*2.2.24*).
*Comparison*: *terazosin hydrochloride dihydrate CRS*.

B. It gives reaction (a) of chlorides (*2.3.1*).

TESTS

**Solution S**. Dissolve 1.00 g in *carbon dioxide-free water R* and dilute to 50.0 mL with the same solvent.

**Appearance of solution**. The solution is clear (*2.2.1*) and not more intensely coloured than reference solution $Y_7$ (*2.2.2, Method II*).

Dilute 10 mL of solution S to 20 mL with *water R*.

**pH** (*2.2.3*): 3.0 to 5.0 for solution S.

**Impurities N and O**. Liquid chromatography (*2.2.29*).

*Solvent mixture*: *acetonitrile R1*, *water R* (20:80 *V/V*).

*Test solution*. Dissolve 50.0 mg of the substance to be examined in the solvent mixture and dilute to 50.0 mL with the solvent mixture.

*Reference solution (a)*. Dissolve 5 mg of *terazosin impurity A CRS* and 5.0 mg of *terazosin impurity N CRS* in *acetonitrile R1* using sonication, add 5.0 mL of the test solution and dilute to 50.0 mL with *acetonitrile R1*. Dilute 10.0 mL of this solution to 100.0 mL with the solvent mixture.

*Reference solution (b)*. Dilute 10.0 mL of reference solution (a) to 100.0 mL with the solvent mixture.

*Column*:
- *size*: *l* = 0.25 m, Ø = 4.0 mm;
- *stationary phase*: *octadecylsilyl silica gel for chromatography R* (5 µm);
- *temperature*: 25 °C.

*Mobile phase*: dissolve 2.80 g of *sodium laurilsulfate R* in 1000.0 mL of *water R* and add 11.0 mL of a solution containing 202.4 g/L of *triethylamine R* and 230.0 g/L of *phosphoric acid R*; adjust to pH 2.5 with *phosphoric acid R*; mix 600 volumes of this solution with 400 volumes of *acetonitrile R1*.

*Flow rate*: 1.0 mL/min.

*Detection*: spectrophotometer at 210 nm.

*Injection*: 20 µL.

*Run time*: 4 times the retention time of terazosin.

*Relative retention* with reference to terazosin (retention time = about 10 min): impurity O = about 0.2; impurity N = about 0.3; impurity A = about 0.4.

*System suitability*: reference solution (a):
- *resolution*: minimum 1.5 between the peaks due to impurities A and N.

*Limits*:
- *impurity N*: not more than the area of the corresponding peak in the chromatogram obtained with reference solution (b) (0.1 per cent);
- *impurity O*: not more than the area of the peak due to terazosin in the chromatogram obtained with reference solution (b) (0.1 per cent).

**Related substances**. Liquid chromatography (*2.2.29*).

*Test solution*. Dissolve 50.0 mg of the substance to be examined in the mobile phase and dilute to 100.0 mL with the mobile phase.

*Reference solution (a)*. Dilute 2.0 mL of the test solution to 100.0 mL with the mobile phase. Dilute 5.0 mL of this solution to 100.0 mL with the mobile phase.

*Reference solution (b)*. Dissolve the contents of a vial of *terazosin for system suitability CRS* (containing impurities A, B, C, J, K and M) in the mobile phase and dilute to 10 mL with the mobile phase.

*Reference solution (c)*. Dissolve 5.0 mg of *terazosin impurity L CRS* in the mobile phase and dilute to 100.0 mL with the mobile phase. Dilute 1.0 mL of this solution to 100.0 mL with the mobile phase.

*Reference solution (d)*. To 5 mg of *terazosin impurity E CRS*, add 70 mL of *methanol R* and 30 mL of *water R*. Allow to stand for at least 1 h to dissolve the substance. Use sonication if necessary.

*Column*:
- *size*: *l* = 0.25 m, Ø = 4.6 mm;
- *stationary phase*: *octylsilyl silica gel for chromatography R* (5 µm);
- *temperature*: 30 °C.

*Mobile phase*: mix 2 volumes of *triethylamine R*, 350 volumes of *acetonitrile R*, and 1650 volumes of a solution containing 6 g/L of *sodium citrate R* and 14.25 g/L of *anhydrous citric acid R*.

*Flow rate*: 1.0 mL/min.

*Detection*: spectrophotometer at 245 nm.

*Injection*: 20 µL.

*Run time*: 4 times the retention time of terazosin.

*Identification of impurities*: use the chromatogram supplied with *terazosin for system suitability CRS* and the chromatogram obtained with reference solution (b) to identify the peaks due to impurities A, B, C, J, K and M; use the chromatograms obtained with reference solutions (c) and (d) to identify the peaks due to impurities L and E respectively.

*Retention time*: terazosin = about 11 min.

*System suitability*: reference solution (b):

- *resolution*: minimum 1.5 between the peaks due to impurities B and J; if necessary, adjust the proportion of the aqueous component in the mobile phase (an increase in the proportion of the aqueous component increases the retention times);
- the chromatogram obtained is similar to the chromatogram supplied with *terazosin for system suitability CRS*; in case of insufficient separation of the impurities, reduce the amount of triethylamine in the mobile phase.

*Limits*:

- *correction factors*: for the calculation of content, multiply the peak areas of the following impurities by the corresponding correction factor: impurity C = 0.7; impurity M = 1.6;
- *impurities A, C, E, K*: for each impurity, not more than 5 times the area of the principal peak in the chromatogram obtained with reference solution (a) (0.5 per cent);
- *impurity L*: not more than the area of the corresponding peak in the chromatogram obtained with reference solution (c) (0.1 per cent);
- *impurities B, J, M*: for each impurity, not more than the area of the principal peak in the chromatogram obtained with reference solution (a) (0.1 per cent);
- *unspecified impurities*: for each impurity, not more than the area of the principal peak in the chromatogram obtained with reference solution (a) (0.10 per cent);
- *total*: not more than 5 times the area of the principal peak in the chromatogram obtained with reference solution (a) (0.5 per cent);
- *disregard limit*: 0.5 times the area of the principal peak in the chromatogram obtained with reference solution (a) (0.05 per cent).

**Water** (*2.5.12*): 7.0 per cent to 8.6 per cent, determined on 0.200 g.

**Sulfated ash** (*2.4.14*): maximum 0.1 per cent, determined on 1.0 g.

ASSAY

Dissolve 0.300 g in a mixture of 5.0 mL of *0.01 M hydrochloric acid* and 50 mL of *methanol R*. Titrate with *0.1 M sodium hydroxide*, determining the end-point potentiometrically (*2.2.20*). Read the volume added between the 2 points of inflexion.

1 mL of *0.1 M sodium hydroxide* is equivalent to 42.39 mg of $C_{19}H_{26}ClN_5O_4$.

STORAGE

Protected from light.

IMPURITIES

*Specified impurities: A, B, C, E, J, K, L, M, N, O.*

*Other detectable impurities* (the following substances would, if present at a sufficient level, be detected by one or other of the tests in the monograph. They are limited by the general acceptance criterion for other/unspecified impurities and/or by the general monograph *Substances for pharmaceutical use (2034)*. # TERBINAFINE HYDROCHLORIDE

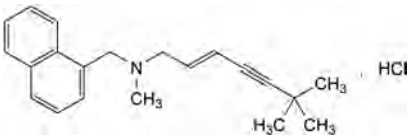
## Terbinafini hydrochloridum



$C_{21}H_{26}ClN$ $M_r$ 327.9
[78628-80-5]

DEFINITION

(2*E*)-*N*,6,6-Trimethyl-*N*-(naphthalen-1-ylmethyl)hept-2-en-4-yn-1-amine hydrochloride.

*Content*: 99.0 per cent to 101.0 per cent (dried substance).

CHARACTERS

*Appearance*: white or almost white powder.

*Solubility*: very slightly or slightly soluble in water, freely soluble in anhydrous ethanol and in methanol, slightly soluble in acetone.

IDENTIFICATION

A. Infrared absorption spectrophotometry (*2.2.24*).
*Comparison*: *terbinafine hydrochloride CRS*.

B. It gives reaction (a) of chlorides (*2.3.1*) using *anhydrous ethanol R* as solvent.

TESTS

**Related substances**. Liquid chromatography (*2.2.29*). *Carry out the test protected from light.*

*Solvent mixture A*: *acetonitrile R*, *water R* (50:50 *V/V*).

*Solvent mixture B*: *acetonitrile R*, *methanol R* (40:60 *V/V*).

*Buffer solution*. Dilute 2.0 mL of *triethylamine R1* to 950 mL with *water R*. Adjust to pH 7.5 with a mixture of 5 volumes of *glacial acetic acid R* and 95 volumes of *water R* and dilute to 1000.0 mL with *water R*.

*Test solution*. Dissolve 25 mg of the substance to be examined in solvent mixture A and dilute to 50.0 mL with solvent mixture A.

*Reference solution (a)*. Dissolve 5 mg of *terbinafine for system suitability CRS* (containing impurities B and E) in 10.0 mL of solvent mixture A.

*Reference solution (b)*. Dilute 1.0 mL of the test solution to 100.0 mL with solvent mixture A. Dilute 1.0 mL of this solution to 10.0 mL with solvent mixture A.

*Column*:

- *size*: *l* = 0.15 m, Ø = 3.0 mm;
- *stationary phase*: spherical *end-capped octadecylsilyl silica gel for chromatography R* (5 µm);
- *temperature*: 40 °C.

*Mobile phase*:

- *mobile phase A*: buffer solution, solvent mixture B (30:70 *V/V*);
- *mobile phase B*: buffer solution, solvent mixture B (5:95 *V/V*);

| Time (min) | Mobile phase A (per cent *V/V*) | Mobile phase B (per cent *V/V*) |
|---|---|---|
| 0 - 4 | 100 | 0 |
| 4 - 25 | 100 → 0 | 0 → 100 |
| 25 - 30 | 0 | 100 |

*Flow rate*: 0.8 mL/min.

*Detection*: spectrophotometer at 280 nm.

*Injection*: 20 µL.

*Identification of impurities*: use the chromatogram supplied with *terbinafine for system suitability CRS* and the chromatogram obtained with reference solution (a) to identify the peaks due to impurities B and E.

*Relative retention* with reference to terbinafine (retention time = about 15 min): impurity B = about 0.9; impurity E = about 1.7.

*System suitability*: reference solution (a):

– *resolution*: minimum 2.0 between the peaks due to impurity B and terbinafine.

*Limits*:

– *correction factor*: for the calculation of content, multiply the peak area of impurity E by 0.5;
– *impurity B*: not more than 1.5 times the area of the principal peak in the chromatogram obtained with reference solution (b) (0.15 per cent);
– *impurity E*: not more than 0.5 times the area of the principal peak in the chromatogram obtained with reference solution (b) (0.05 per cent);
– *unspecified impurities*: for each impurity, not more than the area of the principal peak in the chromatogram obtained with reference solution (b) (0.10 per cent);
– *total*: not more than 3 times the area of the principal peak in the chromatogram obtained with reference solution (b) (0.3 per cent);
– *disregard limit*: 0.5 times the area of the principal peak in the chromatogram obtained with reference solution (b) (0.05 per cent).

**Loss on drying** (*2.2.32*): maximum 0.5 per cent, determined on 1.000 g by drying in an oven at 105 °C.

**Sulfated ash** (*2.4.14*): maximum 0.1 per cent, determined on 1.0 g.

ASSAY

Dissolve 0.250 g in 50 mL of *ethanol (96 per cent) R*, add 5 mL of *0.01 M hydrochloric acid*. Titrate with *0.1 M sodium hydroxide* determining the end-point potentiometrically (*2.2.20*). Read the volume added between the 2 points of inflexion.

1 mL of *0.1 M sodium hydroxide* is equivalent to 32.79 mg of $C_{21}H_{26}ClN$.

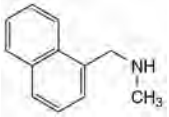
STORAGE

Protected from light.

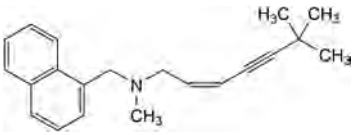
IMPURITIES

*Specified impurities: B, E.*

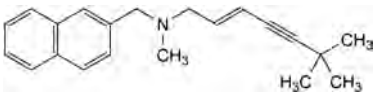
*Other detectable impurities* (the following substances would, if present at a sufficient level, be detected by one or other of the tests in the monograph. They are limited by the general acceptance criterion for other/unspecified impurities and/or by the general monograph *Substances for pharmaceutical use (2034)*. It is therefore not necessary to identify these impurities for demonstration of compliance. See also *5.10. Control of impurities in substances for pharmaceutical use*): *A, C, D, F.*



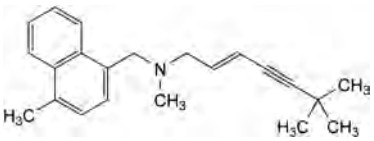
A. *N*-methyl-*C*-(naphthalen-1-yl)methanamine,



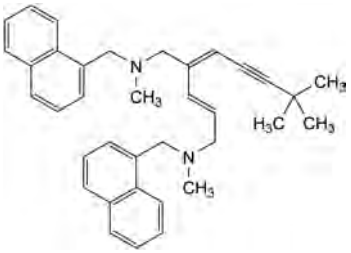
B. (2*Z*)-*N*,6,6-trimethyl-*N*-(naphthalen-1-ylmethyl)hept-2-en-4-yn-1-amine (*cis*-terbinafine),



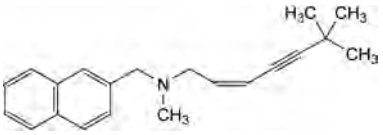
C. (2*E*)-*N*,6,6-trimethyl-*N*-(naphthalen-2-ylmethyl)hept-2-en-4-yn-1-amine (*trans*-isoterbinafine),



D. (2*E*)-*N*,6,6-trimethyl-*N*-[(4-methylnaphthalen-1-yl)methyl]hept-2-en-4-yn-1-amine (4-methylterbinafine),



E. (2*E*,4*E*)-4-(4,4-dimethylpent-2-yn-1-ylidene)-*N*,*N*′-dimethyl-*N*,*N*′-bis(naphthalen-1-ylmethyl)pent-2-ene-1,5-diamine,



F. (2*Z*)-*N*,6,6-trimethyl-*N*-(naphthalen-2-ylmethyl)hept-2-en-4-yn-1-amine (*cis*-isoterbinafine).

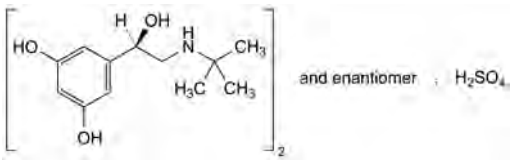
# TERBUTALINE SULFATE

## Terbutalini sulfas



$C_{24}H_{40}N_2O_{10}S$ $M_r$ 548.6
[23031-32-5]

DEFINITION

Bis[5-[(1*RS*)-2-(*tert*-butylamino)-1-hydroxyethyl]benzene-1,3-diol] sulfate.

*Content*: 98.5 per cent to 101.0 per cent (dried substance).

CHARACTERS

*Appearance*: white or almost white, crystalline powder.

*Solubility*: freely soluble in water, slightly soluble in ethanol (96 per cent), practically insoluble in heptane.

It shows polymorphism (*5.9*).

IDENTIFICATION

A. Infrared absorption spectrophotometry (*2.2.24*).

*Comparison*: *terbutaline sulfate CRS*.

If the spectra obtained in the solid state show differences, dissolve the substance to be examined and the reference substance separately in *aldehyde-free methanol R*, evaporate to dryness and record new spectra using the residues.

B. 5 mL of solution S (see Tests) gives reaction (a) of sulfates (*2.3.1*).

TESTS

**Solution S**. Dissolve 1.0 g in *carbon dioxide-free water R* and dilute to 50.0 mL with the same solvent.

**Appearance of solution**. Solution S is clear (*2.2.1*) and its absorbance (*2.2.25*) at 400 nm in a 2 cm cell is not greater than 0.11.

**Acidity**. To 10 mL of solution S add 0.05 mL of *methyl red solution R*. Not more than 1.2 mL of *0.01 M sodium hydroxide* is required to change the colour of the indicator to yellow.

**Optical rotation** (*2.2.7*): − 0.10° to + 0.10°, determined on solution S.

**Related substances**. Liquid chromatography (*2.2.29*).

*Test solution*. Dissolve 75.0 mg of the substance to be examined in the mobile phase and dilute to 50.0 mL with the mobile phase.

*Reference solution (a)*. Dissolve 7.5 mg of *terbutaline impurity C CRS* and 22.5 mg of *terbutaline sulfate CRS* in the mobile phase and dilute to 50 mL with the mobile phase. Dilute 1 mL of the solution to 100 mL with the mobile phase.

*Reference solution (b)*. Dilute 1.0 mL of the test solution to 100.0 mL with the mobile phase. Dilute 1.0 mL of this solution to 10.0 mL with the mobile phase.

*Column*:

- *size*: *l* = 0.15 m, Ø = 4.6 mm;
- *stationary phase*: *base-deactivated end-capped octadecylsilyl silica gel for chromatography R* (5 µm).

*Mobile phase*: prepare a 0.050 M ammonium formate solution as follows: dissolve 3.15 g of *ammonium formate R* in about 980 mL of *water for chromatography R*, adjust to pH 3.0 by adding about 8 mL of *anhydrous formic acid R* and dilute to 1000 mL with *water for chromatography R*. Dissolve 4.23 g of *sodium hexanesulfonate R* in 770 mL of the 0.050 M ammonium formate solution, then add 230 mL of *methanol R*.

*Flow rate*: 1.0 mL/min.

*Detection*: spectrophotometer at 276 nm.

*Injection*: 20 µL.

*Run time*: 6 times the retention time of terbutaline.

*Identification of impurities*: use the chromatogram obtained with reference solution (a) to identify the peak due to impurity C.

*Relative retention* with reference to terbutaline (retention time = about 10 min): impurity C = about 0.9.

*System suitability*: reference solution (a):

- *resolution*: minimum 2.0 between the peaks due to impurity C and terbutaline.

*Calculation of percentage contents*:

- for each impurity, use the concentration of terbutaline sulfate in reference solution (b).

*Limits*:

- *unspecified impurities*: for each impurity, maximum 0.10 per cent;
- *total*: maximum 0.2 per cent;
- *reporting threshold*: 0.05 per cent.

**Loss on drying** (*2.2.32*): maximum 0.5 per cent, determined on 1.000 g by drying in an oven at 105 °C for 3 h.

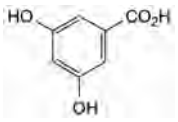
ASSAY

Dissolve 0.400 g in 70 mL of *anhydrous acetic acid R* with heating. Titrate with *0.1 M perchloric acid*, determining the end-point potentiometrically (*2.2.20*).

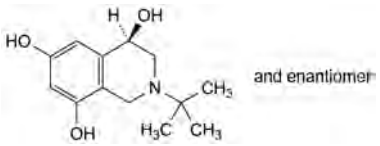
1 mL of *0.1 M perchloric acid* is equivalent to 54.86 mg of $C_{24}H_{40}N_2O_{10}S$.

IMPURITIES

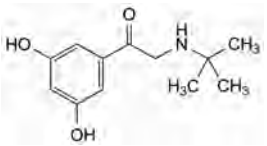
*Other detectable impurities* (the following substances would, if present at a sufficient level, be detected by one or other of the tests in the monograph. They are limited by the general acceptance criterion for other/unspecified impurities and/or by the general monograph *Substances for pharmaceutical use (2034)*. It is therefore not necessary to identify these impurities for demonstration of compliance. See also *5.10. Control of impurities in substances for pharmaceutical use*): *A, B, C, D.*



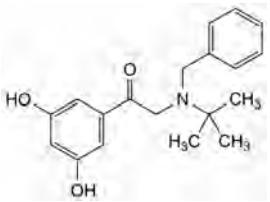
A. 3,5-dihydroxybenzoic acid (α-resorcylic acid),



B. (4*RS*)-2-*tert*-butyl-1,2,3,4-tetrahydroisoquinoline-4,6,8-triol,



C. 2-(*tert*-butylamino)-1-(3,5-dihydroxyphenyl)ethan-1-one,

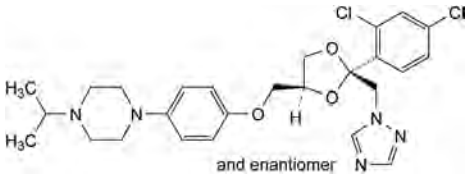


D. 2-[benzyl(*tert*-butyl)amino]-1-(3,5-dihydroxyphenyl)ethan-1-one.

**01/2012:1270**

# TERCONAZOLE

## Terconazolum



$C_{26}H_{31}Cl_2N_5O_3$ $M_r$ 532.5

[67915-31-5]

DEFINITION

1-[4-[[(2*RS*,4*SR*)-2-(2,4-Dichlorophenyl)-2-[(1*H*-1,2,4-triazol-1-yl)methyl]-1,3-dioxolan-4-yl]methoxy]phenyl]-4-(1-methylethyl)piperazine.

*Content*: 99.0 per cent to 101.0 per cent (dried substance).

CHARACTERS

*Appearance*: white or almost white powder.

*Solubility*: practically insoluble in water, freely soluble in methylene chloride, soluble in acetone, sparingly soluble in ethanol (96 per cent).

It shows polymorphism (*5.9*).

IDENTIFICATION

*First identification: A.*

*Second identification: B, C.*

A. Infrared absorption spectrophotometry (*2.2.24*).

*Comparison*: *terconazole CRS.*

If the spectra obtained in the solid state show differences, dissolve the substance to be examined and the reference substance separately in the minimum volume of *acetone R*, evaporate to dryness in a current of air and record new spectra using the residues.

B. Thin-layer chromatography (*2.2.27*).

*Test solution.* Dissolve 30 mg of the substance to be examined in *methanol R* and dilute to 5 mL with the same solvent.

*Reference solution (a).* Dissolve 30 mg of *terconazole CRS* in *methanol R* and dilute to 5 mL with the same solvent.

*Reference solution (b).* Dissolve 30 mg of *ketoconazole CRS* and 30 mg of *terconazole CRS* in *methanol R* and dilute to 5 mL with the same solvent.

*Plate*: *TLC octadecylsilyl silica gel plate R.*

*Mobile phase*: *ammonium acetate solution R*, *dioxan R*, *methanol R* (20:40:40 *V/V/V*).

*Application*: 5 µL.

*Development*: in an unsaturated tank over half of the plate.

*Drying*: in a current of warm air for 15 min.

*Detection*: expose to iodine vapour until the spots appear and examine in daylight.

*System suitability*: reference solution (b):

– the chromatogram shows 2 clearly separated spots.

*Results*: the principal spot in the chromatogram obtained with the test solution is similar in position, colour and size to the principal spot in the chromatogram obtained with reference solution (a).

C. To 30 mg in a porcelain crucible add 0.3 g of *anhydrous sodium carbonate R*. Heat over an open flame for 10 min. Allow to cool. Take up the residue with 5 mL of *dilute nitric acid R* and filter. To 1 mL of the filtrate add 1 mL of *water R*. The solution gives reaction (a) of chlorides (*2.3.1*).

TESTS

**Optical rotation** (*2.2.7*): – 0.10° to + 0.10°.

Dissolve 1.0 g in *methylene chloride R* and dilute to 10 mL with the same solvent.

**Related substances**. Liquid chromatography (*2.2.29*).

*Test solution.* Dissolve 0.100 g of the substance to be examined in *methanol R* and dilute to 10.0 mL with the same solvent.

*Reference solution (a).* Dissolve 2.0 mg of *ketoconazole CRS* and 2.5 mg of *terconazole CRS* in *methanol R* and dilute to 100.0 mL with the same solvent.

*Reference solution (b).* Dilute 1.0 mL of the test solution to 100.0 mL with *methanol R*. Dilute 5.0 mL of this solution to 20.0 mL with *methanol R*.

*Column*:

– *size*: *l* = 0.1 m, Ø = 4.6 mm;

– *stationary phase*: *base-deactivated octadecylsilyl silica gel for chromatography R* (3 µm).

*Mobile phase*:

– *mobile phase A*: 3.4 g/L solution of *tetrabutylammonium hydrogen sulfate R*;

– *mobile phase B*: *acetonitrile R1*;

| Time (min) | Mobile phase A (per cent *V/V*) | Mobile phase B (per cent *V/V*) |
|---|---|---|
| 0 - 10 | 95 → 50 | 5 → 50 |
| 10 - 15 | 50 | 50 |

*Flow rate*: 2 mL/min.

*Detection*: spectrophotometer at 220 nm.

*Injection*: 10 µL.

*Relative retention* with reference to terconazole (retention time = about 7.5 min): ketoconazole = about 0.8; impurity A = about 0.85; impurity B = about 0.9.

*System suitability*: reference solution (a):

– *resolution*: minimum 13 between the peaks due to ketoconazole and terconazole.

*Limits*:

– *impurities A, B*: for each impurity, not more than the area of the principal peak in the chromatogram obtained with reference solution (b) (0.25 per cent);

– *unspecified impurities*: for each impurity, not more than 0.4 times the area of the principal peak in the chromatogram obtained with reference solution (b) (0.10 per cent);

– *total*: not more than twice the area of the principal peak in the chromatogram obtained with reference solution (b) (0.5 per cent);

– *disregard limit*: 0.2 times the area of the principal peak in the chromatogram obtained with reference solution (b) (0.05 per cent).

**Loss on drying** (*2.2.32*): maximum 0.5 per cent, determined on 1.000 g by drying in an oven at 105 °C.

**Sulfated ash** (*2.4.14*): maximum 0.1 per cent, determined on 1.0 g.

ASSAY

Dissolve 0.150 g in 70 mL of a mixture of 1 volume of *anhydrous acetic acid R* and 7 volumes of *methyl ethyl ketone R*. Titrate with *0.1 M perchloric acid*, determining the end-point potentiometrically at the 2nd point of inflexion (*2.2.20*).

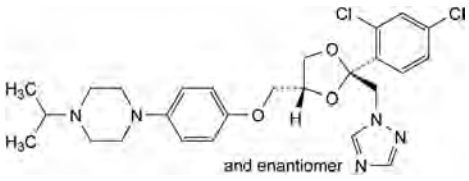
1 mL of *0.1 M perchloric acid* is equivalent to 17.75 mg of $C_{26}H_{31}Cl_2N_5O_3$.

STORAGE

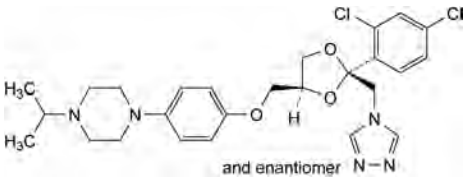
Protected from light.

IMPURITIES

*Specified impurities: A, B.*



A. 1-[4-[[(2*RS*,4*RS*)-2-(2,4-dichlorophenyl)-2-[(1*H*-1,2,4-triazol-1-yl)methyl]-1,3-dioxolan-4-yl]methoxy]phenyl]-4-(1-methylethyl)piperazine,

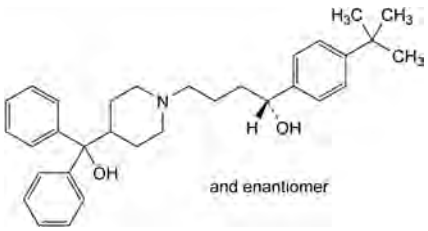


B. 1-[4-[[(2*RS*,4*SR*)-2-(2,4-dichlorophenyl)-2-[(4*H*-1,2,4-triazol-4-yl)methyl]-1,3-dioxolan-4-yl]methoxy]phenyl]-4-(1-methylethyl)piperazine.

**01/2008:0955**
**corrected 6.1**

# TERFENADINE

## Terfenadinum



$C_{32}H_{41}NO_2$ $M_r$ 471.7
[50679-08-8]

DEFINITION

(1*RS*)-1-[4-(1,1-Dimethylethyl)phenyl]-4-[4-(hydroxydiphenylmethyl)piperidin-1-yl]butan-1-ol.

*Content*: 98.5 per cent to 101.0 per cent (dried substance).

CHARACTERS

*Appearance*: white or almost white, crystalline powder.

*Solubility*: very slightly soluble in water, freely soluble in methylene chloride, soluble in methanol. It is very slightly soluble in dilute hydrochloric acid.

It shows polymorphism (*5.9*).

IDENTIFICATION

*First identification: C.*

*Second identification: A, B, D.*

A. Melting point (*2.2.14*): 146 °C to 152 °C.

B. Ultraviolet and visible absorption spectrophotometry (*2.2.25*).

*Test solution.* Dissolve 50.0 mg in *methanol R* and dilute to 100.0 mL with the same solvent.

*Spectral range*: 230-350 nm.

*Absorption maximum*: at 259 nm.

*Shoulders*: at 253 nm and 270 nm.

*Specific absorbance at the absorption maximum*: 13.5 to 14.9.

C. Infrared absorption spectrophotometry (*2.2.24*).

*Comparison*: *terfenadine CRS.*

D. Thin-layer chromatography (*2.2.27*).

*Test solution.* Dissolve 50 mg of the substance to be examined in *methylene chloride R* and dilute to 10 mL with the same solvent.

*Reference solution.* Dissolve 50 mg of *terfenadine CRS* in *methylene chloride R* and dilute to 10 mL with the same solvent.

*Plate*: *TLC silica gel $F_{254}$ plate R.*

*Mobile phase*: *methanol R*, *methylene chloride R* (10:90 *V/V*).

*Application*: 10 µL.

*Development*: over a path of 15 cm.

*Drying*: in air.

*Detection*: examine in ultraviolet light at 254 nm.

*Results*: the principal spot in the chromatogram obtained with the test solution is similar in position and size to the principal spot in the chromatogram obtained with the reference solution.

TESTS

**Related substances**. Liquid chromatography (*2.2.29*).

*Test solution.* Dissolve 15 mg of the substance to be examined in the mobile phase and dilute to 10.0 mL with the mobile phase.

*Reference solution (a).* Dilute 1.0 mL of the test solution to 10.0 mL with the mobile phase. Dilute 1.0 mL of this solution to 20.0 mL with the mobile phase.

*Reference solution (b).* Dissolve 15 mg of *terfenadine impurity A CRS* in the mobile phase and dilute to 10.0 mL with the mobile phase. To 5.0 mL of this solution, add 5.0 mL of the test solution and dilute to 50.0 mL with the mobile phase.

*Reference solution (c).* Dilute 10.0 mL of reference solution (a) to 25.0 mL with the mobile phase.

*Reference solution (d).* Dissolve 0.1 g of *potassium iodide R* in the mobile phase and dilute to 100 mL with the mobile phase. Dilute 1 mL of this solution to 100 mL with the mobile phase.

*Column*:

- *size*: *l* = 0.25 m, Ø = 4.6 mm;
- *stationary phase*: *octylsilyl silica gel for chromatography R* (5 µm).

*Mobile phase*: dilute 600 mL of *acetonitrile R1* to 1 L with *diethylammonium phosphate buffer solution pH 6.0 R.*

*Flow rate*: 1 mL/min.

*Detection*: spectrophotometer at 217 nm.

*Injection*: 20 µL.

*Run time*: 5 times the retention time of terfenadine.

*System suitability*: reference solution (b):

- *resolution*: minimum 5.0 between the peaks due to terfenadine and impurity A;
- *mass distribution ratio*: minimum 2.0 for the peak due to terfenadine; use *potassium iodide R* as the unretained compound (reference solution (d)).

*Limits*:

- *impurities A, B, C, D, E, F, G, H, I, J*: for each impurity, not more than the area of the principal peak in the chromatogram obtained with reference solution (c) (0.2 per cent);
- *total*: not more than the area of the principal peak in the chromatogram obtained with reference solution (a) (0.5 per cent);
- *disregard limit*: 0.025 times the area of the principal peak in the chromatogram obtained with reference solution (c) (0.005 per cent).

**Loss on drying** (*2.2.32*): maximum 0.5 per cent, determined on 1.000 g by drying at 60 °C at a pressure not exceeding 0.5 kPa.

**Sulfated ash** (*2.4.14*): maximum 0.1 per cent, determined on 1.0 g.

ASSAY

Dissolve 0.400 g in 50 mL of *anhydrous acetic acid R*. Titrate with *0.1 M perchloric acid*, determining the end-point potentiometrically (*2.2.20*).

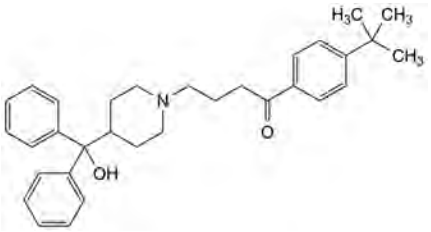
1 mL of *0.1 M perchloric acid* is equivalent to 47.17 mg of $C_{32}H_{41}NO_2$.

STORAGE

Protected from light.

IMPURITIES

*Specified impurities: A, B, C, D, E, F, G, H, I, J.*



A. 1-[4-(1,1-dimethylethyl)phenyl]-4-[4-(hydroxydiphenylmethyl)piperidin-1-yl]butan-1-one,

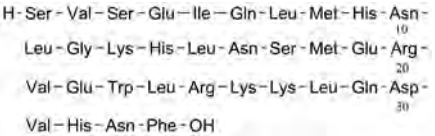
J. ethyl 1-[(4*RS*)-4-[4-(1,1-dimethylethyl)phenyl]-4-hydroxybutyl]piperidine-4-carboxylate.

**01/2017:2829**
**corrected 10.0**

# TERIPARATIDE

## Teriparatidum



$C_{181}H_{291}N_{55}O_{51}S_2$ $M_r$ 4118

[52232-67-4]

DEFINITION

Tetratriacontapeptide in which the sequence of amino acids is the same as that of the 1-34 *N*-terminal fragment of endogeneous human parathyroid hormone (rhPTH).

*Content*: 95.0 per cent to 105.0 per cent (anhydrous, acetic acid- and chloride-free substance).

PRODUCTION

Teriparatide is produced by a method based on recombinant DNA (rDNA) technology. During the course of product development it must be demonstrated that the manufacturing process produces a biologically active protein using a suitable bioassay as approved by the competent authority.

Prior to release, the following tests are carried out on each batch of teriparatide, unless exemption has been granted by the competent authority.

**Host-cell-derived proteins**. The limit is approved by the competent authority.

**Host-cell- and vector-derived DNA**. The limit is approved by the competent authority.

CHARACTERS

*Appearance*: white or almost white, very hygroscopic powder.

*Solubility*: freely soluble in water and in methanol, practically insoluble in acetonitrile.

IDENTIFICATION

A. Peptide mapping (*2.2.55*).

*SELECTIVE CLEAVAGE OF THE PEPTIDE BONDS*

*Solution A*. Dissolve 230 mg of *anhydrous disodium hydrogen phosphate R* and 60 mg of *sodium dihydrogen phosphate monohydrate R* in 100 mL of *water R* and adjust to pH 7.8 with *sodium hydroxide solution R*.

*Test solution*. Dissolve the substance to be examined in solution A to obtain a concentration of 1.5 mg/mL and transfer 150 µL of the solution to a clean tube. Add 90 µL of a 0.25 mg/mL solution of *glutamyl endopeptidase for peptide mapping R* in solution A. Mix and incubate at 37 °C for 18-24 h. Stop the reaction by adding 660 µL of mobile phase A to reach a final digested protein concentration of about 0.25 mg/mL.

*NOTE: if a teriparatide concentration of 1.5 mg/mL is not obtainable, a similar ratio of micrograms of endopeptidase per milligram of teriparatide may be used.*

*Reference solution*. Prepare at the same time and in the same manner as for the test solution but using *teriparatide CRS* instead of the substance to be examined.

*Blank solution*. Prepare at the same time and in the same manner as for the test solution but omitting the substance to be examined.

*CHROMATOGRAPHIC SEPARATION*

Liquid chromatography (*2.2.29*). *Store the solutions at 2-8 °C and use them within 72 h.*

*Column*:

- *size*: *l* = 0.15 m, Ø = 4.6 mm;
- *stationary phase*: *octadecylsilyl silica gel for chromatography R* (3.5 µm) with a pore size of 30 nm;
- *temperature*: 40 °C.

*Mobile phase*:

- *mobile phase A*: mix 1 mL of *trifluoroacetic acid R* and 1000 mL of *water R*; filter and degas;
- *mobile phase B*: mix 1 mL of *trifluoroacetic acid R*, 400 mL of *water R* and 600 mL of *acetonitrile for chromatography R*; filter and degas;

| Time (min) | Mobile phase A (per cent *V/V*) | Mobile phase B (per cent *V/V*) |
|---|---|---|
| 0 - 6 | 96 | 4 |
| 6 - 20 | 96 → 45 | 4 → 55 |
| 20 - 25 | 45 → 0 | 55 → 100 |

*Flow rate*: 1 mL/min.

*Detection*: spectrophotometer at 214 nm.

*Autosampler*: set at 2-8 °C.

*Injection*: 20 µL.

*System suitability*:

- the chromatogram obtained with the reference solution is qualitatively similar to the chromatogram of teriparatide digest supplied with *teriparatide CRS*;
- in the chromatogram obtained with the reference solution, identify the peaks due to digest fragments I, II, III, IV and V:

  *symmetry factor*: maximum 2.3 for the peak due to fragment IV;

  *resolution*: minimum 1.5 between the peaks due to fragments I and III.

*Results*: the profile of the chromatogram obtained with the test solution corresponds to that of the chromatogram obtained with the reference solution.

B. Examine the chromatograms obtained in the assay.

*Results*: the principal peak in the chromatogram obtained with the test solution is similar in retention time to the principal peak in the chromatogram obtained with the reference solution.

TESTS

**Impurities with molecular masses greater than that of teriparatide**. Size-exclusion chromatography (*2.2.30*): use the normalisation procedure. *Store the solutions at 2-8 °C and use them within 72 h.*

*Test solution*. Dissolve the substance to be examined in *water R* to obtain a concentration of 1 mg/mL.

*Reference solution*. Dissolve the contents of a vial of *teriparatide CRS* in *water R* to obtain a concentration of 1 mg/mL.

*Blank solution*: *water R*.

*Resolution solution*. Incubate a vial of *teriparatide CRS* at 75 °C for 16-24 h. After incubation, dissolve the contents of the vial in *water R* to obtain a concentration of 1 mg/mL of degraded teriparatide.

*Column*:

- *size*: *l* = 0.30 m, Ø = 7.8 mm;
- *stationary phase*: *hydrophilic silica gel for chromatography R* (5-10 µm) with a pore size of 12.5 nm, of a grade suitable for fractionation of globular proteins of relative molecular mass up to 150 000.

*Mobile phase*: add 1 mL of *trifluoroacetic acid R* to 750 mL of *water R*, mix with 250 mL of *acetonitrile for chromatography R* and degas.

*Flow rate*: 0.5 mL/min.

*Detection*: spectrophotometer at 214 nm.

*Autosampler*: set at 2-8 °C.

*Injection*: 20 µL.

*Run time*: 1.5 times the retention time of teriparatide monomer.

*Retention time*: teriparatide monomer = about 17 min.

*System suitability*:

- the chromatogram obtained with the reference solution is similar to the chromatogram supplied with *teriparatide CRS*;

– *resolution*: minimum 2.0 between the peaks due to teriparatide dimer and monomer in the chromatogram obtained with the resolution solution.

*Limit*:

– *sum of the peaks eluted before the principal peak*: maximum 0.3 per cent; disregard any peak with a retention time greater than that of the peak due to teriparatide monomer.

**Related proteins**. Liquid chromatography (*2.2.29*): use the normalisation procedure. *Store the solutions at 2-8 °C and use them within 48 h.*

*Buffer solution.* Dissolve 28.4 g of *anhydrous sodium sulfate R* in 900 mL of *water R* and adjust to pH 2.3 with *phosphoric acid R*. Dilute to 1000 mL with *water for chromatography R* and filter.

*Test solution.* Dissolve the substance to be examined in mobile phase A to obtain a concentration of 0.7 mg/mL.

*Reference solution.* Dissolve the contents of a vial of *teriparatide CRS* in mobile phase A to obtain a concentration of 0.7 mg/mL.

*Blank solution*: mobile phase A.

*Resolution solution.* Dissolve the contents of a vial of *teriparatide for system suitability CRS* in mobile phase A to obtain a concentration of 1 mg/mL.

*Column*:

– *size*: *l* = 0.15 m, Ø = 4.6 mm;
– *stationary phase*: *octadecylsilyl silica gel for chromatography R* (3.5 µm) with a pore size of 30 nm;
– *temperature*: 40 °C.

*Mobile phase*:

– *mobile phase A*: mix 10 volumes of *acetonitrile for chromatography R* and 90 volumes of the buffer solution and degas; apply mild heating at 20-25 °C while stirring continuously during analysis;
– *mobile phase B*: mix equal volumes of *acetonitrile for chromatography R* and the buffer solution and degas; apply mild heating at 20-25 °C while stirring continuously during analysis;

| Time (min) | Mobile phase A (per cent *V/V*) | Mobile phase B (per cent *V/V*) |
|---|---|---|
| 0 - 5 | 100 → 65 | 0 → 35 |
| 5 - 35 | 65 → 60 | 35 → 40 |
| 35 - 45 | 60 → 0 | 40 → 100 |

*Flow rate*: 1.0 mL/min.

*Detection*: spectrophotometer at 214 nm.

*Autosampler*: set at 2-8 °C.

*Injection*: 20 µL.

*Relative retention* with reference to teriparatide (retention time = 20-25 min): related protein A ([MetO$^{8}$,MetO$^{18}$]teriparatide) = about 0.40; related protein B ([MetO$^{8}$]teriparatide) = about 0.49; related protein C ([MetO$^{18}$]teriparatide) = about 0.57; related protein D = about 1.06; related protein E = about 1.14.

*System suitability*: resolution solution:

– the chromatogram obtained is similar to the chromatogram supplied with *teriparatide for system suitability CRS*;
– *resolution*: minimum 1.5 between the peaks due to teriparatide and related protein D;
– *symmetry factor*: 0.8 to 2.0 for the peak due to teriparatide;

*Results*:

– the profile of the chromatogram obtained with the test solution corresponds to that of the chromatogram obtained with the reference solution.

*Limits*:

– *sum of related proteins A, B and C*: maximum 0.5 per cent;
– *any other related protein*: maximum 0.5 per cent;
– *total*: maximum 2.0 per cent;
– *reporting threshold*: 0.05 per cent.

**Water** (*2.5.32*): maximum 7.0 per cent, determined on 10 mg using the evaporation technique:

– *temperature*: 100 °C;
– *heating time*: 8 min.

**Bacterial endotoxins** (*2.6.14*): less than 50 IU/mg.

ASSAY

**Acetate**. Liquid chromatography (*2.2.29*): use the normalisation procedure. *Store the solutions at 2-8 °C and use them within 72 h.*

*Test solution.* Dissolve the substance to be examined in the mobile phase to obtain a concentration of 5 mg/mL.

*Reference solutions.* Dissolve separately 100 mg, 200 mg and 300 mg of *anhydrous sodium acetate R* in the mobile phase and dilute to 100 mL with the mobile phase. Further dilute 1.0 mL of each solution to 10.0 mL with the mobile phase to prepare a standard curve with acetate concentrations in the range of 0.072-0.216 mg/mL.

Plot peak areas versus injected acetate content and perform linear regression to create a standard curve.

*Column*:

– *size*: *l* = 0.25 m, Ø = 9.0 mm;
– *stationary phase*: *ion-exclusion resin for chromatography R* (7.5 µm).

*Mobile phase*: 0.5 per cent *V/V* solution of *dilute sulfuric acid R*.

*Flow rate*: 1.0 mL/min.

*Detection*: spectrophotometer at 210 nm.

*Autosampler*: set at 2-8 °C.

*Injection*: 100 µL.

*Run time*: 1.5 times the retention time of acetate.

*Retention time*: acetate = about 10 min.

*System suitability*:

– *repeatability*: maximum relative standard deviation of 1.25 per cent for the area of the principal peak, determined on 3 injections of the middle reference solution;
– the correlation coefficient (*r*) calculated for the standard curve is not less than 0.999.

Calculate the acetate content using the standard curve and the area of the peak due to acetate in the chromatogram obtained with the test solution.

**Chloride**. Liquid chromatography (*2.2.29*): use the normalisation procedure. *Use the solutions within 72 h.*

*Test solution.* Dissolve the substance to be examined in *water R* to obtain a concentration of 1 mg/mL.

*Reference solution (a).* Dissolve 165.9 mg of *sodium chloride R*, previously dried at 105 °C for 30 min, in *water R* and dilute to 100 mL with the same solvent.

*Reference solution (b).* Dissolve 150 mg of *sodium nitrite R* in *water R* and dilute to 100 mL with the same solvent. Mix 1.0 mL of the solution and 2.5 mL of reference solution (a) and dilute to 100 mL with *water R*.

*Reference solutions.* Dilute reference solution (a) with *water R* to prepare a standard curve with at least 4 concentrations in the range of 10-40 µg/mL.

Plot peak areas versus injected chloride content and perform linear regression to create a standard curve.

*Precolumn*:

– *size*: *l* = 0.05 m, Ø = 4.0 mm;
– *stationary phase*: *strongly basic anion-exchange resin for chromatography R* (15 µm).

*Column*:

– *size*: *l* = 0.25 m, Ø = 4.0 mm;

– *stationary phase*: *strongly basic anion-exchange resin for chromatography R* (15 µm).

*Mobile phase*: dissolve 285.7 mg of *sodium hydrogen carbonate R* and 381.6 mg of *anhydrous sodium carbonate R* in *water R* and dilute to 2000 mL with the same solvent.

*Flow rate*: 2.0 mL/min.

*Detection*: conductivity detector; use a self-regenerating anion suppressor at 100 mA.

*Injection*: 50 µL.

*Run time*: 6 times the retention time of chloride.

*Retention time*: chloride = about 1.6 min; nitrite = about 1.8 min.

*System suitability*: reference solution (b):

– *resolution*: minimum 1.5 between the peaks due to chloride and nitrite;
– *symmetry factor*: maximum 2.0 for the peaks due to chloride and nitrite;
– *repeatability*: maximum relative standard deviation of 2.0 per cent for the areas of the peaks due to chloride and nitrite, determined on 5 injections;
– the correlation coefficient (*r*) calculated for the standard curve is not less than 0.999.

Calculate the chloride content using the standard curve and the area of the peak due to chloride in the chromatogram obtained with the test solution.

**Content**. Liquid chromatography (*2.2.29*) as described in the test for related proteins with the following modifications.

*Test solution*. Dissolve the substance to be examined in the mobile phase to obtain a concentration of 0.25 mg/mL.

*Reference solution*. Dissolve the contents of a vial of *teriparatide CRS* in the mobile phase to obtain a concentration of 0.25 mg/mL.

*Mobile phase*: mobile phase A, mobile phase B (63:37 *V/V*); apply mild heating at 20-25 °C while stirring continuously during analysis.

*Run time*: 1.5 times the retention time of teriparatide.

*Retention time*: teriparatide = about 10 min.

*System suitability*: reference solution:

– *symmetry factor*: 0.8 to 1.5 for the peak due to teriparatide;
– *repeatability*: maximum relative standard deviation of 1.25 per cent for the area of the peak due to teriparatide, determined on 3 injections.

Calculate the percentage content of teriparatide ($C_{181}H_{291}N_{55}O_{51}S_2$) taking into account the assigned content of *teriparatide CRS*.

STORAGE

In an airtight container, protected from light, at − 10 °C or below.

**07/2017:2646**

# TERLIPRESSIN

## Terlipressinum

$C_{52}H_{74}N_{16}O_{15}S_2$ $M_r$ 1227
[14636-12-5]

DEFINITION

Glycyl-glycyl-glycyl-L-cysteinyl-L-tyrosyl-L-phenylalanyl-L-glutaminyl-L-asparaginyl-L-cysteinyl-L-prolyl-L-lysylglycinamide cyclic (4→9)-disulfide.

Synthetic dodecapeptide analogue of the natural hormone vasopressin. It is available as an acetate.

*Content*: 95.0 per cent to 105.0 per cent (anhydrous, acetic acid-free substance).

CHARACTERS

*Appearance*: white or almost white fluffy powder, hygroscopic.

IDENTIFICATION

Carry out either tests A, B or tests A, C.

A. Examine the chromatograms obtained in the assay.

*Results*: the principal peak in the chromatogram obtained with the test solution is similar in retention time and size to the principal peak in the chromatogram obtained with reference solution (a).

B. Nuclear magnetic resonance spectrometry (*2.2.64*).

*Preparation*: 2.9 mg/mL solution in *deuterium oxide R* containing 20 µg/mL of *deuterated sodium trimethylsilylpropionate R*, adjusted to pH 4 with *deuterated acetic acid R*.

*Comparison*: dissolve the contents of a vial of *terlipressin for NMR identification CRS* in *deuterium oxide R* containing 20 µg/mL of *deuterated sodium trimethylsilylpropionate R*, adjusted to pH 4 with *deuterated acetic acid R*, to obtain a concentration of 2.9 mg/mL.

*Operating conditions*:

– *field strength*: minimum 300 MHz;
– *temperature*: 23 °C.

*Results*: examine the $^1$H NMR spectrum from 0 to 9 ppm. The $^1$H NMR spectrum obtained is qualitatively similar to the $^1$H NMR spectrum obtained with *terlipressin for NMR identification CRS*.

C. Amino acid analysis (*2.2.56*). Method 1 for hydrolysis and method 1 for analysis are suitable.

Express the content of each amino acid in moles. Calculate the relative proportions of the amino acids, taking 1/9 of the sum of the number of moles of aspartic acid, glutamic acid, proline, glycine, phenylalanine and lysine as equal to 1. The values fall within the following limits: glycine 3.6 to 4.4; half-cystine 1.4 to 2.2; tyrosine 0.7 to 1.1; phenylalanine, glutamic acid, aspartic acid, proline and lysine 0.9 to 1.1. Not more than traces of other amino acids are present.

TESTS

**Specific optical rotation** (*2.2.7*): − 108 to − 88 (anhydrous and acetic acid-free substance).

Dissolve 125.0 mg in 25.0 mL of a 1 per cent *V/V* solution of *glacial acetic acid R*.

**Related substances**. Liquid chromatography (*2.2.29*).

*Buffer solution*. Dissolve 3.30 g of *ammonium sulfate R* in *water for chromatography R* and dilute to 5000 mL with the same solvent. Add 1.0 mL of *sulfuric acid R* and mix well; filter through a membrane filter (nominal pore size 0.45 µm).

*Test solution*. Dissolve 10.0 mg of the substance to be examined in 50.0 mL of a 9 g/L solution of *sodium chloride R*.

*Solution A*. Dissolve the contents of a vial of *terlipressin impurity mixture CRS* (containing impurities A, D and L) in 1.0 mL of a 9 g/L solution of *sodium chloride R*.

*Solution B*. Dissolve the contents of a vial of *terlipressin CRS* in a 9 g/L solution of *sodium chloride R* and dilute to 2.5 mL with the same solution.

*Reference solution (a)*. Dilute 1.0 mL of solution B to 2.0 mL with a 9 g/L solution of *sodium chloride R*.

*Reference solution (b)*. Mix 20 µL of solution A and 500 µL of solution B, and dilute to 1.0 mL with a 9 g/L solution of *sodium chloride R*.

*Reference solution (c).* Mix 100 µL of solution A and 500 µL of solution B, and dilute to 1.0 mL with a 9 g/L solution of *sodium chloride R*.

*Reference solution (d).* Dilute 1.0 mL of the test solution to 100.0 mL with a 9 g/L solution of *sodium chloride R*. Dilute 1.0 mL of this solution to 10.0 mL with a 9 g/L solution of *sodium chloride R*.

*Column*:

- *size*: *l* = 0.15 m, Ø = 3.0 mm;
- *stationary phase*: *end-capped octadecylsilyl silica gel for chromatography R* (5 µm);
- *temperature*: 30 °C.

*Mobile phase*:

- *mobile phase A*: *methanol R*, buffer solution (18.5:81.5 *V/V*);
- *mobile phase B*: *methanol R*, buffer solution (30:70 *V/V*);

| Time (min) | Mobile phase A (per cent *V/V*) | Mobile phase B (per cent *V/V*) |
|---|---|---|
| 0 - 35 | 100 | 0 |
| 35 - 55 | 100 → 0 | 0 → 100 |
| 55 - 65 | 0 | 100 |

*Flow rate*: 0.6 mL/min.

*Detection*: spectrophotometer at 210 nm.

*Injection*: 200 µL of the test solution and reference solutions (a), (b), (c) and (d).

*Identification of impurities*: use the chromatogram supplied with *terlipressin impurity mixture CRS* and the chromatogram obtained with reference solution (c) to identify the peaks due to impurities A, D and L.

*Relative retention* with reference to terlipressin (retention time = about 21 min): impurity E = about 0.4; impurity C = about 0.5; impurity B = about 0.7; impurity A = about 0.85; impurity G = about 1.2; impurity H = about 1.4; impurities I and F = about 2.0; impurity L = about 2.2; impurity D = about 2.3; impurity K = about 2.5; impurity J = about 2.8.

*System suitability*:

- *resolution*: minimum 1.4 between the peak due to impurity A and the principal peak in the chromatogram obtained with reference solution (c); the peaks due to impurities L and D are separated as shown in the chromatogram supplied with *terlipressin impurity mixture CRS*.
- *signal-to-noise ratio*: minimum 50 for the peak due to impurity A in the chromatogram obtained with reference solution (b);
- *symmetry factor*: maximum 2.0 for the peak due to terlipressin in the chromatogram obtained with reference solution (a);
- *repeatability*: maximum relative standard deviation of 2.0 per cent determined on 5 injections of reference solution (a).

*Calculation of percentage contents*:

- for each impurity, use the concentration of terlipressin in reference solution (d).

*Limits*:

- *impurity D*: maximum 0.6 per cent;
- *unspecified impurities*: for each impurity, maximum 0.5 per cent;
- *total*: maximum 1.5 per cent;
- *reporting threshold*: 0.1 per cent.

**Acetic acid** (*2.5.34*): 8.0 per cent to 14.0 per cent.

*Test solution.* Dissolve 20.0 mg of the substance to be examined in a mixture of 5 volumes of mobile phase B and 95 volumes of mobile phase A, and dilute to 20.0 mL with the same mixture of solvents.

**Water** (*2.5.32*): maximum 10.0 per cent, determined on 10.0 mg using the evaporation technique at 120 °C.

ASSAY

Liquid chromatography (*2.2.29*) as described in the test for related substances with the following modification.

*Injection*: 200 µL of the test solution and reference solution (a).

Calculate the percentage content of terlipressin ($C_{52}H_{74}N_{16}O_{15}S_2$) taking into account the assigned content of $C_{52}H_{74}N_{16}O_{15}S_2$ in *terlipressin CRS*.

STORAGE

In an airtight container, protected from light, at a temperature of 2 °C to 8 °C.

LABELLING

The label states the terlipressin content ($C_{52}H_{74}N_{16}O_{15}S_2$).

IMPURITIES

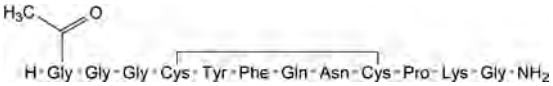
*Specified impurities: D.*

*Other detectable impurities* (the following substances would, if present at a sufficient level, be detected by one or other of the tests in the monograph. They are limited by the general acceptance criterion for other/unspecified impurities and/or by the general monograph *Substances for pharmaceutical use (2034)*. It is therefore not necessary to identify these impurities for demonstration of compliance. See also *5.10. Control of impurities in substances for pharmaceutical use*): *A, B, C, E, F, G, H, I, J, K, L.*

A. des-1-glycine-terlipressin,

B. des-1,2-diglycine-terlipressin,

C. des-(1-3)-terlipressin,



D. $N^1$-acetylterlipressin,

E. [6-D-phenylalanine]terlipressin,

F. [7-L-glutamic acid]terlipressin,

G. [8-L-β-aspartic acid]terlipressin,

H. [8-L-α-aspartic acid]terlipressin,

I. [12-glycine]terlipressin,

J. [12-glycine]terlipressin ethyl ester,

K. [7-L-glutamic acid,12-glycine]terlipressin,

L. [8-L-aspartic acid,12-glycine]terlipressin.

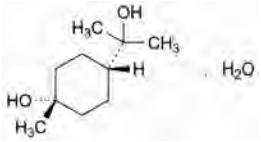
corrected 10.0

# TERPIN MONOHYDRATE

## Terpinum monohydricum



$C_{10}H_{20}O_2,H_2O$ $M_r$ 190.3
[2451-01-6]

DEFINITION

(1*s*,4*s*)-4-(2-Hydroxypropan-2-yl)-1-methylcyclohexan-1-ol monohydrate.

*Content*: 98.0 per cent to 102.0 per cent (anhydrous substance).

CHARACTERS

*Appearance*: white or almost white, crystalline powder.

*Solubility*: slightly soluble in water, soluble in ethanol (96 per cent), slightly soluble in methylene chloride.

mp: about 117 °C.

IDENTIFICATION

A. Infrared absorption spectrophotometry (*2.2.24*).
*Comparison*: *terpin monohydrate CRS*.

B. Water (see Tests).

TESTS

**Solution S**. Dissolve 2.50 g in *ethanol (96 per cent) R* and dilute to 50.0 mL with the same solvent.

**Appearance of solution**. Solution S is clear (*2.2.1*) and colourless (*2.2.2, Method II*).

**Acidity or alkalinity**. To 10 mL of solution S add 0.1 mL of *bromothymol blue solution R1*. Not more than 0.2 mL of *0.02 M sodium hydroxide* or *0.02 M hydrochloric acid* is required to change the colour of the indicator.

**Related substances**. Gas chromatography (*2.2.28*): use the normalisation procedure.

*Internal standard solution*. Dissolve 0.500 g of *biphenyl R* in 1 mL of *methylene chloride R* and dilute to 25.0 mL with *methanol R*.

*Test solution (a)*. Dissolve 0.375 g of the substance to be examined in *methanol R* and dilute to 25.0 mL with the same solvent.

*Test solution (b)*. Dissolve 85.0 mg of the substance to be examined in *methanol R*, add 2.0 mL of the internal standard solution and dilute to 100.0 mL with *methanol R*.

*Reference solution (a)*. Dissolve 15.0 mg of *trans-terpin R* (impurity D) in test solution (a) and dilute to 10.0 mL with test solution (a). Dilute 1.0 mL of the solution to 10.0 mL with test solution (a).

*Reference solution (b)*. Dissolve 85.0 mg of *terpin monohydrate CRS* in *methanol R*, add 2.0 mL of the internal standard solution and dilute to 100.0 mL with *methanol R*.

*Column*:
- *material*: fused silica;
- *size*: *l* = 30 m, Ø = 0.32 mm;
- *stationary phase*: *methylpolysiloxane R* (film thickness 1.0 µm).

*Carrier gas*: *helium for chromatography R*.

*Flow rate*: 1 mL/min.

*Split ratio*: 1:10.

*Temperature*:

| | Time (min) | Temperature (°C) |
|---|---|---|
| Column | 0 - 11 | 180 |
| | 11 - 14 | 180 → 270 |
| | 14 - 15 | 270 |
| Injection port | | 220 |
| Detector | | 300 |

*Detection*: flame ionisation.

*Injection*: 1 µL of test solution (a) and reference solution (a).

*Relative retention* with reference to terpin (retention time = about 6.3 min): impurity D = about 1.05; internal standard = about 1.2.

*System suitability*: reference solution (a):
- *peak-to-valley ratio*: minimum 3, where $H_p$ = height above the baseline of the peak due to impurity D and $H_v$ = height above the baseline of the lowest point of the curve separating this peak from the peak due to terpin.

*Limits*:
- *unspecified impurities*: for each impurity, maximum 0.10 per cent;
- *total*: maximum 0.3 per cent;
- *reporting threshold*: 0.05 per cent.

**Water** (*2.5.12*): 8.0 per cent to 10.0 per cent, determined on 0.200 g.

**Sulfated ash** (*2.4.14*): maximum 0.1 per cent, determined on 1.0 g.

ASSAY

Gas chromatography (*2.2.28*) as described in the test for related substances with the following modification.

*Injection*: 0.5 µL of test solution (b) and reference solution (b).

Calculate the percentage content of terpin using the following expression:

$$\frac{A_1 \times m_2 \times A_4 \times 100}{A_2 \times m_1 \times A_3}$$

$A_1$ = area of the peak due to terpin in the chromatogram obtained with test solution (b);

$A_2$ = area of the peak due to terpin in the chromatogram obtained with reference solution (b);

$A_3$ = area of the peak due to the internal standard in the chromatogram obtained with test solution (b);

$A_4$ = area of the peak due to the internal standard in the chromatogram obtained with reference solution (b);

$m_1$ = mass of the substance to be examined used to prepare test solution (b), in milligrams;

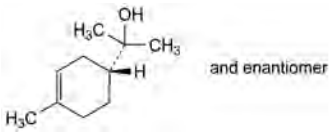
$m_2$ = mass of *terpin monohydrate CRS* used to prepare reference solution (b), in milligrams.

STORAGE

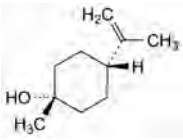
In an airtight container, protected from light.

IMPURITIES

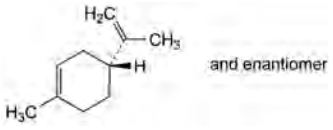
*Other detectable impurities* (the following substances would, if present at a sufficient level, be detected by one or other of the tests in the monograph. They are limited by the general acceptance criterion for other/unspecified impurities and/or by the general monograph *Substances for pharmaceutical use (2034)*. It is therefore not necessary to identify these impurities for demonstration of compliance. See also *5.10. Control of impurities in substances for pharmaceutical use*): *A, B, C, D.*



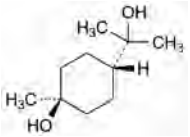
A. 2-[(1*RS*)-4-methylcyclohex-3-en-1-yl]propan-2-ol (α-terpineol),



B. (1*s*,4*s*)-1-methyl-4-(prop-1-en-2-yl)cyclohexan-1-ol (*cis*-β-terpineol),



C. (4*RS*)-1-methyl-4-(prop-1-en-2-yl)cyclohex-1-ene (limonene),

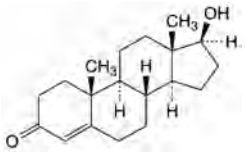


D. (1*r*,4*r*)-4-(2-hydroxypropan-2-yl)-1-methylcyclohexan-1-ol (*trans*-terpin).

**01/2008:1373**
**corrected 7.0**

# TESTOSTERONE

## Testosteronum



$C_{19}H_{28}O_2$ $M_r$ 288.4
[58-22-0]

DEFINITION

17β-Hydroxyandrost-4-en-3-one.

*Content*: 97.0 per cent to 103.0 per cent (dried substance).

CHARACTERS

*Appearance*: white or almost white crystalline powder, or colourless or yellowish-white crystals.

*Solubility*: practically insoluble in water, freely soluble in alcohol and in methylene chloride, practically insoluble in fatty oils.

mp: about 155 °C.

IDENTIFICATION

Infrared absorption spectrophotometry (*2.2.24*).

*Comparison*: *testosterone CRS*.

TESTS

**Specific optical rotation** (*2.2.7*): + 106 to + 114 (dried substance).

Dissolve 0.250 g in *ethanol R* and dilute to 25.0 mL with the same solvent.

**Impurities D and F**. Thin-layer chromatography (*2.2.27*).

*Test solution*. Dissolve 0.100 g of the substance to be examined in *methanol R* and dilute to 10 mL with the same solvent.

*Reference solution (a)*. Dissolve 1 mg of *stanolone R* in *methanol R* and dilute to 10 mL with the same solvent. In 1 mL of this solution, dissolve 10 mg of *testosterone for impurity D identification CRS* (testosterone spiked with about 1 per cent of impurity D).

*Reference solution (b)*. Dilute 1.0 mL of the test solution to 100.0 mL with *methanol R*.

*Reference solution (c)*. Dilute 2.0 mL of reference solution (b) to 10.0 mL with *methanol R*.

*Reference solution (d)*. Dilute 1.0 mL of reference solution (b) to 10.0 mL with *methanol R*.

*Plate*: *TLC silica gel $F_{254}$ plate R* (6-8 μm).

*Preconditioning* (in the dark): add about 5 g of powdered *silver nitrate R* to 100 mL of *methanol R*. Stir the suspension for 30 min. Filter or decant the suspension and immerse the plate in the silver nitrate solution for at least 30 min. Dry at 75 °C for 30 min.

A pre-conditioned plate can be stored in the dark for 5-7 days.

*Mobile phase*: *acetic acid R*, *ethanol R*, *dioxan R*, *methylene chloride R* (1:2:10:90 *V/V/V/V*).

*Application*: 2 μL.

*Development*: in a saturated tank over 3/4 of the plate.

*Drying*: allow to stand at room temperature and protected from light for 30 min.

*Detection*: spray with a 200 g/L solution of *toluenesulfonic acid R* in *ethanol R* and heat at 105 °C for 10 min. Examine in ultraviolet light at 365 nm.

*System suitability*: the chromatogram obtained with reference solution (a) shows 3 clearly separated spots; impurity D $R_F$ = about 0.5; testosterone $R_F$ = about 0.65; impurity F $R_F$ = about 0.7.

*Limits*:

- *impurity D*: any spot due to impurity D is not more intense than the spot in the chromatogram obtained with reference solution (c) (0.2 per cent),
- *impurity F*: any spot due to impurity F is not more intense than the spot in the chromatogram obtained with reference solution (d) (0.1 per cent).

**Related substances**. Liquid chromatography (*2.2.29*).

*Test solution*. Dissolve 0.100 g of the substance to be examined in *methanol R* and dilute to 10.0 mL with the same solvent.

*Reference solution (a)*. Dissolve 10 mg of *testosterone for system suitability CRS* (containing impurities C and I) in 1 mL of *methanol R*.

*Reference solution (b)*. Dilute 1.0 mL of the test solution to 20.0 mL with *methanol R*. Dilute 1.0 mL of this solution to 10.0 mL with *methanol R*.

*Reference solution (c)*. Dilute 2.0 mL of reference solution (b) to 10.0 mL with *methanol R*.

*Column*:

- *size*: *l* = 0.25 m, Ø = 4.6 mm,
- *stationary phase*: spherical *end-capped octadecylsilyl silica gel for chromatography R* (5 μm) with a pore size of 15 nm,
- *temperature*: 40 °C.

*Mobile phase*:

- *mobile phase A*: *water for chromatography R*, *methanol R* (45:55 *V/V*),
- *mobile phase B*: *methanol R*,

Monographs T

| Time (min) | Mobile phase A (per cent *V/V*) | Mobile phase B (per cent *V/V*) |
|---|---|---|
| 0 - 4 | 100 | 0 |
| 4 - 24 | 100 → 60 | 0 → 40 |
| 24 - 53 | 60 → 0 | 40 → 100 |
| 53 - 55 | 0 | 100 |

*Flow rate*: 1.0 mL/min.

*Detection*: spectrophotometer at 254 nm.

*Injection*: 20 µL.

*Relative retention* with reference to testosterone (retention time = about 18 min): impurity G = about 0.6; impurity H = about 0.8; impurity A = about 0.9; impurity I = about 0.95; impurity C = about 1.2; impurity E = about 1.7; impurity J = about 2.1; impurity B = about 2.5.

*System suitability*: reference solution (a):

– *resolution*: minimum baseline separation between the peaks due to impurity I and testosterone.

*Limits*: use the chromatogram obtained with reference solution (a) to identify the peaks due to impurities C and I:

– *correction factor*: for the calculation of content, multiply the peak area of impurity I by 2.9,
– *impurity C*: not more than the area of the principal peak in the chromatogram obtained with reference solution (b) (0.5 per cent),
– *impurity I*: not more than twice the area of the principal peak in the chromatogram obtained with reference solution (c) (0.2 per cent),
– *impurities A, B, E, G, H, J*: for each impurity, not more than the area of the principal peak in the chromatogram obtained with reference solution (c) (0.1 per cent),
– *any other impurity*: for each impurity, not more than the area of the principal peak in the chromatogram obtained with reference solution (c) (0.1 per cent),
– *total*: not more than 1.2 times the area of the principal peak in the chromatogram obtained with reference solution (b) (0.6 per cent),
– *disregard limit*: 0.5 times the area of the principal peak in the chromatogram obtained with reference solution (c) (0.05 per cent).

**Loss on drying** (*2.2.32*): maximum 1.0 per cent, determined on 0.500 g by drying in an oven at 105 °C for 2 h.

ASSAY

Dissolve 50.0 mg in *alcohol R* and dilute to 100.0 mL with the same solvent. Dilute 2.0 mL to 100.0 mL with *alcohol R*. Measure the absorbance (*2.2.25*) at the absorption maximum at 241 nm.

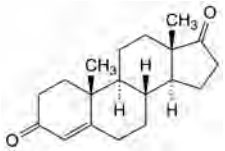
Calculate the content of $C_{19}H_{28}O_2$ taking the specific absorbance to be 569.

STORAGE

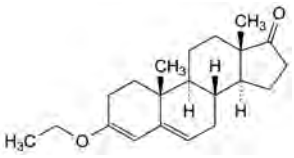
Protected from light.

IMPURITIES

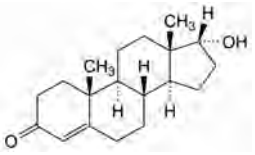
*Specified impurities: A, B, C, D, E, F, G, H, I, J.*



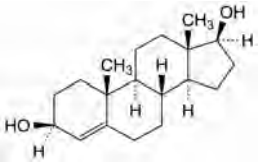
A. androst-4-ene-3,17-dione (androstenedione),



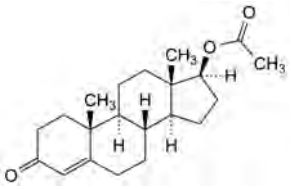
B. 3-ethoxyandrosta-3,5-dien-17-one (androstenedione ethylenolether),



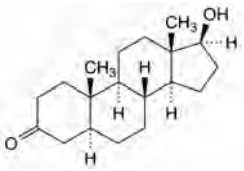
C. 17α-hydroxyandrost-4-en-3-one (epitestosterone),



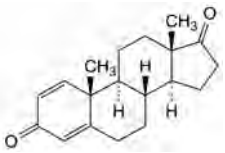
D. androst-4-ene-3β,17β-diol (Δ4-androstenediol),



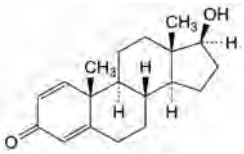
E. 3-oxoandrost-4-en-17β-yl acetate (testosterone acetate),



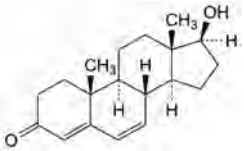
F. 17β-hydroxy-5α-androstan-3-one (androstanolone, stanolone),



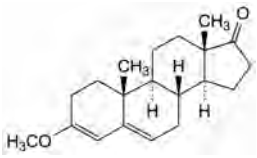
G. androsta-1,4-diene-3,17-dione (androstadienedione).



H. 17β-hydroxyandrosta-1,4-dien-3-one (boldenone),



I. 17β-hydroxyandrosta-4,6-dien-3-one (Δ6-testosterone),



J. 3-methoxyandrosta-3,5-dien-17-one (androstenedione methylenolether).

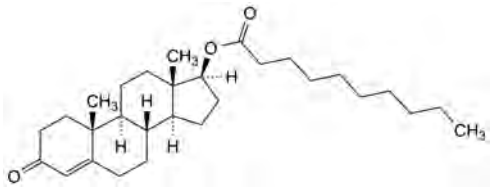
**corrected 10.0**

# TESTOSTERONE DECANOATE

## Testosteroni decanoas



$C_{29}H_{46}O_3$ $M_r$ 442.7

DEFINITION

3-Oxoandrost-4-en-17β-yl decanoate.

*Content*: 97.0 per cent to 102.0 per cent (dried substance).

CHARACTERS

*Appearance*: white or almost white powder.

*Solubility*: practically insoluble in water, very soluble in acetone, in methylene chloride and in anhydrous ethanol, freely soluble in fatty oils.

IDENTIFICATION

A. Infrared absorption spectrophotometry (*2.2.24*).
*Comparison*: *testosterone decanoate CRS*.

B. Examine the chromatograms obtained in the assay.
*Results*: the principal peak in the chromatogram obtained with the test solution is similar in retention time and size to the principal peak in the chromatogram obtained with reference solution (c).

TESTS

**Appearance of solution**. The solution is clear (*2.2.1*) and not more intensely coloured than reference solution $BY_6$ (*2.2.2, Method II*).

Dissolve 0.20 g in 20 mL of *methanol R*.

**Specific optical rotation** (*2.2.7*): + 75.0 to + 80.0 (dried substance).

Dissolve 0.200 g in *anhydrous ethanol R* and dilute to 20.0 mL with the same solvent.

**Related substances**. Liquid chromatography (*2.2.29*).

*Test solution*. Dissolve 20.0 mg of the substance to be examined in the mobile phase and dilute to 50.0 mL with the mobile phase.

*Reference solution (a)*. Dissolve the contents of a vial of *testosterone decanoate for system suitability CRS* (containing impurities A, B, C, D, E and F) in 1 mL of the mobile phase.

*Reference solution (b)*. Dilute 10.0 mL of the test solution to 100.0 mL with the mobile phase. Dilute 1.0 mL of this solution to 20.0 mL with the mobile phase.

*Reference solution (c)*. Dissolve 20.0 mg of *testosterone decanoate CRS* in the mobile phase and dilute to 50.0 mL with the mobile phase.

*Column*:
- *size*: *l* = 0.25 m, Ø = 4.6 mm;
- *stationary phase*: *end-capped octadecylsilyl silica gel for chromatography R* (5 µm);
- *temperature*: 40 °C.

*Mobile phase*: *water R*, *acetonitrile R* (5:95 *V/V*).

*Flow rate*: 1.0 mL/min.

*Detection*: spectrophotometer at 240 nm.

*Injection*: 20 µL of the test solution and reference solutions (a) and (b).

*Run time*: twice the retention time of testosterone decanoate.

*Identification of impurities*: use the chromatogram supplied with *testosterone decanoate for system suitability CRS* and the chromatogram obtained with reference solution (a) to identify the peaks due to impurities A, B, C, D, E and F.

*Relative retention* with reference to testosterone decanoate (retention time = about 20 min): impurity A = about 0.2; impurity B = about 0.6; impurities C and G = about 0.79; impurity D = about 0.83; impurity E = about 1.3; impurity F = about 1.7.

*System suitability*: reference solution (a):
- *resolution*: minimum 1.5 between the peaks due to impurities C and D.

*Limits*:
- *correction factors*: for the calculation of content, multiply the peak area of impurity A by 0.7;
- *impurities A, B, D, E, F*: for each impurity, not more than the area of the principal peak in the chromatogram obtained with reference solution (b) (0.5 per cent);
- *sum of impurities C and G*: not more than the area of the principal peak in the chromatogram obtained with reference solution (b) (0.5 per cent);
- *unspecified impurities*: for each impurity, not more than 0.2 times the area of the principal peak in the chromatogram obtained with reference solution (b) (0.10 per cent);
- *total*: not more than twice the area of the principal peak in the chromatogram obtained with reference solution (b) (1.0 per cent);
- *disregard limit*: 0.1 times the area of the principal peak in the chromatogram obtained with reference solution (b) (0.05 per cent).

**Free acid**. Dissolve 0.65 g in 10 mL of *ethanol (96 per cent) R*, previously neutralised to *bromothymol blue solution R3*, and titrate immediately with *0.01 M sodium hydroxide*, using 0.1 mL of *bromothymol blue solution R3* as indicator. Not more than 0.6 mL of *0.01 M sodium hydroxide* is required to change the colour of the indicator to blue.

**Loss on drying** (*2.2.32*): maximum 0.5 per cent, determined on 1.000 g by drying *in vacuo* at a pressure not exceeding 0.7 kPa.

ASSAY

Liquid chromatography (*2.2.29*) as described in the test for related substances with the following modification.

*Injection*: 20 µL of the test solution and reference solution (c).

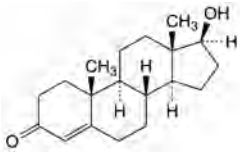
Calculate the percentage content of $C_{29}H_{46}O_3$ from the declared content of *testosterone decanoate CRS*.

STORAGE

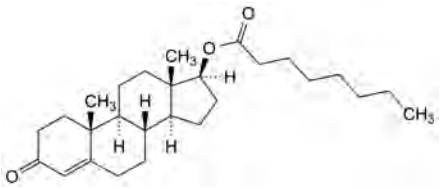
At a temperature of 2 °C to 8 °C.

IMPURITIES

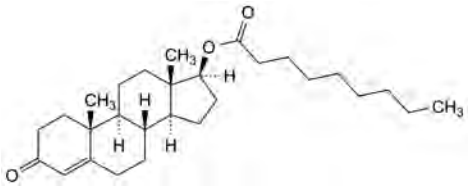
*Specified impurities: A, B, C, D, E, F, G.*



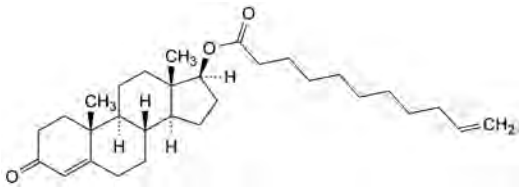
A. testosterone,



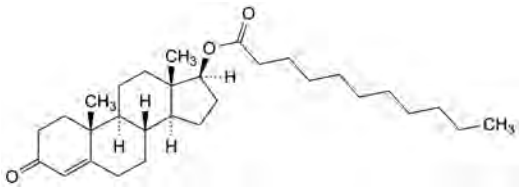
B. 3-oxoandrost-4-en-17β-yl octanoate (testosterone octanoate),



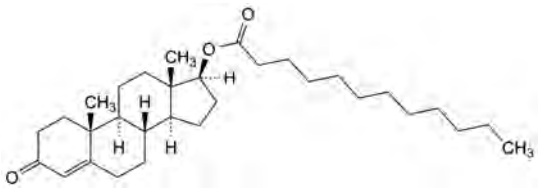
C. 3-oxoandrost-4-en-17β-yl nonanoate (testosterone nonanoate),



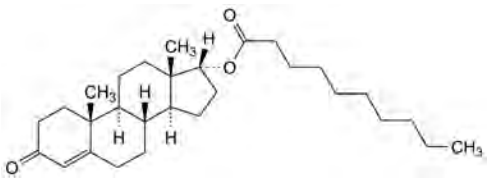
D. 3-oxoandrost-4-en-17β-yl undec-10-enoate (testosterone undecylenate),



E. 3-oxoandrost-4-en-17β-yl undecanoate (testosterone undecanoate),



F. 3-oxoandrost-4-en-17β-yl dodecanoate (testosterone laurate),

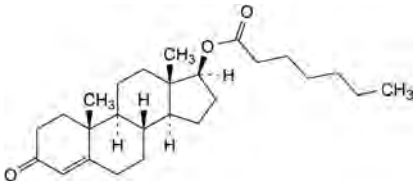


G. 3-oxoandrost-4-en-17α-yl decanoate (epitestosterone decanoate).

**04/2011:1048**
**corrected 10.0**

# TESTOSTERONE ENANTATE

## Testosteroni enantas



$C_{26}H_{40}O_3$ $M_r$ 400.6
[315-37-7]

DEFINITION

3-Oxoandrost-4-en-17β-yl heptanoate.

*Content*: 97.0 per cent to 103.0 per cent (dried substance).

CHARACTERS

*Appearance*: white or yellowish-white, crystalline powder.

*Solubility*: practically insoluble in water, very soluble in anhydrous ethanol, freely soluble in fatty oils.

IDENTIFICATION

*First identification*: B.

*Second identification*: A, C, D.

A. Melting point (*2.2.14*): 34 °C to 39 °C.

B. Infrared absorption spectrophotometry (*2.2.24*).
*Comparison*: *testosterone enantate CRS*.

C. Thin-layer chromatography (*2.2.27*).
*Solvent mixture*: *methanol R*, *methylene chloride R* (10:90 *V/V*).
*Test solution.* Dissolve 5 mg of the substance to be examined in the solvent mixture and dilute to 10 mL with the solvent mixture.
*Reference solution (a).* Dissolve 5 mg of *testosterone enantate CRS* in the solvent mixture and dilute to 10 mL with the solvent mixture.
*Reference solution (b).* Dissolve 5 mg of *testosterone enantate CRS*, 5 mg of *testosterone decanoate CRS* and 5 mg of *testosterone isocaproate CRS* in the solvent mixture and dilute to 10 mL with the solvent mixture.
*Plate*: *TLC octadecylsilyl silica gel $F_{254}$ plate R*.
*Mobile phase*: *water R*, *acetonitrile R*, *2-propanol R* (20:40:60 *V/V/V*).
*Application*: 5 µL.
*Development*: over 3/4 of the plate.
*Drying*: in air, then at 100 °C for 10 min; allow to cool.
*Detection A*: examine in ultraviolet light at 254 nm.
*Results A*: the principal spot in the chromatogram obtained with the test solution is similar in position and size to the principal spot in the chromatogram obtained with reference solution (a).
*Detection B*: spray with *alcoholic solution of sulfuric acid R*; heat at 120 °C for 10 min; allow to cool and examine in daylight.
*Results B*: the principal spot in the chromatogram obtained with the test solution is green and is similar in position and size to the principal spot in the chromatogram obtained with reference solution (a).

*System suitability*: reference solution (b):

- the chromatogram shows 3 clearly separated principal spots by each method of visualisation.

D. To about 25 mg add 2 mL of a 10 g/L solution of *potassium hydroxide R* in *methanol R* and boil under a reflux condenser for 1 h. Cool. Add 10 mL of *water R*. Acidify with *dilute hydrochloric acid R* until *blue litmus paper R* turns red. Filter and wash the precipitate with a small quantity of *water R*. The residue, after drying at 60 °C at a pressure not exceeding 0.7 kPa for 3 h, melts (*2.2.14*) at 150 °C to 153 °C.

TESTS

**Specific optical rotation** (*2.2.7*): + 81 to + 86 (dried substance).

Dissolve 0.100 g in *anhydrous ethanol R* and dilute to 10.0 mL with the same solvent.

**Impurity A**: maximum 0.16 per cent.

Dissolve 0.50 g in 10 mL of *ethanol (96 per cent) R* previously neutralised to *bromothymol blue solution R3*. Titrate immediately with *0.01 M sodium hydroxide* using 0.1 mL of *bromothymol blue solution R3* as indicator. Not more than 0.6 mL of *0.01 M sodium hydroxide* is required to change the colour of the indicator to blue.

**Impurity H**. Thin-layer chromatography (*2.2.27*).

*Test solution*. Dissolve 0.100 g of the substance to be examined in 1.0 mL of *ethanol (96 per cent) R*.

*Reference solution*. Dissolve 3.0 mg of *testosterone enantate impurity H CRS* in 20.0 mL of *ethanol (96 per cent) R*.

*Plate*: *TLC silica gel plate R*.

*Mobile phase*: *ethyl acetate R*, *cyclohexane R1* (40:60 *V/V*).

*Application*: 1 µL.

*Development*: over 2/3 of the plate.

*Drying*: in air.

*Detection*: spray with a 200 g/L solution of *toluenesulfonic acid R* in *ethanol (96 per cent) R* and heat at 120 °C for 10 min; examine in ultraviolet light at 366 nm.

*System suitability*: reference solution:

- the chromatogram shows a clearly visible spot due to impurity H.

*Limit*:

- *impurity H*: any spot due to impurity H is not more intense than the principal spot in the chromatogram obtained with the reference solution (0.15 per cent).

**Related substances**. Liquid chromatography (*2.2.29*).

*Test solution*. Dissolve 20 mg of the substance to be examined in the mobile phase and dilute to 10.0 mL with the mobile phase.

*Reference solution (a)*. Dissolve with the aid of ultrasound the contents of a vial of *testosterone enantate for system suitability CRS* (containing impurities F and G) in the mobile phase and dilute to 1.0 mL with the mobile phase.

*Reference solution (b)*. Dilute 2.0 mL of the test solution to 100.0 mL with the mobile phase. Dilute 1.0 mL of this solution to 20.0 mL with the mobile phase.

*Reference solution (c)*. Dissolve 2 mg of *testosterone enantate for peak identification CRS* (containing impurity E) in 1.0 mL of the mobile phase.

*Reference solution (d)*. Dissolve 2 mg of *testosterone caproate CRS* (impurity B) and 2 mg of *testosterone CRS* (impurity D) in the mobile phase and dilute to 5.0 mL with the mobile phase. Dilute 1.0 mL of the solution to 100.0 mL with the mobile phase.

*Column*:

- *size*: *l* = 0.15 m, Ø = 4.6 mm;
- *stationary phase*: spherical *end-capped dodecylsilyl silica gel for chromatography R* (4 µm).

*Mobile phase*: *water R*, *acetonitrile R* (30:70 *V/V*).

*Flow rate*: 2.0 mL/min.

*Detection*: spectrophotometer at 242 nm.

*Injection*: 10 µL.

*Run time*: 1.5 times the retention time of testosterone enantate.

*Identification of impurities*: use the chromatogram supplied with *testosterone enantate for system suitability CRS* and the chromatogram obtained with reference solution (a) to identify the peaks due to impurities F and G; use the chromatogram supplied with *testosterone enantate for peak identification CRS* and the chromatogram obtained with reference solution (c) to identify the peak due to impurity E; use the chromatogram obtained with reference solution (d) to identify the peaks due to impurities B and D.

*Relative retention* with reference to testosterone enantate (retention time = about 22 min): impurity D = about 0.1; impurity B = about 0.7; impurity E = about 0.8; impurity F = about 0.85; impurity G = about 0.9.

*System suitability*: reference solution (a):

- *resolution*: minimum 1.3 between the peaks due to impurities F and G.

*Limits*:

- *correction factor*: for the calculation of content, multiply the peak area of impurity F by 6.3;
- *impurity D*: not more than 4 times the area of the principal peak in the chromatogram obtained with reference solution (b) (0.4 per cent);
- *impurities E, F*: for each impurity, not more than 3 times the area of the principal peak in the chromatogram obtained with reference solution (b) (0.3 per cent);
- *impurity B*: not more than twice the area of the principal peak in the chromatogram obtained with reference solution (b) (0.2 per cent);
- *impurity G*: not more than 1.5 times the area of the principal peak in the chromatogram obtained with reference solution (b) (0.15 per cent);
- *unspecified impurities*: for each impurity, not more than the area of the principal peak in the chromatogram obtained with reference solution (b) (0.10 per cent);
- *total*: not more than 7 times the area of the principal peak in the chromatogram obtained with reference solution (b) (0.7 per cent);
- *disregard limit*: 0.5 times the area of the principal peak in the chromatogram obtained with reference solution (b) (0.05 per cent).

**Loss on drying** (*2.2.32*): maximum 0.5 per cent, determined on 1.000 g by drying *in vacuo* at a pressure not exceeding 0.7 kPa.

ASSAY

Dissolve 50.0 mg in *anhydrous ethanol R* and dilute to 100.0 mL with the same solvent. Dilute 2.0 mL of the solution to 100.0 mL with *anhydrous ethanol R*. Measure the absorbance (*2.2.25*) at the absorption maximum at 241 nm.

Calculate the content of $C_{26}H_{40}O_3$ taking the specific absorbance to be 422.

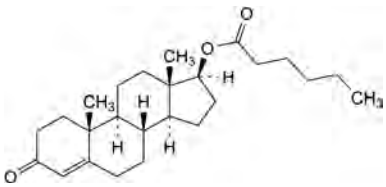
STORAGE

Protected from light, at a temperature of 2 °C to 8 °C.

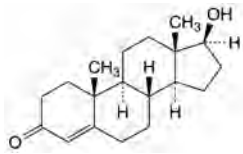
IMPURITIES

*Specified impurities: A, B, D, E, F, G, H.*

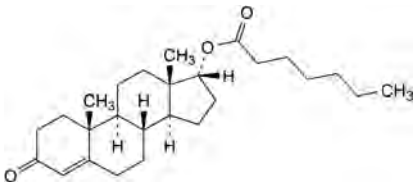
A. heptanoic acid,



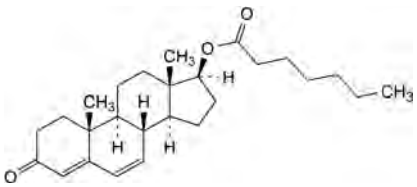
B. 3-oxoandrost-4-en-17β-yl hexanoate (testosterone caproate),



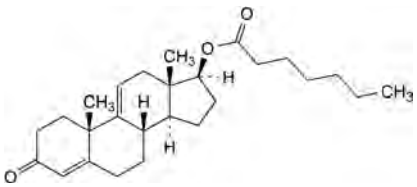
D. 17β-hydroxyandrost-4-en-3-one (testosterone),



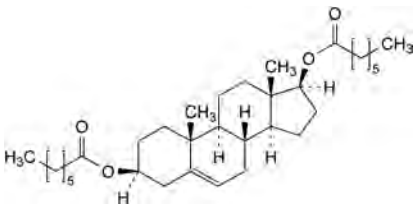
E. 3-oxoandrost-4-en-17α-yl heptanoate (17α-testosterone enantate),



F. 3-oxoandrosta-4,6-dien-17β-yl heptanoate (Δ6-testosterone enantate),



G. 3-oxoandrosta-4,9(11)-dien-17β-yl heptanoate (Δ9(11)-testosterone enantate),



H. androst-5-ene-3β,17β-diyl diheptanoate.

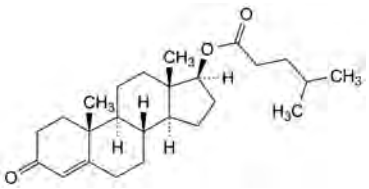
# TESTOSTERONE ISOCAPROATE

## Testosteroni isocaproas



$C_{25}H_{38}O_3$ $M_r$ 386.6

DEFINITION

3-Oxoandrost-4-en-17β-yl 4-methylpentanoate.

*Content*: 97.0 per cent to 102.0 per cent (dried substance).

CHARACTERS

*Appearance*: white or almost white powder.

*Solubility*: practically insoluble in water, very soluble in acetone and in methylene chloride, freely soluble in fatty oils.

IDENTIFICATION

A. Infrared absorption spectrophotometry (*2.2.24*).
*Comparison*: *testosterone isocaproate CRS*.

B. Examine the chromatograms obtained in the assay.
*Results*: the principal peak in the chromatogram obtained with the test solution is similar in retention time and size to the principal peak in the chromatogram obtained with reference solution (c).

TESTS

**Appearance of solution**. The solution is clear (*2.2.1*) and not more intensely coloured than reference solution $BY_6$ (*2.2.2, Method II*).

Dissolve 0.20 g in 20 mL of *methanol R*.

**Specific optical rotation** (*2.2.7*): + 82.0 to + 88.0 (dried substance).

Dissolve 0.200 g in *anhydrous ethanol R* and dilute to 20.0 mL with the same solvent.

**Related substances**. Liquid chromatography (*2.2.29*).

*Test solution*. Dissolve 20.0 mg of the substance to be examined in the mobile phase and dilute to 100.0 mL with the mobile phase.

*Reference solution (a)*. Dissolve 2 mg of *testosterone isocaproate for system suitability CRS* (containing impurities A, B, C, D, E, F and G) in 10 mL of the mobile phase.

*Reference solution (b)*. Dilute 10.0 mL of the test solution to 100.0 mL with the mobile phase. Dilute 1.0 mL of this solution to 20.0 mL with the mobile phase.

*Reference solution (c)*. Dissolve 20.0 mg of *testosterone isocaproate CRS* in the mobile phase and dilute to 100.0 mL with the mobile phase.

*Column*:
- *size*: *l* = 0.25 m, Ø = 4.6 mm;
- *stationary phase*: *end-capped octadecylsilyl silica gel for chromatography R* (5 µm);
- *temperature*: 40 °C.

*Mobile phase*: *water R*, *acetonitrile R* (15:85 *V/V*).

*Flow rate*: 1.0 mL/min.

*Detection*: spectrophotometer at 240 nm.

*Injection*: 20 µL of the test solution and reference solutions (a) and (b).

*Run time*: twice the retention time of testosterone isocaproate.

*Identification of impurities*: use the chromatogram supplied with *testosterone isocaproate for system suitability CRS* and the chromatogram obtained with reference solution (a) to identify the peaks due to impurities A, B, C, D, E, F and G.

*Relative retention* with reference to testosterone isocaproate (retention time = about 14 min): impurity A = about 0.2; impurity B = about 0.4; impurity C = about 0.5; impurity D = about 0.7; impurity G = about 0.8; impurity E = about 1.1; impurity F = about 1.4.

*System suitability*: reference solution (a):

- *peak-to-valley ratio*: minimum 2.5, where $H_p$ = height above the baseline of the peak due to impurity E and $H_v$ = height above the baseline of the lowest point of the curve separating this peak from the peak due to testosterone isocaproate.

*Limits*:

- *impurities A, B, C, D, E, F, G*: for each impurity, not more than the area of the principal peak in the chromatogram obtained with reference solution (b) (0.5 per cent);
- *unspecified impurities*: for each impurity, not more than 0.2 times the area of the principal peak in the chromatogram obtained with reference solution (b) (0.10 per cent);
- *total*: not more than twice the area of the principal peak in the chromatogram obtained with reference solution (b) (1.0 per cent);
- *disregard limit*: 0.1 times the area of the principal peak in the chromatogram obtained with reference solution (b) (0.05 per cent).

**Free acid**. Dissolve 0.44 g in 10 mL of *ethanol (96 per cent) R*, previously neutralised to *bromothymol blue solution R3*, and titrate immediately with *0.01 M sodium hydroxide*, using 0.1 mL of *bromothymol blue solution R3* as indicator. Not more than 0.6 mL of *0.01 M sodium hydroxide* is required to change the colour of the indicator to blue.

**Loss on drying** (*2.2.32*): maximum 0.5 per cent, determined on 1.000 g by drying *in vacuo* at a pressure not exceeding 0.7 kPa.

ASSAY

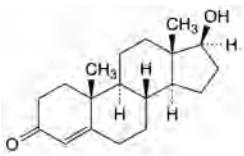
Liquid chromatography (*2.2.29*) as described in the test for related substances with the following modification.

*Injection*: 20 µL of the test solution and reference solution (c).

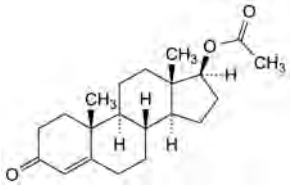
Calculate the percentage content of $C_{25}H_{38}O_3$ from the declared content of *testosterone isocaproate CRS*.

IMPURITIES

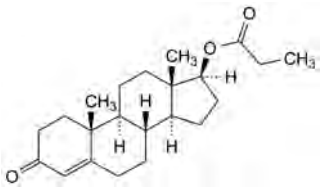
*Specified impurities: A, B, C, D, E, F, G.*



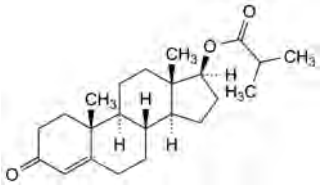
A. testosterone,



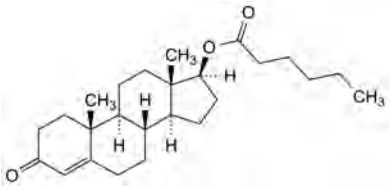
B. 3-oxoandrost-4-en-17β-yl acetate (testosterone acetate),



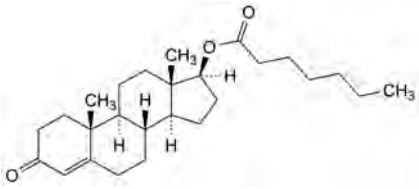
C. testosterone propionate,



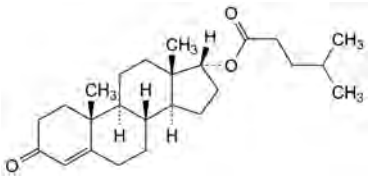
D. 3-oxoandrost-4-en-17β-yl 2-methylpropanoate (testosterone isobutyrate),



E. 3-oxoandrost-4-en-17β-yl hexanoate (testosterone caproate),



F. testosterone enantate,

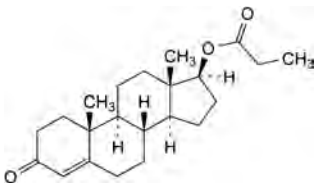


G. 3-oxoandrost-4-en-17α-yl 4-methylpentanoate (epitestosterone isocaproate).

**04/2012:0297**

# TESTOSTERONE PROPIONATE

## Testosteroni propionas



$C_{22}H_{32}O_3$ $M_r$ 344.5
[57-85-2]

DEFINITION

3-Oxoandrost-4-en-17β-yl propanoate.

*Content*: 97.5 per cent to 102.0 per cent (dried substance).

CHARACTERS

*Appearance*: white or almost white powder or colourless crystals.

*Solubility*: practically insoluble in water, freely soluble in acetone and in ethanol (96 per cent), soluble in fatty oils.

IDENTIFICATION

Infrared absorption spectrophotometry (*2.2.24*).

*Comparison*: *testosterone propionate CRS*.

TESTS

**Specific optical rotation** (*2.2.7*): + 84 to + 90 (dried substance).

Dissolve 0.250 g in *ethanol R* and dilute to 25.0 mL with the same solvent.

**Related substances**. Liquid chromatography (*2.2.29*).

*Test solution.* Dissolve 20.0 mg of the substance to be examined in *methanol R* and dilute to 50.0 mL with the same solvent.

*Reference solution (a).* Dissolve 2 mg of *testosterone propionate for system suitability CRS* (containing impurities A, B and C) in 5.0 mL of *methanol R*.

*Reference solution (b).* Dilute 1.0 mL of the test solution to 100.0 mL with *methanol R*. Dilute 1.0 mL of this solution to 10.0 mL with *methanol R*.

*Reference solution (c).* Dissolve 20.0 mg of *testosterone propionate CRS* in 50.0 mL of *methanol R*.

*Column*:

- *size*: *l* = 0.25 m, Ø = 4.6 mm;
- *stationary phase*: *octadecylsilyl silica gel for chromatography R* (5 µm).

*Mobile phase*: *water R*, *methanol R* (20:80 *V/V*).

*Flow rate*: 1.5 mL/min.

*Detection*: spectrophotometer at 254 nm.

*Injection*: 20 µL of the test solution and reference solutions (a) and (b).

*Run time*: twice the retention time of testosterone propionate.

*Identification of impurities*: use the chromatogram supplied with *testosterone propionate for system suitability CRS* and the chromatogram obtained with reference solution (a) to identify the peaks due to impurities A, B and C.

*Relative retention* with reference to testosterone propionate (retention time = about 8 min): impurity C = about 0.4; impurity A = about 0.7; impurity B = about 1.4.

*System suitability*: reference solution (a):

- *peak-to-valley ratio*: minimum 3.0, where $H_p$ = height above the baseline of the peak due to impurity B and $H_v$ = height above the baseline of the lowest point of the curve separating this peak from the peak due to testosterone propionate.

*Limits*:

- *impurity A*: not more than 5 times the area of the principal peak in the chromatogram obtained with reference solution (b) (0.5 per cent);
- *impurity C*: not more than twice the area of the principal peak in the chromatogram obtained with reference solution (b) (0.2 per cent);
- *unspecified impurities*: for each impurity, not more than the area of the principal peak in the chromatogram obtained with reference solution (b) (0.10 per cent);
- *total*: not more than 7 times the area of the principal peak in the chromatogram obtained with reference solution (b) (0.7 per cent);
- *disregard limit*: 0.5 times the area of the principal peak in the chromatogram obtained with reference solution (b) (0.05 per cent).

**Loss on drying** (*2.2.32*): maximum 0.5 per cent, determined on 1.000 g by drying in an oven at 105 °C for 2 h.

ASSAY

Liquid chromatography (*2.2.29*) as described in the test for related substances with the following modification.

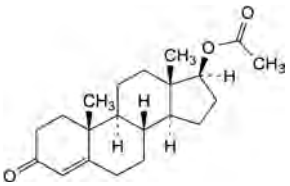
*Injection*: test solution and reference solution (c).

Calculate the percentage content of $C_{22}H_{32}O_3$ taking into account the assigned content of *testosterone propionate CRS*.

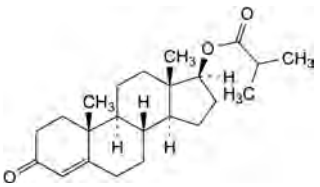
IMPURITIES

*Specified impurities*: *A, C.*

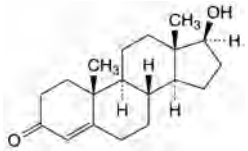
*Other detectable impurities* (the following substances would, if present at a sufficient level, be detected by one or other of the tests in the monograph. They are limited by the general acceptance criterion for other/unspecified impurities and/or by the general monograph *Substances for pharmaceutical use (2034)*. It is therefore not necessary to identify these impurities for demonstration of compliance. See also *5.10. Control of impurities in substances for pharmaceutical use*): *B, D, E.*



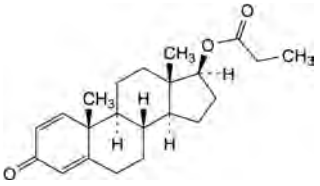
A. 3-oxoandrost-4-en-17β-yl acetate (testosterone acetate),



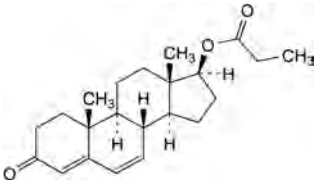
B. 3-oxoandrost-4-en-17β-yl 2-methylpropanoate (testosterone isobutyrate),



C. 17β-hydroxyandrost-4-en-3-one (testosterone),



D. 3-oxoandrosta-1,4-dien-17β-yl propanoate,



E. 3-oxoandrosta-4,6-dien-17β-yl propanoate.

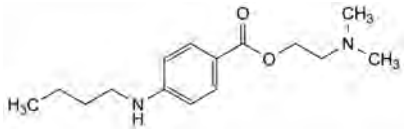
# TETRACAINE

## Tetracainum



$C_{15}H_{24}N_2O_2$ $M_r$ 264.4
[94-24-6]

DEFINITION

2-(Dimethylamino)ethyl 4-(butylamino)benzoate.

*Content*: 99.0 per cent to 101.0 per cent (dried substance).

CHARACTERS

*Appearance*: white or almost white, crystalline powder.

*Solubility*: very slightly soluble in water, freely soluble in methylene chloride, soluble in ethanol (96 per cent).

mp: about 44 °C.

IDENTIFICATION

Infrared absorption spectrophotometry (*2.2.24*).

*Comparison*: *tetracaine CRS*.

TESTS

**Appearance of solution**. The solution is clear (*2.2.1*) and colourless (*2.2.2, Method II*).

Dissolve 2.0 g in *ethanol (96 per cent) R* and dilute to 10 mL with the same solvent.

**Related substances**. Liquid chromatography (*2.2.29*).

*Test solution*. Dissolve 0.100 g of the substance to be examined in *acetonitrile R* and dilute to 50.0 mL with the same solvent.

*Reference solution (a)*. Dilute 1.0 mL of the test solution to 100.0 mL with *acetonitrile R*. Dilute 1.0 mL of this solution to 10.0 mL with *acetonitrile R*.

*Reference solution (b)*. Dissolve 10 mg of *4-aminobenzoic acid R* (impurity A), 10 mg of *4-(butylamino)benzoic acid R* (impurity B) and 10 mg of *methyl 4-(butylamino)benzoate R* (impurity C) in *acetonitrile R* and dilute to 50 mL with the same solvent. Dilute 1 mL of the solution to 10 mL with the test solution.

*Column*:

- *size*: *l* = 0.15 m, Ø = 4.6 mm;
- *stationary phase*: *end-capped octadecylsilyl amorphous organosilica polymer for chromatography R* (5 µm);
- *temperature*: 30 °C.

*Mobile phase*:

- *mobile phase A*: dissolve 1.36 g of *potassium dihydrogen phosphate R* in *water for chromatography R*, add 0.5 mL of *phosphoric acid R* and dilute to 1000 mL with *water for chromatography R*;
- *mobile phase B*: *acetonitrile R*;

| Time (min) | Mobile phase A (per cent *V/V*) | Mobile phase B (per cent *V/V*) |
|---|---|---|
| 0 - 3 | 80 | 20 |
| 3 - 18 | 80 → 40 | 20 → 60 |
| 18 - 23 | 40 | 60 |

*Flow rate*: 1.5 mL/min.

*Detection*: spectrophotometer at 300 nm.

*Injection*: 5 µL.

*Identification of impurities*: use the chromatogram obtained with reference solution (b) to identify the peaks due to impurities A, B and C.

*Relative retention* with reference to tetracaine (retention time = about 7 min): impurity A = about 0.4; impurity B = about 1.6; impurity C = about 2.2.

*System suitability*: reference solution (b):

- *resolution*: minimum 5.0 between the peaks due to tetracaine and impurity B.

*Calculation of percentage contents*:

- *correction factors*: multiply the peak areas of the following impurities by the corresponding correction factor: impurity B = 0.7; impurity C = 0.7;
- for each impurity, use the concentration of tetracaine in reference solution (a).

*Limits*:

- *impurities B, C*: for each impurity, maximum 0.15 per cent;
- *impurity A*: maximum 0.05 per cent;
- *unspecified impurities*: for each impurity, maximum 0.10 per cent;
- *total*: maximum 0.3 per cent;
- *reporting threshold*: 0.05 per cent, except for impurity A.

**Loss on drying** (*2.2.32*): maximum 0.5 per cent, determined on 1.000 g by drying *in vacuo* at 30 °C for 2 h.

**Sulfated ash** (*2.4.14*): maximum 0.1 per cent, determined on 1.0 g.

ASSAY

Dissolve 0.300 g in 50 mL of a mixture of 25 volumes of *water R* and 75 volumes of *ethanol (96 per cent) R*. Titrate with *0.1 M hydrochloric acid*, determining the end-point potentiometrically (*2.2.20*).

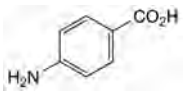
1 mL of *0.1 M hydrochloric acid* is equivalent to 26.44 mg of $C_{15}H_{24}N_2O_2$.

STORAGE

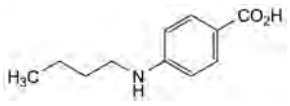
In an airtight container, protected from light.

IMPURITIES

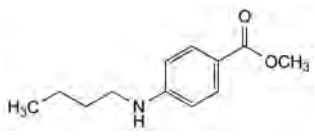
*Specified impurities: A, B, C.*



A. 4-aminobenzoic acid,



B. 4-(butylamino)benzoic acid,

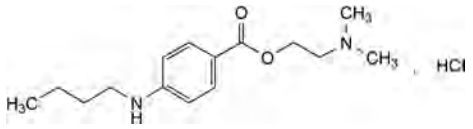


C. methyl 4-(butylamino)benzoate.

01/2017:0057

# TETRACAINE HYDROCHLORIDE

## Tetracaini hydrochloridum



$C_{15}H_{25}ClN_2O_2$ $M_r$ 300.8
[136-47-0]

DEFINITION

2-(Dimethylamino)ethyl 4-(butylamino)benzoate hydrochloride.

*Content*: 99.0 per cent to 101.0 per cent (dried substance).

CHARACTERS

*Appearance*: white or almost white, slightly hygroscopic, crystalline powder.

*Solubility*: freely soluble in water, soluble in ethanol (96 per cent).

It melts at about 148 °C or it may occur in either of 2 other crystalline forms which melt respectively at about 134 °C and 139 °C. Mixtures of these forms melt within the range 134 °C to 147 °C.

IDENTIFICATION

*First identification: A, B, D.*

*Second identification: B, C, D.*

A. Infrared absorption spectrophotometry (*2.2.24*).
*Comparison*: *tetracaine hydrochloride CRS.*

B. To 10 mL of solution S (see Tests) add 1 mL of *ammonium thiocyanate solution R*. A white, crystalline precipitate is formed which, after recrystallisation from *water R* and drying at 80 °C for 2 h, melts (*2.2.14*) at about 131 °C.

C. To about 5 mg add 0.5 mL of *fuming nitric acid R*. Evaporate to dryness on a water-bath, allow to cool and dissolve the residue in 5 mL of *acetone R*. Add 1 mL of *0.1 M alcoholic potassium hydroxide*. A violet colour develops.

D. Solution S gives reaction (a) of chlorides (*2.3.1*).

TESTS

**Solution S**. Dissolve 5.0 g in *carbon dioxide-free water R* and dilute to 50 mL with the same solvent.

**Appearance of solution**. The solution is clear (*2.2.1*) and colourless (*2.2.2, Method II*).

Dilute 2 mL of solution S to 10 mL with *water R*.

**pH** (*2.2.3*): 4.5 to 6.5.

Dilute 1 mL of solution S to 10 mL with *carbon dioxide-free water R*.

**Related substances**. Liquid chromatography (*2.2.29*). *Prepare the solutions immediately before use or store them at 2-8 °C.*

*Solvent mixture*: *acetonitrile R*, *water R* (20:80 *V/V*).

*Test solution.* Dissolve 50 mg of the substance to be examined in the solvent mixture and dilute to 50 mL with the solvent mixture.

*Reference solution (a).* Dilute 1.0 mL of the test solution to 100.0 mL with the solvent mixture. Dilute 1.0 mL of this solution to 10.0 mL with the solvent mixture.

*Reference solution (b).* Dissolve the contents of a vial of *tetracaine for system suitability CRS* (containing impurities A, B and C) in 2 mL of the solvent mixture.

*Column*:
- *size*: *l* = 0.15 m, Ø = 4.6 mm;
- *stationary phase*: *octadecylsilyl silica gel for chromatography R* (5 µm);
- *temperature*: 30 °C.

*Mobile phase*:
- *mobile phase A*: dissolve 1.36 g of *potassium dihydrogen phosphate R* in *water R*, add 0.5 mL of *phosphoric acid R* and dilute to 1000 mL with *water R*;
- *mobile phase B*: *acetonitrile R*;

| Time (min) | Mobile phase A (per cent *V/V*) | Mobile phase B (per cent *V/V*) |
|---|---|---|
| 0 - 3 | 80 | 20 |
| 3 - 18 | 80 → 40 | 20 → 60 |
| 18 - 23 | 40 | 60 |

*Flow rate*: 1.5 mL/min.

*Detection*: spectrophotometer at 300 nm.

*Injection*: 10 µL.

*Identification of impurities*: use the chromatogram supplied with *tetracaine for system suitability CRS* and the chromatogram obtained with reference solution (b) to identify the peaks due to impurities A, B and C.

*Relative retention* with reference to tetracaine (retention time = about 8 min): impurity A = about 0.3; impurity B = about 1.7; impurity C = about 2.1.

*System suitability*: reference solution (b):
- *resolution*: minimum 5.0 between the peaks due to tetracaine and impurity B.

*Limits*:
- *correction factors*: for the calculation of content, multiply the peak areas of the following impurities by the corresponding correction factor: impurity B = 0.6; impurity C = 0.7;
- *impurity A*: not more than 0.5 times the area of the principal peak in the chromatogram obtained with reference solution (a) (0.05 per cent);
- *impurities B, C*: for each impurity, not more than the area of the principal peak in the chromatogram obtained with reference solution (a) (0.1 per cent);
- *unspecified impurities*: for each impurity, not more than the area of the principal peak in the chromatogram obtained with reference solution (a) (0.10 per cent);
- *total*: not more than 5 times the area of the principal peak in the chromatogram obtained with reference solution (a) (0.5 per cent);
- *disregard limit*: 0.5 times the area of the principal peak in the chromatogram obtained with reference solution (a) (0.05 per cent).

**Loss on drying** (*2.2.32*): maximum 1.0 per cent, determined on 1.000 g by drying in an oven at 105 °C.

**Sulfated ash** (*2.4.14*): maximum 0.1 per cent, determined on 1.0 g.

ASSAY

Dissolve 0.250 g in 50 mL of *ethanol (96 per cent) R* and add 5.0 mL of *0.01 M hydrochloric acid*. Carry out a potentiometric titration (*2.2.20*), using *0.1 M sodium hydroxide*. Read the volume added between the 2 points of inflexion.

1 mL of *0.1 M sodium hydroxide* is equivalent to 30.08 mg of $C_{15}H_{25}ClN_2O_2$.

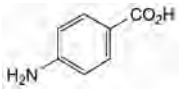
STORAGE

In an airtight container, protected from light.

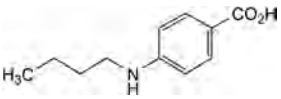
IMPURITIES

*Specified impurities: A, B, C.*

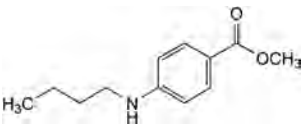
Monographs



A. 4-aminobenzoic acid,



B. 4-(butylamino)benzoic acid,



C. methyl 4-(butylamino)benzoate.

**04/2010:0644**

# TETRACOSACTIDE

## Tetracosactidum

H - Ser - Tyr - Ser - Met - Glu - His - Phe - Arg - Trp - Gly - Lys - Pro - Val - Gly - Lys - Lys - Arg - Arg - Pro - Val - Lys - Val - Tyr - Pro - OH

$C_{136}H_{210}N_{40}O_{31}S$ $M_r$ 2933
[16960-16-0]

DEFINITION

Synthetic tetracosapeptide, in which the sequence of amino acids is the same as that of the first 24 residues of human corticotropin. It increases the rate at which corticoid hormones are secreted by the adrenal glands. It is available as an acetate.

*Content*: 90 per cent to 102 per cent (anhydrous and acetic acid-free substance). By convention, 1 µg of tetracosactide is equivalent to 1 IU of tetracosactide.

CHARACTERS

*Appearance*: white or yellow, amorphous powder.

*Solubility*: sparingly soluble in water.

IDENTIFICATION

A. Examine the chromatograms obtained in the test for related peptides.

*Results*: the principal peak in the chromatogram obtained with the test solution is similar in retention time and size to the principal peak in the chromatogram obtained with the reference solution.

B. Amino acid analysis (*2.2.56*). For hydrolysis use Method 1 and for analysis use Method 1.

Express the content of each amino acid in moles. Calculate the relative proportions of the amino acids, taking that of valine to be equivalent to 3. The values fall within the following limits: lysine 3.5 to 4.7; histidine 0.9 to 1.1; arginine 2.7 to 3.3; serine 1.1 to 2.2; glutamic acid 0.9 to 1.1; proline 2.5 to 3.5; glycine 1.8 to 2.2; methionine 0.9 to 1.1; tyrosine 1.7 to 2.2; phenylalanine 0.9 to 1.1. Not more than traces of other amino acids are present.

TESTS

**Specific optical rotation** (*2.2.7*): − 99 to − 109 (anhydrous and acetic acid-free substance).

Dissolve 10.0 mg in 1.0 mL of a mixture of 1 volume of *glacial acetic acid R* and 99 volumes of *water R*.

**Absorbance** (*2.2.25*): 0.51 to 0.61 (anhydrous and acetic acid-free substance), determined at the absorption maximum between 240 nm and 280 nm, at 276 nm. The ratio of the absorbance at the maximum at 276 nm to the absorbance at 248 nm is 2.4 to 2.9.

Dissolve 1.0 mg in *0.1 M hydrochloric acid* and dilute to 5.0 mL with the same acid.

**Related peptides**. Liquid chromatography (*2.2.29*): use the normalisation procedure.

*Test solution.* Dissolve an accurately weighed quantity of the substance to be examined in *water R* to obtain the same concentration as in reference solution (a).

*Reference solution (a).* Dissolve the contents of a vial of *tetracosactide CRS* in *water R* to obtain a concentration of about 1 mg/mL, as indicated in the leaflet provided with the reference standard.

*Reference solution (b).* In order to prepare impurity A *in situ*, dissolve 1.0 mg of the substance to be examined in 1 mL of a 1 per cent *V/V* solution of *glacial acetic acid R*, add 50 µL of a mixture of 1 volume of *strong hydrogen peroxide solution R* and 999 volumes of *water R*, and allow to stand for 2 h.

*Column*:

- *size*: *l* = 0.15 m, Ø = 4.6 mm;
- *stationary phase*: *octadecylsilyl silica gel for chromatography R* (3 µm);
- *temperature*: 25 °C.

*Mobile phase*:

- *mobile phase A*: mix 5.0 mL of *glacial acetic acid R*, 60 mL of *acetonitrile R* and 5.0 g of *ammonium sulfate R* and dilute to 1000 mL with *water R*;
- *mobile phase B*: mix 5.0 mL of *glacial acetic acid R*, 310 mL of *acetonitrile R* and 5.0 g of *ammonium sulfate R* and dilute to 1000 mL with *water R*;
- *mobile phase C*: *acetonitrile R*.

| Time (min) | Mobile phase A (per cent *V/V*) | Mobile phase B (per cent *V/V*) | Mobile phase C (per cent *V/V*) |
|---|---|---|---|
| 0 - 50 | 55 → 40 | 45 → 60 | 0 |
| 50 - 50.1 | 40 → 0 | 60 → 15 | 0 → 85 |
| 50.1 - 55 | 0 | 15 | 85 |
| 55 - 55.1 | 0 → 55 | 15 → 45 | 85 → 0 |
| 55.1 - 60 | 55 | 45 | 0 |

*Flow rate*: 0.8 mL/min.

*Detection*: spectrophotometer at 275 nm.

*Injection*: 20 µL.

*Identification of impurities*: use the chromatogram supplied with *tetracosactide CRS* and the chromatogram obtained with reference solution (a) to identify the peak due to impurity B; use the chromatogram obtained with reference solution (b) to identify the peak due to impurity A.

*Relative retention* with reference to tetracosactide (retention time = about 26 min): impurity A = about 0.3; impurity B = about 0.95.

*System suitability*: reference solution (a):

- *peak-to-valley ratio*: minimum 3, where $H_p$ = height above the baseline of the peak due to impurity B and $H_v$ = height above the baseline of the lowest point of the curve separating this peak from the peak due to tetracosactide.

*Limits*:

- *impurity A*: maximum 3 per cent;
- *impurity B*: maximum 4 per cent;
- *unspecified impurities*: for each impurity, maximum 2.5 per cent;
- *sum of impurities other than A*: maximum 9 per cent.

**Acetic acid** (*2.5.34*): 8.0 per cent to 13.0 per cent.

*Test solution.* Dissolve 10.0 mg of the substance to be examined in a mixture of 5 volumes of mobile phase B and 95 volumes of mobile phase A and dilute to 10.0 mL with the same mixture of mobile phases.

**Water** (*2.5.32*): maximum 14.0 per cent, determined on 20.0-50.0 mg.

**Bacterial endotoxins** (*2.6.14*): less than 10 IU/mg, if intended for use in the manufacture of parenteral preparations without a further appropriate procedure for the removal of bacterial endotoxins.

ASSAY

Liquid chromatography (*2.2.29*) as described in the test for related peptides.

Calculate the content of $C_{136}H_{210}N_{40}O_{31}S$ using the declared content of *tetracosactide CRS*.

STORAGE

Protected from light, at a temperature of 2 °C to 8 °C.

LABELLING

The label states:

- the mass of peptide in the container;
- where applicable, that the substance is suitable for use in the manufacture of parenteral preparations.

IMPURITIES

*Specified impurities: A, B.*

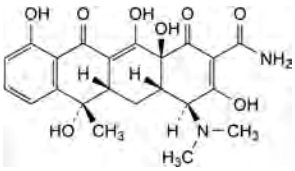
A. tetracosactide sulfoxide,

B. unknown structure.

**01/2017:0211**

# TETRACYCLINE

## Tetracyclinum



$C_{22}H_{24}N_2O_8$ $M_r$ 444.4

[60-54-8]

DEFINITION

(4*S*,4a*S*,5a*S*,6*S*,12a*S*)-4-(Dimethylamino)-3,6,10,12,12a-pentahydroxy-6-methyl-1,11-dioxo-1,4,4a,5,5a,6,11,12a-octahydrotetracene-2-carboxamide.

Substance produced by certain strains of *Streptomyces aerofaciens* or obtained by any other means.

*Content*: 88.0 per cent to 102.0 per cent (dried substance).

CHARACTERS

*Appearance*: yellow, crystalline powder.

*Solubility*: very slightly soluble in water, soluble in ethanol (96 per cent) and in methanol, sparingly soluble in acetone. It dissolves in dilute acid and alkaline solutions.

IDENTIFICATION

A. Thin-layer chromatography (*2.2.27*).

*Test solution.* Dissolve 5 mg of the substance to be examined in *methanol R* and dilute to 10 mL with the same solvent.

*Reference solution (a).* Dissolve 5 mg of *tetracycline hydrochloride CRS* in *methanol R* and dilute to 10 mL with the same solvent.

*Reference solution (b).* Dissolve 5 mg of *tetracycline hydrochloride CRS*, 5 mg of *demeclocycline hydrochloride R* and 5 mg of *oxytetracycline hydrochloride R* in *methanol R* and dilute to 10 mL with the same solvent.

*Plate*: *TLC octadecylsilyl silica gel $F_{254}$ plate R.*

*Mobile phase*: mix 20 volumes of *acetonitrile R*, 20 volumes of *methanol R* and 60 volumes of a 63 g/L solution of *oxalic acid R* previously adjusted to pH 2 with *concentrated ammonia R*.

*Application*: 1 µL.

*Development*: over 3/4 of the plate.

*Drying*: in air.

*Detection*: examine in ultraviolet light at 254 nm.

*System suitability*: the chromatogram obtained with reference solution (b) shows 3 clearly separated spots.

*Results*: the principal spot in the chromatogram obtained with the test solution is similar in position and size to the principal spot in the chromatogram obtained with reference solution (a).

B. To about 2 mg add 5 mL of *sulfuric acid R*. A violet-red colour develops. Add the solution to 2.5 mL of *water R*. The colour becomes yellow.

C. Dissolve about 10 mg in a mixture of 1 mL of *dilute nitric acid R* and 5 mL of *water R*. Shake and add 1 mL of *silver nitrate solution R2*. Any opalescence in the solution is not more intense than that in a mixture of 1 mL of *dilute nitric acid R*, 5 mL of *water R* and 1 mL of *silver nitrate solution R2*.

TESTS

**pH** (*2.2.3*): 3.5 to 6.0.

Suspend 0.1 g in 10 mL of *carbon dioxide-free water R*.

**Specific optical rotation** (*2.2.7*): − 260 to − 280 (dried substance).

Dissolve 0.250 g in *0.1 M hydrochloric acid* and dilute to 50.0 mL with the same acid.

**Related substances**. Liquid chromatography (*2.2.29*). *Prepare the solutions immediately before use.*

*Test solution.* Dissolve 25.0 mg of the substance to be examined in *0.01 M hydrochloric acid* and dilute to 25.0 mL with the same acid.

*Reference solution (a).* Dissolve 25.0 mg of *tetracycline hydrochloride CRS* in *0.01 M hydrochloric acid* and dilute to 25.0 mL with the same acid.

*Reference solution (b).* Dissolve 12.5 mg of *4-epitetracycline hydrochloride CRS* in *0.01 M hydrochloric acid* and dilute to 50.0 mL with the same acid.

*Reference solution (c).* Dissolve 10.0 mg of *anhydrotetracycline hydrochloride CRS* in *0.01 M hydrochloric acid* and dilute to 100.0 mL with the same acid.

*Reference solution (d).* Dissolve 10.0 mg of *4-epianhydrotetracycline hydrochloride CRS* in *0.01 M hydrochloric acid* and dilute to 50.0 mL with the same acid.

*Reference solution (e).* Mix 1.0 mL of reference solution (a), 2.0 mL of reference solution (b) and 5.0 mL of reference solution (d) and dilute to 25.0 mL with *0.01 M hydrochloric acid*.

*Reference solution (f).* Mix 40.0 mL of reference solution (b), 20.0 mL of reference solution (c) and 5.0 mL of reference solution (d) and dilute to 200.0 mL with *0.01 M hydrochloric acid*.

*Reference solution (g).* Dilute 1.0 mL of reference solution (c) to 50.0 mL with *0.01 M hydrochloric acid*.

*Column*:

- *size*: *l* = 0.25 m, Ø = 4.6 mm;

– *stationary phase*: *styrene-divinylbenzene copolymer R* (8 µm);
– *temperature*: 60 °C.

*Mobile phase*: weigh 80.0 g of *2-methyl-2-propanol R* and transfer to a 1000 mL volumetric flask with the aid of 200 mL of *water R*; add 100 mL of a 35 g/L solution of *dipotassium hydrogen phosphate R* adjusted to pH 9.0 with *dilute phosphoric acid R*, 200 mL of a 10 g/L solution of *tetrabutylammonium hydrogen sulfate R* adjusted to pH 9.0 with *dilute sodium hydroxide solution R* and 10 mL of a 40 g/L solution of *sodium edetate R* adjusted to pH 9.0 with *dilute sodium hydroxide solution R*; dilute to 1000.0 mL with *water R*.

*Flow rate*: 1.0 mL/min.

*Detection*: spectrophotometer at 254 nm.

*Injection*: 20 µL; inject the test solution and reference solutions (e), (f) and (g).

*System suitability*:
– *resolution*: minimum 2.5 between the peaks due to impurity A (1st peak) and tetracycline (2nd peak) and minimum 8.0 between the peaks due to tetracycline and impurity D (3rd peak) in the chromatogram obtained with reference solution (e); if necessary, adjust the concentration of 2-methyl-2-propanol in the mobile phase;
– *signal-to-noise ratio*: minimum 3 for the principal peak in the chromatogram obtained with reference solution (g);
– *symmetry factor*: maximum 1.25 for the peak due to tetracycline in the chromatogram obtained with reference solution (e).

*Limits*:
– *impurity A*: not more than the area of the corresponding peak in the chromatogram obtained with reference solution (f) (5.0 per cent);
– *impurity B* (eluting on the tail of the principal peak): not more than 0.4 times the area of the peak due to impurity A in the chromatogram obtained with reference solution (f) (2.0 per cent);
– *impurity C*: not more than the area of the corresponding peak in the chromatogram obtained with reference solution (f) (1.0 per cent);
– *impurity D*: not more than the area of the corresponding peak in the chromatogram obtained with reference solution (f) (0.5 per cent).

**Loss on drying** (*2.2.32*): maximum 13.0 per cent, determined on 1.000 g by drying in an oven at 105 °C.

**Sulfated ash** (*2.4.14*): maximum 0.5 per cent, determined on 1.0 g.

ASSAY

Liquid chromatography (*2.2.29*) as described in the test for related substances with the following modification.

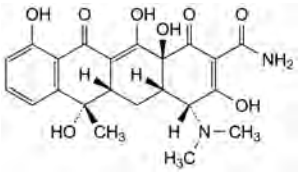
*Injection*: test solution and reference solution (a).

Calculate the percentage content of $C_{22}H_{24}N_2O_8$.

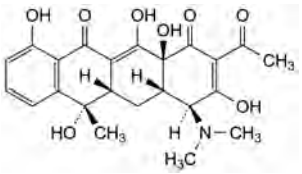
STORAGE

Protected from light.

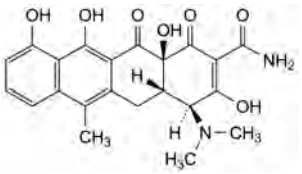
IMPURITIES



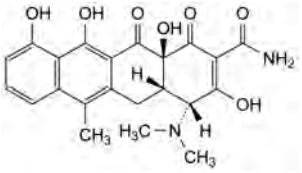
A. (4*R*,4a*S*,5a*S*,6*S*,12a*S*)-4-(dimethylamino)-3,6,10,12,12a-pentahydroxy-6-methyl-1,11-dioxo-1,4,4a,5,5a,6,11,12a-octahydrotetracene-2-carboxamide (4-epitetracycline),



B. (4*S*,4a*S*,5a*S*,6*S*,12a*S*)-2-acetyl-4-(dimethylamino)-3,6,10,12,12a-pentahydroxy-6-methyl-4a,5a,6,12a-tetrahydrotetracene-1,11(4*H*,5*H*)-dione (2-acetyl-2-decarbamoyltetracycline),



C. (4*S*,4a*S*,12a*S*)-4-(dimethylamino)-3,10,11,12a-tetrahydroxy-6-methyl-1,12-dioxo-1,4,4a,5,12,12a-hexahydrotetracene-2-carboxamide (anhydrotetracycline),



D. (4*R*,4a*S*,12a*S*)-4-(dimethylamino)-3,10,11,12a-tetrahydroxy-6-methyl-1,12-dioxo-1,4,4a,5,12,12a-hexahydrotetracene-2-carboxamide (4-epianhydrotetracycline).

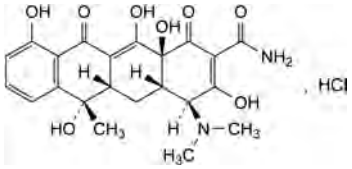
# TETRACYCLINE HYDROCHLORIDE

## Tetracyclini hydrochloridum



$C_{22}H_{25}ClN_2O_8$ $M_r$ 480.9
[64-75-5]

DEFINITION

(4*S*,4a*S*,5a*S*,6*S*,12a*S*)-4-(Dimethylamino)-3,6,10,12,12a-pentahydroxy-6-methyl-1,11-dioxo-1,4,4a,5,5a,6,11,12a-octahydrotetracene-2-carboxamide hydrochloride.

Substance produced by certain strains of *Streptomyces aerofaciens* or obtained by any other means.

*Content*: 95.0 per cent to 102.0 per cent (dried substance).

CHARACTERS

*Appearance*: yellow, crystalline powder.

*Solubility*: soluble in water, slightly soluble in ethanol (96 per cent), practically insoluble in acetone. It dissolves in solutions of alkali hydroxides and carbonates. Solutions in water become turbid on standing, owing to the precipitation of tetracycline.

IDENTIFICATION

A. Thin-layer chromatography (*2.2.27*).

Monographs T

*Test solution.* Dissolve 5 mg of the substance to be examined in *methanol R* and dilute to 10 mL with the same solvent.

*Reference solution (a).* Dissolve 5 mg of *tetracycline hydrochloride CRS* in *methanol R* and dilute to 10 mL with the same solvent.

*Reference solution (b).* Dissolve 5 mg of *tetracycline hydrochloride CRS*, 5 mg of *demeclocycline hydrochloride R* and 5 mg of *oxytetracycline hydrochloride R* in *methanol R* and dilute to 10 mL with the same solvent.

*Plate*: *TLC octadecylsilyl silica gel $F_{254}$ plate R.*

*Mobile phase*: mix 20 volumes of *acetonitrile R*, 20 volumes of *methanol R* and 60 volumes of a 63 g/L solution of *oxalic acid R* previously adjusted to pH 2 with *concentrated ammonia R.*

*Application*: 1 µL.

*Development*: over 3/4 of the plate.

*Drying*: in air.

*Detection*: examine in ultraviolet light at 254 nm.

*System suitability*: the chromatogram obtained with reference solution (b) shows 3 clearly separated spots.

*Results*: the principal spot in the chromatogram obtained with the test solution is similar in position and size to the principal spot in the chromatogram obtained with reference solution (a).

B. To about 2 mg add 5 mL of *sulfuric acid R*. A violet-red colour develops. Add the solution to 2.5 mL of *water R*. The colour becomes yellow.

C. It gives reaction (a) of chlorides (*2.3.1*).

TESTS

**pH** (*2.2.3*): 1.8 to 2.8.

Dissolve 0.1 g in 10 mL of *carbon dioxide-free water R*.

**Specific optical rotation** (*2.2.7*): − 240 to − 255 (dried substance).

Dissolve 0.250 g in *0.1 M hydrochloric acid* and dilute to 25.0 mL with the same acid.

**Related substances**. Liquid chromatography (*2.2.29*). *Prepare the solutions immediately before use.*

*Test solution.* Dissolve 25.0 mg of the substance to be examined in *0.01 M hydrochloric acid* and dilute to 25.0 mL with the same acid.

*Reference solution (a).* Dissolve 25.0 mg of *tetracycline hydrochloride CRS* in *0.01 M hydrochloric acid* and dilute to 25.0 mL with the same acid.

*Reference solution (b).* Dissolve 15.0 mg of *4-epitetracycline hydrochloride CRS* in *0.01 M hydrochloric acid* and dilute to 50.0 mL with the same acid.

*Reference solution (c).* Dissolve 10.0 mg of *anhydrotetracycline hydrochloride CRS* in *0.01 M hydrochloric acid* and dilute to 100.0 mL with the same acid.

*Reference solution (d).* Dissolve 10.0 mg of *4-epianhydrotetracycline hydrochloride CRS* in *0.01 M hydrochloric acid* and dilute to 50.0 mL with the same acid.

*Reference solution (e).* Mix 1.0 mL of reference solution (a), 2.0 mL of reference solution (b) and 5.0 mL of reference solution (d) and dilute to 25.0 mL with *0.01 M hydrochloric acid.*

*Reference solution (f).* Mix 20.0 mL of reference solution (b), 10.0 mL of reference solution (c) and 5.0 mL of reference solution (d) and dilute to 200.0 mL using *0.01 M hydrochloric acid.*

*Reference solution (g).* Dilute 1.0 mL of reference solution (c) to 50.0 mL with *0.01 M hydrochloric acid.*

*Column*:

- *size*: *l* = 0.25 m, Ø = 4.6 mm;
- *stationary phase*: *styrene-divinylbenzene copolymer R* (8 µm);
- *temperature*: 60 °C.

*Mobile phase*: weigh 80.0 g of *2-methyl-2-propanol R* and transfer to a 1000 mL volumetric flask with the aid of 200 mL of *water R*; add 100 mL of a 35 g/L solution of *dipotassium hydrogen phosphate R* adjusted to pH 9.0 with *dilute phosphoric acid R*, 200 mL of a 10 g/L solution of *tetrabutylammonium hydrogen sulfate R* adjusted to pH 9.0 with *dilute sodium hydroxide solution R* and 10 mL of a 40 g/L solution of *sodium edetate R* adjusted to pH 9.0 with *dilute sodium hydroxide solution R*; dilute to 1000.0 mL with *water R.*

*Flow rate*: 1.0 mL/min.

*Detection*: spectrophotometer at 254 nm.

*Injection*: 20 µL; inject the test solution and reference solutions (e), (f) and (g).

*System suitability*:

- *resolution*: minimum 2.5 between the peaks due to impurity A (1st peak) and tetracycline (2nd peak) and minimum 8.0 between the peaks due to tetracycline and impurity D (3rd peak) in the chromatogram obtained with reference solution (e); if necessary, adjust the concentration of 2-methyl-2-propanol in the mobile phase;
- *signal-to-noise ratio*: minimum 3 for the principal peak in the chromatogram obtained with reference solution (g);
- *symmetry factor*: maximum 1.25 for the peak due to tetracycline in the chromatogram obtained with reference solution (e).

*Limits*:

- *impurity A*: not more than the area of the corresponding peak in the chromatogram obtained with reference solution (f) (3.0 per cent);
- *impurity B* (eluting on the tail of the principal peak): not more than 0.5 times the area of the peak due to impurity A in the chromatogram obtained with reference solution (f) (1.5 per cent);
- *impurity C*: not more than the area of the corresponding peak in the chromatogram obtained with reference solution (f) (0.5 per cent);
- *impurity D*: not more than the area of the corresponding peak in the chromatogram obtained with reference solution (f) (0.5 per cent).

**Loss on drying** (*2.2.32*): maximum 2.0 per cent, determined on 1.000 g by drying *in vacuo* at 60 °C at a pressure not exceeding 0.7 kPa for 3 h.

**Sulfated ash** (*2.4.14*): maximum 0.5 per cent, determined on 1.0 g.

**Bacterial endotoxins** (*2.6.14*): less than 0.5 IU/mg, if intended for use in the manufacture of parenteral preparations without a further appropriate procedure for the removal of bacterial endotoxins.

ASSAY

Liquid chromatography (*2.2.29*) as described in the test for related substances with the following modification.

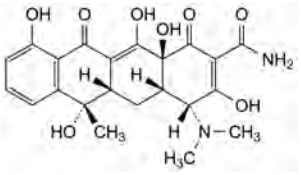
*Injection*: test solution and reference solution (a).

Calculate the percentage content of $C_{22}H_{25}ClN_2O_8$.

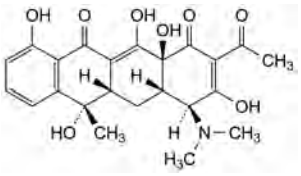
STORAGE

Protected from light. If the substance is sterile, store in a sterile, tamper-evident container.

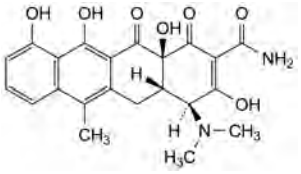
IMPURITIES



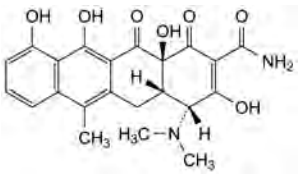
A. (4*R*,4a*S*,5a*S*,6*S*,12a*S*)-4-(dimethylamino)-3,6,10,12,12a-pentahydroxy-6-methyl-1,11-dioxo-1,4,4a,5,5a,6,11,12a-octahydrotetracene-2-carboxamide (4-epitetracycline),



B. (4*S*,4a*S*,5a*S*,6*S*,12a*S*)-2-acetyl-4-(dimethylamino)-3,6,10,12,12a-pentahydroxy-6-methyl-4a,5a,6,12a-tetrahydrotetracene-1,11(4*H*,5*H*)-dione (2-acetyl-2-decarbamoyltetracycline),



C. (4*S*,4a*S*,12a*S*)-4-(dimethylamino)-3,10,11,12a-tetrahydroxy-6-methyl-1,12-dioxo-1,4,4a,5,12,12a-hexahydrotetracene-2-carboxamide (anhydrotetracycline),

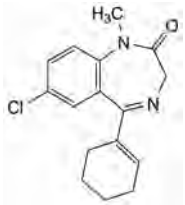


D. (4*R*,4a*S*,12a*S*)-4-(dimethylamino)-3,10,11,12a-tetrahydroxy-6-methyl-1,12-dioxo-1,4,4a,5,12,12a-hexahydrotetracene-2-carboxamide (4-epianhydrotetracycline).

**01/2008:1738**
**corrected 7.0**

# TETRAZEPAM

## Tetrazepamum



$C_{16}H_{17}ClN_2O$ $M_r$ 288.8
[10379-14-3]

DEFINITION

7-Chloro-5-(cyclohex-1-enyl)-1-methyl-1,3-dihydro-2*H*-1,4-benzodiazepin-2-one.

*Content*: 99.0 per cent to 101.0 per cent (dried substance).

CHARACTERS

*Appearance*: light yellow or yellow crystalline powder.

*Solubility*: practically insoluble in water, freely soluble in methylene chloride, soluble in acetonitrile.

IDENTIFICATION

Infrared absorption spectrophotometry (*2.2.24*).

*Comparison*: *Ph. Eur. reference spectrum of tetrazepam*.

TESTS

**Related substances**. Liquid chromatography (*2.2.29*).

*Test solution.* Dissolve 25.0 mg of the substance to be examined in *acetonitrile R* and dilute to 25.0 mL with the same solvent.

*Reference solution (a).* Dissolve 5.0 mg of the substance to be examined and 5.0 mg of *tetrazepam impurity C CRS* in *acetonitrile R* and dilute to 10.0 mL with the same solvent. Dilute 1.0 mL of the solution to 10.0 mL with *acetonitrile R*.

*Reference solution (b).* Dilute 1.0 mL of the test solution to 50.0 mL with *acetonitrile R*. Dilute 1.0 mL of this solution to 10.0 mL with *acetonitrile R*.

*Column*:

- *size*: *l* = 0.25 m, Ø = 4.6 mm;
- *stationary phase*: *octadecylsilyl silica gel for chromatography R* (5 µm).

*Mobile phase*:

- *mobile phase A*: mix 40 volumes of *acetonitrile R* and 60 volumes of a 3.4 g/L solution of *potassium dihydrogen phosphate R*;
- *mobile phase B*: *acetonitrile R*;

| Time (min) | Mobile phase A (per cent *V/V*) | Mobile phase B (per cent *V/V*) |
|---|---|---|
| 0 - 35 | 100 | 0 |
| 35 - 40 | 100 → 55 | 0 → 45 |
| 40 - 50 | 55 | 45 |

*Flow rate*: 1.5 mL/min.

*Detection*: a spectrophotometer at 229 nm.

*Injection*: 20 µL.

*System suitability*: reference solution (a):

- *resolution*: minimum 2.0 between the peaks due to tetrazepam and to impurity C.

*Limits*:

- *any impurity*: not more than the area of the principal peak in the chromatogram obtained with reference solution (b) (0.2 per cent);
- *total*: not more than 5 times the area of the principal peak in the chromatogram obtained with reference solution (b) (1.0 per cent);
- *disregard limit*: 0.25 times the area of the principal peak in the chromatogram obtained with reference solution (b) (0.05 per cent).

**Chlorides** (*2.4.4*): maximum 100 ppm.

Dissolve 0.750 g in 10 mL of *methylene chloride R* and add 15 mL of *water R*. Shake and separate the 2 layers. Dilute 10 mL of the aqueous layer to 15 mL with *water R*.

**Loss on drying** (*2.2.32*): maximum 0.5 per cent, determined on 1.000 g by drying in an oven at 105 °C.

**Sulfated ash** (*2.4.14*): maximum 0.1 per cent, determined on 1.0 g.

ASSAY

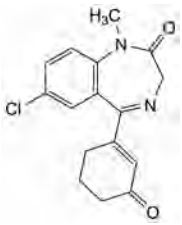
Dissolve 0.230 g in 50.0 mL of *anhydrous acetic acid R*. Titrate with *0.1 M perchloric acid*, determining the end-point potentiometrically (*2.2.20*).

1 mL of *0.1 M perchloric acid* is equivalent to 28.88 mg of $C_{16}H_{17}ClN_2O$.

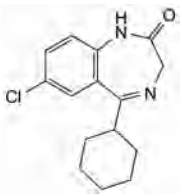
STORAGE

Protected from light.

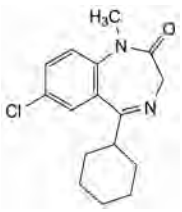
IMPURITIES



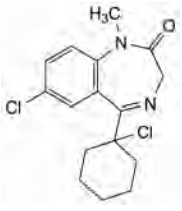
A. 7-chloro-1-methyl-5-(3-oxocyclohex-1-enyl)-1,3-dihydro-2*H*-1,4-benzodiazepin-2-one,



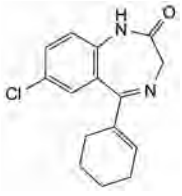
B. 7-chloro-5-cyclohexyl-1,3-dihydro-2*H*-1,4-benzodiazepin-2-one,



C. 7-chloro-5-cyclohexyl-1-methyl-1,3-dihydro-2*H*-1,4-benzodiazepin-2-one,



D. 7-chloro-5-(1-chlorocyclohexyl)-1-methyl-1,3-dihydro-2*H*-1,4-benzodiazepin-2-one,

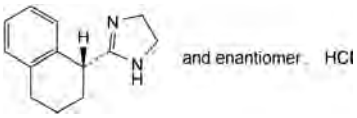


E. 7-chloro-5-(cyclohex-1-enyl)-1,3-dihydro-2*H*-1,4-benzodiazepin-2-one.

**01/2008:2101**
**corrected 10.0**

# TETRYZOLINE HYDROCHLORIDE

## Tetryzolini hydrochloridum



$C_{13}H_{17}ClN_2$ $M_r$ 236.7
[522-48-5]

DEFINITION

2-[(1*RS*)-1,2,3,4-Tetrahydronaphthalen-1-yl]-4,5-dihydro-1*H*-imidazole hydrochloride.

*Content*: 98.0 per cent to 101.0 per cent (dried substance).

CHARACTERS

*Appearance*: white or almost white, crystalline powder.

*Solubility*: freely soluble in water, in anhydrous ethanol and in ethanol (96 per cent), practically insoluble in acetone.

IDENTIFICATION

A. Infrared absorption spectrophotometry (*2.2.24*).
*Comparison*: *tetryzoline hydrochloride CRS*.

B. Dissolve 50 mg in 10 mL of *water R*. The solution gives reaction (a) of chlorides (*2.3.1*).

TESTS

**Appearance of solution**. The solution is clear (*2.2.1*) and colourless (*2.2.2, Method II*).

Dissolve 1.0 g in *water R* and dilute to 10 mL with the same solvent.

**Related substances**. Gas chromatography (*2.2.28*).

*Test solution*. Dissolve 1.0 g of the substance to be examined in a mixture of 25 volumes of *1 M sodium hydroxide* and 75 volumes of *methanol R* and dilute to 10 mL with the same mixture of solvents.

*Reference solution*. Dilute 1.0 mL of the test solution to 100.0 mL with a mixture of 25 volumes of *1 M sodium hydroxide* and 75 volumes of *methanol R*. Dilute 1.0 mL of this solution to 10.0 mL with a mixture of 25 volumes of *1 M sodium hydroxide* and 75 volumes of *methanol R*.

*Column*:
- *material*: fused silica,
- *size*: *l* = 25 m, Ø = 0.32 mm,
- *stationary phase*: *methylpolysiloxane R* (1 µm).

*Carrier gas*: *helium for chromatography R*.

*Split ratio*: 1:40.

*Flow rate*: 2.5 mL/min.

*Temperature*:

| | Time (min) | Temperature (°C) |
|---|---|---|
| Column | 0 - 8 | 160 |
| | 8 - 11 | 160 → 220 |
| | 11 - 15 | 220 |
| Injection port | | 220 |
| Detector | | 220 |

*Detection*: flame ionisation.

*Injection*: 1 µL.

*Relative retention* with reference to tetryzoline (retention time = about 12 min): impurity A = about 0.5.

*System suitability*: reference solution:

– *signal-to-noise ratio*: minimum 50 for the principal peak.

*Limits*:

– *impurity A*: not more than the area of the principal peak in the chromatogram obtained with the reference solution (0.1 per cent),
– *any other impurity*: for each impurity, not more than the area of the principal peak in the chromatogram obtained with the reference solution (0.1 per cent),
– *total*: not more than twice the area of the principal peak in the chromatogram obtained with the reference solution (0.2 per cent),
– *disregard limit*: 0.5 times the area of the principal peak in the chromatogram obtained with the reference solution (0.05 per cent).

**Loss on drying** (*2.2.32*): maximum 0.5 per cent, determined on 1.000 g by drying in an oven at 105 °C.

**Sulfated ash** (*2.4.14*): maximum 0.1 per cent, determined on 1.0 g.

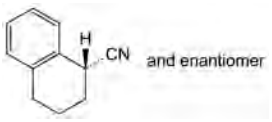
ASSAY

Dissolve 0.200 g in 100 mL of a mixture of 3 volumes of *anhydrous acetic acid R* and 7 volumes of *acetic anhydride R*. Titrate with *0.1 M perchloric acid*, determining the end-point potentiometrically (*2.2.20*). Carry out a blank titration.

1 mL of *0.1 M perchloric acid* is equivalent to 23.67 mg of $C_{13}H_{17}ClN_2$.

IMPURITIES

*Specified impurities: A.*

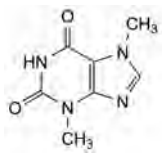


A. (1*RS*)-1,2,3,4-tetrahydronaphthalene-1-carbonitrile (α-cyanotetraline).

**01/2017:0298**

# THEOBROMINE

## Theobrominum



$C_7H_8N_4O_2$ $M_r$ 180.2
[83-67-0]

DEFINITION

Theobromine contains not less than 99.0 per cent and not more than the equivalent of 101.0 per cent of 3,7-dimethyl-3,7-dihydro-1*H*-purine-2,6-dione, calculated with reference to the dried substance.

CHARACTERS

A white or almost white powder, very slightly soluble in water and in anhydrous ethanol, slightly soluble in ammonia. It dissolves in dilute solutions of alkali hydroxides and in mineral acids.

IDENTIFICATION

*First identification: A, C.*

*Second identification: B, C.*

A. Examine by infrared absorption spectrophotometry (*2.2.24*), comparing with the spectrum obtained with *theobromine CRS*.

B. Dissolve about 20 mg in 2 mL of *dilute ammonia R1*, warming slightly, and cool. Add 2 mL of *silver nitrate solution R2*. The solution remains clear. Boil the solution for a few minutes. A white, crystalline precipitate is formed.

C. It gives the reaction of xanthines (*2.3.1*).

TESTS

**Acidity**. To 0.4 g add 20 mL of boiling *water R* and boil for 1 min. Allow to cool and filter. Add 0.05 mL of *bromothymol blue solution R1*. The solution is yellow or yellowish-green. Not more than 0.2 mL of *0.01 M sodium hydroxide* is required to change the colour of the indicator to blue.

**Related substances**. Examine by thin-layer chromatography (*2.2.27*), using *silica gel* $GF_{254}$ *R* as the coating substance.

*Test solution*. To 0.2 g of the finely powdered substance to be examined add 10 mL of a mixture of 4 volumes of *methanol R* and 6 volumes of *chloroform R*. Heat under a reflux condenser on a water-bath for 15 min, shaking occasionally. Cool and filter.

*Reference solution*. Dissolve 5 mg of *theobromine CRS* in a mixture of 4 volumes of *methanol R* and 6 volumes of *chloroform R* and dilute to 50 mL with the same mixture of solvents.

Apply separately to the plate 10 µL of each solution. Develop over a path of 15 cm using a mixture of 10 volumes of *concentrated ammonia R*, 30 volumes of *acetone R*, 30 volumes of *chloroform R* and 40 volumes of *butanol R*. Allow the plate to dry in air and examine in ultraviolet light at 254 nm. Any spot in the chromatogram obtained with the test solution, apart from the principal spot, is not more intense than the spot in the chromatogram obtained with the reference solution (0.5 per cent).

**Loss on drying** (*2.2.32*). Not more than 0.5 per cent, determined on 1.000 g by drying in an oven at 105 °C.

**Sulfated ash** (*2.4.14*). Not more than 0.1 per cent, determined on 1.0 g.

ASSAY

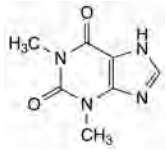
Dissolve, with stirring, 0.150 g in 125 mL of boiling *water R*, cool to 50-60 °C and add 25 mL of *0.1 M silver nitrate*. Using 1 mL of *phenolphthalein solution R* as indicator, titrate dropwise with *0.1 M sodium hydroxide* until a pink colour is obtained.

1 mL of *0.1 M sodium hydroxide* is equivalent to 18.02 mg of $C_7H_8N_4O_2$.

**01/2017:0299**

# THEOPHYLLINE

## Theophyllinum



$C_7H_8N_4O_2$ $M_r$ 180.2
[58-55-9]

DEFINITION

1,3-Dimethyl-3,7-dihydro-1*H*-purine-2,6-dione.

*Content*: 99.0 per cent to 101.0 per cent (dried substance).

CHARACTERS

*Appearance*: white or almost white, crystalline powder.

*Solubility*: slightly soluble in water, sparingly soluble in ethanol (96 per cent). It dissolves in solutions of alkali hydroxides, in ammonia and in mineral acids.

IDENTIFICATION

*First identification: B, D.*

*Second identification: A, C, D, E.*

A. Melting point (*2.2.14*): 270 °C to 274 °C, determined after drying at 100-105 °C.

B. Infrared absorption spectrophotometry (*2.2.24*).

*Comparison*: *Ph. Eur. reference spectrum of theophylline.*

C. Heat 10 mg with 1.0 mL of a 360 g/L solution of *potassium hydroxide R* in a water-bath at 90 °C for 3 min, then add 1.0 mL of *diazotised sulfanilic acid solution R*. A red colour slowly develops. Carry out a blank test.

D. Loss on drying (see Tests).

E. It gives the reaction of xanthines (*2.3.1*).

TESTS

**Solution S**. Dissolve 0.5 g with heating in *carbon dioxide-free water R*, cool and dilute to 75 mL with the same solvent.

**Appearance of solution**. Solution S is clear (*2.2.1*) and colourless (*2.2.2, Method II*).

**Acidity**. To 50 mL of solution S add 0.1 mL of *methyl red solution R*. The solution is red. Not more than 1.0 mL of *0.01 M sodium hydroxide* is required to change the colour of the indicator to yellow.

**Related substances**. Liquid chromatography (*2.2.29*).

*Test solution*. Dissolve 40.0 mg of the substance to be examined in the mobile phase and dilute to 20.0 mL with the mobile phase.

*Reference solution (a)*. Dilute 1.0 mL of the test solution to 100.0 mL with the mobile phase. Dilute 1.0 mL of this solution to 10.0 mL with the mobile phase.

*Reference solution (b)*. Dissolve 10 mg of *theobromine R* in the mobile phase, add 5 mL of the test solution and dilute to 100 mL with the mobile phase. Dilute 5 mL of this solution to 50 mL with the mobile phase.

*Column*:

– *size*: *l* = 0.25 m, Ø = 4 mm;

– *stationary phase*: *octadecylsilyl silica gel for chromatography R* (7 µm).

*Mobile phase*: mix 7 volumes of *acetonitrile for chromatography R* and 93 volumes of a 1.36 g/L solution of *sodium acetate R* containing 5.0 mL/L of *glacial acetic acid R*.

*Flow rate*: 2.0 mL/min.

*Detection*: spectrophotometer at 272 nm.

*Injection*: 20 µL.

*Run time*: 3.5 times the retention time of theophylline.

*Relative retention* with reference to theophylline (retention time = about 6 min): impurity C = about 0.3; impurity B = about 0.4; impurity D = about 0.5; impurity A = about 2.5.

*System suitability*: reference solution (b):

– *resolution*: minimum 2.0 between the peaks due to theobromine and theophylline.

*Limits*:

– *impurities A, B, C, D*: for each impurity, not more than the area of the principal peak in the chromatogram obtained with reference solution (a) (0.1 per cent);

– *any other impurity*: for each impurity, not more than the area of the principal peak in the chromatogram obtained with reference solution (a) (0.1 per cent);

– *total*: not more than 5 times the area of the principal peak in the chromatogram obtained with reference solution (a) (0.5 per cent);

– *disregard limit*: 0.5 times the area of the principal peak in the chromatogram obtained with reference solution (a) (0.05 per cent).

**Loss on drying** (*2.2.32*): maximum 0.5 per cent, determined on 1.000 g by drying in an oven at 105 °C.

**Sulfated ash** (*2.4.14*): maximum 0.1 per cent, determined on 1.0 g.

ASSAY

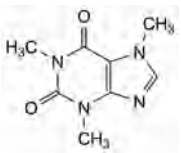
Dissolve 0.150 g in 100 mL of *water R*, add 20 mL of *0.1 M silver nitrate* and shake. Add 1 mL of *bromothymol blue solution R1*. Titrate with *0.1 M sodium hydroxide*.

1 mL of *0.1 M sodium hydroxide* is equivalent to 18.02 mg of $C_7H_8N_4O_2$.

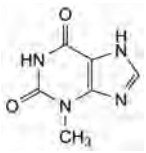
IMPURITIES

*Specified impurities: A, B, C, D.*

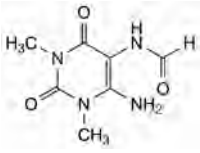
*Other detectable impurities* (the following substances would, if present at a sufficient level, be detected by one or other of the tests in the monograph. They are limited by the general acceptance criterion for other/unspecified impurities and/or by the general monograph *Substances for pharmaceutical use (2034)*. It is therefore not necessary to identify these impurities for demonstration of compliance. See also *5.10. Control of impurities in substances for pharmaceutical use*): *E, F.*



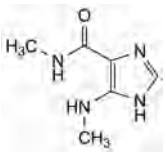
A. 1,3,7-trimethyl-3,7-dihydro-1*H*-purine-2,6-dione (caffeine),



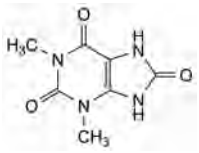
B. 3-methyl-3,7-dihydro-1*H*-purine-2,6-dione,



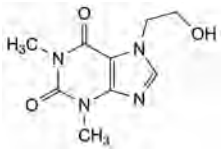
C. *N*-(6-amino-1,3-dimethyl-2,4-dioxo-1,2,3,4-tetrahydropyrimidin-5-yl)formamide,



D. *N*-methyl-5-(methylamino)-1*H*-imidazole-4-carboxamide (theophyllidine),



E. 1,3-dimethyl-7,9-dihydro-1*H*-purine-2,6,8(3*H*)-trione,

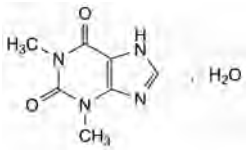


F. 7-(2-hydroxyethyl)-1,3-dimethyl-3,7-dihydro-1*H*-purine-2,6-dione (etofylline).

**01/2017:0302**

# THEOPHYLLINE MONOHYDRATE

## Theophyllinum monohydricum



$C_7H_8N_4O_2,H_2O$ $M_r$ 198.2
[5967-84-0]

DEFINITION

1,3-Dimethyl-3,7-dihydro-1*H*-purine-2,6-dione monohydrate.

*Content*: 99.0 per cent to 101.0 per cent (anhydrous substance).

CHARACTERS

*Appearance*: white or almost white, crystalline powder.

*Solubility*: slightly soluble in water, sparingly soluble in ethanol (96 per cent). It dissolves in solutions of alkali hydroxides, in ammonia and in mineral acids.

IDENTIFICATION

*First identification: B, D.*

*Second identification: A, C, D, E.*

A. Melting point (*2.2.14*): 270 °C to 274 °C, determined after drying at 100-105 °C.

B. Infrared absorption spectrophotometry (*2.2.24*).
*Preparation*: dry the substance to be examined at 100-105 °C before use.
*Comparison*: *Ph. Eur. reference spectrum of theophylline.*

C. Heat 10 mg with 1.0 mL of a 360 g/L solution of *potassium hydroxide R* in a water-bath at 90 °C for 3 min, then add 1.0 mL of *diazotised sulfanilic acid solution R*. A red colour slowly develops. Carry out a blank test.

D. Water (see Tests).

E. It gives the reaction of xanthines (*2.3.1*).

TESTS

**Solution S**. Dissolve 0.5 g with heating in *carbon dioxide-free water R*, cool and dilute to 75 mL with the same solvent.

**Appearance of solution**. Solution S is clear (*2.2.1*) and colourless (*2.2.2, Method II*).

**Acidity**. To 50 mL of solution S add 0.1 mL of *methyl red solution R*. The solution is red. Not more than 1.0 mL of *0.01 M sodium hydroxide* is required to change the colour of the indicator to yellow.

**Related substances**. Liquid chromatography (*2.2.29*).

*Test solution.* Dissolve 40.0 mg of the substance to be examined in the mobile phase and dilute to 20.0 mL with the mobile phase.

*Reference solution (a).* Dilute 1.0 mL of the test solution to 100.0 mL with the mobile phase. Dilute 1.0 mL of this solution to 10.0 mL with the mobile phase.

*Reference solution (b).* Dissolve 10 mg of *theobromine R* in the mobile phase, add 5 mL of the test solution and dilute to 100 mL with the mobile phase. Dilute 5 mL of this solution to 50 mL with the mobile phase.

*Column*:
- *size*: *l* = 0.25 m, Ø = 4 mm;
- *stationary phase*: *octadecylsilyl silica gel for chromatography R* (7 µm).

*Mobile phase*: mix 7 volumes of *acetonitrile for chromatography R* and 93 volumes of a 1.36 g/L solution of *sodium acetate R* containing 5.0 mL/L of *glacial acetic acid R*.

*Flow rate*: 2.0 mL/min.

*Detection*: spectrophotometer at 272 nm.

*Injection*: 20 µL.

*Run time*: 3.5 times the retention time of theophylline.

*Relative retention* with reference to theophylline (retention time = about 6 min): impurity C = about 0.3; impurity B = about 0.4; impurity D = about 0.5; impurity A = about 2.5.

*System suitability*: reference solution (b):
- *resolution*: minimum 2.0 between the peaks due to theobromine and theophylline.

*Limits*:
- *impurities A, B, C, D*: for each impurity, not more than the area of the principal peak in the chromatogram obtained with reference solution (a) (0.1 per cent);
- *any other impurity*: for each impurity, not more than the area of the principal peak in the chromatogram obtained with reference solution (a) (0.1 per cent);
- *total*: not more than 5 times the area of the principal peak in the chromatogram obtained with reference solution (a) (0.5 per cent);
- *disregard limit*: 0.5 times the area of the principal peak in the chromatogram obtained with reference solution (a) (0.05 per cent).

**Water** (*2.5.12*): 8.0 per cent to 9.5 per cent, determined on 0.20 g.

**Sulfated ash** (*2.4.14*): maximum 0.1 per cent, determined on 1.0 g.

ASSAY

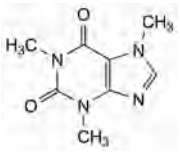
Dissolve 0.160 g in 100 mL of *water R*, add 20 mL of *0.1 M silver nitrate* and shake. Add 1 mL of *bromothymol blue solution R1*. Titrate with *0.1 M sodium hydroxide*.

1 mL of *0.1 M sodium hydroxide* is equivalent to 18.02 mg of $C_7H_8N_4O_2$.

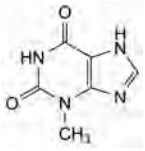
IMPURITIES

*Specified impurities: A, B, C, D.*

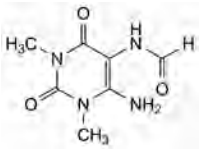
*Other detectable impurities* (the following substances would, if present at a sufficient level, be detected by one or other of the tests in the monograph. They are limited by the general acceptance criterion for other/unspecified impurities and/or by the general monograph *Substances for pharmaceutical use (2034)*. It is therefore not necessary to identify these impurities for demonstration of compliance. See also *5.10. Control of impurities in substances for pharmaceutical use*): *E, F.*



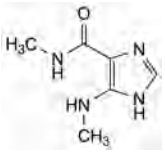
A. 1,3,7-trimethyl-3,7-dihydro-1*H*-purine-2,6-dione (caffeine),



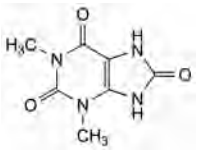
B. 3-methyl-3,7-dihydro-1*H*-purine-2,6-dione,



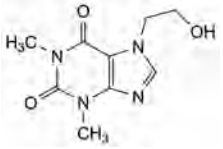
C. *N*-(6-amino-1,3-dimethyl-2,4-dioxo-1,2,3,4-tetrahydropyrimidin-5-yl)formamide,



D. *N*-methyl-5-(methylamino)-1*H*-imidazole-4-carboxamide (theophyllidine),



E. 1,3-dimethyl-7,9-dihydro-1*H*-purine-2,6,8(3*H*)-trione,



F. 7-(2-hydroxyethyl)-1,3-dimethyl-3,7-dihydro-1*H*-purine-2,6-dione (etofylline).

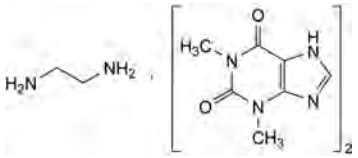
# THEOPHYLLINE-ETHYLENEDIAMINE

## Theophyllinum et ethylenediaminum



$C_{16}H_{24}N_{10}O_4$ $M_r$ 420.4
[317-34-0]

DEFINITION

*Content*:

– *theophylline* ($C_7H_8N_4O_2$; $M_r$ 180.2): 84.0 per cent to 87.4 per cent (anhydrous substance);
– *ethylenediamine* ($C_2H_8N_2$; $M_r$ 60.1): 13.5 per cent to 15.0 per cent (anhydrous substance).

CHARACTERS

*Appearance*: white or slightly yellowish powder, sometimes granular, hygroscopic.

*Solubility*: freely soluble in water (the solution becomes cloudy through absorption of carbon dioxide), practically insoluble in anhydrous ethanol.

IDENTIFICATION

*First identification*: *B, C, E.*

*Second identification*: *A, C, D, E, F.*

Dissolve 1.0 g in 10 mL of *water R* and add 2 mL of *dilute hydrochloric acid R* dropwise with shaking. Filter. Use the precipitate for identification tests A, B, D and F and the filtrate for identification test C.

A. Melting point (*2.2.14*): 270 °C to 274 °C, determined after washing the precipitate with *water R* and drying at 105 °C.
B. Infrared absorption spectrophotometry (*2.2.24*).
   *Preparation*: precipitate, washed with *water R* and dried at 105 °C.
   *Comparison*: *theophylline CRS*.
C. To the filtrate add 0.2 mL of *benzoyl chloride R*, make alkaline with *dilute sodium hydroxide solution R* and shake vigorously. Filter the precipitate, wash with 10 mL of *water R*, dissolve in 5 mL of hot *ethanol (96 per cent) R* and add 5 mL of *water R*. A precipitate is formed, which, when washed and dried at 105 °C, melts (*2.2.14*) at 248 °C to 252 °C.
D. Heat about 10 mg of the precipitate with 1.0 mL of a 360 g/L solution of *potassium hydroxide R* in a water-bath at 90 °C for 3 min, then add 1.0 mL of *diazotised sulfanilic acid solution R*. A red colour slowly develops. Carry out a blank test.
E. Water (see Tests).
F. The precipitate gives the reaction of xanthines (*2.3.1*).

TESTS

**Appearance of solution**. The solution is not more opalescent than reference suspension II (*2.2.1*) and not more intensely coloured than reference solution $GY_6$ (*2.2.2, Method II*).

Dissolve 0.5 g with gentle warming in 10 mL of *carbon dioxide-free water R*.

**Related substances**. Liquid chromatography (*2.2.29*).

*Test solution.* Dissolve 47 mg of the substance to be examined in the mobile phase and dilute to 20.0 mL with the mobile phase.

*Reference solution (a).* Dilute 1.0 mL of the test solution to 100.0 mL with the mobile phase. Dilute 1.0 mL of this solution to 10.0 mL with the mobile phase.

*Reference solution (b).* Dissolve 10 mg of *theobromine R* (impurity G) in the mobile phase, add 5 mL of the test solution and dilute to 100 mL with the mobile phase. Dilute 5 mL of this solution to 50 mL with the mobile phase.

*Column*:

– *size*: *l* = 0.25 m, Ø = 4 mm;
– *stationary phase*: *octadecylsilyl silica gel for chromatography R* (7 µm).

*Mobile phase*: mix 7 volumes of *acetonitrile for chromatography R* and 93 volumes of a 1.36 g/L solution of *sodium acetate R* containing 0.50 per cent *V/V* of *glacial acetic acid R*.

*Flow rate*: 2.0 mL/min.

*Detection*: spectrophotometer at 272 nm.

*Injection*: 20 µL.

*Run time*: 3.5 times the retention time of theophylline.

*Relative retention* with reference to theophylline (retention time = about 6 min): impurity G = about 0.6.

*System suitability*: reference solution (b):

– *resolution*: minimum 2.0 between the peaks due to impurity G and theophylline.

*Limits*:

– *unspecified impurities*: for each impurity, not more than the area of the principal peak in the chromatogram obtained with reference solution (a) (0.10 per cent);
– *total*: not more than the area of the principal peak in the chromatogram obtained with reference solution (a) (0.10 per cent);
– *disregard limit*: 0.5 times the area of the principal peak in the chromatogram obtained with reference solution (a) (0.05 per cent).

**Water** (*2.5.12*): maximum 1.5 per cent, determined on 0.50 g.

**Sulfated ash** (*2.4.14*): maximum 0.1 per cent, determined on 1.0 g.

ASSAY

**Ethylenediamine**. Dissolve 0.250 g in 30 mL of *water R*. Add 0.1 mL of *bromocresol green solution R*. Titrate with *0.1 M hydrochloric acid* until a green colour is obtained.

1 mL of *0.1 M hydrochloric acid* is equivalent to 3.005 mg of $C_2H_8N_2$.

**Theophylline**. Heat 0.200 g to constant mass in an oven at 135 °C. Dissolve the residue with heating in 100 mL of *water R*, allow to cool, add 20 mL of *0.1 M silver nitrate* and shake. Add 1 mL of *bromothymol blue solution R1*. Titrate with *0.1 M sodium hydroxide*.

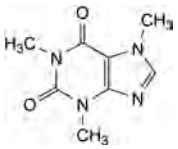
1 mL of *0.1 M sodium hydroxide* is equivalent to 18.02 mg of $C_7H_8N_4O_2$.

STORAGE

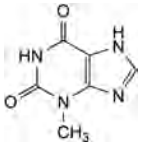
In an airtight container, protected from light.

