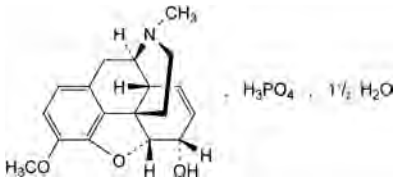
# CODEINE PHOSPHATE SESQUIHYDRATE

## Codeini phosphas sesquihydricus



$C_{18}H_{24}NO_7P,1½H_2O$ $M_r$ 424.4
[5913-76-8]

DEFINITION

7,8-Didehydro-4,5α-epoxy-3-methoxy-17-methylmorphinan-6α-ol phosphate sesquihydrate.

*Content*: 98.5 per cent to 101.0 per cent (dried substance).

CHARACTERS

*Appearance*: white or almost white, crystalline powder or small, colourless crystals.

*Solubility*: freely soluble in water, slightly soluble in ethanol (96 per cent).

IDENTIFICATION

*First identification*: *B, E, F.*

*Second identification*: *A, C, D, E, F, G.*

A. Ultraviolet and visible absorption spectrophotometry (*2.2.25*).

*Test solution*. Dilute 1.0 mL of solution S (see Tests) to 100.0 mL with *water R*. To 25.0 mL of this solution add 25 mL of *water R* then 10 mL of *1 M sodium hydroxide* and dilute to 100.0 mL with *water R*.

*Spectral range*: 250-350 nm.

*Absorption maximum*: at 284 nm.

*Specific absorbance at the absorption maximum*: about 38 (dried substance).

B. Infrared absorption spectrophotometry (*2.2.24*).

*Preparation*: dissolve 0.20 g in 4 mL of *water R*. Add 1 mL of a mixture of equal volumes of *strong sodium hydroxide solution R* and *water R* and initiate crystallisation, if necessary, by scratching the wall of the tube with a glass rod and cooling in iced water. Wash the precipitate with *water R* and dry at 100-105 °C. Examine the dried precipitate prepared as discs using *potassium bromide R*.

*Comparison*: *Ph. Eur. reference spectrum of codeine.*

C. Dissolve 0.20 g in 4 mL of *water R*. Add 1 mL of a mixture of equal volumes of *strong sodium hydroxide solution R* and *water R* and initiate crystallisation, if necessary, by scratching the wall of the tube with a glass rod and cooling in iced water. The precipitate, washed with *water R* and dried at 100-105 °C, melts (*2.2.14*) at 155 °C to 159 °C.

D. To about 10 mg add 1 mL of *sulfuric acid R* and 0.05 mL of *ferric chloride solution R2* and heat on a water-bath. A blue colour develops. Add 0.05 mL of *nitric acid R*. The colour changes to red.

E. Loss on drying (see Tests).

F. Solution S gives reaction (a) of phosphates (*2.3.1*).

G. It gives the reaction of alkaloids (*2.3.1*).

TESTS

**Solution S**. Dissolve 1.00 g in *carbon dioxide-free water R* prepared from *distilled water R* and dilute to 25.0 mL with the same solvent.

**pH** (*2.2.3*): 4.0 to 5.0 for solution S.

**Specific optical rotation** (*2.2.7*): – 98 to – 102 (dried substance).

Dilute 5.0 mL of solution S to 10.0 mL with *water R*.

**Related substances**. Liquid chromatography (*2.2.29*).

*Test solution*. Dissolve 0.100 g of the substance to be examined and 0.100 g of *sodium octanesulfonate R* in the mobile phase and dilute to 10.0 mL with the mobile phase.

*Reference solution (a)*. Dissolve 5.0 mg of *codeine impurity A CRS* in the mobile phase and dilute to 5.0 mL with the mobile phase.

*Reference solution (b)*. Dilute 1.0 mL of reference solution (a) to 20.0 mL with the mobile phase.

*Reference solution (c)*. Dilute 1.0 mL of the test solution to 50.0 mL with the mobile phase. Dilute 5.0 mL of this solution to 100.0 mL with the mobile phase.

*Reference solution (d)*. To 0.25 mL of the test solution add 2.5 mL of reference solution (a).

*Column*:

– *size*: *l* = 0.25 m, Ø = 4.6 mm;
– *stationary phase*: *end-capped octylsilyl silica gel for chromatography R* (5 µm).

*Mobile phase*: dissolve 1.08 g of *sodium octanesulfonate R* in a mixture of 20 mL of *glacial acetic acid R* and 250 mL of *acetonitrile R* and dilute to 1000 mL with *water R*.

*Flow rate*: 2 mL/min.

*Detection*: spectrophotometer at 245 nm.

*Injection*: 10 µL.

*Run time*: 10 times the retention time of codeine.

*Relative retention* with reference to codeine (retention time = about 6 min): impurity B = about 0.6; impurity E = about 0.7; impurity A = about 2.0; impurity C = about 2.3; impurity D = about 3.6.

*System suitability*: reference solution (d):

– *resolution*: minimum 3 between the peaks due to codeine and impurity A.

*Limits*:

– *correction factor*: for the calculation of content, multiply the peak area of impurity C by 0.25;
– *impurity A*: not more than twice the area of the principal peak in the chromatogram obtained with reference solution (b) (1.0 per cent);
– *impurities B, C, D, E*: for each impurity, not more than twice the area of the principal peak in the chromatogram obtained with reference solution (c) (0.2 per cent);
– *unspecified impurities*: for each impurity, not more than the area of the principal peak in the chromatogram obtained with reference solution (c) (0.10 per cent);

– *sum of impurities other than A*: not more than 10 times the area of the principal peak in the chromatogram obtained with reference solution (c) (1.0 per cent);

– *disregard limit*: 0.5 times the area of the principal peak in the chromatogram obtained with reference solution (c) (0.05 per cent).

**Sulfates** (*2.4.13*): maximum 0.1 per cent.

Dilute 5 mL of solution S to 20 mL with *distilled water R*.

**Loss on drying** (*2.2.32*): 5.0 per cent to 7.5 per cent, determined on 0.500 g by drying in an oven at 105 °C.

ASSAY

Dissolve 0.350 g in a mixture of 10 mL of *anhydrous acetic acid R* and 20 mL of *dioxan R*. Titrate with *0.1 M perchloric acid* using 0.05 mL of *crystal violet solution R* as indicator.

1 mL of *0.1 M perchloric acid* is equivalent to 39.74 mg of $C_{18}H_{24}NO_7P$.

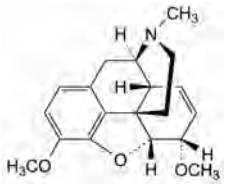
STORAGE

Protected from light.

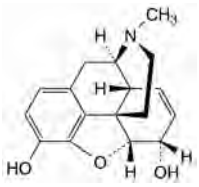
IMPURITIES

*Specified impurities: A, B, C, D, E.*

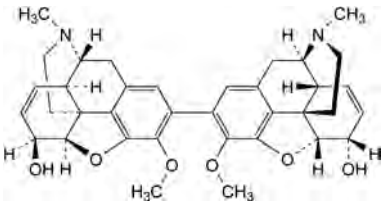
*Other detectable impurities* (the following substances would, if present at a sufficient level, be detected by one or other of the tests in the monograph. They are limited by the general acceptance criterion for other/unspecified impurities and/or by the general monograph *Substances for pharmaceutical use (2034)*. It is therefore not necessary to identify these impurities for demonstration of compliance. See also *5.10. Control of impurities in substances for pharmaceutical use*): *F, G.*



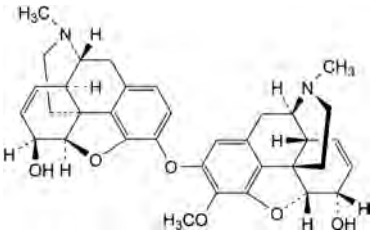
A. 7,8-didehydro-4,5α-epoxy-3,6α-dimethoxy-17-methylmorphinan (methylcodeine),



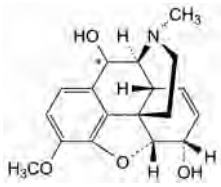
B. 7,8-didehydro-4,5α-epoxy-17-methylmorphinan-3,6α-diol (morphine),



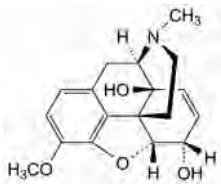
C. 7,7′,8,8′-tetradehydro-4,5α:4′,5′α-diepoxy-3,3′-dimethoxy-17,17′-dimethyl-2,2′-bimorphinanyl-6α,6′α-diol (codeine dimer),



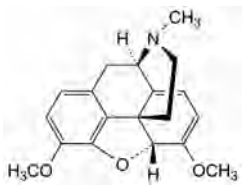
D. 7,8-didehydro-2-[(7,8-didehydro-4,5α-epoxy-6α-hydroxy-17-methylmorphinan-3-yl)oxy]-4,5α-epoxy-3-methoxy-17-methylmorphinan-6α-ol (3-*O*-(codein-2-yl)morphine),



E. 7,8-didehydro-4,5α-epoxy-3-methoxy-17-methylmorphinan-6α,10-diol,



F. 7,8-didehydro-4,5α-epoxy-3-methoxy-17-methylmorphinan-6α,14-diol,

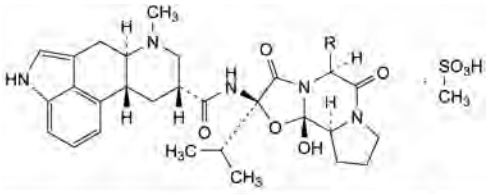


G. 6,7,8,14-tetradehydro-4,5α-epoxy-3,6-dimethoxy-17-methylmorphinan (thebaine).

**07/2013:2060**

# CODERGOCRINE MESILATE

## Codergocrini mesilas



| Name | Mol. Formula | $M_r$ | R |
|---|---|---|---|
| dihydroergocornine mesilate | $C_{32}H_{45}N_5O_8S$ | 660 | $H_3C$, $CH_3$ |
| dihydroergocristine mesilate | $C_{36}H_{45}N_5O_8S$ | 708 | |
| α-dihydroergocryptine mesilate | $C_{33}H_{47}N_5O_8S$ | 674 | $CH_3$, $CH_3$ |
| β-dihydroergocryptine mesilate | $C_{33}H_{47}N_5O_8S$ | 674 | $H_3C$, H, $CH_3$ |

[8067-24-1]

DEFINITION

A mixture of:

- (6a*R*,9*R*,10a*R*)-*N*-[(2*R*,5*S*,10a*S*,10b*S*)-10b-hydroxy-2,5-bis(1-methylethyl)-3,6-dioxooctahydro-8*H*-oxazolo[3,2-*a*]pyrrolo[2,1-*c*]pyrazin-2-yl]-7-methyl-4,6,6a,7,8,9,10,10a-octahydroindolo[4,3-*fg*]quinoline-9-carboxamide methanesulfonate (dihydroergocornine mesilate);
- (6a*R*,9*R*,10a*R*)-*N*-[(2*R*,5*S*,10a*S*,10b*S*)-5-benzyl-10b-hydroxy-2-(1-methylethyl)-3,6-dioxooctahydro-8*H*-oxazolo[3,2-*a*]pyrrolo[2,1-*c*]pyrazin-2-yl]-7-methyl-4,6,6a,7,8,9,10,10a-octahydroindolo[4,3-*fg*]quinoline-9-carboxamide methanesulfonate (dihydroergocristine mesilate);
- (6a*R*,9*R*,10a*R*)-*N*-[(2*R*,5*S*,10a*S*,10b*S*)-10b-hydroxy-2-(1-methylethyl)-5-(2-methylpropyl)-3,6-dioxooctahydro-8*H*-oxazolo[3,2-*a*]pyrrolo[2,1-*c*]pyrazin-2-yl]-7-methyl-4,6,6a,7,8,9,10,10a-octahydroindolo[4,3-*fg*]quinoline-9-carboxamide methanesulfonate (α-dihydroergocryptine mesilate);
- (6a*R*,9*R*,10a*R*)-*N*-[(2*R*,5*S*,10a*S*,10b*S*)-10b-hydroxy-2-(1-methylethyl)-5-[(1*RS*)-1-methylpropyl]-3,6-dioxooctahydro-8*H*-oxazolo[3,2-*a*]pyrrolo[2,1-*c*]pyrazin-2-yl]-7-methyl-4,6,6a,7,8,9,10,10a-octahydroindolo[4,3-*fg*]quinoline-9-carboxamide methanesulfonate (β-dihydroergocryptine mesilate or epicriptine mesilate).

*Content*: 98.0 per cent to 102.0 per cent (dried substance).

PRODUCTION

It is considered that alkylsulfonate esters are genotoxic and are potential impurities in codergocrine mesilate. The manufacturing process should be developed taking into consideration the principles of quality risk management, together with considerations of the quality of starting materials, process capability and validation. The general methods *2.5.37. Methyl, ethyl and isopropyl methanesulfonate in methanesulfonic acid*, *2.5.38. Methyl, ethyl and isopropyl methanesulfonate in active substances* and *2.5.39. Methanesulfonyl chloride in methanesulfonic acid* are available to assist manufacturers.

CHARACTERS

*Appearance*: white or yellowish powder.

*Solubility*: sparingly soluble in water, sparingly soluble to soluble in ethanol (96 per cent), slightly soluble in methylene chloride.

IDENTIFICATION

A. Thin-layer chromatography (*2.2.27*).

*Test solution.* Dissolve 0.20 g of the substance to be examined in a mixture of 1 volume of *methanol R* and 9 volumes of *methylene chloride R* and dilute to 5 mL with the same mixture of solvents.

*Reference solution.* Dissolve 0.20 g of *methanesulfonic acid R* in a mixture of 1 volume of *methanol R* and 9 volumes of *methylene chloride R* and dilute to 5 mL with the same mixture of solvents.

*Plate*: *TLC silica gel plate R*.

*Mobile phase*: *water R*, *concentrated ammonia R*, *butanol R*, *acetone R* (5:10:20:65 *V/V/V/V*).

*Application*: 10 µL.

*Development*: over 2/3 of the plate.

*Drying*: in a current of cold air for not more than 1 min.

*Detection*: spray with a 1 g/L solution of *bromocresol purple R* in *methanol R*, adjusted to a violet-red colour with 0.05 mL of *dilute ammonia R1*.

*Drying*: in a current of hot air at 100 °C.

*Results*: the principal spot in the chromatogram obtained with the test solution is similar in position and colour to the principal spot in the chromatogram obtained with the reference solution.

B. Examine the chromatograms obtained in the test for composition.

*Results*: the 4 principal peaks in the chromatogram obtained with the test solution are similar in retention time to the 4 principal peaks in the chromatogram obtained with the reference solution.

TESTS

**pH** (*2.2.3*): 4.2 to 5.2.

Dissolve 0.10 g in *carbon dioxide-free water R* and dilute to 20 mL with the same solvent.

**Composition**. Liquid chromatography (*2.2.29*): use the normalisation procedure.

*Test solution.* Dissolve 20 mg of the substance to be examined in a mixture of 1 volume of *anhydrous ethanol R* and 2 volumes of a 10 g/L solution of *tartaric acid R* and dilute to 10 mL with the same mixture of solvents.

*Reference solution.* Dissolve 20 mg of *codergocrine mesilate CRS* in a mixture of 1 volume of *anhydrous ethanol R* and 2 volumes of a 10 g/L solution of *tartaric acid R* and dilute to 10 mL with the same mixture of solvents.

*Column*:

- *size*: *l* = 0.15 m, Ø = 4.6 mm;
- *stationary phase*: *octadecylsilyl silica gel for chromatography R* (5 µm).

*Mobile phase*: *triethylamine R*, *acetonitrile R*, *water R* (2.5:25:75 *V/V/V*).

*Flow rate*: 1.5 mL/min.

*Detection*: spectrophotometer at 280 nm.

*Injection*: 20 µL.

*Run time*: 20 min.

*Elution order*: dihydroergocornine, α-dihydroergocryptine, dihydroergocristine, β-dihydroergocryptine.

*System suitability*: test solution:
- *resolution*: minimum 3 between any 2 consecutive principal peaks.

*Composition*:
- *dihydroergocornine*: 30.0 per cent to 35.0 per cent;
- *α-dihydroergocryptine*: 20.0 per cent to 25.0 per cent;
- *dihydroergocristine*: 30.0 per cent to 35.0 per cent;
- *β-dihydroergocryptine*: 10.0 per cent to 13.0 per cent;
- *disregard limit*: 1.0 per cent.

**Related substances**. Thin-layer chromatography (*2.2.27*). *Perform the test as rapidly as possible and protected from direct light. Prepare the test solution last and immediately before application on the plate.*

*Test solution.* Dissolve 0.40 g of the substance to be examined in a mixture of 1 volume of *methanol R* and 9 volumes of *methylene chloride R* and dilute to 5.0 mL with the same mixture of solvents.

*Reference solution (a).* Dissolve 40 mg of *dihydroergocristine mesilate CRS* in a mixture of 1 volume of *methanol R* and 9 volumes of *methylene chloride R* and dilute to 10.0 mL with the same mixture of solvents. Dilute 3.0 mL of the solution to 50.0 mL with a mixture of 1 volume of *methanol R* and 9 volumes of *methylene chloride R*.

*Reference solution (b).* To 2.0 mL of reference solution (a), add 1.0 mL of a mixture of 1 volume of *methanol R* and 9 volumes of *methylene chloride R*.

*Reference solution (c).* To 1.0 mL of reference solution (a), add 2.0 mL of a mixture of 1 volume of *methanol R* and 9 volumes of *methylene chloride R*.

*Reference solution (d).* To 1.0 mL of reference solution (a), add 5.0 mL of a mixture of 1 volume of *methanol R* and 9 volumes of *methylene chloride R*.

*Plate*: *TLC silica gel plate R*.

*Mobile phase*: *concentrated ammonia R*, *methanol R*, *ethyl acetate R*, *methylene chloride R* (1:3:50:50 *V/V/V/V*).

*Application*: 10 µL.

*Drying*: in the dark for 2 min after the application of the last solution.

*First development*: in an unsaturated tank, over 2/3 of the plate.

*Drying*: in a current of cold air for not more than 1 min.

*Second development*: in an unsaturated tank, over 2/3 of the plate; use freshly prepared mobile phase.

*Drying*: in a current of cold air for not more than 1 min.

*Detection*: spray thoroughly with *dimethylaminobenzaldehyde solution R7* and dry in a current of hot air until the spot in the chromatogram obtained with reference solution (d) is clearly visible.

*System suitability*: test solution:
- the chromatogram shows at least 3 separated secondary spots.

*Limits*:
- *any impurity*: any spots, apart from the principal spot, are not more intense than the spot in the chromatogram obtained with reference solution (a) (0.3 per cent); not more than 4 such spots are more intense than the spot in the chromatogram obtained with reference solution (c) (0.1 per cent) and 2 of these may be more intense than the spot in the chromatogram obtained with reference solution (b) (0.2 per cent).

**Loss on drying** (*2.2.32*): maximum 5.0 per cent, determined on 0.500 g by drying at 120 °C under high vacuum.

ASSAY

Dissolve 0.500 g in 60 mL of *pyridine R*. Pass a stream of *nitrogen R* over the surface of the solution and titrate with *0.1 M tetrabutylammonium hydroxide*, determining the end-point potentiometrically (*2.2.20*).

1 mL of *0.1 M tetrabutylammonium hydroxide* is equivalent to 68.04 mg of codergocrine mesilate (average $M_r$ = 680).

STORAGE

Protected from light.

**07/2012:2398**

# COD-LIVER OIL, FARMED

## Iecoris aselli domestici oleum

DEFINITION

Purified fatty oil obtained from the fresh livers of farmed cod, *Gadus morhua* L., solid substances being removed by cooling and filtering.

*Content*:
- *sum of the contents of EPA and DHA (expressed as triglycerides)*: 10.0 per cent to 28.0 per cent;
- *vitamin A*: 50 IU (15 µg) to 500 IU (150 µg) per gram;
- *vitamin $D_3$*: maximum 50 IU (1.3 µg) per gram.

A suitable antioxidant may be added.

PRODUCTION

The fish shall only be given feed with a composition that is in accordance with the relevant European Union or other applicable regulations.

The content of dioxins and dioxin-like PCBs (polychlorinated biphenyls) is controlled using methods and limits in accordance with the requirements set in the European Union or other applicable regulations.

CHARACTERS

*Appearance*: clear, pale yellowish liquid.

*Solubility*: practically insoluble in water, miscible with light petroleum, slightly soluble in ethanol (96 per cent).

IDENTIFICATION

A. Examine the $^{13}C$ NMR spectra obtained in the test for positional distribution (β(2)-acyl) of fatty acids (see Tests). The spectra contain peaks between 172 ppm and 173 ppm with shifts similar to those in the spectrum shown in Figure 2398.-1.

   The positional distribution (β(2)-acyl) for cervonic (docosahexaenoic) acid (C22:6 n-3; DHA), timnodonic (eicosapentaenoic) acid (C20:5 n-3; EPA) and moroctic acid (C18:4 n-3) complies with the limits.

B. Linoleic acid (see Tests).

TESTS

**Acid value** (*2.5.1*): maximum 2.0.

**Anisidine value** (*2.5.36*): maximum 10.0.

**Peroxide value** (*2.5.5, Method B*): maximum 5.0.

**Unsaponifiable matter** (*2.5.7*): maximum 1.5 per cent, determined on 2.0 g, and extracting with 3 quantities, each of 50 mL, of *peroxide-free ether R*.

**Stearin**. Heat at least 10 mL to 60-90 °C then allow to cool for 3 h in a bath of iced water or a thermostatically controlled bath at 0 ± 0.5 °C. If necessary, to eliminate insoluble matter, filter the sample after heating. The sample remains clear.

**Positional distribution (β(2)-acyl) of fatty acids**. Nuclear magnetic resonance spectrometry (*2.2.33*).

*Test solution.* Dissolve 190-210 mg of the substance to be examined in 500 µL of *deuterated chloroform R*. Prepare at least 3 samples and examine within 3 days.

*Apparatus*: high-resolution FT-NMR spectrometer operating at minimum 300 MHz.

*Acquisition of $^{13}C$ NMR spectra.* The following parameters may be used:

- *sweep width*: 200 ppm (– 5 ppm to 195 ppm);
- *irradiation frequency offset*: 95 ppm;
- *time domain*: 64 K;
- *pulse delay*: 2 s;
- *pulse program*: zgig 30 (inverse gated, 30° excitation pulse);
- *dummy scans*: 4;
- *number of scans*: 4096.

*Processing and plotting.* The following parameters may be used:

- *size*: 64 K (zero-filling);
- *window multiplication*: exponential;
- *Lorentzian broadening factor*: 0.2 Hz.

Use the $CDCl_3$ signal for shift referencing. The shift of the central peak of the 1:1:1 triplet is set to 77.16 ppm.

Plot the spectral region δ 171.5-173.5 ppm. Compare the spectrum with the spectrum shown in Figure 2398.-1. The shift values lie within the ranges given in Table 2398.-1.

Table 2398.-1. – *Shift values*

| Signal | Shift range (ppm) |
|---|---|
| β DHA | 172.05 - 172.09 |
| α DHA | 172.43 - 172.47 |
| β EPA | 172.52 - 172.56 |
| α EPA | 172.90 - 172.94 |
| β C18:4 | 172.56 - 172.60 |
| α C18:4 | 172.95 - 172.99 |

*System suitability*:

- *signal-to-noise ratio*: minimum 5 for the smallest relevant peak corresponding to α C18:4 signal (in the range δ 172.95-172.99 ppm);
- *peak width at half-height*: maximum 0.02 ppm for the central $CDCl_3$ signal (at δ 77.16 ppm).

*Calculation of positional distribution (β(2)-acyl)*: use the following expression:

$$\frac{100 \times \beta}{\alpha + \beta}$$

$\alpha$ = peak area of the corresponding α-carbonyl peak;

$\beta$ = peak area of β-carbonyl peak from C22:6 n-3, C20:5 n-3 or C18:4 n-3, respectively.

*Limits*:

- *positional distribution (β(2)-acyl)*:
  - *cervonic (docosahexaenoic) acid (C22:6 n-3; DHA)*: 71 per cent to 81 per cent;
  - *timnodonic (eicosapentaenoic) acid (C20:5 n-3 EPA)*: 32 per cent to 40 per cent;
  - *moroctic acid (C18:4 n-3)*: 28 per cent to 38 per cent.

**Composition of fatty acids** (*2.4.29*). For identification of the peaks, see the chromatogram shown in Figure 2398.-2.

The 24 largest peaks of the methyl esters account for more than 90 per cent of the total area (these correspond to, in common elution order: 14:0, 15:0, 16:0, 16:1 n-7, 16:4 n-1, 18:0, 18:1 n-9, 18:1 n-7, 18:2 n-6, 18:3 n-3, 18:4 n-3, 20:1 n-11, 20:1 n-9, 20:1 n-7, 20:2 n-6, 20:4 n-6, 20:3 n-3, 20:4 n-3, 20:5 n-3, 22:1 n-11, 22:1 n-9, 21:5 n-3, 22:5 n-3, 22:6 n-3).

**Linoleic acid** (*2.4.29*): 3.0 per cent to 11.0 per cent.

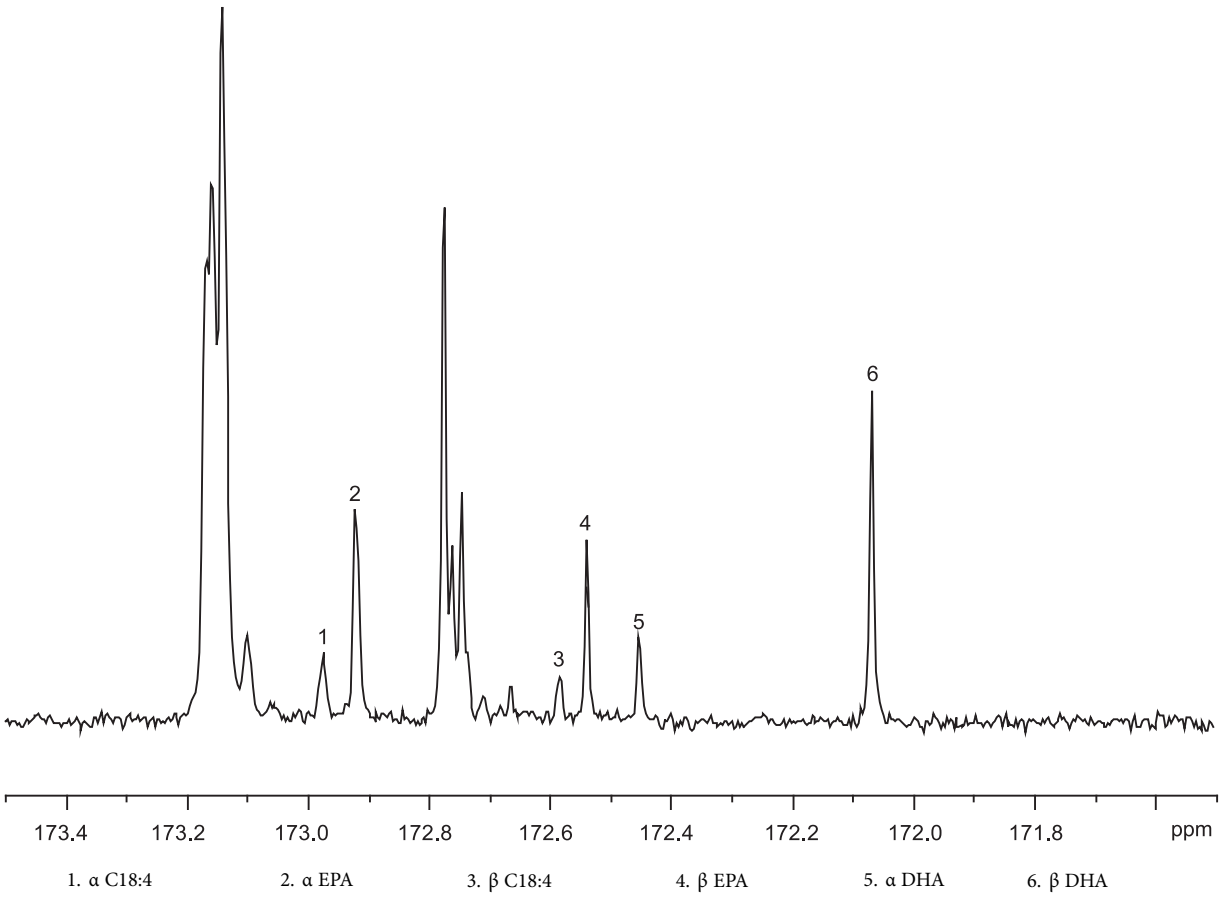


Figure 2398.-1. – *$^{13}C$ NMR spectrum: carbonyl region of farmed cod-liver oil*

ASSAY

**EPA and DHA** (*2.4.29*). See the chromatogram shown in Figure 2398.-2.

**Vitamin A**. *Carry out the test as rapidly as possible, avoiding exposure to actinic light and air, oxidising agents, oxidation catalysts (for example, copper and iron) and acids.*

Use method A. If method A is found not to be valid, use method B.

*METHOD A*

Ultraviolet absorption spectrophotometry (*2.2.25*).

*Test solution*. To 1.00 g in a round-bottomed flask, add 3 mL of a freshly prepared 50 per cent *m/m* solution of *potassium hydroxide R* and 30 mL of *anhydrous ethanol R*. Boil under reflux in a current of *nitrogen R* for 30 min. Cool rapidly and add 30 mL of *water R*. Extract with 50 mL of *ether R*. Repeat the extraction 3 times and discard the lower layer after complete separation. Wash the combined upper layers with 4 quantities, each of 50 mL, of *water R*, and evaporate to dryness under a gentle current of *nitrogen R* at a temperature not exceeding 30 °C or in a rotary evaporator at a temperature not exceeding 30 °C under reduced pressure (water ejector). Dissolve the residue in sufficient *2-propanol R1* to give an expected concentration of vitamin A equivalent to 10-15 IU/mL.

Measure the absorbances of the solution at 300 nm, 310 nm, 325 nm and 334 nm and at the wavelength of maximum absorption with a suitable spectrophotometer in specially matched 1 cm cells, using *2-propanol R1* as the compensation liquid.

Calculate the content of vitamin A, as all-*trans*-retinol, in International Units per gram, using the following expression:

$$A_{325} \times \frac{1821}{100m} \times V$$

$A_{325}$ = absorbance at 325 nm;

$m$ = mass of the substance to be examined, in grams;

$V$ = total volume of solution containing 10-15 IU of vitamin A per millilitre;

1821 = conversion factor for the specific absorbance of all-*trans*-retinol, in International Units.

The above expression can be used only if $A_{325}$ has a value not greater than $A_{325,corr}$ /0.970, where $A_{325,corr}$ is the corrected absorbance at 325 nm and is given by the following equation:

$$A_{325,\,corr} = 6.815A_{325} - 2.555A_{310} - 4.260A_{334}$$

*A* designates the absorbance at the wavelength indicated by the subscript.

If $A_{325}$ has a value greater than $A_{325,corr}$ /0.970, calculate the content of vitamin A using the following expression:

$$A_{325,\,corr} \times \frac{1821}{100m} \times V$$

The assay is not valid unless:

- the wavelength of maximum absorption lies between 323 nm and 327 nm;
- the absorbance at 300 nm relative to that at 325 nm is at most 0.73.

*METHOD B*

Liquid chromatography (*2.2.29*).

Figure 2398.-2. – *Chromatogram for the test for composition of fatty acids of farmed cod-liver oil*

*Test solution*. Prepare duplicates. To 2.00 g in a round-bottomed flask, add 5 mL of a freshly prepared 100 g/L solution of *ascorbic acid R*, 10 mL of a freshly prepared 800 g/L solution of *potassium hydroxide R* and 100 mL of *anhydrous ethanol R*. Boil under a reflux condenser on a water-bath for 15 min. Add 100 mL of a 10 g/L solution of *sodium chloride R* and cool. Transfer the solution to a 500 mL separating funnel, rinsing the round-bottomed flask with about 75 mL of a 10 g/L solution of *sodium chloride R* and then with 150 mL of a mixture of equal volumes of *ether R* and *light petroleum R1*. Shake for 1 min. When the layers have separated completely, discard the lower layer and wash the upper layer, first with 50 mL of a 30 g/L solution of *potassium hydroxide R* in a 10 per cent *V/V* solution of *anhydrous ethanol R* and then with 3 quantities, each of 50 mL, of a 10 g/L solution of *sodium chloride R*. Filter the upper layer through 5 g of *anhydrous sodium sulfate R* on a fast filter paper into a 250 mL flask suitable for a rotary evaporator. Wash the funnel with 10 mL of fresh extraction mixture, filter and combine the upper layers. Distil them at a temperature not exceeding 30 °C under reduced pressure (water ejector) and fill with *nitrogen R* when evaporation is completed. Alternatively, evaporate the solvent under a gentle current of *nitrogen R* at a temperature not exceeding 30 °C. Dissolve the residue in *2-propanol R*, transfer to a 25 mL volumetric flask and dilute to 25 mL with *2-propanol R*. Gentle heating in an ultrasonic bath may be required. *A large fraction of the white residue is cholesterol, constituting approximately 50 per cent m/m of the unsaponifiable matter of cod-liver oil.*

*Reference solution (a).* Prepare a solution of *retinol acetate CRS* in *2-propanol R1* so that 1 mL contains about 1000 IU of all-*trans*-retinol.

The exact concentration of reference solution (a) is assessed by ultraviolet absorption spectrophotometry (*2.2.25*). Dilute reference solution (a) with *2-propanol R1* to a presumed concentration of 10-15 IU/mL and measure the absorbance at 326 nm in matched 1 cm cells using *2-propanol R1* as the compensation liquid.

Calculate the content of vitamin A in International Units per millilitre of reference solution (a) using the following expression, taking into account the assigned content of *retinol acetate CRS*:

$$A_{326} \times \frac{1900 \times V_2}{100 \times V_1}$$

$A_{326}$ = absorbance at 326 nm;

$V_1$ = volume of reference solution (a) used;

$V_2$ = volume of the diluted solution;

1900 = conversion factor for the specific absorbance of *retinol acetate CRS*, in International Units.

*Reference solution (b).* Proceed as described for the test solution but using 2.00 mL of reference solution (a) in place of the substance to be examined.

The exact concentration of reference solution (b) is assessed by ultraviolet absorption spectrophotometry (*2.2.25*). Dilute reference solution (b) with *2-propanol R1* to a presumed all-*trans*-retinol concentration of 10-15 IU/mL and measure the absorbance at 325 nm in matched 1 cm cells using *2-propanol R1* as the compensation liquid.

Calculate the content of all-*trans*-retinol in International Units per millilitre of reference solution (b), using the following expression:

$$A_{325} \times \frac{1821 \times V_3}{100 \times V_4}$$

$A_{325}$ = absorbance at 325 nm;

$V_3$ = volume of the diluted solution;

$V_4$ = volume of reference solution (b) used;

1821 = conversion factor for the specific absorbance of all-*trans*-retinol, in International Units.

*Column*:

– *size*: $l$ = 0.25 m, Ø = 4.6 mm;

– *stationary phase*: *octadecylsilyl silica gel for chromatography R* (5-10 µm).

*Mobile phase*: *water R*, *methanol R* (3:97 *V/V*).

*Flow rate*: 1 mL/min.

*Detection*: spectrophotometer at 325 nm.

*Injection*: 10 µL; inject in triplicate the test solution and reference solution (b).

*Retention time*: all-*trans*-retinol = 5 ± 1 min.

*System suitability*:

– the chromatogram obtained with the test solution shows a peak corresponding to the peak due to all-*trans*-retinol in the chromatogram obtained with reference solution (b);

– the results obtained with the duplicate test solutions do not differ by more than 5 per cent;

– the recovery of all-*trans*-retinol in reference solution (b) as assessed by direct absorption spectrophotometry is greater than 95 per cent.

Calculate the content of vitamin A using the following expression:

$$A_1 \times \frac{C \times V}{A_2} \times \frac{1}{m}$$

$A_1$ = area of the peak due to all-*trans*-retinol in the chromatogram obtained with the test solution;

$A_2$ = area of the peak due to all-*trans*-retinol in the chromatogram obtained with reference solution (b);

$C$ = concentration of *retinol acetate CRS* in reference solution (a) as assessed prior to the saponification, in International Units per millilitre (= 1000 IU/mL);

$V$ = volume of reference solution (a) treated (2.00 mL);

$m$ = mass of the substance to be examined in the test solution (2.00 g).

**Vitamin $D_3$.** Liquid chromatography (*2.2.29*). *Carry out the assay as rapidly as possible, avoiding exposure to actinic light and air.*

*Internal standard solution.* Dissolve 0.50 mg of *ergocalciferol CRS* in 100 mL of *anhydrous ethanol R*.

*Test solution (a).* To 4.00 g in a round-bottomed flask, add 5 mL of a freshly prepared 100 g/L solution of *ascorbic acid R*, 10 mL of a freshly prepared 800 g/L solution of *potassium hydroxide R* and 100 mL of *anhydrous ethanol R*. Boil under a reflux condenser on a water-bath for 30 min. Add 100 mL of a 10 g/L solution of *sodium chloride R* and cool the solution to room temperature. Transfer the solution to a 500 mL separating funnel, rinsing the round-bottomed flask with about 75 mL of a 10 g/L solution of *sodium chloride R* and then with 150 mL of a mixture of equal volumes of *ether R* and *light petroleum R1*. Shake for 1 min. When the layers have separated completely, discard the lower layer and wash the upper layer, first with 50 mL of a 30 g/L solution of *potassium hydroxide R* in a 10 per cent *V/V* solution of *anhydrous ethanol R*, and then with 3 quantities, each of 50 mL, of a 10 g/L solution of *sodium chloride R*. Filter the upper layer through 5 g of *anhydrous sodium sulfate R* on a fast filter paper into a 250 mL flask suitable for a rotary evaporator. Wash the funnel with 10 mL of fresh extraction mixture, filter and combine the upper layers. Distil them at a temperature not exceeding 30 °C under reduced pressure (water ejector) and fill with *nitrogen R*

when evaporation is completed. Alternatively, evaporate the solvent under a gentle current of *nitrogen R* at a temperature not exceeding 30 °C. Dissolve the residue in 1.5 mL of the mobile phase described under Purification. Gentle heating in an ultrasonic bath may be required. *A large fraction of the white residue is cholesterol, constituting approximately 50 per cent m/m of the unsaponifiable matter of cod-liver oil.*

*Test solution (b).* Prepare duplicates. To 4.00 g add 2.0 mL of the internal standard solution and proceed as described for test solution (a).

*Reference solution (a).* Dissolve 0.50 mg of *cholecalciferol CRS* in 100.0 mL of *anhydrous ethanol R*.

*Reference solution (b).* In a round-bottomed flask, add 2.0 mL of reference solution (a) and 2.0 mL of the internal standard solution and proceed as described for test solution (a).

*PURIFICATION*

*Column*:

- *size*: *l* = 0.25 m, Ø = 4.6 mm;
- *stationary phase*: *nitrile silica gel for chromatography R* (10 µm).

*Mobile phase*: *isoamyl alcohol R*, *hexane R* (1.6:98.4 *V/V*).

*Flow rate*: 1.1 mL/min.

*Detection*: spectrophotometer at 265 nm.

*Injection*: 350 µL of reference solution (b) and test solutions (a) and (b). Collect each eluate from 2 min before until 2 min after the retention time of cholecalciferol, in a ground-glass-stoppered tube containing 1 mL of a 1 g/L solution of *butylhydroxytoluene R* in *hexane R*. Evaporate separately to dryness at a temperature not exceeding 30 °C under a gentle current of *nitrogen R*. Dissolve each residue in 1.5 mL of *acetonitrile R*.

*DETERMINATION*

*Column*:

- *size*: *l* = 0.15 m, Ø = 4.6 mm;
- *stationary phase*: *octadecylsilyl silica gel for chromatography R* (5 µm).

*Mobile phase*: *phosphoric acid R*, 96 per cent *V/V* solution of *acetonitrile R* (0.2:99.8 *V/V*).

*Flow rate*: 1.0 mL/min.

*Detection*: spectrophotometer at 265 nm.

*Injection*: 2 quantities not exceeding 200 µL of each of the 3 solutions obtained under Purification.

*System suitability*:

- *resolution*: minimum 1.4 between the peaks due to ergocalciferol and cholecalciferol in the chromatogram obtained with reference solution (b);
- the results obtained with the test solution (b) duplicates do not differ by more than 5 per cent.

Calculate the content of vitamin $D_3$ in International Units per gram using the following expression, taking into account the assigned content of *cholecalciferol CRS*:

$$\frac{A_2}{A_6} \times \frac{A_3}{A_4 - \left[\frac{A_5}{A_1}\right] \times A_2} \times \frac{m_2}{m_1} \times \frac{V_2}{V_1} \times 40$$

$m_1$ = mass of the sample in test solution (b), in grams;

$m_2$ = total mass of *cholecalciferol CRS* used for the preparation of reference solution (a), in micrograms (500 µg);

$A_1$ = area (or height) of the peak due to cholecalciferol in the chromatogram obtained with test solution (a);

$A_2$ = area (or height) of the peak due to cholecalciferol in the chromatogram obtained with test solution (b);

$A_3$ = area (or height) of the peak due to ergocalciferol in the chromatogram obtained with reference solution (b);

$A_4$ = area (or height) of the peak due to ergocalciferol in the chromatogram obtained with test solution (b);

$A_5$ = area (or height) of a possible peak in the chromatogram obtained with test solution (a) with the same retention time as the peak co-eluting with ergocalciferol in test solution (b);

$A_6$ = area (or height) of the peak due to cholecalciferol in the chromatogram obtained with reference solution (b);

$V_1$ = total volume of reference solution (a) (100 mL);

$V_2$ = volume of reference solution (a) used for preparing reference solution (b) (2.0 mL).

STORAGE

In an airtight and well-filled container, protected from light. If no antioxidant is added, store under an inert gas.

Once the container has been opened, its contents are used as soon as possible and any part of the contents not used at once is protected by an atmosphere of inert gas.

LABELLING

The label states:

- the concentration of EPA and DHA as a sum;
- the number of International Units of vitamin A per gram;
- the number of International Units of vitamin $D_3$ per gram.

**01/2020:1192**

# COD-LIVER OIL (TYPE A)

## Iecoris aselli oleum A

DEFINITION

Purified fatty oil obtained from the fresh livers of wild cod, *Gadus morhua* L. and other species of *Gadidae*, solid substances being removed by cooling and filtering. A suitable antioxidant may be added.

*Content*:

- *vitamin A*: 600 IU (180 µg) to 2500 IU (750 µg) per gram;
- *vitamin $D_3$*: 60 IU (1.5 µg) to 250 IU (6.25 µg) per gram.

PRODUCTION

The content of dioxins and dioxin-like PCBs (polychlorinated biphenyls) is controlled using methods and limits in accordance with the requirements set in the European Union or other applicable regulations.

CHARACTERS

*Appearance*: clear, yellowish liquid.

*Solubility*: practically insoluble in water, miscible with light petroleum, slightly soluble in ethanol (96 per cent).

IDENTIFICATION

*First identification: A, B, C.*

*Second identification: C, D.*

A. In the assay for vitamin A using method A, the test solution shows an absorption maximum (*2.2.25*) at 325 ± 2 nm. In the assay for vitamin A using method B, the chromatogram obtained with the test solution shows a peak corresponding to the peak due to all-*trans*-retinol in the chromatogram obtained with the reference solution.

B. In the assay for vitamin $D_3$, the chromatogram obtained with test solution (a) shows a peak corresponding to the peak due to cholecalciferol in the chromatogram obtained with reference solution (b).

C. Composition of fatty acids (see Tests).

D. To 0.1 g add 0.5 mL of *methylene chloride R* and 1 mL of *antimony trichloride solution R*. Mix. A deep blue colour develops in about 10 s.

TESTS

**Appearance**. The substance to be examined is not more intensely coloured than a reference solution prepared as follows: to 3.0 mL of red primary solution add 25.0 mL of yellow primary solution and dilute to 50.0 mL with a 10 g/L solution of *hydrochloric acid R* (*2.2.2, Method II*).

**Relative density** (*2.2.5*): 0.917 to 0.930.

**Refractive index** (*2.2.6*): 1.477 to 1.484.

**Acid value** (*2.5.1*): maximum 2.0, determined on 20.00 g.

**Anisidine value** (*2.5.36*): maximum 30.0.

**Iodine value** (*2.5.4, Method B*): 150 to 180, determined on 0.14 g to 0.16 g.

Use *starch solution R2*.

**Peroxide value** (*2.5.5, Method B*): maximum 10.0.

**Unsaponifiable matter** (*2.5.7*): maximum 1.5 per cent, determined on 5.0 g.

**Stearin**. Heat at least 10 mL to 60-90 °C and cool to room temperature. Immerse for 3 h in a bath of iced water or a thermostatically controlled bath at 0 ± 0.5 °C. If necessary, to eliminate insoluble matter, filter the sample after heating. The sample remains clear.

**Composition of fatty acids**. Gas chromatography (*2.2.28*).

| Trivial name of fatty acid | Nomenclature | Lower limit area (per cent) | Upper limit area (per cent) |
|---|---|---|---|
| *Saturated fatty acids:* | | | |
| Myristic acid | 14:0 | 2.0 | 6.0 |
| Palmitic acid | 16:0 | 7.0 | 14.0 |
| Stearic acid | 18:0 | 1.0 | 4.0 |
| *Mono-unsaturated fatty acids:* | | | |
| Palmitoleic acid | 16:1 n-7 | 4.5 | 11.5 |
| *cis*-Vaccenic acid | 18:1 n-7 | 2.0 | 7.0 |
| Oleic acid | 18:1 n-9 | 12.0 | 21.0 |
| Gadoleic acid | 20:1 n-11 | 1.0 | 5.5 |
| Gondoic acid | 20:1 n-9 | 5.0 | 17.0 |
| Erucic acid | 22:1 n-9 | 0 | 1.5 |
| Cetoleic acid (22:1 n-11) | 22:1 n-11+13 | 5.0 | 12.0 |
| *Poly-unsaturated fatty acids:* | | | |
| Linoleic acid | 18:2 n-6 | 0.5 | 3.0 |
| α-Linolenic acid | 18:3 n-3 | 0 | 2.0 |
| Moroctic acid | 18:4 n-3 | 0.5 | 4.5 |
| Timnodonic (eicosapentaenoic) acid (EPA) | 20:5 n-3 | 7.0 | 16.0 |
| Cervonic (docosahexaenoic) acid (DHA) | 22:6 n-3 | 6.0 | 18.0 |

*Test solution*. Dilute about 0.45 g of the substance to be examined to 10.0 mL with a 50 mg/L solution of *butylhydroxytoluene R* in *trimethylpentane R*. Transfer 2.0 mL of this solution to a quartz tube and evaporate the solvent with a gentle current of *nitrogen R*. Add 1.5 mL of a 20 g/L solution of *sodium hydroxide R* in *methanol R*, cover with *nitrogen R*, cap tightly with a polytetrafluoroethylene-lined cap, mix and heat on a water-bath for 7 min. Cool, add 2 mL of *boron trichloride-methanol solution R*, cover with *nitrogen R*, cap tightly, mix and heat on a water-bath for 30 min. Cool to 40-50 °C, add 1 mL of *trimethylpentane R*, cap and vortex or shake vigorously for at least 30 s. Immediately add 5 mL of *saturated sodium chloride solution R*, cover with *nitrogen R*, cap and vortex or shake vigorously for at least 15 s. Allow the upper layer to become clear and transfer it to a separate tube. Shake the methanol layer once more with 1 mL of *trimethylpentane R* and combine the trimethylpentane extracts. Wash the combined extracts with 2 quantities, each of 1 mL, of *water R* and dry over *anhydrous sodium sulfate R*. Prepare 2 solutions for each sample.

*Reference solution*. Dissolve 0.300 g of *methyl arachidate R*, 0.300 g of *methyl behenate R*, 0.300 g of *methyl palmitate R* and 0.300 g of *methyl stearate R* in a 50 mg/L solution of *butylhydroxytoluene R* in *trimethylpentane R* and dilute to 10.0 mL with the same solution.

*Column*:

- *material*: fused silica;
- *size*: *l* = 30 m, Ø = 0.25 mm;
- *stationary phase*: *macrogol 20 000 R* (film thickness 0.25 µm).

*Carrier gas*: *hydrogen for chromatography R* or *helium for chromatography R*, with an oxygen scrubber.

*Split ratio*: 1:200.

*Temperature*:

| | Time (min) | Temperature (°C) |
|---|---|---|
| Column | 0 - 55 | 170 → 225 |
| | 55 - 75 | 225 |
| Injection port | | 250 |
| Detector | | 280 |

*Detection*: flame ionisation.

*Injection*: 1 µL, twice.

*System suitability*:

- the 15 fatty acids to be tested are satisfactorily identified from the chromatogram shown in Figure 1192.-1;
- in the chromatogram obtained with the reference solution, multiply the areas of the peaks due to methyl palmitate, methyl stearate, methyl arachidate and methyl behenate by the corresponding response factors in Table 1192.-1; normalise the corrected areas of the peaks due to the fatty acid methyl esters to a sum of 100 per cent; the normalised area percentage of each fatty acid methyl ester is to be within ± 1.0 percentage unit of the corresponding weight percentage;

Table 1192.-1.

| Fatty acid methyl ester | Theoretical response factor |
|---|---|
| Methyl palmitate | 1.049 |
| Methyl stearate | 1.029 |
| Methyl arachidate | 1.013 |
| Methyl behenate | 1.000 |

- *resolution*: in the chromatogram obtained with the test solution:
  - minimum 1.3 between the peaks due to methyl oleate and methyl *cis*-vaccenate; the resolution between the peaks due to methyl gadoleate and methyl gondoate is sufficient for purposes of identification and area measurement.

Calculate the area per cent for each fatty acid methyl ester using the following expression:

$$\frac{A_x}{A_t} \times 100$$

$A_x$ = peak area of fatty acid $x$;

$A_t$ = sum of the peak areas (up to C22:6 n-3).

The calculation is not valid unless:

- the total area is based only on peaks due solely to fatty acid methyl esters;

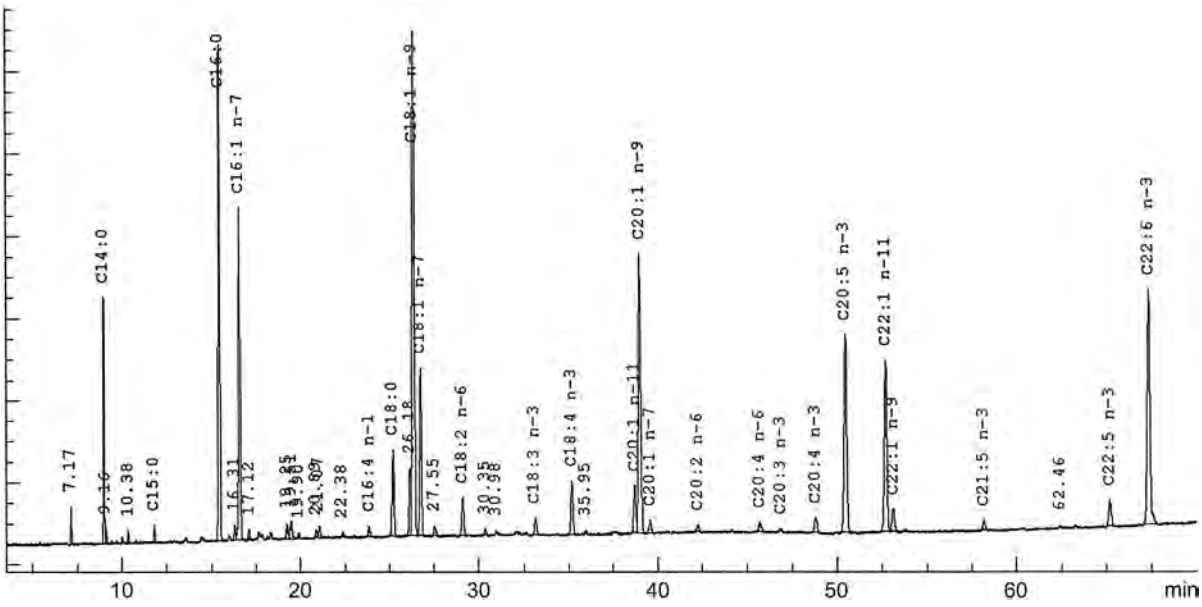

Figure 1192.-1. – *Chromatogram for the test for composition of fatty acids of cod-liver oil (type A)*

- the number of fatty acid methyl ester peaks exceeding 0.05 per cent of the total area is at least 24;
- the 24 largest peaks of the methyl esters account for more than 90 per cent of the total area (these correspond to, in common elution order: 14:0, 15:0, 16:0, 16:1 n-7, 16:4 n-1, 18:0, 18:1 n-9, 18:1 n-7, 18:2 n-6, 18:3 n-3, 18:4 n-3, 20:1 n-11, 20:1 n-9, 20:1 n-7, 20:2 n-6, 20:4 n-6, 20:3 n-3, 20:4 n-3, 20:5 n-3, 22:1 n-11, 22:1 n-9, 21:5 n-3, 22:5 n-3, 22:6 n-3).

ASSAY

**Vitamin A**. *Carry out the test as rapidly as possible, avoiding exposure to actinic light and air, oxidising agents, oxidation catalysts (for example, copper and iron) and acids.*

Use method A. If method A is found not to be valid, use method B.

*METHOD A*

Ultraviolet absorption spectrophotometry (*2.2.25*).

*Test solution.* To 1.00 g in a round-bottomed flask, add 3 mL of a freshly prepared 50 per cent *m/m* solution of *potassium hydroxide R* and 30 mL of *anhydrous ethanol R*. Boil under reflux in a current of *nitrogen R* for 30 min. Cool rapidly and add 30 mL of *water R*. Extract with 50 mL of *ether R*. Repeat the extraction 3 times and discard the lower layer after complete separation. Wash the combined upper layers with 4 quantities, each of 50 mL, of *water R*, and evaporate to dryness under a gentle current of *nitrogen R* at a temperature not exceeding 30 °C or by other suitable means at a temperature not exceeding 30 °C under reduced pressure. Dissolve the residue in sufficient *2-propanol R1* to give an expected concentration of vitamin A equivalent to 10-15 IU/mL.

Measure the absorbances of the solution at 300 nm, 310 nm, 325 nm and 334 nm and at the wavelength of maximum absorption with a suitable spectrophotometer in specially matched 1 cm cells, using *2-propanol R1* as the compensation liquid.

Calculate the content of vitamin A, as all-*trans*-retinol, in International Units per gram, using the following expression:

$$A_{325} \times \frac{1821}{100m} \times V$$

$A_{325}$ = absorbance at 325 nm;

$m$ = mass of the substance to be examined, in grams;

$V$ = total volume of solution containing 10-15 IU of vitamin A per millilitre;

1821 = conversion factor for the specific absorbance of all-*trans*-retinol, in International Units.

The above expression can be used only if $A_{325}$ has a value not greater than $A_{325,corr}/0.970$, where $A_{325,corr}$ is the corrected absorbance at 325 nm and is given by the following equation:

$$A_{325,corr} = 6.815A_{325} - 2.555A_{310} - 4.260A_{334}$$

*A* designates the absorbance at the wavelength indicated by the subscript.

If $A_{325}$ has a value greater than $A_{325,corr}/0.970$, calculate the content of vitamin A using the following expression:

$$A_{325,corr} \times \frac{1821}{100m} \times V$$

The assay is not valid unless:

- the wavelength of the maximum absorption lies between 323 nm and 327 nm;
- the absorbance at 300 nm relative to that at 325 nm is at most 0.73.

*METHOD B*

Liquid chromatography (*2.2.29*).

*Test solution.* Prepare duplicates. To 2.00 g of the substance to be examined in a round-bottomed flask, add 5 mL of a freshly prepared 100 g/L solution of *ascorbic acid R*, 10 mL of a freshly prepared 800 g/L solution of *potassium hydroxide R* and 100 mL of *anhydrous ethanol R*. Boil under a reflux condenser on a water-bath for 15 min. Add 100 mL of a 10 g/L solution of *sodium chloride R* and cool. Transfer the solution to a 500 mL separating funnel, rinsing the round-bottomed flask with about 75 mL of a 10 g/L solution of *sodium chloride R* and then with 150 mL of a mixture of equal volumes of *ether R* and *light petroleum R1*. Shake for 1 min. When the layers have separated completely, discard the lower layer and wash the upper layer, first with 50 mL of a 30 g/L solution of *potassium hydroxide R* in a 10 per cent *V/V* solution of *anhydrous ethanol R* and then with 3 quantities, each of 50 mL, of a 10 g/L solution of *sodium chloride R*. Filter the upper layer through 5 g of *anhydrous sodium sulfate R* on a fast filter paper into a 250 mL flask. Wash the funnel with 10 mL of fresh extraction mixture, filter and combine the upper layers. Distil them at a temperature not exceeding 30 °C under reduced pressure and fill with *nitrogen R* when evaporation is completed.

Alternatively, evaporate the solvent under a gentle current of *nitrogen R* at a temperature not exceeding 30 °C. Dissolve the residue in *2-propanol R1*, transfer to a 25 mL volumetric flask and dilute to 25 mL with *2-propanol R1*. Gentle heating in an ultrasonic bath may be required. *A large fraction of the white residue is cholesterol, constituting approximately 50 per cent m/m of the unsaponifiable matter of cod-liver oil.*

*Reference solution (a).* Prepare a solution of *retinol acetate CRS* in *2-propanol R1* so that 1 mL contains about 1000 IU of all-*trans*-retinol.

The exact concentration of reference solution (a) is assessed by ultraviolet absorption spectrophotometry (*2.2.25*). Dilute reference solution (a) with *2-propanol R1* to a presumed concentration of 10-15 IU/mL and measure the absorbance at 326 nm in matched 1 cm cells using *2-propanol R1* as the compensation liquid.

Calculate the content of vitamin A in International Units per millilitre of reference solution (a) using the following expression, taking into account the assigned content of *retinol acetate CRS*:

$$A_{326} \times \frac{1900 \times V_2}{100 \times V_1}$$

$A_{326}$ = absorbance at 326 nm;

$V_1$ = volume of reference solution (a) used;

$V_2$ = volume of the diluted solution;

1900 = conversion factor for the specific absorbance of *retinol acetate CRS*, in International Units.

*Reference solution (b).* Proceed as described for the test solution but using 2.00 mL of reference solution (a) in place of the substance to be examined.

The exact concentration of reference solution (b) is assessed by ultraviolet absorption spectrophotometry (*2.2.25*). Dilute reference solution (b) with *2-propanol R1* to a presumed all-*trans*-retinol concentration of 10-15 IU/mL and measure the absorbance at 325 nm in matched 1 cm cells using *2-propanol R1* as the compensation liquid.

Calculate the content of all-*trans*-retinol in International Units per millilitre of reference solution (b), using the following expression:

$$A_{325} \times \frac{1821 \times V_3}{100 \times V_4}$$

$A_{325}$ = absorbance at 325 nm;

$V_3$ = volume of the diluted solution;

$V_4$ = volume of reference solution (b) used;

1821 = conversion factor for the specific absorbance of all-*trans*-retinol, in International Units.

*Column*:

- *size*: $l$ = 0.25 m, Ø = 4.6 mm;
- *stationary phase*: *octadecylsilyl silica gel for chromatography R* (5-10 µm).

*Mobile phase*: *water for chromatography R*, *methanol R* (3:97 *V/V*).

*Flow rate*: 1 mL/min.

*Detection*: spectrophotometer at 325 nm.

*Injection*: 10 µL; inject in triplicate the test solution and reference solution (b).

*Retention time*: all-*trans*-retinol = 5 ± 1 min.

*System suitability*:

- the chromatogram obtained with the test solution shows a peak corresponding to the peak due to all-*trans*-retinol in the chromatogram obtained with reference solution (b);
- the results obtained with the duplicate test solutions do not differ by more than 5 per cent;
- the recovery of all-*trans*-retinol in reference solution (b) as assessed by direct absorption spectrophotometry is greater than 95 per cent.

Calculate the content of vitamin A using the following expression:

$$A_1 \times \frac{C \times V}{A_2} \times \frac{1}{m}$$

$A_1$ = area of the peak due to all-*trans*-retinol in the chromatogram obtained with the test solution;

$A_2$ = area of the peak due to all-*trans*-retinol in the chromatogram obtained with reference solution (b);

$C$ = concentration of *retinol acetate CRS* in reference solution (a) as assessed prior to the saponification, in International Units per millilitre (= 1000 IU/mL);

$V$ = volume of reference solution (a) treated (2.00 mL);

$m$ = mass of the substance to be examined in the test solution (2.00 g).

**Vitamin $D_3$.** Liquid chromatography (*2.2.29*). *Carry out the assay as rapidly as possible, avoiding exposure to actinic light and air.*

*Internal standard solution.* Dissolve 0.50 mg of *ergocalciferol CRS* in *anhydrous ethanol R* and dilute to 100.0 mL with the same solvent.

*Test solution (a).* To 4.00 g of the substance to be examined in a round-bottomed flask, add 5 mL of a freshly prepared 100 g/L solution of *ascorbic acid R*, 10 mL of a freshly prepared 800 g/L solution of *potassium hydroxide R* and 100 mL of *anhydrous ethanol R*. Boil under a reflux condenser on a water-bath for 30 min. Add 100 mL of a 10 g/L solution of *sodium chloride R* and cool the solution to room temperature. Transfer the solution to a 500 mL separating funnel, rinsing the round-bottomed flask with about 75 mL of a 10 g/L solution of *sodium chloride R* and then with 150 mL of a mixture of equal volumes of *ether R* and *light petroleum R1*. Shake for 1 min. When the layers have separated completely, discard the lower layer and wash the upper layer, first with 50 mL of a 30 g/L solution of *potassium hydroxide R* in a 10 per cent *V/V* solution of *anhydrous ethanol R*, and then with 3 quantities, each of 50 mL, of a 10 g/L solution of *sodium chloride R*. Filter the upper layer through 5 g of *anhydrous sodium sulfate R* on a fast filter paper into a 250 mL flask. Wash the funnel with 10 mL of fresh extraction mixture, filter and combine the upper layers. Distil them at a temperature not exceeding 30 °C under reduced pressure and fill with *nitrogen R* when evaporation is completed. Alternatively, evaporate the solvent under a gentle current of *nitrogen R* at a temperature not exceeding 30 °C. Dissolve the residue in 1.5 mL of the mobile phase described under Purification. Gentle heating in an ultrasonic bath may be required. *A large fraction of the white residue is cholesterol, constituting approximately 50 per cent m/m of the unsaponifiable matter of cod-liver oil.*

*Test solution (b).* Prepare duplicates. To 4.00 g of the substance to be examined add 2.0 mL of the internal standard solution and proceed as described for test solution (a).

*Reference solution (a).* Dissolve 0.50 mg of *cholecalciferol CRS* in *anhydrous ethanol R* and dilute to 100.0 mL with the same solvent.

*Reference solution (b).* Into a round-bottomed flask, add 2.0 mL of reference solution (a) and 2.0 mL of the internal standard solution and proceed as described for test solution (a).

*PURIFICATION*

*Column*:

- *size*: $l$ = 0.25 m, Ø = 4.6 mm;
- *stationary phase*: *nitrile silica gel for chromatography R* (10 µm).

*Mobile phase*: *isoamyl alcohol R*, *hexane R* (1.6:98.4 *V/V*).

*Flow rate*: 1.1 mL/min.

*Detection*: spectrophotometer at 265 nm.

*Injection*: 350 µL of reference solution (b) and test solutions (a) and (b). Collect each eluate from 2 min before until 2 min after the retention time of cholecalciferol, in a ground-glass-stoppered tube containing 1 mL of a 1 g/L solution of *butylhydroxytoluene R* in *hexane R*. Evaporate separately to dryness at a temperature not exceeding 30 °C under a gentle current of *nitrogen R*. Dissolve each residue in 1.5 mL of *acetonitrile R*.

*DETERMINATION*

*Column*:

- *size*: *l* = 0.15 m, Ø = 4.6 mm;
- *stationary phase*: *octadecylsilyl silica gel for chromatography R* (5 µm).

*Mobile phase*: *phosphoric acid R*, 96 per cent *V/V* solution of *acetonitrile R* (0.2:99.8 *V/V*).

*Flow rate*: 1.0 mL/min.

*Detection*: spectrophotometer at 265 nm.

*Injection*: 2 quantities not exceeding 200 µL of each of the 3 solutions obtained under Purification.

*System suitability*:

- *resolution*: minimum 1.4 between the peaks due to ergocalciferol and cholecalciferol in the chromatogram obtained with reference solution (b);
- the results obtained with the test solution (b) duplicates do not differ by more than 5 per cent.

Calculate the content of vitamin $D_3$ in International Units per gram using the following expression, taking into account the assigned content of *cholecalciferol CRS*:

$$\frac{A_2}{A_6} \times \frac{A_3}{A_4 - \left[\frac{A_5}{A_1}\right] \times A_2} \times \frac{m_2}{m_1} \times \frac{V_2}{V_1} \times 40$$

$m_1$ = mass of the substance to be examined in test solution (b), in grams;

$m_2$ = total mass of *cholecalciferol CRS* used for the preparation of reference solution (a), in micrograms (500 µg);

$A_1$ = area (or height) of the peak due to cholecalciferol in the chromatogram obtained with test solution (a);

$A_2$ = area (or height) of the peak due to cholecalciferol in the chromatogram obtained with test solution (b);

$A_3$ = area (or height) of the peak due to ergocalciferol in the chromatogram obtained with reference solution (b);

$A_4$ = area (or height) of the peak due to ergocalciferol in the chromatogram obtained with test solution (b);

$A_5$ = area (or height) of a possible peak in the chromatogram obtained with test solution (a) with the same retention time as the peak co-eluting with ergocalciferol in test solution (b);

$A_6$ = area (or height) of the peak due to cholecalciferol in the chromatogram obtained with reference solution (b);

$V_1$ = total volume of reference solution (a) (100 mL);

$V_2$ = volume of reference solution (a) used to prepare reference solution (b) (2.0 mL).

STORAGE

In an airtight and well-filled container, protected from light. If no antioxidant is added, store under an inert gas.

Once the container has been opened, its contents are used as soon as possible and any part of the contents not used at once is protected by an atmosphere of inert gas.

LABELLING

The label states:

- the number of International Units of vitamin A per gram;
- the number of International Units of vitamin $D_3$ per gram.

**01/2020:1193**

# COD-LIVER OIL (TYPE B)

## Iecoris aselli oleum B

DEFINITION

Purified fatty oil obtained from the fresh livers of wild cod, *Gadus morhua* L. and other species of *Gadidae*, solid substances being removed by cooling and filtering. A suitable antioxidant may be added.

*Content*:

- *vitamin A*: 600 IU (180 µg) to 2500 IU (750 µg) per gram;
- *vitamin $D_3$*: 60 IU (1.5 µg) to 250 IU (6.25 µg) per gram.

PRODUCTION

The content of dioxins and dioxin-like PCBs (polychlorinated biphenyls) is controlled using methods and limits in accordance with the requirements set in the European Union or other applicable regulations.

CHARACTERS

*Appearance*: clear, yellowish liquid.

*Solubility*: practically insoluble in water, miscible with light petroleum, slightly soluble in ethanol (96 per cent).

IDENTIFICATION

*First identification: A, B, C.*

*Second identification: C, D.*

A. In the assay for vitamin A using method A, the test solution shows an absorption maximum (*2.2.25*) at 325 ± 2 nm. In the assay for vitamin A using method B, the chromatogram obtained with the test solution shows a peak corresponding to the peak due to all-*trans*-retinol in the chromatogram obtained with the reference solution.

B. In the assay for vitamin $D_3$, the chromatogram obtained with test solution (a) shows a peak corresponding to the peak due to cholecalciferol in the chromatogram obtained with reference solution (b).

C. Composition of fatty acids (see Tests).

D. To 0.1 g add 0.5 mL of *methylene chloride R* and 1 mL of *antimony trichloride solution R*. Mix. A deep blue colour develops in about 10 s.

TESTS

**Appearance**. The substance to be examined is not more intensely coloured than a reference solution prepared as follows: to 3.0 mL of red primary solution add 25.0 mL of yellow primary solution and dilute to 50.0 mL with a 10 g/L solution of *hydrochloric acid R* (*2.2.2, Method II*).

**Relative density** (*2.2.5*): 0.917 to 0.930.

**Refractive index** (*2.2.6*): 1.477 to 1.484.

**Acid value** (*2.5.1*): maximum 2.0, determined on 20.00 g.

**Iodine value** (*2.5.4, Method B*): 150 to 180, determined on 0.14 g to 0.16 g.

Use *starch solution R2*.

**Peroxide value** (*2.5.5, Method B*): maximum 10.0.

**Unsaponifiable matter** (*2.5.7*): maximum 1.5 per cent, determined on 5.0 g.

**Stearin**. Heat at least 10 mL to 60-90 °C and cool to room temperature. Immerse for 3 h in a bath of iced water or a thermostatically controlled bath at 0 ± 0.5 °C. If necessary, to eliminate insoluble matter, filter the sample after heating. The sample remains clear.

**Composition of fatty acids**. Gas chromatography (*2.2.28*).

| Trivial name of fatty acid | Nomenclature | Lower limit area (per cent) | Upper limit area (per cent) |
|---|---|---|---|
| *Saturated fatty acids:* | | | |
| Myristic acid | 14:0 | 2.0 | 6.0 |
| Palmitic acid | 16:0 | 7.0 | 14.0 |
| Stearic acid | 18:0 | 1.0 | 4.0 |
| *Mono-unsaturated fatty acids:* | | | |
| Palmitoleic acid | 16:1 n-7 | 4.5 | 11.5 |
| *cis*-Vaccenic acid | 18:1 n-7 | 2.0 | 7.0 |
| Oleic acid | 18:1 n-9 | 12.0 | 21.0 |
| Gadoleic acid | 20:1 n-11 | 1.0 | 5.5 |
| Gondoic acid | 20:1 n-9 | 5.0 | 17.0 |
| Erucic acid | 22:1 n-9 | 0 | 1.5 |
| Cetoleic acid (22:1 n-11) | 22:1 n-11+13 | 5.0 | 12.0 |
| *Poly-unsaturated fatty acids:* | | | |
| Linoleic acid | 18:2 n-6 | 0.5 | 3.0 |
| α-Linolenic acid | 18:3 n-3 | 0 | 2.0 |
| Moroctic acid | 18:4 n-3 | 0.5 | 4.5 |
| Timnodonic (eicosapentaenoic) acid (EPA) | 20:5 n-3 | 7.0 | 16.0 |
| Cervonic (docosahexaenoic) acid (DHA) | 22:6 n-3 | 6.0 | 18.0 |

*Test solution*. Dilute about 0.45 g of the substance to be examined to 10.0 mL with a 50 mg/L solution of *butylhydroxytoluene R* in *trimethylpentane R*. Transfer 2.0 mL of this solution to a quartz tube and evaporate the solvent with a gentle current of *nitrogen R*. Add 1.5 mL of a 20 g/L solution of *sodium hydroxide R* in *methanol R*, cover with *nitrogen R*, cap tightly with a polytetrafluoroethylene-lined cap, mix and heat on a water-bath for 7 min. Cool, add 2 mL of *boron trichloride-methanol solution R*, cover with *nitrogen R*, cap tightly, mix and heat on a water-bath for 30 min. Cool to 40-50 °C, add 1 mL of *trimethylpentane R*, cap and vortex or shake vigorously for at least 30 s. Immediately add 5 mL of *saturated sodium chloride solution R*, cover with *nitrogen R*, cap and vortex or shake thoroughly for at least 15 s. Allow the upper layer to become clear and transfer to a separate tube. Shake the methanol layer once more with 1 mL of *trimethylpentane R* and combine the trimethylpentane extracts. Wash the combined extracts with 2 quantities, each of 1 mL, of *water R* and dry over *anhydrous sodium sulfate R*. Prepare 2 solutions for each sample.

*Reference solution*. Dissolve 0.300 g of *methyl arachidate R*, 0.300 g of *methyl behenate R*, 0.300 g of *methyl palmitate R* and 0.300 g of *methyl stearate R* in a 50 mg/L solution of *butylhydroxytoluene R* in *trimethylpentane R* and dilute to 10.0 mL with the same solution.

*Column*:

- *material*: fused silica;
- *size*: *l* = 30 m, Ø = 0.25 mm;
- *stationary phase*: *macrogol 20 000 R* (film thickness 0.25 µm).

*Carrier gas*: *hydrogen for chromatography R* or *helium for chromatography R*, with an oxygen scrubber.

*Split ratio*: 1:200.

*Temperature*:

| | Time (min) | Temperature (°C) |
|---|---|---|
| Column | 0 - 55 | 170 → 225 |
| | 55 - 75 | 225 |
| Injection port | | 250 |
| Detector | | 280 |

*Detection*: flame ionisation.

*Injection*: 1 µL, twice.

*System suitability*:

- the 15 fatty acids to be tested are satisfactorily identified from the chromatogram shown in Figure 1193.-1;
- in the chromatogram obtained with the reference solution, multiply the areas of the peaks due to methyl palmitate, methyl stearate, methyl arachidate and methyl behenate by the corresponding response factors in Table 1193.-1; normalise the corrected areas of the peaks due to the fatty acid methyl esters to a sum of 100 per cent; the normalised area percentage of each fatty acid methyl ester is to be within ± 1.0 percentage unit of the corresponding weight percentage;

Table 1193.-1.

| Fatty acid methyl ester | Theoretical response factor |
|---|---|
| Methyl palmitate | 1.049 |
| Methyl stearate | 1.029 |
| Methyl arachidate | 1.013 |
| Methyl behenate | 1.000 |

- *resolution*: in the chromatogram obtained with the test solution:
  - minimum 1.3 between the peaks due to methyl oleate and methyl *cis*-vaccenate; the resolution between the peaks due to methyl gadoleate and methyl gondoate is sufficient for purposes of identification and area measurement.

Calculate the area per cent for each fatty acid methyl ester using the following expression:

$$\frac{A_x}{A_t} \times 100$$

$A_x$ = peak area of fatty acid $x$;

$A_t$ = sum of the peak areas (up to C22:6 n-3).

The calculation is not valid unless:

- the total area is based only on peaks due solely to fatty acid methyl esters;
- the number of fatty acid methyl ester peaks exceeding 0.05 per cent of the total area is at least 24;
- the 24 largest peaks of the methyl esters account for more than 90 per cent of the total area (these correspond to, in common elution order: 14:0, 15:0, 16:0, 16:1 n-7, 16:4 n-1, 18:0, 18:1 n-9, 18:1 n-7, 18:2 n-6, 18:3 n-3, 18:4 n-3, 20:1 n-11, 20:1 n-9, 20:1 n-7, 20:2 n-6, 20:4 n-6, 20:3 n-3, 20:4 n-3, 20:5 n-3, 22:1 n-11, 22:1 n-9, 21:5 n-3, 22:5 n-3, 22:6 n-3).

ASSAY

**Vitamin A**. *Carry out the test as rapidly as possible, avoiding exposure to actinic light and air, oxidising agents, oxidation catalysts (for example, copper and iron) and acids.*

Use method A. If method A is found not to be valid, use method B.

*METHOD A*

Ultraviolet absorption spectrophotometry (*2.2.25*).

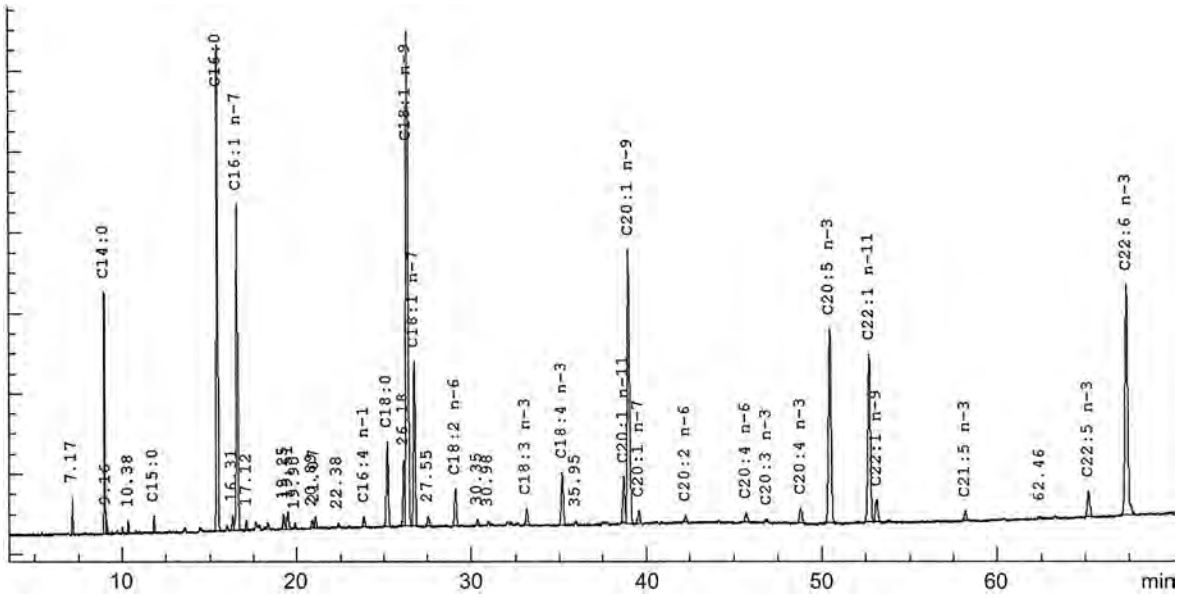

Figure 1193.-1. – *Chromatogram for the test for composition of fatty acids of cod-liver oil (type B)*

*Test solution.* To 1.00 g in a round-bottomed flask, add 3 mL of a freshly prepared 50 per cent *m/m* solution of *potassium hydroxide R* and 30 mL of *anhydrous ethanol R*. Boil under reflux in a current of *nitrogen R* for 30 min. Cool rapidly and add 30 mL of *water R*. Extract with 50 mL of *ether R*. Repeat the extraction 3 times and discard the lower layer after complete separation. Wash the combined upper layers with 4 quantities, each of 50 mL, of *water R* and evaporate to dryness under a gentle current of *nitrogen R* at a temperature not exceeding 30 °C or by other suitable means at a temperature not exceeding 30 °C under reduced pressure. Dissolve the residue in sufficient *2-propanol R1* to give an expected concentration of vitamin A equivalent to 10-15 IU/mL.

Measure the absorbances of the solution at 300 nm, 310 nm, 325 nm and 334 nm and at the wavelength of maximum absorption with a suitable spectrophotometer in specially matched 1 cm cells, using *2-propanol R1* as the compensation liquid.

Calculate the content of vitamin A, as all-*trans*-retinol, in International Units per gram using the following expression:

$$A_{325} \times \frac{1821}{100m} \times V$$

$A_{325}$ = absorbance at 325 nm;

$m$ = mass of the substance to be examined, in grams;

$V$ = total volume of solution containing 10-15 IU of vitamin A per millilitre;

1821 = conversion factor for the specific absorbance of all-*trans*-retinol, in International Units.

The above expression can be used only if $A_{325}$ has a value not greater than $A_{325,corr}/0.970$ where $A_{325,corr}$ is the corrected absorbance at 325 nm and is given by the following equation:

$$A_{325,corr} = 6.815A_{325} - 2.555A_{310} - 4.260A_{334}$$

*A* designates the absorbance at the wavelength indicated by the subscript.

If $A_{325}$ has a value greater than $A_{325,corr}/0.970$, calculate the content of vitamin A using the following expression:

$$A_{325,corr} \times \frac{1821}{100m} \times V$$

The assay is not valid unless:

- the wavelength of maximum absorption lies between 323 nm and 327 nm;
- the absorbance at 300 nm relative to that at 325 nm is at most 0.73.

*METHOD B*

Liquid chromatography (*2.2.29*).

*Test solution.* Prepare duplicates. To 2.00 g of the substance to be examined in a round-bottomed flask, add 5 mL of a freshly prepared 100 g/L solution of *ascorbic acid R*, 10 mL of a freshly prepared 800 g/L solution of *potassium hydroxide R* and 100 mL of *anhydrous ethanol R*. Boil under a reflux condenser on a water-bath for 15 min. Add 100 mL of a 10 g/L solution of *sodium chloride R* and cool. Transfer the solution to a 500 mL separating funnel, rinsing the round-bottomed flask with about 75 mL of a 10 g/L solution of *sodium chloride R* and then with 150 mL of a mixture of equal volumes of *ether R* and *light petroleum R1*. Shake for 1 min. When the layers have separated completely, discard the lower layer and wash the upper layer, first with 50 mL of a 30 g/L solution of *potassium hydroxide R* in a 10 per cent *V/V* solution of *anhydrous ethanol R* and then with 3 quantities, each of 50 mL, of a 10 g/L solution of *sodium chloride R*. Filter the upper layer through 5 g of *anhydrous sodium sulfate R* on a fast filter paper into a 250 mL flask.Wash the funnel with 10 mL of fresh extraction mixture, filter and combine the upper layers. Distil them at a temperature not exceeding 30 °C under reduced pressure and fill with *nitrogen R* when evaporation is completed. Alternatively, evaporate the solvent under a gentle current of *nitrogen R* at a temperature not exceeding 30 °C. Dissolve the residue in *2-propanol R1*, transfer to a 25 mL volumetric flask and dilute to 25 mL with *2-propanol R1*. Gentle heating in an ultrasonic bath may be required. *A large fraction of the white residue is cholesterol, constituting approximately 50 per cent m/m of the unsaponifiable matter of cod-liver oil.*

*Reference solution (a).* Prepare a solution of *retinol acetate CRS* in *2-propanol R1* so that 1 mL contains about 1000 IU of all-*trans*-retinol.

The exact concentration of reference solution (a) is assessed by ultraviolet absorption spectrophotometry (*2.2.25*). Dilute reference solution (a) with *2-propanol R1* to a presumed concentration of 10-15 IU/mL and measure the absorbance at 326 nm in matched 1 cm cells using *2-propanol R1* as the compensation liquid.

Calculate the content of vitamin A in International Units per millilitre of reference solution (a) using the following expression, taking into account the assigned content of *retinol acetate CRS*:

$$A_{326} \times \frac{1900 \times V_2}{100 \times V_1}$$

$A_{326}$ = absorbance at 326 nm;

$V_1$ = volume of reference solution (a) used;

$V_2$ = volume of the diluted solution;

1900 = conversion factor for the specific absorbance of *retinol acetate CRS*, in International Units.

*Reference solution (b).* Proceed as described for the test solution but using 2.00 mL of reference solution (a) in place of the substance to be examined.

The exact concentration of reference solution (b) is assessed by ultraviolet absorption spectrophotometry (*2.2.25*). Dilute reference solution (b) with *2-propanol R1* to a presumed concentration of 10-15 IU/mL of all-*trans*-retinol and measure the absorbance at 325 nm in matched 1 cm cells using *2-propanol R1* as the compensation liquid.

Calculate the content of all-*trans*-retinol in International Units per millilitre of reference solution (b) using the following expression:

$$A_{325} \times \frac{1821 \times V_3}{100 \times V_4}$$

$A_{325}$ = absorbance at 325 nm;

$V_3$ = volume of the diluted solution;

$V_4$ = volume of reference solution (b) used;

1821 = conversion factor for the specific absorbance of all-*trans*-retinol, in International Units.

*Column*:

– *size*: *l* = 0.25 m, Ø = 4.6 mm;

– *stationary phase*: *octadecylsilyl silica gel for chromatography R* (5-10 µm).

*Mobile phase*: *water for chromatography R*, *methanol R* (3:97 *V/V*).

*Flow rate*: 1 mL/min.

*Detection*: spectrophotometer at 325 nm.

*Injection*: 10 µL; inject in triplicate the test solution and reference solution (b).

*Retention time*: all-*trans*-retinol = 5 ± 1 min.

*System suitability*:

– the chromatogram obtained with the test solution shows a peak corresponding to the peak due to all-*trans*-retinol in the chromatogram obtained with reference solution (b);

– the results obtained with the duplicate test solutions do not differ by more than 5 per cent;

– the recovery of all-*trans*-retinol in reference solution (b) as assessed by direct absorption spectrophotometry is greater than 95 per cent.

Calculate the content of vitamin A using the following expression:

$$A_1 \times \frac{C \times V}{A_2} \times \frac{1}{m}$$

$A_1$ = area of the peak due to all-*trans*-retinol in the chromatogram obtained with the test solution;

$A_2$ = area of the peak due to all-*trans*-retinol in the chromatogram obtained with reference solution (b);

$C$ = concentration of *retinol acetate CRS* in reference solution (a) as assessed prior to the saponification, in International Units per millilitre (= 1000 IU/mL);

$V$ = volume of reference solution (a) treated (2.00 mL);

$m$ = mass of the substance to be examined in the test solution (2.00 g).

**Vitamin $D_3$.** Liquid chromatography (*2.2.29*). *Carry out the assay as rapidly as possible, avoiding exposure to actinic light and air.*

*Internal standard solution.* Dissolve 0.50 mg of *ergocalciferol CRS* in *anhydrous ethanol R* and dilute to 100.0 mL with the same solvent.

*Test solution (a).* To 4.00 g of the substance to be examined in a round-bottomed flask, add 5 mL of a freshly prepared 100 g/L solution of *ascorbic acid R*, 10 mL of a freshly prepared 800 g/L solution of *potassium hydroxide R* and 100 mL of *anhydrous ethanol R*. Boil under a reflux condenser on a water-bath for 30 min. Add 100 mL of a 10 g/L solution of *sodium chloride R* and cool the solution to room temperature. Transfer the solution to a 500 mL separating funnel, rinsing the round-bottomed flask with about 75 mL of a 10 g/L solution of *sodium chloride R* and then with 150 mL of a mixture of equal volumes of *ether R* and *light petroleum R1*. Shake for 1 min. When the layers have separated completely, discard the lower layer and wash the upper layer, first with 50 mL of a 30 g/L solution of *potassium hydroxide R* in a 10 per cent *V/V* solution of *anhydrous ethanol R*, and then with 3 quantities, each of 50 mL, of a 10 g/L solution of *sodium chloride R*. Filter the upper layer through 5 g of *anhydrous sodium sulfate R* on a fast filter paper into a 250 mL flask.Wash the funnel with 10 mL of fresh extraction mixture, filter and combine the upper layers. Distil them at a temperature not exceeding 30 °C under reduced pressure and fill with *nitrogen R* when evaporation is completed. Alternatively, evaporate the solvent under a gentle current of *nitrogen R* at a temperature not exceeding 30 °C. Dissolve the residue in 1.5 mL of the mobile phase described under Purification. Gentle heating in an ultrasonic bath may be required. *A large fraction of the white residue is cholesterol, constituting approximately 50 per cent m/m of the unsaponifiable matter of cod-liver oil.*

*Test solution (b).* Prepare duplicates. To 4.00 g of the substance to be examined add 2.0 mL of the internal standard solution and proceed as described for test solution (a).

*Reference solution (a).* Dissolve 0.50 mg of *cholecalciferol CRS* in *anhydrous ethanol R* and dilute to 100.0 mL with the same solvent.

*Reference solution (b).* In a round-bottomed flask, add 2.0 mL of reference solution (a) and 2.0 mL of the internal standard solution and proceed as described for test solution (a).

*PURIFICATION*

*Column*:

– *size*: *l* = 0.25 m, Ø = 4.6 mm;

– *stationary phase*: *nitrile silica gel for chromatography R* (10 µm).

*Mobile phase*: *isoamyl alcohol R*, *hexane R* (1.6:98.4 *V/V*).

*Flow rate*: 1.1 mL/min.

*Detection*: spectrophotometer at 265 nm.

*Injection*: 350 µL of reference solution (b) and test solutions (a) and (b). Collect each eluate from 2 min before until 2 min after the retention time of cholecalciferol, in a ground-glass-stoppered tube containing 1 mL of a 1 g/L solution of *butylhydroxytoluene R* in *hexane R*. Evaporate

separately to dryness at a temperature not exceeding 30 °C under a gentle current of *nitrogen R*. Dissolve each residue in 1.5 mL of *acetonitrile R*.

*DETERMINATION*

*Column*:

- *size*: *l* = 0.15 m, Ø = 4.6 mm;
- *stationary phase*: *octadecylsilyl silica gel for chromatography R* (5 µm).

*Mobile phase*: *phosphoric acid R*, 96 per cent *V/V* solution of *acetonitrile R* (0.2:99.8 *V/V*).

*Flow rate*: 1.0 mL/min.

*Detection*: spectrophotometer at 265 nm.

*Injection*: 2 quantities not exceeding 200 µL of each of the 3 solutions obtained under Purification.

*System suitability*:

- *resolution*: minimum 1.4 between the peaks due to ergocalciferol and cholecalciferol in the chromatogram obtained with reference solution (b);
- the results obtained with the test solution (b) duplicates do not differ by more than 5 per cent.

Calculate the content of vitamin $D_3$ in International Units per gram using the following expression, taking into account the assigned content of *cholecalciferol CRS*:

$$\frac{A_2}{A_6} \times \frac{A_3}{A_4 - \left[\frac{A_5}{A_1}\right] \times A_2} \times \frac{m_2}{m_1} \times \frac{V_2}{V_1} \times 40$$

$m_1$ = mass of the substance to be examined in test solution (b), in grams;

$m_2$ = total mass of *cholecalciferol CRS* used for the preparation of reference solution (a), in micrograms (500 µg);

$A_1$ = area (or height) of the peak due to cholecalciferol in the chromatogram obtained with test solution (a);

$A_2$ = area (or height) of the peak due to cholecalciferol in the chromatogram obtained with test solution (b);

$A_3$ = area (or height) of the peak due to ergocalciferol in the chromatogram obtained with reference solution (b);

$A_4$ = area (or height) of the peak due to ergocalciferol in the chromatogram obtained with test solution (b);

$A_5$ = area (or height) of a possible peak in the chromatogram obtained with test solution (a) with the same retention time as the peak co-eluting with ergocalciferol in test solution (b);

$A_6$ = area (or height) of the peak due to cholecalciferol in the chromatogram obtained with reference solution (b);

$V_1$ = total volume of reference solution (a) (100 mL);

$V_2$ = volume of reference solution (a) used to prepare reference solution (b) (2.0 mL).

STORAGE

In an airtight and well-filled container, protected from light. If no antioxidant is added, store under an inert gas.

Once the container has been opened, its contents are used as soon as possible and any part of the contents not used at once is protected by an atmosphere of inert gas.

LABELLING

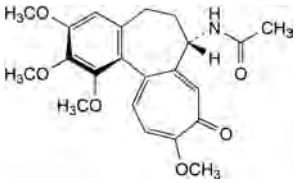
The label states:

- the number of International Units of vitamin A per gram;
- the number of International Units of vitamin $D_3$ per gram.

**04/2018:0758**

# COLCHICINE

## Colchicinum



$C_{22}H_{25}NO_6$ $M_r$ 399.4

[64-86-8]

DEFINITION

*N*-[(7*S*,12a*M*)-1,2,3,10-tetramethoxy-9-oxo-5,6,7,9-tetrahydrobenzo[*a*]heptalen-7-yl]acetamide.

*Content*: 97.0 per cent to 102.0 per cent (anhydrous substance).

CHARACTERS

*Appearance*: yellowish-white, amorphous or crystalline powder.

*Solubility*: very soluble in water, rapidly recrystallising from concentrated solutions as the sesquihydrate, freely soluble in ethanol (96 per cent), practically insoluble in cyclohexane.

IDENTIFICATION

*First identification: B.*

*Second identification: A, C, D.*

A. Ultraviolet and visible absorption spectrophotometry (*2.2.25*).

*Test solution.* Dissolve 5 mg in *ethanol (96 per cent) R* and dilute to 100.0 mL with the same solvent. Dilute 5.0 mL of this solution to 25.0 mL with *ethanol (96 per cent) R*.

*Spectral range*: 230-400 nm.

*Absorption maxima*: 243 nm and 350 nm.

*Absorbance ratio*: $A_{243}/A_{350}$ = 1.7 to 1.9.

B. Infrared absorption spectrophotometry (*2.2.24*).

*Comparison*: *colchicine CRS*.

C. To 0.5 mL of solution S (see Tests) add 0.5 mL of *dilute hydrochloric acid R* and 0.15 mL of *ferric chloride solution R1*. The solution is yellow and becomes dark green on boiling for 30 s. Cool, add 2 mL of *methylene chloride R* and shake. The organic layer is greenish-yellow.

D. Dissolve about 30 mg in 1 mL of *ethanol (96 per cent) R* and add 0.15 mL of *ferric chloride solution R1*. A brownish-red colour develops.

TESTS

**Solution S**. Dissolve 0.10 g in *carbon dioxide-free water R* and dilute to 20 mL with the same solvent.

**Appearance of solution**. Solution S is clear (*2.2.1*) and not more intensely coloured than reference solution $GY_3$ (*2.2.2, Method II*).

**Acidity or alkalinity**. To 10 mL of solution S add 0.1 mL of *bromothymol blue solution R1*. Either the solution does not change colour or it becomes green. Not more than 0.1 mL of *0.01 M sodium hydroxide* is required to change the colour of the indicator to blue.

**Specific optical rotation** (*2.2.7*): − 250 to − 235 (anhydrous substance).

Dissolve 50.0 mg in *ethanol (96 per cent) R* and dilute to 10.0 mL with the same solvent.

**Related substances**. Liquid chromatography (*2.2.29*).

*Solvent mixture*: *methanol R*, *water R* (50:50 *V/V*).

*Test solution.* Dissolve 20.0 mg of the substance to be examined in the solvent mixture and dilute to 20.0 mL with the solvent mixture.

*Reference solution (a).* Dissolve 5 mg of *colchicine for system suitability A CRS* (containing impurities A, E and G) in the solvent mixture and dilute to 5.0 mL with the solvent mixture.

*Reference solution (b).* Dilute 1.0 mL of the test solution to 100.0 mL with the solvent mixture.

*Column*:

- *size*: *l* = 0.25 m, Ø = 4.6 mm;
- *stationary phase*: *octylsilyl silica gel for chromatography R1* (5 µm);
- *temperature*: 25 °C.

*Mobile phase*: mix 450 volumes of a 6.8 g/L solution of *potassium dihydrogen phosphate R* and 530 volumes of *methanol R*. After cooling to room temperature, adjust the volume to 1000 mL with *methanol R*. Adjust the apparent pH to 5.5 with *dilute phosphoric acid R*.

*Flow rate*: 1 mL/min.

*Detection*: spectrophotometer at 254 nm.

*Injection*: 20 µL.

*Run time*: 3 times the retention time of colchicine.

*Identification of impurities*: use the chromatogram supplied with *colchicine for system suitability A CRS* and the chromatogram obtained with reference solution (a) to identify the peaks due to impurities A, B, E and G. (Impurity B is the conformational isomer of colchicine, which is formed *in situ* in solution).

*Relative retention* with reference to colchicine (retention time = about 7 min): impurity E = about 0.6; impurity B = about 0.9; impurity A = about 0.94; impurity G = about 1.4.

*System suitability*: reference solution (a):

- *peak-to-valley ratio*: minimum 2, where $H_p$ = height above the baseline of the peak due to impurity A and $H_v$ = height above the baseline of the lowest point of the curve separating this peak from the peak due to colchicine; minimum 2, where $H_p$ = height above the baseline of the peak due to impurity B and $H_v$ = height above the baseline of the lowest point of the curve separating this peak from the peak due to impurity A.

*Calculation of percentage contents*:

- *correction factor*: multiply the peak area of impurity G by 1.6;
- for each impurity, use the concentration of colchicine in reference solution (b).

*Limits*:

- *impurity A*: maximum 3.0 per cent;
- *impurity G*: maximum 0.25 per cent;
- *impurity E*: maximum 0.2 per cent;
- *unspecified impurities*: for each impurity, maximum 0.10 per cent;
- *total*: maximum 4.0 per cent;
- *reporting threshold*: 0.05 per cent; disregard the peak due to impurity B.

**Impurity F**: maximum 0.2 per cent.

Dissolve 50 mg in *water R* and dilute to 5 mL with the same solvent. Add 0.1 mL of *ferric chloride solution R1*. The solution is not more intensely coloured than a mixture of 1 mL of red primary solution, 2 mL of yellow primary solution and 2 mL of blue primary solution (*2.2.2, Method II*).

**Ethyl acetate** (*2.4.24*): maximum 6.0 per cent *m/m*.

**Water** (*2.5.12*): maximum 2.0 per cent, determined on 0.500 g.

**Sulfated ash** (*2.4.14*): maximum 0.1 per cent, determined on 0.5 g.

ASSAY

Dissolve 0.250 g with gentle heating in a mixture of 20 mL of *acetic anhydride R* and 40 mL of *toluene R*. Titrate with *0.1 M perchloric acid*, determining the end-point potentiometrically (*2.2.20*).

1 mL of *0.1 M perchloric acid* is equivalent to 39.94 mg of $C_{22}H_{25}NO_6$.

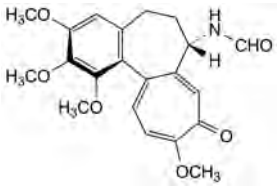
STORAGE

Protected from light.

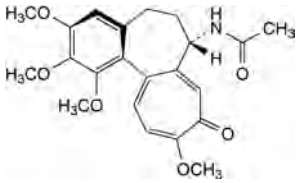
IMPURITIES

*Specified impurities: A, E, F, G.*

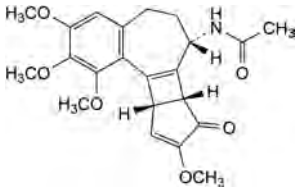
*Other detectable impurities* (the following substances would, if present at a sufficient level, be detected by one or other of the tests in the monograph. They are limited by the general acceptance criterion for other/unspecified impurities and/or by the general monograph *Substances for pharmaceutical use (2034)*. It is therefore not necessary to identify these impurities for demonstration of compliance. See also *5.10. Control of impurities in substances for pharmaceutical use*): *B, C, D.*



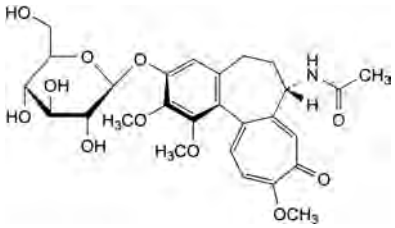
A. *N*-[(7*S*,12a*M*)-1,2,3,10-tetramethoxy-9-oxo-5,6,7,9-tetrahydrobenzo[*a*]heptalen-7-yl]formamide (*N*-deacetyl-*N*-formylcolchicine),



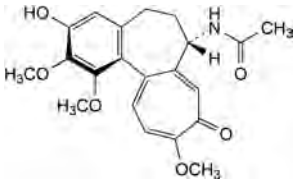
B. *N*-[(7*S*,12a*P*)-1,2,3,10-tetramethoxy-9-oxo-5,6,7,9-tetrahydrobenzo[*a*]heptalen-7-yl]acetamide (conformational isomer),



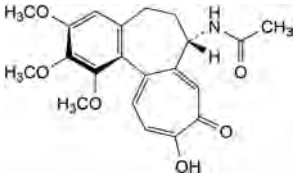
C. *N*-[(7*S*,7b*R*,10a*S*)-1,2,3,9-tetramethoxy-8-oxo-5,6,7,7b,8,10a-hexahydrobenzo[*a*]cyclopenta-[3,4]cyclobuta[1,2-*c*]cyclohepten-7-yl]acetamide (β-lumicolchicine),



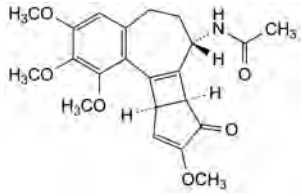
D. *N*-[(7*S*,12a*M*)-3-(β-D-glucopyranosyloxy)-1,2,10-trimethoxy-9-oxo-5,6,7,9-tetrahydrobenzo[*a*]heptalen-7-yl]acetamide (colchicoside),



E. *N*-[(7*S*,12a*M*)-3-hydroxy-1,2,10-trimethoxy-9-oxo-5,6,7,9-tetrahydrobenzo[*a*]heptalen-7-yl]acetamide (3-*O*-demethylcolchicine),



F. *N*-[(7*S*,12a*M*)-10-hydroxy-1,2,3-trimethoxy-9-oxo-5,6,7,9-tetrahydrobenzo[*a*]heptalen-7-yl]acetamide (colchiceine),



G. *N*-[(7*S*,7b*S*,10a*R*)-1,2,3,9-tetramethoxy-8-oxo-5,6,7,7b,8,10a-hexahydrobenzo[*a*]cyclopenta-[3,4]cyclobuta[1,2-*c*]cyclohepten-7-yl]acetamide (γ-lumicolchicine).

**corrected 10.0**

# COLESTYRAMINE

## Colestyraminum

[11041-12-6]

DEFINITION

Strongly basic anion-exchange resin in chloride form, consisting of styrene-divinylbenzene copolymer with quaternary ammonium groups.

*Nominal exchange capacity*: 1.8 g to 2.2 g of sodium glycocholate per gram (dried substance).

CHARACTERS

*Appearance*: white or almost white, fine powder, hygroscopic.

*Solubility*: insoluble in water, in methylene chloride and in ethanol (96 per cent).

IDENTIFICATION

A. Infrared absorption spectrophotometry (*2.2.24*).
*Comparison: colestyramine CRS.*

B. Chloride (see Tests).

TESTS

**pH** (*2.2.3*): 4.0 to 6.0.

Suspend 0.100 g in 10 mL of *water R* and allow to stand for 10 min.

**Dialysable quaternary amines**: maximum 500 ppm, expressed as benzyltrimethylammonium chloride.

*Test solution.* Place a 25 cm piece of cellulose dialysis tubing having a molecular weight cut-off of 12 000-14 000 and an inflated diameter of 3-6 cm (flat width of 5-9 cm) in *water R* to hydrate until pliable, appropriately sealing one end. Introduce 2.0 g of the substance to be examined into the tube and add 10 mL of *water R*. Seal the tube and completely immerse it in 100 mL of *water R* in a suitable vessel and stir the liquid for 16 h to effect dialysis. Use the dialysate as test solution.

*Reference solution.* Prepare the reference solution in a similar manner but using 10 mL of a freshly prepared 0.1 g/L solution of *benzyltrimethylammonium chloride R* instead of the substance to be examined.

Transfer 5.0 mL of the test solution to a separating funnel and add 5 mL of a 3.8 g/L solution of *disodium tetraborate R*, 1 mL of a solution containing 1.5 g/L of *bromothymol blue R* and 4.05 g/L of *sodium carbonate R* and 10 mL of *chloroform R*. Shake the mixture vigourously for 1 min, allow the phases to separate and transfer the clear organic layer to a 25 mL volumetric flask. Repeat the extraction with a further 10 mL of *chloroform R*, combine the organic layers and dilute to 25 mL with *chloroform R*. Measure the absorbance (*2.2.25*) of the solution at the absorption maximum at 420 nm, using as compensation liquid a solution prepared in the same manner but using 5.0 mL of *water R* instead of the test solution.

Repeat the operation using 5.0 mL of the reference solution.

The absorbance obtained with the test solution is not greater than that obtained with the reference solution.

**Impurity A**. Liquid chromatography (*2.2.29*).

*Test solution.* Shake 5.0 g with 10 mL of *acetone R* for 30 min. Centrifuge and use the supernatant.

*Reference solution (a).* Dissolve 5 mg of *styrene R* in *acetone R* and dilute to 100.0 mL with the same solvent. Dilute 1.0 mL of the solution to 100.0 mL with *acetone R*.

*Reference solution (b).* Dissolve 0.35 mL of *styrene R* in *acetone R* and dilute to 100.0 mL with the same solvent. Dilute 1.0 mL of the solution to 100.0 mL with *acetone R*.

*Reference solution (c).* Dissolve 0.35 mL of *toluene R* in *acetone R* and dilute to 100.0 mL with the same solvent.

*Reference solution (d).* Mix 1.0 mL of reference solution (b) and 1.0 mL of reference solution (c) with *acetone R* and dilute to 100.0 mL with the same solvent.

*Column*:
- *size*: *l* = 0.30 m, Ø = 3.9 mm,
- *stationary phase*: *octadecylsilyl silica gel for chromatography R* (10 µm) with a specific surface area of 330 $m^2$/g and a pore size of 12.5 nm.

*Mobile phase*: *acetonitrile R*, *water R* (50:50 *V/V*).

*Flow rate*: 2.0 mL/min.

*Detection*: spectrophotometer at 254 nm.

*Injection*: 20 µL of test solution and reference solutions (a) and (d).

*System suitability*: reference solution (d):
- *resolution*: minimum 1.5 between the peaks due to impurity A and toluene.

*Limit*:
- *impurity A*: not more than the area of the principal peak in the chromatogram obtained with reference solution (a) (1 ppm).

**Chloride**: 13.0 per cent to 17.0 per cent (dried substance).

To 0.2 g add 100 mL of *water R* and 50 mg of *potassium nitrate R*. Add, with stirring, 2 mL of *nitric acid R* and titrate with *0.1 M silver nitrate*, determining the end-point potentiometrically (*2.2.20*).

1 mL of *0.1 M silver nitrate* is equivalent to 3.55 mg of Cl.

**Loss on drying** (*2.2.32*): maximum 12 per cent, determined on 1.000 g by drying *in vacuo* at 70 °C at a pressure not exceeding 7 kPa for 16 h.

**Sulfated ash** (*2.4.14*): maximum 0.1 per cent, determined on 1.0 g.

ASSAY

**Exchange capacity**. Liquid chromatography (*2.2.29*).

*Solution A*. Dissolve 1.500 g of *sodium glycocholate R* in a solution containing 4 g/L of *potassium dihydrogen phosphate R* and 12 g/L of *dipotassium hydrogen phosphate R* and dilute to 100.0 mL with the same solution.

*Test solution*. Add 20.0 mL of solution A to a quantity of the substance to be examined equivalent to about 0.100 g of the dried substance. Shake mechanically for 2 h and centrifuge for 15 min. Dilute 5.0 mL of the supernatant to 50.0 mL with *water R*.

*Reference solution (a)*. Dilute 4.0 mL of solution A to 100.0 mL with *water R*.

*Reference solution (b)*. Dissolve 60 mg of *sodium glycocholate R* and 30 mg of *sodium taurodeoxycholate R* in *water R* and dilute to 100 mL with the same solvent. Dilute 1 mL of the solution to 10 mL with *water R*.

*Column*:

– *size*: *l* = 0.25 m, Ø = 4.6 mm,

– *stationary phase*: *octadecylsilyl silica gel for chromatography R* (5 µm).

*Mobile phase*: mix 35 volumes of *acetonitrile R* and 65 volumes of a 10.9 g/L solution of *potassium dihydrogen phosphate R* adjusted to pH 3.0 with *phosphoric acid R*.

*Flow rate*: 1.5 mL/min.

*Detection*: spectrophotometer at 214 nm.

*Injection*: 50 µL.

*Run time*: twice the retention time of glycocholate.

*System suitability*: reference solution (b):

– *resolution*: minimum 1.5 between the peaks due to glycocholate and taurodeoxycholate.

Calculate the nominal exchange capacity using the following expression:

$$\frac{(2.5\,A_1 - A_2) \times m_1 \times 1.2}{12.5 \times A_1 \times m_2}$$

$A_1$ = area of the peak due to glycocholate in the chromatogram obtained with reference solution (a),

$A_2$ = area of the peak due to glycocholate in the chromatogram obtained with the test solution,

$m_1$ = mass, in milligrams, of *sodium glycocholate R* used in the preparation of solution A,

$m_2$ = mass, in milligrams, of the dried substance to be examined used in the preparation of the test solution,

1.2 = correction factor to convert the true exchange capacity to the conventionally used nominal exchange capacity.

STORAGE

In an airtight container.

IMPURITIES

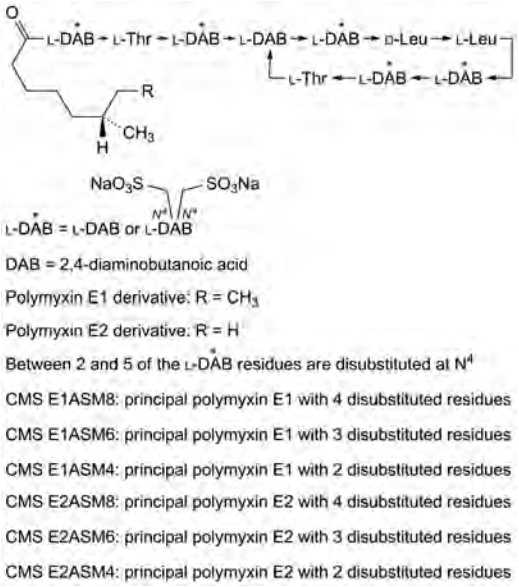
*Specified impurities: A.*

A. styrene.

**07/2017:0319**
**corrected 10.0**

# COLISTIMETHATE SODIUM

## Colistimethatum natricum



[8068-28-8]

DEFINITION

Colistimethate sodium is prepared from colistin by the action of formaldehyde and sodium hydrogen sulfite to form a mixture of di to penta bis-sulfomethylated primary amine derivatives, mainly polymyxins E1 and E2.

Semi-synthetic product derived from a fermentation product.

*Content*: minimum 11 500 IU/mg (dried substance).

PRODUCTION

The composition and purity of the colistin starting material used in the synthesis of colistimethate sodium are equivalent to that described in the monograph *Colistin sulfate (0320)*. In addition, the colistin starting material must have a polymyxin E1 content between 50 per cent and 75 per cent and a polymyxin E2 content between 5 per cent and 20 per cent, in order to comply with the composition limits for colistimethate sodium.

CHARACTERS

*Appearance*: white or almost white, hygroscopic powder.

*Solubility*: very soluble in water, slightly soluble in ethanol (96 per cent), practically insoluble in acetone.

IDENTIFICATION

A. Examine the chromatograms obtained in the test for composition.

*Results*: the peaks due to CMS E1ASM8, CMS E1ASM6, CMS E1ASM4, CMS E2ASM8, CMS E2ASM6 and CMS E2ASM4 in the chromatogram obtained with the test solution are similar in retention time to the corresponding peaks in the chromatogram obtained with reference solution (a).

B. It gives reaction (b) of sodium (*2.3.1*).

TESTS

**Appearance of solution**. The solution is clear (*2.2.1*).

Dissolve 0.16 g in 10 mL of *water R*.

**pH** (*2.2.3*): 6.5 to 8.5.

Dissolve 0.1 g in *carbon dioxide-free water R* and dilute to 10 mL with the same solvent. Measure after 30 min.

**Free colistin**. Dissolve 80 mg in 3 mL of *water R*. Add 0.1 mL of a 100 g/L solution of *silicotungstic acid R*; 10-20 s after addition of the reagent, the solution is not more opalescent than reference suspension II (*2.2.1*).

**Composition**. Liquid chromatography (*2.2.29*): use the normalisation procedure.

*Buffer solution*: 7.8 g/L solution of *sodium dihydrogen phosphate R* adjusted to pH 6.5 with *1 M sodium hydroxide*.

*Test solution*. Dissolve 20 mg of the substance to be examined in 0.5 mL of *water R* and dilute to 10.0 mL with *methanol R*.

*Reference solution (a)*. Dissolve 10 mg of *colistimethate sodium for peak identification CRS* in 0.25 mL of *water R* and dilute to 5.0 mL with *methanol R*.

*Reference solution (b)*. Dissolve 2 mg of *E1 colistimethate sodium for peak identification CRS* in 0.25 mL of *water R* and dilute to 2.0 mL with *methanol R*.

*Reference solution (c)*. Dissolve 1.5 mg of *E2 colistimethate sodium for peak identification CRS* in 0.25 mL of *water R* and dilute to 5.0 mL with *methanol R*.

*Reference solution (d)*. Dilute 1.5 mL of reference solution (a) to 25.0 mL with *methanol R*.

*Precolumn*:

- *size*: *l* = 5 mm, Ø = 2.1 mm;
- *stationary phase*: *end-capped octadecylsilyl silica gel for chromatography R* (1.7 µm).

*Column*:

- *size*: *l* = 0.15 m, Ø = 2.1 mm;
- *stationary phase*: *end-capped octadecylsilyl silica gel for chromatography R* (1.7 µm);
- *temperature*: 30 °C.

*Mobile phase*:

- *mobile phase A*: *acetonitrile R1*, buffer solution (25:475 *V/V*);
- *mobile phase B*: *acetonitrile R1*, buffer solution (250:250 *V/V*);

| Time (min) | Mobile phase A (per cent *V/V*) | Mobile phase B (per cent *V/V*) |
|---|---|---|
| 0 - 10 | 80 → 68 | 20 → 32 |
| 10 - 35 | 68 → 53 | 32 → 47 |

*Flow rate*: 0.30 mL/min.

*Detection*: spectrophotometer at 210 nm.

*Autosampler*: set at 5 °C.

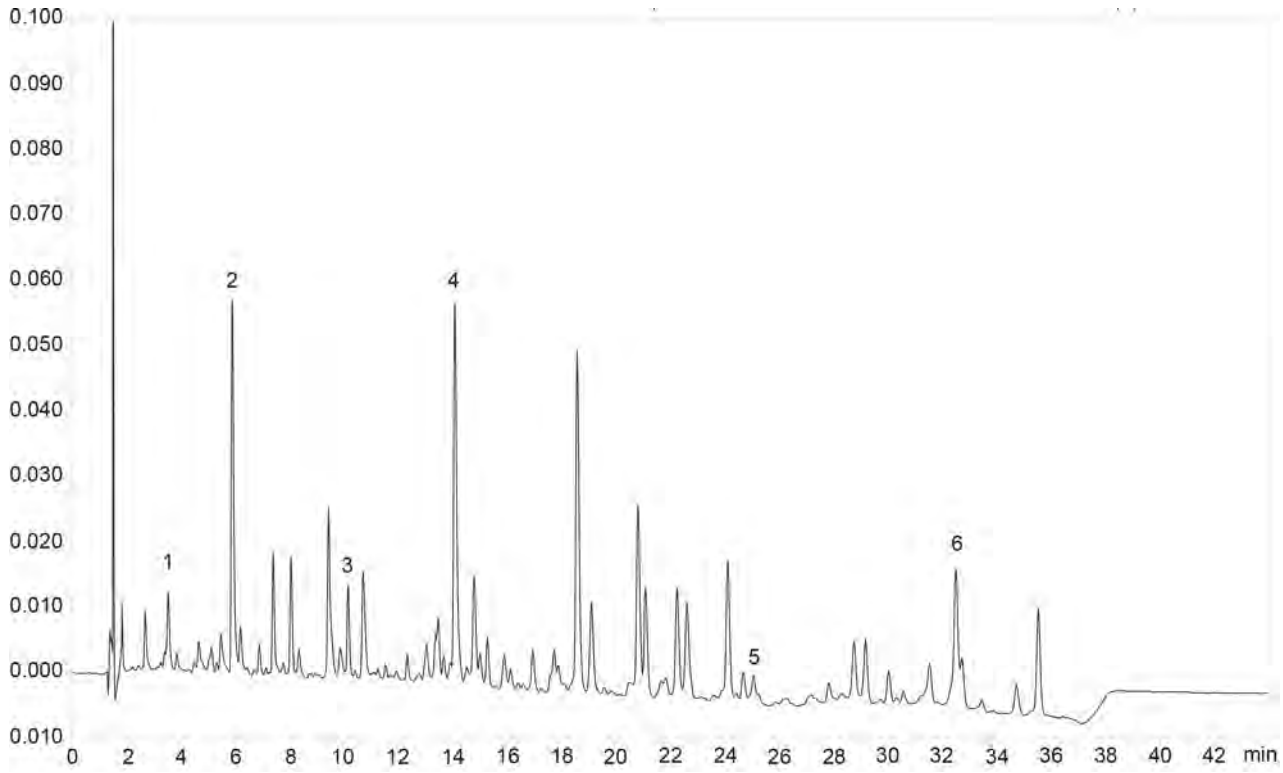
*Injection*: 2.0 µL.

*Identification of peaks*: use the chromatogram supplied with *colistimethate sodium for peak identification CRS* and the chromatogram obtained with reference solution (a) to identify the peaks due to CMS E1ASM8, CMS E1ASM6, CMS E1ASM4, CMS E2ASM8, CMS E2ASM6 and CMS E2ASM4 (see Figure 0319.-1).

The peak corresponding to the most abundant compound in the range of 11.0-14.5 min (CMS E1ASM6) in the chromatogram obtained with reference solution (a) is set as the identification reference peak (relative retention 1.00).

*Identification of peaks related to CMS E1 and CMS E2*: use the chromatogram supplied with *E1 colistimethate sodium for peak identification CRS* and *E2 colistimethate sodium for peak identification CRS*, and the chromatograms obtained with reference solutions (b) and (c) to identify all peaks related to CMS E1 and CMS E2 in the chromatogram obtained with the test solution (see Figures 0319.-2 and 0319.-3).

*Relative retention* with reference to CMS E1ASM6 (retention time = about 13 min): CMS E2ASM8 = about 0.22; CMS E1ASM8 = about 0.39; CMS E2ASM6 = about 0.71; CMS E2ASM4 = about 1.77; CMS E1ASM4 = about 2.35.



1. CMS E2ASM8
2. CMS E1ASM8
3. CMS E2ASM6
4. CMS E1ASM6
5. CMS E2ASM4
6. CMS E1ASM4

Figure 0319.-1. – *Chromatogram for the test for composition of colistimethate sodium: reference solution (a)*

Integrate all peaks above 0.05 per cent to establish the total area.

*System suitability*:

- the difference in the retention times of CMS E1ASM6 in 2 consecutive injections of reference solution (a) is less than 0.1 min; the drift in the retention time of CMS E1ASM6 from the beginning to the end of the sequence is less than 0.5 min;
- *peak-to-valley ratio*: minimum 1.2, where $H_p$ = height above the baseline of the peak with a relative retention of about 2.37 and $H_v$ = height above the baseline of the lowest point of the curve separating this peak from the peak due to CMS E1ASM4 in the chromatogram obtained with reference solution (a);
- *number of theoretical plates*: minimum 50 000, calculated for the peak due to CMS E1ASM6 in the chromatogram obtained with reference solution (a);
- *signal-to-noise ratio*: minimum 50 for the peak due to CMS E1ASM6 in the chromatogram obtained with reference solution (d).

*Limits*:

- *CMS E1ASM8*: 5.0 per cent to 9.5 per cent;
- *CMS E1ASM6*: 6.5 per cent to 9.5 per cent;
- *CMS E1ASM4*: 2.0 per cent to 5.0 per cent;
- *CMS E2ASM8*: 0.5 per cent to 2.0 per cent;
- *CMS E2ASM6*: 0.5 per cent to 2.5 per cent;
- *CMS E2ASM4*: maximum 1.5 per cent;
- *sum of the peaks related to CMS E1 and CMS E2*: minimum 77.0 per cent;
- *disregard limit*: 0.50 per cent.

**Related substances**. Liquid chromatography (*2.2.29*) as described in the test for composition.

*Limits*:

- *any other impurity* (any peak not related to CMS E1 or CMS E2): for each impurity, maximum 1.5 per cent;
- *sum of impurities* (sum of all peaks not related to CMS E1 or CMS E2): maximum 5.5 per cent;
- *disregard limit*: 0.50 per cent.

**Loss on drying** (*2.2.32*): maximum 5.0 per cent, determined on 1.000 g by drying *in vacuo* at 60 °C at a pressure not exceeding 0.7 kPa for 3 h.

**Sulfated ash** (*2.4.14*): 16 per cent to 21 per cent, determined on 0.50 g.

**Pyrogens** (*2.6.8*). If intended for use in the manufacture of parenteral preparations without a further appropriate procedure for removal of pyrogens, it complies with the test. Inject, per kilogram of the rabbit's mass, 1 mL of a solution in *water for injections R* containing 2.5 mg of the substance to be examined per millilitre.

ASSAY

Carry out the microbiological assay of antibiotics (*2.7.2*).

STORAGE

In an airtight container, protected from light. If the substance is sterile the container is also sterile and tamper-evident.

[1264-72-8]

DEFINITION

A mixture of the sulfates of polypeptides produced by certain strains of *Bacillus polymyxa* var. *colistinus*.

*Content*: minimum 19 000 IU/mg (dried substance).

CHARACTERS

*Appearance*: white or almost white, hygroscopic powder.

*Solubility*: freely soluble in water, practically insoluble in acetone and in ethanol (96 per cent).

IDENTIFICATION

*First identification: B, E.*

*Second identification: A, C, D, E.*

A. Thin-layer chromatography (*2.2.27*).

*Test solution.* Dissolve 5 mg of the substance to be examined in 1 mL of a mixture of equal volumes of *hydrochloric acid R* and *water R*. Heat at 135 °C in a sealed tube for 5 h. Evaporate to dryness on a water-bath and continue the heating until moistened *blue litmus paper R* does not turn red. Dissolve the residue in 0.5 mL of *water R*.

*Reference solution (a).* Dissolve 20 mg of *leucine R* in *water R* and dilute to 10 mL with the same solvent.

*Reference solution (b).* Dissolve 20 mg of *threonine R* in *water R* and dilute to 10 mL with the same solvent.

*Reference solution (c).* Dissolve 20 mg of *phenylalanine R* in *water R* and dilute to 10 mL with the same solvent.

*Reference solution (d).* Dissolve 20 mg of *serine R* in *water R* and dilute to 10 mL with the same solvent.

*Plate*: *TLC silica gel plate R.*

*Carry out the following procedures protected from light.*

*Mobile phase*: *water R*, *phenol R* (25:75 *V/V*).

*Application*: 5 µL as bands of 10 mm, then place the plate in the chromatographic tank so that it is not in contact with the mobile phase, and allow it to become impregnated with the vapour of the mobile phase for at least 12 h.

*Development*: over half of the plate.

*Drying*: at 105 °C.

*Detection*: spray with *ninhydrin solution R1* and heat at 110 °C for 5 min.

*Results*: the chromatogram obtained with the test solution shows zones corresponding to those in the chromatograms obtained with reference solutions (a) and (b), but shows no zones corresponding to those in the chromatograms

obtained with reference solutions (c) and (d); the chromatogram obtained with the test solution also shows a zone with a very low $R_F$ value (2,4-diaminobutyric acid).

B. Examine the chromatograms obtained in the test for composition.

*Results*: the peaks due to polymyxin E1 and polymyxin E2 in the chromatogram obtained with the test solution are similar in retention time to the corresponding peaks in the chromatogram obtained with reference solution (a).

C. Dissolve about 5 mg in 3 mL of *water R*. Add 3 mL of *dilute sodium hydroxide solution R*. Shake and add 0.5 mL of a 10 g/L solution of *copper sulfate pentahydrate R*. A violet colour is produced.

D. Dissolve about 50 mg in 1 mL of *1 M hydrochloric acid* and add 0.5 mL of *0.01 M iodine*. The solution remains coloured.

E. It gives reaction (a) of sulfates (*2.3.1*).

TESTS

**pH** (*2.2.3*): 4.0 to 6.0.

Dissolve 0.1 g in *carbon dioxide-free water R* and dilute to 10 mL with the same solvent.

**Composition**. Liquid chromatography (*2.2.29*): use the normalisation procedure.

*Test solution*. Dissolve 5.0 mg of the substance to be examined in 8 mL of *water R* and dilute to 10.0 mL with *acetonitrile R*.

*Reference solution (a)*. Dissolve 5.0 mg of *colistin for system suitability CRS* in 8 mL of *water R* and dilute to 10.0 mL with *acetonitrile R*.

*Reference solution (b)*. Dilute 1.0 mL of reference solution (a) to 100.0 mL with a mixture of 20 volumes of *acetonitrile R* and 80 volumes of *water R*.

*Column*:

- *size*: *l* = 0.25 m, Ø = 4.6 mm;
- *stationary phase*: *end-capped octadecylsilyl silica gel for chromatography R* (3.0 µm);
- *temperature*: 50 °C.

*Mobile phase*: mix 22 volumes of *acetonitrile R1* and 78 volumes of a solution prepared as follows: dissolve 4.46 g of *anhydrous sodium sulfate R* in 900 mL of *water for chromatography R*, adjust to pH 2.4 with *dilute phosphoric acid R* and dilute to 1000 mL with *water for chromatography R*.

*Flow rate*: 1.0 mL/min.

*Detection*: spectrophotometer at 215 nm.

*Injection*: 20 µL.

*Run time*: 1.5 times the retention time of polymyxin E1.

*Identification of peaks*: use the chromatogram supplied with *colistin for system suitability CRS* to identify the peaks due to polymyxins E1, E2, E3, E4, E6, E1-7MOA, E1-I, E1-Nva, E2-I, E2-Val, 2,3-dehydro E1 and due to impurities A and B.

*Relative retention* with reference to polymyxin E1 (retention time = about 21 min): polymyxins E4 and E2-Val = about 0.28; polymyxin E6 = about 0.39; polymyxin E2-I = about 0.42; polymyxin E2 = about 0.50; impurity A = about 0.53; polymyxin E3 = about 0.56; polymyxin E1-Nva = about 0.59; polymyxin E1-I = about 0.82; polymyxin 2,3-dehydro E1 = about 0.90; polymyxin E1-7MOA = about 1.1; impurity B = about 1.3.

*System suitability*:

- *resolution*: minimum 2.0 between the peaks due to polymyxin E6 and polymyxin E2-I, and minimum 3.0 between the peaks due to polymyxin 2,3-dehydro E1 and polymyxin E1 in the chromatogram obtained with reference solution (a);
- *signal-to-noise ratio*: minimum 10 for the peak due to polymyxin E1 in the chromatogram obtained with reference solution (b);
- *peak-to-valley ratio*: minimum 1.1, where $H_p$ = height above the baseline of the peak due to impurity A and $H_v$ = height above the baseline of the lowest point of the curve separating this peak from the peak due to polymyxin E2 in the chromatogram obtained with reference solution (a).

*Limits*:

- *correction factor*: for the calculation of content, multiply the peak area of polymyxin 2,3-dehydro E1 by 0.3;
- *polymyxin E1-I*: maximum 8.5 per cent;
- *polymyxin E3*: maximum 5.5 per cent;
- *polymyxin E1-7MOA*: maximum 5.0 per cent;
- *polymyxin E6*: maximum 4.5 per cent;
- *polymyxin E1-Nva*: maximum 4.5 per cent;
- *sum of polymyxins E4 and E2-Val*: maximum 3.0 per cent;
- *polymyxin E2-I*: maximum 2.5 per cent;
- *polymyxin 2,3-dehydro E1*: maximum 1.5 per cent;
- *sum of polymyxins E1, E2, E3, E4, E6, E1-7MOA, E1-I, E1-Nva, E2-I, E2-Val and 2,3-dehydro E1*: minimum 86.0 per cent;
- *disregard limit*: 0.35 per cent.

**Related substances**. Liquid chromatography (*2.2.29*) as described in the test for composition.

*Limits*:

- *impurity B*: maximum 4.0 per cent;
- *any other impurity*: for each impurity, maximum 2.5 per cent, and not more than 4 such impurities exceed 1.0 per cent;
- *total*: maximum 11.0 per cent;
- *disregard limit*: 0.35 per cent.

**Sulfate**: 16.0 per cent to 18.0 per cent (dried substance).

Dissolve 0.250 g in 100 mL of *water R* and adjust to pH 11 with *concentrated ammonia R*. Add 10.0 mL of *0.1 M barium chloride* and about 0.5 mg of *phthalein purple R*. Titrate with *0.1 M sodium edetate*, adding 50 mL of *ethanol (96 per cent) R* when the colour of the solution begins to change and continuing the titration until the violet-blue colour disappears.

1 mL of *0.1 M barium chloride* is equivalent to 9.606 mg of $SO_4$.

**Loss on drying** (*2.2.32*): maximum 3.5 per cent, determined on 1.000 g by drying *in vacuo* at 60 °C at a pressure not exceeding 0.7 kPa for 3 h.

**Sulfated ash** (*2.4.14*): maximum 1.0 per cent, determined on 1.0 g.

ASSAY

Carry out the microbiological assay of antibiotics (*2.7.2*).

STORAGE

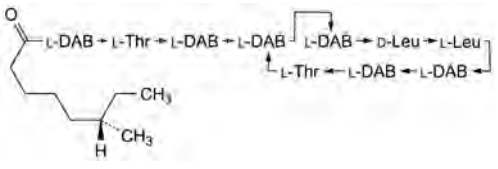
In an airtight container, protected from light.

IMPURITIES

*Specified impurities: B.*

*Other detectable impurities* (the following substances would, if present at a sufficient level, be detected by one or other of the tests in the monograph. They are limited by the general acceptance criterion for other/unspecified impurities. It is therefore not necessary to identify these impurities for demonstration of compliance. See also *5.10. Control of impurities in substances for pharmaceutical use*): *A.*

A. unknown structure,

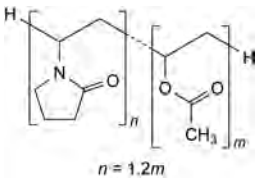


B. [$N^4$-Dab$^5$]polymyxin E1.

**01/2020:0891**

# COPOVIDONE

## Copovidonum



$(C_6H_9NO)_n(C_4H_6O_2)_m$ $M_r$ $(111.1)_n + (86.1)_m$

[25086-89-9]

DEFINITION

Copolymer of 1-ethenylpyrrolidin-2-one and ethenyl acetate in the mass proportion 3:2.

*Content*:

- *nitrogen* (N; $A_r$ 14.01): 7.0 per cent to 8.0 per cent (dried substance);
- *ethenyl acetate* ($C_4H_6O_2$; $M_r$ 86.10): 35.3 per cent to 42.0 per cent (dried substance).

♦CHARACTERS

*Appearance*: white or yellowish-white hygroscopic powder or flakes.

*Solubility*: freely soluble in water, in ethanol (96 per cent) and in methylene chloride.♦

IDENTIFICATION

*First identification: A.*

◊*Second identification: B, C.*◊

A. Infrared absorption spectrophotometry (*2.2.24*).

*Preparation*: dry the substance to be examined and the reference substance at 105 °C for 3 h.

*Comparison*: *copovidone CRS*.

◊B. To 1 mL of solution S (see Tests) add 5 mL of *water R* and 0.2 mL of *0.05 M iodine*. A red colour appears.

C. Dissolve 0.7 g of *hydroxylamine hydrochloride R* in 10 mL of *methanol R*, add 20 mL of a 40 g/L solution of *sodium hydroxide R* and filter if necessary. To 5 mL of the solution add 0.1 g of the substance to be examined and boil for 2 min. Transfer 50 µL to a filter paper and add 0.1 mL of a mixture of equal volumes of *ferric chloride solution R1* and *hydrochloric acid R*. A violet colour appears.◊

TESTS

**Solution S**. Dissolve 10.0 g in *water R* and dilute to 100.0 mL with the same solvent. Add the substance to be examined to the *water R* in small portions with constant stirring.

**Appearance of solution**. Solution S is not more opalescent than reference suspension III (*2.2.1*) and not more intensely coloured than reference solution $B_5$, $R_5$ or $BY_5$ (*2.2.2, Method II*).

**pH** (*2.2.3*): 3.0 to 7.0 for solution S.

**Viscosity, expressed as *K*-value**. Dilute 5.0 mL of solution S to 50.0 mL with *water R*. Allow to stand for 1 h and determine the viscosity (*2.2.9*) of the solution at 25 ± 0.1 °C. Calculate the *K*-value using the following expression:

$$\frac{1.5 \log v_{rel} - 1}{0.15 + 0.003c} + \frac{\sqrt{300c \log v_{rel} + (c + 1.5c \log v_{rel})^2}}{0.15c + 0.003c^2}$$

$c$ = concentration of the substance to be examined (dried substance), in grams per 100 mL;

$v_{rel}$ = kinematic viscosity of the solution relative to that of *water R*.

The *K*-value is 90.0 per cent to 110.0 per cent of the nominal *K*-value.

**Aldehydes**: maximum 500 ppm, expressed as acetaldehyde.

*Test solution*. Dissolve 1.0 g of the substance to be examined in *phosphate buffer solution pH 9.0 R* and dilute to 100.0 mL with the same solvent. Stopper the flask tightly and heat at 60 °C for 1 h. Allow to cool to room temperature.

*Reference solution*. Dissolve 0.140 g of *acetaldehyde ammonia trimer trihydrate R* in *water R* and dilute to 200.0 mL with the same solvent. Dilute 1.0 mL of the solution to 100.0 mL with *phosphate buffer solution pH 9.0 R*.

Into 3 identical spectrophotometric cells with a path length of 1 cm, introduce separately 0.5 mL of the test solution, 0.5 mL of the reference solution and 0.5 mL of *water R* (blank). To each cell add 2.5 mL of *phosphate buffer solution pH 9.0 R* and 0.2 mL of *nicotinamide-adenine dinucleotide solution R*. Mix and stopper tightly. Allow to stand at 22 ± 2 °C for 2-3 min and measure the absorbance (*2.2.25*) of each solution at 340 nm, using *water R* as the compensation liquid. To each cell, add 0.05 mL of *aldehyde dehydrogenase solution R*, mix and stopper tightly. Allow to stand at 22 ± 2 °C for 5 min. Measure the absorbance of each solution at 340 nm using *water R* as the compensation liquid.

Calculate the content of aldehydes, expressed as acetaldehyde, in parts per million, using the following expression:

$$\frac{(A_{t2} - A_{t1}) - (A_{b2} - A_{b1})}{(A_{s2} - A_{s1}) - (A_{b2} - A_{b1})} \times \frac{100\,000 \times C}{m}$$

$A_{t1}$ = absorbance of the test solution before the addition of aldehyde dehydrogenase;

$A_{t2}$ = absorbance of the test solution after the addition of aldehyde dehydrogenase;

$A_{s1}$ = absorbance of the reference solution before the addition of aldehyde dehydrogenase;

$A_{s2}$ = absorbance of the reference solution after the addition of aldehyde dehydrogenase;

$A_{b1}$ = absorbance of the blank before the addition of aldehyde dehydrogenase;

$A_{b2}$ = absorbance of the blank after the addition of aldehyde dehydrogenase;

$m$ = mass of the substance to be examined (dried substance) in the test solution, in grams;

$C$ = concentration of acetaldehyde in the reference solution, calculated from the mass of acetaldehyde ammonia trimer trihydrate and by multiplying by a factor of 0.72, in milligrams per millilitre.

**Peroxides**: maximum 400 ppm, expressed as $H_2O_2$.

Dissolve a quantity of the substance to be examined equivalent to 4.0 g of the dried substance in *water R* and dilute to 100.0 mL with the same solvent (stock solution). To 25.0 mL of the stock solution add 2 mL of *titanium trichloride-sulfuric acid reagent R*, mix and allow to stand for 30 min. The absorbance (*2.2.25*) of the solution, measured at 405 nm using a mixture of 25.0 mL of the stock solution and 2.0 mL of a 13 per cent *V/V* solution of *sulfuric acid R* as the compensation liquid, is not greater than 0.35.

**Hydrazine**. Thin-layer chromatography (*2.2.27*). *Use freshly prepared solutions.*

*Test solution*. Dissolve a quantity of the substance to be examined equivalent to 2.5 g of the dried substance in 25 mL of *water R* and mix. Add 0.5 mL of a 50 g/L solution of *salicylaldehyde R* in *methanol R*, mix and heat in a water-bath

at 60 °C for 15 min. Allow to cool, add 2.0 mL of *toluene R*, stopper tightly, shake vigorously for 2 min and centrifuge. Use the upper layer.

*Reference solution.* Dissolve 90 mg of *salicylaldehyde azine R* in *toluene R* and dilute to 100.0 mL with the same solvent. Dilute 1.0 mL of the solution to 100.0 mL with *toluene R*.

*Plate*: *TLC silanised silica gel $F_{254}$ plate R*.

*Mobile phase*: *water R*, *methanol R* (1:2 *V/V*).

*Application*: 10 µL.

*Development*: over 3/4 of the plate.

*Drying*: in air.

*Detection*: examine in ultraviolet light at 365 nm.

*Retardation factor*: salicylaldehyde azine = about 0.3.

*Limit*:

– *hydrazine*: any spot due to salicylaldehyde azine is not more intense than the spot in the chromatogram obtained with the reference solution (1 ppm).

**Impurity A**. Liquid chromatography (*2.2.29*).

*Test solution.* Dissolve 1.00 g of the substance to be examined in 5 mL of *methanol R*. Sonicate until dissolution is complete and dilute to 100.0 mL with *water R*.

*Reference solution.* Dissolve 0.150 g of *2-pyrrolidone R* (impurity A) in the mobile phase and dilute to 100.0 mL with the mobile phase. Dilute 3.0 mL of the solution to 100.0 mL with the mobile phase.

*Precolumn*:

– *size*: *l* = 0.010 m, Ø = 4 mm;

– *stationary phase*: *base-deactivated end-capped octadecylsilyl silica gel for chromatography R* (5 µm).

*Column*:

– *size*: *l* = 0.15 m, Ø = 4.6 mm;

– *stationary phase*: *base-deactivated end-capped octadecylsilyl silica gel for chromatography R* (5 µm);

– *temperature*: 40 °C.

*Mobile phase*: *methanol R2*, *water for chromatography R* (5:95 *V/V*).

*Flow rate*: 0.8 mL/min.

*Detection*: spectrophotometer at 205 nm.

*Injection*: 20 µL. After each injection of the test solution, elute and wash away the remaining sample by passing the mobile phase through the column backwards for about 30 min at the same flow rate as applied in the test. This process may be replaced by washing the precolumn only.

*Run time*: 4 times the retention time of impurity A.

*Identification of impurities*: use the chromatogram obtained with the reference solution to identify the peak due to impurity A.

*Retention time*: impurity A = about 7 min.

*System suitability*: reference solution:

– *symmetry factor*: maximum 1.5 for the peak due to impurity A;

– *repeatability*: maximum relative standard deviation of 2.0 per cent determined on 6 injections.

Calculate the percentage content of impurity A using the following expression:

$$\frac{A_1}{A_2} \times \frac{m_2}{m_1} \times 3$$

$A_1$ = area of the peak due to impurity A in the chromatogram obtained with the test solution;

$A_2$ = area of the peak due to impurity A in the chromatogram obtained with the reference solution;

$m_1$ = mass of the substance to be examined (dried substance) in the test solution, in grams;

$m_2$ = mass of impurity A in the reference solution, in grams.

*Limit*:

– *impurity A*: maximum 0.5 per cent.

**Impurities B and C**. Liquid chromatography (*2.2.29*). *Store the test solution and the reference solution at a temperature not exceeding 10 °C and use them within 8 h.*

*Test solution.* Dissolve 0.250 g of the substance to be examined in the mobile phase and dilute to 10.0 mL with the mobile phase.

*Reference solution.* Dissolve 50.0 mg of *1-vinylpyrrolidin-2-one R* (impurity B) and 50.0 mg of *vinyl acetate R* (impurity C) in *methanol R* and dilute to 100.0 mL with the same solvent. Dilute 1.0 mL of the solution to 100.0 mL with *methanol R*. Dilute 5.0 mL of this solution to 100.0 mL with the mobile phase.

*Precolumn*:

– *size*: *l* = 0.033 m, Ø = 4.0 mm;

– *stationary phase*: *base-deactivated end-capped octadecylsilyl silica gel for chromatography R* (5 µm).

*Column*:

– *size*: *l* = 0.25 m, Ø = 4.0 mm;

– *stationary phase*: *base-deactivated end-capped octadecylsilyl silica gel for chromatography R* (5 µm);

– *temperature*: 40 °C.

*Mobile phase*: *acetonitrile R1*, *water for chromatography R* (8:92 *V/V*).

*Flow rate*: 1.0 mL/min.

*Detection*: spectrophotometer at 205 nm for impurity C and at 235 nm for impurity B.

*Injection*: 20 µL. After each injection of the test solution, elute and wash away the remaining sample by passing the mobile phase through the column backwards for about 30 min at the same flow rate as applied in the test. This process may be replaced by washing the precolumn only. Store and inject the solutions at a temperature not exceeding 5 °C and use them within 8 h. Use a cooled autosampler.

*Run time*: twice the retention time of impurity C.

*Identification of impurities*: use the chromatogram obtained with the reference solution to identify the peaks due to impurities B and C.

*Retention time*: impurity B = about 17 min;
impurity C = about 22 min.

*System suitability*: reference solution:

– *resolution*: minimum 2.0 between the peaks due to impurities B and C when the chromatogram is recorded at 205 nm;

– *repeatability*: maximum relative standard deviation of 2.0 per cent for the areas of the peaks due to impurities B and C determined on 6 injections. Use separate vials for each replicate injection.

Calculate the content of impurity B in parts per million using the following expression:

$$\frac{A_1}{A_2} \times \frac{m_2}{m_1} \times 0.05$$

$A_1$ = area of the peak due to impurity B in the chromatogram obtained with the test solution;

$A_2$ = area of the peak due to impurity B in the chromatogram obtained with the reference solution;

$m_1$ = mass of the substance to be examined (dried substance) in the test solution, in grams;

$m_2$ = mass of impurity B in the reference solution, in grams.

Calculate the content of impurity C in parts per million using the following expression:

$$\frac{A_1}{A_2} \times \frac{m_2}{m_1} \times 0.05$$

$A_1$ = area of the peak due to impurity C in the chromatogram obtained with the test solution;

$A_2$ = area of the peak due to impurity C in the chromatogram obtained with the reference solution;

$m_1$ = mass of the substance to be examined (dried substance) in the test solution, in grams;

$m_2$ = mass of impurity C in the reference solution, in grams.

*Limits*:

– *impurities B, C*: for each impurity, maximum 10 ppm.

**Loss on drying** (*2.2.32*): maximum 5.0 per cent, determined on 0.500 g by drying in an oven at 105 °C for 3 h.

**Sulfated ash** (*2.4.14*): maximum 0.1 per cent, determined on 1.0 g.

ASSAY

**Ethenyl acetate**. Determine the saponification value (*2.5.6*) on 2.00 g of the substance to be examined. Multiply the result obtained by 0.1534 to obtain the percentage content of the ethenyl acetate component.

**Nitrogen**. Place 0.100 g of the substance to be examined (*m* mg) in a combustion flask and add 5 g of a mixture of 1 g of *copper sulfate pentahydrate R*, 1 g of *titanium dioxide R* and 33 g of *dipotassium sulfate R*. Wash any adhering particles from the neck into the flask with a small quantity of *water R*. Add 7 mL of *sulfuric acid R*, allowing it to run down the insides of the flask. Heat the flask gradually until the solution has a clear, yellowish-green colour, and the inside wall of the flask is free from any carbonised material, and then heat for a further 45 min. After cooling, add cautiously 20 mL of *water R*, and connect the flask to the distillation apparatus, which has been previously washed by passing steam through it. To the absorption flask add 30 mL of a 40 g/L solution of *boric acid R*, 3 drops of *bromocresol green-methyl red solution R* and sufficient *water R* to immerse the lower end of the condenser tube. Add 30 mL of *strong sodium hydroxide solution R* through the funnel, rinse the funnel cautiously with 10 mL of *water R*, immediately close the clamp on the rubber tube, then start distillation with steam to obtain 80-100 mL of distillate. Remove the absorption flask from the lower end of the condenser tube, rinsing the end part with a small quantity of *water R*, and titrate the distillate with *0.025 M sulfuric acid* until the colour of the solution changes from green through pale greyish-blue to pale greyish reddish-purple. Carry out a blank determination.

1 mL of *0.025 M sulfuric acid* is equivalent to 0.700 mg of N.

♦STORAGE

In an airtight container.♦

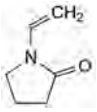
LABELLING

The label states the nominal *K*-value.

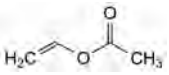
IMPURITIES

*Specified impurities: A, B, C.*

A. pyrrolidin-2-one (2-pyrrolidone),



B. 1-ethenylpyrrolidin-2-one (1-vinylpyrrolidin-2-one),



C. ethenyl acetate (vinyl acetate).

FUNCTIONALITY-RELATED CHARACTERISTICS

*This section provides information on characteristics that are recognised as being relevant control parameters for one or more functions of the substance when used as an excipient (see chapter 5.15). Some of the characteristics described in the Functionality-related characteristics section may also be present in the mandatory part of the monograph since they also represent mandatory quality criteria. In such cases, a cross-reference to the tests described in the mandatory part is included in the Functionality-related characteristics section. Control of the characteristics can contribute to the quality of a medicinal product by improving the consistency of the manufacturing process and the performance of the medicinal product during use. Where control methods are cited, they are recognised as being suitable for the purpose, but other methods can also be used. Wherever results for a particular characteristic are reported, the control method must be indicated.*

*The following characteristics may be relevant for copovidone used as binder in tablets and granules.*

**Viscosity** (*2.2.9*): determine the dynamic viscosity using a capillary viscometer on a 10 per cent solution (dried substance) or on a 20 per cent solution (dried substance) at 25 °C. It is typically about 8 mPa·s or about 23 mPa·s, respectively.

**Particle-size distribution** (*2.9.31* or *2.9.38*).

**Bulk and tapped density** (*2.9.34*).

*The following characteristic may be relevant for copovidone used as film former in coated dosage forms and in aerosols.*

**Viscosity** (*2.2.9*): see above.

**01/2017:0893**

# COPPER SULFATE

## Cupri sulfas

$CuSO_4$ $M_r$ 159.6
[7758-98-7]

DEFINITION

*Content*: 99.0 per cent to 101.0 per cent (dried substance).

CHARACTERS

*Appearance*: greenish-grey powder, very hygroscopic.

*Solubility*: freely soluble in water, slightly soluble in methanol, practically insoluble in ethanol (96 per cent).

IDENTIFICATION

A. Add several drops of *dilute ammonia R2* to 1 mL of solution S (see Tests). A blue precipitate is formed. On further addition of *dilute ammonia R2* the precipitate dissolves and a dark blue colour is produced.

B. Loss on drying (see Tests).

C. Dilute 1 mL of solution S to 5 mL with *water R*. The solution gives reaction (a) of sulfates (*2.3.1*).

TESTS

**Solution S**. Dissolve 1.6 g in *water R* and dilute to 50 mL with the same solvent.

**Appearance of solution**. Solution S is clear (*2.2.1*).

**Chlorides** (*2.4.4*): maximum 150 ppm.

Dilute 10 mL of solution S to 15 mL with *water R*.

**Iron**: maximum 150 ppm.

Atomic absorption spectrometry (*2.2.23, Method I*).

*Test solution.* Dissolve 0.32 g in 10 mL of *water R*, add 2.5 mL of *lead-free nitric acid R* and dilute to 25.0 mL with *water R*.

*Reference solutions.* Prepare the reference solutions using *iron standard solution (20 ppm Fe) R*, adding 2.5 mL of *lead-free nitric acid R* and diluting to 25.0 mL with *water R*.

*Source*: iron hollow-cathode lamp.

*Wavelength*: 248.3 nm.

*Atomisation device*: air-acetylene flame.

*Copper may form explosive acetylides with acetylene. Therefore, clean the burner thoroughly before any residues become dry.*

**Lead**: maximum 80 ppm.

Atomic absorption spectrometry (*2.2.23, Method I*).

*Test solution.* Dissolve 1.6 g in 10 mL of *water R*, add 2.5 mL of *lead-free nitric acid R* and dilute to 25.0 mL with *water R*.

*Reference solutions.* Prepare the reference solutions using *lead standard solution (100 ppm Pb) R*, adding 2.5 mL of *lead-free nitric acid R* and diluting to 25.0 mL with *water R*.

*Source*: lead hollow-cathode lamp.

*Wavelength*: 217.0 nm.

*Atomisation device*: air-acetylene flame.

*Copper may form explosive acetylides with acetylene. Therefore, clean the burner thoroughly before any residues become dry.*

**Loss on drying** (*2.2.32*): maximum 1.0 per cent, determined on 0.500 g by drying in an oven at 250 ± 10 °C.

ASSAY

Dissolve 0.125 g in 50 mL of *water R*. Add 2 mL of *sulfuric acid R* and 3 g of *potassium iodide R*. Titrate with *0.1 M sodium thiosulfate*, using 1 mL of *starch solution R*, added towards the end of the titration.

1 mL of *0.1 M sodium thiosulfate* is equivalent to 15.96 mg of $CuSO_4$.

STORAGE

In an airtight container.

**01/2008:0894**
**corrected 7.0**

# COPPER SULFATE PENTAHYDRATE

## Cupri sulfas pentahydricus

$CuSO_4,5H_2O$ $M_r$ 249.7
[7758-99-8]

DEFINITION

*Content*: 99.0 per cent to 101.0 per cent.

CHARACTERS

*Appearance*: blue, crystalline powder or transparent, blue crystals.

*Solubility*: freely soluble in water, soluble in methanol, practically insoluble in ethanol (96 per cent).

IDENTIFICATION

A. Add several drops of *dilute ammonia R2* to 1 mL of solution S (see Tests). A blue precipitate is formed. On further addition of *dilute ammonia R2* the precipitate dissolves and a dark blue colour is produced.

B. Loss on drying (see Tests).

C. Dilute 1 mL of solution S to 5 mL with *water R*. The solution gives reaction (a) of sulfates (*2.3.1*).

TESTS

**Solution S**. Dissolve 5 g in *water R* and dilute to 100 mL with the same solvent.

**Appearance of solution**. Solution S is clear (*2.2.1*).

**Chlorides** (*2.4.4*): maximum 100 ppm.

Dilute 10 mL of solution S to 15 mL with *water R*.

**Iron**: maximum 100 ppm.

Atomic absorption spectrometry (*2.2.23, Method I*).

*Test solution.* Dissolve 0.5 g in 10 mL of *water R*, add 2.5 mL of *lead-free nitric acid R* and dilute to 25.0 mL with *water R*.

*Reference solutions.* Prepare the reference solutions using *iron standard solution (20 ppm Fe) R*, adding 2.5 mL of *lead-free nitric acid R* and diluting to 25.0 mL with *water R*.

*Source*: iron hollow-cathode lamp.

*Wavelength*: 248.3 nm.

*Atomisation device*: air-acetylene flame.

*Copper may form explosive acetylides with acetylene. Therefore, clean the burner thoroughly before any residues become dry.*

**Lead**: maximum 50 ppm.

Atomic absorption spectrometry (*2.2.23, Method I*).

*Test solution.* Dissolve 2.5 g in 10 mL of *water R*, add 2.5 mL of *lead-free nitric acid R* and dilute to 25.0 mL with *water R*.

*Reference solutions.* Prepare the reference solutions using *lead standard solution (100 ppm Pb) R*, adding 2.5 mL of *lead-free nitric acid R* and diluting to 25.0 mL with *water R*.

*Source*: lead hollow-cathode lamp.

*Wavelength*: 217.0 nm.

*Atomisation device*: air-acetylene flame.

*Copper may form explosive acetylides with acetylene. Therefore, clean the burner thoroughly before any residues become dry.*

**Loss on drying** (*2.2.32*): 35.0 per cent to 36.5 per cent, determined on 0.500 g by drying in an oven at 250 ± 10 °C.

ASSAY

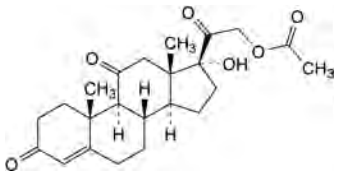
Dissolve 0.200 g in 50 mL of *water R*. Add 2 mL of *sulfuric acid R* and 3 g of *potassium iodide R*. Titrate with *0.1 M sodium thiosulfate*, adding 1 mL of *starch solution R* towards the end of the titration.

1 mL *0.1 M sodium thiosulfate* is equivalent to 24.97 mg of $CuSO_4,5H_2O$.

**01/2008:0321**
**corrected 6.0**

# CORTISONE ACETATE

## Cortisoni acetas



$C_{23}H_{30}O_6$ $M_r$ 402.5
[50-04-4]

DEFINITION

17-Hydroxy-3,11,20-trioxopregn-4-en-21-yl acetate.

*Content*: 97.0 per cent to 103.0 per cent (dried substance).

CHARACTERS

*Appearance*: white or almost white, crystalline powder.

*Solubility*: practically insoluble in water, freely soluble in methylene chloride, soluble in dioxan, sparingly soluble in acetone, slightly soluble in ethanol (96 per cent) and in methanol.

It shows polymorphism (*5.9*).

IDENTIFICATION

*First identification*: *A, B.*

*Second identification*: *C, D, E.*

A. Infrared absorption spectrophotometry (*2.2.24*).

*Comparison*: *cortisone acetate CRS.*

If the spectra obtained in the solid state show differences, record new spectra using 50 g/L solutions in *methylene chloride R* in a 0.2 mm cell.

B. Thin-layer chromatography (*2.2.27*).

*Solvent mixture*: *methanol R*, *methylene chloride R* (1:9 *V/V*).

*Test solution.* Dissolve 10 mg of the substance to be examined in the solvent mixture and dilute to 10 mL with the solvent mixture.

*Reference solution (a).* Dissolve 20 mg of *cortisone acetate CRS* in the solvent mixture and dilute to 20 mL with the solvent mixture.

*Reference solution (b).* Dissolve 10 mg of *hydrocortisone acetate R* in reference solution (a) and dilute to 10 mL with reference solution (a).

*Plate*: *TLC silica gel $F_{254}$ plate R.*

*Mobile phase*: add a mixture of 1.2 volumes of *water R* and 8 volumes of *methanol R* to a mixture of 15 volumes of *ether R* and 77 volumes of *methylene chloride R.*

*Application*: 5 µL.

*Development*: over a path of 15 cm.

*Drying*: in air.

*Detection A*: examine in ultraviolet light at 254 nm.

*Results A*: the principal spot in the chromatogram obtained with the test solution is similar in position and size to the principal spot in the chromatogram obtained with reference solution (a).

*Detection B*: spray with *alcoholic solution of sulfuric acid R.* Heat at 120 °C for 10 min or until the spots appear. Allow to cool. Examine in daylight and in ultraviolet light at 365 nm.

*Results B*: the principal spot in the chromatogram obtained with the test solution is similar in position, colour in daylight, fluorescence in ultraviolet light at 365 nm and size to the principal spot in the chromatogram obtained with reference solution (a).

*System suitability*: reference solution (b):

– the chromatogram shows 2 clearly separated spots.

C. Thin-layer chromatography (*2.2.27*).

*Test solution (a).* Dissolve 25 mg of the substance to be examined in *methanol R* with gentle heating and dilute to 5 mL with the same solvent (solution A). Dilute 2 mL of this solution to 10 mL with *methylene chloride R.*

*Test solution (b).* Transfer 2 mL of solution A to a 15 mL glass tube with a ground-glass stopper or a polytetrafluoroethylene cap. Add 10 mL of *saturated methanolic potassium hydrogen carbonate solution R* and immediately pass a stream of *nitrogen R* briskly through the solution for 5 min. Stopper the tube. Heat in a water-bath at 45 °C protected from light for 2.5 h. Allow to cool.

*Reference solution (a).* Dissolve 25 mg of *cortisone acetate CRS* in *methanol R* with gentle heating and dilute to 5 mL with the same solvent (solution B). Dilute 2 mL of this solution to 10 mL with *methylene chloride R.*

*Reference solution (b).* Transfer 2 mL of solution B to a 15 mL glass tube with a ground-glass stopper or a polytetrafluoroethylene cap. Add 10 mL of *saturated methanolic potassium hydrogen carbonate solution R* and immediately pass a stream of *nitrogen R* briskly through the solution for 5 min. Stopper the tube. Heat in a water-bath at 45 °C protected from light for 2.5 h. Allow to cool.

*Plate*: *TLC silica gel $F_{254}$ plate R.*

*Mobile phase*: add a mixture of 1.2 volumes of *water R* and 8 volumes of *methanol R* to a mixture of 15 volumes of *ether R* and 77 volumes of *methylene chloride R.*

*Application*: 5 µL.

*Development*: over a path of 15 cm.

*Drying*: in air.

*Detection A*: examine in ultraviolet light at 254 nm.

*Results A*: the principal spot in each of the chromatograms obtained with the test solutions is similar in position and size to the principal spot in the chromatogram obtained with the corresponding reference solution.

*Detection B*: spray with *alcoholic solution of sulfuric acid R* and heat at 120 °C for 10 min or until the spots appear. Allow to cool. Examine in daylight and in ultraviolet light at 365 nm.

*Results B*: the principal spot in each of the chromatograms obtained with the test solutions is similar in position, colour in daylight, fluorescence in ultraviolet light at 365 nm and size to the principal spot in the chromatogram obtained with the corresponding reference solution. The principal spots in the chromatograms obtained with test solution (b) and reference solution (b) have an $R_F$ value distinctly lower than that of the principal spots in the chromatograms obtained with test solution (a) and reference solution (a).

D. Add about 2 mg to 2 mL of *sulfuric acid R* and shake to dissolve. Within 5 min, a faint yellow colour develops. Add this solution to 10 mL of *water R* and mix. The colour is discharged and a clear solution remains.

E. About 10 mg gives the reaction of acetyl (*2.3.1*).

TESTS

**Specific optical rotation** (*2.2.7*): + 211 to + 220 (dried substance).

Dissolve 0.250 g in *dioxan R* and dilute to 25.0 mL with the same solvent.

**Related substances**. Liquid chromatography (*2.2.29*). *Prepare the solutions immediately before use.*

*Test solution.* Dissolve 25.0 mg of the substance to be examined in *acetonitrile R* and dilute to 10.0 mL with the same solvent.

*Reference solution (a)*. Dissolve 2 mg of *cortisone acetate CRS* and 2 mg of *hydrocortisone acetate CRS* (impurity A) in *acetonitrile R* and dilute to 100.0 mL with the same solvent.

*Reference solution (b).* Dilute 1.0 mL of the test solution to 100.0 mL with *acetonitrile R*.

*Column*:

- *size*: *l* = 0.25 m, Ø = 4.6 mm;
- *stationary phase*: *octadecylsilyl silica gel for chromatography R* (5 µm).

*Mobile phase*: in a 1000 mL volumetric flask mix 400 mL of *acetonitrile R* with 550 mL of *water R* and allow to equilibrate; dilute to 1000 mL with *water R* and mix again.

*Flow rate*: 1 mL/min.

*Detection*: spectrophotometer at 254 nm.

*Equilibration*: with the mobile phase for about 30 min.

*Injection*: 20 µL; inject *acetonitrile R* as a blank.

*Run time*: twice the retention time of cortisone acetate.

*Retention time*: impurity A = about 10 min; cortisone acetate = about 12 min.

*System suitability*: reference solution (a):

- *resolution*: minimum 4.2 between the peaks due to impurity A and cortisone acetate; if necessary, adjust the concentration of acetonitrile in the mobile phase.

*Limits*:

- *impurity A*: not more than 0.5 times the area of the principal peak in the chromatogram obtained with reference solution (b) (0.5 per cent);
- *total*: not more than 1.5 times the area of the principal peak in the chromatogram obtained with reference solution (b) (1.5 per cent);
- *disregard limit*: 0.05 times the area of the principal peak in the chromatogram obtained with reference solution (b) (0.05 per cent).

**Loss on drying** (*2.2.32*): maximum 0.5 per cent, determined on 0.500 g by drying in an oven at 105 °C.

ASSAY

Dissolve 0.100 g in *ethanol (96 per cent) R* and dilute to 100.0 mL with the same solvent. Dilute 2.0 mL of this solution to 100.0 mL with *ethanol (96 per cent) R*. Measure the absorbance (*2.2.25*) at the absorption maximum at 237 nm.

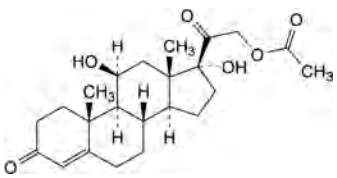
Calculate the content of $C_{23}H_{30}O_6$ taking the specific absorbance to be 395.

STORAGE

Protected from light.

IMPURITIES

*Specified impurities*: *A*.



A. 11β,17-dihydroxy-3,20-dioxopregn-4-en-21-yl acetate (hydrocortisone acetate).

01/2008:0036
corrected 7.0

# COTTON, ABSORBENT

## Lanugo gossypii absorbens

DEFINITION

Absorbent cotton consists of new fibres or good quality combers obtained from the seed-coat of various species of the genus *Gossypium* L., cleaned, purified, bleached and carefully carded. It may not contain any compensatory colouring matter.

CHARACTERS

It is white or almost white and is composed of fibres of average length not less than 10 mm, determined by a suitable method, and contains not more than traces of leaf residue, pericarp, seed-coat or other impurities. It offers appreciable resistance when pulled. It does not shed any appreciable quantity of dust when gently shaken.

IDENTIFICATION

A. Examined under a microscope, each fibre is seen to consist of a single cell, up to about 4 cm long and up to 40 µm wide, in the form of a flattened tube with thick and rounded walls and often twisted.

B. When treated with *iodinated zinc chloride solution R*, the fibres become violet.

C. To 0.1 g add 10 mL of *zinc chloride-formic acid solution R*. Heat to 40 °C and allow to stand for 2 h 30 min, shaking occasionally. It does not dissolve.

TESTS

**Solution S**. Place 15.0 g in a suitable vessel, add 150 mL of *water R*, close the vessel and allow to macerate for 2 h. Decant the solution, squeeze the residual liquid carefully from the sample with a glass rod and mix. Reserve 10 mL of the solution for the test for surface-active substances and filter the remainder.

**Acidity or alkalinity**. To 25 mL of solution S add 0.1 mL of *phenolphthalein solution R* and to another 25 mL add 0.05 mL of *methyl orange solution R*. Neither solution is pink.

**Foreign fibres**. Examined under a microscope, it is seen to consist exclusively of typical cotton fibres, except that occasionally a few isolated foreign fibres may be present.

**Fluorescence**. Examine a layer about 5 mm in thickness under ultraviolet light at 365 nm. It displays only a slight brownish-violet fluorescence and a few yellow particles. It shows no intense blue fluorescence, apart from that which may be shown by a few isolated fibres.

**Neps**. Spread about 1 g evenly between 2 colourless transparent plates each 10 cm square. Examine for neps by transmitted light and compare with *Cotton wool standard for neps CRS*. The product to be examined is not more neppy than the standard.

**Absorbency**

*Apparatus.* A dry cylindrical copper wire basket 8.0 cm high and 5.0 cm in diameter. The wire of which the basket is constructed is about 0.4 mm in diameter, the mesh is 1.5 cm to 2.0 cm wide and the mass of the basket is 2.7 ± 0.3 g.

*Sinking time.* Not more than 10 s. Weigh the basket to the nearest centigram ($m_1$). Take a total of 5.00 g in approximately equal quantities from 5 different places in the product to be examined, place loosely in the basket and weigh the filled basket to the nearest centigram ($m_2$). Fill a beaker 11 cm to 12 cm in diameter to a depth of 10 cm with water at about 20 °C. Hold the basket horizontally and drop it from a height of about 10 mm into the water. Measure with a stopwatch the time taken for the basket to sink below the surface of the water. Calculate the result as the average of 3 tests.

*Water-holding capacity.* Not less than 23.0 g of water per gram. After the sinking time has been measured, remove the basket from the water, allow it to drain for exactly 30 s suspended in a horizontal position over the beaker, transfer it to a tared beaker ($m_3$) and weigh to the nearest centigram ($m_4$). Calculate the water-holding capacity per gram of absorbent cotton using the following expression:

$$\frac{m_4 - (m_2 + m_3)}{m_2 - m_1}$$

Calculate the result as the average of 3 tests.

**Ether-soluble substances**. Not more than 0.50 per cent. In an extraction apparatus, extract 5.00 g with *ether R* for 4 h at a rate of at least 4 extractions per hour. Evaporate the ether extract and dry the residue to constant mass at 100 °C to 105 °C.

**Extractable colouring matter**. In a narrow percolator, slowly extract 10.0 g with *alcohol R* until 50 mL of extract is obtained. The liquid obtained is not more intensely coloured (*2.2.2, Method II*) than reference solution $Y_5$, $GY_6$ or a reference solution prepared as follows: to 3.0 mL of blue primary solution add 7.0 mL of hydrochloric acid (10 g/L HCl). Dilute 0.5 mL of this solution to 10.0 mL with hydrochloric acid (10 g/L HCl).

**Surface-active substances**. Introduce the 10 mL portion of solution S reserved before filtration into a 25 mL graduated ground-glass-stoppered cylinder with an external diameter of 20 mm and a wall thickness of not greater than 1.5 mm, previously rinsed 3 times with *sulfuric acid R* and then with *water R*. Shake vigorously 30 times in 10 s, allow to stand for 1 min and repeat the shaking. After 5 min, any foam present must not cover the entire surface of the liquid.

**Water-soluble substances**. Not more than 0.50 per cent. Boil 5.000 g in 500 mL of *water R* for 30 min, stirring frequently. Replace the water lost by evaporation. Decant the liquid, squeeze the residual liquid carefully from the sample with a glass rod and mix. Filter the liquid whilst hot. Evaporate 400 mL of the filtrate (corresponding to 4/5 of the mass of the sample taken) and dry the residue to constant mass at 100 °C to 105 °C.

**Loss on drying** (*2.2.32*). Not more than 8.0 per cent, determined on 5.000 g by drying in an oven at 105 °C.

**Sulfated ash** (*2.4.14*). Not more than 0.40 per cent. Introduce 5.00 g into a previously heated and cooled, tared crucible. Heat cautiously over a naked flame and then carefully to dull redness at 600 °C. Allow to cool, add a few drops of *dilute sulfuric acid R*, then heat and incinerate until all the black particles have disappeared. Allow to cool. Add a few drops of *ammonium carbonate solution R*. Evaporate and incinerate carefully, allow to cool and weigh again. Repeat the incineration for periods of 5 min to constant mass.

STORAGE

Store in a dust-proof package in a dry place.

**01/2020:1305**

# COTTONSEED OIL, HYDROGENATED

## Gossypii oleum hydrogenatum

DEFINITION

Product obtained by refining and hydrogenation of oil obtained from seeds of cultivated plants of various varieties of *Gossypium hirsutum* L. or of other species of *Gossypium*. The product consists mainly of triglycerides of palmitic and stearic acids.

CHARACTERS

*Appearance*: white or almost white mass or powder which melts to a clear, pale yellow liquid when heated.

*Solubility*: practically insoluble in water, freely soluble in methylene chloride and in toluene, very slightly soluble in ethanol (96 per cent).

IDENTIFICATION

A. Melting point (see Tests).

B. Composition of fatty acids (see Tests).

TESTS

**Melting point** (*2.2.14*): 57 °C to 70 °C.

**Acid value** (*2.5.1*): maximum 0.5.

Dissolve 10.0 g in 50 mL of a hot mixture of equal volumes of *ethanol (96 per cent) R* and *toluene R*, previously neutralised with *0.1 M potassium hydroxide* using 0.5 mL of *phenolphthalein solution R1* as indicator. Titrate the solution immediately while still hot.

**Peroxide value** (*2.5.5, Method A*): maximum 5.0.

**Unsaponifiable matter** (*2.5.7*): maximum 1.0 per cent, determined on 5.0 g.

**Alkaline impurities**. Dissolve with gentle heating 2.0 g in a mixture of 1.5 mL of *ethanol (96 per cent) R* and 3 mL of *toluene R*. Add 0.05 mL of a 0.4 g/L solution of *bromophenol blue R* in *ethanol (96 per cent) R*. Not more than 0.4 mL of *0.01 M hydrochloric acid* is required to change the colour to yellow.

**Composition of fatty acids**. Gas chromatography (*2.4.22, Method A*) with the following modifications. Use the mixture of calibrating substances in Table 2.4.22.-3.

*Column*:

- *material*: fused silica;
- *size*: *l* = 25 m, Ø = 0.25 mm;
- *stationary phase*: *cyanopropylpolysiloxane R* (film thickness 0.2 µm).

*Carrier gas*: *helium for chromatography R.*

*Flow rate*: 0.65 mL/min.

*Split ratio*: 1:100.

*Temperature*:

- *column*: 180 °C for 35 min;
- *injection port and detector*: 250 °C.

*Detection*: flame ionisation.

*Composition of the fatty-acid fraction of the substance*:

- *saturated fatty acids of chain length less than $C_{14}$*: maximum 0.2 per cent;
- *myristic acid*: maximum 1.0 per cent;
- *palmitic acid*: 19.0 per cent to 26.0 per cent;
- *stearic acid*: 68.0 per cent to 80.0 per cent;
- *oleic acid and isomers*: maximum 4.0 per cent;
- *linoleic acid and isomers*: maximum 1.0 per cent;

– *arachidic acid*: maximum 1.0 per cent;
– *behenic acid*: maximum 1.0 per cent;
– *lignoceric acid*: maximum 0.5 per cent.

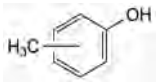
STORAGE

Protected from light.

01/2008:1628

# CRESOL, CRUDE

## Cresolum crudum



$C_7H_8O$ $M_r$ 108.1

DEFINITION

Mixture of 2-, 3- and 4-methylphenol.

CHARACTERS

*Appearance*: colourless or pale brown liquid.

*Solubility*: sparingly soluble in water, miscible with alcohol and with methylene chloride.

IDENTIFICATION

A. To 0.5 mL add 300 mL of *water R*, mix and filter. To 10 mL of the filtrate add 1 mL of *ferric chloride solution R1*. A blue colour is produced.

B. To 10 mL of the filtrate obtained in identification test A, add 1 mL of *bromine water R*. A pale yellow flocculent precipitate is produced.

C. Relative density (see Tests).

TESTS

**Solution S**. To 2.5 g of the substance to be examined add 50 mL of *water R*, shake for 1 min and filter through a moistened filter.

**Acidity or alkalinity**. To 10 mL of solution S add 0.1 mL of *methyl red solution R* and 0.2 mL of *0.01 M sodium hydroxide*. The solution is yellow. Add 0.3 mL of *0.01 M hydrochloric acid*. The solution is red.

**Relative density** (*2.2.5*): 1.029 to 1.044.

**Distillation range** (*2.2.11*): a maximum of 2.0 per cent *V/V* distils below 188 °C and a minimum of 80 per cent *V/V* distils between 195 °C and 205 °C.

**Sulfur compounds**. Place 20 mL in a small conical flask. Over the mouth of the flask fix a piece of filter paper moistened with *lead acetate solution R*. Heat on a water-bath for 5 min. Not more than a light yellow colour is produced on the filter paper.

**Residue on evaporation**: maximum 0.1 per cent.

Evaporate 2.0 g to dryness on a water-bath and dry at 100-105 °C for 1 h. The residue weighs not more than 2 mg.

STORAGE

Protected from light.

01/2020:0985

# CROSCARMELLOSE SODIUM(9)

## Carmellosum natricum conexum

DEFINITION

Cross-linked sodium carboxymethylcellulose.

Sodium salt of a cross-linked, partly *O*-carboxymethylated cellulose.

♦CHARACTERS

*Appearance*: white or greyish-white, hygroscopic powder.

*Solubility*: practically insoluble in acetone, in anhydrous ethanol and in toluene.♦

IDENTIFICATION

A. Mix 1 g with 100 mL of a solution containing 4 ppm of *methylene blue R*, stir the mixture and allow it to settle. The substance to be examined absorbs the methylene blue and settles as a blue, fibrous mass.

B. Mix 1 g with 50 mL of *water R*. Transfer 1 mL of the mixture to a small test-tube and add 1 mL of *water R* and 0.05 mL of a freshly prepared 40 g/L solution of *α-naphthol R* in *methanol R*. Incline the test-tube and carefully add 2 mL of *sulfuric acid R* down the side so that it forms a lower layer. A reddish-violet colour develops at the interface.

♦C. To the residue obtained in the test for sulfated ash add 1 mL of *hydrochloric acid R* and evaporate on a water-bath. Take up the residue in 20 mL of *water R*. The solution gives reaction (a) of sodium (*2.3.1*).♦

TESTS

**pH** (*2.2.3*): 5.0 to 7.0 for the suspension.

Shake 1 g with 100 mL of *carbon dioxide-free water R* for 5 min.

♦**Sodium chloride and sodium glycolate**: maximum 0.5 per cent (dried substance) for the sum of the percentage contents.

*Sodium chloride*. Place 5.00 g in a 250 mL conical flask, add 50 mL of *water R* and 5 mL of *strong hydrogen peroxide solution R* and heat on a water-bath for 20 min, stirring occasionally to ensure total hydration. Cool and add 100 mL of *water R* and 10 mL of *nitric acid R*. Titrate with *0.05 M silver nitrate*, determining the end-point potentiometrically (*2.2.20*) using a silver indicator electrode and a double-junction reference electrode containing a 100 g/L solution of *potassium nitrate R* in the outer jacket and a standard filling solution in the inner jacket, and stirring constantly.

1 mL of *0.05 M silver nitrate* is equivalent to 2.922 mg of NaCl.

*Sodium glycolate*. Place a quantity of the substance to be examined equivalent to 0.500 g of the dried substance in a 100 mL beaker. Add 5 mL of *glacial acetic acid R* and 5 mL of *water R* and stir to ensure total hydration (about 15 min). Add 50 mL of *acetone R* and 1 g of *sodium chloride R*. Stir for several minutes to ensure complete precipitation of the carboxymethylcellulose. Filter through a fast filter paper impregnated with *acetone R* into a volumetric flask, rinse the beaker and the filter with 30 mL of *acetone R* and dilute the filtrate to 100.0 mL with the same solvent. Allow to stand for 24 h without shaking. Use the clear supernatant to prepare the test solution.

Prepare the reference solutions as follows: in a 100 mL volumetric flask, dissolve 0.100 g of *glycolic acid R*, previously dried in a desiccator (*2.2.32*) at room temperature overnight, in *water R* and dilute to 100.0 mL with the same solvent; use the solution within 30 days; transfer 1.0 mL, 2.0 mL, 3.0 mL

(9) This monograph has undergone pharmacopoeial harmonisation. See chapter *5.8. Pharmacopoeial harmonisation*.

and 4.0 mL of the solution to separate volumetric flasks, dilute the contents of each flask to 5.0 mL with *water R*, add 5 mL of *glacial acetic acid R*, dilute to 100.0 mL with *acetone R* and mix.

Transfer 2.0 mL of the test solution and 2.0 mL of each of the reference solutions to separate 25 mL volumetric flasks. Heat the uncovered flasks for 20 min on a water-bath to eliminate acetone. Allow to cool and add 5.0 mL of *2,7-dihydroxynaphthalene solution R* to each flask. Mix, add a further 15.0 mL of *2,7-dihydroxynaphthalene solution R* and mix again. Close the flasks with aluminium foil and heat on a water-bath for 20 min. Cool and dilute to 25.0 mL with *sulfuric acid R*.

Measure the absorbance (*2.2.25*) of each solution at 540 nm. Prepare a blank using 2.0 mL of a solution containing 5 per cent *V/V* each of *glacial acetic acid R* and *water R* in *acetone R*. Prepare a standard curve using the absorbances obtained with the reference solutions. From the standard curve and the absorbance of the test solution, determine the mass (*a*) of glycolic acid in the substance to be examined, in milligrams, and calculate the content of sodium glycolate using the following expression:

$$\frac{10 \times 1.29 \times a}{(100 - b)m}$$

1.29 = factor converting glycolic acid to sodium glycolate;

*b* = loss on drying as a percentage;

*m* = mass of the substance to be examined, in grams.

**Water-soluble substances**: maximum 10.0 per cent.

Disperse 10.00 g in 800.0 mL of *water R* and stir for 1 min every 10 min during the first 30 min. Allow to stand for 1 h and centrifuge if necessary. Decant 200.0 mL of the supernatant liquid onto a fast filter paper in a vacuum filtration funnel, apply vacuum and collect 150.0 mL of the filtrate. Evaporate to dryness and dry the residue at 100-105 °C for 4 h. ♦

**Loss on drying** (*2.2.32*): maximum 10.0 per cent, determined on 1.000 g by drying in an oven at 105 °C for 6 h.

**Sulfated ash** (*2.4.14*): 14.0 per cent to 28.0 per cent (dried substance), determined on 1.0 g.

♦**Microbial contamination**

TAMC: acceptance criterion $10^3$ CFU/g (*2.6.12*).

TYMC: acceptance criterion $10^2$ CFU/g (*2.6.12*).

Absence of *Escherichia coli* (*2.6.13*). ♦

FUNCTIONALITY-RELATED CHARACTERISTICS

*This section provides information on characteristics that are recognised as being relevant control parameters for one or more functions of the substance when used as an excipient (see chapter 5.15). Some of the characteristics described in the Functionality-related characteristics section may also be present in the mandatory part of the monograph since they also represent mandatory quality criteria. In such cases, a cross-reference to the tests described in the mandatory part is included in the Functionality-related characteristics section. Control of the characteristics can contribute to the quality of a medicinal product by improving the consistency of the manufacturing process and the performance of the medicinal product during use. Where control methods are cited, they are recognised as being suitable for the purpose, but other methods can also be used. Wherever results for a particular characteristic are reported, the control method must be indicated.*

*The following characteristics may be relevant for croscarmellose sodium used as disintegrant.*

**Settling volume**. Place 75 mL of *water R* in a 100 mL graduated cylinder and add 1.5 g of the substance to be examined in 0.5 g portions, shaking vigorously after each addition. Dilute to 100.0 mL with *water R* and shake again until the substance is homogeneously distributed. Allow to stand for 4 h. The settling volume is between 10.0 mL and 30.0 mL.

**Degree of substitution**: 0.60 to 0.85 (dried substance).

Place 1.000 g in a 500 mL conical flask, add 300 mL of a 100 g/L solution of *sodium chloride R* and 25.0 mL of *0.1 M sodium hydroxide*, stopper the flask and allow to stand for 5 min, shaking occasionally. Add 0.25 mL of *m-cresol purple solution R* and about 15 mL of *0.1 M hydrochloric acid* from a burette. Insert the stopper and shake. If the solution is violet, add *0.1 M hydrochloric acid* in 1 mL portions until the solution becomes yellow, shaking after each addition. Titrate with *0.1 M sodium hydroxide* until the colour turns to violet.

Calculate the number of milliequivalents (*M*) of base required to neutralise the equivalent of 1 g of dried substance.

Calculate the degree of acid carboxymethyl substitution (*A*) using the following expression:

$$\frac{1150M}{(7102 - 412M - 80C)}$$

*C* = sulfated ash as a percentage.

Calculate the degree of sodium carboxymethyl substitution (*S*) using the following expression:

$$\frac{(162 + 58A)C}{(7102 - 80C)}$$

The degree of substitution is the sum of *A* and *S*.

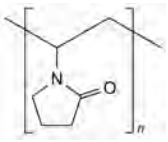
**Particle size distribution** (*2.9.31* or *2.9.38*).

**Hausner ratio** (*2.9.36*).

**01/2017:0892**
**corrected 10.0**

# CROSPOVIDONE(10)

## Crospovidonum



$(C_6H_9NO)_n$ $M_r$ $(111.1)_n$

[9003-39-8]

DEFINITION

Cross-linked homopolymer of 1-ethenylpyrrolidin-2-one.

*Content*: 11.0 per cent to 12.8 per cent of N ($A_r$ 14.01) (dried substance).

2 types of crospovidone are available, depending on the particle size: type A and type B.

♦CHARACTERS

*Appearance*: hygroscopic, white or yellowish-white powder or flakes.

*Solubility*: practically insoluble in water, in ethanol 96 per cent and in methylene chloride. ♦

IDENTIFICATION

♦A. Infrared absorption spectrophotometry (*2.2.24*).
*Comparison*: *crospovidone CRS*. ♦

(10) This monograph has undergone pharmacopoeial harmonisation. See chapter *5.8. Pharmacopoeial harmonisation*.

B. Suspend 1 g in 10 mL of *water R*, add 0.1 mL of *0.05 M iodine* and shake for 30 s. Add 1 mL of *starch solution R* and shake. No blue colour develops within 30 s.

C. To 10 mL of *water R*, add 0.1 g and shake. A suspension is formed and no clear solution is obtained within 15 min.

D. *The analytical sieves must be clean and dry. For this purpose the sieves are washed in hot water and allowed to dry overnight in a drying cabinet at 105 °C.*

Place 20 g (dried substance) in a 1000 mL conical flask, add 500 mL of *water R* and shake the suspension for 30 min. Pour the suspension through a 63 µm analytical sieve, previously tared, and rinse the sieve with *water R* until the filtrate is clear. Dry the sieve and sample residue at 105 °C for 5 h in a drying cabinet without circulating air. Cool in a desiccator for 30 min and weigh.

Calculate the percentage sieving residue (fraction of sample particles having a diameter of more than 63 µm), using the following expression:

$$\frac{m_1 - m_3}{m_2} \times 100$$

$m_1$ = mass of the sieve and sample residue, after drying for 5 h, in grams;

$m_2$ = initial mass of the sample, in grams;

$m_3$ = mass of the sieve, in grams.

If the sieving residue fraction is more than 15 per cent, the substance is classified as type A; if the sieving residue fraction is less than or equal to 15 per cent, the substance is classified as type B.

TESTS

**Peroxides**. Type A: maximum 400 ppm expressed as $H_2O_2$; type B: maximum 1000 ppm expressed as $H_2O_2$.

Suspend 2.0 g in 50 mL of *water R*. To 25 mL of this suspension add 2 mL of *titanium trichloride-sulfuric acid reagent R*. Allow to stand for 30 min and filter. The absorbance (*2.2.25*) of the filtrate, measured at 405 nm using a mixture of 25 mL of a filtered 40 g/L suspension of the substance to be examined and 2 mL of a 13 per cent *V/V* solution of *sulfuric acid R* as the compensation liquid, has a maximum of 0.35.

For type B use 10 mL of the suspension and dilute to 25 mL with *water R* for the test.

**Water-soluble substances**: maximum 1.5 per cent.

Place 25.0 g in a 400 mL beaker, add 200 mL of *water R* and stir for 1 h using a magnetic stirrer. Transfer the suspension to a 250.0 mL volumetric flask, rinsing with *water R*, and dilute to volume with the same solvent. Allow the bulk of the solids to settle. Filter about 100 mL of the almost clear supernatant through a membrane filter (nominal pore size 0.45 µm), protected by superimposing a membrane filter (nominal pore size 3 µm). While filtering, stir the liquid above the membrane filter manually or by means of a mechanical stirrer, taking care not to damage the membrane filter. Transfer 50.0 mL of the clear filtrate to a tared 100 mL beaker, evaporate to dryness and dry at 105-110 °C for 3 h. The residue weighs a maximum of 75 mg.

**Impurity A**. Liquid chromatography (*2.2.29*).

*Test solution*. Suspend 1.250 g in 50.0 mL of *methanol R* and shake for 60 min. Leave the bulk to settle and filter through a membrane filter (nominal pore size 0.2 µm).

*Reference solution (a)*. Dissolve 50 mg of *1-vinylpyrrolidin-2-one R* (impurity A) in *methanol R* and dilute to 100.0 mL with the same solvent. Dilute 1.0 mL of the solution to 100.0 mL with *methanol R*. Dilute 5.0 mL of this solution to 100.0 mL with the mobile phase.

*Reference solution (b)*. Dissolve 10 mg of *1-vinylpyrrolidin-2-one R* (impurity A) and 0.50 g of *vinyl acetate R* in *methanol R* and dilute to 100 mL with the same solvent. Dilute 1 mL of the solution to 100 mL with the mobile phase.

*Precolumn*:

- *size*: $l$ = 0.025 m, Ø = 4 mm;
- *stationary phase*: *end-capped octadecylsilyl silica gel for chromatography R* (5 µm).

*Column*:

- *size*: $l$ = 0.25 m, Ø = 4 mm;
- *stationary phase*: *polar end-capped octadecylsilyl silica gel for chromatography R* (5 µm);
- *temperature*: 40 °C.

*Mobile phase*: *acetonitrile for chromatography R*, *water for chromatography R* (10:90 *V/V*).

*Flow rate*: 1 mL/min.

*Detection*: spectrophotometer at 235 nm.

*Injection*: 50 µL. After each injection of the test solution, wash the precolumn by passing the mobile phase backwards, at the same flow rate as applied in the test, for 30 min.

*System suitability*:

- *resolution*: minimum 2.0 between the peaks due to impurity A and vinyl acetate in the chromatogram obtained with reference solution (b);
- *repeatability*: maximum relative standard deviation of 2.0 per cent determined on 6 injections of reference solution (a).

*Calculation of percentage content*:

- for impurity A, use the concentration of impurity A in reference solution (a).

*Limit*:

- *impurity A*: maximum 10 ppm.

**Loss on drying** (*2.2.32*): maximum 5.0 per cent, determined on 0.500 g by drying in an oven at 105 °C.

**Sulfated ash** (*2.4.14*): maximum 0.1 per cent, determined on 1.0 g.

ASSAY

Place 0.100 g of the substance to be examined ($m$ mg) in a combustion flask and add 5 g of a mixture of 1 g of *copper sulfate pentahydrate R*, 1 g of *titanium dioxide R* and 33 g of *dipotassium sulfate R*, and 3 glass beads. Wash any adhering particles from the neck into the flask with a small quantity of *water R*. Add 7 mL of *sulfuric acid R*, allowing it to run down the inside wall of the flask. Gradually heat the flask until the solution has a clear, yellowish-green colour, and the inside wall of the flask is free from carbonised material, and then heat for a further 45 min. After cooling, cautiously add 20 mL of *water R*, and connect the flask to the distillation apparatus, which has been previously washed by passing steam through it. To the absorption flask add 30 mL of a 40 g/L solution of *boric acid R*, 0.15 mL of *bromocresol green-methyl red solution R* and sufficient *water R* to immerse the lower end of the condenser tube. Add 30 mL of *strong sodium hydroxide solution R* through a funnel, cautiously rinse the funnel with 10 mL of *water R*, immediately close the clamp attached to the rubber tube, then start the distillation with steam to obtain 80-100 mL of distillate. Remove the absorption flask from the lower end of the condenser tube, rinsing the end part with a small quantity of *water R*, and titrate the distillate with *0.025 M sulfuric acid* until the colour of the solution changes from green through pale greyish-blue to pale greyish red-purple. Carry out a blank determination and make any necessary correction.

1 mL of *0.025 M sulfuric acid* is equivalent to 0.700 mg of N.

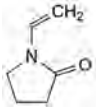
STORAGE

In an airtight container.

♦LABELLING

The label states the type of crospovidone (type A or type B).♦

IMPURITIES



A. 1-ethenylpyrrolidin-2-one (1-vinylpyrrolidin-2-one).

FUNCTIONALITY-RELATED CHARACTERISTICS

*This section provides information on characteristics that are recognised as being relevant control parameters for one or more functions of the substance when used as an excipient (see chapter 5.15). Some of the characteristics described in the Functionality-related characteristics section may also be present in the mandatory part of the monograph since they also represent mandatory quality criteria. In such cases, a cross-reference to the tests described in the mandatory part is included in the Functionality-related characteristics section. Control of the characteristics can contribute to the quality of a medicinal product by improving the consistency of the manufacturing process and the performance of the medicinal product during use. Where control methods are cited, they are recognised as being suitable for the purpose, but other methods can also be used. Wherever results for a particular characteristic are reported, the control method must be indicated.*

*The following characteristics may be relevant for crospovidone used as disintegrant.*

**Hydration capacity**. Introduce 2.0 g into a 100 mL centrifuge tube and add 40 mL of *water R*. Shake vigorously until a suspension is obtained. Shake again 5 min and 10 min later, then centrifuge for 15 min at 750 *g*. Decant the supernatant and weigh the residue. The hydration capacity is the ratio of the mass of the residue to the initial mass of the sample. It is typically 3 to 9.

**Particle-size distribution** (*2.9.31*).

**Powder flow** (*2.9.36*).

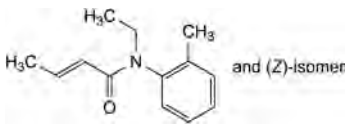
*The following characteristic may be relevant for crospovidone used as suspension stabiliser.*

**Settling volume**. Introduce 10 g into a 100 mL graduated cylinder and add 90 mL of *water R*. Shake vigorously. Dilute to 100 mL with *water R*, washing the powder residues from the walls of the cylinder. Allow to stand for 24 h, then read the volume of the sediment. It is typically greater than 60 mL.

**07/2010:1194**

# CROTAMITON

## Crotamitonum



$C_{13}H_{17}NO$ $M_r$ 203.3

[483-63-6]

DEFINITION

*N*-Ethyl-*N*-(2-methylphenyl)but-2-enamide.

*Content*:

– *sum of the (E)- and (Z)-isomers*: 96.0 per cent to 102.0 per cent;

– *(Z)-isomer*: maximum 15.0 per cent.

CHARACTERS

*Appearance*: colourless or pale yellow, oily liquid.

*Solubility*: slightly soluble in water, miscible with ethanol (96 per cent).

At low temperatures it may partly or completely solidify.

IDENTIFICATION

*First identification: B.*

*Second identification: A, C, D.*

A. Ultraviolet and visible absorption spectrophotometry (*2.2.25*).

*Test solution.* Dissolve 25.0 mg in *cyclohexane R* and dilute to 100.0 mL with the same solvent. Dilute 1.0 mL of this solution to 10.0 mL with *cyclohexane R*.

*Spectral range*: 220-300 nm.

*Absorption maximum*: at 242 nm.

*Specific absorbance at the absorption maximum*: 300 to 330.

B. Infrared absorption spectrophotometry (*2.2.24*).

*Comparison*: *crotamiton CRS*.

C. Thin-layer chromatography (*2.2.27*).

*Test solution.* Dissolve 25 mg of the substance to be examined in *anhydrous ethanol R* and dilute to 10 mL with the same solvent.

*Reference solution.* Dissolve 25 mg of *crotamiton CRS* in *anhydrous ethanol R* and dilute to 10 mL with the same solvent.

*Plate*: *TLC silica gel $F_{254}$ plate R*.

*Mobile phase*: shake 98 volumes of *methylene chloride R* with 2 volumes of *concentrated ammonia R*, dry over *anhydrous sodium sulfate R*, filter and mix 97 volumes of the filtrate with 3 volumes of *2-propanol R*.

*Application*: 5 µL.

*Development*: over a 2/3 of the plate.

*Drying*: in air.

*Detection*: examine in ultraviolet light at 254 nm.

*Results*: the principal spot in the chromatogram obtained with the test solution is similar in position and size to the principal spot in the chromatogram obtained with the reference solution.

D. To 10 mL of a saturated solution add a few drops of a 3 g/L solution of *potassium permanganate R*. A brown colour is produced and a brown precipitate is formed on standing.

TESTS

**Relative density** (*2.2.5*): 1.006 to 1.011.

**Refractive index** (*2.2.6*): 1.540 to 1.542.

**Free amines**: maximum 500 ppm, expressed as ethylaminotoluene.

Dissolve 5.00 g in 16 mL of *methylene chloride R* and add 4.0 mL of *glacial acetic acid R*. Add 0.1 mL of *metanil yellow solution R* and 1.0 mL of *0.02 M perchloric acid*. The solution is red-violet.

**Chlorides**: maximum 100 ppm.

Boil 5.0 g under a reflux condenser for 1 h with 25 mL of *ethanol (96 per cent) R* and 5 mL of a 200 g/L solution of *sodium hydroxide R*. Cool, add 5 mL of *water R* and shake with 25 mL of *ether R*. Dilute the lower layer to 20 mL with *water R*; add 5 mL of *nitric acid R*, dilute to 50 mL with *water R* and add 1 mL of a freshly prepared 50 g/L solution of *silver nitrate R*. Any opalescence in the solution is not more intense than that in a mixture of 1 mL of a freshly prepared 50 g/L solution of *silver nitrate R* and a solution prepared by diluting 5 mL of a 200 g/L solution of *sodium hydroxide R* to 20 mL with *water R* and adding 1.5 mL of *0.01 M hydrochloric acid*, 5 mL of *nitric acid R* and diluting to 50 mL with *water R*.

**Related substances**. Liquid chromatography (*2.2.29*).

*Test solution (a).* Dissolve 50.0 mg of the substance to be examined in the mobile phase and dilute to 100.0 mL with the mobile phase.

*Test solution (b).* Dilute 1.0 mL of test solution (a) to 20.0 mL with the mobile phase.

*Reference solution (a).* Dissolve 50.0 mg of *crotamiton CRS* in the mobile phase and dilute to 100.0 mL with the mobile phase. Dilute 1.0 mL of this solution to 20.0 mL with the mobile phase.

*Reference solution (b).* Dissolve 15.0 mg of *crotamiton impurity A CRS* in the mobile phase and dilute to 20.0 mL with the mobile phase. Dilute 1.0 mL of this solution to 50.0 mL with the mobile phase.

*Reference solution (c).* Dilute 1.0 mL of test solution (a) to 100.0 mL with the mobile phase.

*Reference solution (d).* Dissolve 15 mg of *crotamiton impurity A CRS* in the mobile phase and dilute to 100.0 mL with the mobile phase. Dilute 1.0 mL of this solution to 10.0 mL with test solution (a).

*Column*:

– *size*: *l* = 0.25 m, Ø = 4 mm;
– *stationary phase*: *silica gel for chromatography R* (5 µm).

*Mobile phase*: *tetrahydrofuran R*, *cyclohexane R* (8:92 *V/V*).

*Flow rate*: 1.0 mL/min.

*Detection*: spectrophotometer at 242 nm.

*Injection*: 20 µL of test solution (a) and reference solutions (b), (c) and (d).

*Run time*: 2.5 times the retention time of the (*E*)-isomer.

*Relative retention* with reference to the (*E*)-isomer: (*Z*)-isomer = about 0.5; impurity A = about 0.8.

*System suitability*: reference solution (d):

– *resolution*: minimum 4.5 between the peaks due to impurity A and the (*E*)-isomer.

*Limits*:

– *impurity A*: not more than the area of the corresponding peak in the chromatogram obtained with reference solution (b) (3.0 per cent);
– *unspecified impurities*: for each impurity, not more than 0.1 times the sum of the areas of the peaks due to the (*Z*)- and (*E*)- isomers in the chromatogram obtained with reference solution (c) (0.10 per cent);
– *sum of impurities other than A*: not more than the sum of the areas of the peaks due to the (*Z*)- and (*E*)-isomers in the chromatogram obtained with reference solution (c) (1.0 per cent);
– *disregard limit*: 0.02 times the sum of the areas of the peaks due to the (*Z*)- and (*E*)-isomers in the chromatogram obtained with reference solution (c) (0.02 per cent).

**Sulfated ash** (*2.4.14*): maximum 0.1 per cent, determined on 1.0 g.

ASSAY

Liquid chromatography (*2.2.29*) as described in the test for related substances with the following modification.

*Injection*: test solution (b) and reference solution (a).

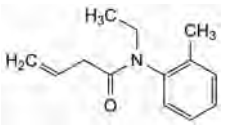
Calculate the percentage content of $C_{13}H_{17}NO$ from the sum of the areas of the peaks due to the (*Z*)- and (*E*)-isomers in the chromatograms obtained. Calculate the content of the (*Z*)-isomer, as a percentage of the total content of the (*E*)- and (*Z*)-isomers, from the chromatogram obtained with test solution (b).

STORAGE

Protected from light.

IMPURITIES

*Specified impurities*: *A*.

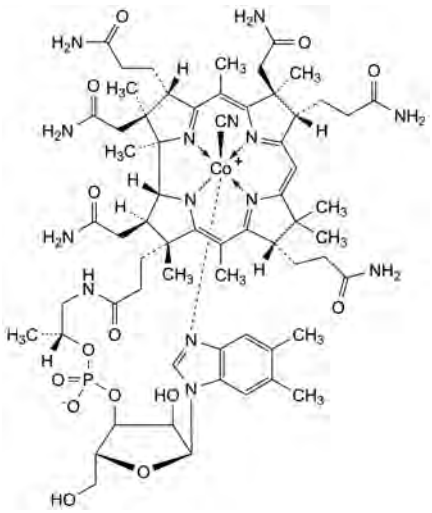


A. *N*-ethyl-*N*-(2-methylphenyl)but-3-enamide.

**07/2014:0547**

# CYANOCOBALAMIN

## Cyanocobalaminum



$C_{63}H_{88}CoN_{14}O_{14}P$ $M_r$ 1355

[68-19-9]

DEFINITION

α-(5,6-Dimethylbenzimidazol-1-yl)cobamide cyanide.

*Content*: 96.0 per cent to 102.0 per cent (dried substance).

This monograph applies to cyanocobalamin produced by fermentation.

CHARACTERS

*Appearance*: dark red, crystalline powder or dark red crystals.

*Solubility*: sparingly soluble in water and in ethanol (96 per cent), practically insoluble in acetone.

The anhydrous substance is very hygroscopic.

IDENTIFICATION

A. Ultraviolet and visible absorption spectrophotometry (*2.2.25*).

*Test solution.* Dissolve 2.5 mg in *water R* and dilute to 100.0 mL with the same solvent.

*Spectral range*: 260-610 nm.

*Absorption maxima*: at 278 nm, 361 nm and from 547 nm to 559 nm.

*Absorbance ratio*:

– $A_{361}$ / $A_{547\text{-}559}$ = 3.15 to 3.45;
– $A_{361}$ / $A_{278}$ = 1.70 to 1.90.

B. Thin-layer chromatography (*2.2.27*). *Carry out the test protected from light.*

*Test solution.* Dissolve 2 mg of the substance to be examined in 1 mL of a mixture of equal volumes of *ethanol (96 per cent) R* and *water R*.

*Reference solution.* Dissolve 2 mg of *cyanocobalamin CRS* in 1 mL of a mixture of equal volumes of *ethanol (96 per cent) R* and *water R*.

*Plate*: *TLC silica gel G plate R.*

*Mobile phase*: *dilute ammonia R1*, *methanol R*, *methylene chloride R* (9:30:45 *V/V/V*).

*Application*: 10 µL.

*Development*: in an unsaturated tank, over 2/3 of the plate.

*Drying*: in air.

*Detection*: examine in daylight.

*Results*: the principal spot in the chromatogram obtained with the test solution is similar in position, colour and size to the principal spot in the chromatogram obtained with the reference solution.

TESTS

**Related substances**. Liquid chromatography (*2.2.29*).

*Test solution.* Dissolve 10.0 mg of the substance to be examined in the mobile phase and dilute to 10.0 mL with the mobile phase. *Use within 1 h.*

*Reference solution (a).* Dilute 3.0 mL of the test solution to 100.0 mL with the mobile phase. *Use within 1 h.*

*Reference solution (b).* Dilute 5.0 mL of the test solution to 50.0 mL with the mobile phase. Dilute 1.0 mL of this solution to 100.0 mL with the mobile phase. *Use within 1 h.*

*Reference solution (c).* Dissolve 25 mg of the substance to be examined in 10 mL of *water R*, warming if necessary. Allow to cool and add 5 mL of a 1.0 g/L solution of *chloramine R* and 0.5 mL of *0.05 M hydrochloric acid*, then dilute to 25 mL with *water R*. Shake and allow to stand for 5 min. Dilute 1 mL of this solution to 10 mL with the mobile phase and inject immediately.

*Column*:

- *size*: *l* = 0.25 m, Ø = 4 mm;
- *stationary phase*: *octylsilyl silica gel for chromatography R* (5 µm).

*Mobile phase*: mix 26.5 volumes of *methanol R* and 73.5 volumes of a 10 g/L solution of *disodium hydrogen phosphate dodecahydrate R* adjusted to pH 3.5 with *phosphoric acid R* and use within 2 days.

*Flow rate*: 0.8 mL/min.

*Detection*: spectrophotometer at 361 nm.

*Injection*: 20 µL.

*Run time*: 3 times the retention time of cyanocobalamin.

*System suitability*:

- the chromatogram obtained with reference solution (c) shows 2 principal peaks;
- *resolution*: minimum 2.5 between the 2 principal peaks in the chromatogram obtained with reference solution (c);
- *signal-to-noise ratio*: minimum 5 for the principal peak in the chromatogram obtained with reference solution (b).

*Limits*:

- *total*: not more than the area of the principal peak in the chromatogram obtained with reference solution (a) (3 per cent);
- *disregard limit*: the area of the principal peak in the chromatogram obtained with reference solution (b) (0.1 per cent).

**Loss on drying** (*2.2.32*): maximum 12.0 per cent, determined on 40.00 mg by drying *in vacuo* at 105 °C for 2 h.

ASSAY

Dissolve 100.0 mg in *water R* and dilute to 500.0 mL with the same solvent. Dilute 25.0 mL of the solution to 200.0 mL with *water R*. Measure the absorbance (*2.2.25*) at the absorption maximum at 361 nm.

Calculate the content of $C_{63}H_{88}CoN_{14}O_{14}P$ taking the specific absorbance to be 207.

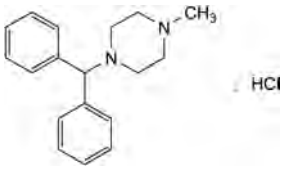
STORAGE

In an airtight container, protected from light.

**07/2008:1092**
**corrected 10.0**

# CYCLIZINE HYDROCHLORIDE

## Cyclizini hydrochloridum



$C_{18}H_{23}ClN_2$ $M_r$ 302.8
[305-25-3]

DEFINITION

1-(Diphenylmethyl)-4-methylpiperazine hydrochloride.

*Content*: 98.5 per cent to 101.0 per cent (dried substance).

CHARACTERS

*Appearance*: white or almost white, crystalline powder.

*Solubility*: slightly soluble in water and in ethanol (96 per cent).

IDENTIFICATION

*First identification: B, E.*

*Second identification: A, C, D, E.*

A. Ultraviolet and visible absorption spectrophotometry (*2.2.25*).

*Test solution (a).* Dissolve 20.0 mg in a 5 g/L solution of *sulfuric acid R* and dilute to 100.0 mL with the same acid solution.

*Test solution (b).* Dilute 10.0 mL of test solution (a) to 100.0 mL with a 5 g/L solution of *sulfuric acid R*.

*Spectral range*: 240-350 nm for test solution (a); 210-240 nm for test solution (b).

*Resolution* (*2.2.25*): minimum 1.7.

*Absorption maxima*: at 258 nm and 262 nm for test solution (a); at 225 nm for test solution (b).

*Absorbance ratio*: $A_{262}/A_{258}$ = 1.0 to 1.1.

*Specific absorbance at the absorption maximum at 225 nm*: 370 to 410 for test solution (b).

B. Infrared absorption spectrophotometry (*2.2.24*).

*Comparison*: *cyclizine hydrochloride CRS.*

C. Thin-layer chromatography (*2.2.27*).

*Test solution.* Dissolve 10 mg of the substance to be examined in *methanol R* and dilute to 10 mL with the same solvent.

*Reference solution.* Dissolve 10 mg of *cyclizine hydrochloride CRS* in *methanol R* and dilute to 10 mL with the same solvent.

*Plate*: *TLC silica gel $GF_{254}$ plate R.*

*Mobile phase*: *concentrated ammonia R*, *methanol R*, *methylene chloride R* (2:13:85 *V/V/V*).

*Application*: 20 µL.

*Development*: over 2/3 of the plate.

*Drying*: in air for 30 min.

*Detection*: expose to iodine vapour for 10 min.

*Results*: the principal spot in the chromatogram obtained with the test solution is similar in position, colour and size to the principal spot in the chromatogram obtained with the reference solution.

D. Dissolve 0.5 g in 10 mL of *ethanol (60 per cent V/V) R*, heating if necessary. Cool in iced water. Add 1 mL of *dilute sodium hydroxide solution R* and 10 mL of *water R*. Filter, wash the precipitate with *water R* and dry at 60 °C at a pressure not exceeding 0.7 kPa for 2 h. The melting point (*2.2.14*) is 105 °C to 108 °C.

E. It gives reaction (a) of chlorides (*2.3.1*).

TESTS

**pH** (*2.2.3*): 4.5 to 5.5.

Dissolve 0.5 g in a mixture of 40 volumes of *ethanol (96 per cent) R* and 60 volumes of *carbon dioxide-free water R* and dilute to 25 mL with the same mixture of solvents.

**Related substances**. Gas chromatography (*2.2.28*). *Prepare the solutions immediately before use.*

*Test solution*. Dissolve 0.250 g of the substance to be examined in 4.0 mL of *methanol R* and dilute to 5.0 mL with *1 M sodium hydroxide*.

*Reference solution (a)*. Dissolve 25 mg of the substance to be examined in 10.0 mL of *methanol R*. Dilute 1.0 mL of this solution to 50.0 mL with *methanol R*.

*Reference solution (b)*. Dissolve 5 mg of the substance to be examined, 5.0 mg of *cyclizine impurity A CRS* and 5.0 mg of *cyclizine impurity B CRS* in *methanol R* and dilute to 20.0 mL with the same solvent.

*Column*:

- *material*: fused silica;
- *size*: *l* = 25 m, Ø = 0.33 mm;
- *stationary phase*: *phenyl(5)methyl(95)polysiloxane R* (film thickness 0.50 µm).

*Carrier gas*: *helium for chromatography R*.

*Flow rate*: 1.0 mL/min.

*Split ratio*: 1:25.

*Temperature*:

| | Time (min) | Temperature (°C) |
|---|---|---|
| Column | 0 - 14 | 100 → 240 |
| | 14 - 16 | 240 → 270 |
| | 16 - 30 | 270 |
| Injection port | | 250 |
| Detector | | 290 |

*Detection*: flame ionisation.

*Injection*: 1 µL.

*Relative retention* with reference to cyclizine (retention time = about 15 min): impurity A = about 0.2; impurity B = about 0.7.

*System suitability*: reference solution (b):

- *peak-to-valley ratio*: minimum 50, where $H_p$ = height above the baseline of the peak due to impurity A and $H_v$ = height above the baseline of the lowest point of the curve separating this peak from the peak due to methanol.

*Limits*:

- *impurities A, B*: for each impurity, not more than the area of the corresponding peak in the chromatogram obtained with reference solution (b) (0.5 per cent);
- *unspecified impurities*: for each impurity, not more than the area of the principal peak in the chromatogram obtained with reference solution (a) (0.10 per cent);
- *total*: not more than 10 times the area of the principal peak in the chromatogram obtained with reference solution (a) (1.0 per cent);
- *disregard limit*: 0.5 times the area of the principal peak in the chromatogram obtained with reference solution (a) (0.05 per cent).

**Loss on drying** (*2.2.32*): maximum 1.0 per cent, determined on 1.000 g by drying in an oven at 130 °C.

**Sulfated ash** (*2.4.14*): maximum 0.1 per cent, determined on 1.0 g.

ASSAY

*In order to avoid overheating in the reaction medium, mix thoroughly throughout and stop the titration immediately after the end-point has been reached.*

Dissolve 0.120 g in 15 mL of *anhydrous formic acid R* and add 40 mL of *acetic anhydride R*. Titrate with *0.1 M perchloric acid*, determining the end-point potentiometrically (*2.2.20*).

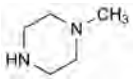
1 mL of *0.1 M perchloric acid* is equivalent to 15.14 mg of $C_{18}H_{23}ClN_2$.

STORAGE

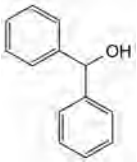
Protected from light.

IMPURITIES

*Specified impurities: A, B.*



A. 1-methylpiperazine,

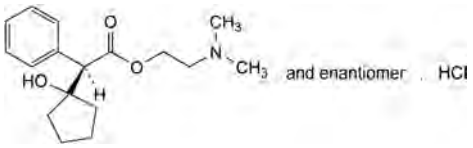


B. diphenylmethanol (benzhydrol).

**04/2009:1093**

# CYCLOPENTOLATE HYDROCHLORIDE

## Cyclopentolati hydrochloridum



$C_{17}H_{26}ClNO_3$ $M_r$ 327.8

[5870-29-1]

DEFINITION

2-(Dimethylamino)ethyl (2*RS*)-(1-hydroxycyclopentyl)-(phenyl)acetate hydrochloride.

*Content*: 98.5 per cent to 101.5 per cent (dried substance).

CHARACTERS

*Appearance*: white or almost white, crystalline powder.

*Solubility*: very soluble in water, freely soluble in ethanol (96 per cent).

It shows polymorphism (*5.9*).

IDENTIFICATION

*First identification: B, D.*

*Second identification: A, C, D.*

A. Melting point (*2.2.14*): 135 °C to 141 °C.

B. Infrared absorption spectrophotometry (*2.2.24*).

*Preparation*: discs of *potassium chloride R*.

*Comparison*: *cyclopentolate hydrochloride CRS*.

If the spectra obtained show differences, dissolve the substance to be examined and the reference substance separately in *ethanol (96 per cent) R*, evaporate to dryness and record new spectra using the residues.

C. Thin-layer chromatography (*2.2.27*).

*Test solution*. Dissolve 10 mg of the substance to be examined in 5 mL of *ethanol (96 per cent) R*.

*Reference solution*. Dissolve 10 mg of *cyclopentolate hydrochloride CRS* in *ethanol (96 per cent) R* and dilute to 5 mL with the same solvent.

*Plate*: *TLC silica gel plate R*.

*Mobile phase*: *concentrated ammonia R*, *water R*, *butyl acetate R*, *2-propanol R* (5:15:30:50 *V/V/V/V*).

*Application*: 10 µL.

*Development*: over 2/3 of the plate.

*Drying*: in air.

*Detection*: spray with *alcoholic solution of sulfuric acid R* and heat at 120 °C for 30 min; examine in ultraviolet light at 365 nm.

*Result*: the principal spot in the chromatogram obtained with the test solution is similar in position, fluorescence and size to the principal spot in the chromatogram obtained with the reference solution.

D. It gives reaction (a) of chlorides (*2.3.1*).

TESTS

**pH** (*2.2.3*): 4.5 to 5.5.

Dissolve 0.2 g in *carbon dioxide-free water R* and dilute to 20 mL with the same solvent.

**Related substances**. Liquid chromatography (*2.2.29*). *Prepare the solutions immediately before use.*

*Test solution*. Dissolve 20 mg of the substance to be examined in *water R* and dilute to 20.0 mL with the same solvent.

*Reference solution (a)*. Dilute 1.0 mL of the test solution to 100.0 mL with *water R*. Dilute 5.0 mL of this solution to 10.0 mL with *water R*.

*Reference solution (b)*. Dissolve 10 mg of *cyclopentolate for system suitability CRS* (containing impurity C) in *water R* and dilute to 10.0 mL with the same solvent.

*Column*:

- *size*: *l* = 0.125 m, Ø = 4.0 mm;
- *stationary phase*: spherical *end-capped hexylsilyl silica gel for chromatography R* (5 µm).

*Mobile phase*: dissolve 0.66 g of *ammonium phosphate R* in *water R*, adjust to pH 3.0 with *phosphoric acid R* and dilute to 1000 mL with *water R*; mix and filter; mix 55 volumes of this solution and 45 volumes of *acetonitrile R1*.

*Flow rate*: 1.0 mL/min.

*Detection*: spectrophotometer at 220 nm.

*Injection*: 20 µl.

*Run time*: 2.5 times the retention time of cyclopentolate.

*Identification of impurities*: use the chromatogram supplied with *cyclopentolate for system suitability CRS* and the chromatogram obtained with reference solution (b) to identify the peak due to impurity C.

*Relative retention* with reference to cyclopentolate (retention time = about 4 min): impurity C = about 0.9.

*System suitability*: reference solution (b):

- *peak-to-valley ratio*: minimum 6, where $H_p$ = height above the baseline of the peak due to impurity C and $H_v$ = height above the baseline of the lowest point of the curve separating this peak from the peak due to cyclopentolate.

*Limits*:

- *correction factor*: for the calculation of content, multiply the peak area of impurity C by 2.0;
- *impurity C*: not more than the area of the principal peak in the chromatogram obtained with reference solution (a) (0.5 per cent);
- *unspecified impurities*: for each impurity, not more than 0.2 times the area of the principal peak in the chromatogram obtained with reference solution (a) (0.10 per cent);
- *total*: not more than twice the area of the principal peak in the chromatogram obtained with reference solution (a) (1.0 per cent);
- *disregard limit*: 0.1 times the area of the principal peak in the chromatogram obtained with reference solution (a) (0.05 per cent).

**Loss on drying** (*2.2.32*): maximum 0.5 per cent, determined on 1.000 g by drying in an oven at 105 °C for 4 h.

**Sulfated ash** (*2.4.14*): maximum 0.1 per cent, determined on 1.0 g.

ASSAY

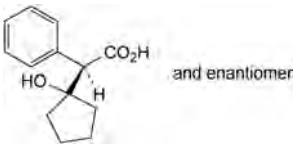
Dissolve 0.250 g in a mixture of 1.0 mL of *0.1 M hydrochloric acid* and 50 mL of *ethanol (96 per cent) R*. Carry out a potentiometric titration (*2.2.20*), using *0.1 M sodium hydroxide*. Read the volume added between the 2 points of inflexion.

1 mL of *0.1 M sodium hydroxide* is equivalent to 32.79 mg of $C_{17}H_{26}ClNO_3$.

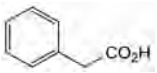
IMPURITIES

*Specified impurities*: *C*.

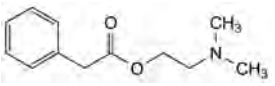
*Other detectable impurities* (the following substances would, if present at a sufficient level, be detected by one or other of the tests in the monograph. They are limited by the general acceptance criterion for other/unspecified impurities and/or by the general monograph *Substances for pharmaceutical use (2034)*. It is therefore not necessary to identify these impurities for demonstration of compliance. See also *5.10. Control of impurities in substances for pharmaceutical use*): *A*, *B*.



A. (2*RS*)-(1-hydroxycyclopentyl)(phenyl)acetic acid,



B. phenylacetic acid,

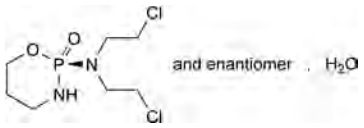


C. 2-(dimethylamino)ethyl phenylacetate.

01/2017:0711

# CYCLOPHOSPHAMIDE

## Cyclophosphamidum



$C_7H_{15}Cl_2N_2O_2P,H_2O$ $M_r$ 279.1
[6055-19-2]

DEFINITION

Cyclophosphamide contains not less than 98.0 per cent and not more than the equivalent of 102.0 per cent of (2*RS*)-*N*,*N*-bis(2-chloroethyl)tetrahydro-2*H*-1,3,2-oxazaphosphorin-2-amine 2-oxide, calculated with reference to the anhydrous substance.

CHARACTERS

A white or almost white, crystalline powder, soluble in water, freely soluble in alcohol.

IDENTIFICATION

*First identification*: B.

*Second identification*: A, C, D.

A. Determine the melting point (*2.2.14*) of the substance to be examined. Mix equal parts of the substance to be examined and *cyclophosphamide CRS* and determine the melting point of the mixture. The difference between the melting points (which are about 51 °C) is not greater than 2 °C.

B. Examine by infrared absorption spectrophotometry (*2.2.24*), comparing with the spectrum obtained with *cyclophosphamide CRS*.

C. Examine the chromatograms obtained in the test for related substances. The principal spot in the chromatogram obtained with test solution (b) is similar in position, colour and size to the principal spot in the chromatogram obtained with reference solution (a).

D. Dissolve 0.1 g in 10 mL of *water R* and add 5 mL of *silver nitrate solution R1*; the solution remains clear. Boil, a white precipitate is formed which dissolves in *concentrated ammonia R* and is reprecipitated on the addition of *dilute nitric acid R*.

TESTS

**Solution S**. Dissolve 0.50 g in *carbon dioxide-free water R* and dilute to 25.0 mL with the same solvent.

**Appearance of solution**. Solution S is clear (*2.2.1*) and not more intensely coloured than reference solution $Y_6$ (*2.2.2, Method II*).

**pH** (*2.2.3*). The pH of solution S is 4.0 to 6.0, determined immediately after preparation of the solution.

**Related substances**. Examine by thin-layer chromatography (*2.2.27*), using *silica gel G R* as the coating substance.

*Test solution (a)*. Dissolve 0.10 g of the substance to be examined in *alcohol R* and dilute to 5 mL with the same solvent.

*Test solution (b)*. Dilute 1 mL of test solution (a) to 10 mL with *alcohol R*.

*Reference solution (a)*. Dissolve 10 mg of *cyclophosphamide CRS* in *alcohol R* and dilute to 5 mL with the same solvent.

*Reference solution (b)*. Dilute 0.1 mL of test solution (a) to 10 mL with *alcohol R*.

Apply separately to the plate 10 µL of each solution. Develop over a path of 15 cm using a mixture of 2 volumes of *anhydrous formic acid R*, 4 volumes of *acetone R*, 12 volumes of *water R* and 80 volumes of *methyl ethyl ketone R*. Dry the plate in a current of warm air and heat at 110 °C for 10 min. At the bottom of a chromatographic tank, place an evaporating dish containing a 50 g/L solution of *potassium permanganate R* and add an equal volume of *hydrochloric acid R*. Place the plate whilst still hot in the tank and close the tank. Leave the plate in contact with the chlorine gas for 2 min. Withdraw the plate and place it in a current of cold air until the excess of chlorine is removed and an area of coating below the points of application gives at most a very faint blue colour with a drop of *potassium iodide and starch solution R*. Avoid prolonged exposure to cold air. Spray with *potassium iodide and starch solution R* and allow to stand for 5 min. Any spot in the chromatogram obtained with test solution (a), apart from the principal spot, is not more intense than the spot in the chromatogram obtained with reference solution (b) (1.0 per cent). Disregard any spot remaining at the point of application.

**Chlorides** (*2.4.4*). Dissolve 0.15 g in *water R* and dilute to 15 mL with the same solvent. The freshly prepared solution complies with the limit test for chlorides (330 ppm).

**Phosphates** (*2.4.11*). Dissolve 0.10 g in *water R* and dilute to 100 mL with the same solvent. The solution complies with the limit test for phosphates (100 ppm).

**Water** (*2.5.12*): 6.0 per cent to 7.0 per cent, determined on 0.300 g by the semi-micro determination of water.

ASSAY

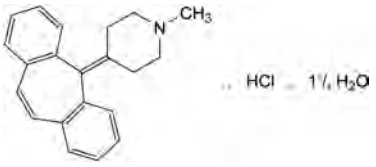
Dissolve 0.100 g in 50 mL of a 1 g/L solution of *sodium hydroxide R* in *ethylene glycol R* and boil under a reflux condenser for 30 min. Allow to cool and rinse the condenser with 25 mL of *water R*. Add 75 mL of *2-propanol R*, 15 mL of *dilute nitric acid R*, 10.0 mL of *0.1 M silver nitrate* and 2.0 mL of *ferric ammonium sulfate solution R2* and titrate with *0.1 M ammonium thiocyanate*.

1 mL of *0.1 M silver nitrate* is equivalent to 13.05 mg of $C_7H_{15}Cl_2N_2O_2P$.

07/2009:0817

# CYPROHEPTADINE HYDROCHLORIDE

## Cyproheptadini hydrochloridum



$C_{21}H_{22}ClN,1\frac{1}{2}H_2O$ $M_r$ 350.9
[41354-29-4]

DEFINITION

4-(5*H*-Dibenzo[*a*,*d*][7]annulen-5-ylidene)-1-methylpiperidine hydrochloride sesquihydrate.

*Content*: 98.5 per cent to 101.0 per cent (anhydrous substance).

CHARACTERS

*Appearance*: white or slightly yellow, crystalline powder.

*Solubility*: slightly soluble in water, freely soluble in methanol, sparingly soluble in ethanol (96 per cent).

IDENTIFICATION

A. Infrared absorption spectrophotometry (*2.2.24*).
*Comparison*: *cyproheptadine hydrochloride CRS*.

B. A saturated solution gives reaction (b) of chlorides (*2.3.1*).

TESTS

**Acidity**. Dissolve 0.10 g in *water R* and dilute to 25 mL with the same solvent. Add 0.1 mL of *methyl red solution R*. Not more than 0.15 mL of *0.01 M sodium hydroxide* is required to change the colour of the indicator.

**Related substances**. Liquid chromatography (*2.2.29*).

*Test solution*. Dissolve 40.0 mg of the substance to be examined in mobile phase A and dilute to 20.0 mL with mobile phase A.

*Reference solution (a)*. Dilute 1.0 mL of the test solution to 100.0 mL with mobile phase A. Dilute 1.0 mL of this solution to 10.0 mL with mobile phase A.

*Reference solution (b)*. Dissolve 2.0 mg of *dibenzocycloheptene CRS* (impurity A), 2.0 mg of *dibenzosuberone CRS* (impurity B) and 2.0 mg of *cyproheptadine impurity C CRS* in mobile phase A, add 1.0 mL of the test solution and dilute to 100.0 mL with mobile phase A.

*Reference solution (c)*. Dilute 1.0 mL of reference solution (b) to 10.0 mL with mobile phase A.

*Column*:
- *size*: *l* = 0.25 m, Ø = 4.6 mm;
- *stationary phase*: *octylsilyl silica gel for chromatography R* (5 µm).

*Mobile phase*:
- *mobile phase A*: dissolve 6.12 g of *potassium dihydrogen phosphate R* in 900 mL of *water R*, adjust to pH 4.5 with *phosphoric acid R* and dilute to 1000 mL with *water R*; mix 60 volumes of this solution and 40 volumes of *acetonitrile for chromatography R*;
- *mobile phase B*: dissolve 6.12 g of *potassium dihydrogen phosphate R* in 900 mL of *water R*, adjust to pH 4.5 with *phosphoric acid R* and dilute to 1000 mL with *water R*; mix 40 volumes of this solution and 60 volumes of *acetonitrile for chromatography R*;

| Time (min) | Mobile phase A (per cent *V/V*) | Mobile phase B (per cent *V/V*) |
|---|---|---|
| 0 - 10.0 | 100 | 0 |
| 10.0 - 10.1 | 100 → 0 | 0 → 100 |
| 10.1 - 35 | 0 | 100 |

*Flow rate*: 1.0 mL/min.

*Detection*: spectrophotometer at 230 nm.

*Injection*: 10 µL.

*Relative retention* with reference to cyproheptadine (retention time = about 8 min): impurity C = about 0.7; impurity B = about 2.6; impurity A = about 3.9.

*System suitability*: reference solution (b):
- *resolution*: minimum 7.0 between the peaks due to impurity C and cyproheptadine.

*Limits*:
- *impurities A, B, C*: for each impurity, not more than 1.5 times the area of the corresponding peak in the chromatogram obtained with reference solution (c) (0.15 per cent);
- *unspecified impurities*: for each impurity, not more than the area of the principal peak in the chromatogram obtained with reference solution (a) (0.10 per cent);
- *total*: not more than 5 times the area of the principal peak in the chromatogram obtained with reference solution (a) (0.5 per cent);
- *disregard limit*: 0.5 times the area of the principal peak in the chromatogram obtained with reference solution (a) (0.05 per cent).

**Water** (*2.5.12*): 7.0 per cent to 9.0 per cent, determined on 0.200 g.

**Sulfated ash** (*2.4.14*): maximum 0.1 per cent, determined on 1.0 g.

ASSAY

Dissolve 0.250 g in a mixture of 5.0 mL of *0.01 M hydrochloric acid* and 50 mL of *ethanol (96 per cent) R*. Carry out a potentiometric titration (*2.2.20*), using *0.1 M sodium hydroxide*. Read the volume added between the 2 points of inflexion.

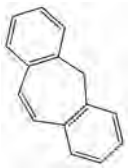
1 mL of *0.1 M sodium hydroxide* is equivalent to 32.39 mg of $C_{21}H_{22}ClN$.

STORAGE

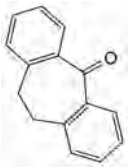
Protected from light.

IMPURITIES

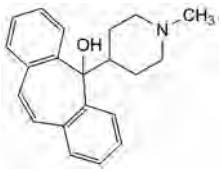
*Specified impurities: A, B, C.*



A. 5*H*-dibenzo[*a,d*][7]annulene (dibenzocycloheptene),



B. 10,11-dihydro-5*H*-dibenzo[*a,d*][7]annulen-5-one (dibenzosuberone),

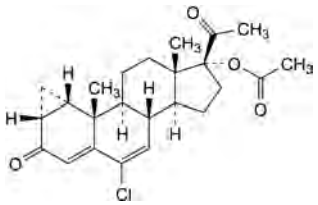


C. 5-(1-methylpiperidin-4-yl)-5*H*-dibenzo[*a,d*][7]annulen-5-ol.

**04/2012:1094**

# CYPROTERONE ACETATE

## Cyproteroni acetas



$C_{24}H_{29}ClO_4$ $M_r$ 416.9
[427-51-0]

DEFINITION

6-Chloro-3,20-dioxo-1β,2β-dihydro-3′*H*-cyclopropa-[1,2]pregna-1,4,6-trien-17-yl acetate.

*Content*: 97.0 per cent to 103.0 per cent (dried substance).

CHARACTERS

*Appearance*: white or almost white, crystalline powder.

*Solubility*: practically insoluble in water, very soluble in methylene chloride, freely soluble in acetone, soluble in methanol, sparingly soluble in anhydrous ethanol.

mp: about 210 °C.

IDENTIFICATION

*First identification: A.*

*Second identification: B, C, D, E.*

A. Infrared absorption spectrophotometry (*2.2.24*).
   *Comparison*: *cyproterone acetate CRS*.

B. Thin-layer chromatography (*2.2.27*).
   *Test solution.* Dissolve 20 mg of the substance to be examined in *methylene chloride R* and dilute to 10 mL with the same solvent.
   *Reference solution.* Dissolve 10 mg of *cyproterone acetate CRS* in *methylene chloride R* and dilute to 5 mL with the same solvent.
   *Plate*: *TLC silica gel $F_{254}$ plate R*.
   *Mobile phase*: *cyclohexane R*, *ethyl acetate R* (50:50 *V/V*).
   *Application*: 5 μL.
   *Development*: twice over 3/4 of the plate; dry in air between the 2 developments.
   *Drying*: in air.
   *Detection*: examine in ultraviolet light at 254 nm.
   *Results*: the principal spot in the chromatogram obtained with the test solution is similar in position and size to the principal spot in the chromatogram obtained with the reference solution.

C. To about 1 mg add 2 mL of *sulfuric acid R* and heat on a water-bath for 2 min. A red colour develops. Cool. Add this solution cautiously to 4 mL of *water R* and shake. The solution becomes violet.

D. Incinerate about 30 mg with 0.3 g of *anhydrous sodium carbonate R* over a naked flame for about 10 min. Cool and dissolve the residue in 5 mL of *dilute nitric acid R*. Filter. To 1 mL of the filtrate add 1 mL of *water R*. The solution gives reaction (a) of chlorides (*2.3.1*).

E. It gives the reaction of acetyl (*2.3.1*).

TESTS

**Specific optical rotation** (*2.2.7*): + 152 to + 157 (dried substance).

Dissolve 0.25 g in *acetone R* and dilute to 25.0 mL with the same solvent.

**Related substances**. Liquid chromatography (*2.2.29*).

*Test solution.* Dissolve 10 mg of the substance to be examined in *acetonitrile R* and dilute to 10.0 mL with the same solvent.

*Reference solution (a).* Dilute 1.0 mL of the test solution to 100.0 mL with *acetonitrile R*.

*Reference solution (b).* Dissolve the contents of a vial of *cyproterone impurity mixture CRS* (impurities F and I) in 1.0 mL of the test solution.

*Reference solution (c).* Dissolve 2 mg of *cyproterone acetate for peak identification CRS* (containing impurities B, C, E and G) in 2.0 mL of *acetonitrile R*.

*Column*:

- *size*: *l* = 0.125 m, Ø = 4.6 mm;
- *stationary phase*: *end-capped octadecylsilyl silica gel for chromatography R* (3 μm).

*Mobile phase*: *acetonitrile R*, *water R* (40:60 *V/V*).

*Flow rate*: 1.5 mL/min.

*Detection*: spectrophotometer at 254 nm.

*Injection*: 20 μL.

*Run time*: twice the retention time of cyproterone acetate.

*Identification of impurities*: use the chromatogram supplied with *cyproterone impurity mixture CRS* and the chromatogram obtained with reference solution (b) to identify the peaks due to impurities F and I; use the chromatogram supplied with *cyproterone acetate for peak identification CRS* and the chromatogram obtained with reference solution (c) to identify the peaks due to impurities B, C, E and G.

*Relative retention* with reference to cyproterone acetate (retention time = about 22 min): impurity E = about 0.27; impurity G = about 0.3; impurity F = about 0.5; impurity B = about 0.7; impurity I = about 0.9; impurity C = about 1.5.

*System suitability*: reference solution (b):

- *resolution*: minimum 1.5 between the peaks due to impurity I and cyproterone acetate.

*Limits*:

- *correction factors*: for the calculation of content, multiply the peak areas of the following impurities by the corresponding correction factor: impurity C = 1.8; impurity E = 0.7;
- *impurity F*: not more than 0.4 times the area of the principal peak in the chromatogram obtained with reference solution (a) (0.4 per cent);
- *impurity E*: not more than 0.2 times the area of the principal peak in the chromatogram obtained with reference solution (a) (0.2 per cent);
- *impurities B, C, G*: for each impurity, not more than 0.15 times the area of the principal peak in the chromatogram obtained with reference solution (a) (0.15 per cent);
- *unspecified impurities*: for each impurity, not more than 0.1 times the area of the principal peak in the chromatogram obtained with reference solution (a) (0.10 per cent);
- *total*: not more than 0.5 times the area of the principal peak in the chromatogram obtained with reference solution (a) (0.5 per cent);
- *disregard limit*: 0.05 times the area of the principal peak in the chromatogram obtained with reference solution (a) (0.05 per cent).

**Loss on drying** (*2.2.32*): maximum 0.5 per cent, determined on 1.000 g by drying at 80 °C at a pressure not exceeding 0.7 kPa.

**Sulfated ash** (*2.4.14*): maximum 0.1 per cent, determined on 1.0 g.

ASSAY

Dissolve 50.0 mg in *methanol R* and dilute to 50.0 mL with the same solvent. Dilute 1.0 mL of the solution to 100.0 mL with *methanol R*. Measure the absorbance (*2.2.25*) at the absorption maximum at 282 nm.

Calculate the content of $C_{24}H_{29}ClO_4$ taking the specific absorbance to be 414.

STORAGE

Protected from light.

IMPURITIES

*Specified impurities: B, C, E, F, G.*

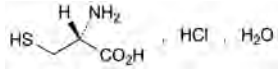
# CYSTEINE HYDROCHLORIDE MONOHYDRATE

## Cysteini hydrochloridum monohydricum



$C_3H_8ClNO_2S,H_2O$ $M_r$ 175.6
[7048-04-6]

DEFINITION

(2*R*)-2-Amino-3-sulfanylpropanoic acid hydrochloride monohydrate.

Product of fermentation or of protein hydrolysis.

*Content*: 98.5 per cent to 101.0 per cent (dried substance).

CHARACTERS

*Appearance*: white or almost white, crystalline powder or colourless crystals.

*Solubility*: freely soluble in water, slightly soluble in ethanol (96 per cent).

IDENTIFICATION

*First identification: A, B, E.*

*Second identification*: *A, C, D, E.*

A. Specific optical rotation (see Tests).

B. Infrared absorption spectrophotometry (*2.2.24*).

*Comparison*: *cysteine hydrochloride monohydrate CRS*.

C. Thin-layer chromatography (*2.2.27*).

*Test solution*. Dissolve 20 mg of the substance to be examined in *water R* and dilute to 10 mL with the same solvent. Add 10 mL of a 40 g/L solution of *N-ethylmaleimide R* in *ethanol (96 per cent) R*. Allow to stand for 5 min. Dilute 2 mL of the solution to 10 mL with *water R*.

*Reference solution*. Dissolve 20 mg of *cysteine hydrochloride monohydrate CRS* in *water R* and dilute to 10 mL with the same solvent. Add 10 mL of a 40 g/L solution of *N-ethylmaleimide R* in *ethanol (96 per cent) R*. Allow to stand for 5 min. Dilute 2 mL of the solution to 10 mL with *water R*.

*Plate*: *TLC silica gel plate R*.

*Mobile phase*: *glacial acetic acid R*, *water R*, *butanol R* (20:20:60 *V/V/V*).

*Application*: 5 µL.

*Development*: over 2/3 of the plate.

*Drying*: at 80 °C for 30 min.

*Detection*: spray with *ninhydrin solution R* and heat at 105 °C for 15 min.

*Results*: the principal spot in the chromatogram obtained with the test solution is similar in position, colour and size to the principal spot in the chromatogram obtained with the reference solution.

D. Dissolve about 5 mg in 1 mL of *dilute sodium hydroxide solution R*. Add 1 mL of a 30 g/L solution of *sodium nitroprusside R*. An intense violet colour develops which becomes brownish-red and then orange. Add 1 mL of *hydrochloric acid R*. The solution becomes green.

E. Dissolve about 50 mg in 5 mL of *water R*. Heat to about 60 °C on a water-bath and carefully add, dropwise, 5 mL of *strong hydrogen peroxide solution R*. Heat the water-bath to boiling and maintain the sample on the water-bath for 1 h. After cooling to room temperature reconstitute the sample to 10 mL with *water R*. 2 mL of the solution gives reaction (a) of chlorides (*2.3.1*).

TESTS

**Solution S**. Dissolve 2.5 g in *distilled water R* and dilute to 50 mL with the same solvent.

**Appearance of solution**. The solution is clear (*2.2.1*) and not more intensely coloured than reference solution $BY_6$ (*2.2.2, Method II*).

Dilute 10 mL of solution S to 20 mL with *water R*.

**Specific optical rotation** (*2.2.7*): + 5.5 to + 7.0 (dried substance).

Dissolve 2.00 g in *hydrochloric acid R1* and dilute to 25.0 mL with the same acid.

**Ninhydrin-positive substances**. Amino acid analysis (*2.2.56*). For analysis, use Method 1. *Prepare the solutions immediately before use.*

The concentrations of the test solution and the reference solutions may be adapted according to the sensitivity of the equipment used. The concentrations of all solutions are adjusted so that the system suitability requirements described in general chapter *2.2.46* are fulfilled, keeping the ratios of concentrations between all solutions as described.

*Solution A*: *dilute hydrochloric acid R1* or a sample preparation buffer suitable for the apparatus used.

*Test solution*. Dissolve 30.0 mg of the substance to be examined in solution A and dilute to 50.0 mL with solution A.

*Reference solution (a)*. Dilute 1.0 mL of the test solution to 100.0 mL with solution A. Dilute 2.0 mL of this solution to 10.0 mL with solution A.

*Reference solution (b)*. Dissolve 30.0 mg of *L-cystine R* (impurity A) in solution A and dilute to 100.0 mL with solution A. Dilute 1.0 mL of the solution to 250.0 mL with solution A.

*Reference solution (c)*. Dissolve 30.0 mg of *proline R* in solution A and dilute to 100.0 mL with solution A. Dilute 1.0 mL of the solution to 250.0 mL with solution A.

*Reference solution (d)*. Dilute 6.0 mL of *ammonium standard solution (100 ppm $NH_4$) R* to 50.0 mL with solution A. Dilute 1.0 mL of this solution to 100.0 mL with solution A.

*Reference solution (e)*. Dissolve 30 mg of *isoleucine R* and 30 mg of *leucine R* in solution A and dilute to 50 mL with solution A. Dilute 1 mL of the solution to 200 mL with solution A.

*Blank solution*: solution A.

Inject suitable, equal amounts of the test, blank and reference solutions into the amino acid analyser. Run a program suitable for the determination of physiological amino acids.

*System suitability*: reference solution (e):

– *resolution*: minimum 1.5 between the peaks due to isoleucine and leucine.

*Calculation of percentage contents*:

– for impurity A, use the concentration of impurity A in reference solution (b);

– for any ninhydrin-positive substance detected at 570 nm, use the concentration of cysteine hydrochloride monohydrate in reference solution (a);

– for any ninhydrin-positive substance detected at 440 nm, use the concentration of proline in reference solution (c); if a peak is above the reporting threshold at both wavelengths, use the result obtained at 570 nm for quantification.

*Limits*:

– *impurity A at 570 nm*: maximum 0.5 per cent;

– *any ninhydrin-positive substance*: for each impurity, maximum 0.2 per cent;

– *total*: maximum 1.0 per cent;

– *reporting threshold*: 0.05 per cent.

The thresholds indicated under Related substances (Table 2034.-1) in the general monograph *Substances for pharmaceutical use (2034)* do not apply.

**Sulfates** (*2.4.13*): maximum 300 ppm.

Dilute 10 mL of solution S to 15 mL with *distilled water R*.

**Ammonium**. Amino acid analysis (*2.2.56*) as described in the test for ninhydrin-positive substances with the following modifications.

*Injection*: test solution, reference solution (d) and blank solution.

*Limit*:

– *ammonium at 570 nm*: not more than the area of the corresponding peak in the chromatogram obtained with reference solution (d) (0.02 per cent), taking into account the peak due to ammonium in the chromatogram obtained with the blank solution.

**Iron** (*2.4.9*): maximum 20 ppm.

In a separating funnel, dissolve 0.50 g in 10 mL of *dilute hydrochloric acid R*. Shake with 3 quantities, each of 10 mL, of *methyl isobutyl ketone R1*, shaking for 3 min each time. To the combined organic layers add 10 mL of *water R* and shake for 3 min. Use the aqueous layer.

**Loss on drying** (*2.2.32*): 8.0 per cent to 12.0 per cent, determined on 1.000 g by drying at a pressure not exceeding 0.7 kPa for 24 h.

**Sulfated ash** (*2.4.14*): maximum 0.1 per cent, determined on 1.0 g.

ASSAY

In a ground-glass stoppered flask dissolve 0.300 g of the substance to be examined and 4 g of *potassium iodide R* in 20 mL of *water R*. Cool the solution in iced water and add 3 mL of *hydrochloric acid R1* and 25.0 mL of *0.05 M iodine*. Stopper the flask and allow to stand in the dark for 20 min. Titrate with *0.1 M sodium thiosulfate* using 3 mL of *starch solution R*, added towards the end of the titration, as indicator. Carry out a blank titration.

1 mL of *0.05 M iodine* is equivalent to 15.76 mg of $C_3H_8ClNO_2S$.

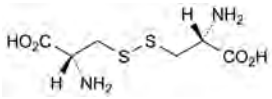
STORAGE

Protected from light.

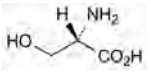
IMPURITIES

*Specified impurities: A.*

*Other detectable impurities* (the following substances would, if present at a sufficient level, be detected by one or other of the tests in the monograph. They are limited by the general acceptance criterion for other/unspecified impurities. It is therefore not necessary to identify these impurities for demonstration of compliance. See also *5.10. Control of impurities in substances for pharmaceutical use*): *B.*



A. (2*R*,2′*R*)-3,3′-disulfanediylbis(2-aminopropanoic acid) (cystine),

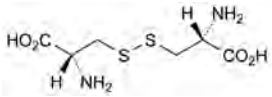


B. (2*S*)-2-amino-3-hydroxypropanoic acid (serine).

**01/2019:0998**

# CYSTINE

## Cystinum



$C_6H_{12}N_2O_4S_2$ $M_r$ 240.3

[56-89-3]

DEFINITION

L-Cystine (3,3′-disulfanediylbis[(2*R*)-2-aminopropanoic acid]).

Product of fermentation or of protein hydrolysis.

*Content*: 98.5 per cent to 101.0 per cent (dried substance).

CHARACTERS

*Appearance*: white or almost white, crystalline powder.

*Solubility*: practically insoluble in water and in ethanol (96 per cent). It dissolves in dilute solutions of alkali hydroxides.

IDENTIFICATION

*First identification: A, B.*

*Second identification: A, C, D.*

A. Specific optical rotation (see Tests).

B. Infrared absorption spectrophotometry (*2.2.24*).
*Comparison*: *cystine CRS.*

C. Thin-layer chromatography (*2.2.27*).
*Test solution.* Dissolve 10 mg of the substance to be examined in 1 mL of a 103 g/L solution of *hydrochloric acid R* and dilute to 50 mL with *water R.*
*Reference solution.* Dissolve 10 mg of *cystine CRS* in 1 mL of a 103 g/L solution of *hydrochloric acid R* and dilute to 50 mL with *water R.*
*Plate*: *TLC silica gel plate R.*
*Mobile phase*: *concentrated ammonia R*, *2-propanol R* (30:70 *V/V*).
*Application*: 5 µL.
*Development*: over 2/3 of the plate.
*Drying*: in air.
*Detection*: spray with *ninhydrin solution R* and heat at 105 °C for 15 min.
*Results*: the principal spot in the chromatogram obtained with the test solution is similar in position, colour and size to the principal spot in the chromatogram obtained with the reference solution.

D. To 0.1 g carefully add 1 mL of *strong hydrogen peroxide solution R* and 0.1 mL of *ferric chloride solution R1*. Allow to cool. Add 1 mL of *dilute hydrochloric acid R* and 5 mL of *water R*. Add 1 mL of *barium chloride solution R1*. Turbidity or a white precipitate develops within 3 min.

TESTS

**Appearance of solution**. The solution is clear (*2.2.1*) and not more intensely coloured than reference solution $Y_7$ (*2.2.2, Method II*).

Dissolve 1.0 g in *dilute hydrochloric acid R* and dilute to 10 mL with the same acid.

**Specific optical rotation** (*2.2.7*): − 224 to − 218 (dried substance).

Dissolve 0.50 g in a 103 g/L solution of *hydrochloric acid R* and dilute to 25.0 mL with the same acid.

**Ninhydrin-positive substances**. Amino acid analysis (*2.2.56*). For analysis, use Method 1.

The concentrations of the test solution and the reference solutions may be adapted according to the sensitivity of the equipment used. The concentrations of all solutions are adjusted so that the system suitability requirements described in general chapter *2.2.46* are fulfilled, keeping the ratios of concentrations between all solutions as described.

*Solution A*: a 10.3 g/L solution of *hydrochloric acid R* or a sample preparation buffer suitable for the apparatus used.

*Test solution.* Dissolve 30.0 mg of the substance to be examined in solution A and dilute to 50.0 mL with solution A.

*Reference solution (a).* Dilute 1.0 mL of the test solution to 100.0 mL with solution A. Dilute 2.0 mL of this solution to 10.0 mL with solution A.

*Reference solution (b).* Dissolve 30.0 mg of *proline R* in solution A and dilute to 100.0 mL with solution A. Dilute 1.0 mL of the solution to 250.0 mL with solution A.

*Reference solution (c).* Dilute 6.0 mL of *ammonium standard solution (100 ppm $NH_4$) R* to 50.0 mL with solution A. Dilute 1.0 mL of this solution to 100.0 mL with solution A.

*Reference solution (d).* Dissolve 30 mg of *isoleucine R* and 30 mg of *leucine R* in solution A and dilute to 50.0 mL with solution A. Dilute 1.0 mL of the solution to 200.0 mL with solution A.

*Blank solution*: solution A.

Inject suitable, equal amounts of the test, blank and reference solutions (a), (b) and (d) into the amino acid analyser. Run a program suitable for the determination of physiological amino acids.

*System suitability*: reference solution (d):

– *resolution*: minimum 1.5 between the peaks due to isoleucine and leucine.

*Calculation of percentage contents*:

– for any ninhydrin-positive substance detected at 570 nm, use the concentration of cystine in reference solution (a);

– for any ninhydrin-positive substance detected at 440 nm, use the concentration of proline in reference solution (b); if a peak is above the reporting threshold at both wavelengths, use the result obtained at 570 nm for quantification.

*Limits*:

– *any ninhydrin-positive substance*: for each impurity, maximum 0.2 per cent;

– *total*: maximum 0.5 per cent;

– *reporting threshold*: 0.05 per cent.

The thresholds indicated under Related substances (Table 2034.-1) in the general monograph *Substances for pharmaceutical use (2034)* do not apply.

**Chlorides**: maximum 200 ppm.

Dissolve 0.5 g in 5 mL of *dilute nitric acid R* and dilute to 10 mL with the same solvent. Add 10 mL of *strong hydrogen peroxide solution R* and heat on a water-bath for 30 min. Cool and dilute to 50 mL with *water R*. Add 1 mL of *silver nitrate solution R2* and mix. Allow to stand for 5 min protected from light. Any opalescence in the solution is not more intense than that in a standard prepared at the same time and in the same manner using 2 mL of *chloride standard solution (50 ppm Cl) R*. Examine the tubes laterally against a black background.

**Sulfates** (*2.4.13*): maximum 300 ppm.

Dissolve 0.5 g in 5 mL of *dilute hydrochloric acid R* and dilute to 15 mL with *distilled water R*.

**Ammonium**. Amino acid analysis (*2.2.56*) as described in the test for ninhydrin-positive substances with the following modifications.

*Injection*: test solution, reference solution (c) and blank solution.

*Limit*:

– *ammonium at 570 nm*: not more than the area of the corresponding peak in the chromatogram obtained with reference solution (c) (0.02 per cent), taking into account the peak due to ammonium in the chromatogram obtained with the blank solution.

**Iron** (*2.4.9*): maximum 10 ppm.

In a separating funnel, dissolve 1.0 g in 10 mL of *dilute hydrochloric acid R*. Shake with 3 quantities, each of 10 mL, of *methyl isobutyl ketone R1*, shaking for 3 min each time. To the combined organic layers add 10 mL of *water R* and shake for 3 min. Use the aqueous layer.

**Loss on drying** (*2.2.32*): maximum 0.5 per cent, determined on 1.000 g by drying in an oven at 105 °C.

**Sulfated ash** (*2.4.14*): maximum 0.1 per cent, determined on 1.0 g.

ASSAY

In a flask with a ground-glass stopper, dissolve 0.100 g in a mixture of 2 mL of *dilute sodium hydroxide solution R* and 10 mL of *water R*. Add 10 mL of a 200 g/L solution of *potassium bromide R*, 50.0 mL of *0.0167 M potassium bromate* and 15 mL of *dilute hydrochloric acid R*. Stopper the flask and cool in iced water. Allow to stand in the dark for 10 min. Add 1.5 g of *potassium iodide R*. After 1 min, titrate with *0.1 M sodium thiosulfate*, using 2 mL of *starch solution R*, added towards the end-point, as indicator. Carry out a blank titration.

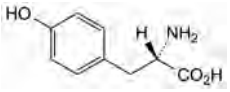
1 mL of *0.0167 M potassium bromate* is equivalent to 2.403 mg of $C_6H_{12}N_2O_4S_2$.

STORAGE

Protected from light.

IMPURITIES

*Other detectable impurities* (the following substances would, if present at a sufficient level, be detected by one or other of the tests in the monograph. They are limited by the general acceptance criterion for other/unspecified impurities. It is therefore not necessary to identify these impurities for demonstration of compliance. See also *5.10. Control of impurities in substances for pharmaceutical use*): *A*.



A. L-tyrosine ((2*S*)-2-amino-3-(4-hydroxyphenyl)propanoic acid).

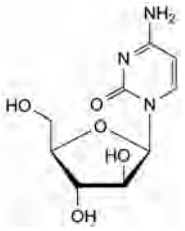
# CYTARABINE

## Cytarabinum



$C_9H_{13}N_3O_5$ $M_r$ 243.2
[147-94-4]

DEFINITION

4-Amino-1-β-D-arabinofuranosylpyrimidin-2(1*H*)-one.

*Content*: 99.0 per cent to 101.0 per cent (dried substance).

CHARACTERS

*Appearance*: white or almost white, crystalline powder.

*Solubility*: freely soluble in water, practically insoluble in ethanol (96 per cent) and in methylene chloride.

mp: about 215 °C.

IDENTIFICATION

Infrared absorption spectrophotometry (*2.2.24*).

*Comparison*: *cytarabine CRS*.

TESTS

**Appearance of solution**. The solution is clear (*2.2.1*) and not more intensely coloured than reference solution $Y_5$ (*2.2.2, Method II*).

Dissolve 1.0 g in *water R* and dilute to 10 mL with the same solvent.

**Specific optical rotation** (*2.2.7*): + 154 to + 160 (dried substance).

Dissolve 0.250 g in *water R* and dilute to 25.0 mL with the same solvent.

**Related substances**. Liquid chromatography (*2.2.29*).

*Buffer solution*. Dissolve 1.38 g of *sodium dihydrogen phosphate monohydrate R* and 1.42 g of *anhydrous disodium hydrogen phosphate R* in 950 mL of *water for chromatography R*, adjust to pH 7 with a 4 g/L solution of *sodium hydroxide R* and dilute to 1000 mL with *water for chromatography R*.

*Test solution*. Dissolve 25.0 mg of the substance to be examined in *water R* and dilute to 10.0 mL with the same solvent.

*Reference solution (a).* Dissolve 5.0 mg of *uracil arabinoside CRS* (impurity A) in *water R* and dilute to 100.0 mL with the same solvent. Dilute 0.5 mL of the solution to 10.0 mL with *water R*.

*Reference solution (b).* Dissolve 2 mg of *uridine R* (impurity B) and 2.5 mg of the substance to be examined in *water R* and dilute to 100 mL with the same solvent.

*Column*:

- *size*: *l* = 0.25 m, Ø = 4.6 mm;
- *stationary phase*: *end-capped octadecylsilyl silica gel for chromatography R* (5 µm);
- *temperature*: 30 °C.

*Mobile phase*:

- *mobile phase A*: *methanol R*, buffer solution (2:98 *V/V*);
- *mobile phase B*: *methanol R*, buffer solution (30:70 *V/V*);

| Time (min) | Mobile phase A (per cent *V/V*) | Mobile phase B (per cent *V/V*) |
|---|---|---|
| 0 - 10 | 100 | 0 |
| 10 - 20 | 100 → 0 | 0 → 100 |
| 20 - 25 | 0 | 100 |

*Flow rate*: 1.0 mL/min.

*Detection*: spectrophotometer at 254 nm.

*Injection*: 20 µL.

*Identification of impurities*: use the chromatogram obtained with reference solution (a) to identify the peak due to impurity A; use the chromatogram obtained with reference solution (b) to identify the peak due to impurity B.

*Relative retention* with reference to cytarabine (retention time = about 9 min): impurity B = about 1.2; impurity A = about 1.7.

*System suitability*: reference solution (b):

- *resolution*: minimum 2.0 between the peaks due to cytarabine and impurity B.

*Calculation of percentage contents*:

- for each impurity, use the concentration of impurity A in reference solution (a).

*Limits*:

- *impurity A*: maximum 0.15 per cent;
- *unspecified impurities*: for each impurity, maximum 0.05 per cent;
- *total*: maximum 0.3 per cent;
- *reporting threshold*: 0.03 per cent.

**Loss on drying** (*2.2.32*): maximum 1.0 per cent, determined on 0.250 g by drying *in vacuo* at 60 °C at a pressure of 0.2-0.7 kPa for 3 h.

**Sulfated ash** (*2.4.14*): maximum 0.5 per cent, determined on 1.0 g.

ASSAY

Dissolve 0.200 g in 60 mL of *anhydrous acetic acid R*, warming if necessary. Titrate with *0.1 M perchloric acid*, determining the end-point potentiometrically (*2.2.20*).

1 mL of *0.1 M perchloric acid* is equivalent to 24.32 mg of $C_9H_{13}N_3O_5$.

STORAGE

In an airtight container, protected from light.

IMPURITIES

*Specified impurities: A.*

*Other detectable impurities* (the following substances would, if present at a sufficient level, be detected by one or other of the tests in the monograph. # DACARBAZINE

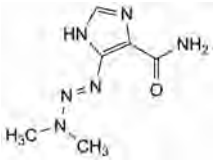
## Dacarbazinum



$C_6H_{10}N_6O$ $M_r$ 182.2
[4342-03-4]

DEFINITION

5-[(1*E*)-3,3-Dimethyltriaz-1-enyl]-1*H*-imidazole-4-carboxamide.

*Content*: 98.5 per cent to 101.0 per cent (anhydrous substance).

CHARACTERS

*Appearance*: white or slightly yellowish, crystalline powder.

*Solubility*: slightly soluble in water and in anhydrous ethanol, practically insoluble in methylene chloride.

IDENTIFICATION

*First identification*: B.

*Second identification*: A, C.

A. Ultraviolet and visible absorption spectrophotometry (*2.2.25*).

*Test solution.* Dissolve 15.0 mg in 100.0 mL of *0.1 M hydrochloric acid*. Dilute 5.0 mL of this solution to 100.0 mL with *0.1 M hydrochloric acid*.

*Spectral range*: 200-400 nm.

*Absorption maximum*: at 323 nm.

*Shoulder*: at 275 nm.

*Specific absorbance at the absorption maximum*: 1024 to 1131.

B. Infrared absorption spectrophotometry (*2.2.24*).

*Comparison*: *dacarbazine CRS*.

C. Thin-layer chromatography (*2.2.27*).

*Test solution.* Dissolve 2.0 mg of the substance to be examined in *methanol R* and dilute to 5.0 mL with the same solvent.

*Reference solution.* Dissolve 2.0 mg of *dacarbazine CRS* in *methanol R* and dilute to 5.0 mL with the same solvent.

*Plate*: *TLC silica gel $F_{254}$ plate R*.

*Mobile phase*: *glacial acetic acid R*, *water R*, *butanol R* (1:2:5 *V/V/V*).

*Application*: 10 µL.

*Development*: over 2/3 of the plate.

*Drying*: in air.

*Detection*: examine in ultraviolet light at 254 nm.

*Results*: the principal spot in the chromatogram obtained with the test solution is similar in position and size to the principal spot in the chromatogram obtained with the reference solution.

TESTS

**Appearance of solution**. The solution is clear (*2.2.1*) and not more intensely coloured than reference solution $BY_6$ (*2.2.2, Method II*).

Dissolve 0.25 g in a 210 g/L solution of *citric acid monohydrate R* and dilute to 25.0 mL with the same solution.

**Related substances**

A. Liquid chromatography (*2.2.29*). *Use freshly prepared solutions and protect them from light.*

*Test solution.* Dissolve 50.0 mg of the substance to be examined and 75 mg of *citric acid monohydrate R* in *distilled water R* and dilute to 5.0 mL with the same solvent.

*Reference solution (a).* Dissolve 5.0 mg of *dacarbazine impurity A CRS* in *distilled water R* and dilute to 50.0 mL with the same solvent. Dilute 5.0 mL of this solution to 25.0 mL with *distilled water R*.

*Reference solution (b).* Dissolve 5.0 mg of *dacarbazine impurity B CRS* in *distilled water R*, add 0.5 mL of the test solution and dilute to 10.0 mL with *distilled water R*. Dilute 1.0 mL of this solution to 50.0 mL with *distilled water R*.

*Column*:

– *size*: *l* = 0.25 m, Ø = 4.6 mm;
– *stationary phase*: *octadecylsilyl silica gel for chromatography R* (5 µm).

*Mobile phase*: 15.63 g/L solution of *glacial acetic acid R* containing 2.33 g/L of *sodium dioctyl sulfosuccinate R*. As the mobile phase contains sodium dioctyl sulfosuccinate, it must be freshly prepared every day, and the column must be flushed with a mixture of equal volumes of *methanol R* and *water for chromatography R*, after all tests have been completed or at the end of the day, for at least 2 h.

*Flow rate*: 1.2 mL/min.

*Detection*: spectrophotometer at 254 nm.

*Injection*: 25 µL of the test solution and reference solution (a).

*Run time*: 3 times the retention time of impurity A.

*Retention time*: impurity A = about 3 min.

*Limits*:

– *impurity A*: not more than the area of the corresponding peak in the chromatogram obtained with reference solution (a) (0.2 per cent);
– *unspecified impurities eluting after impurity A*: for each impurity, not more than 0.5 times the area of the principal peak in the chromatogram obtained with reference solution (a) (0.10 per cent).

B. Liquid chromatography (*2.2.29*) as described in test A for related substances with the following modifications.

*Mobile phase*: mix 45 volumes of a 15.63 g/L solution of *glacial acetic acid R* containing 2.33 g/L of *sodium dioctyl sulfosuccinate R* with 55 volumes of *methanol R*.

*Injection*: 10 µL of the test solution and reference solution (b).

*Run time*: twice the retention time of dacarbazine.

*Relative retention* with reference to dacarbazine (retention time = about 12 min): impurity B = about 0.7.

*System suitability*: reference solution (b):

– *resolution*: minimum 1.5 between the peaks due to impurity B and dacarbazine.

*Limits*:

- *impurity B*: not more than the area of the corresponding peak in the chromatogram obtained with reference solution (b) (0.1 per cent);
- *unspecified impurities*: for each impurity, not more than the area of the peak due to dacarbazine in the chromatogram obtained with reference solution (b) (0.10 per cent);
- *total*: not more than 5 times the area of the peak due to dacarbazine in the chromatogram obtained with reference solution (b) (0.5 per cent);
- *disregard limit*: 0.5 times the area of the peak due to dacarbazine in the chromatogram obtained with reference solution (b) (0.05 per cent).

**Impurity D**. Head-space gas chromatography (*2.2.28*).

*Test solution.* Introduce 0.200 g of the substance to be examined into a 20 mL vial and firmly attach the septum and cap. Using a 10 µL syringe, inject 5 µL of *water R* into the vial.

*Reference solution (a).* Dilute 2.5 mL of *dimethylamine solution R* (impurity D) to 100.0 mL with *water R* (solution A). Firmly attach the septum and cap to a 20 mL vial. Using a 10 µL syringe, inject 10 µL of solution A into the vial.

*Reference solution (b).* Firmly attach the septum and cap to a 20 mL vial. Using a 10 µL syringe, inject 10 µL of solution A and 10 µL of a 10 g/L solution of *triethylamine R* into the vial.

*Column*:

- *material*: fused silica;
- *size*: *l* = 30.0 m, Ø = 0.53 mm;
- *stationary phase*: *base-deactivated macrogol R* (film thickness 1.0 µm).

*Carrier gas*: *helium for chromatography R*.

*Flow rate*: 13 mL/min.

*Split ratio*: 1:1.

*Static head-space conditions that may be used*:

- *equilibration temperature*: 60 °C;
- *equilibration time*: 10 min;
- *transfer-line temperature*: 90 °C;
- *pressurisation time*: 30 s.

*Temperature*:

| | Time (min) | Temperature (°C) |
|---|---|---|
| Column | 0 - 3 | 35 |
| | 3 - 11 | 35 → 165 |
| Injection port | | 180 |
| Detector | | 220 |

*Detection*: flame ionisation.

*Injection*: 1 mL.

*System suitability*: reference solution (b):

- *resolution*: minimum 2.5 between the peaks due to impurity D and triethylamine.

*Limit*:

- *impurity D*: not more than the area of the corresponding peak in the chromatogram obtained with reference solution (a) (0.05 per cent).

**Water** (*2.5.12*): maximum 0.5 per cent, determined on 1.00 g.

**Sulfated ash** (*2.4.14*): maximum 0.1 per cent, determined on 1.0 g.

ASSAY

Dissolve 0.150 g in 30 mL of *anhydrous acetic acid R*. Titrate with *0.1 M perchloric acid*, determining the end-point potentiometrically (*2.2.20*).

1 mL of *0.1 M perchloric acid* is equivalent to 18.22 mg of $C_6H_{10}N_6O$.

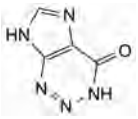
STORAGE

At a temperature of 2 °C to 8 °C, protected from light.

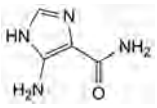
IMPURITIES

*Specified impurities*: *A, B, D*.

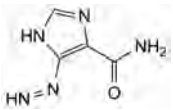
*Other detectable impurities* (the following substances would, if present at a sufficient level, be detected by one or other of the tests in the monograph. They are limited by the general acceptance criterion for other/unspecified impurities and/or by the general monograph *Substances for pharmaceutical use (2034)*. It is therefore not necessary to identify these impurities for demonstration of compliance. See also *5.10. Control of impurities in substances for pharmaceutical use*): *C*.



A. 3,7-dihydro-4*H*-imidazo[4,5-*d*]-1,2,3-triazin-4-one (2-azahypoxanthine),



B. 5-amino-1*H*-imidazole-4-carboxamide,



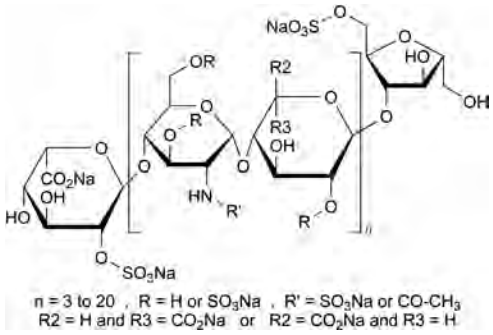
C. 5-diazenyl-1*H*-imidazole-4-carboxamide,

D. *N*-methylmethanamine.

**01/2008:1195**

# DALTEPARIN SODIUM

## Dalteparinum natricum



DEFINITION

Dalteparin sodium is the sodium salt of a low-molecular-mass heparin that is obtained by nitrous acid depolymerisation of heparin from porcine intestinal mucosa. The majority of the components have a 2-*O*-sulfo-α-L-idopyranosuronic acid structure at the non-reducing end and a 6-*O*-sulfo-2,5-anhydro-D-mannitol structure at the reducing end of their chain.

*Dalteparin sodium complies with the monograph Low-molecular-mass heparins (0828) with the modifications and additional requirements below.*

The mass-average relative molecular mass ranges between 5600 and 6400, with a characteristic value of about 6000.

The degree of sulfatation is 2.0 to 2.5 per disaccharide unit.

The potency is not less than 110 IU and not more than 210 IU of anti-factor Xa activity per milligram, calculated with reference to the dried substance. The anti-factor IIa activity is not less than 35 IU/mg and not more than 100 IU/mg, calculated with reference to the dried substance. The ratio of anti-factor Xa activity to anti-factor IIa activity is between 1.9 and 3.2.

## PRODUCTION

Dalteparin sodium is produced by a validated manufacturing and purification procedure under conditions designed to minimise the presence of N-NO groups.

The manufacturing procedure must have been shown to reduce any contamination by N-NO groups to approved limits using an appropriate, validated quantification method.

## IDENTIFICATION

Carry out identification test A as described in the monograph *Low-molecular-mass heparins (0828)* using *dalteparin sodium CRS*.

Carry out identification test C as described in the monograph *Low-molecular-mass heparins (0828)*. The following requirements apply.

The mass-average relative molecular mass ranges between 5600 and 6400. The mass percentage of chains lower than 3000 is not more than 13.0 per cent. The mass percentage of chains higher than 8000 ranges between 15.0 per cent and 25.0 per cent.

## TESTS

**Appearance of solution**. Dissolve 1 g in 10 mL of *water R*. The solution is clear (*2.2.1*) and not more intensely coloured than intensity 5 of the range of reference solutions of the most appropriate colour (*2.2.2, Method II*).

**Nitrite**. Not more than 5 ppm. Examine by liquid chromatography (*2.2.29*). *Rinse all volumetric flasks at least three times with water R before the preparation of the solutions.*

*Test solution.* Dissolve 80.0 mg of the substance to be examined in *water R* and dilute to 10.0 mL with the same solvent. Allow to stand for at least 30 min.

*Reference solution (a).* Dissolve 60.0 mg of *sodium nitrite R* in *water R* and dilute to 1000.0 mL with the same solvent.

*For the preparation of reference solution (b), use a pipette previously rinsed with reference solution (a).*

*Reference solution (b).* Dilute 1.00 mL of reference solution (a) to 50.0 mL with *water R*.

*Before preparing reference solutions (c), (d) and (e), rinse all pipettes with reference solution (b).*

*Reference solution (c).* Dilute 1.00 mL of reference solution (b) to 100.0 mL with *water R* (corresponding to 1 ppm of nitrite in the test sample).

*Reference solution (d).* Dilute 3.00 mL of reference solution (b) to 100.0 mL with *water R* (corresponding to 3 ppm of nitrite in the test sample).

*Reference solution (e).* Dilute 5.00 mL of reference solution (b) to 100.0 mL with *water R* (corresponding to 5 ppm of nitrite in the test sample).

The chromatographic procedure may be carried out using:

- a column 0.125 m long and 4.3 mm in internal diameter packed with a strong anion-exchange resin;
- as mobile phase at a flow rate of 1.0 mL/min a solution consisting of 13.61 g of *sodium acetate R* dissolved in *water R*, adjusted to pH 4.3 with *phosphoric acid R* and diluted to 1000 mL with *water R*;
- as detector an appropriate electrochemical device with the following characteristics and settings: a suitable working electrode, a detector potential of + 1.00 V versus Ag/AgCl reference electrode and a detector sensitivity of 0.1 μA full scale.

Inject 100 μL of reference solution (d). When the chromatograms are recorded in the prescribed conditions, the retention time for nitrite is 3.3 to 4.0 min. The test is not valid unless:

- the number of theoretical plates calculated for the nitrite peak is at least 7000 per metre per column (dalteparin sodium will block the binding sites of the stationary phase, which will cause shorter retention times and lower separation efficiency for the analyte; the initial performance of the column may be partially restored using a 58 g/L solution of *sodium chloride R* at a flow rate of 1.0 mL/min for 1 h; after regeneration the column is rinsed with 200 mL to 400 mL of *water R*);
- the symmetry factor for the nitrite peak is less than 3;
- the relative standard deviation of the peak area for nitrite obtained from 6 injections is less than 3.0 per cent.

Inject 100 μL each of reference solutions (c) and (e). The test is not valid unless:

- the correlation factor for a linear relationship between concentration and response for reference solutions (c), (d) and (e) is at least 0.995;
- the signal-to-noise ratio for reference solution (c) is not less than 5 (if the noise level is too high, electrode recalibration is recommended);
- a blank injection of *water R* does not give rise to spurious peaks.

Inject 100 μL of the test solution. Calculate the content of nitrite from the peak areas in the chromatogram obtained with reference solutions (c), (d) and (e).

**Boron**. Not more than 1 ppm, determined by inductively coupled plasma atomic emission spectroscopy.

Boron is determined by measurement of the emission from an inductively coupled plasma (ICP) at a wavelength specific to boron. The emission line at 249.733 nm is used. Use an appropriate apparatus, whose settings have been optimised as directed by the manufacturer.

*Test solution.* Dissolve 0.2500 g of the substance to be examined in about 2 mL of *water for chromatography R*, add 100 μL of *nitric acid R* and dilute to 10.00 mL with the same solvent.

*Reference solution (a).* Prepare a 1 per cent *V/V* solution of *nitric acid R* in *water for chromatography R* (blank).

*Reference solution (b).* Prepare a 11.4 μg/mL solution of *boric acid R* in a 1 per cent *V/V* solution of *nitric acid R* in *water for chromatography R* ($STD_{cal}$).

*Reference solution (c).* Dissolve 0.2500 g of a reference dalteparin sodium with no detectable boron in about 2 mL of *water for chromatography R*, add 100 μL of *nitric acid R* and dilute to 10.00 mL with the same solvent ($STD_0$).

*Reference solution (d).* Dissolve 0.2500 g of a reference dalteparin sodium with no boron detected in about 2 mL of a 1 per cent *V/V* solution of *nitric acid R* in *water for chromatography R*, add 10 μL of a 5.7 mg/mL solution of *boric acid R* and dilute to 10.00 mL with the same solvent ($STD_1$). This solution contains 1 μg/mL of boron.

Calculate the content of boron in the substance to be examined, using the following correction factor:

$$f = \frac{(STD_1 - STD_0) \times 2}{(STD_{cal} - \text{blank})}$$

**Loss on drying** (*2.2.32*). Not more than 5.0 per cent, determined on 1.000 g by drying in an oven at 60 °C over *diphosphorus pentoxide R* at a pressure not exceeding 670 Pa for 3 h.

**01/2011:2090**
**corrected 10.0**

### DEFINITION

Preparation containing the sodium salts of a mixture of sulfated glycosaminoglycans present in porcine tissues. Danaparoid sodium is prepared from the intestinal mucosa of pigs. Its major constituents are heparan sulfate and dermatan sulfate. On complete hydrolysis it liberates D-glucosamine, D-galactosamine, D-glucuronic acid, L-iduronic acid, acetic acid and sulfuric acid. It has the characteristic property of enhancing the inactivation of activated factor X (factor Xa) by antithrombin. It has a negligible effect on the inactivation rate of thrombin by antithrombin.

*Potency*: 11.0 to 17.0 anti-factor Xa units per milligram (dried substance).

### PRODUCTION

The animals from which danaparoid sodium is derived must fulfil the requirements for the health of animals suitable for human consumption. It is prepared using a process that ensures that the relative proportion of active sulfated glycosaminoglycans is consistent. It is produced by methods of manufacturing designed to minimise or eliminate endotoxins and hypotensive substances.

### CHARACTERS

*Appearance*: white or almost white, hygroscopic powder.

*Solubility*: freely soluble in water.

### IDENTIFICATION

A. The ratio of anti-factor Xa activity to anti-factor IIa activity, determined as described under Assay and Tests respectively, is not less than 22.

B. Molecular mass distribution (see Tests): the mass-average relative molecular mass ranges between 4000 and 7000.

### TESTS

**pH** (*2.2.3*): 5.5 to 7.0.

Dissolve 0.5 g of the dried substance to be examined in *carbon dioxide-free water R* and dilute to 50 mL with the same solvent.

**Anti-factor IIa activity**: maximum 0.5 units per milligram (dried substance).

*Test solutions.* Prepare 2 independent series of dilutions in geometric progression of the substance to be examined in *phosphate buffer solution pH 6.5 R* and in the concentration range of 0.0005 to 0.005 units of anti-factor IIa activity per millilitre.

*Reference solutions.* Prepare 2 independent series of dilutions in geometric progression of *danaparoid sodium CRS* in *phosphate buffer solution pH 6.5 R* and in the concentration range of 0.0005 to 0.005 units of anti-factor IIa activity per millilitre.

Transfer 50 µL of each solution into the wells of a 96-well microtitre plate. To each well add 50 µL of *antithrombin III solution R3* and 50 µL of *human thrombin solution R1*. Shake the microtitre plate but do not allow bubbles to form. Incubate for 75 min. To each well add 50 µL of *chromogenic substrate R4*. Shake the microtitre plate. Measure the absorbances at 405 nm (*2.2.25*) using a suitable reading device, exactly 4 min after the addition of the chromogenic substrate. The reaction may be stopped using 75 µL of a 20 per cent *V/V* solution of *glacial acetic acid R*. Determine the blank amidolytic activity in a similar manner, using *phosphate buffer solution pH 6.5 R* as the blank solution (minimum 10 blanks per microtitre plate). Calculate the activity of the substance to be examined in units of anti-factor IIa activity per milligram using a suitable statistical method, for example the parallel-line assay.

**Chondroitin sulfate and dermatan sulfate**. Chondroitin sulfate: maximum 8.5 per cent (dried substance); dermatan sulfate: 8.0 per cent to 16.0 per cent (dried substance).

Determine by selective enzymatic degradation.

*Test solutions.* Dry the substance to be examined at 60 °C over *diphosphorus pentoxide R* at a pressure of about 670 Pa for 3 h. Dissolve 0.200 g of the dried substance in 10.0 mL of *water R*. Dilute this solution as necessary to obtain 3 test solutions containing 20 mg/mL, 10 mg/mL and 5 mg/mL of the dried substance to be examined in *water R*.

*Chondroitin sulfate reference solutions.* Dry *chondroitin sulfate sodium CRS* over *diphosphorus pentoxide R* at room temperature at a pressure of about 670 Pa for 16 h. Prepare solutions containing 1 mg/mL, 2 mg/mL and 3 mg/mL of dried *chondroitin sulfate sodium CRS* in *water R*.

*Dermatan sulfate reference solutions.* Dry *dermatan sulfate CRS* over *diphosphorus pentoxide R* at room temperature at a pressure of about 670 Pa for 16 h. Prepare solutions containing 1 mg/mL, 2 mg/mL and 3 mg/mL of dried *dermatan sulfate CRS* in *water R*.

*Chondroitinase ABC solution.* Dissolve *chondroitinase ABC R* in *tris-sodium acetate-sodium chloride buffer solution pH 8.0 R* to obtain an activity of 0.5-1.0 units per millilitre.

*Chondroitinase AC solution.* Dissolve *chondroitinase AC R* in *tris-sodium acetate-sodium chloride buffer solution pH 7.4 R* to obtain an activity of 1.0-2.0 units per millilitre.

*Procedure*:

– *Degradation with chondroitinase ABC*: label 2 sets of 10 tubes in triplicate: T1, T2 and T3 for the test solutions; SD1, SD2 and SD3 for the dermatan sulfate reference solutions; SC1, SC2 and SC3 for the chondroitin sulfate reference solutions; and B for the blank (*water R*). To each tube add 1.25 mL of *tris-sodium acetate buffer solution pH 8.0 R* and 150 µL of the test solutions, dermatan sulfate reference solutions, chondroitin sulfate reference solutions or *water R*. To each tube in 1 set of tubes add 75 µL of chondroitinase ABC solution. To determine the blank response level, add 75 µL of *tris-sodium acetate-sodium chloride buffer solution pH 8.0 R* to each tube in the other set of tubes. Mix the contents of the tubes using a vortex mixer, cover with appropriate stoppers and incubate at 37 °C for at least 24 h.

– *Degradation with chondroitinase AC*: label 7 tubes in triplicate: T1, T2 and T3 for the test solutions; SC1, SC2 and SC3 for the chondroitin sulfate reference solutions; and B for the blank (*water R*). To each tube add 1.25 mL of *tris-sodium acetate buffer solution pH 7.4 R* and 150 µL of the test solutions, chondroitin sulfate reference solutions or *water R*. Add 75 µL of chondroitinase AC solution to each tube. Mix the contents of the tubes using a vortex mixer, cover with appropriate stoppers and incubate at 37 °C for at least 24 h. After the incubation period mix the contents of the tubes using a vortex mixer and dilute to 12 times with *water R*. Measure the absorbances (*2.2.25*) of the diluted solutions at 234 nm against *water R* using a suitable spectrophotometer.

*Calculation*: calculate the mean blank absorbance of each reference solution, i.e. the mean of the absorbances of the reference solutions to which no chondroitinase ABC has been added. Subtract the mean blank absorbance value from the individual absorbance of each reference solution. Calculate linear regression curves for the 2 chondroitin sulfate reference and the dermatan sulfate reference by plotting the blank-corrected absorbances against the concentrations.

Calculate the average percentage content of dermatan sulfate in the test solutions of all tested concentrations using the following expression:

$$\frac{A_2 - A_1 - \frac{(A_3 - A_1 - I_1) \times B_2}{B_1} - I_2 - I_3}{B_3 \times C} \times 100$$

$A_1$ = blank absorbance of the test solution;

$A_2$ = absorbance of the test solution with chondroitinase ABC;

$A_3$ = absorbance of the test solution with chondroitinase AC;

$B_1$ = gradient of the curve obtained with the chondroitin sulfate reference solutions with chondroitinase AC;

$B_2$ = gradient of the curve obtained with the chondroitin sulfate reference solutions with chondroitinase ABC;

$B_3$ = gradient of the curve obtained with the dermatan sulfate reference solutions with chondroitinase ABC;

$C$ = concentration of the test solution, in milligrams per millilitre;

$I_1$ = y-intercept of the curve obtained with the chondroitin sulfate reference solutions with chondroitinase AC;

$I_2$ = y-intercept of the curve obtained with the chondroitin sulfate reference solutions with chondroitinase ABC;

$I_3$ = y-intercept of the curve obtained with the dermatan sulfate reference solutions with chondroitinase ABC.

Calculate the average percentage content of chondroitin sulfate in the test solutions for all tested concentrations using the following expression:

$$\frac{(A_3 - A_1 - I_1) \times 100}{B_1 \times C}$$

**Molecular mass distribution**. Size-exclusion chromatography (*2.2.30*).

*Test solution.* Dissolve 10 mg of the substance to be examined in 2 mL of the mobile phase.

*Reference solution.* Dissolve 10 mg of *danaparoid sodium CRS* in 2 mL of the mobile phase.

*Column*:

– *size*: *l* = 0.60 m, Ø = 7.5 mm;

– *stationary phase*: *hydrophilic silica gel for chromatography R* (10 µm) with a fractionation range for proteins with a relative molecular mass of approximately 5000-100 000;

– *temperature*: 30 °C.

*Mobile phase*: 28.4 g/L solution of *anhydrous sodium sulfate R* adjusted to pH 5.0 with *dilute sulfuric acid R*.

*Flow rate*: 0.9 mL/min ± 2 per cent.

*Detection*: spectrophotometer at 210 nm.

*Injection*: 100 µL.

*Run time*: for a period of time ensuring complete elution of sample and solvent peaks (about 40 min).

*System suitability*: inject the reference solution twice. The difference between the retention times corresponding to the maxima of the peaks is not more than 5 s.

*Calibration*: calibration is achieved by taking the relevant part of the chromatogram obtained with the reference solution, i.e. excluding the sharp peak at the end of the chromatogram, and matching the chromatogram obtained with the test solution with the calibration table obtained with the reference solution. From the calibration curve obtained, determine the molecular mass distribution of the sample. A calibration table is supplied with *danaparoid sodium CRS*.

*Limits*:

– *chains with a relative molecular mass less than 2000*: maximum 13 per cent;

– *chains with a relative molecular mass less than 4000*: maximum 39 per cent;

– *chains with a relative molecular mass between 4000 and 8000*: minimum 50 per cent;

– *chains with a relative molecular mass higher than 8000*: maximum 19 per cent;

– *chains with a relative molecular mass higher than 10 000*: maximum 11 per cent.

**Nitrogen** (*2.5.9*): 2.4 per cent to 3.0 per cent (dried substance).

**Nucleic acids**: maximum 0.5 per cent (dried substance).

*Test solution.* Weigh about 50 mg of the dried substance to be examined into a centrifuge tube and dissolve in 200 µL of *water R*.

*Reference solution.* Dissolve about 50 mg of *ribonucleic acid CRS* in 5 mL of *0.1 M sodium hydroxide* and dilute to 20.0 mL with *water R*. Transfer 200 µL of the solution into a centrifuge tube.

Add 4.0 mL of a 50 g/L solution of *trichloroacetic acid R* to each tube and mix. Place all tubes in boiling water for 30 min. Allow to cool to room temperature. Add again 4.0 mL of a 50 g/L solution of *trichloroacetic acid R* to each tube and mix. If any of the test solutions is not clear, sonicate all the tubes in an ultrasonic bath for 10 min and centrifuge at 1500 *g* for 15 min. Dilute 1.0 mL of the clear supernatant to 4.0 mL with *water R*. Measure the absorbances of the diluted reference and test solutions at 265 nm (*2.2.25*) against a blank solution prepared in the same manner, and calculate the percentage nucleic acid content of the sample.

**Total protein** (*2.5.33, Method 2*): maximum 0.5 per cent.

Dissolve the substance to be examined in *water R*. Use *bovine albumin R* as the reference substance.

**Sodium**: 9.0 per cent to 11.0 per cent (dried substance).

Atomic absorption spectrometry (*2.2.23, Method I*).

*Test solution.* Dissolve 0.125 g of the substance to be examined in 100.0 mL of a 1.27 mg/mL solution of *caesium chloride R* in *0.1 M hydrochloric acid*.

*Reference solutions.* Prepare reference solutions containing 50 ppm, 100 ppm and 150 ppm of Na by diluting *sodium standard solution (1000 ppm Na) R* with a 1.27 mg/mL solution of *caesium chloride R* in *0.1 M hydrochloric acid*.

*Source*: sodium hollow-cathode lamp.

*Wavelength*: 330.3 nm.

*Atomisation device*: air-acetylene flame.

**Loss on drying** (*2.2.32*): maximum 5.0 per cent, determined on 0.500 g by drying in an oven at 60 °C over *diphosphorus pentoxide R* at a pressure of 670 Pa for 3 h.

**Bacterial endotoxins** (*2.6.14*): less than 0.02 IU per unit of anti-factor Xa activity, if intended for use in the manufacture of parenteral preparations without a further appropriate procedure for the removal of bacterial endotoxins.

ASSAY

The anticoagulant activity of danaparoid sodium is determined *in vitro* by an assay which determines its ability to accelerate the inhibition of factor Xa by antithrombin III (anti-factor Xa assay).

*Test solutions.* Prepare 2 independent series of dilutions in geometric progression of the substance to be examined in *tris(hydroxymethyl)aminomethane EDTA buffer solution pH 8.4 R* and in the concentration range of 0.1 to 0.32 units of anti-factor Xa activity per millilitre.

*Reference solutions.* Prepare 2 independent series of dilutions in geometric progression of *danaparoid sodium CRS* in *tris(hydroxymethyl)aminomethane EDTA buffer solution pH 8.4 R* and in the concentration range of 0.08 to 0.35 units of anti-factor Xa activity per millilitre.

Transfer 40 µL of each solution into the wells of a 96-well microtitre plate. Add 40 µL of *antithrombin III solution R4* to each well and shake the microtitre plate but do not allow bubbles to form. Add 40 µL of *bovine factor Xa solution R1* to each well. Exactly 2 min after the addition of the factor Xa solution, add 80 µL of *chromogenic substrate R5*. Measure the absorbance at 405 nm (*2.2.25*) using a suitable reading device, exactly 4 min after the addition of the factor Xa solution. The reaction may be stopped using 75 µL of a 20 per cent *V/V* solution of *glacial acetic acid R*. Determine the blank amidolytic activity in the same manner, using *tris(hydroxymethyl)aminomethane EDTA buffer solution pH 8.4 R* as the blank (minimum 8 blanks per microtitre plate). Calculate the potency of the substance to be examined in units of anti-factor Xa activity per milligram using a suitable statistical method, for example the parallel-line assay.

STORAGE

In an airtight container. If the substance is sterile, store in a sterile, airtight, tamper-evident container.

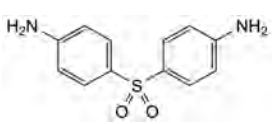
LABELLING

The label states the number of units of anti-factor Xa activity per milligram.

**01/2008:0077**
**corrected 6.0**

# DAPSONE

## Dapsonum



$C_{12}H_{12}N_2O_2S$ $M_r$ 248.3
[80-08-0]

DEFINITION

Dapsone contains not less than 99.0 per cent and not more than the equivalent of 101.0 per cent of 4,4′-sulfonyldianiline, calculated with reference to the dried substance.

CHARACTERS

A white or slightly yellowish-white, crystalline powder, very slightly soluble in water, freely soluble in acetone, sparingly soluble in alcohol. It dissolves freely in dilute mineral acids.

IDENTIFICATION

A. Melting point (*2.2.14*): 175 °C to 181 °C.

B. Dissolve 50.0 mg in *methanol R* and dilute to 100.0 mL with the same solvent. Dilute 1.0 mL of this solution to 100.0 mL with *methanol R*. Examined between 230 nm and 350 nm (*2.2.25*), the solution shows 2 absorption maxima, at 260 nm and 295 nm. The specific absorbances at these maxima are 700 to 760 and 1150 to 1250, respectively.

C. Examine the chromatograms obtained in the test for related substances. The principal spot in the chromatogram obtained with test solution (b) is similar in position, colour and size to the principal spot in the chromatogram obtained with reference solution (a).

TESTS

**Related substances**. Examine by thin-layer chromatography (*2.2.27*), using *silica gel G R* as the coating substance.

*Test solution (a).* Dissolve 0.10 g of the substance to be examined in *methanol R* and dilute to 10 mL with the same solvent.

*Test solution (b).* Dilute 1 mL of test solution (a) to 10 mL with *methanol R*.

*Reference solution (a).* Dissolve 10 mg of *dapsone CRS* in *methanol R* and dilute to 10 mL with the same solvent.

*Reference solution (b).* Dilute 1 mL of test solution (b) to 10 mL with *methanol R*.

*Reference solution (c).* Dilute 2 mL of reference solution (b) to 10 mL with *methanol R*.

Apply separately to the plate 1 µL of test solution (b), 1 µL of reference solution (a), 10 µL of test solution (a), 10 µL of reference solution (b) and 10 µL of reference solution (c). Develop in an unsaturated tank over a path of 15 cm using a mixture of 1 volume of *concentrated ammonia R*, 6 volumes of *methanol R*, 20 volumes of *ethyl acetate R* and 20 volumes of *heptane R*. Allow the plate to dry in air. Spray the plate with a 1 g/L solution of *4-dimethylaminocinnamaldehyde R* in a mixture of 1 volume of *hydrochloric acid R* and 99 volumes of *alcohol R*. Examine in daylight. Any spot in the chromatogram obtained with test solution (a), apart from the principal spot, is not more intense than the spot in the chromatogram obtained with reference solution (b) (1.0 per cent) and not more than 2 such spots are more intense than the spot in the chromatogram obtained with reference solution (c) (0.2 per cent).

**Loss on drying** (*2.2.32*). Not more than 1.5 per cent, determined on 1.000 g by drying in an oven at 105 °C.

**Sulfated ash** (*2.4.14*). Not more than 0.1 per cent, determined on 1.0 g.

ASSAY

Dissolve 0.100 g in 50 mL of *dilute hydrochloric acid R*. Carry out the determination of primary aromatic amino-nitrogen (*2.5.8*).

1 mL of *0.1 M sodium nitrite* is equivalent to 12.42 mg of $C_{12}H_{12}N_2O_2S$.

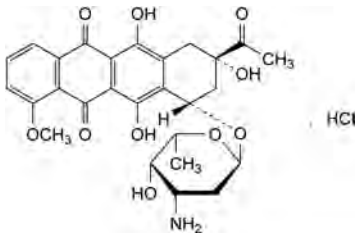
STORAGE

Store protected from light.

**01/2008:0662**
**corrected 10.0**

# DAUNORUBICIN HYDROCHLORIDE

## Daunorubicini hydrochloridum



$C_{27}H_{30}ClNO_{10}$ $M_r$ 564.0
[23541-50-6]

DEFINITION

(8*S*,10*S*)-8-Acetyl-10-[(3-amino-2,3,6-trideoxy-α-L-*lyxo*-hexopyranosyl)oxy]-6,8,11-trihydroxy-1-methoxy-7,8,9,10-tetrahydrotetracene-5,12-dione hydrochloride.

Substance produced by certain strains of *Streptomyces coeruleorubidus* or of *Streptomyces peucetius* or obtained by any other means.

*Content*: 95.0 per cent to 102.0 per cent (anhydrous substance).

PRODUCTION

It is produced by methods of manufacture designed to eliminate or minimise the presence of histamine.

CHARACTERS

*Appearance*: crystalline, orange-red powder, hygroscopic.

*Solubility*: freely soluble in water and in methanol, slightly soluble in alcohol, practically insoluble in acetone.

IDENTIFICATION

A. Infrared absorption spectrophotometry (*2.2.24*).
*Comparison*: *daunorubicin hydrochloride CRS*.

B. Dissolve about 10 mg in 0.5 mL of *nitric acid R*, add 0.5 mL of *water R* and heat over a flame for 2 min. Allow to cool and add 0.5 mL of *silver nitrate solution R1*. A white precipitate is formed.

TESTS

**pH** (*2.2.3*): 4.5 to 6.5.

Dissolve 50 mg in *carbon dioxide-free water R* and dilute to 10 mL with the same solvent.

**Related substances**. Liquid chromatography (*2.2.29*). *Prepare the solutions immediately before use.*

*Test solution.* Dissolve 50.0 mg of the substance to be examined in the mobile phase and dilute to 50.0 mL with the mobile phase.

*Reference solution (a).* Dissolve 50.0 mg of *daunorubicin hydrochloride CRS* in the mobile phase and dilute to 50.0 mL with the mobile phase.

*Reference solution (b).* Dissolve 10 mg of *doxorubicin hydrochloride CRS* and 10 mg of *epirubicin hydrochloride CRS* in the mobile phase and dilute to 100.0 mL with the mobile phase. Dilute 1.0 mL of the solution to 10.0 mL with the mobile phase.

*Reference solution (c).* Dissolve 5.0 mg of *daunorubicinone CRS* and 5.0 mg of *doxorubicin hydrochloride CRS* in the mobile phase and dilute to 100.0 mL with the mobile phase. Dilute 1.0 mL of the solution to 10.0 mL with the mobile phase.

*Reference solution (d).* Dilute 1.0 mL of reference solution (a) to 200.0 mL with the mobile phase.

*Column*:
- *size*: *l* = 0.25 m, Ø = 4.0 mm,
- *stationary phase*: *end-capped octadecylsilyl silica gel for chromatography R* (5 µm).

*Mobile phase*: mixture of equal volumes of *acetonitrile R* and a solution containing 2.88 g/L of *sodium laurilsulfate R* and 2.25 g/L of *phosphoric acid R*.

*Flow rate*: 1 mL/min.

*Detection*: spectrophotometer at 254 nm.

*Injection*: 5 µL; inject the test solution and reference solutions (b), (c) and (d).

*Run time*: twice the retention time of daunorubicin.

*Relative retention* with reference to daunorubicin (retention time = about 15 min): impurity A = about 0.4; impurity D = about 0.5; epirubicin = about 0.6; impurity B = about 0.7.

*System suitability*: reference solution (b):
- *resolution*: minimum of 2.0 between the peaks due to impurity D and epirubicin.

*Limits*:
- *impurity A*: not more than the area of the corresponding peak in the chromatogram obtained with reference solution (c) (0.5 per cent),
- *impurity B*: not more than 3 times the area of the principal peak in the chromatogram obtained with reference solution (d) (1.5 per cent),
- *impurity D*: not more than the area of the corresponding peak in the chromatogram obtained with reference solution (c) (0.5 per cent),
- *any other impurity*: not more than the area of the principal peak in the chromatogram obtained with reference solution (d) (0.5 per cent),
- *total of other impurities*: not more than 5 times the area of the principal peak in the chromatogram obtained with reference solution (d) (2.5 per cent),
- *disregard limit*: 0.1 times the area of the principal peak in the chromatogram obtained with reference solution (d) (0.05 per cent).

**Butanol** (*2.4.24, System B*): maximum 1.0 per cent.

**Water** (*2.5.12*): maximum 3.0 per cent, determined on 0.100 g.

**Bacterial endotoxins** (*2.6.14*): less than 4.3 IU/mg, if intended for use in the manufacture of parenteral preparations without a further appropriate procedure for the removal of bacterial endotoxins.

ASSAY

Liquid chromatography (*2.2.29*) as described in the test for related substances.

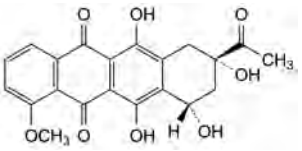
*Injection*: test solution and reference solution (a).

Calculate the percentage content of $C_{27}H_{30}ClNO_{10}$.

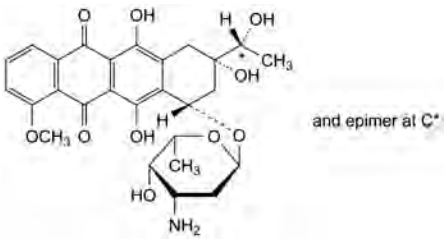
STORAGE

In an airtight container, protected from light. If the substance is sterile, store in a sterile, airtight, tamper-evident container.

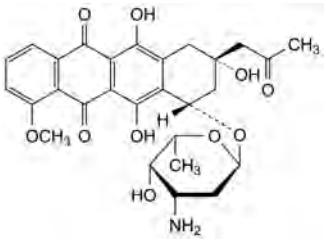
IMPURITIES



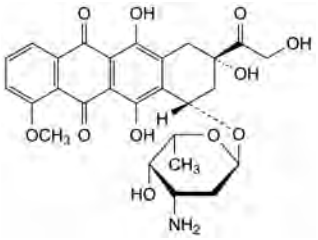
A. (8*S*,10*S*)-8-acetyl-6,8,10,11-tetrahydroxy-1-methoxy-7,8,9,10-tetrahydrotetracene-5,12-dione (daunorubicin aglycone, daunorubicinone),



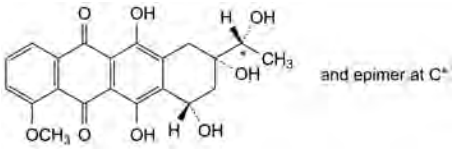
B. (8*S*,10*S*)-10-[(3-amino-2,3,6-trideoxy-α-L-*lyxo*-hexopyranosyl)oxy]-6,8,11-trihydroxy-8-[(1*RS*)-1-hydroxyethyl]-1-methoxy-7,8,9,10-tetrahydrotetracene-5,12-dione (daunorubicinol),



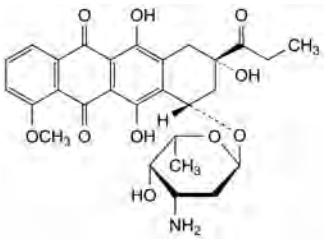
C. (8*S*,10*S*)-10-[(3-amino-2,3,6-trideoxy-α-L-*lyxo*-hexopyranosyl)oxy]-6,8,11-trihydroxy-1-methoxy-8-(2-oxopropyl)-7,8,9,10-tetrahydrotetracene-5,12-dione (feudomycin B),



D. (8*S*,10*S*)-10-[(3-amino-2,3,6-trideoxy-α-L-*lyxo*-hexopyranosyl)oxy]-6,8,11-trihydroxy-8-(hydroxyacetyl)-1-methoxy-7,8,9,10-tetrahydrotetracene-5,12-dione (doxorubicin),



E. (8*S*,10*S*)-6,8,10,11-tetrahydroxy-8-[(1*RS*)-1-hydroxyethyl]-1-methoxy-7,8,9,10-tetrahydrotetracene-5,12-dione (13-dihydrodaunorubicinone),



F. (8*S*,10*S*)-10-[(3-amino-2,3,6-trideoxy-α-L-*lyxo*-hexopyranosyl)oxy]-6,8,11-trihydroxy-1-methoxy-8-propanoyl-7,8,9,10-tetrahydrotetracene-5,12-dione (8-ethyldaunorubicin).

**01/2008:1307**

# DECYL OLEATE

## Decylis oleas

DEFINITION

Mixture consisting of decyl esters of fatty acids, mainly oleic (*cis*-9-octadecenoic) acid.

A suitable antioxidant may be added.

CHARACTERS

*Appearance*: clear, pale yellow or colourless liquid.

*Solubility*: practically insoluble in water, miscible with ethanol (96 per cent), with methylene chloride and with light petroleum (bp: 40-60 °C).

IDENTIFICATION

A. Relative density (see Tests).

B. Saponification value (see Tests).

C. Oleic acid (see Tests).

TESTS

**Relative density** (*2.2.5*): 0.860 to 0.870.

**Acid value** (*2.5.1*): maximum 1.0, determined on 10.0 g.

**Iodine value** (*2.5.4, Method A*): 55 to 70.

**Peroxide value** (*2.5.5, Method A*): maximum 10.0.

**Saponification value** (*2.5.6*): 130 to 140, determined on 2.0 g.

**Oleic acid** (*2.4.22, Method A*): minimum 60.0 per cent in the fatty acid fraction of the substance.

**Water** (*2.5.12*): maximum 1.0 per cent, determined on 1.00 g.

**Total ash** (*2.4.16*): maximum 0.1 per cent, determined on 2.0 g.

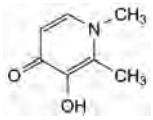
STORAGE

Protected from light.

**07/2018:2236**

# DEFERIPRONE

## Deferipronum



$C_7H_9NO_2$ $M_r$ 139.2

[30652-11-0]

DEFINITION

3-Hydroxy-1,2-dimethylpyridin-4-(1*H*)-one.

*Content*: 98.0 per cent to 102.0 per cent (anhydrous substance).

CHARACTERS

*Appearance*: white or pinkish-white powder.

*Solubility*: sparingly soluble in water, slightly soluble in anhydrous ethanol, practically insoluble in heptane.

IDENTIFICATION

Infrared absorption spectrophotometry (*2.2.24*).

*Comparison*: *deferiprone CRS*.

TESTS

**Related substances**. Liquid chromatography (*2.2.29*). *Use only colourless glassware. Protect the solutions from light.*

*Solution A*. Dissolve 2.91 g of *sodium edetate R*, 4.01 g of *sodium octanesulfonate monohydrate R* and 6.20 g of *dipotassium hydrogen phosphate R* in *water for chromatography R* and dilute to 2000 mL with the same solvent; adjust to pH 3.0 with *phosphoric acid R*.

*Solution B*. Dissolve 0.73 g of *sodium edetate R*, 1.0 g of *sodium octanesulfonate monohydrate R* and 1.55 g of *dipotassium hydrogen phosphate R* in *water for chromatography R* and dilute to 2000 mL with the same solvent; adjust to pH 3.0 with *phosphoric acid R*.

*Solvent mixture*: *acetonitrile R*, *water R* (10:90 *V/V*).

*Test solution (a)*. Dissolve 0.100 g of the substance to be examined in a volume of the mobile phase corresponding to about 2/3 of the final volume and dilute to 100.0 mL with the mobile phase.

*Test solution (b)*. Dissolve 50.0 mg of the substance to be examined in a volume of the solvent mixture corresponding to about 2/3 of the final volume and dilute to 50.0 mL with the solvent mixture. Dilute 5.0 mL of the solution to 200.0 mL with the mobile phase.

*Reference solution (a)*. Dissolve 2 mg of *maltol R* (impurity B) in the mobile phase and dilute to 100.0 mL with the mobile phase. To 2.5 mL of the solution add 10 mL of test solution (a) and dilute to 100.0 mL with the mobile phase.

*Reference solution (b)*. Dilute 1.0 mL of test solution (a) to 100.0 mL with the mobile phase. Dilute 1.0 mL of this solution to 20.0 mL with the mobile phase.

*Reference solution (c)*. Dissolve 50.0 mg of *deferiprone CRS* in a volume of the solvent mixture corresponding to about 2/3 of the final volume and dilute to 50.0 mL with the solvent mixture. Dilute 5.0 mL of the solution to 200.0 mL with the mobile phase.

*Column*:

- *size*: *l* = 0.15 m, Ø = 4.6 mm;
- *stationary phase*: *styrene-divinylbenzene copolymer R* (5 µm);
- *temperature*: 30 °C.

*Mobile phase*: *acetonitrile R*, solution A (10:90 *V/V*).

*Flow rate*: 1.0 mL/min.

*Detection*: spectrophotometer at 280 nm.

*Preconditioning of the column*: rinse for 20 min with the mobile phase before each series of injections.

*Injection*: 20 µL of test solution (a) and reference solutions (a) and (b).

*Run time*: 3.5 times the retention time of deferiprone.

*Identification of impurities*: use the chromatogram obtained with reference solution (a) to identify the peak due to impurity B.

*Relative retention* with reference to deferiprone (retention time = about 12 min): impurity B = about 0.5.

*System suitability*: reference solution (a):

- *resolution*: minimum 5.0 between the peaks due to impurity B and deferiprone.

*Calculation of percentage contents*:

- for each impurity, use the concentration of deferiprone in reference solution (b).

*Limits*:

- *impurity B*: maximum 0.10 per cent;
- *unspecified impurities*: for each impurity, maximum 0.05 per cent;
- *total*: maximum 0.2 per cent;
- *reporting threshold*: 0.03 per cent.

**Water** (*2.5.32*): maximum 0.5 per cent, determined on 0.100 g by direct sample introduction.

**Sulfated ash** (*2.4.14*): maximum 0.1 per cent, determined on 1.0 g.

ASSAY

Liquid chromatography (*2.2.29*) as described in the test for related substances with the following modifications.

*Mobile phase*: *acetonitrile R*, solution B (10:90 *V/V*).

*Injection*: 10 µL of test solution (b) and reference solution (c).

*Run time*: twice the retention time of deferiprone.

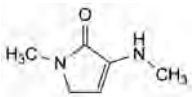
*Retention time*: deferiprone = about 7.7 min.

Calculate the percentage content of $C_7H_9NO_2$ taking into account the assigned content of *deferiprone CRS*.

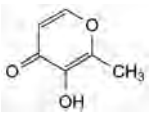
IMPURITIES

*Specified impurities: B.*

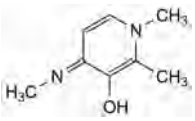
*Other detectable impurities* (the following substances would, if present at a sufficient level, be detected by one or other of the tests in the monograph. They are limited by the general acceptance criterion for other/unspecified impurities. It is therefore not necessary to identify these impurities for demonstration of compliance. See also *5.10. Control of impurities in substances for pharmaceutical use*): *A, C.*



A. 1-methyl-3-(methylamino)-1,5-dihydro-2*H*-pyrrol-2-one,



B. 3-hydroxy-2-methyl-4*H*-pyran-4-one (maltol),



C. 1,2-dimethyl-4-[(Ξ)-methylimino]-1,4-dihydropyridin-3-ol.

**04/2019:2987**
**corrected 10.0**

# DEFERIPRONE ORAL SOLUTION

## Deferiproni solutio peroralis

DEFINITION

Oral solution of *Deferiprone (2236)*.

*It complies with the monograph Liquid preparations for oral use (0672) and the following additional requirements.*

*Content*: 95.0 per cent to 105.0 per cent of the content of deferiprone ($C_7H_9NO_2$) stated on the label.

IDENTIFICATION

A. Record the UV spectrum of the principal peak in the chromatograms obtained with the solutions used in the assay, with a diode array detector in the range of 210-400 nm.

*Results*: the UV spectrum of the principal peak in the chromatogram obtained with test solution (b) is similar to the UV spectrum of the principal peak in the chromatogram obtained with reference solution (c).

B. Examine the chromatograms obtained in the assay.

*Results*: the principal peak in the chromatogram obtained with test solution (b) is similar in retention time and size to the principal peak in the chromatogram obtained with reference solution (c).

TESTS

**Related substances**. Liquid chromatography (*2.2.29*). *Use only colourless glassware. Protect the solutions from light.*

*Buffer solution.* Dissolve 0.25 g of *sodium edetate R*, 4.3 g of *sodium octanesulfonate monohydrate R* and 13.8 g of *sodium dihydrogen phosphate monohydrate R* in *water for chromatography R*, and dilute to 1000 mL with the same solvent; adjust to pH 2.1 with *phosphoric acid R*.

*Solvent mixture*: *methanol R*, buffer solution (20:80 *V/V*)

*Test solution (a).* To a volume of the preparation to be examined containing the equivalent of 100 mg of deferiprone, add the mobile phase and dilute to 100.0 mL with the mobile phase.

*Test solution (b).* Dilute 5.0 mL of test solution (a) to 50.0 mL with the solvent mixture.

*Reference solution (a).* Dilute 1.0 mL of test solution (b) to 100.0 mL with the mobile phase.

*Reference solution (b).* Dissolve 2 mg of *maltol R* (impurity B) in the mobile phase and dilute to 100 mL with the mobile phase. Mix 2.5 mL of the solution and 10 mL of test solution (a) and dilute to 100 mL with the mobile phase.

*Reference solution (c).* Dissolve 50.0 mg of *deferiprone CRS* in the solvent mixture and dilute to 100.0 mL with the solvent mixture. Dilute 10.0 mL of the solution to 50.0 mL with the solvent mixture.

*Column*:

- *size*: *l* = 0.15 m, Ø = 3.9 mm;
- *stationary phase*: *end-capped octadecylsilyl silica gel for chromatography R* (5 µm);
- *temperature*: 30 °C.

*Mobile phase*: *methanol R*, buffer solution (13:87 *V/V*).

*Flow rate*: 1.0 mL/min.

*Detection*: spectrophotometer at 280 nm.

*Injection*: 20 µL of test solution (a) and reference solutions (a) and (b).

*Run time*: 4 times the retention time of deferiprone.

*Identification of impurities*: use the chromatogram obtained with reference solution (b) to identify the peak due to impurity B.

*Relative retention* with reference to deferiprone (retention time = about 11 min): impurity B = about 0.3.

*System suitability*: reference solution (b):

- *resolution*: minimum 5.0 between the peaks due to impurity B and deferiprone.

*Calculation of percentage contents*:

- for each impurity, use the concentration of deferiprone in reference solution (a).

*Limits*:

- *unspecified impurities*: for each impurity, maximum 0.10 per cent;
- *total*: maximum 0.3 per cent;
- *reporting threshold*: 0.05 per cent; disregard the peak due to impurity B.

ASSAY

Liquid chromatography (*2.2.29*) as described in the test for related substances with the following modifications.

*Column*:

- *size*: *l* = 0.15 m, Ø = 4.6 mm;
- *stationary phase*: *end-capped octadecylsilyl silica gel for chromatography R* (5 µm).

*Mobile phase*: solvent mixture.

*Flow rate*: 1.1 mL/min.

*Injection*: test solution (b) and reference solution (c).

*Run time*: 1.5 times the retention time of deferiprone.

*Retention time*: deferiprone = about 7 min.

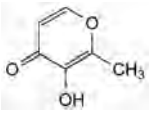
*System suitability*: reference solution (c):

- *repeatability*: maximum relative standard deviation of 1.5 per cent determined on 6 injections.

Calculate the percentage content of deferiprone ($C_7H_9NO_2$) taking into account the assigned content of *deferiprone CRS*.

IMPURITIES

*Other detectable impurities* (the following substances would, if present at a sufficient level, be detected by one or other of the tests in the monograph): *B*.



B. 3-hydroxy-2-methyl-4*H*-pyran-4-one (maltol).

**07/2019:2986**

# DEFERIPRONE TABLETS

## Deferiproni compressi

DEFINITION

Tablets containing *Deferiprone (2236)*.

*They comply with the monograph Tablets (0478) and the following additional requirements.*

*Content*: 95.0 per cent to 105.0 per cent of the content of deferiprone ($C_7H_9NO_2$) stated on the label.

IDENTIFICATION

A. Record the UV spectrum of the principal peak in the chromatograms obtained with the solutions used in the assay, with a diode array detector in the range of 210-400 nm.

*Results*: the UV spectrum of the principal peak in the chromatogram obtained with test solution (b) is similar to the UV spectrum of the principal peak in the chromatogram obtained with reference solution (c).

B. Examine the chromatograms obtained in the assay.

*Results*: the principal peak in the chromatogram obtained with test solution (b) is similar in retention time and size to the principal peak in the chromatogram obtained with reference solution (c).

TESTS

**Related substances**. Liquid chromatography (*2.2.29*). *Use only colourless glassware. Protect the solutions from light.*

*Buffer solution.* Dissolve 2.91 g of *sodium edetate R*, 4.01 g of *sodium octanesulfonate monohydrate R* and 6.20 g of *dipotassium hydrogen phosphate R* in *water for chromatography R* and dilute to 2000 mL with the same solvent; adjust to pH 3.0 with *phosphoric acid R*.

*Test solution (a).* Crush 20 tablets to obtain a homogeneous powder. Dissolve an amount of the powder containing the equivalent of 100 mg of deferiprone in the mobile phase by sonicating for approximately 15 min and dilute to 100.0 mL with the mobile phase.

*Test solution (b).* Dilute 5.0 mL of test solution (a) to 200.0 mL with the mobile phase.

*Reference solution (a).* Dilute 2.0 mL of test solution (b) to 50.0 mL with the mobile phase.

*Reference solution (b).* Dissolve 2 mg of *maltol R* (impurity B) in the mobile phase and dilute to 100 mL with the mobile phase. Mix 5 mL of the solution and 10 mL of test solution (a) and dilute to 100 mL with the mobile phase.

*Reference solution (c).* Dissolve 50.0 mg of *deferiprone CRS* in the mobile phase and dilute to 50.0 mL with the mobile phase. Dilute 5.0 mL of the solution to 200.0 mL with the mobile phase.

*Column*:

- *size*: *l* = 0.15 m, Ø = 4.6 mm;
- *stationary phase*: *styrene-divinylbenzene copolymer R* (5 µm);
- *temperature*: 30 °C.

*Mobile phase*: *acetonitrile R*, buffer solution (10:90 *V/V*).

*Flow rate*: 1.0 mL/min.

*Detection*: spectrophotometer at 280 nm.

*Preconditioning of the column*: rinse for 20 min with the mobile phase before each series of injections.

*Injection*: 20 µL of test solution (a) and reference solutions (a) and (b).

*Run time*: 3.5 times the retention time of deferiprone.

*Identification of impurities*: use the chromatogram obtained with reference solution (b) to identify the peak due to impurity B.

*Relative retention* with reference to deferiprone (retention time = about 12 min): impurity B = about 0.5.

*System suitability*: reference solution (b):

- *resolution*: minimum 5.0 between the peaks due to impurity B and deferiprone.

*Calculation of percentage contents*:

- for each impurity, use the concentration of deferiprone in reference solution (a).

*Limits*:

- *unspecified impurities*: for each impurity, maximum 0.10 per cent;
- *total*: maximum 0.3 per cent;
- *reporting threshold*: 0.05 per cent; disregard the peak due to impurity B.

**Dissolution** (*2.9.3, Apparatus 2*).

*The tablets comply with the test and acceptance criterion as described below, unless otherwise justified and authorised.*

*Dissolution medium*: 10.3 g/L solution of *hydrochloric acid R*. Use 1000 mL of the medium.

*Rotation speed*: 50 r/min.

*Time*: 45 min.

*Analysis.* Ultraviolet and visible absorption spectrophotometry (*2.2.25*).

*Test solutions.* The samples withdrawn from the dissolution vessel and filtered.

*Reference solution.* Dissolve a suitable quantity of *deferiprone CRS* in a suitable volume of the dissolution medium to obtain a concentration of deferiprone corresponding to the theoretical concentration of deferiprone in the test solution, based on the labelled content of the tablets.

When the test is carried out off-line, the solutions may be diluted according to the path length of the cell (e.g. 50-fold dilution for 500 mg tablets and 100-fold for 1000 mg tablets).

Measure the absorbances of the solutions at the absorption maximum at 275 nm, with a background correction at 490 nm.

Calculate the amount of dissolved deferiprone ($C_7H_9NO_2$), expressed as a percentage of the content stated on the label, taking into account the assigned content of *deferiprone CRS*.

*Acceptance criterion*:

- *Q* = 80 per cent after 45 min.

ASSAY

Liquid chromatography (*2.2.29*) as described in the test for related substances with the following modifications.

*Injection*: 10 µL of test solution (b) and reference solution (c).

*Run time*: twice the retention time of deferiprone.

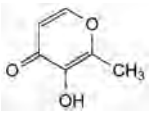
*System suitability*: reference solution (c):

- *repeatability*: maximum relative standard deviation of 1.5 per cent determined on 6 injections.

Calculate the percentage content of deferiprone ($C_7H_9NO_2$) taking into account the assigned content of *deferiprone CRS*.

IMPURITIES

*Other detectable impurities* (the following substances would, if present at a sufficient level, be detected by one or other of the tests in the monograph): *B*.

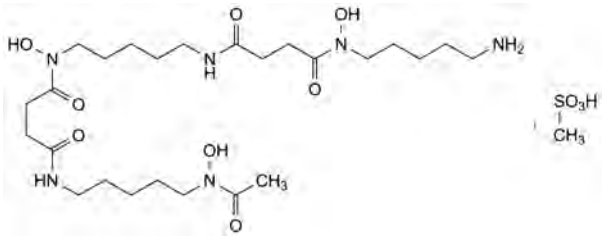


B. 3-hydroxy-2-methyl-4*H*-pyran-4-one (maltol).

**01/2018:0896**
**corrected 10.0**

# DEFEROXAMINE MESILATE

## Deferoxamini mesilas



$C_{26}H_{52}N_6O_{11}S$ $M_r$ 657
[138-14-7]

DEFINITION

$N^1$-[5-(4-[(5-Aminopentyl)(hydroxy)amino]-4-oxobutanamido)pentyl]-$N^1$-hydroxy-$N^4$-[5-(*N*-hydroxyacetamido)pentyl]butanediamide methanesulfonate.

*Content*: 98.0 per cent to 102.0 per cent (anhydrous substance).

PRODUCTION

It is considered that alkyl methanesulfonate esters are genotoxic and are potential impurities in deferoxamine mesilate. The manufacturing process should be developed taking into consideration the principles of quality risk management, together with considerations of the quality of starting materials, process capability and validation. The general methods *2.5.37. Methyl, ethyl and isopropyl methanesulfonate in methanesulfonic acid*, *2.5.38. Methyl, ethyl and isopropyl methanesulfonate in active substances* and *2.5.39. Methanesulfonyl chloride in methanesulfonic acid* are available to assist manufacturers.

CHARACTERS

*Appearance*: white or almost white powder.

*Solubility*: freely soluble in water, slightly soluble in methanol, very slightly soluble in ethanol (96 per cent).

IDENTIFICATION

A. Infrared absorption spectrophotometry (*2.2.24*).
*Comparison*: *deferoxamine mesilate CRS*.

B. Dissolve 0.1 g in 5 mL of *dilute hydrochloric acid R*. Add 1 mL of *barium chloride solution R2*. The solution is clear. In a porcelain crucible, mix 0.1 g with 1 g of *anhydrous sodium carbonate R*, heat and ignite over a naked flame. Allow to cool. Dissolve the residue in 10 mL of *water R*, heating if necessary, and filter. The filtrate gives reaction (a) of sulfates (*2.3.1*).

TESTS

**Solution S**. Dissolve 2.5 g in *carbon dioxide-free water R* prepared from *distilled water R* and dilute to 25 mL with the same solvent.

**Appearance of solution**. Solution S is clear (*2.2.1*) and not more intensely coloured than reference solution $Y_5$ (*2.2.2, Method II*).

**pH** (*2.2.3*): 4.0 to 6.0.

Dilute 1 mL of freshly prepared solution S to 10 mL with *carbon dioxide-free water R* prepared from *distilled water R*.

**Related substances**. Liquid chromatography (*2.2.29*). *Prepare the solutions immediately before use and protect from light.*

A. Deferoxamine mesilate produced by fermentation.

*Solvent mixture*: *acetonitrile R*, *water R* (6:94 *V/V*).

*Test solution.* Dissolve 25 mg of the substance to be examined in 10 mL of the solvent mixture and dilute to 25.0 mL with the solvent mixture.

*Reference solution (a).* Dilute 1.0 mL of the test solution to 100.0 mL with the solvent mixture.

*Reference solution (b).* Dissolve 5 mg of *deferoxamine for system suitability CRS* (containing impurity A) in mobile phase A and dilute to 5 mL with the solvent mixture.

*Column*:
- *size*: *l* = 0.075 m, Ø = 4.6 mm;
- *stationary phase*: *octadecylsilyl silica gel for chromatography R* (3.5 µm);
- *temperature*: 32 °C.

*Mobile phase*:
- *mobile phase A*: 1.32 g/L solution of *ammonium phosphate R* adjusted to pH 3.0 with *phosphoric acid R*;
- *mobile phase B*: mixture of equal volumes of *acetonitrile for chromatography R* and mobile phase A;

| Time (min) | Mobile phase A (per cent *V/V*) | Mobile phase B (per cent *V/V*) |
|---|---|---|
| 0 - 4 | 88 | 12 |
| 4 - 20 | 88 → 80 | 12 → 20 |
| 20 - 35 | 80 → 57.5 | 20 → 42.5 |

*Flow rate*: 1.5 mL/min.

*Detection*: spectrophotometer at 220 nm.

*Injection*: 20 µL.

*Identification of impurities*: use the chromatogram obtained with reference solution (b) to identify the peak due to impurity A.

*Relative retention* with reference to deferoxamine (retention time = about 18 min): impurity A = about 0.9.

*System suitability*: reference solution (b):
- *resolution*: minimum 2.0 between the peaks due to impurity A and deferoxamine.

*Calculation of percentage contents*:
- for each impurity, use the concentration of deferoxamine mesilate in reference solution (a).

*Limits*:
- *impurity A*: maximum 2.0 per cent;
- *any other impurity*: for each impurity, maximum 0.8 per cent;
- *total*: maximum 5.0 per cent;
- *reporting threshold*: 0.05 per cent.

The thresholds indicated under Related substances (Table 2034.-1) in the general monograph *Substances for pharmaceutical use (2034)* do not apply.

B. Deferoxamine mesilate produced by a synthetic process.

*Solvent mixture*: mobile phase B, mobile phase A (20:80 *V/V*).

*Test solution.* Dissolve 0.125 g of the substance to be examined in the solvent mixture and dilute to 10.0 mL with the solvent mixture.

*Reference solution (a).* Dilute 1.0 mL of the test solution to 100.0 mL with the solvent mixture. Dilute 1.0 mL of this solution to 10.0 mL with the solvent mixture.

*Reference solution (b).* Dissolve 12.5 mg of *deferoxamine for peak identification CRS* (containing impurities F, G, H, I and J) in the solvent mixture and dilute to 1 mL with the solvent mixture.

*Column*:
- *size*: *l* = 0.15 m, Ø = 4.6 mm;
- *stationary phase*: *end-capped octadecylsilyl silica gel for chromatography R* (5 µm);
- *temperature*: 25 °C.

*Mobile phase*:
- *mobile phase A*: dissolve 0.605 g of *sodium edetate R* in 900 mL of *water for chromatography R*, add 1.0 mL of *phosphoric acid R* and adjust to pH 6.0 with *concentrated ammonia R*; dilute to 1000 mL with *water for chromatography R*;
- *mobile phase B*: dissolve 0.780 g of *sodium edetate R* in 750 mL of *water for chromatography R* and add 1.0 mL of *phosphoric acid R*; add 250 mL of *acetonitrile for chromatography R*, mix thoroughly and adjust the apparent pH to 6.0 with *concentrated ammonia R*;

| Time (min) | Mobile phase A (per cent *V/V*) | Mobile phase B (per cent *V/V*) |
|---|---|---|
| 0 | 80 | 20 |
| 0 - 21.6 | 80 → 20 | 20 → 80 |
| 21.6 - 31.6 | 20 | 80 |

*Flow rate*: 1.5 mL/min.

*Detection*: spectrophotometer at 220 nm.

*Injection*: 20 µL.

*Identification of impurities*: use the chromatogram supplied with *deferoxamine for peak identification CRS* and the chromatogram obtained with reference solution (b) to identify the peaks due to impurities F, G, H, I and J.

*Relative retention* with reference to deferoxamine (retention time = about 12.9 min): impurity I = about 0.5; impurity F = about 0.96; impurity G = about 0.98; impurity H = about 1.2; impurities J and K = about 1.37.

*System suitability*: reference solution (b):
- *peak-to-valley ratio*: minimum 3.0, where $H_p$ = height above the baseline of the peak due to impurity G and $H_v$ = height above the baseline of the lowest point of the curve separating this peak from the peak due to deferoxamine.

*Calculation of percentage contents*:
- *correction factor*: multiply the peak area of impurity I by 1.4;
- for each impurity, use the concentration of deferoxamine mesilate in reference solution (a).

*Limits*:

- *impurities F, H*: for each impurity, maximum 0.5 per cent;
- *impurities G, I*: for each impurity, maximum 0.3 per cent;
- *sum of impurities J and K*: maximum 0.5 per cent;
- *unspecified impurities*: for each impurity, maximum 0.20 per cent;
- *total*: maximum 2.0 per cent;
- *reporting threshold*: 0.03 per cent.

The thresholds indicated under Related substances (Table 2034.-1) in the general monograph *Substances for pharmaceutical use (2034)* do not apply.

**Chlorides** (*2.4.4*): maximum 330 ppm.

Dilute 2 mL of solution S to 20 mL with *water R*.

**Sulfates** (*2.4.13*): maximum 400 ppm.

Dilute 5 mL of solution S to 20 mL with *distilled water R*.

**Water** (*2.5.12*): maximum 2.0 per cent, determined on 1.000 g.

**Sulfated ash** (*2.4.14*): maximum 0.1 per cent, determined on 1.0 g.

**Bacterial endotoxins** (*2.6.14*): less than 0.025 IU/mg, if intended for use in the manufacture of parenteral preparations without a further appropriate procedure for the removal of bacterial endotoxins. Since deferoxamine mesilate has an inhibitory effect on the bacterial endotoxins test, a suitable procedure is put in place to remove this inhibitory effect. The monocyte-activation test (*2.6.30*) has been found suitable to overcome this issue.

## ASSAY

Dissolve 0.500 g in 50 mL of *water R*. Add 4 mL of *dilute sulfuric acid R1*. Titrate with *0.1 M ferric ammonium sulfate*. To accelerate the titration, add 4.5 mL quickly, stop for 1.5 min and continue to titrate uniformly at a rate of about 0.2 mL/min. Determine the end-point potentiometrically (*2.2.20*) using a platinum indicator electrode and a suitable reference electrode.

1 mL of *0.1 M ferric ammonium sulfate* is equivalent to 65.68 mg of $C_{26}H_{52}N_6O_{11}S$.

## STORAGE

Protected from light. If the substance is sterile, store in a sterile, airtight, tamper-evident container.

## LABELLING

The label states the origin of the substance:

- produced by fermentation;
- produced by a synthetic process.

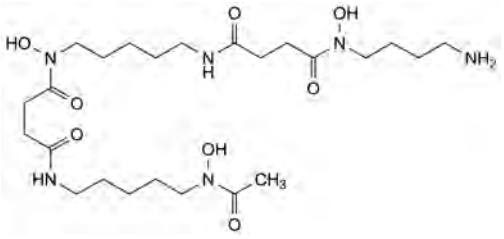
## IMPURITIES

**Test A for related substances**: A, B, C, J.

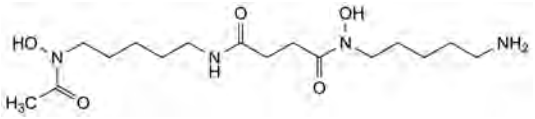
**Test B for related substances**: E, F, G, H, I, J, K.

*Specified impurities: A, F, G, H, I, J, K.*

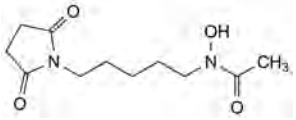
*Other detectable impurities* (the following substances would, if present at a sufficient level, be detected by one or other of the tests in the monograph. They are limited by the general acceptance criterion for other/unspecified impurities. It is therefore not necessary to identify these impurities for demonstration of compliance. See also *5.10. Control of impurities in substances for pharmaceutical use*): *B, C, E.*



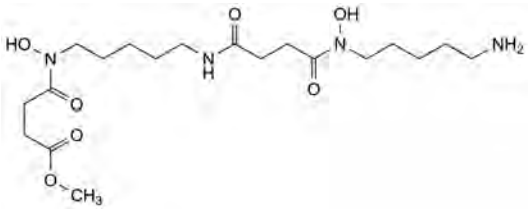
A. $N^1$-[5-(4-[(4-aminobutyl)(hydroxy)amino]-4-oxobutanamido)pentyl]-$N^1$-hydroxy-$N^4$-[5-(*N*-hydroxyacetamido)pentyl]butanediamide,



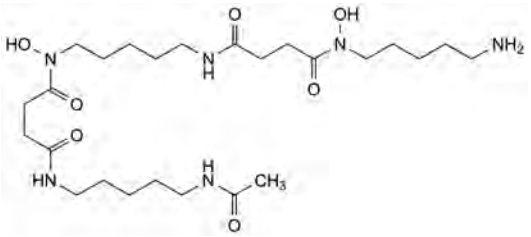
B. $N^1$-(5-aminopentyl)-$N^1$-hydroxy-$N^4$-[5-(*N*-hydroxyacetamido)pentyl]butanediamide,



C. *N*-[5-(2,5-dioxopyrrolidin-1-yl)pentyl]-*N*-hydroxyacetamide,

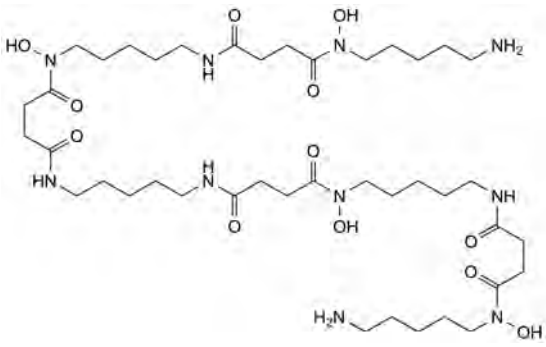


E. methyl 4-[[5-[[4-[(5-aminopentyl)(hydroxy)amino]-4-oxobutanamido]pentyl](hydroxy)amino]-4-oxobutanoate,

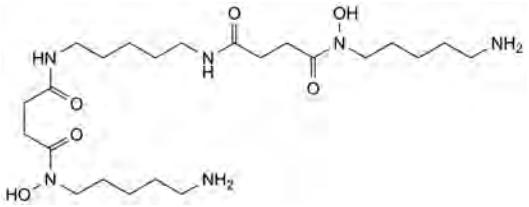


F. $N^1$-(5-acetamidopentyl)-$N^4$-[5-[4-[(5-aminopentyl)-(hydroxyl)amino]-4-oxobutanamido]pentyl]-$N^4$-hydroxybutanediamide,

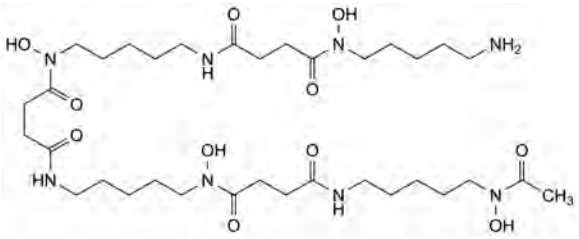
G. unknown structure,



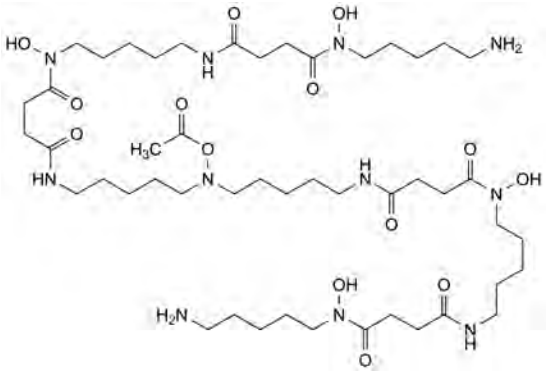
H. $N^1$,$N^{37}$-bis(5-aminopentyl)-$N^1$,$N^{37}$,11,27-tetrahydroxy-4,12,15,23,26,34-hexaoxo-5,11,16,22,27,33-hexaazaheptatriacontane-1,37-diamide,



I. $N^1$-(5-aminopentyl)-$N^4$-[5-(4-[(5-aminopentyl)-(hydroxy)amino]-4-oxobutanamido)pentyl]-$N^1$-hydroxybutanediamide,



J. $N^1$-(5-aminopentyl)-$N^1$,11,22-trihydroxy-$N^{26}$-[5-(*N*-hydroxyacetamido)pentyl]-4,12,15,23-tetraoxo-5,11,16,22-tetraazahexacosane-1,26-diamide,



K. 22-(acetyloxy)-$N^1$,$N^{43}$-bis(5-aminopentyl)-$N^1$,$N^{43}$,11,33-tetrahydroxy-4,12,15,29,32,40-hexaoxo-5,11,16,22,28,33,39-heptaazatritetracontane-1,43-diamide.

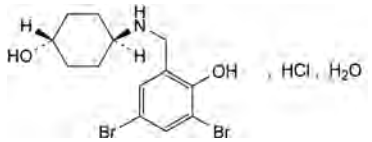
**corrected 9.2**

# DEMBREXINE HYDROCHLORIDE MONOHYDRATE FOR VETERINARY USE

## Dembrexini hydrochloridum monohydricum ad usum veterinarium



$C_{13}H_{18}Br_2ClNO_2,H_2O$ $M_r$ 433.6
[52702-51-9]

DEFINITION

*trans*-4-[(3,5-Dibromo-2-hydroxybenzyl)amino]cyclohexanol hydrochloride monohydrate.

*Content*: 98.0 per cent to 101.0 per cent (anhydrous substance).

CHARACTERS

*Appearance*: white or almost white, crystalline powder.

*Solubility*: slightly soluble in water, freely soluble in methanol, slightly soluble in anhydrous ethanol.

IDENTIFICATION

A. Infrared absorption spectrophotometry (*2.2.24*).
*Comparison*: *dembrexine hydrochloride monohydrate CRS*.

B. It gives reaction (a) of chlorides (*2.3.1*).

TESTS

**Related substances**. Liquid chromatography (*2.2.29*). *Prepare the solutions immediately before use.*

*Test solution*. Dissolve 25.0 mg of the substance to be examined in *methanol R* and dilute to 10.0 mL with the same solvent.

*Reference solution (a)*. Dilute 1.0 mL of the test solution to 50.0 mL with *methanol R*. Dilute 1.0 mL of this solution to 10.0 mL with *methanol R*.

*Reference solution (b)*. Dissolve 2.5 mg of *tribromophenol R* (impurity E) in *methanol R* and dilute to 50.0 mL with the same solvent. To 1.0 mL of this solution add 1.0 mL of the test solution and dilute to 10.0 mL with *methanol R*.

*Blank solution*. *Methanol R*.

*Column*:
- *size*: *l* = 0.15 m, Ø = 4.0 mm;
- *stationary phase*: *end-capped octadecylsilyl silica gel for chromatography R* (5 µm);
- *temperature*: 40 °C.

*Mobile phase*:
- *mobile phase A*: dissolve 1.0 g of *potassium dihydrogen phosphate R* in 900 mL of *water R*, adjust to pH 7.4 with a 0.5 M potassium hydroxide solution prepared from *potassium hydroxide R* and dilute to 1000 mL with *water R*; mix 80 volumes of this solution with 20 volumes of *methanol R*;
- *mobile phase B*: *methanol R*, *acetonitrile R* (20:80 *V/V*);

| Time (min) | Mobile phase A (per cent *V/V*) | Mobile phase B (per cent *V/V*) |
|---|---|---|
| 0 - 7 | 75 | 25 |
| 7 - 15 | 75 → 50 | 25 → 50 |
| 15 - 20 | 50 | 50 |
| 20 - 25 | 50 → 75 | 50 → 25 |
| 25 - 30 | 75 | 25 |

*Flow rate*: 1.0 mL/min.

*Detection*: spectrophotometer at 250 nm.

*Injection*: 10 µL.

*Relative retention* with reference to dembrexine (retention time = about 6 min): impurity A = about 2.3; impurity B = about 1.3.

*System suitability*: reference solution (b):
- *resolution*: minimum 2 between the peaks due to dembrexine and impurity E.

*Limits*:
- *impurities A, B*: for each impurity, not more than the area of the principal peak in the chromatogram obtained with reference solution (a) (0.2 per cent);
- *unspecified impurities*: for each impurity, not more than the area of the principal peak in the chromatogram obtained with reference solution (a) (0.2 per cent);
- *total*: not more than 2.5 times the area of the principal peak in the chromatogram obtained with reference solution (a) (0.5 per cent);

– *disregard limit*: 0.5 times the area of the principal peak in the chromatogram obtained with reference solution (a) (0.1 per cent).

**Water** (*2.5.12*): 3.5 per cent to 5.0 per cent, determined on 0.500 g.

**Sulfated ash** (*2.4.14*): maximum 0.1 per cent, determined on 1.0 g.

ASSAY

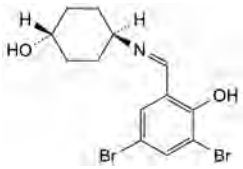
Dissolve 0.350 g in 40 mL of *methanol R*. Add 40 mL of *acetone R* and 1 mL of *0.1 M hydrochloric acid*. Carry out a potentiometric titration (*2.2.20*) using *0.1 M sodium hydroxide*. Read the volume added between the 2 points of inflexion.

1 mL of *0.1 M sodium hydroxide* is equivalent to 41.56 mg of $C_{13}H_{18}Br_2ClNO_2$.

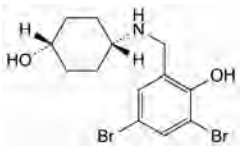
IMPURITIES

*Specified impurities*: *A, B.*

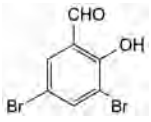
*Other detectable impurities* (the following substances would, if present at a sufficient level, be detected by one or other of the tests in the monograph. They are limited by the general acceptance criterion for other/unspecified impurities and/or by the general monograph *Substances for pharmaceutical use (2034)*. It is therefore not necessary to identify these impurities for demonstration of compliance. See also *5.10. Control of impurities in substances for pharmaceutical use*): *C, D, E.*



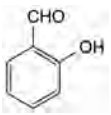
A. *trans*-4-[(3,5-dibromo-2-hydroxybenzylidene)amino]-cyclohexanol,



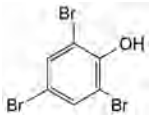
B. *cis*-4-[(3,5-dibromo-2-hydroxybenzyl)amino]cyclohexanol,



C. 3,5-dibromo-2-hydroxybenzaldehyde,



D. 2-hydroxybenzaldehyde (salicylaldehyde),

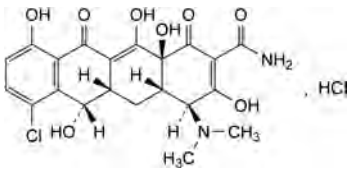


E. 2,4,6-tribromophenol.

**01/2017:0176**
**corrected 10.0**

# DEMECLOCYCLINE HYDROCHLORIDE

## Demeclocyclini hydrochloridum



$C_{21}H_{22}Cl_2N_2O_8$ $M_r$ 501.3
[64-73-3]

DEFINITION

(4*S*,4a*S*,5a*S*,6*S*,12a*S*)-7-Chloro-4-(dimethylamino)-3,6,10,12,12a-pentahydroxy-1,11-dioxo-1,4,4a,5,5a,6,11,12a-octahydrotetracene-2-carboxamide hydrochloride.

Substance produced by certain strains of *Streptomyces aureofaciens*.

*Content*: 89.5 per cent to 102.0 per cent (anhydrous substance).

CHARACTERS

*Appearance*: yellow powder.

*Solubility*: soluble or sparingly soluble in water, slightly soluble in alcohol, very slightly soluble in acetone. It dissolves in solutions of alkali hydroxides and carbonates.

IDENTIFICATION

A. Thin-layer chromatography (*2.2.27*).

*Test solution*. Dissolve 5 mg of the substance to be examined in *methanol R* and dilute to 10 mL with the same solvent.

*Reference solution (a)*. Dissolve 5 mg of *demeclocycline hydrochloride CRS* in *methanol R* and dilute to 10 mL with the same solvent.

*Reference solution (b)*. Dissolve 5 mg of *demeclocycline hydrochloride CRS*, 5 mg of *chlortetracycline hydrochloride R* and 5 mg of *tetracycline hydrochloride R* in *methanol R* and dilute to 10 mL with the same solvent.

*Plate*: *TLC octadecylsilyl silica gel $F_{254}$ plate R.*

*Mobile phase*: mix 20 volumes of *acetonitrile R*, 20 volumes of *methanol R* and 60 volumes of a 63 g/L solution of *oxalic acid R* previously adjusted to pH 2 with *concentrated ammonia R*.

*Application*: 1 µL.

*Development*: over 3/4 of the plate.

*Drying*: in air.

*Detection*: examine in ultraviolet light at 254 nm.

*System suitability*: the chromatogram obtained with reference solution (b) shows 3 clearly separated spots.

*Results*: the principal spot in the chromatogram obtained with the test solution is similar in position and size to the principal spot in the chromatogram obtained with reference solution (a).

B. To about 2 mg add 5 mL of *sulfuric acid R*. A violet colour develops. Add the solution to 2.5 mL of *water R*. The colour becomes yellow.

C. It gives reaction (a) of chlorides (*2.3.1*).

TESTS

**pH** (*2.2.3*): 2.0 to 3.0.

Dissolve 0.1 g in *carbon dioxide-free water R* and dilute to 10 mL with the same solvent.

**Related substances**. Liquid chromatography (*2.2.29*). *Prepare the solutions immediately before use.*

*Buffer 1*: 22.2 g/L solution of *sodium edetate R* adjusted to pH 7.5 with a 40 g/L solution of *sodium hydroxide R*.

*Buffer 2*: 17.0 g/L solution of *tetrapropylammonium hydrogen sulfate R* adjusted to pH 7.5 with a 40 g/L solution of *sodium hydroxide R*.

*Test solution*. Dissolve 25.0 mg of the substance to be examined in a 1.0 g/L solution of *hydrochloric acid R* and dilute to 50.0 mL with the same solution.

*Reference solution (a)*. Dissolve 25.0 mg of *demeclocycline hydrochloride CRS* in a 1.0 g/L solution of *hydrochloric acid R* and dilute to 50.0 mL with the same solution.

*Reference solution (b)*. Dilute 1.0 mL of the test solution to 100.0 mL with a 1.0 g/L solution of *hydrochloric acid R*.

*Reference solution (c)*. Dissolve 5 mg of *demeclocycline for system suitability CRS* (containing impurities A, B, C, E and G) in a 1.0 g/L solution of *hydrochloric acid R* and dilute to 10 mL with the same solution.

*Column*:

- *size*: *l* = 0.075 m, Ø = 4.6 mm;
- *stationary phase*: *end-capped octylsilyl silica gel for chromatography with polar incorporated groups R* (3.5 µm);
- *temperature*: 40 °C.

*Mobile phase*:

- *mobile phase A*: *acetonitrile R*, *water R*, buffer 1, buffer 2 (2:28:35:35 *V/V/V/V*);
- *mobile phase B*: *acetonitrile R*, buffer 1, buffer 2 (30:35:35 *V/V/V*);

| Time (min) | Mobile phase A (per cent *V/V*) | Mobile phase B (per cent *V/V*) |
|---|---|---|
| 0 - 5 | 83 | 17 |
| 5 - 15 | 83 → 30 | 17 → 70 |
| 15 - 25 | 30 | 70 |

*Flow rate*: 1 mL/min.

*Detection*: spectrophotometer at 280 nm.

*Injection*: 10 µL of the test solution and reference solutions (b) and (c).

*Identification of impurities*: use the chromatogram supplied with *demeclocycline for system suitability CRS* and the chromatogram obtained with reference solution (c) to identify the peaks due to impurities A, B, C, E and G.

*Relative retention* with reference to demeclocycline (retention time = about 14 min): impurity C = about 0.3; impurity B = about 0.7; impurity A = about 0.8; impurity E = about 1.2; impurity G = about 1.6.

*System suitability*: reference solution (c):

- *resolution*: minimum 2.5 between the peaks due to impurities A and B.

*Calculation of percentage contents*:

- for each impurity, use the concentration of demeclocycline hydrochloride in reference solution (b).

*Limits*:

- *impurities A, B*: for each impurity, maximum 5.0 per cent;
- *impurities C, G*: for each impurity, maximum 0.3 per cent;
- *impurity E*: maximum 0.2 per cent;
- *any other impurity*: for each impurity, maximum 0.15 per cent;
- *total*: maximum 10.0 per cent;
- *reporting threshold*: 0.05 per cent.

**Water** (*2.5.12*): maximum 3.0 per cent, determined on 1.000 g.

**Sulfated ash** (*2.4.14*): maximum 0.5 per cent, determined on 1.0 g.

ASSAY

Liquid chromatography (*2.2.29*) as described in the test for related substances with the following modification.

*Injection*: 10 µL of the test solution and reference solution (a).

Calculate the percentage content of $C_{21}H_{22}Cl_2N_2O_8$ using the chromatogram obtained with reference solution (a) and taking into account the assigned content of *demeclocycline hydrochloride CRS*.

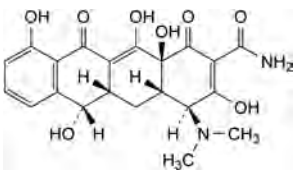
STORAGE

Protected from light.

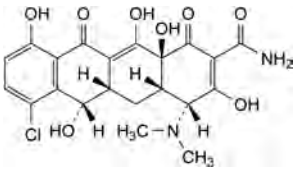
IMPURITIES

*Specified impurities: A, B, C, E, G.*

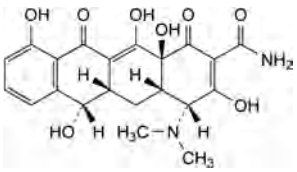
*Other detectable impurities* (the following substances would, if present at a sufficient level, be detected by one or other of the tests in the monograph. They are limited by the general acceptance criterion for other/unspecified impurities and/or by the general monograph *Substances for pharmaceutical use (2034)*. It is therefore not necessary to identify these impurities for demonstration of compliance. See also *5.10. Control of impurities in substances for pharmaceutical use*): *D, F.*



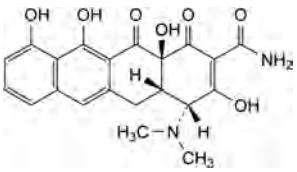
A. (4*S*,4a*S*,5a*S*,6*S*,12a*S*)-4-(dimethylamino)-3,6,10,12,12a-pentahydroxy-1,11-dioxo-1,4,4a,5,5a,6,11,12a-octahydrotetracene-2-carboxamide (demethyltetracycline),



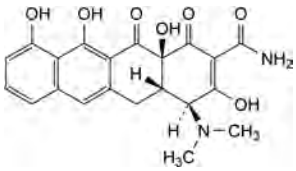
B. (4*R*,4a*S*,5a*S*,6*S*,12a*S*)-7-chloro-4-(dimethylamino)-3,6,10,12,12a-pentahydroxy-1,11-dioxo-1,4,4a,5,5a,6,11,12a-octahydrotetracene-2-carboxamide (4-epidemeclocycline),



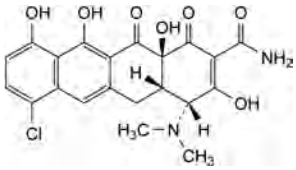
C. (4*R*,4a*S*,5a*S*,6*S*,12a*S*)-4-(dimethylamino)-3,6,10,12,12a-pentahydroxy-1,11-dioxo-1,4,4a,5,5a,6,11,12a-octahydrotetracene-2-carboxamide (4-epidemethyltetracycline),



D. (4*R*,4a*S*,12a*S*)-4-(dimethylamino)-3,10,11,12a-tetrahydroxy-1,12-dioxo-1,4,4a,5,12,12a-hexahydrotetracene-2-carboxamide (4-epianhydrodemethyltetracycline),



E. (4*S*,4a*S*,12a*S*)-4-(dimethylamino)-3,10,11,12a-tetrahydroxy-1,12-dioxo-1,4,4a,5,12,12a-hexahydrotetracene-2-carboxamide (anhydrodemethyltetracycline),



F. (4*R*,4a*S*,12a*S*)-7-chloro-4-(dimethylamino)-3,10,11,12a-tetrahydroxy-1,12-dioxo-1,4,4a,5,12,12a-hexahydrotetracene-2-carboxamide (4-epianhydrodemeclocycline),

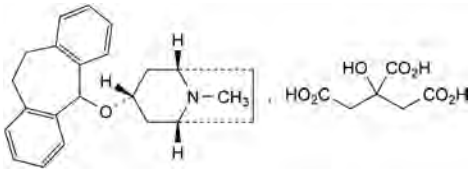
**01/2017:1308**

# DEPTROPINE CITRATE

## Deptropini citras



$C_{29}H_{35}NO_8$ $M_r$ 525.6
[2169-75-7]

DEFINITION

Deptropine citrate contains not less than 98.0 per cent and not more than the equivalent of 101.0 per cent of (1*R*,3*r*,5*S*)-3-(10,11-dihydro-5*H*-dibenzo[*a*,*d*][7]annulen-5-yloxy)-8-methyl-8-azabicyclo[3.2.1]octane dihydrogen citrate, calculated with reference to the dried substance.

CHARACTERS

A white or almost white, microcrystalline powder, very slightly soluble in water and in ethanol, practically insoluble in methylene chloride.

It melts at about 170 °C, with decomposition.

IDENTIFICATION

*First identification: A.*

*Second identification: B, C, D, E.*

A. Examine by infrared absorption spectrophotometry (*2.2.24*), comparing with the spectrum obtained with *deptropine citrate CRS*.

B. Examine the chromatograms obtained in the test for related substances. The principal spot in the chromatogram obtained with test solution (b) is similar in position, colour and size to the principal spot in the chromatogram obtained with reference solution (b).

C. To about 1 mg add 0.5 mL of *sulfuric acid R*. A stable red-orange colour develops.

D. Dissolve about 1 mg in 0.25 mL of *perchloric acid R* and warm gently until the solution becomes turbid. Add 5 mL of *glacial acetic acid R*; a pink colour with an intense green fluorescence appears.

E. To about 5 mg add 1 mL of *acetic anhydride R* and 5 mL of *pyridine R*. A purple colour develops.

TESTS

**pH** (*2.2.3*). Suspend 0.25 g in *carbon dioxide-free water R*, dilute to 25 mL with the same solvent and filter. The pH of the solution is 3.7 to 4.5.

**Related substances**. Examine by thin-layer chromatography (*2.2.27*), using as the coating substance a suitable silica gel with a fluorescent indicator having an optimal intensity at 254 nm.

*Test solution (a).* Dissolve 0.10 g of the substance to be examined in *methanol R* and dilute to 10 mL with the same solvent.

*Test solution (b).* Dilute 1 mL of test solution (a) to 10 mL with *methanol R*.

*Reference solution (a).* Dilute 1.0 mL of test solution (a) to 100.0 mL with *methanol R*.

*Reference solution (b).* Dissolve 20 mg of *deptropine citrate CRS* in *methanol R* and dilute to 2 mL with the same solvent. Dilute 1 mL of the solution to 10 mL with *methanol R*.

*Reference solution (c).* Dissolve 5 mg of *tropine CRS* in *methanol R* and dilute to 100.0 mL with the same solvent.

*Reference solution (d).* Dissolve 10 mg of *deptropine citrate CRS* and 10 mg of *tropine CRS* in *methanol R* and dilute to 25 mL with the same solvent.

Apply to the plate 40 µL of each solution. Develop over a path of 10 cm using a mixture of 8 volumes of *concentrated ammonia R* and 92 volumes of *butanol R*. Dry the plate at 100 °C to 105 °C until the ammonia has completely evaporated. Examine in ultraviolet light at 254 nm. Any spot in the chromatogram obtained with test solution (a), apart from the principal spot, is not more intense than the spot in the chromatogram obtained with reference solution (a) (1 per cent). Spray with *dilute potassium iodobismuthate solution R* and then with a 10 g/L solution of *sodium nitrite R*. Expose the plate to iodine vapours. Examine in daylight and in ultraviolet light at 254 nm. In the chromatogram obtained with test solution (a): any spot corresponding to tropine is not more intense than the spot in the chromatogram obtained with reference solution (c) (0.5 per cent); any spot, apart from the principal spot and any spot corresponding to tropine, is not more intense than the spot in the chromatogram obtained with reference solution (a) (1 per cent). The test is not valid unless the chromatogram obtained with reference solution (d) shows two clearly separated spots.

**Loss on drying** (*2.2.32*). Not more than 2.0 per cent, determined on 1.000 g by drying in an oven at 105 °C for 4 h.

**Sulfated ash** (*2.4.14*). Not more than 0.1 per cent, determined on 1.0 g.

ASSAY

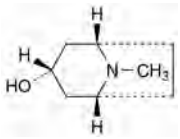
Dissolve 0.400 g in 50 mL of *anhydrous acetic acid R*. Titrate with *0.1 M perchloric acid*, determining the end-point potentiometrically (*2.2.20*).

1 mL of *0.1 M perchloric acid* is equivalent to 52.56 mg of $C_{29}H_{35}NO_8$.

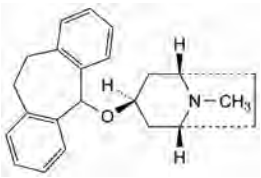
STORAGE

Store protected from light.

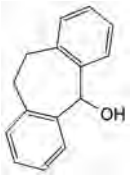
IMPURITIES



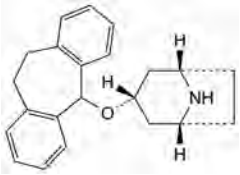
A. (1*R*,3*r*,5*S*)-8-methyl-8-azabicyclo[3.2.1]octan-3-ol (tropine),



B. (1*R*,3*s*,5*S*)-3-(10,11-dihydro-5*H*-dibenzo[*a*,*d*][7]annulen-5-yloxy)-8-methyl-8-azabicyclo[3.2.1]octane (pseudodeptropine),



C. 10,11-dihydro-5*H*-dibenzo[*a*,*d*][7]annulen-5-ol (dibenzocycloheptadienol),

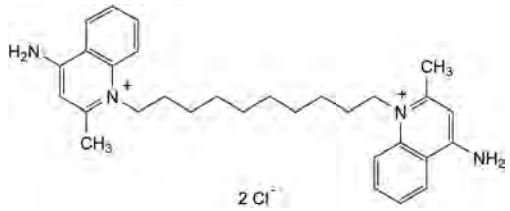


D. (1*R*,3*r*,5*S*)-3-(10,11-dihydro-5*H*-dibenzo[*a*,*d*][7]annulen-5-yloxy)-8-azabicyclo[3.2.1]octane (demethyldeptropine).

**01/2008:1413**
**corrected 6.0**

# DEQUALINIUM CHLORIDE

## Dequalinii chloridum



$C_{30}H_{40}Cl_2N_4$ $M_r$ 527.6
[522-51-0]

DEFINITION

1,1′-(Decane-1,10-diyl)bis(4-amino-2-methylquinolinium) dichloride (dried substance).

*Content*: 95.0 per cent to 101.0 per cent.

CHARACTERS

*Appearance*: white or yellowish-white powder, hygroscopic.

*Solubility*: slightly soluble in water and in ethanol (96 per cent).

IDENTIFICATION

*First identification: B, E.*

*Second identification: A, C, D, E.*

A. Ultraviolet and visible absorption spectrophotometry (*2.2.25*).

*Test solution.* Dissolve about 10 mg in *water R* and dilute to 100 mL with the same solvent. Dilute 10 mL of the solution to 100 mL with *water R*.

*Spectral range*: 230-350 nm.

*Absorption maxima*: at 240 nm and 326 nm.

*Shoulder*: at 336 nm.

*Absorbance ratios*:

- $A_{240}/A_{326}$ = 1.56 to 1.80;
- $A_{326}/A_{336}$ = 1.12 to 1.30.

B. Infrared absorption spectrophotometry (*2.2.24*).

*Spectral range*: 600-2000 $cm^{-1}$.

*Comparison*: *dequalinium chloride CRS.*

C. To 5 mL of solution S (see Tests) add 5 mL of *potassium ferricyanide solution R*. A yellow precipitate is formed.

D. To 10 mL of solution S add 1 mL of *dilute nitric acid R*. A white precipitate is formed. Filter and reserve the filtrate for identification test E.

E. The filtrate from identification test D gives reaction (a) of chlorides (*2.3.1*).

TESTS

**Solution S**. Dissolve 0.2 g in 90 mL of *carbon dioxide-free water R*, heating if necessary, and dilute to 100 mL with the same solvent.

**Appearance of solution**. Solution S is clear (*2.2.1*) and colourless (*2.2.2, Method II*).

**Acidity or alkalinity**. To 5 mL of solution S add 0.1 mL of *bromothymol blue solution R1*. Not more than 0.2 mL of *0.01 M hydrochloric acid* or *0.01 M sodium hydroxide* is required to change the colour of the indicator.

**Related substances**. Liquid chromatography (*2.2.29*).

*Test solution.* Dissolve 10.0 mg of the substance to be examined in the mobile phase and dilute to 10.0 mL with the mobile phase.

*Reference solution (a).* Dissolve 10.0 mg of *dequalinium chloride for performance test CRS* in the mobile phase and dilute to 10.0 mL with the mobile phase.

*Reference solution (b).* Dissolve 10.0 mg of *dequalinium chloride CRS* in the mobile phase and dilute to 10.0 mL with the mobile phase. Dilute 1.0 mL of the solution to 50.0 mL with the mobile phase.

*Column*:

- *size*: *l* = 0.25 m, Ø = 4.6 mm;
- *stationary phase*: *end-capped octadecylsilyl silica gel for chromatography R.*

*Mobile phase*: dissolve 2 g of *sodium hexanesulfonate R* in 300 mL of *water R*; adjust to pH 4.0 with *acetic acid R* and add 700 mL of *methanol R*.

*Flow rate*: 1.5 mL/min.

*Detection*: spectrophotometer at 240 nm.

*Injection*: 10 µL.

*Run time*: 5 times the retention time of dequalinium chloride.

*System suitability*: reference solution (a):

- *peak-to-valley ratio*: minimum 2.0, where $H_p$ = height above the baseline of the peak due to impurity B and $H_v$ = height above the baseline of the lowest point of the curve separating this peak from the peak due to dequalinium chloride. If necessary, adjust the concentration of methanol in the mobile phase.

*Limits*:

- *impurity A*: not more than 0.5 times the area of the principal peak in the chromatogram obtained with reference solution (b) (1 per cent);
- *total of impurities other than A*: not more than 5 times the area of the principal peak in the chromatogram obtained with reference solution (b) (10 per cent);
- *disregard limit*: 0.025 times the area of the principal peak in the chromatogram obtained with reference solution (b) (0.05 per cent).

**Readily carbonisable substances**. Dissolve 20 mg in 2 mL of *sulfuric acid R*. After 5 min the solution is not more intensely coloured than reference solution $BY_4$ (*2.2.2, Method I*).

**Loss on drying** (*2.2.32*): maximum 7.0 per cent, determined on 1.000 g by drying at 105 °C at a pressure not exceeding 0.7 kPa.

**Sulfated ash** (*2.4.14*): maximum 0.1 per cent, determined on 1.0 g.

ASSAY

*In order to avoid overheating in the reaction medium, mix thoroughly throughout and stop the titration immediately after the end-point has been reached.*

Dissolve 0.200 g in 5 mL of *anhydrous formic acid R* and add 50 mL of *acetic anhydride R*. Titrate with *0.1 M perchloric acid*, determining the end-point potentiometrically (*2.2.20*).

1 mL of *0.1 M perchloric acid* is equivalent to 26.38 mg of $C_{30}H_{40}Cl_2N_4$.

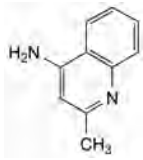
STORAGE

In an airtight container.

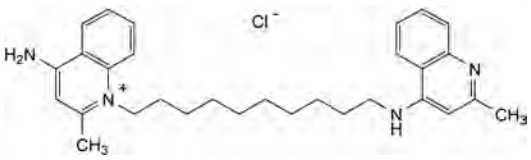
IMPURITIES

*Specified impurities: A.*

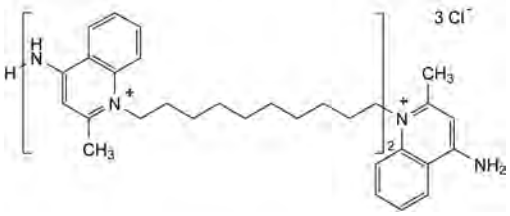
*Other detectable impurities* (the following substances would, if present at a sufficient level, be detected by one or other of the tests in the monograph. They are limited by the general acceptance criterion for other/unspecified impurities and/or by the general monograph *Substances for pharmaceutical use (2034)*. It is therefore not necessary to identify these impurities for demonstration of compliance. See also *5.10. Control of impurities in substances for pharmaceutical use*): *B, C.*



A. 2-methylquinolin-4-amine,



B. 4-amino-1-[10-[(2-methylquinolin-4-yl)amino]decyl]-2-methylquinolinium chloride,



C. 1-[10-(4-amino-2-methylquinolinio)decyl]-4-[[10-(4-amino-2-methylquinolinio)decyl]amino]-2-methylquinolinium trichloride.

**07/2011:2537**

# 3-*O*-DESACYL-4′-MONOPHOSPHORYL LIPID A

## Adeps A 3-*O*-desacyl-4′-monophosphorylatus

DEFINITION

3-*O*-Desacyl-4′-monophosphoryl lipid A is a detoxified derivative of the lipopolysaccharide (LPS) of *Salmonella minnesota*, strain R595, which retains the immunostimulatory activities of the parent LPS. It consists of a mixture of congeners, all containing a backbone of β1′→6-linked disaccharide of 2-deoxy-2-aminoglucose phosphorylated at the 4′-position, but differing in the fatty acid substitutions at the 2, 2′ and 3′ positions. The immunostimulatory activities of 3-*O*-desacyl-4′-monophosphoryl lipid A combined with the vaccine include up-regulation of co-stimulatory molecules on antigen-presenting cells and secretion of pro-inflammatory cytokines, resulting in an enhanced immune response of the Th1-type against the antigens. 3-*O*-desacyl-4′-monophosphoryl lipid A is a lyophilised powder or a sterile liquid.

Requirements given in the sections up to and including the section Triethylamine salt of 3-*O*-desacyl-4′-monophosphoryl lipid A also apply to formulations that do not proceed to the 3-*O*-desacyl-4′-monophosphoryl lipid A liquid bulk.

PRODUCTION

*GENERAL PROVISIONS*

The production method shall have been shown to yield consistently a 3-*O*-desacyl-4′-monophosphoryl lipid A comparable in structure and function with a preparation of 3-*O*-desacyl-4′-monophosphoryl lipid A used as adjuvant in the particular vaccine of proven clinical efficacy and safety in man.

During development studies, and wherever revalidation is necessary, a test for residual endotoxin activity is carried out by injecting intravenously 12-day-old embryonated hens' eggs with 0.1 mL of dilutions of the test sample (8 eggs per dilution) of 3-*O*-desacyl-4′-monophosphoryl lipid A. Eggs are candled and read for mortality at 18-24 hours post-inoculation and the chick embryo 50 per cent lethal dose ($CELD_{50}$) is calculated. The residual endotoxin activity of the 3-*O*-desacyl-4′-monophosphoryl lipid A is acceptable if the $CELD_{50}$ is more than 100 µg.

An endotoxin standard of *Salmonella typhimurium* is prepared and selected dilutions are injected into each group of 8 eggs.

For a test to be valid, the $CELD_{50}$ of the endotoxin standard must not be more than 0.05 µg.

*Reference preparation*: a batch of 3-*O*-desacyl-4′-monophosphoryl lipid A shown to be comparable in structure and function with a preparation of 3-*O*-desacyl-4′-monophosphoryl lipid A used as adjuvant in the particular vaccine of proven clinical efficacy and safety in man or a batch representative thereof.

*BACTERIAL SEED LOTS*

The bacterial strain used for master seed lots shall be identified by historical records that include information on its origin and the tests used to characterise the strain, in particular genotypic and phenotypic information. Only a working seed lot that complies with the following requirements may be used.

**Identification**. The working seed lot is identified by suitable methods such as Gram staining and fatty acid profiling (*5.1.6*).

**Microbial Purity**. Each seed lot complies with the requirements for absence of contaminating organisms. Purity of bacterial cultures is verified by methods of suitable sensitivity and specificity.

*PROPAGATION AND HARVEST*

The bacteria is grown using a suitable liquid medium. At the end of cultivation, the culture is tested for purity and yield. The culture medium is separated from the bacterial mass by a suitable method, for example filtration. Only a harvest that is consistent with respect to the profiles for growth rate, pH, and $O_2$-consumption may be used for the extraction of LPS.

*TRIETHYLAMINE SALT OF 3-O-DESACYL-4′-MONOPHOSPHORYL LIPID A*

LPS is extracted from the bacterial cells by successive alcohol and chloroform-methanol extractions and is then converted to 3-*O*-desacyl-4′-monophosphoryl lipid A by hydrolysis, then purified and salified by triethanolamine before freeze-drying. The freeze-dried triethylamine salt of 3-*O*-desacyl-4′-monophosphoryl lipid A must comply with the following requirements.

**Appearance**. A visual description of the particular preparation after freeze-drying is established and approved by the competent authority; each batch of freeze-dried triethylamine salt of 3-*O*-desacyl-4′-monophosphoryl lipid A must comply with this description.

**Protein**: less than 0.5 per cent *m/m*, determined using a suitable method, for example a reversed-phase HPLC method for amino acid analysis (*2.2.56*). The total amino acid content in micrograms is calculated by comparison to amino acid standards and is equal to the protein concentration.

**Nucleic acid**: maximum 0.3 per cent *m/m*, determined using a suitable method. For example, a fluorimetric method may be used where nucleic acids are extracted from the freeze-dried triethylamine salt of 3-*O*-desacyl-4′-monophosphoryl lipid A, using a solution containing $NH_4OH$ and a suitable non-ionic detergent, and stained by a suitable fluorescent dye. The nucleic acid content in the test sample is interpolated from a calibration curve.

**Hexosamine** (*2.5.20*): 1000 nmol/mg to 1450 nmol/mg.

**Phosphorus** (*2.5.18*): 0.5 µmol/mg to 0.8 µmol/mg.

**Congener distribution**. The relative amount of tetraacyl, pentaacyl, hexaacyl and heptaacyl congener groups are determined by a suitable method, for example reversed-phase HPLC analysis (*2.2.29*).

The relative amount of each congener group in the triethylamine salt of 3-*O*-desacyl-4′-monophosphoryl lipid A is:

- tetraacyl: 15 per cent to 35 per cent;
- pentaacyl: 35 per cent to 60 per cent;
- hexaacyl: 20 per cent to 40 per cent;
- heptaacyl: less than 0.5 per cent.

**Triethylamine**: 4.2 to 5.8 per cent *m/m*, determined by a suitable method, for example gas chromatography (*2.2.28*).

**Water** (*2.5.12*): maximum 6.7 per cent *m/m*.

**Free fatty acids**: maximum 2.6 per cent *m/m*, determined by a suitable method, for example reversed-phase HPLC analysis (*2.2.29*).

**2-Keto-3-deoxyoctonate**: less than 0.5 per cent *m/m*, determined by a suitable method. For example, a colorimetric method may be used where 2-keto-3-deoxyoctonate is released by hydrolysis (0.2 N $H_2SO_4$ at 100 °C for 30 min), oxidised by periodic acid, and reacted with sodium arsenite to yield β-formylpyruvic acid, which subsequently is coupled to thiobarbituric acid to give a red coloured chromophore with absorption maximum at 550 nm. The amount of 2-keto-3-deoxyoctonate is interpolated from a calibration curve.

**Identity**. The test for congener distribution also serves to identify the product.

**Microbial contamination**

TAMC: acceptance criterion $10^1$ CFU/10 mg (*2.6.12*).

**Pyrogens** (*2.6.8*). The triethylamine salt of 3-*O*-desacyl-4′-monophosphoryl lipid A complies with the test for pyrogens. Inject into each rabbit per kilogram of body mass 3 mL of a solution containing 2.5 µg of 3-*O*-desacyl-4′-monophosphoryl lipid A.

*3-O-DESACYL-4′-MONOPHOSPHORYL LIPID A LIQUID BULK*

The triethylamine salt of 3-*O*-desacyl-4′-monophosphoryl lipid A is dispersed in a liquid suitable for the subsequent processing steps at a defined target concentration. If the salt is not soluble in water a microfluidisation step is necessary to prepare a stable aqueous suspension.
The liquid bulk is sterilised by filtration through a bacteria-retentive filter.

Only a 3-*O*-desacyl-4′-monophosphoryl lipid A liquid bulk that complies with the requirements given below under Identification, Tests and Assay and that is within the limits approved for the particular product may be used for the preparation of 3-*O*-desacyl-4′-monophosphoryl lipid A in the final lots.

CHARACTERS

When dispersed in an aqueous solution: slightly turbid suspension.

When dissolved in an organic solvent: a description of its appearance is established and approved by the competent authority; the 3-*O*-desacyl-4′-monophosphoryl lipid A liquid bulk complies with this description.

IDENTIFICATION

Congener distribution (see Tests).

TESTS

**Particle size**. Where applicable, the particle size in the microfluidised liquid bulk is determined by a suitable method, for example dynamic light scattering. The particle size for each batch of liquid bulk is within the limits approved for the particular product.

**Sterility** (*2.6.1*). It complies with the test, carried out using 10 mL for each medium.

**Congener distribution**. The relative amount of tetraacyl, pentaacyl, hexaacyl and heptaacyl congener groups are determined by a suitable method, for example reversed-phase HPLC analysis (*2.2.29*).

The relative amount of each congener group in the 3-*O*-desacyl-4′-monophosphoryl lipid A liquid bulk is:

- tetraacyl: 15 per cent to 35 per cent;
- pentaacyl: 35 per cent to 60 per cent;
- hexaacyl: 20 per cent to 40 per cent;
- heptaacyl: less than 0.5 per cent.

ASSAY

The 3-*O*-desacyl-4′-monophosphoryl lipid A content is determined by a suitable method, for example gas chromatographic quantification (*2.2.28*) of trifluoroacetic anhydride derivatised fatty acid methyl esters of the 3-*O*-desacyl-4′-monophosphoryl lipid A fatty acids dodecanoic acid (C12:0), tetradecanoic acid (C14:0), 3-hydroxy tetradecanoic acid (3-OH-C14:0) and hexadecanoic acid (C16:0) obtained by hydrolysis of 3-*O*-desacyl-4′-monophosphoryl lipid A in an aqueous/methanol (50:50 *V/V*) solution, containing 5 per cent of sodium hydroxide. To the test sample, a reference sample and the dilutions of the calibration curve, pentadecanoic acid

(C15:0) is added as an internal standard. The temperature gradient applied must allow the separation of the fatty acid methyl esters in about 40 min.

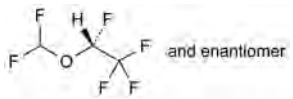
The sum of the ratios between the area for each individual fatty acid methyl ester (C12:0, C14:0, 3-OH-C14:0 and C16:0) and the area of the internal standard (ratio = area $C_x$ / area C15:0) is calculated. The 3-*O*-desacyl-4′-monophosphoryl lipid A quantity corresponding to the sum ratio value on the calibration curve, established with the dilutions of the 3-*O*-desacyl-4′-monophosphoryl lipid A standard, is reported.

The content of 3-*O*-desacyl-4′-monophosphoryl lipid A is not less than 80 per cent and not greater than 120 per cent of the estimated content.

**07/2019:1666**
**corrected 10.0**

# DESFLURANE

## Desfluranum



$C_3H_2F_6O$ $M_r$ 168.0
[57041-67-5]

DEFINITION

(2*RS*)-2-(Difluoromethoxy)-1,1,1,2-tetrafluoroethane.

CHARACTERS

*Appearance*: clear, colourless, mobile, heavy liquid.

*Solubility*: practically insoluble in water, miscible with anhydrous ethanol.

*Relative density*: 1.47, determined at 15 °C.

bp: about 22 °C.

IDENTIFICATION

Infrared absorption spectrophotometry (*2.2.24*).

*Preparation*: examine the substance in the gaseous state.

*Comparison*: *Ph. Eur. reference spectrum of desflurane.*

TESTS

*The substance to be examined must be cooled to a temperature below 10 °C and the tests must be carried out at a temperature below 20 °C.*

**Acidity or alkalinity**. To 20 mL add 20 mL of *carbon dioxide-free water R*, shake for 3 min and allow to stand. Collect the upper layer and add 0.2 mL of *bromocresol purple solution R*. Not more than 0.1 mL of *0.01 M sodium hydroxide* or 0.6 mL of *0.01 M hydrochloric acid* is required to change the colour of the indicator.

**Related substances**. Gas chromatography (*2.2.28*).

*Test solution*. The substance to be examined.

*Reference solution (a)*. Introduce 25 mL of the substance to be examined into a 50 mL flask fitted with a septum, and add 0.50 mL of *desflurane impurity A CRS* and 1.0 mL of *isoflurane CRS* (impurity B). Add 50 µL of *acetone R* (impurity H), 10 µL of *chloroform R* (impurity F) and 50 µL of *methylene chloride R* (impurity E) to the solution, using an airtight syringe, and dilute to 50.0 mL with the substance to be examined. Dilute 5.0 mL of this solution to 50.0 mL with the substance to be examined. Store at a temperature below 10 °C.

*Reference solution (b)*. Dilute 5.0 mL of reference solution (a) to 50.0 mL with the substance to be examined. Store at a temperature below 10 °C.

*Reference solution (c)*. Dilute 5.0 mL of reference solution (b) to 25.0 mL with the substance to be examined. Store at a temperature below 10 °C.

*Column*:
- *material*: fused silica;
- *size*: *l* = 105 m, Ø = 0.32 mm;
- *stationary phase*: *trifluoropropylmethylpolysiloxane R* (film thickness 1.5 µm).

*Carrier gas*: *helium for chromatography R*.

*Flow rate*: 2.0 mL/min.

*Split ratio*: 1:25.

*Temperature*:
- *column*: 30 °C;
- *injection port*: 150 °C;
- *detector*: 200 °C.

*Detection*: flame ionisation.

*Injection*: 2.0 µL.

*Run time*: 35 min.

*Relative retention* with reference to desflurane (retention time = about 11.5 min): impurity C = about 1.06; impurity D = about 1.09; impurity A = about 1.14; impurity G = about 1.39; impurity E = about 1.5; impurity B = about 1.7; impurity F = about 2.2; impurity H = about 2.6.

*System suitability*: reference solution (a):
- *number of theoretical plates*: minimum 20 000, calculated for the peak due to impurity A;
- *symmetry factor*: maximum 2.0 for the peak due to impurity B.

*Limits*:
- *impurity B*: not more than the difference between the area of the corresponding peak in the chromatogram obtained with reference solution (a) and the area of the corresponding peak in the chromatogram obtained with the test solution (0.2 per cent *V/V*);
- *impurity A*: not more than the difference between the area of the corresponding peak in the chromatogram obtained with reference solution (a) and the area of the corresponding peak in the chromatogram obtained with the test solution (0.1 per cent *V/V*);
- *impurities C, D, G*: for each impurity, not more than the difference between the area of the peak due to impurity A in the chromatogram obtained with reference solution (b) and the area of the peak due to impurity A in the chromatogram obtained with the test solution (0.01 per cent *V/V*);
- *impurities E, H*: for each impurity, not more than the difference between the area of the corresponding peak in the chromatogram obtained with reference solution (a) and the area of the corresponding peak in the chromatogram obtained with the test solution (0.01 per cent *V/V*);
- *impurity F*: not more than the difference between the area of the corresponding peak in the chromatogram obtained with reference solution (a) and the area of the corresponding peak in the chromatogram obtained with the test solution (0.002 per cent *V/V*);
- *unspecified impurities*: for each impurity, not more than 0.5 times the difference between the area of the peak due to impurity A in the chromatogram obtained with reference solution (b) and the area of the peak due to impurity A in the chromatogram obtained with the test solution (0.005 per cent *V/V*);
- *sum of impurities other than A, B, C, D, E, F, G and H*: not more than the difference between the area of the peak due to impurity A in the chromatogram obtained with reference solution (b) and the area of the peak due to impurity A in the chromatogram obtained with the test solution (0.01 per cent *V/V*);

– *disregard limit*: the difference between the area of the peak due to impurity A in the chromatogram obtained with reference solution (c) and the area of the peak due to impurity A in the chromatogram obtained with the test solution (0.002 per cent *V/V*).

**Fluorides**: maximum 10 ppm.

Potentiometry (*2.2.36, Method I*).

*Test solution.* To 10.0 mL in a separating funnel, add 10 mL of a mixture of 30.0 mL of *dilute ammonia R2* and 70.0 mL of *distilled water R*. Shake for 1 min and collect the upper layer. Repeat this extraction procedure twice, collecting the upper layer each time. Adjust the combined upper layers to pH 5.2 with *dilute hydrochloric acid R*. Add 5.0 mL of *fluoride standard solution (1 ppm F) R* and dilute to 50.0 mL with *distilled water R*. To 20.0 mL of this solution add 20.0 mL of *total-ionic-strength-adjustment buffer R* and dilute to 50.0 mL with *distilled water R*.

*Reference solutions.* To each of 1.0 mL, 2.0 mL, 3.0 mL, 4.0 mL and 5.0 mL of *fluoride standard solution (10 ppm F) R* add 20.0 mL of *total-ionic-strength-adjustment buffer R* and dilute to 50.0 mL with *distilled water R*.

*Indicator electrode*: fluoride selective.

*Reference electrode*: silver-silver chloride.

Carry out the measurements on 20 mL of each solution. Calculate the concentration of fluorides using the calibration curve, taking into account the addition of fluoride to the test solution.

**Non-volatile matter**: maximum 100 mg/L.

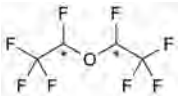
Evaporate 20.0 mL to dryness with the aid of a stream of *nitrogen R*. The residue weighs not more than 2.0 mg.

STORAGE

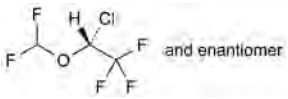
In a glass bottle fitted with a polyethylene-lined cap. Before opening the bottle, cool the contents to below 10 °C.

IMPURITIES

*Specified impurities: A, B, C, D, E, F, G, H.*



A. 1,1′-oxybis[(1Ξ)-1,2,2,2-tetrafluoroethane],



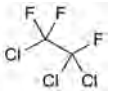
B. (2*RS*)-2-chloro-2-(difluoromethoxy)-1,1,1-trifluoroethane (isofluorane),

C. dichlorofluoromethane,

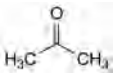
D. trichlorofluoromethane,

E. dichloromethane (methylene chloride),

F. trichloromethane (chloroform),



G. 1,1,2-trichloro-1,2,2-trifluoroethane,

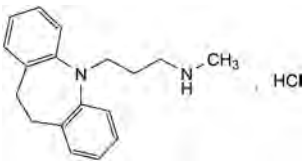


H. propan-2-one (acetone).

**01/2020:0481**

# DESIPRAMINE HYDROCHLORIDE

## Desipramini hydrochloridum



$C_{18}H_{23}ClN_2$ $M_r$ 302.8

[58-28-6]

DEFINITION

3-(10,11-Dihydro-5*H*-dibenzo[*b,f*]azepin-5-yl)-*N*-methylpropan-1-amine hydrochloride.

*Content*: 99.0 per cent to 101.0 per cent (dried substance).

CHARACTERS

*Appearance*: white or almost white, crystalline powder.

*Solubility*: sparingly soluble in water and in anhydrous ethanol, practically insoluble in heptane.

mp: about 214 °C.

IDENTIFICATION

A. Infrared absorption spectrophotometry (*2.2.24*).
*Comparison*: *desipramine hydrochloride CRS*.

B. It gives reaction (a) of chlorides (*2.3.1*).

TESTS

**Solution S**. Dissolve 1.25 g in *carbon dioxide-free water R*, warming to not more than 30 °C if necessary, and dilute to 25 mL with the same solvent.

**Appearance of solution**. Solution S, examined immediately after preparation, is not more intensely coloured than reference solution $BY_6$ (*2.2.2, Method II*).

**Acidity or alkalinity**. To 10 mL of solution S add 0.1 mL of *methyl red solution R* and 0.3 mL of *0.01 M sodium hydroxide*. The solution is yellow. Not more than 0.5 mL of *0.01 M hydrochloric acid* is required to change the colour of the indicator to red.

**Related substances**. Liquid chromatography (*2.2.29*).

*Buffer solution.* Dissolve 5.2 g of *dipotassium hydrogen phosphate R* in 1000 mL of *water for chromatography R*, add 1 mL of *triethylamine R* and adjust to pH 6.4 with *phosphoric acid R*.

*Test solution.* Dissolve 50.0 mg of the substance to be examined in mobile phase A and dilute to 100.0 mL with mobile phase A.

*Reference solution (a).* Dilute 1.0 mL of the test solution to 100.0 mL with mobile phase A. Dilute 1.0 mL of this solution to 10.0 mL with mobile phase A.

*Reference solution (b).* Dissolve 5 mg of *imipramine hydrochloride R* (impurity A) in mobile phase A and dilute to 100 mL with mobile phase A. Mix 1 mL of the solution and 9 mL of the test solution, and dilute to 100 ml with mobile phase A.

*Column*:

- *size*: *l* = 0.25 m, Ø = 4.6 mm;
- *stationary phase*: *base-deactivated end-capped octadecylsilyl silica gel for chromatography R* (5 µm);
- *temperature*: 60 °C.

*Mobile phase*:

- *mobile phase A*: *methanol R*, *acetonitrile R*, buffer solution (11:14:75 *V/V/V*);
- *mobile phase B*: *methanol R*, *acetonitrile R*, buffer solution (28:34:38 *V/V/V*);

| Time (min) | Mobile phase A (per cent *V/V*) | Mobile phase B (per cent *V/V*) |
|---|---|---|
| 0 - 2 | 85 | 15 |
| 2 - 37 | 85 → 0 | 15 → 100 |
| 37 - 52 | 0 | 100 |

*Flow rate*: 1.4 mL/min.

*Detection*: spectrophotometer at 254 nm.

*Injection*: 40 µL.

*Identification of impurities*: use the chromatogram obtained with reference solution (b) to identify the peak due to impurity A.

*Relative retention* with reference to desipramine (retention time = about 19 min): impurity A = about 1.7.

*System suitability*: reference solution (b):

- *resolution*: minimum 25 between the peaks due to desipramine and impurity A.

*Calculation of percentage contents*:

- for each impurity, use the concentration of desipramine hydrochloride in reference solution (a).

*Limits*:

- *unspecified impurities*: for each impurity, maximum 0.10 per cent;
- *total*: maximum 0.5 per cent;
- *reporting threshold*: 0.05 per cent.

**Loss on drying** (*2.2.32*): maximum 0.5 per cent, determined on 1.000 g by drying in an oven at 105 °C.

**Sulfated ash** (*2.4.14*): maximum 0.1 per cent, determined on 1.0 g.

ASSAY

Dissolve 0.250 g in a mixture of 5 mL of *0.01 M hydrochloric acid* and 50 mL of *ethanol (96 per cent) R*. Carry out a potentiometric titration (*2.2.20*), using *0.1 M sodium hydroxide*. Read the volume added between the 2 points of inflexion.

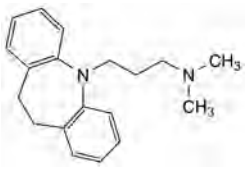
1 mL of *0.1 M sodium hydroxide* is equivalent to 30.28 mg of $C_{18}H_{23}ClN_2$.

STORAGE

Protected from light.

IMPURITIES

*Other detectable impurities* (the following substances would, if present at a sufficient level, be detected by one or other of the tests in the monograph. They are limited by the general acceptance criterion for other/unspecified impurities and/or by the general monograph *Substances for pharmaceutical use (2034)*. It is therefore not necessary to identify these impurities for demonstration of compliance. See also *5.10. Control of impurities in substances for pharmaceutical use*): A.

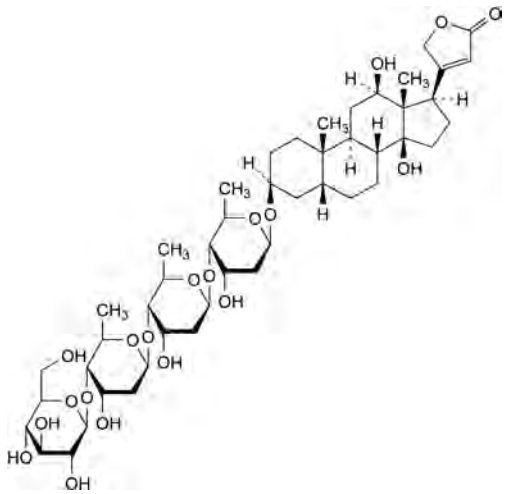


A. 3-(10,11-dihydro-5*H*-dibenzo[*b*,*f*]azepin-5-yl)-*N*,*N*-dimethylpropan-1-amine (imipramine).

**01/2008:0482**
**corrected 6.0**

# DESLANOSIDE

## Deslanosidum



$C_{47}H_{74}O_{19}$ $M_r$ 943
[17598-65-1]

DEFINITION

Deslanoside contains not less than 95.0 per cent and not more than the equivalent of 105.0 per cent of 3β-[(*O*-β-D-glucopyranosyl-(1→4)-*O*-2,6-dideoxy-β-D-*ribo*-hexopyranosyl-(1→4)-*O*-2,6-dideoxy-β-D-*ribo*-hexopyranosyl-(1→4)-2,6-dideoxy-β-D-*ribo*-hexopyranosyl)oxy]-12β,14-dihydroxy-5β,14β-card-20(22)-enolide, calculated with reference to the dried substance.

CHARACTERS

A white or almost white, crystalline or finely crystalline powder, hygroscopic, practically insoluble in water, very slightly soluble in alcohol. In an atmosphere of low relative humidity, it loses water.

IDENTIFICATION

*First identification: A.*

*Second identification: B, C, D.*

A. Examine by infrared absorption spectrophotometry (*2.2.24*), comparing with the spectrum obtained with *deslanoside CRS*. When comparing the spectra, special attention is given to the absence of a distinct absorption maximum at about 1260 $cm^{-1}$ and to the intensity of the absorption maximum at about 1740 $cm^{-1}$. Examine the substances in discs prepared by dissolving 1 mg of the substance to be examined or 1 mg of the reference substance in 0.3 mL of *methanol R* and triturating with about 0.4 g of dry, finely powdered *potassium bromide R* until the mixture is uniform and completely dry.

B. Examine the chromatograms obtained in the test for related substances. The principal zone in the chromatogram obtained with test solution (b) is similar in position, colour and size to the principal zone in the chromatogram obtained with reference solution (a).

C. Suspend about 0.5 mg in 0.2 mL of *alcohol (60 per cent V/V) R*. Add 0.1 mL of *dinitrobenzoic acid solution R* and 0.1 mL of *dilute sodium hydroxide solution R*. A violet colour develops.

D. Dissolve about 5 mg in 5 mL of *glacial acetic acid R* and add 0.05 mL of *ferric chloride solution R1*. Cautiously add 2 mL of *sulfuric acid R*, avoiding mixing the two liquids. Allow to stand; a brown but not reddish ring develops at the interface and a greenish-yellow, then bluish-green colour diffuses from it to the upper layer.

TESTS

**Solution S**. Dissolve 0.20 g in a mixture of equal volumes of *chloroform R* and *methanol R* and dilute to 10 mL with the same mixture of solvents.

**Appearance of solution**. Solution S is clear (*2.2.1*) and colourless (*2.2.2, Method II*).

**Specific optical rotation** (*2.2.7*). Dissolve 0.200 g in *anhydrous pyridine R* and dilute to 10.0 mL with the same solvent. The specific optical rotation is + 6.5 to + 8.5, calculated with reference to the dried substance.

**Related substances**. Examine by thin-layer chromatography (*2.2.27*), using *silica gel G R* as the coating substance.

*Test solution (a)*. Use solution S.

*Test solution (b)*. Dilute 1 mL of test solution (a) to 10 mL with a mixture of equal volumes of *chloroform R* and *methanol R*.

*Reference solution (a)*. Dissolve 20 mg of *deslanoside CRS* in a mixture of equal volumes of *chloroform R* and *methanol R* and dilute to 10 mL with the same mixture of solvents.

*Reference solution (b)*. Dilute 2.5 mL of reference solution (a) to 10 mL with a mixture of equal volumes of *chloroform R* and *methanol R*.

*Reference solution (c)*. Dilute 1 mL of reference solution (a) to 10 mL with a mixture of equal volumes of *chloroform R* and *methanol R*.

Apply separately to the plate as 10 mm bands 5 µL of each solution. Develop immediately over a path of 15 cm using a mixture of 3 volumes of *water R*, 36 volumes of *methanol R* and 130 volumes of *methylene chloride R*. Dry the plate in a current of warm air, spray with a mixture of 5 volumes of *sulfuric acid R* and 95 volumes of *alcohol R* and heat at 140 °C for 15 min. Examine in daylight. In the chromatogram obtained with test solution (a), any zone, apart from the principal zone, is not more intense than the zone in the chromatogram obtained with reference solution (b) (2.5 per cent) and at most two such zones are more intense than the zone in the chromatogram obtained with reference solution (c) (1.0 per cent).

**Loss on drying** (*2.2.32*). Not more than 5.0 per cent, determined on 0.500 g by drying *in vacuo* at 105 °C.

**Sulfated ash** (*2.4.14*). Not more than 0.1 per cent, determined on the residue obtained in the test for loss on drying.

ASSAY

Dissolve 50.0 mg in *alcohol R* and dilute to 50.0 mL with the same solvent. Dilute 5.0 mL of this solution to 100.0 mL with *alcohol R*. Prepare a reference solution in the same manner, using 50.0 mg of *deslanoside CRS* (undried). To 5.0 mL of each solution add 3.0 mL of *alkaline sodium picrate solution R* and allow to stand protected from bright light in a water-bath at 20 ± 1 °C for 40 min. Measure the absorbance (*2.2.25*) of each solution at the maximum at 484 nm, using as the compensation liquid a mixture of 3.0 mL of *alkaline sodium picrate solution R* and 5.0 mL of *alcohol R* prepared at the same time.

Calculate the content of $C_{47}H_{74}O_{19}$ from the absorbances measured and the concentrations of the solutions.

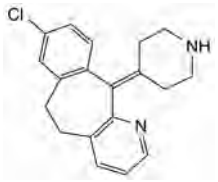
STORAGE

Store in an airtight, glass container, protected from light, at a temperature below 10 °C.

**01/2017:2570**
**corrected 10.0**

# DESLORATADINE

## Desloratadinum



$C_{19}H_{19}ClN_2$ $M_r$ 310.8
[100643-71-8]

DEFINITION

8-Chloro-11-(piperidin-4-ylidene)-6,11-dihydro-5*H*-benzo[5,6]cyclohepta[1,2-*b*]pyridine.

*Content*: 98.0 per cent to 102.0 per cent (anhydrous substance).

CHARACTERS

*Appearance*: white or almost white powder.

*Solubility*: very slightly soluble or practically insoluble in water, freely soluble in ethanol (96 per cent), slightly soluble or very slightly soluble in heptane.

It shows polymorphism (*5.9*).

IDENTIFICATION

Infrared absorption spectrophotometry (*2.2.24*).

*Comparison*: *desloratadine CRS*.

If the spectra obtained in the solid state show differences, dissolve the substance to be examined and the reference substance separately in *methyl isobutyl ketone R*, evaporate to dryness and record new spectra using the residues.

TESTS

**Related substances**. Liquid chromatography (*2.2.29*).

*Test solution*. Dissolve 20.0 mg of the substance to be examined in the mobile phase and dilute to 25.0 mL with the mobile phase. Dilute 5.0 mL of the solution to 50.0 mL with the mobile phase.

*Reference solution (a)*. Dissolve 20.0 mg of *desloratadine CRS* in the mobile phase and dilute to 25.0 mL with the mobile phase. Dilute 5.0 mL of the solution to 50.0 mL with the mobile phase.

*Reference solution (b)*. Dilute 1.0 mL of the test solution to 100.0 mL with the mobile phase. Dilute 1.0 mL of this solution to 10.0 mL with the mobile phase.

*Reference solution (c)*. Dissolve 4 mg of *desloratadine for system suitability CRS* (containing impurities A and B) in the mobile phase and dilute to 5.0 mL with the mobile phase. Dilute 1.0 mL of the solution to 10.0 mL with the mobile phase.

*Column*:

– *size*: *l* = 0.25 m, Ø = 4.6 mm;
– *stationary phase*: *end-capped octadecylsilyl silica gel for chromatography R* (4 µm);
– *temperature*: 35 °C.

*Mobile phase*: dissolve 0.865 g of *sodium dodecyl sulfate R* in *water R*, add 0.5 mL of *trifluoroacetic acid R* and dilute to 1000 mL with *water R*; mix 57 volumes of this solution and 43 volumes of *acetonitrile R*.

*Flow rate*: 1.0 mL/min.

*Detection*: spectrophotometer at 280 nm.

*Injection*: 100 µL of the test solution and reference solutions (b) and (c).

*Run time*: 2.5 times the retention time of desloratadine.

*Identification of impurities*: use the chromatogram supplied with *desloratadine for system suitability CRS* and the chromatogram obtained with reference solution (c) to identify the peaks due to impurities A and B.

*Relative retention* with reference to desloratadine (retention time = about 21 min): impurity A = about 0.8; impurity B = about 0.9.

*System suitability*: reference solution (c):

– *resolution*: minimum 2.0 between the peaks due to impurity B and desloratadine.

*Calculation of percentage contents*:

– *correction factors*: multiply the peak areas of the following impurities by the corresponding correction factor: impurity A = 1.6; impurity B = 1.6;

– for each impurity, use the concentration of desloratadine in reference solution (b).

*Limits*:

– *impurity B*: maximum 0.3 per cent;

– *impurity A*: maximum 0.2 per cent;

– *unspecified impurities*: for each impurity, maximum 0.10 per cent;

– *total*: maximum 0.4 per cent;

– *reporting threshold*: 0.05 per cent.

**Water** (*2.5.32*): maximum 0.5 per cent, determined on 0.250 g.

**Sulfated ash** (*2.4.14*): maximum 0.2 per cent, determined on 0.5 g.

ASSAY

Liquid chromatography (*2.2.29*) as described in the test for related substances with the following modifications.

*Injection*: test solution and reference solution (a).

*System suitability*: reference solution (a):

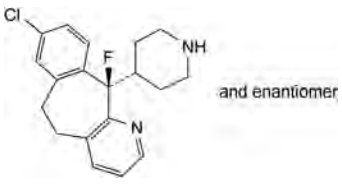
– *symmetry factor*: 0.5 to 1.5 for the peak due to desloratadine.

Calculate the percentage content of $C_{19}H_{19}ClN_2$ taking into account the assigned content of *desloratadine CRS*.

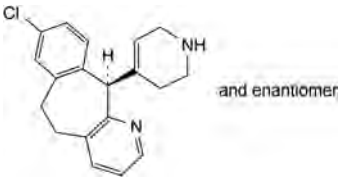
IMPURITIES

*Specified impurities: A, B.*

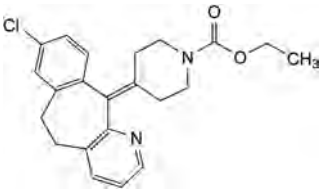
*Other detectable impurities* (the following substances would, if present at a sufficient level, be detected by one or other of the tests in the monograph. They are limited by the general acceptance criterion for other/unspecified impurities and/or by the general monograph *Substances for pharmaceutical use (2034)*. It is therefore not necessary to identify these impurities for demonstration of compliance. See also *5.10. Control of impurities in substances for pharmaceutical use*): *C.*



A. (11*RS*)-8-chloro-11-fluoro-11-(piperidin-4-yl)-6,11-dihydro-5*H*-benzo[5,6]cyclohepta[1,2-*b*]pyridine,



B. (11*RS*)-8-chloro-11-(1,2,3,6-tetrahydropyridin-4-yl)-6,11-dihydro-5*H*-benzo[5,6]cyclohepta[1,2-*b*]pyridine,



C. ethyl 4-(8-chloro-5,6-dihydro-11*H*-benzo[5,6]cyclohepta-[1,2-*b*]pyridin-11-ylidene)piperidine-1-carboxylate (loratadine).

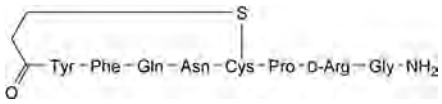
**corrected 10.0**

# DESMOPRESSIN

## Desmopressinum



$C_{46}H_{64}N_{14}O_{12}S_2$ $M_r$ 1069
[16679-58-6]

DEFINITION

(3-Sulfanylpropanoyl)-L-tyrosyl-L-phenylalanyl-L-glutaminyl-L-asparaginyl-L-cysteinyl-L-prolyl-D-arginylglycinamide cyclic (1→6)-disulfide.

Synthetic cyclic nonapeptide, available as an acetate.

*Content*: 95.0 per cent to 105.0 per cent (anhydrous and acetic acid-free substance).

CHARACTERS

*Appearance*: white or almost white, fluffy powder.

*Solubility*: soluble in water, in ethanol (96 per cent) and in glacial acetic acid.

IDENTIFICATION

A. Examine the chromatograms obtained in the assay.

*Results*: the retention time and size of the principal peak in the chromatogram obtained with the test solution are approximately the same as those of the principal peak in the chromatogram obtained with the reference solution.

B. Amino acid analysis (*2.2.56*). For hydrolysis use Method 1 and for analysis use Method 1.

Express the content of each amino acid in moles. Calculate the relative proportions of the amino acids, taking 1/6 of the sum of the number of moles of aspartic acid, glutamic acid, proline, glycine, arginine and phenylalanine as equal to 1. The values fall within the following limits: aspartic acid: 0.90 to 1.10; glutamic acid: 0.90 to 1.10; proline: 0.90 to 1.10; glycine: 0.90 to 1.10; arginine: 0.90 to 1.10; phenylalanine: 0.90 to 1.10; tyrosine: 0.70 to 1.05; half-cystine: 0.30 to 1.05. Lysine, isoleucine and leucine are absent; not more than traces of other amino acids are present.

TESTS

**Specific optical rotation** (*2.2.7*): – 72 to – 82 (anhydrous and acetic acid-free substance).

Dissolve 10.0 mg in a 1 per cent *V/V* solution of *glacial acetic acid R* and dilute to 5.0 mL with the same acid.

**Related substances**. Liquid chromatography (*2.2.29*): use the normalisation procedure.

*Test solution.* Dissolve 1.0 mg of the substance to be examined in 2.0 mL of *water R*.

*Resolution solution.* Dissolve the contents of a vial of *oxytocin/desmopressin validation mixture CRS* in 500 µL of *water R*.

*Column*:

- *size*: *l* = 0.12 m, Ø = 4.0 mm;
- *stationary phase*: *octadecylsilyl silica gel for chromatography R* (5 µm).

*Mobile phase*:

- *mobile phase A*: *0.067 M phosphate buffer solution pH 7.0 R*; filter and degas;
- *mobile phase B*: *acetonitrile for chromatography R*, mobile phase A (50:50 *V/V*); filter and degas.

| Time (min) | Mobile phase A (per cent *V/V*) | Mobile phase B (per cent *V/V*) |
|---|---|---|
| 0 - 4 | 76 | 24 |
| 4 - 18 | 76 → 58 | 24 → 42 |
| 18 - 35 | 58 → 48 | 42 → 52 |
| 35 - 40 | 48 → 76 | 52 → 24 |
| 40 - 50 | 76 | 24 |

*Flow rate*: 1.5 mL/min.

*Detection*: spectrophotometer at 220 nm.

*Injection*: 50 µL.

*Retention time*: desmopressin = about 16 min; oxytocin = about 17 min.

*System suitability*: resolution solution:

- *resolution*: minimum 1.5 between the peaks due to desmopressin and oxytoxin.

*Limits*:

- *unspecified impurities*: for each impurity, maximum 0.5 per cent;
- *total*: maximum 1.5 per cent;
- *disregard limit*: 0.05 per cent.

**Acetic acid** (*2.5.34*): 3.0 per cent to 8.0 per cent.

*Test solution.* Dissolve 20.0 mg of the substance to be examined in a mixture of 5 volumes of mobile phase B and 95 volumes of mobile phase A and dilute to 10.0 mL with the same mixture of mobile phases.

**Water** (*2.5.32*): maximum 6.0 per cent, determined on 20.0 mg.

**Bacterial endotoxins** (*2.6.14*): less than 500 IU/mg, if intended for use in the manufacture of parenteral preparations without a further appropriate procedure for the removal of bacterial endotoxins.

ASSAY

Liquid chromatography (*2.2.29*) as described in the test for related substances with the following modifications.

*Reference solution.* Dissolve the contents of a vial of *desmopressin CRS* in *water R* to obtain a concentration of 0.5 mg/mL.

*Mobile phase*: mobile phase B, mobile phase A (40:60 *V/V*).

*Flow rate*: 2.0 mL/min.

*Retention time*: desmopressin = about 5 min.

Calculate the content of desmopressin ($C_{46}H_{64}N_{14}O_{12}S_2$) from the declared content of $C_{46}H_{64}N_{14}O_{12}S_2$ in *desmopressin CRS*.

STORAGE

In an airtight container, protected from light, at a temperature of 2 °C to 8 °C. If the substance is sterile, store in a sterile, airtight, tamper-evident container.

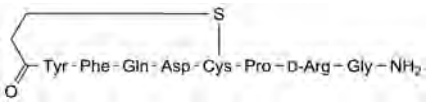
LABELLING

The label states:

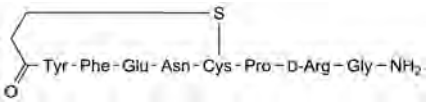
- the mass of peptide per container;
- where applicable, that the substance is suitable for use in the manufacture of parenteral preparations.

IMPURITIES

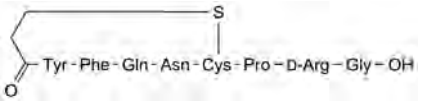
*Other detectable impurities* (the following substances would, if present at a sufficient level, be detected by one or other of the tests in the monograph. They are limited by the general acceptance criterion for other/unspecified impurities and/or by the general monograph *Substances for pharmaceutical use (2034)*. It is therefore not necessary to identify these impurities for demonstration of compliance. See also *5.10. Control of impurities in substances for pharmaceutical use*): *A, B, C, D, E, F, G*.



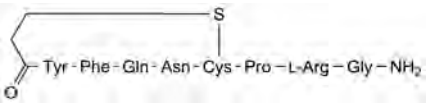
A. [5-L-aspartic acid]desmopressin,



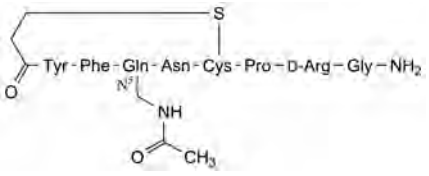
B. [4-L-glutamic acid]desmopressin,



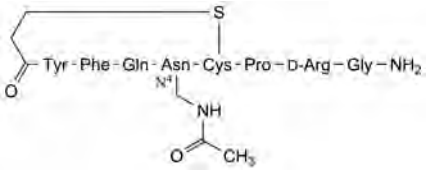
C. [9-glycine]desmopressin,



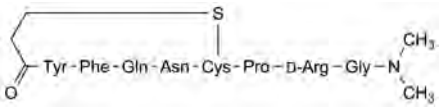
D. [8-L-arginine]desmopressin,



E. $N^{5.4}$-[(acetylamino)methyl]desmopressin,



F. $N^{4.5}$-[(acetylamino)methyl]desmopressin,

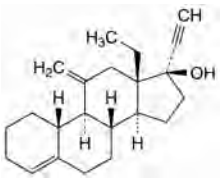


G. $N^{1.9}$,$N^{1.9}$-dimethyldesmopressin.

**01/2008:1717**

# DESOGESTREL

## Desogestrelum



$C_{22}H_{30}O$ $M_r$ 310.5
[54024-22-5]

DEFINITION

13-Ethyl-11-methylidene-18,19-dinor-17α-pregn-4-en-20-yn-17-ol.

*Content*: 98.0 per cent to 102.0 per cent (dried substance).

CHARACTERS

*Appearance*: white or almost white, crystalline powder.

*Solubility*: practically insoluble in water, very soluble in methanol, freely soluble in anhydrous ethanol and in methylene chloride.

IDENTIFICATION

A. Infrared absorption spectrophotometry (*2.2.24*).
*Comparison*: *desogestrel CRS*.

B. Specific optical rotation (see Tests).

TESTS

**Specific optical rotation** (*2.2.7*): + 53 to + 57 (dried substance).

Dissolve 0.250 g in *anhydrous ethanol R* and dilute to 25.0 mL with the same solvent.

**Related substances**. Liquid chromatography (*2.2.29*).

*Test solution.* Dissolve 20.0 mg of the substance to be examined in 25 mL of *acetonitrile R1* and dilute to 50.0 mL with *water R*.

*Reference solution (a).* Dissolve 4 mg of *desogestrel for system suitability CRS* (containing impurities A, B, C and D) in 5 mL of *acetonitrile R1* and dilute to 10.0 mL with *water R*.

*Reference solution (b).* Dilute 1.0 mL of the test solution to 100.0 mL with a mixture of equal volumes of *acetonitrile R1* and *water R*.

*Reference solution (c).* Dilute 1.0 mL of reference solution (b) to 10.0 mL with a mixture of equal volumes of *acetonitrile R1* and *water R*.

*Reference solution (d).* Dissolve 20.0 mg of *desogestrel CRS* in 25 mL of *acetonitrile R1* and dilute to 50.0 mL with *water R*.

*Column*:
- *size*: *l* = 0.25 m, Ø = 4.6 mm,
- *stationary phase*: sterically protected *octadecylsilyl silica gel for chromatography R* (5 µm),
- *temperature*: 50 °C.

*Mobile phase*: *water R*, *acetonitrile R1* (27:73 *V/V*).

*Flow rate*: 1.0 mL/min.

*Detection*: spectrophotometer at 205 nm.

*Injection*: 15 µL of the test solution and reference solutions (a), (b) and (c).

*Run time*: 2.5 times the retention time of desogestrel.

*Identification of impurities*: use the chromatogram supplied with *desogestrel for system suitability CRS* and the chromatogram obtained with reference solution (a) to identify the peaks due to impurities A, B, C and D.

*Relative retention* with reference to desogestrel (retention time = about 22 min): impurity E = about 0.2; impurity D = about 0.25; impurity B = about 0.7; impurity A = about 0.95; impurity C = about 1.05.

*System suitability*: reference solution (a):
- *peak-to-valley ratio*: minimum 2.0, where $H_p$ = height above the baseline of the peak due to impurity C and $H_v$ = height above the baseline of the lowest point of the curve separating this peak from the peak due to desogestrel.

*Limits*:
- *correction factors*: for the calculation of content, multiply the peak area of the following impurities by the corresponding correction factor: impurity A = 1.8, impurity D = 1.5;
- *impurities A, B, C*: for each impurity, not more than twice the area of the principal peak in the chromatogram obtained with reference solution (c) (0.2 per cent);
- *impurity D*: not more than the area of the principal peak in the chromatogram obtained with reference solution (c) (0.1 per cent);
- *unspecified impurities*: for each impurity, not more than the area of the principal peak in the chromatogram obtained with reference solution (c) (0.10 per cent);
- *total*: not more than 0.5 times the area of the principal peak in the chromatogram obtained with reference solution (b) (0.5 per cent);
- *disregard limit*: 0.5 times the area of the principal peak in the chromatogram obtained with reference solution (c) (0.05 per cent).

**Loss on drying** (*2.2.32*): maximum 0.5 per cent, determined on 1.000 g by drying *in vacuo* at a pressure not exceeding 2 kPa.

**Sulfated ash** (*2.4.14*): maximum 0.1 per cent, determined on 1.0 g.

ASSAY

Liquid chromatography (*2.2.29*) as described in the test for related substances with the following modification.

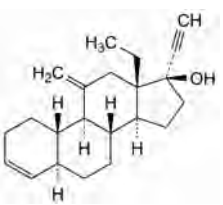
*Injection*: test solution and reference solution (d).

Calculate the percentage content of $C_{22}H_{30}O$ from the areas of the peaks and the declared content of *desogestrel CRS*.

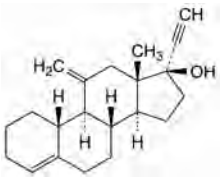
IMPURITIES

*Specified impurities: A, B, C, D.*

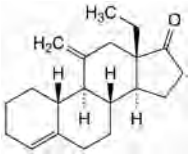
*Other detectable impurities* (the following substances would, if present at a sufficient level, be detected by one or other of the tests in the monograph. They are limited by the general acceptance criterion for other/unspecified impurities and/or by the general monograph *Substances for pharmaceutical use (2034)*. It is therefore not necessary to identify these impurities for demonstration of compliance. See also *5.10. Control of impurities in substances for pharmaceutical use*): *E.*



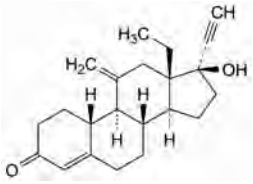
A. 13-ethyl-11-methylidene-18,19-dinor-5α,17α-pregn-3-en-20-yn-17-ol (desogestrel $\Delta^3$-isomer),



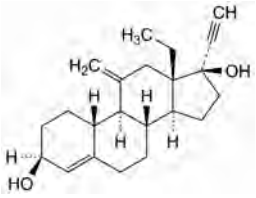
B. 11-methylidene-19-nor-17α-pregn-4-en-20-yn-17-ol,



C. 13-ethyl-11-methylidenegon-4-en-17-one,



D. 13-ethyl-17-hydroxy-11-methylidene-18,19-dinor-17α-pregn-4-en-20-yn-3-one,

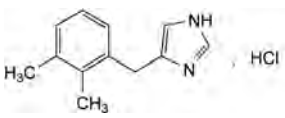


E. 13-ethyl-11-methylidene-18,19-dinor-17α-pregn-4-en-20-yne-3β,17-diol.

**04/2015:1414**
**corrected 10.0**

# DETOMIDINE HYDROCHLORIDE FOR VETERINARY USE

## Detomidini hydrochloridum ad usum veterinarium



$C_{12}H_{15}ClN_2$ $M_r$ 222.7
[90038-01-0]

DEFINITION

4-[(2,3-Dimethylphenyl)methyl]-1*H*-imidazole hydrochloride.

*Content*: 99.0 per cent to 101.0 per cent (anhydrous substance).

CHARACTERS

*Appearance*: white or almost white, hygroscopic, crystalline powder.

*Solubility*: soluble in water, freely soluble in ethanol (96 per cent), very slightly soluble in methylene chloride.

IDENTIFICATION

A. Infrared absorption spectrophotometry (*2.2.24*).
*Comparison*: *detomidine hydrochloride CRS*.
If the spectra obtained show differences, dry the substance to be examined and the reference substance separately in an oven at 105 °C and record new spectra.

B. It gives reaction (a) of chlorides (*2.3.1*).

TESTS

**Appearance of solution**. The solution is clear (*2.2.1*) and colourless (*2.2.2, Method II*).

Dissolve 0.25 g in *water R* and dilute to 25 mL with the same solvent.

**Related substances**. Liquid chromatography (*2.2.29*).

*Test solution*. Dissolve 25 mg of the substance to be examined in 20 mL of the mobile phase and dilute to 50.0 mL with the mobile phase.

*Reference solution (a)*. Dilute 0.20 mL of the test solution to 100.0 mL with the mobile phase.

*Reference solution (b)*. Dissolve 1 mg of *detomidine impurity B CRS* in the mobile phase and dilute to 100.0 mL with the mobile phase. Dilute 1.0 mL of the solution to 10.0 mL with reference solution (a).

*Column*:
- *size*: *l* = 0.15 m, Ø = 4.6 mm;
- *stationary phase*: *end-capped octylsilyl silica gel for chromatography R* (5 µm).

*Mobile phase*: *acetonitrile R1*, 2.64 g/L solution of *ammonium phosphate R* (35:65 *V/V*).

*Flow rate*: 1 mL/min.

*Detection*: spectrophotometer at 220 nm.

*Injection*: 20 µL.

*Run time*: 4 times the retention time of detomidine.

*Identification of impurities*: use the chromatogram obtained with reference solution (b) to identify the peak due to impurity B.

*Relative retention* with reference to detomidine (retention time = about 6 min): impurity B = about 2.1.

*System suitability*: reference solution (b):
- *resolution*: minimum 5.0 between the peaks due to detomidine and impurity B.

*Calculation of percentage contents*:
- for each impurity, use the concentration of detomidine hydrochloride in reference solution (a).

*Limits*:
- *unspecified impurities*: for each impurity, maximum 0.20 per cent;
- *total*: maximum 0.5 per cent;
- *reporting threshold*: 0.10 per cent.

**Water** (*2.5.12*): maximum 2.0 per cent, determined on 0.250 g.

**Sulfated ash** (*2.4.14*): maximum 0.1 per cent, determined on 1.0 g.

ASSAY

Dissolve 0.170 g in 50 mL of *ethanol (96 per cent) R*. Add 5.0 mL of *0.01 M hydrochloric acid*. Carry out a potentiometric titration (*2.2.20*), using *0.1 M sodium hydroxide*. Read the volume added between the 2 points of inflexion.

1 mL of *0.1 M sodium hydroxide* is equivalent to 22.27 mg of $C_{12}H_{15}ClN_2$.

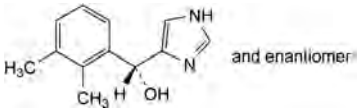
STORAGE

In an airtight container.