IMPURITIES

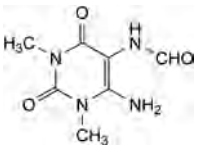
*Other detectable impurities* (the following substances would, if present at a sufficient level, be detected by one or other of the tests in the monograph. They are limited by the general acceptance criterion for other/unspecified impurities and/or by the general monograph *Substances for pharmaceutical use (2034)*. It is therefore not necessary to identify these impurities for demonstration of compliance. See also *5.10. Control of impurities in substances for pharmaceutical use*): *A, B, C, D, E, F, G.*



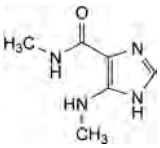
A. 1,3,7-trimethyl-3,7-dihydro-1*H*-purine-2,6-dione (caffeine),



B. 3-methyl-3,7-dihydro-1*H*-purine-2,6-dione,



C. *N*-(6-amino-1,3-dimethyl-2,4-dioxo-1,2,3,4-tetrahydropyrimidin-5-yl)formamide,



D. *N*-methyl-5-(methylamino)-1*H*-imidazole-4-carboxamide,

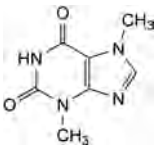
F. 7-(2-hydroxyethyl)-1,3-dimethyl-3,7-dihydro-1*H*-purine-2,6-dione (etofylline),

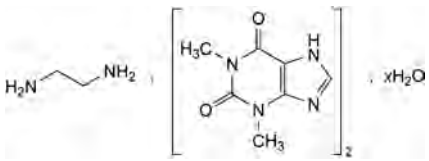


G. 3,7-dimethyl-3,7-dihydro-1*H*-purine-2,6-dione (theobromine).

**01/2017:0301**

# THEOPHYLLINE-ETHYLENEDIAMINE HYDRATE

## Theophyllinum et ethylenediaminum hydricum



$C_{16}H_{24}N_{10}O_4,xH_2O$ $M_r$ 420.4 (anhydrous substance)
[72487-55-9]

DEFINITION

*Content*:

– *theophylline* ($C_7H_8N_4O_2$; $M_r$ 180.2): 84.0 per cent to 87.4 per cent (anhydrous substance);
– *ethylenediamine* ($C_2H_8N_2$; $M_r$ 60.1): 13.5 per cent to 15.0 per cent (anhydrous substance).

It contains a variable quantity of water.

CHARACTERS

*Appearance*: white or slightly yellowish powder, sometimes granular.

*Solubility*: freely soluble in water (the solution becomes cloudy through absorption of carbon dioxide), practically insoluble in anhydrous ethanol.

IDENTIFICATION

*First identification: B, C, E.*

*Second identification: A, C, D, E, F.*

Dissolve 1.0 g in 10 mL of *water R* and add 2 mL of *dilute hydrochloric acid R* dropwise with shaking. Filter. Use the precipitate for identification tests A, B, D and F and the filtrate for identification test C.

A. Melting point (*2.2.14*): 270 °C to 274 °C, determined after washing the precipitate with *water R* and drying at 105 °C.

B. Infrared absorption spectrophotometry (*2.2.24*).

*Preparation*: precipitate, washed with *water R* and dried at 105 °C.

*Comparison*: *theophylline CRS*.

C. To the filtrate add 0.2 mL of *benzoyl chloride R*, make alkaline with *dilute sodium hydroxide solution R* and shake vigorously. Filter the precipitate, wash with 10 mL of *water R*, dissolve in 5 mL of hot *ethanol (96 per cent) R* and add 5 mL of *water R*. A precipitate is formed which, when washed and dried at 105 °C, melts (*2.2.14*) at 248 °C to 252 °C.

D. Heat about 10 mg of the precipitate with 1.0 mL of a 360 g/L solution of *potassium hydroxide R* in a water-bath at 90 °C for 3 min, then add 1.0 mL of *diazotised sulfanilic acid solution R*. A red colour slowly develops. Carry out a blank test.

E. Water (see Tests).

F. The precipitate gives the reaction of xanthines (*2.3.1*).

TESTS

**Appearance of solution**. The solution is not more opalescent than reference suspension II (*2.2.1*) and not more intensely coloured than reference solution $GY_6$ (*2.2.2, Method II*).

Dissolve 0.5 g with gentle warming in 10 mL of *carbon dioxide-free water R*.

**Related substances**. Liquid chromatography (*2.2.29*).

*Test solution*. Dissolve 50 mg of the substance to be examined in the mobile phase and dilute to 20.0 mL with the mobile phase.

*Reference solution (a)*. Dilute 1.0 mL of the test solution to 100.0 mL with the mobile phase. Dilute 1.0 mL of this solution to 10.0 mL with the mobile phase.

*Reference solution (b)*. Dissolve 10 mg of *theobromine R* (impurity G) in the mobile phase, add 5 mL of the test solution and dilute to 100 mL with the mobile phase. Dilute 5 mL of this solution to 50 mL with the mobile phase.

*Column*:

– *size*: *l* = 0.25 m, Ø = 4 mm;
– *stationary phase*: *octadecylsilyl silica gel for chromatography R* (7 µm).

*Mobile phase*: mix 7 volumes of *acetonitrile for chromatography R* and 93 volumes of a 1.36 g/L solution of *sodium acetate R* containing 0.50 per cent *V/V* of *glacial acetic acid R*.

*Flow rate*: 2.0 mL/min.

*Detection*: spectrophotometer at 272 nm.

*Injection*: 20 µL.

*Run time*: 3.5 times the retention time of theophylline.

*Relative retention* with reference to theophylline (retention time = about 6 min): impurity G = about 0.6.

*System suitability*: reference solution (b):

– *resolution*: minimum 2.0 between the peaks due to impurity G and theophylline.

*Limits*:

– *unspecified impurities*: for each impurity, not more than the area of the principal peak in the chromatogram obtained with reference solution (a) (0.10 per cent);
– *total*: not more than the area of the principal peak in the chromatogram obtained with reference solution (a) (0.1 per cent);
– *disregard limit*: 0.5 times the area of the principal peak in the chromatogram obtained with reference solution (a) (0.05 per cent).

**Water** (*2.5.12*): 3.0 per cent to 8.0 per cent, determined on 0.50 g.

**Sulfated ash** (*2.4.14*): maximum 0.1 per cent, determined on 1.0 g.

ASSAY

**Ethylenediamine**. Dissolve 0.250 g in 30 mL of *water R*. Add 0.1 mL of *bromocresol green solution R*. Titrate with *0.1 M hydrochloric acid* until a green colour is obtained.

1 mL of *0.1 M hydrochloric acid* is equivalent to 3.005 mg of $C_2H_8N_2$.

**Theophylline**. Heat 0.200 g to constant mass in an oven at 135 °C. Dissolve the residue with heating in 100 mL of *water R*, allow to cool, add 20 mL of *0.1 M silver nitrate* and shake. Add 1 mL of *bromothymol blue solution R1*. Titrate with *0.1 M sodium hydroxide*.

1 mL of *0.1 M sodium hydroxide* is equivalent to 18.02 mg of $C_7H_8N_4O_2$.

STORAGE

In a well-filled, airtight container, protected from light.

IMPURITIES

*Other detectable impurities* (the following substances would, if present at a sufficient level, be detected by one or other of the tests in the monograph. They are limited by the general acceptance criterion for other/unspecified impurities and/or by the general monograph *Substances for pharmaceutical use (2034)*. **corrected 10.0**

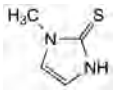
# THIAMAZOLE

## Thiamazolum



$C_4H_6N_2S$ $M_r$ 114.2
[60-56-0]

DEFINITION

1-Methyl-1,3-dihydro-2*H*-imidazole-2-thione.

*Content*: 98.0 per cent to 101.0 per cent (dried substance).

CHARACTERS

*Appearance*: white or pale brown, crystalline powder.

*Solubility*: freely soluble in water, freely soluble in methylene chloride, freely soluble or soluble in ethanol (96 per cent).

IDENTIFICATION

*First identification*: A, C.

*Second identification*: A, B, D.

A. Melting point (*2.2.14*): 143 °C to 146 °C.

B. Dissolve 25 mg in 10 mL of a 0.28 per cent *V/V* solution of *sulfuric acid R* and dilute to 50.0 mL with the same solution. Dilute 1.0 mL of this solution to 100.0 mL with a 0.28 per cent *V/V* solution of *sulfuric acid R*. Examined between 200 nm and 300 nm (*2.2.25*), the solution shows 2 absorption maxima, at 211 nm and 251 nm. The ratio of the absorbance measured at the absorption maximum at 251 nm to that measured at the absorption maximum at 211 nm is 2.5 to 2.7.

C. Infrared absorption spectrophotometry (*2.2.24*).
*Preparation*: discs.
*Comparison*: *thiamazole CRS*.

D. Thin-layer chromatography (*2.2.27*).
*Test solution*. Dissolve 5.0 mg of the substance to be examined in *methanol R* and dilute to 5.0 mL with the same solvent.
*Reference solution (a)*. Dissolve 5.0 mg of *thiamazole CRS* in *methanol R* and dilute to 5.0 mL with the same solvent.
*Reference solution (b)*. Dissolve 5.0 mg of *2-methylimidazole R* in *methanol R* and dilute to 5.0 mL with the same solvent. Dilute 1.0 mL of this solution to 2.0 mL with the test solution.
*Plate*: *TLC silica gel $F_{254}$ plate R*.
*Mobile phase*: *concentrated ammonia R1*, *2-propanol R*, *toluene R* (1:24:75 *V/V/V*).
*Application*: 10 µL.
*Development*: over 2/3 of the plate.
*Drying*: in air.
*Detection*: examine in ultraviolet light at 254 nm.
*System suitability*: reference solution (b):
– expose the plate to iodine vapour for 30 min; the chromatogram shows 2 clearly separated spots.
*Results*: the principal spot in the chromatogram obtained with the test solution is similar in position and size to the principal spot in the chromatogram obtained with reference solution (a).

TESTS

**Solution S**. Dissolve 2.0 g in *water R* and dilute to 20.0 mL with the same solvent.

**Appearance of solution**. Solution S is clear (*2.2.1*) and not more intensely coloured than reference solution $B_6$ (*2.2.2, Method II*).

**Related substances**. Gas chromatography (*2.2.28*).
*Test solution*. Dissolve 0.100 g of the substance to be examined in *chloroform R* and dilute to 10.0 mL with the same solvent.
*Reference solution (a)*. Dilute 1.0 mL of the test solution to 100.0 mL with *chloroform R*. Dilute 1.0 mL of this solution to 10.0 mL with *chloroform R*.
*Reference solution (b)*. Dissolve 5.0 mg of *thiamazole impurity A CRS*, 5.0 mg of *1-methylimidazole R1* and 5.0 mg of *thiamazole impurity C CRS* in *chloroform R* and dilute to 50.0 mL with the same solvent. Dilute 1.0 mL of this solution to 10.0 mL with *chloroform R*.
*Column*:
– *material*: fused silica,
– *size*: *l* = 30.0 m, Ø = 0.25 mm,
– *stationary phase*: *base-deactivated phenyl(5)methyl(95)polysiloxane R* (film thickness 0.5 µm).
*Carrier gas*: *helium for chromatography R*.
*Flow rate*: 1.5 mL/min.
*Split ratio*: 3:20.
*Temperature*:

| | Time (min) | Temperature (°C) |
|---|---|---|
| Column | 0 - 2 | 100 |
| | 2 - 7 | 100 → 250 |
| | 7 - 22 | 250 |
| Injection port | | 150 |
| Detector | | 250 |

*Detection*: flame ionisation.
*Injection*: 1 µL.

*Relative retention* with reference to thiamazole (retention time = about 6.5 min): impurity A = about 0.3; impurity B = about 0.4; impurity C = about 0.7.

*System suitability*: reference solution (b):

– *resolution*: minimum 1.5 between the peaks due to impurity A and impurity B.

*Limits*:

– *impurities A, B, C*: for each impurity, not more than the area of the corresponding peak in the chromatogram obtained with reference solution (b) (0.1 per cent),
– *any other impurity*: for each impurity, not more than the area of the principal peak in the chromatogram obtained with reference solution (a) (0.1 per cent),
– *total*: not more than 5 times the area of the principal peak in the chromatogram obtained with reference solution (a) (0.5 per cent),
– *disregard limit*: 0.2 times the area of the principal peak in the chromatogram obtained with reference solution (a) (0.02 per cent).

**Loss on drying** (*2.2.32*): maximum 0.5 per cent, determined on 1.000 g by drying in an oven at 105 °C for 2 h.

**Sulfated ash** (*2.4.14*): maximum 0.1 per cent, determined on 1.0 g.

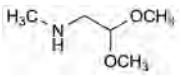
ASSAY

Dissolve 0.250 g in 75 mL of *water R*. Add 15.0 mL of *0.1 M sodium hydroxide*, mix and add with stirring, about 30 mL of *0.1 M silver nitrate*. Continue the titration with *0.1 M sodium hydroxide*, determining the end-point potentiometrically (*2.2.20*).

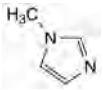
1 mL of *0.1 M sodium hydroxide* is equivalent to 11.42 mg of $C_4H_6N_2S$.

IMPURITIES

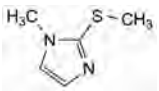
*Specified impurities: A, B, C.*



A. 2,2-dimethoxy-*N*-methylethanamine,



B. 1-methyl-1*H*-imidazole,

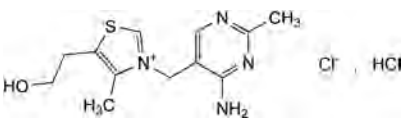


C. 1-methyl-2-(methylsulfanyl)-1*H*-imidazole.

**01/2017:0303**
**corrected 10.0**

# THIAMINE HYDROCHLORIDE

## Thiamini hydrochloridum



$C_{12}H_{18}Cl_2N_4OS$ $M_r$ 337.3
[67-03-8]

DEFINITION

3-[(4-Amino-2-methylpyrimidin-5-yl)methyl]-5-(2-hydroxyethyl)-4-methyl-1,3-thiazol-3-ium chloride hydrochloride.

*Content*: 98.5 per cent to 101.0 per cent (anhydrous substance).

CHARACTERS

*Appearance*: white or almost white, crystalline powder or colourless crystals.

*Solubility*: freely soluble in water, soluble in glycerol, slightly soluble in ethanol (96 per cent), practically insoluble in heptane.

IDENTIFICATION

*First identification: A, C.*

*Second identification: B, C.*

A. Infrared absorption spectrophotometry (*2.2.24*).

*Comparison*: *thiamine hydrochloride CRS*.

If the spectra obtained show differences, dissolve the substance to be examined and the reference substance separately in *water R*, evaporate to dryness and record new spectra using the residues.

B. Dissolve about 20 mg in 10 mL of *water R*, add 1 mL of *dilute acetic acid R* and 1.6 mL of *1 M sodium hydroxide*, heat on a water-bath for 30 min and allow to cool. Add 5 mL of *dilute sodium hydroxide solution R*, 10 mL of *potassium ferricyanide solution R* and 10 mL of *butanol R* and shake vigorously for 2 min. The upper alcoholic layer shows an intense light-blue fluorescence, especially in ultraviolet light at 365 nm. Repeat the test using 0.9 mL of *1 M sodium hydroxide* and 0.1 g of *anhydrous sodium sulfite R* instead of 1.6 mL of *1 M sodium hydroxide*. Practically no fluorescence is seen.

C. It gives reaction (a) of chlorides (*2.3.1*).

TESTS

**Solution S**. Dissolve 2.5 g in *carbon dioxide-free water R* and dilute to 25 mL with the same solvent.

**Appearance of solution**. The solution is clear (*2.2.1*) and not more intensely coloured than reference solution $Y_7$ or $GY_7$ (*2.2.2, Method II*).

Dilute 2.5 mL of solution S to 5 mL with *water R*.

**pH** (*2.2.3*): 2.7 to 3.3.

Dilute 2.5 mL of solution S to 10 mL with *water R*.

**Related substances**. Liquid chromatography (*2.2.29*).

*Test solution*. Dissolve 0.35 g of the substance to be examined in 15.0 mL of a 5 per cent *V/V* solution of *glacial acetic acid R* and dilute to 100.0 mL with *water R*.

*Reference solution (a)*. Dissolve the contents of a vial of *thiamine for system suitability CRS* (containing impurities A, B and C) in 1 mL of a 0.75 per cent *V/V* solution of *glacial acetic acid R*.

*Reference solution (b)*. Dilute 1.0 mL of the test solution to 100.0 mL with *water R*. Dilute 1.0 mL of this solution to 10.0 mL with *water R*.

*Column*:

– *size*: *l* = 0.25 m, Ø = 4.0 mm;
– *stationary phase*: *end-capped octadecylsilyl silica gel for chromatography R* (5 µm);
– *temperature*: 45 °C.

*Mobile phase*:

– *mobile phase A*: 3.764 g/L solution of *sodium hexanesulfonate R* adjusted to pH 3.1 with *phosphoric acid R*;
– *mobile phase B*: *methanol R1*;

| Time (min) | Mobile phase A (per cent *V/V*) | Mobile phase B (per cent *V/V*) |
|---|---|---|
| 0 - 2 | 90 | 10 |
| 2 - 27 | 90 → 70 | 10 → 30 |
| 27 - 35 | 70 → 50 | 30 → 50 |
| 35 - 42 | 50 | 50 |

*Flow rate*: 1.0 mL/min.

*Detection*: spectrophotometer at 248 nm.

*Injection*: 25 µL.

*Identification of impurities*: use the chromatogram supplied with *thiamine for system suitability CRS* and the chromatogram obtained with reference solution (a) to identify the peaks due to impurities A, B and C.

*Relative retention* with reference to thiamine (retention time = about 30 min): impurity A = about 0.3; impurity B = about 0.9; impurity C = about 1.2.

*System suitability*: reference solution (a):

– *resolution*: minimum 3.0 between the peaks due to impurity B and thiamine; minimum 2.0 between the peaks due to thiamine and impurity C.

*Calculation of percentage contents*:

– for each impurity, use the concentration of thiamine hydrochloride in reference solution (b).

*Limits*:

– *impurity B*: maximum 0.3 per cent;

– *impurities A, C*: for each impurity, maximum 0.15 per cent;

– *unspecified impurities*: for each impurity, maximum 0.10 per cent;

– *total*: maximum 0.5 per cent;

– *reporting threshold*: 0.05 per cent.

**Sulfates** (*2.4.13*): maximum 300 ppm.

Dilute 5 mL of solution S to 15 mL with *distilled water R*.

**Water** (*2.5.12*): maximum 5.0 per cent, determined on 0.400 g.

**Sulfated ash** (*2.4.14*): maximum 0.1 per cent, determined on 1.0 g.

## ASSAY

Dissolve 0.110 g in 5 mL of *anhydrous formic acid R* and add 50 mL of *acetic anhydride R*. Titrate immediately with *0.1 M perchloric acid*, determining the end-point potentiometrically (*2.2.20*) and carrying out the titration within 2 min. Carry out a blank titration.

1 mL of *0.1 M perchloric acid* is equivalent to 16.86 mg of $C_{12}H_{18}Cl_2N_4OS$.

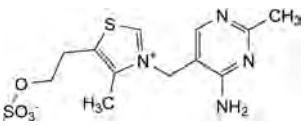
## STORAGE

In a non-metallic container, protected from light.

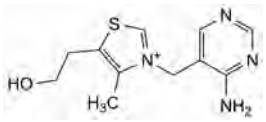
## IMPURITIES

*Specified impurities: A, B, C.*

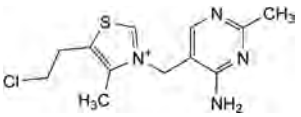
*Other detectable impurities* (the following substances would, if present at a sufficient level, be detected by one or other of the tests in the monograph. They are limited by the general acceptance criterion for other/unspecified impurities and/or by the general monograph *Substances for pharmaceutical use (2034)*. It is therefore not necessary to identify these impurities for demonstration of compliance. See also *5.10. Control of impurities in substances for pharmaceutical use*): *D, E, F, G, H.*



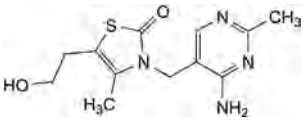
A. 2-[3-[(4-amino-2-methylpyrimidin-5-yl)methyl]-4-methyl-1,3-thiazol-3-ium-5-yl]ethyl sulfate (thiamine sulfate ester),



B. 3-[(4-aminopyrimidin-5-yl)methyl]-5-(2-hydroxyethyl)-4-methyl-1,3-thiazol-3-ium (desmethylthiamine),



C. 3-[(4-amino-2-methylpyrimidin-5-yl)methyl]-5-(2-chloroethyl)-4-methyl-1,3-thiazol-3-ium (chlorothiamine),



D. 3-[(4-amino-2-methylpyrimidin-5-yl)methyl]-5-(2-hydroxyethyl)-4-methyl-1,3-thiazol-2(3*H*)-one (oxothiamine),

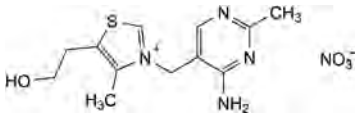
corrected 10.0

# THIAMINE NITRATE

## Thiamini nitras



$C_{12}H_{17}N_5O_4S$ $M_r$ 327.4
[532-43-4]

DEFINITION

3-[(4-Amino-2-methylpyrimidin-5-yl)methyl]-5-(2-hydroxyethyl)-4-methyl-1,3-thiazol-3-ium nitrate.

*Content*: 98.0 per cent to 101.0 per cent (dried substance).

CHARACTERS

*Appearance*: white or almost white, crystalline powder or small, colourless crystals.

*Solubility*: sparingly soluble in water, freely soluble in boiling water, slightly soluble in ethanol (96 per cent), practically insoluble in heptane.

IDENTIFICATION

*First identification: A, C.*

*Second identification: B, C.*

A. Infrared absorption spectrophotometry (*2.2.24*).
*Comparison*: *thiamine nitrate CRS*.

B. Dissolve about 20 mg in 10 mL of *water R*, add 1 mL of *dilute acetic acid R* and 1.6 mL of *1 M sodium hydroxide*, heat on a water-bath for 30 min and allow to cool. Add 5 mL of *dilute sodium hydroxide solution R*, 10 mL of *potassium ferricyanide solution R* and 10 mL of *butanol R* and shake vigorously for 2 min. The upper alcoholic layer shows an intense light-blue fluorescence, especially in ultraviolet light at 365 nm. Repeat the test using 0.9 mL of *1 M sodium hydroxide* and 0.2 g of *sodium sulfite heptahydrate R* instead of 1.6 mL of *1 M sodium hydroxide*. Practically no fluorescence is produced.

C. About 5 mg gives the reaction of nitrates (*2.3.1*).

TESTS

**Solution S**. Dissolve 1.0 g in *carbon dioxide-free water R* and dilute to 50 mL with the same solvent.

**Appearance of solution**. Solution S is clear (*2.2.1*) and not more intensely coloured than reference solution $Y_7$ (*2.2.2, Method II*).

**pH** (*2.2.3*): 6.8 to 7.6 for solution S.

**Related substances**. Liquid chromatography (*2.2.29*).

*Test solution*. Dissolve 0.35 g of the substance to be examined in 15.0 mL of a 5 per cent *V/V* solution of *glacial acetic acid R* and dilute to 100.0 mL with *water R*.

*Reference solution (a)*. Dissolve the contents of a vial of *thiamine for system suitability CRS* (containing impurities A, B and C) in 1 mL of a 0.75 per cent *V/V* solution of *glacial acetic acid R*.

*Reference solution (b)*. Dilute 1.0 mL of the test solution to 100.0 mL with *water R*. Dilute 1.0 mL of this solution to 10.0 mL with *water R*.

*Column*:
– *size*: *l* = 0.25 m, Ø = 4.0 mm;
– *stationary phase*: *end-capped octadecylsilyl silica gel for chromatography R* (5 µm);
– *temperature*: 45 °C.

*Mobile phase*:
– *mobile phase A*: 3.764 g/L solution of *sodium hexanesulfonate R* adjusted to pH 3.1 with *phosphoric acid R*;
– *mobile phase B*: *methanol R1*;

| Time (min) | Mobile phase A (per cent *V/V*) | Mobile phase B (per cent *V/V*) |
|---|---|---|
| 0 - 2 | 90 | 10 |
| 2 - 27 | 90 → 70 | 10 → 30 |
| 27 - 35 | 70 → 50 | 30 → 50 |
| 35 - 42 | 50 | 50 |

*Flow rate*: 1.0 mL/min.

*Detection*: spectrophotometer at 248 nm.

*Injection*: 25 µL.

*Identification of impurities*: use the chromatogram supplied with *thiamine for system suitability CRS* and the chromatogram obtained with reference solution (a) to identify the peaks due to impurities A, B and C.

*Relative retention* with reference to thiamine (retention time = about 30 min): impurity A = about 0.3; impurity B = about 0.9; impurity C = about 1.2.

*System suitability*: reference solution (a):
– *resolution*: minimum 3.0 between the peaks due to impurity B and thiamine; minimum 2.0 between the peaks due to thiamine and impurity C.

*Calculation of percentage contents*:
– for each impurity, use the concentration of thiamine nitrate in reference solution (b).

*Limits*:
– *impurity B*: maximum 0.6 per cent;
– *impurity C*: maximum 0.4 per cent;
– *impurity A*: maximum 0.15 per cent;
– *unspecified impurities*: for each impurity, maximum 0.10 per cent;
– *total*: maximum 1.0 per cent;
– *reporting threshold*: 0.05 per cent; disregard the peak due to the nitrate ion at the beginning of the chromatogram.

**Loss on drying** (*2.2.32*): maximum 1.0 per cent, determined on 1.000 g by drying in an oven at 105 °C.

**Sulfated ash** (*2.4.14*): maximum 0.1 per cent, determined on 1.0 g.

ASSAY

Dissolve 0.140 g in 5 mL of *anhydrous formic acid R* and add 50 mL of *acetic anhydride R*. Titrate immediately with *0.1 M perchloric acid*, determining the end-point potentiometrically (*2.2.20*) and carrying out the titration within 2 min. Carry out a blank titration.

1.0 mL of *0.1 M perchloric acid* is equivalent to 16.37 mg of $C_{12}H_{17}N_5O_4S$.

STORAGE

In a non-metallic container, protected from light.

IMPURITIES

*Specified impurities: A, B, C.*

*Other detectable impurities* (the following substances would, if present at a sufficient level, be detected by one or other of the tests in the monograph. They are limited by the general acceptance criterion for other/unspecified impurities and/or by the general monograph *Substances for pharmaceutical use*

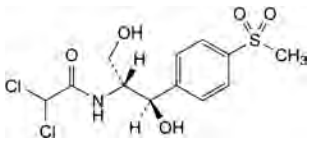
H. (3*RS*)-3-[[[(4-amino-2-methylpyrimidin-5-yl)methyl]thiocarbamoyl]sulfanyl]-4-oxopentyl acetate (ketodithiocarbamate).

**01/2017:0109**

# THIAMPHENICOL

## Thiamphenicolum



$C_{12}H_{15}Cl_2NO_5S$ $M_r$ 356.2
[15318-45-3]

DEFINITION

2,2-Dichloro-*N*-[(1*R*,2*R*)-2-hydroxy-1-(hydroxymethyl)-2-[4-(methylsulfonyl)phenyl]ethyl]acetamide.

*Content*: 98.0 per cent to 100.5 per cent (dried substance).

CHARACTERS

*Appearance*: fine, white or yellowish-white, crystalline powder or crystals.

*Solubility*: slightly soluble in water, very soluble in dimethylacetamide, freely soluble in acetonitrile and in dimethylformamide, soluble in methanol, sparingly soluble in acetone and in anhydrous ethanol, slightly soluble in ethyl acetate.

A solution in anhydrous ethanol is dextrorotatory and a solution in dimethylformamide is laevorotatory.

IDENTIFICATION

A. Infrared absorption spectrophotometry (*2.2.24*).

*Preparation*: dry the substance to be examined and the reference substance at 100-105 °C for 2 h; examine as discs of *potassium bromide R*.

*Comparison*: *thiamphenicol CRS*.

B. Thin-layer chromatography (*2.2.27*).

*Test solution.* Dissolve 0.1 g of the substance to be examined in *methanol R* and dilute to 10 mL with the same solvent.

*Reference solution.* Dissolve 0.1 g of *thiamphenicol CRS* in *methanol R* and dilute to 10 mL with the same solvent.

*Plate*: *silica gel* $GF_{254}$ *R* as the coating substance.

*Mobile phase*: *methanol R*, *ethyl acetate R* (3:97 *V/V*).

*Application*: 5 µL.

*Development*: over a path of 10 cm.

*Drying*: in air.

*Detection*: examine in ultraviolet light at 254 nm.

*Results*: the principal spot in the chromatogram obtained with the test solution is similar in position and size to the spot in the chromatogram obtained with the reference solution.

C. To 50 mg in a porcelain crucible add 0.5 g of *anhydrous sodium carbonate R*. Heat over an open flame for 10 min. Allow to cool. Take up the residue with 5 mL of *dilute nitric acid R* and filter. To 1 mL of the filtrate add 1 mL of *water R*. The solution gives reaction (a) of chlorides (*2.3.1*).

TESTS

**Acidity or alkalinity**. Shake 0.1 g with 20 mL of *carbon dioxide-free water R* and add 0.1 mL of *bromothymol blue solution R1*. Not more than 0.1 mL of *0.02 M hydrochloric acid* or *0.02 M sodium hydroxide* is required to change the colour of the indicator.

Monographs T

**Specific optical rotation** (*2.2.7*): – 24 to – 21 (dried substance).

Dissolve 1.25 g in *dimethylformamide R* and dilute to 25.0 mL with the same solvent.

**Melting point** (*2.2.14*): 163 °C to 167 °C.

**Absorbance** (*2.2.25*).

*Test solution (a).* Dissolve 20 mg in *water R*, heating to about 40 °C, and dilute to 100.0 mL with the same solvent.

*Test solution (b).* Dilute 2.5 mL of test solution (a) to 50.0 mL with *water R*.

*Spectral range*: 240-300 nm for test solution (a); 200-240 nm for test solution (b).

*Absorption maxima*: at 266 nm and 273 nm for test solution (a); at 224 nm for test solution (b).

*Specific absorbances at the absorption maxima*:

– at 266 nm: 25 to 28 for test solution (a);
– at 273 nm: 21.5 to 23.5 for test solution (a);
– at 224 nm: 370 to 400 for test solution (b).

**Chlorides** (*2.4.4*): maximum 200 ppm.

Shake 0.5 g with 30 mL of *water R* for 5 min and filter.

**Loss on drying** (*2.2.32*): maximum 1.0 per cent, determined on 1.000 g by drying in an oven at 105 °C.

**Sulfated ash** (*2.4.14*): maximum 0.1 per cent, determined on 2.0 g.

ASSAY

Dissolve 0.300 g in 30 mL of *ethanol (96 per cent) R*, add 20 mL of a 500 g/L solution of *potassium hydroxide R*, mix and heat under a reflux condenser for 4 h. Cool, add 100 mL of *water R*, neutralise with *dilute nitric acid R* and add 5 mL of the same acid in excess. Titrate with *0.1 M silver nitrate*, determining the end-point potentiometrically (*2.2.20*). Carry out a blank test.

1 mL of *0.1 M silver nitrate* is equivalent to 17.81 mg of $C_{12}H_{15}Cl_2NO_5S$.

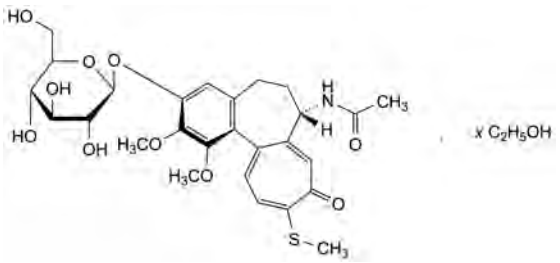
STORAGE

In an airtight container, protected from light.

**04/2016:2896**
**corrected 10.0**

# THIOCOLCHICOSIDE CRYSTALLISED FROM ETHANOL

## Thiocolchicosidum ex ethanolo cristallisatum



$C_{27}H_{33}NO_{10}S,xC_2H_6O$ $M_r$ 563.6 (ethanol-free substance)
Anhydrous thiocolchicoside: [602-41-5]

DEFINITION

*N*-[(7*S*,12a*R*$_a$)-3-(β-D-Glucopyranosyloxy)-1,2-dimethoxy-10-(methylsulfanyl)-9-oxo-5,6,7,9-tetrahydrobenzo[*a*]heptalen-7-yl]acetamide.

*Content*: 97.0 per cent to 102.0 per cent (anhydrous substance).

It contains a variable quantity of ethanol.

CHARACTERS

*Appearance*: yellow crystalline powder, hygroscopic.

*Solubility*: sparingly soluble in water, practically insoluble in acetone and in ethanol (96 per cent).

mp: about 208 °C.

IDENTIFICATION

Infrared absorption spectrophotometry (*2.2.24*).

*Comparison*: *thiocolchicoside crystallised from ethanol CRS*.

TESTS

**Appearance of solution**. The solution is clear (*2.2.1*).

Dissolve 0.100 g in *methanol R* and dilute to 10 mL with the same solvent.

**Specific optical rotation** (*2.2.7*): – 600 to – 570 (anhydrous substance).

Dissolve 0.500 g in *water R* and dilute to 100.0 mL with the same solvent.

**Related substances**. Liquid chromatography (*2.2.29*). *Carry out the test protected from light.*

*Test solution (a).* Dissolve 20.0 mg of the substance to be examined in *methanol R* and dilute to 20.0 mL with the same solvent.

*Test solution (b).* Dilute 1.0 mL of test solution (a) to 10.0 mL with *methanol R*.

*Reference solution (a).* Dilute 1.0 mL of test solution (a) to 100.0 mL with *methanol R*. Dilute 2.0 mL of this solution to 10.0 mL with *methanol R*.

*Reference solution (b).* Dissolve 5 mg of *thiocolchicoside for system suitability CRS* (containing impurities D, E, G, H, K and L) in *methanol R* and dilute to 5 mL with the same solvent.

*Reference solution (c).* Dissolve 20.0 mg of *thiocolchicoside hydrate CRS* in *methanol R* and dilute to 20.0 mL with the same solvent. Dilute 1.0 mL of the solution to 10.0 mL with *methanol R*.

*Column*:

– *size*: *l* = 0.10 m, Ø = 2.1 mm;
– *stationary phase*: *end-capped ethylene-bridged phenylsilyl silica gel for chromatography (hybrid material) R* (1.7 µm);
– *temperature*: 25 °C.

*Mobile phase*:

– *mobile phase A*: dissolve 0.22 g of *ammonium formate R* in 350 mL of *water for chromatography R* and mix with 25 mL of *tetrahydrofuran R*;
– *mobile phase B*: dilute 45 µL of *anhydrous formic acid R* in 900 mL of *acetonitrile R* and mix with 100 mL of *tetrahydrofuran R*;

| Time (min) | Mobile phase A (per cent *V/V*) | Mobile phase B (per cent *V/V*) |
|---|---|---|
| 0 - 2 | 99 | 1 |
| 2 - 6 | 99 → 92 | 1 → 8 |
| 6 - 7.5 | 92 → 70 | 8 → 30 |
| 7.5 - 8.8 | 70 → 50 | 30 → 50 |
| 8.8 - 9.2 | 50 → 2 | 50 → 98 |
| 9.2 - 10 | 2 | 98 |

*Flow rate*: 0.4 mL/min.

*Detection*: spectrophotometer at 370 nm.

*Injection*: 1.0 µL of test solution (a) and reference solutions (a) and (b).

*Identification of impurities*: use the chromatogram supplied with *thiocolchicoside for system suitability CRS* and the chromatogram obtained with reference solution (b) to identify the peaks due to impurities D, E, H and L.

*Relative retention* with reference to thiocolchicoside (retention time = about 6 min): impurity D = about 0.2; impurity H = about 0.4; impurity E = about 1.05; impurity L = about 1.11.

*System suitability*:

- *signal-to-noise ratio*: minimum 50 for the principal peak in the chromatogram obtained with reference solution (a);
- *peak-to-valley ratio*: minimum 1.5, where $H_p$ = height above the baseline of the peak due to impurity E and $H_v$ = height above the baseline of the lowest point of the curve separating this peak from the peak due to thiocolchicoside in the chromatogram obtained with reference solution (b).

*Calculation of percentage contents*:

- *correction factor*: multiply the peak areas of the following impurities by the corresponding correction factor: impurity D = 1.7; impurity H = 2.8;
- for each impurity, use the concentration of the substance to be examined in reference solution (a).

*Limits*:

- *impurity D*: maximum 0.4 per cent;
- *impurities E, H*: for each impurity, maximum 0.3 per cent;
- *unspecified impurities*: for each impurity, maximum 0.10 per cent;
- *total*: maximum 1.0 per cent;
- *reporting threshold*: 0.05 per cent; disregard the peak due to impurity L.

**Ethanol** (*2.4.24*): maximum 1.5 per cent.

**Water** (*2.5.12*): maximum 2.5 per cent, determined on 0.500 g.

**Sulfated ash** (*2.4.14*): maximum 0.1 per cent, determined on 1.0 g.

ASSAY

Liquid chromatography (*2.2.29*) as described in the test for related substances with the following modification.

*Injection*: test solution (b) and reference solution (c).

Calculate the percentage content of $C_{27}H_{33}NO_{10}S$ taking into account the assigned content of *thiocolchicoside hydrate CRS*.

STORAGE

In an airtight container, protected from light.

IMPURITIES

*Specified impurities: D, E, H.*

*Other detectable impurities* (the following substances would, if present at a sufficient level, be detected by one or other of the tests in the monograph. They are limited by the general acceptance criterion for other/unspecified impurities and/or by the general monograph *Substances for pharmaceutical use (2034)*. # THIOCOLCHICOSIDE HYDRATE

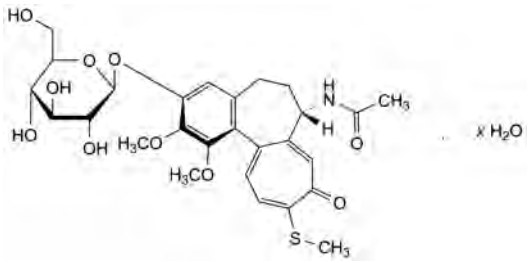
## Thiocolchicosidum hydricum



$C_{27}H_{33}NO_{10}S,xH_2O$ $M_r$ 563.6 (anhydrous substance)
Anhydrous thiocolchicoside: [602-41-5]

DEFINITION

*N*-[(7*S*,12a$R_a$)-3-(β-D-Glucopyranosyloxy)-1,2-dimethoxy-10-(methylsulfanyl)-9-oxo-5,6,7,9-tetrahydrobenzo[*a*]heptalen-7-yl]acetamide.

*Content*: 96.0 per cent to 102.0 per cent (anhydrous substance).

It contains a variable quantity of water.

CHARACTERS

*Appearance*: yellow crystalline powder, slightly hygroscopic.

*Solubility*: sparingly soluble in water, slightly soluble in ethanol (96 per cent), practically insoluble in acetone.

mp: about 272 °C.

IDENTIFICATION

Infrared absorption spectrophotometry (*2.2.24*).

*Comparison*: *thiocolchicoside hydrate CRS*.

TESTS

**Appearance of solution**. The solution is clear (*2.2.1*).

Dissolve 0.100 g in *methanol R* and dilute to 10 mL with the same solvent.

**Specific optical rotation** (*2.2.7*): − 600 to − 570 (anhydrous substance).

Dissolve 0.500 g in *water R* and dilute to 100.0 mL with the same solvent.

**Related substances**. Liquid chromatography (*2.2.29*). *Carry out the test protected from light.*

*Test solution (a).* Dissolve 20.0 mg of the substance to be examined in *methanol R* and dilute to 20.0 mL with the same solvent.

*Test solution (b).* Dilute 1.0 mL of test solution (a) to 10.0 mL with *methanol R*.

*Reference solution (a).* Dilute 1.0 mL of test solution (a) to 100.0 mL with *methanol R*. Dilute 2.0 mL of this solution to 10.0 mL with *methanol R*.

*Reference solution (b).* Dissolve 5 mg of *thiocolchicoside for system suitability CRS* (containing impurities D, E, G, H, K and L) in *methanol R* and dilute to 5 mL with the same solvent.

*Reference solution (c).* Dissolve 20.0 mg of *thiocolchicoside hydrate CRS* in *methanol R* and dilute to 20.0 mL with the same solvent. Dilute 1.0 mL of the solution to 10.0 mL with *methanol R*.

*Column*:

- *size*: *l* = 0.10 m, Ø = 2.1 mm;
- *stationary phase*: *end-capped ethylene-bridged phenylsilyl silica gel for chromatography (hybrid material) R* (1.7 µm);

– *temperature*: 25 °C.

*Mobile phase*:

– *mobile phase A*: dissolve 0.22 g of *ammonium formate R* in 350 mL of *water for chromatography R* and mix with 25 mL of *tetrahydrofuran R*;

– *mobile phase B*: dilute 45 µL of *anhydrous formic acid R* in 900 mL of *acetonitrile R* and mix with 100 mL of *tetrahydrofuran R*;

| Time (min) | Mobile phase A (per cent *V/V*) | Mobile phase B (per cent *V/V*) |
|---|---|---|
| 0 - 2 | 99 | 1 |
| 2 - 6 | 99 → 92 | 1 → 8 |
| 6 - 7.5 | 92 → 70 | 8 → 30 |
| 7.5 - 8.8 | 70 → 50 | 30 → 50 |
| 8.8 - 9.2 | 50 → 2 | 50 → 98 |
| 9.2 - 10 | 2 | 98 |

*Flow rate*: 0.4 mL/min.

*Detection*: spectrophotometer at 370 nm.

*Injection*: 1.0 µL of test solution (a) and reference solutions (a) and (b).

*Identification of impurities*: use the chromatogram supplied with *thiocolchicoside for system suitability CRS* and the chromatogram obtained with reference solution (b) to identify the peaks due to impurities D, E, G, H, K and L.

*Relative retention* with reference to thiocolchicoside (retention time = about 6 min): impurity D = about 0.2; impurity H = about 0.4; impurity G = about 0.7; impurity K = about 0.8; impurity E = about 1.05; impurity L = about 1.11.

*System suitability*:

– *signal-to-noise ratio*: minimum 50 for the principal peak in the chromatogram obtained with reference solution (a);

– *peak-to-valley ratio*: minimum 1.5, where $H_p$ = height above the baseline of the peak due to impurity E and $H_v$ = height above the baseline of the lowest point of the curve separating this peak from the peak due to thiocolchicoside in the chromatogram obtained with reference solution (b).

*Calculation of percentage contents*:

– *correction factors*: multiply the peak areas of the following impurities by the corresponding correction factor: impurity D = 1.7; impurity H = 2.8;

– for each impurity, use the concentration of thiocolchicoside hydrate in reference solution (a).

*Limits*:

– *impurity E*: maximum 1.0 per cent;

– *impurity H*: maximum 0.7 per cent;

– *impurity K*: maximum 0.3 per cent;

– *impurities D, G*: for each impurity, maximum 0.2 per cent;

– *unspecified impurities*: for each impurity, maximum 0.10 per cent;

– *total*: maximum 2.5 per cent;

– *reporting threshold*: 0.05 per cent; disregard the peak due to impurity L.

**Water** (*2.5.12*): maximum 2.5 per cent, determined on 0.500 g.

**Sulfated ash** (*2.4.14*): maximum 0.1 per cent, determined on 1.0 g.

ASSAY

Liquid chromatography (*2.2.29*) as described in the test for related substances with the following modification.

*Injection*: test solution (b) and reference solution (c).

Calculate the percentage content of $C_{27}H_{33}NO_{10}S$ taking into account the assigned content of *thiocolchicoside hydrate CRS*.

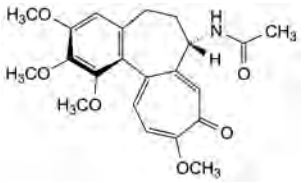
STORAGE

In an airtight container, protected from light.

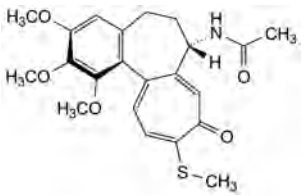
IMPURITIES

*Specified impurities: D, E, G, H, K.*

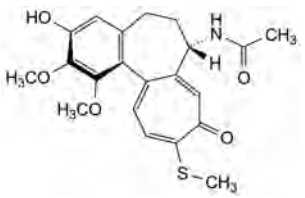
*Other detectable impurities* (the following substances would, if present at a sufficient level, be detected by one or other of the tests in the monograph. They are limited by the general acceptance criterion for other/unspecified impurities and/or by the general monograph *Substances for pharmaceutical use (2034)*. It is therefore not necessary to identify these impurities for demonstration of compliance. See also *5.10. Control of impurities in substances for pharmaceutical use*): *A, B, C, J, L.*



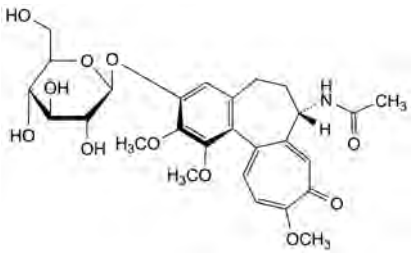
A. *N*-[(7*S*,12a$R_a$)-1,2,3,10-tetramethoxy-9-oxo-5,6,7,9-tetrahydrobenzo[*a*]heptalen-7-yl]acetamide (colchicine),



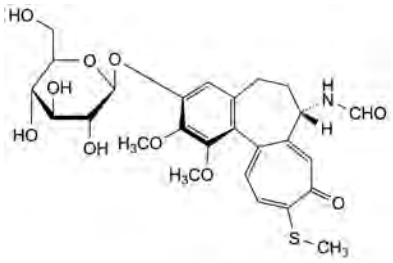
B. *N*-[(7*S*,12a$R_a$)-1,2,3-trimethoxy-10-(methylsulfanyl)-9-oxo-5,6,7,9-tetrahydrobenzo[*a*]heptalen-7-yl]acetamide (thiocolchicine),



C. *N*-[(7*S*,12a$R_a$)-3-hydroxy-1,2-dimethoxy-10-(methylsulfanyl)-9-oxo-5,6,7,9-tetrahydrobenzo[*a*]heptalen-7-yl]acetamide (3-*O*-demethylthiocolchicine),



D. *N*-[(7*S*,12a$R_a$)-3-(β-D-glucopyranosyloxy)-1,2,10-trimethoxy-9-oxo-5,6,7,9-tetrahydrobenzo[*a*]heptalen-7-yl]acetamide (colchicoside),



E. *N*-[(7*S*,12a$R_a$)-3-(β-D-glucopyranosyloxy)-1,2-dimethoxy-10-(methylsulfanyl)-9-oxo-5,6,7,9-tetrahydrobenzo[*a*]heptalen-7-yl]formamide (*N*-deacetyl-*N*-formylthiocolchicoside),

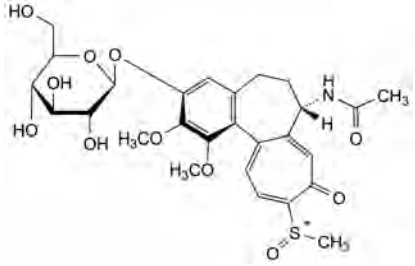
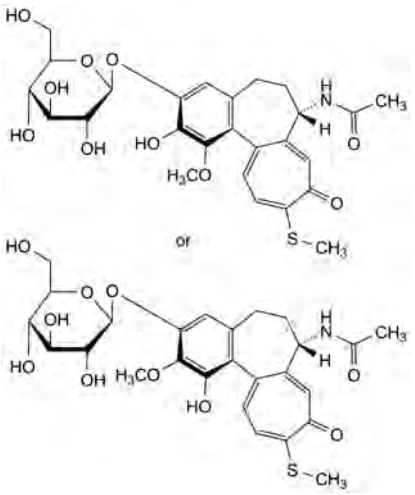
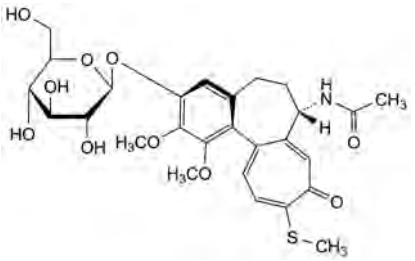
H. *N*-[(7*S*,12a$R_a$)-3-(β-D-glucopyranosyloxy)-1,2-dimethoxy-9-oxo-5,6,7,9-tetrahydrobenzo[*a*]heptalen-7-yl]acetamide (10-demethoxycolchicoside),



J. *N*-[(7*S*,12a$R_a$)-3-(β-D-glucopyranosyloxy)-1,2-dimethoxy-10-(methylsulfinyl)-9-oxo-5,6,7,9-tetrahydrobenzo[*a*]heptalen-7-yl]acetamide (thiocolchicoside *S*-oxide),



K. *N*-[(7*S*,12a$R_a$)-3-(β-D-glucopyranosyloxy)-2-hydroxy-1-methoxy-10-(methylsulfanyl)-9-oxo-5,6,7,9-tetrahydrobenzo[*a*]heptalen-7-yl]acetamide or *N*-[(7*S*,12a$R_a$)-3-(β-D-glucopyranosyloxy)-1-hydroxy-2-methoxy-10-(methylsulfanyl)-9-oxo-5,6,7,9-tetrahydrobenzo[*a*]heptalen-7-yl]acetamide,

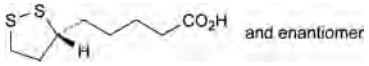


L. *N*-[(7*S*,12a$S_a$)-3-(β-D-glucopyranosyloxy)-1,2-dimethoxy-10-(methylsulfanyl)-9-oxo-5,6,7,9-tetrahydrobenzo[*a*]heptalen-7-yl]acetamide (12a$S_a$-thiocolchicoside).

**01/2008:1648**

# THIOCTIC ACID

## Acidum thiocticum



$C_8H_{14}O_2S_2$ $M_r$ 206.3
[1077-28-7]

DEFINITION

5-[(3*RS*)-1,2-Dithiolan-3-yl]pentanoic acid.

*Content*: 97.0 per cent to 102.0 per cent (dried substance).

CHARACTERS

*Appearance*: yellow, crystalline powder.

*Solubility*: very slightly soluble in water, very soluble in dimethylformamide, freely soluble in methanol.

mp: about 61 °C.

IDENTIFICATION

Infrared absorption spectrophotometry (*2.2.24*).

*Comparison*: *thioctic acid CRS*.

TESTS

**Appearance of solution**. The solution is clear (*2.2.1*).

Dissolve 0.50 g in a 20 g/L solution of *sodium hydroxide R* and dilute to 10 mL with the same solution.

**Impurity B**. Thin-layer chromatography (*2.2.27*).

*Test solution.* Dissolve 0.20 g of the substance to be examined in *dimethylformamide R* and dilute to 10 mL with the same solvent.

*Reference solution.* Dissolve 20 mg of *thioctic acid containing impurity B CRS* in *dimethylformamide R* and dilute to 1.0 mL with the same solvent (1.0 per cent impurity B solution).

*Plate*: *TLC silica gel plate R.*

*Mobile phase*: 25 per cent *V/V* solution of *ammonia R*, *water R*, *ethyl acetate R*, *propanol R* (5:10:40:40 *V/V/V/V*).

*Application*: 5 µL.

*Development*: over 2/3 of the plate.

*Drying*: at 50 °C for 20 min.

*Detection*: expose to iodine vapour for 30 min or until the spots appear.

*System suitability*: reference solution:

– the chromatogram shows 2 clearly separated principal spots due to impurity B ($R_F$ = 0.0) and thioctic acid ($R_F$ = about 0.3).

*Limit*:

– *impurity B*: any spot due to impurity B is not more intense than the corresponding spot in the chromatogram obtained with the reference solution (1.0 per cent).

**Related substances**. Liquid chromatography (*2.2.29*). *Protect the solutions from light.*

*Solvent mixture*: a mixture of equal volumes of *acetonitrile R1* and a 0.7 g/L solution of *potassium dihydrogen phosphate R* previously adjusted to pH 3.6 with *phosphoric acid R*.

*Test solution.* Dissolve 50.0 mg of the substance to be examined in the solvent mixture and dilute to 50.0 mL with the solvent mixture.

*Reference solution (a).* Dissolve 5 mg of *thioctic acid for system suitability CRS* (containing impurity A) in the solvent mixture and dilute to 5 mL with the solvent mixture.

*Reference solution (b).* Dilute 1.0 mL of the test solution to 100.0 mL with the solvent mixture. Dilute 1.0 mL of this solution to 10.0 mL with the solvent mixture.

*Reference solution (c).* Dissolve 50.0 mg of *thioctic acid CRS* in the solvent mixture and dilute to 50.0 mL with the solvent mixture.

*Blank solution.* Solvent mixture.

*Column*:

– *size*: *l* = 0.25 m, Ø = 4.6 mm;
– *stationary phase*: *octadecylsilyl silica gel for chromatography R* (5 µm);
– *temperature*: 35 °C.

*Mobile phase*: mix 8 volumes of *acetonitrile R1*, 41 volumes of a 0.7 g/L solution of *potassium dihydrogen phosphate R* previously adjusted to pH 3.0 with *phosphoric acid R*, and 51 volumes of *methanol R*.

*Flow rate*: 1.2 mL/min.

*Detection*: spectrophotometer at 215 nm.

*Injection*: 20 µL.

*Run time*: 2.5 times the retention time of thioctic acid.

*Relative retention* with reference to thioctic acid (retention time = about 6 min): impurity A = about 2.2.

*System suitability*:

– *resolution*: minimum 6.0 between the peaks due to thioctic acid and impurity A in the chromatogram obtained with reference solution (a);
– *symmetry factor*: maximum 2.0 for the peak due to thioctic acid in the chromatogram obtained with reference solution (c).

*Limits*:

– *correction factor*: for the calculation of content, multiply the peak area of impurity A by 0.6;
– *impurity A*: not more than twice the area of the principal peak in the chromatogram obtained with reference solution (b) (0.2 per cent);
– *unspecified impurities*: for each impurity, not more than the area of the principal peak in the chromatogram obtained with reference solution (b) (0.10 per cent);
– *total*: not more than 3 times the area of the principal peak in the chromatogram obtained with reference solution (b) (0.3 per cent);
– *disregard limit*: 0.5 times the area of the principal peak in the chromatogram obtained with reference solution (b) (0.05 per cent).

**Loss on drying** (*2.2.32*): maximum 0.2 per cent, determined on 1.000 g by drying *in vacuo* at 40 °C for 3 h.

**Sulfated ash** (*2.4.14*): maximum 0.1 per cent, determined on 1.0 g.

ASSAY

Liquid chromatography (*2.2.29*) as described in the test for related substances with the following modification.

*Injection*: test solution and reference solution (c).

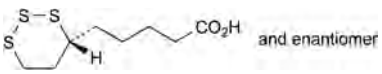
Calculate the percentage content of $C_8H_{14}O_2S_2$ from the peak areas and the declared content of *thioctic acid CRS*.

STORAGE

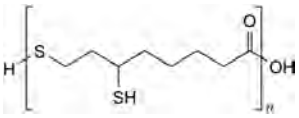
Protected from light.

IMPURITIES

*Specified impurities: A, B.*



A. 5-[(4*RS*)-1,2,3-trithian-4-yl]pentanoic acid,

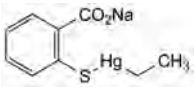


B. α-hydro-ω-hydroxypoly[sulfanediyl(3-sulfanyl-8-oxooctane-1,8-diyl)] (mixture of thioctic acid polymers).

**01/2008:1625**
**corrected 10.0**

# THIOMERSAL

## Thiomersalum



$C_9H_9HgNaO_2S$ $M_r$ 404.8

[54-64-8]

DEFINITION

Sodium ethyl[2-sulfanylbenzoato(2-)-*O*,*S*]mercurate(1-).

*Content*: 97.0 per cent to 101.0 per cent (dried substance).

CHARACTERS

*Appearance*: white or almost white, crystalline powder.

*Solubility*: freely soluble in water, sparingly soluble or soluble in ethanol (96 per cent), practically insoluble in methylene chloride.

IDENTIFICATION

*First identification: B, D.*

*Second identification: A, C, D.*

A. Melting point (*2.2.14*): 103 °C to 115 °C.
Dissolve 0.5 g in *water R* and dilute to 10 mL with the same solvent. Add 2 mL of *dilute hydrochloric acid R*. A white precipitate is formed. Wash the precipitate with *water R* and dry *in vacuo* (*2.2.32*) at a pressure not exceeding 0.7 kPa.

B. Infrared absorption spectrophotometry (*2.2.24*).
*Comparison*: *thiomersal CRS*.

C. Treat 50 mg by the oxygen-flask method (*2.5.10*). Use a mixture of 1 mL of *strong hydrogen peroxide solution R* and 50 mL of *water R* to absorb the combustion products. To the solution add 5 mL of *dilute nitric acid R*. 0.1 mL of this solution gives reaction (a) of mercury (*2.3.1*). To the remaining part of the solution add 10 mL of *dilute hydrochloric acid R* and filter. 5 mL of the filtrate, without further addition of acid, gives reaction (a) of sulfates (*2.3.1*).

D. Solution S (see Tests) gives reaction (a) of sodium (*2.3.1*).

TESTS

**Solution S**. Dissolve 2.0 g in *carbon dioxide-free water R* and dilute to 25 mL with the same solvent.

**Appearance of solution**. Solution S is not more opalescent than reference suspension II (*2.2.1*) and not more intensely coloured than reference solution $B_6$ (*2.2.2, Method II*).

**pH** (*2.2.3*): 6.0 to 8.0.

Dilute 5 mL of solution S to 50 mL with *carbon dioxide-free water R*.

**Inorganic mercury compounds**: maximum 0.70 per cent.

*Protect the solutions from light throughout the procedure.*

*Test solution.* Dissolve 25 mg of the substance to be examined in *water R* and dilute to 25.0 mL with the same solvent.

*Reference solution.* Dissolve 95.0 mg of *mercuric chloride R* in *water R* and dilute to 50.0 mL with the same solvent. Dilute 1.0 mL of the solution to 20.0 mL with *water R*.

*Test, reference and blank preparations.* Label five 10 mL volumetric flasks A, B, C, D and E. Place 5 mL of the test solution in flasks A, B, C and D. To each of the flasks C and D add 0.5 mL of the reference solution. Dilute the contents of flasks A and C to 10 mL with *water R* (blank preparations A and C). Dilute the contents of flasks B and D to 10 mL with a freshly prepared 332 g/L solution of *potassium iodide R* (test preparation B and reference preparation D). Place 5 mL of a 332 g/L solution of *potassium iodide R* in flask E. Dilute to 10 mL with *water R* (blank preparation E).

Measure the absorbance (*2.2.25*) of each solution ($A_a$, $A_b$, $A_c$, $A_d$ and $A_e$) at 323 nm using *water R* as the compensation liquid. Calculate the content of inorganic mercury compounds, expressed as Hg from the expression:

$$\frac{(A_b - A_a - A_e) \times m_R \times 0.1847}{(A_d - A_c - A_b + A_a) \times m_T}$$

$m_R$ = mass of mercuric chloride in the reference solution in milligrams,

$m_T$ = mass of the substance to be examined in milligrams.

**Loss on drying** (*2.2.32*): maximum 0.5 per cent, determined on 1.000 g by drying in a desiccator at a pressure not exceeding 0.7 kPa for 24 h.

ASSAY

Place 0.5 g in a 100 mL long-necked combustion flask, add 5 mL of *sulfuric acid R* and heat gently until charring occurs, continue to heat and add dropwise *strong hydrogen peroxide solution R* until the mixture is colourless. Dilute with *water R*, evaporate until slight fuming occurs, dilute to 10 mL with *water R*, cool down and titrate with *0.1 M ammonium thiocyanate* using *ferric ammonium sulfate solution R2* as indicator.

1 mL of *0.1 M ammonium thiocyanate* is equivalent to 20.24 mg of $C_9H_9HgNaO_2S$.

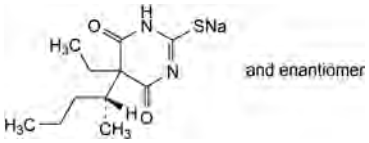
STORAGE

Protected from light.

**07/2012:0212**

# THIOPENTAL SODIUM AND SODIUM CARBONATE

## Thiopentalum natricum et natrii carbonas



$C_{11}H_{17}N_2NaO_2S$ $M_r$ 264.3

DEFINITION

Mixture of sodium 5-ethyl-5-[(1*RS*)-1-methylbutyl]-4,6-dioxo-1,4,5,6-tetrahydropyrimidine-2-thiolate and anhydrous sodium carbonate.

*Content*:

– *thiopental*: 84.0 per cent to 87.0 per cent (dried substance);
– *sodium*: 10.2 per cent to 11.2 per cent (dried substance).

CHARACTERS

*Appearance*: yellowish-white, hygroscopic powder.

*Solubility*: freely soluble in water, partly soluble in anhydrous ethanol.

IDENTIFICATION

*First identification: A, B, E.*

*Second identification: A, C, D, E.*

A. Acidify 10 mL of solution S (see Tests) with *dilute hydrochloric acid R*. An effervescence is produced. Shake with 20 mL of *1,1-dimethylethyl methyl ether R*. Separate the upper layer, wash with 10 mL of *water R*, dry over *anhydrous sodium sulfate R* and filter. Evaporate the filtrate to dryness and dry the residue at 100-105 °C. Determine the melting point (*2.2.14*) of the residue. Mix equal parts of the residue and *thiopental CRS* and determine the melting point of the mixture. The difference between the melting points (which are about 160 °C) is not greater than 2 °C.

B. Infrared absorption spectrophotometry (*2.2.24*).
*Preparation*: use the residue obtained in Identification test A.
*Comparison*: *thiopental CRS*.

C. Thin-layer chromatography (*2.2.27*).
*Test solution.* Dissolve 0.1 g of the substance to be examined in *water R* and dilute to 100 mL with the same solvent.
*Reference solution.* Dissolve 85 mg of *thiopental CRS* in 10 mL of *dilute sodium hydroxide solution R* and dilute to 100 mL with *water R*.
*Plate*: *TLC silica gel $GF_{254}$ plate R*.
*Mobile phase*: *concentrated ammonia R*, *ethanol (96 per cent) R*, *methylene chloride R* (5:15:80 *V/V/V*); use the lower layer.
*Application*: 10 µL.

*Development*: over 3/4 of the plate.

*Detection*: examine immediately in ultraviolet light at 254 nm.

*Results*: the principal spot in the chromatogram obtained with the test solution is similar in position and size to the principal spot in the chromatogram obtained with the reference solution.

D. It gives the reaction of non-nitrogen substituted barbiturates (*2.3.1*).

E. It gives reaction (a) of sodium (*2.3.1*).

TESTS

**Solution S**. Dissolve 5.0 g in *carbon dioxide-free water R* and dilute to 50 mL with the same solvent.

**Appearance of solution**. Solution S is clear (*2.2.1*) and not more intensely coloured than reference solution $GY_3$ (*2.2.2, Method II*).

**Related substances**. Liquid chromatography (*2.2.29*). *Prepare the solutions immediately before use.*

*Test solution.* Dissolve 20.0 mg of the substance to be examined in the mobile phase and dilute to 20.0 mL with the mobile phase.

*Reference solution (a).* Dilute 1.0 mL of the test solution to 100.0 mL with the mobile phase. Dilute 5.0 mL of this solution to 10.0 mL with the mobile phase.

*Reference solution (b).* Dissolve 2 mg of *thiopental for system suitability CRS* (containing impurities A, B, C and D) in the mobile phase and dilute to 2.0 mL with the mobile phase.

*Column*:

– *size*: *l* = 0.15 m, Ø = 4.6 mm;

– *stationary phase*: *end-capped octadecylsilyl silica gel for chromatography R* (5 µm).

*Mobile phase*: *acetonitrile R1*, 1 g/L solution of *phosphoric acid R* (35:65 *V/V*).

*Flow rate*: 1 mL/min.

*Detection*: spectrophotometer at 225 nm.

*Injection*: 10 µL.

*Run time*: twice the retention time of thiopental.

*Identification of impurities*: use the chromatogram supplied with *thiopental for system suitability CRS* (containing impurities A, B, C and D) and the chromatogram obtained with reference solution (b) to identify the peaks due to impurities A, B, C and D.

*Relative retention* with reference to thiopental (retention time = about 20 min): impurity A = about 0.3; impurity B = about 0.4; impurity C = about 0.9; impurity D = about 1.3.

*System suitability*: reference solution (b):

– *resolution*: minimum 1.5 between the peaks due to impurities A and B; minimum 1.5 between the peaks due to impurity C and thiopental.

*Limits*:

– *correction factor*: for the calculation of content, multiply the peak area of impurity B by 1.5;

– *impurity C*: not more than 6 times the area of the principal peak in the chromatogram obtained with reference solution (a) (3.0 per cent);

– *impurity B*: not more than twice the area of the principal peak in the chromatogram obtained with reference solution (a) (1.0 per cent);

– *impurity D*: not more than 0.6 times the area of the principal peak in the chromatogram obtained with reference solution (a) (0.3 per cent);

– *unspecified impurities*: for each impurity, not more than 0.2 times the area of the principal peak in the chromatogram obtained with reference solution (a) (0.10 per cent);

– *total*: not more than 10 times the area of the principal peak in the chromatogram obtained with reference solution (a) (5.0 per cent);

– *disregard limit*: 0.1 times the area of the principal peak in the chromatogram obtained with reference solution (a) (0.05 per cent).

**Chlorides** (*2.4.4*): maximum 330 ppm.

To 5 mL of solution S add 35 mL of *water R* and 10 mL of *dilute nitric acid R*. Shake with 3 quantities, each of 25 mL, of *1,1-dimethylethyl methyl ether R* and discard the upper layer. Eliminate the organic solvent from the lower layer by heating on a water-bath. 15 mL of the solution complies with the test for chlorides.

**Loss on drying** (*2.2.32*): maximum 2.5 per cent, determined on 0.500 g by drying *in vacuo* at 100 °C for 4 h.

ASSAY

**Sodium**. Dissolve 0.400 g in 30 mL of *water R*. Add 0.1 mL of *methyl red solution R* and titrate with *0.1 M hydrochloric acid* until a red colour is obtained. Boil gently for 2 min. Allow to cool and, if necessary, continue the titration with *0.1 M hydrochloric acid* until the red colour is again obtained.

1 mL of *0.1 M hydrochloric acid* is equivalent to 2.299 mg of Na.

**Thiopental**. Dissolve 0.150 g in 5 mL of *water R*. Add 2 mL of *dilute sulfuric acid R* and shake with 4 quantities, each of 10 mL, of *chloroform R*. Combine the chloroform layers, filter and evaporate the filtrate to dryness on a water-bath. Dissolve the residue in 30 mL of previously neutralised *dimethylformamide R* and add 0.1 mL of a 2 g/L solution of *thymol blue R* in *methanol R*. Titrate immediately with *0.1 M lithium methoxide* until a blue colour is obtained. Protect the solution from atmospheric carbon dioxide during the titration.

1 mL of *0.1 M lithium methoxide* is equivalent to 24.23 mg of $C_{11}H_{18}N_2O_2S$.

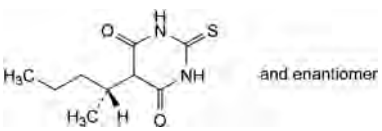
STORAGE

In an airtight container, protected from light.

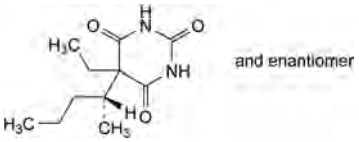
IMPURITIES

*Specified impurities*: *B, C, D.*

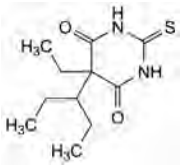
*Other detectable impurities* (the following substances would, if present at a sufficient level, be detected by one or other of the tests in the monograph. They are limited by the general acceptance criterion for other/unspecified impurities and/or by the general monograph *Substances for pharmaceutical use (2034)*. It is therefore not necessary to identify these impurities for demonstration of compliance. See also *5.10. Control of impurities in substances for pharmaceutical use*): *A.*



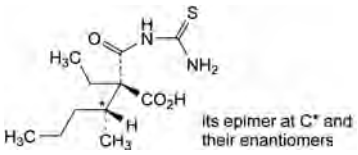
A. 5-[(1*RS*)-1-methylbutyl]-2-thioxo-2,3-dihydropyrimidine-4,6(1*H*,5*H*)-dione,



B. 5-ethyl-5-[(1*RS*)-1-methylbutyl]pyrimidine-2,4,6(1*H*,3*H*,5*H*)-trione,



C. 5-ethyl-5-(1-ethylpropyl)-2-thioxo-2,3-dihydropyrimidine-4,6(1*H*,5*H*)-dione,

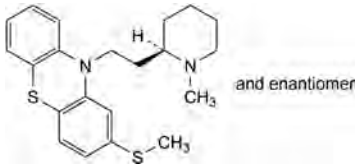


D. mixture of (2*RS*,3*RS*)-2-(carbamothioylcarbamoyl)-2-ethyl-3-methylhexanoic acid and (2*RS*,3*SR*)-2-(carbamothioylcarbamoyl)-2-ethyl-3-methylhexanoic acid.

**01/2017:2005**

# THIORIDAZINE

## Thioridazinum



$C_{21}H_{26}N_2S_2$ $M_r$ 370.6
[50-52-2]

DEFINITION

10-[2-[(2*RS*)-1-Methylpiperidin-2-yl]ethyl]-2-(methylsulfanyl)-10*H*-phenothiazine

*Content*: 99.0 per cent to 101.0 per cent (dried substance).

CHARACTERS

*Appearance*: white or almost white powder.

*Solubility*: practically insoluble in water, very soluble in methylene chloride, freely soluble in methanol, soluble in ethanol (96 per cent).

IDENTIFICATION

Infrared absorption spectrophotometry (*2.2.24*).

*Comparison*: *thioridazine CRS*.

TESTS

**Solution S**. Dissolve 1.25 g in *methanol R* and dilute to 25 mL with the same solvent.

**Appearance of solution**. Solution S is clear (*2.2.1*) and not more intensely coloured than intensity 6 of the range of reference solutions of the most appropriate colour (*2.2.2, Method II*).

**Related substances**. Liquid chromatography (*2.2.29*). *Carry out the test as quickly as possible and protected from light.*

*Test solution.* Dissolve 20 mg of the substance to be examined in *methanol R* and dilute to 100 mL with the same solvent.

*Reference solution (a).* Dilute 5.0 mL of the test solution to 100.0 mL with *methanol R*. Dilute 2.0 mL of this solution to 100.0 mL with *methanol R*.

*Reference solution (b).* Dissolve the contents of a vial of *thioridazine for system suitability CRS* (containing impurities A, B, C, D and E) in 1.0 mL of *methanol R*.

*Column*:
- *size*: *l* = 0.25 m, Ø = 4.0 mm;
- *stationary phase*: *end-capped octadecylsilyl silica gel for chromatography R* resistant to bases up to pH 11.

*Mobile phase*:
- *mobile phase A*: *triethylamine R1*, *acetonitrile R*, *water R* (2:400:600 *V/V/V*);
- *mobile phase B*: *triethylamine R1*, *acetonitrile R* (2:1000 *V/V*);

| Time (min) | Mobile phase A (per cent *V/V*) | Mobile phase B (per cent *V/V*) |
|---|---|---|
| 0 - 5 | 100 | 0 |
| 5 - 35 | 100 → 5 | 0 → 95 |
| 35 - 40 | 5 | 95 |

*Flow rate*: 1.0 mL/min.

*Detection*: spectrophotometer at 275 nm.

*Injection*: 25 µL.

*Identification of impurities*: use the chromatogram supplied with *thioridazine for system suitability CRS* and the chromatogram obtained with reference solution (b) to identify the peaks due to impurities A, B, C, D and E.

*Relative retention* with reference to thioridazine (retention time = about 30 min): impurity D = about 0.1; impurity A = about 0.3; impurity C = about 0.4; impurity B = about 0.5; impurity E = about 0.6.

*System suitability*: reference solution (b):
- *resolution*: minimum 3.5 between the peaks due to impurities C and B.

*Limits*:
- *correction factors*: for the calculation of content, multiply the peak areas of the following impurities by the corresponding correction factor: impurity A = 1.9; impurity B = 2.4; impurity C = 0.5; impurity D = 1.5;
- *impurities A, B, C, D, E*: for each impurity, not more than the area of the principal peak in the chromatogram obtained with reference solution (a) (0.1 per cent);
- *unspecified impurities*: for each impurity, not more than the area of the principal peak in the chromatogram obtained with reference solution (a) (0.10 per cent);
- *total*: not more than 5 times the area of the principal peak in the chromatogram obtained with reference solution (a) (0.5 per cent);
- *disregard limit*: 0.5 times the area of the principal peak in the chromatogram obtained with reference solution (a) (0.05 per cent).

**Loss on drying** (*2.2.32*): maximum 0.5 per cent, determined on 1.000 g *in vacuo* at 50 °C for 4 h.

**Sulfated ash** (*2.4.14*): maximum 0.1 per cent, determined on 1.0 g.

ASSAY

Dissolve 0.300 g in 60 mL of *anhydrous acetic acid R*. Titrate with *0.1 M perchloric acid*, determining the end-point potentiometrically (*2.2.20*).

1 mL of *0.1 M perchloric acid* is equivalent to 37.06 mg of $C_{21}H_{26}N_2S_2$.

STORAGE

Protected from light.

IMPURITIES

*Specified impurities*: *A, B, C, D, E.*

*Other detectable impurities* (the following substances would, if present at a sufficient level, be detected by one or other of the tests in the monograph. They are limited by the general acceptance criterion for other/unspecified impurities and/or

by the general monograph *Substances for pharmaceutical use (2034)*. It is therefore not necessary to identify these impurities for demonstration of compliance. See also *5.10. Control of impurities in substances for pharmaceutical use*): *F.*

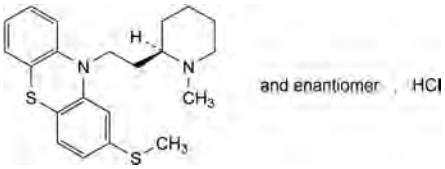
# THIORIDAZINE HYDROCHLORIDE

## Thioridazini hydrochloridum



$C_{21}H_{27}ClN_2S_2$ $M_r$ 407.0
[130-61-0]

DEFINITION

10-[2-[(2*RS*)-1-Methylpiperidin-2-yl]ethyl]-2-(methylsulfanyl)-10*H*-phenothiazine hydrochloride.

*Content*: 99.0 per cent to 101.0 per cent (dried substance).

CHARACTERS

*Appearance*: white or almost white, crystalline powder.

*Solubility*: freely soluble in water and in methanol, soluble in ethanol 96 per cent.

IDENTIFICATION

A. Infrared absorption spectrophotometry (*2.2.24*).
*Comparison*: *thioridazine hydrochloride CRS*.

B. 0.2 g gives reaction (b) of chlorides (*2.3.1*).

TESTS

*Carry out all operations protected from light.*

**Appearance of solution**. The solution is clear (*2.2.1*) and not more intensely coloured than intensity 6 of the range of reference solutions of the most appropriate colour (*2.2.2, Method II*).

Dissolve 1.0 g in *methanol R* and dilute to 20 mL with the same solvent.

**Optical rotation** (*2.2.7*): − 0.10° to + 0.10°.

Dissolve 1.0 g in *methanol R* and dilute to 20.0 mL with the same solvent.

**Related substances**. Liquid chromatography (*2.2.29*). *Carry out the test as quickly as possible and protected from light.*

*Test solution*. Dissolve 20.0 mg of the substance to be examined in *methanol R* and dilute to 100.0 mL with the same solvent.

*Reference solution (a)*. Dilute 5.0 mL of the test solution to 100.0 mL with *methanol R*. Dilute 2.0 mL of this solution to 100.0 mL with *methanol R*.

*Reference solution (b)*. Dissolve the contents of a vial of *thioridazine for system suitability CRS* (containing impurities A, B, C, D and E) in 1.0 mL of *methanol R*.

*Column*:

- *size*: *l* = 0.25 m, Ø = 4.0 mm;
- *stationary phase*: *end-capped octadecylsilyl silica gel for chromatography R* (5 µm) resistant to bases up to pH 11.

*Mobile phase*:

- *mobile phase A*: *triethylamine R1*, *acetonitrile R*, *water R* (2:400:600 *V/V/V*);
- *mobile phase B*: *triethylamine R1*, *acetonitrile R* (2:1000 *V/V*);

Monographs T

| Time (min) | Mobile phase A (per cent *V/V*) | Mobile phase B (per cent *V/V*) |
|---|---|---|
| 0 - 5 | 100 | 0 |
| 5 - 35 | 100 → 5 | 0 → 95 |
| 35 - 40 | 5 | 95 |

*Flow rate*: 1.0 mL/min.

*Detection*: spectrophotometer at 275 nm.

*Injection*: 25 µL.

*Identification of impurities*: use the chromatogram supplied with *thioridazine for system suitability CRS* to identify the peaks due to impurities A, B, C, D and E .

*Relative retention* with reference to thioridazine (retention time = about 30 min): impurity D = about 0.1; impurity A = about 0.3; impurity C = about 0.4; impurity B = about 0.5; impurity E = about 0.6; impurity F = about 0.9.

*System suitability*: reference solution (b):

– *resolution*: minimum 3.5 between the peaks due to impurities C and B.

*Limits*:

– *correction factors*: for the calculation of content, multiply the peak areas of the following impurities by the corresponding correction factor: impurity A = 1.9; impurity B = 2.4; impurity C = 0.5; impurity D = 1.5;

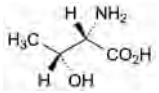
F. 2-(methylsulfanyl)-10-[2-[(2*RS*)-piperidin-2-yl]ethyl]-10*H*-phenothiazine.

**01/2017:1049**

# THREONINE

## Threoninum



$C_4H_9NO_3$ $M_r$ 119.1
[72-19-5]

DEFINITION

(2*S*,3*R*)-2-Amino-3-hydroxybutanoic acid.

Product of fermentation or of protein hydrolysis.

*Content*: 99.0 per cent to 101.0 per cent (dried substance).

CHARACTERS

*Appearance*: white or almost white, crystalline powder or colourless crystals.

*Solubility*: soluble in water, practically insoluble in ethanol (96 per cent).

IDENTIFICATION

*First identification*: *A, B.*

*Second identification*: *A, C, D.*

A. Specific optical rotation (see Tests).

B. Infrared absorption spectrophotometry (*2.2.24*).
*Comparison*: *threonine CRS*.

C. Thin-layer chromatography (*2.2.27*).
*Test solution*. Dissolve 10 mg of the substance to be examined in a 1 per cent *V*/*V* solution of *hydrochloric acid R* and dilute to 50 mL with the same solution.
*Reference solution*. Dissolve 10 mg of *threonine CRS* in a 1 per cent *V*/*V* solution of *hydrochloric acid R* and dilute to 50 mL with the same solution.
*Plate*: *TLC silica gel plate R*.
*Mobile phase*: *glacial acetic acid R*, *water R*, *butanol R* (20:20:60 *V*/*V*/*V*).
*Application*: 5 µL.
*Development*: over 2/3 of the plate.
*Drying*: in air.
*Detection*: spray with *ninhydrin solution R* and heat at 105 °C for 15 min.
*Results*: the principal spot in the chromatogram obtained with the test solution is similar in position, colour and size to the principal spot in the chromatogram obtained with the reference solution.

D. Mix 1 mL of a 2 g/L solution of the substance to be examined and 1 mL of a 20 g/L solution of *sodium periodate R*. Add 0.2 mL of *piperidine R* and 0.1 mL of a 25 g/L solution of *sodium nitroprusside R*. A blue colour develops that changes to yellow after a few minutes.

TESTS

**Solution S**. Dissolve 2.5 g in *carbon dioxide-free water R* and dilute to 100 mL with the same solvent.

**Appearance of solution**. Solution S is clear (*2.2.1*) and colourless (*2.2.2, Method II*).

**pH** (*2.2.3*): 5.0 to 6.5 for solution S.

**Specific optical rotation** (*2.2.7*): − 29.0 to − 27.6 (dried substance).

Dissolve 1.50 g in *water R* and dilute to 25.0 mL with the same solvent.

**Ninhydrin-positive substances**. Amino acid analysis (*2.2.56*). For analysis, use Method 1.

The concentrations of the test solution and the reference solutions may be adapted according to the sensitivity of the equipment used. The concentrations of all solutions are adjusted so that the system suitability requirements described in general chapter *2.2.46* are fulfilled, keeping the ratios of concentrations between all solutions as described.

*Solution A*: *dilute hydrochloric acid R1* or a sample preparation buffer suitable for the apparatus used.

*Test solution*. Dissolve 30.0 mg of the substance to be examined in solution A and dilute to 50.0 mL with solution A.

*Reference solution (a)*. Dilute 1.0 mL of the test solution to 100.0 mL with solution A. Dilute 2.0 mL of this solution to 10.0 mL with solution A.

*Reference solution (b)*. Dissolve 30.0 mg of *proline R* in solution A and dilute to 100.0 mL with solution A. Dilute 1.0 mL of the solution to 250.0 mL with solution A.

*Reference solution (c)*. Dilute 6.0 mL of *ammonium standard solution (100 ppm $NH_4$) R* to 50.0 mL with solution A. Dilute 1.0 mL of this solution to 100.0 mL with solution A.

*Reference solution (d)*. Dissolve 30 mg of *isoleucine R* (impurity D) and 30 mg of *leucine R* in solution A and dilute to 50.0 mL with solution A. Dilute 1.0 mL of the solution to 200.0 mL with solution A.

*Blank solution*: solution A.

Inject suitable, equal amounts of the test, blank and reference solutions into the amino acid analyser. Run a program suitable for the determination of physiological amino acids.

*System suitability*: reference solution (d):
- *resolution*: minimum 1.5 between the peaks due to impurity D and leucine.

*Calculation of percentage contents*:
- for any ninhydrin-positive substance detected at 570 nm, use the concentration of threonine in reference solution (a);
- for any ninhydrin-positive substance detected at 440 nm, use the concentration of proline in reference solution (b); if a peak is above the reporting threshold at both wavelengths, use the result obtained at 570 nm for quantification.

*Limits*:
- *any ninhydrin-positive substance*: for each impurity, maximum 0.2 per cent;
- *total*: maximum 0.5 per cent;
- *reporting threshold*: 0.05 per cent.

The thresholds indicated under Related substances (Table 2034.-1) in the general monograph *Substances for pharmaceutical use (2034)* do not apply.

**Chlorides** (*2.4.4*): maximum 200 ppm.

Dilute 10 mL of solution S to 15 mL with *water R*.

**Sulfates** (*2.4.13*): maximum 300 ppm.

Dissolve 0.5 g in *distilled water R* and dilute to 15 mL with the same solvent.

**Ammonium**. Amino acid analysis (*2.2.56*) as described in the test for ninhydrin-positive substances with the following modifications.

*Injection*: test solution, reference solution (c) and blank solution.

*Limit*:
- *ammonium at 570 nm*: not more than the area of the corresponding peak in the chromatogram obtained with reference solution (c) (0.02 per cent), taking into account the peak due to ammonium in the chromatogram obtained with the blank solution.

**Iron** (*2.4.9*): maximum 10 ppm.

In a separating funnel, dissolve 1.0 g in 10 mL of *dilute hydrochloric acid R*. Shake with 3 quantities, each of 10 mL, of

*methyl isobutyl ketone R1*, shaking for 3 min each time. To the combined organic layers add 10 mL of *water R* and shake for 3 min. Use the aqueous layer.

**Loss on drying** (*2.2.32*): maximum 0.5 per cent, determined on 1.000 g by drying in an oven at 105 °C.

**Sulfated ash** (*2.4.14*): maximum 0.1 per cent, determined on 1.0 g.

ASSAY

Dissolve 0.100 g in 5 mL of *anhydrous formic acid R*. Add 30 mL of *anhydrous acetic acid R*. Titrate with *0.1 M perchloric acid*, determining the end-point potentiometrically (*2.2.20*).

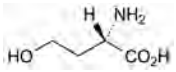
1 mL of *0.1 M perchloric acid* is equivalent to 11.91 mg of $C_4H_9NO_3$.

STORAGE

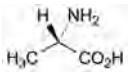
Protected from light.

IMPURITIES

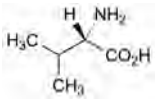
*Other detectable impurities* (the following substances would, if present at a sufficient level, be detected by one or other of the tests in the monograph. They are limited by the general acceptance criterion for other/unspecified impurities. It is therefore not necessary to identify these impurities for demonstration of compliance. See also *5.10. Control of impurities in substances for pharmaceutical use*): *A, B, C, D, E.*



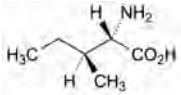
A. (2*S*)-2-amino-4-hydroxybutanoic acid (homoserine),



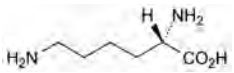
B. (2*S*)-2-aminopropanoic acid (alanine),



C. (2*S*)-2-amino-3-methylbutanoic acid (valine),



D. (2*S*,3*S*)-2-amino-3-methylpentanoic acid (isoleucine),

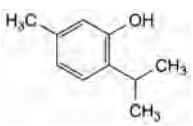


E. (2*S*)-2,6-diaminohexanoic acid (lysine).

**01/2008:0791**

# THYMOL

## Thymolum



$C_{10}H_{14}O$ $M_r$ 150.2

[89-83-8]

DEFINITION

5-Methyl-2-(methylethyl)phenol.

CHARACTERS

*Appearance*: colourless crystals.

*Solubility*: very slightly soluble in water, very soluble in ethanol (96 per cent), freely soluble in essential oils and in fatty oils, sparingly soluble in glycerol. It dissolves in dilute solutions of alkali hydroxides.

IDENTIFICATION

*First identification*: *B.*

*Second identification*: *A, C, D.*

A. Melting point (*2.2.14*): 48 °C to 52 °C.

B. Infrared absorption spectrophotometry (*2.2.24*).
*Comparison*: *thymol CRS.*

C. Dissolve 0.2 g with heating in 2 mL of *dilute sodium hydroxide solution R* and add 0.2 mL of *chloroform R*. Heat on a water-bath. A violet colour develops.

D. Dissolve about 2 mg in 1 mL of *anhydrous acetic acid R*. Add 0.15 mL of *sulfuric acid R* and 0.05 mL of *nitric acid R*. A bluish-green colour develops.

TESTS

**Appearance of solution**. The solution is not more opalescent than reference suspension IV (*2.2.1*) and not more intensely coloured than reference solution $R_6$ (*2.2.2, Method II*).

Dissolve 1.0 g in 10 mL of *dilute sodium hydroxide solution R*.

**Acidity**. To 1.0 g in a 100 mL glass-stoppered conical flask add 20 mL of *water R*. Boil until dissolution is complete, cool and stopper the flask. Shake vigorously for 1 min. Add a few crystals of the substance to be examined to initiate crystallisation. Shake vigorously for 1 min and filter. To 5 mL of the filtrate add 0.05 mL of *methyl red solution R* and 0.05 mL of *0.01 M sodium hydroxide*. The solution is yellow.

**Related substances**. Gas chromatography (*2.2.28*).

*Test solution*. Dissolve 0.100 g of the substance to be examined in *ethanol (96 per cent) R* and dilute to 10.0 mL with the same solvent.

*Reference solution (a)*. Dilute 1 mL of the test solution to 100 mL with *ethanol (96 per cent) R*.

*Reference solution (b)*. Dilute 1 mL of reference solution (a) to 10 mL with *ethanol (96 per cent) R*.

*Reference solution (c)*. Dilute 5 mL of reference solution (b) to 10 mL with *ethanol (96 per cent) R*.

*Column*:

- *material*: glass or steel;
- *size*: *l* = 4 m, Ø = 2 mm;
- *stationary phase*: *diatomaceous earth for gas chromatography R*, impregnated with a mixture suitable for the separation of free fatty acids.

*Carrier gas*: *nitrogen for chromatography R.*

*Flow rate*: 30 mL/min.

*Temperature*:

| | Time (min) | Temperature (°C) |
|---|---|---|
| Column | 0 - 2 | 80 |
| | 2 - 22 | 80 → 240 |
| | 22 - 37 | 240 |
| Injection port | | 250 |
| Detector | | 300 |

*Detection*: flame ionisation.

*Injection*: 1 µL.

*System suitability*: reference solution (b):

- *signal-to-noise ratio*: minimum 5 for the principal peak.

*Limits*:

- *total*: not more than the area of the principal peak in the chromatogram obtained with reference solution (a) (1.0 per cent);
- *disregard limit*: the area of the principal peak in the chromatogram obtained with reference solution (c) (0.05 per cent).

**Residue on evaporation**: maximum 0.05 per cent.

Evaporate 2.00 g on a water-bath and heat in an oven at 100-105 °C for 1 h. The residue weighs not more than 1.0 mg.

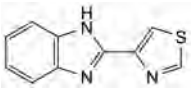
STORAGE

Protected from light.

**01/2017:0866**

# TIABENDAZOLE

## Tiabendazolum



$C_{10}H_7N_3S$ $M_r$ 201.2
[148-79-8]

DEFINITION

Tiabendazole contains not less than 98.0 per cent and not more than the equivalent of 101.0 per cent of 2-(thiazol-4-yl)-1*H*-benzimidazole, calculated with reference to the anhydrous substance.

CHARACTERS

A white or almost white, crystalline powder, practically insoluble in water, slightly soluble in alcohol and in methylene chloride. It dissolves in dilute mineral acids. It melts at about 300 °C.

IDENTIFICATION

*First identification: B.*

*Second identification: A, C, D.*

A. Dissolve 25 mg in *0.1 M hydrochloric acid* and dilute to 100.0 mL with the same acid. Dilute 2.0 mL of the solution to 100.0 mL with *0.1 M hydrochloric acid*. Examined between 230 nm and 350 nm (*2.2.25*), the solution shows two absorption maxima, at 243 nm and 302 nm. The ratio of the absorbance measured at the maximum at 302 nm to that measured at the maximum at 243 nm is 1.8 to 2.1.

B. Examine by infrared absorption spectrophotometry (*2.2.24*), comparing with the spectrum obtained with *tiabendazole CRS*. Examine the substances prepared as discs.

C. Examine the chromatograms obtained in the test for related substances in ultraviolet light at 254 nm. The principal spot in the chromatogram obtained with test solution (b) is similar in position and size to the principal spot in the chromatogram obtained with reference solution (a).

D. Dissolve about 5 mg in *0.1 M hydrochloric acid* and dilute to 5 mL with the same acid. Add 3 mg of *p-phenylenediamine dihydrochloride R* and shake until dissolved. Add 0.1 g of *zinc powder R*, mix, allow to stand for 2 min and add 5 mL of *ferric ammonium sulfate solution R2*. A bluish-violet colour develops.

TESTS

**Related substances**. Examine by thin-layer chromatography (*2.2.27*), using *silica gel* $HF_{254}$ *R* as the coating substance.

*Test solution (a).* Dissolve 0.10 g of the substance to be examined in *methanol R* and dilute to 10 mL with the same solvent.

*Test solution (b).* Dilute 2 mL of test solution (a) to 20 mL with *methanol R*.

*Reference solution (a).* Dissolve 20 mg of *tiabendazole CRS* in *methanol R* and dilute to 20 mL with the same solvent.

*Reference solution (b).* Dilute 1 mL of test solution (b) to 10 mL with *methanol R*.

*Reference solution (c).* Dilute 1 mL of test solution (b) to 25 mL with *methanol R*.

Apply separately to the plate 20 µL of each solution. Develop over a path of 15 cm using a mixture of 2.5 volumes of *water R*, 10 volumes of *acetone R*, 25 volumes of *glacial acetic acid R* and 62.5 volumes of *toluene R*. Allow the plate to dry in air and examine in ultraviolet light at 254 nm. Any spot in the chromatogram obtained with test solution (a), apart from the principal spot, is not more intense than the spot in the chromatogram obtained with reference solution (b) (1.0 per cent) and at most one such spot is more intense than the spot in the chromatogram obtained with reference solution (c) (0.4 per cent).

***o*-Phenylenediamine**. To 5.0 g in a flask fitted with a ground-glass stopper, add 25 mL of a mixture of 1 volume of *methanol R* and 2 volumes of *water R*. Shake for 3 min. Filter through a sintered-glass filter (16) (*2.1.2*) under reduced pressure. To 10 mL of the filtrate add 0.5 mL of *hydrochloric acid R* and 0.5 mL of *acetylacetone R* and shake until the solution is clear. The solution is not more intensely coloured than reference solution $R_7$ (*2.2.2, Method I*) (10 ppm).

**Water** (*2.5.12*). Not more than 0.5 per cent, determined on 1.00 g by the semi-micro determination of water.

**Sulfated ash** (*2.4.14*). Not more than 0.2 per cent, determined on 1.0 g.

ASSAY

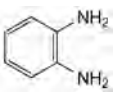
Dissolve 0.150 g in 30 mL of *anhydrous acetic acid R*. Titrate with *0.1 M perchloric acid*, determining the end-point potentiometrically (*2.2.20*).

1 mL of *0.1 M perchloric acid* is equivalent to 20.12 mg of $C_{10}H_7N_3S$.

STORAGE

Store protected from light.

IMPURITIES



A. benzene-1,2-diamine.

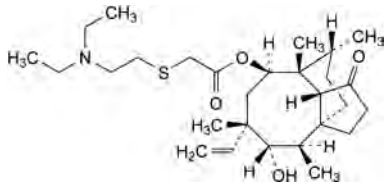
# TIAMULIN FOR VETERINARY USE

## Tiamulinum ad usum veterinarium



$C_{28}H_{47}NO_4S$ $M_r$ 493.8
[55297-95-5]

DEFINITION

(3a*S*,4*R*,5*S*,6*S*,8*R*,9*R*,9a*R*,10*R*)-6-Ethenyl-5-hydroxy-4,6,9,10-tetramethyl-1-oxodecahydro-3a,9-propano-3a*H*-cyclopentacycloocten-8-yl [[2-(diethylamino)ethyl] sulfanyl]acetate.

Semi-synthetic product derived from a fermentation product.

*Content*: 96.5 per cent to 102.0 per cent (dried substance).

CHARACTERS

*Appearance*: sticky, translucent yellowish mass, slightly hygroscopic.

*Solubility*: practically insoluble in water, very soluble in methylene chloride, freely soluble in anhydrous ethanol.

IDENTIFICATION

Infrared absorption spectrophotometry (*2.2.24*).

*Comparison*: *Ph. Eur. reference spectrum of tiamulin*.

TESTS

**Appearance of solution**. The solution is clear (*2.2.1*) and its absorbance (*2.2.25*) at 420 nm is not greater than 0.050.

Dissolve 2.5 g in 50 mL of *methanol R*.

**Related substances**. Liquid chromatography (*2.2.29*).

*Ammonium carbonate buffer solution pH 10.0*. Dissolve 10.0 g of *ammonium carbonate R* in *water R*, add 22 mL of *perchloric acid solution R* and dilute to 1000.0 mL with *water R*. Adjust to pH 10.0 with *concentrated ammonia R1*.

*Solvent mixture*: *acetonitrile R1*, ammonium carbonate buffer solution pH 10.0 (50:50 *V/V*).

*Test solution*. Dissolve 0.200 g of the substance to be examined in the solvent mixture and dilute to 50.0 mL with the solvent mixture.

*Reference solution (a)*. Dissolve 0.250 g of *tiamulin hydrogen fumarate CRS* in the solvent mixture and dilute to 50.0 mL with the solvent mixture.

*Reference solution (b)*. Dilute 1.0 mL of the test solution to 100.0 mL with the solvent mixture.

*Reference solution (c)*. Dilute 0.1 mL of *toluene R* to 100 mL with *acetonitrile R*. Dilute 0.1 mL of this solution to 100.0 mL with the solvent mixture.

*Column*:

- *size*: *l* = 0.15 m, Ø = 4.6 mm;
- *stationary phase*: *end-capped octadecylsilyl silica gel for chromatography R* (5 µm);
- *temperature*: 30 °C.

*Mobile phase*: *acetonitrile R1*, ammonium carbonate buffer solution pH 10.0, *methanol R1* (21:30:49 *V/V/V*).

*Flow rate*: 1.0 mL/min.

*Detection*: spectrophotometer at 212 nm.

*Injection*: 20 µL.

*Run time*: 3 times the retention time of tiamulin.

*Relative retention* with reference to tiamulin (retention time = about 18 min): impurity A = about 0.22; impurity B = about 0.5; impurity C = about 0.66; impurity D = about 1.1; impurity F = about 1.6; impurity E = about 2.4.

*System suitability*: reference solution (a):

- baseline separation between the peaks due to tiamulin and impurity D.

*Limits*:

- *impurities A, B, C, D, E, F*: for each impurity, not more than the area of the principal peak in the chromatogram obtained with reference solution (b) (1.0 per cent);
- *any other impurity*: for each impurity, not more than 0.2 times the area of the principal peak in the chromatogram obtained with reference solution (b) (0.2 per cent);
- *total*: not more than 3 times the area of the principal peak in the chromatogram obtained with reference solution (b) (3.0 per cent);
- *disregard limit*: 0.1 times the area of the principal peak in the chromatogram obtained with reference solution (b) (0.1 per cent); disregard any peak present in the chromatogram obtained with reference solution (c).

**Loss on drying** (*2.2.32*): maximum 1.0 per cent, determined on 1.000 g by drying in an oven at 80 °C.

**Bacterial endotoxins** (*2.6.14, Method D*): less than 0.4 IU/mg, determined in a 1 mg/mL solution in *anhydrous ethanol R* (endotoxin free) diluted 1:40 with water for bacterial endotoxins test.

ASSAY

Liquid chromatography (*2.2.29*) as described in the test for related substances with the following modification.

*Injection*: test solution and reference solution (a).

Calculate the percentage content of $C_{28}H_{47}NO_4S$, from the declared content of *tiamulin hydrogen fumarate CRS*.

STORAGE

Protected from light.

IMPURITIES

*Specified impurities: A, B, C, D, E, F.*

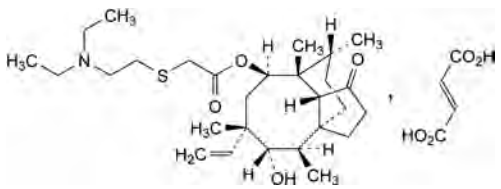
# TIAMULIN HYDROGEN FUMARATE FOR VETERINARY USE

## Tiamulini hydrogenofumaras ad usum veterinarium



$C_{32}H_{51}NO_8S$ $M_r$ 610
[55297-96-6]

DEFINITION

(3a*S*,4*R*,5*S*,6*S*,8*R*,9*R*,9a*R*,10*R*)-6-Ethenyl-5-hydroxy-4,6,9,10-tetramethyl-1-oxodecahydro-3a,9-propano-3a*H*-cyclopentacycloocten-8-yl [[2-(diethylamino)ethyl]sulfanyl]acetate hydrogen (*E*)-butenedioate.

Semi-synthetic product derived from a fermentation product.

*Content*: 96.5 per cent to 102.0 per cent (dried substance).

CHARACTERS

*Appearance*: white or light yellow, crystalline powder.

*Solubility*: soluble in water, freely soluble in anhydrous ethanol and soluble in methanol.

IDENTIFICATION

Infrared absorption spectrophotometry (*2.2.24*).

*Comparison*: *tiamulin hydrogen fumarate CRS*.

TESTS

**pH** (*2.2.3*): 3.1 to 4.1.

Dissolve 0.5 g in *carbon dioxide-free water R* and dilute to 50 mL with the same solvent.

**Related substances**. Liquid chromatography (*2.2.29*).

*Ammonium carbonate buffer solution pH 10.0*. Dissolve 10.0 g of *ammonium carbonate R* in *water R*, add 22 mL of *perchloric acid solution R* and dilute to 1000.0 mL with *water R*. Adjust to pH 10.0 with *concentrated ammonia R1*.

*Solvent mixture*: ammonium carbonate buffer solution pH 10.0, *acetonitrile R1* (50:50 *V/V*).

*Test solution*. Dissolve 0.200 g of the substance to be examined in the solvent mixture and dilute to 50.0 mL with the solvent mixture.

*Reference solution (a)*. Dissolve 0.200 g of *tiamulin hydrogen fumarate CRS* in the solvent mixture and dilute to 50.0 mL with the solvent mixture.

*Reference solution (b)*. Dilute 1.0 mL of the test solution to 100.0 mL with the solvent mixture.

*Reference solution (c)*. Dissolve 40.0 mg of *fumaric acid R* in the solvent mixture and dilute to 50.0 mL with the solvent mixture.

*Reference solution (d)*. Dissolve 4 mg of *tiamulin for peak identification CRS* (tiamulin hydrogen fumarate containing impurities B, C, D, F, H and I) in the solvent mixture and dilute to 1 mL with the solvent mixture.

*Column*:

- *size*: *l* = 0.15 m, Ø = 4.6 mm,
- *stationary phase*: *end-capped octadecylsilyl silica gel for chromatography R* (5 µm),
- *temperature*: 30 °C.

*Mobile phase*: *acetonitrile R1*, ammonium carbonate buffer solution pH 10.0, *methanol R1* (21:30:49 *V/V/V*).

*Flow rate*: 1.0 mL/min.

*Detection*: spectrophotometer at 212 nm.

*Injection*: 20 µL.

*Run time*: 3 times the retention time of tiamulin.

*Identification of impurities*: use the chromatogram supplied with *tiamulin for peak identification CRS* and the chromatogram obtained with reference solution (d) to identify the peaks due to impurities B and H.

*Relative retention* with reference to tiamulin (retention time = about 18 min): impurity G = about 0.2; impurity A = about 0.22; impurity H = about 0.23; impurity I = about 0.3; impurity J = about 0.4; impurity K = about 0.45; impurity B = about 0.5; impurity L = about 0.65; impurity C = about 0.66; impurity F = about 0.8; impurity M = about 0.85; impurity D = about 1.1; impurity S = about 1.4; impurity T = about 1.6; impurity E = 2.4.

*System suitability*: reference solution (a):

– baseline separation between the peaks due to tiamulin and impurity D.

*Limits*:

– *impurities B, H*: for each impurity, not more than 1.5 times the area of the principal peak in the chromatogram obtained with reference solution (b) (1.5 per cent),
– *impurities A, C, D, E, F, G, I, J, K, L, M, S, T*: for each impurity, not more than the area of the principal peak in the chromatogram obtained with reference solution (b) (1.0 per cent),
– *any other impurity*: for each impurity, not more than 0.2 times the area of the principal peak in the chromatogram obtained with reference solution (b) (0.2 per cent),
– *total*: not more than 3 times the area of the principal peak in the chromatogram obtained with reference solution (b) (3.0 per cent),
– *disregard limit*: 0.1 times the area of the principal peak in the chromatogram obtained with reference solution (b) (0.1 per cent); disregard any peak present in reference solution (c).

**Loss on drying** (*2.2.32*): maximum 0.5 per cent, determined on 1.000 g by drying in an oven at 105 °C.

ASSAY

Liquid chromatography (*2.2.29*) as described in the test for related substances with the following modification.

*Injection*: test solution and reference solution (a).

Calculate the percentage content of $C_{32}H_{51}NO_8S$ from the declared content of *tiamulin hydrogen fumarate CRS*.

STORAGE

Protected from light.

IMPURITIES

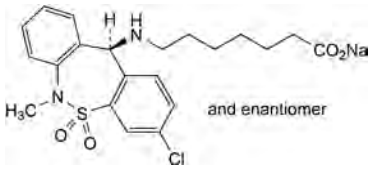
# TIANEPTINE SODIUM

## Tianeptinum natricum



$C_{21}H_{24}ClN_2NaO_4S$ $M_r$ 458.9
[30123-17-2]

DEFINITION

Sodium 7-[[(11*RS*)-3-chloro-6-methyl-6,11-dihydrodibenzo-[*c*,*f*][1,2]thiazepin-11-yl]amino]heptanoate *S*,*S*-dioxide.

*Content*: 99.0 per cent to 101.0 per cent (anhydrous substance).

CHARACTERS

*Appearance*: white or yellowish powder, very hygroscopic.

*Solubility*: freely soluble in water, in methanol and in methylene chloride.

IDENTIFICATION

A. Infrared absorption spectrophotometry (*2.2.24*).
*Comparison*: *Ph. Eur. reference spectrum of tianeptine sodium*.

B. It gives reaction (a) of sodium (*2.3.1*).

TESTS

**Impurity A**. Gas chromatography (*2.2.28*).

*Internal standard solution.* Dilute 1 mL of *ethyl 5-bromovalerate R* in *anhydrous ethanol R* and dilute to 100.0 mL with the same solvent. Dilute 1.0 mL of the solution to 250.0 mL with *anhydrous ethanol R*.

*Test solution.* Dissolve 0.1000 g of the substance to be examined in the internal standard solution and dilute to 2.0 mL with the same solution.

*Reference solution.* Dissolve 10.0 mg of *tianeptine impurity A CRS* in the internal standard solution and dilute to 200.0 mL with the same solution.

*Column*:
- *material*: fused silica,
- *size*: *l* = 25 m, Ø = 0.25 mm,
- *stationary phase*: *cyanopropylpolysiloxane R* (film thickness 0.2 µm).

*Carrier gas*: *helium for chromatography R*.

*Linear velocity*: 26 cm/s.

*Split ratio*: 1:100.

*Temperature*:
- *column*: 150 °C,
- *injection port and detector*: 210 °C.

*Detection*: flame ionisation.

*Injection*: 1 µL.

*Run time*: twice the retention time of ethyl 5-bromovalerate.

*System suitability*: reference solution:
- *elution order*: ethanol, ethyl 5-bromovalerate, impurity A,
- *resolution*: minimum 10 between the peaks due to ethyl 5-bromovalerate and impurity A,
- *signal-to-noise ratio*: minimum 20 for the peak due to impurity A.

*Limit*:
- *impurity A*: not more than the area of the corresponding peak in the chromatogram obtained with the reference solution (0.1 per cent).

**Related substances**. Liquid chromatography (*2.2.29*).

*Solvent mixture.* Mix 50 volumes of *methanol R* and 50 volumes of *water R*.

*Test solution.* Dissolve 50.0 mg of the substance to be examined in the solvent mixture and dilute to 50.0 mL with the solvent mixture.

*Reference solution (a).* Dilute 1.0 mL of the test solution to 100.0 mL with the solvent mixture. Dilute 1.0 mL of this solution to 20.0 mL with the solvent mixture.

*Reference solution (b).* Dissolve 20 mg of *sodium tianeptine for system suitability CRS* in the solvent mixture and dilute to 200 mL with the solvent mixture.

*Column*:
- *size*: *l* = 0.15 m, Ø = 4.6 mm,
- *stationary phase*: *octadecylsilyl silica gel for chromatography R* (3 µm) with a pore size of 0.01 µm,
- *temperature*: 30 °C.

*Mobile phase*:
- *mobile phase A*: mix 21 volumes of *methanol R1*, 31.5 volumes of *acetonitrile R1* and 47.5 volumes of a 2 g/L solution of *sodium laurilsulfate R*, adjusted to pH 2.5 with *phosphoric acid R*,
- *mobile phase B*: mix 20 volumes of *methanol R1*, 20 volumes of a 2 g/L solution of *sodium laurilsulfate R*, adjusted to pH 2.5 with *phosphoric acid R* and 60 volumes of *acetonitrile R1*,

| Time (min) | Mobile phase A (per cent *V/V*) | Mobile phase B (per cent *V/V*) |
|---|---|---|
| 0 - 35 | 100 | 0 |
| 35 - 45 | 100 → 40 | 0 → 60 |
| 45 - 60 | 40 | 60 |
| 60 - 70 | 40 → 100 | 60 → 0 |

*Flow rate*: 1 mL/min.

*Detection*: spectrophotometer at 220 nm.

*Injection*: 10 µL.

*Relative retention* with reference to tianeptine (retention time = about 30 min): impurity C = about 0.4; impurity D1 = about 0.6; impurity D2 = about 0.8; impurity E = about 1.1; impurity B = about 1.7.

*System suitability*: reference solution (b):
- *resolution*: minimum 2.5 between the peaks due to tianeptine and impurity E.

*Limits*:
- *any impurity*: not more than twice the area of the principal peak in the chromatogram obtained with reference solution (a) (0.1 per cent),
- *total*: not more than 8 times the area of the principal peak in the chromatogram obtained with reference solution (a) (0.4 per cent),
- *disregard limit*: area of the principal peak in the chromatogram obtained with reference solution (a) (0.05 per cent).

**Water** (*2.5.12*): maximum 5.0 per cent, determined on 0.100 g.

ASSAY

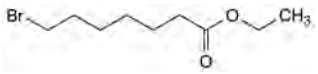
Dissolve 0.165 g in 50 mL of *anhydrous acetic acid R*. Titrate with *0.1 M perchloric acid*, determining the end-point potentiometrically (*2.2.20*).

1 mL of *0.1 M perchloric acid* is equivalent to 22.95 mg of $C_{21}H_{24}ClN_2NaO_4S$.

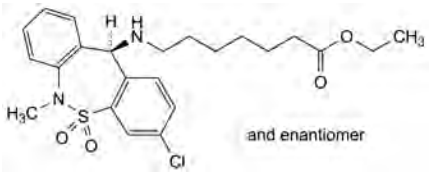
STORAGE

In an airtight container.

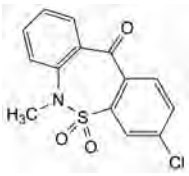
IMPURITIES



A. ethyl 7-bromoheptanoate,



B. ethyl 7-[[(11*RS*)-3-chloro-6-methyl-6,11-dihydrodibenzo-[*c*,*f*][1,2]thiazepin-11-yl]amino]heptanoate *S*,*S*-dioxide,



C. 3-chloro-6-methyldibenzo[*c*,*f*][1,2]thiazepin-11(6*H*)-one *S*,*S*-dioxide,

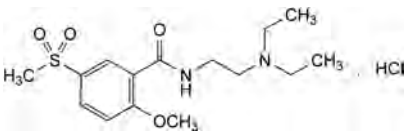
# TIAPRIDE HYDROCHLORIDE

## Tiapridi hydrochloridum



$C_{15}H_{25}ClN_2O_4S$ $M_r$ 364.9
[51012-33-0]

DEFINITION

*N*-[2-(Diethylamino)ethyl]-2-methoxy-5-(methylsulfonyl)-benzamide hydrochloride.

*Content*: 98.5 per cent to 101.0 per cent (dried substance).

CHARACTERS

*Appearance*: white or almost white, crystalline powder.

*Solubility*: very soluble in water, soluble in methanol, slightly soluble in anhydrous ethanol.

IDENTIFICATION

A. Infrared absorption spectrophotometry (*2.2.24*).

*Comparison*: *tiapride hydrochloride CRS*.

B. Solution S (see Tests) gives reaction (a) of chlorides (*2.3.1*).

TESTS

**Solution S**. Dissolve 2.5 g in *carbon dioxide-free water R* and dilute to 50.0 mL with the same solvent.

**Appearance of solution**. Solution S is clear (*2.2.1*) and its absorbance (*2.2.25*) at 450 nm is not greater than 0.030.

**pH** (*2.2.3*): 4.0 to 6.0 for solution S.

**Impurity C**. Thin-layer chromatography (*2.2.27*).

*Test solution.* Dissolve 0.400 g of the substance to be examined in *methanol R* and dilute to 10 mL with the same solvent.

*Reference solution.* Dissolve 20.0 mg of *metoclopramide impurity E CRS* (impurity C) in *methanol R* and dilute to 50 mL with the same solvent. Dilute 2.0 mL of the solution to 20 mL with *methanol R*.

*Plate*: *TLC silica gel $F_{254}$ plate R*.

*Mobile phase*: *concentrated ammonia R*, *dioxan R*, *methanol R*, *methylene chloride R* (2:10:14:90 *V/V/V/V*).

*Application*: 10 µL.

*Development*: over 4/5 of the plate.

*Drying*: in air.

*Detection*: spray with a 2 g/L solution of *ninhydrin R* in *butanol R* and heat at 100 °C for 15 min.

*Retardation factors*: impurity C = about 0.1; tiapride = about 0.6.

*Limit*:

– *impurity C*: any spot due to impurity C is not more intense than the corresponding spot in the chromatogram obtained with the reference solution (0.1 per cent).

**Related substances**. Liquid chromatography (*2.2.29*).

*Test solution.* Dissolve 0.100 g of the substance to be examined in the mobile phase and dilute to 100.0 mL with the mobile phase.

*Reference solution (a).* Dilute 1.0 mL of the test solution to 10.0 mL with the mobile phase. Dilute 1.0 mL of this solution to 100.0 mL with the mobile phase.

*Reference solution (b).* Dissolve 5.0 mg of *tiapride hydrochloride CRS* and 5.0 mg of *tiapride N-oxide CRS* (impurity D) in the mobile phase and dilute to 100.0 mL with the mobile phase.

*Column*:

– *size*: *l* = 0.25 m, Ø = 4.6 mm;
– *stationary phase*: *base-deactivated end-capped octylsilyl silica gel for chromatography R* (5 µm);
– *temperature*: 40 °C.

*Mobile phase*: dissolve 5.44 g of *potassium dihydrogen phosphate R* and 0.08 g of *sodium octanesulfonate R* in 780 mL of *water R*, adjust to pH 2.7 with *phosphoric acid R* and dilute to 800 mL with *water R*; add 150 mL of *methanol R* and 50 mL of *acetonitrile R* and mix.

*Flow rate*: 1.5 mL/min.

*Detection*: spectrophotometer at 240 nm.

*Injection*: 10 µL.

*Run time*: 3 times the retention time of tiapride.

*Identification of impurities*: use the chromatogram obtained with reference solution (b) to identify the peak due to impurity D.

*Relative retention* with reference to tiapride (retention time = about 7 min): impurity D = about 1.2.

*System suitability*: reference solution (b):

– *resolution*: minimum 4.0 between the peaks due to tiapride and impurity D.

*Calculation of percentage contents*:

– for each impurity, use the concentration of tiapride hydrochloride in reference solution (a).

*Limits*:

– *unspecified impurities*: for each impurity, maximum 0.10 per cent;

– *total*: maximum 0.2 per cent;

– *reporting threshold*: 0.05 per cent.

**Loss on drying** (*2.2.32*): maximum 0.5 per cent, determined on 1.000 g by drying in an oven at 105 °C.

**Sulfated ash** (*2.4.14*): maximum 0.1 per cent, determined on 1.0 g.

ASSAY

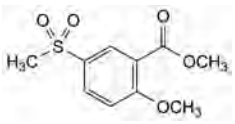
Dissolve 0.300 g in 20 mL of *anhydrous acetic acid R*. Add 20 mL of *acetic anhydride R*. Titrate with *0.1 M perchloric acid*, determining the end-point potentiometrically (*2.2.20*).

1 mL of *0.1 M perchloric acid* is equivalent to 36.49 mg of $C_{15}H_{25}ClN_2O_4S$.

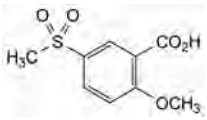
IMPURITIES

*Specified impurities: C.*

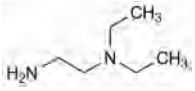
*Other detectable impurities* (the following substances would, if present at a sufficient level, be detected by one or other of the tests in the monograph. They are limited by the general acceptance criterion for other/unspecified impurities and/or by the general monograph *Substances for pharmaceutical use (2034)*. It is therefore not necessary to identify these impurities for demonstration of compliance. See also *5.10. Control of impurities in substances for pharmaceutical use*): *A, B, D.*



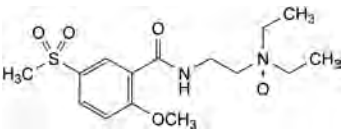
A. methyl 2-methoxy-5-(methylsulfonyl)benzoate,



B. 2-methoxy-5-(methylsulfonyl)benzoic acid,



C. *N*,*N*-diethylethane-1,2-diamine,

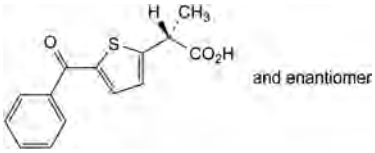


D. *N*-[2-(diethyloxidoaminol)ethyl]-2-methoxy-5-(methylsulfonyl)benzamide (tiapride *N*-oxide).

**01/2017:1157**

# TIAPROFENIC ACID

## Acidum tiaprofenicum



$C_{14}H_{12}O_3S$ $M_r$ 260.3

[33005-95-7]

DEFINITION

(2*RS*)-2-(5-Benzoylthiophen-2-yl)propanoic acid.

*Content*: 99.0 per cent to 101.0 per cent (dried substance).

CHARACTERS

*Appearance*: white or almost white, crystalline powder.

*Solubility*: practically insoluble in water, freely soluble in acetone, in ethanol (96 per cent) and in methylene chloride.

IDENTIFICATION

*First identification: C.*

*Second identification: A, B, D.*

A. Melting point (*2.2.14*): 95 °C to 99 °C.

B. Ultraviolet and visible absorption spectrophotometry (*2.2.25*).

*Test solution.* Dissolve 25.0 mg in *ethanolic hydrochloric acid R* and dilute to 50.0 mL with the same solvent. Dilute 1.0 mL of this solution to 50.0 mL with *ethanolic hydrochloric acid R*.

*Spectral range*: 220-350 nm.

*Absorption maximum*: at 305 nm.

*Shoulder*: at 262 nm.

*Specific absorbance at the absorption maximum*: 550 to 590.

C. Infrared absorption spectrophotometry (*2.2.24*).

*Comparison*: *tiaprofenic acid CRS*.

D. Thin-layer chromatography (*2.2.27*).

*Test solution.* Dissolve 10 mg of the substance to be examined in *methylene chloride R* and dilute to 10 mL with the same solvent.

*Reference solution (a).* Dissolve 10 mg of *tiaprofenic acid CRS* in *methylene chloride R* and dilute to 10 mL with the same solvent.

*Reference solution (b).* Dissolve 10 mg of *ketoprofen CRS* in *methylene chloride R* and dilute to 10 mL with the same solvent. Dilute 1 mL of this solution to 2 mL with reference solution (a).

*Plate*: *TLC silica gel $F_{254}$ plate R.*

*Mobile phase*: *acetic acid R*, *methylene chloride R*, *acetone R* (1:20:80 *V/V/V*).

*Application*: 10 µL.

*Development*: over a path of 15 cm.

*Drying*: in air.

*Detection*: examine in ultraviolet light at 254 nm.

*System suitability*: reference solution (b):

– the chromatogram shows 2 clearly separated principal spots.

*Results*: the principal spot in the chromatogram obtained with the test solution is similar in position and size to the principal spot in the chromatogram obtained with reference solution (a).

TESTS

**Appearance of solution**. The solution is clear (*2.2.1*) and not more intensely coloured than reference solution $Y_6$ (*2.2.2, Method II*).

Dissolve 2.0 g in *ethanol (96 per cent) R* and dilute to 20 mL with the same solvent.

**Optical rotation** (*2.2.7*): – 0.10° to + 0.10°.

Dissolve 0.50 g in *ethyl acetate R* and dilute to 10.0 mL with the same solvent.

**Related substances**. Liquid chromatography (*2.2.29*).

*Test solution.* Dissolve 20.0 mg of the substance to be examined in the mobile phase and dilute to 20.0 mL with the mobile phase.

*Reference solution (a).* Dilute 1.0 mL of the test solution to 50.0 mL with the mobile phase. Dilute 1.0 mL of this solution to 10.0 mL with the mobile phase.

*Reference solution (b).* Dilute 5.0 mL of reference solution (a) to 10.0 mL with the mobile phase.

*Reference solution (c).* Dissolve 10.0 mg of *tiaprofenic acid impurity C CRS* in the mobile phase and dilute to 100.0 mL with the mobile phase. Dilute 1.0 mL of this solution to 50.0 mL with the mobile phase.

*Reference solution (d).* Dilute 1.0 mL of reference solution (a) to 2.0 mL with reference solution (c).

*Column*:

– *size*: *l* = 0.25 m, Ø = 4.6 mm;

– *stationary phase*: *silica gel for chromatography R* (5 µm).

*Mobile phase*: *water R*, *glacial acetic acid R*, *hexane R*, *methylene chloride R* (0.25:20:500:500 *V/V/V/V*); add the water to the acetic acid, then hexane and methylene chloride; sonicate the mixture for 2 min. Do not degas with helium during analysis.

*Flow rate*: 1 mL/min.

*Detection*: spectrophotometer at 250 nm.

*Injection*: 20 µL.

*Run time*: twice the retention time of tiaprofenic acid.

*Relative retention* with reference to tiaprofenic acid: impurity A = about 0.19; impurity B = about 0.43; impurity C = about 0.86.

*System suitability*: reference solution (d):

– *resolution*: minimum 3.0 between the peaks due to impurity C and tiaprofenic acid.

*Limits*:

– *impurity C*: not more than the area of the corresponding peak in the chromatogram obtained with reference solution (c) (0.2 per cent);

– *unspecified impurities*: for each impurity, not more than the area of the principal peak in the chromatogram obtained with reference solution (b) (0.10 per cent);

– *sum of impurities other than C*: not more than 1.5 times the area of the principal peak in the chromatogram obtained with reference solution (a) (0.3 per cent);

– *disregard limit*: 0.5 times the area of the principal peak in the chromatogram obtained with reference solution (b) (0.05 per cent).

**Loss on drying** (*2.2.32*): maximum 0.5 per cent, determined on 1.000 g by drying in an oven at 60 °C at a pressure not exceeding 0.7 kPa for 3 h.

**Sulfated ash** (*2.4.14*): maximum 0.1 per cent, determined on 1.0 g.

ASSAY

Dissolve 0.250 g in 25 mL of *ethanol (96 per cent) R*. Add 25 mL of *water R* and 0.5 mL of *phenolphthalein solution R*. Titrate with *0.1 M sodium hydroxide*.

1 mL of *0.1 M sodium hydroxide* is equivalent to 26.03 mg of $C_{14}H_{12}O_3S$.

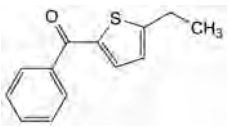
STORAGE

Protected from light.

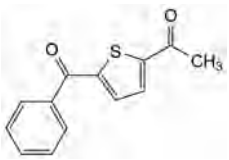
IMPURITIES

*Specified impurities: C.*

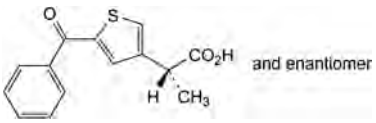
*Other detectable impurities* (the following substances would, if present at a sufficient level, be detected by one or other of the tests in the monograph. They are limited by the general acceptance criterion for other/unspecified impurities and/or by the general monograph *Substances for pharmaceutical use (2034)*. It is therefore not necessary to identify these impurities for demonstration of compliance. See also *5.10. Control of impurities in substances for pharmaceutical use*): *A, B, D, E, F.*



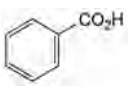
A. (5-ethylthiophen-2-yl)phenylmethanone,



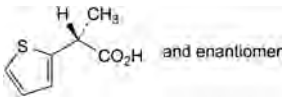
B. 1-(5-benzoylthiophen-2-yl)ethanone,



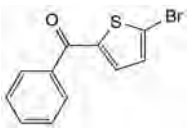
C. (2*RS*)-2-(5-benzoylthiophen-3-yl)propanoic acid,



D. benzoic acid,



E. (2*RS*)-2-(thiophen-2-yl)propanoic acid,

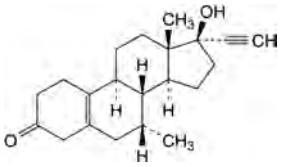


F. (5-bromothiophen-2-yl)phenylmethanone.

**01/2008:1739**
**corrected 6.0**

# TIBOLONE

## Tibolonum



$C_{21}H_{28}O_2$ $M_r$ 312.5

DEFINITION

17-Hydroxy-7α-methyl-19-nor-17α-pregn-5(10)-en-20-yn-3-one.

*Content*: 99.0 per cent to 101.0 per cent (dried substance).

CHARACTERS

*Appearance*: white or almost white, crystalline powder or crystals.

*Solubility*: practically insoluble in water, soluble in acetone and in methanol.

It shows polymorphism (*5.9*).

IDENTIFICATION

Infrared absorption spectrophotometry (*2.2.24*).

*Comparison*: *Ph. Eur. reference spectrum of tibolone.*

If the spectra obtained in the solid state show differences, dissolve the substance to be examined in the minimum volume of *anhydrous ethanol R*, evaporate to dryness on a water-bath and record a new spectrum using the residue.

TESTS

**Specific optical rotation** (*2.2.7*): + 100 to + 106 (dried substance).

Dissolve 0.250 g in *anhydrous ethanol R* and dilute to 25.0 mL with the same solvent.

**Related substances**. Liquid chromatography (*2.2.29*).

*Select a brand of acetonitrile such that the formation of possible artefact peaks, eluting after impurity C at relative retentions 0.6 to 0.8, is avoided.*

*Solvent mixture*: *water R*, *acetonitrile R1* (25:75 *V/V*).

*Test solution.* Dissolve 40.0 mg of the substance to be examined in the solvent mixture and dilute to 10.0 mL with the solvent mixture.

*Reference solution (a).* Dissolve 4 mg of *tibolone for system suitability CRS* (containing impurities A, B, C, D and E) in 1 mL of the solvent mixture.

*Reference solution (b).* Dilute 1.0 mL of the test solution to 100.0 mL with the solvent mixture.

*Column*:

- *size*: *l* = 0.15 m, Ø = 4.6 mm;
- *stationary phase*: spherical *end-capped octylsilyl silica gel for chromatography R* (5 µm).

*Mobile phase*: *methanol R*, *acetonitrile R1*, *water R* (8:40:52 *V/V/V*).

*Flow rate*: 1.0 mL/min.

*Detection*: spectrophotometer at 205 nm.

*Injection*: 5 µL.

*Run time*: 3 times the retention time of tibolone.

*Identification of impurities*: use the chromatogram supplied with *tibolone for system suitability CRS* and the chromatogram obtained with reference solution (a) to identify the peaks due to impurities A, B, C, D and E.

*Relative retention* with reference to tibolone (retention time = about 14 min): impurity A = about 0.22; impurity B = about 0.24; impurity C = about 0.58; impurity D = about 1.12; impurity E = about 2.24.

*System suitability*: reference solution (a):

- *peak-to-valley ratio*: minimum 2.0, where $H_p$ = height above the baseline of the peak due to impurity D and $H_v$ = height above the baseline of the lowest point of the curve separating this peak from the peak due to tibolone.

*Limits*:

- *correction factors*: for the calculation of content, multiply the peak areas of the following impurities by the corresponding correction factor: impurity A = 1.7; impurity B = 1.5; impurity C = 2.1;
- *impurities A, E*: for each impurity, not more than 0.1 times the area of the principal peak in the chromatogram obtained with reference solution (b) (0.1 per cent);
- *impurity B*: not more than 0.4 times the area of the principal peak in the chromatogram obtained with reference solution (b) (0.4 per cent);
- *impurity C*: not more than 0.5 times the area of the principal peak in the chromatogram obtained with reference solution (b) (0.5 per cent);
- *impurity D*: not more than 0.2 times the area of the principal peak in the chromatogram obtained with reference solution (b) (0.2 per cent);
- *unspecified impurities*: for each impurity, not more than 0.1 times the area of the principal peak in the chromatogram obtained with reference solution (b) (0.10 per cent);
- *total*: not more than the area of the principal peak in the chromatogram obtained with reference solution (b) (1.0 per cent);
- *disregard limit*: 0.05 times the area of the principal peak in the chromatogram obtained with reference solution (b) (0.05 per cent).

**Loss on drying** (*2.2.32*): maximum 0.5 per cent, determined on 1.000 g by drying in an oven at 105 °C for 3 h.

**Sulfated ash** (*2.4.14*): maximum 0.1 per cent, determined on 1.0 g.

ASSAY

Dissolve 0.250 g in 60 mL of *tetrahydrofuran R*. Add 25 mL of a 100 g/L solution of *silver nitrate R*. Titrate with *0.1 M sodium hydroxide*, determining the end-point potentiometrically (*2.2.20*).

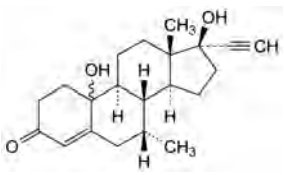
1 mL of *0.1 M sodium hydroxide* is equivalent to 31.25 mg of $C_{21}H_{28}O_2$.

STORAGE

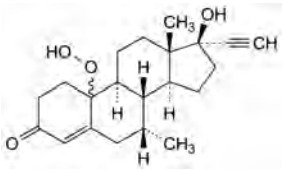
At a temperature of 2 °C to 8 °C.

IMPURITIES

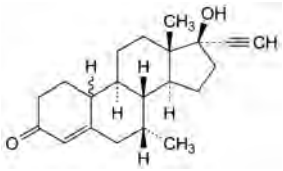
*Specified impurities*: *A, B, C, D, E.*



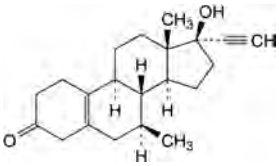
A. 10,17-dihydroxy-7α-methyl-19-nor-10ξ,17α-pregn-4-en-20-yn-3-one,



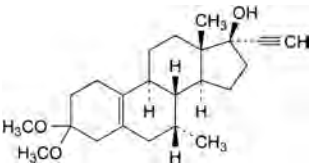
B. 10-hydroperoxy-17-hydroxy-7α-methyl-19-nor-10ξ,17α-pregn-4-en-20-yn-3-one,



C. 17-hydroxy-7α-methyl-19-nor-10ξ,17α-pregn-4-en-20-yn-3-one,



D. 17-hydroxy-7β-methyl-19-nor-17α-pregn-5(10)-en-20-yn-3-one,

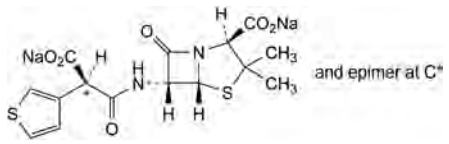


E. 3,3-dimethoxy-7α-methyl-19-nor-17α-pregn-5(10)-en-20-yn-17-ol.

**01/2008:0956**
**corrected 10.0**

# TICARCILLIN SODIUM

## Ticarcillinum natricum



$C_{15}H_{14}N_2Na_2O_6S_2$ $M_r$ 428.4
[4697-14-7]

DEFINITION

Disodium (2*S*,5*R*,6*R*)-6-[[(2*RS*)-2-carboxylato-2-(thiophen-3-yl)acetyl]amino]-3,3-dimethyl-7-oxo-4-thia-1-azabicyclo[3.2.0]heptane-2-carboxylate.

Semi-synthetic product derived from a fermentation product.

*Content*: 89.0 per cent to 102.0 per cent (anhydrous substance).

CHARACTERS

*Appearance*: white or slightly yellow, hygroscopic powder.

*Solubility*: freely soluble in water, soluble in methanol.

IDENTIFICATION

*First identification: A, D, E.*

*Second identification: B, C, D.*

A. Infrared absorption spectrophotometry (*2.2.24*).

*Preparation*: dissolve 50 mg of the substance to be examined in 1 mL of *water R*, add 0.1 mL of *hydrochloric acid R1*, swirl and allow to stand in iced water for 10 min. Filter the precipitate and rinse with 2 mL of *water R*. Dissolve in a mixture of 1 volume of *water R* and 9 volumes of *acetone R*. Evaporate the solvent almost to dryness, then dry in an oven at 60 °C for 30 min.

*Comparison*: repeat the operations using *ticarcillin monosodium CRS*.

B. Thin-layer chromatography (*2.2.27*).

*Test solution.* Dissolve 25 mg of the substance to be examined in *methanol R* and dilute to 5 mL with the same solvent.

*Reference solution (a).* Dissolve 25 mg of *ticarcillin monosodium CRS* in *methanol R* and dilute to 5 mL with the same solvent.

*Reference solution (b).* Dissolve 25 mg of *carbenicillin sodium CRS* and 25 mg of *ticarcillin monosodium CRS* in *methanol R* and dilute to 5 mL with the same solvent.

*Plate*: *TLC silanised silica gel plate R.*

*Mobile phase*: mix 10 volumes of *acetone R* and 90 volumes of a 154 g/L solution of *ammonium acetate R*, adjusted to pH 5.0 with *glacial acetic acid R*.

*Application*: 1 µL.

*Development*: over a path of 12 cm.

*Drying*: in a current of hot air.

*Detection*: expose to iodine vapour.

*System suitability*: reference solution (b):

– the chromatogram shows 2 clearly separated spots.

*Results*: the principal spot in the chromatogram obtained with the test solution is similar in position, colour and size to the principal spot in the chromatogram obtained with reference solution (a).

C. Place about 2 mg in a test-tube about 15 cm long and 15 mm in diameter. Moisten with 0.05 mL of *water R* and add 2 mL of *sulfuric acid-formaldehyde reagent R*. Mix the contents of the tube by swirling; the solution is brown. Place the test-tube in a water-bath for 1 min; a dark reddish-brown colour develops.

D. It gives reaction (a) of sodium (*2.3.1*).

E. Specific optical rotation (see Tests).

TESTS

**Solution S**. Dissolve 2.50 g in *carbon dioxide-free water R* and dilute to 50 mL with the same solvent.

**Appearance of solution**. Solution S is clear (*2.2.1*) and not more intensely coloured than reference solution $Y_5$ (*2.2.2, Method II*).

**pH** (*2.2.3*): 5.5 to 7.5 for solution S.

**Specific optical rotation** (*2.2.7*): + 172 to + 187 (anhydrous substance).

Dissolve 0.250 g in *water R* and dilute to 25.0 mL with the same solvent.

**Related substances**. Liquid chromatography (*2.2.29*).

*Test solution.* Dissolve 25.0 mg of the substance to be examined in mobile phase A and dilute to 25.0 mL with mobile phase A.

*Reference solution (a).* Dissolve 20.0 mg of *ticarcillin impurity A CRS* in mobile phase A and dilute to 100.0 mL with mobile phase A. Dilute 5.0 mL of this solution to 50.0 mL with mobile phase A.

*Reference solution (b).* Dilute 1 mL of the test solution to 50 mL with mobile phase A.

*Column*:

– *size*: *l* = 0.25 m, Ø = 4 mm;

– *stationary phase*: *octadecylsilyl silica gel for chromatography R* (5 µm).

*Mobile phase*:
- *mobile phase A*: 1.3 g/L solution of *ammonium phosphate R* adjusted to pH 7.0 with *phosphoric acid R*;
- *mobile phase B*: *methanol R*, mobile phase A (50:50 *V/V*);

| Time (min) | Mobile phase A (per cent *V/V*) | Mobile phase B (per cent *V/V*) |
|---|---|---|
| 0 - 30 | 100 → 30 | 0 → 70 |
| 30 - 40 | 30 | 70 |

*Flow rate*: 1.0 mL/min.

*Detection*: spectrophotometer at 220 nm.

*Injection*: 20 µL.

*System suitability*: reference solution (b):
- *resolution*: minimum 2.0 between the 2 principal peaks (diastereoisomers).

*Limits*:
- *impurity A*: not more than twice the area of the principal peak in the chromatogram obtained with reference solution (a) (4 per cent);
- *any other impurity*: for each impurity, not more than 1.25 times the area of the principal peak in the chromatogram obtained with reference solution (a) (2.5 per cent).

***N,N*-Dimethylaniline** (*2.4.26, Method B*): maximum 20 ppm.

**2-Ethylhexanoic acid** (*2.4.28*): maximum 0.5 per cent *m/m*.

**Water** (*2.5.12*): maximum 5.5 per cent, determined on 0.150 g.

**Bacterial endotoxins** (*2.6.14*): less than 0.05 IU/mg, if intended for use in the manufacture of parenteral preparations without a further appropriate procedure for the removal of bacterial endotoxins.

ASSAY

Liquid chromatography (*2.2.29*).

*Test solution.* Dissolve 50.0 mg of the substance to be examined in the mobile phase and dilute to 100.0 mL with the mobile phase. Dilute 10.0 mL of this solution to 50.0 mL with the mobile phase.

*Reference solution.* Dissolve 50.0 mg of *ticarcillin monosodium CRS* in the mobile phase and dilute to 100.0 mL with the mobile phase. Dilute 10.0 mL of this solution to 50.0 mL with the mobile phase.

*Column*:
- *size*: *l* = 0.25 m, Ø = 4 mm;
- *stationary phase*: *octadecylsilyl silica gel for chromatography R* (5 µm).

*Mobile phase*: mix 20 volumes of *methanol R* and 80 volumes of a 1.3 g/L solution of *ammonium phosphate R* adjusted to pH 7.0 with *phosphoric acid R*.

*Flow rate*: 1 mL/min.

*Detection*: spectrophotometer at 220 nm.

*Injection*: 20 µL.

*System suitability*: reference solution:
- *resolution*: minimum 2.5 between the 2 principal peaks;
- *repeatability*: maximum relative standard deviation of 1.0 per cent for the 2 peaks due to ticarcillin after 6 injections.

Calculate the percentage content of ticarcillin sodium as the sum of the areas of the 2 peaks, multiplying the content of ticarcillin monosodium by 1.054.

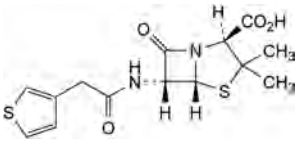
STORAGE

In an airtight container, at a temperature of 2 °C to 8 °C. If the substance is sterile, store in a sterile, airtight, tamper-evident container.

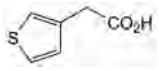
IMPURITIES

*Specified impurities: A.*

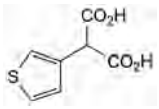
*Other detectable impurities* (the following substances would, if present at a sufficient level, be detected by one or other of the tests in the monograph. They are limited by the general acceptance criterion for other/unspecified impurities and/or by the general monograph *Substances for pharmaceutical use (2034)*. It is therefore not necessary to identify these impurities for demonstration of compliance. See also *5.10. Control of impurities in substances for pharmaceutical use*): *B, C, D, E.*



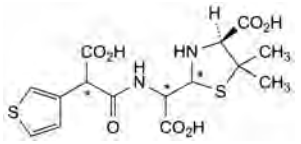
A. (2*S*,5*R*,6*R*)-3,3-dimethyl-7-oxo-6-[[(thiophen-3-yl)acetyl]amino]-4-thia-1-azabicyclo[3.2.0]heptane-2-carboxylic acid (decarboxyticarcillin),



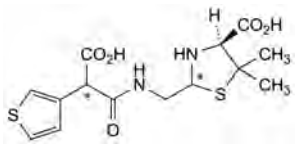
B. (thiophen-3-yl)acetic acid,



C. 2-(thiophen-3-yl)propanedioic acid (3-thienylmalonic acid),



D. (4*S*)-2-[carboxy[[2-carboxy-2-(thiophen-3-yl)acetyl]amino]methyl]-5,5-dimethylthiazolidine-4-carboxylic acid (penicilloic acids of ticarcillin),

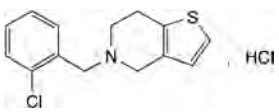


E. (4*S*)-2-[[[2-carboxy-2-(thiophen-3-yl)acetyl]amino]-methyl]-5,5-dimethylthiazolidine-4-carboxylic acid (penilloic acids of ticarcillin).

**01/2017:1050**

# TICLOPIDINE HYDROCHLORIDE

## Ticlopidini hydrochloridum



$C_{14}H_{15}Cl_2NS$ $M_r$ 300.2

[53885-35-1]

DEFINITION

5-(2-Chlorobenzyl)-4,5,6,7-tetrahydrothieno[3,2-*c*]pyridine hydrochloride.

*Content*: 99.0 per cent to 101.0 per cent (anhydrous substance).

CHARACTERS

*Appearance*: white or almost white, crystalline powder.

*Solubility*: sparingly soluble in water and in anhydrous ethanol, very slightly soluble in ethyl acetate.

IDENTIFICATION

*First identification: B, D.*

*Second identification: A, C, D.*

A. Ultraviolet and visible absorption spectrophotometry (*2.2.25*).

*Test solution (a).* Dissolve 40 mg in *water R* and dilute to 100.0 mL with the same solvent.

*Test solution (b).* Dilute 5.0 mL of test solution (a) to 100.0 mL with *water R*.

*Spectral range*: 250-350 nm for test solution (a); 200-350 nm for test solution (b).

*Absorption maxima*: at 268 nm and 275 nm for test solution (a); at 214 nm and 232 nm for test solution (b).

*Absorption ratio*: $A_{268}/A_{275}$ = 1.1 to 1.2.

B. Infrared absorption spectrophotometry (*2.2.24*).

*Comparison*: *ticlopidine hydrochloride CRS*.

C. Mix about 6 mg of *citric acid monohydrate R* and 0.3 mL of *acetic anhydride R*. Add about 5 mg of the substance to be examined and heat in a water-bath at 80 °C. A red colour develops.

D. About 20 mg gives reaction (a) of chlorides (*2.3.1*).

TESTS

**Appearance of solution**. The solution is clear (*2.2.1*) and colourless (*2.2.2, Method II*).

Dissolve 0.5 g in a 1 per cent *V/V* solution of *hydrochloric acid R* and dilute to 20 mL with the same solution.

**pH** (*2.2.3*): 3.5 to 4.0.

Dissolve 0.5 g in *carbon dioxide-free water R* and dilute to 20 mL with the same solvent.

**Related substances**. Liquid chromatography (*2.2.29*).

*Solvent mixture*: mobile phase B, mobile phase A (20:80 *V/V*).

*Test solution.* Dissolve 0.250 g of the substance to be examined in the solvent mixture and dilute to 50.0 mL with the solvent mixture.

*Reference solution.* Dissolve 5.0 mg of *ticlopidine impurity F CRS* in the solvent mixture. Add 1.00 mL of the test solution and dilute to 100.0 mL with the solvent mixture. Dilute 1.0 mL of this solution to 10.0 mL with the solvent mixture.

*Column*:

- *size*: *l* = 0.15 m, Ø = 4.6 mm;
- *stationary phase*: *octadecylsilyl silica gel for chromatography R* (5 µm);
- *temperature*: 40 °C.

*Mobile phase*:

- *mobile phase A*: 0.95 g/L solution of *sodium pentanesulfonate monohydrate R*, adjusted to pH 3.4 with a 50 per cent *V/V* solution of *phosphoric acid R*;
- *mobile phase B*: *methanol R1*;

| Time (min) | Mobile phase A (per cent *V/V*) | Mobile phase B (per cent *V/V*) |
|---|---|---|
| 0 - 45 | 80 → 20 | 20 → 80 |
| 45 - 50 | 20 | 80 |

*Flow rate*: 1.3 mL/min.

*Detection*: spectrophotometer at 220 nm.

*Injection*: 10 µL; inject the solvent mixture as a blank.

*Identification of impurities*: use the chromatogram obtained with the reference solution to identify the peak due to impurity F.

*Retention time*: ticlopidine = about 15 min.

*System suitability*: reference solution:

- *resolution*: minimum 2.0 between the peaks due to ticlopidine and impurity F; if necessary, adjust the pH of mobile phase A;
- *signal-to-noise ratio*: minimum 50 for the peak due to ticlopidine.

*Limits*:

- *impurity F*: not more than 0.5 times the area of the corresponding peak in the chromatogram obtained with the reference solution (0.05 per cent);
- *unspecified impurities*: for each impurity, not more than the area of the peak due to ticlopidine in the chromatogram obtained with the reference solution (0.10 per cent);
- *total*: not more than the area of the peak due to ticlopidine in the chromatogram obtained with the reference solution (0.10 per cent);
- *disregard limit*: 0.5 times the area of the peak due to ticlopidine in the chromatogram obtained with the reference solution (0.05 per cent). Do not disregard the peak due to impurity F.

**Formaldehyde**: maximum 20 ppm.

Dissolve 0.200 g in 4.0 mL of *water R*. Add 0.4 mL of *dilute sodium hydroxide solution R*. Centrifuge, filter the supernatant through cotton previously impregnated with *water R* and dilute to 5.0 mL with *water R*. Transfer to a test-tube. Add 5.0 mL of *acetylacetone reagent R1*. Place the test-tube in a water-bath at 40 °C for 40 min. The test solution is not more intensely coloured than a standard prepared at the same time and in the same manner using 5.0 mL of a 0.8 ppm solution of formaldehyde ($CH_2O$), obtained by dilution of *formaldehyde standard solution (5 ppm $CH_2O$) R* with *water R*. Examine the tubes down their vertical axis.

**Water** (*2.5.12*): maximum 0.5 per cent, determined on 0.500 g.

**Sulfated ash** (*2.4.14*): maximum 0.1 per cent, determined on 1.0 g.

ASSAY

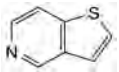
Dissolve 0.150 g in 15 mL of *anhydrous acetic acid R*. Add 35 mL of *acetic anhydride R*. Titrate with *0.1 M perchloric acid*, determining the end-point potentiometrically (*2.2.20*).

1 mL of *0.1 M perchloric acid* is equivalent to 30.02 mg of $C_{14}H_{15}Cl_2NS$.

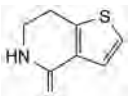
IMPURITIES

*Specified impurities: F.*

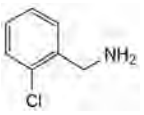
*Other detectable impurities* (the following substances would, if present at a sufficient level, be detected by one or other of the tests in the monograph. They are limited by the general acceptance criterion for other/unspecified impurities and/or by the general monograph *Substances for pharmaceutical use (2034)*. It is therefore not necessary to identify these impurities for demonstration of compliance. See also *5.10. Control of impurities in substances for pharmaceutical use*): *A, B, C, D, E, G, H, I, J, K, L.*



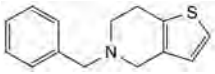
A. thieno[3,2-*c*]pyridine,



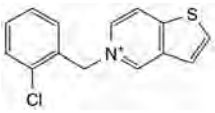
B. 6,7-dihydrothieno[3,2-*c*]pyridin-4(5*H*)-one,



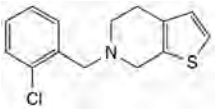
C. (2-chlorophenyl)methanamine,



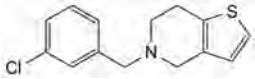
D. 5-benzyl-4,5,6,7-tetrahydrothieno[3,2-*c*]pyridine,



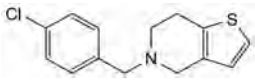
E. 5-(2-chlorobenzyl)thieno[3,2-*c*]pyridinium,



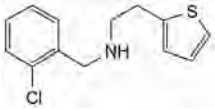
F. 6-(2-chlorobenzyl)-4,5,6,7-tetrahydrothieno[2,3-*c*]pyridine,



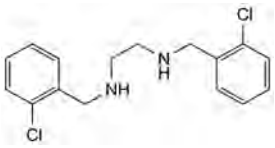
G. 5-(3-chlorobenzyl)-4,5,6,7-tetrahydrothieno[3,2-*c*]pyridine,



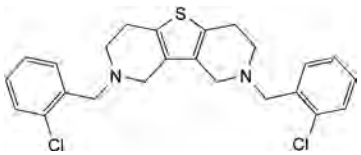
H. 5-(4-chlorobenzyl)-4,5,6,7-tetrahydrothieno[3,2-*c*]pyridine,



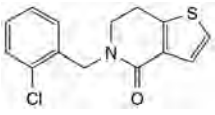
I. *N*-(2-chlorobenzyl)-2-(thiophen-2-yl)ethanamine,



J. *N*,*N*′-bis(2-chlorobenzyl)ethane-1,2-diamine,



K. 2,8-bis(2-chlorobenzyl)-1,2,3,4,6,7,8,9-octahydrothieno[3,2-*c*:4,5-*c*′]dipyridine (bis-ticlopidine),



L. 5-(2-chlorobenzyl)-6,7-dihydrothieno[3,2-*c*]pyridin-4(5*H*)-one.

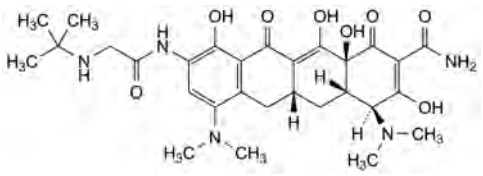
# TIGECYCLINE

## Tigecyclinum



$C_{29}H_{39}N_5O_8$ $M_r$ 585.7
[220620-09-7]

DEFINITION

(4*S*,4a*S*,5a*R*,12a*S*)-9-[2-(*tert*-Butylamino)acetamido]-4,7-bis(dimethylamino)-3,10,12,12a-tetrahydroxy-1,11-dioxo-1,4,4a,5,5a,6,11,12a-octahydrotetracene-2-carboxamide.

Semi-synthetic product derived from a fermentation product.

*Content*: 97.0 per cent to 102.0 per cent (anhydrous substance).

CHARACTERS

*Appearance*: orange, hygroscopic, crystalline powder.

*Solubility*: freely soluble in water, slightly soluble in anhydrous ethanol and in heptane.

It shows polymorphism (*5.9*).

IDENTIFICATION

Infrared absorption spectrophotometry (*2.2.24*).

*Comparison*: *tigecycline CRS*.

If the spectra obtained in the solid state show differences, dissolve the substance to be examined and the reference substance separately in *methanol R*, evaporate to dryness and record new spectra using the residues.

TESTS

**pH** (*2.2.3*): 7.7 to 8.2.

Dissolve 0.500 g in *carbon dioxide-free water R* and dilute to 50.0 mL with the same solvent.

**Related substances**. Liquid chromatography (*2.2.29*). *Carry out the test protected from light. Store the solutions at 2-8 °C and use them within 12 h.*

*Solution A*. Solution containing 4.35 g/L of *dipotassium hydrogen phosphate R* and 0.5 g/L of *sodium hydrogensulfite R* adjusted to pH 8.0 with a 56.1 g/L solution of *potassium hydroxide R*.

*Test solution (a)*. Dissolve 50.0 mg of the substance to be examined in solution A and dilute to 100.0 mL with solution A.

*Test solution (b)*. Dilute 10.0 mL of test solution (a) to 50.0 mL with solution A.

*Reference solution (a)*. Dissolve 50.0 mg of *tigecycline CRS* in solution A and dilute to 100.0 mL with solution A. Dilute 10.0 mL of this solution to 50.0 mL with solution A.

*Reference solution (b)*. Dilute 1.0 mL of test solution (a) to 100.0 mL with solution A. Dilute 1.0 mL of this solution to 10.0 mL with solution A.

*Reference solution (c)*. Dissolve 2 mg of *tigecycline impurity B CRS* and 2 mg of *minocycline hydrochloride R* (impurity C) in solution A and dilute to 25 mL with solution A. Dilute 3 mL of the solution to 20 mL with solution A. Dissolve 2.5 mg of *tigecycline for system suitability CRS* (containing impurity A) in 1 mL of this solution and dilute to 5 mL with solution A.

*Reference solution (d).* Dissolve 2.5 mg of *tigecycline for system suitability CRS* (containing impurity A) in solution A and dilute to 5 mL with solution A.

*Column*:

- *size*: *l* = 0.15 m, Ø = 4.6 mm;
- *stationary phase*: *end-capped octadecylsilyl silica gel for chromatography R* (3 µm);
- *temperature*: 30 °C.

*Mobile phase*:

- *mobile phase A*: dissolve 4.35 g of *dipotassium hydrogen phosphate R* and 0.93 g of *sodium edetate R* in 940 mL of *water for chromatography R*, and adjust to pH 6.4 with *phosphoric acid R*; make up to 950 mL with *water for chromatography R* and dilute to 1000 mL with *acetonitrile for chromatography R*;
- *mobile phase B*: dissolve 4.35 g of *dipotassium hydrogen phosphate R* and 0.93 g of *sodium edetate R* in 490 mL of *water for chromatography R*, and adjust to pH 6.4 with *phosphoric acid R*; make up to 500 mL with *water for chromatography R* and dilute to 1000 mL with *acetonitrile for chromatography R*;

| Time (min) | Mobile phase A (per cent *V/V*) | Mobile phase B (per cent *V/V*) |
|---|---|---|
| 0 - 2 | 85 | 15 |
| 2 - 42 | 85 → 57 | 15 → 43 |
| 42 - 57 | 57 → 0 | 43 → 100 |
| 57 - 60 | 0 | 100 |

*Flow rate*: 1.0 mL/min.

*Detection*: spectrophotometer at 248 nm.

*Injection*: 25 µL of test solution (a) and reference solutions (b) and (c).

*Identification of impurities*: use the chromatogram supplied with *tigecycline for system suitability CRS* and the chromatogram obtained with reference solution (c) to identify the peaks due to impurities A, B and C.

*Relative retention* with reference to tigecycline (retention time = about 20 min): impurity B = about 0.6; impurity A = about 0.7; impurity C = about 1.6.

*System suitability*: reference solution (c):

- *resolution*: minimum 1.6 between the peaks due to impurities B and A.

*Calculation of percentage contents*:

- for each impurity, use the concentration of tigecycline in reference solution (b).

*Limits*:

- *impurity A*: maximum 0.6 per cent;
- *impurity C*: maximum 0.2 per cent;
- *impurity B*: maximum 0.15 per cent;
- *unspecified impurities*: for each impurity, maximum 0.10 per cent;
- *total*: maximum 1.0 per cent;
- *reporting threshold*: 0.05 per cent.

**Water** (*2.5.32*): maximum 2.5 per cent.

Inject 1.0 mL of a 50 mg/mL solution of the substance to be examined in *dimethyl sulfoxide R2*.

**Sulfated ash** (*2.4.14*): maximum 0.1 per cent, determined on 1.0 g.

ASSAY

Liquid chromatography (*2.2.29*) as described in the test for related substances with the following modifications.

*Column*:

- *stationary phase*: *end-capped octadecylsilyl silica gel for chromatography R* (5 µm).

*Mobile phase*: mix 14 volumes of *acetonitrile for chromatography R* and 86 volumes of a solution containing 4.35 g/L of *dipotassium hydrogen phosphate R* and 0.93 g/L of *sodium edetate R* previously adjusted to pH 6.2 with *phosphoric acid R*.

*Injection*: 20 µL of test solution (b) and reference solutions (a) and (d).

*Run time*: 4.5 times the retention time of tigecycline.

*Relative retention* with reference to tigecycline (retention time = about 12 min): impurity A = about 0.6.

*System suitability*: reference solution (d):

- *resolution*: minimum 3.0 between the peaks due to impurity A and tigecycline.

Calculate the percentage content of $C_{29}H_{39}N_5O_8$ using the chromatogram obtained with reference solution (a) and taking into account the assigned content of *tigecycline CRS*.

STORAGE

Under nitrogen, in an airtight container, protected from light, at a temperature of 2 °C to 8 °C. If the substance is sterile, the container is also sterile and tamper-evident.

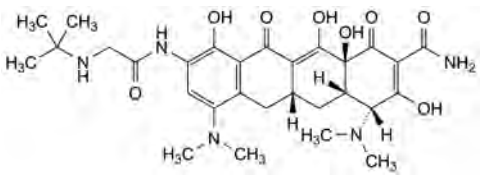
LABELLING

The label states, where applicable, that the substance is suitable for use in the manufacture of parenteral preparations.

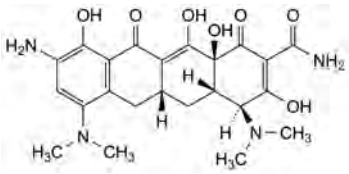
IMPURITIES

*Specified impurities: A, B, C.*

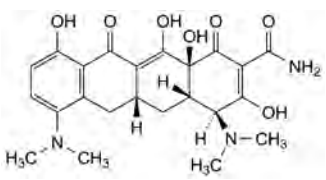
*Other detectable impurities* (the following substances would, if present at a sufficient level, be detected by one or other of the tests in the monograph. They are limited by the general acceptance criterion for other/unspecified impurities and/or by the general monograph *Substances for pharmaceutical use (2034)*. It is therefore not necessary to identify these impurities for demonstration of compliance. See also *5.10. Control of impurities in substances for pharmaceutical use*): *D.*



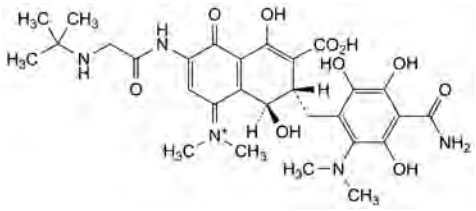
A. (4*R*,4a*S*,5a*R*,12a*S*)-9-[2-(*tert*-butylamino)acetamido]-4,7-bis(dimethylamino)-3,10,12,12a-tetrahydroxy-1,11-dioxo-1,4,4a,5,5a,6,11,12a-octahydrotetracene-2-carboxamide,



B. (4*S*,4a*S*,5a*R*,12a*S*)-9-amino-4,7-bis(dimethylamino)-3,10,12,12a-tetrahydroxy-1,11-dioxo-1,4,4a,5,5a,6,11,12a-octahydrotetracene-2-carboxamide (9-aminominocycline),



C. (4*S*,4a*S*,5a*R*,12a*S*)-4,7-bis(dimethylamino)-3,10,12,12a-tetrahydroxy-1,11-dioxo-1,4,4a,5,5a,6,11,12a-octahydrotetracene-2-carboxamide (minocycline),

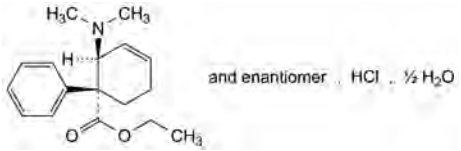


D. (7*S*,8*R*)-3-[2-(*tert*-butylamino)acetamido]-7-[[4-carbamoyl-2-(dimethylamino)-3,5,6-trihydroxyphenyl]methyl]-6-carboxy-5,8-dihydroxy-*N*,*N*-dimethyl-4-oxo-7,8-dihydronaphthalen-1(4*H*)-iminium.

**01/2020:1767**

# TILIDINE HYDROCHLORIDE HEMIHYDRATE

## Tilidini hydrochloridum hemihydricum



$C_{17}H_{24}ClNO_2,½H_2O$ $M_r$ 318.8
[255733-17-6]

DEFINITION

Ethyl (1*RS*,6*SR*)-6-(dimethylamino)-3,6-dihydro[1,1′-biphenyl]-1(2*H*)-carboxylate hydrochloride hemihydrate.

*Content*: 99.0 per cent to 101.0 per cent (anhydrous substance).

A suitable antioxidant may be added.

CHARACTERS

*Appearance*: white or almost white, crystalline powder.

*Solubility*: freely soluble in water, very soluble in methylene chloride, freely soluble in ethanol (96 per cent).

IDENTIFICATION

A. Infrared absorption spectrophotometry (*2.2.24*).
*Comparison*: *tilidine hydrochloride hemihydrate CRS*.

B. It gives reaction (a) of chlorides (*2.3.1*).

TESTS

**Solution S**. Dissolve 1.0 g in *carbon dioxide-free water R* and dilute to 20 mL with the same solvent.

**Appearance of solution**. Solution S is clear (*2.2.1*) and not more intensely coloured than reference solution $Y_7$ (*2.2.2, Method II*).

**Acidity or alkalinity**. To 20.0 mL of solution S add 0.2 mL of *0.01 M sodium hydroxide*. The pH is not less than 4.1. Add 0.4 mL of *0.01 M hydrochloric acid*. The pH is not more than 4.3.

**Related substances**. Liquid chromatography (*2.2.29*). *Prepare the solutions immediately before use.*

*Test solution*. Dissolve 50.0 mg of the substance to be examined in the mobile phase and dilute to 50.0 mL with the mobile phase.

*Reference solution (a)*. Dilute 1.0 mL of the test solution to 100.0 mL with the mobile phase. Dilute 1.0 mL of this solution to 10.0 mL with the mobile phase.

*Reference solution (b)*. Dissolve 5 mg of *tilidine for system suitability CRS* (containing impurities D and E) in the mobile phase and dilute to 5 mL with the mobile phase.

*Precolumn*:
- *size*: *l* = 4 mm, Ø = 4.0 mm;
- *stationary phase*: *octadecylsilyl silica gel for chromatography R* (5 µm).

*Column*:
- *size*: *l* = 0.125 m, Ø = 4.0 mm;
- *stationary phase*: *octadecylsilyl silica gel for chromatography R* (5 µm).

*Mobile phase*: mix equal volumes of *acetonitrile for chromatography R* and a 0.98 g/L solution of *ammonium carbonate R*.

*Flow rate*: 0.8 mL/min.

*Detection*: spectrophotometer at 220 nm.

*Injection*: 10 µL.

*Run time*: twice the retention time of tilidine.

*Identification of impurities*: use the chromatogram supplied with *tilidine for system suitability CRS* and the chromatogram obtained with reference solution (b) to identify the peaks due to impurities D and E; impurities D and E may be inverted in the elution order, therefore take into account the heights of the corresponding peaks in the chromatogram supplied with *tilidine for system suitabity CRS*.

*Relative retention* with reference to tilidine (retention time = about 15 min): impurity E = about 0.4; impurity D = about 0.5 (D and E may be inverted).

*System suitability*: reference solution (b):
- *resolution*: minimum 1.5 between the peaks due to impurities E and D.

*Calculation of percentage contents*:
- *correction factor*: multiply the peak area of impurity E by 0.5;
- for each impurity, use the concentration of tilidine hydrochloride hemihydrate in reference solution (a).

*Limits*:
- *impurity E*: maximum 0.15 per cent;
- *unspecified impurities*: for each impurity, maximum 0.10 per cent;
- *total*: maximum 0.5 per cent;
- *reporting threshold*: 0.05 per cent.

**Water** (*2.5.12*): 2.5 per cent to 3.1 per cent, determined on 0.300 g.

ASSAY

Dissolve 0.250 g in a mixture of 10 mL of *anhydrous acetic acid R* and 50 mL of *acetic anhydride R*. Titrate with *0.1 M perchloric acid*, determining the end-point potentiometrically (*2.2.20*).

1 mL of *0.1 M perchloric acid* is equivalent to 30.98 mg of $C_{17}H_{24}ClNO_2$.

STORAGE

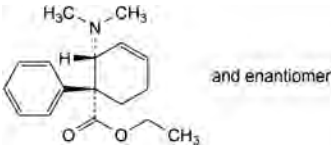
Protected from light.

IMPURITIES

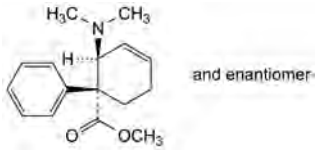
*Specified impurities*: *E*.

*Other detectable impurities* (the following substances would, if present at a sufficient level, be detected by one or other of the tests in the monograph. They are limited by the general acceptance criterion for other/unspecified impurities and/or by the general monograph *Substances for pharmaceutical use (2034)*. It is therefore not necessary to identify these impurities for demonstration of compliance. See also *5.10. Control of impurities in substances for pharmaceutical use*): *A, B, C, D*.

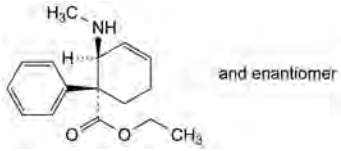
Monographs T



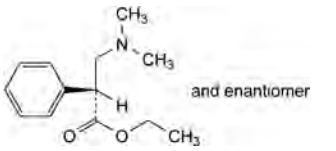
A. ethyl (1*RS*,6*RS*)-6-(dimethylamino)-3,6-dihydro[1,1′-biphenyl]-1(2*H*)-carboxylate,



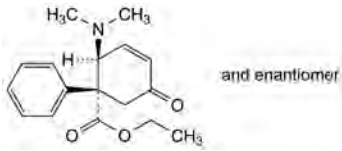
B. methyl (1*RS*,6*SR*)-6-(dimethylamino)-3,6-dihydro[1,1′-biphenyl]-1(2*H*)-carboxylate,



C. ethyl (1*RS*,6*SR*)-6-(methylamino)-3,6-dihydro[1,1′-biphenyl]-1(2*H*)-carboxylate,



D. ethyl (2*RS*)-3-(dimethylamino)-2-phenylpropanoate,



E. ethyl (1*RS*,6*SR*)-6-(dimethylamino)-3-oxo-3,6-dihydro[1,1′-biphenyl]-1(2*H*)-carboxylate.

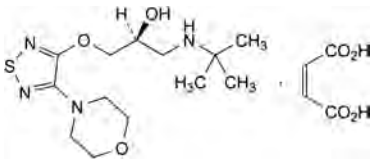
# TIMOLOL MALEATE

## Timololi maleas



$C_{17}H_{28}N_4O_7S$ $M_r$ 432.5
[26921-17-5]

DEFINITION

(2*S*)-1-[(1,1-Dimethylethyl)amino]-3-[[4-(morpholin-4-yl)-1,2,5-thiadiazol-3-yl]oxy]propan-2-ol (*Z*)-butenedioate.

*Content*: 98.5 per cent to 101.0 per cent (dried substance).

CHARACTERS

*Appearance*: white or almost white, crystalline powder or colourless crystals.

*Solubility*: soluble in water and in ethanol (96 per cent).

mp: about 199 °C, with decomposition.

IDENTIFICATION

*First identification: A, B.*

*Second identification: A, C, D.*

A. Specific optical rotation (*2.2.7*): − 6.2 to − 5.7.
Dissolve 1.000 g in *1 M hydrochloric acid* and dilute to 10.0 mL with the same acid.

B. Infrared absorption spectrophotometry (*2.2.24*).
*Comparison*: *timolol maleate CRS*.

C. Thin-layer chromatography (*2.2.27*).
*Test solution.* Dissolve 5 mg of the substance to be examined in *methanol R* and dilute to 5 mL with the same solvent.
*Reference solution.* Dissolve 5 mg of *timolol maleate CRS* in *methanol R* and dilute to 5 mL with the same solvent.
*Plate*: *TLC silica gel* $GF_{254}$ *plate R*.
*Mobile phase*: *concentrated ammonia R*, *methanol R*, *methylene chloride R* (1:20:80 *V/V/V*).
*Application*: 10 µL.
*Development*: over 2/3 of the plate.
*Drying*: in air.
*Detection*: expose to iodine vapour for 2 h.
*Results*: the principal spot in the chromatogram obtained with the test solution is similar in position, colour and size to the principal spot in the chromatogram obtained with the reference solution.

D. Triturate 0.1 g with a mixture of 1 mL of *dilute sodium hydroxide solution R* and 3 mL of *water R*. Shake with 3 quantities, each of 5 mL, of *ether R*. To 0.1 mL of the aqueous layer add a solution containing 10 mg of *resorcinol R* in 3 mL of *sulfuric acid R*. Heat on a water-bath for 15 min; no violet-red colour develops. Neutralise the remainder of the aqueous layer with *dilute sulfuric acid R* and add 1 mL of *bromine water R*. Heat on a water-bath for 15 min, then heat to boiling and cool. To 0.2 mL of this solution add a solution containing 10 mg of *resorcinol R* in 3 mL of *sulfuric acid R*. Heat on a water-bath for 15 min; a violet-red colour develops. Add 0.2 mL of a 100 g/L solution of *potassium bromide R* and heat for 5 min on a water-bath; the colour becomes violet-blue.

TESTS

**Solution S**. Dissolve 0.5 g in *carbon dioxide-free water R* and dilute to 25 mL with the same solvent.

**Appearance of solution**. Solution S is clear (*2.2.1*) and not more intensely coloured than reference solution $B_8$ (*2.2.2, Method II*).

**pH** (*2.2.3*): 3.8 to 4.3 for solution S.

**Enantiomeric purity**. Liquid chromatography (*2.2.29*). *Carry out the test protected from actinic light.*
*Solvent mixture*: *methylene chloride R*, *2-propanol R* (10:30 *V/V*).
*Test solution.* Dissolve 30.0 mg of the substance to be examined in the solvent mixture and dilute to 10.0 mL with the solvent mixture.
*Reference solution (a).* Dissolve 30 mg of *timolol maleate CRS* in the solvent mixture and dilute to 10 mL with the solvent mixture.
*Reference solution (b).* Dissolve 3 mg of *(R)-timolol CRS* (impurity A) in the solvent mixture and dilute to 10.0 mL with the solvent mixture. Dilute 1.0 mL of the solution to 10.0 mL with the solvent mixture.
*Reference solution (c).* Dilute 1 mL of reference solution (a) to 100 mL with the solvent mixture. Mix 1 mL of this solution with 1 mL of reference solution (b).
*Reference solution (d).* Dilute 1.0 mL of the test solution to 100.0 mL with the solvent mixture.

*Column*:

– *size*: *l* = 0.25 m, Ø = 4.6 mm;

– *stationary phase*: *cellulose derivative of silica gel for chiral separation R* (5 µm).

*Mobile phase*: *diethylamine R*, *2-propanol R*, *hexane R* (2:40:960 *V/V/V*).

*Flow rate*: 1 mL/min.

*Detection*: spectrophotometer at 297 nm.

*Injection*: 5 µL.

*Elution order*: impurity A is eluted first.

*System suitability*:

– *resolution*: minimum 4.0 between the peaks due to impurity A and the (*S*)-enantiomer in the chromatogram obtained with reference solution (c);

– the retention times of the principal peaks due to the (*S*)-enantiomer in the chromatograms obtained with the test solution and reference solution (a) are identical.

*Limit*:

– *impurity A*: not more than the area of the principal peak in the chromatogram obtained with reference solution (d) (1.0 per cent).

**Related substances**. Liquid chromatography (*2.2.29*).

*Test solution*. Dissolve 0.100 g of the substance to be examined in mobile phase A and dilute to 20 mL with mobile phase A.