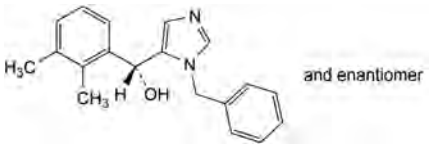
IMPURITIES

*Other detectable impurities* (the following substances would, if present at a sufficient level, be detected by one or other of the tests in the monograph. They are limited by the general acceptance criterion for other/unspecified impurities and/or by the general monograph *Substances for pharmaceutical use*

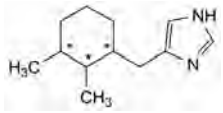
*(2034)*. It is therefore not necessary to identify these impurities for demonstration of compliance. See also *5.10. Control of impurities in substances for pharmaceutical use*): *A, B, C.*



A. (*RS*)-(2,3-dimethylphenyl)(1*H*-imidazol-4-yl)methanol,



B. (*RS*)-(1-benzyl-1*H*-imidazol-5-yl)(2,3-dimethylphenyl)-methanol,

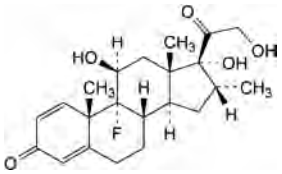


C. 4-[(2,3-dimethylcyclohexyl)methyl]-1*H*-imidazole.

**01/2014:0388**

# DEXAMETHASONE

## Dexamethasonum



$C_{22}H_{29}FO_5$ $M_r$ 392.5
[50-02-2]

DEFINITION

9-Fluoro-11β,17,21-trihydroxy-16α-methylpregna-1,4-diene-3,20-dione.

*Content*: 97.0 per cent to 103.0 per cent (dried substance).

CHARACTERS

*Appearance*: white or almost white, crystalline powder.

*Solubility*: practically insoluble in water, sparingly soluble in anhydrous ethanol, slightly soluble in methylene chloride.

IDENTIFICATION

*First identification: B, C.*

*Second identification: A, C, D, E.*

A. Dissolve 10.0 mg in *anhydrous ethanol R* and dilute to 100.0 mL with the same solvent. Place 2.0 mL of this solution in a stoppered test tube, add 10.0 mL of *phenylhydrazine-sulfuric acid solution R*, mix and heat in a water-bath at 60 °C for 20 min. Cool immediately. The absorbance (*2.2.25*) measured at the absorption maximum at 419 nm is not less than 0.4.

B. Infrared absorption spectrophotometry (*2.2.24*).
*Comparison*: *dexamethasone CRS.*

C. Thin-layer chromatography (*2.2.27*).
*Solvent mixture*: *methanol R*, *methylene chloride R* (1:9 *V/V*).
*Test solution.* Dissolve 10 mg of the substance to be examined in the solvent mixture and dilute to 10 mL with the solvent mixture.
*Reference solution (a).* Dissolve 20 mg of *dexamethasone CRS* in the solvent mixture and dilute to 20 mL with the solvent mixture.
*Reference solution (b).* Dissolve 10 mg of *betamethasone CRS* in reference solution (a) and dilute to 10 mL with reference solution (a).
*Plate*: *TLC silica gel $F_{254}$ plate R.*
*Mobile phase*: *butanol R* saturated with *water R*, *toluene R*, *ether R* (5:10:85 *V/V/V*).
*Application*: 5 µL.
*Development*: over 2/3 of the plate.
*Drying*: in air.
*Detection A*: examine in ultraviolet light at 254 nm.
*Results A*: the principal spot in the chromatogram obtained with the test solution is similar in position and size to the principal spot in the chromatogram obtained with reference solution (a).
*Detection B*: spray with *alcoholic solution of sulfuric acid R*. Heat at 120 °C for 10 min or until the spots appear. Allow to cool. Examine in daylight and in ultraviolet light at 365 nm.
*Results B*: the principal spot in the chromatogram obtained with the test solution is similar in position, colour in daylight, fluorescence in ultraviolet light at 365 nm and size to the principal spot in the chromatogram obtained with reference solution (a).
*System suitability*: reference solution (b):
– the chromatogram shows 2 spots which may, however, not be completely separated.

D. Add about 2 mg to 2 mL of *sulfuric acid R* and shake to dissolve. Within 5 min, a faint reddish-brown colour develops. Add this solution to 10 mL of *water R* and mix; the colour is discharged.

E. Mix about 5 mg with 45 mg of *heavy magnesium oxide R* and ignite in a crucible until an almost white residue is obtained (usually less than 5 min). Allow to cool, add 1 mL of *water R*, 0.05 mL of *phenolphthalein solution R1* and about 1 mL of *dilute hydrochloric acid R* to render the solution colourless. Filter. To a freshly prepared mixture of 0.1 mL of *alizarin S solution R* and 0.1 mL of *zirconyl nitrate solution R*, add 1.0 mL of the filtrate. Mix, allow to stand for 5 min and compare the colour of the solution with that of a blank prepared in the same manner. The test solution is yellow and the blank solution is red.

TESTS

**Specific optical rotation** (*2.2.7*): + 86 to + 92 (dried substance).

Dissolve 0.250 g in *anhydrous ethanol R* and dilute to 25.0 mL with the same solvent.

**Related substances**. Liquid chromatography (*2.2.29*). *Carry out the test protected from light.*

*Test solution.* Dissolve 25 mg of the substance to be examined in 1.5 mL of *acetonitrile R* and add 5 mL of mobile phase A. Sonicate until dissolution is complete and dilute to 10.0 mL with mobile phase A.

*Reference solution (a).* Dissolve 5 mg of *dexamethasone for system suitability CRS* (containing impurities B, F and G) in 0.5 mL of *acetonitrile R* and add 1 mL of mobile phase A. Sonicate until dissolution is complete and dilute to 2.0 mL with mobile phase A.

*Reference solution (b).* Dilute 1.0 mL of the test solution to 100.0 mL with mobile phase A. Dilute 1.0 mL of this solution to 10.0 mL with mobile phase A.

*Reference solution (c).* Dissolve 5 mg of *dexamethasone for peak identification CRS* (containing impurities J and K) in 0.5 mL of *acetonitrile R* and add 1 mL of mobile phase A. Sonicate until dissolution is complete and dilute to 2.0 mL with mobile phase A.

*Column*:

– *size*: *l* = 0.15 m, Ø = 4.6 mm;

– *stationary phase*: *end-capped octadecylsilyl silica gel for chromatography R* (5 µm);

– *temperature*: 45 °C.

*Mobile phase*:

– *mobile phase A*: mix 250 mL of *acetonitrile R* with 700 mL of *water R* and allow to equilibrate; dilute to 1000.0 mL with *water R* and mix again;

– *mobile phase B*: *acetonitrile R*;

| Time (min) | Mobile phase A (per cent *V/V*) | Mobile phase B (per cent *V/V*) |
|---|---|---|
| 0 - 15 | 100 | 0 |
| 15 - 40 | 100 → 0 | 0 → 100 |

*Flow rate*: 1.2 mL/min.

*Detection*: spectrophotometer at 254 nm.

*Injection*: 20 µL; inject mobile phase A as a blank.

*Identification of impurities*: use the chromatogram supplied with *dexamethasone for system suitability CRS* and the chromatogram obtained with reference solution (a) to identify the peaks due to impurities B, F and G; use the chromatogram supplied with *dexamethasone for peak identification CRS* and the chromatogram obtained with reference solution (c) to identify the peaks due to impurities J and K.

*Relative retention* with reference to dexamethasone (retention time = about 15 min): impurity J = about 0.90; impurity B = about 0.94; impurity K = about 1.3; impurity F = about 1.5; impurity G = about 1.7.

*System suitability*: reference solution (a):

– *peak-to-valley ratio*: minimum 2.0, where $H_p$ = height above the baseline of the peak due to impurity B and $H_v$ = height above the baseline of the lowest point of the curve separating this peak from the peak due to dexamethasone.

*Limits*:

– *impurity G*: not more than 3 times the area of the principal peak in the chromatogram obtained with reference solution (b) (0.3 per cent);

– *impurities B, F, J, K*: for each impurity, not more than 1.5 times the area of the principal peak in the chromatogram obtained with reference solution (b) (0.15 per cent);

– *unspecified impurities*: for each impurity, not more than the area of the principal peak in the chromatogram obtained with reference solution (b) (0.10 per cent);

– *total*: not more than 5 times the area of the principal peak in the chromatogram obtained with reference solution (b) (0.5 per cent);

– *disregard limit*: 0.5 times the area of the principal peak in the chromatogram obtained with reference solution (b) (0.05 per cent).

**Loss on drying** (*2.2.32*): maximum 0.5 per cent, determined on 0.500 g by drying in an oven at 105 °C.

ASSAY

Dissolve 0.100 g in *ethanol (96 per cent) R* and dilute to 100.0 mL with the same solvent. Dilute 2.0 mL of this solution to 100.0 mL with *ethanol (96 per cent) R*. Measure the absorbance (*2.2.25*) at the absorption maximum at 238.5 nm.

Calculate the content of $C_{22}H_{29}FO_5$ taking the specific absorbance to be 394.

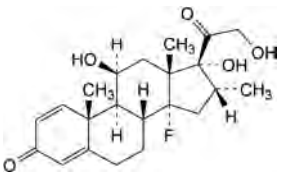
STORAGE

Protected from light.

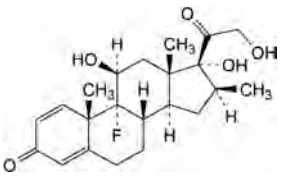
IMPURITIES

*Specified impurities: B, F, G, J, K.*

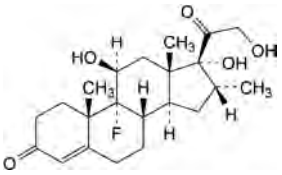
*Other detectable impurities* (the following substances would, if present at a sufficient level, be detected by one or other of the tests in the monograph. They are limited by the general acceptance criterion for other/unspecified impurities and/or by the general monograph *Substances for pharmaceutical use (2034)*. It is therefore not necessary to identify these impurities for demonstration of compliance. See also *5.10. Control of impurities in substances for pharmaceutical use*): *A, C, D, E, H, I.*



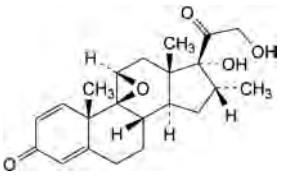
A. 14-fluoro-11β,17,21-trihydroxy-16α-methylpregna-1,4-diene-3,20-dione,



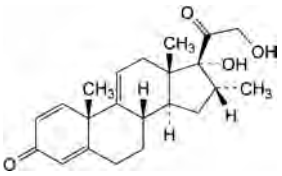
B. 9-fluoro-11β,17,21-trihydroxy-16β-methylpregna-1,4-diene-3,20-dione (betamethasone),



C. 9-fluoro-11β,17,21-trihydroxy-16α-methylpregn-4-ene-3,20-dione,



D. 9β,11β-epoxy-17,21-dihydroxy-16α-methylpregna-1,4-diene-3,20-dione,



E. 17,21-dihydroxy-16α-methylpregna-1,4,9(11)-triene-3,20-dione,

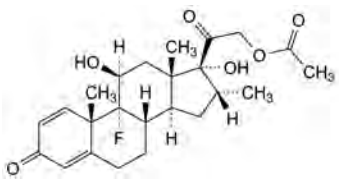
K. 17,21-dihydroxy-16α-methylpregna-1,4,7,9(11)-tetraene-3,20-dione.

**01/2017:0548**

# DEXAMETHASONE ACETATE

## Dexamethasoni acetas



$C_{24}H_{31}FO_6$ $M_r$ 434.5
[1177-87-3]

DEFINITION

9-Fluoro-11β,17-dihydroxy-16α-methyl-3,20-dioxopregna-1,4-dien-21-yl acetate.

*Content*: 97.5 per cent to 102.0 per cent (dried substance).

CHARACTERS

*Appearance*: white or almost white, crystalline powder.

*Solubility*: practically insoluble in water, freely soluble in ethanol (96 per cent), slightly soluble in methylene chloride.

It shows polymorphism (*5.9*).

IDENTIFICATION

*First identification: B, G.*

*Second identification: A, C, D, E, F.*

A. Dissolve 10.0 mg in *anhydrous ethanol R* and dilute to 100.0 mL with the same solvent. Place 2.0 mL of this solution in a ground-glass-stoppered tube, add 10.0 mL of *phenylhydrazine-sulfuric acid solution R*, mix and heat in a water-bath at 60 °C for 20 min. Cool immediately. The absorbance (*2.2.25*) measured at the absorption maximum at 419 nm is not less than 0.35.

B. Infrared absorption spectrophotometry (*2.2.24*).

*Comparison*: *dexamethasone acetate CRS*.

If the spectra obtained in the solid state show differences, dissolve the substance to be examined and the reference substance separately in *methylene chloride R*, evaporate to dryness and record new spectra using the residues.

C. Thin-layer chromatography (*2.2.27*).

*Solvent mixture*: *methanol R*, *methylene chloride R* (1:9 *V/V*).

*Test solution*. Dissolve 10 mg of the substance to be examined in the solvent mixture and dilute to 10 mL with the solvent mixture.

*Reference solution (a)*. Dissolve 20 mg of *dexamethasone acetate CRS* in the solvent mixture and dilute to 20 mL with the solvent mixture.

*Reference solution (b)*. Dissolve 10 mg of *cortisone acetate R* in reference solution (a) and dilute to 10 mL with reference solution (a).

*Plate*: *TLC silica gel $F_{254}$ plate R*.

*Mobile phase*: add a mixture of 1.2 volumes of *water R* and 8 volumes of *methanol R* to a mixture of 15 volumes of *ether R* and 77 volumes of *methylene chloride R*.

*Application*: 5 µL.

*Development*: over 3/4 of the plate.

*Drying*: in air.

*Detection A*: examine in ultraviolet light at 254 nm.

*Results A*: the principal spot in the chromatogram obtained with the test solution is similar in position and size to the principal spot in the chromatogram obtained with reference solution (a).

*Detection B*: spray with *alcoholic solution of sulfuric acid R*, heat at 120 °C for 10 min or until the spots appear, and allow to cool; examine in daylight and in ultraviolet light at 365 nm.

*Results B*: the principal spot in the chromatogram obtained with the test solution is similar in position, colour in daylight, fluorescence in ultraviolet light at 365 nm and size to the principal spot in the chromatogram obtained with reference solution (a).

*System suitability*: reference solution (b):

– the chromatogram shows 2 clearly separated spots.

D. Add about 2 mg to 2 mL of *sulfuric acid R* and shake to dissolve. Within 5 min, a faint reddish-brown colour develops. Add this solution to 10 mL of *water R* and mix. The colour is discharged and a clear solution remains.

E. Mix about 5 mg with 45 mg of *heavy magnesium oxide R* and ignite in a crucible until an almost white residue is obtained (usually less than 5 min). Allow to cool, add 1 mL of *water R*, 0.05 mL of *phenolphthalein solution R1* and about 1 mL of *dilute hydrochloric acid R* to render the solution colourless. Filter. To a freshly prepared mixture of 0.1 mL of *alizarin S solution R* and 0.1 mL of *zirconyl*

*nitrate solution R*, add 1.0 mL of the filtrate. Mix, allow to stand for 5 min and compare the colour of the solution with that of a blank prepared in the same manner. The test solution is yellow and the blank is red.

F. About 10 mg gives the reaction of acetyl (*2.3.1*).

G. Examine the chromatograms obtained in the assay.

*Results*: the principal peak in the chromatogram obtained with test solution (b) is similar in retention time and size to the principal peak in the chromatogram obtained with reference solution (e).

TESTS

**Specific optical rotation** (*2.2.7*): + 94 to + 99 (dried substance).

Dissolve 0.250 g in *anhydrous ethanol R* and dilute to 25.0 mL with the same solvent.

**Related substances**. Liquid chromatography (*2.2.29*). *Carry out the test protected from light.*

*Test solution (a).* Dissolve 25.0 mg of the substance to be examined in about 4 mL of *acetonitrile R* and dilute to 10.0 mL with *water for chromatography R*.

*Test solution (b).* Dilute 1.0 mL of test solution (a) to 5.0 mL with the mobile phase.

*Reference solution (a).* Dissolve 2 mg of *dexamethasone CRS* (impurity A) and 2 mg of *betamethasone acetate CRS* (impurity D) in the mobile phase, using sonication for about 10 min, and dilute to 100.0 mL with the mobile phase. Mix 1.0 mL of this solution and 6.0 mL of test solution (a) and dilute to 10.0 mL with the mobile phase.

*Reference solution (b).* Dilute 1.0 mL of test solution (a) to 100.0 mL with the mobile phase. Dilute 1.0 mL of this solution to 10.0 mL with the mobile phase.

*Reference solution (c).* Dissolve the contents of a vial of *dexamethasone acetate impurity E CRS* in 1.0 mL of the mobile phase.

*Reference solution (d).* Dissolve 5 mg of *dexamethasone acetate for peak identification CRS* (containing impurity I) in about 0.8 mL of *acetonitrile R* and dilute to 2.0 mL with *water for chromatography R*.

*Reference solution (e).* Dissolve 25.0 mg of *dexamethasone acetate CRS* in about 4 mL of *acetonitrile R* and dilute to 10.0 mL with *water for chromatography R*. Dilute 1.0 mL of the solution to 5.0 mL with the mobile phase.

*Column*:

- *size*: *l* = 0.25 m, Ø = 4.6 mm;
- *stationary phase*: *end-capped octadecylsilyl silica gel for chromatography R* (5 µm).

*Mobile phase*: mix 380 mL of *acetonitrile R* and 550 mL of *water for chromatography R* and allow to equilibrate; dilute to 1000 mL with *water for chromatography R* and mix again.

*Flow rate*: 1 mL/min.

*Detection*: spectrophotometer at 254 nm.

*Injection*: 20 µL of test solution (a) and reference solutions (a), (b), (c) and (d).

*Run time*: 2.5 times the retention time of dexamethasone acetate.

*Identification of impurities*: use the chromatogram obtained with reference solution (a) to identify the peaks due to impurities A and D; use the chromatogram obtained with reference solution (c) to identify the peak due to impurity E; use the chromatogram supplied with *dexamethasone acetate for peak identification CRS* and the chromatogram obtained with reference solution (d) to identify the peak due to impurity I.

*Relative retention* with reference to dexamethasone acetate (retention time = about 22 min): impurity A = about 0.4; impurity D = about 0.9; impurity E = about 1.2; impurity I = about 1.4.

*System suitability*: reference solution (a):

- *resolution*: minimum 3.3 between the peaks due to impurity D and dexamethasone acetate.

*Limits*:

- *impurity I*: not more than 4 times the area of the principal peak in the chromatogram obtained with reference solution (b) (0.4 per cent);
- *impurity D*: not more than 3 times the area of the principal peak in the chromatogram obtained with reference solution (b) (0.3 per cent);
- *impurities A, E*: for each impurity, not more than twice the area of the principal peak in the chromatogram obtained with reference solution (b) (0.2 per cent);
- *unspecified impurities*: for each impurity, not more than the area of the principal peak in the chromatogram obtained with reference solution (b) (0.10 per cent);
- *total*: not more than 5 times the area of the principal peak in the chromatogram obtained with reference solution (b) (0.5 per cent);
- *disregard limit*: 0.5 times the area of the principal peak in the chromatogram obtained with reference solution (b) (0.05 per cent).

**Loss on drying** (*2.2.32*): maximum 0.5 per cent, determined on 1.000 g by drying *in vacuo* in an oven at 105 °C.

ASSAY

*Carry out the test protected from light.*

Liquid chromatography (*2.2.29*) as described in the test for related substances with the following modifications.

*Mobile phase*: *acetonitrile R*, *water for chromatography R* (45:55 *V/V*).

*Injection*: test solution (b) and reference solution (e).

*Run time*: 1.5 times the retention time of dexamethasone acetate.

*Retention time*: dexamethasone acetate = about 13 min.

Calculate the percentage content of $C_{24}H_{31}FO_6$ taking into account the assigned content of *dexamethasone acetate CRS*.

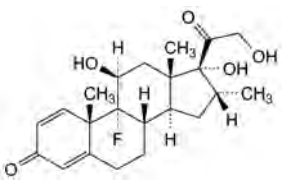
STORAGE

Protected from light.

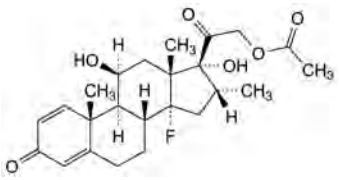
IMPURITIES

*Specified impurities: A, D, E, I.*

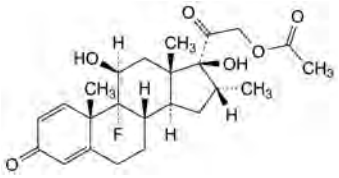
*Other detectable impurities* (the following substances would, if present at a sufficient level, be detected by one or other of the tests in the monograph. They are limited by the general acceptance criterion for other/unspecified impurities and/or by the general monograph *Substances for pharmaceutical use (2034)*. It is therefore not necessary to identify these impurities for demonstration of compliance. See also *5.10. Control of impurities in substances for pharmaceutical use*): *B, C, F, G, H.*



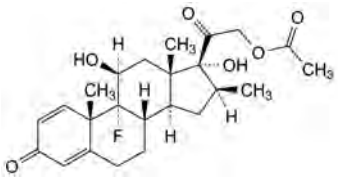
A. 9-fluoro-11β,17,21-trihydroxy-16α-methylpregna-1,4-diene-3,20-dione (dexamethasone),



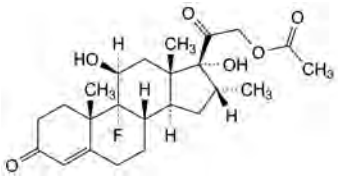
B. 14-fluoro-11β,17-dihydroxy-16α-methyl-3,20-dioxopregna-1,4-dien-21-yl acetate,



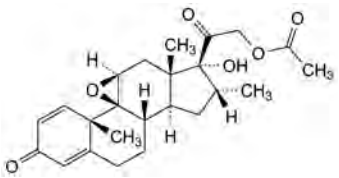
C. 9-fluoro-11β,17-dihydroxy-16α-methyl-3,20-dioxo-17α-pregna-1,4-dien-21-yl acetate,



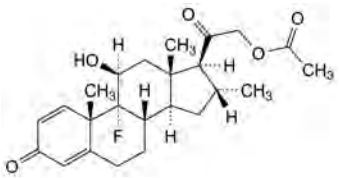
D. 9-fluoro-11β,17-dihydroxy-16β-methyl-3,20-dioxopregna-1,4-dien-21-yl acetate (betamethasone acetate),



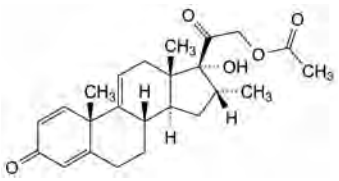
E. 9-fluoro-11β,17-dihydroxy-16α-methyl-3,20-dioxopregn-4-en-21-yl acetate,



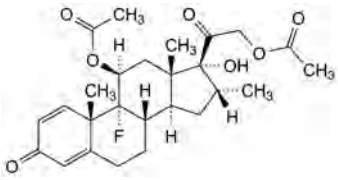
F. 9β,11β-epoxy-17-hydroxy-16α-methyl-3,20-dioxopregna-1,4-dien-21-yl acetate,



G. 9-fluoro-11β-hydroxy-16α-methyl-3,20-dioxopregna-1,4-dien-21-yl acetate,



H. 17-hydroxy-16α-methyl-3,20-dioxopregna-1,4,9(11)-trien-21-yl acetate,

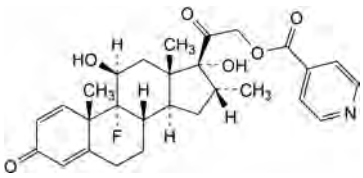


I. 9-fluoro-17-hydroxy-16α-methyl-3,20-dioxopregna-1,4-diene-11β,21-diyl diacetate (dexamethasone 11,21-diacetate).

**01/2008:2237**

# DEXAMETHASONE ISONICOTINATE

## Dexamethasoni isonicotinas



$C_{28}H_{32}FNO_6$ $M_r$ 497.6

[2265-64-7]

DEFINITION

9-Fluoro-11β,17-dihydroxy-16α-methyl-3,20-dioxopregna-1,4-dien-21-yl pyridine-4-carboxylate.

*Content*: 99.0 per cent to 101.0 per cent (dried substance).

CHARACTERS

*Appearance*: white or almost white crystalline powder.

*Solubility*: practically insoluble in water, slightly soluble in anhydrous ethanol and in acetone.

IDENTIFICATION

Infrared absorption spectrophotometry (*2.2.24*).

*Comparison*: *dexamethasone isonicotinate CRS*.

TESTS

**Specific optical rotation** (*2.2.7*): + 142 to + 146 (dried substance).

Suspend 0.200 g in 4.0 mL of *ethyl acetate R* and dilute to 20.0 mL with *ethanol (96 per cent) R*. Treat in an ultrasonic bath until a clear solution is obtained.

**Related substances**. Liquid chromatography (*2.2.29*). *Prepare solutions immediately before use.*

*Test solution.* Suspend 50.0 mg in 7 mL of *acetonitrile R* and dilute to 10.0 mL with *water R*. Treat in an ultrasonic bath until a clear solution is obtained.

*Reference solution (a).* Suspend 5.0 mg of *dexamethasone CRS* and 5.0 mg of *dexamethasone acetate CRS* in 70 mL of *acetonitrile R*, add 1.0 mL of the test solution and dilute to 100.0 mL with *water R*. Treat in an ultrasonic bath until a clear solution is obtained.

*Reference solution (b).* Dilute 1.0 mL of reference solution (a) to 10.0 mL with *water R*.

*Reference solution (c).* Suspend 5 mg of *dexamethasone isonicotinate for impurity C identification CRS* in 0.7 mL of *acetonitrile R* and dilute to 1 mL with *water R*. Treat in an ultrasonic bath until a clear solution is obtained.

*Column*:

– *size*: *l* = 0.125 m, Ø = 4.0 mm,
– *stationary phase*: *octadecylsilyl silica gel for chromatography R* (5 µm).

*Mobile phase*:
- *mobile phase A*: *water R*,
- *mobile phase B*: *acetonitrile R*,

| Time (min) | Mobile phase A (per cent *V/V*) | Mobile phase B (per cent *V/V*) |
|---|---|---|
| 0 - 2 | 68 | 32 |
| 2 - 20 | 68 → 50 | 32 → 50 |
| 20 - 25 | 50 → 68 | 50 → 32 |
| 25 - 35 | 68 | 32 |

*Flow rate*: 1.2 mL/min.

*Detection*: spectrophotometer at 240 nm.

*Injection*: 10 µL.

*Identification of impurities*: use the chromatogram supplied with *dexamethasone isonicotinate for impurity C identification CRS* and the chromatogram obtained with reference solution (c) to identify the peak due to impurity C.

*Relative retention* with reference to dexamethasone isonicotinate (retention time = about 12 min): impurity A = about 0.4; impurity C = about 0.6; impurity B = about 0.8.

*System suitability*: reference solution (a):
- *resolution*: minimum 5.0 between the peaks due to impurity B and dexamethasone isonicotinate.

*Limits*:
- *impurity A*: not more than 5 times the area of the corresponding peak in the chromatogram obtained with reference solution (b) (0.5 per cent),
- *impurity B*: not more than 3 times the area of the corresponding peak in the chromatogram obtained with reference solution (b) (0.3 per cent),
- *impurity C*: not more than 3 times the area of the peak due to dexamethasone isonicotinate in the chromatogram obtained with reference solution (b) (0.3 per cent),
- *unspecified impurities*: for each impurity, not more than the area of the peak due to dexamethasone isonicotinate in the chromatogram obtained with reference solution (b) (0.1 per cent),
- *total*: not more than 8 times the area of the peak due to dexamethasone isonicotinate in the chromatogram obtained with reference solution (b) (0.8 per cent),
- *disregard limit*: 0.5 times the area of the peak due to dexamethasone isonicotinate in the chromatogram obtained with reference solution (b) (0.05 per cent).

**Loss on drying** (*2.2.32*): maximum 1.0 per cent, determined on 1.000 g by drying in an oven at 102 °C under high vacuum for 4 h.

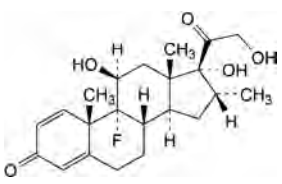
ASSAY

Dissolve 0.400 g in a mixture of 5 mL of *anhydrous formic acid R* and 50 mL of *glacial acetic acid R*. Titrate with *0.1 M perchloric acid*, determining the end-point potentiometrically (*2.2.20*).

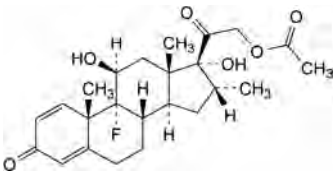
1 mL of *0.1 M perchloric acid* is equivalent to 49.76 mg of $C_{28}H_{32}FNO_6$.

IMPURITIES

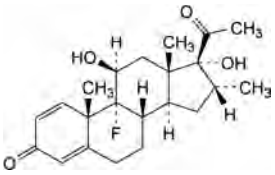
*Specified impurities: A, B, C.*



A. 9-fluoro-11β,17,21-trihydroxy-16α-methylpregna-1,4-diene-3,20-dione (dexamethasone),



B. 9-fluoro-11β,17-dihydroxy-16α-methyl-3,20-dioxopregna-1,4-dien-21-yl acetate (dexamethasone acetate),

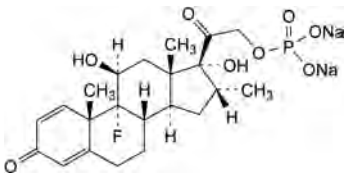


C. 9-fluoro-11β,17-dihydroxy-16α-methylpregna-1,4-diene-3,20-dione (21-deoxydexamethasone).

**04/2014:0549**

# DEXAMETHASONE SODIUM PHOSPHATE

## Dexamethasoni natrii phosphas



$C_{22}H_{28}FNa_2O_8P$ $M_r$ 516.4
[2392-39-4]

DEFINITION

9-Fluoro-11β,17-dihydroxy-16α-methyl-3,20-dioxopregna-1,4-dien-21-yl disodium phosphate.

*Content*: 97.0 per cent to 102.0 per cent (anhydrous substance).

CHARACTERS

*Appearance*: white or almost white, very hygroscopic powder.

*Solubility*: freely soluble in water, slightly soluble in ethanol (96 per cent), practically insoluble in methylene chloride.

It shows polymorphism (*5.9*).

IDENTIFICATION

*First identification: B, G.*

*Second identification: A, C, D, E, F.*

A. Dissolve 10.0 mg in 5 mL of *water R* and dilute to 100.0 mL with *anhydrous ethanol R*. Place 2.0 mL of this solution in a ground-glass-stoppered tube, add 10.0 mL of *phenylhydrazine-sulfuric acid solution R*, mix and heat in a water-bath at 60 °C for 20 min. Cool immediately. The absorbance (*2.2.25*) measured at the absorption maximum at 419 nm is at least 0.20.

B. Infrared absorption spectrophotometry (*2.2.24*).

*Comparison*: *dexamethasone sodium phosphate CRS.*

If the spectra obtained in the solid state show differences, dissolve the substance to be examined and the reference substance separately in the minimum volume of *ethanol (96 per cent) R*, evaporate to dryness on a water-bath and record new spectra using the residues.

C. Thin-layer chromatography (*2.2.27*).

*Test solution*. Dissolve 10 mg of the substance to be examined in *methanol R* and dilute to 10 mL with the same solvent.

*Reference solution (a)*. Dissolve 20 mg of *dexamethasone sodium phosphate CRS* in *methanol R* and dilute to 20 mL with the same solvent.

*Reference solution (b)*. Dissolve 10 mg of *prednisolone sodium phosphate CRS* in reference solution (a) and dilute to 10 mL with reference solution (a).

*Plate*: *TLC silica gel $F_{254}$ plate R*.

*Mobile phase*: *glacial acetic acid R*, *water R*, *butanol R* (20:20:60 *V/V/V*).

*Application*: 5 µL.

*Development*: over 3/4 of the plate.

*Drying*: in air.

*Detection A*: examine in ultraviolet light at 254 nm.

*Results A*: the principal spot in the chromatogram obtained with the test solution is similar in position and size to the principal spot in the chromatogram obtained with reference solution (a).

*Detection B*: spray with *alcoholic solution of sulfuric acid R*, heat at 120 °C for 10 min or until the spots appear, and allow to cool; examine in daylight and in ultraviolet light at 365 nm.

*Results B*: the principal spot in the chromatogram obtained with the test solution is similar in position, colour in daylight, fluorescence in ultraviolet light at 365 nm and size to the principal spot in the chromatogram obtained with reference solution (a).

*System suitability*: reference solution (b):

– the chromatogram shows 2 spots which may, however, not be completely separated.

D. Add about 2 mg to 2 mL of *sulfuric acid R* and shake to dissolve. Within 5 min, a faint yellowish-brown colour develops. Add this solution to 10 mL of *water R* and mix. The colour fades and a clear solution remains.

E. Mix about 5 mg with 45 mg of *heavy magnesium oxide R* and ignite in a crucible until an almost white residue is obtained (usually less than 5 min). Allow to cool, add 1 mL of *water R*, 0.05 mL of *phenolphthalein solution R1* and about 1 mL of *dilute hydrochloric acid R* to render the solution colourless. Filter. To a freshly prepared mixture of 0.1 mL of *alizarin S solution R* and 0.1 mL of *zirconyl nitrate solution R*, add 1.0 mL of the filtrate. Mix, allow to stand for 5 min and compare the colour of the solution with that of a blank prepared in the same manner. The test solution is yellow and the blank is red.

F. To 40 mg add 2 mL of *sulfuric acid R* and heat gently until white fumes are evolved, add *nitric acid R* dropwise, continue the heating until the solution is almost colourless and cool. Add 2 mL of *water R*, heat until white fumes are again evolved, cool, add 10 mL of *water R* and neutralise to *red litmus paper R* with *dilute ammonia R1*. The solution gives reaction (a) of sodium (*2.3.1*) and reaction (b) of phosphates (*2.3.1*).

G. Examine the chromatograms obtained in the assay.

*Results*: the principal peak in the chromatogram obtained with the test solution is similar in retention time and size to the principal peak in the chromatogram obtained with reference solution (b).

TESTS

**Solution S**. Dissolve 1.0 g in *carbon dioxide-free water R* and dilute to 20 mL with the same solvent.

**Appearance of solution**. Solution S is clear (*2.2.1*) and not more intensely coloured than reference solution $B_7$ (*2.2.2, Method II*).

**pH** (*2.2.3*): 7.5 to 9.5.

Dilute 1 mL of solution S to 5 mL with *carbon dioxide-free water R*.

**Specific optical rotation** (*2.2.7*): + 75 to + 83 (anhydrous substance).

Dissolve 0.250 g in *water R* and dilute to 25.0 mL with the same solvent.

**Related substances**. Liquid chromatography (*2.2.29*).

*Solution A*. Dissolve 7.0 g of *ammonium acetate R* in 1000 mL of *water R*.

*Test solution*. Dissolve 10 mg of the substance to be examined in mobile phase A and dilute to 10.0 mL with mobile phase A.

*Reference solution (a)*. Dissolve 2 mg of *betamethasone sodium phosphate CRS* (impurity B) and 2 mg of *dexamethasone sodium phosphate CRS* in mobile phase A, then dilute to 100.0 mL with mobile phase A.

*Reference solution (b)*. Dissolve 2 mg of *dexamethasone sodium phosphate for peak identification CRS* (containing impurities A, C, D, E, F and G) in mobile phase A and dilute to 2.0 mL with mobile phase A.

*Reference solution (c)*. Dilute 1.0 mL of the test solution to 100.0 mL with mobile phase A. Dilute 1.0 mL of this solution to 10.0 mL with mobile phase A.

*Column*:

– *size*: *l* = 0.125 m, Ø = 4.6 mm;
– *stationary phase*: *end-capped octylsilyl silica gel for chromatography R* (5 µm);
– *temperature*: 30 °C.

*Mobile phase*:

– *mobile phase A*: mix 300 mL of solution A and 350 mL of *water R*, adjust to pH 3.8 with *acetic acid R*, then add 350 mL of *methanol R*;
– *mobile phase B*: adjust 300 mL of solution A to pH 4.0 with *acetic acid R*, then add 700 mL of *methanol R*;

| Time (min) | Mobile phase A (per cent *V/V*) | Mobile phase B (per cent *V/V*) |
|---|---|---|
| 0 - 3.5 | 90 | 10 |
| 3.5 - 23.5 | 90 → 60 | 10 → 40 |
| 23.5 - 34.5 | 60 → 5 | 40 → 95 |
| 34.5 - 50 | 5 | 95 |

*Flow rate*: 1.0 mL/min.

*Detection*: spectrophotometer at 254 nm.

*Injection*: 20 µL.

*Identification of impurities*: use the chromatogram supplied with *dexamethasone sodium phosphate for peak identification CRS* and the chromatogram obtained with reference solution (b) to identify the peaks due to impurities A, C, D, E, F and G; use the chromatogram obtained with reference solution (a) to identify the peak due to impurity B.

*Relative retention* with reference to dexamethasone sodium phosphate (retention time = about 22 min): impurity C = about 0.5; impurity D = about 0.6; impurity E = about 0.8; impurity F = about 0.92; impurity B = about 0.95; impurity A = about 1.37; impurity G = about 1.41.

*System suitability*: reference solution (a):

– *resolution*: minimum 2.0 between the peaks due to impurity B and dexamethasone sodium phosphate.

*Limits*:

– *correction factor*: for the calculation of content, multiply the peak area of impurity A by 0.75;
– *impurity A*: not more than 5 times the area of the principal peak in the chromatogram obtained with reference solution (c) (0.5 per cent);

- *impurity G*: not more than 3 times the area of the principal peak in the chromatogram obtained with reference solution (c) (0.3 per cent);
- *impurities B, C, D, E, F*: for each impurity, not more than twice the area of the principal peak in the chromatogram obtained with reference solution (c) (0.2 per cent);
- *unspecified impurities*: for each impurity, not more than the area of the principal peak in the chromatogram obtained with reference solution (c) (0.10 per cent);
- *total*: not more than 10 times the area of the principal peak in the chromatogram obtained with reference solution (c) (1.0 per cent);
- *disregard limit*: 0.5 times the area of the principal peak in the chromatogram obtained with reference solution (c) (0.05 per cent).

**Inorganic phosphates**: maximum 1 per cent.

Dissolve 50 mg in *water R* and dilute to 100 mL with the same solvent. To 10 mL of this solution add 5 mL of *molybdovanadic reagent R*, mix and allow to stand for 5 min. Any yellow colour in the solution is not more intense than that in a standard prepared at the same time in the same manner using 10 mL of *phosphate standard solution (5 ppm $PO_4$) R*.

**Ethanol** (*2.4.24, System A*): maximum 1.5 per cent.

**Water** (*2.5.12*): maximum 10.0 per cent, determined on 0.200 g.

ASSAY

Liquid chromatography (*2.2.29*).

*Test solution.* Dissolve 30.0 mg of the substance to be examined in the mobile phase and dilute to 50.0 mL with the mobile phase. Dilute 5.0 mL of the solution to 50.0 mL with the mobile phase.

*Reference solution (a).* Dissolve 2 mg of *dexamethasone CRS* (impurity A) and 2 mg of *dexamethasone sodium phosphate CRS* in 2 mL of *tetrahydrofuran R*, then dilute to 100.0 mL with the mobile phase. Dilute 5.0 mL of this solution to 50.0 mL with the mobile phase.

*Reference solution (b).* Dissolve 30.0 mg of *dexamethasone sodium phosphate CRS* in the mobile phase and dilute to 50.0 mL with the mobile phase. Dilute 5.0 mL of the solution to 50.0 mL with the mobile phase.

*Column*:

- *size*: *l* = 0.15 m, Ø = 4.6 mm;
- *stationary phase*: *end-capped octadecylsilyl silica gel for chromatography R* (7 µm).

*Mobile phase*: mix 520 mL of *water R* with 2 mL of *phosphoric acid R*. Adjust the temperature to 20 °C, then adjust to pH 2.6 with *sodium hydroxide R*. Mix this solution with 36 mL of *tetrahydrofuran R* and 364 mL of *methanol R*.

*Flow rate*: 1.5 mL/min.

*Detection*: spectrophotometer at 254 nm.

*Injection*: 20 µL.

*Run time*: 3 times the retention time of dexamethasone sodium phosphate.

*Identification of impurities*: use the chromatogram obtained with reference solution (a) to identify the peak due to impurity A.

*Relative retention* with reference to dexamethasone sodium phosphate (retention time = about 8 min): impurity A = about 2.0.

*System suitability*: reference solution (a):

- *resolution*: minimum 6.0 between the peaks due to dexamethasone sodium phosphate and impurity A.

Calculate the percentage content of $C_{22}H_{28}FNa_2O_8P$ using the chromatogram obtained with reference solution (b) and taking into account the assigned content of *dexamethasone sodium phosphate CRS*.

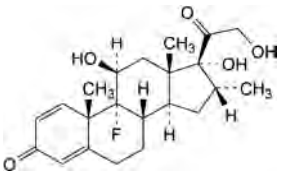
STORAGE

In an airtight container, protected from light.

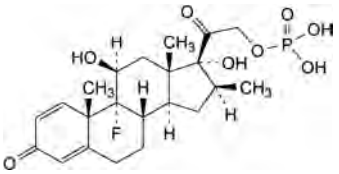
IMPURITIES

*Specified impurities: A, B, C, D, E, F, G.*

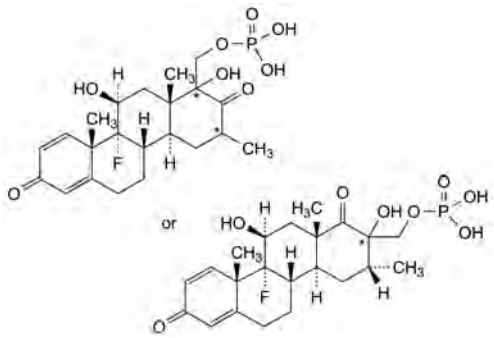
*Other detectable impurities* (the following substances would, if present at a sufficient level, be detected by one or other of the tests in the monograph. They are limited by the general acceptance criterion for other/unspecified impurities and/or by the general monograph *Substances for pharmaceutical use (2034)*. It is therefore not necessary to identify these impurities for demonstration of compliance. See also *5.10. Control of impurities in substances for pharmaceutical use*): *H.*



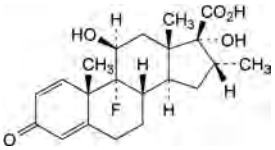
A. 9-fluoro-11β,17,21-trihydroxy-16α-methylpregna-1,4-diene-3,20-dione (dexamethasone),



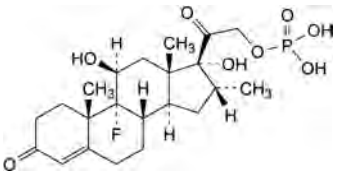
B. 9-fluoro-11β,17-dihydroxy-16β-methyl-3,20-dioxopregna-1,4-dien-21-yl dihydrogen phosphate (betamethasone phosphate),



C, D, E, F. for each impurity, one or more diastereoisomer(s) of (9-fluoro-11β,17a-dihydroxy-16-methyl-3,17-dioxo-*D*-homo-androsta-1,4-dien-17a-yl)methyl dihydrogen phosphate (undefined stereochemistry at C-16 and C-17a), or (9-fluoro-11β,17-dihydroxy-16α-methyl-3,17a-dioxo-*D*-homo-androsta-1,4-dien-17-yl)methyl dihydrogen phosphate (undefined stereochemistry at C-17),



G. 9-fluoro-11β,17-dihydroxy-16α-methyl-3-oxoandrosta-1,4-diene-17β-carboxylic acid,



H. 9-fluoro-11β,17-dihydroxy-16α-methyl-3,20-dioxopregn-4-en-21-yl dihydrogen phosphate.

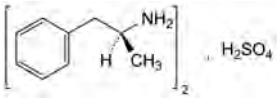
# DEXAMFETAMINE SULFATE

## Dexamfetamini sulfas



$C_{18}H_{28}N_2O_4S$ $M_r$ 368.5
[51-63-8]

DEFINITION

Bis[(2*S*)-1-phenylpropan-2-amine] sulfate.

*Content*: 99.0 per cent to 101.0 per cent (dried substance).

CHARACTERS

*Appearance*: white or almost white powder.

*Solubility*: freely soluble in water, very slightly soluble in ethanol (96 per cent), practically insoluble in methylene chloride.

IDENTIFICATION

*First identification: A, B, D.*

*Second identification: C, D.*

A. Enantiomeric purity (see Tests).

B. Infrared absorption spectrophotometry (*2.2.24*).
*Comparison*: *dexamfetamine sulfate CRS*.

C. To 50 mL of solution S add 5 mL of *strong sodium hydroxide solution R* and 0.5 mL of *benzoyl chloride R* and shake. Continue to add *benzoyl chloride R* in portions of 0.5 mL, shaking after each addition, until no further precipitate is formed. Filter, wash the precipitate with *water R*, recrystallise twice from a mixture of equal volumes of *ethanol (96 per cent) R* and *water R*, then dry at 100-105 °C. The crystals melt (*2.2.14*) at 155 °C to 160 °C.

D. Solution S (see Tests) gives reaction (a) of sulfates (*2.3.1*).

TESTS

**Solution S**. Dissolve 2.0 g in *carbon dioxide-free water R* and dilute to 100 mL with the same solvent.

**Appearance of solution**. Solution S is clear (*2.2.1*) and colourless (*2.2.2, Method II*).

**Acidity or alkalinity**. To 25 mL of solution S add 0.1 mL of *methyl red solution R*. Not more than 0.1 mL of *0.01 M hydrochloric acid* or *0.01 M sodium hydroxide* is required to change the colour of the indicator.

**Enantiomeric purity**. Liquid chromatography (*2.2.29*).

*Test solution.* Dissolve 25.0 mg of the substance to be examined in *methanol R* and dilute to 25.0 mL with the same solvent.

*Reference solution (a).* Dilute 1.0 mL of the test solution to 20.0 mL with *methanol R*.

*Reference solution (b).* Dissolve 5 mg of *amfetamine sulfate CRS* (containing impurity E and dexamfetamine) in 5 mL of *methanol R*.

*Column*:
- *size*: *l* = 0.25 m, Ø = 4.6 mm;
- *stationary phase*: *vancomycin-bonded silica gel for chiral separation R* (5 µm);
- *temperature*: 25 °C.

*Mobile phase*: *concentrated ammonia R1*, *glacial acetic acid R*, *methanol R2* (0.1:1:998.9 *V/V/V*).

*Flow rate*: 1.0 mL/min.

*Detection*: spectrophotometer at 210 nm.

*Injection*: 5 µL.

*Run time*: 1.5 times the retention time of dexamfetamine.

*Identification of peaks*: use the chromatogram supplied with *amfetamine sulfate CRS* and the chromatogram obtained with reference solution (b) to identify the peaks due to dexamfetamine and impurity E.

*Relative retention* with reference to dexamfetamine (retention time = about 10 min): impurity E = about 1.1.

*System suitability*: reference solution (b):
- *resolution*: minimum 2.5 between the peaks due to dexamfetamine and impurity E.

*Calculation of percentage content*:
- for impurity E, use the concentration of dexamfetamine sulfate in reference solution (a).

*Limit*:
- *impurity E*: maximum 5.0 per cent.

**Related substances**. Liquid chromatography (*2.2.29*). *Prepare the solutions immediately before use.*

*Solvent mixture.* Mix 5 mL of *trifluoroacetic acid R* and 900 mL of *water for chromatography R*, adjust to pH 2.2 with *concentrated ammonia R* and dilute to 1000 mL with *acetonitrile R*.

*Test solution.* Dissolve 20.0 mg of the substance to be examined in the solvent mixture and dilute to 10.0 mL with the solvent mixture.

*Reference solution (a).* Dilute 1.0 mL of the test solution to 100.0 mL with the solvent mixture. Dilute 1.0 mL of this solution to 10.0 mL with the solvent mixture.

*Reference solution (b).* Dissolve 5 mg of *1-phenylpropan-2-ol R* (impurity A) and 5 mg of *benzaldehyde R* (impurity D) in the solvent mixture and dilute to 10 mL with the solvent mixture. Dilute 1 mL of the solution to 100 mL with the solvent mixture.

*Column*:
- *size*: *l* = 0.15 m, Ø = 4.6 mm;
- *stationary phase*: *base-deactivated end-capped octadecylsilyl silica gel for chromatography R* (5 µm);
- *temperature*: 40 °C.

*Mobile phase*:
- *mobile phase A*: solvent mixture;
- *mobile phase B*: *acetonitrile R*;

| Time (min) | Mobile phase A (per cent *V/V*) | Mobile phase B (per cent *V/V*) |
|---|---|---|
| 0 - 1 | 100 | 0 |
| 1 - 16 | 100 → 65 | 0 → 35 |
| 16 - 21 | 65 → 0 | 35 → 100 |
| 21 - 23 | 0 | 100 |

*Flow rate*: 1.5 mL/min.

*Detection*: spectrophotometer at 257 nm.

*Injection*: 20 µL.

*Identification of impurities*: use the chromatogram obtained with reference solution (b) to identify the peaks due to impurities A and D.

*Relative retention* with reference to dexamfetamine (retention time = about 8 min): impurity D = about 1.6; impurity A = about 1.7.

*System suitability*: reference solution (b):
- *resolution*: minimum 4.0 between the peaks due to impurities D and A.

*Calculation of percentage contents*:
- for each impurity, use the concentration of dexamfetamine sulfate in reference solution (a).

*Limits*:

- *unspecified impurities*: for each impurity, maximum 0.10 per cent;
- *total*: maximum 0.5 per cent;
- *reporting threshold*: 0.05 per cent.

**Loss on drying** (*2.2.32*): maximum 1.0 per cent, determined on 1.000 g by drying in an oven at 105 °C.

**Sulfated ash** (*2.4.14*): maximum 0.1 per cent, determined on 1.0 g.

ASSAY

Dissolve 0.300 g in 30 mL of *anhydrous acetic acid R*. Titrate with *0.1 M perchloric acid*, determining the end-point potentiometrically (*2.2.20*).

1 mL of *0.1 M perchloric acid* is equivalent to 36.85 mg of $C_{18}H_{28}N_2O_4S$.

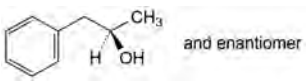
STORAGE

Protected from light.

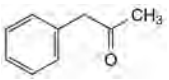
IMPURITIES

*Specified impurities: E.*

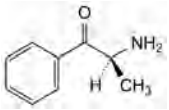
*Other detectable impurities* (the following substances would, if present at a sufficient level, be detected by one or other of the tests in the monograph. They are limited by the general acceptance criterion for other/unspecified impurities and/or by the general monograph *Substances for pharmaceutical use (2034)*. It is therefore not necessary to identify these impurities for demonstration of compliance. See also *5.10. Control of impurities in substances for pharmaceutical use*): *A, B, C, D.*



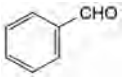
A. (2*RS*)-1-phenylpropan-2-ol,



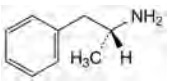
B. 1-phenylpropan-2-one,



C. (2*S*)-2-amino-1-phenylpropan-1-one (cathinone),



D. benzaldehyde,



E. (2*R*)-1-phenylpropan-2-amine (levamfetamine).

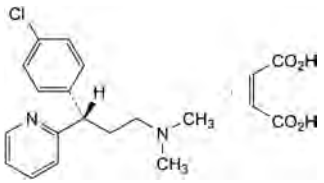
# DEXCHLORPHENIRAMINE MALEATE

## Dexchlorpheniramini maleas



$C_{20}H_{23}ClN_2O_4$ $M_r$ 390.9
[2438-32-6]

DEFINITION

(3*S*)-3-(4-Chlorophenyl)-*N*,*N*-dimethyl-3-(pyridin-2-yl)propan-1-amine (*Z*)-butenedioate.

*Content*: 98.0 per cent to 100.5 per cent (dried substance).

CHARACTERS

*Appearance*: white or almost white, crystalline powder.

*Solubility*: very soluble in water, freely soluble in ethanol (96 per cent), in methanol and in methylene chloride.

IDENTIFICATION

*First identification: A, C, E.*

*Second identification: A, B, D, E.*

A. Specific optical rotation (see Tests).

B. Melting point (*2.2.14*): 110 °C to 115 °C.

C. Infrared absorption spectrophotometry (*2.2.24*).
*Preparation*: discs of *potassium bromide R*.
*Comparison*: *dexchlorpheniramine maleate CRS*.

D. Thin-layer chromatography (*2.2.27*).
*Test solution.* Dissolve 0.10 g of the substance to be examined in *methanol R* and dilute to 5.0 mL with the same solvent.
*Reference solution.* Dissolve 56 mg of *maleic acid R* in *methanol R* and dilute to 10 mL with the same solvent.
*Plate*: *TLC silica gel $F_{254}$ plate R*.
*Mobile phase*: *water R*, *anhydrous formic acid R*, *methanol R*, *di-isopropyl ether R* (3:7:20:70 *V/V/V/V*).
*Application*: 5 µL.
*Development*: over a path of 12 cm.
*Drying*: in a current of air for a few minutes.
*Detection*: examine in ultraviolet light at 254 nm.
*Results*: the chromatogram obtained with the test solution shows 2 clearly separated spots. The upper spot is similar in position and size to the spot in the chromatogram obtained with the reference solution.

E. To 0.15 g in a porcelain crucible add 0.5 g of *anhydrous sodium carbonate R*. Heat over an open flame for 10 min. Allow to cool. Take up the residue with 10 mL of *dilute nitric acid R* and filter. To 1 mL of the filtrate add 1 mL of *water R*. The solution gives reaction (a) of chlorides (*2.3.1*).

TESTS

**Solution S**. Dissolve 2.0 g in *water R* and dilute to 20.0 mL with the same solvent.

**Appearance of solution**. Solution S is clear (*2.2.1*) and not more intensely coloured than reference solution $BY_6$ (*2.2.2, Method II*).

**pH** (*2.2.3*): 4.5 to 5.5.

Dissolve 0.20 g in 20 mL of *water R*.

**Specific optical rotation** (*2.2.7*): + 22 to + 23 (dried substance), determined on solution S.

**Related substances**. Gas chromatography (*2.2.28*).

*Test solution.* Dissolve 10.0 mg of the substance to be examined in 1.0 mL of *methylene chloride R*.

*Reference solution.* Dissolve 5.0 mg of *brompheniramine maleate CRS* in 0.5 mL of *methylene chloride R* and add 0.5 mL of the test solution. Dilute 0.5 mL of this solution to 50.0 mL with *methylene chloride R*.

*Column*:

- *material*: glass;
- *size*: *l* = 2.3 m, Ø = 2 mm;
- *stationary phase*: *silanised diatomaceous earth for gas chromatography R* (135-175 µm) impregnated with 3 per cent *m/m* of *phenyl(50)methyl(50)polysiloxane R*.

*Carrier gas*: *nitrogen for chromatography R*.

*Flow rate*: 20 mL/min.

*Temperature*:

- *column*: 205 °C;
- *injection port and detector*: 250 °C.

*Detection*: flame ionisation.

*Injection*: 1 µL.

*Run time*: 2.5 times the retention time of dexchlorpheniramine.

*System suitability*: reference solution:

- *resolution*: minimum 1.5 between the peaks due to dexchlorpheniramine and brompheniramine.

*Limits*:

- *impurity A*: not more than 0.8 times the area of the peak due to dexchlorpheniramine in the chromatogram obtained with the reference solution (0.4 per cent);
- *total*: not more than twice the area of the peak due to dexchlorpheniramine in the chromatogram obtained with the reference solution (1 per cent).

**Enantiomeric purity**. Liquid chromatography (*2.2.29*).

*Test solution.* Dissolve 10.0 mg of the substance to be examined in 3 mL of *water R*. Add a few drops of *concentrated ammonia R* until an alkaline reaction is produced. Shake with 5 mL of *methylene chloride R*. Separate the layers. Evaporate the lower, methylene chloride layer to an oily residue on a water-bath. Dissolve the oily residue in *2-propanol R* and dilute to 10.0 mL with the same solvent.

*Reference solution (a).* Dissolve 10.0 mg of *dexchlorpheniramine maleate CRS* in 3 mL of *water R*. Add a few drops of *concentrated ammonia R* until an alkaline reaction is produced. Shake with 5 mL of *methylene chloride R*. Separate the layers. Evaporate the lower, methylene chloride layer to an oily residue on a water-bath. Dissolve the oily residue in *2-propanol R* and dilute to 10.0 mL with the same solvent.

*Reference solution (b).* Dissolve 10 mg of *chlorphenamine maleate CRS* in 3 mL of *water R*. Add a few drops of *concentrated ammonia R* until an alkaline reaction is produced. Shake with 5 mL of *methylene chloride R*. Separate the layers. Evaporate the lower, methylene chloride layer to an oily residue on a water-bath. Dissolve the oily residue in *2-propanol R* and dilute to 10 mL with the same solvent.

*Reference solution (c).* Dilute 1.0 mL of the test solution to 50 mL with *2-propanol R*.

*Column*:

- *size*: *l* = 0.25 m, Ø = 4.6 mm;
- *stationary phase*: *amylose derivative of silica gel for chromatography R*.

*Mobile phase*: *diethylamine R*, *2-propanol R*, *hexane R* (3:20:980 *V/V/V*).

*Flow rate*: 1 mL/min.

*Detection*: spectrophotometer at 254 nm.

*Injection*: 10 µL.

Under these conditions the peak due to the (*S*)-isomer appears first.

*System suitability*:

- *resolution*: minimum 1.5 between the peaks due to the (*R*)-enantiomer (impurity B) and the (*S*)-enantiomer in the chromatogram obtained with reference solution (b);
- the retention times of the principal peaks in the chromatograms obtained with the test solution and reference solution (a) are identical ((*S*)-enantiomer).

*Limits*:

- *(R)-enantiomer* (impurity B): not more than the area of the principal peak in the chromatogram obtained with reference solution (c) (2 per cent);
- *unspecified impurities*: for each impurity, not more than 0.25 times the area of the principal peak in the chromatogram obtained with reference solution (c) (0.5 per cent).

**Loss on drying** (*2.2.32*): maximum 0.5 per cent, determined on 1.000 g by drying in an oven at 65 °C for 4 h.

**Sulfated ash** (*2.4.14*): maximum 0.1 per cent, determined on 1.0 g.

ASSAY

Dissolve 0.150 g in 25 mL of *anhydrous acetic acid R*. Titrate with *0.1 M perchloric acid*, determining the end-point potentiometrically (*2.2.20*).

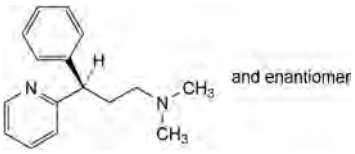
1 mL of *0.1 M perchloric acid* is equivalent to 19.54 mg of $C_{20}H_{23}ClN_2O_4$.

STORAGE

Protected from light.

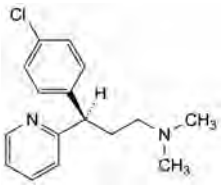
IMPURITIES

*Specified impurities: A, B.*



and enantiomer

A. (3*RS*)-*N*,*N*-dimethyl-3-phenyl-3-(pyridin-2-yl)propan-1-amine,

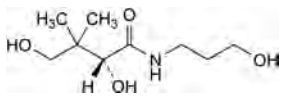


B. (3*R*)-3-(4-chlorophenyl)-*N*,*N*-dimethyl-3-(pyridin-2-yl)propan-1-amine ((*R*)-enantiomer).

**01/2017:0761**

# DEXPANTHENOL

## Dexpanthenolum



$C_9H_{19}NO_4$ $M_r$ 205.3

[81-13-0]

DEFINITION

Dexpanthenol contains not less than 98.0 per cent and not more than the equivalent of 101.0 per cent of (2*R*)-2,4-dihydroxy-*N*-(3-hydroxypropyl)-3,3-dimethylbutanamide, calculated with reference to the anhydrous substance.

CHARACTERS

A colourless or slightly yellowish, viscous hygroscopic liquid, or a white or almost white, crystalline powder, very soluble in water, freely soluble in ethanol (96 per cent).

IDENTIFICATION

*First identification: A, B.*

*Second identification: A, C, D.*

A. Specific optical rotation (see Tests).

B. Examine by infrared absorption spectrophotometry (*2.2.24*), comparing with the spectrum obtained with *dexpanthenol CRS*. Examine the substances using discs prepared as follows: dissolve the substance to be examined and the reference substance separately in 1.0 mL of *anhydrous ethanol R* to obtain a concentration of 5 mg/mL. Place dropwise 0.5 mL of this solution on a disc of *potassium bromide R*. Dry the disc at 100-105 °C for 15 min.

C. Examine the chromatograms obtained in the test for 3-aminopropanol. The principal spot in the chromatogram obtained with test solution (b) is similar in position, colour and size to the principal spot in the chromatogram obtained with reference solution (a).

D. To 1 mL of solution S (see Tests) add 1 mL of *dilute sodium hydroxide solution R* and 0.1 mL of *copper sulfate solution R*. A blue colour develops.

TESTS

**Solution S**. Dissolve 2.500 g in *carbon dioxide-free water R* and dilute to 50.0 mL with the same solvent.

**Appearance of solution**. Solution S is clear (*2.2.1*) and not more intensely coloured than reference solution $B_6$ (*2.2.2, Method II*).

**pH** (*2.2.3*). The pH of solution S is not greater than 10.5.

**Specific optical rotation** (*2.2.7*). The specific optical rotation is + 29.0 to + 32.0, determined on solution S and calculated with reference to the anhydrous substance.

**3-Aminopropanol**. Examine by thin-layer chromatography (*2.2.27*), using *silica gel G R* as the coating substance.

*Test solution (a).* Dissolve 0.25 g of the substance to be examined in *anhydrous ethanol R* and dilute to 5 mL with the same solvent.

*Test solution (b).* Dilute 1 mL of test solution (a) to 10 mL with *anhydrous ethanol R*.

*Reference solution (a).* Dissolve the contents of a vial of *dexpanthenol CRS* in 1.0 mL of *anhydrous ethanol R* to obtain a concentration of 5 mg/mL.

*Reference solution (b).* Dissolve 25 mg of *3-aminopropanol R* in *anhydrous ethanol R* and dilute to 100 mL with the same solvent.

Apply separately to the plate 10 µL of each solution. Develop over a path of 15 cm using a mixture of 20 volumes of *concentrated ammonia R*, 25 volumes of *methanol R* and 55 volumes of *butanol R*. Allow the plate to dry in air, spray with a 100 g/L solution of *trichloroacetic acid R* in *methanol R* and heat at 150 °C for 10 min. Spray with a 1 g/L solution of *ninhydrin R* in *methanol R* and heat at 120 °C until a colour appears. Any spot due to 3-aminopropanol in the chromatogram obtained with test solution (a) is not more intense than the spot in the chromatogram obtained with reference solution (b) (0.5 per cent).

**Water** (*2.5.12*). Not more than 1.0 per cent, determined on 1.000 g.

**Sulfated ash** (*2.4.14*). Not more than 0.1 per cent, determined on 1.0 g.

ASSAY

To 0.400 g add 50.0 mL of *0.1 M perchloric acid*. Boil under a reflux condenser for 5 h protected from humidity. Allow to cool. Add 50 mL of *dioxan R* by rinsing the condenser, protected from humidity. Add 0.2 mL of *naphtholbenzein solution R* and titrate with *0.1 M potassium hydrogen phthalate* until the colour changes from green to yellow. Carry out a blank titration.

1 mL of *0.1 M perchloric acid* is equivalent to 20.53 mg of $C_9H_{19}NO_4$.

STORAGE

In an airtight container.

**04/2018:1506**

# DEXTRAN 1 FOR INJECTION

## Dextranum 1 ad iniectabile

DEFINITION

Low-molecular-weight fraction of dextran, consisting of a mixture of isomaltooligosaccharides.

*Average relative molecular mass*: about 1000.

PRODUCTION

It is obtained by hydrolysis and fractionation of dextrans produced by fermentation of sucrose using *Leuconostoc mesenteroides* strain NRRL B-512 = CIP 78.59 or substrains thereof (for example *L. mesenteroides* B-512 F = NCTC 10817).

It is prepared in conditions designed to minimise the risk of microbial contamination.

CHARACTERS

*Appearance*: white or almost white hygroscopic powder.

*Solubility*: very soluble in water, very slightly soluble in ethanol (96 per cent).

IDENTIFICATION

A. Dissolve 3.000 g in *water R*, heat on a water-bath and dilute to 100.0 mL with the same solvent. The specific optical rotation (*2.2.7*) is + 148 to + 164, calculated with reference to the dried substance. Dry an aliquot of the solution first on a water-bath and then to constant weight *in vacuo* at 70 °C. Calculate the dextran content after correction for the content of sodium chloride.

B. Infrared absorption spectrophotometry (*2.2.24*).

*Preparation*: to 1-2 mg add 1 or a few drops of *water R*. Grind in an agate mortar for 1-2 min. Add about 300 mg of *potassium bromide R* and mix to a slurry but do not grind. Dry *in vacuo* at 40 °C for 15 min. Crush the residue. If it is not dry, dry for another 15 min. Prepare a disc with the residue.

*Comparison*: repeat the operations using *dextran 1 CRS*.

C. Molecular-mass distribution (see Tests).

TESTS

**Solution S**. Dissolve 7.5 g in *carbon dioxide-free water R*, heat on a water-bath and dilute to 50 mL with the same solvent.

**Absorbance** (*2.2.25*): maximum 0.12, determined at 375 nm on solution S.

**Acidity or alkalinity**. To 10 mL of solution S add 0.1 mL of *phenolphthalein solution R*. The solution is colourless. Add 0.2 mL of *0.01 M sodium hydroxide*. The solution is pink. Add

0.4 mL of *0.01 M hydrochloric acid*. The solution is colourless. Add 0.1 mL of *methyl red solution R*. The solution is red or orange.

**Nitrogen-containing substances**: maximum 110 ppm of N.

Carry out the determination of nitrogen by sulfuric acid digestion (*2.5.9*), using 0.200 g and heating for 2 h. Collect the distillate in a mixture of 0.5 mL of *bromocresol green solution R*, 0.5 mL of *methyl red solution R* and 20 mL of *water R*. Titrate with *0.01 M hydrochloric acid*. Not more than 0.15 mL of *0.01 M hydrochloric acid* is required to change the colour of the indicator.

**Sodium chloride**: maximum 1.5 per cent.

Accurately weigh 3-5 g and dissolve in 100 mL of *water R*. Titrate with *0.1 M silver nitrate*, determining the end-point potentiometrically (*2.2.20*).

1 mL of *0.1 M silver nitrate* is equivalent to 5.844 mg of NaCl.

**Molecular-mass distribution**. Size-exclusion chromatography (*2.2.30*).

*Test solution*. Dissolve 6.0-6.5 mg of the substance to be examined in 1.0 mL of the mobile phase.

*Reference solution (a)*. Dissolve 6.0-6.5 mg of *dextran 1 CRS* in 1.0 mL of the mobile phase.

*Reference solution (b)*. Dissolve the contents of a vial of *isomaltooligosaccharide CRS* in 1 mL of the mobile phase, and mix. This corresponds to approximately 45 µg of isomaltotriose (3 glucose units), approximately 45 µg of isomaltononaose (9 glucose units), and approximately 60 µg of sodium chloride per 100 µL.

*Column*: 2 columns coupled in series:
- *size*: *l* = 0.30 m, Ø = 10 mm;
- *stationary phase*: dextran covalently bound to highly cross-linked porous agarose beads, allowing resolution of oligosaccharides in the molecular mass range of 180 to 3000;
- *temperature*: 20-25 °C.

*Mobile phase*: 2.92 g/L solution of *sodium chloride R*.

*Flow rate*: 0.07-0.08 mL/min maintained constant to ± 1 per cent.

*Detection*: differential refractometer.

*Injection*: 100 µL.

*Identification of peaks*: use the chromatogram obtained with reference solution (b) to identify the peaks due to isomaltotriose, isomaltononaose and sodium chloride.

Determine the peak areas. Disregard any peak due to sodium chloride. Calculate the average relative molecular mass $M_w$ and the amount of the fraction with less than 3 and more than 9 glucose units, of *dextran 1 CRS* and of the substance to be examined, using the following expression:

$$M_w = \sum w_i \times m_i$$

$M_w$ = average molecular mass of the dextran;

$m_i$ = molecular mass of oligosaccharide *i*;

$w_i$ = weight proportion of oligosaccharide *i*.

Use the following $m_i$ values for the calculation:

| Oligosaccharide *i* | $m_i$ |
|---|---|
| glucose | 180 |
| isomaltose | 342 |
| isomaltotriose | 504 |
| isomaltotetraose | 666 |
| isomaltopentaose | 828 |
| isomaltohexaose | 990 |
| isomaltoheptaose | 1152 |
| isomaltooctaose | 1314 |
| isomaltononaose | 1476 |
| isomaltodecaose | 1638 |
| isomaltoundecaose | 1800 |
| isomaltododecaose | 1962 |
| isomaltotridecaose | 2124 |
| isomaltotetradecaose | 2286 |
| isomaltopentadecaose | 2448 |
| isomaltohexadecaose | 2610 |
| isomaltoheptadecaose | 2772 |
| isomaltooctadecaose | 2934 |
| isomaltononadecaose | 3096 |

*System suitability*: the values obtained for *dextran 1 CRS* are within the values stated on the label.

*Limits*:
- *average molecular mass ($M_w$)*: 850 to 1150;
- *fraction with less than 3 glucose units*: less than 15 per cent;
- *fraction with more than 9 glucose units*: less than 20 per cent.

**Loss on drying** (*2.2.32*): maximum 5.0 per cent, determined on 5.000 g by drying in an oven at 105 °C for 5 h.

**Bacterial endotoxins** (*2.6.14*): less than 25 IU/g.

**Microbial contamination**

TAMC: acceptance criterion $10^2$ CFU/g (*2.6.12*).

**01/2017:0999**

# DEXTRAN 40 FOR INJECTION

## Dextranum 40 ad iniectabile

DEFINITION

Mixture of polysaccharides, principally of the α-1,6-glucan type.

*Average relative molecular mass*: about 40 000.

PRODUCTION

It is obtained by hydrolysis and fractionation of dextrans produced by fermentation of sucrose using *Leuconostoc mesenteroides* strain NRRL B-512 = CIP 78.59 or substrains thereof (for example *L. mesenteroides* B-512F = NCTC 10817).

It is prepared in conditions designed to minimise the risk of microbial contamination.

CHARACTERS

*Appearance*: white or almost white powder.

*Solubility*: very soluble in water, very slightly soluble in ethanol (96 per cent).

IDENTIFICATION

A. Specific optical rotation (*2.2.7*): + 195 to + 201 (dried substance).

Dissolve 1.0 g in *water R*, heating on a water-bath, and dilute to 50.0 mL with the same solvent.

B. Infrared absorption spectrophotometry (*2.2.24*).

*Comparison*: *dextran CRS*.

C. Molecular-mass distribution (see Tests).

TESTS

**Solution S**. Dissolve 5.0 g in *distilled water R*, heating on a water-bath, and dilute to 50 mL with the same solvent.

**Appearance of solution**. Solution S is clear (*2.2.1*) and colourless (*2.2.2, Method II*).

**Acidity or alkalinity**. To 10 mL of solution S add 0.1 mL of *phenolphthalein solution R*. The solution remains colourless. Add 0.2 mL of *0.01 M sodium hydroxide*. The solution is red. Add 0.4 mL of *0.01 M hydrochloric acid*. The solution is colourless. Add 0.1 mL of *methyl red solution R*. The solution is red or orange.

**Nitrogen-containing substances**: maximum 110 ppm N.

Carry out the determination of nitrogen by sulfuric acid digestion (*2.5.9*), using 0.200 g and heating for 2 h. Collect the distillate in a mixture of 0.5 mL of *bromocresol green solution R*, 0.5 mL of *methyl red solution R* and 20 mL of *water R*. Titrate with *0.01 M hydrochloric acid*. Not more than 0.15 mL of *0.01 M hydrochloric acid* is required to change the colour of the indicator.

**Residual solvents**. Gas chromatography (*2.2.28*).

*Internal standard*: *propanol R*.

*Test solution*. Dissolve 5 g of the substance to be examined in 100 mL of *water R* and distil. Collect the first 45 mL of the distillate, add 1 mL of a 25 g/L solution of *propanol R* and dilute to 50 mL with *water R*.

*Reference solution*. Mix 0.5 mL of a 25 g/L solution of *anhydrous ethanol R*, 0.5 mL of a 25 g/L solution of *propanol R* and 0.5 mL of a 2.5 g/L solution of *methanol R* and dilute to 25.0 mL with *water R*.

*Column*:

- *material*: stainless steel;
- *size*: *l* = 1.8 m, Ø = 2 mm;
- *stationary phase*: *ethylvinylbenzene-divinylbenzene copolymer R* (125-150 µm).

*Carrier gas*: *nitrogen for chromatography R*.

*Flow rate*: 25 mL/min.

*Temperature*:

- *column*: 190 °C;
- *injection port*: 240 °C;
- *detector*: 210 °C.

*Detection*: flame ionisation.

*Injection*: the chosen volume of each solution.

*Limits*:

- *ethanol*: not more than the area of the corresponding peak in the chromatogram obtained with the reference solution (0.5 per cent);
- *methanol*: not more than the area of the corresponding peak in the chromatogram obtained with the reference solution (0.05 per cent);
- *sum of solvents other than ethanol, methanol and propanol*: not more than the area of the peak due to the internal standard (0.5 per cent, calculated as propanol).

**Molecular-mass distribution** (*2.2.39*). The average molecular mass ($M_w$) is 35 000 to 45 000. The average molecular mass of the 10 per cent high fraction is not greater than 110 000. The average molecular mass of the 10 per cent low fraction is not less than 7000.

**Loss on drying** (*2.2.32*): maximum 7.0 per cent, determined on 0.200 g by heating in an oven at 105 ± 2 °C for 5 h.

**Sulfated ash** (*2.4.14*): maximum 0.3 per cent, determined on 0.50 g.

**Bacterial endotoxins** (*2.6.14*): less than 10 IU/g.

**Microbial contamination**

TAMC: acceptance criterion $10^2$ CFU/g (*2.6.12*).

**01/2017:1000**

# DEXTRAN 60 FOR INJECTION

## Dextranum 60 ad iniectabile

DEFINITION

Mixture of polysaccharides, principally of the α-1,6-glucan type.

*Average relative molecular mass*: about 60 000.

PRODUCTION

It is obtained by hydrolysis and fractionation of dextrans produced by fermentation of sucrose using *Leuconostoc mesenteroides* strain NRRL B-512 = CIP 78.59 or substrains thereof (for example *L. mesenteroides* B-512F = NCTC 10817).

It is prepared in conditions designed to minimise the risk of microbial contamination.

CHARACTERS

*Appearance*: white or almost white powder.

*Solubility*: very soluble in water, very slightly soluble in ethanol (96 per cent).

IDENTIFICATION

A. Specific optical rotation (*2.2.7*): + 195 to + 201 (dried substance).

Dissolve 1.0 g in *water R*, heating on a water-bath, and dilute to 50.0 mL with the same solvent.

B. Infrared absorption spectrophotometry (*2.2.24*).

*Comparison*: *dextran CRS*.

C. Molecular-mass distribution (see Tests).

TESTS

**Solution S**. Dissolve 5.0 g in *distilled water R*, heating on a water-bath, and dilute to 50 mL with the same solvent.

**Appearance of solution**. Solution S is clear (*2.2.1*) and colourless (*2.2.2, Method II*).

**Acidity or alkalinity**. To 10 mL of solution S add 0.1 mL of *phenolphthalein solution R*. The solution remains colourless. Add 0.2 mL of *0.01 M sodium hydroxide*. The solution is red. Add 0.4 mL of *0.01 M hydrochloric acid*. The solution is colourless. Add 0.1 mL of *methyl red solution R*. The solution is red or orange.

**Nitrogen-containing substances**: maximum 110 ppm of N.

Carry out the determination of nitrogen by sulfuric acid digestion (*2.5.9*), using 0.200 g and heating for 2 h. TAMC: acceptance criterion $10^2$ CFU/g (*2.6.12*).

**01/2017:1001**

# DEXTRAN 70 FOR INJECTION

## Dextranum 70 ad iniectabile

DEFINITION

Mixture of polysaccharides, principally of the α-1,6-glucan type.

*Average relative molecular mass*: about 70 000.

PRODUCTION

It is obtained by hydrolysis and fractionation of dextrans produced by fermentation of sucrose using *Leuconostoc mesenteroides* strain NRRL B-512 = CIP 78.59 or substrains thereof (for example *L. mesenteroides* B-512F = NCTC 10817).

It is prepared in conditions designed to minimise the risk of microbial contamination.

CHARACTERS

*Appearance*: white or almost white powder.

*Solubility*: very soluble in water, very slightly soluble in ethanol (96 per cent).

IDENTIFICATION

A. Specific optical rotation (*2.2.7*): + 195 to + 201 (dried substance).
Dissolve 1.0 g in *water R*, heating on a water-bath, and dilute to 50.0 mL with the same solvent.

B. Infrared absorption spectrophotometry (*2.2.24*).
*Comparison*: *dextran CRS*.

C. Molecular-mass distribution (see Tests).

TESTS

**Solution S**. Dissolve 5.0 g in *distilled water R*, heating on a water-bath, and dilute to 50 mL with the same solvent.

**Appearance of solution**. Solution S is clear (*2.2.1*) and colourless (*2.2.2, Method II*).

**Acidity or alkalinity**. To 10 mL of solution S add 0.1 mL of *phenolphthalein solution R*. The solution remains colourless. Add 0.2 mL of *0.01 M sodium hydroxide*. The solution is red. Add 0.4 mL of *0.01 M hydrochloric acid*. The solution is colourless. Add 0.1 mL of *methyl red solution R*. The solution is red or orange.

**Nitrogen-containing substances**: maximum 110 ppm of N.
Carry out the determination of nitrogen by sulfuric acid digestion (*2.5.9*), using 0.200 g and heating for 2 h. Collect the distillate in a mixture of 0.5 mL of *bromocresol green solution R*, 0.5 mL of *methyl red solution R* and 20 mL of *water R*. Titrate with *0.01 M hydrochloric acid*. Not more than 0.15 mL of *0.01 M hydrochloric acid* is required to change the colour of the indicator.

**Residual solvents**. Gas chromatography (*2.2.28*).

*Internal standard*: *propanol R*.

*Test solution*. Dissolve 5 g of the substance to be examined in 100 mL of *water R* and distil. Collect the first 45 mL of the distillate, add 1 mL of a 25 g/L solution of *propanol R* and dilute to 50 mL with *water R*.

*Reference solution*. Mix 0.5 mL of a 25 g/L solution of *anhydrous ethanol R*, 0.5 mL of a 25 g/L solution of *propanol R* and 0.5 mL of a 2.5 g/L solution of *methanol R* and dilute to 25.0 mL with *water R*.

*Column*:
– *material*: stainless steel;
– *size*: *l* = 1.8 m, Ø = 2 mm;
– *stationary phase*: *ethylvinylbenzene-divinylbenzene copolymer R* (125-150 µm).

*Carrier gas*: *nitrogen for chromatography R*.

*Flow rate*: 25 mL/min.

*Temperature*:
– *column*: 190 °C;
– *injection port*: 240 °C;
– *detector*: 210 °C.

*Detection*: flame ionisation.

*Injection*: the chosen volume of each solution.

*Limits*:
– *ethanol*: not more than the area of the corresponding peak in the chromatogram obtained with the reference solution (0.5 per cent);
– *methanol*: not more than the area of the corresponding peak in the chromatogram obtained with the reference solution (0.05 per cent);
– *sum of solvents other than ethanol, methanol and propanol*: not more than the area of the peak due to the internal standard (0.5 per cent, calculated as propanol).

**Molecular-mass distribution** (*2.2.39*). The average molecular mass ($M_w$) is 64 000 to 76 000. The average molecular mass of the 10 per cent high fraction is not greater than 185 000. The average molecular mass of the 10 per cent low fraction is not less than 15 000.

**Loss on drying** (*2.2.32*): maximum 7.0 per cent, determined on 0.200 g by heating in an oven at 105 ± 2 °C for 5 h.

**Sulfated ash** (*2.4.14*): maximum 0.3 per cent, determined on 0.50 g.

**Bacterial endotoxins** (*2.6.14*): less than 16 IU/g.

**Microbial contamination**

TAMC: acceptance criterion $10^2$ CFU/g (*2.6.12*).

01/2017:2238

# DEXTRANOMER

## Dextranomerum

[56087-11-7]

DEFINITION

Three-dimensional network made of dextran chains *O*,*O*′-cross-linked with 2-hydroxypropane-1,3-diyl bridges and *O*-substituted with 2,3-dihydroxypropyl and 2-hydroxy-1-(hydroxymethyl)ethyl groups.

CHARACTERS

*Appearance*: white or almost white, spherical beads.

*Solubility*: practically insoluble in water. It swells in water and in electrolyte solutions.

PRODUCTION

The absorption capacity is determined using a 9.0 g/L solution of *sodium chloride R* containing 20 µL/L of *polysorbate 20 R* or another suitable solution, with a suitable, validated method.

The particle size is controlled to a minimum of 80 per cent of the number of dry beads within 100-300 µm and a maximum of 7 per cent of their number below 100 µm using a suitable, validated method.

IDENTIFICATION

A. The substance to be examined is practically insoluble in *water R*. It swells in *water R*.

B. Infrared absorption spectrophotometry (*2.2.24*).

*Preparation*: grind the substance to be examined in *acetone R*. Evaporate the solvent at room temperature and use the residue.

*Comparison*: *dextranomer CRS*.

TESTS

**pH** (*2.2.3*): 5.3 to 7.5.

Introduce 0.50 g to 30 mL of a freshly prepared 74.6 g/L solution of *potassium chloride R*. Allow to stand for 2 min. Determine the pH on the mucilage obtained.

**Boron**: maximum 30 ppm.

Inductively coupled plasma-atomic emission spectrometry (ICP-AES) (*2.2.57*).

*Test solution*. Introduce 3.0 g into a platinum dish and moisten with 5 mL of a 32.1 g/L solution of *magnesium nitrate R* in a mixture of equal volumes of *ethanol (96 per cent) R* and *distilled water R*. Evaporate to dryness on a water-bath. Ignite at 550 °C for 5 h. Take up the residue with 5 mL of *6 M hydrochloric acid R* and transfer to a 50 mL volumetric flask. Add about 20 mL of *distilled water R* and allow to digest for 1 h on a water-bath. Allow to cool and dilute to 50.0 mL with *distilled water R*.

*Reference solutions*. Prepare the reference solutions using a solution of *boric acid R* containing 10 ppm of boron. Proceed as described for the test solution.

*Wavelength*: 249.773 nm.

**Loss on drying** (*2.2.32*): maximum 10.0 per cent, determined on 1.000 g by drying in an oven at 105 °C for 15 h.

**Sulfated ash** (*2.4.14*): maximum 0.4 per cent, determined on 1.0 g.

**Microbial contamination**

TAMC: acceptance criterion $10^2$ CFU/g (*2.6.12*), determined using the pour-plate method.

01/2017:1507
corrected 9.6

# DEXTRIN

## Dextrinum

[9004-53-9]

DEFINITION

Maize, potato or cassava starch partly hydrolysed and modified by heating with or without the presence of acids, alkalis or pH-control agents.

CHARACTERS

*Appearance*: white or almost white, free-flowing powder.

*Solubility*: very soluble in boiling water forming a mucilaginous solution, slowly soluble in cold water, practically insoluble in ethanol (96 per cent).

IDENTIFICATION

A. Suspend 1 g in 50 mL of *water R*, boil for 1 min and cool. To 1 mL of the solution add 0.05 mL of *iodine solution R1*. A dark blue or reddish-brown colour is produced, which disappears on heating.

B. Centrifuge 5 mL of the mucilage obtained in identification test A. To the upper layer add 2 mL of *dilute sodium hydroxide solution R* and, dropwise with shaking, 0.5 mL of *copper sulfate solution R* and boil. A red precipitate is produced.

C. It is very soluble in boiling *water R*, forming a mucilaginous solution.

TESTS

**pH** (*2.2.3*): 2.0 to 8.0.

Disperse 5.0 g in 100 mL of *carbon dioxide-free water R*.

**Chlorides**: maximum 0.2 per cent.

Dissolve 2.5 g in 50 mL of boiling *water R*, dilute to 100 mL with *water R* and filter. Dilute 1 mL of the filtrate to 15 mL with *water R* and add 1 mL of *dilute nitric acid R*. Pour the mixture as a single addition into 1 mL of *silver nitrate solution R2* and allow to stand for 5 min protected from light. When viewed transversely against a black background any opalescence produced is not more intense than that obtained by treating a mixture of 10 mL of *chloride standard solution (5 ppm Cl) R* and 5 mL of *water R*, prepared in the same manner.

**Reducing sugars**: maximum 10 per cent, calculated as glucose $C_6H_{12}O_6$.

To a quantity of dextrin equivalent to 2.0 g (dried substance) add 100 mL of *water R*, shake for 30 min, dilute to 200.0 mL with *water R* and filter. To 10.0 mL of alkaline *cupri-tartaric solution R* add 20.0 mL of the filtrate, mix, and heat on a hot plate adjusted to bring the solution to boil within 3 min. Boil for 2 min, and cool immediately. Add 5 mL of a 300 g/L solution of *potassium iodide R* and 10 mL of *dilute sulfuric acid R*, mix, and titrate immediately with *0.1 M sodium thiosulfate*, using *starch solution R*, added towards the end of the titration, as indicator. Repeat the procedure beginning with "To 10.0 mL of...", using, in place of the filtrate, 20.0 mL of a 1 g/L solution of *glucose R*, accurately prepared. Perform a blank titration. $(V_B - V_U)$ is not greater than $(V_B - V_S)$, in which $V_B$, $V_U$ and $V_S$ are the number of millilitres of *0.1 M sodium thiosulfate* consumed in the titrations of the blank, the dextrin and the glucose, respectively.

**Loss on drying** (*2.2.32*): maximum 13.0 per cent, determined on 1.000 g by drying at 130 ± 5 °C for 90 min.

**Sulfated ash** (*2.4.14*): maximum 0.5 per cent, determined on 1.0 g.

FUNCTIONALITY-RELATED CHARACTERISTICS

*This section provides information on characteristics that are recognised as being relevant control parameters for one or more functions of the substance when used as an excipient (see chapter 5.15). Some of the characteristics described in the Functionality-related characteristics section may also be present in the mandatory part of the monograph since they also represent mandatory quality criteria. In such cases, a cross-reference to the tests described in the mandatory part is included in the Functionality-related characteristics section. Control of the characteristics can contribute to the quality of a medicinal product by improving the consistency of the manufacturing process and the performance of the medicinal product during use. Where control methods are cited, they are recognised as being suitable for the purpose, but other methods can also be used. Wherever results for a particular characteristic are reported, the control method must be indicated.*

*The following characteristics may be relevant for dextrin used as filler and binder, in tablets and capsules.*

**Particle-size distribution** (*2.9.31* or *2.9.38*).

**Powder flow** (*2.9.36*).

*The following characteristic may be relevant for dextrin used as viscosity-increasing agent.*

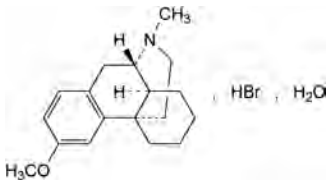
**Apparent viscosity** (*2.2.10*): typically 100 mPa·s to 350 mPa·s (dried substance), depending on the grade of dextrin.

In a beaker, prepare a 10-50 per cent slurry so that the viscosity value ranges from 100 mPa·s to 350 mPa·s. The total mass of the sample plus water must be 600 g. Mix with a plastic rod to obtain a homogeneous slurry. Place the beaker in a water-bath at 100 ± 1 °C. Introduce the paddle of a stirrer into the beaker and close the beaker with a lid. Start agitation at 250 r/min as rapidly as possible and carry on for exactly 30 min. Transfer the paste immediately to the beaker to be used for viscosity measurement, placed in a water-bath at 40 ± 1 °C. Stir until the temperature in the beaker is 40 ± 1 °C then measure the apparent viscosity using spindle no. 2 and a rotation speed of 100 r/min.

**07/2016:0020**

# DEXTROMETHORPHAN HYDROBROMIDE

## Dextromethorphani hydrobromidum



$C_{18}H_{26}BrNO,H_2O$ $M_r$ 370.3
[6700-34-1]

DEFINITION

*ent*-3-Methoxy-17-methylmorphinan hydrobromide monohydrate.

*Content*: 99.0 per cent to 101.0 per cent (anhydrous substance).

CHARACTERS

*Appearance*: almost white, crystalline powder.

*Solubility*: sparingly soluble in water, freely soluble in ethanol (96 per cent).

mp: about 125 °C, with decomposition.

IDENTIFICATION

*First identification: A, B, D.*

*Second identification: A, C, D.*

A. Specific optical rotation (see Tests).

B. Infrared absorption spectrophotometry (*2.2.24*).
*Comparison*: *dextromethorphan hydrobromide CRS.*

C. Thin-layer chromatography (*2.2.27*).
*Test solution.* Dissolve 25 mg of the substance to be examined in *methanol R* and dilute to 10 mL with the same solvent.
*Reference solution.* Dissolve 25 mg of *dextromethorphan hydrobromide CRS* in *methanol R* and dilute to 10 mL with the same solvent.
*Plate*: *TLC silica gel G plate R.*
*Mobile phase*: *concentrated ammonia R*, *methylene chloride R*, *methanol R*, *ethyl acetate R*, *toluene R* (2:10:13:20:55 *V/V/V/V/V*).
*Application*: 5 µL.
*Development*: over 2/3 of the plate.
*Drying*: in air.
*Detection*: spray with *potassium iodobismuthate solution R2.*
*Results*: the principal spot in the chromatogram obtained with the test solution is similar in position and size to the principal spot in the chromatogram obtained with the reference solution.

D. It gives reaction (a) of bromides (*2.3.1*).

TESTS

**Solution S**. Dissolve 1.0 g in *ethanol (96 per cent) R* and dilute to 20 mL with the same solvent.

**Appearance of solution**. Solution S is clear (*2.2.1*) and colourless (*2.2.2, Method II*).

**Acidity or alkalinity**. Dissolve 0.4 g in *carbon dioxide-free water R* with gentle heating, cool and dilute to 20 mL with the same solvent. Add 0.1 mL of *methyl red solution R* and 0.2 mL of *0.01 M sodium hydroxide*. The solution is yellow. Not more than 0.4 mL of *0.01 M hydrochloric acid* is required to change the colour of the indicator to red.

**Specific optical rotation** (*2.2.7*): + 28 to + 30 (anhydrous substance).

Dissolve 0.200 g in *0.1 M hydrochloric acid* and dilute to 10.0 mL with the same acid.

**Related substances**. Liquid chromatography (*2.2.29*).

*Test solution.* Dissolve 10.0 mg of the substance to be examined in the mobile phase and dilute to 10.0 mL with the mobile phase.

*Reference solution (a).* Dissolve 2 mg of *dextromethorphan impurity A CRS* in 2 mL of the test solution and dilute to 25.0 mL with the mobile phase.

*Reference solution (b).* Dilute 1.0 mL of the test solution to 200.0 mL with the mobile phase.

*Column*:
- *size*: *l* = 0.25 m, Ø = 4.6 mm;
- *stationary phase*: *octadecylsilyl silica gel for chromatography R* (5 µm).

*Mobile phase*: dissolve 3.11 g of *docusate sodium R* in a mixture of 400 mL of *water R* and 600 mL of *acetonitrile R*, add 0.56 g of *sodium nitrate R* and adjust to apparent pH 2.0 with *glacial acetic acid R*.

*Flow rate*: 1.0 mL/min.

*Detection*: spectrophotometer at 280 nm.

*Injection*: 20 µL.

*Run time*: twice the retention time of dextromethorphan.

*Relative retention* with reference to dextromethorphan (retention time = about 22 min): impurity B = about 0.4; impurity C = about 0.8; impurity D = about 0.9; impurity A = about 1.1.

*System suitability*: reference solution (a):

- *resolution*: minimum 1.5 between the peaks due to dextromethorphan and impurity A.

*Limits*:

- *correction factor*: for the calculation of content, multiply the peak area of impurity C by 0.2;
- *impurities A, B, C, D*: for each impurity, not more than the area of the principal peak in the chromatogram obtained with reference solution (b) (0.5 per cent), and not more than 1 such peak has an area greater than 0.5 times the area of the principal peak in the chromatogram obtained with reference solution (b) (0.25 per cent);
- *unspecified impurities*: for each impurity, not more than 0.2 times the area of the principal peak in the chromatogram obtained with reference solution (b) (0.10 per cent);
- *total*: not more than twice the area of the principal peak in the chromatogram obtained with reference solution (b) (1.0 per cent);
- *disregard limit*: 0.1 times the area of the principal peak in the chromatogram obtained with reference solution (b) (0.05 per cent).

***N,N*-Dimethylaniline**: maximum 10 ppm.

Dissolve 0.5 g with heating in 20 mL of *water R*. Allow to cool, add 2 mL of *dilute acetic acid R* and 1 mL of a 10 g/L solution of *sodium nitrite R* and dilute to 25 mL with *water R*. The solution is not more intensely coloured than a reference solution prepared at the same time and in the same manner using 20 mL of a 0.25 mg/L solution of *N,N-dimethylaniline R*.

**Water** (*2.5.12*): 4.0 per cent to 5.5 per cent, determined on 0.200 g.

**Sulfated ash** (*2.4.14*): maximum 0.1 per cent, determined on 1.0 g.

ASSAY

Dissolve 0.300 g in a mixture of 5.0 mL of *0.01 M hydrochloric acid* and 20 mL of *ethanol (96 per cent) R*. Titrate with *0.1 M sodium hydroxide*, determining the end-point potentiometrically (*2.2.20*). Read the volume added between the 2 points of inflexion.

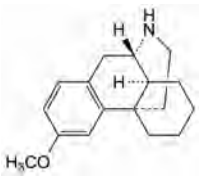
1 mL of *0.1 M sodium hydroxide* is equivalent to 35.23 mg of $C_{18}H_{26}BrNO$.

STORAGE

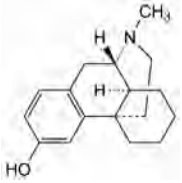
Protected from light.

IMPURITIES

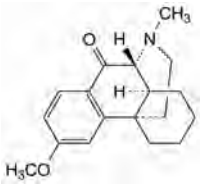
*Specified impurities*: *A, B, C, D.*



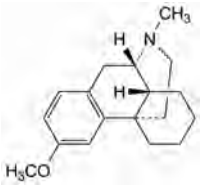
A. *ent*-3-methoxymorphinan,



B. *ent*-17-methylmorphinan-3-ol,



C. *ent*-3-methoxy-17-methylmorphinan-10-one,

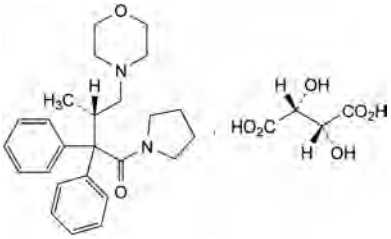


D. *ent*-(14*S*)-3-methoxy-17-methylmorphinan.

**01/2008:0021**
**corrected 6.0**

# DEXTROMORAMIDE TARTRATE

## Dextromoramidi tartras



$C_{29}H_{38}N_2O_8$ $M_r$ 542.6
[2922-44-3]

DEFINITION

Dextromoramide tartrate contains not less than 98.0 per cent and not more than the equivalent of 101.0 per cent of 1-[(3*S*)-3-methyl-4-(morpholin-4-yl)-2,2-diphenylbutanoyl]pyrrolidine hydrogen (2*R*,3*R*)-2,3-dihydroxybutanedioate, calculated with reference to the dried substance.

CHARACTERS

A white or almost white, amorphous or crystalline powder, soluble in water, sparingly soluble in alcohol.

It melts at about 190 °C, with slight decomposition.

IDENTIFICATION

A. Dissolve 75 mg in *1 M hydrochloric acid* and dilute to 100.0 mL with the same acid. Examined between 230 nm and 350 nm (*2.2.25*), the solution shows 3 absorption maxima, at 254 nm, 259 nm and 264 nm. The specific absorbances at the maxima are about 6.9, 7.7 and 6.5, respectively.

B. Dissolve about 50 mg in *water R* and dilute to 10 mL with the same solvent. To 2 mL of the solution add 3 mL of *ammoniacal silver nitrate solution R* and heat on a water-bath. A grey or black precipitate is formed.

C. It gives reaction (b) of tartrates (*2.3.1*).

TESTS

**pH** (*2.2.3*). Dissolve 0.2 g in *carbon dioxide-free water R* and dilute to 20 mL with the same solvent. The pH of the solution is 3.0 to 4.0.

**Specific optical rotation** (*2.2.7*). Dissolve 0.50 g in *0.1 M hydrochloric acid* and dilute to 10.0 mL with the same acid. The specific optical rotation is + 21 to + 23.

**Related substances**. Examine by thin-layer chromatography (*2.2.27*), using *silica gel G R* as the coating substance.

*Test solution*. Dissolve 0.2 g of the substance to be examined in *methanol R* and dilute to 10 mL with the same solvent.

*Reference solution*. Dilute 1 mL of the test solution to 100 mL with *methanol R*.

Apply separately to the plate 10 µL of each solution. Develop over a path of 15 cm using *methanol R*. Allow the plate to dry in air and spray with *dilute potassium iodobismuthate solution R*. Any spot in the chromatogram obtained with the test solution, apart from the principal spot, is not more intense than the spot in the chromatogram obtained with the reference solution (1.0 per cent).

**Loss on drying** (*2.2.32*). Not more than 0.5 per cent, determined on 1.00 g by drying in an oven at 105 °C.

**Sulfated ash** (*2.4.14*). Not more than 0.1 per cent, determined on 1.0 g.

ASSAY

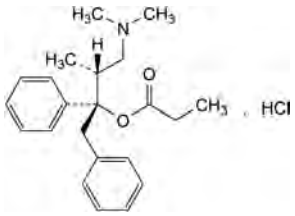
Dissolve 0.250 g in 30 mL of *anhydrous acetic acid R*. Titrate with *0.05 M perchloric acid* using 0.15 mL of *naphtholbenzein solution R* as indicator.

1 mL of *0.05 M perchloric acid* is equivalent to 27.13 mg of $C_{29}H_{38}N_2O_8$.

**01/2010:0713**

# DEXTROPROPOXYPHENE HYDROCHLORIDE

## Dextropropoxypheni hydrochloridum



$C_{22}H_{30}ClNO_2$ $M_r$ 375.9
[1639-60-7]

DEFINITION

(1*S*,2*R*)-1-Benzyl-3-(dimethylamino)-2-methyl-1-phenylpropyl propanoate hydrochloride.

*Content*: 98.5 per cent to 101.5 per cent (dried substance).

CHARACTERS

*Appearance*: white or almost white, crystalline powder.

*Solubility*: very soluble in water, freely soluble in ethanol (96 per cent).

mp: about 165 °C.

IDENTIFICATION

A. Specific optical rotation (see Tests).

B. Infrared absorption spectrophotometry (*2.2.24*).
*Comparison*: *dextropropoxyphene hydrochloride CRS*.

C. Solution S (see Tests) gives reaction (a) of chlorides (*2.3.1*).

TESTS

**Solution S**. Dissolve 1.5 g in *carbon dioxide-free water R* and dilute to 30 mL with the same solvent.

**Appearance of solution**. Solution S is clear (*2.2.1*) and colourless (*2.2.2, Method II*).

**Acidity or alkalinity**. Dilute 10 mL of solution S to 25 mL with *carbon dioxide-free water R*. To 10 mL of this solution add 0.1 mL of *methyl red solution R* and 0.2 mL of *0.01 M sodium hydroxide*. The solution is yellow. Add 0.4 mL of *0.01 M hydrochloric acid*. The solution is red.

**Specific optical rotation** (*2.2.7*): + 52 to + 57.

Dissolve 0.100 g in *water R* and dilute to 10.0 mL with the same solvent.

**Related substances**. Liquid chromatography (*2.2.29*).

*Solvent mixture*: *acetonitrile R*, *methanol R* (50:50 *V/V*).

*Test solution*. Dissolve 0.100 g of the substance to be examined in the solvent mixture and dilute to 50.0 mL with the solvent mixture.

*Reference solution (a)*. Dilute 1.0 mL of the test solution to 50.0 mL with the solvent mixture. Dilute 1.0 mL of this solution to 20.0 mL with the solvent mixture.

*Reference solution (b)*. Dissolve 2 mg of *dextropropoxyphene for system suitability CRS* (containing impurities A, B, C and D) in 1.0 mL of the solvent mixture.

*Reference solution (c)*. Dilute 1.0 mL of *toluene R* to 50.0 mL with the solvent mixture. Dilute 1.0 mL of this solution to 10.0 mL with the solvent mixture.

*Column*:
- *size*: *l* = 0.15 m, Ø = 4.6 mm;
- *stationary phase*: *octylsilyl silica gel for chromatography R* (5 µm).

*Mobile phase*:
- *mobile phase A*: dissolve 2.5 g of *ammonium phosphate R* in *water R*, adjust to pH 5.6 with *dilute phosphoric acid R* and dilute to 1000 mL with the same solvent;
- *mobile phase B*: *acetonitrile R1*.

| Time (min) | Mobile phase A (per cent *V/V*) | Mobile phase B (per cent *V/V*) |
|---|---|---|
| 0 - 2 | 85 | 15 |
| 2 - 7 | 85 → 75 | 15 → 25 |
| 7 - 24 | 75 → 50 | 25 → 50 |
| 24 - 32 | 50 → 40 | 50 → 60 |

*Flow rate*: 1.5 mL/min.

*Detection*: spectrophotometer at 214 nm.

*Injection*: 10 µL.

*Identification of impurities*: use the chromatogram supplied with *dextropropoxyphene for system suitability CRS* and the chromatogram obtained with reference solution (b) to identify the peaks due to impurities A, B, C and D. Use the chromatogram obtained with reference solution (c) to identify the peak due to toluene.

*Relative retention* with reference to dextropropoxyphene (retention time = about 18 min): impurity A = about 0.8; impurity B = about 0.9; impurity D = about 1.1; impurity C = about 1.2.

*System suitability*: reference solution (b):
- *peak-to-valley ratio*: minimum 5, where $H_p$ = height above the baseline of the peak due to impurity D and $H_v$ = height above the baseline of the lowest point of the curve separating this peak from the peak due to dextropropoxyphene.

*Limits*:
- *impurities A, B*: for each impurity, not more than 5 times the area of the principal peak in the chromatogram obtained with reference solution (a) (0.5 per cent);
- *impurities C, D*: for each impurity, not more than twice the area of the principal peak in the chromatogram obtained with reference solution (a) (0.2 per cent);

- *unspecified impurities*: for each impurity, not more than the area of the principal peak in the chromatogram obtained with reference solution (a) (0.10 per cent);
- *total*: not more than 10 times the area of the principal peak in the chromatogram obtained with reference solution (a) (1.0 per cent);
- *disregard limit*: 0.5 times the area of the principal peak in the chromatogram obtained with reference solution (a) (0.05 per cent); disregard any peak due to toluene (relative retention = about 1.24).

**Loss on drying** (*2.2.32*): maximum 1.0 per cent, determined on 1.000 g by drying in an oven at 105 °C for 4 h.

**Sulfated ash** (*2.4.14*): maximum 0.1 per cent, determined on 1.0 g.

ASSAY

Dissolve 0.270 g in 60 mL of *acetic anhydride R*. Titrate with *0.1 M perchloric acid*, determining the end-point potentiometrically (*2.2.20*).

1 mL of *0.1 M perchloric acid* is equivalent to 37.59 mg of $C_{22}H_{30}ClNO_2$.

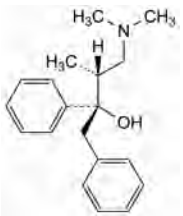
STORAGE

Protected from light.

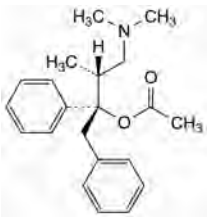
IMPURITIES

*Specified impurities: A, B, C, D.*

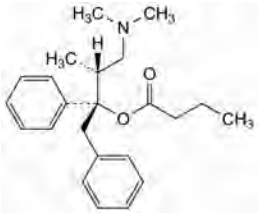
*Other detectable impurities* (the following substances would, if present at a sufficient level, be detected by one or other of the tests in the monograph. They are limited by the general acceptance criterion for other/unspecified impurities and/or by the general monograph *Substances for pharmaceutical use (2034)*. It is therefore not necessary to identify these impurities for demonstration of compliance. See also *5.10. Control of impurities in substances for pharmaceutical use*): *F.*



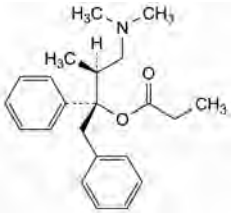
A. (2*S*,3*R*)-4-(dimethylamino)-1,2-diphenyl-3-methyl-butan-2-ol (oxyphene),



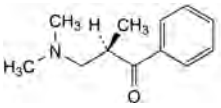
B. (1*S*,2*R*)-1-benzyl-3-(dimethylamino)-2-methyl-1-phenylpropyl acetate (acetoxyphene),



C. (1*S*,2*R*)-1-benzyl-3-(dimethylamino)-2-methyl-1-phenylpropyl butanoate (butyroxyphene),



D. (1*S*,2*S*)-1-benzyl-3-(dimethylamino)-2-methyl-1-phenylpropyl propanoate (isopropoxyphene),

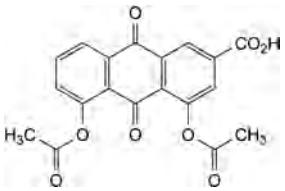


F. (2*RS*)-3-(dimethylamino)-2-methyl-1-phenylpropan-1-one.

**01/2020:2409**

# DIACEREIN

## Diacereinum



$C_{19}H_{12}O_8$ $M_r$ 368.3

[13739-02-1]

DEFINITION

4,5-Bis(acetyloxy)-9,10-dioxo-9,10-dihydroanthracene-2-carboxylic acid.

*Content*: 98.0 per cent to 102.0 per cent (dried substance).

CHARACTERS

*Appearance*: yellow, crystalline powder.

*Solubility*: practically insoluble in water, soluble in dimethylacetamide, slightly soluble in tetrahydrofuran, practically insoluble in anhydrous ethanol.

IDENTIFICATION

Infrared absorption spectrophotometry (*2.2.24*).

*Comparison*: *diacerein CRS*.

TESTS

**Impurities B and H**. Liquid chromatography (*2.2.29*). *Carry out the test protected from light.*

*Solution A*. Dissolve 10 g of *sodium hydroxide R* in 500 mL of *water R*.

*Solution B*. Dissolve 14.7 g of *sodium chloride R* and 18.8 g of *glycine R* in 500 mL of *water R*.

*Solution C*. Mix 25.3 volumes of solution A and 74.6 volumes of solution B. If necessary, adjust to pH 9.5 using *dilute sodium hydroxide solution R* or *dilute sulfuric acid R*.

*Solution D*. Dilute 5 mL of *dilute sulfuric acid R* to 500 mL with *water R*.

*Test solution*. Dissolve 0.100 g of the substance to be examined in 30 mL of solution A and mix for 10 min. Add 70 mL of solution B and adjust to pH 9.5 with *dilute sodium hydroxide solution R* or *dilute sulfuric acid R*, if necessary. Extract with 3 quantities, each of 25 mL, of *methylene chloride R*. Combine the methylene chloride extracts and wash with 2 quantities,

each of 8 mL, of solution C and then once with 10 mL of solution D. Evaporate the organic layer to dryness at 33 °C, completing the drying procedure using compressed air. Dissolve the residue in 2.0 mL of the mobile phase.

*Reference solution (a).* Dissolve 7.5 mg of *diacerein impurity B CRS* in *tetrahydrofuran R* and dilute to 25.0 mL with the same solvent. Sonicate for not more than 30 s. Dilute 1.0 mL of the solution to 100.0 mL with solution A. Dilute 5.0 mL of this solution to 50.0 mL with solution A. Mix 5.0 mL of this solution with 25 mL of solution A for 10 min. Add 70 mL of solution B and adjust to pH 9.5 with *dilute sodium hydroxide solution R* or *dilute sulfuric acid R*, if necessary. Perform the extraction as described for the test solution. *Care should be taken that the time between dissolution of diacerein impurity B in tetrahydrofuran and extraction does not exceed 30 min.*

*Reference solution (b).* Dilute 1.0 mL of reference solution (a) to 5.0 mL with the mobile phase.

*Column*:

- *size*: *l* = 0.125 m, Ø = 4.6 mm;
- *stationary phase*: irregular *octadecylsilyl silica gel for chromatography R* (5 µm);
- *temperature*: 16 ± 1 °C.

*Mobile phase*: *tetrahydrofuran R*, *acetonitrile R*, 4 g/L solution of *citric acid monohydrate R* (8:27.5:64.5 *V/V/V*).

*Flow rate*: 1.0 mL/min.

*Detection*: spectrophotometer at 254 nm.

*Injection*: 100 µL.

*Run time*: 2.5 times the retention time of impurity B.

*Retention time*: impurity B = about 11 min.

*System suitability*: reference solution (b):

- *signal-to-noise ratio*: minimum 10 for the principal peak.

*Limit*:

- *sum of impurities B and H*: not more than the area of the peak due to impurity B in the chromatogram obtained with reference solution (a) (15 ppm).

**Related substances**. Liquid chromatography (*2.2.29*). *Carry out the test protected from light.*

*Solvent mixture*: mobile phase A, mobile phase B (50:50 *V/V*).

*Test solution.* Dissolve 0.100 g of the substance to be examined in 50 mL of *tetrahydrofuran R* and dilute to 100.0 mL with the solvent mixture.

*Reference solution (a).* Dilute 1.0 mL of the test solution to 100.0 mL with *tetrahydrofuran R*. Dilute 1.0 mL of this solution to 10.0 mL with the solvent mixture.

*Reference solution (b).* In order to prepare impurities D and E *in situ*, add 10.0 mL of a 0.4 g/L solution of *sodium hydroxide R* to 0.100 g of the substance to be examined. Add 40 mL of *tetrahydrofuran R* and dilute to 100 mL with the solvent mixture.

*Reference solution (c).* Dissolve the contents of a vial of *diacerein impurity mixture CRS* (impurities C and F) in a mixture of 0.5 mL of *tetrahydrofuran R* and 0.5 mL of the solvent mixture.

*Column*:

- *size*: *l* = 0.10 m, Ø = 4.6 mm;
- *stationary phase*: *end-capped polar-embedded octadecylsilyl amorphous organosilica polymer R* (5 µm);
- *temperature*: 30 °C.

*Mobile phase*:

- *mobile phase A*: to 353 mL of *water for chromatography R* add 147 mL of *phosphoric acid R* and mix; dilute 2 mL of the solution to 1000 mL with *water for chromatography R*;
- *mobile phase B*: *acetonitrile R*;

| Time (min) | Mobile phase A (per cent *V/V*) | Mobile phase B (per cent *V/V*) |
|---|---|---|
| 0 - 3 | 80 | 20 |
| 3 - 13 | 80 → 60 | 20 → 40 |
| 13 - 20 | 60 | 40 |

*Flow rate*: 1.2 mL/min.

*Detection*: spectrophotometer at 254 nm.

*Injection*: 20 µL.

*Identification of impurities*: use the chromatogram supplied with *diacerein impurity mixture CRS* and the chromatogram obtained with reference solution (c) to identify the peaks due to impurities C and F; use the chromatogram obtained with reference solution (b) to identify the peaks due to impurities D and E.

*Relative retention* with reference to diacerein (retention time = about 13.5 min): impurity D = about 1.1; impurity E = about 1.15; impurity C = about 1.2; impurity F = about 1.3.

*System suitability*:

- *resolution*: minimum 1.5 between the peaks due to impurities D and E in the chromatogram obtained with reference solution (b);
- *signal-to-noise ratio*: minimum 100 for the principal peak in the chromatogram obtained with reference solution (a).

*Limits*:

- *correction factors*: for the calculation of content, multiply the peak areas of the following impurities by the corresponding correction factor: impurity C = 1.4; impurity D = 1.3; impurity E = 1.3; impurity F = 9.5;
- *impurities D, E*: for each impurity, not more than 5 times the area of the principal peak in the chromatogram obtained with reference solution (a) (0.5 per cent);
- *impurity C*: not more than twice the area of the principal peak in the chromatogram obtained with reference solution (a) (0.2 per cent);
- *impurity F*: not more than 1.5 times the area of the principal peak in the chromatogram obtained with reference solution (a) (0.15 per cent);
- *unspecified impurities*: for each impurity, not more than the area of the principal peak in the chromatogram obtained with reference solution (a) (0.10 per cent);
- *total*: not more than 20 times the area of the principal peak in the chromatogram obtained with reference solution (a) (2.0 per cent);
- *disregard limit*: 0.5 times the area of the principal peak in the chromatogram obtained with reference solution (a) (0.05 per cent).

**Loss on drying** (*2.2.32*): maximum 0.5 per cent, determined on 1.000 g by drying in an oven at 105 °C.

**Sulfated ash** (*2.4.14*): maximum 0.1 per cent, determined on 1.0 g.

ASSAY

Liquid chromatography (*2.2.29*) as described in the test for related substances with the following modifications.

*Test solution.* Dissolve 60.0 mg of the substance to be examined in *tetrahydrofuran R* and dilute to 50.0 mL with the same solvent. Dilute 2.0 mL of the solution to 25.0 mL with the solvent mixture.

*Reference solution.* Dissolve 60.0 mg of *diacerein CRS* in *tetrahydrofuran R* and dilute to 50.0 mL with the same solvent. Dilute 2.0 mL of the solution to 25.0 mL with the solvent mixture.

Calculate the percentage content of $C_{19}H_{12}O_8$ taking into account the assigned content of *diacerein CRS*.

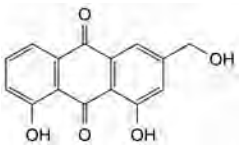
STORAGE

In an airtight container, protected from light.

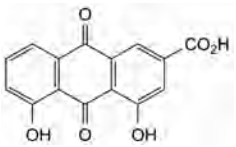
IMPURITIES

*Specified impurities: B, C, D, E, F, H.*

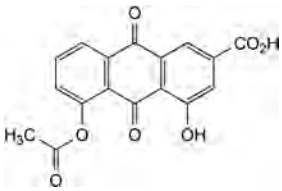
*Other detectable impurities* (the following substances would, if present at a sufficient level, be detected by one or other of the tests in the monograph. They are limited by the general acceptance criterion for other/unspecified impurities and/or by the general monograph *Substances for pharmaceutical use (2034)*. It is therefore not necessary to identify these impurities for demonstration of compliance. See also *5.10. Control of impurities in substances for pharmaceutical use*): *G.*



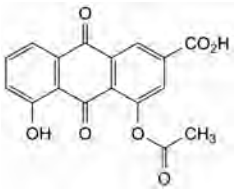
B. 1,8-dihydroxy-3-(hydroxymethyl)anthracene-9,10-dione (aloe-emodin),



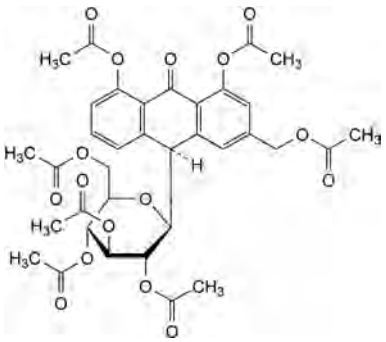
C. 4,5-dihydroxy-9,10-dioxo-9,10-dihydroanthracene-2-carboxylic acid (rhein),



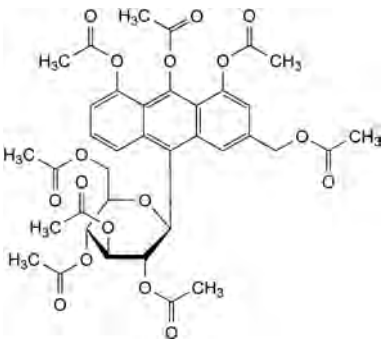
D. 5-(acetyloxy)-4-hydroxy-9,10-dioxo-9,10-dihydroanthracene-2-carboxylic acid (monoacetyl rhein isomer A),



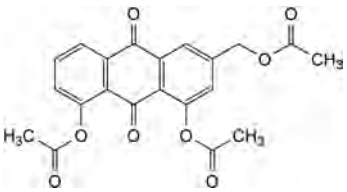
E. 4-(acetyloxy)-5-hydroxy-9,10-dioxo-9,10-dihydroanthracene-2-carboxylic acid (monoacetyl rhein isomer B),



F. (10*S*)-3-[(acetyloxy)methyl]-10-(2,3,4,6-tetra-*O*-acetyl-β-D-glucopyranosyl)-9-oxo-9,10-dihydroanthracene-1,8-diyl diacetate (heptaacetyl aloin, heptaacetyl barbaloin),



G. 3-[(acetyloxy)methyl]-10-(2,3,4,6-tetra-*O*-acetyl-β-D-glucopyranosyl)anthracene-1,8,9-triyl triacetate,

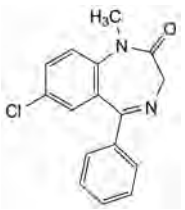


H. 3-[(acetyloxy)methyl]-9,10-dioxo-9,10-dihydroanthracene-1,8-diyl diacetate (triacetyl aloe-emodin).

**01/2017:0022**

# DIAZEPAM

## Diazepamum



$C_{16}H_{13}ClN_2O$ $M_r$ 284.7

[439-14-5]

DEFINITION

7-Chloro-1-methyl-5-phenyl-1,3-dihydro-2*H*-1,4-benzodiazepin-2-one.

*Content*: 99.0 per cent to 101.0 per cent (dried substance).

CHARACTERS

*Appearance*: white or almost white, crystalline powder.

*Solubility*: very slightly soluble in water, soluble in ethanol (96 per cent).

IDENTIFICATION

Infrared absorption spectrophotometry (*2.2.24*).

*Comparison: diazepam CRS.*

TESTS

**Related substances**. Liquid chromatography (*2.2.29*). *Prepare the solutions protected from bright light.*

*Test solution.* Dissolve 25.0 mg of the substance to be examined in 0.5 mL of *acetonitrile R* and dilute to 50.0 mL with the mobile phase.

*Reference solution (a).* Dilute 1.0 mL of the test solution to 100.0 mL with the mobile phase. Dilute 1.0 mL of this solution to 10.0 mL with the mobile phase.

*Reference solution (b).* Dissolve the contents of a vial of *diazepam for system suitability CRS* (containing impurities A, B and E) in 1.0 mL of the mobile phase.

*Column*:

- *size*: *l* = 0.15 m, Ø = 4.6 mm;
- *stationary phase*: spherical *end-capped octylsilyl silica gel for chromatography R* (5 µm);
- *temperature*: 30 °C.

*Mobile phase*: mix 22 volumes of *acetonitrile R*, 34 volumes of *methanol R* and 44 volumes of a 3.4 g/L solution of *potassium dihydrogen phosphate R* previously adjusted to pH 5.0 with *dilute sodium hydroxide solution R*.

*Flow rate*: 1.0 mL/min.

*Detection*: spectrophotometer at 254 nm.

*Injection*: 20 µL.

*Run time*: about 4 times the retention time of diazepam.

*Identification of impurities*: use the chromatogram supplied with *diazepam for system suitability CRS* and the chromatogram obtained with reference solution (b) to identify the peaks due to impurities A, B and E.

*Relative retention* with reference to diazepam (retention time = about 9 min): impurity E = about 0.7; impurity A = about 0.8; impurity B = about 1.3.

*System suitability*: reference solution (b):

- *resolution*: minimum 2.5 between the peaks due to impurities E and A and minimum 6.0 between the peaks due to impurity A and diazepam.

*Limits*:

- *correction factors*: for the calculation of content, multiply the peak areas of the following impurities by the corresponding correction factor: impurity B = 1.3; impurity E = 1.3;
- *impurities A, B, E*: for each impurity, not more than the area of the principal peak in the chromatogram obtained with reference solution (a) (0.1 per cent);
- *unspecified impurities*: for each impurity, not more than the area of the principal peak in the chromatogram obtained with reference solution (a) (0.10 per cent);
- *total*: not more than twice the area of the principal peak in the chromatogram obtained with reference solution (a) (0.2 per cent);
- *disregard limit*: 0.5 times the area of the principal peak in the chromatogram obtained with reference solution (a) (0.05 per cent).

**Loss on drying** (*2.2.32*): maximum 0.5 per cent, determined on 1.000 g by drying *in vacuo* at 60 °C for 4 h.

**Sulfated ash** (*2.4.14*): maximum 0.1 per cent, determined on 1.0 g.

ASSAY

Dissolve 0.200 g in 50 mL of *acetic anhydride R*. Titrate with *0.1 M perchloric acid*, determining the end-point potentiometrically (*2.2.20*).

1 mL of *0.1 M perchloric acid* is equivalent to 28.47 mg of $C_{16}H_{13}ClN_2O$.

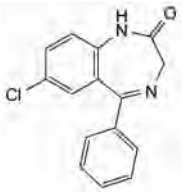
STORAGE

Protected from light.

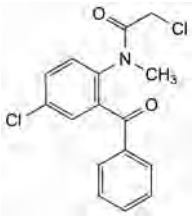
IMPURITIES

*Specified impurities: A, B, E.*

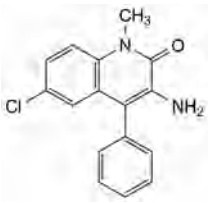
*Other detectable impurities* (the following substances would, if present at a sufficient level, be detected by one or other of the tests in the monograph. They are limited by the general acceptance criterion for other/unspecified impurities and/or by the general monograph *Substances for pharmaceutical use (2034)*. It is therefore not necessary to identify these impurities for demonstration of compliance. See also *5.10. Control of impurities in substances for pharmaceutical use*): *C, D, F.*



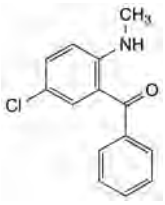
A. 7-chloro-5-phenyl-1,3-dihydro-2*H*-1,4-benzodiazepin-2-one (nordazepam),



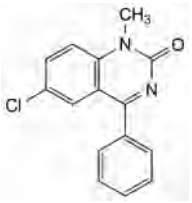
B. *N*-(2-benzoyl-4-chlorophenyl)-2-chloro-*N*-methylacetamide,



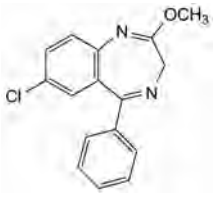
C. 3-amino-6-chloro-1-methyl-4-phenylquinolin-2(1*H*)-one,



D. [5-chloro-2-(methylamino)phenyl]phenylmethanone,



E. 6-chloro-1-methyl-4-phenylquinazolin-2(1*H*)-one,



F. 7-chloro-2-methoxy-5-phenyl-3*H*-1,4-benzodiazepine.

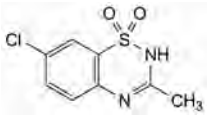
corrected 6.0

# DIAZOXIDE

## Diazoxidum



$C_8H_7ClN_2O_2S$ $M_r$ 230.7
[364-98-7]

DEFINITION

Diazoxide contains not less than 98.0 per cent and not more than the equivalent of 101.0 per cent of 7-chloro-3-methyl-2*H*-1,2,4-benzothiadiazine 1,1-dioxide, calculated with reference to the dried substance.

CHARACTERS

A white or almost white, fine or crystalline powder, practically insoluble in water, freely soluble in dimethylformamide, slightly soluble in alcohol. It is very soluble in dilute solutions of the alkali hydroxides.

IDENTIFICATION

*First identification*: B.

*Second identification*: A, C, D.

A. Dissolve 50.0 mg in 5 mL of *1 M sodium hydroxide* and dilute to 50.0 mL with *water R*. Dilute 1.0 mL of this solution to 100.0 mL with *0.1 M sodium hydroxide*. Examined between 230 nm and 350 nm (*2.2.25*), the solution shows an absorption maximum at 280 nm and a shoulder at 304 nm. The specific absorbance at the maximum is 570 to 610.

B. Examine by infrared absorption spectrophotometry (*2.2.24*), comparing with the spectrum obtained with *diazoxide CRS*. Examine the substances prepared as discs using *potassium bromide R*.

C. Examine the chromatograms obtained in the test for related substances in ultraviolet light at 254 nm. The principal spot in the chromatogram obtained with test solution (b) is similar in position and size to the principal spot in the chromatogram obtained with reference solution (b).

D. Dissolve about 20 mg in a mixture of 5 mL of *hydrochloric acid R* and 10 mL of *water R*. Add 0.1 g of *zinc powder R*. Boil for 5 min, cool and filter. To the filtrate add 2 mL of a 1 g/L solution of *sodium nitrite R* and mix. Allow to stand for 1 min and add 1 mL of a 5 g/L solution of *naphthylethylenediamine dihydrochloride R*. A red or violet-red colour develops.

TESTS

**Appearance of solution**. Dissolve 0.4 g in 2 mL of *1 M sodium hydroxide* and dilute to 20 mL with *water R*. The solution is clear (*2.2.1*) and not more intensely coloured than reference solution $Y_7$ (*2.2.2, Method II*).

**Acidity or alkalinity**. To 0.5 g of the powdered substance to be examined add 30 mL of *carbon dioxide-free water R*, shake for 2 min and filter. To 10 mL of the filtrate add 0.2 mL of *0.01 M sodium hydroxide* and 0.15 mL of *methyl red solution R*. The solution is yellow. Not more than 0.4 mL of *0.01 M hydrochloric acid* is required to change the colour of the indicator to red.

**Related substances**. Examine by thin-layer chromatography (*2.2.27*), using *silica gel* $GF_{254}$ *R* as the coating substance.

*Test solution (a)*. Dissolve 0.1 g of the substance to be examined in a mixture of 0.5 mL of *1 M sodium hydroxide* and 1 mL of *methanol R* and dilute to 5 mL with *methanol R*.

*Test solution (b)*. Dilute 1 mL of test solution (a) to 5 mL with a mixture of 1 volume of *1 M sodium hydroxide* and 9 volumes of *methanol R*.

*Reference solution (a)*. Dilute 0.5 mL of test solution (a) to 100 mL with a mixture of 1 volume of *1 M sodium hydroxide* and 9 volumes of *methanol R*.

*Reference solution (b)*. Dissolve 20 mg of *diazoxide CRS* in a mixture of 0.5 mL of *1 M sodium hydroxide* and 1 mL of *methanol R* and dilute to 5 mL with *methanol R*.

Apply separately to the plate 5 µL of each solution. Develop over a path of 15 cm using a mixture of 7 volumes of *concentrated ammonia R*, 25 volumes of *methanol R* and 68 volumes of *chloroform R*. Allow the plate to dry in air and examine in ultraviolet light at 254 nm. Any spot in the chromatogram obtained with test solution (a), apart from the principal spot, is not more intense than the spot in the chromatogram obtained with reference solution (a) (0.5 per cent).

**Loss on drying** (*2.2.32*). Not more than 0.5 per cent, determined on 1.000 g by drying in an oven at 105 °C for 2 h.

**Sulfated ash** (*2.4.14*). Not more than 0.1 per cent, determined on 1.0 g.

ASSAY

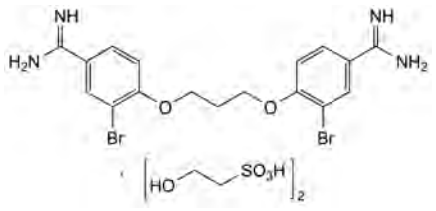
Dissolve 0.200 g with gentle heating in 50 mL of a mixture of 1 volume of *water R* and 2 volumes of *dimethylformamide R*. Titrate with *0.1 M sodium hydroxide*, determining the end-point potentiometrically (*2.2.20*). Carry out a blank titration.

1 mL of *0.1 M sodium hydroxide* is equivalent to 23.07 mg of $C_8H_7ClN_2O_2S$.

04/2016:2300

# DIBROMPROPAMIDINE DIISETHIONATE

## Dibrompropamidini diisetionas



$C_{21}H_{30}Br_2N_4O_{10}S_2$ $M_r$ 722
[614-87-9]

DEFINITION

3,3′-Dibromo-4,4′-[propane-1,3-diylbis(oxy)]dibenzimidamide bis(2-hydroxyethanesulfonate).

*Content*: 99.0 per cent to 101.0 per cent (dried substance).

PRODUCTION

It is considered that alkyl 2-hydroxyethanesulfonate esters are potential impurities in dibrompropamidine diisetionate. The manufacturing process should be developed taking into consideration the principles of quality risk management, together with considerations of the quality of starting

materials, process capability and validation including, where necessary, demonstration that alkyl 2-hydroxyethanesulfonate esters are not detectable in the final product.

CHARACTERS

*Appearance*: white or almost white, crystalline powder.

*Solubility*: freely soluble or soluble in water, slightly soluble in ethanol (96 per cent), practically insoluble in methylene chloride.

IDENTIFICATION

A. Infrared absorption spectrophotometry (*2.2.24*).
*Comparison*: *dibrompropamidine diisetionate CRS*.

B. Mix 0.1 g with 0.5 g of *anhydrous sodium carbonate R*, ignite and take up the residue with 20 mL of *water R*. Filter and neutralise the filtrate to *blue litmus paper R* with *nitric acid R*. The filtrate gives reaction (a) of bromides (*2.3.1*).

TESTS

**pH** (*2.2.3*): 5.0 to 6.0.

Dissolve 0.50 g in *carbon dioxide-free water R* and dilute to 10 mL with the same solvent.

**Related substances**. Liquid chromatography (*2.2.29*).

*Solvent mixture*: *anhydrous formic acid R*, *methanol R*, *ethyl acetate R* (0.01:8:12 *V/V/V*).

*Test solution*. To 8 mL of *methanol R* add 20.0 mg of the substance to be examined and dissolve with the aid of an ultrasonic bath. Add 11 mL of *ethyl acetate R* then 10 µL of *anhydrous formic acid R* and mix. Dilute to 20.0 mL with *ethyl acetate R*.

*Reference solution (a)*. Dilute 1.0 mL of the test solution to 100.0 mL with the solvent mixture. Dilute 1.0 mL of this solution to 10.0 mL with the solvent mixture.

*Reference solution (b)*. Dissolve 10 mg of *dibrompropamidine for system suitability CRS* (containing impurities A and B) in 4 mL of *methanol R* using an ultrasonic bath. Add 5 mL of *ethyl acetate R*, then 5 µL of *anhydrous formic acid R* and mix. Dilute to 10.0 mL with *ethyl acetate R*.

*Column*:
- *size*: *l* = 0.25 m, Ø = 4.6 mm;
- *stationary phase*: *strong cation-exchange silica gel for chromatography R* (5 µm).

*Mobile phase*: mix 4 volumes of a 25 g/L solution of *ammonium formate R* in *methanol R* and 6 volumes of *ethyl acetate R*.

*Flow rate*: 1 mL/min.

*Detection*: spectrophotometer at 254 nm.

*Injection*: 40 µL.

*Run time*: 1.5 times the retention time of dibrompropamidine.

*Identification of impurities*: use the chromatogram supplied with *dibrompropamidine for system suitability CRS* and the chromatogram obtained with reference solution (b) to identify the peaks due to impurities A and B.

*Relative retention* with reference to dibrompropamidine (retention time = about 20 min): impurity A = about 0.4; impurity B = about 1.1.

*System suitability*: reference solution (b):
- *peak-to-valley ratio*: minimum 1.5, where $H_p$ = height above the baseline of the peak due to impurity B and $H_v$ = height above the baseline of the lowest point of the curve separating this peak from the peak due to dibrompropamidine.

*Limits*:
- *impurity A*: not more than 3 times the area of the principal peak in the chromatogram obtained with reference solution (a) (0.3 per cent);
- *impurity B*: not more than 5 times the area of the principal peak in the chromatogram obtained with reference solution (a) (0.5 per cent);
- *unspecified impurities*: for each impurity, not more than the area of the principal peak in the chromatogram obtained with reference solution (a) (0.1 per cent);
- *total*: not more than 10 times the area of the principal peak in the chromatogram obtained with reference solution (a) (1.0 per cent);
- *disregard limit*: 0.5 times the area of the principal peak in the chromatogram obtained with reference solution (a) (0.05 per cent).

**Loss on drying** (*2.2.32*): maximum 2.0 per cent, determined on 1.000 g by drying in an oven at 105 °C.

**Sulfated ash** (*2.4.14*): maximum 0.1 per cent, determined on 1.0 g.

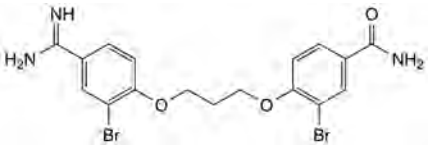
ASSAY

Dissolve 0.250 g in 50 mL of *dimethylformamide R*. Titrate with *0.1 M tetrabutylammonium hydroxide* under a current of *nitrogen R*, determining the end-point potentiometrically (*2.2.20*).

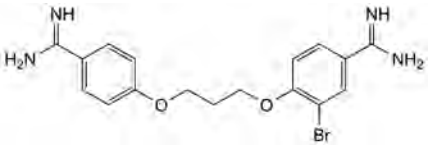
1 mL of *0.1 M tetrabutylammonium hydroxide* is equivalent to 36.12 mg of $C_{21}H_{30}Br_2N_4O_{10}S_2$.

IMPURITIES

*Specified impurities: A, B.*



A. 3-bromo-4-[3-(2-bromo-4-carbamimidoylphenoxy)-propoxy]benzamide,



B. 3-bromo-4-[3-(4-carbamimidoylphenoxy)propoxy]-benzimidamide.

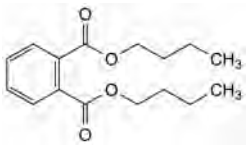
# DIBUTYL PHTHALATE

## Dibutylis phthalas



$C_{16}H_{22}O_4$ $M_r$ 278.3
[84-74-2]

DEFINITION

Dibutyl benzene-1,2-dicarboxylate.

*Content*: 99.0 per cent *m/m* to 101.0 per cent *m/m*.

CHARACTERS

*Appearance*: clear, oily liquid, colourless or very slightly yellow.

*Solubility*: practically insoluble in water, miscible with ethanol (96 per cent).

IDENTIFICATION

*First identification*: *B, C.*

*Second identification*: *A, D, E.*

A. Relative density (*2.2.5*): 1.043 to 1.048.

B. Refractive index (*2.2.6*): 1.490 to 1.495.

C. Infrared absorption spectrophotometry (*2.2.24*).
*Comparison*: *dibutyl phthalate CRS.*

D. Thin-layer chromatography (*2.2.27*).
*Test solution.* Dissolve 50 mg of the substance to be examined in *ether R* and dilute to 10 mL with the same solvent.
*Reference solution.* Dissolve 50 mg of *dibutyl phthalate CRS* in *ether R* and dilute to 10 mL with the same solvent.
*Plate*: *TLC silica gel* $GF_{254}$ *plate R.*
*Mobile phase*: *heptane R*, *ether R* (30:70 *V/V*).
*Application*: 10 µL.
*Development*: over a path of 15 cm.
*Drying*: in air.
*Detection*: examine in ultraviolet light at 254 nm.
*Results*: the principal spot in the chromatogram obtained with the test solution is similar in position and size to the principal spot in the chromatogram obtained with the reference solution.

E. To about 0.1 mL add 0.25 mL of *sulfuric acid R* and 50 mg of *resorcinol R.* Heat in a water-bath for 5 min. Allow to cool. Add 10 mL of *water R* and 1 mL of *strong sodium hydroxide solution R.* The solution becomes yellow or brownish-yellow and shows a green fluorescence.

TESTS

**Appearance**. The substance to be examined is clear (*2.2.1*) and not more intensely coloured than reference solution $Y_6$ (*2.2.2, Method II*).

**Acidity**. Dissolve 20.0 g in 50 mL of *ethanol (96 per cent) R* previously neutralised to *phenolphthalein solution R1.* Add 0.2 mL of *phenolphthalein solution R1.* Not more than 0.50 mL of *0.1 M sodium hydroxide* is required to change the colour of the indicator.

**Related substances**. Gas chromatography (*2.2.28*).
*Internal standard solution.* Dissolve 60 mg of *bibenzyl R* in *methylene chloride R* and dilute to 20 mL with the same solvent.
*Test solution (a).* Dissolve 1.0 g of the substance to be examined in *methylene chloride R* and dilute to 20.0 mL with the same solvent.
*Test solution (b).* Dissolve 1.0 g of the substance to be examined in *methylene chloride R*, add 2.0 mL of the internal standard solution and dilute to 20.0 mL with *methylene chloride R.*
*Reference solution.* To 1.0 mL of test solution (a) add 10.0 mL of the internal standard solution and dilute to 100.0 mL with *methylene chloride R.*
*Column*:
– *material*: glass;
– *size*: *l* = 1.5 m, Ø = 4 mm;
– *stationary phase*: *silanised diatomaceous earth for gas chromatography R* (150-180 µm) impregnated with 3 per cent *m/m* of *phenyl(50)methyl(50)polysiloxane R.*
*Carrier gas*: *nitrogen for chromatography R.*
*Flow rate*: 30 mL/min.
*Temperature*:
– *column*: 190 °C;
– *injection port and detector*: 225 °C.
*Detection*: flame ionisation.
*Injection*: 1 µL.
*Run time*: 3 times the retention time of dibutyl phthalate.
*Elution order*: bibenzyl, dibutyl phthalate.
*Retention time*: dibutyl phthalate = about 12 min.
*System suitability*:
– *resolution*: minimum 12 between the peaks due to bibenzyl and dibutyl phthalate in the chromatogram obtained with the reference solution;
– in the chromatogram obtained with test solution (a), there is no peak with the same retention time as the internal standard.
*Limit*:
– *total*: calculate the ratio (*R*) of the area of the peak due to dibutyl phthalate to the area of the peak due to the internal standard from the chromatogram obtained with the reference solution; from the chromatogram obtained with test solution (b), calculate the ratio of the sum of the areas of any peaks, apart from the principal peak and the peak due to the internal standard, to the area of the peak due to the internal standard: this ratio is not greater than *R* (1.0 per cent).

**Water** (*2.5.12*): maximum 0.2 per cent, determined on 10.00 g.

**Sulfated ash** (*2.4.14*): maximum 0.1 per cent, determined on 1.0 g.

ASSAY

Introduce 0.750 g into a 250 mL borosilicate glass flask. Add 25.0 mL of *0.5 M alcoholic potassium hydroxide* and a few glass beads. Heat in a water-bath under a reflux condenser for 1 h. Add 1 mL of *phenolphthalein solution R1* and titrate immediately with *0.5 M hydrochloric acid* until the colour changes from red to colourless. Carry out a blank titration. Calculate the volume of potassium hydroxide used in the saponification.

1 mL of *0.5 M alcoholic potassium hydroxide* is equivalent to 69.59 mg of $C_{16}H_{22}O_4$.

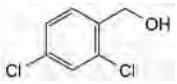
STORAGE

In an airtight container.

**04/2014:2410**

# 2,4-DICHLOROBENZYL ALCOHOL

## Alcohol 2,4-dichlorobenzylicus



$C_7H_6Cl_2O$ $M_r$ 177.0
[1777-82-8]

DEFINITION

(2,4-Dichlorophenyl)methanol.
*Content*: 98.0 per cent to 102.0 per cent (anhydrous substance).

CHARACTERS

*Appearance*: white or almost white, crystalline powder.
*Solubility*: very slightly soluble in water, very soluble in ethanol (96 per cent).
mp: about 59 °C.

IDENTIFICATION

Infrared absorption spectrophotometry (*2.2.24*).
*Comparison*: *2,4-dichlorobenzyl alcohol CRS.*

TESTS

**Related substances**. Liquid chromatography (*2.2.29*).

*Solvent mixture*: *acetonitrile R1*, *water R* (50:50 *V/V*).

*Buffer solution*. Dissolve 0.68 g of *potassium dihydrogen phosphate R* in 900 mL of *water R*, adjust to pH 3.0 with *phosphoric acid R* and dilute to 1000.0 mL with *water R*.

*Test solution (a)*. Dissolve 0.100 g of the substance to be examined in 10.0 mL of *acetonitrile R1* and dilute to 50.0 mL with the solvent mixture.

*Test solution (b)*. Dilute 5.0 mL of test solution (a) to 50.0 mL with the solvent mixture.

*Reference solution (a)*. Dilute 1.0 mL of test solution (a) to 100.0 mL with the solvent mixture. Dilute 1.0 mL of this solution to 10.0 mL with the solvent mixture.

*Reference solution (b)*. Dissolve 20.0 mg of *2,4-dichlorobenzyl alcohol impurity A CRS* and 20.0 mg of *2,4-dichlorobenzyl alcohol impurity C CRS* in 100.0 mL of *acetonitrile R1*. Dilute 1.0 mL of the solution to 100.0 mL with the solvent mixture.

*Reference solution (c)*. Dissolve 0.100 g of *2,4-dichlorobenzyl alcohol CRS* in 10.0 mL of *acetonitrile R1* and dilute to 50.0 mL with the solvent mixture. Dilute 5.0 mL of the solution to 50.0 mL with the solvent mixture.

*Column*:

- *size*: *l* = 0.15 m, Ø = 4.6 mm;
- *stationary phase*: *end-capped octadecylsilyl silica gel for chromatography R* (5 µm);
- *temperature*: 30 °C.

*Mobile phase*:

- *mobile phase A*: *methanol R2*, *acetonitrile R1*, buffer solution (20:30:50 *V/V/V*);
- *mobile phase B*: *acetonitrile R1*;

| Time (min) | Mobile phase A (per cent *V/V*) | Mobile phase B (per cent *V/V*) |
|---|---|---|
| 0 - 7 | 100 | 0 |
| 7 - 17 | 100 → 20 | 0 → 80 |
| 17 - 30 | 20 | 80 |

*Flow rate*: 1.2 mL/min.

*Detection*: spectrophotometer at 214 nm.

*Injection*: 10 µL of test solution (a) and reference solutions (a) and (b).

*Relative retention* with reference to 2,4-dichlorobenzyl alcohol (retention time = about 7 min): impurity C = about 0.87; impurity A = about 0.91.

*System suitability*: reference solution (b):

- *peak-to-valley ratio*: minimum 4, where $H_p$ = height above the baseline of the peak due to impurity C and $H_v$ = height above the baseline of the lowest point of the curve separating this peak from the peak due to impurity A.

*Calculation of percentage contents*:

- for each impurity, use the concentration of 2,4-dichlorobenzyl alcohol in reference solution (a).

*Limits*:

- *unspecified impurities*: for each impurity, maximum 0.10 per cent;
- *total*: maximum 0.3 per cent;
- *reporting threshold*: 0.05 per cent.

**Water** (*2.5.32*): maximum 0.2 per cent, determined on 0.500 g using the evaporation technique:

- *temperature*: 120 °C.

**Sulfated ash** (*2.4.14*): maximum 0.1 per cent, determined on 1.0 g.

ASSAY

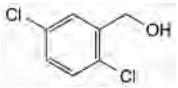
Liquid chromatography (*2.2.29*) as described in the test for related substances with the following modification.

*Injection*: test solution (b) and reference solution (c).

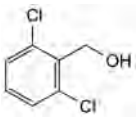
Calculate the percentage content of $C_7H_6Cl_2O$ taking into account the assigned content of *2,4-dichlorobenzyl alcohol CRS*.

IMPURITIES

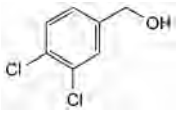
*Other detectable impurities* (the following substances would, if present at a sufficient level, be detected by one or other of the tests in the monograph. They are limited by the general acceptance criterion for other/unspecified impurities and/or by the general monograph *Substances for pharmaceutical use (2034)*. It is therefore not necessary to identify these impurities for demonstration of compliance. See also *5.10. Control of impurities in substances for pharmaceutical use*): *A, B, C, D, E, F, G.*



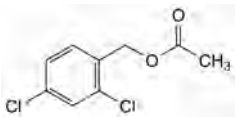
A. (2,5-dichlorophenyl)methanol,



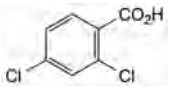
B. (2,6-dichlorophenyl)methanol,



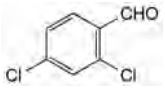
C. (3,4-dichlorophenyl)methanol,



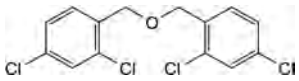
D. 2,4-dichlorobenzyl acetate,



E. 2,4-dichlorobenzoic acid,



F. 2,4-dichlorobenzaldehyde,



G. 1,1′-(oxydimethylene)bis(2,4-dichlorobenzene).

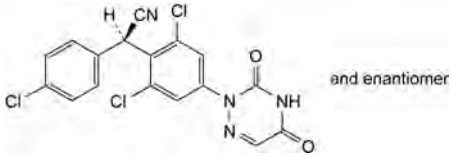
# DICLAZURIL FOR VETERINARY USE

## Diclazurilum ad usum veterinarium



$C_{17}H_9Cl_3N_4O_2$ $M_r$ 407.6
[101831-37-2]

DEFINITION

(*RS*)-(4-Chlorophenyl)[2,6-dichloro-4-(3,5-dioxo-4,5-dihydro-1,2,4-triazin-2(3*H*)-yl)phenyl]acetonitrile.

*Content*: 99.0 per cent to 101.0 per cent (dried substance).

CHARACTERS

*Appearance*: white or light yellow powder.

*Solubility*: practically insoluble in water, sparingly soluble in dimethylformamide, practically insoluble in alcohol and methylene chloride.

IDENTIFICATION

Infrared absorption spectrophotometry (*2.2.24*).

*Comparison*: *Ph. Eur. reference spectrum of diclazuril.*

TESTS

**Related substances**. Liquid chromatography (*2.2.29*).

*Test solution.* Dissolve 20.0 mg of the substance to be examined in *dimethylformamide R* and dilute to 20.0 mL with the same solvent.

*Reference solution (a).* Dissolve 5 mg of *diclazuril for system suitability CRS* in *dimethylformamide R* and dilute to 5.0 mL with the same solvent.

*Reference solution (b).* Dilute 1.0 mL of the test solution to 100.0 mL with *dimethylformamide R*. Dilute 5.0 mL of the solution to 20.0 mL with *dimethylformamide R*.

*Column*:

- *size*: *l* = 0.10 m, Ø = 4.6 mm,
- *stationary phase*: *base-deactivated octadecylsilyl silica gel for chromatography R* (3 µm),
- *temperature*: 35 °C.

*Mobile phase*:

- *mobile phase A*: mix 10 volumes of a 6.3 g/L solution of *ammonium formate R* adjusted to pH 4.0 with *anhydrous formic acid R*, 15 volumes of *acetonitrile R* and 75 volumes of *water R*,
- *mobile phase B*: mix 10 volumes of a 6.3 g/L solution of *ammonium formate R* adjusted to pH 4.0 with *anhydrous formic acid R*, 85 volumes of *acetonitrile R* and 5 volumes of *water R*,

| Time (min) | Mobile phase A (per cent *V/V*) | Mobile phase B (per cent *V/V*) |
|---|---|---|
| 0 - 20 | 100 → 0 | 0 → 100 |
| 20 - 25 | 0 | 100 |

*Flow rate*: 1.0 mL/min.

*Detection*: spectrophotometer at 230 nm.

*Injection*: 5 µL.

*System suitability*: reference solution (a):

- *peak-to-valley ratio*: minimum of 1.5, where $H_p$ = height above the baseline of the peak due to impurity D and $H_v$ = height above the baseline of the lowest point of the curve separating this peak from the peak due to diclazuril.

*Limits*:

- *correction factors*: for the calculation of contents, multiply the peak areas of the following impurities by the corresponding correction factor: impurity D = 1.9; impurity H = 1.4,
- *impurity D*: not more than 0.4 times the area of the principal peak in the chromatogram obtained with reference solution (b) (0.1 per cent),
- *any other impurity*: not more than the area of the principal peak in the chromatogram obtained with reference solution (b) (0.25 per cent),
- *total*: not more than 4 times the area of the principal peak in the chromatogram obtained with reference solution (b) (1.0 per cent),
- *disregard limit*: 0.2 times the area of the principal peak in the chromatogram obtained with reference solution (b) (0.05 per cent).

**Loss on drying** (*2.2.32*): maximum 0.5 per cent, determined on 1.000 g by drying in an oven at 105 °C for 4 h.

**Sulfated ash** (*2.4.14*): maximum 0.1 per cent, determined on 1.0 g.

ASSAY

Dissolve 0.150 g in 75 mL of *dimethylformamide R*. Carry out a potentiometric titration (*2.2.20*), using *0.1 M tetrabutylammonium hydroxide*. Read the volume added at the second inflexion point. Carry out a blank titration.

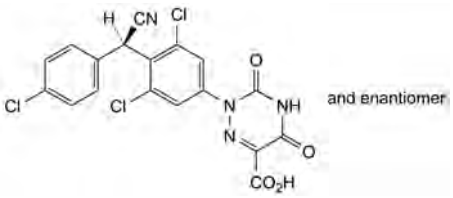
1 mL of *0.1 M tetrabutylammonium hydroxide* is equivalent to 20.38 mg of $C_{17}H_9Cl_3N_4O_2$.

STORAGE

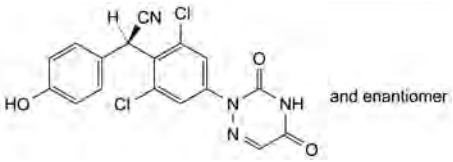
Protected from light.

IMPURITIES

*Specified impurities: A, B, C, D, E, F, G, H, I.*



A. 2-[3,5-dichloro-4-[(*RS*)-(4-chlorophenyl)cyanomethyl]-phenyl]-3,5-dioxo-2,3,4,5-tetrahydro-1,2,4-triazine-6-carboxylic acid,



B. (*RS*)-[2,6-dichloro-4-(3,5-dioxo-4,5-dihydro-1,2,4-triazin-2(3*H*)-yl)phenyl](4-hydroxyphenyl)acetonitrile,

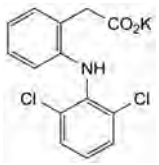
# DICLOFENAC POTASSIUM

## Diclofenacum kalicum



$C_{14}H_{10}Cl_2KNO_2$ $M_r$ 334.2
[15307-81-0]

DEFINITION

Potassium [2-[(2,6-dichlorophenyl)amino]phenyl]acetate.

*Content*: 99.0 per cent to 101.0 per cent (dried substance).

CHARACTERS

*Appearance*: white or slightly yellowish, slightly hygroscopic, crystalline powder.

*Solubility*: sparingly soluble in water, freely soluble in methanol, soluble in ethanol (96 per cent), slightly soluble in acetone.

IDENTIFICATION

*First identification*: *A, D.*

*Second identification*: *B, C, D.*

A. Infrared absorption spectrophotometry (*2.2.24*).
*Comparison*: *diclofenac potassium CRS.*

B. Thin-layer chromatography (*2.2.27*).
*Test solution.* Dissolve 25 mg of the substance to be examined in *methanol R* and dilute to 5 mL with the same solvent.
*Reference solution (a).* Dissolve 25 mg of *diclofenac potassium CRS* in *methanol R* and dilute to 5 mL with the same solvent.
*Reference solution (b).* Dissolve 10 mg of *indometacin R* in reference solution (a) and dilute to 2 mL with the same solution.
*Plate*: *TLC silica gel* $GF_{254}$ *plate R.*
*Mobile phase*: *concentrated ammonia R*, *methanol R*, *ethyl acetate R* (10:10:80 *V/V/V*).
*Application*: 5 µL.
*Development*: over 1/2 of the plate.
*Drying*: in air.
*Detection*: examine in ultraviolet light at 254 nm.
*System suitability*: reference solution (b):
– the chromatogram shows 2 clearly separated spots.
*Results*: the principal spot in the chromatogram obtained with the test solution is similar in position and size to the principal spot in the chromatogram obtained with reference solution (a).

C. Dissolve about 10 mg in 10 mL of *ethanol (96 per cent) R.* To 1 mL of this solution add 0.2 mL of a mixture, prepared immediately before use, of equal volumes of a 6 g/L solution of *potassium ferricyanide R* and a 9 g/L solution of *ferric chloride R.* Allow to stand protected from light for 5 min. Add 3 mL of a 10 g/L solution of *hydrochloric acid R.* Allow to stand protected from light for 15 min. A blue colour develops and a precipitate is formed.

D. Suspend 0.5 g in 10 mL of *water R.* Stir and add *water R* until the substance is dissolved. Add 2 mL of *hydrochloric acid R1*, stir for 1 h and filter with the aid of vacuum. Neutralise with *sodium hydroxide solution R.* The solution gives reaction (b) of potassium (*2.3.1*).

TESTS

**Appearance of solution**. The solution is clear (*2.2.1*) and its absorbance (*2.2.25*) at 440 nm is not greater than 0.05.
Dissolve 1.25 g in *methanol R* and dilute to 25.0 mL with the same solvent.

**Related substances**. Liquid chromatography (*2.2.29*).
*Test solution.* Dissolve 50.0 mg of the substance to be examined in the mobile phase and dilute to 50.0 mL with the mobile phase.
*Reference solution (a).* Dilute 2.0 mL of the test solution to 100.0 mL with the mobile phase. Dilute 1.0 mL of this solution to 10.0 mL with the mobile phase.
*Reference solution (b).* Dissolve the contents of a vial of *diclofenac for system suitability CRS* (containing impurities A and F) in 1 mL of the mobile phase.
*Column*:
– *size*: *l* = 0.25 m, Ø = 4.6 mm;
– *stationary phase*: *end-capped octadecylsilyl silica gel for chromatography R* (5 µm).
*Mobile phase*: mix 34 volumes of a solution containing 0.5 g/L of *phosphoric acid R* and 0.8 g/L of *sodium dihydrogen phosphate R*, previously adjusted to pH 2.5 with *phosphoric acid R*, and 66 volumes of *methanol R.*
*Flow rate*: 1.0 mL/min.
*Detection*: spectrophotometer at 254 nm.

*Injection*: 20 µL.

*Run time*: 1.6 times the retention time of diclofenac.

*Identification of impurities*: use the chromatogram supplied with *diclofenac for system suitability CRS* and the chromatogram obtained with reference solution (b) to identify the peaks due to impurities A and F.

*Relative retention* with reference to diclofenac (retention time = about 25 min): impurity A = about 0.4; impurity F = about 0.8.

*System suitability*: reference solution (b):

– *resolution*: minimum 4.0 between the peaks due to impurity F and diclofenac.

*Calculation of percentage contents*:

– *correction factors*: multiply the peak areas of the following impurities by the corresponding correction factor: impurity A = 0.7; impurity F = 0.3;

– for each impurity, use the concentration of diclofenac potassium in reference solution (a).

*Limits*:

– *impurities A, F*: for each impurity, maximum 0.15 per cent;

– *unspecified impurities*: for each impurity, maximum 0.10 per cent;

– *total*: maximum 0.4 per cent;

– *reporting threshold*: 0.05 per cent.

**Loss on drying** (*2.2.32*): maximum 0.5 per cent, determined on 1.000 g by drying in an oven at 105 °C for 3 h.

ASSAY

Dissolve 0.250 g in 60 mL of *anhydrous acetic acid R*. Titrate with *0.1 M perchloric acid*, determining the end-point potentiometrically (*2.2.20*).

1 mL of *0.1 M perchloric acid* is equivalent to 33.42 mg of $C_{14}H_{10}Cl_2KNO_2$.

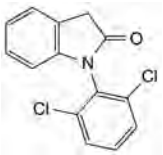
STORAGE

In an airtight container, protected from light.

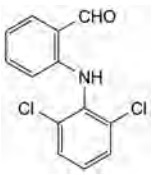
IMPURITIES

*Specified impurities: A, F.*

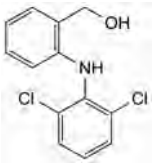
*Other detectable impurities* (the following substances would, if present at a sufficient level, be detected by one or other of the tests in the monograph. They are limited by the general acceptance criterion for other/unspecified impurities and/or by the general monograph *Substances for pharmaceutical use (2034)*. It is therefore not necessary to identify these impurities for demonstration of compliance. See also *5.10. Control of impurities in substances for pharmaceutical use*): *B, C, D, E.*



A. 1-(2,6-dichlorophenyl)-1,3-dihydro-2*H*-indol-2-one,

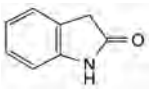


B. 2-[(2,6-dichlorophenyl)amino]benzaldehyde,

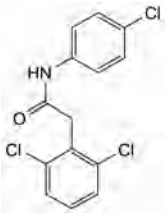


C. [2-[(2,6-dichlorophenyl)amino]phenyl]methanol,

D. [2-[(2-bromo-6-chlorophenyl)amino]phenyl]acetic acid,



E. 1,3-dihydro-2*H*-indol-2-one,



F. *N*-(4-chlorophenyl)-2-(2,6-dichlorophenyl)acetamide.

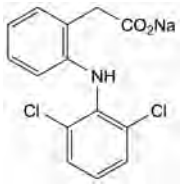
# DICLOFENAC SODIUM

## Diclofenacum natricum



$C_{14}H_{10}Cl_2NNaO_2$ $M_r$ 318.1
[15307-79-6]

DEFINITION

Sodium [2-[(2,6-dichlorophenyl)amino]phenyl]acetate.

*Content*: 99.0 per cent to 101.0 per cent (dried substance).

CHARACTERS

*Appearance*: white or slightly yellowish, slightly hygroscopic, crystalline powder.

*Solubility*: sparingly soluble in water, freely soluble in methanol, soluble in ethanol (96 per cent), slightly soluble in acetone.

mp: about 280 °C, with decomposition.

IDENTIFICATION

*First identification: A, D.*

*Second identification: B, C, D.*

A. Infrared absorption spectrophotometry (*2.2.24*).
*Comparison*: *diclofenac sodium CRS*.

B. Thin-layer chromatography (*2.2.27*).

*Test solution.* Dissolve 25 mg of the substance to be examined in *methanol R* and dilute to 5 mL with the same solvent.

*Reference solution (a).* Dissolve 25 mg of *diclofenac sodium CRS* in *methanol R* and dilute to 5 mL with the same solvent.

*Reference solution (b).* Dissolve 10 mg of *indometacin R* in reference solution (a) and dilute to 2 mL with reference solution (a).

*Plate*: *TLC silica gel $GF_{254}$ plate R.*

*Mobile phase*: *concentrated ammonia R*, *methanol R*, *ethyl acetate R* (10:10:80 *V/V/V*).

*Application*: 5 µL.

*Development*: over 1/2 of the plate.

*Drying*: in air.

*Detection*: examine in ultraviolet light at 254 nm.

*System suitability*: reference solution (b):

– the chromatogram shows 2 clearly separated spots.

*Results*: the principal spot in the chromatogram obtained with the test solution is similar in position and size to the principal spot in the chromatogram obtained with reference solution (a).

C. Dissolve about 10 mg in 10 mL of *ethanol (96 per cent) R*. To 1 mL of this solution add 0.2 mL of a mixture, prepared immediately before use, of equal volumes of a 6 g/L solution of *potassium ferricyanide R* and a 9 g/L solution of *ferric chloride R*. Allow to stand protected from light for 5 min. Add 3 mL of a 10 g/L solution of *hydrochloric acid R*. Allow to stand, protected from light, for 15 min. A blue colour develops and a precipitate is formed.

D. Dissolve 60 mg in 0.5 mL of *methanol R* and add 0.5 mL of *water R*. The solution gives reaction (b) of sodium (*2.3.1*).

TESTS

**Appearance of solution**. The solution is clear (*2.2.1*) and its absorbance (*2.2.25*) at 440 nm is not greater than 0.05.

Dissolve 1.25 g in *methanol R* and dilute to 25.0 mL with the same solvent.

**Related substances**. Liquid chromatography (*2.2.29*).

*Test solution.* Dissolve 50.0 mg of the substance to be examined in the mobile phase and dilute to 50.0 mL with the mobile phase.

*Reference solution (a).* Dilute 2.0 mL of the test solution to 100.0 mL with the mobile phase. Dilute 1.0 mL of this solution to 10.0 mL with the mobile phase.

*Reference solution (b).* Dissolve the contents of a vial of *diclofenac for system suitability CRS* (containing impurities A and F) in 1 mL of the mobile phase.

*Column*:

– *size*: *l* = 0.25 m, Ø = 4.6 mm;

– *stationary phase*: *end-capped octadecylsilyl silica gel for chromatography R* (5 µm).

*Mobile phase*: mix 34 volumes of a solution containing 0.5 g/L of *phosphoric acid R* and 0.8 g/L of *sodium dihydrogen phosphate R*, previously adjusted to pH 2.5 with *phosphoric acid R*, and 66 volumes of *methanol R*.

*Flow rate*: 1.0 mL/min.

*Detection*: spectrophotometer at 254 nm.

*Injection*: 20 µL.

*Run time*: 1.6 times the retention time of diclofenac.

*Identification of impurities*: use the chromatogram supplied with *diclofenac for system suitability CRS* and the chromatogram obtained with reference solution (b) to identify the peaks due to impurities A and F.

*Relative retention* with reference to diclofenac (retention time = about 25 min): impurity A = about 0.4; impurity F = about 0.8.

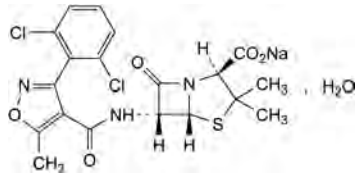
# DICLOXACILLIN SODIUM

## Dicloxacillinum natricum



$C_{19}H_{16}Cl_2N_3NaO_5S,H_2O$ $M_r$ 510.3
[13412-64-1]

DEFINITION

Sodium (2*S*,5*R*,6*R*)-6-[[[3-(2,6-dichlorophenyl)-5-methyl-1,2-oxazol-4-yl]carbonyl]amino]-3,3-dimethyl-7-oxo-4-thia-1-azabicyclo[3.2.0]heptane-2-carboxylate monohydrate.

Semi-synthetic product derived from a fermentation product.

*Content*: 95.0 per cent to 102.0 per cent (anhydrous substance).

CHARACTERS

*Appearance*: white or almost white, hygroscopic, crystalline powder.

*Solubility*: freely soluble in water, soluble in ethanol (96 per cent) and in methanol.

IDENTIFICATION

*First identification*: *A, D.*

*Second identification*: *B, C, D.*

A. Infrared absorption spectrophotometry (*2.2.24*).

*Preparation*: discs.

*Comparison*: *dicloxacillin sodium CRS.*

B. Thin-layer chromatography (*2.2.27*).

*Test solution.* Dissolve 25 mg of the substance to be examined in 5 mL of *water R.*

*Reference solution (a).* Dissolve 25 mg of *dicloxacillin sodium CRS* in 5 mL of *water R.*

*Reference solution (b).* Dissolve 25 mg of *cloxacillin sodium CRS*, 25 mg of *dicloxacillin sodium CRS* and 25 mg of *flucloxacillin sodium CRS* in 5 mL of *water R.*

*Plate*: *TLC silanised silica gel plate R.*

*Mobile phase*: mix 30 volumes of *acetone R* and 70 volumes of a 154 g/L solution of *ammonium acetate R* adjusted to pH 5.0 with *glacial acetic acid R.*

*Application*: 1 µL.

*Development*: over a path of 15 cm.

*Drying*: in air.

*Detection*: expose to iodine vapour until the spots appear and examine in daylight.

*System suitability*: reference solution (b):

– the chromatogram shows 3 clearly separated spots.

*Results*: the principal spot in the chromatogram obtained with the test solution is similar in position, colour and size to the principal spot in the chromatogram obtained with reference solution (a).

C. Place about 2 mg in a test-tube about 150 mm long and about 15 mm in diameter. Moisten with 0.05 mL of *water R* and add 2 mL of *sulfuric acid-formaldehyde reagent R*. Mix the contents of the tube by swirling; the solution is slightly greenish-yellow. Place the test-tube in a water-bath for 1 min; a yellow colour develops.

D. It gives reaction (a) of sodium (*2.3.1*).

TESTS

**Solution S**. Dissolve 2.50 g in *carbon dioxide-free water R* and dilute to 25.0 mL with the same solvent.

**Appearance of solution**. Solution S is clear (*2.2.1*) and its absorbance (*2.2.25*) at 430 nm is not greater than 0.04.

**pH** (*2.2.3*): 5.0 to 7.0 for solution S.

**Specific optical rotation** (*2.2.7*): + 128 to + 143 (anhydrous substance).

Dissolve 0.250 g in *water R* and dilute to 25.0 mL with the same solvent.

**Related substances**. Liquid chromatography (*2.2.29*).

*Test solution (a).* Dissolve 50.0 mg of the substance to be examined in the mobile phase and dilute to 50.0 mL with the mobile phase.

*Test solution (b).* Dilute 5.0 mL of test solution (a) to 50.0 mL with the mobile phase.

*Reference solution (a).* Dissolve 50.0 mg of *dicloxacillin sodium CRS* in the mobile phase and dilute to 50.0 mL with the mobile phase. Dilute 5.0 mL of this solution to 50.0 mL with the mobile phase.

*Reference solution (b).* Dilute 5.0 mL of test solution (b) to 50.0 mL with the mobile phase.

*Reference solution (c).* Dissolve 5 mg of *flucloxacillin sodium CRS* and 5 mg of *dicloxacillin sodium CRS* in the mobile phase, then dilute to 50.0 mL with the mobile phase.

*Column*:

– *size*: *l* = 0.25 m, Ø = 4 mm;
– *stationary phase*: *octadecylsilyl silica gel for chromatography R* (5 µm).

*Mobile phase*: mix 25 volumes of *acetonitrile R* and 75 volumes of a 2.7 g/L solution of *potassium dihydrogen phosphate R* adjusted to pH 5.0 with *dilute sodium hydroxide solution R.*

*Flow rate*: 1.0 mL/min.

*Detection*: spectrophotometer at 225 nm.

*Injection*: 20 µL of test solution (a) and reference solutions (b) and (c).

*Run time*: 5 times the retention time of dicloxacillin.

*Retention time*: dicloxacillin = about 10 min.

*System suitability*: reference solution (c):

– *resolution*: minimum 2.5 between the peaks due to flucloxacillin (1st peak) and dicloxacillin (2nd peak).

*Limits*:

– *any impurity*: for each impurity, not more than the area of the principal peak in the chromatogram obtained with reference solution (b) (1 per cent);
– *total*: not more than 5 times the area of the principal peak in the chromatogram obtained with reference solution (b) (5 per cent);
– *disregard limit*: 0.05 times the area of the principal peak in the chromatogram obtained with reference solution (b) (0.05 per cent).

***N*,*N*-Dimethylaniline** (*2.4.26, Method B*): maximum 20 ppm.

**2-Ethylhexanoic acid** (*2.4.28*): maximum 0.8 per cent *m/m*.

**Water** (*2.5.12*): 3.0 per cent to 4.5 per cent, determined on 0.300 g.

**Pyrogens** (*2.6.8*). If intended for use in the manufacture of parenteral preparations without a further appropriate procedure for the removal of pyrogens, it complies with the test for pyrogens. Inject per kilogram of the rabbit's mass 1 mL of a solution in *water for injections R* containing 20 mg of the substance to be examined per millilitre.

ASSAY

Liquid chromatography (*2.2.29*) as described in the test for related substances with the following modifications.

*Injection*: test solution (b) and reference solution (a).

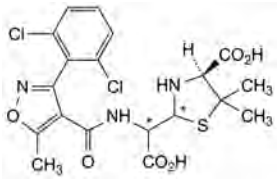
*System suitability*: reference solution (a):

– *repeatability*: maximum relative standard deviation of 1.0 per cent after 6 injections.

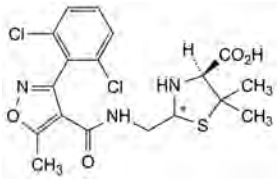
STORAGE

In an airtight container, at a temperature not exceeding 25 °C. If the substance is sterile, store in a sterile, airtight, tamper-evident container.

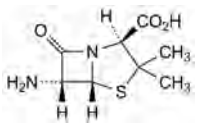
IMPURITIES



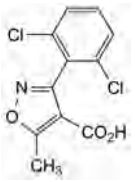
A. (4*S*)-2-[carboxy[[[3-(2,6-dichlorophenyl)-5-methyl-1,2-oxazol-4-yl]carbonyl]amino]methyl]-5,5-dimethyl-1,3-thiazolidine-4-carboxylic acid (penicilloic acids of dicloxacillin),



B. (2*RS*,4*S*)-2-[[[[3-(2,6-dichlorophenyl)-5-methyl-1,2-oxazol-4-yl]carbonyl]amino]methyl]-5,5-dimethyl-1,3-thiazolidine-4-carboxylic acid (penilloic acids of dicloxacillin),



C. (2*S*,5*R*,6*R*)-6-amino-3,3-dimethyl-7-oxo-4-thia-1-azabicyclo[3.2.0]heptane-2-carboxylic acid (6-aminopenicillanic acid),

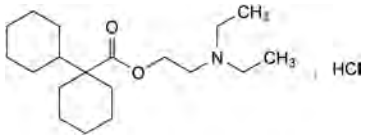


D. 3-(2,6-dichlorophenyl)-5-methyl-1,2-oxazole-4-carboxylic acid.

**04/2017:1197**
**corrected 10.0**

# DICYCLOVERINE HYDROCHLORIDE

## Dicycloverini hydrochloridum



$C_{19}H_{36}ClNO_2$ $M_r$ 346.0

DEFINITION

2-(Diethylamino)ethyl 1,1′-(bicyclohexane)-1-carboxylate hydrochloride.

*Content*: 99.0 per cent to 101.0 per cent (anhydrous substance).

CHARACTERS

*Appearance*: white or almost white, crystalline powder.

*Solubility*: soluble in water, freely soluble in ethanol (96 per cent) and in methylene chloride.

It shows polymorphism (*5.9*).

IDENTIFICATION

*First identification*: *A, D.*

*Second identification*: *B, C, D.*

A. Infrared absorption spectrophotometry (*2.2.24*).
*Comparison*: *dicycloverine hydrochloride CRS.*
If the spectra obtained show differences, dissolve the substance to be examined and the reference substance separately in *acetone R*, evaporate to dryness and record new spectra using the residues.

B. Thin-layer chromatography (*2.2.27*).
*Test solution.* Dissolve 50 mg of the substance to be examined in *methanol R* and dilute to 50 mL with the same solvent.
*Reference solution.* Dissolve 10 mg of *dicycloverine hydrochloride CRS* in *methanol R* and dilute to 10 mL with the same solvent.
*Plate*: *TLC silica gel plate R*
*Mobile phase*: *concentrated ammonia R*, *ethyl acetate R*, *water R*, *propanol R* (5:10:10:75 *V/V/V/V*).
*Application*: 10 µL.
*Development*: over 2/3 of the plate.
*Drying*: in a current of warm air.
*Detection*: spray with *dilute potassium iodobismuthate solution R*.
*Results*: the principal spot in the chromatogram obtained with the test solution is similar in position, colour and size to the principal spot in the chromatogram obtained with the reference solution.

C. To 3 mL of a 1.0 g/L solution of *sodium laurilsulfate R* add 5 mL of *methylene chloride R* and 0.05 mL of a 2.5 g/L solution of *methylene blue R*, mix gently and allow to

separate; the lower layer is blue. Add 2 mL of a 20 g/L solution of the substance to be examined, mix gently and allow to separate; the upper layer is blue and the lower layer is colourless.

D. It gives reaction (a) of chlorides (*2.3.1*).

TESTS

**pH** (*2.2.3*): 5.0 to 5.5.

Dissolve 0.5 g in *carbon dioxide-free water R* and dilute to 50 mL with the same solvent.

**Related substances**. Liquid chromatography (*2.2.29*).

*Test solution.* Dissolve 50.0 mg of the substance to be examined in the mobile phase and dilute to 10.0 mL with the mobile phase.

*Reference solution (a).* Dilute 1.0 mL of the test solution to 100.0 mL with the mobile phase. Dilute 1.0 mL of this solution to 10.0 mL with the mobile phase.

*Reference solution (b).* Dissolve 5 mg of *dicycloverine for system suitability CRS* (containing impurity B) in 1 mL of the mobile phase.

*Reference solution (c).* Dissolve 7.5 mg of *dicycloverine impurity A CRS* in the mobile phase and dilute to 10.0 mL with the mobile phase. Dilute 1.0 mL of the solution to 100.0 mL with the mobile phase.

*Column*:

- *size*: *l* = 0.25 m, Ø = 4.6 mm;
- *stationary phase*: *base-deactivated end-capped octadecylsilyl silica gel for chromatography R* (5 µm);
- *temperature*: 25 °C.

*Mobile phase*: mix 15 volumes of a 4.62 g/L solution of *ammonium acetate R* previously adjusted to pH 8.0 with *2 M sodium hydroxide R* and 85 volumes of *methanol R2*.

*Flow rate*: 1.0 mL/min.

*Detection*: spectrophotometer at 215 nm.

*Injection*: 10 µL.

*Run time*: 1.5 times the retention time of dicycloverine.

*Identification of impurities*: use the chromatogram supplied with *dicycloverine for system suitability CRS* and the chromatogram obtained with reference solution (b) to identify the peak due to impurity B; use the chromatogram obtained with reference solution (c) to identify the peak due to impurity A.

*Relative retention* with reference to dicycloverine (retention time = about 22 min): impurity A = about 0.5; impurity B = about 0.8.

*System suitability*: reference solution (b):

- *resolution*: minimum 2.0 between the peaks due to impurity B and dicycloverine.

*Calculation of percentage contents*:

- *correction factor*: multiply the peak area of impurity B by 0.4;
- for impurity A, use the concentration of impurity A in reference solution (c);
- for impurities other than A, use the concentration of dicycloverine hydrochloride in reference solution (a).

*Limits*:

- *impurity B*: maximum 0.5 per cent;
- *impurity A*: maximum 0.15 per cent;
- *unspecified impurities*: for each impurity, maximum 0.10 per cent;
- *total*: maximum 0.7 per cent;
- *reporting threshold*: 0.05 per cent.

**Water** (*2.5.32*): maximum 1.0 per cent, determined on 1.00 g by direct introduction of the sample.

**Sulfated ash** (*2.4.14*): maximum 0.1 per cent, determined on 1.0 g.

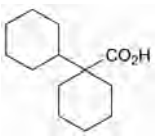
ASSAY

Dissolve 0.300 g in a mixture of 5.0 mL of *0.01 M hydrochloric acid* and 50 mL of *ethanol (96 per cent) R*. Carry out a potentiometric titration (*2.2.20*), using *0.1 M sodium hydroxide*. Read the volume added between the 2 points of inflexion.

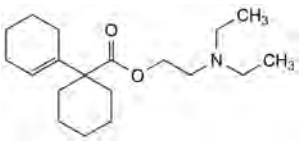
1 mL of *0.1 M sodium hydroxide* is equivalent to 34.60 mg of $C_{19}H_{36}ClNO_2$.

IMPURITIES

*Specified impurities: A, B.*



A. 1,1′-bi(cyclohexane)-1-carboxylic acid,

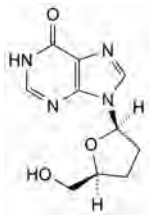


B. 2-(diethylamino)ethyl 1,1′-bi(cyclohexan)-1′-ene-1-carboxylate.

**01/2017:2200**

# DIDANOSINE

## Didanosinum



$C_{10}H_{12}N_4O_3$ $M_r$ 236.2
[69655-05-6]

DEFINITION

9-(2,3-Dideoxy-β-D-*glycero*-pentofuranosyl)-1,9-dihydro-6*H*-purin-6-one (2′,3′-dideoxyinosine).

*Content*: 98.5 per cent to 101.0 per cent (anhydrous substance).

CHARACTERS

*Appearance*: white or almost white, crystalline powder.

*Solubility*: sparingly soluble in water, freely soluble in dimethyl sulfoxide, slightly soluble in methanol and in ethanol (96 per cent).

IDENTIFICATION

A. Infrared absorption spectrophotometry (*2.2.24*).
*Comparison*: *didanosine CRS*.

B. Specific optical rotation (*2.2.7*): – 28.2 to – 24.2 (anhydrous substance).
Dissolve 0.100 g in *water R* and dilute to 10.0 mL with the same solvent.

TESTS

**Related substances**. Liquid chromatography (*2.2.29*). *Prepare the solutions immediately before use.*

*Solvent mixture.* Mix 8 volumes of mobile phase B and 92 volumes of mobile phase A.

*Test solution.* Dissolve 25.0 mg of the substance to be examined in 50.0 mL of the solvent mixture.

*Reference solution (a).* Dilute 1.0 mL of the test solution to 100.0 mL with the solvent mixture. Dilute 1.0 mL of this solution to 10.0 mL with the solvent mixture.

*Reference solution (b).* Dissolve 5.0 mg of *didanosine impurity A CRS* in the solvent mixture and dilute to 100.0 mL with the solvent mixture. Dilute 1.0 mL to 20.0 mL with the solvent mixture.

*Reference solution (c).* Dissolve 5 mg of *didanosine for system suitability CRS* (containing impurities A to F) in the solvent mixture and dilute to 10 mL with the solvent mixture.

*Reference solution (d).* Dissolve 5 mg of *didanosine impurity G CRS* in the solvent mixture and dilute to 100 mL with the solvent mixture. Dilute 1 mL to 20 mL with the solvent mixture.

*Column*:

- *size*: *l* = 0.25 m, Ø = 4.6 mm;
- *stationary phase*: *base-deactivated octadecylsilyl silica gel for chromatography R* (5 µm).

*Mobile phase*:

- *mobile phase A*: mix 8 volumes of *methanol R* and 92 volumes of a 3.86 g/L solution of *ammonium acetate R* adjusted to pH 8.0 with *concentrated ammonia R*;
- *mobile phase B*: mix 30 volumes of *methanol R* and 70 volumes of a 3.86 g/L solution of *ammonium acetate R* adjusted to pH 8.0 with *concentrated ammonia R*;

| Time (min) | Mobile phase A (per cent *V/V*) | Mobile phase B (per cent *V/V*) |
|---|---|---|
| 0 - 18 | 100 | 0 |
| 18 - 25 | 100 → 0 | 0 → 100 |
| 25 - 45 | 0 | 100 |
| 45 - 50 | 0 → 100 | 100 → 0 |
| 50 - 60 | 100 | 0 |

*Flow rate*: 1.0 mL/min.

*Detection*: spectrophotometer at 254 nm.

*Injection*: 20 µL.

*Identification of impurities*: use the chromatogram supplied with *didanosine for system suitability CRS* and the chromatogram obtained with reference solution (c) to identify the peaks due to impurities A to F and use the chromatogram obtained with reference solution (d) to identify the peak due to impurity G.

*Relative retention* with reference to didanosine (retention time = about 13-15 min): impurity A = about 0.3; impurity B = about 0.4; impurity C = about 0.44; impurity D = about 0.48; impurity E = about 0.5; impurity F = about 0.8; impurity G = about 1.6.

*System suitability*: reference solution (c):

- *resolution*: minimum 2.5 between the peaks due to impurity C and impurity D.

*Limits*:

- *impurity A*: not more than the area of the principal peak in the chromatogram obtained with reference solution (b) (0.5 per cent);
- *impurities B, C, D, E, F, G*: for each impurity, not more than twice the area of the principal peak in the chromatogram obtained with reference solution (a) (0.2 per cent);
- *unspecified impurities*: for each impurity, not more than the area of the principal peak in the chromatogram obtained with reference solution (a) (0.10 per cent);
- *total*: not more than 10 times the area of the principal peak in the chromatogram obtained with reference solution (a) (1.0 per cent);
- *disregard limit*: 0.5 times the area of the principal peak in the chromatogram obtained with reference solution (a) (0.05 per cent).

**Water** (*2.5.12*): maximum 2.0 per cent, determined on 0.500 g.

**Sulfated ash** (*2.4.14*): maximum 0.1 per cent, determined on 1.0 g.

ASSAY

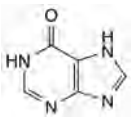
Dissolve 0.200 g in 50 mL of *glacial acetic acid R*. Titrate with *0.1 M perchloric acid*, determining the end-point potentiometrically (*2.2.20*).

1 mL of *0.1 M perchloric acid* is equivalent to 23.62 mg of $C_{10}H_{12}N_4O_3$.

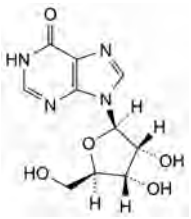
IMPURITIES

*Specified impurities: A, B, C, D, E, F, G.*

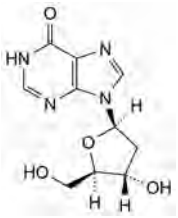
*Other detectable impurities* (the following substances would, if present at a sufficient level, be detected by one or other of the tests in the monograph. They are limited by the general acceptance criterion for other/unspecified impurities and/or by the general monograph *Substances for pharmaceutical use (2034)*. It is therefore not necessary to identify these impurities for demonstration of compliance. See also *5.10. Control of impurities in substances for pharmaceutical use*): *H, I.*



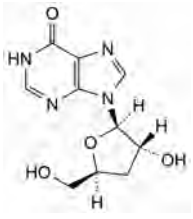
A. 1,7-dihydro-6*H*-purin-6-one (hypoxanthine),



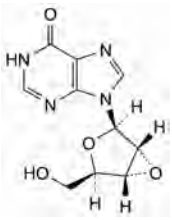
B. 9-β-D-ribofuranosyl-1,9-dihydro-6*H*-purin-6-one (inosine),



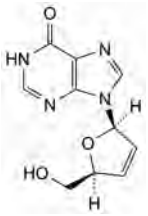
C. 9-(2-deoxy-β-D-*erythro*-pentofuranosyl)-1,9-dihydro-6*H*-purin-6-one (2′-deoxyinosine),



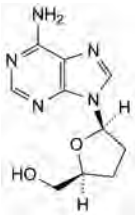
D. 9-(3-deoxy-β-D-*erythro*-pentofuranosyl)-1,9-dihydro-6*H*-purin-6-one (3′-deoxyinosine),



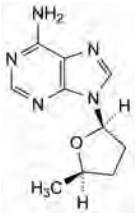
E. 9-(2,3-anhydro-β-D-ribofuranosyl)-1,9-dihydro-6*H*-purin-6-one (2′,3′-anhydroinosine),



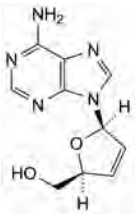
F. 9-(2,3-dideoxy-β-D-*glycero*-pent-2-enofuranosyl)-1,9-dihydro-6*H*-purin-6-one (2′,3′-dideoxy-2′,3′-didehydroinosine),



G. 9-(2,3-dideoxy-β-D-*glycero*-pentofuranosyl)-9*H*-purin-6-amine (2′,3′-dideoxyadenosine),



H. 9-(2,3,5-trideoxy-β-D-*glycero*-pentofuranosyl)-9*H*-purin-6-amine (2′,3′,5′-trideoxyadenosine),

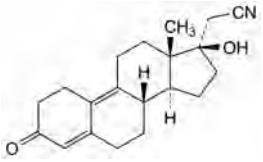


I. 9-(2,3-dideoxy-β-D-*glycero*-pent-2-enofuranosyl)-9*H*-purin-6-amine (2′,3′-dideoxy-2′,3′-didehydroadenosine).

**04/2016:2732**

# DIENOGEST

## Dienogestum



$C_{20}H_{25}NO_2$ $M_r$ 311.4
[65928-58-7]

DEFINITION

(17-Hydroxy-3-oxoestra-4,9-dien-17α-yl)acetonitrile.

*Content*: 98.0 per cent to 102.0 per cent (dried substance).

CHARACTERS

*Appearance*: white, almost white or slightly yellow, crystalline powder.

*Solubility*: practically insoluble in water, sparingly soluble in methylene chloride, slightly soluble in methanol.

IDENTIFICATION

A. Specific optical rotation (see Tests).

B. Infrared absorption spectrophotometry (*2.2.24*).
*Comparison*: *dienogest CRS*.

TESTS

**Specific optical rotation** (*2.2.7*): − 352 to − 344 (dried substance).

Dissolve 0.125 g in *methanol R2* and dilute to 25.0 mL with the same solvent.

**Related substances**. Liquid chromatography (*2.2.29*). *Carry out the test protected from light.*

*Solvent mixture*: *acetonitrile R1*, *water for chromatography R* (40:60 *V/V*).

*Test solution (a).* Dissolve 20 mg of the substance to be examined in 8 mL of *acetonitrile R1* and dilute to 20.0 mL with *water R*.

*Test solution (b).* Dissolve 30.0 mg of the substance to be examined in 40 mL of *acetonitrile R1* and dilute to 100.0 mL with *water R*. Dilute 5.0 mL of the solution to 25.0 mL with the solvent mixture.

*Reference solution (a).* Dissolve 2.5 mg of *dienogest for system suitability CRS* (containing impurity F) in 2 mL of *acetonitrile R1* and dilute to 5.0 mL with *water R*.

*Reference solution (b).* Dilute 1.0 mL of test solution (a) to 100.0 mL with the solvent mixture. Dilute 1.0 mL of this solution to 10.0 mL with the solvent mixture.

*Reference solution (c).* Dissolve 30.0 mg of *dienogest CRS* in 40 mL of *acetonitrile R1* and dilute to 100.0 mL with *water R*. Dilute 5.0 mL of the solution to 25.0 mL with the solvent mixture.

*Column*:

- *size*: *l* = 0.15 m, Ø = 4.6 mm;
- *stationary phase*: *end-capped extra-dense bonded octadecylsilyl silica gel for chromatography R* (3.5 µm);
- *temperature*: 35 °C.

*Mobile phase*:

- *mobile phase A*: *acetonitrile R1*, *water for chromatography R* (10:90 *V/V*);

– *mobile phase B*: *water for chromatography R, acetonitrile R1* (10:90 *V/V*);

| Time (min) | Mobile phase A (per cent *V/V*) | Mobile phase B (per cent *V/V*) |
|---|---|---|
| 0 - 3 | 90 | 10 |
| 3 - 53 | 90 → 10 | 10 → 90 |

*Flow rate*: 1.0 mL/min.

*Detection*: spectrophotometer at 210 nm.

*Injection*: 15 µL of test solution (a) and reference solutions (a) and (b).

*Identification of impurities*: use the chromatogram supplied with *dienogest for system suitability CRS* and the chromatogram obtained with reference solution (a) to identify the peak due to impurity F.

*Relative retention* with reference to dienogest (retention time = about 19 min): impurity F = about 1.1.

*System suitability*: reference solution (a):

– *resolution*: minimum 4.0 between the peaks due to dienogest and impurity F.

*Calculation of percentage contents*:

– for each impurity, use the concentration of dienogest in reference solution (b).

*Limits*:

– *unspecified impurities*: for each impurity, maximum 0.10 per cent;

– *total*: maximum 0.5 per cent;

– *reporting threshold*: 0.05 per cent.

**Loss on drying** (*2.2.32*): maximum 0.5 per cent, determined on 1.000 g by drying in an oven at 105 °C for 3 h.

**Sulfated ash** (*2.4.14*): maximum 0.1 per cent, determined on 1.0 g.

ASSAY

Liquid chromatography (*2.2.29*) as described in the test for related substances with the following modifications.

*Mobile phase*:

| Time (min) | Mobile phase A (per cent *V/V*) | Mobile phase B (per cent *V/V*) |
|---|---|---|
| 0 - 3 | 75 | 25 |
| 3 - 14 | 75 → 25 | 25 → 75 |

*Detection*: spectrophotometer at 215 nm.

*Injection*: test solution (b) and reference solution (c).

*Retention time*: dienogest = about 9 min.

Calculate the percentage content of $C_{20}H_{25}NO_2$ taking into account the assigned content of *dienogest CRS*.

STORAGE

Protected from light.

IMPURITIES

*Other detectable impurities* (the following substances would, if present at a sufficient level, be detected by one or other of the tests in the monograph. They are limited by the general acceptance criterion for other/unspecified impurities and/or by the general monograph *Substances for pharmaceutical use (2034)*. # DIETHYL PHTHALATE

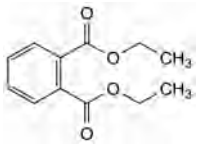
## Diethylis phthalas



$C_{12}H_{14}O_4$ $M_r$ 222.2
[84-66-2]

DEFINITION

Diethyl benzene-1,2-dicarboxylate.

*Content*: 99.0 per cent *m/m* to 101.0 per cent *m/m*.

CHARACTERS

*Appearance*: clear, colourless or very slightly yellow, oily liquid.

*Solubility*: practically insoluble in water, miscible with ethanol (96 per cent).

IDENTIFICATION

*First identification: B, C.*

*Second identification: A, D, E.*

A. Relative density (*2.2.5*): 1.117 to 1.121.

B. Refractive index (*2.2.6*): 1.500 to 1.505.

C. Infrared absorption spectrophotometry (*2.2.24*).

*Preparation*: thin films.

*Comparison*: *diethyl phthalate CRS*.

D. Thin-layer chromatography (*2.2.27*).

*Test solution*. Dissolve 50 mg of the substance to be examined in *ether R* and dilute to 10 mL with the same solvent.

*Reference solution*. Dissolve 50 mg of *diethyl phthalate CRS* in *ether R* and dilute to 10 mL with the same solvent.

*Plate*: *TLC silica gel* $GF_{254}$ *plate R*.

*Mobile phase*: *heptane R*, *ether R* (30:70 *V/V*).

*Application*: 10 µL.

*Development*: over 2/3 of the plate.

*Drying*: in air.

*Detection*: examine in ultraviolet light at 254 nm.

*Results*: the principal spot in the chromatogram obtained with the test solution is similar in position and size to the principal spot in the chromatogram obtained with the reference solution.

E. To about 0.1 mL add 0.25 mL of *sulfuric acid R* and 50 mg of *resorcinol R*. Heat on a water-bath for 5 min. Allow to cool. Add 10 mL of *water R* and 1 mL of *strong sodium hydroxide solution R*. The solution becomes yellow or brownish-yellow and shows green fluorescence.

TESTS

**Appearance**. The substance to be examined is clear (*2.2.1*) and not more intensely coloured than reference solution $Y_6$ (*2.2.2, Method II*).

**Acidity**. Dissolve 20.0 g in 50 mL of *ethanol (96 per cent) R* previously neutralised to *phenolphthalein solution R1*. Add 0.2 mL of *phenolphthalein solution R1*. Not more than 0.1 mL of *0.1 M sodium hydroxide* is required to change the colour of the indicator to pink.

**Related substances**. Gas chromatography (*2.2.28*).

*Internal standard solution*. Dissolve 60 mg of *naphthalene R* in *methylene chloride R* and dilute to 20 mL with the same solvent.

*Test solution (a)*. Dissolve 1.0 g of the substance to be examined in *methylene chloride R* and dilute to 20.0 mL with the same solvent.

*Test solution (b)*. Dissolve 1.0 g of the substance to be examined in *methylene chloride R*, add 2.0 mL of the internal standard solution and dilute to 20.0 mL with *methylene chloride R*.

*Reference solution*. To 1.0 mL of test solution (a) add 10.0 mL of the internal standard solution and dilute to 100.0 mL with *methylene chloride R*.

*Column*:

- *material*: glass;
- *size*: *l* = 2 m, Ø = 2 mm;
- *stationary phase*: *silanised diatomaceous earth for gas chromatography R* (150-180 µm) impregnated with 3 per cent *m/m* of *phenyl(50)methyl(50)polysiloxane R*.

*Carrier gas*: *nitrogen for chromatography R*.

*Flow rate*: 30 mL/min.

*Temperature*:

- *column*: 150 °C;

– *injection port and detector*: 225 °C.

*Detection*: flame ionisation.

*Injection*: 1 µL.

*Run time*: 3 times the retention time of diethyl phthalate.

*Elution order*: naphthalene, diethyl phtalate.

*System suitability*:

– *resolution*: minimum 10 between the peaks due to naphthalene and diethyl phthalate in the chromatogram obtained with the reference solution;
– in the chromatogram obtained with test solution (a), there is no peak with the same retention time as the internal standard.

*Limit*:

– *total*: calculate the ratio (*R*) of the area of the peak due to diethyl phthalate to the area of the peak due to the internal standard from the chromatogram obtained with the reference solution; from the chromatogram obtained with test solution (b), calculate the ratio of the sum of the areas of any peaks, apart from the principal peak and the peak due to the internal standard, to the area of the peak due to the internal standard: this ratio is not greater than *R* (1.0 per cent).

**Water** (*2.5.12*): maximum 0.2 per cent, determined on 10.0 g.

**Sulfated ash** (*2.4.14*): maximum 0.1 per cent, determined on 1.0 g.

ASSAY

Introduce 0.750 g into a 250 mL borosilicate glass flask. Add 25.0 mL of *0.5 M alcoholic potassium hydroxide* and a few glass beads. Boil in a water-bath under a reflux condenser for 1 h. Add 1 mL of *phenolphthalein solution R1* and titrate immediately with *0.5 M hydrochloric acid*. Carry out a blank titration. Calculate the volume of *0.5 M alcoholic potassium hydroxide* used in the saponification.

1 mL of *0.5 M alcoholic potassium hydroxide* is equivalent to 55.56 mg of $C_{12}H_{14}O_4$.

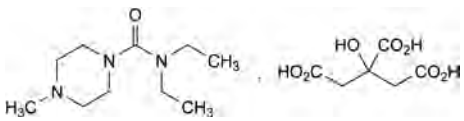
STORAGE

In an airtight container.

**01/2017:0271**

# DIETHYLCARBAMAZINE CITRATE

## Diethylcarbamazini citras



$C_{16}H_{29}N_3O_8$ $M_r$ 391.4
[1642-54-2]

DEFINITION

*N*,*N*-Diethyl-4-methylpiperazine-1-carboxamide dihydrogen 2-hydroxypropane-1,2,3-tricarboxylate.

*Content*: 98.0 per cent to 102.0 per cent (dried substance).

CHARACTERS

*Appearance*: white or almost white, crystalline powder, slightly hygroscopic.

*Solubility*: very soluble in water, soluble in ethanol (96 per cent), practically insoluble in acetone.

mp: about 138 °C, with decomposition.

IDENTIFICATION

*First identification: A, C.*

*Second identification: B, C.*

A. Infrared absorption spectrophotometry (*2.2.24*).
*Comparison*: *diethylcarbamazine citrate CRS.*

B. Examine the chromatograms obtained in the test for impurities A and B.
*Results*: the principal spot in the chromatogram obtained with the test solution is similar in position, colour and size to the principal spot in the chromatogram obtained with reference solution (a).

C. Dissolve 0.1 g in 5 mL of *water R*. The solution gives the reaction of citrates (*2.3.1*).

TESTS

**Solution S**. Shake 2.5 g with *water R* until dissolved and dilute to 25 mL with the same solvent.

**Appearance of solution**. Solution S is not more opalescent than reference suspension II (*2.2.1*) and not more intensely coloured than reference solution $BY_6$ (*2.2.2, Method II*).

**Impurities A and B**. Thin-layer chromatography (*2.2.27*).

*Test solution.* Dissolve 0.5 g of the substance to be examined in *methanol R* and dilute to 10 mL with the same solvent.

*Reference solution (a).* Dissolve 0.1 g of *diethylcarbamazine citrate CRS* in *methanol R* and dilute to 2.0 mL with the same solvent.

*Reference solution (b).* Dissolve 10 mg of *methylpiperazine R* (impurity A) in *methanol R* and dilute to 100 mL with the same solvent.

*Reference solution (c).* Dissolve 10 mg of *dimethylpiperazine R* (impurity B) in *methanol R* and dilute to 100 mL with the same solvent.

*Plate*: *TLC silica gel plate R.*

*Mobile phase*: *concentrated ammonia R*, *methyl ethyl ketone R*, *methanol R* (5:30:65 *V/V/V*).

*Application*: 10 µL.

*Development*: over 2/3 of the plate.

*Drying*: at 100-105 °C.

*Detection*: expose to iodine vapour for 30 min.

*Retardation factors*: impurity A = about 0.2; impurity B = about 0.5.

*Limits*:

– *impurity A*: any spot due to impurity A is not more intense than the corresponding spot in the chromatogram obtained with reference solution (b) (0.2 per cent);
– *impurity B*: any spot due to impurity B is not more intense than the corresponding spot in the chromatogram obtained with reference solution (c) (0.2 per cent).

**Related substances**. Liquid chromatography (*2.2.29*).

*Solution A*. Dissolve 31.2 g of *potassium dihydrogen phosphate R* in *water R* and dilute to 1000 mL with the same solvent.

*Test solution (a).* Suspend 0.30 g of the substance to be examined in solution A and dilute to 100 mL with solution A. Filter or centrifuge and use the clear filtrate or supernatant.

*Test solution (b).* Dissolve 10.0 mg of the substance to be examined in solution A and dilute to 100.0 mL with solution A.

*Reference solution (a).* Dilute 1.0 mL of test solution (a) to 100.0 mL with solution A. Dilute 1.0 mL of this solution to 10.0 mL with solution A.

*Reference solution (b).* Dissolve 10 mg of *citric acid monohydrate R* in solution A and dilute to 10 mL with solution A.

*Reference solution (c).* To 3 mL of test solution (a) add 0.5 mL of *strong hydrogen peroxide solution R* and maintain at 80 °C for 3 h. Dilute to 100 mL with solution A.

*Reference solution (d).* Dissolve 5.0 mg of *diethylcarbamazine citrate CRS* in solution A and dilute to 50.0 mL with solution A.

*Column*:

– *size*: *l* = 0.15 m, Ø = 3.9 mm;

– *stationary phase*: *end-capped octadecylsilyl silica gel for chromatography R* (5 µm).

*Mobile phase*: mix 100 volumes of *methanol R2* and 900 volumes of a 10 g/L solution of *potassium dihydrogen phosphate R*.

*Flow rate*: 0.8 mL/min.

*Detection*: spectrophotometer at 220 nm.

*Injection*: 20 µL of test solution (a) and reference solutions (a), (b) and (c).

*Run time*: twice the retention time of diethylcarbamazine.

*Identification of impurities*: use the chromatogram obtained with reference solution (b) to identify the peak due to the citrate.

*Relative retention* with reference to diethylcarbamazine (retention time = about 7 min): citrate = about 0.2; degradation product = about 1.6.

*System suitability*: reference solution (c):

– *resolution*: minimum 5 between the peaks due to diethylcarbamazine and the degradation product.

*Limits*:

– *unspecified impurities*: for each impurity, not more than the area of the principal peak in the chromatogram obtained with reference solution (a) (0.10 per cent);

– *total*: not more than 5 times the area of the principal peak in the chromatogram obtained with reference solution (a) (0.5 per cent);

– *disregard limit*: 0.5 times the area of the principal peak in the chromatogram obtained with reference solution (a) (0.05 per cent); disregard the peak due to the citrate.

**Loss on drying** (*2.2.32*): maximum 0.5 per cent, determined on 1.000 g by drying *in vacuo* at 60 °C for 4 h.

**Sulfated ash** (*2.4.14*): maximum 0.1 per cent, determined on 1.0 g.

ASSAY

Liquid chromatography (*2.2.29*) as described in the test for related substances with the following modification.

*Injection*: 20 µL of test solution (b) and reference solution (d).

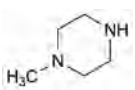
Calculate the percentage content of $C_{16}H_{29}N_3O_8$ from the declared content of *diethylcarbamazine citrate CRS*.

STORAGE

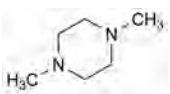
In an airtight container.

IMPURITIES

*Specified impurities: A, B.*



A. 1-methylpiperazine,



B. 1,4-dimethylpiperazine.

**01/2008:1198**
**corrected 10.0**

# DIETHYLENE GLYCOL MONOETHYL ETHER

## Diethylenglycoli aether monoethylicus

$C_6H_{14}O_3$ $M_r$ 134.2
[111-90-0]

DEFINITION

2-(2-Ethoxyethoxy)ethanol, produced by condensation of ethylene oxide and alcohol, followed by distillation.

CHARACTERS

*Appearance*: clear, colourless, hygroscopic liquid.

*Solubility*: miscible with water, with acetone and with alcohol, miscible in certain proportions with vegetable oils, not miscible with mineral oils.

*Relative density*: about 0.991.

IDENTIFICATION

A. Refractive index (*2.2.6*): 1.426 to 1.428.

B. Infrared absorption spectrophotometry (*2.2.24*).
*Comparison*: *Ph. Eur. reference spectrum of diethylene glycol monoethyl ether.*

TESTS

**Acid value** (*2.5.1*): maximum 0.1.

Mix 30.0 mL with 30 mL of *alcohol R* previously neutralised with *0.1 M potassium hydroxide* using *phenolphthalein solution R* as indicator. Titrate with *0.01 M alcoholic potassium hydroxide.*

**Peroxide value** (*2.5.5*): maximum 8.0, determined on 2.00 g.

**Related substances**. Gas chromatography (*2.2.28*).

*Internal standard solution.* Dilute 1.00 g of *decane R* to 100.0 mL with *methanol R*.

*Test solution.* To 5.00 g of the substance to be examined, add 0.1 mL of the internal standard solution and dilute to 10.0 mL with *methanol R*.

*Reference solution (a).* Dilute 25.0 mg of *ethylene glycol monomethyl ether R*, 80.0 mg of *ethylene glycol monoethyl ether R*, 0.310 g of *ethylene glycol R* and 0.125 g of *diethylene glycol R* to 100.0 mL with *methanol R*. To 1.0 mL of this solution add 0.1 mL of the internal standard solution and dilute to 10.0 mL with *methanol R*.

*Reference solution (b).* Dilute 25.0 mg of *ethylene glycol monoethyl ether R* and 25.0 mg of *ethylene glycol R* to 100.0 mL with *methanol R*. Dilute 1.0 mL of this solution to 5.0 mL with *methanol R*.

*Reference solution (c).* Dilute 1.00 g of the substance to be examined to 100.0 mL with *methanol R*. To 1.0 mL of this solution add 0.1 mL of the internal standard solution and dilute to 10.0 mL with *methanol R*.

*Column*:

– *material*: fused silica,

– *size*: *l* = 30 m, Ø = 0.32 mm,

– *stationary phase*: *cyanopropyl(7)phenyl(7)methyl(86)polysiloxane R* (film thickness 1 µm).

*Carrier gas*: *nitrogen for chromatography R* or *helium for chromatography R*.

*Flow rate*: 2.0 mL/min.

*Split ratio*: 1:80.

*Temperature*:

| | Time (min) | Temperature (°C) |
|---|---|---|
| Column | 0 - 1 | 120 |
| | 1 - 10 | 120 → 225 |
| | 10 - 12 | 225 |
| Injection port | | 275 |
| Detector | | 250 |

*Detection*: flame ionisation.

*Injection*: 0.5 µL.

*Relative retentions* with reference to diethylene glycol monoethyl ether (retention time = about 4 min): ethylene glycol monomethyl ether = about 0.4; ethylene glycol monoethyl ether = about 0.5; ethylene glycol = about 0.55; diethylene glycol = about 1.1.

*System suitability*:

- *resolution*: minimum 3.0 between the peaks due to ethylene glycol monoethyl ether and to ethylene glycol in the chromatogram obtained with reference solution (b),
- *signal-to-noise ratio*: minimum 3.0 for the peak due to ethylene glycol monomethyl ether in the chromatogram obtained with reference solution (a),

*Limits* (take into account the impurity/internal standard peak area ratio):

- *ethylene glycol monomethyl ether*: not more than the area of the corresponding peak in the chromatogram obtained with reference solution (a) (50 ppm),
- *ethylene glycol monoethyl ether*: not more than the area of the corresponding peak in the chromatogram obtained with reference solution (a) (160 ppm),
- *ethylene glycol*: not more than the area of the corresponding peak in the chromatogram obtained with reference solution (a) (620 ppm),
- *diethylene glycol*: not more than the area of the corresponding peak in the chromatogram obtained with reference solution (a) (250 ppm),
- *total*: not more than the area of the principal peak in the chromatogram obtained with reference solution (c) (0.2 per cent).

**Ethylene oxide**. Head-space gas chromatography (*2.2.28*).

*Test solution.* To 1.00 g of the substance to be examined in a vial, add 50 µL of *water R*.