*Reference solution (a)*. Dilute 1.0 mL of the test solution to 100.0 mL with mobile phase A. Dilute 1.0 mL of this solution to 10.0 mL with mobile phase A.

*Reference solution (b)*. Dissolve 3 mg of *timolol impurity F CRS* in *methanol R* and dilute to 20.0 mL with the same solvent. Dilute 1.0 mL of the solution to 10.0 mL with mobile phase A (solution A). Dissolve the contents of a vial of *timolol for system suitability CRS* (containing impurities B, C and D) in 1.0 mL of solution A.

*Reference solution (c)*. Dissolve 2 mg of the substance to be examined and 20 mg of *maleic acid R* in 10 mL of *acetonitrile R*. Evaporate 1 mL of the solution to dryness under a stream of *nitrogen R* in an amber glass vial. Heat the open vial at 105 °C for 1 h. Reconstitute the residue with 1.0 mL of mobile phase A (*in situ* preparation of impurity E).

*Column*:

– *size*: *l* = 0.150 m, Ø = 3.9 mm;

– *stationary phase*: *octadecylsilyl silica gel for chromatography R* (5 µm).

*Mobile phase*:

– *mobile phase A*: mixture of equal volumes of *methanol R* and a 4.32 g/L solution of *sodium octanesulfonate R* previously adjusted to pH 3.0 with *glacial acetic acid R*;

– *mobile phase B*: *methanol R*;

| Time (min) | Mobile phase A (per cent *V/V*) | Mobile phase B (per cent *V/V*) |
|---|---|---|
| 0 - 10 | 97.5 | 2.5 |
| 10 - 11 | 97.5 → 70 | 2.5 → 30 |
| 11 - 20 | 70 | 30 |

*Flow rate*: 1.2 mL/min.

*Detection*: spectrophotometer at 295 nm.

*Injection*: 20 µL.

*Identification of impurities*: use the chromatogram supplied with *timolol for system suitability CRS* and the chromatogram obtained with reference solution (b) to identify the peaks due to impurities B, C, D and F; use the chromatogram obtained with reference solution (c) to identify the peak due to impurity E.

*Relative retention* with reference to timolol (retention time = about 7.5 min): maleic acid = about 0.1; impurity D = about 0.3; impurity E = about 0.4; impurity B = about 0.7; impurity F = about 0.8; impurity C = about 2.1.

*System suitability*: reference solution (b):

– *resolution*: minimum 1.5 between the peaks due to impurities B and F.

*Limits*:

– *correction factor*: for the calculation of content, multiply the peak area of impurity D by 0.6;

– *impurities B, C, D, E, F*: for each impurity, not more than twice the area of the principal peak in the chromatogram obtained with reference solution (a) (0.2 per cent);

– *unspecified impurities*: for each impurity, not more than the area of the principal peak in the chromatogram obtained with reference solution (a) (0.10 per cent);

– *total*: not more than 4 times the area of the principal peak in the chromatogram obtained with reference solution (a) (0.4 per cent);

– *disregard limit*: 0.5 times the area of the principal peak in the chromatogram obtained with reference solution (a) (0.05 per cent); disregard any peak due to maleic acid.

**Loss on drying** (*2.2.32*): maximum 0.5 per cent, determined on 1.000 g by drying in an oven at 105 °C.

**Sulfated ash** (*2.4.14*): maximum 0.1 per cent, determined on 1.0 g.

ASSAY

Dissolve 0.350 g in 60 mL of *anhydrous acetic acid R*. Titrate with *0.1 M perchloric acid*, determining the end-point potentiometrically (*2.2.20*).

1 mL of *0.1 M perchloric acid* is equivalent to 43.25 mg of $C_{17}H_{28}N_4O_7S$.

STORAGE

Protected from light.

IMPURITIES

*Specified impurities*: *A, B, C, D, E, F.*

*Other detectable impurities* (the following substances would, if present at a sufficient level, be detected by one or other of the tests in the monograph. They are limited by the general acceptance criterion for other/unspecified impurities and/or by the general monograph *Substances for pharmaceutical use (2034)*. It is therefore not necessary to identify these impurities for demonstration of compliance. See also *5.10. Control of impurities in substances for pharmaceutical use*): *G, H, I, J.*

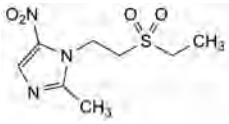
# TINIDAZOLE

## Tinidazolum



$C_8H_{13}N_3O_4S$ $M_r$ 247.3
[19387-91-8]

DEFINITION

1-[2-(Ethylsulfonyl)ethyl]-2-methyl-5-nitro-1*H*-imidazole.

*Content*: 98.0 per cent to 101.0 per cent (dried substance).

CHARACTERS

*Appearance*: almost white or pale yellow, crystalline powder.

*Solubility*: practically insoluble in water, soluble in acetone and in methylene chloride, sparingly soluble in methanol.

IDENTIFICATION

*First identification: A, C.*

*Second identification: A, B, D, E.*

A. Melting point (*2.2.14*): 125 °C to 128 °C.

B. Ultraviolet and visible absorption spectrophotometry (*2.2.25*).

*Test solution.* Dissolve 10.0 mg in *methanol R* and dilute to 100.0 mL with the same solvent. Dilute 1.0 mL of this solution to 10.0 mL with *methanol R*.

*Spectral range*: 220-350 nm.

*Absorption maximum*: at 310 nm.

*Specific absorbance at the absorption maximum*: 340 to 360.

C. Infrared absorption spectrophotometry (*2.2.24*).

*Comparison*: *tinidazole CRS*.

D. Thin-layer chromatography (*2.2.27*).

*Test solution.* Dissolve 20 mg of the substance to be examined in *methanol R* and dilute to 10 mL with the same solvent.

*Reference solution.* Dissolve 20 mg of *tinidazole CRS* in *methanol R* and dilute to 10 mL with the same solvent.

*Plate*: *TLC silica gel* $GF_{254}$ *plate R*.

*Pretreatment*: heat at 110 °C for 1 h and allow to cool.

*Mobile phase*: *butanol R*, *ethyl acetate R* (25:75 *V/V*).

*Application*: 10 µL.

*Development*: over 2/3 of the plate.

*Drying*: in air.

*Detection*: examine in ultraviolet light at 254 nm.

*Results*: the principal spot in the chromatogram obtained with the test solution is similar in position and size to the principal spot in the chromatogram obtained with the reference solution.

E. To about 10 mg add about 10 mg of *zinc powder R*, 0.3 mL of *hydrochloric acid R* and 1 mL of *water R*. Heat in a water-bath for 5 min and cool. The solution gives the reaction of primary aromatic amines (*2.3.1*).

TESTS

**Appearance of solution**. The solution is clear (*2.2.1*) and not more intensely coloured than reference solution $Y_5$ (*2.2.2, Method II*).

Dissolve 1.0 g in *acetone R* and dilute to 20 mL with the same solvent.

**Related substances**. Liquid chromatography (*2.2.29*). *Protect solutions from light.*

*Test solution.* Dissolve 10.0 mg of the substance to be examined in 10.0 mL of *methanol R* and dilute to 100.0 mL with the mobile phase.

*Reference solution (a).* Dilute 1.0 mL of the test solution to 100.0 mL with the mobile phase. Dilute 1.0 mL of this solution to 10.0 mL with the mobile phase.

*Reference solution (b).* Dissolve 5.0 mg of *tinidazole impurity A CRS* and 5.0 mg of *tinidazole impurity B CRS* in 10.0 mL of *methanol R* and dilute to 100.0 mL with the mobile phase. Dilute 2.0 mL of this solution to 10.0 mL with the mobile phase.

*Reference solution (c).* Dilute 1.0 mL of reference solution (b) to 50.0 mL with the mobile phase.

*Column*:

– *size*: *l* = 0.25 m, Ø = 3.0 mm;

– *stationary phase*: *octylsilyl silica gel for chromatography R* (5 µm).

Regular column conditioning by subsequent flushing with 50 mL of *water R*, 100 mL of *methanol R*, 25 mL of *water R* and 100 mL of the mobile phase is recommended.

*Mobile phase*: *acetonitrile R*, *methanol R*, *water R* (10:20:70 *V/V/V*).

*Flow rate*: 0.5 mL/min.

*Detection*: spectrophotometer at 320 nm.

*Injection*: 20 µL.

*Run time*: 1.5 times the retention time of tinidazole.

*Relative retention* with reference to tinidazole (retention time = about 6 min): impurity A = about 0.6; impurity B = about 0.7.

*System suitability*: reference solution (b):

– *resolution*: minimum 2.0 between the peaks due to impurities A and B.

*Limits*:

– *impurities A, B*: for each impurity, not more than the area of the corresponding peak in the chromatogram obtained with reference solution (c) (0.2 per cent);

– *unspecified impurities*: for each impurity, not more than the area of the principal peak in the chromatogram obtained with reference solution (a) (0.10 per cent);

– *total*: not more than 4 times the area of the principal peak in the chromatogram obtained with reference solution (a) (0.4 per cent);

– *disregard limit*: 0.5 times the area of the principal peak in the chromatogram obtained with reference solution (a) (0.05 per cent).

**Loss on drying** (*2.2.32*): maximum 0.5 per cent, determined on 1.000 g by drying in an oven at 105 °C.

**Sulfated ash** (*2.4.14*): maximum 0.1 per cent, determined on 1.0 g.

ASSAY

Dissolve 0.150 g in 25 mL of *anhydrous acetic acid R*. Titrate with *0.1 M perchloric acid*, determining the end-point potentiometrically (*2.2.20*).

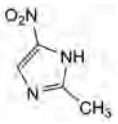
1 mL of *0.1 M perchloric acid* is equivalent to 24.73 mg of $C_8H_{13}N_3O_4S$.

STORAGE

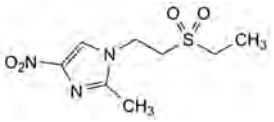
Protected from light.

IMPURITIES

*Specified impurities: A, B.*



A. 2-methyl-5-nitro-1*H*-imidazole,

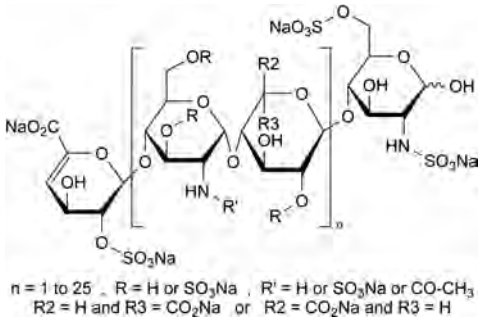


B. 1-[2-(ethylsulfonyl)ethyl]-2-methyl-4-nitro-1*H*-imidazole.

**01/2008:1271**

# TINZAPARIN SODIUM

## Tinzaparinum natricum



DEFINITION

Tinzaparin sodium is the sodium salt of a low-molecular-mass heparin that is obtained by controlled enzymatic depolymerisation of heparin from porcine intestinal mucosa using heparinase from *Flavobacterium heparinum*. The majority of the components have a 2-*O*-sulfo-4-enepyranosuronic acid structure at the non-reducing end and a 2-*N*,6-*O*-disulfo-D-glucosamine structure at the reducing end of their chain.

*Tinzaparin sodium complies with the monograph on Low-molecular-mass heparins (0828) with the modifications and additional requirements below.*

The mass-average relative molecular mass ranges between 5500 and 7500 with a characteristic value of about 6500.

The degree of sulfatation is 1.8 to 2.5 per disaccharide unit.

The potency is not less than 70 IU and not more than 120 IU of anti-factor Xa activity per milligram calculated with reference to the dried substance. The ratio of the anti-factor Xa activity to anti-factor IIa activity is between 1.5 and 2.5.

IDENTIFICATION

Carry out identification test A as described in the monograph *Low-molecular-mass heparins (0828)* using *tinzaparin sodium CRS*.

Carry out identification test C as described in the monograph *Low-molecular-mass heparins (0828)*. The following requirements apply.

The mass-average relative molecular mass ranges between 5500 and 7500. The mass percentage of chains lower than 2000 is not more than 10.0 per cent. The mass percentage of chains between 2000 and 8000 ranges between 60.0 and 72.0 per cent. The mass percentage of chains above 8000 ranges between 22.0 and 36.0 per cent.

Monographs T

TESTS

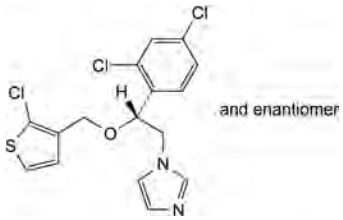
**Appearance of solution**. Dissolve 1.0 g in 10 mL of *water R*. The solution is clear (*2.2.1*) and not more intensely coloured than intensity 5 of the range of reference solutions of the most appropriate colour (*2.2.2, Method II*)

**Absorbance** (*2.2.25*). Dissolve 50.0 mg in 100 mL of *0.01 M hydrochloric acid*. The specific absorbance, measured at 231 nm and calculated with reference to the dried substance, is 8.0 to 12.5.

**01/2008:2074**

# TIOCONAZOLE

## Tioconazolum



$C_{16}H_{13}Cl_3N_2OS$ $M_r$ 387.7
[65899-73-2]

DEFINITION

1-[(2*RS*)-2-[(2-Chlorothiophen-3-yl)methoxy]-2-(2,4-dichlorophenyl)ethyl]-1*H*-imidazole.

*Content*: 99.0 per cent to 101.0 per cent (anhydrous substance).

CHARACTERS

*Appearance*: white or almost white, crystalline powder.

*Solubility*: very slightly soluble in water, very soluble in methylene chloride, freely soluble in alcohol.

IDENTIFICATION

Infrared absorption spectrophotometry (*2.2.24*).

*Comparison*: *Ph. Eur. reference spectrum of tioconazole*.

TESTS

**Related substances**. Liquid chromatography (*2.2.29*).

*Test solution*. Dissolve 20.0 mg of the substance to be examined in the mobile phase and dilute to 10.0 mL with the mobile phase.

*Reference solution (a)*. Dilute 1.0 mL of the test solution to 100.0 mL with the mobile phase. Dilute 2.0 mL of this solution to 10.0 mL with the mobile phase.

*Reference solution (b)*. Dissolve 5 mg of *tioconazole for system suitability CRS* in the mobile phase and dilute to 2.5 mL with the mobile phase.

*Column*:

- *size*: *l* = 0.25 m, Ø = 4.6 mm,
- *stationary phase*: *end-capped octadecylsilyl silica gel for chromatography R* (5 µm) with a specific surface area of 170 $m^2$/g, a pore size of 12 nm and a carbon loading of 10 per cent.

*Mobile phase*: mix 1 volume of a 1.7 g/L solution of *tetrabutylammonium dihydrogen phosphate R* previously adjusted to pH 7.4 with *dilute ammonia R2* and 3 volumes of *methanol R*.

*Flow rate*: 1 mL/min.

*Detection*: spectrophotometer at 218 nm.

*Injection*: 20 µL.

*Run time*: 2.5 times the retention time of tioconazole.

*System suitability*: reference solution (b):

- *resolution*: minimum 1.0 between the peaks due to impurity B and impurity C (locate impurities A, B and C by comparison with the chromatogram provided with *tioconazole for system suitability CRS*).

*Limits*:

- *correction factors*: for the calculation of contents, multiply the peak areas of the following impurities by the corresponding correction factor: impurity B = 1.7; impurity C = 1.7.
- *impurities A, B, C*: for each impurity, not more than 1.5 times the area of the principal peak in the chromatogram obtained with reference solution (a) (0.3 per cent),
- *unspecified impurities*: for each impurity, not more than 0.5 times the area of the principal peak in the chromatogram obtained with reference solution (a) (0.10 per cent),
- *total*: not more than 5 times the area of the principal peak in the chromatogram obtained with reference solution (a) (1.0 per cent),
- *disregard limit*: 0.25 times the area of the principal peak in the chromatogram obtained with reference solution (a) (0.05 per cent).

**Water** (*2.5.12*): maximum 0.5 per cent, determined on 1.00 g.

**Sulfated ash** (*2.4.14*): maximum 0.1 per cent, determined on 1.0 g.

ASSAY

Dissolve 0.300 g in 50 mL of *anhydrous acetic acid R*. Titrate with *0.1 M perchloric acid*, determining the end-point potentiometrically (*2.2.20*).

1 mL of *0.1 M perchloric acid* is equivalent to 38.77 mg of $C_{16}H_{13}Cl_3N_2OS$.

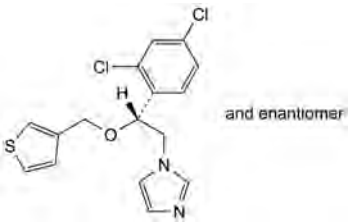
STORAGE

Protected from light.

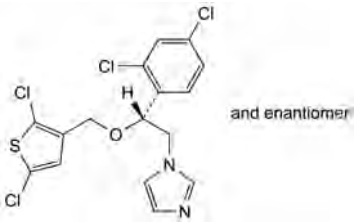
IMPURITIES

*Specified impurities: A, B, C.*

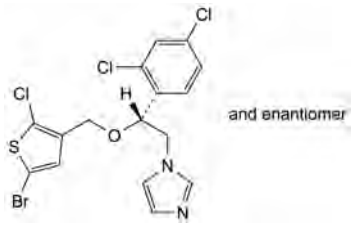
*Other detectable impurities* (the following substances would, if present at a sufficient level, be detected by one or other of the tests in the monograph. They are limited by the general acceptance criterion for other/unspecified impurities and/or by the general monograph *Substances for pharmaceutical use (2034)*. It is therefore not necessary to identify these impurities for demonstration of compliance. See also *5.10. Control of impurities in substances for pharmaceutical use*): *D.*



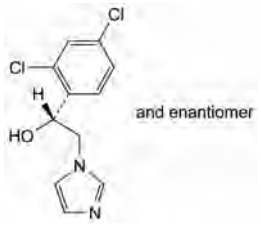
A. 1-[(2*RS*)-2-(2,4-dichlorophenyl)-2-[(thiophen-3-yl)methoxy]ethyl]-1*H*-imidazole,



B. 1-[(2*RS*)-2-(2,4-dichlorophenyl)-2-[(2,5-dichlorothiophen-3-yl)methoxy]ethyl]-1*H*-imidazole,



C. 1-[(2*RS*)-2-[(5-bromo-2-chlorothiophen-3-yl)methoxy]-2-(2,4-dichlorophenyl)ethyl]-1*H*-imidazole,

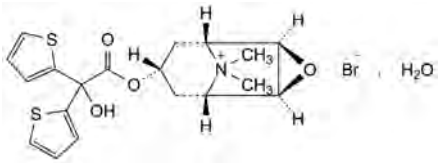


D. (1*RS*)-1-(2,4-dichlorophenyl)-2-(1*H*-imidazol-1-yl)ethanol.

**01/2018:2420**

# TIOTROPIUM BROMIDE MONOHYDRATE

## Tiotropii bromidum monohydricum



$C_{19}H_{22}BrNO_4S_2,H_2O$ $M_r$ 490.4
[411207-31-3]

DEFINITION

(1*R*,2*R*,4*S*,5*S*,7*s*)-7-[[Hydroxy[di(thiophen-2-yl)]acetyl]oxy]-9,9-dimethyl-3-oxa-9-azatricyclo[3.3.1.$0^{2,4}$]nonan-9-ium bromide monohydrate.

*Content*: 98.5 per cent to 101.5 per cent (anhydrous substance).

CHARACTERS

*Appearance*: white or yellowish-white powder or crystals.

*Solubility*: sparingly soluble in water, soluble in methanol, practically insoluble in methylene chloride.

IDENTIFICATION

A. Infrared absorption spectrophotometry (*2.2.24*).
*Comparison*: *tiotropium bromide monohydrate CRS*.

B. It gives reaction (a) of bromides (*2.3.1*).

TESTS

**Appearance of solution**. The solution is clear (*2.2.1*) and not more intensely coloured than reference solution $Y_6$ (*2.2.2, Method II*).

Dissolve 0.2 g in *water R* and dilute to 20 mL with the same solvent.

**Impurities G and H**. Thin-layer chromatography (*2.2.27*). *Prepare the solutions immediately before use.*

*Solvent mixture.* Dilute 1 volume of a 103 g/L solution of *hydrochloric acid R* to 100 volumes with *methanol R*.

*Test solution.* Dissolve 0.40 g of the substance to be examined in the solvent mixture and dilute to 10 mL with the solvent mixture.

*Reference solution (a).* Dissolve the contents of a vial of *tiotropium impurity mixture CRS* (containing impurities G and H) in 1.0 mL of the solvent mixture.

*Reference solution (b).* Mix 0.1 mL of the test solution with 0.1 mL of reference solution (a).

*Plate*: *TLC silica gel $F_{254}$ plate R* (2-10 µm).

*Mobile phase*: *water R*, *anhydrous formic acid R*, *acetonitrile R*, *methylene chloride R* (10:15:35:50 *V/V/V/V*).

*Application*: 10 µL of the test solution and reference solution (a), and 20 µL of reference solution (b).

*Development*: over 2/3 of the plate.

*Drying*: in air.

*Detection*: expose to iodine vapour until the spots are clearly visible (about 15 min); remove the plate and examine immediately.

*Retardation factors*: impurity G = about 0.33; impurity H = about 0.38; tiotropium = about 0.64.

*System suitability*: reference solution (b):

– the chromatogram shows 3 clearly separated spots.

*Limits*:

– *impurity G*: any spot due to impurity G is not more intense than the corresponding spot in the chromatogram obtained with reference solution (a) (0.1 per cent);
– *impurity H*: any spot due to impurity H is not more intense than the corresponding spot in the chromatogram obtained with reference solution (a) (0.1 per cent).

**Related substances**. Liquid chromatography (*2.2.29*). *Prepare the solutions protected from light.*

*Test solution.* Dissolve 50.0 mg of the substance to be examined in mobile phase B and dilute to 25.0 mL with mobile phase B.

*Reference solution (a).* Dilute 1.0 mL of the test solution to 100.0 mL with mobile phase B. Dilute 1.0 mL of this solution to 10.0 mL with mobile phase B.

*Reference solution (b).* Dissolve 4 mg of *tiotropium for system suitability 1 CRS* (containing impurity C) in 2.0 mL of mobile phase B.

*Column*:

– *size*: *l* = 0.15 m, Ø = 3.0 mm;
– *stationary phase*: *propylsilyl silica gel for chromatography R* (3.5 µm);
– *temperature*: 50 °C.

*Mobile phase*:

– *mobile phase A*: dissolve 1.0 g of *sodium methanesulfonate R* and 5.0 g of *potassium dihydrogen phosphate R* in about 980 mL of *water R*, adjust to pH 3.0 with *dilute phosphoric acid R* and dilute to 1000 mL with *water R*;
– *mobile phase B*: *methanol R1*, *acetonitrile for chromatography R*, mobile phase A (10:40:50 *V/V/V*);

| Time (min) | Mobile phase A (per cent *V/V*) | Mobile phase B (per cent *V/V*) |
|---|---|---|
| 0 - 3 | 90 | 10 |
| 3 - 17 | 90 → 80 | 10 → 20 |
| 17 - 28 | 80 → 25 | 20 → 75 |
| 28 - 30 | 25 | 75 |

*Flow rate*: 1.2 mL/min.

*Detection*: spectrophotometer at 240 nm.

*Injection*: 5 µL.

Monographs T

*Identification of impurities*: use the chromatogram supplied with *tiotropium for system suitability 1 CRS* and the chromatogram obtained with reference solution (b) to identify the peak due to impurity C.

*Relative retention* with reference to tiotropium (retention time = about 15 min): impurity C = about 1.2.

*System suitability*: reference solution (b):

– *resolution*: minimum 2.4 between the peaks due to tiotropium and impurity C.

*Limits*:

– *unspecified impurities*: for each impurity, not more than the area of the principal peak in the chromatogram obtained with reference solution (a) (0.10 per cent);

– *total*: not more than twice the area of the principal peak in the chromatogram obtained with reference solution (a) (0.2 per cent);

– *disregard limit*: 0.5 times the area of the principal peak in the chromatogram obtained with reference solution (a) (0.05 per cent).

**Water** (*2.5.12*): 2.5 per cent to 4.0 per cent, determined on 0.300 g.

**Sulfated ash** (*2.4.14*): maximum 0.1 per cent, determined on 1.0 g.

ASSAY

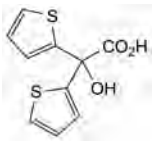
Dissolve 0.35 g in 100 mL of *water R*. Add 10 mL of *dilute nitric acid R2*. Titrate with *0.1 M silver nitrate*, determining the end-point potentiometrically (*2.2.20*).

1 mL of *0.1 M silver nitrate* is equivalent to 47.24 mg of $C_{19}H_{22}BrNO_4S_2$.

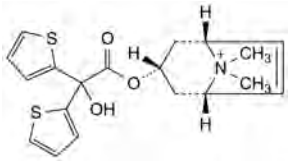
IMPURITIES

*Specified impurities: G, H.*

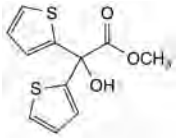
*Other detectable impurities* (the following substances would, if present at a sufficient level, be detected by one or other of the tests in the monograph. They are limited by the general acceptance criterion for other/unspecified impurities and/or by the general monograph *Substances for pharmaceutical use (2034)*. It is therefore not necessary to identify these impurities for demonstration of compliance. See also *5.10. Control of impurities in substances for pharmaceutical use*): *A, C, E, F.*



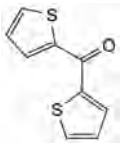
A. hydroxy[di(thiophen-2-yl)]acetic acid,



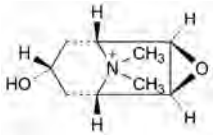
C. (1*R*,3*s*,5*S*)-3-[[hydroxy[di(thiophen-2-yl)]acetyl]oxy]-8,8-dimethyl-8-azabicyclo[3.2.1]oct-6-en-8-ium,



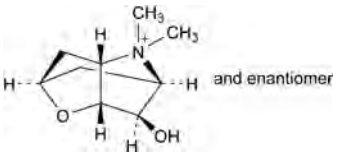
E. methyl hydroxy[di(thiophen-2-yl)]acetate,



F. di(thiophen-2-yl)methanone,



G. (1*R*,2*R*,4*S*,5*S*,7*s*)-7-hydroxy-9,9-dimethyl-3-oxa-9-azatricyclo[3.3.1.0$^{2,4}$]nonan-9-ium,



H. (1*s*,3*RS*,4*RS*,5*RS*,7*SR*)-4-hydroxy-6,6-dimethyl-2-oxa-6-azatricyclo[3.3.1.0$^{3,7}$]nonan-6-ium.

**01/2017:0150**

# TITANIUM DIOXIDE

## Titanii dioxidum

$TiO_2$ $M_r$ 79.9
[13463-67-7]

DEFINITION

*Content*: 98.0 per cent to 100.5 per cent.

CHARACTERS

*Appearance*: white or almost white powder.

*Solubility*: practically insoluble in water. It does not dissolve in dilute mineral acids but dissolves slowly in hot concentrated sulfuric acid.

IDENTIFICATION

A. When strongly heated, it becomes pale yellow; the colour disappears on cooling.

B. To 5 mL of solution S2 (see Tests) add 0.1 mL of *strong hydrogen peroxide solution R*. An orange-red colour appears.

C. To 5 mL of solution S2 add 0.5 g of *zinc R* in granules. After 45 min, the mixture has a violet-blue colour.

TESTS

**Solution S1**. Shake 20.0 g with 30 mL of *hydrochloric acid R* for 1 min. Add 100 mL of *distilled water R* and heat the mixture to boiling. Filter the hot mixture through a hardened filter paper until a clear filtrate is obtained. Wash the filter with 60 mL of *distilled water R* and dilute the combined filtrate and washings to 200 mL with *distilled water R*.

**Solution S2**. Mix 0.500 g (*m* g) with 5 g of *anhydrous sodium sulfate R* in a 300 mL long-necked combustion flask. Add 10 mL of *water R* and mix. Add 10 mL of *sulfuric acid R* and boil vigorously, with the usual precautions, until a clear solution is obtained. Cool, add slowly a cooled mixture of 30 mL of *water R* and 10 mL of *sulfuric acid R*, cool again and dilute to 100.0 mL with *water R*.

**Appearance of solution**. Solution S2 is not more opalescent than reference suspension II (*2.2.1*) and is colourless (*2.2.2, Method II*).

**Acidity or alkalinity**. Shake 5.0 g with 50 mL of *carbon dioxide-free water R* for 5 min. Centrifuge or filter until a clear solution is obtained. To 10 mL of the solution add 0.1 mL of *bromothymol blue solution R1*. Not more than 1.0 mL of *0.01 M hydrochloric acid* or *0.01 M sodium hydroxide* is required to change the colour of the indicator.

**Water-soluble substances**: maximum 0.5 per cent.

To 10.0 g add a solution of 0.5 g of *ammonium sulfate R* in 150 mL of *water R* and boil for 5 min. Cool, dilute to 200 mL with *water R* and filter until a clear solution is obtained. Evaporate 100 mL of the solution to dryness in a tared evaporating dish and ignite. The residue weighs a maximum of 25 mg.

**Antimony**: maximum 100 ppm.

To 10 mL of solution S2 add 10 mL of *hydrochloric acid R* and 10 mL of *water R*. Cool to 20 °C, if necessary, and add 0.15 mL of *sodium nitrite solution R*. After 5 min, add 5 mL of a 10 g/L solution of *hydroxylamine hydrochloride R* and 10 mL of a freshly prepared 0.1 g/L solution of *rhodamine B R*. Mix thoroughly after each addition. Shake vigorously with 10.0 mL of *toluene R* for 1 min. Allow to separate and centrifuge for 2 min if necessary. Any pink colour in the toluene phase is not more intense than that in the toluene phase of a standard prepared at the same time in the same manner using a mixture of 5.0 mL of *antimony standard solution (1 ppm Sb) R*, 10 mL of *hydrochloric acid R* and 15 mL of a solution containing 0.5 g of *anhydrous sodium sulfate R* and 2 mL of *sulfuric acid R* instead of the mixture of 10 mL of solution S2, 10 mL of *hydrochloric acid R* and 10 mL of *water R*.

**Arsenic** (*2.4.2, Method A*): maximum 5 ppm.

Place 0.50 g in a 250 mL round-bottomed flask, fitted with a thermometer, a funnel with stopcock and a vapour-outlet tube connected to a flask containing 30 mL of *water R*. Add 50 mL of *water R*, 0.5 g of *hydrazine sulfate R*, 0.5 g of *potassium bromide R* and 20 g of *sodium chloride R*. Through the funnel, add dropwise 25 mL of *sulfuric acid R*, heat and maintain the temperature of the liquid at 110-115 °C for 20 min. Collect the vapour in the flask containing 30 mL of *water R*. Dilute to 50 mL with *water R*. 20 mL of the solution complies with the test.

**Barium**. To 10 mL of solution S1 add 1 mL of *dilute sulfuric acid R*. After 30 min, any opalescence in the solution is not more intense than that in a mixture of 10 mL of solution S1 and 1 mL of *distilled water R*.

**Iron**: maximum 200 ppm.

To 8 mL of solution S2 add 4 mL of *water R*. Mix and add 0.05 mL of *bromine water R*. Allow to stand for 5 min and remove the excess of bromine with a current of air. Add 3 mL of *potassium thiocyanate solution R*. Any colour in the solution is not more intense than that in a standard prepared at the same time in the same manner using a mixture of 4 mL of *iron standard solution (2 ppm Fe) R* and 8 mL of a 200 g/L solution of *sulfuric acid R*.

ASSAY

To 300 g of *zinc R* in granules (710) add 300 mL of a 20 g/L solution of *mercuric nitrate R* and 2 mL of *nitric acid R*, shake for 10 min and wash with *water R*. Pack the amalgamated zinc into a glass tube about 400 mm long and about 20 mm in diameter fitted with a tap and a filter plate. Pass through the column 100 mL of *dilute sulfuric acid R* followed by 100 mL of *water R*, making sure that the amalgam is always covered with liquid. Pass slowly at a rate of about 3 mL/min through the column a mixture of 100 mL of *dilute sulfuric acid R* and 100 mL of *water R* followed by 100 mL of *water R*. Collect the eluate in a 500 mL conical flask containing 50.0 mL of a 150 g/L solution of *ferric ammonium sulfate R* in a mixture of 1 volume of *sulfuric acid R* and 3 volumes of *water R*. Add 0.1 mL of *ferroin R* and titrate immediately with *0.1 M ammonium and cerium nitrate* until a greenish colour is obtained ($n_1$ mL). Pass slowly at a rate of about 3 mL/min through the column a mixture of 50 mL of *dilute sulfuric acid R* and 50 mL of *water R*, followed by 20.0 mL of solution S2, a mixture of 50 mL of *dilute sulfuric acid R* and 50 mL of *water R* and finally 100 mL of *water R*. Collect the eluate in a 500 mL conical flask containing 50.0 mL of a 150 g/L solution of *ferric ammonium sulfate R* in a mixture of 1 volume of *sulfuric acid R* and 3 volumes of *water R*. Rinse the lower end of the column with *water R*, add 0.1 mL of *ferroin R* and titrate immediately with *0.1 M ammonium and cerium nitrate* until a greenish colour is obtained ($n_2$ mL).

Calculate the percentage content of $TiO_2$ using the following expression:

$$\frac{3.99 \times (n_2 - n_1)}{m}$$

$m$ = mass of the substance to be examined used for the preparation of solution S2, in grams.

FUNCTIONALITY-RELATED CHARACTERISTICS

*This section provides information on characteristics that are recognised as being relevant control parameters for one or more functions of the substance when used as an excipient (see chapter 5.15). Some of the characteristics described in the Functionality-related characteristics section may also be present in the mandatory part of the monograph since they also represent mandatory quality criteria. In such cases, a cross-reference to the tests described in the mandatory part is included in the Functionality-related characteristics section. Control of the characteristics can contribute to the quality of a medicinal product by improving the consistency of the manufacturing process and the performance of the medicinal product during use. Where control methods are cited, they are recognised as being suitable for the purpose, but other methods can also be used. Wherever results for a particular characteristic are reported, the control method must be indicated.*

*The following characteristic may be relevant for titanium dioxide used as opacifier in solid oral dosage forms and in preparations for cutaneous application.*

**Particle-size distribution** (*2.9.31*).

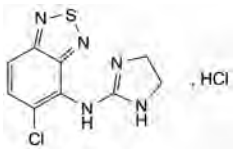
**corrected 10.0**

# TIZANIDINE HYDROCHLORIDE

## Tizanidini hydrochloridum



$C_9H_9Cl_2N_5S$ $M_r$ 290.2
[64461-82-1]

DEFINITION

5-Chloro-*N*-(4,5-dihydro-1*H*-imidazol-2-yl)-2,1,3-benzothiadiazol-4-amine hydrochloride.

*Content*: 98.0 per cent to 102.0 per cent (dried substance).

CHARACTERS

*Appearance*: white or yellowish-white, crystalline powder.

*Solubility*: soluble in water, very slightly soluble in ethanol (96 per cent), practically insoluble in methylene chloride.

IDENTIFICATION

A. Infrared absorption spectrophotometry (*2.2.24*).

*Comparison*: *tizanidine hydrochloride CRS*.

B. Solution S (see Tests) gives reaction (a) of chlorides (*2.3.1*).

TESTS

**Solution S**. Dissolve 0.5 g in *carbon dioxide-free water R* and dilute to 50 mL with the same solvent.

**pH** (*2.2.3*): 3.7 to 5.0 for solution S.

**Impurity H**. Thin-layer chromatography (*2.2.27*).

*Test solution*. Dissolve 0.200 g of the substance to be examined in *methanol R* and dilute to 5.0 mL with the same solvent.

*Reference solution*. Dissolve 8.0 mg of *ethylenediamine R* (impurity H) in *methanol R* and dilute to 100.0 mL with the same solvent.

*Plate*: *TLC cellulose plate R*.

*Mobile phase*: *glacial acetic acid R*, *water R*, *methanol R* (1:25:75 *V/V/V*).

*Application*: 5 µL.

*Development*: over 1/2 of the plate.

*Drying*: in a current of cold air.

*Detection*: spray with a mixture of 15 volumes of a 20 g/L solution of *ninhydrin R* in *glacial acetic acid R* and 85 volumes of *butanol R*, then heat at 100 °C for 5 min.

*Relative retention* with reference to tizanidine ($R_F$ = about 0.8): impurity H = about 0.3.

*Limit*:

– *impurity H*: any spot due to impurity H is not more intense than the corresponding spot in the chromatogram obtained with the reference solution (0.2 per cent).

**Related substances**. Liquid chromatography (*2.2.29*).

*Test solution*. Dissolve 30.0 mg of the substance to be examined in mobile phase A, using sonication if necessary, and dilute to 25.0 mL with mobile phase A. Dilute 5.0 mL of the solution to 50.0 mL with mobile phase A.

*Reference solution (a)*. Dissolve 3 mg of *tizanidine impurity B CRS* in mobile phase A and dilute to 25.0 mL with mobile phase A. Dilute 1.0 mL of the solution to 100.0 mL with mobile phase A. Dilute 1.0 mL of this solution to 10.0 mL with the test solution.

*Reference solution (b)*. Dilute 1.0 mL of the test solution to 100.0 mL with mobile phase A. Dilute 1.0 mL of this solution to 10.0 mL with mobile phase A.

*Reference solution (c)*. Dissolve 30.0 mg of *tizanidine hydrochloride CRS* in mobile phase A, using sonication if necessary, and dilute to 25.0 mL with mobile phase A. Dilute 5.0 mL of the solution to 50.0 mL with mobile phase A.

*Column*:

– *size*: *l* = 0.15 m, Ø = 4.6 mm;

– *stationary phase*: *end-capped octadecylsilyl silica gel for chromatography R* (3.5 µm);

– *temperature*: 50 °C.

*Mobile phase*:

– *mobile phase A*: mix 18 volumes of *acetonitrile R1* and 82 volumes of a 3.86 g/L solution of *sodium pentanesulfonate monohydrate R* previously adjusted to pH 3.0 with *phosphoric acid R*;

– *mobile phase B*: mix 20 volumes of a 3.86 g/L solution of *sodium pentanesulfonate monohydrate R* previously adjusted to pH 3.0 with *phosphoric acid R* and 80 volumes of *acetonitrile R1*;

| Time (min) | Mobile phase A (per cent *V/V*) | Mobile phase B (per cent *V/V*) |
|---|---|---|
| 0 - 15 | 100 | 0 |
| 15 - 25 | 100 → 0 | 0 → 100 |
| 25 - 27 | 0 | 100 |

*Flow rate*: 0.6 mL/min.

*Detection*: spectrophotometer at 230 nm.

*Injection*: 10 µL of the test solution and reference solutions (a) and (b).

*Identification of impurities*: use the chromatogram obtained with reference solution (a) to identify the peak due to impurity B.

*Relative retention* with reference to tizanidine (retention time = about 6 min): impurity B = about 1.3.

*System suitability*: reference solution (a):

– *resolution*: minimum 4.0 between the peaks due to tizanidine and impurity B.

*Calculation of percentage contents*:

– for each impurity, use the concentration of tizanidine hydrochloride in reference solution (b).

*Limits*:

– *unspecified impurities*: for each impurity, maximum 0.10 per cent;

– *total*: maximum 0.2 per cent;

– *reporting threshold*: 0.05 per cent.

**Loss on drying** (*2.2.32*): maximum 0.5 per cent, determined on 1.000 g by drying in an oven at 105 °C.

**Sulfated ash** (*2.4.14*): maximum 0.1 per cent, determined on 1.0 g.

ASSAY

Liquid chromatography (*2.2.29*) as described in the test for related substances with the following modification.

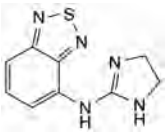
*Injection*: test solution and reference solution (c).

Calculate the percentage content of $C_9H_9Cl_2N_5S$ taking into account the assigned content of *tizanidine hydrochloride CRS*.

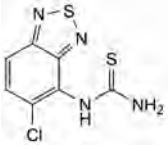
IMPURITIES

*Specified impurities*: *H*.

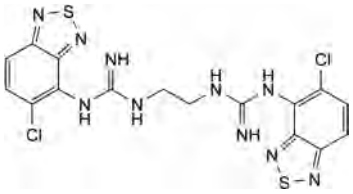
*Other detectable impurities* (the following substances would, if present at a sufficient level, be detected by one or other of the tests in the monograph. They are limited by the general acceptance criterion for other/unspecified impurities and/or by the general monograph *Substances for pharmaceutical use (2034)*. It is therefore not necessary to identify these impurities for demonstration of compliance. See also *5.10. Control of impurities in substances for pharmaceutical use*): *A, B, C, D, E, F, G, I*.



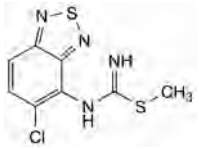
A. *N*-(4,5-dihydro-1*H*-imidazol-2-yl)-2,1,3-benzothiadiazol-4-amine,



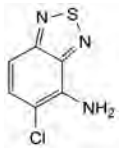
B. *N*-(5-chloro-2,1,3-benzothiadiazol-4-yl)thiourea,



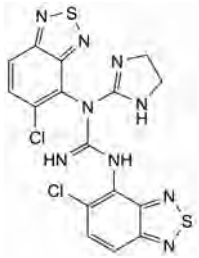
C. 1,1′-ethane-1,2-diylbis[3-(5-chloro-2,1,3-benzothiadiazol-4-yl)guanidine],



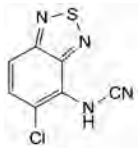
D. methyl *N*-(5-chloro-2,1,3-benzothiadiazol-4-yl)-carbamimidothioate,



E. 5-chloro-2,1,3-benzothiadiazol-4-amine,

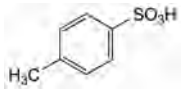


F. 1,3-bis(5-chloro-2,1,3-benzothiadiazol-4-yl)-1-(4,5-dihydro-1*H*-imidazol-2-yl)guanidine,



G. (5-chloro-2,1,3-benzothiadiazol-4-yl)cyanamide,

H. ethane-1,2-diamine (ethylenediamine),

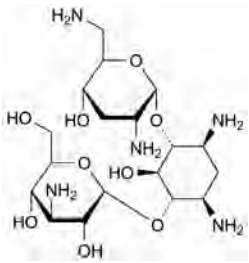


I. 4-methylbenzenesulfonic acid (*p*-toluenesulfonic acid).

**01/2008:0645**
**corrected 10.0**

# TOBRAMYCIN

## Tobramycinum



$C_{18}H_{37}N_5O_9$ $M_r$ 467.5
[32986-56-4]

DEFINITION

4-*O*-(3-Amino-3-deoxy-α-D-glucopyranosyl)-2-deoxy-6-*O*-(2,6-diamino-2,3,6-trideoxy-α-D-*ribo*-hexopyranosyl)-L-streptamine.

Substance produced by *Streptomyces tenebrarius* or obtained by any other means.

*Content*: 97.0 per cent to 102.0 per cent (anhydrous substance).

PRODUCTION

It is produced by methods of manufacture designed to eliminate or minimise substances lowering blood pressure.

CHARACTERS

*Appearance*: white or almost white powder.

*Solubility*: freely soluble in water, very slightly soluble in ethanol (96 per cent).

IDENTIFICATION

*First identification*: A.

*Second identification*: B, C.

A. Nuclear magnetic resonance spectrometry (*2.2.33*).

*Preparation*: 100 g/L solution in *deuterium oxide R*.

*Comparison*: 100 g/L solution of *tobramycin CRS* in *deuterium oxide R*.

B. Thin-layer chromatography (*2.2.27*).

*Test solution*. Dissolve 20 mg of the substance to be examined in *water R* and dilute to 5 mL with the same solvent.

*Reference solution (a)*. Dissolve 20 mg of *tobramycin CRS* in *water R* and dilute to 5 mL with the same solvent.

*Reference solution (b)*. Dissolve 4 mg of *neomycin sulfate CRS* and 4 mg of *kanamycin monosulfate CRS* in 1 mL of reference solution (a).

*Plate*: *TLC silica gel plate R*.

*Mobile phase*: *methylene chloride R*, *concentrated ammonia R*, *methanol R* (17:33:50 *V/V/V*).

*Application*: 5 µL.

*Development*: over 2/3 of the plate.

*Drying*: in a current of warm air.

*Detection*: spray with a mixture of equal volumes of a 2 g/L solution of *1,3-dihydroxynaphthalene R* in *ethanol (96 per cent) R* and a 460 g/L solution of *sulfuric acid R*; heat at 105 °C for 5-10 min.

*System suitability*: the chromatogram obtained with reference solution (b) shows 3 major spots which are clearly separated.

Monographs T

*Results*: the principal spot in the chromatogram obtained with the test solution is similar in position, colour and size to the principal spot in the chromatogram obtained with reference solution (a).

C. Dissolve about 5 mg in 5 mL of *water R*. Add 5 mL of a 1 g/L solution of *ninhydrin R* in *ethanol (96 per cent) R* and heat in a water-bath for 3 min. A violet-blue colour develops.

TESTS

**pH** (*2.2.3*): 9.0 to 11.0.

Dissolve 1.0 g in 10 mL of *carbon dioxide-free water R*.

**Specific optical rotation** (*2.2.7*): + 138 to + 148 (anhydrous substance).

Dissolve 1.00 g in *water R* and dilute to 25.0 mL with the same solvent.

**Related substances**. Liquid chromatography (*2.2.29*).

*Test solution (a).* Dissolve 25.0 mg of the substance to be examined in the mobile phase and dilute to 25.0 mL with the mobile phase.

*Test solution (b).* Dilute 10.0 mL of test solution (a) to 100.0 mL with the mobile phase.

*Reference solution (a).* Dissolve 25.0 mg of *tobramycin CRS* in the mobile phase and dilute to 100.0 mL with the mobile phase.

*Reference solution (b).* Dilute 1.0 mL of reference solution (a) to 100.0 mL with the mobile phase.

*Reference solution (c).* Dilute 1.0 mL of reference solution (a) to 50.0 mL with the mobile phase.

*Reference solution (d).* Dissolve 10.0 mg of *kanamycin B sulfate CRS* in 20.0 mL of the mobile phase. To 1.0 mL of this solution, add 2.0 mL of reference solution (a) and dilute to 10.0 mL with the mobile phase.

*Reference solution (e).* Dilute 10.0 mL of reference solution (a) to 25.0 mL with the mobile phase.

*Column*:

- *size*: *l* = 0.25 m, Ø = 4.6 mm;
- *stationary phase*: *styrene-divinylbenzene copolymer R* (8 µm) with a pore size of 100 nm;
- *temperature*: 55 °C.

*Mobile phase*: mixture prepared with *carbon dioxide-free water R* containing 52 g/L of *anhydrous sodium sulfate R*, 1.5 g/L of *sodium octanesulfonate R*, 3 mL/L of *tetrahydrofuran R* stabilised with *butylhydroxytoluene R*, and 50 mL/L of *0.2 M potassium dihydrogen phosphate R* previously adjusted to pH 3.0 with *dilute phosphoric acid R*. Degas.

*Flow rate*: 1.0 mL/min.

*Post-column solution*: *carbonate-free sodium hydroxide solution R* diluted 25-fold with *carbon dioxide-free water R*, which is added pulselessly to the column effluent using a 375 µL polymeric mixing coil.

*Flow rate*: 0.3 mL/min.

*Detection*: pulsed amperometric detector or equivalent with a gold working electrode, a silver-silver chloride reference electrode and a stainless steel auxiliary electrode which is the cell body, held at respectively + 0.05 V detection, + 0.75 V oxidation and − 0.15 V reduction potentials, with pulse durations according to the instrument used. The temperature of the detector is set at 35 °C.

*NOTE: to prevent problems due to salt precipitation, the electrochemical cell can be flushed with water R overnight.*

*Injection*: 20 µL using a refrigerated injector (4-8 °C); inject test solution (a) and reference solutions (b), (c) and (d).

*Run time*: 1.5 times the retention time of tobramycin.

*Relative retention* with reference to tobramycin (retention time = about 18 min): impurity C = about 0.35; impurity B = about 0.40, impurity A = about 0.70.

*System suitability*:

- *resolution*: minimum 3.0 between the peaks due to impurity A and to tobramycin in the chromatogram obtained with reference solution (d); if necessary, adjust the concentration of sodium octanesulfonate in the mobile phase;
- *signal-to-noise ratio*: minimum 10 for the principal peak in the chromatogram obtained with reference solution (b).

*Limits*:

- *any impurity*: not more than twice the area of the principal peak in the chromatogram obtained with reference solution (c) (1.0 per cent) and not more than 1 such peak has an area greater than the area of the principal peak in the chromatogram obtained with reference solution (c) (0.5 per cent);
- *total*: not more than 3 times the area of the principal peak in the chromatogram obtained with reference solution (c) (1.5 per cent);
- *disregard limit*: the area of the principal peak in the chromatogram obtained with reference solution (b) (0.25 per cent).

**2-Methyl-1-propanol** (*2.4.24, System B*): maximum 1.0 per cent *m/m*.

**Water** (*2.5.12*): maximum 8.0 per cent, determined on 0.30 g.

**Sulfated ash** (*2.4.14*): maximum 0.3 per cent, determined on 1.0 g.

**Bacterial endotoxins** (*2.6.14*): less than 2.0 IU/mg, if intended for use in the manufacture of parenteral preparations without a further appropriate procedure for the removal of bacterial endotoxins.

ASSAY

Liquid chromatography (*2.2.29*) as described in the test for related substances with the following modifications.

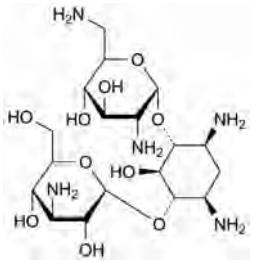
*Injection*: test solution (b) and reference solution (e).

Calculate the percentage content of tobramycin.

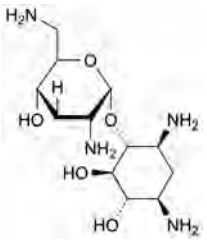
STORAGE

If the substance is sterile, store in a sterile, airtight, tamper-evident container.

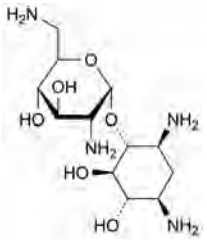
IMPURITIES



A. 4-*O*-(3-amino-3-deoxy-α-D-glucopyranosyl)-2-deoxy-6-*O*-(2,6-diamino-2,6-dideoxy-α-D-glucopyranosyl)-L-streptamine (kanamycin B),



B. 2-deoxy-4-*O*-(2,6-diamino-2,3,6-trideoxy-α-D-*ribo*-hexopyranosyl)-D-streptamine (nebramine),

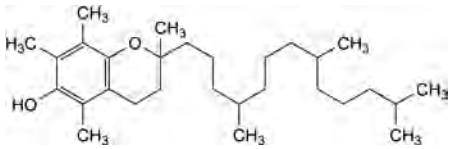


C. 2-deoxy-4-*O*-(2,6-diamino-2,6-dideoxy-α-D-glucopyranosyl)-D-streptamine (neamine).

**07/2011:0692**
**corrected 10.0**

# all-*rac*-α-TOCOPHEROL

## int-*rac*-α-Tocopherolum



$C_{29}H_{50}O_2$ $M_r$ 430.7
[10191-41-0]

DEFINITION

all-*rac*-2,5,7,8-Tetramethyl-2-(4,8,12-trimethyltridecyl)-3,4-dihydro-2*H*-1-benzopyran-6-ol.

*Content*: 96.0 per cent to 102.0 per cent.

CHARACTERS

*Appearance*: clear, colourless or yellowish-brown, viscous, oily liquid.

*Solubility*: practically insoluble in water, freely soluble in acetone, in anhydrous ethanol, in methylene chloride and in fatty oils.

IDENTIFICATION

*First identification*: *A, B.*

*Second identification*: *A, C.*

A. Optical rotation (*2.2.7*): − 0.01° to + 0.01°.

Dissolve 2.50 g in *anhydrous ethanol R* and dilute to 25.0 mL with the same solvent.

B. Infrared absorption spectrophotometry (*2.2.24*).

*Comparison*: *α-tocopherol CRS.*

C. Thin-layer chromatography (*2.2.27*).

*Test solution.* Dissolve 10 mg of the substance to be examined in 2 mL of *cyclohexane R.*

*Reference solution.* Dissolve 10 mg of *α-tocopherol CRS* in 2 mL of *cyclohexane R.*

*Plate*: *TLC silica gel $F_{254}$ plate R.*

*Mobile phase*: *ether R*, *cyclohexane R* (20:80 *V/V*).

*Application*: 10 µL.

*Development*: over 2/3 of the plate.

*Drying*: in a current of air.

*Detection*: examine in ultraviolet light at 254 nm.

*Results*: the principal spot in the chromatogram obtained with the test solution is similar in position and size to the principal spot in the chromatogram obtained with the reference solution.

TESTS

**Related substances**. Gas chromatography (*2.2.28*): use the normalisation procedure.

*Internal standard solution.* Dissolve 1.0 g of *squalane R* in *cyclohexane R* and dilute to 100.0 mL with the same solvent.

*Test solution (a).* Dissolve 0.100 g of the substance to be examined in 10.0 mL of the internal standard solution.

*Test solution (b).* Dissolve 0.100 g of the substance to be examined in 10 mL of *cyclohexane R.*

*Reference solution (a).* Dissolve 0.100 g of *α-tocopherol CRS* in 10.0 mL of the internal standard solution.

*Reference solution (b).* Dissolve 10 mg of the substance to be examined and 10 mg of *α-tocopheryl acetate R* in *cyclohexane R* and dilute to 100.0 mL with the same solvent.

*Reference solution (c).* Dissolve 10 mg of *all-rac-α-tocopherol for peak identification CRS* (containing impurities A and B) in *cyclohexane R* and dilute to 1 mL with the same solvent.

*Reference solution (d).* Dilute 1.0 mL of test solution (b) to 100.0 mL with *cyclohexane R*. Dilute 1.0 mL of this solution to 10.0 mL with *cyclohexane R.*

*Column*:

- *material*: fused silica;
- *size*: *l* = 30 m, Ø = 0.25 mm;
- *stationary phase*: *methylpolysiloxane R* (film thickness 0.25 µm).

*Carrier gas*: *helium for chromatography R.*

*Flow rate*: 1 mL/min.

*Split ratio*: 1:100.

*Temperature*:

- *column*: 280 °C;
- *injection port and detector*: 290 °C.

*Detection*: flame ionisation.

*Injection*: 1 µL of test solution (b) and reference solutions (b), (c) and (d).

*Run time*: twice the retention time of all-*rac*-α-tocopherol.

*Identification of impurities*: use the chromatogram supplied with *all-rac-α-tocopherol for peak identification CRS* and the chromatogram obtained with reference solution (c) to identify the peaks due to impurities A and B.

*Relative retention* with reference to all-*rac*-α-tocopherol (retention time = about 9 min): squalane = about 0.5; impurity A = about 0.7; impurity B = about 0.8; impurities C and D = about 1.05 (eluting immediately after the all-*rac*-α-tocopherol peak).

*System suitability*: reference solution (b):

- *resolution*: minimum 3.5 between the peaks due to all-*rac*-α-tocopherol and α-tocopheryl acetate.

*Limits*:

- *impurity A*: maximum 0.5 per cent;
- *impurity B*: maximum 1.5 per cent;
- *sum of impurities C and D*: maximum 1.0 per cent;
- *any other impurity*: for each impurity, maximum 0.25 per cent;
- *total*: maximum 2.5 per cent;
- *disregard limit*: the area of the principal peak in the chromatogram obtained with reference solution (d) (0.1 per cent).

The thresholds indicated under Related substances (Table 2034.-1) in the general monograph *Substances for pharmaceutical use (2034)* do not apply.

ASSAY

Gas chromatography (*2.2.28*) as described in the test for related substances with the following modifications.

*Injection*: test solution (a) and reference solution (a).

*System suitability*: reference solution (a):

– *symmetry factor*: minimum 0.6 for the principal peak.

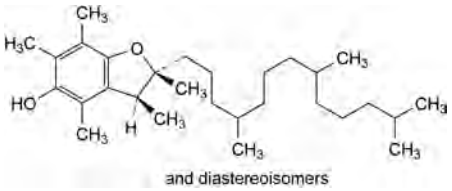
Calculate the percentage content of $C_{29}H_{50}O_2$ from the declared content of *α-tocopherol CRS*.

STORAGE

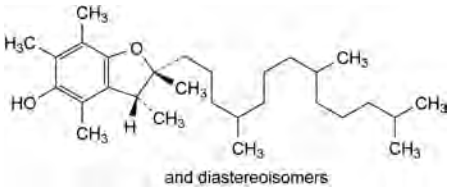
Under an inert gas, protected from light.

IMPURITIES

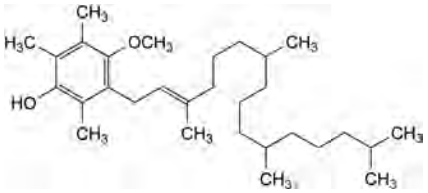
*Specified impurities: A, B, C, D.*



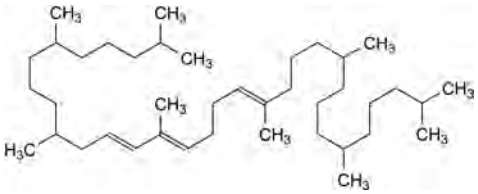
A. all-*rac-trans*-2,3,4,6,7-pentamethyl-2-(4,8,12-trimethyltridecyl)-2,3-dihydrobenzofuran-5-ol,



B. all-*rac-cis*-2,3,4,6,7-pentamethyl-2-(4,8,12-trimethyltridecyl)-2,3-dihydrobenzofuran-5-ol,



C. 4-methoxy-2,3,6-trimethyl-5-[(all-*RS*,*E*)-3,7,11,15-tetramethylhexadec-2-enyl]phenol,

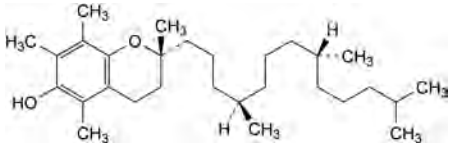


D. (all-*RS*,all-*E*)-2,6,10,14,19,23,27,31-octamethyldotriaconta-12,14,18-triene.

**04/2013:1256**
**corrected 10.0**

# *RRR*-α-TOCOPHEROL

## *RRR*-α-Tocopherolum



$C_{29}H_{50}O_2$ $M_r$ 430.7

[59-02-9]

DEFINITION

(2*R*)-2,5,7,8-Tetramethyl-2-[(4*R*,8*R*)-4,8,12-trimethyltridecyl]-3,4-dihydro-2*H*-1-benzopyran-6-ol.

*Content*: 94.5 per cent to 102.0 per cent.

CHARACTERS

*Appearance*: clear, colourless or yellowish-brown, viscous, oily liquid.

*Solubility*: practically insoluble in water, freely soluble in acetone, in anhydrous ethanol, in methylene chloride and in fatty oils.

IDENTIFICATION

*First identification: A, B.*

*Second identification: A, C.*

A. Optical rotation (*2.2.7*): + 0.05° to + 0.10°.
Dissolve 2.50 g in *anhydrous ethanol R* and dilute to 25.0 mL with the same solvent.

B. Infrared absorption spectrophotometry (*2.2.24*).
*Comparison*: *α-tocopherol CRS*.

C. Thin-layer chromatography (*2.2.27*).
*Test solution.* Dissolve 10 mg of the substance to be examined in 2 mL of *cyclohexane R*.
*Reference solution.* Dissolve 10 mg of *α-tocopherol CRS* in 2 mL of *cyclohexane R*.
*Plate*: *TLC silica gel $F_{254}$ plate R*.

TESTS

**Related substances**. Gas chromatography (*2.2.28*): use the normalisation procedure.

*Internal standard solution.* Dissolve 1.0 g of *squalane R* in *cyclohexane R* and dilute to 100.0 mL with the same solvent.

*Test solution (a).* Dissolve 0.100 g of the substance to be examined in 10.0 mL of the internal standard solution.

*Test solution (b).* Dissolve 0.100 g of the substance to be examined in 10.0 mL of *cyclohexane R*.

*Reference solution (a).* Dissolve 0.100 g of *α-tocopherol CRS* in 10.0 mL of the internal standard solution.

*Reference solution (b).* Dissolve 10 mg of *α-tocopherol R* and 10 mg of *α-tocopheryl acetate R* in *cyclohexane R* and dilute to 100.0 mL with the same solvent.

*Column*:

– *material*: fused silica;
– *size*: *l* = 30 m, Ø = 0.25 mm;
– *stationary phase*: *methylpolysiloxane R* (film thickness 0.25 µm).

*Carrier gas*: *helium for chromatography R*.

*Flow rate*: 1 mL/min.

*Split ratio*: 1:100.

*Temperature*:

| | Time (min) | Temperature (°C) |
|---|---|---|
| Column | 0 - 15 | 280 |
| Injection port | | 290 |
| Detector | | 290 |

*Detection*: flame ionisation.

*Injection*: 1 µL of test solution (b) and reference solution (b).

*System suitability*: reference solution (b):

– *resolution*: minimum 3.5 between the peaks due to α-tocopherol and α-tocopheryl acetate.

*Limits*:

– *total*: maximum 4.0 per cent;

– *disregard limit*: 0.1 per cent.

The thresholds indicated under Related substances (Table 2034.-1) in the general monograph *Substances for pharmaceutical use (2034)* do not apply.

ASSAY

Gas chromatography (*2.2.28*) as described in the test for related substances with the following modifications.

*Injection*: test solution (a) and reference solution (a).

*System suitability*: reference solution (a):

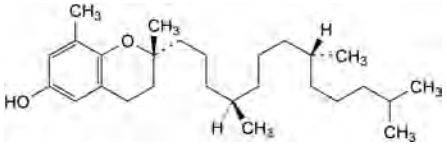
– *symmetry factor*: minimum 0.6 for the principal peak.

Calculate the percentage content of $C_{29}H_{50}O_2$ taking into account the assigned content of *α-tocopherol CRS*.

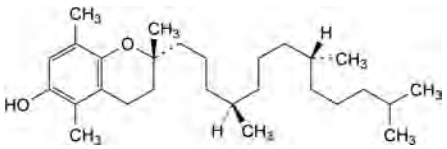
STORAGE

Under an inert gas, protected from light.

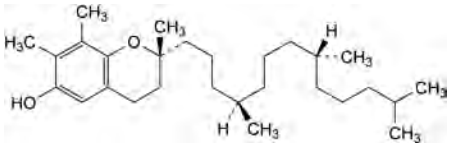
IMPURITIES



A. (2*R*)-2,8-dimethyl-2-[(4*R*,8*R*)-4,8,12-trimethyltridecyl]-3,4-dihydro-2*H*-1-benzopyran-6-ol (*RRR*-δ-tocopherol),



B. (2*R*)-2,5,8-trimethyl-2-[(4*R*,8*R*)4,8,12-trimethyltridecyl]-3,4-dihydro-2*H*-1-benzopyran-6-ol (*RRR*-β-tocopherol),



C. (2*R*)-2,7,8-trimethyl-2-[(4*R*,8*R*)-4,8,12-trimethyltridecyl]-3,4-dihydro-2*H*-1-benzopyran-6-ol (*RRR*-γ-tocopherol).

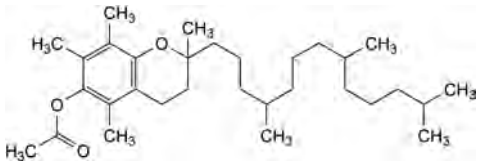
**corrected 10.0**

# all-*rac*-α-TOCOPHERYL ACETATE

## int-*rac*-α-Tocopherylis acetas



$C_{31}H_{52}O_3$ $M_r$ 472.7

[7695-91-2]

DEFINITION

all-*rac*-2,5,7,8-Tetramethyl-2-(4,8,12-trimethyltridecyl)-3,4-dihydro-2*H*-1-benzopyran-6-yl acetate.

*Content*: 96.5 per cent to 102.0 per cent.

CHARACTERS

*Appearance*: clear, colourless or slightly greenish-yellow, viscous, oily liquid.

*Solubility*: practically insoluble in water, freely soluble in acetone, in anhydrous ethanol and in fatty oils.

IDENTIFICATION

*First identification: A, B.*

*Second identification: A, C.*

A. Optical rotation (*2.2.7*): – 0.01° to + 0.01°.
Dissolve 2.50 g in *anhydrous ethanol R* and dilute to 25.0 mL with the same solvent.

B. Infrared absorption spectrophotometry (*2.2.24*).
*Comparison*: *α-tocopheryl acetate CRS*.

C. Thin-layer chromatography (*2.2.27*).
*Test solution.* Dissolve about 10 mg of the substance to be examined in 2 mL of *cyclohexane R*.
*Reference solution.* Dissolve about 10 mg of *α-tocopheryl acetate CRS* in 2 mL of *cyclohexane R*.
*Plate*: *TLC silica gel $F_{254}$ plate R*.
*Mobile phase*: *ether R*, *cyclohexane R* (20:80 *V/V*).
*Application*: 10 µL.
*Development*: over 2/3 of the plate.
*Drying*: in a current of air.
*Detection*: examine in ultraviolet light at 254 nm.
*Results*: the principal spot in the chromatogram obtained with the test solution is similar in position and size to the principal spot in the chromatogram obtained with the reference solution.

TESTS

**Related substances**. Gas chromatography (*2.2.28*): use the normalisation procedure.

*Internal standard solution.* Dissolve 1.0 g of *squalane R* in *cyclohexane R* and dilute to 100.0 mL with the same solvent.

*Test solution (a).* Dissolve 0.100 g of the substance to be examined in 10.0 mL of the internal standard solution.

*Test solution (b).* Dissolve 0.100 g of the substance to be examined in 10 mL of *cyclohexane R*.

*Reference solution (a).* Dissolve 0.100 g of *α-tocopheryl acetate CRS* in 10.0 mL of the internal standard solution.

*Reference solution (b).* Dissolve 10 mg of the substance to be examined and 10 mg of *α-tocopherol R* in *cyclohexane R* and dilute to 100.0 mL with the same solvent.

*Reference solution (c).* Dissolve 10 mg of *all-rac-α-tocopheryl acetate for peak identification CRS* (containing impurities A and B) in *cyclohexane R* and dilute to 1 mL with the same solvent.

*Reference solution (d).* Dilute 1.0 mL of test solution (b) to 100.0 mL with *cyclohexane R*. Dilute 1.0 mL of this solution to 10.0 mL with *cyclohexane R*.

*Column*:

– *material*: fused silica;

– *size*: *l* = 30 m, Ø = 0.25 mm;

– *stationary phase*: *methylpolysiloxane R* (film thickness 0.25 µm).

*Carrier gas*: *helium for chromatography R*.

*Flow rate*: 1 mL/min.

*Split ratio*: 1:100.

*Temperature*:

– *column*: 280 °C;

– *injection port and detector*: 290 °C.

*Detection*: flame ionisation.

*Injection*: 1 µL of test solution (b) and reference solutions (a), (b), (c) and (d); inject directly onto the column or via a sufficiently inert, glass-lined injection port using an automatic injection device or other reproducible injection method.

*Run time*: twice the retention time of all-*rac*-α-tocopheryl acetate.

*Identification of impurities*: use the chromatogram supplied with *all-rac-α-tocopheryl acetate for peak identification CRS* and the chromatogram obtained with reference solution (c) to identify the peaks due to impurities A and B.

*Relative retention* with reference to all-*rac*-α-tocopheryl acetate (retention time = about 15 min): squalane = about 0.4; impurity A = about 0.7; impurity B = about 0.8; impurity C = about 0.9; impurities D and E = about 1.05 (eluting immediately after the all-*rac*-α-tocopheryl acetate peak).

*System suitability*:

– *resolution*: minimum 3.5 between the peaks due to impurity C and all-*rac*-α-tocopheryl acetate in the chromatogram obtained with reference solution (b);

– in the chromatogram obtained with reference solution (a), the area of the peak due to impurity C is not greater than 0.2 per cent of the area of the peak due to all-*rac*-α-tocopheryl acetate.

*Limits*:

– *impurities A, C*: for each impurity, maximum 0.5 per cent;

– *impurity B*: maximum 1.5 per cent;

– *sum of impurities D and E*: maximum 1.0 per cent;

– *any other impurity*: for each impurity, maximum 0.25 per cent;

– *total*: maximum 2.5 per cent;

– *disregard limit*: the area of the principal peak in the chromatogram obtained with reference solution (d) (0.1 per cent).

The thresholds indicated under Related substances (Table 2034.-1) in the general monograph *Substances for pharmaceutical use (2034)* do not apply.

ASSAY

Gas chromatography (*2.2.28*) as described in the test for related substances with the following modifications.

*Injection*: test solution (a) and reference solution (a).

*System suitability*: reference solution (a):

– *symmetry factor*: minimum 0.6 for the principal peak.

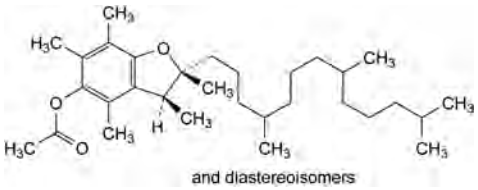
Calculate the percentage content of $C_{31}H_{52}O_3$ from the declared content of *α-tocopheryl acetate CRS*.

STORAGE

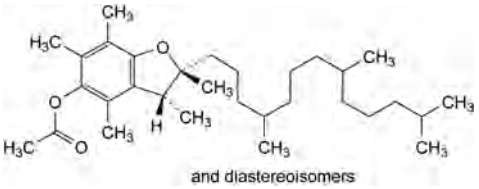
Protected from light.

IMPURITIES

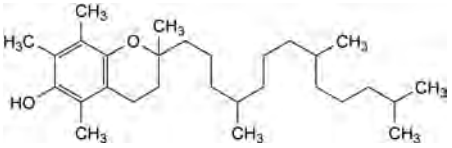
*Specified impurities: A, B, C, D, E.*



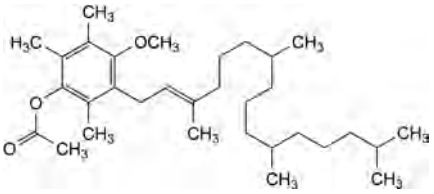
A. all-*rac-trans*-2,3,4,6,7-pentamethyl-2-(4,8,12-trimethyltridecyl)-2,3-dihydrobenzofuran-5-yl acetate,



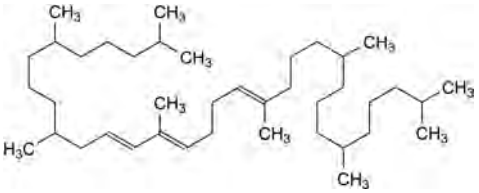
B. all-*rac-cis*-2,3,4,6,7-pentamethyl-2-(4,8,12-trimethyltridecyl)-2,3-dihydrobenzofuran-5-yl acetate,



C. all-*rac*-2,5,7,8-tetramethyl-2-(4,8,12-trimethyltridecyl)-3,4-dihydro-2*H*-1-benzopyran-6-ol (all-*rac*-α-tocopherol),



D. 4-methoxy-2,3,6-trimethyl-5-[(all-*RS*,*E*)-3,7,11,15-tetramethylhexadec-2-enyl]phenyl acetate,

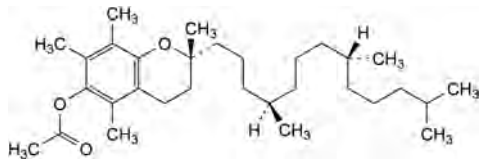


E. (all-*RS*,all-*E*)-2,6,10,14,19,23,27,31-octamethyldotriaconta-12,14,18-triene.

**04/2013:1257**
**corrected 10.0**

# *RRR*-α-TOCOPHERYL ACETATE

## *RRR*-α-Tocopherylis acetas



$C_{31}H_{52}O_3$ $M_r$ 472.7

DEFINITION

(2*R*)-2,5,7,8-Tetramethyl-2-[(4*R*,8*R*)-4,8,12-trimethyltridecyl]-3,4-dihydro-2*H*-1-benzopyran-6-yl acetate.

*Content*: 95.0 per cent to 101.0 per cent.

CHARACTERS

*Appearance*: clear, colourless or slightly greenish-yellow, viscous, oily liquid.

*Solubility*: practically insoluble in water, freely soluble in acetone, in anhydrous ethanol and in fatty oils, soluble in ethanol (96 per cent).

IDENTIFICATION

*First identification: A, B.*

*Second identification*: *A, C.*

A. Optical rotation (*2.2.7*): + 0.25° to + 0.35°.
Dissolve 2.50 g in *anhydrous ethanol R* and dilute to 25.0 mL with the same solvent.

B. Infrared absorption spectrophotometry (*2.2.24*).
*Comparison*: *α-tocopheryl acetate CRS*.

C. Thin-layer chromatography (*2.2.27*).
*Test solution (a).* Dissolve 10 mg of the substance to be examined in 2 mL of *cyclohexane R*.
*Test solution (b).* In a ground-glass stoppered tube, dissolve about 10 mg of the substance to be examined in 2 mL of *2.5 M alcoholic sulfuric acid R*. Heat on a water-bath for 5 min. Cool and add 2 mL of *water R* and 2 mL of *cyclohexane R*. Shake for 1 min. Use the upper layer.
*Reference solution (a).* Dissolve 10 mg of *α-tocopheryl acetate CRS* in 2 mL of *cyclohexane R*.
*Reference solution (b).* Prepare as described for test solution (b), using *α-tocopheryl acetate CRS* instead of the substance to be examined.
*Plate*: *TLC silica gel $F_{254}$ plate R*.
*Mobile phase*: *ether R, cyclohexane R* (20:80 *V/V*).
*Application*: 10 µL.
*Development*: over 2/3 of the plate.
*Drying*: in a current of air.
*Detection*: examine in ultraviolet light at 254 nm.
*Results*: the principal spot in the chromatogram obtained with test solution (a) is similar in position and size to the principal spot in the chromatogram obtained with reference solution (a). In the chromatograms obtained with test solution (b) and reference solution (b), there may be 2 spots depending on the degree of hydrolysis: the spot with the higher $R_F$ value is due to α-tocopheryl acetate and corresponds to the spot in the chromatogram obtained with reference solution (a); the spot with the lower $R_F$ value is due to α-tocopherol.

TESTS

**Related substances**. Gas chromatography (*2.2.28*): use the normalisation procedure.

*Internal standard solution.* Dissolve 1.0 g of *squalane R* in *cyclohexane R* and dilute to 100.0 mL with the same solvent.

# α-TOCOPHERYL ACETATE CONCENTRATE (POWDER FORM)

## α-Tocopherylis acetatis pulvis

DEFINITION

Preparation obtained either by finely dispersing *all-rac-α-Tocopheryl acetate (0439)* in a suitable carrier of suitable quality (for example gelatin, acacia, carbohydrates, lactoproteins or a mixture thereof) or by adsorbing *all-rac-α-Tocopheryl acetate (0439)* on silicic acid of suitable quality.

*Content*: 90.0 per cent to 115.0 per cent of the α-tocopheryl acetate content stated on the label, which is not less than 25 g per 100 g of concentrate.

CHARACTERS

*Appearance*: almost white, yellowish or light brown, small particles.

*Solubility*: practically insoluble or swells or forms a dispersion in water, depending on the formulation.

IDENTIFICATION

*First identification*: B.

*Second identification*: A.

A. Thin-layer chromatography (*2.2.27*).

*Test solution.* To a quantity of the preparation to be examined corresponding to 50 mg of α-tocopheryl acetate add 5 mL of *0.01 M hydrochloric acid* and treat with ultrasound at 60 °C. Add 5 mL of *anhydrous ethanol R* and 10 mL of *cyclohexane R*, shake for 1 min and centrifuge for 5 min. Use the upper layer.

*Reference solution.* Dissolve 50 mg of *α-tocopheryl acetate CRS* in *cyclohexane R* and dilute to 10 mL with the same solvent.

*Plate*: *TLC silica gel $F_{254}$ plate R.*

*Mobile phase*: *ether R*, *cyclohexane R* (20:80 *V/V*).

*Application*: 10 µL.

*Development*: 3/4 of the plate.

*Drying*: in a current of air.

*Detection*: examine in ultraviolet light at 254 nm.

*Results*: the principal spot in the chromatogram obtained with the test solution is similar in position and size to the principal spot in the chromatogram obtained with the reference solution.

B. Examine the chromatograms obtained in the assay.

*Results*:

- the principal peak in the chromatogram obtained with the test solution is similar in retention time and size to the principal peak in the chromatogram obtained with reference solution (a);
- in the chromatogram obtained with reference solution (c) no additional principal peak is observed when compared with the chromatogram obtained with the test solution.

ASSAY

Gas chromatography (*2.2.28*).

*Internal standard solution.* Dissolve 1.0 g of *squalane R* in *cyclohexane R* and dilute to 500.0 mL with the same solvent.

*Test solution.* Weigh accurately a quantity of the preparation to be examined corresponding to about 0.100 g of α-tocopheryl acetate into a 250 mL conical flask. Add 20 mL of *1 M hydrochloric acid* and sonicate at 70 °C for 20 min. Add 50 mL of *anhydrous ethanol R* and 50.0 mL of the internal standard solution. Mix thoroughly for 30 min using a magnetic stirrer. Allow the 2 layers to separate and use the upper layer.

*Reference solution (a).* Dissolve 0.100 g of *α-tocopheryl acetate CRS* in 50.0 mL of the internal standard solution.

*Reference solution (b).* Dissolve 10 mg of *α-tocopherol R* and 10 mg of *α-tocopheryl acetate CRS* in 5.0 mL of *cyclohexane R*.

*Reference solution (c).* Mix 1.0 mL of the test solution and 1.0 mL of reference solution (a).

*Column*:

- *material*: fused silica;
- *size*: *l* = 30 m, Ø = 0.25 mm;
- *stationary phase*: *methylpolysiloxane R* (film thickness 0.25 µm).

*Carrier gas*: *helium for chromatography R.*

*Flow rate*: 1 mL/min.

*Split ratio*: 1:100.

*Temperature*:

- *column*: 280 °C;
- *injection port and detector*: 290 °C.

*Detection*: flame ionisation.

*Injection*: 1 µL; inject directly onto the column or via a sufficiently inert, glass-lined injection port.

*Run time*: 1.1 times the retention time of α-tocopheryl acetate.

*Relative retention* with reference to α-tocopheryl acetate (retention time = about 12 min): squalane = about 0.5; α-tocopherol = about 0.9.

*System suitability*:

- *resolution*: minimum 3.5 between the peaks due to α-tocopherol and α-tocopheryl acetate in the chromatogram obtained with reference solution (b);
- in the chromatogram obtained with reference solution (a), the area of the peak due to α-tocopherol is not greater than 0.002 times the area of the peak due to α-tocopheryl acetate (0.2 per cent).

Calculate the percentage content of $C_{31}H_{52}O_3$ from the declared content of *α-tocopheryl acetate CRS*.

STORAGE

In an airtight, well-filled container, protected from light.

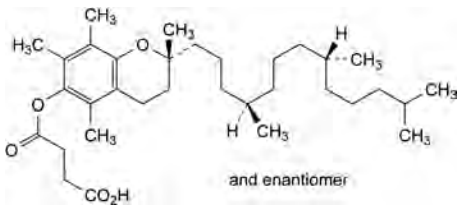
LABELLING

The label states the content of α-tocopheryl acetate, expressed in grams per 100 g of concentrate.

**01/2017:1258**
**corrected 10.0**

# DL-α-TOCOPHERYL HYDROGEN SUCCINATE

## DL-α-Tocopherylis hydrogenosuccinas



$C_{33}H_{54}O_5$ $M_r$ 530.8

DEFINITION

(2*RS*)-2,5,7,8-Tetramethyl-2-[(4*RS*,8*RS*)-4,8,12-trimethyltridecyl]-3,4-dihydro-2*H*-1-benzopyran-6-yl hydrogen succinate.

*Content*: 96.0 per cent to 102.0 per cent.

CHARACTERS

*Appearance*: white or almost white, crystalline powder.

*Solubility*: practically insoluble in water, very soluble in methylene chloride, soluble in acetone and in anhydrous ethanol.

IDENTIFICATION

*First identification: B, D.*

*Second identification: A, C, D.*

A. Absorbance (see Tests).

B. Infrared absorption spectrophotometry (*2.2.24*).

*Comparison*: *RRR-α-tocopheryl hydrogen succinate CRS*.

C. Thin-layer chromatography (*2.2.27*).

*Test solution (a).* Dissolve 10 mg of the substance to be examined in 2 mL of *cyclohexane R*.

*Test solution (b).* In a ground-glass-stoppered tube, dissolve 10 mg of the substance to be examined in 2 mL of *2.5 M alcoholic sulfuric acid R*. Heat on a water-bath for 5 min. Cool and add 2 mL of *water R* and 2 mL of *cyclohexane R*. Shake for 1 min. Use the upper layer.

*Reference solution (a).* Dissolve 10 mg of *RRR-α-tocopheryl hydrogen succinate CRS* in 2 mL of *cyclohexane R*.

*Reference solution (b).* Prepare as described for test solution (b), using *RRR-α-tocopheryl hydrogen succinate CRS* instead of the substance to be examined.

*Plate*: *TLC silica gel $F_{254}$ plate R*.

*Mobile phase*: *glacial acetic acid R*, *ether R*, *cyclohexane R* (0.2:20:80 *V/V/V*).

*Application*: 10 µL.

*Development*: over a path of 15 cm.

*Drying*: in a current of air.

*Detection A*: examine in ultraviolet light at 254 nm.

*Results A*: the principal spot in the chromatogram obtained with test solution (a) is similar in position and size to the principal spot in the chromatogram obtained with reference solution (a). In the chromatograms obtained with test solution (b) and reference solution (b), there are 2 spots: the spot with the higher $R_F$ value is due to α-tocopherol, the spot with the lower $R_F$ value is due to DL-α-tocopheryl hydrogen succinate and corresponds to the spot obtained with reference solution (a). Depending on the degree of hydrolysis, the lower spot may be weak or even absent.

*Detection B*: spray with a mixture of 10 volumes of *hydrochloric acid R*, 40 volumes of a 2.5 g/L solution of *ferric chloride R* in *ethanol (96 per cent) R* and 40 volumes of a 10 g/L solution of *phenanthroline hydrochloride R* in *ethanol (96 per cent) R*.

*Results B*: in the chromatograms obtained with test solution (b) and reference solution (b), the spot due to α-tocopherol is orange.

D. Optical rotation (see Tests).

TESTS

**Optical rotation** (*2.2.7*): − 0.01° to + 0.01°.

Dissolve 2.50 g in *anhydrous ethanol R* and dilute to 25.0 mL with the same solvent.

**Absorbance** (*2.2.25*).

*Solution A*. Dissolve 0.150 g in *anhydrous ethanol R* and dilute to 100 mL with the same solvent.

*Test solution (a).* Dilute 10.0 mL of solution A to 100.0 mL with *anhydrous ethanol R*.

*Test solution (b).* Dilute 20.0 mL of solution A to 50.0 mL with *anhydrous ethanol R*.

*Absorption maximum*: at 284 nm for test solution (a).

*Absorption minimum*: at 254 nm for test solution (b).

*Specific absorbance at the absorption maximum*: 35 to 38 for test solution (a).

*Specific absorbance at the absorption minimum*: 6.0 to 8.0 for test solution (b).

**Acid value** (*2.5.1*): 101 to 108, determined on 1.00 g.

**Free tocopherol**: maximum 1.0 per cent.

Dissolve 0.500 g in 100 mL of *0.25 M alcoholic sulfuric acid R*. Add 20 mL of *water R* and 0.1 mL of a 2.5 g/L solution of *diphenylamine R* in *sulfuric acid R*. Titrate with *0.01 M ammonium and cerium sulfate* until a blue colour is obtained that persists for at least 5 s. Carry out a blank titration.

1 mL of *0.01 M ammonium and cerium sulfate* is equivalent to 2.154 mg of free tocopherol.

**Related substances**. The thresholds indicated under Related substances (Table 2034.-1) in the general monograph *Substances for pharmaceutical use (2034)* do not apply.

**Sulfated ash** (*2.4.14*): maximum 0.1 per cent, determined on 1.0 g.

ASSAY

Gas chromatography (*2.2.28*).

*Internal standard solution.* Dissolve 0.300 g of *dotriacontane R* in *hexane R* and dilute to 100.0 mL with the same solvent.

*Test solution.* Weigh 30.0 mg of the substance to be examined into a 20 mL vial. Add 2.0 mL of *methanol R*, 1.0 mL of *dimethoxypropane R* and 0.1 mL of *hydrochloric acid R*. Cap tightly and sonicate. Allow to stand in the dark for 1 h ± 5 min. Remove from the dark, uncap and evaporate just to dryness on a steam bath with the aid of a stream of nitrogen. Add 10.0 mL of the internal standard solution. Vortex into solution.

*Reference solution.* Weigh 30.0 mg of *RRR-α-tocopheryl hydrogen succinate CRS* into a 20 mL vial. Add 2.0 mL of *methanol R*, 1.0 mL of *dimethoxypropane R* and 0.1 mL of *hydrochloric acid R*. Cap tightly and sonicate. Allow to stand in the dark for 1 h ± 5 min. Remove from the dark, uncap and evaporate just to dryness on a steam bath with the aid of a stream of nitrogen. Add 10.0 mL of the internal standard solution. Vortex into solution.

*Column*:

- *material*: fused silica;
- *size*: *l* = 15 m, Ø = 0.32 mm;
- *stationary phase*: *methylpolysiloxane R* (film thickness 0.25 µm).

*Carrier gas*: *helium for chromatography R*.

*Flow rate*: 3-6 mL/min.

*Split ratio*: 1:10 to 1:20.

*Temperature*:

| | Time (min) | Temperature (°C) |
|---|---|---|
| Column | 0 - 10 | 200 → 250 |
| | 10 - 20 | 250 |
| Injection port | | 300 |
| Detector | | 330 |

*Detection*: flame ionisation.

*Injection*: 1 µL; inject directly onto the column or via a glass-lined injection port using an automatic injection device or some other reproducible injection method.

*System suitability*: reference solution:

- *resolution*: minimum 12.0 between the peaks due to dotriacontane and DL-α-tocopheryl hydrogen succinate.

Monographs T

*Interference test.* Dissolve 0.100 g of the substance to be examined in *hexane R* and dilute to 50.0 mL with the same solvent. Inject 1 µL of the solution and record the chromatogram. If a peak is detected with the same retention time as that of the peak due to dotriacontane, calculate the area of this peak relative to the peak area of the substance to be examined. If the relative peak area is greater than 0.5 per cent, use the corrected peak area $S'_{D(corr)}$ for the final calculation.

$$S'_{D(corr)} = S'_D - \frac{S_I \times S'_T}{S_{TI}}$$

$S'_D$ = area of the peak due to dotriacontane in the chromatogram obtained with the test solution;

$S_I$ = area of the peak with the same retention time as that of the peak due to dotriacontane in the chromatogram obtained in the interference test;

$S'_T$ = area of the peak due to DL-α-tocopheryl hydrogen succinate in the chromatogram obtained with the test solution;

$S_{TI}$ = area of the peak due to DL-α-tocopheryl hydrogen succinate in the chromatogram obtained in the interference test.

Measure the areas of the peaks due to *RRR-α-tocopheryl hydrogen succinate CRS* ($S_T$) and dotriacontane ($S_D$) in the chromatogram obtained with the reference solution and the areas of the peaks due to DL-α-tocopheryl hydrogen succinate ($S'_T$) and dotriacontane ($S'_D$) in the chromatogram obtained with the test solution.

Determine the response factor (RF) for DL-α-tocopheryl hydrogen succinate from the areas of the peaks due to *RRR-α-tocopheryl hydrogen succinate CRS* and dotriacontane in the chromatogram obtained with the reference solution, using the following expression:

$$\frac{S_D \times m_T}{S_T \times m_D}$$

Calculate the percentage content of DL-α-tocopheryl hydrogen succinate using the following expression:

$$\frac{100 \times S'_T \times m_D \times RF}{S'_{D(corr)} \times m}$$

$S_D$ = area of the peak due to dotriacontane in the chromatogram obtained with the reference solution;

$S'_{D(corr)}$ = corrected area of the peak due to dotriacontane in the chromatogram obtained with the test solution;

$S_T$ = area of the peak due to *RRR-α-tocopheryl hydrogen succinate CRS* in the chromatogram obtained with the reference solution;

$S'_T$ = area of the peak due to DL-α-tocopheryl hydrogen succinate in the chromatogram obtained with the test solution;

$m_D$ = mass of dotriacontane in the test solution and in the reference solution, in milligrams;

$m_T$ = mass of *RRR-α-tocopheryl hydrogen succinate CRS* in the reference solution, in milligrams;

$m$ = mass of the substance to be examined in the test solution, in milligrams.

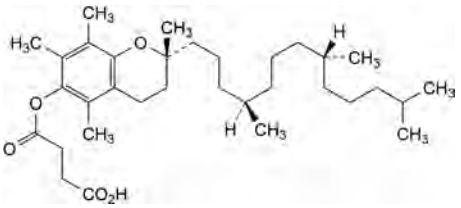
# *RRR*-α-TOCOPHERYL HYDROGEN SUCCINATE

## *RRR*-α-Tocopherylis hydrogenosuccinas



$C_{33}H_{54}O_5$ $M_r$ 530.8
[4345-03-3]

DEFINITION

(2*R*)-2,5,7,8-Tetramethyl-2-[(4*R*,8*R*)-4,8,12-trimethyltridecyl]-3,4-dihydro-2*H*-1-benzopyran-6-yl hydrogen succinate.

*Content*: 96.0 per cent to 102.0 per cent.

CHARACTERS

*Appearance*: white or almost white, crystalline powder.

*Solubility*: practically insoluble in water, very soluble in methylene chloride, soluble in acetone and in anhydrous ethanol.

IDENTIFICATION

*First identification: B, D.*

*Second identification: A, C, D.*

A. Absorbance (see Tests).

B. Infrared absorption spectrophotometry (*2.2.24*).
*Comparison*: *RRR-α-tocopheryl hydrogen succinate CRS.*

C. Thin-layer chromatography (*2.2.27*).
*Test solution (a).* Dissolve 10 mg of the substance to be examined in 2 mL of *cyclohexane R*.
*Test solution (b).* In a ground-glass-stoppered tube, dissolve 10 mg of the substance to be examined in 2 mL of *2.5 M alcoholic sulfuric acid R*. Heat on a water-bath for 5 min. Cool and add 2 mL of *water R* and 2 mL of *cyclohexane R*. Shake for 1 min. Use the upper layer.
*Reference solution (a).* Dissolve 10 mg of *RRR-α-tocopheryl hydrogen succinate CRS* in 2 mL of *cyclohexane R*.
*Reference solution (b).* Prepare as described for test solution (b), using *RRR-α-tocopheryl hydrogen succinate CRS* instead of the substance to be examined.
*Plate*: *TLC silica gel $F_{254}$ plate R.*
*Mobile phase*: *glacial acetic acid R, ether R, cyclohexane R* (0.2:20:80 *V/V/V*).
*Application*: 10 µL.
*Development*: over a path of 15 cm.
*Drying*: in a current of air.
*Detection A*: examine in ultraviolet light at 254 nm.
*Results A*: the principal spot in the chromatogram obtained with test solution (a) is similar in position and size to the principal spot in the chromatogram obtained with reference solution (a). In the chromatograms obtained with test solution (b) and reference solution (b), there are 2 spots: the spot with the higher $R_F$ value is due to α-tocopherol, the spot with the lower $R_F$ value is due to *RRR*-α-tocopheryl

Monographs T

hydrogen succinate and corresponds to the spot obtained with reference solution (a). Depending on the degree of hydrolysis, the lower spot may be weak or even absent.

*Detection B*: spray with a mixture of 10 volumes of *hydrochloric acid R*, 40 volumes of a 2.5 g/L solution of *ferric chloride R* in *ethanol (96 per cent) R* and 40 volumes of a 10 g/L solution of *phenanthroline hydrochloride R* in *ethanol (96 per cent) R*.

*Results B*: in the chromatograms obtained with test solution (b) and reference solution (b), the spot due to α-tocopherol is orange.

D. After saponification, the resulting *RRR*-α-tocopherol is dextrorotatory (*2.2.7*). The specific optical rotation after oxidation to the quinone form is not less than + 24.

*Carry out the test avoiding exposure to actinic light.* Transfer 1.0 g to a round bottomed, ground-glass-stoppered, 250 mL flask, dissolve in 30 mL of *anhydrous ethanol R* and heat under reflux for 3 min. While the solution is boiling, add, through the condenser, 20 mL of *2 M alcoholic potassium hydroxide R*. Continue heating under reflux for 20 min and, without cooling, add 4.0 mL of *hydrochloric acid R* dropwise through the condenser. Cool, rinse the condenser with 10 mL of *anhydrous ethanol R*, transfer the contents of the flask to a 500 mL separating funnel, and rinse the flask with 4 quantities, each of 25 mL, of *water R* and 4 quantities, each of 25 mL, of *ether R*. Add the rinsings to the separating funnel. Shake vigorously for 2 min, allow the layers to separate and collect each of the 2 layers in individual separating funnels. Shake the aqueous layer with 2 quantities, each of 50 mL, of *ether R* and add these extracts to the main ether extract. Wash the combined ether extracts with 4 quantities, each of 100 mL, of *water R* and discard the washings.

To the ether solution add 40 mL of a 100 g/L solution of *potassium ferricyanide R* in an 8 g/L solution of *sodium hydroxide R* and shake for 3 min. Wash the ether solution with 4 quantities, each of 50 mL, of *water R*, discard the washings and dry the ether layer over *anhydrous sodium sulfate R*. Evaporate the ether on a water-bath under reduced pressure or in an atmosphere of nitrogen until a few millilitres remain, then complete the evaporation removing the last traces of ether without the application of heat. Immediately dissolve the residue in 25.0 mL of *trimethylpentane R* and determine the optical rotation.

Calculate the specific optical rotation of the substance in the test solution using as *c* the number of grams equivalent to α-tocopherol (factor 0.811) in 1000 mL.

TESTS

**Absorbance** (*2.2.25*).

*Solution A*. Dissolve 0.150 g in *anhydrous ethanol R* and dilute to 100 mL with the same solvent.

*Test solution (a).* Dilute 10.0 mL of solution A to 100.0 mL with *anhydrous ethanol R*.

*Test solution (b).* Dilute 20.0 mL of solution A to 50.0 mL with *anhydrous ethanol R*.

*Absorption maximum*: at 284 nm for test solution (a).

*Absorption minimum*: at 254 nm for test solution (b).

*Specific absorbance at the absorption maximum*: 35 to 38 for test solution (a).

*Specific absorbance at the absorption minimum*: 6.0 to 8.0 for test solution (b).

**Acid value** (*2.5.1*): 101 to 108, determined on 1.00 g.

**Free tocopherol**: maximum 1.0 per cent.

Dissolve 0.500 g in 100 mL of *0.25 M alcoholic sulfuric acid R*. Add 20 mL of *water R* and 0.1 mL of a 2.5 g/L solution of *diphenylamine R* in *sulfuric acid R*. Titrate with *0.01 M ammonium and cerium sulfate* until a blue colour is obtained that persists for at least 5 s. Carry out a blank titration.

1 mL of *0.01 M ammonium and cerium sulfate* is equivalent to 2.154 mg of free tocopherol.

**Related substances**. The thresholds indicated under Related substances (Table 2034.-1) in the general monograph *Substances for pharmaceutical use (2034)* do not apply.

**Sulfated ash** (*2.4.14*): maximum 0.1 per cent, determined on 1.0 g.

ASSAY

Gas chromatography (*2.2.28*).

*Internal standard solution.* Dissolve 0.300 g of *dotriacontane R* in *hexane R* and dilute to 100.0 mL with the same solvent.

*Test solution.* Weigh 30.0 mg of the substance to be examined into a 20 mL vial. Add 2.0 mL of *methanol R*, 1.0 mL of *dimethoxypropane R* and 0.1 mL of *hydrochloric acid R*. Cap tightly and sonicate. Allow to stand in the dark for 1 h ± 5 min. Remove from the dark, uncap and evaporate just to dryness on a steam bath with the aid of a stream of nitrogen. Add 10.0 mL of the internal standard solution. Vortex into solution.

*Reference solution.* Weigh 30.0 mg of *RRR-α-tocopheryl hydrogen succinate CRS* into a 20 mL vial. Add 2.0 mL of *methanol R*, 1.0 mL of *dimethoxypropane R* and 0.1 mL of *hydrochloric acid R*. Cap tightly and sonicate. Allow to stand in the dark for 1 h ± 5 min. Remove from the dark, uncap and evaporate just to dryness on a steam bath with the aid of a stream of nitrogen. Add 10.0 mL of the internal standard solution. Vortex into solution.

*Column*:

- *material*: fused silica;
- *size*: *l* = 15 m, Ø = 0.32 mm;
- *stationary phase*: *methylpolysiloxane R* (film thickness 0.25 µm).

*Carrier gas*: *helium for chromatography R*.

*Flow rate*: 3-6 mL/min.

*Split ratio*: 1:10 to 1:20.

*Temperature*:

| | Time (min) | Temperature (°C) |
|---|---|---|
| Column | 0 - 10 | 200 → 250 |
| | 10 - 20 | 250 |
| Injection port | | 300 |
| Detector | | 330 |

*Detection*: flame ionisation.

*Injection*: 1 µL; inject directly onto the column or via a glass-lined injection port using an automatic injection device or some other reproducible injection method.

*System suitability*: reference solution:

- *resolution*: minimum 12.0 between the peaks due to dotriacontane and *RRR*-α-tocopheryl hydrogen succinate.

*Interference test.* Dissolve 0.100 g of the substance to be examined in *hexane R* and dilute to 50.0 mL with the same solvent. Inject 1 µL of the solution and record the chromatogram. If a peak is detected with the same retention time as that of the peak due to dotriacontane, calculate the area of this peak relative to the peak area of the substance to be examined. If the relative peak area is greater than 0.5 per cent, use the corrected peak area $S'_{D(corr)}$ for the final calculation.

$$S'_{D(corr)} = S'_D - \frac{S_I \times S'_T}{S_{TI}}$$

$S'_D$ = area of the peak due to dotriacontane in the chromatogram obtained with the test solution;

$S_I$ = area of the peak with the same retention time as that of the peak due to dotriacontane in the chromatogram obtained in the interference test;

$S'_T$ = area of the peak due to *RRR*-α-tocopheryl hydrogen succinate in the chromatogram obtained with the test solution;

$S_{TI}$ = area of the peak due to *RRR*-α-tocopheryl hydrogen succinate in the chromatogram obtained in the interference test.

Measure the areas of the peaks due to *RRR-α-tocopheryl hydrogen succinate CRS* ($S_T$) and dotriacontane ($S_D$) in the chromatogram obtained with the reference solution and the areas of the peaks due to *RRR*-α-tocopheryl hydrogen succinate ($S'_T$) and dotriacontane ($S'_D$) in the chromatogram obtained with the test solution.

Determine the response factor (RF) for *RRR*-α-tocopheryl hydrogen succinate from the areas of the peaks due to *RRR-α-tocopheryl hydrogen succinate CRS* and dotriacontane in the chromatogram obtained with the reference solution, using the following expression:

$$\frac{S_D \times m_T}{S_T \times m_D}$$

Calculate the percentage content of *RRR*-α-tocopheryl hydrogen succinate using the following expression:

$$\frac{100 \times S'_T \times m_D \times RF}{S'_{D(corr)} \times m}$$

$S_D$ = area of the peak due to dotriacontane in the chromatogram obtained with the reference solution;

$S'_{D(corr)}$ = corrected area of the peak due to dotriacontane in the chromatogram obtained with the test solution;

$S_T$ = area of the peak due to *RRR-α-tocopheryl hydrogen succinate CRS* in the chromatogram obtained with the reference solution;

$S'_T$ = area of the peak due to *RRR*-α-tocopheryl hydrogen succinate in the chromatogram obtained with the test solution;

$m_D$ = mass of dotriacontane in the test solution and in the reference solution, in milligrams;

$m_T$ = mass of *RRR-α-tocopheryl hydrogen succinate CRS* in the reference solution, in milligrams;

$m$ = mass of the substance to be examined in the test solution, in milligrams.

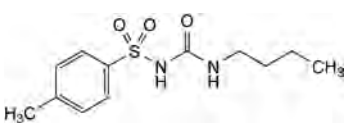
# TOLBUTAMIDE

## Tolbutamidum



$C_{12}H_{18}N_2O_3S$ $M_r$ 270.3

[64-77-7]

DEFINITION

1-Butyl-3-[(4-methylphenyl)sulfonyl]urea.

*Content*: 99.0 per cent to 101.0 per cent (dried substance).

CHARACTERS

*Appearance*: white or almost white, crystalline powder.

*Solubility*: practically insoluble in water, soluble in acetone and in ethanol (96 per cent). It dissolves in dilute solutions of alkali hydroxides.

IDENTIFICATION

*First identification: A, C.*

*Second identification: A, B, D.*

A. Melting point (*2.2.14*): 126 °C to 130 °C.

B. Ultraviolet and visible absorption spectrophotometry (*2.2.25*).

*Test solution (a).* Dissolve 25.0 mg in *methanol R* and dilute to 100.0 mL with the same solvent.

*Test solution (b).* Dilute 10.0 mL of test solution (a) to 250.0 mL with *methanol R*.

*Spectral range*: 245-300 nm for test solution (a); 220-235 nm for test solution (b).

*Absorption maxima*: at 258 nm, 263 nm and 275 nm for test solution (a); at 228 nm for test solution (b).

*Shoulder*: at 268 nm for test solution (a).

*Specific absorbance at the absorption maximum*: 480 to 520 for test solution (b).

C. Infrared absorption spectrophotometry (*2.2.24*).

*Comparison*: *tolbutamide CRS*.

D. To 0.2 g add 8 mL of a 500 g/L solution of *sulfuric acid R* and heat under a reflux condenser for 30 min. Allow to cool. Crystals are formed which, after recrystallisation from hot *water R* and drying at 105 °C, melt (*2.2.14*) at 135 °C to 140 °C.

TESTS

**Appearance of solution**. The solution is clear (*2.2.1*) and colourless (*2.2.2, Method II*).

Dissolve 0.2 g in 5 mL of *dilute sodium hydroxide solution R* and add 5 mL of *water R*.

**pH** (*2.2.3*): 4.5 to 5.5.

To 2.0 g add 50 mL of *carbon dioxide-free water R* and heat at 70 °C for 5 min. Cool rapidly and filter.

**Related substances**. Liquid chromatography (*2.2.29*). *Prepare the solutions immediately before use.*

*Test solution*. Dissolve 50 mg of the substance to be examined in the mobile phase and dilute to 50.0 mL with the mobile phase.

*Reference solution (a).* Dilute 1.0 mL of the test solution to 100.0 mL with the mobile phase. Dilute 1.0 mL of this solution to 10.0 mL with the mobile phase.

*Reference solution (b).* Dissolve 10 mg of *toluenesulfonamide R* (impurity A) and 10 mg of *toluenesulfonylurea R* (impurity B) in the mobile phase and dilute to 10.0 mL with the mobile phase. Dilute 1.0 mL of this solution to 100.0 mL with the mobile phase.

*Column*:

– *size*: *l* = 0.25 m, Ø = 4.6 mm;

– *stationary phase*: *end-capped octadecylsilyl silica gel for chromatography R* (5 µm).

*Mobile phase*: mix 35 volumes of *acetonitrile R1* and 65 volumes of a 1.36 g/L solution of *potassium dihydrogen phosphate R* adjusted to pH 3.5 with *phosphoric acid R*.

*Flow rate*: 1.5 mL/min.

*Detection*: spectrophotometer at 230 nm.

*Injection*: 20 µL.

*Run time*: 1.5 times the retention time of tolbutamide.

*Identification of impurities*: use the chromatogram obtained with reference solution (b) to identify the peak due to impurities A and B.

*Relative retention* with reference to tolbutamide (retention time = about 18 min): impurity B = about 0.2; impurity A = about 0.3.

*System suitability*: reference solution (b):

– *resolution*: minimum 2.0 between the peaks due to impuritites A and B.

*Limits*:

– *unspecified impurities*: for each impurity, not more than the area of the principal peak in the chromatogram obtained with reference solution (a) (0.10 per cent);

– *total*: not more than 3 times the area of the principal peak in the chromatogram obtained with reference solution (a) (0.3 per cent);

– *disregard limit*: 0.5 times the area of the principal peak in the chromatogram obtained with reference solution (a) (0.05 per cent).

**Loss on drying** (*2.2.32*): maximum 0.5 per cent, determined on 1.000 g by drying in an oven at 105 °C.

**Sulfated ash** (*2.4.14*): maximum 0.1 per cent, determined on 1.0 g.

ASSAY

Dissolve 0.250 g in a mixture of 20 mL of *water R* and 40 mL of *ethanol (96 per cent) R*. Titrate with *0.1 M sodium hydroxide*, using 1 mL of *phenolphthalein solution R* as indicator.

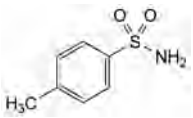
1 mL of *0.1 M sodium hydroxide* is equivalent to 27.03 mg of $C_{12}H_{18}N_2O_3S$.

STORAGE

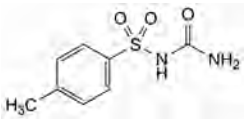
In an airtight container.

IMPURITIES

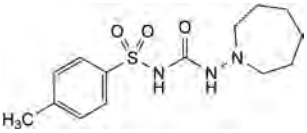
*Other detectable impurities* (the following substances would, if present at a sufficient level, be detected by one or other of the tests in the monograph. They are limited by the general acceptance criterion for other/unspecified impurities and/or by the general monograph *Substances for pharmaceutical use (2034)*. It is therefore not necessary to identify these impurities for demonstration of compliance. See also *5.10. Control of impurities in substances for pharmaceutical use*): *A, B, C.*



A. (4-methylphenyl)sulfonamide (toluenesulfonamide),



B. 1-[(4-methylphenyl)sulfonyl]urea (toluenesulfonylurea),

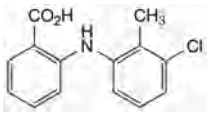


C. 1-azepan-1-yl-3-[(4-methylphenyl)sulfonyl]urea (tolazamide).

**07/2019:2039**

# TOLFENAMIC ACID

## Acidum tolfenamicum



$C_{14}H_{12}ClNO_2$ $M_r$ 261.7
[13710-19-5]

DEFINITION

2-(3-Chloro-2-methylanilino)benzoic acid.

*Content*: 99.0 per cent to 101.0 per cent (dried substance).

CHARACTERS

*Appearance*: white or slightly yellow, crystalline powder.

*Solubility*: practically insoluble in water, soluble in dimethylformamide, sparingly soluble in anhydrous ethanol and in methylene chloride. It dissolves in dilute solutions of alkali hydroxides.

mp: about 213 °C.

IDENTIFICATION

*First identification: B.*

*Second identification: A, C.*

A. Dissolve 20 mg in a mixture of 1 volume of *1 M hydrochloric acid* and 99 volumes of *methanol R* and dilute to 100 mL with the same mixture of solvents. Dilute 5.0 mL of the solution to 50 mL with a mixture of 1 volume of *1 M hydrochloric acid* and 99 volumes of *methanol R*. Examined between 250 nm and 380 nm (*2.2.25*), the solution shows 2 absorption maxima, at 286 nm and 345 nm. The ratio of the absorbance measured at the maximum at 286 nm to that measured at the maximum at 345 nm is 1.2 to 1.4.

B. Infrared absorption spectrophotometry (*2.2.24*).
*Comparison*: *tolfenamic acid CRS*.

C. Thin-layer chromatography (*2.2.27*).
*Test solution*. Dissolve 25 mg of the substance to be examined in a mixture of 1 volume of *methanol R* and 3 volumes of *methylene chloride R* and dilute to 10 mL with the same mixture of solvents.
*Reference solution*. Dissolve 25 mg of *tolfenamic acid CRS* in a mixture of 1 volume of *methanol R* and 3 volumes of *methylene chloride R* and dilute to 10 mL with the same mixture of solvents.
*Plate*: *TLC silica gel* $GF_{254}$ *plate R*.
*Mobile phase*: *glacial acetic acid R*, *dioxan R*, *toluene R* (1:25:90 *V/V/V*).
*Application*: 10 µL.
*Development*: over 2/3 of the plate.
*Drying*: in a current of warm air.
*Detection*: ultraviolet light at 254 nm.
*Results*: the principal spot in the chromatogram obtained with the test solution is similar in position, colour and size to the principal spot in the chromatogram obtained with the reference solution.

TESTS

**Related substances**. Liquid chromatography (*2.2.29*).

*Test solution*. Dissolve 50.0 mg of the substance to be examined in 5 mL of *anhydrous ethanol R* and dilute to 50.0 mL with the mobile phase.

Monographs T

*Reference solution (a).* Dissolve 25.0 mg of *2-chlorobenzoic acid R* (impurity A) and 25.0 mg of *3-chloro-2-methylaniline R* (impurity B) in 5 mL of *anhydrous ethanol R* and dilute to 50.0 mL with the mobile phase. Dilute 1.0 mL of the solution to 50.0 mL with the mobile phase. Dilute 1.0 mL of this solution to 10.0 mL with the mobile phase.

*Reference solution (b).* Dilute 1.0 mL of the test solution to 10.0 mL with the mobile phase. Dilute 1.0 mL of this solution to 100.0 mL with the mobile phase.

*Column*:

- *size*: *l* = 0.25 m, Ø = 4.6 mm;
- *stationary phase*: *end-capped octadecylsilyl silica gel for chromatography R* (5 µm).

*Mobile phase*: *glacial acetic acid R*, *water for chromatography R*, *anhydrous ethanol R* (0.2:35:65 *V/V/V*).

*Flow rate*: 0.8 mL/min.

*Detection*: spectrophotometer at 232 nm.

*Injection*: 20 µL.

*Run time*: 3 times the retention time of tolfenamic acid.

*Relative retention* with reference to tolfenamic acid (retention time = about 15 min): impurity A = about 0.25; impurity B = about 0.34.

*System suitability*: reference solution (a):

- *resolution*: minimum 2.5 between the peaks due to impurity A and to impurity B.

*Limits*:

- *impurity A*: not more than the area of the corresponding peak in the chromatogram obtained with reference solution (a) (0.1 per cent);
- *impurity B*: not more than half the area of the corresponding peak in the chromatogram obtained with reference solution (a) (0.05 per cent);
- *unspecified impurities*: for each impurity, not more than the area of the principal peak in the chromatogram obtained with reference solution (b) (0.10 per cent);
- *total*: not more than 5 times the area of the principal peak in the chromatogram obtained with reference solution (b) (0.5 per cent);
- *disregard limit*: 0.1 times the area of the principal peak in the chromatogram obtained with reference solution (b) (0.01 per cent).

**Loss on drying** (*2.2.32*): maximum 0.5 per cent, determined on 1.000 g by drying in an oven at 105 °C.

**Sulfated ash** (*2.4.14*): maximum 0.1 per cent, determined on 1.0 g.

ASSAY

Dissolve 0.200 g with the aid of ultrasound in 100 mL of *anhydrous ethanol R*. Add 0.1 mL of *phenol red solution R* and titrate with *0.1 M sodium hydroxide*.

1 mL of *0.1 M sodium hydroxide* is equivalent to 26.17 mg of $C_{14}H_{12}ClNO_2$.

STORAGE

Protected from light.

IMPURITIES

*Specified impurities: A, B.*

*Other detectable impurities* (the following substances would, if present at a sufficient level, be detected by one or other of the tests in the monograph. They are limited by the general acceptance criterion for other/unspecified impurities and/or by the general monograph *Substances for pharmaceutical use (2034)*. A. 2-chlorobenzoic acid,

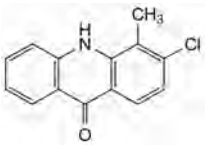
B. 3-chloro-2-methylaniline,

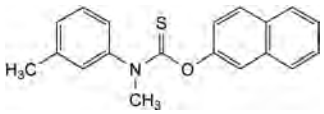


C. 3-chloro-4-methylacridin-9(10*H*)-one.

**04/2011:1158**

# TOLNAFTATE

## Tolnaftatum



$C_{19}H_{17}NOS$ $M_r$ 307.4
[2398-96-1]

DEFINITION

*O*-Naphthalen-2-yl methyl(3-methylphenyl)carbamothioate.

*Content*: 97.0 per cent to 103.0 per cent (dried substance).

CHARACTERS

*Appearance*: white or yellowish-white powder.

*Solubility*: practically insoluble in water, freely soluble in acetone and in methylene chloride, very slightly soluble in ethanol (96 per cent).

IDENTIFICATION

Infrared absorption spectrophotometry (*2.2.24*).

*Comparison*: *tolnaftate CRS*.

TESTS

**Impurity D**. Liquid chromatography (*2.2.29*).

*Test solution.* Dissolve 0.400 g of the substance to be examined in 2 mL of *methylene chloride R*. Extract with 3 quantities, each of 3 mL, of *0.01 M hydrochloric acid*. Combine the aqueous phases and dilute to 10.0 mL with *0.01 M hydrochloric acid*.

*Reference solution (a).* Dissolve 20.0 mg of *N-methyl-m-toluidine R* (impurity D) in 50.0 mL of *methylene chloride R*.

*Reference solution (b).* Dilute 1.0 mL of reference solution (a) to 100.0 mL with *methylene chloride R*. Take 2.0 mL of this solution and extract with 3 quantities, each of 3 mL, of *0.01 M hydrochloric acid*. Combine the aqueous phases and dilute to 10.0 mL with *0.01 M hydrochloric acid*.

*Reference solution (c).* Dissolve 10 mg of the substance to be examined in 25 mL of *methanol R*. Add 2 mL of this solution to 2 mL of reference solution (a) and dilute to 25 mL with *methanol R*.

*Column*:

- *size*: *l* = 0.15 m, Ø = 4.6 mm;

– *stationary phase*: *octadecylsilyl silica gel for chromatography R* (5 µm).

*Mobile phase*:

– *mobile phase A*: *trifluoroacetic acid R*, *methanol R*, *water R* (0.1:10:90 *V/V/V*);

– *mobile phase B*: *trifluoroacetic acid R*, *water R*, *methanol R* (0.1:10:90 *V/V/V*);

| Time (min) | Mobile phase A (per cent *V/V*) | Mobile phase B (per cent *V/V*) |
|---|---|---|
| 0 - 3 | 70 | 30 |
| 3 - 8 | 70 → 0 | 30 → 100 |
| 8 - 20 | 0 | 100 |

*Flow rate*: 1.0 mL/min.

*Detection*: spectrophotometer at 254 nm.

*Injection*: 100 µL of the test solution and reference solution (b); 10 µL of reference solution (c).

*Relative retention* with reference to tolnaftate (retention time = about 15 min): impurity D = about 0.25.

*System suitability*:

– *resolution*: minimum 5.0 between the peaks due to impurity D and tolnaftate in the chromatogram obtained with reference solution (c);

– *symmetry factor*: maximum 1.9 for the peak due to impurity D in the chromatogram obtained with reference solution (b).

*Limit*:

– *impurity D*: not more than the area of the principal peak in the chromatogram obtained with reference solution (b) (20 ppm).

**Related substances**. Liquid chromatography (*2.2.29*).

*Test solution.* Dissolve 25 mg of the substance to be examined in 5 mL of *methanol R* and dilute to 25.0 mL with the same solvent.

*Reference solution (a).* Dilute 1.0 mL of the test solution to 100.0 mL with *methanol R*. Dilute 1.0 mL of this solution to 10.0 mL with *methanol R*.

*Reference solution (b).* Dissolve 5 mg of *tolnaftate for system suitability CRS* (containing resolution component A) in 5.0 mL of *methanol R*.

*Column*:

– *size*: *l* = 0.15 m, Ø = 4.6 mm;

– *stationary phase*: *octadecylsilyl silica gel for chromatography R* (5 µm).

*Mobile phase*:

– *mobile phase A*: *trifluoroacetic acid R*, *water R*, *methanol R* (0.1:30:70 *V/V/V*);

– *mobile phase B*: *trifluoroacetic acid R*, *water R*, *methanol R* (0.1:10:90 *V/V/V*);

| Time (min) | Mobile phase A (per cent *V/V*) | Mobile phase B (per cent *V/V*) |
|---|---|---|
| 0 - 12 | 100 | 0 |
| 12 - 30 | 100 → 0 | 0 → 100 |
| 30 - 33 | 0 | 100 |

*Flow rate*: 1.0 mL/ min.

*Detection*: spectrophotometer at 254 nm.

*Injection*: 10 µL.

*Relative retention* with reference to tolnaftate (retention time = about 18 min): resolution component A = about 0.7.

*System suitability*: reference solution (b):

– *resolution*: minimum 5.0 between the peaks due to resolution component A and tolnaftate.

*Limits*:

– *unspecified impurities*: for each impurity, not more than the area of the principal peak in the chromatogram obtained with reference solution (a) (0.10 per cent);

– *total*: not more than twice the area of the principal peak in the chromatogram obtained with reference solution (a) (0.2 per cent);

– *disregard limit*: 0.5 times the area of the principal peak in the chromatogram obtained with reference solution (a) (0.05 per cent).

**Loss on drying** (*2.2.32*): maximum 0.5 per cent, determined on 1.000 g by drying at 60 °C at a pressure not exceeding 0.7 kPa for 3 h.

**Sulfated ash** (*2.4.14*): maximum 0.1 per cent, determined on 1.0 g.

ASSAY

Dissolve 50.0 mg in *methanol R* and dilute to 250.0 mL with the same solvent. Dilute 2.0 mL of this solution to 50.0 mL with *methanol R*. Measure the absorbance (*2.2.25*) at the absorption maximum at 257 nm.

Calculate the content of $C_{19}H_{17}NOS$ taking the specific absorbance to be 720.

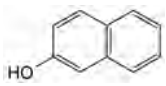
STORAGE

Protected from light.

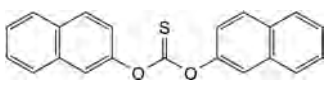
IMPURITIES

*Specified impurities: D.*

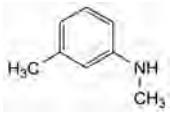
*Other detectable impurities* (the following substances would, if present at a sufficient level, be detected by one or other of the tests in the monograph. They are limited by the general acceptance criterion for other/unspecified impurities and/or by the general monograph *Substances for pharmaceutical use (2034)*. It is therefore not necessary to identify these impurities for demonstration of compliance. See also *5.10. Control of impurities in substances for pharmaceutical use*): *A, B.*



A. naphthalen-2-ol (β-naphthol),



B. *O*,*O*-dinaphthalen-2-yl carbonothioate,



D. *N*,3-dimethylaniline (*N*-methyl-*m*-toluidine).

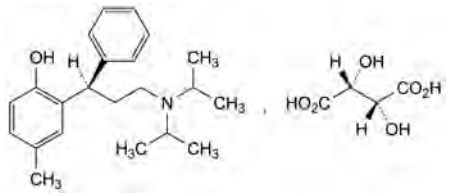
# TOLTERODINE TARTRATE

## Tolterodini tartras



$C_{26}H_{37}NO_7$ $M_r$ 475.6
[124937-52-6]

DEFINITION

2-[(1*R*)-3-[Bis(1-methylethyl)amino]-1-phenylpropyl]-4-methylphenol (2*R*,3*R*)-2,3-dihydroxybutanedioate.

*Content*: 99.0 per cent to 101.0 per cent (dried substance).

CHARACTERS

*Appearance*: white or almost white, crystalline powder.

*Solubility*: sparingly soluble in water, slightly soluble in anhydrous ethanol, practically insoluble in heptane.

IDENTIFICATION

A. Infrared absorption spectrophotometry (*2.2.24*).
*Comparison*: *tolterodine tartrate CRS*.

B. Enantiomeric purity (see Tests).

C. It gives reaction (b) of tartrates (*2.3.1*).

TESTS

**Enantiomeric purity**. Liquid chromatography (*2.2.29*).

*Solution A*. Dissolve 0.29 g of *sodium dihydrogen phosphate monohydrate R* and 0.47 g of *disodium hydrogen phosphate dihydrate R* in 1 L of *water R*. Dissolve 1.04 g of *tetrabutylammonium bromide R* in this solution.

*Test solution*. Dissolve 4.0 mg of the substance to be examined in the mobile phase and dilute to 100.0 mL with the mobile phase.

*Reference solution (a)*. Dissolve 2 mg of *tolterodine for system suitability CRS* (containing impurity F) in the mobile phase and dilute to 50.0 mL with the mobile phase.

*Reference solution (b)*. Dilute 0.5 mL of the test solution to 100.0 mL with the mobile phase.

*Column*:

– *size*: *l* = 0.10 m, Ø = 2 mm;
– *stationary phase*: *α1-acid-glycoprotein silica gel for chiral separation R* (5 µm).

*Mobile phase*: *2-methylpropanol R*, solution A (7:93 *V/V*).

*Flow rate*: 0.2 mL/min.

*Detection*: spectrophotometer at 220 nm.

*Injection*: 20 µL.

*Run time*: 1.5 times the retention time of tolterodine.

*Relative retention* with reference to tolterodine (retention time = about 23 min): impurity F = about 0.9.

*System suitability*: reference solution (a):

– *peak-to-valley ratio*: minimum 2.5, where $H_p$ = height above the baseline of the peak due to impurity F and $H_v$ = height above the baseline of the lowest point of the curve separating this peak from the peak due to tolterodine.

*Calculation of percentage content*:

– for impurity F, use the concentration of tolterodine tartrate in reference solution (b).

*Limit*:

– *impurity F*: maximum 0.6 per cent.

**Related substances**. Liquid chromatography (*2.2.29*).

*Test solution*. Dissolve 25 mg of the substance to be examined in 10 mL of *methanol R1*, sonicate until dissolution is complete and dilute to 25.0 mL with *methanol R1*.

*Reference solution (a)*. Dilute 1.0 mL of the test solution to 100.0 mL with *methanol R1*. Dilute 1.0 mL of this solution to 10.0 mL with *methanol R1*.

*Reference solution (b)*. Dissolve 2 mg of *tolterodine impurity E CRS* in *methanol R1* and dilute to 10.0 mL with *methanol R1*. Dilute 1.0 mL of the solution to 20.0 mL with *methanol R1*.

*Reference solution (c)*. Dissolve 25 mg of the substance to be examined in 10 mL of *methanol R1*. Sonicate until dissolution is complete. Add 5 mL of reference solution (b) and dilute to 25.0 mL with *methanol R1*.

*Column*:

– *size*: *l* = 0.25 m, Ø = 4.6 mm;
– *stationary phase*: *base-deactivated end-capped octadecylsilyl silica gel for chromatography R* (5 µm).

*Mobile phase*:

– *mobile phase A*: mix 5 volumes of *triethylamine R2* and 450 volumes of a 2.88 g/L solution of *ammonium dihydrogen phosphate R*; adjust to pH 5.9 with a 50 per cent *V/V* solution of *phosphoric acid R*; add 550 volumes of *methanol R1*;
– *mobile phase B*: *methanol R1*;

| Time (min) | Mobile phase A (per cent *V/V*) | Mobile phase B (per cent *V/V*) |
|---|---|---|
| 0 - 25 | 100 | 0 |
| 25 - 45 | 100 → 80 | 0 → 20 |

*Flow rate*: 1.5 mL/min.

*Detection*: spectrophotometer at 220 nm.

*Injection*: 20 µL of the test solution and reference solutions (a) and (c).

*Identification of impurities*: use the chromatogram obtained with reference solution (c) to identify the peak due to impurity E.

*Relative retention* with reference to tolterodine (retention time = about 7 min): tartaric acid = about 0.2; impurity E = about 0.9.

*System suitability*: reference solution (c):

– *resolution*: minimum 1.5 between the peaks due to impurity E and tolterodine.

*Calculation of percentage contents*:

– for each impurity, use the concentration of tolterodine tartrate in reference solution (a).

*Limits*:

– *unspecified impurities*: for each impurity, maximum 0.10 per cent;
– *total*: maximum 0.3 per cent;
– *reporting threshold*: 0.05 per cent; disregard the peak due to tartaric acid.

**Loss on drying** (*2.2.32*): maximum 0.5 per cent, determined on 1.000 g by drying in an oven at 105 °C for 3 h.

**Sulfated ash** (*2.4.14*): maximum 0.1 per cent, determined on 1.0 g.

ASSAY

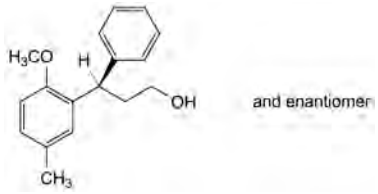
Dissolve 0.400 g in 30.0 mL of *anhydrous acetic acid R* and sonicate until dissolution is complete. Titrate with *0.1 M perchloric acid*, determining the end-point potentiometrically (*2.2.20*).

1 mL of *0.1 M perchloric acid* is equivalent to 47.56 mg of $C_{26}H_{37}NO_7$.

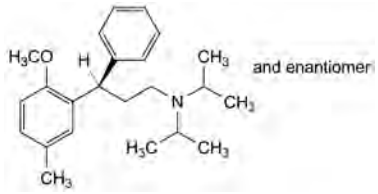
IMPURITIES

*Specified impurities: F.*

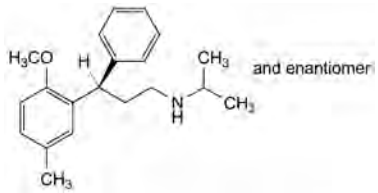
*Other detectable impurities* (the following substances would, if present at a sufficient level, be detected by one or other of the tests in the monograph. They are limited by the general acceptance criterion for other/unspecified impurities and/or by the general monograph *Substances for pharmaceutical use (2034)*. It is therefore not necessary to identify these impurities for demonstration of compliance. See also *5.10. Control of impurities in substances for pharmaceutical use*): *A, C, D, E, G.*



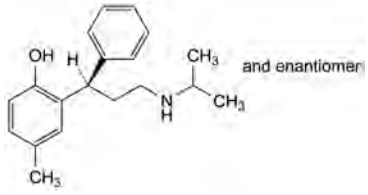
A. (3*RS*)-3-(2-methoxy-5-methylphenyl)-3-phenylpropan-1-ol,



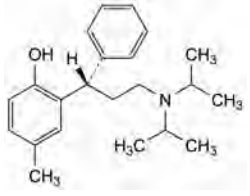
C. (3*RS*)-3-(2-methoxy-5-methylphenyl)-*N*,*N*-bis(1-methylethyl)-3-phenylpropan-1-amine,



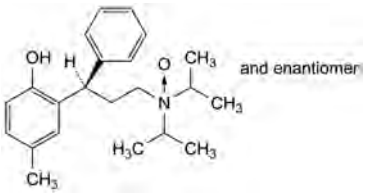
D. (3*RS*)-3-(2-methoxy-5-methylphenyl)-*N*-(1-methylethyl)-3-phenylpropan-1-amine,



E. 4-methyl-2-[(1*RS*)-3-[(1-methylethyl)amino]-1-phenylpropyl]phenol,



F. 2-[(1*S*)-3-[bis(1-methylethyl)amino]-1-phenylpropyl]-4-methylphenol,



G. 2-[(1*R*)-3-[bis(1-methylethyl)amino]-1-phenylpropyl]-4-methylphenol *N*-oxide.

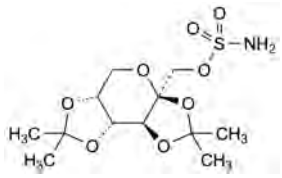
# TOPIRAMATE

## Topiramatum



$C_{12}H_{21}NO_8S$ $M_r$ 339.4

[97240-79-4]

DEFINITION

2,3:4,5-Bis-*O*-(propan-2,2-diyl)-β-D-fructopyranose 1-sulfamate.

*Content*: 98.0 per cent to 102.0 per cent (anhydrous substance).

CHARACTERS

*Appearance*: white or almost white, crystalline powder.

*Solubility*: slightly soluble in water, freely soluble in methanol and in methylene chloride.

IDENTIFICATION

Infrared absorption spectrophotometry (*2.2.24*).

*Comparison*: *topiramate CRS.*

TESTS

**Specific optical rotation** (*2.2.7*): − 32 to − 29 (anhydrous substance).

Dissolve 0.200 g in *methanol R* and dilute to 50.0 mL with the same solvent.

**Impurity A**. Thin-layer chromatography (*2.2.27*).

*Test solution*. Dissolve 40.0 mg of the substance to be examined in 1.0 mL of *methanol R*.

*Reference solution (a)*. Dissolve 10.0 mg of *topiramate impurity A CRS* in *methanol R* and dilute to 50.0 mL with the same solvent. Dilute 2.0 mL of the solution to 5.0 mL with *methanol R*.

*Reference solution (b)*. Dissolve 40 mg of the substance to be examined in 1 mL of reference solution (a).

*Plate*: *TLC silanised silica gel plate R*.

*Pretreatment*: wash the plate with *methanol R* and allow to dry in air.

*Mobile phase*: *methanol R*, *acetonitrile R*, 29 g/L solution of *sodium chloride R* (15:35:50 *V/V/V*).

*Application*: 5 µL.

*Development*: over 2/3 of the plate.

*Drying*: in air.

*Detection*: spray with a solution prepared by dissolving 3 g of *phenol R* in 95 mL of *ethanol (96 per cent) R* and carefully adding 5 mL of *sulfuric acid R*; allow to dry in air, then heat at 125 °C for 10 min. Use transmittance mode.

Monographs T

*Retardation factors*: topiramate = about 0.43; impurity A = about 0.55.

*System suitability*:

– the chromatogram obtained with reference solution (b) shows 2 clearly separated spots due to topiramate and impurity A.

*Limit*:

– *impurity A*: any spot due to impurity A is not more intense than the corresponding spot in the chromatogram obtained with reference solution (a) (0.2 per cent).

**Related substances**. Liquid chromatography (*2.2.29*).

*Solvent mixture*: *acetonitrile R1*, mobile phase A (20:80 *V/V*).

*Test solution (a).* Dissolve 50.0 mg of the substance to be examined in the solvent mixture and dilute to 10.0 mL with the solvent mixture.

*Test solution (b).* Dilute 1.0 mL of test solution (a) to 20.0 mL with the solvent mixture. Dilute 5.0 mL of this solution to 50.0 mL with the solvent mixture.

*Reference solution (a).* Dilute 1.0 mL of test solution (a) to 100.0 mL with the solvent mixture. Dilute 1.0 mL of this solution to 10.0 mL with the solvent mixture.

*Reference solution (b).* Dissolve 15.0 mg of *topiramate impurity E CRS* in the solvent mixture and dilute to 50.0 mL with the solvent mixture. Dilute 5.0 mL of the solution to 200.0 mL with the solvent mixture.

*Reference solution (c).* Dissolve 5 mg of the substance to be examined in 1 mL of a mixture of 2 volumes of *acetonitrile R1*, 4 volumes of *water for chromatography R* and 4 volumes of *anhydrous formic acid R*. Incubate at 60 °C for 30 min (*in situ* preparation of impurity C). Dilute 20 µL of the solution to 1 mL with a 25 mg/L solution of *fructose R* (impurity E).

*Reference solution (d).* Dissolve 25.0 mg of *topiramate CRS* in 10.0 mL of the solvent mixture and dilute to 100.0 mL with the solvent mixture. Dilute 5.0 mL of the solution to 50.0 mL with the solvent mixture.

*Column*:

– *size*: *l* = 0.10 m, Ø = 4.6 mm;
– *stationary phase*: *end-capped solid core pentafluorophenylpropylsilyl silica gel for chromatography R* (2.6 µm);
– *temperature*: 40 °C.

*Mobile phase*:

– *mobile phase A*: 1.93 g/L solution of *ammonium acetate R* adjusted to pH 3.5 with *glacial acetic acid R*;
– *mobile phase B*: *acetonitrile R1*;

| Time (min) | Mobile phase A (per cent *V/V*) | Mobile phase B (per cent *V/V*) |
|---|---|---|
| 0 - 5 | 80 | 20 |
| 5 - 15 | 80 → 50 | 20 → 50 |
| 15 - 15.1 | 50 → 80 | 50 → 20 |

*Flow rate*: 1.0 mL/min.

*Detection*: charged aerosol detector:

– *range*: 100 pA;
– *filter*: none.

*Injection*: 20 µL of test solution (a) and reference solutions (a), (b) and (c).

*Identification of impurities*: use the chromatogram obtained with reference solution (b) to identify the peak due to impurity E.

*Relative retention* with reference to topiramate (retention time = about 5.6 min): impurity E = about 0.18; impurity C = about 0.25.

*System suitability*: reference solution (c):

– *resolution*: minimum 4.5 between the peaks due to impurities E and C.

*Calculation of percentage contents*:

– for impurity E, use the concentration of impurity E in reference solution (b) and the height of the peak due to impurity E;
– for impurities other than E, use the concentration of topiramate in reference solution (a).

*Limits*:

– *impurity E*: maximum 0.15 per cent;
– *unspecified impurities*: for each impurity, maximum 0.10 per cent;
– *total*: maximum 0.2 per cent;
– *reporting threshold*: 0.05 per cent.

**Water** (*2.5.12*): maximum 0.5 per cent, determined on 1.000 g.

**Sulfated ash** (*2.4.14*): maximum 0.1 per cent, determined on 1.0 g.

ASSAY

Liquid chromatography (*2.2.29*) as described in the test for related substances with the following modifications.

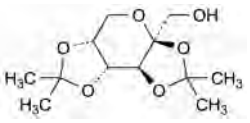
*Injection*: test solution (b) and reference solution (d).

Calculate the percentage content of $C_{12}H_{21}NO_8S$ taking into account the assigned content of *topiramate CRS*.

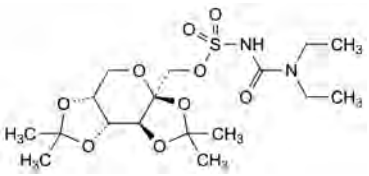
IMPURITIES

*Specified impurities: A, E.*

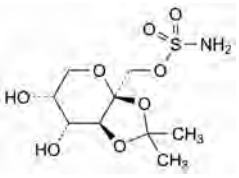
*Other detectable impurities* (the following substances would, if present at a sufficient level, be detected by one or other of the tests in the monograph. They are limited by the general acceptance criterion for other/unspecified impurities and/or by the general monograph *Substances for pharmaceutical use (2034)*. It is therefore not necessary to identify these impurities for demonstration of compliance. See also *5.10. Control of impurities in substances for pharmaceutical use*): *B, C, D.*



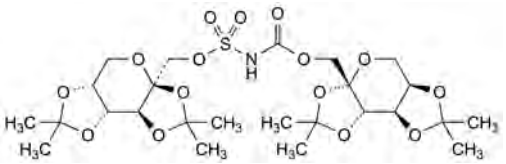
A. 2,3:4,5-bis-*O*-(propan-2,2-diyl)-β-D-fructopyranose,



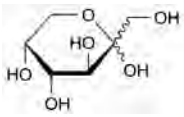
B. 2,3:4,5-bis-*O*-(propan-2,2-diyl)-β-D-fructopyranose 1-[*N*-(diethylcarbamoyl)sulfamate],



C. 2,3-*O*-(propan-2,2-diyl)-β-D-fructopyranose 1-sulfamate,



D. 2,3:4,5-bis-*O*-(propan-2,2-diyl)-β-D-fructopyranose 1-[*N*-[[[2,3:4,5-bis-*O*-(propan-2,2-diyl)-β-D-fructopyranosyl]oxy]carbamoyl]sulfamate],



E. D-fructopyranose (fructose).

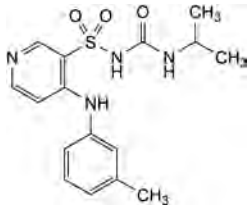
# TORASEMIDE

## Torasemidum



$C_{16}H_{20}N_4O_3S$ $M_r$ 348.4
[56211-40-6]

DEFINITION

1-(1-Methylethyl)-3-[[4-[(3-methylphenyl)amino]pyridin-3-yl]sulfonyl]urea.

*Content*: 99.0 per cent to 101.0 per cent (dried substance).

CHARACTERS

*Appearance*: white or almost white powder.

*Solubility*: practically insoluble in water, slightly soluble in ethanol (96 per cent). It is sparingly soluble in dilute solutions of alkali hydroxides and slightly soluble in dilute acids.

It shows polymorphism (*5.9*).

IDENTIFICATION

Infrared absorption spectrophotometry (*2.2.24*).

*Comparison*: *anhydrous torasemide CRS*.

If the spectra obtained in the solid state show differences, dissolve the substance to be examined and the reference substance separately in *methanol R*, evaporate to dryness and record new spectra using the residues.

TESTS

**Related substances**. Liquid chromatography (*2.2.29*).

*Solution A*. Dissolve 2.7 g of *potassium dihydrogen phosphate R* in 950 mL of *water R*, adjust to pH 3.5 with *phosphoric acid R* and dilute to 1000 mL with *water R*.

*Test solution*. Dissolve 20.0 mg of the substance to be examined in 15 mL of *methanol R* and sonicate for 15 min. Add 22.5 mL of solution A, cool to room temperature and dilute to 50.0 mL with the mobile phase.

*Reference solution (a)*. Dissolve 2.0 mg of *torasemide for system suitability CRS* (containing impurities A, B, C and D) in 2.5 mL of *methanol R* and dilute to 5.0 mL with solution A.

*Reference solution (b)*. Dilute 1.0 mL of the test solution to 100.0 mL with the mobile phase. Dilute 1.0 mL of this solution to 10.0 mL with the mobile phase.

*Reference solution (c)*. Dissolve the contents of a vial of *torasemide impurity E CRS* in 0.5 mL of *methanol R*. Add 0.5 mL of solution A.

*Column*:

- *size*: *l* = 0.125 m, Ø = 4.0 mm;
- *stationary phase*: *end-capped octadecylsilyl silica gel for chromatography R* (5 µm);
- *temperature*: 30 °C.

*Mobile phase*: *methanol R*, solution A (40:60 *V/V*).

*Flow rate*: 0.8 mL/min.

*Detection*: spectrophotometer at 288 nm.

*Injection*: 20 µL.

*Run time*: 2.5 times the retention time of torasemide.

*Identification of impurities*: use the chromatogram supplied with *torasemide for system suitability CRS* and the chromatogram obtained with reference solution (a) to identify the peaks due to impurities A, B, C and D; use the chromatogram obtained with reference solution (c) to identify the peak due to impurity E.

*Relative retention* with reference to torasemide (retention time = about 10 min): impurity A = about 0.3; impurity B = about 0.4; impurity C = about 0.5; impurity E = about 0.7; impurity D = about 2.3.

*System suitability*:

- *resolution*: minimum 3.0 between the peaks due to impurities B and C in the chromatogram obtained with reference solution (a);
- *signal-to-noise ratio*: minimum 100 for the principal peak in the chromatogram obtained with reference solution (b).

*Limits*:

- *correction factors*: for the calculation of content, multiply the peak areas of the following impurities by the corresponding correction factor: impurity A = 5.1; impurity B = 0.76;
- *impurity B*: not more than 5 times the area of the principal peak in the chromatogram obtained with reference solution (b) (0.5 per cent);
- *impurities A, C, D, E*: for each impurity, not more than 1.5 times the area of the principal peak in the chromatogram obtained with reference solution (b) (0.15 per cent);
- *unspecified impurities*: for each impurity, not more than the area of the principal peak in the chromatogram obtained with reference solution (b) (0.10 per cent);
- *total*: not more than 6 times the area of the principal peak in the chromatogram obtained with reference solution (b) (0.6 per cent);
- *disregard limit*: 0.5 times the area of the principal peak in the chromatogram obtained with reference solution (b) (0.05 per cent).

**Loss on drying** (*2.2.32*): maximum 0.5 per cent, determined on 1.000 g by drying in an oven at 105 °C for 3 h.

**Sulfated ash** (*2.4.14*): maximum 0.1 per cent, determined on 1.0 g.

ASSAY

Dissolve 0.300 g in 50 mL of *anhydrous acetic acid R*. Titrate with *0.1 M perchloric acid*, determining the end-point potentiometrically (*2.2.20*).

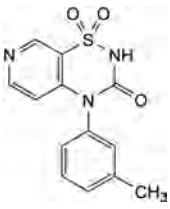
1 mL of *0.1 M perchloric acid* is equivalent to 34.84 mg of $C_{16}H_{20}N_4O_3S$.

STORAGE

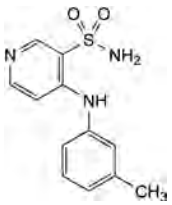
Protected from light.

IMPURITIES

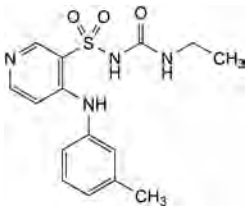
*Specified impurities*: *A, B, C, D, E.*



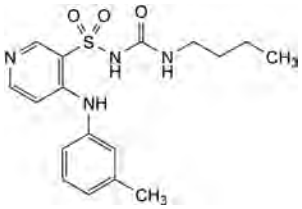
A. 4-(3-methylphenyl)-2*H*-pyrido[4,3-*e*]-1,2,4-thiadiazin-3(4*H*)-one 1,1-dioxide,



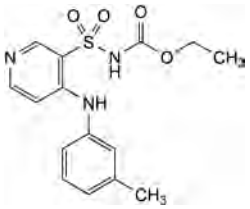
B. 4-[(3-methylphenyl)amino]pyridine-3-sulfonamide,



C. 1-ethyl-3-[[4-[(3-methylphenyl)amino]pyridin-3-yl]sulfonyl]urea,



D. 1-butyl-3-[[4-[(3-methylphenyl)amino]pyridin-3-yl]sulfonyl]urea,

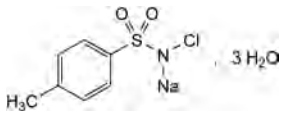


E. ethyl [[4-[(3-methylphenyl)amino]pyridin-3-yl]sulfonyl]carbamate.

**01/2008:0381**
**corrected 10.0**

# TOSYLCHLORAMIDE SODIUM

## Tosylchloramidum natricum



$C_7H_7ClNNaO_2S,3H_2O$ $M_r$ 281.7

DEFINITION

Sodium *N*-chloro-4-methylbenzene-sulfonimidate trihydrate.

*Content*: 98.0 per cent to 103.0 per cent of $C_7H_7ClNNaO_2S,3H_2O$.

CHARACTERS

*Appearance*: white or slightly yellow, crystalline powder.

*Solubility*: freely soluble in water, soluble in ethanol (96 per cent).

IDENTIFICATION

A. Solution S (see Tests) turns *red litmus paper R* blue and then bleaches it.

B. To 10 mL of solution S add 10 mL of *dilute hydrogen peroxide solution R*. A white precipitate is formed which dissolves on heating. Filter the hot solution and allow to cool. White crystals are formed which, when washed and dried at 100-105 °C, melt (*2.2.14*) at 137 °C to 140 °C.

C. Ignite cautiously 1 g, because of the risk of deflagration. Dissolve the residue in 10 mL of *water R*. The solution gives reaction (a) of chlorides (*2.3.1*).

D. The solution prepared for identification test C gives reaction (a) of sulfates (*2.3.1*).

E. The solution prepared for identification test C gives reaction (b) of sodium (*2.3.1*).

TESTS

**Solution S**. Dissolve 1.0 g in *carbon dioxide-free water R* and dilute to 20 mL with the same solvent.

**Appearance of solution**. Solution S is not more opalescent than reference suspension II (*2.2.1*) and is colourless (*2.2.2, Method II*).

**pH** (*2.2.3*): 8.0 to 10.0 for solution S.

**Ortho compound**. To 2 g add 10 mL of *water R*, mix, add 1 g of *sodium metabisulfite R* and heat to boiling. Cool to 0 °C, filter rapidly and wash with 3 quantities, each of 5 mL, of iced *water R*. The precipitate, dried *in vacuo* (*2.2.32*) at a pressure not exceeding 0.6 kPa, melts (*2.2.14*) at a minimum of 134 °C.

**Residue insoluble in anhydrous ethanol**: maximum 2 per cent.

Shake 1.00 g with 20 mL of *anhydrous ethanol R* for 30 min, filter on a tared filter, wash any residue with 5 mL of *anhydrous ethanol R* and dry at 100-105 °C. The residue weighs a maximum of 20 mg.

ASSAY

Dissolve 0.125 g in 100 mL of *water R* in a ground-glass-stoppered flask. Add 1 g of *potassium iodide R* and 5 mL of *dilute sulfuric acid R*. Allow to stand for 3 min. Titrate with *0.1 M sodium thiosulfate*, using 1 mL of *starch solution R* as indicator.

1 mL of *0.1 M sodium thiosulfate* is equivalent to 14.08 mg of $C_7H_7ClNNaO_2S,3H_2O$.

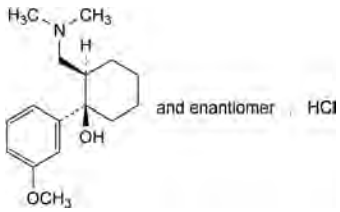
STORAGE

In an airtight container, protected from light.

**01/2017:1681**

# TRAMADOL HYDROCHLORIDE

## Tramadoli hydrochloridum



$C_{16}H_{26}ClNO_2$ $M_r$ 299.8
[36282-47-0]

DEFINITION

(1*RS*,2*RS*)-2-[(Dimethylamino)methyl]-1-(3-methoxyphenyl)cyclohexanol hydrochloride.

*Content*: 99.0 per cent to 101.0 per cent (anhydrous substance).

CHARACTERS

*Appearance*: white or almost white, crystalline powder.

*Solubility*: freely soluble in water and in methanol, very slightly soluble in acetone.

IDENTIFICATION

*First identification: B, D.*

*Second identification: A, C, D.*

A. Melting point (*2.2.14*): 180 °C to 184 °C.

B. Infrared absorption spectrophotometry (*2.2.24*).

*Comparison*: *tramadol hydrochloride CRS*.

C. Chromatograms obtained in the test for impurity E.

*Results*: the principal spot in the chromatogram obtained with test solution (b) is similar in position and size to the principal spot in the chromatogram obtained with reference solution (a).

D. It gives reaction (a) of chlorides (*2.3.1*).

TESTS

**Solution S**. Dissolve 1.0 g in *water R* and dilute to 20 mL with the same solvent.

**Appearance of solution**. Solution S is clear (*2.2.1*) and colourless (*2.2.2, Method II*).

**Acidity**. To 10 mL of solution S, add 0.2 mL of *methyl red solution R* and 0.2 mL of *0.01 M hydrochloric acid*. The solution is red. Not more than 0.4 mL of *0.01 M sodium hydroxide* is required to change the colour of the indicator to yellow.

**Optical rotation** (*2.2.7*): − 0.10° to + 0.10°, determined on solution S.

**Impurity E**. Thin-layer chromatography (*2.2.27*).

*Test solution (a).* Dissolve 0.10 g in *methanol R* and dilute to 2 mL with the same solvent.

*Test solution (b).* Dilute 1 mL of test solution (a) to 10 mL with *methanol R*.

*Reference solution (a).* Dissolve 25 mg of *tramadol hydrochloride CRS* in *methanol R* and dilute to 5 mL with the same solvent.

*Reference solution (b).* Dissolve 5 mg of *tramadol impurity E CRS* in 5 mL of *methanol R*. Dilute 1 mL of the solution to 10 mL with *methanol R*.

*Reference solution (c).* Dissolve 5 mg of *tramadol impurity A CRS* in 1 mL of reference solution (a).

*Plate*: *TLC silica gel $F_{254}$ plate R*, prewashed with *methanol R*.

*Mobile phase*: *concentrated ammonia R*, *2-propanol R*, *toluene R* (1:19:80 *V/V/V*).

*Application*: 10 µL.

*Development*: over 2/3 of the plate. Saturate the plate for 20 min with *concentrated ammonia R*. For this, add *concentrated ammonia R* to one trough of a twin trough tank. Just before developing, add the mobile phase to the other trough. Place the plate in the chromatographic tank, ensuring that the layer of silica gel is orientated towards the middle of the tank.

*Drying*: in air.

*Detection*: expose the plate to iodine vapour for 1 h, examine in ultraviolet light at 254 nm.

*System suitability*: the chromatogram obtained with reference solution (c) shows 2 clearly separated spots.

*Limit*: test solution (a):

– *impurity E*: any spot corresponding to impurity E is not more intense and not greater than the spot in the chromatogram obtained with reference solution (b) (0.2 per cent).

**Related substances**. Liquid chromatography (*2.2.29*).

*Test solution.* Dissolve 0.15 g of the substance to be examined in the mobile phase and dilute to 100 mL with the mobile phase.

*Reference solution (a).* Dilute 2.0 mL of the test solution to 10.0 mL with the mobile phase. Dilute 1.0 mL of this solution to 100 mL with the mobile phase.

*Reference solution (b).* Dissolve 5 mg of *tramadol impurity A CRS* in 4.0 mL of the test solution and dilute to 100 mL with the mobile phase.

*Column*:

– *size*: *l* = 0.25 m, Ø = 4.0 mm;

– *stationary phase*: *end-capped base-deactivated octylsilyl silica gel for chromatography R* (5 µm).

*Mobile phase*: 295 volumes of *acetonitrile R* and 705 volumes of a mixture of 0.2 mL of *trifluoroacetic acid R* and 100 mL of *water R*.

*Flow rate*: 1.0 mL/min.

*Detection*: spectrophotometer at 270 nm.

*Injection*: 20 µL.

*Run time*: 4 times the retention time of tramadol.

*Relative retention* with reference to tramadol (retention time = about 5 min): impurity A = about 0.85.

*System suitability*: reference solution (b):

– *resolution*: minimum 2.0 between the peaks due to impurity A and tramadol.

*Limits*:

– *impurity A*: not more than the area of the principal peak in the chromatogram obtained with reference solution (a) (0.2 per cent);

– *unspecified impurities*: for each impurity, not more than 0.5 times the area of the principal peak in the chromatogram obtained with reference solution (a) (0.10 per cent);

– *total*: not more than twice the area of the principal peak in the chromatogram obtained with reference solution (a) (0.4 per cent);

– *disregard limit*: 0.1 times the area of the principal peak in the chromatogram obtained with reference solution (a) (0.02 per cent).

**Water** (*2.5.12*): maximum 0.5 per cent, determined on 1.000 g.

**Sulfated ash** (*2.4.14*): maximum 0.1 per cent, determined on 1.0 g.

ASSAY

Dissolve 0.180 g in 25 mL of *anhydrous acetic acid R* and add 10 mL of *acetic anhydride R*. Titrate with *0.1 M perchloric acid*, determining the end-point potentiometrically (*2.2.20*).

1 mL of *0.1 M perchloric acid* is equivalent to 29.98 mg of $C_{16}H_{26}ClNO_2$.

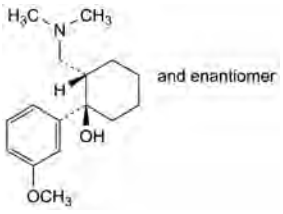
STORAGE

Protected from light.

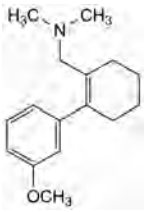
IMPURITIES

*Specified impurities: A, E.*

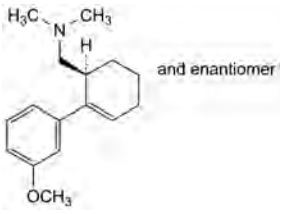
*Other detectable impurities* (the following substances would, if present at a sufficient level, be detected by one or other of the tests in the monograph. They are limited by the general acceptance criterion for other/unspecified impurities and/or by the general monograph *Substances for pharmaceutical use (2034)*. It is therefore not necessary to identify these impurities for demonstration of compliance. See also *5.10. Control of impurities in substances for pharmaceutical use*): *B, C, D.*



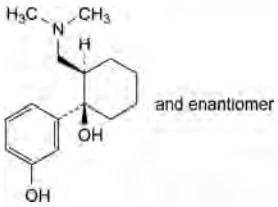
A. (1*RS*,2*SR*)-2-[(dimethylamino)methyl]-1-(3-methoxyphenyl)cyclohexanol,



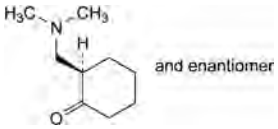
B. [2-(3-methoxyphenyl)cyclohex-1-enyl]-*N*,*N*-dimethylmethanamine,



C. (1*RS*)-[2-(3-methoxyphenyl)cyclohex-2-enyl]-*N*,*N*-dimethylmethanamine,



D. (1*RS*,2*RS*)-2-[(dimethylamino)methyl]-1-(3-hydroxyphenyl)cyclohexanol,

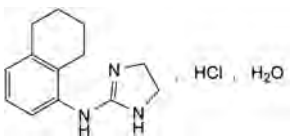


E. (2*RS*)-2-[(dimethylamino)methyl]cyclohexanone.

**01/2008:1597**

# TRAMAZOLINE HYDROCHLORIDE MONOHYDRATE

## Tramazolini hydrochloridum monohydricum



$C_{13}H_{18}ClN_3,H_2O$ $M_r$ 269.8
[74195-73-6]

DEFINITION

*N*-(5,6,7,8-Tetrahydronaphthalen-1-yl)-4,5-dihydro-1*H*-imidazol-2-amine hydrochloride monohydrate.

*Content*: 98.5 per cent to 101.5 per cent (anhydrous substance).

CHARACTERS

*Appearance*: white or almost white, crystalline powder.

*Solubility*: soluble in water and in ethanol (96 per cent).

IDENTIFICATION

A. Infrared absorption spectrophotometry (*2.2.24*).
*Comparison*: *tramazoline hydrochloride monohydrate CRS*.

B. It gives reaction (a) of chlorides (*2.3.1*).

TESTS

**Solution S**. Dissolve 2.5 g in *carbon dioxide-free water R* and dilute to 50 mL with the same solvent.

**Appearance of solution**. Solution S is clear (*2.2.1*) and not more intensely coloured than reference solution $Y_6$ (*2.2.2, Method II*).

**pH** (*2.2.3*): 4.9 to 6.3 for solution S.

**Related substances**. Liquid chromatography (*2.2.29*).

*Test solution*. Dissolve 50.0 mg of the substance to be examined in a mixture of 50 volumes of *acetonitrile R* and 50 volumes of *water R* and dilute to 50.0 mL with the same mixture of solvents.

*Reference solution (a)*. Dissolve 5.0 mg of *tramazoline impurity A CRS* and 5.0 mg of *tramazoline impurity B CRS* in 5 mL of a mixture of 50 volumes of *acetonitrile R* and 50 volumes of *water R* and add 5 mL of the test solution.

*Reference solution (b)*. Dilute 0.2 mL of reference solution (a) to 100 mL with a mixture of 50 volumes of *acetonitrile R* and 50 volumes of *water R*.

*Column*:
- *size*: *l* = 0.125 m, Ø = 4 mm,
- *stationary phase*: *octadecylsilyl silica gel for chromatography R* (5 µm).

*Mobile phase*: 2.0 g/L solution of *sodium dodecyl sulfate R* in a mixture of 6 volumes of *2-propanol R*, 42 volumes of *acetonitrile R* and 52 volumes of *water R*.

*Flow rate*: 1.2 mL/min.

*Detection*: spectrophotometer at 215 nm.

*Injection*: 5 µL.

*Run time*: 3 times the retention time of tramazoline.

*Relative retention* with reference to tramazoline (retention time = about 6.5 min): impurity A = about 0.71; impurity B = about 0.86.

*System suitability*: reference solution (a):
- the chromatogram obtained shows 3 clearly separated peaks,
- *resolution*: minimum 1.5 between tramazoline and impurity B.

*Limits*:
- *impurity A*: not more than 3 times the area of the corresponding peak in the chromatogram obtained with reference solution (b) (0.3 per cent),
- *impurity B*: not more than 3 times the area of the corresponding peak in the chromatogram obtained with reference solution (b) (0.3 per cent),
- *any other impurity*: not more than the area of the peak due to impurity B in the chromatogram obtained with reference solution (b) (0.1 per cent),
- *sum of other impurities*: not more than twice the area of the peak due to impurity B in the chromatogram obtained with reference solution (b) (0.2 per cent),

– *disregard limit*: 0.2 times the area of the peak due to impurity B in the chromatogram obtained with reference solution (b) (0.02 per cent).

**Water** (*2.5.12*): 6.2 per cent to 7.2 per cent, determined on 0.500 g.

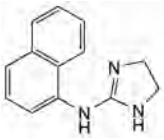
**Sulfated ash** (*2.4.14*): maximum 0.1 per cent, determined on 1.0 g.

ASSAY

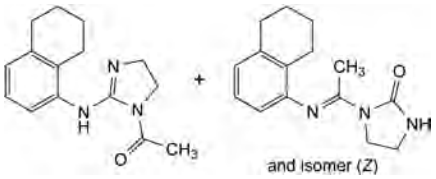
Dissolve 2.000 g in a mixture of 5 mL of *0.1 M hydrochloric acid* and 75 mL of *ethanol (96 per cent) R*. Carry out a potentiometric titration (*2.2.20*) using *1 M sodium hydroxide*. Read the volume added between the 2 points of inflexion.

1 mL of *1 M sodium hydroxide* is equivalent to 251.8 mg of $C_{13}H_{18}ClN_3$.

IMPURITIES



A. *N*-(naphthalen-1-yl)-4,5-dihydro-1*H*-imidazol-2-amine,

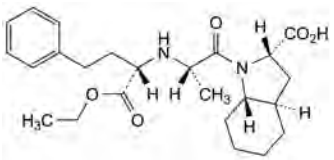


B. mixture of 1-acetyl-*N*-(5,6,7,8-tetrahydronaphthalen-1-yl)-4,5-dihydro-1*H*-imidazol-2-amine and 1-[(*EZ*)-1-[(5,6,7,8-tetrahydronaphthalen-1-yl)imino]ethyl]imidazolidin-2-one.

**07/2019:2245**

# TRANDOLAPRIL

## Trandolaprilum



$C_{24}H_{34}N_2O_5$ $M_r$ 430.5
[87679-37-6]

DEFINITION

(2*S*,3a*R*,7a*S*)-1-[(2*S*)-2-[[(2*S*)-1-Ethoxy-1-oxo-4-phenylbutan-2-yl]amino]propanoyl]octahydro-1*H*-indole-2-carboxylic acid.

*Content*: 99.0 per cent to 101.0 per cent (anhydrous substance).

CHARACTERS

*Appearance*: white or almost white powder.

*Solubility*: practically insoluble in water, freely soluble in methylene chloride, sparingly soluble in anhydrous ethanol.

IDENTIFICATION

A. Specific optical rotation (see Tests).

B. Infrared absorption spectrophotometry (*2.2.24*).
*Comparison*: *trandolapril CRS*.

TESTS

**Appearance of solution**. The solution is not more intensely coloured than reference solution $Y_7$ (*2.2.2, Method II*).

Dissolve 1.0 g in *methanol R* and dilute to 10 mL with the same solvent.

**Specific optical rotation** (*2.2.7*): – 18.5 to – 16.5 (anhydrous substance).

Dissolve 1.0 g in *anhydrous ethanol R* and dilute to 50.0 mL with the same solvent.

**Related substances**. Liquid chromatography (*2.2.29*).

*Test solution*. Dissolve 25 mg of the substance to be examined in mobile phase A and dilute to 10.0 mL with mobile phase A.

*Reference solution (a)*. Dilute 1.0 mL of the test solution to 10.0 mL with mobile phase A. Dilute 1.0 mL of this solution to 100.0 mL with mobile phase A.

*Reference solution (b)*. Dissolve 5 mg of *trandolapril impurity C CRS* and 5 mg of *trandolapril impurity D CRS* in mobile phase A and dilute to 5 mL with mobile phase A. Dilute 1 mL of the solution to 20 mL with mobile phase A.

*Column*:

– *size*: *l* = 0.15 m, Ø = 4.6 mm;
– *stationary phase*: *end-capped polar-embedded octadecylsilyl amorphous organosilica polymer R* (3.5 µm);
– *temperature*: 40 °C.

*Mobile phase*:

– *mobile phase A*: mix 25 volumes of *acetonitrile R1* and 75 volumes of a 6.8 g/L solution of *potassium dihydrogen phosphate R* previously adjusted to pH 2.5 ± 0.1 with *phosphoric acid R*;
– *mobile phase B*: mix equal volumes of *acetonitrile R1* and a 6.8 g/L solution of *potassium dihydrogen phosphate R* previously adjusted to pH 2.2 ± 0.1 with *phosphoric acid R*;

| Time (min) | Mobile phase A (per cent *V/V*) | Mobile phase B (per cent *V/V*) |
|---|---|---|
| 0 - 20 | 95 | 5 |
| 20 - 35 | 95 → 5 | 5 → 95 |
| 35 - 45 | 5 | 95 |

*Flow rate*: 1.3 mL/min.

*Detection*: spectrophotometer at 210 nm.

*Injection*: 20 µL.

*Identification of impurities*: use the chromatogram obtained with reference solution (b) to identify the peaks due to impurities C and D.

*Relative retention* with reference to trandolapril (retention time = about 14.5 min): impurity C = about 2.1; impurity D = about 2.5.

*System suitability*: reference solution (b):

– *resolution*: minimum 4 between the peaks due to impurities C and D.

*Limits*:

– *correction factor*: for the calculation of content, multiply the peak area of impurity C by 2.2;
– *impurity D*: not more than 5 times the area of the principal peak in the chromatogram obtained with reference solution (a) (0.5 per cent);
– *impurity C*: not more than twice the area of the principal peak in the chromatogram obtained with reference solution (a) (0.2 per cent);
– *unspecified impurities*: for each impurity, not more than the area of the principal peak in the chromatogram obtained with reference solution (a) (0.10 per cent);
– *sum of impurities other than D*: not more than 5 times the area of the principal peak in the chromatogram obtained with reference solution (a) (0.5 per cent);

– *disregard limit*: 0.5 times the area of the principal peak in the chromatogram obtained with reference solution (a) (0.05 per cent).

**Water** (*2.5.32*): maximum 0.2 per cent, determined on 1.000 g.

**Sulfated ash** (*2.4.14*): maximum 0.1 per cent, determined on 2.0 g in a porcelain or quartz crucible.

ASSAY

Dissolve 0.300 g in 50 mL of *anhydrous acetic acid R*. Titrate with *0.1 M perchloric acid*, determining the end-point potentiometrically (*2.2.20*).

1 mL of *0.1 M perchloric acid* is equivalent to 43.05 mg of $C_{24}H_{34}N_2O_5$.

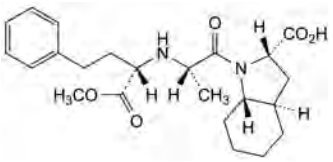
STORAGE

Protected from light.

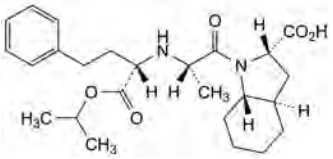
IMPURITIES

*Specified impurities: C, D.*

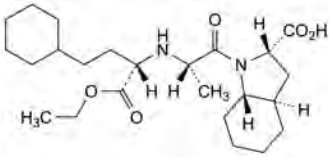
*Other detectable impurities* (the following substances would, if present at a sufficient level, be detected by one or other of the tests in the monograph. They are limited by the general acceptance criterion for other/unspecified impurities and/or by the general monograph *Substances for pharmaceutical use (2034)*. It is therefore not necessary to identify these impurities for demonstration of compliance. See also *5.10. Control of impurities in substances for pharmaceutical use*): *A, B, E, F.*



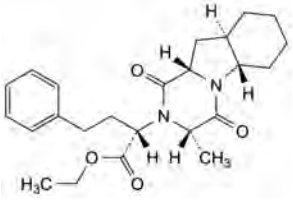
A. (2*S*,3a*R*,7a*S*)-1-[(2*S*)-2-[[(2*S*)-1-methoxy-1-oxo-4-phenylbutan-2-yl]amino]propanoyl]octahydro-1*H*-indole-2-carboxylic acid (methyl ester derivative),



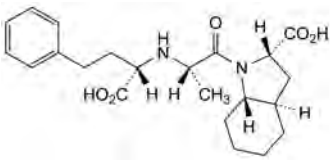
B. (2*S*,3a*R*,7a*S*)-1-[(2*S*)-2-[[(2*S*)-1-oxo-4-phenyl-1-[(propan-2-yl)oxy]butan-2-yl]amino]propanoyl]octahydro-1*H*-indole-2-carboxylic acid (isopropyl ester derivative),



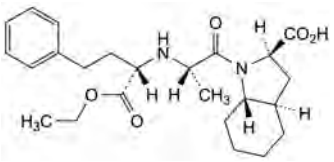
C. (2*S*,3a*R*,7a*S*)-1-[(2*S*)-2-[[(2*S*)-4-cyclohexyl-1-ethoxy-1-oxobutan-2-yl]amino]propanoyl]octahydro-1*H*-indole-2-carboxylic acid (hexahydrotrandolapril),



D. ethyl (2*S*)-2-[(3*S*,5a*S*,9a*R*,10a*S*)-3-methyl-1,4-dioxodecahydropyrazino[1,2-*a*]indol-2(1*H*)-yl]-4-phenylbutanoate (trandolapril diketopiperazine),



E. (2*S*,3a*R*,7a*S*)-1-[(2*S*)-2-[[(1*S*)-1-carboxy-3-phenylpropyl]-amino]propanoyl]octahydro-1*H*-indole-2-carboxylic acid (trandolaprilate),

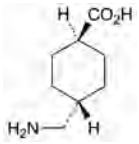


F. (2*R*,3a*R*,7a*S*)-1-[(2*S*)-2-[[(2*S*)-1-ethoxy-1-oxo-4-phenylbutan-2-yl]amino]propanoyl]octahydro-1*H*-indole-2-carboxylic acid.

**01/2017:0875**

# TRANEXAMIC ACID

## Acidum tranexamicum



$C_8H_{15}NO_2$ $M_r$ 157.2

[1197-18-8]

DEFINITION

*trans*-4-(Aminomethyl)cyclohexanecarboxylic acid.

*Content*: 99.0 per cent to 101.0 per cent (dried substance).

CHARACTERS

*Appearance*: white or almost white, crystalline powder.

*Solubility*: freely soluble in water and in glacial acetic acid, practically insoluble in acetone and in ethanol (96 per cent).

IDENTIFICATION

Infrared absorption spectrophotometry (*2.2.24*).

*Preparation*: discs.

*Comparison*: *tranexamic acid CRS*.

TESTS

**pH** (*2.2.3*): 7.0 to 8.0.

Dissolve 2.5 g in *carbon dioxide-free water R* and dilute to 50 mL with the same solvent.

**Related substances**. Liquid chromatography (*2.2.29*).

*Test solution.* Dissolve 0.20 g of the substance to be examined in *water R* and dilute to 20.0 mL with the same solvent.

*Reference solution (a).* Dilute 5.0 mL of the test solution to 100.0 mL with *water R*. Dilute 1.0 mL of this solution to 10.0 mL with *water R*.

*Reference solution (b).* Dissolve 20 mg of *tranexamic acid CRS* (containing impurity C) in *water R* and dilute to 2 mL with the same solvent.

*Reference solution (c).* Dissolve 12 mg of *4-aminomethylbenzoic acid R* (impurity D) in *water R* and dilute to 100 mL with the same solvent. Dilute 1 mL of the solution to 50 mL with *water R*. Dilute 5 mL of this solution to 200 mL with *water R*.

*Column*:
- *size*: *l* = 0.25 m, Ø = 4.6 mm or *l* = 0.25 m, Ø = 6.0 mm;
- *stationary phase*: *octadecylsilyl silica gel for chromatography R* (5 µm).

*Mobile phase*: dissolve 11.0 g of *anhydrous sodium dihydrogen phosphate R* in 500 mL of *water R* and add 5 mL of *triethylamine R* and 1.4 g of *sodium laurilsulfate R*. Adjust to pH 2.5 with *dilute phosphoric acid R* and dilute to 600 mL with *water R*. Add 400 mL of *methanol R* and mix.

*Flow rate*: 0.9 mL/min.

*Detection*: spectrophotometer at 220 nm.

*Injection*: 20 µL.

*Run time*: 3 times the retention time of tranexamic acid.

*Identification of impurities*: use the chromatogram supplied with *tranexamic acid CRS* and the chromatogram obtained with reference solution (b) to identify the peak due to impurity C; use the chromatogram obtained with reference solution (c) to identify the peak due to impurity D.

*Relative retention* with reference to tranexamic acid (retention time = about 13 min): impurity C = about 1.1; impurity D = about 1.3; impurity B = about 1.5; impurity A = about 2.1.

*System suitability*: reference solution (b):
- *resolution*: minimum 1.5 between the peaks due to tranexamic acid and impurity C.

*Limits*:
- *correction factors*: for the calculation of content, multiply the peak areas of the following impurities by the corresponding correction factor: impurity B = 1.2; impurity C = 0.005; impurity D = 0.006;
- *impurity A*: not more than 0.2 times the area of the principal peak in the chromatogram obtained with reference solution (a) (0.1 per cent);
- *impurity B*: not more than 0.4 times the area of the principal peak in the chromatogram obtained with reference solution (a) (0.2 per cent);
- *unspecified impurities*: for each impurity, not more than 0.2 times the area of the principal peak in the chromatogram obtained with reference solution (a) (0.10 per cent);
- *sum of unspecified impurities*: not more than 0.4 times the area of the principal peak in the chromatogram obtained with reference solution (a) (0.2 per cent);
- *disregard limit*: 0.05 times the area of the principal peak in the chromatogram obtained with reference solution (a) (0.025 per cent).

**Halides expressed as chlorides** (*2.4.4*): maximum 140 ppm.

Dissolve 1.2 g in *water R* and dilute to 50 mL with the same solvent.

**Loss on drying** (*2.2.32*): maximum 0.5 per cent, determined on 1.000 g by drying in an oven at 105 °C for 2 h.

**Sulfated ash** (*2.4.14*): maximum 0.1 per cent, determined on 1.0 g.

ASSAY

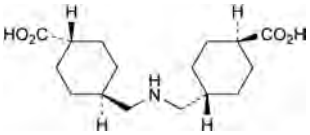
Dissolve 0.140 g in 20 mL of *anhydrous acetic acid R*. Titrate with *0.1 M perchloric acid*, determining the end-point potentiometrically (*2.2.20*).

1 mL of *0.1 M perchloric acid* is equivalent to 15.72 mg of $C_8H_{15}NO_2$.

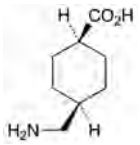
IMPURITIES

*Specified impurities: A, B.*

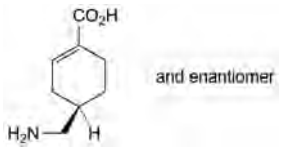
*Other detectable impurities* (the following substances would, if present at a sufficient level, be detected by one or other of the tests in the monograph. They are limited by the general acceptance criterion for other/unspecified impurities and/or by the general monograph *Substances for pharmaceutical use (2034)*. It is therefore not necessary to identify these impurities for demonstration of compliance. See also *5.10. Control of impurities in substances for pharmaceutical use*): *C, D.*



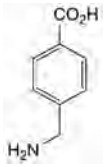
A. *trans*,*trans*-4,4′-(iminodimethylene)di(cyclohexanecarboxylic) acid,



B. *cis*-4-(aminomethyl)cyclohexanecarboxylic acid,



C. (*RS*)-4-(aminomethyl)cyclohex-1-enecarboxylic acid,

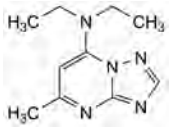


D. 4-aminomethylbenzoic acid.

**01/2017:1576**

# TRAPIDIL

## Trapidilum



$C_{10}H_{15}N_5$ $M_r$ 205.3

[15421-84-8]

DEFINITION

*N*,*N*-Diethyl-5-methyl-[1,2,4]triazolo[1,5-*a*]pyrimidin-7-amine.

*Content*: 99.0 per cent to 101.0 per cent (dried substance).

CHARACTERS

*Appearance*: white or almost white, crystalline powder.

*Solubility*: freely soluble in water, soluble in ethanol and in methylene chloride.

mp: about 102 °C.

IDENTIFICATION

Infrared absorption spectrophotometry (*2.2.24*).

*Comparison*: *trapidil CRS*.

TESTS

**Solution S**. Dissolve 2.0 g in *carbon dioxide-free water R* and dilute to 100 mL with the same solvent.

**Appearance of solution**. Solution S is clear (*2.2.1*) and colourless (*2.2.2, Method II*).

**Acidity or alkalinity**. To 10 mL of solution S add 0.2 mL of *methyl red solution R* and 0.2 mL of *0.01 M hydrochloric acid*. The solution is red. Add 0.4 mL of *0.01 M sodium hydroxide*. The solution is yellow.

**Related substances**. Liquid chromatography (*2.2.29*).

*Test solution.* Dissolve 20.0 mg of the substance to be examined in the mobile phase and dilute to 10.0 mL with the mobile phase.

*Reference solution (a).* Dissolve 5.0 mg of *trapidil impurity A CRS* in the mobile phase and dilute to 50.0 mL with the mobile phase. Dilute 1.0 mL of the solution to 50.0 mL with the mobile phase.

*Reference solution (b).* Dissolve 5.0 mg of *trapidil impurity B CRS* in the mobile phase and dilute to 50.0 mL with the mobile phase. Dilute 1.0 mL of the solution to 50.0 mL with the mobile phase.

*Reference solution (c).* Mix equal volumes of reference solution (a) and reference solution (b).

*Column*:

- *size*: *l* = 0.125 m, Ø = 4.0 mm,
- *stationary phase*: *base-deactivated octadecylsilyl silica gel for chromatography R* (5 µm),

*Mobile phase*: 50 mL of *methanol R*, 75 mL of *acetonitrile R* and 800 mL of a 1.7 g/L solution of *potassium dihydrogen phosphate R* adjusted to pH 2.45 with *phosphoric acid R*; dilute to 1000 mL with *water R*.

*Flow rate*: 1.0 mL/min.

*Detection*: spectrophotometer at 205 nm.

*Injection*: 10 µL.

*Run time*: 3 times the retention time of trapidil.

*System suitability*:

- *resolution*: minimum of 4.0 between the peaks due to impurity A and impurity B in the chromatogram obtained with reference solution (c).

*Limits*:

- *impurity A*: not more than the area of the principal peak in the chromatogram obtained with reference solution (a) (0.1 per cent),
- *impurity B*: not more than the area of the principal peak in the chromatogram obtained with reference solution (b) (0.1 per cent),
- *any other impurity*: not more than the area of the principal peak in the chromatogram obtained with reference solution (a) (0.1 per cent),
- *total*: not more than 5 times the area of the principal peak in the chromatogram obtained with reference solution (a) (0.5 per cent).
- *disregard limit*: 0.1 times the area of the principal peak in the chromatogram obtained with reference solution (a) (0.01 per cent).

**Chlorides** (*2.4.4*): maximum 100 ppm.

Dissolve 0.25 g in 10 mL of *water R* and dilute to 15 mL with *water R*. Prepare the standard using 5 mL of *chloride standard solution (5 ppm Cl) R*.

**Ammonium** (*2.4.1*): maximum 20 ppm.

0.50 g complies with limit test A. Prepare the standard using 0.1 mL of *ammonium standard solution (100 ppm $NH_4$) R*.

**Loss on drying** (*2.2.32*): maximum 0.5 per cent, determined on 1.000 g by drying *in vacuo* at 60 °C for 3 h.

**Sulfated ash** (*2.4.14*): maximum 0.1 per cent, determined on 1.0 g.

ASSAY

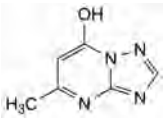
Dissolve 0.180 g in 50 mL of *anhydrous acetic acid R*. Titrate with *0.1 M perchloric acid*, determining the end-point potentiometrically (*2.2.20*).

1 mL of *0.1 M perchloric acid* is equivalent to 20.53 mg of $C_{10}H_{15}N_5$.

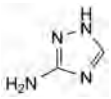
STORAGE

Protected from light.

IMPURITIES



A. 5-methyl-[1,2,4]triazolo[1,5-*a*]pyrimidin-7-ol,

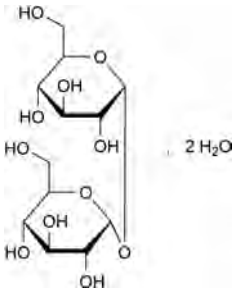


B. 1,2,4-triazol-3-amine.

**01/2017:2297**

# TREHALOSE DIHYDRATE

## Trehalosum dihydricum



$C_{12}H_{22}O_{11},2H_2O$ $M_r$ 378.3

[6138-23-4]

DEFINITION

α-D-Glucopyranosyl α-D-glucopyranoside dihydrate (α,α-trehalose dihydrate). It is obtained by enzymatic modification of starch.

*Content*: 97.0 per cent to 102.0 per cent (anhydrous substance).

CHARACTERS

*Appearance*: white or almost white, crystalline powder.

*Solubility*: freely soluble in water, slightly soluble in methanol, practically insoluble in ethanol (96 per cent).

IDENTIFICATION

A. Infrared absorption spectrophotometry (*2.2.24*).
*Comparison*: *trehalose dihydrate CRS*.

B. Dissolve 2 g in 5 mL of *water R*. To 1 mL of this solution add 0.4 mL of a 50 g/L solution of *α-naphthol R* in *ethanol (96 per cent) R* and mix thoroughly. Carefully add 2 mL of *sulfuric acid R*. A violet colour develops at the interface.

C. Dissolve 1 g in 25 mL of *water R*. To 2 mL of this solution add 1 mL of *dilute hydrochloric acid R* and mix. Keep the solution for 20 min at room temperature. Add 4 mL of a 40 g/L solution of *sodium hydroxide R* and 2 mL of a 40 g/L solution of *glycine R* and mix. Heat the solution in a water-bath for 10 min. No brown colour develops.

TESTS

**Solution S**. Dissolve 10.0 g in *carbon dioxide-free water R* prepared from *distilled water R* and dilute to 100.0 mL with the same solvent.

**Appearance of solution**. Solution S is clear (*2.2.1*) and colourless (*2.2.2, Method II*).

**pH** (*2.2.3*): 4.5 to 6.5 for solution S.

**Specific optical rotation** (*2.2.7*): + 197 to + 201 (anhydrous substance), determined on solution S.

**Related substances**. Liquid chromatography (*2.2.29*).

*Test solution*. Dissolve 0.100 g of the substance to be examined in *water R* and dilute to 10.0 mL with the same solvent.

*Reference solution (a)*. Dissolve 0.100 g of *trehalose dihydrate CRS* in *water R* and dilute to 10.0 mL with the same solvent.

*Reference solution (b)*. Dilute 1.0 mL of the test solution to 100.0 mL with *water R*.

*Reference solution (c)*. Dilute 5.0 mL of reference solution (b) to 25.0 mL with *water R*.

*Reference solution (d)*. Dissolve 25 mg of *glucose R* (impurity A) and 25 mg of *maltotriose R* in *water R*, add 2.5 mL of reference solution (a) and dilute to 10.0 mL with *water R*.

*Column*:

- *size*: *l* = 0.3 m, Ø = 8 mm;
- *stationary phase*: *strong cation-exchange resin (sodium form) R* (6 µm);
- *temperature*: 80 °C.

*Mobile phase*: *water R*.

*Flow rate*: 0.4 mL/min.

*Detection*: refractometer maintained at 40 °C.

*Injection*: 20 µL of the test solution and reference solutions (b), (c) and (d).

*Run time*: twice the retention time of trehalose.

*Identification of impurities*: use the chromatogram obtained with reference solution (d) to identify the peaks due to impurities A and B; impurity B has the same retention time as maltotriose.

*Relative retention* with reference to trehalose (retention time = about 15 min): impurity B = about 0.9; impurity A = about 1.2.

*System suitability*: reference solution (d):

- *resolution*: minimum 1.5 between the peaks due to maltotriose and trehalose.

*Limits*:

- *impurities A, B*: for each impurity, not more than 0.5 times the area of the principal peak in the chromatogram obtained with reference solution (b) (0.5 per cent);
- *unspecified impurities*: for each impurity, not more than the area of the principal peak in the chromatogram obtained with reference solution (c) (0.2 per cent);
- *total*: not more than the area of the principal peak in the chromatogram obtained with reference solution (b) (1.0 per cent);
- *disregard limit*: 0.5 times the area of the principal peak in the chromatogram obtained with reference solution (c) (0.1 per cent).

**Chlorides** (*2.4.4*): maximum 125 ppm.

Dilute 4 mL of solution S to 15 mL with *water R*.

**Sulfates** (*2.4.13*): maximum 200 ppm.

Dilute 7.5 mL of solution S to 15 mL with *distilled water R*.

**Soluble starch**. Dissolve 1 g in 10 mL of *water R*. Add 0.1 mL of *iodine solution R1*. No blue colour develops.

**Water** (*2.5.12*): 9.0 per cent to 11.0 per cent, determined on 0.10 g.

**Sulfated ash** (*2.4.14*): maximum 0.1 per cent, determined on 1.0 g.

**Microbial contamination**

If intended for use in the manufacture of parenteral preparations:

- TAMC: acceptance criterion $10^2$ CFU/g (*2.6.12*).

If not intended for use in the manufacture of parenteral preparations:

- TAMC: acceptance criterion $10^3$ CFU/g (*2.6.12*);
- TYMC: acceptance criterion $10^2$ CFU/g (*2.6.12*);
- absence of *Escherichia coli* (*2.6.13*);
- absence of *Salmonella* (*2.6.13*).

**Bacterial endotoxins** (*2.6.14*). If intended for use in the manufacture of parenteral preparations without a further appropriate procedure for the removal of bacterial endotoxins:

- less than 4 IU/g for parenteral preparations having a concentration of 100 g/L or less of trehalose dihydrate;
- less than 2.5 IU/g for parenteral preparations having a concentration of more than 100 g/L of trehalose dihydrate.

ASSAY

Liquid chromatography (*2.2.29*) as described in the test for related substances with the following modification.

*Injection*: test solution and reference solution (a).

Calculate the percentage content of trehalose from the declared content of *trehalose dihydrate CRS*.

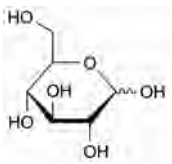
LABELLING

The label states:

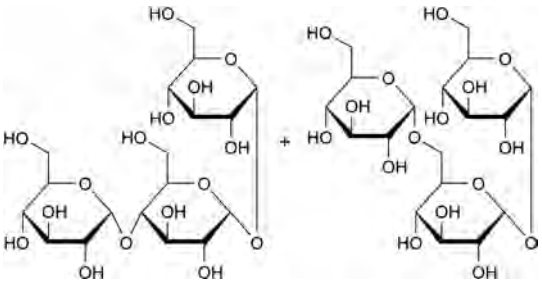
- where applicable, the maximum concentration of bacterial endotoxins;
- where applicable, that the substance is suitable for use in the manufacture of parenteral preparations.

IMPURITIES

*Specified impurities: A, B.*



A. D-glucopyranose (glucose),

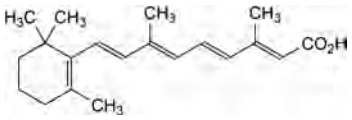


B. oligosaccharides, mainly glucosyltrehalose: mixture of α-D-glucopyranosyl α-D-glucopyranosyl-(1→4)-α-D-glucopyranoside (4-*O*-glucosyltrehalose or α-D-maltosyl α-D-glucoside) and α-D-glucopyranosyl-(1→6)-α-D-glucopyranosyl α-D-glucopyranoside (6-*O*-glucosyltrehalose or α-D-isomaltosyl α-D-glucoside).

01/2017:0693

# TRETINOIN

## Tretinoinum



$C_{20}H_{28}O_2$ $M_r$ 300.4
[302-79-4]

DEFINITION

(2*E*,4*E*,6*E*,8*E*)-3,7-Dimethyl-9-(2,6,6-trimethylcyclohex-1-enyl)nona-2,4,6,8-tetraenoic acid.

*Content*: 98.0 per cent to 102.0 per cent (dried substance).

CHARACTERS

*Appearance*: yellow or light orange, crystalline powder.

*Solubility*: practically insoluble in water, sparingly soluble in methylene chloride, slightly soluble in ethanol (96 per cent).

mp: about 182 °C, with decomposition.

It is sensitive to air, heat and light, especially in solution.

*Carry out all operations as rapidly as possible and avoid exposure to actinic light; use freshly prepared solutions.*

IDENTIFICATION

*First identification: A.*

*Second identification: B, C.*

A. Infrared absorption spectrophotometry (*2.2.24*).

*Comparison*: *tretinoin CRS*.

B. Thin-layer chromatography (*2.2.27*).

*Test solution.* Dissolve 10 mg of the substance to be examined in *methylene chloride R* and dilute to 10 mL with the same solvent.

*Reference solution.* Dissolve 10 mg of *tretinoin CRS* in *methylene chloride R* and dilute to 10 mL with the same solvent.

*Plate*: *TLC silica gel $GF_{254}$ plate R*.

*Mobile phase*: *glacial acetic acid R*, *acetone R*, *peroxide-free ether R*, *cyclohexane R* (2:4:40:54 *V/V/V/V*).

*Application*: 5 µL.

*Development*: over 3/4 of the plate.

*Drying*: in air.

*Detection*: examine in ultraviolet light at 254 nm.

*Results*: the principal spot in the chromatogram obtained with the test solution is similar in position and size to the principal spot in the chromatogram obtained with the reference solution.

C. Dissolve about 5 mg in 2 mL of *antimony trichloride solution R*. An intense red colour develops and later becomes violet.

TESTS

**Related substances**. Liquid chromatography (*2.2.29*).

*Test solution.* Dissolve 0.100 g of the substance to be examined in *methanol R* and dilute to 50.0 mL with the same solvent.

*Reference solution (a).* Dissolve 10.0 mg of *isotretinoin CRS* (impurity A) in *methanol R* and dilute to 10.0 mL with the same solvent.

*Reference solution (b).* Mix 1.0 mL of reference solution (a) and 0.5 mL of the test solution and dilute to 25.0 mL with *methanol R*.

*Reference solution (c).* Dilute 0.5 mL of the test solution to 100.0 mL with *methanol R*.

*Column*:

- *size*: *l* = 0.15 m, Ø = 4.6 mm;
- *stationary phase*: *octadecylsilyl silica gel for chromatography R* (3 µm).

*Mobile phase*: *glacial acetic acid R*, *water R*, *methanol R* (5:225:770 *V/V/V*).

*Flow rate*: 1.0 mL/min.

*Detection*: spectrophotometer at 355 nm.

*Injection*: 10 µL.

*Run time*: 1.2 times the retention time of tretinoin.

*Identification of impurities*: use the chromatogram obtained with reference solution (a) to identify the peak due to impurity A.

*Relative retention* with reference to tretinoin (retention time = about 29 min): impurity A = about 0.75.

*System suitability*: reference solution (b):

- *resolution*: minimum 5.0 between the peaks due to impurity A and tretinoin.

*Limits*:

- *impurity A*: not more than the area of the principal peak in the chromatogram obtained with reference solution (c) (0.5 per cent);
- *unspecified impurities*: for each impurity, not more than 0.4 times the area of the principal peak in the chromatogram obtained with reference solution (c) (0.2 per cent);
- *total*: not more than twice the area of the principal peak in the chromatogram obtained with reference solution (c) (1.0 per cent);
- *disregard limit*: 0.1 times the area of the principal peak in the chromatogram obtained with reference solution (c) (0.05 per cent).

The thresholds indicated under Related substances (Table 2034.-1) in the general monograph *Substances for Pharmaceutical use (2034)* do not apply.

**Loss on drying** (*2.2.32*): maximum 0.5 per cent, determined on 1.000 g by drying *in vacuo* for 16 h.

**Sulfated ash** (*2.4.14*): maximum 0.1 per cent, determined on 1.0 g.

ASSAY

Dissolve 0.200 g in 70 mL of *acetone R*. Titrate with *0.1 M tetrabutylammonium hydroxide in 2-propanol*, determining the end-point potentiometrically (*2.2.20*).

1 mL of *0.1 M tetrabutylammonium hydroxide in 2-propanol* is equivalent to 30.04 mg of $C_{20}H_{28}O_2$.

STORAGE

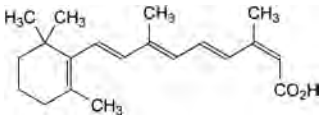
Under an inert gas, in an airtight container, protected from light.

It is recommended that the contents of an opened container be used as soon as possible and any unused part be protected by an atmosphere of inert gas.

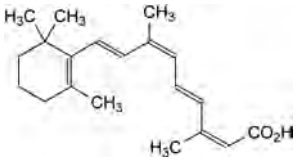
IMPURITIES

*Specified impurities*: *A*.

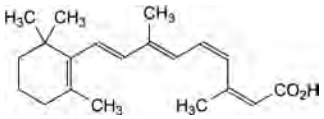
*Other detectable impurities* (the following substances would, if present at a sufficient level, be detected by one or other of the tests in the monograph. They are limited by the general acceptance criterion for other/unspecified impurities. It is therefore not necessary to identify these impurities for demonstration of compliance. See also *5.10. Control of impurities in substances for pharmaceutical use*): *B, C, D, F, G*.



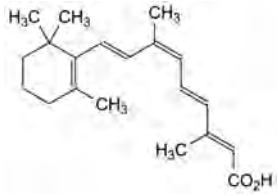
A. (2*Z*,4*E*,6*E*,8*E*)-3,7-dimethyl-9-(2,6,6-trimethylcyclohex-1-enyl)nona-2,4,6,8-tetraenoic acid (isotretinoin),



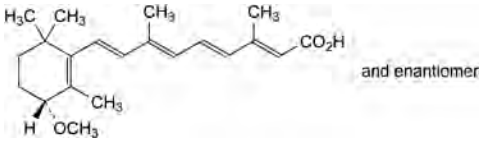
B. (2*Z*,4*E*,6*Z*,8*E*)-3,7-dimethyl-9-(2,6,6-trimethylcyclohex-1-enyl)nona-2,4,6,8-tetraenoic acid (9,13-di-*cis*-retinoic acid),



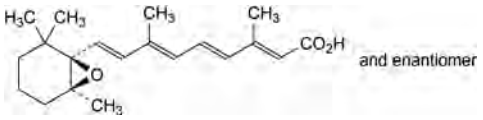
C. (2*Z*,4*Z*,6*E*,8*E*)-3,7-dimethyl-9-(2,6,6-trimethylcyclohex-1-enyl)nona-2,4,6,8-tetraenoic acid (11,13-di-*cis*-retinoic acid),



D. (2*E*,4*E*,6*Z*,8*E*)-3,7-dimethyl-9-(2,6,6-trimethylcyclohex-1-enyl)nona-2,4,6,8-tetraenoic acid (9-*cis*-retinoic acid),



F. (2*E*,4*E*,6*E*,8*E*)-9-[(3*RS*)-3-methoxy-2,6,6-trimethylcyclohex-1-enyl]-3,7-dimethylnona-2,4,6,8-tetraenoic acid (*rac*-4-methoxytretinoin),

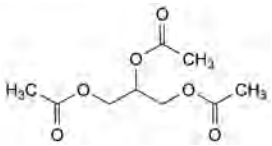


G. (2*E*,4*E*,6*E*,8*E*)-3,7-dimethyl-9-(2,2,6-trimethyl-7-oxabicyclo[4.1.0]hept-1-yl)nona-2,4,6,8-tetraenoic acid (*rac*-5,6-epoxytretinoin).

**01/2008:1106**
**corrected 6.0**

# TRIACETIN

## Triacetinum



$C_9H_{14}O_6$ $M_r$ 218.2
[102-76-1]

DEFINITION

Propane-1,2,3-triyl triacetate.

*Content*: 97.0 per cent to 100.5 per cent (anhydrous substance).

CHARACTERS

*Appearance*: clear, colourless, slightly viscous oily liquid.

*Solubility*: soluble in water, miscible with ethanol (96 per cent) and toluene.

bp: about 260 °C.

IDENTIFICATION

Infrared absorption spectrophotometry (*2.2.24*).

*Comparison*: *Ph. Eur. reference spectrum of triacetin*.

TESTS

**Appearance**. It is clear (*2.2.1*) and not more intensely coloured than reference solution $Y_6$ (*2.2.2, Method II*).

**Acidity**. Dissolve 5.00 g in 25 mL of *anhydrous ethanol R*, previously neutralised to 0.2 mL of *phenolphthalein solution R* and add 0.20 mL of *0.1 M sodium hydroxide*. The pink colour of the mixture persists for 15 s.

**Relative density** (*2.2.5*): 1.159 to 1.164.

**Refractive index** (*2.2.6*): 1.429 to 1.432.

**Water** (*2.5.12*): maximum 0.2 per cent, determined on 5.00 g.

ASSAY

Introduce 0.300 g into a 250 mL borosilicate glass flask fitted with a reflux condenser. Add 25.0 mL of *0.5 M alcoholic potassium hydroxide* and a few glass beads. Attach the condenser and heat under reflux for 30 min. Add 1 mL of *phenolphthalein solution R1* and titrate immediately with *0.5 M hydrochloric acid*. Carry out a blank test under the same conditions. Calculate the content from the difference in consumption of alkali in the main and the blank procedure.

1 mL of *0.5 M alcoholic potassium hydroxide* is equivalent to 36.37 mg of $C_9H_{14}O_6$.

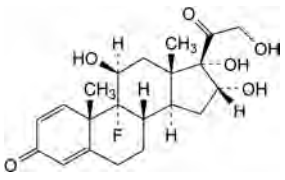
STORAGE

In a well-filled container.

**01/2008:1376**

# TRIAMCINOLONE

## Triamcinolonum



$C_{21}H_{27}FO_6$ $M_r$ 394.4
[124-94-7]

DEFINITION

9-Fluoro-11β,16α,17,21-tetrahydroxypregna-1,4-diene-3,20-dione.

*Content*: 97.0 per cent to 103.0 per cent (anhydrous substance).

CHARACTERS

*Appearance*: white or almost white, crystalline powder.

*Solubility*: practically insoluble in water, slightly soluble in methanol, practically insoluble in methylene chloride.

It shows polymorphism (*5.9*).

Monographs T

IDENTIFICATION

A. Infrared absorption spectrophotometry (*2.2.24*).

*Comparison*: *triamcinolone CRS*.

If the spectra obtained show differences, dissolve the substance to be examined and the reference substance separately in *methanol R*, evaporate to dryness, dry the residues at 60 °C at a pressure not exceeding 0.7 kPa and record new spectra using the residues.

B. Thin-layer chromatography (*2.2.27*). *Prepare the solutions immediately before use and protect from light. Examine the plate under ultraviolet light immediately after development.*

*Test solution*. Dissolve 10 mg of the substance to be examined in *methanol R* and dilute to 10 mL with the same solvent.

*Reference solution (a)*. Dissolve 20 mg of *triamcinolone CRS* in *methanol R* and dilute to 20 mL with the same solvent.

*Reference solution (b)*. Dissolve 10 mg of *dexamethasone CRS* in reference solution (a) and dilute to 10 mL with the same solution.

*Plate*: *TLC silica gel $F_{254}$ plate R*.

*Mobile phase*: add a mixture of 1.2 volumes of *water R* and 8 volumes of *methanol R* to a mixture of 15 volumes of *ether R* and 77 volumes of *methylene chloride R*.

*Application*: 5 µL.

*Development*: over a path of 15 cm.

*Drying*: in air.

*Detection*: examine in ultraviolet light at 254 nm.

*System suitability*: the chromatogram obtained with reference solution (b) shows 2 clearly separated spots.

*Results*: the principal spot in the chromatogram obtained with the test solution is similar in position and size to the principal spot in the chromatogram obtained with reference solution (a).

TESTS

**Specific optical rotation** (*2.2.7*): + 65 to + 72 (anhydrous substance).

Dissolve 0.100 g in *dimethylformamide R* and dilute to 10.0 mL with the same solvent.

**Related substances**. Liquid chromatography (*2.2.29*). *Prepare the solutions immediately before use and protect from light.*

*Test solution*. Dissolve 25.0 mg of the substance to be examined in a mixture of equal volumes of *methanol R* and *water R* and dilute to 10.0 mL with the same mixture of solvents.

*Reference solution (a)*. Dissolve 2 mg of *triamcinolone CRS* and 2 mg of *triamcinolone impurity C CRS* in a mixture of equal volumes of *methanol R* and *water R* and dilute to 100.0 mL with the same mixture of solvents.

*Reference solution (b)*. Dilute 1.0 mL of the test solution to 100.0 mL with a mixture of equal volumes of *methanol R* and *water R*.

*Blank*: *methanol R*.

*Column*:

- *size*: *l* = 0.25 m, Ø = 4.6 mm,
- *stationary phase*: *base-deactivated end-capped octadecylsilyl silica gel for chromatography R* (5 µm).

*Mobile phase*: a mixture prepared as follows: in a 1000 mL volumetric flask mix 525 mL of *methanol R* with 400 mL of *water R* and allow to equilibrate; adjust the volume to 1000 mL with *water R* and mix again.

*Flow rate*: 1 mL/min.

*Detection*: spectrophotometer set at 238 nm.

*Injection*: 20 µL.

*Run time*: 4.5 times the retention time of triamcinolone.

*Retention time*: triamcinolone = about 11 min.

*System suitability*: reference solution (a):

- *resolution*: minimum of 1.8 between the peaks due to triamcinolone and to impurity C.

*Limits*:

- *any impurity*: not more than the area of the principal peak in the chromatogram obtained with reference solution (b) (1 per cent) and not more than 2 such peaks have an area greater than half the area of the principal peak in the chromatogram obtained with reference solution (b) (0.5 per cent),
- *total*: not more than twice the area of the principal peak in the chromatogram obtained with reference solution (b) (2 per cent),
- *disregard limit*: 0.05 times the area of the principal peak in the chromatogram obtained with reference solution (b) (0.05 per cent).

**Water** (*2.5.12*): maximum 1.0 per cent, determined on 0.500 g.

ASSAY

*Prepare the solutions immediately before use and protect from light.*

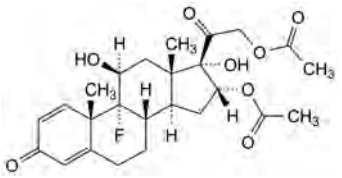
Dissolve 50.0 mg in *alcohol R* and dilute to 50.0 mL with the same solvent. Dilute 2.0 mL of the solution to 100.0 mL with *alcohol R*. Measure the absorbance (*2.2.25*) at the maximum at 238 nm.

Calculate the content of $C_{21}H_{27}FO_6$ taking the specific absorbance to be 389.

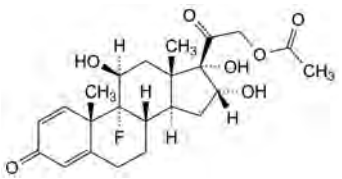
STORAGE

Protected from light.

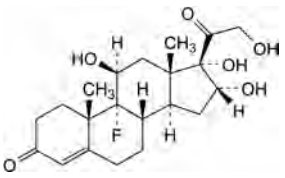
IMPURITIES



A. 9-fluoro-11β,17-dihydroxy-3,20-dioxopregna-1,4-diene-16α,21-diyl diacetate (triamcinolone 16,21-diacetate),



B. 9-fluoro-11β,16α,17-trihydroxy-3,20-dioxopregna-1,4-dien-21-yl acetate (triamcinolone 21-acetate),

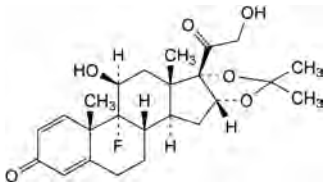


C. 9-fluoro-11β,16α,17,21-tetrahydroxypregn-4-ene-3,20-dione (pretriamcinolone).

**07/2012:0533**

# TRIAMCINOLONE ACETONIDE

## Triamcinoloni acetonidum



$C_{24}H_{31}FO_6$ $M_r$ 434.5
[76-25-5]

DEFINITION

9-Fluoro-11β,21-dihydroxy-16α,17-(1-methylethylidenedioxy)pregna-1,4-diene-3,20-dione.

*Content*: 97.5 per cent to 102.0 per cent (anhydrous substance).

CHARACTERS

*Appearance*: white or almost white, crystalline powder.

*Solubility*: practically insoluble in water, sparingly soluble in ethanol (96 per cent).

It shows polymorphism (*5.9*).

IDENTIFICATION

*First identification: A, C.*

*Second identification: B, D.*

A. Infrared absorption spectrophotometry (*2.2.24*).

*Comparison*: *triamcinolone acetonide CRS*.

If the spectra obtained in the solid state show differences, dissolve the substance to be examined and the reference substance separately in the minimum volume of *methanol R* and evaporate to dryness. Using the residues, prepare halogen salt discs or mulls in *liquid paraffin R* and record new spectra.

B. Thin-layer chromatography (*2.2.27*). *Prepare the solutions immediately before use and protect from light.*

*Test solution*. Dissolve 10 mg of the substance to be examined in *methanol R* and dilute to 10 mL with the same solvent.

*Reference solution (a)*. Dissolve 20 mg of *triamcinolone acetonide CRS* in *methanol R* and dilute to 20 mL with the same solvent.

*Reference solution (b)*. Dissolve 10 mg of *triamcinolone hexacetonide CRS* in reference solution (a) and dilute to 10 mL with reference solution (a).

*Plate*: *TLC silica gel $F_{254}$ plate R*.

*Mobile phase*: add a mixture of 1.2 volumes of *water R* and 8 volumes of *methanol R* to a mixture of 15 volumes of *ether R* and 77 volumes of *methylene chloride R*.

*Application*: 5 µL.

*Development*: over 3/4 of the plate.

*Drying*: in air.

*Detection*: examine in ultraviolet light at 254 nm, immediately after development.

*System suitability*: reference solution (b):

– the chromatogram shows 2 clearly separated spots.

*Results*: the principal spot in the chromatogram obtained with the test solution is similar in position and size to the principal spot in the chromatogram obtained with reference solution (a).

C. Examine the chromatograms obtained in the assay.

*Results*: the principal peak in the chromatogram obtained with the test solution is similar in retention time and size to the principal peak in the chromatogram obtained with reference solution (c).

D. Mix about 5 mg with 45 mg of *heavy magnesium oxide R* and ignite in a crucible until an almost white residue is obtained (usually less than 5 min). Allow to cool, add 1 mL of *water R*, 0.05 mL of *phenolphthalein solution R1* and about 1 mL of *dilute hydrochloric acid R* to render the solution colourless. Filter. To a freshly prepared mixture of 0.1 mL of *alizarin S solution R* and 0.1 mL of *zirconyl nitrate solution R*, add 1.0 mL of the filtrate. Mix, allow to stand for 5 min and compare the colour of the solution to that of a blank prepared in the same manner. The test solution is yellow and the blank is red.

TESTS

**Specific optical rotation** (*2.2.7*): + 110 to + 117 (anhydrous substance).

Dissolve 0.100 g in *ethanol (96 per cent) R* and dilute to 20.0 mL with the same solvent.

**Related substances**. Liquid chromatography (*2.2.29*). *Carry out the test protected from light.*

*Test solution.* Dissolve 25.0 mg of the substance to be examined in mobile phase B and dilute to 25.0 mL with mobile phase B.

*Reference solution (a).* Dissolve 5 mg of *triamcinolone acetonide for system suitability CRS* (containing impurities B and C) in mobile phase B and dilute to 5.0 mL with mobile phase B.

*Reference solution (b).* Dilute 1.0 mL of the test solution to 100.0 mL with mobile phase B. Dilute 1.0 mL of this solution to 10.0 mL with mobile phase B.

*Reference solution (c).* Dissolve 25.0 mg of *triamcinolone acetonide CRS* in mobile phase B and dilute to 25.0 mL with mobile phase B.

*Column*:

– *size*: *l* = 0.25 m, Ø = 4.6 mm;
– *stationary phase*: *end-capped octadecylsilyl silica gel for chromatography R* (5 µm);
– *temperature*: 40 °C.

*Mobile phase*:

– *mobile phase A*: *acetonitrile R*, *water for chromatography R* (32:68 *V/V*);
– *mobile phase B*: *water for chromatography R*, *acetonitrile R* (35:65 *V/V*);

| Time (min) | Mobile phase A (per cent *V/V*) | Mobile phase B (per cent *V/V*) |
|---|---|---|
| 0 - 20 | 100 | 0 |
| 20 - 40 | 100 → 0 | 0 → 100 |

*Flow rate*: 1.5 mL/min.

*Detection*: spectrophotometer at 254 nm.

*Injection*: 20 µL of the test solution and reference solutions (a) and (b).

*Identification of impurities*: use the chromatogram supplied with *triamcinolone acetonide for system suitability CRS* and the chromatogram obtained with reference solution (a) to identify the peaks due to impurities B and C.

*Relative retention* with reference to triamcinolone acetonide (retention time = about 16 min): impurity C = about 0.7; impurity B = about 0.8.

*System suitability*: reference solution (a):

– *resolution*: minimum 2.5 between the peaks due to impurities C and B.

Monographs T

*Limits*:

- *impurity B*: not more than twice the area of the principal peak in the chromatogram obtained with reference solution (b) (0.2 per cent);
- *impurity C*: not more than 1.5 times the area of the principal peak in the chromatogram obtained with reference solution (b) (0.15 per cent);
- *unspecified impurities*: for each impurity, not more than the area of the principal peak in the chromatogram obtained with reference solution (b) (0.10 per cent);
- *total*: not more than 5 times the area of the principal peak in the chromatogram obtained with reference solution (b) (0.5 per cent);
- *disregard limit*: 0.5 times the area of the principal peak in the chromatogram obtained with reference solution (b) (0.05 per cent).

**Water** (*2.5.12*): maximum 2.0 per cent, determined on 0.500 g.

ASSAY

*Carry out the assay protected from light.*

Liquid chromatography (*2.2.29*) as described in the test for related substances with the following modifications.

*Mobile phase*: mobile phase A.

*Injection*: test solution and reference solution (c).

*Run time*: 1.5 times the retention time of triamcinolone acetonide.

*Retention time*: triamcinolone acetonide = about 16 min.

Calculate the percentage content of $C_{24}H_{31}FO_6$ taking into account the assigned content of *triamcinolone acetonide CRS*.

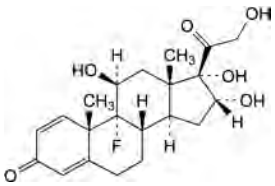
STORAGE

Protected from light.

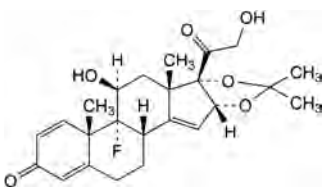
IMPURITIES

*Specified impurities*: *B, C.*

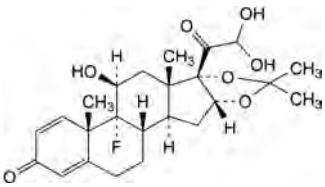
*Other detectable impurities* (the following substances would, if present at a sufficient level, be detected by one or other of the tests in the monograph. They are limited by the general acceptance criterion for other/unspecified impurities and/or by the general monograph *Substances for pharmaceutical use (2034)*. It is therefore not necessary to identify these impurities for demonstration of compliance. See also *5.10. Control of impurities in substances for pharmaceutical use*): *A, D, E, F.*



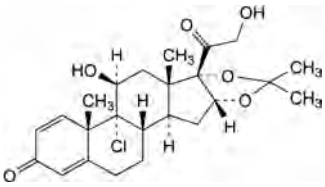
A. 9-fluoro-11β,16α,17,21-tetrahydroxypregna-1,4-diene-3,20-dione (triamcinolone),



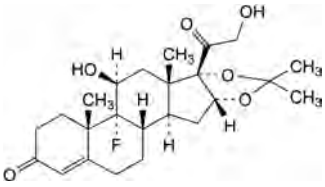
B. 9-fluoro-11β,21-dihydroxy-16α,17-(1-methylethylidenedioxy)pregna-1,4,14-triene-3,20-dione (Δ14-triamcinolone acetonide),



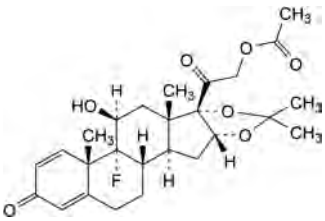
C. 9-fluoro-11β,21,21-trihydroxy-16α,17-(1-methylethylidenedioxy)pregna-1,4-diene-3,20-dione (triamcinolone acetonide 21-aldehyde hydrate),



D. 9-chloro-11β,21-dihydroxy-16α,17-(1-methylethylidenedioxy)pregna-1,4-diene-3,20-dione (9α-chloro triamcinolone acetonide),



E. 9-fluoro-11β,21-dihydroxy-16α,17-(1-methylethylidenedioxy)pregna-4-ene-3,20-dione (1,2-dihydrotriamcinolone acetonide),

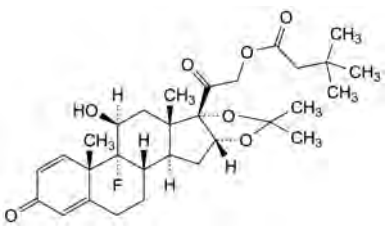


F. 9-fluoro-11β-hydroxy-16α,17-(1-methylethylidenedioxy)-3,20-dioxopregna-1,4-dien-21-yl acetate (21-acetate triamcinolone acetonide).

**01/2017:0867**

# TRIAMCINOLONE HEXACETONIDE

## Triamcinoloni hexacetonidum



$C_{30}H_{41}FO_7$ $M_r$ 532.6

[5611-51-8]

DEFINITION

9-Fluoro-11β-hydroxy-2′,2′-dimethyl-3,20-dioxo-(16β*H*)-[1,3]dioxolo[4′,5′:16,17]pregna-1,4-dien-21-yl 3,3-dimethylbutanoate.

*Content*: 98.0 per cent to 102.0 per cent (anhydrous substance).

CHARACTERS

*Appearance*: white or almost white, crystalline powder.

*Solubility*: practically insoluble in water, sparingly soluble in anhydrous ethanol and in methanol, practically insoluble in heptane.

IDENTIFICATION

A. Infrared absorption spectrophotometry (*2.2.24*).

*Comparison*: *triamcinolone hexacetonide CRS*.

B. Examine the chromatograms obtained in the assay.

*Results*: the principal peak in the chromatogram obtained with test solution (b) is similar in retention time and size to the principal peak in the chromatogram obtained with reference solution (c).

TESTS

**Specific optical rotation** (*2.2.7*): + 95 to + 101 (anhydrous substance).

Dissolve 0.100 g in *methylene chloride R* and dilute to 10.0 mL with the same solvent.

**Related substances**. Liquid chromatography (*2.2.29*). *Carry out the test protected from light.*

*Test solution (a).* Dissolve 25.0 mg of the substance to be examined in *methanol R* and dilute to 10.0 mL with the same solvent.

*Test solution (b).* Dilute 1.0 mL of test solution (a) to 5.0 mL with *methanol R*.

*Reference solution (a).* Dissolve 5 mg of *triamcinolone hexacetonide for system suitability CRS* (containing impurities B and C) in *methanol R* and dilute to 2.0 mL with the same solvent.

*Reference solution (b).* Dilute 1.0 mL of test solution (a) to 100.0 mL with the mobile phase. Dilute 1.0 mL of this solution to 10.0 mL with the mobile phase.

*Reference solution (c).* Dissolve 25.0 mg of *triamcinolone hexacetonide CRS* in *methanol R* and dilute to 10.0 mL with the same solvent. Dilute 1.0 mL of the solution to 5.0 mL with *methanol R*.

*Column*:

– *size*: *l* = 0.25 m, Ø = 4.6 mm;
– *stationary phase*: *base-deactivated end-capped octadecylsilyl silica gel for chromatography R* (5 µm).

*Mobile phase*: *water for chromatography R*, *methanol R* (25:75 *V/V*).

*Flow rate*: 2.0 mL/min.

*Detection*: spectrophotometer at 254 nm.

*Injection*: 20 µL of test solution (a) and reference solutions (a) and (b).

*Run time*: twice the retention time of triamcinolone hexacetonide.

*Identification of impurities*: use the chromatogram supplied with *triamcinolone hexacetonide for system suitability CRS* and the chromatogram obtained with reference solution (a) to identify the peaks due to impurities B and C.

*Relative retention* with reference to triamcinolone hexacetonide (retention time = about 8 min): impurity B (epimer 1) = about 0.79; impurity B (epimer 2) = about 0.81; impurity C = about 1.3.

*System suitability*: reference solution (a):

– *resolution*: minimum 4.0 between the peaks due to triamcinolone hexacetonide and impurity C.

*Calculation of percentage contents:*

– for each impurity, use the concentration of triamcinolone hexacetonide in reference solution (b).

*Limits*:

– *impurity B*: for the sum of the areas of the 2 epimer peaks, maximum 0.15 per cent;
– *unspecified impurities*: for each impurity, maximum 0.10 per cent;
– *total*: maximum 0.3 per cent;
– *reporting threshold*: 0.05 per cent.

**Water** (*2.5.12*): maximum 2.0 per cent, determined on 0.50 g.

ASSAY

*Carry out the test protected from light.*

Liquid chromatography (*2.2.29*) as described in the test for related substances with the following modification.

*Injection*: 10 µL of test solution (b) and reference solution (c).

Calculate the percentage content of $C_{30}H_{41}FO_7$ taking into account the assigned content of *triamcinolone hexacetonide CRS*.

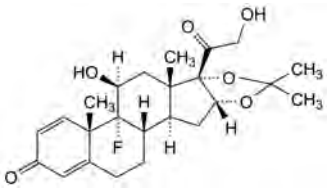
STORAGE

Protected from light.

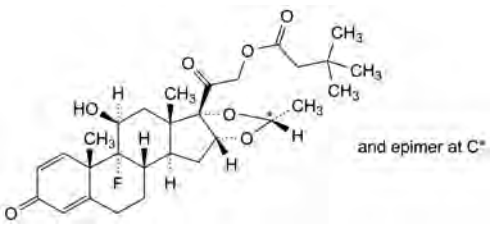
IMPURITIES

*Specified impurities: B.*

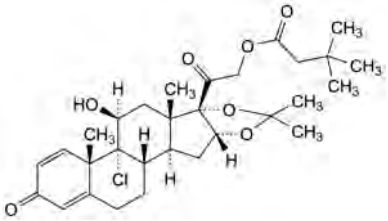
*Other detectable impurities* (the following substances would, if present at a sufficient level, be detected by one or other of the tests in the monograph. They are limited by the general acceptance criterion for other/unspecified impurities and/or by the general monograph *Substances for pharmaceutical use (2034)*. It is therefore not necessary to identify these impurities for demonstration of compliance. See also *5.10. Control of impurities in substances for pharmaceutical use*): *A, C.*



A. 9-fluoro-11β,21-dihydroxy-2′,2′-dimethyl-(16β*H*)-[1,3]dioxolo[4′,5′:16,17]pregna-1,4-diene-3,20-dione (triamcinolone acetonide),



B. (2′*RS*)-9-fluoro-11β-hydroxy-2′-methyl-3,20-dioxo-(16β*H*)-[1,3]dioxolo[4′,5′:16,17]pregna-1,4-dien-21-yl 3,3-dimethylbutanoate,



C. 9-chloro-11β-hydroxy-2′,2′-dimethyl-3,20-dioxo-(16β*H*)-[1,3]dioxolo[4′,5′:16,17]pregna-1,4-dien-21-yl 3,3-dimethylbutanoate.

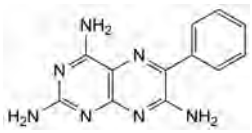
corrected 6.3

# TRIAMTERENE

## Triamterenum



$C_{12}H_{11}N_7$ $M_r$ 253.3
[396-01-0]

DEFINITION

6-Phenylpteridine-2,4,7-triamine.

*Content*: 99.0 per cent to 101.0 per cent (dried substance).

CHARACTERS

*Appearance*: yellow, crystalline powder.

*Solubility*: very slightly soluble in water and in ethanol (96 per cent).

IDENTIFICATION

Infrared absorption spectrophotometry (*2.2.24*).

*Comparison*: *triamterene CRS*.

TESTS

**Acidity**. Boil 1.0 g with 20 mL of *water R* for 5 min, cool, filter and wash the filter with 3 quantities, each of 10 mL, of *water R*. Combine the filtrate and washings and add 0.3 mL of *phenolphthalein solution R*. Not more than 1.5 mL of *0.01 M sodium hydroxide* is required to change the colour of the indicator.

**Impurity D**. Gas chromatography (*2.2.28*).

*Internal standard solution*. Dilute 0.1 mL of *nitrobenzene R* to 100 mL with *methanol R*. Dilute 1 mL of this solution to 50 mL with *methanol R*.

*Test solution*. Introduce 0.800 g of the substance to be examined into a suitable vial, add 5 mL of *dimethyl sulfoxide R* and heat until the sample is dissolved (do not heat to boiling). Allow to cool. Add 5 mL of cold *methanol R* to enhance the precipitation of triamterene. Filter and wash the filter with 5 mL of *methanol R*. Combine the filtrate and washing, add 2.0 mL of the internal standard solution and dilute to 20.0 mL with *methanol R*.

*Reference solution*. Dissolve 20.0 mg of *benzyl cyanide R* (impurity D) in *methanol R* and dilute to 100.0 mL with the same solvent. Dilute 5.0 mL of the solution to 50.0 mL with *methanol R*. To 2.0 mL of this solution add 2.0 mL of the internal standard solution and 5 mL of *dimethyl sulfoxide R* and dilute to 20.0 mL with *methanol R*.

*Blank solution*. Dilute 5 mL of *dimethyl sulfoxide R* to 20 mL with *methanol R*.

*Column*:

- *material*: fused silica;
- *size*: *l* = 30 m, Ø = 0.25 mm;
- *stationary phase*: *macrogol 20 000 R* (0.5 µm).

*Carrier gas*: *helium for chromatography R*.

*Flow rate*: 1.5 mL/min.

*Split ratio*: 1:15.

*Temperature*:

- *column*: 170 °C;
- *injection port*: 210 °C;
- *detector*: 230 °C.

*Detection*: flame ionisation.

*Injection*: 1 µL.

*Run time*: twice the retention time of the internal standard.

*Relative retention* with reference to the internal standard (retention time = about 6 min): impurity D = about 1.6.

*System suitability*: reference solution:

- *resolution*: minimum 2.0 between the peak due to impurity D and the nearest peak due to the solvent (blank solution);
- *signal-to-noise ratio*: minimum 10 for the peak due to impurity D.

*Limit*:

- *impurity D*: calculate the ratio (*R*) of the area of the peak due to impurity D to the area of the peak due to the internal standard from the chromatogram obtained with the reference solution; from the chromatogram obtained with the test solution, calculate the ratio of the area of the peak due to impurity D to the area of the peak due to the internal standard: this ratio is not greater than *R* (50 ppm).

**Related substances**. Liquid chromatography (*2.2.29*).

*Test solution*. Dissolve 10.0 mg of the substance to be examined in the mobile phase and dilute to 10.0 mL with the mobile phase.

*Reference solution (a)*. Dilute 1.0 mL of the test solution to 100.0 mL with the mobile phase. Dilute 1.0 mL of this solution to 10.0 mL with the mobile phase.

*Reference solution (b)*. Dissolve 5.0 mg of *nitrosotriaminopyrimidine CRS* (impurity A) in the mobile phase and dilute to 100.0 mL with the mobile phase. Dilute 1.0 mL of the solution to 100.0 mL with the mobile phase. Dilute 1.0 mL of this solution to 10.0 mL with the mobile phase.

*Reference solution (c)*. Dissolve the contents of a vial of *triamterene impurity B CRS* in 200 µL of *dimethyl sulfoxide R*. Add 5.0 mL of the test solution and dilute to 50.0 mL with the mobile phase. Filter the solution through a membrane filter (nominal pore size 0.45 µm) before injection.

*Column*:

- *size*: *l* = 0.25 m, Ø = 4.0 mm;
- *stationary phase*: spherical *end-capped octylsilyl silica gel for chromatography R* (5 µm).

*Mobile phase*: *butylamine R*, *acetonitrile R*, *methanol R*, *water R* (2:200:200:600 *V/V/V/V*), adjusted to pH 5.3 with *acetic acid R*.

*Flow rate*: 1 mL/min.

*Detection*: spectrophotometer at 320 nm and at 355 nm.

*Injection*: 50 µL.

*Relative retention* with reference to triamterene (retention time = about 5 min): impurity A = about 0.6; impurity B = about 0.8; impurity C = about 1.7.

*System suitability*:

- *resolution*: minimum 1.5 between the peaks due to impurity B and triamterene in the chromatogram obtained with reference solution (c) at 355 nm; if necessary, increase the quantity of *water R* in the mobile phase;
- *signal-to-noise ratio*: minimum 10 for the principal peak in the chromatogram obtained with reference solution (b) at 320 nm.

*Limits*:

- *correction factors*: for the calculation of content, multiply the peak areas of the following impurities by the corresponding correction factor: impurity B = 1.8; impurity C = 1.5;
- *impurity A at 320 nm*: not more than the area of the corresponding peak in the chromatogram obtained with reference solution (b) (50 ppm);

- *impurities B, C at 355 nm*: for each impurity, not more than the area of the principal peak in the chromatogram obtained with reference solution (a) (0.1 per cent);
- *unspecified impurities at 355 nm*: for each impurity, not more than the area of the principal peak in the chromatogram obtained with reference solution (a) (0.10 per cent);
- *total at 355 nm*: not more than twice the area of the principal peak in the chromatogram obtained with reference solution (a) (0.2 per cent);
- *disregard limit at 355 nm*: 0.5 times the area of the principal peak in the chromatogram obtained with reference solution (a) (0.05 per cent).

**Loss on drying** (*2.2.32*): maximum 1.0 per cent, determined on 1.000 g by drying in an oven at 105 °C.

**Sulfated ash** (*2.4.14*): maximum 0.1 per cent, determined on 1.0 g.

ASSAY

Dissolve 0.150 g in 5 mL of *anhydrous formic acid R* and add 100 mL of *anhydrous acetic acid R*. Titrate with *0.1 M perchloric acid*, determining the end-point potentiometrically (*2.2.20*).

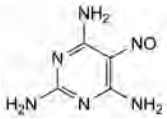
1 mL of *0.1 M perchloric acid* is equivalent to 25.33 mg of $C_{12}H_{11}N_7$.

STORAGE

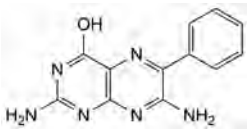
Protected from light.

IMPURITIES

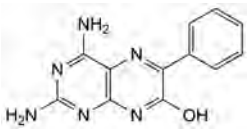
*Specified impurities: A, B, C, D.*



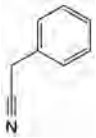
A. 5-nitrosopyrimidine-2,4,6-triamine (nitrosotriamino-pyrimidine),



B. 2,7-diamino-6-phenylpteridin-4-ol,



C. 2,4-diamino-6-phenylpteridin-7-ol,

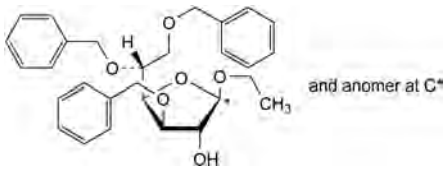


D. phenylacetonitrile (benzyl cyanide).

**01/2017:1740**

# TRIBENOSIDE

## Tribenosidum



$C_{29}H_{34}O_6$ $M_r$ 478.6
[10310-32-4]

DEFINITION

Mixture of α- and β-anomers of ethyl 3,5,6-tri-*O*-benzyl-D-glucofuranoside.

*Content*: 96.0 per cent to 102.0 per cent.

CHARACTERS

*Appearance*: yellowish or pale yellow, clear, viscous liquid.

*Solubility*: practically insoluble in water, very soluble in acetone, in methanol and in methylene chloride.

IDENTIFICATION

Infrared absorption spectrophotometry (*2.2.24*).

*Comparison*: *tribenoside CRS*.

TESTS

**Solution S**. Dissolve 4.00 g in *methanol R* and dilute to 20.0 mL with the same solvent.

**Appearance of solution**. Solution S is clear (*2.2.1*) and its absorbance (*2.2.25*) at 420 nm has a maximum of 0.10.

**Specific optical rotation** (*2.2.7*): − 40.0 to − 31.0.

Dilute 2.0 mL of solution S to 20.0 mL with *methanol R*.

**Related substances**. Liquid chromatography (*2.2.29*).

*Test solution (a).* Dissolve 1.000 g of the substance to be examined in a mixture of 5 volumes of *water R* and 95 volumes of *acetonitrile R* and dilute to 25.0 mL with the same mixture of solvents.

*Test solution (b).* Dissolve 50.0 mg of the substance to be examined in a mixture of 5 volumes of *water R* and 95 volumes of *acetonitrile R* and dilute to 50.0 mL with the same mixture of solvents.

*Reference solution (a).* Dilute 25.0 mg of *benzaldehyde CRS* (impurity C) and 30.0 mg of *tribenoside impurity A CRS* to 100.0 mL with *acetonitrile R*. Introduce 20.0 mL of this solution into a 50 mL volumetric flask, add 2.5 mL of *water R* and dilute to 50.0 mL with *acetonitrile R*.

*Reference solution (b).* Dissolve 50.0 mg of *tribenoside CRS* in a mixture of 5 volumes of *water R* and 95 volumes of *acetonitrile R* and dilute to 50.0 mL with the same mixture of solvents.

*Reference solution (c).* Dissolve 12.0 mg of *tribenoside impurity D CRS* in a mixture of 5 volumes of *water R* and 95 volumes of *acetonitrile R* and dilute to 100.0 mL with the same mixture of solvents.

*Column*:

- *size*: *l* = 0.15 m, Ø = 4.6 mm;
- *stationary phase*: *end-capped octadecylsilyl silica gel for chromatography R* (3 µm).

*Mobile phase*:

- *mobile phase A*: 0.1 per cent *V/V* solution of *phosphoric acid R*;

Monographs T

– *mobile phase B*: *acetonitrile R*;

| Time (min) | Mobile phase A (per cent *V/V*) | Mobile phase B (per cent *V/V*) |
|---|---|---|
| 0 - 40 | 55 → 10 | 45 → 90 |
| 40 - 55 | 10 | 90 |

*Flow rate*: 1.3 mL/min.

*Detection*: spectrophotometer at 254 nm.

*Injection*: 20 µL of test solution (a) and reference solutions (a), (b) and (c).

*Identification of impurities*: use the chromatogram obtained with reference solution (a) to identify the peaks due to impurities A and C; use the chromatogram obtained with reference solution (c) to identify the peak due to impurity D.

*Relative retentions* with reference to the β-anomer of tribenoside (retention time = about 18 min): α-anomer = about 1.1; impurity C = about 0.2; impurity B = about 0.6; impurity D = about 0.8; impurity A = about 1.4.

*System suitability*: reference solution (b):

– *resolution*: minimum 3.0 between the peaks due to the α-anomer and to the β-anomer of tribenoside.

*Limits*:

– *impurity A*: not more than 1.7 times the area of the corresponding peak in the chromatogram obtained with reference solution (a) (0.5 per cent);
– *impurity C*: not more than twice the area of the corresponding peak in the chromatogram obtained with reference solution (a) (0.5 per cent); if the area of the peak due to impurity C in the chromatogram obtained with the test solution is greater than the area of the corresponding peak in the chromatogram obtained with reference solution (a) (0.25 per cent), dilute the test solution to obtain an area equal to or smaller than the area of the peak in the chromatogram obtained with reference solution (a); calculate the content of impurity C taking into account the dilution factor;
– *impurity D*: not more than the area of the principal peak in the chromatogram obtained with reference solution (c) (0.3 per cent);
– *any other impurity*: not more than the area of the peak due to impurity A in the chromatogram obtained with reference solution (a) (0.3 per cent);
– *total*: maximum 2.0 per cent;
– *disregard limit*: 0.17 times the area of the peak due to impurity A in the chromatogram obtained with reference solution (a) (0.05 per cent).

ASSAY

Liquid chromatography (*2.2.29*) as described in the test for related substances with the following modification.

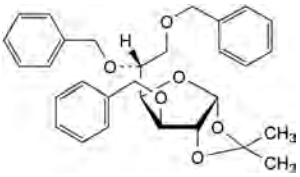
*Injection*: test solution (b) and reference solution (b).

Calculate the sum of the percentage contents of the α-anomer and the β-anomer of tribenoside taking into account the assigned content of *tribenoside CRS*.

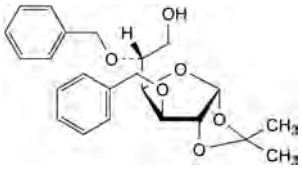
STORAGE

Under nitrogen, in an airtight container.

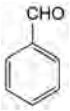
IMPURITIES



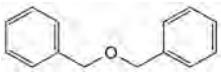
A. 3,5,6-tri-*O*-benzyl-1,2-*O*-(1-methylethylidene)-α-D-glucofuranose,



B. 3,5-di-*O*-benzyl-1,2-*O*-(1-methylethylidene)-α-D-glucofuranose,



C. benzaldehyde,

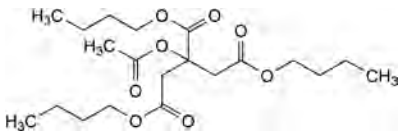


D. dibenzyl ether.

**01/2017:1770**
**corrected 10.0**

# TRIBUTYL ACETYLCITRATE

## Tributylis acetylcitras



$C_{20}H_{34}O_8$ $M_r$ 402.5
[77-90-7]

DEFINITION

Tributyl 2-(acetyloxy)propane-1,2,3-tricarboxylate.

*Content*: 99.0 per cent to 101.0 per cent (anhydrous substance).

CHARACTERS

*Appearance*: clear, oily liquid.

*Solubility*: not miscible with water, miscible with ethanol (96 per cent) and with methylene chloride.

IDENTIFICATION

Infrared absorption spectrophotometry (*2.2.24*).

*Preparation*: thin films between 2 sodium chloride plates.

*Comparison*: *tributyl acetylcitrate CRS*.

TESTS

**Appearance**. The substance to be examined is clear (*2.2.1*) and not more intensely coloured than reference solution $BY_6$ (*2.2.2, Method II*).

**Acidity**. Dilute 10 g with 10 mL of previously neutralised *ethanol (96 per cent) R* and add 0.5 mL of *bromothymol blue solution R2*. Not more than 0.3 mL of *0.1 M sodium hydroxide* is required to change the colour of the indicator to blue.

**Refractive index** (*2.2.6*): 1.442 to 1.445.

**Related substances**. Gas chromatography (*2.2.28*).

*Test solution*. Dissolve 0.5 g of the substance to be examined in *methylene chloride R* and dilute to 20 mL with the same solvent.

*Reference solution (a)*. Dissolve 50 mg of the substance to be examined and 50 mg of *tributyl citrate R* (impurity A) in *methylene chloride R* and dilute to 20 mL with the same solvent.

*Reference solution (b).* Dilute 1.0 mL of the test solution to 20.0 mL with *methylene chloride R*. Dilute 1.0 mL of this solution to 25.0 mL with *methylene chloride R*.

*Reference solution (c).* Dissolve the contents of a vial of *tributyl acetylcitrate for peak identification CRS* (containing impurities B and C) in 1 mL of *methylene chloride R*.

*Column*:

- *material*: fused silica;
- *size*: *l* = 30 m, Ø = 0.25 mm;
- *stationary phase*: *cyanopropyl(25)phenyl(25)methyl(50)polysiloxane R* (film thickness 0.25 µm).

*Carrier gas*: *helium for chromatography R*.

*Linear velocity*: 36 cm/s.

*Split ratio*: 1:20.

*Temperature*:

| | Time (min) | Temperature (°C) |
|---|---|---|
| Column | 0 - 7 | 70 → 210 |
| | 7 - 50 | 210 |
| Injection port | | 250 |
| Detector | | 250 |

*Detection*: flame ionisation.

*Injection*: 1 µL; inject via an inert, glass-lined injection port using an automatic injection device.

*Identification of impurities*: use the chromatogram supplied with *tributyl acetylcitrate for peak identification CRS* and the chromatogram obtained with reference solution (c) to identify the peaks due to impurities B and C; use the chromatogram obtained with reference solution (a) to identify the peak due to impurity A.

*Relative retention* with reference to tributyl acetylcitrate (retention time = about 24 min): impurity B = about 0.70; impurity C = about 0.83; impurity A = about 0.87.

*System suitability*:

- *resolution*: minimum 2.0 between the peaks due to impurity A and tributyl acetylcitrate in the chromatogram obtained with reference solution (a);
- *repeatability*: maximum relative standard deviation of 5.0 per cent after 6 injections of reference solution (b).

*Limits*:

- *impurity A*: not more than 3 times the area of the principal peak in the chromatogram obtained with reference solution (b) (0.6 per cent);
- *impurity C*: not more than twice the area of the principal peak in the chromatogram obtained with reference solution (b) (0.4 per cent);
- *impurity B*: not more than the area of the principal peak in the chromatogram obtained with reference solution (b) (0.2 per cent);
- *unspecified impurities*: for each impurity, not more than 0.5 times the area of the principal peak in the chromatogram obtained with reference solution (b) (0.10 per cent);
- *total*: not more than 5 times the area of the principal peak in the chromatogram obtained with reference solution (b) (1.0 per cent);
- *disregard limit*: 0.25 times the area of the principal peak in the chromatogram obtained with reference solution (b) (0.05 per cent).

**Water** (*2.5.12*): maximum 0.25 per cent, determined on 2.00 g.

**Sulfated ash** (*2.4.14*): maximum 0.1 per cent, determined on 1.0 g.

ASSAY

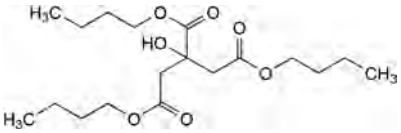
Introduce 1.500 g into a 250 mL borosilicate glass flask. Add 25 mL of *2-propanol R*, 50 mL of *water R*, 25.0 mL of *1 M sodium hydroxide* and a few glass beads. Heat under a reflux condenser for 3 h. Allow to cool. Add 1 mL of *phenolphthalein solution R1* and titrate with *1 M hydrochloric acid*. Carry out a blank titration.

1 mL of *1 M sodium hydroxide* is equivalent to 100.6 mg of $C_{20}H_{34}O_8$.

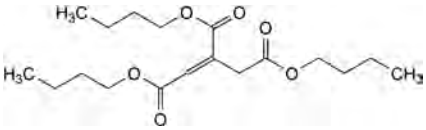
IMPURITIES

*Specified impurities*: *A, B, C.*

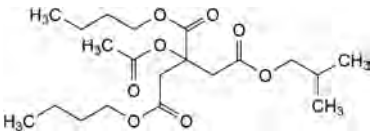
*Other detectable impurities* (the following substances would, if present at a sufficient level, be detected by one or other of the tests in the monograph. They are limited by the general acceptance criterion for other/unspecified impurities and/or by the general monograph *Substances for pharmaceutical use (2034)*. It is therefore not necessary to identify these impurities for demonstration of compliance. See also *5.10. Control of impurities in substances for pharmaceutical use*): *D, E.*



A. tributyl 2-hydroxypropane-1,2,3-tricarboxylate (tributyl citrate),

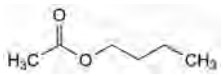


B. tributyl propene-1,2,3-tricarboxylate (tributyl aconitate),



C. 1,2-dibutyl 3-(2-methylpropyl) 2-(acetyloxy)propane-1,2,3-tricarboxylate,

D. butan-1-ol,

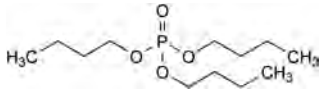


E. butyl acetate.

**01/2017:1682**
**corrected 10.0**

# TRI-*n*-BUTYL PHOSPHATE

## Tri-*n*-butylis phosphas



$C_{12}H_{27}O_4P$ $M_r$ 266.3

[126-73-8]

CHARACTERS

*Appearance*: clear, colourless or pale yellow liquid.

*Solubility*: slightly soluble in water, miscible with ethanol (96 per cent).

bp: about 289 °C, with decomposition.

IDENTIFICATION

Infrared absorption spectrophotometry (*2.2.24*).

*Comparison*: *tri-n-butyl phosphate CRS*.

TESTS

**Appearance**. The substance to be examined is clear (*2.2.1*) and not more intensely coloured than reference solution $Y_6$ (*2.2.2, Method II*).

**Acidity**. Dissolve 50 mL in 50 mL of *ethanol (96 per cent) R* previously adjusted with *0.02 M potassium hydroxide* or *0.02 M hydrochloric acid* to a bluish-green colour, using 0.5 mL of *bromothymol blue solution R1* as indicator. Titrate with *0.02 M potassium hydroxide* to the initial bluish-green coloration. Not more than 0.8 mL of *0.02 M potassium hydroxide* is required.

**Related substances**. Gas chromatography (*2.2.28*): use the normalisation procedure.

*Test solution*. The substance to be examined.

*Reference solution*. Dissolve 10 mg of the substance to be examined and 10 mg of *methyl myristate R* in *methylene chloride R* and dilute to 10 mL with the same solvent.

*Column*:

- *material*: fused silica;
- *size*: *l* = 30 m, Ø = 0.32 mm;
- *stationary phase*: *methylpolysiloxane R* (5 µm).

*Carrier gas*: *helium for chromatography R*.

*Linear velocity*: 32 cm/s.

*Split ratio*: 65:1.

*Temperature*:

- *column*: 250 °C;
- *injection port and detector*: 250 °C.

*Detection*: flame ionisation.

*Injection*: 1 µL.

*Run time*: twice the retention time of tri-*n*-butyl phosphate.

*System suitability*: reference solution:

- *resolution*: minimum 10 between the peaks due to tri-*n*-butyl phosphate and methyl myristate.

*Limits*:

- *any impurity*: for each impurity, maximum 0.3 per cent;
- *total*: maximum 0.5 per cent;
- *disregard limit*: 0.01 per cent.

**Chlorides** (*2.4.4*): maximum 200 ppm.

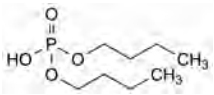
Dissolve 0.25 g in 15 mL of *ethanol (70 per cent V/V) R*. The solution complies with the test. Prepare the reference solution using 10 mL of *chloride standard solution (5 ppm Cl) R* and 5 mL of *anhydrous ethanol R*.

**Water** (*2.5.32*): maximum 0.1 per cent, determined on 1.0 g.

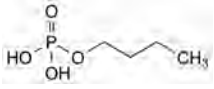
STORAGE

Protected from light.

IMPURITIES

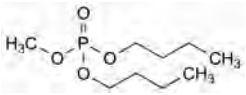


A. dibutyl hydrogen phosphate,

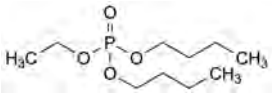


B. butyl dihydrogen phosphate,

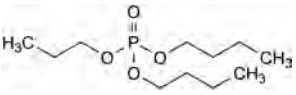
C. $H_3C$-$[CH_2]_3$-OH: butan-1-ol,



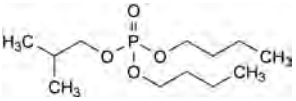
D. dibutyl methyl phosphate,



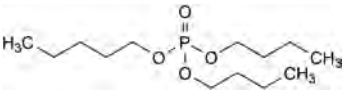
E. dibutyl ethyl phosphate,



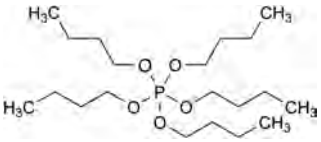
F. dibutyl propyl phosphate,



G. dibutyl 2-methylpropyl phosphate,



H. dibutyl pentyl phosphate,



I. pentabutyl phosphate.

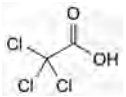
# TRICHLOROACETIC ACID

## Acidum trichloroaceticum



$C_2HCl_3O_2$ $M_r$ 163.4
[76-03-9]

DEFINITION

2,2,2-Trichloroacetic acid.

*Content*: 98.0 per cent to 100.5 per cent.

CHARACTERS

*Appearance*: white or almost white, crystalline mass or colourless crystals, very deliquescent.

*Solubility*: very soluble in water, in ethanol (96 per cent) and in methylene chloride.

IDENTIFICATION

*First identification*: *A*.

*Second identification*: *B, C*.

A. Infrared absorption spectrophotometry (*2.2.24*).
*Comparison*: *Ph. Eur. reference spectrum of trichloroacetic acid*.

B. To 0.5 mL of solution S (see Tests) add 2 mL of *pyridine R* and 5 mL of *strong sodium hydroxide solution R*. Shake vigorously and heat in a water-bath at 60-70 °C for 5 min. The upper layer shows an intense red colour.

C. Solution S is strongly acidic (*2.2.4*).

TESTS

**Solution S**. Dissolve 2.5 g in *water R* and dilute to 25 mL with the same solvent.

**Appearance of solution**. Solution S is clear (*2.2.1*) and not more intensely coloured than reference solution $BY_7$ (*2.2.2, Method II*).

**Chlorides** (*2.4.4*): maximum 100 ppm.

Dilute 5 mL of solution S to 15 mL with *water R*.

**Sulfated ash** (*2.4.14*): maximum 0.1 per cent, determined on 1.0 g.

ASSAY

Dissolve 0.150 g in 20 mL of *water R*. Titrate with *0.1 M sodium hydroxide*, determining the end-point potentiometrically (*2.2.20*).

1 mL of *0.1 M sodium hydroxide* is equivalent to 16.34 mg of $C_2HCl_3O_2$.

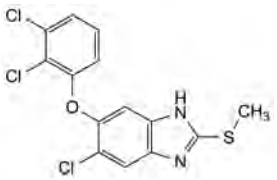
STORAGE

In an airtight container.

**07/2015:2609**

# TRICLABENDAZOLE FOR VETERINARY USE

## Triclabendazolum ad usum veterinarium



$C_{14}H_9Cl_3N_2OS$ $M_r$ 359.7
[68786-66-3]

DEFINITION

5-Chloro-6-(2,3-dichlorophenoxy)-2-(methylsulfanyl)-1*H*-benzimidazole.

*Content*: 99.0 per cent to 101.0 per cent (dried substance).

CHARACTERS

*Appearance*: white or almost white, crystalline powder.

*Solubility*: practically insoluble in water, soluble in acetone, sparingly soluble in ethanol (96 per cent).

IDENTIFICATION

Infrared absorption spectrophotometry (*2.2.24*).

*Comparison*: *triclabendazole CRS*.

TESTS

**Related substances**. Liquid chromatography (*2.2.29*). *Prepare the solutions protected from light.*

*Test solution.* Dissolve 50.0 mg of the substance to be examined in 10 mL of *acetonitrile R* and dilute to 25.0 mL with the mobile phase.

*Reference solution (a).* Dilute 1.0 mL of the test solution to 50.0 mL with the mobile phase. Dilute 1.0 mL of this solution to 10.0 mL with the mobile phase.

*Reference solution (b).* Dissolve the contents of a vial of *triclabendazole for system suitability CRS* ( impurities A, B and D) in 1.0 mL of the mobile phase.

*Column*:

– *size*: *l* = 0.25 m, Ø = 4.6 mm;

– *stationary phase*: *base-deactivated end-capped octadecylsilyl silica gel for chromatography R* (5 µm).

*Mobile phase.* Dissolve 0.77 g of *ammonium acetate R* in 800 mL of *water for chromatography R*, add 1 mL of *triethylamine R* and mix; adjust to pH 4.5 with *glacial acetic acid R* and dilute to 1 L with *water for chromatography R*. Mix 40 volumes of this solution and 60 volumes of *acetonitrile R*.

*Flow rate*: 1.0 mL/min.

*Detection*: spectrophotometer at 305 nm.

*Injection*: 20 µL.

*Run time*: 2.5 times the retention time of triclabendazole.

*Identification of impurities*: use the chromatogram supplied with *triclabendazole for system suitability CRS* and the chromatogram obtained with reference solution (b) to identify the peaks due to impurities A, B and D.

*Relative retention* with reference to triclabendazole (retention time = about 10 min): impurity A = about 0.6; impurity B = about 0.7; impurity D = about 1.9.

*System suitability*: reference solution (b):

– *resolution*: minimum 2.5 between the peaks due to impurities A and B.

*Calculation of percentage contents*:

– *correction factors*: multiply the peak areas of the following impurities by the corresponding correction factor: impurity A = 1.9; impurity D = 2.7;

– for each impurity, use the concentration of triclabendazole in reference solution (a).

*Limits*:

– *impurities A, D*: for each impurity, maximum 0.3 per cent;

– *unspecified impurities*: for each impurity, maximum 0.20 per cent;

– *total*: maximum 1.0 per cent;

– *reporting threshold*: 0.10 per cent.

**Loss on drying** (*2.2.32*): maximum 0.5 per cent, determined on 1.000 g by drying in an oven at 105 °C for 6 h.

**Sulfated ash** (*2.4.14*): maximum 0.1 per cent, determined on 1.0 g.

ASSAY

Dissolve 0.280 g in 50 mL of *anhydrous acetic acid R*. Allow to cool and titrate with *0.1 M perchloric acid*, determining the end-point potentiometrically (*2.2.20*).

1 mL of *0.1 M perchloric acid* is equivalent to 35.97 mg of $C_{14}H_9Cl_3N_2OS$.

STORAGE

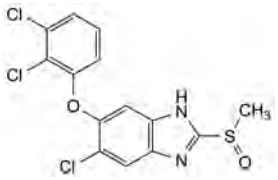
Protected from light.

IMPURITIES

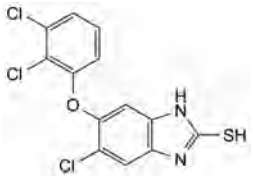
*Specified impurities: A, D.*

*Other detectable impurities* (the following substances would, if present at a sufficient level, be detected by one or other of the tests in the monograph. They are limited by the general acceptance criterion for other/unspecified impurities and/or by the general monograph *Substances for pharmaceutical use (2034)*. It is therefore not necessary to identify these impurities for demonstration of compliance. See also *5.10. Control of impurities in substances for pharmaceutical use*): *B.*

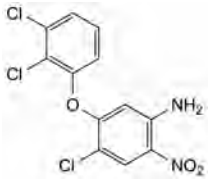
Monographs T



A. 5-chloro-6-(2,3-dichlorophenoxy)-2-(methylsulfinyl)-1*H*-benzimidazole,



B. 5-chloro-6-(2,3-dichlorophenoxy)-1*H*-benzimidazole-2-thiol,

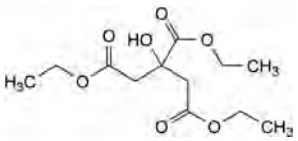


D. 4-chloro-5-(2,3-dichlorophenoxy)-2-nitroaniline.

**01/2017:1479**
**corrected 10.0**

# TRIETHYL CITRATE

## Triethylis citras



$C_{12}H_{20}O_7$ $M_r$ 276.3
[77-93-0]

DEFINITION

Triethyl 2-hydroxypropane-1,2,3-tricarboxylate.

*Content*: 98.5 per cent to 101.0 per cent (anhydrous substance).

CHARACTERS

*Appearance*: clear, viscous, colourless or almost colourless, hygroscopic liquid.

*Solubility*: soluble in water, miscible with ethanol (96 per cent), slightly soluble in fatty oils.

IDENTIFICATION

*First identification: A, B.*

*Second identification: A, C, D.*

A. Refractive index (see Tests).

B. Infrared absorption spectrophotometry (*2.2.24*).
*Comparison*: *Ph. Eur. reference spectrum of triethyl citrate.*

C. It gives the reaction of esters (*2.3.1*).

D. To 0.5 mL add 5 mL of *ethanol (96 per cent) R* and 4 mL of *dilute sodium hydroxide solution R*. Boil under reflux for about 10 min. 2 mL of the solution gives the reaction of citrates (*2.3.1*).

TESTS

**Appearance**. The substance to be examined is clear (*2.2.1*) and not more intensely coloured than reference solution $BY_6$ (*2.2.2, Method II*).

**Acidity**. Dilute 10 g with 10 mL of previously neutralised *ethanol (96 per cent) R*, add 0.5 mL of *bromothymol blue solution R2*. Not more than 0.3 mL of *0.1 M sodium hydroxide* is required to change the colour of the indicator to blue.

**Refractive index** (*2.2.6*): 1.440 to 1.446.

**Related substances**. Gas chromatography (*2.2.28*): use the normalisation procedure.

*Test solution.* Dissolve 1.0 mL of the substance to be examined in *methylene chloride R* and dilute to 50.0 mL with the same solvent.

*Reference solution.* Dissolve 1.0 mL of the substance to be examined and 0.5 mL of *methyl tridecanoate R* in *methylene chloride R*, then dilute to 50.0 mL with the same solvent.

*Column*:
- *material*: fused silica;
- *size*: *l* = 30 m, Ø = 0.32 mm;
- *stationary phase*: *methylpolysiloxane R* (5 µm).

*Carrier gas*: *helium for chromatography R.*

*Linear velocity*: about 26 cm/s.

*Split ratio*: about 1:50.

*Temperature*:
- *column*: 200 °C;
- *injection port and detector*: 220 °C.

*Detection*: flame ionisation.

*Injection*: 1.0 µL.

*Run time*: twice the retention time of triethyl citrate.

*Retention time*: triethyl citrate = about 13.6 min.

*System suitability*: reference solution:
- *resolution*: minimum 1.5 between the peaks due to triethyl citrate and methyl tridecanoate.

*Limits*:
- *any impurity*: for each impurity, maximum 0.2 per cent;
- *total*: maximum 0.5 per cent;
- *disregard limit*: 0.04 per cent.

**Water** (*2.5.12*): maximum 0.25 per cent, determined on 1.000 g.

**Sulfated ash** (*2.4.14*): maximum 0.1 per cent, determined on 1.0 g.

ASSAY

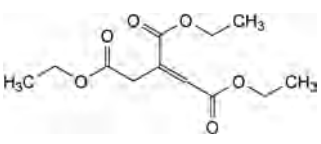
Introduce 1.500 g into a 250 mL borosilicate-glass flask fitted with a reflux condenser. Add 25 mL of *2-propanol R*, 50 mL of *water R*, 25.0 mL of *1 M sodium hydroxide* and a few glass beads. Heat under a reflux condenser for 1 h. Allow to cool. Add 1 mL of *phenolphthalein solution R1* and titrate with *1 M hydrochloric acid*. Carry out a blank titration.

1 mL of *1 M sodium hydroxide* is equivalent to 92.1 mg of $C_{12}H_{20}O_7$.

STORAGE

In an airtight container.

IMPURITIES

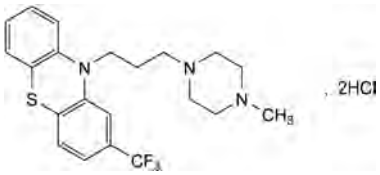


A. triethyl propene-1,2,3-tricarboxylate (triethyl aconitate).

**01/2008:0059**
**corrected 6.0**

# TRIFLUOPERAZINE HYDROCHLORIDE

## Trifluoperazini hydrochloridum



$C_{21}H_{26}Cl_2F_3N_3S$ $M_r$ 480.4
[440-17-5]

DEFINITION

Trifluoperazine hydrochloride contains not less than 99.0 per cent and not more than the equivalent of 101.0 per cent of 10-[3-(4-methylpiperazin-1-yl)propyl]-2-(trifluoromethyl)-10*H*-phenothiazine dihydrochloride, calculated with reference to the dried substance.

CHARACTERS

A white to pale yellow, crystalline powder, hygroscopic, freely soluble in water, soluble in alcohol.

It melts at about 242 °C, with decomposition.

IDENTIFICATION

A. *Protect the solutions from bright light and measure the absorbances immediately.* Dissolve 50 mg in *0.1 M hydrochloric acid* and dilute to 500 mL with the same acid. Examined between 280 nm and 350 nm, the solution shows an absorption maximum (*2.2.25*) at 305 nm. Dilute 5 mL of the solution to 100 mL with *0.1 M hydrochloric acid*. Examined between 230 nm and 280 nm, this solution shows an absorption maximum at 255 nm. The specific absorbance at this maximum is about 650.

B. It complies with the identification test for phenothiazines by thin-layer chromatography (*2.3.3*): use *trifluoperazine hydrochloride CRS* to prepare the reference solution.

C. Place 0.25 g in a 100 mL separating funnel, add 5 mL of *water R* and 2 mL of *dilute sodium hydroxide solution R*. Shake vigorously with 20 mL of *ether R*. Wash the ether layer with 5 mL of *water R*, add 0.15 g of *maleic acid R* and evaporate the ether. The residue, recrystallised from 30 mL of *alcohol R* and dried, melts (*2.2.14*) at about 192 °C.

D. Dissolve about 0.5 mg in 1 mL of *water R*, add 0.1 mL of *bromine water R* and shake for about 1 min. Add dropwise 1 mL of *sulfuric acid R* with constant, vigorous agitation. A red colour develops.

E. Dissolve about 50 mg in 5 mL of *water R* and add 2 mL of *nitric acid R*. A dark-red colour develops which turns to pale yellow. The solution gives reaction (a) of chlorides (*2.3.1*).

TESTS

**pH** (*2.2.3*). Dissolve 2.0 g in *carbon dioxide-free water R* and dilute to 20 mL with the same solvent. The pH of the solution is 1.6 to 2.5.

**Related substances**. *Carry out the test protected from bright light.*

Examine by thin-layer chromatography (*2.2.27*), using a *TLC silica gel $GF_{254}$ plate R*.

*Test solution.* Dissolve 0.2 g of the substance to be examined in a mixture of 5 volumes of *diethylamine R* and 95 volumes of *methanol R* and dilute to 10 mL with the same mixture of solvents. Prepare immediately before use.

*Reference solution.* Dilute 1 mL of the test solution to 200 mL with a mixture of 5 volumes of *diethylamine R* and 95 volumes of *methanol R*.

Apply to the plate 10 µL of each solution. Develop over a path of 12 cm using a mixture of 10 volumes of *acetone R*, 10 volumes of *diethylamine R* and 80 volumes of *cyclohexane R*. Allow the plate to dry in air and examine in ultraviolet light at 254 nm. Any spot in the chromatogram obtained with the test solution, apart from the principal spot, is not more intense than the spot in the chromatogram obtained with the reference solution (0.5 per cent).

**Loss on drying** (*2.2.32*). Not more than 1.5 per cent, determined on 1.000 g by drying in an oven at 105 °C.

**Sulfated ash** (*2.4.14*). Not more than 0.1 per cent, determined on 1.0 g.

ASSAY

Dissolve 0.200 g in 50 mL of *alcohol R* and add 5.0 mL of *0.01 M hydrochloric acid*. Carry out a potentiometric titration (*2.2.20*), using *0.1 M sodium hydroxide*. Read the volume added between the 2 points of inflexion.

1 mL of *0.1 M sodium hydroxide* is equivalent to 48.04 mg of $C_{21}H_{26}Cl_2F_3N_3S$.

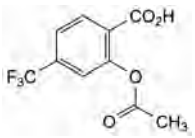
STORAGE

Store in an airtight container, protected from light.

**01/2017:1377**

# TRIFLUSAL

## Triflusalum



$C_{10}H_7F_3O_4$ $M_r$ 248.2
[322-79-2]

DEFINITION

2-(Acetyloxy)-4-(trifluoromethyl)benzoic acid.

*Content*: 98.5 per cent to 101.5 per cent (dried substance).

CHARACTERS

*Appearance*: white or almost white, crystalline powder.

*Solubility*: practically insoluble in water, very soluble in anhydrous ethanol, freely soluble in methylene chloride.

mp: about 118 °C, with decomposition.

IDENTIFICATION

Infrared absorption spectrophotometry (*2.2.24*).

*Comparison*: *triflusal CRS*.

TESTS

**Related substances**. Liquid chromatography (*2.2.29*).

*Test solution.* Dissolve 0.200 g of the substance to be examined in *acetonitrile R* and dilute to 20.0 mL with the same solvent. *Prepare the solution immediately before use.*

*Reference solution (a).* Dissolve 5.0 mg of *triflusal impurity B CRS* in *acetonitrile R* and dilute to 10.0 mL with the same solvent.

*Reference solution (b).* Dilute 1.0 mL of reference solution (a) to 25.0 mL with *acetonitrile R*.

*Reference solution (c).* Dissolve 2.5 mg of the substance to be examined in *acetonitrile R*, add 5 mL of reference solution (a) and dilute to 10.0 mL with *acetonitrile R*. *Prepare the solution immediately before use.*

*Column*:

- *size*: *l* = 0.15 m, Ø = 4.0 mm;
- *stationary phase*: *end-capped octadecylsilyl silica gel for chromatography R* (4-5 µm).

*Mobile phase*:

- *mobile phase A*: 0.5 per cent *V/V* solution of *phosphoric acid R*;
- *mobile phase B*: *acetonitrile R*;

| Time (min) | Mobile phase A (per cent *V/V*) | Mobile phase B (per cent *V/V*) |
|---|---|---|
| 0 - 20 | 80 → 30 | 20 → 70 |
| 20 - 25 | 30 | 70 |

*Flow rate*: 1.2 mL/min.

*Detection*: spectrophotometer at 237 nm.

*Injection*: 10 µL of the test solution and reference solutions (b) and (c).

*Identification of impurities*: use the chromatogram obtained with reference solution (b) to identify the peak due to impurity B.

*Relative retention* with reference to triflusal (retention time = about 11 min): impurity B = about 1.2.

*System suitability*: reference solution (c):

- *resolution*: minimum 3.0 between the peaks due to triflusal and impurity B.

*Limits*:

- *impurity B*: not more than 1.5 times the area of the corresponding peak in the chromatogram obtained with reference solution (b) (0.3 per cent);
- *unspecified impurities*: for each impurity, not more than 0.5 times the area of the peak due to impurity B in the chromatogram obtained with reference solution (b) (0.10 per cent);
- *sum of impurities other than B*: not more than 0.5 times the area of the peak due to impurity B in the chromatogram obtained with reference solution (b) (0.1 per cent);
- *disregard limit*: 0.25 times the area of the peak due to impurity B in the chromatogram obtained with reference solution (b) (0.05 per cent).

**Loss on drying** (*2.2.32*): maximum 0.5 per cent, determined on 1.000 g by drying *in vacuo*.

**Sulfated ash** (*2.4.14*): maximum 0.1 per cent, determined on 1.0 g in a platinum crucible.

ASSAY

Dissolve 0.200 g in 50 mL of *anhydrous ethanol R*. Titrate with *0.1 M sodium hydroxide*, determining the end-point potentiometrically (*2.2.20*).

1 mL of *0.1 M sodium hydroxide* is equivalent to 24.82 mg of $C_{10}H_7F_3O_4$.

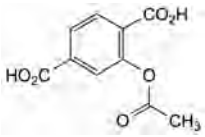
STORAGE

In an airtight container, at a temperature not exceeding 25 °C.

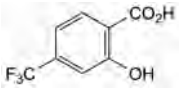
IMPURITIES

*Specified impurities: B.*

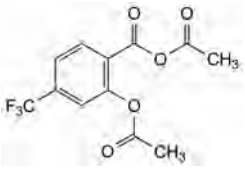
*Other detectable impurities* (the following substances would, if present at a sufficient level, be detected by one or other of the tests in the monograph. They are limited by the general acceptance criterion for other/unspecified impurities and/or by the general monograph *Substances for pharmaceutical use (2034)*. It is therefore not necessary to identify these impurities for demonstration of compliance. See also *5.10. Control of impurities in substances for pharmaceutical use*): *A, C, D.*



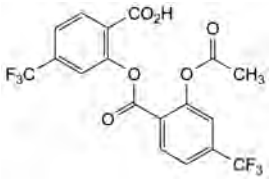
A. 2-(acetyloxy)benzene-1,4-dicarboxylic acid (2-acetoxyterephthalic acid),



B. 2-hydroxy-4-(trifluoromethyl)benzoic acid (4-(trifluoromethyl)salicylic acid),



C. acetic 2-(acetyloxy)-4-(trifluoromethyl)benzoic anhydride,



D. 2-[[2-(acetyloxy)-4-(trifluoromethyl)benzoyl]oxy]-4-(trifluoromethyl)benzoic acid.

**01/2020:0868**

# TRIGLYCERIDES, MEDIUM-CHAIN

## Triglycerida media

DEFINITION

Mixture of triglycerides of saturated fatty acids, mainly of caprylic (octanoic) acid and of capric (decanoic) acid. The fatty acids are obtained from the oil extracted from the hard, dried fraction of the endosperm of *Cocos nucifera* L. or from the dried endosperm of *Elaeis guineensis* Jacq.

*Content*: minimum 95.0 per cent of saturated fatty acids with 8 and 10 carbon atoms.

CHARACTERS

*Appearance*: colourless or slightly yellowish, oily liquid.

*Solubility*: practically insoluble in water, miscible with ethanol (96 per cent), with methylene chloride, with light petroleum and with fatty oils.

*Relative density*: about 0.95.

*Refractive index*: about 1.446.

IDENTIFICATION

*First identification: C, D.*

*Second identification: A, B, D.*

A. Iodine value (*2.5.4*): maximum 1.0.

B. Saponification value (*2.5.6*): 310 to 360.

C. Composition of fatty acids (see Tests).

D. Viscosity (see Tests).

TESTS

**Appearance**. The substance to be examined is clear (*2.2.1*) and not more intensely coloured than reference solution $Y_3$ (*2.2.2, Method I*).

**Alkaline impurities**. Dissolve 2.00 g in a mixture of 1.5 mL of *ethanol (96 per cent) R* and 3.0 mL of *ether R*. Add 0.05 mL of *bromophenol blue solution R*. Not more than 0.15 mL of *0.01 M hydrochloric acid* is required to change the colour of the indicator to yellow.

**Viscosity** (*2.2.9*): 25 mPa·s to 33 mPa·s.

**Acid value** (*2.5.1*): maximum 0.2.

**Hydroxyl value** (*2.5.3, Method A*): maximum 10.

**Peroxide value** (*2.5.5, Method A*): maximum 1.0.

**Composition of fatty acids**. Gas chromatography (*2.4.22, Method C*) with the following modifications. Use the mixture of calibrating substances in Table 2.4.22.-2.

*Column*:

– *material*: fused silica;

– *size*: *l* = 30 m, Ø = 0.32 mm;

– *stationary phase*: *macrogol 20 000 R* (film thickness 0.5 µm).

*Carrier gas*: *helium for chromatography R*.

*Flow rate*: 1.3 mL/min.

*Temperature*:

| | Time (min) | Temperature (°C) |
|---|---|---|
| Column | 0 - 1 | 70 |
| | 1 - 35 | 70 → 240 |
| | 35 - 50 | 240 |
| Injection port | | 250 |
| Detector | | 250 |

*Detection*: flame ionisation.

*Split ratio*: 1:100.

*Composition of the fatty-acid fraction of the substance*:

– *caproic acid*: maximum 2.0 per cent;

– *caprylic acid*: 50.0 per cent to 80.0 per cent;

– *capric acid*: 20.0 per cent to 50.0 per cent;

– *lauric acid*: maximum 3.0 per cent;

– *myristic acid*: maximum 1.0 per cent;

– *fatty acids of chain length greater than or equal to* $C_{16}$: maximum 1.0 per cent.

**Water** (*2.5.32*): maximum 0.2 per cent, determined on 1.00 g.

**Sulfated ash** (*2.4.14*): maximum 0.1 per cent, determined on 2.0 g.

STORAGE

In a well-filled container, protected from light.

LABELLING

The label states, where applicable, that the substance is intended for use in parenteral nutrition.

**04/2012:2032**

# TRIGLYCEROL DIISOSTEARATE

## Triglyceroli diisostearas

DEFINITION

Mixture of polyglycerol diesters of mainly isostearic acid, obtained by esterification of polyglycerol and isostearic acid. The polyglycerol consists mainly of triglycerol.

CHARACTERS

*Appearance*: clear, yellowish, viscous liquid.

*Solubility*: practically insoluble in water, miscible with ethanol (96 per cent) and with fatty oils.

IDENTIFICATION

A. Infrared absorption spectrophotometry (*2.2.24*).

*Preparation*: film between 2 plates of *sodium chloride R*.

*Comparison*: *triglycerol diisostearate CRS*.

B. Composition of fatty acids (see Tests).

TESTS

**Appearance of solution**. The solution is not more intensely coloured than reference solution $BY_3$ (*2.2.2, Method I*).

Mix 10 mL with 10 mL of *ethanol (96 per cent) R*.

**Acid value** (*2.5.1*): maximum 3.0, determined on 1.0 g.

**Hydroxyl value** (*2.5.3, Method A*): 180 to 230, determined on 0.25 g.

**Iodine value** (*2.5.4, Method B*): maximum 5.0.

**Peroxide value** (*2.5.5, Method B*): maximum 6.0.

**Saponification value** (*2.5.6*): 128 to 160.

**Composition of fatty acids** (*2.4.22, Method B*). Use the mixture of calibrating substances in Table 2.4.22.-1.

*Composition of the fatty-acid fraction of the substance*:

– *sum of the contents of the fatty acids eluting between palmitic acid and stearic acid*: minimum 60.0 per cent;

– *sum of the contents of myristic acid, palmitic acid and stearic acid*: maximum 11.0 per cent.

**Water** (*2.5.12*): maximum 0.5 per cent, determined on 2.00 g.

**Sulfated ash**: maximum 0.5 per cent, determined on 1.0 g.

Heat a silica crucible to redness for 30 min, allow to cool in a desiccator and weigh. Evenly distribute 1.00 g of the substance to be examined in the crucible and weigh. Dry at 100-105 °C for 1 h and ignite in a muffle furnace at 600 °C ± 25 °C until the substance is thoroughly charred. Carry out the test for sulfated ash (*2.4.14*) on the residue obtained, starting with "Moisten the substance to be examined...".

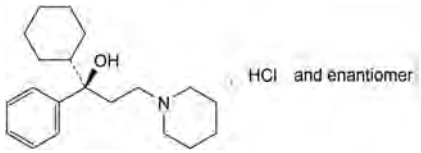
STORAGE

In an airtight container, protected from light.

01/2008:1626
corrected 6.0

# TRIHEXYPHENIDYL HYDROCHLORIDE

## Trihexyphenidyli hydrochloridum



$C_{20}H_{32}ClNO$ $M_r$ 337.9
[52-49-3]

DEFINITION

(1*RS*)-1-Cyclohexyl-1-phenyl-3-(piperidin-1-yl)propan-1-ol hydrochloride.

*Content*: 99.0 per cent to 101.0 per cent (dried substance).

CHARACTERS

*Appearance*: white or almost white, crystalline powder.

*Solubility*: slightly soluble in water, sparingly soluble in ethanol (96 per cent) and in methylene chloride.

mp: about 250 °C, with decomposition.

IDENTIFICATION

*First identification*: *A, D.*

*Second identification*: *B, C, D.*

A. Infrared absorption spectrophotometry (*2.2.24*).
*Comparison*: *trihexyphenidyl hydrochloride CRS.*

B. Thin-layer chromatography (*2.2.27*).
*Test solution.* Dissolve 25 mg of the substance to be examined in a mixture of 20 volumes of *methanol R* and 80 volumes of *methylene chloride R* and dilute to 10 mL with the same mixture of solvents.
*Reference solution.* Dissolve 25 mg of *trihexyphenidyl hydrochloride CRS* in a mixture of 20 volumes of *methanol R* and 80 volumes of *methylene chloride R* and dilute to 10 mL with the same mixture of solvents.
*Plate*: *TLC silica gel G plate R.*
*Mobile phase*: *diethylamine R*, *hexane R* (5:95 *V/V*).
*Application*: 5 µL.
*Development*: over 2/3 of the plate.
*Drying*: in air.
*Detection*: spray with a 0.1 g/L solution of *chloroplatinic acid R* in *hydrochloric acid R* containing 0.4 per cent *V/V* of *hydriodic acid R*.
*Results*: the principal spot in the chromatogram obtained with the test solution is similar in position, colour and size to the principal spot in the chromatogram obtained with the reference solution.

C. Dissolve 0.5 g in 5 mL of warm *methanol R* and make just alkaline to *red litmus paper R* with *sodium hydroxide solution R*. A precipitate is formed which, after recrystallisation from *methanol R*, melts (*2.2.14*) at about 113°C to 115 °C.

D. It gives reaction (a) of chlorides (*2.3.1*).

TESTS

**pH** (*2.2.3*): 5.2 to 6.2.

Dissolve 0.5 g with heating in 25 mL of *carbon dioxide-free water R*. Cool to room temperature and dilute to 50 mL with *carbon dioxide-free water R*.

**Optical rotation** (*2.2.7*): – 0.10° to + 0.10°.

Dissolve 1.25 g in a mixture of 20 volumes of *methanol R* and 80 volumes of *methylene chloride R* and dilute to 25.0 mL with the same mixture of solvents.

**Related substances**. Liquid chromatography (*2.2.29*).

*Test solution.* Dissolve 20.0 mg of the substance to be examined in the mobile phase and dilute to 10.0 mL with the mobile phase.

*Reference solution (a).* Dilute 1.0 mL of the test solution to 200.0 mL with the mobile phase. Dilute 10.0 mL to 50.0 mL with the mobile phase.

*Reference solution (b).* Dissolve 10.0 mg of *trihexyphenidyl impurity A CRS* in the mobile phase and dilute to 10.0 mL with the mobile phase.

*Reference solution (c).* Dilute 1.0 mL of reference solution (b) to 100.0 mL with the mobile phase.

*Reference solution (d).* To 1 mL of reference solution (b), add 1 mL of the test solution and dilute to 100 mL with the mobile phase.

*Column*:
- *size*: *l* = 0.15 m, Ø = 4.6 mm;
- *stationary phase*: *octadecylsilyl silica gel for chromatography R* (5 µm).

*Mobile phase*: mix 200 mL of *water R* with 0.2 mL of *triethylamine R*. Adjust to pH 4.0 with *phosphoric acid R* and add 800 mL of *acetonitrile R*.

*Flow rate*: 1.0 mL/min.

*Detection*: spectrophotometer at 210 nm.

*Injection*: 20 µL.

*Run time*: 3 times the retention time of trihexyphenidyl.

*System suitability*: reference solution (d):
- *resolution*: minimum 4.0 between the peaks due to trihexyphenidyl and to impurity A.

*Limits*:
- *impurity A*: not more than the area of the principal peak in the chromatogram obtained with reference solution (c) (0.5 per cent);
- *unspecified impurities*: for each impurity, not more than the area of the principal peak in the chromatogram obtained with reference solution (a) (0.10 per cent);
- *total*: not more than 0.5 per cent;
- *disregard limit*: 0.2 times the area of the principal peak in the chromatogram obtained with reference solution (a) (0.02 per cent).

**Loss on drying** (*2.2.32*): maximum 0.5 per cent, determined on 1.000 g by drying in an oven at 105 °C.

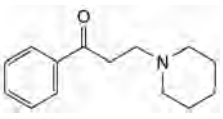
**Sulfated ash** (*2.4.14*): maximum 0.1 per cent, determined on 1.0 g.

ASSAY

Dissolve 0.250 g in 50 mL of *ethanol (96 per cent) R* and add 5.0 mL of *0.01 M hydrochloric acid*. Carry out a potentiometric titration (*2.2.20*), using *0.1 M sodium hydroxide*. Read the volume added between the 2 points of inflexion.

1 mLof *0.1 M sodium hydroxide* is equivalent to 33.79 mg of $C_{20}H_{32}ClNO$.

IMPURITIES



A. 1-phenyl-3-(piperidin-1-yl)propan-1-one.

Monographs T

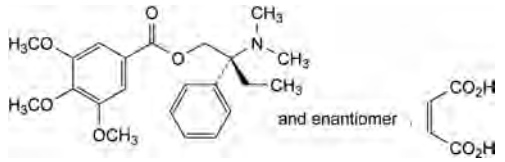
**corrected 10.0**

# TRIMEBUTINE MALEATE

## Trimebutini maleas



$C_{26}H_{33}NO_9$ $M_r$ 503.5
[34140-59-5]

DEFINITION

(2*RS*)-2-(Dimethylamino)-2-phenylbutyl 3,4,5-trimethoxybenzoate (*Z*)-butenedioate.

*Content*: 99.0 per cent to 101.5 per cent (dried substance).

CHARACTERS

*Appearance*: white or almost white, crystalline powder.

*Solubility*: slightly soluble in water, soluble in acetonitrile, sparingly soluble in acetone, slightly soluble in ethanol (96 per cent).

mp: about 133 °C.

IDENTIFICATION

Infrared absorption spectrophotometry (*2.2.24*).

*Comparison*: *trimebutine maleate CRS*.

TESTS

**Appearance of solution**. The solution is clear (*2.2.1*) and colourless (*2.2.2, Method II*).

Dissolve 0.5 g in *acetone R*, sonicate and dilute to 100 mL with the same solvent.

**Related substances**. Liquid chromatography (*2.2.29*).

*Solvent mixture.* Dissolve 0.24 g of *anhydrous sodium dihydrogen phosphate R* in 180 mL of *water R* and adjust to pH 2.5 with *dilute phosphoric acid R*; dilute to 200 mL with *water R*. Add 50 mL of *acetonitrile R* and mix.

*Test solution.* Dissolve 10 mg of the substance to be examined in the solvent mixture and dilute to 10.0 mL with the solvent mixture.

*Reference solution (a).* Dilute 1.0 mL of the test solution to 100.0 mL with the solvent mixture. Dilute 1.0 mL of this solution to 10.0 mL with the solvent mixture.

*Reference solution (b).* Dissolve 5 mg of *methyl 3,4,5-trimethoxybenzoate R* (impurity C) in 10 mL of the solvent mixture. Dilute 1 mL of the solution to 20 mL with the solvent mixture.

*Reference solution (c).* Dissolve the contents of a vial of *trimebutine for system suitability CRS* (containing impurities D and E) in 1 mL of reference solution (b).

*Column*:
- *size*: *l* = 0.25 m, Ø = 4.6 mm;
- *stationary phase*: *polar end-capped octadecylsilyl silica gel for chromatography R* (5 µm);
- *temperature*: 25 °C.

*Mobile phase*:
- *mobile phase A*: dissolve 3.6 g of *anhydrous sodium dihydrogen phosphate R* in 990 mL of *water for chromatography R* and adjust to pH 3.0 with *phosphoric acid R*; dilute to 1000 mL with *water for chromatography R*;
- *mobile phase B*: *acetonitrile R1*;

| Time (min) | Mobile phase A (per cent *V/V*) | Mobile phase B (per cent *V/V*) |
|---|---|---|
| 0 - 3 | 78 | 22 |
| 3 - 6.5 | 78 → 65 | 22 → 35 |
| 6.5 - 15 | 65 → 60 | 35 → 40 |
| 15 - 35 | 60 | 40 |

*Flow rate*: 1.5 mL/min.

*Detection*: spectrophotometer at 215 nm.

*Injection*: 20 µL of the test solution and reference solutions (a) and (c).

*Identification of impurities*: use the chromatogram supplied with *trimebutine for system suitability CRS* and the chromatogram obtained with reference solution (c) to identify the peaks due to impurities C, D and E.

*Relative retention* with reference to trimebutine (retention time = about 12 min): maleic acid = about 0.17; impurity E = about 0.9; impurity D = about 1.3; impurity C = about 1.4.

*System suitability*: reference solution (c):
- *resolution*: minimum 1.5 between the peaks due to impurities D and C;
- *peak-to-valley ratio*: minimum 10, where $H_p$ = height above the baseline of the peak due to impurity E and $H_v$ = height above the baseline of the lowest point of the curve separating this peak from the peak due to trimebutine.

*Limits*:
- *impurity E*: not more than 6 times the area of the principal peak in the chromatogram obtained with reference solution (a) (0.6 per cent);
- *unspecified impurities*: for each impurity, not more than the area of the principal peak in the chromatogram obtained with reference solution (a) (0.10 per cent);
- *total*: not more than 10 times the area of the principal peak in the chromatogram obtained with reference solution (a) (1.0 per cent);
- *disregard limit*: 0.5 times the area of the principal peak in the chromatogram obtained with reference solution (a) (0.05 per cent); disregard any peak due to maleic acid.

**Loss on drying** (*2.2.32*): maximum 0.5 per cent, determined on 1.000 g by drying in an oven at 105 °C.

**Sulfated ash** (*2.4.14*): maximum 0.1 per cent, determined on 1.0 g.

ASSAY

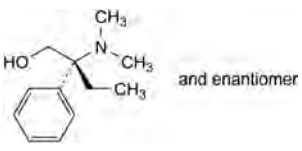
Dissolve 0.300 g in 50 mL of *anhydrous acetic acid R*. Titrate with *0.1 M perchloric acid*, determining the end-point potentiometrically (*2.2.20*).

1 mL of *0.1 M perchloric acid* is equivalent to 50.35 mg of $C_{26}H_{33}NO_9$.

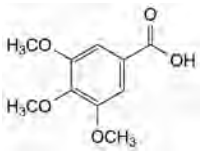
IMPURITIES

*Specified impurities*: *E.*

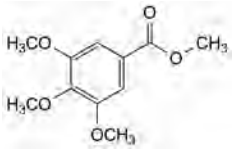
*Other detectable impurities* (the following substances would, if present at a sufficient level, be detected by one or other of the tests in the monograph. They are limited by the general acceptance criterion for other/unspecified impurities and/or by the general monograph *Substances for pharmaceutical use (2034)*. It is therefore not necessary to identify these impurities for demonstration of compliance. See also *5.10. Control of impurities in substances for pharmaceutical use*): *A, B, C, D.*



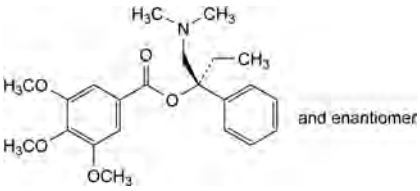
A. (2*RS*)-2-(dimethylamino)-2-phenylbutanol,



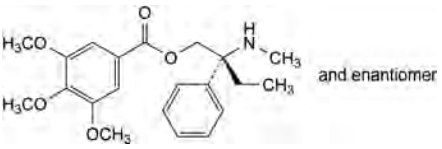
B. 3,4,5-trimethoxybenzoic acid,



C. methyl 3,4,5-trimethoxybenzoate,



D. (1*RS*)-1-[(dimethylamino)methyl]-1-phenylpropyl 3,4,5-trimethoxybenzoate,



E. (2*RS*)-2-(methylamino)-2-phenylbutyl 3,4,5-trimethoxybenzoate.

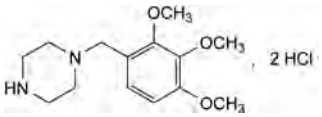
**corrected 10.0**

# TRIMETAZIDINE DIHYDROCHLORIDE

## Trimetazidini dihydrochloridum



$C_{14}H_{24}Cl_2N_2O_3$ $M_r$ 339.3
[13171-25-0]

DEFINITION

1-(2,3,4-Trimethoxybenzyl)piperazine dihydrochloride.

*Content*: 98.5 per cent to 101.5 per cent (dried substance).

CHARACTERS

*Appearance*: white or almost white, crystalline powder, slightly hygroscopic.

*Solubility*: freely soluble in water, sparingly soluble in alcohol.

IDENTIFICATION

A. Infrared absorption spectrophotometry (*2.2.24*).

*Comparison*: *Ph. Eur. reference spectrum of trimetazidine dihydrochloride*.

B. Dissolve 25 mg in 5 mL of *water R*. 2 mL of the solution gives reaction (a) of chlorides (*2.3.1*).

TESTS

**Appearance of solution**. The solution is clear (*2.2.1*) and not more intensely coloured than reference solution $BY_6$ (*2.2.2, Method II*).

Dissolve 1.0 g in *water R* and dilute to 10 mL with the same solvent.

**Related substances**. Liquid chromatography (*2.2.29*).

*Test solution*. Dissolve 0.200 g of the substance to be examined in *water R* and dilute to 50.0 mL with the same solvent.

*Reference solution (a)*. Dissolve 20.0 mg of *trimetazidine for system suitability CRS* in *water R* and dilute to 5.0 mL with the same solvent.

*Reference solution (b)*. Dilute 2.0 mL of the test solution to 100.0 mL with *water R*. Dilute 5.0 mL of this solution to 100.0 mL with *water R*.

*Reference solution (c)*. Dilute 25.0 mL of reference solution (b) to 50.0 mL with *water R*.

*Column*:

- *size*: *l* = 0.15 m, Ø = 4.6 mm,
- *stationary phase*: spherical *octadecylsilyl silica gel for chromatography R* (5 µm) with a pore size of 10 nm,
- *temperature*: 30 °C.

*Mobile phase*:

- *mobile phase A*: mix 357 volumes of *methanol R* and 643 volumes of a 2.87 g/L solution of *sodium heptanesulfonate R* adjusted to pH 3.0 with *dilute phosphoric acid R*,
- *mobile phase B*: *methanol R*,

| Time (min) | Mobile phase A (per cent *V/V*) | Mobile phase B (per cent *V/V*) |
|---|---|---|
| 0 - 50 | 95 → 75 | 5 → 25 |
| 50 - 52 | 75 → 95 | 25 → 5 |

*Flow rate*: 1.2 mL/min.

*Detection*: spectrophotometer at 240 nm.

*Equilibration*: for at least 1 h with the mobile phase at the initial composition.

*Injection*: 10 µL.

*Relative retention* with reference to trimetazidine (retention time = about 25 min): impurity D = about 0.2; impurity C = about 0.4; impurity H = about 0.6; impurities A and I = about 0.9; impurity E = about 0.95; impurity F = about 1.4; impurity B = about 1.8.

*System suitability*:

- *peak-to-valley ratio*: minimum 3, where $H_p$ = height above the baseline of the peak due to impurity E and $H_v$ = height above the baseline of the lowest point of the curve separating this peak from the principal peak in the chromatogram obtained with reference solution (a);
- *signal-to-noise ratio*: minimum 10 for the principal peak in the chromatogram obtained with reference solution (c).

*Limits*:

- *correction factors*: for the calculation of contents, multiply the peak areas of the following impurities by the corresponding correction factor: impurity B = 0.55; impurity C = 0.37; impurity F = 0.71;
- *impurities A, B, C, D, E, F, H, I*: for each impurity, not more than the area of the principal peak in the chromatogram obtained with reference solution (b) (0.1 per cent);
- *any other impurity*: for each impurity, not more than the area of the principal peak in the chromatogram obtained with reference solution (b) (0.1 per cent);
- *total*: not more than twice the area of the principal peak in the chromatogram obtained with reference solution (b) (0.2 per cent);

– *disregard limit*: area of the principal peak in the chromatogram obtained with reference solution (c) (0.05 per cent).

**Impurity G**. Thin-layer chromatography (*2.2.27*).

*Test solution*. Dissolve 0.10 g of the substance to be examined in *methanol R* and dilute to 10 mL with the same solvent.

*Reference solution*. Dissolve 22.6 mg of *piperazine hydrate R* in *methanol R* and dilute to 100 mL with the same solvent. Dilute 10 mL of the solution to 100 mL with *methanol R*.

*Plate*: *TLC silica gel plate R*.

*Mobile phase*: *concentrated ammonia R*, *alcohol R* (20:80 *V/V*).

*Application*: 10 µL.

*Development*: over 2/3 of the plate.

*Drying*: at 100-105 °C for 30 min.

*Detection*: spray with *iodoplatinate reagent R*.

*Limit*:

– *impurity G*: any spot due to impurity G is not more intense than the spot in the chromatogram obtained with the reference solution (0.1 per cent, expressed as anhydrous piperazine).

**Loss on drying** (*2.2.32*): maximum 2.5 per cent, determined on 1.000 g by drying *in vacuo* at 105 °C at a pressure not exceeding 15 kPa.

**Sulfated ash** (*2.4.14*): maximum 0.1 per cent, determined on 1.0 g.

ASSAY

Dissolve 0.120 g in 50.0 mL of *water R*. Add 1 mL of *nitric acid R* and titrate with *0.1 M silver nitrate*, determining the end-point potentiometrically (*2.2.20*).

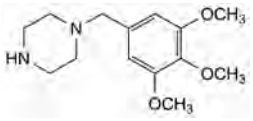
1 mL of *0.1 M silver nitrate* is equivalent to 16.96 mg of $C_{14}H_{24}Cl_2N_2O_3$.

STORAGE

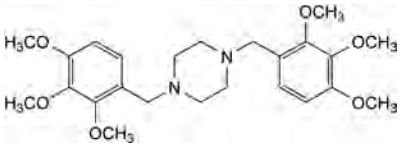
In an airtight container.

IMPURITIES

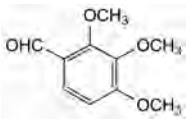
*Specified impurities: A, B, C, D, E, F, G, H, I.*



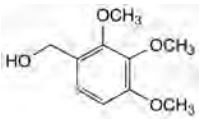
A. 1-(3,4,5-trimethoxybenzyl)piperazine,



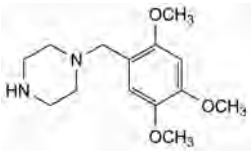
B. 1,4-bis(2,3,4-trimethoxybenzyl)piperazine,



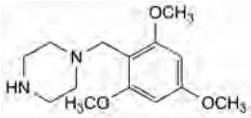
C. 2,3,4-trimethoxybenzaldehyde,



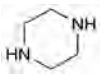
D. (2,3,4-trimethoxyphenyl)methanol,



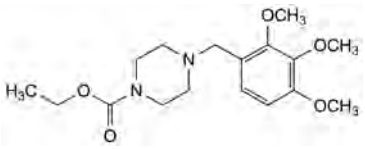
E. 1-(2,4,5-trimethoxybenzyl)piperazine,



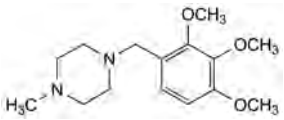
F. 1-(2,4,6-trimethoxybenzyl)piperazine,



G. piperazine,



H. ethyl 4-(2,3,4-trimethoxybenzyl)piperazine-1-carboxylate,

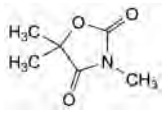


I. 1-methyl-4-(2,3,4-trimethoxybenzyl)piperazine (*N*-methyltrimetazidine).

**01/2017:0440**

# TRIMETHADIONE

## Trimethadionum



$C_6H_9NO_3$ $M_r$ 143.1
[127-48-0]

DEFINITION

3,5,5-Trimethyloxazolidine-2,4-dione.

*Content*: 98.0 per cent to 102.0 per cent (dried substance).

CHARACTERS

*Appearance*: colourless or almost colourless crystals.

*Solubility*: soluble in water, very soluble in ethanol (96 per cent).

IDENTIFICATION

*First identification: B.*

*Second identification: A, C, D.*

A. Melting point (*2.2.14*): 45 °C to 47 °C, determined without previous drying.

B. Infrared absorption spectrophotometry (*2.2.24*).

*Preparation*: discs prepared using 3 mg of substance per 0.4 g of *potassium bromide R*.

*Comparison*: *trimethadione CRS*.

C. To 2 mL of solution S (see Tests) add 1 mL of *barium hydroxide solution R*. A white precipitate is formed, which dissolves on addition of 1 mL of *dilute hydrochloric acid R*.

D. Dissolve 0.3 g in a mixture of 5 mL of *alcoholic potassium hydroxide solution R* and 5 mL of *ethanol (96 per cent) R*. Allow to stand for 10 min. Add 0.05 mL of *phenolphthalein solution R1* and neutralise exactly with *hydrochloric acid R*. Evaporate to dryness on a water-bath and take up the residue with 4 quantities, each of 5 mL, of *ether R*. Filter the combined ether layers and evaporate to dryness. The residue, recrystallised from 5 mL of *toluene R* and dried, melts (*2.2.14*) at about 80 °C.

TESTS

**Solution S**. Dissolve 2.0 g in *carbon dioxide-free water R* and dilute to 40 mL with the same solvent.

**Appearance of solution**. Solution S is clear (*2.2.1*) and colourless (*2.2.2, Method II*).

**Acidity or alkalinity**. To 10 mL of solution S add 0.1 mL of *methyl red solution R*. Not more than 0.1 mL of *0.01 M hydrochloric acid* or *0.01 M sodium hydroxide* is required to change the colour of the indicator.

**Loss on drying** (*2.2.32*): maximum 0.5 per cent, determined on 1.00 g by drying in a desiccator over *anhydrous silica gel R* for 6 h.

**Sulfated ash** (*2.4.14*): maximum 0.1 per cent, determined on 1.0 g.

ASSAY

Gas chromatography (*2.2.28*).

*Internal standard solution*. Dissolve 0.125 g of *decanol R* in *anhydrous ethanol R* and dilute to 25 mL with the same solvent.

*Test solution*. Dissolve 0.100 g of the substance to be examined in the internal standard solution and dilute to 10.0 mL with the same solution.

*Reference solution*. Dissolve 0.100 g of *trimethadione CRS* in the internal standard solution and dilute to 10.0 mL with the same solution.

*Column*:

– *material*: stainless steel,

– *size*: *l* = 0.75 m, Ø = 3 mm,

– *stationary phase*: *styrene-divinylbenzene copolymer R* (125-150 µm).

*Carrier gas*: *nitrogen for chromatography R*.

*Flow rate*: 20 mL/min.

*Temperature*:

– *column*: 210 °C,

– *injection port*: 240 °C,

– *detector*: 270 °C.

*Detection*: flame ionisation.

*Injection*: 1 µL.

Calculate the content of $C_6H_9NO_3$ from the declared content of *trimethadione CRS*.

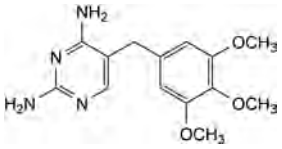
STORAGE

Protected from light.

**01/2017:0060**
**corrected 10.0**

# TRIMETHOPRIM

## Trimethoprimum



$C_{14}H_{18}N_4O_3$ $M_r$ 290.3
[738-70-5]

DEFINITION

5-(3,4,5-Trimethoxybenzyl)pyrimidine-2,4-diamine.

*Content*: 98.5 per cent to 101.0 per cent (dried substance).

CHARACTERS

*Appearance*: white or yellowish-white powder.

*Solubility*: very slightly soluble in water, slightly soluble in ethanol (96 per cent).

IDENTIFICATION

*First identification*: *C*.

*Second identification*: *A, B, D*.

A. Melting point (*2.2.14*): 199 °C to 203 °C.

B. Dissolve about 20 mg in *0.1 M sodium hydroxide* and dilute to 100.0 mL with the same solvent. Dilute 1.0 mL of this solution to 10.0 mL with *0.1 M sodium hydroxide*. Examined between 230 nm and 350 nm (*2.2.25*), the solution shows an absorption maximum at 287 nm. The specific absorbance at the absorption maximum is 240 to 250.

C. Infrared absorption spectrophotometry (*2.2.24*).
*Preparation*: discs.
*Comparison*: *trimethoprim CRS*.

D. Dissolve about 25 mg, heating if necessary, in 5 mL of *0.005 M sulfuric acid* and add 2 mL of a 16 g/L solution of *potassium permanganate R* in *0.1 M sodium hydroxide*. Heat to boiling and add to the hot solution 0.4 mL of *formaldehyde R*. Mix, add 1 mL of *0.5 M sulfuric acid*, mix and heat again to boiling. Cool and filter. To the filtrate, add 2 mL of *methylene chloride R* and shake vigorously. The organic layer, examined in ultraviolet light at 365 nm, shows green fluorescence.

TESTS

**Appearance of solution**. The solution is not more intensely coloured than reference solution $BY_7$ (*2.2.2, Method II*).

Dissolve 0.5 g in 10 mL of a mixture of 1 volume of *water R*, 4.5 volumes of *methanol R* and 5 volumes of *methylene chloride R*.

**Related substances**

A. Liquid chromatography (*2.2.29*).

*Test solution*. Dissolve 25.0 mg of the substance to be examined in the mobile phase and dilute to 25.0 mL with the mobile phase.

*Reference solution (a)*. Dilute 1.0 mL of the test solution to 200.0 mL with the mobile phase.

*Reference solution (b)*. Dissolve the contents of a vial of *trimethoprim for system suitability CRS* (containing impurity E) in 1 mL of the mobile phase.

*Column*:

– *size*: *l* = 0.250 m, Ø = 4.0 mm;

– *stationary phase*: *base-deactivated octadecylsilyl silica gel for chromatography R* (5 µm).

*Mobile phase*: mix 30 volumes of *methanol R* and 70 volumes of a 1.4 g/L solution of *sodium perchlorate R* adjusted to pH 3.6 with *phosphoric acid R*.

*Flow rate*: 1.3 mL/min.

*Detection*: spectrophotometer at 280 nm.

*Injection*: 20 µL loop injector.

*Run time*: 11 times the retention time of trimethoprim.

*Relative retention* with reference to trimethoprim (retention time = about 5 min): impurity C = about 0.8; impurity E = about 0.9; impurity A = about 1.5; impurity D = about 2.0; impurity G = about 2.1; impurity B = about 2.3; impurity J = about 2.7; impurity F = about 4.0.

*System suitability*: reference solution (b):

– *resolution*: minimum 2.5 between the peaks due to impurity E and trimethoprim.

*Limits*:

– *correction factors*: for the calculation of content, multiply the peak areas of the following impurities by the corresponding correction factor: impurity B = 0.43; impurity E = 0.53; impurity J = 0.66;

– *any impurity*: not more than 0.2 times the area of the principal peak in the chromatogram obtained with reference solution (a) (0.1 per cent);

– *total*: not more than 0.4 times the area of the principal peak in the chromatogram obtained with reference solution (a) (0.2 per cent);

– *disregard limit*: 0.04 times the area of the principal peak in the chromatogram obtained with reference solution (a) (0.02 per cent); disregard any peak corresponding to impurity H (relative retention = about 10.3).

B. Liquid chromatography (*2.2.29*).

*Test solution*. Dissolve 25.0 mg of the substance to be examined in the mobile phase and dilute to 25.0 mL with the mobile phase.

*Reference solution (a)*. Dilute 1.0 mL of the test solution to 200.0 mL with the mobile phase.

*Reference solution (b)*. Dissolve 5.0 mg of *trimethoprim CRS* and 5.0 mg of *trimethoprim impurity B CRS* in the mobile phase and dilute to 100.0 mL with the mobile phase.

*Column*:

– *size*: *l* = 0.25 m, Ø = 4.6 mm;

– *stationary phase*: *nitrile silica gel for chromatography R* (5 µm) with a specific surface area of 350 $m^2$/g and a pore diameter of 10 nm.

*Mobile phase*: dissolve 1.14 g of *sodium hexanesulfonate R* in 600 mL of a 13.6 g/L solution of *potassium dihydrogen phosphate R*; adjust to pH 3.1 with *phosphoric acid R* and mix with 400 mL of *methanol R*.

*Flow rate*: 0.8 mL/min.

*Detection*: spectrophotometer at 280 nm.

*Injection*: 20 µL loop injector.

*Run time*: 6 times the retention time of trimethoprim.

*Relative retention* with reference to trimethoprim (retention time = about 4 min): impurity H = about 1.8; impurity I = about 4.9.

*System suitability*: reference solution (b):

– *resolution*: minimum 2.0 between the peaks due to trimethoprim and impurity B.

*Limits*:

– *correction factors*: for the calculation of content, multiply the peak areas of the following impurities by the corresponding correction factor: impurity H = 0.50; impurity I = 0.28;

– *any impurity*: not more than 0.2 times the area of the principal peak in the chromatogram obtained with reference solution (a) (0.1 per cent);

– *total*: not more than 0.4 times the area of the principal peak in the chromatogram obtained with reference solution (a) (0.2 per cent);

– *disregard limit*: 0.04 times the area of the principal peak in the chromatogram obtained with reference solution (a) (0.02 per cent); disregard any peak due to impurity B (relative retention = about 1.3).

**Impurity K**. Gas chromatography (*2.2.28*).

*Test solution*. Dissolve 0.500 g of the substance to be examined in 35.0 mL of *citrate buffer solution pH 5.0 R*, add 10.0 mL of *1,1-dimethylethyl methyl ether R*, shake thoroughly and centrifuge for 10 min. Use the upper layer.

*Reference solution*. Dilute 5.0 mL of *hydrochloric acid R* to 50.0 mL with *water R*, add 12.5 mg of *aniline R* and shake thoroughly. Add 10.0 µL of this solution and 10.0 mL of *1,1-dimethylethyl methyl ether R* to 35.0 mL of *citrate buffer solution pH 5.0 R*, shake thoroughly and centrifuge for 10 min. Use the upper layer.

*Column*:

– *material*: fused silica;

– *size*: *l* = 30 m, Ø = 0.53 mm;

– *stationary phase*: *methylpolysiloxane R* (film thickness 3 µm).

*Carrier gas*: *helium for chromatography R*.

*Flow rate*: 12 mL/min.

*Temperature*:

– *column*: 80 °C;

– *injection port*: 230 °C;

– *detector*: 270 °C.

*Detection*: nitrogen-phosphorus detector.

*Injection*: 3 µL.

*Run time*: 15 min.

*System suitability*: reference solution:

– *repeatability*: maximum relative standard deviation of 5.0 per cent after 6 injections.

*Limit*:

– *impurity K*: not more than the area of the corresponding peak in the chromatogram obtained with the reference solution (5 ppm).

**Loss on drying** (*2.2.32*): maximum 1.0 per cent, determined on 1.000 g by drying in an oven at 105 °C.

**Sulfated ash** (*2.4.14*): maximum 0.1 per cent, determined on 1.0 g.

ASSAY

Dissolve 0.250 g in 50 mL of *anhydrous acetic acid R*. Titrate with *0.1 M perchloric acid*, determining the end-point potentiometrically (*2.2.20*).

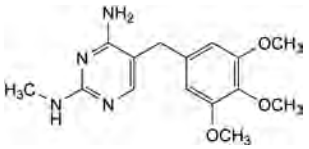
1 mL of *0.1 M perchloric acid* is equivalent to 29.03 mg of $C_{14}H_{18}N_4O_3$.

IMPURITIES

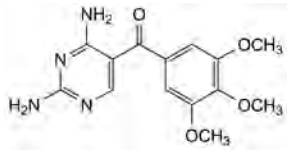
**Test A for related substances**: A, B, C, D, E, F, G, H, J.

**Test B for related substances**: B, H, I.

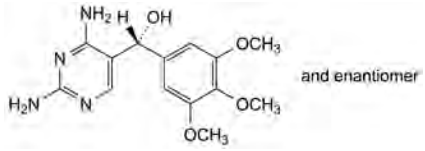
**Test for impurity K**: K.



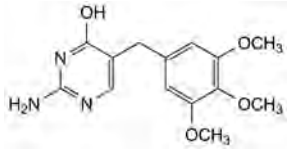
A. $N^2$-methyl-5-(3,4,5-trimethoxybenzyl)pyrimidine-2,4-diamine,



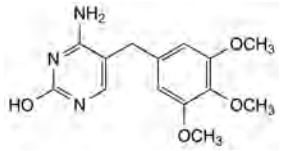
B. (2,4-diaminopyrimidin-5-yl)(3,4,5-trimethoxyphenyl)-methanone,



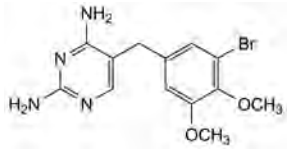
C. (*RS*)-(2,4-diaminopyrimidin-5-yl)(3,4,5-trimethoxyphenyl)methanol,



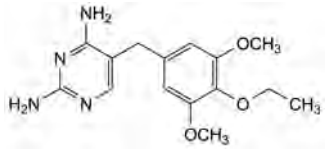
D. 2-amino-5-(3,4,5-trimethoxybenzyl)pyrimidin-4-ol,



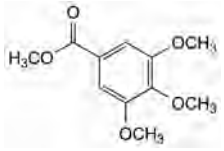
E. 4-amino-5-(3,4,5-trimethoxybenzyl)pyrimidin-2-ol,



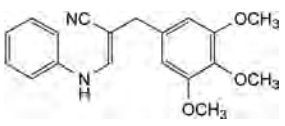
F. 5-(3-bromo-4,5-dimethoxybenzyl)pyrimidine-2,4-diamine,



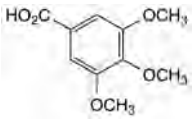
G. 5-(4-ethoxy-3,5-dimethoxybenzyl)pyrimidine-2,4-diamine,



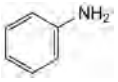
H. methyl 3,4,5-trimethoxybenzoate,



I. 3-(phenylamino)-2-(3,4,5-trimethoxybenzyl)prop-2-enenitrile,



J. 3,4,5-trimethoxybenzoic acid,

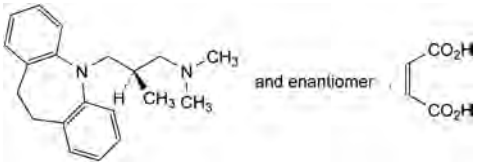


K. aniline.

**01/2017:0534**

# TRIMIPRAMINE MALEATE

## Trimipramini maleas



$C_{24}H_{30}N_2O_4$ $M_r$ 410.5
[521-78-8]

DEFINITION

(2*RS*)-3-(10,11-Dihydro-5*H*-dibenzo[*b*,*f*]azepin-5-yl)-*N*,*N*,2-trimethylpropan-1-amine hydrogen (2*Z*)-but-2-enedioate.

*Content*: 98.0 per cent to 101.0 per cent (dried substance).

CHARACTERS

*Appearance*: white or almost white, crystalline powder.

*Solubility*: slightly soluble in water and in ethanol (96 per cent).

IDENTIFICATION

A. Melting point (*2.2.14*): 140 °C to 144 °C.

B. Infrared absorption spectrophotometry (*2.2.24*).
*Comparison*: *trimipramine maleate CRS*.

TESTS

**Related substances**. Liquid chromatography (*2.2.29*). *Carry out the test protected from light.*

*Buffer solution pH 7.7*: 2.64 g/L solution of *ammonium phosphate R* in *water for chromatography R*; adjust to pH 7.7 with *phosphoric acid R*.

*Test solution.* Dissolve 50 mg of the substance to be examined in the mobile phase and dilute to 100 mL with the mobile phase.

*Reference solution (a).* Dissolve 5 mg of the substance to be examined and 5 mg of *iminodibenzyl R* (impurity F) in the mobile phase and dilute to 10 mL with the mobile phase.

*Reference solution (b).* Dilute 1.0 mL of the test solution to 100.0 mL with the mobile phase. Dilute 1.0 mL of this solution to 10.0 mL with the mobile phase.

*Reference solution (c).* Dissolve the contents of a vial of *trimipramine for peak identification CRS* (containing impurities A, B, C, D and E) in 1 mL of *acetonitrile R1*.

*Column*:

– *size*: *l* = 0.125 m, Ø = 4.0 mm;
– *stationary phase*: *end-capped octadecylsilyl silica gel for chromatography R* (5 µm).

*Mobile phase*: *acetonitrile R1*, buffer solution pH 7.7 (38:62 *V/V*).

*Flow rate*: 1.5 mL/min.

*Detection*: spectrophotometer at 210 nm.

*Injection*: 20 µL.

*Run time*: 3 times the retention time of trimipramine.

*Identification of impurities*: use the chromatogram supplied with *trimipramine for peak identification CRS* and the chromatogram obtained with reference solution (c) to identify the peaks due to impurities A, B, C, D and E; doubling of the peak due to impurity E may be observed.

*Relative retention* with reference to trimipramine (retention time = about 27 min): impurity A = about 0.1; impurity B = about 0.3; impurity C = about 0.4; impurity D = about 0.5; impurity F = about 1.4; impurity E = about 1.5.

*System suitability*:

- *resolution*: minimum 3.5 between the peaks due to trimipramine and impurity F in the chromatogram obtained with reference solution (a);
- the chromatogram obtained with reference solution (c) is similar to the chromatogram supplied with *trimipramine for peak identification CRS*.

*Limits*:

- *correction factor*: for the calculation of content, multiply the peak area of impurity F by 0.5;
- *impurity E*: not more than 3 times the area of the principal peak in the chromatogram obtained with reference solution (b) (0.3 per cent);
- *impurity F*: not more than 2 times the area of the principal peak in the chromatogram obtained with reference solution (b) (0.2 per cent);
- *impurities A, B, C, D*: for each impurity, not more than 1.5 times the area of the principal peak in the chromatogram obtained with reference solution (b) (0.15 per cent);
- *unspecified impurities*: for each impurity, not more than the area of the principal peak in the chromatogram obtained with reference solution (b) (0.10 per cent);
- *total*: not more than 10 times the area of the principal peak in the chromatogram obtained with reference solution (b) (1.0 per cent);
- *disregard limit*: 0.5 times the area of the principal peak in the chromatogram obtained with reference solution (b) (0.05 per cent).

**Loss on drying** (*2.2.32*): maximum 0.5 per cent, determined on 1.000 g by drying in an oven at 105 °C.

**Sulfated ash** (*2.4.14*): maximum 0.1 per cent, determined on 1.0 g.

ASSAY

Dissolve 0.350 g in 50 mL of *anhydrous acetic acid R*. Titrate with *0.1 M perchloric acid*, determining the end-point potentiometrically (*2.2.20*).

1 mL of *0.1 M perchloric acid* is equivalent to 41.05 mg of $C_{24}H_{30}N_2O_4$.

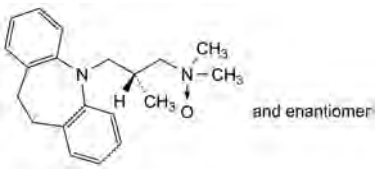
STORAGE

Protected from light.

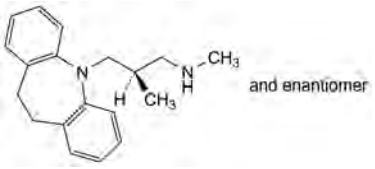
IMPURITIES

*Specified impurities*: *A, B, C, D, E, F.*

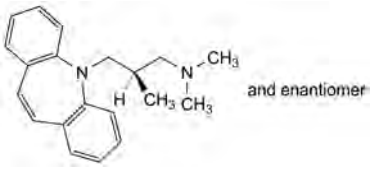
*Other detectable impurities* (the following substances would, if present at a sufficient level, be detected by one or other of the tests in the monograph. They are limited by the general acceptance criterion for other/unspecified impurities and/or by the general monograph *Substances for pharmaceutical use (2034)*. It is therefore not necessary to identify these impurities for demonstration of compliance. See also *5.10. Control of impurities in substances for pharmaceutical use*): *G.*



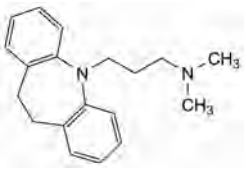
A. (2*RS*)-3-(10,11-dihydro-5*H*-dibenzo[*b,f*]azepin-5-yl)-*N*,*N*,2-trimethylpropan-1-amine *N*-oxide,



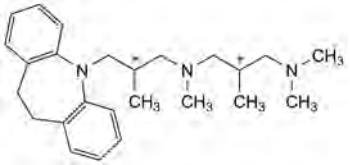
B. (2*RS*)-3-(10,11-dihydro-5*H*-dibenzo[*b,f*]azepin-5-yl)-*N*,2-dimethylpropan-1-amine,



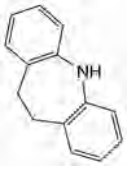
C. (2*RS*)-3-(5*H*-dibenzo[b,f]azepin-5-yl)-*N*,*N*,2-trimethylpropan-1-amine,



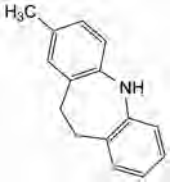
D. imipramine,



E. mixture of the stereoisomers of *N*-[3-(10,11-dihydro-5*H*-dibenzo[*b,f*]azepin-5-yl)-2-methylpropyl]-*N*,*N*′,*N*′,2-tetramethylpropane-1,3-diamine,



F. 10,11-dihydro-5*H*-dibenzo[*b,f*]azepine,

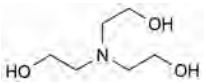


G. 2-methyl-10,11-dihydro-5*H*-dibenzo[*b,f*]azepine.

**01/2017:1577**
**corrected 10.0**

# TROLAMINE

## Trolaminum



$C_6H_{15}NO_3$ $M_r$ 149.2
[102-71-6]

DEFINITION

2,2′,2″-Nitrilotriethanol.

*Content*: 99.0 per cent *m/m* to 103.0 per cent *m/m* of total bases (anhydrous substance).

CHARACTERS

*Appearance*: clear, viscous, colourless or slightly yellow liquid, very hygroscopic.

*Solubility*: miscible with water and with ethanol (96 per cent), soluble in methylene chloride.

IDENTIFICATION

*First identification: B, C.*

*Second identification: A, B, D.*

A. Relative density (*2.2.5*): 1.120 to 1.130.

B. Refractive index (*2.2.6*): 1.482 to 1.485.

C. Examine the chromatograms obtained in the test for related substances.

*Results*: the principal peak in the chromatogram obtained with the test solution is similar in retention time and size to the principal peak in the chromatogram obtained with reference solution (a).

D. To 1 mL add 0.3 mL of *copper sulfate solution R*. A blue colour develops. Add 2.5 mL of *dilute sodium hydroxide solution R* and heat to boiling. The blue colour remains unchanged.

TESTS

**Solution S**. Dissolve 12 g in *water R* and dilute to 20 mL with the same solvent.

**Appearance of solution**. Solution S is clear (*2.2.1*) and not more intensely coloured than reference solution $B_6$ (*2.2.2, Method II*).

**Related substances**. Gas chromatography (*2.2.28*).

*Internal standard solution.* Dissolve 5.0 g of *3-aminopropanol R* in *water R* and dilute to 100.0 mL with the same solvent.

*Test solution.* Dissolve 10.0 g of the substance to be examined in *water R*. Add 1.0 mL of the internal standard solution and dilute to 100.0 mL with *water R*.

*Reference solution (a).* Dissolve 1.0 g of *trolamine CRS* in *water R* and dilute to 10.0 mL with the same solvent.

*Reference solution (b).* Dissolve 0.1 g of *trolamine impurity A CRS*, 0.5 g of *trolamine impurity B CRS* and 0.1 g of *trolamine CRS* in *water R* and dilute to 10.0 mL with the same solvent. To 1.0 mL of this solution add 1.0 mL of the internal standard solution and dilute to 100.0 mL with *water R*.

*Column*:

- *material*: fused silica;
- *size*: *l* = 25 m, Ø = 0.25 mm;
- *stationary phase*: *phenyl(5)methyl(95)polysiloxane R* (film thickness 0.50 µm).

*Carrier gas*: *helium for chromatography R*.

*Flow rate*: 1 mL/min.

*Split ratio*: 1:35.

*Temperature*:

| | Time (min) | Temperature (°C) |
|---|---|---|
| Column | 0 | 60 |
| | 0 - 8.5 | 60 → 230 |
| | 8.5 - 14 | 230 |
| Injection port | | 260 |
| Detector | | 280 |

*Detection*: flame ionisation.

*Injection*: 2 µL; if necessary inject a blank solution.

*Elution order*: impurity A, 3-aminopropanol, impurity B, trolamine.

*System suitability*: reference solution (b):

- *resolution*: minimum 2.0 between the peaks due to 3-aminopropanol and impurity A.

*Limits*:

- *impurity A*: calculate the ratio (*R1*) of the area of the peak due to impurity A to the area of the peak due to the internal standard from the chromatogram obtained with reference solution (b); from the chromatogram obtained with the test solution, calculate the ratio of the area of any peak due to impurity A to the area of the peak due to the internal standard: this ratio is not greater than *R1* (0.1 per cent);
- *impurity B*: calculate the ratio (*R2*) of the area of the peak due to impurity B to the area of the peak due to the internal standard from the chromatogram obtained with reference solution (b); from the chromatogram obtained with the test solution, calculate the ratio of the area of any peak due to impurity B to the area of the peak due to the internal standard: this ratio is not greater than *R2* (0.5 per cent);
- *total*: calculate the ratio (*R4*) of the area of the peak due to trolamine to the area of the peak due to the internal standard from the chromatogram obtained with reference solution (b); from the chromatogram obtained with the test solution, calculate the ratio of the sum of the areas of any peaks, apart from the principal peak and the peak due to the internal standard, to the area of the peak due to the internal standard: this ratio is not greater than 10 times *R4* (1.0 per cent);
- *disregard limit*: 0.5 times the ratio of the area of the peak due to trolamine to the area of the peak due to the internal standard from the chromatogram obtained with reference solution (b) (0.05 per cent).

**Impurity C**. Gas chromatography (*2.2.28*).

*Solvent mixture*: *acetone R*, *chloroform R* (10:50 *V/V*).

*Preparation of solid phase extraction columns*

*Column A*. Fill a glass chromatography column (*l* = 400 mm; Ø = 20 mm) fitted with a polytetrafluoroethylene stopcock and a sintered-glass filter (160) (*2.1.2*) with 3 g of *anhydrous sodium sulfate R* and cover with a mixture of 17 g of *kieselguhr for chromatography R* and 3 g of *potassium carbonate R*. Settle the column bed by gently tapping the column.

*Column B*. Fill a glass chromatography column (*l* = 400 mm; Ø = 20 mm) fitted with a polytetrafluoroethylene stopcock and a sintered-glass filter (160) (*2.1.2*) with a slurry of 25 g of *silica gel for chromatography R* (0.063 to 0.200 mm) in the solvent mixture. Apply slight pressure to settle the column and cover the column bed with 5 g of *anhydrous sodium sulfate R*.

*Standard solution (a).* Dissolve 50 µL of *N-nitrosodiethanolamine R* (impurity C) in *methanol R* and dilute to 50.0 mL with the same solvent. Dilute 100 µL of this solution to 100.0 mL with *methanol R*.

*Standard solution (b).* Dilute 10.0 mL of standard solution (a) to 50.0 mL with *methanol R*.

*Standard solution (c).* Dissolve 50 mg of *N-nitrosodiisopropanolamine R* in *methanol R* and dilute to 50.0 mL with the same solvent. Dilute 100 µL of this solution to 100.0 mL with *methanol R*.

*Test solution.* To 2.000 g of the substance to be examined add 200 µL of *methanol R* and 0.5 g of *sulfamic acid R*. Dissolve in 8 mL of *water for chromatography R* and apply the solution to column A. Rinse the vessel twice with 1.5 mL of *water for chromatography R*, applying the rinsings to the column as well. After 15 min of equilibration time elute the column with 100 mL of *ethyl acetate R*, collecting the eluate in a 250 mL distillation flask. Evaporate the eluate to dryness. Take up the residue in 1 mL of the solvent mixture, apply to column B and let it settle. Rinse the flask twice with 2 mL of the solvent mixture, apply the rinsings to the column and let it settle. Wash the column with 100 mL of the solvent mixture and discard. Elute the column with 120 mL of *acetone R*, collecting the eluate in a 250 mL distillation flask. Evaporate the eluate to dryness. Transfer the residue with the aid of a small volume of *acetone R* into a vial and evaporate again to dryness under a stream of *nitrogen R*. Dissolve the residue in 100 µL of *trimethylpentane for chromatography R*, add 100 µL of *N-methyltrimethylsilyl-trifluoroacetamide R* and heat at 70 °C for 1 h.

*Reference solution (a).* To 2.000 g of the substance to be examined add 200 µL of standard solution (b) and 0.5 g of *sulfamic acid R*. Dissolve in 8 mL of *water for chromatography R*, then proceed exactly as described for the test solution.

*Reference solution (b).* To 1.0 mL of standard solution (a) add 4.0 mL of standard solution (c) and mix. Transfer 500 µL of the solution to a vial and evaporate to dryness under a stream of *nitrogen R*. Dissolve the residue in 200 µL of *trimethylpentane for chromatography R*, add 200 µL of *N-methyltrimethylsilyl-trifluoroacetamide R* and heat at 70 °C for 1 h.

*Reference solution (c).* In a vial, evaporate 200 µL of standard solution (b) to dryness under a stream of *nitrogen R*. Dissolve the residue in 100 µL of *trimethylpentane for chromatography R*, add 100 µL of *N-methyltrimethylsilyl-trifluoroacetamide R* and heat at 70 °C for 1 h.

*Blank solution.* In a gas chromatography vial, evaporate 200 µL of *methanol R* to dryness under a stream of *nitrogen R*. Dissolve the residue in 100 µL of *trimethylpentane for chromatography R* add 100 µL of *N-methyltrimethylsilyl-trifluoroacetamide R* and heat at 70 °C for 1 h.

*Column*:

- *material*: fused silica;
- *size*: *l* = 30 m; Ø = 0.25 mm;
- *stationary phase*: *base-deactivated phenyl(5)methyl(95)polysiloxane R* (film thickness 1 µm).

*Carrier gas*: *helium for chromatography R.*

*Flow rate*: 2 mL/min.

*Split ratio*: 1:10.

*Temperature*:

| | Time (min) | Temperature (°C) |
|---|---|---|
| Column | 0 - 5 | 180 → 280 |
| | 5 - 10 | 280 |
| Injection port | | 220 |

*Detection*: chemoluminescence:

- dual plasma burner in nitrosamine mode;
- burner temperature: 450 °C;
- oxygen flow rate: 4.4-5.0 mL/min.

*Injection*: 4 µL.

*System suitability*:

- *resolution*: minimum 1.3 between the peaks due to impurity C and *N*-nitrosodiisopropanolamine in the chromatogram obtained with reference solution (b);
- *recovery*: minimum 50 per cent. The difference between the area of the peak due to impurity C in the chromatogram obtained with reference solution (a) and the area of the corresponding peak in the chromatogram obtained with the test solution is not less than 0.5 times the area of the corresponding peak in the chromatogram obtained with reference solution (c).

*Limits*:

- *impurity C*: not more than the difference between the area of the peak due to impurity C in the chromatogram obtained with reference solution (a) and the area of the corresponding peak in the chromatogram obtained with the test solution (24 ppb).

**Water** (*2.5.12*): maximum 1.0 per cent, determined on 1.000 g.

Open the titration vessel, introduce the substance to be examined directly into the previously titrated solvent. Stopper the flask immediately.

**Sulfated ash** (*2.4.14*): maximum 0.1 per cent, determined on 1.0 g. Do not carry out the initial heating on a water-bath.

ASSAY

Dissolve 1.200 g in 75 mL of *carbon dioxide-free water R*. Add 0.3 mL of *methyl red solution R*. Titrate with *1 M hydrochloric acid*.

1 mL of *1 M hydrochloric acid* is equivalent to 0.149 g of $C_6H_{15}NO_3$.

STORAGE

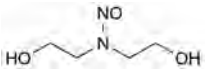
In an airtight container, protected from light.

IMPURITIES

*Specified impurities: A, B, C.*

A. 2-aminoethanol (ethanolamine),

B. 2,2′-iminodiethanol (diethanolamine),

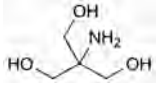


C. 2,2′-(nitrosoimino)diethanol (*N*-nitrosodiethanolamine).

**01/2017:1053**

# TROMETAMOL

## Trometamolum



$C_4H_{11}NO_3$ $M_r$ 121.1

[77-86-1]

DEFINITION

Trometamol contains not less than 99.0 per cent and not more than the equivalent of 100.5 per cent of aminomethylidynetri(methanol), calculated with reference to the dried substance.

CHARACTERS

A white or almost white, crystalline powder, or colourless crystals, freely soluble in water, sparingly soluble in alcohol, very slightly soluble in ethyl acetate.

IDENTIFICATION

*First identification*: B, C.

*Second identification*: A, B, D.

A. Solution S (see Tests) is strongly alkaline (*2.2.4*).

B. Melting point (*2.2.14*): 168 °C to 174 °C.

C. Examine by infrared absorption spectrophotometry (*2.2.24*), comparing with the spectrum obtained with *trometamol CRS*.

D. Examine the chromatograms obtained in the test for related substances. The principal spot in the chromatogram obtained with test solution (b) is similar in position, colour and size to the principal spot in the chromatogram obtained with reference solution (a).

TESTS

**Solution S**. Dissolve 2.5 g in *carbon dioxide-free water R* and dilute to 50 mL with the same solvent.

**Appearance of solution**. Solution S is clear (*2.2.1*) and colourless (*2.2.2, Method II*).

**pH** (*2.2.3*). The pH of freshly prepared solution S is 10.0 to 11.5.

**Related substances**. Examine by thin-layer chromatography (*2.2.27*), using *silica gel G R* as the coating substance. Wash the plate with *methanol R* before applying the solutions.

*Test solution (a)*. Dissolve 0.20 g in 1 mL of *water R*, with heating, and dilute to 10 mL with *methanol R*.

*Test solution (b)*. Dilute 1 mL of test solution (a) to 10 mL with *methanol R*.

*Reference solution (a)*. Dissolve 20 mg of *trometamol CRS* in *methanol R* and dilute to 10 mL with the same solvent.

*Reference solution (b)*. Dilute 1 mL of test solution (a) to 100 mL with *methanol R*.

Apply to the plate 10 µL of each solution. Develop over a path of 10 cm using a mixture of 10 volumes of *dilute ammonia R1* and 90 volumes of *2-propanol R*. Dry the plate at 100 °C to 105 °C. Spray with a 5 g/L solution of *potassium permanganate R* in a 10 g/L solution of *sodium carbonate R*. After about 10 min examine in daylight. Any spot in the chromatogram obtained with test solution (a), apart from the principal spot, is not more intense than the spot in the chromatogram obtained with reference solution (b) (1.0 per cent).

**Chlorides** (*2.4.4*). To 10 mL of solution S add 2.5 mL of *dilute nitric acid R* and dilute to 15 mL with *water R*. The solution complies with the limit test for chlorides (100 ppm).

**Iron** (*2.4.9*). Dissolve 1.0 g in *water R* and dilute to 10 mL with the same solvent. The solution complies with the limit test for iron (10 ppm).

**Loss on drying** (*2.2.32*). Not more than 0.5 per cent, determined on 1.000 g by drying in an oven at 105 °C.

**Sulfated ash** (*2.4.14*). Not more than 0.1 per cent, determined on 1.0 g.

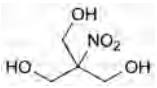
**Bacterial endotoxins** (*2.6.14*): less than 0.03 IU/mg, if intended for use in the manufacture of parenteral preparations without a further appropriate procedure for the removal of bacterial endotoxins.

ASSAY

Dissolve 0.100 g in 20 mL of *water R*. Add 0.2 mL of *methyl red solution R*. Titrate with *0.1 M hydrochloric acid* until the colour changes from yellow to red.

1 mL of *0.1 M hydrochloric acid* is equivalent to 12.11 mg of $C_4H_{11}NO_3$.

IMPURITIES

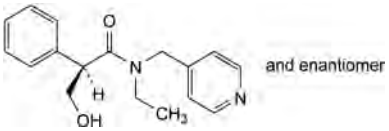


A. nitromethylidynetri(methanol).

**01/2011:1159**

# TROPICAMIDE

## Tropicamidum



$C_{17}H_{20}N_2O_2$ $M_r$ 284.4

[1508-75-4]

DEFINITION

(2*RS*)-*N*-Ethyl-3-hydroxy-2-phenyl-*N*-(pyridin-4-ylmethyl)propanamide.

*Content*: 99.0 per cent to 101.0 per cent (dried substance).

CHARACTERS

*Appearance*: white or almost white, crystalline powder.

*Solubility*: slightly soluble in water, freely soluble in ethanol (96 per cent) and in methylene chloride.

IDENTIFICATION

*First identification*: C.

*Second identification*: A, B, D, E.

A. Melting point (*2.2.14*): 95 °C to 98 °C.

B. Ultraviolet and visible absorption spectrophotometry (*2.2.25*).

*Test solution*. Dissolve 20.0 mg in *0.1 M hydrochloric acid* and dilute to 50.0 mL with the same acid. Dilute 2.0 mL of this solution to 20.0 mL with *0.1 M hydrochloric acid*.

*Spectral range*: 230-350 nm.

*Absorption maximum*: at 254 nm.

*Specific absorbance at the absorption maximum*: 170 to 190.

C. Infrared absorption spectrophotometry (*2.2.24*).

*Comparison*: *tropicamide CRS*.

D. Thin-layer chromatography (*2.2.27*).

*Test solution*. Dissolve 10 mg of the substance to be examined in *methylene chloride R* and dilute to 10 mL with the same solvent.

*Reference solution*. Dissolve 10 mg of *tropicamide CRS* in *methylene chloride R* and dilute to 10 mL with the same solvent.

*Plate*: *TLC silica gel $F_{254}$ plate R*.

*Mobile phase*: *concentrated ammonia R*, *methanol R*, *methylene chloride R* (0.5:5:95 *V/V/V*).

*Application*: 10 µL.

*Development*: over 2/3 of the plate.

*Drying*: in air.

*Detection*: examine in ultraviolet light at 254 nm.

*Results*: the principal spot in the chromatogram obtained with the test solution is similar in position and size to the spot in the chromatogram obtained with the reference solution.

Monographs T

E. Dissolve about 5 mg in 3 mL of a mixture of 9 mL of *acetic anhydride R*, 1 mL of *acetic acid R* and 0.1 g of *citric acid monohydrate R*. Heat on a water-bath for 5-10 min. A reddish-yellow colour is produced.

TESTS

**Appearance of solution**. The solution is clear (*2.2.1*) and colourless (*2.2.2, Method II*).

Dissolve 0.1 g in *ethanol (96 per cent) R* and dilute to 10 mL with the same solvent.

**Optical rotation** (*2.2.7*): − 0.1° to + 0.1°.

Dissolve 2.5 g in *anhydrous ethanol R* and dilute to 25.0 mL with the same solvent.

**Related substances**. Liquid chromatography (*2.2.29*).

*Test solution.* Dissolve 50.0 mg of the substance to be examined in 3 mL of *acetonitrile R1* and dilute to 50.0 mL with *water for chromatography R*.

*Reference solution (a).* Dilute 1.0 mL of the test solution to 100.0 mL with *water for chromatography R*. Dilute 1.0 mL of this solution to 10.0 mL with *water for chromatography R*.

*Reference solution (b).* Dissolve 5 mg of *4-[(ethylamino)methyl]pyridine R* (impurity A), 5.0 mg of *tropicamide impurity C CRS* and 5.0 mg of *tropicamide impurity D CRS* in 2 mL of *acetonitrile R1* and dilute to 50.0 mL with *water for chromatography R*. Dilute 1.0 mL of this solution to 10.0 mL with *water for chromatography R*.

*Reference solution (c).* Dissolve 5 mg of *tropicamide for peak identification CRS* (containing impurity B) in 1.0 mL of *acetonitrile R1* and dilute to 10.0 mL with *water for chromatography R*.

*Reference solution (d).* To 1 mL of reference solution (b) add 1 mL of reference solution (c).

*Reference solution (e).* Dilute 1.5 mL of reference solution (b) to 10.0 mL with *water for chromatography R*.

*Column*:

- *size*: *l* = 0.15 m, Ø = 4.6 mm;
- *stationary phase*: *end-capped octadecylsilyl silica gel for chromatography R* (3 µm);
- *temperature*: 40 °C.

*Mobile phase.* Dissolve 0.135 g of *sodium dodecyl sulfate R* and 3.4 mL of *phosphoric acid R* in 950 mL of *water for chromatography R*. Adjust to pH 3.0 with *strong sodium hydroxide solution R* and dilute to 1000 mL with *water for chromatography R*. Mix 73 volumes of this solution with 27 volumes of *acetonitrile R1*.

*Flow rate*: 0.8 mL/min.

*Detection*: spectrophotometer at 210 nm and at 254 nm.

*Injection*: 15 µL.

*Run time*: 3 times the retention time of tropicamide.

*Identification of impurities*: use the chromatogram obtained with reference solution (c) to identify the peak due to impurity B; use the chromatogram obtained with reference solution (b) to identify the peaks due to impurities A, C and D.

*Relative retention* with reference to tropicamide (retention time = about 11 min): impurity C = about 0.4; impurity A = about 0.5; impurity D = about 0.8; impurity B = about 2.3.

*System suitability*: reference solution (d):

- *resolution at 210 nm*: minimum 2.0 between the peaks due to impurities C and A;
- *resolution at 210 nm*: minimum 2.0 between the peaks due to impurities A and D.

*Limits*:

- *correction factors*: for the calculation of content, multiply the peak areas of the following impurities by the corresponding correction factor: impurity A = 0.8; impurity B = 0.6;
- *impurity B at 254 nm*: not more than 3 times the area of the principal peak in the chromatogram obtained with reference solution (a) (0.3 per cent);
- *impurity A at 254 nm*: not more than 1.5 times the area of the principal peak in the chromatogram obtained with reference solution (a) (0.15 per cent);
- *impurity C at 210 nm*: not more than the area of the corresponding peak in the chromatogram obtained with reference solution (e) (0.15 per cent);
- *impurity D at 210 nm*: not more than the area of the corresponding peak in the chromatogram obtained with reference solution (e) (0.15 per cent);
- *unspecified impurities at 254 nm*: for each impurity, not more than the area of the principal peak in the chromatogram obtained with reference solution (a) (0.10 per cent);
- *sum of impurities other than C and D at 254 nm*: not more than 5 times the area of the principal peak in the chromatogram obtained with reference solution (a) (0.5 per cent);
- *disregard limit at 254 nm*: 0.5 times the area of the principal peak in the chromatogram obtained with reference solution (a) (0.05 per cent).

**Chlorides** (*2.4.4*): maximum 100 ppm.

Dissolve 1.0 g with heating in 8 mL of *acetic acid R*, cool and dilute to 10 mL with the same acid. Dilute 5 mL of this solution to 15 mL with *water R*.

**Loss on drying** (*2.2.32*): maximum 0.5 per cent, determined on 1.000 g by drying in an oven at 80 °C at a pressure not exceeding 0.7 kPa for 4 h.

**Sulfated ash** (*2.4.14*): maximum 0.1 per cent, determined on 1.0 g.

ASSAY

Dissolve 0.200 g in 50 mL of *anhydrous acetic acid R*. Add 0.2 mL of *naphtholbenzein solution R* and titrate with *0.1 M perchloric acid* until the colour changes from orange to green.

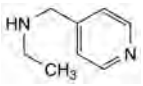
1 mL of *0.1 M perchloric acid* is equivalent to 28.44 mg of $C_{17}H_{20}N_2O_2$.

STORAGE

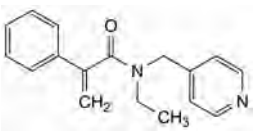
Protected from light.

IMPURITIES

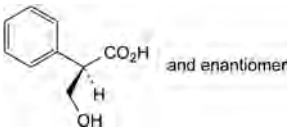
*Specified impurities: A, B, C, D.*



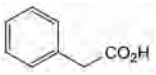
A. *N*-(pyridin-4-ylmethyl)ethanamine,



B. *N*-ethyl-2-phenyl-*N*-(pyridin-4-ylmethyl)propenamide,



C. (2*RS*)-3-hydroxy-2-phenylpropanoic acid (tropic acid),

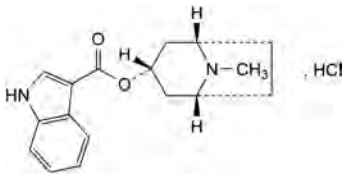


D. phenylacetic acid.

**01/2008:2102**
**corrected 6.0**

# TROPISETRON HYDROCHLORIDE

## Tropisetroni hydrochloridum



$C_{17}H_{21}ClN_2O_2$ $M_r$ 320.8
[105826-92-4]

DEFINITION

Hydrochloride of (1*R*,3*r*,5*S*)-8-methyl-8-azabicyclo[3.2.1]oct-3-yl 1*H*-indole-3-carboxylate.

*Content*: 99.0 per cent to 101.0 per cent (dried substance).

CHARACTERS

*Appearance*: white or almost white powder.

*Solubility*: freely soluble or soluble in water, sparingly soluble in ethanol (96 per cent), very slightly soluble in methylene chloride.

IDENTIFICATION

*First identification*: *B, D.*

*Second identification*: *A, C, D.*

A. Ultraviolet and visible absorption spectrophotometry (*2.2.25*).

*Test solution.* Dissolve 50 mg in *methanol R* and dilute to 25.0 mL with the same solvent. Dilute 1.0 mL of this solution to 100.0 mL with *methanol R*.

*Spectral range*: 220-360 nm.

*Absorption maxima*: at 228 nm and 282 nm.

*Absorbance ratio*: $A_{228}/A_{282}$ = 1.3 to 1.4.

B. Infrared absorption spectrophotometry (*2.2.24*).

*Comparison*: *tropisetron hydrochloride CRS*.

C. Thin-layer chromatography (*2.2.27*).

*Test solution.* Dissolve 5 mg of the substance to be examined in a mixture of equal volumes of *methanol R* and *methylene chloride R* and dilute to 5 mL with the same mixture of solvents.

*Reference solution.* Dissolve 5 mg of *tropisetron hydrochloride CRS* in a mixture of equal volumes of *methanol R* and *methylene chloride R* and dilute to 5 mL with the same mixture of solvents.

*Plate*: *TLC silica gel $F_{254}$ plate R.*

*Mobile phase*: *anhydrous formic acid R*, *water R*, *methanol R*, *methylene chloride R* (2:2:30:70 *V/V/V/V*).

*Application*: 5 µL.

*Development*: over 2/3 of the plate.

*Drying*: in cold air.

*Detection A*: examine in ultraviolet light at 254 nm.

*Detection B*: spray first with a solution prepared as follows: dissolve 0.85 g of *bismuth subnitrate R* in a mixture of 10 mL of *acetic acid R* and 40 mL of *water R*; to 5 mL of this solution add 5 mL of a 400 g/L solution of *potassium iodide R* and dilute to 100 mL with *water R*. Then spray with *strong hydrogen peroxide solution R*.

*Results*: for both detection methods, the principal spot in the chromatogram obtained with the test solution is similar in position and size to the principal spot in the chromatogram obtained with the reference solution.

D. It gives reaction (a) of chlorides (*2.3.1*).

TESTS

**Appearance of solution**. The solution is clear (*2.2.1*) and not more intensely coloured than reference solution $B_7$ (*2.2.2, Method II*).

Dissolve 1.00 g in *water R* and dilute to 20 mL with the same solvent.

**Impurity A**. Thin-layer chromatography (*2.2.27*).

*Test solution.* Dissolve 0.200 g of the substance to be examined in a mixture of equal volumes of *methanol R* and *methylene chloride R* and dilute to 5.0 mL with the same mixture of solvents.

*Reference solution (a).* Dissolve 5.0 mg of *tropine CRS* (impurity A) in a mixture of equal volumes of *methanol R* and *methylene chloride R* and dilute to 25.0 mL with the same mixture of solvents.

*Reference solution (b).* Dilute 1.0 mL of the test solution to 20.0 mL with a mixture of equal volumes of *methanol R* and *methylene chloride R*. To 0.1 mL of this solution add 1.0 mL of reference solution (a).

*Plate*: *TLC silica gel $F_{254}$ plate R.*

*Mobile phase*: *ammonia R*, *methanol R*, *methylene chloride R* (5:40:60 *V/V/V*).

*Application*: 10 µL.

*Development*: over 2/3 of the plate.

*Drying*: in a current of cold air.

*Detection*: dip the plate in *potassium iodobismuthate solution R1*.

*System suitability*: reference solution (b):

– the chromatogram shows 2 clearly separated spots.

*Limit*:

– *impurity A*: any spot due to impurity A is not more intense than the spot in the chromatogram obtained with reference solution (a) (0.5 per cent).

**Related substances**. Liquid chromatography (*2.2.29*).

*Test solution.* Dissolve 0.100 g of the substance to be examined in mobile phase A and dilute to 20.0 mL with mobile phase A.

*Reference solution (a).* Dilute 1.0 mL of the test solution to 100.0 mL with mobile phase A. Dilute 1.0 mL of this solution to 10.0 mL with mobile phase A.

*Reference solution (b).* Dissolve 5.0 mg of *tropisetron impurity B CRS* and 5 mg of *ethyl indole-3-carboxylate CRS* in mobile phase A and dilute to 20.0 mL with mobile phase A. Dilute 1.0 mL of this solution to 50.0 mL with mobile phase A.

*Column*:

– *size*: *l* = 0.25 m, Ø = 4.6 mm;

– *stationary phase*: *octylsilyl silica gel for chromatography R* (5 µm).

*Mobile phase*:

– *mobile phase A*: *triethylamine R*, *acetonitrile R*, *water R*, *methanol R* (0.3:35:400:565 *V/V/V/V*);

– *mobile phase B*: *triethylamine R*, *acetonitrile R*, *water R*, *methanol R* (0.3:100:100:800 *V/V/V/V*);

| Time (min) | Mobile phase A (per cent *V/V*) | Mobile phase B (per cent *V/V*) |
|---|---|---|
| 0 - 14 | 100 | 0 |
| 14 - 32 | 100 → 0 | 0 → 100 |
| 32 - 36 | 0 | 100 |
| 36 - 37 | 0 → 100 | 100 → 0 |
| 37 - 52 | 100 | 0 |

*Flow rate*: 2 mL/min.

*Detection*: spectrophotometer at 280 nm.

*Injection*: 20 µL.

*Relative retention* with reference to tropisetron (retention time = about 22 min): impurity B = about 0.05; ethyl indole-3-carboxylate = about 0.2.

*System suitability*: reference solution (b):

– *resolution*: minimum 4 between the peaks due to impurity B and ethyl indole-3-carboxylate.

*Limits*:

– *impurity B*: not more than the area of the corresponding peak in the chromatogram obtained with reference solution (b) (0.1 per cent);
– *unspecified impurities*: for each impurity, not more than the area of the principal peak in the chromatogram obtained with reference solution (a) (0.10 per cent);
– *total*: not more than 3 times the area of the principal peak in the chromatogram obtained with reference solution (a) (0.3 per cent);
– *disregard limit*: 0.5 times the area of the principal peak in the chromatogram obtained with reference solution (a) (0.05 per cent).