*Reference solution.* To 1.00 g of the substance to be examined in a vial, add 50 µL of *ethylene oxide solution R4* and close tightly.

*Column*:

- *material*: fused silica,
- *size*: *l* = 30 m, Ø = 0.32 mm,
- *stationary phase*: *cyanopropyl(7)phenyl(7)methyl(86)polysiloxane R* (film thickness 1 µm).

*Carrier gas*: *helium for chromatography R*.

*Flow rate*: 1.1 mL/min.

*Static head-space conditions which may be used*:

- *equilibration temperature*: 80 °C,
- *equilibration time*: 45 min,
- *transfer line temperature*: 110 °C,
- *pressurisation time*: 2 min,
- *injection time*: 12 s.

*Temperature*:

| | Time (min) | Temperature (°C) |
|---|---|---|
| Column | 0 - 5 | 40 |
| | 5 - 18 | 40 → 200 |
| Injection port | | 150 |
| Detector | | 250 |

*Detection*: flame ionisation.

*Injection*: 1.0 mL.

The peak due to ethylene oxide is identified by injecting solutions of ethylene oxide of increasing concentration.

Determine the content of ethylene oxide (ppm) in the substance to be examined using the following expression:

$$\frac{S_T \times C}{(S_S \times M_T) - (S_T \times M_S)}$$

$S_T$ = area of the peak due to ethylene oxide in the chromatogram obtained with the test solution,

$S_S$ = area of the peak due to ethylene oxide in the chromatogram obtained with the reference solution,

$M_T$ = mass of the substance to be examined in the test solution, in grams,

$M_S$ = mass of the substance to be examined in the reference solution, in grams,

$C$ = mass of added ethylene oxide in the reference solution, in micrograms.

*Limit*:

- *ethylene oxide*: maximum 1 ppm.

**Water** (*2.5.12*): maximum 0.1 per cent, determined on 10.0 g.

STORAGE

Under an inert gas, in an airtight container.

LABELLING

The label states that the substance is stored under an inert gas.

**01/2020:1415**

# DIETHYLENE GLYCOL PALMITOSTEARATE

## Diethylenglycoli palmitostearas

DEFINITION

Mixture of diethylene glycol (2,2′-oxydi(ethan-1-ol)) mono- and diesters of palmitic (hexadecanoic) and stearic (octadecanoic) acids, produced by the condensation of diethylene glycol and stearic acid 50 of vegetable or animal origin (see *Stearic acid (1474)*).

*Content*:

- *monoesters*: 45.0 per cent to 60.0 per cent;
- *diesters*: 35.0 per cent to 55.0 per cent.

CHARACTERS

*Appearance*: white or almost white, waxy solid.

*Solubility*: practically insoluble in water, soluble in acetone and in hot ethanol (96 per cent).

IDENTIFICATION

A. Melting point (see Tests).

B. Composition of fatty acids (see Tests).

C. It complies with the assay (content of monoesters).

TESTS

**Melting point** (*2.2.15*): 43 °C to 50 °C.

**Acid value** (*2.5.1*): maximum 4.0.

**Iodine value** (*2.5.4*): maximum 3.0.

**Saponification value** (*2.5.6*): 155 to 180, determined on 2.0 g.

**Composition of fatty acids** (*2.4.22, Method A*). Use the mixture of calibrating substances in Table 2.4.22.-1.

*Composition of the fatty-acid fraction of the substance:*

- *stearic acid*: 40.0 per cent to 60.0 per cent;
- *sum of contents of palmitic acid and stearic acid*: minimum 90.0 per cent.

**Free diethylene glycol**: maximum 2.5 per cent, determined as prescribed under Assay.

**Water** (*2.5.12*): maximum 1.0 per cent, determined on 1.00 g. Use a mixture of equal volumes of *methanol R* and *methylene chloride R* as the solvent.

**Total ash** (*2.4.16*): maximum 0.1 per cent.

ASSAY

Size-exclusion chromatography (*2.2.30*).

*Test solution.* In a 15 mL flask, weigh 0.200 g (*m*). Add 5.0 mL of *tetrahydrofuran R* and shake to dissolve. Heat gently, if necessary. Reweigh the flask and calculate the total mass of solvent and substance (*M*).

*Reference solutions.* In four 15 mL flasks, weigh respectively 2.5 mg, 5.0 mg, 10.0 mg and 20.0 mg of *diethylene glycol R*. Add 5.0 mL of *tetrahydrofuran R* and shake to dissolve. Weigh the flasks again and calculate the concentration of diethylene glycol in milligrams per gram for each reference solution.

*Column*:

- *size*: *l* = 0.6 m, Ø = 7.5 mm;
- *stationary phase*: *styrene-divinylbenzene copolymer R* (5 µm) with a pore size of 10 nm.

*Mobile phase*: *tetrahydrofuran R*.

*Flow rate*: 1 mL/min.

*Detection*: differential refractometer.

*Injection*: 40 µL.

*Relative retention* with reference to diethylene glycol: diesters = about 0.78; monoesters = about 0.84.

*Calculations*:

- *free diethylene glycol*: from the calibration curve obtained with the reference solutions, determine the concentration of diethylene glycol (*C*) in milligrams per gram in the test solution and calculate the percentage content of free diethylene glycol (*A*) in the substance to be examined using the following expression:

$$\frac{C \times M}{m \times 10}$$

- *free fatty acids*: calculate the percentage content of free fatty acids (*D*) using the following expression:

$$\frac{I_A \times 270}{56.11 \times 10}$$

$I_A$ = acid value (see Tests);

270 = average rounded molar mass of palmitic acid and stearic acid, in grams per mole;

56.11 = molar mass of potassium hydroxide, in grams per mole.

- *monoesters*: calculate the percentage content of monoesters using the following expression:

$$\left[\frac{X}{X+Y}(100 - A - B)\right] - D$$

$A$ = percentage content of free diethylene glycol;

$B$ = percentage content of water (see Tests);

$D$ = percentage content of free fatty acids;

$X$ = area of the peak due to monoesters and free fatty acids;

$Y$ = area of the peak due to diesters.

- *diesters*: calculate the percentage content of diesters using the following expression:

$$\frac{Y}{X+Y}(100 - A - B)$$

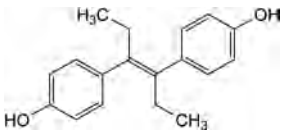
STORAGE

Protected from light.

**01/2008:0484**
**corrected 6.0**

# DIETHYLSTILBESTROL

## Diethylstilbestrolum



$C_{18}H_{20}O_2$ $M_r$ 268.4
[56-53-1]

DEFINITION

Diethylstilbestrol contains not less than 97.0 per cent and not more than the equivalent of 101.0 per cent of (*E*)-4,4′-(1,2-diethylethene-1,2-diyl)diphenol, calculated with reference to the dried substance.

CHARACTERS

A white or almost white, crystalline powder, practically insoluble in water, freely soluble in alcohol. It dissolves in solutions of the alkali hydroxides.

It melts at about 172 °C.

IDENTIFICATION

*First identification: B, D.*

*Second identification: A, C, D.*

A. Examined between 230 nm and 450 nm (*2.2.25*), the irradiated solution of the substance to be examined prepared as prescribed in the assay shows two absorption maxima, at 292 nm and 418 nm.

B. Examine by infrared absorption spectrophotometry (*2.2.24*), comparing with the spectrum obtained with *diethylstilbestrol CRS*. Examine the substances prepared as discs.

C. Examine the chromatograms obtained in the test for mono-and dimethyl ethers. The principal spot in the chromatogram obtained with test solution (b) is similar in position, colour and size to the principal spot in the chromatogram obtained with reference solution (a).

D. Dissolve about 0.5 mg in 0.2 mL of *glacial acetic acid R*, add 1 mL of *phosphoric acid R* and heat on a water-bath for 3 min. A deep-yellow colour develops.

TESTS

**4,4′-Dihydroxystilbene and related ethers**. Dissolve 0.100 g in *ethanol R* and dilute to 10.0 mL with the same solvent. The absorbance (*2.2.25*) of the solution measured at 325 nm is not greater than 0.50.

**Mono- and dimethyl ethers**. Examine by thin-layer chromatography (*2.2.27*), using *silica gel G R* as the coating substance.

*Test solution (a)*. Dissolve 0.2 g of the substance to be examined in 2 mL of *alcohol R*.

*Test solution (b)*. Dilute 1 mL of test solution (a) to 20 mL with *alcohol R*.

*Reference solution (a)*. Dissolve 10 mg of *diethylstilbestrol CRS* in 2 mL of *alcohol R*.

*Reference solution (b)*. Dissolve 5 mg of *diethylstilbestrol monomethyl ether CRS* in *alcohol R* and dilute to 10 mL with the same solvent.

*Reference solution (c)*. Dissolve 5 mg of *diethylstilbestrol dimethyl ether CRS* in *alcohol R* and dilute to 10 mL with the same solvent.

*Reference solution (d)*. Dissolve 10 mg of *dienestrol CRS* in 2 mL of *alcohol R*. To 1 mL of this solution add 1 mL of reference solution (a).

Apply to the plate 1 µL of each solution. Develop over a path of 15 cm using a mixture of 10 volumes of *diethylamine R* and 90 volumes of *toluene R*. Allow the plate to dry in air, spray with *alcoholic solution of sulfuric acid R* and heat at 120 °C for 10 min. In the chromatogram obtained with test solution (a), any spots corresponding to diethylstilbestrol monomethyl ether and diethylstilbestrol dimethyl ether are not more intense than the spots in the chromatograms obtained with reference solutions (b) and (c) respectively (0.5 per cent). Diethylstilbestrol gives one or sometimes two spots. The test is not valid unless the chromatogram obtained with reference solution (d) shows at least two clearly separated spots having approximately the same intensity.

**Loss on drying** (*2.2.32*). Not more than 0.5 per cent, determined on 1.000 g by drying in an oven at 105 °C.

**Sulfated ash** (*2.4.14*). Not more than 0.1 per cent, determined on 1.0 g.

ASSAY

Dissolve 20.0 mg in *ethanol R* and dilute to 100.0 mL with the same solvent. Dilute 10.0 mL of the solution to 100.0 mL with *ethanol R*. To 25.0 mL of the resulting solution add 25.0 mL of a solution of 1 g of *dipotassium hydrogen phosphate R* in 55 mL of *water R*. Prepare in the same manner a reference solution using 20.0 mg of *diethylstilbestrol CRS*. Transfer an equal volume of each solution to separate 1 cm quartz cells and close the cells; place the two cells about 5 cm from a low-pressure, short-wave 2 W to 20 W mercury lamp and irradiate for about 5 min. Measure the absorbance (*2.2.25*) of the irradiated solutions at the maximum at 418 nm, using *water R* as the compensation liquid. Continue the irradiation for successive periods of 3 min to 15 min, depending on the power of the lamp, and repeat the measurement of the absorbances at 418 nm until the maximum absorbance (about 0.7) is obtained. If necessary, adjust the geometry of the irradiation apparatus to obtain a maximum, reproducible absorbance at 418 nm.

Calculate the content of $C_{18}H_{20}O_2$ from the measured absorbances and the concentrations of the solutions.

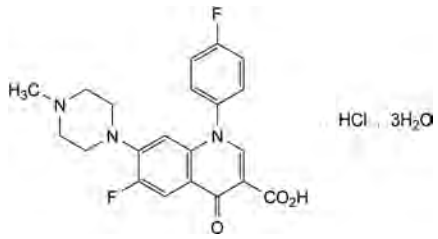
STORAGE

Store protected from light.

**04/2013:2239**

# DIFLOXACIN HYDROCHLORIDE TRIHYDRATE FOR VETERINARY USE

## Difloxacini hydrochloridum trihydricum ad usum veterinarium



$C_{21}H_{20}ClF_2N_3O_3,3H_2O$ $M_r$ 490.0

Anhydrous difloxacin hydrochloride: [91296-86-5]

DEFINITION

6-Fluoro-1-(4-fluorophenyl)-7-(4-methylpiperazin-1-yl)-4-oxo-1,4-dihydroquinoline-3-carboxylic acid hydrochloride trihydrate.

*Content*: 99.0 per cent to 101.0 per cent (anhydrous substance).

CHARACTERS

*Appearance*: white or light yellow, crystalline powder.

*Solubility*: slightly soluble in water and in methanol, very slightly soluble in methylene chloride.

It shows polymorphism (*5.9*).

IDENTIFICATION

A. Infrared absorption spectrophotometry (*2.2.24*).

*Comparison*: *difloxacin hydrochloride CRS*.

If the spectra obtained in the solid state show differences, dissolve the substance to be examined and the reference substance separately in *methanol R*, evaporate to dryness and record new spectra using the residues.

B. Suspend 30 mg in 2 mL of *water R*, acidify with *dilute nitric acid R* and filter. The clear filtrate gives reaction (a) of chlorides (*2.3.1*).

C. Water (see Tests).

TESTS

**Related substances**. Liquid chromatography (*2.2.29*).

*Solvent mixture*: *acetonitrile R*, *water R* (50:50 *V/V*).

*Solution A*. Dissolve 2.72 g of *potassium dihydrogen phosphate R* in 900 mL of *water R* and adjust to pH 2.5 with *phosphoric acid R*; dilute to 1000 mL with *water R*.

*Test solution*. Dissolve 30.0 mg of the substance to be examined in 50.0 mL of the solvent mixture and dilute to 100.0 mL with mobile phase A.

*Reference solution (a)*. Dissolve 6.0 mg of *difloxacin impurity G CRS* in *acetonitrile R* and dilute to 20.0 mL with the same solvent.

*Reference solution (b)*. Mix 0.5 mL of reference solution (a), 1.0 mL of the test solution and 50 mL of the solvent mixture and dilute to 100.0 mL with mobile phase A.

*Reference solution (c)*. Dissolve 3 mg of *sarafloxacin hydrochloride R* (impurity B) in 100.0 mL of solution A. Dilute 1.0 mL of the solution to 50.0 mL with the test solution.

*Column*:

– *size*: *l* = 0.15 m, Ø = 4.6 mm;
– *stationary phase*: *end-capped octadecylsilyl silica gel for chromatography R* (5 µm).

Monographs D

*Mobile phase*:

– *mobile phase A*: *acetonitrile R*, *tetrahydrofuran R*, solution A (5:5:90 *V/V/V*);

– *mobile phase B*: *acetonitrile R*, solution A, *tetrahydrofuran R* (5:35:60 *V/V/V*);

| Time (min) | Mobile phase A (per cent *V/V*) | Mobile phase B (per cent *V/V*) |
|---|---|---|
| 0 - 15 | 100 | 0 |
| 15 - 50 | 100 → 0 | 0 → 100 |
| 50 - 60 | 0 | 100 |

*Flow rate*: 1.0 mL/min.

*Detection*: spectrophotometer at 325 nm.

*Injection*: 30 µL of the test solution and reference solutions (b) and (c).

*Identification of impurities*: use the chromatogram obtained with reference solution (c) to identify the peak due to impurity B; use the chromatogram obtained with reference solution (b) to identify the peak due to impurity G.

*Relative retention* with reference to difloxacin (retention time = about 10 min): impurity B = about 1.2; impurity G = about 4.0.

*System suitability*: reference solution (c):

– *peak-to-valley ratio*: minimum 2.0, where $H_p$ = height above the baseline of the peak due to impurity B and $H_v$ = height above the baseline of the lowest point of the curve separating this peak from the peak due to difloxacin.

*Limits*:

– *impurity G*: not more than the area of the corresponding peak in the chromatogram obtained with reference solution (b) (0.5 per cent);

– *unspecified impurities*: for each impurity, not more than 0.2 times the area of the peak due to difloxacin in the chromatogram obtained with reference solution (b) (0.20 per cent);

– *total*: maximum 1.0 per cent;

– *disregard limit*: 0.1 times the area of the peak due to difloxacin in the chromatogram obtained with reference solution (b) (0.10 per cent).

**Heavy metals** (*2.4.8*): maximum 20 ppm.

*Solvent mixture*. Dissolve 30 g of *propylene glycol R* in 30 mL of *methanol R*, add 4 g of *arginine R* and dilute to 100 mL with *water R*.

0.25 g complies with test H. Prepare the reference solution using 0.5 mL of *lead standard solution (10 ppm Pb) R*. The substance precipitates after addition of *buffer solution pH 3.5 R*. Dilute to 20 mL with *methanol R*; the substance re-dissolves completely.

**Water** (*2.5.12*): 8.0 per cent to 12.0 per cent, determined on 0.100 g, using a mixture of 20 volumes of *formamide R* and 25 volumes of *methanol R* as solvent.

**Sulfated ash** (*2.4.14*): maximum 0.1 per cent, determined on 1.0 g in a platinum crucible.

ASSAY

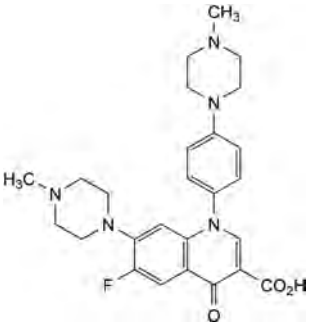
Dissolve 0.150 g in 5 mL of *anhydrous formic acid R* and add 50 mL of *acetic anhydride R*. Titrate with *0.1 M perchloric acid*, determining the end-point potentiometrically (*2.2.20*). Read the volume added at the 2nd point of inflexion.

1 mL of *0.1 M perchloric acid* is equivalent to 21.79 mg of $C_{21}H_{20}ClF_2N_3O_3$.

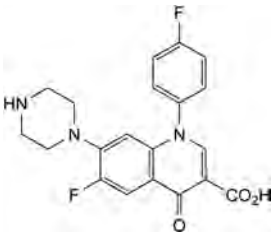
IMPURITIES

*Specified impurities: G.*

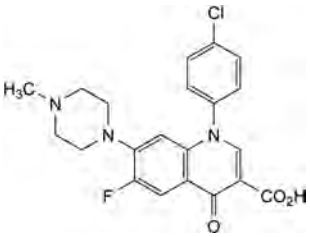
*Other detectable impurities* (the following substances would, if present at a sufficient level, be detected by one or other of the tests in the monograph. They are limited by the general acceptance criterion for other/unspecified impurities and/or by the general monograph *Substances for pharmaceutical use (2034)*. It is therefore not necessary to identify these impurities for demonstration of compliance. See also *5.10. Control of impurities in substances for pharmaceutical use*): *A, B, C, D, E, F.*



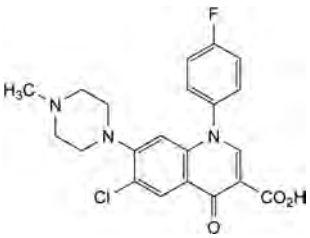
A. 6-fluoro-7-(4-methylpiperazin-1-yl)-1-[4-(4-methylpiperazin-1-yl)phenyl]-4-oxo-1,4-dihydroquinoline-3-carboxylic acid,



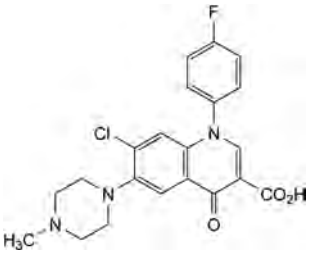
B. 6-fluoro-1-(4-fluorophenyl)-4-oxo-7-piperazin-1-yl-1,4-dihydroquinoline-3-carboxylic acid (sarafloxacin),



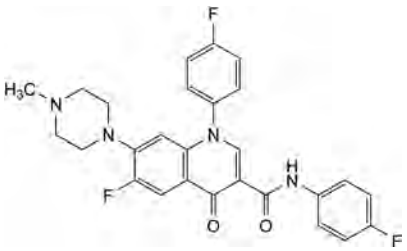
C. 1-(4-chlorophenyl)-6-fluoro-7-(4-methylpiperazin-1-yl)-4-oxo-1,4-dihydroquinoline-3-carboxylic acid,



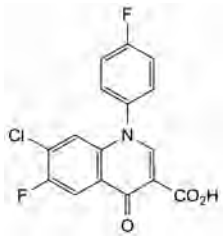
D. 6-chloro-1-(4-fluorophenyl)-7-(4-methylpiperazin-1-yl)-4-oxo-1,4-dihydroquinoline-3-carboxylic acid,



E. 7-chloro-1-(4-fluorophenyl)-6-(4-methylpiperazin-1-yl)-4-oxo-1,4-dihydroquinoline-3-carboxylic acid,



F. 6-fluoro-*N*,1-bis(4-fluorophenyl)-7-(4-methylpiperazin-1-yl)-4-oxo-1,4-dihydroquinoline-3-carboxamide,



G. 7-chloro-6-fluoro-1-(4-fluorophenyl)-4-oxo-1,4-dihydroquinoline-3-carboxylic acid.

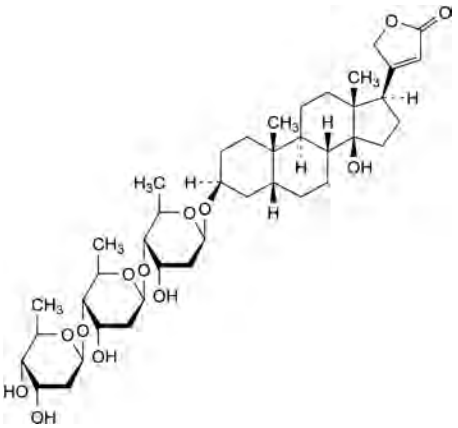
**corrected 6.0**

# DIGITOXIN

## Digitoxinum



$C_{41}H_{64}O_{13}$ $M_r$ 765
[71-63-6]

DEFINITION

Digitoxin contains not less than 95.0 per cent and not more than the equivalent of 103.0 per cent of 3β-[(*O*-2,6-dideoxy-β-D-*ribo*-hexopyranosyl-(1→4)-*O*-2,6-dideoxy-β-D-*ribo*-hexopyranosyl-(1→4)-2,6-dideoxy-β-D-*ribo*-hexopyranosyl)oxy]-14-hydroxy-5β,14β-card-20(22)-enolide, calculated with reference to the dried substance.

CHARACTERS

A white or almost white powder, practically insoluble in water, freely soluble in a mixture of equal volumes of methanol and methylene chloride, slightly soluble in alcohol and in methanol.

IDENTIFICATION

*First identification: A.*

*Second identification: B, C, D.*

A. Examine by infrared absorption spectrophotometry (*2.2.24*), comparing with the spectrum obtained with *digitoxin CRS*.

B. Examine the chromatograms obtained in the test for related substances. The principal spot in the chromatogram obtained with the test solution is similar in position, colour and size to the principal spot in the chromatogram obtained with reference solution (a).

C. Suspend about 0.5 mg in 0.2 mL of *alcohol (60 per cent V/V) R*. Add 0.1 mL of *dinitrobenzoic acid solution R* and 0.1 mL of *dilute sodium hydroxide solution R*. A violet colour develops.

D. Dissolve about 0.5 mg in 1 mL of *glacial acetic acid R*, heating gently, allow to cool and add 0.05 mL of *ferric chloride solution R1*. Cautiously add 1 mL of *sulfuric acid R*, avoiding mixing the two liquids. A brown ring develops at the interface and on standing a green, then blue colour passes to the upper layer.

TESTS

**Appearance of solution**. Dissolve 50 mg in a mixture of equal volumes of *methanol R* and *methylene chloride R* and dilute to 10 mL with the same mixture of solvents. The solution is clear (*2.2.1*) and colourless (*2.2.2, Method I*).

**Specific optical rotation** (*2.2.7*). Dissolve 0.25 g in *chloroform R* and dilute to 10.0 mL with the same solvent. The specific optical rotation is + 16.0 to + 18.5.

**Related substances**. Examine by thin-layer chromatography (*2.2.27*), using a *TLC silica gel G plate R*.

*Test solution.* Dissolve 20 mg of the substance to be examined in a mixture of equal volumes of *methanol R* and *methylene chloride R* and dilute to 2 mL with the same mixture of solvents.

*Reference solution (a).* Dissolve 20 mg of *digitoxin CRS* in a mixture of equal volumes of *methanol R* and *methylene chloride R* and dilute to 2 mL with the same mixture of solvents.

*Reference solution (b).* Dilute 0.5 mL of reference solution (a) to 50 mL with a mixture of equal volumes of *methanol R* and *methylene chloride R*.

*Reference solution (c).* Dissolve 10 mg of *gitoxin CRS* with stirring in a mixture of equal volumes of *methanol R* and *methylene chloride R* and dilute to 50 mL with the same mixture of solvents.

*Reference solution (d).* Dilute 1 mL of reference solution (b) to 2 mL with a mixture of equal volumes of *methanol R* and *methylene chloride R*.

*Reference solution (e).* Mix 1 mL of reference solution (a) and 1 mL of reference solution (c).

Apply to the plate 5 µL of each solution. Develop immediately over a path of 15 cm using a mixture of 15 volumes of *methanol R*, 40 volumes of *cyclohexane R* and 90 volumes of *methylene chloride R*. Dry the plate in a stream of cold air for 5 min. Repeat the development and dry the plate in a stream of cold air for 5 min. Spray with a mixture of 1 volume of *sulfuric acid R* and 9 volumes of *alcohol R* and heat at 130 °C for 15 min. Examine in daylight.

*Gitoxin.* Any spot corresponding to gitoxin in the chromatogram obtained with the test solution is not more intense than the spot in the chromatogram obtained with reference solution (c) (2.0 per cent).

*Other glycosides.* Any spot in the chromatogram obtained with the test solution, apart from the principal spot and the spot corresponding to gitoxin, is not more intense than the spot in the chromatogram obtained with reference solution (b) (1.0 per cent).

The test is not valid unless the chromatogram obtained with reference solution (e) shows clearly separated spots corresponding to digitoxin, gitoxin and other glycosides and the spot in the chromatogram obtained with reference solution (d) is clearly visible.

**Loss on drying** (*2.2.32*). Not more than 1.5 per cent, determined on 0.500 g by drying in an oven at 105 °C for 2 h.

**Sulfated ash** (*2.4.14*). Not more than 0.1 per cent, determined on the residue from the test for loss on drying.

ASSAY

Dissolve 40.0 mg in *alcohol R* and dilute to 50.0 mL with the same solvent. Dilute 5.0 mL of the solution to 100.0 mL with *alcohol R*. Prepare a reference solution in the same manner, using 40.0 mg of *digitoxin CRS*. To 5.0 mL of each solution add 3.0 mL of *alkaline sodium picrate solution R*, allow to stand protected from bright light for 30 min and measure the absorbance (*2.2.25*) of each solution at the maximum at 495 nm, using as the compensation liquid a mixture of 5.0 mL of *alcohol R* and 3.0 mL of *alkaline sodium picrate solution R* prepared at the same time.

Calculate the content of $C_{41}H_{64}O_{13}$ from the absorbances measured and the concentrations of the solutions.

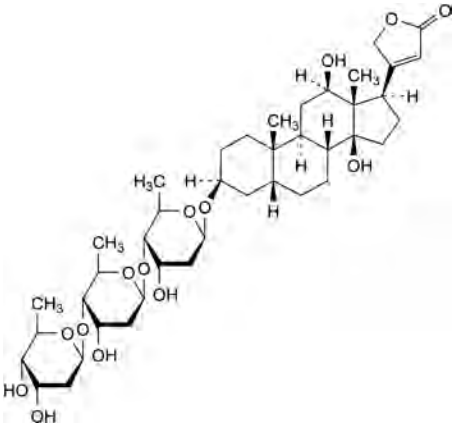
STORAGE

Store protected from light.

**01/2008:0079**
**corrected 7.0**

# DIGOXIN

## Digoxinum



$C_{41}H_{64}O_{14}$ $M_r$ 781
[20830-75-5]

DEFINITION

3β-[(2,6-Dideoxy-β-D-*ribo*-hexopyranosyl-(1→4)-2,6-dideoxy-β-D-*ribo*-hexopyranosyl-(1→4)-2,6-dideoxy-β-D-*ribo*-hexopyranosyl)oxy]-12β,14-dihydroxy-5β-card-20(22)-enolide.

*Content*: 96.0 per cent to 102.0 per cent (dried substance).

CHARACTERS

*Appearance*: white or almost white powder, or colourless crystals.

*Solubility*: practically insoluble in water, soluble in a mixture of equal volumes of methanol and methylene chloride, slightly soluble in ethanol (96 per cent).

IDENTIFICATION

Infrared absorption spectrophotometry (*2.2.24*).

*Comparison*: *digoxin CRS*.

TESTS

**Appearance of solution**. The solution is clear (*2.2.1*) and colourless (*2.2.2, Method I*).

Dissolve 50 mg in a mixture of equal volumes of *methanol R* and *methylene chloride R* and dilute to 10 mL with the same mixture of solvents.

**Specific optical rotation** (*2.2.7*): + 13.9 to + 15.9 (dried substance).

Dissolve 0.50 g in a mixture of equal volumes of *methanol R* and *methylene chloride R* and dilute to 25.0 mL with the same mixture of solvents.

**Related substances**. Liquid chromatography (*2.2.29*).

*Test solution*. Dissolve 50.0 mg of the substance to be examined in 100.0 mL of *methanol R*.

*Reference solution (a)*. Dissolve 10.0 mg of *digoxin CRS* in *methanol R* and dilute to 20.0 mL with the same solvent.

*Reference solution (b)*. Dilute 1.0 mL of the test solution to 100.0 mL with *methanol R*.

*Reference solution (c)*. Dissolve 2.5 mg of *digoxigenin CRS* (impurity C) in *methanol R* and dilute to 5.0 mL with the same solvent. Dilute 1.0 mL of the solution to 50.0 mL with *methanol R*. Dilute 1.0 mL of this solution to 10.0 mL with *methanol R*.

*Reference solution (d)*. Dissolve 50.0 mg of *lanatoside C R* (impurity H) in *methanol R* and dilute to 100.0 mL with the same solvent. To 1.0 mL of this solution, add 1.0 mL of the test solution and dilute to 20.0 mL with *methanol R*.

*Reference solution (e)*. Dissolve 5.0 mg of *digoxin for peak identification CRS* in *methanol R* and dilute to 10.0 mL with the same solvent.

*Column*:

- *size*: *l* = 0.15 m, Ø = 3.9 mm;
- *stationary phase*: *octadecylsilyl silica gel for chromatography R* (5 µm).

*Mobile phase*:

- *mobile phase A*: *acetonitrile R*, *water R* (10:90 *V/V*);
- *mobile phase B*: *water R*, *acetonitrile R* (10:90 *V/V*);

| Time (min) | Mobile phase A (per cent *V/V*) | Mobile phase B (per cent *V/V*) |
|---|---|---|
| 0 - 5 | 78 | 22 |
| 5 - 15 | 78 → 30 | 22 → 70 |

*Flow rate*: 1.5 mL/min.

*Detection*: spectrophotometer at 220 nm.

*Injection*: 10 µL of the test solution and reference solutions (b), (c), (d) and (e).

*Identification of impurities*: use the chromatogram supplied with *digoxin for peak identification CRS* and the chromatogram obtained with reference solution (e) to identify the peaks due to impurities A, B, C, E, F, G and K.

*Relative retention* with reference to digoxin (retention time = about 4.3 min): impurity C = about 0.3; impurity E = about 0.5; impurity F = about 0.6; impurity G = about 0.8; impurity L = about 1.4; impurity K = about 1.6; impurity B = about 2.2; impurity A = about 2.6.

*System suitability*: reference solution (d):

- *resolution*: minimum 1.5 between the peaks due to impurity H and digoxin.

*Limits*:

- *impurity F*: not more than 2.5 times the area of the principal peak in the chromatogram obtained with reference solution (b) (2.5 per cent);

- *impurity C*: not more than 5 times the area of the corresponding peak in the chromatogram obtained with reference solution (c) (1.0 per cent);
- *impurities E, K*: for each impurity, not more than the area of the principal peak in the chromatogram obtained with reference solution (b) (1.0 per cent);
- *impurity G*: not more than 0.8 times the area of the principal peak in the chromatogram obtained with reference solution (b) (0.8 per cent);
- *impurities A, B*: for each impurity, not more than 0.5 times the area of the principal peak in the chromatogram obtained with reference solution (b) (0.5 per cent);
- *impurity L*: not more than 0.3 times the area of the principal peak in the chromatogram obtained with reference solution (b) (0.3 per cent);
- *any other impurity*: for each impurity, not more than 0.2 times the area of the principal peak in the chromatogram obtained with reference solution (b) (0.2 per cent);
- *sum of impurities other than A, B, C, E, F, G, K, L*: not more than 0.7 times the area of the principal peak in the chromatogram obtained with reference solution (b) (0.7 per cent);
- *total*: not more than 3.5 times the area of the principal peak in the chromatogram obtained with reference solution (b) (3.5 per cent);
- *disregard limit*: 0.05 times the area of the principal peak in the chromatogram obtained with reference solution (b) (0.05 per cent).

The thresholds indicated under Related Substances (Table 2034.-1) in the general monograph *Substances for pharmaceutical use (2034)* do not apply.

**Loss on drying** (*2.2.32*): maximum 1.0 per cent, determined on 0.500 g by drying *in vacuo* in an oven.

**Sulfated ash** (*2.4.14*): maximum 0.1 per cent, determined on the residue obtained in the test for loss on drying.

## ASSAY

Liquid chromatography (*2.2.29*) as described in the test for related substances with the following modification.

*Injection*: test solution and reference solution (a).

Calculate the percentage content of $C_{41}H_{64}O_{14}$ from the declared content of *digoxin CRS*.

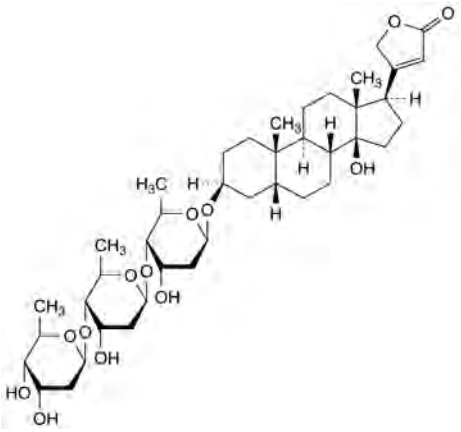
## STORAGE

Protected from light.

## IMPURITIES

*Specified impurities: A, B, C, E, F, G, K, L.*

*Other detectable impurities* (the following substances would, if present at a sufficient level, be detected by one or other of the tests in the monograph. They are limited by the general acceptance criterion for other/unspecified impurities. It is therefore not necessary to identify these impurities for demonstration of compliance. See also *5.10. Control of impurities in substances for pharmaceutical use*): *D, H, I, J.*



A. 3β-[(2,6-dideoxy-β-D-*ribo*-hexopyranosyl-(1→4)-2,6-dideoxy-β-D-*ribo*-hexopyranosyl-(1→4)-2,6-dideoxy-β-D-*ribo*-hexopyranosyl)oxy]-14-hydroxy-5β-card-20(22)-enolide (digitoxin),

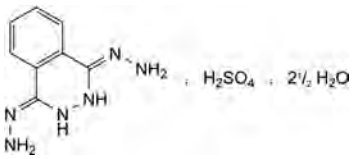
# DIHYDRALAZINE SULFATE, HYDRATED

## Dihydralazini sulfas hydricus



$C_8H_{12}N_6O_4S,2½H_2O$ $M_r$ 333.3

Dihydralazine sulfate, anhydrous: [7327-87-9]

DEFINITION

(Phthalazine-1,4(2*H*,3*H*)-diylidene)dihydrazine sulfate 2.5-hydrate.

*Content*: 98.0 per cent to 102.0 per cent (dried substance).

CHARACTERS

*Appearance*: white or slightly yellow, crystalline powder.

*Solubility*: slightly soluble in water, practically insoluble in anhydrous ethanol. It dissolves in dilute mineral acids.

IDENTIFICATION

A. Infrared absorption spectrophotometry (*2.2.24*).
*Comparison*: *Ph. Eur. reference spectrum of dihydralazine sulfate hydrated*.

B. Dissolve about 50 mg in 5 mL of *dilute hydrochloric acid R*. The solution gives reaction (a) of sulfates (*2.3.1*).

TESTS

**Appearance of solution**. The solution is clear (*2.2.1*) and not more intensely coloured than reference solution $BY_6$ (*2.2.2, Method II*).

Dissolve 0.20 g in *dilute nitric acid R* and dilute to 10 mL with the same acid.

**Related substances**. Liquid chromatography (*2.2.29*). *Prepare the solutions immediately before use.*

*Test solution.* Dissolve 50.0 mg of the substance to be examined in a 6 g/L solution of *glacial acetic acid R* and dilute to 50.0 mL with the same solution.

*Reference solution (a).* Dilute 1.0 mL of the test solution to 100.0 mL with the mobile phase containing 0.5 g/L of *sodium edetate R*. Dilute 1.0 mL of this solution to 10.0 mL with the mobile phase containing 0.5 g/L of *sodium edetate R*.

*Reference solution (b).* Dilute 1.0 mL of the test solution to 50.0 mL with the mobile phase containing 0.5 g/L of *sodium edetate R*.

*Reference solution (c).* Dissolve 5 mg of *dihydralazine for system suitability CRS* in a 6 g/L solution of *glacial acetic acid R* and dilute to 5.0 mL with the same solution.

*Column*:
- *size*: *l* = 0.25 m, Ø = 4.6 mm;
- *stationary phase*: *nitrile silica gel for chromatography R* (5 µm).

*Mobile phase*: mix 22 volumes of *acetonitrile R1* and 78 volumes of a solution containing 1.44 g/L of *sodium laurilsulfate R* and 0.75 g/L of *tetrabutylammonium bromide R*, then adjust to pH 3.0 with *dilute sulfuric acid R1*.

*Flow rate*: 1.5 mL/min.

*Detection*: spectrophotometer at 230 nm.

*Injection*: 20 µL.

*Run time*: twice the retention time of dihydralazine.

*Relative retention* with reference to dihydralazine: impurity A = about 0.8.

*System suitability*: reference solution (c):
- the peaks due to impurity A and dihydralazine are baseline separated as in the chromatogram supplied with *dihydralazine for system suitability CRS*.

*Limits*:
- *impurity A*: not more than the area of the principal peak in the chromatogram obtained with reference solution (b) (2 per cent);
- *impurity C*: not more than the area of the principal peak in the chromatogram obtained with reference solution (a) (0.1 per cent);
- *unspecified impurities*: for each impurity, not more than the area of the principal peak in the chromatogram obtained with reference solution (a) (0.10 per cent);
- *sum of impurities other than A*: not more than 5 times the area of the principal peak in the chromatogram obtained with reference solution (a) (0.5 per cent);
- *disregard limit*: 0.1 times the area of the principal peak in the chromatogram obtained with reference solution (a) (0.01 per cent).

**Impurity B**. Liquid chromatography (*2.2.29*). *Prepare the solutions immediately before use.*

*Test solution.* Dissolve 40.0 mg of *hydrazine sulfate R* (impurity B) in *water R* and dilute to 100.0 mL with the same solvent. Dilute 1.0 mL of the solution to 25.0 mL with *water R*. To 0.50 mL of this solution, add 0.200 g of the substance to be examined and dissolve in 6 mL of *dilute hydrochloric acid R*, then dilute to 10.0 mL with *water R*. In a centrifuge tube with a ground-glass stopper, place immediately 0.50 mL of this solution and 2.0 mL of a 60 g/L solution of *benzaldehyde R* in a mixture of equal volumes of *methanol R* and *water R*. Shake for 90 s. Add 1.0 mL of *water R* and 5.0 mL of *heptane R*. Shake for 1 min and centrifuge. Use the upper layer.

*Reference solution.* Dissolve 40.0 mg of *hydrazine sulfate R* (impurity B) in *water R* and dilute to 100.0 mL with the same solvent. Dilute 1.0 mL of the solution to 25.0 mL with *water R*. To 0.50 mL of this solution, add 6 mL of *dilute hydrochloric acid R* and dilute to 10.0 mL with *water R*. In a centrifuge tube with a ground-glass stopper, place 0.50 mL of this solution

and 2.0 mL of a 60 g/L solution of *benzaldehyde R* in a mixture of equal volumes of *methanol R* and *water R*. Shake for 90 s. Add 1.0 mL of *water R* and 5.0 mL of *heptane R*. Shake for 1 min and centrifuge. Use the upper layer.

*Blank solution.* Prepare in the same manner as for the reference solution but replacing the 0.50 mL of hydrazine sulfate solution by 0.50 mL of *water R*.

*Column*:

– *size*: *l* = 0.25 m, Ø = 4.6 mm;

– *stationary phase*: *octadecylsilyl silica gel for chromatography R* (5 µm).

*Mobile phase*: 0.3 g/L solution of *sodium edetate R*, *acetonitrile R* (30:70 *V/V*).

*Flow rate*: 1 mL/min.

*Detection*: spectrophotometer at 305 nm.

*Injection*: 20 µL.

*Relative retention* with reference to benzaldehyde: benzaldehyde azine (benzalazine) corresponding to impurity B = about 1.8.

*Limit*:

– *impurity B*: the area of the peak due to benzaldehyde azine is not greater than twice the area of the corresponding peak in the chromatogram obtained with the reference solution (10 ppm).

**Iron** (*2.4.9*): maximum 20 ppm.

To the residue obtained in the test for sulfated ash add 0.2 mL of *sulfuric acid R* and heat carefully until the acid is almost completely eliminated. Allow to cool and dissolve the residue with heating in 5.5 mL of *hydrochloric acid R1*. Filter the hot solution through a filter previously washed 3 times with *dilute hydrochloric acid R*. Wash the crucible and the filter with 5 mL of *water R*. Combine the filtrate and the washings and neutralise with about 3.5 mL of *strong sodium hydroxide solution R*. Adjust to pH 3-4 with *acetic acid R* and dilute to 20 mL with *water R*. Prepare the standard with 5 mL of *iron standard solution (2 ppm Fe) R* and 5 mL of *water R*.

**Loss on drying** (*2.2.32*): 13.0 per cent to 15.0 per cent, determined on 1.000 g by drying in an oven at 50 °C at a pressure not exceeding 0.7 kPa for 5 h.

**Sulfated ash** (*2.4.14*): maximum 0.1 per cent, determined on 1.0 g.

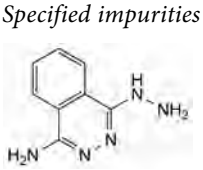
ASSAY

Dissolve 60.0 mg in 25 mL of *water R*. Add 35 mL of *hydrochloric acid R* and titrate slowly with *0.05 M potassium iodate*, determining the end-point potentiometrically (*2.2.20*), using a suitable reference electrode and a platinum indicator electrode.

1 mL of *0.05 M potassium iodate* is equivalent to 7.208 mg of $C_8H_{12}N_6O_4S$.

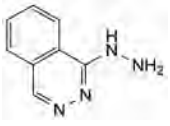
IMPURITIES

*Specified impurities: A, B, C.*



A. 4-hydrazinophthalazin-1-amine,

B. $H_2N$-$NH_2$: hydrazine,

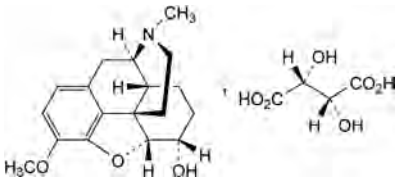


C. (phthalazin-1-yl)hydrazine (hydralazine).

**01/2008:1776**

# DIHYDROCODEINE HYDROGEN TARTRATE

## Dihydrocodeini hydrogenotartras



$C_{22}H_{29}NO_9$ $M_r$ 451.5

[5965-13-9]

DEFINITION

4,5α-Epoxy-3-methoxy-17-methylmorphinan-6α-ol hydrogen (2*R*,3*R*)-2,3-dihydroxybutanedioate.

*Content*: 98.5 per cent to 101.0 per cent (anhydrous substance).

CHARACTERS

*Appearance*: white or almost white, crystalline powder.

*Solubility*: freely soluble in water, sparingly soluble in alcohol, practically insoluble in cyclohexane.

IDENTIFICATION

*First identification: A.*

*Second identification: B, C, D.*

A. Infrared absorption spectrophotometry (*2.2.24*).
*Comparison*: *Ph. Eur. reference spectrum of dihydrocodeine hydrogen tartrate*.

B. To about 0.1 g add 1 mL of *sulfuric acid R* and 0.05 mL of *ferric chloride solution R1* and heat on a water-bath. A brownish-yellow colour develops. Add 0.05 mL of *dilute nitric acid R*. The colour does not become red.

C. To 1 mL of solution S (see Tests) add 5 mL of *picric acid solution R*. Heat on a water-bath until a clear solution is obtained. Allow to cool. A precipitate is formed. Filter, wash with 5 mL of *water R* and dry at 100-105 °C. The crystals melt (*2.2.14*) at 220 °C to 223 °C.

D. It gives reaction (b) of tartrates (*2.3.1*).

TESTS

**Solution S**. Dissolve 2.50 g in *carbon dioxide-free water R* and dilute to 25.0 mL with the same solvent.

**Appearance of solution**. Solution S is clear (*2.2.1*) and not more intensely coloured than reference solution $BY_5$ (*2.2.2, Method II*).

**pH** (*2.2.3*): 3.2 to 4.2 for solution S.

**Specific optical rotation** (*2.2.7*): – 70.5 to – 73.5 (anhydrous substance).

Dilute 10.0 mL of solution S to 20.0 mL with *water R*.

**Related substances**. Liquid chromatography (*2.2.29*).

*Test solution.* Dissolve 10.0 mg of the substance to be examined in the mobile phase and dilute to 10.0 mL with the mobile phase.

*Reference solution (a).* Dissolve 2.0 mg of *codeine phosphate R* in 2.0 mL of the test solution and dilute to 25.0 mL with the mobile phase.

*Reference solution (b).* Dilute 1.0 mL of the test solution to 200 mL with the mobile phase.

*Column*:

– *size*: *l* = 0.25 m, Ø = 4.6 mm,

– *stationary phase*: *octylsilyl silica gel for chromatography R* (5 µm).

*Mobile phase*: to 1.0 g of *sodium heptanesulfonate R*, add 10.0 mL of *glacial acetic acid R* and 4.0 mL of a solution of 5.0 mL of *triethylamine R* diluted to 25.0 mL with a mixture of equal volumes of *water R* and *acetonitrile R*. Add 170 mL of *acetonitrile R* and dilute to 1000 mL with *water R*.

*Flow rate*: 1 mL/min.

*Detection*: spectrophotometer at 284 nm.

*Injection*: 20 µL.

*Run time*: 5 times the retention time of dihydrocodeine.

*Retention time*: dihydrocodeine = about 14 min.

*System suitability*: reference solution (a):

– *resolution*: minimum of 2 between the peaks due to dihydrocodeine and to impurity A.

*Limits*:

– *impurity A*: not more than the area of the principal peak in the chromatogram obtained with reference solution (b) (0.5 per cent),
– *any other peak*: not more than 0.6 times the area of the principal peak in the chromatogram obtained with reference solution (b) (0.3 per cent),
– *total*: not more than twice the area of the principal peak in the chromatogram obtained with reference solution (b) (1 per cent); disregard any peak due to tartaric acid (relative retention with reference to dihydrocodeine = about 0.25),
– *disregard limit*: 0.1 times the area of the principal peak in the chromatogram obtained with reference solution (b) (0.05 per cent).

**Water** (*2.5.12*): maximum 0.7 per cent, determined on 1.00 g.

**Sulfated ash** (*2.4.14*): maximum 0.1 per cent, determined on 1.0 g.

ASSAY

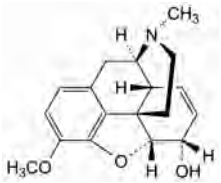
Dissolve 0.350 g in 60 mL of *anhydrous acetic acid R*. Titrate with *0.1 M perchloric acid* determining the end-point potentiometrically (*2.2.20*).

1 mL of *0.1 M perchloric acid* is equivalent to 45.15 mg of $C_{22}H_{29}NO_9$.

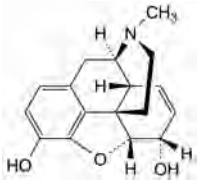
STORAGE

Protected from light.

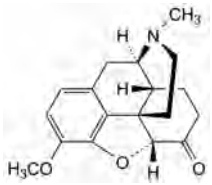
IMPURITIES



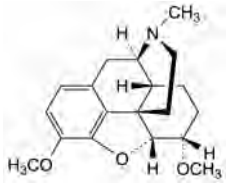
A. 7,8-didehydro-4,5α-epoxy-3-methoxy-17-methylmorphinan-6α-ol (codeine),



B. 7,8-didehydro-4,5α-epoxy-17-methylmorphinan-3,6α-diol (morphine),



C. 4,5α-epoxy-3-methoxy-17-methylmorphinan-6-one (hydrocodone),



D. 4,5α-epoxy-3,6α-dimethoxy-17-methylmorphinan (tetrahydrothebaine).

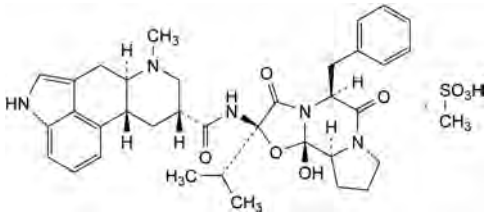
# DIHYDROERGOCRISTINE MESILATE

## Dihydroergocristini mesilas



$C_{36}H_{45}N_5O_8S$ $M_r$ 708

[24730-10-7]

DEFINITION

(6a*R*,9*R*,10a*R*)-*N*-[(2*R*,5*S*,10a*S*,10b*S*)-5-Benzyl-10b-hydroxy-2-(1-methylethyl)-3,6-dioxo-octahydro-8*H*-oxazolo[3,2-*a*]pyrrolo[2,1-*c*]pyrazin-2-yl]-7-methyl-4,6,6a,7,8,9,10,10a-octahydroindolo[4,3-*fg*]quinoline-9-carboxamide methanesulfonate.

*Content*: 98.0 per cent to 102.0 per cent (dried substance).

PRODUCTION

It is considered that alkyl methanesulfonate esters are genotoxic and are potential impurities in dihydroergocristine mesilate. The manufacturing process should be developed taking into consideration the principles of quality risk management, together with considerations of the quality of starting materials, process capability and validation. The general methods *2.5.37. Methyl, ethyl and isopropyl methanesulfonate in methanesulfonic acid*, *2.5.38. Methyl, ethyl and isopropyl methanesulfonate in active substances* and *2.5.39. Methanesulfonyl chloride in methanesulfonic acid* are available to assist manufacturers.

CHARACTERS

*Appearance*: white or almost white, fine crystalline powder.

*Solubility*: slightly soluble in water, soluble in methanol.

IDENTIFICATION

A. Infrared absorption spectrophotometry (*2.2.24*).
*Preparation*: discs.
*Comparison*: *dihydroergocristine mesilate CRS*.

B. Thin-layer chromatography (*2.2.27*).

*Test solution.* Dissolve 0.10 g of the substance to be examined in a mixture of 1 volume of *methanol R* and 9 volumes of *methylene chloride R* and dilute to 5 mL with the same mixture of solvents.

*Reference solution.* Dissolve 0.10 g of *dihydroergocristine mesilate CRS* in a mixture of 1 volume of *methanol R* and 9 volumes of *methylene chloride R* and dilute to 5 mL with the same mixture of solvents.

*Plate*: *TLC silica gel $F_{254}$ plate R.*

*Mobile phase*: *concentrated ammonia R*, *dimethylformamide R*, *ether R* (2:15:85 *V/V/V*).

*Application*: 5 µL.

*Development*: over 2/3 of the plate protected from light.

*Drying*: in a current of cold air for 5 min.

*Detection*: spray with *dimethylaminobenzaldehyde solution R7* and dry in a current of hot air for 2 min.

*Results*: the principal spot in the chromatogram obtained with the test solution is similar in position, colour and size to the principal spot in the chromatogram obtained with the reference solution.

C. Thin-layer chromatography (*2.2.27*).

*Test solution.* Dissolve 0.20 g of the substance to be examined in a mixture of 1 volume of *methanol R* and 9 volumes of *methylene chloride R* and dilute to 5 mL with the same mixture of solvents.

*Reference solution.* Dissolve 0.20 g of *methanesulfonic acid R* in a mixture of 1 volume of *methanol R* and 9 volumes of *methylene chloride R* and dilute to 5 mL with the same mixture of solvents. Dilute 1 mL of the solution to 10 mL with a mixture of 1 volume of *methanol R* and 9 volumes of *methylene chloride R*.

*Plate*: *TLC silica gel $F_{254}$ plate R.*

*Mobile phase*: *water R*, *concentrated ammonia R*, *butanol R*, *acetone R* (5:10:20:65 *V/V/V/V*).

*Application*: 10 µL.

*Development*: over a path of 10 cm protected from light.

*Drying*: in a current of cold air for not more than 1 min.

*Detection*: spray with a 1 g/L solution of *bromocresol purple R* in *methanol R*, adjusting the colour to violet-red with one drop of *dilute ammonia R1* and dry the plate in a current of hot air at 100 °C.

*Results*: the principal spot in the chromatogram obtained with the test solution is similar in position, colour and size to the principal spot in the chromatogram obtained with the reference solution.

TESTS

**Appearance of solution**. The solution is clear (*2.2.1*) and not more intensely coloured than reference solution $B_7$ (*2.2.2, Method II*).

Dissolve 0.50 g in *methanol R* and dilute to 25.0 mL with the same solvent.

**pH** (*2.2.3*): 4.0 to 5.0.

Dissolve 0.10 g in *carbon dioxide-free water R* and dilute to 20 mL with the same solvent.

**Specific optical rotation** (*2.2.7*): − 43 to − 37 (dried substance).

Dissolve 0.250 g in *anhydrous pyridine R* and dilute to 25.0 mL with the same solvent.

**Related substances**. Liquid chromatography (*2.2.29*). *Carry out the test and preparation of the solutions protected from bright light.*

*Test solution.* Dissolve 75.0 mg of the substance to be examined in 10 mL of *acetonitrile R*. Add 10 mL of a 1.0 g/L solution of *phosphoric acid R* and dilute to 50.0 mL with *water R*.

*Reference solution.* Dissolve 20.0 mg of *codergocrine mesilate CRS* in 10 mL of *acetonitrile R*. Add 10 mL of a 1.0 g/L solution of *phosphoric acid R* and dilute to 50.0 mL with *water R*. Dilute 6.0 mL of the solution to 50.0 mL with a mixture of 20 volumes of *acetonitrile R*, 20 volumes of a 1.0 g/L solution of *phosphoric acid R* and 60 volumes of *water R*.

*Column*:

- *size*: *l* = 0.25 m, Ø = 4.6 mm;
- *stationary phase*: *octadecylsilyl silica gel for chromatography R* (5 µm) with a pore size of 10 nm and a carbon loading of 19 per cent.

*Mobile phase*:

- *mobile phase A*: mix 100 volumes of *acetonitrile R* with 900 volumes of *water R* and add 10 volumes of *triethylamine R*;
- *mobile phase B*: mix 100 volumes of *water R* with 900 volumes of *acetonitrile R* and add 10 volumes of *triethylamine R*;

| Time (min) | Mobile phase A (per cent *V/V*) | Mobile phase B (per cent *V/V*) |
|---|---|---|
| 0 - 5 | 75 | 25 |
| 5 - 20 | 75 → 25 | 25 → 75 |

*Flow rate*: 1.2 mL/min.

*Detection*: spectrophotometer at 280 nm.

*Injection*: 10 µL.

*Relative retention* with reference to dihydroergocristine (retention time = about 13.7 min): impurity F = about 0.8; impurity H = about 0.9; impurity I = about 1.02.

*System suitability*: reference solution:

- the chromatogram shows 4 peaks;
- *resolution*: minimum 1 between the peaks due to dihydroergocristine and impurity I.

*Limits*:

- *any impurity*: not more than the area of the peak due to dihydroergocristine in the chromatogram obtained with the reference solution (1 per cent);
- *total*: not more than twice the area of the peak due to dihydroergocristine in the chromatogram obtained with the reference solution (2 per cent);
- *disregard limit*: 0.1 times the area of the peak due to dihydroergocristine in the chromatogram obtained with the reference solution (0.1 per cent).

**Loss on drying** (*2.2.32*): maximum 3.0 per cent, determined on 0.500 g by drying under high vacuum at 80 °C.

ASSAY

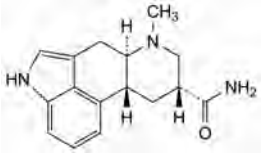
Dissolve 0.300 g in 60 mL of *pyridine R*. Pass a stream of *nitrogen R* over the surface of the solution and titrate with *0.1 M tetrabutylammonium hydroxide*, determining the end-point potentiometrically (*2.2.20*). Note the volume used at the second point of inflexion.

1 mL of *0.1 M tetrabutylammonium hydroxide* is equivalent to 35.39 mg of $C_{36}H_{45}N_5O_8S$.

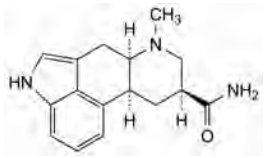
STORAGE

Store protected from light.

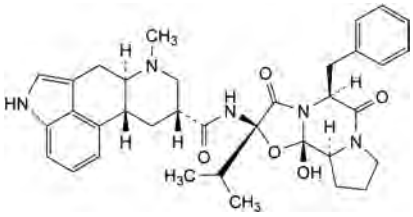
IMPURITIES



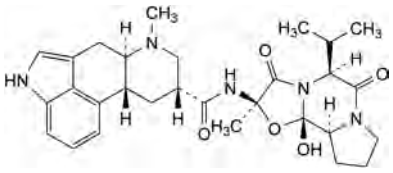
A. (6a*R*,9*R*,10a*R*)-7-methyl-4,6,6a,7,8,9,10,10a-octahydroindolo[4,3-*fg*]quinoline-9-carboxamide (6-methylergoline-8β-carboxamide),



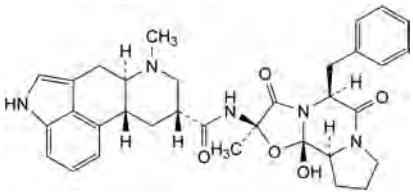
B. (6a*R*,9*S*,10a*S*)-7-methyl-4,6,6a,7,8,9,10,10a-octahydroindolo[4,3-*fg*]quinoline-9-carboxamide (6-methylisoergoline-8α-carboxamide),



C. (6a*R*,9*R*,10a*R*)-*N*-[(2*S*,5*S*,10a*S*,10b*S*)-5-benzyl-10b-hydroxy-2-(1-methylethyl)-3,6-dioxooctahydro-8*H*-oxazolo[3,2-*a*]pyrrolo[2,1-*c*]pyrazin-2-yl]-7-methyl-4,6,6a,7,8,9,10,10a-octahydroindolo[4,3-*fg*]quinoline-9-carboxamide (2′-epidihydroergocristine),



D. (6a*R*,9*R*,10a*R*)-*N*-[(2*R*,5*S*,10a*S*,10b*S*)-10b-hydroxy-2-methyl-5-(1-methylethyl)-3,6-dioxooctahydro-8*H*-oxazolo[3,2-*a*]pyrrolo[2,1-*c*]pyrazin-2-yl]-7-methyl-4,6,6a,7,8,9,10,10a-octahydroindolo[4,3-*fg*]quinoline-9-carboxamide (dihydroergosine),



E. (6a*R*,9*R*,10a*R*)-*N*-[(2*R*,5*S*,10a*S*,10b*S*)-5-benzyl-10b-hydroxy-2-methyl-3,6-dioxooctahydro-8*H*-oxazolo[3,2-*a*]pyrrolo[2,1-*c*]pyrazin-2-yl]-7-methyl-4,6,6a,7,8,9,10,10a-octahydroindolo[4,3-*fg*]quinoline- 9-carboxamide (dihydroergotamine),

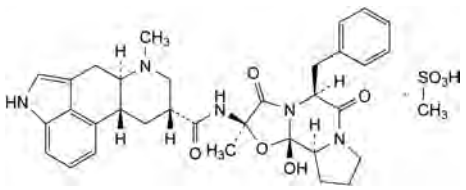
# DIHYDROERGOTAMINE MESILATE

## Dihydroergotamini mesilas



$C_{34}H_{41}N_5O_8S$ $M_r$ 680
[6190-39-2]

DEFINITION

(6a*R*,9*R*,10a*R*)-*N*-[(2*R*,5*S*,10a*S*,10b*S*)-5-Benzyl-10b-hydroxy-2-methyl-3,6-dioxooctahydro-8*H*-oxazolo[3,2-*a*]pyrrolo[2,1-*c*]pyrazin-2-yl]-7-methyl-4,6,6a,7,8,9,10,10a-octahydroindolo[4,3-*fg*]quinoline-9-carboxamide methanesulfonate.

*Content*: 98.0 per cent to 101.0 per cent (dried substance).

PRODUCTION

It is considered that alkyl methanesulfonate esters are genotoxic and are potential impurities in dihydroergotamine mesilate. The manufacturing process should be developed taking into consideration the principles of quality risk management, together with considerations of the quality of starting materials, process capability and validation. The general methods *2.5.37. Methyl, ethyl and isopropyl methanesulfonate in methanesulfonic acid*, *2.5.38. Methyl, ethyl and isopropyl methanesulfonate in active substances* and *2.5.39. Methanesulfonyl chloride in methanesulfonic acid* are available to assist manufacturers.

CHARACTERS

*Appearance*: white or almost white, crystalline powder or colourless crystals.

*Solubility*: slightly soluble in water, sparingly soluble in methanol, slightly soluble in ethanol (96 per cent).

IDENTIFICATION

*First identification*: *B, C.*

*Second identification*: *A, C, D.*

A. Ultraviolet and visible absorption spectrophotometry (*2.2.25*).

*Test solution.* Dissolve 5.0 mg in *methanol R* and dilute to 100.0 mL with the same solvent.

*Spectral range*: 250-350 nm.

*Absorption maxima*: at 281 nm and 291 nm.

*Shoulder*: at 275 nm.

*Absorbance*: negligible above 320 nm.

*Specific absorbance at the absorption maximum at 281 nm*: 95 to 105 (dried substance).

B. Infrared absorption spectrophotometry (*2.2.24*).

*Comparison*: *dihydroergotamine mesilate CRS.*

C. Thin-layer chromatography (*2.2.27*). *Prepare the reference solution and the test solution immediately before use.*

*Solvent mixture*: *methanol R, methylene chloride R* (10:90 *V/V*).

*Test solution.* Dissolve 5 mg of the substance to be examined in the solvent mixture and dilute to 2.5 mL with the solvent mixture.

*Reference solution.* Dissolve 5 mg of *dihydroergotamine mesilate CRS* in the solvent mixture and dilute to 2.5 mL with the solvent mixture.

*Plate*: *TLC silica gel G plate R.*

*Mobile phase*: *concentrated ammonia R, methanol R, ethyl acetate R, methylene chloride R* (1:6:50:50 *V/V/V/V*).

*Application*: 5 µL.

*Development*: protected from light, over a path of 15 cm; dry in a current of cold air for not longer than 1 min and repeat the development protected from light over a path of 15 cm using a freshly prepared amount of the mobile phase.

*Drying*: in a current of cold air.

*Detection*: spray abundantly with *dimethylaminobenzaldehyde solution R7* and dry in a current of hot air for about 2 min.

*Results*: the principal spot in the chromatogram obtained with the test solution is similar in position, colour and size to the principal spot in the chromatogram obtained with the reference solution.

D. To 0.1 g of the substance to be examined, add 5 mL of *dilute hydrochloric acid R* and shake for about 5 min. Filter, then add 1 mL of *barium chloride solution R1*. The filtrate remains clear. Mix 0.1 g of the substance to be examined with 0.4 g of powdered *sodium hydroxide R*, heat to fusion and continue to heat for 1 min. Cool, add 5 mL of *water R*, boil and filter. Acidify the filtrate with *hydrochloric acid R1* and filter again. The filtrate gives reaction (a) of sulfates (*2.3.1*).

TESTS

**Appearance of solution**. The solution is clear (*2.2.1*) and not more intensely coloured than reference solution $Y_7$ or $BY_7$ (*2.2.2, Method II*).

Dissolve 0.10 g in a mixture of 0.1 mL of a 70 g/L solution of *methanesulfonic acid R* and 50 mL of *water R*.

**pH** (*2.2.3*): 4.4 to 5.4.

Dissolve 0.10 g in *carbon dioxide-free water R* and dilute to 100 mL with the same solvent.

**Specific optical rotation** (*2.2.7*): − 47 to − 42 (dried substance).

Dissolve 0.250 g in *anhydrous pyridine R* and dilute to 25.0 mL with the same solvent.

**Related substances**. Liquid chromatography (*2.2.29*). *Carry out the test protected from light.*

*Solvent mixture*: *acetonitrile R, water R* (50:50 *V/V*).

*Test solution.* Dissolve 70 mg of the substance to be examined in the solvent mixture and dilute to 100.0 mL with the solvent mixture.

*Reference solution (a).* Dilute 1.0 mL of the test solution to 10.0 mL with the solvent mixture. Dilute 1.0 mL of this solution to 100.0 mL with the solvent mixture.

*Reference solution (b).* Dissolve 7 mg of the substance to be examined and 6.8 mg of *ergotamine tartrate CRS* (impurity A) (equivalent to 7 mg of ergotamine mesilate) in the solvent mixture and dilute to 100 mL with the solvent mixture. Dilute 5 mL of this solution to 10 mL with the solvent mixture.

*Reference solution (c).* Dissolve 5 mg of *dihydroergotamine for peak identification CRS* (containing impurities A, B, C, D and E) in the solvent mixture, add 100 µL of *dilute sulfuric acid R* and dilute to 5 mL with the solvent mixture.

*Column*:

- *size*: *l* = 0.15 m, Ø = 4.6 mm;
- *stationary phase*: spherical *end-capped octadecylsilyl silica gel for chromatography R* (3 µm);
- *temperature*: 25 °C.

*Mobile phase*:

- *mobile phase A*: 3 g/L solution of *sodium heptanesulfonate monohydrate R* adjusted to pH 2.0 with *phosphoric acid R*;
- *mobile phase B*: mobile phase A, *acetonitrile for chromatography R* (20:80 *V/V*);

| Time (min) | Mobile phase A (per cent *V/V*) | Mobile phase B (per cent *V/V*) |
|---|---|---|
| 0 - 15 | 58 → 40 | 42 → 60 |

*Flow rate*: 1.5 mL/min.

*Detection*: spectrophotometer at 220 nm.

*Injection*: 5 µL.

*Identification of impurities*: use the chromatogram supplied with *dihydroergotamine for peak identification CRS* and the chromatogram obtained with reference solution (c) to identify the peaks due to impurities A, B, C, D and E.

*Relative retention* with reference to dihydroergotamine (retention time = about 6.5 min): impurity D = about 0.7; impurity C = about 0.86; impurity A = about 0.95; impurity B = about 1.2; impurity E = about 1.4.

*System suitability*: reference solution (b):

- *resolution*: minimum 1.5 between the peaks due to impurity A and dihydroergotamine.

*Limits*:

- *correction factors*: for the calculation of content, multiply the peak areas of the following impurities by the corresponding correction factor: impurity A = 1.3; impurity C = 1.3;
- *impurities B, E*: for each impurity, not more than 5 times the area of the principal peak in the chromatogram obtained with reference solution (a) (0.5 per cent);
- *impurity C*: not more than 3 times the area of the principal peak in the chromatogram obtained with reference solution (a) (0.3 per cent);
- *impurities A, D*: for each impurity, not more than 1.5 times the area of the principal peak in the chromatogram obtained with reference solution (a) (0.15 per cent);
- *unspecified impurities*: for each impurity, not more than the area of the principal peak in the chromatogram obtained with reference solution (a) (0.10 per cent);
- *total*: not more than 10 times the area of the principal peak in the chromatogram obtained with reference solution (a) (1.0 per cent);
- *disregard limit*: 0.5 times the area of the principal peak in the chromatogram obtained with reference solution (a) (0.05 per cent).

**Loss on drying** (*2.2.32*): maximum 4.0 per cent, determined on 0.500 g by drying at 105 °C at a pressure not exceeding 0.1 kPa for 5 h.

ASSAY

Dissolve 0.500 g in a mixture of 10 mL of *anhydrous acetic acid R* and 70 mL of *acetic anhydride R*. Titrate with *0.1 M perchloric acid*, determining the end-point potentiometrically (*2.2.20*).

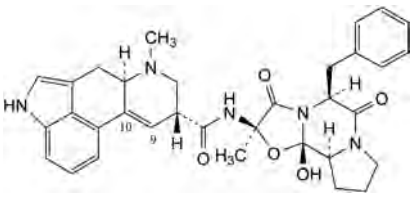
1 mL of *0.1 M perchloric acid* is equivalent to 68.00 mg of $C_{34}H_{41}N_5O_8S$.

STORAGE

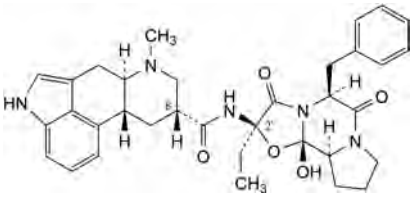
Protected from light.

IMPURITIES

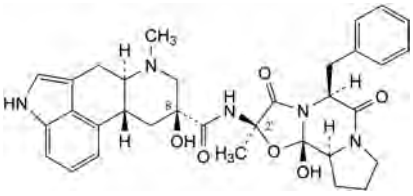
*Specified impurities: A, B, C, D, E.*



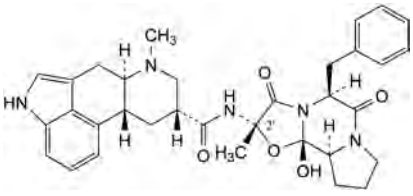
A. (6a*R*,9*R*)-*N*-[(2*R*,5*S*,10a*S*,10b*S*)-5-benzyl-10b-hydroxy-2-methyl-3,6-dioxooctahydro-8*H*-oxazolo[3,2-*a*]pyrrolo[2,1-*c*]pyrazin-2-yl]-7-methyl-4,6,6a,7,8,9-hexahydroindolo[4,3-*fg*]quinoline-9-carboxamide (ergotamine),



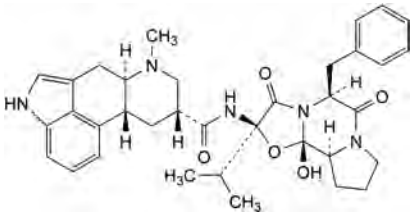
B. (6a*R*,9*R*,10a*R*)-*N*-[(2*R*,5*S*,10a*S*,10b*S*)-5-benzyl-2-ethyl-10b-hydroxy-3,6-dioxooctahydro-8*H*-oxazolo[3,2-*a*]pyrrolo[2,1-*c*]pyrazin-2-yl]-7-methyl-4,6,6a,7,8,9,10,10a-octahydroindolo[4,3-*fg*]quinoline-9-carboxamide (9,10-dihydroergostine),



C. (6a*R*,9*S*,10a*R*)-*N*-[(2*R*,5*S*,10a*S*,10b*S*)-5-benzyl-10b-hydroxy-2-methyl-3,6-dioxooctahydro-8*H*-oxazolo[3,2-*a*]pyrrolo[2,1-*c*]pyrazin-2-yl]-9-hydroxy-7-methyl-4,6,6a,7,8,9,10,10a-octahydroindolo[4,3-*fg*]quinoline-9-carboxamide (8-hydroxy-9,10-dihydroergotamine),



D. (6a*R*,9*R*,10a*R*)-*N*-[(2*S*,5*S*,10a*S*,10b*S*)-5-benzyl-10b-hydroxy-2-methyl-3,6-dioxooctahydro-8*H*-oxazolo[3,2-*a*]pyrrolo[2,1-*c*]pyrazin-2-yl]-7-methyl-4,6,6a,7,8,9,10,10a-octahydroindolo[4,3-*fg*]quinoline-9-carboxamide (2′-*epi*-9,10-dihydroergotamine),



E. (6a*R*,9*R*,10a*R*)-*N*-[(2*R*,5*S*,10a*S*,10b*S*)-5-benzyl-10b-hydroxy-2-(1-methylethyl)-3,6-dioxo-octahydro-8*H*-oxazolo[3,2-*a*]pyrrolo[2,1-*c*]pyrazin-2-yl]-7-methyl-4,6,6a,7,8,9,10,10a-octahydroindolo[4,3-*fg*]quinoline-9-carboxamide (dihydroergocristine).

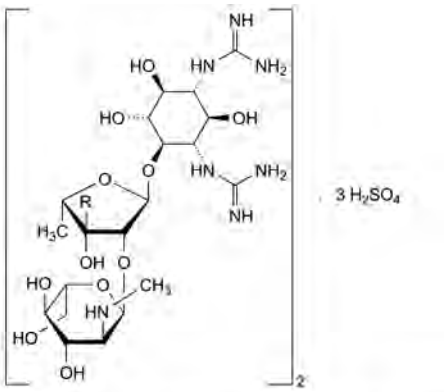
# DIHYDROSTREPTOMYCIN SULFATE FOR VETERINARY USE

## Dihydrostreptomycini sulfas ad usum veterinarium



| Compound | R | Molec. Formula | $M_r$ |
|---|---|---|---|
| dihydrostreptomycin sulfate | $CH_2OH$ | $C_{42}H_{86}N_{14}O_{36}S_3$ | 1461 |
| streptomycin sulfate | CHO | $C_{42}H_{84}N_{14}O_{36}S_3$ | 1457 |

[5490-27-7]

DEFINITION

*Main compound*: bis[$N^1$,$N^3$-dicarbamimidoyl-4-*O*-[5-deoxy-2-*O*-[2-deoxy-2-(methylamino)-α-L-glucopyranosyl]-3-*C*-(hydroxymethyl)-α-L-lyxofuranosyl]-D-streptamine] trisulfate.

Sulfate of a substance obtained by catalytic hydrogenation of streptomycin or by any other means.

Semi-synthetic product derived from a fermentation product.

Stabilisers may be added.

*Content*:

– *sum of the percentage contents of dihydrostreptomycin sulfate and streptomycin sulfate*: 95.0 per cent to 102.0 per cent (dried substance);
– *streptomycin sulfate*: maximum 2.0 per cent (dried substance).

CHARACTERS

*Appearance*: white or almost white, hygroscopic powder.

*Solubility*: freely soluble in water, practically insoluble in acetone, in ethanol (96 per cent) and in methanol.

IDENTIFICATION

*First identification: A, E.*

*Second identification: B, C, D, E.*

A. Examine the chromatograms obtained in the assay.
*Results*: the principal peak in the chromatogram obtained with the test solution is similar in retention time and size to the principal peak in the chromatogram obtained with reference solution (a).

B. Thin-layer chromatography (*2.2.27*).
*Test solution.* Dissolve 10 mg of the substance to be examined in *water R* and dilute to 10 mL with the same solvent.
*Reference solution (a).* Dissolve the contents of a vial of *dihydrostreptomycin sulfate CRS* in 5.0 mL of *water R*.
*Reference solution (b).* Dilute 1.0 mL of reference solution (a) to 5.0 mL with *water R*.
*Reference solution (c).* Dissolve 10 mg of *kanamycin monosulfate CRS* and 10 mg of *neomycin sulfate CRS* in *water R*, add 2.0 mL of reference solution (a), mix thoroughly and dilute to 10 mL with *water R*.
*Plate*: *TLC silica gel plate R*.
*Mobile phase*: 70 g/L solution of *potassium dihydrogen phosphate R*.
*Application*: 10 µL.
*Development*: over 2/3 of the plate.
*Drying*: in a current of warm air.
*Detection*: spray with a mixture of equal volumes of a 2 g/L solution of *1,3-dihydroxynaphthalene R* in *ethanol (96 per cent) R* and a 460 g/L solution of *sulfuric acid R*; heat at 150 °C for 5-10 min.
*System suitability*: reference solution (c):
– the chromatogram shows 3 clearly separated spots.
*Results*: the principal spot in the chromatogram obtained with the test solution is similar in position, colour and size to the principal spot in the chromatogram obtained with reference solution (b).

C. Dissolve 0.1 g in 2 mL of *water R* and add 1 mL of *α-naphthol solution R* and 2 mL of a mixture of equal volumes of *strong sodium hypochlorite solution R* and *water R*. A red colour develops.

D. Dissolve 10 mg in 5 mL of *water R* and add 1 mL of *1 M hydrochloric acid*. Heat in a water-bath for 2 min. Add 2 mL of a 5 g/L solution of *α-naphthol R* in *1 M sodium hydroxide* and heat in a water-bath for 1 min. A violet-pink colour is produced.

E. It gives reaction (a) of sulfates (*2.3.1*).

TESTS

**Solution S**. Dissolve 2.5 g in *carbon dioxide-free water R* and dilute to 10 mL with the same solvent.

**Appearance of solution**. Solution S is not more intensely coloured than intensity 5 of the range of reference solutions of the most appropriate colour (*2.2.2, Method II*). Allow to stand protected from light at about 20 °C for 24 h; solution S is not more opalescent than reference suspension II (*2.2.1*).

**pH** (*2.2.3*): 5.0 to 7.0 for solution S.

**Specific optical rotation** (*2.2.7*): – 91.0 to – 83.0 (dried substance).

Dissolve 0.200 g in *water R* and dilute to 10.0 mL with the same solvent.

**Related substances**. Liquid chromatography (*2.2.29*).

*Test solution.* Dissolve 50.0 mg of the substance to be examined in *water R* and dilute to 10.0 mL with the same solvent.

*Reference solution (a).* Dissolve the contents of a vial of *dihydrostreptomycin sulfate CRS* (containing impurities A, B and C) in 5.0 mL of *water R*.

*Reference solution (b).* Dilute 1.0 mL of the test solution to 100.0 mL with *water R*.

*Reference solution (c).* Dilute 5.0 mL of reference solution (b) to 50.0 mL with *water R*.

*Reference solution (d).* Dissolve 10 mg of *streptomycin sulfate CRS* in *water R* and dilute to 20 mL with the same solvent. Mix 0.1 mL of this solution with 1.0 mL of reference solution (a).

*Reference solution (e).* Dilute 1.0 mL of reference solution (a) to 100.0 mL with *water R*.

*Column*:

- *size*: *l* = 0.25 m, Ø = 4.6 mm;
- *stationary phase*: *end-capped octadecylsilyl silica gel for chromatography R* (5 µm);
- *temperature*: 45 °C.

*Mobile phase*: solution containing 4.6 g/L of *anhydrous sodium sulfate R*, 1.5 g/L of *sodium octanesulfonate R*, 120 mL/L of *acetonitrile R1* and 50 mL/L of a 27.2 g/L solution of *potassium dihydrogen phosphate R* previously adjusted to pH 3.0 with a 22.5 g/L solution of *phosphoric acid R*.

*Flow rate*: 1.0 mL/min.

*Detection*: spectrophotometer at 205 nm.

*Injection*: 20 µL.

*Run time*: 1.5 times the retention time of dihydrostreptomycin.

*Identification of impurities*: use the chromatogram supplied with *dihydrostreptomycin sulfate CRS* and the chromatogram obtained with reference solution (a) to identify the peaks due to streptomycin and impurities A, B and C.

*Relative retention* with reference to dihydrostreptomycin (retention time = about 57 min): impurity A = about 0.2; impurity B = about 0.8; streptomycin = about 0.9; impurity C = about 0.95.

*System suitability*:

- peak-to-valley ratio (a): minimum 1.1, where $H_p$ = height above the baseline of the peak due to streptomycin and $H_v$ = height above the baseline of the lowest point of the curve separating this peak from the peak due to impurity C in the chromatogram obtained with reference solution (d);
- peak-to-valley ratio (b): minimum 5, where $H_p$ = height above the baseline of the peak due to impurity C and $H_v$ = height above the baseline of the lowest point of the curve separating this peak from the peak due to dihydrostreptomycin in the chromatogram obtained with reference solution (d);
- the chromatogram obtained with reference solution (a) is similar to the chromatogram supplied with *dihydrostreptomycin sulfate CRS*.

*Limits*:

- *correction factor*: for the calculation of content, multiply the peak area of impurity A by 0.5;
- *impurity C*: not more than twice the area of the principal peak in the chromatogram obtained with reference solution (b) (2.0 per cent);
- *impurities A, B*: for each impurity, not more than the area of the principal peak in the chromatogram obtained with reference solution (b) (1.0 per cent);
- *any other impurity*: for each impurity, not more than the area of the principal peak in the chromatogram obtained with reference solution (b) (1.0 per cent);
- *total*: not more than 5 times the area of the principal peak in the chromatogram obtained with reference solution (b) (5.0 per cent);
- *disregard limit*: the area of the principal peak in the chromatogram obtained with reference solution (c) (0.1 per cent); disregard the peak due to streptomycin.

**Heavy metals** (*2.4.8*): 20 ppm.

1.0 g complies with test C. Prepare the reference solution using 2 mL of *lead standard solution (10 ppm Pb) R*.

**Loss on drying** (*2.2.32*): maximum 5.0 per cent, determined on 1.000 g by drying under high vacuum at 60 °C for 4 h.

**Sulfated ash** (*2.4.14*): maximum 1.0 per cent, determined on 1.0 g.

**Bacterial endotoxins** (*2.6.14*): less than 0.50 IU/mg, if intended for use in the manufacture of parenteral preparations without a further appropriate procedure for removal of bacterial endotoxins.

ASSAY

Liquid chromatography (*2.2.29*) as described in the test for related substances with the following modification.

*Injection*: test solution and reference solutions (a) and (e).

Calculate the percentage content of streptomycin sulfate using the chromatogram obtained with reference solution (e) and the assigned content of *dihydrostreptomycin sulfate CRS*.

Calculate the percentage content of dihydrostreptomycin sulfate using the chromatogram obtained with reference solution (a) and the assigned content of *dihydrostreptomycin sulfate CRS*.

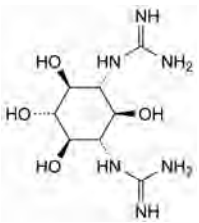
STORAGE

In an airtight container, protected from light. If the substance is sterile, store in a sterile, airtight, tamper-evident container.

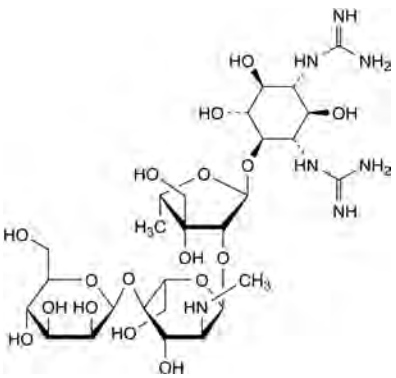
IMPURITIES

*Specified impurities: A, B, C.*

*Other detectable impurities* (the following substances would, if present at a sufficient level, be detected by one or other of the tests in the monograph. They are limited by the general acceptance criterion for other/unspecified impurities and/or by the general monograph *Substances for pharmaceutical use (2034)*. It is therefore not necessary to identify these impurities for demonstration of compliance. See also *5.10. Control of impurities in substances for pharmaceutical use*): *D.*

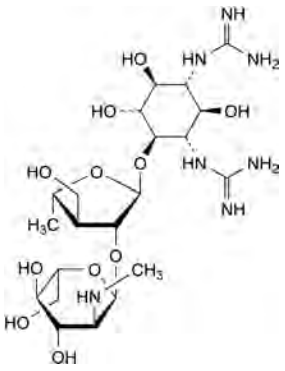


A. $N^1$,$N^3$-dicarbamimidoyl-D-streptamine (streptidine),



B. $N^1$,$N^3$-dicarbamimidoyl-4-*O*-[5-deoxy-2-*O*-[2-deoxy-4-*O*-β-D-mannopyranosyl-2-(methylamino)-α-L-glucopyranosyl]-3-*C*-(hydroxymethyl)-α-L-lyxofuranosyl]-D-streptamine (dihydrostreptomycin B),

C. unknown structure,

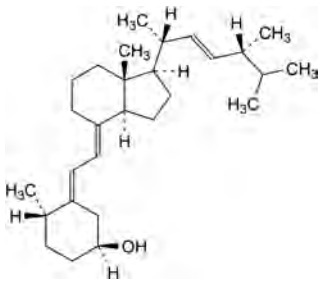


D. $N^1$,$N^3$-dicarbamimidoyl-4-*O*-[3,5-dideoxy-2-*O*-[2-deoxy-2-(methylamino)-α-L-glucopyranosyl]-3-*C*-(hydroxymethyl)-α-L-arabinofuranosyl]-D-streptamine (deoxydihydrostreptomycin).

**01/2019:2014**

# DIHYDROTACHYSTEROL

## Dihydrotachysterolum



$C_{28}H_{46}O$ $M_r$ 398.7
[67-96-9]

DEFINITION

(5*E*,7*E*,22*E*)-9,10-Seco-10α-ergosta-5,7,22-trien-3β-ol.

*Content*: 97.0 per cent to 102.0 per cent.

CHARACTERS

*Appearance*: colourless crystals or white or almost white, crystalline powder.

*Solubility*: practically insoluble in water, freely soluble in acetone and in hexane, sparingly soluble in ethanol (96 per cent).

It shows polymorphism (*5.9*).

IDENTIFICATION

Infrared absorption spectrophotometry (*2.2.24*).

*Comparison*: *dihydrotachysterol CRS*.

If the spectra obtained in the solid state show differences, record new spectra using the residues after recrystallisation from *methanol R*.

TESTS

**Specific optical rotation** (*2.2.7*): + 99 to + 103.

Dissolve 0.500 g in *ethanol (96 per cent) R* and dilute to 25.0 mL with the same solvent.

**Related substances**. Liquid chromatography (*2.2.29*).

*Test solution*. Dissolve 10.00 mg of the substance to be examined in *acetonitrile R* and dilute to 50.0 mL with the same solvent.

*Reference solution (a)*. Dissolve 1.0 mg of *dihydrotachysterol for system suitability CRS* (containing impurities A, B and C) in *acetonitrile R* and dilute to 5.0 mL with the same solvent.

*Reference solution (b)*. Dissolve 10.00 mg of *dihydrotachysterol CRS* in *acetonitrile R* and dilute to 50.0 mL with the same solvent.

*Reference solution (c)*. Dilute 5.0 mL of the test solution to 100.0 mL with *acetonitrile R*. Dilute 5.0 mL of this solution to 50.0 mL with *acetonitrile R*.

*Column*:

- *size*: *l* = 0.25 m, Ø = 3.0 mm;
- *stationary phase*: *octadecylsilyl silica gel for chromatography for separation of polycyclic aromatic hydrocarbons R* (3 μm);
- *temperature*: 40 °C.

*Mobile phase*: *decanol R, water for chromatography R, acetonitrile R1* (1:25:1000 *V/V/V*).

*Flow rate*: 0.5 mL/min.

*Detection*: variable-wavelength spectrophotometer capable of operating at 251 nm and at 203 nm.

*Injection*: 5 μL of the test solution and reference solutions (a) and (c).

*Run time*: twice the retention time of dihydrotachysterol.

*Identification of impurities*: reference solution (a):

- use the chromatogram obtained at 203 nm and the chromatogram obtained at 203 nm supplied with *dihydrotachysterol for system suitability CRS* to identify the peak due to impurity A;
- use the chromatogram obtained at 251 nm and the chromatogram obtained at 251 nm supplied with *dihydrotachysterol for system suitability CRS* to identify the peaks due to impurities B and C.

*Relative retention* with reference to dihydrotachysterol (retention time = about 15 min): impurity B = about 0.9; impurity C = about 1.2; impurity A (not visible at 251 nm, detected at 203 nm) = about 1.2.

*System suitability*: reference solution (a):

- *peak-to-valley ratio*: minimum 4, where $H_p$ = height above the baseline of the peak due to impurity B and $H_v$ = height above the baseline of the lowest point of the curve separating this peak from the peak due to dihydrotachysterol in the chromatogram obtained at 251 nm.

Examine the chromatogram obtained at 203 nm for impurity A and the chromatogram obtained at 251 nm for impurities other than A.

*Limits*:

- *impurity A*: not more than the area of the principal peak in the chromatogram obtained with reference solution (c) (0.5 per cent);
- *impurities B, C*: for each impurity, not more than the area of the principal peak in the chromatogram obtained with reference solution (c) (0.5 per cent);
- *any other impurity*: for each impurity, not more than 0.2 times the area of the principal peak in the chromatogram obtained with reference solution (c) (0.1 per cent);
- *total (including A)*: not more than twice the area of the principal peak in the chromatogram obtained with reference solution (c) at 251 nm (1.0 per cent);
- *disregard limit*: 0.1 times the area of the principal peak in the chromatogram obtained with reference solution (c) (0.05 per cent).

**Water** (*2.5.32*): maximum 0.10 per cent, determined on 40.0 mg.

ASSAY

Liquid chromatography (*2.2.29*) as described in the test for related substances with the following modifications.

*Detection*: spectrophotometer at 251 nm.

*Injection*: test solution and reference solution (b).

Calculate the percentage content of $C_{28}H_{46}O$ taking into account the assigned content of *dihydrotachysterol CRS*.

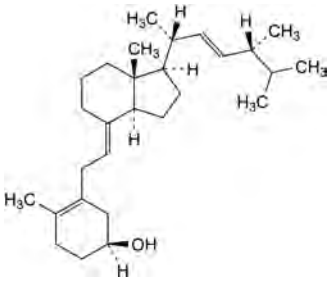
STORAGE

Under an inert gas, in an airtight container, at a temperature of 2 °C to 8 °C.

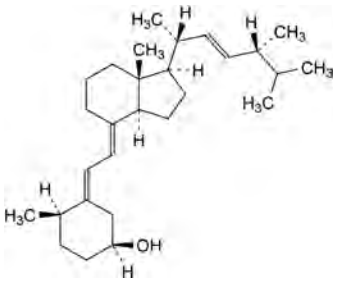
The contents of an opened container are to be used immediately.

IMPURITIES

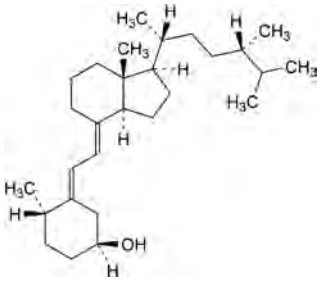
*Specified impurities: A, B, C.*



A. (7*E*,22*E*)-9,10-secoergosta-5(10),7,22-trien-3β-ol (dihydrovitamin $D_2$-I),



B. (5*E*,7*E*,22*E*)-9,10-secoergosta-5,7,22-trien-3β-ol (dihydrovitamin $D_2$-IV),

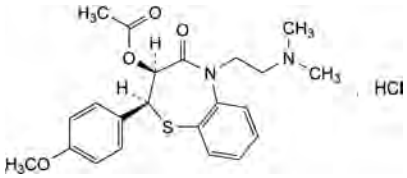


C. (5*E*,7*E*)-9,10-seco-10α-ergosta-5,7-dien-3β-ol (dihydrotachysterol$_4$).

**01/2017:1004**

# DILTIAZEM HYDROCHLORIDE

## Diltiazemi hydrochloridum



$C_{22}H_{27}ClN_2O_4S$ $M_r$ 451.0

[33286-22-5]

DEFINITION

Hydrochloride of (2*S*,3*S*)-5-[2-(dimethylamino)ethyl]-2-(4-methoxyphenyl)-4-oxo-2,3,4,5-tetrahydro-1,5-benzothiazepin-3-yl acetate.

*Content*: 98.5 per cent to 101.0 per cent (dried substance).

CHARACTERS

*Appearance*: white or almost white, crystalline powder.

*Solubility*: freely soluble in water, in methanol and in methylene chloride, slightly soluble in anhydrous ethanol.

mp: about 213 °C, with decomposition.

IDENTIFICATION

*First identification: A, D.*

*Second identification: B, C, D.*

A. Infrared absorption spectrophotometry (*2.2.24*).
*Comparison*: *diltiazem hydrochloride CRS*.

B. Thin-layer chromatography (*2.2.27*).
*Test solution*. Dissolve 50 mg of the substance to be examined in *methylene chloride R* and dilute to 5 mL with the same solvent.
*Reference solution*. Dissolve 50 mg of *diltiazem hydrochloride CRS* in *methylene chloride R* and dilute to 5 mL with the same solvent.
*Plate*: *TLC silica gel $F_{254}$ plate R*.
*Mobile phase*: *acetic acid R*, *water R*, *methylene chloride R*, *anhydrous ethanol R* (1:3:10:12 *V/V/V/V*).
*Application*: 10 µL.
*Development*: over 2/3 of the plate.
*Drying*: in air.
*Detection*: examine in ultraviolet light at 254 nm.
*Results*: the principal spot in the chromatogram obtained with the test solution is similar in position and size to the principal spot in the chromatogram obtained with the reference solution.

C. Dissolve 50 mg in 5 mL of *water R*. Add 1 mL of *ammonium reineckate solution R*. A pink precipitate is produced.

D. It gives reaction (a) of chlorides (*2.3.1*).

TESTS

**Solution S**. Dissolve 1.00 g in *carbon dioxide-free water R* and dilute to 20.0 mL with the same solvent.

**Appearance of solution**. Solution S is clear (*2.2.1*) and colourless (*2.2.2, Method II*).

**pH** (*2.2.3*): 4.3 to 5.3.

Dilute 2.0 mL of solution S to 10.0 mL with *carbon dioxide-free water R*.

**Specific optical rotation** (*2.2.7*): + 115 to + 120 (dried substance).

Dilute 5.0 mL of solution S to 25.0 mL with *water R*.

**Related substances**. Liquid chromatography (*2.2.29*).

*Test solution*. Dissolve 50 mg of the substance to be examined in the mobile phase and dilute to 200.0 mL with the mobile phase.

*Reference solution (a)*. Dissolve 5 mg of *diltiazem for system suitability CRS* (containing impurity A) in the mobile phase and dilute to 20.0 mL with the mobile phase.

*Reference solution (b)*. Dilute 1.0 mL of the test solution to 100.0 mL with the mobile phase. Dilute 1.0 mL of this solution to 10.0 mL with the mobile phase.

*Reference solution (c)*. Dissolve 5 mg of *diltiazem impurity F CRS* in the mobile phase and dilute to 100.0 mL with the mobile phase. Dilute 1.0 mL of the solution to 100.0 mL with the mobile phase.

*Column*:

– *size*: *l* = 0.10 m, Ø = 4.6 mm;

– *stationary phase*: *octadecylsilyl silica gel for chromatography R* (3 µm).

*Mobile phase*: mix 5 volumes of *anhydrous ethanol R*, 25 volumes of *acetonitrile R* and 70 volumes of a solution containing 6.8 g/L of *potassium dihydrogen phosphate R* and 0.1 mL/L of *N,N-dimethyloctylamine R*, adjusted to pH 4.5 with *dilute phosphoric acid R*.

*Flow rate*: 1.5 mL/min.

*Detection*: spectrophotometer at 240 nm.

*Injection*: 20 µL.

*Run time*: 5 times the retention time of diltiazem.

*Identification of impurities*: use the chromatogram obtained with reference solution (c) to identify the peak due to impurity F.

*Relative retention* with reference to diltiazem (retention time = about 5 min): impurity F = about 0.5; impurity A = about 0.8.

*System suitability*: reference solution (a):

– *resolution*: minimum 3.0 between the peaks due to impurity A and diltiazem;

– *symmetry factor*: maximum 2.0 for the peak due to impurity A; if necessary, adjust the concentration of *N,N*-dimethyloctylamine in the mobile phase.

*Limits*:

– *impurity F*: not more than 3 times the area of the principal peak in the chromatogram obtained with reference solution (b) (0.3 per cent);

– *unspecified impurities*: for each impurity, not more than the area of the principal peak in the chromatogram obtained with reference solution (b) (0.10 per cent);

– *total*: not more than 3 times the area of the principal peak in the chromatogram obtained with reference solution (b) (0.3 per cent);

– *disregard limit*: 0.5 times the area of the principal peak in the chromatogram obtained with reference solution (b) (0.05 per cent).

**Loss on drying** (*2.2.32*): maximum 0.5 per cent, determined on 1.000 g by drying in an oven at 105 °C for 2 h.

**Sulfated ash** (*2.4.14*): maximum 0.1 per cent, determined on 1.0 g.

ASSAY

Dissolve 0.400 g in a mixture of 2 mL of *anhydrous formic acid R* and 60 mL of *acetic anhydride R*. Titrate with *0.1 M perchloric acid*, determining the end-point potentiometrically (*2.2.20*).

1 mL of *0.1 M perchloric acid* is equivalent to 45.1 mg of $C_{22}H_{27}ClN_2O_4S$.

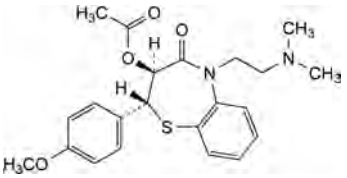
STORAGE

In an airtight container, protected from light.

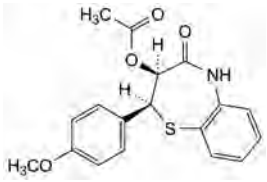
IMPURITIES

*Specified impurities: F.*

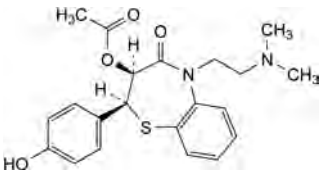
*Other detectable impurities* (the following substances would, if present at a sufficient level, be detected by one or other of the tests in the monograph. They are limited by the general acceptance criterion for other/unspecified impurities and/or by the general monograph *Substances for pharmaceutical use (2034)*. It is therefore not necessary to identify these impurities for demonstration of compliance. See also *5.10. Control of impurities in substances for pharmaceutical use*): *A, B, C, D, E.*



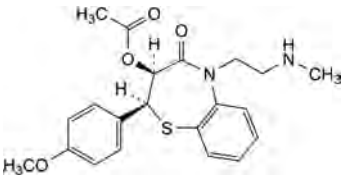
A. (2*R*,3*S*)-5-[2-(dimethylamino)ethyl]-2-(4-methoxyphenyl)-4-oxo-2,3,4,5-tetrahydro-1,5-benzothiazepin-3-yl acetate,



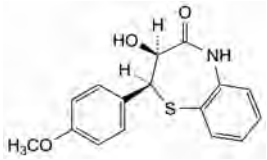
B. (2*S*,3*S*)-2-(4-methoxyphenyl)-4-oxo-2,3,4,5-tetrahydro-1,5-benzothiazepin-3-yl acetate,



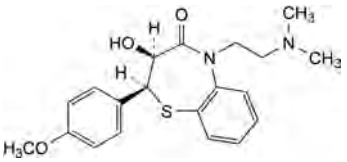
C. (2*S*,3*S*)-5-[2-(dimethylamino)ethyl]-2-(4-hydroxyphenyl)-4-oxo-2,3,4,5-tetrahydro-1,5-benzothiazepin-3-yl acetate,



D. (2*S*,3*S*)-2-(4-methoxyphenyl)-5-[2-(methylamino)ethyl]-4-oxo-2,3,4,5-tetrahydro-1,5-benzothiazepin-3-yl acetate,



E. (2*S*,3*S*)-3-hydroxy-2-(4-methoxyphenyl)-2,3-dihydro-1,5-benzothiazepin-4(5*H*)-one,

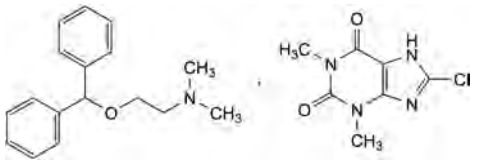


F. (2*S*,3*S*)-5-[2-(dimethylamino)ethyl]-3-hydroxy-2-(4-methoxyphenyl)-2,3-dihydro-1,5-benzothiazepin-4(5*H*)-one.

**07/2009:0601**

# DIMENHYDRINATE

## Dimenhydrinatum



$C_{24}H_{28}ClN_5O_3$ $M_r$ 470.0
[523-87-5]

DEFINITION

Diphenhydramine [2-(diphenylmethoxy)-*N*,*N*-dimethylethanamine] 8-chlorotheophylline (8-chloro-1,3-dimethyl-3,7-dihydro-1*H*-purine-2,6-dione).

*Content*:

– *diphenhydramine* ($C_{17}H_{21}NO$; $M_r$ 255.4): 53.0 per cent to 55.5 per cent (dried substance);

– *8-chlorotheophylline* ($C_7H_7ClN_4O_2$; $M_r$ 214.6): 44.0 per cent to 46.5 per cent (dried substance).

CHARACTERS

*Appearance*: white or almost white, crystalline powder or colourless crystals.

*Solubility*: slightly soluble in water, freely soluble in ethanol (96 per cent).

IDENTIFICATION

*First identification*: *C*.

*Second identification*: *A, B, D*.

A. Melting point (*2.2.14*): 102 °C to 106 °C.

B. Dissolve 0.1 g in a mixture of 3 mL of *water R* and 3 mL of *ethanol (96 per cent) R*, add 6 mL of *water R* and 1 mL of *dilute hydrochloric acid R* and cool in iced water for 30 min, scratching the wall of the tube with a glass rod if necessary to initiate crystallisation. Dissolve about 10 mg of the precipitate obtained in 1 mL of *hydrochloric acid R*, add 0.1 g of *potassium chlorate R* and evaporate to dryness in a porcelain dish. A reddish residue is obtained that becomes violet-red when exposed to ammonia vapour.

C. Infrared absorption spectrophotometry (*2.2.24*).

*Comparison*: *dimenhydrinate CRS*.

D. Dissolve 0.2 g in 10 mL of *ethanol (96 per cent) R*. Add 10 mL of *picric acid solution R* and initiate crystallisation by scratching the wall of the tube with a glass rod. The precipitate, washed with *water R* and dried at 100-105 °C, melts (*2.2.14*) at 130 °C to 134 °C.

TESTS

**Appearance of solution**. The solution is clear (*2.2.1*) and colourless (*2.2.2, Method II*).

Dissolve 1.0 g in *ethanol (96 per cent) R* and dilute to 20 mL with the same solvent.

**pH** (*2.2.3*): 7.1 to 7.6 for the filtrate.

To 0.4 g add 20 mL of *carbon dioxide-free water R*, shake for 2 min and filter.

**Related substances**. Liquid chromatography (*2.2.29*).

*Solvent mixture*: *acetonitrile R*, *water R* (18:82 *V/V*).

*Test solution*. Dissolve 0.100 g of the substance to be examined in the solvent mixture and dilute to 100.0 mL with the solvent mixture.

*Reference solution (a)*. Dissolve 57 mg of *diphenhydramine hydrochloride CRS* in the solvent mixture and dilute to 50.0 mL with the solvent mixture.

*Reference solution (b)*. Dilute 1.0 mL of reference solution (a) to 100.0 mL with the solvent mixture. Dilute 2.0 mL of this solution to 10.0 mL with the solvent mixture.

*Reference solution (c)*. Dissolve 5.0 mg of *diphenhydramine impurity A CRS* (impurity F) in 5.0 mL of reference solution (a) and dilute to 50.0 mL with the solvent mixture.

*Reference solution (d)*. Dissolve the contents of a vial of *dimenhydrinate for peak identification CRS* (containing impurities A and E) in 1.0 mL of the solvent mixture.

*Column*:

– *size*: *l* = 0.25 m, Ø = 4.6 mm;

– *stationary phase*: *end-capped octadecylsilyl silica gel for chromatography R* (5 µm);

– *temperature*: 30 °C.

*Mobile phase*:

– *mobile phase A*: dissolve 10.0 g of *triethylamine R2* in 950 mL of *water R*, adjust to pH 2.5 with *phosphoric acid R* and dilute to 1000 mL with *water R*;

– *mobile phase B*: *acetonitrile R1*;

| Time (min) | Mobile phase A (per cent *V/V*) | Mobile phase B (per cent *V/V*) | Flow rate (mL/min) |
|---|---|---|---|
| 0 - 2 | 82 | 18 | 1.2 |
| 2 - 15 | 82 → 50 | 18 → 50 | 1.2 |
| 15 - 20 | 50 → 20 | 50 → 80 | 1.2 → 2.0 |
| 20 - 30 | 20 | 80 | 2.0 |

*Detection*: spectrophotometer at 225 nm.

*Injection*: 10 µL.

*Identification of impurities*: use the chromatogram supplied with *dimenhydrinate for peak identification CRS* and the chromatogram obtained with reference solution (d) to identify the peaks due to impurities A and E; use the chromatogram obtained with reference solution (c) to identify impurity F.

*Relative retention* with reference to diphenhydramine (retention time = about 13 min): impurity A = about 0.3; impurity E = about 0.7; impurity F = about 0.95.

*System suitability*: reference solution (c):

– *resolution*: minimum 1.5 between the peaks due to impurity F and diphenhydramine.

*Limits*:

– *impurities A, F*: for each impurity, not more than the area of the principal peak in the chromatogram obtained with reference solution (b) (0.2 per cent);

– *impurity E*: not more than 0.75 times the area of the principal peak in the chromatogram obtained with reference solution (b) (0.15 per cent);

– *unspecified impurities*: for each impurity, not more than 0.5 times the area of the principal peak in the chromatogram obtained with reference solution (b) (0.10 per cent);

– *total*: not more than 2.5 times the area of the principal peak in the chromatogram obtained with reference solution (b) (0.5 per cent);

– *disregard limit*: 0.25 times the area of the principal peak in the chromatogram obtained with reference solution (b) (0.05 per cent).

**Loss on drying** (*2.2.32*): maximum 0.5 per cent, determined on 1.000 g by drying *in vacuo*.

**Sulfated ash** (*2.4.14*): maximum 0.2 per cent, determined on 1.0 g.

ASSAY

**Diphenhydramine**. Dissolve 0.200 g in 60 mL of *anhydrous acetic acid R*. Titrate with *0.1 M perchloric acid*, determining the end-point potentiometrically (*2.2.20*).

1 mL of *0.1 M perchloric acid* is equivalent to 25.54 mg of $C_{17}H_{21}NO$.

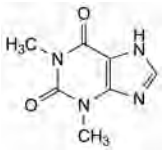
**8-Chlorotheophylline**. To 0.800 g add 50 mL of *water R*, 3 mL of *dilute ammonia R1* and 0.6 g of *ammonium nitrate R* and heat on a water-bath for 5 min. Add 25.0 mL of *0.1 M silver nitrate* and continue heating on a water-bath for 15 min with frequent swirling. Cool, add 25 mL of *dilute nitric acid R* and dilute to 250.0 mL with *water R*. Filter and discard the first 25 mL of the filtrate. Using 5 mL of *ferric ammonium sulfate solution R2* as indicator, titrate 100.0 mL of the filtrate with *0.1 M ammonium thiocyanate* until a yellowish-brown colour is obtained.

1 mL of *0.1 M silver nitrate* is equivalent to 21.46 mg of $C_7H_7ClN_4O_2$.

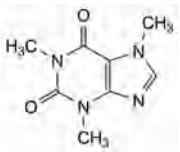
IMPURITIES

*Specified impurities: A, E, F.*

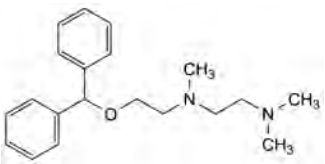
*Other detectable impurities* (the following substances would, if present at a sufficient level, be detected by one or other of the tests in the monograph. They are limited by the general acceptance criterion for other/unspecified impurities and/or by the general monograph *Substances for pharmaceutical use (2034)*. It is therefore not necessary to identify these impurities for demonstration of compliance. See also *5.10. Control of impurities in substances for pharmaceutical use*): *C, D, G, H, I, J, K.*



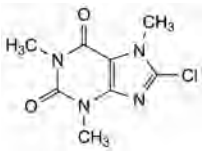
A. 1,3-dimethyl-3,7-dihydro-1*H*-purine-2,6-dione (theophylline),



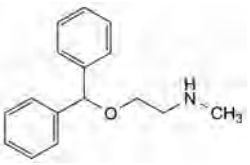
C. 1,3,7-trimethyl-3,7-dihydro-1*H*-purine-2,6-dione (caffeine),



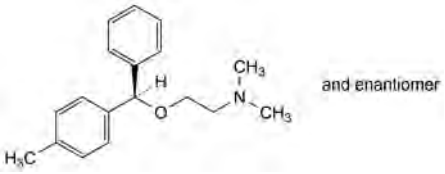
D. *N*-[2-(diphenylmethoxy)ethyl]-*N*,*N*′,*N*′-trimethylethane-1,2-diamine,



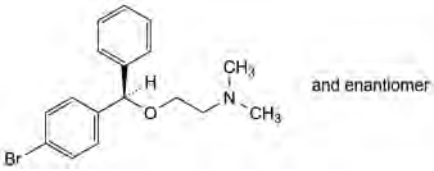
E. 8-chloro-1,3,7-trimethyl-3,7-dihydro-1*H*-purine-2,6-dione (8-chlorocaffeine),



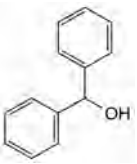
F. 2-(diphenylmethoxy)-*N*-methylethanamine (diphenhydramine impurity A),



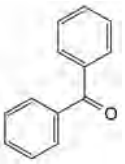
G. *N*,*N*-dimethyl-2-[(*RS*)-(4-methylphenyl)(phenyl)-methoxy]ethanamine (4-methyldiphenhydramine),



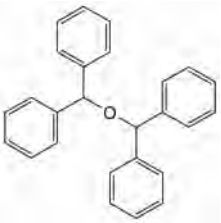
H. 2-[(*RS*)-(4-bromophenyl)-(phenyl)methoxy]-*N*,*N*-dimethylethanamine (4-bromodiphenhydramine),



I. diphenylmethanol (benzhydrol),



J. diphenylmethanone (benzophenone),



K. [oxybis(methanetriyl)]tetrabenzene.

# DIMERCAPROL

## Dimercaprolum

$C_3H_8OS_2$ $M_r$ 124.2
[59-52-9]

DEFINITION

(2*RS*)-2,3-Disulfanylpropan-1-ol.

*Content*: 98.5 per cent to 101.5 per cent.

CHARACTERS

*Appearance*: clear, colourless or slightly yellow liquid.

*Solubility*: soluble in water and in arachis oil, miscible with ethanol (96 per cent) and with benzyl benzoate.

IDENTIFICATION

A. Dissolve 0.05 mL in 2 mL of *water R*. Add 1 mL of *0.05 M iodine*. The colour of the iodine is discharged immediately.

B. Dissolve 0.1 mL in 5 mL of *water R* and add 2 mL of *copper sulfate solution R*. A bluish-black precipitate is formed which quickly becomes dark grey.

C. In a ground-glass-stoppered tube, suspend 0.6 g of *sodium bismuthate R*, previously heated to 200 °C for 2 h, in a mixture of 2.8 mL of *dilute phosphoric acid R* and 6 mL of *water R*. Add 0.2 mL of the substance to be examined, mix and allow to stand for 10 min with frequent shaking. To 1 mL of the supernatant add 5 mL of a 4 g/L solution of *chromotropic acid, sodium salt R* in *sulfuric acid R* and mix. Heat in a water-bath for 15 min. A violet-red colour develops.

TESTS

**Appearance**. It is clear (*2.2.1*) and not more intensely coloured than reference solution $B_6$ or $BY_6$ (*2.2.2, Method II*).

**Acidity or alkalinity**. Dissolve 0.2 g in *carbon dioxide-free water R* and dilute to 10 mL with the same solvent. Add 0.25 mL of *bromocresol green solution R* and 0.3 mL of *0.01 M hydrochloric acid*. The solution is yellow. Not more than 0.5 mL of *0.01 M sodium hydroxide* is required to change the colour of the indicator to blue.

**Refractive index** (*2.2.6*): 1.568 to 1.574.

**Halides**. To 2.0 g add 25 mL of *alcoholic potassium hydroxide solution R* and boil under a reflux condenser for 2 h. Eliminate the ethanol by evaporation in a stream of hot air. Add 20 mL of *water R* and cool. Add 40 mL of *water R* and 10 mL of *strong hydrogen peroxide solution R*, boil gently for 10 min, cool and filter rapidly. Add 10 mL of *dilute nitric acid R* and 5.0 mL of *0.1 M silver nitrate*. Using 2 mL of *ferric ammonium sulfate solution R2* as indicator, titrate with *0.1 M ammonium thiocyanate* until a reddish-yellow colour is obtained. Carry out a blank titration. The difference between the titration volumes is not greater than 1.0 mL.

ASSAY

Dissolve 0.100 g in 40 mL of *methanol R*. Add 20 mL of *0.1 M hydrochloric acid* and 50.0 mL of *0.05 M iodine*. Allow to stand for 10 min and titrate with *0.1 M sodium thiosulfate*. Carry out a blank titration.

1 mL of *0.05 M iodine* is equivalent to 6.21 mg of $C_3H_8OS_2$.

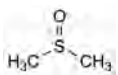
STORAGE

In a well-filled, airtight container, protected from light, at a temperature of 2 °C to 8 °C.

**01/2017:0763**

# DIMETHYL SULFOXIDE

## Dimethylis sulfoxidum



$C_2H_6OS$ $M_r$ 78.1
[67-68-5]

DEFINITION

Sulfinylbismethane.

CHARACTERS

*Appearance*: colourless liquid or colourless crystals, hygroscopic.

*Solubility*: miscible with water and with ethanol (96 per cent).

IDENTIFICATION

*First identification: C.*

*Second identification: A, B, D.*

A. Relative density (see Tests).

B. Refractive index (see Tests).

C. Infrared absorption spectrophotometry (*2.2.24*).
*Comparison*: *dimethyl sulfoxide CRS*.

D. Dissolve 50 mg of *nickel chloride R* in 5 mL of the substance to be examined. The solution is greenish-yellow. Heat in a water-bath at 50 °C. The colour changes to green or bluish-green. Cool. The colour changes to greenish-yellow.

TESTS

**Acidity**. Dissolve 50.0 g in 100 mL of *carbon dioxide-free water R*. Add 0.1 mL of *phenolphthalein solution R1*. Not more than 5.0 mL of *0.01 M sodium hydroxide* is required to produce a pink colour.

**Relative density** (*2.2.5*): 1.100 to 1.104.

**Refractive index** (*2.2.6*): 1.478 to 1.480.

**Freezing point** (*2.2.18*): minimum 18.3 °C.

**Absorbance** (*2.2.25*). Purge with *nitrogen R* for 15 min. The absorbance, measured using *water R* as the compensation liquid, is not more than 0.30 at 275 nm and not more than 0.20 at both 285 nm and 295 nm. Examined between 270 nm and 350 nm, the substance to be examined shows no absorption maximum.

**Related substances**. Gas chromatography (*2.2.28*).

*Internal standard solution.* Dissolve 0.125 g of *bibenzyl R* in *acetone R* and dilute to 50 mL with the same solvent.

*Test solution (a).* Dissolve 5.0 g of the substance to be examined in *acetone R* and dilute to 10.0 mL with the same solvent.

*Test solution (b).* Dissolve 5.0 g of the substance to be examined in *acetone R*, add 1.0 mL of the internal standard solution and dilute to 10.0 mL with *acetone R*.

*Reference solution.* Dissolve 50.0 mg of the substance to be examined and 50 mg of *dimethyl sulfone R* in *acetone R*, add 10.0 mL of the internal standard solution and dilute to 100.0 mL with *acetone R*.

*Column*:

- *material*: glass;
- *size*: *l* = 1.5 m, Ø = 4 mm;
- *stationary phase*: *diatomaceous earth for gas chromatography R* (125-180 µm) impregnated with 10 per cent *m/m* of *polyethyleneglycol adipate R*.

*Carrier gas*: *nitrogen for chromatography R*.

*Flow rate*: 30 mL/min.

*Temperature*:

- *column*: 165 °C;
- *injection port and detector*: 190 °C.

*Detection*: flame ionisation.

*Injection*: 1 µL.

*Run time*: 4 times the retention time of dimethyl sulfoxide.

*Elution order*: dimethyl sulfoxide, dimethyl sulfone, bibenzyl.

*Retention time*: dimethyl sulfoxide = about 5 min.

*System suitability*:

– *resolution*: minimum 3 between the peaks due to dimethyl sulfoxide and dimethyl sulfone in the chromatogram obtained with the reference solution;

– in the chromatogram obtained with test solution (a) there is no peak with the same retention time as the internal standard.

*Limit*:

– *total*: calculate the ratio *R* of the area of the peak due to dimethyl sulfoxide to the area of the peak due to the internal standard from the chromatogram obtained with the reference solution; from the chromatogram obtained with test solution (b), calculate the ratio of the sum of the areas of any peaks, apart from the principal peak and the peak due to the internal standard to the area of the peak due to the internal standard: this ratio is not greater than *R* (0.1 per cent).

**Water** (*2.5.12*): maximum 0.2 per cent, determined on 10.0 g.

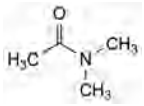
STORAGE

In an airtight, glass container, protected from light.

**01/2017:1667**

# DIMETHYLACETAMIDE

## Dimethylacetamidum



$C_4H_9NO$ $M_r$ 87.1

[127-19-5]

DEFINITION

*N*,*N*-Dimethylacetamide.

CHARACTERS

*Appearance*: clear, colourless, slightly hygroscopic liquid.

*Solubility*: miscible with water, with ethanol (96 per cent), and with most common organic solvents.

bp: about 165 °C.

IDENTIFICATION

*First identification: C.*

*Second identification: A, B, D.*

A. Relative density (*2.2.5*): 0.941 to 0.944.

B. Refractive index (*2.2.6*): 1.435 to 1.439.

C. Infrared absorption spectrophotometry (*2.2.24*).
*Preparation*: films.
*Comparison*: *Ph. Eur. reference spectrum of dimethylacetamide.*

D. Dilute 50 mg with 1 mL of *methanol R*. Add 1 mL of a 15 g/L solution of *hydroxylamine hydrochloride R* and mix. Add 1 mL of *dilute sodium hydroxide solution R*, mix and allow to stand for 30 min. Add 1 mL of *dilute hydrochloric acid R* and add 1 mL of a 100 g/L solution of *ferric chloride R* in *0.1 M hydrochloric acid*. A reddish-brown colour develops, reaching a maximum intensity after about 5 min.

TESTS

**Appearance**. The substance to be examined is clear (*2.2.1*) and not more intensely coloured than reference solution $Y_7$ (*2.2.2, Method II*).

**Acidity**. Dilute 50 mL with 50 mL of *water R* previously adjusted with *0.02 M potassium hydroxide* or *0.02 M hydrochloric acid* to a bluish-green colour, using 0.5 mL of *bromothymol blue solution R1* as indicator. Not more than 5.0 mL of *0.02 M potassium hydroxide* is required to restore the initial (bluish-green) colour.

**Alkalinity**. To 50 mL add 50 mL of *water R* previously adjusted with *0.02 M potassium hydroxide* or *0.02 M hydrochloric acid* to a yellow colour, using 0.5 mL of *bromothymol blue solution R1* as indicator. Not more than 0.5 mL of *0.02 M hydrochloric acid* is required to restore the initial (yellow) colour.

**Related substances**. Gas chromatography (*2.2.28*): use the normalisation procedure.

*Test solution.* The substance to be examined.

*Reference solution (a).* Dilute a mixture of 1 mL of the substance to be examined and 1 mL of *dimethylformamide R* (impurity B) to 20 mL with *methylene chloride R*.

*Reference solution (b).* Dilute 1 mL of the substance to be examined to 20.0 mL with *methylene chloride R*. Dilute 0.1 mL of the solution to 10.0 mL with *methylene chloride R*.

*Column*:

– *material*: fused silica;

– *size*: *l* = 30 m, Ø = 0.32 mm;

– *stationary phase*: *macrogol 20 000 R* (film thickness 1 µm).

*Carrier gas*: *nitrogen for chromatography R*.

*Linear velocity*: 30 cm/s.

*Split ratio*: 1:20.

*Temperature*:

| | Time (min) | Temperature (°C) |
|---|---|---|
| Column | 0 - 15 | 80 → 200 |
| Injection port | | 250 |
| Detector | | 250 |

*Detection*: flame ionisation.

*Injection*: 0.5 µL.

*System suitability*:

– *resolution*: minimum 5.0 between the peaks due to dimethylacetamide and impurity B in the chromatogram obtained with reference solution (a);

– *signal-to-noise ratio*: minimum 10 for the principal peak in the chromatogram obtained with reference solution (b).

*Limits*:

– *any impurity*: maximum 0.1 per cent;

– *total*: maximum 0.3 per cent;

– *disregard limit*: the area of the peak in the chromatogram obtained with reference solution (b) (0.05 per cent).

**Non-volatile matter**: maximum 20 ppm.

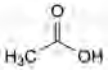
Evaporate 50 g to dryness by suitable means at a pressure not exceeding 1 kPa and on a water-bath. Dry the residue in an oven at 170-175 °C. The residue weighs not more than 1 mg.

**Water** (*2.5.32*): maximum 0.1 per cent, determined on 0.100 g.

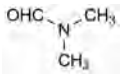
STORAGE

In an airtight container, protected from light.

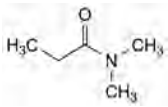
IMPURITIES



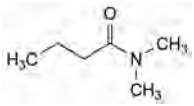
A. acetic acid,



B. *N*,*N*-dimethylformamide,



C. *N*,*N*-dimethylpropanamide,

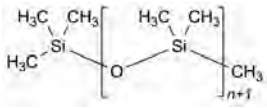


D. *N*,*N*-dimethylbutanamide.

**01/2017:0138**

# DIMETICONE

## Dimeticonum



[9006-65-9]

DEFINITION

α-Trimethylsilyl-ω-methylpoly[oxy(dimethylsilanediyl)].

This poly(dimethylsiloxane) is obtained by hydrolysis and polycondensation of dichlorodimethylsilane and chlorotrimethylsilane. Different grades of dimeticone exist which are distinguished by a number indicating the nominal kinematic viscosity placed after the name.

Their degree of polymerisation ($n$ = 20 to 400) is such that their kinematic viscosities are nominally between 20 $mm^2 \cdot s^{-1}$ and 1300 $mm^2 \cdot s^{-1}$.

*Dimeticones with a nominal viscosity of 50 $mm^2 \cdot s^{-1}$ or lower are intended for external use only.*

CHARACTERS

*Appearance*: clear, colourless liquid of various viscosities.

*Solubility*: practically insoluble in water, very slightly soluble or practically insoluble in anhydrous ethanol, miscible with ethyl acetate, with methyl ethyl ketone and with toluene.

IDENTIFICATION

A. It is identified by its kinematic viscosity at 25 °C (see Tests).

B. Infrared absorption spectrophotometry (*2.2.24*).

*Comparison*: *dimeticone CRS*.

The region of the spectrum from 850 $cm^{-1}$ to 750 $cm^{-1}$ is not taken into account.

C. Heat 0.5 g in a test-tube over a small flame until white fumes begin to appear. Invert the tube over a 2nd tube containing 1 mL of a 1 g/L solution of *chromotropic acid, sodium salt R* in *sulfuric acid R* so that the fumes reach the solution. Shake the 2nd tube for about 10 s and heat on a water-bath for 5 min. The solution is violet.

D. In a platinum crucible, prepare the sulfated ash (*2.4.14*) using 50 mg. The residue is a white powder that gives the reaction of silicates (*2.3.1*).

TESTS

**Acidity**. To 2.0 g add 25 mL of a mixture of equal volumes of *anhydrous ethanol R* and *ether R*, previously neutralised to 0.2 mL of *bromothymol blue solution R1*, and shake. Not more than 0.15 mL of *0.01 M sodium hydroxide* is required to change the colour of the solution to blue.

**Viscosity** (*2.2.9*): 90 per cent to 110 per cent of the nominal kinematic viscosity stated on the label, determined at 25 °C.

**Mineral oils**. Place 2 g in a test-tube and examine in ultraviolet light at 365 nm. The fluorescence is not more intense than that of a solution containing 0.1 ppm of *quinine sulfate R* in *0.005 M sulfuric acid* examined in the same conditions.

**Phenylated compounds**. Dissolve 5.0 g with shaking in 10 mL of *cyclohexane R*. At wavelengths from 250 nm to 270 nm, the absorbance (*2.2.25*) of the solution is not greater than 0.2.

**Volatile matter**: maximum 0.3 per cent, for dimeticones with a nominal viscosity greater than 50 $mm^2 \cdot s^{-1}$, determined on 1.00 g by heating in an oven at 150 °C for 2 h. Carry out the test using a dish 60 mm in diameter and 10 mm deep.

LABELLING

The label states:

- the nominal kinematic viscosity by a number placed after the name of the product;
- where applicable, that the product is intended for external use.

FUNCTIONALITY-RELATED CHARACTERISTICS

*This section provides information on characteristics that are recognised as being relevant control parameters for one or more functions of the substance when used as an excipient (see chapter 5.15). Some of the characteristics described in the Functionality-related characteristics section may also be present in the mandatory part of the monograph since they also represent mandatory quality criteria. In such cases, a cross-reference to the tests described in the mandatory part is included in the Functionality-related characteristics section. Control of the characteristics can contribute to the quality of a medicinal product by improving the consistency of the manufacturing process and the performance of the medicinal product during use. Where control methods are cited, they are recognised as being suitable for the purpose, but other methods can also be used. Wherever results for a particular characteristic are reported, the control method must be indicated.*

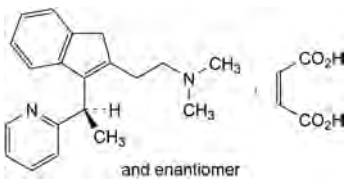
*The following characteristic may be relevant for dimeticone used as emollient.*

**Viscosity** (see Tests).

**01/2008:1417**
**corrected 10.0**

# DIMETINDENE MALEATE

## Dimetindeni maleas



$C_{24}H_{28}N_2O_4$ $M_r$ 408.5
[3614-69-5]

DEFINITION

*N*,*N*-Dimethyl-2-[3-[(*RS*)-1-(pyridin-2-yl)ethyl]-1*H*-inden-2-yl]ethanamine (*Z*)-butenedioate.

*Content*: 99.0 per cent to 101.0 per cent (dried substance).

CHARACTERS

*Appearance*: white or almost white, crystalline powder.

*Solubility*: slightly soluble in water, soluble in methanol.

IDENTIFICATION

Infrared absorption spectrophotometry (*2.2.24*).

*Preparation*: discs.

*Comparison*: *dimetindene maleate CRS*.

TESTS

**Solution S**. Dissolve 0.20 g in *methanol R* and dilute to 20.0 mL with the same solvent.

**Appearance of solution**. Solution S is clear (*2.2.1*) and not more intensely coloured than $Y_6$ (*2.2.2, Method II*).

**Optical rotation** (*2.2.7*): − 0.10° to + 0.10°, determined on solution S.

**Related substances**. Gas chromatography (*2.2.28*).

*Solvent mixture*: *acetone R*, *methylene chloride R* (50:50 *V/V*).

*Test solution.* Dissolve 50.0 mg of the substance to be examined in the solvent mixture and dilute to 5.0 mL with the solvent mixture.

*Reference solution (a).* Dilute 1 mL of the test solution to 100.0 mL with the solvent mixture.

*Reference solution (b).* Dissolve 5.0 mg of *2-ethylpyridine R* (impurity A) in the solvent mixture and dilute to 50.0 mL with the solvent mixture. Dilute 10.0 mL of this solution to 100.0 mL with the solvent mixture.

*Column*:

- *material*: fused silica;
- *size*: *l* = 30 m, Ø = 0.32 mm;
- *stationary phase*: *phenyl(50)methyl(50)polysiloxane R* (film thickness 0.25 µm).

*Carrier gas*: *helium for chromatography R*.

*Linear velocity*: about 30 cm/s.

*Temperature*:

| | Time (min) | Temperature (°C) |
|---|---|---|
| Column | 0 - 1 | 60 |
| | 1 - 34.3 | 60 → 260 |
| | 34.3 - 46.3 | 260 |
| Injection port | | 240 |
| Detector | | 260 |

*Detection*: flame ionisation.

*Injection*: 2 µL; inject via a split injector with a split flow of 30 mL/min.

*Run time*: 1.3 times the retention time of dimetindene.

*Elution order*: impurity A and maleic acid appear during the first 8 min.

*System suitability*: reference solution (a):

- *symmetry factor*: maximum 1.3 for the principal peak.

*Limits*:

- *impurity A*: not more than the area of the corresponding peak in the chromatogram obtained with reference solution (b) (0.1 per cent);
- *impurities B, C, D, E, F, G, H, I*: for each impurity, not more than 0.2 times the area of the principal peak in the chromatogram obtained with reference solution (a) (0.2 per cent);
- *sum of impurities other than A*: not more than 0.5 times the area of the principal peak in the chromatogram obtained with reference solution (a) (0.5 per cent);
- *disregard limit*: 0.05 times the area of the principal peak in the chromatogram obtained with reference solution (a) (0.05 per cent); disregard the peak due to maleic acid.

**Loss on drying** (*2.2.32*): maximum 0.1 per cent, determined on 1.000 g by drying in an oven at 105 °C for 2 h.

**Sulfated ash** (*2.4.14*): maximum 0.1 per cent, determined on 1.0 g.

ASSAY

Dissolve 0.150 g in 80 mL of *anhydrous acetic acid R*. Titrate with *0.1 M perchloric acid*, determining the end-point potentiometrically (*2.2.20*).

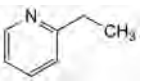
1 mL of *0.1 M perchloric acid* is equivalent to 20.43 mg of $C_{24}H_{28}N_2O_4$.

STORAGE

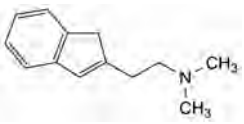
Protected from light.

IMPURITIES

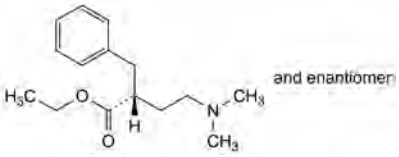
*Specified impurities: A, B, C, D, E, F, G, H, I.*



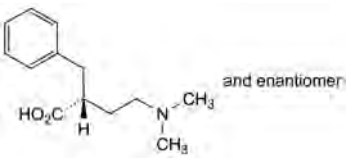
A. 2-ethylpyridine,



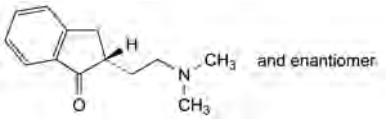
B. 2-(1*H*-inden-2-yl)-*N*,*N*-dimethylethanamine,



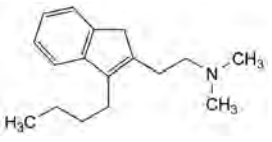
C. ethyl (2*RS*)-2-benzyl-4-(dimethylamino)butanoate,



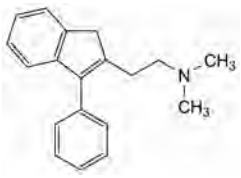
D. (2*RS*)-2-benzyl-4-(dimethylamino)butanoic acid,



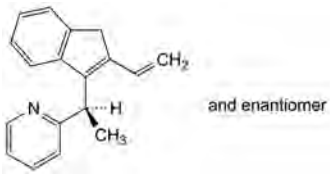
E. (2*RS*)-2-[2-(dimethylamino)ethyl]indan-1-one,



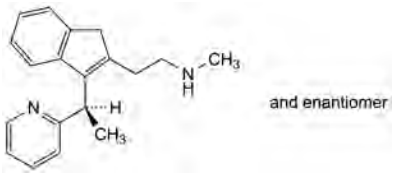
F. 2-(3-butyl-1*H*-inden-2-yl)-*N*,*N*-dimethylethanamine,



G. *N*,*N*-dimethyl-2-(3-phenyl-1*H*-inden-2-yl)ethanamine,



H. 2-[(1*RS*)-1-(2-ethenyl-1*H*-inden-3-yl)ethyl]pyridine,

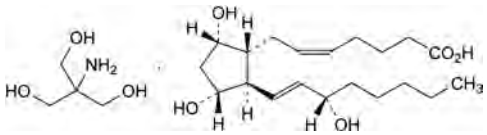


I. *N*-methyl-2-[3-[(1*RS*)-1-(pyridin-2-yl)ethyl]-1*H*-inden-2-yl]ethanamine.

**01/2008:1312**

# DINOPROST TROMETAMOL

## Dinoprostum trometamolum



$C_{24}H_{45}NO_8$ $M_r$ 475.6
[38562-01-5]

DEFINITION

Trometamol (*Z*)-7-[(1*R*,2*R*,3*R*,5*S*)-3,5-dihydroxy-2-[(*E*)-(3*S*)-3-hydroxyoct-1-enyl]cyclopentyl]hept-5-enoate ($PGF_{2\alpha}$).

*Content*: 96.0 per cent to 102.0 per cent (anhydrous substance).

CHARACTERS

*Appearance*: white or almost white powder.

*Solubility*: very soluble in water, freely soluble in ethanol (96 per cent), practically insoluble in acetonitrile.

IDENTIFICATION

A. Specific optical rotation (*2.2.7*): + 19 to + 26 (anhydrous substance).

Dissolve 0.100 g in *ethanol (96 per cent) R* and dilute to 10.0 mL with the same solvent.

B. Infrared absorption spectrophotometry (*2.2.24*).

*Comparison*: *dinoprost trometamol CRS*.

TESTS

**Related substances**. Liquid chromatography (*2.2.29*).

*Solvent mixture*: *acetonitrile R*, *water R* (23:77 *V/V*).

*Test solution.* Dissolve 10.0 mg of the substance to be examined in the solvent mixture and dilute to 10.0 mL with the solvent mixture.

*Reference solution (a). Degradation of dinoprost trometamol to impurity B.* Dissolve 1 mg of the substance to be examined in 1 mL of the mobile phase and heat the solution on a water-bath at 85 °C for 5 min and cool.

*Reference solution (b).* Dilute 2.0 mL of the test solution to 20.0 mL with the solvent mixture. Dilute 2.0 mL of this solution to 20.0 mL with the solvent mixture.

*Column*:

– *size*: *l* = 0.15 m, Ø = 3.9 mm;
– *stationary phase*: *octadecylsilyl silica gel for chromatography R1* (5 µm) with a pore size of 10 nm and a carbon loading of 19 per cent.

*Mobile phase*: dissolve 2.44 g of *sodium dihydrogen phosphate R* in *water R* and dilute to 1000 mL with *water R*; adjust to pH 2.5 with *phosphoric acid R* (about 0.6 mL); mix 770 mL of this solution with 230 mL of *acetonitrile R1*.

*Flow rate*: 1 mL/min.

*Detection*: spectrophotometer at 200 nm.

*Injection*: 20 µL.

*Run time*: 2.5 times the retention time of the principal peak (to elute degradation products formed during heating) for reference solution (a) and 10 min after the elution of dinoprost for the test solution and reference solution (b).

*Retention time*: impurity B = about 55 min; impurity A = about 60 min; dinoprost = about 66 min.

*System suitability*: reference solution (a):

– *resolution*: minimum 1.5 between the peaks due to impurities B and A and minimum 2.0 between the peaks due to impurity A and dinoprost; if necessary, adjust the composition of the mobile phase by increasing the concentration of acetonitrile to decrease the retention times;
– *symmetry factor*: maximum 1.2 for the peaks due to impurities A and B.

*Limits*:

– *impurity A*: not more than twice the area of the principal peak obtained with reference solution (b) (2 per cent);
– *impurities B, C, D*: for each impurity, not more than 1.5 times the area of the principal peak obtained with reference solution (b) (1.5 per cent) and not more than one such peak has an area greater than 0.5 times the area of the principal peak obtained with reference solution (b) (0.5 per cent);
– *sum of impurities other than A*: not more than twice the area of the principal peak obtained with reference solution (b) (2 per cent);
– *disregard limit*: 0.05 times the area of the principal peak obtained with reference solution (b) (0.05 per cent); disregard any peak due to trometamol (retention time = about 1.5 min).

**Water** (*2.5.12*): maximum 1.0 per cent, determined on 0.500 g.

ASSAY

Liquid chromatography (*2.2.29*).

*Solvent mixture*: *acetonitrile R*, *water R* (23:77 *V/V*).

*Test solution.* Dissolve 10.0 mg of the substance to be examined in the solvent mixture and dilute to 10.0 mL with the solvent mixture.

*Reference solution.* Dissolve 10.0 mg of *dinoprost trometamol CRS* in the solvent mixture and dilute to 10.0 mL with the solvent mixture.

*Column*:

– *size*: *l* = 0.15 m, Ø = 3.9 mm;
– *stationary phase*: *octadecylsilyl silica gel for chromatography R1* (5 µm) with a pore size of 10 nm and a carbon loading of 19 per cent.

Monographs D

*Mobile phase*: dissolve 2.44 g of *sodium dihydrogen phosphate R* in *water R* and dilute to 1000 mL with *water R*; adjust to pH 2.5 with *phosphoric acid R* (about 0.6 mL); mix 730 mL of this solution with 270 mL of *acetonitrile R1*.

*Flow rate*: 1 mL/min.

*Detection*: spectrophotometer at 200 nm.

*Injection*: 20 µL.

*Retention time*: dinoprost = about 23 min.

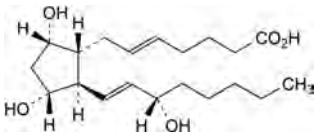
*System suitability*: reference solution:

– *repeatability*: maximum relative standard deviation of 2.0 per cent for the peak due to dinoprost after 6 injections.

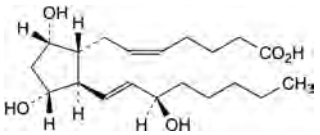
Calculate the percentage of dinoprost trometamol from the declared content of *dinoprost trometamol CRS*.

IMPURITIES

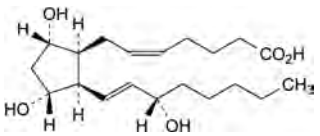
*Specified impurities: A, B, C, D.*



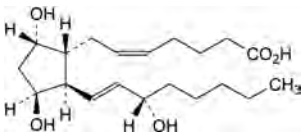
A. (*E*)-7-[(1*R*,2*R*,3*R*,5*S*)-3,5-dihydroxy-2-[(*E*)-(3*S*)-3-hydroxyoct-1-enyl]cyclopentyl]hept-5-enoic acid ((5*E*)-$PGF_{2\alpha}$; 5,6-*trans*-$PGF_{2\alpha}$),



B. (*Z*)-7-[(1*R*,2*R*,3*R*,5*S*)-3,5-dihydroxy-2-[(*E*)-(3*R*)-3-hydroxyoct-1-enyl]cyclopentyl]hept-5-enoic acid ((15*R*)-$PGF_{2\alpha}$;15-epi$PGF_{2\alpha}$),



C. (*Z*)-7-[(1*S*,2*R*,3*R*,5*S*)-3,5-dihydroxy-2-[(*E*)-(3*S*)-3-hydroxyoct-1-enyl]cyclopentyl]hept-5-enoic acid ((8*S*)-$PGF_{2\alpha}$; 8-epi$PGF_{2\alpha}$),



D. (*Z*)-7-[(1*R*,2*R*,3*S*,5*S*)-3,5-dihydroxy-2-[(*E*)-(3*S*)-3-hydroxyoct-1-enyl]cyclopentyl]hept-5-enoic acid (11β-$PGF_{2\alpha}$; 11-epi$PGF_{2\alpha}$).

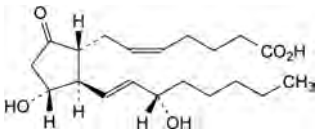
**corrected 9.2**

# DINOPROSTONE

## Dinoprostonum



$C_{20}H_{32}O_5$ $M_r$ 352.5
[363-24-6]

DEFINITION

(*Z*)-7-[(1*R*,2*R*,3*R*)-3-Hydroxy-2-[(*E*)-(3*S*)-3-hydroxyoct-1-enyl]-5-oxocyclopentyl]hept-5-enoic acid ($PGE_2$).

*Content*: 95.0 per cent to 102.0 per cent (anhydrous substance).

CHARACTERS

*Appearance*: white or almost white, crystalline powder or colourless crystals.

*Solubility*: practically insoluble in water, very soluble in methanol, freely soluble in alcohol.

The substance degrades at room temperature.

IDENTIFICATION

A. Specific optical rotation (*2.2.7*): – 90 to – 82 (anhydrous substance).

Immediately before use, dissolve 50.0 mg in *alcohol R* and dilute to 10.0 mL with the same solvent.

B. Infrared absorption spectrophotometry (*2.2.24*).

*Comparison*: *dinoprostone CRS*.

TESTS

*Prepare the solutions immediately before use.*

**Related substances**. Liquid chromatography (*2.2.29*).

*Test solution (a).* Dissolve 10.0 mg of the substance to be examined in a 58 per cent *V/V* solution of *methanol R2* and dilute to 2.0 mL with the same solvent.

*Test solution (b).* Dissolve 20.0 mg of the substance to be examined in a 58 per cent *V/V* solution of *methanol R2* and dilute to 20.0 mL with the same solvent.

*Reference solution (a).* Dissolve 1 mg of *dinoprostone CRS* and 1 mg of *dinoprostone impurity C CRS* in a 58 per cent *V/V* solution of *methanol R2* and dilute to 10.0 mL with the same solvent. Dilute 4.0 mL of the solution to 10.0 mL with a 58 per cent *V/V* solution of *methanol R2*.

*Reference solution (b).* Dilute 0.5 mL of test solution (a) to 10.0 mL with a 58 per cent *V/V* solution of *methanol R2*. Dilute 1.0 mL of the solution to 10.0 mL with a 58 per cent *V/V* solution of *methanol R2*.

*Reference solution (c).* In order to prepare *in situ* the degradation compounds (impurity D and impurity E), dissolve 1 mg of the substance to be examined in 100 µL of *1 M sodium hydroxide* (the solution becomes brownish-red), wait 4 min, add 150 µL of *dilute acetic acid R1* (yellowish-white opalescent solution) and dilute to 5.0 mL with a 58 per cent *V/V* solution of *methanol R2*.

*Reference solution (d).* Dissolve 20 mg of *dinoprostone CRS* in a 58 per cent *V/V* solution of *methanol R2* and dilute to 20.0 mL with the same solvent.

*Column*:

– *size*: *l* = 0.25 m, Ø = 4.6 mm,

– *stationary phase*: *end-capped octadecylsilyl silica gel for chromatography R*,

– *temperature*: 30 °C.

*Mobile phase*: mix 42 volumes of a 0.2 per cent *V/V* solution of *acetic acid R* and 58 volumes of *methanol R2*.

*Flow rate*: 1.0 mL/min.

*Detection*: spectrophotometer at 210 nm.

*Injection*: 20 µL; inject test solution (a) and reference solutions (a), (b) and (c).

*Relative retention* with reference to dinoprostone (retention time = about 18 min): impurity C = about 1.2; impurity D = about 1.8; impurity E = about 2.0.

*System suitability*: reference solution (a):

- *resolution*: minimum of 3.8 between the peaks due to dinoprostone and to impurity C. If necessary adjust the concentration of the acetic acid solution and/or methanol (increase the concentration of the acetic acid solution to increase the retention time for dinoprostone and impurity C and increase the concentration of methanol to decrease the retention time for both compounds).

*Limits*:

- *correction factors*: for the calculation of contents, multiply the peak areas of the following impurities by the corresponding correction factor: impurity D = 0.2; impurity E = 0.7,
- *impurity C*: not more than 3 times the area of the principal peak in the chromatogram obtained with reference solution (b) (1.5 per cent),
- *impurity D*: not more than twice the area of the principal peak in the chromatogram obtained with reference solution (b) (1 per cent),
- *impurity E*: not more than the area of the principal peak in the chromatogram obtained with reference solution (b) (0.5 per cent),
- *any other impurity*: not more than the area of the principal peak in the chromatogram obtained with reference solution (b) (0.5 per cent),
- *total of other impurities*: not more than twice the area of the principal peak in the chromatogram obtained with reference solution (b) (1 per cent),
- *disregard limit*: 0.1 times the area of the principal peak in the chromatogram obtained with reference solution (b) (0.05 per cent).

If any peak with a relative retention to dinoprostone of about 0.8 is greater than 0.5 per cent or if the total of other impurities is greater than 1.0 per cent, record the chromatogram of test solution (a) with a detector set at 230 nm. If the area of the peak at 230 nm is twice the area of the peak at 210 nm, multiply the area at 210 nm by 0.2 (correction factor for impurity F).

**Water** (*2.5.12*): maximum 0.5 per cent, determined on 0.50 g.

ASSAY

*Prepare the solutions immediately before use.*

Liquid chromatography (*2.2.29*) as described in the test for related substances.

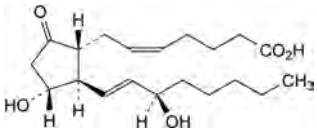
*Injection*: test solution (b) and reference solution (d).

Calculate the percentage content of $C_{20}H_{32}O_5$.

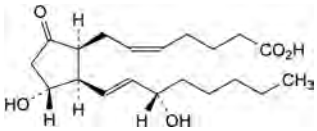
STORAGE

At a temperature not exceeding - 15 °C.

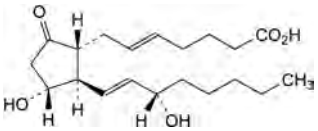
IMPURITIES



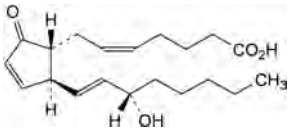
A. (*Z*)-7-[(1*R*,2*R*,3*R*)-3-hydroxy-2-[(*E*)-(3*R*)-3-hydroxyoct-1-enyl]-5-oxocyclopentyl]hept-5-enoic acid (15-epiPGE$_2$; (15*R*)-PGE$_2$),



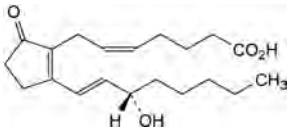
B. (*Z*)-7-[(1*S*,2*R*,3*R*)-3-hydroxy-2-[(*E*)-(3*S*)-3-hydroxyoct-1-enyl]-5-oxocyclopentyl]hept-5-enoic acid (8-epiPGE$_2$; (8S)-PGE$_2$),



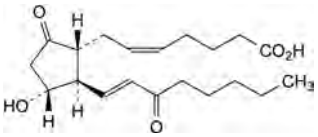
C. (*E*)-7-[(1*R*,2*R*,3*R*)-3-hydroxy-2-[(*E*)-(3*S*)-3-hydroxyoct-1-enyl]-5-oxocyclopentyl]hept-5-enoic acid (5-*trans*-PGE$_2$; (5*E*)-PGE$_2$),



D. (*Z*)-7-[(1*R*,2*S*)-2-[(*E*)-(3*S*)-3-hydroxyoct-1-enyl]-5-oxocyclopent-3-enyl]hept-5-enoic acid (PGA$_2$),



E. (*Z*)-7-[2-[(*E*)-(3*S*)-3-hydroxyoct-1-enyl]-5-oxocyclopent-1-enyl]hept-5-enoic acid (PGB$_2$),

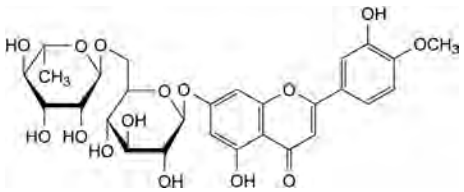


F. (*Z*)-7-[(1*R*,2*R*,3*R*)-3-hydroxy-2-[(*E*)-3-oxo-oct-1-enyl]-5-oxocyclopentyl]hept-5-enoic acid (15-oxo-PGE$_2$; 15-keto-PGE$_2$).

**01/2017:1611**

# DIOSMIN

## Diosminum



$C_{28}H_{32}O_{15}$ $M_r$ 609

[520-27-4]

DEFINITION

7-[[6-*O*-(6-Deoxy-α-L-mannopyranosyl)-β-D-glucopyranosyl]oxy]-5-hydroxy-2-(3-hydroxy-4-methoxyphenyl)-4*H*-1-benzopyran-4-one.

Substance obtained through iodine-assisted oxidation of (2*S*)-7-[[6-*O*-(6-deoxy-α-L-mannopyranosyl)-β-D-glucopyranosyl]oxy]-5-hydroxy-2-(3-hydroxy-4-methoxyphenyl)-2,3-dihydro-4*H*-1-benzopyran-4-one (hesperidin) of natural origin.

*Content:* 90.0 per cent to 102.0 per cent (anhydrous substance).

CHARACTERS

*Appearance*: greyish-yellow or light yellow, hygroscopic powder.

*Solubility*: practically insoluble in water, soluble in dimethyl sulfoxide, practically insoluble in ethanol (96 per cent). It dissolves in dilute solutions of alkali hydroxides.

IDENTIFICATION

A. Infrared absorption spectrophotometry (*2.2.24*).

*Comparison*: *diosmin CRS*.

B. Examine the chromatograms obtained in the assay.

*Results*: the principal peak in the chromatogram obtained with the test solution is similar in retention time and size to the principal peak in the chromatogram obtained with reference solution (a).

TESTS

**Iodine**: maximum 0.1 per cent.

Determine the total content of iodine by potentiometry, using an iodide-selective electrode (*2.2.36*), after oxygen combustion (*2.5.10*).

*Test solution.* Wrap 0.100 g of the substance to be examined in a piece of filter paper and place it in a sample carrier. Introduce into the flask 50 mL of a 0.2 g/L solution of *hydrazine R*. Flush the flask with oxygen for 10 min. Ignite the filter paper. Stir the contents of the flask immediately after the end of the combustion to dissolve completely the combustion products. Continue stirring for 1 h.

*Reference solution.* Dilute 2.0 mL of a 16.6 g/L solution of *potassium iodide R* to 100.0 mL with *water R*. Dilute 10.0 mL of this solution to 100.0 mL with *water R*.

Introduce into a beaker 30 mL of a 200 g/L solution of *potassium nitrate R* in *0.1 M nitric acid*. Immerse the electrodes and stir for 10 min. The potential of the solution ($nT_1$) must remain stable. Add 1 mL of the test solution and measure the potential ($nT_2$).

Introduce into a beaker 30 mL of a 200 g/L solution of *potassium nitrate R* in *0.1 M nitric acid*. Immerse the electrodes and stir for 10 min. The potential of the solution must remain stable ($nR_1$). Add 80 µL of the reference solution and measure the potential ($nR_2$).

The absolute value $|nT_2 - nT_1|$ is not higher than the absolute value $|nR_2 - nR_1|$.

**Related substances**. Liquid chromatography (*2.2.29*).

*Test solution.* Dissolve 25.0 mg of the substance to be examined in *dimethyl sulfoxide R* and dilute to 25.0 mL with the same solvent.

*Reference solution (a).* Dissolve 25.0 mg of *diosmin CRS* in *dimethyl sulfoxide R* and dilute to 25.0 mL with the same solvent.

*Reference solution (b).* Dilute 1.0 mL of the test solution to 100.0 mL with *dimethyl sulfoxide R*.

*Reference solution (c).* Dissolve 5.0 mg of *diosmin for system suitability CRS* (containing impurities A, B, C, D, E and F) in *dimethyl sulfoxide R* and dilute to 5.0 mL with the same solvent.

*Column*:

- *size*: *l* = 0.10 m, Ø = 4.6 mm;
- *stationary phase*: *end-capped octadecylsilyl silica gel for chromatography R* (3 µm);
- *temperature*: 40 °C.

*Mobile phase*: *acetonitrile R*, *glacial acetic acid R*, *methanol R*, *water R* (2:6:28:66 *V/V/V/V*).

*Flow rate*: 1.5 mL/min.

*Detection*: spectrophotometer at 275 nm.

*Injection*: 10 µL of the test solution and reference solutions (b) and (c).

*Run time*: 6 times the retention time of diosmin.

*Identification of impurities*: use the chromatogram supplied with *diosmin for system suitability CRS* and the chromatogram obtained with reference solution (c) to identify the peaks due to impurities A, B, C, D, E and F.

*Relative retention* with reference to diosmin (retention time = about 4 min): impurity A = about 0.5; impurity B = about 0.6; impurity C = about 0.8; impurity D = about 2.2; impurity E = about 2.6; impurity F = about 4.5.

*System suitability*: reference solution (c):

- *resolution*: minimum 2.5 between the peaks due to impurities B and C.

*Calculation of percentage contents*:

- *correction factors*: multiply the peak areas of the following impurities by the corresponding correction factor: impurity A = 0.4; impurity F = 0.6;
- for each impurity, use the concentration of diosmin in reference solution (b).

*Limits*:

- *impurity B*: maximum 4.0 per cent;
- *impurities C, E*: for each impurity, maximum 3.0 per cent;
- *impurity F*: maximum 2.0 per cent;
- *impurity D*: maximum 0.6 per cent;
- *impurity A*: maximum 0.5 per cent;
- *unspecified impurities*: for each impurity, maximum 0.4 per cent;
- *total*: maximum 8.5 per cent;
- *reporting threshold*: 0.10 per cent.

The thresholds indicated under Related substances (Table 2034.-1) in the general monograph *Substances for pharmaceutical use (2034)* do not apply.

**Water** (*2.5.12*): maximum 6.0 per cent, determined on 0.300 g.

**Sulfated ash** (*2.4.14*): maximum 0.2 per cent, determined on 1.0 g.

ASSAY

Liquid chromatography (*2.2.29*) as described in the test for related substances with the following modification.

*Injection*: test solution and reference solution (a).

Calculate the percentage content of $C_{28}H_{32}O_{15}$ taking into account the assigned content of *diosmin CRS*.

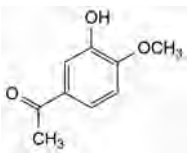
STORAGE

In an airtight container.

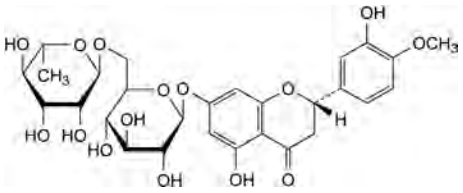
IMPURITIES

*Specified impurities: A, B, C, D, E, F.*

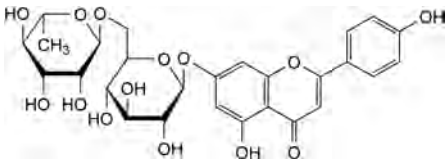
*Other detectable impurities* (the following substances would, if present at a sufficient level, be detected by one or other of the tests in the monograph. They are limited by the general acceptance criterion for other/unspecified impurities. It is therefore not necessary to identify these impurities for demonstration of compliance. See also *5.10. Control of impurities in substances for pharmaceutical use*): *G.*



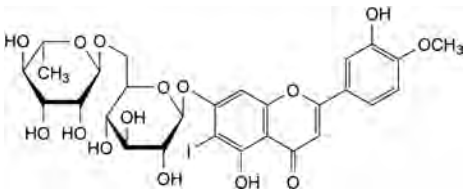
A. 1-(3-hydroxy-4-methoxyphenyl)ethan-1-one (acetoisovanillone),



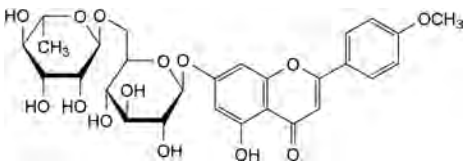
B. (2*S*)-7-[[6-*O*-(6-deoxy-α-L-mannopyranosyl)-β-D-glucopyranosyl]oxy]-5-hydroxy-2-(3-hydroxy-4-methoxyphenyl)-2,3-dihydro-4*H*-1-benzopyran-4-one (hesperidin),



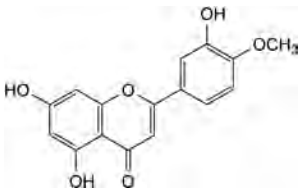
C. 7-[[6-*O*-(6-deoxy-α-L-mannopyranosyl)-β-D-glucopyranosyl]oxy]-5-hydroxy-2-(4-hydroxyphenyl)-4*H*-1-benzopyran-4-one (isorhoifolin),



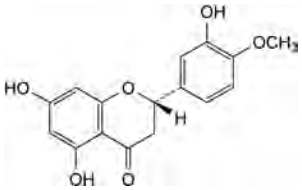
D. 7-[[6-*O*-(6-deoxy-α-L-mannopyranosyl)-β-D-glucopyranosyl]oxy]-5-hydroxy-2-(3-hydroxy-4-methoxyphenyl)-6-iodo-4*H*-1-benzopyran-4-one (6-iododiosmin),



E. 7-[[6-*O*-(6-deoxy-α-L-mannopyranosyl)-β-D-glucopyranosyl]oxy]-5-hydroxy-2-(4-methoxyphenyl)-4*H*-1-benzopyran-4-one (linarin),



F. 5,7-dihydroxy-2-(3-hydroxy-4-methoxyphenyl)-4*H*-1-benzopyran-4-one (diosmetin),



G. (2*S*)-5,7-dihydroxy-2-(3-hydroxy-4-methoxyphenyl)-2,3-dihydro-4*H*-1-benzopyran-4-one (hesperetin).

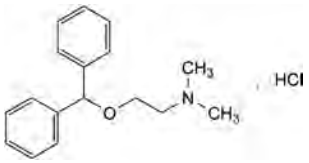
# DIPHENHYDRAMINE HYDROCHLORIDE

## Diphenhydramini hydrochloridum



$C_{17}H_{22}ClNO$ $M_r$ 291.8
[147-24-0]

DEFINITION

2-(Diphenylmethoxy)-*N*,*N*-dimethylethanamine hydrochloride.

*Content*: 99.0 per cent to 101.0 per cent (dried substance).

CHARACTERS

*Appearance*: white or almost white, crystalline powder.

*Solubility*: very soluble in water, freely soluble in ethanol (96 per cent).

IDENTIFICATION

*First identification: C, D.*

*Second identification: A, B, D.*

A. Melting point (*2.2.14*): 168 °C to 172 °C.

B. Ultraviolet and visible absorption spectrophotometry (*2.2.25*).

*Test solution.* Dissolve 50 mg in *ethanol (96 per cent) R* and dilute to 100.0 mL with the same solvent.

*Spectral range*: 230-350 nm.

*Absorption maxima*: at 253 nm, 258 nm and 264 nm.

*Absorbance ratios*:

- $A_{258}/A_{253}$ = 1.1 to 1.3;
- $A_{258}/A_{264}$ = 1.2 to 1.4.

C. Infrared absorption spectrophotometry (*2.2.24*).

*Comparison*: *diphenhydramine hydrochloride CRS.*

D. It gives reaction (a) of chlorides (*2.3.1*).

TESTS

**Solution S**. Dissolve 1.0 g in *carbon dioxide-free water R* and dilute to 20 mL with the same solvent.

**Appearance of solution**. Solution S and a fivefold dilution of solution S are clear (*2.2.1*). Solution S is not more intensely coloured than reference solution $BY_6$ (*2.2.2, Method II*).

**Acidity or alkalinity**. To 10 mL of solution S add 0.15 mL of *methyl red solution R* and 0.25 mL of *0.01 M hydrochloric acid*. The solution is pink. Not more than 0.5 mL of *0.01 M sodium hydroxide* is required to change the colour of the indicator to yellow.

**Related substances**. Liquid chromatography (*2.2.29*).

*Test solution.* Dissolve 70 mg of the substance to be examined in the mobile phase and dilute to 20.0 mL with the mobile phase. Dilute 2.0 mL of the solution to 10.0 mL with the mobile phase.

*Reference solution (a).* Dilute 1.0 mL of the test solution to 10.0 mL with the mobile phase. Dilute 1.0 mL of this solution to 20.0 mL with the mobile phase.

*Reference solution (b).* Dissolve 5 mg of *diphenhydramine impurity A CRS* and 5 mg of *diphenylmethanol R* in the mobile phase and dilute to 10.0 mL with the mobile phase. To 2.0 mL of this solution add 1.5 mL of the test solution and dilute to 10.0 mL with the mobile phase.

*Column*:

– *size*: *l* = 0.25 m, Ø = 4.6 mm,

– *stationary phase*: *base-deactivated octylsilyl silica gel for chromatography R* (5 µm).

*Mobile phase*: mix 35 volumes of *acetonitrile R* and 65 volumes of a 5.4 g/L solution of *potassium dihydrogen phosphate R* adjusted to pH 3.0 using *phosphoric acid R*.

*Flow rate*: 1.2 mL/min.

*Detection*: spectrophotometer at 220 nm.

*Injection*: 10 µL.

*Run time*: 7 times the retention time of diphenhydramine.

*Relative retention* with reference to diphenhydramine (retention time = about 6 min): impurity A = about 0.9; impurity B = about 1.5; impurity C = about 1.8; impurity D = about 2.6; impurity E = about 5.1.

*System suitability*: reference solution (b):

– *resolution*: minimum 2.0 between the peaks due to diphenhydramine and to impurity A.

*Limits*:

– *correction factor*: for the calculation of content, multiply the peak area of impurity D by 0.7,

– *impurity A*: not more than the area of the principal peak in the chromatogram obtained with reference solution (a) (0.5 per cent),

– *any other impurity*: not more than 0.6 times the area of the principal peak in the chromatogram obtained with reference solution (a) (0.3 per cent),

– *total*: not more than twice the area of the principal peak in the chromatogram obtained with reference solution (a) (1.0 per cent),

– *disregard limit*: 0.1 times the area of the principal peak in the chromatogram obtained with reference solution (a) (0.05 per cent).

**Loss on drying** (*2.2.32*): maximum 0.5 per cent, determined on 1.000 g by drying in an oven at 105 °C.

**Sulfated ash** (*2.4.14*): maximum 0.1 per cent, determined on 1.0 g.

ASSAY

Dissolve 0.250 g in 50 mL of *ethanol (96 per cent) R* and add 5.0 mL of *0.01 M hydrochloric acid*. Carry out a potentiometric titration (*2.2.20*), using *0.1 M sodium hydroxide*. Read the volume added between the 2 points of inflexion.

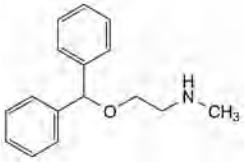
1 mL of *0.1 M sodium hydroxide* is equivalent to 29.18 mg of $C_{17}H_{22}ClNO$.

STORAGE

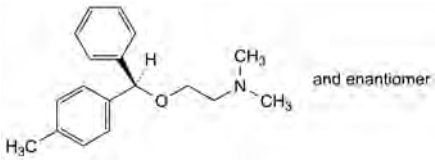
Protected from light.

IMPURITIES

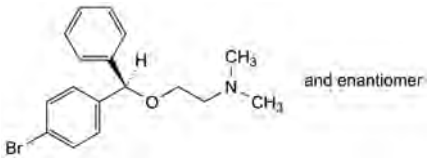
*Specified impurities: A, B, C, D, E.*



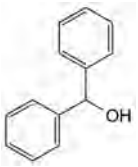
A. 2-(diphenylmethoxy)-*N*-methylethanamine,



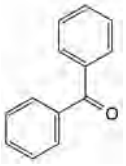
B. 2-[(*RS*)-(4-methylphenyl)phenylmethoxy]-*N,N*-dimethylethanamine,



C. 2-[(*RS*)-(4-bromophenyl)phenylmethoxy]-*N,N*-dimethylethanamine,



D. diphenylmethanol (benzhydrol),

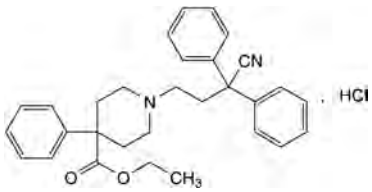


E. diphenylmethanone (benzophenone).

**04/2012:0819**

# DIPHENOXYLATE HYDROCHLORIDE

## Diphenoxylati hydrochloridum



$C_{30}H_{33}ClN_2O_2$ $M_r$ 489.1
[3810-80-8]

DEFINITION

Ethyl 1-(3-cyano-3,3-diphenylpropyl)-4-phenylpiperidine-4-carboxylate hydrochloride.

*Content*: 98.0 per cent to 102.0 per cent (dried substance).

CHARACTERS

*Appearance*: white or almost white, crystalline powder.

*Solubility*: very slightly soluble in water, freely soluble in methylene chloride, sparingly soluble in ethanol (96 per cent).

IDENTIFICATION

A. Infrared absorption spectrophotometry (*2.2.24*).
*Comparison*: *diphenoxylate hydrochloride CRS*.

B. Dissolve about 30 mg in 5 mL of *methanol R*. Add 0.25 mL of *nitric acid R* and 0.4 mL of *silver nitrate solution R1*. Shake and allow to stand. A curdled precipitate is formed. Centrifuge and rinse the precipitate with 3 quantities, each

of 2 mL, of *methanol R*. Carry out this operation rapidly and protected from bright light. Suspend the precipitate in 2 mL of *water R* and add 1.5 mL of *ammonia R*. The precipitate dissolves easily.

TESTS

**Appearance of solution**. The solution is clear (*2.2.1*) and not more intensely coloured than reference solution $Y_6$ (*2.2.2, Method II*).

Dissolve 1.0 g in *methylene chloride R* and dilute to 10 mL with the same solvent.

**Related substances**. Liquid chromatography (*2.2.29*).

*Solution A*. Adjust 900 mL of *water R* to pH 2.3 with *phosphoric acid R* and dilute to 1000.0 mL with *water R*.

*Solvent mixture*: *acetonitrile R1*, solution A (50:50 *V/V*).

*Test solution*. Dissolve 25 mg of the substance to be examined in 20 mL of the solvent mixture, sonicate for 2 min, cool and dilute to 25.0 mL with the solvent mixture.

*Reference solution (a)*. Dilute 1.0 mL of the test solution to 100.0 mL with the solvent mixture. Dilute 1.0 mL of this solution to 10.0 mL with the solvent mixture.

*Reference solution (b)*. Dissolve 2 mg of *diphenoxylate for system suitability CRS* (containing impurity A) in 2.0 mL of the solvent mixture.

*Column*:

- *size*: *l* = 0.25 m, Ø = 4.6 mm;
- *stationary phase*: *end-capped octadecylsilyl silica gel for chromatography R* (5 µm).

*Mobile phase*:

- *mobile phase A*: solution A;
- *mobile phase B*: *acetonitrile R1*;

| Time (min) | Mobile phase A (per cent *V/V*) | Mobile phase B (per cent *V/V*) |
|---|---|---|
| 0 - 5 | 75 | 25 |
| 5 - 40 | 75 → 15 | 25 → 85 |

*Flow rate*: 2.0 mL/min.

*Detection*: spectrophotometer at 210 nm.

*Injection*: 20 µL.

*Relative retention* with reference to diphenoxylate (retention time = about 16 min): impurity A = about 0.8.

*System suitability*: reference solution (b):

- *resolution*: minimum 5.0 between the peaks due to impurity A and diphenoxylate.

*Limits*:

- *impurity A*: not more than 1.5 times the area of the principal peak in the chromatogram obtained with reference solution (a) (0.15 per cent);
- *unspecified impurities*: for each impurity, not more than the area of the principal peak in the chromatogram obtained with reference solution (a) (0.10 per cent);
- *total*: not more than 5 times the area of the principal peak in the chromatogram obtained with reference solution (a) (0.5 per cent);
- *disregard limit*: 0.5 times the area of the principal peak in the chromatogram obtained with reference solution (a) (0.05 per cent).

**Loss on drying** (*2.2.32*): maximum 0.5 per cent, determined on 1.000 g by drying in an oven at 105 °C.

**Sulfated ash** (*2.4.14*): maximum 0.1 per cent, determined on 1.0 g.

ASSAY

Dissolve 0.400 g in 40 mL of *ethanol (96 per cent) R* and add 5.0 mL of *0.01 M hydrochloric acid*. Carry out a potentiometric titration (*2.2.20*), using *0.1 M ethanolic sodium hydroxide*. Read the volume added between the 2 points of inflexion.

1 mL of *0.1 M ethanolic sodium hydroxide* is equivalent to 48.91 mg of $C_{30}H_{33}ClN_2O_2$.

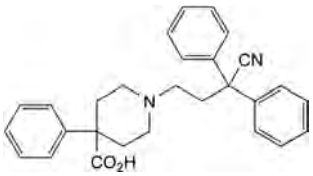
STORAGE

Protected from light.

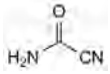
IMPURITIES

*Specified impurities*: *A*.

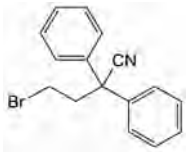
*Other detectable impurities* (the following substances would, if present at a sufficient level, be detected by one or other of the tests in the monograph. They are limited by the general acceptance criterion for other/unspecified impurities and/or by the general monograph *Substances for pharmaceutical use (2034)*. It is therefore not necessary to identify these impurities for demonstration of compliance. See also *5.10. Control of impurities in substances for pharmaceutical use*): *B, C*.



A. 1-(3-cyano-3,3-diphenylpropyl)-4-phenylpiperidine-4-carboxylic acid (diphenoxylic acid),



B. 1-cyanomethanamide,



C. 4-bromo-2,2-diphenylbutanenitrile.

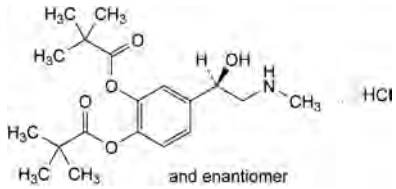
**corrected 7.0**

# DIPIVEFRINE HYDROCHLORIDE

## Dipivefrini hydrochloridum



$C_{19}H_{30}ClNO_5$ $M_r$ 387.9
[64019-93-8]

DEFINITION

Hydrochloride of 4-[(1*RS*)-1-hydroxy-2-(methylamino)ethyl]-1,2-phenylene bis(2,2-dimethylpropanoate).

*Content*: 97.5 per cent to 102.0 per cent (dried substance).

CHARACTERS

*Appearance*: white or almost white, crystalline powder.

*Solubility*: freely soluble in water, very soluble in methanol, freely soluble in ethanol (96 per cent) and in methylene chloride.

mp: about 160 °C.

IDENTIFICATION

A. Infrared absorption spectrophotometry (*2.2.24*).

*Preparation*: discs.

*Comparison*: *dipivefrine hydrochloride CRS*.

B. It gives reaction (a) of chlorides (*2.3.1*).

TESTS

**Impurities A and B**. Liquid chromatography (*2.2.29*).

*Test solution.* Dissolve 0.100 g of the substance to be examined in *0.01 M hydrochloric acid* and dilute to 10.0 mL with the same acid.

*Reference solution.* Dissolve 10.0 mg of *adrenaline R* and 10.0 mg of *adrenalone hydrochloride R* in *0.01 M hydrochloric acid* and dilute to 100.0 mL with the same acid. Dilute 1.0 mL of this solution to 10.0 mL with *0.01 M hydrochloric acid*. *Protect this solution from light.*

*Column*:

- *size*: *l* = 0.15 m, Ø = 4.6 mm;
- *stationary phase*: *end-capped polar-embedded octadecylsilyl amorphous organosilica polymer R* (5 µm).

*Mobile phase*:

- *mobile phase A*: 0.1 per cent *V/V* solution of *anhydrous formic acid R*;
- *mobile phase B*: *methanol R2*, *acetonitrile R* (40:60 *V/V*);

| Time (min) | Mobile phase A (per cent *V/V*) | Mobile phase B (per cent *V/V*) |
|---|---|---|
| 0 - 3 | 100 | 0 |
| 3 - 5 | 100 → 40 | 0 → 60 |
| 5 - 10 | 40 | 60 |

*Flow rate*: 1 mL/min.

*Detection*: spectrophotometer at 260 nm.

*Injection*: 10 µL.

*Retention times*: impurity A = about 2.2 min; impurity B = about 3.2 min.

*System suitability*: reference solution:

- *resolution*: minimum 2.0 between the peaks due to impurities A and B.

*Limits*:

- *impurities A, B*: for each impurity, not more than the area of the corresponding peak in the chromatogram obtained with the reference solution (0.1 per cent).

**Related substances**. Liquid chromatography (*2.2.29*).

*Solvent mixture.* Mix 40 volumes of *methanol R2* and 60 volumes of *acetonitrile R*. Mix 55 volumes of this mixture and 45 volumes of *0.01 M hydrochloric acid*.

*Test solution.* Dissolve 50.0 mg of the substance to be examined in the solvent mixture and dilute to 5.0 mL with the solvent mixture.

*Reference solution (a).* Dilute 1.0 mL of the test solution to 100.0 mL with the solvent mixture.

*Reference solution (b).* Dissolve 5 mg of *dipivefrine for system suitability CRS* (containing impurities C, D and E) in the solvent mixture and dilute to 2.0 mL with the solvent mixture.

*Reference solution (c).* Dissolve 5.0 mg of *dipivefrine hydrochloride CRS* in the solvent mixture and dilute to 2.0 mL with the solvent mixture. Dilute 1.0 mL of this solution to 25.0 mL with the solvent mixture.

*Column*:

- *size*: *l* = 0.15 m, Ø = 4.6 mm;
- *stationary phase*: *end-capped polar-embedded octadecylsilyl amorphous organosilica polymer R* (5 µm).

*Mobile phase*: mix 45 volumes of a 2.7 g/L solution of *concentrated ammonia R* adjusted to pH 10.0 with *dilute acetic acid R* and 55 volumes of a mixture of 40 volumes of *methanol R2* and 60 volumes of *acetonitrile R*.

*Flow rate*: 1 mL/min.

*Detection*: spectrophotometer at 260 nm.

*Injection*: 10 µL.

*Run time*: 2.5 times the retention time of dipivefrine.

*Relative retention* with reference to dipivefrine (retention time = about 7 min): impurities C and D = about 0.4; impurity E = about 1.3; impurity F = about 2.0.

*System suitability*: reference solution (b):

- *resolution*: minimum 3.0 between the peaks due to dipivefrine and impurity E.

*Limits*:

- *correction factors*: for the calculation of content, multiply the peak areas of the following impurities by the corresponding correction factor: impurities C and D = 0.5; impurity E = 0.06;
- *sum of impurities C and D*: not more than 0.3 times the area of the principal peak in the chromatogram obtained with reference solution (a) (0.3 per cent);
- *impurities E, F*: for each impurity, not more than 0.1 times the area of the principal peak in the chromatogram obtained with reference solution (a) (0.1 per cent);
- *unspecified impurities*: for each impurity, not more than 0.1 times the area of the principal peak in the chromatogram obtained with reference solution (a) (0.10 per cent);
- *total*: not more than 0.5 times the area of the principal peak in the chromatogram obtained with reference solution (a) (0.5 per cent);
- *disregard limit*: 0.05 times the area of the principal peak in the chromatogram obtained with reference solution (a) (0.05 per cent); disregard any peak with a mass distribution ratio less than 0.5.

**Loss on drying** (*2.2.32*): maximum 1.0 per cent, determined on 1.000 g by drying *in vacuo* at 60 °C for 6 h.

**Sulfated ash** (*2.4.14*): maximum 0.1 per cent, determined on 1.0 g.

ASSAY

Liquid chromatography (*2.2.29*) as described in the test for related substances with the following modification.

*Injection*: 20 µL of reference solutions (a) and (c).

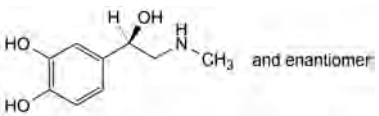
*System suitability*: reference solution (c):

- *symmetry factor*: maximum 2.0 for the peak due to dipivefrine.

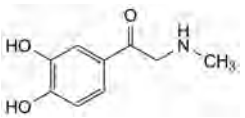
Calculate the percentage content of $C_{19}H_{30}ClNO_5$ using the chromatograms obtained with reference solutions (a) and (c) and the declared content of *dipivefrine hydrochloride CRS*.

IMPURITIES

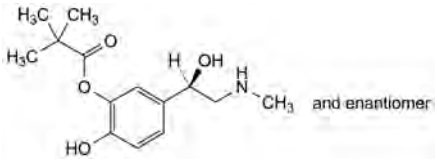
*Specified impurities: A, B, C, D, E, F.*



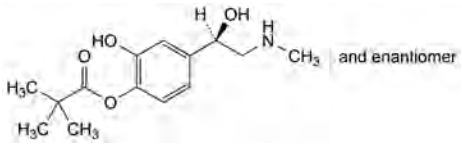
A. 4-[(1*RS*)-1-hydroxy-2-(methylamino)ethyl]benzene-1,2-diol ((±)-adrenaline),



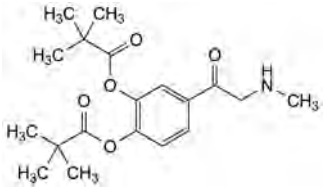
B. 1-(3,4-dihydroxyphenyl)-2-(methylamino)ethanone (adrenalone),



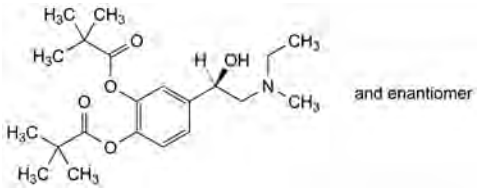
C. 2-hydroxy-5-[(1*RS*)-1-hydroxy-2-(methylamino)-ethyl]phenyl 2,2-dimethylpropanoate,



D. 2-hydroxy-4-[(1*RS*)-1-hydroxy-2-(methylamino)-ethyl]phenyl 2,2-dimethylpropanoate,



E. 4-[(methylamino)acetyl]-1,2-phenylene bis(2,2-dimethylpropanoate) (adrenalone dipivalate ester),

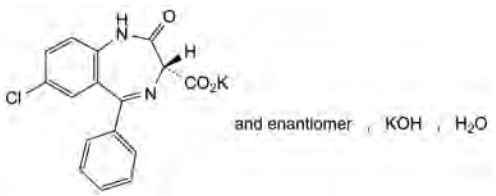


F. 4-[(1*RS*)-2-(ethylmethylamino)-1-hydroxyethyl]-1,2-phenylene bis(2,2-dimethylpropanoate).

**04/2019:0898**

# DIPOTASSIUM CLORAZEPATE MONOHYDRATE

## Dikalii clorazepas monohydricus



$C_{16}H_{11}ClK_2N_2O_4,H_2O$ $M_r$ 426.9

DEFINITION

Potassium (3*RS*)-7-chloro-2-oxo-5-phenyl-2,3-dihydro-1*H*-1,4-benzodiazepine-3-carboxylate compound with potassium hydroxide (1:1) monohydrate.

*Content*: 99.0 per cent to 101.0 per cent (anhydrous substance).

CHARACTERS

*Appearance*: white or light yellow, crystalline powder, hygroscopic.

*Solubility*: freely soluble to very soluble in water, very slightly soluble in ethanol (96 per cent), practically insoluble in methylene chloride.

Solutions in water and in ethanol (96 per cent) are unstable and are to be used immediately.

IDENTIFICATION

*First identification: B, E.*

*Second identification: A, C, D, E.*

A. Ultraviolet and visible absorption spectrophotometry (*2.2.25*).

*Test solution (a).* Dissolve 10.0 mg in a 0.3 g/L solution of *potassium carbonate R* and dilute to 100.0 mL with the same solution.

*Test solution (b).* Dilute 10.0 mL of test solution (a) to 100.0 mL with a 0.3 g/L solution of *potassium carbonate R*.

*Spectral range*: 280-350 nm for test solution (a); 220-280 nm for test solution (b).

*Absorption maxima*: about 315 nm (broad) for test solution (a); 230 nm for test solution (b).

*Specific absorbance at the absorption maxima*:

- 230 nm: 800 to 870;
- 315 nm: 49 to 56.

B. Infrared absorption spectrophotometry (*2.2.24*).

*Comparison*: *Ph. Eur. reference spectrum of dipotassium clorazepate*.

C. Dissolve about 20 mg in 2 mL of *sulfuric acid R*. Observed in ultraviolet light at 365 nm, the solution shows yellow fluorescence.

D. Dissolve 0.5 g in 5 mL of *water R*. Add 0.1 mL of *thymol blue solution R*. The solution is violet-blue.

E. Place 1.0 g in a crucible and add 2 mL of *dilute sulfuric acid R*. Heat at first on a water-bath, then ignite until all black particles have disappeared. Allow to cool. Take up the residue with *water R* and dilute to 20 mL with the same solvent. The solution gives reaction (b) of potassium (*2.3.1*).

TESTS

**Appearance of solution**. The solution is clear (*2.2.1*) and not more intensely coloured than reference solution $GY_5$ (*2.2.2, Method II*).

Rapidly dissolve 2.0 g with shaking in *water R* and dilute to 20.0 mL with the same solvent. Observe immediately.

**Related substances**. Liquid chromatography (*2.2.29*). *Prepare the solutions immediately before use.*

*Solution A*. Dissolve 11.7 g of *dipotassium hydrogen phosphate R* in about 900 mL of *water R*, adjust to pH 7.0 with *phosphoric acid R* and dilute to 1000 mL with *water R*. Mix equal volumes of this solution and *methanol R*.

*Solution B*: *methanol R*, 20 g/L solution of *potassium carbonate R* (30:70 *V/V*).

*Test solution (a).* Dissolve 10.0 mg of the substance to be examined in solution A and dilute to 20.0 mL with solution A.

*Test solution (b).* Dissolve 10.0 mg of the substance to be examined in solution B cooled to 0 °C and dilute to 20.0 mL with solution B.

*Reference solution (a).* Dilute 1.0 mL of test solution (a) to 100.0 mL with solution A. Dilute 2.0 mL of this solution to 20.0 mL with solution A.

*Reference solution (b).* Dissolve 15 mg of *aminochlorobenzophenone R* (impurity A) and 15 mg of *ethyl clorazepate R* (impurity C) in *methanol R* and dilute to 20 mL with the same solvent. Dilute 1 mL of the solution to 20 mL with *methanol R*.

*Reference solution (c).* Dissolve 15 mg of *nordazepam R* (impurity B) in *methanol R* and dilute to 20 mL with the same solvent. Dilute 1 mL of the solution to 20 mL with solution B.

*Column*:

- *size*: *l* = 0.25 m, Ø = 4.6 mm;
- *stationary phase*: *base-deactivated end-capped octadecylsilyl silica gel for chromatography R* (5 µm).

*Mobile phase*:

– *mobile phase A*: dissolve 1.17 g of *dipotassium hydrogen phosphate R* in about 580 mL of *water for chromatography R*, adjust to pH 8.0 with *phosphoric acid R*, dilute to 650 mL with *water for chromatography R*, and add 450 mL of *methanol R1*;

– *mobile phase B*: *methanol R1*;

| Time (min) | Mobile phase A (per cent *V/V*) | Mobile phase B (per cent *V/V*) |
|---|---|---|
| 0 - 5 | 80 | 20 |
| 5 - 20 | 80 → 50 | 20 → 50 |
| 20 - 25 | 50 | 50 |

*Flow rate*: 1.2 mL/min.

*Detection*: spectrophotometer at 230 nm.

*Autosampler*: set at 4 °C.

*Injection*: 20 µL of test solution (a) and reference solutions (a), (b) and (c).

*Identification of impurities*: use the chromatogram obtained with reference solution (b) to identify the peaks due to impurities A and C; use the chromatogram obtained with reference solution (c) to identify the peak due to impurity B.

*Relative retention* with reference to clorazepate (retention time = about 3 min): impurity B = about 4.6; impurity C = about 5.9; impurity A = about 6.5.

*System suitability*: reference solution (b):

– *resolution*: minimum 2.5 between the peaks due to impurities C and A.

*Calculation of percentage contents*:

– for each impurity, use the concentration of dipotassium clorazepate monohydrate in reference solution (a).

*Limits*:

– *impurity C*: maximum 0.3 per cent;

– *unspecified impurities*: for each impurity, maximum 0.10 per cent;

– *total*: maximum 0.4 per cent;

– *reporting threshold*: 0.05 per cent; disregard the peak due to impurity B.

**Impurity B**. Liquid chromatography (*2.2.29*) as described in the test for related substances with the following modifications.

*Injection*: test solution (b) and reference solutions (a) and (c).

*Calculation of percentage content*:

– *correction factor*: multiply the peak area of impurity B by 0.6;

– use the concentration of dipotassium clorazepate monohydrate in reference solution (a).

*Limit*:

– *impurity B*: maximum 0.2 per cent.

**Water** (*2.5.12*): 3.5 per cent to 5.5 per cent, determined on 0.250 g.

ASSAY

Dissolve 0.130 g in 10 mL of *anhydrous acetic acid R*. Add 30 mL of *methylene chloride R*. Titrate with *0.1 M perchloric acid*, determining the 2 points of inflexion by potentiometry (*2.2.20*).

At the 2nd point of inflexion, 1 mL of *0.1 M perchloric acid* is equivalent to 13.03 mg of $C_{16}H_{11}ClK_2N_2O_4$.

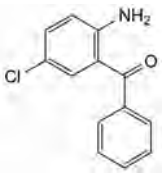
STORAGE

In an airtight container, protected from light.

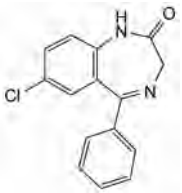
IMPURITIES

*Specified impurities: B, C.*

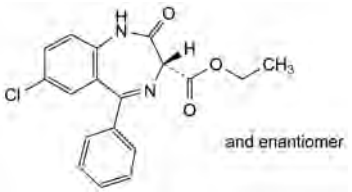
*Other detectable impurities* (the following substances would, if present at a sufficient level, be detected by one or other of the tests in the monograph. They are limited by the general acceptance criterion for other/unspecified impurities and/or by the general monograph *Substances for pharmaceutical use (2034)*. It is therefore not necessary to identify these impurities for demonstration of compliance. See also *5.10. Control of impurities in substances for pharmaceutical use*): A.



A. (2-amino-5-chlorophenyl)(phenyl)methanone (aminochlorobenzophenone),



B. 7-chloro-5-phenyl-1,3-dihydro-2*H*-1,4-benzodiazepin-2-one (nordazepam),



C. ethyl (3*RS*)-7-chloro-2-oxo-5-phenyl-2,3-dihydro-1*H*-1,4-benzodiazepine-3-carboxylate (ethyl clorazepate).

**01/2017:1003**

# DIPOTASSIUM PHOSPHATE

## Dikalii phosphas

$K_2HPO_4$ $M_r$ 174.2
[7758-11-4]

DEFINITION

*Content*: 98.0 per cent to 101.0 per cent (dried substance).

CHARACTERS

*Appearance*: white or almost white powder or colourless crystals, very hygroscopic.

*Solubility*: very soluble in water, very slightly soluble in ethanol (96 per cent).

IDENTIFICATION

A. Solution S (see Tests) is slightly alkaline (*2.2.4*).

B. Solution S gives reaction (b) of phosphates (*2.3.1*).

C. Solution S gives reaction (a) of potassium (*2.3.1*).

TESTS

**Solution S**. Dissolve 5.0 g in *distilled water R* and dilute to 50 mL with the same solvent.

**Appearance of solution**. Solution S is clear (*2.2.1*) and colourless (*2.2.2, Method II*).

**Reducing substances**. To 5 mL of solution S add 5 mL of *dilute sulfuric acid R* and 0.25 mL of *0.02 M potassium permanganate* and heat on a water-bath for 5 min. The solution remains faintly pink.

**Monopotassium phosphate**: maximum 2.5 per cent.

From the volume of *1 M hydrochloric acid* (10.0 mL) and of *1 M sodium hydroxide* ($n_1$ mL and $n_2$ mL) used in the assay, calculate the following ratio:

$$\frac{n_2 - 10}{10 - n_1}$$

This ratio is not greater than 0.025.

**Chlorides** (*2.4.4*): maximum 200 ppm.

To 2.5 mL of solution S add 10 mL of *dilute nitric acid R* and dilute to 15 mL with *water R*.

**Sulfates** (*2.4.13*): maximum 0.1 per cent.

To 1.5 mL of solution S add 2 mL of *dilute hydrochloric acid R* and dilute to 15 mL with *distilled water R*.

**Arsenic** (*2.4.2, Method A*): maximum 2 ppm, determined on 5 mL of solution S.

**Iron** (*2.4.9*): maximum 10 ppm, determined on solution S.

**Sodium**: maximum 0.1 per cent, if intended for use in the manufacture of parenteral preparations.

Atomic emission spectrometry (*2.2.22, Method I*).

*Test solution*. Dissolve 1.00 g in *water R* and dilute to 100.0 mL with the same solvent.

*Reference solutions*. Prepare the reference solutions using *sodium standard solution (200 ppm Na) R*, diluted as necessary with *water R*.

*Wavelength*: 589 nm.

**Loss on drying** (*2.2.32*): maximum 2.0 per cent, determined on 1.000 g by drying in an oven at 125-130 °C.

**Bacterial endotoxins** (*2.6.14*): less than 1.1 IU/mg, if intended for use in the manufacture of parenteral preparations without a further appropriate procedure for the removal of bacterial endotoxins.

ASSAY

Dissolve 0.800 g (*m*) in 40 mL of *carbon dioxide-free water R* and add 10.0 mL of *1 M hydrochloric acid*. Carry out a potentiometric titration (*2.2.20*) using *1 M sodium hydroxide*. Read the volume added at the 1st inflexion point ($n_1$ mL). Continue the titration to the 2nd inflexion point (total volume of *1 M sodium hydroxide* required, $n_2$ mL).

Calculate the percentage content of $K_2HPO_4$ from the following expression:

$$\frac{1742(10 - n_1)}{m(100 - d)}$$

*d* = percentage loss on drying.

STORAGE

In an airtight container.

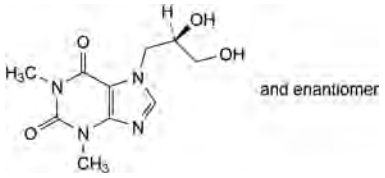
LABELLING

The label states, where applicable, that the substance is suitable for use in the manufacture of parenteral preparations.

**01/2017:0486**

# DIPROPHYLLINE

## Diprophyllinum



$C_{10}H_{14}N_4O_4$ $M_r$ 254.2
[479-18-5]

DEFINITION

7-[(2*RS*)-2,3-Dihydroxypropyl]-1,3-dimethyl-3,7-dihydro-1*H*-purine-2,6-dione.

*Content*: 98.5 per cent to 101.0 per cent (dried substance).

CHARACTERS

*Appearance*: white or almost white, crystalline powder.

*Solubility*: freely soluble in water, slightly soluble in ethanol (96 per cent).

IDENTIFICATION

Infrared absorption spectrophotometry (*2.2.24*).

*Comparison*: *diprophylline CRS*.

TESTS

**Solution S**. Dissolve 2.5 g in *carbon dioxide-free water R* and dilute to 50 mL with the same solvent.

**Appearance of solution**. Solution S is clear (*2.2.1*) and colourless (*2.2.2, Method II*).

**Acidity or alkalinity**. To 10 mL of solution S add 0.25 mL of *bromothymol blue solution R1*. The solution is yellow or green. Not more than 0.4 mL of *0.01 M sodium hydroxide* is required to change the colour of the indicator to blue.

**Related substances**. Liquid chromatography (*2.2.29*).

*Test solution*. Dissolve 50 mg of the substance to be examined in *water R* and dilute to 50.0 mL with the same solvent.

*Reference solution (a)*. Dilute 1.0 mL of the test solution to 100.0 mL with *water R*. Dilute 1.0 mL of this solution to 10.0 mL with *water R*.

*Reference solution (b)*. Dissolve 5 mg of *etofylline CRS* (impurity C) in *water R* and dilute to 50.0 mL with the same solvent. Dilute 0.5 mL of the solution to 20.0 mL with the test solution.

*Column*:

- *size*: *l* = 0.15 m, Ø = 4.6 mm;
- *stationary phase*: *end-capped octadecylsilyl silica gel for chromatography with polar incorporated groups R* (3 µm);
- *temperature*: 30 °C.

*Mobile phase*: *methanol R*, *water R* (10:90 *V/V*).

*Flow rate*: 0.7 mL/min.

*Detection*: spectrophotometer at 272 nm.

*Injection*: 10 µL.

*Run time*: 3 times the retention time of diprophylline.

*Relative retention* with reference to diprophylline (retention time = about 18 min): impurity C = about 1.1.

Monographs D

*System suitability*: reference solution (b):

– *peak-to-valley ratio*: minimum 5, where $H_p$ = height above the baseline of the peak due to impurity C and $H_v$ = height above the baseline of the lowest point of the curve separating this peak from the peak due to diprophylline.

*Limits*:

– *unspecified impurities*: for each impurity, not more than the area of the principal peak in the chromatogram obtained with reference solution (a) (0.10 per cent);

– *total*: not more than 3 times the area of the principal peak in the chromatogram obtained with reference solution (a) (0.3 per cent);

– *disregard limit*: 0.5 times the area of the principal peak in the chromatogram obtained with reference solution (a) (0.05 per cent).

**Chlorides** (*2.4.4*): maximum 400 ppm.

Dilute 2.5 mL of solution S to 15 mL with *water R*.

**Loss on drying** (*2.2.32*): maximum 0.5 per cent, determined on 1.000 g by drying in an oven at 105 °C.

**Sulfated ash** (*2.4.14*): maximum 0.1 per cent, determined on 1.0 g.

ASSAY

*In order to avoid overheating in the reaction medium, mix thoroughly throughout and stop the titration immediately after the end-point has been reached.*

Dissolve 0.200 g in 3.0 mL of *anhydrous formic acid R* and add 50.0 mL of *acetic anhydride R*. Titrate with *0.1 M perchloric acid*, determining the end-point potentiometrically (*2.2.20*).

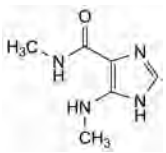
1 mL of *0.1 M perchloric acid* is equivalent to 25.42 mg of $C_{10}H_{14}N_4O_4$.

STORAGE

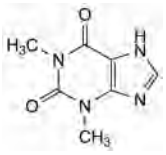
Protected from light.

IMPURITIES

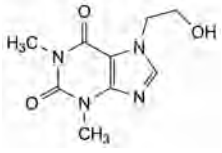
*Other detectable impurities* (the following substances would, if present at a sufficient level, be detected by one or other of the tests in the monograph. They are limited by the general acceptance criterion for other/unspecified impurities and/or by the general monograph *Substances for pharmaceutical use (2034)*. It is therefore not necessary to identify these impurities for demonstration of compliance. See also *5.10. Control of impurities in substances for pharmaceutical use*): *A, B, C, D.*



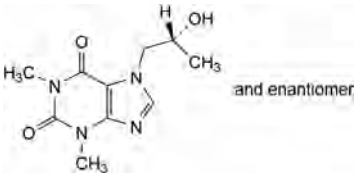
A. *N*-methyl-5-(methylamino)-1*H*-imidazole-4-carboxamide (theophyllidine),



B. 1,3-dimethyl-3,7-dihydro-1*H*-purine-2,6-dione (theophylline),



C. 7-(2-hydroxyethyl)-1,3-dimethyl-3,7-dihydro-1*H*-purine-2,6-dione (etofylline),

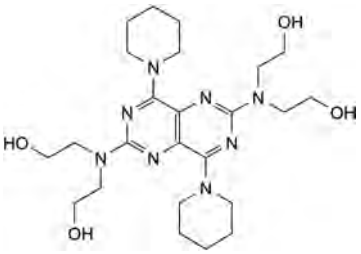


D. 7-[(2*RS*)-2-hydroxypropyl]-1,3-dimethyl-3,7-dihydro-1*H*-purine-2,6-dione (proxyphylline).

**01/2014:1199**

# DIPYRIDAMOLE

## Dipyridamolum



$C_{24}H_{40}N_8O_4$ $M_r$ 504.6

[58-32-2]

DEFINITION

2,2′,2″,2‴-[[4,8-Di(piperidin-1-yl)pyrimido[5,4-*d*]pyrimidine-2,6-diyl]dinitrilo]tetraethanol.

*Content*: 98.5 per cent to 101.5 per cent (dried substance).

CHARACTERS

*Appearance*: bright yellow, crystalline powder.

*Solubility*: practically insoluble in water, freely soluble in acetone, soluble in anhydrous ethanol. It dissolves in dilute mineral acids.

IDENTIFICATION

Infrared absorption spectrophotometry (*2.2.24*).

*Preparation*: discs of *potassium bromide R*.

*Comparison*: *dipyridamole CRS*.

TESTS

**Related substances**. Liquid chromatography (*2.2.29*). *Prepare the solutions immediately before use.*

*Test solution*. Dissolve 0.100 g of the substance to be examined in *methanol R* and dilute to 50 mL with the same solvent.

*Reference solution (a)*. Dilute 1.0 mL of the test solution to 100.0 mL with *methanol R*. Dilute 1.0 mL of this solution to 10.0 mL with *methanol R*.

*Reference solution (b)*. Dissolve the contents of a vial of *dipyridamole for peak identification CRS* (containing impurities A, B, C, D, E and F) in 1 mL of *methanol R*.

*Column*:

– *size*: *l* = 0.10 m, Ø = 4.0 mm;

– *stationary phase*: spherical *end-capped octadecylsilyl silica gel for chromatography R* (5 µm);

– *temperature*: 45 °C.

*Mobile phase*:

– *mobile phase A*: dissolve 1.0 g of *potassium dihydrogen phosphate R* in 900 mL of *water R*, adjust to pH 7.0 with *0.5 M sodium hydroxide* and dilute to 1000 mL with *water R*;

– *mobile phase B*: *methanol R*;

| Time (min) | Mobile phase A (per cent *V/V*) | Mobile phase B (per cent *V/V*) |
|---|---|---|
| 0 - 5 | 40 | 60 |
| 5 - 19 | 40 → 5 | 60 → 95 |
| 19 - 24 | 5 → 40 | 95 → 60 |
| 24 - 29 | 40 | 60 |

*Flow rate*: 1.2 mL/min.

*Detection*: spectrophotometer at 295 nm.

*Injection*: 5 µL.

*Identification of impurities*: use the chromatogram supplied with *dipyridamole for peak identification CRS* and the chromatogram obtained with reference solution (b) to identify the peaks due to impurities A, B, C, D, E and F.

*Relative retention* with reference to dipyridamole (retention time = about 8 min): impurity B = about 0.2; impurity F = about 0.3; impurity D = about 0.9; impurity E = about 1.3; impurity C = about 1.6; impurity A = about 2.2.

*System suitability*: reference solution (b):

- *resolution*: minimum 2.0 between the peaks due to impurity D and dipyridamole;
- *peak-to-valley ratio*: minimum 2.0, where $H_p$ = height above the baseline of the peak due to impurity F and $H_v$ = height above the baseline of the lowest point of the curve separating this peak from the peak due to impurity B.

*Limits*:

- *correction factor*: for the calculation of content, multiply the peak area of impurity B by 1.7;
- *impurities A, B, C*: for each impurity, not more than 5 times the area of the principal peak in the chromatogram obtained with reference solution (a) (0.5 per cent);
- *impurities D, E*: for each impurity, not more than twice the area of the principal peak in the chromatogram obtained with reference solution (a) (0.2 per cent);
- *unspecified impurities*: for each impurity, not more than the area of the principal peak in the chromatogram obtained with reference solution (a) (0.10 per cent);
- *total*: not more than 10 times the area of the principal peak in the chromatogram obtained with reference solution (a) (1.0 per cent);
- *disregard limit*: 0.5 times the area of the principal peak in the chromatogram obtained with reference solution (a) (0.05 per cent).

**Chlorides** (*2.4.4*): maximum 200 ppm.

To 0.250 g add 10 mL of *water R* and shake vigorously. Filter, rinse the filter with 5 mL of *water R* and dilute to 15 mL with *water R*.

**Loss on drying** (*2.2.32*): maximum 0.5 per cent, determined on 1.000 g by drying in an oven at 105 °C.

**Sulfated ash** (*2.4.14*): maximum 0.1 per cent, determined on 1.0 g.

ASSAY

Dissolve 0.400 g in 70 mL of *methanol R*. Titrate with *0.1 M perchloric acid*, determining the end-point potentiometrically (*2.2.20*).

1 mL of *0.1 M perchloric acid* is equivalent to 50.46 mg of $C_{24}H_{40}N_8O_4$.

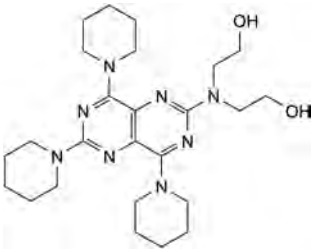
STORAGE

Protected from light.

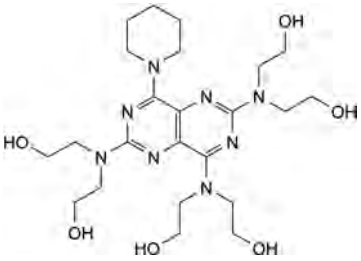
IMPURITIES

*Specified impurities: A, B, C, D, E.*

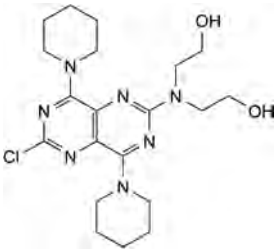
*Other detectable impurities* (the following substances would, if present at a sufficient level, be detected by one or other of the tests in the monograph. They are limited by the general acceptance criterion for other/unspecified impurities and/or by the general monograph *Substances for pharmaceutical use (2034)*. It is therefore not necessary to identify these impurities for demonstration of compliance. See also *5.10. Control of impurities in substances for pharmaceutical use*): *F, G.*



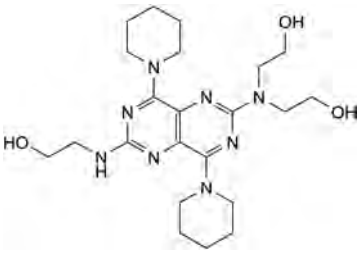
A. 2,2′-[[4,6,8-tri(piperidin-1-yl)pyrimido[5,4-*d*]pyrimidin-2-yl]nitrilo]diethanol,



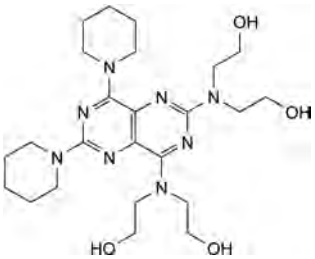
B. 2,2′,2″,2‴,2⁗,2⁗′[[8-(piperidin-1-yl)pyrimido[5,4-*d*]pyrimidine-2,4,6-triyl]trinitrilo]hexaethanol,



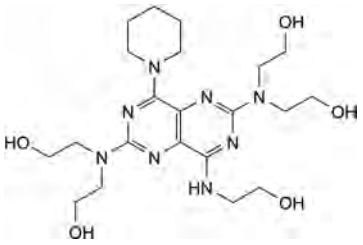
C. 2,2′-[[6-chloro-4,8-di(piperidin-1-yl)pyrimido[5,4-*d*]pyrimidin-2-yl]nitrilo]diethanol,



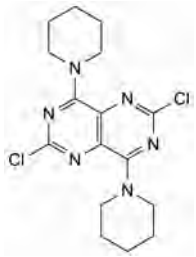
D. 2,2′-[[6-[(2-hydroxyethyl)amino]-4,8-di(piperidin-1-yl)pyrimido[5,4-*d*]pyrimidin-2-yl]nitrilo]diethanol,



E. 2,2′,2″,2‴-[[6,8-di(piperidin-1-yl)pyrimido[5,4-*d*]pyrimidine-2,4-diyl]dinitrilo]tetraethanol,



F. 2,2′,2″,2‴-[[4-[(2-hydroxyethyl)amino]-8-(piperidin-1-yl)pyrimido[5,4-*d*]pyrimidine-2,6-diyl]dinitrilo]tetraethanol,

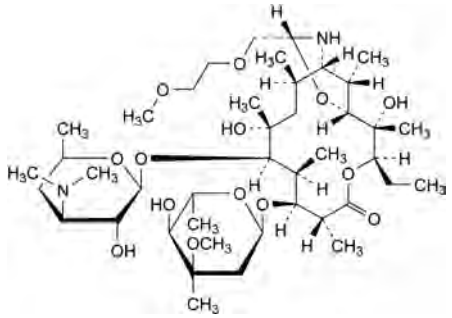


G. 2,6-dichloro-4,8-di(piperidin-1-yl)pyrimido[5,4-*d*]pyrimidine.

**01/2017:1313**

# DIRITHROMYCIN

## Dirithromycinum



$C_{42}H_{78}N_2O_{14}$ $M_r$ 835

[62013-04-1]

DEFINITION

(1*R*,2*S*,3*R*,6*R*,7*S*,8*S*,9*R*,10*R*,12*R*,13*S*,15*R*,17*S*)-9-[[3-(Dimethylamino)-3,4,6-trideoxy-β-D-*xylo*-hexopyranosyl]oxy]-3-ethyl-2,10-dihydroxy-15-[(2-methoxyethoxy)methyl]-2,6,8,10,12,17-hexamethyl-7-[(3-*C*-methyl-3-*O*-methyl-2,6dideoxy-α-L-*ribo*-hexopyranosyl)oxy]-4,16-dioxa-14azabicyclo[11.3.1]heptadecan-5-one (or (9*S*)-9,11-[imino[(1*R*)-2-(2-methoxyethoxy)ethylidene]oxy]-9-deoxo-11-deoxyerythromycin).