***N,N*-Dimethylaniline**. Liquid chromatography (*2.2.29*). *Prepare the solutions immediately before use.*

*Test solution*. Dissolve 250 mg of the substance to be examined in mobile phase A and dilute to 5.0 mL with mobile phase A.

*Reference solution*. Dissolve 10.0 mg of *N,N-dimethylaniline R* in mobile phase A and dilute to 100.0 mL with mobile phase A. Dilute 1.0 mL of this solution to 100.0 mL with mobile phase A.

*Column*:

– *size*: *l* = 0.25 m, Ø = 4.6 mm;
– *stationary phase*: *octylsilyl silica gel for chromatography R* (5 µm).

*Mobile phase*:

– *mobile phase A*: *triethylamine R, acetonitrile R, water R, methanol R* (0.3:35:400:565 *V/V/V/V*);
– *mobile phase B*: *triethylamine R, acetonitrile R, water R*; *methanol R* (0.3:100:100:800 *V/V/V/V*);

| Time (min) | Mobile phase A (per cent *V/V*) | Mobile phase B (per cent *V/V*) |
|---|---|---|
| 0 - 10 | 100 | 0 |
| 10 - 11 | 100 → 0 | 0 → 100 |
| 11 - 30 | 0 | 100 |
| 30 - 31 | 0 → 100 | 100 → 0 |
| 31 - 50 | 100 | 0 |

*Flow rate*: 1 mL/min.

*Detection*: spectrophotometer at 248 nm.

*Injection*: 20 µL.

*Limit*:

– *N,N-dimethylaniline*: not more than the area of the principal peak in the chromatogram obtained with the reference solution (20 ppm).

**Loss on drying** (*2.2.32*): maximum 0.3 per cent, determined on 1.000 g by drying in an oven at 105 °C.

**Sulfated ash** (*2.4.14*): maximum 0.1 per cent, determined on 1.0 g.

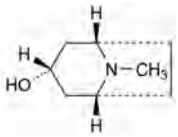
ASSAY

Dissolve 0.250 g in 10 mL of *anhydrous acetic acid R* and add 70 mL of *acetic anhydride R*. Titrate with *0.1 M perchloric acid*, determining the end-point potentiometrically (*2.2.20*).

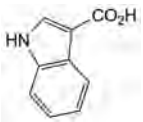
1 mL of *0.1 M perchloric acid* is equivalent to 32.08 mg of $C_{17}H_{21}ClN_2O_2$.

IMPURITIES

*Specified impurities: A, B.*



A. (1*R*,3*r*,5*S*)-8-methyl-8-azabicyclo[3.2.1]octan-3-ol (tropine),

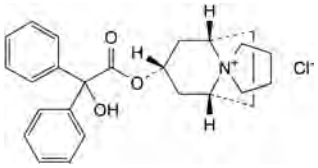


B. 1*H*-indole-3-carboxylic acid.

**01/2008:1798**
**corrected 6.0**

# TROSPIUM CHLORIDE

## Trospii chloridum



$C_{25}H_{30}ClNO_3$ $M_r$ 428.0

[10405-02-4]

DEFINITION

(1*R*,3*r*,5*S*)-3-[(Hydroxydiphenylacetyl)oxy]spiro[8-azoniabicyclo[3.2.1]octane-8,1′-pyrrolidinium] chloride.

*Content*: 99.0 per cent to 101.0 per cent (dried substance).

CHARACTERS

*Appearance*: white or almost white, crystalline powder.

*Solubility*: very soluble in water, freely soluble in methanol, practically insoluble in methylene chloride.

IDENTIFICATION

A. Infrared absorption spectrophotometry (*2.2.24*).
*Comparison*: *trospium chloride CRS.*

B. It gives reaction (a) of chlorides (*2.3.1*).

TESTS

**Solution S**. Dissolve 3.0 g in *carbon dioxide-free water R* and dilute to 30 mL with the same solvent.

**Appearance of solution**. Solution S is clear (*2.2.1*) and not more intensely coloured than reference solution $B_7$ (*2.2.2, Method II*).

**pH** (*2.2.3*): 5.0 to 7.0.

Dilute 5 mL of solution S to 50 mL with *carbon dioxide-free water R*.

**Impurity C**. Thin-layer chromatography (*2.2.27*).

*Test solution.* Dissolve 0.20 g of the substance to be examined in 2.0 mL of *methanol R*.

*Reference solution (a).* Dissolve 1.0 mg of *trospium impurity C CRS* in 2.0 mL of *methanol R*.

*Reference solution (b).* Dilute 1.0 mL of test solution to 10.0 mL with *methanol R*. To 50 µL of this solution add 1 mL of reference solution (a).

*Plate*: *TLC silica gel plate R*.

*Mobile phase*: *glacial acetic acid R*, *hydrochloric acid R*, *acetonitrile R* (1:3.5:45 *V/V/V*).

*Application*: 10 µL as bands.

*Development*: over 2/3 of the plate.

*Drying*: in a current of warm air until the odour of acetic acid is no longer perceptible.

*Detection*: spray with *potassium iodobismuthate solution R* and subsequently with a 5 g/L solution of *sodium nitrite R*.

*System suitability*: reference solution (b):

– the chromatogram shows 2 clearly visible and separated zones.

*Limit*:

– *impurity C*: any zone due to impurity C is not more intense than the zone in the chromatogram obtained with reference solution (a) (0.5 per cent).

**Related substances**. Liquid chromatography (*2.2.29*).

*Test solution.* Dissolve 30.0 mg of the substance to be examined in the mobile phase and dilute to 10.0 mL with the mobile phase.

*Reference solution (a).* Dissolve 6.0 mg of *trospium impurity A CRS* in the mobile phase and dilute to 20.0 mL with the mobile phase.

*Reference solution (b).* Dissolve 7.5 mg of *trospium impurity B CRS* in the mobile phase and dilute to 5.0 mL with the mobile phase.

*Reference solution (c).* Dilute a mixture of 0.3 mL of the test solution, 1.0 mL of reference solution (a) and 1.0 mL of reference solution (b) to 100.0 mL with the mobile phase.

*Column*:

– *size*: *l* = 0.25 m, Ø = 4.6 mm;
– *stationary phase*: *end-capped octylsilyl silica gel for chromatography R* (5 µm);
– *temperature*: 40 °C.

*Mobile phase*: mix 1 volume of *triethylamine R* and 3 volumes of *phosphoric acid R* with 700 volumes of *water R* and add 300 volumes of *acetonitrile R*.

*Flow rate*: 1 mL/min.

*Detection*: spectrophotometer at 215 nm.

*Injection*: 20 µL.

*Run time*: 3 times the retention time of trospium.

*Relative retention* with reference to trospium (retention time = about 10 min): impurity B = about 0.7; impurity A = about 1.9.

*System suitability*: reference solution (c):

– *resolution*: minimum 3 between the peaks due to impurity B and trospium.

*Limits*:

– *impurity B*: not more than the area of the corresponding peak in the chromatogram obtained with reference solution (c) (0.5 per cent);
– *impurity A*: not more than 3 times the area of the corresponding peak in the chromatogram obtained with reference solution (c) (0.3 per cent);
– *unspecified impurities*: for each impurity, not more than 0.2 times the area of the peak due to impurity B in the chromatogram obtained with reference solution (c) (0.10 per cent);
– *total*: not more than twice the area of the peak due to impurity B in the chromatogram obtained with reference solution (c) (1.0 per cent);
– *disregard limit*: 0.1 times the area of the peak due to impurity B in the chromatogram obtained with reference solution (c) (0.05 per cent).

**Loss on drying** (*2.2.32*): maximum 0.5 per cent, determined on 1.000 g by drying in an oven at 105 °C.

**Sulfated ash** (*2.4.14*): maximum 0.1 per cent, determined on 1.0 g.

ASSAY

Dissolve 0.300 g in 50 mL of *water R*. Titrate with *0.1 M silver nitrate*, determining the end-point potentiometrically (*2.2.20*).

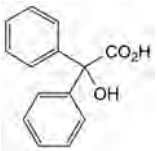
1 mL of *0.1 M silver nitrate* is equivalent to 42.80 mg of $C_{25}H_{30}ClNO_3$.

STORAGE

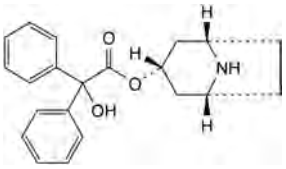
Protected from light.

IMPURITIES

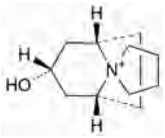
*Specified impurities: A, B, C.*



A. hydroxydiphenylacetic acid (benzilic acid),



B. (1*R*,3*r*,5*S*)-8-azabicyclo[3.2.1]oct-3-yl hydroxydiphenylacetate,



C. (1*R*,3*r*,5*S*)-3-hydroxyspiro[8-azoniabicyclo[3.2.1]octane-8,1′-pyrrolidinium].

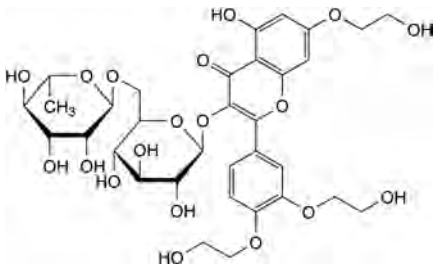
**corrected 10.0**

# TROXERUTIN

## Troxerutinum



$C_{33}H_{42}O_{19}$ $M_r$ 743

[7085-55-4]

DEFINITION

Mixture of *O*-hydroxyethylated derivatives of rutoside containing minimum 80 per cent of 2-[3,4-bis(2-hydroxyethoxy)phenyl]-3-[[6-*O*-(6-deoxy-α-L-mannopyranosyl)-β-D-glucopyranosyl]oxy]-5-hydroxy-7-(2-hydroxyethoxy)-4*H*-1-benzopyran-4-one (tris(hydroxyethyl)rutin).

*Content*: 95.0 per cent to 105.0 per cent (dried substance).

CHARACTERS

*Appearance*: yellowish-green, crystalline powder, hygroscopic.

*Solubility*: freely soluble in water, slightly soluble in ethanol (96 per cent) and practically insoluble in methylene chloride.

IDENTIFICATION

A. Infrared absorption spectrophotometry (*2.2.24*).
*Comparison*: *troxerutin CRS*.

B. Examine the chromatograms obtained in the test for composition.
*Results*: the principal peak in the chromatogram obtained with the test solution is similar in position and size to the principal peak in the chromatogram obtained with the reference solution (a).

TESTS

**Composition**. Liquid chromatography (*2.2.29*): use the normalisation procedure.

*Test solution.* Dissolve 10.0 mg of the substance to be examined in the mobile phase, if necessary using an ultrasonic bath and dilute to 10.0 mL with the mobile phase.

*Reference solution (a).* Dissolve 10.0 mg of *troxerutin CRS* in the mobile phase, if necessary using an ultrasonic bath and dilute to 10.0 mL with the mobile phase.

*Reference solution (b).* Dilute 1 mL of reference solution (a) to 10 mL with the mobile phase. Dilute 1 mL of this solution to 100 mL with the mobile phase.

*Column*:
- *size*: *l* = 0.25 m, Ø = 4.6 mm,
- *stationary phase*: *end-capped octadecylsilyl silica gel for chromatography R* (5 µm).

*Mobile phase*: mix 20 volumes of *acetonitrile R* and 80 volumes of a 15.6 g/L solution of *sodium dihydrogen phosphate R* adjusted to pH 4.4 with *dilute phosphoric acid R* or *dilute sodium hydroxide solution R*.

*Flow rate*: 0.5 mL/min.

*Detection*: spectrophotometer at 350 nm.

*Injection*: 10 µL.

*Run time*: twice the retention time of the main compound of troxerutin (tris(hydroxyethyl)rutin).

*Relative retention* with reference to tris(hydroxyethyl)rutin (retention time = about 25 min): tetrakis(hydroxyethyl)-rutin = about 0.5; mono(hydroxyethyl)rutin = about 0.8; bis(hydroxyethyl)rutin = about 1.1.

*System suitability*: reference solution (a):
- *peak-to-valley ratio*: minimum 2.0, where $H_p$ = height above the baseline of the peak due to bis(hydroxyethyl)rutin and $H_v$ = height above the baseline of the lowest point of the curve separating this peak from the peak due to tris(hydroxyethyl)rutin;
- *signal-to-noise ratio*: minimum 10 for the principal peak in the chromatogram obtained with reference solution (b).

*Limits*:
- *principal peak*: minimum 80 per cent,
- *any other peak*: for each peak, maximum 5 per cent, except for 1 peak which can be maximum 10 per cent.
- *disregard limit*: area of the principal peak in the chromatogram obtained with reference solution (b).

**Ethylene oxide**. Head-space gas chromatography (*2.2.28*).

*Test solution.* To 1.00 g of the substance to be examined in a vial, add 1.0 mL of *water R*. Mix to obtain a homogeneous solution. Heat at 70 °C for 45 min.

*Reference solution.* To 1.00 g of the substance to be examined in a vial, add 50 µL of *ethylene oxide solution R4* and 950 µL of *water R* and close tightly. Mix to obtain a homogeneous solution. Heat at 70 °C for 45 min.

*Column*:
- *material*: fused silica,
- *size*: *l* = 30 m, Ø = 0.32 mm,
- *stationary phase*: *cyanopropyl(7)phenyl(7)methyl(86)polysiloxane R* (film thickness 1 µm).

*Carrier gas*: *helium for chromatography R*.

*Flow rate*: 1.1 mL/min.

*Static head-space conditions which may be used*:
- *equilibration temperature*: 70 °C,
- *equilibration time*: 45 min,
- *transfer line temperature*: 110 °C,
- *pressurisation time*: 2 min,
- *injection time*: 12 s.

*Temperature*:

| | Time (min) | Temperature (°C) |
|---|---|---|
| Column | 0 - 5 | 40 |
| | 5 - 18 | 40 → 200 |
| Injection port | | 150 |
| Detector | | 250 |

*Detection*: flame ionisation.

*Injection*: 1.0 mL.

The peak due to ethylene oxide is identified by injecting solutions of ethylene oxide of increasing concentration.

Determine the content of ethylene oxide (ppm) in the substance to be examined using the following expression:

$$\frac{A_1 \times m_1}{(A_2 \times m_2) - (A_1 \times m_3)}$$

$A_1$ = area of the peak due to ethylene oxide in the chromatogram obtained with the test solution,

$A_2$ = area of the peak due to ethylene oxide in the chromatogram obtained with the reference solution,

$m_1$ = mass of ethylene oxide in the reference solution, in micrograms,

$m_2$ = mass of the substance to be examined in the test solution, in grams,

$m_3$ = mass of the substance to be examined in the reference solution, in grams.

*Limit*:
- *ethylene oxide*: maximum 1 ppm.

**Loss on drying** (*2.2.32*): maximum 5.0 per cent, determined on 1.000 g by drying in an oven at 105 °C for 4 h.

**Sulfated ash** (*2.4.14*): maximum 0.4 per cent, determined on 1.0 g.

ASSAY

Dissolve 0.200 g in 100.0 mL of *water R*. Dilute 10.0 mL of this solution to 100.0 mL with *water R*. Dilute 10.0 mL to 100.0 mL with *water R*. Measure the absorbance (*2.2.25*) at the absorption maximum at 350 nm.

Calculate the percentage content of $C_{33}H_{42}O_{19}$ taking the specific absorbance to be 250.

STORAGE

In an airtight container, protected from light.

01/2016:0694

# TRYPSIN

## Trypsinum

[9002-07-7]

DEFINITION

Trypsin is a proteolytic enzyme obtained by the activation of trypsinogen extracted from the pancreas of mammals. It has an activity of not less than 0.5 microkatal per milligram, calculated with reference to the dried substance. In solution, it has maximum enzymic activity at pH 8; the activity is reversibly inhibited at pH 3, the pH at which it is most stable.

PRODUCTION

The animals from which trypsin is derived must fulfil the requirements for the health of animals suitable for human consumption.

The method of manufacture is validated to demonstrate that the product, if tested, would comply with the following test.

**Histamine** (*2.6.10*): not more than 1 µg of histamine base per 0.2 microkatal of trypsin activity. Use a 10 g/L solution of the substance to be examined in *0.0015 M borate buffer solution pH 8.0 R* inactivated by heating on a water-bath for 30 min. Carry out dilutions with a 9 g/L solution of *sodium chloride R*.

CHARACTERS

*Appearance*: white or almost white, crystalline or amorphous powder, hygroscopic if amorphous.

*Solubility*: sparingly soluble in water.

IDENTIFICATION

A. Dilute 1 mL of solution S (see Tests) to 100 mL with *water R*. In a depression in a white spot-plate, mix 0.1 mL of this solution with 0.2 mL of *tosylarginine methyl ester hydrochloride solution R*. A reddish-violet colour develops within 3 min.

B. Dilute 0.5 mL of solution S to 5 mL with *water R*. Add 0.1 mL of a 20 g/L solution of *tosyl-lysyl-chloromethane hydrochloride R*. Adjust to pH 7.0, shake for 2 h and dilute to 50 mL with *water R*. In one of the depressions of a white spot-plate, mix 0.1 mL of this solution with 0.2 mL of *tosylarginine methyl ester hydrochloride solution R*. No reddish-violet colour develops within 3 min.

TESTS

**Solution S**. Dissolve 0.10 g in *carbon dioxide-free water R* and dilute to 10.0 mL with the same solvent.

**Appearance of solution**. Solution S is not more opalescent than reference suspension III (*2.2.1*).

**pH** (*2.2.3*): 3.0 to 6.0 for solution S.

**Specific absorbance** (*2.2.25*): 13.5 to 16.5, determined at the absorption maximum at 280 nm; maximum 7.0, determined at the absorption minimum at 250 nm.

Dissolve 30.0 mg in *0.001 M hydrochloric acid* and dilute to 100.0 mL with the same acid.

**Chymotrypsin**.

*Test solution*. To 1.8 mL of *buffer solution pH 8.0 R* add 7.4 mL of *water R* and 0.5 mL of *0.2 M acetyltyrosine ethyl ester R*. While shaking the solution, add 0.3 mL of solution S and start a timer. After exactly 5 min, measure the pH (*2.2.3*).

*Reference solution*. Prepare in the same manner as the test solution, replacing solution S by 0.3 mL of a 0.5 g/L solution of *chymotrypsin BRP*, and measure the pH (*2.2.3*) exactly 5 min after adding the chymotrypsin.

The pH of the test solution is higher than that of the reference solution.

**Loss on drying** (*2.2.32*): not more than 5.0 per cent, determined on 0.500 g by drying at 60 °C at a pressure not exceeding 0.67 kPa for 2 h.

**Microbial contamination**

TAMC: acceptance criterion $10^4$ CFU/g (*2.6.12*).

TYMC: acceptance criterion $10^2$ CFU/g (*2.6.12*).

Absence of *Escherichia coli* (*2.6.13*).

Absence of *Salmonella* (*2.6.13*).

ASSAY

The activity of trypsin is determined by comparing the rate at which it hydrolyses *benzoylarginine ethyl ester hydrochloride R* with the rate at which *trypsin BRP* hydrolyses the same substrate in the same conditions.

*Apparatus*. Use a reaction vessel of about 30 mL capacity provided with:

- a device that will maintain a temperature of 25.0 ± 0.1 °C;
- a stirring device (for example, a magnetic stirrer);
- a lid with holes for the insertion of electrodes, the tip of a burette, a tube for the admission of nitrogen and the introduction of reagents.

An automatic or manual titration device may be used. For the latter, the burette is graduated in 0.005 mL and the pH meter is provided with a wide-range scale and glass-silver-silver chloride or other suitable electrodes.

*Test solution*. Dissolve a suitable quantity of the substance to be examined in *0.001 M hydrochloric acid* and dilute to 25.0 mL with the same acid in order to obtain a solution containing approximately 700 nanokatals per millilitre.

*Reference solution*. Dissolve 25.0 mg of *trypsin BRP* in *0.001 M hydrochloric acid* and dilute to 25.0 mL with the same acid.

Store the solutions at 0-5 °C. Warm 1 mL of each solution to about 25 °C over 15 min and use 50 µL of each solution for each titration. Carry out the titration in an atmosphere of nitrogen. Transfer 10.0 mL of *0.0015 M borate buffer solution pH 8.0 R* to the reaction vessel and, while stirring, add 1.0 mL of a freshly prepared 6.86 g/L solution of *benzoylarginine ethyl ester hydrochloride R*. When the temperature is steady at 25.0 ± 0.1 °C (after about 5 min) adjust to pH 8.0 exactly with *0.1 M sodium hydroxide*. Add 50 µL of the test solution and start a timer. Maintain at pH 8.0 by the addition of *0.1 M sodium hydroxide*, the tip of the microburette being immersed in the solution; note the volume added every 30 s. Follow the reaction for 8 min. Calculate the volume of *0.1 M sodium hydroxide* used per second. Carry out a titration in the same manner using the reference solution and calculate the volume of *0.1 M sodium hydroxide* used per second.

Calculate the activity in microkatals per milligram using the following expression:

$$\frac{m' \times V}{m \times V'} \times A$$

$m$ = mass of the substance to be examined, in milligrams;

$m'$ = mass of *trypsin BRP*, in milligrams;

$V$ = volume of *0.1 M sodium hydroxide* used per second by the test solution;

$V'$ = volume of *0.1 M sodium hydroxide* used per second by the reference solution;

$A$ = activity of *trypsin BRP*, in microkatals per milligram.

STORAGE

In an airtight container, protected from light, at a temperature of 2 °C to 8 °C.

LABELLING

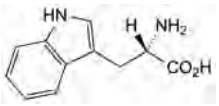
The label states:

- the activity in microkatals per milligram;
- for the amorphous substance, that it is hygroscopic.

**01/2017:1272**

# TRYPTOPHAN

## Tryptophanum



$C_{11}H_{12}N_2O_2$ $M_r$ 204.2

[73-22-3]

DEFINITION

(2*S*)-2-Amino-3-(1*H*-indol-3-yl)propanoic acid.

Product of fermentation or of protein hydrolysis.

*Content*: 98.5 per cent to 101.0 per cent (dried substance).

CHARACTERS

*Appearance*: white or almost white, crystalline or amorphous powder.

*Solubility*: sparingly soluble in water, slightly soluble in ethanol (96 per cent). It dissolves in dilute solutions of mineral acids and alkali hydroxides.

IDENTIFICATION

*First identification: A, B.*

*Second identification: A, C, D.*

A. Specific optical rotation (see Tests).

B. Infrared absorption spectrophotometry (*2.2.24*).
*Comparison*: *tryptophan CRS.*

C. Thin-layer chromatography (*2.2.27*).
*Solvent mixture*: *glacial acetic acid R*, *water R* (50:50 *V/V*).
*Test solution.* Dissolve 10 mg of the substance to be examined in the solvent mixture and dilute to 50 mL with the solvent mixture.
*Reference solution.* Dissolve 10 mg of *tryptophan CRS* in the solvent mixture and dilute to 50 mL with the solvent mixture.
*Plate*: *TLC silica gel plate R.*
*Mobile phase*: *glacial acetic acid R*, *water R*, *butanol R* (20:20:60 *V/V/V*).
*Application*: 5 µL.
*Development*: over 2/3 of the plate.
*Drying*: in air.
*Detection*: spray with *ninhydrin solution R* and heat at 105 °C for 15 min.
*Results*: the principal spot in the chromatogram obtained with the test solution is similar in position, colour and size to the principal spot in the chromatogram obtained with the reference solution.

D. Dissolve about 20 mg in 10 mL of *water R*. Add 5 mL of *dimethylaminobenzaldehyde solution R6* and 2 mL of *hydrochloric acid R1*. Heat on a water-bath. A purple-blue colour develops.

TESTS

**Appearance of solution**. The solution is clear (*2.2.1*) and not more intensely coloured than reference solution $BY_6$ (*2.2.2, Method II*).

Dissolve 0.1 g in *1 M hydrochloric acid* and dilute to 10 mL with the same acid.

**Specific optical rotation** (*2.2.7*): − 33.0 to − 30.0 (dried substance).

Dissolve 0.25 g in *water R*, heating on a water-bath if necessary, and dilute to 25.0 mL with the same solvent.

**Ninhydrin-positive substances**. Amino acid analysis (*2.2.56*). For analysis, use Method 1.

The concentrations of the test solution and the reference solutions may be adapted according to the sensitivity of the equipment used. The concentrations of all solutions are adjusted so that the system suitability requirements described in general chapter *2.2.46* are fulfilled, keeping the ratios of concentrations between all solutions as described.

*Solution A*: *dilute hydrochloric acid R1* or a sample preparation buffer suitable for the apparatus used.

*Test solution.* Dissolve 30.0 mg of the substance to be examined in solution A and dilute to 50.0 mL with solution A.

*Reference solution (a).* Dilute 1.0 mL of the test solution to 100.0 mL with solution A. Dilute 2.0 mL of this solution to 10.0 mL with solution A.

*Reference solution (b).* Dissolve 30.0 mg of *proline R* in solution A and dilute to 100.0 mL with solution A. Dilute 1.0 mL of the solution to 250.0 mL with solution A.

*Reference solution (c).* Dilute 6.0 mL of *ammonium standard solution (100 ppm $NH_4$) R* to 50.0 mL with solution A. Dilute 1.0 mL of this solution to 100.0 mL with solution A.

*Reference solution (d).* Dissolve 30 mg of *isoleucine R* and 30 mg of *leucine R* in solution A and dilute to 50.0 mL with solution A. Dilute 1.0 mL of the solution to 200.0 mL with solution A.

*Blank solution*: solution A.

Inject suitable, equal amounts of the test, blank and reference solutions into the amino acid analyser. Run a program suitable for the determination of physiological amino acids.

*System suitability*: reference solution (d):

- *resolution*: minimum 1.5 between the peaks due to isoleucine and leucine.

*Calculation of percentage contents*:

- for any ninhydrin-positive substance detected at 570 nm, use the concentration of tryptophan in reference solution (a);
- for any ninhydrin-positive substance detected at 440 nm, use the concentration of proline in reference solution (b); if a peak is above the reporting threshold at both wavelengths, use the result obtained at 570 nm for quantification.

*Limits*:

- *any ninhydrin-positive substance*: for each impurity, maximum 0.2 per cent;
- *total*: maximum 0.5 per cent;
- *reporting threshold*: 0.05 per cent.

The thresholds indicated under Related substances (Table 2034.-1) in the general monograph *Substances for pharmaceutical use (2034)* do not apply.

**Impurity A and other related substances**. Liquid chromatography (*2.2.29*). *Prepare the standard, test and reference solutions immediately before use.*

*Buffer solution pH 2.3.* Dissolve 3.90 g of *sodium dihydrogen phosphate R* in 1000 mL of *water R*. Add about 700 mL of a 2.9 g/L solution of *phosphoric acid R* and adjust to pH 2.3 with the same acid solution.

*Solvent mixture*: *acetonitrile R*, *water R* (10:90 *V/V*).

*Standard solution.* Dissolve 10.0 mg of *N-acetyltryptophan R* in the solvent mixture and dilute to 100.0 mL with the solvent mixture. Dilute 2.0 mL of this solution to 100.0 mL with the solvent mixture.

*Test solution (a).* Dissolve 0.10 g of the substance to be examined in the solvent mixture and dilute to 10.0 mL with the solvent mixture.

*Test solution (b).* Dissolve 0.10 g of the substance to be examined in the standard solution and dilute to 10.0 mL with the standard solution.

*Reference solution (a).* Dissolve the contents of a vial of *1,1′-ethylidenebistryptophan CRS* (impurity A) in 1.0 mL of the solvent mixture.

*Reference solution (b).* Dissolve the contents of a vial of *1,1′-ethylidenebistryptophan CRS* (impurity A) in 1.0 mL of the standard solution.

*Reference solution (c).* Dilute 0.5 mL of reference solution (a) to 5.0 mL with the solvent mixture.

*Column*:

- *size*: *l* = 0.25 m, Ø = 4.6 mm;
- *stationary phase*: *octadecylsilyl silica gel for chromatography R* (5 µm);
- *temperature*: 40 °C.

*Mobile phase*:

- *mobile phase A*: *acetonitrile R*, buffer solution pH 2.3 (115:885 *V/V*);
- *mobile phase B*: *acetonitrile R*, buffer solution pH 2.3 (350:650 *V/V*);

| Time (min) | Mobile phase A (per cent *V/V*) | Mobile phase B (per cent *V/V*) |
|---|---|---|
| 0 - 10 | 100 | 0 |
| 10 - 45 | 100 → 0 | 0 → 100 |
| 45 - 65 | 0 | 100 |

*Flow rate*: 0.7 mL/min.

*Detection*: spectrophotometer at 220 nm.

*Injection*: 20 µL of test solutions (a) and (b) and reference solutions (b) and (c).

*Retention time*: tryptophan = about 8 min; *N*-acetyltryptophan = about 29 min; impurity A = about 34 min.

*System suitability*:

- *resolution*: minimum 8.0 between the peaks due to *N*-acetyltryptophan and impurity A in the chromatogram obtained with reference solution (b); if necessary, adjust the time programme for the elution gradient (an increase in the duration of elution with mobile phase A produces longer retention times and a better resolution);
- *signal-to-noise ratio*: minimum 15 for the principal peak in the chromatogram obtained with reference solution (c);
- *symmetry factor*: maximum 3.5 for the peak due to impurity A in the chromatogram obtained with reference solution (b);
- in the chromatogram obtained with test solution (a) there is no peak with the same retention time as *N*-acetyltryptophan (in such case correct the area of the *N*-acetyltryptophan peak).

*Limits*: test solution (b):

- *impurity A*: not more than 0.5 times the area of the principal peak in the chromatogram obtained with reference solution (c) (10 ppm);
- *sum of impurities with a retention time less than that of tryptophan*: not more than 0.6 times the area of the peak due to *N*-acetyltryptophan in the chromatogram obtained with reference solution (b) (100 ppm);
- *sum of impurities with a retention time greater than that of tryptophan and up to 1.8 times the retention time of N-acetyltryptophan*: not more than 1.9 times the area of the peak due to *N*-acetyltryptophan in the chromatogram obtained with reference solution (b) (300 ppm);
- *disregard limit*: 0.02 times the area of the peak due to *N*-acetyltryptophan in the chromatogram obtained with reference solution (b); disregard the peak due to *N*-acetyltryptophan.

**Chlorides** (*2.4.4*): maximum 200 ppm.

Dissolve 0.25 g in 3 mL of *dilute nitric acid R* and dilute to 15 mL with *water R*. The solution, without any further addition of nitric acid, complies with the test.

**Sulfates** (*2.4.13*): maximum 300 ppm.

Dissolve 0.5 g in a mixture of 5 volumes of *dilute hydrochloric acid R* and 25 volumes of *distilled water R*, and dilute to 15 mL with the same mixture of solvents.

**Ammonium**. Amino acid analysis (*2.2.56*) as described in the test for ninhydrin-positive substances with the following modifications.

*Injection*: test solution, reference solution (c) and blank solution.

*Limit*:

- *ammonium at 570 nm*: not more than the area of the corresponding peak in the chromatogram obtained with reference solution (c) (0.02 per cent), taking into account the peak due to ammonium in the chromatogram obtained with the blank solution.

**Iron** (*2.4.9*): maximum 20 ppm.

In a separating funnel, dissolve 0.50 g in 10 mL of *dilute hydrochloric acid R*. Shake with 3 quantities, each of 10 mL, of *methyl isobutyl ketone R1*, shaking for 3 min each time. To the combined organic layers add 10 mL of *water R* and shake for 3 min. Examine the aqueous layer.

**Loss on drying** (*2.2.32*): maximum 0.5 per cent, determined on 1.000 g by drying in an oven at 105 °C.

**Sulfated ash** (*2.4.14*): maximum 0.1 per cent, determined on 1.0 g.

## ASSAY

Dissolve 0.150 g in 3 mL of *anhydrous formic acid R*. Add 50 mL of *anhydrous acetic acid R*. Titrate with *0.1 M perchloric acid*, determining the end-point potentiometrically (*2.2.20*). Carry out a blank titration.

1 mL of *0.1 M perchloric acid* is equivalent to 20.42 mg of $C_{11}H_{12}N_2O_2$.

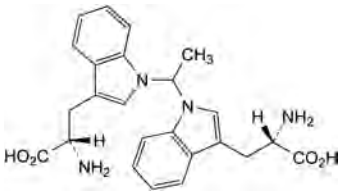
## STORAGE

Protected from light.

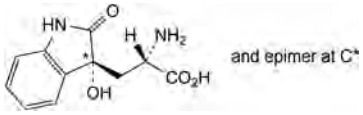
## IMPURITIES

*Specified impurities: A.*

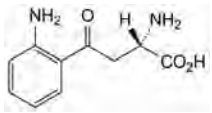
*Other detectable impurities* (the following substances would, if present at a sufficient level, be detected by one or other of the tests in the monograph. They are limited by the general acceptance criterion for other/unspecified impurities. It is therefore not necessary to identify these impurities for demonstration of compliance. See also *5.10. Control of impurities in substances for pharmaceutical use*): *B, C, D, E, F, G, H, I, J, K, L.*



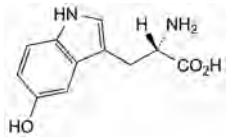
A. 3,3′-[ethane-1,1-diylbis(1*H*-indol-1,3-diyl)]bis[(2*S*)-2-aminopropanoic acid] (ethane-1,1-diylbistryptophan),



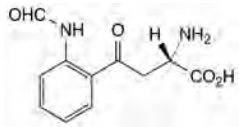
B. (2*S*)-2-amino-3-[(3*RS*)-3-hydroxy-2-oxo-2,3-dihydro-1*H*-indol-3-yl]propanoic acid (dioxyindolylalanine),



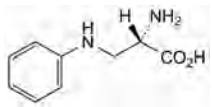
C. (2*S*)-2-amino-4-(2-aminophenyl)-4-oxobutanoic acid (kynurenine),



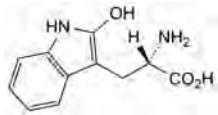
D. (2*S*)-2-amino-3-(5-hydroxy-1*H*-indol-3-yl)propanoic acid (5-hydroxytryptophan),



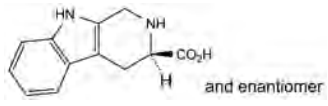
E. (2*S*)-2-amino-4-[2-(formylamino)phenyl]-4-oxobutanoic acid (*N*-formylkynurenine),



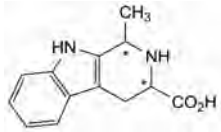
F. (2*S*)-2-amino-3-(phenylamino)propanoic acid (3-phenylaminoalanine),



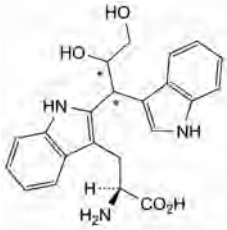
G. (2*S*)-2-amino-3-(2-hydroxy-1*H*-indol-3-yl)propanoic acid (2-hydroxytryptophan),



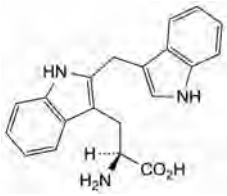
H. (3*RS*)-1,2,3,4-tetrahydro-9*H*-pyrido[3,4-*b*]indole-3-carboxylic acid,



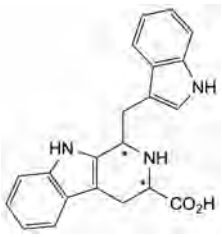
I. 1-methyl-1,2,3,4-tetrahydro-9*H*-pyrido[3,4-*b*]indole-3-carboxylic acid,



J. (2*S*)-2-amino-3-[2-[2,3-dihydroxy-1-(1*H*-indol-3-yl)propyl]-1*H*-indol-3-yl]propanoic acid,



K. (2*S*)-2-amino-3-[2-(1*H*-indol-3-ylmethyl)-1*H*-indol-3-yl]propanoic acid,



L. 1-(1*H*-indol-3-ylmethyl)-1,2,3,4-tetrahydro-9*H*-pyrido[3,4-*b*]indole-3-carboxylic acid.

**01/2008:0152**

# TUBERCULIN FOR HUMAN USE, OLD

## Tuberculinum pristinum ad usum humanum

DEFINITION

Old tuberculin for human use consists of a filtrate, concentrated by heating, containing the soluble products of the culture and lysis of one or more strains of *Mycobacterium bovis* and/or *Mycobacterium tuberculosis* that is capable of demonstrating a delayed hypersensitivity in an animal sensitised to micro-organisms of the same species.

Old tuberculin for human use in concentrated form is a transparent, viscous, yellow or brown liquid.

PRODUCTION

*GENERAL PROVISIONS*

The production of old tuberculin is based on a seed-lot system. The production method shall have been shown to yield consistently old tuberculin of adequate potency and safety in man. A batch of old tuberculin, calibrated in International Units by the method described under Assay and for which adequate clinical information is available as to its activity in man, is set aside to serve as a reference preparation.

The International Unit is the activity of a stated quantity of the International Standard. The equivalence in International Units of the International Standard is stated by the World Health Organization.

*SEED LOTS*

The strains of mycobacteria used shall be identified by historical records that include information on their origin and subsequent manipulation.

The working seed lots used to inoculate the media for the production of a concentrated harvest shall not have undergone more than 4 subcultures from the master seed lot.

Only seed lots that comply with the following requirements may be used for propagation.

**Identification**. The species of mycobacterium of the master and working seed lots is identified.

**Bacterial and fungal contamination**. Carry out the test for sterility (*2.6.1*), using 10 mL for each medium. The working seed lot complies with the test for sterility except for the presence of mycobacteria.

*PROPAGATION AND HARVEST*

The bacteria are grown in a liquid medium which may be a glycerolated broth or a synthetic medium. Growth must be typical for the strain. The culture is inactivated by a suitable method, such as treatment in an autoclave (121 °C for not less than 30 min) or in flowing steam at a temperature not less than 100 °C for at least 1 h. The culture liquid, from which the micro-organisms may or may not have been separated by filtration, is concentrated by evaporation, usually to one-tenth of its initial volume. The preparation is free from live mycobacteria. The concentrated harvest is shown to comply with the test for mycobacteria (*2.6.2*) before addition of any antimicrobial preservative or other substance that might interfere with the test. Phenol (5 g/L) or another suitable antimicrobial preservative that does not give rise to false positive reactions may be added.

Only a concentrated harvest that complies with the following requirements may be used in the preparation of the final bulk tuberculin.

**pH** (*2.2.3*). The pH of the concentrated harvest is 6.5 to 8.

**Glycerol**. Where applicable, determine the glycerol content of the concentrated harvest. The amount is within the limits approved for the particular product.

**Antimicrobial preservative**. Where applicable, determine the amount of antimicrobial preservative by a suitable chemical or physico-chemical method. The content is not less than 85 per cent and not more than 115 per cent of the intended amount. If phenol has been used in the preparation, the concentration is not more than 5 g/L (*2.5.15*).

**Sensitisation**. Carry out the test described under Tests.

**Sterility** (*2.6.1*). The concentrated harvest complies with the test for sterility, carried out using 10 mL for each medium.

**Potency**. Determine the potency as described under Assay.

*FINAL BULK TUBERCULIN*

The concentrated harvest is diluted aseptically.

Only a final bulk tuberculin that complies with the following requirement may be used in the preparation of the final lot.

**Sterility** (*2.6.1*). The final bulk tuberculin complies with the test for sterility, carried out using 10 mL for each medium.

*FINAL LOT*

The final bulk tuberculin is distributed aseptically into sterile containers which are then closed so as to prevent contamination.

Only a final lot that is satisfactory with respect to each of the requirements given below under Identification, Tests and Assay may be released for use.

The following tests may be omitted on the final lot if they have been carried out at the stages indicated:

- live mycobacteria: concentrated harvest,
- sensitisation: concentrated harvest,
- toxicity: concentrated harvest or final bulk tuberculin,
- antimicrobial preservative: final bulk tuberculin.

IDENTIFICATION

Inject increasing doses of the preparation to be examined intradermally into healthy, white or pale-coloured guinea-pigs, specifically sensitised (for example, as described under Assay). A reaction varying from erythema to necrosis is produced at the site of the injection. Similar injections administered to non-sensitised guinea-pigs do not stimulate a reaction. The assay may also serve as identification.

TESTS

*Old tuberculin for human use in concentrated form (≥ 100 000 IU/mL) complies with each of the tests prescribed below; the diluted product complies with the tests for antimicrobial preservative and sterility.*

**Toxicity**. Inject a quantity equivalent to 50 000 IU subcutaneously into each of two healthy guinea-pigs weighing 250 g to 350 g and which have not been subjected to any treatment likely to interfere with the test. Observe the animals for 7 days. No adverse effect is produced.

**Sensitisation**. Use 3 guinea-pigs that have not been subjected to any treatment likely to interfere with the test. On 3 occasions at intervals of 5 days, inject intradermally into each guinea-pig about 500 IU of the preparation to be examined in a volume of 0.1 mL. 2 to 3 weeks after the third injection, administer the same dose intradermally to the same animals and to a control group of 3 guinea-pigs of the same mass that have not previously received injections of tuberculin. After 24 h to 72 h, the reactions in the 2 groups of animals are not substantially different.

**Antimicrobial preservative**. Where applicable, determine the amount of antimicrobial preservative by a suitable chemical or physico-chemical method. The content is not less than the minimum amount shown to be effective and not more than 115 per cent of the amount stated on the label. If phenol has been used in the preparation, the concentration is not more than 5 g/L (*2.5.15*).

**Live mycobacteria** (*2.6.2*). It complies with the test for mycobacteria.

**Sterility** (*2.6.1*). It complies with the test for sterility.

ASSAY

The potency of old tuberculin is determined by comparing the reactions produced by the intradermal injection of increasing doses of the preparation to be examined into sensitised guinea-pigs with the reactions produced by known concentrations of the reference preparation.

Prepare a suspension containing a suitable amount (0.1 mg to 0.4 mg/mL) of heat-inactivated, dried mycobacteria in mineral oil with or without emulsifier; use mycobacteria of a strain of the same species as that used in the preparation to be examined. Sensitise not fewer than 6 pale-coloured guinea-pigs weighing not less than 300 g by injecting intramuscularly or intradermally a total of about 0.5 mL of the suspension, divided between several sites if necessary. Carry out the test after the period of time required for optimal sensitisation which is usually 4 to 8 weeks after sensitisation. Depilate the flanks of the animals so that it is possible to make at least three injections on each side and not more than a total of 12 injection points per animal. Use at least three different doses of the reference preparation and at least 3 different doses of the preparation to be examined. For both preparations, use doses such that the highest dose is about 10 times the lowest dose. Choose the doses such that when they are injected the lesions produced have a diameter of not less than 8 mm and not more than 25 mm. In any given test, the order of the dilutions injected at each point is chosen at random in a Latin square design. Inject each dose intradermally in a constant volume of 0.1 mL or 0.2 mL. Measure the diameters of the lesions 24 h to 48 h later and calculate the results of the test by the usual statistical

methods, assuming that the diameters of the lesions are directly proportional to the logarithm of the concentration of the preparation.

The estimated potency is not less than 80 per cent and not more than 125 per cent of the stated potency. The confidence limits ($P$ = 0.95) are not less than 64 per cent and not more than 156 per cent of the stated potency.

STORAGE

Store protected from light.

LABELLING

The label states:

- the number of International Units per millilitre,
- the species of mycobacterium used to prepare the product,
- the name and quantity of any antimicrobial preservative or any other excipient,
- the expiry date,
- where applicable, that old tuberculin is not to be injected in its concentrated form but diluted so as to administer not more than 100 IU per dose.

**01/2008:0535**
**corrected 10.0**

# TUBERCULIN PURIFIED PROTEIN DERIVATIVE, AVIAN

## Tuberculini aviarii derivatum proteinosum purificatum

DEFINITION

Avian tuberculin purified protein derivative (avian tuberculin PPD) is a preparation obtained from the heat-treated products of growth and lysis of *Mycobacterium avium* capable of revealing a delayed hypersensitivity in an animal sensitised to micro-organisms of the same species.

PRODUCTION

It is obtained from the water-soluble fractions prepared by heating in free-flowing steam and subsequently filtering cultures of *M. avium* grown in a liquid synthetic medium. The active fraction of the filtrate, consisting mainly of protein, is isolated by precipitation, washed and re-dissolved. An antimicrobial preservative that does not give rise to false positive reactions, such as phenol, may be added. The final sterile preparation, free from mycobacteria, is distributed aseptically into sterile tamper-evident glass containers, which are then closed so as to prevent contamination. The preparation may be freeze-dried.

*The identification, the tests and the determination of potency apply to the liquid form and to the freeze-dried form after reconstitution as stated on the label.*

IDENTIFICATION

Inject a range of graded doses intradermally at different sites into suitably sensitised albino guinea-pigs, each weighing not less than 250 g. After 24-28 h, reactions appear in the form of oedematous swellings with erythema, with or without necrosis, at the points of injection. The size and severity of the reactions vary according to the dose. Unsensitised guinea-pigs show no reactions to similar injections.

TESTS

**pH** (*2.2.3*): 6.5 to 7.5.

**Phenol** (*2.5.15*): maximum 5 g/L, if the preparation to be examined contains phenol.

**Sensitising effect**. Use a group of 3 guinea-pigs that have not been treated with any material that will interfere with the test. On 3 occasions at intervals of 5 days, inject intradermally into each guinea-pig a dose of the preparation to be examined equivalent to 500 IU in 0.1 mL. 15-21 days after the 3rd injection, inject the same dose (500 IU) intradermally into these animals and into a control group of 3 guinea-pigs of the same mass, which have not previously received injections of tuberculin. 24-28 h after the last injections, the reactions of the 2 groups are not significantly different.

**Toxicity**. Use 2 guinea-pigs, each weighing not less than 250 g, that have not previously been treated with any material that will interfere with the test. Inject subcutaneously into each guinea-pig 0.5 mL of the preparation to be examined. Observe the animals for 7 days. No abnormal effects occur during the observation period.

**Sterility**. It complies with the test for sterility prescribed in the monograph *Vaccines for veterinary use (0062)*.

POTENCY

The potency of avian tuberculin purified protein derivative is determined by comparing the reactions produced in sensitised guinea-pigs by the intradermal injection of a series of dilutions of the preparation to be examined with those produced by known concentrations of a reference preparation calibrated in International Units.

The International Unit is the activity contained in a stated amount of the International Standard. The equivalence in International Units of the International Standard is stated by the World Health Organization.

Sensitise not fewer than 8 albino guinea-pigs, each weighing 400-600 g, by the deep intramuscular injection of a suitable dose of inactivated or live *M. avium*. Not less than 4 weeks after the sensitisation of the guinea-pigs, shave their flanks to provide space for not more than 4 injection sites on each side. Prepare dilutions of the preparation to be examined and of the reference preparation using isotonic phosphate-buffered saline (pH 6.5-7.5) containing 0.005 g/L of *polysorbate 80 R*. Use not fewer than 3 doses of the reference preparation and not fewer than 3 doses of the preparation to be examined. Choose the doses such that the lesions produced have a diameter of not less than 8 mm and not more than 25 mm. Allocate the dilutions randomly to the sites, for example using a Latin square design. Inject each dose intradermally in a constant volume of 0.1 mL or 0.2 mL. Measure the diameters of the lesions after 24-28 h and calculate the results of the test using the usual statistical methods (for example, *5.3*) and assuming that the diameters of the lesions are directly proportional to the logarithm of the concentration of the tuberculins.

The test is not valid unless the confidence limits ($P$ = 0.95) are not less than 50 per cent and not more than 200 per cent of the estimated potency. The estimated potency is not less than 75 per cent and not more than 133 per cent of the stated potency. The stated potency is not less than 20 000 IU/mL.

STORAGE

Protected from light, at a temperature of 5 ± 3 °C.

LABELLING

The label states:

- the potency in International Units per millilitre;
- the name and quantity of any excipient;
- for freeze-dried preparations:
  - the name and volume of the reconstituting liquid to be added;
  - that the product is to be used immediately after reconstitution.

**corrected 10.0**

# TUBERCULIN PURIFIED PROTEIN DERIVATIVE, BOVINE

## Tuberculini bovini derivatum proteinosum purificatum

DEFINITION

Bovine tuberculin purified protein derivative (bovine tuberculin PPD) is a preparation obtained from the heat-treated products of growth and lysis of *Mycobacterium bovis* capable of revealing a delayed hypersensitivity in an animal sensitised to micro-organisms of the same species.

PRODUCTION

It is obtained from the water-soluble fractions prepared by heating in free-flowing steam and subsequently filtering cultures of *M. bovis* grown in a liquid synthetic medium. The active fraction of the filtrate, consisting mainly of protein, is isolated by precipitation, washed and re-dissolved. An antimicrobial preservative that does not give rise to false positive reactions, such as phenol, may be added. The final sterile preparation, free from mycobacteria, is distributed aseptically into sterile, tamper-evident glass containers, which are then closed so as to prevent contamination. The preparation may be freeze-dried.

*The identification, the tests and the determination of potency apply to the liquid form and to the freeze-dried form after reconstitution as stated on the label.*

IDENTIFICATION

Inject a range of graded doses intradermally at different sites into suitably sensitised albino guinea-pigs, each weighing not less than 250 g. After 24-28 h, reactions appear in the form of oedematous swellings with erythema, with or without necrosis, at the points of injection. The size and severity of the reactions vary according to the dose. Unsensitised guinea-pigs show no reactions to similar injections.

TESTS

**pH** (*2.2.3*): 6.5 to 7.5.

**Phenol** (*2.5.15*): maximum 5 g/L, if the preparation to be examined contains phenol.

**Sensitising effect**. Use a group of 3 guinea-pigs that have not been treated with any material that will interfere with the test. On 3 occasions at intervals of 5 days, inject intradermally into each guinea-pig a dose of the preparation to be examined equivalent to 500 IU in 0.1 mL. 15-21 days after the 3rd injection, inject the same dose (500 IU) intradermally into these animals and into a control group of 3 guinea-pigs of the same mass, which have not previously received injections of tuberculin. 24-28 h after the last injections, the reactions of the 2 groups are not significantly different.

**Toxicity**. Use 2 guinea-pigs, each weighing not less than 250 g, that have not previously been treated with any material that will interfere with the test. Inject subcutaneously into each guinea-pig 0.5 mL of the preparation to be examined. Observe the animals for 7 days. No abnormal effects occur during the observation period.

**Sterility**. It complies with the test for sterility prescribed in the monograph *Vaccines for veterinary use (0062)*.

POTENCY

The potency of bovine tuberculin purified protein derivative is determined by comparing the reactions produced in sensitised guinea-pigs by the intradermal injection of a series of dilutions of the preparation to be examined with those produced by known concentrations of a reference preparation calibrated in International Units.

The International Unit is the activity contained in a stated amount of the International Standard. The equivalence in International Units of the International Standard is stated by the World Health Organization.

Sensitise not fewer than 8 albino guinea-pigs, each weighing 400-600 g, by the deep intramuscular injection of 0.0001 mg of wet mass of living *M. bovis* of strain AN5 suspended in 0.5 mL of a 9 g/L solution of *sodium chloride R*. Not less than 4 weeks after the sensitisation of the guinea-pigs, shave their flanks to provide space for not more than 4 injection sites on each side. Prepare dilutions of the preparation to be examined and of the reference preparation using isotonic phosphate-buffered saline (pH 6.5-7.5) containing 0.005 g/L of *polysorbate 80 R*. Use not fewer than 3 doses of the reference preparation and not fewer than 3 doses of the preparation to be examined. Choose the doses such that the lesions produced have a diameter of not less than 8 mm and not more than 25 mm. Allocate the dilutions randomly to the sites, for example using a Latin square design. Inject each dose intradermally in a constant volume of 0.1 mL or 0.2 mL. Measure the diameters of the lesions after 24-28 h and calculate the results of the test using the usual statistical methods (for example, *5.3*) and assuming that the diameters of the lesions are directly proportional to the logarithm of the concentration of the tuberculins.

The test is not valid unless the confidence limits ($P$ = 0.95) are not less than 50 per cent and not more than 200 per cent of the estimated potency. The estimated potency is not less than 66 per cent and not more than 150 per cent of the stated potency. The stated potency is not less than 20 000 IU/mL.

STORAGE

Protected from light, at a temperature of 5 ± 3 °C.

LABELLING

The label states:

# TUBERCULIN PURIFIED PROTEIN DERIVATIVE FOR HUMAN USE

## Tuberculini derivatum proteinosum purificatum ad usum humanum

DEFINITION

Tuberculin purified protein derivative (tuberculin PPD) for human use is a preparation obtained by precipitation from the heated products of the culture and lysis of *Mycobacterium bovis* and/or *Mycobacterium tuberculosis* and capable of demonstrating a delayed hypersensitivity in an animal sensitised to micro-organisms of the same species.

Tuberculin PPD is a colourless or pale-yellow liquid; the diluted preparation may be a freeze-dried powder which upon dissolution gives a colourless or pale-yellow liquid.

## PRODUCTION

*GENERAL PROVISIONS*

The production of tuberculin PPD is based on a seed-lot system. The production method shall have been shown to yield consistently tuberculin PPD of adequate potency and safety in man. A batch of tuberculin PPD, calibrated in International Units by method A described under Assay and for which adequate clinical information is available as to its activity in man, is set aside to serve as a reference preparation.

The International Unit is the activity of a stated quantity of the International Standard. The equivalence in International Units of the International Standard is stated by the World Health Organization.

*SEED LOTS*

The strains of mycobacteria used shall be identified by historical records that include information on their origin and subsequent manipulation.

The working seed lots used to inoculate the media for production of a concentrated harvest shall not have undergone more than 4 subcultures from the master seed lot.

Only seed lots that comply with the following requirements may be used for propagation.

**Identification**. The species of mycobacterium of the master and working seed lots is identified.

**Bacterial and fungal contamination**. Carry out the test for sterility (*2.6.1*), using 10 mL for each medium. The working seed lot complies with the test for sterility except for the presence of mycobacteria.

*PROPAGATION AND HARVEST*

The bacteria are grown in a liquid synthetic medium. Growth must be typical for the strain. The culture is inactivated by a suitable method such as treatment in an autoclave (121 °C for not less than 30 min) or in flowing steam at a temperature not less than 100 °C for at least 1 h and filtered. The active fraction of the filtrate, consisting mainly of protein, is isolated by precipitation, washed and re-dissolved. The preparation is free from mycobacteria. The concentrated harvest is shown to comply with the test for mycobacteria (*2.6.2*) before addition of any antimicrobial preservative or other substance that might interfere with the test. Phenol (5 g/L) or another suitable antimicrobial preservative that does not give rise to false positive reactions may be added; a suitable stabiliser intended to prevent adsorption on glass or plastic surfaces may be added. The concentrated harvest may be freeze-dried. Phenol is not added to preparations that are to be freeze-dried.

Only a concentrated harvest that complies with the following requirements may be used in the preparation of the final bulk tuberculin PPD.

**Antimicrobial preservative**. Where applicable, determine the amount of antimicrobial preservative by a suitable chemical or physico-chemical method. The content is not less than 85 per cent and not more than 115 per cent of the intended amount. If phenol has been used in the preparation, the concentration is not more than 5 g/L (*2.5.15*).

**Sensitisation**. Carry out the test described under Tests.

**Sterility** (*2.6.1*). The concentrated harvest, reconstituted if necessary, complies with the test for sterility, carried out using 10 mL for each medium.

**Potency**. Determine the potency as described under Assay.

*FINAL BULK TUBERCULIN PPD*

The concentrated harvest is diluted aseptically, after reconstitution if necessary.

Only a final bulk tuberculin PPD that complies with the following requirement may be used in the preparation of the final lot.

**Sterility** (*2.6.1*). The final bulk tuberculin PPD complies with the test for sterility, carried out using 10 mL for each medium.

*FINAL LOT*

The final bulk tuberculin PPD is distributed aseptically into sterile containers which are then closed so as to prevent contamination. It may be freeze-dried.

Only a final lot that is satisfactory with respect to each of the requirements given below under Identification, Tests and Assay may be released for use.

The following tests may be omitted on the final lot if they have been carried out at the stages indicated:

- live mycobacteria: concentrated harvest
- sensitisation: concentrated harvest
- toxicity: concentrated harvest or final bulk tuberculin PPD
- antimicrobial preservative: final bulk tuberculin PPD.

## IDENTIFICATION

Inject increasing doses of the preparation to be examined intradermally into healthy, white or pale-coloured guinea-pigs, specifically sensitised (for example as described under Assay). A reaction varying from erythema to necrosis is produced at the site of the injection. Similar injections administered to non-sensitised guinea-pigs do not stimulate a reaction. The assay may also serve as identification.

## TESTS

*Tuberculin purified protein derivative for human use in concentrated form (≥ 100 000 IU/mL) complies with each of the tests prescribed below; the diluted product complies with the tests for pH, antimicrobial preservative and sterility.*

**pH** (*2.2.3*). The pH of the preparation, reconstituted if necessary as stated on the label, is 6.5 to 7.5.

**Toxicity**. Inject subcutaneously 50 000 IU of the preparation to be examined into each of two healthy guinea-pigs weighing 250 g to 350 g and which have not been subjected to any treatment likely to interfere with the test. Observe the animals for 7 days. No adverse effect is produced.

**Sensitisation**. Use 3 guinea-pigs that have not been subjected to any treatment likely to interfere with the test. On 3 occasions at intervals of 5 days, inject intradermally into each guinea-pig about 500 IU of the preparation to be examined in a volume of 0.1 mL. 2 to 3 weeks after the third injection, administer the same dose intradermally to the same animals and to a control group of three guinea-pigs of the same mass that have not previously received injections of tuberculin. After 24 h to 72 h, the reactions in the 2 groups of animals are not substantially different.

**Antimicrobial preservative**. Where applicable, determine the amount of antimicrobial preservative by a suitable chemical or physico-chemical method. The content is not less than the minimum amount shown to be effective and not more than 115 per cent of the amount stated on the label. If phenol has been used in the preparation, the concentration is not more than 5 g/L (*2.5.15*).

**Live mycobacteria** (*2.6.2*). It complies with the test for mycobacteria.

**Sterility** (*2.6.1*). It complies with the test for sterility.

## ASSAY

Use method A or, where the preparation contains 1 IU to 2 IU, use method B.

*METHOD A*

The potency of tuberculin PPD is determined by comparing the reactions produced by the intradermal injection of increasing doses of the preparation to be examined into sensitised guinea-pigs with the reactions produced by known concentrations of the reference preparation.

Prepare a suspension containing a suitable amount (0.1 mg/mL to 0.4 mg/mL) of heat-inactivated, dried mycobacteria in mineral oil with or without emulsifier; use mycobacteria of a strain of the same species as that used in the preparation to be examined. Sensitise not fewer than six pale-coloured guinea-pigs weighing not less than 300 g by injecting intramuscularly or intradermally a total of about 0.5 mL of the suspension, divided between several sites if necessary. Carry out the test after the period of time required for optimal sensitisation which is usually 4 to 8 weeks after sensitisation. Depilate the flanks of the animals so that it is possible to make at least 3 injections on each side but not more than a total of 12 injection points per animal. Prepare dilutions of the preparation to be examined and of the reference preparation using isotonic phosphate-buffered saline (pH 6.5 to 7.5) containing 50 mg/L of *polysorbate 80 R*. If the preparation to be examined is freeze-dried and does not contain a stabiliser, reconstitute it using the liquid described above. Use at least 3 different doses of the reference preparation and at least 3 different doses of the preparation to be examined. For both preparations, use doses such that the highest dose is about 10 times the lowest dose. Choose the doses such that when they are injected the lesions produced have a diameter of not less than 8 mm and not more than 25 mm. In any given test, the order of the dilutions injected at each point is chosen at random in a Latin square design. Inject each dose intradermally in a constant volume of 0.1 mL or 0.2 mL. Measure the diameters of the lesions 24 h to 48 h later and calculate the results of the test by the usual statistical methods, assuming that the diameters of the lesions are directly proportional to the logarithm of the concentration of the preparation.

The estimated potency is not less than 80 per cent and not more than 125 per cent of the stated potency. The confidence limits ($P$ = 0.95) are not less than 64 per cent and not more than 156 per cent of the stated potency.

*METHOD B*

The potency of tuberculin PPD is determined by comparing the reactions produced by the intradermal injection of the preparation to be examined into sensitised guinea-pigs with the reactions produced by known concentrations of the reference preparation.

Prepare a suspension in mineral oil with or without emulsifier and containing a suitable amount (0.1 mg/mL to 0.4 mg/mL) of heat-inactivated, dried mycobacteria; use mycobacteria of a strain of the same species as that used in the preparation to be examined. Sensitise not fewer than 6 pale-coloured guinea-pigs weighing not less than 300 g by injecting intramuscularly or intradermally a total of about 0.5 mL of the suspension, divided between several sites if necessary. Carry out the test after the period of time required for optimal sensitisation which is usually 4 to 8 weeks after sensitisation. Depilate the flanks of the animals so that it is possible to make at least 3 injections on each side but not more than a total of 12 injection points per animal. Prepare dilutions of the reference preparation using isotonic phosphate-buffered saline (pH 6.5 to 7.5) containing 50 mg/L of *polysorbate 80 R*. Use at least 3 different doses of the reference preparation such that the highest dose is about 10 times the lowest dose and the median dose is the same as that of the preparation to be examined. In any given test, the order of the dilutions injected at each point is chosen at random in a Latin square design. Inject the preparation to be examined and each dilution of the reference preparation intradermally in a constant volume of 0.1 mL or 0.2 mL. Measure the diameters of the lesions 24 h to 48 h later and calculate the results of the test by the usual statistical methods, assuming that the areas of the lesions are directly proportional to the logarithm of the concentration of the preparation to be examined. (This dose relationship applies to this assay and not necessarily to other test systems.)

The estimated potency is not less than 80 per cent and not more than 125 per cent of the stated potency. The confidence limits ($P$ = 0.95) are not less than 64 per cent and not more than 156 per cent of the stated potency.

STORAGE

Store protected from light.

LABELLING

The label states:

- the number of International Units per container,
- the species of mycobacteria used to prepare the product,
- the name and quantity of any antimicrobial preservative or any other excipient,
- the expiry date,
- for freeze-dried products, a statement that the product is to be reconstituted using the liquid provided by the manufacturer,
- where applicable, that tuberculin PPD is not to be injected in its concentrated form but diluted so as to administer not more than 100 IU per dose.

If the package does not contain a leaflet warning that the inhalation of concentrated tuberculin PPD may produce toxic effects, this warning must be shown on the label on the container together with a statement that the powder must be handled with care.

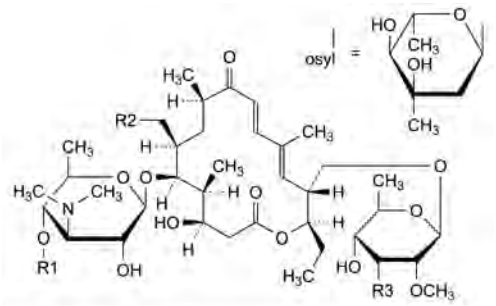
# TYLOSIN FOR VETERINARY USE

## Tylosinum ad usum veterinarium



| Tylosin | R1 | R2 | R3 | Mol. Formula | $M_r$ |
|---|---|---|---|---|---|
| A | osyl | CHO | $OCH_3$ | $C_{46}H_{77}NO_{17}$ | 916 |
| B | H | CHO | $OCH_3$ | $C_{39}H_{65}NO_{14}$ | 772 |
| C | osyl | CHO | OH | $C_{45}H_{75}NO_{17}$ | 902 |
| D | osyl | $CH_2OH$ | $OCH_3$ | $C_{46}H_{79}NO_{17}$ | 918 |

[1401-69-0]

DEFINITION

Mixture of macrolide antibiotics produced by certain strains of *Streptomyces fradiae*. The main component is 2-[(4*R*,5*S*,6*S*,7*R*,9*R*,11*E*,13*E*,15*R*,16*R*)-15-[[(6-deoxy-2,3-di-*O*-methyl-β-D-allopyranosyl)oxy]methyl]-6-[[3,6-dideoxy-4-*O*-(2,6-dideoxy-3-*C*-methyl-α-L-*ribo*-hexopyranosyl)-3-(dimethylamino)-β-D-glucopyranosyl]oxy]-16-ethyl-4-hydroxy-5,9,13-trimethyl-2,10-dioxo-1-oxacyclohexadeca-

Monographs T

11,13-dien-7-yl]acetaldehyde (tylosin, tylosin A). Tylosin B (desmycosin, 4′-*O*-demycarosyltylosin), tylosin C (macrocin, 3‴-*O*-demethyltylosin) and tylosin D (relomycin, 19-deoxo-19-hydroxytylosin) may also be present.

*Content*: minimum 900 IU/mg (dried substance). Tylosins A, B, C and D contribute to the potency.

CHARACTERS

*Appearance*: almost white or slightly yellow powder.

*Solubility*: very slightly soluble in water, freely soluble in ethanol (96 per cent) and in methylene chloride, practically insoluble in heptane.

IDENTIFICATION

Infrared absorption spectrophotometry (*2.2.24*).

*Comparison*: *tylosin CRS*.

TESTS

**Appearance of solution**. The solution is clear (*2.2.1*) and not more intensely coloured than reference solution $Y_5$ (*2.2.2, Method II*).

Dissolve 1.00 g in 20 mL of a mixture of equal volumes of *acetonitrile R* and *water R*.

**pH** (*2.2.3*): 8.5 to 10.5.

Suspend 0.25 g in 10 mL of *carbon dioxide-free water R*.

**Composition**. Liquid chromatography (*2.2.29*): use the normalisation procedure. *Prepare the solutions immediately before use.*

*Phosphate buffer pH 5.5*. Dissolve 25.82 g of *potassium dihydrogen phosphate R* in 800 mL of *water R*, adjust to pH 5.5 with a 13.2 g/L solution of *dipotassium hydrogen phosphate R* and dilute to 1.0 L with *water R*.

*Test solution*. Dissolve 25.0 mg of the substance to be examined in 5 mL of *acetonitrile R* and dilute to 25.0 mL with *water R*.

*Reference solution (a)*. Dissolve 5 mg of *tylosin for system suitability CRS* (containing tylosins A, B, C and D, and impurities A, E, N, O, R and S) in 1 mL of *acetonitrile R* and dilute to 5.0 mL with *water R*.

*Reference solution (b)*. Dilute 1.0 mL of the test solution to 100.0 mL with *water R*. Dilute 1.0 mL of this solution to 10.0 mL with *water R*.

*Column*:

- *size*: *l* = 0.25 m, Ø = 4.6 mm;
- *stationary phase*: *end-capped octadecylsilyl silica gel for chromatography R* (5 µm);
- *temperature*: 60 °C.

*Mobile phase*:

- *mobile phase A*: phosphate buffer pH 5.5, *acetonitrile R*, *water for chromatography R* (10:27.5:62.5 *V/V/V*);
- *mobile phase B*: phosphate buffer pH 5.5, *water for chromatography R*, *acetonitrile R* (10:40:50 *V/V/V*);

| Time (min) | Mobile phase A (per cent *V/V*) | Mobile phase B (per cent *V/V*) |
|---|---|---|
| 0 - 25 | 100 | 0 |
| 25 - 45 | 100 → 84 | 0 → 16 |
| 45 - 65 | 84 | 16 |
| 65 - 70 | 84 → 44 | 16 → 56 |
| 70 - 82 | 44 | 56 |

*Flow rate*: 1.0 mL/min.

*Detection*: spectrophotometer at 280 nm.

*Injection*: 20 µL.

*Identification of peaks*: use the chromatogram supplied with *tylosin for system suitability CRS* and the chromatogram obtained with reference solution (a) to identify the peaks due to tylosins A, B, C and D, and impurities A, E, N, O, R and S.

*Relative retention* with reference to tylosin A (retention time = about 65 min): impurity E = about 0.23; tylosin B = about 0.31; impurity A = about 0.38; tylosin C = about 0.60; tylosin D = about 0.78; impurity N = about 0.81; impurity O = about 0.85; impurity R = about 1.17; impurity S = about 1.20.

*System suitability*:

- *resolution*: reference solution (a): minimum 2.0 between the peaks due to tylosin B and impurity A; minimum 1.5 between the peaks due to impurities N and O; minimum 1.3 between the peaks due to impurities R and S;
- *signal-to-noise ratio*: minimum 10 for the principal peak in the chromatogram obtained with reference solution (b).

*Limits*:

- *tylosin A*: minimum 80.0 per cent;
- *sum of tylosins A, B, C and D*: minimum 95.0 per cent;
- *reporting threshold*: 0.10 per cent (reference solution (b)).

**Related substances**. Liquid chromatography (*2.2.29*) as described in the test for composition. Use the normalisation procedure.

*Limits*:

- *impurity A*: maximum 2.0 per cent;
- *sum of impurities eluting between impurity A and tylosin C*: maximum 2.0 per cent;
- *impurities N, O*: for each impurity, maximum 1.0 per cent;
- *impurities E, R, S*: for each impurity, maximum 0.5 per cent;
- *any other impurity*: for each impurity, maximum 0.50 per cent;
- *total*: maximum 5.0 per cent;
- *reporting threshold*: 0.10 per cent (reference solution (b)).

**Impurity II (tyramine)**: maximum 0.35 per cent, or maximum 0.15 per cent if intended for use in the manufacture of parenteral preparations.

In a 25.0 mL volumetric flask, dissolve 50.0 mg in 5.0 mL of a 3.4 g/L solution of *phosphoric acid R*. Add 1.0 mL of *pyridine R* and 2.0 mL of a saturated solution of *ninhydrin R* (about 40 g/L). Close the flask with aluminium foil and heat in a water-bath at 85 °C for 30 min. Cool the solution rapidly and dilute to 25.0 mL with *water R*. Mix and measure immediately the absorbance (*2.2.25*) of the solution at 570 nm using a blank solution as the compensation liquid. The absorbance is not greater than that of a standard prepared at the same time and in the same manner using 5.0 mL of a 35 mg/L solution of *tyramine R* (impurity II) in a 3.4 g/L solution of *phosphoric acid R*. If intended for use in the manufacture of parenteral preparations, the absorbance is not greater than that of a standard prepared at the same time and in the same manner using 5.0 mL of a 15 mg/L solution of *tyramine R* (impurity II) in a 3.4 g/L solution of *phosphoric acid R*.

**Loss on drying** (*2.2.32*): maximum 4.0 per cent, determined on 1.000 g by drying in an oven at 60 °C at a pressure not exceeding 0.7 kPa for 3 h.

**Sulfated ash** (*2.4.14*): maximum 1.0 per cent, determined on 1.0 g.

ASSAY

Carry out the microbiological assay of antibiotics (*2.7.2*). Use *tylosin CRS* as the chemical reference substance.

STORAGE

In an airtight container, protected from light. If the substance is sterile, the container is also sterile and tamper-evident.

IMPURITIES

*Specified impurities: A, E, N, O, R, S, II.*

*Other detectable impurities* (the following substances would, if present at a sufficient level, be detected by one or other of the tests in the monograph. They are limited by the general acceptance criterion for other/unspecified impurities. It is therefore not necessary to identify these impurities for demonstration of compliance. See also *5.10. Control of impurities in substances for pharmaceutical use*): *B, C, D, F, G, H, I, J, K, L, M, P, Q, T, U, V, W, X, Y, Z, AA, BB, CC, DD, EE, FF, GG, HH.*

### DEFINITION

Solution of the dihydrogen phosphate of a mixture of macrolide antibiotics produced by certain strains of *Streptomyces fradiae*. The main component is 2-[(4*R*,5*S*,6*S*,7*R*,9*R*,11*E*,13*E*,15*R*,16*R*)-15-[[(6-deoxy-2,3-di-*O*-methyl-β-D-allopyranosyl)oxy]-methyl]-6-[[3,6-dideoxy-4-*O*-(2,6-dideoxy-3-*C*-methyl-α-L-*ribo*-hexopyranosyl)-3-(dimethylamino)-β-D-gluco-pyranosyl]oxy]-16-ethyl-4-hydroxy-5,9,13-trimethyl-2,10-dioxo-1-oxacyclohexadeca-11,13-dien-7-yl]acetaldehyde monophosphate (tylosin monophosphate, tylosin A monophosphate). The monophosphates of tylosin B (desmycosin, 4′-*O*-demycarosyltylosin), tylosin C (macrocin, 3‴-*O*-demethyltylosin) and tylosin D (relomycin, 19-deoxo-19-hydroxytylosin) may also be present. The solution also contains sodium dihydrogen phosphate.

*Content*: minimum 815 IU/mg of dry residue. Tylosins A, B, C and D contribute to the potency.

### CHARACTERS

*Appearance*: yellow or brownish-yellow, viscous liquid.

*Solubility*: miscible with water.

### IDENTIFICATION

A. Infrared absorption spectrophotometry (*2.2.24*).

*Preparation*: use the dry residue prepared as described in the assay.

*Comparison*: *tylosin phosphate CRS*.

B. Dilute a quantity of the bulk solution to be examined equivalent to 400 000 IU of tylosin phosphate to 10 mL with *water R*. The solution gives reaction (a) of phosphates (*2.3.1*).

### TESTS

**pH** (*2.2.3*): 5.5 to 6.5.

Dilute 1.0 g of the bulk solution to be examined to 10 mL with *carbon dioxide-free water R*.

**Composition**. Liquid chromatography (*2.2.29*): use the normalisation procedure. *Prepare the solutions immediately before use.*

*Phosphate buffer pH 5.5*. Dissolve 25.82 g of *potassium dihydrogen phosphate R* in 800 mL of *water R*, adjust to pH 5.5 with a 13.2 g/L solution of *dipotassium hydrogen phosphate R* and dilute to 1.0 L with *water R*.

*Test solution*. Dilute 1.0 g of the bulk solution to be examined to 50.0 mL with *water R*. Dilute 3.0 mL of this solution to 20.0 mL with *water R* (1.0 mg/mL of dried residue).

*Reference solution (a)*. Dissolve 5 mg of *tylosin for system suitability CRS* (containing tylosins A, B, C and D, and impurities A, E, N, O, R and S) in 1 mL of *acetonitrile R* and dilute to 5.0 mL with *water R*.

*Reference solution (b)*. Dilute 1.0 mL of the test solution to 100.0 mL with *water R*. Dilute 1.0 mL of this solution to 10.0 mL with *water R*.

*Column*:

- *size*: *l* = 0.25 m, Ø = 4.6 mm;
- *stationary phase*: *end-capped octadecylsilyl silica gel for chromatography R* (5 µm);
- *temperature*: 60 °C.

*Mobile phase*:

- *mobile phase A*: phosphate buffer pH 5.5, *acetonitrile R*, *water for chromatography R* (10:27.5:62.5 *V/V/V*);
- *mobile phase B*: phosphate buffer pH 5.5, *water for chromatography R*, *acetonitrile R* (10:40:50 *V/V/V*);

| Time (min) | Mobile phase A (per cent *V/V*) | Mobile phase B (per cent *V/V*) |
|---|---|---|
| 0 - 25 | 100 | 0 |
| 25 - 45 | 100 → 84 | 0 →16 |
| 45 - 65 | 84 | 16 |
| 65 - 70 | 84 → 44 | 16 → 56 |
| 70 - 82 | 44 | 56 |

*Flow rate*: 1.0 mL/min.

*Detection*: spectrophotometer at 280 nm.

*Injection*: 20 µL.

*Identification of peaks*: use the chromatogram supplied with *tylosin for system suitability CRS* and the chromatogram obtained with reference solution (a) to identify the peaks due to tylosins A, B, C and D, and impurities A, E, N, O, R and S.

*Relative retention* with reference to tylosin A (retention time = about 65 min): impurity E = about 0.23; tylosin B = about 0.31; impurity A = about 0.38; tylosin C = about 0.60; tylosin D = about 0.78; impurity N = about 0.81; impurity O = about 0.85; impurity R = about 1.17; impurity S = about 1.20.

*System suitability*:

- *resolution*: reference solution (a): minimum 2.0 between the peaks due to tylosin B and impurity A; minimum 1.5 between the peaks due to impurities N and O; minimum 1.3 between the peaks due to impurities R and S;
- *signal-to-noise ratio*: minimum 10 for the principal peak in the chromatogram obtained with reference solution (b).

*Limits*:

- *tylosin A*: minimum 80.0 per cent;
- *sum of tylosins A, B, C and D*: minimum 95.0 per cent;
- *reporting threshold*: 0.10 per cent (reference solution (b)).

**Related substances**. Liquid chromatography (*2.2.29*) as described in the test for composition. Use the normalisation procedure.

*Limits*:

- *impurity A*: maximum 2.0 per cent;
- *sum of impurities eluting between impurity A and tylosin C*: maximum 2.0 per cent;
- *impurities N, O*: for each impurity, maximum 1.0 per cent;
- *impurities E, R, S*: for each impurity, maximum 0.5 per cent;
- *any other impurity*: for each impurity, maximum 0.50 per cent;
- *total*: maximum 5.0 per cent;
- *reporting threshold*: 0.10 per cent (reference solution (b)).

**Impurity II (tyramine)**: maximum 0.35 per cent.

In a 25.0 mL volumetric flask, dilute a quantity of the bulk solution to be examined equivalent to 50 000 IU of tylosin phosphate to 5.0 mL with a 3.4 g/L solution of *phosphoric acid R*. Add 1.0 mL of *pyridine R* and 2.0 mL of a saturated solution of *ninhydrin R* (about 40 g/L). Close the flask with aluminium foil and heat in a water-bath at 85 °C for 20-30 min. Cool the solution rapidly and dilute to 25.0 mL with *water R*. Mix and measure immediately the absorbance (*2.2.25*) of the solution at 570 nm using a blank solution as the compensation liquid. The absorbance is not greater than that of a standard prepared at the same time and in the same manner using 5.0 mL of a 35 mg/L solution of *tyramine R* (impurity II) in a 3.4 g/L solution of *phosphoric acid R*.

**Phosphate**: 8.5 per cent to 10.0 per cent, calculated with reference to the dry residue (see Assay).

*Test solution*. Dilute a quantity of the bulk solution to be examined equivalent to 200 000 IU of tylosin phosphate to 50 mL with *water R*. Add 5.0 mL of *dilute sulfuric acid R* and dilute to 100.0 mL with *water R*. To 2.0 mL of this solution add successively, mixing after each addition, 10.0 mL of *water R*, 5.0 mL of *ammonium molybdate reagent R2*, 1.0 mL of *hydroquinone solution R* and 1.0 mL of a 200 g/L solution of *sodium metabisulfite R*. Allow to stand for at least 20 min and dilute to 50.0 mL with *water R*. Mix thoroughly.

*Reference solution (a)*. To 1.0 mL of a standard solution containing 0.430 g/L of *potassium dihydrogen phosphate R* (corresponds to 300 ppm of $PO_4$) add successively, mixing after each addition, 10.0 mL of *water R*, 5.0 mL of *ammonium molybdate reagent R2*, 1.0 mL of *hydroquinone solution R* and 1.0 mL of a 200 g/L solution of *sodium metabisulfite R*. Allow to stand for at least 20 min and dilute to 50.0 mL with *water R*. Mix thoroughly.

*Reference solution (b)*. Prepare as reference solution (a) but using 2.0 mL of the standard solution.

*Reference solution (c)*. Prepare as reference solution (a) but using 5.0 mL of the standard solution.

*Compensation liquid*. Prepare as reference solution (a) but omitting the standard solution.

Measure the absorbance (*2.2.25*) of the test solution and of the reference solutions at 650 nm. Draw a calibration curve with the absorbances of the 3 reference solutions as a function of the quantity of phosphate in the solutions and read from the curve the quantity of phosphate in the test solution. Determine the percentage content of phosphate, calculated with reference to the dry residue (see Assay).

ASSAY

Carry out the microbiological assay of antibiotics (*2.7.2*).

Use *tylosin CRS* as the chemical reference substance. Calculate the content from the mass of the dry residue and the activity of the solution.

*Dry residue*. Dry 3.0 g of the bulk solution to be examined *in vacuo* at 60 °C for 3 h and weigh.

STORAGE

Protected from light, at a temperature of 2 °C to 8 °C.

IMPURITIES

*Specified impurities: A, E, N, O, R, S, II.*

*Other detectable impurities* (the following substances would, if present at a sufficient level, be detected by one or other of the tests in the monograph. They are limited by the general acceptance criterion for other/unspecified impurities. It is therefore not necessary to identify these impurities for demonstration of compliance. See also *5.10. Control of impurities in substances for pharmaceutical use*): *B, C, D, F, G, H, I, J, K, L, M, P, Q, T, U, V, W, X, Y, Z, AA, BB, CC, DD, EE, FF, GG, HH.*

[1405-53-4]

DEFINITION

Dihydrogen phosphate of a mixture of macrolide antibiotics produced by certain strains of *Streptomyces fradiae*. The main component is 2-[(4*R*,5*S*,6*S*,7*R*,9*R*,11*E*,13*E*,15*R*,16*R*)-15-[[(6-deoxy-2,3-di-*O*-methyl-β-D-allopyranosyl)oxy]methyl]-6-[[3,6-dideoxy-4-*O*-(2,6-dideoxy-3-*C*-methyl-α-L-*ribo*-hexopyranosyl)-3-(dimethylamino)-β-D-glucopyranosyl]oxy]-16-ethyl-4-hydroxy-5,9,13-trimethyl-2,10-dioxo-

Monographs T

1-oxacyclohexadeca-11,13-dien-7-yl]acetaldehyde monophosphate (tylosin monophosphate, tylosin A monophosphate). The monophosphates of tylosin B (desmycosin, 4′-*O*-demycarosyltylosin), tylosin C (macrocin, 3‴-*O*-demethyltylosin) and tylosin D (relomycin, 19-deoxo-19-hydroxytylosin) may also be present.

*Content*: minimum 900 IU/mg (dried substance). Tylosins A, B, C and D contribute to the potency.

CHARACTERS

*Appearance*: white or slightly yellow, hygroscopic powder.

*Solubility*: freely soluble in water and in ethanol (96 per cent), practically insoluble in heptane.

IDENTIFICATION

A. Infrared absorption spectrophotometry (*2.2.24*).
*Comparison*: *tylosin phosphate CRS*.

B. Dissolve 50 mg in 10 mL of *water R*. The solution gives reaction (a) of phosphates (*2.3.1*).

TESTS

**Appearance of solution**. The solution is clear (*2.2.1*) and not more intensely coloured than reference solution $Y_3$ (*2.2.2, Method II*).

Dissolve 1.00 g in 20 mL of a mixture of equal volumes of *acetonitrile R* and *water R*.

**pH** (*2.2.3*): 6.0 to 7.2.

Dissolve 0.25 g in 10 mL of *carbon dioxide-free water R*.

**Composition**. Liquid chromatography (*2.2.29*): use the normalisation procedure. *Prepare the solutions immediately before use.*

*Phosphate buffer pH 5.5*. Dissolve 25.82 g of *potassium dihydrogen phosphate R* in 800 mL of *water R*, adjust to pH 5.5 with a 13.2 g/L solution of *dipotassium hydrogen phosphate R* and dilute to 1.0 L with *water R*.

*Test solution*. Dissolve 25.0 mg of the substance to be examined in 5 mL of *acetonitrile R* and dilute to 25.0 mL with *water R*.

*Reference solution (a)*. Dissolve 5 mg of *tylosin for system suitability CRS* (containing tylosins A, B, C and D, and impurities A, E, N, O, R and S) in 1 mL of *acetonitrile R* and dilute to 5.0 mL with *water R*.

*Reference solution (b)*. Dilute 1.0 mL of the test solution to 100.0 mL with *water R*. Dilute 1.0 mL of this solution to 10.0 mL with *water R*.

*Column*:
- *size*: *l* = 0.25 m, Ø = 4.6 mm;
- *stationary phase*: *end-capped octadecylsilyl silica gel for chromatography R* (5 µm);
- *temperature*: 60 °C.

*Mobile phase*:
- *mobile phase A*: phosphate buffer pH 5.5, *acetonitrile R*, *water for chromatography R* (10:27.5:62.5 *V/V/V*);
- *mobile phase B*: phosphate buffer pH 5.5, *water for chromatography R*, *acetonitrile R* (10:40:50 *V/V/V*);

| Time (min) | Mobile phase A (per cent *V/V*) | Mobile phase B (per cent *V/V*) |
|---|---|---|
| 0 - 25 | 100 | 0 |
| 25 - 45 | 100 → 84 | 0 → 16 |
| 45 - 65 | 84 | 16 |
| 65 - 70 | 84 → 44 | 16 → 56 |
| 70 - 82 | 44 | 56 |

*Flow rate*: 1.0 mL/min.

*Detection*: spectrophotometer at 280 nm.

*Injection*: 20 µL.

*Identification of peaks*: use the chromatogram supplied with *tylosin for system suitability CRS* and the chromatogram obtained with reference solution (a) to identify the peaks due to tylosins A, B, C and D, and impurities A, E, N, O, R and S.

*Relative retention* with reference to tylosin A (retention time = about 65 min): impurity E = about 0.23; tylosin B = about 0.31; impurity A = about 0.38; tylosin C = about 0.60; tylosin D = about 0.78; impurity N = about 0.81; impurity O = about 0.85; impurity R = about 1.17; impurity S = about 1.20.

*System suitability*:
- *resolution*: reference solution (a): minimum 2.0 between the peaks due to tylosin B and impurity A; minimum 1.5 between the peaks due to impurities N and O; minimum 1.3 between the peaks due to impurities R and S;
- *signal-to-noise ratio*: minimum 10 for the principal peak in the chromatogram obtained with reference solution (b).

*Limits*:
- *tylosin A*: minimum 80.0 per cent;
- *sum of tylosins A, B, C and D*: minimum 95.0 per cent;
- *reporting threshold*: 0.10 per cent (reference solution (b)).

**Related substances**. Liquid chromatography (*2.2.29*) as described in the test for composition. Use the normalisation procedure.

*Limits*:
- *impurity A*: maximum 2.0 per cent;
- *sum of impurities eluting between impurity A and tylosin C*: maximum 2.0 per cent;
- *impurities N, O*: for each impurity, maximum 1.0 per cent;
- *impurities E, R, S*: for each impurity, maximum 0.5 per cent;
- *any other impurity*: for each impurity, maximum 0.50 per cent;
- *total*: maximum 5.0 per cent;
- *reporting threshold*: 0.10 per cent (reference solution (b)).

**Impurity II (tyramine)**: maximum 0.35 per cent, or maximum 0.15 per cent if intended for use in the manufacture of parenteral preparations.

In a 25.0 mL volumetric flask, dissolve 50.0 mg in 5.0 mL of a 3.4 g/L solution of *phosphoric acid R*. Add 1.0 mL of *pyridine R* and 2.0 mL of a saturated solution of *ninhydrin R* (about 40 g/L). Close the flask with aluminium foil and heat in a water-bath at 85 °C for 20-30 min. Cool the solution rapidly and dilute to 25.0 mL with *water R*. Mix and measure immediately the absorbance (*2.2.25*) of the solution at 570 nm using a blank solution as the compensation liquid. The absorbance is not greater than that of a standard prepared at the same time and in the same manner using 5.0 mL of a 35 mg/L solution of *tyramine R* (impurity II) in a 3.4 g/L solution of *phosphoric acid R*. If intended for use in the manufacture of parenteral preparations, the absorbance is not greater than that of a standard prepared at the same time and in the same manner using 5.0 mL of a 15 mg/L solution of *tyramine R* (impurity II) in a 3.4 g/L solution of *phosphoric acid R*.

**Loss on drying** (*2.2.32*): maximum 4.5 per cent, determined on 1.000 g by drying in an oven at 60 °C at a pressure not exceeding 0.7 kPa for 3 h.

**Sulfated ash** (*2.4.14*): maximum 6.0 per cent, determined on 1.0 g.

ASSAY

Carry out the microbiological assay of antibiotics (*2.7.2*). Use *tylosin CRS* as the chemical reference substance.

STORAGE

In an airtight container, protected from light. If the substance is sterile, the container is also sterile and tamper-evident.

[1405-54-5]

DEFINITION

Hemitartrate of a mixture of macrolide antibiotics produced by certain strains of *Streptomyces fradiae*. The main component is 2-[(4*R*,5*S*,6*S*,7*R*,9*R*,11*E*,13*E*,15*R*,16*R*)-15-[[(6-deoxy-2,3-di-*O*-methyl-β-D-allopyranosyl)oxy]methyl]-6-[[3,6-dideoxy-4-*O*-(2,6-dideoxy-3-*C*-methyl-α-L-*ribo*-hexopyranosyl)-3-(dimethylamino)-β-D-glucopyranosyl]oxy]-16-ethyl-4-hydroxy-5,9,13-trimethyl-2,10-dioxo-1-oxacyclohexadeca-11,13-dien-7-yl]acetaldehyde hemi[(2*R*,3*R*)-2,3-dihydroxybutanedioate] (tylosin hemitartrate, tylosin A hemitartrate). The hemitartrates of tylosin B (desmycosin, 4′-*O*-demycarosyltylosin), tylosin C (macrocin, 3‴-*O*-demethyltylosin) and tylosin D (relomycin, 19-deoxo-19-hydroxytylosin) may also be present.

*Content*: minimum 900 IU/mg (dried substance). Tylosins A, B, C and D contribute to the potency.

CHARACTERS

*Appearance*: almost white or slightly yellow, hygroscopic powder.

*Solubility*: freely soluble in water, in ethanol (96 per cent) and in methylene chloride, practically insoluble in heptane.

IDENTIFICATION

A. Infrared absorption spectrophotometry (*2.2.24*).
*Comparison*: *tylosin tartrate CRS*.

B. Dissolve about 30 mg in a mixture of 0.15 mL of *water R*, 2.5 mL of *acetic anhydride R* and 7.5 mL of *pyridine R*. Allow to stand for about 10 min. A green colour is produced.

TESTS

**Appearance of solution**. The solution is clear (*2.2.1*) and not more intensely coloured than reference solution $Y_3$ (*2.2.2, Method II*).

Dissolve 1.00 g in 20 mL of a mixture of equal volumes of *acetonitrile R* and *water R*.

**pH** (*2.2.3*): 5.0 to 7.2.

Dissolve 0.25 g in 10 mL of *carbon dioxide-free water R*.

**Composition**. Liquid chromatography (*2.2.29*): use the normalisation procedure. *Prepare the solutions immediately before use.*

*Phosphate buffer pH 5.5*. Dissolve 25.82 g of *potassium dihydrogen phosphate R* in 800 mL of *water R*, adjust to pH 5.5 with a 13.2 g/L solution of *dipotassium hydrogen phosphate R* and dilute to 1.0 L with *water R*.

*Test solution*. Dissolve 25.0 mg of the substance to be examined in 5 mL of *acetonitrile R* and dilute to 25.0 mL with *water R*.

*Reference solution (a)*. Dissolve 5 mg of *tylosin for system suitability CRS* (containing tylosins A, B, C and D, and impurities A, E, N, O, R and S) in 1 mL of *acetonitrile R* and dilute to 5.0 mL with *water R*.

*Reference solution (b)*. Dilute 1.0 mL of the test solution to 100.0 mL with *water R*. Dilute 1.0 mL of this solution to 10.0 mL with *water R*.

*Column*:
- *size*: *l* = 0.25 m, Ø = 4.6 mm;
- *stationary phase*: *end-capped octadecylsilyl silica gel for chromatography R* (5 µm);
- *temperature*: 60 °C.

*Mobile phase*:
- *mobile phase A*: phosphate buffer pH 5.5, *acetonitrile R*, *water for chromatography R* (10:27.5:62.5 *V/V/V*);
- *mobile phase B*: phosphate buffer pH 5.5, *water for chromatography R*, *acetonitrile R* (10:40:50 *V/V/V*);

| Time (min) | Mobile phase A (per cent *V/V*) | Mobile phase B (per cent *V/V*) |
|---|---|---|
| 0 - 25 | 100 | 0 |
| 25 - 45 | 100 → 84 | 0 → 16 |
| 45 - 65 | 84 | 16 |
| 65 - 70 | 84 → 44 | 16 → 56 |
| 70 - 82 | 44 | 56 |

*Flow rate*: 1.0 mL/min.

*Detection*: spectrophotometer at 280 nm.

*Injection*: 20 µL.

*Identification of peaks*: use the chromatogram supplied with *tylosin for system suitability CRS* and the chromatogram obtained with reference solution (a) to identify the peaks due to tylosins A, B, C and D, and impurities A, E, N, O, R and S.

Monographs T

*Relative retention* with reference to tylosin A (retention time = about 65 min): impurity E = about 0.23; tylosin B = about 0.31; impurity A = about 0.38; tylosin C = about 0.60; tylosin D = about 0.78; impurity N = about 0.81; impurity O = about 0.85; impurity R = about 1.17; impurity S = about 1.20.

*System suitability*:

- *resolution*: reference solution (a): minimum 2.0 between the peaks due to tylosin B and impurity A; minimum 1.5 between the peaks due to impurities N and O; minimum 1.3 between the peaks due to impurities R and S;
- *signal-to-noise ratio*: minimum 10 for the principal peak in the chromatogram obtained with reference solution (b).

*Limits*:

- *tylosin A*: minimum 80.0 per cent;
- *sum of tylosins A, B, C and D*: minimum 95.0 per cent;
- *reporting threshold*: 0.10 per cent (reference solution (b)).

**Related substances**. Liquid chromatography (*2.2.29*) as described in the test for composition. Use the normalisation procedure.

*Limits*:

- *impurity A*: maximum 2.0 per cent;
- *sum of impurities eluting between impurity A and tylosin C*: maximum 2.0 per cent per cent;
- *impurities N, O*: for each impurity, maximum 1.0 per cent;
- *impurities E, R, S*: for each impurity, maximum 0.5 per cent;
- *any other impurity*: for each impurity, maximum 0.50 per cent;
- *total*: maximum 5.0 per cent;
- *reporting threshold*: 0.10 per cent (reference solution (b)).

**Impurity II (tyramine)**: maximum 0.35 per cent, or maximum 0.15 per cent if intended for use in the manufacture of parenteral preparations.

In a 25.0 mL volumetric flask, dissolve 50.0 mg in 5.0 mL of a 3.4 g/L solution of *phosphoric acid R*. Add 1.0 mL of *pyridine R* and 2.0 mL of a saturated solution of *ninhydrin R* (about 40 g/L). Close the flask with aluminium foil and heat in a water-bath at 85 °C for 30 min. Cool the solution rapidly and dilute to 25.0 mL with *water R*. Mix and measure immediately the absorbance (*2.2.25*) of the solution at 570 nm using a blank solution as the compensation liquid. The absorbance is not greater than that of a standard prepared at the same time and in the same manner using 5.0 mL of a 35 mg/L solution of *tyramine R* (impurity II) in a 3.4 g/L solution of *phosphoric acid R*. If intended for use in the manufacture of parenteral preparations, the absorbance is not greater than that of a standard prepared at the same time and in the same manner using 5.0 mL of a 15 mg/L solution of *tyramine R* (impurity II) in a 3.4 g/L solution of *phosphoric acid R*.

**Loss on drying** (*2.2.32*): maximum 4.5 per cent, determined on 1.000 g by drying at 60 °C at a pressure not exceeding 0.7 kPa for 3 h.

**Sulfated ash** (*2.4.14*): maximum 2.5 per cent, determined on 1.0 g.

ASSAY

Carry out the microbiological assay of antibiotics (*2.7.2*). Use *tylosin CRS* as the chemical reference substance.

STORAGE

In an airtight container, protected from light. If the substance is sterile, the container is also sterile and tamper-evident.

IMPURITIES

*Specified impurities: A, E, N, O, R, S, II.*

*Other detectable impurities* (the following substances would, if present at a sufficient level, be detected by one or other of the tests in the monograph. They are limited by the general acceptance criterion for other/unspecified impurities. It is therefore not necessary to identify these impurities for demonstration of compliance. See also *5.10. Control of impurities in substances for pharmaceutical use*): *B, C, D, F, G, H, I, J, K, L, M, P, Q, T, U, V, W, X, Y, Z, AA, BB, CC, DD, EE, FF, GG, HH.*

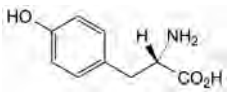
# TYROSINE

## Tyrosinum



$C_9H_{11}NO_3$ $M_r$ 181.2
[60-18-4]

DEFINITION

(2*S*)-2-Amino-3-(4-hydroxyphenyl)propanoic acid.

Product of fermentation or of protein hydrolysis.

*Content*: 99.0 per cent to 101.0 per cent (dried substance).

CHARACTERS

*Appearance*: white or almost white, crystalline powder or colourless crystals.

*Solubility*: very slightly soluble in water, practically insoluble in ethanol (96 per cent). It dissolves in dilute mineral acids and in dilute solutions of alkali hydroxides.

IDENTIFICATION

*First identification: A, B.*

*Second identification: A, C, D, E.*

A. Specific optical rotation (see Tests).

B. Infrared absorption spectrophotometry (*2.2.24*).
*Comparison*: *tyrosine CRS.*

C. Thin-layer chromatography (*2.2.27*).
*Test solution.* Dissolve 10 mg of the substance to be examined in 1 mL of *dilute ammonia R2* and dilute to 50 mL with *water R.*
*Reference solution.* Dissolve 10 mg of *tyrosine CRS* in 1 mL of *dilute ammonia R2* and dilute to 50 mL with *water R.*
*Plate*: *TLC silica gel plate R.*
*Mobile phase*: *concentrated ammonia R1*, *propanol R* (30:70 *V/V*).
*Application*: 5 µL.
*Development*: over 2/3 of the plate.
*Drying*: in air.
*Detection*: spray with *ninhydrin solution R* and heat at 105 °C for 15 min.

*Results*: the principal spot in the chromatogram obtained with the test solution is similar in position, colour and size to the principal spot in the chromatogram obtained with the reference solution.

D. To about 50 mg add 1 mL of *dilute nitric acid R*. A dark red colour is produced within 15 min.

E. Dissolve about 30 mg in 2 mL of *dilute sodium hydroxide solution R*. Add 3 mL of a freshly prepared mixture of equal volumes of a 100 g/L solution of *sodium nitrite R* and a solution of 0.5 g of *sulfanilic acid R* in a mixture of 6 mL of *hydrochloric acid R1* and 94 mL of *water R*. An orange-red colour is produced.

TESTS

**Appearance of solution**. The solution is clear (*2.2.1*) and not more intensely coloured than reference solution $Y_7$ (*2.2.2, Method II*).

Dissolve 0.5 g in *dilute hydrochloric acid R* and dilute to 20 mL with the same acid.

**Specific optical rotation** (*2.2.7*): – 12.3 to – 11.0 (dried substance).

Dissolve 1.25 g in a mixture of equal volumes of *dilute hydrochloric acid R* and *water R* and dilute to 25.0 mL with the same mixture of solvents.

**Ninhydrin-positive substances**. Amino acid analysis (*2.2.56*). For analysis, use Method 1.

The concentrations of the test solution and the reference solutions may be adapted according to the sensitivity of the equipment used. The concentrations of all solutions are adjusted so that the system suitability requirements described in general chapter *2.2.46* are fulfilled, keeping the ratios of concentrations between all solutions as described.

*Solution A*: *dilute hydrochloric acid R1* or a sample preparation buffer suitable for the apparatus used.

*Test solution.* Dissolve 30.0 mg of the substance to be examined in solution A and dilute to 50.0 mL with solution A.

*Reference solution (a).* Dilute 1.0 mL of the test solution to 100.0 mL with solution A. Dilute 2.0 mL of this solution to 10.0 mL with solution A.

*Reference solution (b).* Dissolve 30.0 mg of *phenylalanine R* (impurity A) in solution A and dilute to 100.0 mL with solution A. Dilute 1.0 mL of the solution to 250.0 mL with solution A.

*Reference solution (c).* Dissolve 30.0 mg of *proline R* in solution A and dilute to 100.0 mL with solution A. Dilute 1.0 mL of the solution to 250.0 mL with solution A.

*Reference solution (d).* Dilute 6.0 mL of *ammonium standard solution (100 ppm $NH_4$) R* to 50.0 mL with solution A. Dilute 1.0 mL of this solution to 100.0 mL with solution A.

*Reference solution (e).* Dissolve 30 mg of *isoleucine R* and 30 mg of *leucine R* in solution A and dilute to 50.0 mL with solution A. Dilute 1.0 mL of the solution to 200.0 mL with solution A.

*Blank solution*: solution A.

Inject suitable, equal amounts of the test, blank and reference solutions into the amino acid analyser. Run a program suitable for the determination of physiological amino acids.

*System suitability*: reference solution (e):

– *resolution*: minimum 1.5 between the peaks due to isoleucine and leucine.

*Calculation of percentage contents*:

– for impurity A, use the concentration of impurity A in reference solution (b);

– for any ninhydrin-positive substance detected at 570 nm, use the concentration of tyrosine in reference solution (a);

– for any ninhydrin-positive substance detected at 440 nm, use the concentration of proline in reference solution (c); if a peak is above the reporting threshold at both wavelengths, use the result obtained at 570 nm for quantification.

*Limits*:

– *impurity A at 570 nm*: maximum 0.5 per cent;

– *any ninhydrin-positive substance*: for each impurity, maximum 0.2 per cent;

– *total*: maximum 0.6 per cent;

– *reporting threshold*: 0.05 per cent.

The thresholds indicated under Related substances (Table 2034.-1) in the general monograph *Substances for pharmaceutical use (2034)* do not apply.

**Chlorides** (*2.4.4*): maximum 200 ppm.

Dissolve 0.25 g in 3 mL of *dilute nitric acid R* and dilute to 15 mL with *water R*. The solution, without further addition of nitric acid, complies with the test.

**Sulfates** (*2.4.13*): maximum 300 ppm.

Dissolve, with gentle heating, 0.5 g in 5 mL of *dilute hydrochloric acid R* and dilute to 15 mL with *distilled water R*.

**Ammonium**. Amino acid analysis (*2.2.56*) as described in the test for ninhydrin-positive substances with the following modifications.

*Injection*: test solution, reference solution (d) and blank solution.

*Limit*:

– *ammonium at 570 nm*: not more than the area of the corresponding peak in the chromatogram obtained with reference solution (d) (0.02 per cent), taking into account the peak due to ammonium in the chromatogram obtained with the blank solution.

**Iron** (*2.4.9*): maximum 10 ppm.

In a separating funnel, dissolve 1.0 g in 10 mL of *dilute hydrochloric acid R*. Shake with 3 quantities, each of 10 mL, of *methyl isobutyl ketone R1*, shaking for 3 min each time. To the combined organic layers add 10 mL of *water R* and shake for 3 min. Use the aqueous layer.

**Loss on drying** (*2.2.32*): maximum 0.5 per cent, determined on 1.000 g by drying in an oven at 105 °C.

**Sulfated ash** (*2.4.14*): maximum 0.1 per cent, determined on 1.0 g.

ASSAY

Dissolve 0.150 g in 5 mL of *anhydrous formic acid R*. Add 30 mL of *anhydrous acetic acid R*. Titrate with *0.1 M perchloric acid*, determining the end-point potentiometrically (*2.2.20*).

1 mL of *0.1 M perchloric acid* is equivalent to 18.12 mg of $C_9H_{11}NO_3$.

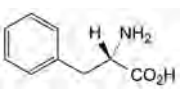
STORAGE

Protected from light.

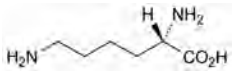
IMPURITIES

*Specified impurities: A.*

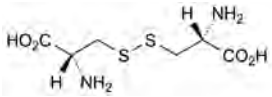
*Other detectable impurities* (the following substances would, if present at a sufficient level, be detected by one or other of the tests in the monograph. They are limited by the general acceptance criterion for other/unspecified impurities. It is therefore not necessary to identify these impurities for demonstration of compliance. See also *5.10. Control of impurities in substances for pharmaceutical use*): *B, C.*



A. (2*S*)-2-amino-3-phenylpropanoic acid (phenylalanine),



B. (2*S*)-2,6-diaminohexanoic acid (lysine),

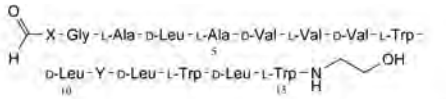


C. 3,3′-disulfanediylbis[(2*R*)-2-aminopropanoic acid] (cystine).

**01/2008:1662**

# TYROTHRICIN

## Tyrothricinum



| Gramicidin | Mol. formula | $M_r$ | X | Y |
|---|---|---|---|---|
| A1 | $C_{99}H_{140}N_{20}O_{17}$ | 1882 | L-Val | L-Trp |

### DEFINITION

Mixture of antimicrobial linear and cyclic polypeptides, isolated from the fermentation broth of *Brevibacillus brevis* Dubos. It consists mainly of gramicidins and tyrocidins as described above; other related compounds may be present in smaller amounts.

*Potency*: 180 IU/mg to 280 IU/mg (dried substance).

### CHARACTERS

*Appearance*: white or almost white powder.

*Solubility*: practically insoluble in water, soluble in ethanol (96 per cent) and in methanol.

### IDENTIFICATION

*First identification*: B.

*Second identification*: A.

A. Thin-layer chromatography (*2.2.27*).

*Test solution.* Dissolve 5 mg of the substance to be examined in 4.0 mL of *ethanol (96 per cent) R*.

*Reference solution.* Dissolve 5 mg of *tyrothricin CRS* in 4.0 mL of *ethanol (96 per cent) R*.

*Plate*: *TLC silica gel $F_{254}$ plate R*.

*Mobile phase*: *methanol R*, *butanol R*, *water R*, *acetic acid R*, *butyl acetate R* (2.5:7.5:12:20:40 *V/V/V/V/V*).

*Application*: 1 µL.

*Development*: over 2/3 of the plate.

*Drying*: in a current of warm air.

*Detection A*: examine in ultraviolet light at 254 nm.

*Results A*: the principal spots or groups of principal spots in the chromatogram obtained with the test solution are similar in position and size to the principal spots or groups of principal spots in the chromatogram obtained with the reference solution. The upper group corresponds to gramicidins, the lower group to tyrocidins.

*Detection B*: spray with *dimethylaminobenzaldehyde solution R2*. Heat the plate in a current of warm air until the spots appear.

*System suitability*: reference solution:

– the chromatogram shows 2 clearly separated spots or groups of spots.

*Results B*: the principal spots or groups of principal spots in the chromatogram obtained with the test solution are similar in position, colour and size to the principal spots or groups of principal spots in the chromatogram obtained with the reference solution. The upper group corresponds to gramicidins, the lower group to tyrocidins.

B. Composition (see Tests).

### TESTS

**Composition**. Liquid chromatography (*2.2.29*): use the normalisation procedure. *Prepare the solutions immediately before use.*

*Test solution.* Dissolve 5 mg of the substance to be examined in 2 mL of *methanol R* and dilute to 5.0 mL with the mobile phase.

*Reference solution (a).* Dissolve 5 mg of *tyrothricin CRS* in 2 mL of *methanol R* and dilute to 5.0 mL with the mobile phase.

*Reference solution (b).* Dilute 1.0 mL of reference solution (a) to 50.0 mL with the mobile phase.

*Column*:

– *size*: *l* = 0.25 m, Ø = 4.6 mm,
– *stationary phase*: *octadecylsilyl silica gel for chromatography R* (5 µm),
– *temperature*: 60 °C.

*Mobile phase*: 0.79 g/L solution of *ammonium sulfate R*, *methanol R* (25:75 *V/V*).

*Flow rate*: 1.2 mL/min.

*Detection*: spectrophotometer at 280 nm.

*Injection*: 25 µL.

*Run time*: 6 times the retention time of gramicidin A1. Use the chromatogram obtained with reference solution (a) and the chromatogram supplied with *tyrothricin CRS* to identify the peaks due to gramicidin A1, gramicidin A2 and the tyrocidins.

*Relative retention* with reference to gramicidin A1 (retention time = about 10 min): gramicidin C1 = about 0.8; gramicidin C2 = about 0.9; gramicidin A2 = about 1.1; tyrocidins = about 1.5 to 6.

*System suitability*: reference solution (a):

– *peak-to-valley ratio*: minimum 3.0, where $H_p$ = height above the baseline of the peak due to gramicidin A2 and $H_v$ = height above the baseline of the lowest point of the curve separating this peak from the peak due to gramicidin A1.

*Limits*:

– *sum of gramicidins*: 25 per cent to 50 per cent,
– *sum of tyrocidins*: 50 per cent to 70 per cent,
– *total*: minimum 85 per cent,
– *disregard limit*: the sum of the areas of the peaks due to gramicidins in the chromatogram obtained with reference solution (b).

**Loss on drying** (*2.2.32*): maximum 4.0 per cent, determined on 1.000 g by drying under high vacuum at 60 °C for 3 h.

**Sulfated ash** (*2.4.14*): maximum 1.5 per cent, determined on 1.0 g.

ASSAY

Carry out the microbiological assay of antibiotics (*2.7.2*) using the turbidimetric method. Use *gramicidin CRS* as the reference substance.

*Test solution*. Prepare a solution of tyrothricin containing about the same amount of gramicidin as the corresponding solution of *gramicidin CRS* i.e. 5 times more concentrated.

STORAGE

In an airtight container, protected from light.

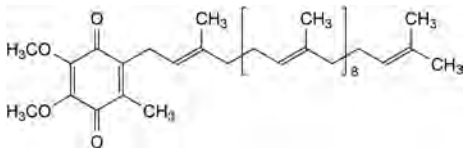
# UBIDECARENONE

## Ubidecarenonum



$C_{59}H_{90}O_4$ $M_r$ 863
[303-98-0]

DEFINITION

2-[(*all-E*)-3,7,11,15,19,23,27,31,35,39-Decamethyltetraconta-2,6,10,14,18,22,26,30,34,38-decaenyl]-5,6-dimethoxy-3-methylbenzene-1,4-dione.

*Content*: 98.0 per cent to 102.0 per cent (anhydrous substance).

CHARACTERS

*Appearance*: yellow or orange, hygroscopic, crystalline powder.

*Solubility*: practically insoluble in water, soluble in acetone, very slightly soluble in anhydrous ethanol.

It gradually decomposes and darkens on exposure to light.

mp: about 48 °C.

*Carry out all operations protected from light.*

IDENTIFICATION

A. Infrared absorption spectrophotometry (*2.2.24*).
*Comparison*: *ubidecarenone CRS*.

B. Examine the chromatograms obtained in the assay.
*Results*: the principal peak in the chromatogram obtained with the test solution is similar in retention time and size to the principal peak in the chromatogram obtained with reference solution (a).

TESTS

**Related substances**. Liquid chromatography (*2.2.29*). *Carry out the test protected from light.*

*Test solution.* Dissolve 25.0 mg of the substance to be examined in 25.0 mL of *anhydrous ethanol R* by heating at about 50 °C for 2 min. Allow to cool.

*Reference solution (a).* Dissolve 25.0 mg of *ubidecarenone CRS* in 25.0 mL of *anhydrous ethanol R* by heating at about 50 °C for 2 min. Allow to cool.

*Reference solution (b).* Dissolve 2 mg of *ubidecarenone impurity D CRS* in 2.0 mL of the test solution by heating at about 50 °C for 2 min. Allow to cool. Dilute 1.0 mL of this solution to 50.0 mL with *anhydrous ethanol R*.

*Reference solution (c).* Dilute 1.0 mL of the test solution to 100.0 mL with *anhydrous ethanol R*. Dilute 5.0 mL of this solution to 10.0 mL with *anhydrous ethanol R*.

*Column*:
- *size*: *l* = 0.2 m, Ø = 4.6 mm;
- *stationary phase*: *end-capped octadecylsilyl silica gel for chromatography R* (5 µm);
- *temperature*: 30 °C.

*Mobile phase*: *anhydrous ethanol R*, *methanol R2* (20:80 *V/V*).

*Flow rate*: 1.7 mL/min.

*Detection*: spectrophotometer at 275 nm.

*Injection*: 10 µL of the test solution and reference solutions (b) and (c).

*Run time*: twice the retention time of ubidecarenone.

*Identification of impurities*: use the chromatogram obtained with reference solution (b) to identify the peak due to impurity D.

*Relative retention* with reference to ubidecarenone (retention time = about 14 min): impurity D = about 0.7.

*System suitability*: reference solution (b):
- *resolution*: minimum 6.5 between the peaks due to impurity D and ubidecarenone.

*Calculation of percentage contents*:
- for each impurity, use the concentration of ubidecarenone in reference solution (c).

*Limits*:
- *impurity D*: maximum 0.3 per cent;
- *unspecified impurities*: for each impurity, maximum 0.10 per cent;
- *total*: maximum 0.6 per cent,
- *reporting threshold*: 0.05 per cent.

**Impurity F**. Liquid chromatography (*2.2.29*). *Carry out the test protected from light.*

*Test solution.* Dissolve 25.0 mg of the substance to be examined in 25.0 mL of *hexane R*.

*Reference solution (a).* Dissolve the contents of a vial of *ubidecarenone for system suitability CRS* (containing impurity F) in 1.0 mL of *hexane R*.

*Reference solution (b).* Dilute 1.0 mL of the test solution to 100.0 mL with *hexane R*.

*Column*:
- *size*: *l* = 0.25 m, Ø = 4.0 mm;
- *stationary phase*: *silica gel for chromatography R* (7 µm).

*Mobile phase*: *ethyl acetate R*, *hexane R* (3:97 *V/V*).

*Flow rate*: 2 mL/min.

*Detection*: spectrophotometer at 275 nm.

*Injection*: 20 µL.

*Run time*: 1.2 times the retention time of ubidecarenone.

*Identification of impurities*: use the chromatogram supplied with *ubidecarenone for system suitability CRS* and the chromatogram obtained with reference solution (a) to identify the peak due to impurity F.

*Relative retention* with reference to ubidecarenone (retention time = about 10 min): impurity F = about 0.85.

*System suitability*: reference solution (a):
- *resolution*: minimum 1.5 between the peaks due to impurity F and ubidecarenone.

*Limit*:
- *impurity F*: not more than 0.5 times the area of the principal peak in the chromatogram obtained with reference solution (b) (0.5 per cent).

**Water** (*2.5.12*): maximum 0.2 per cent, determined on 3.00 g.

**Sulfated ash** (*2.4.14*): maximum 0.1 per cent, determined on 1.0 g.

ASSAY

Liquid chromatography (*2.2.29*) as described in the test for related substances with the following modification.

*Injection*: test solution and reference solution (a).

Calculate the percentage content of $C_{59}H_{90}O_4$ taking into account the assigned content of *ubidecarenone CRS*.

STORAGE

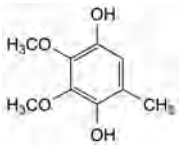
In an airtight container, protected from light.

IMPURITIES

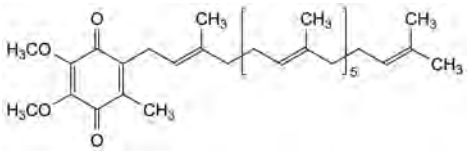
*Specified impurities: D, F.*

*Other detectable impurities* (the following substances would, if present at a sufficient level, be detected by one or other of the tests in the monograph. They are limited by the general

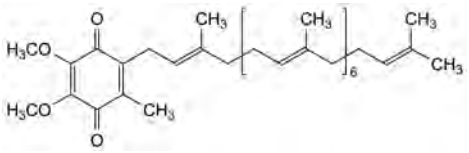
acceptance criterion for other/unspecified impurities and/or by the general monograph *Substances for pharmaceutical use (2034)*. It is therefore not necessary to identify these impurities for demonstration of compliance. See also *5.10. Control of impurities in substances for pharmaceutical use*): *A, B, C, E, G.*



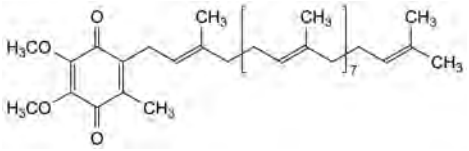
A. 2,3-dimethoxy-5-methylbenzene-1,4-diol,



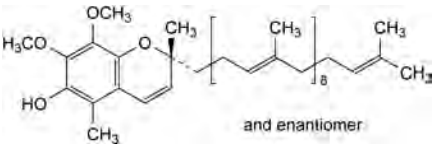
B. 2-[(*all-E*)-3,7,11,15,19,23,27-heptamethyloctadocosa-2,6,10,14,18,22,26-heptaenyl]-5,6-dimethoxy-3-methylbenzene-1,4-dione (ubiquinone-7),



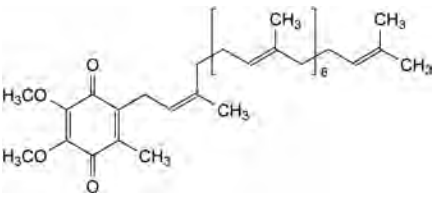
C. 5,6-dimethoxy-3-methyl-2-[(*all-E*)-3,7,11,15,19,23,27,31-octamethyldotriaconta-2,6,10,14,18,22,26,30-octaenyl]-benzene-1,4-dione (ubiquinone-8),



D. 5,6-dimethoxy-3-methyl-2-[(*all-E*)-3,7,11,15,19,23,27,31,35-nonamethylhexatriaconta-2,6,10,14,18,22,26,30,34-nonaenyl]benzene-1,4-dione (ubiquinone-9),



E. (2*RS*)-7,8-dimethoxy-2,5-dimethyl-2-[(*all-E*)-4,8,12,16,20,24,28,32,36-nonamethylheptatriaconta-3,7,11,15,19,23,27,31,35-nonaenyl]-2*H*-1-benzopyran-6-ol (ubicromenol),



F. 2-[(2*Z*,6*E*,10*E*,14*E*,18*E*,22*E*,26*E*,30*E*,34*E*)-3,7,11,15,19,23,27,31,35,39-decamethyltetraconta-2,6,10,14,18,22,26,30,34,38-decaenyl]-5,6-dimethoxy-3-methylbenzene-1,4-dione (ubidecarenone (*Z*)-isomer),

G. unknown structure.

# UNDECYLENIC ACID

## Acidum undecylenicum

$C_{11}H_{20}O_2$ $M_r$ 184.3
[112-38-9]

DEFINITION

Undec-10-enoic acid.

*Content*: 97.0 per cent to 102.0 per cent.

CHARACTERS

*Appearance*: white or very pale yellow, crystalline mass or colourless or pale yellow liquid.

*Solubility*: practically insoluble in water, freely soluble in ethanol (96 per cent) and in fatty and essential oils.

IDENTIFICATION

A. Refractive index (*2.2.6*): 1.447 to 1.450, determined at 25 ± 0.5 °C.

B. Freezing point (*2.2.18*): 21 °C to 24 °C.

C. To 2.0 g add 2 mL of freshly distilled *aniline R* and boil under a reflux condenser for 10 min. Allow to cool and add 30 mL of *ether R*. Shake with 3 quantities, each of 20 mL, of *dilute hydrochloric acid R* and then with 20 mL of *water R*. Evaporate the organic layer to dryness on a water-bath. After recrystallising twice from *ethanol (70 per cent V/V) R* and drying *in vacuo* for 3 h, the residue melts (*2.2.14*) at 66 °C to 68 °C.

D. Dissolve 0.1 g in a mixture of 2 mL of *dilute sulfuric acid R* and 5 mL of *glacial acetic acid R*. Add dropwise 0.25 mL of *potassium permanganate solution R*. The colour of the potassium permanganate is discharged.

TESTS

**Peroxide value** (*2.5.5, Method A*): maximum 10.

**Fixed and mineral oils**. To 1.0 g add 5 mL of *sodium carbonate solution R* and 25 mL of *water R* and boil for 3 min. The hot solution is not more opalescent than reference suspension II (*2.2.1*).

**Water-soluble acids**. To 1.0 g add 20 mL of *water R* heated to 35-45 °C and shake for 2 min. Cool and filter the aqueous layer through a moistened filter. To 10 mL of the filtrate add 0.1 mL of *phenolphthalein solution R*. Not more than 0.1 mL of *0.1 M sodium hydroxide* is required to change the colour of the indicator.

**Degree of unsaturation**. Dissolve 85.0 mg in a mixture of 5 mL of *dilute hydrochloric acid R* and 30 mL of *glacial acetic acid R*. Using 0.05 mL of *indigo carmine solution R1* as indicator, added towards the end of the titration, titrate with *0.0167 M bromide-bromate* until the colour changes from blue to yellow. 8.9 mL to 9.4 mL of *0.0167 M bromide-bromate* is required. Carry out a blank titration.

**Sulfated ash** (*2.4.14*): maximum 0.1 per cent, determined on 0.50 g.

ASSAY

Dissolve 0.750 g in 10 mL of *ethanol (96 per cent) R*. Titrate with *0.5 M sodium hydroxide* using 0.1 mL of *phenolphthalein solution R* as indicator, until a pink colour is obtained.

1 mL of *0.5 M sodium hydroxide* is equivalent to 92.14 mg of $C_{11}H_{20}O_2$.

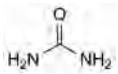
STORAGE

In a non-metallic container, protected from light.

**01/2017:0743**

# UREA

## Ureum



$CH_4N_2O$ $M_r$ 60.1

[57-13-6]

DEFINITION

Carbamide.

*Content*: 98.5 per cent to 101.5 per cent (dried substance).

CHARACTERS

*Appearance*: white or almost white, crystalline powder or transparent crystals, slightly hygroscopic.

*Solubility*: very soluble in water, soluble in ethanol (96 per cent), practically insoluble in methylene chloride.

IDENTIFICATION

*First identification: A, B.*

*Second identification: A, C, D.*

A. Melting point (*2.2.14*): 132 °C to 135 °C.

B. Infrared absorption spectrophotometry (*2.2.24*).
*Comparison*: *urea CRS*.

C. Dissolve 0.1 g in 1 mL of *water R*. Add 1 mL of *nitric acid R*. A white, crystalline precipitate is formed.

D. Heat 0.5 g in a test tube until it liquefies and the liquid becomes turbid. Cool, dissolve in a mixture of 1 mL of *dilute sodium hydroxide solution R* and 10 mL of *water R* and add 0.05 mL of *copper sulfate solution R*. A reddish-violet colour is produced.

TESTS

**Solution S**. Dissolve 10.0 g in *water R* and dilute to 50 mL with the same solvent.

**Appearance of solution**. The solution is clear (*2.2.1*) and colourless (*2.2.2, Method II*).

To 2.5 mL of solution S add 7.5 mL of *water R*.

**Alkalinity**. To 2.5 mL of solution S add 7.5 mL of *water R*, 0.1 mL of *methyl red solution R* and 0.4 mL of *0.01 M hydrochloric acid*. The solution is red to orange.

**Biuret**: maximum 0.1 per cent.

To 10 mL of solution S add 5 mL of *water R*, 0.5 mL of a 5 g/L solution of *copper sulfate pentahydrate R* and 0.5 mL of *strong sodium hydroxide solution R*. Allow to stand for 5 min. Any reddish-violet colour in the solution is not more intense than that in a standard prepared at the same time in the same manner using 10 mL of a 0.2 g/L solution of *biuret R*.

**Ammonium** (*2.4.1*): maximum 500 ppm, determined on 0.1 mL of solution S.

**Loss on drying** (*2.2.32*): maximum 1.0 per cent, determined on 1.000 g by drying in an oven at 105 °C for 1 h.

**Sulfated ash** (*2.4.14*): maximum 0.1 per cent, determined on 1.0 g.

ASSAY

Dissolve 0.2000 g in *water R* and dilute to 50.0 mL with the same solvent. Introduce 1.0 mL of the solution into a combustion flask. Add 4 g of a powdered mixture of 100 g of *dipotassium sulfate R*, 5 g of *copper sulfate pentahydrate R* and 2.5 g of *selenium R*, and 3 glass beads. Wash any adhering particles from the neck into the flask with 5 mL of *sulfuric acid R*, allowing it to run down the sides of the flask, and mix the contents by rotation. Close the mouth of the flask loosely, for example by means of a glass bulb with a short stem, to avoid excessive loss of sulfuric acid. Heat gradually at first, then increase the temperature until there is vigorous boiling with condensation of sulfuric acid in the neck of the flask; take precautions to prevent the upper part of the flask from becoming overheated. Continue the heating for 30 min. Cool, dissolve the solid material by cautiously adding to the mixture 25 mL of *water R*, cool again and place in a steam-distillation apparatus. Add 30 mL of *strong sodium hydroxide solution R* and distil immediately by passing steam through the mixture. Collect the distillate in 15 mL of a 40 g/L solution of *boric acid R* to which has been added 0.2 mL of *methyl red mixed solution R* and enough *water R* to cover the tip of the condenser. Towards the end of the distillation, lower the receiver so that the tip of the condenser is above the surface of the acid. Take precautions to prevent any water on the outer surface of the condenser from reaching the contents of the receiver. Titrate the distillate with *0.01 M sulfuric acid*.

1 mL of *0.01 M sulfuric acid* is equivalent to 0.6006 mg of $CH_4N_2O$.

STORAGE

In an airtight container.

**01/2020:0958**

# UROFOLLITROPIN

## Urofollitropinum

[97048-13-0]

DEFINITION

Dried preparation containing menopausal gonadotrophin obtained from the urine of post-menopausal women. It has follicle-stimulating activity and no or virtually no luteinising activity.

*Potency*: minimum 90 IU of follicle-stimulating hormone (hFSH) per milligram.

*Ratio of the number of units of luteinising hormone (interstitial-cell-stimulating hormone) [hLH(ICSH)] to the number of units of follicle-stimulating hormone:* maximum 1/60.

PRODUCTION

It is prepared by suitable collection and extraction procedures followed by purification steps.

The method of preparation includes steps that have been shown to remove and/or inactivate extraneous agents. In addition, the process is designed to minimise microbial contamination.

CHARACTERS

*Appearance*: almost white or slightly yellowish powder.

*Solubility*: soluble in water.

IDENTIFICATION

When administered to immature female rats as prescribed in the assay, it causes enlargement of the ovaries.

TESTS

**Residual luteinising activity**. The International Units of FSH and LH are the activities contained in stated amounts of the International Standard of human urinary follicle-stimulating

hormone and luteinising hormone (interstitial-cell-stimulating hormone) which consists of a mixture of a freeze-dried extract of urine of post-menopausal women with lactose. The equivalence in International Units of the International Standard is stated by the World Health Organization.

Use immature female rats approximately 21 days old and having masses such that the difference between the heaviest and the lightest rat is not more than 10 g. Assign the rats at random to 4 equal groups of at least 6 animals. If sets of 4 litter mates are available, assign one litter mate at random from each set to each group and mark according to litter.

Inject subcutaneously into each rat 50 IU of *serum gonadotrophin R* on the first day and 25 IU of *chorionic gonadotrophin R* on the fourth day, each in 0.5 mL of *phosphate-albumin buffered saline pH 7.2 R*.

Choose 3 doses of the reference preparation such that the smallest dose produces a depletion of the ovarian ascorbic acid content in all the rats and the largest dose does not produce a maximal depletion in all the rats. Use doses in geometric progression; as an initial approximation, total doses of 0.5 IU, 1.0 IU and 2.0 IU may be tried although the dose to be used will depend on the sensitivity of the animals.

Choose a dose of the preparation to be examined expected to contain 60 *X* IU of follicle-stimulating hormone (hFSH), in which *X* = the number of International Units of hLH in the middle dose of the reference preparation.

Dissolve separately the total quantities of the preparation to be examined and of the reference preparation in 1.0 mL of *phosphate-albumin buffered saline pH 7.2 R*. Inject into a tail vein to each separate group of rats 6 days after the injection of chorionic gonadotrophin. Exactly 4 h after the injection, euthanise the rats and remove the ovaries from each animal. Remove any extraneous fluid and tissue from the ovaries and weigh the ovaries immediately.

Treat the combined ovaries from each rat separately, as follows. Crush and homogenise within 2 min in a freshly prepared 25 g/L solution of *metaphosphoric acid R* at a temperature of 4 °C and dilute to 7 mL with the same solution. Allow the homogenate to stand for 30 min at 4 °C and centrifuge at 4 °C at approximately 2500 *g*. Filter the supernatant, if necessary, through a 0.22 µm filter.

Prepare a fresh solution consisting of a mixture of 2 mL of a 45.3 g/L solution of *sodium acetate R* adjusted to pH 7 with *acetic acid R*, 3 mL of *water R* and 2 mL of *dichlorophenolindophenol standard solution R*. Mix 2 mL of this solution with 2 mL of the clear supernatant. 30 s after mixing, measure the absorbance (*2.2.25*) of the solution at the maximum at about 520 nm. Use as reference a solution with a known content of *ascorbic acid CRS* in a 25 g/L solution of *metaphosphoric acid R*, treated by the same process.

Calculate the amount of ascorbic acid from the ascorbic acid standard curve obtained and express in milligrams per 0.1 g of ovary to obtain the ascorbic acid content of the ovaries. Calculate the mean and its variance of the ascorbic acid content of the ovaries of the rats treated with the preparation to be examined.

For each dose-group of the reference preparation, plot the mean ascorbic acid content of the ovaries as a function of the logarithm of the dose and analyse the regression of the ascorbic acid content on the logarithm of the dose injected, using standard methods of analysis (the method of least squares).

The test is not valid unless:

- the slope constant *b* is significant at the 0.05 significance level;
- for the groups treated with the reference preparation, the sum of squares due to linear regression is equal to at least 95 per cent of the total sum of squares of the ascorbic acid content;
- the within-group variance of the ascorbic acid content of the group receiving the preparation to be examined is not significantly different at the 0.05 significance level from the within-group variance of the ascorbic acid content of the groups receiving the reference preparation.

The mean ascorbic acid content of the ovaries of the rats treated with the preparation to be examined is not significantly lower than that of the rats treated with the middle dose of the reference preparation (calculated from the regression equation) at the 0.05 significance level.

**Water** (*2.5.32*): maximum 5.0 per cent.

**Bacterial endotoxins** (*2.6.14, Method C*): less than 0.40 IU per International Unit of urofollitropin, if intended for use in the manufacture of parenteral preparations without a further appropriate procedure for the removal of bacterial endotoxins.

ASSAY

The follicle-stimulating activity of urofollitropin is estimated by comparing under given conditions its effect in enlarging the ovaries of immature rats treated with chorionic gonadotrophin with the same effect of the International Standard preparation of human urinary follicle-stimulating hormone and luteinising hormone or of a reference preparation calibrated in International Units. The International Units of FSH and LH are the activities contained in stated amounts of the International Standard of human urinary follicle-stimulating hormone and luteinising hormone (interstitial-cell-stimulating hormone) which consists of a mixture of a freeze-dried extract of urine of post-menopausal women with lactose. The equivalence in International Units of the International Standard is stated by the World Health Organization.

Use immature female rats of the same strain, 19-28 days old, differing in age by not more than 3 days and having masses such that the difference between the heaviest and the lightest rat is not more than 10 g. Assign the rats at random to 6 equal groups of at least 5 animals. If sets of 6 litter mates are available, assign one litter mate from each set to each group and mark according to litter.

Choose 3 doses of the reference preparation and 3 doses of the preparation to be examined such that the smallest dose produces a positive response in some of the rats and the largest dose does not produce a maximal response in all the rats. Use doses in geometric progression and as an initial approximation total doses of 1.5 IU, 3.0 IU and 6.0 IU may be tried although the dose will depend on the sensitivity of the animals used, which may vary widely.

Dissolve separately the total quantities of the preparation to be examined and of the reference preparation corresponding to the daily doses to be used in sufficient *phosphate-albumin buffered saline pH 7.2 R* such that the daily dose is administered in a volume of about 0.5 mL. The buffer solution shall contain in the daily dose not less than 14 IU of chorionic gonadotrophin to ensure complete luteinisation. Add a suitable antimicrobial preservative such as 4 g/L of phenol or 0.02 g/L of thiomersal. Store the solutions at 5 ± 3 °C.

Inject subcutaneously into each rat the daily dose allocated to its group. Repeat the injection of each dose 24 h and 48 h after the first injection. About 24 h after the last injection, euthanise the rats and remove the ovaries from each animal. Remove any extraneous fluid and tissue from the ovaries and weigh the 2 combined ovaries of each animal immediately. Calculate the results by the usual statistical methods (for example, *5.3*) using the mass of the 2 combined ovaries as the response (a suitable correction of the organ mass with reference to the mass of the animal from which it was taken may be applied; an analysis of covariance may be used).

The estimated potency is not less than 80 per cent and not more than 125 per cent of the stated potency. The confidence limits ($P$ = 0.95) of the estimated potency are not less than 64 per cent and not more than 156 per cent of the stated potency.

STORAGE

In an airtight container, protected from light, at a temperature of 2 °C to 8 °C. If the substance is sterile, store in a sterile, airtight, tamper-evident container.

LABELLING

The label states:

- the number of International Units of follicle-stimulating hormone per container;
- the potency, in International Units of follicle-stimulating hormone per milligram.

**01/2020:0695**

# UROKINASE

## Urokinasum

[9039-53-6]

DEFINITION

Enzyme, obtained from human urine, that activates plasminogen. It consists of a mixture of low-molecular-mass (LMM) ($M_r$ 33 000) and high-molecular-mass (HMM) ($M_r$ 54 000) forms, the high-molecular-mass form being predominant.

*Potency*: minimum 70 000 IU per milligram of protein.

PRODUCTION

It is prepared by suitable collection and extraction procedures followed by purification steps.

The method of preparation includes steps that have been shown to remove and/or inactivate extraneous agents. In addition, the process is designed to minimise microbial contamination and vasoactive substances.

CHARACTERS

*Appearance*: white or almost white, amorphous powder.

*Solubility*: soluble in water.

IDENTIFICATION

A. Place separately in 2 haemolysis tubes 0.5 mL of citrated human plasma and 0.5 mL of citrated bovine plasma and maintain in a water-bath at 37 °C. To each tube add 0.1 mL of a solution containing a quantity of the substance to be examined equivalent to 1000 IU/mL in *phosphate buffer solution pH 7.4 R* and 0.1 mL of a solution containing a quantity of *human thrombin R* equivalent to 20 IU/mL in *phosphate buffer solution pH 7.4 R*. Shake immediately. In both tubes, a clot forms and lyses within 30 min.

B. Carry out identification by a suitable immunodiffusion test.

TESTS

**Appearance of solution**. The solution is clear (*2.2.1*) and colourless (*2.2.2, Method II*).

Dissolve 10 mg in 10 mL of *water R*.

**Thromboplastic contaminants**

*Test solutions.* Dissolve suitable quantities of the substance to be examined in *barbital buffer solution pH 7.4 R* to obtain solutions with activities of 5000 IU/mL, 2500 IU/mL, 1250 IU/mL, 625 IU/mL and 312 IU/mL.

To each of 6 haemolysis tubes 1 cm in internal diameter add 0.1 mL of *citrated rabbit plasma R*. Allocate the test solutions 1 to each of 5 of the tubes; add to each tube 0.1 mL of the solution allocated to it and to the 6th tube add 0.1 mL of *barbital buffer solution pH 7.4 R* (blank). Incubate the tubes at 25 ± 0.5 °C for 5 min and add 0.1 mL of a 3.675 g/L solution of *calcium chloride R*. Measure with a stop-watch the coagulation time for each tube. Plot the shortening of the recalcification time (clotting time of the blank minus clotting time measured) against log concentration in International Units. Extrapolate the best-fitting straight line through the 5 points until it reaches the log-concentration axis. The urokinase activity at the intersection point, which represents the limit concentration for coagulant activity (zero coagulant activity), is not less than 150 IU/mL.

**Molecular fractions**. Size-exclusion chromatography (*2.2.30*).

*Test solution.* Dissolve about 1 mg in 1.0 mL of *0.02 M phosphate buffer solution pH 8.0 R*. Prepare immediately before use.

*Column*:

- *size*: *l* = 0.9 m, Ø = 16 mm;
- *stationary phase*: *cross-linked dextran for chromatography R3*;
- *temperature*: 5 °C.

*Mobile phase*: 17.5 g/L solution of *sodium chloride R* in *0.02 M phosphate buffer solution pH 8.0 R*.

*Flow rate*: 0.1 mL/min.

Apply the test solution to the head of the column rinsing twice with 0.5 mL portions of the buffer and carry out the elution. The eluate may be collected in fractions of 1 mL. Measure the absorbance (*2.2.25*) of the eluate at the maximum at 280 nm and plot the individual values on a graph. Draw perpendicular lines towards the axis of the abscissae from the minima before the HMM peak, between the HMM and the LMM peaks, and after the LMM peak, thus identifying the fractions to be considered in calculating the HMM/LMM activity ratio. Pool the HMM fractions and, separately, the LMM fractions. Determine separately the urokinase activity in International Units of each of the fraction pools by the method prescribed under Assay. The ratio of the urokinase activity in the HMM fraction pool to that in the LMM fraction pool is not less than 2.0.

**Total protein**. Determine the nitrogen content, using 10 mg, by the method of sulfuric acid digestion (*2.5.9*) and calculate the quantity of protein by multiplying by 6.25.

ASSAY

The potency of urokinase is determined by comparing its capacity to activate plasminogen to form plasmin with the same capacity of a reference preparation of urokinase calibrated in International Units; the formation of plasmin is measured by the determination of the lysis time of a fibrin clot under given conditions.

The International Unit is the activity contained in a stated amount of the International Reference Preparation, which consists of freeze-dried urokinase with lactose. The equivalence in International Units of the International Reference Preparation is stated by the World Health Organization.

Unless otherwise prescribed, use *phosphate buffer solution pH 7.4 R* containing 30 g/L of *bovine albumin R* for the preparation of the solutions and dilutions used in the assay.

*Test solution.* Prepare a solution of the substance to be examined expected to have an activity of 1000 IU/mL.

*Reference solution.* Prepare a solution of a reference preparation having an activity of 1000 IU/mL.

Keep the test solution and the reference solution in iced water and use within 6 h. Prepare 3 serial 1.5-fold dilutions of the reference preparation such that the longest clot-lysis time is less than 20 min and the shortest clot-lysis time is greater than 3 min. Prepare 3 similar dilutions of the test solution. Keep the solutions in iced water and use within 1 h. Use 24 tubes 8 mm in diameter. Label the tubes $T_1$, $T_2$ and $T_3$ for the dilutions of the test solution and $S_1$, $S_2$ and $S_3$ for the dilutions of the reference solution, allocating 4 tubes to each dilution. Place the tubes in iced water. Into each tube, introduce 0.2 mL

of the appropriate dilution, 0.2 mL of *phosphate buffer solution pH 7.4 R* containing 30 g/L of *bovine albumin R* and 0.1 mL of a solution of *human thrombin R* having an activity of not less than 20 IU/mL. Place the tubes in a water-bath at 37 °C and allow to stand for 2 min to attain temperature equilibrium. Using an automatic pipette, introduce into the bottom of the 1st tube 0.5 mL of a 10 g/L solution of *bovine euglobulins R*, ensuring mixing. At intervals of 5 s, introduce successively into the remaining tubes 0.5 mL of a 10 g/L solution of *bovine euglobulins R*. Using a stop-watch, measure for each tube the time in seconds that elapses between the addition of the euglobulins solution and the lysis of the clot. Plot the logarithms of the lysis times for the substance to be examined and for the reference preparation against the logarithms of the concentration and calculate the activity of the substance to be examined using the usual statistical methods.

The estimated potency is not less than 90 per cent and not more than 111 per cent of the stated potency. The confidence limits ($P$ = 0.95) of the estimated potency are not less than 80 per cent and not more than 125 per cent of the stated potency.

STORAGE

In an airtight container, protected from light, at a temperature not exceeding 8 °C. If the substance is sterile, store in a sterile, airtight, tamper-evident container.

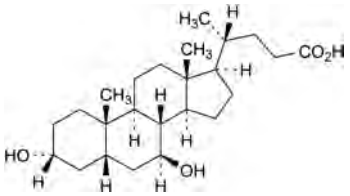
LABELLING

The label states the potency in International Units per milligram of protein.

**01/2017:1275**

# URSODEOXYCHOLIC ACID

## Acidum ursodeoxycholicum



$C_{24}H_{40}O_4$ $M_r$ 392.6
[128-13-2]

DEFINITION

3α,7β-Dihydroxy-5β-cholan-24-oic acid.

*Content*: 99.0 per cent to 101.0 per cent (dried substance).

CHARACTERS

*Appearance*: white or almost white powder.

*Solubility*: practically insoluble in water, freely soluble in ethanol (96 per cent), slightly soluble in acetone, practically insoluble in methylene chloride.

mp: about 202 °C.

IDENTIFICATION

*First identification: A.*

*Second identification: B, C.*

A. Infrared absorption spectrophotometry (*2.2.24*).
*Comparison*: *ursodeoxycholic acid CRS.*

B. Examine the chromatograms obtained in the test for impurity C.
*Results*: the principal spot in the chromatogram obtained with test solution (b) is similar in position, colour and size to the principal spot in the chromatogram obtained with reference solution (a).

C. Dissolve about 10 mg in 1 mL of *sulfuric acid R*. Add 0.1 mL of *formaldehyde solution R* and allow to stand for 5 min. Add 5 mL of *water R*. The suspension obtained is greenish-blue.

TESTS

**Specific optical rotation** (*2.2.7*): + 58.0 to + 62.0 (dried substance).

Dissolve 0.500 g in *anhydrous ethanol R* and dilute to 25.0 mL with the same solvent.

**Impurity C**. Thin-layer chromatography (*2.2.27*).

*Solvent mixture*: *water R*, *acetone R* (10:90 *V/V*).

*Test solution (a).* Dissolve 0.40 g of the substance to be examined in the solvent mixture and dilute to 10 mL with the solvent mixture.

*Test solution (b).* Dilute 1 mL of test solution (a) to 10 mL with the solvent mixture.

*Reference solution (a).* Dissolve 40 mg of *ursodeoxycholic acid CRS* in the solvent mixture and dilute to 10 mL with the solvent mixture.

*Reference solution (b).* Dissolve 20 mg of *lithocholic acid CRS* (impurity C) in the solvent mixture and dilute to 10.0 mL with the solvent mixture (solution A). Dilute 2.0 mL of this solution to 100.0 mL with the solvent mixture.

*Reference solution (c).* To 5 mL of solution A add 10 mg of *chenodeoxycholic acid CRS* (impurity A) and dilute to 50 mL with the solvent mixture.

*Plate*: *TLC silica gel plate R.*

*Mobile phase*: *glacial acetic acid R*, *acetone R*, *methylene chloride R* (1:30:60 *V/V/V*).

*Application*: 5 µL.

*Development*: over 2/3 of the plate.

*Drying*: at 120 °C for 10 min.

*Detection*: spray immediately with a 47.6 g/L solution of *phosphomolybdic acid R* in a mixture of 1 volume of *sulfuric acid R* and 20 volumes of *glacial acetic acid R* and heat at 120 °C until blue spots appear on a lighter background.

*System suitability*: reference solution (c):

– the chromatogram shows 2 clearly separated principal spots.

*Limit*: test solution (a):

– *impurity C*: any spot due to impurity C is not more intense than the principal spot in the chromatogram obtained with reference solution (b) (0.1 per cent).

**Related substances**. Liquid chromatography (*2.2.29*).

*Solvent mixture*: *methanol R*, mobile phase (10:90 *V/V*).

*Test solution.* Dissolve 60 mg of the substance to be examined in the solvent mixture and dilute to 20.0 mL with the solvent mixture.

*Reference solution (a).* Dissolve the contents of a vial of *ursodeoxycholic acid for system suitability CRS* (containing impurities A and H) in 1.0 mL of the solvent mixture.

*Reference solution (b).* Dilute 1.0 mL of the test solution to 100.0 mL with the solvent mixture. Dilute 1.0 mL of this solution to 10.0 mL with the solvent mixture.

*Column*:

– *size*: *l* = 0.25 m, Ø = 4.6 mm;
– *stationary phase*: *end-capped octadecylsilyl silica gel for chromatography R* (5 µm);
– *temperature*: 40 °C ± 1 °C.

*Mobile phase*: mix 30 volumes of *acetonitrile R*, 37 volumes of a 0.78 g/L solution of *sodium dihydrogen phosphate R* adjusted to pH 3 with *phosphoric acid R*, and 40 volumes of *methanol R*.

*Flow rate*: 0.8 mL/min.

*Detection*: refractometer at 35 ± 1 °C.

*Injection*: 150 µL.

*Run time*: 4 times the retention time of ursodeoxycholic acid.

*Identification of impurities*: use the chromatogram supplied with *ursodeoxycholic acid for system suitability CRS* and the chromatogram obtained with reference solution (a) to identify the peaks due to impurities A and H.

*Relative retention* with reference to ursodeoxycholic acid (retention time = about 14 min): impurity H = about 0.9; impurity A = about 2.8.

*System suitability*: reference solution (a):

– *resolution*: minimum 1.5 between the peaks due to impurity H and ursodeoxycholic acid.

*Limits*:

– *impurity A*: not more than 10 times the area of the principal peak in the chromatogram obtained with reference solution (b) (1.0 per cent);

– *unspecified impurities*: for each impurity, not more than the area of the principal peak in the chromatogram obtained with reference solution (b) (0.10 per cent);

– *total*: not more than 15 times the area of the principal peak in the chromatogram obtained with reference solution (b) (1.5 per cent);

– *disregard limit*: 0.5 times the area of the principal peak in the chromatogram obtained with reference solution (b) (0.05 per cent).

**Loss on drying** (*2.2.32*): maximum 1.0 per cent, determined on 1.000 g by drying in an oven at 105 °C.

**Sulfated ash** (*2.4.14*): maximum 0.1 per cent, determined on 1.0 g.

ASSAY

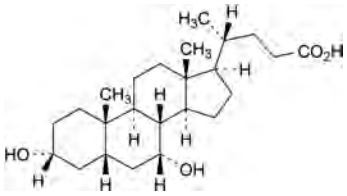
Dissolve 0.350 g in 50 mL of *ethanol (96 per cent) R*, previously neutralised to 0.2 mL of *phenolphthalein solution R*. Add 50 mL of *water R* and titrate with *0.1 M sodium hydroxide* until a pink colour is obtained.

1 mL of *0.1 M sodium hydroxide* is equivalent to 39.26 mg of $C_{24}H_{40}O_4$.

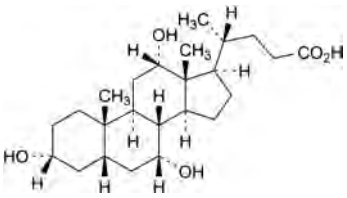
IMPURITIES

*Specified impurities: A, C.*

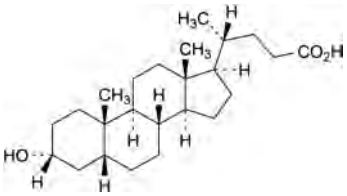
*Other detectable impurities* (the following substances would, if present at a sufficient level, be detected by one or other of the tests in the monograph. They are limited by the general acceptance criterion for other/unspecified impurities and/or by the general monograph *Substances for pharmaceutical use (2034)*. It is therefore not necessary to identify these impurities for demonstration of compliance. See also *5.10. Control of impurities in substances for pharmaceutical use*): *B, D, E, F, G, H, I.*



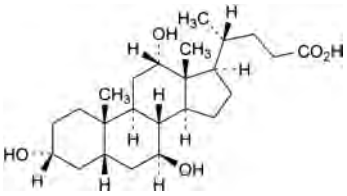
A. 3α,7α-dihydroxy-5β-cholan-24-oic acid (chenodeoxycholic acid),



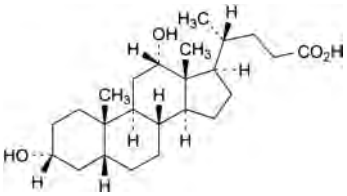
B. 3α,7α,12α-trihydroxy-5β-cholan-24-oic acid (cholic acid),



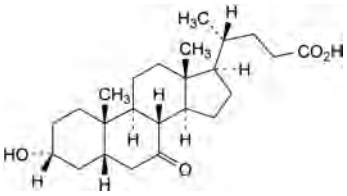
C. 3α-hydroxy-5β-cholan-24-oic acid (lithocholic acid),



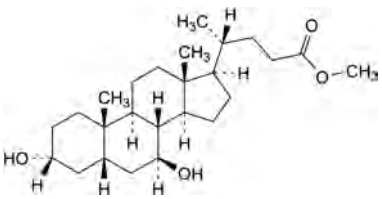
D. 3α,7β,12α-trihydroxy-5β-cholan-24-oic acid (ursocholic acid),



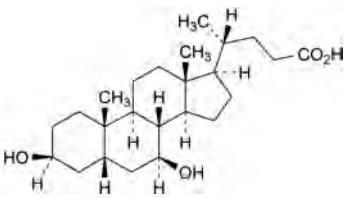
E. 3α,12α-dihydroxy-5β-cholan-24-oic acid (deoxycholic acid),



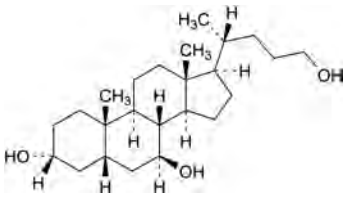
F. 3α-hydroxy-7-oxo-5β-cholan-24-oic acid,



G. methyl 3α,7β-dihydroxy-5β-cholan-24-oate,



H. 3β,7β-dihydroxy-5β-cholan-24-oic acid,



I. 5β-cholane-3α,7β,24-triol.

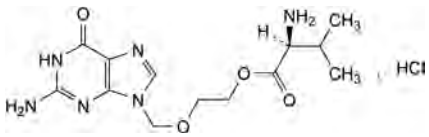
# VALACICLOVIR HYDROCHLORIDE

## Valacicloviri hydrochloridum



$C_{13}H_{21}ClN_6O_4$ $M_r$ 360.8
[124832-27-5]

DEFINITION

2-[(2-Amino-6-oxo-1,6-dihydro-9*H*-purin-9-yl)-methoxy]ethyl L-valinate hydrochloride.

*Content*: 95.0 per cent to 102.0 per cent (anhydrous substance).

CHARACTERS

*Appearance*: white or almost white powder.

*Solubility*: freely soluble in water, slightly soluble in anhydrous ethanol.

It shows polymorphism (*5.9*).

IDENTIFICATION

Carry out either tests A, B, C, E or tests A, B, D, E.

A. Infrared absorption spectrophotometry (*2.2.24*).

*Comparison*: *anhydrous valaciclovir hydrochloride CRS*.

If the spectra obtained in the solid state show differences, dissolve the substance to be examined and the reference substance separately in the minimum volume of *anhydrous ethanol R* and evaporate to dryness in a desiccator, under high vacuum, over *diphosphorus pentoxide R*. Record new spectra using the residues.

B. It gives reaction (a) of chlorides (*2.3.1*).

C. It complies with the limit for impurity R given in test A for related substances.

D. Optical rotation (*2.2.7*): laevorotatory.

Dissolve 2.50 g in *water R* and dilute to 50.0 mL with the same solvent.

E. Water (see Tests).

TESTS

**Impurities E, F and G**. Thin-layer chromatography (*2.2.27*).

*Test solution*. Dissolve 0.250 g of the substance to be examined in 2 mL of *water R* and dilute to 5.0 mL with *ethanol (96 per cent) R*.

*Reference solution (a)*. Dissolve 5 mg of *valaciclovir impurity D CRS*, 5.0 mg of *valaciclovir impurity E CRS*, 5.0 mg of *valaciclovir impurity G CRS* and 8.4 mg of *valaciclovir impurity F para-toluenesulfonate CRS* in a mixture of 2 mL of *water R* and 6 mL of *ethanol (96 per cent) R*, and dilute to 10.0 mL with *ethanol (96 per cent) R*.

*Reference solution (b)*. Dilute 3.0 mL of reference solution (a) to 10.0 mL with *ethanol (96 per cent) R*.

*Reference solution (c)*. Dilute 2.0 mL of reference solution (a) to 10.0 mL with *ethanol (96 per cent) R*.

*Reference solution (d)*. Dilute 0.5 mL of reference solution (a) to 10.0 mL with *ethanol (96 per cent) R*.

*Plate*: *TLC silica gel $F_{254}$ plate R* (2-10 µm).

*Pretreatment*: wash the plate with *methanol R* until the solvent front has migrated over at least 4/5 of the plate; allow the plate to dry.

*Mobile phase*: *concentrated ammonia R*, *tetrahydrofuran R*, *methanol R*, *methylene chloride R* (3:12:34:54 *V/V/V/V*); use freshly prepared mobile phase.

*Application*: 4 µL of the test solution and reference solutions (b), (c) and (d).

*Development*: over 4/5 of the plate.

*Drying*: in a current of air.

*Detection*: examine in ultraviolet light at 254 nm for impurities E and G; spray with a 0.1 g/L solution of *fluorescamine R* in *ethylene chloride R* and examine in ultraviolet light at 365 nm for impurity F.

*Retardation factors*: impurity A = about 0; impurity B = about 0.2; valaciclovir = about 0.3; impurity C = about 0.5; impurity D = about 0.6; impurity E = about 0.7; impurity F = about 0.75; impurity G = about 0.79; impurity C is masked by the leading edge of the spot due to valaciclovir; impurities F and G may co-elute, but this does not adversely affect their quantification because they are visualised differently.

*System suitability*: the chromatograms obtained with reference solutions (b), (c) and (d) each show 3 clearly separated spots when examined under ultraviolet light at 254 nm, due to impurities D, E and G.

*Limits*:

- *impurity E*: any spot due to impurity E is not more intense than the corresponding spot in the chromatogram obtained with reference solution (c) (0.2 per cent);
- *impurity F*: any spot due to impurity F is not more intense than the corresponding spot in the chromatogram obtained with reference solution (b) (0.3 per cent calculated as hydrochloride salt);
- *impurity G*: any spot due to impurity G is not more intense than the corresponding spot in the chromatogram obtained with reference solution (d) (0.05 per cent).

**Related substances**.

A. Impurities A, B, I and R. Liquid chromatography (*2.2.29*): use the normalisation procedure.

*Test solution*. Dissolve 50.0 mg of the substance to be examined in a 0.5 per cent *V/V* solution of *hydrochloric acid R* and dilute to 100.0 mL with the same solution.

*Reference solution (a)*. Dissolve 2.5 mg of *valaciclovir for system suitability CRS* (containing impurities A, B, C, D, H, I, J, M and R) in a 0.5 per cent *V/V* solution of *hydrochloric acid R* and dilute to 5.0 mL with the same solution.

*Reference solution (b)*. Dissolve 50.0 mg of *anhydrous valaciclovir hydrochloride CRS* in a 0.5 per cent *V/V* solution of *hydrochloric acid R* and dilute to 100.0 mL with the same solution.

*Reference solution (c)*. Dilute 3.0 mL of the test solution to 100.0 mL with a 0.5 per cent *V/V* solution of *hydrochloric acid R*. Dilute 1.0 mL of this solution to 100.0 mL with a 0.5 per cent *V/V* solution of *hydrochloric acid R*.

*Column*:

- *size*: *l* = 0.15 m, Ø = 4.0 mm;
- *stationary phase*: *crown-ether silica gel for chiral separation R* (5 µm);
- *temperature*: 10 °C.

*Mobile phase*: *perchloric acid R*, *methanol R*, *water for chromatography R* (0.5:5:95 *V/V/V*).

*Flow rate*: 0.75 mL/min.

*Detection*: spectrophotometer at 254 nm.

*Injection*: 10 µL of the test solution and reference solutions (a) and (c).

*Run time*: 1.5 times the retention time of valaciclovir.

*Identification of impurities*: use the chromatogram supplied with *valaciclovir for system suitability CRS* and the chromatogram obtained with reference solution (a) to identify the peaks due to impurities A + B, C + R, D, I and M.

*Relative retention* with reference to valaciclovir (retention time = about 21 min): impurities A and B = about 0.2; impurity I = about 0.4; impurities C and R = about 0.6; impurity D = about 0.7; impurity M = about 1.3.

*System suitability*: reference solution (a):

– *peak-to-valley ratio*: minimum 1.5, where $H_p$ = height above the baseline of the peak due to impurity D and $H_v$ = height above the baseline of the lowest point of the curve separating this peak from the peak due to impurities C and R.

*Limits*:

– *correction factor*: for the calculation of content, multiply the peak area of impurities A and B by 0.7;
– *impurity R*: maximum 3.0 per cent; for the calculation, subtract the content of impurity C as determined in test B for related substances from the content of the coeluting impurities C and R as determined in this test;
– *sum of impurities A and B*: maximum 2.0 per cent;
– *impurity I*: maximum 0.2 per cent;
– *disregard limit*: the area of the principal peak in the chromatogram obtained with reference solution (c) (0.03 per cent); disregard any peaks due to impurities other than A + B, C + R or I.

B. Liquid chromatography (*2.2.29*): use the normalisation procedure. *Use the solutions within 24 h of preparation.*

*Solvent mixture*: *ethanol (96 per cent) R*, *water R* (20:80 *V/V*).

*Test solution*. Dissolve 40 mg of the substance to be examined in the solvent mixture and dilute to 100.0 mL with the solvent mixture.

*Reference solution (a)*. Dissolve 2.5 mg of *valaciclovir for system suitability CRS* (containing impurities A, B, C, D, H, I, J, M and R) in the solvent mixture and dilute to 5.0 mL with the solvent mixture.

*Reference solution (b)*. Dilute 1.0 mL of the test solution to 100.0 mL with the solvent mixture. Dilute 1.0 mL of this solution to 20.0 mL with the solvent mixture.

*Column*:

– *size*: *l* = 0.25 m, Ø = 4.6 mm;
– *stationary phase*: *end-capped phenylhexylsilyl silica gel for chromatography R* (5 µm);
– *temperature*: 15 °C.

*Mobile phase*:

– *mobile phase A*: *trifluoroacetic acid R*, *water for chromatography R* (0.2:100 *V/V*);
– *mobile phase B*: *trifluoroacetic acid R*, *methanol R2* (0.2:100 *V/V*);

| Time (min) | Mobile phase A (per cent *V/V*) | Mobile phase B (per cent *V/V*) |
|---|---|---|
| 0 - 5 | 90 | 10 |
| 5 - 35 | 90 → 60 | 10 → 40 |

*Flow rate*: 0.8 mL/min.

*Detection*: spectrophotometer at 254 nm.

*Injection*: 10 µL.

*Identification of impurities*: use the chromatogram supplied with *valaciclovir for system suitability CRS* and the chromatogram obtained with reference solution (a) to identify the peaks due to impurities A, B, C, D, H, I, J and M.

*Relative retention* with reference to valaciclovir (retention time = about 19 min): impurity A = about 0.3; impurity B = about 0.4; impurity H = about 0.5; impurity C = about 1.06; impurity I = about 1.09; impurity D = about 1.2; impurity J = about 1.3; impurity M = about 1.6.

*System suitability*: reference solution (a):

– *peak-to-valley ratio*: minimum 2.5, where $H_p$ = height above the baseline of the peak due to impurity C and $H_v$ = height above the baseline of the lowest point of the curve separating this peak from the peak due to valaciclovir;
– the chromatogram obtained is similar to the chromatogram supplied with *valaciclovir for system suitability CRS*.

*Limits*:

– *impurity M*: maximum 1.5 per cent;
– *impurity D*: maximum 0.5 per cent;
– *impurity C*: maximum 0.3 per cent;
– *impurities H, J*: for each impurity, maximum 0.10 per cent;
– *unspecified impurities*: for each impurity, maximum 0.05 per cent;
– *disregard limit*: 0.6 times the area of the principal peak in the chromatogram obtained with reference solution (b) (0.03 per cent); disregard the peaks due to impurities A, B and I.

*Limit*:

– *total for tests A and B*: maximum 5.0 per cent.

**Chloride**: 9.4 to 9.9 per cent (anhydrous and solvent-free substance).

Dissolve 0.350 g in 100 mL of *water R* and add 0.2 mL of *nitric acid R*. Carry out a potentiometric titration (*2.2.20*), using *0.1 M silver nitrate*. Use a silver indicator electrode and a silver-silver chloride reference electrode or a combined silver electrode. Discard the result from the first titration, which is used to condition the electrodes. Carry out a blank titration.

1 mL of *0.1 M silver nitrate* is equivalent to 3.543 mg of Cl.

**Water** (*2.5.12*): maximum 2.0 per cent, determined on 0.250 g.

**Sulfated ash** (*2.4.14*): maximum 0.1 per cent, determined on 1.0 g.

ASSAY

Liquid chromatography (*2.2.29*) as described in test A for related substances with the following modification.

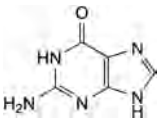
*Injection*: test solution and reference solution (b).

Calculate the percentage content of $C_{13}H_{21}ClN_6O_4$ taking into account the assigned content of *anhydrous valaciclovir hydrochloride CRS*.

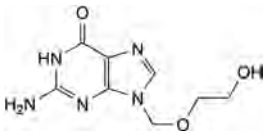
IMPURITIES

*Specified impurities: A, B, C, D, E, F, G, H, I, J, M, R.*

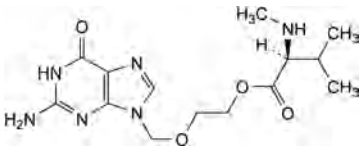
*Other detectable impurities* (the following substances would, if present at a sufficient level, be detected by one or other of the tests in the monograph. They are limited by the general acceptance criterion for other/unspecified impurities and/or by the general monograph *Substances for pharmaceutical use (2034)*. It is therefore not necessary to identify these impurities for demonstration of compliance. See also *5.10. Control of impurities in substances for pharmaceutical use*): *K, L, N, O, P, Q.*



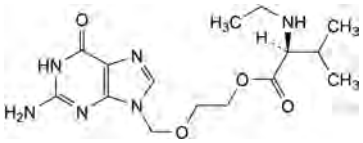
A. 2-amino-1,9-dihydro-6*H*-purin-6-one (guanine),



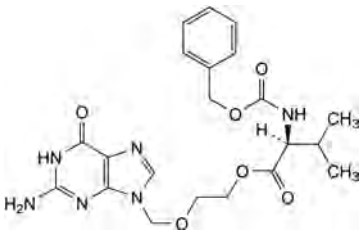
B. 2-amino-9-[(2-hydroxyethoxy)methyl]-1,9-dihydro-6*H*-purin-6-one (aciclovir),



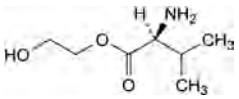
C. 2-[(2-amino-6-oxo-1,6-dihydro-9*H*-purin-9-yl)methoxy]ethyl *N*-methyl-L-valinate,



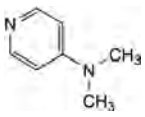
D. 2-[(2-amino-6-oxo-1,6-dihydro-9*H*-purin-9-yl)methoxy]ethyl *N*-ethyl-L-valinate,



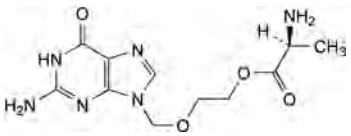
E. 2-[(2-amino-6-oxo-1,6-dihydro-9*H*-purin-9-yl)methoxy]ethyl *N*-[(benzyloxy)carbonyl]-L-valinate,



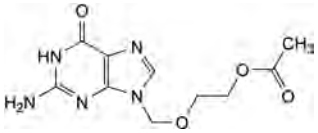
F. 2-hydroxyethyl L-valinate,



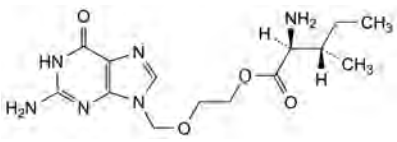
G. *N*,*N*-dimethylpyridin-4-amine,



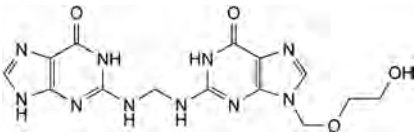
H. 2-[(2-amino-6-oxo-1,6-dihydro-9*H*-purin-9-yl)methoxy]ethyl L-alaninate,



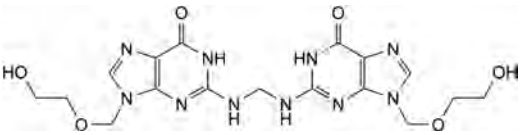
I. 2-[(2-amino-6-oxo-1,6-dihydro-9*H*-purin-9-yl)methoxy]ethyl acetate,



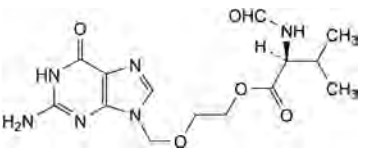
J. 2-[(2-amino-6-oxo-1,6-dihydro-9*H*-purin-9-yl)methoxy]ethyl L-isoleucinate,



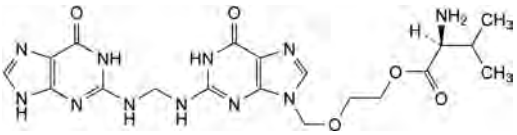
K. 9-[(2-hydroxyethoxy)methyl]-2-[[[(6-oxo-6,9-dihydro-1*H*-purin-2-yl)amino]methyl]amino]-1,9-dihydro-6*H*-purin-6-one,



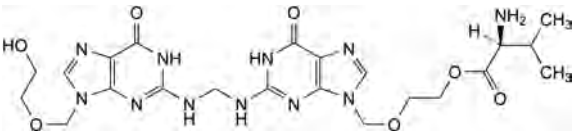
L. 2,2′-(methylenediazanediyl)bis[9-[(2-hydroxyethoxy)methyl]-1,9-dihydro-6*H*-purin-6-one],



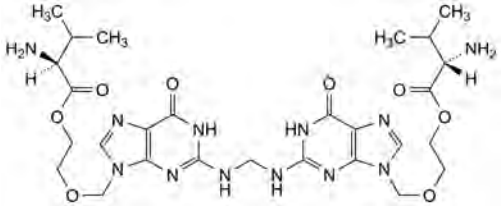
M. 2-[(2-amino-6-oxo-1,6-dihydro-9*H*-purin-9-yl)methoxy]ethyl *N*-formyl-L-valinate,



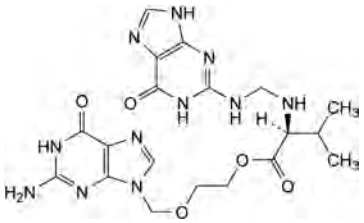
N. 2-[[6-oxo-2-[[[(6-oxo-6,9-dihydro-1*H*-purin-2-yl)amino]methyl]amino]-1,6-dihydro-9*H*-purin-9-yl]methoxy]ethyl L-valinate,



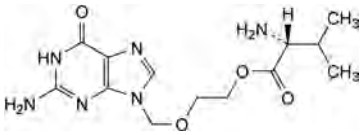
O. 2-[[2-[[[9-[(2-hydroxyethoxy)methyl]-6-oxo-6,9-dihydro-1*H*-purin-2-yl]amino]methyl]amino]-6-oxo-1,6-dihydro-9*H*-purin-9-yl]methoxy]ethyl L-valinate,



P. [methylenebis[azanediyl(6-oxo-1,6-dihydro-9*H*-purine-2,9-diyl)methyleneoxyethan-2,1-diyl]] di-L-valinate,



Q. 2-[(2-amino-6-oxo-1,6-dihydro-9*H*-purin-9-yl)methoxy]ethyl *N*-[[(6-oxo-6,9-dihydro-1*H*-purin-2-yl)amino]methyl]-L-valinate,

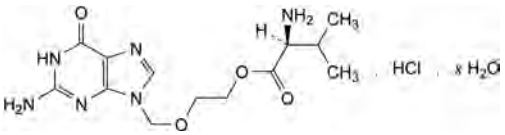


R. 2-[(2-amino-6-oxo-1,6-dihydro-9*H*-purin-9-yl)methoxy]ethyl D-valinate.

**07/2019:2751**

# VALACICLOVIR HYDROCHLORIDE HYDRATE

## Valacicloviri hydrochloridum hydricum



$C_{13}H_{21}ClN_6O_4,xH_2O$ $M_r$ 360.8 (anhydrous substance)
[1218948-84-5]

DEFINITION

2-[(2-Amino-6-oxo-1,6-dihydro-9*H*-purin-9-yl)methoxy]-ethyl L-valinate hydrochloride hydrate.

*Content*: 95.0 per cent to 102.0 per cent (anhydrous substance).

It contains a variable quantity of water.

CHARACTERS

*Appearance*: white or almost white powder, hygroscopic.

*Solubility*: freely soluble in water, very slightly soluble in anhydrous ethanol, practically insoluble in acetonitrile.

It shows polymorphism (*5.9*).

IDENTIFICATION

A. Infrared absorption spectrophotometry (*2.2.24*).

*Preparation*: dissolve the substance to be examined in the minimum volume of *water R*, evaporate to dryness at room temperature and record the spectrum using the residue.

*Comparison*: repeat the operations using *anhydrous valaciclovir hydrochloride CRS*.

B. It complies with the limit for impurity R (see test A for related substances).

C. Water (see Tests).

D. It gives reaction (a) of chlorides (*2.3.1*).

TESTS

**Impurities G and S**. Thin-layer chromatography (*2.2.27*).

*Test solution*. Dissolve 0.250 g of the substance to be examined in 2 mL of *water R* and dilute to 5.0 mL with *ethanol (96 per cent) R*.

*Reference solution*. Dissolve 5.0 mg of *valaciclovir impurity G CRS* and 5.0 mg of *valaciclovir impurity S CRS* in a mixture of 2 mL of *water R* and 6 mL of *ethanol (96 per cent) R* and dilute to 10.0 mL with *ethanol (96 per cent) R*. Dilute 0.5 mL of the solution to 10.0 mL with *ethanol (96 per cent) R*.

*Plate*: *TLC silica gel $F_{254}$ plate R* (2-10 µm).

*Pretreatment*: wash the plate with *methanol R* until the solvent front has migrated over at least 4/5 of the plate; allow to dry in air.

*Mobile phase*: *concentrated ammonia R*, *tetrahydrofuran R*, *methanol R*, *methylene chloride R* (3:12:34:54 *V/V/V/V*); use freshly prepared mobile phase.

*Application*: 4 µL.

*Development*: over 4/5 of the plate.

*Drying*: in a current of air.

*Detection*: examine in ultraviolet light at 254 nm.

*Retardation factors*: valaciclovir = about 0.3; impurity S = about 0.7; impurity G = about 0.8.

*System suitability*: the chromatogram obtained with the reference solution shows 2 clearly separated spots due to impurities S and G.

*Limits*:

– *impurity G*: any spot due to impurity G is not more intense than the corresponding spot in the chromatogram obtained with the reference solution (0.05 per cent);

– *impurity S*: any spot due to impurity S is not more intense than the corresponding spot in the chromatogram obtained with the reference solution (0.05 per cent).

**Related substances**

A. Liquid chromatography (*2.2.29*): use the normalisation procedure.

*Test solution*. Dissolve 50.0 mg of the substance to be examined in a 0.5 per cent *V/V* solution of *hydrochloric acid R* and dilute to 100.0 mL with the same solution.

*Reference solution (a)*. Dissolve 2.5 mg of *valaciclovir for system suitability CRS* (containing impurities A, B, C, D, H, M and R) in a 0.5 per cent *V/V* solution of *hydrochloric acid R* and dilute to 5.0 mL with the same solution.

*Reference solution (b)*. Dissolve 50.0 mg of *anhydrous valaciclovir hydrochloride CRS* in a 0.5 per cent *V/V* solution of *hydrochloric acid R* and dilute to 100.0 mL with the same solution.

*Reference solution (c)*. Dilute 3.0 mL of the test solution to 100.0 mL with a 0.5 per cent *V/V* solution of *hydrochloric acid R*. Dilute 1.0 mL of this solution to 100.0 mL with a 0.5 per cent *V/V* solution of *hydrochloric acid R*.

*Column*:

– *size*: *l* = 0.15 m, Ø = 4.0 mm;

– *stationary phase*: *crown-ether silica gel for chiral separation R* (5 µm);

– *temperature*: 10 °C.

*Mobile phase*: *perchloric acid R*, *methanol R*, *water for chromatography R* (0.5:5:95 *V/V/V*).

*Flow rate*: 0.75 mL/min.

*Detection*: spectrophotometer at 254 nm.

*Injection*: 10 µL of the test solution and reference solutions (a) and (c).

*Run time*: 1.5 times the retention time of valaciclovir.

*Identification of impurities*: use the chromatogram supplied with *valaciclovir for system suitability CRS* and the chromatogram obtained with reference solution (a) to identify the peaks due to impurities A + B, C + R, D and M.

*Relative retention* with reference to valaciclovir (retention time = about 17 min): impurities A and B = about 0.2; impurities C and R = about 0.6; impurity D = about 0.7; impurity M = about 1.3.

*System suitability*: reference solution (a):

– *peak-to-valley ratio*: minimum 1.5, where $H_p$ = height above the baseline of the peak due to impurity D and $H_v$ = height above the baseline of the lowest point of the curve separating this peak from the peak due to impurities C and R.

*Limits*:

– *correction factor*: for the calculation of content, multiply the peak area of impurities A and B by 0.7;
– *impurity R*: maximum 3.0 per cent; for the calculation, subtract the content of impurity C as determined in test B for related substances from the content of the coeluting impurities C and R as determined in this test;
– *sum of impurities A and B*: maximum 2.0 per cent;
– *disregard limit*: the area of the principal peak in the chromatogram obtained with reference solution (c) (0.03 per cent); disregard any peaks due to impurities other than A + B and C + R.

B. Liquid chromatography (*2.2.29*): use the normalisation procedure. *Use the solutions within 24 h of preparation.*

*Solvent mixture*: *ethanol (96 per cent) R*, *water R* (20:80 *V/V*).

*Test solution*. Dissolve 80 mg of the substance to be examined in the solvent mixture and dilute to 100.0 mL with the solvent mixture.

*Reference solution (a)*. Dissolve 1.6 mg of *valaciclovir for system suitability CRS* (containing impurities A, B, C, D, H, M and R) in the solvent mixture and dilute to 2.0 mL with the solvent mixture.

*Reference solution (b)*. Dilute 1.0 mL of the test solution to 100.0 mL with the solvent mixture. Dilute 1.0 mL of this solution to 20.0 mL with the solvent mixture.

*Reference solution (c)*. Dissolve 2 mg of *valaciclovir impurity P CRS* in the solvent mixture and dilute to 25.0 mL with the solvent mixture. Dilute 1.0 mL of the solution to 100.0 mL with the solvent mixture.

*Column*:

– *size*: *l* = 0.25 m, Ø = 4.6 mm;
– *stationary phase*: *end-capped phenylhexylsilyl silica gel for chromatography R* (5 µm);
– *temperature*: 15 °C.

*Mobile phase*:

– *mobile phase A*: *trifluoroacetic acid R*, *water for chromatography R* (0.2:100 *V/V*);
– *mobile phase B*: *trifluoroacetic acid R*, *methanol R2* (0.2:100 *V/V*);

| Time (min) | Mobile phase A (per cent *V/V*) | Mobile phase B (per cent *V/V*) |
|---|---|---|
| 0 - 5 | 90 | 10 |
| 5 - 35 | 90 → 60 | 10 → 40 |
| 35 - 45 | 60 | 40 |

*Flow rate*: 0.8 mL/min.

*Detection*: spectrophotometer at 254 nm.

*Injection*: 10 µL.

*Identification of impurities*: use the chromatogram supplied with *valaciclovir for system suitability CRS* and the chromatogram obtained with reference solution (a) to identify the peaks due to impurities A, B, C, D, H and M; use the chromatogram obtained with reference solution (c) to identify the peak due to impurity P.

*Relative retention* with reference to valaciclovir (retention time = about 20 min): impurity A = about 0.3; impurity B = about 0.4; impurity H = about 0.5; impurity C = about 1.06; impurity D = about 1.2; impurity M = about 1.6; impurity P = about 2.0.

*System suitability*: reference solution (a):

– *peak-to-valley ratio*: minimum 2.0, where $H_p$ = height above the baseline of the peak due to impurity C and $H_v$ = height above the baseline of the lowest point of the curve separating this peak from the peak due to valaciclovir.

*Limits*:

– *impurity M*: maximum 0.6 per cent;
– *impurity D*: maximum 0.3 per cent;
– *impurity C*: maximum 0.2 per cent;
– *impurities H, P*: for each impurity, maximum 0.10 per cent;
– *unspecified impurities*: for each impurity, maximum 0.05 per cent;
– *disregard limit*: 0.6 times the area of the principal peak in the chromatogram obtained with reference solution (b) (0.03 per cent); disregard the peaks due to impurities A and B.

*Limit*:

– *total for tests A and B*: maximum 4.0 per cent.

**Water** (*2.5.12*): 4.5 per cent to 11.0 per cent, determined on 0.100 g.

**Sulfated ash** (*2.4.14*): maximum 0.1 per cent, determined on 1.0 g.

ASSAY

Liquid chromatography (*2.2.29*) as described in test A for related substances with the following modification.

*Injection*: test solution and reference solution (b).

Calculate the percentage content of $C_{13}H_{21}ClN_6O_4$ taking into account the assigned content of *anhydrous valaciclovir hydrochloride CRS*.

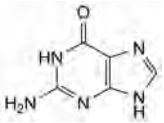
STORAGE

In an airtight container.

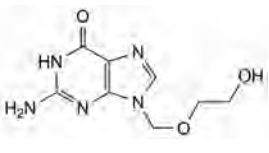
IMPURITIES

*Specified impurities: A, B, C, D, G, H, M, P, R, S.*

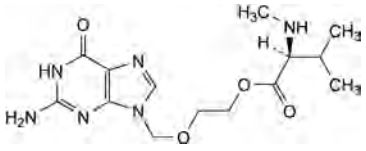
*Other detectable impurities* (the following substances would, if present at a sufficient level, be detected by one or other of the tests in the monograph. They are limited by the general acceptance criterion for other/unspecified impurities and/or by the general monograph *Substances for pharmaceutical use (2034)*. It is therefore not necessary to identify these impurities for demonstration of compliance. See also *5.10. Control of impurities in substances for pharmaceutical use*): *I, J, N.*



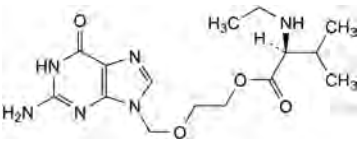
A. 2-amino-1,9-dihydro-6*H*-purin-6-one (guanine),



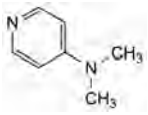
B. 2-amino-9-[(2-hydroxyethoxy)methyl]-1,9-dihydro-6*H*-purin-6-one (aciclovir),



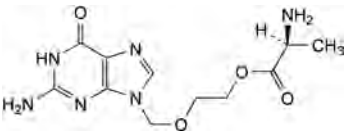
C. 2-[(2-amino-6-oxo-1,6-dihydro-9*H*-purin-9-yl)methoxy]ethyl *N*-methyl-L-valinate,



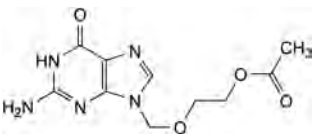
D. 2-[(2-amino-6-oxo-1,6-dihydro-9*H*-purin-9-yl)methoxy]ethyl *N*-ethyl-L-valinate,



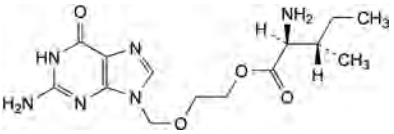
G. *N*,*N*-dimethylpyridin-4-amine,



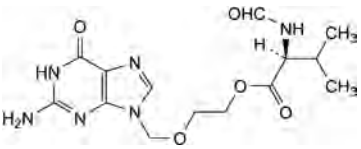
H. 2-[(2-amino-6-oxo-1,6-dihydro-9*H*-purin-9-yl)methoxy]ethyl L-alaninate,



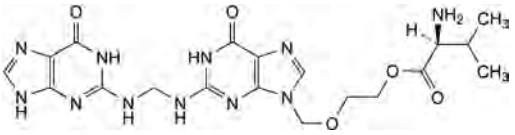
I. 2-[(2-amino-6-oxo-1,6-dihydro-9*H*-purin-9-yl)methoxy]ethyl acetate,



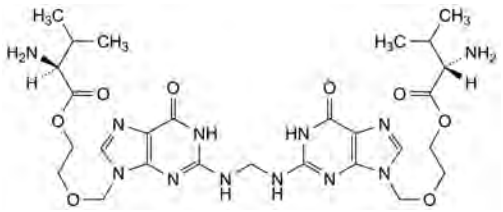
J. 2-[(2-amino-6-oxo-1,6-dihydro-9*H*-purin-9-yl)methoxy]ethyl L-isoleucinate,



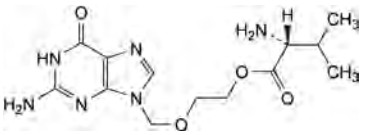
M. 2-[(2-amino-6-oxo-1,6-dihydro-9*H*-purin-9-yl)methoxy]ethyl *N*-formyl-L-valinate,



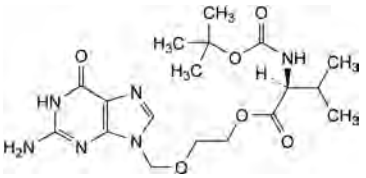
N. 2-[[6-oxo-2-[[[(6-oxo-6,9-dihydro-1*H*-purin-2-yl)amino]methyl]amino]-1,6-dihydro-9*H*-purin-9-yl]methoxy]ethyl L-valinate,



P. [methylenebis[azanediyl(6-oxo-1,6-dihydro-9*H*-purine-2,9-diyl)methyleneoxyethan-2,1-diyl]] di-L-valinate,



R. 2-[(2-amino-6-oxo-1,6-dihydro-9*H*-purin-9-yl)methoxy]ethyl D-valinate,

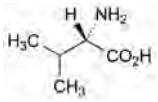


S. 2-[(2-amino-6-oxo-1,6-dihydro-9*H*-purin-9-yl)methoxy]ethyl *N*-(*tert*-butoxycarbonyl)-L-valinate.

**01/2017:0796**

# VALINE

## Valinum



$C_5H_{11}NO_2$ $M_r$ 117.1
[72-18-4]

DEFINITION

(2*S*)-2-Amino-3-methylbutanoic acid.

Product of fermentation or of protein hydrolysis.

*Content*: 98.5 per cent to 101.0 per cent (dried substance).

CHARACTERS

*Appearance*: white or almost white, crystalline powder or colourless crystals.

*Solubility*: soluble in water, very slightly soluble in ethanol (96 per cent).

IDENTIFICATION

*First identification: A, B.*

*Second identification: A, C.*

A. Specific optical rotation (see Tests).

B. Infrared absorption spectrophotometry (*2.2.24*).
*Comparison*: *valine CRS.*

C. Thin-layer chromatography (*2.2.27*).
*Test solution.* Dissolve 10 mg of the substance to be examined in a 10.3 g/L solution of *hydrochloric acid R* and dilute to 50 mL with the same solution.
*Reference solution.* Dissolve 10 mg of *valine CRS* in a 10.3 g/L solution of *hydrochloric acid R* and dilute to 50 mL with the same solution.
*Plate*: *TLC silica gel plate R.*
*Mobile phase*: *glacial acetic acid R*, *water R*, *butanol R* (20:20:60 *V/V/V*)
*Application*: 5 µL.
*Development*: over 2/3 of the plate.
*Drying*: in air.
*Detection*: spray with *ninhydrin solution R* and heat at 105 °C for 15 min.
*Results*: the principal spot in the chromatogram obtained with the test solution is similar in position, colour and size to the principal spot in the chromatogram obtained with the reference solution.

TESTS

**Solution S**. Dissolve 2.5 g in *water R* and dilute to 100 mL with the same solvent.

**Appearance of solution**. Solution S is clear (*2.2.1*) and not more intensely coloured than reference solution $BY_6$ (*2.2.2, Method II*).

**Specific optical rotation** (*2.2.7*): + 26.5 to + 29.0 (dried substance).

Dissolve 2.00 g in *hydrochloric acid R1* and dilute to 25.0 mL with the same acid.

**Ninhydrin-positive substances**. Amino acid analysis (*2.2.56*). For analysis, use Method 1.

The concentrations of the test solution and the reference solutions may be adapted according to the sensitivity of the equipment used. The concentrations of all solutions are adjusted so that the system suitability requirements described in general chapter *2.2.46* are fulfilled, keeping the ratios of concentrations between all solutions as described.

*Solution A*: *dilute hydrochloric acid R1* or a sample preparation buffer suitable for the apparatus used.

*Test solution*. Dissolve 30.0 mg of the substance to be examined in solution A and dilute to 50.0 mL with solution A.

*Reference solution (a)*. Dilute 1.0 mL of the test solution to 100.0 mL with solution A. Dilute 2.0 mL of this solution to 10.0 mL with solution A.

*Reference solution (b)*. Dissolve 30.0 mg of *proline R* in solution A and dilute to 100.0 mL with solution A. Dilute 1.0 mL of the solution to 250.0 mL with solution A.

*Reference solution (c)*. Dilute 6.0 mL of *ammonium standard solution (100 ppm $NH_4$) R* to 50.0 mL with solution A. Dilute 1.0 mL of this solution to 100.0 mL with solution A.

*Reference solution (d)*. Dissolve 30 mg of *isoleucine R* (impurity B) and 30 mg of *leucine R* (impurity C) in solution A and dilute to 50.0 mL with solution A. Dilute 1.0 mL of the solution to 200.0 mL with solution A.

*Reference solution (e)*. Dissolve 30.0 mg of *isoleucine R* (impurity B) in solution A and dilute to 100.0 mL with solution A. Dilute 1.0 mL of the solution to 250.0 mL with solution A.

*Blank solution*: solution A.

Inject suitable, equal amounts of the test, blank and reference solutions into the amino acid analyser. Run a program suitable for the determination of physiological amino acids.

*System suitability*: reference solution (d):

– *resolution*: minimum 1.5 between the peaks due to impurities B and C.

*Calculation of percentage contents*:

– for impurity B, use the concentration of impurity B in reference solution (e);

– for any ninhydrin-positive substance detected at 570 nm, use the concentration of valine in reference solution (a);

– for any ninhydrin-positive substance detected at 440 nm, use the concentration of proline in reference solution (b); if a peak is above the reporting threshold at both wavelengths, use the result obtained at 570 nm for quantification.

*Limits*:

– *impurity B at 570 nm*: maximum 0.4 per cent;

– *any ninhydrin-positive substance*: for each impurity, maximum 0.2 per cent;

– *total*: maximum 1.0 per cent;

– *reporting threshold*: 0.05 per cent.

The thresholds indicated under Related substances (Table 2034.-1) in the general monograph *Substances for pharmaceutical use (2034)* do not apply.

**Chlorides** (*2.4.4*): maximum 200 ppm.

Dilute 10 mL of solution S to 15 mL with *water R*.

**Sulfates** (*2.4.13*): maximum 300 ppm.

Dissolve 0.5 g in *distilled water R* and dilute to 15 mL with the same solvent.

**Ammonium**. Amino acid analysis (*2.2.56*) as described in the test for ninhydrin-positive substances with the following modifications.

*Injection*: test solution, reference solution (c) and blank solution.

*Limit*:

– *ammonium at 570 nm*: not more than the area of the corresponding peak in the chromatogram obtained with reference solution (c) (0.02 per cent), taking into account the peak due to ammonium in the chromatogram obtained with the blank solution.

**Iron** (*2.4.9*): maximum 10 ppm.

In a separating funnel, dissolve 1.0 g in 10 mL of *dilute hydrochloric acid R*. Shake with 3 quantities, each of 10 mL, of *methyl isobutyl ketone R1*, shaking for 3 min each time. To the combined organic layers add 10 mL of *water R* and shake for 3 min. Use the aqueous layer.

**Loss on drying** (*2.2.32*): maximum 0.5 per cent, determined on 1.000 g by drying in an oven at 105 °C.

**Sulfated ash** (*2.4.14*): maximum 0.1 per cent, determined on 1.0 g.

ASSAY

Dissolve 0.100 g in 3 mL of *anhydrous formic acid R*. Add 30 mL of *anhydrous acetic acid R*. Titrate with *0.1 M perchloric acid*, determining the end-point potentiometrically (*2.2.20*).

1 mL of *0.1 M perchloric acid* is equivalent to 11.71 mg of $C_5H_{11}NO_2$.

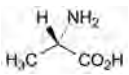
STORAGE

Protected from light.

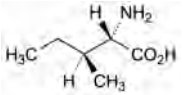
IMPURITIES

*Specified impurities: B.*

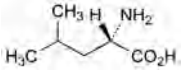
*Other detectable impurities* (the following substances would, if present at a sufficient level, be detected by one or other of the tests in the monograph. They are limited by the general acceptance criterion for other/unspecified impurities. It is therefore not necessary to identify these impurities for demonstration of compliance. See also *5.10. Control of impurities in substances for pharmaceutical use*): *A, C.*



A. (2*S*)-2-aminopropanoic acid (alanine),



B. (2*S*,3*S*)-2-amino-3-methylpentanoic acid (isoleucine),

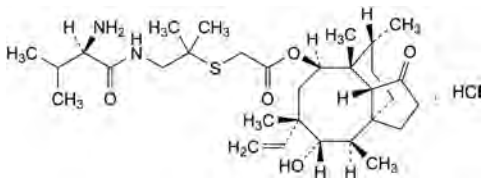


C. (2*S*)-2-amino-4-methylpentanoic acid (leucine).

**01/2008:2137**

# VALNEMULIN HYDROCHLORIDE FOR VETERINARY USE

## Valnemulini hydrochloridum ad usum veterinarium



$C_{31}H_{53}ClN_2O_5S$ $M_r$ 601

[133868-46-9]

DEFINITION

(3a*S*,4*R*,5*S*,6*S*,8*R*,9*R*,9a*R*,10*R*)-6-Ethenyl-5-hydroxy-4,6,9,10-tetramethyl-1-oxodecahydro-3a,9-propano-3a*H*-cyclopenta[8]annulen-8-yl [[2-[[(2*R*)-2-amino-3-methylbutanoyl]amino]-1,1-dimethylethyl]sulfanyl]acetate hydrochloride.

Semi-synthetic product derived from a fermentation product.

*Content*: 96.0 per cent to 102.0 per cent (anhydrous substance).

CHARACTERS

*Appearance*: white or yellowish, amorphous powder, hygroscopic.

*Solubility*: freely soluble in water and in anhydrous ethanol, practically insoluble in *tert*-butyl methyl ether.

IDENTIFICATION

A. Infrared absorption spectrophotometry (*2.2.24*).
*Comparison*: *valnemulin hydrochloride CRS*.

B. It gives reaction (a) of chlorides (*2.3.1*).

TESTS

**pH** (*2.2.3*): 3.0 to 6.0.

Dissolve 2.0 g in *carbon dioxide-free water R* and dilute to 20 mL with the same solvent.

**Specific optical rotation** (*2.2.7*): + 15.5 to + 18.0 (anhydrous substance).

Dissolve 0.250 g in *water R* and dilute to 25.0 mL with the same solvent.

**Related substances**. Liquid chromatography (*2.2.29*).

*Phosphate buffer solution pH 2.5*. Dissolve 8.0 g of *disodium hydrogen phosphate dodecahydrate R* and 3.0 g of *potassium dihydrogen phosphate R* in *water for chromatography R* and dilute to 1000.0 mL with the same solvent. Adjust to pH 2.5 with *phosphoric acid R*.

*Solvent mixture*. Mix equal volumes of *acetonitrile R1* and *water for chromatography R*.

*Test solution*. Dissolve 0.100 g of the substance to be examined in the solvent mixture and dilute to 10.0 mL with the solvent mixture.

*Reference solution (a)*. Dilute 1.0 mL of the test solution to 100.0 mL with the solvent mixture.

*Reference solution (b)*. Dissolve 5 mg of *valnemulin impurity E CRS* and 5 mg of the substance to be examined in the solvent mixture and dilute to 25 mL with the solvent mixture.

*Reference solution (c)*. Dissolve the contents of a vial of *valnemulin for peak identification CRS* (containing impurities A, B and C) in 1 mL of the solvent mixture.

*Column*:
- *size*: *l* = 0.15 m, Ø = 4.6 mm;
- *stationary phase*: *octadecylsilyl silica gel for chromatography R* (3 µm);
- *temperature*: 50 °C.

*Mobile phase*:
- *mobile phase A*: phosphate buffer solution pH 2.5, *water R* (25:75 *V/V*);
- *mobile phase B*: phosphate buffer solution pH 2.5, *acetonitrile R1* (25:75 *V/V*);

| Time (min) | Mobile phase A (per cent *V/V*) | Mobile phase B (per cent *V/V*) |
|---|---|---|
| 0 - 2 | 95 → 55 | 5 → 45 |
| 2 - 4.5 | 55 → 50 | 45 → 50 |
| 4.5 - 5.5 | 50 → 35 | 50 → 65 |
| 5.5 - 6.85 | 35 | 65 |
| 6.85 - 10 | 35 → 0 | 65 → 100 |
| 10 - 13 | 0 | 100 |
| 13 - 14 | 0 → 95 | 100 → 5 |
| 14 - 20 | 95 | 5 |

*Flow rate*: 1.5 mL/min.

*Detection*: spectrophotometer at 200 nm.

*Injection*: 5 µL.

*Identification of impurities*: use the chromatogram supplied with *valnemulin for peak identification CRS* and the chromatogram obtained with reference solution (c) to identify the peaks due to impurities A, B and C.

*Relative retention* with reference to valnemulin (retention time = about 7 min): impurity D = about 0.2; impurity A = about 0.7; impurity B = about 0.85; impurity E = about 0.9; impurity C = about 1.1.

*System suitability*: reference solution (b):
- *resolution*: minimum 1.5 between the peaks due to impurity E and valnemulin.

*Limits*:
- *correction factors*: for the calculation of content multiply the peak areas of the following impurities by the corresponding correction factor: impurity B = 3.2; impurity E = 4.2;
- *impurity A*: not more than 0.5 times the area of the principal peak in the chromatogram obtained with reference solution (a) (0.5 per cent);
- *impurity B*: not more than twice the area of the principal peak in the chromatogram obtained with reference solution (a) (2.0 per cent);
- *impurity C*: not more than the area of the principal peak in the chromatogram obtained with reference solution (a) (1.0 per cent);
- *any other impurity*: for each impurity, not more than 0.2 times the area of the principal peak in the chromatogram obtained with reference solution (a) (0.2 per cent);
- *total*: not more than 3 times the area of the principal peak in the chromatogram obtained with reference solution (a) (3.0 per cent);
- *disregard limit*: 0.1 times the area of the principal peak in the chromatogram obtained with reference solution (a) (0.1 per cent); disregard the peak due to the chloride ion.

**Water** (*2.5.12*): maximum 4.0 per cent, determined on 0.500 g.

ASSAY

Liquid chromatography (*2.2.29*).

*Test solution*. Dissolve 40.0 mg of the substance to be examined in a mixture of equal volumes of *acetonitrile R1* and *water R* and dilute to 50.0 mL with the same mixture of solvents.

*Reference solution*. Dissolve 50.0 mg of *valnemulin hydrogen tartrate CRS* in a mixture of equal volumes of *acetonitrile R1* and *water R* and dilute to 50.0 mL with the same mixture of solvents.

*Column*:

– *size*: *l* = 0.125 m, Ø = 4.6 mm;

– *stationary phase*: *octadecylsilyl silica gel for chromatography R* (3 µm);

– *temperature*: 45 °C.

*Mobile phase*: mix 43 volumes of *acetonitrile R1* and 57 volumes of a solution containing 0.94 g/L of *disodium hydrogen phosphate dodecahydrate R* and 8.7 g/L of *potassium dihydrogen phosphate R* previously adjusted to pH 2.5 with *phosphoric acid R*.

*Flow rate*: 1.2 mL/min.

*Detection*: spectrophotometer at 210 nm.

*Injection*: 5 µL.

*Run time*: 3 times the retention time of valnemulin (retention time = about 2.4 min).

Calculate the percentage content of $C_{31}H_{53}ClN_2O_5S$, using the declared content of *valnemulin hydrogen tartrate CRS* and by multiplying by 0.841.

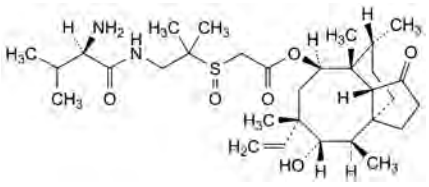
STORAGE

In an airtight container, protected from light.

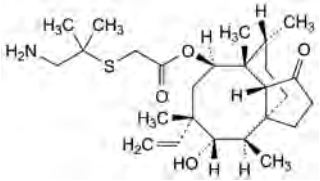
IMPURITIES

*Specified impurities: A, B, C.*

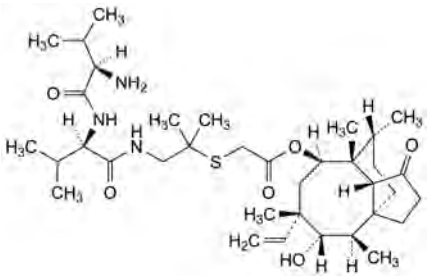
*Other detectable impurities* (the following substances would, if present at a sufficient level, be detected by one or other of the tests in the monograph. They are limited by the general acceptance criterion for other/unspecified impurities and/or by the general monograph *Substances for pharmaceutical use (2034)*. It is therefore not necessary to identify these impurities for demonstration of compliance. See also *5.10. Control of impurities in substances for pharmaceutical use*): *D, E.*



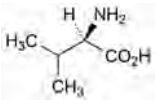
A. (3a*S*,4*R*,5*S*,6*S*,8*R*,9*R*,9a*R*,10*R*)-6-ethenyl-5-hydroxy-4,6,9,10-tetramethyl-1-oxodecahydro-3a,9-propano-3a*H*-cyclopenta[8]annulen-8-yl [[2-[[(2*R*)-2-amino-3-methylbutanoyl]amino]-1,1-dimethylethyl]sulfinyl]acetate (valnemulin sulfoxide),



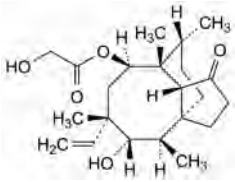
B. (3a*S*,4*R*,5*S*,6*S*,8*R*,9*R*,9a*R*,10*R*)-6-ethenyl-5-hydroxy-4,6,9,10-tetramethyl-1-oxodecahydro-3a,9-propano-3a*H*-cyclopenta[8]annulen-8-yl [(2-amino-1,1-dimethylethyl)sulfanyl]acetate (dimethyl cysteaminyl pleuromulin),



C. (3a*S*,4*R*,5*S*,6*S*,8*R*,9*R*,9a*R*,10*R*)-6-ethenyl-5-hydroxy-4,6,9,10-tetramethyl-1-oxodecahydro-3a,9-propano-3a*H*-cyclopenta[8]annulen-8-yl [[2-[[(2*R*)-2-[[(2*R*)-2-amino-3-methylbutanoyl]amino]-3-methylbutanoyl]amino]-1,1-dimethylethyl]sulfanyl]acetate (valyl-valneumulin),



D. (2*R*)-2-amino-3-methylbutanoic acid (D-valine),



E. (3a*S*,4*R*,5*S*,6*S*,8*R*,9*R*,9a*R*,10*R*)6-ethenyl-5-hydroxy-4,6,9,10-tetramethyl-1-oxodecahydro-3a,9-propano-3a*H*-cyclopenta[8]annulen-8-yl 2-hydroxyacetate (pleuromulin).

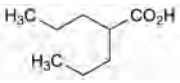
# VALPROIC ACID

## Acidum valproicum



$C_8H_{16}O_2$ $M_r$ 144.2
[99-66-1]

DEFINITION

2-Propylpentanoic acid.

*Content*: 99.0 per cent to 101.0 per cent.

CHARACTERS

*Appearance*: colourless or very slightly yellow, clear liquid, slightly viscous.

*Solubility*: very slightly soluble in water, miscible with ethanol (96 per cent) and with methylene chloride. It dissolves in dilute solutions of alkali hydroxides.

IDENTIFICATION

Infrared absorption spectrophotometry (*2.2.24*).

*Comparison*: *valproic acid CRS*.

TESTS

**Appearance of solution**. The solution is clear (*2.2.1*) and not more intensely coloured than reference solution $Y_5$ (*2.2.2, Method II*).

Dissolve 2.0 g in *dilute sodium hydroxide solution R* and dilute to 10 mL with the same alkaline solution.

**Related substances**. Gas chromatography (*2.2.28*).

*Test solution*. Dissolve 0.500 g of the substance to be examined in *heptane R* and dilute to 100.0 mL with the same solvent.

*Reference solution (a)*. Dissolve 5 mg of *valproic acid for system suitability CRS* (containing impurity K) in 1.0 mL of *heptane R*.

*Reference solution (b)*. Dilute 1.0 mL of the test solution to 100.0 mL with *heptane R*.

*Column*:

- *material*: wide-bore fused silica;
- *size*: *l* = 30 m, Ø = 0.53 mm;
- *stationary phase*: *macrogol 20 000 2-nitroterephthalate R* (film thickness 0.5 µm).

*Carrier gas*: *helium for chromatography R*.

*Flow rate*: 8 mL/min.

*Temperature*:

| | Time (min) | Temperature (°C) |
|---|---|---|
| Column | 0 - 5 | 80 |
| | 5 - 15 | 80 → 150 |
| | 15 - 28.3 | 150 → 190 |
| | 28.3 - 30 | 190 |
| Injection port | | 220 |
| Detector | | 220 |

*Detection*: flame ionisation.

*Injection*: 1 µL.

*Relative retention* with reference to valproic acid (retention time = about 17 min): impurity K = about 0.97.

*System suitability*: reference solution (a):

- *resolution*: minimum 2.0 between the peaks due to impurity K and valproic acid.

*Limits*:

- *impurity K*: not more than 0.15 times the area of the principal peak in the chromatogram obtained with reference solution (b) (0.15 per cent);
- *unspecified impurities*: for each impurity, not more than 0.05 times the area of the principal peak in the chromatogram obtained with reference solution (b) (0.05 per cent);
- *total*: not more than 0.2 times the area of the principal peak in the chromatogram obtained with reference solution (b) (0.2 per cent);
- *disregard limit*: 0.03 times the area of the principal peak in the chromatogram obtained with reference solution (b) (0.03 per cent).

**Sulfated ash** (*2.4.14*): maximum 0.1 per cent, determined on 1.0 g.

ASSAY

Dissolve 0.100 g in 25 mL of *ethanol (96 per cent) R*. Add 2 mL of *water R*. Titrate with *0.1 M sodium hydroxide*, determining the end-point potentiometrically (*2.2.20*).

1 mL of *0.1 M sodium hydroxide* is equivalent to 14.42 mg of $C_8H_{16}O_2$.

STORAGE

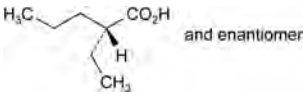
In an airtight container.

IMPURITIES

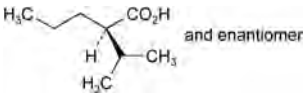
*Specified impurities*: *K*.

*Other detectable impurities* (the following substances would, if present at a sufficient level, be detected by one or other of the tests in the monograph. They are limited by the general acceptance criterion for other/unspecified impurities and/or by the general monograph *Substances for pharmaceutical use (2034)*. It is therefore not necessary to identify these impurities for demonstration of compliance. See also *5.10. Control of impurities in substances for pharmaceutical use*): *A, B, C, D, E, F, G, H, I, J, L*.

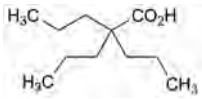
A. pentanoic acid (valeric acid),



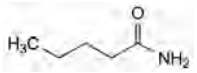
B. (2*RS*)-2-ethylpentanoic acid,



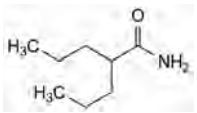
C. (2*RS*)-2-(1-methylethyl)pentanoic acid,



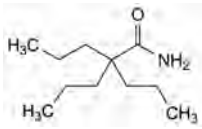
D. 2,2-dipropylpentanoic acid,



E. pentanamide (valeramide),

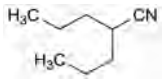


F. 2-propylpentanamide,



G. 2,2-dipropylpentanamide,

H. pentanenitrile (valeronitrile),



I. 2-propylpentanenitrile,

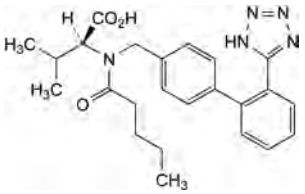
# VALSARTAN

## Valsartanum



$C_{24}H_{29}N_5O_3$ $M_r$ 435.5
[137862-53-4]

DEFINITION

(2*S*)-3-Methyl-2-[pentanoyl[[2′-(1*H*-tetrazol-5-yl)biphenyl-4-yl]methyl]amino]butanoic acid.

*Content*: 99.0 per cent to 101.0 per cent (anhydrous substance).

PRODUCTION

As *N*-nitrosodimethylamine (NDMA) and *N*-nitrosodiethylamine (NDEA) are classified as probable human carcinogens, manufacturers must ensure that their manufacturing process does not generate such impurities and develop appropriate control strategies. To allow manufacturers to make the necessary changes to their process, a transition period has been agreed by competent authorities and strict temporary limits on levels of these impurities introduced in the Test section.

CHARACTERS

*Appearance*: white or almost white, hygroscopic powder.

*Solubility*: practically insoluble in water, freely soluble in anhydrous ethanol, sparingly soluble in methylene chloride.

IDENTIFICATION

Carry out either tests A, B or tests A, C.

A. Infrared absorption spectrophotometry (*2.2.24*).
   *Comparison*: *valsartan CRS*.

B. Enantiomeric purity (see Tests).

C. Specific optical rotation (*2.2.7*): – 69.0 to – 64.0 (anhydrous substance).
   Dissolve 0.200 g in *methanol R* and dilute to 20.0 mL with the same solvent.

TESTS

**Enantiomeric purity**. Liquid chromatography (*2.2.29*).

*Test solution*. Dissolve 50 mg of the substance to be examined in the mobile phase and dilute to 50.0 mL with the mobile phase.

*Reference solution (a)*. Dissolve 5 mg of *valsartan for peak identification CRS* (containing impurity A) in the mobile phase and dilute to 5 mL with the mobile phase.

*Reference solution (b)*. Dilute 1.0 mL of the test solution to 100.0 mL with the mobile phase.

*Column*:
- *size*: *l* = 0.25 m, Ø = 4.6 mm;
- *stationary phase*: *cellulose derivative of silica gel for chiral separation R* (5 µm).

*Mobile phase*: *trifluoroacetic acid R*, *2-propanol R*, *hexane R* (0.1:15:85 *V/V/V*).

*Flow rate*: 0.8 mL/min.

*Detection*: spectrophotometer at 230 nm.

*Injection*: 10 µL.

*Run time*: 1.5 times the retention time of valsartan.

*Identification of impurities*: use the chromatogram supplied with *valsartan for peak identification CRS* and the chromatogram obtained with reference solution (a) to identify the peak due to impurity A.

*Relative retention* with reference to valsartan (retention time = about 13 min): impurity A = about 0.6.

*System suitability*: reference solution (a):
- *resolution*: minimum 2.0 between the peaks due to impurity A and valsartan.

*Limit*:
- *impurity A*: not more than the area of the principal peak in the chromatogram obtained with reference solution (b) (1.0 per cent).

**Related substances**. Liquid chromatography (*2.2.29*).

*Test solution*. Dissolve 50 mg of the substance to be examined in the mobile phase and dilute to 100.0 mL with the mobile phase.

*Reference solution (a)*. Dilute 1.0 mL of the test solution to 100.0 mL with the mobile phase. Dilute 1.0 mL of this solution to 10.0 mL with the mobile phase.

*Reference solution (b)*. Dissolve the contents of a vial of *valsartan for system suitability CRS* (containing impurity C) in 1 mL of the mobile phase.

*Column*:
- *size*: *l* = 0.125 m, Ø = 3.0 mm;
- *stationary phase*: *end-capped octadecylsilyl silica gel for chromatography R* (5 µm).

*Mobile phase*: *glacial acetic acid R*, *acetonitrile R1*, *water for chromatography R* (1:500:500 *V/V/V*).

*Flow rate*: 0.4 mL/min.

*Detection*: spectrophotometer at 225 nm.

*Injection*: 10 µL.

*Run time*: 6 times the retention time of valsartan.

*Identification of impurities*: use the chromatogram supplied with *valsartan for system suitability CRS* and the chromatogram obtained with reference solution (b) to identify the peak due to impurity C.

*Relative retention* with reference to valsartan (retention time = about 5 min): impurity C = about 0.8.

*System suitability*: reference solution (b):
- *resolution*: minimum 3.0 between the peaks due to impurity C and valsartan.

*Limits*:
- *impurity C*: not more than twice the area of the principal peak in the chromatogram obtained with reference solution (a) (0.2 per cent);
- *unspecified impurities*: for each impurity, not more than the area of the principal peak in the chromatogram obtained with reference solution (a) (0.10 per cent);
- *total*: not more than 3 times the area of the principal peak in the chromatogram obtained with reference solution (a) (0.3 per cent);
- *disregard limit*: 0.5 times the area of the principal peak in the chromatogram obtained with reference solution (a) (0.05 per cent).

**Water** (*2.5.12*): maximum 2.0 per cent, determined on 0.500 g.

**Sulfated ash** (*2.4.14*): maximum 0.1 per cent, determined on 1.0 g.

**Nitrosamines**. Carry out the test by a suitable method.

The substance to be examined does not contain either NDMA or NDEA above the limits provided below or both impurities at whatever level:
- *N-nitrosodimethylamine (NDMA)*: maximum 0.300 ppm;
- *N-nitrosodiethylamine (NDEA)*: maximum 0.082 ppm.

ASSAY

Dissolve 0.170 g in 70 mL of *2-propanol R*. Titrate with *0.1 M tetrabutylammonium hydroxide in 2-propanol*, determining the endpoint potentiometrically (*2.2.20*). Perform all operations under nitrogen.

1 mL of *0.1 M tetrabutylammonium hydroxide in 2-propanol* is equivalent to 21.78 mg of $C_{24}H_{29}N_5O_3$.

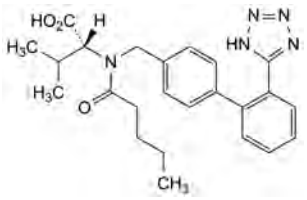
STORAGE

In an airtight container.

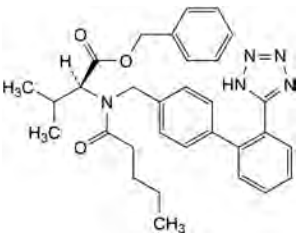
IMPURITIES

*Specified impurities: A, C.*

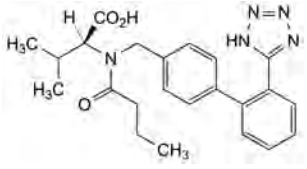
*Other detectable impurities* (the following substances would, if present at a sufficient level, be detected by one or other of the tests in the monograph. They are limited by the general acceptance criterion for other/unspecified impurities and/or by the general monograph *Substances for pharmaceutical use (2034)*. It is therefore not necessary to identify these impurities for demonstration of compliance. See also *5.10. Control of impurities in substances for pharmaceutical use*): *B.*



A. (2*R*)-3-methyl-2-[pentanoyl[[2′-(1*H*-tetrazol-5-yl)biphenyl-4-yl]methyl]amino]butanoic acid,



B. benzyl (2*S*)-3-methyl-2-[pentanoyl[[2′-(1*H*-tetrazol-5-yl)biphenyl-4-yl]methyl]amino]butanoate,



C. (2*S*)-2-[butanoyl[[2′-(1*H*-tetrazol-5-yl)biphenyl-4-yl]methyl]amino]-3-methylbutanoic acid.

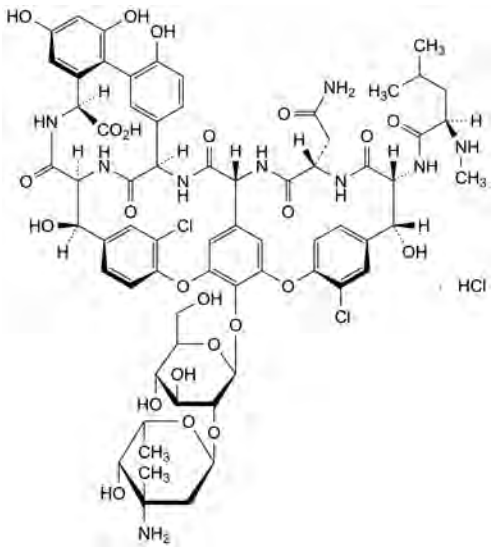
**corrected 10.0**

# VANCOMYCIN HYDROCHLORIDE

## Vancomycini hydrochloridum



$C_{66}H_{76}Cl_3N_9O_{24}$ $M_r$ 1486

DEFINITION

Monohydrochloride of (3*S*,6*R*,7*R*,8*M*,18*M*,22*R*,23*S*,26*S*,30a*M*,36*R*,38a*R*)-3-(2-amino-2-oxoethyl)-44-[[2-*O*-(3-amino-2,3,6-trideoxy-3-*C*-methyl-α-L-*lyxo*-hexopyranosyl)-β-D-glucopyranosyl]oxy]-10,19-dichloro-7,22,28,30,32-pentahydroxy-6-[(2*R*)-4-methyl-2-(methylamino)pentanamido]-2,5,24,38,39-pentaoxo-2,3,4,5,6,7,23,24,25,26,36,37,38,38a-tetradecahydro-22*H*-23,36-(azanomethano)-8,11:18,21-dietheno-13,16:31,35-dimetheno-1*H*,13*H*-[1,6,9]oxadiazacyclohexadecino[4,5-*m*][10,2,16]benzoxadiazacyclotetracosine-26-carboxylic acid (vancomycin B hydrochloride).

Substance produced by certain strains of *Amycolatopsis orientalis*.

*Potency*: minimum 1050 IU/mg (anhydrous substance).

CHARACTERS

*Appearance*: white or almost white, hygroscopic powder.

*Solubility*: freely soluble in water, practically insoluble in ethanol (96 per cent).

IDENTIFICATION

A. Examine the chromatograms obtained in the test for vancomycin B and related substances.

*Results*: the principal peak in the chromatogram obtained with the test solution is similar in retention time to the principal peak in the chromatogram obtained with reference solution (a).

B. It gives reaction (a) of chlorides (*2.3.1*).

TESTS

**Appearance of solution**. The solution is clear (*2.2.1*) and its absorbance (*2.2.25*) at 450 nm is not greater than 0.10, and its absorbance at 370 nm is not greater than 0.65.

Dissolve 2.50 g in *water R* and dilute to 25.0 mL with the same solvent.

**pH** (*2.2.3*): 2.5 to 4.5.

Dissolve 0.50 g in *carbon dioxide-free water R* and dilute to 10 mL with the same solvent.

**Vancomycin B and related substances**. Liquid chromatography (*2.2.29*): use the normalisation procedure.

*Solution A*. Dissolve 7.0 g of *tris(hydroxymethyl)aminomethane R* in approximately 950 mL of *water for chromatography R*. Measure the temperature of the solution and adjust to the target pH indicated in Table 1058.-1 using a 20 per cent *V/V* solution of *glacial acetic acid R* in *water for chromatography R* and dilute to 1000 mL with *water for chromatography R*.

Table 1058.-1

| Temperature of solution A (°C) | Target pH |
|---|---|
| 15 | 8.27 ± 0.05 |
| 16 | 8.25 ± 0.05 |
| 17 | 8.22 ± 0.05 |
| 18 | 8.19 ± 0.05 |
| 19 | 8.16 ± 0.05 |
| 20 | 8.13 ± 0.05 |
| 21 | 8.11 ± 0.05 |
| 22 | 8.08 ± 0.05 |
| 23 | 8.05 ± 0.05 |
| 24 | 8.03 ± 0.05 |
| 25 | 8.00 ± 0.05 |

*Test solution.* Dissolve 20.0 mg of the substance to be examined in *water R* and dilute to 5.0 mL with the same solvent.

*Reference solution (a).* Dissolve 4 mg of *vancomycin for system suitability CRS* (containing impurities A, C, F, H, I, J, K and M) in 1.0 mL of *water R*.

*Reference solution (b).* In order to prepare impurities B, D, E, G and L *in situ*, expose 4 mg of *vancomycin for system suitability CRS* (containing impurities A, C, F, H, I, J, K and M) to 80-100 per cent relative humidity at 42 ± 2 °C for at least 7 days. Add 1 mL of *water R* and dissolve the sample completely using sonication.

*Reference solution (c).* Dilute 1.0 mL of reference solution (a) to 100.0 mL with a 0.1 per cent *V/V* solution of *acetic acid R*. Dilute 1.0 mL of this solution to 10.0 mL with a 0.1 per cent *V/V* solution of *acetic acid R*.

*Column*:

- *size*: *l* = 0.15 m, Ø = 2.1 mm;
- *stationary phase*: *end-capped, charged surface, ethylene-bridged octadecylsilyl silica gel for chromatography (hybrid material) R* (1.7 µm);
- *temperature*: 40 ± 2 °C.

*Mobile phase*:

- *mobile phase A*: *acetonitrile R*, *methanol R*, solution A (3:4:93 *V/V/V*);
- *mobile phase B*: *acetonitrile R*, *methanol R*, solution A (10:40:50 *V/V/V*);

| Time (min) | Mobile phase A (per cent *V/V*) | Mobile phase B (per cent *V/V*) |
|---|---|---|
| 0 - 7 | 88 | 12 |
| 7 - 21 | 88 → 75 | 12 → 25 |
| 21 - 35 | 75 → 25 | 25 → 75 |
| 35 - 37 | 25 | 75 |

*Flow rate*: 0.30 ± 0.02 mL/min.

*Detection*: spectrophotometer at 280 nm.

*Autosampler*: set at 5 °C.

*Injection*: 2 µL.

*Identification of peaks*: use the chromatogram obtained with reference solution (a) to identify the peaks due to impurities A, C, F, H, I, J, K and M; use the chromatogram obtained with reference solution (b) to identify the peaks due to impurities B, D, E, G and L.

*Relative retention* with reference to vancomycin B (retention time = about 19 min): impurity E = about 0.37; impurity L = about 0.66; impurity B = about 0.70; impurity A = about 0.76; impurity F = about 0.82; impurity G = about 0.90; impurity H = about 0.94; impurity M = about 1.11; impurity I = about 1.14; impurity J = about 1.20; impurity D = about 1.24; impurity K = about 1.50; impurity C = about 1.86.

*System suitability*:

- *resolution*: minimum 1.5 and maximum 4.0 between the peaks due to impurities G and H, and minimum 1.5 and maximum 5.0 between the peaks due to impurities L and B in the chromatogram obtained with reference solution (b);
- *signal-to-noise ratio*: minimum 10 for the peak due to vancomycin B in the chromatogram obtained with reference solution (c).

*Limits*:

- *vancomycin B*: minimum 91.0 per cent;
- *impurities A, H*: for each impurity, maximum 3.0 per cent;
- *sum of impurities B and E*: maximum 2.0 per cent;
- *impurity J*: maximum 1.6 per cent;
- *impurities D, F, M*: for each impurity, maximum 1.5 per cent;
- *impurities G, I, K*: for each impurity, maximum 1.2 per cent;
- *impurity C*: maximum 1.0 per cent;
- *any other impurity eluting before vancomycin B*: for each impurity, maximum 0.8 per cent, and not more than 5 such impurities exceed 0.30 per cent;
- *any other impurity eluting after vancomycin B*: for each impurity, maximum 0.8 per cent, and not more than 3 such impurities exceed 0.30 per cent;
- *total of impurities*: maximum 9.0 per cent;
- *reporting threshold*: 0.10 per cent.

**Water** (*2.5.12*): maximum 5.0 per cent, determined on 0.500 g.

**Sulfated ash** (*2.4.14*): maximum 1.0 per cent, determined on 1.00 g.

ASSAY

Carry out the microbiological assay of antibiotics (*2.7.2*).

STORAGE

In an airtight container, protected from light at a temperature of 2 °C to 8 °C. If the substance is sterile, the container is also sterile and tamper-evident.

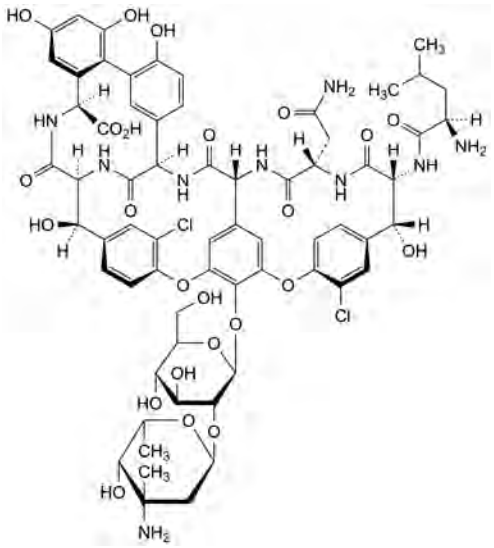
LABELLING

The label states, where applicable, that the substance is suitable for use in the manufacture of parenteral preparations.

IMPURITIES

*Specified impurities: A, B, C, D, E, F, G, H, I, J, K, M.*

*Other detectable impurities* (the following substances would, if present at a sufficient level, be detected by one or other of the tests in the monograph. They are limited by the general acceptance criterion for other/unspecified impurities. It is therefore not necessary to identify these impurities for demonstration of compliance. See also *5.10. Control of impurities in substances for pharmaceutical use*): *L.*



A. $N^{2.1}$-demethylvancomycin B,

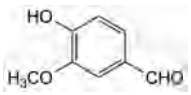
# VANILLIN

## Vanillinum



$C_8H_8O_3$ $M_r$ 152.1
[121-33-5]

DEFINITION

Vanillin contains not less than 99.0 per cent and not more than the equivalent of 101.0 per cent of 4-hydroxy-3-methoxybenzaldehyde, calculated with reference to the dried substance.

CHARACTERS

White or slightly yellowish, crystalline powder or needles, slightly soluble in water, freely soluble in alcohol and in methanol. It dissolves in dilute solutions of alkali hydroxides.

IDENTIFICATION

*First identification*: B.

*Second identification*: A, C, D.

A. Melting point (*2.2.14*): 81 °C to 84 °C.

B. Examine by infrared absorption spectrophotometry (*2.2.24*), comparing with the spectrum obtained with *vanillin CRS*. Examine the substances prepared as discs.

C. Examine the chromatograms obtained in the test for related substances in daylight after spraying. The principal spot in the chromatogram obtained with test solution (b) is similar in position, colour and size to the principal spot in the chromatogram obtained with reference solution (a).

D. To 5 mL of a saturated solution of the substance to be examined add 0.2 mL of *ferric chloride solution R1*. A blue colour is produced. Heat to 80 °C. The solution becomes brown. On cooling, a white precipitate is formed.

TESTS

**Appearance of solution**. Dissolve 1.0 g in *alcohol R* and dilute to 20 mL with the same solvent. The solution is clear (*2.2.1*) and not more intensely coloured than reference solution $B_6$ (*2.2.2, Method II*).

**Related substances**. Examine by thin-layer chromatography (*2.2.27*), using *silica gel* $GF_{254}$ *R* as the coating substance.

*Test solution (a)*. Dissolve 0.1 g of the substance to be examined in *methanol R* and dilute to 5 mL with the same solvent.

*Test solution (b)*. Dilute 1 mL of test solution (a) to 10 mL with *methanol R*.

*Reference solution (a)*. Dissolve 10 mg of *vanillin CRS* in *methanol R* and dilute to 5 mL with the same solvent.

*Reference solution (b)*. Dilute 0.5 mL of test solution (a) to 100 mL with *methanol R*.

Apply to the plate 5 µL of each solution. Develop in an unsaturated tank over a path of 10 cm using a mixture of 0.5 volumes of *anhydrous acetic acid R*, 1 volume of *methanol R* and 98.5 volumes of *methylene chloride R*. Dry the plate in a current of cold air. Examine in ultraviolet light at 254 nm. Any spot in the chromatogram obtained with test solution (a), apart from the principal spot, is not more intense than the spot in the chromatogram obtained with reference solution (b) (0.5 per cent). Spray with *dinitrophenylhydrazine-aceto-hydrochloric solution R* and examine in daylight. Any spot in the chromatogram obtained with test solution (a), apart from the principal spot, is not more intense than the spot in the chromatogram obtained with reference solution (b) (0.5 per cent).

**Reaction with sulfuric acid**. Dissolve 50 mg in 5 mL of *sulfuric acid R*. After 5 min, the solution is not more intensely coloured than a mixture of 4.9 mL of yellow primary solution and 0.1 mL of red primary solution or a mixture of 4.9 mL of yellow primary solution and 0.1 mL of blue primary solution (*2.2.2, Method I*).

**Loss on drying** (*2.2.32*). Not more than 1.0 per cent, determined on 1.000 g by drying in a desiccator for 4 h.

**Sulfated ash** (*2.4.14*). Not more than 0.05 per cent, determined on 2.0 g.

ASSAY

Dissolve 0.120 g in 20 mL of *alcohol R* and add 60 mL of *carbon dioxide-free water R*. Titrate with *0.1 M sodium hydroxide*, determining the end-point potentiometrically (*2.2.20*).

1 mL of *0.1 M sodium hydroxide* is equivalent to 15.21 mg of $C_8H_8O_3$.

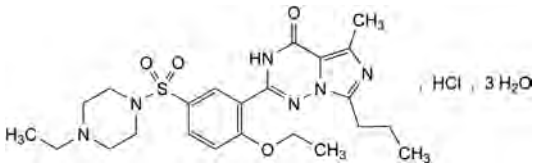
STORAGE

Store protected from light.

07/2014:2782
corrected 10.0

# VARDENAFIL HYDROCHLORIDE TRIHYDRATE

## Vardenafili hydrochloridum trihydricum



$C_{23}H_{33}ClN_6O_4S,3H_2O$ $M_r$ 579.1
[330808-88-3]

DEFINITION

2-[2-Ethoxy-5-[(4-ethylpiperazin-1-yl)sulfonyl]phenyl]-5-methyl-7-propylimidazo[5,1-*f*][1,2,4]triazin-4(3*H*)-one hydrochloride trihydrate.

*Content*: 98.0 per cent to 102.0 per cent (anhydrous substance).

CHARACTERS

*Appearance*: white or slightly brown or yellow powder.

*Solubility*: slightly soluble in water, freely soluble in anhydrous ethanol, practically insoluble in heptane.

IDENTIFICATION

A. Infrared absorption spectrophotometry (*2.2.24*).
*Comparison*: *vardenafil hydrochloride CRS*.

B. Water (see Tests).

C. It gives reaction (a) of chlorides (*2.3.1*).

TESTS

**Related substances**. Liquid chromatography (*2.2.29*). *Protect the solutions from light.*

*Solvent mixture*: *acetonitrile R*, mobile phase A (20:80 *V/V*).

*Test solution (a)*. Dissolve 50.0 mg of the substance to be examined in 20 mL of *acetonitrile R* and dilute to 100.0 mL with mobile phase A.

Monographs U-V

*Test solution (b).* Dilute 15.0 mL of test solution (a) to 50.0 mL with the solvent mixture.

*Reference solution (a).* Dissolve 50.0 mg of *vardenafil hydrochloride CRS* in 20 mL of *acetonitrile R* and dilute to 100.0 mL with mobile phase A. Dilute 15.0 mL of the solution to 50.0 mL with the solvent mixture.

*Reference solution (b).* Dilute 1.0 mL of test solution (a) to 100.0 mL with the solvent mixture. Dilute 1.0 mL of this solution to 10.0 mL with the solvent mixture.

*Reference solution (c).* Dissolve 5 mg of *vardenafil for system suitability CRS* (containing impurity A) in 2 mL of *acetonitrile R* and dilute to 10 mL with mobile phase A.

*Column*:
- *size*: *l* = 0.25 m, Ø = 3.0 mm;
- *stationary phase*: *end-capped polar-embedded octadecylsilyl amorphous organosilica polymer R* (5 µm);
- *temperature*: 45 °C.

*Mobile phase*:
- *mobile phase A*: solution containing 0.7 g/L of *disodium hydrogen phosphate dihydrate R* and 1.3 g/L of *potassium dihydrogen phosphate R*;
- *mobile phase B*: *acetonitrile for chromatography R*;

| Time (min) | Mobile phase A (per cent *V/V*) | Mobile phase B (per cent *V/V*) |
|---|---|---|
| 0 - 2 | 80 | 20 |
| 2 - 22 | 80 → 25 | 20 → 75 |
| 22 - 27 | 25 | 75 |

*Flow rate*: 0.5 mL/min.

*Detection*: spectrophotometer at 242 nm.

*Injection*: 10 µL of test solution (a) and reference solutions (b) and (c).

*Identification of impurities*: use the chromatogram supplied with *vardenafil for system suitability CRS* and the chromatogram obtained with reference solution (c) to identify the peak due to impurity A.

*Relative retention* with reference to vardenafil (retention time = about 16 min): impurity A = about 0.8.

*System suitability*: reference solution (c):
- *resolution*: minimum 5.0 between the peaks due to impurity A and vardenafil.

*Calculation of percentage contents:*
- for each impurity, use the concentration of vardenafil hydrochloride trihydrate in reference solution (b).

*Limits*:
- *impurity A*: maximum 0.15 per cent;
- *unspecified impurities*: for each impurity, maximum 0.10 per cent;
- *total*: maximum 0.3 per cent;
- *reporting threshold*: 0.05 per cent.

**Sulfates** (*2.4.13*): maximum 400 ppm.

Suspend 0.5 g in 20 mL of a 5.15 g/L solution of *hydrochloric acid R* and stir for 15 min. Filter if complete dissolution is not obtained.

**Water** (*2.5.12*): 8.8 per cent to 10.5 per cent, determined on 60.0 mg.

**Sulfated ash** (*2.4.14*): maximum 0.1 per cent, determined on 1.0 g.

ASSAY

Liquid chromatography (*2.2.29*) as described in the test for related substances with the following modification.

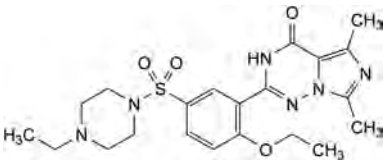
*Injection*: 10 µL of test solution (b) and reference solution (a).

Calculate the percentage content of $C_{23}H_{33}ClN_6O_4S$ taking into account the assigned content of *vardenafil hydrochloride CRS*.

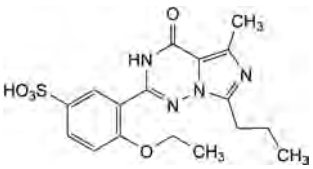
IMPURITIES

*Specified impurities*: *A*.

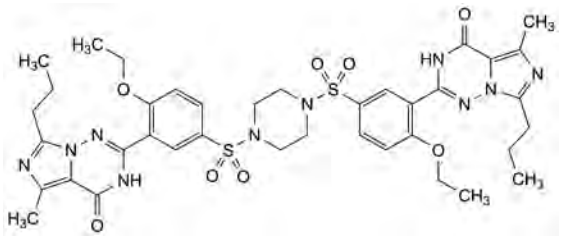
*Other detectable impurities* (the following substances would, if present at a sufficient level, be detected by one or other of the tests in the monograph. They are limited by the general acceptance criterion for other/unspecified impurities and/or by the general monograph *Substances for pharmaceutical use (2034)*. It is therefore not necessary to identify these impurities for demonstration of compliance. See also *5.10. Control of impurities in substances for pharmaceutical use*): *B, C*.



A. 2-[2-ethoxy-5-[(4-ethylpiperazin-1-yl)sulfonyl]phenyl]-5,7-dimethylimidazo[5,1-*f*][1,2,4]triazin-4(3*H*)-one,



B. 4-ethoxy-3-(5-methyl-4-oxo-7-propyl-3,4-dihydroimidazo[5,1-*f*][1,2,4]triazin-2-yl)benzenesulfonic acid,



C. 2,2′-[piperazine-1,4-diylbis[(sulfonyl)(4-ethoxybenzene-1,3-diyl)]]bis[5-methyl-7-propylimidazo[5,1-*f*][1,2,4]-triazin-4(3*H*)-one].

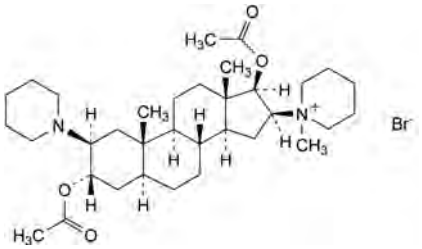
# VECURONIUM BROMIDE

## Vecuronii bromidum



$C_{34}H_{57}BrN_2O_4$ $M_r$ 638

[50700-72-6]

DEFINITION

1-[3α,17β-Bis(acetyloxy)-2β-(piperidin-1-yl)-5α-androstan-16β-yl]-1-methylpiperidin-1-ium bromide.

*Content*: 99.0 per cent to 101.0 per cent (anhydrous substance).

CHARACTERS

*Appearance*: white or almost white crystals or crystalline powder.

*Solubility*: slightly soluble in water, freely soluble in methylene chloride, sparingly soluble in acetonitrile and in anhydrous ethanol.

IDENTIFICATION

A. Specific optical rotation (see Tests).

B. Infrared absorption spectrophotometry (*2.2.24*).

*Comparison*: *vecuronium bromide CRS*.

C. It gives reaction (a) of bromides (*2.3.1*).

TESTS

**Solution S**. Dissolve 0.500 g in a 5.15 g/L solution of *hydrochloric acid R* and dilute to 50.0 mL with the same solution.

**Appearance of solution**. Solution S is clear (*2.2.1*) and not more intensely coloured than reference solution $BY_7$ (*2.2.2, Method II*).

**Specific optical rotation** (*2.2.7*): + 30.5 to + 35.0 (anhydrous substance), determined on solution S.

**Impurity B**. Thin-layer chromatography (*2.2.27*).

*Test solution*. Dissolve 0.10 g of the substance to be examined in *methylene chloride R* and dilute to 5.0 mL with the same solvent.

*Reference solution (a)*. Dissolve 5 mg of the substance to be examined and 5 mg of *pancuronium bromide CRS* (impurity B) in *methylene chloride R* and dilute to 5.0 mL with the same solvent.

*Reference solution (b)*. Dissolve 5.0 mg of *pancuronium bromide CRS* (impurity B) in *methylene chloride R* and dilute to 100.0 mL with the same solvent.

*Plate*: *TLC silica gel plate R* (2-10 µm).

*Mobile phase*: dissolve 1 g of *sodium bromide R* in 5 mL of *water R*. Add 85 mL of *2-propanol R*, then 10 mL of *acetonitrile R*.

*Application*: 1 µL.

*Development*: in an unsaturated tank, over 2/3 of the plate.

*Drying*: in air for 30 min.

*Detection*: spray with a 2.5 g/L solution of *iodine R* in a mixture of equal volumes of *methanol R* and *methylene chloride R*.

*System suitability*: reference solution (a):

– the chromatogram shows 2 clearly separated spots.

*Limit*:

– *impurity B*: any spot due to impurity B is not more intense than the spot in the chromatogram obtained with reference solution (b) (0.25 per cent).

**Related substances**. Liquid chromatography (*2.2.29*). *Prepare the solutions immediately before use.*

*Solution A*: 0.2 g/L solution of *hydrochloric acid R* in *methanol R2*.

*Test solution*. Dissolve 40 mg of the substance to be examined in solution A and dilute to 20.0 mL with solution A.

*Reference solution (a)*. Dissolve 4 mg of *vecuronium for system suitability CRS* (containing impurities C and E) in solution A and dilute to 2.0 mL with the solution A.

*Reference solution (b)*. Dilute 1.0 mL of the test solution to 100.0 mL with solution A. Dilute 1.0 mL of this solution to 10.0 mL with solution A.

*Column*:

– *size*: *l* = 0.25 m, Ø = 4.6 mm;

– *stationary phase*: *end-capped octadecylsilyl silica gel for chromatography R* (5 µm);

– *temperature*: 40 °C.

*Mobile phase*: mix 135 volumes of an 18.0 g/L solution of *tetramethylammonium hydroxide R* previously adjusted to pH 6.9 with *phosphoric acid R*, 250 volumes of *methanol R2* and 615 volumes of *acetonitrile R1*.

*Flow rate*: 2.0 mL/min.

*Detection*: spectrophotometer at 210 nm.

*Autosampler*: set at 4 °C.

*Injection*: 20 µL.

*Run time*: 5 times the retention time of vecuronium.

*Identification of impurities*: use the chromatogram supplied with *vecuronium for system suitability CRS* and the chromatogram obtained with reference solution (a) to identify the peaks due to impurities C and E.

*Relative retention* with reference to vecuronium (retention time = about 5 min): impurity C = about 0.8; impurity E = about 1.2.

*System suitability*:

– *signal-to-noise ratio*: minimum 28 for the principal peak in the chromatogram obtained with reference solution (b);

– *peak-to-valley ratio*: minimum 2.0, where $H_p$ = height above the baseline of the peak due to impurity E and $H_v$ = height above the baseline of the lowest point of the curve separating this peak from the principal peak in the chromatogram obtained with reference solution (a).

*Calculation of percentage contents*:

– *correction factor*: multiply the peak area of impurity C by 1.4;

– for each impurity, use the concentration of vecuronium bromide in reference solution (b).

*Limits*:

– *impurity C*: maximum 0.15 per cent;

– *unspecified impurities*: for each impurity, maximum 0.10 per cent;

– *total*: maximum 0.2 per cent;

– *reporting threshold*: 0.05 per cent.

**Water** (*2.5.12*): maximum 4.0 per cent, determined on 0.300 g.

**Sulfated ash** (*2.4.14*): maximum 0.1 per cent, determined on 1.0 g.

ASSAY

Dissolve 0.450 g in 50 mL of *glacial acetic acid R*. Titrate with *0.1 M perchloric acid*, determining the end-point potentiometrically (*2.2.20*).

1 mL of *0.1 M perchloric acid* is equivalent to 63.8 mg of $C_{34}H_{57}BrN_2O_4$.

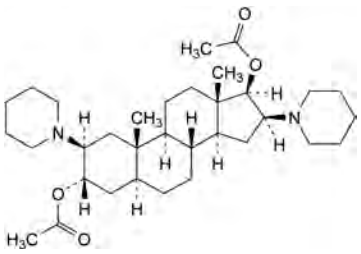
STORAGE

In an airtight container, protected from light and moisture.

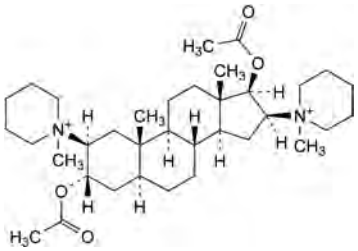
IMPURITIES

*Specified impurities: B, C.*

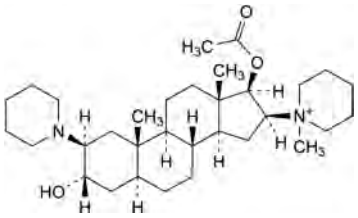
*Other detectable impurities* (the following substances would, if present at a sufficient level, be detected by one or other of the tests in the monograph. They are limited by the general acceptance criterion for other/unspecified impurities and/or by the general monograph *Substances for pharmaceutical use (2034)*. It is therefore not necessary to identify these impurities for demonstration of compliance. See also *5.10. Control of impurities in substances for pharmaceutical use*): *A, D, E, F.*



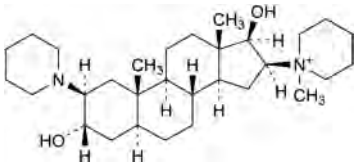
A. 2β,16β-di(piperidin-1-yl)-5α-androstane-3α,17β-diyl diacetate,



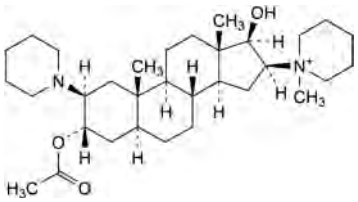
B. 1,1′-[3α,17β-bis(acetyloxy)-5α-androstane-2β,16β-diyl]bis(1-methylpiperidin-1-ium) (pancuronium),



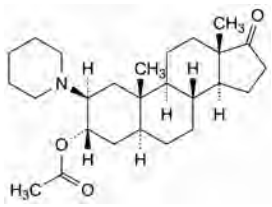
C. 1-[17β-(acetyloxy)-3α-hydroxy-2β-(piperidin-1-yl)-5α-androstan-16β-yl]-1-methylpiperidin-1-ium,



D. 1-[3α,17β-dihydroxy-2β-(piperidin-1-yl)-5α-androstan-16β-yl]-1-methylpiperidin-1-ium,



E. 1-[3α-(acetyloxy)-17β-hydroxy-2β-(piperidin-1-yl)-5α-androstan-16β-yl]-1-methylpiperidin-1-ium,

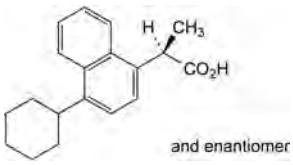


F. 2β-(piperidin-1-yl)-17-oxo-5α-androstan-3α-yl acetate.

**07/2009:2248**

# VEDAPROFEN FOR VETERINARY USE

## Vedaprofenum ad usum veterinarium



$C_{19}H_{22}O_2$ $M_r$ 282.4
[71109-09-6]

DEFINITION

(2*RS*)-2-(4-Cyclohexyl-1-naphthyl)propanoic acid.

*Content*: 98.5 per cent to 101.0 per cent (dried substance).

CHARACTERS

*Appearance*: white or almost white powder.

*Solubility*: practically insoluble in water, freely soluble in acetone, soluble in methanol. It dissolves in dilute solutions of alkali hydroxides.

IDENTIFICATION

Infrared absorption spectrophotometry (*2.2.24*).

*Comparison*: *vedaprofen CRS*.

TESTS

**Appearance of solution**. The solution is clear (*2.2.1*) and not more intensely coloured than reference solution $Y_5$ (*2.2.2, Method II*).

Dissolve 2.0 g in *acetone R* and dilute to 20.0 mL with the same solvent.

**Related substances**. Liquid chromatography (*2.2.29*).

*Test solution*. Dissolve 25 mg of the substance to be examined in *methanol R* and dilute to 50.0 mL with the same solvent.

*Reference solution (a)*. Dilute 1.0 mL of the test solution to 50.0 mL with *methanol R*. Dilute 1.0 mL of this solution to 10.0 mL with *methanol R*.

*Reference solution (b)*. Dissolve the contents of a vial of *vedaprofen impurity mixture CRS* (impurities A, B and C) in 1.0 mL of reference solution (a).

*Column*:

- *size*: *l* = 0.10 m, Ø = 3.0 mm;
- *stationary phase*: *octadecylsilyl silica gel for chromatography R* (5 µm);
- *temperature*: 35 °C.

*Mobile phase*: dissolve 1.70 g of *tetrabutylammonium hydrogen sulfate R* in 1000 mL of a mixture of 20 volumes of *water R* and 80 volumes of *methanol R*.

*Flow rate*: 0.4 mL/min.

*Detection*: spectrophotometer at 288 nm.

*Injection*: 10 µL.

*Run time*: 5 times the retention time of vedaprofen.

*Identification of impurities*: use the chromatogram supplied with *vedaprofen impurity mixture CRS* and the chromatogram obtained with reference solution (b) to identify the peaks due to impurities A, B and C.

*Relative retention* with reference to vedaprofen (retention time = about 6 min): impurity C = about 0.8; impurity A = about 1.8; impurity B = about 3.7.

*System suitability*: reference solution (b):

– *resolution*: minimum 2.0 between the peaks due to impurity C and vedaprofen.

*Limits*:

– *correction factor*: for the calculation of content, multiply the peak area of impurity B by 0.7;

– *impurities A, B*: for each impurity, not more than twice the area of the principal peak in the chromatogram obtained with reference solution (a) (0.4 per cent);

– *unspecified impurities*: for each impurity, not more than the area of the principal peak in the chromatogram obtained with reference solution (a) (0.20 per cent);

– *total*: not more than 2.5 times the area of the principal peak in the chromatogram obtained with reference solution (a) (0.5 per cent);

– *disregard limit*: 0.5 times the area of the principal peak in the chromatogram obtained with reference solution (a) (0.1 per cent).

**Heavy metals** (*2.4.8*): maximum 10 ppm.

Dissolve 1.0 g in a mixture of 15 volumes of *water R* and 85 volumes of *acetone R* and dilute to 20 mL with the same mixture of solvents. 12 mL of the solution complies with test B. Prepare the reference solution using lead standard solution (0.5 ppm Pb) obtained by diluting *lead standard solution (100 ppm Pb) R* with a mixture of 15 volumes of *water R* and 85 volumes of *acetone R*.

**Loss on drying** (*2.2.32*): maximum 0.5 per cent, determined on 1.000 g by drying in an oven at 105 °C.

**Sulfated ash** (*2.4.14*): maximum 0.3 per cent, determined on 0.500 g.

ASSAY

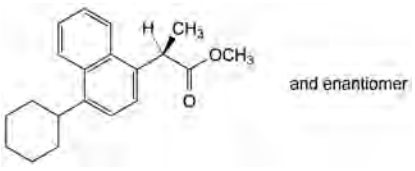
Dissolve 0.200 g in 50 mL of *ethanol (96 per cent) R* and add 1.0 mL of *0.1 M hydrochloric acid*. Carry out a potentiometric titration (*2.2.20*), using *0.1 M sodium hydroxide*. Read the volume added between the 2 points of inflexion.

1 mL of *0.1 M sodium hydroxide* is equivalent to 28.24 mg of $C_{19}H_{22}O_2$.

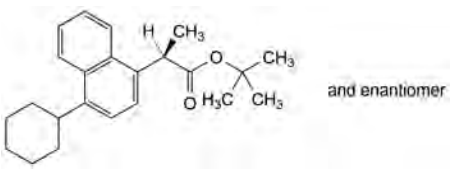
IMPURITIES

*Specified impurities: A, B.*

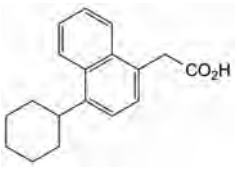
*Other detectable impurities* (the following substances would, if present at a sufficient level, be detected by one or other of the tests in the monograph. They are limited by the general acceptance criterion for other/unspecified impurities and/or by the general monograph *Substances for pharmaceutical use (2034)*. It is therefore not necessary to identify these impurities for demonstration of compliance. See also *5.10. Control of impurities in substances for pharmaceutical use*): *C, D.*



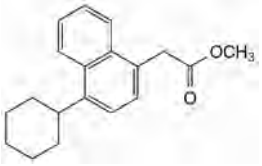
A. methyl (2*RS*)-2-(4-cyclohexyl-1-naphthyl)propanoate,



B. 1,1-dimethylethyl (2*RS*)-2-(4-cyclohexyl-1-naphthyl)propanoate,



C. (4-cyclohexyl-1-naphthyl)acetic acid,

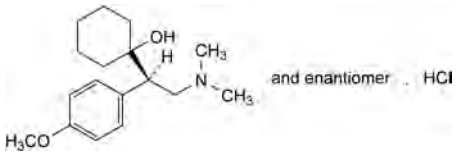


D. methyl (2*RS*)-2-(4-cyclohexyl-1-naphthyl)acetate.

**01/2017:2119**

# VENLAFAXINE HYDROCHLORIDE

## Venlafaxini hydrochloridum



$C_{17}H_{28}ClNO_2$ $M_r$ 313.9
[99300-78-4]

DEFINITION

1-[(1*RS*)-2-(Dimethylamino)-1-(4-methoxyphenyl)ethyl]-cyclohexanol hydrochloride.

*Content*: 99.0 per cent to 101.0 per cent (dried substance).

CHARACTERS

*Appearance*: white or almost white powder.

*Solubility*: freely soluble in water and in methanol, soluble in anhydrous ethanol, slightly soluble or practically insoluble in acetone.

It shows polymorphism (*5.9*).

IDENTIFICATION

A. Infrared absorption spectrophotometry (*2.2.24*).

*Comparison*: *venlafaxine hydrochloride CRS*.

If the spectra obtained in the solid state show differences, dissolve the substance to be examined and the reference substance separately in *2-propanol R*, evaporate to dryness and record new spectra using the residues.

B. It gives reaction (a) of chlorides (*2.3.1*).

TESTS

**Acidity or alkalinity**. Dissolve 0.20 g in *carbon dioxide-free water R* and dilute to 10 mL with the same solvent. Add 0.05 mL of *methyl red solution R* and 0.1 mL of *0.01 M hydrochloric acid*. The solution is pink. Not more than 0.2 mL of *0.01 M sodium hydroxide* is required to change the colour of the indicator to yellow.

**Related substances**. Liquid chromatography (*2.2.29*).

*Test solution*. Dissolve 25.0 mg of the substance to be examined in the mobile phase and dilute to 25.0 mL with the mobile phase.

*Reference solution (a)*. Dilute 1.0 mL of the test solution to 10.0 mL with the mobile phase. Dilute 1.0 mL of this solution to 100.0 mL with the mobile phase.

*Reference solution (b).* Dissolve the contents of a vial of *venlafaxine for system suitability CRS* (containing impurities D and F) in 1.0 mL of the mobile phase.

*Column*:

- *size*: *l* = 0.25 m, Ø = 4.6 mm;
- *stationary phase*: *end-capped octylsilyl silica gel for chromatography R* (5 µm) with a pore size of 10 nm.

*Mobile phase*: mix 510 volumes of *acetonitrile R* and 1490 volumes of a solution prepared as follows: dissolve 17 g of *ammonium dihydrogen phosphate R* in 1490 mL of *water R* and adjust to pH 4.4 using *phosphoric acid R*.

*Flow rate*: 1.2 mL/min.

*Detection*: spectrophotometer at 225 nm.

*Injection*: 20 µL.

*Run time*: 10 times the retention time of venlafaxine.

*Relative retention* with reference to venlafaxine (retention time = about 9 min): impurity D = about 0.9; impurity F = about 3.4.

*System suitability*: reference solution (b):

- *resolution*: minimum 1.5 between the peaks due to impurity D and venlafaxine.

*Limits*:

- *impurity F*: not more than the area of the principal peak in the chromatogram obtained with reference solution (a) (0.1 per cent);
- *unspecified impurities*: for each impurity, not more than the area of the principal peak in the chromatogram obtained with reference solution (a) (0.10 per cent);
- *total*: not more than twice the area of the principal peak in the chromatogram obtained with reference solution (a) (0.2 per cent);
- *disregard limit*: 0.5 times the area of the principal peak in the chromatogram obtained with reference solution (a) (0.05 per cent).

**Loss on drying** (*2.2.32*): maximum 0.5 per cent, determined on 1.000 g by drying *in vacuo* at 80 °C for 3 h.

**Sulfated ash** (*2.4.14*): maximum 0.1 per cent, determined on 1.0 g.

ASSAY

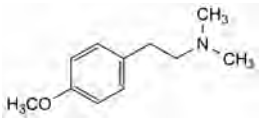
Dissolve 0.250 g in a mixture of 5.0 mL of *0.01 M hydrochloric acid* and 50 mL of *ethanol (96 per cent) R*. Carry out a potentiometric titration (*2.2.20*), using *0.1 M sodium hydroxide*. Read the volume added between the 2 points of inflexion. Carry out a blank titration.

1 mL of *0.1 M sodium hydroxide* is equivalent to 31.39 mg of $C_{17}H_{28}ClNO_2$.

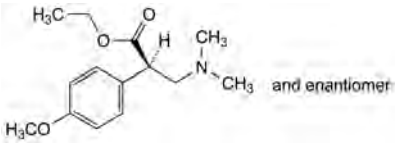
IMPURITIES

*Specified impurities: F.*

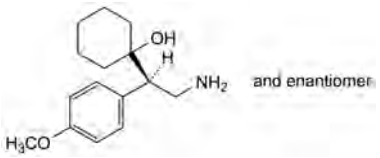
*Other detectable impurities* (the following substances would, if present at a sufficient level, be detected by one or other of the tests in the monograph. They are limited by the general acceptance criterion for other/unspecified impurities and/or by the general monograph *Substances for pharmaceutical use (2034)*. It is therefore not necessary to identify these impurities for demonstration of compliance. See also *5.10. Control of impurities in substances for pharmaceutical use*): *A, B, C, D, E, G, H.*



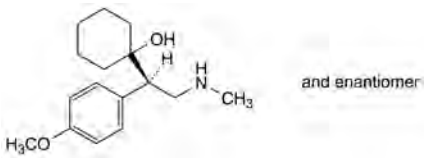
A. 2-(4-methoxyphenyl)-*N*,*N*-dimethylethanamine,



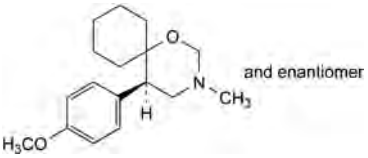
B. ethyl (2*RS*)-3-(dimethylamino)-2-(4-methoxyphenyl)-propanoate,



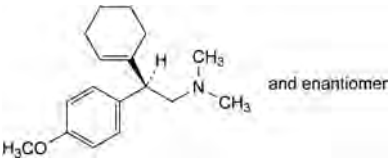
C. 1-[(1*RS*)-2-amino-1-(4-methoxyphenyl)ethyl]-cyclohexanol,



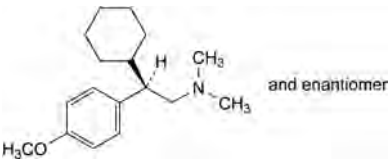
D. 1-[(1*RS*)-1-(4-methoxyphenyl)-2-(methylamino)ethyl]-cyclohexanol,



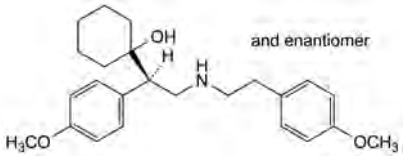
E. (5*RS*)-5-(4-methoxyphenyl)-3-methyl-1-oxa-3-azaspiro[5.5]undecane,



F. (2*RS*)-2-(cyclohex-1-enyl)-2-(4-methoxyphenyl)-*N*,*N*-dimethylethanamine,



G. (2*RS*)-2-cyclohexyl-2-(4-methoxyphenyl)-*N*,*N*-dimethylethanamine,

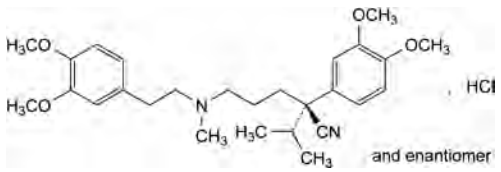


H. 1-[(1*RS*)-1-(4-methoxyphenyl)-2-[[2-(4-methoxyphenyl)-ethyl]amino]ethyl]cyclohexanol.

**01/2017:0573**

# VERAPAMIL HYDROCHLORIDE

## Verapamili hydrochloridum



$C_{27}H_{39}ClN_2O_4$ $M_r$ 491.1
[152-11-4]

DEFINITION

(2*RS*)-2-(3,4-Dimethoxyphenyl)-5-[[2-(3,4-dimethoxyphenyl)ethyl](methyl)amino]-2-(1-methylethyl)pentanenitrile hydrochloride.

*Content*: 99.0 per cent to 101.0 per cent (dried substance).

CHARACTERS

*Appearance*: white or almost white, crystalline powder.

*Solubility*: soluble in water, freely soluble in methanol, sparingly soluble in ethanol (96 per cent).

mp: about 144 °C.

IDENTIFICATION

*First identification*: *B, D.*

*Second identification*: *A, C, D.*

A. Ultraviolet and visible absorption spectrophotometry (*2.2.25*).

*Test solution.* Dissolve 20.0 mg in *0.01 M hydrochloric acid* and dilute to 100.0 mL with the same acid. Dilute 5.0 mL of this solution to 50.0 mL with *0.01 M hydrochloric acid*.

*Spectral range*: 210-340 nm.

*Absorption maxima*: at 229 nm and 278 nm.

*Shoulder*: at 282 nm.

*Absorbance ratio*: $A_{278}/A_{229}$ = 0.35 to 0.39.

B. Infrared absorption spectrophotometry (*2.2.24*).

*Comparison*: *verapamil hydrochloride CRS.*

C. Thin-layer chromatography (*2.2.27*).

*Test solution.* Dissolve 10 mg of the substance to be examined in *methylene chloride R* and dilute to 5 mL with the same solvent.

*Reference solution (a).* Dissolve 20 mg of *verapamil hydrochloride CRS* in *methylene chloride R* and dilute to 10 mL with the same solvent.

*Reference solution (b).* Dissolve 5 mg of *papaverine hydrochloride CRS* in reference solution (a) and dilute to 5 mL with the same solution.

*Plate*: *TLC silica gel $F_{254}$ plate R.*

*Mobile phase*: *diethylamine R, cyclohexane R* (15:85 *V/V*).

*Application*: 5 µL.

*Development*: over 3/4 of the plate.

*Drying*: in air.

*Detection*: examine in ultraviolet light at 254 nm.

*System suitability*: reference solution (b):

– the chromatogram shows 2 clearly separated principal spots.

*Results*: the principal spot in the chromatogram obtained with the test solution is similar in position and size to the principal spot in the chromatogram obtained with reference solution (a).

D. It gives reaction (b) of chlorides (*2.3.1*).

TESTS

**Solution S**. Dissolve 1.0 g in *carbon dioxide-free water R* while gently heating and dilute to 20.0 mL with the same solvent.

**Appearance of solution**. Solution S is clear (*2.2.1*) and colourless (*2.2.2, Method II*).

**pH** (*2.2.3*): 4.5 to 6.0 for solution S.

**Optical rotation** (*2.2.7*): – 0.10° to + 0.10°, determined on solution S.

**Related substances**. Liquid chromatography (*2.2.29*).

*Solvent mixture*: mobile phase B, mobile phase A (37:63 *V/V*).

*Test solution.* Dissolve 25.0 mg of the substance to be examined in the solvent mixture and dilute to 10.0 mL with the solvent mixture.

*Reference solution (a).* Dissolve 5 mg of *verapamil hydrochloride CRS*, 5 mg of *verapamil impurity I CRS* and 5 mg of *verapamil impurity M CRS* in the solvent mixture and dilute to 20 mL with the solvent mixture. Dilute 1 mL of this solution to 10 mL with the solvent mixture.

*Reference solution (b).* Dilute 1.0 mL of the test solution to 100.0 mL with the solvent mixture. Dilute 1.0 mL of this solution to 10.0 mL with the solvent mixture.

*Column*:

– *size*: *l* = 0.25 m, Ø = 4.6 mm;
– *stationary phase*: *end-capped polar-embedded octadecylsilyl amorphous organosilica polymer R* (5 µm).

*Mobile phase*:

– *mobile phase A*: 6.97 g/L solution of *dipotassium hydrogen phosphate R* adjusted to pH 7.20 with *phosphoric acid R*;
– *mobile phase B*: *acetonitrile R*;

| Time (min) | Mobile phase A (per cent *V/V*) | Mobile phase B (per cent *V/V*) |
|---|---|---|
| 0 - 22 | 63 | 37 |
| 22 - 27 | 63 → 35 | 37 → 65 |
| 27 - 35 | 35 | 65 |

*Flow rate*: 1.5 mL/min.

*Detection*: spectrophotometer at 278 nm.

*Injection*: 10 µL.

*Relative retention* with reference to verapamil (retention time = about 15 min): impurity I = about 1.3; impurity M = about 2.4.

*System suitability*: reference solution (a):

– *resolution*: minimum 5.0 between the peaks due to verapamil and impurity I;
– impurity M elutes from the column.

*Limits*:

– *unspecified impurities*: for each impurity, not more than the area of the principal peak in the chromatogram obtained with reference solution (b) (0.10 per cent);
– *total*: not more than 3 times the area of the principal peak in the chromatogram obtained with reference solution (b) (0.3 per cent);
– *disregard limit*: 0.5 times the area of the principal peak in the chromatogram obtained with reference solution (b) (0.05 per cent).

**Loss on drying** (*2.2.32*): maximum 0.5 per cent, determined on 1.000 g by drying in an oven at 105 °C.

**Sulfated ash** (*2.4.14*): maximum 0.1 per cent, determined on 1.0 g.

ASSAY

Dissolve 0.400 g in 50 mL of *anhydrous ethanol R* and add 5.0 mL of *0.01 M hydrochloric acid*. Titrate with *0.1 M sodium hydroxide*, determining the end-point potentiometrically (*2.2.20*). Measure the volume added between the 2 points of inflexion.

1 mL of *0.1 M sodium hydroxide* is equivalent to 49.11 mg of $C_{27}H_{39}ClN_2O_4$.

STORAGE

Protected from light.

IMPURITIES

*Other detectable impurities* (the following substances would, if present at a sufficient level, be detected by one or other of the tests in the monograph. They are limited by the general acceptance criterion for other/unspecified impurities and/or by the general monograph *Substances for pharmaceutical use (2034)*. It is therefore not necessary to identify these impurities for demonstration of compliance. See also *5.10. **01/2020:2305**

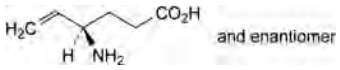
# VIGABATRIN

## Vigabatrinum



$C_6H_{11}NO_2$ $M_r$ 129.2
[60643-86-9]

DEFINITION

(4*RS*)-4-Aminohex-5-enoic acid.

*Content*: 98.5 per cent to 101.5 per cent (anhydrous substance).

CHARACTERS

*Appearance*: white or almost white powder.

*Solubility*: freely soluble in water, slightly soluble in methanol, practically insoluble in methylene chloride.

IDENTIFICATION

Infrared absorption spectrophotometry (*2.2.24*).

*Comparison*: *vigabatrin CRS*.

TESTS

**Related substances**. Liquid chromatography (*2.2.29*).

*Test solution.* Dissolve 50.0 mg of the substance to be examined in *water R*, using sonication if necessary, and dilute to 5.0 mL with the same solvent.

*Reference solution (a).* Dilute 1.0 mL of the test solution to 100.0 mL with *water R*.

*Reference solution (b).* Dissolve 7.5 mg of *vigabatrin impurity A CRS* and 7.5 mg of *vigabatrin impurity B CRS* in *water R* and dilute to 50.0 mL with the same solvent. Dilute 2.0 mL of the solution to 20.0 mL with *water R*.

*Reference solution (c).* Dissolve 5.0 mg of *vigabatrin impurity E CRS* and 10.0 mg of *vigabatrin impurity D CRS* in *water R* and dilute to 50.0 mL with the same solvent. To 2.0 mL of the solution add 1.0 mL of reference solution (a) and dilute to 20.0 mL with *water R*.

*Reference solution (d).* Dilute 2 mL of reference solution (b) to 10 mL with *water R*.

*Column*:

– *size*: *l* = 0.10 m, Ø = 4.6 mm;
– *stationary phase*: *end-capped solid core phenylhexylsilyl silica gel for chromatography R* (2.7 µm);
– *temperature*: 45 °C.

*Mobile phase*: dissolve 2.1 g of *perfluoroheptanoic acid R* in a mixture of 195 mL of *methanol R2* and 805 mL of *water for chromatography R*.

*Flow rate*: 1.0 mL/min.

*Post-column solution*: *methanol R2*.

*Post-column flow rate*: 0.8 mL/min.

*Detection*: charged aerosol detector (gas source: nitrogen at 35 psi) and, for impurities A and B, spectrophotometer at 210 nm.

*Autosampler*: set at 15 °C.

*Injection*: 30 µL of the test solution and reference solutions (b), (c) and (d).

*Run time*: 3 times the retention time of vigabatrin.

*Identification of impurities*: use the chromatogram obtained with the spectrophotometer and with reference solution (b) to identify the peaks due to impurities A and B; use the chromatogram obtained with the charged aerosol detector and with reference solution (c) to identify the peaks due to impurities D and E.

*Relative retention* with reference to vigabatrin (retention time = about 11 min): impurity A = about 0.3; impurity E = about 0.5; impurity D = about 0.6; impurity B = about 2.3.

*System suitability*:

– *resolution*: minimum 1.5 between the peaks due to impurities E and D in the chromatogram obtained with reference solution (c);
– *signal-to-noise ratio*: minimum 15 for the peak due to vigabatrin in the chromatogram obtained with reference solution (c); minimum 10 for the peak due to impurity B in the chromatogram obtained with reference solution (d);
– *symmetry factor*: minimum 0.6 for the peaks due to impurity D and vigabatrin in the chromatogram obtained with reference solution (c); minimum 0.6 for the peaks due to impurities A and B in the chromatogram obtained with reference solution (b).

*Calculation of percentage contents*:

– for impurities A and B, use the concentration of each impurity in reference solution (b);
– for impurity D, use the concentration of impurity D in reference solution (c);
– for impurities other than A, B and D, use the concentration of vigabatrin in reference solution (c).

*Limits*:

– *impurity D*: maximum 0.2 per cent;
– *impurities A, B (spectrophotometer at 210 nm)*: for each impurity, maximum 0.15 per cent;
– *unspecified impurities*: for each impurity, maximum 0.05 per cent;
– *total*: maximum 0.5 per cent;
– *reporting threshold*: 0.03 per cent.

**Water** (*2.5.12*): maximum 0.5 per cent, determined on 0.300 g.

**Sulfated ash** (*2.4.14*): maximum 0.1 per cent, determined on 1.0 g.

ASSAY

Dissolve 90 mg in 50 mL of *glacial acetic acid R*. Titrate with *0.1 M perchloric acid*, determining the end-point potentiometrically (*2.2.20*).

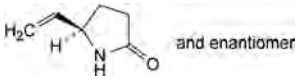
1 mL of *0.1 M perchloric acid* is equivalent to 12.92 mg of $C_6H_{11}NO_2$.

IMPURITIES

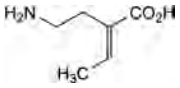
*Specified impurities: A, B, D.*

Monographs U-V

*Other detectable impurities* (the following substances would, if present at a sufficient level, be detected by one or other of the tests in the monograph. They are limited by the general acceptance criterion for other/unspecified impurities. It is therefore not necessary to identify these impurities for demonstration of compliance. See also *5.10. Control of impurities in substances for pharmaceutical use*): E.

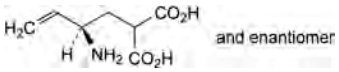


A. (5*RS*)-5-ethenylpyrrolidin-2-one,



B. (2*E*)-2-(2-aminoethyl)but-2-enoic acid,

D. 4-aminobutanoic acid (GABA),



E. 2-[(2*RS*)-2-aminobut-3-en-1-yl]propanedioic acid.

# VINBLASTINE SULFATE

## Vinblastini sulfas

$C_{46}H_{60}N_4O_{13}S$ $M_r$ 909
[143-67-9]

DEFINITION

Vinblastine sulfate contains not less than 95.0 per cent and not more than the equivalent of 104.0 per cent of methyl (3a*R*,4*R*,5*S*,5a*R*,10b*R*,13a*R*)-4-(acetyloxy)-3a-ethyl-9-[(5*S*,7*R*,9*S*)5-ethyl-5-hydroxy-9-(methoxycarbonyl)-1,4,5,6,7,8,9,10-octahydro-2*H*-3,7-methanoazacycloundecino[5,4-*b*]indol-9-yl]-5-hydroxy-8-methoxy-6-methyl-3a,4,5,5a,6,11,12,13a-octahydro-1*H*-indolizino[8,1-*cd*]carbazole-5-carboxylate sulfate, calculated with reference to the dried substance.

CHARACTERS

A white or slightly yellowish, crystalline powder, very hygroscopic, freely soluble in water, practically insoluble in alcohol.

IDENTIFICATION

A. Examine by infrared absorption spectrophotometry (*2.2.24*), comparing with the *Ph. Eur. reference spectrum of vinblastine sulfate*.

B. Examine the chromatograms obtained in the assay. The principal peak in the chromatogram obtained with the test solution is similar in position and approximate size to the principal peak in the chromatogram obtained with reference solution (a).

TESTS

**Solution S**. Dissolve 50.0 mg in *carbon dioxide-free water R* and dilute to 10.0 mL with the same solvent.

**Appearance of solution**. Solution S is clear (*2.2.1*) and not more intensely coloured than reference solution $Y_7$ (*2.2.2, Method I*).

**pH** (*2.2.3*). Dilute 3 mL of solution S to 10 mL with *carbon dioxide-free water R*. The pH of this solution is 3.5 to 5.0.

**Related substances**. Examine the chromatograms obtained in the assay. In the chromatogram obtained with the test solution, the area of any peak apart from the principal peak is not greater than the area of the principal peak in the chromatogram obtained with reference solution (c) (2.0 per cent) and the sum of the areas of any such peaks is not greater than 2.5 times the area of the principal peak in the chromatogram obtained with reference solution (c) (5.0 per cent). Disregard any peak with an area less than that of the peak in the chromatogram obtained with reference solution (d).

**Loss on drying**. Not more than 15.0 per cent, determined on 3 mg by thermogravimetry (*2.2.34*). Heat to 200 °C at a rate of 5 °C/min, under a stream of *nitrogen for chromatography R*, at a flow rate of 40 mL/min.

ASSAY

Examine by liquid chromatography (*2.2.29*).

*Keep the solutions in iced water before use.*

*Test solution.* Dilute 1.0 mL of solution S (see Tests) to 5.0 mL with *water R*.

*Reference solution (a).* Dissolve the contents of a vial of *vinblastine sulfate CRS* in 5.0 mL of *water R* to obtain a concentration of 1.0 mg/mL.

*Reference solution (b).* Dissolve 1.0 mg of *vincristine sulfate CRS* in 1.0 mL of reference solution (a).

*Reference solution (c).* Dilute 1.0 mL of reference solution (a) to 50.0 mL with *water R*.

*Reference solution (d).* Dilute 1.0 mL of reference solution (c) to 20.0 mL with *water R*.

The chromatographic procedure may be carried out using:

- a stainless steel column 0.25 m long and 4.6 mm in internal diameter packed with *octylsilyl silica gel for chromatography R* (5 µm). Place between the injector and the column a precolumn packed with suitable silica gel,
- as mobile phase at a flow rate of 1.0 mL/min a mixture of 38 volumes of a 1.5 per cent *V/V* solution of *diethylamine R* adjusted to pH 7.5 with *phosphoric acid R*, 12 volumes of *acetonitrile R* and 50 volumes of *methanol R*,
- as detector a spectrophotometer set at 262 nm,
- a loop injector.

Inject 10 µL of each solution and record the chromatograms for 3 times the retention time of the peak due to vinblastine. The assay is not valid unless: in the chromatogram obtained with reference solution (b) the resolution between the peaks due to vincristine and vinblastine is not less than 4; the peak in the chromatogram obtained with reference solution (d) has a signal-to-noise ratio not less than 5. Calculate the percentage content of $C_{46}H_{60}N_4O_{13}S$ from the area of the principal peak in each of the chromatograms obtained with the test solution and reference solution (a) and from the declared content of *vinblastine sulfate CRS*.

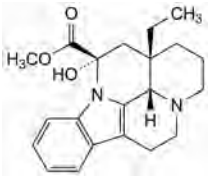
STORAGE

Store in an airtight, glass container, protected from light, at a temperature not exceeding – 20 °C. If the substance is sterile, store in a sterile, airtight, tamper-evident glass container.

**01/2020:1800**

# VINCAMINE

## Vincaminum



$C_{21}H_{26}N_2O_3$ $M_r$ 354.5
[1617-90-9]

DEFINITION

Methyl 14-hydroxyvincane-14β-carboxylate.

*Content*: 99.0 per cent to 101.0 per cent (dried substance).

CHARACTERS

*Appearance*: white or almost white, crystalline powder.

*Solubility*: practically insoluble in water, soluble in methylene chloride, slightly soluble in anhydrous ethanol.

IDENTIFICATION

A. Specific optical rotation (see Tests).

B. Infrared absorption spectrophotometry (*2.2.24*).
*Comparison*: *vincamine CRS*.

TESTS

**Specific optical rotation** (*2.2.7*): + 44.3 to + 49.0 (dried substance).

Dissolve 0.1 g in *dimethylformamide R* and dilute to 20.0 mL with the same solvent.

**Related substances**. Liquid chromatography (*2.2.29*). *Prepare the solutions immediately before use. Dissolve the samples using sonications, while avoiding any overheating.*

*Test solution.* Dissolve 50.0 mg of the substance to be examined in 10 mL of *tetrahydrofuran R* and dilute to 100.0 mL with the mobile phase.

*Reference solution (a).* Dilute 1.0 mL of the test solution to 200.0 mL with the mobile phase.

*Reference solution (b).* Dissolve 5 mg of *vincamine for system suitability CRS* (containing impurities A, B and C) in the mobile phase and dilute to 10 mL with the mobile phase.

*Column*:
- *size*: *l* = 0.25 m, Ø = 4.6 mm;
- *stationary phase*: *end-capped octadecylsilyl silica gel for chromatography with embedded polar groups R* (5 µm).

*Mobile phase*: *tetrahydrofuran R*, *acetonitrile R*, 15.4 g/L solution of *ammonium acetate R* (17:18:65 *V/V/V*).

*Flow rate*: 1.0 mL/min.

*Detection*: spectrophotometer at 272 nm.

*Injection*: 20 µL.

*Run time*: 3.5 times the retention time of vincamine.

*Identification of impurities*: use the chromatogram supplied with *vincamine for system suitability CRS* and the chromatogram obtained with reference solution (b) to identify the peaks due to impurities A, B and C.

*Relative retention* with reference to vincamine (retention time = about 10 min): impurity A = about 0.8; impurity B = about 0.9; impurity C = about 1.35.

*System suitability*: reference solution (b):
- *resolution*: minimum 2.0 between the peaks due to impurity B and vincamine.

*Calculation of percentage contents*:
- for each impurity, use the concentration of vincamine in reference solution (a).

*Limits*:
- *impurities A, C*: for each impurity, maximum 0.5 per cent;
- *unspecified impurities*: for each impurity, maximum 0.10 per cent;
- *total*: maximum 1.0 per cent;
- *reporting threshold*: 0.05 per cent.

**Loss on drying** (*2.2.32*): maximum 0.5 per cent, determined on 1.000 g by drying in an oven at 105 °C.

**Sulfated ash** (*2.4.14*): maximum 0.2 per cent, determined on 1.0 g.

ASSAY

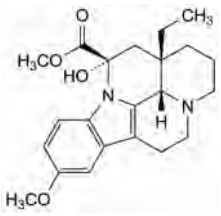
Dissolve 0.300 g in 30 mL of a mixture of 1 volume of *acetic anhydride R* and 5 volumes of *anhydrous acetic acid R*. Titrate with *0.1 M perchloric acid*, determining the end-point potentiometrically (*2.2.20*).

1 mL of *0.1 M perchloric acid* is equivalent to 35.45 mg of $C_{21}H_{26}N_2O_3$.

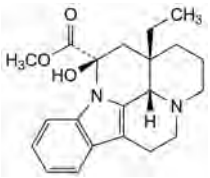
IMPURITIES

*Specified impurities: A, C.*

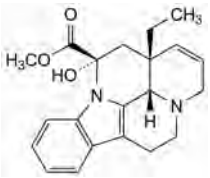
*Other detectable impurities* (the following substances would, if present at a sufficient level, be detected by one or other of the tests in the monograph. They are limited by the general acceptance criterion for other/unspecified impurities and/or by the general monograph *Substances for pharmaceutical use (2034)*. It is therefore not necessary to identify these impurities for demonstration of compliance. See also *5.10. Control of impurities in substances for pharmaceutical use*): *B, D.*



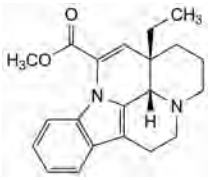
A. methyl 14-hydroxy-10-methoxyvincane-14β-carboxylate (10-methoxyvincamine),



B. methyl 14-hydroxyvincane-14α-carboxylate (14-*epi*-vincamine),



C. methyl 14-hydroxy-17,18-didehydrovincane-14β-carboxylate (17,18-didehydrovincamine),

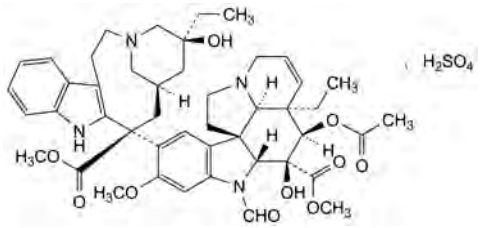


D. methyl 14,15-didehydrovincane-14-carboxylate (apovincamine).

**01/2008:0749**
**corrected 10.0**

# VINCRISTINE SULFATE

## Vincristini sulfas



$C_{46}H_{58}N_4O_{14}S$ $M_r$ 923
[2068-78-2]

DEFINITION

Methyl (3a*R*,4*R*,5*S*,5a*R*,10b*R*,13a*R*)-4-(acetyloxy)-3a-ethyl-9-[(5*S*,7*R*,9*S*)-5-ethyl-5-hydroxy-9-(methoxycarbonyl)-1,4,5,6,7,8,9,10-octahydro-2*H*-3,7-methanoazacycloundecino[5,4-*b*]indol-9-yl]-6-formyl-5-hydroxy-8-methoxy-3a,4,5,5a,6,11,12,13a-octahydro-1*H*-indolizino[8,1-*cd*]carbazole-5-carboxylate sulfate.

*Content*: 95.0 per cent to 104.0 per cent (dried substance).

CHARACTERS

*Appearance*: white or slightly yellowish, crystalline powder, very hygroscopic.

*Solubility*: freely soluble in water, slightly soluble in alcohol.

IDENTIFICATION

Infrared absorption spectrophotometry (*2.2.24*).

*Comparison*: *Ph. Eur. reference spectrum of vincristine sulfate.*

TESTS

**Solution S**. Dissolve 50.0 mg in *carbon dioxide-free water R* and dilute to 10.0 mL with the same solvent. *Keep the solution in iced water to carry out the test for related substances.*

**Appearance of solution**. Solution S is clear (*2.2.1*) and not more intensely coloured than reference solution $Y_7$ (*2.2.2, Method I*).

**pH** (*2.2.3*): 3.5 to 4.5.

Dilute 2 mL of solution S to 10 mL with *carbon dioxide-free water R*.

**Related substances**. Liquid chromatography (*2.2.29*). *Keep the solutions in iced water before use.*

*Test solution*. Dilute 1.0 mL of solution S to 5.0 mL with *water R*.

*Reference solution (a)*. Dissolve the contents of a vial of *vincristine sulfate CRS* in 5.0 mL of *water R* to obtain a concentration of 1.0 mg/mL.

*Reference solution (b)*. Dissolve 1.0 mg of *vinblastine sulfate CRS* in 1.0 mL of reference solution (a).

*Reference solution (c)*. Dilute 1.0 mL of the test solution to 50.0 mL with *water R*.

*Reference solution (d)*. Dilute 1.0 mL of reference solution (c) to 20.0 mL with *water R*.

*Precolumn*:

– *stationary phase*: *octylsilyl silica gel for chromatography R*.

*Column*:

– *size*: *l* = 0.25 m, Ø = 4.6 mm,
– *stationary phase*: *octylsilyl silica gel for chromatography R* (5 µm).

*Mobile phase*:

– *mobile phase A*: 1.5 per cent *V/V* solution of *diethylamine R* adjusted to pH 7.5 with *phosphoric acid R*,
– *mobile phase B*: *methanol R*,

| Time (min) | Mobile phase A (per cent *V/V*) | Mobile phase B (per cent *V/V*) |
|---|---|---|
| 0 - 12 | 38 | 62 |
| 12 - 27 | 38 → 8 | 62 → 92 |

*Flow rate*: 2 mL/min.

*Detection*: spectrophotometer at 297 nm.

*Injection*: 20 µL.

*System suitability*: reference solution (b):

– *resolution*: minimum 4 between the peaks due to vincristine and vinblastine.

*Limits*:

– *any impurity*: not more than the area of the principal peak in the chromatogram obtained with reference solution (c) (2.0 per cent),
– *total*: not more than 2.5 times the area of the principal peak in the chromatogram obtained with reference solution (c) (5.0 per cent),
– *disregard limit*: area of the peak in the chromatogram obtained with reference solution (d) (0.1 per cent).

**Loss on drying**: maximum 12.0 per cent, determined on 3 mg by thermogravimetry (*2.2.34*). Heat the substance to be examined to 200 °C increasing the temperature by 5 °C/min, under a current of *nitrogen for chromatography R*, at a flow rate of 40 mL/min.

ASSAY

Liquid chromatography (*2.2.29*) as described in the test for related substances, with the following modifications.

*Mobile phase*: mix 30 volumes of a 1.5 per cent *V/V* solution of *diethylamine R* adjusted to pH 7.5 with *phosphoric acid R* and 70 volumes of *methanol R*.

*Flow rate*: 1.0 mL/min.

Calculate the percentage content of $C_{46}H_{58}N_4O_{14}S$ using the chromatogram obtained with reference solution (a) and the declared content of *vincristine sulfate CRS*.

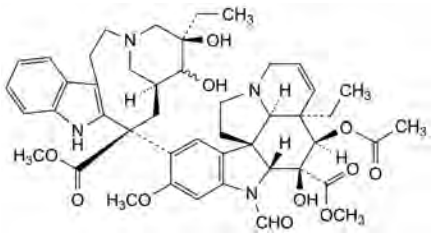
STORAGE

In an airtight, glass container, protected from light, at a temperature not exceeding – 20 °C. If the substance is sterile, store in a sterile, airtight, tamper-evident glass container.

IMPURITIES

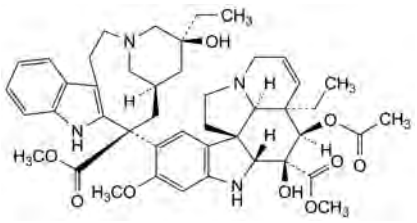
*Specified impurities*: *A, B, C, D, H.*

*Other detectable impurities* (the following substances would, if present at a sufficient level, be detected by one or other of the tests in the monograph. They are limited by the general acceptance criterion for other/unspecified impurities and/or by the general monograph *Substances for pharmaceutical use (2034)*. It is therefore not necessary to identify these impurities for demonstration of compliance. See also *5.10. Control of impurities in substances for pharmaceutical use*): *E, F, G.*



A. methyl (3a*R*,4*R*,5*S*,5a*R*,10b*R*,13a*R*)-4-(acetyloxy)-3a-ethyl-9-[(5*R*,7*S*,9*S*)-5-ethyl-5,6-dihydroxy-9-(methoxycarbonyl)-1,4,5,6,7,8,9,10-octahydro-2*H*-3,7-methanoazacycloundecino[5,4-b]indol-9-yl]-6-formyl-5-hydroxy-8-methoxy-3a,4,5,5a,6,11,12,13a-octahydro-1*H*-indolizino[8,1-*cd*]carbazole-5-carboxylate (3′-hydroxy-VCR),

B. methyl (3a*R*,4*R*,5*S*,5a*R*,10b*R*,13a*R*)-4-(acetyloxy)-3a-ethyl-9-[(5*R*,7*S*,9*S*)-5-ethyl-9-(methoxycarbonyl)-1,4,5,6,7,8,9,10-octahydro-2*H*-3,7-methanoazacycloundecino[5,4-*b*]indol-9-yl]-6-formyl-5-hydroxy-8-methoxy-3a,4,5,5a,6,11,12,13a-octahydro-1*H*-indolizino[8,1-*cd*]carbazole-5-carboxylate (4′-deoxyvincristine),



C. methyl (3a*R*,4*R*,5*S*,5a*R*,10b*S*,13a*R*)-4-(acetyloxy)-3a-ethyl-9-[(5*S*,7*R*,9*S*)-5-ethyl-5-hydroxy-9-(methoxycarbonyl)-1,4,5,6,7,8,9,10-octahydro-2*H*-3,7-methanoazacycloundecino[5,4-*b*]indol-9-yl]-5-hydroxy-8-methoxy-3a,4,5,5a,6,11,12,13a-octahydro-1*H*-indolizino[8,1-*cd*]carbazole-5-carboxylate (*N*-desmethylvinblastine),

D. methyl (3a*R*,4*R*,5*S*,5a*R*,10b*R*,13a*R*)-3a-ethyl-9-[(5*S*,7*R*,9*S*)-5-ethyl-5-hydroxy-9-(methoxycarbonyl)-1,4,5,6,7,8,9,10-octahydro-2*H*-3,7-methanoazacycloundecino-[5,4-*b*]indol-9-yl]-6-formyl-4,5-dihydroxy-8-methoxy-3a,4,5,5a,6,11,12,13a-octahydro-1*H*-indolizino-[8,1-*cd*]carbazole-5-carboxylate (deacetylvincristine),

E. methyl (3a*R*,4*R*,5*S*,5a*R*,10b*R*,13a*R*)-3a-ethyl-9-[(5*S*,7*R*,9*S*)-5-ethyl-5-hydroxy-9-(methoxycarbonyl)-1,4,5,6,7,8,9,10-octahydro-2*H*-3,7-methanoazacycloundecino[5,4-*b*]-indol-9-yl]-4,5-dihydroxy-8-methoxy-6-methyl-3a,4,5,5a,6,11,12,13a-octahydro-1*H*-indolizino-[8,1-*cd*]carbazole-5-carboxylate (deacetylvinblastine),

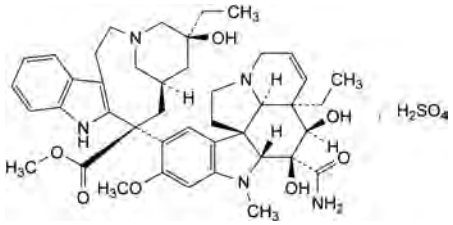
# VINDESINE SULFATE

## Vindesini sulfas



$C_{43}H_{57}N_5O_{11}S$ $M_r$ 852
[59917-39-4]

DEFINITION

3-(Carbamoyl)-$O^4$-deacetyl-3-de(methoxycarbonyl)vincaleukoblastine sulfate.

*Content*: 96.0 per cent to 103.0 per cent (anhydrous substance).

CHARACTERS

*Appearance*: white or almost white, amorphous, hygroscopic substance.

*Solubility*: freely soluble in water and in methanol, practically insoluble in cyclohexane.

IDENTIFICATION

Infrared absorption spectrophotometry (*2.2.24*).

*Comparison*: *Ph. Eur. reference spectrum of vindesine sulfate*.

TESTS

**Solution S**. Dissolve 50 mg in *carbon dioxide-free water R* and dilute to 10 mL with the same solvent.

**Appearance of solution**. Solution S is clear (*2.2.1*) and not more intensely coloured than reference solution $Y_7$ (*2.2.2, Method I*).

**pH** (*2.2.3*): 3.5 to 5.5 for solution S.

**Related substances**. Liquid chromatography (*2.2.29*). *Keep the solutions in iced water before use.*

*Test solution.* Dissolve 10.0 mg of the substance to be examined in *water R* and dilute to 10.0 mL with the same solvent.

*Reference solution (a).* Dilute 1.0 mL of the test solution to 50.0 mL with *water R*. Dilute 1.0 mL of this solution to 10.0 mL with *water R*.

*Reference solution (b).* Dissolve 1.0 mg of *desacetylvinblastine CRS* in *water R*, add 1.0 mL of the test solution and dilute to 50.0 mL with *water R*.

*Reference solution (c).* In order to prepare impurity A *in situ*, dissolve 0.2 g of the substance to be examined in *dilute hydrogen peroxide solution R* and dilute to 20.0 mL with the same solvent. Dilute 2.0 mL of the solution to 10.0 mL with *water R*. Inject the solution within 1 h of preparation.

*Column*:
- *size*: *l* = 0.15 m, Ø = 4.6 mm;
- *stationary phase*: *base-deactivated end-capped octadecylsilyl silica gel for chromatography R* (5 µm).

*Mobile phase*:
- *mobile phase A*: 1.5 per cent *V/V* solution of *diethylamine R* adjusted to pH 7.4 with *phosphoric acid R*;
- *mobile phase B*: *methanol R*;

| Time (min) | Mobile phase A (per cent *V/V*) | Mobile phase B (per cent *V/V*) |
|---|---|---|
| 0 - 40 | 49 | 51 |
| 40 - 49 | 49 → 30 | 51 → 70 |
| 49 - 60 | 30 | 70 |

*Flow rate*: 2 mL/min.

*Detection*: spectrophotometer at 270 nm.

*Injection*: 200 µL.

*Identification of impurities*: use the chromatogram obtained with reference solution (c) to identify the peak due to impurity A.

*Relative retention* with reference to vindesine (retention time = about 25 min): impurity A = about 0.2.

*System suitability*: reference solution (b):
- the retention time of vindesine is less than 40 min;
- *resolution*: minimum 2.0 between the peaks due to vindesine and desacetylvinblastine;
- *symmetry factor*: maximum 2.0 for the peak due to vindesine.

*Limits*:
- *impurity A*: not more than 2.5 times the area of the principal peak in the chromatogram obtained with reference solution (a) (0.5 per cent);
- *unspecified impurities*: for each impurity, not more than 0.5 times the area of the principal peak in the chromatogram obtained with reference solution (a) (0.10 per cent);
- *total*: not more than 4 times the area of the principal peak in the chromatogram obtained with reference solution (a) (0.8 per cent);
- *disregard limit*: 0.25 times the area of the principal peak in the chromatogram obtained with reference solution (a) (0.05 per cent).

**Water** (*2.5.32*): maximum 5.0 per cent, determined on 50.0 mg using the evaporation technique at 150 °C; weigh the sample in an inert atmosphere and carry out a blank test.

ASSAY

Liquid chromatography (*2.2.29*). *Keep the solutions in iced water before use.*

*Test solution.* Dissolve 5.0 mg of the substance to be examined in *water R* and dilute to 10.0 mL with the same solvent.

*Reference solution (a).* Dissolve and dilute the entire contents of a vial of *vindesine sulfate CRS* with *water R* to yield a concentration of approximately 0.50 mg/mL.

*Reference solution (b).* Add 1.0 mg of *desacetylvinblastine CRS* to 2.0 mL of reference solution (a).

*Column*:
- *size*: *l* = 0.15 m, Ø = 4.6 mm;
- *stationary phase*: *octadecylsilyl silica gel for chromatography R* (5 µm).

*Mobile phase*: mix 38 volumes of a 1.5 per cent *V/V* solution of *diethylamine R*, previously adjusted to pH 7.4 with *phosphoric acid R*, and 62 volumes of *methanol R*.

*Flow rate*: 1 mL/min.

*Detection*: spectrophotometer at 270 nm.

*Injection*: 20 µL.

*System suitability*: reference solution (b):
- *resolution*: minimum 1.5 between the peaks due to vindesine and desacetylvinblastine;
- *symmetry factor*: maximum 2.0 for the peak due to vindesine;
- *repeatability*: maximum relative standard deviation of 1.5 per cent for the peak due to vindesine after 5 injections.

Calculate the percentage content of $C_{43}H_{57}N_5O_{11}S$ taking into account the assigned content of *vindesine sulfate CRS*.

STORAGE

In an airtight, high-density polyethylene container with a high-density polyethylene cap, at a temperature of – 50 °C or below. If the substance is sterile, store in a sterile, airtight, tamper-evident container.

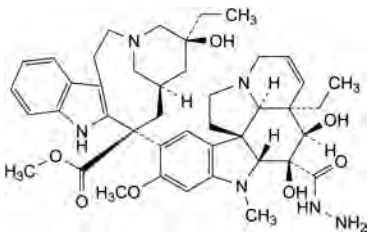
IMPURITIES

*Specified impurities: A.*

*Other detectable impurities* (the following substances would, if present at a sufficient level, be detected by one or other of the tests in the monograph. They are limited by the general acceptance criterion for other/unspecified impurities and/or by the general monograph *Substances for pharmaceutical use (2034)*. It is therefore not necessary to identify these impurities for demonstration of compliance. See also *5.10. Control of impurities in substances for pharmaceutical use*): *B, C.*

A. 3-(carbamoyl)-$O^4$-deacetyl-3-de(methoxycarbonyl)vincaleukoblastine $N^{6'}$-oxide (vindesine $N^3$-oxide),

B. vincaleukoblastine (vinblastine),



C. $O^4$-deacetyl-23-demethoxy-23-hydrazinylvincaleukoblastine (deacetylvinblastine hydrazide).

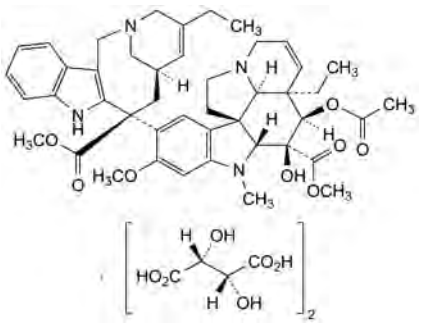
# VINORELBINE TARTRATE

## Vinorelbini tartras



$C_{53}H_{66}N_4O_{20}$ $M_r$ 1079
[125317-39-7]

DEFINITION

4′-Deoxy-3′,4′-didehydro-8′-norvincaleukoblastine dihydrogen bis[(2*R*,3*R*)-2,3-dihydroxybutanedioate].

*Content*: 98.0 per cent to 102.0 per cent (anhydrous substance).

CHARACTERS

*Appearance*: white or almost white powder, hygroscopic.

*Solubility*: freely soluble in water and in methanol, practically insoluble in hexane.

IDENTIFICATION

A. Infrared absorption spectrophotometry (*2.2.24*).

*Preparation*: dissolve 10 mg in 5 mL of *water R*. Add 0.5 mL of *sodium hydroxide solution R*. Extract with 5 mL of *methylene chloride R*. Dry the organic layer over *anhydrous sodium sulfate R*, filter and reduce its volume to about 0.5 mL by evaporation and apply to a disc of *potassium bromide R*. Evaporate and record the spectrum.

*Comparison*: *vinorelbine tartrate CRS*, treated as described above.

B. It gives reaction (b) of tartrates (*2.3.1*).

TESTS

**Solution S**. Dissolve a quantity equivalent to 0.140 g of the anhydrous substance in *carbon dioxide-free water R* and dilute to 10.0 mL with the same solvent.

**Appearance of solution**. Solution S is clear (*2.2.1*) and its absorbance (*2.2.25*) at 420 nm is not greater than 0.030.

**pH** (*2.2.3*): 3.3 to 3.8 for solution S.

**Related substances**. Liquid chromatography (*2.2.29*): use the normalisation procedure.

*Solvent mixture*: mobile phase A, mobile phase B (45:55 *V/V*).

*Test solution.* Dissolve 35.0 mg of the substance to be examined in the solvent mixture and dilute to 25.0 mL with the solvent mixture.

*Reference solution (a).* Dissolve 14 mg of *vinorelbine tartrate CRS* in *water R* and dilute to 10 mL with the same solvent. Expose this solution for 1 h to a xenon lamp apparatus at a wavelength of 310-880 nm, supplying a dose of 1600 kJ/m$^2$ at a fluence rate of 500 W/m$^2$ in order to generate impurity A.

*Reference solution (b).* Dilute 1.0 mL of the test solution to 20.0 mL with the solvent mixture. Dilute 1.0 mL of this solution to 100.0 mL with the solvent mixture.

*Reference solution (c).* Dissolve 7 mg of *vinorelbine for peak identification A CRS* (containing impurity K) in the solvent mixture and dilute to 5 mL with the solvent mixture.

*Reference solution (d).* Dissolve 7 mg of *vinorelbine for peak identification B CRS* (containing impurities C and I) in the solvent mixture and dilute to 5 mL with the solvent mixture.

*Column*:

- *size*: *l* = 0.15 m, Ø = 4.6 mm;
- *stationary phase*: spherical *end-capped octadecylsilyl silica gel for chromatography R* (5 µm);
- *temperature*: 30 °C.

*Mobile phase*:

- *mobile phase A*: mix 14 mL of *diethylamine R* and 986 mL of *water for chromatography R* and adjust to pH 7.5 with *dilute phosphoric acid R*;
- *mobile phase B*: *acetonitrile R*, *methanol R* (20:80 *V/V*);

| Time (min) | Mobile phase A (per cent *V/V*) | Mobile phase B (per cent *V/V*) |
|---|---|---|
| 0 - 5 | 45 | 55 |
| 5 - 45 | 45 → 20 | 55 → 80 |
| 45 - 50 | 20 | 80 |

*Flow rate*: 2.0 mL/min.

*Detection*: spectrophotometer at 267 nm.

*Autosampler*: set at 5 °C.

*Injection*: 20 µL.

*Identification of impurities*: use the chromatogram obtained with reference solution (a) to identify the peak due to impurity A; use the chromatogram supplied with *vinorelbine for peak identification B CRS* and the chromatogram obtained with reference solution (d) to identify the peaks due to impurities C and I; use the chromatogram supplied with *vinorelbine for peak identification A CRS* and the chromatogram obtained with reference solution (c) to identify the peak due to impurity K.

*Relative retention* with reference to vinorelbine (retention time = about 20 min): impurity C = about 0.65; impurity K = about 0.8; impurity A = about 0.9; impurity I = about 1.2.

*System suitability*: reference solution (a):

- *resolution*: minimum 1.5 between the peaks due to impurity A and vinorelbine.

*Limits*:

- *impurity A*: maximum 0.3 per cent;
- *impurities C, I, K*: for each impurity, maximum 0.2 per cent;
- *unspecified impurities*: for each impurity, maximum 0.10 per cent;
- *total*: maximum 0.5 per cent;
- *reporting threshold*: 0.05 per cent (principal peak in the chromatogram obtained with reference solution (b)).

**Boron**: maximum 50 ppm.

*Test solution.* Dissolve 0.10 g of the substance to be examined in 2 mL of *water R*. Slowly add 10.0 mL of *sulfuric acid R* while cooling in iced water. Stir and allow to warm to room temperature. Add 10.0 mL of a 0.5 g/L solution of *carminic acid R* in *sulfuric acid R*.

*Reference solution.* Dilute 2.5 mL of a 0.572 g/L solution of *boric acid R* to 100.0 mL with *water R*. To 2.0 mL of this solution slowly add 10.0 mL of *sulfuric acid R* while cooling in iced water. Stir and allow to warm to room temperature. Add 10.0 mL of a 0.5 g/L solution of *carminic acid R* in *sulfuric acid R*.

*Blank solution.* To 2.0 mL of *water R* slowly add 10.0 mL of *sulfuric acid R* while cooling in iced water. Stir and allow to warm to room temperature. Add 10.0 mL of a 0.5 g/L solution of *carminic acid R* in *sulfuric acid R*.

After 45 min, measure the absorbance (*2.2.25*) of the test solution and the reference solution, between 560 nm and 650 nm, using the blank solution as compensation liquid. The maximum absorbance value of the test solution is not greater than that of the reference solution.

**Fluorides**: maximum 50 ppm.

Potentiometry (*2.2.36, Method I*) using a fluoride-selective indicator electrode and a silver-silver chloride reference electrode.

*Test solution.* Dissolve 0.19 g of the substance to be examined in 20 mL of *water R*. Add 5.0 mL of *total-ionic-strength-adjustment buffer R* and dilute to 50 mL with *water R*.

*Reference solutions.* To 0.6 mL, 0.8 mL, 1.0 mL, 1.2 mL and 1.4 mL of *fluoride standard solution (10 ppm F) R*, add 5.0 mL of *total-ionic-strength-adjustment buffer R* and dilute to 50 mL with *water R*.

Introduce the electrodes into the reference solutions and allow to stand for 5 min. Determine the potential difference between the electrodes after 1 min of stabilisation. Using semi-logarithmic paper plot the potential difference obtained for each reference solution as a function of concentration of fluoride. Using exactly the same conditions, determine the potential difference obtained with the test solution and calculate the content of fluoride.

**Water** (*2.5.12*): maximum 4.0 per cent, determined on 0.250 g.

ASSAY

Dissolve 0.350 g in 40 mL of *glacial acetic acid R*. Titrate with *0.1 M perchloric acid*, determining the end-point potentiometrically (*2.2.20*).

1 mL of *0.1 M perchloric acid* is equivalent to 53.96 mg of $C_{53}H_{66}N_4O_{20}$.

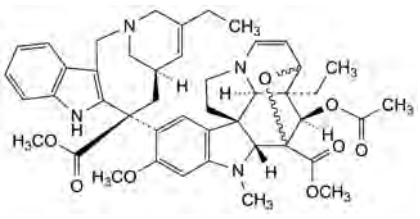
STORAGE

Under an inert gas, protected from light, at a temperature not exceeding – 15 °C.

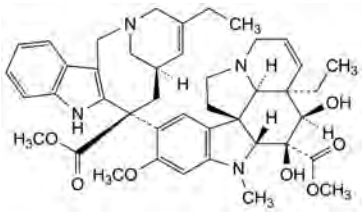
IMPURITIES

*Specified impurities: A, C, I, K.*

*Other detectable impurities* (the following substances would, if present at a sufficient level, be detected by one or other of the tests in the monograph. They are limited by the general acceptance criterion for other/unspecified impurities and/or by the general monograph *Substances for pharmaceutical use (2034)*. It is therefore not necessary to identify these impurities for demonstration of compliance. See also *5.10. Control of impurities in substances for pharmaceutical use*): *B, D, E, F, G, H, J.*

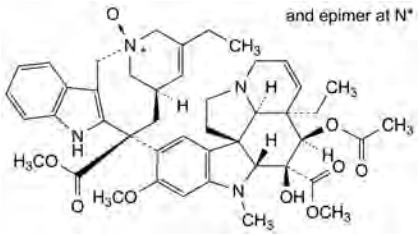


A. 3,4′-dideoxy-3,6ξ-epoxy-3′,4′,7,8-tetradehydro-6,7-dihydro-8′-nor-3ξ-vincaleukoblastine,

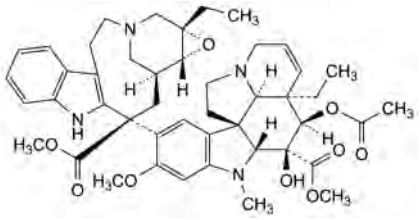


B. $O^4$-deacetyl-4′-deoxy-3′,4′-didehydro-8′-norvincaleukoblastine,

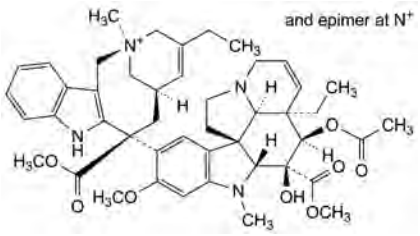
C. unknown structure,



D. (6′*RS*)-4′-deoxy-3′,4′-didehydro-8′-norvincaleukoblastine 6′-oxide,

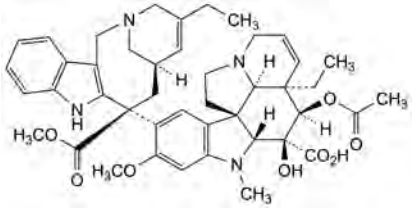


E. 4′-deoxy-3′α,4′α-epoxyvincaleukoblastine (leurosine),

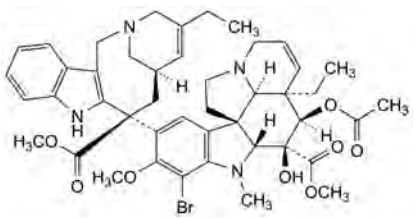


F. (6′*RS*)-4′-deoxy-6′-methyl-3′,4′-didehydro-6′-azonia-8′-norvincaleukoblastine,

G. 4′-deoxy-3′α,4′α-epoxy-8′-norvincaleukoblastine,

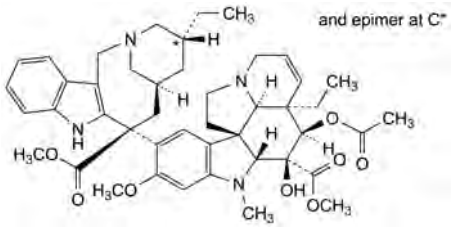


H. 4′-deoxy-3′,4′-didehydro-8′,24-dinorvincaleukoblastine,



I. 17-bromo-4′-deoxy-3′,4′-didehydro-8′-norvincaleukoblastine,

J. 4′-deoxy-3′,4′-didehydrovincaleukoblastine,



K. 4′-deoxy-8′-nor-4′αβ-vincaleukoblastine.

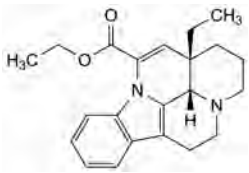
**corrected 7.3**

# VINPOCETINE

## Vinpocetinum



$C_{22}H_{26}N_2O_2$ $M_r$ 350.5
[42971-09-5]

DEFINITION

Ethyl (13a*S*,13b*S*)-13a-ethyl-2,3,5,6,13a,13b-hexahydro-1*H*-indolo[3,2,1-*de*]pyrido[3,2,1-*ij*][1,5]naphthyridine-12-carboxylate.

*Content*: 98.5 per cent to 101.5 per cent (dried substance).

CHARACTERS

*Appearance*: white or slightly yellow, crystalline powder.

*Solubility*: practically insoluble in water, soluble in methylene chloride, slightly soluble in anhydrous ethanol.

IDENTIFICATION

A. Specific optical rotation (see Tests).

B. Infrared absorption spectrophotometry (*2.2.24*).
*Comparison*: *vinpocetine CRS*.

TESTS

**Specific optical rotation** (*2.2.7*): + 127 to + 134 (dried substance).

Dissolve 0.25 g in *dimethylformamide R* and dilute to 25.0 mL with the same solvent.

**Related substances**. Liquid chromatography (*2.2.29*).

*Test solution.* Dissolve 50.0 mg of the substance to be examined in the mobile phase and dilute to 50.0 mL with the mobile phase.

*Reference solution (a).* Dilute 1.0 mL of the test solution to 50.0 mL with the mobile phase.

*Reference solution (b).* Dissolve 5.0 mg of *vinpocetine impurity B CRS*, 6.0 mg of *vinpocetine impurity A CRS*, 5.0 mg of *vinpocetine impurity C CRS* and 5.0 mg of *vinpocetine impurity D CRS* in the mobile phase and dilute to 50.0 mL with the mobile phase.

*Reference solution (c).* Dilute 1.0 mL of reference solution (a) and 1.0 mL of reference solution (b) to 20.0 mL with the mobile phase.

*Column*:

- *size*: *l* = 0.25 m, Ø = 4.6 mm;
- *stationary phase*: *end-capped octadecylsilyl silica gel for chromatography R* (5 µm).

*Mobile phase*: 15.4 g/L solution of *ammonium acetate R*, *acetonitrile R* (45:55 *V/V*).

*Flow rate*: 1.0 mL/min.

*Detection*: spectrophotometer at 280 nm.

*Injection*: 15 µL.

*Run time*: 3 times the retention time of vinpocetine.

*Relative retention* with reference to vinpocetine (retention time = about 16 min): impurity A = about 0.4; impurity D = about 0.68; impurity B = about 0.75; impurity C = about 0.83.

*System suitability*: reference solution (c):

- *resolution*: minimum 2.0 between the peaks due to impurities D and B.

*Limits*:

- *impurity A*: not more than the area of the corresponding peak in the chromatogram obtained with reference solution (c) (0.6 per cent);
- *impurities B, D*: for each impurity, not more than the area of the corresponding peak in the chromatogram obtained with reference solution (c) (0.5 per cent);
- *impurity C*: not more than 0.6 times the area of the corresponding peak in the chromatogram obtained with reference solution (c) (0.3 per cent);
- *unspecified impurities*: for each impurity, not more than the area of the peak due to vinpocetine in the chromatogram obtained with reference solution (c) (0.10 per cent);
- *total*: not more than 10 times the area of the peak due to vinpocetine in the chromatogram obtained with reference solution (c) (1.0 per cent);
- *disregard limit*: 0.5 times the area of the peak due to vinpocetine in the chromatogram obtained with reference solution (c) (0.05 per cent).

**Loss on drying** (*2.2.32*): maximum 0.5 per cent, determined on 1.000 g by drying *in vacuo* in an oven at 100 °C for 3 h.

**Sulfated ash** (*2.4.14*): maximum 0.1 per cent, determined on 1.0 g.

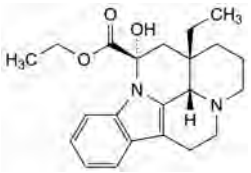
ASSAY

Dissolve 0.300 g in 50 mL of a mixture of equal volumes of *acetic anhydride R* and *anhydrous acetic acid R*. Titrate with *0.1 M perchloric acid*, determining the end-point potentiometrically (*2.2.20*).

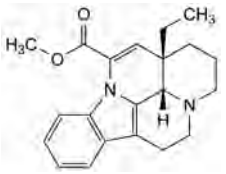
1 mL of *0.1 M perchloric acid* is equivalent to 35.05 mg of $C_{22}H_{26}N_2O_2$.

IMPURITIES

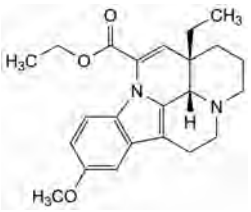
*Specified impurities: A, B, C, D.*



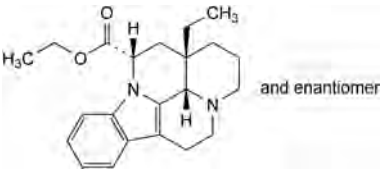
A. ethyl (12*S*,13a*S*,13b*S*)-13a-ethyl-12-hydroxy-2,3,5,6,12,13,13a,13b-octahydro-1*H*-indolo[3,2,1-*de*]-pyrido[3,2,1-*ij*][1,5]naphthyridine-12-carboxylate (ethyl vincaminate),



B. methyl (13a*S*,13b*S*)-13a-ethyl-2,3,5,6,13a,13b-hexahydro-1*H*-indolo[3,2,1-*de*]pyrido[3,2,1-*ij*][1,5]naphthyridine-12-carboxylate (apovincamine),



C. ethyl (13a*S*,13b*S*)-13a-ethyl-10-methoxy-2,3,5,6,13a,13b-hexahydro-1*H*-indolo[3,2,1-*de*]pyrido[3,2,1-*ij*][1,5]-naphthyridine-12-carboxylate (methoxyvinpocetine),



D. ethyl (12*RS*,13a*RS*,13b*RS*)-13a-ethyl-2,3,5,6,12,13,13a,13b-octahydro-1*H*-indolo[3,2,1-*de*]-pyrido[3,2,1-*ij*][1,5]naphthyridine-12-carboxylate (dihydrovinpocetine).

**corrected 6.0**

# VISCOSE WADDING, ABSORBENT

## Lanugo cellulosi absorbens

DEFINITION

Absorbent viscose wadding consists of bleached, carefully carded, new fibres of regenerated cellulose obtained by the viscose process, with or without the addition of titanium dioxide, of linear density 1.0 dtex to 8.9 dtex (dtex = mass of 10 000 m of fibre, expressed in grams) and cut to a suitable staple length. It does not contain any compensatory colouring matter.

CHARACTERS

It is white or very slightly yellow, has a lustrous or matt appearance, and is soft to the touch.

IDENTIFICATION

A. Viscose rayon fibres may be solid or hollow; hollow fibres may have a continuous lumen or be compartmented. The fibres have an average length of 25 mm to 80 mm and when examined under a microscope in the dry state, or when mounted in *alcohol R* and *water R*, the following characters are observed. They are usually of a more or less uniform width, with many longitudinal parallel lines distributed unequally over the width. The ends are cut more or less straight. Matt fibres contain numerous granular particles of approximately 1 µm average diameter.

*Solid fibres*. In longitudinal view, the surface of the fibres may be uneven or crenate. Fibres having an approximately circular or elliptical cross section have a diameter of about 10 µm to 20 µm and those that are flattened and twisted ribbons vary in width from 15 µm to 20 µm as the twisting of the filament reveals first the major axis and then the minor axis. They are about 4 µm in thickness. Other solid cross sections are Y-shaped and have protruding limbs with the major axis 5 µm to 25 µm in length and the minor axis 2 µm to 8 µm wide.

*Hollow fibres*. Fibres with a continuous, hollow lumen have a diameter of up to about 30 µm; they are thin-walled, with a wall thickness of about 5 µm. When mounted in *alcohol R* and *water R*, the lumen is clearly indicated in many fibres by the presence of many entrapped air bubbles.

*Compartmented fibres*. These fibres may have a diameter of up to 80 µm; they are hollow, having a central lumen which is divided up into several compartments. Individual compartments vary in size but typically may be up to about 60 µm in length and there may be more than one compartment across the width of each fibre. Some compartments show entrapped air bubbles when the fibres are mounted in *alcohol R* and *water R*.

B. When treated with *iodinated zinc chloride solution R*, the fibres become violet.

C. To 0.1 g add 10 mL of *zinc chloride-formic acid solution R*. Heat to 40 °C and allow to stand for 2 h 30 min, shaking occasionally. It dissolves completely except for the matt variety where titanium dioxide particles remain.

D. Dissolve the residue obtained in the test for sulfated ash by warming gently with 5 mL of *sulfuric acid R*. Allow to cool and add 0.2 mL of *dilute hydrogen peroxide solution R*. The solution obtained from the lustrous variety undergoes no change in colour; that from the matt variety shows an orange-yellow colour, the intensity of which depends on the quantity of titanium dioxide present.

TESTS

**Solution S**. Place 15.0 g in a suitable vessel, add 150 mL of *water R*, close the vessel and allow to macerate for 2 h. Decant the solution, squeeze the residual liquid carefully from the sample with a glass rod and mix. Reserve 10 mL of the solution for the test for surface-active substances and filter the remainder.

**Acidity or alkalinity**. To 25 mL of solution S add 0.1 mL of *phenolphthalein solution R* and to another 25 mL add 0.05 mL of *methyl orange solution R*. Neither solution is pink.

**Foreign fibres**. Examined under a microscope, it is seen to consist exclusively of viscose fibres, except that occasionally a few isolated foreign fibres may be present.

**Fluorescence**. Examine a layer about 5 mm in thickness under ultraviolet light at 365 nm. It displays only a slight brownish-violet fluorescence. It shows no intense blue fluorescence, apart from that which may be shown by a few isolated fibres.

**Absorbency**

*Apparatus*. A dry cylindrical copper-wire basket 8.0 cm high and 5.0 cm in diameter. The wire of which the basket is constructed is about 0.4 mm in diameter, the mesh is 1.5 cm to 2.0 cm wide and the mass of the basket is 2.7 ± 0.3 g.

*Sinking time*. Not more than 10 s. Weigh the basket to the nearest centigram ($m_1$). Take a total of 5.00 g in approximately equal quantities from 5 different places in the product to be examined, place loosely in the basket and weigh the filled basket to the nearest centigram ($m_2$). Fill a beaker 11 cm to 12 cm in diameter to a depth of 10 cm with water at about 20 °C. Hold the basket horizontally and drop it from a height of about 10 mm into the water. Measure with a stopwatch the time taken for the basket to sink below the surface of the water. Calculate the result as the average of 3 tests.

*Water-holding capacity*. Not less than 18.0 g of water per gram. After the sinking time has been measured, remove the basket from the water, allow it to drain for exactly 30 s suspended in a horizontal position over the beaker, transfer it to a tared beaker ($m_3$) and weigh to the nearest centigram ($m_4$). Calculate the water-holding capacity per gram of absorbent viscose wadding using the following expression:

$$\frac{m_4 - (m_2 + m_3)}{m_2 - m_1}$$

Calculate the result as the average of 3 tests.

**Ether-soluble substances**. Not more than 0.30 per cent. In an extraction apparatus, extract 5.00 g with *ether R* for 4 h at a rate of at least 4 extractions per hour. Evaporate the ether extract and dry the residue to constant mass at 100 °C to 105 °C.

**Extractable colouring matter**. In a narrow percolator, slowly extract 10.0 g with *alcohol R* until 50 mL of extract is obtained. The liquid obtained is not more intensely coloured (*2.2.2, Method II*) than reference solution $Y_5$, $GY_6$ or a reference solution prepared as follows: to 3.0 mL of blue primary solution add 7.0 mL of hydrochloric acid (10 g/L HCl) and dilute 0.5 mL of this solution to 10.0 mL with hydrochloric acid (10 g/L HCl).

**Surface-active substances**. Introduce the 10 mL portion of solution S reserved before filtration into a 25 mL graduated ground-glass-stoppered cylinder with an external diameter of 20 mm and a wall thickness of not greater than 1.5 mm, previously rinsed 3 times with *sulfuric acid R* and then with *water R*. Shake vigorously 30 times in 10 s, allow to stand for 1 min and repeat the shaking. After 5 min, any foam present does not cover the entire surface of the liquid.

**Water-soluble substances**. Not more than 0.70 per cent. Boil 5.00 g in 500 mL of *water R* for 30 min, stirring frequently. Replace the water lost by evaporation. Decant the liquid, squeeze the residual liquid carefully from the sample with a glass rod and mix. Filter the liquid whilst hot. Evaporate 400 mL of the filtrate (corresponding to 4/5 of the mass of the sample taken) and dry the residue to constant mass at 100 °C to 105 °C.

**Hydrogen sulfide**. To 10 mL of solution S add 1.9 mL of *water R*, 0.15 mL of *dilute acetic acid R* and 1 mL of *lead acetate solution R*. After 2 min, the solution is not more intensely coloured than a reference solution prepared at the same time using 0.15 mL of *dilute acetic acid R*, 1.2 mL of *thioacetamide reagent R*, 1.7 mL of *lead standard solution (10 ppm Pb) R* and 10 mL of solution S.

**Loss on drying** (*2.2.32*). Not more than 13.0 per cent, determined on 5.000 g by drying in an oven at 105 °C.

**Sulfated ash** (*2.4.14*). Not more than 0.45 per cent for the lustrous variety and not more than 1.7 per cent for the matt variety. Introduce 5.00 g into a previously heated and cooled, tared crucible. Heat cautiously over a naked flame and then carefully to dull redness at 600 °C. Allow to cool, add a few drops of *dilute sulfuric acid R*, then heat and incinerate until all the black particles have disappeared. Allow to cool. Add a few drops of *ammonium carbonate solution R*. Evaporate and incinerate carefully, allow to cool and weigh again. Repeat the incineration for periods of 5 min to constant mass.

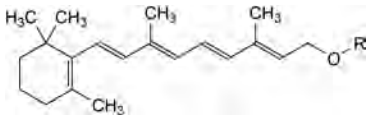
STORAGE

Store in a dust-proof package in a dry place.

**01/2008:0217**

# VITAMIN A

## Vitaminum A



| Substance | R | Molecular formula | $M_r$ |
|---|---|---|---|
| all-(*E*)-retinol | H | $C_{20}H_{30}O$ | 286.5 |
| all-(*E*)-retinol acetate | CO-$CH_3$ | $C_{22}H_{32}O_2$ | 328.5 |
| all-(*E*)-retinol propionate | CO-$C_2H_5$ | $C_{23}H_{34}O_2$ | 342.5 |
| all-(*E*)-retinol palmitate | CO-$C_{15}H_{31}$ | $C_{36}H_{60}O_2$ | 524.9 |

DEFINITION

*Vitamin A* refers to a number of substances of very similar structure (including (*Z*)-isomers) found in animal tissues and possessing similar activity. The principal and biologically most active substance is all-(*E*)-retinol (all-(*E*)-3,7-dimethyl-9-(2,6,6-trimethylcyclohex-1-enyl)nona-2,4,6,8-tetraen-1-ol; $C_{20}H_{30}O$). Vitamin A is generally used in the form of esters such as the acetate, propionate and palmitate.

*Synthetic retinol ester* refers to an ester (acetate, propionate or palmitate) or a mixture of synthetic retinol esters.

The activity of vitamin A is expressed in retinol equivalents (R.E.). 1 mg R.E. corresponds to the activity of 1 mg of all-(*E*)-retinol. The activity of the other retinol esters is calculated stoichiometrically, so that 1 mg R.E. of vitamin A corresponds to the activity of:

- 1.147 mg of all-(*E*)-retinol acetate,
- 1.195 mg of all-(*E*)-retinol propionate,
- 1.832 mg of all-(*E*)-retinol palmitate.

International Units (IU) are also used to express the activity of vitamin A. 1 IU of vitamin A is equivalent to the activity of 0.300 µg of all-(*E*)-retinol. The activity of the other retinol esters is calculated stoichiometrically, so that 1 IU of vitamin A is equivalent to the activity of:

- 0.344 µg of all-(*E*)-retinol acetate,
- 0.359 µg of all-(*E*)-retinol propionate,
- 0.550 µg of all-(*E*)-retinol palmitate,

1 mg of retinol equivalent is equivalent to 3333 IU.

CHARACTERS

*Appearance*:

Retinol acetate: pale-yellow crystals (mp: about 60 °C). Once melted retinol acetate tends to yield a supercooled melt.

Retinol propionate: reddish-brown oily liquid.

Retinol palmitate: a fat-like, light yellow solid or a yellow oily liquid, if melted (mp: about 26 °C).

*Solubility*: all retinol esters are practically insoluble in water, soluble or partly soluble in anhydrous ethanol and miscible with organic solvents.

Vitamin A and its esters are very sensitive to the action of air, oxidising agents, acids, light and heat.

*Carry out the assay and all tests as rapidly as possible, avoiding exposure to actinic light and air, oxidising agents, oxidation catalysts (e.g. copper, iron), acids and heat; use freshly prepared solutions.*

IDENTIFICATION

A. Thin-layer chromatography (*2.2.27*).

*Test solution.* Prepare a solution containing about 3.3 IU of vitamin A per microlitre in *cyclohexane R* containing 1 g/L of *butylhydroxytoluene R*.

*Reference solution.* Prepare a 10 mg/mL solution of *retinol esters CRS* (i.e. 3.3 IU of each ester per microlitre) in *cyclohexane R* containing 1 g/L of *butylhydroxytoluene R*.

*Plate*: *TLC silica gel $F_{254}$ plate R.*

*Mobile phase*: *ether R*, *cyclohexane R* (20:80 *V/V*).

*Application*: 3 µL.

*Development*: over 2/3 of the plate.

*Drying*: in air.

*Detection*: examine in ultraviolet light at 254 nm.

*System suitability*: reference solution:

- the chromatogram shows the individual spots of the corresponding esters. The elution order from bottom to top is: retinol acetate, retinol propionate and retinol palmitate.

*Results*: the composition of esters is confirmed by the correspondence of the principal spot or spots of the test solution with those obtained with the reference solution.

B. Related substances (see Tests).

TESTS

**Retinol**. Thin-layer chromatography (*2.2.27*).

*Test solution.* Prepare a solution in *cyclohexane R*, stabilised with a solution containing 1 g/L of *butylhydroxytoluene R*, containing about 330 IU of vitamin A per microlitre.

*Reference solution.* Shake 1 mL of the test solution with 20 mL of *0.1 M tetrabutylammonium hydroxide in 2-propanol* for 2 min and dilute to 100 mL with *cyclohexane R*, stabilised with a solution containg 1 g/L of *butylhydroxytoluene R*.

*Plate*: *TLC silica gel $F_{254}$ plate R.*

*Mobile phase*: *ether R*, *cyclohexane R* (20:80 *V/V*).

*Application*: 3 µL.

*Development*: over a path of 15 cm.

*Drying*: in air.

*Detection*: examine in ultraviolet light at 254 nm.

*System suitability*: reference solution:

- in the chromatogram obtained no or only traces of the retinol esters are seen.

*Limit*: any spot corresponding to retinol in the chromatogram obtained with the test solution is not more intense than the spot in the chromatogram obtained with the reference solution (1.0 per cent).

**Related substances**. Ultraviolet and visible absorption spectrophotometry (*2.2.25*).

*Test solution.* The solution described under Activity.

*Absorption maximum*: at 325 nm to 327 nm.

*Absorbance ratios*:

- $A_{300}/A_{326}$ = maximum 0.60;
- $A_{350}/A_{326}$ = maximum 0.54;
- $A_{370}/A_{326}$ = maximum 0.14.

The thresholds indicated under Related substances (Table 2034.-1) in the general monograph *Substances for pharmaceutical use (2034)* do not apply.

ACTIVITY

The activity of the substance is determined in order to be taken into account for the production of concentrates.

Dissolve 25-100 mg, weighed with an accuracy of 0.1 per cent, in 5 mL of *pentane R* and dilute with *2-propanol R1* to a presumed concentration of 10 IU/mL to 15 IU/mL. Measure the absorbance (*2.2.25*) at the absorption maximum at 326 nm. Calculate the activity of vitamin A in International Units per gram from the expression:

$$\frac{A_{326} \times V \times 1900}{100 \times m}$$

$A_{326}$ = absorbance at 326 nm,

$m$ = mass of the substance to be examined, in grams,

$V$ = total volume to which the substance to be examined is diluted to give 10 IU/mL to 15 IU/mL,

1900 = factor to convert the specific absorbance of esters of retinol into International Units per gram.

STORAGE

In an airtight container, protected from light.

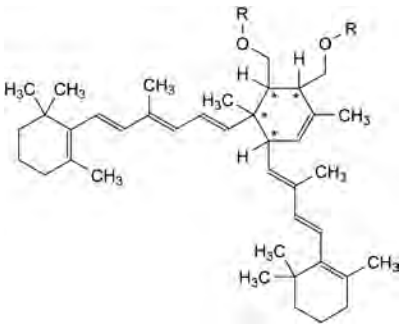
Once the container has been opened, its contents are to be used as soon as possible; any part of the contents not used at once should be protected by an atmosphere of inert gas.

LABELLING

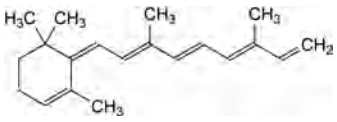
The label states:

- the number of International Units per gram,
- the name of the ester or esters.

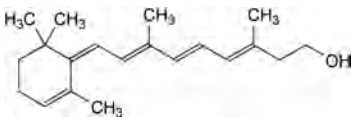
IMPURITIES



A. R = H, CO-$CH_3$: kitols (Diels-Alder dimers of vitamin A),



B. (3*E*,5*E*,7*E*)-3,7-dimethyl-9-[(1*Z*)-2,6,6-trimethylcyclohex-2-enylidene]nona-1,3,5,7-tetraene (anhydro-vitamin A),



C. (3*E*,5*E*,7*E*)-3,7-dimethyl-9-[(1*Z*)-2,6,6-trimethylcyclohex-2-enylidene]nona-3,5,7-trien-1-ol (*retro*-vitamin A),

D. oxidation products of vitamin A.

**01/2018:0219**

# VITAMIN A CONCENTRATE (OILY FORM), SYNTHETIC

## Vitaminum A syntheticum densatum oleosum

DEFINITION

Oily concentrate prepared from synthetic retinol ester (*0217*) as is or by dilution with a suitable vegetable fatty oil.

*Content*: 95.0 per cent to 110.0 per cent of the vitamin A content stated on the label, which is not less than 500 000 IU/g.

It may contain suitable stabilisers such as antioxidants.

CHARACTERS

*Appearance*: yellow or brownish-yellow, oily liquid.

*Solubility*: practically insoluble in water, soluble or partly soluble in anhydrous ethanol, miscible with organic solvents.

Partial crystallisation may occur in highly concentrated solutions.

IDENTIFICATION

Thin-layer chromatography (*2.2.27*).

*Test solution.* Prepare a solution containing about 3.3 IU of vitamin A per microlitre in *cyclohexane R* containing 1 g/L of *butylhydroxytoluene R*.

*Reference solution.* Prepare a 10 mg/mL solution of *retinol esters CRS* (i.e. 3.3 IU of each ester per microlitre) in *cyclohexane R* containing 1 g/L of *butylhydroxytoluene R*.

*Plate*: *TLC silica gel $F_{254}$ plate R*.

*Mobile phase*: *ether R*, *cyclohexane R* (20:80 *V/V*).

*Application*: 3 µL.

*Development*: immediately, over a path of 15 cm.

*Drying*: in air.

*Detection*: examine in ultraviolet light at 254 nm.

*System suitability*: reference solution:

- the chromatogram shows the individual spots of the corresponding esters. The elution order from bottom to top is: retinol acetate, retinol propionate and retinol palmitate.

*Results*: the composition of the test solution is confirmed by the correspondence of the principal spot or spots with those obtained with the reference solution.

TESTS

**Acid value** (*2.5.1*): maximum 2.0, determined on 2.0 g.

**Peroxide value** (*2.5.5, Method A*): maximum 10.0.

**Related substances**. The thresholds indicated under Related substances (Table 2034.-1) in the general monograph *Substances for pharmaceutical use (2034)* do not apply.

ASSAY

*Carry out the assay as rapidly as possible, avoiding exposure to actinic light, air, oxidising agents, oxidation catalysts (e.g. copper, iron), acids and prolonged heat; use freshly prepared solutions. If partial crystallisation has occurred, homogenise the material at a temperature of about 65 °C, but avoid prolonged heating.*

*Carry out the assay according to Method A. If the assay is not shown to be valid, use Method B.*

**Method A**. Ultraviolet absorption spectrophotometry (*2.2.25*).

Dissolve 25-100 mg, weighed with an accuracy of 0.1 per cent, in 5 mL of *pentane R* and dilute with *2-propanol R1* to a presumed concentration of 10-15 IU/mL.

Verify that the absorption maximum of the solution lies between 325 nm and 327 nm and measure the absorbances at 300 nm, 326 nm, 350 nm and 370 nm. Repeat the readings at each wavelength and take the mean values. Calculate the ratio $A_\lambda/A_{326}$ for each wavelength.

If the ratios do not exceed: 0.60 at 300 nm, 0.54 at 350 nm, 0.14 at 370 nm, calculate the content of vitamin A in International Units per gram using the following expression:

$$\frac{A_{326} \times V \times 1900}{100 \times m}$$

$A_{326}$ = absorbance at 326 nm,

$m$ = mass of the preparation to be examined, in grams,

$V$ = total volume to which the preparation to be examined is diluted to give 10-15 IU/mL,

1900 = factor to convert the specific absorbance of esters of retinol into International Units per gram.

If one or more of the ratios $A_\lambda/A_{326}$ exceeds the values given, or if the wavelength of the absorption maximum does not lie between 325 nm and 327 nm, use Method B.

**Method B**. Liquid chromatography (*2.2.29*).

*Test solution (a).* Introduce 0.100 g of the preparation to be examined into a 100 mL volumetric flask and dissolve immediately in 5 mL of *pentane R*. Add 40 mL of *0.1 M tetrabutylammonium hydroxide in 2-propanol*. Swirl gently and let the mixture react for 10 min at 60-65 °C for hydrolysis, swirling occasionally. Allow to cool to room temperature, dilute to 100.0 mL with *2-propanol R* containing 1 g/L of *butylhydroxytoluene R*, and homogenise carefully to avoid air bubbles.

*Test solution (b).* Dilute test solution (a) with *2-propanol R* to a final concentration of 100 IU/mL.

*Reference solution (a).* Introduce about 0.100 g of *retinol acetate CRS* into a 100 mL volumetric flask and proceed as described for test solution (a).

*Reference solution (b).* Dilute reference solution (a) with *2-propanol R* to a final concentration of 100 IU/mL. Homogenise carefully to avoid air bubbles.

*Column*:

- *size*: $l$ = 0.125 m, Ø = 4 mm,
- *stationary phase*: *octadecylsilyl silica gel for chromatography R* (5 µm).

*Mobile phase*: *water R*, *methanol R* (5:95 *V/V*).

*Flow rate*: 1 mL/min.

*Detection*: spectrophotometer at 325 nm.

*Injection*: 10 µL of test solution (b) and reference solution (b).

*Run time*: 1.5 times the retention time of retinol.

*Retention time*: retinol = about 3 min.

Calculate the content of vitamin A in International Units per gram using the following expression:

$$\frac{A_1 \times C \times m_2}{A_2 \times m_1}$$

$A_1$ = area of the peak due to retinol in the chromatogram obtained with test solution (b),

$A_2$ = area of the peak due to retinol in the chromatogram obtained with reference solution (b),

$C$ = concentration of *retinol acetate CRS* in International Units per gram, determined by method A; the absorption ratios $A_\lambda/A_{326}$ must conform,

$m_1$ = mass of the substance to be examined in test solution (a), in milligrams,

$m_2$ = mass of *retinol acetate CRS* in reference solution (a), in milligrams.

STORAGE

In an airtight container, protected from light.

Once the container has been opened, its contents are to be used as soon as possible; any part of the contents not used at once should be protected by an atmosphere of inert gas.

LABELLING

The label states:

- the number of International Units per gram,
- the name of the ester or esters,
- the name of any added stabilisers,
- the method of restoring the solution if partial crystallisation has occurred.

**01/2018:0218**

# VITAMIN A CONCENTRATE (POWDER FORM), SYNTHETIC

## Vitamini A synthetici densati pulvis

DEFINITION

Powder concentrate obtained by dispersing a synthetic retinol ester (*0217*) in a matrix of *Gelatin (0330)* or *Acacia (0307)* or other suitable material.

*Content*: 95.0 per cent to 115.0 per cent of the vitamin A content stated on the label, which is not less than 250 000 IU/g.

It may contain suitable stabilisers such as antioxidants.

CHARACTERS

*Appearance*: yellowish powder usually in the form of particles of almost uniform size.

*Solubility*: practically insoluble in water, swells or forms an emulsion, depending on the formulation.

IDENTIFICATION

Thin-layer chromatography (*2.2.27*).

*Test solution.* Introduce a quantity of the preparation to be examined containing about the equivalent of 17 000 IU of vitamin A into a 20 mL glass-stoppered test tube. Add about 20 mg of *bromelains R*, 2 mL of *water R* and about 150 µL of *2-propanol R*, swirling gently for 2-5 min in a water-bath at 60-65 °C. Cool to below 30 °C and add 5 mL of *2-propanol R* containing 1 g/L of *butylhydroxytoluene R*. Shake vigorously for 1 min, allow to stand for a few minutes and use the supernatant solution.

*Reference solution.* Prepare a 10 mg/mL solution of *retinol esters CRS* (i.e. 3.3 IU of each ester per microlitre) in *2-propanol R* containing 1 g/L of *butylhydroxytoluene R*.

*Plate*: *TLC silica gel $F_{254}$ plate R*.

*Mobile phase*: *ether R*, *cyclohexane R* (20:80 *V/V*).

*Application*: 3 µL.

*Development*: over a path of 15 cm.

*Drying*: in air.

*Detection*: examine in ultraviolet light at 254 nm.

*System suitability*: reference solution:

- the chromatogram shows the individual spots of the corresponding esters. The elution order from bottom to top is: retinol acetate, retinol propionate and retinol palmitate.

*Results*: the composition of the test solution is confirmed by the correspondence of the principal spot or spots with those obtained with the reference solution.

TESTS

**Related substances**. The thresholds indicated under Related substances (Table 2034.-1) in the general monograph *Substances for pharmaceutical use (2034)* do not apply.

ASSAY

*Carry out the assay as rapidly as possible, avoiding exposure to actinic light, air, oxidising agents, oxidation catalysts (e.g. copper, iron), acids and prolonged heat.*

Liquid chromatography (*2.2.29*).

*Test solution (a)*. Introduce 0.200 g of the preparation to be examined into a 100 mL volumetric flask. Add 20-30 mg of *bromelains R*, 5.0 mL of *water R* and 0.15 mL of *2-propanol R*. Heat gently in a water-bath at 60 °C for about 5 min, swirling occasionally. Add 40 mL of *0.1 M tetrabutylammonium hydroxide in 2-propanol*. Swirl gently and let the mixture react for 10 min at 60-65 °C for hydrolysis, swirling occasionally. Ensure that all sample material is wetted. Allow to cool to room temperature, dilute to 100.0 mL with *2-propanol R* containing 1 g/L of *butylhydroxytoluene R*, and homogenise carefully to avoid air bubbles. The solution may be turbid.

*Test solution (b)*. Dilute test solution (a) with *2-propanol R* to a final concentration of 100 IU/mL. Filter before injection.

*Reference solution (a)*. Introduce about 0.100 g of *retinol acetate CRS* into a 100 mL volumetric flask and dissolve immediately in 5 mL of *pentane R*. Add 40 mL of *0.1 M tetrabutylammonium hydroxide in 2-propanol*. Swirl gently and let the mixture react for 10 min at 60-65 °C for hydrolysis, swirling occasionally. Allow to cool to room temperature, dilute to 100.0 mL with *2-propanol R* containing 1 g/L of *butylhydroxytoluene R*, and homogenise carefully to avoid air bubbles.

*Reference solution (b)*. Dilute reference solution (a) with *2-propanol R* to a final concentration of 100 IU/mL. Homogenise carefully to avoid air bubbles.

*Column*:

- *size*: $l$ = 0.125 m, Ø = 4 mm,
- *stationary phase*: *octadecylsilyl silica gel for chromatography R* (5 µm).

*Mobile phase*: *water R*, *methanol R* (5:95 *V/V*).

*Flow rate*: 1 mL/min.

*Detection*: spectrophotometer at 325 nm.

*Injection*: 10 µL of test solution (b) and reference solution (b).

*Run time*: 1.5 times the retention time of retinol.

*Retention time*: retinol = about 3 min.

Calculate the content of vitamin A using the following expression:

$$\frac{A_1 \times C \times m_2}{A_2 \times m_1}$$

$A_1$ = area of the peak due to retinol in the chromatogram obtained with test solution (b),

$A_2$ = area of the peak due to retinol in the chromatogram obtained with reference solution (b),

$C$ = concentration of *retinol acetate CRS* in International Units per gram, determined by the method below,

$m_1$ = mass of the substance to be examined in test solution (a), in milligrams,

$m_2$ = mass of *retinol acetate CRS* in reference solution (a), in milligrams.

The exact concentration of *retinol acetate CRS* is assessed by ultraviolet absorption spectrophotometry (*2.2.25*). Dissolve 25-100 mg of *retinol acetate CRS*, weighed with an accuracy of 0.1 per cent, in 5 mL of *pentane R* and dilute with *2-propanol R1* to a presumed concentration of 10-15 IU/mL.

Verify that the absorption maximum of the solution lies between 325 nm and 327 nm and measure the absorbances at 300 nm, 326 nm, 350 nm and 370 nm. Repeat the readings at each wavelength and take the mean values. Calculate the ratio $A_\lambda/A_{326}$ for each wavelength.