Semi-synthetic product derived from a fermentation product.

*Content*: 96.0 per cent to 102.0 per cent for the sum of the percentage contents of $C_{42}H_{78}N_2O_{14}$ and dirithromycin 15*S*-epimer (anhydrous substance).

CHARACTERS

*Appearance*: white or almost white powder.

*Solubility*: very slightly soluble in water, very soluble in methanol and in methylene chloride.

It shows polymorphism (*5.9*).

IDENTIFICATION

A. Infrared absorption spectrophotometry (*2.2.24*).

*Comparison*: *dirithromycin CRS*.

B. Examine the chromatograms obtained in the assay.

*Results*: the principal peak in the chromatogram obtained with test solution (a) is similar in retention time and size to the principal peak in the chromatogram obtained with reference solution (a).

TESTS

**Related substances**. Liquid chromatography (*2.2.29*).

*Solvent mixture*: *methanol R*, *acetonitrile R1* (30:70 *V/V*).

*Test solution (a).* Dissolve 20.0 mg of the substance to be examined in the solvent mixture and dilute to 10.0 mL with the solvent mixture.

*Test solution (b).* Dissolve 0.10 g of the substance to be examined in the solvent mixture and dilute to 10.0 mL with the solvent mixture.

*Reference solution (a).* Dissolve 20.0 mg of *dirithromycin CRS* in the solvent mixture and dilute to 10.0 mL with the solvent mixture.

*Reference solution (b).* Dilute 5.0 mL of reference solution (a) to 50.0 mL with the solvent mixture.

*Reference solution (c).* Dissolve 20 mg of *dirithromycin CRS* in the mobile phase and dilute to 10 mL with the mobile phase. Allow to stand for 24 h before use.

*Column*:

- *size*: *l* = 0.25 m, Ø = 4.6 mm;
- *stationary phase*: *octadecylsilyl silica gel for chromatography R* (5 µm);
- *temperature*: 40 °C.

*Mobile phase*: mix 9 volumes of *water R*, 19 volumes of *methanol R*, 28 volumes of a solution containing 1.9 g/L of *potassium dihydrogen phosphate R* and 9.1 g/L of *dipotassium hydrogen phosphate R* adjusted to pH 7.5 if necessary with a 100 g/L solution of *potassium hydroxide R*, and 44 volumes of *acetonitrile R1*.

*Flow rate*: 2.0 mL/min.

*Detection*: spectrophotometer at 205 nm.

*Injection*: 10 µL of test solution (b) and reference solutions (b) and (c).

*Run time*: 3 times the retention time of dirithromycin.

*Relative retention* with reference to dirithromycin: impurity A = about 0.7; 15*S*-epimer = about 1.1.

*System suitability*: reference solution (c):

- *resolution*: minimum 2.0 between the peaks due to dirithromycin and its 15*S*-epimer; if necessary, adjust the concentration of the organic modifiers in the mobile phase.

*Limits*:

- *impurity A*: not more than 0.75 times the area of the principal peak in the chromatogram obtained with reference solution (b) (1.5 per cent);
- *any other impurity*: for each impurity, not more than 0.5 times the area of the principal peak in the chromatogram obtained with reference solution (b) (1 per cent);
- *disregard limit*: disregard the peak due to the 15*S*-epimer.

**Dirithromycin 15*S*-epimer**. Liquid chromatography (*2.2.29*) as described in the test for related substances with the following modifications.

*Injection*: test solution (b) and reference solution (b).

*System suitability*: reference solution (b):

- *repeatability*: maximum relative standard deviation of 5.0 per cent after 6 injections.

*Limit*:

- *15S-epimer*: maximum 1.5 per cent.

**Acetonitrile** (*2.4.24, System A*): maximum 0.1 per cent.

Prepare the solutions using *dimethylformamide R* instead of *water R*.

*Sample solution.* Dissolve 0.200 g of the substance to be examined in *dimethylformamide R* and dilute to 20.0 mL with the same solvent.

*Static head-space injection conditions that may be used*:

– *equilibration temperature*: 120 °C;

– *equilibration time*: 60 min;

– *transfer-line temperature*: 125 °C.

**Water** (*2.5.12*): maximum 1.0 per cent, determined on 1.00 g.

**Sulfated ash** (*2.4.14*): maximum 0.1 per cent, determined on 1.0 g.

ASSAY

Liquid chromatography (*2.2.29*) as described in the test for related substances with the following modifications.

*Injection*: test solution (a) and reference solution (a).

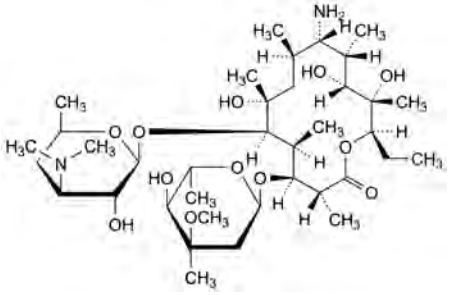
*System suitability*: reference solution (a):

– *repeatability*: maximum relative standard deviation of 1.0 per cent after 6 injections.

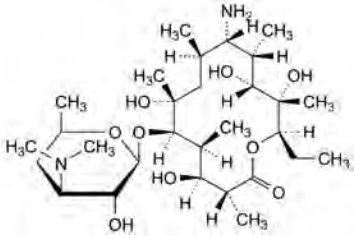
IMPURITIES

*Specified impurities: A.*

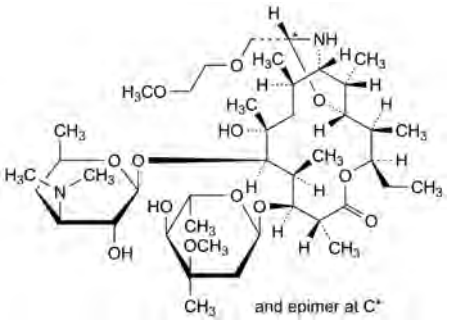
*Other detectable impurities* (the following substances would, if present at a sufficient level, be detected by one or other of the tests in the monograph. They are limited by the general acceptance criterion for other/unspecified impurities and/or by the general monograph *Substances for pharmaceutical use (2034)*. It is therefore not necessary to identify these impurities for demonstration of compliance. See also *5.10. Control of impurities in substances for pharmaceutical use*): *B, C, D, E.*



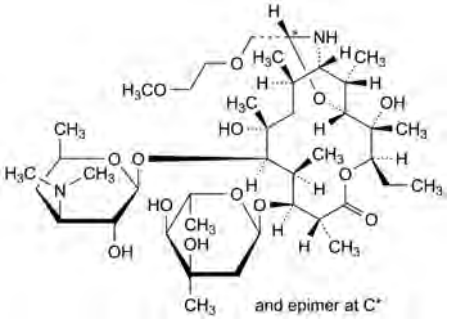
A. (9*S*)-9-amino-9-deoxoerythromycin,



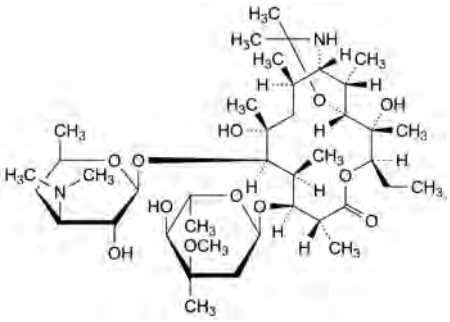
B. (9*S*)-9-amino-3-de(2,6-dideoxy-3-*C*-methyl-3-*O*-methyl-α-L-*ribo*-hexopyranosyl)-9-deoxoerythromycin,



C. (9*S*)-9,11-[imino[(1*RS*)-2-(2-methoxyethoxy)ethylidene]-oxy]-9-deoxo-11,12-dideoxyerythromycin (dirithromycin B),



D. (9*S*)-9,11-[imino[(1*RS*)-2-(2-methoxyethoxy)ethylidene]-oxy]-3′-*O*-demethyl-9-deoxo-11-deoxyerythromycin (dirithromycin C),

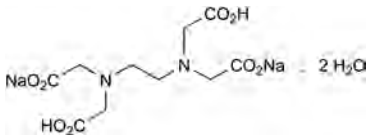


E. 9,11-[imino(1-methylethylidene)oxy]-9-deoxo-11-deoxyerythromycin.

**01/2017:0232**

# DISODIUM EDETATE

## Dinatrii edetas



$C_{10}H_{14}N_2Na_2O_8,2H_2O$ $M_r$ 372.2

DEFINITION

Disodium dihydrogen (ethylenedinitrilo)tetraacetate dihydrate.

*Content*: 98.5 per cent to 101.0 per cent.

CHARACTERS

*Appearance*: white or almost white, crystalline powder.

*Solubility*: soluble in water, practically insoluble in ethanol (96 per cent).

IDENTIFICATION

*First identification: A, B, D.*

*Second identification: B, C, D.*

A. Infrared absorption spectrophotometry (*2.2.24*).
*Preparation*: discs.
*Comparison*: *disodium edetate CRS*.

B. Dissolve 2 g in 25 mL of *water R*, add 6 mL of *lead nitrate solution R*, shake and add 3 mL of *potassium iodide solution R*. No yellow precipitate is formed. Make alkaline to *red litmus paper R* by the addition of *dilute ammonia R2*. Add 3 mL of *ammonium oxalate solution R*. No precipitate is formed.

C. Dissolve 0.5 g in 10 mL of *water R* and add 0.5 mL of *calcium chloride solution R*. Make alkaline to *red litmus paper R* by the addition of *dilute ammonia R2* and add 3 mL of *ammonium oxalate solution R*. No precipitate is formed.

D. It gives the reactions of sodium (*2.3.1*).

TESTS

**Solution S**. Dissolve 5.0 g in *carbon dioxide-free water R* and dilute to 100 mL with the same solvent.

**Appearance of solution**. Solution S is clear (*2.2.1*) and colourless (*2.2.2, Method II*).

**pH** (*2.2.3*): 4.0 to 5.5 for solution S.

**Impurity A**. Liquid chromatography (*2.2.29*). *Carry out the test protected from light.*

*Solvent mixture.* Dissolve 10.0 g of *ferric sulfate pentahydrate R* in 20 mL of *0.5 M sulfuric acid* and add 780 mL of *water R*. Adjust to pH 2.0 with *1 M sodium hydroxide* and dilute to 1000 mL with *water R*.

*Test solution.* Dissolve 0.100 g of the substance to be examined in the solvent mixture and dilute to 25.0 mL with the solvent mixture.

*Reference solution.* Dissolve 40.0 mg of *nitrilotriacetic acid R* in the solvent mixture and dilute to 100.0 mL with the solvent mixture. To 1.0 mL of the solution add 0.1 mL of the test solution and dilute to 100.0 mL with the solvent mixture.

*Column*:
- *size*: *l* = 0.10 m, Ø = 4.6 mm,
- *stationary phase*: spherical *graphitised carbon for chromatography R1* (5 µm) with a specific surface area of 120 $m^2$/g and a pore size of 25 nm.

*Mobile phase*: dissolve 50.0 mg of *ferric sulfate pentahydrate R* in 50 mL of *0.5 M sulfuric acid* and add 750 mL of *water R*. Adjust to pH 1.5 with *0.5 M sulfuric acid* or *1 M sodium hydroxide*, add 20 mL of *ethylene glycol R* and dilute to 1000 mL with *water R*.

*Flow rate*: 1 mL/min.

*Detection*: spectrophotometer at 273 nm.

*Injection*: 20 µL; filter the solutions and inject immediately.

*Run time*: 4 times the retention time of the iron complex of impurity A.

*Retention times*: iron complex of impurity A = about 5 min; iron complex of edetic acid = about 10 min.

*System suitability*: reference solution:
- *resolution*: minimum 7 between the peaks due to the iron complex of impurity A and the iron complex of edetic acid,
- *signal-to-noise ratio*: minimum 50 for the peak due to impurity A.

*Limit*:
- *impurity A*: not more than the area of the corresponding peak in the chromatogram obtained with the reference solution (0.1 per cent).

**Iron** (*2.4.9*): maximum 80 ppm.

Dilute 2.5 mL of solution S to 10 mL with *water R*. Add 0.25 g of *calcium chloride R* to the test solution and the standard before the addition of the *thioglycollic acid R*.

ASSAY

Dissolve 0.300 g in *water R* and dilute to 300 mL with the same solvent. Add 2 g of *hexamethylenetetramine R* and 2 mL of *dilute hydrochloric acid R*. Titrate with *0.1 M lead nitrate*, using about 50 mg of *xylenol orange triturate R* as indicator.

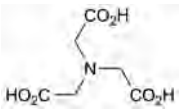
1 mL of *0.1 M lead nitrate* is equivalent to 37.22 mg of $C_{10}H_{14}N_2Na_2O_8,2H_2O$.

STORAGE

Protected from light.

IMPURITIES

*Specified impurities: A.*



A. nitrilotriacetic acid.

**01/2017:1509**

# DISODIUM PHOSPHATE

## Dinatrii phosphas

$Na_2HPO_4$ $M_r$ 142.0
[7558-79-4]

DEFINITION

*Content*: 98.0 per cent to 101.0 per cent (dried substance).

CHARACTERS

*Appearance*: white or almost white powder, hygroscopic.

*Solubility*: soluble in water, practically insoluble in ethanol (96 per cent).

IDENTIFICATION

A. Solution S (see Tests) is slightly alkaline (*2.2.4*).

B. Loss on drying (see Tests).

C. Solution S gives reaction (b) of phosphates (*2.3.1*).

D. Solution S gives reaction (a) of sodium (*2.3.1*).

TESTS

**Solution S**. Dissolve 5.0 g in *distilled water R* and dilute to 100.0 mL with the same solvent.

**Appearance of solution**. Solution S is clear (*2.2.1*) and colourless (*2.2.2, Method II*).

**Reducing substances**. To 10 mL of solution S add 5 mL of *dilute sulfuric acid R* and 0.25 mL of *0.02 M potassium permanganate* and heat on a water-bath for 5 min. The colour of the permanganate is not completely discharged.

**Monosodium phosphate**: maximum 2.5 per cent.

From the volume of *1 M hydrochloric acid* (25 mL) and of *1 M sodium hydroxide* ($n_1$ mL and $n_2$ mL) used in the assay, calculate the following ratio:

$$\frac{n_2 - 25}{25 - n_1}$$

This ratio is not greater than 0.025.

**Chlorides** (*2.4.4*): maximum 200 ppm.

Dilute 5 mL of solution S to 15 mL with *dilute nitric acid R*.

**Sulfates** (*2.4.13*): maximum 500 ppm.

To 6 mL of solution S add 2 mL of *dilute hydrochloric acid R* and dilute to 15 mL with *distilled water R*.

**Arsenic** (*2.4.2, Method A*): maximum 2 ppm, determined on 10 mL of solution S.

**Iron** (*2.4.9*): maximum 20 ppm, determined on solution S.

**Loss on drying** (*2.2.32*): maximum 1.0 per cent, determined on 1.000 g by drying in an oven at 105 °C for 4 h.

ASSAY

Dissolve 1.600 g (*m*) in 25.0 mL of *carbon dioxide-free water R* and add 25.0 mL of *1 M hydrochloric acid*. Carry out a potentiometric titration (*2.2.20*) using *1 M sodium hydroxide*. Read the volume added at the 1st inflexion point ($n_1$ mL). Continue the titration to the 2nd inflexion point (total volume of *1 M sodium hydroxide* required, $n_2$ mL).

Calculate the percentage content of $Na_2HPO_4$ from the following expression:

$$\frac{1420(25 - n_1)}{m(100 - d)}$$

*d* = percentage loss on drying.

STORAGE

In an airtight container.

**01/2017:0602**

# DISODIUM PHOSPHATE DIHYDRATE

## Dinatrii phosphas dihydricus

$Na_2HPO_4,2H_2O$ $M_r$ 178.0
[10028-24-7]

DEFINITION

*Content*: 98.0 per cent to 101.0 per cent (dried substance).

CHARACTERS

*Appearance*: white or almost white powder or colourless crystals.

*Solubility*: soluble in water, practically insoluble in ethanol (96 per cent).

IDENTIFICATION

A. Solution S (see Tests) is slightly alkaline (*2.2.4*).

B. Loss on drying (see Tests).

C. Solution S gives reaction (b) of phosphates (*2.3.1*).

D. Solution S gives reaction (a) of sodium (*2.3.1*).

TESTS

**Solution S**. Dissolve 5.0 g in *distilled water R* and dilute to 100 mL with the same solvent.

**Appearance of solution**. Solution S is clear (*2.2.1*) and colourless (*2.2.2, Method II*).

**Reducing substances**. To 5 mL of solution S add 5 mL of *dilute sulfuric acid R* and 0.25 mL of *0.02 M potassium permanganate* and heat on a water-bath for 5 min. The colour of the permanganate is not completely discharged.

**Monosodium phosphate**: maximum 2.5 per cent.

From the volume of *1 M hydrochloric acid* (25 mL) and of *1 M sodium hydroxide* ($n_1$ mL and $n_2$ mL) used in the assay, calculate the following ratio:

$$\frac{n_2 - 25}{25 - n_1}$$

This ratio is not greater than 0.025.

**Chlorides** (*2.4.4*): maximum 400 ppm.

To 2.5 mL of solution S add 10 mL of *dilute nitric acid R* and dilute to 15 mL with *water R*.

**Sulfates** (*2.4.13*): maximum 0.1 per cent.

To 3 mL of solution S add 2 mL of *dilute hydrochloric acid R* and dilute to 15 mL with *distilled water R*.

**Arsenic** (*2.4.2, Method A*): maximum 4 ppm, determined on 5 mL of solution S.

**Iron** (*2.4.9*): maximum 40 ppm.

Dilute 5 mL of solution S to 10 mL with *water R*.

**Loss on drying** (*2.2.32*): 19.5 per cent to 21.0 per cent, determined on 1.000 g by drying in an oven at 130 °C.

ASSAY

Dissolve 2.000 g (*m*) in 50 mL of *water R* and add 25.0 mL of *1 M hydrochloric acid*. Carry out a potentiometric titration (*2.2.20*) using *1 M sodium hydroxide*. Read the volume added at the 1st inflexion point ($n_1$ mL). Continue the titration to the 2nd inflexion point (total volume of *1 M sodium hydroxide* required, $n_2$ mL).

Calculate the percentage content of $Na_2HPO_4$ from the following expression:

$$\frac{1420(25 - n_1)}{m(100 - d)}$$

*d* = percentage loss on drying.

**01/2019:0118**

# DISODIUM PHOSPHATE DODECAHYDRATE

## Dinatrii phosphas dodecahydricus

$Na_2HPO_4,12H_2O$ $M_r$ 358.1
[10039-32-4]

DEFINITION

*Content*: 98.5 per cent to 102.5 per cent.

CHARACTERS

*Appearance*: colourless, transparent crystals, very efflorescent.

*Solubility*: freely soluble in water, practically insoluble in ethanol (96 per cent).

IDENTIFICATION

A. Solution S (see Tests) is slightly alkaline (*2.2.4*).

B. Loss on drying (see Tests).

C. Solution S gives reaction (b) of phosphates (*2.3.1*).

D. Solution S gives reaction (a) of sodium (*2.3.1*).

TESTS

**Solution S**. Dissolve 5.0 g in *distilled water R* and dilute to 50 mL with the same solvent.

**Appearance of solution**. Solution S is clear (*2.2.1*) and colourless (*2.2.2, Method II*).

**Reducing substances**. To 5 mL of solution S add 5 mL of *dilute sulfuric acid R* and 0.25 mL of *0.02 M potassium permanganate* and heat on a water-bath for 5 min. The colour of the permanganate is not completely discharged.

**Monosodium phosphate**: maximum 2.5 per cent.

From the volume of *1 M hydrochloric acid* ($n_3$ mL) and of *1 M sodium hydroxide* ($n_1$ mL and $n_2$ mL) used in the assay, calculate the following ratio:

$$\frac{n_2 - n_3}{n_3 - n_1}$$

This ratio is not greater than 0.025.

**Chlorides** (*2.4.4*): maximum 200 ppm.

To 2.5 mL of solution S add 10 mL of *dilute nitric acid R* and dilute to 15 mL with *water R*.

**Sulfates** (*2.4.13*): maximum 500 ppm.

To 3 mL of solution S add 2 mL of *dilute hydrochloric acid R* and dilute to 15 mL with *distilled water R*.

**Arsenic** (*2.4.2, Method A*): maximum 2 ppm, determined on 5 mL of solution S.

**Iron** (*2.4.9*): maximum 20 ppm.

Dilute 5 mL of solution S to 10 mL with *water R*.

**Loss on drying** (*2.2.32*): 57.0 per cent to 61.0 per cent, determined on 1.000 g by drying in an oven at 130 °C for 4 h.

ASSAY

Dissolve 4.00 g ($m$) in 25 mL of *water R* and add 25.0 mL of *1 M hydrochloric acid*. Carry out a potentiometric titration (*2.2.20*) using *1 M sodium hydroxide*. Read the volume added at the 1st inflexion point ($n_1$ mL). Continue the titration to the 2nd inflexion point (total volume of *1 M sodium hydroxide* required, $n_2$ mL). Carry out a blank titration ($n_3$ mL).

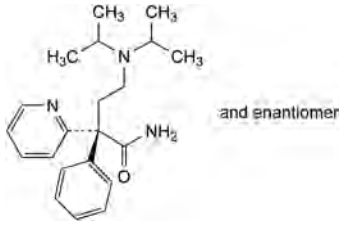
Calculate the percentage content of $Na_2HPO_4,12H_2O$ using the following expression:

$$\frac{3581(n_3 - n_1)}{m \times 100}$$

**01/2017:1006**

# DISOPYRAMIDE

## Disopyramidum



$C_{21}H_{29}N_3O$ $M_r$ 339.5
[3737-09-5]

DEFINITION

Disopyramide contains not less than 98.5 per cent and not more than the equivalent of 101.5 per cent of (2*RS*)-4-[bis(1-methylethyl)amino]-2-phenyl-2-(pyridin-2-yl)butanamide, calculated with reference to the dried substance.

CHARACTERS

A white or almost white powder, slightly soluble in water, freely soluble in methylene chloride, soluble in alcohol.

IDENTIFICATION

*First identification: B.*

*Second identification: A, C.*

A. Dissolve 40.0 mg in a 5 g/L solution of *sulfuric acid R* in *methanol R* and dilute to 100.0 mL with the same solution. Dilute 5.0 mL of this solution to 50.0 mL with a 5 g/L solution of *sulfuric acid R* in *methanol R*. Examined between 240 nm and 350 nm (*2.2.25*), the solution shows an absorption maximum at 269 nm and a shoulder at 263 nm. The specific absorbance at the maximum is 190 to 210.

B. Examine by infrared absorption spectrophotometry (*2.2.24*), comparing with the spectrum obtained with *disopyramide CRS*. Examine the substances as discs prepared by placing 50 µL of a 50 g/L solution in *methylene chloride R* on a disc of *potassium bromide R*. Dry the discs at 60 °C for 1 h before use.

C. Examine the chromatograms obtained in the test for related substances in ultraviolet light at 254 nm. The principal spot in the chromatogram obtained with test solution (b) is similar in position and size to the principal spot in the chromatogram obtained with reference solution (a). Spray with *dilute potassium iodobismuthate solution R*. Examine in daylight. The principal spot in the chromatogram obtained with test solution (b) is similar in position, colour and size to the principal spot in the chromatogram obtained with reference solution (a).

TESTS

**Related substances**. Examine by thin-layer chromatography (*2.2.27*), using *silica gel* $GF_{254}$ *R* as the coating substance.

*Test solution (a).* Dissolve 0.20 g of the substance to be examined in *methanol R* and dilute to 10 mL with the same solvent.

*Test solution (b).* Dilute 1 mL of test solution (a) to 10 mL with *methanol R*.

*Reference solution (a).* Dissolve 20 mg of *disopyramide CRS* in *methanol R* and dilute to 10 mL with the same solvent.

*Reference solution (b).* Dilute 0.5 mL of test solution (b) to 20 mL with *methanol R*.

Apply to the plate 10 µL of each solution. Develop over a path of 15 cm using a mixture of 1 volume of *concentrated ammonia R*, 30 volumes of *acetone R* and 30 volumes of *cyclohexane R*. Dry the plate in a current of warm air and examine in ultraviolet light at 254 nm. Any spot in the chromatogram obtained with test solution (a), apart from the principal spot, is not more intense than the spot in the chromatogram obtained with reference solution (b) (0.25 per cent).

**Loss on drying** (*2.2.32*). Not more than 0.5 per cent, determined on 1.000 g by drying at 80 °C over *diphosphorus pentoxide R* at a pressure not exceeding 0.7 kPa for 2 h.

**Sulfated ash** (*2.4.14*). Not more than 0.2 per cent, determined on 1.0 g.

ASSAY

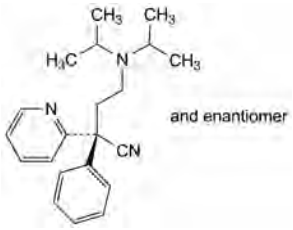
Dissolve 0.130 g in 30 mL of *anhydrous acetic acid R*. Add 0.2 mL of *naphtholbenzein solution R*. Titrate with *0.1 M perchloric acid* until the colour changes from yellow to green.

1 mL of *0.1 M perchloric acid* is equivalent to 16.97 mg of $C_{21}H_{29}N_3O$.

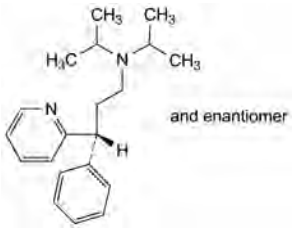
STORAGE

Store protected from light.

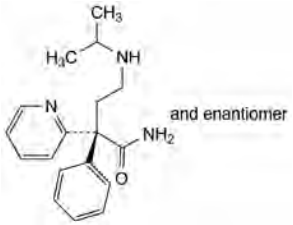
IMPURITIES



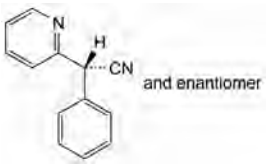
A. (2*RS*)-4-[bis(1-methylethyl)amino]-2-phenyl-2-(pyridin-2-yl)butanenitrile (di-isopyronitrile),



B. (3*RS*)-*N*,*N*-bis(1-methylethyl)-3-phenyl-3-(pyridin-2-yl)propan-1-amine,



C. (2*RS*)-4-[(1-methylethyl)amino]-2-phenyl-2-(pyridin-2-yl)butanamide,

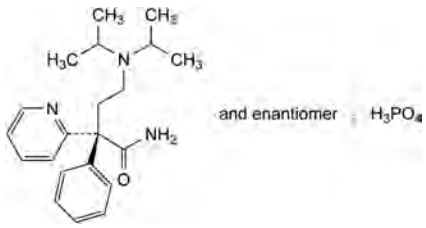


D. (*RS*)-phenyl(pyridin-2-yl)acetonitrile (pyronitrile).

**01/2017:1005**

# DISOPYRAMIDE PHOSPHATE

## Disopyramidi phosphas



$C_{21}H_{32}N_3O_5P$ $M_r$ 437.5
[22059-60-5]

DEFINITION

Disopyramide phosphate contains not less than 98.0 per cent and not more than the equivalent of 102.0 per cent of (2*RS*)-4-[bis(1-methylethyl)amino]-2-phenyl-2-(pyridin-2-yl)butanamide dihydrogen phosphate, calculated with reference to the dried substance.

CHARACTERS

A white or almost white powder, soluble in water, sparingly soluble in alcohol, practically insoluble in methylene chloride.

IDENTIFICATION

*First identification: B.*

*Second identification: A, C, D.*

A. Dissolve 50.0 mg in a 5 g/L solution of *sulfuric acid R* in *methanol R* and dilute to 100.0 mL with the same solution. Dilute 5.0 mL of this solution to 50.0 mL with a 5 g/L solution of *sulfuric acid R* in *methanol R*. Examined between 240 nm and 350 nm (*2.2.25*), the solution shows an absorption maximum at 269 nm and a shoulder at 263 nm. The specific absorbance at the maximum is 147 to 163.

B. Examine by infrared absorption spectrophotometry (*2.2.24*), comparing with the spectrum obtained with *disopyramide phosphate CRS*. Examine the substances prepared as discs.

C. Examine the chromatograms obtained in the test for related substances in ultraviolet light at 254 nm. The principal spot in the chromatogram obtained with test solution (b) is similar in position and size to the principal spot in the chromatogram obtained with reference solution (a). Spray with *dilute potassium iodobismuthate solution R*. Examine in daylight. The principal spot in the chromatogram obtained with test solution (b) is similar in position, colour and size to the principal spot in the chromatogram obtained with reference solution (a).

D. Solution S (see Tests) gives reaction (a) of phosphates (*2.3.1*).

TESTS

**Solution S**. Dissolve 1.0 g in *carbon dioxide-free water R* and dilute to 20 mL with the same solvent.

**Appearance of solution**. Solution S is clear (*2.2.1*) and colourless (*2.2.2, Method II*).

**pH** (*2.2.3*). The pH of solution S is 4.0 to 5.0.

**Related substances**. Examine by thin-layer chromatography (*2.2.27*), using *silica gel* $GF_{254}$ *R* as the coating substance.

*Test solution (a).* Dissolve 0.25 g of the substance to be examined in *methanol R* and dilute to 10 mL with the same solvent.

*Test solution (b).* Dilute 1 mL of test solution (a) to 10 mL with *methanol R*.

*Reference solution (a).* Dissolve 25 mg of *disopyramide phosphate CRS* in *methanol R* and dilute to 10 mL with the same solvent.

*Reference solution (b).* Dilute 1 mL of test solution (b) to 20 mL with *methanol R*.

Apply to the plate 10 µL of each solution. Develop over a path of 15 cm using a mixture of 1 volume of *concentrated ammonia R*, 30 volumes of *acetone R* and 30 volumes of *cyclohexane R*. Dry the plate in a current of warm air and examine in ultraviolet light at 254 nm. Any spot in the chromatogram obtained with test solution (a), apart from the principal spot, is not more intense than the spot in the chromatogram obtained with reference solution (b) (0.5 per cent).

**Loss on drying** (*2.2.32*). Not more than 0.5 per cent, determined on 1.000 g by drying in an oven at 105 °C.

ASSAY

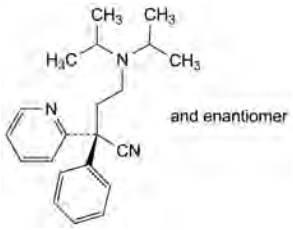
Dissolve 0.180 g in 30 mL of *anhydrous acetic acid R*. Add 0.2 mL of *naphtholbenzein solution R*. Titrate with *0.1 M perchloric acid* until the colour changes from yellow to green.

1 mL of *0.1 M perchloric acid* is equivalent to 21.88 mg of $C_{21}H_{32}N_3O_5P$.

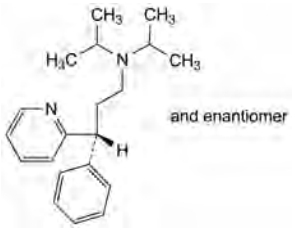
STORAGE

Store protected from light.

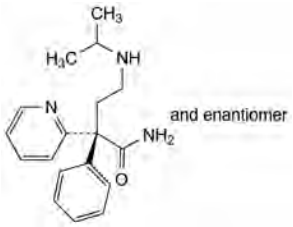
IMPURITIES



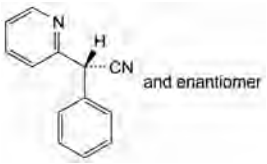
A. (2*RS*)-4-[bis(1-methylethyl)amino]-2-phenyl-2-(pyridin-2-yl)butanenitrile (di-isopyronitrile),



B. (3*RS*)-*N*,*N*-bis(1-methylethyl)-3-phenyl-3-(pyridin-2-yl)propan-1-amine,



C. (2*RS*)-4-[(1-methylethyl)amino]-2-phenyl-2-(pyridin-2-yl)butanamide,

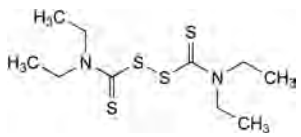


D. (*RS*)-phenyl(pyridin-2-yl)acetonitrile (pyronitrile).

**01/2017:0603**

# DISULFIRAM

## Disulfiramum



$C_{10}H_{20}N_2S_4$ $M_r$ 296.5

[97-77-8]

DEFINITION

Disulfiram contains not less than 98.5 per cent and not more than the equivalent of 101.0 per cent of tetraethyldisulfanedicarbothioamide, calculated with reference to the dried substance.

CHARACTERS

A white or almost white, crystalline powder, practically insoluble in water, freely soluble in methylene chloride, sparingly soluble in alcohol.

IDENTIFICATION

*First identification: A, B.*

*Second identification: A, C, D.*

A. Melting point (*2.2.14*): 70 °C to 73 °C.

B. Examine by infrared absorption spectrophotometry (*2.2.24*), comparing with the spectrum obtained with *disulfiram CRS*. Examine the substances prepared as discs.

C. Examine the chromatograms obtained in the test for related substances. The principal spot in the chromatogram obtained with test solution (b) is similar in position and size to the principal spot in the chromatogram obtained with reference solution (a).

D. Dissolve about 10 mg in 10 mL of *methanol R*. Add 2 mL of a 0.5 g/L solution of *cupric chloride R* in *methanol R*. A yellow colour develops which becomes greenish-yellow.

TESTS

**Related substances**. Examine by thin-layer chromatography (*2.2.27*), using as the coating substance a suitable silica gel with a fluorescent indicator having an optimal intensity at 254 nm.

*Test solution (a).* Dissolve 0.20 g of the substance to be examined in *ethyl acetate R* and dilute to 10 mL with the same solvent.

*Test solution (b).* Dilute 1 mL of test solution (a) to 10 mL with *ethyl acetate R*.

*Reference solution (a).* Dissolve 10 mg of *disulfiram CRS* in *ethyl acetate R* and dilute to 5 mL with the same solvent.

*Reference solution (b).* Dilute 1 mL of test solution (b) to 20 mL with *ethyl acetate R*.

Apply to the plate 10 µL of each solution. Develop over a path of 15 cm using a mixture of 30 volumes of *butyl acetate R* and 70 volumes of *hexane R*. Allow the plate to dry in air and examine in ultraviolet light at 254 nm. Any spot in the chromatogram obtained with test solution (a), apart from the principal spot, is not more intense than the spot in the chromatogram obtained with reference solution (b) (0.5 per cent).

**Diethyldithiocarbamate**. Dissolve 0.20 g in 10 mL of *peroxide-free ether R*, add 5 mL of *buffer solution pH 8.0 R* and shake vigorously. Discard the upper layer and wash the lower layer with 10 mL of *peroxide-free ether R*. Add to the lower layer 0.2 mL of a 4 g/L solution of *copper sulfate pentahydrate R* and 5 mL of *cyclohexane R*. Shake. Any yellow colour in the upper layer is not more intense than that of a standard prepared at the same time using 0.2 mL of a freshly prepared 0.15 g/L solution of *sodium diethyldithiocarbamate R* (150 ppm).

**Loss on drying** (*2.2.32*). Not more than 0.5 per cent, determined on 1.000 g by drying *in vacuo* at 50 °C.

**Sulfated ash** (*2.4.14*). Not more than 0.1 per cent, determined on 1.0 g.

ASSAY

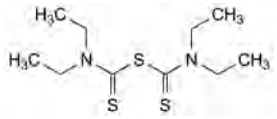
Dissolve 0.450 g in 80 mL of *acetone R* and add 20 mL of a 20 g/L solution of *potassium nitrate R*. Titrate with *0.1 M silver nitrate*. Determine the end-point potentiometrically (*2.2.20*), using a silver electrode and a silver-silver chloride double-junction electrode saturated with potassium nitrate.

1 mL of *0.1 M silver nitrate* is equivalent to 59.30 mg of $C_{10}H_{20}N_2S_4$.

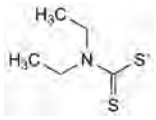
STORAGE

Store protected from light.

IMPURITIES



A. diethylthiocarbamic thioanhydride (sulfiram),

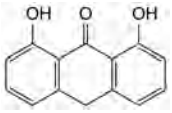


B. diethyldithiocarbamate.

**01/2016:1007**

# DITHRANOL

## Dithranolum



$C_{14}H_{10}O_3$ $M_r$ 226.2
[1143-38-0]

DEFINITION

1,8-Dihydroxyanthracen-9(10*H*)-one.

*Content*: 98.5 per cent to 101.0 per cent (dried substance).

CHARACTERS

*Appearance*: yellow or brownish-yellow, crystalline powder.

*Solubility*: practically insoluble in water, soluble in methylene chloride, sparingly soluble in acetone, slightly soluble in ethanol (96 per cent). It dissolves in dilute solutions of alkali hydroxides.

*Carry out all tests protected from bright light and use freshly prepared solutions.*

IDENTIFICATION

*First identification: A, B.*

*Second identification: A, C, D.*

A. Melting point (*2.2.14*): 178 °C to 182 °C.

B. Infrared absorption spectrophotometry (*2.2.24*).

*Comparison*: *dithranol CRS.*

C. Thin-layer chromatography (*2.2.27*).

*Test solution.* Dissolve 10 mg of the substance to be examined in *methylene chloride R* and dilute to 10 mL with the same solvent.

*Reference solution (a).* Dissolve 10 mg of *dithranol CRS* in *methylene chloride R* and dilute to 10 mL with the same solvent.

*Reference solution (b).* Dissolve about 5 mg of *dantron R* (impurity B) in 5 mL of reference solution (a).

*Plate*: *TLC silica gel plate R.*

*Mobile phase*: *hexane R*, *methylene chloride R* (50:50 *V/V*).

*Application*: 10 µL.

*Development*: over a path of 12 cm.

*Drying*: in air.

*Detection*: place the plate in a tank saturated with ammonia vapour until the spots appear. Examine in daylight.

*System suitability*: reference solution (b):

– the chromatogram shows 2 clearly separated spots.

*Results*: the principal spot in the chromatogram obtained with the test solution is similar in position, colour and size to the principal spot in the chromatogram obtained with reference solution (a).

D. To 5 mg add 0.1 g of *anhydrous sodium acetate R* and 1 mL of *acetic anhydride R*. Boil for 30 s. Add 20 mL of *ethanol (96 per cent) R*. Examined in ultraviolet light at 365 nm, the solution shows a blue fluorescence.

TESTS

**Related substances**

A. Liquid chromatography (*2.2.29*).

*Test solution.* Dissolve 0.200 g of the substance to be examined in 20 mL of *methylene chloride R*, add 1.0 mL of *glacial acetic acid R* and dilute to 100.0 mL with *hexane R*.

*Reference solution.* Dissolve 5.0 mg of *anthrone R* (impurity A), 5.0 mg of *dantron R* (impurity B), 5.0 mg of *dithranol impurity C CRS* and 5.0 mg of *dithranol CRS* in *methylene chloride R* and dilute to 5.0 mL with the same solvent. To 1.0 mL of this solution, add 19.0 mL of *methylene chloride R* and 1.0 mL of *glacial acetic acid R*, and dilute to 50.0 mL with *hexane R*.

*Column*:

– *size*: *l* = 0.25 m, Ø = 4.6 mm;

– *stationary phase*: *silica gel for chromatography R* (5 µm).

*Mobile phase*: *glacial acetic acid R*, *methylene chloride R*, *hexane R* (1:5:82 *V/V/V*).

*Flow rate*: 2 mL/min.

*Detection*: spectrophotometer at 260 nm.

*Injection*: 20 µL.

*Run time*: 1.5 times the retention time of impurity C.

*Elution order*: dithranol, impurity B, impurity A, impurity C.

*System suitability*: reference solution:

– *resolution*: minimum 2.0 between the peaks due to dithranol and impurity B.

*Limits*:

– *impurities A, B, C*: for each impurity, not more than the area of the corresponding peak in the chromatogram obtained with the reference solution (1 per cent).

B. Liquid chromatography (*2.2.29*).

*Test solution.* Dissolve 25.0 mg of the substance to be examined in 5 mL of *tetrahydrofuran R* and dilute to 25.0 mL with the mobile phase.

*Reference solution.* Dissolve 5.0 mg of *dithranol impurity D CRS* and 5.0 mg of *dithranol CRS* in 5 mL of *tetrahydrofuran R* and dilute to 10.0 mL with the mobile phase. Dilute 1.0 mL of this solution to 20.0 mL with the mobile phase.

*Column*:

– *size*: *l* = 0.20 m, Ø = 4.6 mm;

– *stationary phase*: *octadecylsilyl silica gel for chromatography R* (5 µm).

*Mobile phase*: *glacial acetic acid R*, *tetrahydrofuran R*, *water R* (2.5:40:60 *V/V/V*).

*Flow rate*: 0.9 mL/min.

*Detection*: spectrophotometer at 254 nm.

*Injection*: 20 µL.

*Run time*: 3 times the retention time of dithranol.

*System suitability*: reference solution:

– *resolution*: minimum 2.5 between the peaks due to impurity D and dithranol.

*Limit*:

– *impurity D*: not more than the area of the corresponding peak in the chromatogram obtained with the reference solution (2.5 per cent).

*Total (tests A + B)*: maximum 3.0 per cent for the sum of the contents of all impurities.

**Chlorides** (*2.4.4*): maximum 100 ppm.

Shake 1.0 g with 20 mL of *water R* for 1 min and filter. Dilute 10 mL of the filtrate to 15 mL with *water R*.

**Loss on drying** (*2.2.32*): maximum 0.5 per cent, determined on 1.000 g by drying in an oven at 105 °C.

**Sulfated ash** (*2.4.14*): maximum 0.1 per cent, determined on 1.0 g.

ASSAY

Dissolve 0.200 g in 50 mL of *anhydrous pyridine R*. Titrate with *0.1 M tetrabutylammonium hydroxide* under *nitrogen R*. Determine the end-point potentiometrically (*2.2.20*), using a glass indicator electrode and a suitable reference electrode.

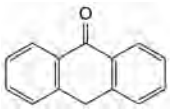
1 mL of *0.1 M tetrabutylammonium hydroxide* is equivalent to 22.62 mg of $C_{14}H_{10}O_3$.

STORAGE

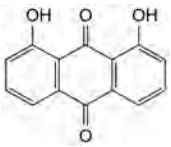
Protected from light.

IMPURITIES

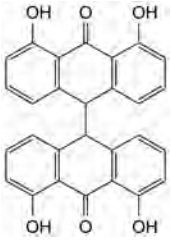
*Specified impurities: A, B, C, D.*



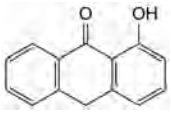
A. anthracen-9(10*H*)-one (anthrone),



B. 1,8-dihydroxyanthracene-9,10-dione (dantron),



C. 4,4′,5,5′-tetrahydroxy-9,9′-bianthracenyl-10,10′(9*H*,9′*H*)-dione,

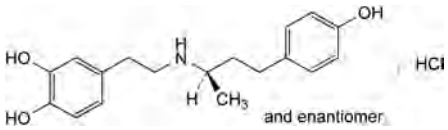


D. 1-hydroxyanthracen-9(10*H*)-one.

**01/2017:1200**

# DOBUTAMINE HYDROCHLORIDE

## Dobutamini hydrochloridum



$C_{18}H_{24}ClNO_3$ $M_r$ 337.8
[49745-95-1]

DEFINITION

4-[2-[[(2*RS*)-4-(4-Hydroxyphenyl)-butan-2-yl]amino]ethyl]-benzene-1,2-diol hydrochloride.

*Content*: 98.5 per cent to 101.0 per cent (dried substance).

CHARACTERS

*Appearance*: white or almost white, crystalline powder.

*Solubility*: sparingly soluble in water, soluble in methanol, sparingly soluble in ethanol (96 per cent).

IDENTIFICATION

A. Infrared absorption spectrophotometry (*2.2.24*).
*Comparison*: *dobutamine hydrochloride CRS*.

B. It gives reaction (a) of chlorides (*2.3.1*) using a mixture of equal volumes of *methanol R* and *water R*.

TESTS

**Acidity or alkalinity**. Dissolve 0.1 g in *water R* with gentle heating and dilute to 10 mL with the same solvent. Add 0.1 mL of *methyl red solution R* and 0.2 mL of *0.01 M sodium hydroxide*. The solution is yellow. Add 0.4 mL of *0.01 M hydrochloric acid*. The solution is red.

**Absorbance** (*2.2.25*): maximum 0.04 at 480 nm.

Dissolve 0.5 g in a mixture of equal volumes of *methanol R* and *water R* with heating, if necessary, at 30-35 °C and dilute to 25 mL with the same mixture of solvents. Cool quickly. Examine immediately.

**Related substances**. Liquid chromatography (*2.2.29*).

*Solvent mixture*: mobile phase B, mobile phase A (35:65 *V/V*).

*Test solution*. Dissolve 0.10 g of the substance to be examined in the solvent mixture and dilute to 20.0 mL with the solvent mixture.

*Reference solution (a)*. Dilute 4.0 mL of the test solution to 100.0 mL with a 0.05 g/L solution of *anisaldehyde R* in the solvent mixture. Dilute 1.0 mL of this solution to 10.0 mL with the solvent mixture.

*Reference solution (b)*. Dilute 5.0 mL of the test solution to 100.0 mL with the solvent mixture. Dilute 1.0 mL of this solution to 10.0 mL with the solvent mixture.

*Reference solution (c)*. Dissolve the contents of a vial of *dobutamine impurity mixture CRS* (impurities A, B and C) in 1.0 mL of the solvent mixture.

*Column*:

– *size*: *l* = 0.15 m, Ø = 4.6 mm;
– *stationary phase*: *base-deactivated end-capped octadecylsilyl silica gel for chromatography R* (5 µm).

*Mobile phase*:

– *mobile phase A*: dissolve 2.60 g of *sodium octanesulfonate R* in 1000 mL of *water R*, add 3 mL of *triethylamine R* and adjust to pH 2.5 with *phosphoric acid R*;
– *mobile phase B*: *acetonitrile R*, *methanol R* (18:82 *V/V*);

| Time (min) | Mobile phase A (per cent *V/V*) | Mobile phase B (per cent *V/V*) |
|---|---|---|
| 0 - 5 | 65 | 35 |
| 5 - 20 | 65 → 20 | 35 → 80 |
| 20 - 25 | 20 | 80 |

*Flow rate*: 1 mL/min.

*Detection*: spectrophotometer at 280 nm.

*Injection*: 20 µL.

*Identification of impurities*: use the chromatogram supplied with *dobutamine impurity mixture CRS* and the chromatogram obtained with reference solution (c) to identify the peaks due to impurities A, B and C.

*Relative retention* with reference to dobutamine (retention time = about 12 min): impurity A = about 0.3; impurity B = about 0.5; anisaldehyde = about 0.7; impurity C = about 1.4.

*System suitability*: reference solution (a):

– *resolution*: minimum 4.0 between the peaks due to dobutamine and anisaldehyde.

*Limits*:

– *correction factor*: for the calculation of content, multiply the peak area of impurity B by 1.4;
– *impurities A, B, C*: for each impurity, not more than the area of the principal peak in the chromatogram obtained with reference solution (b) (0.5 per cent);
– *unspecified impurities*: for each impurity, not more than 0.2 times the area of the principal peak in the chromatogram obtained with reference solution (b) (0.10 per cent);
– *total*: not more than twice the area of the principal peak in the chromatogram obtained with reference solution (b) (1 per cent);
– *disregard limit*: 0.1 times the area of the principal peak in the chromatogram obtained with reference solution (b) (0.05 per cent).

**Loss on drying** (*2.2.32*): maximum 0.5 per cent, determined on 1.000 g by drying in an oven at 105 °C.

**Sulfated ash** (*2.4.14*): maximum 0.1 per cent, determined on 1.0 g.

ASSAY

*In order to avoid overheating in the reaction medium, mix thoroughly throughout and stop the titration immediately after the end-point has been reached.*

Dissolve 0.250 g in 10 mL of *anhydrous formic acid R*. Add 50 mL of *acetic anhydride R*. Titrate with *0.1 M perchloric acid*, determining the end-point potentiometrically (*2.2.20*).

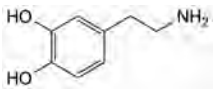
1 mL of *0.1 M perchloric acid* is equivalent to 33.79 mg of $C_{18}H_{24}ClNO_3$.

STORAGE

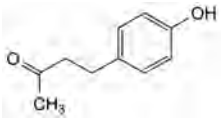
Protected from light.

IMPURITIES

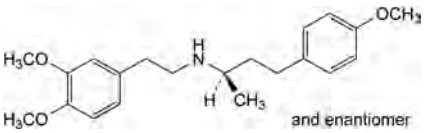
*Specified impurities: A, B, C.*



A. 4-(2-aminoethyl)benzene-1,2-diol (dopamine),



B. 4-(4-hydroxyphenyl)butan-2-one,

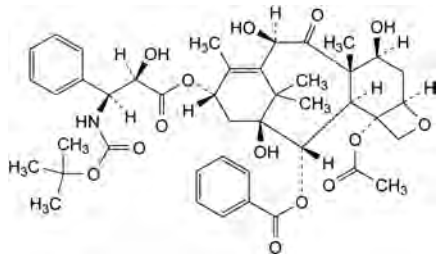


C. (2*RS*)-*N*-[2-(3,4-dimethoxyphenyl)ethyl]-4-(4-methoxyphenyl)butan-2-amine.

**01/2017:2593**

# DOCETAXEL

## Docetaxelum



$C_{43}H_{53}NO_{14}$ $M_r$ 808

[114977-28-5]

DEFINITION

5β,20-Epoxy-1,7β,10β-trihydroxy-9-oxotax-11-ene-2α,4,13α-triyl 4-acetate 2-benzoate 13-[(2*R*,3*S*)-3-[[(1,1-dimethylethoxy)carbonyl]amino]-2-hydroxy-3-phenylpropanoate].

*Content*: 97.5 per cent to 102.0 per cent (anhydrous substance).

CHARACTERS

*Appearance*: white or almost white, crystalline, hygroscopic powder.

*Solubility*: practically insoluble in water, freely soluble in anhydrous ethanol, soluble in methylene chloride.

IDENTIFICATION

A. Specific optical rotation (see Tests).

B. Infrared absorption spectrophotometry (*2.2.24*).
*Comparison*: *anhydrous docetaxel CRS*.

TESTS

**Appearance of solution**. The solution is not more opalescent than reference suspension II (*2.2.1*) and not more intensely coloured than reference solution $B_5$ (*2.2.2, Method I*).

Dissolve 1.0 g in *anhydrous ethanol R* and dilute to 20 mL with the same solvent.

**Specific optical rotation** (*2.2.7*): – 41.5 to – 38.5 (anhydrous substance).

Dissolve 0.250 g in *methanol R* and dilute to 25.0 mL with the same solvent.

**Related substances**. Liquid chromatography (*2.2.29*).

*Solvent mixture*: *acetic acid R*, *acetonitrile R1*, *water R* (0.05:50:50 *V/V/V*).

*Test solution*. Dissolve 50.0 mg of the substance to be examined in 2.5 mL of *anhydrous ethanol R* and dilute to 50.0 mL with the solvent mixture.

*Reference solution (a)*. Dissolve 50.0 mg of *docetaxel trihydrate CRS* in 2.5 mL of *anhydrous ethanol R* and dilute to 50.0 mL with the solvent mixture.

*Reference solution (b)*. Dilute 1.0 mL of the test solution to 100.0 mL with the solvent mixture. Dilute 1.0 mL of this solution to 10.0 mL with the solvent mixture.

*Reference solution (c).* Dissolve 5 mg of *docetaxel for system suitability CRS* (containing impurities A, B and C) in 0.25 mL of *anhydrous ethanol R* and dilute to 5.0 mL with the solvent mixture.

*Reference solution (d).* Dissolve 5 mg of *docetaxel impurity E CRS* in 2.5 mL of *anhydrous ethanol R* and dilute to 50.0 mL with the solvent mixture. Dilute 1.0 mL of the solution to 100.0 mL with the solvent mixture.

*Column*:

- *size*: *l* = 0.15 m, Ø = 4.6 mm;
- *stationary phase*: *end-capped octadecylsilyl silica gel for chromatography R* (3.5 µm);
- *temperature*: 45 °C.

*Mobile phase*:

- *mobile phase A*: *water R*;
- *mobile phase B*: *acetonitrile R1*;

| Time (min) | Mobile phase A (per cent *V/V*) | Mobile phase B (per cent *V/V*) |
|---|---|---|
| 0 - 9 | 72 | 28 |
| 9 - 39 | 72 → 28 | 28 → 72 |

*Flow rate*: 1.2 mL/min.

*Detection*: spectrophotometer at 232 nm.

*Injection*: 10 µL of the test solution and reference solutions (b), (c) and (d).

*Identification of impurities*: use the chromatogram supplied with *docetaxel for system suitability CRS* and the chromatogram obtained with reference solution (c) to identify the peaks due to impurities A, B and C; use the chromatogram obtained with reference solution (d) to identify the peak due to impurity E.

*Relative retention* with reference to docetaxel (retention time = about 27 min): impurity E = about 0.2; impurity A = about 0.97; impurity B = about 1.08; impurity C = about 1.13.

*System suitability*: reference solution (c):

- *resolution*: minimum 3.0 between the peaks due to impurity A and docetaxel.

*Limits*:

- *correction factor*: for the calculation of content, multiply the peak area of impurity A by 1.6;
- *impurity B*: not more than 3 times the area of the principal peak in the chromatogram obtained with reference solution (b) (0.3 per cent);
- *impurity A*: not more than twice the area of the principal peak in the chromatogram obtained with reference solution (b) (0.2 per cent);
- *impurity C*: not more than 1.5 times the area of the principal peak in the chromatogram obtained with reference solution (b) (0.15 per cent);
- *impurity E*: not more than 1.5 times the area of the corresponding peak in the chromatogram obtained with reference solution (d) (0.15 per cent);
- *unspecified impurities*: for each impurity, not more than the area of the principal peak in the chromatogram obtained with reference solution (b) (0.10 per cent);
- *total*: maximum 0.8 per cent;
- *disregard limit*: 0.5 times the area of the principal peak in the chromatogram obtained with reference solution (b) (0.05 per cent).

**Water** (*2.5.32*): maximum 1.5 per cent.

Inject 800 µL of a 25 mg/mL solution of the substance to be examined in *methanol R*.

**Sulfated ash** (*2.4.14*): maximum 0.1 per cent, determined on 1.0 g.

**Bacterial endotoxins** (*2.6.14*): less than 0.3 IU/mg, if intended for use in the manufacture of parenteral preparations without a further appropriate procedure for the removal of bacterial endotoxins.

ASSAY

Liquid chromatography (*2.2.29*) as described in the test for related substances with the following modification.

*Injection*: 10 µL of the test solution and reference solution (a).

Calculate the percentage content of $C_{43}H_{53}NO_{14}$ taking into account the assigned content of *docetaxel trihydrate CRS*.

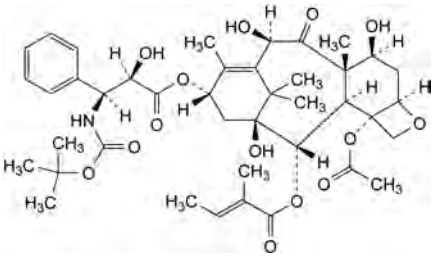
STORAGE

Protected from light, in an airtight container.

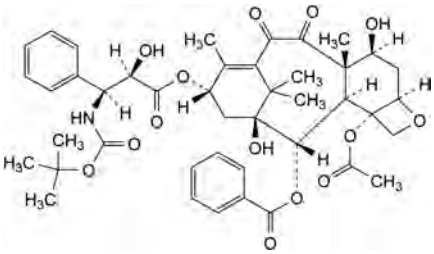
IMPURITIES

*Specified impurities*: *A, B, C, E.*

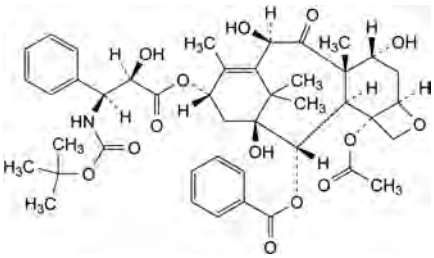
*Other detectable impurities* (the following substances would, if present at a sufficient level, be detected by one or other of the tests in the monograph. They are limited by the general acceptance criterion for other/unspecified impurities and/or by the general monograph *Substances for pharmaceutical use (2034)*. It is therefore not necessary to identify these impurities for demonstration of compliance. See also *5.10. Control of impurities in substances for pharmaceutical use*): *D, F, G.*



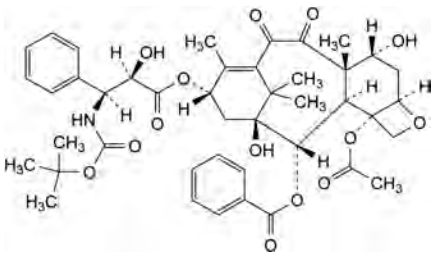
A. 5β,20-epoxy-1,7β,10β-trihydroxy-9-oxotax-11-ene-2α,4,13α-triyl 4-acetate 13-[(2*R*,3*S*)-3-[[(1,1-dimethylethoxy)carbonyl]amino]-2-hydroxy-3-phenylpropanoate] 2-[(2*E*)-2-methylbut-2-enoate] (2-*O*-desbenzoyl-2-*O*-tiglyldocetaxel),



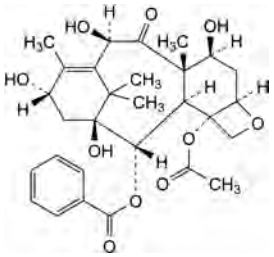
B. 5β,20-epoxy-1,7β-dihydroxy-9,10-dioxotax-11-ene-2α,4,13α-triyl 4-acetate 2-benzoate 13-[(2*R*,3*S*)-3-[[(1,1-dimethylethoxy)carbonyl]amino]-2-hydroxy-3-phenylpropanoate] (10-deoxy-10-oxodocetaxel),



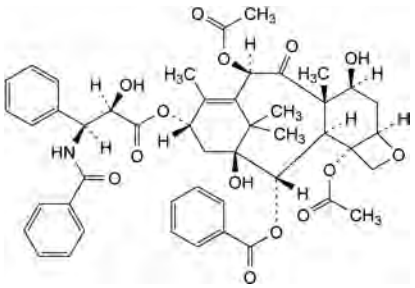
C. 5β,20-epoxy-1,7α,10β-trihydroxy-9-oxotax-11-ene-2α,4,13α-triyl 4-acetate 2-benzoate 13-[(2*R*,3*S*)-3-[[(1,1-dimethylethoxy)carbonyl]amino]-2-hydroxy-3-phenylpropanoate] (7-*epi*-docetaxel),



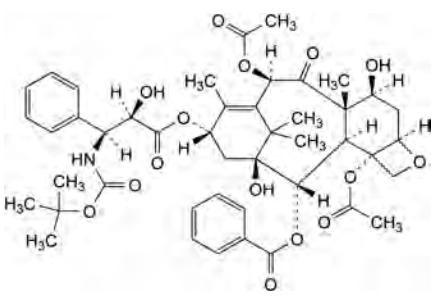
D. 5β,20-epoxy-1,7α-dihydroxy-9,10-dioxotax-11-ene-2α,4,13α-triyl 4-acetate 2-benzoate 13-[(2*R*,3*S*)-3-[[(1,1-dimethylethoxy)carbonyl]amino]-2-hydroxy-3-phenylpropanoate] (10-deoxy-10-oxo-7-*epi*-docetaxel),



E. 5β,20-epoxy-4-(acetyloxy)-1,7β,10β,13α-tetrahydroxy-9-oxotax-11-en-2α-yl benzoate (10-desacetyl-baccatin III),



F. 5β,20-epoxy-1,7β-dihydroxy-9-oxotax-11-ene-2α,4,10β,13α-tetrayl 4,10-diacetate 2-benzoate 13-[(2*R*,3*S*)-3-(benzoylamino)-2-hydroxy-3-phenylpropanoate] (paclitaxel),



G. 5β,20-epoxy-1,7β-dihydroxy-9-oxotax-11-ene-2α,4,10β,13α-tetrayl 4,10-diacetate 2-benzoate 13-[(2*R*,3*S*)-3-[[(1,1-dimethylethoxy)carbonyl]amino]-2-hydroxy-3-phenylpropanoate] (10-acetyldocetaxel).

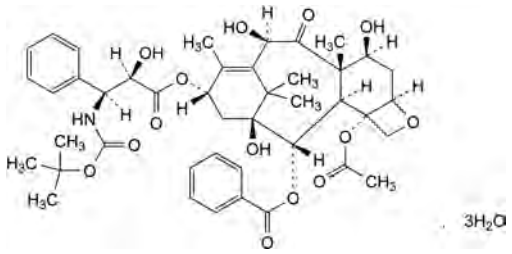
# DOCETAXEL TRIHYDRATE

## Docetaxelum trihydricum



$C_{43}H_{53}NO_{14},3H_2O$ $M_r$ 862

[148408-66-6]

DEFINITION

5β,20-epoxy-1,7β,10β-Trihydroxy-9-oxotax-11-ene-2α,4,13α-triyl 4-acetate 2-benzoate 13-[(2*R*,3*S*)-3-[[(1,1-dimethylethoxy)carbonyl]amino]-2-hydroxy-3-phenylpropanoate] trihydrate.

*Content*: 97.5 per cent to 102.0 per cent (anhydrous substance).

CHARACTERS

*Appearance*: white or almost white, crystalline powder.

*Solubility*: practically insoluble in water, freely soluble in anhydrous ethanol, soluble in methylene chloride.

IDENTIFICATION

A. Specific optical rotation (see Tests).

B. Infrared absorption spectrophotometry (*2.2.24*).
*Comparison*: *docetaxel trihydrate CRS*.

TESTS

**Appearance of solution**. The solution is not more opalescent than reference suspension II (*2.2.1*) and not more intensely coloured than reference solution $B_5$ (*2.2.2, Method I*).

Dissolve 1.0 g in *anhydrous ethanol R* and dilute to 20 mL with the same solvent.

**Specific optical rotation** (*2.2.7*): − 41.5 to − 38.5 (anhydrous substance).

Dissolve 0.250 g in *methanol R* and dilute to 25.0 mL with the same solvent.

**Related substances**. Liquid chromatography (*2.2.29*).

*Solvent mixture*: *acetic acid R*, *acetonitrile R1*, *water R* (0.05:50:50 *V/V/V*).

*Test solution*. Dissolve 50.0 mg of the substance to be examined in 2.5 mL of *anhydrous ethanol R* and dilute to 50.0 mL with the solvent mixture.

*Reference solution (a)*. Dissolve 50.0 mg of *docetaxel trihydrate CRS* in 2.5 mL of *anhydrous ethanol R* and dilute to 50.0 mL with the solvent mixture.

*Reference solution (b)*. Dilute 1.0 mL of the test solution to 100.0 mL with the solvent mixture. Dilute 1.0 mL of this solution to 10.0 mL with the solvent mixture.

*Reference solution (c)*. Dissolve 5 mg of *docetaxel for system suitability CRS* (containing impurities A, B and C) in 0.25 mL of *anhydrous ethanol R* and dilute to 5.0 mL with the solvent mixture.

*Column*:

– *size*: *l* = 0.15 m, Ø = 4.6 mm;

– *stationary phase*: *end-capped octadecylsilyl silica gel for chromatography R* (3.5 µm);

– *temperature*: 45 °C.

*Mobile phase*:

– *mobile phase A*: *water R*;

– *mobile phase B*: *acetonitrile R1*;

| Time (min) | Mobile phase A (per cent *V/V*) | Mobile phase B (per cent *V/V*) |
|---|---|---|
| 0 - 9 | 72 | 28 |
| 9 - 39 | 72 → 28 | 28 → 72 |

*Flow rate*: 1.2 mL/min.

*Detection*: spectrophotometer at 232 nm.

*Injection*: 10 µL of the test solution and reference solutions (b) and (c).

*Identification of impurities*: use the chromatogram supplied with *docetaxel for system suitability CRS* and the chromatogram obtained with reference solution (c) to identify the peaks due to impurities A, B and C.

*Relative retention* with reference to docetaxel (retention time = about 27 min): impurity A = about 0.97; impurity B = about 1.08; impurity C = about 1.13.

*System suitability*: reference solution (c):

– *resolution*: minimum 3.0 between the peaks due to impurity A and docetaxel.

*Limits*:

– *correction factor*: for the calculation of content, multiply the peak area of impurity A by 1.6;

– *impurity A*: not more than 5 times the area of the principal peak in the chromatogram obtained with reference solution (b) (0.5 per cent);

– *impurities B, C*: for each impurity, not more than 3 times the area of the principal peak in the chromatogram obtained with reference solution (b) (0.3 per cent);

– *unspecified impurities*: for each impurity, not more than the area of the principal peak in the chromatogram obtained with reference solution (b) (0.10 per cent);

– *total*: not more than 10 times the area of the principal peak in the chromatogram obtained with reference solution (b) (1.0 per cent);

– *disregard limit*: 0.5 times the area of the principal peak in the chromatogram obtained with reference solution (b) (0.05 per cent).

**Water** (*2.5.32*): 5.0 per cent to 7.0 per cent.

Inject 200 µL of a 100 mg/mL solution of the substance to be examined in *dimethylformamide R*.

**Sulfated ash** (*2.4.14*): maximum 0.1 per cent, determined on 1.0 g.

**Bacterial endotoxins** (*2.6.14*): less than 0.3 IU/mg, if intended for use in the manufacture of parenteral preparations without a further appropriate procedure for the removal of bacterial endotoxins.

ASSAY

Liquid chromatography (*2.2.29*) as described in the test for related substances with the following modification.

*Injection*: 10 µL of the test solution and reference solution (a).

Calculate the percentage content of $C_{43}H_{53}NO_{14}$ taking into account the assigned content of *docetaxel trihydrate CRS*.

STORAGE

Protected from light.

IMPURITIES

*Specified impurities*: *A, B, C.*

*Other detectable impurities* (the following substances would, if present at a sufficient level, be detected by one or other of the tests in the monograph. # DOCUSATE SODIUM

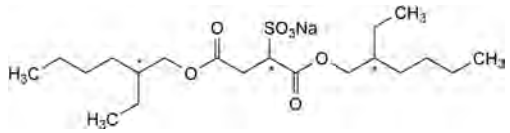
## Natrii docusas



$C_{20}H_{37}NaO_7S$ $M_r$ 444.6
[577-11-7]

DEFINITION

Sodium 1,4-bis[(2-ethylhexyl)oxy]-1,4-dioxobutane-2-sulfonate.

*Content*: 98.0 to 101.0 per cent (anhydrous substance).

CHARACTERS

*Appearance*: white or almost white, waxy masses or flakes, hygroscopic.

*Solubility*: sparingly soluble in water, freely soluble in ethanol (96 per cent) and in methylene chloride.

IDENTIFICATION

A. Infrared absorption spectrophotometry (*2.2.24*).

*Preparation*: place about 3 mg of the substance to be examined on a sodium chloride plate, add 0.05 mL of *acetone R* and immediately cover with another sodium chloride plate. Rub the plates together to dissolve the substance to be examined, slide the plates apart and allow the acetone to evaporate.

*Comparison*: *docusate sodium CRS*.

B. In a crucible, ignite 0.75 g in the presence of *dilute sulfuric acid R*, until an almost white residue is obtained. Allow to cool and take up the residue with 5 mL of *water R*. Filter. 2 mL of the filtrate gives reaction (a) of sodium (*2.3.1*).

TESTS

**Alkalinity**. Dissolve 1.0 g in 100 mL of a mixture of equal volumes of *methanol R* and *water R*, previously neutralised to *methyl red solution R*. Add 0.1 mL of *methyl red solution R*. Not more than 0.2 mL of *0.1 M hydrochloric acid* is required to change the colour of the indicator to red.

**Related non-ionic substances**. Gas chromatography (*2.2.28*).

*Internal standard solution*. Dissolve 10 mg of *methyl behenate R* in *hexane R* and dilute to 50 mL with the same solvent.

*Test solution (a)*. Dissolve 0.10 g of the substance to be examined in 2.0 mL of the internal standard solution and dilute to 5.0 mL with *hexane R*. Pass the solution, at a rate of about 1.5 mL/min, through a column 10 mm in internal diameter, packed with 5 g of *basic aluminium oxide R* and previously washed with 25 mL of *hexane R*. Elute with 5 mL of *hexane R* and discard the eluate. Elute with 20 mL of a mixture of equal volumes of *ether R* and *hexane R*. Evaporate the eluate to dryness and dissolve the residue in 2.0 mL of *hexane R*.

*Test solution (b)*. Prepare as described for test solution (a) but dissolving 0.10 g of the substance to be examined in *hexane R*, diluting to 5.0 mL with the same solvent, and using a new column.

*Reference solution*. Dilute 2.0 mL of the internal standard solution to 5.0 mL with *hexane R*.

*Column*:

– *material*: glass;
– *size*: *l* = 2 m, Ø = 2 mm;
– *stationary phase*: *silanised diatomaceous earth for gas chromatography R* impregnated with 3 per cent *m/m* of *phenyl(50)methyl(50)polysiloxane R*.

*Carrier gas*: *nitrogen for chromatography R*.

*Flow rate*: 30 mL/min.

*Temperature*:

– *column*: 230 °C;
– *injection port and detector*: 280 °C.

*Detection*: flame ionisation.

*Injection*: 1 µL.

*Run time*: 2.5 times the retention time of the internal standard.

*System suitability*: there is no peak with the same retention time as the internal standard in the chromatogram obtained with test solution (b).

*Limits*: test solution (a):

– *any impurity*: for each impurity, not more than the area of the peak due to the internal standard (0.4 per cent).

**Chlorides**: maximum 350 ppm.

Dissolve 5.0 g in 50 mL of *ethanol (50 per cent V/V) R*. Titrate with *0.01 M silver nitrate*, determining the end-point potentiometrically (*2.2.20*).

1 mL of *0.01 M silver nitrate* is equivalent to 0.3545 mg of Cl.

**Sodium sulfate**: maximum 2 per cent.

Dissolve 0.25 g in 40 mL of a mixture of 20 volumes of *water R* and 80 volumes of *2-propanol R*. Adjust the pH to between 2.5 and 4.0 using *perchloric acid solution R*. Add 0.4 mL of *naphtharson solution R* and 0.1 mL of a 0.125 g/L solution of *methylene blue R*. Not more than 1.5 mL of *0.025 M barium perchlorate* is required to change the colour of the indicator from yellowish-green to yellowish-pink.

**Water** (*2.5.12*): maximum 3.0 per cent, determined on 0.250 g.

ASSAY

To 1.000 g in a 250 mL conical flask fitted with a reflux condenser add 25.0 mL of *0.5 M alcoholic potassium hydroxide* and heat on a water-bath under reflux for 45 min. Allow to cool. Add 0.25 mL of *phenolphthalein solution R1* and titrate with *0.5 M hydrochloric acid* until the red colour disappears. Carry out a blank titration.

1 mL of *0.5 M alcoholic potassium hydroxide* is equivalent to 0.1112 g of $C_{20}H_{37}NaO_7S$.

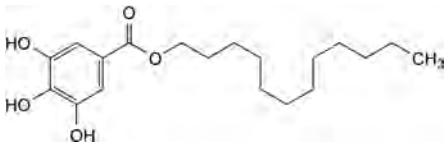
STORAGE

In an airtight container.

**01/2017:2078**

# DODECYL GALLATE

## Dodecylis gallas



$C_{19}H_{30}O_5$ $M_r$ 338.4
[1166-52-5]

DEFINITION

Dodecyl 3,4,5-trihydroxybenzoate.

*Content*: 97.0 per cent to 103.0 per cent (dried substance).

CHARACTERS

*Appearance*: white or almost white, crystalline powder.

*Solubility*: very slightly soluble or practically insoluble in water, freely soluble in ethanol (96 per cent), slightly soluble in methylene chloride.

IDENTIFICATION

A. Determine the melting point (*2.2.14*) of the substance to be examined. Mix equal parts of the substance to be examined and *dodecyl gallate CRS* and determine the melting point of the mixture. The difference between the melting points (which are about 96 °C) is not greater than 2 °C.

B. Examine the chromatograms obtained in the test for impurity A.

*Results*: the principal spot in the chromatogram obtained with test solution (b) is similar in position, colour and size to the principal spot in the chromatogram obtained with reference solution (a).

TESTS

**Impurity A**. Thin-layer chromatography (*2.2.27*).

*Test solution (a).* Dissolve 0.20 g of the substance to be examined in *acetone R* and dilute to 10 mL with the same solvent.

*Test solution (b).* Dilute 1.0 mL of test solution (a) to 20 mL with *acetone R*.

*Reference solution (a).* Dissolve 10 mg of *dodecyl gallate CRS* in *acetone R* and dilute to 10 mL with the same solvent.

*Reference solution (b).* Dissolve 20 mg of *gallic acid R* in *acetone R* and dilute to 20 mL with the same solvent.

*Reference solution (c).* Dilute 1.0 mL of reference solution (b) to 10 mL with *acetone R*.

*Reference solution (d).* Dilute 1.0 mL of reference solution (b) to 5 mL with test solution (a).

*Plate*: *TLC silica gel plate R*.

*Mobile phase*: *anhydrous formic acid R*, *ethyl formate R*, *toluene R* (10:40:50 *V/V/V*).

*Application*: 5 µL of test solutions (a) and (b) and reference solutions (a), (c) and (d).

*Development*: over 2/3 of the plate.

*Drying*: in air for 10 min.

*Detection*: spray with a mixture of 1 volume of *ferric chloride solution R1* and 9 volumes of *ethanol (96 per cent) R*.

*System suitability*: reference solution (d):

– the chromatogram shows 2 clearly separated principal spots.

*Limit*: test solution (a):

– *impurity A*: any spot due to impurity A is not more intense than the spot in the chromatogram obtained with reference solution (c) (0.5 per cent).

**Chlorides** (*2.4.4*): maximum 100 ppm.

To 1.65 g add 50 mL of *water R*. Shake for 5 min. Filter. 15 mL of the filtrate complies with the test.

**Loss on drying** (*2.2.32*): maximum 0.5 per cent, determined on 1.000 g by drying in an oven at 70 °C.

**Sulfated ash** (*2.4.14*): maximum 0.1 per cent, determined on 1.0 g.

ASSAY

Dissolve 0.100 g in *methanol R* and dilute to 250.0 mL with the same solvent. Dilute 5.0 mL of the solution to 200.0 mL with *methanol R*. Measure the absorbance (*2.2.25*) at the absorption maximum at 275 nm.

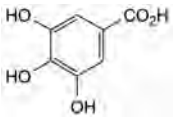
Calculate the content of $C_{19}H_{30}O_5$ taking the specific absorbance to be 321.

STORAGE

In a non-metallic container, protected from light.

IMPURITIES

*Specified impurities: A.*

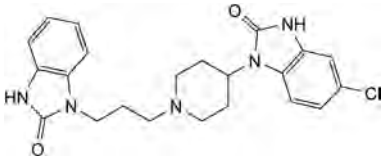


A. 3,4,5-trihydroxybenzoic acid (gallic acid).

**01/2017:1009**

# DOMPERIDONE

## Domperidonum



$C_{22}H_{24}ClN_5O_2$ $M_r$ 425.9

[57808-66-9]

DEFINITION

5-Chloro-1-[1-[3-(2-oxo-2,3-dihydro-1*H*-benzimidazol-1-yl)propyl]piperidin-4-yl]-1,3-dihydro-2*H*-benzimidazol-2-one.

*Content*: 99.0 per cent to 101.0 per cent (dried substance).

CHARACTERS

*Appearance*: white or almost white powder.

*Solubility*: practically insoluble in water, soluble in dimethylformamide, slightly soluble in ethanol (96 per cent) and in methanol.

IDENTIFICATION

*First identification: A, B.*

*Second identification: A, C, D.*

A. Melting point (*2.2.14*): 244 °C to 248 °C.

B. Infrared absorption spectrophotometry (*2.2.24*).

*Comparison*: *domperidone CRS*.

C. Thin-layer chromatography (*2.2.27*).

*Test solution.* Dissolve 20 mg of the substance to be examined in *methanol R* and dilute to 10 mL with the same solvent.

*Reference solution (a).* Dissolve 20 mg of *domperidone CRS* in *methanol R* and dilute to 10 mL with the same solvent.

*Reference solution (b).* Dissolve 20 mg of *domperidone CRS* and 20 mg of *droperidol CRS* in *methanol R* and dilute to 10 mL with the same solvent.

*Plate*: *TLC octadecylsilyl silica gel plate R*.

*Mobile phase*: *ammonium acetate solution R*, *dioxan R*, *methanol R* (20:40:40 *V/V/V*).

*Application*: 5 µL.

*Development*: over 3/4 of the plate.

*Drying*: in a current of warm air for 15 min.

*Detection*: expose to iodine vapour until the spots appear; examine in daylight.

*System suitability*: reference solution (b):

– the chromatogram shows 2 clearly separated spots.

*Results*: the principal spot in the chromatogram obtained with the test solution is similar in position and size to the principal spot in the chromatogram obtained with reference solution (a).

D. It gives the reaction of non-nitrogen substituted barbiturates (*2.3.1*).

TESTS

**Appearance of solution**. The solution is clear (*2.2.1*) and not more intensely coloured than reference solution $Y_6$ (*2.2.2, Method II*).

Dissolve 0.20 g in *dimethylformamide R* and dilute to 20.0 mL with the same solvent.

**Related substances**. Liquid chromatography (*2.2.29*). *Prepare the solutions immediately before use.*

*Test solution.* Dissolve 0.10 g of the substance to be examined in *dimethylformamide R* and dilute to 10.0 mL with the same solvent.

*Reference solution (a).* Dissolve 10.0 mg of *domperidone CRS* and 15.0 mg of *droperidol CRS* in *dimethylformamide R* and dilute to 100.0 mL with the same solvent.

*Reference solution (b).* Dilute 1.0 mL of the test solution to 100.0 mL with *dimethylformamide R*. Dilute 5.0 mL of this solution to 20.0 mL with *dimethylformamide R*.

*Column*:

– *size*: *l* = 0.1 m, Ø = 4.6 mm;

– *stationary phase*: *base-deactivated octadecylsilyl silica gel for chromatography R* (3 µm).

*Mobile phase*:

– *mobile phase A*: 5 g/L solution of *ammonium acetate R*;

– *mobile phase B*: *methanol R*;

| Time (min) | Mobile phase A (per cent *V/V*) | Mobile phase B (per cent *V/V*) |
|---|---|---|
| 0 - 10 | 70 → 0 | 30 → 100 |
| 10 - 12 | 0 | 100 |

*Flow rate*: 1.5 mL/min.

*Detection*: spectrophotometer at 280 nm.

*Injection*: 10 µL.

*Relative retention* with reference to domperidone (retention time = about 6.5 min): impurity A = about 0.4; impurity B = about 0.65; impurity C = about 0.7; droperidol = about 1.1; impurity D = about 1.15; impurity E = about 1.2; impurity F = about 1.3.

*System suitability*: reference solution (a):

– *resolution*: minimum 2.0 between the peaks due to domperidone and droperidol.

*Limits*:

– *impurities A, B, C, D, E, F*: for each impurity, not more than the area of the principal peak in the chromatogram obtained with reference solution (b) (0.25 per cent);

– *unspecified impurities*: for each impurity, not more than 0.4 times the area of the principal peak in the chromatogram obtained with reference solution (b) (0.10 per cent);

– *total*: not more than twice the area of the principal peak in the chromatogram obtained with reference solution (b) (0.5 per cent);

– *disregard limit*: 0.2 times the area of the principal peak in the chromatogram obtained with reference solution (b) (0.05 per cent).

**Loss on drying** (*2.2.32*): maximum 0.5 per cent, determined on 1.000 g by drying in an oven at 105 °C.

**Sulfated ash** (*2.4.14*): maximum 0.1 per cent, determined on 1.0 g.

ASSAY

Dissolve 0.300 g in 50 mL of a mixture of 1 volume of *anhydrous acetic acid R* and 7 volumes of *methyl ethyl ketone R*. Titrate with *0.1 M perchloric acid* until the colour changes from orange-yellow to green using 0.2 mL of *naphtholbenzein solution R* as indicator.

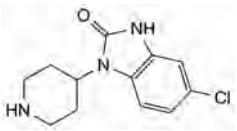
1 mL of *0.1 M perchloric acid* is equivalent to 42.59 mg of $C_{22}H_{24}ClN_5O_2$.

STORAGE

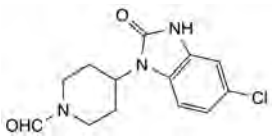
Protected from light.

IMPURITIES

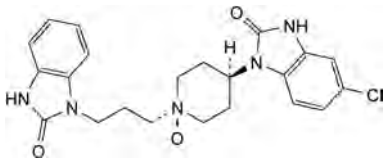
*Specified impurities: A, B, C, D, E, F.*



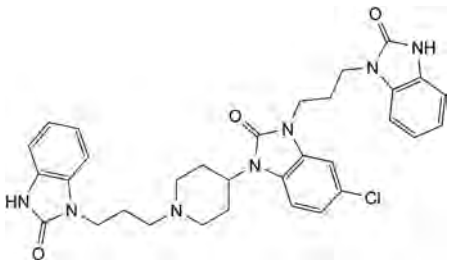
A. 5-chloro-1-(piperidin-4-yl)-1,3-dihydro-2*H*-benzimidazol-2-one,



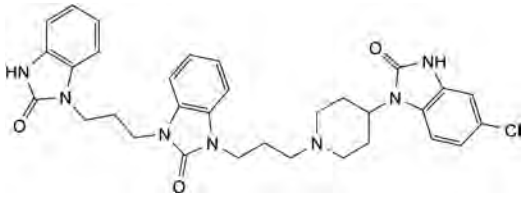
B. 4-(5-chloro-2-oxo-2,3-dihydro-1*H*-benzimidazol-1-yl)-1-formylpiperidine,



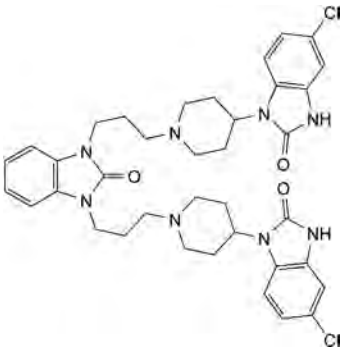
C. *cis*-4-(5-chloro-2-oxo-2,3-dihydro-1*H*-benzimidazol-1-yl)-1-[3-(2-oxo-2,3-dihydro-1*H*-benzimidazol-1-yl)propyl]piperidine 1-oxide,



D. 5-chloro-3-[3-(2-oxo-2,3-dihydro-1*H*-benzimidazol-1-yl)propyl]-1-[1-[3-(2-oxo-2,3-dihydro-1*H*-benzimidazol-1-yl)propyl]piperidin-4-yl]-1,3-dihydro-2*H*-benzimidazol-2-one,



E. 1-[3-[4-(5-chloro-2-oxo-2,3-dihydro-1*H*-benzimidazol-1-yl)piperidin-1-yl]propyl]-3-[3-(2-oxo-2,3-dihydro-1*H*-benzimidazol-1-yl)propyl]-1,3-dihydro-2*H*-benzimidazol-2-one,

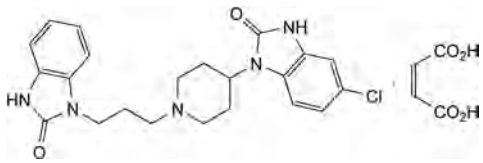


F. 1,3-bis[3-[4-(5-chloro-2-oxo-2,3-dihydro-1*H*-benzimidazol-1-yl)piperidin-1-yl]propyl]-1,3-dihydro-2*H*-benzimidazol-2-one.

**01/2017:1008**

# DOMPERIDONE MALEATE

## Domperidoni maleas



$C_{26}H_{28}ClN_5O_6$ $M_r$ 542.0
[83898-65-1]

DEFINITION

5-Chloro-1-[1-[3-(2-oxo-2,3-dihydro-1*H*-benzimidazol-1-yl)propyl]piperidin-4-yl]-1,3-dihydro-2*H*-benzimidazol-2-one hydrogen (*Z*)-butenedioate.

*Content*: 99.0 per cent to 101.0 per cent (dried substance).

CHARACTERS

*Appearance*: white or almost white powder.

*Solubility*: very slightly soluble in water, sparingly soluble in dimethylformamide, slightly soluble in methanol, very slightly soluble in ethanol (96 per cent).

It shows polymorphism (*5.9*).

IDENTIFICATION

*First identification*: *A*.

*Second identification*: *B, C*.

A. Infrared absorption spectrophotometry (*2.2.24*).

*Preparation*: discs.

*Comparison*: *domperidone maleate CRS*.

If the spectra obtained show differences, dissolve the substance to be examined and the reference substance separately in the minimum volume of *2-propanol R*, evaporate to dryness on a water-bath and record new spectra using the residues.

B. Thin-layer chromatography (*2.2.27*).

*Test solution*. Dissolve 20 mg of the substance to be examined in *methanol R* and dilute to 10 mL with the same solvent.

*Reference solution (a)*. Dissolve 20 mg of *domperidone maleate CRS* in *methanol R* and dilute to 10 mL with the same solvent.

*Reference solution (b)*. Dissolve 20 mg of *domperidone maleate CRS* and 20 mg of *droperidol CRS* in *methanol R* and dilute to 10 mL with the same solvent.

*Plate*: *TLC octadecylsilyl silica gel plate R*.

*Mobile phase*: *ammonium acetate solution R*, *dioxan R*, *methanol R* (20:40:40 *V/V/V*).

*Application*: 5 µL.

*Development*: over a path of 15 cm.

*Drying*: in a current of warm air for 15 min.

*Detection*: expose to iodine vapour until the spots appear. Examine in daylight.

*System suitability*: reference solution (b):

– the chromatogram shows 2 clearly separated spots.

*Results*: the principal spot in the chromatogram obtained with the test solution is similar in position and size to the principal spot in the chromatogram obtained with reference solution (a).

C. Triturate 0.1 g with a mixture of 1 mL of *strong sodium hydroxide solution R* and 3 mL of *water R*. Shake with 3 quantities, each of 5 mL, of *ether R*. To 0.1 mL of the aqueous layer add a solution of 10 mg of *resorcinol R* in 3 mL of *sulfuric acid R*. Heat on a water-bath for 15 min. No colour develops. To the remainder of the aqueous layer add 2 mL of *bromine solution R*. Heat on a water-bath for 15 min and then heat to boiling. Cool. To 0.1 mL of this solution add a solution of 10 mg of *resorcinol R* in 3 mL of *sulfuric acid R*. Heat on a water-bath for 15 min. A violet colour develops.

TESTS

**Appearance of solution**. The solution is clear (*2.2.1*) and not more intensely coloured than reference solution $Y_6$ (*2.2.2, Method II*).

Dissolve 0.20 g in *dimethylformamide R* and dilute to 20.0 mL with the same solvent.

**Related substances**. Liquid chromatography (*2.2.29*). *Prepare the solutions immediately before use*.

*Test solution*. Dissolve 0.10 g of the substance to be examined in *dimethylformamide R* and dilute to 10.0 mL with the same solvent.

*Reference solution (a)*. Dissolve 10.0 mg of *domperidone maleate CRS* and 15.0 mg of *droperidol CRS* in *dimethylformamide R* and dilute to 100.0 mL with the same solvent.

*Reference solution (b)*. Dilute 1.0 mL of the test solution to 100.0 mL with *dimethylformamide R*. Dilute 5.0 mL of this solution to 20.0 mL with *dimethylformamide R*.

*Blank solution*: *dimethylformamide R*.

*Column*:

– *size*: *l* = 0.1 m, Ø = 4.6 mm;
– *stationary phase*: *base-deactivated octadecylsilyl silica gel for chromatography R* (3 µm).

*Mobile phase*:

– *mobile phase A*: 5 g/L solution of *ammonium acetate R*;
– *mobile phase B*: *methanol R*;

| Time (min) | Mobile phase A (per cent *V/V*) | Mobile phase B (per cent *V/V*) |
|---|---|---|
| 0 - 10 | 70 → 0 | 30 → 100 |
| 10 - 12 | 0 | 100 |

*Flow rate*: 1.5 mL/min.

*Detection*: spectrophotometer at 280 nm.

*Equilibration*: with *methanol R* for at least 30 min and then with the mobile phase at the initial composition for at least 5 min.

*Injection*: 10 µL.

*Retention time*: domperidone = about 6.5 min; droperidol = about 7 min.

*System suitability*: reference solution (a):

– *resolution*: minimum 2.0 between the peaks due to domperidone and droperidol; if necessary, adjust the concentration of methanol in the mobile phase or adjust the time programme for the linear gradient.

*Limits*:

– *impurities A, B, C, D, E, F*: for each impurity, not more than the area of the principal peak in the chromatogram obtained with reference solution (b) (0.25 per cent);

– *total*: not more than twice the area of the principal peak in the chromatogram obtained with reference solution (b) (0.5 per cent);

– *disregard limit*: 0.2 times the area of the principal peak in the chromatogram obtained with reference solution (b) (0.05 per cent); disregard any peak due to maleic acid at the beginning of the chromatogram.

**Loss on drying** (*2.2.32*): maximum 0.5 per cent, determined on 1.000 g by drying in an oven at 105 °C.

**Sulfated ash** (*2.4.14*): maximum 0.1 per cent, determined on 1.0 g.

ASSAY

Dissolve 0.400 g in 50 mL of *anhydrous acetic acid R*. Using 0.2 mL of *naphtholbenzein solution R* as indicator, titrate with *0.1 M perchloric acid* until the colour changes from orange-yellow to green.

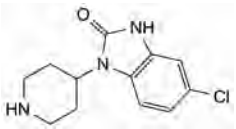
1 mL of *0.1 M perchloric acid* is equivalent to 54.20 mg of $C_{26}H_{28}ClN_5O_6$.

STORAGE

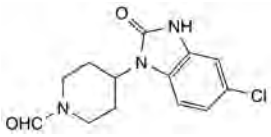
Protected from light.

IMPURITIES

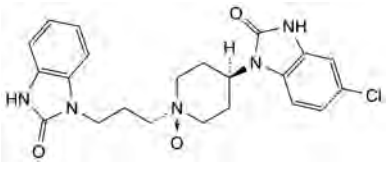
*Specified impurities: A, B, C, D, E, F.*



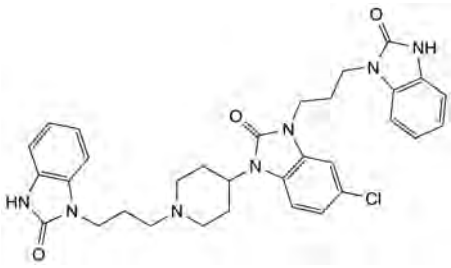
A. 5-chloro-1-(piperidin-4-yl)-1,3-dihydro-2*H*-benzimidazol-2-one,



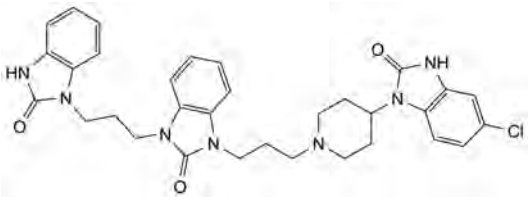
B. 4-(5-chloro-2-oxo-2,3-dihydro-1*H*-benzimidazol-1-yl)-1-formylpiperidine,



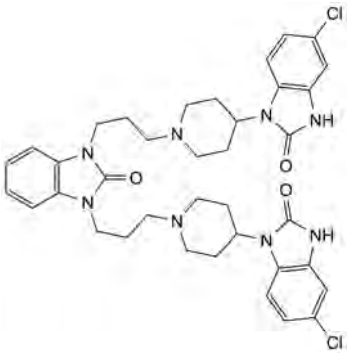
C. *cis*-4-(5-chloro-2-oxo-2,3-dihydro-1*H*-benzimidazol-1-yl)-1-[3-(2-oxo-2,3-dihydro-1*H*-benzimidazol-1-yl)propyl]piperidine 1-oxide,



D. 5-chloro-3-[3-(2-oxo-2,3-dihydro-1*H*-benzimidazol-1-yl)propyl]-1-[1-[3-(2-oxo-2,3-dihydro-1*H*-benzimidazol-1-yl)propyl]piperidin-4-yl]-1,3-dihydro-2*H*-benzimidazol-2-one,



E. 1-[3-[4-(5-chloro-2-oxo-2,3-dihydro-1*H*-benzimidazol-1-yl)piperidin-1-yl]propyl]-3-[3-(2-oxo-2,3-dihydro-1*H*-benzimidazol-1-yl)propyl]-1,3-dihydro-2*H*-benzimidazol-2-one,



F. 1,3-bis[3-[4-(5-chloro-2-oxo-2,3-dihydro-1*H*-benzimidazol-1-yl)piperidin-1-yl]propyl]-1,3-dihydro-2*H*-benzimidazol-2-one.

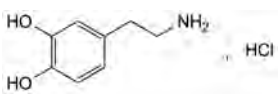
# DOPAMINE HYDROCHLORIDE

## Dopamini hydrochloridum



$C_8H_{12}ClNO_2$ $M_r$ 189.6
[62-31-7]

DEFINITION

4-(2-Aminoethyl)benzene-1,2-diol hydrochloride.

*Content*: 99.0 per cent to 101.0 per cent (dried substance).

CHARACTERS

*Appearance*: white or almost white, crystalline powder.

*Solubility*: freely soluble in water, soluble in ethanol (96 per cent), sparingly soluble in acetone and in methylene chloride.

IDENTIFICATION

*First identification: B, E.*

*Second identification*: *A, C, D, E.*

A. Ultraviolet and visible absorption spectrophotometry (*2.2.25*).

*Test solution.* Dissolve 40.0 mg in *0.1 M hydrochloric acid* and dilute to 100.0 mL with the same acid. Dilute 10.0 mL of this solution to 100.0 mL with *0.1 M hydrochloric acid*.

*Spectral range*: 230-350 nm.

*Absorption maximum*: at 280 nm.

*Specific absorbance at the absorption maximum*: 136 to 150.

B. Infrared absorption spectrophotometry (*2.2.24*).

*Comparison*: *dopamine hydrochloride CRS*.

C. Dissolve about 5 mg in a mixture of 5 mL of *1 M hydrochloric acid* and 5 mL of *water R*. Add 0.1 mL of *sodium nitrite solution R* containing 100 g/L of *ammonium molybdate R*. A yellow colour develops which becomes red on the addition of *strong sodium hydroxide solution R*.

D. Dissolve about 2 mg in 2 mL of *water R* and add 0.2 mL of *ferric chloride solution R2*. A green colour develops which changes to bluish-violet on the addition of 0.1 g of *hexamethylenetetramine R*.

E. It gives reaction (a) of chlorides (*2.3.1*).

TESTS

**Appearance of solution**. The solution is clear (*2.2.1*) and not more intensely coloured than reference solution $B_6$ or $Y_6$ (*2.2.2, Method II*).

Dissolve 0.4 g in *water R* and dilute to 10 mL with the same solvent.

**Acidity or alkalinity**. Dissolve 0.5 g in *carbon dioxide-free water R* and dilute to 10 mL with the same solvent. Add 0.1 mL of *methyl red solution R* and 0.75 mL of *0.01 M sodium hydroxide*. The solution is yellow. Add 1.5 mL of *0.01 M hydrochloric acid*. The solution is red.

**Related substances**. Liquid chromatography (*2.2.29*). *Protect the solutions from light.*

*Buffer solution.* Dissolve 21 g of *citric acid monohydrate R* in 200 mL of *1 M sodium hydroxide* and dilute to 1000 mL with *water R*. To 600 mL of this solution add 400 mL of *0.1 M hydrochloric acid*.

*Test solution.* Dissolve 50 mg of the substance to be examined in mobile phase A and dilute to 25 mL with mobile phase A.

*Reference solution (a).* Dilute 1.0 mL of the test solution to 100.0 mL with mobile phase A. Dilute 1.0 mL of this solution to 10.0 mL with mobile phase A.

*Reference solution (b).* Dissolve 10 mg of *3-O-methyldopamine hydrochloride R* (impurity B) and 10 mg of *4-O-methyldopamine hydrochloride R* (impurity A) in mobile phase A and dilute to 100 mL with mobile phase A. Dilute 6 mL of this solution to 25 mL with mobile phase A.

*Column*:

- *size*: *l* = 0.15 m, Ø = 3.9 mm;
- *stationary phase*: spherical *end-capped octadecylsilyl silica gel for chromatography R* (4 µm).

*Mobile phase*:

- *mobile phase A*: dissolve 1.08 g of *sodium octanesulfonate R* in 880 mL of the buffer solution and add 50 mL of *methanol R* and 70 mL of *acetonitrile R*;
- *mobile phase B*: dissolve 1.08 g of *sodium octanesulfonate R* in 700 mL of the buffer solution and add 100 mL of *methanol R* and 200 mL of *acetonitrile R*;

| Time (min) | Mobile phase A (per cent *V/V*) | Mobile phase B (per cent *V/V*) |
|---|---|---|
| 0 - 5 | 90 | 10 |
| 5 - 20 | 90 → 40 | 10 → 60 |
| 20 - 25 | 40 | 60 |

*Flow rate*: 1.0 mL/min.

*Detection*: spectrophotometer at 280 nm.

*Injection*: 10 µL.

*Retention time*: dopamine = about 5 min.

*System suitability*: reference solution (b):

- *resolution*: minimum 5.0 between the peaks due to impurities B and A.

*Limits*:

- *unspecificied impurities*: for each impurity, not more than the area of the principal peak in the chromatogram obtained with reference solution (a) (0.10 per cent);
- *total*: not more than twice the area of the principal peak in the chromatogram obtained with reference solution (a) (0.2 per cent);
- *disregard limit*: 0.5 times the area of the principal peak in the chromatogram obtained with reference solution (a) (0.05 per cent).

**Loss on drying** (*2.2.32*): maximum 0.5 per cent, determined on 1.000 g by drying in an oven at 105 °C for 2 h.

**Sulfated ash** (*2.4.14*): maximum 0.1 per cent, determined on 1.0 g.

ASSAY

*In order to avoid overheating in the reaction medium, mix thoroughly throughout the titration and stop the titration immediately after the end-point has been reached.*

Dissolve 0.150 g in 10 mL of *anhydrous formic acid R*. Add 50 mL of *acetic anhydride R*. Titrate with *0.1 M perchloric acid*, determining the end-point potentiometrically (*2.2.20*).

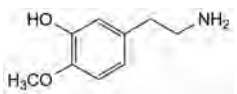
1 mL of *0.1 M perchloric acid* is equivalent to 18.96 mg of $C_8H_{12}ClNO_2$.

STORAGE

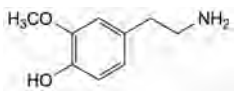
In an airtight container, under nitrogen, protected from light.

IMPURITIES

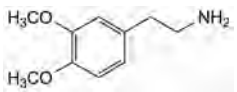
*Other detectable impurities* (the following substances would, if present at a sufficient level, be detected by one or other of the tests in the monograph. They are limited by the general acceptance criterion for other/unspecified impurities and/or by the general monograph *Substances for pharmaceutical use (2034)*. It is therefore not necessary to identify these impurities for demonstration of compliance. See also *5.10. Control of impurities in substances for pharmaceutical use*): *A, B, C.*



A. 5-(2-aminoethyl)-2-methoxyphenol (4-*O*-methyldopamine),



B. 4-(2-aminoethyl)-2-methoxyphenol (3-*O*-methyldopamine),

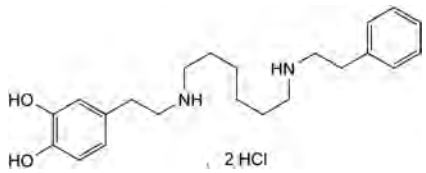


C. 2-(3,4-dimethoxyphenyl)ethanamine.

**01/2017:1748**

# DOPEXAMINE DIHYDROCHLORIDE

## Dopexamini dihydrochloridum



$C_{22}H_{34}Cl_2N_2O_2$ $M_r$ 429.4
[86484-91-5]

DEFINITION

4-[2-[[6-[(2-Phenylethyl)amino]hexyl]amino]ethyl]benzene-1,2-diol dihydrochloride.

*Content*: 98.5 per cent to 101.0 per cent (anhydrous substance).

CHARACTERS

*Appearance*: white or almost white, crystalline powder.

*Solubility*: soluble in water, sparingly soluble in ethanol (96 per cent) and in methanol, practically insoluble in acetone.

IDENTIFICATION

A. Infrared absorption spectrophotometry (*2.2.24*).
*Comparison*: *dopexamine dihydrochloride CRS.*

B. It gives reaction (a) of chlorides (*2.3.1*).

TESTS

**Appearance of solution**. The solution is clear (*2.2.1*) and not more intensely coloured than reference solution $BY_7$ (*2.2.2, Method II*).

Dissolve 0.10 g in *0.1 M hydrochloric acid* and dilute to 10 mL with the same acid.

**pH** (*2.2.3*): 3.7 to 5.7.

Dissolve 0.20 g in *carbon dioxide-free water R* and dilute to 20 mL with the same solvent.

**Related substances**. Liquid chromatography (*2.2.29*).

*Test solution.* Dissolve 0.100 g of the substance to be examined in mobile phase A and dilute to 10.0 mL with mobile phase A.

*Reference solution (a).* Dilute 1.0 mL of the test solution to 100.0 mL with mobile phase A. Dilute 1.0 mL of this solution to 10.0 mL with mobile phase A.

*Reference solution (b).* Dissolve 5 mg of the substance to be examined and 5 mg of *dopexamine impurity B CRS* in mobile phase A and dilute to 10.0 mL with mobile phase A.

*Reference solution (c).* Dissolve 5 mg of *dopexamine impurity F CRS* in mobile phase A and dilute to 100 mL with mobile phase A.

*Column*:
- *size*: *l* = 0.15 m, Ø = 4.6 mm;
- *stationary phase*: *octadecylsilyl silica gel for chromatography R* (5 µm);
- *temperature*: 45 °C.

*Mobile phase*:
- *mobile phase A*: mix 5 volumes of *buffer solution pH 2.5 R* and 95 volumes of *water R*;
- *mobile phase B*: mix 5 volumes of *buffer solution pH 2.5 R* and 95 volumes of a 60 per cent *V/V* solution of *acetonitrile R*;

| Time (min) | Mobile phase A (per cent *V/V*) | Mobile phase B (per cent *V/V*) |
|---|---|---|
| 0 - 10 | 81 → 77 | 19 → 23 |
| 10 - 25 | 77 → 50 | 23 → 50 |
| 25 - 30 | 50 | 50 |

*Flow rate*: 1 mL/min.

*Detection*: spectrophotometer at 280 nm.

*Preconditioning of the column*: rinse for 5 min with a mixture of 19 volumes of mobile phase B and 81 volumes of mobile phase A.

*Injection*: 20 µL.

*Relative retention* with reference to dopexamine (retention time = about 5 min): impurity A = about 0.5; impurity B = about 2.0; impurity C = about 2.3; impurity D = about 2.8; impurity E = about 2.9; impurity F = about 3.0; impurity I = about 3.6; impurity J = about 5.0; impurity K = about 5.9.

*System suitability*: reference solution (b):
- *resolution*: minimum 2 between the peaks due to dopexamine and impurity B.

*Limits*:
- *correction factors*: for the calculation of content, multiply the peak areas of the following impurities by the corresponding correction factor: impurity A = 1.4; impurity F = 0.7;
- *impurities A, B, C, D, E, F, I, K*: for each impurity, not more than the area of the principal peak in the chromatogram obtained with reference solution (a) (0.1 per cent);
- *unspecified impurities*: for each impurity, not more than the area of the principal peak in the chromatogram obtained with reference solution (a) (0.10 per cent);
- *total*: not more than 5 times the area of the principal peak in the chromatogram obtained with reference solution (a) (0.5 per cent);
- *disregard limit*: 0.5 times the area of the principal peak in the chromatogram obtained with reference solution (a) (0.05 per cent).

**Impurity J**. Liquid chromatography (*2.2.29*) as described in the test for related substances with the following modification.

*Detection*: spectrophotometer at 210 nm.

*Limit*:
- *impurity J*: not more than the area of the principal peak in the chromatogram obtained with reference solution (a) (0.1 per cent).

**Water** (*2.5.12*): maximum 0.5 per cent, determined on 1.00 g.

**Sulfated ash** (*2.4.14*): maximum 0.1 per cent, determined on 1.0 g.

**Bacterial endotoxins** (*2.6.14*): less than 10 IU/mg.

ASSAY

*Carry out the titration immediately after preparation of the test solution. In order to avoid overheating in the reaction medium, mix thoroughly throughout and stop the titration immediately after the end-point has been reached.*

Dissolve 0.150 g in 10 mL of *anhydrous formic acid R*. Add 50 mL of *acetic anhydride R*. Titrate with *0.1 M perchloric acid*, determining the end-point potentiometrically (*2.2.20*).

1 mL of *0.1 M perchloric acid* is equivalent to 21.47 mg of $C_{22}H_{34}Cl_2N_2O_2$.

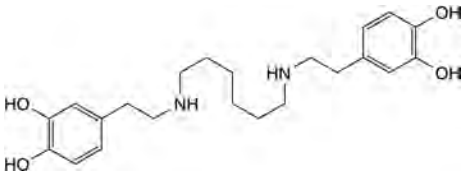
STORAGE

Protected from light.

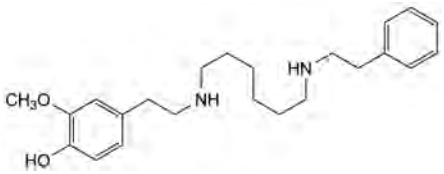
IMPURITIES

*Specified impurities: A, B, C, D, E, F, I, J, K.*

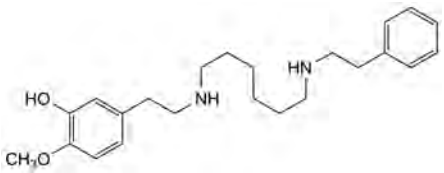
*Other detectable impurities* (the following substances would, if present at a sufficient level, be detected by one or other of the tests in the monograph. They are limited by the general acceptance criterion for other/unspecified impurities and/or by the general monograph *Substances for pharmaceutical use (2034)*. It is therefore not necessary to identify these impurities for demonstration of compliance. See also *5.10. Control of impurities in substances for pharmaceutical use*): *G, H.*



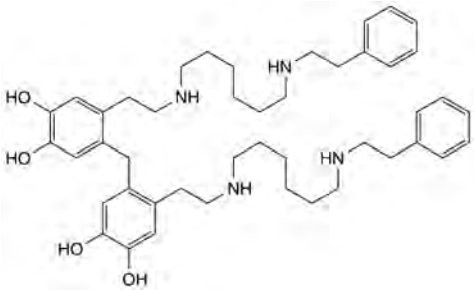
A. 4,4′-[hexane-1,6-diylbis(iminoethylene)]dibenzene-1,2-diol,



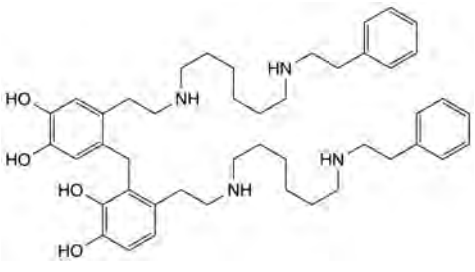
B. 2-methoxy-4-[2-[[6-[(2-phenylethyl)amino]hexyl]amino]-ethyl]phenol,



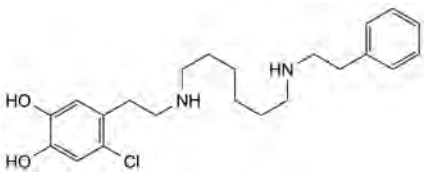
C. 2-methoxy-5-[2-[[6-[(2-phenylethyl)amino]hexyl]amino]-ethyl]phenol,



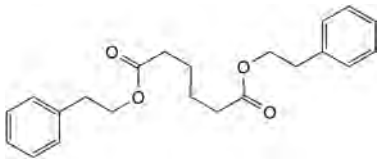
D. 4,4′-methylenebis[5-[2-[[6-[(2-phenylethyl)amino]hexyl]-amino]ethyl]benzene-1,2-diol],



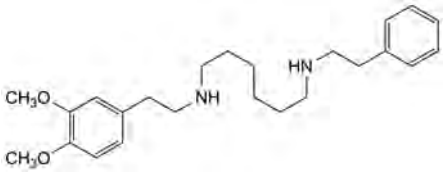
E. 3-[4,5-dihydroxy-2-[2-[[6-[(2-phenylethyl)amino]hexyl]-amino]ethyl]benzyl]-4-[2-[[6-[(2-phenylethyl)amino]-hexyl]amino]ethyl]benzene-1,2-diol,



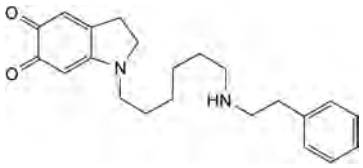
F. 4-chloro-5-[2-[[6-[(2-phenylethyl)amino]hexyl]amino]-ethyl]benzene-1,2-diol,



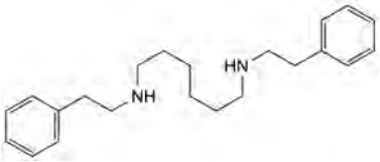
G. bis(2-phenylethyl) hexanedioate,



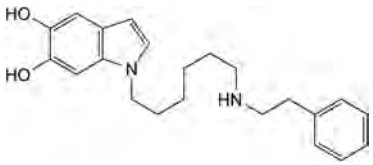
H. *N*-[2-(3,4-dimethoxyphenyl)ethyl]-*N*′-(2-phenylethyl)hexane-1,6-diamine,



I. 1-[6-[(2-phenylethyl)amino]hexyl]-2,3-dihydro-1*H*-indole5,6-dione (dopexamine aminochrome),



J. *N*,*N*′-bis(2-phenylethyl)hexane-1,6-diamine,

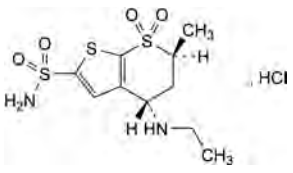


K. 1-[6-[(2-phenylethyl)amino]hexyl]-1*H*-indole-5,6-diol.

**01/2008:2359**

# DORZOLAMIDE HYDROCHLORIDE

## Dorzolamidi hydrochloridum



$C_{10}H_{17}ClN_2O_4S_3$ $M_r$ 360.9

[130693-82-2]

DEFINITION

(4*S*,6*S*)-4-(Ethylamino)-6-methyl-5,6-dihydro-4*H*-thieno[2,3-*b*]thiopyran-2-sulfonamide 7,7-dioxide hydrochloride.

*Content*: 99.0 per cent to 101.0 per cent (dried substance).

CHARACTERS

*Appearance*: white or almost white, crystalline powder.

*Solubility*: soluble in water, slightly soluble in methanol, very slightly soluble in anhydrous ethanol.

It shows polymorphism (*5.9*).

IDENTIFICATION

A. Infrared absorption spectrophotometry (*2.2.24*).

*Comparison*: *dorzolamide hydrochloride CRS*.

If the spectra obtained in the solid state show differences, dissolve the substance to be examined and the reference substance separately in *methanol R*, evaporate to dryness and record new spectra using the residues.

B. It complies with the test for impurity A (see Tests).

C. It gives reaction (a) of chlorides (*2.3.1*).

TESTS

**Impurity A**. Liquid chromatography (*2.2.29*).

*Solvent mixture*: *acetonitrile R*, *glacial acetic acid R*, *1,1-dimethylethyl methyl ether R* (3:10:87 *V/V/V*).

*Test solution.* In a centrifuge tube, dissolve 20.0 mg of the substance to be examined in 4 mL of *dilute ammonia R4*, add 4 mL of *ethyl acetate R*, and mix. Separate the organic layer and transfer it to a separate centrifuge tube. Add 4 mL of *ethyl acetate R* to the aqueous layer, mix, separate the organic layer, and combine it with the 1st extract. Evaporate the combined organic layers to dryness in a water-bath at 50 °C under a stream of *nitrogen R*. Dissolve the residue in 3 mL of *acetonitrile R*, add 0.06 mL of *(S)-(−)-α-methylbenzyl isocyanate R*, and heat in a water-bath at 50 °C for 5 min. Evaporate to dryness in a water-bath at 50 °C under a stream of *nitrogen R*. Dissolve the residue in 10 mL of the solvent mixture.

*Reference solution.* In a centrifuge tube, dissolve 18.0 mg of *dorzolamide hydrochloride CRS* and 2.0 mg of *dorzolamide impurity A CRS* in 4 mL of *dilute ammonia R4*, and proceed as indicated for the test solution beginning with "add 4 mL of *ethyl acetate R*, and mix".

*Column*:

– *size*: *l* = 0.25 m, Ø = 4.6 mm;
– *stationary phase*: *silica gel for chromatography R* (5 µm).

*Mobile phase*: *water R*, *acetonitrile R*, *heptane R*, *1,1-dimethylethyl methyl ether R* (0.2:2:35:63 *V/V/V/V*).

*Flow rate*: 2 mL/min.

*Detection*: spectrophotometer at 254 nm.

*Injection*: 10 µL.

*Run time*: 3 times the retention time of dorzolamide.

*Relative retention* with reference to dorzolamide (retention time = about 10 min): impurity A = about 1.4.

*System suitability*: reference solution:

– *resolution*: minimum 4.0 between the peaks due to dorzolamide and impurity A.

Calculate the percentage content of impurity A using the following expression:

$$\frac{A}{A+B} \times 100$$

*A* = area of the peak due to impurity A in the chromatogram obtained with the test solution;

*B* = area of the peak due to dorzolamide in the chromatogram obtained with the test solution.

*Limit*:

– *impurity A*: maximum 0.5 per cent.

**Related substances**. Liquid chromatography (*2.2.29*).

*Test solution.* Dissolve 30.0 mg of the substance to be examined in mobile phase A and dilute to 50.0 mL with mobile phase A.

*Reference solution (a).* Dissolve 1.0 mL of the test solution to 100.0 mL with mobile phase A. Dilute 1.0 mL of this solution to 10.0 mL with mobile phase A.

*Reference solution (b).* Dissolve 2 mg of *dorzolamide for system suitability CRS* (containing impurity C) in 2 mL of mobile phase A.

*Column*:

– *size*: *l* = 0.25 m, Ø = 4.6 mm;
– *stationary phase*: *end-capped octadecylsilyl silica gel for chromatography R* (5 µm);
– *temperature*: 35 °C.

*Mobile phase*:

– *mobile phase A*: mix 65 mL of *acetonitrile R* and 935 mL of a 3.7 g/L solution of *potassium dihydrogen phosphate R*;
– *mobile phase B*: *acetonitrile R*;

| Time (min) | Mobile phase A (per cent *V/V*) | Mobile phase B (per cent *V/V*) |
|---|---|---|
| 0 - 15 | 100 | 0 |
| 15 - 30 | 100 → 50 | 0 → 50 |
| 30 - 37 | 50 → 100 | 50 → 0 |
| 37 - 44 | 100 | 0 |

*Flow rate*: 1.5 mL/min.

*Detection*: spectrophotometer at 254 nm.

*Injection*: 10 µL.

*Identification of impurities*: use the chromatogram supplied with *dorzolamide for system suitability CRS* and the chromatogram obtained with reference solution (b) to identify the peak due to impurity C.

*Relative retention* with reference to dorzolamide (retention time = about 11 min): impurity C = about 0.9.

*System suitability*: reference solution (b):

– *resolution*: minimum 2.0 between the peaks due to impurity C and dorzolamide.

*Limits*:

– *impurity C*: not more than 1.5 times the area of the principal peak in the chromatogram obtained with reference solution (a) (0.15 per cent);
– *unspecified impurities*: for each impurity, not more than the area of the principal peak in the chromatogram obtained with reference solution (a) (0.10 per cent);
– *total*: not more than 3 times the area of the principal peak in the chromatogram obtained with reference solution (a) (0.3 per cent);
– *disregard limit*: 0.5 times the area of the principal peak in the chromatogram obtained with reference solution (a) (0.05 per cent).

**Loss on drying** (*2.2.32*): maximum 0.5 per cent, determined on 1.000 g by drying in an oven at 105 °C.

**Sulfated ash** (*2.4.14*): maximum 0.1 per cent, determined on 1.0 g.

ASSAY

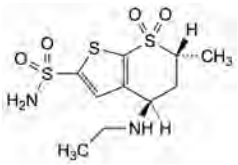
Dissolve 0.150 g in a mixture of 5.0 mL of *0.01 M hydrochloric acid* and 50 mL of *ethanol (96 per cent) R*, using sonication if necessary. Carry out a potentiometric titration (*2.2.20*), using *0.1 M sodium hydroxide*. Read the volume added between the 1st and the 3rd points of inflexion.

1 mL of *0.1 M sodium hydroxide* is equivalent to 18.05 mg of $C_{10}H_{17}N_2O_4S_3Cl$.

IMPURITIES

*Specified impurities: A, C.*

*Other detectable impurities* (the following substances would, if present at a sufficient level, be detected by one or other of the tests in the monograph. They are limited by the general acceptance criterion for other/unspecified impurities and/or by the general monograph *Substances for pharmaceutical use (2034)*. It is therefore not necessary to identify these impurities for demonstration of compliance. See also *5.10. Control of impurities in substances for pharmaceutical use*): *B, D.*



A. (4*R*,6*R*)-4-(ethylamino)-6-methyl-5,6-dihydro-4*H*-thieno-[2,3-*b*]thiopyran-2-sulfonamide 7,7-dioxide,

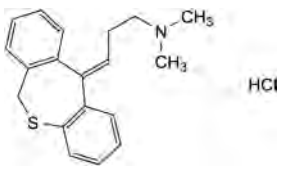
# DOSULEPIN HYDROCHLORIDE

## Dosulepini hydrochloridum



$C_{19}H_{22}ClNS$ $M_r$ 331.9

[897-15-4]

DEFINITION

(*E*)-3-(Dibenzo[*b*,*e*]thiepin-11(6*H*)-ylidene)-*N*,*N*-dimethylpropan-1-amine hydrochloride.

*Content*: 98.0 per cent to 101.0 per cent (dried substance).

CHARACTERS

*Appearance*: white or faintly yellow, crystalline powder.

*Solubility*: freely soluble in water, in ethanol (96 per cent) and in methylene chloride.

IDENTIFICATION

*First identification: B, D.*

*Second identification: A, C, D.*

A. Ultraviolet and visible absorption spectrophotometry (*2.2.25*).

*Test solution.* Dissolve 25.0 mg in a 1 g/L solution of *hydrochloric acid R* in *methanol R* and dilute to 100.0 mL with the same solution. Dilute 2.0 mL to 50.0 mL with a 1 g/L solution of *hydrochloric acid R* in *methanol R*.

*Spectral range*: 220-350 nm.

*Absorption maxima*: 231 nm and 306 nm.

*Shoulder*: about 260 nm.

*Specific absorbance at the absorption maximum at 231 nm*: 660 to 730.

B. Infrared absorption spectrophotometry (*2.2.24*).

*Comparison*: *dosulepin hydrochloride CRS*.

C. Dissolve about 1 mg in 5 mL of *sulfuric acid R*. A dark red colour is produced.

D. It gives reaction (b) of chlorides (*2.3.1*).

TESTS

**Appearance of solution**. The solution is clear (*2.2.1*) and not more intensely coloured than reference solution $Y_5$ (*2.2.2, Method II*).

Dissolve 1 g in *water R* and dilute to 20 mL with the same solvent.

**pH** (*2.2.3*): 4.2 to 5.2.

Dissolve 1 g in *carbon dioxide-free water R* and dilute to 10 mL with the same solvent.

**Related substances**. Liquid chromatography (*2.2.29*). *Prepare the solutions immediately before use and protect from light.*

*Test solution.* Dissolve 50.0 mg of the substance to be examined in 5 mL of *methanol R* and dilute to 100.0 mL with the mobile phase.

*Reference solution (a).* Dissolve 12.5 mg of *dosulepin impurity A CRS* in 5 mL of *methanol R* and dilute to 50.0 mL with the mobile phase. Dilute 0.5 mL of this solution to 100.0 mL with the mobile phase.

*Reference solution (b).* Dissolve 10 mg of *dosulepin for system suitability CRS* (containing impurity E) in 5 mL of *methanol R* and dilute to 20 mL with the mobile phase.

*Column*:

- *size*: *l* = 0.25 m, Ø = 4.6 mm;
- *stationary phase*: *end-capped cyanosilyl silica gel for chromatography R* (5 µm);
- *temperature*: 35 °C.

*Mobile phase*: 0.83 per cent *V/V* solution of *perchloric acid R*, *propanol R*, *methanol R1*, *water for chromatography R* (1:10:30:60 *V/V/V/V*).

*Flow rate*: 1 mL/min.

*Detection*: spectrophotometer at 229 nm.

*Injection*: 5 µL.

*Run time*: 2.5 times the retention time of dosulepin.

*Identification of impurities*: use the chromatogram obtained with reference solution (a) to identify the peak due to impurity A; use the chromatogram supplied with *dosulepin for system suitability CRS* and the chromatogram obtained with reference solution (b) to identify the peak due to impurity E.

*Relative retention* with reference to dosulepin (retention time = about 14 min): impurity A = about 0.3; impurity E = about 0.92.

*System suitability*: reference solution (b):

- *peak-to-valley ratio*: minimum 4, where $H_p$ = height above the baseline of the peak due to impurity E and $H_v$ = height above the baseline of the lowest point of the curve separating this peak from the peak due to dosulepin.

*Limits*:

- *impurity E*: not more than 5 per cent of the sum of the areas of the peak due to impurity E and the principal peak in the chromatogram obtained with the test solution (5 per cent);
- *impurity A*: not more than the area of the principal peak in the chromatogram obtained with reference solution (a) (0.25 per cent);
- *unspecified impurities*: for each impurity, not more than 0.4 times the area of the principal peak in the chromatogram obtained with reference solution (a) (0.10 per cent);
- *sum of impurities other than E*: not more than twice the area of the principal peak in the chromatogram obtained with reference solution (a) (0.5 per cent);
- *disregard limit*: 0.2 times the area of the principal peak in the chromatogram obtained with reference solution (a) (0.05 per cent).

**Loss on drying** (*2.2.32*): maximum 0.5 per cent, determined on 1.000 g by drying in an oven at 105 °C.

**Sulfated ash** (*2.4.14*): maximum 0.1 per cent, determined on 1.0 g.

ASSAY

Dissolve 0.250 g in a mixture of 5 mL of *anhydrous acetic acid R* and 35 mL of *acetic anhydride R*. Titrate with *0.1 M perchloric acid*, determining the end-point potentiometrically (*2.2.20*).

1 mL of *0.1 M perchloric acid* is equivalent to 33.19 mg of $C_{19}H_{22}ClNS$.

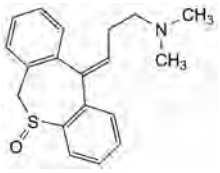
STORAGE

Protected from light.

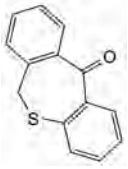
IMPURITIES

*Specified impurities: A, E.*

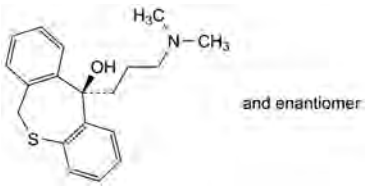
*Other detectable impurities* (the following substances would, if present at a sufficient level, be detected by one or other of the tests in the monograph. They are limited by the general acceptance criterion for other/unspecified impurities and/or by the general monograph *Substances for pharmaceutical use (2034)*. It is therefore not necessary to identify these impurities for demonstration of compliance. See also *5.10. Control of impurities in substances for pharmaceutical use*): *B, C, D.*



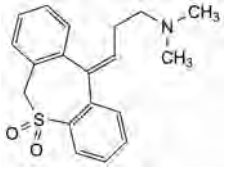
A. (*E*)-3-(5-oxo-5λ⁴-dibenzo[*b*,*e*]thiepin-11(6*H*)-ylidene)-*N*,*N*-dimethylpropan-1-amine,



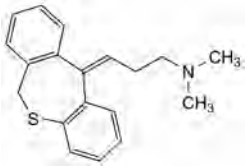
B. dibenzo[*b*,*e*]thiepin-11(6*H*)-one,



C. (11*RS*)-11-[3-(dimethylamino)propyl]-6,11-dihydrodibenzo[*b*,*e*]thiepin-11-ol,



D. (*E*)-3-(5,5-dioxo-5λ⁶-dibenzo[*b*,*e*]thiepin-11(6*H*)-ylidene)-*N*,*N*-dimethylpropan-1-amine,

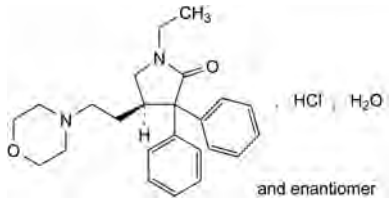


E. (*Z*)-3-(dibenzo[*b*,*e*]thiepin-11(6*H*)-ylidene)-*N*,*N*-dimethylpropan-1-amine.

**01/2017:1201**

# DOXAPRAM HYDROCHLORIDE

## Doxaprami hydrochloridum



$C_{24}H_{31}ClN_2O_2,H_2O$ $M_r$ 433.0
[7081-53-0]

DEFINITION

(4*RS*)-1-Ethyl-4-[2-(morpholin-4-yl)ethyl]-3,3-diphenylpyrrolidin-2-one hydrochloride monohydrate.

*Content*: 98.0 per cent to 100.5 per cent (dried substance).

CHARACTERS

*Appearance*: white or almost white, crystalline powder.

*Solubility*: sparingly soluble in water, soluble in ethanol (96 per cent) and in methylene chloride.

IDENTIFICATION

*First identification: A, C.*

*Second identification: B, C.*

A. Infrared absorption spectrophotometry (*2.2.24*).
*Comparison*: *doxapram hydrochloride CRS.*

B. Thin-layer chromatography (*2.2.27*).
*Test solution.* Dissolve 10 mg of the substance to be examined in *methanol R* and dilute to 10 mL with the same solvent.
*Reference solution.* Dissolve 10 mg of *doxapram hydrochloride CRS* in *methanol R* and dilute to 10 mL with the same solvent.

*Plate*: *TLC silica gel plate R*.

*Mobile phase*: solution of *ammonia R* containing 17 g/L of $NH_3$, *2-propanol R*, *2-methylpropanol R* (10:10:80 *V/V/V*).

*Application*: 10 µL.

*Development*: over 2/3 of the plate.

*Drying*: in air.

*Detection*: spray with *dilute potassium iodobismuthate solution R* and examine immediately.

*Results*: the principal spot in the chromatogram obtained with the test solution is similar in position, colour and size to the principal spot in the chromatogram obtained with the reference solution.

C. It gives reaction (a) of chlorides (*2.3.1*).

TESTS

**Solution S**. Dissolve 1.000 g in *carbon dioxide-free water R* and dilute to 50.0 mL with the same solvent.

**Appearance of solution**. The solution is clear (*2.2.1*) and colourless (*2.2.2, Method II*).

Dilute 10 mL of solution S to 25 mL with *water R*.

**pH** (*2.2.3*): 3.5 to 5.0.

Dilute 5 mL of solution S to 25 mL with *carbon dioxide-free water R*.

**Optical rotation** (*2.2.7*): − 0.10° to + 0.10°, determined on solution S.

**Related substances**. Liquid chromatography (*2.2.29*). *Prepare the solutions immediately before use.*

*Test solution.* Dissolve 10.0 mg of the substance to be examined in the mobile phase and dilute to 10.0 mL with the mobile phase.

*Reference solution (a).* Dilute 1.0 mL of the test solution to 100.0 mL with the mobile phase.

*Reference solution (b).* Dilute 1.0 mL of reference solution (a) to 5.0 mL with the mobile phase.

*Reference solution (c).* Dissolve 5 mg of *doxapram impurity B CRS* in the mobile phase and dilute to 5.0 mL with the mobile phase. To 1.0 mL of the solution, add 1.0 mL of the test solution and dilute to 100.0 mL with the mobile phase.

*Column*:

- *size*: *l* = 0.25 m, Ø = 4.6 mm;
- *stationary phase*: *end-capped octadecylsilyl silica gel for chromatography R* (5 µm).

*Mobile phase*: mix 50 volumes of *acetonitrile R* and 50 volumes of a 0.82 g/L solution of *sodium acetate R* adjusted to pH 4.5 with *glacial acetic acid R*.

*Flow rate*: 1.5 mL/min.

*Detection*: spectrophotometer at 214 nm.

*Injection*: 20 µL.

*Run time*: 4 times the retention time of doxapram.

*Retention time*: doxapram = about 6 min.

*System suitability*: reference solution (c):

- *resolution*: minimum 3.0 between the peaks due to doxapram and impurity B.

*Limits*:

- *any impurity*: not more than the area of the principal peak in the chromatogram obtained with reference solution (b) (0.2 per cent),
- *total*: not more than the area of the principal peak in the chromatogram obtained with reference solution (a) (1.0 per cent),
- *disregard limit*: 0.05 times the area of the principal peak in the chromatogram obtained with reference solution (a) (0.05 per cent).

**Loss on drying** (*2.2.32*): 3.0 per cent to 4.5 per cent, determined on 1.000 g by drying in an oven at 105 °C.

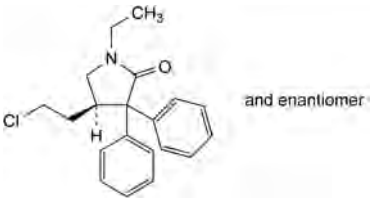
**Sulfated ash** (*2.4.14*): maximum 0.1 per cent, determined on 1.0 g.

ASSAY

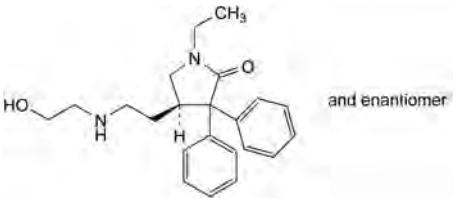
Dissolve 0.300 g in a mixture of 10 mL of *0.01 M hydrochloric acid* and 50 mL of *ethanol (96 per cent) R*. Carry out a potentiometric titration (*2.2.20*) using *0.1 M sodium hydroxide*. Read the volume added between the 2 points of inflexion.

1 mL of *0.1 M sodium hydroxide* is equivalent to 41.50 mg of $C_{24}H_{31}ClN_2O_2$.

IMPURITIES



A. (4*RS*)-4-(2-chloroethyl)-1-ethyl-3,3-diphenylpyrrolidin-2-one,

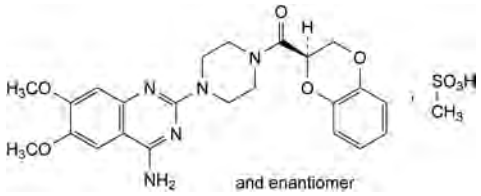


B. (4*RS*)-1-ethyl-4-[2-[(2-hydroxyethyl)amino]ethyl]-3,3-diphenylpyrrolidin-2-one.

**07/2019:2125**

# DOXAZOSIN MESILATE

## Doxazosini mesilas



$C_{24}H_{29}N_5O_8S$ $M_r$ 547.6
[77883-43-3]

DEFINITION

[4-(4-Amino-6,7-dimethoxyquinazolin-2-yl)piperazin-1-yl][(2*RS*)-2,3-dihydro-1,4-benzodioxin-2-yl]methanone methanesulfonate.

*Content*: 98.0 per cent to 102.0 per cent (anhydrous substance).

PRODUCTION

It is considered that alkyl methanesulfonate esters are genotoxic and are potential impurities in doxazosin mesilate. The manufacturing process should be developed taking into consideration the principles of quality risk management, together with considerations of the quality of starting materials, process capability and validation. The general methods *2.5.37. Methyl, ethyl and isopropyl methanesulfonate in methanesulfonic acid*, *2.5.38. Methyl, ethyl and isopropyl methanesulfonate in active substances* and *2.5.39. Methanesulfonyl chloride in methanesulfonic acid* are available to assist manufacturers.

CHARACTERS

*Appearance*: white or almost white, crystalline powder.

*Solubility*: slightly soluble in water, soluble in a mixture of 15 volumes of water and 35 volumes of tetrahydrofuran, slightly soluble in methanol, practically insoluble in acetone.

It shows polymorphism (*5.9*); some forms may be hygroscopic.

IDENTIFICATION

Infrared absorption spectrophotometry (*2.2.24*).

*Comparison*: *doxazosin mesilate CRS*.

If the spectra obtained in the solid state show differences, mix 1 part of the substance to be examined and 1 part of the reference substance separately with 10 parts of *anhydrous ethanol R* and heat to boiling. Continue heating the suspension under a reflux condenser for about 3 h. Cool and filter. Record new spectra using the previously dried residues on the filters.

TESTS

**Appearance of solution**. The solution is clear (*2.2.1*) and not more intensely coloured than reference solution $BY_6$ (*2.2.2, Method II*).

Dissolve 1.0 g in a mixture of 15 mL of *water R* and 35 mL of *tetrahydrofuran R*.

**Related substances**. Liquid chromatography (*2.2.29*).

*Test solution*. Dissolve 25.0 mg of the substance to be examined in 5 mL of mobile phase B, adding *water R*, and dilute to 50.0 mL with *water R*.

*Reference solution (a)*. Dilute 1.0 mL of the test solution to 100.0 mL with *water R*. Dilute 1.0 mL of this solution to 10.0 mL with *water R*.

*Reference solution (b)*. Dissolve 25.0 mg of *doxazosin mesilate CRS* in 5 mL of mobile phase B, adding *water R*, and dilute to 50.0 mL with *water R*.

*Reference solution (c)*. Dissolve 5 mg of *doxazosin impurity D CRS* and 5 mg of *doxazosin impurity F CRS* in 5 mL of mobile phase B, adding *water R*, and dilute to 50 mL with *water R*. Dilute 1 mL of this solution to 5 mL with *water R*.

*Column*:

- *size*: *l* = 0.25 m, Ø = 4.0 mm;
- *stationary phase*: *base-deactivated end-capped octylsilyl silica gel for chromatography R* (5 µm);
- *temperature*: 35 °C.

*Mobile phase*:

- *mobile phase A*: 1.5 g/L solution of *phosphoric acid R*;
- *mobile phase B*: 1.5 g/L solution of *phosphoric acid R* in *acetonitrile R1*;

| Time (min) | Mobile phase A (per cent *V/V*) | Mobile phase B (per cent *V/V*) |
|---|---|---|
| 0 - 5 | 90 | 10 |
| 5 - 40 | 90 → 50 | 10 → 50 |
| 40 - 45 | 50 | 50 |

*Flow rate*: 0.8 mL/min.

*Detection*: spectrophotometer at 210 nm.

*Injection*: 10 µL of the test solution and reference solutions (a) and (c).

*Identification of impurities*: use the chromatogram obtained with reference solution (c) to identify the peaks due to impurities D and F.

*Relative retention* with reference to doxazosin (retention time = about 30 min): impurity D = about 0.5; impurity F = about 0.6.

*System suitability*: reference solution (c):

- *resolution*: minimum 4.5 between the peaks due to impurities D and F.

*Limits*:

- *unspecified impurities*: for each impurity, not more than the area of the principal peak in the chromatogram obtained with reference solution (a) (0.10 per cent);
- *total*: not more than 3 times the area of the principal peak in the chromatogram obtained with reference solution (a) (0.3 per cent);
- *disregard limit*: 0.5 times the area of the principal peak in the chromatogram obtained with reference solution (a) (0.05 per cent).

**Water** (*2.5.12*): maximum 1.5 per cent, determined on 0.500 g.

**Sulfated ash** (*2.4.14*): maximum 0.1 per cent, determined on 1.0 g.

ASSAY

Liquid chromatography (*2.2.29*) as described in the test for related substances with the following modification.

*Injection*: test solution and reference solution (b).

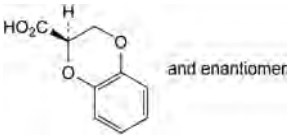
Calculate the percentage content of $C_{24}H_{29}N_5O_8S$ taking into account the assigned content of *doxazosin mesilate CRS*.

STORAGE

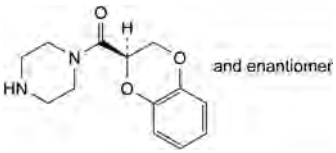
In an airtight container.

IMPURITIES

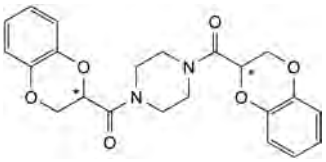
*Other detectable impurities* (the following substances would, if present at a sufficient level, be detected by one or other of the tests in the monograph. They are limited by the general acceptance criterion for other/unspecified impurities and/or by the general monograph *Substances for pharmaceutical use (2034)*. It is therefore not necessary to identify these impurities for demonstration of compliance. See also *5.10. Control of impurities in substances for pharmaceutical use*): *A, B, C, D, E, F, G, H*.



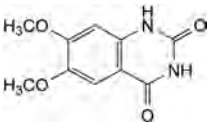
A. (2*RS*)-2,3-dihydro-1,4-benzodioxine-2-carboxylic acid,



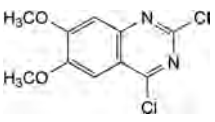
B. [(2*RS*)-2,3-dihydro-1,4-benzodioxin-2-yl](piperazin-1-yl)methanone,



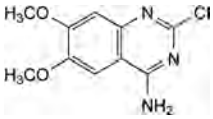
C. (piperazine-1,4-diyl)bis[[(2Ξ)-2,3-dihydro-1,4-benzodioxin-2-yl]methanone],



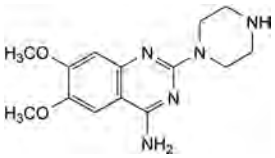
D. 6,7-dimethoxyquinazoline-2,4(1*H*,3*H*)-dione,



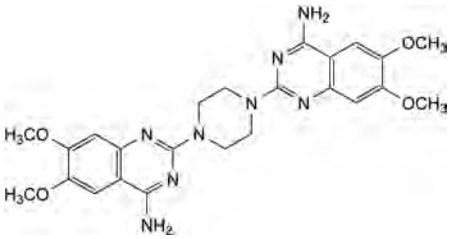
E. 2,4-dichloro-6,7-dimethoxyquinazoline,



F. 2-chloro-6,7-dimethoxyquinazolin-4-amine,



G. 6,7-dimethoxy-2-(piperazin-1-yl)quinazolin-4-amine,

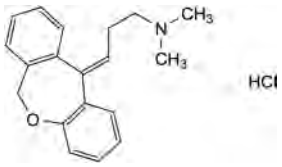


H. 2,2′-(piperazine-1,4-diyl)bis(6,7-dimethoxyquinazolin-4-amine).

**01/2017:1096**

# DOXEPIN HYDROCHLORIDE

## Doxepini hydrochloridum



$C_{19}H_{22}ClNO$ $M_r$ 315.8
[1229-29-4]

DEFINITION

(*E*)-3-(Dibenzo[*b,e*]oxepin-11(6*H*)-ylidene)-*N,N*-dimethylpropan-1-amine hydrochloride.

*Content*: 98.0 per cent to 101.0 per cent of $C_{19}H_{22}ClNO$ (dried substance).

CHARACTERS

*Appearance*: white or almost white, crystalline powder.

*Solubility*: freely soluble in water, in ethanol (96 per cent) and in methylene chloride.

IDENTIFICATION

*First identification: C, E.*

*Second identification: A, B, D, E.*

A. Melting point (*2.2.14*): 185 °C to 191 °C.

B. Ultraviolet and visible absorption spectrophotometry (*2.2.25*).

*Test solution.* Dissolve 50.0 mg in a 1 g/L solution of *hydrochloric acid R* in *methanol R* and dilute to 100.0 mL with the same acid solution. Dilute 5.0 mL to 50.0 mL with a 1 g/L solution of *hydrochloric acid R* in *methanol R*.

*Spectral range*: 230-350 nm.

*Absorption maximum*: at 297 nm.

*Specific absorbance at the absorption maximum*: 128 to 142.

C. Infrared absorption spectrophotometry (*2.2.24*).

*Comparison*: *doxepin hydrochloride CRS*.

D. Dissolve about 5 mg in 2 mL of *sulfuric acid R*. A dark red colour is produced.

E. Solution S (see Tests) gives reaction (a) of chlorides (*2.3.1*).

TESTS

**Solution S**. Dissolve 1.5 g in *carbon dioxide-free water R* and dilute to 30 mL with the same solvent.

**Appearance of solution**. Dilute 10 mL of solution S to 25 mL with *water R*. The solution is clear (*2.2.1*) and colourless (*2.2.2, Method II*).

**Acidity**. To 10 mL of solution S add 0.1 mL of *methyl red solution R*. Not more than 0.1 mL of *0.1 M sodium hydroxide* is required to change the colour of the indicator to yellow.

**Related substances**. Liquid chromatography (*2.2.29*). *Prepare the solutions immediately before use and protect them from light.*

*Phosphate buffer solution.* Dissolve 1.42 g of *anhydrous disodium hydrogen phosphate R* in *water R*, adjust to pH 7.7 with *dilute phosphoric acid R* and dilute to 1000 mL with *water R*.

*Solvent mixture.* Mix 1 volume of *1 M sodium hydroxide* and 250 volumes of the mobile phase.

*Test solution.* Dissolve 50 mg of the substance to be examined in the solvent mixture and dilute to 50.0 mL with the solvent mixture.

*Reference solution (a).* Dilute 1.0 mL of the test solution to 100.0 mL with the solvent mixture. Dilute 1.0 mL of this solution to 10.0 mL with the solvent mixture.

*Reference solution (b).* Dissolve the contents of a vial of *doxepin for system suitability CRS* (containing impurities A, B and C) in 1.0 mL of mobile phase.

*Column*:

- *size*: *l* = 0.25 m, Ø = 4.6 mm;
- *stationary phase*: *end-capped octadecylsilyl silica gel for chromatography R* (5 µm);
- *temperature*: 30 °C.

*Mobile phase*: *acetonitrile R1*, phosphate buffer solution, *methanol R1* (20:30:50 *V/V/V*).

*Flow rate*: 1.0 mL/min.

*Detection*: spectrophotometer at 215 nm.

*Injection*: 20 µL.

*Run time*: 1.5 times the retention time of doxepin.

*Identification of impurities*: use the chromatogram supplied with *doxepin for system suitability CRS* and the chromatogram obtained with reference solution (b) to identify the peaks due to impurities A, B and C.

*Relative retention* with reference to doxepin (retention time = about 18 min): impurity A = about 0.5; impurity C = about 0.6; impurity B = about 0.7; the peak due to doxepin might show a shoulder caused by the (*Z*)-isomer (impurity D).

*System suitability*: reference solution (b):

- *resolution*: minimum 1.5 between the peaks due to impurities A and C, and minimum 1.5 between the peaks due to impurities C and B;
- the chromatogram obtained is similar to the chromatogram supplied with *doxepin for system suitability CRS*.

*Limits*:

- *correction factor*: for the calculation of content, multiply the peak area of impurity B by 1.7;
- *impurities A, B*: for each impurity, not more than the area of the principal peak in the chromatogram obtained with reference solution (a) (0.1 per cent);

- *impurity C*: not more than twice the area of the principal peak in the chromatogram obtained with reference solution (a) (0.2 per cent);
- *unspecified impurities*: for each impurity, not more than the area of the principal peak in the chromatogram obtained with reference solution (a) (0.10 per cent);
- *total*: not more than 3 times the area of the principal peak in the chromatogram obtained with reference solution (a) (0.3 per cent);
- *disregard limit*: 0.5 times the area of the principal peak in the chromatogram obtained with reference solution (a) (0.05 per cent).

**(*Z*)-Isomer**. Liquid chromatography (*2.2.29*).

*Test solution.* Dissolve 20.0 mg of the substance to be examined in the mobile phase and dilute to 20.0 mL with the mobile phase. Dilute 1.0 mL of this solution to 10.0 mL with the mobile phase.

*Column*:

- *size*: *l* = 0.12 m, Ø = 4 mm;
- *stationary phase*: spherical *octylsilyl silica gel for chromatography R* (5 µm) with a specific surface area of 220 $m^2$/g and a pore size of 80 nm;
- *temperature*: 50 °C.

*Mobile phase*: mix 30 volumes of *methanol R* and 70 volumes of a 30 g/L solution of *sodium dihydrogen phosphate R* previously adjusted to pH 2.5 with *phosphoric acid R*.

*Flow rate*: 1 mL/min.

*Detection*: spectrophotometer at 254 nm.

*Injection*: 20 µL.

*System suitability*:

- *resolution*: minimum 1.5 between the peaks due to the (*E*)-isomer (1st peak) and to the (*Z*)-isomer (2nd peak).

*Results*:

- calculate the ratio of the area of the peak due to the (*E*)-isomer to the area of the peak due to the (*Z*)-isomer: this ratio is 4.4 to 6.7 (13.0 per cent to 18.5 per cent of the (*Z*)-isomer).

**Loss on drying** (*2.2.32*): maximum 0.5 per cent, determined on 1.000 g by drying in an oven at 105 °C.

**Sulfated ash** (*2.4.14*): maximum 0.1 per cent, determined on 1.0 g.

ASSAY

Dissolve 0.250 g in a mixture of 5 mL of *anhydrous acetic acid R* and 35 mL of *acetic anhydride R*. Using 0.2 mL of *crystal violet solution R* as indicator, titrate with *0.1 M perchloric acid* until the colour changes from blue to green.

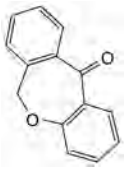
1 mL of *0.1 M perchloric acid* is equivalent to 31.58 mg of $C_{19}H_{22}ClNO$.

STORAGE

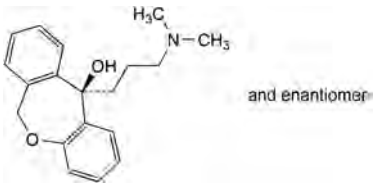
Protected from light.

IMPURITIES

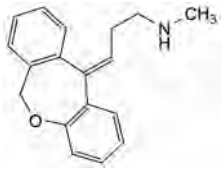
*Specified impurities: A, B, C, D.*



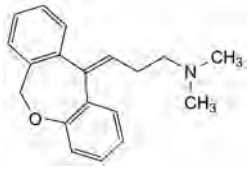
A. dibenzo[*b,e*]oxepin-11(6*H*)-one (doxepinone),



B. (11*RS*)-11-[3-(dimethylamino)propyl]-6,11-dihydrodibenzo[*b,e*]oxepin-11-ol (doxepinol),



C. (*E*)-3-(dibenzo[*b,e*]oxepin-11(6*H*)-ylidene)-*N*-methylpropan-1-amine (desmethyldoxepin),

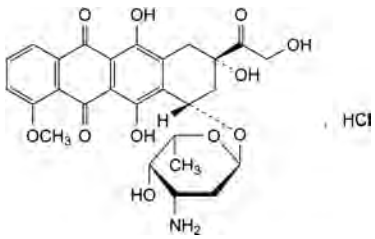


D. (*Z*)-3-(dibenzo[*b,e*]oxepin-11(6*H*)-ylidene)-*N,N*-dimethylpropan-1-amine.

**01/2008:0714**
**corrected 10.0**

# DOXORUBICIN HYDROCHLORIDE

## Doxorubicini hydrochloridum



$C_{27}H_{30}ClNO_{11}$ $M_r$ 580.0
[25316-40-9]

DEFINITION

(8*S*,10*S*)-10-[(3-Amino-2,3,6-trideoxy-α-L-*lyxo*-hexopyranosyl)oxy]-6,8,11-trihydroxy-8-(hydroxyacetyl)-1-methoxy-7,8,9,10-tetrahydrotetracene-5,12-dione hydrochloride.

Substance produced by certain strains of *Streptomyces coeruleorubidus* or *Streptomyces peucetius* or obtained by any other means.

*Content*: 98.0 per cent to 102.0 per cent (anhydrous substance).

CHARACTERS

*Appearance*: orange-red, crystalline powder, hygroscopic.

*Solubility*: soluble in water, slightly soluble in methanol.

IDENTIFICATION

A. Infrared absorption spectrophotometry (*2.2.24*).
*Comparison*: *doxorubicin hydrochloride CRS*.

B. Dissolve about 10 mg in 0.5 mL of *nitric acid R*, add 0.5 mL of *water R* and heat over a flame for 2 min. Allow to cool and add 0.5 mL of *silver nitrate solution R1*. A white precipitate is formed.

TESTS

**pH** (*2.2.3*): 4.0 to 5.5.

Dissolve 50 mg in *carbon dioxide-free water R* and dilute to 10 mL with the same solvent.

**Related substances**. Liquid chromatography (*2.2.29*). *Prepare the solutions immediately before use.*

*Test solution (a).* Dissolve 50.0 mg of the substance to be examined in the mobile phase and dilute to 50.0 mL with the mobile phase.

*Test solution (b).* Dilute 10.0 mL of test solution (a) to 100.0 mL with the mobile phase.

*Reference solution (a).* Dissolve 10.0 mg of *doxorubicin hydrochloride CRS* and 10 mg of *epirubicin hydrochloride CRS* in the mobile phase and dilute to 50.0 mL with the mobile phase. Dilute 10.0 mL of the solution to 100.0 mL with the mobile phase.

*Reference solution (b).* Dilute 5.0 mL of reference solution (a) to 20.0 mL with the mobile phase.

*Reference solution (c).* Dissolve 50.0 mg of *doxorubicin hydrochloride CRS* in the mobile phase and dilute to 50.0 mL with the mobile phase. Dilute 10.0 mL of the solution to 100.0 mL with the mobile phase.

*Column*:

- *size*: *l* = 0.25 m, Ø = 4.0 mm,
- *stationary phase*: *end-capped octadecylsilyl silica gel for chromatography R* (5 µm).

*Mobile phase*: mix equal volumes of *acetonitrile R* and a solution containing 2.88 g/L of *sodium laurilsulfate R* and 2.25 g/L of *phosphoric acid R*.

*Flow rate*: 1 mL/min.

*Detection*: spectrophotometer at 254 nm.

*Injection*: 5 µL; inject test solution (a) and reference solutions (a) and (b).

*Run time*: 3.5 times the retention time of doxorubicin.

*Retention time*: doxorubicin = about 8 min.

*System suitability*: reference solution (a):

- *resolution*: minimum of 2.0 between the peaks due to doxorubicin and to epirubicin.

*Limits*:

- *any impurity*: not more than the area of the peak due to doxorubicin in the chromatogram obtained with reference solution (b) (0.5 per cent),
- *disregard limit*: 0.1 times the area of the peak due to doxorubicin in the chromatogram obtained with reference solution (b) (0.05 per cent).

**Ethanol** (*2.4.24, System B*): maximum 1.0 per cent.

**Water** (*2.5.12*): maximum 4.0 per cent, determined on 0.100 g.

**Bacterial endotoxins** (*2.6.14*): less than 2.2 IU/mg, if intended for use in the manufacture of parenteral preparations without a further appropriate procedure for the removal of bacterial endotoxins.

ASSAY

Liquid chromatography (*2.2.29*) as described in the test for related substances.

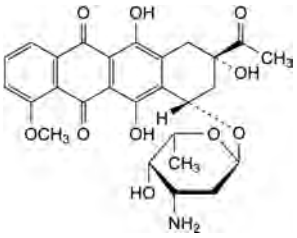
*Injection*: test solution (b) and reference solution (c).

Calculate the percentage content of $C_{27}H_{30}ClNO_{11}$.

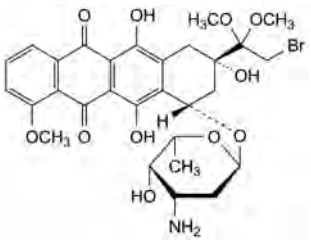
STORAGE

In an airtight container. If the substance is sterile, store in a sterile, airtight, tamper-evident container.

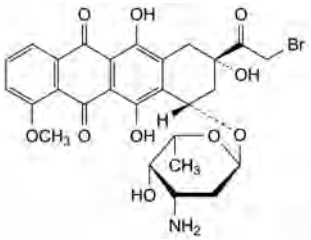
IMPURITIES



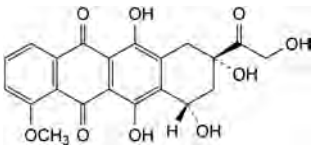
A. (8*S*,10*S*)-8-acetyl-10-[(3-amino-2,3,6-trideoxy-α-L-*lyxo*-hexopyranosyl)oxy]-6,8,11-trihydroxy-1-methoxy-7,8,9,10-tetrahydrotetracene-5,12-dione (daunorubicin),



B. (8*S*,10*S*)-10[(3-amino-2,3,6-trideoxy-α-L-*lyxo*-hexopyranosyl)oxy]-8-(2-bromo-1,1-dimethoxyethyl)-6,8,11-trihydroxy-1-methoxy-7,8,9,10-tetrahydrotetracene-5,12-dione,



C. (8*S*,10*S*)-10[(3-amino-2,3,6-trideoxy-α-L-*lyxo*-hexopyranosyl)oxy]-8-(bromoacetyl)-6,8,11-trihydroxy-1-methoxy-7,8,9,10-tetrahydrotetracene-5,12-dione,

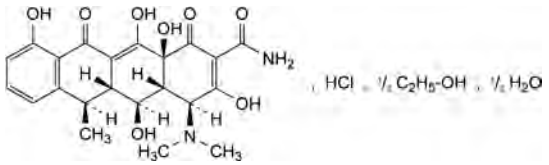


D. (8*S*,10*S*)-6,8,10,11-tetrahydroxy-8-(hydroxyacetyl)-1-methoxy-7,8,9,10-tetrahydrotetracene-5,12-dione (doxorubicin aglycone, doxorubicinone).

**01/2017:0272**
**corrected 10.0**

# DOXYCYCLINE HYCLATE

## Doxycyclini hyclas



$(C_{22}H_{25}ClN_2O_8),½C_2H_6O,½H_2O$ $M_r$ 512.9

[24390-14-5]

DEFINITION

(4*S*,4a*R*,5*S*,5a*R*,6*R*,12a*S*)-4-(Dimethylamino)-3,5,10,12,12a-pentahydroxy-6-methyl-1,11-dioxo-1,4,4a,5,5a,6,11,12a-octahydrotetracene-2-carboxamide hydrochloride hemiethanol hemihydrate.

Substance obtained from oxytetracycline or metacycline or by any other means.

Semi-synthetic product derived from a fermentation product.

*Content*: 95.0 per cent to 102.0 per cent of $C_{22}H_{25}ClN_2O_8$ (anhydrous and ethanol-free substance).

CHARACTERS

*Appearance*: yellow, hygroscopic, crystalline powder.

*Solubility*: freely soluble in water and in methanol, sparingly soluble in ethanol (96 per cent). It dissolves in solutions of alkali hydroxides and carbonates.

IDENTIFICATION

A. Examine the chromatograms obtained in the assay.
   *Results*: the principal peak in the chromatogram obtained with the test solution is similar in retention time to the principal peak in the chromatogram obtained with reference solution (a).

B. To about 2 mg add 5 mL of *sulfuric acid R*. A yellow colour develops.

C. It gives reaction (a) of chlorides (*2.3.1*).

TESTS

**pH** (*2.2.3*): 2.0 to 3.0.

Dissolve 0.1 g in *carbon dioxide-free water R* and dilute to 10 mL with the same solvent.

**Absorbance** (*2.2.25*): maximum 0.07 at 490 nm (anhydrous and ethanol-free substance).

Dissolve 0.10 g in a mixture of 1 volume of a 103 g/L solution of *hydrochloric acid R* and 99 volumes of *methanol R* and dilute to 10.0 mL with the same mixture of solvents. Carry out the measurement within 1 h of preparing the solution.

**Related substances**. Liquid chromatography (*2.2.29*). *Prepare the solutions immediately before use.*

*Solution A*. Suspend 111.6 g of *sodium edetate R* in 900 mL of *water for chromatography R*. Adjust to pH 7.0 with *concentrated ammonia R* to achieve complete dissolution, then dilute to 1 L with *water for chromatography R*.

*Test solution.* Dissolve 20.0 mg of the substance to be examined in a 1 g/L solution of *hydrochloric acid R* and dilute to 25.0 mL with the same solution.

*Reference solution (a).* Dissolve 20.0 mg of *doxycycline hyclate CRS* in a 1 g/L solution of *hydrochloric acid R* and dilute to 25.0 mL with the same solution.

*Reference solution (b).* Dissolve 5 mg of *doxycycline for system suitability CRS* (containing impurities A, B, C and F) in a 1 g/L solution of *hydrochloric acid R* and dilute to 10 mL with the same solution.

*Reference solution (c).* Dilute 1.0 mL of the test solution to 100.0 mL with a 1 g/L solution of *hydrochloric acid R*.

*Column*:
- *size*: *l* = 0.25 m, Ø = 4.6 mm;
- *stationary phase*: *end-capped polar-embedded octadecylsilyl amorphous organosilica polymer R* (5 µm);
- *temperature*: 35 °C.

*Mobile phase*: mix 13 volumes of *acetonitrile R*, 17 volumes of *water for chromatography R*, 35 volumes of a 67.9 g/L solution of *tetrabutylammonium hydrogen sulfate R* previously adjusted to pH 7.0 with *concentrated ammonia R* and 35 volumes of solution A.

*Flow rate*: 1.0 mL/min.

*Detection*: spectrophotometer at 280 nm.

*Injection*: 20 µL of the test solution and reference solutions (b) and (c).

*Run time*: twice the retention time of doxycycline.

*Identification of impurities*: use the chromatogram supplied with *doxycycline for system suitability CRS* and the chromatogram obtained with reference solution (b) to identify the peaks due to impurities A, B, C and F.

*Relative retention* with reference to doxycycline (retention time = about 21 min): impurity C = about 0.4; impurity A = about 0.7; impurity B = about 0.8; impurity F = about 1.3.

*System suitability*: reference solution (b):
- *resolution*: minimum 2.0 between the peaks due to impurities A and B; minimum 2.0 between the peaks due to impurity B and doxycycline.

*Calculation of percentage contents*:
- for each impurity, use the concentration of doxycycline hyclate in reference solution (c).

*Limits*:
- *impurity A*: maximum 2.0 per cent;
- *impurity F*: maximum 1.2 per cent;
- *impurity B*: maximum 0.5 per cent;
- *impurity C*: maximum 0.2 per cent;
- *unspecified impurities*: for each impurity, maximum 0.10 per cent;
- *total*: maximum 3.0 per cent;
- *reporting threshold*: 0.05 per cent.

**Ethanol**. Gas chromatography (*2.2.28*).

*Internal standard solution.* Dilute 0.50 mL of *propanol R* to 1.0 L with *water R*.

*Test solution.* Dissolve 0.10 g of the substance to be examined in the internal standard solution and dilute to 10.0 mL with the same solution.

*Reference solution.* Dilute 0.5 mL of *anhydrous ethanol R* to 100.0 mL with the internal standard solution. Dilute 1.0 mL of this solution to 10.0 mL with the internal standard solution.

*Column*:
- *material*: fused silica;
- *size*: *l* = 50 m, Ø = 0.32 mm;
- *stationary phase*: *methylpolysiloxane R* (film thickness 5 µm).

*Carrier gas*: *helium for chromatography R*.

*Linear velocity*: 37 cm/s.

*Split ratio*: 1:10.

*Temperature*:

| | Time (min) | Temperature (°C) |
|---|---|---|
| Column | 0 - 7 | 70 |
| | 7 - 13 | 70 → 160 |
| | 13 - 15 | 160 |
| Injection port | | 200 |
| Detector | | 250 |

*Detection*: flame ionisation.

*Injection*: 1 µL.

*Relative retention* with reference to propanol (retention time = about 7 min): ethanol = about 0.6.

Calculate the content of ethanol, taking the density (*2.2.5*) at 20 °C to be 0.790 g/mL.

*Limit*:
- *ethanol*: 4.3 per cent to 6.0 per cent.

**Water** (*2.5.12*): 1.4 per cent to 2.8 per cent, determined on 1.20 g.

**Sulfated ash** (*2.4.14*): maximum 0.4 per cent, determined on 1.0 g.

**Bacterial endotoxins** (*2.6.14*): less than 1.14 IU/mg, if intended for use in the manufacture of parenteral preparations without a further appropriate procedure for the removal of bacterial endotoxins.

ASSAY

Liquid chromatography (*2.2.29*) as described in the test for related substances with the following modification.

*Injection*: test solution and reference solution (a).

Calculate the percentage content of $C_{22}H_{25}ClN_2O_8$ taking into account the assigned content of *doxycycline hyclate CRS*.

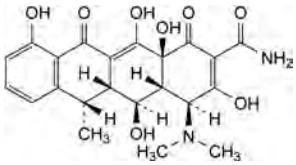
STORAGE

In an airtight container, protected from light. If the substance is sterile, store in a sterile, airtight, tamper-evident container.

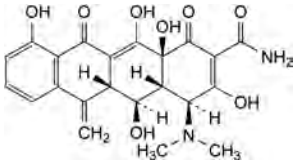
IMPURITIES

*Specified impurities: A, B, C, F.*

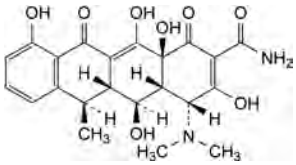
*Other detectable impurities* (the following substances would, if present at a sufficient level, be detected by one or other of the tests in the monograph. They are limited by the general acceptance criterion for other/unspecified impurities and/or by the general monograph *Substances for pharmaceutical use (2034)*. It is therefore not necessary to identify these impurities for demonstration of compliance. See also *5.10. Control of impurities in substances for pharmaceutical use*): *D, E.*



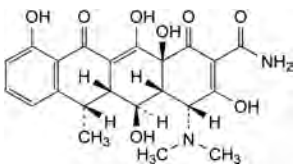
A. (4*S*,4a*R*,5*S*,5a*R*,6*S*,12a*S*)-4-(dimethylamino)-3,5,10,12,12a-pentahydroxy-6-methyl-1,11-dioxo-1,4,4a,5,5a,6,11,12a-octahydrotetracene-2-carboxamide (6-epidoxycycline),



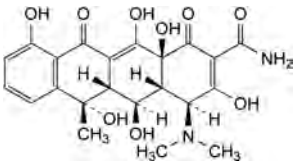
B. (4*S*,4a*R*,5*S*,5a*R*,12a*S*)-4-(dimethylamino)-3,5,10,12,12a-pentahydroxy-6-methylene-1,11-dioxo-1,4,4a,5,5a,6,11,12a-octahydrotetracene-2-carboxamide (metacycline),



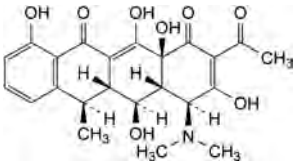
C. (4*R*,4a*R*,5*S*,5a*R*,6*R*,12a*S*)-4-(dimethylamino)-3,5,10,12,12a-pentahydroxy-6-methyl-1,11-dioxo-1,4,4a,5,5a,6,11,12a-octahydrotetracene-2-carboxamide (4-epidoxycycline),



D. (4*R*,4a*R*,5*S*,5a*R*,6*S*,12a*S*)-4-(dimethylamino)-3,5,10,12,12a-pentahydroxy-6-methyl-1,11-dioxo-1,4,4a,5,5a,6,11,12a-octahydrotetracene-2-carboxamide (4-epi-6-epidoxycycline),



E. (4*S*,4a*R*,5*S*,5a*R*,6*S*,12a*S*)-4-(dimethylamino)-3,5,6,10,12,12a-hexahydroxy-6-methyl-1,11-dioxo-1,4,4a,5,5a,6,11,12a-octahydrotetracene-2-carboxamide (oxytetracycline),



F. (4*S*,4a*R*,5*S*,5a*R*,6*R*,12a*S*)-2-acetyl-4-(dimethylamino)-3,5,10,12,12a-pentahydroxy-6-methyl-4a,5a,6,12a-tetrahydrotetracene-1,11(4*H*,5*H*)-dione (2-acetyl-2-decarbamoyldoxycycline).

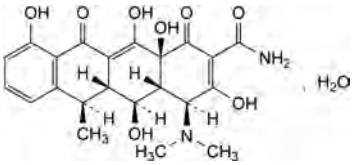
# DOXYCYCLINE MONOHYDRATE

## Doxycyclinum monohydricum



$C_{22}H_{24}N_2O_8,H_2O$ $M_r$ 462.5
[17086-28-1]

DEFINITION

(4*S*,4a*R*,5*S*,5a*R*,6*R*,12a*S*)-4-(Dimethylamino)-3,5,10,12,12a-pentahydroxy-6-methyl-1,11-dioxo-1,4,4a,5,5a,6,11,12a-octahydrotetracene-2-carboxamide monohydrate.

Substance obtained from oxytetracycline or metacycline or by any other means.

Semi-synthetic product derived from a fermentation product.

*Content*: 95.0 per cent to 102.0 per cent of $C_{22}H_{24}N_2O_8$ (anhydrous substance).

CHARACTERS

*Appearance*: yellow, crystalline powder.

*Solubility*: very slightly soluble in water and in ethanol (96 per cent). It dissolves in dilute solutions of mineral acids and in solutions of alkali hydroxides and carbonates.

IDENTIFICATION

A. Examine the chromatograms obtained in the assay.

*Results*: the principal peak in the chromatogram obtained with the test solution is similar in retention time to the principal peak in the chromatogram obtained with reference solution (a).

B. To about 2 mg add 5 mL of *sulfuric acid R*. A yellow colour develops.

C. Water (see Tests).

TESTS

**pH** (*2.2.3*): 5.0 to 6.5.

Suspend 0.1 g in *carbon dioxide-free water R* and dilute to 10 mL with the same solvent.

**Absorbance** (*2.2.25*): maximum 0.07 at 490 nm (anhydrous substance).

Dissolve 0.10 g in a mixture of 0.5 volumes of *hydrochloric acid R* and 99.5 volumes of *methanol R* and dilute to 10.0 mL with the same mixture of solvents. Carry out the measurement within 1 h of preparing the solution.

**Related substances**. Liquid chromatography (*2.2.29*). *Prepare the solutions immediately before use.*

*Solution A*. Suspend 111.6 g of *sodium edetate R* in 900 mL of *water R*. Adjust to pH 7.0 with *concentrated ammonia R* to achieve complete dissolution, then dilute to 1 L with *water R*.

*Test solution*. Dissolve 20.0 mg of the substance to be examined in a 1 g/L solution of *hydrochloric acid R* and dilute to 25.0 mL with the same solution.

*Reference solution (a)*. Dissolve 20.0 mg of *doxycycline hyclate CRS* in a 1 g/L solution of *hydrochloric acid R* and dilute to 25.0 mL with the same solution.

*Reference solution (b)*. Dissolve 5 mg of *doxycycline for system suitability CRS* (containing impurities A, B, C and F) in a 1 g/L solution of *hydrochloric acid R* and dilute to 10 mL with the same solution.

*Reference solution (c)*. Dilute 1.0 mL of the test solution to 100.0 mL with a 1 g/L solution of *hydrochloric acid R*.

*Column*:

– *size*: *l* = 0.25 m, Ø = 4.6 mm;
– *stationary phase*: *end-capped polar-embedded octadecylsilyl amorphous organosilica polymer R* (5 µm) ;
– *temperature*: 35 °C.

*Mobile phase*: mix 13 volumes of *acetonitrile R*, 17 volumes of *water R*, 35 volumes of a 67.9 g/L solution of *tetrabutylammonium hydrogen sulfate R* previously adjusted to pH 7.0 with *concentrated ammonia R* and 35 volumes of solution A.

*Flow rate*: 1.0 mL/min.

*Detection*: spectrophotometer at 280 nm.

*Injection*: 20 µL of the test solution and reference solutions (b) and (c).

*Run time*: twice the retention time of doxycycline.

*Identification of impurities*: use the chromatogram supplied with *doxycycline for system suitability CRS* and the chromatogram obtained with reference solution (b) to identify the peaks due to impurities A, B, C and F.

*Relative retention* with reference to doxycycline (retention time = about 21 min): impurity C = about 0.4; impurity A = about 0.7; impurity B = about 0.8; impurity F = about 1.3.

*System suitability*: reference solution (b):

– *resolution*: minimum 2.0 between the peaks due to impurities A and B; minimum 2.0 between the peaks due to impurity B and doxycycline.

*Calculation of percentage contents*:

– for each impurity, use the concentration of doxycycline monohydrate in reference solution (c).

*Limits*:

– *impurity A*: maximum 2.0 per cent;
– *impurity F*: maximum 1.2 per cent;
– *impurity B*: maximum 0.5 per cent;
– *impurity C*: maximum 0.2 per cent;

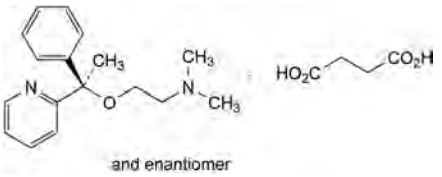
# DOXYLAMINE HYDROGEN SUCCINATE

## Doxylamini hydrogenosuccinas



$C_{21}H_{28}N_2O_5$ $M_r$ 388.5
[562-10-7]

DEFINITION

*N*,*N*-Dimethyl-2-[(1*RS*)-1-phenyl-1-(pyridin-2-yl)ethoxy]ethanamine hydrogen butanedioate.

*Content*: 99.0 per cent to 101.0 per cent (anhydrous substance).

CHARACTERS

*Appearance*: white or almost white powder.

*Solubility*: very soluble in water, freely soluble in ethanol (96 per cent).

It shows polymorphism (*5.9*).

IDENTIFICATION

Infrared absorption spectrophotometry (*2.2.24*).

*Comparison*: *doxylamine hydrogen succinate CRS*.

If the spectra obtained show differences, dissolve the substance to be examined and the reference substance separately in *methanol R*, evaporate to dryness and record new spectra using the residues.

TESTS

**Appearance of solution**. The solution is clear (*2.2.1*) and colourless (*2.2.2, Method II*).

Dissolve 0.4 g in *water R* and dilute to 20 mL with the same solvent.

**Related substances**. Gas chromatography (*2.2.28*).

*Test solution*. Dissolve 0.650 g of the substance to be examined in 20 mL of a 10.3 g/L solution of *hydrochloric acid R*. Add 3 mL of a 100 g/L solution of *sodium hydroxide R* and extract with 3 quantities, each of 25 mL, of *methylene chloride R*. Combine the methylene chloride extracts and filter using hydrophobic phase-separation filter paper. Rinse the filter with 10 mL of *methylene chloride R* and combine the rinsings with the methylene chloride extracts. Evaporate the solvent under reduced pressure at a temperature not exceeding 40 °C. Dissolve the residue in 20.0 mL of *anhydrous ethanol R*.

*Reference solution (a)*. Dilute 1.0 mL of the test solution to 100.0 mL with *anhydrous ethanol R*. Dilute 1.0 mL of this solution to 10.0 mL with *anhydrous ethanol R*.

*Reference solution (b)*. Dissolve 50 mg of *doxylamine for system suitability CRS* (containing impurity C) in 10 mL of a 10.3 g/L solution of *hydrochloric acid R*. Add 1.5 mL of a 100 g/L solution of *sodium hydroxide R* and extract with 3 quantities, each of 25 mL, of *methylene chloride R*. Combine the methylene chloride extracts and filter using hydrophobic phase-separation filter paper. Rinse the filter with 10 mL of *methylene chloride R* and combine the rinsings with the methylene chloride extracts. Evaporate the solvent under reduced pressure at a temperature not exceeding 40 °C. Dissolve the residue in 5.0 mL of *anhydrous ethanol R*.

*Column*:

- *material*: fused silica;
- *size*: *l* = 30 m, Ø = 0.53 mm;
- *stationary phase*: *phenyl(5)methyl(95)polysiloxane R* (film thickness 1.5 µm).

*Carrier gas*: *helium for chromatography R*.

*Flow rate*: 7 mL/min.

*Temperature*:

| | Time (min) | Temperature (°C) |
|---|---|---|
| Column | 0 - 12 | 160 → 220 |
| | 12 - 27 | 220 |
| Injection port | | 250 |
| Detector | | 250 |

*Detection*: flame ionisation.

*Injection*: 1 µL.

*Identification of impurities*: use the chromatogram supplied with *doxylamine for system suitability CRS* and the chromatogram obtained with reference solution (b) to identify the peak due to impurity C.

*Relative retention* with reference to doxylamine (retention time = about 12 min): impurity C = about 0.96.

*System suitability*: reference solution (b):

- *resolution*: minimum 1.5 between the peaks due to impurity C and doxylamine.

*Limits*:

- *impurity C*: not more than 5 times the area of the principal peak in the chromatogram obtained with reference solution (a) (0.5 per cent);
- *unspecified impurities*: for each impurity, not more than the area of the principal peak in the chromatogram obtained with reference solution (a) (0.10 per cent);
- *total*: not more than 7 times the area of the principal peak in the chromatogram obtained with reference solution (a) (0.7 per cent);
- *disregard limit*: 0.5 times the area of the principal peak in the chromatogram obtained with reference solution (a) (0.05 per cent).

**Water** (*2.5.12*): maximum 0.5 per cent, determined on 2.00 g.

**Sulfated ash** (*2.4.14*): maximum 0.1 per cent, determined on 1.0 g.

ASSAY

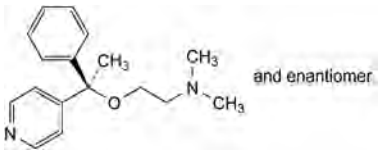
Dissolve 0.150 g in 50 mL of *anhydrous acetic acid R*. Titrate with *0.1 M perchloric acid*, determining the end-point potentiometrically (*2.2.20*).

1 mL of *0.1 M perchloric acid* is equivalent to 19.43 mg of $C_{21}H_{28}N_2O_5$.

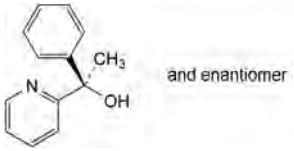
IMPURITIES

*Specified impurities*: *C*.

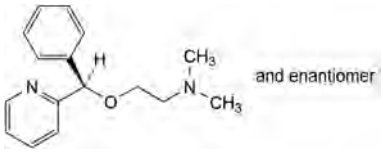
*Other detectable impurities* (the following substances would, if present at a sufficient level, be detected by one or other of the tests in the monograph. They are limited by the general acceptance criterion for other/unspecified impurities and/or by the general monograph *Substances for pharmaceutical use (2034)*. It is therefore not necessary to identify these impurities for demonstration of compliance. See also *5.10. Control of impurities in substances for pharmaceutical use*): *A, B, D*.



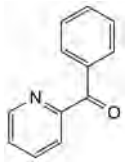
A. *N,N*-dimethyl-2-[(1*RS*)-1-phenyl-1-(pyridin-4-yl)ethoxy]ethanamine,



B. (1*RS*)-1-phenyl-1-(pyridin-2-yl)ethanol,



C. *N,N*-dimethyl-2-[(1*RS*)-1-phenyl-1-(pyridin-2-yl)methoxy]ethanamine,



D. phenyl(pyridin-2-yl)methanone (2-benzoylpyridine).

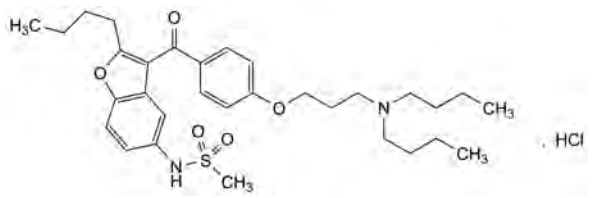
# DRONEDARONE HYDROCHLORIDE

## Dronedaroni hydrochloridum



$C_{31}H_{45}ClN_2O_5S$ $M_r$ 593.2
[141625-93-6]

DEFINITION

*N*-[2-Butyl-3-[4-[3-(dibutylamino)propoxy]benzoyl]-1-benzofuran-5-yl]methanesulfonamide hydrochloride.

*Content*: 98.0 to 102.0 per cent (anhydrous substance).

CHARACTERS

*Appearance*: white or almost white, fine powder.

*Solubility*: practically insoluble in water, freely soluble in methanol, soluble in ethanol (96 per cent) and practically insoluble in heptane.

IDENTIFICATION

A. Infrared absorption spectrophotometry (*2.2.24*).
*Comparison*: *dronedarone hydrochloride CRS*.

B. It gives reaction (b) of chlorides (*2.3.1*).

TESTS

**Related substances**. Liquid chromatography (*2.2.29*).

*Solvent mixture*: *acetonitrile for chromatography R*, mobile phase A (50:50 *V/V*).

*Test solution*. Dissolve 0.100 g of the substance to be examined in the solvent mixture, using sonication, and dilute to 50.0 mL with the solvent mixture.

*Reference solution (a)*. Dilute 1.0 mL of the test solution to 100.0 mL with the solvent mixture. Dilute 1.0 mL of this solution to 10.0 mL with the solvent mixture.

*Reference solution (b)*. Dissolve 5 mg of the substance to be examined and 5 mg of *dronedarone impurity B CRS* in *methanol R* and dilute to 25 mL with the same solvent. Dilute 1 mL of the solution to 20 mL with the solvent mixture.

*Column*:

- *size*: *l* = 0.25 m, Ø = 4.6 mm;
- *stationary phase*: *diisopropylcyanosilyl silica gel for chromatography R* (5 µm).

*Mobile phase*:

- *mobile phase A*: to 2.0 mL of *triethylamine R* add 950 mL of *water for chromatography R*, adjust to pH 4.0 with *phosphoric acid R* and dilute to 1000 mL with *water for chromatography R*;
- *mobile phase B*: *acetonitrile for chromatography R*;

| Time (min) | Mobile phase A (per cent *V/V*) | Mobile phase B (per cent *V/V*) |
|---|---|---|
| 0 - 2 | 70 | 30 |
| 2 - 17 | 70 → 60 | 30 → 40 |
| 17 - 27 | 60 | 40 |
| 27 - 42 | 60 → 50 | 40 → 50 |
| 42 - 47 | 50 → 40 | 50 → 60 |
| 47 - 60 | 40 | 60 |

*Flow rate*: 0.8 mL/min.

*Detection*: spectrophotometer at 246 nm.

*Injection*: 25 µL.

*Identification of impurities*: use the chromatogram obtained with reference solution (b) to identify the peak due to impurity B.

*Relative retention* with reference to dronedarone (retention time = about 40 min): impurity B = about 0.9.

*System suitability*: reference solution (b):

- *resolution*: minimum 5.0 between the peaks due to impurity B and dronedarone.

*Calculation of percentage contents*:

- for each impurity, use the concentration of dronedarone hydrochloride in reference solution (a).

*Limits*:

– *unspecified impurities*: for each impurity, maximum 0.10 per cent;

– *total*: maximum 0.3 per cent;

– *reporting threshold*: 0.05 per cent.

**Water** (*2.5.12*): maximum 1.0 per cent, determined on 0.500 g.

**Sulfated ash** (*2.4.14*): maximum 0.1 per cent, determined on 1.0 g.

ASSAY

Liquid chromatography (*2.2.29*).

*Solution A*. To 2.0 mL of *triethylamine R* add 950 mL of *water for chromatography R*, adjust to pH 3.0 with *phosphoric acid R* and dilute to 1000 mL with *water for chromatography R*.

*Test solution*. Dissolve 50.0 mg of the substance to be examined in the mobile phase and dilute to 50.0 mL with the mobile phase. Dilute 5.0 mL of the solution to 50.0 mL with the mobile phase.

*Reference solution*. Dissolve 50.0 mg of *dronedarone hydrochloride CRS* in the mobile phase and dilute to 50.0 mL with the mobile phase. Dilute 5.0 mL of the solution to 50.0 mL with the mobile phase.

*Column*:

– *size*: *l* = 0.25 m, Ø = 4.6 mm;

– *stationary phase*: *diisopropylcyanosilyl silica gel for chromatography R* (5 µm).

*Mobile phase*: *acetonitrile R*, solution A (50:50 *V/V*).

*Flow rate*: 0.8 mL/min.

*Detection*: spectrophotometer at 288 nm.

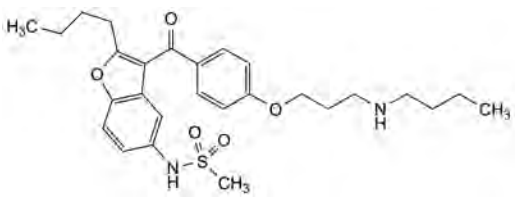
*Injection*: 10 µL.

*Run time*: twice the retention time of dronedarone (retention time = about 9 min).

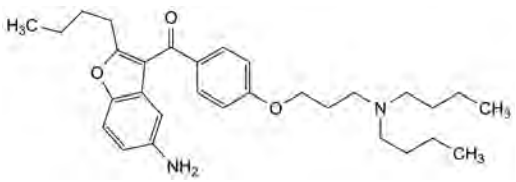
Calculate the percentage content of $C_{31}H_{45}ClN_2O_5S$ taking into account the assigned content of *dronedarone hydrochloride CRS*.

IMPURITIES

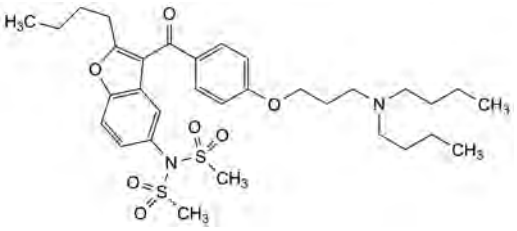
*Other detectable impurities* (the following substances would, if present at a sufficient level, be detected by one or other of the tests in the monograph. They are limited by the general acceptance criterion for other/unspecified impurities and/or by the general monograph *Substances for pharmaceutical use (2034)*. It is therefore not necessary to identify these impurities for demonstration of compliance. See also *5.10. Control of impurities in substances for pharmaceutical use*): *A, B, C*.



A. *N*-[2-butyl-3-[4-[3-(butylamino)propoxy]benzoyl]-1-benzofuran-5-yl]methanesulfonamide,



B. (5-amino-2-butyl-1-benzofuran-3-yl)[4-[3-(dibutylamino)propoxy]phenyl]methanone,

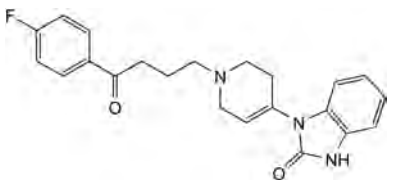


C. *N*-[2-butyl-3-[4-[3-(dibutylamino)propoxy]benzoyl]-1-benzofuran-5-yl]-*N*-(methanesulfonyl)methanesulfonamide.

**01/2017:1010**

# DROPERIDOL

## Droperidolum



$C_{22}H_{22}FN_3O_2$ $M_r$ 379.4

[548-73-2]

DEFINITION

1-[1-[4-(4-Fluorophenyl)-4-oxobutyl]-1,2,3,6-tetrahydropyridin-4-yl]-1,3-dihydro-2*H*-benzimidazol-2-one.

*Content*: 99.0 per cent to 101.0 per cent (dried substance).

CHARACTERS

*Appearance*: white or almost white powder.

*Solubility*: practically insoluble in water, freely soluble in dimethylformamide and in methylene chloride, sparingly soluble in ethanol (96 per cent).

It shows polymorphism (*5.9*).

IDENTIFICATION

*First identification: A.*

*Second identification: B, C, D.*

A. Infrared absorption spectrophotometry (*2.2.24*).

*Comparison*: *droperidol CRS*.

If the spectra obtained show differences, dissolve the substance to be examined and the reference substance separately in the minimum volume of *acetone R*, evaporate to dryness on a water-bath and record new spectra using the residues.

B. Thin-layer chromatography (*2.2.27*).

*Test solution*. Dissolve 30 mg of the substance to be examined in the mobile phase and dilute to 10 mL with the mobile phase.

*Reference solution (a)*. Dissolve 30 mg of *droperidol CRS* in the mobile phase and dilute to 10 mL with the mobile phase.

*Reference solution (b)*. Dissolve 30 mg of *droperidol CRS* and 30 mg of *benperidol CRS* in the mobile phase and dilute to 10 mL with the mobile phase.

*Plate*: *TLC silica gel* $GF_{254}$ *plate R*.

*Mobile phase*: *acetone R*, *methanol R* (10:90 *V/V*).

*Application*: 10 µL.

*Development*: over 3/4 of the plate.

*Drying*: in air.

*Detection*: examine in ultraviolet light at 254 nm.

*System suitability*: reference solution (b):

– the chromatogram shows 2 clearly separated spots.

*Results*: the principal spot in the chromatogram obtained with the test solution is similar in position and size to the principal spot in the chromatogram obtained with reference solution (a).

C. Dissolve about 10 mg in 5 mL of *anhydrous ethanol R*. Add 0.5 mL of *dinitrobenzene solution R* and 0.5 mL of *2 M alcoholic potassium hydroxide R*. A violet colour is produced and becomes brownish-red after 20 min.

D. Mix about 5 mg with 45 mg of *heavy magnesium oxide R* and ignite in a crucible until an almost white residue is obtained (usually less than 5 min). Allow to cool, add 1 mL of *water R*, 0.05 mL of *phenolphthalein solution R1* and about 1 mL of *dilute hydrochloric acid R* to render the solution colourless. Filter. To a freshly prepared mixture of 0.1 mL of *alizarin S solution R* and 0.1 mL of *zirconyl nitrate solution R*, add 1.0 mL of the filtrate. Mix, allow to stand for 5 min and compare the colour of the solution with that of a blank prepared in the same manner. The test solution is yellow and the blank is red.

TESTS

**Appearance of solution**. The solution is clear (*2.2.1*) and not more intensely coloured than reference solution $BY_5$ (*2.2.2, Method II*).

Dissolve 0.20 g in *methylene chloride R* and dilute to 20.0 mL with the same solvent.

**Related substances**. Liquid chromatography (*2.2.29*). *Prepare the solutions immediately before use.*

*Test solution*. Dissolve 0.10 g of the substance to be examined in *dimethylformamide R* and dilute to 10.0 mL with the same solvent.

*Reference solution (a)*. Dissolve 2.5 mg of *droperidol CRS* and 2.5 mg of *benperidol CRS* in *dimethylformamide R* and dilute to 100.0 mL with the same solvent.

*Reference solution (b)*. Dilute 1.0 mL of the test solution to 100.0 mL with *dimethylformamide R*. Dilute 5.0 mL of this solution to 20.0 mL with *dimethylformamide R*.

*Column*:

– *size*: *l* = 0.10 m, Ø = 4.6 mm;

– *stationary phase*: *base-deactivated octadecylsilyl silica gel for chromatography R* (3 µm).

*Mobile phase*:

– *mobile phase A*: *acetonitrile R*;

– *mobile phase B*: 10 g/L solution of *tetrabutylammonium hydrogen sulfate R1*;

| Time (min) | Mobile phase A (per cent *V/V*) | Mobile phase B (per cent *V/V*) |
|---|---|---|
| 0 - 15 | 0 → 40 | 100 → 60 |
| 15 - 20 | 40 | 60 |
| 20 - 25 | 40 → 0 | 60 → 100 |

*Flow rate*: 1.5 mL/min.

*Detection*: spectrophotometer at 275 nm.

*Injection*: 10 µL.

*Relative retention* with reference to droperidol (retention time = about 7 min): impurity A = about 0.2; impurity B = about 0.85; benperidol = about 0.9; impurity C = about 0.95; impurity D = about 1.2; impurity E = about 1.5.

*System suitability*: reference solution (a):

– *resolution*: minimum 2.0 between the peaks due to benperidol and droperidol.

*Limits*:

– *impurities A, B, C, D, E*: for each impurity, not more than the area of the principal peak in the chromatogram obtained with reference solution (b) (0.25 per cent);

– *unspecified impurities*: for each impurity, not more than 0.4 times the area of the principal peak in the chromatogram obtained with reference solution (b) (0.10 per cent);

– *total*: not more than twice the area of the principal peak in the chromatogram obtained with reference solution (b) (0.5 per cent);

– *disregard limit*: 0.2 times the area of the principal peak in the chromatogram obtained with reference solution (b) (0.05 per cent).

**Loss on drying** (*2.2.32*): maximum 0.5 per cent, determined on 1.000 g by drying in an oven at 105 °C.

**Sulfated ash** (*2.4.14*): maximum 0.1 per cent, determined on 1.0 g.

ASSAY

Dissolve 0.300 g in 50 mL of a mixture of 1 volume of *anhydrous acetic acid R* and 7 volumes of *methyl ethyl ketone R*. Using 0.2 mL of *naphtholbenzein solution R* as indicator, titrate with *0.1 M perchloric acid* until the colour changes from orange-yellow to green.

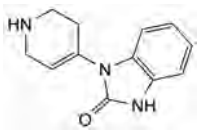
1 mL of *0.1 M perchloric acid* is equivalent to 37.94 mg of $C_{22}H_{22}FN_3O_2$.

STORAGE

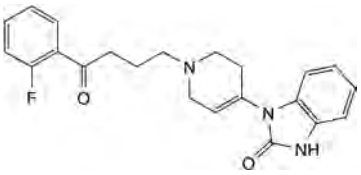
Protected from light.

IMPURITIES

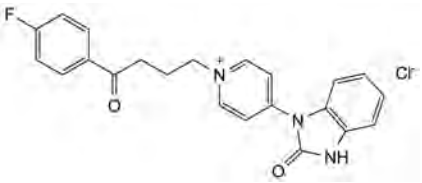
*Specified impurities: A, B, C, D, E.*



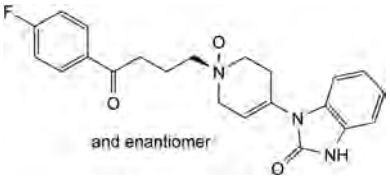
A. 1-(1,2,3,6-tetrahydropyridin-4-yl)-1,3-dihydro-2*H*-benzimidazol-2-one,



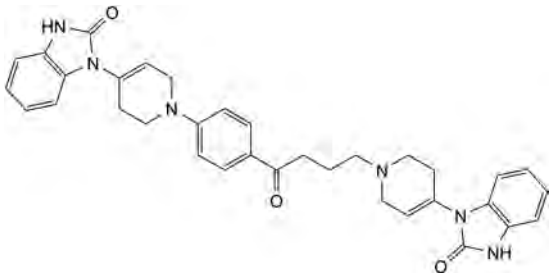
B. 1-[1-[4-(2-fluorophenyl)-4-oxobutyl]-1,2,3,6-tetrahydropyridin-4-yl]-1,3-dihydro-2*H*-benzimidazol-2-one,



C. 1-[4-(4-fluorophenyl)-4-oxobutyl]-4-(2-oxo-2,3-dihydro-1*H*-benzimidazol-1-yl)pyridinium chloride,



D. (1*RS*)-1-[4-(4-fluorophenyl)-4-oxobutyl]-4-(2-oxo-2,3-dihydro-1*H*-benzimidazol-1-yl)-1,2,3,6-tetrahydropyridine 1-oxide,

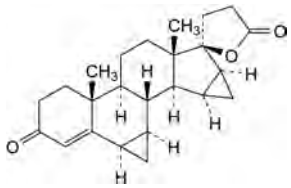


E. 1-[1-[4-[4-[4-(2-oxo-2,3-dihydro-1*H*-benzimidazol-1-yl)-3,6-dihydropyridin-1(2*H*)-yl]-1-oxobutyl]phenyl]-1,2,3,6-tetrahydropyridin-4-yl]-1,3-dihydro-2*H*-benzimidazol-2-one.

**04/2015:2404**

# DROSPIRENONE

## Drospirenonum



$C_{24}H_{30}O_3$ $M_r$ 366.5
[67392-87-4]

DEFINITION

3-Oxo-6α,7α,15α,16α-tetrahydro-3′*H*,3″*H*-dicyclopropa-[6,7:15,16]-17α-pregn-4-en-21,17-carbolactone.

*Content*: 98.0 per cent to 102.0 per cent (dried substance).

CHARACTERS

*Appearance*: white or almost white powder.

*Solubility*: practically insoluble in water, freely soluble in methylene chloride, soluble in methanol, sparingly soluble in ethanol (96 per cent).

IDENTIFICATION

A. Specific optical rotation (see Tests).

B. Infrared absorption spectrophotometry (*2.2.24*).
*Comparison*: *drospirenone CRS*.

TESTS

**Specific optical rotation** (*2.2.7*): − 193 to − 187 (dried substance).

Dissolve 0.100 g in *methanol R* and dilute to 10.0 mL with the same solvent.

**Related substances**. Liquid chromatography (*2.2.29*).

*Solvent mixture*: *acetonitrile R*, *water R* (50:50 *V/V*).

*Test solution.* Dissolve 30.0 mg of the substance to be examined in the solvent mixture and dilute to 50.0 mL with the solvent mixture.

*Reference solution (a).* Dilute 1.0 mL of the test solution to 10.0 mL with the solvent mixture. Use 1.0 mL of this solution to dissolve the contents of a vial of *drospirenone impurity E CRS*.

*Reference solution (b).* Dilute 1.0 mL of the test solution to 100.0 mL with the solvent mixture. Dilute 1.0 mL of this solution to 10.0 mL with the solvent mixture.

*Reference solution (c).* Dissolve 30.0 mg of *drospirenone CRS* in the solvent mixture and dilute to 50.0 mL with the solvent mixture.

*Reference solution (d).* Dissolve 3 mg of *drospirenone for peak identification CRS* (containing impurity A) in the solvent mixture and dilute to 5.0 mL with the solvent mixture.

*Column*:
- *size*: *l* = 0.25 m, Ø = 4.6 mm;
- *stationary phase*: *end-capped octadecylsilyl silica gel for chromatography R* (3 µm);
- *temperature*: 35 °C.

*Mobile phase*:
- *mobile phase A*: *water R*;
- *mobile phase B*: *acetonitrile R*;

| Time (min) | Mobile phase A (per cent *V/V*) | Mobile phase B (per cent *V/V*) |
|---|---|---|
| 0 - 2 | 63 | 37 |
| 2 - 16 | 63 → 52 | 37 → 48 |
| 16 - 23 | 52 | 48 |
| 23 - 31 | 52 → 20 | 48 → 80 |
| 31 - 39 | 20 | 80 |

*Flow rate*: 1.0 mL/min.

*Detection*: spectrophotometer at 245 nm.

*Injection*: 10 µL of the test solution and reference solutions (a), (b) and (d).

*Identification of impurities*: use the chromatogram supplied with *drospirenone for peak identification CRS* and the chromatogram obtained with reference solution (d) to identify the peak due to impurity A; use the chromatogram obtained with reference solution (a) to identify the peak due to impurity E.

*Relative retention* with reference to drospirenone (retention time = about 22 min): impurity E = about 1.1; impurity A = about 1.2.

*System suitability*: reference solution (a):
- *resolution*: minimum 5.0 between the peaks due to drospirenone and impurity E.

*Limits*:
- *correction factor*: for the calculation of content, multiply the peak area of impurity A by 0.5;
- *impurity A*: not more than 1.5 times the area of the principal peak in the chromatogram obtained with reference solution (b) (0.15 per cent);
- *unspecified impurities*: for each impurity, not more than the area of the principal peak in the chromatogram obtained with reference solution (b) (0.10 per cent);
- *total*: not more than 3 times the area of the principal peak in the chromatogram obtained with reference solution (b) (0.3 per cent);
- *disregard limit*: 0.5 times the area of the principal peak in the chromatogram obtained with reference solution (b) (0.05 per cent).

**Loss on drying** (*2.2.32*): maximum 0.5 per cent, determined on 1.000 g by drying in an oven at 105 °C for 3 h.

ASSAY

Liquid chromatography (*2.2.29*) as described in the test for related substances with the following modification.

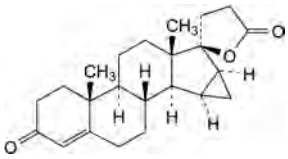
*Injection*: test solution and reference solution (c).

Calculate the percentage content of $C_{24}H_{30}O_3$ taking into account the assigned content of *drospirenone CRS*.

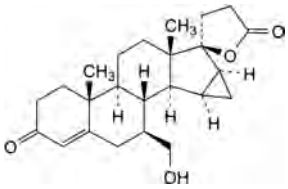
IMPURITIES

*Specified impurities: A.*

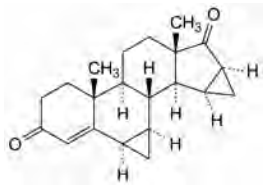
*Other detectable impurities* (the following substances would, if present at a sufficient level, be detected by one or other of the tests in the monograph. They are limited by the general acceptance criterion for other/unspecified impurities and/or by the general monograph *Substances for pharmaceutical use (2034)*. It is therefore not necessary to identify these impurities for demonstration of compliance. See also *5.10. Control of impurities in substances for pharmaceutical use*): *B, C, D, E, F, G, H, I, K.*



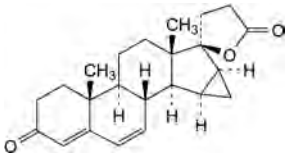
A. 3-oxo-15α,16α-dihydro-3′*H*-cyclopropa[15,16]-17α-pregn-4-ene-21,17-carbolactone (6,7-desmethylenedrospirenone),



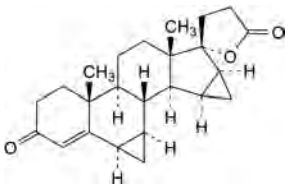
B. 7β-(hydroxymethyl)-3-oxo-15α,16α-dihydro-3′*H*-cyclopropa[15,16]-17α-pregn-4-ene-21,17-carbolactone (7β-hydroxymethyl derivative),



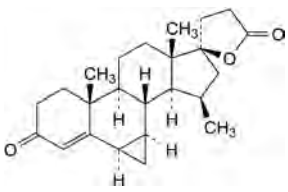
C. 6α,7α,15α,16α-tetrahydro-3′*H*,3″*H* -dicyclopropa-[6,7:15,16]androst-4-ene-3,17-dione (17-keto derivative),



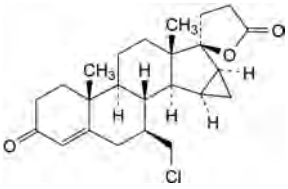
D. 3-oxo-15α,16α-dihydro-3′*H*-cyclopropa[15,16]-17α-pregna-4,6-diene-21,17-carbolactone (Δ6-drospirenone),



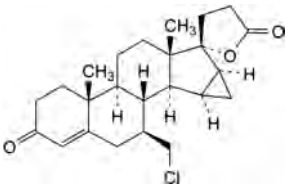
E. 3-oxo-6α,7α,15α,16α-tetrahydro-3′*H*,3″*H* -dicyclopropa[6,7:15,16]pregn-4-ene-21,17-carbolactone (17-epidrospirenone),



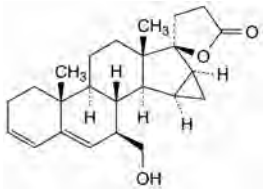
F. 15β-methyl-3-oxo-6α,7α-dihydro-3′*H*-cyclopropa[6,7]-17α-pregn-4-ene-21,17-carbolactone (3″-16-secodrospirenone),



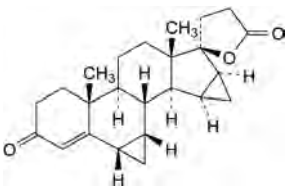
G. 7β-(chloromethyl)-3-oxo-15α,16α-dihydro-3′*H*-cyclopropa[15,16]-17α-pregn-4-ene-21,17-carbolactone (3′-chloro-3′,6-secodrospirenone),



H. 7β-(chloromethyl)-3-oxo-15α,16α-dihydro-3′*H*-cyclopropa[15,16]pregn-4-ene-21,17-carbolactone (3′-chloro-3′,6-seco-17-epidrospirenone),



I. 7β-(hydroxymethyl)-15α,16α-dihydro-3′*H*-cyclopropa[15,16]-17α-pregna-3,5-diene-21,17-carbolactone (7β-hydroxymethyldiene derivative),



K. 3-oxo-6β,7β,15α,16α-tetrahydro-3′*H*,3″*H*-dicyclopropa-[6,7:15,16]-17α-pregn-4-ene-21,17-carbolactone (6α,7α-drospirenone).

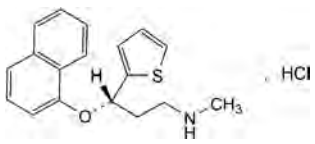
# DULOXETINE HYDROCHLORIDE

## Duloxetini hydrochloridum



$C_{18}H_{20}ClNOS$ $M_r$ 333.9
[136434-34-9]

DEFINITION

(3*S*)-*N*-Methyl-3-(naphthalen-1-yloxy)-3-(thiophen-2-yl)propan-1-amine hydrochloride.

*Content*: 97.5 per cent to 102.0 per cent (dried substance).

CHARACTERS

*Appearance*: white or almost white powder.

*Solubility*: sparingly soluble in water, freely soluble in methanol, practically insoluble in hexane.

IDENTIFICATION

Carry out either tests A, B, D or tests B, C, D.

A. Specific optical rotation (*2.2.7*): + 119 to + 127 (dried substance).
   Dissolve 0.250 g in *methanol R* and dilute to 25.0 mL with the same solvent. Examine within 30 min of preparing the solution.

B. Infrared absorption spectrophotometry (*2.2.24*).
   *Comparison*: *duloxetine hydrochloride CRS*.

C. Enantiomeric purity (see Tests).

D. Dissolve 25 mg in 5 mL of *methanol R*. The solution gives reaction (a) of chlorides (*2.3.1*).

TESTS

**Enantiomeric purity**. Liquid chromatography (*2.2.29*).

*Test solution*. Dissolve 5.0 mg of the substance to be examined in the mobile phase and dilute to 100.0 mL with the mobile phase.

*Reference solution (a)*. Dilute 1.0 mL of the test solution to 200.0 mL with the mobile phase.

*Reference solution (b)*. Dissolve 5 mg of *duloxetine impurity A CRS* and 5 mg of the substance to be examined in 100 mL of the mobile phase.

*Column*:
- *size*: *l* = 0.25 m, Ø = 4.6 mm;
- *stationary phase*: *cellulose derivative of silica gel for chiral separation R* (5 µm);
- *temperature*: 40 °C.

*Mobile phase*: add 2.0 mL of *diethylamine R* to 1000 mL of a mixture of 17 volumes of *2-propanol R* and 83 volumes of *hexane R*.

*Flow rate*: 1.0 mL/min.

*Detection*: spectrophotometer at 230 nm.

*Injection*: 20 µL.

*Relative retention* with reference to duloxetine (retention time = about 7 min): impurity A = about 1.3.

*System suitability*:
- *resolution*: minimum 3.5 between the peaks due to duloxetine and impurity A in the chromatogram obtained with reference solution (b);
- *signal-to-noise ratio*: minimum 10 for the principal peak in the chromatogram obtained with reference solution (a).

*Limit*:
- *impurity A*: not more than the area of the principal peak in the chromatogram obtained with reference solution (a) (0.5 per cent).

**Related substances**. Liquid chromatography (*2.2.29*).
*Carry out the test protected from light. Prepare the solutions immediately before use.*

*Solvent mixture*: *acetonitrile R*, *water R* (25:75 *V/V*).

*Test solution (a)*. Dissolve 20 mg of the substance to be examined in 200.0 mL of the solvent mixture.

*Test solution (b)*. Dissolve 50.0 mg of the substance to be examined in 100.0 mL of the solvent mixture. Dilute 1.0 mL of the solution to 10.0 mL with the solvent mixture.

*Reference solution (a)*. Dilute 1.0 mL of test solution (a) to 100.0 mL with the mobile phase. Dilute 1.0 mL of this solution to 10.0 mL with the mobile phase.