If the ratios do not exceed: 0.60 at 300 nm, 0.54 at 350 nm, 0.14 at 370 nm, calculate the content of vitamin A in International Units per gram using the following expression:

$$\frac{A_{326} \times V \times 1900}{100 \times m}$$

$A_{326}$ = absorbance at 326 nm,

$m$ = mass of *retinol acetate CRS*, in grams,

$V$ = total volume to which the *retinol acetate CRS* is diluted to give 10-15 IU/mL,

1900 = factor to convert the specific absorbance of esters of retinol into International Units per gram.

The absorbance ratios $A_\lambda/A_{326}$ must conform.

STORAGE

In an airtight container, protected from light.

Once the container has been opened, its contents are to be used as soon as possible; any part of the contents not used at once should be protected by an atmosphere of inert gas.

LABELLING

The label states:

- the number of International Units per gram,
- the name of the ester or esters,
- the name of the principal excipient or excipients used and the name of any added stabilisers.

**01/2018:0220**

# VITAMIN A CONCENTRATE (SOLUBILISATE/EMULSION), SYNTHETIC

## Vitaminum A syntheticum, solubilisatum densatum in aqua dispergibile

DEFINITION

Liquid concentrate (water is generally used as solvent) of a synthetic retinol ester (*0217*) and a suitable solubiliser.

*Content*: 95.0 per cent to 115.0 per cent of the vitamin A content stated on the label, which is not less than 100 000 IU/g.

It may contain suitable stabilisers such as antimicrobial preservatives and antioxidants.

CHARACTERS

*Appearance*: yellow or yellowish liquid of variable opalescence and viscosity. Highly concentrated solutions may become cloudy at low temperature or take the form of a gel.

A mixture of 1 g with 10 mL of *water R* previously warmed to 50 °C gives, after cooling to 20 °C, a uniform, slightly opalescent and slightly yellow dispersion.

IDENTIFICATION

Thin-layer chromatography (*2.2.27*).

*Test solution*. Introduce a quantity of the preparation to be examined containing about the equivalent of 17 000 IU of vitamin A into a 20 mL glass-stoppered test tube. Add 5 mL of *2-propanol R* containing 1 g/L of *butylhydroxytoluene R* and mix thoroughly.

*Reference solution*. Prepare a 10 mg/mL solution of *retinol esters CRS* (i.e. 3.3 IU of each ester per microlitre) in *2-propanol R* containing 1 g/L of *butylhydroxytoluene R*.

*Plate*: *TLC silica gel $F_{254}$ plate R*.

*Mobile phase*: *ether R*, *cyclohexane R* (20:80 *V/V*).

*Application*: 3 µL.

*Development*: over a path of 15 cm.

*Drying*: in air.

*Detection*: examine in ultraviolet light at 254 nm.

*System suitability*: reference solution:

– the chromatogram shows the individual spots of the corresponding esters. The elution order from bottom to top is: retinol acetate, retinol propionate and retinol palmitate.

*Results*: the composition of the test solution is confirmed by the correspondence of the principal spot or spots with those obtained with the reference solution.

TESTS

**Related substances**. The thresholds indicated under Related substances (Table 2034.-1) in the general monograph *Substances for pharmaceutical use (2034)* do not apply.

ASSAY

*Carry out the assay as rapidly as possible, avoiding exposure to actinic light, air, oxidising agents, oxidation catalysts (e.g. copper, iron), acids and prolonged heat.*

Liquid chromatography (*2.2.29*).

*Test solution (a)*. Introduce 0.200 g of the preparation to be examined into a 100 mL volumetric flask. Add 40 mL of *0.1 M tetrabutylammonium hydroxide in 2-propanol*. Swirl into dispersion and let the mixture react for 10 min at 60-65 °C for hydrolysis, swirling occasionally. Ensure that all sample material is wetted. Allow to cool to room temperature, dilute to 100.0 mL with *2-propanol R* containing 1 g/L of *butylhydroxytoluene R* and homogenise carefully to avoid air bubbles. Residue of the matrix may make the solution more or less cloudy.

*Test solution (b)*. Dilute test solution (a) with *2-propanol R* to a final concentration of 100 IU/mL. Filter before injection.

*Reference solution (a)*. Introduce about 0.100 g of *retinol acetate CRS* into a 100 mL volumetric flask and dissolve immediately in 5 mL of *pentane R*. Add 40 mL of *0.1 M tetrabutylammonium hydroxide in 2-propanol*. Swirl gently and let the mixture react for 10 min at 60-65 °C for hydrolysis, swirling occasionally. Allow to cool to room temperature, dilute to 100.0 mL with *2-propanol R* containing 1 g/L of *butylhydroxytoluene R*, and homogenise carefully to avoid air bubbles.

*Reference solution (b)*. Dilute reference solution (a) with *2-propanol R* to a final concentration of 100 IU/mL. Homogenise carefully to avoid air bubbles.

*Column*:

– *size*: *l* = 0.125 m, Ø = 4 mm,

– *stationary phase*: *octadecylsilyl silica gel for chromatography R* (5 µm).

*Mobile phase*: *water R*, *methanol R* (5:95 *V/V*).

*Flow rate*: 1 mL/min.

*Detection*: spectrophotometer at 325 nm.

*Injection*: 10 µL of test solution (b) and reference solution (b).

*Run time*: 1.5 times the retention time of retinol.

*Retention time*: retinol = about 3 min.

Calculate the content of vitamin A using the following expression:

$$\frac{A_1 \times C \times m_2}{A_2 \times m_1}$$

$A_1$ = area of the peak due to retinol in the chromatogram obtained with test solution (b),

$A_2$ = area of the peak due to retinol in the chromatogram obtained with reference solution (b),

$C$ = concentration of *retinol acetate CRS* in International Units per gram, determined by the method below,

$m_1$ = mass of the substance to be examined in test solution (a), in milligrams,

$m_2$ = mass of *retinol acetate CRS* in reference solution (a), in milligrams.

The exact concentration of *retinol acetate CRS* is assessed by ultraviolet absorption spectrophotometry (*2.2.25*). Dissolve 25-100 mg of *retinol acetate CRS*, weighed with an accuracy of 0.1 per cent, in 5 mL of *pentane R* and dilute with *2-propanol R1* to a presumed concentration of 10-15 IU/mL.

Verify that the absorption maximum of the solution lies between 325 nm and 327 nm and measure the absorbances at 300 nm, 326 nm, 350 nm and 370 nm. Repeat the readings at each wavelength and take the mean values. Calculate the ratio $A_\lambda/A_{326}$ for each wavelength.

If the ratios do not exceed: 0.60 at 300 nm, 0.54 at 350 nm, 0.14 at 370 nm, calculate the content of vitamin A in International Units per gram using the following expression:

$$\frac{A_{326} \times V \times 1900}{100 \times m}$$

$A_{326}$ = absorbance at 326 nm,

$m$ = mass of *retinol acetate CRS*, in grams,

$V$ = total volume to which the *retinol acetate CRS* is diluted to give 10-15 IU/mL,

1900 = factor to convert the specific absorbance of esters of retinol into International Units per gram.

The absorbance ratios $A_\lambda/A_{326}$ must conform.

STORAGE

In an airtight container, protected from light, at the temperature stated on the label.

Once the container has been opened, its contents are to be used as soon as possible; any part of the contents not used at once should be protected by an atmosphere of inert gas.

LABELLING

The label states:

– the number of International Units per gram,

– the name of the ester or esters,

– the name of the principal solubiliser or solubilisers used and the name of any added stabilisers,

– the storage temperature.

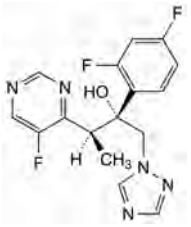
corrected 10.0

# VORICONAZOLE

## Voriconazolum



$C_{16}H_{14}F_3N_5O$ $M_r$ 349.3
[137234-62-9]

DEFINITION

(2*R*,3*S*)-2-(2,4-Difluorophenyl)-3-(5-fluoropyrimidin-4-yl)-1-(1*H*-1,2,4-triazol-1-yl)butan-2-ol.

*Content*: 97.5 per cent to 102.0 per cent (anhydrous substance).

CHARACTERS

*Appearance*: white or almost white powder.

*Solubility*: very slightly soluble in water, freely soluble in acetone and in methylene chloride.

IDENTIFICATION

A. Infrared absorption spectrophotometry (*2.2.24*).
*Comparison*: *voriconazole CRS*.

B. Enantiomeric purity (see Tests).

TESTS

**Appearance of solution**. The solution is clear (*2.2.1*) and colourless (*2.2.2, Method II*).

Dissolve 0.5 g in a 103 g/L solution of *hydrochloric acid R* and dilute to 20 mL with the same solution.

**Enantiomeric purity**. Liquid chromatography (*2.2.29*).

*Test solution.* Dissolve 25.0 mg of the substance to be examined in 2 mL of *acetonitrile R* and dilute to 50.0 mL with the mobile phase.

*Reference solution (a).* Dissolve 5.0 mg of *voriconazole impurity D CRS* in 2 mL of *acetonitrile R* and dilute to 50.0 mL with the mobile phase.

*Reference solution (b).* Dissolve 25 mg of the substance to be examined in 2 mL of *acetonitrile R*, add 1 mL of reference solution (a) and dilute to 50.0 mL with the mobile phase.

*Reference solution (c).* Dilute 1.0 mL of reference solution (a) to 100.0 mL with the mobile phase.

*Column*:
- *size*: *l* = 0.25 m, Ø = 4.6 mm;
- *stationary phase*: *silica gel BC for chiral chromatography R* (5 µm);
- *temperature*: 30 °C.

*Mobile phase*: mix 18 volumes of *acetonitrile R* and 82 volumes of a 0.77 g/L solution of *ammonium acetate R* previously adjusted to pH 5.0 with *glacial acetic acid R*.

*Flow rate*: 1.0 mL/min.

*Detection*: spectrophotometer at 256 nm.

*Injection*: 20 µL of the test solution and reference solutions (b) and (c).

*Run time*: 2.5 times the retention time of voriconazole.

*Relative retention* with reference to voriconazole (retention time = about 7 min): impurity D = about 1.5.

*System suitability*: reference solution (b):
- *resolution*: minimum 4.0 between the peaks due to voriconazole and impurity D.

*Limit*:
- *impurity D*: not more than the area of the principal peak in the chromatogram obtained with reference solution (c) (0.2 per cent).

**Impurity E**. Liquid chromatography (*2.2.29*).

*Test solution.* Dissolve 50.0 mg of the substance to be examined in 5.0 mL of *methanol R* and dilute to 10.0 mL with the mobile phase.

*Reference solution (a).* Dissolve 25.0 mg of *voriconazole impurity E CRS* in 50 mL of *methanol R* and dilute to 100.0 mL with the mobile phase.

*Reference solution (b).* Dissolve 17 mg of *sodium chloride R* in *water R* and dilute to 200.0 mL with the same solvent. Mix 1 mL of the solution, 1 mL of reference solution (a) and 25 mL of *methanol R* and dilute to 50.0 mL with the mobile phase.

*Reference solution (c).* To 1.0 mL of reference solution (a) add 25 mL of *methanol R* and dilute to 50.0 mL with the mobile phase.

*Column*:
- *size*: *l* = 0.25 m, Ø = 4.0 mm;
- *stationary phase*: *strongly basic anion-exchange resin for chromatography R* (8.5 µm);
- *temperature*: 40 °C.

*Mobile phase*: to 1500 mL of *water R* add 500 mL of *methanol R*, mix and degas; add about 175 µL of a 470 g/L solution of *sodium hydroxide R* and mix.

*Flow rate*: 1.0 mL/min.

*Detection*: conductivity detector; use a self-regenerating anion suppressor.

*Injection*: 20 µL of the test solution and reference solutions (b) and (c).

*Run time*: twice the retention time of impurity E.

*Relative retention* with reference to impurity E (retention time = about 4 min): chloride = about 1.5.

*System suitability*:
- *resolution*: minimum 3.5 between the peaks due to impurity E and chloride in the chromatogram obtained with reference solution (b);
- *symmetry factor*: maximum 1.7 for the peak due to impurity E in the chromatogram obtained with reference solution (c).

*Limit*:
- *impurity E*: not more than the area of the principal peak in the chromatogram obtained with reference solution (c) (0.10 per cent).

**Related substances**. Liquid chromatography (*2.2.29*).

*Test solution (a).* Dissolve 50.0 mg of the substance to be examined in the mobile phase, sonicating if necessary, and dilute to 100.0 mL with the mobile phase. Mix well to ensure complete dissolution.

*Test solution (b).* Dilute 5.0 mL of test solution (a) to 100.0 mL with the mobile phase.

*Reference solution (a).* Dissolve 50.0 mg of *voriconazole CRS* in the mobile phase, sonicating if necessary, and dilute to 100.0 mL with the mobile phase. Mix well to ensure complete dissolution. Dilute 5.0 mL of the solution to 100.0 mL with the mobile phase.

*Reference solution (b).* Suspend 0.100 g of the substance to be examined in 10 mL of a 40 g/L solution of *sodium hydroxide R* and dilute to 20 mL with the mobile phase; sonicate if necessary. Allow to stand for 30 min. Dilute 1.0 mL of the solution to 100.0 mL with the mobile phase (*in situ* degradation to obtain impurities A and C).

*Reference solution (c).* Dilute 1.0 mL of test solution (a) to 100.0 mL with the mobile phase and mix. Dilute 1.0 mL of this solution to 10.0 mL with the mobile phase and mix well.

*Reference solution (d).* Dissolve 2 mg of *voriconazole impurity B CRS* in the mobile phase and dilute to 200 mL with the mobile phase. Dilute 1.0 mL of the solution to 10.0 mL with the mobile phase.

*Column*:

- *size*: *l* = 0.15 m, Ø = 3.9 mm;
- *stationary phase*: *end-capped octadecylsilyl silica gel for chromatography R* (4 µm);
- *temperature*: 35 °C.

*Mobile phase*: mix 15 volumes of *acetonitrile R*, 30 volumes of *methanol R* and 55 volumes of a 1.90 g/L solution of *ammonium formate R* previously adjusted to pH 4.0 with *anhydrous formic acid R* while stirring continuously.

*Flow rate*: 1.0 mL/min.

*Detection*: spectrophotometer at 256 nm.

*Injection*: 20 µL of test solution (a) and reference solutions (b), (c) and (d).

*Run time*: 3 times the retention time of voriconazole.

*Identification of impurities*: use the chromatogram obtained with reference solution (b) to identify the peaks due to impurities A and C; use the chromatogram obtained with reference solution (d) to identify the peak due to impurity B.

*Relative retention* with reference to voriconazole (retention time = about 8 min): impurity A = about 0.25; impurity C = about 0.3; impurity B = about 0.6.

*System suitability*: reference solution (b):

- *resolution*: minimum 1.8 between the peaks due to impurities A and C.

*Limits*:

- *correction factors*: for the calculation of content, multiply the peak areas of the following impurities by the corresponding correction factor: impurity A = 0.7; impurity B = 2.1; impurity C = 0.7;
- *impurities A, B, C*: for each impurity, not more than 1.5 times the area of the principal peak in the chromatogram obtained with reference solution (c) (0.15 per cent);
- *unspecified impurities*: for each impurity, not more than the area of the principal peak in the chromatogram obtained with reference solution (c) (0.10 per cent);
- *sum of impurities A, B, C, D, E and unspecified impurities*: maximum 0.5 per cent;
- *disregard limit*: 0.5 times the area of the principal peak in the chromatogram obtained with reference solution (c) (0.05 per cent).

**Water** (*2.5.12*): maximum 0.4 per cent, determined on 1.00 g.

**Sulfated ash** (*2.4.14*): maximum 0.1 per cent, determined on 1.0 g in a platinum crucible.

**Bacterial endotoxins** (*2.6.14*): less than 0.2 IU/mg, if intended for use in the manufacture of parenteral preparations without a further appropriate procedure for the removal of bacterial endotoxins.

ASSAY

Liquid chromatography (*2.2.29*) as described in the test for related substances with the following modification.

*Injection*: test solution (b) and reference solution (a).

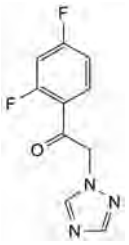
Calculate the percentage content of $C_{16}H_{14}F_3N_5O$ from the declared content of *voriconazole CRS*.

STORAGE

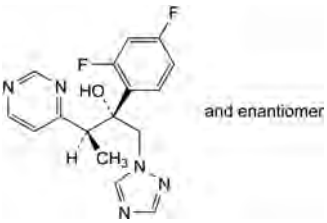
If the substance is sterile, store in a sterile, airtight, tamper-evident container.

IMPURITIES

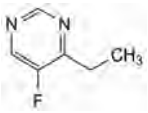
*Specified impurities*: *A, B, C, D, E.*



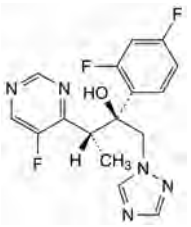
A. 1-(2,4-difluorophenyl)-2-(1*H*-1,2,4-triazol-1-yl)ethanone,



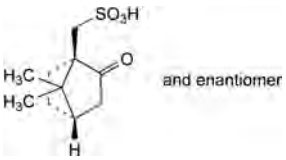
B. (2*RS*,3*SR*)-2-(2,4-difluorophenyl)-3-pyrimidin-4-yl-1-(1*H*-1,2,4-triazol-1-yl)butan-2-ol,



C. 4-ethyl-5-fluoropyrimidine,



D. (2*S*,3*R*)-2-(2,4-difluorophenyl)-3-(5-fluoropyrimidin-4-yl)-1-(1*H*-1,2,4-triazol-1-yl)butan-2-ol (voriconazole enantiomer),



E. [(1*R*,4*S*)-7,7-dimethyl-2-oxobicyclo[2.2.1]hept-1-yl]methanesulfonic acid ((±)-10-camphorsulfonic acid).

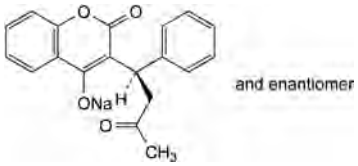
# WARFARIN SODIUM

## Warfarinum natricum



$C_{19}H_{15}NaO_4$ $M_r$ 330.3
[129-06-6]

DEFINITION

Sodium 2-oxo-3-[(1*RS*)-3-oxo-1-phenylbutyl]-2*H*-1-benzopyran-4-olate.

*Content*: 98.0 per cent to 102.0 per cent (anhydrous substance).

CHARACTERS

*Appearance*: white or almost white, hygroscopic, amorphous powder.

*Solubility*: very soluble in water and in ethanol (96 per cent), soluble in acetone, very slightly soluble in methylene chloride.

IDENTIFICATION

A. Infrared absorption spectrophotometry (*2.2.24*).
*Comparison*: *warfarin sodium CRS*.

B. Propan-2-ol (see Tests).

C. It gives reaction (b) of sodium (*2.3.1*).

TESTS

**Appearance of solution**. The solution is clear (*2.2.1*) and colourless (*2.2.2, Method II*).

Dissolve 1.0 g in *water R* and dilute to 20 mL with the same solvent.

**pH** (*2.2.3*): 7.6 to 8.6.

Dissolve 1.0 g in *carbon dioxide-free water R* and dilute to 100 mL with the same solvent.

**Related substances**. Liquid chromatography (*2.2.29*).

*Solvent mixture*: *methanol R*, *water R* (25:75 *V/V*).

*Test solution*. Dissolve 40.0 mg of the substance to be examined in the solvent mixture and dilute to 50.0 mL with the solvent mixture.

*Reference solution (a)*. Dissolve 2 mg of *4-hydroxycoumarin R* (impurity B) and 2 mg of *benzalacetone R* (impurity C) in 25 mL of *methanol R* and dilute to 100 mL with *water R*.

*Reference solution (b)*. Dilute 1.0 mL of the test solution to 100.0 mL with the solvent mixture. Dilute 1.0 mL of this solution to 10.0 mL with the solvent mixture.

*Column*:
- *size*: *l* = 0.25 m, Ø = 4.0 mm;
- *stationary phase*: *cyanosilyl silica gel for chromatography R* (5 µm);
- *temperature*: 30 °C.

*Mobile phase*: *glacial acetic acid R*, *acetonitrile R*, *water R* (1:25:75 *V/V/V*).

*Flow rate*: 1.5 mL/min.

*Detection*: spectrophotometer at 260 nm.

*Injection*: 20 µL.

*Run time*: twice the retention time of warfarin.

*Identification of impurities*: use the chromatogram obtained with reference solution (a) to identify the peaks due to impurities B and C.

*Relative retention* with reference to warfarin (retention time = about 9 min): impurity B = about 0.4; impurity C = about 0.6.

*System suitability*: reference solution (a):
- *resolution*: minimum 2.0 between the peaks due to impurities B and C.

*Limits*:
- *correction factors*: for the calculation of content, multiply the peak areas of the following impurities by the corresponding correction factor: impurity B = 0.5; impurity C = 0.4;
- *impurities B, C*: for each impurity, not more than 1.5 times the area of the principal peak in the chromatogram obtained with reference solution (b) (0.15 per cent);
- *unspecified impurities*: for each impurity, not more than the area of the principal peak in the chromatogram obtained with reference solution (b) (0.10 per cent);
- *total*: not more than 3 times the area of the principal peak in the chromatogram obtained with reference solution (b) (0.3 per cent);
- *disregard limit*: 0.5 times the area of the principal peak in the chromatogram obtained with reference solution (b) (0.05 per cent).

**Phenolic ketones**. Dissolve 1.25 g in a 20 g/L solution of *sodium hydroxide R* and dilute to 10.0 mL with the same solvent. The absorbance (*2.2.25*) is maximum 0.20 measured at 385 nm within 15 min of preparing the solution.

**Propan-2-ol** (*2.4.24, System A*): maximum 0.5 per cent.

**Water** (*2.5.12*): maximum 4.0 per cent, determined on 0.750 g.

ASSAY

Dissolve 0.100 g in *0.01 M sodium hydroxide* and dilute to 100.0 mL with the same solvent. Dilute 10.0 mL of the solution to 100.0 mL with *0.01 M sodium hydroxide*. Dilute 10.0 mL of this solution to 100.0 mL with *0.01 M sodium hydroxide*. Measure the absorbance (*2.2.25*) at the absorption maximum at 308 nm.

Calculate the percentage content of $C_{19}H_{15}NaO_4$ taking the specific absorbance to be 431.

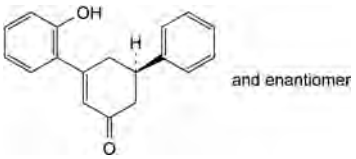
STORAGE

In an airtight container, protected from light.

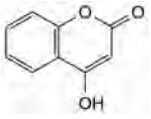
IMPURITIES

*Specified impurities: B, C.*

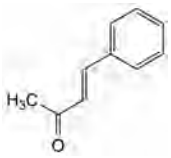
*Other detectable impurities* (the following substances would, if present at a sufficient level, be detected by one or other of the tests in the monograph. They are limited by the general acceptance criterion for other/unspecified impurities and/or by the general monograph *Substances for pharmaceutical use (2034)*. It is therefore not necessary to identify these impurities for demonstration of compliance. See also *5.10. Control of impurities in substances for pharmaceutical use*): A.



A. (5*RS*)-3-(2-hydroxyphenyl)-5-phenylcyclohex-2-enone,



B. 4-hydroxy-2*H*-1-benzopyran-2-one (4-hydroxycoumarin),

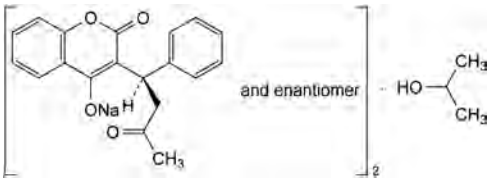


C. (3*E*)-4-phenylbut-3-en-2-one (benzalacetone).

**04/2014:0699**

# WARFARIN SODIUM CLATHRATE

## Warfarinum natricum clathratum



DEFINITION

Mixture, in the form of a clathrate, of warfarin sodium (sodium 2-oxo-3-[(1*RS*)-3-oxo-1-phenylbutyl]-2*H*-1-benzopyran-4-olate) and propan-2-ol in molecular proportions 2:1 (equivalent to about 92 per cent of warfarin sodium).

*Content*:

– *warfarin sodium*: 98.0 per cent to 102.0 per cent (anhydrous and propan-2-ol-free substance);
– *propan-2-ol*: 8.0 per cent to 8.5 per cent.

CHARACTERS

*Appearance*: white or almost white, hygroscopic, crystalline powder.

*Solubility*: very soluble in water, freely soluble in ethanol (96 per cent), soluble in acetone, very slightly soluble in methylene chloride.

IDENTIFICATION

A. Infrared absorption spectrophotometry (*2.2.24*).
*Comparison*: *warfarin sodium clathrate CRS*.

B. Propan-2-ol (see Tests).

C. It gives reaction (b) of sodium (*2.3.1*).

TESTS

**Appearance of solution**. The solution is clear (*2.2.1*) and colourless (*2.2.2, Method II*).

Dissolve 1.0 g in *water R* and dilute to 20 mL with the same solvent.

**pH** (*2.2.3*): 7.6 to 8.6.

Dissolve 1.0 g in *carbon dioxide-free water R* and dilute to 100 mL with the same solvent.

**Related substances**. Liquid chromatography (*2.2.29*).

*Solvent mixture*: *methanol R*, *water R* (25:75 *V/V*).

*Test solution*. Dissolve 40.0 mg of the substance to be examined in the solvent mixture and dilute to 50.0 mL with the solvent mixture.

*Reference solution (a)*. Dissolve 2 mg of *4-hydroxycoumarin R* (impurity B) and 2 mg of *benzalacetone R* (impurity C) in 25 mL of *methanol R* and dilute to 100 mL with *water R*.

*Reference solution (b)*. Dilute 1.0 mL of the test solution to 100.0 mL with the solvent mixture. Dilute 1.0 mL of this solution to 10.0 mL with the solvent mixture.

*Column*:

– *size*: *l* = 0.25 m, Ø = 4.0 mm;
– *stationary phase*: *cyanosilyl silica gel for chromatography R* (5 µm);
– *temperature*: 30 °C.

*Mobile phase*: *glacial acetic acid R*, *acetonitrile R*, *water R* (1:25:75 *V/V/V*).

*Flow rate*: 1.5 mL/min.

*Detection*: spectrophotometer at 260 nm.

*Injection*: 20 µL.

*Run time*: twice the retention time of warfarin.

*Identification of impurities*: use the chromatogram obtained with reference solution (a) to identify the peaks due to impurities B and C.

*Relative retention* with reference to warfarin (retention time = about 9 min): impurity B = about 0.4; impurity C = about 0.6.

*System suitability*: reference solution (a):

– *resolution*: minimum 2.0 between the peaks due to impurities B and C.

*Limits*:

– *correction factors*: for the calculation of content, multiply the peak areas of the following impurities by the corresponding correction factor: impurity B = 0.5; impurity C = 0.4;
– *impurities B, C*: for each impurity, not more than 1.5 times the area of the principal peak in the chromatogram obtained with reference solution (b) (0.15 per cent);
– *unspecified impurities*: for each impurity, not more than the area of the principal peak in the chromatogram obtained with reference solution (b) (0.10 per cent);
– *total*: not more than 3 times the area of the principal peak in the chromatogram obtained with reference solution (b) (0.3 per cent);
– *disregard limit*: 0.5 times the area of the principal peak in the chromatogram obtained with reference solution (b) (0.05 per cent).

**Phenolic ketones**. Dissolve 1.25 g in a 20 g/L solution of *sodium hydroxide R* and dilute to 10.0 mL with the same solvent. The absorbance (*2.2.25*) is maximum 0.20 measured at 385 nm within 15 min of preparing the solution.

**Propan-2-ol** (*2.4.24, System A*): 8.0 per cent to 8.5 per cent.

**Water** (*2.5.12*): maximum 0.3 per cent, determined on 2.500 g.

ASSAY

Dissolve 0.100 g in *0.01 M sodium hydroxide* and dilute to 100.0 mL with the same solvent. Dilute 10.0 mL of the solution to 100.0 mL with *0.01 M sodium hydroxide*. Dilute 10.0 mL of this solution to 100.0 mL with *0.01 M sodium hydroxide*. Measure the absorbance (*2.2.25*) at the absorption maximum at 308 nm.

Calculate the percentage content of warfarin sodium ($C_{19}H_{15}NaO_4$) taking the specific absorbance to be 431.

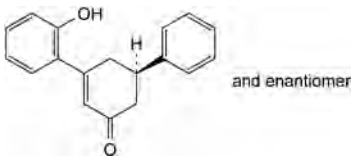
STORAGE

In an airtight container, protected from light.

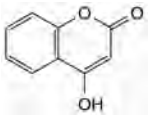
IMPURITIES

*Specified impurities: B, C.*

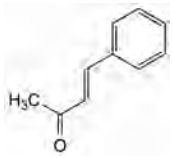
*Other detectable impurities* (the following substances would, if present at a sufficient level, be detected by one or other of the tests in the monograph. They are limited by the general acceptance criterion for other/unspecified impurities and/or by the general monograph *Substances for pharmaceutical use (2034)*. It is therefore not necessary to identify these impurities for demonstration of compliance. See also *5.10. Control of impurities in substances for pharmaceutical use*): *A*.



A. (5*RS*)-3-(2-hydroxyphenyl)-5-phenylcyclohex-2-enone,



B. 4-hydroxy-2*H*-1-benzopyran-2-one (4-hydroxycoumarin),



C. (3*E*)-4-phenylbut-3-en-2-one (benzalacetone).

**04/2017:0169**

# WATER FOR INJECTIONS

## Aqua ad iniectabile

$H_2O$ $M_r$ 18.02

DEFINITION

Water for the preparation of medicines for parenteral administration when water is used as vehicle (water for injections in bulk) and for dissolving or diluting substances or preparations for parenteral administration (sterilised water for injections).

## Water for injections in bulk

PRODUCTION

Water for injections in bulk is obtained from water that complies with the regulations on water intended for human consumption laid down by the competent authority or from purified water. It is produced either:

- by distillation in an apparatus of which the parts in contact with the water are of neutral glass, quartz or a suitable metal and which is fitted with an effective device to prevent the entrainment of droplets; or
- by a purification process that is equivalent to distillation. Reverse osmosis, which may be single-pass or double-pass, coupled with other appropriate techniques such as electro-deionisation, ultrafiltration or nanofiltration, is suitable. Notice is given to the supervisory authority of the manufacturer before implementation.

For all methods of production, correct operation monitoring and maintenance of the system are essential. In order to ensure the appropriate quality of the water, validated procedures, in-process monitoring of the electrical conductivity, and regular monitoring of total organic carbon and microbial contamination are applied.

The first portion of water obtained when the system begins to function is discarded.

Water for injections in bulk is stored and distributed in conditions designed to prevent growth of micro-organisms and to avoid any other contamination.

**Microbiological monitoring**. During production and subsequent storage, appropriate measures are taken to ensure that the microbial count is adequately controlled and monitored. Appropriate alert and action levels are set so as to detect adverse trends. Under normal conditions, an appropriate action level is a microbial count of 10 CFU per 100 mL when determined by filtration through a membrane with a nominal pore size not greater than 0.45 µm, using R2A agar, using at least 200 mL of water for injections in bulk and incubating at 30-35 °C for not less than 5 days. For aseptic processing, stricter alert levels may need to be applied.

*R2A agar*

| | |
|---|---|
| Yeast extract | 0.5 g |
| Proteose peptone | 0.5 g |
| Casein hydrolysate | 0.5 g |
| Glucose | 0.5 g |
| Starch | 0.5 g |
| Dipotassium hydrogen phosphate | 0.3 g |
| Magnesium sulfate, anhydrous | 0.024 g |
| Sodium pyruvate | 0.3 g |
| Agar | 15.0 g |
| Purified water | to 1000 mL |

Adjust the pH so that after sterilisation it is 7.2 ± 0.2. Sterilise by heating in an autoclave at 121 °C for 15 min.

*Growth promotion of R2A agar*

- *Preparation of test strains.* Use standardised stable suspensions of test strains or prepare them as stated in Table 0169.-1. Seed lot culture maintenance techniques (seed-lot systems) are used so that the viable micro-organisms used for inoculation are not more than 5 passages removed from the original master seed-lot. Grow each of the bacterial strains separately as described in Table 0169.-1. Use buffered sodium chloride-peptone solution pH 7.0 or phosphate buffer solution pH 7.2 to make test suspensions. Use the suspensions within 2 h, or within 24 h if stored at 2-8 °C. As an alternative to preparing and then diluting a fresh suspension of vegetative cells of *Bacillus subtilis*, a stable spore suspension is prepared and then an appropriate volume of the spore suspension is used for test inoculation. The stable spore suspension may be maintained at 2-8 °C for a validated period of time.

- *Growth promotion.* Test each batch of ready-prepared medium and each batch of medium, prepared either from dehydrated medium or from the ingredients described. Inoculate plates of R2A agar separately with a small number (not more than 100 CFU) of the micro-organisms indicated in Table 0169.-1. Incubate under the conditions described in the table. Growth obtained must not differ by a factor greater than 2 from the calculated value for a standardised inoculum. For a freshly prepared inoculum, growth of the micro-organisms must be comparable to that obtained with a previously tested and approved batch of medium.

Table 0169.-1. – *Growth promotion of R2A agar*

| Micro-organism | Preparation of the test strain | Growth promotion |
|---|---|---|
| *Pseudomonas aeruginosa*<br>such as:<br>ATCC 9027<br>NCIMB 8626<br>CIP 82.118<br>NBRC 13275 | Casein soyabean digest agar or casein soyabean digest broth<br>30-35 °C<br>18-24 h | R2A agar<br>≤ 100 CFU<br>30-35 °C<br>≤ 3 days |
| *Bacillus subtilis*<br>such as:<br>ATCC 6633<br>NCIMB 8054<br>CIP 52.62<br>NBRC 3134 | Casein soyabean digest agar or casein soyabean digest broth<br>30-35 °C<br>18-24 h | R2A agar<br>≤ 100 CFU<br>30-35 °C<br>≤ 3 days |

**Total organic carbon** (*2.2.44*): maximum 0.5 mg/L.

**Conductivity**. Determine the conductivity off-line or in-line under the following conditions.

*EQUIPMENT*

*Conductivity cell*:

– electrodes of a suitable material such as stainless steel;

– cell constant: the cell constant is generally certified by the supplier and is subsequently verified at suitable intervals using a certified reference solution with a conductivity less than 1500 μS·cm$^{-1}$ or by comparison with a cell having a certified cell constant. The cell constant is confirmed if the value found is within 2 per cent of the certified value, otherwise re-calibration must be performed.

*Conductometer*: accuracy of 0.1 μS·cm$^{-1}$ or better at the lowest range.

*System calibration (conductivity cell and conductometer)*:

– against one or more suitable certified reference solutions;

– accuracy: within 3 per cent of the measured conductivity plus 0.1 μS·cm$^{-1}$.

*Conductometer calibration*: calibration is carried out for each range of measurement to be used, after disconnection of the conductivity cell, using certified precision resistors or equivalent devices with an uncertainty not greater than 0.1 per cent of the certified value.

If in-line conductivity cells cannot be dismantled, system calibration may be performed against a calibrated conductivity-measuring instrument with a conductivity cell placed close to the cell to be calibrated in the water flow.

*Temperature measurement*: tolerance ± 2 °C.

*PROCEDURE*

*Stage 1*

1. Measure the conductivity without temperature compensation, recording simultaneously the temperature. Temperature-compensated measurement may be performed after suitable validation.

2. Using Table 0169.-2, find the closest temperature value that is not greater than the measured temperature. The corresponding conductivity value is the limit at that temperature.

3. If the measured conductivity is not greater than the value in Table 0169.-2, the water to be examined meets the requirements of the test for conductivity. If the conductivity is higher than the value in Table 0169.-2, proceed with stage 2.

Table 0169.-2. – *Stage 1*
*Temperature and conductivity requirements (for non-temperature-compensated conductivity measurements)*

| Temperature (°C) | Conductivity (μS·cm$^{-1}$) |
|---|---|
| 0 | 0.6 |
| 5 | 0.8 |
| 10 | 0.9 |
| 15 | 1.0 |
| 20 | 1.1 |
| 25 | 1.3 |
| 30 | 1.4 |
| 35 | 1.5 |
| 40 | 1.7 |
| 45 | 1.8 |
| 50 | 1.9 |
| 55 | 2.1 |
| 60 | 2.2 |
| 65 | 2.4 |
| 70 | 2.5 |
| 75 | 2.7 |
| 80 | 2.7 |
| 85 | 2.7 |
| 90 | 2.7 |
| 95 | 2.9 |
| 100 | 3.1 |

*Stage 2*

4. Transfer a sufficient amount of the water to be examined (100 mL or more) to a suitable container, and stir the test sample. Adjust the temperature, if necessary, and while maintaining it at 25 ± 1 °C, begin vigorously agitating the test sample while periodically observing the conductivity. When the change in conductivity (due to uptake of atmospheric carbon dioxide) is less than 0.1 μS.cm$^{-1}$ per 5 min, note the conductivity.

5. If the conductivity is not greater than 2.1 μS.cm$^{-1}$, the water to be examined meets the requirements of the test for conductivity. If the conductivity is greater than 2.1 μS.cm$^{-1}$, proceed with stage 3.

*Stage 3*

6. Perform this test within approximately 5 min of the conductivity determination in step 5 under stage 2, while maintaining the sample temperature at 25 ± 1 °C. Add a recently prepared saturated solution of *potassium chloride R* to the test sample (0.3 mL per 100 mL of the test sample), and determine the pH (*2.2.3*) to the nearest 0.1 pH unit.

7. Using Table 0169.-3, determine the conductivity limit at the measured pH value in step 6. If the measured conductivity in step 4 under stage 2 is not greater than the conductivity requirements for the pH determined, the water to be examined meets the requirements of the test for conductivity. If either the measured conductivity is greater than this value or the pH is outside the range of 5.0-7.0, the water to be examined does not meet the requirements of the test for conductivity.

Table 0169.-3. – *Stage 3*
*pH and conductivity requirements (for atmosphere- and temperature-equilibrated samples)*

| pH | Conductivity ($\mu S \cdot cm^{-1}$) |
|---|---|
| 5.0 | 4.7 |
| 5.1 | 4.1 |
| 5.2 | 3.6 |
| 5.3 | 3.3 |
| 5.4 | 3.0 |
| 5.5 | 2.8 |
| 5.6 | 2.6 |
| 5.7 | 2.5 |
| 5.8 | 2.4 |
| 5.9 | 2.4 |
| 6.0 | 2.4 |
| 6.1 | 2.4 |
| 6.2 | 2.5 |
| 6.3 | 2.4 |
| 6.4 | 2.3 |
| 6.5 | 2.2 |
| 6.6 | 2.1 |
| 6.7 | 2.6 |
| 6.8 | 3.1 |
| 6.9 | 3.8 |
| 7.0 | 4.6 |

CHARACTERS

*Appearance*: clear and colourless liquid.

TESTS

**Nitrates**: maximum 0.2 ppm.

Place 5 mL in a test-tube immersed in iced water, add 0.4 mL of a 100 g/L solution of *potassium chloride R*, 0.1 mL of *diphenylamine solution R* and, dropwise with shaking, 5 mL of *nitrogen-free sulfuric acid R*. Transfer the tube to a water-bath at 50 °C. After 15 min, any blue colour in the solution is not more intense than that in a reference solution prepared at the same time in the same manner using a mixture of 4.5 mL of *nitrate-free water R* and 0.5 mL of *nitrate standard solution (2 ppm $NO_3$) R*.

**Aluminium** (*2.4.17*): maximum 10 ppb, if intended for use in the manufacture of dialysis solutions.

*Prescribed solution*. To 400 mL of the water to be examined add 10 mL of *acetate buffer solution pH 6.0 R* and 100 mL of *distilled water R*.

*Reference solution*. Mix 2 mL of *aluminium standard solution (2 ppm Al) R*, 10 mL of *acetate buffer solution pH 6.0 R* and 98 mL of *distilled water R*.

*Blank solution*. Mix 10 mL of *acetate buffer solution pH 6.0 R* and 100 mL of *distilled water R*.

**Bacterial endotoxins** (*2.6.14*): less than 0.25 IU/mL.

## Sterilised water for injections

DEFINITION

Water for injections in bulk that has been distributed into suitable containers, closed and sterilised by heat in conditions which ensure that the product still complies with the test for bacterial endotoxins. Sterilised water for injections is free from any added substances.

Examined in suitable conditions of visibility, it is clear and colourless.

Each container contains a sufficient quantity of water for injections to permit the nominal volume to be withdrawn.

TESTS

**Acidity or alkalinity**. To 20 mL add 0.05 mL of *phenol red solution R*. If the solution is yellow, it becomes red on the addition of 0.1 mL of *0.01 M sodium hydroxide*; if red, it becomes yellow on the addition of 0.15 mL of *0.01 M hydrochloric acid*.

**Conductivity**: maximum 25 $\mu S \cdot cm^{-1}$ for containers with a nominal volume of 10 mL or less; maximum 5 $\mu S \cdot cm^{-1}$ for containers with a nominal volume greater than 10 mL.

Use equipment and the calibration procedure as defined under Water for injections in bulk, maintaining the sample temperature at 25 ± 1 °C.

**Oxidisable substances**. For containers with a nominal volume less than 50 mL: heat 100 mL to boiling with 10 mL of *dilute sulfuric acid R*, add 0.4 mL of *0.02 M potassium permanganate* and boil for 5 min; the solution remains faintly pink.

For containers with a nominal volume equal to or greater than 50 mL: heat 100 mL to boiling with 10 mL of *dilute sulfuric acid R*, add 0.2 mL of *0.02 M potassium permanganate* and boil for 5 min; the solution remains faintly pink.

**Chlorides** (*2.4.4*): maximum 0.5 ppm for containers with a nominal volume of 100 mL or less.

15 mL complies with the limit test for chlorides. Prepare the standard using a mixture of 1.5 mL of *chloride standard solution (5 ppm Cl) R* and 13.5 mL of *water R*. Examine the solutions down the vertical axes of the tubes.

For containers with a nominal volume greater than 100 mL, use the following test: to 10 mL add 1 mL of *dilute nitric acid R* and 0.2 mL of *silver nitrate solution R2*. The solution shows no change in appearance for at least 15 min.

**Nitrates**: maximum 0.2 ppm.

Place 5 mL in a test-tube immersed in iced water, add 0.4 mL of a 100 g/L solution of *potassium chloride R*, 0.1 mL of *diphenylamine solution R* and, dropwise with shaking, 5 mL of *nitrogen-free sulfuric acid R*. Transfer the tube to a water-bath at 50 °C. After 15 min, any blue colour in the solution is not more intense than that in a reference solution prepared at the same time in the same manner using a mixture of 4.5 mL of *nitrate-free water R* and 0.5 mL of *nitrate standard solution (2 ppm $NO_3$) R*.

**Sulfates**. To 10 mL add 0.1 mL of *dilute hydrochloric acid R* and 0.1 mL of *barium chloride solution R1*. The solution shows no change in appearance for at least 1 h.

**Aluminium** (*2.4.17*): maximum 10 ppb, if intended for use in the manufacture of dialysis solutions.

*Prescribed solution*. To 400 mL of the water to be examined add 10 mL of *acetate buffer solution pH 6.0 R* and 100 mL of *distilled water R*.

*Reference solution*. Mix 2 mL of *aluminium standard solution (2 ppm Al) R*, 10 mL of *acetate buffer solution pH 6.0 R* and 98 mL of *distilled water R*.

*Blank solution*. Mix 10 mL of *acetate buffer solution pH 6.0 R* and 100 mL of *distilled water R*.

**Ammonium**: for containers with a nominal volume less than 50 mL: maximum 0.6 ppm; for containers with a nominal volume equal to or greater than 50 mL: maximum 0.2 ppm.

Containers with a nominal volume less than 50 mL: to 20 mL add 1 mL of *alkaline potassium tetraiodomercurate solution R*; after 5 min, examine the solution down the vertical axis of the tube; the solution is not more intensely coloured than a standard prepared at the same time by adding 1 mL of *alkaline potassium tetraiodomercurate solution R* to a mixture of 4 mL of *ammonium standard solution (3 ppm $NH_4$) R* and 16 mL of *ammonium-free water R*.

Containers with a nominal volume equal to or greater than 50 mL: to 20 mL add 1 mL of *alkaline potassium tetraiodomercurate solution R*; after 5 min, examine the solution down the vertical axis of the tube; the solution is not more intensely coloured than a standard prepared at the same time by adding 1 mL of *alkaline potassium tetraiodomercurate solution R* to a mixture of 4 mL of *ammonium standard solution (1 ppm $NH_4$) R* and 16 mL of *ammonium-free water R*.

**Calcium and magnesium**. To 100 mL add 2 mL of *ammonium chloride buffer solution pH 10.0 R*, 50 mg of *mordant black 11 triturate R* and 0.5 mL of *0.01 M sodium edetate*. A pure blue colour is produced.

**Residue on evaporation**: maximum 4 mg (0.004 per cent) for containers with a nominal volume of 10 mL or less; maximum 3 mg (0.003 per cent) for containers with a nominal volume greater than 10 mL.

Evaporate 100 mL to dryness on a water-bath and dry in an oven at 100-105 °C.

**Particulate contamination: sub-visible particles** (*2.9.19*). It complies with test A or test B, as appropriate.

**Sterility** (*2.6.1*). It complies with the test for sterility.

**Bacterial endotoxins** (*2.6.14*): less than 0.25 IU/mL.

**04/2012:2249**

# WATER FOR PREPARATION OF EXTRACTS

## Aqua ad extracta praeparanda

DEFINITION

Water intended for the preparation of *Herbal drug extracts (0765)* complies with the sections Purified water in bulk or Purified water in containers in the monograph *Purified water (0008)*, or is water intended for human consumption of a quality equivalent to that defined in Directive 98/83/EC which is monitored according to the Production section described below.

PRODUCTION

When water intended for human consumption is used as water for preparation of extracts it is a clear, colourless liquid. It is stored (where necessary) and distributed under conditions designed to prevent growth of micro-organisms and to avoid other contamination.

For monitoring purposes, the following tests are carried out at regular intervals to demonstrate consistency in the quality of the water used for the preparation of extracts.

**Conductivity** (*2.2.38*): maximum 2500 $\mu S \cdot cm^{-1}$, measured at 20 °C.

**Nitrate**. Liquid chromatography (*2.2.29*).

*Test solution*. The substance to be examined.

*Reference solution*. Dissolve 0.163 g of *potassium nitrate R* and 0.149 g of *potassium bromide R* in *water R* and dilute to 100.0 mL with the same solvent. Dilute 5.0 mL of the solution to 100.0 mL with *water R*.

*Column*:

– *size*: *l* = 0.25 m, Ø = 4 mm;

– *stationary phase*: *anion-exchange resin R3*.

*Mobile phase*: dissolve 0.265 g of *anhydrous sodium carbonate R* and 0.210 g of *sodium hydrogen carbonate R* in *water R* and dilute to 1000.0 mL with the same solvent.

*Flow rate*: 1.2 mL/min.

*Detection*: conductivity detector, using a self-regenerating anion suppressor.

*Injection*: 25 µL.

*Run time*: twice the retention time of nitrate.

*Relative retention* with reference to nitrate (retention time = about 7 min): bromide = about 0.9.

*System suitability*: reference solution:

– *resolution*: minimum 2.0 between the peaks due to bromide and nitrate.

*Limit*:

– *nitrate*: maximum 50 ppm.

**Microbiological monitoring**. Appropriate measures are taken to ensure that the microbial count is adequately controlled and monitored. Appropriate alert and action levels are set so as to detect adverse trends.

Under normal conditions, an appropriate action level is a microbial count of 100 CFU/mL, determined by filtration through a membrane with a nominal pore size not greater than 0.45 µm, using casein soya bean digest agar and incubating at 30-35 °C for not less than 5 days.

The size of the sample is to be chosen in relation to the expected result.

*Casein soya bean digest agar*

| | |
|---|---|
| Pancreatic digest of casein | 15.0 g |
| Papaic digest of soya bean | 5.0 g |
| Sodium chloride | 5.0 g |
| Agar | 15.0 g |
| Purified water | to 1000 mL |

Adjust the pH so that after sterilisation it is 7.3 ± 0.2. Sterilise in an autoclave using a validated cycle.

*Growth promotion of casein soya bean digest agar*

– *Preparation of test strains*. Use standardised stable suspensions of test strains or prepare them as stated in Table 2249.-1. Seed lot culture maintenance techniques (seed-lot systems) are used so that the viable micro-organisms used for inoculation are not more than 5 passages removed from the original master seed-lot. Grow each of the bacterial strains separately as described in Table 2249.-1. Use buffered sodium chloride-peptone solution pH 7.0 or phosphate buffer solution pH 7.2 to make test suspensions. Use the suspensions within 2 h, or within 24 h if stored at 2-8 °C. As an alternative to preparing and then diluting a fresh suspension of vegetative cells of *Bacillus subtilis*, a stable spore suspension is prepared and then an appropriate volume of the spore suspension is used for test inoculation. The stable spore suspension may be maintained at 2-8 °C for a validated period of time.

– *Growth promotion*. Test each batch of ready-prepared medium and each batch of medium, prepared either from dehydrated medium or from the ingredients described. Inoculate plates of casein soya bean digest agar separately with a small number (not more than 100 CFU) of the micro-organisms indicated in Table 2249.-1. Incubate under the conditions described in this table. Growth obtained must not differ by a factor greater than 2 from the

calculated value for a standardised inoculum. For a freshly prepared inoculum, growth of the micro-organisms must be comparable to that obtained with a previously tested and approved batch of medium.

Table 2249.-1. – *Growth promotion of casein soya bean digest agar*

| Micro-organism | Preparation of the test strain | Growth promotion |
|---|---|---|
| *Pseudomonas aeruginosa*<br>such as:<br>ATCC 9027<br>NCIMB 8626<br>CIP 82.118<br>NBRC 13275 | Casein soya bean digest agar or casein soya bean digest broth<br>30-35 °C<br>18-24 h | Casein soya bean digest agar<br>≤ 100 CFU<br>30-35 °C<br>≤ 3 days |

**04/2018:0008**

# WATER, PURIFIED

## Aqua purificata

$H_2O$ $M_r$ 18.02

DEFINITION

Water for the preparation of medicines other than those that are required to be both sterile and apyrogenic, unless otherwise justified and authorised.

## Purified water in bulk

PRODUCTION

Purified water in bulk is prepared by distillation, by ion exchange, by reverse osmosis or by any other suitable method from water that complies with the regulations on water intended for human consumption laid down by the competent authority.

Purified water in bulk is stored and distributed in conditions designed to prevent growth of micro-organisms and to avoid any other contamination.

**Microbiological monitoring**. During production and subsequent storage, appropriate measures are taken to ensure that the microbial count is adequately controlled and monitored. Appropriate alert and action levels are set so as to detect adverse trends. Under normal conditions, an appropriate action level is a microbial count of 100 CFU/mL, determined by filtration through a membrane with a nominal pore size not greater than 0.45 µm, using R2A agar and incubating at 30-35 °C for not less than 5 days. The size of the sample is to be chosen in relation to the expected result.

*R2A agar*

| | |
|---|---|
| Yeast extract | 0.5 g |
| Proteose peptone | 0.5 g |
| Casein hydrolysate | 0.5 g |
| Glucose | 0.5 g |
| Starch | 0.5 g |
| Dipotassium hydrogen phosphate | 0.3 g |
| Magnesium sulfate, anhydrous | 0.024 g |
| Sodium pyruvate | 0.3 g |
| Agar | 15.0 g |
| Purified water | to 1000 mL |

Adjust the pH so that after sterilisation it is 7.2 ± 0.2. Sterilise by heating in an autoclave at 121 °C for 15 min.

*Growth promotion of R2A agar*

– *Preparation of test strains.* Use standardised stable suspensions of test strains or prepare them as stated in Table 0008.-1. Seed lot culture maintenance techniques (seed-lot systems) are used so that the viable micro-organisms used for inoculation are not more than 5 passages removed from the original master seed-lot. Grow each of the bacterial strains separately as described in Table 0008.-1. Use buffered sodium chloride-peptone solution pH 7.0 or phosphate buffer solution pH 7.2 to make test suspensions. Use the suspensions within 2 h, or within 24 h if stored at 2-8 °C. As an alternative to preparing and then diluting a fresh suspension of vegetative cells of *Bacillus subtilis*, a stable spore suspension is prepared and then an appropriate volume of the spore suspension is used for test inoculation. The stable spore suspension may be maintained at 2-8 °C for a validated period of time.
– *Growth promotion.* Test each batch of ready-prepared medium and each batch of medium, prepared either from dehydrated medium or from the ingredients described. Inoculate plates of R2A agar separately with a small number (not more than 100 CFU) of the micro-organisms indicated in Table 0008.-1. Incubate under the conditions described in the table. Growth obtained must not differ by a factor greater than 2 from the calculated value for a standardised inoculum. For a freshly prepared inoculum, growth of the micro-organisms must be comparable to that obtained with a previously tested and approved batch of medium.

Table 0008.-1. – *Growth promotion of R2A agar*

| Micro-organism | Preparation of the test strain | Growth promotion |
|---|---|---|
| *Pseudomonas aeruginosa*<br>such as:<br>ATCC 9027<br>NCIMB 8626<br>CIP 82.118<br>NBRC 13275 | Casein soyabean digest agar or casein soyabean digest broth<br>30-35 °C<br>18-24 h | R2A agar<br>≤ 100 CFU<br>30-35 °C<br>≤ 3 days |
| *Bacillus subtilis*<br>such as:<br>ATCC 6633<br>NCIMB 8054<br>CIP 52.62<br>NBRC 3134 | Casein soyabean digest agar or casein soyabean digest broth<br>30-35 °C<br>18-24 h | R2A agar<br>≤ 100 CFU<br>30-35 °C<br>≤ 3 days |

**Total organic carbon or oxidisable substances**. Carry out the test for total organic carbon (*2.2.44*) with a limit of 0.5 mg/L or alternatively the following test for oxidisable substances: to 100 mL add 10 mL of *dilute sulfuric acid R* and 0.1 mL of *0.02 M potassium permanganate* and boil for 5 min; the solution remains faintly pink.

**Conductivity**. Determine the conductivity off-line or in-line under the following conditions.

*EQUIPMENT*

*Conductivity cell*:

– electrodes of a suitable material such as stainless steel;
– cell constant: the cell constant is generally certified by the supplier and is subsequently verified at suitable intervals using a certified reference solution with a conductivity less than 1500 µS·cm$^{-1}$ or by comparison with a cell having a certified cell constant; the cell constant is confirmed if the value found is within 2 per cent of the certified value, otherwise re-calibration must be performed.

*Conductometer*: accuracy of 0.1 µS·cm$^{-1}$ or better at the lowest range.

*System calibration (conductivity cell and conductometer)*:

– against one or more suitable certified reference solutions;

– accuracy: within 3 per cent of the measured conductivity plus 0.1 µS·cm$^{-1}$.

*Conductometer calibration*: calibration is carried out for each range of measurement to be used, after disconnection of the conductivity cell, using certified precision resistors or equivalent devices with an uncertainty not greater than 0.1 per cent of the certified value.

If in-line conductivity cells cannot be dismantled, system calibration may be performed against a calibrated conductivity-measuring instrument with a conductivity cell placed close to the cell to be calibrated in the water flow.

*Temperature measurement*: tolerance ± 2 °C.

*PROCEDURE*

Measure the conductivity without temperature compensation, recording simultaneously the temperature. Temperature-compensated measurement may be performed after suitable validation.

The water to be examined meets the requirements if the measured conductivity at the recorded temperature is not greater than the value in Table 0008.-2.

Table 0008.-2. – *Temperature and conductivity requirements*

| Temperature (°C) | Conductivity (µS·cm$^{-1}$) |
|---|---|
| 0 | 2.4 |
| 10 | 3.6 |
| 20 | 4.3 |
| 25 | 5.1 |
| 30 | 5.4 |
| 40 | 6.5 |
| 50 | 7.1 |
| 60 | 8.1 |
| 70 | 9.1 |
| 75 | 9.7 |
| 80 | 9.7 |
| 90 | 9.7 |
| 100 | 10.2 |

For temperatures not listed in Table 0008.-2, calculate the maximal permitted conductivity by interpolation between the next lower and next higher data points in the table.

**Elemental impurities**. If purified water in bulk does not meet the requirement for conductivity prescribed for *Water for injections (0169)* in bulk, a risk assessment according to general chapter *5.20. Elemental impurities* is carried out. The risk assessment should consider the role of water in the manufacturing process, in particular when water is used in a process but is no longer present in the final product.

CHARACTERS

*Appearance*: clear and colourless liquid.

TESTS

**Nitrates**: maximum 0.2 ppm.

Place 5 mL in a test-tube immersed in iced water, add 0.4 mL of a 100 g/L solution of *potassium chloride R*, 0.1 mL of *diphenylamine solution R* and, dropwise with shaking, 5 mL of *nitrogen-free sulfuric acid R*. Transfer the tube to a water-bath at 50 °C. After 15 min, any blue colour in the solution is not more intense than that in a reference solution prepared at the same time in the same manner using a mixture of 4.5 mL of *nitrate-free water R* and 0.5 mL of *nitrate standard solution (2 ppm $NO_3$) R*.

**Aluminium** (*2.4.17*): maximum 10 ppb, if intended for use in the manufacture of dialysis solutions.

*Prescribed solution*. To 400 mL of the water to be examined add 10 mL of *acetate buffer solution pH 6.0 R* and 100 mL of *distilled water R*.

*Reference solution*. Mix 2 mL of *aluminium standard solution (2 ppm Al) R*, 10 mL of *acetate buffer solution pH 6.0 R* and 98 mL of *distilled water R*.

*Blank solution*. Mix 10 mL of *acetate buffer solution pH 6.0 R* and 100 mL of *distilled water R*.

**Bacterial endotoxins** (*2.6.14*): less than 0.25 IU/mL, if intended for use in the manufacture of dialysis solutions without a further appropriate procedure for removal of bacterial endotoxins.

LABELLING

The label states, where applicable, that the substance is suitable for use in the manufacture of dialysis solutions.

## Purified water in containers

DEFINITION

Purified water in bulk that has been filled and stored in conditions designed to assure the required microbiological quality. It is free from any added substances.

CHARACTERS

*Appearance*: clear and colourless liquid.

TESTS

It complies with the tests prescribed in the section on Purified water in bulk and with the following additional tests.

**Acidity or alkalinity**. To 10 mL, freshly boiled and cooled in a borosilicate glass flask, add 0.05 mL of *methyl red solution R*. The solution is not coloured red.

To 10 mL add 0.1 mL of *bromothymol blue solution R1*. The solution is not coloured blue.

**Oxidisable substances**. To 100 mL add 10 mL of *dilute sulfuric acid R* and 0.1 mL of *0.02 M potassium permanganate* and boil for 5 min. The solution remains faintly pink.

**Chlorides**. To 10 mL add 1 mL of *dilute nitric acid R* and 0.2 mL of *silver nitrate solution R2*. The solution shows no change in appearance for at least 15 min.

**Sulfates**. To 10 mL add 0.1 mL of *dilute hydrochloric acid R* and 0.1 mL of *barium chloride solution R1*. The solution shows no change in appearance for at least 1 h.

**Ammonium**: maximum 0.2 ppm.

To 20 mL add 1 mL of *alkaline potassium tetraiodomercurate solution R*. After 5 min, examine the solution down the vertical axis of the tube. The solution is not more intensely coloured than a standard prepared at the same time by adding 1 mL of *alkaline potassium tetraiodomercurate solution R* to a mixture of 4 mL of *ammonium standard solution (1 ppm $NH_4$) R* and 16 mL of *ammonium-free water R*.

**Calcium and magnesium**. To 100 mL add 2 mL of *ammonium chloride buffer solution pH 10.0 R*, 50 mg of *mordant black 11 triturate R* and 0.5 mL of *0.01 M sodium edetate*. A pure blue colour is produced.

**Residue on evaporation**: maximum 0.001 per cent.

Evaporate 100 mL to dryness on a water-bath and dry in an oven at 100-105 °C. The residue weighs a maximum of 1 mg.

**Microbial contamination**

TAMC: acceptance criterion $10^2$ CFU/mL (*2.6.12*). Use casein soya bean digest agar.

LABELLING

The label states, where applicable, that the substance is suitable for use in the manufacture of dialysis solutions.

**01/2020:0359**

# WHEAT STARCH[(1)]

## Tritici amylum

DEFINITION

Wheat starch is obtained from the caryopsis of *Triticum aestivum* L. (*T. vulgare* Vill.).

♦CHARACTERS

*Appearance*: very fine, white or almost white powder that creaks when pressed between the fingers.

*Solubility*: practically insoluble in cold water and in ethanol (96 per cent).

Wheat starch does not contain starch granules of any other origin. It may contain a minute quantity, if any, of tissue fragments of the original plant.♦

IDENTIFICATION

A. Microscopic examination (*2.8.23*) using a 50 per cent *V/V* solution of *glycerol R*. It shows large and small granules, and, very rarely, intermediate sizes (Figure 0359.-1). The large granules, 10-60 µm in diameter, are discoid or, more rarely, reniform in surface view. The central hilum and striations are invisible or barely visible and the granules sometimes show cracks on the edges. In side view, the granules are elliptical and fusiform and the hilum appears as a slit along the main axis. The small granules, rounded or polyhedral, are 2-10 µm in diameter. Between orthogonally orientated polarising plates or prisms, the granules show a distinct black cross intersecting at the hilum.

Figure 0359.-1. – *Illustration for identification test A of wheat starch*

B. Suspend 1 g in 50 mL of *water R*, boil for 1 min and cool. A thin, cloudy mucilage is formed.

C. To 1 mL of the mucilage obtained in identification test B add 0.05 mL of *iodine solution R1*. A dark blue colour is produced, which disappears on heating.

TESTS

**pH** (*2.2.3*): 4.5 to 7.0.

Shake 5.0 g with 25.0 mL of *carbon dioxide-free water R* for 60 s. Allow to stand for 15 min.

◊**Foreign matter**. Examined under a microscope using a 50 per cent *V/V* solution of *glycerol R*, not more than traces of matter other than starch granules are present. No starch granules of any other origin are present.◊

**Total protein**: maximum 0.3 per cent (corresponding to 0.048 per cent of nitrogen).

Determine the nitrogen content by sulfuric acid digestion as follows, and calculate the quantity of protein by multiplying by 6.25.

Carry out a blank determination by placing 4 g of a powdered mixture of 100 g of *dipotassium sulfate R*, 3 g of *copper sulfate pentahydrate R* and 3 g of *titanium dioxide R*, and 3 glass beads in a combustion flask. Wash any adhering particles from the neck into the flask with 25 mL of *sulfuric acid R*, allowing it to run down the sides of the flask, and swirl to mix the contents. Close the mouth of the flask loosely, for example by means of a glass bulb with a short stem, to avoid excessive loss of sulfuric acid. Heat gradually at first, then increase the temperature until there is vigorous boiling with condensation of sulfuric acid in the neck of the flask; take precautions to prevent the upper part of the flask from becoming overheated. Continue heating until a clear solution is obtained. Cool, dissolve the solid material by cautiously adding 25 mL of *water R* to the mixture, cool again and place in a steam-distillation apparatus. Add a suitable volume of *strong sodium hydroxide solution R* to change the colour of the solution from bluish-green to brown or black, and distil immediately by passing steam through the mixture. Collect about 40 mL of distillate in 50.0 mL of *0.01 M hydrochloric acid*, adding enough *water R* if necessary to cover the tip of the condenser. Towards the end of the distillation, lower the receiver so that the tip of the condenser is above the surface of the acid. Take precautions to prevent any water on the outer surface of the condenser from reaching the contents of the receiver. Titrate the distillate with *0.025 M sodium hydroxide* ($n_1$ mL), using *methyl red mixed solution R* as indicator.

Repeat the test adding 3.0 g ($m$ g) of the substance to be examined to the combustion flask, and using the same volume of *strong sodium hydroxide solution R*. Titrate the distillate as described for the blank determination with *0.025 M sodium hydroxide* ($n_2$ mL). Calculate the percentage content of nitrogen using the following expression:

$$\frac{0.03503(n_1 - n_2)}{m}$$

**Oxidising substances** (*2.5.30*): maximum 20 ppm, calculated as $H_2O_2$.

**Sulfur dioxide** (*2.5.29*): maximum 50 ppm.

**Iron** (*2.4.9*): maximum 10 ppm.

Shake 1.5 g with 15 mL of *dilute hydrochloric acid R*. Filter. The filtrate complies with the test.

**Loss on drying** (*2.2.32*): maximum 15.0 per cent, determined on 1.000 g by drying in an oven at 130 °C for 90 min.

**Sulfated ash** (*2.4.14*): maximum 0.6 per cent, determined on 1.0 g.

**Microbial contamination**

TAMC: acceptance criterion $10^3$ CFU/g (*2.6.12*).

TYMC: acceptance criterion $10^2$ CFU/g (*2.6.12*).

Absence of *Escherichia coli* (*2.6.13*).

◊Absence of *Salmonella* (*2.6.13*).◊

(1) This monograph has undergone pharmacopoeial harmonisation. See chapter *5.8. Pharmacopoeial harmonisation*.

01/2020:1379

# WHEAT-GERM OIL, REFINED

## Tritici aestivi oleum raffinatum

DEFINITION

Fatty oil obtained from the germ of the grain of *Triticum aestivum* L. by cold expression or by other suitable mechanical means and/or by extraction. It is then refined. A suitable antioxidant may be added.

PRODUCTION

The oil is prepared using materials and methods designed to ensure that the content of brassicasterol (*2.4.23*) in the sterol fraction of the oil is not greater than 0.3 per cent.

CHARACTERS

*Appearance*: clear, light yellow liquid.

*Solubility*: practically insoluble in water and in ethanol (96 per cent), miscible with light petroleum (bp: 40-60 °C).

*Relative density*: about 0.925.

*Refractive index*: about 1.475.

IDENTIFICATION

*First identification: B.*

*Second identification: A.*

A. Identification of fatty oils by thin-layer chromatography (*2.3.2*).

*Results*: the chromatogram obtained is similar to the corresponding chromatogram shown in Figure 2.3.2.-1.

B. Composition of fatty acids (see Tests).

TESTS

**Acid value** (*2.5.1*): maximum 0.9, or maximum 0.3 if intended for use in the manufacture of parenteral preparations.

**Peroxide value** (*2.5.5, Method A*): maximum 10.0, or maximum 5.0 if intended for use in the manufacture of parenteral preparations.

**Unsaponifiable matter** (*2.5.7*): maximum 5.0 per cent, determined on 5.0 g.

**Alkaline impurities** (*2.4.19*). It complies with the test.

**Composition of fatty acids** (*2.4.22, Method C*). Use the mixture of calibrating substances in Table 2.4.22.-3.

*Composition of the fatty-acid fraction of the oil*:

- *palmitic acid*: 14.0 per cent to 19.0 per cent;
- *stearic acid*: maximum 2.0 per cent;
- *oleic acid*: 12.0 per cent to 23.0 per cent;
- *linoleic acid*: 52.0 per cent to 59.0 per cent;
- *linolenic acid*: 3.0 per cent to 10.0 per cent;
- *eicosenoic acid*: maximum 2.0 per cent.

**Water** (*2.5.32*): maximum 0.1 per cent, determined on 1.00 g.

STORAGE

In an airtight, well-filled container, protected from light.

LABELLING

The label states:

- where applicable, that the substance is suitable for use in the manufacture of parenteral preparations;
- whether the oil is obtained by mechanical means, by extraction or by a combination of the 2.

01/2020:1480

# WHEAT-GERM OIL, VIRGIN

## Tritici aestivi oleum virginale

DEFINITION

Fatty oil obtained from the germ of the grain of *Triticum aestivum* L. by cold expression or other suitable mechanical means.

PRODUCTION

The oil is prepared using materials and methods designed to ensure that the content of brassicasterol (*2.4.23*) in the sterol fraction of the oil is not greater than 0.3 per cent.

CHARACTERS

*Appearance*: clear, light yellow or golden-yellow liquid.

*Solubility*: practically insoluble in water and in ethanol (96 per cent), miscible with light petroleum (bp: 40-60 °C).

*Relative density*: about 0.925.

*Refractive index*: about 1.475.

IDENTIFICATION

*First identification: B.*

*Second identification: A.*

A. Identification of fatty oils by thin-layer chromatography (*2.3.2*).

*Results*: the chromatogram obtained is similar to the corresponding chromatogram shown in Figure 2.3.2.-1.

B. Composition of fatty acids (see Tests).

TESTS

**Acid value** (*2.5.1*): maximum 20.0.

**Peroxide value** (*2.5.5, Method A*): maximum 15.0.

**Unsaponifiable matter** (*2.5.7*): maximum 5.0 per cent, determined on 5.0 g.

**Composition of fatty acids** (*2.4.22, Method C*).

*Composition of the fatty-acid fraction of the oil*:

- *palmitic acid*: 14.0 per cent to 19.0 per cent;
- *stearic acid*: maximum 2.0 per cent;
- *oleic acid*: 12.0 per cent to 23.0 per cent;
- *linoleic acid*: 52.0 per cent to 59.0 per cent;
- *linolenic acid*: 3.0 per cent to 10.0 per cent;
- *eicosenoic acid*: maximum 2.0 per cent.

**Water** (*2.5.32*): maximum 0.1 per cent, determined on 1.00 g.

STORAGE

In an airtight, well-filled container, protected from light.

**04/2012:0593**
**corrected 10.0**

# WOOL ALCOHOLS

## Alcoholes adipis lanae

DEFINITION

Mixture of sterols and higher aliphatic alcohols from wool fat. A suitable antioxidant may be added.

*Content*: minimum 30.0 per cent of cholesterol.

CHARACTERS

*Appearance*: pale-yellow or brownish-yellow, brittle mass becoming plastic on heating.

*Solubility*: practically insoluble in water, soluble in boiling anhydrous ethanol and in methylene chloride, slightly soluble in ethanol (90 per cent *V/V*).

IDENTIFICATION

Dissolve 50 mg in 5 mL of *methylene chloride R* and add 1 mL of *acetic anhydride R* and 0.1 mL of *sulfuric acid R*. Within a few seconds, a green colour develops.

TESTS

**Appearance of solution**. To 1.0 g add 10 mL of *light petroleum R1* and shake while warming in a water-bath. The substance dissolves completely. After cooling, the solution is clear (*2.2.1*).

**Alkalinity**. Dissolve 2.0 g in 25 mL of hot *ethanol (90 per cent V/V) R* and add 0.5 mL of *phenolphthalein solution R1*. No red colour develops.

**Melting point** (*2.2.15*): minimum 56 °C.

Melt the substance to be examined by heating in a water-bath at a temperature which exceeds the expected melting point by not more than 10 °C; introduce the substance to be examined into the capillary tubes and allow to stand on ice for at least 2 h.

**Water-absorption capacity**. Place 0.6 g of the substance to be examined and 9.4 g of *white soft paraffin R* in a mortar and melt on a water-bath. Allow to cool and incorporate 20 mL of *water R*, added in portions. Within 24 h no water is released from the almost white, ointment-like emulsion.

**Acid value** (*2.5.1*): maximum 2.0.

If necessary, heat in a water-bath under a reflux condenser to dissolve the substance to be examined.

**Hydroxyl value** (*2.5.3, Method A*): 120 to 180.

**Peroxide value** (*2.5.5, Method A*): maximum 15.

Take from the substance to be examined wedge-shaped pieces whose base consists of part of the surface. Melt the pieces before carrying out the determination. Before adding 0.5 mL of *saturated potassium iodide solution R*, cool the solution obtained to room temperature.

**Saponification value** (*2.5.6*): maximum 12.0, determined on 10.00 g. Heat under reflux for 4 h.

**Loss on drying** (*2.2.32*): maximum 0.5 per cent, determined on 2.000 g by drying in an oven at 105 °C.

**Total ash** (*2.4.16*): maximum 0.1 per cent.

ASSAY

Gas chromatography (*2.2.28*). *Homogenise the sample before use.*

*Internal standard solution.* Dissolve 0.125 g of *pregnenolone isobutyrate CRS* in *heptane R* and dilute to 50.0 mL with the same solvent.

*Test solution.* Dissolve 75.0 mg of the substance to be examined in 10.0 mL of the internal standard solution and dilute to 25.0 mL with *heptane R*.

*Reference solution.* Dissolve 25.0 mg of *cholesterol CRS* in 10.0 mL of the internal standard solution and dilute to 25.0 mL with *heptane R*.

*Injection liner*:

- *packing material*: quartz wool;
- *size*: *l* = 78.5 mm, Ø = 4.0 mm.

*Column*:

- *material*: fused silica;
- *size*: *l* = 30 m, Ø = 0.25 mm;
- *stationary phase*: *methylpolysiloxane R* (film thickness 0.25 µm).

*Carrier gas*: *helium for chromatography R*.

*Flow rate*: 1 mL/min.

*Split ratio*: 1:50.

*Temperature*:

- *column*: 275 °C;
- *injection port*: 285 °C;
- *detector*: 300 °C.

*Detection*: flame ionisation.

*Injection*: 1 µL.

*Relative retention* with reference to pregnenolone isobutyrate (retention time = about 8 min): cholesterol = about 1.2.

*System suitability*: reference solution:

- *resolution*: minimum 5.0 between the peaks due to pregnenolone isobutyrate and cholesterol.

Calculate the percentage content of cholesterol in the substance to be examined taking into account the assigned content of *cholesterol CRS*.

STORAGE

In a well-filled container, protected from light.

**04/2012:0134**
**corrected 10.0**

# WOOL FAT

## Adeps lanae

DEFINITION

Purified, anhydrous, waxy substance obtained from the wool of sheep (*Ovis aries*). A suitable antioxidant may be added.

CHARACTERS

*Appearance*: yellow, unctuous substance. When melted, it is a clear or almost clear, yellow liquid. A solution in light petroleum is opalescent.

*Solubility*: practically insoluble in water, slightly soluble in boiling anhydrous ethanol.

Characteristic odour.

IDENTIFICATION

A. In a test-tube, dissolve 0.5 g in 5 mL of *methylene chloride R* and add 1 mL of *acetic anhydride R* and 0.1 mL of *sulfuric acid R*. A green colour develops.

B. Dissolve 50 mg in 5 mL of *methylene chloride R*, add 5 mL of *sulfuric acid R* and shake. A red colour develops and an intense green fluorescence appears in the lower layer when examined in daylight, with illumination from behind the observer.

TESTS

**Water-soluble acid or alkaline substances**. Melt 5.0 g on a water-bath and shake vigorously for 2 min with 75 mL of *water R* previously heated to 90-95 °C. Allow to cool and filter through filter paper previously rinsed with *water R*. To 60 mL of the filtrate (which may not be clear) add 0.25 mL of *bromothymol blue solution R1*. Not more than 0.2 mL of *0.02 M hydrochloric acid* or 0.15 mL of *0.02 M sodium hydroxide* is required to change the colour of the indicator.

**Water-absorption capacity**. Place 10 g of molten wool fat in a mortar and allow to cool to room temperature. Weigh the mortar. Add *water R* in portions of 0.2-0.5 mL from a burette, stirring vigorously after each addition to incorporate the *water R*. Instead of a pestle, use a high-density polypropylene cylindrical rod (120 mm long and 10 mm in diameter, for

example). The end-point is reached when visible droplets remain which cannot be incorporated. Weigh the mortar again and determine the amount of water absorbed by weight difference. Not less than 20 mL of *water R* is absorbed.

**Acid value** (*2.5.1*): maximum 1.0, determined on 5.0 g dissolved in 25 mL of the prescribed mixture of solvents.

**Peroxide value** (*2.5.5, Method A*): maximum 20.

Before adding 0.5 mL of *saturated potassium iodide solution R*, cool the solution obtained to room temperature.

**Saponification value** (*2.5.6*): 90 to 105, determined on 2.00 g while heating under reflux for 4 h.

**Water-soluble oxidisable substances**. To 10 mL of the filtrate obtained in the test for water-soluble acid or alkaline substances add 1 mL of *dilute sulfuric acid R* and 0.1 mL of *0.02 M potassium permanganate*. After 10 min, the solution is not completely decolourised.

**Paraffins**: maximum 1.0 per cent.

*The tap and cotton plugs used must be free from grease.* Prepare a column of anhydrous aluminium oxide 0.23 m long and 20 mm in diameter by adding a slurry of *anhydrous aluminium oxide R* and *light petroleum R1* to a glass tube fitted with a tap and containing *light petroleum R1* (before use, dehydrate the anhydrous aluminium oxide by heating it in an oven at 600 °C for 3 h). Allow to settle and reduce the depth of the layer of solvent above the column to about 40 mm. Dissolve 3.0 g of the substance to be examined in 50 mL of warm *light petroleum R1*, cool, pass the solution through the column at a flow rate of 3 mL/min and wash with 250 mL of *light petroleum R1*. Concentrate the combined eluate and washings to low bulk by distillation, evaporate to dryness on a water-bath and heat the residue at 105 °C for periods of 10 min until 2 successive weighings do not differ by more than 1 mg. The residue weighs a maximum of 30 mg.

**Pesticide residues**: maximum 0.05 ppm for each organochlorine pesticide, 0.5 ppm for each other pesticide and 1 ppm for the sum of all the pesticides.

*All glassware used is thoroughly washed using phosphate-free detergent as follows. The glassware is immersed in a bath of detergent solution (5 per cent in deionised water) and allowed to soak for 24 h. The detergent is washed off with copious amounts of acetone and hexane for pesticide analysis. It is important to keep glassware specifically for pesticide analyses, it must not be mixed up with glassware used for other applications. The glassware used must be free of chlorinated solvents, plastics and rubber materials, in particular phthalate plasticisers, oxygenated compounds and nitrogenated solvents such as acetonitrile. Use hexane, toluene and acetone for pesticide analysis. Use HPLC grade reagents for ethyl acetate, cyclohexane and water.*

The test consists of the isolation of pesticide residues by size-exclusion chromatography (*2.2.30*) followed by solid phase extraction and identification by gas chromatography coupled with an electron capture detector or a thermionic detector.

*ISOLATION OF THE PESTICIDE RESIDUES.* As detector, use a UV-visible spectrophotometer set at a wavelength of 254 nm to calibrate the chromatographic column for gel permeation.

Calibration is extremely important in gel permeation chromatography (GPC) to check that the pressure, solvent flow rate, solvent ratio, temperature and column conditions remain constant. The gel permeation column is to be calibrated at regular intervals using a standard mixture prepared as follows: into a 1000 mL volumetric flask, introduce 50.00 g of *maize oil R*, 0.20 g of *methoxychlor R* and 50.0 mg of *perylene R*. Dilute to 1000.0 mL with a mixture of equal volumes of *cyclohexane R* and *ethyl acetate R*.

To calibrate the column, set the mobile phase at a flow rate of 5 mL/min with a mixture of equal volumes of *cyclohexane R* and *ethyl acetate R*. Inject 5 mL of the standard mixture and record the resulting chromatogram. The retention times for the analytes must not vary by more than ± 5 per cent between calibrations. If the retention time shift is greater than ± 5 per cent, take corrective action. Excessive retention time shifts may be caused by:

- poor laboratory temperature control;
- the pump containing air; this can be verified by measuring the flow rate: collect 25 mL of column eluate in a volumetric flask and record the time (300 ± 5 s);
- a leak in the system.

Changes in pressure, in mobile phase flow rate or in column temperature conditions, as well as column contamination, can affect pesticide retention times and are to be monitored. If the flow rate or column pressure are outside desired bands the precolumn or column is to be replaced.

*Test solution.* In a volumetric flask, dissolve 1 g of the substance to be examined, accurately weighed, in a mixture of 1 volume of *ethyl acetate R* and 7 volumes of *cyclohexane R*. Add 1 mL of an internal standard (2 ppm, either *isodrin R* or *ditalimphos R*) and dilute to 20 mL. *The internal standard solutions are used to establish that recoveries of the pesticides from the GPC purification stage, evaporation and solid phase extraction stage are at acceptable levels. Recovery levels of the internal standard solutions from the wool fat are determined by comparing the peak areas of the wool fat extracts with peak areas of solutions of the internal standards.*

*Precolumn*:

- *size*: *l* = 0.075 m, Ø = 21.2 mm;
- *stationary phase*: *styrene-divinylbenzene copolymer R* (5 µm).

*Gel permeation column*:

- *size*: *l* = 0.3 m, Ø = 21.2 mm;
- *stationary phase*: *styrene-divinylbenzene copolymer R* (5 µm).

*Mobile phase*: *ethyl acetate R*, *cyclohexane R* (10:70 *V/V*).

*Flow rate*: 5 mL/min.

*Detection*: spectrophotometer at 254 nm.

Inject 5 mL of the test solution. Discard the first 95 mL (19 min) of eluate containing the substance to be examined. Collect the next 155 mL of eluate (31 min) containing any pesticide residues in an evaporating vessel.

Place the 155 mL of the eluate collected from the gel permeation chromatography column into an evaporating vessel. Place this vessel in an autoevaporator setting the water-bath temperature at 45 °C and the nitrogen pressure at 55 kPa. Evaporate the eluate down to 0.5 mL.

To prepare the solid phase extraction cartridges take some *magnesium silicate for pesticide residue analysis R* and heat it in a muffle furnace at 700 °C for 4 h to remove moisture and polychlorinated biphenyls. Subsequently allow the magnesium silicate to cool for 2 h and transfer it directly to an oven at 100-105 °C, and allow to stand for 30 min. Transfer the magnesium silicate to a stoppered glass jar and allow to equilibrate for 48 h. This material may be used for up to 2 weeks. After that period the magnesium silicate is to be reactivated, by heating at 600 °C for 2 h in a muffle furnace. Remove the magnesium silicate from the furnace, cool and store in a stoppered glass jar. The magnesium silicate is deactivated by adding 1 per cent of *water R*. After the water has been added, shake the magnesium silicate intermittently over 15 min just prior to use. The deactivated magnesium silicate is suitable for use for up to 1 week. It is essential that only deactivated magnesium silicate is used.

Take a 6 mL empty solid phase extraction cartridge and weigh into the cartridge 1 g of the deactivated magnesium silicate.

At this stage the GPC fraction still contains about 10 per cent of the substance to be examined, so further clean-up is necessary. A separate isolation procedure is carried out a) for organochlorine and synthetic pyrethroid pesticides and

b) for organophosphorus pesticides. Place a preconditioned solid phase extraction cartridge containing l g of deactivated *magnesium silicate for pesticide residue analysis R* onto a vacuum manifold.

Condition the cartridge by adding 10 mL of *toluene R* and allowing the solvent to elute through the cartridge. Place the 0.5 mL of the solvent fraction from the evaporating vessel on the preconditioned cartridge. Elute the pesticide fractions from the cartridges using 20 mL of either of the 2 different solvent systems shown below:

a) for determination of the organochlorine and synthetic pyrethroid pesticides: *toluene R*; a very small amount of the substance to be examined is co-eluted;

b) for determination of the organophosphorus pesticides: a mixture of 2 volumes of *acetone R* and 98 volumes of *toluene R*; this solvent system is used to elute all the pesticides including the more polar organophosphorus pesticides; unfortunately, some of the substance to be examined is co-eluted with this solvent system, which can interfere with the electron capture detector.

Collect the eluate from the extraction cartridges in 25 mL glass vials. Quantitatively transfer the eluate to an evaporating vessel, washing the vial with 3 quantities, each of 10 mL, of *hexane R*.

Place the evaporating vessel on the autoevaporator and evaporate the solid phase extraction fractions down to 0.5 mL. The water-bath temperature is set at 45 °C and the nitrogen pressure is 55 kPa.

Examine the residues by gas chromatography (*2.2.28*) using electron capture and thermionic detectors as described below.

*Recovery*. Calculate the recovery correction factor ($R_{cf}$) of the internal standards (*ditalimphos R* or *isodrin R*) added to the test solution using the following expression:

$$\frac{A_2}{A_1} \times 100$$

$A_1$ = peak area of an internal standard 1 ppm in solution;

$A_2$ = peak area of internal standard extracted from the test solution.

5 mL of the 20 mL test solution containing 1 mL of 2 ppm internal standard concentrated to 0.5 mL is equivalent to 1 ppm of the internal standard in the solution.

If the recovery of the internal standards falls outside the range of 70 per cent to 110 per cent the test is not valid.

*Reference solutions*. Prepare reference solutions of pesticides using the pesticides standards at a concentration of 0.5 ppm (see composition of reference solutions A to D in Table 0134.-1). Commercially available pesticides may be purchased. The individual standards have a concentration of 10 ppm.

Table 0134.-1. – *Composition of the reference solutions*

| | |
|---|---|
| **Reference solution A (0.5 ppm or 0.5 mg/L) (organochlorine and synthetic pyrethroid pesticides)** | **Reference solution B (0.5 ppm or 0.5 mg/L) (organochlorine and synthetic pyrethroid pesticides)** |
| *Cyhalothrin R* | *Aldrin R* |
| *Cypermethrin R* | *o,p'-DDT R* |
| *o,p'-DDE R* | *o,p'-DDD R* |
| *p,p'-DDE R* | *p,p'-DDD R* |
| *p,p'-DDT R* | *Dieldrin R* |
| *Deltamethrin R* | *α-Endosulfan R* |
| *Endrin R* | *β-Endosulfan R* |
| *Heptachlor R* | *Fenvalerate R* |
| *Heptachlor epoxide R* | *α-Hexachlorocyclohexane R* |
| *Hexachlorobenzene R* | *β-Hexachlorocyclohexane R* |
| *Lindane R* | *δ-Hexachlorocyclohexane R* |
| *Tecnazene R* | *Methoxychlor R* |
| | *Permethrin R* |
| **Reference solution C (0.5 ppm or 0.5 mg/L) (organophosphorus pesticides)** | **Reference solution D (0.5 ppm or 0.5 mg/L) (organophosphorus pesticides)** |
| *Bromophos-ethyl R* | *Bromophos R* |
| *Carbophenothion R* | *Chlorpyriphos R* |
| *Chlorfenvinphos R* | *Chlorpyriphos-methyl R* |
| *Diazinon R* | *Coumaphos R* |
| *Dichlofenthion R* | *Phosalone R* |
| *Ethion R* | *Pirimiphos-ethyl R* |
| *Fenchlorphos R* | *Tetrachlorvinphos R* |
| *Malathion R* | |
| *Propetamphos R* | |
| **Reference solution E (electron capture detector calibration mixture)** | **Reference solution F (thermionic detector calibration mixture)** |
| *Aldrin R* (0.01 mg/L) | *Chlorfenvinphos R* (0.05 mg/L) |
| *Cypermethrin R* (0.1 mg/L) | *Diazinon R* (0.05 mg/L) |
| *o,p'-DDD R* (0.01 mg/L) | *Ethion R* (0.05 mg/L) |
| *Deltamethrin R* (0.1 mg/L) | *Fenchlorphos R* (0.05 mg/L) |
| *Endrin R* (0.01 mg/L) | *Propetamphos R* (0.05 mg/L) |
| *β-Hexachlorocyclohexane R* (0.01 mg/L) | |
| **Reference solution G (internal standard organophosphorus pesticide)** | **Reference solution H (internal standard organochlorine pesticide)** |
| *Ditalimphos R* (2 ppm or 2.0 mg/L) | *Isodrin R* (2 ppm or 2.0 mg/L) |
| *Ditalimphos R* (1 ppm or 1.0 mg/L) | *Isodrin R* (1 ppm or 1.0 mg/L) |

At the same time prepare solutions of pesticides equivalent to the limit of detection of the method (see recommended compositions in Table 0134.-1). These reference solutions are used to optimise the electron capture detector and thermionic detector to achieve the detection limits of the method (reference solutions E and F).

To prepare the reference solutions at the different concentrations use a calibrated pipette and volumetric flasks. To prepare the internal standard solutions G and H use a four-place analytical balance, pipette and volumetric flasks.

*IDENTIFICATION AND QUANTIFICATION OF THE PESTICIDE RESIDUES*. To identify any pesticide residues compare the chromatograms obtained with chromatograms obtained with reference solutions A to D.

The identity of the pesticides can be confirmed by spiking samples or overlaying chromatograms using an integration package on a computer. The interpretation of pesticides in trace residue analyses is extremely complex. The detectors, particularly the electron capture detector, are prone to

interference, both from the substance to be examined itself, and from solvents, reagents and apparatus used in the extraction. These peaks can easily be misinterpreted or quoted as a false positive. Confirmation of pesticides can be achieved by running samples and standards on different capillary columns (see chromatographic systems A or B described below). The peaks can be identified by using the information in Table 0134.-2.

A knowledge of the different responses the pesticides have with the 2 detectors is useful in identification of unknown peaks.

Table 0134.-2. – *Elution order of the pesticides on chromatographic systems A and B*

| Chromatographic system A | Chromatographic system B |
|---|---|
| Tecnazene | Tecnazene |
| α-Hexachlorocyclohexane | Hexachlorobenzene |
| Hexachlorobenzene | α-Hexachlorocyclohexane |
| β-Hexachlorocyclohexane | Diazinon |
| Lindane | Lindane |
| Propetamphos | Propetamphos |
| δ-Hexachlorocyclohexane | Heptachlor |
| Diazinon | Dichlofenthion |
| Dichlofenthion | Aldrin |
| Chlorpyriphos-methyl | Chlorpyriphos-methyl |
| Heptachlor | Fenchlorphos |
| Fenchlorphos | β-Hexachlorocyclohexane |
| Aldrin | δ-Hexachlorocyclohexane |
| Malathion | Pirimiphos-ethyl |
| Chlorpyriphos | Chlorpyriphos |
| Bromophos | Bromophos |
| Pirimiphos-ethyl | Malathion |
| Heptachlor epoxide | Heptachlor epoxide |
| Chlorfenvinphos (*E*) | *o,p'*-DDE |
| Chlorfenvinphos (*Z*) | Chlorfenvinphos (*E*) |
| Bromophos-ethyl | α-Endosulfan |
| *o,p'*-DDE | Chlorfenvinphos (*Z*) |
| α-Endosulfan | Bromophos-ethyl |
| Tetrachlorvinphos | *p,p'*-DDE |
| Dieldrin | Dieldrin |
| *p,p'*-DDE | Tetrachlorvinphos |
| *o,p'*-DDT | *o,p'*-DDT |
| Endrin | Endrin |
| β-Endosulfan | *o,p'*-DDD |
| *o,p'*-DDD | *p,p'*-DDD |
| *p,p'*-DDD | β-Endosulfan |
| Ethion | Ethion |
| Carbophenothion | *p,p'*-DDT |
| *p,p'*-DDT | Carbophenothion |
| Methoxychlor | Methoxychlor |
| Phosalone | Cyhalothrin |
| Cyhalothrin (2 isomers) | *cis*-Permethrin |
| *cis*-Permethrin | Phosalone |
| *trans*-Permethrin | *trans*-Permethrin |
| Coumaphos | Cypermethrin (4 isomers) |
| Cypermethrin (4 isomers) | Coumaphos |
| Fenvalerate (2 isomers) | Fenvalerate (2 isomers) |
| Deltamethrin | Deltamethrin |

Once the pesticides have been identified, calculate the content of each pesticide using the following expression:

$$C_p = \frac{P_p \times D \times C_e}{P_e} \times \frac{100}{R_{cf}}$$

$C_p$ = concentration of identified pesticide (ppm);

$P_p$ = peak area of the individual pesticide in the test sample obtained;

$C_e$ = concentration of the individual pesticide in the external standard (ppm);

$P_e$ = peak area of the individual pesticide in the external standard;

$D$ = dilution factor;

$R_{cf}$ = recovery correction factor.

The dilution factor ($D$) can be defined as follows:

$$\frac{V_1}{m \times \frac{V_2}{V_3}}$$

$V_1$ = volume of sample obtained after the 2nd evaporation stage;

$m$ = sample weight;

$V_2$ = GPC injection volume;

$V_3$ = sample volumetric flask volume.

*Chromatographic system A*:

*Precolumn*:

– *material*: deactivated silica;

– *size*: *l* = 4.5 m, Ø = 0.53 mm.

*Column*:

– *material*: fused silica;

– *size*: *l* = 60 m, Ø = 0.25 mm;

– *stationary phase*: *phenyl(5)methyl(95)polysiloxane R* (film thickness 0.25 µm).

*Carrier gas*: *helium for chromatography R*.

*Linear velocity*: 25 cm/s.

*Pressure*: 180 kPa.

*Temperature*:

| | Time (min) | Temperature (°C) |
|---|---|---|
| Column | 0 - 1 | 75 |
| | 1 - 5 | 75 → 175 |
| | 5 - 30 | 175 → 275 |
| | 30 - 40 | 275 → 285 |
| | 40 - 55 | 285 |
| Injection port | | 300 |
| Detector | | 350 |

*Detection*: electron capture or thermionic specific detector.

*Injection*: 2 µL.

*Chromatographic system B* which may be used for confirmation analysis:

*Precolumn*:

– *material*: deactivated silica;

– *size*: *l* = 4.5 m, Ø = 0.53 mm.

*Column*:

– *material*: fused silica;

– *size*: *l* = 60 m, Ø = 0.25 mm;

– *stationary phase*: *cyanopropyl(7)phenyl(7)methyl(86)polysiloxane R* (film thickness 0.25 µm).

*Carrier gas*: *helium for chromatography R*.

*Linear velocity*: 25 cm/s.

*Pressure*: 180 kPa.

*Temperature*:

| | Time (min) | Temperature (°C) |
|---|---|---|
| Column | 0 - 1 | 75 |
| | 1 - 5 | 75 → 175 |
| | 5 - 30 | 175 → 275 |
| | 30 - 40 | 275 → 285 |
| | 40 - 55 | 285 |
| Injection port | | 300 |
| Detector | | 350 |

*Detection*: electron capture or thermionic specific detector.

*Injection*: 2 µL.

**Chlorides**: maximum 150 ppm.

Boil 1.0 g with 20 mL of *ethanol (90 per cent V/V) R* in a round-bottomed flask fitted with a reflux condenser for 5 min. Cool, add 40 mL of *water R* and 0.5 mL of *nitric acid R* and filter. To the filtrate add 0.15 mL of a 10 g/L solution of *silver nitrate R* in *ethanol (90 per cent V/V) R*. Allow to stand for 5 min protected from light. Any opalescence in the solution is not more intense than that in a standard prepared at the same time by adding 0.15 mL of a 10 g/L solution of *silver nitrate R* in *ethanol (90 per cent V/V) R* to a mixture of 0.2 mL of *0.02 M hydrochloric acid*, 20 mL of *ethanol (90 per cent V/V) R*, 40 mL of *water R* and 0.5 mL of *nitric acid R*.

**Loss on drying** (*2.2.32*): maximum 0.5 per cent, determined on 1.000 g by drying in an oven at 105 °C for 1 h.

**Sulfated ash** (*2.4.14*): maximum 0.15 per cent.

Ignite 5.0 g and use the residue to determine the sulfated ash.

STORAGE

At a temperature not exceeding 25 °C.

FUNCTIONALITY-RELATED CHARACTERISTICS

*This section provides information on characteristics that are recognised as being relevant control parameters for one or more functions of the substance when used as an excipient (see chapter 5.15). Some of the characteristics described in the Functionality-related characteristics section may also be present in the mandatory part of the monograph since they also represent mandatory quality criteria. In such cases, a cross-reference to the tests described in the mandatory part is included in the Functionality-related characteristics section. Control of the characteristics can contribute to the quality of a medicinal product by improving the consistency of the manufacturing process and the performance of the medicinal product during use. Where control methods are cited, they are recognised as being suitable for the purpose, but other methods can also be used. Wherever results for a particular characteristic are reported, the control method must be indicated.*

*The following characteristics may be relevant for wool fat used in water-emulsifying ointments and lipophilic creams.*

**Water-absorption capacity** (see Tests).

**Drop point** (*2.2.17, Method A*). To fill the metal cup, melt the wool fat on a water-bath, cool to about 50 °C, pour into the cup and allow to stand at 15-20 °C for 24 h. The drop point is typically 38 °C to 44 °C.

**corrected 10.0**

# WOOL FAT, HYDROGENATED

## Adeps lanae hydrogenatus

DEFINITION

Mixture of higher aliphatic alcohols and sterols obtained from the direct, high-pressure, high-temperature hydrogenation of *wool fat (0134)* during which the esters and acids present are reduced to the corresponding alcohols. A suitable antioxidant may be added.

CHARACTERS

*Appearance*: white or pale yellow, unctuous substance.

*Solubility*: practically insoluble in water, soluble in boiling anhydrous ethanol and in light petroleum.

IDENTIFICATION

*First identification: B.*

*Second identification: A, C.*

A. Melting point (see Tests).

B. Examine the chromatograms obtained in the test for fatty alcohols and sterols.

*Results*: the principal peaks in the chromatogram obtained with the test solution are similar in retention time and size to the principal peaks in the chromatogram obtained with reference solution (a).

C. Dissolve 50 mg in 5 mL of *methylene chloride R* and add 1 mL of *acetic anhydride R* and 0.1 mL of *sulfuric acid R*. A green colour is produced.

TESTS

**Melting point** (*2.2.15*): 45 °C to 55 °C. Allow to stand at 20 °C for 16 h.

**Acid value** (*2.5.1*): maximum 1.0, determined on 5.0 g.

**Hydroxyl value** (*2.5.3, Method A*): 140 to 180.

**Saponification value** (*2.5.6*): maximum 8.0. Heat under reflux for 4 h.

**Fatty alcohols and sterols**. Gas chromatography (*2.2.28*).

*Test solution.* Dissolve 0.25 g of the substance to be examined in 60 mL of *anhydrous ethanol R* and dilute to 100.0 mL with the same solvent.

*Reference solution (a).* Dissolve 0.25 g of *hydrogenated wool fat CRS* in 60 mL of *anhydrous ethanol R* and dilute to 100.0 mL with the same solvent.

*Reference solution (b).* Dissolve 50 mg of *cetyl alcohol CRS* and 50 mg of *stearyl alcohol CRS* in 60 mL of *anhydrous ethanol R* and dilute to 100.0 mL with the same solvent.

*Column*:

- *material*: fused silica;
- *size*: *l* = 30 m, Ø = 0.25 mm;
- *stationary phase*: *methylpolysiloxane R* or another non-polar phase (film thickness 0.25 µm).

*Carrier gas*: *helium for chromatography R.*

*Flow rate*: 1 mL/min.

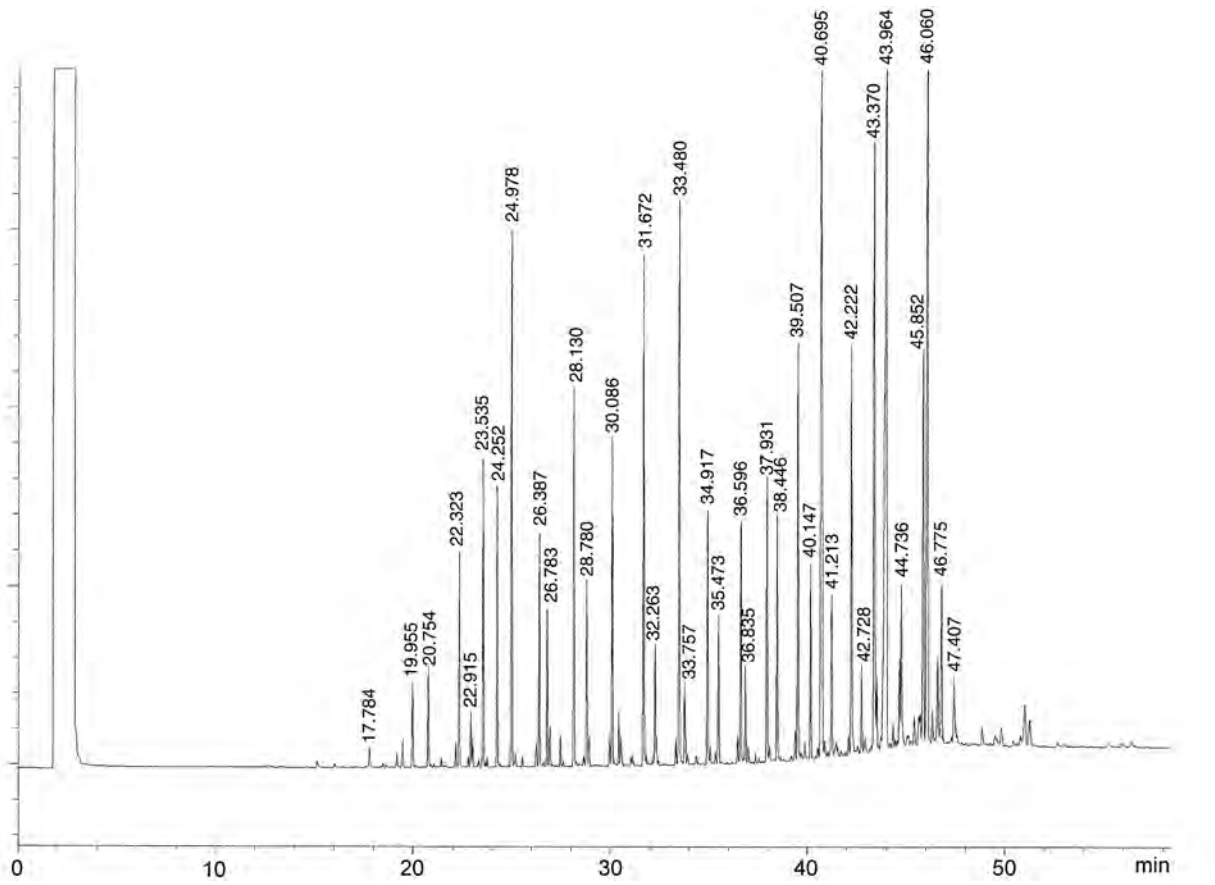

Figure 0969.-1. – *Chromatogram for the test for fatty alcohols and sterols in hydrogenated wool fat: reference solution (a)*

*Temperature*:

| | Time (min) | Temperature (°C) |
|---|---|---|
| Column | 0 - 5 | 100 |
| | 5 - 45 | 100 → 300 |
| | 45 - 60 | 300 |
| Injection port | | 325 |
| Detector | | 350 |

*Detection*: flame ionisation.

*Injection*: 1 µL.

*Results*: the chromatogram obtained with the test solution does not differ significantly from the chromatogram obtained with reference solution (a) (Figure 0969.-1) and it does not show enhanced peaks with retention times corresponding to cetyl alcohol and stearyl alcohol present in the chromatogram obtained with reference solution (b).

**Loss on drying** (*2.2.32*): maximum 3.0 per cent, determined on 2.000 g by drying in an oven at 105 °C for 1 h.

**Total ash** (*2.4.16*): maximum 0.1 per cent, determined on 5.0 g.

STORAGE

In a well-filled container, protected from light.

**04/2012:0135**

# WOOL FAT, HYDROUS

## Adeps lanae cum aqua

DEFINITION

Mixture of 75 per cent *m/m* of wool fat and 25 per cent *m/m* of water. It is obtained by the gradual addition of water to melted wool fat with continuous stirring. A suitable antioxidant may be added.

CHARACTERS

*Appearance*: pale yellow, unctuous substance.

IDENTIFICATION

A. In a test-tube, dissolve 0.5 g in 5 mL of *methylene chloride R* and add 1 mL of *acetic anhydride R* and 0.1 mL of *sulfuric acid R*. A green colour develops.

B. Dissolve 50 mg in 5 mL of *methylene chloride R*, add 5 mL of *sulfuric acid R* and shake. A red colour develops and an intense green fluorescence appears in the lower layer when examined in daylight, with illumination from behind the observer.

TESTS

**Water-soluble acid or alkaline substances**. Melt 6.7 g on a water-bath and shake vigorously for 2 min with 75 mL of *water R* previously heated to 90-95 °C. Allow to cool and filter through filter paper previously rinsed with *water R*. To 60 mL of the filtrate (which may not be clear) add 0.25 mL of *bromothymol blue solution R1*. Not more than 0.2 mL of *0.02 M hydrochloric acid* or 0.15 mL of *0.02 M sodium hydroxide* is required to change the colour of the indicator.

**Drop point** (*2.2.17*): 38 °C to 44 °C.

To fill the metal cup, melt the residue obtained in the test for wool-fat content on a water-bath, cool to about 50 °C, pour into the cup and allow to stand at 15-20 °C for 24 h.

**Water-absorption capacity**. Place 10 g of the residue obtained in the test for wool-fat content in a mortar. Add *water R* in portions of 0.2-0.5 mL from a burette, stirring vigorously after each addition to incorporate the *water R*. The end-point is reached when visible droplets remain which cannot be incorporated. Not less than 20 mL of *water R* is absorbed.

**Acid value** (*2.5.1*): maximum 0.8, determined on 5.0 g dissolved in 25 mL of the prescribed mixture of solvents.

**Peroxide value** (*2.5.5, Method A*): maximum 15.

**Saponification value** (*2.5.6*): 67 to 79, determined on 2.00 g while heating under reflux for 4 h.

**Water-soluble oxidisable substances**. To 10 mL of the filtrate obtained in the test for water-soluble acid or alkaline substances add 1 mL of *dilute sulfuric acid R* and 0.1 mL of *0.02 M potassium permanganate*. After 10 min, the solution is not completely decolourised.

**Paraffins**: maximum 1.0 per cent.

*The tap and cotton plugs used must be free from grease.* Prepare a column of anhydrous aluminium oxide 230 mm long and 20 mm in diameter by adding a slurry of *anhydrous aluminium oxide R* and *light petroleum R1* to a glass tube fitted with a tap and containing *light petroleum R1*. Allow to settle and reduce the depth of the layer of solvent above the column to about 40 mm. Dissolve 3.0 g of the residue obtained in the test for wool-fat content in 50 mL of warm *light petroleum R1*, cool, pass the solution through the column at a rate of 3 mL/min and wash with 250 mL of *light petroleum R1*. Concentrate the combined eluate and washings to low bulk by distillation, evaporate to dryness on a water-bath and heat the residue at 105 °C for periods of 10 min until 2 successive weighings do not differ by more than 1 mg. The residue weighs a maximum of 30 mg.

**Chlorides**: maximum 115 ppm.

Boil 1.3 g with 20 mL of *ethanol (90 per cent V/V) R* under a reflux condenser for 5 min. Cool, add 40 mL of *water R* and 0.5 mL of *nitric acid R* and filter. To the filtrate add 0.15 mL of a 10 g/L solution of *silver nitrate R* in *ethanol (90 per cent V/V) R*. Allow to stand for 5 min, protected from light. Any opalescence in the solution is not more intense than that in a standard prepared at the same time by adding 0.15 mL of a 10 g/L solution of *silver nitrate R* in *ethanol (90 per cent V/V) R* to a mixture of 0.2 mL of *0.02 M hydrochloric acid*, 20 mL of *ethanol (90 per cent V/V) R*, 40 mL of *water R* and 0.5 mL of *nitric acid R*.

**Sulfated ash** (*2.4.14*): maximum 0.1 per cent.

Ignite 5.0 g and use the residue.

**Wool-fat content**: 72.5 per cent to 77.5 per cent.

In a suitable tared dish containing a glass rod, heat 30.0 g to constant mass on a water-bath, stirring continuously. Weigh the residue.

STORAGE

At a temperature not exceeding 25 °C.

# XANTHAN GUM

## Xanthani gummi

[11138-66-2]

DEFINITION

High-molecular-mass anionic polysaccharide produced by fermentation of carbohydrates with *Xanthomonas campestris*. It consists of a principal chain of β(1→4)-linked D-glucose units with trisaccharide side chains, on alternating anhydroglucose units, consisting of 1 glucuronic acid unit included between 2 mannose units. Most of the terminal units contain a pyruvate moiety and the mannose unit adjacent to the principal chain may be acetylated at C-6.

Xanthan gum has a relative molecular mass of approximately $1 \times 10^6$. It exists as the sodium, potassium or calcium salt.

*Content*: minimum 1.5 per cent of pyruvate acetal groups ($C_3H_3O_2$; $M_r$ 71.1) (dried substance).

CHARACTERS

*Appearance*: white or yellowish-white, free-flowing powder.

*Solubility*: soluble in water giving a highly viscous solution, practically insoluble in organic solvents.

IDENTIFICATION

A. In a flask, suspend 1 g in 15 mL of *0.1 M hydrochloric acid*. Close the flask with a fermentation bulb containing *barium hydroxide solution R* and heat carefully for 5 min. The barium hydroxide solution shows a white turbidity.

B. To 300 mL of *water R*, previously heated to 80 °C and stirred rapidly with a mechanical stirrer in a 400 mL beaker, add, at the point of maximum agitation, a dry blend of 1.5 g of *carob bean gum R* and 1.5 g of the substance to be examined. Stir until the mixture forms a solution, and then continue stirring for 30 min or longer. Do not allow the water temperature to drop below 60 °C during stirring. Discontinue stirring and allow the mixture to stand for at least 2 h. A firm rubbery gel forms after the temperature drops below 40 °C but no such gel forms in a 1 per cent control solution of the sample prepared in the same manner but omitting the carob bean gum.

TESTS

**pH** (*2.2.3*): 6.0 to 8.0 for a 10.0 g/L solution in *carbon dioxide-free water R*.

**2-Propanol**. Gas chromatography (*2.2.28*).

*Internal standard solution.* Dilute 0.50 g of *2-methyl-2-propanol R* to 500 mL with *water R*.

*Test solution.* To 200 mL of *water R* in a 1000 mL round-bottomed flask, add 5.0 g of the substance to be examined and 1 mL of a 10 g/L emulsion of *dimeticone R* in *liquid paraffin R*, stopper the flask and shake for 1 h. Distil about 90.0 mL, mix the distillate with 4.0 mL of the internal standard solution and dilute to 100.0 mL with *water R*.

*Reference solution.* Dilute a suitable quantity of *2-propanol R*, accurately weighed, with *water R* to obtain a solution having a known concentration of 2-propanol of about 1 mg/mL. To 4.0 mL of this solution add 4.0 mL of the internal standard solution and dilute to 100.0 mL with *water R*.

*Column*:

– *size*: *l* = 1.8 m, Ø = 4.0 mm;

– *stationary phase*: *ethylvinylbenzene-divinylbenzene copolymer R* (149-177 μm).

*Carrier gas*: *helium for chromatography R*.

*Flow rate*: 30 mL/min.

*Temperature*:

– *column*: 165 °C;

– *injection port and detector*: 200 °C.

*Detection*: flame ionisation.

*Injection*: 5 μL.

*Relative retention* with reference to 2-propanol: 2-methyl-2-propanol = about 1.5.

*Limit*:

– *2-propanol*: maximum 750 ppm.

**Loss on drying** (*2.2.32*): maximum 15.0 per cent, determined on 1.000 g by drying in an oven at 105 °C for 2.5 h.

**Total ash** (*2.4.16*): 6.5 per cent to 16.0 per cent.

ASSAY

*Test solution.* Dissolve a quantity of the substance to be examined corresponding to 120.0 mg of the dried substance in *water R* and dilute to 20.0 mL with the same solvent.

*Reference solution.* Dissolve 45.0 mg of *pyruvic acid R* in *water R* and dilute to 500.0 mL with the same solvent.

Place 10.0 mL of the test solution in a 50 mL round-bottomed flask, add 20.0 mL of *0.1 M hydrochloric acid* and weigh. Boil on a water-bath under a reflux condenser for 3 h. Weigh and adjust to the initial mass with *water R*. In a separating funnel mix 2.0 mL of the solution with 1.0 mL of *dinitrophenylhydrazine-hydrochloric solution R*. Allow to stand for 5 min and add 5.0 mL of *ethyl acetate R*. Shake and allow the solids to settle. Collect the upper layer and shake with 3 quantities, each of 5.0 mL, of *sodium carbonate solution R*. Combine the aqueous layers and dilute to 50.0 mL with *sodium carbonate solution R*. Mix. Treat 10.0 mL of the reference solution at the same time and in the same manner as for the test solution.

Immediately measure the absorbance (*2.2.25*) of the 2 solutions at 375 nm, using *sodium carbonate solution R* as the compensation liquid.

The absorbance of the test solution is not less than that of the reference solution, which corresponds to a content of pyruvoyl groups of not less than 1.5 per cent.

FUNCTIONALITY-RELATED CHARACTERISTICS

*This section provides information on characteristics that are recognised as being relevant control parameters for one or more functions of the substance when used as an excipient (see chapter 5.15). Some of the characteristics described in the Functionality-related characteristics section may also be present in the mandatory part of the monograph since they also represent mandatory quality criteria. In such cases, a cross-reference to the tests described in the mandatory part is included in the Functionality-related characteristics section. Control of the characteristics can contribute to the quality of a medicinal product by improving the consistency of the manufacturing process and the performance of the medicinal product during use. Where control methods are cited, they are recognised as being suitable for the purpose, but other methods can also be used. Wherever results for a particular characteristic are reported, the control method must be indicated.*

*The following characteristics may be relevant for xanthan gum used as viscosity-increasing agent.*

**Viscosity** (*2.2.10*): typically minimum 600 mPa·s.

Add 3.0 g (dried substance) within 45-90 s into 250 mL of a 12 g/L solution of *potassium chloride R* in a 500 mL beaker stirring with a low-pitch propeller-type stirrer rotating at 800 r/min. When adding the substance take care that agglomerates are destroyed. Add an additional quantity of 44 mL of *water R*, to rinse any adhering residue from the walls of the beaker. Stir the preparation at 800 r/min for 2 h whilst maintaining the temperature at 24 ± 1 °C. Determine the viscosity within 15 min at 24 ± 1 °C using a rotating

viscosimeter set at 60 r/min and equipped with a rotating spindle 1.78 mm high and 12.60 mm in diameter which is attached to a shaft 3.2 mm in diameter. The distance from the top of the cylinder to the lower tip of the shaft should be 25.60 mm and the immersion depth 50.0 mm.

*The following characteristics may be relevant for xanthan gum used as matrix former in prolonged-release tablets.*

**Viscosity**: see test above.

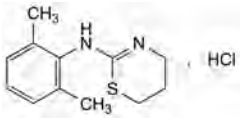
**Particle-size distribution** (*2.9.31* or *2.9.38*).

**Powder flow** (*2.9.36*).

**07/2019:1481**

# XYLAZINE HYDROCHLORIDE FOR VETERINARY USE

## Xylazini hydrochloridum ad usum veterinarium



$C_{12}H_{17}ClN_2S$ $M_r$ 256.8
[23076-35-9]

DEFINITION

*N*-(2,6-Dimethylphenyl)-5,6-dihydro-4*H*-1,3-thiazin-2-amine hydrochloride.

*Content*: 98.0 per cent to 102.0 per cent (dried substance).

CHARACTERS

*Appearance*: white or almost white, crystalline powder, hygroscopic.

*Solubility*: freely soluble in water, very soluble in methanol, freely soluble in methylene chloride.

It shows polymorphism (*5.9*).

IDENTIFICATION

A. Infrared absorption spectrophotometry (*2.2.24*).

*Comparison*: *xylazine hydrochloride CRS*.

If the spectra obtained show differences, dissolve the substance to be examined and the reference substance separately in the minimum volume of *water R*, evaporate to dryness at 60 °C at a pressure of 10-20 kPa, and record new spectra using the residues.

B. It gives reaction (b) of chlorides (*2.3.1*).

TESTS

**Solution S**. Dissolve 5.0 g in *carbon dioxide-free water R*, heating at 60 °C if necessary; allow to cool and dilute to 50.0 mL with the same solvent.

**Appearance of solution**. Solution S is not more opalescent than reference suspension II (*2.2.1*) and is colourless (*2.2.2, Method II*).

**pH** (*2.2.3*): 4.0 to 5.5 for solution S.

**Related substances**. Liquid chromatography (*2.2.29*). *Prepare the solutions immediately before use.*

*Solvent mixture*. Mix 8 volumes of *acetonitrile R*, 30 volumes of *methanol R* and 62 volumes of a 2.72 g/L solution of *potassium dihydrogen phosphate R* previously adjusted to pH 7.2 with *dilute sodium hydroxide solution R*.

*Test solution*. Dissolve 0.100 g of the substance to be examined in the solvent mixture and dilute to 20.0 mL with the solvent mixture.

*Reference solution (a)*. Dilute 1.0 mL of the test solution to 50.0 mL with the solvent mixture. Dilute 1.0 mL of this solution to 10.0 mL with the solvent mixture.

*Reference solution (b)*. Dissolve 5.0 mg of *bupivacaine impurity F CRS* ( xylazine impurity A) in *acetonitrile R* and dilute to 100.0 mL with the same solvent.

*Reference solution (c)*. Dilute 1.0 mL of reference solution (b) to 100.0 mL with the solvent mixture.

*Reference solution (d)*. Dilute 1 mL of the test solution to 100 mL with the solvent mixture. Mix 10 mL of this solution with 10 mL of reference solution (b). Dilute 1 mL of this solution to 5 mL with the solvent mixture.

*Column*:

- *size*: *l* = 0.15 m, Ø = 3.9 mm;
- *stationary phase*: *end-capped octylsilyl silica gel for chromatography with polar incorporated groups R* (5 µm);
- *temperature*: 40 °C.

*Mobile phase*:

- *mobile phase A*: mix 30 volumes of *methanol R1* and 70 volumes of a 2.72 g/L solution of *potassium dihydrogen phosphate R* previously adjusted to pH 7.2 with *dilute sodium hydroxide solution R*;
- *mobile phase B*: *methanol R1*, *acetonitrile for chromatography R* (30:70 *V/V*);

| Time (min) | Mobile phase A (per cent *V/V*) | Mobile phase B (per cent *V/V*) |
|---|---|---|
| 0 - 15 | 89 → 28 | 11 → 72 |
| 15 - 21 | 28 | 72 |

*Flow rate*: 1.0 mL/min.

*Detection*: spectrophotometer at 230 nm.

*Injection*: 20 µL of the test solution and reference solutions (a), (c) and (d).

*Identification of impurities*: use the chromatogram obtained with reference solution (c) to identify the peak due to impurity A.

*Relative retention* with reference to xylazine (retention time = about 8 min): impurity A = about 0.8.

*System suitability*: reference solution (d):

- *resolution*: minimum 4.0 between the peaks due to impurity A and xylazine.

*Calculation of percentage contents*:

- for impurity A, use the concentration of impurity A in reference solution (c);
- for impurities other than A, use the concentration of xylazine hydrochloride in reference solution (a).

*Limits*:

- *impurity A*: maximum 0.01 per cent;
- *unspecified impurities*: for each impurity, maximum 0.20 per cent;
- *total*: maximum 0.2 per cent;
- *reporting threshold*: 0.10 per cent, except for impurity A.

**Heavy metals** (*2.4.8*): maximum 10 ppm.

12 mL of solution S complies with test A. Prepare the reference solution using 10 mL of *lead standard solution (1 ppm Pb) R*.

**Loss on drying** (*2.2.32*): maximum 0.5 per cent, determined on 1.000 g by drying in an oven at 105 °C for 2 h.

**Sulfated ash** (*2.4.14*): maximum 0.1 per cent, determined on 1.0 g.

ASSAY

Dissolve 0.200 g in 25 mL of *ethanol (96 per cent) R*. Add 25 mL of *water R*. Titrate with *0.1 M sodium hydroxide*, determining the end-point potentiometrically (*2.2.20*).

1 mL of *0.1 M sodium hydroxide* is equivalent to 25.68 mg of $C_{12}H_{17}ClN_2S$.

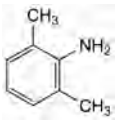
STORAGE

In an airtight container, protected from light.

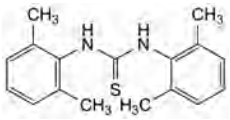
IMPURITIES

*Specified impurities: A.*

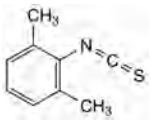
*Other detectable impurities* (the following substances would, if present at a sufficient level, be detected by one or other of the tests in the monograph. They are limited by the general acceptance criterion for other/unspecified impurities and/or by the general monograph *Substances for pharmaceutical use (2034)*. It is therefore not necessary to identify these impurities for demonstration of compliance. See also *5.10. Control of impurities in substances for pharmaceutical use*): *B, C, D.*



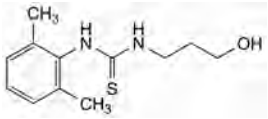
A. 2,6-dimethylaniline (2,6-xylidine),



B. *N*,*N*′-bis(2,6-dimethylphenyl)thiourea,



C. 1-isothiocyanato-2,6-dimethylbenzene,

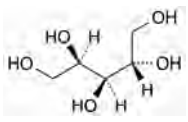


D. *N*-(2,6-dimethylphenyl)-*N*′-(3-hydroxypropyl)thiourea.

**07/2016:1381**
**corrected 10.0**

# XYLITOL

## Xylitolum



$C_5H_{12}O_5$ $M_r$ 152.1
[87-99-0]

DEFINITION

*Meso*-xylitol.

*Content*: 98.0 per cent to 102.0 per cent (anhydrous substance).

CHARACTERS

*Appearance*: white or almost white, crystalline powder or crystals.

*Solubility*: very soluble in water, sparingly soluble in ethanol (96 per cent).

IDENTIFICATION

*First identification: B.*

*Second identification: A, C.*

A. Melting point (*2.2.14*): 92 °C to 96 °C.

B. Infrared absorption spectrophotometry (*2.2.24*).

*Preparation*: mulls in *liquid paraffin R*.

*Comparison*: *xylitol CRS*.

C. Thin-layer chromatography (*2.2.27*).

*Test solution.* Dissolve 25 mg of the substance to be examined in *water R* and dilute to 10 mL with the same solvent.

*Reference solution (a).* Dissolve 25 mg of *xylitol CRS* in *water R* and dilute to 10 mL with the same solvent.

*Reference solution (b).* Dissolve 25 mg of *mannitol R* and 25 mg of *xylitol R* in *water R* and dilute to 10 mL with the same solvent.

*Plate*: *TLC silica gel plate R*.

*Mobile phase*: *water R*, *ethyl acetate R*, *propanol R* (10:20:70 *V/V/V*).

*Application*: 2 µL.

*Development*: over 3/4 of the plate.

*Drying*: in air.

*Detection*: spray with *4-aminobenzoic acid solution R*, dry in a current of cold air until the acetone is removed, then heat at 100 °C for 15 min; allow to cool, spray with a 2 g/L solution of *sodium periodate R*, dry in a current of cold air, then heat at 100 °C for 15 min.

*System suitability*: reference solution (b):

– the chromatogram shows 2 clearly separated spots.

*Results*: the principal spot in the chromatogram obtained with the test solution is similar in position, colour and size to the principal spot in the chromatogram obtained with reference solution (a).

TESTS

**Appearance of solution**. The solution is not more opalescent than reference suspension IV (*2.2.1*) and not more intensely coloured than reference solution $BY_7$ (*2.2.2, Method II*).

Dissolve 2.5 g in *water R* and dilute to 50.0 mL with the same solvent.

**Conductivity** (*2.2.38*): maximum 20 µS·cm$^{-1}$.

Dissolve 20.0 g in *carbon dioxide-free water R* prepared from *distilled water R* and dilute to 100.0 mL with the same solvent. Measure the conductivity of the solution while gently stirring with a magnetic stirrer.

**Reducing sugars**: maximum 0.2 per cent, calculated as glucose equivalent.

Dissolve 5.0 g in 6 mL of *water R* with the aid of gentle heat. Cool and add 20 mL of *cupri-citric solution R* and a few glass beads. Heat so that boiling begins after 4 min and maintain boiling for 3 min. Cool rapidly and add 100 mL of a 2.4 per cent *V/V* solution of *glacial acetic acid R* and 20.0 mL of *0.025 M iodine*. With continuous shaking, add 25 mL of a mixture of 6 volumes of *hydrochloric acid R* and 94 volumes of *water R* and, when the precipitate has dissolved, titrate the excess of iodine with *0.05 M sodium thiosulfate* using 1 mL of *starch solution R*, added towards the end of the titration, as indicator. Not less than 12.8 mL of *0.05 M sodium thiosulfate* is required.

**Related substances**. Gas chromatography (*2.2.28*).

*Internal standard solution.* Dissolve 5 mg of *erythritol R* in *water R* and dilute to 25.0 mL with the same solvent.

*Test solution (a).* Dissolve 5.000 g of the substance to be examined in *water R* and dilute to 100.0 mL with the same solvent.

*Test solution (b).* Dilute 1.0 mL of test solution (a) to 10.0 mL with *water R*.

*Reference solution (a).* Dissolve 5.0 mg each of *L-arabinitol CRS* (impurity A), *galactitol CRS* (impurity B), *mannitol CRS* (impurity C) and *sorbitol CRS* (impurity D) in *water R* and dilute to 20.0 mL with the same solvent.

*Reference solution (b).* Dissolve 50.0 mg of *xylitol CRS* in *water R* and dilute to 10.0 mL with the same solvent.

Pipette 1.0 mL of test solutions (a) and (b) and reference solutions (a) and (b) into 4 separate 100 mL round-bottomed flasks. Add 1.0 mL of the internal standard solution to each of the flasks containing test solution (a) or reference solution (a), and 5.0 mL of the internal standard solution to each of the flasks containing test solution (b) or reference solution (b). Evaporate each mixture to dryness in a water-bath at 60 °C by suitable means. Dissolve each dry residue in 1 mL of *anhydrous pyridine R*, add 1 mL of *acetic anhydride R* to each flask and boil each solution under reflux for 1 h to complete acetylation.

*Column*:

– *size*: *l* = 30 m, Ø = 0.25 mm;

– *stationary phase*: *cyanopropyl(7)phenyl(7)methyl(86)polysiloxane R* (0.25 µm).

*Carrier gas*: *nitrogen R*.

*Flow rate*: 1 mL/min.

*Split ratio*: 1:50 to 1:100.

*Temperature*:

| | Time (min) | Temperature (°C) |
|---|---|---|
| Column | 0 - 1 | 170 |
| | 1 - 6 | 170 → 230 |
| | 6 - 30 | 230 |
| Injection port | | 250 |
| Detector | | 250 |

*Detection*: flame ionisation.

*Injection*: 1 µL of test solution (a) and reference solution (a) (solutions obtained after derivatisation).

*Relative retention* with reference to xylitol (retention time = about 15 min): internal standard = about 0.6; impurity A = about 0.9; impurity C = about 1.4; impurity B = about 1.45; impurity D = about 1.5.

*System suitability*: reference solution (a):

– *resolution*: minimum 2.0 between the peaks due to impurities B and D.

Calculate the percentage content of each related substance in the substance to be examined using the following expression:

$$100 \times \frac{m_s}{m_u} \times \frac{R_u}{R_s}$$

$m_s$ = mass of the particular component in 1 mL of reference solution (a), in milligrams;

$m_u$ = mass of the substance to be examined in 1 mL of test solution (a), in milligrams;

$R_s$ = ratio of the area of the peak due to the particular derivatised component to the area of the peak due to the derivatised internal standard in the chromatogram obtained with reference solution (a);

$R_u$ = ratio of the area of the peak due to the particular derivatised component to the area of the peak due to the derivatised internal standard in the chromatogram obtained with test solution (a).

The sum of the percentage contents of the related substances in the chromatogram obtained with test solution (a) is not greater than 2.0 per cent. Disregard any peak with an area corresponding to a percentage content of 0.05 per cent or less.

**Lead** (*2.4.10*): maximum 0.5 ppm.

Dissolve the substance to be examined in 150.0 mL of the prescribed mixture of solvents.

**Nickel** (*2.4.15*): maximum 1 ppm.

Dissolve the substance to be examined in 150.0 mL of the prescribed mixture of solvents.

**Water** (*2.5.12*): maximum 1.0 per cent, determined on 1.00 g.

**Bacterial endotoxins** (*2.6.14*): less than 4 IU/g if the concentration is less than 100 g/L of xylitol and less than 2.5 IU/g if the concentration is 100 g/L or more of xylitol, when intended for use in the manufacture of parenteral preparations without a further appropriate procedure for the removal of bacterial endotoxins.

ASSAY

Gas chromatography (*2.2.28*) as described in the test for related substances with the following modifications.

*Injection*: 1 µL of test solution (b) and reference solution (b) (solutions obtained after derivatisation).

Calculate the percentage content of $C_5H_{12}O_5$ using the following expression:

$$T \times \frac{m_t}{m_v} \times \frac{R_v}{R_t}$$

T = declared percentage content of *xylitol CRS*;

$m_t$ = mass of *xylitol CRS* in 1 mL of reference solution (b), in milligrams;

$m_v$ = mass of the substance to be examined in 1 mL of test solution (b), in milligrams;

$R_t$ = ratio of the area of the peak due to derivatised xylitol to the area of the peak due to the derivatised internal standard in the chromatogram obtained with reference solution (b);

$R_v$ = ratio of the area of the peak due to derivatised xylitol to the area of the peak due to the derivatised internal standard in the chromatogram obtained with test solution (b).

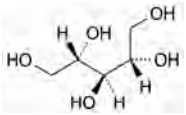
LABELLING

The label states:

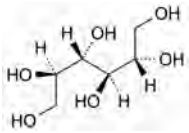
– where applicable, the maximum concentration of bacterial endotoxins;

– where applicable, that the substance is suitable for use in the manufacture of parenteral preparations.

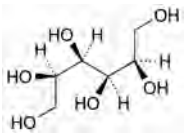
IMPURITIES



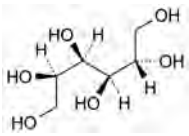
A. L-arabinitol,



B. *meso*-galactitol,



C. D-mannitol,

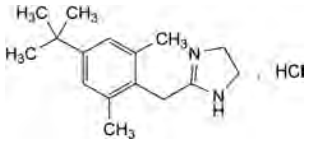


D. D-glucitol (D-sorbitol).

**01/2008:1162**
**corrected 7.0**

# XYLOMETAZOLINE HYDROCHLORIDE

## Xylometazolini hydrochloridum



$C_{16}H_{25}ClN_2$ $M_r$ 280.8
[1218-35-5]

DEFINITION

2-[4-(1,1-Dimethylethyl)-2,6-dimethylbenzyl]-4,5-dihydro-1*H*-imidazole hydrochloride.

*Content*: 99.0 per cent to 101.0 per cent (dried substance).

CHARACTERS

*Appearance*: white or almost white, crystalline powder.

*Solubility*: freely soluble in water, in ethanol (96 per cent) and in methanol.

IDENTIFICATION

*First identification: A, E.*

*Second identification: B, C, D, E.*

A. Infrared absorption spectrophotometry (*2.2.24*).
*Comparison*: *xylometazoline hydrochloride CRS.*

B. Thin-layer chromatography (*2.2.27*).
*Test solution.* Dissolve 20 mg of the substance to be examined in *methanol R* and dilute to 5 mL with the same solvent.
*Reference solution.* Dissolve 20 mg of *xylometazoline hydrochloride CRS* in *methanol R* and dilute to 5 mL with the same solvent.
*Plate*: *TLC silica gel G plate R.*
*Mobile phase*: *concentrated ammonia R, methanol R* (5:100 *V/V*).
*Application*: 5 µL.
*Development*: over 2/3 of the plate.
*Drying*: in air.
*Chlorine treatment*: at the bottom of a chromatographic tank place a beaker containing a mixture of 1 volume of *hydrochloric acid R1*, 1 volume of *water R* and 2 volumes of a 15 g/L solution of *potassium permanganate R*. Close the tank and allow to stand for 15 min. Place the dried plate in the tank and reclose the tank. Leave the plate in contact with the chlorine vapour for 5 min. Withdraw the plate and place it in a current of cold air until the excess of chlorine is removed and an area of the coating below the points of application does not give a blue colour with a drop of *potassium iodide and starch solution R.*
*Detection*: spray with *potassium iodide and starch solution R.*
*Results*: the principal spot in the chromatogram obtained with the test solution is similar in position, colour and size to the principal spot in the chromatogram obtained with the reference solution.

C. Dissolve about 0.5 mg in 1 mL of *methanol R*. Add 0.5 mL of a freshly prepared 50 g/L solution of *sodium nitroprusside R* and 0.5 mL of a 20 g/L solution of *sodium hydroxide R*. Allow to stand for 10 min and add 1 mL of an 80 g/L solution of *sodium hydrogen carbonate R*. A violet colour develops.

D. Dissolve 0.2 g in 1 mL of *water R*, add 2.5 mL of *ethanol (96 per cent) R* and 2 mL of *1 M sodium hydroxide*. Mix thoroughly and examine in ultraviolet light at 365 nm. The solution shows no fluorescence or at most the same fluorescence as a blank solution prepared in the same manner. The identification is not valid unless a solution prepared in the same manner using *naphazoline hydrochloride CRS* instead of the substance to be examined shows a distinct bluish fluorescence.

E. It gives reaction (a) of chlorides (*2.3.1*).

TESTS

**Appearance of solution**. The solution is clear (*2.2.1*) and not more intensely coloured than reference solution $Y_6$ (*2.2.2, Method II*).

Dissolve 2.5 g in *water R* and dilute to 50.0 mL with the same solvent.

**Acidity or alkalinity**. Dissolve 0.25 g in *carbon dioxide-free water R* and dilute to 25 mL with the same solvent. Add 0.1 mL of *methyl red solution R* and 0.1 mL of *0.01 M hydrochloric acid*. The solution is red. Not more than 0.2 mL of *0.01 M sodium hydroxide* is required to change the colour of the indicator to yellow.

**Related substances**. Liquid chromatography (*2.2.29*).

*Test solution.* Dissolve 50.0 mg of the substance to be examined in *water R* and dilute to 50.0 mL with the same solvent. Allow to stand for 1 h before injection.

*Reference solution (a).* Dilute 5.0 mL of the test solution to 100.0 mL with *water R*. Dilute 2.0 mL of this solution to 100.0 mL with *water R*.

*Reference solution (b).* Dissolve 5.0 mg of *xylometazoline impurity A CRS* and 5 mg of the substance to be examined in *water R* and dilute to 50.0 mL with the same solvent. Dilute 10.0 mL of this solution to 50.0 mL with *water R*.

*Reference solution (c).* Dilute 5.0 mL of reference solution (b) to 50.0 mL with *water R*.

*Column*:

– *size*: *l* = 0.25 m, Ø = 4.6 mm;

– *stationary phase*: *end-capped octadecylsilyl silica gel for chromatography with polar incorporated groups R* (5 µm).

*Mobile phase*:

– *mobile phase A*: 1.36 g/L solution of *potassium dihydrogen phosphate R* adjusted to pH 3.0 with *phosphoric acid R*;

– *mobile phase B*: *acetonitrile R1*;

| Time (min) | Mobile phase A (per cent *V/V*) | Mobile phase B (per cent *V/V*) |
|---|---|---|
| 0 - 5 | 70 | 30 |
| 5 - 20 | 70 → 15 | 30 → 85 |
| 20 - 35 | 15 | 85 |

*Flow rate*: 1.0 mL/min.

*Detection*: spectrophotometer at 220 nm.

*Injection*: 10 µL.

*Relative retention* with reference to xylometazoline (retention time = about 7.2 min): impurity A = about 0.79.

*System suitability*: reference solution (b):

– *resolution*: minimum 2.5 between the peaks due to impurity A and xylometazoline.

*Limits*:

– *impurity A*: not more than the area of the corresponding peak in the chromatogram obtained with reference solution (c) (0.2 per cent);

– *unspecified impurities*: for each impurity, not more than the area of the principal peak in the chromatogram obtained with reference solution (a) (0.10 per cent);

– *total*: not more than 5 times the area of the principal peak in the chromatogram obtained with reference solution (a) (0.5 per cent);

– *disregard limit*: 0.5 times the area of the principal peak in the chromatogram obtained with reference solution (a) (0.05 per cent).

**Loss on drying** (*2.2.32*): maximum 0.5 per cent, determined on 1.000 g by drying in an oven at 105 °C.

**Sulfated ash** (*2.4.14*): maximum 0.1 per cent, determined on 1.0 g.

ASSAY

Dissolve 0.200 g in 25 mL of *anhydrous acetic acid R* and add 10 mL of *acetic anhydride R*. Titrate with *0.1 M perchloric acid*, determining the end-point potentiometrically (*2.2.20*).

1 mL of *0.1 M perchloric acid* is equivalent to 28.08 mg of $C_{16}H_{25}ClN_2$.

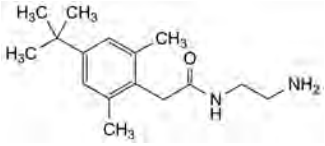
STORAGE

Protected from light.

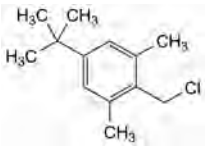
IMPURITIES

*Specified impurities: A.*

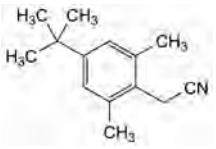
*Other detectable impurities* (the following substances would, if present at a sufficient level, be detected by one or other of the tests in the monograph. They are limited by the general acceptance criterion for other/unspecified impurities and/or by the general monograph *Substances for pharmaceutical use (2034)*. It is therefore not necessary to identify these impurities for demonstration of compliance. See also *5.10. Control of impurities in substances for pharmaceutical use*): *B, C, D, E, F.*



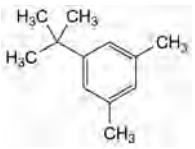
A. *N*-(2-aminoethyl)-2-[4-(1,1-dimethylethyl)-2,6-dimethylphenyl]acetamide,



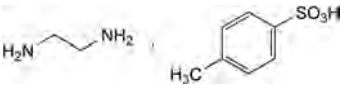
B. 2-(chloromethyl)-5-(1,1-dimethylethyl)-1,3-dimethylbenzene,



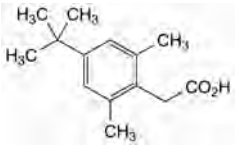
C. [4-(1,1-dimethylethyl)-2,6-dimethylphenyl]acetonitrile,



D. 1-(1,1-dimethylethyl)-3,5-dimethylbenzene,



E. ethane-1,2-diamine mono(4-methylbenzenesulfonate),

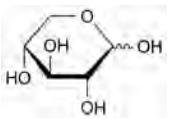


F. [4-(1,1-dimethylethyl)-2,6-dimethylphenyl]acetic acid.

**01/2017:1278**

# XYLOSE

## Xylosum



$C_5H_{10}O_5$ $M_r$ 150.1

[58-86-6]

DEFINITION

D-Xylopyranose.

CHARACTERS

*Appearance*: white or almost white, crystalline powder or colourless needles.

*Solubility*: freely soluble in water, soluble in hot ethanol (96 per cent).

IDENTIFICATION

*First identification: A.*

*Second identification: B, C.*

A. Infrared absorption spectrophotometry (*2.2.24*).
*Preparation*: discs.
*Comparison*: *xylose CRS*.

B. Thin-layer chromatography (*2.2.27*).
*Solvent mixture*: *water R*, *methanol R* (2:3 *V/V*).

*Test solution.* Dissolve 10 mg of the substance to be examined in the solvent mixture and dilute to 20 mL with the solvent mixture.

*Reference solution (a).* Dissolve 10 mg of *xylose CRS* in the solvent mixture and dilute to 20 mL with the solvent mixture.

*Reference solution (b).* Dissolve 10 mg of *fructose R*, 10 mg of *glucose R* and 10 mg of *xylose R* in the solvent mixture and dilute to 20 mL with the solvent mixture.

*Plate*: *TLC silica gel plate R.*

*Mobile phase*: *water R*, *methanol R*, *anhydrous acetic acid R*, *ethylene chloride R* (10:15:25:50 *V/V/V/V*); measure the volumes accurately since a slight excess of water produces cloudiness.

*Application*: 2 µL; thoroughly dry the points of application.

*Development*: over a path of 15 cm.

*Drying*: in a current of warm air.

*Detection*: spray with a 5 g/L solution of *thymol R* in a mixture of 5 volumes of *sulfuric acid R* and 95 volumes of *ethanol (96 per cent) R*. Heat in an oven at 130 °C for 10 min.

*System suitability*: reference solution (b):

– the chromatogram shows 3 clearly separated spots.

*Results*: the principal spot in the chromatogram obtained with the test solution is similar in position, colour and size to the principal spot in the chromatogram obtained with reference solution (a).

C. Dissolve 0.1 g in 10 mL of *water R*. Add 3 mL of *cupri-tartaric solution R* and heat. An orange or red precipitate is formed.

TESTS

**Solution S**. Dissolve 10.0 g in *carbon dioxide-free water R* and dilute to 100 mL with the same solvent.

**Appearance of solution**. Solution S is clear (*2.2.1*) and colourless (*2.2.2, Method II*).

**Acidity or alkalinity**. To 50 mL of solution S add 0.3 mL of *phenolphthalein solution R1*. The solution is colourless. Not more than 0.2 mL of *0.1 M sodium hydroxide* is required to change the colour of the indicator to pink.

**Specific optical rotation** (*2.2.7*): + 18.5 to + 19.5 (dried substance).

Dissolve 10.0 g in 80 mL of *water R*, add 1 mL of *dilute ammonia R2* and dilute to 100.0 mL with *water R*. Allow to stand for 30 min.

**Chlorides** (*2.4.4*): maximum 330 ppm.

Dilute 1.5 mL of solution S to 15 mL with *water R*.

**Loss on drying** (*2.2.32*): maximum 0.5 per cent, determined on 1.000 g by drying in an oven at 105 °C at a pressure not exceeding 0.7 kPa.

**Sulfated ash** (*2.4.14*): maximum 0.1 per cent, determined on 1.0 g.

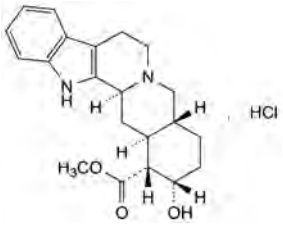
# Y

Yohimbine hydrochloride.. ..... 4231

**01/2008:2172**

# YOHIMBINE HYDROCHLORIDE

## Yohimbini hydrochloridum



$C_{21}H_{27}ClN_2O_3$ $M_r$ 390.9
[65-19-0]

DEFINITION

Methyl 17α-hydroxyyohimban-16α-carboxylate hydrochloride.

*Content*: 97.0 per cent to 102.0 per cent (dried substance).

CHARACTERS

*Appearance*: white or slightly yellowish, crystalline powder.

*Solubility*: sparingly soluble in water, practically insoluble in ethanol (96 per cent) and in methylene chloride.

IDENTIFICATION

A. Infrared absorption spectrophotometry (*2.2.24*).
*Comparison*: *yohimbine hydrochloride CRS*.

B. It gives reaction (a) of chlorides (*2.3.1*).

TESTS

**Solution S**. Dissolve 0.500 g in *carbon dioxide-free water R* with heating, allow to cool to room temperature and dilute to 50.0 mL with the same solvent.

**pH** (*2.2.3*): 3.5 to 5.5 for solution S.

**Specific optical rotation** (*2.2.7*): + 101.0 to + 105.0 (dried substance), determined on solution S.

**Related substances**. Liquid chromatography (*2.2.29*). *Prepare the solutions protected from light.*

*Test solution.* Dissolve 10.0 mg of the substance to be examined in *methanol R* and dilute to 50.0 mL with the same solvent.

*Reference solution (a).* Dissolve 5.0 mg of *yohimbine hydrochloride CRS* (containing impurities A, F and G) in *methanol R* and dilute to 25.0 mL with the same solvent.

*Reference solution (b).* Dilute 1.0 mL of reference solution (a) to 100.0 mL with *methanol R*.

*Reference solution (c).* Dilute 1.0 mL of reference solution (b) to 10.0 mL with *methanol R*.

*Column*:
- *size*: *l* = 0.125 m, Ø = 4.0 mm;
- *stationary phase*: *octylsilyl silica gel for chromatography R* (4 µm);
- *temperature*: 40 °C.

*Mobile phase*: mix 50 mL of a 9.08 g/L solution of *potassium dihydrogen phosphate R*, 100 mL of an 11.88 g/L solution of *disodium hydrogen phosphate dihydrate R*, 285 mL of *acetonitrile R*, 4.0 g of *sodium laurilsulfate R* and 355 mL of *water R*.

*Flow rate*: 1.5 mL/min.

*Detection*: spectrophotometer at 229 nm.

*Injection*: 10 µL.

*Run time*: 3 times the retention time of yohimbine.

*Relative retention* with reference to yohimbine (retention time = about 7 min): impurity F = about 0.65; impurity G = about 0.70; impurity A = about 0.75.

*System suitability*: reference solution (a):
- *peak-to-valley ratio*: minimum 1.3, where $H_p$ = height above the baseline of the peak due to impurity G and $H_v$ = height above the baseline of the lowest point of the curve separating this peak from the peak due to impurity A; and minimum 1.3, where $H_p$ = height above the baseline of the peak due to impurity G and $H_v$ = height above the baseline of the lowest point of the curve separating this peak from the peak due to impurity F.

*Limits*:
- *sum of impurities A and G*: not more than the area of the principal peak in the chromatogram obtained with reference solution (b) (1.0 per cent);
- *impurity F*: not more than 4 times the area of the principal peak in the chromatogram obtained with reference solution (c) (0.4 per cent);
- *unspecified impurities*: for each impurity, not more than the area of the principal peak in the chromatogram obtained with reference solution (c) (0.10 per cent);
- *total*: not more than twice the area of the principal peak in the chromatogram obtained with reference solution (b) (2.0 per cent);
- *disregard limit*: 0.5 times the area of the principal peak in the chromatogram obtained with reference solution (c) (0.05 per cent).

**Loss on drying** (*2.2.32*): maximum 0.5 per cent, determined on 1.000 g by drying in an oven at 105 °C.

**Sulfated ash** (*2.4.14*): maximum 0.1 per cent, determined on 1.0 g.

ASSAY

Liquid chromatography (*2.2.29*) as described in the test for related substances with the following modification.

*Injection*: test solution and reference solution (a).

Calculate the percentage content of $C_{21}H_{27}ClN_2O_3$ from the declared content of *yohimbine hydrochloride CRS*.

STORAGE

In an airtight container, protected from light.

IMPURITIES

*Specified impurities*: *A, F, G.*

*Other detectable impurities* (the following substances would, if present at a sufficient level, be detected by one or other of the tests in the monograph. They are limited by the general acceptance criterion for other/unspecified impurities and/or by the general monograph *Substances for pharmaceutical use (2034)*. # ZANAMIVIR HYDRATE

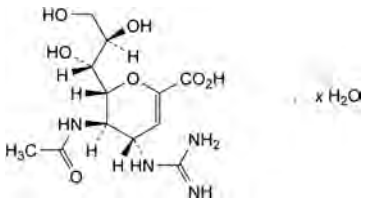
## Zanamivirum hydricum



$C_{12}H_{20}N_4O_7,xH_2O$ $M_r$ 332.3 (anhydrous substance)
[551942-41-7]

DEFINITION

(2*R*,3*R*,4*S*)-3-(Acetylamino)-4-carbamimidoylamino-2-[(1*R*,2*R*)-1,2,3-trihydroxypropyl]-3,4-dihydro-2*H*-pyran-6-carboxylic acid.

*Content*: 97.0 per cent to 102.0 per cent (dried substance).

It contains a variable quantity of water.

CHARACTERS

*Appearance*: white or almost white, slightly hygroscopic powder.

*Solubility*: slightly soluble in water, practically insoluble in ethanol (96 per cent) and in methylene chloride.

IDENTIFICATION

A. Specific optical rotation (see Tests).

B. Infrared absorption spectrophotometry (*2.2.24*).
*Comparison*: *zanamivir hydrate CRS*.

TESTS

**Specific optical rotation** (*2.2.7*): + 36.0 to + 38.5 (dried substance).

Dissolve 0.250 g in 25.0 mL of *water R*; sonicate until dissolution is complete.

**Related substances**. Liquid chromatography (*2.2.29*).

*Test solution (a)*. Dissolve 23.0 mg of the substance to be examined in 20 mL of *water R* and dilute to 50.0 mL with *acetonitrile R1*.

*Test solution (b)*. Dilute 5.0 mL of test solution (a) to 50.0 mL with the mobile phase.

*Reference solution (a)*. Dissolve 23.0 mg of *zanamivir for assay CRS* in 20 mL of *water R* and dilute to 50.0 mL with *acetonitrile R1*. Dilute 5.0 mL of the solution to 50.0 mL with the mobile phase.

*Reference solution (b)*. Dissolve 5 mg of *zanamivir for system suitability CRS* (containing impurities A, B, C and E) in 6 mL of *water R* and dilute to 10.0 mL with *acetonitrile R1*.

*Reference solution (c)*. Dilute 1.0 mL of test solution (a) to 100.0 mL with the mobile phase. Dilute 1.0 mL of this solution to 10.0 mL with the mobile phase.

*Reference solution (d)*. Dissolve 3.0 mg of *zanamivir impurity F CRS* in the mobile phase and dilute to 100.0 mL with the mobile phase.

*Reference solution (e)*. Dilute 1.0 mL of reference solution (d) to 100.0 mL with the mobile phase. Dilute 3.0 mL of this solution to 20.0 mL with the mobile phase.

*Column*:
- *size*: *l* = 0.25 m, Ø = 4.6 mm;
- *stationary phase*: *amino alkyl vinyl polymer for chromatography R* (5 µm);
- *temperature*: 30 °C.

*Mobile phase*: 0.7 g/L solution of *sulfuric acid R* previously adjusted to pH 5.5 with *dilute ammonia R3*, *acetonitrile R1* (40:60 *V/V*).

*Flow rate*: 1.5 mL/min.

*Detection*: spectrophotometer at 234 nm.

*Preconditioning of the column*: prior to first use, rinse with a 0.7 g/L solution of *ammonium sulfate R* at 1.5 mL/min at 30 °C for about 1 h; prior to each use, rinse with the mobile phase for at least 8 h.

*Injection*: 20 µL of test solution (a) and reference solutions (b), (c) and (e).

*Run time*: 3 times the retention time of zanamivir.

*Identification of impurities*: use the chromatogram supplied with *zanamivir for system suitability CRS* and the chromatogram obtained with reference solution (b) to identify the peaks due to impurities A, B, C and E; use the chromatogram obtained with reference solution (e) to identify the peak due to impurity F.

*Relative retention* with reference to zanamivir (retention time = about 9 min): impurity F = about 0.3; impurity B = about 0.6; impurity C = about 0.75; impurity E = about 0.8; impurity A = about 2.6.

*System suitability*:
- *signal-to-noise ratio*: minimum 10 for the principal peak in the chromatogram obtained with reference solution (e);
- *peak-to-valley ratio*: minimum 2.5, where $H_p$ = height above the baseline of the peak due to impurity E and $H_v$ = height above the baseline of the lowest point of the curve separating this peak from the peak due to impurity C in the chromatogram obtained with reference solution (b).

*Calculation of percentage contents*:
- for impurity F, use the concentration of impurity F in reference solution (e);
- for impurities other than F, use the concentration of zanamivir in reference solution (c).

*Limits*:
- *impurity A*: maximum 0.5 per cent;
- *impurity B*: maximum 0.3 per cent;
- *impurity C*: maximum 0.2 per cent;
- *impurity F*: maximum 0.01 per cent;
- *unspecified impurities*: for each impurity, maximum 0.10 per cent;
- *total*: maximum 1.2 per cent;
- *reporting threshold*: 0.05 per cent, except for impurity F.

**Loss on drying** (*2.2.32*): 4.0 per cent to 9.0 per cent, determined on 1.000 g by drying *in vacuo* at 105 °C.

**Sulfated ash** (*2.4.14*): maximum 0.1 per cent, determined on 1.0 g.

ASSAY

Liquid chromatography (*2.2.29*) as described in the test for related substances with the following modification.

*Injection*: test solution (b) and reference solution (a).

Calculate the percentage content of $C_{12}H_{20}N_4O_7$ taking into account the assigned content of *zanamivir for assay CRS*.

STORAGE

In an airtight container, protected from light.

IMPURITIES

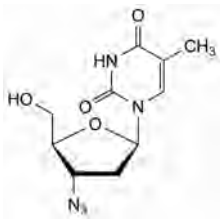
**01/2017:1059**

# ZIDOVUDINE

## Zidovudinum



$C_{10}H_{13}N_5O_4$ $M_r$ 267.2
[30516-87-1]

DEFINITION

1-(3-Azido-2,3-dideoxy-β-D-*erythro*-pentofuranosyl)-5-methylpyrimidine-2,4(1*H*,3*H*)-dione.

*Content*: 97.0 per cent to 102.0 per cent (dried substance).

CHARACTERS

*Appearance*: white or slightly brownish powder.

*Solubility*: sparingly soluble in water, soluble in anhydrous ethanol, practically insoluble in heptane.

It shows polymorphism (*5.9*).

IDENTIFICATION

A. Specific optical rotation (see Tests).

B. Infrared absorption spectrophotometry (*2.2.24*).

*Comparison*: *zidovudine CRS*.

If the spectra obtained in the solid state show differences, dissolve the substance to be examined and the reference substance separately in the minimum volume of *water R*, evaporate to dryness in a desiccator, under high vacuum over *diphosphorus pentoxide R* and record new spectra using the residues.

TESTS

**Appearance of solution**. The solution is not more opalescent than reference suspension I (*2.2.1*) and not more intensely coloured than reference solution $BY_5$ (*2.2.2, Method II*).

Dissolve 0.5 g in 50 mL of *water R*, heating if necessary.

**Specific optical rotation** (*2.2.7*): + 60.5 to + 63.0 (dried substance), measured at 25 °C.

Dissolve 0.50 g in *anhydrous ethanol R* and dilute to 50.0 mL with the same solvent.

**Related substances**

A. Liquid chromatography (*2.2.29*).

*Solvent mixture*. Mix 4 volumes of *acetonitrile R*, 20 volumes of *methanol R* and 76 volumes of a 2 g/L solution of *ammonium acetate R* previously adjusted to pH 6.8 with *dilute acetic acid R*.

*Test solution (a)*. Dissolve 20.0 mg of the substance to be examined in the solvent mixture and dilute to 20.0 mL with the solvent mixture.

*Test solution (b)*. Dilute 10.0 mL of test solution (a) to 50.0 mL with the solvent mixture.

*Reference solution (a)*. Dissolve 2 mg of *thymine R* (impurity C) and 2 mg of *zidovudine impurity B CRS* in the solvent mixture and dilute to 50.0 mL with the solvent mixture. Dilute 1.0 mL of the solution to 20.0 mL with the solvent mixture.

*Reference solution (b).* Dissolve 5 mg of *zidovudine for system suitability CRS* (containing impurities A, G and H) in reference solution (a) and dilute to 5.0 mL with reference solution (a).

*Reference solution (c).* Dilute 1.0 mL of test solution (a) to 100.0 mL with the solvent mixture. Dilute 1.0 mL of this solution to 10.0 mL with the solvent mixture.

*Reference solution (d).* Dissolve 20.0 mg of *zidovudine CRS* in the solvent mixture and dilute to 20.0 mL with the solvent mixture. Dilute 10.0 mL of the solution to 50.0 mL with the solvent mixture.

*Reference solution (e).* Dissolve 1 mg of *zidovudine impurity D CRS* in a mixture of 4 volumes of *acetonitrile R*, 40 volumes of *methanol R* and 56 volumes of a 2 g/L solution of *ammonium acetate R* previously adjusted to pH 6.8 with *dilute acetic acid R* and dilute to 50.0 mL with the same mixture of solvents. Dilute 5.0 mL of the solution to 10.0 mL with the same mixture of solvents.

*Column*:

– *size*: *l* = 0.25 m, Ø = 4.6 mm;
– *stationary phase*: *base-deactivated end-capped octadecylsilyl silica gel for chromatography R* (5 µm).

*Mobile phase*:

– *mobile phase A*: 2 g/L solution of *ammonium acetate R* previously adjusted to pH 6.8 with *dilute acetic acid R*;
– *mobile phase B*: *acetonitrile R*;

| Time (min) | Mobile phase A (per cent *V/V*) | Mobile phase B (per cent *V/V*) |
|---|---|---|
| 0 - 3 | 95 | 5 |
| 3 - 18 | 95 → 85 | 5 → 15 |
| 18 - 28 | 85 → 30 | 15 → 70 |
| 28 - 43 | 30 | 70 |

*Flow rate*: 1.5 mL/min.

*Detection*: spectrophotometer at 265 nm.

*Injection*: 20 µL of test solution (a) and reference solutions (b), (c) and (e).

*Identification of impurities*: use the chromatogram supplied with *zidovudine for system suitability CRS* and the chromatogram obtained with reference solution (b) to identify the peaks due to impurities A, B, C, G and H; use the chromatogram obtained with reference solution (e) to identify the peak due to impurity D.

*Relative retention* with reference to zidovudine (retention time = about 16 min): impurity C = about 0.2; impurity A = about 0.5; impurity H = about 0.95; impurity B = about 1.05; impurity G = about 1.5; impurity D = about 2.0.

*System suitability*: reference solution (b):

– *resolution*: minimum 2.0 between the peaks due to impurity H and zidovudine; minimum 2.0 between the peaks due to zidovudine and impurity B.

*Calculation of percentage contents*:

– *correction factor*: multiply the peak area of impurity C by 0.6;
– for each impurity, use the concentration of zidovudine in reference solution (c).

*Limits*:

– *impurity G*: maximum 0.5 per cent;
– *impurities A and C*: for each impurity, maximum 0.15 per cent;
– *unspecified impurities*: for each impurity, maximum 0.10 per cent;
– *reporting threshold*: 0.05 per cent; disregard any peak due to impurity D and any peak eluted after this impurity.

B. Liquid chromatography (*2.2.29*).

*Test solution.* Dissolve 0.5 g of the substance to be examined in 10 mL of *acetonitrile R1* and dilute to 100.0 mL with the mobile phase.

*Reference solution (a).* Dissolve 5.0 mg of *zidovudine impurity D CRS* in *acetonitrile R1* and dilute to 10.0 mL with the same solvent.

*Reference solution (b).* Dilute 1.0 mL of reference solution (a) to 100.0 mL with the mobile phase.

*Reference solution (c).* Dilute 1.0 mL of reference solution (a) to 50.0 mL with the test solution.

*Column*:

– *size*: *l* = 0.15 m, Ø = 4.6 mm;
– *stationary phase*: *base-deactivated end-capped octadecylsilyl silica gel for chromatography R* (5 µm).

*Mobile phase*: *water for chromatography R*, *acetonitrile R1* (30:70 *V/V*).

*Flow rate*: 1.0 mL/min.

*Detection*: spectrophotometer at 210 nm.

*Injection*: 20 µL of the test solution and reference solutions (b) and (c).

*Run time*: 10 times the retention time of zidovudine.

*Identification of impurities*: use the chromatogram obtained with reference solution (b) to identify the peak due to impurity D.

*Relative retention* with reference to zidovudine (retention time = about 1.5 min): impurity D = about 2.5.

*System suitability*: reference solution (c):

– *resolution*: minimum 5.0 between the peaks due to zidovudine and impurity D.

*Calculation of percentage contents*:

– for each impurity, use the concentration of impurity D in reference solution (b).

*Limits*:

– *unspecified impurities*: for each impurity, maximum 0.10 per cent;
– *reporting threshold*: 0.05 per cent; disregard any peak eluted before impurity D.

*Limit*:

– *total for tests A and B*: maximum 1.0 per cent.

**Loss on drying** (*2.2.32*): maximum 1.0 per cent, determined on 1.000 g by drying in an oven at 105 °C.

**Sulfated ash** (*2.4.14*): maximum 0.1 per cent, determined on 1.0 g.

ASSAY

Liquid chromatography (*2.2.29*) as described in test A for related substances with the following modification.

*Injection*: test solution (b) and reference solution (d).

Calculate the percentage content of $C_{10}H_{13}N_5O_4$ taking into account the assigned content of *zidovudine CRS*.

STORAGE

Protected from light.

IMPURITIES

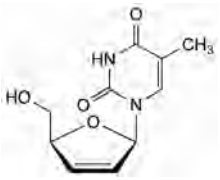
**Test A for related substances**: A, B, C, E, F, G, H.

**Test B for related substances**: D, J, K.

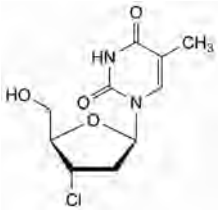
*Specified impurities: A, C, G.*

*Other detectable impurities* (the following substances would, if present at a sufficient level, be detected by one or other of the tests in the monograph. They are limited by the general acceptance criterion for other/unspecified impurities and/or by the general monograph *Substances for pharmaceutical use (2034).* It is therefore not necessary to identify these

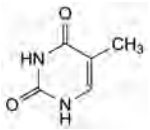
impurities for demonstration of compliance. See also *5.10. Control of impurities in substances for pharmaceutical use*): *B, D, E, F, H, J, K.*



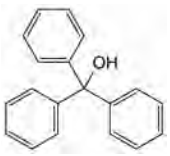
A. 1-[(2*R*,5*S*)-5-(hydroxymethyl)-2,5-dihydrofuran-2-yl]-5-methylpyrimidine-2,4(1*H*,3*H*)-dione,



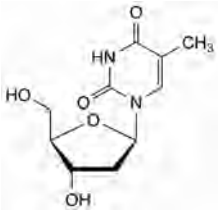
B. 1-(3-chloro-2,3-dideoxy-β-D-*erythro*-pentofuranosyl)-5-methylpyrimidine-2,4(1*H*,3*H*)-dione,



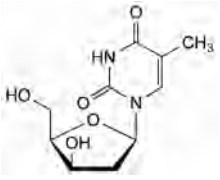
C. 5-methylpyrimidine-2,4(1*H*,3*H*)-dione (thymine),



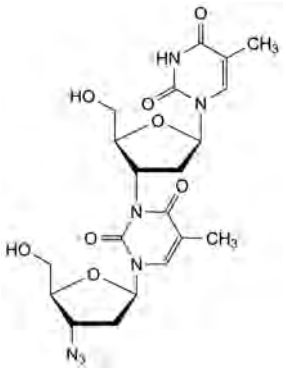
D. triphenylmethanol,



E. 1-(2-deoxy-β-D-*erythro*-pentofuranosyl)-5-methylpyrimidine-2,4(1*H*,3*H*)-dione (thymidine),

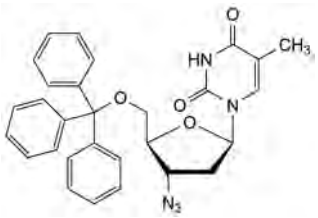


F. 1-(2-deoxy-β-D-*threo*-pentofuranosyl)-5-methylpyrimidine-2,4(1*H*,3*H*)-dione,

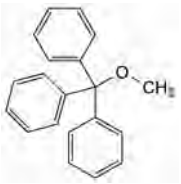


G. 1-[(2*R*,4*S*,5*S*)-4-azido-5-(hydroxymethyl)tetrahydrofuran-2-yl]-3-[(2*S*,3*S*,5*R*)-2-(hydroxymethyl)-5-(5-methyl-2,4-dioxo-3,4-dihydropyrimidin-1(2*H*)-yl)tetrahydrofuran-3-yl]-5-methylpyrimidine-2,4(1*H*,3*H*)-dione,

H. unknown structure,



J. 1-[3-azido-2,3-dideoxy-5-*O*-(triphenylmethyl)-β-D-*erythro*-pentofuranosyl]-5-methylpyrimidine-2,4(1*H*,3*H*)-dione (trityl zidovudine),



K. 1,1′,1″-(methoxymethanetriyl)tribenzene (methyl trityl ether).

**corrected 7.0**

# ZINC ACETATE DIHYDRATE

## Zinci acetas dihydricus

$C_4H_6O_4Zn,2H_2O$ $M_r$ 219.5
[5970-45-6]

DEFINITION

*Content*: 99.0 per cent to 101.0 per cent of $C_4H_6O_4Zn,2H_2O$.

CHARACTERS

*Appearance*: white or almost white crystalline powder or flakes.

*Solubility*: freely soluble in water, soluble in ethanol (96 per cent).

IDENTIFICATION

A. It gives reaction (a) of acetates (*2.3.1*).

B. It gives the reaction of zinc (*2.3.1*).

TESTS

**Solution S**. Dissolve 10.0 g in *carbon dioxide-free water R* prepared from *distilled water R* and dilute to 100 mL with the same solvent.

**Appearance of solution**. Solution S is clear (*2.2.1*) and colourless (*2.2.2, Method II*).

**pH** (*2.2.3*): 5.8 to 7.0.

Dilute 10 mL of solution S to 20 mL with *carbon dioxide-free water R*.

**Reducing substances**. Boil for 5 min a mixture of 10 mL of solution S, 90 mL of *water R*, 5 mL of *dilute sulfuric acid R* and 1.5 mL of a 0.3 g/L solution of *potassium permanganate R*. The pink colour of the solution remains.

**Chlorides** (*2.4.4*): maximum 50 ppm.

Dilute 10 mL of solution S with 15 mL of *water R*.

**Sulfates** (*2.4.13*): maximum 100 ppm, determined on solution S.

**Aluminium**: maximum 5 ppm.

Atomic absorption spectrometry (*2.2.23, Method I*).

*Test solution.* Dissolve 2.50 g in 20 mL of a 200 g/L solution of *cadmium- and lead-free nitric acid R* and dilute to 25.0 mL with the same acid solution.

*Reference solutions.* Prepare the reference solutions using *aluminium standard solution (200 ppm Al) R*, diluted with a 200 g/L solution of *cadmium- and lead-free nitric acid R*.

*Source*: aluminium hollow-cathode lamp.

*Wavelength*: 309.3 nm.

*Atomisation device*: air-acetylene or acetylene-nitrous oxide flame.

**Arsenic** (*2.4.2, Method A*): maximum 2 ppm, determined on 0.5 g.

**Cadmium**: maximum 2 ppm.

Atomic absorption spectrometry (*2.2.23, Method I*).

*Test solution.* Use the solution described in the test for aluminium.

*Reference solutions.* Prepare the reference solutions using *cadmium standard solution (0.1 per cent Cd) R*, diluted with a 200 g/L solution of *cadmium- and lead-free nitric acid R*.

*Source*: cadmium hollow-cathode lamp.

*Wavelength*: 228.8 nm.

*Atomisation device*: air-acetylene flame.

**Copper**: maximum 50 ppm.

Atomic absorption spectrometry (*2.2.23, Method I*).

*Test solution.* Use the solution described in the test for iron.

*Reference solutions.* Prepare the reference solutions using *copper standard solution (10 ppm Cu) R*, diluted with a 200 g/L solution of *cadmium- and lead-free nitric acid R*.

*Source*: copper hollow-cathode lamp.

*Wavelength*: 324.8 nm.

*Atomisation device*: air-acetylene flame.

**Iron**: maximum 50 ppm.

Atomic absorption spectrometry (*2.2.23, Method I*).

*Test solution.* Dissolve 1.25 g in 20 mL of a 200 g/L solution of *cadmium- and lead-free nitric acid R* and dilute to 25.0 mL with the same acid solution.

*Reference solutions.* Prepare the reference solutions using *iron standard solution (20 ppm Fe) R*, diluted with a 200 g/L solution of *cadmium- and lead-free nitric acid R*.

*Source*: iron hollow-cathode lamp.

*Wavelength*: 248.3 nm.

*Atomisation device*: air-acetylene flame.

**Lead**: maximum 10 ppm.

Atomic absorption spectrometry (*2.2.23, Method I*).

*Test solution.* Dissolve 5.00 g in 20 mL of a 200 g/L solution of *cadmium- and lead-free nitric acid R* and dilute to 25.0 mL with the same acid solution.

*Reference solutions.* Prepare the reference solutions using *lead standard solution (0.1 per cent Pb) R*, diluting with a 200 g/L solution of *cadmium- and lead-free nitric acid R*.

*Source*: lead hollow-cathode lamp.

*Wavelength*: 283.3 nm.

*Atomisation device*: air-acetylene flame.

ASSAY

Dissolve 0.200 g in 5 mL of *dilute acetic acid R*. Carry out the complexometric titration of zinc (*2.5.11*).

1 mL of *0.1 M sodium edetate* is equivalent to 21.95 mg of $C_4H_6O_4Zn,2H_2O$.

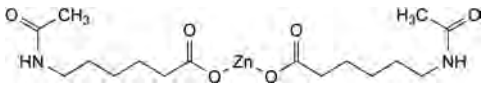
STORAGE

In a non-metallic container.

**07/2010:1279**
**corrected 7.0**

# ZINC ACEXAMATE

## Zinci acexamas



$C_{16}H_{28}N_2O_6Zn$ $M_r$ 409.8
[70020-71-2]

DEFINITION

Zinc 6-(acetylamino)hexanoate.

*Content*: 97.5 per cent to 101.0 per cent (dried substance).

CHARACTERS

*Appearance*: white or almost white, crystalline powder.

*Solubility*: soluble in water, practically insoluble in acetone and in ethanol (96 per cent). It dissolves in dilute nitric acid.

mp: about 198 °C.

IDENTIFICATION

A. Infrared absorption spectrophotometry (*2.2.24*).
*Comparison*: *zinc acexamate CRS*.

B. 5 mL of solution S (see Tests) gives the reaction of zinc (*2.3.1*).

TESTS

**Solution S**. Dissolve 0.5 g in *carbon dioxide-free water R* and dilute to 20 mL with the same solvent.

**Appearance of solution**. Solution S is not more opalescent than reference suspension IV (*2.2.1*) and is colourless (*2.2.2, Method II*).