*Reference solution (b)*. Dissolve 20 mg of *duloxetine for system suitability CRS* (containing impurity F) in the mobile phase and dilute to 200 mL with the mobile phase. In order to prepare impurities C and D *in situ*, heat the solution at 60 °C for 1 h (solution containing impurities C, D and F).

*Reference solution (c)*. Dissolve 50.0 mg of *duloxetine hydrochloride CRS* in 100.0 mL of the solvent mixture. Dilute 1.0 mL of the solution to 10.0 mL with the solvent mixture.

*Column*:
- *size*: *l* = 0.15 m, Ø = 4.6 mm;
- *stationary phase*: spherical *octylsilyl silica gel for chromatography R* (3.5 µm);
- *temperature*: 40 °C.

*Hexanesulfonate solution*: dissolve 10.3 g of *sodium hexanesulfonate monohydrate for ion-pair chromatography R* in a solution prepared as follows and dilute to 1000.0 mL with the same solution: dissolve 2.9 g (1.7 mL) of *phosphoric acid R* in 900 mL of *water for chromatography R*, adjust to pH 2.5 with *dilute sodium hydroxide solution R* and dilute to 1000 mL with *water for chromatography R*.

*Mobile phase*: *acetonitrile for chromatography R*, *propanol R*, hexanesulfonate solution (13:17:70 *V/V/V*).

*Flow rate*: 1.0 mL/min.

*Detection*: spectrophotometer at 230 nm.

*Injection*: 20 µL of test solution (a) and reference solutions (a) and (b).

*Run time*: 2.5 times the retention time of duloxetine.

*Identification of impurities*: use the chromatogram supplied with *duloxetine for system suitability CRS* and the chromatogram obtained with reference solution (b) to identify the peaks due to impurities C, D and F.

*Relative retention* with reference to duloxetine (retention time = about 16 min): impurity C = about 0.4; impurity D = about 0.5; impurity F = about 1.1.

*System suitability*: reference solution (b):
- *resolution*: minimum 1.5 between the peaks due to impurities C and D;
- *peak-to-valley ratio*: minimum 4.0, where $H_p$ = height above the baseline of the peak due to impurity F and $H_v$ = height above the baseline of the lowest point of the curve separating this peak from the peak due to duloxetine.

*Limits*:
- *impurity F*: not more than 4 times the area of the principal peak in the chromatogram obtained with reference solution (a) (0.4 per cent);
- *unspecified impurities*: for each impurity, not more than the area of the principal peak in the chromatogram obtained with reference solution (a) (0.10 per cent);
- *total*: not more than 5 times the area of the principal peak in the chromatogram obtained with reference solution (a) (0.5 per cent);
- *disregard limit*: 0.5 times the area of the principal peak in the chromatogram obtained with reference solution (a) (0.05 per cent).

**Loss on drying** (*2.2.32*): maximum 0.5 per cent, determined on 1.000 g by drying in an oven at 105 °C for 3 h.

**Sulfated ash** (*2.4.14*): maximum 0.1 per cent, determined on 1.0 g.

ASSAY

Liquid chromatography (*2.2.29*) as described in the test for related substances with the following modification.

*Injection*: test solution (b) and reference solution (c).

Calculate the percentage content of $C_{18}H_{20}ClNOS$ taking into account the assigned content of *duloxetine hydrochloride CRS*.

STORAGE

Protected from light.

IMPURITIES

*Specified impurities*: *A, F*.

*Other detectable impurities* (the following substances would, if present at a sufficient level, be detected by one or other of the tests in the monograph. # DUTASTERIDE

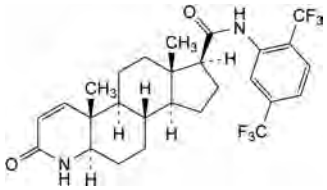
## Dutasteridum



$C_{27}H_{30}F_6N_2O_2$ $M_r$ 528.5
[164656-23-9]

DEFINITION

*N*-[2,5-Bis(trifluoromethyl)phenyl]-3-oxo-4-aza-5α-androst-1-ene-17β-carboxamide.

*Content*: 97.0 per cent to 102.0 per cent (anhydrous substance).

CHARACTERS

*Appearance*: white or pale yellow powder.

*Solubility*: practically insoluble in water, freely soluble in methylene chloride, soluble or sparingly soluble in anhydrous ethanol.

IDENTIFICATION

A. Specific optical rotation (see Tests).

B. Infrared absorption spectrophotometry (*2.2.24*).
*Comparison*: *dutasteride CRS*.

TESTS

**Specific optical rotation** (*2.2.7*): + 33.0 to + 39.0 (anhydrous substance).

Dissolve 0.100 g in *anhydrous ethanol R* and dilute to 20.0 mL with the same solvent.

**Related substances**

A. Liquid chromatography (*2.2.29*).

*Solvent mixture*: *water for chromatography R*, *acetonitrile R1* (40:60 *V/V*).

*Test solution*. Dissolve 50.0 mg of the substance to be examined in the solvent mixture and dilute to 100.0 mL with the solvent mixture.

*Reference solution (a)*. Dilute 1.0 mL of the test solution to 100.0 mL with the solvent mixture. Dilute 1.0 mL of this solution to 10.0 mL with the solvent mixture.

*Reference solution (b)*. Dissolve 5 mg of *dutasteride for system suitability CRS* (containing impurities A, B, C, E, F, G, H and I) in the solvent mixture and dilute to 10 mL with the solvent mixture.

*Reference solution (c)*. Dissolve 50.0 mg of *dutasteride CRS* in the solvent mixture and dilute to 100.0 mL with the solvent mixture.

*Column*:
- *size*: *l* = 0.25 m, Ø = 4.6 mm;
- *stationary phase*: *end-capped octadecylsilyl silica gel for chromatography R* (5 µm);
- *temperature*: 35 °C.

*Mobile phase*: mix 0.25 volumes of *trifluoroacetic acid R*, 480 volumes of *water for chromatography R* and 520 volumes of *acetonitrile R1*.

*Flow rate*: 1.0 mL/min.

*Detection*: spectrophotometer at 220 nm.

*Injection*: 20 µL of the test solution and reference solutions (a) and (b).

*Run time*: 1.6 times the retention time of dutasteride.

*Identification of impurities*: use the chromatogram supplied with *dutasteride for system suitability CRS* and the chromatogram obtained with reference solution (b) to identify the peaks due to impurities A, B, C, E, F and G.

*Relative retention* with reference to dutasteride (retention time = about 36 min): impurity A = about 0.10; impurity B = about 0.11; impurity C = about 0.4; impurity E = about 0.9; impurity F = about 1.1; impurity G = about 1.2.

*System suitability*:

- *resolution*: minimum 1.5 between the peaks due to impurity E and dutasteride and minimum 1.5 between the peaks due to impurities A and B in the chromatogram obtained with reference solution (b);
- *signal-to-noise ratio*: minimum 30 for the peak due to dutasteride in the chromatogram obtained with reference solution (a).

*Calculation of percentage contents*:

- *correction factors*: multiply the peak areas of the following impurities by the corresponding correction factor: impurity B = 0.7; impurity F = 3.0;
- for each impurity, use the concentration of dutasteride in reference solution (a).

*Limits*:

- *impurity F*: maximum 0.4 per cent;
- *impurities E, G*: for each impurity, maximum 0.3 per cent;
- *impurities A, C*: for each impurity, maximum 0.2 per cent;
- *impurity B*: maximum 0.15 per cent;
- *unspecified impurities*: for each impurity, maximum 0.10 per cent;
- *reporting threshold*: 0.05 per cent.

B. Liquid chromatography (*2.2.29*) as described in test A for related substances with the following modifications.

*Column*:

- *size*: *l* = 0.15 m, Ø = 4.6 mm;
- *stationary phase*: *phenylsilyl silica gel for chromatography R* (5 µm).

*Mobile phase*: *water for chromatography R, acetonitrile R1* (20:80 *V/V*).

*Injection*: 10 µL of the test solution and reference solutions (a) and (b).

*Run time*: 5 times the retention time of dutasteride.

*Identification of impurities*: use the chromatogram supplied with *dutasteride for system suitability CRS* and the chromatogram obtained with reference solution (b) to identify the peaks due to impurities H and I.

*Relative retention* with reference to dutasteride (retention time = about 4 min): impurity H = about 3.4; impurity I = about 3.9.

*System suitability*: reference solution (b):

- *resolution*: minimum 1.5 between the peaks due to impurities H and I.

*Calculation of percentage contents*:

- for each impurity, use the concentration of dutasteride in reference solution (a).

*Limits*:

- *impurity I*: maximum 0.5 per cent;
- *impurity H*: maximum 0.3 per cent;
- *unspecified impurities eluting after dutasteride*: for each impurity, maximum 0.10 per cent;
- *reporting threshold*: 0.05 per cent.

*Limit*:

- *total for tests A and B*: maximum 1.5 per cent.

**Water** (*2.5.32*): maximum 0.2 per cent, determined on 0.100 g using the evaporation technique at 180 °C.

**Sulfated ash** (*2.4.14*): maximum 0.1 per cent, determined on 1.0 g in a platinum crucible.

ASSAY

Liquid chromatography (*2.2.29*) as described in test A for related substances with the following modification.

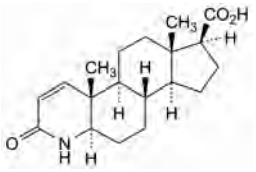
*Injection*: 10 µL of the test solution and reference solution (c).

Calculate the percentage content of $C_{27}H_{30}F_6N_2O_2$ taking into account the assigned content of *dutasteride CRS*.

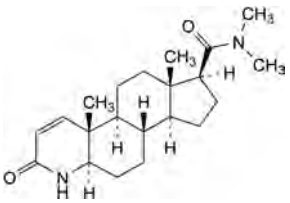
IMPURITIES

*Specified impurities: A, B, C, E, F, G, H, I.*

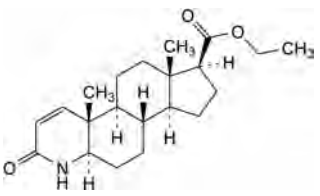
*Other detectable impurities* (the following substances would, if present at a sufficient level, be detected by one or other of the tests in the monograph. They are limited by the general acceptance criterion for other/unspecified impurities and/or by the general monograph *Substances for pharmaceutical use (2034)*. It is therefore not necessary to identify these impurities for demonstration of compliance. See also *5.10. Control of impurities in substances for pharmaceutical use*): *D.*



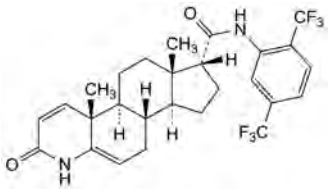
A. 3-oxo-4-aza-5α-androst-1-ene-17β-carboxylic acid,



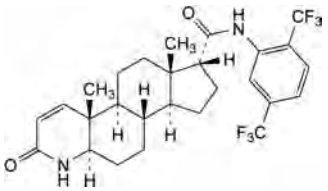
B. *N*,*N*-dimethyl-3-oxo-4-aza-5α-androst-1-ene-17β-carboxamide,



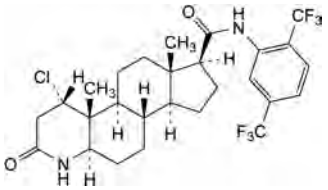
C. ethyl 3-oxo-4-aza-5α-androst-1-ene-17β-carboxylate,



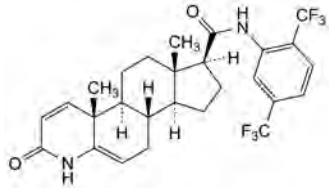
D. *N*-[2,5-bis(trifluoromethyl)phenyl]-3-oxo-4-azaandrost-1,5-diene-17α-carboxamide,



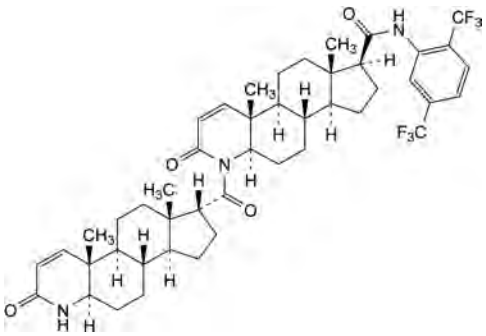
E. *N*-[2,5-bis(trifluoromethyl)phenyl]-3-oxo-4-aza-5α-androst-1-ene-17α-carboxamide,



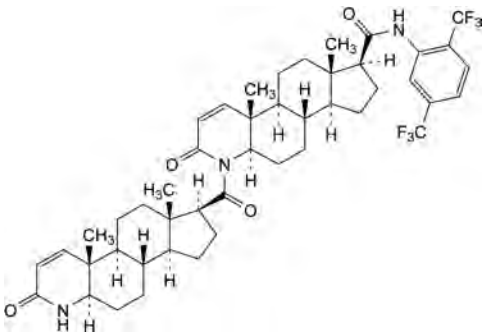
F. *N*-[2,5-bis(trifluoromethyl)phenyl]-1α-chloro-3-oxo-4-aza-5α-androstane-17β-carboxamide,



G. *N*-[2,5-bis(trifluoromethyl)phenyl]-3-oxo-4-azaandrost-1,5-diene-17β-carboxamide,



H. *N*-[2,5-bis(trifluoromethyl)phenyl]-3-oxo-4-[3-oxo-4-aza-5α-androst-1-ene-17α-carbonyl]-4-aza-5α-androst-1-ene-17β-carboxamide (dutasteride dimer 1),

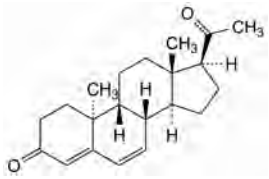


I. *N*-[2,5-bis(trifluoromethyl)phenyl]-3-oxo-4-[3-oxo-4-aza-5α-androst-1-ene-17β-carbonyl]-4-aza-5α-androst-1-ene-17β-carboxamide (dutasteride dimer 2).

**01/2009:2357**

# DYDROGESTERONE

## Dydrogesteronum



$C_{21}H_{28}O_2$ $M_r$ 312.5
[152-62-5]

DEFINITION

9β,10α-Pregna-4,6-diene-3,20-dione.

*Content*: 98.0 per cent to 102.0 per cent (dried substance).

CHARACTERS

*Appearance*: white or almost white, crystalline powder.

*Solubility*: practically insoluble in water, soluble in acetone, sparingly soluble in ethanol (96 per cent).

IDENTIFICATION

Infrared absorption spectrophotometry (*2.2.24*).

*Comparison*: *dydrogesterone CRS*.

TESTS

**Specific optical rotation** (*2.2.7*): – 469 to – 485 (dried substance), measured at 25 °C.

Dissolve 0.100 g in *methylene chloride R* and dilute to 20.0 mL with the same solvent.

**Related substances**. Liquid chromatography (*2.2.29*).

*Test solution (a).* Dissolve 50.0 mg of the substance to be examined in the mobile phase and dilute to 100.0 mL with the mobile phase.

*Test solution (b).* Dissolve 20.0 mg of the substance to be examined in the mobile phase and dilute to 100.0 mL with the mobile phase.

*Reference solution (a).* Dissolve 3.0 mg of *dydrogesterone impurity A CRS* in the mobile phase and dilute to 20.0 mL with the mobile phase. Dilute 1.0 mL of this solution to 100.0 mL with the mobile phase.

*Reference solution (b).* Dilute 1.0 mL of test solution (a) to 100.0 mL with the mobile phase. Dilute 1.0 mL of this solution to 10.0 mL with the mobile phase.

*Reference solution (c).* Dissolve 10 mg of the substance to be examined in 10 mL of reference solution (a).

*Reference solution (d).* Dissolve 10 mg of the substance to be examined in 30 mL of *ethanol (96 per cent) R*. Add 1 mL of a 8.4 g/L solution of *sodium hydroxide R* and heat at 85 °C for 10 min. Cool to room temperature, add 1 mL of a 20.6 g/L solution of *hydrochloric acid R*, add 20 mL of *acetonitrile R*, 2 mg of *dydrogesterone impurity B CRS*, dilute to 100 mL with *water R* and mix. This solution contains dydrogesterone and impurities B and C.

*Reference solution (e).* Dissolve 20.0 mg of *dydrogesterone CRS* in the mobile phase and dilute to 100.0 mL with the mobile phase.

*Column*:

- *size*: *l* = 0.15 m, Ø = 4.6 mm;
- *stationary phase*: spherical *end-capped octadecylsilyl silica gel for chromatography R* (3 µm);
- *temperature*: 40 °C.

*Mobile phase*: *acetonitrile R*, *ethanol (96 per cent) R*, *water R* (21:25:54 *V/V/V*).

*Flow rate*: 1.0 mL/min.

*Detection*: spectrophotometer at 280 nm and at 385 nm.

*Injection*: 10 µL of test solution (a) and reference solutions (a), (b), (c) and (d).

*Run time*: twice the retention time of dydrogesterone.

*Relative retention at 385 nm* with reference to dydrogesterone (retention time = about 13 min): impurity A = about 0.9.

*Relative retention at 280 nm* with reference to dydrogesterone (retention time = about 13 min): impurity B = about 1.1; impurity C = about 1.2.

*System suitability*:

- *resolution at 385 nm*: minimum 1.1 between the peaks due to impurity A and dydrogesterone in the chromatogram obtained with reference solution (c);
- *resolution at 280 nm*: minimum 4.5 between the peaks due to dydrogesterone and impurity B and minimum 1.5 between the peaks due to impurity B and impurity C in the chromatogram obtained with reference solution (d).

*Limits*:

- *impurity A at 385 nm*: not more than the area of the corresponding peak in the chromatogram obtained with reference solution (a) (0.3 per cent);
- *impurity B at 280 nm*: not more than 1.5 times the area of the principal peak in the chromatogram obtained with reference solution (b) (0.15 per cent);
- *impurity C at 280 nm*: not more than 3 times the area of the principal peak in the chromatogram obtained with reference solution (b) (0.3 per cent);
- *unspecified impurities at 280 nm*: for each impurity, not more than the area of the principal peak in the chromatogram obtained with reference solution (b) (0.10 per cent);
- *total at 280 nm*: not more than 5 times the area of the principal peak in the chromatogram obtained with reference solution (b) (0.5 per cent);
- *disregard limit at 280 nm*: 0.5 times the area of the principal peak in the chromatogram obtained with reference solution (b) (0.05 per cent).

**Loss on drying** (*2.2.32*): maximum 0.5 per cent, determined on 1.000 g by drying in an oven at 105 °C for 3 h.

**Sulfated ash** (*2.4.14*): maximum 0.1 per cent, determined on 1.0 g.

ASSAY

Liquid chromatography (*2.2.29*) as described in the test for related substances with the following modifications.

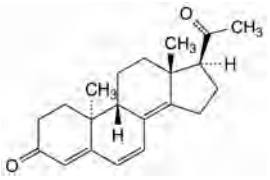
*Detection*: spectrophotometer at 280 nm.

*Injection*: test solution (b) and reference solution (e).

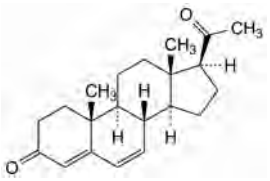
Calculate the percentage content of $C_{21}H_{28}O_2$ from the declared content of *dydrogesterone CRS*.

IMPURITIES

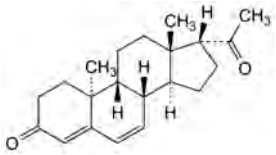
*Specified impurities: A, B, C.*



A. 9β,10α-pregna-4,6,8(14)-triene-3,20-dione,



B. pregna-4,6-diene-3,20-dione,



C. 9β,10α,17α-pregna-4,6-diene-3,20-dione.

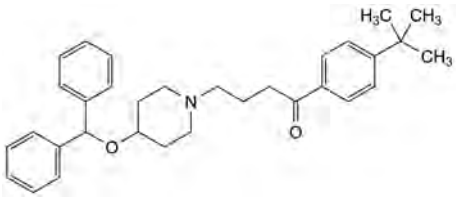
# EBASTINE

## Ebastinum



$C_{32}H_{39}NO_2$ $M_r$ 469.7
[90729-43-4]

DEFINITION

1-(4-*tert*-Butylphenyl)-4-[4-(diphenylmethoxy)piperidin-1-yl]butan-1-one.

*Content*: 99.0 per cent to 101.0 per cent (anhydrous substance).

CHARACTERS

*Appearance*: white or almost white, crystalline powder.

*Solubility*: practically insoluble in water, very soluble in methylene chloride, sparingly soluble in methanol.

mp: about 86 °C.

IDENTIFICATION

Infrared absorption spectrophotometry (*2.2.24*).

*Comparison*: *ebastine CRS*.

TESTS

**Related substances**. Liquid chromatography (*2.2.29*).

*Solution A*. Dilute 12 mL of *phosphoric acid R* and 12 mL of *diethylamine R* in 800 mL of *water for chromatography R*, adjust to pH 6.0 with *diethylamine R* and dilute to 1000 mL with *water for chromatography R*.

*Test solution*. Dissolve 25 mg of the substance to be examined in the mobile phase and dilute to 10.0 mL with the mobile phase.

*Reference solution (a)*. Dissolve 5 mg of *bis(diphenylmethyl) ether R* (impurity H) in the mobile phase and dilute to 50.0 mL with the mobile phase. Dilute 0.5 mL of the solution to 5.0 mL with the test solution. Dilute 3.0 mL of this solution to 10.0 mL with the mobile phase.

*Reference solution (b)*. Dilute 1.0 mL of the test solution to 100.0 mL with the mobile phase. Dilute 1.0 mL of this solution to 10.0 mL with the mobile phase.

*Column*:

- *size*: *l* = 0.25 m, Ø = 4.6 mm;
- *stationary phase*: *base-deactivated end-capped octadecylsilyl silica gel for chromatography R* (5 µm);
- *temperature*: 40 °C.

*Mobile phase*: solution A, *methanol R2*, *acetonitrile R1* (20:38:42 *V/V/V*).

*Flow rate*: 1.0 mL/min.

*Detection*: spectrophotometer at 210 nm.

*Autosampler*: set at 15 °C.

*Injection*: 10 µL.

*Run time*: 1.5 times the retention time of ebastine.

*Identification of impurities*: use the chromatogram obtained with reference solution (a) to identify the peak due to impurity H.

*Relative retention* with reference to ebastine (retention time = about 27 min): impurity H = about 0.9.

*System suitability*: reference solution (a):

- *resolution*: minimum 2 between the peaks due to impurity H and ebastine.

*Calculation of percentage contents*:

- for each impurity, use the concentration of ebastine in reference solution (b).

*Limits*:

- *unspecified impurities*: for each impurity, maximum 0.10 per cent;
- *total*: maximum 0.2 per cent;
- *reporting threshold*: 0.05 per cent.

**Sulfates** (*2.4.13*): maximum 100 ppm.

Suspend 2.5 g in 25 mL of *dilute nitric acid R*. Boil under a reflux condenser for 10 min. Cool and filter.

**Water** (*2.5.12*): maximum 0.5 per cent, determined on 0.500 g.

**Sulfated ash** (*2.4.14*): maximum 0.1 per cent, determined on 1.0 g.

ASSAY

Dissolve 0.350 g in 50 mL of *anhydrous acetic acid R*. Titrate with *0.1 M perchloric acid*, determining the end-point potentiometrically (*2.2.20*).

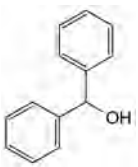
1 mL of *0.1 M perchloric acid* is equivalent to 46.97 mg of $C_{32}H_{39}NO_2$.

STORAGE

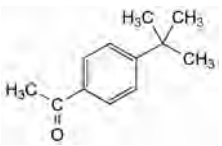
Protected from light.

IMPURITIES

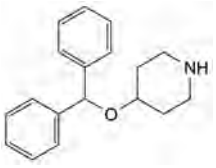
*Other detectable impurities* (the following substances would, if present at a sufficient level, be detected by one or other of the tests in the monograph. They are limited by the general acceptance criterion for other/unspecified impurities and/or by the general monograph *Substances for pharmaceutical use (2034)*. It is therefore not necessary to identify these impurities for demonstration of compliance. See also *5.10. Control of impurities in substances for pharmaceutical use*): *A, B, C, D, E, F, G, H*.



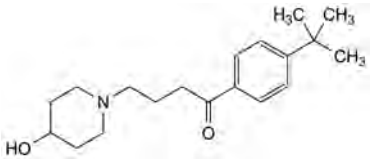
A. diphenylmethanol (benzhydrol),



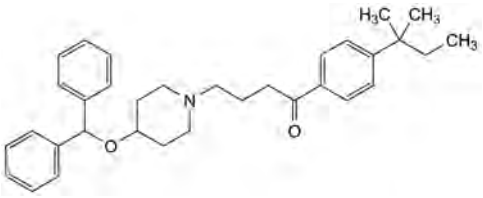
B. 1-(4-*tert*-butylphenyl)ethan-1-one,



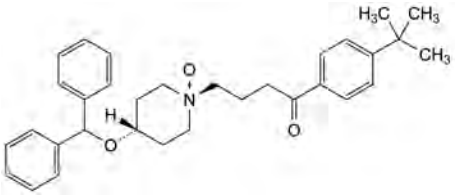
C. 4-(diphenylmethoxy)piperidine,



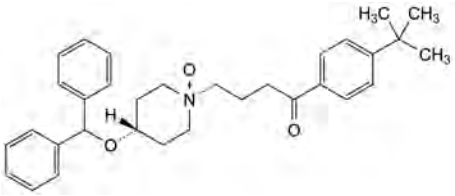
D. 1-(4-*tert*-butylphenyl)-4-(4-hydroxypiperidin-1-yl)butan-1-one,



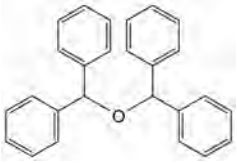
E. 4-[4-(diphenylmethoxy)piperidin-1-yl]-1-[4-(2-methylbutan-2-yl)phenyl]butan-1-one,



F. (1*s*,4*s*)-1-[4-(4-*tert*-butylphenyl)-4-oxobutyl]-4-(diphenylmethoxy)piperidine *N*-oxide,



G. (1*r*,4*r*)-1-[4-(4-*tert*-butylphenyl)-4-oxobutyl]-4-(diphenylmethoxy)piperidine *N*-oxide,

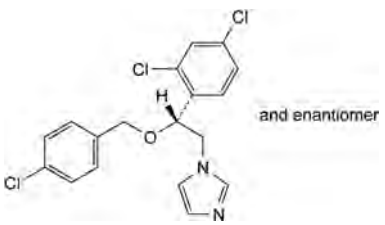


H. [oxybis(methanetriyl)]tetrakisbenzene (bis(diphenylmethyl) ether).

**07/2010:2049**
**corrected 7.0**

# ECONAZOLE

## Econazolum



$C_{18}H_{15}Cl_3N_2O$ $M_r$ 381.7
[27220-47-9]

DEFINITION

1-[(2*RS*)-2-[(4-Chlorobenzyl)oxy]-2-(2,4-dichlorophenyl)-ethyl]-1*H*-imidazole.

*Content*: 99.0 per cent to 101.0 per cent (dried substance).

CHARACTERS

*Appearance*: white or almost white powder.

*Solubility*: practically insoluble in water, very soluble in ethanol (96 per cent) and in methylene chloride.

IDENTIFICATION

A. Melting point (*2.2.14*): 88 °C to 92 °C.

B. Infrared absorption spectrophotometry (*2.2.24*).
*Comparison*: *econazole CRS*.

TESTS

**Related substances**. Liquid chromatography (*2.2.29*).

*Test solution*. Dissolve 0.100 g of the substance to be examined in *methanol R* and dilute to 10.0 mL with the same solvent.

*Reference solution (a)*. Dissolve 10 mg of *econazole for system suitability CRS* (containing impurities A, B and C) in *methanol R* and dilute to 1.0 mL with the same solvent.

*Reference solution (b)*. Dilute 1.0 mL of the test solution to 20.0 mL with *methanol R*. Dilute 1.0 mL of this solution to 25.0 mL with *methanol R*.

*Column*:
- *size*: *l* = 0.10 m, Ø = 4.6 mm;
- *stationary phase*: *base-deactivated octadecylsilyl silica gel for chromatography R* (3 µm);
- *temperature*: 35 °C.

*Mobile phase*:
- *mobile phase A*: *methanol R*, 0.77 g/L solution of *ammonium acetate R* (20:80 *V/V*);
- *mobile phase B*: *methanol R*, *acetonitrile R* (40:60 *V/V*);

| Time (min) | Mobile phase A (per cent *V/V*) | Mobile phase B (per cent *V/V*) |
|---|---|---|
| 0 - 25 | 60 → 10 | 40 → 90 |
| 25 - 27 | 10 | 90 |

*Flow rate*: 1.5 mL/min.

*Detection*: spectrophotometer at 225 nm.

*Injection*: 10 µL.

*Identification of impurities*: use the chromatogram supplied with *econazole for system suitability CRS* and the chromatogram obtained with reference solution (a) to identify the peaks due to impurities A, B and C.

*Relative retention* with reference to econazole (retention time = about 15 min): impurity A = about 0.2; impurity B = about 0.6; impurity C = about 1.1.

*System suitability*: reference solution (a):
- *peak-to-valley ratio*: minimum 1.5, where $H_p$ = height above the baseline of the peak due to impurity C and $H_v$ = height above the baseline of the lowest point of the curve separating this peak from the peak due to econazole.

*Limits*:
- *correction factor*: for the calculation of content, multiply the peak area of impurity A by 1.4;
- *impurities A, B, C*: for each impurity, not more than the area of the principal peak in the chromatogram obtained with reference solution (b) (0.2 per cent);
- *unspecified impurities*: for each impurity, not more than 0.5 times the area of the principal peak in the chromatogram obtained with reference solution (b) (0.10 per cent);
- *total*: not more than 1.5 times the area of the principal peak in the chromatogram obtained with reference solution (b) (0.3 per cent);

– *disregard limit*: 0.25 times the area of the principal peak in the chromatogram obtained with reference solution (b) (0.05 per cent).

**Loss on drying** (*2.2.32*): maximum 0.5 per cent, determined on 1.000 g by drying *in vacuo* at 60 °C for 4 h.

**Sulfated ash** (*2.4.14*): maximum 0.1 per cent, determined on 1.0 g.

ASSAY

Dissolve 0.300 g in 75 mL of *anhydrous acetic acid R*. Titrate with *0.1 M perchloric acid*, determining the end-point potentiometrically (*2.2.20*). Carry out a blank titration.

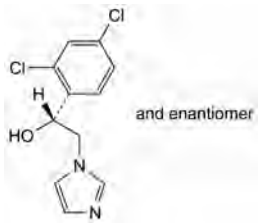
1 mL of *0.1 M perchloric acid* is equivalent to 38.17 mg of $C_{18}H_{15}Cl_3N_2O$.

STORAGE

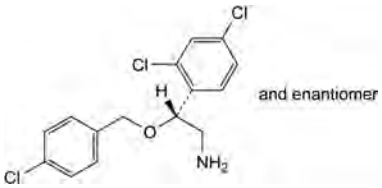
Protected from light.

IMPURITIES

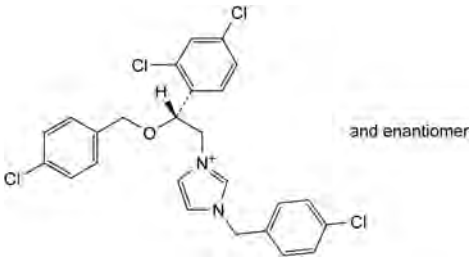
*Specified impurities: A, B, C.*



A. (1*RS*)-1-(2,4-dichlorophenyl)-2-(1*H*-imidazol-1-yl)ethanol,



B. (2*RS*)-2-[(4-chlorobenzyl)oxy]-2-(2,4-dichlorophenyl)-ethanamine,



C. 1-(4-chlorobenzyl)-3-[(2*RS*)-2-[(4-chlorobenzyl)oxy]-2-(2,4-dichlorophenyl)ethyl]imidazolium.

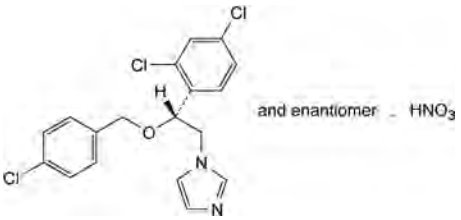
# ECONAZOLE NITRATE

## Econazoli nitras



$C_{18}H_{16}Cl_3N_3O_4$ $M_r$ 444.7
[24169-02-6]

DEFINITION

1-[(2*RS*)-2-[(4-Chlorobenzyl)oxy]-2-(2,4-dichlorophenyl)-ethyl]-1*H*-imidazole nitrate.

*Content*: 99.0 per cent to 101.0 per cent (dried substance).

CHARACTERS

*Appearance*: white or almost white, crystalline powder.

*Solubility*: very slightly soluble in water, soluble in methanol, sparingly soluble in methylene chloride, slightly soluble in ethanol (96 per cent).

mp: about 165 °C, with decomposition.

IDENTIFICATION

Infrared absorption spectrophotometry (*2.2.24*).

*Comparison*: *econazole nitrate CRS*.

TESTS

**Related substances**. Liquid chromatography (*2.2.29*).

*Test solution*. Dissolve 0.100 g of the substance to be examined in *methanol R* and dilute to 10.0 mL with the same solvent.

*Reference solution (a)*. Dissolve 10 mg of *econazole for system suitability CRS* (containing impurities A, B and C) in *methanol R* and dilute to 1.0 mL with the same solvent.

*Reference solution (b)*. Dilute 1.0 mL of the test solution to 20.0 mL with *methanol R*. Dilute 1.0 mL of this solution to 25.0 mL with *methanol R*.

*Column*:

– *size*: *l* = 0.10 m, Ø = 4.6 mm;
– *stationary phase*: *base-deactivated octadecylsilyl silica gel for chromatography R* (3 µm);
– *temperature*: 35 °C.

*Mobile phase*:

– *mobile phase A*: *methanol R*, 0.77 g/L solution of *ammonium acetate R* (20:80 *V/V*);
– *mobile phase B*: *methanol R*, *acetonitrile R* (40:60 *V/V*);

| Time (min) | Mobile phase A (per cent *V/V*) | Mobile phase B (per cent *V/V*) |
|---|---|---|
| 0 - 25 | 60 → 10 | 40 → 90 |
| 25 - 27 | 10 | 90 |

*Flow rate*: 1.5 mL/min.

*Detection*: spectrophotometer at 225 nm.

*Injection*: 10 µL.

*Identification of impurities*: use the chromatogram supplied with *econazole for system suitability CRS* and the chromatogram obtained with reference solution (a) to identify the peaks due to impurities A, B and C.

*Relative retention* with reference to econazole (retention time = about 15 min): impurity A = about 0.2; impurity B = about 0.6; impurity C = about 1.1.

*System suitability*: reference solution (a):

- *peak-to-valley ratio*: minimum 1.5, where $H_p$ = height above the baseline of the peak due to impurity C and $H_v$ = height above the baseline of the lowest point of the curve separating this peak from the peak due to econazole.

*Limits*:

- *correction factor*: for the calculation of content, multiply the peak area of impurity A by 1.4;
- *impurities A, B, C*: for each impurity, not more than the area of the principal peak in the chromatogram obtained with reference solution (b) (0.2 per cent);
- *unspecified impurities*: for each impurity, not more than 0.5 times the area of the principal peak in the chromatogram obtained with reference solution (b) (0.10 per cent);
- *total*: not more than 1.5 times the area of the principal peak in the chromatogram obtained with reference solution (b) (0.3 per cent);
- *disregard limit*: 0.25 times the area of the principal peak in the chromatogram obtained with reference solution (b) (0.05 per cent); disregard the peak due to the nitrate ion at the beginning of the chromatogram.

**Loss on drying** (*2.2.32*): maximum 0.5 per cent, determined on 1.000 g by drying in an oven at 105 °C for 4 h.

**Sulfated ash** (*2.4.14*): maximum 0.1 per cent, determined on 1.0 g.

ASSAY

Dissolve 0.400 g in 50 mL of *anhydrous acetic acid R*. Titrate with *0.1 M perchloric acid*, determining the end-point potentiometrically (*2.2.20*). Carry out a blank titration.

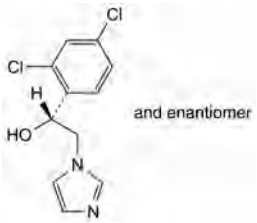
1 mL of *0.1 M perchloric acid* is equivalent to 44.47 mg of $C_{18}H_{16}Cl_3N_3O_4$.

STORAGE

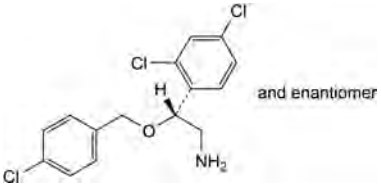
Protected from light.

IMPURITIES

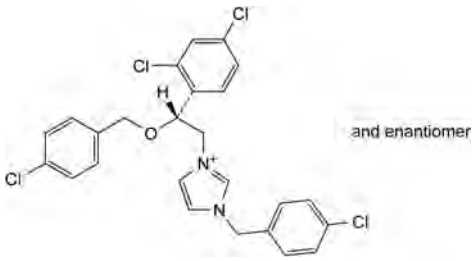
*Specified impurities: A, B, C.*



A. (1*RS*)-1-(2,4-dichlorophenyl)-2-(1*H*-imidazol-1-yl)ethanol,



B. (2*RS*)-2-[(4-chlorobenzyl)oxy]-2-(2,4-dichlorophenyl)-ethanamine,



C. 1-(4-chlorobenzyl)-3-[(2*RS*)-2-[(4-chlorobenzyl)oxy]-2-(2,4-dichlorophenyl)ethyl]imidazolium.

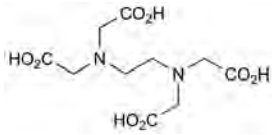
# EDETIC ACID

## Acidum edeticum



$C_{10}H_{16}N_2O_8$ $M_r$ 292.2
[60-00-4]

DEFINITION

(Ethylenedinitrilo)tetraacetic acid.

*Content*: 98.0 per cent to 101.0 per cent.

CHARACTERS

*Appearance*: white or almost white, crystalline powder or colourless crystals.

*Solubility*: practically insoluble in water and in ethanol (96 per cent). It dissolves in dilute solutions of alkali hydroxides.

IDENTIFICATION

*First identification: A.*

*Second identification: B, C.*

A. Infrared absorption spectrophotometry (*2.2.24*).

*Preparation*: discs, after drying the substance to be examined in an oven at 100-105 °C for 2 h.

*Comparison*: *sodium edetate R*, treated as follows: dissolve 0.25 g of *sodium edetate R* in 5 mL of *water R*, add 1.0 mL of *dilute hydrochloric acid R*. Filter, wash the residue with 2 quantities, each of 5 mL, of *water R* and dry the residue in an oven at 100-105 °C for 2 h.

B. To 5 mL of *water R* add 0.1 mL of *ammonium thiocyanate solution R* and 0.1 mL of *ferric chloride solution R1* and mix. The solution is red. Add 0.5 mL of solution S (see Tests). The solution becomes yellowish.

C. To 10 mL of solution S add 0.5 mL of *calcium chloride solution R*. Make alkaline to *red litmus paper R* by the addition of *dilute ammonia R2* and add 3 mL of *ammonium oxalate solution R*. No precipitate is formed.

TESTS

**Solution S**. Dissolve 5.0 g in 20 mL of *dilute sodium hydroxide solution R* and dilute to 100 mL with *water R*.

**Appearance of solution**. Solution S is clear (*2.2.1*) and colourless (*2.2.2, Method II*).

**Impurity A**. Liquid chromatography (*2.2.29*). *Carry out the test protected from light.*

*Solvent mixture.* Dissolve 10.0 g of *ferric sulfate pentahydrate R* in 20 mL of *0.5 M sulfuric acid* and add 780 mL of *water R*.

Adjust to pH 2.0 with *1 M sodium hydroxide* and dilute to 1000 mL with *water R*.

*Test solution*. Dissolve 0.100 g of the substance to be examined in 1.0 mL of *1 M sodium hydroxide* and dilute to 25.0 mL with the solvent mixture.

*Reference solution*. Dissolve 40.0 mg of *nitrilotriacetic acid R* in the solvent mixture and dilute to 100.0 mL with the solvent mixture. To 1.0 mL of the solution add 0.1 mL of the test solution and dilute to 100.0 mL with the solvent mixture.

*Column*:

– *size*: *l* = 0.10 m, Ø = 4.6 mm,

– *stationary phase*: spherical *graphitised carbon for chromatography R1* (5 µm) with a specific surface area of 120 $m^2$/g and a pore size of 25 nm.

*Mobile phase*: dissolve 50.0 mg of *ferric sulfate pentahydrate R* in 50 mL of *0.5 M sulfuric acid* and add 750 mL of *water R*. Adjust to pH 1.5 with *0.5 M sulfuric acid* or *1 M sodium hydroxide*, add 20 mL of *ethylene glycol R* and dilute to 1000 mL with *water R*.

*Flow rate*: 1 mL/min.

*Detection*: spectrophotometer at 273 nm.

*Injection*: 20 µL; filter the solutions and inject immediately.

*Run time*: 4 times the retention time of the iron complex of impurity A.

*Retention time*: iron complex of impurity A = about 5 min; iron complex of edetic acid = about 10 min.

*System suitability*: reference solution:

– *resolution*: minimum 7 between the peaks due to the iron complex of impurity A and the iron complex of edetic acid,

– *signal-to-noise ratio*: minimum 50 for the peak due to impurity A.

*Limit*:

– *impurity A*: not more than the area of the corresponding peak in the chromatogram obtained with the reference solution (0.1 per cent).

**Chlorides** (*2.4.4*): maximum 200 ppm.

To 10 mL of solution S add 8 mL of *nitric acid R* and stir for 10 min. A precipitate is formed. Filter and wash the filter with *water R*. Collect the filtrate and the washings and dilute to 20 mL with *water R*. Dilute 10 mL of this solution to 15 mL with *water R*.

**Iron** (*2.4.9*): maximum 80 ppm.

Dilute 2.5 mL of solution S to 10 mL with *water R* and add 0.25 g of *calcium chloride R* before adding the *thioglycollic acid R*. Allow to stand for 5 min. Also add 0.25 g of *calcium chloride R* to the standard.

**Sulfated ash** (*2.4.14*): maximum 0.2 per cent, determined on 1.0 g.

ASSAY

Dissolve 0.250 g in 2.0 mL of *dilute sodium hydroxide solution R* and dilute to 300 mL with *water R*. Add 2 g of *hexamethylenetetramine R* and 2 mL of *dilute hydrochloric acid R*. Titrate with *0.1 M zinc sulfate* using about 50 mg of *xylenol orange triturate R* as indicator.

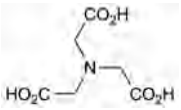
1 mL of *0.1 M zinc sulfate* corresponds to 29.22 mg of $C_{10}H_{16}N_2O_8$.

STORAGE

Protected from light.

IMPURITIES

*Specified impurities: A.*

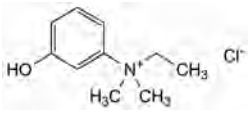


A. nitrilotriacetic acid.

**01/2008:2106**
**corrected 10.0**

# EDROPHONIUM CHLORIDE

## Edrophonii chloridum



$C_{10}H_{16}ClNO$ $M_r$ 201.7
[116-38-1]

DEFINITION

*N*-Ethyl-3-hydroxy-*N*,*N*-dimethylanilinium chloride.

*Content*: 99.0 per cent to 101.0 per cent (dried substance).

CHARACTERS

*Appearance*: white or almost white, crystalline powder.

*Solubility*: very soluble in water, freely soluble in ethanol (96 per cent), practically insoluble in methylene chloride.

IDENTIFICATION

A. Infrared absorption spectrophotometry (*2.2.24*).
*Comparison*: *edrophonium chloride CRS*.

B. It gives reaction (a) of chlorides (*2.3.1*).

TESTS

**Appearance of solution**. The solution is clear (*2.2.1*) and colourless (*2.2.2, Method II*).

Dissolve 0.5 g in *water R* and dilute to 25 mL with the same solvent.

**pH** (*2.2.3*): 4.0 to 5.0.

Dissolve 1.0 g in *carbon dioxide-free water R* and dilute to 10.0 mL with the same solvent.

**Related substances**. Liquid chromatography (*2.2.29*).

*Test solution*. Dissolve 50.0 mg in *water R* and dilute to 50.0 mL with the same solvent.

*Reference solution (a)*. Dissolve 10.0 mg of *3-dimethylaminophenol R* in *acetonitrile R* and dilute to 10.0 mL with the same solvent.

*Reference solution (b)*. Mix 1.0 mL of the test solution and 1.0 mL of reference solution (a) and dilute to 100.0 mL with *water R*. Dilute 10.0 mL of this solution to 100.0 mL with *water R*.

*Column*:

– *size*: *l* = 0.25 m, Ø = 4.6 mm,

– *stationary phase*: *styrene-divinylbenzene copolymer R* (8-10 µm).

*Mobile phase*: mix 10 volumes of *acetonitrile R* and 90 volumes of a 7.7 g/L solution of *tetramethylammonium bromide R* previously adjusted to pH 3.0 with *phosphoric acid R*.

*Flow rate*: 1 mL/min.

*Detection*: spectrophotometer at 281 nm.

*Injection*: 20 µL.

*Run time*: twice the retention time of edrophonium.

*Relative retention* with reference to edrophonium (retention time = about 3.8 min): impurity A = about 1.3.

*System suitability*: reference solution (b):

– *resolution*: minimum 2.0 between the peaks due to edrophonium and impurity A.

*Limits*:

– *impurity A*: not more than the area of the corresponding peak in the chromatogram obtained with reference solution (b) (0.1 per cent),

– *any other impurity*: for each impurity, not more than the area of the peak due to edrophonium in the chromatogram obtained with reference solution (b) (0.1 per cent),

– *total*: not more than 5 times the area of the peak due to edrophonium in the chromatogram obtained with reference solution (b) (0.5 per cent),

– *disregard limit*: 0.5 times the area of the peak due to edrophonium in the chromatogram obtained with reference solution (b) (0.05 per cent).

**Loss on drying** (*2.2.32*): maximum 0.5 per cent, determined on 1.000 g by drying in a desiccator at a pressure not exceeding 0.7 kPa for 24 h.

**Sulfated ash** (*2.4.14*): maximum 0.1 per cent, determined on 1.0 g.

**Bacterial endotoxins** (*2.6.14*): less than 8.3 IU/mg.

ASSAY

Dissolve 0.150 g in 60 mL of a mixture of equal volumes of *acetic anhydride R* and *anhydrous acetic acid R*. Titrate with *0.1 M perchloric acid*, determining the end-point potentiometrically (*2.2.20*).

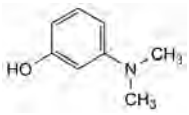
1 mL of *0.1 M perchloric acid* is equivalent to 20.17 mg of $C_{10}H_{16}ClNO$.

STORAGE

Protected from light.

IMPURITIES

*Specified impurities: A.*



A. 3-(dimethylamino)phenol.

**07/2019:2315**

# EGG PHOSPHOLIPIDS FOR INJECTION

## Phospholipida ex ovo ad iniectabile

Egg lecithins: [93685-90-6]
Egg phosphatidylcholines: [97281-44-2]

DEFINITION

Mixture of natural phospholipids of egg yolk, and fractions thereof, for injection. A suitable stabiliser such as α-tocopherol may be added.

*Content*:

– *phosphatidylcholine*: minimum 60.0 per cent (anhydrous substance);

– *phosphatidylethanolamine*: maximum 20.0 per cent (anhydrous substance);

– *lysophosphatidylcholine*: maximum 3.0 per cent (anhydrous substance).

PRODUCTION

**Viral safety**. The requirements of general chapter *5.1.7* apply.

CHARACTERS

*Appearance*: almost white or yellow mass or powder.

*Solubility*: practically insoluble in water, very soluble in ethanol (96 per cent) and freely soluble in heptane.

IDENTIFICATION

*Carry out either test A or test B. If sphingomyelin is not detected with test A or B, carry out test C.*

A. Thin-layer chromatography (*2.2.27*).

*Test solution*. Dissolve 25 mg of the substance to be examined in *methanol R* and dilute to 50.0 mL with the same solvent.

*Reference solution (a)*. Dissolve 10 mg of *phosphatidylethanolamine from egg yolk CRS* in *methanol R* and dilute to 10.0 mL with the same solvent.

*Reference solution (b)*. Dissolve 15 mg of *lysophosphatidylcholine from egg yolk CRS* and 15 mg of *sphingomyelin from egg yolk R* in *methanol R* and dilute to 20.0 mL with the same solvent.

*Reference solution (c)*. Dissolve 15 mg of *phosphatidylcholine from egg yolk CRS* in *methanol R*, add 5 mL of reference solution (a) and 1 mL of reference solution (b) and dilute to 50.0 mL with *methanol R*.

*Plate*: *TLC silica gel plate R* (2-10 µm).

*Mobile phase*: *water R*, *methanol R*, *chloroform R* (4:25:65 *V/V/V*).

*Application*: 4 µL of the test solution and reference solution (c), as slim bands.

*Development*: over 2/3 of the plate.

*Detection*: spray with *copper sulfate solution R1* and heat at 170 °C for 5-15 min; the phospholipids appear as brownish-grey bands.

*Retardation factors*: lysophosphatidylcholine = about 0.15; sphingomyelin = about 0.2; phosphatidylcholine = about 0.3; phosphatidylethanolamine = about 0.6.

*System suitability*: reference solution (c):

– the chromatogram shows 4 clearly separated bands.

*Results*:

– the principal band in the chromatogram obtained with the test solution is similar in position and colour to the band due to phosphatidylcholine in the chromatogram obtained with reference solution (c);

– the band due to sphingomyelin is visible in the chromatogram obtained with the test solution.

B. Liquid chromatography (*2.2.29*) as described in the assay with the following modifications.

*Injection*: test solution and reference solution (h).

*Identification of peaks*: use the chromatogram obtained with reference solution (h) to identify the peak due to sphingomyelin.

*Relative retention* with reference to phosphatidylcholine (retention time = about 8 min): sphingomyelin = about 1.1 (may be eluted as 1 or 2 peaks).

*Results*:

– the principal peak in the chromatogram obtained with the test solution is due to phosphatidylcholine;

– the peak due to sphingomyelin in the chromatogram obtained with the test solution has a signal-to-noise ratio not less than 3.

C. Composition of fatty acids (*2.4.22, Method B*). Use the mixture of calibrating substances in Table 2.4.22.-3.

*Composition of the fatty-acid fraction of the substance*:
- the oleic acid (C18:1) content is greater than that of linoleic acid (C18:2);
- arachidonic acid (C20:4) and docosahexaenoic acid (C22:6) are present.

TESTS

**Acid value** (*2.5.1*): maximum 20.

Dissolve 2.00 g in 50 mL of a mixture of equal volumes of *ethanol (96 per cent) R* and *ether R*, previously neutralised with *0.1 M potassium hydroxide* using 0.5 mL of *phenolphthalein solution R1* as indicator.

**Peroxide value** (*2.5.5, Method A*): maximum 3.

Titrate with *0.01 M sodium thiosulfate*, determining the end-point potentiometrically (*2.2.20*).

**Nonphosphatidyl lipids**: maximum 7.0 per cent.

*Test solution.* Dissolve 0.500 g of the substance to be examined in *ether R* and dilute to 15.0 mL with the same solvent.

*Chromatography column*: *l* = 0.35-0.4 m, Ø = 10-20 mm.

*Preparation of the column.* Transfer 1 kg of silica gel with a particle size of 0.05-0.2 mm into a container fitted with a screw cap. Add 150 g of *water R*, shake thoroughly, and allow to stand for 24 h. Suspend 15 g of the prepared adsorbent in 50 mL of *ether R* and introduce into the column. Allow the *ether R* to pass through the column to a level of about 1 cm above the silica gel bed.

Transfer the test solution to the column. Rinse with 2 quantities, each of 15 mL, of *ether R*, allowing each to pass through the column before adding the next. After rinsing, elute with 105 mL of *ether R*. Combine the rinsings and eluate and evaporate to dryness. Remove any volatile components with a stream of nitrogen and dry the residue at 105 °C for 20 min.

Calculate the percentage content of nonphosphatidyl lipids using the following expression:

$$\frac{m_1}{m_2} \times 100$$

$m_1$ = mass of the residue, in milligrams;

$m_2$ = mass of the substance to be examined in the test solution, in milligrams.

**Water** (*2.5.12*): maximum 4.0 per cent, determined on 0.500-1.00 g.

**Microbial contamination**

TAMC: acceptance criterion $10^2$ CFU/g (*2.6.12*).

Absence of *Escherichia coli* (*2.6.13*).

Absence of *Salmonella* (*2.6.13*).

**Bacterial endotoxins** (*2.6.14, Method A*): less than 6 IU/g. The suitability of the method must be verified and a risk assessment must be carried out according to general chapter *5.1.10. Guidelines for using the test for bacterial endotoxins* since the phospholipids can interfere with the test.

ASSAY

Liquid chromatography (*2.2.29*).

*Solvent mixture.* Mix 8 volumes of *water R* and 46 volumes of *2-propanol R*, then add 46 volumes of *hexane R*.

*Test solution.* Dissolve 0.100 g of the substance to be examined in the solvent mixture and dilute to 25.0 mL with the solvent mixture.

*NOTE: if saturation of the peak due to phosphatidylcholine is observed, the test solution may be diluted with the solvent mixture to quantify this compound.*

*Reference solution ($a_1$).* Dissolve 60 mg of *phosphatidylcholine from egg yolk CRS* in the solvent mixture and dilute to 10.0 mL with the solvent mixture.

*Reference solutions ($b_1$), ($c_1$), ($d_1$), ($e_1$), ($f_1$).* Dilute reference solution ($a_1$) with the solvent mixture to obtain 5 reference solutions, the concentrations of which span 60 per cent to 140 per cent of the expected content of phosphatidylcholine in the test solution.

*Reference solution ($a_2$).* Dissolve 40 mg of *phosphatidylethanolamine from egg yolk CRS* in the solvent mixture and dilute to 10.0 mL with the solvent mixture.

*Reference solutions ($b_2$), ($c_2$), ($d_2$), ($e_2$), ($f_2$).* Dilute reference solution ($a_2$) with the solvent mixture to obtain 5 reference solutions, the concentrations of which span 60 per cent to 140 per cent of the expected content of phosphatidylethanolamine in the test solution.

*Reference solution ($a_3$).* Dissolve 40 mg of *lysophosphatidylcholine from egg yolk CRS* in the solvent mixture and dilute to 10.0 mL with the solvent mixture.

*Reference solutions ($b_3$), ($c_3$), ($d_3$), ($e_3$), ($f_3$).* Dilute reference solution ($a_3$) with the solvent mixture to obtain 5 reference solutions, the concentrations of which span 60 per cent to 140 per cent of the expected content of lysophosphatidylcholine in the test solution.

*Reference solution (g).* Mix 5 mL of reference solution ($a_1$) and 5 mL of reference solution ($a_2$).

*Reference solution (h).* Dissolve 5 mg of *sphingomyelin from egg yolk R* in the solvent mixture and dilute to 50.0 mL with the solvent mixture.

*Column*:
- *size*: *l* = 0.125 m, Ø = 4.0 mm;
- *stationary phase*: *diol silica gel for chromatography R* (5 µm);
- *temperature*: 55 °C.

*Mobile phase*:
- *mobile phase A*: mix 0.08 volumes of *triethylamine R*, 1.5 volumes of *glacial acetic acid R*, 17 volumes of *2-propanol R* and 81.42 volumes of *hexane R*;
- *mobile phase B*: mix 0.08 volumes of *triethylamine R*, 1.5 volumes of *glacial acetic acid R*, 14 volumes of *water for chromatography R* and 84.42 volumes of *2-propanol R*;

| Time (min) | Mobile phase A (per cent *V/V*) | Mobile phase B (per cent *V/V*) |
|---|---|---|
| 0 - 2.0 | 95 | 5 |
| 2.0 - 7.0 | 95 → 80 | 5 → 20 |
| 7.0 - 10.5 | 80 → 60 | 20 → 40 |
| 10.5 - 17.0 | 60 → 0 | 40 → 100 |
| 17.0 - 19.5 | 0 | 100 |

*Flow rate*: 1.0 mL/min.

*Detection*: evaporative light-scattering detector; the following settings have been found to be suitable; if the detector has different setting parameters, adjust the detector settings so as to comply with the system suitability criteria:
- *carrier gas*: *nitrogen R*;
- *flow rate*: 2.5 mL/min;
- *evaporator temperature*: 50 °C.

*Injection*: 20 µL of the test solution and reference solutions ($b_{1,2,3}$), ($c_{1,2,3}$), ($d_{1,2,3}$), ($e_{1,2,3}$), ($f_{1,2,3}$) and (g).

*Identification of peaks*: use the chromatograms obtained with reference solutions ($f_1$), ($f_2$) and ($f_3$) to identify the peaks due to phosphatidylcholine, phosphatidylethanolamine and lysophosphatidylcholine.

*Relative retention* with reference to phosphatidylcholine (retention time = about 8 min): phosphatidylethanolamine = about 0.8; lysophosphatidylcholine = about 1.2 (may be eluted as 1 or 2 peaks).

Establish calibration curves with the logarithm of the concentration of phosphatidylcholine, phosphatidylethanolamine and lysophosphatidylcholine in

reference solutions ($b_{1,2,3}$), ($c_{1,2,3}$), ($d_{1,2,3}$), ($e_{1,2,3}$) and ($f_{1,2,3}$) as the abscissa and the logarithm of the corresponding peak areas as the ordinate.

*System suitability*:

- *resolution*: minimum 2.0 between the peaks due to phosphatidylethanolamine and phosphatidylcholine in the chromatogram obtained with reference solution (g);
- *phosphatidylcholine*:
  - *repeatability*: maximum relative standard deviation of 5.0 per cent determined on 6 injections of reference solution ($f_1$);
  - *correlation coefficient*: minimum 0.995;
- *phosphatidylethanolamine*:
  - *repeatability*: maximum relative standard deviation of 5.0 per cent determined on 6 injections of reference solution ($f_2$);
  - *correlation coefficient*: minimum 0.995;
- *lysophosphatidylcholine*:
  - *repeatability*: maximum relative standard deviation of 5.0 per cent determined on 6 injections of reference solution ($f_3$);
  - *correlation coefficient*: minimum 0.99.

Calculate the percentage contents of phosphatidylcholine, phosphatidylethanolamine and lysophosphatidylcholine using the calibration curves.

STORAGE

Under nitrogen, protected from light, at – 15 °C or below.

LABELLING

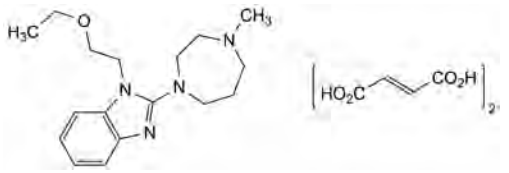
The label states:

- the specified content range of phosphatidylcholine;
- the specified content range of phosphatidylethanolamine.

**01/2008:2242**

# EMEDASTINE DIFUMARATE

## Emedastini difumaras



$C_{25}H_{34}N_4O_9$ $M_r$ 534.6

[87233-62-3]

DEFINITION

1-(2-Ethoxyethyl)-2-(4-methylhexahydro-1*H*-1,4-diazepin-1-yl)-1*H*-benzimidazole bis[hydrogen (2*E*)-butenedioate].

*Content*: 99.0 per cent to 101.0 per cent (dried substance).

CHARACTERS

*Appearance*: white or yellowish powder.

*Solubility*: soluble in water, sparingly soluble in anhydrous ethanol, very slightly soluble in acetone.

It shows polymorphism (*5.9*).

IDENTIFICATION

Infrared absorption spectrophotometry (*2.2.24*).

*Comparison*: *emedastine difumarate CRS*.

If the spectra obtained in the solid state show differences, dissolve the substance to be examined and the reference substance separately in *anhydrous ethanol R*, evaporate to dryness and record new spectra using the residues.

TESTS

**Appearance of solution**. The solution is clear (*2.2.1*) and not more intensely coloured than reference solution $Y_5$ (*2.2.2, Method II*).

Dissolve 2.50 g in *water R* and dilute to 50 mL with the same solvent.

**pH** (*2.2.3*): 3.0 to 4.5.

Dissolve 0.20 g in 100 mL of *carbon dioxide-free water R*.

**Related substances**. Liquid chromatography (*2.2.29*).

*Test solution.* Dissolve 10 mg of the substance to be examined in the mobile phase and dilute to 10 mL with the mobile phase.

*Reference solution (a).* Dissolve 5 mg of *emedastine impurity E CRS* in the mobile phase and dilute to 25 mL with the mobile phase.

*Reference solution (b).* Dissolve 10 mg of the substance to be examined in the mobile phase. Add 0.5 mL of reference solution (a) and dilute to 10 mL with the mobile phase.

*Reference solution (c).* Dilute 5.0 mL of the test solution to 50.0 mL with the mobile phase. Dilute 1.0 mL of this solution to 100.0 mL with the mobile phase.

*Column*:

- *size*: *l* = 0.15 m, Ø = 4.6 mm;
- *stationary phase*: *octadecylsilyl silica gel for chromatography R* (5 µm).

*Mobile phase*: dissolve 3.9 g of *disodium hydrogen phosphate dodecahydrate R* and 2.5 g of *sodium dodecyl sulfate R* in *water R* and dilute to 1000.0 mL with the same solvent. Adjust to pH 2.4 with *phosphoric acid R*. Mix 550 volumes of this solution with 450 volumes of *acetonitrile R*.

*Flow rate*: 1.0 mL/min.

*Detection*: spectrophotometer at 280 nm.

*Injection*: 10 µL of the test solution and reference solutions (b) and (c).

*Run time*: twice the retention time of emedastine.

*Relative retention* with reference to emedastine (retention time = about 18 min): fumaric acid = about 0.1; impurity A = about 0.2; impurity B = about 0.3; impurity C = about 0.5; impurity D = about 0.7; impurity E = about 0.9; impurity F = about 1.4.

*System suitability*: reference solution (b):

- *peak-to-valley ratio*: minimum 4, where $H_p$ = height above the baseline of the peak due to impurity E and $H_v$ = height above the baseline of the lowest point of the curve separating this peak from the peak due to emedastine.

*Limits*:

- *impurities A, B, C, D, E, F*: for each impurity, not more than the area of the principal peak in the chromatogram obtained with reference solution (c) (0.1 per cent);
- *unspecified impurities*: for each impurity, not more than the area of the principal peak in the chromatogram obtained with reference solution (c) (0.1 per cent);
- *total*: not more than twice the area of the principal peak in the chromatogram obtained with reference solution (c) (0.2 per cent);
- *disregard limit*: 0.5 times the area of the principal peak in the chromatogram obtained with reference solution (c) (0.05 per cent); disregard the peak due to fumaric acid.

**Loss on drying** (*2.2.32*): maximum 0.5 per cent, determined on 1.000 g by drying in an oven at 105 °C for 3 h.

**Sulfated ash** (*2.4.14*): maximum 0.1 per cent, determined on 1.0 g.

ASSAY

Dissolve 0.200 g in 50 mL of *glacial acetic acid R*. Titrate with *0.1 M perchloric acid*, determining the end-point potentiometrically (*2.2.20*).

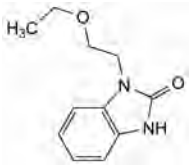
1 mL of *0.1 M perchloric acid* is equivalent to 26.73 mg of $C_{25}H_{34}N_4O_9$.

STORAGE

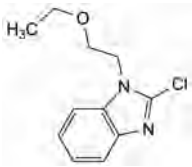
Protected from light.

IMPURITIES

*Specified impurities: A, B, C, D, E, F.*



A. 1-(2-ethoxyethyl)-1,3-dihydro-2*H*-benzimidazol-2-one,



B. 2-chloro-1-(2-ethoxyethyl)-1*H*-benzimidazole,

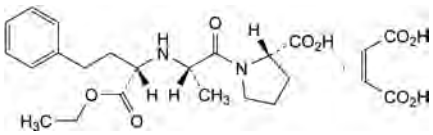
# ENALAPRIL MALEATE

## Enalaprili maleas



$C_{24}H_{32}N_2O_9$ $M_r$ 492.5
[76095-16-4]

DEFINITION

(2*S*)-1-[(2*S*)-2-[[(1*S*)-1-(Ethoxycarbonyl)-3-phenylpropyl]-amino]propanoyl]pyrrolidine-2-carboxylic acid hydrogen (*Z*)-butenedioate.

*Content*: 98.5 per cent to 101.5 per cent (dried substance).

CHARACTERS

*Appearance*: white or almost white, crystalline powder.

*Solubility*: sparingly soluble in water, freely soluble in methanol, practically insoluble in methylene chloride. It dissolves in dilute solutions of alkali hydroxides.

IDENTIFICATION

Infrared absorption spectrophotometry (*2.2.24*).

*Comparison*: *enalapril maleate CRS*.

TESTS

**Solution S**. Dissolve 0.25 g in *carbon dioxide-free water R* and dilute to 25.0 mL with the same solvent.

**Appearance of solution**. Solution S is clear (*2.2.1*) and colourless (*2.2.2, Method II*).

**pH** (*2.2.3*): 2.4 to 2.9 for solution S.

**Specific optical rotation** (*2.2.7*): − 51 to − 48 (dried substance), determined on solution S.

**Related substances**. Liquid chromatography (*2.2.29*).

*Buffer solution A*. Dissolve 2.8 g of *sodium dihydrogen phosphate monohydrate R* in 950 mL of *water for chromatography R*, adjust to pH 2.5 with *phosphoric acid R* and dilute to 1000 mL with *water for chromatography R*.

*Buffer solution B*. Dissolve 2.8 g of *sodium dihydrogen phosphate monohydrate R* in 950 mL of *water for chromatography R*, adjust to pH 6.8 with *strong sodium hydroxide solution R* and dilute to 1000 mL with *water for chromatography R*.

*Solvent mixture*: *acetonitrile R1*, buffer solution A (5:95 *V/V*).

*Test solution (a)*. Dissolve 30 mg of the substance to be examined in the solvent mixture and dilute to 100.0 mL with the solvent mixture.

*Test solution (b)*. Dissolve 0.100 g of the substance to be examined in the solvent mixture and dilute to 20.0 mL with the solvent mixture.

*Reference solution (a)*. Dilute 1.0 mL of test solution (a) to 100.0 mL with the solvent mixture. Dilute 1.0 mL of this solution to 10.0 mL with the solvent mixture.

*Reference solution (b)*. Dissolve 3 mg of *enalapril for system suitability CRS* (containing impurity A) in the solvent mixture and dilute to 10.0 mL with the solvent mixture.

*Reference solution (c)*. Dissolve the contents of a vial of *enalapril impurity mixture A CRS* (impurities C and H) in 1.0 mL of the solvent mixture.

*Reference solution (d).* Dissolve 2.0 mg of *enalapril impurity G CRS* in the solvent mixture and dilute to 10.0 mL with the solvent mixture. Dilute 1.0 mL of the solution to 20.0 mL with the solvent mixture.

*Column*:

- *size*: *l* = 0.15 m, Ø = 4.1 mm;
- *stationary phase*: *styrene-divinylbenzene copolymer R* (5 µm);
- *temperature*: 70 °C.

*Mobile phase*:

- *mobile phase A*: *acetonitrile R1*, buffer solution B (5:95 *V/V*);
- *mobile phase B*: buffer solution B, *acetonitrile R1* (34:66 *V/V*);

| Time (min) | Mobile phase A (per cent *V/V*) | Mobile phase B (per cent *V/V*) |
|---|---|---|
| 0 - 3 | 95 | 5 |
| 3 - 23 | 95 → 40 | 5 → 60 |
| 23 - 30 | 40 | 60 |

*Flow rate*: 1.0 mL/min.

*Detection*: spectrophotometer at 215 nm.

*Injection*: 50 µL of test solution (a) and reference solutions (a), (b) and (c); for impurity G, test solution (b) and reference solution (d).

*Identification of impurities*: use the chromatogram obtained with reference solution (b) to identify the peak due to impurity A; use the chromatogram supplied with *enalapril impurity mixture A CRS* and the chromatogram obtained with reference solution (c) to identify the peaks due to impurities C and H; use the chromatogram obtained with reference solution (d) to identify the peak due to impurity G.

*Relative retention* with reference to enalapril (retention time = about 13 min): maleic acid = about 0.1; impurity C = about 0.2; impurity A = about 1.1; impurity G = about 1.2; impurity H = about 1.3.

*System suitability*:

- *signal-to-noise ratio*: minimum 40 for the peak due to enalapril in the chromatogram obtained with reference solution (a); minimum 40 for the peak due to impurity G in the chromatogram obtained with reference solution (d);
- *peak-to-valley ratio*: minimum 10, where $H_p$ = height above the baseline of the peak due to impurity A and $H_v$ = height above the baseline of the lowest point of the curve separating this peak from the peak due to enalapril in the chromatogram obtained with reference solution (b).

*Calculation of percentage contents*:

- *correction factor*: multiply the peak area of impurity H by 2.0;
- for impurity G, use the concentration of impurity G in reference solution (d);
- for impurities other than G, use the concentration of enalapril maleate in reference solution (a).

*Limits*:

- *impurity A*: maximum 0.5 per cent;
- *impurity H*: maximum 0.3 per cent;
- *impurities C, G*: for each impurity, maximum 0.2 per cent;
- *unspecified impurities*: for each impurity, maximum 0.10 per cent;
- *total*: maximum 1.0 per cent;
- *reporting threshold*: 0.05 per cent; disregard the peak due to maleic acid.

**Loss on drying** (*2.2.32*): maximum 1.0 per cent, determined on 1.000 g by drying in an oven at 105 °C for 3 h.

**Sulfated ash** (*2.4.14*): maximum 0.1 per cent, determined on 1.0 g.

ASSAY

Dissolve 0.100 g in *carbon dioxide-free water R* and dilute to 50 mL with the same solvent. Titrate with *0.1 M sodium hydroxide*, determining the end-point potentiometrically (*2.2.20*). Titrate to the 2nd point of inflexion.

1 mL of *0.1 M sodium hydroxide* is equivalent to 16.42 mg of $C_{24}H_{32}N_2O_9$.

STORAGE

Protected from light.

IMPURITIES

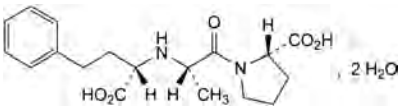
# ENALAPRILAT DIHYDRATE

## Enalaprilatum dihydricum



$C_{18}H_{24}N_2O_5,2H_2O$ $M_r$ 384.4
[84680-54-6]

DEFINITION

(2*S*)-1-[(2*S*)-2-[[(1*S*)-1-Carboxy-3-phenylpropyl]amino]-propanoyl)pyrrolidine-2-carboxylic acid dihydrate.

*Content*: 98.5 per cent to 101.5 per cent (anhydrous substance).

CHARACTERS

*Appearance*: white or almost white, hygroscopic, crystalline powder.

*Solubility*: very slightly soluble or slightly soluble in water, sparingly soluble in methanol, practically insoluble in acetonitrile.

It shows pseudopolymorphism (*5.9*).

IDENTIFICATION

A. Specific optical rotation (see Tests).

B. Infrared absorption spectrophotometry (*2.2.24*).

*Preparation*: mulls in *liquid paraffin R*.

*Comparison*: *enalaprilat dihydrate CRS*.

If the spectra obtained show differences, expose the substance to be examined and the reference substance to a 98 per cent relative humidity for 3 days using a chamber conditioned with a saturated solution of *calcium sulfate R*. Record new spectra.

TESTS

**Appearance of solution**. The solution is clear (*2.2.1*) and colourless (*2.2.2, Method II*).

Dissolve 0.10 g in *water R* and dilute to 100.0 mL with the same solvent.

**Specific optical rotation** (*2.2.7*): – 53.0 to – 56.0 (anhydrous substance).

Dissolve 0.200 g in *methanol R* and dilute to 20.0 mL with the same solvent.

**Related substances**. Liquid chromatography (*2.2.29*). *Use freshly prepared solutions.*

*Buffer solution.* Dissolve 1.36 g of *potassium dihydrogen phosphate R* in 950 mL of *water R*. Adjust to pH 3.0 with *phosphoric acid R* and dilute to 1000 mL with *water R*.

*Solvent mixture.* Buffer solution, *acetonitrile R1*, *methanol R1* (1:2:2 *V/V/V*).

*Dissolution mixture.* Solvent mixture, buffer solution (8:92 *V/V*).

*Test solution.* Dissolve 25.0 mg of the substance to be examined in 2.5 mL of *methanol R1* and dilute to 25.0 mL with the dissolution mixture.

*Reference solution (a).* Dilute 1.0 mL of the test solution to 100.0 mL with the dissolution mixture. Dilute 5.0 mL of this solution to 10.0 mL with the dissolution mixture.

*Reference solution (b).* Dissolve 5 mg of *enalaprilat for system suitability CRS* (containing impurity C) in 0.5 mL of *methanol R1* and dilute to 5 mL with the dissolution mixture.

*Reference solution (c).* Dissolve the contents of a vial of *enalaprilat impurity G CRS* in 1 mL of the test solution.

*Column*:

– *size*: *l* = 0.25 m, Ø = 4.6 mm;
– *stationary phase*: *end-capped octadecylsilyl silica gel for chromatography R* (5 µm);
– *temperature*: 70 °C.

*Mobile phase*:

– *mobile phase A*: solvent mixture, buffer solution (10:90 *V/V*);
– *mobile phase B*: *acetonitrile R1*;

| Time (min) | Mobile phase A (per cent *V/V*) | Mobile phase B (per cent *V/V*) |
|---|---|---|
| 0 - 25 | 100 | 0 |
| 25 - 50 | 100 → 90 | 0 → 10 |
| 50 - 80 | 90 | 10 |

*Flow rate*: 2.0 mL/min.

*Detection*: spectrophotometer at 210 nm.

*Injection*: 20 µL.

*Identification of impurities*: use the chromatogram supplied with *enalaprilat for system suitability CRS* and the chromatogram obtained with reference solution (b) to identify the peak due to impurity C; use the chromatogram obtained with reference solution (c) to identify the peak due to impurity G.

*Relative retention* with reference to enalaprilat (retention time = about 21 min): impurity C = about 1.2; impurity G = about 2.9.

*System suitability*: reference solution (b):

– *peak-to-valley ratio*: minimum 2.0, where $H_p$ = height above the baseline of the peak due to impurity C and $H_v$ = height above the baseline of the lowest point of the curve separating this peak from the peak due to enalaprilat.

*Limits*:

– *impurities C, G*: for each impurity, not more than the area of the principal peak in the chromatogram obtained with reference solution (a) (0.5 per cent);

- *unspecified impurities*: for each impurity, not more than 0.2 times the area of the principal peak in the chromatogram obtained with reference solution (a) (0.10 per cent);
- *total*: not more than twice the area of the principal peak in the chromatogram obtained with reference solution (a) (1.0 per cent);
- *disregard limit*: 0.1 times the area of the principal peak in the chromatogram obtained with reference solution (a) (0.05 per cent).

**Water** (*2.5.12*): 7.0 per cent to 11.0 per cent, determined on 0.100 g.

**Sulfated ash** (*2.4.14*): maximum 0.1 per cent, determined on 1.0 g.

**Bacterial endotoxins** (*2.6.14*): less than 0.1 IU/mg.

ASSAY

Dissolve 0.300 g in *glacial acetic acid R* and dilute to 50 mL with the same solvent. Titrate with *0.1 M perchloric acid*, determining the end point potentiometrically (*2.2.20*).

1 mL of *0.1 M perchloric acid* is equivalent to 34.84 mg of $C_{18}H_{24}N_2O_5$.

STORAGE

In an airtight container.

IMPURITIES

*Specified impurities: C, G.*

*Other detectable impurities* (the following substances would, if present at a sufficient level, be detected by one or other of the tests in the monograph. # ENILCONAZOLE FOR VETERINARY USE

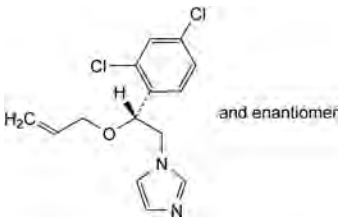
## Enilconazolum ad usum veterinarium



$C_{14}H_{14}Cl_2N_2O$ $M_r$ 297.2
[35554-44-0]

DEFINITION

1-[(2*RS*)-2-(2,4-Dichlorophenyl)-2-(prop-2-enyloxy)ethyl]-1*H*-imidazole.

*Content*: 98.5 per cent to 101.5 per cent (dried substance).

CHARACTERS

*Appearance*: clear, yellowish, oily liquid or solid mass.

*Solubility*: very slightly soluble in water, freely soluble in ethanol (96 per cent), in methanol and in toluene.

IDENTIFICATION

Infrared absorption spectrophotometry (*2.2.24*).

*Comparison*: *enilconazole CRS*.

TESTS

**Optical rotation** (*2.2.7*): – 0.10° to + 0.10°.

Dissolve 0.1 g in *methanol R* and dilute to 10 mL with the same solvent.

**Related substances**. Gas chromatography (*2.2.28*). *Prepare the solutions immediately before use and protect from light.*

*Test solution*. Dissolve 0.100 g of the substance to be examined in *toluene R* and dilute to 100.0 mL with the same solvent.

*Reference solution (a).* Dissolve 10 mg of *enilconazole CRS* and 10 mg of *enilconazole impurity E CRS* in *toluene R* and dilute to 100 mL with the same solvent.

*Reference solution (b).* Dilute 5.0 mL of the test solution to 100.0 mL with *toluene R*. Dilute 1.0 mL of this solution to 10.0 mL with *toluene R*.

*Column*:

- *material*: fused silica;
- *size*: *l* = 25 m, Ø = 0.32 mm;
- *stationary phase*: *phenyl(5)methyl(95)polysiloxane R* (film thickness 0.52 µm).

*Carrier gas*: *helium for chromatography R*.

*Flow rate*: 1.3 mL/min.

*Split ratio*: 1:38.

*Temperature*:

| | Time (min) | Temperature (°C) |
|---|---|---|
| Column | 0 - 6.4 | 100 → 260 |
| | 6.4 - 14 | 260 |
| Injection port | | 250 |
| Detector | | 300 |

*Detection*: flame ionisation.

*Injection*: 2 µL.

*Identification of impurities*: use the chromatogram obtained with reference solution (a) to identify the peak due to impurity E.

*Relative retention* with reference to enilconazole (retention time = about 10 min): impurity A = about 0.6; impurity B = about 0.7; impurity C = about 0.8; impurity D = about 0.9; impurity E = about 1.03; impurity F = about 1.1.

*System suitability*: reference solution (a):

- *resolution*: minimum 2.5 between the peaks due to enilconazole and impurity E.

*Limits*:

- *impurities A, B, C, D, E, F*: for each impurity, not more than twice the area of the principal peak in the chromatogram obtained with reference solution (b) (1.0 per cent), and not more than 1 such peak has an area greater than the area of the principal peak in the chromatogram obtained with reference solution (b) (0.5 per cent);
- *unspecified impurities*: for each impurity, not more than 0.4 times the area of the principal peak in the chromatogram obtained with reference solution (b) (0.20 per cent);
- *total*: not more than 4 times the area of the principal peak in the chromatogram obtained with reference solution (b) (2.0 per cent);
- *disregard limit*: 0.1 times the area of the principal peak in the chromatogram obtained with reference solution (b) (0.05 per cent).

**Loss on drying** (*2.2.32*): maximum 0.5 per cent, determined on 1.000 g by drying *in vacuo* at 40 °C for 4 h.

**Sulfated ash** (*2.4.14*): maximum 0.1 per cent, determined on 1.0 g.

ASSAY

Dissolve 0.230 g in 50 mL of a mixture of 1 volume of *anhydrous acetic acid R* and 7 volumes of *methyl ethyl ketone R*. Titrate with *0.1 M perchloric acid* using 0.2 mL of *naphtholbenzein solution R* as indicator.

1 mL of *0.1 M perchloric acid* is equivalent to 29.72 mg of $C_{14}H_{14}Cl_2N_2O$.

STORAGE

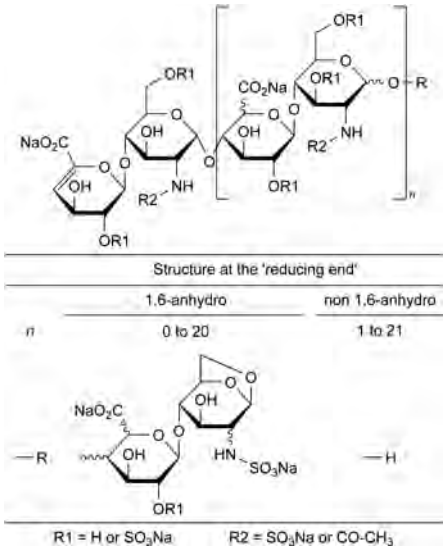
# ENOXAPARIN SODIUM

## Enoxaparinum natricum



DEFINITION

Enoxaparin sodium is the sodium salt of a low-molecular-mass heparin that is obtained by alkaline depolymerisation of the benzyl ester derivative of heparin from porcine intestinal mucosa. Enoxaparin consists of a complex set of oligosaccharides that have not yet been completely characterised. Based on current knowledge, the majority of the components have a 4-enopyranose uronate structure at the non-reducing end of their chain. 15 per cent to 25 per cent of the components have a 1,6-anhydro structure at the reducing end of their chain.

*Enoxaparin sodium complies with the monograph Low-molecular-mass heparins (0828) with the modifications and additional requirements below.*

The mass-average relative molecular mass ranges between 3800 and 5000, with a characteristic value of about 4500.

The degree of sulfatation is about 2 per disaccharide unit.

The potency is not less than 90 IU and not more than 125 IU of anti-factor Xa activity per milligram, calculated with reference to the dried substance. The anti-factor IIa activity is not less than 20.0 IU and not more than 35.0 IU per milligram, calculated with reference to the dried substance. The ratio of anti-factor Xa activity to anti-factor IIa activity is between 3.3 and 5.3.

PRODUCTION

Enoxaparin is produced by alkaline depolymerisation of benzyl ester derivatives of heparin from porcine intestinal mucosa under conditions that yield a product complying with the structural requirements stated under Definition.

IDENTIFICATION

A. Carry out identification test A as described in the monograph *Low-molecular-mass heparins (0828)* using *enoxaparin sodium CRS*.

B. Liquid chromatography (*2.2.29*): use the normalisation procedure.

*Solution A*. Dissolve 12 mg of *sodium tetrahydroborate R* in 400 µL of *water R* and mix using a vortex mixer.

*Heparinase solution (a).* Dissolve *heparinase I R* in *potassium phosphate buffer solution pH 7.0 R* to obtain an activity of 0.4 IU/mL. Store the solution at – 20 °C until use.

*Heparinase solution (b).* Dissolve *heparinase II R* in *potassium phosphate buffer solution pH 7.0 R* to obtain an activity of 0.4 IU/mL. Store the solution at – 20 °C until use.

*Heparinase solution (c).* Dissolve *heparinase III R* in *potassium phosphate buffer solution pH 7.0 R* to obtain an activity of 0.4 IU/mL. Store the solution at – 20 °C until use.

*Heparinase solution (d).* Mix equal volumes of heparinase solution (a), heparinase solution (b) and heparinase solution (c).

*Blank solution.* Gently mix by inversion 20 µL of *water R*, 70 µL of *sodium/calcium acetate buffer solution pH 7.0 R* and 100 µL of heparinase solution (d). Place in a water-bath at 25 °C for 48 h. Mix 60 µL of this solution and 10 µL of freshly prepared solution A. Mix and allow to stand at room temperature for 4 h.

*Test solution (a).* Dissolve 20 mg of the substance to be examined in 1 mL of *water R*.

*Test solution (b).* To 20 µL of test solution (a), add 70 µL of *sodium/calcium acetate buffer solution pH 7.0 R* and 100 µL of heparinase solution (d). Gently mix by inversion and place in a water-bath at 25 °C for 48 h.

*Test solution (c).* To 60 µL of test solution (b), add 10 µL of freshly prepared solution A. Mix and allow to stand at room temperature for 4 h.

*Reference solution (a).* Dissolve 20 mg of *enoxaparin sodium CRS* in 1 mL of *water R*.

*Reference solution (b).* To 20 µL of reference solution (a), add 70 µL of *sodium/calcium acetate buffer solution pH 7.0 R* and 100 µL of heparinase solution (d). Gently mix by inversion and place in a water-bath at 25 °C for 48 h.

*Reference solution (c).* To 60 µL of reference solution (b), add 10 µL of freshly prepared solution A. Mix and allow to stand at room temperature for 4 h.

*NOTE: heparinase solutions (a), (b) and (c) can be stored for 3 months at – 20 °C. Test solutions (a) and (b) and reference solutions (a) and (b) must be prepared at the same time; depolymerised test solutions are stable for 1 month at – 20 °C. Test solution (c) and reference solution (c) must also be prepared at the same time.*

*Precolumn*:

- *stationary phase*: *strongly basic anion-exchange resin for chromatography R* (5 µm).

*Column*:

- *size*: *l* = 0.25 m, Ø = 4 mm;
- *stationary phase*: *strongly basic anion-exchange resin for chromatography R* (5 µm);
- *temperature*: 50 °C.

*Mobile phase*:

- *mobile phase A*: dissolve 0.280 g of *sodium dihydrogen phosphate R* in 950 mL of *water R*, adjust to pH 3.0 with *phosphoric acid R* and dilute to 1000 mL with *water R*;
- *mobile phase B*: dissolve 140 g of *sodium perchlorate R* in 950 mL of mobile phase A, adjust to pH 3.0 with *phosphoric acid R* and dilute to 1000 mL with mobile phase A;

| Time (min) | Mobile phase A (per cent *V/V*) | Mobile phase B (per cent *V/V*) |
|---|---|---|
| 0 - 20 | 97 → 65 | 3 → 35 |
| 20 - 50 | 65 → 0 | 35 → 100 |
| 50 - 60 | 0 | 100 |

*Flow rate*: 0.8 mL/min.

*Detection*: spectrophotometer at 234 nm.

*Injection*: 18 µL of the blank solution, test solution (c) and reference solutions (b) and (c).

*Identification of disaccharides*: use the chromatogram supplied with *enoxaparin sodium CRS* and the chromatogram obtained with reference solution (c) to identify the peaks due to the disaccharides listed in Table 1097.-1; use the chromatogram obtained with reference solution (b) to confirm the identity of the peaks due to the 1,6-anhydro derivatives.

Table 1097.-1. – *Correlation between the relative retention of peaks observed in chromatograms obtained with solutions of depolymerised and reduced enoxaparin, with reference to reduced ΔIS (retention time = about 30 min), and molecular masses of the enoxaparin derivatives*

| Derivatives | Relative retention | Molecular mass (Da) |
|---|---|---|
| Unidentified | < 0.20 | 741 |
| Reduced ΔIVA | 0.20 | 401 |
| Unidentified | 0.20 - 0.46 | 741 |
| Reduced ΔIVS | 0.46 | 461 |
| Unidentified | 0.46 - 0.48 | 483 |
| Reduced ΔIIA | 0.48 | 503 |
| Unidentified | 0.48 - 0.52 | 503 |
| 1,6-anhydro ΔIIS | 0.52 | 443 |
| Unidentified | 0.52 - 0.57 | 503 |
| Reduced ΔIIIA | 0.57 | 503 |
| Unidentified | 0.57 - 0.66 | 533 |
| Reduced ΔIIS | 0.66 | 563 |
| Unidentified | 0.66 - 0.76 | 563 |
| Reduced ΔIIIS | 0.76 | 563 |
| Unidentified | 0.76 - 0.85 | 583 |
| Reduced ΔIA | 0.85 | 605 |
| 1,6-anhydro ΔIS | 0.88 | 545 |
| Unidentified | 0.88 - 0.97 | 635 |
| Reduced ΔIIA-IVSglu | 0.97 | 1066 |
| Reduced ΔIS | 1.00 | 665 |
| ΔIS | 1.04 | 665 |
| Unidentified | 1.04 - 1.10 | 1228 |
| Reduced ΔIIA-IISglu | 1.10 | 1168 |
| Unidentified | 1.10 - 1.28 | 1228 |
| 1,6-anhydro ΔIS-IS | 1.28 | 1210 |
| Unidentified | > 1.28 | 1228 |

*NOTE: depending on the resolution of the column, 1,6-anhydro ΔIIS may be eluted in the form of 2 peaks (mannosamine and glucosamine forms), which are both taken into account as 1,6-anhydro ΔIIS.*

*Relative retention* with reference to reduced ΔIS (retention time = about 30 min): see Table 1097.-1.

*System suitability*:

- *peak area ratio*: maximum 1.15 for the peaks due to 1,6-anhydro ΔIS-IS and 1,6-anhydro ΔIS in the chromatogram obtained with reference solution (b); maximum 0.02 for the peaks due to ΔIS and reduced ΔIS in the chromatogram obtained with reference solution (c);
- *resolution*: minimum 1.5 between the peaks due to reduced ΔIA and 1,6-anhydro ΔIS in the chromatogram obtained with reference solution (c);
- the content of 1,6-anhydro derivatives in *enoxaparin sodium CRS* is within 1.5 per cent of the assigned content.

*Calculation*:

Calculate the molar percentage of the 3 main 1,6-anhydro derivatives using the relative molecular masses given in Table 1097.-1 and the following expression:

$$100 \times \frac{Mw}{\sum Mw_x \cdot A_x} \times (A_1 + A_2 + A_3)$$

$Mw$ = mass-average relative molecular mass of enoxaparin (as determined by identification test C);

$Mw_x$ = relative molecular mass attributed to derivative $x$ according to Table 1097.-1;

$A_x$ = area of the peak due to derivative $x$;

$A_1$ = area of the peak due to 1,6-anhydro ΔIS;

$A_2$ = area of the peak due to 1,6-anhydro ΔIIS;

$A_3$ = area of the peak due to 1,6-anhydro ΔIS-IS.

Disregard any peak observed with the blank solution.

Correct the value to the nearest unit.

*Limit*: 15 per cent to 25 per cent of components bearing the 1,6-anhydro structure at the reducing end of their chain.

C. Carry out identification test C as described in the monograph *Low-molecular-mass heparins (0828)*. The following requirements apply.

The mass-average relative molecular mass ranges between 3800 and 5000. The mass percentage of chains lower than 2000 ranges between 12.0 per cent and 20.0 per cent. The mass percentage of chains between 2000 and 8000 ranges between 68.0 per cent and 82.0 per cent.

TESTS

**Appearance of solution**. The solution is clear (*2.2.1*) and not more intensely coloured than intensity 6 of the range of reference solutions of the most appropriate colour (*2.2.2, Method II*).

Dissolve 1.0 g in 10 mL of *water R*.

**pH** (*2.2.3*): 6.2 to 7.7.

Dissolve 1.0 g in *carbon dioxide-free water R* and dilute to 10.0 mL with the same solvent.

**Specific absorbance** (*2.2.25*): 14.0 to 20.0 (dried substance), determined at 231 nm.

Dissolve 50.0 mg in 100 mL of *0.01 M hydrochloric acid*.

**Benzyl alcohol**. Liquid chromatography (*2.2.29*).

*Internal standard solution*: 1 g/L solution of *3,4-dimethylphenol R* in *methanol R*.

*Test solution*. Dissolve about 0.500 g of the substance to be examined in 5.0 mL of *1 M sodium hydroxide*. Allow to stand for 1 h. Add 1.0 mL of *glacial acetic acid R* and 1.0 mL of the internal standard solution and dilute to 10.0 mL with *water R*.

*Reference solution*. Prepare a 0.25 g/L solution of *benzyl alcohol R* in *water R*. Mix 0.50 mL of this solution with 1.0 mL of the internal standard solution and dilute to 10.0 mL with *water R*.

Monographs E

*Precolumn*:

– *size*: *l* = 0.02 m, Ø = 4.6 mm;

– *stationary phase*: *octylsilyl silica gel for chromatography R* (5 µm).

*Column*:

– *size*: *l* = 0.15 m, Ø = 4.6 mm;

– *stationary phase*: *octylsilyl silica gel for chromatography R* (5 µm).

*Mobile phase*: *methanol R*, *acetonitrile R*, *water R* (5:15:80 *V/V/V*).

*Flow rate*: 1 mL/min.

*Detection*: spectrophotometer at 256 nm.

*Injection*: 20 µL.

From the chromatogram obtained with the reference solution, calculate the ratio ($R_1$) of the height of the peak due to benzyl alcohol to the height of the peak due to the internal standard. From the chromatogram obtained with the test solution, calculate the ratio ($R_2$) of the height of the peak due to benzyl alcohol to the height of the peak due to the internal standard.

Calculate the percentage content *m/m* of benzyl alcohol using the following expression:

$$\frac{0.0125 \times R_2}{m \times R_1}$$

*m* = mass of the substance to be examined, in grams.

*Limit*:

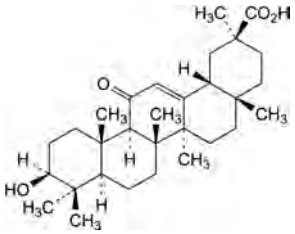
– *benzyl alcohol*: maximum 0.1 per cent *m/m*.

**Sodium** (*2.2.23, Method I*): 11.3 per cent to 13.5 per cent (dried substance).

**01/2017:1511**

# ENOXOLONE

## Enoxolonum



$C_{30}H_{46}O_4$ $M_r$ 470.7

[471-53-4]

DEFINITION

(20β)-3β-Hydroxy-11-oxo-olean-12-en-29-oic acid.

*Content*: 98.0 per cent to 101.0 per cent (dried substance).

CHARACTERS

*Appearance*: white or almost white crystalline powder.

*Solubility*: practically insoluble in water, soluble in ethanol, sparingly soluble in methylene chloride.

It shows polymorphism (*5.9*).

IDENTIFICATION

*First identification*: *A*.

*Second identification*: *B, C*.

A. Examine by infrared absorption spectrophotometry (*2.2.24*).

*Comparison*: *enoxolone CRS*.

If the spectra obtained in the solid state show differences, dissolve 0.2 g of the substance to be examined and 0.2 g of the reference substance separately in 6 mL of *ethanol R*. Boil under a reflux condenser for 1 h and add 6 mL of *water R*. A precipitate is formed. Cool to about 10 °C and filter with the aid of vacuum. Wash the precipitate with 10 mL of *alcohol R*, dry in an oven at 80 °C and record new spectra.

B. Thin-layer chromatography (*2.2.27*).

*Test solution*. Dissolve 10 mg of the substance to be examined in *methylene chloride R* and dilute to 10 mL with the same solvent.

*Reference solution*. Dissolve 10 mg of *enoxolone CRS* in *methylene chloride R* and dilute to 10 mL with the same solvent.

*Plate*: *TLC silica gel plate R*.

*Mobile phase*: *glacial acetic acid R*, *acetone R*, *methylene chloride R* (5:10:90 *V/V/V*).

*Application*: 5 µL.

*Development*: over 2/3 of the plate.

*Drying*: in air for 5 min.

*Detection*: spray with *anisaldehyde solution R* and heat at 100-105 °C for 10 min.

*Results*: the principal spot in the chromatogram obtained with the test solution is similar in position, colour and size to the principal spot in the chromatogram obtained with the reference solution.

C. Dissolve 50 mg in 10 mL of *methylene chloride R*. To 2 mL of this solution, add 1 mL of *acetic anhydride R* and 0.3 mL of *sulfuric acid R*. A pink colour is produced.

TESTS

**Appearance of solution**. The solution is clear (*2.2.1*) and not more intensely coloured than reference solution $Y_6$ (*2.2.2, Method II*).

Dissolve 0.1 g in *ethanol R* and dilute to 10 mL with the same solvent.

**Specific optical rotation** (*2.2.7*): + 145 to + 154 (dried substance).

Dissolve 0.50 g in *dioxan R* and dilute to 50.0 mL with the same solvent.

**Related substances**. Liquid chromatography (*2.2.29*).

*Test solution*. Dissolve 0.10 g of the substance to be examined in the mobile phaseand dilute to 100.0 mL with the mobile phase.

*Reference solution (a)*. Dilute 2.0 mL of the test solution to 100.0 mL with the mobile phase.

*Reference solution (b)*. Dilute 5.0 mL of reference solution (a) to 100.0 mL with the mobile phase.

*Reference solution (c)*. Dissolve 0.1 g of *18α-glycyrrhetinic acid R* in *tetrahydrofuran R* and dilute to 100.0 mL with the same solvent. To 2.0 mL of the solution, add 2.0 mL of the test solution and dilute to 100.0 mL with the mobile phase.

*Column*:

– *size*: *l* = 0.25 m, Ø = 4.6 mm,

– *stationary phase*: *octadecylsilyl silica gel for chromatography R* (5 µm),

– *temperature*: 30 °C.

*Mobile phase*: mix 430 volumes of *tetrahydrofuran R* and 570 volumes of a 1.36 g/L solution of *sodium acetate R* adjusted to pH 4.8 with *glacial acetic acid R*.

*Flow rate*: 0.8 mL/min.

*Detection*: spectrophotometer at 250 nm.

*Injection*: 20 µL loop injector; inject the test solution and the reference solutions.

*Run time*: 4 times the retention time of enoxolone.

*System suitability*:

– *resolution*: minimum of 2.0 between the peaks due to enoxolone and to 18α-glycyrrhetinic acid in the chromatogram obtained with reference solution (c).

*Limits*:

– *any impurity*: not more than 7 times the area of the principal peak in the chromatogram obtained with reference solution (b) (0.7 per cent),

– *total*: not more than the area of the principal peak in the chromatogram obtained with reference solution (a) (2.0 per cent),

– *disregard limit*: 0.5 times the area of the principal peak in the chromatogram obtained with reference solution (b) (0.05 per cent).

**Loss on drying** (*2.2.32*): maximum 0.5 per cent, determined on 1.000 g by drying in an oven at 105 °C for 4 h.

**Sulfated ash** (*2.4.14*): maximum 0.2 per cent, determined on 1.0 g.

ASSAY

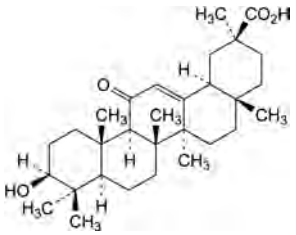
Dissolve 0.330 g in 40 mL of *dimethylformamide R*. Titrate with *0.1 M tetrabutylammonium hydroxide*, determining the end-point potentiometrically (*2.2.20*). Carry out a blank titration.

1 mL of *0.1 M tetrabutylammonium hydroxide* is equivalent to 47.07 mg of $C_{30}H_{46}O_4$.

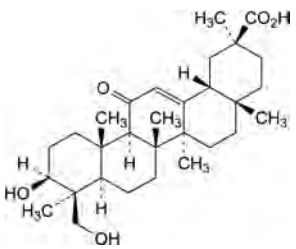
STORAGE

Protected from light.

IMPURITIES



A. (20β)-3β-hydroxy-11-oxo-18α-olean-12-en-29-oic acid,



B. (4β,20β)-3β,23-dihydroxy-11-oxo-olean-12-en-29-oic acid.

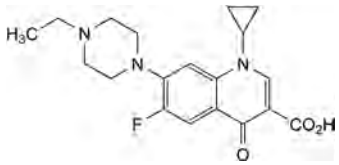
**corrected 10.0**

# ENROFLOXACIN FOR VETERINARY USE

## Enrofloxacinum ad usum veterinarium



$C_{19}H_{22}FN_3O_3$ $M_r$ 359.4
[93106-60-6]

DEFINITION

1-Cyclopropyl-7-(4-ethylpiperazin-1-yl)-6-fluoro-4-oxo-1,4-dihydroquinoline-3-carboxylic acid.

*Content*: 98.5 per cent to 101.5 per cent (dried substance).

CHARACTERS

*Appearance*: pale yellowish or light yellow, crystalline powder.

*Solubility*: practically insoluble in water, freely soluble in methylene chloride, slightly soluble in methanol.

IDENTIFICATION

Infrared absorption spectrophotometry (*2.2.24*).

*Comparison*: *enrofloxacin CRS*.

TESTS

**Appearance of solution**. The solution is not more opalescent than reference suspension II (*2.2.1*) and not more intensely coloured than reference solution $GY_4$ (*2.2.2, Method II*).

To 1.0 g of the substance to be examined add about 0.25 g of *potassium hydroxide R* and 7 mL of *water R*. Sonicate to dissolve and dilute to 10.0 mL with *water R*.

**Impurity A**. Thin-layer chromatography (*2.2.27*). *Prepare the solutions immediately before use.*

*Solvent mixture*: *methanol R*, *methylene chloride R* (50:50 *V/V*).

*Test solution*. Dissolve 0.100 g of the substance to be examined in the solvent mixture and dilute to 5.0 mL with the solvent mixture.

*Reference solution*. Dissolve 5.0 mg of *ciprofloxacin impurity A CRS* (enrofloxacin impurity A) in the solvent mixture and dilute to 50.0 mL with the solvent mixture. Dilute 4.0 mL of the solution to 10.0 mL with the solvent mixture.

*Plate*: *TLC silica gel $F_{254}$ plate R* (2-10 μm).

*Mobile phase*: *butanol R*, *water R*, *anhydrous acetic acid R*, *ethyl acetate R* (15:15:20:50 *V/V/V/V*).

*Application*: 10 μL.

*Development*: over 3/4 of the plate.

*Drying*: in air.

*Detection*: examine in ultraviolet light at 254 nm.

*Results*:

– *impurity A*: any spot due to impurity A is not more intense than the spot in the chromatogram obtained with the reference solution (0.2 per cent).

**Related substances**. Liquid chromatography (*2.2.29*).

*Test solution*. Dissolve 50 mg of the substance to be examined in the mobile phase and dilute to 50.0 mL with the mobile phase.

*Reference solution (a).* Dissolve 10 mg of *enrofloxacin for system suitability CRS* (containing impurities B and C) and dilute to 10 mL with the mobile phase.

*Reference solution (b).* Dilute 1.0 mL of the test solution to 50.0 mL with the mobile phase. Dilute 1.0 mL of this solution to 10.0 mL with the mobile phase.

*Column*:

- *size*: *l* = 0.15 m, Ø = 4.6 mm;
- *stationary phase*: *base-deactivated end-capped octadecylsilyl silica gel for chromatography R* (5 µm);
- *temperature*: 40 °C.

*Mobile phase*: mix 15 volumes of *methanol R* and 85 volumes of a 2.9 g/L solution of *phosphoric acid R*, previously adjusted to pH 2.3 with *triethylamine R*.

*Flow rate*: 1.5 mL/min.

*Detection*: spectrophotometer at 270 nm.

*Injection*: 10 µL.

*Run time*: 3 times the retention time of enrofloxacin.

*Identification of impurities*: use the chromatogram supplied with *enrofloxacin for system suitability CRS* and the chromatogram obtained with reference solution (a) to identify the peaks due to impurities B and C.

*Relative retention* with reference to enrofloxacin (retention time = about 16 min): impurity C = about 0.6; impurity B = about 0.8.

*System suitability*: reference solution (a):

- *resolution*: minimum 2.0 between the peaks due to impurity B and enrofloxacin.

*Limits*:

- *impurity B*: not more than 2.5 times the area of the principal peak in the chromatogram obtained with reference solution (b) (0.5 per cent);
- *impurity C*: not more than the area of the principal peak in the chromatogram obtained with reference solution (b) (0.2 per cent);
- *unspecified impurities*: for each impurity, not more than the area of the principal peak in the chromatogram obtained with reference solution (b) (0.20 per cent);
- *total*: not more than 5 times the area of the principal peak in the chromatogram obtained with reference solution (b) (1.0 per cent);
- *disregard limit*: 0.5 times the area of the principal peak in the chromatogram obtained with reference solution (b) (0.1 per cent).

**Heavy metals** (*2.4.8*): maximum 20 ppm.

Dissolve 1.5 g in a mixture of 5 mL of *dilute acetic acid R* and 10 mL of *water R*. Filter. 12 mL of the filtrate after adding 2 mL of *water R* (instead of buffer solution) complies with test E. Prepare the reference solution using 12 mL of *lead standard solution (2 ppm Pb) R*.

**Loss on drying** (*2.2.32*): maximum 1.0 per cent, determined on 2.000 g by drying *in vacuo* at 120 °C for 6 h.

**Sulfated ash** (*2.4.14*): maximum 0.1 per cent, determined on 1.0 g.

ASSAY

Dissolve 0.250 g in 100 mL of *anhydrous acetic acid R* and titrate with *0.1 M perchloric acid* determining the end-point potentiometrically (*2.2.20*).

1 mL of *0.1 M perchloric acid* is equivalent to 35.94 mg of $C_{19}H_{22}FN_3O_3$.

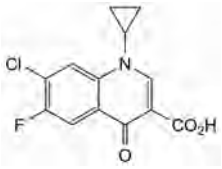
STORAGE

Protected from light.

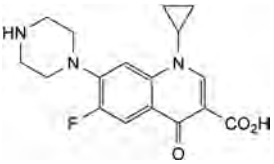
IMPURITIES

*Specified impurities: A, B, C.*

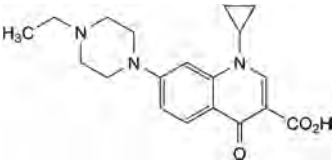
*Other detectable impurities* (the following substances would, if present at a sufficient level, be detected by one or other of the tests in the monograph. They are limited by the general acceptance criterion for other/unspecified impurities and/or by the general monograph *Substances for pharmaceutical use (2034)*. It is therefore not necessary to identify these impurities for demonstration of compliance. See also *5.10. Control of impurities in substances for pharmaceutical use*): *E, F, G.*



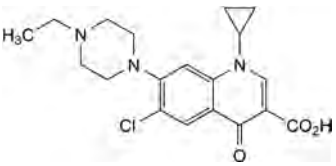
A. 7-chloro-1-cyclopropyl-6-fluoro-4-oxo-1,4-dihydroquinoline-3-carboxylic acid,



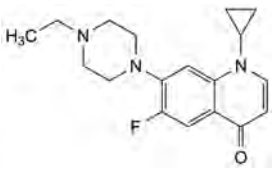
B. ciprofloxacin,



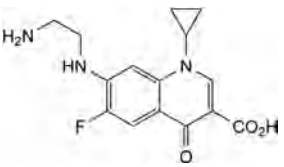
C. 1-cyclopropyl-7-(4-ethylpiperazin-1-yl)-4-oxo-1,4-dihydroquinoline-3-carboxylic acid,



E. 6-chloro-1-cyclopropyl-7-(4-ethylpiperazin-1-yl)-4-oxo-1,4-dihydroquinoline-3-carboxylic acid,



F. 1-cyclopropyl-7-(4-ethylpiperazin-1-yl)-6-fluoroquinolin-4(1*H*)-one,

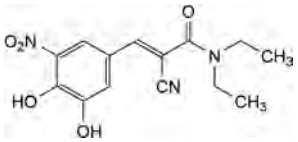


G. 7-[(2-aminoethyl)amino]-1-cyclopropyl-6-fluoro-4-oxo-1,4-dihydroquinoline-3-carboxylic acid.

**01/2017:2574**

# ENTACAPONE

## Entacaponum



$C_{14}H_{15}N_3O_5$ $M_r$ 305.3
[130929-57-6]

DEFINITION

(2*E*)-2-Cyano-3-(3,4-dihydroxy-5-nitrophenyl)-*N*,*N*-diethylprop-2-enamide.

*Content*: 98.0 per cent to 102.0 per cent (dried substance).

CHARACTERS

*Appearance*: greenish-yellow or yellow powder.

*Solubility*: practically insoluble in water, soluble or sparingly soluble in acetone, slightly soluble in anhydrous ethanol.

It shows polymorphism (*5.9*).

IDENTIFICATION

Infrared absorption spectrophotometry (*2.2.24*).

*Comparison*: *entacapone CRS*.

If the spectra obtained in the solid state show differences, dissolve the substance to be examined and the reference substance separately in *acetone R*, evaporate to dryness and record new spectra using the residues.

TESTS

**Related substances**. Liquid chromatography (*2.2.29*). *Use freshly prepared solutions.*

*Solvent mixture*: *tetrahydrofuran R*, *methanol R* (30:70 *V/V*).

*Test solution (a)*. Dissolve 50.0 mg of the substance to be examined in the solvent mixture and dilute to 50.0 mL with the solvent mixture.

*Test solution (b)*. Dilute 5.0 mL of test solution (a) to 50.0 mL with the solvent mixture.

*Reference solution (a)*. Dissolve 5 mg of *entacapone impurity A CRS* in the solvent mixture, add 5.0 mL of test solution (a) and dilute to 25.0 mL with the solvent mixture. Dilute 1.0 mL of the solution to 20.0 mL with the solvent mixture. Dilute 1.0 mL of this solution to 10.0 mL with the solvent mixture.

*Reference solution (b)*. Dilute 1.0 mL of test solution (b) to 100.0 mL with the solvent mixture.

*Reference solution (c)*. Dissolve 50.0 mg of *entacapone CRS* in the solvent mixture and dilute to 50.0 mL with the solvent mixture. Dilute 5.0 mL of the solution to 50.0 mL with the solvent mixture.

*Column*:

- *size*: *l* = 0.25 m, Ø = 4.6 mm;
- *stationary phase*: *end-capped propyl-2-phenylsilyl amorphous organosilica polymer R* (5 µm).

*Mobile phase*: mix 2 volumes of *tetrahydrofuran R*, 44 volumes of *methanol R* and 54 volumes of a 2.34 g/L solution of *sodium dihydrogen phosphate R* previously adjusted to pH 2.1 with *phosphoric acid R*.

*Flow rate*: 1.0 mL/min.

*Detection*: spectrophotometer at 300 nm.

*Injection*: 10 µL of test solution (a) and reference solutions (a) and (b).

*Run time*: 2.5 times the retention time of entacapone.

*Relative retention* with reference to entacapone (retention time = about 17 min): impurity A = about 0.8.

*System suitability*: reference solution (a):

- *resolution*: minimum 3.0 between the peaks due to impurity A and entacapone.

*Limits*:

- *impurity A*: not more than 1.5 times the area of the principal peak in the chromatogram obtained with reference solution (b) (0.15 per cent);
- *unspecified impurities*: for each impurity, not more than the area of the principal peak in the chromatogram obtained with reference solution (b) (0.10 per cent);
- *sum of impurities other than A*: not more than twice the area of the principal peak in the chromatogram obtained with reference solution (b) (0.2 per cent);
- *disregard limit*: 0.5 times the area of the principal peak in the chromatogram obtained with reference solution (b) (0.05 per cent).

**Loss on drying** (*2.2.32*): maximum 0.5 per cent, determined on 1.000 g by drying *in vacuo* at 60 °C.

**Sulfated ash** (*2.4.14*): maximum 0.1 per cent, determined on 1.0 g.

ASSAY

Liquid chromatography (*2.2.29*) as described in the test for related substances with the following modification.

*Injection*: test solution (b) and reference solution (c).

Calculate the percentage content of $C_{14}H_{15}N_3O_5$ from the declared content of *entacapone CRS*.

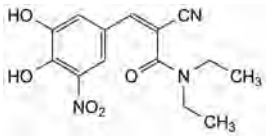
STORAGE

Protected from light.

IMPURITIES

*Specified impurities*: *A*.

*Other detectable impurities* (the following substances would, if present at a sufficient level, be detected by one or other of the tests in the monograph. They are limited by the general acceptance criterion for other/unspecified impurities and/or by the general monograph *Substances for pharmaceutical use (2034)*. It is therefore not necessary to identify these impurities for demonstration of compliance. See also *5.10. Control of impurities in substances for pharmaceutical use*): *B, C, D, E, F, G, H, I.*



A. (2*Z*)-2-cyano-3-(3,4-dihydroxy-5-nitrophenyl)-*N*,*N*-diethylprop-2-enamide,

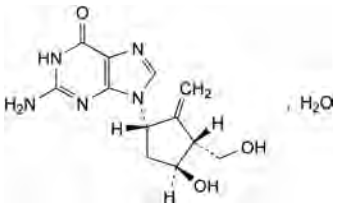
# ENTECAVIR MONOHYDRATE

## Entecavirum monohydricum



$C_{12}H_{15}N_5O_3,H_2O$ $M_r$ 295.3
[209216-23-9]

DEFINITION

2-Amino-9-[(1*S*,3*R*,4*S*)-4-hydroxy-3-(hydroxymethyl)-2-methylidenecyclopentyl]-1,9-dihydro-6*H*-purin-6-one monohydrate.

*Content*: 98.0 per cent to 102.0 per cent (anhydrous substance).

CHARACTERS

*Appearance*: white or almost white powder.

*Solubility*: practically insoluble in water, in anhydrous ethanol and in heptane, slightly soluble in methanol.

It shows polymorphism (*5.9*).

IDENTIFICATION

A. Specific optical rotation (see Tests).

B. Infrared absorption spectrophotometry (*2.2.24*).

*Comparison*: *entecavir monohydrate CRS*.

If the spectra obtained show differences, suspend 50 mg of the substance to be examined and 50 mg of the reference substance separately in 5 mL of hot *water R*. Swirl protected from light and heat until a clear solution is obtained. Allow to cool and filter the precipitates *in vacuo*. Dry the precipitates for 12 h in a desiccator and record new spectra using the residues.

TESTS

**Specific optical rotation** (*2.2.7*): + 24 to + 30 (anhydrous substance), measured at 25 °C.

Dissolve 0.25 g in 10 mL of a mixture of equal volumes of *dimethylformamide R* and *methanol R* and dilute to 25.0 mL with the same mixture of solvents.

**Impurity F**. Liquid chromatography (*2.2.29*).

*Test solution.* Dissolve 25.0 mg of the substance to be examined in 10 mL of *methanol R* using sonication, and dilute to 25.0 mL with the same solvent.

*Reference solution.* Dissolve 2.5 mg of *entecavir impurity F CRS* in 20 mL of *methanol R* using sonication, and dilute to 50.0 mL with the same solvent. Dilute 1.0 mL of the solution to 50.0 mL with *methanol R*.

*Column*:

- *size*: *l* = 0.05 m, Ø = 4.6 mm;
- *stationary phase*: *end-capped octadecylsilyl silica gel for chromatography R* (5 µm);
- *temperature*: 30 °C.

*Mobile phase*:

- *mobile phase A*: 0.1 per cent *V/V* solution of *trifluoroacetic acid R*;
- *mobile phase B*: 0.1 per cent *V/V* solution of *trifluoroacetic acid R* in *acetonitrile R*;

| Time (min) | Mobile phase A (per cent *V/V*) | Mobile phase B (per cent *V/V*) |
|---|---|---|
| 0 - 8 | 65 → 53 | 35 → 47 |

*Flow rate*: 2.0 mL/min.

*Detection*: spectrophotometer at 254 nm.

*Injection*: 10 µL.

*Retention time*: impurity F = about 6 min.

*Calculation of percentage content*:

- for impurity F, use the concentration of impurity F in the reference solution.

*Limit*:

- *impurity F*: maximum 0.10 per cent.

**Related substances**. Liquid chromatography (*2.2.29*).

*Test solution.* Dissolve 25.0 mg of the substance to be examined in 10 mL of *methanol R* using sonication, and dilute to 25.0 mL with the same solvent. Dilute 2.0 mL of the solution to 10.0 mL with mobile phase A.

*Reference solution (a).* Dissolve 25.0 mg of *entecavir monohydrate CRS* in 10 mL of *methanol R* using sonication, and dilute to 25.0 mL with the same solvent. Dilute 2.0 mL of the solution to 10.0 mL with mobile phase A.

*Reference solution (b).* Dilute 1.0 mL of the test solution to 100.0 mL with mobile phase A. Dilute 1.0 mL of this solution to 10.0 mL with mobile phase A.

*Reference solution (c).* Dissolve the contents of a vial of *entecavir for system suitability CRS* (containing impurities A and C) in 1 mL of *methanol R* using sonication, and dilute to 5.0 mL with mobile phase A.

*Column*:

- *size*: *l* = 0.25 m, Ø = 4.6 mm;
- *stationary phase*: *end-capped octadecylsilyl silica gel for chromatography R* (5 µm).

*Mobile phase*:

- *mobile phase A*: *acetonitrile R, water for chromatography R* (3:97 *V/V*);
- *mobile phase B*: *acetonitrile R*;

| Time (min) | Mobile phase A (per cent *V/V*) | Mobile phase B (per cent *V/V*) |
|---|---|---|
| 0 - 8 | 100 | 0 |
| 8 - 50 | 100 → 77 | 0 → 23 |
| 50 - 75 | 77 → 17 | 23 → 83 |

*Flow rate*: 1.0 mL/min.

*Detection*: spectrophotometer at 254 nm.

*Injection*: 10 µL of the test solution and reference solutions (b) and (c).

*Identification of impurities*: use the chromatogram supplied with *entecavir for system suitability CRS* and the chromatogram obtained with reference solution (c) to identify the peaks due to impurities A and C.

*Relative retention* with reference to entecavir (retention time = about 21 min): impurity A = about 0.9; impurity C = about 1.03.

*System suitability*: reference solution (c):

- *resolution*: minimum 3.5 between the peaks due to impurity A and entecavir; minimum 2.0 between the peaks due to entecavir and impurity C.

*Calculation of percentage contents*:

- for each impurity, use the concentration of entecavir monohydrate in reference solution (b).

*Limits*:

- *unspecified impurities*: for each impurity, maximum 0.10 per cent;
- *total*: maximum 0.3 per cent;
- *reporting threshold*: 0.05 per cent; disregard any peak with a relative retention with reference to entecavir of about 3.4 (impurity F).

**Water** (*2.5.32*): 5.5 per cent to 7.0 per cent, determined on 30.0 mg by direct sample introduction.

**Sulfated ash** (*2.4.14*): maximum 0.1 per cent, determined on 1.0 g.

ASSAY

Liquid chromatography (*2.2.29*) as described in the test for related substances with the following modification.

*Injection*: test solution and reference solution (a).

Calculate the percentage content of $C_{12}H_{15}N_5O_3$ taking into account the assigned content of *entecavir monohydrate CRS*.

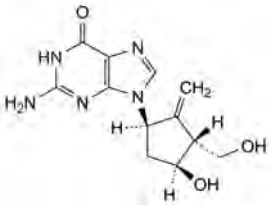
STORAGE

Protected from light.

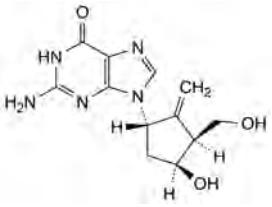
IMPURITIES

*Specified impurities: F.*

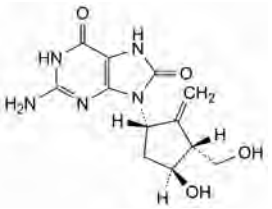
*Other detectable impurities* (the following substances would, if present at a sufficient level, be detected by one or other of the tests in the monograph. They are limited by the general acceptance criterion for other/unspecified impurities and/or by the general monograph *Substances for pharmaceutical use (2034)*. It is therefore not necessary to identify these impurities for demonstration of compliance. See also *5.10. Control of impurities in substances for pharmaceutical use*): *A, B, C, D, E.*



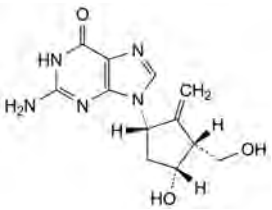
A. 2-amino-9-[(1*R*,3*R*,4*S*)-4-hydroxy-3-(hydroxymethyl)-2-methylidenecyclopentyl]-1,9-dihydro-6*H*-purin-6-one,



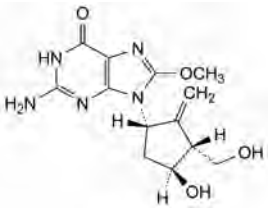
B. 2-amino-9-[(1*S*,3*S*,4*S*)-4-hydroxy-3-(hydroxymethyl)-2-methylidenecyclopentyl]-1,9-dihydro-6*H*-purin-6-one,



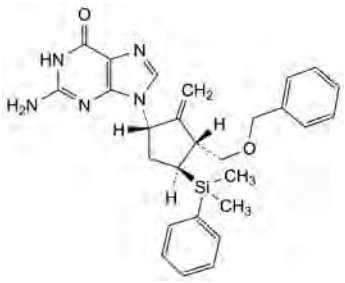
C. 2-amino-9-[(1*S*,3*R*,4*S*)-4-hydroxy-3-(hydroxymethyl)-2-methylidenecyclopentyl]-7,9-dihydro-1*H*-purine-6,8-dione,



D. 2-amino-9-[(1*S*,3*R*,4*R*)-4-hydroxy-3-(hydroxymethyl)-2-methylidenecyclopentyl]-1,9-dihydro-6*H*-purin-6-one,



E. 2-amino-9-[(1*S*,3*R*,4*S*)-4-hydroxy-3-(hydroxymethyl)-2-methylidenecyclopentyl]-8-methoxy-1,9-dihydro-6*H*-purin-6-one,



F. 2-amino-9-[(1*S*,3*R*,4*S*)-3-[(benzyloxy)methyl]-4-[dimethyl(phenyl)silyl]-2-methylidenecyclopentyl]-1,9-dihydro-6*H*-purin-6-one.

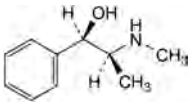
# EPHEDRINE

## Ephedrinum



$C_{10}H_{15}NO$ $M_r$ 165.2
[299-42-3]

DEFINITION

Ephedrine contains not less than 99.0 per cent and not more than the equivalent of 101.0 per cent of (1*R*,2*S*)-2-methylamino-1-phenylpropan-1-ol, calculated with reference to the anhydrous substance.

CHARACTERS

A white or almost white, crystalline powder or colourless crystals, soluble in water, very soluble in alcohol.

It melts at about 36 °C.

IDENTIFICATION

*First identification: B, D.*

*Second identification: A, C, D, E.*

A. Specific optical rotation (see Tests).

B. Examine by infrared absorption spectrophotometry (*2.2.24*), comparing with the spectrum obtained with the base isolated from *ephedrine hydrochloride CRS*. Examine the substances in discs prepared as follows: dissolve 40 mg of the substance to be examined in 1 mL of *water R*, add 1 mL of *dilute sodium hydroxide solution R* and 4 mL of *chloroform R* and shake; dry the organic layer over 0.2 g of *anhydrous sodium sulfate R*; prepare a blank disc using about 0.3 g of *potassium bromide R*; apply dropwise to the disc 0.1 mL of the organic layer, allowing the solvent to evaporate between applications; dry the disc at 50 °C for 2 min. Repeat the operations using 50 mg of *ephedrine hydrochloride CRS*.

C. Examine the chromatograms obtained in the test for related substances. The principal spot in the chromatogram obtained with test solution (b) is similar in position, colour and size to the principal spot in the chromatogram obtained with reference solution (a).

D. Dissolve about 10 mg in 1 mL of *water R*. Add 0.2 mL of *strong sodium hydroxide solution R* and 0.2 mL of *copper sulfate solution R*. A violet colour is produced. Add 2 mL of *ether R* and shake. The ether layer is purple and the aqueous layer blue.

E. Water (see Tests).

TESTS

**Appearance of solution**. Dissolve 0.25 g in *water R* and dilute to 10 mL with the same solvent. The solution is clear (*2.2.1*) and colourless (*2.2.2, Method II*).

**Specific optical rotation** (*2.2.7*). Dissolve 2.25 g in 15 mL of *dilute hydrochloric acid R* and dilute to 50.0 mL with *water R*. The specific optical rotation is − 41 to − 43, calculated with reference to the anhydrous substance.

**Related substances**. Examine by thin-layer chromatography (*2.2.27*), using *silica gel G R* as the coating substance.

*Test solution (a).* Dissolve 0.2 g of the substance to be examined in *methanol R* and dilute to 10 mL with the same solvent.

*Test solution (b).* Dilute 1 mL of test solution (a) to 10 mL with *methanol R*.

*Reference solution (a).* Dissolve 25 mg of *ephedrine hydrochloride CRS* in *methanol R* and dilute to 10 mL with the same solvent.

*Reference solution (b).* Dilute 1.0 mL of test solution (a) to 200 mL with *methanol R*.

Apply separately to the plate 10 µL of each solution. Develop over a path of 15 cm using a mixture of 5 volumes of *chloroform R*, 15 volumes of *concentrated ammonia R* and 80 volumes of *2-propanol R*. Allow the plate to dry in air and spray with *ninhydrin solution R*. Heat at 110 °C for 5 min. Any spot in the chromatogram obtained with test solution (a), apart from the principal spot, is not more intense than the spot in the chromatogram obtained with reference solution (b) (0.5 per cent). Disregard any spot of lighter colour than the background.

**Chlorides**. Dissolve 0.17 g in 10 mL of *water R*. Add 5 mL of *dilute nitric acid R* and 0.5 mL of *silver nitrate solution R1*. Allow to stand for 2 min, protected from bright light. Any opalescence in the solution is not more intense than that in a standard prepared at the same time and in the same manner using 10 mL of *chloride standard solution (5 ppm Cl) R*, 5 mL of *dilute nitric acid R* and 0.5 mL of *silver nitrate solution R1* (290 ppm).

**Water** (*2.5.12*). Not more than 0.5 per cent, determined on 2.000 g by the semi-micro determination of water.

**Sulfated ash** (*2.4.14*). Not more than 0.1 per cent, determined on 1.0 g.

ASSAY

Dissolve 0.200 g in 5 mL of *alcohol R* and add 20.0 mL of *0.1 M hydrochloric acid*. Using 0.05 mL of *methyl red solution R* as indicator, titrate with *0.1 M sodium hydroxide* until a yellow colour is obtained.

1 mL of *0.1 M hydrochloric acid* is equivalent to 16.52 mg of $C_{10}H_{15}NO$.

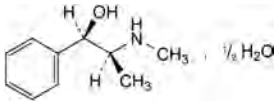
STORAGE

Store protected from light.

**01/2008:0489**
**corrected 6.0**

# EPHEDRINE HEMIHYDRATE

## Ephedrinum hemihydricum



$C_{10}H_{15}NO,½H_2O$ $M_r$ 174.2
[50906-05-3]

DEFINITION

Ephedrine hemihydrate contains not less than 99.0 per cent and not more than the equivalent of 101.0 per cent of (1*R*,2*S*)-2-(methylamino)-1-phenylpropan-1-ol, calculated with reference to the anhydrous substance.

CHARACTERS

A white or almost white, crystalline powder or colourless crystals, soluble in water, very soluble in alcohol.

It melts at about 42 °C, determined without previous drying.

IDENTIFICATION

*First identification*: *B, D.*

*Second identification*: *A, C, D, E.*

A. Specific optical rotation (see Tests).

B. Examine by infrared absorption spectrophotometry (*2.2.24*), comparing with the spectrum obtained with the base isolated from *ephedrine hydrochloride CRS*. Examine the substances in discs prepared as follows: dissolve 40 mg of the substance to be examined in 1 mL of *water R*, add 1 mL of *dilute sodium hydroxide solution R* and 4 mL of *chloroform R* and shake; dry the organic layer over 0.2 g of *anhydrous sodium sulfate R*; prepare a blank disc using about 0.3 g of *potassium bromide R*; apply dropwise to the disc 0.1 mL of the organic layer, allowing the solvent to evaporate between applications; dry the disc at 50 °C for 2 min. Repeat the operations using 50 mg of *ephedrine hydrochloride CRS*.

C. Examine the chromatograms obtained in the test for related substances. The principal spot in the chromatogram obtained with test solution (b) is similar in position, colour and size to the principal spot in the chromatogram obtained with reference solution (a).

D. Dissolve about 10 mg in 1 mL of *water R*. Add 0.2 mL of *strong sodium hydroxide solution R* and 0.2 mL of *copper sulfate solution R*. A violet colour is produced. Add 2 mL of *ether R* and shake. The ether layer is purple and the aqueous layer blue.

E. Water (see Tests).

TESTS

**Appearance of solution**. Dissolve 0.25 g in *water R* and dilute to 10 mL with the same solvent. The solution is clear (*2.2.1*) and colourless (*2.2.2, Method II*).

**Specific optical rotation** (*2.2.7*). Dissolve 2.25 g in 15 mL of *dilute hydrochloric acid R* and dilute to 50.0 mL with *water R*. The specific optical rotation is − 41 to − 43, calculated with reference to the anhydrous substance.

**Related substances**. Examine by thin-layer chromatography (*2.2.27*), using *silica gel G R* as the coating substance.

*Test solution (a).* Dissolve 0.2 g of the substance to be examined in *methanol R* and dilute to 10 mL with the same solvent.

*Test solution (b).* Dilute 1 mL of test solution (a) to 10 mL with *methanol R*.

*Reference solution (a).* Dissolve 25 mg of *ephedrine hydrochloride CRS* in *methanol R* and dilute to 10 mL with the same solvent.

*Reference solution (b).* Dilute 1.0 mL of test solution (a) to 200 mL with *methanol R*.

Apply separately to the plate 10 µL of each solution. Develop over a path of 15 cm using a mixture of 5 volumes of *chloroform R*, 15 volumes of *concentrated ammonia R* and 80 volumes of *2-propanol R*. Allow the plate to dry in air and spray with *ninhydrin solution R*. Heat at 110 °C for 5 min. Any spot in the chromatogram obtained with test solution (a), apart from the principal spot, is not more intense than the spot in the chromatogram obtained with reference solution (b) (0.5 per cent). Disregard any spot of lighter colour than the background.

**Chlorides**. Dissolve 0.18 g in 10 mL of *water R*. Add 5 mL of *dilute nitric acid R* and 0.5 mL of *silver nitrate solution R1*. Allow to stand for 2 min, protected from bright light. Any opalescence in the solution is not more intense than that in a standard prepared at the same time and in the same manner using 10 mL of *chloride standard solution (5 ppm Cl) R*, 5 mL of *dilute nitric acid R* and 0.5 mL of *silver nitrate solution R1* (280 ppm).

**Water** (*2.5.12*): 4.5 per cent to 5.5 per cent, determined on 0.300 g by the semi-micro determination of water.

**Sulfated ash** (*2.4.14*). Not more than 0.1 per cent, determined on 1.0 g.

ASSAY

Dissolve 0.200 g in 5 mL of *alcohol R* and add 20.0 mL of *0.1 M hydrochloric acid*. Using 0.05 mL of *methyl red solution R* as indicator, titrate with *0.1 M sodium hydroxide* until a yellow colour is obtained.

1 mL of *0.1 M hydrochloric acid* is equivalent to 16.52 mg of $C_{10}H_{15}NO$.

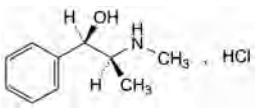
STORAGE

Store protected from light.

**01/2008:0487**
**corrected 6.0**

# EPHEDRINE HYDROCHLORIDE

## Ephedrini hydrochloridum



$C_{10}H_{16}ClNO$ $M_r$ 201.7
[50-98-6]

DEFINITION

(1*R*,2*S*)-2-(Methylamino)-1-phenylpropan-1-ol hydrochloride.

*Content*: 99.0 per cent to 101.0 per cent (dried substance).

CHARACTERS

*Appearance*: white or almost white, crystalline powder or colourless crystals.

*Solubility*: freely soluble in water, soluble in ethanol (96 per cent).

mp: about 219 °C.

IDENTIFICATION

*First identification*: *B, E.*

*Second identification*: *A, C, D, E.*

A. Specific optical rotation (see Tests).

B. Infrared absorption spectrophotometry (*2.2.24*).

*Comparison*: *ephedrine hydrochloride CRS*.

C. Thin-layer chromatography (*2.2.27*).

*Test solution*. Dissolve 20 mg of the substance to be examined in *methanol R* and dilute to 10 mL with the same solvent.

*Reference solution*. Dissolve 10 mg of *ephedrine hydrochloride CRS* in *methanol R* and dilute to 5 mL with the same solvent.

*Plate*: *TLC silica gel plate R*.

*Mobile phase*: *methylene chloride R*, *concentrated ammonia R*, *2-propanol R* (5:15:80 *V/V/V*).

*Application*: 10 µL.

*Development*: over 2/3 of the plate.

*Drying*: in air.

*Detection*: spray with *ninhydrin solution R*; heat at 110 °C for 5 min.

*Results*: the principal spot in the chromatogram obtained with the test solution is similar in position, colour and size to the principal spot in the chromatogram obtained with the reference solution.

D. To 0.1 mL of solution S (see Tests) add 1 mL of *water R*, 0.2 mL of *copper sulfate solution R* and 1 mL of *strong sodium hydroxide solution R*. A violet colour is produced. Add 2 mL of *methylene chloride R* and shake. The lower (organic) layer is dark grey and the upper (aqueous) layer is blue.

E. To 5 mL of solution S (see Tests) add 5 mL of *water R*. The solution gives reaction (a) of chlorides (*2.3.1*).

TESTS

**Solution S**. Dissolve 5.00 g in *distilled water R* and dilute to 50.0 mL with the same solvent.

**Appearance of solution**. Solution S is clear (*2.2.1*) and colourless (*2.2.2, Method II*).

**Acidity or alkalinity**. To 10 mL of solution S add 0.1 mL of *methyl red solution R* and 0.2 mL of *0.01 M sodium hydroxide*. The solution is yellow. Add 0.4 mL of *0.01 M hydrochloric acid*. The solution is red.

**Specific optical rotation** (*2.2.7*): − 33.5 to − 35.5 (dried substance).

Dilute 12.5 mL of solution S to 25.0 mL with *water R*.

**Related substances**. Liquid chromatography (*2.2.29*).

*Test solution*. Dissolve 75 mg of the substance to be examined in the mobile phase and dilute to 10 mL with the mobile phase.

*Reference solution (a)*. Dilute 2.0 mL of the test solution to 100.0 mL with the mobile phase. Dilute 1.0 mL of this solution to 10.0 mL with the mobile phase.

*Reference solution (b)*. Dissolve 5 mg of the substance to be examined and 5 mg of *pseudoephedrine hydrochloride CRS* in the mobile phase and dilute to 50 mL with the mobile phase.

*Column*:

- *size*: *l* = 0.15 m, Ø = 4.6 mm;
- *stationary phase*: spherical *phenylsilyl silica gel for chromatography R* (3 µm).

*Mobile phase*: mix 6 volumes of *methanol R* and 94 volumes of a 11.6 g/L solution of *ammonium acetate R* adjusted to pH 4.0 with *glacial acetic acid R*.

*Flow rate*: 1.0 mL/min.

*Detection*: spectrophotometer at 257 nm.

*Injection*: 20 µL.

*Run time*: 2.5 times the retention time of ephedrine.

*Relative retention* with reference to ephedrine (retention time = about 8 min): impurity B = about 1.1; impurity A = about 1.4.

*System suitability*: reference solution (b):

- *resolution*: minimum 2.0 between the peaks due to ephedrine and impurity B.

*Limits*:

- *correction factor*: for the calculation of content, multiply the peak area of impurity A by 0.4;
- *impurity A*: not more than the area of the principal peak in the chromatogram obtained with reference solution (a) (0.2 per cent);
- *unspecified impurities*: for each impurity, not more than 0.5 times the area of the principal peak in the chromatogram obtained with reference solution (a) (0.1 per cent);
- *sum of impurities other than A*: not more than 2.5 times the area of the principal peak in the chromatogram obtained with reference solution (a) (0.5 per cent);
- *disregard limit*: 0.25 times the area of the principal peak in the chromatogram obtained with reference solution (a) (0.05 per cent).

**Sulfates** (*2.4.13*): maximum 100 ppm, determined on solution S.

**Loss on drying** (*2.2.32*): maximum 0.5 per cent, determined on 1.000 g by drying in an oven at 105 °C.

**Sulfated ash** (*2.4.14*): maximum 0.1 per cent, determined on 1.0 g.

ASSAY

Dissolve 0.150 g in 50 mL of *ethanol (96 per cent) R* and add 5.0 mL of *0.01 M hydrochloric acid*. Carry out a potentiometric titration (*2.2.20*), using *0.1 M sodium hydroxide*. Read the volume added between the 2 points of inflexion.

1 mL of *0.1 M sodium hydroxide* is equivalent to 20.17 mg of $C_{10}H_{16}ClNO$.

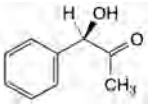
STORAGE

Protected from light.

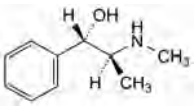
IMPURITIES

*Specified impurities*: *A*.

*Other detectable impurities* (the following substances would, if present at a sufficient level, be detected by one or other of the tests in the monograph. They are limited by the general acceptance criterion for other/unspecified impurities and/or by the general monograph *Substances for pharmaceutical use (2034)*. It is therefore not necessary to identify these impurities for demonstration of compliance. See also *5.10. Control of impurities in substances for pharmaceutical use*): *B*.



A. (–)-(1*R*)-1-hydroxy-1-phenylpropan-2-one,

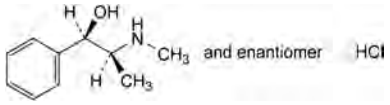


B. (1*S*,2*S*)-2-(methylamino)-1-phenylpropan-1-ol (pseudoephedrine).

**01/2008:0715**
**corrected 6.0**

# EPHEDRINE HYDROCHLORIDE, RACEMIC

## Ephedrini racemici hydrochloridum



$C_{10}H_{16}ClNO$ $M_r$ 201.7
[134-71-4]

DEFINITION

Racemic ephedrine hydrochloride contains not less than 99.0 per cent and not more than the equivalent of 101.0 per cent of (1*RS*,2*SR*)-2-(methylamino)-1-phenylpropan-1-ol hydrochloride, calculated with reference to the dried substance.

CHARACTERS

A white or almost white, crystalline powder or colourless crystals, freely soluble in water, soluble in ethanol (96 per cent).

It melts at about 188 °C.

IDENTIFICATION

*First identification: B, E.*

*Second identification: A, C, D, E.*

A. Optical rotation (see Tests).

B. Examine by infrared absorption spectrophotometry (*2.2.24*), comparing with the spectrum obtained with *racemic ephedrine hydrochloride CRS*. Examine the substances prepared as discs.

C. Examine the chromatograms obtained in the test for related substances. The principal spot in the chromatogram obtained with test solution (b) is similar in position, colour and size to the principal spot in the chromatogram obtained with reference solution (a).

D. To 0.1 mL of solution S (see Tests) add 1 mL of *water R*, 0.2 mL of *copper sulfate solution R* and 1 mL of *strong sodium hydroxide solution R*. A violet colour is produced. Add 2 mL of *ether R* and shake. The ether layer is purple and the aqueous layer is blue.

E. To 5 mL of solution S add 5 mL of *water R*. The solution gives reaction (a) of chlorides (*2.3.1*).

TESTS

**Solution S**. Dissolve 5.00 g in *distilled water R* and dilute to 50.0 mL with the same solvent.

**Appearance of solution**. Solution S is clear (*2.2.1*) and colourless (*2.2.2, Method II*).

**Acidity or alkalinity**. To 10 mL of solution S add 0.1 mL of *methyl red solution R* and 0.1 mL of *0.01 M sodium hydroxide*; the solution is yellow. Add 0.2 mL of *0.01 M hydrochloric acid*; the solution is red.

**Optical rotation** (*2.2.7*): + 0.2° to − 0.2°, determined on solution S.

**Related substances**. Examine by thin-layer chromatography (*2.2.27*), using *silica gel G R* as the coating substance.

*Test solution (a).* Dissolve 0.20 g of the substance to be examined in *methanol R* and dilute to 10 mL with the same solvent.

*Test solution (b).* Dilute 1 mL of test solution (a) to 10 mL with *methanol R*.

*Reference solution (a).* Dissolve 20 mg of *racemic ephedrine hydrochloride CRS* in *methanol R* and dilute to 10 mL with the same solvent.

*Reference solution (b).* Dilute 1 mL of test solution (a) to 200 mL with *methanol R*.

Apply separately to the plate 10 µL of each solution. Develop over a path of 15 cm using a mixture of 5 volumes of *chloroform R*, 15 volumes of *concentrated ammonia R* and 80 volumes of *2-propanol R*. Allow the plate to dry in air. Spray with *ninhydrin solution R* and heat at 110 °C for 5 min. Any spot in the chromatogram obtained with test solution (a), apart from the principal spot, is not more intense than the spot in the chromatogram obtained with reference solution (b) (0.5 per cent). Disregard any spot of lighter colour than the background.

**Sulfates** (*2.4.13*). 15 mL of solution S complies with the limit test for sulfates (100 ppm).

**Loss on drying** (*2.2.32*). Not more than 0.5 per cent, determined on 1.000 g by drying in an oven at 105 °C.

**Sulfated ash** (*2.4.14*). Not more than 0.1 per cent, determined on 1.0 g.

ASSAY

Dissolve 0.170 g in 30 mL of *ethanol (96 per cent) R*. Add 5.0 mL of *0.01 M hydrochloric acid*. Carry out a potentiometric titration (*2.2.20*), using *0.1 M sodium hydroxide*. Read the volume added between the two points of inflexion.

1 mL of *0.1 M sodium hydroxide* corresponds to 20.17 mg of $C_{10}H_{16}ClNO$.

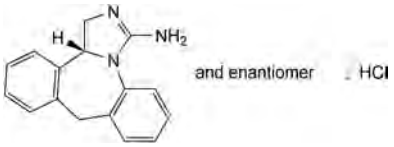
STORAGE

Store protected from light.

**01/2017:2411**

# EPINASTINE HYDROCHLORIDE

## Epinastini hydrochloridum



$C_{16}H_{16}ClN_3$ $M_r$ 285.8
[108929-04-0]

DEFINITION

(13b*RS*)-9,13b-Dihydro-1*H*-dibenzo[*c,f*]imidazo[1,5-*a*]azepin-3-amine hydrochloride.

*Content*: 99.0 per cent to 101.0 per cent (dried substance).

CHARACTERS

*Appearance*: white or almost white, hygroscopic, crystalline powder.

*Solubility*: freely soluble in water and in methanol, sparingly soluble in methylene chloride, slightly soluble in acetonitrile.

IDENTIFICATION

A. Infrared absorption spectrophotometry (*2.2.24*).
Comparison: *epinastine hydrochloride CRS*.

B. It gives reaction (a) of chlorides (*2.3.1*).

Monographs E

TESTS

**Acidity or alkalinity**. Dissolve 1.0 g in *carbon dioxide-free water R* and dilute to 10 mL with the same solvent. Add 0.1 mL of *methyl red mixed solution R* and 0.25 mL of *0.01 M sodium hydroxide*. The solution is green. Add 0.5 mL of *0.01 M hydrochloric acid*. The solution is reddish-violet.

**Related substances**. Liquid chromatography (*2.2.29*).

*Buffer solution pH 4.4*. Dissolve 3.8 g of *sodium pentanesulfonate monohydrate R* and 4.0 g of *potassium dihydrogen phosphate R* in *water R*, adjust to pH 4.4 with *phosphoric acid R* and dilute to 1000.0 mL with *water R*.

*Solvent mixture*: mobile phase B, mobile phase A (25:75 *V/V*).

*Test solution*. Dissolve 50 mg of the substance to be examined in the solvent mixture and dilute to 100.0 mL with the solvent mixture.

*Reference solution (a)*. Dilute 10.0 mL of the test solution to 100.0 mL with the solvent mixture. Dilute 1.0 mL of this solution to 100.0 mL with the solvent mixture.

*Reference solution (b)*. Dissolve 5 mg of *epinastine for system suitability CRS* (containing impurities A and B) in 10.0 mL of the solvent mixture.

*Column*:

- *size*: *l* = 0.10 m, Ø = 3.0 mm;
- *stationary phase*: *end-capped octadecylsilyl silica gel for chromatography R* (3 µm);
- *temperature*: 50 °C.

*Mobile phase* :

- *mobile phase A*: *methanol R2*, buffer solution pH 4.4 (15:85 *V/V*);
- *mobile phase B*: *methanol R2*, *acetonitrile R1* (15:85 *V/V*);

| Time (min) | Mobile phase A (per cent *V/V*) | Mobile phase B (per cent *V/V*) |
|---|---|---|
| 0 - 4 | 80 | 20 |
| 4 - 13 | 80 → 30 | 20 → 70 |

*Flow rate*: 1.4 mL/min.

*Detection*: spectrophotometer at 220 nm.

*Injection*: 10 µL.

*Identification of impurities*: use the chromatogram supplied with *epinastine for system suitability CRS* and the chromatogram obtained with reference solution (b) to identify the peaks due to impurities A and B.

*Relative retention* with reference to epinastine (retention time = about 4 min): impurity A = about 1.2; impurity B = about 2.0.

*System suitability*: reference solution (b):

- *peak-to-valley ratio*: minimum 2.0, where $H_p$ = height above the baseline of the peak due to impurity A and $H_v$ = height above the baseline of the lowest point of the curve separating this peak from the peak due to epinastine.

*Limits*:

- *impurity B*: not more than 3 times the area of the principal peak in the chromatogram obtained with reference solution (a) (0.3 per cent);
- *impurity A*: not more than twice the area of the principal peak in the chromatogram obtained with reference solution (a) (0.2 per cent);
- *unspecified impurities*: for each impurity, not more than the area of the principal peak in the chromatogram obtained with reference solution (a) (0.10 per cent);
- *total*: not more than 7 times the area of the principal peak in the chromatogram obtained with reference solution (a) (0.7 per cent);
- *disregard limit*: 0.5 times the area of the principal peak in the chromatogram obtained with reference solution (a) (0.05 per cent).

**Loss on drying** (*2.2.32*): maximum 1.0 per cent, determined on 1.000 g by drying in an oven at 105 °C.

**Sulfated ash** (*2.4.14*): maximum 0.1 per cent, determined on 1.0 g.

ASSAY

Dissolve 0.200 g in 100 mL of a mixture of 1 volume of *anhydrous acetic acid R* and 2 volumes of *acetic anhydride R*. Titrate with *0.1 M perchloric acid*, determining the end-point potentiometrically (*2.2.20*).

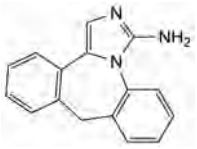
1 mL of *0.1 M perchloric acid* is equivalent to 28.58 mg of $C_{16}H_{16}ClN_3$.

STORAGE

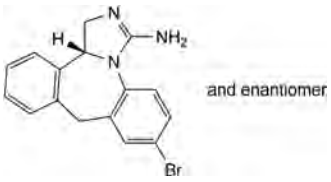
In an airtight container.

IMPURITIES

*Specified impurities: A, B.*



A. 9*H*-dibenzo[*c,f*]imidazo[1,5-*a*]azepin-3-amine,



B. (13b*RS*)-7-bromo-9,13b-dihydro-1*H*-dibenzo[*c,f*]imidazo-[1,5-*a*]azepin-3-amine.

**01/2008:1590**

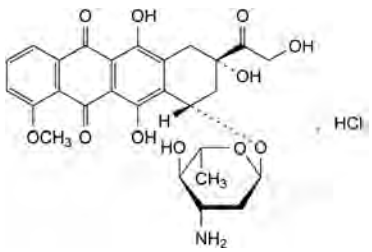
# EPIRUBICIN HYDROCHLORIDE

## Epirubicini hydrochloridum



$C_{27}H_{30}ClNO_{11}$ $M_r$ 580.0
[56390-09-1]

DEFINITION

(8*S*,10*S*)-10-[(3-Amino-2,3,6-trideoxy-α-L-*arabino*-hexopyranosyl)oxy]-6,8,11-trihydroxy-8-(hydroxyacetyl)-1-methoxy-7,8,9,10-tetrahydrotetracene-5,12-dione hydrochloride.

Substance obtained by chemical transformation of a substance produced by certain strains of *Streptomyces peucetius*.

*Content*: 97.0 per cent to 102.0 per cent (anhydrous substance).

CHARACTERS

*Appearance*: orange-red powder.

*Solubility*: soluble in water and in methanol, slightly soluble in anhydrous ethanol, practically insoluble in acetone.

IDENTIFICATION

A. Infrared absorption spectrophotometry (*2.2.24*).

*Comparison*: *epirubicin hydrochloride CRS*.

B. Examine the chromatograms obtained in the assay.

*Results*: the principal peak in the chromatogram obtained with the test solution is similar in retention time to the principal peak in the chromatogram obtained with reference solution (a).

C. Dissolve about 10 mg in 0.5 mL of *nitric acid R*, add 0.5 mL of *water R* and heat over a flame for 2 min. Allow to cool and add 0.5 mL of *silver nitrate solution R1*. A white precipitate is formed.

TESTS

**pH** (*2.2.3*): 4.0 to 5.5.

Dissolve 50 mg in *carbon dioxide-free water R* and dilute to 10 mL with the same solvent.

**Related substances**. Liquid chromatography (*2.2.29*). *Allow the solutions to stand for 3 h before use.*

*Test solution.* Dissolve 25.0 mg of the substance to be examined in the mobile phase and dilute to 25.0 mL with the mobile phase.

*Reference solution (a).* Dissolve 25.0 mg of *epirubicin hydrochloride CRS* in the mobile phase and dilute to 25.0 mL with the mobile phase.

*Reference solution (b).* Dissolve 10 mg of *epirubicin hydrochloride CRS* and 10 mg of *doxorubicin hydrochloride CRS* in the mobile phase and dilute to 100 mL with the mobile phase.

*Reference solution (c).* Dissolve 10 mg of *doxorubicin hydrochloride CRS* in a mixture of 5 mL of *water R* and 5 mL of *phosphoric acid R*. Allow to stand for 30 min. Adjust to pH 2.6 with an 80 g/L solution of *sodium hydroxide R*. Add 15 mL of *acetonitrile R* and 10 mL of *methanol R*. Mix.

*Reference solution (d).* Dilute 1.0 mL of the test solution to 100.0 mL with the mobile phase.

*Column*:

– *size*: *l* = 0.25 m, Ø = 4.6 mm;
– *stationary phase*: *trimethylsilyl silica gel for chromatography R* (6 µm);
– *temperature*: 35 °C.

*Mobile phase*: mix 17 volumes of *methanol R*, 29 volumes of *acetonitrile R* and 54 volumes of a solution containing 3.7 g/L of *sodium laurilsulfate R* and 2.8 per cent *V/V* of *dilute phosphoric acid R*.

*Flow rate*: 2.5 mL/min.

*Detection*: spectrophotometer at 254 nm.

*Injection*: 10 µL of the test solution and reference solutions (b), (c) and (d).

*Run time*: 3.5 times the retention time of epirubicin.

*Identification of impurities*: use the 2nd most abundant peak present in the chromatogram obtained with reference solution (c) to identify impurity A.

*Relative retention* with reference to epirubicin (retention time = about 9.5 min): impurity A = about 0.3; impurity B = about 0.4; impurity C = about 0.8; impurity E = about 1.1; impurity D = about 1.5; impurity F = about 1.7; impurity G = about 2.1.

*System suitability*: reference solution (b):

– *resolution*: minimum 2.0 between the peaks due to impurity C and epirubicin.

*Limits*:

– *correction factor*: for the calculation of content, multiply the peak area of impurity A by 0.7;
– *impurity A*: not more than the area of the principal peak in the chromatogram obtained with reference solution (d) (1.0 per cent);
– *impurity C*: not more than the area of the principal peak in the chromatogram obtained with reference solution (d) (1.0 per cent);
– *any other impurity*: for each impurity, not more than 0.5 times the area of the principal peak in the chromatogram obtained with reference solution (d) (0.5 per cent);
– *total*: not more than twice the area of the principal peak in the chromatogram obtained with reference solution (d) (2.0 per cent);
– *disregard limit*: 0.05 times the area of the principal peak in the chromatogram obtained with reference solution (d) (0.05 per cent).

**Acetone** (*2.4.24*): maximum 1.5 per cent.

**Water** (*2.5.12*): maximum 4.0 per cent, determined on 0.100 g.

**Bacterial endotoxins** (*2.6.14*): less than 1.1 IU/mg, if intended for use in the manufacture of parenteral preparations without a further appropriate procedure for removal of bacterial endotoxins.

ASSAY

Liquid chromatography (*2.2.29*) as described in the test for related substances with the following modification.

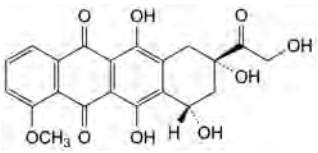
*Injection*: test solution and reference solution (a).

Calculate the percentage content of $C_{27}H_{30}ClNO_{11}$.

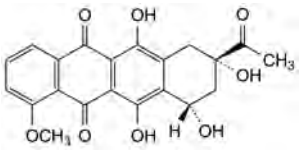
STORAGE

In an airtight container, protected from light, at a temperature of 2 °C to 8 °C. If the substance is sterile, store in a sterile, airtight, tamper-evident container.

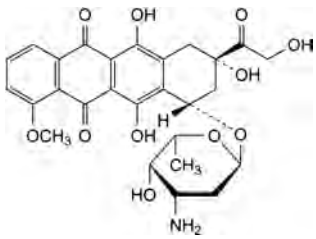
IMPURITIES



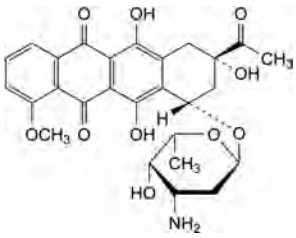
A. (8*S*,10*S*)-6,8,10,11-tetrahydroxy-8-(hydroxyacetyl)-1-methoxy-7,8,9,10-tetrahydrotetracene-5,12-dione (doxorubicinone),



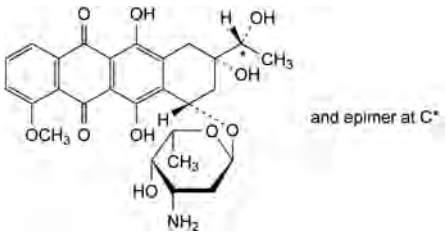
B. (8*S*,10*S*)-8-acetyl-6,8,10,11-tetrahydroxy-1-methoxy-7,8,9,10-tetrahydrotetracene-5,12-dione (daunorubicinone),



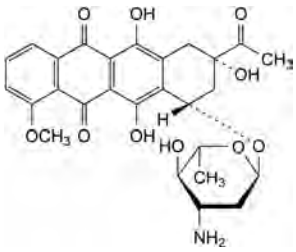
C. (8*S*,10*S*)-10-[(3-amino-2,3,6-trideoxy-α-L-*lyxo*-hexopyranosyl)oxy]-6,8,11-trihydroxy-8-(hydroxyacetyl)-1-methoxy-7,8,9,10-tetrahydrotetracene-5,12-dione (doxorubicin),



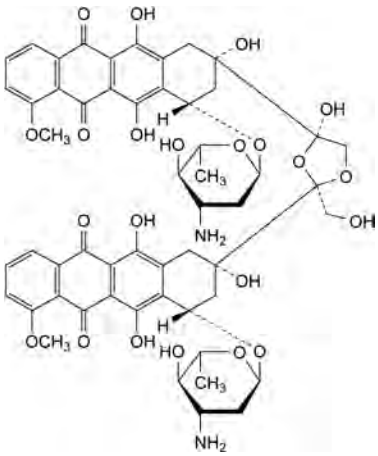
D. (8*S*,10*S*)-8-acetyl-10-[(3-amino-2,3,6-trideoxy-α-L-*lyxo*-hexopyranosyl)oxy]-6,8,11-trihydroxy-1-methoxy-7,8,9,10-tetrahydrotetracene-5,12-dione (daunorubicin),



E. (8*S*,10*S*)-10-[(3-amino-2,3,6-trideoxy-α-L-*lyxo*-hexopyranosyl)oxy]-6,8,11-trihydroxy-8-[(1*RS*)-1-hydroxyethyl]-1-methoxy-7,8,9,10-tetrahydrotetracene-5,12-dione (dihydrodaunorubicin),



F. (8*S*,10*S*)-8-acetyl-10-[(3-amino-2,3,6-trideoxy-α-L-*arabino*-hexopyranosyl)oxy]-6,8,11-trihydroxy-1-methoxy-7,8,9,10-tetrahydrotetracene-5,12-dione (*epi*-daunorubicin),

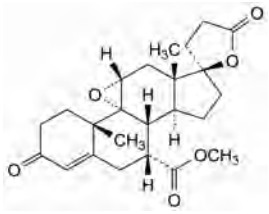


G. 8,8′-[(2*R*,4*R*)-4-hydroxy-2-(hydroxymethyl)-1,3-dioxolan-2,4-diyl]bis[(8*S*,10*S*)-10-[(3-amino-2,3,6-trideoxy-α-L-*arabino*-hexopyranosyl)oxy]-6,8,11-trihydroxy-1-methoxy-7,8,9,10-tetrahydrotetracene-5,12-dione] (epirubicin dimer).

**04/2015:2765**

# EPLERENONE

## Eplerenonum



$C_{24}H_{30}O_6$ $M_r$ 414.5

[107724-20-9]

DEFINITION

9,11α-Epoxy-7α-(methoxycarbonyl)-3-oxo-17α-pregn-4-ene-21,17-carbolactone.

*Content*: 97.5 per cent to 102.0 per cent (anhydrous substance).

CHARACTERS

*Appearance*: white, almost white or slightly yellow, crystalline powder.

*Solubility*: slightly soluble in water, freely soluble in methylene chloride, slightly soluble in ethanol (96 per cent).

It shows polymorphism (*5.9*).

IDENTIFICATION

Infrared absorption spectrophotometry (*2.2.24*).

*Comparison*: *eplerenone CRS*.

If the spectra obtained in the solid state show differences, dissolve the substance to be examined and the reference substance separately in *methanol R*, evaporate to dryness and record new spectra using the residues.

TESTS

**Specific optical rotation** (*2.2.7*): − 16.0 to − 14.0.

Dissolve 0.250 g in *acetonitrile R* and dilute to 25.0 mL with the same solvent.

**Related substances**. Liquid chromatography (*2.2.29*).

*Solvent mixture*: *acetonitrile R*, *methanol R*, *water R* (25:25:50 *V/V/V*).

*Test solution (a)*. Dissolve 25.0 mg of the substance to be examined in the solvent mixture and dilute to 50.0 mL with the solvent mixture.

*Test solution (b)*. Dilute 1.0 mL of test solution (a) to 10.0 mL with the solvent mixture.

*Reference solution (a)*. Dissolve 5 mg of *eplerenone for system suitability CRS* (containing impurities A and D) in the solvent mixture and dilute to 10.0 mL with the solvent mixture.

*Reference solution (b)*. Dissolve 5 mg of *eplerenone for peak identification CRS* (containing impurity B) in the solvent mixture and dilute to 10.0 mL with the solvent mixture.

*Reference solution (c)*. Dilute 1.0 mL of test solution (a) to 100.0 mL with the solvent mixture. Dilute 1.0 mL of this solution to 10.0 mL with the solvent mixture.

*Reference solution (d)*. Dissolve 25.0 mg of *eplerenone CRS* in the solvent mixture and dilute to 50.0 mL with the solvent mixture. Dilute 1.0 mL of the solution to 10.0 mL with the solvent mixture.

*Column*:

– *size*: *l* = 0.15 m, Ø = 4.6 mm;

– *stationary phase*: *base-deactivated end-capped octadecylsilyl silica gel for chromatography R* (3 µm);

– *temperature*: 30 °C.

*Mobile phase*:

– *mobile phase A*: 0.1 per cent *V/V* solution of *phosphoric acid R*;

– *mobile phase B*: *phosphoric acid R*, *acetonitrile R*, *methanol R* (0.1:40:60 *V/V/V*);

| Time (min) | Mobile phase A (per cent *V/V*) | Mobile phase B (per cent *V/V*) |
|---|---|---|
| 0 - 25 | 54 | 46 |
| 25 - 32 | 54 → 40 | 46 → 60 |
| 32 - 45 | 40 | 60 |

*Flow rate*: 1.0 mL/min.

*Detection*: spectrophotometer at 240 nm.

*Injection*: 20 µL of test solution (a) and reference solutions (a), (b) and (c).

*Identification of impurities*: use the chromatogram supplied with *eplerenone for system suitability CRS* and the chromatogram obtained with reference solution (a) to identify the peaks due to impurities A and D; use the chromatogram supplied with *eplerenone for peak identification CRS* and the chromatogram obtained with reference solution (b) to identify the peak due to impurity B.

*Relative retention* with reference to eplerenone (retention time = about 9 min): impurity D = about 0.71; impurity A = about 0.74; impurity B = about 1.2.

*System suitability*: reference solution (a):

– *peak-to-valley ratio*: minimum 5.0, where $H_p$ = height above the baseline of the peak due to impurity D and $H_v$ = height above the baseline of the lowest point of the curve separating this peak from the peak due to impurity A.

*Calculation of percentage contents*:

– for each impurity, use the concentration of eplerenone in reference solution (c).

*Limits*:

– *impurities A, B*: for each impurity, maximum 0.3 per cent;

– *unspecified impurities*: for each impurity, maximum 0.10 per cent;

– *total*: maximum 0.6 per cent;

– *reporting threshold*: 0.05 per cent.

**Water** (*2.5.12*): maximum 0.5 per cent, determined on 1.000 g.

**Sulfated ash** (*2.4.14*): maximum 0.1 per cent, determined on 1.0 g.

ASSAY

Liquid chromatography (*2.2.29*) as described in the test for related substances with the following modification.

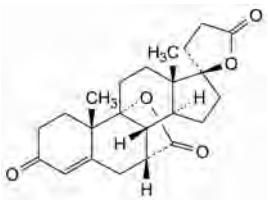
*Injection*: test solution (b) and reference solution (d).

Calculate the percentage content of $C_{24}H_{30}O_6$ taking into account the assigned content of *eplerenone CRS*.

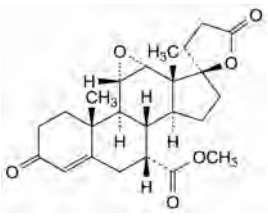
IMPURITIES

*Specified impurities: A, B.*

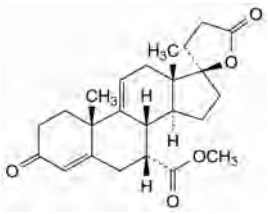
*Other detectable impurities* (the following substances would, if present at a sufficient level, be detected by one or other of the tests in the monograph. They are limited by the general acceptance criterion for other/unspecified impurities and/or by the general monograph *Substances for pharmaceutical use (2034)*. It is therefore not necessary to identify these impurities for demonstration of compliance. See also *5.10. Control of impurities in substances for pharmaceutical use*): *C, D, E, F, G.*



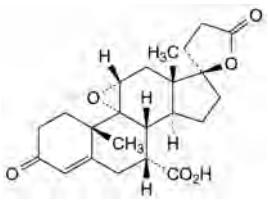
A. 3-oxo-17α-pregn-4-ene-7α,9:21,17-dicarbolactone,



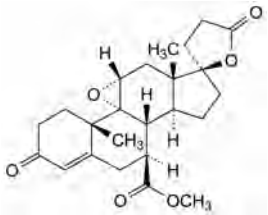
B. 11α,12α-epoxy-7α-(methoxycarbonyl)-3-oxo-17α-pregn-4-ene-21,17-carbolactone,



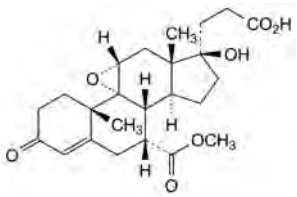
C. 7α-(methoxycarbonyl)-3-oxo-17α-pregna-4,9(11)-diene-21,17-carbolactone,



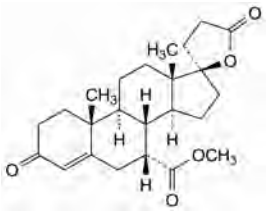
D. (2′*R*)-9,11α-epoxy-3,5′-dioxo-4′,5′-dihydro-3′*H*-spiro[androst-4-ene-17,2′-furan]-7α-carboxylic acid,



E. 9,11α-epoxy-7β-(methoxycarbonyl)-3-oxo-17α-pregn-4-ene-21,17-carbolactone,



F. 9,11α-epoxy-17-hydroxy-7α-(methoxycarbonyl)-3-oxo-17α-pregn-4-ene-21-carboxylic acid,

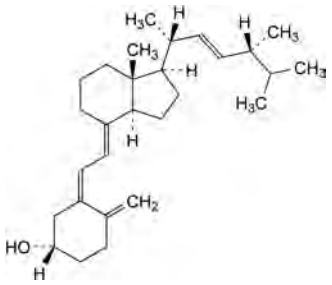


G. 7α-(methoxycarbonyl)-3-oxo-17α-pregn-4-ene-21,17-carbolactone.

**04/2019:0082**

# ERGOCALCIFEROL

## Ergocalciferolum



$C_{28}H_{44}O$ $M_r$ 396.7
[50-14-6]

DEFINITION

(3*S*,5*Z*,7*E*,22*E*)-9,10-Secoergosta-5,7,10(19),22-tetraen-3-ol.

*Content*: 97.0 per cent to 102.0 per cent.

A suitable antioxidant may be added.

A reversible isomerisation to pre-ergocalciferol takes place in solution, depending on temperature and time. The activity is due to both compounds (see Assay).

1 mg of ergocalciferol is equivalent to 40 000 IU of antirachitic activity (vitamin D) in rats.

CHARACTERS

*Appearance*: white or slightly yellowish, crystalline powder or white or almost white crystals.

*Solubility*: practically insoluble in water, freely soluble in ethanol (96 per cent) and in methanol, soluble in fatty oils.

It is sensitive to air, heat and light.

IDENTIFICATION

Infrared absorption spectrophotometry (*2.2.24*).

*Comparison*: *ergocalciferol CRS*.

TESTS

**Specific optical rotation** (*2.2.7*): + 103 to + 107.

Dissolve 0.200 g rapidly and without heating in *aldehyde-free alcohol R* and dilute to 25.0 mL with the same solvent. Examine within 30 min of preparing the solution.

**Reducing substances**. Dissolve 0.1 g in *aldehyde-free alcohol R* and dilute to 10.0 mL with the same solvent. Add 0.5 mL of a 5 g/L solution of *tetrazolium blue R* in *aldehyde-free alcohol R* and 0.5 mL of *dilute tetramethylammonium hydroxide solution R*. Allow to stand for exactly 5 min and add 1.0 mL of *glacial acetic acid R*. Prepare a reference solution at the same time and in the same manner using 10.0 mL of a solution containing 0.2 µg/mL of *hydroquinone R* in *aldehyde-free alcohol R*. Measure the absorbance (*2.2.25*) of the 2 solutions at 525 nm using as the compensation liquid 10.0 mL of *aldehyde-free alcohol R* treated in the same manner. The absorbance of the test solution is not greater than that of the reference solution (20 ppm).

**Impurity B**. Liquid chromatography (*2.2.29*). *Prepare the solutions immediately before use, avoiding exposure to actinic light and air.*

*Test solution*. Dissolve 25.0 mg of the substance to be examined without heating in *methanol R* and dilute to 25.0 mL with the same solvent.

*Reference solution*. Dissolve 5.0 mg of *ergosterol CRS* (impurity B) without heating in *methanol R* and dilute to 50.0 mL with the same solvent. Dilute 1.0 mL of the solution to 50.0 mL with *methanol R*.

*Column*:

- *size*: *l* = 0.25 m, Ø = 4.6 mm;
- *stationary phase*: *end-capped octadecylsilyl silica gel for chromatography R* (5 µm);
- *temperature*: 25 °C.

*Mobile phase*: *methanol R*.

*Flow rate*: 1.5 mL/min.

*Detection*: spectrophotometer at 282 nm.

*Injection*: 20 µL.

*Run time*: 2.5 times the retention time of ergocalciferol.

*Relative retention* with reference to ergocalciferol (retention time = about 7 min): impurity B = about 1.6.

*Limit*:

- *impurity B*: not more than the area of the principal peak in the chromatogram obtained with the reference solution (0.2 per cent).

**Related substances**. Liquid chromatography (*2.2.29*). *Prepare the solutions immediately before use, avoiding exposure to actinic light and air.*

*Test solution*. Dissolve 15.0 mg of the substance to be examined in the mobile phase and dilute to 25.0 mL with the mobile phase. Dilute 1.0 mL of the solution to 10.0 mL with the mobile phase.

*Reference solution (a)*. Dissolve 5 mg of *ergocalciferol for system suitability CRS* (containing impurities A, F and G) in 10 mL of the mobile phase. Heat in a water-bath at 90 °C under a reflux-condenser for 45 min and allow to cool (*in-situ* degradation to obtain pre-ergocalciferol). Dilute 3 mL of the solution to 25 mL with the mobile phase.

*Reference solution (b)*. Dissolve 15.0 mg of *ergocalciferol CRS* in the mobile phase and dilute to 25.0 mL with the mobile phase. Dilute 1.0 mL of the solution to 10.0 mL with the mobile phase.

*Reference solution (c)*. Dilute 1.0 mL of the test solution to 100.0 mL with the mobile phase.

*Reference solution (d)*. Dilute 1.0 mL of reference solution (c) to 10.0 mL with the mobile phase.

*Column*:

- *size*: *l* = 0.25 m, Ø = 4.6 mm;
- *stationary phase*: *base-deactivated end-capped octadecylsilyl silica gel for chromatography R* (5 µm);
- *temperature*: 25 °C.

*Mobile phase*: *methanol R*, *acetonitrile R* (10:90 *V/V*).

*Flow rate*: 1.0 mL/min.

*Detection*: spectrophotometer at 265 nm.

*Injection*: 20 µL of the test solution and reference solutions (a), (c) and (d).

*Run time*: twice the retention time of ergocalciferol.

*Identification of impurities*: use the chromatogram supplied with *ergocalciferol for system suitability CRS* and the chromatogram obtained with reference solution (a) to identify the peaks due to impurities A, F and G, and pre-ergocalciferol.

*Relative retention* with reference to ergocalciferol (retention time = about 13 min): impurity F = about 0.6; impurity A = about 0.8; pre-ergocalciferol = about 0.9; impurity G = about 1.2.

*System suitability*: reference solution (a):

- *resolution*: minimum 2.0 between the peaks due to impurity A and pre-ergocalciferol; minimum 2.5 between the peaks due to pre-ergocalciferol and ergocalciferol.

*Calculation of percentage contents*:

- for impurities A, F and G, use the concentration of ergocalciferol in reference solution (c);
- for impurities other than A, F and G, use the concentration of ergocalciferol in reference solution (d).

*Limits*:

- *impurity G*: maximum 1.5 per cent;
- *impurities A, F*: for each impurity, maximum 0.5 per cent;
- *unspecified impurities*: for each impurity, maximum 0.10 per cent;
- *total*: maximum 2.0 per cent;
- *reporting threshold*: 0.05 per cent; disregard any peak due to pre-ergocalciferol or the antioxidant.

ASSAY

Liquid chromatography (*2.2.29*) as described in the test for related substances with the following modification.

*Injection*: test solution and reference solution (b).

Calculate the percentage content of $C_{28}H_{44}O$ taking into account the assigned content of *ergocalciferol CRS*, and if present, the peak due to pre-ergocalciferol in the test solution.

STORAGE

Under an inert gas, in an airtight container, protected from light, at a temperature of 2 °C to 8 °C.

The contents of an opened container are to be used immediately.

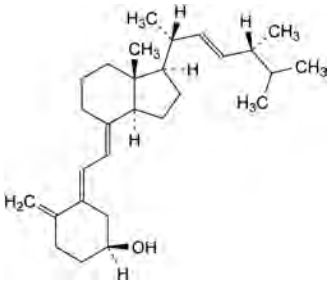
LABELLING

The label states the name and concentration of any added antioxidant.

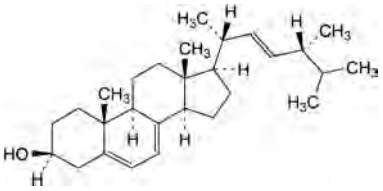
IMPURITIES

*Specified impurities: A, B, F, G.*

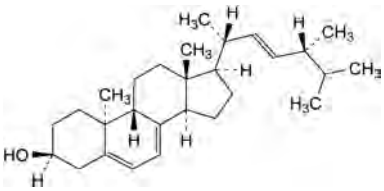
*Other detectable impurities* (the following substances would, if present at a sufficient level, be detected by one or other of the tests in the monograph. They are limited by the general acceptance criterion for other/unspecified impurities and/or by the general monograph *Substances for pharmaceutical use (2034)*. It is therefore not necessary to identify these impurities for demonstration of compliance. See also *5.10. Control of impurities in substances for pharmaceutical use*): *C, D, E.*



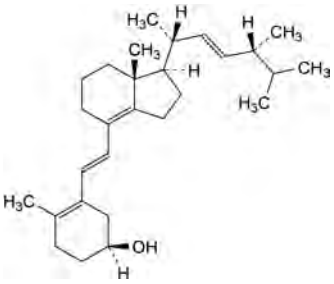
A. (3*S*,5*E*,7*E*,22*E*)-9,10-secoergosta-5,7,10(19),22-tetraen-3-ol (*trans*-vitamin $D_2$),



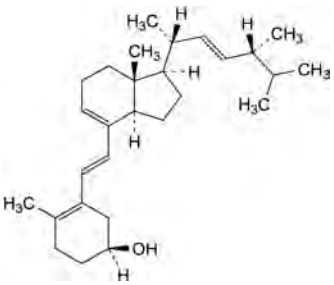
B. (22*E*)-ergosta-5,7,22-trien-3β-ol (ergosterol),



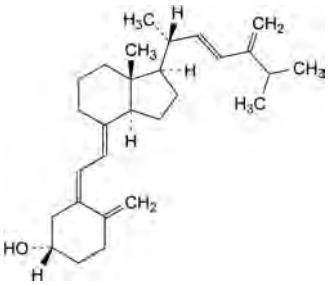
C. (22*E*)-9β,10α-ergosta-5,7,22-trien-3β-ol (lumisterol$_2$),



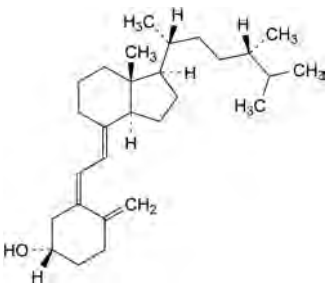
D. (3*S*,6*E*,22*E*)-9,10-secoergosta-5(10),6,8(14),22-tetraen-3-ol (iso-tachysterol$_2$),



E. (3*S*,6*E*,22*E*)-9,10-secoergosta-5(10),6,8,22-tetraen-3-ol (tachysterol$_2$),



F. (3*S*,5*Z*,7*E*,22*E*)-9,10-secoergosta-5,7,10(19),22,24(24$^1$)-pentaen-3-ol,

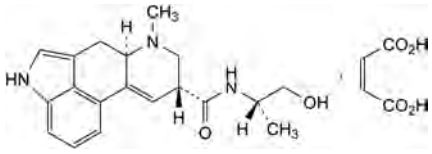


G. (3*S*,5*Z*,7*E*)-9,10-secoergosta-5,7,10(19)-trien-3-ol (vitamin $D_4$).

**01/2008:0223**
**corrected 6.0**

# ERGOMETRINE MALEATE

## Ergometrini maleas



$C_{23}H_{27}N_3O_6$ $M_r$ 441.5
[129-51-1]

DEFINITION

Ergometrine maleate contains not less than 98.0 per cent and not more than the equivalent of 101.0 per cent of (6a*R*,9*R*)-*N*-[(*S*)-2-hydroxy-1-methylethyl]-7-methyl-4,6,6a,7,8,9-hexahydro-indolo[4,3-*fg*]quinoline-9-carboxamide (*Z*)-butenedioate, calculated with reference to the dried substance.

CHARACTERS

A white or almost white or slightly coloured, crystalline powder, sparingly soluble in water, slightly soluble in alcohol.

IDENTIFICATION

*First identification: B, C.*

*Second identification: A, C, D, E.*

A. Dissolve 30 mg in *0.01 M hydrochloric acid* and dilute to 100.0 mL with the same acid. Dilute 10.0 mL of the solution to 100.0 mL with *0.01 M hydrochloric acid*. Examined between 250 nm and 360 nm (*2.2.25*), the solution shows an absorption maximum at 311 nm and a minimum at 265 nm to 272 nm. The specific absorbance at the maximum is 175 to 195.

B. Examine by infrared absorption spectrophotometry (*2.2.24*), comparing with the spectrum obtained with *ergometrine maleate CRS*. Examine the substances prepared as discs.

C. Examine the chromatograms obtained in the test for related substances. The principal spot in the chromatogram obtained with test solution (b) is similar in position, colour and size to the principal spot in the chromatogram obtained with reference solution (a).

D. To 0.1 mL of solution S (see Tests) add 1 mL of *glacial acetic acid R*, 0.05 mL of *ferric chloride solution R1* and 1 mL of *phosphoric acid R* and heat in a water-bath at 80 °C. After about 10 min, a blue or violet colour develops which becomes more intense on standing.

E. Dissolve 0.1 g in a mixture of 0.5 mL of *dilute sulfuric acid R* and 2.5 mL of *water R*. Add 5 mL of *ether R* and 1 mL of *strong sodium hydroxide solution R* and shake. Separate the aqueous layer and shake with two quantities, each of 5 mL, of *ether R*. To 0.1 mL of the aqueous layer add a solution of 10 mg of *resorcinol R* in 3 mL of *sulfuric acid R*. Heat on a water-bath for 15 min. No colour develops. To the rest of the aqueous layer add 1 mL of *bromine water R*. Heat on a water-bath for 10 min, then heat to boiling and cool. To 0.2 mL of this solution add a solution of 10 mg of *resorcinol R* in 3 mL of *sulfuric acid R*. Heat on a water-bath for 15 min. A pinkish-violet colour develops.

TESTS

**Solution S**. Dissolve 0.100 g, without heating and protected from light, in 9 mL of *carbon dioxide-free water R* and dilute to 10.0 mL with the same solvent.

**Appearance of solution**. Solution S is clear (*2.2.1*) and not more intensely coloured than reference solution $Y_5$ or $BY_5$ (*2.2.2, Method II*).

**pH** (*2.2.3*). The pH of solution S is 3.6 to 4.4.

**Specific optical rotation** (*2.2.7*): + 50 to + 56, determined on solution S and calculated with reference to the dried substance.

**Related substances**. Examine by thin-layer chromatography (*2.2.27*), using *silica gel G R* as the coating substance. *Carry out all operations as rapidly as possible, protected from light. Prepare the test and reference solutions immediately before use.*

*Test solution (a).* Dissolve 50 mg of the substance to be examined in a mixture of 1 volume of *concentrated ammonia R* and 9 volumes of *alcohol (80 per cent V/V) R* and dilute to 5.0 mL with the same mixture of solvents.

*Test solution (b).* Dilute 1.0 mL of test solution (a) to 10.0 mL with a mixture of 1 volume of *concentrated ammonia R* and 9 volumes of *alcohol (80 per cent V/V) R*.

*Reference solution (a).* Dissolve 10 mg of *ergometrine maleate CRS* in a mixture of 1 volume of *concentrated ammonia R* and 9 volumes of *alcohol (80 per cent V/V) R* and dilute to 10.0 mL with the same mixture of solvents.

*Reference solution (b).* Dilute 5.0 mL of reference solution (a) to 50.0 mL with a mixture of 1 volume of *concentrated ammonia R* and 9 volumes of *alcohol (80 per cent V/V) R*.

*Reference solution (c).* To 2.0 mL of reference solution (b) add 2.0 mL of a mixture of 1 volume of *concentrated ammonia R* and 9 volumes of *alcohol (80 per cent V/V) R*.

Apply separately to the plate 5 µL of each solution. Develop immediately over a path of 14 cm using a mixture of 3 volumes of *water R*, 25 volumes of *methanol R* and 75 volumes of *chloroform R*. Dry the plate in a current of cold air and spray with *dimethylaminobenzaldehyde solution R7*. Dry the plate in a current of warm air for about 2 min. Any spot in the chromatogram obtained with test solution (a), apart from the principal spot, is not more intense than the principal spot in the chromatogram obtained with reference solution (b) (1.0 per cent) and at most one such spot is more intense than the principal spot in the chromatogram obtained with reference solution (c) (0.5 per cent).

**Loss on drying** (*2.2.32*). Not more than 2.0 per cent, determined on 0.20 g by drying over *diphosphorus pentoxide R* at 80 °C at a pressure not exceeding 2.7 kPa for 2 h.

ASSAY

Dissolve 0.150 g in 40 mL of *anhydrous acetic acid R*. Titrate with *0.05 M perchloric acid*, determining the end-point potentiometrically (*2.2.20*).

1 mL of *0.05 M perchloric acid* is equivalent to 22.07 mg of $C_{23}H_{27}N_3O_6$.

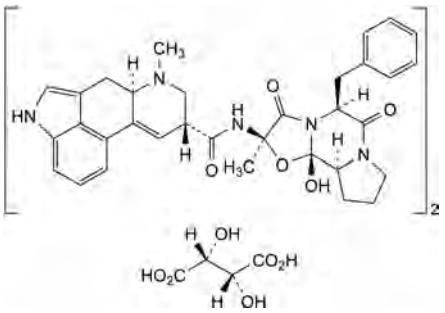
STORAGE

Store in an airtight, glass container, protected from light, at a temperature of 2 °C to 8 °C.

**01/2017:0224**

# ERGOTAMINE TARTRATE

## Ergotamini tartras



$C_{70}H_{76}N_{10}O_{16}$ $M_r$ 1313
[379-79-3]

DEFINITION

Bis[(6a*R*,9*R*)-*N*-[(2*R*,5*S*,10a*S*,10b*S*)-5-benzyl-10b-hydroxy-2-methyl-3,6-dioxooctahydro-8*H*-[1,3]oxazolo[3,2-*a*]pyrrolo[2,1-*c*]pyrazin-2-yl]-7-methyl-4,6,6a,7,8,9-hexahydroindolo[4,3-*fg*]quinoline-9-carboxamide] (2*R*,3*R*)-2,3-dihydroxybutanedioate.

*Content*: 98.0 per cent to 101.0 per cent (dried substance).

It may contain two molecules of methanol of crystallisation.

CHARACTERS

*Appearance*: white or almost white, crystalline powder or colourless crystals, slightly hygroscopic.

*Solubility*: slightly soluble in ethanol 96 per cent. Aqueous solutions slowly become cloudy owing to hydrolysis; this may be prevented by the addition of tartaric acid.

IDENTIFICATION

*First identification: B.*

*Second identification: A, C, D, E.*

A. Ultraviolet and visible absorption spectrophotometry (*2.2.25*).

*Test solution.* Dissolve 50 mg in *0.01 M hydrochloric acid* and dilute to 100.0 mL with the same acid. Dilute 10.0 mL of the solution to 100.0 mL with *0.01 M hydrochloric acid.*

*Spectral range*: 250 nm and 360 nm.

*Absorption maximum*: at 311 to 321 nm.

*Absorption minimum*: at 265 to 275 nm.

*Specific absorbance at the absorption maximum*: 118 to 128 (dried substance).

B. Infrared absorption spectrophotometry (*2.2.24*).

*Comparison*: *ergotamine tartrate CRS.*

*Preparation*: as discs, triturate the substance to be examined and the reference substance separately with 0.2 mL of *methanol R* and then with *potassium bromide R* as prescribed in the general method.

C. Thin-layer chromatography (*2.2.27*). *Prepare the solutions immediately before use.*

*Test solution.* Dissolve 5 mg of the substance to be examined in a mixture of 1 volume of *methanol R* and 9 volumes of *methylene chloride R* and dilute to 5.0 mL with the same mixture of solvents.

*Reference solution.* Dissolve 5 mg of *ergotamine tartrate CRS* in a mixture of 1 volume of *methanol R* and 9 volumes of *methylene chloride R* and dilute to 5.0 mL with the same mixture of solvents.

*Plate*: *TLC silica gel plate R.*

*Mobile phase*: *anhydrous ethanol R*, *methylene chloride R*, *dimethylformamide R*, *ether R* (5:10:15:70 *V/V/V/V*).

*Application*: 5 µL; immediately expose the points of application to ammonia vapour for exactly 20 s by moving the line of application from side to side above a beaker 55 mm high and 45 mm in diameter containing about 20 mL of *concentrated ammonia R*; dry the line of application in a current of cold air for exactly 20 s.

*Development*: over 2/3 of the plate.

*Drying*: in a current of cold air for about 2 min.

*Detection A*: examine for not more than 1 min in ultraviolet light at 365 nm.

*Results A*: the principal spot in the chromatogram obtained with the test solution is similar in position and fluorescence to the principal spot in the chromatogram obtained with the reference solution.

*Detection B*: spray the plate abundantly with *dimethylaminobenzaldehyde solution R7* and dry in a current of warm air for about 2 min; examine in daylight.

*Results B*: the principal spot in the chromatogram obtained with the test solution is similar in position, colour and size to the principal spot in the chromatogram obtained with the reference solution.

D. To 0.1 mL of solution S (see Tests) add 1 mL of *glacial acetic acid R*, 0.05 mL of *ferric chloride solution R1* and 1 mL of *phosphoric acid R* and heat in a water-bath at 80 °C. After about 10 min, a blue or violet colour develops which becomes more intense on standing.

E. Dissolve about 10 mg in 1.0 mL of *0.1 M sodium hydroxide*. Transfer to a separating funnel and shake with 5 mL of *methylene chloride R*. Discard the organic layer. Neutralise the aqueous layer with a few drops of *dilute hydrochloric acid R*. 0.1 mL of this solution gives reaction (b) of tartrates (*2.3.1*). Pour the reaction mixture into 1 mL of *water R* to observe the colour change to red or brownish-red.

TESTS

*Carry out all operations as rapidly as possible, protected from light.*

**Solution S**. Triturate 50 mg finely with about 25 mg of *tartaric acid R* and dissolve with shaking in 10 mL of *water R.*

**pH** (*2.2.3*): 4.0 to 5.5 for the suspension.

Shake 25 mg, finely powdered, with 10 mL of *carbon dioxide-free water R.*

**Related substances**. Liquid chromatography (*2.2.29*): use the normalisation procedure. *Prepare the solutions immediately before use.*

*Solvent mixture*: *water R*, *acetonitrile R* (10:90 *V/V*).

*Solution A*. Dissolve 1.0 g of *potassium dihydrogen phosphate R* and 2.0 g of *sodium 1-propanesulfonate R* in 900 mL of *water R*, adjust to pH 4.3 with *dilute phosphoric acid R* and dilute to 1000 mL with *water R.*

*Test solution.* Dissolve 30 mg of the substance to be examined in the solvent mixture and dilute to 50.0 mL with the solvent mixture.

*Reference solution.* Dissolve 3 mg of *ergotamine for system suitability CRS* (containing impurities A and C) in the solvent mixture and dilute to 5.0 mL with the solvent mixture. In order to prepare impurity B *in situ*, maintain the solution at room temperature for 1 h.

*Column*:

– *size*: *l* = 0.05 m, Ø = 4.6 mm;
– *stationary phase*: *octadecylsilyl silica gel for chromatography R* (1.8 µm);
– *temperature*: 15 °C.

*Mobile phase*:

– *mobile phase A*: *acetonitrile R*, solution A (10:90 *V/V*);

– *mobile phase B*: solution A, *acetonitrile R* (20:80 *V/V*);

| Time (min) | Mobile phase A (per cent *V/V*) | Mobile phase B (per cent *V/V*) |
|---|---|---|
| 0 - 7 | 80 → 50 | 20 → 50 |

*Flow rate*: 1.5 mL/min.

*Detection*: spectrophotometer at 240 nm.

*Autosampler*: set at 4 °C.

*Injection*: 1 µL.

*Identification of impurities*: use the chromatogram supplied with *ergotamine for system suitability CRS* and the chromatogram obtained with the reference solution to identify the peaks due to impurities A, B and C.

*Relative retention* with reference to ergotamine (retention time = about 3 min): impurity A = about 0.9; impurity B = about 1.1; impurity C = about 1.2.

*System suitability*: reference solution:

– *resolution*: minimum 1.5 between the peaks due to impurity A and ergotamine.

*Limits*:

– *correction factor*: for the calculation of content, multiply the peak area of impurity C by 1.3;
– *impurity C*: maximum 0.4 per cent;
– *impurities A, B*: for each impurity, maximum 0.2 per cent;
– *unspecified impurities*: for each impurity, maximum 0.10 per cent;
– *total*: maximum 0.6 per cent;
– *reporting threshold*: 0.05 per cent.

**Loss on drying** (*2.2.32*): maximum 6.0 per cent, determined on 0.100 g by drying *in vacuo* at 95 °C for 6 h.

ASSAY

Dissolve 0.200 g in 40 mL of *anhydrous acetic acid R*. Titrate with *0.05 M perchloric acid*, determining the end-point potentiometrically (*2.2.20*).

1 mL of *0.05 M perchloric acid* is equivalent to 32.84 mg of $C_{70}H_{76}N_{10}O_{16}$.

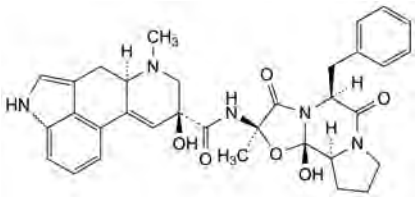
STORAGE

In an airtight container, protected from light, at a temperature of 2 °C to 8 °C.

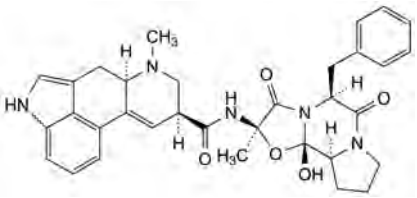
IMPURITIES

*Specified impurities: A, B, C.*

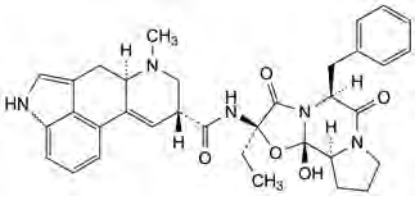
*Other detectable impurities* (the following substances would, if present at a sufficient level, be detected by one or other of the tests in the monograph. They are limited by the general acceptance criterion for other/unspecified impurities and/or by the general monograph *Substances for pharmaceutical use (2034)*. It is therefore not necessary to identify these impurities for demonstration of compliance. See also *5.10. Control of impurities in substances for pharmaceutical use*): *D.*



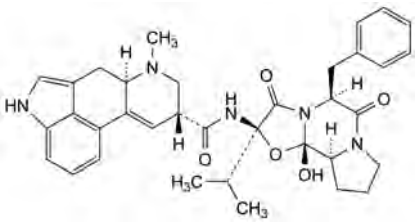
A. (6a*R*,9*S*)-*N*-[(2*R*,5*S*,10a*S*,10b*S*)-5-benzyl-10b-hydroxy-2-methyl-3,6-dioxooctahydro-8*H*-[1,3]oxazolo[3,2-*a*]pyrrolo[2,1-*c*]pyrazin-2-yl]-9-hydroxy-7-methyl-4,6,6a,7,8,9-hexahydroindolo[4,3-*fg*]quinoline-9-carboxamide (8-hydroxyergotamine),



B. (6a*R*,9*S*)-*N*-[(2*R*,5*S*,10a*S*,10b*S*)-5-benzyl-10b-hydroxy-2-methyl-3,6-dioxooctahydro-8*H*-[1,3]oxazolo[3,2-*a*]pyrrolo[2,1-*c*]pyrazin-2-yl]-7-methyl-4,6,6a,7,8,9-hexahydroindolo[4,3-*fg*]quinoline-9-carboxamide (ergotaminine),



C. (6a*R*,9*R*)-*N*-[(2*R*,5*S*,10a*S*,10b*S*)-5-benzyl-2-ethyl-10b-hydroxy-3,6-dioxooctahydro-8*H*-[1,3]oxazolo[3,2-*a*]pyrrolo[2,1-*c*]pyrazin-2-yl]-7-methyl-4,6,6a,7,8,9-hexahydroindolo[4,3-*fg*]quinoline-9-carboxamide (ergostine),

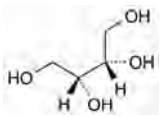


D. (6a*R*,9*R*)-*N*-[(2*R*,5*S*,10a*S*,10b*S*)-5-benzyl-10b-hydroxy-3,6-dioxo-2-(propan-2-yl)octahydro-8*H*-[1,3]oxazolo[3,2-*a*]pyrrolo[2,1-*c*]pyrazin-2-yl]-7-methyl-4,6,6a,7,8,9-hexahydroindolo[4,3-*fg*]quinoline-9-carboxamide (ergocristine).

**07/2019:1803**

# ERYTHRITOL

## Erythritolum



$C_4H_{10}O_4$ $M_r$ 122.1
[149-32-6]

DEFINITION

(2*R*,3*S*)-Butane-1,2,3,4-tetrol (*meso*-erythritol).

*Content*: 96.0 per cent to 102.0 per cent (anhydrous substance).

CHARACTERS

*Appearance*: white or almost white, crystalline powder or free-flowing granules.

*Solubility*: freely soluble in water, very slightly soluble in ethanol (96 per cent).

IDENTIFICATION

A. Melting point (*2.2.14*): 119 °C to 122 °C.

B. Infrared absorption spectrophotometry (*2.2.24*).
*Comparison*: *erythritol CRS*.

TESTS

**Appearance of solution**. The solution is clear (*2.2.1*) and colourless (*2.2.2, Method II*).

Dissolve 5.0 g in *water R* and dilute to 50 mL with the same solvent.

**Conductivity** (*2.2.38*): maximum 20 µS·cm$^{-1}$.

Dissolve 20.0 g in *carbon dioxide-free water R* prepared from *distilled water R* and dilute to 100.0 mL with the same solvent. Measure the conductivity of the solution, while gently stirring with a magnetic stirrer.

**Related substances**. Liquid chromatography (*2.2.29*).

*Test solution*. Dissolve 0.50 g of the substance to be examined in *water R* and dilute to 10.0 mL with the same solvent.

*Reference solution (a)*. Dissolve 0.50 g of *erythritol CRS* in *water R* and dilute to 10.0 mL with the same solvent.

*Reference solution (b)*. Dilute 2.0 mL of the test solution to 100.0 mL with *water R*.

*Reference solution (c)*. Dilute 5.0 mL of reference solution (b) to 100.0 mL with *water R*.

*Reference solution (d)*. Dissolve 1.0 g of *erythritol R* and 1.0 g of *glycerol R* in *water R* and dilute to 20 mL with the same solvent.

*Column*:

– *size*: *l* = 0.3 m, Ø = 8.0 mm;

– *stationary phase*: *cation-exchange resin R* (9 µm);

– *temperature*: 70 °C.

*Mobile phase*: 0.01 per cent *V/V* solution of *sulfuric acid R*.

*Flow rate*: 0.8 mL/min.

*Detection*: differential refractometer maintained at a constant temperature (e.g. 35 °C).

*Injection*: 20 µL of the test solution and reference solutions (b), (c) and (d).

*Run time*: 3 times the retention time of erythritol.

*Relative retention* with reference to erythritol (retention time = about 11 min): impurity A = about 0.77; impurity B = about 0.90; impurity C = about 0.94; impurity D = about 1.10.

*System suitability*: reference solution (d):

– *resolution*: minimum 2.0 between the peaks due to erythritol and impurity D.

*Limits*:

– *any impurity*: not more than the area of the principal peak in the chromatogram obtained with reference solution (b) (2.0 per cent);

– *total*: not more than the area of the principal peak in the chromatogram obtained with reference solution (b) (2.0 per cent);

– *disregard limit*: area of the principal peak in the chromatogram obtained with reference solution (c) (0.1 per cent).

**Water** (*2.5.12*): maximum 0.5 per cent, determined on 1.00 g.

**Microbial contamination**

If intended for use in the manufacture of parenteral preparations:

– TAMC: acceptance criterion $10^2$ CFU/g (*2.6.12*).

If not intended for use in the manufacture of parenteral preparations:

– TAMC: acceptance criterion $10^3$ CFU/g (*2.6.12*);

– TYMC: acceptance criterion $10^2$ CFU/g (*2.6.12*);

– absence of *Escherichia coli* (*2.6.13*);

– absence of *Salmonella* (*2.6.13*).

**Bacterial endotoxins** (*2.6.14*). If intended for use in the manufacture of parenteral preparations without a further appropriate procedure for the removal of bacterial endotoxins:

– less than 4 IU/g for parenteral preparations having a concentration of 100 g/L or less of erythritol;

– less than 2.5 IU/g for parenteral preparations having a concentration of more than 100 g/L of erythritol.

ASSAY

Liquid chromatography (*2.2.29*) as described in the test for related substances with the following modification.

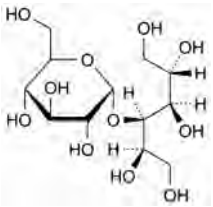
*Injection*: test solution and reference solution (a).

Calculate the percentage content of $C_4H_{10}O_4$ taking into account the assigned content of *erythritol CRS*.

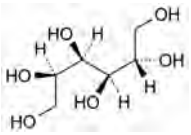
LABELLING

The label states where applicable, that the substance is suitable for use in the manufacture of parenteral preparations.

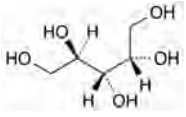
IMPURITIES



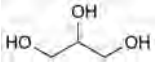
A. 4-*O*-α-D-glucopyranosyl-D-glucitol (D-maltitol),



B. D-glucitol (D-sorbitol),



C. (2*R*,3*s*,4*S*)-pentane-1,2,3,4,5-pentol (*meso*-ribitol),

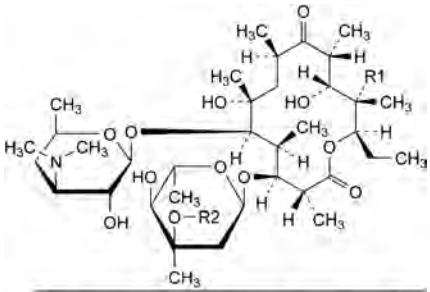


D. propane-1,2,3-triol (glycerol).

01/2017:0179

# ERYTHROMYCIN

## Erythromycinum



| Erythromycin | Mol. Formula | $M_r$ | R1 | R2 |
|---|---|---|---|---|
| A | $C_{37}H_{67}NO_{13}$ | 734 | OH | $CH_3$ |
| B | $C_{37}H_{67}NO_{12}$ | 718 | H | $CH_3$ |
| C | $C_{36}H_{65}NO_{13}$ | 720 | OH | H |

### DEFINITION

Mixture of macrolide antibiotics produced by a strain of *Streptomyces erythreus*.

*Main component*: (3*R*,4*S*,5*S*,6*R*,7*R*,9*R*,11*R*,12*R*,13*S*,14*R*)-4-[(2,6-dideoxy-3-*C*-methyl-3-*O*-methyl-α-L-*ribo*-hexopyranosyl)oxy]-14-ethyl-7,12,13-trihydroxy-3,5,7,9,11,13-hexamethyl-6-[[3,4,6-trideoxy-3-(dimethylamino)-β-D-*xylo*-hexopyranosyl]oxy]oxacyclotetradecane-2,10-dione (erythromycin A).

*Content*:

- *sum of erythromycins A, B and C*: 93.0 per cent to 102.0 per cent (anhydrous substance);
- *erythromycin B*: maximum 5.0 per cent (anhydrous substance);
- *erythromycin C*: maximum 5.0 per cent (anhydrous substance).

### CHARACTERS

*Appearance*: white or slightly yellow powder or colourless or slightly yellow crystals, slightly hygroscopic.

*Solubility*: slightly soluble in water (the solubility decreases as the temperature rises), freely soluble in ethanol (96 per cent), soluble in methanol.

It shows polymorphism (*5.9*).

### IDENTIFICATION

*First identification: A.*

*Second identification: B.*

A. Infrared absorption spectrophotometry (*2.2.24*).

*Comparison*: *erythromycin A CRS*.

Disregard any band in the region from 1980 $cm^{-1}$ to 2050 $cm^{-1}$.

If the spectra obtained show differences, dissolve 50 mg of the substance to be examined and of the reference substance separately in 1.0 mL of *methylene chloride R*, dry at 60 °C for 3 h at a pressure not exceeding 0.67 kPa and record new spectra using the residues.

B. Thin-layer chromatography (*2.2.27*).

*Test solution*. Dissolve 10 mg of the substance to be examined in *methanol R* and dilute to 10 mL with the same solvent.

*Reference solution (a)*. Dissolve 10 mg of *erythromycin A CRS* in *methanol R* and dilute to 10 mL with the same solvent.

*Reference solution (b)*. Dissolve 20 mg of *spiramycin CRS* in *methanol R* and dilute to 10 mL with the same solvent.

*Plate*: *TLC silica gel plate R*.

*Mobile phase*: mix 4 volumes of *2-propanol R*, 8 volumes of a 150 g/L solution of *ammonium acetate R* previously adjusted to pH 9.6 with *ammonia R*, and 9 volumes of *ethyl acetate R*; allow to settle and use the upper layer.

*Application*: 10 µL.

*Development*: over 2/3 of the plate.

*Drying*: in air.

*Detection*: spray with *anisaldehyde solution R1* and heat at 110 °C for 5 min.

*Results*: the principal spot in the chromatogram obtained with the test solution is similar in position, colour and size to the principal spot in the chromatogram obtained with reference solution (a), and its position and colour are different from those of the spots in the chromatogram obtained with reference solution (b).

### TESTS

**Related substances**. Liquid chromatography (*2.2.29*). *Prepare the solutions immediately before use.*

*Solution A*. Dissolve 11.5 g of *dipotassium hydrogen phosphate R* in 900 mL of *water R*, adjust to pH 8.0 with *dilute phosphoric acid R* and dilute to 1000 mL with *water R*.

*Solvent mixture*: *methanol R*, solution A (40:60 *V/V*).

*Test solution*. Dissolve 40.0 mg of the substance to be examined in the solvent mixture and dilute to 10.0 mL with the solvent mixture.

*Reference solution (a)*. Dissolve 40.0 mg of *erythromycin A CRS* in the solvent mixture and dilute to 10.0 mL with the solvent mixture.

*Reference solution (b)*. Dissolve 10.0 mg of *erythromycin B CRS* and 10.0 mg of *erythromycin C CRS* in the solvent mixture and dilute to 50.0 mL with the solvent mixture.

*Reference solution (c)*. Dilute 1.0 mL of reference solution (a) to 100.0 mL with the solvent mixture.

*Reference solution (d)*. Dissolve 4 mg of *erythromycin for system suitability CRS* (containing impurities A, B, C, D, E, F, H and L) in the solvent mixture and dilute to 1.0 mL with the solvent mixture.

*Reference solution (e)*. Dissolve 4 mg of *erythromycin for impurity M identification CRS* in the solvent mixture and dilute to 1.0 mL with the solvent mixture.

*Column*:

- *size*: *l* = 0.25 m, Ø = 4.6 mm;
- *stationary phase*: *end-capped polar-embedded octadecylsilyl amorphous organosilica polymer R* (3.5 µm);
- *temperature*: 65 °C; preheating the mobile phase may be required, for instance by extending the inlet tubing in the oven to 30 cm.

*Mobile phase*:

- *mobile phase A*: *phosphate buffer solution pH 7.0 R7*, *acetonitrile R1*, *water R* (5:35:60 *V/V/V*);
- *mobile phase B*: *phosphate buffer solution pH 7.0 R7*, *water R*, *acetonitrile R1* (5:45:50 *V/V/V*);

| Time (min) | Mobile phase A (per cent *V/V*) | Mobile phase B (per cent *V/V*) |
|---|---|---|
| 0 - $t_R$ | 100 | 0 |
| $t_R$ - ($t_R$ + 2) | 100 → 0 | 0 → 100 |
| ($t_R$ + 2) - ($t_R$ + 15) | 0 | 100 |

$t_R$ = retention time of erythromycin B, determined by injecting 10 µL of reference solution (b) and eluting with mobile phase A

*Flow rate*: 1.0 mL/min.

*Detection*: spectrophotometer at 210 nm.

*Autosampler*: set at 4 °C.

*Injection*: 100 µL.

*Identification of impurities*: use the chromatogram supplied with *erythromycin for system suitability CRS* and the chromatogram obtained with reference solution (d) to identify the peaks due to impurities A, B, C, D, E, F, H and L; use the chromatogram supplied with *erythromycin for impurity M identification CRS* and the chromatogram obtained with reference solution (e) to identify the peak due to impurity M; use the chromatogram obtained with reference solution (b) to identify the peaks due to erythromycins B and C.