**pH** (*2.2.3*): 5.0 to 7.0 for solution S.

**Impurity B**. Thin-layer chromatography (*2.2.27*).

*Test solution.* Dissolve 0.30 g of the substance to be examined in *water R* and dilute to 10 mL with the same solvent.

*Reference solution.* Dissolve 15 mg of *6-aminohexanoic acid R* (impurity B) in *water R* and dilute to 10 mL with the same solvent. Dilute 1 mL of this solution to 10 mL with *water R*.

*Plate*: *TLC silica gel plate R*.

*Mobile phase*: *ammonia R*, *water R*, *ethanol (96 per cent) R* (2:30:68 *V/V/V*).

*Application*: 5 µL; allow to dry in air.

*Development*: over a path of 15 cm.

*Drying*: in a current of warm air.

*Detection*: spray with *ninhydrin solution R* and heat at 100-105 °C for 15 min.

*Limit*:

– *impurity B*: any spot due to impurity B is not more intense than the corresponding spot in the chromatogram obtained with the reference solution (0.5 per cent).

**Related substances**. Liquid chromatography (*2.2.29*).

*Test solution (a).* Dissolve 0.50 g of the substance to be examined in *water R* and dilute to 100.0 mL with the same solvent.

*Test solution (b).* To 20.0 mL of test solution (a), add 20 mL of the mobile phase and 0.4 mL of a 100 g/L solution of *phosphoric acid R*, then dilute to 50.0 mL with the mobile phase.

*Reference solution (a).* Dissolve 40 mg of *N-acetyl-ε-caprolactam R* (impurity C) in *water R* and dilute to 100.0 mL with the same solvent.

*Reference solution (b).* Dilute 5.0 mL of reference solution (a) to 100.0 mL with *water R*.

*Reference solution (c).* Dissolve 20 mg of *zinc acexamate impurity A CRS* in *water R* and dilute to 50.0 mL with the same solvent.

*Reference solution (d).* Dissolve 40 mg of *ε-caprolactam R* (impurity D) in *water R* and dilute to 100.0 mL with the same solvent. Dilute 5.0 mL of this solution to 100.0 mL with *water R*.

*Reference solution (e).* To 20.0 mL of test solution (a), add 5.0 mL of reference solution (b), 5.0 mL of reference solution (c), 5.0 mL of reference solution (d) and 0.4 mL of a 100 g/L solution of *phosphoric acid R*, then dilute to 50.0 mL with the mobile phase.

*Reference solution (f).* To 5.0 mL of reference solution (c), add 5.0 mL of reference solution (b), 5.0 mL of reference solution (d) and 0.4 mL of a 100 g/L solution of *phosphoric acid R*, then dilute to 50.0 mL with the mobile phase.

*Column*:

– *size*: *l* = 0.25 m, Ø = 4.0 mm;

– *stationary phase*: *octadecylsilyl silica gel for chromatography R* (5 µm).

*Mobile phase*: mix 0.2 volumes of *phosphoric acid R*, 8 volumes of *acetonitrile R* and 92 volumes of *water R*, then adjust to pH 4.5 with *dilute ammonia R1*.

*Flow rate*: 1.2 mL/min.

*Detection*: spectrophotometer at 210 nm.

*Injection*: 20 µL of test solution (b) and reference solutions (b), (e) and (f).

*Run time*: 8 times the retention time of zinc acexamate.

*Elution order*: zinc acexamate, impurity D, impurity A, impurity C.

*System suitability*: reference solution (e):

– *resolution*: minimum 3.0 between the peaks due to zinc acexamate and impurity D; if necessary, adjust the mobile phase to pH 4.7 with *dilute ammonia R1*.

*Limits*:

– *impurity A*: not more than the area of the corresponding peak in the chromatogram obtained with reference solution (f) (2 per cent);

– *impurities C, D*: for each impurity, not more than 1.5 times the area of the corresponding peak in the chromatogram obtained with reference solution (f) (0.15 per cent);

– *unspecified impurities*: for each impurity, not more than 0.5 times the area of the peak due to impurity C in the chromatogram obtained with reference solution (f) (0.05 per cent);

– *sum of impurities other than A*: not more than 5 times the area of the peak due to impurity C in the chromatogram obtained with reference solution (f) (0.5 per cent);

– *disregard limit*: 0.5 times the area of the peak due to impurity C in the chromatogram obtained with reference solution (f) (0.05 per cent).

**Arsenic** (*2.4.2, Method A*): maximum 2 ppm, determined on 0.5 g.

**Cadmium**: maximum 2 ppm.

Atomic absorption spectrometry (*2.2.23, Method I*).

*Test solution.* Dissolve 2.50 g in 20 mL of a 200 g/L solution of *cadmium- and lead-free nitric acid R* and dilute to 25.0 mL with the same acid solution.

*Reference solutions.* Prepare the reference solutions using *cadmium standard solution (0.1 per cent Cd) R*, diluting with a 200 g/L solution of *cadmium- and lead-free nitric acid R*.

*Source*: cadmium hollow-cathode lamp.

*Wavelength*: 228.8 nm.

*Atomisation device*: air-acetylene flame.

**Iron**: maximum 50 ppm.

Atomic absorption spectrometry (*2.2.23, Method I*).

*Test solution.* Dissolve 1.25 g in 20 mL of a 200 g/L solution of *cadmium- and lead-free nitric acid R* and dilute to 25.0 mL with the same acid solution.

*Reference solutions.* Prepare the reference solutions using *iron standard solution (20 ppm Fe) R*, diluting with a 200 g/L solution of *cadmium- and lead-free nitric acid R*.

*Source*: iron hollow-cathode lamp.

*Wavelength*: 248.3 nm.

*Atomisation device*: air-acetylene flame.

**Lead**: maximum 10 ppm.

Atomic absorption spectrometry (*2.2.23, Method I*).

*Test solution.* Dissolve 5.00 g in 20 mL of a 200 g/L solution of *cadmium- and lead-free nitric acid R* and dilute to 25.0 mL with the same acid solution.

*Reference solutions.* Prepare the reference solutions using *lead standard solution (0.1 per cent Pb) R*, diluting with a 200 g/L solution of *cadmium- and lead-free nitric acid R*.

*Source*: lead hollow-cathode lamp.

*Wavelength*: 283.3 nm.

*Atomisation device*: air-acetylene flame.

**Loss on drying** (*2.2.32*): maximum 1.0 per cent, determined on 1.000 g by drying in an oven at 105 °C.

ASSAY

Dissolve 0.400 g in 10 mL of *dilute acetic acid R*. Carry out the complexometric titration of zinc (*2.5.11*).

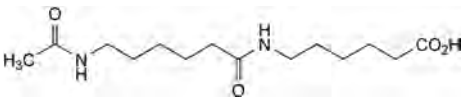
1 mL of *0.1 M sodium edetate* is equivalent to 40.98 mg of $C_{16}H_{28}N_2O_6Zn$.

STORAGE

In a non-metallic container.

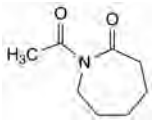
IMPURITIES

*Specified impurities: A, B, C, D.*

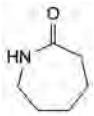


A. 6-[[6-(acetylamino)hexanoyl]amino]hexanoic acid,

B. 6-aminohexanoic acid (6-aminocaproic acid),



C. 1-acetylhexahydro-2*H*-azepin-2-one (*N*-acetyl-ε-caprolactam),



D. hexahydro-2*H*-azepin-2-one (ε–caprolactam).

**01/2008:0110 corrected 9.0**

# ZINC CHLORIDE

## Zinci chloridum

$ZnCl_2$ $M_r$ 136.3
[7646-85-7]

DEFINITION

*Content*: 95.0 per cent to 100.5 per cent.

CHARACTERS

*Appearance*: white or almost white, crystalline powder or cast in white or almost white sticks, deliquescent.

*Solubility*: very soluble in water, freely soluble in ethanol (96 per cent) and in glycerol.

IDENTIFICATION

A. Dissolve 0.5 g in *dilute nitric acid R* and dilute to 10 mL with the same acid. The solution gives reaction (a) of chlorides (*2.3.1*).

B. 5 mL of solution S (see Tests) gives the reaction of zinc (*2.3.1*).

TESTS

**Solution S**. To 2.0 g add 38 mL of *carbon dioxide-free water R* prepared from *distilled water R* and add *dilute hydrochloric acid R* dropwise until dissolution is complete. Dilute to 40 mL with *carbon dioxide-free water R* prepared from *distilled water R*.

**pH** (*2.2.3*): 4.6 to 5.5.

Dissolve 1.0 g in 9 mL of *carbon dioxide-free water R*, ignoring any slight turbidity.

**Oxychlorides**. Dissolve 10.0 g in 10 mL of *carbon dioxide-free water R*. The solution is not more opalescent than reference suspension II (*2.2.1*). To 1.5 mL of the solution add 7.5 mL of *ethanol (96 per cent) R*. The solution may become cloudy within 10 min. Any cloudiness disappears on the addition of 0.2 mL of *dilute hydrochloric acid R*.

**Sulfates** (*2.4.13*): maximum 200 ppm.

Dilute 5 mL of solution S to 15 mL with *distilled water R*. Prepare the standard using a mixture of 5 mL of *sulfate standard solution (10 ppm $SO_4$) R* and 10 mL of *distilled water R*.

**Aluminium, calcium, iron, magnesium**. To 8 mL of solution S add 2 mL of *concentrated ammonia R* and shake. The solution is clear (*2.2.1*) and colourless (*2.2.2, Method II*). Add 1 mL of *disodium hydrogen phosphate solution R*. The solution remains clear for at least 5 min. Add 0.2 mL of *sodium sulfide solution R*. A white precipitate is formed and the supernatant remains colourless.

**Ammonium** (*2.4.1*): maximum 400 ppm.

Dilute 0.5 mL of solution S to 15 mL with *water R*.

ASSAY

Dissolve 0.250 g in 5 mL of *dilute acetic acid R*. Carry out the complexometric titration of zinc (*2.5.11*).

1 mL of *0.1 M sodium edetate* is equivalent to 13.63 mg of $ZnCl_2$.

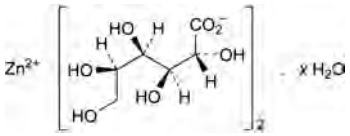
STORAGE

In a non-metallic container.

**01/2017:2164**

# ZINC GLUCONATE

## Zinci gluconas



$C_{12}H_{22}ZnO_{14},xH_2O$ $M_r$ 455.7 (anhydrous substance)

DEFINITION

Anhydrous or hydrated zinc D-gluconate.

*Content*: 98.0 per cent to 102.0 per cent (anhydrous substance).

CHARACTERS

*Appearance*: white or almost white, hygroscopic, crystalline powder.

*Solubility*: soluble in water, practically insoluble in anhydrous ethanol and in methylene chloride.

IDENTIFICATION

A. Thin-layer chromatography (*2.2.27*).

*Test solution*. Dissolve 20 mg of the substance to be examined in 1 mL of *water R*.

*Reference solution*. Dissolve 20 mg of *calcium gluconate CRS* in 1 mL of *water R*, heating if necessary in a water-bath at 60 °C.

*Plate*: *TLC silica gel plate R* (5-40 µm) [or *TLC silica gel plate R* (2-10 µm)].

*Mobile phase*: *concentrated ammonia R*, *ethyl acetate R*, *water R*, *ethanol (96 per cent) R* (10:10:30:50 *V/V/V/V*).

*Application*: 1 µL.

*Development*: over 3/4 of the plate.

*Drying*: at 100-105 °C for 20 min, then allow to cool to room temperature.

*Detection*: spray with a solution containing 25 g/L of *ammonium molybdate R* and 10 g/L of *cerium sulfate R* in *dilute sulfuric acid R*, and heat at 100-105 °C for about 10 min.

*Results*: the principal spot in the chromatogram obtained with the test solution is similar in position, colour and size to the principal spot in the chromatogram obtained with the reference solution.

B. Dissolve 0.1 g in 5 mL of *water R*. Add 0.5 mL of *potassium ferrocyanide solution R*. A white precipitate is formed that does not dissolve upon the addition of 5 mL of *hydrochloric acid R*.

TESTS

**Solution S**. Dissolve 1.0 g in *water R* and dilute to 50 mL with the same solvent.

**Appearance of solution**. Solution S is not more opalescent than reference suspension II (*2.2.1*) and not more intensely coloured than reference solution $Y_6$ (*2.2.2, Method II*).

**Sucrose and reducing sugars**. Dissolve 0.5 g in a mixture of 2 mL of *hydrochloric acid R1* and 10 mL of *water R*. Boil for 5 min, allow to cool, add 10 mL of *sodium carbonate solution R* and allow to stand for 10 min. Dilute to 25 mL with *water R* and filter. To 5 mL of the filtrate add 2 mL of *cupri-tartaric solution R* and boil for 1 min. Allow to stand for 2 min. No red precipitate is formed.

**Chlorides** (*2.4.4*): maximum 500 ppm.

Dilute 5 mL of solution S to 15 mL with *water R*.

**Sulfates** (*2.4.13*): maximum 500 ppm.

Dissolve 2.0 g in a mixture of 10 mL of *acetic acid R* and 90 mL of *distilled water R*.

**Cadmium**: maximum 2 ppm.

Atomic absorption spectrometry (*2.2.23, Method II*).

*Test solution.* Dissolve 5.00 g in 20 mL of *deionised distilled water R* with the aid of ultrasound and dilute to 25.0 mL with the same solvent.

*Reference solutions.* Prepare the reference solutions using *cadmium standard solution (0.1 per cent Cd) R*, diluting with *deionised distilled water R*.

*Source*: cadmium hollow-cathode lamp.

*Wavelength*: 228.8 nm.

*Atomisation device*: air-acetylene flame.

**Water** (*2.5.32*): maximum 12.0 per cent, determined on 80.0 mg.

**Microbial contamination**

TAMC: acceptance criterion $10^3$ CFU/g (*2.6.12*).

TYMC: acceptance criterion $10^2$ CFU/g (*2.6.12*).

ASSAY

Dissolve 0.400 g in 5 mL of *dilute acetic acid R*. Carry out the complexometric titration of zinc (*2.5.11*).

1 mL of *0.1 M sodium edetate* is equivalent to 45.57 mg of $C_{12}H_{22}ZnO_{14}$.

STORAGE

In a non-metallic, airtight container.

**corrected 7.0**

# ZINC OXIDE

## Zinci oxidum

ZnO $M_r$ 81.4
[1314-13-2]

DEFINITION

*Content*: 99.0 per cent to 100.5 per cent (ignited substance).

CHARACTERS

*Appearance*: soft, white or faintly yellowish-white, amorphous powder, free from gritty particles.

*Solubility*: practically insoluble in water and in ethanol (96 per cent). It dissolves in dilute mineral acids.

IDENTIFICATION

A. It becomes yellow when strongly heated; the yellow colour disappears on cooling.

B. Dissolve 0.1 g in 1.5 mL of *dilute hydrochloric acid R* and dilute to 5 mL with *water R*. The solution gives the reaction of zinc (*2.3.1*).

TESTS

**Alkalinity**. Shake 1.0 g with 10 mL of boiling *water R*. Add 0.1 mL of *phenolphthalein solution R* and filter. If the filtrate is red, not more than 0.3 mL of *0.1 M hydrochloric acid* is required to change the colour of the indicator.

**Carbonates and substances insoluble in acids**. Dissolve 1.0 g in 15 mL of *dilute hydrochloric acid R*. It dissolves without effervescence and the solution is not more opalescent than reference suspension II (*2.2.1*) and is colourless (*2.2.2, Method II*).

**Arsenic** (*2.4.2, Method A*): maximum 5 ppm, determined on 0.2 g.

**Cadmium**: maximum 10 ppm.

Atomic absorption spectrometry (*2.2.23, Method II*).

*Test solution.* Dissolve 2.0 g in 14 mL of a mixture of equal volumes of *water R* and *cadmium- and lead-free nitric acid R*, boil for 1 min, cool and dilute to 100.0 mL with *water R*.

*Reference solutions.* Prepare the reference solutions using *cadmium standard solution (0.1 per cent Cd) R* and diluting with a 3.5 per cent *V/V* solution of *cadmium- and lead-free nitric acid R*.

*Source*: cadmium hollow-cathode lamp.

*Wavelength*: 228.8 nm.

*Atomisation device*: air-acetylene or air-propane flame.

**Iron** (*2.4.9*): maximum 200 ppm.

Dissolve 50 mg in 1 mL of *dilute hydrochloric acid R* and dilute to 10 mL with *water R*. Use in this test 0.5 mL of *thioglycollic acid R*.

**Lead**: maximum 50 ppm.

Atomic absorption spectrometry (*2.2.23, Method II*).

*Test solution.* Dissolve 5.0 g in 24 mL of a mixture of equal volumes of *water R* and *cadmium- and lead-free nitric acid R*, boil for 1 min, cool and dilute to 100.0 mL with *water R*.

*Reference solutions.* Prepare the reference solutions using *lead standard solution (0.1 per cent Pb) R* and diluting with a 3.5 per cent *V/V* solution of *cadmium- and lead-free nitric acid R*.

*Source*: lead hollow-cathode lamp.

*Wavelength*: 283.3 nm; 217.0 nm may be used depending on the apparatus.

*Atomisation device*: air-acetylene flame.

**Loss on ignition**: maximum 1.0 per cent, determined on 1.00 g by ignition to constant mass at 500 ± 50 °C.

ASSAY

Dissolve 0.150 g in 10 mL of *dilute acetic acid R*. Carry out the complexometric titration of zinc (*2.5.11*).

1 mL of *0.1 M sodium edetate* is equivalent to 8.14 mg of ZnO.

**01/2008:0306**
**corrected 7.0**

# ZINC STEARATE

## Zinci stearas

[557-05-1]

DEFINITION

Zinc stearate [$(C_{17}H_{35}COO)_2Zn$; $M_r$ 632] may contain varying proportions of zinc palmitate [$(C_{15}H_{31}COO)_2Zn$; $M_r$ 576.2] and zinc oleate [$(C_{17}H_{33}COO)_2Zn$; $M_r$ 628].

*Content*: 10.0 per cent to 12.0 per cent of Zn.

CHARACTERS

*Appearance*: light, white or almost white, amorphous powder, free from gritty particles.

*Solubility*: practically insoluble in water and in anhydrous ethanol.

IDENTIFICATION

A. Freezing point (*2.2.18*): minimum 53 °C, determined on the residue obtained in the preparation of solution S (see Tests).

B. Neutralise 5 mL of solution S to *red litmus paper R* with *strong sodium hydroxide solution R*. The solution gives the reaction of zinc (*2.3.1*).

TESTS

**Solution S**. To 5.0 g add 50 mL of *ether R* and 40 mL of a 7.5 per cent *V/V* solution of *cadmium- and lead-free nitric acid R* in *distilled water R*. Heat under a reflux condenser until dissolution is complete. Allow to cool. In a separating funnel, separate the aqueous layer and shake the ether layer with 2 quantities, each of 4 mL, of *distilled water R*. Combine the aqueous layers, wash with 15 mL of *ether R* and heat on a water-bath until ether is completely eliminated. Allow to cool and dilute to 50.0 mL with *distilled water R* (solution S). Evaporate the ether layer to dryness and dry the residue at 105 °C.

**Appearance of solution**. Solution S is not more intensely coloured than reference solution $Y_6$ (*2.2.2, Method II*).

**Appearance of solution of fatty acids**. Dissolve 0.5 g of the residue obtained in the preparation of solution S in 10 mL of *chloroform R*. The solution is clear (*2.2.1*) and not more intensely coloured than reference solution $Y_5$ (*2.2.2, Method II*).

**Acidity or alkalinity**. Shake 1.0 g with 5 mL of *ethanol (96 per cent) R* and add 20 mL of *carbon dioxide-free water R* and 0.1 mL of *phenol red solution R*. Not more than 0.3 mL of *0.1 M hydrochloric acid* or 0.1 mL of *0.1 M sodium hydroxide* is required to change the colour of the indicator.

**Acid value of the fatty acids** (*2.5.1*): 195 to 210.

Dissolve 0.20 g of the residue obtained in the preparation of solution S in 25 mL of the prescribed mixture of solvents.

**Chlorides** (*2.4.4*): maximum 250 ppm.

Dilute 2 mL of solution S to 15 mL with *water R*.

**Sulfates** (*2.4.13*): maximum 0.6 per cent.

Dilute 1 mL of solution S to 50 mL with *distilled water R*. Dilute 12.5 mL of this solution to 15 mL with *distilled water R*.

**Cadmium**: maximum 5 ppm.

Atomic absorption spectrometry (*2.2.23, Method II*).

*Test solution*. Dilute 20.0 mL of solution S to 50.0 mL with a 3.5 per cent *V/V* solution of *cadmium- and lead-free nitric acid R*.

*Reference solutions*. Prepare the reference solutions using *cadmium standard solution (0.1 per cent Cd) R* and diluting with a 3.5 per cent *V/V* solution of *cadmium- and lead-free nitric acid R*.

*Source*: cadmium hollow-cathode lamp.

*Wavelength*: 228.8 nm.

*Atomisation device*: air-acetylene or an air-propane flame.

**Lead**: maximum 25 ppm.

Atomic absorption spectrometry (*2.2.23, Method II*).

*Test solution*. Solution S.

*Reference solutions*. Prepare the reference solutions using *lead standard solution (0.1 per cent Pb) R* and diluting with a 3.5 per cent *V/V* solution of *cadmium- and lead-free nitric acid R*.

*Source*: lead hollow-cathode lamp.

*Wavelength*: 283.3 nm. Depending on the apparatus the line at 217.0 nm may be used.

*Atomisation device*: air-acetylene flame.

ASSAY

To 1.000 g add 50 mL of *dilute acetic acid R* and boil for at least 10 min or until the layer of fatty acids is clear, adding more *water R* as necessary to maintain the original volume. Cool and filter. Wash the filter and the flask with *water R* until the washings are no longer acid to *blue litmus paper R*. Combine the filtrate and washings. Carry out the complexometric titration of zinc (*2.5.11*).

1 mL of *0.1 M sodium edetate* is equivalent to 6.54 mg of Zn.

**01/2008:0111**
**corrected 6.0**

# ZINC SULFATE HEPTAHYDRATE

## Zinci sulfas heptahydricus

$ZnSO_4,7H_2O$ $M_r$ 287.5
[7446-20-0]

DEFINITION

*Content*: 99.0 per cent to 104.0 per cent.

CHARACTERS

*Appearance*: white or almost white, crystalline powder or colourless, transparent crystals, efflorescent.

*Solubility*: very soluble in water, practically insoluble in ethanol (96 per cent).

IDENTIFICATION

A. Solution S (see Tests) gives the reactions of sulfates (*2.3.1*).

B. Solution S gives the reaction of zinc (*2.3.1*).

C. It complies with the limits of the assay.

TESTS

**Solution S**. Dissolve 2.5 g in *carbon dioxide-free water R* and dilute to 50 mL with the same solvent.

**Appearance of solution**. Solution S is clear (*2.2.1*) and colourless (*2.2.2, Method II*).

**pH** (*2.2.3*): 4.4 to 5.6 for solution S.

**Chlorides** (*2.4.4*): maximum 300 ppm.

Dilute 3.3 mL of solution S to 15 mL with *water R*.

**Iron** (*2.4.9*): maximum 100 ppm.

Dilute 2 mL of solution S to 10 mL with *water R*. Use in this test 0.5 mL of *thioglycollic acid R*.

ASSAY

Dissolve 0.200 g in 5 mL of *dilute acetic acid R*. Carry out the complexometric titration of zinc (*2.5.11*).

1 mL of *0.1 M sodium edetate* is equivalent to 28.75 mg of $ZnSO_4,7H_20$.

STORAGE

In a non-metallic, airtight container.

**01/2008:1683 corrected 6.0**

# ZINC SULFATE HEXAHYDRATE

## Zinci sulfas hexahydricus

$ZnSO_4,6H_2O$ $M_r$ 269.5
[13986-24-8]

DEFINITION

*Content*: 99.0 per cent to 104.0 per cent.

CHARACTERS

*Appearance*: white or almost white, crystalline powder or colourless transparent crystals, efflorescent.

*Solubility*: very soluble in water, practically insoluble in ethanol (96 per cent).

IDENTIFICATION

A. Solution S (see Tests) gives the reactions of sulfates (*2.3.1*).

B. Solution S gives the reaction of zinc (*2.3.1*).

C. It complies with the limits of the assay.

TESTS

**Solution S**. Dissolve 2.5 g in *carbon dioxide-free water R* and dilute to 50 mL with the same solvent.

**Appearance of solution**. Solution S is clear (*2.2.1*) and colourless (*2.2.2, Method II*).

**pH** (*2.2.3*): 4.4 to 5.6 for solution S.

**Chlorides** (*2.4.4*): maximum 300 ppm.

Dilute 3.3 mL of solution S to 15 mL with *water R*.

**Iron** (*2.4.9*): maximum 100 ppm.

Dilute 2 mL of solution S to 10 mL with *water R*. Use in this test 0.5 mL of *thioglycollic acid R*.

ASSAY

Dissolve 0.200 g in 5 mL of *dilute acetic acid R*. Carry out the complexometric titration of zinc (*2.5.11*).

1 mL of *0.1 M sodium edetate* is equivalent to 26.95 mg of $ZnSO_4,6H_20$.

STORAGE

In a non-metallic, airtight container.

**01/2010:2159**

# ZINC SULFATE MONOHYDRATE

## Zinci sulfas monohydricus

$ZnSO_4,H_2O$ $M_r$ 179.5

DEFINITION

*Content*: 99.0 per cent to 101.0 per cent.

CHARACTERS

*Appearance*: white or almost white, crystalline powder, or colourless, transparent crystals.

*Solubility*: very soluble in water, practically insoluble in ethanol (96 per cent).

IDENTIFICATION

A. Solution S (see Tests) gives the reactions of sulfates (*2.3.1*).

B. Solution S gives the reaction of zinc (*2.3.1*).

C. It complies with the limits of the assay.

TESTS

**Solution S**. Dissolve 2.5 g in *carbon dioxide-free water R* and dilute to 50 mL with the same solvent.

**Appearance of solution**. Solution S is clear (*2.2.1*) and colourless (*2.2.2, Method II*).

**pH** (*2.2.3*): 4.0 to 5.6 for solution S.

**Chlorides** (*2.4.4*): maximum 300 ppm.

Dilute 3.3 mL of solution S to 15 mL with *water R*.

**Iron** (*2.4.9*): maximum 100 ppm.

Dilute 2 mL of solution S to 10 mL with *water R*. Use 0.5 mL of *thioglycollic acid R* in this test.

ASSAY

Dissolve 0.160 g in 5 mL of *dilute acetic acid R*. Carry out the complexometric titration of zinc (*2.5.11*).

1 mL of *0.1 M sodium edetate* is equivalent to 17.95 mg of $ZnSO_4,H_2O$.

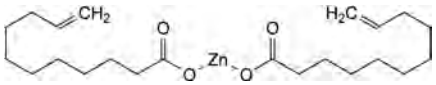
STORAGE

In a non-metallic container.

**01/2008:0539 corrected 6.0**

# ZINC UNDECYLENATE

## Zinci undecylenas



$C_{22}H_{38}O_4Zn$ $M_r$ 431.9
[557-08-4]

DEFINITION

Zinc di(undec-10-enoate).

*Content*: 98.0 per cent to 102.0 per cent (dried substance).

CHARACTERS

*Appearance*: white or almost white, fine powder.

*Solubility*: practically insoluble in water and in ethanol (96 per cent).

mp: 116 °C to 121 °C, it may leave a slight solid residue.

IDENTIFICATION

A. To 2.5 g add 10 mL of *water R* and 10 mL of *dilute sulfuric acid R*. Shake with 2 quantities, each of 10 mL, of *ether R*. Reserve the aqueous layer for identification test C. Wash the combined ether layers with *water R* and evaporate to dryness. To the residue add 2 mL of freshly distilled *aniline R* and boil under a reflux condenser for 10 min. Allow to cool and add 30 mL of *ether R*. Shake with 3 quantities, each of 20 mL, of *dilute hydrochloric acid R* and then with 20 mL of *water R*. Evaporate the organic layer to dryness on a water-bath. The residue, after recrystallisation twice from *ethanol (70 per cent V/V) R* and drying *in vacuo* for 3 h, melts (*2.2.14*) at 66 °C to 68 °C.

B. Dissolve 0.1 g in a mixture of 2 mL of *dilute sulfuric acid R* and 5 mL of *glacial acetic acid R*. Add dropwise 0.25 mL of *potassium permanganate solution R*. The colour of the potassium permanganate solution is discharged.

C. A mixture of 1 mL of the aqueous layer obtained in identification test A and 4 mL of *water R* gives the reaction of zinc (*2.3.1*).

TESTS

**Alkalinity**. Mix 1.0 g with 5 mL of *ethanol (96 per cent) R* and 0.5 mL of *phenol red solution R*. Add 50 mL of *carbon dioxide-free water R* and examine immediately. No reddish colour appears.

**Alkali and alkaline-earth metals**: maximum 2.0 per cent.

To 1.0 g add 25 mL of *water R* and 5 mL of *hydrochloric acid R* and heat to boiling. Filter whilst hot. Wash the filter and the residue with 25 mL of hot *water R*. Combine the filtrate and washings and add *concentrated ammonia R* until alkaline. Add 7.5 mL of *thioacetamide solution R* and heat on a water-bath for 30 min. Filter and wash the precipitate with 2 quantities, each of 10 mL, of *water R*. Combine the filtrate and washings, evaporate to dryness on a water-bath and ignite. The residue weighs a maximum of 20 mg.

**Sulfates** (*2.4.13*): maximum 500 ppm.

To 0.1 g add a mixture of 2 mL of *dilute hydrochloric acid R* and 10 mL of *distilled water R* and heat to boiling. Cool, filter and dilute to 15 mL with *distilled water R*. Prepare the standard using 5 mL of *sulfate standard solution (10 ppm $SO_4$) R* and 10 mL of *distilled water R*.

**Loss on drying** (*2.2.32*): maximum 1.5 per cent, determined on 0.500 g by drying in an oven at 105 °C.

**Degree of unsaturation**. Dissolve 0.100 g in a mixture of 5 mL of *dilute hydrochloric acid R* and 30 mL of *glacial acetic acid R*. Using 0.05 mL *indigo carmine solution R1*, added towards the end of the titration as indicator. Titrate with *0.0167 M bromide-bromate* until the colour changes from blue to yellow. 9.1 mL to 9.4 mL of *0.0167 M bromide-bromate* is required. Carry out a blank titration.

ASSAY

To 0.350 g add 25 mL of *dilute acetic acid R* and heat to boiling. Carry out the complexometric titration of zinc (*2.5.11*).

1 mL of *0.1 M sodium edetate* is equivalent to 43.19 mg of $C_{22}H_{38}O_4Zn$.

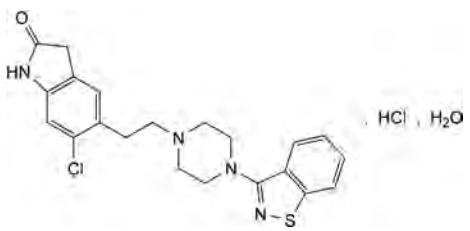
STORAGE

Protected from light.

**01/2017:2421**

# ZIPRASIDONE HYDROCHLORIDE MONOHYDRATE

## Ziprasidoni hydrochloridum monohydricum



$C_{21}H_{22}Cl_2N_4OS,H_2O$ $M_r$ 467.4
[138982-67-9]

DEFINITION

5-[2-[4-(1,2-Benzisothiazol-3-yl)piperazin-1-yl]ethyl]-6-chloro-1,3-dihydro-2*H*-indol-2-one hydrochloride monohydrate.

*Content*: 98.0 per cent to 102.0 per cent (anhydrous substance).

CHARACTERS

*Appearance*: white or slightly pink powder.

*Solubility*: practically insoluble in water, slightly soluble in methanol and in methylene chloride.

It shows polymorphism (*5.9*).

IDENTIFICATION

A. Infrared absorption spectrophotometry (*2.2.24*).
*Comparison*: *ziprasidone hydrochloride monohydrate CRS*.
If the spectra obtained in the solid state show differences, dissolve the substance to be examined and the reference substance separately in *methanol R*, evaporate to dryness and record new spectra using the residues.

B. Suspend 30 mg in 2 mL of *water R*, acidify with 0.15 mL of *dilute nitric acid R* and filter. The clear filtrate gives reaction (a) of chlorides (*2.3.1*).

TESTS

**Related substances**. Liquid chromatography (*2.2.29*). *Carry out the test protected from light and prepare the solutions immediately before use.*

*Solvent mixture A*: *water R*, *methanol R* (40:60 *V/V*).

*Solvent mixture B*: *hydrochloric acid R*, *water R*, *methanol R* (0.04:20:80 *V/V/V*).

*Test solution (a)*. Dissolve 23 mg of the substance to be examined in solvent mixture A and dilute to 100.0 mL with solvent mixture A.

*Test solution (b)*. Dissolve 23 mg of the substance to be examined in solvent mixture B and dilute to 50.0 mL with solvent mixture B.

*Reference solution (a)*. Dissolve 2.5 mg of *ziprasidone for system suitability 1 CRS* (containing impurities A, B and C) in solvent mixture A and dilute to 10.0 mL with solvent mixture A.

*Reference solution (b)*. Dilute 1.0 mL of test solution (b) to 100.0 mL with solvent mixture B. Dilute 1.0 mL of this solution to 10.0 mL with solvent mixture B.

*Reference solution (c)*. Dissolve the contents of a vial of *ziprasidone for system suitability 2 CRS* (containing impurities D and E) in 1.0 mL of solvent mixture B.

A. *Column*:
- *size*: *l* = 0.15 m, Ø = 4.6 mm;
- *stationary phase*: spherical *octylsilyl silica gel for chromatography R* (5 µm);
- *temperature*: 40 °C.

*Mobile phase*:
- *mobile phase A*: mix 40 volumes of *methanol R* and 60 volumes of a 6.8 g/L solution of *potassium dihydrogen phosphate R* previously adjusted to pH 2.5 with *phosphoric acid R*;
- *mobile phase B*: *methanol R*;

| Time (min) | Mobile phase A (per cent *V/V*) | Mobile phase B (per cent *V/V*) |
|---|---|---|
| 0 - 20 | 100 | 0 |
| 20 - 21 | 100 → 0 | 0 → 100 |
| 21 - 24 | 0 | 100 |

*Flow rate*: 1.5 mL/min.

*Detection*: spectrophotometer at 229 nm.

*Injection*: 20 µL of test solutions (a) and (b) and reference solutions (a) and (b).

*Identification of impurities*: use the chromatogram supplied with *ziprasidone for system suitability 1 CRS* and the chromatogram obtained with reference solution (a) to identify the peaks due to impurities A, B and C.

*Relative retention* with reference to ziprasidone (retention time = about 7 min): impurity A = about 0.4; impurity B = about 0.8; impurity C = about 0.9.

*System suitability*: reference solution (a):

– *peak-to-valley ratio*: minimum 1.2, where $H_p$ = height above the baseline of the peak due to impurity C and $H_v$ = height above the baseline of the lowest point of the curve separating this peak from the peak due to impurity B.

*Limits*:

– *correction factor*: for the calculation of content, multiply the peak area of impurity A by 0.7;
– *impurity B in test solution (b)*: not more than twice the area of the principal peak in the chromatogram obtained with reference solution (b) (0.2 per cent);
– *impurity A in test solution (b)*: not more than 1.5 times the area of the principal peak in the chromatogram obtained with reference solution (b) (0.15 per cent);
– *impurity C in test solution (a)*: not more than 0.75 times the area of the principal peak in the chromatogram obtained with reference solution (b) (0.15 per cent);
– *unspecified impurities in test solution (b)*: for each impurity, not more than the area of the principal peak in the chromatogram obtained with reference solution (b) (0.10 per cent);
– *disregard limit in test solution (b)*: 0.5 times the area of the principal peak in the chromatogram obtained with reference solution (b) (0.05 per cent); disregard the peak due to impurity C and any peak with a retention time greater than 20 min.

B. *Column*:

– *size*: *l* = 0.15 m, Ø = 4.6 mm;
– *stationary phase*: spherical *octylsilyl silica gel for chromatography R* (5 µm);
– *temperature*: 35 °C.

*Mobile phase*: mix 5 volumes of *methanol R*, 40 volumes of a 6.8 g/L solution of *potassium dihydrogen phosphate R* adjusted to pH 6.0 with a 280 g/L solution of *potassium hydroxide R*, and 55 volumes of *acetonitrile R1*.

*Flow rate*: 1.0 mL/min.

*Detection*: spectrophotometer at 229 nm.

*Injection*: 20 µL of test solution (b) and reference solutions (b) and (c).

*Run time*: 11 times the retention time of ziprasidone.

*Identification of impurities*: use the chromatogram supplied with *ziprasidone for system suitability 2 CRS* and the chromatogram obtained with reference solution (c) to identify the peaks due to impurities D and E.

*Relative retention* with reference to ziprasidone (retention time = about 4.5 min): impurity D = about 2.0; impurity E = about 3.0.

*System suitability*: reference solution (c):

– *resolution*: minimum 6.0 between the peaks due to ziprasidone and impurity D.

*Limits*:

– *correction factors*: for the calculation of content, multiply the peak areas of the following impurities by the corresponding correction factor: impurity D = 1.4; impurity E = 0.5;
– *impurities D, E*: for each impurity, not more than 1.5 times the area of the principal peak in the chromatogram obtained with reference solution (b) (0.15 per cent);
– *unspecified impurities*: for each impurity, not more than the area of the principal peak in the chromatogram obtained with reference solution (b) (0.10 per cent);
– *disregard limit*: 0.5 times the area of the principal peak in the chromatogram obtained with reference solution (b) (0.05 per cent); disregard any peak eluting before the peak due to ziprasidone.

*Limit*:

– *total for tests A and B*: maximum 0.5 per cent.

**Water** (*2.5.12*): 3.7 per cent to 5.0 per cent, determined on 0.250 g.

**Sulfated ash** (*2.4.14*): maximum 0.1 per cent, determined on 1.0 g.

ASSAY

Liquid chromatography (*2.2.29*). *Carry out the test protected from light and prepare the solutions immediately before use.*

*Solvent mixture*: *water R*, *methanol R* (40:60 *V/V*).

*Test solution.* Dissolve 23.0 mg of the substance to be examined in the solvent mixture and dilute to 100.0 mL with the solvent mixture.

*Reference solution.* Dissolve 23.0 mg of *ziprasidone hydrochloride monohydrate CRS* in the solvent mixture and dilute to 100.0 mL with the solvent mixture.

*Column*:

– *size*: *l* = 0.15 m, Ø = 4.6 mm;
– *stationary phase*: spherical *octylsilyl silica gel for chromatography R* (5 µm);
– *temperature*: 40 °C.

*Mobile phase*: mix 40 volumes of *methanol R* and 60 volumes of a 6.8 g/L solution of *potassium dihydrogen phosphate R* adjusted to pH 3.0 with *phosphoric acid R*.

*Flow rate*: 1.5 mL/min.

*Detection*: spectrophotometer at 229 nm.

*Injection*: 20 µL.

*Run time*: twice the retention time of ziprasidone.

*Retention time*: ziprasidone = about 7 min.

*System suitability*: reference solution:

– *symmetry factor*: maximum 2.0 for the peak due to ziprasidone.

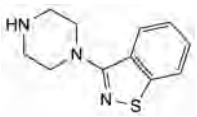
Calculate the percentage content of $C_{21}H_{22}Cl_2N_4OS$ from the declared content of *ziprasidone hydrochloride monohydrate CRS*.

STORAGE

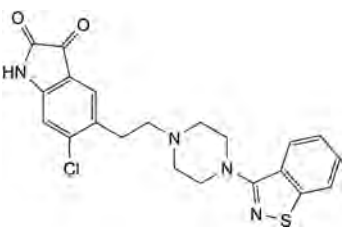
Protected from light.

IMPURITIES

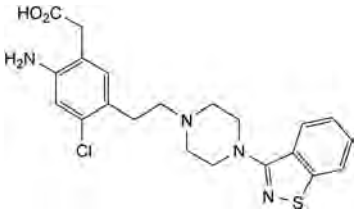
*Specified impurities: A, B, C, D, E.*



A. 3-piperazin-1-yl-1,2-benzisothiazole,



B. 5-[2-[4-(1,2-benzisothiazol-3-yl)piperazin-1-yl]ethyl]-6-chloro-1*H*-indole-2,3-dione,



C. 2-[2-amino-5-[2-[4-(1,2-benzisothiazol-3-yl)piperazin-1-yl]ethyl]-4-chlorophenyl]acetic acid,

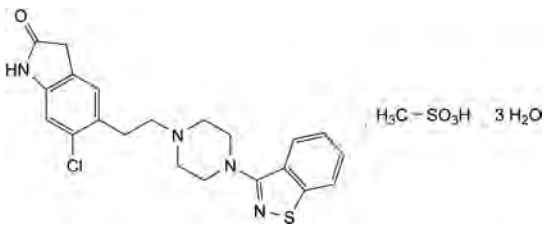
# ZIPRASIDONE MESILATE TRIHYDRATE

## Ziprasidoni mesilas trihydricus



$C_{22}H_{25}ClN_4O_4S_2,3H_2O$ $M_r$ 563.1
[199191-69-0]

DEFINITION

5-[2-[4-(1,2-Benzisothiazol-3-yl)piperazin-1-yl]ethyl]-6-chloro-1,3-dihydro-2*H*-indol-2-one methanesulfonate trihydrate.

*Content*: 98.0 per cent to 102.0 per cent (anhydrous substance).

PRODUCTION

It is considered that alkyl methanesulfonate esters are genotoxic and are potential impurities in ziprasidone mesilate trihydrate. The manufacturing process should be developed taking into consideration the principles of quality risk management, together with considerations of the quality of starting materials, process capability and validation. The general methods *2.5.37. Methyl, ethyl and isopropyl methanesulfonate in methanesulfonic acid*, *2.5.38. Methyl, ethyl and isopropyl methanesulfonate in active substances* and *2.5.39. Methanesulfonyl chloride in methanesulfonic acid* are available to assist manufacturers.

CHARACTERS

*Appearance*: white or almost white powder.

*Solubility*: very slightly soluble in water, slightly soluble in methanol, practically insoluble in acetonitrile.

It shows polymorphism (*5.9*).

IDENTIFICATION

Infrared absorption spectrophotometry (*2.2.24*).

*Comparison*: *ziprasidone mesilate trihydrate CRS*.

If the spectra obtained in the solid state show differences, dissolve the substance to be examined and the reference substance separately in *methanol R*, evaporate to dryness and record new spectra using the residues.

TESTS

**Related substances**

*Carry out the tests protected from light and prepare the solutions immediately before use.*

A. Liquid chromatography (*2.2.29*).

*Solvent mixture*: *hydrochloric acid R*, *water R*, *methanol R* (0.04:40:60 *V/V/V*).

*Test solution (a).* Dissolve 27.0 mg of the substance to be examined in 35 mL of the solvent mixture, sonicate for about 2 min and shake. Dilute to 50.0 mL with the solvent mixture.

*Test solution (b).* Dilute 2.0 mL of test solution (a) to 20.0 mL with the solvent mixture.

*Reference solution (a).* Dissolve 27.0 mg of *ziprasidone hydrochloride monohydrate CRS* in 35 mL of the solvent mixture, sonicate for about 2 min and shake. Dilute to 50.0 mL with the solvent mixture. Dilute 2.0 mL of the solution to 20.0 mL with the solvent mixture.

*Reference solution (b).* Dissolve 2.5 mg of *ziprasidone for system suitability 1 CRS* (containing impurities B and C) in a mixture of 40 volumes of *water R* and 60 volumes of *methanol R* and dilute to 10 mL with the same mixture of solvents.

*Reference solution (c).* Dilute 1.0 mL of test solution (a) to 100.0 mL with the solvent mixture. Dilute 1.0 mL of this solution to 10.0 mL with the solvent mixture.

*Column*:

- *size*: *l* = 0.15 m, Ø = 3.9 mm;
- *stationary phase*: *end-capped octadecylsilyl silica gel for chromatography R* (5 µm);
- *temperature*: 40 °C.

*Mobile phase*:

- *mobile phase A*: mix 40 volumes of *methanol R1* and 60 volumes of a 6.8 g/L solution of *potassium dihydrogen phosphate R* previously adjusted to pH 3.0 with *phosphoric acid R*;
- *mobile phase B*: *methanol R1*;

| Time (min) | Mobile phase A (per cent *V/V*) | Mobile phase B (per cent *V/V*) |
|---|---|---|
| 0 - 40 | 100 | 0 |
| 40 - 41 | 100 → 0 | 0 → 100 |
| 41 - 50 | 0 | 100 |

*Flow rate*: 1.0 mL/min.

*Detection*: spectrophotometer at 229 nm.

*Injection*: 20 µL of test solution (a) and reference solutions (b) and (c).

*Identification of impurities*: use the chromatogram supplied with *ziprasidone for system suitability 1 CRS* and the chromatogram obtained with reference solution (b) to identify the peaks due to impurities B and C.

*Relative retention* with reference to ziprasidone (retention time = about 6 min): impurity B = about 0.8; impurity C = about 0.9.

*System suitability*: reference solution (b):

– *peak-to-valley ratio*: minimum 1.5, where $H_p$ = height above the baseline for the peak due to impurity C and $H_v$ = height above the baseline of the lowest point of the curve separating this peak from the peak due to impurity B; minimum 2.0, where $H_p$ = height above the baseline for the peak due to impurity C and $H_v$ = height above the baseline of the lowest point of the curve separating this peak from the peak due to ziprasidone.

*Calculation of percentage contents*:

– for each impurity, use the concentration of ziprasidone mesilate trihydrate in reference solution (c).

*Limits*:

– *impurity B*: maximum 0.15 per cent;

– *unspecified impurities*: for each impurity, maximum 0.10 per cent;

– *reporting threshold*: 0.05 per cent; disregard any peak with a retention time greater than 40 min.

B. Liquid chromatography (*2.2.29*).

*Solvent mixture*: *hydrochloric acid R*, *water R*, *methanol R* (0.04:20:80 *V/V/V*).

*Test solution*. Dissolve 27 mg of the substance to be examined in 35 mL of the solvent mixture, sonicate for about 2 min and shake. Dilute to 50.0 mL with the solvent mixture.

*Reference solution (a)*. Dissolve the contents of a vial of *ziprasidone for system suitability 2 CRS* (containing impurities D and E) in 1 mL of the solvent mixture.

*Reference solution (b)*. Dilute 1.0 mL of the test solution to 100.0 mL with the solvent mixture. Dilute 1.0 mL of this solution to 10.0 mL with the solvent mixture.

*Column*:

– *size*: *l* = 0.15 m, Ø = 3.9 mm;

– *stationary phase*: *end-capped octadecylsilyl silica gel for chromatography R* (5 µm);

– *temperature*: 35 °C.

*Mobile phase*: mix 8 volumes of *methanol R1*, 42 volumes of *acetonitrile for chromatography R* and 50 volumes of a solution prepared as follows: dissolve 3.4 g of *potassium dihydrogen phosphate R* and 21.6 g of *sodium octanesulfonate R* in 900 mL of *water for chromatography R*, adjust to pH 3.0 with *phosphoric acid R* and dilute to 1000 mL with *water for chromatography R*.

*Flow rate*: 1.0 mL/min.

*Detection*: spectrophotometer at 229 nm.

*Injection*: 20 µL.

*Run time*: 15 times the retention time of ziprasidone.

*Identification of impurities*: use the chromatogram obtained with reference solution (a) to identify the peaks due to impurities D and E.

*Relative retention* with reference to ziprasidone (retention time = about 3 min): impurity E = about 2.6; impurity D = about 7.8.

*System suitability*: reference solution (a):

– *resolution*: minimum 5.0 between the peaks due to impurities E and D.

*Calculation of percentage contents*:

– for each impurity, use the concentration of ziprasidone mesilate trihydrate in reference solution (b).

*Limits*:

– *impurity D*: maximum 0.15 per cent;

– *unspecified impurities*: for each impurity, maximum 0.10 per cent;

– *reporting threshold*: 0.05 per cent; disregard any peak eluting before the peak due to ziprasidone.

*Limit*:

– *total for tests A and B*: maximum 0.2 per cent.

**Water** (*2.5.12*): 8.5 per cent to 10.1 per cent, determined on 0.050 g.

**Sulfated ash** (*2.4.14*): maximum 0.1 per cent, determined on 1.0 g.

**Bacterial endotoxins** (*2.6.14*): less than 17.5 IU/mg, if intended for use in the manufacture of parenteral preparations without a further appropriate procedure for the removal of bacterial endotoxins.

ASSAY

Liquid chromatography (*2.2.29*) as described in test A for related substances with the following modifications.

*Injection*: 20 µL of test solution (b) and reference solution (a).

*System suitability*: reference solution (a):

– *symmetry factor*: maximum 1.7 for the peak due to ziprasidone.

Calculate the percentage content of $C_{22}H_{25}ClN_4O_4S_2$ taking into account the assigned content of *ziprasidone hydrochloride monohydrate CRS* and a conversion factor of 1.133.

STORAGE

Protected from light. If the substance is sterile, store in a sterile, airtight, tamper-evident container.

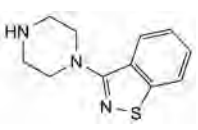
IMPURITIES

**Test A for related substances**: A, B, C.

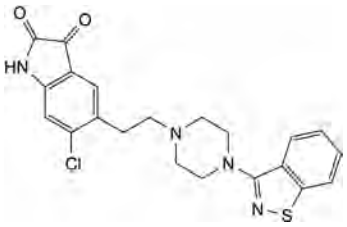
**Test B for related substances**: D, E.

*Specified impurities: B, D.*

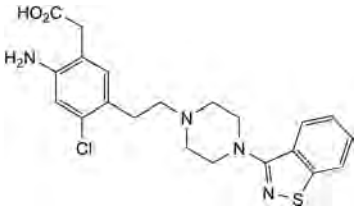
*Other detectable impurities* (the following substances would, if present at a sufficient level, be detected by one or other of the tests in the monograph. They are limited by the general acceptance criterion for other/unspecified impurities and/or by the general monograph *Substances for pharmaceutical use (2034)*. It is therefore not necessary to identify these impurities for demonstration of compliance. See also *5.10. Control of impurities in substances for pharmaceutical use*): *A, C, E.*



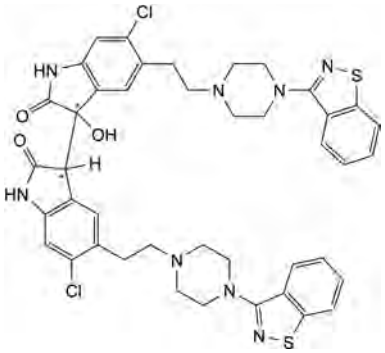
A. 3-piperazin-1-yl-1,2-benzisothiazole,



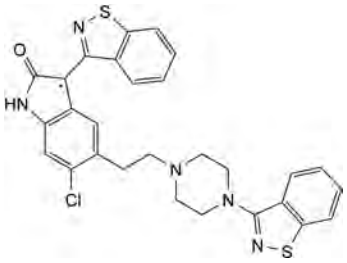
B. 5-[2-[4-(1,2-benzisothiazol-3-yl)piperazin-1-yl]ethyl]-6-chloro-1*H*-indole-2,3-dione,



C. 2-[2-amino-5-[2-[4-(1,2-benzisothiazol-3-yl)-piperazin-1-yl]ethyl]-4-chlorophenyl]acetic acid,



D. 5,5′-bis[2-[4-(1,2-benzisothiazol-3-yl)piperazin-1-yl]-ethyl]-6,6′-dichloro-3-hydroxy-1,1′,3,3′-tetrahydro-2*H*,2′*H*-3,3′-biindole-2,2′-dione,

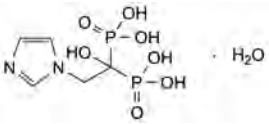


E. 3-(1,2-benzisothiazol-3-yl)-5-[2-[4-(1,2-benzisothiazol-3-yl)piperazin-1-yl]ethyl]-6-chloro-1,3-dihydro-2*H*-indol-2-one.

**01/2019:2743**

# ZOLEDRONIC ACID MONOHYDRATE

## Acidum zoledronicum monohydricum



$C_5H_{10}N_2O_7P_2,H_2O$ $M_r$ 290.1
[165800-06-6]

DEFINITION

[1-Hydroxy-2-(1*H*-imidazol-1-yl)ethane-1,1-diyl]bis-(phosphonic acid) monohydrate.

*Content*: 99.0 per cent to 102.0 per cent (anhydrous substance).

CHARACTERS

*Appearance*: white or almost white, crystalline powder.

*Solubility*: slightly soluble in water, practically insoluble in anhydrous ethanol and in heptane.

IDENTIFICATION

A. Infrared absorption spectrophotometry (*2.2.24*).

*Comparison*: *zoledronic acid monohydrate CRS*.

B. Water (see Tests).

TESTS

**Appearance of solution**. The solution is clear (*2.2.1*) and not more intensely coloured than reference solution $B_7$ or $BY_7$ (*2.2.2, Method II*).

Dissolve 0.5 g in a 4 g/L solution of *sodium hydroxide R* and dilute to 50.0 mL with the same solution.

**pH** (*2.2.3*): 1.8 to 2.8.

Dissolve 0.150 g in *carbon dioxide-free water R* and dilute to 50.0 mL with the same solvent. Sonicate for 10 min, if necessary.

**Related substances**. Liquid chromatography (*2.2.29*).

*Solution A*. Dissolve 10.8 g of *sodium octanesulfonate R* and 37 mg of *sodium edetate R* in *water for chromatography R*, add 10 mL of *perchloric acid R* and 2 mL of *phosphoric acid R* and dilute to 1000 mL with *water for chromatography R*.

*Test solution*. Dissolve 40 mg of the substance to be examined in the mobile phase, sonicate for 30 min, and dilute to 20.0 mL with the mobile phase.

*Reference solution (a)*. Dissolve 2 mg of *zoledronic acid impurity A CRS*, 5 mg of *zoledronic acid impurity B CRS* and 2 mg of *sodium nitrate R* in the mobile phase and dilute to 50.0 mL with the mobile phase. To 1.0 mL of the solution add 7.0 mL of the mobile phase and dilute to 20.0 mL with the test solution.

*Reference solution (b)*. Dilute 1.0 mL of the test solution to 100.0 mL with the mobile phase. Dilute 1.0 mL of this solution to 10.0 mL with the mobile phase.

*Column*:

- *size*: *l* = 0.25 m, Ø = 4.6 mm;
- *stationary phase*: *end-capped phenylhexylsilyl silica gel for chromatography R* (5 µm);
- *temperature*: 20 °C.

*Mobile phase*: *acetonitrile R1*, solution A (4:96 *V/V*).

*Flow rate*: 0.6 mL/min.

*Detection*: spectrophotometer at 215 nm.

*Preconditioning*: precondition the instrument and the column once before each series of injections as follows:

- *instrument*: rinse the instrument without a column with a 25 per cent *V/V* solution of *acetic acid R* at 5 mL/min for about 20 min. Then, rinse with *water for chromatography R* at 5 mL/min for about 2 h;
- *column*: rinse the column with the mobile phase at 0.6 mL/min for about 1 h. During the rinsing, inject the test solution 15 times, applying a run time of about 3 min for each injection.

*Injection*: 10 µL.

*Run time*: 5 times the retention time of zoledronic acid.

*Identification of impurities*: use the chromatogram obtained with reference solution (a) to identify the peaks due to impurities A and B and the nitrate ion.

*Relative retention* with reference to zoledronic acid (retention time = about 6 min): nitrate = about 0.6; impurity B = about 0.7; impurity A = about 0.9.

*System suitability*: reference solution (a):

– *resolution*: minimum 1.5 between the peaks due to impurity A and zoledronic acid; minimum 1.5 between the peaks due to the nitrate ion and impurity B.

*Calculation of percentage contents*:

– *correction factor*: multiply the peak area of impurity B by 1.9;

– for each impurity, use the concentration of zoledronic acid monohydrate in reference solution (b).

*Limits*:

– *impurity B*: maximum 0.5 per cent;

– *unspecified impurities*: for each impurity, maximum 0.10 per cent;

– *total*: maximum 0.5 per cent;

– *reporting threshold*: 0.05 per cent, disregard the peak due to the nitrate ion.

**Impurities E and F**. Liquid chromatography (*2.2.29*).

*Test solution*. Dissolve 50.0 mg of the substance to be examined in mobile phase B, sonicate if necessary, and dilute to 10.0 mL with mobile phase B.

*Reference solution (a)*. Dissolve 95.0 mg of *anhydrous sodium dihydrogen phosphate R* and 79.0 mg of *phosphorous acid R* (impurity E) in *water R* and dilute to 100.0 mL with the same solvent.

*Reference solution (b)*. Dissolve 34.0 mg of *sodium chloride R* in *water R* and dilute to 100.0 mL with the same solvent.

*Reference solution (c)*. To 1.0 mL of reference solution (a) add 0.5 mL of reference solution (b) and dilute to 100.0 mL with mobile phase B.

*Reference solution (d)*. Dilute 0.1 mL of reference solution (a) to 100.0 mL with mobile phase B.

*Precolumn*:

– *size*: *l* = 0.05 m, Ø = 4.0 mm;

– *stationary phase*: *anion-exchange resin R* (13 µm).

*Column*:

– *size*: *l* = 0.25 m, Ø = 4.0 mm;

– *stationary phase*: *anion-exchange resin R* (9 µm);

– *temperature*: 30 °C.

*Mobile phase*:

– *mobile phase A*: *carbon dioxide-free water R*;

– *mobile phase B*: 4.0 g/L solution of *sodium hydroxide R* in *carbon dioxide-free water R*;

| Time (min) | Mobile phase A (per cent *V/V*) | Mobile phase B (per cent *V/V*) |
|---|---|---|
| 0 - 13 | 80 → 70 | 20 → 30 |
| 13 - 17 | 70 → 60 | 30 → 40 |
| 17 - 29 | 60 | 40 |

*Flow rate*: 1.0 mL/min.

*Detection*: conductivity detector.

*Injection*: 20 µL.

*Identification of impurities*: use the chromatogram obtained with reference solution (a) to identify the peaks due to impurities E and F; use the chromatogram obtained with reference solution (b) to identify the peak due to the chloride ion.

*Relative retention* with reference to chloride (retention time = about 5 min): impurity E = about 1.2; impurity F = about 3.4.

*System suitability*:

– *resolution*: minimum 1.5 between the peaks due to the chloride ion and impurity E in the chromatogram obtained with reference solution (c);

– *signal-to-noise ratio*: minimum 10 for the peak due to impurity F in the chromatogram obtained with reference solution (d).

*Calculation of percentage contents*:

– for each impurity, use the concentration of the corresponding impurity in reference solution (c).

*Limits*:

– *impurities E, F*: for each impurity, maximum 0.15 per cent.

**Water** (*2.5.12*): 5.0 per cent to 7.5 per cent, determined on 0.100 g.

ASSAY

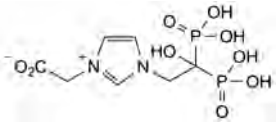
Dissolve 0.150 g in 50 mL of *carbon dioxide-free water R*. Sonicate for 10 min, if necessary. Titrate with *0.1 M sodium hydroxide*, determining the end-point potentiometrically (*2.2.20*). Read the volume added at the 3rd inflexion point.

1 mL of *0.1 M sodium hydroxide* is equivalent to 9.07 mg of $C_5H_{10}N_2O_7P_2$.

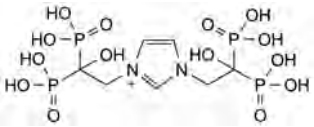
IMPURITIES

*Specified impurities: B, E, F.*

*Other detectable impurities* (the following substances would, if present at a sufficient level, be detected by one or other of the tests in the monograph. They are limited by the general acceptance criterion for other/unspecified impurities and/or by the general monograph *Substances for pharmaceutical use (2034)*. It is therefore not necessary to identify these impurities for demonstration of compliance. See also *5.10. Control of impurities in substances for pharmaceutical use*): *A, C, D.*



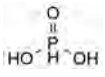
A. [1-(2-hydroxy-2,2-diphosphonoethyl)-1*H*-imidazol-3-ium-3-yl]acetate,



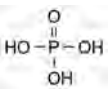
B. 1,3-bis(2-hydroxy-2,2-diphosphonoethyl)-1*H*-imidazol-3-ium,

C. 1*H*-imidazole,

D. (1*H*-imidazol-1-yl)acetic acid,



E. phosphonic acid (phosphorous acid),

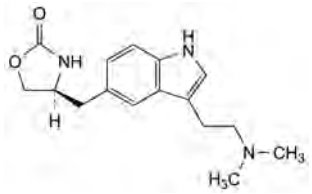


F. phosphoric acid.

**07/2018:2737**

# ZOLMITRIPTAN

## Zolmitriptanum



$C_{16}H_{21}N_3O_2$ $M_r$ 287.4
[139264-17-8]

DEFINITION

(4*S*)-4-[[3-[2-(Dimethylamino)ethyl]-1*H*-indol-5-yl]methyl]-1,3-oxazolidin-2-one.

*Content*: 97.5 per cent to 102.0 per cent (anhydrous substance).

CHARACTERS

*Appearance*: white or almost white powder.

*Solubility*: slightly soluble or very slightly soluble in water, freely soluble in methanol, sparingly soluble in acetone.

IDENTIFICATION

Infrared absorption spectrophotometry (*2.2.24*).

*Comparison*: *zolmitriptan CRS*.

TESTS

**Enantiomeric purity**. Liquid chromatography (*2.2.29*).

*Test solution*. Dissolve 25.0 mg of the substance to be examined in the mobile phase and dilute to 25.0 mL with the mobile phase.

*Reference solution (a)*. Dilute 1.0 mL of the test solution to 100.0 mL with the mobile phase. Dilute 1.0 mL of this solution to 10.0 mL with the mobile phase.

*Reference solution (b)*. Dissolve 5 mg of *zolmitriptan impurity A CRS* in the mobile phase and dilute to 5.0 mL with the mobile phase. To 1.0 mL of the solution add 1.0 mL of the test solution and dilute to 10.0 mL with the mobile phase. Dilute 1.0 mL of this solution to 50.0 mL with the mobile phase.

*Column*:

- *size*: *l* = 0.25 m, Ø = 4.6 mm;
- *stationary phase*: *amylose derivative of silica gel for chiral separation R* (5 µm);
- *temperature*: 35 °C.

*Mobile phase*: *diethylamine R*, *2-propanol R*, *methanol R*, *heptane R* (0.1:10:15:75 *V/V/V/V*).

*Flow rate*: 1.0 mL/min.

*Detection*: spectrophotometer at 285 nm.

*Injection*: 10 µL.

*Run time*: twice the retention time of zolmitriptan.

*Relative retention* with reference to zolmitriptan (retention time = about 7 min): impurity A = 0.7.

*System suitability*: reference solution (b):

- *resolution*: minimum 2.0 between the peaks due to impurity A and zolmitriptan.

*Calculation of percentage content*:

- for impurity A, use the concentration of zolmitriptan in reference solution (a).

*Limit*:

- *impurity A*: maximum 0.10 per cent.

**Related substances**. Liquid chromatography (*2.2.29*).

*Solvent mixture*: mobile phase B, mobile phase A (10:90 *V/V*).

*Test solution (a)*. Dissolve 10.0 mg of the substance to be examined in the solvent mixture and dilute to 10.0 mL with the solvent mixture.

*Test solution (b)*. Dilute 1.0 mL of test solution (a) to 5.0 mL with the solvent mixture.

*Reference solution (a)*. Dilute 1.0 mL of test solution (a) to 100.0 mL with the solvent mixture. Dilute 1.0 mL of this solution to 10.0 mL with the solvent mixture.

*Reference solution (b)*. Dissolve 5 mg of *zolmitriptan for system suitability CRS* (containing impurities C, H and I) in the solvent mixture and dilute to 5.0 mL with the solvent mixture.

*Reference solution (c)*. Dissolve 10.0 mg of *zolmitriptan CRS* in the solvent mixture and dilute to 10.0 mL with the solvent mixture. Dilute 1.0 mL of the solution to 5.0 mL with the solvent mixture.

*Column*:

- *size*: *l* = 0.10 m, Ø = 3.0 mm;
- *stationary phase*: *end-capped solid core phenylhexylsilyl silica gel for chromatography R* (2.7 µm);
- *temperature*: 20 °C.

*Mobile phase A*: dissolve 2.72 g of *potassium dihydrogen phosphate R* and 0.94 g of *sodium hexanesulfonate R* in *water for chromatography R*, adjust to pH 2.0 with *phosphoric acid R* and dilute to 1000 mL with *water for chromatography R*;

*Mobile phase B*: *acetonitrile R1*;

| Time (min) | Mobile phase A (per cent *V/V*) | Mobile phase B (per cent *V/V*) |
|---|---|---|
| 0 - 0.5 | 90 | 10 |
| 0.5 - 4 | 90 → 85 | 10 → 15 |
| 4 - 8 | 85 | 15 |
| 8 - 9 | 85 → 80 | 15 → 20 |
| 9 - 10 | 80 | 20 |
| 10 - 12 | 80 → 70 | 20 → 30 |
| 12 - 13 | 70 | 30 |

*Flow rate*: 0.8 mL/min.

*Detection*: spectrophotometer at 210 nm.

*Injection*: 2 µL of test solution (a) and reference solutions (a) and (b).

*Identification of impurities*: use the chromatogram supplied with *zolmitriptan for system suitability CRS* and the chromatogram obtained with reference solution (b) to identify the peaks due to impurities C, H and I.

*Relative retention* with reference to zolmitriptan (retention time = about 5 min): impurity H = about 0.97; impurity I = about 1.1; impurity C = about 2.0.

*System suitability*: reference solution (b):

- *peak-to-valley ratio*: minimum 8, where $H_p$ = height above the baseline of the peak due to impurity H and $H_v$ = height above the baseline of the lowest point of the curve separating this peak from the peak due to zolmitriptan; minimum 1.5, where $H_p$ = height above the baseline of the peak due to impurity I and $H_v$ = height above the baseline of the lowest point of the curve separating this peak from the peak due to zolmitriptan.

*Calculation of percentage contents*:

- *correction factor*: multiply the peak area of impurity C by 2.0;
- for each impurity, use the concentration of zolmitriptan in reference solution (a).

*Limits*:

- *impurity C*: maximum 0.15 per cent;
- *unspecified impurities*: for each impurity, maximum 0.10 per cent;
- *total*: maximum 0.5 per cent;
- *reporting threshold*: 0.05 per cent.

**Water** (*2.5.12*): maximum 0.5 per cent, determined on 0.500 g.

**Sulfated ash** (*2.4.14*): maximum 0.1 per cent, determined on 1.0 g.

ASSAY

Liquid chromatography (*2.2.29*) as described in the test for related substances with the following modifications.

*Detection*: spectrophotometer at 283 nm.

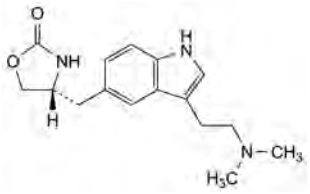
*Injection*: 2 µL of test solution (b) and reference solution (c).

Calculate the percentage content of $C_{16}H_{21}N_3O_2$ taking into account the assigned content of *zolmitriptan CRS*.

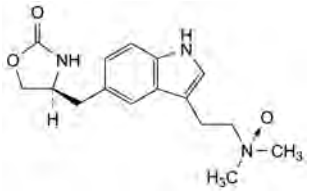
IMPURITIES

*Specified impurities: A, C.*

*Other detectable impurities* (the following substances would, if present at a sufficient level, be detected by one or other of the tests in the monograph. They are limited by the general acceptance criterion for other/unspecified impurities and/or by the general monograph *Substances for pharmaceutical use (2034)*. It is therefore not necessary to identify these impurities for demonstration of compliance. See also *5.10. Control of impurities in substances for pharmaceutical use*): *B, D, E, F, G, H, I.*



A. (4*R*)-4-[[3-[2-(dimethylamino)ethyl]-1*H*-indol-5-yl]methyl]-1,3-oxazolidin-2-one,



B. *N*,*N*-dimethyl-2-[5-[[(4*S*)-2-oxo-1,3-oxazolidin-4-yl]methyl]-1*H*-indol-3-yl]ethan-1-amine *N*-oxide,

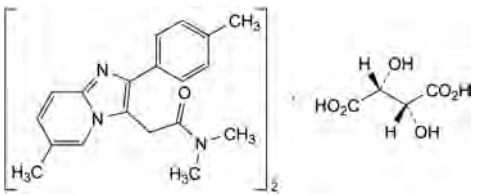
# ZOLPIDEM TARTRATE

## Zolpidemi tartras



$C_{42}H_{48}N_6O_8$ $M_r$ 765

[99294-93-6]

DEFINITION

Bis[*N*,*N*-dimethyl-2-[6-methyl-2-(4-methylphenyl)-imidazo[1,2-*a*]pyridin-3-yl]acetamide] (2*R*,3*R*)-2,3-dihydroxybutanedioate.

*Content*: 98.5 per cent to 101.0 per cent (anhydrous substance).

CHARACTERS

*Appearance*: white or almost white, hygroscopic, crystalline powder.

*Solubility*: slightly soluble in water, sparingly soluble in methanol, practically insoluble in methylene chloride.

IDENTIFICATION

*First identification*: *A, C.*

*Second identification*: *B, C.*

A. Infrared absorption spectrophotometry (*2.2.24*).

*Preparation*: dissolve 0.10 g in 10 mL of *0.1 M hydrochloric acid*. Add 10 mL of *water R*. Add dropwise with stirring 1 mL of *dilute ammonia R2*. Filter and collect the resulting precipitate. Wash the precipitate with *water R* and then dry at 105 °C for 2 h. Examine the precipitate as a disc.

*Comparison*: repeat the operations using 0.10 g of *zolpidem tartrate CRS*.

B. Thin-layer chromatography (*2.2.27*).

*Test solution.* Dissolve 50 mg of the substance to be examined in 5 mL of *methanol R*, add 0.1 mL of *diethylamine R* and dilute to 10 mL with *methanol R*.

*Reference solution (a).* Dissolve 50 mg of *zolpidem tartrate CRS* in 5 mL of *methanol R*, add 0.1 mL of *diethylamine R* and dilute to 10 mL with *methanol R*.

*Reference solution (b).* Dissolve 50 mg of *flunitrazepam CRS* in 5 mL of *methylene chloride R* and dilute to 10 mL with the same solvent. Mix 1 mL of this solution with 1 mL of reference solution (a).

*Plate*: *TLC silica gel $F_{254}$ plate R.*

*Mobile phase*: *diethylamine R*, *cyclohexane R*, *ethyl acetate R* (10:45:45 *V/V/V*).

*Application*: 5 µL.

*Development*: over 2/3 of the plate.

*Drying*: in air.

*Detection*: examine in ultraviolet light at 254 nm.

*System suitability*: reference solution (b):

– the chromatogram shows 2 clearly separated spots.

*Results*: the principal spot in the chromatogram obtained with the test solution is similar in position and size to the principal spot in the chromatogram obtained with reference solution (a).

C. Dissolve about 0.1 g in 1 mL of *methanol R* heating gently. 0.1 mL of this solution gives reaction (b) of tartrates (*2.3.1*).

TESTS

**Appearance of solution**. The solution is clear (*2.2.1*) and not more intensely coloured than reference solution $Y_6$ or $BY_6$ (*2.2.2, Method II*). *Prepare the solutions protected from light and carry out the test as rapidly as possible.*

Triturate 0.25 g with 0.125 g of *tartaric acid R*. Dissolve the mixture in 20 mL of *water R* and dilute to 25 mL with the same solvent.

**Related substances**. Liquid chromatography (*2.2.29*).

*Test solution*. Dissolve 25 mg of the substance to be examined in the mobile phase and dilute to 50.0 mL with the mobile phase.

*Reference solution (a).* Dissolve 5 mg of *zolpidem impurity A CRS* in the mobile phase and dilute to 50.0 mL with the mobile phase.

*Reference solution (b).* Dissolve 5 mg of the substance to be examined in the mobile phase and dilute to 50.0 mL with the mobile phase. To 10 mL of this solution, add 10 mL of reference solution (a).

*Reference solution (c).* Dilute 2.0 mL of the test solution to 100.0 mL with the mobile phase. Dilute 1.0 mL of this solution to 10.0 mL with the mobile phase.

*Column*:

– *size*: *l* = 0.15 m, Ø = 3.9 mm;

– *stationary phase*: *octadecylsilyl silica gel for chromatography R* (4 µm).

*Mobile phase*: mix 18 volumes of *acetonitrile R*, 23 volumes of *methanol R* and 59 volumes of a 5.6 g/L solution of *phosphoric acid R* adjusted to pH 5.5 with *triethylamine R*.

*Flow rate*: 1.5 mL/min.

*Detection*: spectrophotometer at 254 nm.

*Injection*: 20 µL of the test solution and reference solutions (b) and (c).

*Identification of impurities*: use the chromatogram obtained with reference solution (b) to identify the peak due to impurity A.

*Relative retention* with reference to zolpidem (retention time = about 10 min): tartaric acid = about 0.16; impurity A = about 0.8.

*System suitability*: reference solution (b):

– *resolution*: minimum 2.0 between the peaks due to impurity A and zolpidem.

*Limits*:

– *unspecified impurities*: for each impurity, not more than 0.5 times the area of the principal peak in the chromatogram obtained with reference solution (c) (0.10 per cent);

– *total*: not more than the area of the principal peak in the chromatogram obtained with reference solution (c) (0.2 per cent);

– *disregard limit*: 0.25 times the area of the principal peak in the chromatogram obtained with reference solution (c) (0.05 per cent); disregard any peak due to tartaric acid.

**Water** (*2.5.12*): maximum 3.0 per cent, determined on 0.50 g.

**Sulfated ash** (*2.4.14*): maximum 0.1 per cent, determined on 1.0 g.

ASSAY

Dissolve 0.300 g in a mixture of 20 mL of *anhydrous acetic acid R* and 20 mL of *acetic anhydride R*. Titrate with *0.1 M perchloric acid*, determining the end-point potentiometrically (*2.2.20*). Carry out a blank titration.

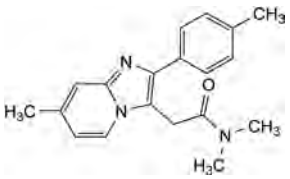
1 mL of *0.1 M perchloric acid* is equivalent to 38.24 mg of $C_{42}H_{48}N_6O_8$.

STORAGE

In an airtight container, protected from light.

IMPURITIES

*Other detectable impurities* (the following substances would, if present at a sufficient level, be detected by one or other of the tests in the monograph. They are limited by the general acceptance criterion for other/unspecified impurities and/or by the general monograph *Substances for pharmaceutical use (2034)*. It is therefore not necessary to identify these impurities for demonstration of compliance. See also *5.10. Control of impurities in substances for pharmaceutical use*): *A.*

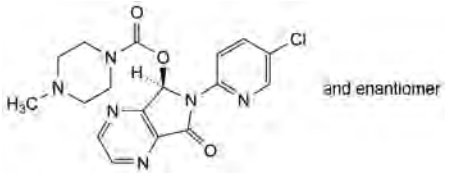


A. *N*,*N*-dimethyl-2-[7-methyl-2-(4-methylphenyl)-imidazo[1,2-*a*]pyridin-3-yl]acetamide.

**01/2017:1060**

# ZOPICLONE

## Zopiclonum



$C_{17}H_{17}ClN_6O_3$ $M_r$ 388.8
[43200-80-2]

DEFINITION

(5*RS*)-6-(5-Chloropyridin-2-yl)-7-oxo-6,7-dihydro-5*H*-pyrrolo[3,4-*b*]pyrazin-5-yl 4-methylpiperazine-1-carboxylate.

*Content*: 98.5 per cent to 100.5 per cent.

CHARACTERS

*Appearance*: white or slightly yellowish powder.

*Solubility*: practically insoluble in water, freely soluble in methylene chloride, sparingly soluble in acetone, practically insoluble in ethanol (96 per cent). It dissolves in dilute mineral acids.

IDENTIFICATION

*First identification*: B.

*Second identification*: A, C.

A. Ultraviolet and visible absorption spectrophotometry (*2.2.25*).

*Test solution.* Dissolve 50.0 mg in a 3.5 g/L solution of *hydrochloric acid R* and dilute to 100.0 mL with the same solvent. Dilute 2.0 mL of this solution to 100.0 mL with a 3.5 g/L solution of *hydrochloric acid R*.

*Spectral range*: 220-350 nm.

*Absorption maximum*: at 303 nm.

*Specific absorbance at the absorption maximum*: 340 to 380.

B. Infrared absorption spectrophotometry (*2.2.24*).

*Comparison*: *zopiclone CRS*.

C. Thin-layer chromatography (*2.2.27*).

*Test solution.* Dissolve 10 mg of the substance to be examined in *methylene chloride R* and dilute to 10 mL with the same solvent.

*Reference solution.* Dissolve 10 mg of *zopiclone CRS* in *methylene chloride R* and dilute to 10 mL with the same solvent.

*Plate*: *TLC silica gel* $GF_{254}$ *plate R*.

*Mobile phase*: *triethylamine R*, *acetone R*, *ethyl acetate R* (2:50:50 *V/V/V*).

*Application*: 10 µL.

*Development*: over 2/3 of the plate.

*Drying*: in air.

*Detection*: examine in ultraviolet light at 254 nm.

*Results*: the principal spot in the chromatogram obtained with the test solution is similar in position and size to the principal spot in the chromatogram obtained with the reference solution.

TESTS

**Solution S**. Dissolve 1.0 g in *dimethylformamide R* and dilute to 20.0 mL with the same solvent.

**Appearance of solution**. Solution S is not more opalescent than reference suspension II (*2.2.1*) and not more intensely coloured than intensity 5 of the range of reference solutions of the most appropriate colour (*2.2.2, Method II*).

**Optical rotation** (*2.2.7*): – 0.05° to + 0.05°.

Dilute 10.0 mL of solution S to 50.0 mL with *dimethylformamide R*.

**Related substances**. Liquid chromatography (*2.2.29*). *Prepare the solutions immediately before use.*

*Test solution.* Dissolve 40.0 mg of the substance to be examined in the mobile phase and dilute to 10.0 mL with the mobile phase.

*Reference solution (a).* Dilute 2.0 mL of the test solution to 100.0 mL with the mobile phase. Dilute 1.0 mL of this solution to 10.0 mL with the mobile phase.

*Reference solution (b).* Dissolve 4.0 mg of *zopiclone oxide CRS* (impurity A) in the mobile phase and dilute to 10.0 mL with the mobile phase. To 5.0 mL of the solution add 0.5 mL of the test solution and dilute to 50.0 mL with the mobile phase.

*Reference solution (c).* Dissolve 2.0 mg of *zopiclone impurity B CRS* in the mobile phase and dilute to 5.0 mL with the mobile phase. Dilute 1.0 mL of the solution to 100.0 mL with the mobile phase.

*Column*:

– *size*: *l* = 0.25 m, Ø = 4.6 mm;
– *stationary phase*: *end-capped octadecylsilyl silica gel for chromatography R* (5 µm);
– *temperature*: 30 °C.

*Mobile phase*: mix 38 volumes of *acetonitrile R* and 62 volumes of a solution containing 8.1 g/L of *sodium laurilsulfate R* and 1.6 g/L of *sodium dihydrogen phosphate R*, previously adjusted to an apparent pH of 3.5 with a 10 per cent *V/V* solution of *phosphoric acid R*.

*Flow rate*: 1.5 mL/min.

*Detection*: spectrophotometer at 303 nm.

*Injection*: 20 µL.

*Run time*: 1.5 times the retention time of zopiclone.

*Identification of impurities*: use the chromatogram obtained with reference solution (c) to identify the peak due to impurity B.

*Retention time*: zopiclone = 27 min to 31 min; if necessary, adjust the concentration of acetonitrile in the mobile phase.

*Relative retention* with reference to zopiclone: impurity B = about 0.1; impurity A = about 0.9.

*System suitability*: reference solution (b):

– *resolution*: minimum 3.0 between the peaks due to impurity A and zopiclone; if necessary, adjust the mobile phase to pH 4.0 with a 10 per cent *V/V* solution of *phosphoric acid R*.

*Limits*:

– *impurity B*: not more than twice the area of the corresponding peak in the chromatogram obtained with reference solution (c) (0.2 per cent);
– *unspecified impurities*: for each impurity, not more than 0.5 times the area of the principal peak in the chromatogram obtained with reference solution (a) (0.10 per cent);
– *total (excluding impurity B)*: not more than the area of the principal peak in the chromatogram obtained with reference solution (a) (0.2 per cent);

– *disregard limit*: 0.25 times the area of the principal peak in the chromatogram obtained with reference solution (a) (0.05 per cent).

**2-Propanol**. Gas chromatography (*2.2.28*).

*Internal standard solution.* Dilute 5 mL of *ethanol R1* to 100 mL with *ethylene chloride R*. Dilute 1 mL of the solution to 10 mL with *ethylene chloride R*.

*Test solution.* Dissolve 0.25 g of the substance to be examined in *ethylene chloride R*, add 0.5 mL of the internal standard solution and dilute to 5.0 mL with *ethylene chloride R*.

*Reference solution.* Dilute 4.5 mL of *2-propanol R* to 100.0 mL with *ethylene chloride R*. To 1.0 mL of the solution add 10.0 mL of the internal standard solution and dilute to 100.0 mL with *ethylene chloride R*.

*Column*:

– *material*: fused silica;

– *size*: *l* = 10 m, Ø = about 0.53 mm;

– *stationary phase*: *styrene-divinylbenzene copolymer R* (film thickness 20 µm).

*Carrier gas*: *helium for chromatography R*.

*Flow rate*: 4 mL/min.

*Temperature*:

| | Time (min) | Temperature (°C) |
|---|---|---|
| Column | 0 - 5 | 50 |
| | 5 - 10 | 50 → 70 |
| | 10 - 14 | 70 |
| | 14 - 20.5 | 70 → 200 |
| | 20.5 - 27.5 | 200 |
| Injection port | | 150 |
| Detector | | 250 |

*Detection*: flame ionisation.

*Injection*: 1 µL.

Calculate the percentage content *m/m* of 2-propanol taking its density to be 0.785 g/mL at 20 °C.

*Limit*:

– *2-propanol*: maximum 0.7 per cent *m/m*.

**Sulfated ash** (*2.4.14*): maximum 0.1 per cent, determined on 1.0 g.

ASSAY

Dissolve 0.300 g in a mixture of 10 mL of *anhydrous acetic acid R* and 40 mL of *acetic anhydride R*. Titrate with *0.1 M perchloric acid*, determining the end-point potentiometrically (*2.2.20*).

1 mL of *0.1 M perchloric acid* is equivalent to 38.88 mg of $C_{17}H_{17}ClN_6O_3$.

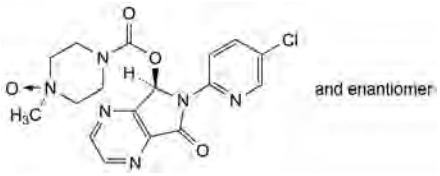
STORAGE

Protected from light.

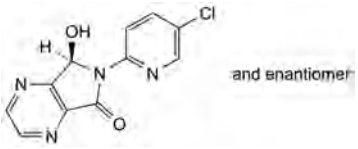
IMPURITIES

*Specified impurities: B.*

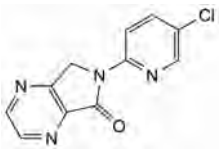
*Other detectable impurities* (the following substances would, if present at a sufficient level, be detected by one or other of the tests in the monograph. They are limited by the general acceptance criterion for other/unspecified impurities and/or by the general monograph *Substances for pharmaceutical use (2034)*. It is therefore not necessary to identify these impurities for demonstration of compliance. See also *5.10. Control of impurities in substances for pharmaceutical use*): *A, C.*



A. (5*RS*)-6-(5-chloropyridin-2-yl)-7-oxo-6,7-dihydro-5*H*-pyrrolo[3,4-*b*]pyrazin-5-yl 4-methylpiperazine-1-carboxylate 4-oxide (zopiclone oxide),



B. (7*RS*)-6-(5-chloropyridin-2-yl)-7-hydroxy-6,7-dihydro-5*H*-pyrrolo[3,4-*b*]pyrazin-5-one,

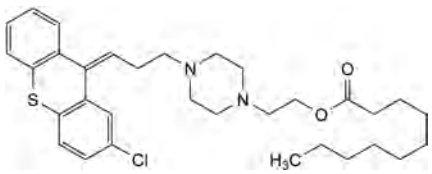


C. 6-(5-chloropyridin-2-yl)-6,7-dihydro-5*H*-pyrrolo-[3,4-*b*]pyrazin-5-one.

**01/2017:1707**

# ZUCLOPENTHIXOL DECANOATE

## Zuclopenthixoli decanoas



$C_{32}H_{43}ClN_2O_2S$ $M_r$ 555.2

[64053-00-5]

DEFINITION

2-[4-[3-[(9*Z*)-2-Chloro-9*H*-thioxanthen-9-ylidene]propyl]-piperazin-1-yl]ethyl decanoate.

*Content*: 98.0 per cent to 102.0 per cent (dried substance).

CHARACTERS

*Appearance*: yellow, viscous, oily liquid.

*Solubility*: very slightly soluble in water, very soluble in ethanol (96 per cent) and in methylene chloride.

IDENTIFICATION

Infrared absorption spectrophotometry (*2.2.24*).

*Comparison*: *Ph. Eur. reference spectrum of zuclopenthixol decanoate.*

TESTS

**Appearance of solution**. The solution is clear (*2.2.1*).

Using an ultrasonic bath, dissolve 1.0 g in *ethanol (96 per cent) R* and dilute to 20.0 mL with the same solvent.

**Related substances**. Liquid chromatography (*2.2.29*). *Carry out the test protected from light and prepare the solutions immediately before use.*

*Solution A*. Dissolve 8.89 g of *docusate sodium R* in *water R*, stirring for about 6-8 h, and dilute to 1000 mL with the same solvent.

*Test solution.* Dissolve 25.0 mg of the substance to be examined in *acetonitrile R* and dilute to 100.0 mL with the same solvent.

*Reference solution (a).* Dilute 1.0 mL of the test solution to 100.0 mL with *acetonitrile R*.

*Reference solution (b).* Dissolve 5.0 mg of *zuclopenthixol impurity B CRS* in *acetonitrile R* and dilute to 100.0 mL with the same solvent. Dilute 5.0 mL of this solution to 100.0 mL with *acetonitrile R*.

*Reference solution (c).* Dissolve the contents of a vial of *zuclopenthixol for system suitability CRS* (zuclopenthixol decanoate containing impurities A, B and C) in 1 mL of *methanol R*.

*Column*:

- *size*: *l* = 0.25 m, Ø = 4.6 mm;
- *stationary phase*: spherical *end-capped octadecylsilyl silica gel for chromatography R* (5 µm);
- *temperature*: 40 °C.

*Mobile phase*: mix 25 volumes of solution A and 75 volumes of *anhydrous ethanol R*, then add 0.1 volumes of *phosphoric acid R*.

*Flow rate*: 1.0 mL/min.

*Detection*: spectrophotometer at 270 nm.

*Injection*: 20 µL.

*Run time*: twice the retention time of zuclopenthixol decanoate.

*Identification of impurities*: use the chromatogram supplied with *zuclopenthixol for system suitability CRS* and the chromatograms obtained with reference solutions (b) and (c) to identify the peaks due to impurities A, B and C.

*Relative retention* with reference to zuclopenthixol decanoate (retention time = about 12 min): impurity C = about 0.4; impurity B = about 0.5; impurity A = about 1.1.

*System suitability*: reference solution (c):

- *peak-to-valley ratio*: minimum 2.0, where $H_p$ = height above the baseline of the peak due to impurity C and $H_v$ = height above the baseline of the lowest point of the curve separating this peak from the peak due to impurity B; and minimum 2.5, where $H_p$ = height above the baseline of the peak due to impurity A and $H_v$ = height above the baseline of the lowest point of the curve separating this peak from the peak due to zuclopenthixol decanoate.

*Limits*:

- *impurity A*: not more than 1.3 times the area of the principal peak in the chromatogram obtained with reference solution (a) (1.3 per cent);
- *impurity B*: not more than 0.2 times the area of the principal peak in the chromatogram obtained with reference solution (b) (0.2 per cent);
- *impurity C*: not more than 0.3 times the area of the principal peak in the chromatogram obtained with reference solution (a) (0.3 per cent);
- *unspecified impurities*: for each impurity, not more than 0.1 times the area of the principal peak in the chromatogram obtained with reference solution (a) (0.10 per cent);
- *total*: not more than 1.5 times the area of the principal peak in the chromatogram obtained with reference solution (a) (1.5 per cent);
- *disregard limit*: 0.05 times the area of the principal peak in the chromatogram obtained with reference solution (a) (0.05 per cent).

**Loss on drying** (*2.2.32*): maximum 0.5 per cent, determined on 1.000 g by drying in an oven at 60 °C at a pressure not exceeding 0.7 kPa for 3 h.

**Sulfated ash** (*2.4.14*): maximum 0.1 per cent, determined on 1.0 g.

ASSAY

Dissolve 0.250 g in 50 mL of *anhydrous acetic acid R*. Titrate with *0.1 M perchloric acid*, determining the end-point potentiometrically (*2.2.20*).

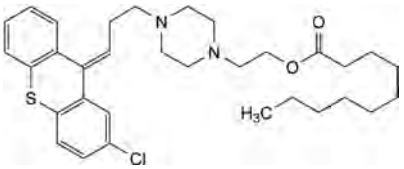
1 mL of *0.1 M perchloric acid* is equivalent to 27.76 mg of $C_{32}H_{43}ClN_2O_2S$.

STORAGE

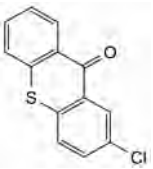
Under an inert gas in an airtight container, protected from light, at a temperature not exceeding – 20 °C.

IMPURITIES

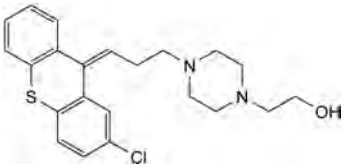
*Specified impurities: A, B, C.*



A. 2-[4-[3-[(9*E*)-2-chloro-9*H*-thioxanthen-9-ylidene]propyl]-piperazin-1-yl]ethyl decanoate,



B. 2-chloro-9*H*-thioxanthen-9-one,



C. 2-[4-[3-[(9*Z*)-2-chloro-9*H*-thioxanthen-9-ylidene]propyl]-piperazin-1-yl]ethanol.

2.5.32. Water: micro determination ..... 178
2.5.33. Total protein ..... 178
2.5.34. Acetic acid in synthetic peptides ..... 181
2.5.35. Nitrous oxide in gases ..... 182
2.5.36. Anisidine value ..... 182
2.5.37. Methyl, ethyl and isopropyl methanesulfonate in methanesulfonic acid ..... 182
2.5.38. Methyl, ethyl and isopropyl methanesulfonate in active substances ..... 183
2.5.39. Methanesulfonyl chloride in methanesulfonic acid ..... 184
2.5.4. Iodine value ..... 167
2.5.40. Methyl, ethyl and isopropyl toluenesulfonate in active substances ..... 185
2.5.41. Methyl, ethyl and isopropyl benzenesulfonate in active substances ..... 186
2.5.5. Peroxide value ..... 168
2.5.6. Saponification value ..... 169
2.5.7. Unsaponifiable matter ..... 169
2.5.8. Determination of primary aromatic amino-nitrogen ..... 169
2.5.9. Determination of nitrogen by sulfuric acid digestion ..... 170
2.6. Biological tests ..... 191
2.6.1. Sterility ..... 191
2.6.10. Histamine ..... 200
2.6.11. Depressor substances ..... 200
2.6.12. Microbiological examination of non-sterile products: microbial enumeration tests ..... 201
2.6.13. Microbiological examination of non-sterile products: test for specified micro-organisms ..... 205
2.6.14. Bacterial endotoxins ..... 209
2.6.15. Prekallikrein activator ..... 213
2.6.16. Tests for extraneous agents in viral vaccines for human use ..... 214
2.6.17. Test for anticomplementary activity of immunoglobulin ..... 216
2.6.18. Test for neurovirulence of live virus vaccines ..... 218
2.6.2. Mycobacteria ..... 194
2.6.20. Anti-A and anti-B haemagglutinins ..... 218
2.6.21. Nucleic acid amplification techniques ..... 219
2.6.22. Activated coagulation factors ..... 224
2.6.24. Avian viral vaccines: tests for extraneous agents in seed lots ..... 224
2.6.25. Avian live virus vaccines: tests for extraneous agents in batches of finished product ..... 227
2.6.26. Test for anti-D antibodies in human immunoglobulin ..... 230
2.6.27. Microbiological examination of cell-based preparations ..... 231
2.6.30. Monocyte-activation test ..... 233
2.6.31. Microbiological examination of herbal medicinal products for oral use and extracts used in their preparation ..... 239
2.6.33. Residual pertussis toxin ..... 241
2.6.34. Host-cell protein assays ..... 244
2.6.35. Quantification and characterisation of residual host-cell DNA ..... 248
2.6.36. Microbiological examination of live biotherapeutic products: tests for enumeration of microbial contaminants ..... 250
2.6.38. Microbiological examination of live biotherapeutic products: tests for specified micro-organisms ..... 255
2.6.7. Mycoplasmas ..... 194
2.6.8. Pyrogens ..... 199
2.7. Biological assays ..... 261
2.7.1. Immunochemical methods ..... 261
2.7.10. Assay of human coagulation factor VII ..... 280
2.7.11. Assay of human coagulation factor IX ..... 281
2.7.12. Assay of heparin in coagulation factors ..... 281
2.7.13. Assay of human anti-D immunoglobulin ..... 282
2.7.14. Assay of hepatitis A vaccine ..... 284
2.7.15. Assay of hepatitis B vaccine (rDNA) ..... 285
2.7.16. Assay of pertussis vaccine (acellular) ..... 286
2.7.17. Assay of human antithrombin III ..... 288
2.7.18. Assay of human coagulation factor II ..... 288
2.7.19. Assay of human coagulation factor X ..... 289
2.7.2. Microbiological assay of antibiotics ..... 262
2.7.20. *In vivo* assay of poliomyelitis vaccine (inactivated) .. 289
2.7.21. Assay of human von Willebrand factor ..... 290
2.7.22. Assay of human coagulation factor XI ..... 291
2.7.23. Numeration of CD34/CD45+ cells in haematopoietic products ..... 292
2.7.24. Flow cytometry ..... 293
2.7.25. Assay of human plasmin inhibitor ..... 295
2.7.27. Flocculation value (Lf) of diphtheria and tetanus toxins and toxoids (Ramon assay) ..... 295
2.7.28. Colony-forming cell assay for human haematopoietic progenitor cells ..... 296
2.7.29. Nucleated cell count and viability ..... 297
2.7.30. Assay of human protein C ..... 299
2.7.31. Assay of human protein S ..... 300
2.7.32. Assay of human α-1-proteinase inhibitor ..... 300
2.7.34. Assay of human C1-esterase inhibitor ..... 301
2.7.35. Immunonephelometry for vaccine component assay ..... 301
2.7.4. Assay of human coagulation factor VIII ..... 268
2.7.5. Assay of heparin ..... 269
2.7.6. Assay of diphtheria vaccine (adsorbed) ..... 269
2.7.7. Assay of pertussis vaccine (whole cell) ..... 274
2.7.8. Assay of tetanus vaccine (adsorbed) ..... 275
2.7.9. Test for Fc function of immunoglobulin ..... 279
2.8. Methods in pharmacognosy ..... 305
2.8.1. Ash insoluble in hydrochloric acid ..... 305
2.8.10. Solubility in alcohol of essential oils ..... 306
2.8.11. Assay of 1,8-cineole in essential oils ..... 307
2.8.12. Essential oils in herbal drugs ..... 307
2.8.13. Pesticide residues ..... 308
2.8.14. Tannins in herbal drugs ..... 310
2.8.15. Bitterness value ..... 310
2.8.16. Dry residue of extracts ..... 311
2.8.17. Loss on drying of extracts ..... 311
2.8.18. Determination of aflatoxin $B_1$ in herbal drugs ..... 311
2.8.2. Foreign matter ..... 305
2.8.20. Herbal drugs: sampling and sample preparation .... 313
2.8.21. Test for aristolochic acids in herbal drugs ..... 314
2.8.22. Determination of ochratoxin A in herbal drugs ..... 316
2.8.23. Microscopic examination of herbal drugs ..... 317
2.8.24. Foam index ..... 317
2.8.25. High-performance thin-layer chromatography of herbal drugs and herbal drug preparations ..... 318
2.8.3. Stomata and stomatal index ..... 305
2.8.4. Swelling index ..... 306
2.8.5. Water in essential oils ..... 306
2.8.6. Foreign esters in essential oils ..... 306
2.8.7. Fatty oils and resinified essential oils in essential oils ..... 306
2.8.8. Odour and taste of essential oils ..... 306
2.8.9. Residue on evaporation of essential oils ..... 306
2.9. Pharmaceutical technical procedures ..... 323
2.9.1. Disintegration of tablets and capsules ..... 323
2.9.10. Ethanol content ..... 339
2.9.11. Test for methanol and 2-propanol ..... 342
2.9.12. Sieve test ..... 343
2.9.14. Specific surface area by air permeability ..... 343
2.9.16. Flowability ..... 346
2.9.17. Test for extractable volume of parenteral preparations ..... 347
2.9.18. Preparations for inhalation: aerodynamic assessment of fine particles ..... 347
2.9.19. Particulate contamination: sub-visible particles ..... 360
2.9.2. Disintegration of suppositories and pessaries ..... 325
2.9.20. Particulate contamination: visible particles ..... 362

2.9.22. Softening time determination of lipophilic suppositories ... 363
2.9.23. Gas pycnometric density of solids ... 364
2.9.25. Dissolution test for medicated chewing gums ... 365
2.9.26. Specific surface area by gas adsorption ... 369
2.9.27. Uniformity of mass of delivered doses from multidose containers ... 372
2.9.29. Intrinsic dissolution ... 372
2.9.3. Dissolution test for solid dosage forms ... 326
2.9.31. Particle size analysis by laser light diffraction ... 373
2.9.32. Porosity and pore-size distribution of solids by mercury porosimetry ... 377
2.9.33. Characterisation of crystalline and partially crystalline solids by X-ray powder diffraction (XRPD) ... 379
2.9.34. Bulk density and tapped density of powders ... 384
2.9.35. Powder fineness ... 387
2.9.36. Powder flow ... 387
2.9.37. Optical microscopy ... 390
2.9.38. Particle-size distribution estimation by analytical sieving ... 392
2.9.39. Water-solid interactions: determination of sorption-desorption isotherms and of water activity ... 394
2.9.4. Dissolution test for transdermal patches ... 333
2.9.40. Uniformity of dosage units ... 398
2.9.41. Friability of granules and spheroids ... 400
2.9.42. Dissolution test for lipophilic solid dosage forms ... 401
2.9.43. Apparent dissolution ... 403
2.9.44. Preparations for nebulisation: characterisation ... 404
2.9.45. Wettability of porous solids including powders ... 406
2.9.47. Demonstration of uniformity of dosage units using large sample sizes ... 409
2.9.49. Powder flow properties by shear cell methods ... 411
2.9.5. Uniformity of mass of single-dose preparations ... 335
2.9.52. Scanning electron microscopy ... 414
2.9.6. Uniformity of content of single-dose preparations ... 336
2.9.7. Friability of uncoated tablets ... 336
2.9.8. Resistance to crushing of tablets ... 337
2.9.9. Measurement of consistency by penetrometry ... 337
3.1. Materials used for the manufacture of containers ... 423
3.1.1. Materials for containers for human blood and blood components (see 3.3.1.) ... 465
3.1.10. Materials based on non-plasticised poly(vinyl chloride) for containers for non-injectable, aqueous solutions ... 437
3.1.11. Materials based on non-plasticised poly(vinyl chloride) for containers for solid dosage forms for oral administration ... 439
3.1.1.1. Materials based on plasticised poly(vinyl chloride) for containers for human blood and blood components (see 3.3.2.) ... 465
3.1.1.2. Materials based on plasticised poly(vinyl chloride) for tubing used in sets for the transfusion of blood and blood components (see 3.3.3.) ... 468
3.1.13. Plastic additives ... 441
3.1.14. Materials based on plasticised poly(vinyl chloride) for containers for aqueous solutions for intravenous infusion ... 445
3.1.15. Polyethylene terephthalate for containers for preparations not for parenteral use ... 448
3.1.3. Polyolefins ... 423
3.1.4. Polyethylene without additives for containers for parenteral preparations and for ophthalmic preparations ... 426
3.1.5. Polyethylene with additives for containers for parenteral preparations and for ophthalmic preparations ... 427
3.1.6. Polypropylene for containers and closures for parenteral preparations and ophthalmic preparations ... 431
3.1.7. Poly(ethylene - vinyl acetate) for containers and tubing for total parenteral nutrition preparations ... 434
3.1.8. Silicone oil used as a lubricant ... 436
3.1.9. Silicone elastomer for closures and tubing ... 436
3.2. Containers ... 453
3.2.1. Glass containers for pharmaceutical use ... 453
3.2.2. Plastic containers and closures for pharmaceutical use ... 459
3.2.2.1. Plastic containers for aqueous solutions for infusion ... 460
3.2.3. Sterile plastic containers for human blood and blood components (see 3.3.4.) ... 471
3.2.4. Empty sterile containers of plasticised poly(vinyl chloride) for human blood and blood components (see 3.3.5.) ... 473
3.2.5. Sterile containers of plasticised poly(vinyl chloride) for human blood containing anticoagulant solution (see 3.3.6.) ... 474
3.2.6. Sets for the transfusion of blood and blood components (see 3.3.7.) ... 475
3.2.8. Sterile single-use plastic syringes (see 3.3.8.) ... 477
3.2.9. Rubber closures for containers for aqueous parenteral preparations, for powders and for freeze-dried powders ... 460
3.3. Containers for human blood and blood components, and materials used in their manufacture; transfusion sets and materials used in their manufacture; syringes ... 463
3.3.1. Materials for containers for human blood and blood components ... 465
3.3.2. Materials based on plasticised poly(vinyl chloride) for containers for human blood and blood components ... 465
3.3.3. Materials based on plasticised poly(vinyl chloride) for tubing used in sets for the transfusion of blood and blood components ... 468
3.3.4. Sterile plastic containers for human blood and blood components ... 471
3.3.5. Empty sterile containers of plasticised poly(vinyl chloride) for human blood and blood components ... 473
3.3.6. Sterile containers of plasticised poly(vinyl chloride) for human blood containing anticoagulant solution ... 474
3.3.7. Sets for the transfusion of blood and blood components ... 475
3.3.8. Sterile single-use plastic syringes ... 477
3-*O*-Desacyl-4′-monophosphoryl lipid A ... 2355
4. Reagents ... 481
4.1. Reagents, standard solutions, buffer solutions ... 481
4.1.1. Reagents ... 481
4.1.2. Standard solutions for limit tests ... 598
4.1.3. Buffer solutions ... 602
4.2. Volumetric analysis ... 609
4.2.1. Primary standards for volumetric solutions ... 609
4.2.2. Volumetric solutions ... 609

Circular dichroism (2.2.41.) ... 75
Cisatracurium besilate ... 2226
Cisplatin ... 2231
Citalopram hydrobromide ... 2232
Citalopram hydrochloride ... 2234
Citric acid ... 2235
Citric acid monohydrate ... 2236
Citronella oil ... 1392
Cladribine ... 2237
Clarithromycin ... 2238
Clarity and degree of opalescence of liquids (2.2.1.) ... 21
Clary sage oil ... 1393
Classical swine-fever vaccine (live, prepared in cell cultures) ... 1159
Clazuril for veterinary use ... 2241
Clebopride malate ... 2243
Clemastine fumarate ... 2244
Clematis armandii stem ... 1394
Clenbuterol hydrochloride ... 2246
Clindamycin hydrochloride ... 2247
Clindamycin phosphate ... 2248
Clioquinol ... 2251
Clobazam ... 2252
Clobetasol propionate ... 2253
Clobetasone butyrate ... 2255
Clodronate disodium tetrahydrate ... 2257
Clofazimine ... 2258

Clofibrate ... 2259
Clomifene citrate ... 2260
Clomipramine hydrochloride ... 2261
Clonazepam ... 2263
Clonidine hydrochloride ... 2264
Clopamide ... 2265
Clopidogrel besilate ... 2267
Clopidogrel hydrochloride ... 2268
Clopidogrel hydrogen sulfate ... 2270
Clorazepate, dipotassium monohydrate ... 2439
Closantel sodium dihydrate for veterinary use ... 2272
Clostridium botulinum vaccine for veterinary use ... 1087
Clostridium chauvoei vaccine for veterinary use ... 1088
Clostridium novyi (type B) vaccine for veterinary use ... 1088
Clostridium perfringens vaccine for veterinary use ... 1090
Clostridium septicum vaccine for veterinary use ... 1092
Closures and containers for parenteral preparations and ophthalmic preparations, polypropylene for (3.1.6.) ... 431
Closures and containers for pharmaceutical use, plastic (3.2.2.) ... 459
Closures and tubing, silicone elastomer for (3.1.9.) ... 436
Closures for containers for aqueous parenteral preparations, for powders and for freeze-dried powders, rubber (3.2.9.) ... 460
Clotrimazole ... 2273
Clove ... 1396
Clove oil ... 1396
Cloxacillin sodium ... 2275
Clozapine ... 2276
Coagulation factor II, human, assay of (2.7.18.) ... 288
Coagulation factor IX, human ... 2846
Coagulation factor IX, human, assay of (2.7.11.) ... 281
Coagulation factor IX (rDNA) concentrated solution, human ... 2848
Coagulation factor IX (rDNA) powder for solution for injection, human ... 2853
Coagulation factor VII, human ... 2838
Coagulation factor VII, human, assay of (2.7.10.) ... 280
Coagulation factor VIIa (rDNA) concentrated solution, human ... 2840
Coagulation factor VIII, human ... 2844
Coagulation factor VIII, human, assay of (2.7.4.) ... 268
Coagulation factor VIII (rDNA), human ... 2845
Coagulation factor X, assay of (2.7.19.) ... 289
Coagulation factor XI, human ... 2855
Coagulation factor XI, human, assay of (2.7.22.) ... 291
Coagulation factors, activated (2.6.22.) ... 224
Coagulation factors, assay of heparin (2.7.12.) ... 281
Coated granules ... 912
Coated tablets ... 938
Cocaine hydrochloride ... 2278
Coccidiosis vaccine (live) for chickens ... 1094
Cocculus for homoeopathic preparations ... 1708
Cocoa butter ... 2279
Coconut oil, refined ... 2279
Cocoyl caprylocaprate ... 2280
Codeine hydrochloride dihydrate ... 2281
Codeine monohydrate ... 2283
Codeine phosphate hemihydrate ... 2285
Codeine phosphate sesquihydrate ... 2288
Codergocrine mesilate ... 2290
Cod-liver oil, farmed ... 2291
Cod-liver oil (type A) ... 2295
Cod-liver oil (type B) ... 2299
Codonopsis root ... 1397
Coix seed ... 1398
Cola ... 1400
Colchicine ... 2303
Cold-water vibriosis vaccine (inactivated) for salmonids ... 1163
Colestyramine ... 2305
Colibacillosis vaccine (inactivated), neonatal piglet ... 1132
Colibacillosis vaccine (inactivated), neonatal ruminant ... 1133
Colistimethate sodium ... 2306
Colistin sulfate ... 2309
Colloidal anhydrous silica ... 3787
Colloidal hydrated silica ... 3788
Colloidal silica, hydrophobic ... 3789
Colloidal silver, for external use ... 3790
Colony-forming cell assay for human haematopoietic progenitor cells (2.7.28.) ... 296
Colophony ... 1401
Coloration of liquids (2.2.2.) ... 22
Common selfheal fruit-spike ... 1401
Common stinging nettle for homoeopathic preparations ... 1728
Comparative table of porosity of sintered-glass filters (2.1.2.) ... 15
Complexometric titrations (2.5.11.) ... 170
Composition of fatty acids by gas chromatography (2.4.22.) ... 147
Composition of fatty acids in oils rich in omega-3 acids (2.4.29.) ... 161
Compressed lozenges ... 922
Concentrated solutions for haemodialysis ... 2798
Concentrated solutions for haemofiltration and haemodiafiltration ... 2801
Concentrates for injections or infusions ... 924
Concentrates for intrauterine solutions ... 914
Conductivity (2.2.38.) ... 66
Coneflower herb, purple ... 1589
Coneflower root, narrow-leaved ... 1548
Coneflower root, pale ... 1568
Coneflower root, purple ... 1591
Conjugated estrogens ... 2561
Conjugated polysaccharide vaccines for human use, carrier proteins for the production of (5.2.11.) ... 674
Consistency by penetrometry, measurement of (2.9.9.) ... 337
Containers (3.2.) ... 453
Containers and closures for parenteral preparations and ophthalmic preparations, polypropylene for (3.1.6.) ... 431
Containers and closures for pharmaceutical use, plastic (3.2.2.) ... 459
Containers and tubing for total parenteral nutrition preparations, poly(ethylene - vinyl acetate) for (3.1.7.) ... 434
Containers for aqueous solutions for infusion, plastic (3.2.2.1.) ... 460
Containers for aqueous solutions for intravenous infusion, materials based on, plasticised poly(vinyl chloride) for (3.1.14.) ... 445
Containers for human blood and blood components, and materials used in their manufacture; transfusion sets and materials used in their manufacture; syringes (3.3.) ... 463
Containers for human blood and blood components, materials based on plasticised poly(vinyl chloride) for (3.3.2.) ... 465
Containers for human blood and blood components, materials for (3.3.1.) ... 465
Containers for human blood and blood components, plastic, sterile (3.3.4.) ... 471
Containers for non-injectable aqueous solutions, materials based on non-plasticised poly(vinyl chloride) for (3.1.10.) ... 437
Containers for parenteral preparations and for ophthalmic preparations, polyethylene with additives for (3.1.5.) ... 427
Containers for parenteral preparations and for ophthalmic preparations, polyethylene without additives for (3.1.4.) ... 426
Containers for pharmaceutical use, glass (3.2.1.) ... 453
Containers for preparations not for parenteral use, polyethylene terephthalate for (3.1.15) ... 448
Containers for solid dosage forms for oral administration, materials based on non-plasticised poly(vinyl chloride) for (3.1.11.) ... 439
Containers, materials used for the manufacture of (3.1.) ... 423
Containers of plasticised poly(vinyl chloride) for human blood and blood components, empty sterile (3.3.5.) ... 473
Containers of plasticised poly(vinyl chloride) for human blood containing anticoagulant solution, sterile (3.3.6.) ... 474

Contamination, microbial: microbial enumeration tests (2.6.12.) ..... 201
Contamination, microbial: microbial enumeration tests (live biotherapeutic products) (2.6.36.) ..... 250
Contamination, microbial: test for specified micro-organisms (2.6.13.) ..... 205
Contamination, microbial: tests for specified micro-organisms (live biotherapeutic products) (2.6.38.) ..... 255
Content uniformity of single-dose preparations (2.9.6.) ..... 336
Control of impurities in substances for pharmaceutical use (5.10.) ..... 763
Control of microbiological quality, alternative methods for (5.1.6.) ..... 628

Dioxan and ethylene oxide (2.4.25.) ... 157
Dip concentrates ... 942
Diphenhydramine hydrochloride ... 2435
Diphenoxylate hydrochloride ... 2436
Diphtheria and tetanus toxins and toxoids, flocculation value (Lf) of, (Ramon assay) (2.7.27.) ... 295
Diphtheria and tetanus vaccine (adsorbed) ... 952
Diphtheria and tetanus vaccine (adsorbed, reduced antigen(s) content) ... 953
Diphtheria antitoxin ... 1170
Diphtheria, tetanus and hepatitis B (rDNA) vaccine (adsorbed) ... 954
Diphtheria, tetanus and pertussis (acellular, component) vaccine (adsorbed) ... 955
Diphtheria, tetanus and pertussis (acellular, component) vaccine (adsorbed, reduced antigen(s) content) ... 956
Diphtheria, tetanus and pertussis (whole cell) vaccine (adsorbed) ... 958
Diphtheria, tetanus and poliomyelitis (inactivated) vaccine (adsorbed, reduced antigen(s) content) ... 959
Diphtheria, tetanus, pertussis (acellular, component) and haemophilus type b conjugate vaccine (adsorbed) ... 961
Diphtheria, tetanus, pertussis (acellular, component) and hepatitis B (rDNA) vaccine (adsorbed) ... 963
Diphtheria, tetanus, pertussis (acellular, component) and poliomyelitis (inactivated) vaccine (adsorbed) ... 964
Diphtheria, tetanus, pertussis (acellular, component) and poliomyelitis (inactivated) vaccine (adsorbed, reduced antigen(s) content) ... 966
Diphtheria, tetanus, pertussis (acellular, component), hepatitis B (rDNA), poliomyelitis (inactivated) and haemophilus type b conjugate vaccine (adsorbed) ... 968
Diphtheria, tetanus, pertussis (acellular, component), poliomyelitis (inactivated) and haemophilus type b conjugate vaccine (adsorbed) ... 970
Diphtheria, tetanus, pertussis (whole cell) and poliomyelitis (inactivated) vaccine (adsorbed) ... 973
Diphtheria, tetanus, pertussis (whole cell), poliomyelitis (inactivated) and haemophilus type b conjugate vaccine (adsorbed) ... 974
Diphtheria vaccine (adsorbed) ... 977
Diphtheria vaccine (adsorbed), assay of (2.7.6.) ... 269
Diphtheria vaccine (adsorbed, reduced antigen content) ... 978
Dipivefrine hydrochloride ... 2437
Dipotassium clorazepate monohydrate ... 2439
Dipotassium phosphate ... 2440
Diprophylline ... 2441
Dipyridamole ... 2442
Direct amperometric and pulsed electrochemical detection (2.2.63.) ... 117
Dirithromycin ... 2444
Disintegration of suppositories and pessaries (2.9.2.) ... 325
Disintegration of tablets and capsules (2.9.1.) ... 323
Disodium clodronate tetrahydrate ... 2257
Disodium edetate ... 2445
Disodium etidronate ... 2589
Disodium pamidronate pentahydrate ... 3474
Disodium phosphate ... 2446
Disodium phosphate dihydrate ... 2447
Disodium phosphate dodecahydrate ... 2447
Disopyramide ... 2448
Disopyramide phosphate ... 2449
Dispersible tablets ... 939
Dissolution, apparent (2.9.43.) ... 403
Dissolution, intrinsic (2.9.29.) ... 372
Dissolution test for lipophilic solid dosage forms (2.9.42.) ... 401
Dissolution test for medicated chewing gums (2.9.25.) ... 365
Dissolution test for solid dosage forms (2.9.3.) ... 326
Dissolution test for transdermal patches (2.9.4.) ... 333
Dissolution testing, recommendations on (5.17.1.) ... 801
Distemper vaccine (live), canine ... 1081
Distemper vaccine (live) for mustelids ... 1097
Distillation range (2.2.11.) ... 30
Distribution estimation by analytical sieving, particle-size (2.9.38.) ... 392
Disulfiram ... 2450
Dithranol ... 2451
DL-Methionine ... 3225
DL-α-Tocopheryl hydrogen succinate ... 4062
DNA, residual host-cell, quantification and characterisation of (2.6.35.) ... 248
Dobesilate monohydrate, calcium ... 2048
Dobutamine hydrochloride ... 2452
Docetaxel ... 2453
Docetaxel trihydrate ... 2455
Docusate sodium ... 2457

Homoepathic preparations, Ignatia for ... 1719
Honey ... 2831
Honey bee for homoeopathic preparations ... 1703
Hop strobile ... 1474
Horse-chestnut ... 1475
Horse-chestnut dry extract, standardised ... 1477
Host-cell DNA, residual, quantification and characterisation of (2.6.35.) ... 248
Host-cell protein assays (2.6.34.) ... 244
Houttuynia herb ... 1478
Human α-1-proteinase inhibitor ... 2869
Human α-1-proteinase inhibitor, assay of (2.7.32.) ... 300
Human albumin injection, iodinated ($^{125}$I) ... 1210
Human albumin solution ... 2832
Human anti-D immunoglobulin ... 2834
Human anti-D immunoglobulin, assay of (2.7.13.) ... 282
Human anti-D immunoglobulin for intravenous administration ... 2835
Human antithrombin III, assay of (2.7.17.) ... 288
Human antithrombin III concentrate ... 2835

Human C1-esterase inhibitor ... 2837
Human C1-esterase inhibitor, assay of (2.7.34.) ... 301
Human coagulation factor II, assay of (2.7.18.) ... 288
Human coagulation factor IX ... 2846
Human coagulation factor IX, assay of (2.7.11.) ... 281
Human coagulation factor IX (rDNA) concentrated solution ... 2848
Human coagulation factor IX (rDNA) powder for solution for injection ... 2853
Human coagulation factor VII ... 2838
Human coagulation factor VII, assay of (2.7.10.) ... 280
Human coagulation factor VIIa (rDNA) concentrated solution ... 2840
Human coagulation factor VIII ... 2844
Human coagulation factor VIII, assay of (2.7.4.) ... 268
Human coagulation factor VIII (rDNA) ... 2845
Human coagulation factor X, assay of (2.7.19.) ... 289
Human coagulation factor XI ... 2855
Human coagulation factor XI, assay of (2.7.22.) ... 291
Human fibrinogen ... 2856
Human glucagon ... 2753
Human haematopoietic progenitor cells, colony-forming cell assay for (2.7.28.) ... 296
Human haematopoietic stem cells ... 2857
Human hepatitis A immunoglobulin ... 2858
Human hepatitis B immunoglobulin ... 2858
Human hepatitis B immunoglobulin for intravenous administration ... 2859
Human insulin ... 2951
Human measles immunoglobulin ... 2859
Human normal immunoglobulin for intramuscular administration ... 2860
Human normal immunoglobulin for intravenous administration ... 2862
Human normal immunoglobulin for subcutaneous administration ... 2864
Human papillomavirus vaccine (rDNA) ... 989
Human plasma for fractionation ... 2865
Human plasma (pooled and treated for virus inactivation) ... 2867
Human plasmin inhibitor, assay of (2.7.25.) ... 295
Human protein C, assay of (2.7.30.) ... 299
Human protein S, assay of (2.7.31.) ... 300
Human prothrombin complex ... 2870
Human rabies immunoglobulin ... 2871
Human rubella immunoglobulin ... 2872
Human tetanus immunoglobulin ... 2873
Human varicella immunoglobulin ... 2875
Human varicella immunoglobulin for intravenous administration ... 2875
Human von Willebrand factor ... 2875
Human von Willebrand factor, assay of (2.7.21.) ... 290
Hyaluronate, sodium ... 3821
Hyaluronidase ... 2877
Hydralazine hydrochloride ... 2878
Hydrastis canadensis for homoeopathic preparations ... 1716
Hydrochloric acid, concentrated ... 2879
Hydrochloric acid, dilute ... 2879
Hydrochlorothiazide ... 2879
Hydrocodone hydrogen tartrate 2.5-hydrate ... 2881
Hydrocortisone ... 2883
Hydrocortisone acetate ... 2886
Hydrocortisone hydrogen succinate ... 2888
Hydrogen peroxide solution (3 per cent) ... 2889
Hydrogen peroxide solution (30 per cent) ... 2890
Hydrogenated arachis oil ... 1869
Hydrogenated castor oil ... 2102
Hydrogenated cottonseed oil ... 2317
Hydrogenated soya-bean oil ... 3872
Hydrogenated vegetable oils, nickel in (2.4.31.) ... 163
Hydrogenated wool fat ... 4215
Hydromorphone hydrochloride ... 2890
Hydrophobic colloidal silica ... 3789
Hydrous wool fat ... 4216
Hydroxocobalamin acetate ... 2892
Hydroxocobalamin chloride ... 2893
Hydroxocobalamin sulfate ... 2894
Hydroxycarbamide ... 2895
Hydroxychloroquine sulfate ... 2896
Hydroxyethyl salicylate ... 2897
Hydroxyethyl starches ... 3892
Hydroxyethylcellulose ... 2898
Hydroxyethylmethylcellulose ... 3237
Hydroxyl value (2.5.3.) ... 167
Hydroxypropyl starch ... 3888
Hydroxypropyl starch, pregelatinised ... 3890
Hydroxypropylbetadex ... 2901
Hydroxypropylcellulose ... 2903
Hydroxypropylcellulose, low-substituted ... 2904
Hydroxypropylmethylcellulose ... 2914
Hydroxypropylmethylcellulose phthalate ... 2916
Hydroxyzine hydrochloride ... 2906
Hymecromone ... 2907
Hymenoptera venoms for allergen products ... 2908
Hyoscine ... 2909
Hyoscine butylbromide ... 2910
Hyoscine hydrobromide ... 2911
Hyoscyamine sulfate ... 2913
Hyoscyamus for homoeopathic preparations ... 1717
Hypericum ... 1631
Hypericum for homoeopathic preparations ... 1718
Hypromellose ... 2914
Hypromellose phthalate ... 2916

Phenobarbital sodium ... 3525
Phenol ... 3527
Phenol in immunosera and vaccines (2.5.15.) ... 172
Phenolphthalein ... 3527
Phenolsulfonphthalein ... 3528
Phenothiazines, identification by thin-layer chromatography (2.3.3.) ... 133
Phenoxyethanol ... 3529
Phenoxymethylpenicillin ... 3530
Phenoxymethylpenicillin (benzathine) tetrahydrate ... 3531
Phenoxymethylpenicillin potassium ... 3533
Phentolamine mesilate ... 3535
Phenylalanine ... 3536
Phenylbutazone ... 3538
Phenylbutyrate, sodium ... 3833
Phenylephrine ... 3539
Phenylephrine hydrochloride ... 3541
Phenylmercuric acetate ... 3542
Phenylmercuric borate ... 3542
Phenylmercuric nitrate ... 3543
Phenylpropanolamine hydrochloride ... 3543
Phenytoin ... 3545
Phenytoin sodium ... 3546
Phloroglucinol ... 3548
Phloroglucinol dihydrate ... 3549
Pholcodine monohydrate ... 3551
Phosphates (2.4.11.) ... 142
Phospholipids for injection, egg ... 2494
Phospholipids for injection, soya ... 3870
Phosphoric acid, concentrated ... 3553
Phosphoric acid, dilute ... 3553
Phosphorus in polysaccharide vaccines (2.5.18.) ... 172
Phthalylsulfathiazole ... 3553
Physical and physico-chemical methods (2.2.) ... 21
Physostigmine salicylate ... 3554
Phytomenadione, racemic ... 3555
Phytonadione, racemic ... 3555
Phytosterol ... 3557
Picosulfate, sodium ... 3835
Picotamide monohydrate ... 3558
Piglet colibacillosis vaccine (inactivated), neonatal ... 1132
Pillules for homoeopathic preparations ... 1696
Pillules, homoeopathic, coated ... 1697
Pillules, homoeopathic, impregnated ... 1697
Pilocarpine hydrochloride ... 3559
Pilocarpine nitrate ... 3560
Pimobendan for veterinary use ... 3561
Pimozide ... 3562
Pindolol ... 3563
Pine (dwarf) oil ... 1419
Pine sylvestris oil ... 1581
Pioglitazone hydrochloride ... 3565
Pipemidic acid trihydrate ... 3566
Piperacillin ... 3567
Piperacillin sodium ... 3568
Piperazine adipate ... 3570
Piperazine citrate ... 3571
Piperazine hydrate ... 3572
Piracetam ... 3573
Pirenzepine dihydrochloride monohydrate ... 3574
Piretanide ... 3575
Pirfenidone ... 3576
Piroxicam ... 3577
Pivampicillin ... 3579
Pivmecillinam hydrochloride ... 3581
Plasma for fractionation, human ... 2865
Plasma (pooled and treated for virus inactivation), human ... 2867
Plasmid vectors for human use, bacterial cells used for the manufacture of ... 781
Plasmin inhibitor, assay of human (2.7.25.) ... 295
Plasters, medicated ... 935
Plastic additives (3.1.13.) ... 441
Plastic containers and closures for pharmaceutical use (3.2.2.) ... 459
Plastic containers for aqueous solutions for infusion (3.2.2.1.) ... 460
Plastic containers for human blood and blood components, sterile (3.3.4.) ... 471
Plastic syringes, single-use, sterile (3.3.8.) ... 477
Platycodon root ... 1582
Pneumococcal polysaccharide conjugate vaccine (adsorbed) ... 1019
Pneumococcal polysaccharide vaccine ... 1021
Pneumonia vaccine (inactivated), porcine enzootic ... 1141
Podophyllotoxin ... 3582
Poliomyelitis (inactivated), diphtheria and tetanus vaccine (adsorbed, reduced antigen(s) content) ... 959
Poliomyelitis (inactivated), diphtheria, tetanus and pertussis (acellular, component) vaccine (adsorbed) ... 964
Poliomyelitis (inactivated), diphtheria, tetanus and pertussis (acellular, component) vaccine (adsorbed, reduced antigen(s) content) ... 966
Poliomyelitis (inactivated), diphtheria, tetanus and pertussis (whole cell) vaccine (adsorbed) ... 973
Poliomyelitis (inactivated), diphtheria, tetanus, pertussis (acellular, component) and haemophilus type b conjugate vaccine (adsorbed) ... 970
Poliomyelitis (inactivated), diphtheria, tetanus, pertussis (acellular, component), hepatitis B (rDNA) and haemophilus type b conjugate vaccine (adsorbed) ... 968
Poliomyelitis (inactivated), diphtheria, tetanus, pertussis (whole cell) and haemophilus type b conjugate vaccine (adsorbed) ... 974
Poliomyelitis vaccine (inactivated) ... 1023
Poliomyelitis vaccine (inactivated), *in vivo* assay of (2.7.20.) ... 289
Poliomyelitis vaccine (oral) ... 1026
Pollens for allergen products ... 3583
Poloxamers ... 3584
Polyacrylate dispersion 30 per cent ... 3586
Polyamide suture, sterile, in distributor for veterinary use ... 1282
Poly(ethylene - vinyl acetate) for containers and tubing for total parenteral nutrition preparations (3.1.7.) ... 434

Polyethylene oxides, high-molecular-mass ..... 3147
Polyethylene terephthalate for containers for preparations not for parenteral use (3.1.15.) ..... 448
Poly(ethylene terephthalate) suture, sterile, in distributor for veterinary use ..... 1283
Polyethylene with additives for containers for parenteral preparations and for ophthalmic preparations (3.1.5.) ..... 427
Polyethylene without additives for containers for parenteral preparations and for ophthalmic preparations (3.1.4.) ..... 426
Polyethyleneglycols ..... 3145
Polyethyleneglycols, high-molecular-mass ..... 3147
Polygonum cuspidatum rhizome and root ..... 1583
Polygonum orientale fruit ..... 1585
Polymorphism (5.9.) ..... 759
Polymyxin B sulfate ..... 3587
Polyolefins (3.1.3.) ..... 423
Polyoxyl castor oil ..... 3144
Polyoxyl hydrogenated castor oil ..... 3144
Polyoxypropylene stearyl ether ..... 3588
Polypropylene for containers and closures for parenteral preparations and ophthalmic preparations (3.1.6.) ..... 431
Polysaccharide vaccines for human use, conjugated, carrier proteins for the production of (5.2.11.) ..... 674
Polysaccharide vaccines, hexosamines in (2.5.20.) ..... 173
Polysaccharide vaccines, methylpentoses in (2.5.21.) ..... 173
Polysaccharide vaccines, nucleic acids in (2.5.17.) ..... 172
Polysaccharide vaccines, *O*-acetyl in (2.5.19.) ..... 173
Polysaccharide vaccines, phosphorus in (2.5.18.) ..... 172
Polysaccharide vaccines, protein in (2.5.16.) ..... 172
Polysaccharide vaccines, ribose in (2.5.31.) ..... 177
Polysaccharide vaccines, sialic acid in (2.5.23.) ..... 174
Polysaccharide vaccines, uronic acids in (2.5.22.) ..... 174
Polysorbate 20 ..... 3589
Polysorbate 40 ..... 3590
Polysorbate 60 ..... 3591
Polysorbate 80 ..... 3591
Polystyrene sulfonate, sodium ..... 3836
Poly(vinyl acetate) ..... 3593
Poly(vinyl acetate) dispersion 30 per cent ..... 3594
Poly(vinyl alcohol) ..... 3595
Poly(vinyl alcohol) macrogol grafted copolymer ..... 3140
Poly(vinyl chloride) (non-plasticised) for containers for solid dosage forms for oral administration, materials based on (3.1.11.) ..... 439
Poly(vinyl chloride), non-plasticised, materials based on for containers for non-injectable aqueous solutions (3.1.10.) .. 437
Poly(vinyl chloride), plasticised, empty sterile containers of, for human blood and blood components (3.3.5.) ..... 473
Poly(vinyl chloride), plasticised, materials based on, for containers for aqueous solutions for intravenous infusion (3.1.14.) ..... 445
Poly(vinyl chloride), plasticised, materials based on, for containers for human blood and blood components (3.3.2.) ..... 465
Poly(vinyl chloride), plasticised, materials based on, for tubing used in sets for the transfusion of blood and blood components (3.3.3.) ..... 468
Poly(vinyl chloride), plasticised, sterile containers of, for human blood containing anticoagulant solution (3.3.6.) .. 474
Poppy petals, red ..... 1595
Porcine actinobacillosis vaccine (inactivated) ..... 1139
Porcine enzootic pneumonia vaccine (inactivated) ..... 1141
Porcine influenza vaccine (inactivated) ..... 1142
Porcine insulin ..... 2957
Porcine parvovirosis vaccine (inactivated) ..... 1143
Porcine progressive atrophic rhinitis vaccine (inactivated) ..... 1144
Pore-size distribution of solids by mercury porosimetry, porosity and (2.9.32.) ..... 377
Poria ..... 1587
Porosimetry, mercury, porosity and pore-size distribution of solids by (2.9.32.) ..... 377
Porosity and pore-size distribution of solids by mercury porosimetry (2.9.32.) ..... 377
Porosity of sintered-glass filters (2.1.2.) ..... 15
Porous solids including powders, wettability of (2.9.45.) .... 406
Potassium (2.4.12.) ..... 142
Potassium acetate ..... 3596
Potassium bromide ..... 3597
Potassium carbonate ..... 3598
Potassium chloride ..... 3598
Potassium citrate ..... 3599
Potassium clavulanate ..... 3599
Potassium clavulanate, diluted ..... 3602
Potassium dichromate for homoeopathic preparations ..... 1721
Potassium dihydrogen phosphate ..... 3603
Potassium disulfite ..... 3607
Potassium hydrogen aspartate hemihydrate ..... 3604
Potassium hydrogen carbonate ..... 3605
Potassium hydrogen tartrate ..... 3605
Potassium hydroxide ..... 3606
Potassium iodide ..... 3606
Potassium metabisulfite ..... 3607
Potassium nitrate ..... 3607
Potassium perchlorate ..... 3608
Potassium permanganate ..... 3609
Potassium sodium tartrate tetrahydrate ..... 3609
Potassium sorbate ..... 3610
Potassium sulfate ..... 3610
Potato starch ..... 3611
Potentiometric determination of ionic concentration using ion-selective electrodes (2.2.36.) ..... 64
Potentiometric determination of pH (2.2.3.) ..... 24
Potentiometric titration (2.2.20.) ..... 35
Potentisation, methods of preparation of homoeopathic stocks and ..... 1682
Poultices ..... 936
Pour-on preparations ..... 942
Povidone ..... 3612
Povidone, iodinated ..... 3615
Powder fineness (2.9.35.) ..... 387
Powder flow (2.9.36.) ..... 387
Powder flow properties by shear cell methods (2.9.49.) ..... 411
Powdered cellulose ..... 2150
Powders and granules for oral solutions and suspensions .. 917
Powders and granules for syrups ..... 918
Powders and tablets for rectal solutions and suspensions ... 934
Powders, bulk density and tapped density of (2.9.34.) ..... 384
Powders, ear ..... 909
Powders, effervescent ..... 927
Powders for cutaneous application ..... 925
Powders for eye drops and powders for eye lotions ..... 910
Powders for injections or infusions ..... 924
Powders for oral drops ..... 918
Powders, inhalation ..... 931
Powders, nasal ..... 920
Powders, oral ..... 926
Powders, wettability of porous solids including (2.9.45.) .... 406
Pramipexole dihydrochloride monohydrate ..... 3615
Prasugrel hydrochloride ..... 3617
Pravastatin sodium ..... 3618
Prazepam ..... 3620
Praziquantel ..... 3621
Prazosin hydrochloride ..... 3622
Precursors for radiopharmaceutical preparations, chemical ..... 863
Prednicarbate ..... 3624
Prednisolone ..... 3625
Prednisolone acetate ..... 3627
Prednisolone pivalate ..... 3629
Prednisolone sodium phosphate ..... 3630
Prednisone ..... 3631
Pregabalin ..... 3633
Pregelatinised hydroxypropyl starch ..... 3890
Pregelatinised starch ..... 3891

Prekallikrein activator (2.6.15.) ... 213
Premixes for medicated feeding stuffs for veterinary use ... 927
Preparations for inhalation ... 927
Preparations for inhalation: aerodynamic assessment of fine particles (2.9.18.) ... 347
Preparations for irrigation ... 932
Preparations for nebulisation: characterisation (2.9.44.) ... 404
Preservative and anticoagulant solutions for human blood ... 1856
Pressurised pharmaceutical preparations ... 933
Prilocaine ... 3635
Prilocaine hydrochloride ... 3636
Primaquine diphosphate ... 3637
Primary aromatic amino-nitrogen, determination of (2.5.8.) ... 169
Primary standards for volumetric solutions (4.2.1.) ... 609
Primidone ... 3639
Primula root ... 1588
Probenecid ... 3640
Procainamide hydrochloride ... 3641
Procaine benzylpenicillin monohydrate ... 1955
Procaine hydrochloride ... 3642
Procaine penicillin G monohydrate ... 1955
Process analytical technology (5.25.) ... 855
Prochlorperazine maleate ... 3642
Products of fermentation ... 882
Products of recombinant DNA technology ... 888
Products with risk of transmitting agents of animal spongiform encephalopathies ... 884
Progenitor cells, human haematopoietic, colony-forming cell assay for (2.7.28.) ... 296
Progesterone ... 3644
Progressive atrophic rhinitis vaccine (inactivated), porcine ... 1144
Proguanil hydrochloride ... 3646
Proline ... 3647
Promazine hydrochloride ... 3649
Promethazine hydrochloride ... 3649
Propacetamol hydrochloride ... 3651
Propafenone hydrochloride ... 3652
Propanol ... 3654
Propanol and methanol, 2-, test for (2.9.11.) ... 342
Propantheline bromide ... 3655
Propofol ... 3656
Propranolol hydrochloride ... 3658
Propyl gallate ... 3659
Propyl parahydroxybenzoate ... 3660
Propyl parahydroxybenzoate, sodium ... 3838
Propylene glycol ... 3661
Propylene glycol dicaprylocaprate ... 3662
Propylene glycol dilaurate ... 3662
Propylene glycol monolaurate ... 3663
Propylene glycol monopalmitostearate ... 3664
Propylene glycol monostearate ... 3664
Propylthiouracil ... 3665
Propyphenazone ... 3666
Protamine sulfate ... 3667
Protein assays, host-cell (2.6.34.) ... 244
Protein C, human, assay of (2.7.30.) ... 299
Protein in polysaccharide vaccines (2.5.16.) ... 172
Protein S, human, assay of (2.7.31.) ... 300
Protein, total (2.5.33.) ... 178
Prothrombin complex, human ... 2870
Protirelin ... 3669
Proxyphylline ... 3670
Pseudoephedrine hydrochloride ... 3671
Psyllium seed ... 1588
Pullulan ... 3672
Pulsed electrochemical detection and direct amperometric detection (2.2.63.) ... 117
Purified water ... 4207
Purple coneflower herb ... 1589
Purple coneflower root ... 1591
Pycnometric density of solids, gas (2.9.23.) ... 364
Pygeum africanum bark ... 1593
Pyrantel embonate ... 3673
Pyrazinamide ... 3674
Pyridostigmine bromide ... 3675
Pyridoxine hydrochloride ... 3676
Pyrimethamine ... 3677
Pyrogens (2.6.8.) ... 199
Pyrophosphate (sodium) decahydrate for radiopharmaceutical preparations ... 1241
Pyrrolidone ... 3678

**Q**

Quality control of vaccines, substitution of *in vivo* method(s) by *in vitro* method(s) for the (5.2.14.) ... 679
Quality of non-sterile pharmaceutical preparations and substances for pharmaceutical use, microbiological (5.1.4.) ... 627
Quantification and characterisation of residual host-cell DNA (2.6.35.) ... 248
Quantified hawthorn leaf and flower liquid extract ... 1473
Quetiapine fumarate ... 3683
Quillaia bark ... 1593
Quinapril hydrochloride ... 3685
Quinidine sulfate ... 3687
Quinine hydrochloride ... 3689
Quinine sulfate ... 3690

Simvastatin ..... 3792
Single-dose preparations, uniformity of content (2.9.6.) ..... 336
Single-dose preparations, uniformity of mass (2.9.5.) ..... 335
Sintered-glass filters (2.1.2.) ..... 15
Sitagliptin phosphate monohydrate ..... 3795
Sitagliptin tablets ..... 3796
Size-exclusion chromatography (2.2.30.) ..... 51
(*S*)-Lactic acid ..... 3051
Smallpox vaccine (live) ..... 1037
Sodium acetate ([1-$^{11}$C]) injection ..... 1225
Sodium acetate trihydrate ..... 3797
Sodium alendronate trihydrate ..... 3798
Sodium alginate ..... 3799
Sodium aluminium silicate ..... 1803
Sodium amidotrizoate ..... 3800
Sodium aminosalicylate dihydrate ..... 3801
Sodium ascorbate ..... 3802
Sodium aurothiomalate ..... 3804
Sodium benzoate ..... 3805
Sodium bromide ..... 3806
Sodium calcium edetate ..... 3807
Sodium calcium pentetate for radiopharmaceutical preparations ..... 1223
Sodium caprylate ..... 3808
Sodium carbonate ..... 3809
Sodium carbonate decahydrate ..... 3809
Sodium carbonate monohydrate ..... 3810
Sodium carboxymethylcellulose ..... 2093
Sodium carboxymethylcellulose, cross-linked ..... 2318
Sodium carboxymethylcellulose, low-substituted ..... 2094
Sodium cetostearyl sulfate ..... 3810
Sodium chloride ..... 3812
Sodium chromate ($^{51}$Cr) sterile solution ..... 1226
Sodium citrate ..... 3813
Sodium cromoglicate ..... 3813
Sodium cyclamate ..... 3814
Sodium dihydrogen phosphate dihydrate ..... 3816
Sodium disulfite ..... 3829
Sodium ethyl parahydroxybenzoate ..... 3816
Sodium fluoride ..... 3818
Sodium fluoride ($^{18}$F) injection ..... 1227
Sodium fusidate ..... 3818
Sodium glycerophosphate, hydrated ..... 3821
Sodium hyaluronate ..... 3821
Sodium hydrogen carbonate ..... 3824
Sodium hydroxide ..... 3824
Sodium iodide ..... 3825
Sodium iodide ($^{123}$I) injection ..... 1228
Sodium iodide ($^{123}$I) solution for radiolabelling ..... 1228
Sodium iodide ($^{131}$I) capsules for diagnostic use ..... 1229
Sodium iodide ($^{131}$I) capsules for therapeutic use ..... 1230
Sodium iodide ($^{131}$I) solution ..... 1231
Sodium iodide ($^{131}$I) solution for radiolabelling ..... 1232
Sodium iodohippurate ($^{123}$I) injection ..... 1233
Sodium iodohippurate ($^{131}$I) injection ..... 1234
Sodium iodohippurate dihydrate for radiopharmaceutical preparations ..... 1234
Sodium lactate solution ..... 3825
Sodium laurilsulfate ..... 3827
Sodium lauroylsarcosinate for external use ..... 3828
Sodium metabisulfite ..... 3829
Sodium methyl parahydroxybenzoate ..... 3830
Sodium molybdate ($^{99}$Mo) solution (fission) ..... 1235
Sodium molybdate dihydrate ..... 3831
Sodium nitrite ..... 3832
Sodium nitroprusside ..... 3832
Sodium perborate, hydrated ..... 3833
Sodium pertechnetate ($^{99m}$Tc) injection (accelerator-produced) ..... 1237
Sodium pertechnetate ($^{99m}$Tc) injection (fission) ..... 1238
Sodium pertechnetate ($^{99m}$Tc) injection (non-fission) ..... 1240
Sodium phenylbutyrate ..... 3833
Sodium phosphate ($^{32}$P) injection ..... 1240
Sodium picosulfate ..... 3835
Sodium polystyrene sulfonate ..... 3836
Sodium propionate ..... 3837
Sodium propyl parahydroxybenzoate ..... 3838
Sodium pyrophosphate decahydrate for radiopharmaceutical preparations ..... 1241
Sodium risedronate 2.5-hydrate ..... 3729
Sodium salicylate ..... 3839
Sodium selenite ..... 3840
Sodium selenite pentahydrate ..... 3840
Sodium (*S*)-lactate solution ..... 3826
Sodium starch glycolate (type A) ..... 3841
Sodium starch glycolate (type B) ..... 3842
Sodium starch glycolate (type C) ..... 3843
Sodium stearate ..... 3844
Sodium stearyl fumarate ..... 3845
Sodium sulfate, anhydrous ..... 3846
Sodium sulfate decahydrate ..... 3847
Sodium sulfite ..... 3847
Sodium sulfite heptahydrate ..... 3848
Sodium tetrachloroaurate dihydrate for homoeopathic preparations ..... 1704
Sodium thiosulfate ..... 3848
Sodium valproate ..... 3849
Soft capsules ..... 906
Soft extracts ..... 867
Softening time determination of lipophilic suppositories (2.9.22.) ..... 363
Solid dosage forms, dissolution test for (2.9.3.) ..... 326

Solid dosage forms, recommendations on dissolution testing of (5.17.1.) 801
Solids by mercury porosimetry, porosity and pore-size distribution of (2.9.32.) 377
Solids, density of (2.2.42.) 76
Solids, gas pycnometric density of (2.9.23.) 364
Solids (porous) including powders, wettability of (2.9.45.) 406
Solifenacin succinate 3850
Solubility in alcohol of essential oils (2.8.10.) 306
Soluble tablets 939
Solution calorimetry and microcalorimetry, characterisation of crystalline solids by (2.2.61.) 115
Solutions, emulsions and suspensions, oral 917
Solutions for haemodialysis 2798
Solutions for haemodialysis, concentrated, water for diluting 2797
Solutions for haemofiltration and haemodiafiltration 2803
Solutions for organ preservation 3852
Solutions for peritoneal dialysis 3515
Solutions, suspensions, intrauterine 914
Solvents, residual (5.4.) 717
Solvents, residual, identification and control (2.4.24.) 152
Somatostatin 3853
Somatropin 3854
Somatropin concentrated solution 3856
Somatropin for injection 3858
Somatropin solution for injection 3860
Sophora flower 1626
Sophora flower-bud 1628
Sorbic acid 3861
Sorbitan laurate 3862
Sorbitan oleate 3862
Sorbitan palmitate 3863
Sorbitan sesquioleate 3863
Sorbitan stearate 3864
Sorbitan trioleate 3865
Sorbitol 3865
Sorbitol, liquid (crystallising) 3867
Sorbitol, liquid (non-crystallising) 3867
Sorbitol, liquid, partially dehydrated 3868
Sorption-desorption isotherms and water activity, determination of (water-solid interactions) (2.9.39.) 394
Sotalol hydrochloride 3869
Soya phospholipids for injection 3870
Soya-bean oil, hydrogenated 3872
Soya-bean oil, refined 3873
Spanish sage oil 1629
Specific surface area by air permeability (2.9.14.) 343
Specific surface area by gas adsorption (2.9.26.) 369
Spectinomycin dihydrochloride pentahydrate 3873
Spectinomycin sulfate tetrahydrate for veterinary use 3875
Spectrometry, atomic absorption (2.2.23.) 37
Spectrometry, atomic emission (2.2.22.) 36
Spectrometry, mass (2.2.43.) 77
Spectrometry, nuclear magnetic resonance (2.2.33.) 58
Spectrometry, X-ray fluorescence (*2.2.37.*) 65
Spectrophotometry, infrared absorption (2.2.24.) 39
Spectrophotometry, ultraviolet and visible absorption (2.2.25.) 42
Spectroscopy, near-infrared (2.2.40.) 70
Spectroscopy, Raman (2.2.48.) 92
SPF chicken flocks for the production and quality control of vaccines (5.2.2.) 647
Spheroids and granules, friability of (2.9.41.) 400
Spike lavender oil 1630
Spiramycin 3877
Spirapril hydrochloride monohydrate 3880
Spironolactone 3881
Spot-on preparations 942
Sprays (liquid nasal) and drops (nasal) 919
Sprays, veterinary 942
Squalane 3883
Squalene 3886
St. John's wort 1631
St. John's wort dry extract, quantified 1633
Standard solutions for limit tests (4.1.2.) 598
Standards, reference (5.12.) 773
Stannous chloride dihydrate 3886
Stanozolol 3887
Staphysagria for homoeopathic preparations 1726
Star anise 1635
Star anise oil 1636
Starch glycolate (type A), sodium 3841
Starch glycolate (type B), sodium 3842
Starch glycolate (type C), sodium 3843
Starch, hydroxypropyl 3888
Starch, hydroxypropyl, pregelatinised 3890
Starch, maize 3167
Starch, pea 3492
Starch, potato 3611
Starch, pregelatinised 3891
Starch, rice 3721
Starch, wheat 4209
Starches, hydroxyethyl 3892
Starflower (borage) oil, refined 1992
Statistical analysis of results of biological assays and tests (5.3.) 685
Stavudine 3896
Steam sterilisation of aqueous preparations, application of the $F_0$ concept (5.1.5.) 628
Stearic acid 3898
Stearoyl macrogolglycerides 3899
Stearyl alcohol 3900
Stem cells, human haematopoietic 2857
Stephania root, fourstamen 1438
Sterile braided silk suture in distributor for veterinary use 1283
Sterile catgut 1269
Sterile catgut in distributor for veterinary use 1281
Sterile containers of plasticised poly(vinyl chloride) for human blood containing anticoagulant solution (3.3.6.) 474
Sterile linen thread in distributor for veterinary use 1282
Sterile non-absorbable strands in distributor for veterinary use 1283
Sterile non-absorbable sutures 1270
Sterile plastic containers for human blood and blood components (3.3.4.) 471
Sterile polyamide suture in distributor for veterinary use 1282
Sterile poly(ethylene terephthalate) suture in distributor for veterinary use 1283
Sterile products, biological indicators and related microbial preparations used in the manufacture of (5.1.2.) 622
Sterile products, methods of preparation of (5.1.1.) 619
Sterile single-use plastic syringes (3.3.8.) 477
Sterile synthetic absorbable braided sutures 1274
Sterile synthetic absorbable monofilament sutures 1275
Sterility (2.6.1.) 191
Sterility, guidelines for using the test for (5.1.9.) 639
Sterols in fatty oils (2.4.23.) 150
Sticks 937
Sticks, intrauterine 914
Sticks, nasal 920
Stomata and stomatal index (2.8.3.) 305
Stramonium leaf 1638
Stramonium, prepared 1640
Strands, sterile non-absorbable, in distributor for veterinary use 1283
Streptokinase concentrated solution 3901
Streptomycin sulfate 3902
Strontium ($^{89}$Sr) chloride injection 1242
Strychnos ignatii for homoeopathic preparations 1719
Subdivision of tablets 937
Sublingual sprays, oromucosal drops and oromucosal sprays 920
Sublingual tablets and buccal tablets 922
Substances for pharmaceutical use 890

Substances for pharmaceutical use, control of impurities in (5.10.) ... 763
Substances of animal origin for the production of immunological veterinary medicinal products (5.2.5.) ... 656
Substitution of *in vivo* method(s) by *in vitro* method(s) for the quality control of vaccines (5.2.14.) ... 679
Sub-visible particles, particulate contamination (2.9.19.) ... 360

Trolamine ..... 4106
Trometamol ..... 4107
Tropicamide ..... 4108
Tropisetron hydrochloride ..... 4110
Trospium chloride ..... 4111
Troxerutin ..... 4112
Trypsin ..... 4114
Tryptophan ..... 4115
TSE, animal, minimising the risk of transmitting via human and veterinary medicinal products (5.2.8.) ..... 661
TSE, animal, products with risk of transmitting agents of .. 884
Tuberculin for human use, old ..... 4117
Tuberculin purified protein derivative, avian ..... 4119
Tuberculin purified protein derivative, bovine ..... 4120
Tuberculin purified protein derivative for human use ..... 4120
Tuberculosis (BCG) vaccine, freeze-dried ..... 949
Tubes for comparative tests (2.1.5.) ..... 17
Tubing and closures, silicone elastomer for (3.1.9.) ..... 436
Tubing and containers for total parenteral nutrition preparations, poly(ethylene - vinyl acetate) for (3.1.7.) ..... 434
Tubing used in sets for the transfusion of blood and blood components, materials based on plasticised poly(vinyl chloride) for (3.3.3.) ..... 468
Turkey infectious rhinotracheitis vaccine (live) ..... 1162
Turmeric, Javanese ..... 1652
Turmeric rhizome ..... 1653
Turpentine oil ..... 1655
Tylosin for veterinary use ..... 4122
Tylosin phosphate bulk solution for veterinary use ..... 4127
Tylosin phosphate for veterinary use ..... 4131
Tylosin tartrate for veterinary use ..... 4136
Typhae pollen ..... 1656
Typhoid polysaccharide and hepatitis A (inactivated, adsorbed) vaccine ..... 982
Typhoid polysaccharide vaccine ..... 1044
Typhoid vaccine ..... 1046
Typhoid vaccine (live, oral, strain Ty 21a) ..... 1046
Tyrosine ..... 4140
Tyrothricin ..... 4142

**U**

Ubidecarenone ..... 4147
Udder-washes ..... 942
Ultraviolet and visible absorption spectrophotometry (2.2.25.) ..... 42
Ultraviolet ray lamps for analytical purposes (2.1.3.) ..... 15
Uncaria stem with hooks ..... 1657
Uncoated tablets ..... 938
Undecylenic acid ..... 4148
Uniformity of content of single-dose preparations (2.9.6.) .. 336
Uniformity of dosage units (2.9.40.) ..... 398
Uniformity of dosage units, demonstration using large sample sizes (2.9.47.) ..... 409
Uniformity of mass of delivered doses from multidose containers (2.9.27.) ..... 372
Uniformity of mass of single-dose preparations (2.9.5.) ..... 335
Units of the International System (SI) used in the Pharmacopoeia and equivalence with other units (1.) ..... 3
Unsaponifiable matter (2.5.7.) ..... 169
Urea ..... 4149
Urofollitropin ..... 4149
Urokinase ..... 4151
Uronic acids in polysaccharide vaccines (2.5.22.) ..... 174
Ursodeoxycholic acid ..... 4152
Urtica dioica for homoeopathic preparations ..... 1728

**V**

Vaccine component assay by immunonephelometry (2.7.35.) ..... 301
Vaccines, adsorbed, aluminium in (2.5.13.) ..... 171
Vaccines, adsorbed, calcium in (2.5.14.) ..... 172
Vaccines and immunosera, phenol in (2.5.15.) ..... 172
Vaccines and immunosera, veterinary, evaluation of efficacy of (5.2.7.) ..... 661
Vaccines and immunosera, veterinary, evaluation of safety (5.2.6.) ..... 658
Vaccines for human use ..... 893
Vaccines for human use, cell substrates for the production of (5.2.3.) ..... 650
Vaccines for human use, conjugated polysaccharide, carrier proteins for the production of (5.2.11.) ..... 674
Vaccines for human use, viral, tests for extraneous agents in (2.6.16.) ..... 214
Vaccines for veterinary use ..... 896
Vaccines for veterinary use, inactivated, healthy chicken flocks for the production of (5.2.13.) ..... 679
Vaccines, polysaccharide, hexosamines in (2.5.20.) ..... 173
Vaccines, polysaccharide, methylpentoses in (2.5.21.) ..... 173
Vaccines, polysaccharide, nucleic acids in (2.5.17.) ..... 172
Vaccines, polysaccharide, *O*-acetyl in (2.5.19.) ..... 173
Vaccines, polysaccharide, phosphorus in (2.5.18.) ..... 172
Vaccines, polysaccharide, protein in (2.5.16.) ..... 172
Vaccines, polysaccharide, ribose in (2.5.31.) ..... 177
Vaccines, polysaccharide, sialic acid in (2.5.23.) ..... 174
Vaccines, polysaccharide, uronic acids in (2.5.22.) ..... 174
Vaccines, SPF chicken flocks for the production and quality control of (5.2.2.) ..... 647
Vaccines, substitution of *in vivo* method(s) by *in vitro* method(s) for the quality control of (5.2.14.) ..... 679

Vaccines, veterinary, cell cultures for the production of (5.2.4.) ... 654
Vaccines, viral live, test for neurovirulence (2.6.18.) ... 218
Vaginal capsules ... 941
Vaginal foams ... 941
Vaginal preparations ... 940
Vaginal preparations, semi-solid ... 941
Vaginal solutions and suspensions, tablets for ... 941
Vaginal solutions, emulsions and suspensions ... 941
Vaginal tablets ... 941
Vaginal tampons, medicated ... 941
Valaciclovir hydrochloride ... 4157
Valaciclovir hydrochloride hydrate ... 4160
Valerian dry aqueous extract ... 1659
Valerian dry hydroalcoholic extract ... 1660
Valerian root ... 1660
Valerian root, cut ... 1662
Valerian tincture ... 1664
Validation of nucleic acid amplification techniques for the detection of B19 virus (B19V) DNA in plasma pools: guidelines ... 219
Validation of nucleic acid amplification techniques for the detection of hepatitis C virus (HCV) RNA in plasma pools: guidelines ... 219
Valine ... 4162
Valnemulin hydrochloride for veterinary use ... 4164
Valproate, sodium ... 3849
Valproic acid ... 4165
Valsartan ... 4167
Vancomycin hydrochloride ... 4168
Vanillin ... 4172
Vapour, preparations to be converted into ... 928
Vardenafil hydrochloride trihydrate ... 4172
Varicella immunoglobulin for intravenous administration, human ... 2875
Varicella immunoglobulin, human ... 2875
Varicella, measles, mumps and rubella vaccine (live) ... 1006
Varicella vaccine (live) ... 1048
Vectors for human use, adeno-associated-virus ... 788
Vectors for human use, adenovirus ... 782
Vectors for human use, plasmid ... 780
Vectors for human use, plasmid, bacterial cells used for the manufacture of ... 781
Vectors for human use, poxvirus ... 784
Vectors for human use, retroviridae-derived ... 786
Vecuronium bromide ... 4173
Vedaprofen for veterinary use ... 4175
Vegetable fatty oils ... 901
Venlafaxine hydrochloride ... 4176
Verapamil hydrochloride ... 4178
Verbena herb ... 1665
Veterinary liquid preparations for cutaneous application ... 941
Veterinary medicinal products, immunological, substances of animal origin for the production of (5.2.5.) ... 656
Veterinary semi-solid preparations for oral use ... 942
Veterinary vaccines and immunosera, evaluation of efficacy of (5.2.7.) ... 661
Viability, nucleated cell count and (2.7.29.) ... 297
Vibriosis (cold-water) vaccine (inactivated) for salmonids ... 1163
Vibriosis vaccine (inactivated) for salmonids ... 1164
VICH (5.8.) ... 755
Vigabatrin ... 4180
Vinblastine sulfate ... 4181
Vincamine ... 4182
Vincristine sulfate ... 4183
Vindesine sulfate ... 4185
Vinorelbine tartrate ... 4186
Vinpocetine ... 4188
Viper venom antiserum, European ... 1174
Viral diarrhoea vaccine (inactivated), bovine ... 1075
Viral hepatitis type I vaccine (live), duck ... 1099
Viral rhinotracheitis vaccine (inactivated), feline ... 1113
Viral rhinotracheitis vaccine (live), feline ... 1114
Viral safety (5.1.7.) ... 637
Viral tenosynovitis vaccine (live), avian ... 1069
Viral vaccines for human use, tests for extraneous agents in (2.6.16.) ... 214
Viscometer method, capillary (2.2.9.) ... 27
Viscometer methods, falling ball and automatic rolling ball (2.2.49.) ... 94
Viscose wadding, absorbent ... 4189
Viscosity - rotating viscometer method (2.2.10.) ... 28
Viscosity (2.2.8.) ... 27
Visible and ultraviolet absorption spectrophotometry (2.2.25.) ... 42
Visible particles, particulate contamination (2.9.20.) ... 362
Vitamin A ... 4191
Vitamin A concentrate (oily form), synthetic ... 4192
Vitamin A concentrate (powder form), synthetic ... 4193
Vitamin A concentrate (solubilisate/emulsion), synthetic ... 4194
Voltametric titration (2.2.65.) ... 119
Volumetric analysis (4.2.) ... 609
Volumetric solutions (4.2.2.) ... 609
Volumetric solutions, primary standards for (4.2.1.) ... 609
von Willebrand factor, human ... 2875
von Willebrand factor, human, assay of (2.7.21.) ... 290
Voriconazole ... 4196

**W**

Warfarin sodium ... 4201
Warfarin sodium clathrate ... 4202
Washes, nasal ... 920
Water ($^{15}$O) injection ... 1264
Water activity and sorption-desorption isotherms, determination of (water-solid interactions) (2.9.39.) ... 394
Water, determination by distillation (2.2.13.) ... 31
Water for diluting concentrated haemodialysis solutions ... 2797
Water for injections ... 4203
Water for pharmaceutical use, total organic carbon in (2.2.44.) ... 79
Water for preparation of extracts ... 4206
Water in essential oils (2.8.5.) ... 306
Water in gases (2.5.28.) ... 176
Water: micro determination (2.5.32.) ... 178
Water, purified ... 4207
Water: semi-micro determination (2.5.12.) ... 171
Water-solid interactions: determination of sorption-desorption isotherms and of water activity (2.9.39.) ... 394
Wettability of porous solids including powders (2.9.45.) ... 406
Wheat starch ... 4209
Wheat-germ oil, refined ... 4210
Wheat-germ oil, virgin ... 4210
White beeswax ... 1931
White horehound ... 1667
White peony root ... 1573
White soft paraffin ... 3485
Wild pansy (flowering aerial parts) ... 1668
Wild thyme ... 1669
Willow bark ... 1671
Willow bark dry extract ... 1672
Wool alcohols ... 4210
Wool fat ... 4211
Wool fat, hydrogenated ... 4215
Wool fat, hydrous ... 4216
Wormwood ... 1673

**X**

Xanthan gum ... 4221
Xenon ($^{133}$Xe) injection ... 1264
X-ray fluorescence spectrometry (*2.2.37.*) ... 65
X-ray powder diffraction (XRPD), characterisation of crystalline and partially crystalline solids by (2.9.33.) ... 379
Xylazine hydrochloride for veterinary use ... 4222
Xylitol ... 4223

Xylometazoline hydrochloride ..... 4225
Xylose ..... 4226

**Y**

Yarrow ..... 1674
Yeasticidal, bactericidal or fungicidal activity of antiseptic medicinal products, determination of (5.1.11.) ..... 643
Yellow beeswax ..... 1932
Yellow fever vaccine (live) ..... 1049
Yellow soft paraffin ..... 3486
Yersiniosis vaccine (inactivated) for salmonids ..... 1102
Yohimbine hydrochloride ..... 4231
Yttrium ($^{90}$Y) chloride solution for radiolabelling ..... 1265

**Z**

Zanamivir hydrate ..... 4235
Zanthoxylum bungeanum pericarp ..... 1675
Zidovudine ..... 4236
Zinc acetate dihydrate ..... 4238
Zinc acexamate ..... 4239
Zinc chloride ..... 4241
Zinc gluconate ..... 4241
Zinc oxide ..... 4242
Zinc stearate ..... 4242
Zinc sulfate heptahydrate ..... 4243
Zinc sulfate hexahydrate ..... 4244
Zinc sulfate monohydrate ..... 4244
Zinc undecylenate ..... 4244
Ziprasidone hydrochloride monohydrate ..... 4245
Ziprasidone mesilate trihydrate ..... 4247
Zoledronic acid monohydrate ..... 4249
Zolmitriptan ..... 4251
Zolpidem tartrate ..... 4252
Zopiclone ..... 4254
Zoster (shingles) vaccine (live), herpes ..... 1036
Zuclopenthixol decanoate ..... 4255

*α-1-Proteinasi inhibitor humanum* ..... 2869

### EUROPEAN PHARMACOPOIEA ELECTRONIC VERSION

http://pheur.edqm.eu

### ORDERS AND PRICES

www.edqm.eu/store

### HELPDESK

www.edqm.eu/hd

To send a question, consult the FAQs or contact the EDQM, use the HelpDesk, which is accessible through the EDQM website.

### KNOWLEDGE

http://go.edqm.eu/knowledge

The Knowledge database provides additional information on the texts published in the European Pharmacopoeia, including work in progress, the volume of Pharmeuropa and of the European Pharmacopoeia in which a text has been published, the trade names of reagents and chromatography columns used during the elaboration of monographs, the history of revisions since the 5$^{th}$ Edition, representative chromatograms, the list of reference standards used and the list of certificates granted.

### REFERENCE STANDARDS

http://crs.edqm.eu

The list of released European Pharmacopoeia reference standards, which is updated daily, and their terms of supply can be accessed through this database.

### CERTIFICATION

http://go.edqm.eu/CEPdatabase

This database provides information on Certificates of Suitability (CEPs) granted by the EDQM.

# EUROPEAN PHARMACOPOEIA – 10th EDITION

published July 2019

replaces the 9th Edition on 1 January 2020

## BOOK

Volumes I, II and III of this publication 10.0 constitute the 10th Edition of the European Pharmacopoeia. They will be complemented by **non-cumulative supplements** (see the publication schedule opposite) that are to be kept for the duration of the 10th Edition. Each new edition or supplement of the European Pharmacopoeia is usually published 6 months before its implementation date.

To use the 10th Edition correctly, make sure that you have all the published supplements and consult the index of the most recent supplement to ensure that you use the latest versions of the monographs and general chapters.

A cumulative list of reagents will be published in supplements 10.4 and 10.7. A list of new reagents published during the course of the 10th Edition is available under 'Useful information' in Pharmeuropa Online.

## ELECTRONIC VERSION

The 10th Edition is also available in an electronic format containing all of the monographs and general chapters found in the book. With the publication of each supplement the electronic version is replaced by a new, fully updated, cumulative version. Each update of the electronic version is usually available 6 months before its implementation date. A list of new reagents published during the course of the 10th Edition is available under 'Useful information' in Pharmeuropa Online.

## CORRECTIONS

Corrections are to be taken into account as soon as possible and not later than the end of the month following the month of publication (see the publication schedule opposite).

## PHARMACOPOEIAL HARMONISATION

See the information given in general chapter *5.8. Pharmacopoeial harmonisation*.

## ARCHIVES

http://pheur.edqm.eu

The European Pharmacopoeia Archives contain all obsolete editions and supplements in PDF format. They are available to all European Pharmacopoeia subscribers with an up-to-date subscription (book or electronic version) and a registered EPID code. To access the archives, register the EPID code which can be found on the inside-front cover. The registration page is accessible through the EDQM website (https://pheur.edqm.eu/user/register/).

# PHARMEUROPA ONLINE

European Pharmacopoeia's free online forum

http://pharmeuropa.edqm.eu

Pharmeuropa Online contains preliminary drafts of new and revised texts proposed for inclusion in the European Pharmacopoeia and gives an opportunity for all interested parties to comment on the specifications before they are finalised.

Pharmeuropa Online also contains information on the work programme or of general interest and articles published in Pharmeuropa Bio & Scientific Notes (containing scientific articles on pharmacopoeial matters).

**Archives** of Pharmeuropa and Pharmeuropa Bio & Scientific Notes can be accessed via this website.

# COMBISTATS

www.edqm.eu/combistats

CombiStats is a computer program for the statistical analysis of data from biological assays in agreement with general chapter 5.3. *Statistical analysis of results of biological assays and tests* of the 10th Edition of the European Pharmacopoeia.

# KEY TO MONOGRAPHS

*Version date of the text*

**01/2012:0884**
**corrected 10.0**

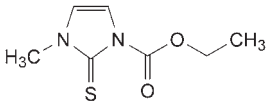
*Text reference number*

*Modification to be taken into account as soon as possible and not later than the end of the month following the month of publication of Ph. Eur. 10.0 (see section IV. Contents of the 10th Edition)*

*Link to further information on the text (e.g. Knowledge database) for smartphones/tablets with camera and barcode reader app*

## CARBIMAZOLE(1)

Carbimazolum



$C_7H_{10}N_2O_2S$

[22232-54-8] $M_r$ 186.2

*CAS number*

DEFINITION

Ethyl 3-methyl-2-thioxo-2,3-dihydro-1*H*-imidazole-1-carboxylate.

*Chemical name in accordance with IUPAC nomenclature rules*

*Content*: 98.0 per cent to 102.0 per cent (dried substance).

*For the meaning of black and white diamonds see chapter 5.8. Pharmacopoeial harmonisation*

♦CHARACTERS

*Appearance*: white or yellowish-white, crystalline powder.

*Solubility*: slightly soluble in water, soluble in acetone and in ethanol (96 per cent). ♦

IDENTIFICATION

*First identification: B.*

*Second identification: A, C.*

*Application of the first and second identification is defined in the General Notices (chapter 1)*

◊A. Melting point (*2.2.14*): 122 °C to 125 °C.◊

B. Infrared absorption spectrophotometry (*2.2.24*).

*Preparation*: discs.

*Comparison*: *carbimazole CRS*.

*Reference standard available from the EDQM (see http://crs.edqm.eu)*

C. Thin-layer chromatography (*2.2.27*).

*Test solution*. Dissolve 10 mg of the substance to be examined in *methylene chloride R* and dilute to 10 mL with the same solvent.

*Reagent described in chapter 4*

*Reference solution*. Dissolve 10 mg of *carbimazole CRS* in *methylene chloride R* and dilute to 10 mL with the same solvent.

*Plate*: *TLC silica gel GF254 plate R*.

*Further information on certain reagents available in the Knowledge database (http://go.edqm.eu/knowledge)*

*Mobile phase*: *acetone R*, *methylene chloride R* (20:80 *V/V*).

*Application*: 10 µL.

*Development*: over 3/4 of the plate.

*Drying*: in air for 30 min.

*Vertical line in the margin indicating where the text has been modified*

*Detection*: examine in ultraviolet light at 254 nm.

*Results*: the principal spot in the chromatogram obtained with the test solution is similar in position and size to the principal spot in the chromatogram obtained with the reference solution.

*Horizontal line in the margin indicating where part of the text has been deleted*

TESTS

**Related substances**. Liquid chromatography (*2.2.29*).

*Reference to a general chapter*

*Test solution.* Dissolve 5.0 mg of the substance to be examined in 10.0 mL of a mixture of 20 volumes of *acetonitrile R* and 80 volumes of *water R*. Use this solution within 5 min of preparation.

(1) This monograph has undergone pharmacopoeial harmonisation. See chapter 5.8. *Pharmacopoeial harmonisation*.

SPECIMEN

*IMPORTANT NOTICE*

# GENERAL MONOGRAPHS

The European Pharmacopoeia contains a number of general monographs covering classes of products. These general monographs give requirements that are applicable to all products in the given class or, in some cases, to any product in the given class for which there is a specific monograph in the Pharmacopoeia (see *1. General Notices*, General monographs). Where no restriction on scope of a general monograph is given in a preamble, it is applicable to all products in the class defined, irrespective of whether there is an individual monograph for the product in the Pharmacopoeia.

Whenever a monograph is used, it is essential to ascertain whether there is a general monograph applicable to the product in question. The general monographs listed below are published in the General Monographs section (unless otherwise stated). This list is updated where necessary and republished in each supplement.

Allergen products (1063)

Chemical precursors for radiopharmaceutical preparations (2902)

Dosage Forms monographs
*(published in the Dosage Forms section or the Homoeopathic Preparations section, as appropriate)*

Essential oils (2098)

Herbal drug extracts (0765)

Herbal drug preparations (1434)

Herbal drugs (1433)

Herbal drugs for homoeopathic preparations (2045)
*(published in the Homoeopathic Preparations section)*

Herbal teas (1435)

Herbal teas, instant (2620)

Homoeopathic preparations (1038)
*(published in the Homoeopathic Preparations section)*

Immunosera for human use, animal (0084)