*Relative retention* with reference to erythromycin A (retention time = about 23 min): impurity H = about 0.3; impurity A = about 0.4; impurity B = about 0.5; erythromycin C = about 0.55; impurity M = about 0.58; impurity L = about 0.63; impurity C = about 0.9; impurity D = about 1.61; erythromycin B = about 1.75; impurity F = about 1.81; impurity E = about 2.3.

*System suitability*: reference solution (d):

- *resolution*: minimum 1.2 between the peaks due to impurity B and erythromycin C;
- *peak-to-valley ratio*: minimum 1.5, where $H_p$ = height above the baseline of the peak due to impurity F and $H_v$ = height above the baseline of the lowest point of the curve separating this peak from the peak due to erythromycin B; minimum 2.0, where $H_p$ = height above the baseline of the peak due to impurity C and $H_v$ = height above the baseline of the lowest point of the curve separating this peak from the peak due to erythromycin A. If necessary, adjust the concentration of *acetonitrile R1* in the mobile phases and/or the gradient to obtain the required separation.

*Calculation of percentage contents*:

- *correction factors*: multiply the peak areas of the following impurities by the corresponding correction factor: impurity D = 2; impurity E = 0.08; impurity F = 0.08; impurity L = 0.11;
- for each impurity, use the concentration of erythromycin A in reference solution (c).

*Limits*:

- *impurity C*: maximum 3.0 per cent;
- *impurities A, B*: for each impurity, maximum 2.0 per cent;
- *impurities D, E, F, H, M*: for each impurity, maximum 1.0 per cent;
- *impurity L*: maximum 0.4 per cent;
- *any other impurity*: for each impurity, maximum 0.4 per cent;
- *total*: maximum 7.0 per cent;
- *reporting threshold*: 0.2 per cent; disregard the peaks due to erythromycins B and C.

**Thiocyanate**: maximum 0.3 per cent.

*Prepare the solutions immediately before use and protect from actinic light.*

*Compensation liquid.* Dilute 1.0 mL of a 90 g/L solution of *ferric chloride R* to 50.0 mL with *methanol R*.

*Test solution.* Dissolve 0.100 g of the substance to be examined in 20 mL of *methanol R*, add 1.0 mL of a 90 g/L solution of *ferric chloride R* and dilute to 50.0 mL with *methanol R*.

*Prepare 2 independent reference solutions.*

*Reference solution.* Dissolve 0.100 g of *potassium thiocyanate R*, previously dried at 105 °C for 1 h, in *methanol R* and dilute to 50.0 mL with the same solvent. Dilute 5.0 mL of the solution to 50.0 mL with *methanol R*. To 5.0 mL of this solution, add 1.0 mL of a 90 g/L solution of *ferric chloride R* and dilute to 50.0 mL with *methanol R*.

Measure the absorbance (*2.2.25*) of each reference solution ($A_1$, $A_2$) and of the test solution ($A$) at the absorption maximum (about 492 nm).

*Suitability value*:

$$S = \frac{m_2 \times A_1}{m_1 \times A_2}$$

$m_1$, $m_2$ = mass of potassium thiocyanate used to prepare reference solutions $A_1$ and $A_2$ respectively, in grams.

The test is not valid unless $S$ is not less than 0.985 and not greater than 1.015.

Calculate the percentage content of thiocyanate using the following expression:

$$\frac{A \times 58.08 \times 0.5}{m \times 97.18} \times \left( \frac{m_1}{A_1} + \frac{m_2}{A_2} \right)$$

$m$ = mass of the substance to be examined used to prepare the test solution, in grams;

58.08 = relative molecular mass of the thiocyanate moiety;

97.18 = relative molecular mass of potassium thiocyanate.

**Water** (*2.5.12*): maximum 6.5 per cent, determined on 0.200 g.

Use a 100 g/L solution of *imidazole R* in *anhydrous methanol R* as the solvent.

**Sulfated ash** (*2.4.14*): maximum 0.2 per cent, determined on 1.0 g.

ASSAY

Liquid chromatography (*2.2.29*) as described in the test for related substances with the following modifications.

*Injection*: test solution and reference solutions (a) and (b).

*System suitability*: reference solution (a):

- *symmetry factor*: maximum 2.0 for the peak due to erythromycin A;
- *repeatability*: maximum relative standard deviation of 1.0 per cent determined on 6 injections.

Calculate the percentage content of erythromycin A ($C_{37}H_{67}NO_{13}$) using the chromatogram obtained with reference solution (a). Calculate the percentage contents of erythromycin B ($C_{37}H_{67}NO_{12}$) and erythromycin C ($C_{36}H_{65}NO_{13}$) using the chromatogram obtained with reference solution (b).

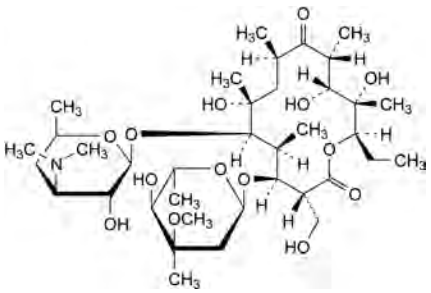
STORAGE

In an airtight container, protected from light.

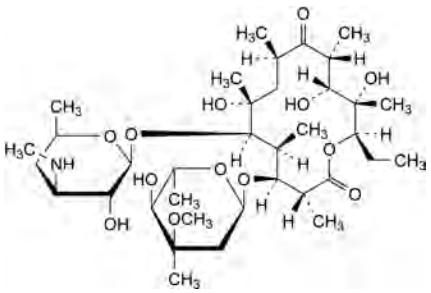
IMPURITIES

*Specified impurities: A, B, C, D, E, F, H, L, M.*

*Other detectable impurities* (the following substances would, if present at a sufficient level, be detected by one or other of the tests in the monograph. They are limited by the general acceptance criterion for other/unspecified impurities. It is therefore not necessary to identify these impurities for demonstration of compliance. See also *5.10. Control of impurities in substances for pharmaceutical use*): *I, J, K, N.*



A. (3*R*,4*S*,5*S*,6*R*,7*R*,9*R*,11*R*,12*R*,13*S*,14*R*)-4-[(2,6-dideoxy-3-*C*-methyl-3-*O*-methyl-α-L-*ribo*-hexopyranosyl)oxy]-14-ethyl-7,12,13-trihydroxy-3-(hydroxymethyl)-5,7,9,11,13-pentamethyl-6-[[3,4,6-trideoxy-3-(dimethylamino)-β-D-*xylo*-hexopyranosyl]oxy]oxacyclotetradecane-2,10-dione (erythromycin F),



B. (3*R*,4*S*,5*S*,6*R*,7*R*,9*R*,11*R*,12*R*,13*S*,14*R*)-4-[(2,6-dideoxy-3-*C*-methyl-3-*O*-methyl-α-L-*ribo*-hexopyranosyl)oxy]-14-ethyl-7,12,13-trihydroxy-3,5,7,9,11,13-hexamethyl-6-[[3,4,6-trideoxy-3-(methylamino)-β-D-*xylo*-hexopyranosyl]oxy]oxacyclotetradecane-2,10-dione (3″-*N*-demethylerythromycin A),

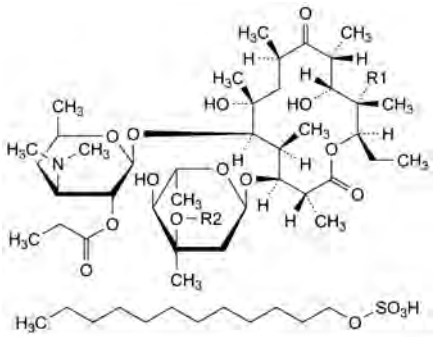
C. N. (3*R*,4*S*,5*S*,6*R*,7*R*,9*R*,11*R*,12*S*,13*R*,14*R*)-14-ethyl-4,6,7,12-tetrahydroxy-3,5,7,9,11,13-hexamethyloxacyclotetradecane-2,10-dione (erythronolide B).

**01/2017:0552**

# ERYTHROMYCIN ESTOLATE

## Erythromycini estolas



| Erythromycin (estolate) | Mol. Formula | $M_r$ | R1 | R2 |
|---|---|---|---|---|
| A | $C_{52}H_{97}NO_{18}S$ | 1056 | OH | $CH_3$ |
| B | $C_{52}H_{97}NO_{17}S$ | 1040 | H | $CH_3$ |
| C | $C_{51}H_{95}NO_{18}S$ | 1042 | OH | H |

DEFINITION

Mixture of the estolate esters of erythromycin.

*Main component*: (3*R*,4*S*,5*S*,6*R*,7*R*,9*R*,11*R*,12*R*,13*S*,14*R*)-4-[(2,6-dideoxy-3-*C*-methyl-3-*O*-methyl-α-L-*ribo*-hexopyranosyl)oxy]-14-ethyl-7,12,13-trihydroxy-3,5,7,9,11,13-hexamethyl-6-[[3,4,6-trideoxy-3-(dimethylamino)-2-*O*-propanyl-β-D-*xylo*-hexopyranosyl]oxy]oxacyclotetradecane-2,10-dione dodecyl sulfate (erythromycin A 2″-propionate dodecyl sulfate).

Semi-synthetic product derived from a fermentation product obtained using a strain of *Streptomycines erythreus*.

*Content*:

– *sum of erythromycins A, B and C expressed as estolates*: 93.0 per cent to 102.0 per cent (anhydrous substance);
– *erythromycin B estolate*: maximum 5.0 per cent (anhydrous substance);
– *erythromycin C estolate*: maximum 5.0 per cent (anhydrous substance).

CHARACTERS

*Appearance*: white or almost white, crystalline powder.

*Solubility*: practically insoluble in water, freely soluble in ethanol (96 per cent), soluble in acetone. It is practically insoluble in dilute hydrochloric acid.

IDENTIFICATION

Infrared absorption spectrophotometry (*2.2.24*).

*Comparison*: *erythromycin estolate CRS*.

TESTS

**Related substances**. Liquid chromatography (*2.2.29*). *Prepare the solutions immediately before use (apart from the test solution).*

*Solution A* (hydrolysis solution). Dissolve 11.5 g of *dipotassium hydrogen phosphate R* in 900 mL of *water R*, adjust to pH 8.0 with *dilute phosphoric acid R* and dilute to 1000 mL with *water R*.

*Test solution.* Dissolve 0.150 g of the substance to be examined in 25 mL of *methanol R*. Add 20 mL of solution A, mix and allow to stand at room temperature for at least 12 h. Dilute to 50.0 mL with solution A.

*Reference solution (a).* Dissolve 40.0 mg of *erythromycin A CRS* in 12.0 mL of *methanol R* and dilute to 20.0 mL with solution A.

*Reference solution (b).* Dissolve 10.0 mg of *erythromycin B CRS* and 10.0 mg of *erythromycin C CRS* in 40.0 mL of *methanol R* and dilute to 100.0 mL with solution A.

*Reference solution (c).* Dilute 1.0 mL of reference solution (a) to 100.0 mL with a mixture of 4 volumes of solution A and 6 volumes of *methanol R*.

*Reference solution (d).* Dissolve 4 mg of *erythromycin for system suitability CRS* (containing impurities A, B, C, D, E, F, H and L) in 0.4 mL of *methanol R* and add 0.6 mL of solution A.

*Column*:

- *size*: *l* = 0.25 m, Ø = 4.6 mm;
- *stationary phase*: *end-capped polar-embedded octadecylsilyl amorphous organosilica polymer R* (3.5 µm);
- *temperature*: 65 °C; preheating the mobile phase may be required, for instance by extending the inlet tubing in the oven to 30 cm.

*Mobile phase*:

- *mobile phase A*: *phosphate buffer solution pH 7.0 R7*, *acetonitrile R1*, *water R* (5:35:60 *V/V/V*);
- *mobile phase B*: *phosphate buffer solution ph 7.0 R7*, *water R*, *acetonitrile R1* (5:45:50 *V/V/V*);

| Time (min) | Mobile phase A (per cent *V/V*) | Mobile phase B (per cent *V/V*) |
|---|---|---|
| 0 - $t_R$ | 100 | 0 |
| $t_R$ - ($t_R$ + 2) | 100 → 0 | 0 → 100 |
| ($t_R$ + 2) - ($t_R$ + 15) | 0 | 100 |

$t_R$ = retention time of erythromycin B, determined by injecting 20 µL of reference solution (b) and eluting with mobile phase A

*Flow rate*: 1.0 mL/min.

*Detection*: spectrophotometer at 210 nm.

*Autosampler*: set at 4 °C.

*Injection*: 200 µL.

*Identification of impurities*: use the chromatogram supplied with *erythromycin for system suitability CRS* and the chromatogram obtained with reference solution (d) to identify the peaks due to impurities A, B, C, D, E, F and L; use the chromatogram obtained with reference solution (b) to identify the peaks due to erythromycins B and C.

*Relative retention* with reference to erythromycin A (retention time = about 23 min): impurity A = about 0.4; impurity B = about 0.5; erythromycin C = about 0.55; impurity L = about 0.63; impurity C = about 0.9; impurity D = about 1.61; erythromycin B = about 1.75; impurity F = about 1.81; impurity E = about 2.3.

*System suitability*: reference solution (d):

- *resolution*: minimum 1.2 between the peaks due to impurity B and erythromycin C;
- *peak-to-valley ratio*: minimum 1.5, where $H_p$ = height above the baseline of the peak due to impurity F and $H_v$ = height above the baseline of the lowest point of the curve separating this peak from the peak due to erythromycin B; minimum 2.0, where $H_p$ = height above the baseline of the peak due to impurity C and $H_v$ = height above the baseline of the lowest point of the curve separating this peak from the peak due to erythromycin A. If necessary, adjust the concentration of *acetonitrile R1* in the mobile phases and/or the gradient to obtain the required separation.

*Calculation of percentage contents*:

- *correction factors*: multiply the peak areas of the following impurities by the corresponding correction factor: impurity D = 2; impurity E = 0.08; impurity F = 0.08; impurity L = 0.11;
- for each impurity, use the concentration of erythromycin A in reference solution (c).

*Limits*:

- *impurity C*: maximum 3.0 per cent;
- *impurities A, B*: for each impurity, maximum 2.0 per cent;
- *impurities D, F*: for each impurity, maximum 1.0 per cent;
- *impurities eluting with relative retention between 2.1 and 2.4*: not more than 4 impurities; for 1 impurity, maximum 3.5 per cent; for each other impurity, maximum 1.0 per cent;
- *impurity L*: maximum 0.4 per cent;
- *any other impurity*: for each impurity, maximum 0.4 per cent;
- *total*: maximum 7.0 per cent;
- *reporting threshold*: 0.2 per cent; disregard the peaks due to erythromycins B and C and any peak with a relative retention to erythromycin A of less than 0.3 (hydrolysis peaks).

**Free erythromycin**. Liquid chromatography (*2.2.29*). *Prepare the solutions immediately before use.*

*Test solution.* Dissolve 0.250 g of the substance to be examined in the mobile phase and dilute to 50.0 mL with the mobile phase.

*Reference solution.* Dissolve 75.0 mg of *erythromycin A CRS* in the mobile phase and dilute to 50.0 mL with the mobile phase. Dilute 5.0 mL of the solution to 25.0 mL with *acetonitrile R1*.

*Column*:

- *size*: *l* = 0.25 m, Ø = 4.6 mm;
- *stationary phase*: *octylsilyl silica gel for chromatography R* (5 µm);
- *temperature*: 30 °C.

*Mobile phase*: mix 35 volumes of *acetonitrile R1* and 65 volumes of a solution containing 3.4 g/L of *potassium dihydrogen phosphate R* and 2.0 g/L of *triethylamine R*, previously adjusted to pH 3.0 with *dilute phosphoric acid R*.

*Flow rate*: 1 mL/min.

*Detection*: spectrophotometer at 195 nm.

*Injection*: 20 µL.

*Run time*: twice the retention time of erythromycin A for the reference solution and 4.5 times the retention time of the 1st peak of erythromycin propionate for the test solution.

*Retention time*: erythromycin A = about 5 min; 1st peak of erythromycin propionate = about 10 min.

*Limit*:

- *free erythromycin*: not more than the area of the principal peak in the chromatogram obtained with the reference solution (6.0 per cent).

**Dodecyl sulfate**: 23.0 per cent to 25.5 per cent of $C_{12}H_{26}O_4S$ (anhydrous substance).

Dissolve 0.500 g in 25 mL of *dimethylformamide R*. Titrate with *0.1 M sodium methoxide* using 0.05 mL of a 3 g/L solution of *thymol blue R* in *methanol R* as indicator.

1 mL of *0.1 M sodium methoxide* is equivalent to 26.64 mg of $C_{12}H_{26}O_4S$.

**Water** (*2.5.12*): maximum 4.0 per cent, determined on 0.300 g.

Use a 100 g/L solution of *imidazole R* in *anhydrous methanol R* as the solvent.

**Sulfated ash** (*2.4.14*): maximum 0.5 per cent, determined on 0.5 g.

ASSAY

Liquid chromatography (*2.2.29*) as described in the test for related substances with the following modifications.

*Injection*: test solution and reference solutions (a) and (b).

*System suitability*: reference solution (a):

– *symmetry factor*: maximum 2.0 for the peak due to erythromycin A;

– *repeatability*: maximum relative standard deviation of 1.0 per cent determined on 6 injections.

Calculate the percentage content of erythromycin A ($C_{37}H_{67}NO_{13}$) using the chromatogram obtained with reference solution (a). Calculate the percentage contents of erythromycin B ($C_{37}H_{67}NO_{12}$) and erythromycin C ($C_{36}H_{65}NO_{13}$) using the chromatogram obtained with reference solution (b). Express the result as erythromycin A estolate, erythromycin B estolate and erythromycin C estolate by multiplying the percentage content of erythromycin A by 1.4387, the percentage content of erythromycin B by 1.4485 and the percentage content of erythromycin C by 1.4472.

For the calculation of content of erythromycin estolate, use the sum of erythromycins A, B and C expressed as estolates as described above.

STORAGE

Protected from light.

IMPURITIES

*Specified impurities: A, B, C, D, E, F, L.*

*Other detectable impurities* (the following substances would, if present at a sufficient level, be detected by one or other of the tests in the monograph. # ERYTHROMYCIN ETHYLSUCCINATE

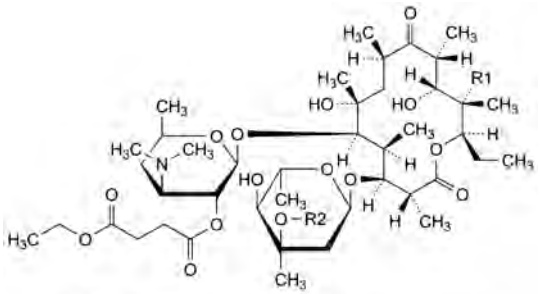
## Erythromycini ethylsuccinas



| Erythromycin (ethylsuccinate) | Mol. Formula | *M*r | R1 | R2 |
|---|---|---|---|---|
| A | $C_{43}H_{75}NO_{16}$ | 862 | OH | $CH_3$ |
| B | $C_{43}H_{75}NO_{15}$ | 846 | H | $CH_3$ |
| C | $C_{42}H_{73}NO_{16}$ | 848 | OH | H |

### DEFINITION

Mixture of the ethylsuccinate esters of erythromycin.

*Main component*: (3*R*,4*S*,5*S*,6*R*,7*R*,9*R*,11*R*,12*R*,13*S*,14*R*)-4-[(2,6-dideoxy-3-*C*-methyl-3-*O*-methyl-α-L-*ribo*-hexopyranosyl)oxy]-14-ethyl-7,12,13-trihydroxy-3,5,7,9,11,13-hexamethyl-6-[[3,4,6-trideoxy-3-(dimethylamino)-2-*O*-(4-ethoxy-4-oxobutanoyl)-β-D-*xylo*-hexopyranosyl]oxy]oxacyclotetradecane-2,10-dione (erythromycin A 2″-(ethyl succinate)).

Semi-synthetic product derived from a fermentation product obtained using a strain of *Streptomyces erythreus*.

*Content*:

- *sum of erythromycins A, B and C expressed as ethylsuccinates*: 93.0 per cent to 102.0 per cent (anhydrous substance);
- *erythromycin B ethylsuccinate*: maximum 5.0 per cent (anhydrous substance);
- *erythromycin C ethylsuccinate*: maximum 5.0 per cent (anhydrous substance).

### CHARACTERS

*Appearance*: white or almost white, crystalline powder, hygroscopic.

*Solubility*: practically insoluble in water, freely soluble in acetone, in anhydrous ethanol and in methanol.

### IDENTIFICATION

Infrared absorption spectrophotometry (*2.2.24*).

*Comparison*: *erythromycin ethylsuccinate CRS*.

### TESTS

**Related substances**. Liquid chromatography (*2.2.29*).

*Hydrolysis solution*. A 20 g/L solution of *dipotassium hydrogen phosphate R* adjusted to pH 8.0 with *phosphoric acid R*.

*Test solution*. Dissolve 0.115 g of the substance to be examined in 25 mL of *methanol R*. Add 20 mL of the hydrolysis solution, mix and allow to stand at room temperature for at least 12 h. Dilute to 50.0 mL with the hydrolysis solution.

*Reference solution (a)*. Dissolve 40.0 mg of *erythromycin A CRS* in 10 mL of *methanol R* and dilute to 20.0 mL with the hydrolysis solution.

*Reference solution (b)*. Dissolve 10.0 mg of *erythromycin B CRS* and 10.0 mg of *erythromycin C CRS* in 50 mL of *methanol R*. Add 5.0 mL of reference solution (a) and dilute to 100.0 mL with the hydrolysis solution.

*Reference solution (c)*. Dissolve 2 mg of *N-demethylerythromycin A CRS* in 20 mL of reference solution (b).

*Reference solution (d)*. Dilute 3.0 mL of reference solution (a) to 100.0 mL with a mixture of equal volumes of *methanol R* and the hydrolysis solution.

*Reference solution (e)*. Dissolve 40 mg of *erythromycin A CRS*, previously heated at 130 °C for 3 h, in 10 mL of *methanol R* and dilute to 20 mL with the hydrolysis solution.

*Column*:

- *size*: *l* = 0.25 m, Ø = 4.6 mm;
- *stationary phase*: *styrene-divinylbenzene copolymer R* (8 µm) with a pore size of 100 nm;
- *temperature*: 70 °C using a water-bath for the column and at least one-third of the tubing preceding the column.

*Mobile phase*: to 50 mL of a 35 g/L solution of *dipotassium hydrogen phosphate R* adjusted to pH 8.0 with *dilute phosphoric acid R*, add 400 mL of *water for chromatography R*, 165 mL of *2-methyl-2-propanol R* and 30 mL of *acetonitrile R1*, and dilute to 1000 mL with *water for chromatography R*.

*Flow rate*: 2.0 mL/min.

*Detection*: spectrophotometer at 215 nm.

*Injection*: 200 µL of the test solution and reference solutions (a), (c), (d) and (e).

*Run time*: 5 times the retention time of erythromycin A; begin integration after the hydrolysis peak.

*Relative retention* with reference to erythromycin A (retention time = about 15 min): hydrolysis peak = less than 0.3; impurity B = about 0.45; erythromycin C = about 0.5; impurity C = about 0.9; impurity G = about 1.3; impurity D = about 1.4; impurity F = about 1.5; erythromycin B = about 1.8; impurity E = about 4.3.

*System suitability*: reference solution (c):

- *resolution*: minimum 0.8 between the peaks due to impurity B and erythromycin C and minimum 5.5 between the peaks due to impurity B and erythromycin A.

*Limits*:

- *correction factors*: for the calculation of contents, multiply the peak areas of the following impurities by the corresponding correction factor: impurity E = 0.09; impurity F = 0.15; impurity G = 0.14; use the chromatogram obtained with reference solution (e) to identify the peaks due to impurities E and F;
- *any impurity*: not more than the area of the principal peak in the chromatogram obtained with reference solution (d) (3.0 per cent);
- *total*: not more than 1.67 times the area of the principal peak in the chromatogram obtained with reference solution (d) (5.0 per cent);
- *disregard limit*: 0.02 times the area of the principal peak in the chromatogram obtained with reference solution (d) (0.06 per cent).

**Free erythromycin**. Liquid chromatography (*2.2.29*).

*Test solution.* Dissolve 0.250 g of the substance to be examined in *acetonitrile R1* and dilute to 50.0 mL with the same solvent.

*Reference solution.* Dissolve 75.0 mg of *erythromycin A CRS* in *acetonitrile R1* and dilute to 50.0 mL with the same solvent. Dilute 5.0 mL of the solution to 25.0 mL with *acetonitrile R1*.

*Column*:

- *size*: *l* = 0.25 m, Ø = 4.6 mm;
- *stationary phase*: *octylsilyl silica gel for chromatography R* (5 µm);
- *temperature*: 30 °C.

*Mobile phase*: mix 35 volumes of *acetonitrile R1* and 65 volumes of a solution containing 3.4 g/L of *potassium dihydrogen phosphate R* and 2.0 g/L of *triethylamine R*, previously adjusted to pH 3.0 with *dilute phosphoric acid R*.

*Flow rate*: 1 mL/min.

*Detection*: spectrophotometer at 195 nm.

*Injection*: 20 µL.

*Run time*: twice the retention time of erythromycin A (retention time = about 8 min) for the reference solution; twice the retention time of erythromycin ethylsuccinate (retention time = about 24 min) for the test solution.

*Limit*:

- *free erythromycin*: not more than the area of the principal peak in the chromatogram obtained with the reference solution (6.0 per cent).

**Water** (*2.5.12*): maximum 3.0 per cent, determined on 0.300 g.

Use a 100 g/L solution of *imidazole R* in *anhydrous methanol R* as the solvent.

**Sulfated ash** (*2.4.14*): maximum 0.3 per cent, determined on 1.0 g.

ASSAY

Liquid chromatography (*2.2.29*). *Prepare the solutions immediately before use (apart from the test solution).*

*Solution A* (hydrolysis solution). Dissolve 11.5 g of *dipotassium hydrogen phosphate R* in 900 mL of *water R*, adjust to pH 8.0 with *dilute phosphoric acid R* and dilute to 1000 mL with *water R*.

*Solvent mixture*: *methanol R*, solution A (40:60 *V/V*).

*Test solution.* Dissolve 11.5 mg of the substance to be examined in 2.5 mL of *methanol R*. Add 2 mL of solution A, mix and allow to stand at room temperature for at least 12 h. Dilute to 5.0 mL with solution A.

*Reference solution (a).* Dissolve 40.0 mg of *erythromycin A CRS* in 10.0 mL of *methanol R* and dilute to 20.0 mL with solution A.

*Reference solution (b).* Dissolve 10.0 mg of *erythromycin B CRS* and 10.0 mg of *erythromycin C CRS* in 50.0 mL of *methanol R* and dilute to 100.0 mL with solution A.

*Column*:

- *size*: *l* = 0.25 m, Ø = 4.6 mm;
- *stationary phase*: *end-capped polar-embedded octadecylsilyl amorphous organosilica polymer R* (3.5 µm);
- *temperature*: 65 °C; preheating the mobile phase may be required, for instance by extending the inlet tubing in the oven to 30 cm.

*Mobile phase*:

- *mobile phase A*: *phosphate buffer solution pH 7.0 R7*, *acetonitrile R1*, *water for chromatography R* (5:35:60 *V/V/V*);
- *mobile phase B*: *phosphate buffer solution pH 7.0 R7*, *water for chromatography R*, *acetonitrile R1* (5:45:50 *V/V/V*);

| Time (min) | Mobile phase A (per cent *V/V*) | Mobile phase B (per cent *V/V*) |
|---|---|---|
| 0 - $t_R$ | 100 | 0 |
| $t_R$ - ($t_R$ + 2) | 100 → 0 | 0 → 100 |
| ($t_R$ + 2) - ($t_R$ + 15) | 0 | 100 |

$t_R$ = retention time of erythromycin B, determined by injecting 20 µL of reference solution (b) and eluting with mobile phase A

*Flow rate*: 1.0 mL/min.

*Detection*: spectrophotometer at 210 nm.

*Autosampler*: set at 4 °C.

*Injection*: 200 µL.

*System suitability*: reference solution (a):

- *symmetry factor*: maximum 2.0 for the peak due to erythromycin A;
- *repeatability*: maximum relative standard deviation of 1.0 per cent determined on 6 injections.

Calculate the percentage content of erythromycin A ($C_{37}H_{67}NO_{13}$) using the chromatogram obtained with reference solution (a). Calculate the percentage contents of erythromycin B ($C_{37}H_{67}NO_{12}$) and erythromycin C ($C_{36}H_{65}NO_{13}$) using the chromatogram obtained with reference solution (b).

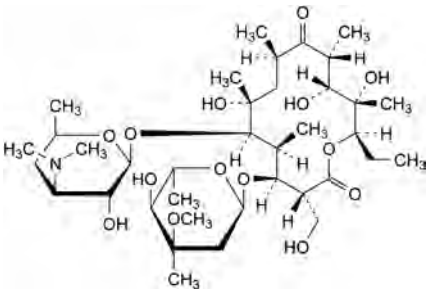
Express the results as erythromycin A ethylsuccinate, erythromycin B ethylsuccinate and erythromycin C ethylsuccinate by multiplying the percentage content of erythromycin A by 1.1744, the percentage content of erythromycin B by 1.1783 and the percentage content of erythromycin C by 1.1777.

For the calculation of content of erythromycin ethylsuccinate, use the sum of erythromycins A, B and C expressed as ethylsuccinates as described above.

STORAGE

In an airtight container, protected from light.

IMPURITIES



A. (3*R*,4*S*,5*S*,6*R*,7*R*,9*R*,11*R*,12*R*,13*S*,14*R*)-4-[(2,6-dideoxy-3-*C*-methyl-3-*O*-methyl-α-L-*ribo*-hexopyranosyl)oxy]-14-ethyl-7,12,13-trihydroxy-3-(hydroxymethyl)-5,7,9,11,13-pentamethyl-6-[[3,4,6-trideoxy-3-(dimethylamino)-β-D-*xylo*-hexopyranosyl]oxy]oxacyclotetradecane-2,10-dione (erythromycin F),

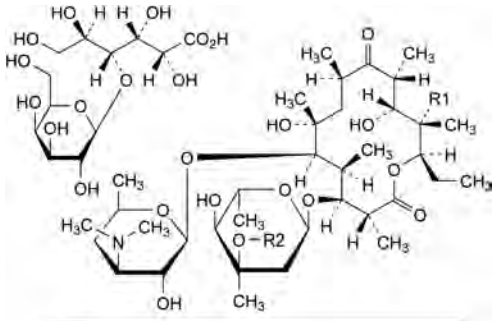
# ERYTHROMYCIN LACTOBIONATE

## Erythromycini lactobionas



| Erythromycin (lactobionate) | Mol. Formula | $M_r$ | R1 | R2 |
|---|---|---|---|---|
| A | $C_{49}H_{89}NO_{25}$ | 1092 | OH | $CH_3$ |
| B | $C_{49}H_{89}NO_{24}$ | 1076 | H | $CH_3$ |
| C | $C_{48}H_{87}NO_{25}$ | 1078 | OH | H |

DEFINITION

Mixture of the lactobionate salts of erythromycin.

*Main component*: (3*R*,4*S*,5*S*,6*R*,7*R*,9*R*,11*R*,12*R*,13*S*,14*R*)-4-[(2,6-dideoxy-3-*C*-methyl-3-*O*-methyl-α-L-*ribo*-hexopyranosyl)oxy]-14-ethyl-7,12,13-trihydroxy-3,5,7,9,11,13-

hexamethyl-6-[[3,4,6-trideoxy-3-(dimethylamino)-β-D-*xylo*-hexopyranosyl]oxy]oxacyclotetradecane-2,10-dione 4-*O*-β-D-galactopyranosyl-D-gluconate (erythromycin A lactobionate).

Salt of a product obtained by fermentation using a strain of *Streptomyces erythreus*.

*Content*:

– *sum of erythromycins A, B and C expressed as lactobionates*: 93.0 per cent to 102.0 per cent (anhydrous substance);
– *erythromycin B lactobionate*: maximum 5.0 per cent (anhydrous substance);
– *erythromycin C lactobionate*: maximum 5.0 per cent (anhydrous substance).

CHARACTERS

*Appearance*: white or slightly yellow, hygroscopic powder.

*Solubility*: soluble in water, freely soluble in anhydrous ethanol and in methanol, very slightly soluble in acetone and in methylene chloride.

IDENTIFICATION

Infrared absorption spectrophotometry (*2.2.24*).

*Comparison*: *erythromycin lactobionate CRS*.

TESTS

**Appearance of solution**. The solution is clear (*2.2.1*) and colourless (*2.2.2, Method II*).

Dissolve 1.0 g in 20 mL of *water R*.

**pH** (*2.2.3*): 6.5 to 7.5.

Dissolve 0.50 g in *carbon dioxide-free water R* and dilute to 25 mL with the same solvent.

**Related substances**. Liquid chromatography (*2.2.29*). *Prepare the solutions immediately before use.*

*Solution A*. Dissolve 11.5 g of *dipotassium hydrogen phosphate R* in 900 mL of *water R*, adjust to pH 8.0 with *dilute phosphoric acid R* and dilute to 1000 mL with *water R*.

*Solvent mixture*: *methanol R*, solution A (40:60 *V/V*).

*Test solution*. Dissolve 60.0 mg of the substance to be examined in the solvent mixture and dilute to 10.0 mL with the solvent mixture.

*Reference solution (a)*. Dissolve 40.0 mg of *erythromycin A CRS* in the solvent mixture and dilute to 10.0 mL with the solvent mixture.

*Reference solution (b)*. Dissolve 10.0 mg of *erythromycin B CRS* and 10.0 mg of *erythromycin C CRS* in the solvent mixture and dilute to 50.0 mL with the solvent mixture.

*Reference solution (c)*. Dilute 1.0 mL of reference solution (a) to 100.0 mL with the solvent mixture.

*Reference solution (d)*. Dissolve 4 mg of *erythromycin for system suitability CRS* (containing impurities A, B, C, D, E, F, H and L) in the solvent mixture and dilute to 1.0 mL with the solvent mixture.

*Column*:

– *size*: *l* = 0.25 m, Ø = 4.6 mm;
– *stationary phase*: *end-capped polar-embedded octadecylsilyl amorphous organosilica polymer R* (3.5 µm);
– *temperature*: 65 °C; preheating the mobile phase may be required, for instance by extending the inlet tubing in the oven to 30 cm.

*Mobile phase*:

– *mobile phase A*: *phosphate buffer solution pH 7.0 R7*, *acetonitrile R1*, *water R* (5:35:60 *V/V/V*);
– *mobile phase B*: *phosphate buffer solution pH 7.0 R7*, *water R*, *acetonitrile R1* (5:45:50 *V/V/V*);

| Time (min) | Mobile phase A (per cent *V/V*) | Mobile phase B (per cent *V/V*) |
|---|---|---|
| 0 - $t_R$ | 100 | 0 |
| $t_R$ - ($t_R$ + 2) | 100 → 0 | 0 → 100 |
| ($t_R$ + 2) - ($t_R$ + 15) | 0 | 100 |

$t_R$ = retention time of erythromycin B, determined by injecting 10 µL of reference solution (b) and eluting with mobile phase A

*Flow rate*: 1.0 mL/min.

*Detection*: spectrophotometer at 210 nm.

*Autosampler*: set at 4 °C.

*Injection*: 100 µL.

*Identification of impurities*: use the chromatogram supplied with *erythromycin for system suitability CRS* and the chromatogram obtained with reference solution (d) to identify the peaks due to impurities A, B, C, D, E, F and L; use the chromatogram obtained with reference solution (b) to identify the peaks due to erythromycins B and C.

*Relative retention* with reference to erythromycin A (retention time = about 23 min): impurity A = about 0.4; impurity B = about 0.5; erythromycin C = about 0.55; impurity L = about 0.63; impurity C = about 0.9; impurity D = about 1.61; erythromycin B = about 1.75; impurity F = about 1.81; impurity E = about 2.3.

*System suitability*: reference solution (d):

– *resolution*: minimum 1.2 between the peaks due to impurity B and erythromycin C;
– *peak-to-valley ratio*: minimum 1.5, where $H_p$ = height above the baseline of the peak due to impurity F and $H_v$ = height above the baseline of the lowest point of the curve separating this peak from the peak due to erythromycin B; minimum 2.0, where $H_p$ = height above the baseline of the peak due to impurity C and $H_v$ = height above the baseline of the lowest point of the curve separating this peak from the peak due to erythromycin A. If necessary, adjust the concentration of *acetonitrile R1* in the mobile phases and/or the gradient to obtain the required separation.

*Calculation of percentage contents*:

– *correction factors*: multiply the peak areas of the following impurities by the corresponding correction factor: impurity D = 2; impurity E = 0.08; impurity F = 0.08; impurity L = 0.11;
– for each impurity, use the concentration of erythromycin A in reference solution (c).

*Limits*:

– *impurity C*: maximum 3.0 per cent;
– *impurities A, B*: for each impurity, maximum 2.0 per cent;
– *impurities D, E, F*: for each impurity, maximum 1.0 per cent;
– *impurity L*: maximum 0.4 per cent,
– *any other impurity*: for each impurity, maximum 0.4 per cent;
– *total*: maximum 7.0 per cent;
– *reporting threshold*: 0.2 per cent; disregard the peaks due to erythromycins B and C.

**Free lactobionic acid**: maximum 1.0 per cent of $C_{12}H_{22}O_{12}$ (anhydrous substance).

Dissolve 0.400 g in 50 mL of *water R*. Titrate with *0.1 M sodium hydroxide*, determining the end-point potentiometrically (*2.2.20*). Calculate the volume of *0.1 M sodium hydroxide* required per gram of the substance to be examined ($n_1$ mL). Dissolve 0.500 g in 40 mL of *anhydrous acetic acid R* and titrate with *0.1 M perchloric acid*, determining the end-point potentiometrically (*2.2.20*). Calculate the volume of *0.1 M perchloric acid* required per gram of the substance to be examined ($n_2$ mL).

Calculate the percentage content of $C_{12}H_{22}O_{12}$ using the following expression:

$$3.580(n_1 - n_2)$$

**Water** (*2.5.12*): maximum 5.0 per cent, determined on 0.200 g.

Use a 100 g/L solution of *imidazole R* in *anhydrous methanol R* as the solvent.

**Sulfated ash** (*2.4.14*): maximum 0.5 per cent, determined on 1.0 g.

ASSAY

Liquid chromatography (*2.2.29*) as described in the test for related substances with the following modifications.

*Injection*: test solution and reference solutions (a) and (b).

*System suitability*: reference solution (a):

- *symmetry factor*: maximum 2.0 for the peak due to erythromycin A;
- *repeatability*: maximum relative standard deviation of 1.0 per cent determined on 6 injections.

Calculate the percentage content of erythromycin A ($C_{37}H_{67}NO_{13}$) using the chromatogram obtained with reference solution (a). Calculate the percentage contents of erythromycin B ($C_{37}H_{67}NO_{12}$) and erythromycin C ($C_{36}H_{65}NO_{13}$) using the chromatogram obtained with reference solution (b).

Express the result as erythromycin A lactobionate, erythromycin B lactobionate and erythromycin C lactobionate by multiplying the percentage content of erythromycin A by 1.4877, the percentage content of erythromycin B by 1.4986 and the percentage content of erythromycin C by 1.4972.

For the calculation of content of erythromycin lactobionate, use the sum of erythromycins A, B and C expressed as lactobionates as described above.

STORAGE

In an airtight container, protected from light. If the substance is sterile, store in a sterile, airtight, tamper-evident container.

IMPURITIES

*Specified impurities: A, B, C, D, E, F, L.*

*Other detectable impurities* (the following substances would, if present at a sufficient level, be detected by one or other of the tests in the monograph. They are limited by the general acceptance criterion for other/unspecified impurities. It is therefore not necessary to identify these impurities for demonstration of compliance. See also *5.10. Control of impurities in substances for pharmaceutical use*): *H, I, J, K, M, N.*

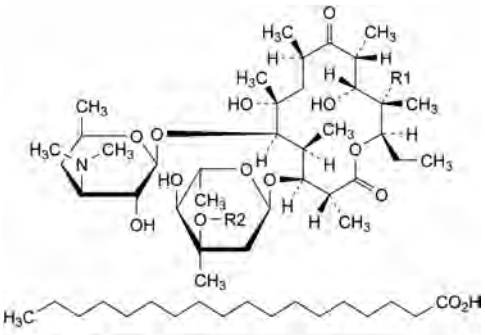
# ERYTHROMYCIN STEARATE

## Erythromycini stearas



| Erythromycin (stearate) | Mol. Formula | $M_r$ | R1 | R2 |
|---|---|---|---|---|
| A | $C_{55}H_{103}NO_{15}$ | 1018 | OH | $CH_3$ |
| B | $C_{55}H_{103}NO_{14}$ | 1002 | H | $CH_3$ |
| C | $C_{54}H_{101}NO_{15}$ | 1004 | OH | H |

### DEFINITION

Mixture of the stearate salts of erythromycin and stearic acid.

*Main component*: (3*R*,4*S*,5*S*,6*R*,7*R*,9*R*,11*R*,12*R*,13*S*,14*R*)-4-[(2,6-dideoxy-3-*C*-methyl-3-*O*-methyl-α-L-*ribo*-hexopyranosyl)oxy]-14-ethyl-7,12,13-trihydroxy-3,5,7,9,11,13-hexamethyl-6-[[3,4,6-trideoxy-3-(dimethylamino)-β-D-*xylo*-hexopyranosyl]oxy]oxacyclotetradecane-2,10-dione octadecanoate (erythromycin A stearate).

Salt of a product obtained by fermentation using a strain of *Streptomyces erythreus*.

*Content*:

- *sum of erythromycins A, B and C expressed as stearates*: 79.0 per cent to 102.0 per cent (anhydrous substance);
- *erythromycin B stearate*: maximum 5.0 per cent (anhydrous substance);
- *erythromycin C stearate*: maximum 5.0 per cent (anhydrous substance).

### CHARACTERS

*Appearance*: white or almost white, crystalline powder.

*Solubility*: practically insoluble in water, soluble in acetone and in methanol.

Solutions may be opalescent.

### IDENTIFICATION

Infrared absorption spectrophotometry (*2.2.24*).

*Comparison*: *erythromycin stearate CRS*.

### TESTS

**Free stearic acid**: maximum 14.0 per cent (anhydrous substance) of $C_{18}H_{36}O_2$.

Dissolve 0.400 g in 50 mL of *methanol R*. Titrate with *0.1 M sodium hydroxide*, determining the end-point potentiometrically (*2.2.20*). Calculate the volume of *0.1 M sodium hydroxide* required per gram of the substance to be examined ($n_1$ mL). Dissolve 0.500 g in 30 mL of *methylene chloride R*. If the solution is opalescent, filter and shake the residue with 3 quantities, each of 25 mL, of *methylene chloride R*. Filter, if necessary, and rinse the filter with *methylene chloride R*. Reduce the volume of the combined filtrate and rinsings to 30 mL by evaporation on a water-bath. Add 50 mL of *glacial acetic acid R* and titrate with *0.1 M perchloric acid*, determining the end-point potentiometrically (*2.2.20*). Calculate the volume of *0.1 M perchloric acid* required per gram of the substance to be examined ($n_2$ mL).

Calculate the percentage content of $C_{18}H_{36}O_2$ using the following expression:

$$2.845(n_1 - n_2) \times \frac{100}{100 - h}$$

$h$ = percentage water content.

**Related substances**. Liquid chromatography (*2.2.29*). *Prepare the solutions immediately before use.*

*Solution A*. Dissolve 11.5 g of *dipotassium hydrogen phosphate R* in 900 mL of *water R*, adjust to pH 8.0 with *dilute phosphoric acid R* and dilute to 1000 mL with *water R*.

*Solvent mixture*: *methanol R*, solution A (40:60 *V/V*).

*Test solution*. Dissolve 55.0 mg of the substance to be examined in the solvent mixture and dilute to 10.0 mL with the solvent mixture. Centrifuge and use the clear solution.

*Reference solution (a)*. Dissolve 40.0 mg of *erythromycin A CRS* in the solvent mixture and dilute to 10.0 mL with the solvent mixture.

*Reference solution (b)*. Dissolve 10.0 mg of *erythromycin B CRS* and 10.0 mg of *erythromycin C CRS* in the solvent mixture and dilute to 50.0 mL with the solvent mixture.

*Reference solution (c)*. Dilute 1.0 mL of reference solution (a) to 100.0 mL with the solvent mixture.

*Reference solution (d)*. Dissolve 4 mg of *erythromycin for system suitability CRS* (containing impurities A, B, C, D, E, F, H and L) in the solvent mixture and dilute to 1.0 mL with the solvent mixture.

*Reference solution (e)*. Dissolve 4 mg of *erythromycin stearate for impurity S identification CRS* in the solvent mixture and dilute to 1.0 mL with the solvent mixture.

*Column*:

- *size*: *l* = 0.25 m, Ø = 4.6 mm;
- *stationary phase*: *end-capped polar-embedded octadecylsilyl amorphous organosilica polymer R* (3.5 µm);
- *temperature*: 65 °C; preheating the mobile phase may be required, for instance by extending the inlet tubing in the oven to 30 cm.

*Mobile phase*:

- *mobile phase A*: *phosphate buffer solution pH 7.0 R7*, *acetonitrile R1*, *water R* (5:35:60 *V/V/V*);
- *mobile phase B*: *phosphate buffer solution pH 7.0 R7*, *water R*, *acetonitrile R1* (5:45:50 *V/V/V*);

| Time (min) | Mobile phase A (per cent *V/V*) | Mobile phase B (per cent *V/V*) |
|---|---|---|
| 0 - $t_R$ | 100 | 0 |
| $t_R$ - ($t_R$ + 2) | 100 → 0 | 0 → 100 |
| ($t_R$ + 2) - ($t_R$ + 15) | 0 | 100 |

$t_R$ = retention time of erythromycin B, determined by injecting 10 µL of reference solution (b) and eluting with mobile phase A

*Flow rate*: 1.0 mL/min.

*Detection*: spectrophotometer at 210 nm.

*Autosampler*: set at 4 °C.

*Injection*: 100 µL.

*Identification of impurities*: use the chromatogram supplied with *erythromycin for system suitability CRS* and the chromatogram obtained with reference solution (d) to identify the peaks due to impurities A, B, C, D, E, F and L; use the chromatogram supplied with *erythromycin stearate for impurity S identification CRS* and the chromatogram obtained with reference solution (e) to identify the peak due to impurity S; use the chromatogram obtained with reference solution (b) to identify the peaks due to erythromycins B and C.

*Relative retention* with reference to erythromycin A (retention time = about 23 min): impurity A = about 0.4; impurity B = about 0.5; erythromycin C = about 0.55; impurity L = about 0.63; impurity C = about 0.9; impurity D = about 1.61; erythromycin B = about 1.75; impurity F = about 1.81; impurity S = about 2.1; impurity E = about 2.3.

*System suitability*: reference solution (d):

- *resolution*: minimum 1.2 between the peaks due to impurity B and erythromycin C;
- *peak-to-valley ratio*: minimum 1.5, where $H_p$ = height above the baseline of the peak due to impurity F and $H_v$ = height above the baseline of the lowest point of the curve separating this peak from the peak due to erythromycin B; minimum 2.0, where $H_p$ = height above the baseline of the peak due to impurity C and $H_v$ = height above the baseline of the lowest point of the curve separating this peak from the peak due to erythromycin A. If necessary, adjust the concentration of *acetonitrile R1* in the mobile phases and/or the gradient to obtain the required separation.

*Calculation of percentage contents*:

- *correction factors*: multiply the peak areas of the following impurities by the corresponding correction factor: impurity D = 2; impurity E = 0.08; impurity F = 0.08; impurity L = 0.11;
- for each impurity, use the concentration of erythromycin A in reference solution (c).

*Limits*:

- *impurity C*: maximum 3.0 per cent;
- *impurities A, B*: for each impurity, maximum 2.0 per cent;
- *impurities D, E, F, S*: for each impurity, maximum 1.0 per cent;
- *impurity L*: maximum 0.4 per cent;
- *any other impurity*: for each impurity, maximum 0.4 per cent;
- *total*: maximum 7.0 per cent;
- *reporting threshold*: 0.2 per cent; disregard the peaks due to erythromycins B and C.

**Water** (*2.5.12*): maximum 4.0 per cent, determined on 0.300 g.

Use a 100 g/L solution of *imidazole R* in *anhydrous methanol R* as the solvent.

**Sulfated ash** (*2.4.14*): maximum 0.5 per cent, determined on 1.0 g.

ASSAY

Liquid chromatography (*2.2.29*) as described in the test for related substances with the following modifications.

*Injection*: test solution and reference solutions (a) and (b).

*System suitability*: reference solution (a):

- *symmetry factor*: maximum 2.0 for the peak due to erythromycin A;
- *repeatability*: maximum relative standard deviation of 1.0 per cent determined on 6 injections.

Calculate the percentage content of erythromycin A ($C_{37}H_{67}NO_{13}$) using the chromatogram obtained with reference solution (a). Calculate the percentage contents of erythromycin B ($C_{37}H_{67}NO_{12}$) and erythromycin C ($C_{36}H_{65}NO_{13}$) using the chromatogram obtained with reference solution (b).

Express the results as erythromycin A stearate, erythromycin B stearate and erythromycin C stearate by multiplying the percentage content of erythromycin A by 1.3869, the percentage content of erythromycin B by 1.3955 and the percentage content of erythromycin C by 1.3944.

For the calculation of content of erythromycin stearate, use the sum of erythromycins A, B and C expressed as stearates as described above.

STORAGE

Protected from light.

IMPURITIES

disulfide bridges: 7-161, 29-33

$M_r$ approx. 30 600

DEFINITION

Solution containing a family of closely-related glycoproteins which are indistinguishable from the naturally occurring human erythropoietin (urinary erythropoietin) in terms of amino acid sequence (165 amino acids) and average glycosylation pattern, at a concentration of 0.5-10 mg/mL. It may also contain buffer salts and other excipients. It has a potency of not less than 100 000 IU per milligram of active substance determined using the conditions described under Assay and in the test for protein.

PRODUCTION

Erythropoietin is produced in rodent cells *in vitro* by a method based on recombinant DNA technology.

Prior to release, the following tests are carried out on each batch of erythropoietin concentrated solution, unless exemption has been granted by the competent authority.

**Host cell-derived proteins**: the limit is approved by the competent authority.

**Host cell- and vector-derived DNA**: the limit is approved by the competent authority.

CHARACTERS

*Appearance*: clear or slightly turbid, colourless solution.

IDENTIFICATION

A. It gives the appropriate response when examined using the conditions described under Assay.

B. Capillary zone electrophoresis (*2.2.47*).

*Test solution.* Dilute the preparation to be examined with *water R* to obtain a concentration of 1 mg/mL. Desalt 0.25 mL of the solution by passage through a micro-concentrator cartridge provided with a membrane with a molecular mass cut-off of not more than 10 000 Da. Add 0.2 mL of *water R* to the sample and desalt again. Repeat the desalting procedure once more. Dilute the sample with *water R*, determine its protein concentration as described under Tests and adjust to a concentration of approximately 1 mg/mL with *water R*.

*Reference solution.* Dissolve the contents of a vial of *erythropoietin for physicochemical tests CRS* in 0.10 mL of *water R*. Proceed with desalting as described for the test solution.

*Capillary*:

– *material*: uncoated fused silica;

– *size*: effective length = about 100 cm, Ø = 50 µm.

*Temperature*: 35 °C.

*CZE buffer concentrate (0.1 M sodium chloride, 0.1 M tricine, 0.1 M sodium acetate).* Dissolve 0.584 g of *sodium chloride R*, 1.792 g of *tricine R* and 0.820 g of *anhydrous sodium acetate R* in *water R* and dilute to 100.0 mL with the same solvent.

*1 M putrescine solution.* Dissolve 0.882 g of *putrescine R* in 10 mL of *water R*. Distribute in 0.5 mL aliquots.

*CZE buffer (0.01 M tricine, 0.01 M sodium chloride, 0.01 M sodium acetate, 7 M urea, 2.5 mM putrescine).* Dissolve 21.0 g of *urea R* in 25 mL of *water R* by warming in a water-bath at 30 °C. Add 5.0 mL of CZE buffer concentrate and 125 µL of 1 M putrescine solution. Dilute to 50.0 mL with *water R*. Using *dilute acetic acid R*, adjust to pH 5.55 at 30 °C and filter through a membrane filter (nominal pore size 0.45 µm).

*Detection*: spectrophotometer at 214 nm.

*Set the autosampler to store the samples at 4 °C during analysis.*

*Preconditioning of the capillary*: rinse the capillary for 60 min with *0.1 M sodium hydroxide* filtered through a membrane filter (nominal pore size 0.45 µm) and for 60 min with CZE buffer. Apply voltage for 12 h (20 kV).

*Between-run rinsing*: rinse the capillary for 10 min with *water R*, for 5 min with *0.1 M sodium hydroxide* filtered through a membrane filter (nominal pore size 0.45 µm) and for 10 min with CZE buffer.

*Injection*: under pressure or vacuum.

*Migration*: apply a field strength of 143 V/cm (15.4 kV for capillaries of 107 cm total length) for 80 min, using CZE buffer as the electrolyte in both buffer reservoirs.

*System suitability*: in the electropherogram obtained with the reference solution, a pattern of well separated peaks corresponding to the peaks in the electropherogram of erythropoietin supplied with *erythropoietin for physicochemical tests CRS* is seen, and the largest peak is at least 50 times greater than the baseline noise. If necessary, adjust the sample load to give peaks of sufficient height. Identify the peaks due to isoforms 1 to 8. Isoform 1 may not be visible. The peak due to isoform 8 is detected

and the resolution between the peaks due to isoforms 5 and 6 is not less than 1. Repeat the separation at least 3 times. The baseline is stable, showing little drift, and the distribution of peaks is qualitatively and quantitatively similar to the distribution of peaks in the electropherogram of erythropoietin supplied with *erythropoietin for physicochemical tests CRS*. The relative standard deviation of the migration time of the peak due to isoform 2 is less than 2 per cent.

*Limits*: identify the peaks due to isoforms 1 to 8 in the electropherogram obtained with the test solution by comparison with the electropherogram obtained with the reference solution. Calculate the percentage content of each isoform from the corresponding peak area. The percentages are within the following ranges:

| Isoform | Content (per cent) |
|---|---|
| 1 | 0 - 15 |
| 2 | 0 - 15 |
| 3 | 1 - 20 |
| 4 | 10 - 35 |
| 5 | 15 - 40 |
| 6 | 10 - 35 |
| 7 | 5 - 25 |
| 8 | 0 - 15 |

C. Polyacrylamide gel electrophoresis and immunoblotting.

(a) Polyacrylamide gel electrophoresis (*2.2.31*).

*Gel dimensions*: 0.75 mm thick, about 16 cm square.

*Resolving gel*: 12 per cent acrylamide.

*Sample buffer*: *concentrated SDS-PAGE sample buffer R*.

*Test solution (a).* Dilute the preparation to be examined in *water R* to obtain a concentration of 1.0 mg/mL. To 1 volume of this solution add 1 volume of sample buffer.

*Test solution (b).* Dilute the preparation to be examined in *water R* to obtain a concentration of 0.1 mg/mL. To 1 volume of this solution add 1 volume of sample buffer.

*Reference solution (a).* Dissolve the contents of a vial of *erythropoietin for physicochemical tests CRS* in 0.10 mL of *water R*. To 1 volume of this solution add 1 volume of sample buffer.

*Reference solution (b).* Dissolve the contents of a vial of *erythropoietin for physicochemical tests CRS* in *water R* and dilute with the same solvent to obtain a concentration of 0.1 mg/mL. To 1 volume of this solution add 1 volume of sample buffer.

*Reference solution (c).* A solution of molecular mass markers suitable for calibrating SDS-polyacrylamide gels in the range of 10-70 kDa.

*Reference solution (d).* A solution of pre-stained molecular mass markers suitable for calibrating SDS-polyacrylamide gels in the range of 10-70 kDa and suitable for the electrotransfer to an appropriate membrane.

*Sample treatment:* boil for 2 min.

*Application*: 20 µL, in the following order: reference solution (c), reference solution (a), test solution (a), empty well, reference solution (b), test solution (b), reference solution (d).

At the end of the separation, remove the gel-cassette from the apparatus and cut the gel into 2 parts: the first part containing reference solution (c), reference solution (a) and test solution (a); the second part containing reference solution (b), test solution (b) and reference solution (d).

*Detection*: by Coomassie staining on the first part of the gel.

*System suitability*: reference solution (c):

– the validation criteria are met.

*Results*: the electropherogram obtained with test solution (a) shows a single diffuse band corresponding in position and intensity to the single band seen in the electropherogram obtained with reference solution (a).

(b) Immunoblotting.

Transfer the second part of the gel onto a membrane suitable for the immobilisation of proteins, using commercially available electrotransfer equipment and following the manufacturer's instructions. After electrotransfer, incubate the membrane in a neutral isotonic buffer containing a suitable blocking agent (for example, 50 g/L of dried milk or 10 per cent *V/V* foetal calf serum), for 1-2 h, followed by incubation for 1-14 h in the same blocking solution with a suitable dilution of either a polyclonal or monoclonal anti-erythropoietin antibody. Detect erythropoietin-bound antibody using a suitable enzyme- or radiolabelled antibody (for example, an alkaline phosphatase-conjugated second antibody). The precise details of blocking agents, concentrations and incubation times should be optimised using the principles set out in *Immunochemical methods* (*2.7.1*).

*System suitability*: in the electropherogram obtained with reference solution (d), the molecular mass markers are resolved on the membrane into discrete bands, with a linear relationship between distance migrated and $\text{logarithm}_{10}$ of the molecular mass.

*Results*: the electropherogram obtained with test solution (b) shows a single broad band corresponding in position and intensity to the single band seen in the electropherogram obtained with reference solution (b).

D. Peptide mapping (*2.2.55*).

*SELECTIVE CLEAVAGE OF THE PEPTIDE BONDS*

*Test solution.* Dilute the preparation to be examined in *tris acetate buffer solution pH 8.5 R* to a concentration of 1.0 mg/mL. Equilibrate the solution in *tris acetate buffer solution pH 8.5 R* using a suitable procedure (dialysis against *tris acetate buffer solution pH 8.5 R*, or membrane filtration using the procedure described under Identification B, but reconstituting the desalted sample with *tris acetate buffer solution pH 8.5 R*, are suitable). Transfer the dialysed solution to a polypropylene centrifuge tube. Freshly prepare a solution of *trypsin for peptide mapping R* at a concentration of 1 mg/mL in *water R*, and add 2 µL to 0.10 mL of the dialysed solution. Cap the tube and place in a water-bath at 37 °C for 18 h. Remove the sample from the water-bath and stop the reaction immediately by freezing.

*Reference solution.* Dissolve the contents of a vial of *erythropoietin for physicochemical tests CRS* in 0.10 mL of *water R*. Prepare as for the test solution, ensuring that all procedures are carried out simultaneously, and under identical conditions.

*CHROMATOGRAPHIC SEPARATION.* Liquid chromatography (*2.2.29*).

*Column*:

– *size*: *l* = 0.25 m, Ø = 4.6 mm;

– *stationary phase*: *end-capped butylsilyl silica gel for chromatography R* (5-10 µm).

*Mobile phase*:

– *mobile phase A*: 0.06 per cent *V/V* solution of *trifluoroacetic acid R*;

– *mobile phase B*: to 100 mL of *water for chromatography R* add 0.6 mL of *trifluoroacetic acid R* and dilute to 1000 mL with *acetonitrile R1*;

Monographs E

| Time (min) | Flow rate (mL/min) | Mobile phase A (per cent *V/V*) | Mobile phase B (per cent *V/V*) |
|---|---|---|---|
| 0 - 10 | 0.75 | 100 | 0 |
| 10 - 125 | 0.75 | 100 → 39 | 0 → 61 |
| 125 - 135 | 1.25 | 39 → 17 | 61 → 83 |
| 135 - 145 | 1.25 | 17 → 0 | 83 → 100 |
| 145 - 150 | 1.25 | 100 | 0 |

*Detection*: spectrophotometer at 214 nm.

*Equilibration*: at initial conditions for at least 15 min. Carry out a blank run using the above-mentioned gradient.

*Injection*: 50 µL.

*System suitability*: the chromatogram obtained with the reference solution is qualitatively similar to the chromatogram of erythropoietin digest supplied with *erythropoietin for physicochemical tests CRS*.

*Results*: the profile of the chromatogram obtained with the test solution corresponds to that of the chromatogram obtained with the reference solution.

E. *N*-terminal sequence analysis.

The first 15 amino acids are: Ala - Pro - Pro - Arg - Leu - Ile - (no recovered peak) - Asp - Ser - Arg - Val - Leu - Glu - Arg - Tyr.

Perform the Edman degradation using an automated solid-phase sequencer, operated in accordance with the manufacturer's instructions.

Desalt the equivalent of 50 µg of erythropoietin. For example, dilute a volume of the preparation to be examined equivalent to 50 µg of the active substance in 1 mL of a 0.1 per cent *V/V* solution of *trifluoroacetic acid R*. Pre-wash a C18 reverse-phase sample preparation cartridge according to the instructions supplied and equilibrate the cartridge in a 0.1 per cent *V/V* solution of *trifluoroacetic acid R*. Apply the sample to the cartridge, and wash successively with a 0.1 per cent *V/V* solution of *trifluoroacetic acid R* containing 0 per cent, 10 per cent and 50 per cent *V/V* of *acetonitrile R* according to the manufacturer's instructions. Lyophilise the 50 per cent *V/V acetonitrile R* eluate.

Redissolve the desalted sample in 50 µL of a 0.1 per cent *V/V* solution of *trifluoroacetic acid R* and couple to a sequencing cartridge using the protocol provided by the manufacturer. Run 15 sequencing cycles, using the reaction conditions for proline when running the 2nd and 3rd cycles.

Identify the phenylthiohydantoin (PTH)-amino acids released at each sequencing cycle by reverse-phase liquid chromatography. The procedure may be carried out using the column and reagents recommended by the manufacturer of the sequencing equipment for the separation of PTH-amino-acids.

The separation procedure is calibrated using:

- the mixture of PTH-amino acids provided by the manufacturer of the sequencer, with the gradient conditions adjusted as indicated to achieve optimum resolution of all amino acids;
- a sample obtained from a blank sequencing cycle obtained as recommended by the equipment manufacturer.

TESTS

**Protein** (*2.5.33, Method I*): 80 per cent to 120 per cent of the stated concentration.

*Test solution*. Dilute the preparation to be examined in a 4 g/L solution of *ammonium hydrogen carbonate R*.

Record the absorbance spectrum between 250 nm and 400 nm. Measure the value at the absorbance maximum (276-280 nm), after correction for any light scattering, measured up to 400 nm. Calculate the concentration of erythropoietin taking the specific absorbance to be 7.43.

**Dimers and related substances with molecular masses greater than that of erythropoietin**. Size-exclusion chromatography (*2.2.30*): use the normalisation procedure.

*Test solution*. Dilute the preparation to be examined in the mobile phase to obtain a concentration of 0.2 mg/mL.

*Resolution solution*. Dissolve the contents of a vial of *erythropoietin for SEC system suitability CRS* in the mobile phase to obtain a concentration of 0.2 mg/mL.

*Reference solution*. Dilute 20 µL of the resolution solution to 1.0 mL with the mobile phase.

*Column*:

- *size*: *l* = 0.3 m, Ø = 7.5 mm;
- *stationary phase*: *hydrophilic silica gel for chromatography R* (5 µm), of a grade suitable for fractionation of globular proteins in the relative molecular mass range of 20 000 to 200 000.

*Mobile phase*: dissolve 1.15 g of *anhydrous disodium hydrogen phosphate R*, 0.2 g of *potassium dihydrogen phosphate R* and 23.4 g of *sodium chloride R* in 900 mL of *water for chromatography R*, adjust to pH 7.4 if necessary, and dilute to 1000 mL with *water for chromatography R*.

*Flow rate*: 0.5 mL/min.

*Detection*: spectrophotometer at 214 nm.

*Injection*: 100 µL.

*Run time*: twice the retention time of erythropoietin monomer.

*Relative retention* with reference to erythropoietin monomer: erythropoietin dimer = about 0.9.

*System suitability*:

- the area of the principal peak in the chromatogram obtained with the reference solution is 1.5 per cent to 2.5 per cent of the area of the principal peak in the chromatogram obtained with the resolution solution;
- *resolution*: minimum 1.5 between the peaks due to erythropoietin dimer and erythropoietin monomer in the chromatogram obtained with the resolution solution.

*Limit*:

- *sum of the peaks eluted before the principal peak*: maximum 2.0 per cent; disregard any peak with a retention time greater than that of the principal peak.

**Sialic acids**: minimum 10 mol of sialic acids (calculated as *N*-acetylneuraminic acid) per mole of erythropoietin.

*Test solution (a)*. Dilute the preparation to be examined in the mobile phase used in the test for dimers and related substances with molecular masses greater than that of erythropoietin to obtain a concentration of 0.3 mg/mL.

*Test solution (b)*. To 0.5 mL of test solution (a) add 0.5 mL of the mobile phase used in the test for dimers and related substances with molecular masses greater than that of erythropoietin.

*Reference solution (a)*. Dissolve a suitable amount of *N-acetylneuraminic acid R* in *water R* to obtain a concentration of 0.1 mg/mL.

*Reference solution (b)*. To 0.8 mL of reference solution (a) add 0.2 mL of *water R*.

*Reference solution (c)*. To 0.6 mL of reference solution (a) add 0.4 mL of *water R*.

*Reference solution (d)*. To 0.4 mL of reference solution (a) add 0.6 mL of *water R*.

*Reference solution (e)*. To 0.2 mL of reference solution (a) add 0.8 mL of *water R*.

*Reference solution (f)*. Use *water R*.

Carry out the test in triplicate. Transfer 100 µL of each of the test and reference solutions to 10 mL glass test tubes. To each tube add 1.0 mL of *resorcinol reagent R*. Stopper the tubes and incubate at 100 °C for 30 min. Cool on ice. To each tube, add 2.0 mL of a mixture of 12 volumes of *butanol R* and 48 volumes of *butyl acetate R*. Mix vigorously, and allow the 2 phases to

separate. Ensuring that the upper phase is completely clear, remove the upper phase, taking care to exclude completely any of the lower phase. Measure the absorbance (*2.2.25*) of all samples at 580 nm. Using the calibration curve generated by the reference solutions, determine the content of sialic acids in test solutions (a) and (b) and calculate the mean. Calculate the number of moles of sialic acids per mole of erythropoietin assuming that the relative molecular mass of erythropoietin is 30 600 and that the relative molecular mass of *N*-acetylneuraminic acid is 309.

*System suitability*:

- the individual replicates agree to within ± 10 per cent of each other;
- the value obtained from reference solution (a) is between 1.5 and 3.3 times that obtained with test solution (a).

**Bacterial endotoxins** (*2.6.14*): less than 20 IU in the volume that contains 100 000 IU of erythropoietin.

ASSAY

The activity of the preparation is compared with that of *erythropoietin BRP* and expressed in International Units (IU).

The estimated potency is not less than 80 per cent and not more than 125 per cent of the stated potency. The confidence limits of the estimated potency ($P$ = 0.95) are not less than 64 per cent and not more than 156 per cent of the stated potency.

Carry out the determination of potency by Method A or B.

**A. In polycythaemic mice**

The activity of the preparation is estimated by examining, under given conditions, its effect in stimulating the incorporation of $^{59}$Fe into circulating red blood cells of mice made polycythaemic by exposure to reduced atmospheric pressure.

The following schedule, using treatment in a hypobaric chamber, has been found to be suitable.

Induce polycythaemia in female mice of the same strain, weighing 16-18 g. Place the mice in a hypoxic chamber and reduce the pressure to 0.6 atmospheres. After 3 days at 0.6 atmospheres, further reduce the pressure to 0.4-0.5 atmospheres and maintain the animals at this pressure for a further 11 days (the partial vacuum is interrupted daily for a maximum of 1 h at about 11:00 a.m., in order to clean the cages and feed the animals). At the end of the specified period, return the mice to normal atmospheric conditions. Randomly distribute the mice into cages, each containing 6 animals, and mark them.

*Test solution (a).* Dilute the substance to be examined in *phosphate-albumin buffered saline pH 7.2 R1* to obtain a concentration of 0.2 IU/mL.

*Test solution (b).* Mix equal volumes of test solution (a) and *phosphate-albumin buffered saline pH 7.2 R1*.

*Test solution (c).* Mix equal volumes of test solution (b) and *phosphate-albumin buffered saline pH 7.2 R1*.

*Reference solution (a).* Dissolve *erythropoietin BRP* in *phosphate-albumin buffered saline pH 7.2 R1* to obtain a concentration of 0.2 IU/mL.

*Reference solution (b).* Mix equal volumes of reference solution (a) and *phosphate-albumin buffered saline pH 7.2 R1*.

*Reference solution (c).* Mix equal volumes of reference solution (b) and *phosphate-albumin buffered saline pH 7.2 R1*.

*Radiolabelled ferric [$^{59}$Fe] chloride solution, concentrated.* Use a commercially available solution of [$^{59}$Fe]ferric chloride (approximate specific activity: 100-1000 MBq/mg of Fe).

*Radiolabelled [$^{59}$Fe]ferric chloride solution.* Dilute the concentrated radiolabelled [$^{59}$Fe]ferric chloride solution in *Sodium citrate buffer solution pH 7.8 (0.034 M sodium citrate, 0.101 M sodium chloride) R* to obtain a solution with an activity of $3.7 \times 10^4$ Bq/mL.

The concentrations of the test solutions and reference solutions may need to be modified, based on the response range of the animals used.

3 days after returning the animals to atmospheric pressure, inject each animal subcutaneously with 0.2 mL of one of the solutions. The 6 animals in each cage must each receive one of the 6 different treatments (3 test solutions and 3 reference solutions), and the order of injection must be separately randomised for each cage. A minimum of 8 cages is recommended. 2 days after injection of the test or reference solution, inject each animal intraperitoneally with 0.2 mL of radiolabelled [$^{59}$Fe]ferric chloride solution. The order of the injections must be the same as that of the erythropoietin injections, and the time interval between administration of the erythropoietin and the radiolabelled ferric chloride solution must be the same for each animal. After a further 48 h, anaesthetise each animal by injection of a suitable anaesthetic, record body weights and withdraw blood samples (0.65 mL) into haematocrit capillaries from the bifurcation of the aorta. After determining the packed cell volume for each sample, measure the radioactivity.

Calculate the response (percentage of iron-59 in total circulating blood) for each mouse using the expression:

$$\frac{A_s \times M \times 7.5}{A_t \times V_s}$$

$A_s$ = radioactivity in the sample;

$A_t$ = total radioactivity injected;

7.5 = total blood volume as per cent body weight;

$M$ = body weight, in grams;

$V_s$ = sample volume.

Calculate the potency by the usual statistical methods for a parallel line assay. Eliminate from the calculation any animal where the packed cell volume is less than 54 per cent, or where the body weight is more than 24 g.

**B. In normocythaemic mice**

The assay is based on the measurement of stimulation of reticulocyte production in normocythaemic mice.

The assay may be carried out using the following procedure:

*Test solution (a).* Dilute the preparation to be examined in *phosphate-albumin buffered saline pH 7.2 R1* to obtain a concentration of 80 IU/mL.

*Test solution (b).* Mix equal volumes of test solution (a) and *phosphate-albumin buffered saline pH 7.2 R1*.

*Test solution (c).* Mix equal volumes of test solution (b) and *phosphate-albumin buffered saline pH 7.2 R1*.

*Reference solution (a).* Dissolve *erythropoietin BRP* in *phosphate-albumin buffered saline pH 7.2 R1* to obtain a concentration of 80 IU/mL.

*Reference solution (b).* Mix equal volumes of reference solution (a) and *phosphate-albumin buffered saline pH 7.2 R1*.

*Reference solution (c).* Mix equal volumes of reference solution (b) and *phosphate-albumin buffered saline pH 7.2 R1*.

The exact concentrations of the test solutions and reference solutions may need to be modified, based on the response range of the animals used.

At the beginning of the assay procedure, randomly distribute mice of a suitable age and strain (8-week old B6D2F1 mice are suitable) into 6 cages. A minimum of 8 mice per cage is recommended. Inject each animal subcutaneously with 0.5 mL of the appropriate treatment (one solution per cage) and put the animal in a new cage. Combine the mice in such a way that each cage housing the treated mice contains one mouse out of the 6 different treatments (3 test solutions and 3 reference solutions, 6 mice per cage). 4 days after the injections, collect blood samples from the animals and determine the number of reticulocytes using a suitable procedure.

The following method may be employed:

*The volume of blood, dilution procedure and fluorescent reagent may need to be modified to ensure maximum development and stability of fluorescence.*

*Colorant solution, concentrated.* Use a solution of thiazole orange suitable for the determination of reticulocytes. Prepare at a concentration twice that necessary for the analysis.

Proceed with the following dilution steps. Dilute whole blood 500-fold in the buffer used to prepare the colorant solution. Dilute this solution 2-fold in the concentrated colorant solution. After staining for 3-10 min, determine the reticulocyte count microfluorometrically in a flow cytometer. The percentage of reticulocytes is determined using a biparametric histogram: number of cells/red fluorescence (620 nm).

Calculate the potency by the usual statistical methods for a parallel line assay.

STORAGE

In an airtight container at a temperature below – 20 °C. Avoid repeated freezing and thawing.

LABELLING

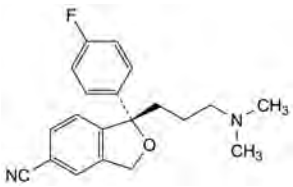
The label states:

- the erythropoietin content in milligrams per millilitre;
- the activity in International Units per millilitre;
- the name and the concentration of any other excipients.

**01/2017:2758**

# ESCITALOPRAM

## Escitalopramum



$C_{20}H_{21}FN_2O$ $M_r$ 324.4
[128196-01-0]

DEFINITION

(1*S*)-1-[3-(Dimethylamino)propyl]-1-(4-fluorophenyl)-1,3-dihydro-2-benzofuran-5-carbonitrile.

*Content*: 99.0 per cent to 101.0 per cent (anhydrous substance).

CHARACTERS

*Appearance*: white or yellowish, crystalline powder.

*Solubility*: practically insoluble in water, freely soluble in anhydrous ethanol and in toluene.

IDENTIFICATION

A. Infrared absorption spectrophotometry (*2.2.24*).
*Comparison*: *escitalopram CRS*.

B. Enantiomeric purity (see Tests).

TESTS

**Related substances**. Liquid chromatography (*2.2.29*).

*Buffer solution.* Dissolve 3.4 g of *potassium dihydrogen phosphate R* in 900 mL of *water R*; adjust to pH 3.0 with *phosphoric acid R* and dilute to 1000 mL with *water R*.

*Test solution.* Dissolve 25 mg of the substance to be examined in mobile phase A and dilute to 50.0 mL with mobile phase A.

*Reference solution (a).* Dissolve 5 mg of *escitalopram for system suitability CRS* (containing impurity D) in mobile phase A and dilute to 10.0 mL with mobile phase A.

*Reference solution (b).* Dilute 1.0 mL of the test solution to 100.0 mL with mobile phase A. Dilute 1.0 mL of this solution to 10.0 mL with mobile phase A.

*Column*:

- *size*: *l* = 0.25 m, Ø = 4.6 mm;
- *stationary phase*: *end-capped octadecylsilyl silica gel for chromatography R* (5 µm);
- *temperature*: 45 °C.

*Mobile phase*:

- *mobile phase A*: *acetonitrile R*, buffer solution (10:90 *V/V*);
- *mobile phase B*: buffer solution, *acetonitrile R* (35:65 *V/V*);

| Time (min) | Mobile phase A (per cent *V/V*) | Mobile phase B (per cent *V/V*) | Flow rate (mL/min) |
|---|---|---|---|
| 0 - 2 | 95 | 5 | 1.0 |
| 2 - 37 | 95 → 65 | 5 → 35 | 1.0 |
| 37 - 47 | 65 → 0 | 35 → 100 | 1.0 |
| 47 - 62 | 0 | 100 | 2.0 |

*Detection*: spectrophotometer at 237 nm and at 254 nm.

*Injection*: 20 µL.

*Identification of impurities*: use the chromatogram supplied with *escitalopram for system suitability CRS* and the chromatogram obtained with reference solution (a) to identify the peak due to impurity D.

*Relative retention* with reference to escitalopram (retention time = about 38 min): impurity D = about 0.98.

*System suitability*: reference solution (a) at 237 nm:

- *peak-to-valley ratio*: minimum 5.0, where $H_p$ = height above the baseline of the peak due to impurity D and $H_v$ = height above the baseline of the lowest point of the curve separating this peak from the peak due to escitalopram.

*Calculation of percentage contents*:

- for each impurity, use the concentration of escitalopram in reference solution (b) at 237 nm.

*Limits*:

- *unspecified impurities at 237 nm and at 254 nm*: for each impurity, maximum 0.10 per cent;
- *total at 237 nm*: maximum 0.5 per cent;
- *reporting threshold at 237 nm*: 0.05 per cent.

**Enantiomeric purity**. Liquid chromatography (*2.2.29*): use the normalisation procedure.

*Test solution.* Dissolve 25.0 mg of the substance to be examined in the mobile phase and dilute to 50.0 mL with the mobile phase. Dilute 5.0 mL of the solution to 20.0 mL with the mobile phase.

*Reference solution (a).* Dissolve 5.0 mg of *citalopram hydrobromide CRS* (containing equal amounts of impurity K and escitalopram) in the mobile phase and dilute to 10.0 mL with the mobile phase. Dilute 5.0 mL of the solution to 20.0 mL with the mobile phase.

*Reference solution (b).* Dilute 1.0 mL of reference solution (a) to 50.0 mL with the mobile phase. Dilute 1.0 mL of this solution to 10.0 mL with the mobile phase.

*Column*:

- *size*: *l* = 0.15 m, Ø = 4.6 mm;
- *stationary phase*: *protein derivative of silica gel for chiral separation R* (5 µm);
- *temperature*: 30 °C.

*Mobile phase*: *acetonitrile R*, *0.05 M phosphate buffer solution pH 7.0 R* (15:85 *V/V*).

*Flow rate*: 0.6 mL/min.

*Detection*: spectrophotometer at 240 nm.

*Injection*: 15 µL.

*Run time*: twice the retention time of escitalopram.

*Identification of impurities*: use the chromatogram obtained with reference solution (a) to identify the peak due to impurity K.

*Relative retention* with reference to escitalopram (retention time = about 11 min): impurity K = about 1.2.

*System suitability*: reference solution (a):

- *resolution*: minimum 1.3 between the peaks due to escitalopram and impurity K;
- *symmetry factor*: maximum 4.0 for the peak due to escitalopram; maximum 4.0 for the peak due to impurity K.

*Limits*:

- *impurity K*: maximum 2.0 per cent;
- *reporting threshold*: 0.10 per cent (reference solution (b)).

**Water** (*2.5.12*): maximum 0.2 per cent, determined on 0.500 g.

**Sulfated ash** (*2.4.14*): maximum 0.1 per cent, determined on 1.0 g in a platinum crucible.

ASSAY

Dissolve 0.300 g in a mixture of 5.0 mL of *acetic anhydride R* and 75 mL of *glacial acetic acid R*. Titrate with *0.1 M perchloric acid*, determining the end-point potentiometrically (*2.2.20*).

1 mL of *0.1 M perchloric acid* is equivalent to 32.44 mg of $C_{20}H_{21}FN_2O$.

IMPURITIES

*Specified impurities: K.*

*Other detectable impurities* (the following substances would, if present at a sufficient level, be detected by one or other of the tests in the monograph. They are limited by the general acceptance criterion for other/unspecified impurities and/or by the general monograph *Substances for pharmaceutical use (2034)*. It is therefore not necessary to identify these impurities for demonstration of compliance. See also *5.10. # ESCITALOPRAM OXALATE

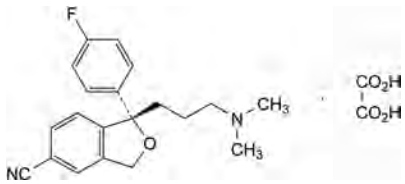
## Escitaloprami oxalas



$C_{22}H_{23}FN_2O_5$ $M_r$ 414.4
[219861-08-2]

DEFINITION

(1*S*)-1-[3-(Dimethylamino)propyl]-1-(4-fluorophenyl)-1,3-dihydro-2-benzofuran-5-carbonitrile hydrogen oxalate.

*Content*: 99.0 per cent to 101.0 per cent (anhydrous substance).

CHARACTERS

*Appearance*: white or almost white, crystalline powder.

*Solubility*: sparingly soluble in water, freely soluble in methanol, slightly soluble in methylene chloride.

IDENTIFICATION

A. Infrared absorption spectrophotometry (*2.2.24*).
*Comparison*: *escitalopram oxalate CRS*.

B. Enantiomeric purity (see Tests).

TESTS

**Related substances**. Liquid chromatography (*2.2.29*).

*Buffer solution*. Dissolve 3.4 g of *potassium dihydrogen phosphate R* in 900 mL of *water R*, adjust to pH 3.0 with *phosphoric acid R* and dilute to 1.0 L with *water R*.

*Test solution*. Dissolve 25 mg of the substance to be examined in mobile phase A and dilute to 50.0 mL with mobile phase A.

*Reference solution (a)*. Dissolve 5 mg of *escitalopram for system suitability CRS* (containing impurity D) in mobile phase A and dilute to 10.0 mL with mobile phase A.

*Reference solution (b)*. Dilute 1.0 mL of the test solution to 100.0 mL with mobile phase A. Dilute 1.0 mL of this solution to 10.0 mL with mobile phase A.

*Column*:
- *size*: *l* = 0.25 m, Ø = 4.6 mm;
- *stationary phase*: *end-capped octadecylsilyl silica gel for chromatography R* (5 µm);
- *temperature*: 45 °C.

*Mobile phase*:
- *mobile phase A*: *acetonitrile R*, buffer solution (10:90 *V/V*);
- *mobile phase B*: buffer solution, *acetonitrile R* (35:65 *V/V*);

| Time (min) | Mobile phase A (per cent *V/V*) | Mobile phase B (per cent *V/V*) | Flow rate (mL/min) |
|---|---|---|---|
| 0 - 2 | 95 | 5 | 1.0 |
| 2 - 37 | 95 → 65 | 5 → 35 | 1.0 |
| 37 - 47 | 65 → 0 | 35 → 100 | 1.0 |
| 47 - 62 | 0 | 100 | 2.0 |

*Detection*: spectrophotometer at 237 nm and at 254 nm.

*Injection*: 20 µL.

*Identification of impurities*: use the chromatogram supplied with *escitalopram for system suitability CRS* and the chromatogram obtained with reference solution (a) to identify the peak due to impurity D.

*Relative retention* with reference to escitalopram (retention time = about 38 min): impurity D = about 0.98.

*System suitability*: reference solution (a) at 237 nm:
- *peak-to-valley ratio*: minimum 5.0, where $H_p$ = height above the baseline of the peak due to impurity D and $H_v$ = height above the baseline of the lowest point of the curve separating this peak from the peak due to escitalopram.

*Calculation of percentage contents*:
- for each impurity, use the concentration of escitalopram in reference solution (b) at 237 nm.

*Limits*:
- *unspecified impurities at 237 nm and at 254 nm*: for each impurity, maximum 0.10 per cent;
- *total at 237 nm*: maximum 0.5 per cent;
- *reporting threshold at 237 nm*: 0.05 per cent.

**Enantiomeric purity**. Liquid chromatography (*2.2.29*): use the normalisation procedure.

*Test solution*. Dissolve 25.0 mg of the substance to be examined in the mobile phase and dilute to 50.0 mL with the mobile phase. Dilute 5.0 mL of the solution to 20.0 mL with the mobile phase.

*Reference solution (a)*. Dissolve 5.0 mg of *citalopram hydrobromide CRS* (containing equal amounts of impurity K and escitalopram) in the mobile phase and dilute to 10.0 mL with the mobile phase. Dilute 5.0 mL of the solution to 20.0 mL with the mobile phase.

*Reference solution (b)*. Dilute 1.0 mL of reference solution (a) to 50.0 mL with the mobile phase. Dilute 1.0 mL of this solution to 10.0 mL with the mobile phase.

*Column*:
- *size*: *l* = 0.15 m, Ø = 4.6 mm;

– *stationary phase*: *protein derivative of silica gel for chiral separation R* (5 µm);
– *temperature*: 30 °C.

*Mobile phase*: *acetonitrile R*, *0.05 M phosphate buffer solution pH 7.0 R* (15:85 *V/V*).

*Flow rate*: 0.6 mL/min.

*Detection*: spectrophotometer at 240 nm.

*Injection*: 15 µL.

*Run time*: twice the retention time of escitalopram.

*Identification of impurities*: use the chromatogram obtained with reference solution (a) to identify the peak due to impurity K.

*Relative retention* with reference to escitalopram (retention time = about 11 min): impurity K = about 1.2.

*System suitability*: reference solution (a):
– *resolution*: minimum 1.3 between the peaks due to escitalopram and impurity K;
– *symmetry factor*: maximum 4.0 for the peak due to escitalopram; maximum 4.0 for the peak due to impurity K.

*Limits*:
– *impurity K*: maximum 2.0 per cent;
– *reporting threshold*: 0.10 per cent (reference solution (b)).

**Water** (*2.5.12*): maximum 1.0 per cent, determined on 0.250 g.

**Sulfated ash** (*2.4.14*): maximum 0.1 per cent, determined on 1.0 g in a platinum crucible.

ASSAY

Dissolve 0.300 g in a mixture of 5.0 mL of *acetic anhydride R* and 75 mL of *glacial acetic acid R*. Titrate with *0.1 M perchloric acid*, determining the end-point potentiometrically (*2.2.20*).

1 mL of *0.1 M perchloric acid* is equivalent to 41.44 mg of $C_{22}H_{23}FN_2O_5$.

IMPURITIES

*Specified impurities: K.*

*Other detectable impurities* (the following substances would, if present at a sufficient level, be detected by one or other of the tests in the monograph. They are limited by the general acceptance criterion for other/unspecified impurities and/or by the general monograph *Substances for pharmaceutical use (2034)*. # ESKETAMINE HYDROCHLORIDE

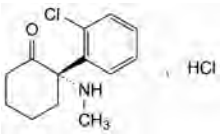
## Esketamini hydrochloridum



$C_{13}H_{17}Cl_2NO$ $M_r$ 274.2
[33643-47-9]

DEFINITION

(2*S*)-2-(2-Chlorophenyl)-2-(methylamino)cyclohexanone hydrochloride.

*Content*: 99.0 per cent to 101.0 per cent.

CHARACTERS

*Appearance*: white or almost white, crystalline powder.

*Solubility*: freely soluble in water and in methanol, soluble in ethanol (96 per cent).

IDENTIFICATION

A. Specific optical rotation (*2.2.7*): + 85.0 to + 95.0.
Dilute 12.5 mL of solution S (see Tests) to 40.0 mL with *water R*.

B. Infrared absorption spectrophotometry (*2.2.24*).
*Comparison*: *Ph. Eur. reference spectrum of esketamine hydrochloride*.

C. It gives reaction (a) of chlorides (*2.3.1*).

TESTS

**Solution S**. Dissolve 8.0 g in *carbon dioxide-free water R* and dilute to 50.0 mL with the same solvent.

**Appearance of solution**. Solution S is clear (*2.2.1*) and colourless (*2.2.2, Method II*).

**pH** (*2.2.3*): 3.5 to 4.5.
Dilute 12.5 mL of solution S to 20 mL with *carbon dioxide-free water R*.

**Impurity D**. Liquid chromatography (*2.2.29*).
*Test solution*. Dissolve 25.0 mg of the substance to be examined in *water R* and dilute to 100.0 mL with the same solvent.
*Reference solution (a)*. Dissolve 5 mg of *esketamine impurity D CRS* in *water R*, add 20 mL of the test solution and dilute to 50 mL with *water R*. Dilute 10 mL of this solution to 100 mL with *water R*.
*Reference solution (b)*. Dilute 5.0 mL of the test solution to 25.0 mL with *water R*. Dilute 5.0 mL of this solution to 50.0 mL with *water R*.
*Reference solution (c)*. Dilute 2.5 mL of reference solution (b) to 10.0 mL with *water R*. Dilute 1.0 mL of this solution to 10.0 mL with *water R*.
*Precolumn*:
– *size*: *l* = 0.01 m, Ø = 3.0 mm;
– *stationary phase*: *silica gel AGP for chiral chromatography R* (5 µm);
– *temperature*: 30 °C.
*Column*:
– *size*: *l* = 0.125 m, Ø = 4.6 mm;
– *stationary phase*: *silica gel AGP for chiral chromatography R* (5 µm);
– *temperature*: 30 °C.
*Mobile phase*: mix 16 volumes of *methanol R* and 84 volumes of a 6.8 g/L solution of *potassium dihydrogen phosphate R* previously adjusted to pH 7.0 with *potassium hydroxide R*.
*Flow rate*: 0.8 mL/min.
*Detection*: spectrophotometer at 215 nm.
*Injection*: 20 µL.
*Run time*: 20 min.
*Relative retention* with reference to esketamine (retention time = about 10 min): impurity D = about 1.3.
*System suitability*:
– *resolution*: minimum 2.0 between the peaks due to esketamine and impurity D in the chromatogram obtained with reference solution (a);
– *signal-to-noise ratio*: minimum 3 for the principal peak in the chromatogram obtained with reference solution (c).
*Limit*:
– *impurity D*: not more than the area of the principal peak in the chromatogram obtained with reference solution (b) (2.0 per cent).

**Related substances**. Liquid chromatography (*2.2.29*).
*Test solution*. Dissolve 50.0 mg of the substance to be examined in the mobile phase and dilute to 50.0 mL with the mobile phase.
*Reference solution (a)*. Dissolve 5 mg of *ketamine impurity A CRS* in the mobile phase (using ultrasound, if necessary) and dilute to 10 mL with the mobile phase. To 1 mL of the solution add 0.5 mL of the test solution and dilute to 100 mL with the mobile phase. Prepare immediately before use.
*Reference solution (b)*. Dilute 1.0 mL of the test solution to 10.0 mL with the mobile phase. Dilute 1.0 mL of this solution to 20.0 mL with the mobile phase.

*Column*:

– *size*: *l* = 0.125 m, Ø = 4.0 mm;

– *stationary phase*: spherical *octadecylsilyl silica gel for chromatography R* (5 µm).

*Mobile phase*: dissolve 0.95 g of *sodium hexanesulfonate R* in 1000 mL of a mixture of 25 volumes of *acetonitrile R* and 75 volumes of *water R* and add 4 mL of *acetic acid R*.

*Flow rate*: 1.0 mL/min.

*Detection*: spectrophotometer at 215 nm.

*Injection*: 20 µL.

*Run time*: 10 times the retention time of esketamine.

*Relative retention* with reference to esketamine: impurity A = about 1.6; impurity B = about 3.3; impurity C = about 4.6.

*System suitability*: reference solution (a):

– *retention time*: esketamine = 3.0 min to 4.5 min;

– *resolution*: minimum 1.5 between the peaks due to impurity A and esketamine.

*Limits*:

– *impurities A, B, C*: for each impurity, not more than 0.4 times the area of the principal peak in the chromatogram obtained with reference solution (b) (0.2 per cent);

– *any other impurity*: for each impurity, not more than 0.2 times the area of the principal peak in the chromatogram obtained with reference solution (b) (0.1 per cent);

– *total*: not more than the area of the principal peak in the chromatogram obtained with reference solution (b) (0.5 per cent);

– *disregard limit*: 0.2 times the area of the principal peak in the chromatogram obtained with reference solution (b) (0.1 per cent).

**Sulfated ash** (*2.4.14*): maximum 0.1 per cent, determined on 1.0 g.

ASSAY

Dissolve 0.200 g in 50 mL of *methanol R* and add 1.0 mL of *0.1 M hydrochloric acid*. Carry out a potentiometric titration (*2.2.20*), using *0.1 M sodium hydroxide*. Read the volume added between the 2 points of inflexion.

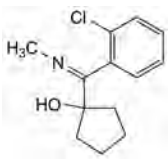
1 mL of *0.1 M sodium hydroxide* is equivalent to 27.42 mg of $C_{13}H_{17}Cl_2NO$.

STORAGE

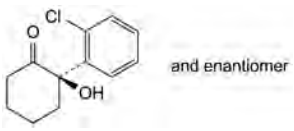
Protected from light.

IMPURITIES

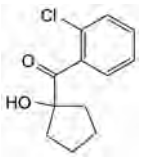
*Specified impurities: A, B, C, D.*



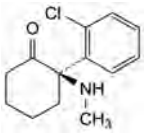
A. 1-[(2-chlorophenyl)(methylimino)methyl]cyclopentanol,



B. (2*RS*)-2-(2-chlorophenyl)-2-hydroxycyclohexanone,



C. (2-chlorophenyl)(1-hydroxycyclopentyl)methanone,

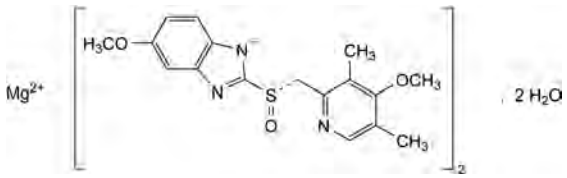


D. (2*R*)-2-(2-chlorophenyl)-2-(methylamino)cyclohexanone ((*R*)-ketamine).

**07/2014:2787**

# ESOMEPRAZOLE MAGNESIUM DIHYDRATE

## Esomeprazolum magnesicum dihydricum



$C_{34}H_{36}MgN_6O_6S_2,2H_2O$ $M_r$ 749.2
[217087-10-0]

DEFINITION

Magnesium bis[5-methoxy-2-[(*S*)-[(4-methoxy-3,5-dimethylpyridin-2-yl)methyl]sulfinyl]-1*H*-benzimidazol-1-ide] dihydrate.

*Content*: 98.0 per cent to 102.0 per cent (anhydrous substance).

CHARACTERS

*Appearance*: white or slightly coloured powder, slightly hygroscopic.

*Solubility*: slightly soluble in water, soluble in methanol, practically insoluble in heptane.

It shows polymorphism (*5.9*).

IDENTIFICATION

A. Infrared absorption spectrophotometry (*2.2.24*).
*Comparison*: *esomeprazole magnesium dihydrate CRS*.

If the spectra obtained in the solid state show differences, dissolve the substance to be examined and the reference substance separately in *methanol R*, evaporate to dryness and record new spectra using the residues.

B. Enantiomeric purity (see Tests).

C. Ignite about 0.5 g of the substance to be examined according to the procedure for the sulfated ash test (*2.4.14*). Dissolve the residue in 10 mL of *water R*. 2 mL of this solution gives the reaction of magnesium (*2.3.1*).

D. Water (see Tests).

TESTS

**Absorbance** (*2.2.25*): maximum 0.20 at 440 nm.

Dissolve 0.500 g in *methanol R* and dilute to 25.0 mL with the same solvent. Filter through a membrane filter (nominal pore size 0.45 µm).

**Enantiomeric purity**. Liquid chromatography (*2.2.29*): use the normalisation procedure.

*Buffer solution pH 6.0.* Mix 20 mL of a 179.1 g/L solution of *disodium hydrogen phosphate dodecahydrate R* and 70 mL of a 156.0 g/L solution of *sodium dihydrogen phosphate R*, then dilute to 1000 mL with *water R*. Dilute 250 mL of this solution to 1000 mL with *water R*.

*Buffer solution pH 11.0.* Mix 11 mL of a 95.0 g/L solution of *trisodium phosphate dodecahydrate R* and 22 mL of a 179.1 g/L solution of *disodium hydrogen phosphate dodecahydrate R*, then dilute to 1000 mL with *water R*.

*Test solution.* Dissolve 40 mg of the substance to be examined in 5 mL of *methanol R* and dilute to 50.0 mL with buffer solution pH 11.0. Dilute 1.0 mL of this solution to 25.0 mL with buffer solution pH 11.0.

*Reference solution.* Dissolve 2 mg of *omeprazole CRS* in buffer solution pH 11.0 and dilute to 50.0 mL with the same buffer solution. Dilute 1.0 mL of the solution to 10.0 mL with buffer solution pH 11.0.

*Column*:

- *size*: *l* = 0.1 m, Ø = 4.0 mm;
- *stationary phase*: $\alpha_1$*-acid-glycoprotein silica gel for chiral separation R* (5 µm).

*Mobile phase*: *acetonitrile R*, buffer solution pH 6.0 (13:87 *V/V*).

*Flow rate*: 0.6 mL/min.

*Detection*: spectrophotometer at 302 nm.

*Injection*: 20 µL.

*Relative retention* with reference to esomeprazole (retention time = about 5 min): impurity F = about 0.7.

*System suitability*: reference solution:

- *resolution*: minimum 3.0 between the peaks due to impurity F and esomeprazole.

*Limit*:

- *impurity F*: maximum 0.6 per cent; disregard any peak other than impurity F and esomeprazole.

**Related substances**. Liquid chromatography (*2.2.29*): use the normalisation procedure. *Prepare the solutions immediately before use.*

*Test solution.* Dissolve 14 mg of the substance to be examined in the mobile phase and dilute to 100.0 mL with the mobile phase.

*Reference solution (a).* Dissolve 1 mg of *omeprazole CRS* and 1 mg of *omeprazole impurity D CRS* in the mobile phase and dilute to 10.0 mL with the mobile phase.

*Reference solution (b).* Dissolve 3 mg of *omeprazole for peak identification CRS* (containing impurity E) in the mobile phase and dilute to 20.0 mL with the mobile phase.

*Reference solution (c).* Dilute 1.0 mL of the test solution to 100.0 mL with the mobile phase. Dilute 1.0 mL of this solution to 10.0 mL with the mobile phase.

*Column*:

- *size*: *l* = 0.125 m, Ø = 4.6 mm;
- *stationary phase*: *octylsilyl silica gel for chromatography R* (5 µm).

*Mobile phase*: mix 27 volumes of *acetonitrile R* and 73 volumes of a 1.4 g/L solution of *disodium hydrogen phosphate dodecahydrate R* previously adjusted to pH 7.6 with *phosphoric acid R*.

*Flow rate*: 1 mL/min.

*Detection*: spectrophotometer at 280 nm.

*Injection*: 40 µL.

*Run time*: 4 times the retention time of esomeprazole.

*Identification of impurities*: use the chromatogram supplied with *omeprazole for peak identification CRS* and the chromatogram obtained with reference solution (b) to identify the peak due to impurity E; use the chromatogram obtained with reference solution (a) to identify the peak due to impurity D.

*Relative retention* with reference to esomeprazole (retention time = about 9 min): impurity E = about 0.4; impurity D = about 0.7.

*System suitability*: reference solution (a):

- *resolution*: minimum 3.0 between the peaks due to impurity D and omeprazole.

*Limits*:

- *impurities D, E*: for each impurity, maximum 0.15 per cent;
- *unspecified impurities*: for each impurity, maximum 0.10 per cent;
- *total*: maximum 0.3 per cent;
- *disregard limit*: 0.5 times the area of the principal peak in the chromatogram obtained with reference solution (c) (0.05 per cent).

**Magnesium**: 3.30 per cent to 3.55 per cent (anhydrous substance).

Dissolve 0.400 g in 25 mL of *methanol R*, sonicate until dissolution is complete. Add 25 mL of *water R*, 10 mL of *concentrated ammonia R*, 20.000 mL of *0.05 M sodium edetate* and about 50 mg of *mordant black 11 triturate R*. Titrate the excess of sodium edetate with *0.05 M zinc sulfate* until the colour changes from full blue to violet. Carry out a blank titration.

1 mL of *0.05 M sodium edetate* corresponds to 1.21525 mg of Mg.

**Water** (*2.5.12*): 4.5 per cent to 6.1 per cent, determined on 0.200 g.

ASSAY

Liquid chromatography (*2.2.29*).

*Buffer solution pH 11.0.* Mix 11 mL of a 95.0 g/L solution of *trisodium phosphate dodecahydrate R* and 22 mL of a 179.1 g/L solution of *disodium hydrogen phosphate dodecahydrate R*, then dilute to 100.0 mL with *water R*.

*Test solution.* Dissolve 10.0 mg of the substance to be examined in about 10 mL of *methanol R*, add 10 mL of buffer solution pH 11.0 and dilute to 200.0 mL with *water R*.

*Reference solution.* Dissolve 10.0 mg of *omeprazole CRS* in about 10 mL of *methanol R*, add 10 mL of buffer solution pH 11.0 and dilute to 200.0 mL with *water R*.

*Column*:

- *size*: *l* = 0.125 m, Ø = 4 mm;
- *stationary phase*: *octylsilyl silica gel for chromatography R* (5 µm).

*Mobile phase*: mix 35 volumes of *acetonitrile R* and 65 volumes of a 1.4 g/L solution of *disodium hydrogen phosphate dodecahydrate R* previously adjusted to pH 7.6 with *phosphoric acid R*.

*Flow rate*: 1 mL/min.

*Detection*: spectrophotometer at 280 nm.

*Injection*: 20 µL.

*Run time*: 1.5 times the retention time of esomeprazole.

*Retention time*: esomeprazole = about 4 min.

Calculate the percentage content of $C_{34}H_{36}MgN_6O_6S_2$ taking into account the assigned content of *omeprazole CRS*.

1 g of omeprazole is equivalent to 1.032 g of esomeprazole magnesium.

STORAGE

In an airtight container, protected from light.

IMPURITIES

*Specified impurities: D, E, F.*

*Other detectable impurities* (the following substances would, if present at a sufficient level, be detected by one or other of the tests in the monograph. They are limited by the general acceptance criterion for other/unspecified impurities and/or by the general monograph *Substances for pharmaceutical use (2034)*. # ESOMEPRAZOLE MAGNESIUM TRIHYDRATE

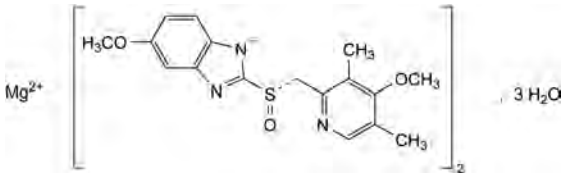
## Esomeprazolum magnesicum trihydricum



$C_{34}H_{36}MgN_6O_6S_2,3H_2O$ $M_r$ 767.2

[217087-09-7]

DEFINITION

Magnesium bis[5-methoxy-2-[(*S*)-[(4-methoxy-3,5-dimethylpyridin-2-yl)methyl]sulfinyl]-1*H*-benzimidazol-1-ide] trihydrate.

*Content*: 98.0 per cent to 102.0 per cent (anhydrous substance).

CHARACTERS

*Appearance*: white or slightly coloured powder, slightly hygroscopic.

*Solubility*: slightly soluble in water, soluble in methanol, practically insoluble in heptane.

IDENTIFICATION

A. Infrared absorption spectrophotometry (*2.2.24*).
*Comparison*: *esomeprazole magnesium trihydrate CRS*.

B. Enantiomeric purity (see Tests).

C. Ignite about 0.5 g of the substance to be examined according to the procedure for the sulfated ash test (*2.4.14*). Dissolve the residue in 10 mL of *water R*. 2 mL of this solution gives the reaction of magnesium (*2.3.1*).

D. Water (see Tests).

TESTS

**Absorbance** (*2.2.25*): maximum 0.20 at 440 nm.

Dissolve 0.500 g in *methanol R* and dilute to 25.0 mL with the same solvent. Filter through a membrane filter (nominal pore size 0.45 µm).

**Enantiomeric purity**. Liquid chromatography (*2.2.29*): use the normalisation procedure.

*Buffer solution pH 6.0.* Mix 20 mL of a 179.1 g/L solution of *disodium hydrogen phosphate dodecahydrate R* and 70 mL of a 156.0 g/L solution of *sodium dihydrogen phosphate R*, then dilute to 1000 mL with *water R*. Dilute 250 mL of this solution to 1000 mL with *water R*.

*Buffer solution pH 11.0.* Mix 11 mL of a 95.0 g/L solution of *trisodium phosphate dodecahydrate R* and 22 mL of a 179.1 g/L solution of *disodium hydrogen phosphate dodecahydrate R*, then dilute to 1000 mL with *water R*.

*Test solution.* Dissolve 40 mg of the substance to be examined in 5 mL of *methanol R* and dilute to 50.0 mL with buffer solution pH 11.0. Dilute 1.0 mL of this solution to 25.0 mL with buffer solution pH 11.0.

*Reference solution.* Dissolve 2 mg of *omeprazole CRS* in buffer solution pH 11.0 and dilute to 50.0 mL with the same buffer solution. Dilute 1.0 mL of the solution to 10.0 mL with buffer solution pH 11.0.

*Column*:

– *size*: *l* = 0.1 m, Ø = 4.0 mm;

– *stationary phase*: $\alpha_1$*-acid-glycoprotein silica gel for chiral separation R* (5 µm).

*Mobile phase*: *acetonitrile R*, buffer solution pH 6.0 (13:87 *V/V*).

*Flow rate*: 0.6 mL/min.

*Detection*: spectrophotometer at 302 nm.

*Injection*: 20 µL.

*Relative retention* with reference to esomeprazole (retention time = about 5 min): impurity F = about 0.7.

*System suitability*: reference solution:

– *resolution*: minimum 3.0 between the peaks due to impurity F and esomeprazole.

*Limit*:

– *impurity F*: maximum 0.2 per cent; disregard any peak other than impurity F and esomeprazole.

**Related substances**. Liquid chromatography (*2.2.29*): use the normalisation procedure. *Prepare the solutions immediately before use.*

*Test solution.* Dissolve 14 mg of the substance to be examined in the mobile phase and dilute to 100.0 mL with the mobile phase.

*Reference solution (a).* Dissolve 1 mg of *omeprazole CRS* and 1 mg of *omeprazole impurity D CRS* in the mobile phase and dilute to 10.0 mL with the mobile phase.

*Reference solution (b).* Dissolve 3 mg of *omeprazole for peak identification CRS* (containing impurity E) in the mobile phase and dilute to 20.0 mL with the mobile phase.

*Reference solution (c).* Dilute 1.0 mL of the test solution to 100.0 mL with the mobile phase. Dilute 1.0 mL of this solution to 10.0 mL with the mobile phase.

*Column*:

– *size*: *l* = 0.125 m, Ø = 4.6 mm;

– *stationary phase*: *octylsilyl silica gel for chromatography R* (5 µm).

*Mobile phase*: mix 27 volumes of *acetonitrile R* and 73 volumes of a 1.4 g/L solution of *disodium hydrogen phosphate dodecahydrate R* previously adjusted to pH 7.6 with *phosphoric acid R*.

*Flow rate*: 1 mL/min.

*Detection*: spectrophotometer at 280 nm.

*Injection*: 40 µL.

*Run time*: 4 times the retention time of esomeprazole.

*Identification of impurities*: use the chromatogram supplied with *omeprazole for peak identification CRS* and the chromatogram obtained with reference solution (b) to identify the peak due to impurity E; use the chromatogram obtained with reference solution (a) to identify the peak due to impurity D.

*Relative retention* with reference to esomeprazole (retention time = about 9 min): impurity E = about 0.4; impurity D = about 0.7.

*System suitability*: reference solution (a):

– *resolution*: minimum 3.0 between the peaks due to impurity D and omeprazole.

*Limits*:

– *impurities D, E*: for each impurity, maximum 0.15 per cent;

– *unspecified impurities*: for each impurity, maximum 0.10 per cent;

– *total*: maximum 0.3 per cent;

– *disregard limit*: 0.5 times the area of the principal peak in the chromatogram obtained with reference solution (c) (0.05 per cent).

**Magnesium**: 3.30 per cent to 3.55 per cent (anhydrous substance).

Dissolve 0.400 g in 25 mL of *methanol R*, sonicate until dissolution is complete. Add 25 mL of *water R*, 10 mL of *concentrated ammonia R*, 20.000 mL of *0.05 M sodium edetate* and about 50 mg of *mordant black 11 triturate R*. Titrate the excess of sodium edetate with *0.05 M zinc sulfate* until the colour changes from full blue to violet. Carry out a blank titration.

1 mL of *0.05 M sodium edetate* corresponds to 1.21525 mg of Mg.

**Water** (*2.5.12*): 6.2 per cent to 8.0 per cent, determined on 0.200 g.

ASSAY

Liquid chromatography (*2.2.29*).

*Buffer solution pH 11.0.* Mix 11 mL of a 95.0 g/L solution of *trisodium phosphate dodecahydrate R* and 22 mL of a 179.1 g/L solution of *disodium hydrogen phosphate dodecahydrate R*, then dilute to 100.0 mL with *water R*.

*Test solution.* Dissolve 10.0 mg of the substance to be examined in about 10 mL of *methanol R*, add 10 mL of buffer solution pH 11.0 and dilute to 200.0 mL with *water R*.

*Reference solution.* Dissolve 10.0 mg of *omeprazole CRS* in about 10 mL of *methanol R*, add 10 mL of buffer solution pH 11.0 and dilute to 200.0 mL with *water R*.

*Column*:

– *size*: *l* = 0.125 m, Ø = 4 mm;

– *stationary phase*: *octylsilyl silica gel for chromatography R* (5 µm).

*Mobile phase*: mix 35 volumes of *acetonitrile R* and 65 volumes of a 1.4 g/L solution of *disodium hydrogen phosphate dodecahydrate R* previously adjusted to pH 7.6 with *phosphoric acid R*.

*Flow rate*: 1 mL/min.

*Detection*: spectrophotometer at 280 nm.

*Injection*: 20 µL.

*Run time*: 1.5 times the retention time of esomeprazole.

*Retention time*: esomeprazole = about 4 min.

Calculate the percentage content of $C_{34}H_{36}MgN_6O_6S_2$ taking into account the assigned content of *omeprazole CRS*.

1 g of omeprazole is equivalent to 1.032 g of esomeprazole magnesium.

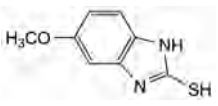
STORAGE

In an airtight container, protected from light.

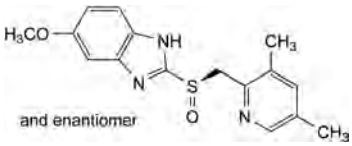
IMPURITIES

*Specified impurities: D, E, F.*

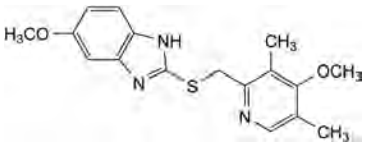
*Other detectable impurities* (the following substances would, if present at a sufficient level, be detected by one or other of the tests in the monograph. They are limited by the general acceptance criterion for other/unspecified impurities and/or by the general monograph *Substances for pharmaceutical use (2034)*. It is therefore not necessary to identify these impurities for demonstration of compliance. See also *5.10. Control of impurities in substances for pharmaceutical use*): *A, B, C.*



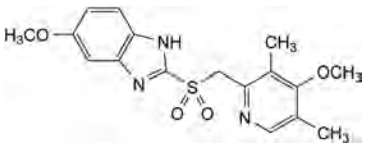
A. 5-methoxy-1*H*-benzimidazole-2-thiol,



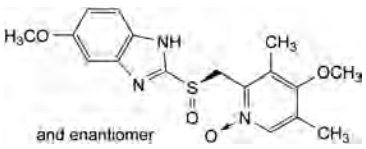
B. 2-[(*RS*)-[(3,5-dimethylpyridin-2-yl)methyl]sulfinyl]-5-methoxy-1*H*-benzimidazole,



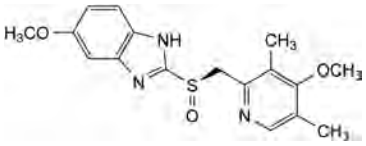
C. 5-methoxy-2-[[(4-methoxy-3,5-dimethylpyridin-2-yl)methyl]sulfanyl]-1*H*-benzimidazole (ufiprazole),



D. 5-methoxy-2-[[(4-methoxy-3,5-dimethylpyridin-2-yl)methyl]sulfonyl]-1*H*-benzimidazole (omeprazole sulfone),



E. 4-methoxy-2-[[(*RS*)-(5-methoxy-1*H*-benzimidazol-2-yl)sulfinyl]methyl]-3,5-dimethylpyridine 1-oxide,

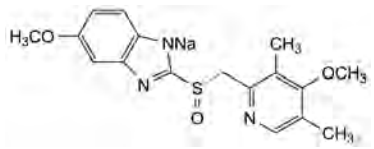


F. 5-methoxy-2-[(*R*)-[(4-methoxy-3,5-dimethylpyridin-2-yl)methyl]sulfinyl]-1*H*-benzimidazole ((*R*)-omeprazole).

**04/2019:2923**

# ESOMEPRAZOLE SODIUM

## Esomeprazolum natricum



$C_{17}H_{18}N_3NaO_3S$ $M_r$ 367.4
[161796-78-7]

DEFINITION

Sodium 5-methoxy-2-[(*S*)-[(4-methoxy-3,5-dimethylpyridin-2-yl)methanesulfinyl]-1*H*-benzimidazol-1-ide.

*Content*: 99.0 per cent to 101.0 per cent (anhydrous substance).

CHARACTERS

*Appearance*: white or almost white, amorphous or crystalline powder, slightly hygroscopic.

*Solubility*: freely soluble in water and in ethanol (96 per cent), soluble in propylene glycol, very slightly soluble in methylene chloride.

It shows polymorphism (*5.9*).

IDENTIFICATION

A. Infrared absorption spectrophotometry (*2.2.24*).

*Comparison*: *esomeprazole sodium CRS*.

If the spectra obtained in the solid state show differences, dissolve the substance to be examined and the reference substance separately in *ethanol (96 per cent) R*, evaporate to dryness and record new spectra using the residues.

B. Enantiomeric purity (see Tests).

C. Ignite 1 g and cool. Add 1 mL of *water R* to the residue and neutralise with *hydrochloric acid R*. Filter and dilute the filtrate to 4 mL with *water R*. 0.1 mL of the solution gives reaction (b) of sodium (*2.3.1*).

TESTS

**Solution S**. Dissolve 0.50 g in *carbon dioxide-free water R* and dilute to 25 mL with the same solvent.

**Appearance of solution**. Solution S is clear (*2.2.1*) and not more intensely coloured than reference solution $Y_7$ (*2.2.2, Method II*).

**pH** (*2.2.3*): 10.3 to 11.3 for solution S.

**Enantiomeric purity**. Liquid chromatography (*2.2.29*): use the normalisation procedure. *Prepare the solutions immediately before use.*

*Buffer solution pH 6.0.* Mix 20 mL of a 179.1 g/L solution of *disodium hydrogen phosphate dodecahydrate R* and 70 mL of a 156.0 g/L solution of *sodium dihydrogen phosphate R*, then dilute to 1000.0 mL with *water for chromatography R*. Dilute 250 mL of this solution to 1000.0 mL with *water for chromatography R*.

*Buffer solution pH 11.0.* Mix 11 mL of a 95.0 g/L solution of *trisodium phosphate dodecahydrate R* and 22 mL of a 179.1 g/L solution of *disodium hydrogen phosphate dodecahydrate R*, then dilute to 1000.0 mL with *water R*.

*Test solution.* Dissolve 40 mg of the substance to be examined in buffer solution pH 11.0 and dilute to 50.0 mL with the same buffer solution. Dilute 1.0 mL of this solution to 25.0 mL with buffer solution pH 11.0.

*Reference solution (a).* Dissolve 2 mg of *omeprazole CRS* in buffer solution pH 11.0 and dilute to 50 mL with the same buffer solution. Dilute 1 mL of the solution to 10 mL with buffer solution pH 11.0.

*Reference solution (b).* Dilute 1.0 mL of the test solution to 100.0 mL with buffer solution pH 11.0. Dilute 1.0 mL of this solution to 20.0 mL with buffer solution pH 11.0.

*Column*:

– *size*: *l* = 0.10 m, Ø = 4.0 mm;
– *stationary phase*: $\alpha_1$*-acid-glycoprotein silica gel for chiral separation R* (5 µm).

*Mobile phase*: *acetonitrile R*, buffer solution pH 6.0 (15:85 *V/V*).

*Flow rate*: 0.6 mL/min.

*Detection*: spectrophotometer at 302 nm.

*Injection*: 20 µL.

*Run time*: 1.5 times the retention time of esomeprazole.

*Identification of impurities*: use the chromatogram obtained with reference solution (a) to identify the peak due to impurity B.

*Relative retention* with reference to esomeprazole (retention time = about 4 min): impurity B = about 0.7.

*System suitability*: reference solution (a):

– *resolution*: minimum 2.8 between the peaks due to impurity B and esomeprazole.

*Limit*:

– *impurity B*: maximum 0.2 per cent;

– *reporting threshold*: 0.05 per cent (reference solution (b)); disregard any peak other than impurity B and esomeprazole.

**Related substances**. Liquid chromatography (*2.2.29*). *Prepare the solutions immediately before use.*

*Buffer solution pH 7.6.* Dissolve 5.7 g of *disodium hydrogen phosphate dihydrate R* and 0.7 g of *sodium dihydrogen phosphate monohydrate R* in *water for chromatography R* and dilute to 1000.0 mL with the same solvent.

*Test solution.* Dissolve 10 mg of the substance to be examined in mobile phase A and dilute to 50.0 mL with mobile phase A.

*Reference solution (a).* Dissolve 1 mg of *omeprazole CRS* and 1 mg of *omeprazole impurity D CRS* in mobile phase A and dilute to 50 mL with mobile phase A.

*Reference solution (b).* Dilute 1.0 mL of the test solution to 100.0 mL with mobile phase A. Dilute 1.0 mL of this solution to 10.0 mL with mobile phase A.

*Column*:

– *size*: *l* = 0.10 m, Ø = 4.6 mm;

– *stationary phase*: *end-capped octadecylsilyl amorphous organosilica polymer for chromatography R* (3.5 µm).

*Mobile phase*:

– *mobile phase A*: mix 100 mL of *acetonitrile R* and 100 mL of buffer solution pH 7.6 and dilute to 1000.0 mL with *water for chromatography R*;

– *mobile phase B*: mix 10 mL of buffer solution pH 7.6 and 800 mL of *acetonitrile R* and dilute to 1000.0 mL with *water for chromatography R*;

| Time (min) | Mobile phase A (per cent *V/V*) | Mobile phase B (per cent *V/V*) |
|---|---|---|
| 0 - 2 | 100 | 0 |
| 2 - 12 | 100 → 80 | 0 → 20 |
| 12 - 32 | 80 → 0 | 20 → 100 |

*Flow rate*: 1.0 mL/min.

*Detection*: spectrophotometer at 302 nm.

*Injection*: 20 µL.

*Identification of impurities*: use the chromatogram obtained with reference solution (a) to identify the peak due to impurity D.

*Relative retention* with reference to esomeprazole (retention time = about 16 min): impurity D = about 0.9.

*System suitability*: reference solution (a):

– *resolution*: minimum 2.0 between the peaks due to impurity D and omeprazole.

*Calculation of percentage contents*:

– for each impurity, use the concentration of esomeprazole sodium in reference solution (b).

*Limits*:

– *impurity D*: maximum 0.2 per cent;

– *unspecified impurities*: for each impurity, maximum 0.10 per cent;

– *total*: maximum 0.5 per cent;

– *reporting threshold*: 0.05 per cent.

**Water** (*2.5.12*): maximum 4.0 per cent, determined on 0.300 g.

ASSAY

Dissolve 0.300 g in 50 mL of *carbon dioxide-free water R*. Titrate with *0.1 M hydrochloric acid*, determining the end-point potentiometrically (*2.2.20*).

1 mL of *0.1 M hydrochloric acid* is equivalent to 36.74 mg of $C_{17}H_{18}N_3NaO_3S$.

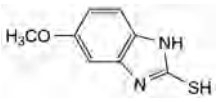
STORAGE

In an airtight container, protected from light.

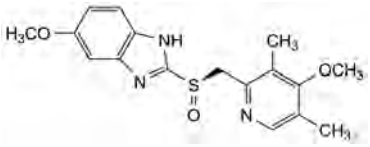
IMPURITIES

*Specified impurities: B, D.*

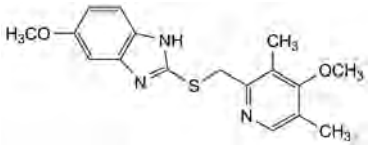
*Other detectable impurities* (the following substances would, if present at a sufficient level, be detected by one or other of the tests in the monograph. They are limited by the general acceptance criterion for other/unspecified impurities and/or by the general monograph *Substances for pharmaceutical use (2034)*. It is therefore not necessary to identify these impurities for demonstration of compliance. See also *5.10. Control of impurities in substances for pharmaceutical use*): *A, C, E, F, G.*



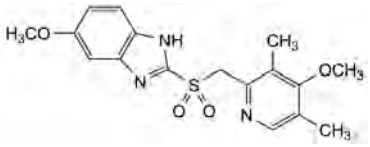
A. 5-methoxy-1*H*-benzimidazole-2-thiol,



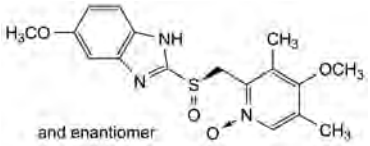
B. 5-methoxy-2-[(*R*)-(4-methoxy-3,5-dimethylpyridin-2-yl)methanesulfinyl]-1*H*-benzimidazole ((*R*)-omeprazole),



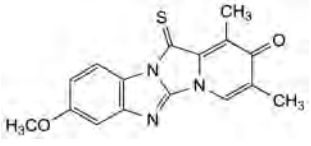
C. 5-methoxy-2-[[(4-methoxy-3,5-dimethylpyridin-2-yl)methyl]sulfanyl]-1*H*-benzimidazole (ufiprazole),



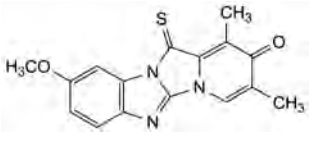
D. 5-methoxy-2-[(4-methoxy-3,5-dimethylpyridin-2-yl)methanesulfonyl]-1*H*-benzimidazole (omeprazole sulfone),



E. 4-methoxy-2-[[(*RS*)-5-methoxy-1*H*-benzimidazole-2-sulfinyl]methyl]-3,5-dimethylpyridine 1-oxide,



F. 8-methoxy-1,3-dimethyl-12-sulfanylidenepyrido[1′,2′:3,4]imidazo[1,2-a]benzimidazol-2(12*H*)-one,



G. 9-methoxy-1,3-dimethyl-12-sulfanylidenepyrido[1′,2′:3,4]imidazo[1,2-*a*]benzimidazol-2(12*H*)-one.

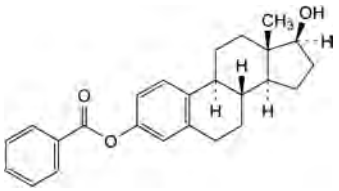
# ESTRADIOL BENZOATE

## Estradioli benzoas



$C_{25}H_{28}O_3$ $M_r$ 376.5
[50-50-0]

DEFINITION

17β-Hydroxyestra-1,3,5(10)-trien-3-yl benzoate.

*Content*: 97.0 per cent to 103.0 per cent (dried substance).

CHARACTERS

*Appearance*: almost white, crystalline powder or colourless crystals.

*Solubility*: practically insoluble in water, freely soluble in methylene chloride, sparingly soluble in acetone, slightly soluble in methanol.

It shows polymorphism (*5.9*).

IDENTIFICATION

Infrared absorption spectrophotometry (*2.2.24*).

*Comparison*: *estradiol benzoate CRS*.

If the spectra obtained in the solid state show differences, dissolve the substance to be examined and the reference substance separately in *acetone R*, evaporate to dryness and record new spectra using the residues.

TESTS

**Specific optical rotation** (*2.2.7*): + 55.0 to + 59.0 (dried substance).

Dissolve 0.250 g in *acetone R* and dilute to 25.0 mL with the same solvent.

**Related substances**. Liquid chromatography (*2.2.29*).

*Test solution*. Dissolve 20 mg of the substance to be examined in *acetonitrile R1* and dilute to 10.0 mL with the same solvent.

*Reference solution (a)*. Dissolve 5 mg of *estradiol benzoate for system suitability CRS* (containing impurities A, B, C, E and G) in *acetonitrile R1* and dilute to 2.5 mL with the same solvent.

*Reference solution (b)*. Dilute 0.5 mL of the test solution to 100.0 mL with *acetonitrile R1*.

*Column*:

- *size*: *l* = 0.25 m, Ø = 4.6 mm;
- *stationary phase*: *end-capped octylsilyl silica gel for chromatography R* (5 µm).

*Mobile phase*:

- *mobile phase A*: *water R*, *acetonitrile R1* (40:60 *V/V*);
- *mobile phase B*: *acetonitrile R1*;

| Time (min) | Mobile phase A (per cent *V/V*) | Mobile phase B (per cent *V/V*) |
|---|---|---|
| 0 - 20 | 100 | 0 |
| 20 - 21 | 100 → 10 | 0 → 90 |
| 21 - 31 | 10 | 90 |

*Flow rate*: 1.0 mL/min.

*Detection*: spectrophotometer at 230 nm.

*Injection*: 10 µL.

*Identification of impurities*: use the chromatogram supplied with *estradiol benzoate for system suitability CRS* and the chromatogram obtained with reference solution (a) to identify the peaks due to impurities A, B, C, E and G.

*Relative retention* with reference to estradiol benzoate (retention time = about 19 min): impurity A = about 0.3; impurity E = about 1.1; impurity B = about 1.2; impurity G = about 1.3; impurity C = about 1.5.

*System suitability*: reference solution (a):

- *peak-to-valley ratio*: minimum 2.0, where $H_p$ = height above the baseline of the peak due to impurity E and $H_v$ = height above the baseline of the lowest point of the curve separating this peak from the peak due to estradiol benzoate.

*Limits*:

- *correction factors*: for the calculation of content, multiply the peak areas of the following impurities by the corresponding correction factor: impurity A = 3.3; impurity C = 0.7;
- *impurity C*: not more than the area of the principal peak in the chromatogram obtained with reference solution (b) (0.5 per cent);
- *impurities B, E, G*: for each impurity, not more than 0.6 times the area of the principal peak in the chromatogram obtained with reference solution (b) (0.3 per cent);
- *impurity A*: not more than 0.4 times the area of the principal peak in the chromatogram obtained with reference solution (b) (0.2 per cent);
- *unspecified impurities*: for each impurity, not more than 0.2 times the area of the principal peak in the chromatogram obtained with reference solution (b) (0.10 per cent);
- *total*: not more than twice the area of the principal peak in the chromatogram obtained with reference solution (b) (1.0 per cent);
- *disregard limit*: 0.1 times the area of the principal peak in the chromatogram obtained with reference solution (b) (0.05 per cent).

**Loss on drying** (*2.2.32*): maximum 0.5 per cent, determined on 1.000 g by drying in an oven at 105 °C for 3 h.

ASSAY

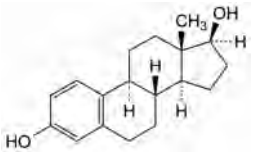
Dissolve 25.0 mg in *anhydrous ethanol R* and dilute to 250.0 mL with the same solvent. Dilute 10.0 mL of this solution to 100.0 mL with *anhydrous ethanol R*. Measure the absorbance (*2.2.25*) at the absorption maximum at 231 nm.

Calculate the content of $C_{25}H_{28}O_3$ taking the specific absorbance to be 500.

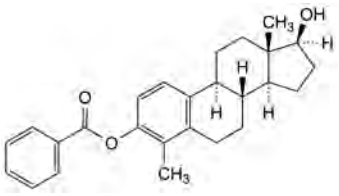
IMPURITIES

*Specified impurities: A, B, C, E, G.*

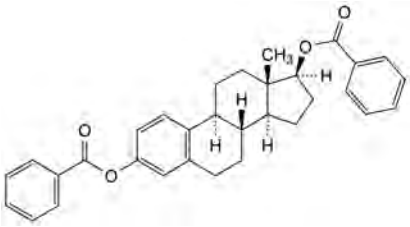
*Other detectable impurities* (the following substances would, if present at a sufficient level, be detected by one or other of the tests in the monograph. They are limited by the general acceptance criterion for other/unspecified impurities and/or by the general monograph *Substances for pharmaceutical use (2034)*. It is therefore not necessary to identify these impurities for demonstration of compliance. See also *5.10. Control of impurities in substances for pharmaceutical use*): *D, F, H.*



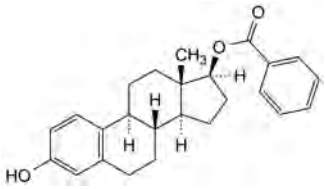
A. estra-1,3,5(10)-triene-3,17β-diol (estradiol),



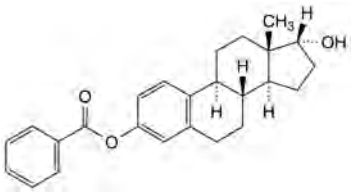
B. 17β-hydroxy-4-methylestra-1,3,5(10)-trien-3-yl benzoate,



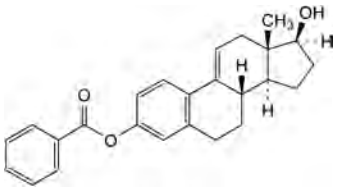
C. estra-1,3,5(10)-triene-3,17β-diyl dibenzoate,



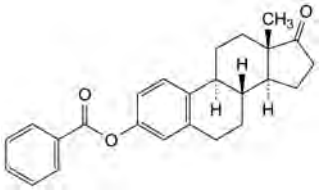
D. 3-hydroxyestra-1,3,5(10)-trien-17β-yl benzoate,



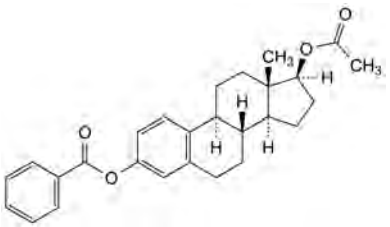
E. 17α-hydroxyestra-1,3,5(10)-trien-3-yl benzoate,



F. 17β-hydroxyestra-1,3,5(10),9(11)-tetraen-3-yl benzoate.



G. 17-oxoestra-1,3,5(10)-trien-3-yl benzoate (estrone benzoate),

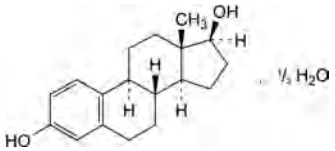


H. estra-1,3,5(10)-triene-3,17β-diyl 17-acetate 3-benzoate,

**04/2017:0821**

# ESTRADIOL HEMIHYDRATE

## Estradiolum hemihydricum



$C_{18}H_{24}O_2,½H_2O$ $M_r$ 281.4

DEFINITION

Estra-1,3,5(10)-triene-3,17β-diol hemihydrate.

*Content*: 97.0 per cent to 103.0 per cent (anhydrous substance).

CHARACTERS

*Appearance*: white or almost white, crystalline powder or colourless crystals.

*Solubility*: practically insoluble in water, soluble in acetone, sparingly soluble in ethanol (96 per cent), slightly soluble in methylene chloride.

IDENTIFICATION

*First identification: B.*

*Second identification: A, C, D, E.*

A. Melting point (*2.2.14*): 175 °C to 180 °C.

B. Infrared absorption spectrophotometry (*2.2.24*).
*Comparison*: *estradiol hemihydrate CRS*.

C. Thin-layer chromatography (*2.2.27*).
*Test solution*. Dissolve 50 mg of the substance to be examined in *methanol R* and dilute to 50 mL with the same solvent.
*Reference solution (a)*. Dissolve 50 mg of *estradiol hemihydrate CRS* in *methanol R* and dilute to 50 mL with the same solvent.
*Reference solution (b)*. Dissolve 25 mg of *ethinylestradiol CRS* in reference solution (a) and dilute to 25 mL with reference solution (a).
*Plate*: *TLC silica gel plate R*.
*Mobile phase*: *ethanol (96 per cent) R*, *toluene R* (20:80 *V/V*).
*Application*: 5 µL.
*Development*: over 3/4 of the plate.
*Drying*: in air until the solvent has evaporated.
*Detection*: heat at 110 °C for 10 min. Spray the hot plate with *alcoholic solution of sulfuric acid R*. Heat again at 110 °C for 10 min. Allow to cool. Examine in daylight and in ultraviolet light at 365 nm.
*System suitability*: the chromatogram obtained with reference solution (b) shows 2 spots which may however not be completely separated.
*Results*: the principal spot in the chromatogram obtained with the test solution is similar in position, colour in daylight, fluorescence in ultraviolet light at 365 nm and size to the principal spot in the chromatogram obtained with reference solution (a).

D. To about 1 mg add 0.5 mL of freshly prepared *sulfomolybdic reagent R2*. A blue colour develops which in ultraviolet light at 365 nm has an intense green fluorescence. Add 1 mL of *sulfuric acid R* and 9 mL of *water R*. The colour becomes pink with a yellowish fluorescence.

E. Water (see Tests).

TESTS

**Specific optical rotation** (*2.2.7*): + 76.0 to + 83.0 (anhydrous substance).

Dissolve 0.250 g in *ethanol (96 per cent) R* and dilute to 25.0 mL with the same solvent.

**Related substances**. Liquid chromatography (*2.2.29*).

*Test solution*. Dissolve 25 mg of the substance to be examined in 10 mL of *acetonitrile R* and dilute to 25.0 mL with *methanol R2*.

*Reference solution (a)*. Dilute 1.0 mL of the test solution to 100.0 mL with the mobile phase. Dilute 2.0 mL of this solution to 10.0 mL with the mobile phase.

*Reference solution (b)*. Mix equal volumes of a 1 mg/mL solution of the substance to be examined in *methanol R2* and of a 1 mg/mL solution of *2,3-dichloro-5,6-dicyanobenzoquinone R* in *methanol R2*. Allow to stand for 30 min before injection.

*Reference solution (c)*. Dissolve 5 mg of *estradiol for peak identification CRS* (containing impurities A, B and C) in 2 mL of *acetonitrile R* and dilute to 5.0 mL with *methanol R2*.

*Column*:

- *size*: *l* = 0.25 m, Ø = 4.6 mm;
- *stationary phase*: *end-capped octadecylsilyl silica gel for chromatography R* (5 µm).

*Mobile phase*: to 400 mL of *acetonitrile R* add 50 mL of *methanol R2* and 400 mL of *water for chromatography R*; allow to stand for 10 min, dilute to 1000 mL with *water for chromatography R* and mix again.

*Flow rate*: 1 mL/min.

*Detection*: spectrophotometer at 280 nm.

*Injection*: 20 µL.

*Run time*: twice the retention time of estradiol.

*Identification of impurities*: use the chromatogram supplied with *estradiol for peak identification CRS* and the chromatogram obtained with reference solution (c) to identify the peaks due to impurities A, B and C; use the chromatogram obtained with reference solution (b) to identify the peak due to impurity D.

*Relative retention* with reference to estradiol (retention time = about 13 min): impurity D = about 0.9; impurity B = about 1.1; impurity A = about 1.4; impurity C = about 1.9.

*System suitability*: reference solution (c):

- *resolution*: minimum 2.5 between the peaks due to estradiol and impurity B.

*Limits*:

- *correction factor*: for the calculation of content, multiply the peak area of impurity D by 0.4;
- *impurities A, B, C, D*: for each impurity, not more than 1.5 times the area of the principal peak in the chromatogram obtained with reference solution (a) (0.3 per cent);
- *unspecified impurities*: for each impurity, not more than 0.5 times the area of the principal peak in the chromatogram obtained with reference solution (a) (0.10 per cent);
- *total*: not more than 2.5 times the area of the principal peak in the chromatogram obtained with reference solution (a) (0.5 per cent);
- *disregard limit*: 0.25 times the area of the principal peak in the chromatogram obtained with reference solution (a) (0.05 per cent).

**Water** (*2.5.12*): 2.9 per cent to 3.5 per cent, determined on 0.500 g.

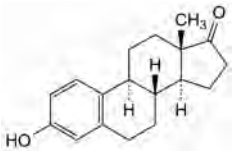
ASSAY

Dissolve 20.0 mg in *ethanol (96 per cent) R* and dilute to 100.0 mL with the same solvent. Dilute 5.0 mL of the solution to 50.0 mL with *0.1 M sodium hydroxide*. Allow to cool to room temperature. Measure the absorbance (*2.2.25*) of the solution at the maximum at 238 nm.

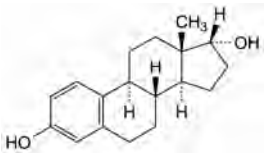
Calculate the content of $C_{18}H_{24}O_2$ taking the specific absorbance to be 335.

IMPURITIES

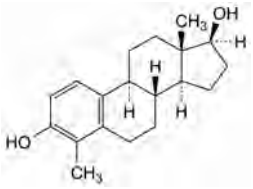
*Specified impurities: A, B, C, D.*



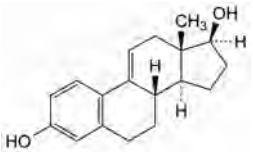
A. 3-hydroxyestra-1,3,5(10)-trien-17-one (estrone),



B. estra-1,3,5(10)-triene-3,17α-diol (17α-estradiol),



C. 4-methylestra-1,3,5(10)-triene-3,17β-diol,

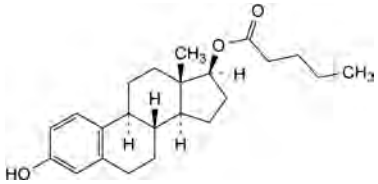


D. estra-1,3,5(10),9(11)-tetraene-3,17β-diol.

**04/2016:1614**

# ESTRADIOL VALERATE

## Estradioli valeras



$C_{23}H_{32}O_3$ $M_r$ 356.5

[979-32-8]

DEFINITION

3-Hydroxyestra-1,3,5(10)-trien-17β-yl pentanoate.

*Content*: 97.5 per cent to 102.0 per cent (dried substance).

CHARACTERS

*Appearance*: white or almost white, crystalline powder or colourless crystals.

*Solubility*: practically insoluble in water, freely soluble in methylene chloride, soluble in ethanol (96 per cent).

IDENTIFICATION

A. Infrared absorption spectrophotometry (*2.2.24*).

*Comparison*: *estradiol valerate CRS*.

B. Examine the chromatograms obtained in the assay.

*Results*: the principal peak in the chromatogram obtained with test solution (b) is similar in retention time and size to the principal peak in the chromatogram obtained with reference solution (c).

TESTS

**Solution S**. Dissolve 0.500 g in *methanol R* and dilute to 20.0 mL with the same solvent.

**Appearance of solution**. Solution S is clear (*2.2.1*) and colourless (*2.2.2, Method II*).

**Specific optical rotation** (*2.2.7*): + 41 to + 47 (dried substance), determined on solution S.

**Related substances**. Liquid chromatography (*2.2.29*).

*Test solution (a)*. Dissolve 50.0 mg of the substance to be examined in *acetonitrile R1* and dilute to 10.0 mL with the same solvent.

*Test solution (b)*. Dilute 5.0 mL of test solution (a) to 20.0 mL with *acetonitrile R1*.

*Reference solution (a)*. Dissolve 3 mg of *estradiol valerate for system suitability CRS* (containing impurities A, C, D and E) in *acetonitrile R1* and dilute to 1.0 mL with the same solvent.

*Reference solution (b)*. Dilute 1.0 mL of test solution (a) to 100.0 mL with *acetonitrile R1*. Dilute 1.0 mL of this solution to 10.0 mL with *acetonitrile R1*.

*Reference solution (c)*. Dissolve 50.0 mg of *estradiol valerate CRS* in *acetonitrile R1* and dilute to 10.0 mL with the same solvent. Dilute 5.0 mL of the solution to 20.0 mL with *acetonitrile R1*.

*Column*:

- *size*: *l* = 0.10 m, Ø = 4.6 mm;
- *stationary phase*: *end-capped solid core alkylsilyl silica gel for chromatography R* (2.6 µm).

*Mobile phase*:

- *mobile phase A*: *water R*;
- *mobile phase B*: *acetonitrile R1*;

| Time (min) | Mobile phase A (per cent *V/V*) | Mobile phase B (per cent *V/V*) |
|---|---|---|
| 0 - 1 | 48 | 52 |
| 1 - 10 | 48 → 35 | 52 → 65 |
| 10 - 17.5 | 35 → 0 | 65 → 100 |
| 17.5 - 26 | 0 | 100 |

*Flow rate*: 2.0 mL/min.

*Detection*: spectrophotometer at 220 nm.

*Injection*: 5 µL of test solution (a) and reference solutions (a) and (b).

*Identification of impurities*: use the chromatogram supplied with *estradiol valerate for system suitability CRS* and the chromatogram obtained with reference solution (a) to identify the peaks due to impurities A, C, D and E.

*Relative retention* with reference to estradiol valerate (retention time = about 9 min): impurity A = about 0.1; impurity C = about 0.9; impurity D = about 1.3; impurity E = about 1.7.

*System suitability*: reference solution (a):

- *resolution*: minimum 2.5 between the peaks due to impurity C and estradiol valerate.

*Calculation of percentage contents*:

- *correction factor*: multiply the peak area of impurity C by 0.5;
- for each impurity, use the concentration of estradiol valerate in reference solution (b).

*Limits*:

- *impurity D*: maximum 0.4 per cent;
- *impurities A, C*: for each impurity, maximum 0.2 per cent;
- *impurity E*: maximum 0.15 per cent;
- *unspecified impurities*: for each impurity, maximum 0.10 per cent;
- *total*: maximum 0.5 per cent;
- *reporting threshold*: 0.05 per cent.

**Loss on drying** (*2.2.32*): maximum 1.0 per cent, determined on 0.500 g by drying in an oven at 105 °C for 3 h.

ASSAY

Liquid chromatography (*2.2.29*) as described in the test for related substances with the following modification.

*Injection*: test solution (b) and reference solution (c).

Calculate the percentage content of $C_{23}H_{32}O_3$ taking into account the assigned content of *estradiol valerate CRS*.

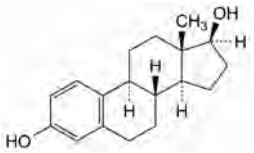
STORAGE

Protected from light.

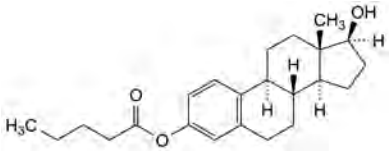
IMPURITIES

*Specified impurities: A, C, D, E.*

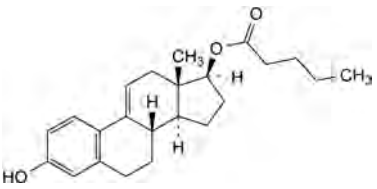
*Other detectable impurities* (the following substances would, if present at a sufficient level, be detected by one or other of the tests in the monograph. They are limited by the general acceptance criterion for other/unspecified impurities and/or by the general monograph *Substances for pharmaceutical use (2034)*. It is therefore not necessary to identify these impurities for demonstration of compliance. See also *5.10. Control of impurities in substances for pharmaceutical use*): *B, F, G, H, I, J.*



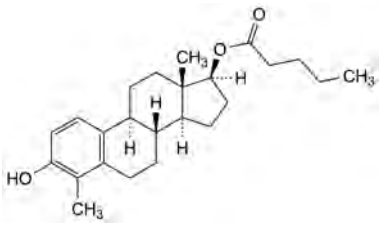
A. estra-1,3,5(10)-triene-3,17β-diol (estradiol),



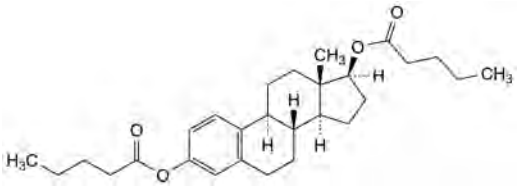
B. 17β-hydroxyestra-1,3,5(10)-trien-3-yl pentanoate,



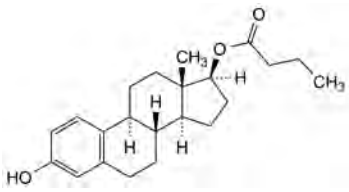
C. 3-hydroxyestra-1,3,5(10),9(11)-tetraen-17β-yl pentanoate,



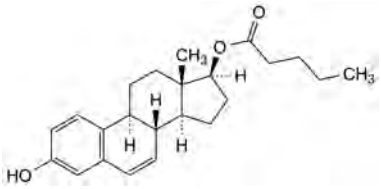
D. 3-hydroxy-4-methylestra-1,3,5(10)-trien-17β-yl pentanoate,



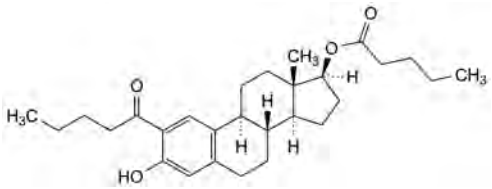
E. estra-1,3,5(10)-trien-3,17β-diyl dipentanoate,



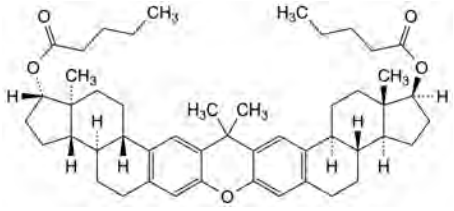
F. 3-hydroxyestra-1,3,5(10)-trien-17β-yl butanoate,



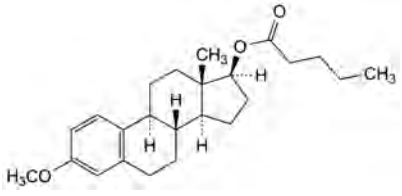
G. 3-hydroxyestra-1,3,5(10),6-tetraen-17β-yl pentanoate,



H. 3-hydroxy-2-pentanoylestra-1,3,5(10)-trien-17β-yl pentanoate,



I. (1*S*,3a*S*,3b*R*,10a*R*,10b*S*,13*S*,13a*S*,15a*S*,18b*S*,20a*S*)-13a,17,17,20a-tetramethyl-2,3,3a,3b,4,5,9,10,10a,-10b,11,12,13,13a,14,15,15a,17,18b,19,20,20a-docosahydro-1*H*-bis(cyclopenta[5,6]naphtho)-[1,2-*b*:2′,1′-*i*]xanthene-1,13-diyl dipentanoate,

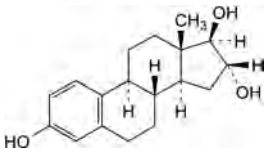


J. 3-methoxyestra-1,3,5(10)-trien-17β-yl pentanoate.

**07/2018:1203**

# ESTRIOL

## Estriolum



$C_{18}H_{24}O_3$ $M_r$ 288.4
[50-27-1]

DEFINITION

Estra-1,3,5(10)-triene-3,16α,17β-triol.

*Content*: 97.5 per cent to 102.0 per cent (dried substance).

CHARACTERS

*Appearance*: white or almost white, crystalline powder.

*Solubility*: practically insoluble in water, sparingly soluble in ethanol (96 per cent).

IDENTIFICATION

A. Infrared absorption spectrophotometry (*2.2.24*).
*Comparison*: *estriol CRS*.

B. Examine the chromatograms obtained in the assay.
*Results*: the principal peak in the chromatogram obtained with test solution (b) is similar in retention time and size to the principal peak in the chromatogram obtained with reference solution (c).

TESTS

**Specific optical rotation** (*2.2.7*): + 60 to + 65 (dried substance).

Dissolve 80 mg in *anhydrous ethanol R* and dilute to 10.0 mL with the same solvent.

**Related substances**. Liquid chromatography (*2.2.29*).

*Solvent mixture*: *methanol R*, *water R* (50:50 *V/V*).

*Test solution (a).* Dissolve 25.0 mg of the substance to be examined in 25 mL of *methanol R* and dilute to 50.0 mL with *water R*.

*Test solution (b).* Dilute 1.0 mL of test solution (a) to 10.0 mL with the solvent mixture.

*Reference solution (a).* Dissolve 5 mg of *estriol for system suitability CRS* (containing impurities A, D, E and F) in 5 mL of *methanol R* and dilute to 10.0 mL with *water R*.

*Reference solution (b).* Dilute 1.0 mL of test solution (a) to 100.0 mL with the solvent mixture. Dilute 1.0 mL of this solution to 10.0 mL with the solvent mixture.

*Reference solution (c).* Dissolve 25.0 mg of *estriol CRS* in 25 mL of *methanol R* and dilute to 50.0 mL with *water R*. Dilute 1.0 mL of the solution to 10.0 mL with the solvent mixture.

*Column*:

– *size*: *l* = 0.10 m, Ø = 2.1 mm;
– *stationary phase*: *end-capped, charged surface, ethylene-bridged octadecylsilyl silica gel for chromatography (hybrid material) R* (1.7 µm);
– *temperature*: 50 °C.

*Mobile phase*:

– *mobile phase A*: *methanol R1*, *water for chromatography R* (28:72 *V/V*);
– *mobile phase B*: *acetonitrile for chromatography R*;

| Time (min) | Mobile phase A (per cent *V/V*) | Mobile phase B (per cent *V/V*) |
|---|---|---|
| 0 - 9 | 100 | 0 |
| 9 - 23 | 100 → 57 | 0 → 43 |
| 23 - 28 | 57 | 43 |

*Flow rate*: 0.4 mL/min.

*Detection*: spectrophotometer at 220 nm.

*Injection*: 10 µL of test solution (a) and reference solutions (a) and (b).

*Identification of impurities*: use the chromatogram supplied with *estriol for system suitability CRS* and the chromatogram obtained with reference solution (a) to identify the peaks due to impurities A, D, E and F.

*Relative retention* with reference to estriol (retention time = about 11 min): impurity A = about 0.95; impurity F = about 1.45; impurity E = about 1.5; impurity D = about 1.8.

*System suitability*: reference solution (a):

– *peak-to-valley ratio*: minimum 5.0, where $H_p$ = height above the baseline of the peak due to impurity A and $H_v$ = height above the baseline of the lowest point of the curve separating this peak from the peak due to estriol.

*Calculation of percentage contents*:

– *correction factor*: multiply the peak area of impurity A by 0.5;
– for each impurity, use the concentration of estriol in reference solution (b).

*Limits*:

– *impurity F*: maximum 0.5 per cent;
– *impurity E*: maximum 0.3 per cent;
– *impurities A, D*: for each impurity, maximum 0.2 per cent;
– *unspecified impurities*: for each impurity, maximum 0.10 per cent;
– *total*: maximum 1.0 per cent;
– *reporting threshold*: 0.05 per cent.

**Loss on drying** (*2.2.32*): maximum 0.5 per cent, determined on 1.000 g by drying in an oven at 105 °C for 3 h.

ASSAY

Liquid chromatography (*2.2.29*) as described in the test for related substances with the following modifications.

*Mobile phase*:

| Time (min) | Mobile phase A (per cent *V/V*) | Mobile phase B (per cent *V/V*) |
|---|---|---|
| 0 - 5 | 90 | 10 |
| 5 - 5.5 | 90 → 30 | 10 → 70 |
| 5.5 - 7.5 | 30 | 70 |

*Injection*: 5 µL of test solution (b) and reference solutions (a) and (c).

*Identification of impurities*: use the chromatogram obtained with reference solution (a) to identify the peak due to impurity A.

*Relative retention* with reference to estriol (retention time = about 4 min): impurity A = about 0.9.

*System suitability*: reference solution (a):

– *peak-to-valley ratio*: minimum 5.0, where $H_p$ = height above the baseline of the peak due to impurity A and $H_v$ = height above the baseline of the lowest point of the curve separating this peak from the peak due to estriol.

Calculate the percentage content of $C_{18}H_{24}O_3$ taking into account the assigned content of *estriol CRS*.

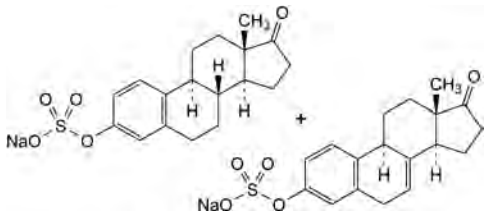
# ESTROGENS, CONJUGATED

## Estrogeni coniuncti



$C_{18}H_{21}NaO_5S + C_{18}H_{19}NaO_5S$ $M_r$ 372.4 + 370.4

DEFINITION

Mixture of various conjugated forms of estrogens obtained from the urine of pregnant mares or by synthesis, dispersed in a suitable powdered diluent.

The 2 principal components are 17-oxoestra-1,3,5(10)-trien-3-yl sodium sulfate (sodium estrone sulfate) and 17-oxoestra-1,3,5(10),7-tetraen-3-yl sodium sulfate (sodium equilin sulfate). Concomitants are sodium 17α-estradiol sulfate, sodium 17α-dihydroequilin sulfate and sodium 17β-dihydroequilin sulfate.

*Content* (percentages related to the labelled content):

- *sodium estrone sulfate*: 52.5 per cent to 61.5 per cent;
- *sodium equilin sulfate*: 22.5 per cent to 30.5 per cent;
- *sodium 17α-estradiol sulfate*: 2.5 per cent to 9.5 per cent;
- *sodium 17α-dihydroequilin sulfate*: 13.5 per cent to 19.5 per cent;
- *sodium 17β-dihydroequilin sulfate*: 0.5 per cent to 4.0 per cent;
- *sum of sodium estrone sulfate and sodium equilin sulfate*: 79.5 per cent to 88.0 per cent.

CHARACTERS

*Appearance*: almost white or brownish, amorphous powder.

IDENTIFICATION

A. Examine the chromatograms obtained in the assay.

*Results*: the 2 principal peaks due to estrone and equilin in the chromatogram obtained with test solution (a) are similar in retention time and size to the 2 principal peaks in the chromatogram obtained with reference solution (a).

B. Examine the chromatogram obtained in the test for chromatographic profile.

*Results*: the chromatogram obtained with test solution (b) exhibits additional peaks due to 17α-estradiol, 17α-dihydroequilin and 17β-dihydroequilin, at relative retentions with reference to 3-*O*-methylestrone (internal standard) of about 0.24, 0.30 and 0.35 respectively.

TESTS

**Chromatographic profile**. Gas chromatography (*2.2.28*).

*Internal standard solution*. Dissolve 8 mg of *3-O-methylestrone R* in 10.0 mL of *anhydrous ethanol R*. Dilute 2.0 mL of this solution to 10.0 mL with *anhydrous ethanol R*.

*Acetate buffer solution pH 5.2*. Dissolve 10 g of *sodium acetate R* in 100 mL of *water R* and add 10 mL of *dilute acetic acid R*. Dilute to 500 mL with *water R* and adjust to pH 5.2 ± 0.1.

*Test solution (a)*. Considering the labelled content, transfer an accurately weighed quantity corresponding to about 2 mg of conjugated estrogens to a 50 mL centrifuge tube containing 15 mL of the acetate buffer solution pH 5.2 and 1 g of *barium chloride R*. Cap the tube tightly and shake for 30 min. If necessary, adjust to pH 5.0 ± 0.5 with *acetic acid R* or a 120 g/L solution of *sodium acetate R*. Sonicate for 30 s, then shake for 30 min. Add a suitable sulfatase preparation equivalent to 2500 units and shake mechanically for 10 min in a water-bath at 50 ± 1 °C. Swirl the tube by hand, then shake mechanically for 10 min in the water-bath. Allow to cool. Add 15.0 mL of *ethylene chloride R* to the mixture, immediately cap the tube tightly and shake for 15 min. Centrifuge for 10 min or until the lower layer is clear. Draw out the organic layer to a screw-cap tube, add 5 g of *anhydrous sodium sulfate R* and shake. Allow the solution to stand until clear. Protect the solution from any loss due to evaporation. Transfer 3.0 mL of the clear solution to a suitable centrifuge tube fitted with a screw cap. Add 1.0 mL of the internal standard solution. Evaporate the mixture to dryness with the aid of a stream of *nitrogen R*, maintaining the temperature below 50 °C. To the dry residue add 15 µL of *anhydrous pyridine R* and 65 µL of *N,O-bis(trimethylsilyl)trifluoroacetamide R* containing 1 per cent of *chlorotrimethylsilane R*. Immediately cap the tube tightly, mix thoroughly and allow to stand for 15 min. Add 0.5 mL of *toluene R* and mix mechanically.

*Test solution (b)*. Prepare as described in test solution (a), but do not add the sulfatase and use 6.0 mL of the upper layer instead of 3.0 mL. Prepare a blank in the same manner.

*Reference solution (a)*. Dissolve separately 8 mg of *estrone CRS*, 7 mg of *equilin CRS* and 5 mg of *17α-dihydroequilin CRS* in 10.0 mL of *anhydrous ethanol R*. Dilute together 2.0 mL, 1.0 mL and 1.0 mL respectively of these solutions to 10.0 mL with *anhydrous ethanol R*. Transfer 1.0 mL of this solution and 1.0 mL of the internal standard solution to a centrifuge tube fitted with a screw cap. Evaporate the mixture to dryness with the aid of a stream of *nitrogen R*, maintaining the temperature below 50 °C. To the dry residue add 15 µL of *anhydrous pyridine R* and 65 µL of *N,O-bis(trimethylsilyl)trifluoroacetamide R* containing 1 per cent of *chlorotrimethylsilane R*. Immediately cap the tube tightly, mix and allow to stand for 15 min. Add 0.5 mL of *toluene R*.

*Reference solution (b)*. Prepare as described in reference solution (a), but dilute tenfold with *anhydrous ethanol R* before adding the internal standard.

*Column*:
- *material*: fused silica;
- *size*: *l* = 15 m, Ø = 0.25 mm;
- *stationary phase*: *cyanopropyl(25)phenyl(25)methyl(50)polysiloxane R* (film thickness 0.25 µm).

*Carrier gas*: *hydrogen for chromatography R*.

*Flow rate*: 2 mL/min.

*Split ratio*: 1:20 to 1:30.

*Temperature*:
- *column*: 220 °C;
- *injection port and detector*: 260 °C.

*Detection*: flame ionisation.

*Injection*: 1 µL.

*Relative retention* with reference to 3-*O*-methylestrone: 17α-dihydroequilin = about 0.30; estrone = about 0.80; equilin = about 0.87.

*System suitability*: reference solution (a):
- *resolution*: minimum 1.2 between the peaks due to estrone and equilin; if necessary, adjust the temperature and the flow rate of the carrier gas.

In the chromatogram obtained with reference solution (a), measure the areas of the peaks due to 17α-dihydroequilin, estrone and 3-*O*-methylestrone.

In the chromatogram obtained with test solution (a), locate the peaks with relative retentions with reference to 3-*O*-methylestrone of 1 and about 0.24, 0.29, 0.30, 0.35, 0.56, 0.64, 0.90 and 1.3 and measure their areas.

Calculate the percentage content of the components occurring as sodium sulfate salts using expression (1) below.

In the chromatogram obtained with reference solution (b), measure the areas of the peaks due to estrone and 3-*O*-methylestrone.

In the chromatogram obtained with test solution (b), locate the peaks with relative retentions with reference to 3-*O*-methylestrone of about 0.30, 0.80 and 0.87 and measure the sum of the areas.

Calculate the percentage content of 17α-dihydroequilin, estrone and equilin occurring as free steroids using expression (2) below.

$$\frac{S_A' \times S_I \times m_R \times 137.8 \times 1000}{S_R \times S_I' \times m \times LC} \quad (1)$$

$$\frac{S_{FS}' \times S_I \times m_E \times 100 \times 1000}{S_E \times S_I' \times m \times LC} \quad (2)$$

$S_I$ = area of the peak due to the internal standard in the chromatogram obtained with the corresponding reference solution;

$S'_I$ = area of the peak due to the internal standard in the chromatogram obtained with the corresponding test solution;

$S_R$ = area of the peak due to the reference substance (Table 1512.-1) in the chromatogram obtained with the corresponding reference solution;

$S'_A$ = area of the peak due to the analyte in the chromatogram obtained with the corresponding test solution;

$m_R$ = mass of the reference substance (Table 1512.-1) in the corresponding reference solution, in milligrams;

$m$ = mass of the substance to be examined in the corresponding test solution, in milligrams;

$S'_{FS}$ = sum of the areas of the peaks due to 17α-dihydroequilin, estrone and equilin in the chromatogram obtained with the corresponding test solution;

$S_E$ = area of the peak due to *estrone CRS* in the chromatogram obtained with the corresponding reference solution;

$m_E$ = mass of *estrone CRS* in the corresponding reference solution, in milligrams;

$LC$ = labelled content, in milligrams per gram.

The percentages are within the following ranges:
- *sodium 17α-estradiol sulfate*: 2.5 per cent to 9.5 per cent;
- *sodium 17α-dihydroequilin sulfate*: 13.5 per cent to 19.5 per cent;
- *sodium 17β-dihydroequilin sulfate*: 0.5 per cent to 4.0 per cent;
- *sodium 17β-estradiol sulfate*: maximum 2.25 per cent;
- *sodium 17α-dihydroequilenin sulfate*: maximum 3.25 per cent;
- *sodium 17β-dihydroequilenin sulfate*: maximum 2.75 per cent;
- *sodium 8,9-didehydroestrone sulfate*: maximum 6.25 per cent;
- *sodium equilenin sulfate*: maximum 5.5 per cent;
- *sum of estrone, equilin and 17α-dihydroequilin*: maximum 1.3 per cent.

ASSAY

Gas chromatography (*2.2.28*) as described in the test for chromatographic profile with the following modifications.

Table 1512.-1

| Relative retention (to 3-*O*-methylestrone) | Analyte | Quantified with reference to CRS | Present as |
|---|---|---|---|
| 0.24 | 17α-estradiol | *17α-dihydroequilin CRS* | sodium sulfate |
| 0.29 | 17β-estradiol | *estrone CRS* | sodium sulfate |
| 0.30 | 17α-dihydroequilin | *17α-dihydroequilin CRS* | free steroid, sodium sulfate (assay) |
| 0.35 | 17β-dihydroequilin | *17α-dihydroequilin CRS* | sodium sulfate |
| 0.56 | 17α-dihydroequilenin | *estrone CRS* | sodium sulfate |
| 0.64 | 17β-dihydroequilenin | *estrone CRS* | sodium sulfate |
| 0.80 | estrone | *estrone CRS* | free steroid, sodium sulfate (assay) |
| 0.87 | equilin | *equilin CRS* | free steroid, sodium sulfate (assay) |
| 0.90 | 8,9-didehydroestrone | *estrone CRS* | sodium sulfate |
| 1 | 3-*O*-methylestrone | (internal standard) | |
| 1.3 | equilenin | *estrone CRS* | sodium sulfate |

*Injection*: test solution (a) and reference solution (a).

*System suitability*: reference solution (a):

– *repeatability*: maximum relative standard deviation of 2.0 per cent for the ratio of the area of the peak due to estrone to that due to the internal standard after at least 6 injections.

In the chromatogram obtained with reference solution (a), measure the areas of the peaks due to estrone or equilin and 3-*O*-methylestrone. In the chromatogram obtained with test solution (a), measure the areas of the peaks due to estrone, equilin and 3-*O*-methylestrone.

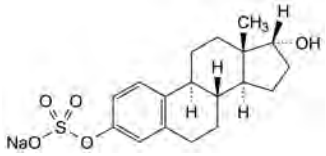
Calculate the percentage content of sodium estrone sulfate and sodium equilin sulfate using expression (1).

LABELLING

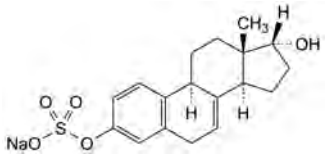
The label states:

– the name of the substance;
– the content of the substance;
– the nature of the diluent.

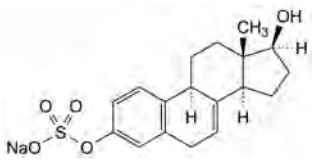
IMPURITIES AND CONCOMITANTS



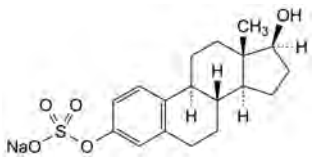
A. 17α-hydroxyestra-1,3,5(10)-trien-3-yl sodium sulfate (sodium 17α-estradiol sulfate),



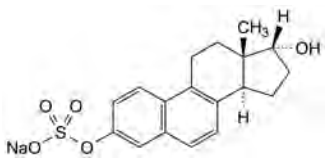
B. 17α-hydroxyestra-1,3,5(10),7-tetraen-3-yl sodium sulfate (sodium 17α-dihydroequilin sulfate),



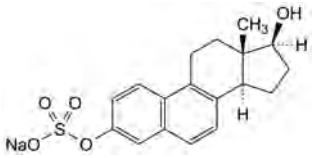
C. 17β-hydroxyestra-1,3,5(10),7-tetraen-3-yl sodium sulfate (sodium 17β-dihydroequilin sulfate),



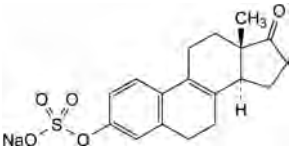
D. 17β-hydroxyestra-1,3,5(10)-trien-3-yl sodium sulfate (sodium 17β-estradiol sulfate),



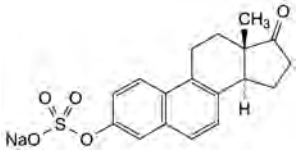
E. 17α-hydroxyestra-1,3,5(10),6,8-pentaen-3-yl sodium sulfate (sodium 17α-dihydroequilenin sulfate),



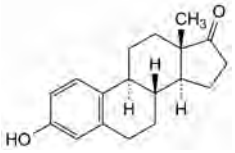
F. 17β-hydroxyestra-1,3,5(10),6,8-pentaen-3-yl sodium sulfate (sodium 17β-dihydroequilenin sulfate),



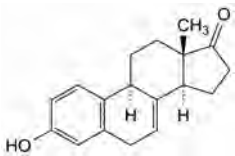
G. 17-oxoestra-1,3,5(10),8-tetraen-3-yl sodium sulfate (sodium 8,9-didehydroestrone sulfate),



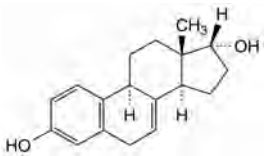
H. 17-oxoestra-1,3,5(10),6,8-pentaen-3-yl sodium sulfate (sodium equilenin sulfate),



I. 3-hydroxyestra-1,3,5(10)-trien-17-one (estrone),



J. 3-hydroxyestra-1,3,5(10),7-tetraen-17-one (equilin),

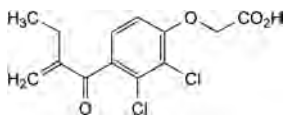


K. estra-1,3,5(10),7-tetraene-3,17α-diol (17α-dihydroequilin).

**01/2017:0457**

# ETACRYNIC ACID

## Acidum etacrynicum



$C_{13}H_{12}Cl_2O_4$ $M_r$ 303.1

[58-54-8]

DEFINITION

[2,3-Dichloro-4-(2-methylenebutanoyl)phenoxy]acetic acid

*Content*: 98.0 per cent to 102.0 per cent (dried substance).

CHARACTERS

*Appearance*: white or almost white, crystalline powder.

*Solubility*: very slightly soluble in water, freely soluble in ethanol (96 per cent). It dissolves in ammonia and in dilute solutions of alkali hydroxides and carbonates.

IDENTIFICATION

*First identification: C.*

*Second identification: A, B, D, E.*

A. Melting point (*2.2.14*): 121 °C to 124 °C.

B. Ultraviolet and visible absorption spectrophotometry (*2.2.25*).

*Solvent mixture*: 103 g/L solution of *hydrochloric acid R*, *methanol R* (1:99 *V/V*).

*Test solution*: Dissolve 50.0 mg in the solvent mixture and dilute to 100.0 mL with the solvent mixture. Dilute 10.0 mL of this solution to 100.0 mL with the solvent mixture.

*Spectral range*: 230-350 nm.

*Absorption maximum*: at 270 nm.

*Shoulder*: at about 285 nm.

*Specific absorbance at the absorption maximum*: 110 to 120.

C. Infrared absorption spectrophotometry (*2.2.24*).

*Comparison*: *etacrynic acid CRS*.

D. Dissolve about 30 mg in 2 mL of *aldehyde-free alcohol R*. Dissolve 70 mg of *hydroxylamine hydrochloride R* in 0.1 mL of *water R*, add 7 mL of *alcoholic potassium hydroxide solution R* and dilute to 10 mL with *aldehyde-free alcohol R*. Allow to stand and add 1 mL of the supernatant to the solution of the substance to be examined. Heat the mixture on a water-bath for 3 min. After cooling, add 3 mL of *water R* and 0.15 mL of *hydrochloric acid R*. Examined in ultraviolet light at 254 nm, the mixture shows an intense blue fluorescence.

E. Dissolve about 25 mg in 2 mL of a 42 g/L solution of *sodium hydroxide R* and heat in a water-bath for 5 min. Cool and add 0.25 mL of a mixture of equal volumes of *sulfuric acid R* and *water R*. Add 0.5 mL of a 100 g/L solution of *chromotropic acid, sodium salt R* and, carefully, 2 mL of *sulfuric acid R*. An intense violet colour is produced.

TESTS

**Related substances**. Liquid chromatography (*2.2.29*).

*Solvent mixture*: *acetonitrile R*, *water R* (40:60 *V/V*).

*Test solution.* Dissolve 25 mg of the substance to be examined in the solvent mixture and dilute to 25.0 mL with the solvent mixture.

*Reference solution (a).* Dilute 1.0 mL of the test solution to 100.0 mL with the solvent mixture. Dilute 1.0 mL of this solution to 10.0 mL with the solvent mixture.

*Reference solution (b).* Dissolve 5 mg of *etacrynic acid for system suitability CRS* (containing impurities A, B and C) in 5.0 mL of the solvent mixture.

*Column*:

- *size*: *l* = 0.25 m, Ø = 4.0 mm;
- *stationary phase*: *end-capped octadecylsilyl silica gel for chromatography R* (5 µm);
- *temperature*: 25 °C.

*Mobile phase*:

- *mobile phase A*: 1 per cent *V/V* solution of *triethylamine R* adjusted to pH 6.8 with *phosphoric acid R*;
- *mobile phase B*: *acetonitrile R*;

| Time (min) | Mobile phase A (per cent *V/V*) | Mobile phase B (per cent *V/V*) |
|---|---|---|
| 0-2.5 | 70 | 30 |
| 2.5-3 | 70→65 | 30→35 |
| 3-6 | 65 | 35 |
| 6-7 | 65→45 | 35→55 |
| 7-22 | 45 | 55 |

*Flow rate*: 0.8 mL/min.

*Detection*: spectrophotometer at 280 nm.

*Injection*: 10 µL.

*Identification of impurities*: use the chromatogram supplied with *etacrynic acid for system suitability CRS* and the chromatogram obtained with reference solution (b) to identify the peaks due to impurities A, B and C.

*Relative retention* with reference to etacrynic acid (retention time = about 9 min): impurity A = about 0.8; impurity B = about 1.3; impurity C = about 1.7.

*System suitability*: reference solution (b):

- *resolution*: minimum 4.0 between the peaks due to impurity A and etacrynic acid.

*Limits*:

- *correction factors*: for the calculation of contents, multiply the peak areas of the following impurities by the corresponding correction factor: impurity A = 0.6; impurity B = 0.6; impurity C = 1.3;
- *impurity C*: not more than 3 times the area of the principal peak in the chromatogram obtained with reference solution (a) (0.3 per cent);
- *impurities A, B*: for each impurity, not more than 1.5 times the area of the principal peak in the chromatogram obtained with reference solution (a) (0.15 per cent);
- *unspecified impurities*: for each impurity, not more than the area of the principal peak in the chromatogram obtained with reference solution (a) (0.10 per cent);
- *total*: not more than 8 times the area of the principal peak in the chromatogram obtained with reference solution (a) (0.8 per cent);
- *disregard limit*: 0.5 times the area of the principal peak in the chromatogram obtained with reference solution (a) (0.05 per cent).

**Loss on drying** (*2.2.32*): maximum 0.5 per cent, determined on 2.000 g by drying at 60 °C over *diphosphorus pentoxide R* at a pressure of 0.1-0.5 kPa.

**Sulfated ash** (*2.4.14*): maximum 0.1 per cent, determined on 1.0 g.

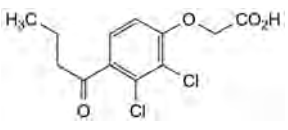
ASSAY

Dissolve 0.250 g in 100 mL of *methanol R* and add 5 mL of *water R*. Titrate with *0.1 M sodium hydroxide*, determining the end-point potentiometrically (*2.2.20*).

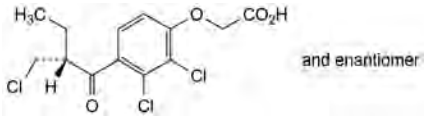
1 mL of *0.1 M sodium hydroxide* is equivalent to 30.31 mg of $C_{13}H_{12}Cl_2O_4$.

IMPURITIES

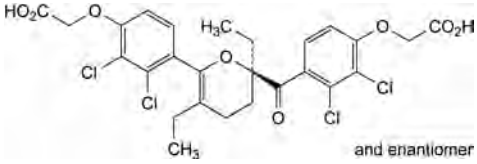
*Specified impurities: A, B, C.*



A. (4-butanoyl-2,3-dichlorophenoxy)acetic acid,



B. [2,3-dichloro-4-[2-(chloromethyl)butanoyl]phenoxy]acetic acid,

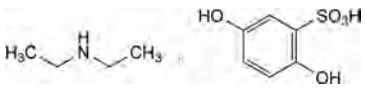


C. [4-[2-[4-(carboxymethoxy)-2,3-dichlorobenzoyl]-2,5-diethyl-3,4-dihydro-2*H*-pyran-6-yl]-2,3-dichlorophenoxy]acetic acid.

**01/2017:1204**

# ETAMSYLATE

## Etamsylatum



$C_{10}H_{17}NO_5S$ $M_r$ 263.3
[2624-44-4]

DEFINITION

*N*-Ethylethanamine 2,5-dihydroxybenzenesulfonate.

*Content*: 99.0 per cent to 101.0 per cent (dried substance).

CHARACTERS

*Appearance*: white or almost white, crystalline powder.

*Solubility*: very soluble in water, freely soluble in methanol, soluble in anhydrous ethanol, practically insoluble in methylene chloride.

It shows polymorphism (*5.9*).

IDENTIFICATION

*First identification: B.*

*Second identification: A, C, D.*

A. Melting point (*2.2.14*): 127 °C to 134 °C.

B. Infrared absorption spectrophotometry (*2.2.24*).
*Comparison*: *etamsylate CRS.*

C. Ultraviolet and visible absorption spectrophotometry (*2.2.25*).
*Test solution.* Dissolve 0.100 g in *water R* and dilute to 200.0 mL with the same solvent. Dilute 5.0 mL of the solution to 100.0 mL with *water R*. Examine immediately.
*Spectral range*: 210-350 nm.
*Absorption maxima*: at 221 nm and 301 nm.
*Specific absorbance at the absorption maximum at 301 nm*: 145 to 151.

D. Into a test-tube, introduce 2 mL of freshly prepared solution S (see Tests) and 0.5 g of *sodium hydroxide R*. Warm the mixture and place a wet strip of *red litmus paper R* near the open end of the tube. The colour of the paper becomes blue.

TESTS

**Solution S**. Dissolve 10.0 g in *carbon dioxide-free water R* and dilute to 100 mL with the same solvent.

**Appearance of solution**. Solution S, when freshly prepared, is clear (*2.2.1*) and colourless (*2.2.2, Method II*).

**pH** (*2.2.3*): 4.5 to 5.6 for solution S.

**Related substances**. Liquid chromatography (*2.2.29*). *Keep all solutions at 2-8 °C.*

*Buffer solution.* Dissolve 1.2 g of *anhydrous sodium dihydrogen phosphate R* in 900 mL of *water for chromatography R*. Adjust to pH 6.5 with *disodium hydrogen phosphate solution R* and dilute to 1000 mL with *water for chromatography R*.

*Test solution.* Dissolve 0.100 g of the substance to be examined in *water R* and dilute to 10.0 mL with the same solvent.

*Reference solution (a).* Dilute 1.0 mL of the test solution to 100.0 mL with *water R*. Dilute 1.0 mL of this solution to 10.0 mL with *water R*.

*Reference solution (b).* Dissolve 10 mg of the substance to be examined and 10 mg of *hydroquinone R* (impurity A) in *water R* and dilute to 10 mL with the same solvent. Dilute 1 mL of the solution to 100 mL with *water R*.

*Column*:
- *size*: *l* = 0.25 m, Ø = 4.6 mm;
- *stationary phase:* spherical *end-capped octadecylsilyl silica gel for chromatography R* (5 µm).

*Mobile phase*: *acetonitrile R1*, buffer solution (10:90 *V/V*).

*Flow rate*: 0.8 mL/min.

*Detection*: spectrophotometer at 220 nm.

*Injection*: 10 µL.

*Run time*: 11 times the retention time of etamsylate.

*Relative retention* with reference to etamsylate (retention time = about 6 min): impurity A = about 1.7.

*System suitability*: reference solution (b):
- *resolution*: minimum 8.0 between the peaks due to etamsylate and impurity A.

*Limits*:
- *correction factor*: for the calculation of content, multiply the peak area of impurity A by 0.5;
- *impurity A*: not more than the area of the principal peak in the chromatogram obtained with reference solution (a) (0.1 per cent);
- *unspecified impurities*: for each impurity, not more than the area of the principal peak in the chromatogram obtained with reference solution (a) (0.10 per cent);
- *total*: not more than twice the area of the principal peak in the chromatogram obtained with reference solution (a) (0.2 per cent);
- *disregard limit*: 0.5 times the area of the principal peak in the chromatogram obtained with reference solution (a) (0.05 per cent).

**Iron** (*2.4.9*): maximum 10 ppm, determined on solution S.

**Loss on drying** (*2.2.32*): maximum 0.5 per cent, determined on 1.000 g by drying *in vacuo* in an oven at 60 °C.

**Sulfated ash** (*2.4.14*): maximum 0.1 per cent, determined on 1.0 g.

ASSAY

Dissolve 0.200 g in a mixture of 10 mL of *water R* and 40 mL of *dilute sulfuric acid R*. Titrate with *0.1 M cerium sulfate*, determining the end-point potentiometrically (*2.2.20*).

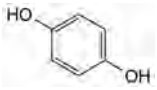
1 mL of *0.1 M cerium sulfate* is equivalent to 13.16 mg of $C_{10}H_{17}NO_5S$.

STORAGE

In an airtight container, protected from light.

IMPURITIES

*Specified impurities: A.*

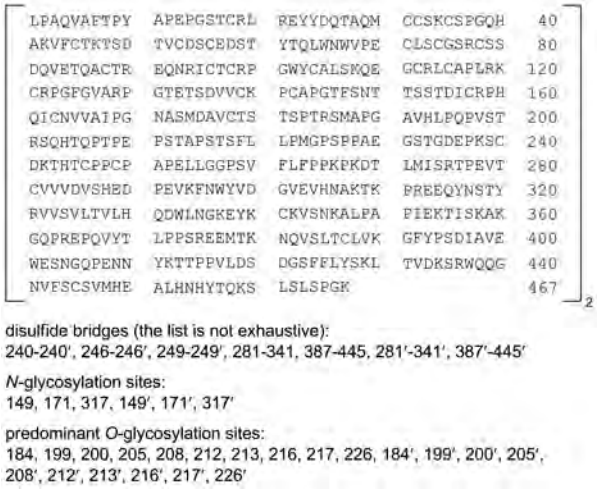


A. benzene-1,4-diol (hydroquinone).

**07/2019:2895**

# ETANERCEPT

## Etanerceptum



disulfide bridges (the list is not exhaustive):
240-240′, 246-246′, 249-249′, 281-341, 387-445, 281′-341′, 387′-445′

*N*-glycosylation sites:
149, 171, 317, 149′, 171′, 317′

predominant *O*-glycosylation sites:
184, 199, 200, 205, 208, 212, 213, 216, 217, 226, 184′, 199′, 200′, 205′, 208′, 212′, 213′, 216′, 217′, 226′

$C_{2224}H_{3472}N_{618}O_{701}S_{36}$ (monomer)

$M_r$ approx. 51 200 (monomer without glycosylation)

[185243-69-0]

DEFINITION

Dimeric fusion protein consisting of the extracellular ligand-binding portion of the human tumour necrosis factor receptor (TNFR) linked to the Fc portion of human IgG1. The Fc component of etanercept contains the $CH_2$ domain, the $CH_3$ domain and the hinge region, but not the $CH_1$ domain of IgG1. Etanercept consists of 934 amino acids and has an apparent molecular mass of approximately 150 kDa.

Etanercept represents a glycosylated protein with multiple *N*- and *O*-linked glycosylation sites. It shows full occupancy of *N*-linked glycans at N149, N171 and N317.

It contains one or more suitable buffering and/or stabilising agents.

*Content (milligrams of protein per millilitre)*: as approved by the competent authority.

*Potency*: $1.0 \times 10^6$ to $2.9 \times 10^6$ IU per milligram of protein.

PRODUCTION

Etanercept is produced in a suitable mammalian cell expression system by a method based on recombinant DNA (rDNA) technology. During the course of product development, it must be demonstrated that the manufacturing process consistently produces a product with the expected *O*-glycan occupancy using a suitably qualified assay.

*Prior to release, the following tests are carried out on each batch of etanercept, unless exemption has been granted by the competent authority.*

**Host-cell-derived proteins**. The limit is approved by the competent authority.

**Host-cell and vector-derived DNA**. The limit is approved by the competent authority.

***N*-Glycan analysis**. Use a suitable method developed according to general chapter *2.2.59. Glycan analysis of glycoproteins*, section 2-3:

- release the glycans using one of the agents described in Table *2.2.59.*-1, for example peptide *N*-glycosidase F (PNGase F);
- label the released glycans with one of the fluorescent labelling agents described in Table *2.2.59.*-2, for example 2-aminobenzamide;
- analyse the labelled glycans by liquid chromatography (*2.2.29*) using fluorescence detection.

*The following procedure is given as an example.*

*Test solution*. To 4 µL of the preparation to be examined (about 25 mg/mL) add 21 µL of *water R*, 3 µL of *0.25 M sodium phosphate buffer solution pH 7.5 R* and 2 µL of a 500 000 U/mL solution of *peptide N-glycosidase F R*. Mix and incubate at 37 °C for 20-24 h. Label the released glycans with 2-aminobenzamide using a suitable procedure. The procedure employs a combination of reagents optimised and validated for the efficient labelling of glycans, and for the subsequent extraction and recovery of the labelled glycans from the reaction. Resuspend or dilute the labelled glycans in 100 µL of *water R*.

*Reference solution (a)*. Dissolve the contents of a vial of *etanercept CRS* in *water R* to obtain a concentration of about 25 mg/mL. Carry out the release and labelling of glycans in the same manner as for the test solution. Resuspend or dilute the labelled glycans in 100 µL of *water R*.

*Reference solution (b)*. Use a suitable etanercept in-house reference preparation shown to be representative of batches tested clinically and batches used to demonstrate consistency of production. Dilute, if necessary, with *water R* to obtain a concentration of about 25 mg/mL. Carry out the release and labelling of glycans in the same manner as for the test solution. Resuspend or dilute the labelled glycans in 100 µL of *water R*.

*Blank solution*. Prepare at the same time and in the same manner as for the test solution but using *water R* instead of the preparation to be examined.

Analyse the labelled glycans by liquid chromatography (*2.2.29*).

*Column*:

- *size*: *l* = 0.25 m, Ø = 4.6 mm;
- *stationary phase*: an amide derivative of *silica gel for chromatography R* (5 µm);
- *temperature*: 35 °C.

*Mobile phase*:

- *mobile phase A*: mix 9.8 mL of *anhydrous formic acid R* and 500 mL of *water for chromatography R*, adjust to pH 4.0 with *ammonia R* and dilute to 1000 mL with *water for chromatography R*;
- *mobile phase B*: *acetonitrile R*;

| Time (min) | Mobile phase A (per cent *V/V*) | Mobile phase B (per cent *V/V*) |
|---|---|---|
| 0 - 2 | 20 → 30 | 80 → 70 |
| 2 - 67.0 | 30 → 52 | 70 → 48 |
| 67.0 - 67.1 | 52 → 80 | 48 → 20 |
| 67.1 - 73.0 | 80 | 20 |

*Flow rate*: 0.4 mL/min.

*Detection*: fluorimeter at 330 nm for excitation and 420 nm for emission.

*Autosampler*: set at 2-8 °C.

*Injection*: 10 µL.

*Identification of peaks*: use the chromatogram shown in Figure 2895.-1 to identify the 2 groups of oligosaccharides corresponding to neutral (peaks 1 to 5) and sialylated (peaks 6 to 9) *N*-glycans; record the retention time of each peak in both groups.

*System suitability*:

- the chromatogram obtained with reference solution (a) is qualitatively similar to the chromatogram supplied with *etanercept CRS* and peaks 1 to 9 are clearly visible;
- no significant peaks are observed in the chromatogram obtained with the blank solution.

*Results*:

- the profile of the chromatogram obtained with the test solution corresponds to that of the chromatogram obtained with reference solution (b);
- the retention times of the peaks in the chromatogram obtained with the test solution correspond to those in the chromatogram obtained with reference solution (b);
- no additional peaks are observed in the chromatogram obtained with the test solution in comparison with the chromatogram obtained with reference solution (b).

Calculate the relative peak areas of the individual peaks corresponding to neutral and sialylated *N*-glycans with reference to the sum of the areas of all retained glycan peaks.

Calculate the percentage contents of the neutral and sialylated groups, using the following expressions:

$$\frac{A}{A+B} \times 100$$

$$\frac{B}{A+B} \times 100$$

*A* = sum of the areas of the peaks due to neutral *N*-glycans;

*B* = sum of the areas of the peaks due to sialylated *N*-glycans.

*NOTE: peaks 2 and 3 are separate peaks, but they are integrated together.*

*Limits*:

- *percentage of neutral N-glycans*: as approved by the competent authority;
- *percentage of sialylated N-glycans*: as approved by the competent authority.

CHARACTERS

*Appearance*: clear, almost colourless, slightly yellow or slightly brown liquid.

IDENTIFICATION

A. It complies with the limits of the assay (potency).

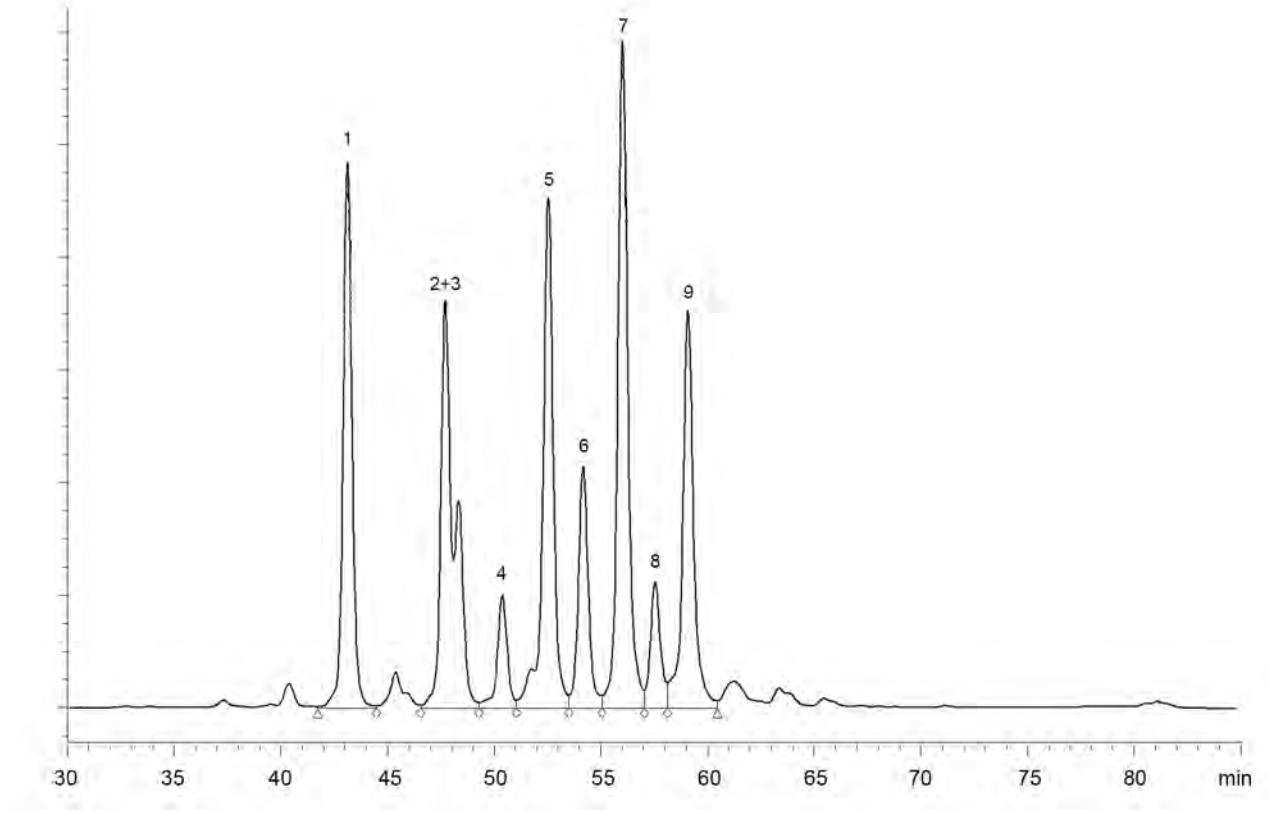
B. Peptide mapping (*2.2.55*).

*SELECTIVE CLEAVAGE OF THE PEPTIDE BONDS*

*Test solution.* Dilute the preparation to be examined with *water R* to obtain a concentration of about 15 mg/mL.

*Reference solution.* Dissolve the contents of a vial of *etanercept CRS* in *water R* to obtain a concentration of about 15 mg/mL.

*Reduction and alkylation.* To 200 µL of the test solution add 500 µL of *guanidine-tris(hydroxymethyl)aminomethane buffer solution pH 8.3 R* and 7 µL of a 154 g/L solution of *dithiothreitol R*. Mix and incubate at 65 °C for 15 min. Cool in an ice-bath for 5-10 min, then add 15.4 µL of a freshly prepared 185 g/L solution of *iodoacetamide R*. Mix and



| Peak | Charged | Structure | Peak | Charged | Structure | Peak | Charged | Structure | Peak | Charged | Structure |
|---|---|---|---|---|---|---|---|---|---|---|---|
| 1. | No | Asialo-, agalacto-, biantennary, core-fucosylated | 4. | No | Asialo-, galactosylated biantennary | 6. | Yes | Monosialylated-, galactosylated biantennary | 8. | Yes | Disialylated, galactosylated biantennary |
| 2+3. | No | Asialo-, mono-galactosylated biantennary, core-fucosylated | 5. | No | Asialo-, galactosylated biantennary, core-fucosylated | 7. | Yes | Monosialylated-, galactosylated biantennary, core-fucosylated | 9. | Yes | Disialylated-, galactosylated biantennary, core-fucosylated |

Figure 2895.-1. – *Chromatogram for N-glycan analysis of etanercept*

allow to stand protected from light for 10 min. Add 1.4 µL of a 154 g/L solution of *dithiothreitol R*. Mix and allow to stand protected from light for 10 min.

*Digestion*. To 97 µL of the reduced test solution prepared previously, add 903 µL of *0.1 M tris-hydrochloride buffer solution pH 7.5 R*. Add 9.6 µL of a 500 000 U/mL solution of *peptide N-glycosidase F R* and incubate at 37 °C for 1 h. Add 40 µL of a 1 mg/mL solution of *trypsin for peptide mapping R* and incubate at 37 °C for 5 h. Heat at 95 °C for 5 min and cool in ice for 5 min. Adjust to pH 2 with about 30 µL of a 150 g/L solution of *trifluoroacetic acid R*.

Carry out the reduction/alkylation and digestion steps for the reference solution in the same manner as for the test solution.

*CHROMATOGRAPHIC SEPARATION*. Liquid chromatography (*2.2.29*).

*Column*:

- *size*: *l* = 0.25 m, Ø = 3.2 mm;
- *stationary phase*: *end-capped octadecylsilyl silica gel for chromatography R* (5 µm) with a pore size of 10 nm;
- *temperature*: 30-35 °C.

*Mobile phase*:

- *mobile phase A*: mix 3 g of *trifluoroacetic acid R* and 2000 mL of *water for chromatography R*;
- *mobile phase B*: mix 2 g of *trifluoroacetic acid R*, 330 mL of *water for chromatography R* and 1320 mL of *acetonitrile for chromatography R*;

| Time (min) | Mobile phase A (per cent *V/V*) | Mobile phase B (per cent *V/V*) |
|---|---|---|
| 0 - 5 | 98 | 2 |
| 5 - 125 | 98 → 50 | 2 → 50 |
| 125 - 140 | 50 → 5 | 50 → 95 |

*Flow rate*: 0.5 mL/min.

*Detection*: spectrophotometer at 220 nm.

*Autosampler*: set at 2-8 °C.

*Injection*: 200 µL.

*System suitability*:

- the chromatogram obtained with the reference solution is qualitatively similar to the chromatogram supplied with *etanercept CRS*.

*Results*: the profile of the chromatogram obtained with the test solution corresponds to that of the chromatogram obtained with the reference solution.

TESTS

**pH** (*2.2.3*). As approved by the competent authority.

**Sialic acid**. Use a suitable method developed according to general chapter *2.2.59. Glycan analysis of glycoproteins*, section 2-4:

- release the sialic acid by acid hydrolysis pre-treatment of the preparation to be examined;
- label the released sialic acid with a fluorescent labelling reagent, for example 1,2-diamino-4,5-methylenedioxybenzene, using a suitable procedure;
- analyse the labelled sialic acid by liquid chromatography (*2.2.29*) using fluorescence detection.

*The following procedure is given as an example.*

*Solution A*. Dissolve 8.71 g of *arginine R* in 40 mL of *water R*. Add 0.5 mL of a 10 g/L solution of *polysorbate 80 R*, mix and adjust to pH 7.3 with *phosphoric acid R*. Dilute to 250 mL with *water R*.

*Test solution*. Dilute the preparation to be examined with *water R* to obtain a concentration of about 5 mg/mL. Further dilute with solution A to obtain a concentration of about 1 mg/mL. To 50 µL of this solution add 50 µL of a 480 g/L solution of *glacial acetic acid R* and incubate at 90 °C for 65 min. Cool, briefly centrifuge and evaporate to dryness. Label the released sialic acid using a suitable procedure; for example, add 15 µL of a 1.6 g/L solution of *1,2-diamino-4,5-methylenedioxybenzene dihydrochloride R* containing 78.1 g/L of *2-mercaptoethanol R* and 3.1 g/L of *sodium dithionite R* and incubate at 50 °C for 3 h. Dilute to 1 mL with *water R*.

*Reference solution (a)*. Dissolve the contents of a vial of *etanercept CRS* in *water R* to obtain a concentration of about 5 mg/mL. Carry out the release and labelling of sialic acid in the same manner as for the test solution. Dilute to 1 mL with *water R*.

*Reference solution (b)*. Dissolve *N-acetylneuraminic acid R* in *water R* to obtain a concentration of about 1 mg/mL. Mix 40 µL of the solution, 40 µL of a 1 mg/mL solution of *bovine albumin R1* and 120 µL of solution A. Use 50 µL of this solution to carry out the release and labelling of sialic acid in the same manner as for the test solution. Dilute with *water R* to obtain a concentration of 0.01 µg/µL.

*Standard solutions*. Dilute reference solution (b) with *water R* to obtain a concentration of 2 ng/µL. Further dilute this solution to prepare a standard curve with concentrations in the range of 0.10-0.40 ng/µL (6 concentrations, typically 0.10 ng/µL, 0.15 ng/µL, 0.20 ng/µL, 0.25 ng/µL, 0.30 ng/µL, 0.40 ng/µL). Analyse the labelled sialic acid by liquid chromatography (*2.2.29*).

*Column*:

- *size*: *l* = 0.25 m, Ø = 4.6 mm;
- *stationary phase*: *end-capped octadecylsilyl silica gel for chromatography R* (5 µm) with a pore size of 8 nm;
- *temperature*: 35 °C.

*Mobile phase*: mix 8 mL of *acetonitrile R*, 500 mL of *methanol R* and 1820 mL of *water for chromatography R*; mix thoroughly.

*Flow rate*: 1 mL/min.

*Detection*: fluorimeter at 374 nm for excitation and 448 nm for emission.

*Autosampler*: set at 2-8 °C.

*Injection*: 20 µL.

*Retention time*: sialic acid = about 10.5 min.

Calculate the sialic acid content in the preparation to be examined using the standard curve and the content of sialic acid (*N*-acetylneuraminic acid) in the standard solutions. Report the molar ratio (number of moles of sialic acid per mole of etanercept), using the molar mass of the monomer.

*System suitability*:

- the peak due to sialic acid in the chromatogram obtained with reference solution (a) is visible and is similar to the corresponding peak in the chromatogram supplied with *etanercept CRS*;
- *repeatability*: maximum relative standard deviation of 15 per cent for the sialic acid content expressed as the molar ratio, determined on 3 consecutive injections of reference solution (a);
- the coefficient of determination ($R^2$) calculated for the standard curve is not less than 0.9995.

*Results*:

- the profile of the chromatogram obtained with the test solution corresponds to that of the chromatogram obtained with reference solution (a).

*Limit*:

- 8 to 19 moles of sialic acid per mole of etanercept.

**Related proteins**. Liquid chromatography (*2.2.29*): use the normalisation procedure.

*Test solution*. Dilute the preparation to be examined with *water R* to obtain a concentration of about 2 mg/mL.

*Reference solution*. Dissolve the contents of a vial of *etanercept CRS* in *water R* to obtain a concentration of about 2 mg/mL.

*Column*:
- *size*: *l* = 0.035 m, Ø = 4.6 mm;
- *stationary phase*: *resin for hydrophobic interaction chromatography R* (2.5 µm);
- *temperature*: 35 °C.

*Mobile phase*:
- *mobile phase A*: dissolve 28.4 g of *anhydrous disodium hydrogen phosphate R* and 475.9 g of *ammonium sulfate R* in *water for chromatography R* and dilute to 1950 mL with the same solvent; adjust to pH 7.0 with *phosphoric acid R* and dilute to 2000 mL with *water for chromatography R*;
- *mobile phase B*: dissolve 28.4 g of *anhydrous disodium hydrogen phosphate R* in *water for chromatography R* and dilute to 1950 mL with the same solvent; adjust to pH 7.0 with *phosphoric acid R* and dilute to 2000 mL with *water for chromatography R*;

| Time (min) | Mobile phase A (per cent *V/V*) | Mobile phase B (per cent *V/V*) |
|---|---|---|
| 0 - 50 | 100 → 0 | 0 → 100 |

*Flow rate*: 1.0 mL/min.

*Detection*: fluorimeter at 278 nm for excitation and 350 nm for emission.

*Autosampler*: set at 10 °C.

*Injection*: 5 µL; perform 3 injections.

*Relative retention* with reference to etanercept (retention time = about 28.5 min): peak 1 = 0.96; peak 3 = 1.12.

*System suitability*: reference solution:
- the chromatogram obtained is qualitatively similar to the chromatogram supplied with *etanercept CRS*;
- peaks 1 and 3 are clearly separated from the peak due to etanercept.

*Results*:
- no additional peaks are observed in the chromatogram obtained with the test solution in comparison with the chromatogram obtained with the reference solution.

*Limits*:
- *peak 1*: maximum 5 per cent;
- *peak 3*: maximum 28 per cent;
- *sum of all peaks other than the principal peak*: maximum 30 per cent.

**Impurities with molecular masses greater than that of etanercept**. Size-exclusion chromatography (*2.2.30*): use the normalisation procedure.

*Solution A*. Dissolve 8.8 g of *sodium chloride R* and 15.6 g of *sodium dihydrogen phosphate R* in 900 mL of *water for chromatography R* and dilute to 1000 mL with the same solvent.

*Solution B*. Dissolve 8.75 g of *sodium chloride R* and 14.2 g of *anhydrous disodium hydrogen phosphate R* in 900 mL of *water for chromatography R* and dilute to 1000 mL with the same solvent.

*Test solution*. Dilute the preparation to be examined with *water R* to obtain a concentration of 2.5 mg/mL.

*Reference solution*. Dissolve the contents of a vial of *etanercept CRS* in *water R* to obtain a concentration of 2.5 mg/mL.

*Column*:
- *size*: *l* = 0.30 m, Ø = 8.0 mm;
- *stationary phase*: *hydrophilic silica gel for chromatography R* (5 µm) with a pore size of 30 nm and of a grade suitable for fractionation of globular proteins in the relative molecular mass range of 10 000 to 1000 000.

*Mobile phase*: mix 220 mL of solution A and 780 mL of solution B, and adjust to pH 7.2 with solution A or solution B.

*Flow rate*: 1.0 mL/min.

*Detection*: spectrophotometer at 220 nm.

*Autosampler*: set at 2-8 °C.

*Injection*: 14 µL; perform at least 3 injections.

*Relative retention* with reference to etanercept monomer (retention time = about 7.8 min): aggregates = 0.84; high molecular mass species = 0.89.

Any shoulder appearing on the descending part of the peak due to etanercept monomer is included in its area.

*System suitability*: reference solution:
- the chromatogram obtained is qualitatively similar to the chromatogram supplied with *etanercept CRS*;
- *resolution*: minimum 1.7 between the peaks due to the high molecular mass species and etanercept monomer;
- *number of theoretical plates*: minimum 3000 calculated for the peak due to etanercept monomer.

*Limit*:
- *sum of the peaks eluted before the principal peak*: maximum 8.0 per cent.

**Impurities with molecular masses differing from that of etanercept**. Polyacrylamide gel electrophoresis (*2.2.31*) under both reducing and non-reducing conditions.

*Gel dimensions*: 1.0 mm thick.

*Resolving gel*: 8-16 per cent acrylamide.

*Sample buffer (non-reducing conditions)*: *concentrated SDS-PAGE sample buffer R.*

*Sample buffer (reducing conditions)*: *concentrated SDS-PAGE sample buffer for reducing conditions R.*

*Test solution.* Dilute the preparation to be examined with *water R* to obtain a concentration of 0.2 mg/mL. Mix 1 volume of this solution and 1 volume of sample buffer.

*Reference solution (a).* Dissolve the contents of a vial of *etanercept CRS* in *water R* to obtain a concentration of 0.2 mg/mL. Mix 1 volume of the solution and 1 volume of sample buffer.

*Reference solution (b).* 0.01 mg/mL solution of *bovine albumin R.*

*Reference solution (c).* Mix 1 volume of reference solution (b) and 4 volumes of *concentrated SDS-PAGE sample buffer R.*

*Reference solution (d).* Mix 1 volume of reference solution (b) and 19 volumes of *concentrated SDS-PAGE sample buffer R.*

*Reference solution (e).* A solution of molecular mass markers suitable for calibrating SDS-polyacrylamide gels in the range of 5-200 kDa.

*Sample treatment*: heat at 90-105 °C for 5 min and load onto the gel within 15 min.

*Application*: 10 µL.

*Detection*: by silver staining.

*Identification of bands*:
- *non-reducing conditions*: the band corresponding to etanercept of an apparent molecular mass of approximately 150 kDa is present; related protein bands with apparent molecular masses of approximately 60 kDa, 100 kDa, 120 kDa, 225 kDa, 250 kDa may also be present;
- *reducing conditions*: the band corresponding to etanercept of an apparent molecular mass of approximately 76 kDa is present; related protein bands with apparent molecular masses of approximately 25 kDa, 35 kDa, 55 kDa, 200 kDa may also be present.

*System suitability*:
- the bands in the electropherogram obtained with reference solution (a) are clearly visible;
- the band in the electropherogram obtained with reference solutions (b), (c) and (d) is clearly visible;
- all expected bands in the electropherogram obtained with reference solution (e) are visible and clearly separated.

*Results*:

- the electropherogram obtained with the test solution is similar to the electropherogram obtained with reference solution (a);
- the electropherogram obtained with the test solution shows no additional band that is more intense than that of the band in the electropherogram obtained with reference solution (d).

**Microbiological contamination** (*2.6.12*): maximum 1 CFU/mL.

ASSAY

**Protein** (*2.5.33, Method 1*).

*Test solution*. Dilute the preparation to be examined gravimetrically with a suitable buffer to obtain a concentration of 1.0 mg/mL. Prepare in triplicate.

*Reference solution*. Dissolve the contents of a vial of *etanercept CRS* in a suitable buffer to obtain a concentration of 1.0 mg/mL.

Record the absorbance spectrum between 250 nm and 400 nm. Measure the value at the absorbance maximum of 280 nm after correction for any light scattering measured up to 320 nm. Calculate the protein concentration of etanercept taking into account the assigned content of *etanercept CRS*.

**Potency**. The potency of etanercept is determined by comparison of dilutions of the test preparation with the dilutions of *etanercept BRP* using a suitable cell-based assay based on the inhibitory action of etanercept on the biological activity of TNF-α and a suitable readout for assessing this inhibitory effect.

*The following procedure is given as an example.*

Carry out an apoptosis-based assay based on the ability of etanercept to inhibit TNF-α induced apoptosis in histiocytic lymphoma cell line U937 (ATCC No. CRL-1593.2) via caspase activation. The U937 cells are incubated with varying dilutions of test and reference preparations of etanercept in the presence of TNF-α. They are then incubated with Caspase-Glo 3/7 reagent, which results in caspase cleavage of a luminogenic substrate, subsequent release of a luciferase substrate and generation of a luminescent signal. The luminescence produced is proportional to the amount of caspase activity present.

*Assay medium*. RPMI 1640 containing L-alanyl-L-glutamine, 6.0 g/L *HEPES R* (25 mM) and foetal bovine serum (7.5 per cent *V/V*).

*Test solutions*. Dilute the preparation to be examined with assay medium to obtain a concentration of about 72 ng/mL. Use this solution to prepare 11 additional sample dilutions (dilution steps of 1.2 or 1.4 have been found suitable).

*Reference solutions*. Reconstitute the contents of 1 ampoule of *etanercept BRP* with sterilised *water for injections R* to obtain a concentration of 10 000 IU/mL. Further dilute with assay medium to obtain a concentration of 144 IU/mL. Use this solution to prepare 11 additional dilutions to generate the standard curve (dilution steps of 1.2 or 1.4 have been found suitable).

*TNF-α working solution*. Dissolve the contents of a vial of TNF-α according to the supplier's instructions. Further dilute with assay medium to obtain a suitable working concentration. As the biological activity of TNF-α is likely to vary between different suppliers and also between different batches from the same supplier, this should be controlled by use of an appropriate standard (e.g. WHO International Standard for TNF-α).

*Method*.

*Plate preparation*. Add 600 µL of assay medium to the wells designated for cells only (column 1, rows A-D) on a cluster tube rack. Add 300 µL of assay medium and 300 µL of TNF-α working solution to the wells designated for the TNF-α controls (column 1, rows E-H). Add 300 µL of the test or reference solutions and 300 µL of TNF-α working solution to the sample wells (columns 2-12, rows A-H). Mix on a shaker for 5 min. Incubate at 36.0-38.0 °C for 30-60 min in a humidified incubator using 5 ± 2 per cent $CO_2$.

*NOTE: when using deep-well or 96-well plates instead of cluster tubes, adapt the volumes of sample, TNF-α working solution and assay medium accordingly.*

*Cell preparation*. A cell density between $3.0 \times 10^5$ and $1.0 \times 10^6$ cells per millilitre is suitable, and cell viability is not less than 95 per cent.

*Plating test solution, reference solution, controls and cells*. Transfer 60 µL from each cluster tube and add to the corresponding wells. Mix the cell suspension thoroughly and add 60 µL to each well. Mix the contents of the plates on a shaker for 5 min. Incubate the plates without lids at 36.0-38.0 °C for 2-2.5 h in a humidified incubator using 5 ± 2 per cent $CO_2$.

*Addition of Caspase-Glo 3/7 assay system*. Reconstitute the Caspase-Glo 3/7 assay system according to the manufacturer's instructions and add 100 µL to each well of the assay plates. Shake the plates, covered with black lids, on a plate shaker for 10-15 min. Incubate at room temperature for 30-60 min. Place the uncovered plates in a luminometer and read the luminescence for a minimum of 1 second per well.

Calculate the potency of the preparation to be examined using the four-parameter logistic curve model (*5.3*).

*System suitability*:

- *maximum value (TNF-α control) to minimum value (cell only) ratio*: minimum 3.0.

*Result*: the estimated potency is not less than 80 per cent and not more than 140 per cent relative to the reference solution. The confidence limits ($P$ = 0.95) are not less than 80 per cent and not more than 125 per cent of the estimated potency.

STORAGE

In an airtight container at − 20 °C or below.

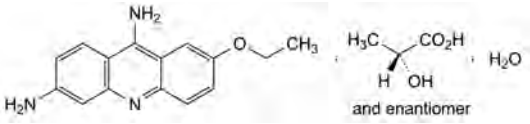
LABELLING

The label states the content, in milligrams of protein per millilitre.

**07/2019:1591**
**corrected 10.0**

# ETHACRIDINE LACTATE MONOHYDRATE

## Ethacridini lactas monohydricus



$C_{18}H_{21}N_3O_4,H_2O$ $M_r$ 361.4
[6402-23-9]

DEFINITION

7-Ethoxyacridine-3,9-diamine (2*RS*)-2-hydroxypropanoate monohydrate.

*Content*: 99.0 per cent to 101.0 per cent (dried substance).

CHARACTERS

*Appearance*: yellow crystalline powder.

*Solubility*: sparingly soluble in water, very slightly soluble in ethanol (96 per cent), practically insoluble in methylene chloride.

IDENTIFICATION

*First identification*: A.

*Second identification*: B, C.

A. Infrared absorption spectrophotometry (*2.2.24*).

*Comparison*: *ethacridine lactate monohydrate CRS*.

B. Thin-layer chromatography (*2.2.27*).

*Test solution*. Dissolve 5 mg of the substance to be examined in 2 mL of *water R* and dilute to 10 mL with *methanol R*.

*Reference solution*. Dissolve 5 mg of *ethacridine lactate monohydrate CRS* in 2 mL of *water R* and dilute to 10 mL with *methanol R*.

*Plate*: *TLC silica gel $F_{254}$ plate R*.

*Mobile phase*: *glacial acetic acid R*, *water R*, *butanol R* (17:17:66 *V/V/V*).

*Application*: 2 µL; the volume can be adapted based on the type of plate used.

*Development*: over 2/3 of the plate.

*Drying*: at 100-105 °C.

*Detection A*: examine in daylight.

*Results A*: the principal spot in the chromatogram obtained with the test solution is similar in position and size to the principal spot in the chromatogram obtained with the reference solution.

*Detection B*: examine in ultraviolet light at 254 nm and at 366 nm.

*Results B*: the principal spot in the chromatogram obtained with the test solution is similar in position, colour and size to the principal spot in the chromatogram obtained with the reference solution.

C. To 50 mL of solution S (see Tests) add 10 mL of *dilute sodium hydroxide solution R*. Filter. To 5 mL of the filtrate, add 1 mL of *dilute sulfuric acid R*. 5 mL of the solution obtained gives the reaction of lactates (*2.3.1*).

TESTS

**Solution S**. Dissolve 2.0 g in *carbon dioxide-free water R* and dilute to 100.0 mL with the same solvent.

**pH** (*2.2.3*): 5.5 to 7.0 for solution S.

**Related substances**. Liquid chromatography (*2.2.29*).

*Test solution*. Dissolve 10.0 mg of the substance to be examined in the mobile phase and dilute to 25.0 mL with the mobile phase.

*Reference solution (a)*. Dilute 1.0 mL of the test solution to 100.0 mL with the mobile phase.

*Reference solution (b)*. Dilute 1.0 mL of reference solution (a) to 10.0 mL with the mobile phase.

*Column*:

- *size*: *l* = 0.25 m, Ø = 4.6 mm;
- *stationary phase*: *base-deactivated end-capped octadecylsilyl silica gel for chromatography R* (5 µm).

*Mobile phase*: dissolve 1.0 g of *sodium octanesulfonate R* in a mixture of 300 mL of *acetonitrile R* and 700 mL of *phosphate buffer solution pH 2.8 R*.

*Flow rate*: 1 mL/min.

*Detection*: spectrophotometer at 268 nm.

*Injection*: 10 µL.

*Run time*: 3 times the retention time of ethacridine.

*Retention time*: ethacridine = about 15 min.

*Limits*:

- *any impurity*: not more than 3 times the area of the principal peak in the chromatogram obtained with reference solution (b) (0.3 per cent);
- *total*: not more than the area of the principal peak in the chromatogram obtained with reference solution (a) (1 per cent);
- *disregard limit*: 0.5 times the area of the principal peak in the chromatogram obtained with reference solution (b) (0.05 per cent).

**Loss on drying** (*2.2.32*): 4.5 per cent to 5.5 per cent, determined on 1.000 g by drying *in vacuo* at 105 °C.

**Sulfated ash** (*2.4.14*): maximum 0.1 per cent, determined on 1.0 g.

ASSAY

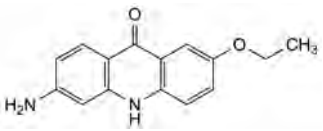
Dissolve 0.270 g in 5.0 mL of *anhydrous formic acid R*. Add 60.0 mL of *acetic anhydride R* and titrate with *0.1 M perchloric acid*, determining the end-point potentiometrically (*2.2.20*).

1 mL of *0.1 M perchloric acid* is equivalent to 34.34 mg of $C_{18}H_{21}N_3O_4$.

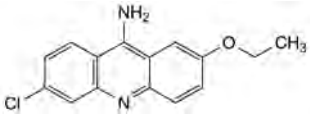
STORAGE

Protected from light.

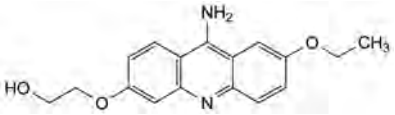
IMPURITIES



A. 6-amino-2-ethoxyacridin-9(10*H*)-one,



B. 6-chloro-2-ethoxyacridin-9-amine,

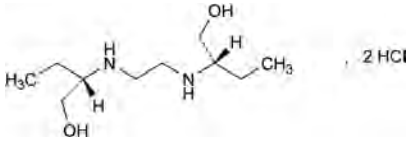


C. 2-[(9-amino-7-ethoxyacridin-3-yl)oxy]ethan-1-ol.

**01/2017:0553**

# ETHAMBUTOL HYDROCHLORIDE

## Ethambutoli hydrochloridum



$C_{10}H_{26}Cl_2N_2O_2$ $M_r$ 277.2

[1070-11-7]

DEFINITION

(2*S*,2′*S*)-2,2′-(Ethylenediimino)dibutan-1-ol dihydrochloride.

*Content*: 99.0 per cent to 101.0 per cent (dried substance).

CHARACTERS

*Appearance*: white or almost white, crystalline powder, hygroscopic.

*Solubility*: freely soluble in water, soluble in ethanol (96 per cent).

IDENTIFICATION

*First identification: A, D, E.*

*Second identification: B, C, D.*

A. Infrared absorption spectrophotometry (*2.2.24*).
*Comparison*: *ethambutol hydrochloride CRS*.

B. Examine the chromatograms obtained in the test for impurity A.
*Results*: the principal spot in the chromatogram obtained with test solution (b) is similar in position, colour and size to the principal spot in the chromatogram obtained with reference solution (b).

C. Dissolve 0.1 g in 10 mL of *water R*. Add 0.2 mL of *copper sulfate solution R* and 0.5 mL of *dilute sodium hydroxide solution R*; a blue colour is produced.

D. It gives reaction (a) of chlorides (*2.3.1*).

E. Related substances (see Tests).

TESTS

**pH** (*2.2.3*): 3.7 to 4.0.

Dissolve 0.2 g in 10 mL of *carbon dioxide-free water R*.

**Impurity A**. Thin-layer chromatography (*2.2.27*).

*Test solution (a).* Dissolve 0.50 g of the substance to be examined in *methanol R* and dilute to 10 mL with the same solvent.

*Test solution (b).* Dilute 1 mL of test solution (a) to 10 mL with *methanol R*.

*Reference solution (a).* Dissolve 50.0 mg of *aminobutanol R* (impurity A) in *methanol R* and dilute to 10.0 mL with the same solvent. Dilute 1.0 mL of this solution to 10.0 mL with *methanol R*.

*Reference solution (b).* Dissolve 50 mg of *ethambutol hydrochloride CRS* and 5 mg of *aminobutanol R* in *methanol R* and dilute to 10 mL with the same solvent.

*Plate*: *TLC silica gel plate R*.

*Mobile phase*: *concentrated ammonia R*, *water R*, *methanol R* (10:15:75 *V/V/V*).

*Application*: 2 µL.

*Development*: over 2/3 of the plate.

*Drying*: in air; heat at 110 °C for 10 min.

*Detection*: cool then spray with *ninhydrin solution R1*; heat at 110 °C for 5 min.

*System suitability*: reference solution (b):

– the chromatogram shows 2 clearly separated spots.

*Limit*:

– *impurity A*: any spot due to impurity A in the chromatogram obtained with test solution (a) is not more intense than the spot in the chromatogram obtained with reference solution (a) (1.0 per cent).

**Related substances**. Liquid chromatography (*2.2.29*). *Prepare the solutions immediately before use.*

*Test solution.* Suspend 4.0 mg of the substance to be examined in 4.0 mL of *acetonitrile R1* and add 100 µL of *triethylamine R*. Sonicate the mixture for 5 min. Add 15 µL of *(R)-(+)-α-methylbenzyl isocyanate R* and heat at 70 °C for 20 min.

*Reference solution (a).* Dilute 0.50 mL of the test solution to 100.0 mL with *acetonitrile R1*.

*Reference solution (b).* Treat 4.0 mg of *ethambutol for system suitability CRS* (containing impurity B) as described for the test solution.

*Column*:

– *size*: *l* = 0.10 m, Ø = 4.6 mm;

– *stationary phase*: *end-capped octadecylsilyl silica gel for chromatography R* (3 µm);

– *temperature*: 40 °C.

*Mobile phase*:

– *mobile phase A*: *methanol R*, *water R* (50:50 *V/V*);

– *mobile phase B*: *methanol R*;

| Time (min) | Mobile phase A (per cent *V/V*) | Mobile phase B (per cent *V/V*) |
|---|---|---|
| 0 - 30 | 71 | 29 |
| 30 - 35 | 71 → 0 | 29 → 100 |
| 35 - 37 | 0 | 100 |
| 37 - 38 | 0 → 71 | 100 → 29 |

*Flow rate*: 1.0 mL/min.

*Detection*: spectrophotometer at 215 nm.

*Injection*: 10 µL.

*Relative retention* with reference to ethambutol (retention time = about 14 min): impurity B = about 1.3.

*System suitability*: reference solution (b):

– *resolution*: minimum 4.0 between the peaks due to ethambutol and impurity B.

*Limits*:

– *impurity B*: not more than twice the area of the principal peak in the chromatogram obtained with reference solution (a) (1.0 per cent);

– *unspecified impurities with a relative retention of 0.75 to 1.5 with reference to ethambutol*: for each impurity, not more than 0.2 times the area of the peak due to ethambutol in the chromatogram obtained with reference solution (a) (0.10 per cent);

– *total (impurity B and unspecified impurities with a relative retention of 0.75 to 1.5 with reference to ethambutol)*: not more than twice the area of the principal peak in the chromatogram obtained with reference solution (a) (1.0 per cent);

– *disregard limit*: 0.1 times the area of the peak due to ethambutol in the chromatogram obtained with reference solution (a) (0.05 per cent).

**Impurity D (1,2-dichloroethane)** (*2.4.24*): maximum 5 ppm.

**Loss on drying** (*2.2.32*): maximum 0.5 per cent, determined on 0.500 g by drying in an oven at 105 °C for 3 h.

**Sulfated ash** (*2.4.14*): maximum 0.1 per cent, determined on 1.0 g.

ASSAY

Dissolve 0.200 g in 50 mL of *water R* and add 1.0 mL of *0.1 M hydrochloric acid*. Carry out a potentiometric titration (*2.2.20*), using *0.1 M sodium hydroxide*. Read the volume added between the 2 points of inflexion.

1 mL of *0.1 M sodium hydroxide* is equivalent to 27.72 mg of $C_{10}H_{26}Cl_2N_2O_2$.

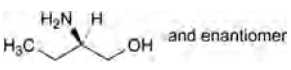
STORAGE

In an airtight container.

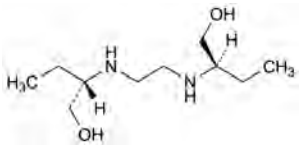
IMPURITIES

*Specified impurities: A, B, D.*

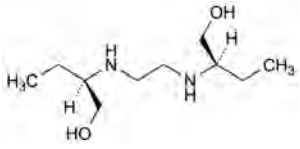
*Other detectable impurities* (the following substances would, if present at a sufficient level, be detected by one or other of the tests in the monograph. They are limited by the general acceptance criterion for other/unspecified impurities and/or by the general monograph *Substances for pharmaceutical use (2034)*. It is therefore not necessary to identify these impurities for demonstration of compliance. See also *5.10. Control of impurities in substances for pharmaceutical use*): C.



A. 2-aminobutan-1-ol,



B. (2*R*,2′*S*)-2,2′-(ethylenediimino)dibutan-1-ol (meso-ethambutol),



C. (2*R*,2′*R*)-2,2′-(ethylenediimino)dibutan-1-ol ((*R*,*R*)-ethambutol),

D. 1,2-dichloroethane (ethylene chloride).

**01/2015:1317**
**corrected 10.0**

# ETHANOL (96 PER CENT)[(1)]

## Ethanolum (96 per centum)

DEFINITION

*Content*:

– *ethanol* ($C_2H_6O$; $M_r$ 46.07): 95.1 per cent *V/V* (92.6 per cent *m/m*) to 96.9 per cent *V/V* (95.2 per cent *m/m*) at 20 °C, calculated from the relative density using the alcoholimetric tables (*5.5*);

– *water*.

♦CHARACTERS

*Appearance*: colourless, clear, volatile, flammable liquid, hygroscopic.

*Solubility*: miscible with water and with methylene chloride.

It burns with a blue, smokeless flame.

bp: about 78 °C.♦

IDENTIFICATION

*First identification*: *A, B.*

*Second identification*: *A, C, D.*

A. Relative density (see Tests).

B. Infrared absorption spectrophotometry (*2.2.24*).

*Comparison*: *Ph. Eur. reference spectrum of ethanol (96 per cent).*

◊C. Mix 0.1 mL with 1 mL of a 10 g/L solution of *potassium permanganate R* and 0.2 mL of *dilute sulfuric acid R* in a test-tube. Cover immediately with a filter paper moistened with a freshly prepared solution containing 0.1 g of *sodium nitroprusside R* and 0.5 g of *piperazine hydrate R* in 5 mL of *water R*. After a few minutes, an intense blue colour appears on the paper and becomes paler after 10-15 min.

D. To 0.5 mL add 5 mL of *water R*, 2 mL of *dilute sodium hydroxide solution R*, then slowly add 2 mL of *0.05 M iodine*. A yellow precipitate is formed within 30 min.◊

TESTS

**Appearance**. It is clear (*2.2.1*) and colourless (*2.2.2, Method II*) when compared with *water R*. Dilute 1.0 mL to 20 mL with *water R*. After standing for 5 min, the dilution remains clear (*2.2.1*) when compared with *water R*.

**Acidity or alkalinity**. To 20 mL add 20 mL of *carbon dioxide-free water R* and 0.1 mL of *phenolphthalein solution R*. The solution is colourless. Add 1.0 mL of *0.01 M sodium hydroxide*. The solution is pink (30 ppm, expressed as acetic acid).

**Relative density** (*2.2.5*): 0.805 to 0.812.

**Absorbance** (*2.2.25*): maximum 0.40 at 240 nm, 0.30 between 250 nm and 260 nm, and 0.10 between 270 nm and 340 nm. The spectrum shows a steadily descending curve with no observable peaks or shoulders.

Examine between 235 nm and 340 nm, in a 5 cm cell using *water R* as the compensation liquid.

**Volatile impurities**. Gas chromatography (*2.2.28*).

*Test solution (a)*. The substance to be examined.

*Test solution (b)*. Add 150 µL of *4-methylpentan-2-ol R* to 500.0 mL of the substance to be examined.

*Reference solution (a)*. Dilute 100 µL of *anhydrous methanol R* to 50.0 mL with the substance to be examined. Dilute 5.0 mL of the solution to 50.0 mL with the substance to be examined.

*Reference solution (b)*. Dilute 50 µL of *anhydrous methanol R* and 50 µL of *acetaldehyde R* to 50.0 mL with the substance to be examined. Dilute 100 µL of the solution to 10.0 mL with the substance to be examined.

*Reference solution (c)*. Dilute 150 µL of *acetal R* to 50.0 mL with the substance to be examined. Dilute 100 µL of the solution to 10.0 mL with the substance to be examined.

*Reference solution (d)*. Dilute 100 µL of *benzene R* to 100.0 mL with the substance to be examined. Dilute 100 µL of the solution to 50.0 mL with the substance to be examined.

*Column*:

– *material*: fused silica;

– *size*: *l* = 30 m, Ø = 0.32 mm;

– *stationary phase*: *cyanopropyl(3)phenyl(3)methyl(94)polysiloxane R* (film thickness 1.8 µm).

*Carrier gas*: *helium for chromatography R.*

*Linear velocity*: 35 cm/s.

*Split ratio*: 1:20.

*Temperature*:

| | Time (min) | Temperature (°C) |
|---|---|---|
| Column | 0 - 12 | 40 |
| | 12 - 32 | 40 → 240 |
| | 32 - 42 | 240 |
| Injection port | | 200 |
| Detector | | 280 |

*Detection*: flame ionisation.

*Injection*: 1 µL.

*System suitability*: reference solution (b):

– *resolution*: minimum 1.5 between the 1st peak (acetaldehyde) and the 2nd peak (methanol).

*Limits*:

– *methanol* in the chromatogram obtained with test solution (a): not more than half the area of the corresponding peak in the chromatogram obtained with reference solution (a) (200 ppm *V/V*);

– *acetaldehyde + acetal*: maximum 10 ppm *V/V*, expressed as acetaldehyde.

(1) This monograph has undergone pharmacopoeial harmonisation. See chapter *5.8. Pharmacopoeial harmonisation*.

Calculate the sum of the contents of acetaldehyde and acetal in parts per million *V/V* using the following expression:

$$\frac{10 \times A_E}{A_T - A_E} + \frac{30 \times C_E}{C_T - C_E} \times \frac{44.05}{118.2}$$

$A_E$ = area of the peak due to acetaldehyde in the chromatogram obtained with test solution (a),

$A_T$ = area of the peak due to acetaldehyde in the chromatogram obtained with reference solution (b),

$C_E$ = area of the peak due to acetal in the chromatogram obtained with test solution (a),

$C_T$ = area of the peak due to acetal in the chromatogram obtained with reference solution (c),

44.05 = molecular mass of acetaldehyde,

118.2 = molecular mass of acetal.

– *benzene*: maximum 2 ppm *V/V*.

Calculate the content of benzene in parts per million *V/V* using the following expression:

$$\frac{2B_E}{B_T - B_E}$$

$B_E$ = area of the peak due to benzene in the chromatogram obtained with test solution (a),

$B_T$ = area of the peak due to benzene in the chromatogram obtained with reference solution (d).

If necessary, the identity of benzene can be confirmed using another suitable chromatographic system (stationary phase with a different polarity).

– *total of other impurities* in the chromatogram obtained with test solution (b): not more than the area of the peak due to 4-methylpentan-2-ol in the chromatogram obtained with test solution (b) (300 ppm),

– *disregard limit*: 0.03 times the area of the peak due to 4-methylpentan-2-ol in the chromatogram obtained with test solution (b) (9 ppm).

**Residue on evaporation**: maximum 25 ppm *m/V*.

Evaporate 100 mL to dryness on a water-bath and dry at 100-105 °C for 1 h. The residue weighs a maximum of 2.5 mg.

STORAGE

Protected from light.

# ETHANOL, ANHYDROUS[(2)]

## Ethanolum anhydricum

$C_2H_6O$ $M_r$ 46.07
[64-17-5]

DEFINITION

*Content*: not less than 99.5 per cent *V/V* of $C_2H_6O$ (99.2 per cent *m/m*), at 20 °C, calculated from the relative density using the alcoholimetric tables (*5.5*).

♦CHARACTERS

*Appearance*: colourless, clear, volatile, flammable liquid, hygroscopic.

*Solubility*: miscible with water and with methylene chloride.

It burns with a blue, smokeless flame.

bp: about 78 °C.♦

IDENTIFICATION

*First identification*: *A, B.*

*Second identification*: *A, C, D.*

A. Relative density (see Tests).

B. Infrared absorption spectrophotometry (*2.2.24*).

*Comparison*: *Ph. Eur. reference spectrum of anhydrous ethanol.*

◊C. Mix 0.1 mL with 1 mL of a 10 g/L solution of *potassium permanganate R* and 0.2 mL of *dilute sulfuric acid R* in a test-tube. Cover immediately with a filter paper moistened with a freshly prepared solution containing 0.1 g of *sodium nitroprusside R* and 0.5 g of *piperazine hydrate R* in 5 mL of *water R*. After a few minutes, an intense blue colour appears on the paper and becomes paler after 10-15 min.

D. To 0.5 mL add 5 mL of *water R*, 2 mL of *dilute sodium hydroxide solution R*, then slowly add 2 mL of *0.05 M iodine*. A yellow precipitate is formed within 30 min.◊

TESTS

**Appearance**. It is clear (*2.2.1*) and colourless (*2.2.2, Method II*) when compared with *water R*. Dilute 1.0 mL to 20 mL with *water R*. After standing for 5 min, the dilution remains clear (*2.2.1*) when compared with *water R*.

**Acidity or alkalinity**. To 20 mL add 20 mL of *carbon dioxide-free water R* and 0.1 mL of *phenolphthalein solution R*. The solution is colourless. Add 1.0 mL of *0.01 M sodium hydroxide*. The solution is pink (30 ppm, expressed as acetic acid).

**Relative density** (*2.2.5*): 0.790 to 0.793.

**Absorbance** (*2.2.25*): maximum 0.40 at 240 nm, 0.30 between 250 nm and 260 nm, and 0.10 between 270 nm and 340 nm. The spectrum shows a steadily descending curve with no observable peaks or shoulders.

Examine between 235 nm and 340 nm in a 5 cm cell using *water R* as the compensation liquid.

**Volatile impurities**. Gas chromatography (*2.2.28*).

*Test solution (a)*. The substance to be examined.

*Test solution (b)*. Add 150 µL of *4-methylpentan-2-ol R* to 500.0 mL of the substance to be examined.

*Reference solution (a)*. Dilute 100 µL of *anhydrous methanol R* to 50.0 mL with the substance to be examined. Dilute 5.0 mL of the solution to 50.0 mL with the substance to be examined.

*Reference solution (b)*. Dilute 50 µL of *anhydrous methanol R* and 50 µL of *acetaldehyde R* to 50.0 mL with the substance to be examined. Dilute 100 µL of the solution to 10.0 mL with the substance to be examined.

*Reference solution (c)*. Dilute 150 µL of *acetal R* to 50.0 mL with the substance to be examined. Dilute 100 µL of the solution to 10.0 mL with the substance to be examined.

*Reference solution (d)*. Dilute 100 µL of *benzene R* to 100.0 mL with the substance to be examined. Dilute 100 µL of the solution to 50.0 mL with the substance to be examined.

*Column*:

– *material*: fused silica;
– *size*: *l* = 30 m, Ø = 0.32;
– *stationary phase*: *cyanopropyl(3)phenyl(3)methyl(94)polysiloxane R* (film thickness 1.8 µm).

*Carrier gas*: *helium for chromatography R.*

*Linear velocity*: 35 cm/s.

*Split ratio*: 1:20.

*Temperature*:

| | Time (min) | Temperature (°C) |
|---|---|---|
| Column | 0 - 12 | 40 |
| | 12 - 32 | 40 → 240 |
| | 32 - 42 | 240 |
| Injection port | | 200 |
| Detector | | 280 |

*Detection*: flame ionisation.

*Injection*: 1 µL.

*System suitability*: reference solution (b):

– *resolution*: minimum 1.5 between the 1st peak (acetaldehyde) and the 2nd peak (methanol).

*Limits*:

– *methanol* in the chromatogram obtained with test solution (a): not more than half the area of the corresponding peak in the chromatogram obtained with reference solution (a) (200 ppm *V/V*);
– *acetaldehyde + acetal*: maximum 10 ppm *V/V*, expressed as acetaldehyde.

(2) This monograph has undergone pharmacopoeial harmonisation. See chapter *5.8. Pharmacopoeial harmonisation*.

Calculate the sum of the contents of acetaldehyde and acetal in parts per million *V/V* using the following expression:

$$\frac{10 \times A_E}{A_T - A_E} + \frac{30 \times C_E}{C_T - C_E} \times \frac{44.05}{118.2}$$

$A_E$ = area of the peak due to acetaldehyde in the chromatogram obtained with test solution (a),

$A_T$ = area of the peak due to acetaldehyde in the chromatogram obtained with reference solution (b),

$C_E$ = area of the peak due to acetal in the chromatogram obtained with test solution (a),

$C_T$ = area of the peak due to acetal in the chromatogram obtained with reference solution (c),

44.05 = molecular mass of acetaldehyde,

118.2 = molecular mass of acetal.

– *benzene*: maximum 2 ppm *V/V*.

Calculate the content of benzene in parts per million *V/V* using the following expression:

$$\frac{2B_E}{B_T - B_E}$$

$B_E$ = area of the peak due to benzene in the chromatogram obtained with test solution (a),

$B_T$ = area of the peak due to benzene in the chromatogram obtained with reference solution (d).

If necessary, the identity of benzene can be confirmed using another suitable chromatographic system (stationary phase with a different polarity).

– *total of other impurities* in the chromatogram obtained with test solution (b): not more than the area of the peak due to 4-methylpentan-2-ol in the chromatogram obtained with test solution (b) (300 ppm);

– *disregard limit*: 0.03 times the area of the peak due to 4-methylpentan-2-ol in the chromatogram obtained with test solution (b) (9 ppm).

**Residue on evaporation**: maximum 25 ppm *m/V*.

Evaporate 100 mL to dryness on a water-bath and dry at 100-105 °C for 1 h. The residue weighs a maximum of 2.5 mg.

STORAGE

Protected from light.

# ETHER

## Aether

$C_4H_{10}O$ $M_r$ 74.1
[60-29-7]

DEFINITION

Diethyl ether.

It may contain a suitable non-volatile antioxidant at a suitable concentration.

CHARACTERS

*Appearance*: clear, colourless, volatile liquid.

*Solubility*: soluble in water, miscible with ethanol (96 per cent), with methylene chloride and with fatty oils.

It is highly flammable.

IDENTIFICATION

A. Relative density (see Tests).

B. Distillation range (see Tests).

TESTS

**Acidity**. To 20 mL of *ethanol (96 per cent) R* add 0.25 mL of *bromothymol blue solution R1* and, dropwise, *0.02 M sodium hydroxide* until a blue colour persists for 30 s. Add 25 mL of the substance to be examined, shake and add, dropwise, *0.02 M sodium hydroxide* until the blue colour reappears and persists for 30 s. Not more than 0.4 mL of *0.02 M sodium hydroxide* is required.

**Relative density** (*2.2.5*): 0.714 to 0.716.

**Distillation range** (*2.2.11*). *Do not distil if the substance to be examined does not comply with the test for peroxides.* It distils completely between 34.0 °C and 35.0 °C. Carry out the test using a suitable heating device and taking care to avoid directly heating the flask above the level of the liquid.

**Aldehydes**. To 10.0 mL in a ground-glass-stoppered cylinder add 1 mL of *alkaline potassium tetraiodomercurate solution R* and shake for 10 s. Allow to stand for 5 min, protected from light. The lower layer may show a yellow or reddish-brown opalescence but not a grey or black opalescence.

**Peroxides**. Place 8 mL of *potassium iodide and starch solution R* in a 12 mL ground-glass-stoppered cylinder about 15 mm in diameter. Fill completely with the substance to be examined, mix and allow to stand protected from light for 5 min. No colour develops.

**Non-volatile matter**: maximum 20 mg/L.

*After ensuring that the substance to be examined complies with the test for peroxides*, evaporate 50 mL to dryness on a water-bath and dry the residue in an oven at 100-105 °C. The residue weighs a maximum of 1 mg.

**Substances with a foreign odour**. Moisten a disc of filter paper 80 mm in diameter with 5 mL of the substance to be examined and allow to evaporate. No foreign odour is perceptible immediately after the evaporation.

**Water** (*2.5.12*): maximum 2 g/L, determined on 20 mL.

STORAGE

In an airtight container, protected from light.

**07/2016:0367**

# ETHER, ANAESTHETIC

## Aether anaestheticus

$C_4H_{10}O$ $M_r$ 74.1
[60-29-7]

DEFINITION

Diethyl ether.

It may contain a suitable non-volatile antioxidant at an appropriate concentration.

CHARACTERS

*Appearance*: clear, colourless liquid, volatile, very mobile.

*Solubility*: soluble in 15 parts of water, miscible with ethanol (96 per cent) and with fatty oils.

It is highly flammable.

IDENTIFICATION

A. Relative density (see Tests).

B. Distillation range (see Tests).

TESTS

**Acidity**. To 20 mL of *ethanol (96 per cent) R* add 0.25 mL of *bromothymol blue solution R1* and, dropwise, *0.02 M sodium hydroxide* until a blue colour persists for 30 s. Add 25 mL of the substance to be examined, shake and add, dropwise, *0.02 M sodium hydroxide* until the blue colour reappears and persists for 30 s. Not more than 0.4 mL of *0.02 M sodium hydroxide* is required.

**Relative density** (*2.2.5*): 0.714 to 0.716.

**Distillation range** (*2.2.11*). *Do not distil if the substance to be examined does not comply with the test for peroxides.* It distils completely between 34.0 °C and 35.0 °C. Carry out the test using a suitable heating device and taking care to avoid directly heating the flask above the level of the liquid.

**Acetone and aldehydes**. To 10.0 mL in a ground-glass-stoppered cylinder add 1 mL of *alkaline potassium tetraiodomercurate solution R* and shake for 10 s. Allow to stand for 5 min, protected from light. The lower layer shows only a slight opalescence.

If the substance to be examined does not comply with the test, distil 40 mL, *after ensuring that the substance to be examined complies with the test for peroxides*, until only 5 mL remains. Collect the distillate in a receiver cooled in a bath of iced water and repeat the test described above using 10.0 mL of the distillate.

**Peroxides**. Place 8 mL of *potassium iodide and starch solution R* in a 12 mL ground-glass-stoppered cylinder about 15 mm in diameter. Fill completely with the substance to be examined, shake vigorously and allow to stand protected from light for 30 min. No colour develops.

**Non-volatile matter**: maximum 20 mg/L.

*After ensuring that the substance to be examined complies with the test for peroxides*, evaporate 50 mL to dryness on a water-bath and dry the residue in an oven at 100-105 °C. The residue weighs a maximum of 1 mg.

**Substances with a foreign odour**. Moisten a disc of filter paper 80 mm in diameter with 5 mL of the substance to be examined and allow to evaporate. No foreign odour is perceptible immediately after the evaporation.

**Water** (*2.5.12*): maximum 2 g/L, determined on 20 mL.

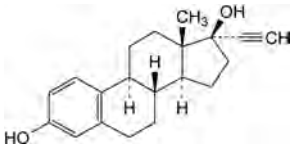
STORAGE

In an airtight container, protected from light. The contents of a partly filled container may deteriorate rapidly.

**04/2012:0140**

# ETHINYLESTRADIOL

## Ethinylestradiolum



$C_{20}H_{24}O_2$ $M_r$ 296.4
[57-63-6]

DEFINITION

19-Nor-17α-pregna-1,3,5(10)-trien-20-yne-3,17-diol.

*Content*: 97.5 per cent to 102.0 per cent (dried substance).

CHARACTERS

*Appearance*: white or slightly yellowish-white, crystalline powder.

*Solubility*: practically insoluble in water, freely soluble in ethanol (96 per cent). It dissolves in dilute alkaline solutions.

It shows polymorphism (*5.9*).

IDENTIFICATION

A. Infrared absorption spectrophotometry (*2.2.24*).

*Comparison*: *ethinylestradiol CRS*.

If the spectra obtained in the solid state show differences, dissolve the substance to be examined and the reference substance separately in *methanol R*, evaporate to dryness and record new spectra using the residues.

B. Thin-layer chromatography (*2.2.27*).

*Solvent mixture*: *methanol R*, *methylene chloride R* (10:90 *V/V*).

*Test solution*. Dissolve 25 mg of the substance to be examined in the solvent mixture and dilute to 25 mL with the solvent mixture.

*Reference solution*. Dissolve 25 mg of *ethinylestradiol CRS* in the solvent mixture and dilute to 25 mL with the solvent mixture.

*Plate*: *TLC silica gel G plate R*.

*Mobile phase*: *ethanol (96 per cent) R*, *toluene R* (10:90 *V/V*).

*Application*: 5 µL.

*Development*: over 2/3 of the plate.

*Drying*: in air until the solvent has evaporated.

*Detection*: heat at 110 °C for 10 min, spray the hot plate with *alcoholic solution of sulfuric acid R* and heat again at 110 °C for 10 min. Examine in daylight and in ultraviolet light at 365 nm.

*Results*: the principal spot in the chromatogram obtained with the test solution is similar in position, colour, fluorescence and size to the principal spot in the chromatogram obtained with the reference solution.

TESTS

**Related substances**. Liquid chromatography (*2.2.29*).

*Solvent mixture*: *water R*, *acetonitrile R1* (40:60 *V/V*).

*Test solution*. Dissolve 50.0 mg of the substance to be examined in 30 mL of *acetonitrile R1* and dilute to 50.0 mL with *water R*.

*Reference solution (a)*. Dilute 1.0 mL of the test solution to 100.0 mL with the solvent mixture. Dilute 1.0 mL of this solution to 10.0 mL with the solvent mixture.

*Reference solution (b)*. Dissolve 2 mg of *estrone CRS* (impurity C) in 10.0 mL of the solvent mixture. Dilute 1.0 mL of the solution to 100.0 mL with the solvent mixture. Use 1.0 mL of this solution to dissolve the contents of a vial of *ethinylestradiol for system suitability CRS* (containing impurities B, F, H, I and K).

*Reference solution (c)*. Dissolve 50.0 mg of *ethinylestradiol CRS* in 30 mL of *acetonitrile R1* and dilute to 50.0 mL with *water R*.

*Column*:

- *size*: *l* = 0.25 m, Ø = 4.6 mm;
- *stationary phase*: *end-capped butylsilyl silica gel for chromatography R* (5 µm);
- *temperature*: 30 °C.

*Mobile phase*:

- *mobile phase A*: *acetonitrile R1*, *water R* (30:70 *V/V*);
- *mobile phase B*: *water R*, *acetonitrile R1* (25:75 *V/V*);

| Time (min) | Mobile phase A (per cent *V/V*) | Mobile phase B (per cent *V/V*) |
|---|---|---|
| 0 - 35 | 100 | 0 |
| 35 - 65 | 100 → 0 | 0 → 100 |

*Flow rate*: 1.5 mL/min.

*Detection*: spectrophotometer at 220 nm.

*Injection*: 30 µL of the test solution and reference solutions (a) and (b).

*Identification of impurities*: use the chromatogram supplied with *ethinylestradiol for system suitability CRS* and the chromatogram obtained with reference solution (b) to identify the peaks due to impurities B, C, F, H, I and K.

*Relative retention* with reference to ethinylestradiol (retention time = about 35 min): impurity F = about 0.2; impurity H = about 0.5; impurity I = about 0.8; impurity B = about 0.88; impurity C = about 0.92; impurity K = about 1.3.

*System suitability*: reference solution (b):

- *resolution*: minimum 1.2 between the peaks due to impurities I and B.

*Limits*:

- *correction factors*: for the calculation of content, multiply the peak areas of the following impurities by the corresponding correction factor: impurity B = 0.7; impurity I = 0.4;
- *impurity B*: not more than 5 times the area of the principal peak in the chromatogram obtained with reference solution (a) (0.5 per cent);
- *impurities H, I, K*: for each impurity, not more than twice the area of the principal peak in the chromatogram obtained with reference solution (a) (0.2 per cent);
- *impurities C, F*: for each impurity, not more than 1.5 times the area of the principal peak in the chromatogram obtained with reference solution (a) (0.15 per cent);

- *unspecified impurities*: for each impurity, not more than the area of the principal peak in the chromatogram obtained with reference solution (a) (0.10 per cent);
- *total*: not more than 8 times the area of the principal peak in the chromatogram obtained with reference solution (a) (0.8 per cent);
- *disregard limit*: 0.5 times the area of the principal peak in the chromatogram obtained with reference solution (a) (0.05 per cent).

**Loss on drying** (*2.2.32*): maximum 1.0 per cent, determined on 0.500 g by drying in an oven at 105 °C for 3 h.

ASSAY

Liquid chromatography (*2.2.29*) as described in the test for related substances with the following modification.

*Injection*: test solution and reference solution (c).

Calculate the percentage content of $C_{20}H_{24}O_2$ from the declared content of *ethinylestradiol CRS*.

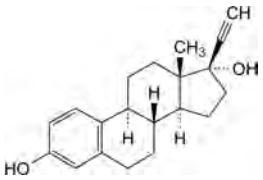
STORAGE

Protected from light.

IMPURITIES

*Specified impurities: B, C, F, H, I, K.*

*Other detectable impurities* (the following substances would, if present at a sufficient level, be detected by one or other of the tests in the monograph. They are limited by the general acceptance criterion for other/unspecified impurities and/or by the general monograph *Substances for pharmaceutical use (2034)*. It is therefore not necessary to identify these impurities for demonstration of compliance. See also *5.10. Control of impurities in substances for pharmaceutical use*): *A, D, E, G, J, L, M.*



A. 19-norpregna-1,3,5(10)-trien-20-yne-3,17-diol (17β-ethinylestradiol),

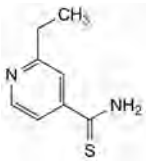
# ETHIONAMIDE

## Ethionamidum



$C_8H_{10}N_2S$ $M_r$ 166.2
[536-33-4]

DEFINITION

2-Ethylpyridine-4-carbothioamide.

*Content*: 98.5 per cent to 101.5 per cent (dried substance).

CHARACTERS

*Appearance:* yellow, crystalline powder or small, yellow crystals.

*Solubility:* practically insoluble in water, soluble in methanol, sparingly soluble in ethanol (96 per cent).

IDENTIFICATION

*First identification: C.*

*Second identification: A, B, D.*

A. Melting point (*2.2.14*): 158 °C to 164 °C.

B. Ultraviolet and visible absorption spectrophotometry (*2.2.25*).

*Test solution.* Dissolve 10.0 mg in *methanol R* and dilute to 100.0 mL with the same solvent. Dilute 10.0 mL of the solution to 100.0 mL with *methanol R*.

*Spectral range*: 230-350 nm.

*Absorption maximum*: at 290 nm.

*Specific absorbance at the absorption maximum*: 380 to 440.

C. Infrared absorption spectrophotometry (*2.2.24*).

*Comparison: ethionamide CRS.*

D. Dissolve about 10 mg in 5 mL of *methanol R*. Add 5 mL of *silver nitrate solution R2*. A dark brown precipitate is formed.

TESTS

**Acidity**. Dissolve 2.0 g in 20 mL of *methanol R*, heating to about 50 °C, and add 20 mL of *water R*. Cool slightly while shaking until crystallisation begins and then allow to cool to room temperature. Add 60 mL of *water R* and 0.2 mL of *cresol red solution R*. Not more than 0.2 mL of *0.1 M sodium hydroxide* is required to change the colour of the indicator to red.

**Related substances**. Liquid chromatography (*2.2.29*).

*Solvent mixture.* Dissolve 0.240 g of *ammonium dihydrogen phosphate R* in 700 mL of *water R* and add 300 mL of *acetonitrile R*.

*Test solution.* Dissolve 10.0 mg of the substance to be examined in the solvent mixture and dilute to 10.0 mL with the solvent mixture.

*Reference solution (a).* Dilute 1.0 mL of the test solution to 100.0 mL with the solvent mixture. Dilute 1.0 mL of this solution to 10.0 mL with the solvent mixture.

*Reference solution (b).* Dissolve 5 mg of *pyridine-4-carbonitrile R* (impurity B) in the solvent mixture and dilute to 50.0 mL with the solvent mixture. Dilute 1.0 mL of the solution to 100.0 mL with the solvent mixture.

*Reference solution (c).* Dissolve 5 mg of *ethionamide for system suitability CRS* (containing impurity A) in reference solution (b) and dilute to 5.0 mL with reference solution (b).

*Column*:

- *size*: *l* = 0.15 m, Ø = 4.6 mm;
- *stationary phase*: *end-capped octadecylsilyl silica gel for chromatography R* (3 µm);
- *temperature*: 30 °C.

*Mobile phase*:

- *mobile phase A*: dissolve 0.287 g of *ammonium dihydrogen phosphate R* in 850 mL of *water R*;
- *mobile phase B*: *acetonitrile R*;

| Time (min) | Mobile phase A (per cent *V/V*) | Mobile phase B (per cent *V/V*) |
|---|---|---|
| 0 - 30 | 85 | 15 |
| 30 - 32 | 85 → 70 | 15 → 30 |
| 32 - 55 | 70 | 30 |

*Flow rate*: 1 mL/min.

*Detection*: spectrophotometer at 287 nm.

*Injection*: 5 µL of the test solution and reference solutions (a) and (c).

*Identification of impurities*: use the chromatogram supplied with *ethionamide for system suitability CRS* and the chromatogram obtained with reference solution (c) to identify the peaks due to impurities A and B.

*Relative retention* with reference to ethionamide (retention time = about 9 min): impurity A = about 0.4; impurity B = about 0.5.

*System suitability*: reference solution (c):

- *resolution*: minimum 3.0 between the peaks due to impurities A and B.

*Calculation of percentage contents*:

- for each impurity, use the concentration of ethionamide in reference solution (a).

*Limits*:

- *impurity A*: maximum 0.2 per cent;
- *unspecified impurities*: for each impurity, maximum 0.10 per cent;
- *total*: maximum 0.5 per cent;
- *reporting threshold*: 0.05 per cent.

**Loss on drying** (*2.2.32*): maximum 0.5 per cent, determined on 1.000 g by drying in an oven at 105 °C for 3 h.

**Sulfated ash** (*2.4.14*): maximum 0.1 per cent, determined on 1.0 g.

ASSAY

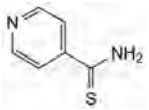
Dissolve 0.150 g in 50 mL of *anhydrous acetic acid R*. Titrate with *0.1 M perchloric acid*, determining the end-point potentiometrically (*2.2.20*).

1 mL of *0.1 M perchloric acid* is equivalent to 16.62 mg of $C_8H_{10}N_2S$.

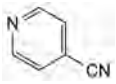
IMPURITIES

*Specified impurities: A.*

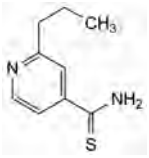
*Other detectable impurities* (the following substances would, if present at a sufficient level, be detected by one or other of the tests in the monograph. They are limited by the general acceptance criterion for other/unspecified impurities and/or by the general monograph *Substances for pharmaceutical use (2034)*. It is therefore not necessary to identify these impurities for demonstration of compliance. See also *5.10. Control of impurities in substances for pharmaceutical use*): *B, C, D, E, F.*



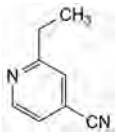
A. pyridine-4-carbothioamide,



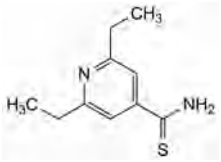
B. pyridine-4-carbonitrile,



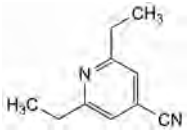
C. 2-propylpyridine-4-carbothioamide (prothionamide),



D. 2-ethylpyridine-4-carbonitrile,



E. 2,6-diethylpyridine-4-carbothioamide,

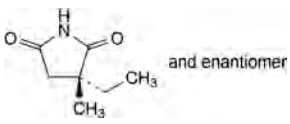


F. 2,6-diethylpyridine-4-carbonitrile.

**01/2019:0764**

# ETHOSUXIMIDE

## Ethosuximidum



$C_7H_{11}NO_2$ $M_r$ 141.2
[77-67-8]

DEFINITION

(3*RS*)-3-Ethyl-3-methylpyrrolidine-2,5-dione.

*Content*: 99.0 per cent to 101.0 per cent (anhydrous substance).

CHARACTERS

*Appearance*: white or almost white, powder or waxy solid.

*Solubility*: freely soluble in water, very soluble in ethanol (96 per cent) and in methylene chloride.

It shows polymorphism (*5.9*).

IDENTIFICATION

*First identification*: *A, B.*

*Second identification*: *A, C.*

A. Melting point (*2.2.14*): 45 °C to 50 °C.

B. Infrared absorption spectrophotometry (*2.2.24*).

*Comparison*: *ethosuximide CRS*.

If the spectra obtained in the solid state show differences, dissolve the substance to be examined and the reference substance separately in *methylene chloride R*, evaporate to dryness and record new spectra using the residues.

C. Thin-layer chromatography (*2.2.27*).

*Test solution*. Dissolve 20 mg of the substance to be examined in 1 mL of *methanol R*.

*Reference solution*. Dissolve 20 mg of *ethosuximide CRS* in 1 mL of *methanol R*.

*Plate*: *TLC silica gel $F_{254}$ plate R*.

*Mobile phase*: *glacial acetic acid R*, *water R*, *butanol R* (17:17:66 *V/V/V*).

*Application*: 5 µL.

*Development*: over 3/4 of the plate.

*Drying*: at 100-105 °C for 10 min.

*Detection*: examine in ultraviolet light at 254 nm.

*Results*: the principal spot in the chromatogram obtained with the test solution is similar in position and size to the principal spot in the chromatogram obtained with the reference solution.

TESTS

**Appearance of solution**. The solution is clear (*2.2.1*) and colourless (*2.2.2, Method II*).

Dissolve 2.5 g in *water R* and dilute to 25 mL with the same solvent.

**Cyanide**. Liquid chromatography (*2.2.29*).

*Test solution*. Dissolve 0.50 g of the substance to be examined in *water R* and dilute to 10.0 mL with the same solvent.

*Reference solution (a)*. Dissolve 0.125 g of *potassium cyanide R* in *water R* and dilute to 50.0 mL with the same solvent. Dilute 1.0 mL of the solution to 100.0 mL with *water R*. Dilute 0.5 mL of this solution to 10.0 mL with *water R*.

*Reference solution (b)*. Dissolve 0.50 g of the substance to be examined in *water R*, add 0.5 mL of reference solution (a) and dilute to 10.0 mL with *water R*.

*Column*:

– *size*: *l* = 0.075 m, Ø = 7.5 mm,

– *stationary phase*: spherical *weak anion-exchange resin R* (10 µm).

*Mobile phase*: dissolve 2.1 g of *lithium hydroxide R* and 85 mg of *sodium edetate R* in *water for chromatography R*, and dilute to 1000 mL with the same solvent.

*Flow rate*: 2.0 mL/min.

*Detection*: electrochemical detector (direct amperometry) with a silver working electrode, a silver-silver chloride reference electrode, held at + 0.05 V oxidation potential, and a detector sensitivity of 20 nA full scale.

*Injection*: 20 µL of the test solution and reference solution (b).

*System suitability*: reference solution (b):

– *peak-to-valley ratio*: minimum 3, where $H_p$ = height above the baseline of the peak due to cyanide and $H_v$ = height above the baseline of the lowest point of the curve separating this peak from the peak due to ethosuximide.

*Limit*:

– *cyanide*: not more than 0.5 times the height of the corresponding peak in the chromatogram obtained with reference solution (b) (0.5 ppm).

**Related substances**. Liquid chromatography (*2.2.29*).

*Test solution.* Dissolve 0.250 g of the substance to be examined in mobile phase A and dilute to 10.0 mL with mobile phase A. Store the solution at room temperature for at least 30 min before injection (*in situ* transformation of impurity B to impurity A).

*Reference solution (a).* Dissolve 5.0 mg of *ethosuximide impurity A CRS* in mobile phase A and dilute to 10.0 mL with mobile phase A.

*Reference solution (b).* Dilute 1.0 mL of reference solution (a) to 20.0 mL with mobile phase A.

*Reference solution (c).* Mix 1 mL of reference solution (a) and 4 mL of the test solution.

*Column*:

– *size*: *l* = 0.10 m, Ø = 2.1 mm;
– *stationary phase*: *end-capped solid core octadecylsilyl organosilica polymer compatible with 100 per cent aqueous mobile phases R* (2.6 µm);
– *temperature*: 25 °C.

*Mobile phase*:

– *mobile phase A*: 15.6 g/L solution of *sodium dihydrogen phosphate R* previously adjusted to pH 2.0 with *phosphoric acid R*;
– *mobile phase B*: *acetonitrile for chromatography R*;

| Time (min) | Mobile phase A (per cent *V/V*) | Mobile phase B (per cent *V/V*) |
|---|---|---|
| 0 - 10 | 90 | 10 |
| 10 - 11 | 90 → 30 | 10 → 70 |
| 11 - 15 | 30 | 70 |

*Flow rate*: 0.25 mL/min.

*Detection*: spectrophotometer at 220 nm.

*Injection*: 3 µL of the test solution and reference solutions (b) and (c).

*Identification of impurities*: use the chromatogram obtained with reference solution (b) to identify the peak due to impurity A.

*Relative retention* with reference to ethosuximide (retention time = about 4 min): impurity A = about 1.7.

*System suitability*: reference solution (c):

– *resolution*: minimum 3.0 between the peaks due to ethosuximide and impurity A.

*Calculation of percentage contents*:

– for each impurity, use the concentration of impurity A in reference solution (b).

*Limits*:

– *unspecified impurities*: for each impurity, maximum 0.10 per cent;
– *total*: maximum 0.2 per cent;
– *reporting threshold*: 0.05 per cent.

**Water** (*2.5.12*): maximum 0.5 per cent, determined on 1.00 g.

**Sulfated ash** (*2.4.14*): maximum 0.1 per cent, determined on 1.0 g.

ASSAY

Dissolve 0.120 g in 20 mL of *dimethylformamide R* and carry out a potentiometric titration (*2.2.20*) using *0.1 M tetrabutylammonium hydroxide.* Protect the solution from atmospheric carbon dioxide throughout the titration. Carry out a blank titration.

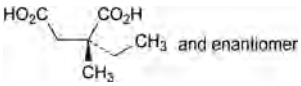
1 mL of *0.1 M tetrabutylammonium hydroxide* is equivalent to 14.12 mg of $C_7H_{11}NO_2$.

STORAGE

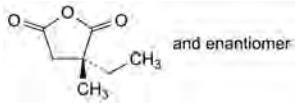
Protected from light.

IMPURITIES

*Other detectable impurities (the following substances would, if present at a sufficient level, be detected by one or other of the tests in the monograph. They are limited by the general acceptance criterion for other/unspecified impurities and/or by the general monograph Substances for pharmaceutical use (2034). It is therefore not necessary to identify these impurities for demonstration of compliance. See also 5.10. Control of impurities in substances for pharmaceutical use): A, B.*



A. (2*RS*)-2-ethyl-2-methylbutanedioic acid,

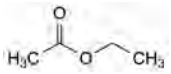


B. (3*RS*)-3-ethyl-3-methyldihydrofuran-2,5-dione.

**01/2008:0899**

# ETHYL ACETATE

## Ethylis acetas



$C_4H_8O_2$ $M_r$ 88.1
[141-78-6]

DEFINITION

Ethyl ethanoate.

CHARACTERS

*Appearance*: clear, colourless, volatile liquid.

*Solubility*: soluble in water, miscible with acetone, with ethanol (96 per cent) and with methylene chloride.

IDENTIFICATION

*First identification: B.*

*Second identification: A, C, D.*

A. Boiling point (*2.2.12*): 76 °C to 78 °C.

B. Infrared absorption spectrophotometry (*2.2.24*).
*Comparison*: *Ph. Eur. reference spectrum of ethyl acetate.*

C. It gives the reaction of acetyl (*2.3.1*).

D. It gives the reaction of esters (*2.3.1*).

TESTS

**Appearance of solution**. The solution is clear (*2.2.1*) and colourless (*2.2.2, Method II*).

Mix 1 mL of the substance to be examined and 15 mL of *water R*.

**Acidity**. To 10 mL of *ethanol (96 per cent) R* add 0.1 mL of *phenolphthalein solution R* and *0.01 M sodium hydroxide* until the colour changes to pink. Add 5.5 mL of the substance to be examined and 0.25 mL of *0.02 M sodium hydroxide*. The solution remains pink for not less than 15 s.

**Relative density** (*2.2.5*): 0.898 to 0.902.

**Refractive index** (*2.2.6*): 1.370 to 1.373.

**Reaction with sulfuric acid**. Carefully add 2 mL to 10 mL of *sulfuric acid R*. After 15 min, the interface between the 2 liquids is not coloured.

**Related substances**. Gas chromatography (*2.2.28*).

*Test solution*. The substance to be examined.

*Column*:

– *material*: glass;
– *size*: *l* = 2 m, Ø = 2 mm;
– *stationary phase*: *ethylvinylbenzene-divinylbenzene copolymer R* (136-173 µm).

*Carrier gas*: *nitrogen for chromatography R*.

*Flow rate*: 30 mL/min.

*Temperature*:

| | Time (min) | Temperature (°C) |
|---|---|---|
| Column | 0 - 18.8 | 90 → 240 |
| | 18.8 - 26.8 | 240 |
| Injection port | | 240 |
| Detector | | 240 |

*Detection*: flame ionisation.

*Injection*: 1 µL.

*Limit*:

– *total*: not more than 0.2 per cent of the area of the principal peak.

**Residue on evaporation**: maximum 30 ppm.

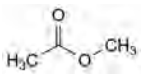
Evaporate 100.0 g to dryness on a water-bath and dry in an oven at 100-105 °C. The residue weighs not more than 3 mg.

**Water** (*2.5.12*): maximum 0.1 per cent, determined on 10.0 mL.

STORAGE

Protected from light, at a temperature not exceeding 30 °C.

IMPURITIES



A. methyl ethanoate (methyl acetate),

B. ethanol,

C. methanol.

**01/2008:1319**

# ETHYL OLEATE

## Ethylis oleas

DEFINITION

Mixture consisting of the ethyl esters of fatty acids, mainly oleic (*cis*-9-octadecenoic) acid.

A suitable antioxidant may be added.

CHARACTERS

*Appearance*: clear, pale yellow or colourless liquid.

*Solubility*: practically insoluble in water, miscible with ethanol (96 per cent), with methylene chloride and with light petroleum (bp: 40-60 °C).

IDENTIFICATION

A. Relative density (see Tests).
B. Saponification value (see Tests).
C. Oleic acid (see Tests).

TESTS

**Relative density** (*2.2.5*): 0.866 to 0.874.

**Acid value** (*2.5.1*): maximum 0.5, determined on 10.0 g.

**Iodine value** (*2.5.4, Method A*): 75 to 90.

**Peroxide value** (*2.5.5, Method A*): maximum 10.0.

**Saponification value** (*2.5.6*): 177 to 188, determined on 2.0 g.

**Oleic acid** (*2.4.22, Method A*): minimum 60.0 per cent in the fatty acid fraction of the substance to be examined.

**Water** (*2.5.12*): maximum 1.0 per cent, determined on 1.00 g.

**Total ash** (*2.4.16*): maximum 0.1 per cent, determined on 2.0 g.

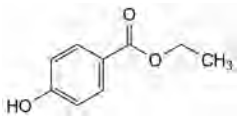
STORAGE

Protected from light.

**07/2010:0900**

# ETHYL PARAHYDROXYBENZOATE

## Ethylis parahydroxybenzoas



$C_9H_{10}O_3$ $M_r$ 166.2
[120-47-8]

DEFINITION

Ethyl 4-hydroxybenzoate.

*Content*: 98.0 per cent to 102.0 per cent.

CHARACTERS

*Appearance*: white or almost white, crystalline powder or colourless crystals.

*Solubility*: very slightly soluble in water, freely soluble in ethanol (96 per cent) and in methanol.

IDENTIFICATION

*First identification: A, B.*

*Second identification: A, C.*

A. Melting point (*2.2.14*): 115 °C to 118 °C.

B. Infrared absorption spectrophotometry (*2.2.24*).
*Comparison*: *ethyl parahydroxybenzoate CRS*.

C. Thin-layer chromatography (*2.2.27*).
*Test solution (a)*. Dissolve 0.10 g of the substance to be examined in *acetone R* and dilute to 10 mL with the same solvent.
*Test solution (b)*. Dilute 1 mL of test solution (a) to 10 mL with *acetone R*.
*Reference solution (a)*. Dissolve 10 mg of *ethyl parahydroxybenzoate CRS* in *acetone R* and dilute to 10 mL with the same solvent.
*Reference solution (b)*. Dissolve 10 mg of *methyl parahydroxybenzoate R* in 1 mL of test solution (a) and dilute to 10 mL with *acetone R*.
*Plate*: *TLC octadecylsilyl silica gel $F_{254}$ plate R*.
*Mobile phase*: *glacial acetic acid R*, *water R*, *methanol R* (1:30:70 *V/V/V*).

*Application*: 2 µL of test solution (b) and reference solutions (a) and (b).

*Development*: over 2/3 of the plate.

*Drying*: in air.

*Detection*: examine in ultraviolet light at 254 nm.

*System suitability*: reference solution (b):

– the chromatogram shows 2 clearly separated principal spots.

*Results*: the principal spot in the chromatogram obtained with test solution (b) is similar in position and size to the principal spot in the chromatogram obtained with reference solution (a).

TESTS

**Solution S**. Dissolve 1.0 g in *ethanol (96 per cent) R* and dilute to 10 mL with the same solvent.

**Appearance of solution**. Solution S is clear (*2.2.1*) and not more intensely coloured than reference solution $BY_6$ (*2.2.2, Method II*).

**Acidity**. To 2 mL of solution S add 3 mL of *ethanol (96 per cent) R*, 5 mL of *carbon dioxide-free water R* and 0.1 mL of *bromocresol green solution R*. Not more than 0.1 mL of *0.1 M sodium hydroxide* is required to change the colour of the indicator to blue.

**Related substances**. Liquid chromatography (*2.2.29*).

*Test solution*. Dissolve 50.0 mg of the substance to be examined in 2.5 mL of *methanol R* and dilute to 50.0 mL with the mobile phase. Dilute 10.0 mL of this solution to 100.0 mL with the mobile phase.

*Reference solution (a)*. Dissolve 5 mg of *4-hydroxybenzoic acid R* (impurity A), 5 mg of *methyl parahydroxybenzoate R* (impurity B) and 5 mg of the substance to be examined in the mobile phase and dilute to 100.0 mL with the mobile phase. Dilute 1.0 mL of this solution to 10.0 mL with the mobile phase.

*Reference solution (b)*. Dissolve 50.0 mg of *ethyl parahydroxybenzoate CRS* in 2.5 mL of *methanol R* and dilute to 50.0 mL with the mobile phase. Dilute 10.0 mL of this solution to 100.0 mL with the mobile phase.

*Reference solution (c)*. Dilute 1.0 mL of the test solution to 20.0 mL with the mobile phase. Dilute 1.0 mL of this solution to 10.0 mL with the mobile phase.

*Column*:

– *size*: *l* = 0.15 m, Ø = 4.6 mm;

– *stationary phase*: *end-capped octadecylsilyl silica gel for chromatography R* (5 µm).

*Mobile phase*: 6.8 g/L solution of *potassium dihydrogen phosphate R*, *methanol R* (35:65 *V/V*).

*Flow rate*: 1.3 mL/min.

*Detection*: spectrophotometer at 272 nm.

*Injection*: 10 µL of the test solution and reference solutions (a) and (c).

*Run time*: 4 times the retention time of ethyl parahydroxybenzoate.

*Relative retention* with reference to ethyl parahydroxybenzoate (retention time = about 3.0 min): impurity A = about 0.5; impurity B = about 0.8.

*System suitability*: reference solution (a):

– *resolution*: minimum 2.0 between the peaks due to impurity B and ethyl parahydroxybenzoate.

*Limits*:

– *correction factor*: for the calculation of content, multiply the peak area of impurity A by 1.4;

– *impurity A*: not more than the area of the principal peak in the chromatogram obtained with reference solution (c) (0.5 per cent);

– *unspecified impurities*: for each impurity, not more than the area of the principal peak in the chromatogram obtained with reference solution (c) (0.5 per cent);

– *total*: not more than twice the area of the principal peak in the chromatogram obtained with reference solution (c) (1.0 per cent);

– *disregard limit*: 0.2 times the area of the principal peak in the chromatogram obtained with reference solution (c) (0.1 per cent).

**Sulfated ash** (*2.4.14*): maximum 0.1 per cent, determined on 1.0 g.

ASSAY

Liquid chromatography (*2.2.29*) as described in the test for related substances with the following modification.

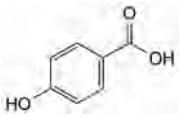
*Injection*: test solution and reference solution (b).

Calculate the percentage content of $C_9H_{10}O_3$ from the declared content of *ethyl parahydroxybenzoate CRS*.

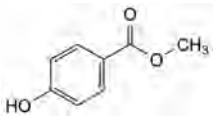
IMPURITIES

*Specified impurities: A.*

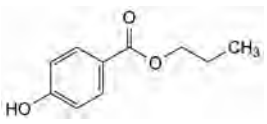
*Other detectable impurities* (the following substances would, if present at a sufficient level, be detected by one or other of the tests in the monograph. They are limited by the general acceptance criterion for other/unspecified impurities and/or by the general monograph *Substances for pharmaceutical use (2034)*. It is therefore not necessary to identify these impurities for demonstration of compliance. See also *5.10. Control of impurities in substances for pharmaceutical use*): *B, C, D.*



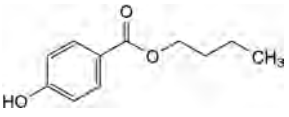
A. 4-hydroxybenzoic acid,



B. methyl 4-hydroxybenzoate (methyl parahydroxybenzoate),



C. propyl 4-hydroxybenzoate (propyl parahydroxybenzoate),



D. butyl 4-hydroxybenzoate (butyl parahydroxybenzoate).

**04/2019:0822**
**corrected 10.0**

# ETHYLCELLULOSE[3]

## Ethylcellulosum

DEFINITION

Partly *O*-ethylated cellulose.

It may contain a suitable antioxidant.

*Content*: 44.0 per cent to 51.0 per cent of ethoxy ($-OC_2H_5$) groups (dried substance).

♦CHARACTERS

*Appearance*: white or yellowish-white powder or granular powder.

*Solubility*: practically insoluble in water, soluble in methylene chloride and in a mixture of 20 g of ethanol (96 per cent) and 80 g of toluene, slightly soluble in ethyl acetate and in methanol, practically insoluble in glycerol (85 per cent) and in propylene glycol. The solutions may show a slight opalescence.♦

IDENTIFICATION

A. Infrared absorption spectrophotometry (*2.2.24*).

*Preparation*: dissolve 40 mg in 1 mL of *methylene chloride R*; spread 2 drops of this solution between 2 sodium chloride plates then remove one of the plates to evaporate the solvent.

*Comparison*: *ethylcellulose CRS*.

◊B. It complies with the limits of the assay.◊

TESTS

**Acidity or alkalinity**. To 0.5 g add 25 mL of *carbon dioxide-free water R* and shake for 15 min. Filter through a sintered-glass filter (40) (*2.1.2*). To 10 mL of the solution add 0.1 mL of *phenolphthalein solution R* and 0.5 mL of *0.01 M sodium hydroxide*. The solution is pink. To 10 mL of the solution add 0.1 mL of *methyl red solution R* and 0.5 mL of *0.01 M hydrochloric acid*. The solution is red.

**Viscosity** (*2.2.9*): 80.0 per cent to 120.0 per cent of that stated on the label for a nominal viscosity greater than 6 mPa·s; 75.0 per cent to 140.0 per cent of that stated on the label for a nominal viscosity not greater than 6 mPa·s.

Shake a quantity of the substance to be examined equivalent to 5.00 g of the dried substance with 95 g of a mixture of 20 g of *ethanol (96 per cent) R* and 80 g of *toluene R* until the substance is dissolved. Determine the viscosity in mPa·s at 25 °C using a capillary viscometer.

**Acetaldehyde**: maximum 100 ppm.

Introduce 3.0 g into a 250 mL conical flask with a ground-glass stopper, add 10 mL of *water R* and stir mechanically for 1 h. Allow to stand for 24 h, filter and dilute the filtrate to 100.0 mL with *water R*. Transfer 5.0 mL of the filtrate to a 25 mL volumetric flask, add 5 mL of a 0.5 g/L solution of *methylbenzothiazolone hydrazone hydrochloride R* and heat in a water-bath at 60 °C for 5 min. Add 2 mL of *ferric chloride-sulfamic acid reagent R* and heat again in a water-bath at 60 °C for 5 min. Cool and dilute to 25.0 mL with *water R*. The solution is not more intensely coloured than a standard prepared at the same time and in the same manner using instead of the 5.0 mL of filtrate, 5.0 mL of a reference solution prepared by diluting 3.0 mL of *acetaldehyde standard solution (100 ppm $C_2H_4O$) R1* to 100.0 mL with *water R*.

**Chlorides** (*2.4.4*): maximum 0.1 per cent.

Disperse 0.250 g in 50 mL of *water R*, heat to boiling and allow to cool, shaking occasionally. Filter and discard the first 10 mL of the filtrate. Dilute 10 mL of the filtrate to 15 mL with *water R*.

**Loss on drying** (*2.2.32*): maximum 3.0 per cent, determined on 1.000 g by drying in an oven at 105 °C for 2 h.

**Sulfated ash** (*2.4.14*): maximum 0.5 per cent, determined on 1.0 g.

ASSAY

Gas chromatography (*2.2.28*).

*Internal standard solution*. To 10 mL of *o-xylene R* add 0.5 mL of *octane R* and dilute to 100.0 mL with *o-xylene R*.

*Test solution*. To 30.0 mg (dried substance), add 60 mg of *adipic acid R* in a 5 mL pressure-tight reaction vial equipped with a pressure-tight membrane stopper coated with polytetrafluoroethylene and secured with an aluminium crimped cap or another sealing system providing a sufficient air-tightness. Add 2.00 mL of the internal standard solution and 1.0 mL of *hydriodic acid R* and close immediately. Accurately weigh the vial (total mass before heating). Do not mix the contents of the vial by hand before heating. Place the vial in an oven or heat in a suitable heater, with continuous mechanical agitation, maintaining the internal temperature of the vial at 115 ± 2 °C for 70 min. Allow to cool and accurately weigh the vial (total mass after heating). If the difference between the total mass before heating and the total mass after heating is more than 10 mg, prepare a new test solution. After phase separation, pierce through the septum of the vial with a cooled syringe and withdraw a sufficient volume of the upper layer as the test solution.

*Reference solution*. Place 60 mg of *adipic acid R* and 2.00 mL of the internal standard solution in another 5 mL reaction vial, add 1.0 mL of *hydriodic acid R* and close immediately. Accurately weigh the vial then inject 25 µL of *iodoethane R* through the septum into the vial, weigh again accurately and mix. After phase separation, pierce through the septum of the vial with a cooled syringe and withdraw a sufficient volume of the upper layer as the reference solution.

*Column*:

- *material*: fused silica;
- *size*: *l* = 30 m, Ø = 0.53 mm;
- *stationary phase*: *methylpolysiloxane R* (film thickness 3 µm).

*Carrier gas*: *helium for chromatography R*.

*Flow rate*: 4.2 mL/min.

*Split ratio*: 1:40.

*Temperature*:

| | Time (min) | Temperature (°C) |
|---|---|---|
| Column | 0 - 3 | 50 |
| | 3 - 8 | 50 → 100 |
| | 8 - 12 | 100 → 250 |
| | 12 - 20 | 250 |
| Injection port | | 250 |
| Detector | | 280 |

*Detection*: flame ionisation.

*Injection*: 1 µL.

*Relative retention* with reference to octane (retention time = about 10 min): iodoethane = about 0.6.

(3) This monograph has undergone pharmacopoeial harmonisation. See chapter *5.8. Pharmacopoeial harmonisation*.

*System suitability*: reference solution:
- *resolution*: minimum 5.0 between the peaks due to iodoethane and octane;
- *repeatability*: maximum relative standard deviation of 2.0 per cent for the response factor of the principal peak determined on 6 injections.

Calculate the response factor ($R$) of *iodoethane R* using the following expression:

$$\frac{A_1 \times W_1 \times C}{A_2 \times 100}$$

$A_1$ = area of the peak due to the internal standard in the chromatogram obtained with the reference solution;

$A_2$ = area of the peak due to iodoethane in the chromatogram obtained with the reference solution;

$W_1$ = mass of *iodoethane R* in the reference solution, in milligrams;

$C$ = percentage content of *iodoethane R*.

Calculate the percentage content *m/m* of ethoxy groups using the following expression:

$$\frac{A_4 \times R \times M_1 \times 100}{A_3 \times W_2 \times M_2}$$

$A_3$ = area of the peak due to the internal standard in the chromatogram obtained with the test solution;

$A_4$ = area of the peak due to iodoethane in the chromatogram obtained with the test solution;

$R$ = response factor;

$M_1$ = molar mass of the ethoxy group (45.1);

$M_2$ = molar mass of iodoethane (156.0);

$W_2$ = mass of the sample (dried substance) in the test solution, in milligrams.

LABELLING

The label states:
- the nominal viscosity in millipascal seconds for a 5 per cent *m/m* solution;
- the name and concentration of any added antioxidant.

FUNCTIONALITY-RELATED CHARACTERISTICS

*This section provides information on characteristics that are recognised as being relevant control parameters for one or more functions of the substance when used as an excipient (see chapter 5.15). Some of the characteristics described in the Functionality-related characteristics section may also be present in the mandatory part of the monograph since they also represent mandatory quality criteria. In such cases, a cross-reference to the tests described in the mandatory part is included in the Functionality-related characteristics section. Control of the characteristics can contribute to the quality of a medicinal product by improving the consistency of the manufacturing process and the performance of the medicinal product during use. Where control methods are cited, they are recognised as being suitable for the purpose, but other methods can also be used. Wherever results for a particular characteristic are reported, the control method must be indicated.*

*The following characteristics may be relevant for ethylcellulose used as binder and film former.*

**Viscosity** (see Tests).

**Degree of substitution** (see Assay).

*The following characteristics may be relevant for ethylcellulose used as matrix former in modified-release oral dosage forms.*

**Viscosity** (see Tests).

**Degree of substitution** (see Assay).

**Particle-size distribution** (*2.9.31* or *2.9.38*).

**Powder flow** (*2.9.36*).

**01/2020:1421**

# ETHYLENE GLYCOL MONOPALMITOSTEARATE

## Ethylenglycoli monopalmitostearas

DEFINITION

Mixture of ethylene glycol (ethane-1,2-diol) mono- and diesters of palmitic (hexadecanoic) and stearic (octadecanoic) acids, produced by the condensation of ethylene glycol and stearic acid 50 of vegetable or animal origin (see *Stearic acid (1474)*).

*Content*: minimum 50.0 per cent of monoesters.

CHARACTERS

*Appearance*: white or almost white, waxy solid.

*Solubility*: practically insoluble in water, soluble in acetone and in hot ethanol (96 per cent).

IDENTIFICATION

A. Melting point (see Tests).

B. Composition of fatty acids (see Tests).

C. It complies with the assay (content of monoesters).

TESTS

**Melting point** (*2.2.15*): 54 °C to 60 °C.

**Acid value** (*2.5.1*): maximum 3.0.

**Iodine value** (*2.5.4*): maximum 3.0.

**Saponification value** (*2.5.6*): 170 to 195, determined on 2.0 g.

**Composition of fatty acids** (*2.4.22, Method A*).

*Composition of the fatty-acid fraction of the substance*:
- *stearic acid*: 40.0 per cent to 60.0 per cent;
- *sum of contents of palmitic acid and stearic acid*: minimum 90.0 per cent.

**Free ethylene glycol**: maximum 5.0 per cent, determined as prescribed under Assay.

**Water** (*2.5.12*): maximum 1.0 per cent, determined on 1.00 g. Carry out the titration at 60 °C using a mixture of equal volumes of *methanol R* and *methylene chloride R* as the solvent.

**Total ash** (*2.4.16*): maximum 0.1 per cent.

ASSAY

Size-exclusion chromatography (*2.2.30*).

*Test solution.* In a 15 mL flask, weigh 0.200 g ($m$). Add 5.0 mL of *tetrahydrofuran R* and shake to dissolve. Heat gently, if necessary. Reweigh the flask and calculate the total mass of solvent and substance ($M$).

*Reference solutions.* In four 15 mL flasks, weigh respectively 2.5 mg, 5.0 mg, 10.0 mg and 20.0 mg of *ethylene glycol R*. Add 5.0 mL of *tetrahydrofuran R* and shake to dissolve. Weigh the flasks again and calculate the concentration of ethylene glycol in milligrams per gram for each reference solution.

*Column*:
- *size*: $l$ = 0.6 m, Ø = 7.5 mm;
- *stationary phase*: *styrene-divinylbenzene copolymer R* (5 µm) with a pore size of 10 nm.

*Mobile phase*: *tetrahydrofuran R*.

*Flow rate*: 1 mL/min.

*Detection*: differential refractometer.

*Injection*: 40 µL.

*Relative retention* with reference to ethylene glycol: diesters = about 0.76; monoesters = about 0.83.

*Calculations*:

– *free ethylene glycol*: from the calibration curve obtained with the reference solutions, determine the concentration of ethylene glycol (*C*) in milligrams per gram in the test solution and calculate the percentage content of free ethylene glycol (*A*) in the substance to be examined using the following expression:

$$\frac{C \times M}{m \times 10}$$

– *free fatty acids*: calculate the percentage content of free fatty acids (*D*) using the following expression:

$$\frac{I_A \times 270}{56.11 \times 10}$$

$I_A$ = acid value (see Tests);

270 = average rounded molar mass of palmitic acid and stearic acid, in grams per mole;

56.11 = molar mass of potassium hydroxide, in grams per mole.

– *monoesters*: calculate the percentage content of monoesters using the following expression:

$$\left[\frac{X}{X+Y}(100 - A - B)\right] - D$$

*A* = percentage content of free ethylene glycol;

*B* = percentage content of water (see Tests);

*D* = percentage content of free fatty acids;

*X* = area of the peak due to monoesters and free fatty acids;

*Y* = area of the peak due to diesters.

STORAGE

Protected from light.

**01/2017:0716**

# ETHYLENEDIAMINE

## Ethylendiaminum

$C_2H_8N_2$ $M_r$ 60.1

[107-15-3]

DEFINITION

Ethane-1,2-diamine.

*Content*: 98.0 per cent to 101.0 per cent.

CHARACTERS

*Appearance*: clear, colourless or slightly yellow liquid, hygroscopic.

*Solubility*: miscible with water and with anhydrous ethanol.

On exposure to air, white fumes are evolved. On heating, it evaporates completely.

IDENTIFICATION

A. Relative density (*2.2.5*): 0.895 to 0.905.

B. Boiling point (*2.2.12*): 116 °C to 118 °C.

C. To 0.2 mL add 0.5 mL of *acetic anhydride R*. Boil. A crystalline mass forms after cooling, which dissolves in 5 mL of *2-propanol R* with heating. Cool the solution and add 5 mL of *ether R*. If necessary, initiate crystallisation by scratching the walls of the test-tube with a glass rod. Filter through a sintered-glass filter (*2.1.2*), wash with several portions of *ether R* and dry at 100-105 °C. The residue melts (*2.2.14*) at 173 °C to 177 °C.

TESTS

**Solution S**. Mix 10 g with *carbon dioxide-free water R* and dilute to 100 mL with the same solvent.

**Appearance of solution**. Solution S is clear (*2.2.1*) and not more intensely coloured than the reference solution $BY_6$ (*2.2.2, Method II*).

**Carbonate**. A mixture of 4 mL of solution S and 6 mL of *calcium hydroxide solution R* is not more opalescent than reference suspension II (*2.2.1*).

**Chlorides** (*2.4.4*): maximum 100 ppm.

To 5 mL of solution S add 5 mL of *dilute nitric acid R* and dilute to 15 mL with *water R*.

**Ammonia and other bases**. Dissolve 1.2 g in 20 mL of *ethanol (96 per cent) R* and add, dropwise with stirring, 4.5 mL of *hydrochloric acid R*. Evaporate to dryness on a water-bath, breaking up any resulting cake with a glass rod, and dry at 100-105 °C for 1 h. 1 g of the residue is equivalent to 0.4518 g of $C_2H_8N_2$. Calculate the percentage content of $C_2H_8N_2$: it does not vary by more than 0.5 from the percentage content determined in the assay.

**Iron** (*2.4.9*): maximum 10 ppm, determined on solution S.

**Residue on evaporation**: maximum 0.3 per cent.

Evaporate 5.00 g to dryness on a water-bath and dry at 100-105 °C for 1 h. The residue weighs a maximum of 15 mg.

ASSAY

Place 25.0 mL of *1 M hydrochloric acid* and 0.2 mL of *methyl red mixed solution R* in a flask. Add 0.600 g of the substance to be examined. Titrate with *1 M sodium hydroxide* until the colour changes from violet-red to green.

1 mL of *1 M hydrochloric acid* is equivalent to 30.05 mg of $C_2H_8N_2$.

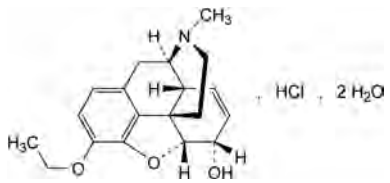
STORAGE

In an airtight container, protected from light.

**01/2008:0491**

# ETHYLMORPHINE HYDROCHLORIDE

## Ethylmorphini hydrochloridum



$C_{19}H_{24}ClNO_3,2H_2O$ $M_r$ 385.9

DEFINITION

7,8-Didehydro-4,5α-epoxy-3-ethoxy-17-methylmorphinan-6α-ol hydrochloride dihydrate.

*Content*: 99.0 per cent to 101.0 per cent (anhydrous substance).

CHARACTERS

*Appearance*: white or almost white, crystalline powder.

*Solubility*: soluble in water and in alcohol, insoluble in cyclohexane.

IDENTIFICATION

*First identification: A, D.*

*Second identification: B, C, D.*

A. Infrared absorption spectrophotometry (*2.2.24*).

*Comparison*: *Ph. Eur. reference spectrum of ethylmorphine hydrochloride*.

B. In a test-tube, dissolve 0.5 g in 6 mL of *water R* and add 15 mL of *0.1 M sodium hydroxide*. Scratch the wall of the tube with a glass rod. A white, crystalline precipitate is formed. Collect the precipitate, wash and dissolve in 20 mL of *water R* heated to 80 °C. Filter and cool in iced water. The crystals, after drying *in vacuo* for 12 h, melt (*2.2.14*) at 85 °C to 89 °C.

C. To about 10 mg add 1 mL of *sulfuric acid R* and 0.05 mL of *ferric chloride solution R2*. Heat on a water-bath. A blue colour develops. Add 0.05 mL of *nitric acid R*. The colour becomes red.

D. Solution S (see Tests) gives reaction (a) of chlorides (*2.3.1*).

TESTS

**Solution S**. Dissolve 0.500 g in *carbon dioxide-free water R* and dilute to 25.0 mL with the same solvent.

**Appearance of solution**. Solution S is clear (*2.2.1*) and not more intensely coloured than reference solution $BY_6$ (*2.2.2, Method II*).

**Acidity or alkalinity**. To 10 mL of solution S add 0.05 mL of *methyl red solution R* and 0.2 mL of *0.02 M hydrochloric acid*, the solution is red. Add 0.4 mL of *0.02 M sodium hydroxide*, the solution becomes yellow.

**Specific optical rotation** (*2.2.7*): – 102 to – 105 (anhydrous substance), determined on solution S.

**Related substances**. Liquid chromatography (*2.2.29*).

*Test solution*. Dissolve 50.0 mg of the substance to be examined in the mobile phase and dilute to 20.0 mL with the mobile phase.

*Reference solution (a)*. Dilute 1.0 mL of the test solution to 25.0 mL with the mobile phase. Dilute 1.0 mL of this solution to 20.0 mL with the mobile phase.

*Reference solution (b)*. Dissolve 12.5 mg of *codeine R* in the mobile phase and dilute to 5.0 mL with the mobile phase.

*Reference solution (c)*. Dilute 0.5 mL of reference solution (b) to 100.0 mL with the mobile phase.

*Reference solution (d)*. To 1.0 mL of the test solution, add 1.0 mL of reference solution (b) and dilute to 50.0 mL with the mobile phase.

*Column*:

- *size*: *l* = 0.25 m, Ø = 4.6 mm,
- *stationary phase*: *octylsilyl silica gel for chromatography R* (5 µm),
- *temperature*: 30 °C.

*Mobile phase*: add 1.25 g of *sodium heptanesulfonate R* to a mixture of 12.5 mL of *glacial acetic acid R* and 5 mL of a 20 per cent *V/V* solution of *triethylamine R* in a mixture of equal volumes of *methanol R* and *water R*. Dilute to 1000 mL with *water R*. To 550 mL of this solution add 450 mL of *methanol R*.

*Flow rate*: 1 mL/min.

*Detection*: spectrophotometer at 230 nm.

*Injection*: 10 µL.

*Run time*: 4 times the retention time of ethylmorphine.

*Relative retention* with reference to ethylmorphine (retention time = about 6.2 min): impurity B = about 0.7; impurity C = about 0.8; impurity D = about 1.3; impurity A = about 2.5.

*System suitability*: reference solution (d):

- *resolution*: minimum 5 between the peaks due to ethylmorphine and impurity C.

*Limits*:

- *correction factor*: for the calculation of content, multiply the peak area of impurity D by 0.4,
- *impurities A, B, D*: for each impurity, not more than the area of the principal peak in the chromatogram obtained with reference solution (a) (0.2 per cent),
- *impurity C*: not more than the area of the principal peak in the chromatogram obtained with reference solution (c) (0.5 per cent),
- *any other impurity*: for each impurity, not more than 0.5 times the area of the principal peak in the chromatogram obtained with reference solution (a) (0.1 per cent),
- *total of impurities other than C*: not more than 2.5 times the area of the principal peak in the chromatogram obtained with reference solution (a) (0.5 per cent),
- *disregard limit*: 0.25 times the area of the principal peak in the chromatogram obtained with reference solution (a) (0.05 per cent).

**Water** (*2.5.12*): 8.0 per cent to 10.0 per cent, determined on 0.250 g.

**Sulfated ash** (*2.4.14*): maximum 0.1 per cent, determined on 1.0 g.

ASSAY

Dissolve 0.300 g in a mixture of 5 mL of *0.01 M hydrochloric acid* and 30 mL of *alcohol R*. Carry out a potentiometric titration (*2.2.20*), using *0.1 M sodium hydroxide*. Read the volume added between the 2 points of inflexion.

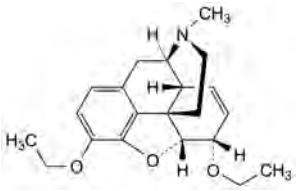
1 mL of *0.1 M sodium hydroxide* is equivalent to 34.99 mg of $C_{19}H_{24}ClNO_3$.

STORAGE

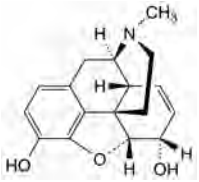
Protected from light.

IMPURITIES

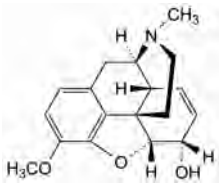
*Specified impurities: A, B, C, D.*



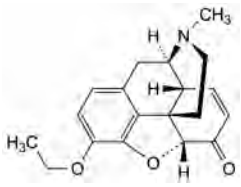
A. 7,8-didehydro-4,5α-epoxy-3,6α-diethoxy-17-methylmorphinan,



B. 7,8-didehydro-4,5α-epoxy-17-methylmorphinan-3,6α-diol (morphine),



C. 7,8-didehydro-4,5α-epoxy-3-methoxy-17-methylmorphinan-6α-ol (codeine),

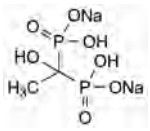


D. 7,8-didehydro-4,5α-epoxy-3-ethoxy-17-methylmorphinan-6-one (ethylmorphinone).

**01/2017:1778**

# ETIDRONATE DISODIUM

## Dinatrii etidronas



$C_2H_6Na_2O_7P_2$ $M_r$ 250.0
[7414-83-7]

DEFINITION

Disodium dihydrogen (1-hydroxyethylidene)bisphosphonate.

*Content*: 98.0 per cent to 102.0 per cent (anhydrous substance).

CHARACTERS

*Appearance*: white or yellowish, hygroscopic powder.

*Solubility*: freely soluble in water, practically insoluble in acetone and in ethanol (96 per cent).

IDENTIFICATION

A. Infrared absorption spectrophotometry (*2.2.24*).
*Comparison*: *etidronate disodium CRS*.
The transmittance at about 2000 $cm^{-1}$ (5 µm) is not less than 40 per cent without compensation.

B. It gives reaction (a) of sodium (*2.3.1*).

TESTS

**pH** (*2.2.3*): 4.2 to 5.2.

Dissolve 1.0 g in *carbon dioxide-free water R* and dilute to 100 mL with the same solvent.

**Impurities A and B**. Liquid chromatography (*2.2.29*).

*Test solution.* Dissolve 20.0 mg of the substance to be examined in *water R* and dilute to 10.0 mL with the same solvent.

*Reference solution.* To 2.0 mL of a 0.3 g/L solution of *phosphoric acid R* add 2.0 mL of a 0.25 g/L solution of *phosphorous acid R* and dilute to 50.0 mL with *water R*.

*Column*:
- *size*: *l* = 0.15 m, Ø = 4.6 mm;
- *stationary phase*: *anion-exchange resin R* (5 µm);
- *temperature*: 35 °C.

*Mobile phase*: mix 0.2 mL of *anhydrous formic acid R* and 1000 mL of *water R*; adjust to pH 3.5 with an 80 g/L solution of *sodium hydroxide R*.

*Flow rate*: 1.0 mL/min.

*Detection*: differential refractometer.

*Injection*: 100 µL.

*System suitability*: reference solution:
- *resolution*: minimum 2.5 between the peaks due to impurity A and impurity B.

*Limits*:
- *impurities A, B*: for each impurity, not more than the area of the corresponding peak in the chromatogram obtained with the reference solution (0.5 per cent).

**Water** (*2.5.32*): maximum 5.0 per cent.

Dissolve 50.0 mg in a mixture of equal volumes of *anhydrous acetic acid R* and *formamide R* and dilute to 5.0 mL with the same mixture of solvents. Use 1.0 mL of the solution.

ASSAY

Dissolve 0.100 g in 2 mL of *anhydrous formic acid R* and dilute to 50 mL with *glacial acetic acid R*. Titrate with *0.1 M perchloric acid*, determining the end-point potentiometrically (*2.2.20*).

1 mL of *0.1 M perchloric acid* is equivalent to 12.50 mg of $C_2H_6Na_2O_7P_2$.

STORAGE

In an airtight container.

IMPURITIES

*Specified impurities: A, B.*

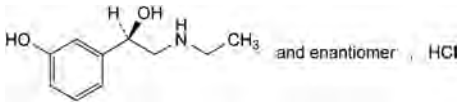
A. $H_3PO_4$: phosphoric acid,

B. $H_3PO_3$: phosphorous acid.

**01/2017:1205**

# ETILEFRINE HYDROCHLORIDE

## Etilefrini hydrochloridum



$C_{10}H_{16}ClNO_2$ $M_r$ 217.7
[943-17-9]

DEFINITION

(1*RS*)-2-(Ethylamino)-1-(3-hydroxyphenyl)ethanol hydrochloride.

*Content*: 98.0 per cent to 101.0 per cent (dried substance).

CHARACTERS

*Appearance*: white or almost white, crystalline powder or colourless crystals.

*Solubility*: freely soluble in water, soluble in ethanol (96 per cent), practically insoluble in methylene chloride.

IDENTIFICATION

*First identification: B, E.*

*Second identification: A, C, D, E.*

A. Melting point (*2.2.14*): 118 °C to 122 °C.

B. Infrared absorption spectrophotometry (*2.2.24*).
*Preparation*: discs of *potassium chloride R*.
*Comparison*: *etilefrine hydrochloride CRS*.

C. Thin-layer chromatography (*2.2.27*).

*Prepare the solutions protected from bright light and develop the chromatograms protected from light.*

*Test solution.* Dissolve 25 mg of the substance to be examined in *methanol R* and dilute to 5 mL with the same solvent.

*Reference solution (a).* Dissolve 25 mg of *etilefrine hydrochloride CRS* in *methanol R* and dilute to 5 mL with the same solvent.

*Reference solution (b).* Dissolve 10 mg of *phenylephrine hydrochloride CRS* in 2 mL of reference solution (a) and dilute to 10 mL with *methanol R*.

*Plate*: *TLC silica gel plate R*.

*Mobile phase*: *concentrated ammonia R*, *methanol R*, *methylene chloride R* (5:25:70 *V/V/V*).

*Application*: 5 µL.

*Development*: over a path of 15 cm.

*Drying*: in a current of warm air.

*Detection*: spray with a 10 g/L solution of *potassium permanganate R*; examine in daylight after 15 min.

*System suitability*: reference solution (b):

– the chromatogram shows 2 clearly separated spots.

*Results*: the principal spot in the chromatogram obtained with the test solution is similar in position, colour and size to the principal spot in the chromatogram obtained with reference solution (a).

D. To 0.2 mL of solution S (see Tests), add 1 mL of *water R*, 0.1 mL of *copper sulfate solution R* and 1 mL of *strong sodium hydroxide solution R*. A blue colour is produced. Add 2 mL of *ether R* and shake. The upper layer is colourless.

E. Dilute 1 mL of solution S to 10 mL with *water R*. The solution gives reaction (a) of chlorides (*2.3.1*).

TESTS

**Solution S**. Dissolve 2.50 g in *carbon dioxide-free water R* prepared from *distilled water R* and dilute to 50.0 mL with the same solvent.

**Appearance of solution**. Solution S is clear (*2.2.1*) and colourless (*2.2.2, Method II*).

**Acidity or alkalinity**. Dilute 4 mL of solution S to 10 mL with *carbon dioxide-free water R*. Add 0.1 mL of *methyl red solution R* and 0.2 mL of *0.01 M sodium hydroxide*. The solution is yellow. Not more than 0.4 mL of *0.01 M hydrochloric acid* is required to change the colour of the indicator to red.

**Optical rotation** (*2.2.7*): – 0.10° to + 0.10°, determined on solution S.

**Related substances**. Liquid chromatography (*2.2.29*). *Prepare the solutions immediately before use.*

*Test solution.* Dissolve 50.0 mg of the substance to be examined in *water R* and dilute to 50.0 mL with the same solvent.

*Reference solution (a).* Dilute 1.0 mL of the test solution to 10.0 mL with *water R*. Dilute 1.0 mL of this solution to 50.0 mL with *water R*.

*Reference solution (b).* Dissolve 10.0 mg of *etilefrine impurity A CRS* in *water R* and dilute to 50.0 mL with the same solvent. Dilute 1.0 mL of the solution to 50.0 mL with *water R*.

*Reference solution (c).* To 10.0 mL of reference solution (a) add 5.0 mL of reference solution (b) and dilute to 20.0 mL with *water R*.

*Column*:

– *size*: *l* = 0.25 m, Ø = 4.6 mm,

– *stationary phase*: *octylsilyl silica gel for chromatography R* (5 µm).

*Mobile phase*: mix 35 volumes of *acetonitrile R* and 65 volumes of a 1.1 g/L solution of *sodium laurilsulfate R* adjusted to pH 2.3 with *phosphoric acid R*.

*Flow rate*: 1 mL/min.

*Detection*: spectrophotometer at 220 nm.

*Injection*: 20 µL.

*Run time*: 5 times the retention time of etilefrine.

*Relative retention* with reference to etilefrine (retention time = about 9 min): impurity E = about 0.5; impurity C = about 0.8; impurity B = about 0.9; impurity A = about 1.2; impurity F = about 1.7; impurity D = about 4.5.

*System suitability*: reference solution (c):

– *resolution*: minimum 2.5 between the peaks due to etilefrine and impurity A.

*Limits*:

– *impurity A*: not more than the area of the principal peak in the chromatogram obtained with reference solution (b) (0.4 per cent),

– *impurities B, C, D, E*: for each impurity, not more than the area of the principal peak in the chromatogram obtained with reference solution (a) (0.2 per cent),

– *any other impurity*: for each impurity, not more than 0.5 times the area of the principal peak in the chromatogram obtained with reference solution (a) (0.1 per cent),

– *sum of impurities other than A*: not more than 5 times the area of the principal peak in the chromatogram obtained with reference solution (a) (1 per cent),

– *disregard limit*: 0.1 times the area of the principal peak in the chromatogram obtained with reference solution (a) (0.02 per cent); disregard any peak due to the solvent.

**Sulfates** (*2.4.13*): maximum 200 ppm, determined on 15 mL of solution S.

**Loss on drying** (*2.2.32*): maximum 0.5 per cent, determined on 1.000 g by drying in an oven at 105 °C.

**Sulfated ash** (*2.4.14*): maximum 0.1 per cent, determined on 1.0 g.

ASSAY

Dissolve 0.150 g in a mixture of 20 mL of *anhydrous acetic acid R* and 50 mL of *acetic anhydride R*. Titrate with *0.1 M perchloric acid*, determining the end-point potentiometrically (*2.2.20*).

1 mL of *0.1 M perchloric acid* is equivalent to 21.77 mg of $C_{10}H_{16}ClNO_2$.

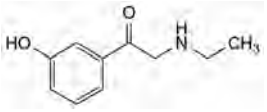
STORAGE

In an airtight container, protected from light.

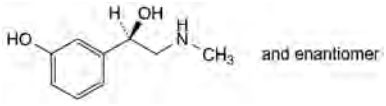
IMPURITIES

*Specified impurities: A, B, C, D, E.*

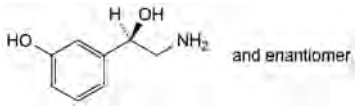
*Other detectable impurities* (the following substances would, if present at a sufficient level, be detected by one or other of the tests in the monograph. They are limited by the general acceptance criterion for other/unspecified impurities and/or by the general monograph *Substances for pharmaceutical use (2034)*. It is therefore not necessary to identify these impurities for demonstration of compliance. See also *5.10. Control of impurities in substances for pharmaceutical use*): *F.*



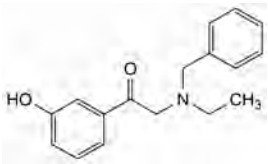
A. 2-(ethylamino)-1-(3-hydroxyphenyl)ethanone (etilefrone),



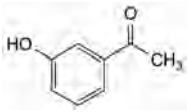
B. (1*RS*)-1-(3-hydroxyphenyl)-2-(methylamino)ethanol (phenylephrine),



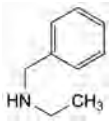
C. (1*RS*)-2-amino-1-(3-hydroxyphenyl)ethanol (norfenefrine),



D. 2-(benzylethylamino)-1-(3-hydroxyphenyl)ethanone (benzyletilefrone),



E. 1-(3-hydroxyphenyl)ethanone (3-hydroxyacetophenone),

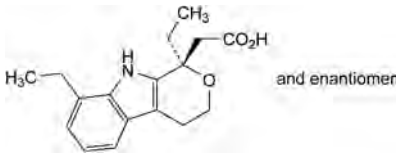


F. *N*-benzylethanamine (benzylethylamine).

**01/2017:1422**

# ETODOLAC

## Etodolacum



$C_{17}H_{21}NO_3$ $M_r$ 287.4
[41340-25-4]

DEFINITION

[(1*RS*)-1,8-Diethyl-1,3,4,9-tetrahydropyrano[3,4-*b*]indol-1-yl]acetic acid.

*Content*: 98.0 per cent to 102.0 per cent (anhydrous substance).

CHARACTERS

*Appearance*: white or almost white, crystalline powder.

*Solubility*: practically insoluble in water, freely soluble in acetone and in ethanol (96 per cent).

IDENTIFICATION

*First identification: B.*

*Second identification: A, C.*

A. Melting point (*2.2.14*): 144 °C to 150 °C.

B. Infrared absorption spectrophotometry (*2.2.24*).
*Comparison*: *etodolac CRS.*

C. Thin-layer chromatography (*2.2.27*).
*Test solution.* Dissolve 10 mg of the substance to be examined in *acetone R* and dilute to 10 mL with the same solvent.
*Reference solution.* Dissolve 10 mg of *etodolac CRS* in *acetone R* and dilute to 10 mL with the same solvent.
*Plate*: *TLC silica gel* $GF_{254}$ *plate R* previously activated by heating at 105 °C for 1 h.
Place the plate in an unsaturated tank containing a mixture of 20 volumes of a 25 g/L solution of *ascorbic acid R* and 80 volumes of *methanol R*. Allow the solution to ascend 1 cm above the line of application on the plate, remove the plate and allow it to dry for at least 30 min.
*Mobile phase*: *glacial acetic acid R*, *anhydrous ethanol R*, *toluene R* (0.5:30:70 *V/V/V*).
*Application*: 10 µL.
*Development*: over 2/3 of the plate.
*Drying*: in air.
*Detection*: examine in ultraviolet light at 254 nm.
*Results*: the principal spot in the chromatogram obtained with the test solution is similar in position and size to the principal spot in the chromatogram obtained with the reference solution.

TESTS

**Related substances**. Liquid chromatography (*2.2.29*).
*Test solution.* Dissolve 20.0 mg of the substance to be examined in *acetonitrile R1* and dilute to 50.0 mL with the same solvent.
*Reference solution (a).* Dilute 1.0 mL of the test solution to 50.0 mL with *acetonitrile R1*. Dilute 1.0 mL of this solution to 20.0 mL with *acetonitrile R1*.
*Reference solution (b).* Dissolve 4 mg of *etodolac impurity H CRS* in the test solution and dilute to 10 mL with the same solution. Dilute 0.5 mL of this solution to 50 mL with *acetonitrile R1*.
*Reference solution (c).* Dissolve the contents of a vial of *etodolac for peak identification CRS* (containing impurities A, B, C, D, E, F, G, H, I and K) in 1.0 mL of *acetonitrile R1*.
*Column*:
– *size*: *l* = 0.15 m, Ø = 4.6 mm;
– *stationary phase*: *end-capped butylsilyl silica gel for chromatography R* (3.5 µm);
– *temperature*: 35 °C.
*Mobile phase*:
– *mobile phase A*: 0.77 g/L solution of *ammonium acetate R*;
– *mobile phase B*: mobile phase A, *acetonitrile R1* (10:90 *V/V*);

| Time (min) | Mobile phase A (per cent *V/V*) | Mobile phase B (per cent *V/V*) |
|---|---|---|
| 0 - 25 | 80 → 50 | 20 → 50 |
| 25 - 42 | 50 | 50 |
| 42 - 48 | 50 → 80 | 50 → 20 |

*Flow rate*: 1 mL/min.
*Detection*: spectrophotometer at 225 nm.
*Injection*: 5 µL.
*Identification of impurities*: use the chromatogram supplied with *etodolac for peak identification CRS* and the chromatogram obtained with reference solution (c) to identify the peaks due to impurities A, B, C, D, E, F, G, H, I and K.
*Relative retention* with reference to etodolac (retention time = about 16.7 min): impurity A = about 0.68; impurity B = about 0.83; impurity C = about 0.85; impurity H = about 1.09; impurity D = about 1.17;

impurity G = about 1.19; impurity E = about 1.20; impurity F = about 1.22; impurity I = about 1.50; impurity K = about 2.37.

*System suitability*: reference solution (b):

– *resolution*: minimum 5.0 between the peaks due to etodolac and impurity H.

*Limits*:

– *impurity C*: not more than 5 times the area of the principal peak in the chromatogram obtained with reference solution (a) (0.5 per cent);
– *impurities A, B, D, E, F, G, H, I, K*: for each impurity, not more than twice the area of the principal peak in the chromatogram obtained with reference solution (a) (0.2 per cent);
– *unspecified impurities*: for each impurity, not more than the area of the principal peak in the chromatogram obtained with reference solution (a) (0.10 per cent);
– *total*: not more than 10 times the area of the principal peak in the chromatogram obtained with reference solution (a) (1.0 per cent);
– *disregard limit*: 0.5 times the area of the principal peak in the chromatogram obtained with reference solution (a) (0.05 per cent).

**Chlorides**: maximum 300 ppm.

Dissolve 1.0 g of the substance to be examined in 60 mL of *methanol R*, add 10 mL of *water R* and 20 mL of *dilute nitric acid R*. Titrate with *0.01 M silver nitrate*, determining the end-point potentiometrically (*2.2.20*).

1 mL of *0.01 M silver nitrate* is equivalent to 0.3545 mg of Cl.

**Water** (*2.5.12*): maximum 0.5 per cent, determined on 1.00 g.

**Sulfated ash** (*2.4.14*): maximum 0.1 per cent, determined on 1.0 g.

ASSAY

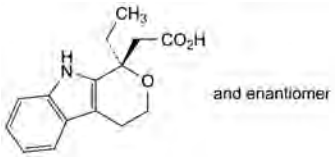
Dissolve 0.250 g in 60 mL of *methanol R*. Titrate with *0.1 M tetrabutylammonium hydroxide* determining the end-point potentiometrically (*2.2.20*). Carry out a blank titration.

1 mL of *0.1 M tetrabutylammonium hydroxide* is equivalent to 28.74 mg of $C_{17}H_{21}NO_3$.

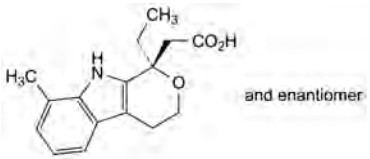
IMPURITIES

*Specified impurities: A, B, C, D, E, F, G, H, I, K.*

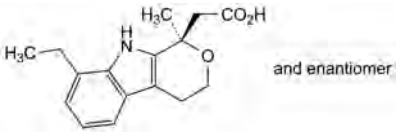
*Other detectable impurities* (the following substances would, if present at a sufficient level, be detected by one or other of the tests in the monograph. They are limited by the general acceptance criterion for other/unspecified impurities and/or by the general monograph *Substances for pharmaceutical use (2034)*. It is therefore not necessary to identify these impurities for demonstration of compliance. See also *5.10. Control of impurities in substances for pharmaceutical use*): *J, L.*



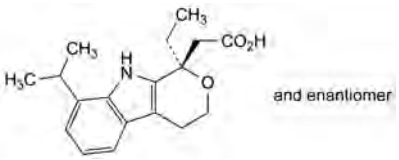
A. [(1*RS*)-1-ethyl-1,3,4,9-tetrahydropyrano[3,4-*b*]indol-1-yl]acetic acid (8-desethyl etodolac),



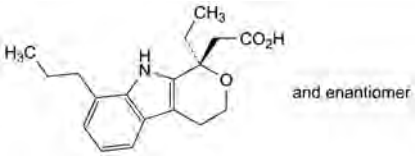
B. [(1*RS*)-1-ethyl-8-methyl-1,3,4,9-tetrahydropyrano[3,4-*b*]indol-1-yl]acetic acid (8-methyl etodolac),



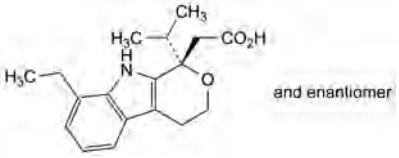
C. [(1*RS*)-8-ethyl-1-methyl-1,3,4,9-tetrahydropyrano[3,4-*b*]indol-1-yl]acetic acid (1-methyl etodolac),



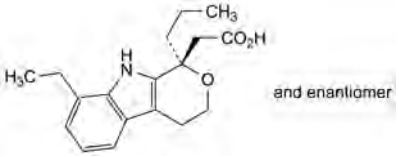
D. [(1*RS*)-1-ethyl-8-(1-methylethyl)-1,3,4,9-tetrahydropyrano[3,4-*b*]indol-1-yl]acetic acid (8-isopropyl etodolac),



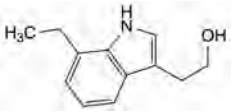
E. [(1*RS*)-1-ethyl-8-propyl-1,3,4,9-tetrahydropyrano[3,4-*b*]indol-1-yl]acetic acid (8-propyl etodolac),



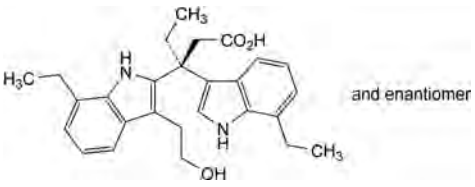
F. [(1*RS*)-8-ethyl-1-(1-methylethyl)-1,3,4,9-tetrahydropyrano[3,4-*b*]indol-1-yl]acetic acid (1-isopropyl etodolac),



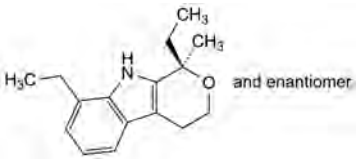
G. [(1*RS*)-8-ethyl-1-propyl-1,3,4,9-tetrahydropyrano[3,4-*b*]indol-1-yl]acetic acid (1-propyl etodolac),



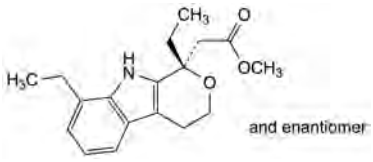
H. 2-(7-ethyl-1*H*-indol-3-yl)ethanol,



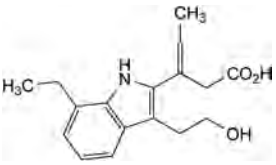
I. (3*RS*)-3-[7-ethyl-3-(2-hydroxyethyl)-1*H*-indol-2-yl]-3-(7-ethyl-1*H*-indol-3-yl)pentanoic acid (etodolac dimer),



J. (1*RS*)-1,8-diethyl-1-methyl-1,3,4,9-tetrahydropyrano[3,4-*b*]indole (decarboxy etodolac),



K. methyl [(1*RS*)-1,8-diethyl-1,3,4,9-tetrahydropyrano[3,4-*b*]indol-1-yl]acetate (etodolac methyl ester),

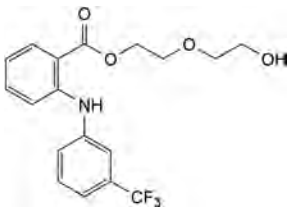


L. (*EZ*)-3-[7-ethyl-3-(2-hydroxyethyl)-1*H*-indol-2-yl]pent-3-enoic acid.

**01/2017:1513**
**corrected 10.0**

# ETOFENAMATE

## Etofenamatum



$C_{18}H_{18}F_3NO_4$ $M_r$ 369.4
[30544-47-9]

DEFINITION

2-(2-Hydroxyethoxy)ethyl 2-[[3-(trifluoromethyl)phenyl]-amino]benzoate.

*Content*: 98.5 per cent to 101.5 per cent (anhydrous substance).

CHARACTERS

*Appearance*: yellowish, viscous liquid.

*Solubility*: practically insoluble in water, miscible with ethanol (96 per cent) and with ethyl acetate.

IDENTIFICATION

Infrared absorption spectrophotometry (*2.2.24*).

*Comparison*: *etofenamate CRS*.

*Preparation*: films.

TESTS

**Appearance**. The substance to be examined is clear (*2.2.1*) and not more intensely coloured than reference solution $GY_1$ (*2.2.2, Method II*).

**Impurity F**. Gas chromatography (*2.2.28*).

*Internal standard*: *tetradecane R*.

*Solution A*. Dissolve 6.0 mg of *tetradecane R* in *hexane R* and dilute to 10.0 mL with the same solvent.

*Solution B*. To 6.0 mg of *diethylene glycol R* in a 10 mL volumetric flask add 3 mL of *N-methyltrimethylsilyl-trifluoroacetamide R* and heat for 30 min at 50 °C. After cooling dilute to 10.0 mL with *N-methyltrimethylsilyl-trifluoroacetamide R*.

*Test solution*. To 0.200 g of the substance to be examined add 10 µL of solution A. Add 2 mL of *N-methyltrimethylsilyl-trifluoroacetamide R* and heat for 30 min at 50 °C.

*Reference solution*. To 2.0 mL of *N-methyltrimethylsilyl-trifluoroacetamide R* add 10 µL of solution A and 10 µL of solution B.

*Column*:

– *size*: *l* = 25 m, Ø = 0.20 mm;
– *stationary phase*: *phenyl(5)methyl(95)polysiloxane R* (film thickness 0.33 µm).

*Carrier gas*: *hydrogen for chromatography R*.

*Flow rate*: 0.9 mL/min.

*Temperature*:

| | Time (min) | Temperature (°C) | Rate (°C/min) |
|---|---|---|---|
| Column | 0 - 13 | 60 → 150 | 7 |
| | 13 - 19 | 150 → 300 | 25 |
| | 19 - 34 | 300 | |
| Injection port | | 150 | |
| Detector | | 300 | |

*Detection*: flame ionisation.

*Injection*: 0.2 µL.

*Limit*:

– *impurity F*: maximum 0.1 per cent.

**Related substances**. Liquid chromatography (*2.2.29*).

*Solvent mixture*: *water R*, *methanol R* (40:60 *V/V*).

*Test solution*. Dissolve 50.0 mg of the substance to be examined in 30 mL of *methanol R* and dilute to 50.0 mL with *water R*.

*Reference solution (a)*. Dissolve 10.0 mg of *etofenamate impurity G CRS* in *methanol R* and dilute to 20.0 mL with the same solvent. Dilute 0.2 mL of the solution to 50.0 mL with the solvent mixture.

*Reference solution (b)*. Dilute 0.2 mL of the test solution to 100.0 mL with the solvent mixture.

*Reference solution (c)*. To 5.0 mL of reference solution (a), add 5.0 mL of reference solution (b).

*Reference solution (d)*. Dissolve 10.0 mg of *etofenamate for peak identification CRS* (containing impurities A, B, C, D and E) in 6.0 mL of *methanol R* and dilute to 10.0 mL with *water R*.

*Column*:

– *size*: *l* = 0.10 m, Ø = 4.0 mm;
– *stationary phase*: *end-capped octadecylsilyl silica gel for chromatography R* (3 µm);
– *temperature*: 40 °C.

*Mobile phase*:

– *mobile phase A*: dissolve 1.3 g of *ammonium phosphate R* and 4.0 g of *tetrabutylammonium hydroxide R* in 900 mL of *water R*, adjust to pH 8.0 with *dilute phosphoric acid R* and dilute to 1000 mL with *water R*;
– *mobile phase B*: *methanol R*;

| Time | Mobile phase A (per cent *V/V*) | Mobile phase B (per cent *V/V*) |
|---|---|---|
| 0 - 13 | 40 | 60 |
| 13 - 20 | 40 → 10 | 60 → 90 |
| 20 - 25 | 10 | 90 |

*Flow rate*: 1.2 mL/min.

*Detection*: spectrophotometer at 286 nm.

*Injection*: 20 µL.

*Identification of impurities*: use the chromatogram supplied with *etofenamate for peak identification CRS* and the chromatogram obtained with reference solution (d) to identify the peaks due to impurities A, B, C, D and E; use the chromatogram obtained with reference solution (a) to identify the peak due to impurity G.

*Relative retention* with reference to etofenamate (retention time = about 13 min): impurity A = about 0.2; impurity C = about 0.7; impurity G = about 0.85; impurity E = about 1.5; impurity B = about 1.6; impurity D = about 1.7.

*System suitability*: reference solution (c):

– *resolution*: minimum 2.3 between the peaks due to impurity G and etofenamate.

*Limits*:

– *correction factors*: for the calculation of content, multiply the peak areas of the following impurities by the corresponding correction factor: impurity A = 0.62; impurity C = 0.45; impurity D = 0.77;

– *impurity D*: not more than 2.5 times the area of the principal peak in the chromatogram obtained with reference solution (b) (0.5 per cent);

– *impurity A*: not more than 1.25 times the area of the principal peak in the chromatogram obtained with reference solution (b) (0.25 per cent);

– *impurities B, C, E*: for each impurity, not more than the area of the principal peak in the chromatogram obtained with reference solution (b) (0.2 per cent);

– *impurity G*: not more than the area of the principal peak in the chromatogram obtained with reference solution (a) (0.2 per cent);

– *unspecified impurities*: for each impurity, not more than 0.5 times the area of the principal peak in the chromatogram obtained with reference solution (b) (0.10 per cent);

– *total*: not more than 6 times the area of the principal peak in the chromatogram obtained with reference solution (b) (1.2 per cent);

– *disregard limit*: 0.25 times the area of the principal peak in the chromatogram obtained with reference solution (b) (0.05 per cent).

**Water** (*2.5.12*): maximum 0.5 per cent, determined on 1.00 g.

**Sulfated ash** (*2.4.14*): maximum 0.1 per cent, determined on 1.0 g.

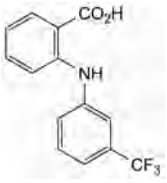
ASSAY

To 3.000 g add 20 mL of *2-propanol R* and 20.0 mL of *1 M sodium hydroxide* and heat under reflux for 2 h. Add 0.1 mL of *bromothymol blue solution R1*. Titrate after cooling with *1 M hydrochloric acid* until the colour disappears. Carry out a blank titration.

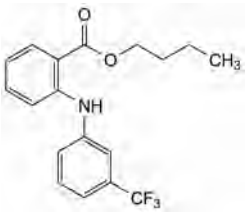
1 mL of *1 M sodium hydroxide* is equivalent to 0.3694 g of $C_{18}H_{18}F_3NO_4$.

IMPURITIES

*Specified impurities*: *A, B, C, D, E, F, G.*

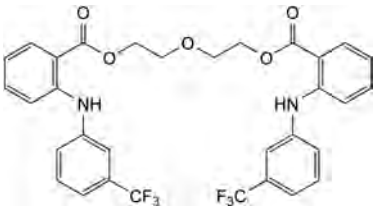


A. 2-[[3-(trifluoromethyl)phenyl]amino]benzoic acid (flufenamic acid),

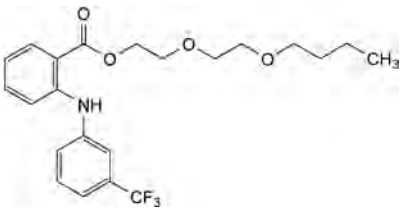


B. butyl 2-[[3-(trifluoromethyl)phenyl]amino]benzoate (butyl flufenamate),

C. *N*-phenyl-3-(trifluoromethyl)aniline,

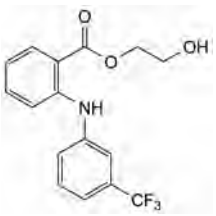


D. 2,2′-oxybis(ethylene) bis[2-[[3-(trifluoromethyl)phenyl]-amino]benzoate],



E. 2-(2-butoxyethoxy)ethyl 2-[[3-(trifluoromethyl)phenyl]-amino]benzoate,

F. 2,2′-oxydiethanol,

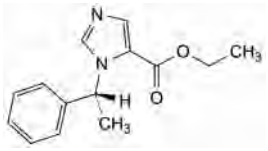


G. 2-hydroxyethyl 2-[[3-(trifluoromethyl)phenyl]amino]-benzoate.

**01/2008:1514**
**corrected 7.0**

# ETOMIDATE

## Etomidatum



$C_{14}H_{16}N_2O_2$ $M_r$ 244.3
[33125-97-2]

DEFINITION

Ethyl 1-[(1*R*)-1-phenylethyl]-1*H*-imidazole-5-carboxylate.

*Content*: 99.0 per cent to 101.0 per cent (dried substance).

CHARACTERS

*Appearance*: white or almost white powder.

*Solubility*: very slightly soluble in water, freely soluble in ethanol (96 per cent) and in methylene chloride.

mp: about 68 °C.

IDENTIFICATION

A. Infrared absorption spectrophotometry (*2.2.24*).
*Comparison*: *etomidate CRS*.

B. Specific optical rotation (see Tests).

TESTS

**Solution S**. Dissolve 0.25 g in *anhydrous ethanol R* and dilute to 25.0 mL with the same solvent.

**Appearance of solution**. Solution S is clear (*2.2.1*) and colourless (*2.2.2, Method II*).

**Specific optical rotation** (*2.2.7*): + 67 to + 70 (dried substance), determined on solution S.

**Related substances**. Liquid chromatography (*2.2.29*).

*Solvent mixture*: *anhydrous ethanol R*, *water R* (50:50 *V/V*).

*Test solution*. Dissolve 0.100 g of the substance to be examined in the solvent mixture and dilute to 10.0 mL with the solvent mixture.

*Reference solution (a)*. Dissolve 5.0 mg of *etomidate CRS* and 5.0 mg of *etomidate impurity B CRS* in the solvent mixture, then dilute to 250.0 mL with the solvent mixture.

*Reference solution (b)*. Dilute 1.0 mL of the test solution to 100.0 mL with the solvent mixture. Dilute 5.0 mL of this solution to 25.0 mL with the solvent mixture.

*Column*:

– *size*: *l* = 0.1 m, Ø = 4.6 mm;
– *stationary phase*: *octadecylsilyl silica gel for chromatography R* (3 µm).

*Mobile phase*:

– *mobile phase A*: 5 g/L solution of *ammonium carbonate R*;
– *mobile phase B*: *acetonitrile R*;

| Time (min) | Mobile phase A (per cent *V/V*) | Mobile phase B (per cent *V/V*) |
|---|---|---|
| 0 - 5 | 90 → 30 | 10 → 70 |
| 5 - 6 | 30 → 10 | 70 → 90 |
| 6 - 10 | 10 | 90 |

*Flow rate*: 2.0 mL/min.

*Detection*: spectrophotometer at 235 nm.

*Injection*: 10 µL.

*Retention time*: impurity B = about 4.5 min; etomidate = about 5.0 min.

*System suitability*: reference solution (a):

– *resolution*: minimum 5.0 between the peaks due to impurity B and etomidate; if necessary, adjust the concentration of ammonium carbonate in the mobile phase or the time programme of the linear gradient.

*Limits*:

– *impurities A, B, C*: for each impurity, not more than the area of the principal peak in the chromatogram obtained with reference solution (b) (0.2 per cent);
– *total*: not more than 1.5 times the area of the principal peak in the chromatogram obtained with reference solution (b) (0.3 per cent);
– *disregard limit*: 0.25 times the area of the principal peak in the chromatogram obtained with reference solution (b) (0.05 per cent).

**Loss on drying** (*2.2.32*): maximum 0.5 per cent, determined on 1.000 g by drying *in vacuo* at 40 °C for 4 h.

**Sulfated ash** (*2.4.14*): maximum 0.1 per cent, determined on 1.0 g.

ASSAY

Dissolve 0.200 g in 50 mL of a mixture of 1 volume of *anhydrous acetic acid R* and 7 volumes of *methyl ethyl ketone R*. Titrate with *0.1 M perchloric acid* using 0.2 mL of *naphtholbenzein solution R* as indicator.

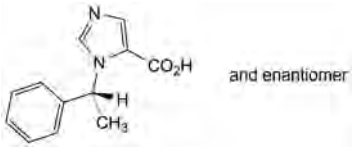
1 mL of *0.1 M perchloric acid* is equivalent to 24.43 mg of $C_{14}H_{16}N_2O_2$.

STORAGE

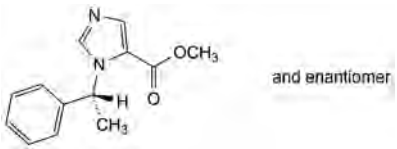
Protected from light.

IMPURITIES

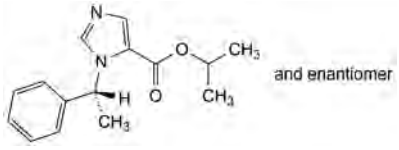
*Specified impurities: A, B, C.*



A. 1-[(1*RS*)-1-phenylethyl]-1*H*-imidazole-5-carboxylic acid,



B. methyl 1-[(1*RS*)-1-phenylethyl]-1*H*-imidazole-5-carboxylate (metomidate),

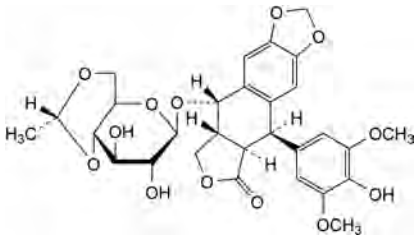


C. 1-methylethyl 1-[(1*RS*)-1-phenylethyl]-1*H*-imidazole-5-carboxylate.

**04/2017:0823**

# ETOPOSIDE

## Etoposidum



$C_{29}H_{32}O_{13}$ $M_r$ 588.6
[33419-42-0]

DEFINITION

(5*R*,5a*R*,8a*R*,9*S*)-9-[[4,6-*O*-[(1*R*)-ethane-1,1-diyl]-β-D-glucopyranosyl]oxy]-5-(4-hydroxy-3,5-dimethoxyphenyl)-5,8,8a,9-tetrahydro[2]benzofuro[5,6-*f*][1,3]benzodioxol-6(5a*H*)-one.

*Content*: 98.0 per cent to 102.0 per cent (anhydrous substance).

CHARACTERS

*Appearance*: white or almost white, crystalline powder, slightly hygroscopic.

*Solubility*: practically insoluble in water, sparingly soluble in methanol, slightly soluble in ethanol (96 per cent) and in methylene chloride.

IDENTIFICATION

*First identification: A, B.*

*Second identification: C, D.*

A. Specific optical rotation (see Tests).

B. Infrared absorption spectrophotometry (*2.2.24*).
*Comparison*: *etoposide CRS*.

C. Thin-layer chromatography (*2.2.27*).
*Test solution.* Dissolve 10 mg of the substance to be examined in a mixture of 1 volume of *methanol R* and 9 volumes of *methylene chloride R* and dilute to 2 mL with the same mixture of solvents.
*Reference solution.* Dissolve 10 mg of *etoposide CRS* in a mixture of 1 volume of *methanol R* and 9 volumes of *methylene chloride R* and dilute to 2 mL with the same mixture of solvents.
*Plate*: *silica gel H R* as the coating substance.
*Mobile phase*: *water R*, *glacial acetic acid R*, *acetone R*, *methylene chloride R* (1.5:8:20:100 *V/V/V/V*).
*Application*: 5 µL as bands of 10 mm.
*Development*: immediately, over 6/7 of the plate.
*Drying*: in a current of warm air for 5 min.
*Detection*: spray with a mixture of 1 volume of *sulfuric acid R* and 9 volumes of *ethanol (96 per cent) R* and heat at 140 °C for 15 min. Cover the plate immediately with a glass plate of the same size. Examine in daylight.
*Results*: the principal zone in the chromatogram obtained with the test solution is similar in position, colour and size to the principal zone in the chromatogram obtained with the reference solution.

D. In a test-tube dissolve about 5 mg in 5 mL of *glacial acetic acid R* and add 0.05 mL of *ferric chloride solution R1*. Mix and cautiously add 2 mL of *sulfuric acid R*. Avoid mixing the 2 layers. Allow to stand for about 30 min; a pink to reddish-brown ring develops at the interface and the upper layer is yellow.

TESTS

**Appearance of solution**. The solution is clear (*2.2.1*) and not more intensely coloured than reference solution $Y_6$ or $BY_6$ (*2.2.2, Method II*).

Dissolve 0.6 g in a mixture of 1 volume of *methanol R* and 9 volumes of *methylene chloride R* and dilute to 20 mL with the same mixture of solvents.

**Specific optical rotation** (*2.2.7*): – 114 to – 106 (anhydrous substance).

Dissolve 50.0 mg in a mixture of 1 volume of *methanol R* and 9 volumes of *methylene chloride R* and dilute to 10.0 mL with the same mixture of solvents.

**Related substances**. Liquid chromatography (*2.2.29*).

*Solvent mixture*: mobile phase A, mobile phase B (50:50 *V/V*).

*Test solution (a).* Dissolve 40 mg of the substance to be examined in the solvent mixture and dilute to 10.0 mL with the solvent mixture.

*Test solution (b).* Dissolve 50.0 mg of the substance to be examined in the solvent mixture and dilute to 50.0 mL with the solvent mixture.

*Reference solution (a).* Dilute 1.0 mL of test solution (a) to 100.0 mL with the solvent mixture. Dilute 1.0 mL of this solution to 10.0 mL with the solvent mixture.

*Reference solution (b).* Dissolve 4 mg of *etoposide for system suitability CRS* (containing impurities B, C, D, E, N and O) in 1.0 mL of the solvent mixture.

*Reference solution (c).* Dissolve 50.0 mg of *etoposide CRS* in the solvent mixture and dilute to 50.0 mL with the solvent mixture.

*Column*:
- *size*: *l* = 0.125 m, Ø = 4.6 mm;
- *stationary phase*: *end-capped octadecylsilyl silica gel for chromatography R* (5 µm);
- *temperature*: 40 °C.

*Mobile phase*:
- *mobile phase A*: *anhydrous formic acid R*, *triethylamine R*, *water for chromatography R* (1:1:998 *V/V/V*);
- *mobile phase B*: *anhydrous formic acid R*, *triethylamine R*, *acetonitrile R* (1:1:998 *V/V/V*);

| Time (min) | Mobile phase A (per cent *V/V*) | Mobile phase B (per cent *V/V*) |
|---|---|---|
| 0 - 7 | 75 | 25 |
| 7 - 23 | 75 → 27 | 25 → 73 |

*Flow rate*: 1 mL/min.

*Detection*: spectrophotometer at 285 nm.

*Injection*: 10 µL of test solution (a) and reference solutions (a) and (b).

*Identification of impurities*: use the chromatogram supplied with *etoposide for system suitability CRS* and the chromatogram obtained with reference solution (b) to identify the peaks due to impurities B, C, D, E, N and O.

*Relative retention* with reference to etoposide (retention time = about 5 min): impurity D = about 0.4; impurity E = about 0.8; impurity C = about 1.1; impurity B = about 1.2; impurity N = about 3.1; impurity O = about 4.2.

*System suitability*: reference solution (b):
- *peak-to-valley ratio*: minimum 2.0, where $H_p$ = height above the baseline of the peak due to impurity C and $H_v$ = height above the baseline of the lowest point of the curve separating this peak from the peak due to etoposide; and minimum 3.0, where $H_p$ = height above the baseline

of the peak due to impurity B and $H_v$ = height above the baseline of the lowest point of the curve separating this peak from the peak due to impurity C.

*Limits*:

- *correction factor*: for the calculation of content, multiply the peak area of impurity O by 1.7;
- *impurities B, C, D, E, N*: for each impurity, not more than twice the area of the principal peak in the chromatogram obtained with reference solution (a) (0.2 per cent);
- *impurity O*: not more than 1.5 times the area of the principal peak in the chromatogram obtained with reference solution (a) (0.15 per cent);
- *unspecified impurities*: for each impurity, not more than the area of the principal peak in the chromatogram obtained with reference solution (a) (0.10 per cent);
- *total*: not more than 10 times the area of the principal peak in the chromatogram obtained with reference solution (a) (1.0 per cent);
- *disregard limit*: 0.5 times the area of the principal peak in the chromatogram obtained with reference solution (a) (0.05 per cent); disregard any peak due to the solvent.

**Water** (*2.5.32*): maximum 6.0 per cent, determined on 0.150 g using the evaporation technique at 130 °C.

**Sulfated ash** (*2.4.14*): maximum 0.1 per cent, determined on 1.0 g.

ASSAY

Liquid chromatography (*2.2.29*) as described in the test for related substances with the following modifications.

*Injection*: test solution (b) and reference solution (c).

*System suitability*:

- *repeatability*: maximum relative standard deviation of 1.0 per cent determined on 6 injections of reference solution (c).

Calculate the percentage content of $C_{29}H_{32}O_{13}$ taking into account the assigned content of *etoposide CRS*.

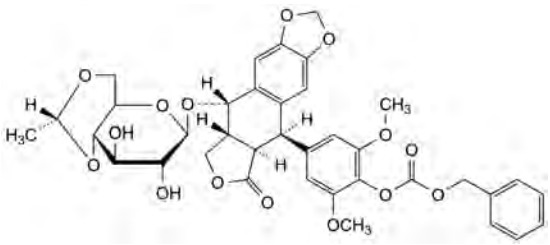
STORAGE

In an airtight container.

IMPURITIES

*Specified impurities: B, C, D, E, N, O.*

*Other detectable impurities* (the following substances would, if present at a sufficient level, be detected by one or other of the tests in the monograph. They are limited by the general acceptance criterion for other/unspecified impurities and/or by the general monograph *Substances for pharmaceutical use (2034)*. It is therefore not necessary to identify these impurities for demonstration of compliance. See also *5.10. Control of impurities in substances for pharmaceutical use*): *A, F, G, H, I, J, K, L, M, P, Q, R.*



A. (5*R*,5a*R*,8a*R*,9*S*)-5-[4-[[(benzyloxy)carbonyl]oxy]-3,5-dimethoxyphenyl]-9-[[4,6-*O*-[(1*R*)-ethane-1,1-diyl]-β-D-glucopyranosyl]oxy]-5,8,8a,9-tetrahydro[2]benzofuro[5,6-*f*][1,3]benzodioxol-6(5a*H*)-one (4'-carbobenzoyloxyethylidene-lignan P),

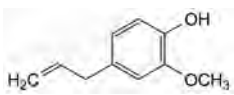
# EUGENOL

## Eugenolum



$C_{10}H_{12}O_2$ $M_r$ 164.2
[97-53-0]

DEFINITION

2-Methoxy-4-(prop-2-enyl)phenol.

CHARACTERS

*Appearance*: colourless or pale yellow, clear liquid, darkening on exposure to air.

It has a strong odour of clove.

*Solubility*: practically insoluble in water, freely soluble in ethanol (70 per cent *V/V*), practically insoluble in glycerol, miscible with ethanol (96 per cent), with glacial acetic acid, with methylene chloride and with fatty oils.

IDENTIFICATION

*First identification: B.*

*Second identification: A, C, D.*

A. Refractive index (see Tests).

B. Infrared absorption spectrophotometry (*2.2.24*).

*Comparison*: *eugenol CRS.*

C. Thin-layer chromatography (*2.2.27*).

*Test solution.* Dissolve 50 µL of the substance to be examined in *ethanol (96 per cent) R* and dilute to 25 mL with the same solvent.

*Reference solution.* Dissolve 50 µL of *eugenol CRS* in *ethanol (96 per cent) R* and dilute to 25 mL with the same solvent.

*Plate*: *TLC silica gel $F_{254}$ plate R.*

*Mobile phase*: *ethyl acetate R*, *toluene R* (10:90 *V/V*).

*Application*: 5 µL.

*Development*: over a path of 15 cm.

*Drying*: in a current of cold air.

*Detection A*: examine in ultraviolet light at 254 nm.

*Results A*: the principal spot in the chromatogram obtained with the test solution is similar in position and size to the principal spot in the chromatogram obtained with the reference solution.

*Detection B*: spray with *anisaldehyde solution R* and heat at 100-105 °C for 10 min.

*Results B*: the principal spot in the chromatogram obtained with the test solution is similar in position, colour and size to the principal spot in the chromatogram obtained with the reference solution.

D. Dissolve 0.05 mL in 2 mL of *ethanol (96 per cent) R* and add 0.1 mL of *ferric chloride solution R1*. A dark green colour is produced which changes to yellowish-green within 10 min.

TESTS

**Relative density** (*2.2.5*): 1.066 to 1.070.

**Refractive index** (*2.2.6*): 1.540 to 1.542.

**Dimeric and oligomeric compounds**. Dissolve 0.150 g in *anhydrous ethanol R* and dilute to 100.0 mL with the same solvent. The absorbance (*2.2.25*) of the solution at 330 nm is not greater than 0.25.

**Related substances**. Gas chromatography (*2.2.28*): use the normalisation procedure.

*Test solution.* Dissolve 1.00 g of the substance to be examined in *anhydrous ethanol R* and dilute to 5.0 mL with the same solvent.

*Reference solution (a).* Dilute 1.0 mL of the test solution to 100.0 mL with *anhydrous ethanol R.*

*Reference solution (b).* Dissolve 50 mg of *vanillin R* (impurity H) in 1 mL of the test solution and dilute to 5 mL with *anhydrous ethanol R.*

*Column*:

– *material*: fused silica;
– *size*: *l* = 30 m, Ø = 0.25 mm;
– *stationary phase*: *phenyl(50)methyl(50)polysiloxane R* (film thickness 0.25 µm).

*Carrier gas*: *helium for chromatography R.*

*Flow rate*: 1 mL/min.

*Split ratio*: 1:40.

*Temperature*:

| | Time (min) | Temperature (°C) |
|---|---|---|
| Column | 0 - 2 | 80 |
| | 2 - 27 | 80 → 280 |
| | 27 - 47 | 280 |
| Injection port | | 250 |
| Detector | | 280 |

*Detection*: flame ionisation.

*Injection*: 1 µL.

*System suitability*: reference solution (b):

– *relative retention* with reference to eugenol: impurity H = minimum 1.1.

*Limits*:

– *any impurity*: for each impurity, maximum 0.5 per cent;
– *sum of impurities with a relative retention greater than 2.0 with reference to eugenol*: maximum 1.0 per cent;
– *total*: maximum 3.0 per cent;
– *disregard limit*: 0.05 times the area of the principal peak in the chromatogram obtained with reference solution (a) (0.05 per cent).

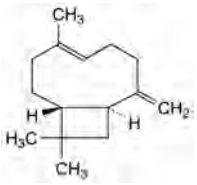
**Hydrocarbons**. Dissolve 1 mL in 5 mL of *dilute sodium hydroxide solution R* and add 30 mL of *water R* in a stoppered test-tube. Examined immediately, the solution is yellow and clear (*2.2.1*).

**Sulfated ash** (*2.4.14*): maximum 0.1 per cent, determined on 1.0 g.

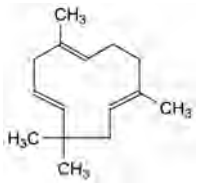
STORAGE

In a well-filled container, protected from light.

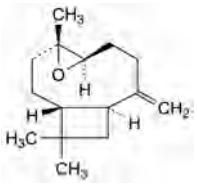
IMPURITIES



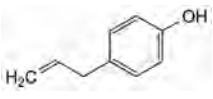
A. (1*R*,4*E*,9*S*)-4,11,11-trimethyl-8-methylenebicyclo[7.2.0]-undec-4-ene (β-caryophyllene),



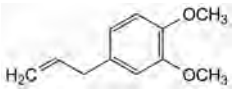
B. (1*E*,4*E*,8*E*)-2,6,6,9-tetramethylcycloundeca-1,4,8-triene (α-humulene, α-caryophyllene),



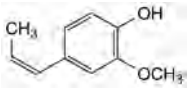
C. (1*R*,4*R*,6*R*,10*S*)-4,12,12-trimethyl-9-methylene-5-oxatricyclo[8.2.0.0$^{4,6}$]dodecane (β-caryophyllene oxide),



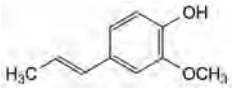
D. 4-(prop-2-enyl)phenol,



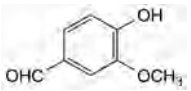
E. 1,2-dimethoxy-4-(prop-2-enyl)benzene (eugenol methyl ether),



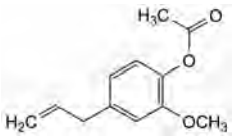
F. 2-methoxy-4-[(Z)-prop-1-enyl]phenol (*cis*-isoeugenol),



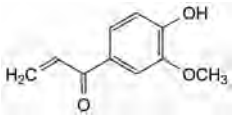
G. 2-methoxy-4-[(E)-prop-1-enyl]phenol (*trans*-isoeugenol),



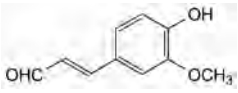
H. 4-hydroxy-3-methoxybenzaldehyde (vanillin),



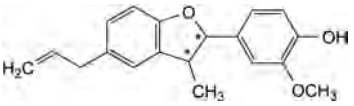
I. 2-methoxy-4-(prop-2-enyl)phenyl acetate (acetyleugenol),



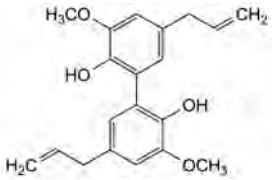
J. 1-(4-hydroxy-3-methoxyphenyl)prop-2-enone,



K. (*E*)-3-(4-hydroxy-3-methoxyphenyl)prop-2-enal (*trans*-coniferyl aldehyde),

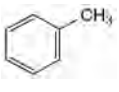


L. 2-methoxy-4-[3-methyl-5-(prop-2-enyl)-2,3-dihydrobenzofuran-2-yl]phenol (dehydrodi-isoeugenol),



M. 3,3′-dimethoxy-5,5′-bis(prop-2-enyl)biphenyl-2,2′-diol (dehydrodieugenol),

N. O. 2 further unknown dimeric compounds,



P. toluene.

# EVENING PRIMROSE OIL, REFINED

## Oenotherae oleum raffinatum

DEFINITION

Fatty oil obtained from seeds of *Oenothera biennis* L. or *Oenothera lamarckiana* L. by extraction and/or expression. It is then refined. A suitable antioxidant may be added.

PRODUCTION

The oil is prepared using materials and methods designed to ensure that the content of brassicasterol (*2.4.23*) in the sterol fraction of the oil is not greater than 0.3 per cent.

CHARACTERS

*Appearance*: clear, light yellow or yellow liquid.

*Solubility*: practically insoluble in water and in ethanol (96 per cent), miscible with light petroleum (bp: 40-60 °C).

*Relative density*: about 0.923.

*Refractive index*: about 1.478.

IDENTIFICATION

*First identification*: B.

*Second identification*: A.

A. Identification of fatty oils by thin-layer chromatography (*2.3.2*).

*Results*: the chromatogram obtained is similar to the corresponding chromatogram shown in Figure 2.3.2.-1.

B. Composition of fatty acids (see Tests).

TESTS

**Acid value** (*2.5.1*): maximum 0.5, or maximum 0.3 if intended for use in the manufacture of parenteral preparations.

**Peroxide value** (*2.5.5, Method A*): maximum 10.0, or maximum 5.0 if intended for use in the manufacture of parenteral preparations.

**Unsaponifiable matter** (*2.5.7*): maximum 2.5 per cent, determined on 5.0 g.

**Alkaline impurities** (*2.4.19*). It complies with the test.

**Composition of fatty acids** (*2.4.22, Method A*). Use the mixture of calibrating substances in Table 2.4.22.-3.

*Composition of the fatty-acid fraction of the oil*:

- *saturated fatty acids of chain length less than $C_{16}$*: maximum 0.3 per cent;
- *palmitic acid*: 4.0 per cent to 10.0 per cent;
- *stearic acid*: 1.0 per cent to 4.0 per cent;
- *oleic acid*: 5.0 per cent to 12.0 per cent;
- *linoleic acid*: 65.0 per cent to 85.0 per cent;
- *gamma-linolenic acid*: 7.0 per cent to 14.0 per cent;
- *alpha-linolenic acid*: maximum 0.5 per cent.

**Water** (*2.5.32*): maximum 0.1 per cent, determined on 1.00 g.

STORAGE

Under an inert gas, in a well-filled, airtight container, protected from light.

LABELLING

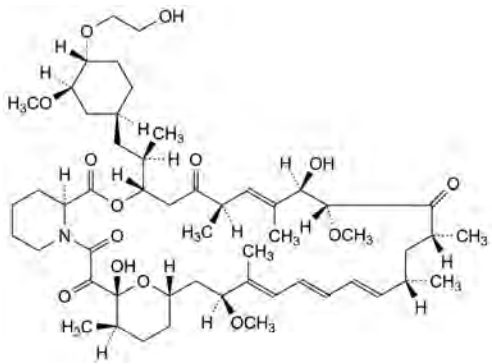
The label states:

- where applicable, that the oil is suitable for use in the manufacture of parenteral preparations;
- the name of the inert gas.

**04/2019:2918**
**corrected 10.0**

# EVEROLIMUS

## Everolimusum



$C_{53}H_{83}NO_{14}$ $M_r$ 958

[159351-69-6]

(1*R*,9*S*,12*S*,15*R*,16*E*,18*R*,19*R*,21*R*,23*S*,24*E*,26*E*,28*E*,30*S*,32*S*,-35*R*)-1,18-Dihydroxy-12-[(2*R*)-1-[(1*S*,3*R*,4*R*)-4-(2-hydroxyethoxy)-3-methoxycyclohexyl]propan-2-yl]-19,30-dimethoxy-15,17,21,23,29,35-hexamethyl-11,36-dioxa-4-azatricyclo[30.3.1.0$^{4,9}$]hexatriaconta-16,24,26,28-tetraene-2,3,10,14,20-pentone.

Semi-synthetic product derived from a fermentation product. A suitable antioxidant may be added.

DEFINITION

*Content*: 95.0 per cent to 102.0 per cent (anhydrous substance).

A reversible isomerisation to everolimus tautomer takes place in solution. The activity is due to both compounds.

CHARACTERS

*Appearance*: white or faintly yellow, hygroscopic powder.

*Solubility*: practically insoluble in water, very soluble in anhydrous ethanol, practically insoluble in heptane.

IDENTIFICATION

Infrared absorption spectrophotometry (*2.2.24*).

*Comparison*: *everolimus CRS*.

TESTS

**Specific optical rotation** (*2.2.7*): – 153.0 to – 141.0 (anhydrous substance).

Dissolve 0.100 g in *methanol R* and dilute to 10.0 mL with the same solvent.

**Impurity A**. Liquid chromatography (*2.2.29*). *Protect the solutions from light. Use plastic labware to minimise the formation of everolimus tautomer.*

*Test solution*. Dissolve 50.0 mg of the substance to be examined in *acetonitrile R* and dilute to 25.0 mL with the same solvent.

*Reference solution (a)*. Dissolve 1 mg of *sirolimus R* (impurity A) in 5 mL of *acetonitrile R*. Dilute 0.8 mL of the solution to 10 mL with the test solution.

*Reference solution (b)*. Dilute 1.0 mL of the test solution to 100.0 mL with *acetonitrile R*. Dilute 1.0 mL of this solution to 10.0 mL with *acetonitrile R*.

*Column*:

- *size*: *l* = 0.15 m, Ø = 2.1 mm;
- *stationary phase*: *end-capped solid core octadecylsilyl silica gel for chromatography R* (2.7 µm);

Monographs E

– *temperature*: 60 °C.

*Mobile phase*:

– *mobile phase A*: *anhydrous formic acid R*, *methanol R*, 0.70 g/L solution of *ammonium formate R*, *acetonitrile R* (0.05:100:450:450 *V/V/V/V*);

– *mobile phase B*: *anhydrous formic acid R*, *methanol R*, 0.96 g/L solution of *ammonium formate R*, *acetonitrile R* (0.05:100:330:570 *V/V/V/V*);

| Time (min) | Mobile phase A (per cent *V/V*) | Mobile phase B (per cent *V/V*) |
|---|---|---|
| 0 - 14 | 100 | 0 |
| 14 - 23 | 100 → 0 | 0 → 100 |
| 23 - 28 | 0 | 100 |

*Flow rate*: 0.9 mL/min.

*Detection*: spectrophotometer at 278 nm.

*Autosampler*: set at 6 °C.

*Injection*: 3.5 µL.

*Identification of impurities*: use the chromatogram obtained with reference solution (a) to identify the peak due to impurity A.

*Relative retention* with reference to everolimus (retention time = about 16 min): impurity A = about 0.9; everolimus tautomer = about 1.1.

*System suitability*: reference solution (a):

– *peak-to-valley ratio*: minimum 2.0, where $H_p$ = height above the baseline of the peak due to impurity A and $H_v$ = height above the baseline of the lowest point of the curve separating this peak from the peak due to everolimus.

*Calculation of percentage content*:

– for impurity A, use the concentration of everolimus (and everolimus tautomer if present) in reference solution (b).

*Limit*:

– *impurity A*: maximum 0.8 per cent.

**Related substances**. Liquid chromatography (*2.2.29*). *Carry out the test protected from light. Prepare the solutions immediately before use.*

*Test solution (a).* Dissolve 50.0 mg of the substance to be examined in *acetonitrile R* and dilute to 10.0 mL with the same solvent.

*Test solution (b).* Dissolve 25.0 mg of the substance to be examined in *acetonitrile R* and dilute to 50.0 mL with the same solvent.

*Reference solution (a).* Dissolve 5 mg of *everolimus for system suitability CRS* (containing impurities D, E, F, H, I and J) in 1 mL of *acetonitrile R*.

*Reference solution (b).* Dilute 1.0 mL of test solution (a) to 100.0 mL with *acetonitrile R*. Dilute 1.0 mL of this solution to 10.0 mL with *acetonitrile R*.

*Reference solution (c).* Dissolve 25.0 mg of *everolimus CRS* in *acetonitrile R* and dilute to 50.0 mL with the same solvent.

*Reference solution (d).* Dissolve 5 mg of *everolimus for impurity C identification CRS* in 1 mL of *acetonitrile R*.

*Column*:

– *size*: *l* = 0.25 m, Ø = 3.0 mm;

– *stationary phase*: *base-deactivated end-capped octadecylsilyl silica gel for chromatography R* (5 µm);

– *temperature*: 50 °C.

*Mobile phase*:

– *mobile phase A*: *acetonitrile R1*, 0.27 g/L solution of *potassium dihydrogen phosphate R* (40:60 *V/V*);

– *mobile phase B*: *acetonitrile R1*;

| Time (min) | Mobile phase A (per cent *V/V*) | Mobile phase B (per cent *V/V*) |
|---|---|---|
| 0 - 2 | 100 | 0 |
| 2 - 7 | 100 → 72 | 0 → 28 |
| 7 - 25 | 72 → 60 | 28 → 40 |
| 25 - 33 | 60 → 0 | 40 → 100 |
| 33 - 43 | 0 | 100 |

*Flow rate*: 1.1 mL/min.

*Detection*: spectrophotometer at 210 nm.

*Injection*: 10 µL of test solution (a) and reference solutions (a), (b) and (d).

*Identification of impurities*: use the chromatogram supplied with *everolimus for system suitability CRS* and the chromatogram obtained with reference solution (a) to identify the peaks due to impurities D, E, F, H, I and J; use the chromatogram supplied with *everolimus for impurity C identification CRS* and the chromatogram obtained with reference solution (d) to identify the peak due to impurity C.

*Relative retention* with reference to everolimus (retention time = about 15 min): impurity H = about 0.78; impurity I = about 0.81; impurity C = about 0.87; impurity D = about 0.92; everolimus tautomer = about 1.1; impurity E = about 1.34; impurity J = about 1.38; impurity F = about 1.5.

*System suitability*: reference solution (a):

– *resolution*: minimum 1.5 between the peaks due to impurity D and everolimus; minimum 1.5 between the peaks due to everolimus and everolimus tautomer.

*Calculation of percentage contents*:

– for each impurity, use the sum of the concentrations of everolimus and everolimus tautomer in reference solution (b).

*Limits*:

– *impurities C, D, I*: for each impurity, maximum 0.8 per cent;

– *impurity H*: maximum 0.4 per cent;

– *sum of impurities E and J*: maximum 0.3 per cent;

– *impurity F*: maximum 0.2 per cent;

– *unspecified impurities*: for each impurity, maximum 0.15 per cent;

– *total*: maximum 2.5 per cent;

– *reporting threshold*: 0.05 per cent; disregard any peak due to everolimus tautomer.

**Water** (*2.5.12*): maximum 2.0 per cent, determined on 0.400 g.

**Sulfated ash** (*2.4.14*): maximum 0.1 per cent, determined on 1.0 g.

ASSAY

Liquid chromatography (*2.2.29*) as described in the test for related substances with the following modifications.

*Detection*: spectrophotometer at 275 nm.

*Injection*: test solution (b) and reference solution (c).

Calculate the percentage content of $C_{53}H_{83}NO_{14}$ taking into account the assigned content of *everolimus CRS* and, if present, the peak due to everolimus tautomer and by subtracting the content of impurity A obtained in the corresponding test.

STORAGE

Under an inert gas, in an airtight container, protected from light, at a temperature of 2 °C to 8 °C.

IMPURITIES

*Specified impurities: A, C, D, E, F, H, I, J.*

*Other detectable impurities* (the following substances would, if present at a sufficient level, be detected by one or other of the tests in the monograph. They are limited by the general

acceptance criterion for other/unspecified impurities. It is therefore not necessary to identify these impurities for demonstration of compliance. See also *5.10. Control of impurities in substances for pharmaceutical use*): *B.*

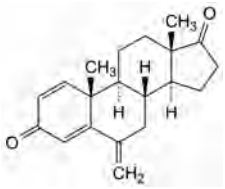
# EXEMESTANE

## Exemestanum



$C_{20}H_{24}O_2$ $M_r$ 296.4
[107868-30-4]

DEFINITION

6-Methylideneandrosta-1,4-diene-3,17-dione.

*Content*: 98.0 per cent to 102.0 per cent (dried substance).

CHARACTERS

*Appearance*: white or slightly yellow powder.

*Solubility*: practically insoluble in water, freely soluble in methylene chloride, soluble in methanol.

IDENTIFICATION

Infrared absorption spectrophotometry (*2.2.24*).

*Comparison*: *exemestane CRS*.

TESTS

**Specific optical rotation** (*2.2.7*): + 290 to + 298 (dried substance).

Dissolve 0.250 g in *methanol R* and dilute to 25.0 mL with the same solvent.

**Related substances**. Liquid chromatography (*2.2.29*). *Store the solutions protected from light.*

*Solvent mixture*: *water R*, *acetonitrile R* (25:75 *V/V*).

*Test solution*. Dissolve 25.0 mg of the substance to be examined in the solvent mixture and dilute to 25.0 mL with the solvent mixture.

*Reference solution (a)*. Dissolve 5 mg of *exemestane for system suitability CRS* (containing impurity G) in the solvent mixture and dilute to 5.0 mL with the solvent mixture.

*Reference solution (b)*. Dilute 1.0 mL of the test solution to 100.0 mL with the solvent mixture. Dilute 1.0 mL of this solution to 10.0 mL with the solvent mixture.

*Reference solution (c)*. Dissolve 25.0 mg of *exemestane CRS* in the solvent mixture and dilute to 25.0 mL with the solvent mixture.

*Column*:

- *size*: *l* = 0.25 m, Ø = 4.6 mm;
- *stationary phase*: *end-capped polar-embedded octadecylsilyl amorphous organosilica polymer R* (3.5 µm);
- *temperature*: 40 °C.

*Mobile phase*:

- *mobile phase A*: *water R*;
- *mobile phase B*: *acetonitrile R*;

| Time (min) | Mobile phase A (per cent *V/V*) | Mobile phase B (per cent *V/V*) |
|---|---|---|
| 0 - 5 | 75 | 25 |
| 5 - 35 | 75 → 55 | 25 → 45 |
| 35 - 45 | 55 → 5 | 45 → 95 |
| 45 - 50 | 5 | 95 |

*Flow rate*: 1.2 mL/min.

*Detection*: spectrophotometer at 247 nm.

*Injection*: 10 µL of the test solution and reference solutions (a) and (b).

*Identification of impurities*: use the chromatogram supplied with *exemestane for system suitability CRS* and the chromatogram obtained with reference solution (a) to identify the peak due to impurity G.

*Relative retention* with reference to exemestane (retention time = about 27 min): impurity G = about 1.03.

*System suitability*: reference solution (a):

- *peak-to-valley ratio*: minimum 2.5, where $H_p$ = height above the baseline of the peak due to impurity G and $H_v$ = height above the baseline of the lowest point of the curve separating this peak from the peak due to exemestane.

*Calculation of percentage contents*:

- for each impurity, use the concentration of exemestane in reference solution (b).

*Limits*:

- *unspecified impurities*: for each impurity, maximum 0.10 per cent;
- *total*: maximum 0.3 per cent;
- *reporting threshold*: 0.05 per cent.

**Loss on drying** (*2.2.32*): maximum 0.5 per cent, determined on 1.000 g by drying in an oven at 105 °C for 3 h.

**Sulfated ash** (*2.4.14*): maximum 0.1 per cent, determined on 1.0 g.

ASSAY

Liquid chromatography (*2.2.29*) as described in the test for related substances with the following modification.

*Injection*: test solution and reference solution (c).

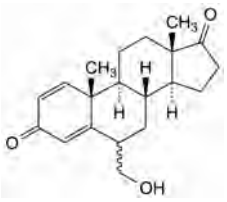
Calculate the percentage content of $C_{20}H_{24}O_2$ taking into account the assigned content of *exemestane CRS*.

STORAGE

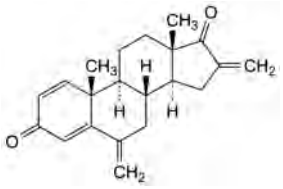
Protected from light.

IMPURITIES

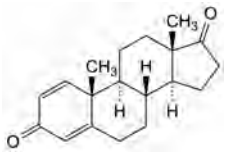
*Other detectable impurities* (the following substances would, if present at a sufficient level, be detected by one or other of the tests in the monograph. They are limited by the general acceptance criterion for other/unspecified impurities and/or by the general monograph *Substances for pharmaceutical use (2034)*. It is therefore not necessary to identify these impurities for demonstration of compliance. See also *5.10. Control of impurities in substances for pharmaceutical use*): *B, C, D, E, F, G*.



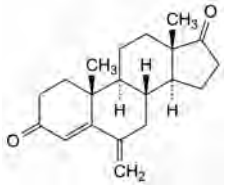
B. 6ξ-(hydroxymethyl)androsta-1,4-diene-3,17-dione,



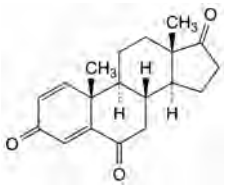
C. 6,16-dimethylideneandrosta-1,4-diene-3,17-dione,



D. androsta-1,4-diene-3,17-dione,



E. 6-methylideneandrost-4-ene-3,17-dione,



F. androsta-1,4-diene-3,6,17-trione,

G. unknown structure.

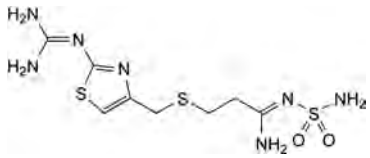
# FAMOTIDINE

## Famotidinum



$C_8H_{15}N_7O_2S_3$ $M_r$ 337.4
[76824-35-6]

DEFINITION

3-[[[2-[(Diaminomethylidene)amino]thiazol-4-yl]methyl]sulfanyl]-*N*′-sulfamoylpropanimidamide.

*Content*: 98.5 per cent to 101.5 per cent (dried substance).

CHARACTERS

*Appearance*: white or yellowish-white, crystalline powder or crystals.

*Solubility*: very slightly soluble in water, freely soluble in glacial acetic acid, very slightly soluble in anhydrous ethanol, practically insoluble in ethyl acetate. It dissolves in dilute mineral acids.

It shows polymorphism (*5.9*).

IDENTIFICATION

Infrared absorption spectrophotometry (*2.2.24*).

*Comparison*: *famotidine CRS*.

If the spectra obtained show differences, suspend 0.10 g of the substance to be examined and 0.10 g of the reference substance separately in 5 mL of *water R*. Heat to boiling and allow to cool, scratching the wall of the tube with a glass rod to initiate crystallisation. Filter, wash the crystals with 2 mL of iced *water R* and dry in an oven at 80 °C at a pressure not exceeding 670 Pa for 1 h. Record new spectra using the residues.

TESTS

**Appearance of solution**. Dissolve 0.20 g in a 50 g/L solution of *hydrochloric acid R*, heating to 40 °C if necessary, and dilute to 20 mL with the same acid. The solution is clear (*2.2.1*) and not more intensely coloured than reference solution $BY_7$ (*2.2.2, Method II*).

**Related substances**. Liquid chromatography (*2.2.29*).

*Test solution*. Dissolve 12.5 mg of the substance to be examined in mobile phase A and dilute to 25.0 mL with mobile phase A.

*Reference solution (a)*. Dilute 1.0 mL of the test solution to 100.0 mL with mobile phase A. Dilute 1.0 mL of this solution to 10.0 mL with mobile phase A.

*Reference solution (b)*. Dissolve 2.5 mg of *famotidine impurity D CRS* in *methanol R* and dilute to 10.0 mL with the same solvent. To 1.0 mL of the solution add 0.50 mL of the test solution and dilute to 100.0 mL with mobile phase A.

*Reference solution (c)*. Dissolve 5.0 mg of *famotidine for system suitability CRS* (containing impurities A, B, C, D, F and G) in mobile phase A and dilute to 10.0 mL with mobile phase A.

*Column*:

- *size*: *l* = 0.25 m, Ø = 4.6 mm;
- *stationary phase*: *end-capped octadecylsilyl silica gel for chromatography R* (5 µm);
- *temperature*: 50 °C.

*Mobile phase*:

- *mobile phase A*: mix 6 volumes of *methanol R*, 94 volumes of *acetonitrile R* and 900 volumes of a 1.882 g/L solution of *sodium hexanesulfonate R* previously adjusted to pH 3.5 with *acetic acid R*;
- *mobile phase B*: *acetonitrile R*;

| Time (min) | Mobile phase A (per cent *V/V*) | Mobile phase B (per cent *V/V*) | Flow rate (mL/min) |
|---|---|---|---|
| 0 - 23 | 100 → 96 | 0 → 4 | 1 |
| 23 - 27 | 96 | 4 | 1 → 2 |
| 27 - 47 | 96 → 78 | 4 → 22 | 2 |

*Detection*: spectrophotometer at 265 nm.

*Injection*: 20 µL.

*Identification of impurities*: use the chromatogram supplied with *famotidine for system suitability CRS* and the chromatogram obtained with reference solution (c) to identify the peaks due to impurities A, B, C, F and G; use the chromatogram obtained with reference solution (b) to identify the peak due to impurity D.

*Relative retention* with reference to famotidine (retention time = about 21 min): impurity D = about 1.1; impurity C = about 1.2; impurity G = about 1.4; impurity F = about 1.5; impurity A = about 1.6; impurity B = about 2.0.

*System suitability*:

- *retention time*: famotidine = 19-23 min in all the chromatograms;
- *resolution*: minimum 3.5 between the peaks due to famotidine and impurity D in the chromatogram obtained with reference solution (b).

*Limits*:

- *correction factors*: for the calculation of content, multiply the peak areas of the following impurities by the corresponding correction factor: impurity A = 1.9; impurity B = 2.5; impurity C = 1.9; impurity F = 1.7; impurity G = 1.4;
- *impurities C, D*: for each impurity, not more than 3 times the area of the principal peak in the chromatogram obtained with reference solution (a) (0.3 per cent);
- *impurities A, B, F, G*: for each impurity, not more than 1.5 times the area of the principal peak in the chromatogram obtained with reference solution (a) (0.15 per cent);
- *unspecified impurities*: for each impurity, not more than the area of the principal peak in the chromatogram obtained with reference solution (a) (0.10 per cent);
- *total*: not more than 8 times the area of the principal peak in the chromatogram obtained with reference solution (a) (0.8 per cent);
- *disregard limit*: 0.5 times the area of the principal peak in the chromatogram obtained with reference solution (a) (0.05 per cent).

**Loss on drying** (*2.2.32*): maximum 0.5 per cent, determined on 1.000 g by drying in an oven at 80 °C at a pressure not exceeding 670 Pa for 5 h.

**Sulfated ash** (*2.4.14*): maximum 0.1 per cent, determined on 1.0 g.

ASSAY

Dissolve 0.120 g in 60 mL of *anhydrous acetic acid R*. Titrate with *0.1 M perchloric acid*, determining the end-point potentiometrically (*2.2.20*).

1 mL of *0.1 M perchloric acid* is equivalent to 16.87 mg of $C_8H_{15}N_7O_2S_3$.

STORAGE

Protected from light.

IMPURITIES

*Specified impurities: A, B, C, D, F, G.*

*Other detectable impurities* (the following substances would, if present at a sufficient level, be detected by one or other of the tests in the monograph. They are limited by the general acceptance criterion for other/unspecified impurities and/or by the general monograph *Substances for pharmaceutical use (2034)*. # FEBANTEL FOR VETERINARY USE

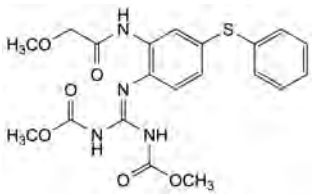
## Febantelum ad usum veterinarium



$C_{20}H_{22}N_4O_6S$ $M_r$ 446.5
[58306-30-2]

DEFINITION

Dimethyl *N*,*N*′-[[[2-[(methoxyacetyl)amino]-4-(phenylsulfanyl)phenyl]imino]methylene]dicarbamate.

*Content*: 97.5 per cent to 102.0 per cent (dried substance).

CHARACTERS

*Appearance*: white or almost white, crystalline powder.

*Solubility*: practically insoluble in water, soluble in acetone, slightly soluble in anhydrous ethanol.

It shows polymorphism (*5.9*).

IDENTIFICATION

Infrared absorption spectrophotometry (*2.2.24*).

*Comparison*: *febantel CRS*.

If the spectra obtained in the solid state show differences, dissolve the substance to be examined and the reference substance separately in *acetone R*, evaporate to dryness and record new spectra using the residues.

TESTS

**Related substances**. Liquid chromatography (*2.2.29*).

*Solvent mixture*: *acetonitrile R*, *tetrahydrofuran R* (50:50 *V/V*).

*Test solution (a).* Dissolve 0.100 g of the substance to be examined in the solvent mixture and dilute to 10.0 mL with the solvent mixture.

*Test solution (b).* Dilute 5.0 mL of test solution (a) to 100.0 mL with the solvent mixture.

*Reference solution (a).* Dilute 1.0 mL of test solution (a) to 100.0 mL with the solvent mixture. Dilute 1.0 mL of this solution to 10.0 mL with the solvent mixture.

*Reference solution (b).* Dissolve 50.0 mg of *febantel CRS* in the solvent mixture and dilute to 10.0 mL with the solvent mixture. Dilute 5.0 mL of this solution to 50.0 mL with the solvent mixture.

*Reference solution (c).* Dissolve 5 mg of *febantel for system suitability CRS* (containing impurities A, B and C) in 1.0 mL of the solvent mixture.

*Column*:

– *size*: *l* = 0.15 m, Ø = 4.0 mm;

– *stationary phase*: spherical *end-capped octadecylsilyl silica gel for chromatography R1* (5 µm).

*Mobile phase*: dissolve 6.8 g of *potassium dihydrogen phosphate R* in 1000 mL of *water for chromatography R*. Mix 350 mL of *acetonitrile R* with 650 mL of this solution.

*Flow rate*: 1.0 mL/min.

*Detection*: spectrophotometer at 280 nm.

*Injection*: 10 µL of test solution (a) and reference solutions (a) and (c).

*Run time*: 1.5 times the retention time of febantel.

*Elution order*: impurity A, impurity B, impurity C, febantel.

*Retention time*: febantel = about 32 min.

*System suitability*: reference solution (c):

– *resolution*: minimum 3.0 between the peaks due to impurities A and B and minimum 4.0 between the peaks due to impurities B and C.

*Limits*:

– *impurities A, B, C*: for each impurity, not more than the area of the principal peak in the chromatogram obtained with reference solution (a) (0.1 per cent);

– *unspecified impurities*: for each impurity, not more than twice the area of the principal peak in the chromatogram obtained with reference solution (a) (0.20 per cent);

– *total*: not more than 5 times the area of the principal peak in the chromatogram obtained with reference solution (a) (0.5 per cent);

– *disregard limit*: 0.5 times the area of the principal peak in the chromatogram obtained with reference solution (a) (0.05 per cent).

**Heavy metals** (*2.4.8*): maximum 20 ppm.

1.0 g complies with test F. Prepare the reference solution using 2 mL of *lead standard solution (10 ppm Pb) R*.

**Loss on drying** (*2.2.32*): maximum 0.5 per cent, determined on 1.000 g by drying in an oven at 105 °C for 2 h.

**Sulfated ash** (*2.4.14*): maximum 0.1 per cent, determined on 1.0 g.

ASSAY

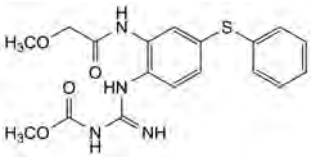
Liquid chromatography (*2.2.29*) as described in the test for related substances with the following modification.

*Injection*: test solution (b) and reference solution (b).

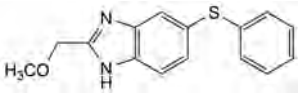
Calculate the percentage content of $C_{20}H_{22}N_4O_6S$ from the declared content of *febantel CRS*.

IMPURITIES

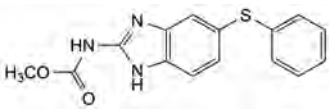
*Specified impurities: A, B, C.*



A. methyl [[2-[(methoxyacetyl)amino]-4-(phenylsulfanyl)-phenyl]carbamimidoyl]carbamate,



B. 2-(methoxymethyl)-5-(phenylsulfanyl)-1*H*-benzimidazole,

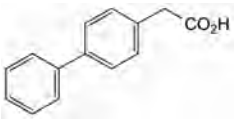


C. methyl [5-(phenylsulfanyl)-1*H*-benzimidazol-2-yl]carbamate (fenbendazole).

**01/2008:2304**

# FELBINAC

## Felbinacum



$C_{14}H_{12}O_2$ $M_r$ 212.2
[5728-52-9]

DEFINITION

(Biphenyl-4-yl)acetic acid.

*Content*: 99.0 per cent to 101.0 per cent (dried substance).

CHARACTERS

*Appearance*: white or almost white, crystalline powder.

*Solubility*: practically insoluble in water, soluble in methanol, sparingly soluble in ethanol (96 per cent).

mp: about 164 °C.

IDENTIFICATION

Infrared absorption spectrophotometry (*2.2.24*).

*Comparison*: *felbinac CRS*.

TESTS

**Related substances**. Liquid chromatography (*2.2.29*). *Protect the solutions from light and inject within 20 min of preparation.*

*Test solution.* Dissolve 0.100 g of the substance to be examined in *methanol R* and dilute to 10.0 mL with the same solvent.

*Reference solution.* Dissolve 5.0 mg of *felbinac impurity A CRS* and 5.0 mg of *biphenyl R* (impurity B) in *methanol R*, add 0.5 mL of the test solution and dilute to 50.0 mL with *methanol R*. Dilute 1.0 mL of this solution to 10.0 mL with *methanol R*.

*Column*:

– *size*: *l* = 0.15 m, Ø = 4.6 mm;

– *stationary phase*: *octadecylsilyl silica gel for chromatography R* (5 µm).

*Mobile phase*: mix 45 volumes of a 0.1 per cent *V/V* solution of *glacial acetic acid R* and 55 volumes of *methanol R*.

*Flow rate*: 2 mL/min.

*Detection*: spectrophotometer at 254 nm.

*Injection*: 20 µL.

*Run time*: 3.5 times the retention time of felbinac.

*Relative retention* with reference to felbinac (retention time = about 15 min): impurity A = about 1.3; impurity B = about 2.8.

*System suitability*: reference solution:

– *resolution*: minimum 3.0 between the peaks due to felbinac and impurity A.

*Limits*:

– *impurity A*: not more than the area of the corresponding peak in the chromatogram obtained with the reference solution (0.1 per cent);
– *impurity B*: not more than the area of the peak due to felbinac in the chromatogram obtained with the reference solution (0.1 per cent);
– *unspecified impurities*: for each impurity, not more than the area of the peak due to felbinac in the chromatogram obtained with the reference solution (0.10 per cent);
– *total*: not more than twice the area of the peak due to felbinac in the chromatogram obtained with the reference solution (0.2 per cent);
– *disregard limit*: 0.5 times the area of the peak due to felbinac in the chromatogram obtained with the reference solution (0.05 per cent).

**Chlorides**: maximum 110 ppm.

Dissolve 1.0 g in 40 mL of *acetone R*, add 6 mL of a 10 per cent *V/V* solution of *nitric acid R*, dilute to 50.0 mL with *water R* and mix. Pour 15.0 mL of this solution as a single addition into 1 mL of *0.1 M silver nitrate* and allow to stand for 5 min protected from light. When viewed horizontally against a black background, any opalescence produced is not more intense than that obtained by treating in the same manner 15.0 mL of a mixture of 1.5 mL of *0.002 M hydrochloric acid*, 40 mL of *acetone R*, 6 mL of 10 per cent *V/V* solution of *nitric acid R*, diluted to 50.0 mL with *water R*.

**Sulfates**: maximum 130 ppm.

Dissolve 1.5 g in 40 mL of *dimethylformamide R*, add 1 mL of a 10 per cent *V/V* solution of *hydrochloric acid R*, dilute to 50.0 mL with *dimethylformamide R* and mix. To 15.0 mL of this solution add 2.0 mL of a 120 g/L solution of *barium chloride R* and allow to stand for 5 min. Any opalescence produced is not more intense than that of a standard prepared in the same manner but using 2.0 mL of *0.001 M sulfuric acid* instead of the substance to be examined.

**Loss on drying** (*2.2.32*) : maximum 0.5 per cent, determined on 1.000 g by drying in an oven at 105 °C for 3 h.

**Sulfated ash** (*2.4.14*): maximum 0.1 per cent, determined on 1.0 g.

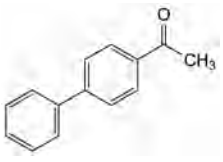
ASSAY

Dissolve 0.160 g in 50 mL of *methanol R*. Titrate with *0.1 M alcoholic potassium hydroxide* determining the end-point potentiometrically (*2.2.20*).

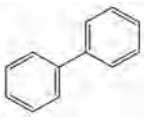
1 mL of *0.1 M alcoholic potassium hydroxide* is equivalent to 21.23 mg of $C_{14}H_{12}O_2$.

IMPURITIES

*Specified impurities: A, B.*



A. 4-acetyl biphenyl,

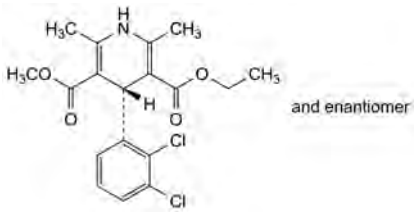


B. biphenyl.

**01/2008:1013**
**corrected 6.0**

# FELODIPINE

## Felodipinum



$C_{18}H_{19}Cl_2NO_4$ $M_r$ 384.3
[72509-76-3]

DEFINITION

Ethyl methyl (4*RS*)-4-(2,3-dichlorophenyl)-2,6-dimethyl-1,4-dihydropyridine-3,5-dicarboxylate.

*Content*: 99.0 per cent to 101.0 per cent (dried substance).

CHARACTERS

*Appearance*: white or light yellow, crystalline powder.

*Solubility*: practically insoluble in water, freely soluble in acetone, in anhydrous ethanol, in methanol and in methylene chloride.

IDENTIFICATION

*First identification: B.*

*Second identification: A, C, D.*

A. Ultraviolet and visible absorption spectrophotometry (*2.2.25*).

*Test solution.* Dissolve 50 mg in *methanol R* and dilute to 100 mL with the same solvent. Dilute 3 mL of this solution to 100 mL with *methanol R*.

*Spectral range*: 220-400 nm.

*Absorption maxima*: at 238 nm and 361 nm.

*Absorbance ratio*: $A_{361}$ / $A_{238}$ = 0.34 to 0.36.

B. Infrared absorption spectrophotometry (*2.2.24*).

*Preparation*: discs.

*Comparison*: *felodipine CRS*.

C. Thin-layer chromatography (*2.2.27*).

*Test solution.* Dissolve 10 mg of the substance to be examined in *methanol R* and dilute to 10 mL with the same solvent.

*Reference solution (a).* Dissolve 10 mg of *felodipine CRS* in *methanol R* and dilute to 10 mL with the same solvent.

*Reference solution (b).* Dissolve 5 mg of *nifedipine CRS* in reference solution (a) and dilute to 5 mL with reference solution (a).

*Plate*: *TLC silica gel $F_{254}$ plate R.*

*Mobile phase*: *ethyl acetate R*, *cyclohexane R* (40:60 *V/V*).

*Application*: 5 µL.

*Development*: over a path of 15 cm.

*Drying*: in air.

*Detection*: examine in ultraviolet light at 254 nm.

*System suitability*: reference solution (b):

– the chromatogram shows 2 clearly separated spots.

*Results*: the principal spot in the chromatogram obtained with the test solution is similar in position, fluorescence and size to the principal spot in the chromatogram obtained with reference solution (a).

D. Ultraviolet and visible absorption spectrophotometry (*2.2.25*).

*Test solution.* Dissolve 0.150 g in a mixture of 25 mL of *2-methyl-2-propanol R* and 25 mL of *perchloric acid solution R*. Add 10 mL of *0.1 M cerium sulfate*, allow to stand for 15 min, add 3.5 mL of *strong sodium hydroxide solution R* and neutralise with *dilute sodium hydroxide solution R*. Shake with 25 mL of *methylene chloride R*. Evaporate the lower layer to dryness on a water-bath under nitrogen (the residue is also used in the test for related substances). Dissolve about 20 mg of the residue in *methanol R* and dilute to 50 mL with the same solvent. Dilute 2 mL of this solution to 50 mL with *methanol R*.

*Spectral range*: 220-400 nm.

*Absorption maximum*: at 273 nm.

TESTS

**Solution S**. Dissolve 1.00 g in *methanol R* and dilute to 20.0 mL with the same solvent.

**Appearance of solution**. Solution S is clear (*2.2.1*).

**Absorbance** (*2.2.25*): maximum 0.10, determined at 440 nm on solution S.

**Related substances**. Liquid chromatography (*2.2.29*).

*Test solution.* Dissolve 25.0 mg of the substance to be examined in the mobile phase and dilute to 50.0 mL with the mobile phase.

*Reference solution (a).* Dilute 1.0 mL of the test solution to 100.0 mL with the mobile phase.

*Reference solution (b).* Dilute 1.0 mL of reference solution (a) to 10.0 mL with the mobile phase.

*Reference solution (c).* Dissolve 50.0 mg of the residue obtained in identification test D (impurity A) and 25.0 mg of *felodipine CRS* in the mobile phase, then dilute to 50.0 mL with the mobile phase. Dilute 1.0 mL of this solution to 100.0 mL with the mobile phase. Dilute 1.0 mL of the solution to 10.0 mL with the mobile phase.

*Column*:

– *size*: *l* = 0.125-0.15 m, Ø = 4 mm;

– *stationary phase*: *octadecylsilyl silica gel for chromatography R* (5 µm).

*Mobile phase*: mix 20 volumes of *methanol R*, 40 volumes of *acetonitrile R* and 40 volumes of a phosphate buffer solution pH 3.0 containing 0.8 g/L of *phosphoric acid R* and 8 g/L of *sodium dihydrogen phosphate R*.

*Flow rate*: 1 mL/min.

*Detection*: spectrophotometer at 254 nm.

*Injection*: 20 µL.

*Run time*: twice the retention time of felodipine.

*Elution order*: impurity B, impurity A, felodipine, impurity C.

*Retention time*: felodipine = about 12 min.

*System suitability*: reference solution (c):

– *resolution*: minimum 2.5 between the peaks due to impurity A and felodipine.

*Limits*:

– *sum of impurities B and C*: not more than the area of the principal peak in the chromatogram obtained with reference solution (a) (1.0 per cent);

– *unspecified impurities*: for each impurity, not more than the area of the principal peak in the chromatogram obtained with reference solution (b) (0.10 per cent);

– *sum of impurities other than B and C*: not more than 3 times the area of the principal peak in the chromatogram obtained with reference solution (b) (0.3 per cent);

– *disregard limit*: 0.2 times the area of the principal peak in the chromatogram obtained with reference solution (b) (0.02 per cent).

**Loss on drying** (*2.2.32*): maximum 0.5 per cent, determined on 1.000 g by drying in an oven at 105 °C for 3 h.

**Sulfated ash** (*2.4.14*): maximum 0.1 per cent, determined on 1.0 g.

ASSAY

Dissolve 0.160 g in a mixture of 25 mL of *2-methyl-2-propanol R* and 25 mL of *perchloric acid solution R*. Add 0.05 mL of *ferroin R*. Titrate with *0.1 M cerium sulfate* until the pink colour disappears. Titrate slowly towards the end of the titration.

1 mL of *0.1 M cerium sulfate* is equivalent to 19.21 mg of $C_{18}H_{19}Cl_2NO_4$.

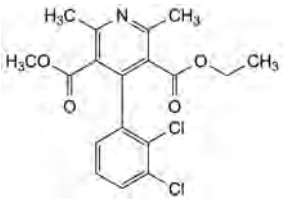
STORAGE

Protected from light.

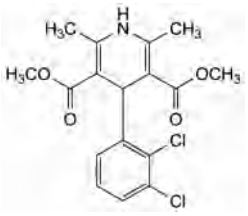
IMPURITIES

*Specified impurities: B, C.*

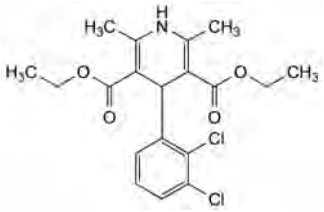
*Other detectable impurities* (the following substances would, if present at a sufficient level, be detected by one or other of the tests in the monograph. They are limited by the general acceptance criterion for other/unspecified impurities and/or by the general monograph *Substances for pharmaceutical use (2034)*. It is therefore not necessary to identify these impurities for demonstration of compliance. See also *5.10. Control of impurities in substances for pharmaceutical use*): *A.*



A. ethyl methyl 4-(2,3-dichlorophenyl)-2,6-dimethylpyridine-3,5-dicarboxylate,



B. dimethyl 4-(2,3-dichlorophenyl)-2,6-dimethyl-1,4-dihydropyridine-3,5-dicarboxylate,



C. diethyl 4-(2,3-dichlorophenyl)-2,6-dimethyl-1,4-dihydropyridine-3,5-dicarboxylate.

**01/2008:1634**
**corrected 10.0**

# FELYPRESSIN

## Felypressinum

$C_{46}H_{65}N_{13}O_{11}S_2$ $M_r$ 1039
[56-59-7]

DEFINITION

L-Cysteinyl-L-phenylalanyl-L-phenylalanyl-L-glutaminyl-L-asparaginyl-L-cysteinyl-L-prolyl-L-lysylglycinamide cyclic (1,6)-disulfide.

Synthetic nonapeptide having a vasoconstricting activity. It is available as an acetate.

*Content*: 95.0 per cent to 102.0 per cent (anhydrous and acetic acid-free substance).

CHARACTERS

*Appearance*: white or almost white, powder or flakes.

*Solubility*: freely soluble in water, practically insoluble in acetone and ethanol (96 per cent). It dissolves in dilute solutions of alkali hydroxides.

IDENTIFICATION

A. Examine the chromatograms obtained in the assay.

*Results*: the principal peak in the chromatogram obtained with test solution (b) is similar in retention time and size to the principal peak in the chromatogram obtained with the reference solution.

B. Amino acid analysis (*2.2.56*). For hydrolysis use Method 1 and for analysis use Method 1.

Express the content of each amino acid in moles. Calculate the relative proportions of amino acids, taking one-seventh of the sum of the number of moles of glutamic acid, aspartic acid, proline, lysine, glycine and phenylalanine as equal to one. The values fall within the following limits: aspartic acid: 0.9 to 1.1; glutamic acid: 0.9 to 1.1; proline: 0.9 to 1.1; glycine: 0.9 to 1.1; phenylalanine: 1.8 to 2.2; half-cystine: 1.8 to 2.2; lysine: 0.9 to 1.1.

TESTS

**Specific optical rotation** (*2.2.7*): − 35 to − 29, determined at 25 °C (anhydrous and acetic acid-free substance).

Dissolve 20.0 mg in a 1 per cent *V/V* solution of *glacial acetic acid R* and dilute to 10.0 mL with the same solution.

**Related substances**. Liquid chromatography (*2.2.29*); use the normalisation procedure. *The solutions are stable for 24 h at room temperature or for 1 week at 2-8 °C.*

*Test solution (a).* Dissolve 5.0 mg of the substance to be examined in 5.0 mL of mobile phase A.

*Test solution (b).* Dilute 1.0 mL of test solution (a) to 5.0 mL with mobile phase A.

*Reference solution.* Dissolve the contents of a vial of *felypressin CRS* in mobile phase A to obtain a concentration of 0.2 mg/mL.

*Column*:

- *size*: *l* = 0.15 m, Ø = 3.9 mm,
- *stationary phase*: *octadecylsilyl silica gel for chromatography R* (5 µm),
- *temperature*: 50 °C.

*Mobile phase*:

- *mobile phase A*: dissolve 3.62 g of *tetramethylammonium hydroxide R* in 900 mL *water R*; adjust to pH 2.5 with *phosphoric acid R* and dilute to 1000 mL with *water R*;
- *mobile phase B*: dissolve 1.81 g of *tetramethylammonium hydroxide R* in 450 mL of a 50 per cent *V/V* solution of *acetonitrile for chromatography R*; adjust to pH 2.5 with *phosphoric acid R* and dilute to 500 mL with a 50 per cent *V/V* solution of *acetonitrile for chromatography R*;

| Time (min) | Mobile phase A (per cent *V/V*) | Mobile phase B (per cent *V/V*) |
|---|---|---|
| 0 - 20 | 80 → 50 | 20 → 50 |
| 20 - 25 | 50 | 50 |

*Flow rate*: 1.0 mL/min.

*Detection*: spectrophotometer at 210 nm.

*Injection*: 10 µL of test solution (a) and 50 µL of the reference solution.

*Identification of impurities*: use the chromatogram supplied with *felypressin CRS* to identify the peaks due to impurities A to F.

*Relative retention* with reference to felypressin: impurity A = about 0.9; impurity B = about 1.1; impurity F = about 1.2; impurity C = about 1.3; impurity D = about 1.4; impurity E = about 2.1.

*System suitability*: reference solution:

- *retention time*: felypressin = about 7.5 min;
- *resolution*: minimum 1.5 between the peaks due to impurity C and impurity D.

*Limits*:

- *impurities A, B, C, D, E, F*: for each impurity, maximum 0.5 per cent,
- *any other impurity*: for each impurity, maximum 0.1 per cent,
- *total*: maximum 3.0 per cent,
- *disregard limit*: 0.05 per cent.

**Acetic acid** (*2.5.34*): 9.0 per cent to 13.0 per cent.

*Test solution.* Dissolve 10.0 mg of the substance to be examined in a mixture of 5 volumes of mobile phase B and 95 volumes of mobile phase A and dilute to 10.0 mL with the same mixture of mobile phases.

**Water** (*2.5.32*): maximum 7.0 per cent.

**Bacterial endotoxins** (*2.6.14*): less than 100 IU/mg, if intended for use in the manufacture of parenteral preparations without a further appropriate procedure for the removal of bacterial endotoxins.

ASSAY

Liquid chromatography (*2.2.29*) as described in the test for related substances with the following modification.

*Injection*: 10 µL of test solution (b) and of the reference solution.

Calculate the content of felypressin ($C_{46}H_{65}N_{13}O_{11}S_2$) from the areas of the peaks and the declared content of $C_{46}H_{65}N_{13}O_{11}S_2$ in *felypressin CRS*.

STORAGE

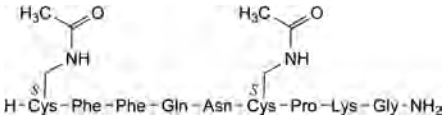
In an airtight container, protected from light, at a temperature of 2 °C to 8 °C. If the substance is sterile, store in a sterile, airtight, tamper-evident container.

LABELLING

The label states the mass of peptide in the container.

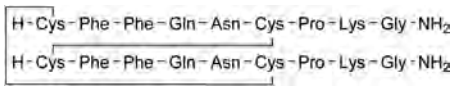
IMPURITIES

*Specified impurities: A, B, C, D, E, F.*

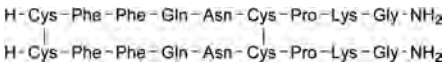


A. $S^1$,$S^6$-bis[(acetylamino)methyl]-(reduced felypressin),

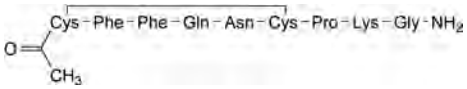
B. [5-aspartic acid]felypressin,



C. bis(reduced felypressin) (1,6′),(1′,6)-bis(disulfide),



D. bis(reduced felypressin) (1,1′),(6,6′)-bis(disulfide),



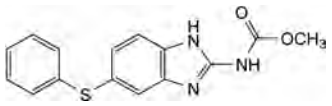
E. $N^1$-acetylfelypressin,

F. [4-glutamic acid]felypressin.

**01/2014:1208**

# FENBENDAZOLE FOR VETERINARY USE

## Fenbendazolum ad usum veterinarium



$C_{15}H_{13}N_3O_2S$ $M_r$ 299.4
[43210-67-9]

DEFINITION

Methyl [5-(phenylsulfanyl)-1*H*-benzimidazol-2-yl]carbamate.

*Content*: 98.0 per cent to 101.0 per cent (dried substance).

CHARACTERS

*Appearance*: white or almost white powder.

*Solubility*: practically insoluble in water, sparingly soluble in dimethylformamide, very slightly soluble in methanol.

IDENTIFICATION

Infrared absorption spectrophotometry (*2.2.24*).

*Comparison*: *fenbendazole CRS*.

TESTS

**Related substances**. Liquid chromatography (*2.2.29*). *Prepare the solutions immediately before use. Keep the temperature of the autosampler at 10 °C.*

*Test solution.* Dissolve 50.0 mg of the substance to be examined in 10.0 mL of *hydrochloric methanol R*.

*Reference solution (a).* Dissolve 50.0 mg of *fenbendazole CRS* in 10.0 mL of *hydrochloric methanol R*. Dilute 1.0 mL of the solution to 200.0 mL with *methanol R*. Dilute 5.0 mL of this solution to 10.0 mL with *hydrochloric methanol R*.

*Reference solution (b).* Dissolve 10.0 mg of *fenbendazole impurity A CRS* in 100.0 mL of *methanol R*. Dilute 1.0 mL of the solution to 10.0 mL with *hydrochloric methanol R*.

*Reference solution (c).* Dissolve 10.0 mg of *fenbendazole impurity B CRS* in 100.0 mL of *methanol R*. Dilute 1.0 mL of the solution to 10.0 mL with *hydrochloric methanol R*.

*Reference solution (d).* Dissolve 10.0 mg of *fenbendazole CRS* and 10.0 mg of *mebendazole CRS* in 100.0 mL of *methanol R*. Dilute 1.0 mL of the solution to 10.0 mL with *hydrochloric methanol R*.

*Column*:

– *size*: *l* = 0.25 m, Ø = 4.6 mm;
– *stationary phase*: *base-deactivated end-capped octadecylsilyl silica gel for chromatography R* (5 µm).

*Mobile phase*:

– *mobile phase A*: *anhydrous acetic acid R*, *methanol R*, *water R* (1:30:70 *V/V/V*);
– *mobile phase B*: *anhydrous acetic acid R*, *water R*, *methanol R* (1:30:70 *V/V/V*);

| Time (min) | Mobile phase A (per cent *V/V*) | Mobile phase B (per cent *V/V*) |
|---|---|---|
| 0 - 10 | 100 → 0 | 0 → 100 |
| 10 - 40 | 0 | 100 |

*Flow rate*: 1.0 mL/min.

*Detection*: spectrophotometer at 280 nm.

*Injection*: 10 µL.

*Identification of impurities*: use the chromatogram obtained with reference solution (b) to identify the peak due to impurity A; use the chromatogram obtained with reference solution (c) to identify the peak due to impurity B; use the chromatogram obtained with reference solution (d) to identify the peak due to mebendazole.

*Relative retention* with reference to fenbendazole (retention time = about 18 min): impurity A = about 0.2; impurity B = about 0.6; mebendazole = about 0.8.

*System suitability*: reference solution (d):

– *resolution*: minimum 1.5 between the peaks due to mebendazole and fenbendazole.

*Limits*:

– *impurity A*: not more than 2.5 times the area of the corresponding peak in the chromatogram obtained with reference solution (b) (0.5 per cent);
– *impurity B*: not more than 2.5 times the area of the corresponding peak in the chromatogram obtained with reference solution (c) (0.5 per cent);
– *unspecified impurities*: for each impurity, not more than twice the area of the principal peak in the chromatogram obtained with reference solution (a) (0.5 per cent);
– *total*: maximum 1.0 per cent;
– *disregard limit*: 0.4 times the area of the principal peak in the chromatogram obtained with reference solution (a) (0.10 per cent).

**Heavy metals** (*2.4.8*): maximum 20 ppm.

1.0 g complies with test C. Prepare the reference solution using 2 mL of *lead standard solution (10 ppm Pb) R*.

**Loss on drying** (*2.2.32*): maximum 1.0 per cent, determined on 1.000 g by drying in an oven at 105 °C for 3 h.

**Sulfated ash** (*2.4.14*): maximum 0.3 per cent, determined on 1.0 g.

ASSAY

Dissolve 0.200 g in 30 mL of *anhydrous acetic acid R*, warming gently if necessary. Cool and titrate with *0.1 M perchloric acid*, determining the end-point potentiometrically (*2.2.20*).

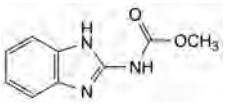
1 mL of *0.1 M perchloric acid* is equivalent to 29.94 mg of $C_{15}H_{13}N_3O_2S$.

STORAGE

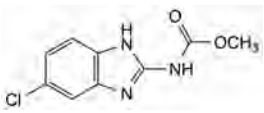
Protected from light.

IMPURITIES

*Specified impurities: A, B.*



A. methyl (1*H*-benzimidazol-2-yl)carbamate,

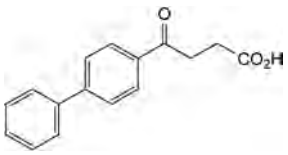


B. methyl (5-chloro-1*H*-benzimidazol-2-yl)carbamate.

**01/2017:1209**

# FENBUFEN

## Fenbufenum



$C_{16}H_{14}O_3$ $M_r$ 254.3

[36330-85-5]

DEFINITION

4-(Biphenyl-4-yl)-4-oxobutanoic acid.

*Content*: 98.5 per cent to 101.0 per cent (dried substance).

CHARACTERS

*Appearance*: white or almost white, fine, crystalline powder.

*Solubility*: very slightly soluble in water, slightly soluble in acetone, in ethanol (96 per cent) and in methylene chloride.

IDENTIFICATION

*First identification: B.*

*Second identification: A, C.*

A. Melting point (*2.2.14*): 186 °C to 189 °C.

B. Infrared absorption spectrophotometry (*2.2.24*).

*Comparison*: *fenbufen CRS*.

C. Thin-layer chromatography (*2.2.27*).

*Test solution.* Dissolve 10 mg of the substance to be examined in *methylene chloride R* and dilute to 10 mL with the same solvent.

*Reference solution (a).* Dissolve 10 mg of *fenbufen CRS* in *methylene chloride R* and dilute to 10 mL with the same solvent.

*Reference solution (b).* Dissolve 10 mg of *ketoprofen CRS* in *methylene chloride R* and dilute to 10 mL with the same solvent. To 5 mL of this solution, add 5 mL of reference solution (a).

*Plate*: *TLC silica gel $F_{254}$ plate R.*

*Mobile phase*: *anhydrous acetic acid R*, *ethyl acetate R*, *hexane R* (5:25:75 *V/V/V*).

*Application*: 10 µL.

*Development*: over a path of 15 cm.

*Drying*: in air.

*Detection*: examine in ultraviolet light at 254 nm.

*System suitability*: reference solution (b):

– the chromatogram shows 2 clearly separated spots.

*Results*: the principal spot in the chromatogram obtained with the test solution is similar in position and size to the principal spot in the chromatogram obtained with reference solution (a).

TESTS

**Related substances**. Liquid chromatography (*2.2.29*).

*Solvent mixture*: *dimethylformamide R*, mobile phase A (40:60 *V/V*).

*Test solution.* Dissolve 50.0 mg of the substance to be examined in the solvent mixture and dilute to 10.0 mL with the solvent mixture.

*Reference solution (a).* Dilute 0.5 mL of the test solution to 50.0 mL with the solvent mixture. Dilute 1.0 mL of this solution to 10.0 mL with the solvent mixture.

*Reference solution (b).* Dissolve 25 mg of *fenbufen CRS* and 6 mg of *ketoprofen CRS* in the solvent mixture and dilute to 10 mL with the solvent mixture. Dilute 1 mL of this solution to 100 mL with the solvent mixture.

*Column*:

– *size*: *l* = 0.125 m, Ø = 4.0 mm;

– *stationary phase*: *octadecylsilyl silica gel for chromatography R* (5 µm).

*Mobile phase*:

– *mobile phase A*: mix 32 volumes of *acetonitrile R* and 68 volumes of a mixture of 1 volume of *glacial acetic acid R* and 55 volumes of *water R*;

– *mobile phase B*: mix 45 volumes of *acetonitrile R* and 55 volumes of a mixture of 1 volume of *glacial acetic acid R* and 55 volumes of *water R*;

| Time (min) | Mobile phase A (per cent *V/V*) | Mobile phase B (per cent *V/V*) |
|---|---|---|
| 0 – 15 | 100 | 0 |
| 15 – 20 | 100 → 0 | 0 → 100 |
| 20 – 35 | 0 | 100 |

*Flow rate*: 2 mL/min.

*Detection*: spectrophotometer at 254 nm.

*Injection*: 20 µL.

*System suitability*: reference solution (b):

– *resolution*: minimum 5.0 between the peaks due to ketoprofen and fenbufen.

*Limits*:

– *any impurity*: for each impurity, not more than the area of the principal peak in the chromatogram obtained with reference solution (a) (0.1 per cent);

– *total*: not more than 5 times the area of the principal peak in the chromatogram obtained with reference solution (a) (0.5 per cent);

– *disregard limit*: 0.2 times the area of the principal peak in the chromatogram obtained with reference solution (a) (0.02 per cent).

**Loss on drying** (*2.2.32*): maximum 0.5 per cent, determined on 1.000 g by drying in an oven at 105 °C for 3 h.

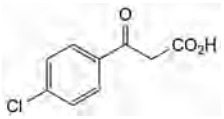
**Sulfated ash** (*2.4.14*): maximum 0.1 per cent, determined on 1.0 g.

ASSAY

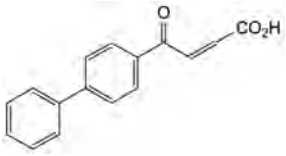
Dissolve 0.200 g in 75 mL of *acetone R* previously neutralised with *phenolphthalein solution R1* and add 50 mL of *water R*. Add 0.2 mL of *phenolphthalein solution R1* and titrate with *0.1 M sodium hydroxide.* Carry out a blank titration.

1 mL of *0.1 M sodium hydroxide* is equivalent to 25.43 mg of $C_{16}H_{14}O_3$.

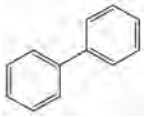
IMPURITIES



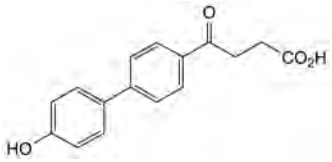
A. 3-(4-chlorophenyl)-3-oxopropanoic acid,



B. 4-(biphenyl-4-yl)-4-oxobut-2-enoic acid,



C. biphenyl,

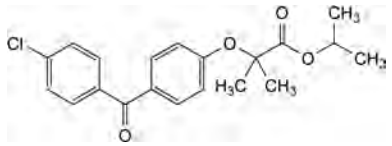


D. 4-(4′-hydroxybiphenyl-4-yl)-4-oxobutanoic acid.

**01/2017:1322**

# FENOFIBRATE

## Fenofibratum



$C_{20}H_{21}ClO_4$ $M_r$ 360.8
[49562-28-9]

DEFINITION

1-Methylethyl 2-[4-(4-chlorobenzoyl)phenoxy]-2-methylpropanoate.

*Content*: 98.0 per cent to 102.0 per cent (dried substance).

CHARACTERS

*Appearance*: white or almost white, crystalline powder.

*Solubility*: practically insoluble in water, very soluble in methylene chloride, slightly soluble in ethanol (96 per cent).

IDENTIFICATION

A. Melting point (*2.2.14*): 79 °C to 82 °C.

B. Infrared absorption spectrophotometry (*2.2.24*).
*Comparison*: *fenofibrate CRS*.

TESTS

**Solution S**. To 5.0 g, add 25 mL of *distilled water R* and heat at 50 °C for 10 min. Cool and dilute to 50.0 mL with *distilled water R*. Filter. Use the filtrate as solution S.

**Appearance of solution**. The solution is clear (*2.2.1*) and not more intensely coloured than reference solution $BY_6$ (*2.2.2, Method II*).

Dissolve 0.50 g in *acetone R* and dilute to 10.0 mL with the same solvent.

**Acidity**. Dissolve 1.0 g in 50 mL of *ethanol (96 per cent) R* previously neutralised using 0.2 mL of *phenolphthalein solution R1*. Not more than 0.2 mL of *0.1 M sodium hydroxide* is required to change the colour of the indicator to pink.

**Related substances**. Liquid chromatography (*2.2.29*).

*Test solution*. Dissolve 0.100 g of the substance to be examined in the mobile phase and dilute to 100.0 mL with the mobile phase.

*Reference solution (a)*. Dissolve 25.0 mg of *fenofibrate CRS* in the mobile phase and dilute to 25.0 mL with the mobile phase.

*Reference solution (b)*. Dissolve 5.0 mg of *fenofibrate CRS*, 5.0 mg of *fenofibrate impurity A CRS*, 5.0 mg of *fenofibrate impurity B CRS* and 10.0 mg of *fenofibrate impurity G CRS* in the mobile phase and dilute to 100.0 mL with the mobile phase. Dilute 1.0 mL of the solution to 50.0 mL with the mobile phase.

*Column*:

- *size*: *l* = 0.25 m, Ø = 4.0 mm;
- *stationary phase*: *octadecylsilyl silica gel for chromatography R* (5 µm).

*Mobile phase*: mix 30 volumes of *water R* acidified to pH 2.5 with *phosphoric acid R* and 70 volumes of *acetonitrile R*.

*Flow rate*: 1 mL/min.

*Detection*: spectrophotometer at 286 nm.

*Injection*: 20 µL of the test solution and reference solution (b).

*Run time*: twice the retention time of fenofibrate.

*Identification of impurities*: use the chromatogram obtained with reference solution (b) to identify the peaks due to impurities A, B and G.

*Relative retention* with reference to fenofibrate (retention time = about 10 min): impurity A = about 0.34; impurity B = about 0.36; impurity G = about 1.35.

*System suitability*: reference solution (b):

- *resolution*: minimum 1.5 between the peaks due to impurities A and B.

*Limits*:

- *impurities A, B*: for each impurity, not more than 1.5 times the area of the corresponding peak in the chromatogram obtained with reference solution (b) (0.15 per cent);
- *impurity G*: not more than the area of the corresponding peak in the chromatogram obtained with reference solution (b) (0.2 per cent);
- *unspecified impurities*: for each impurity, not more than the area of the peak due to fenofibrate in the chromatogram obtained with reference solution (b) (0.10 per cent);
- *total*: not more than 5 times the area of the peak due to fenofibrate in the chromatogram obtained with reference solution (b) (0.5 per cent);
- *disregard limit*: 0.5 times the area of the peak due to fenofibrate in the chromatogram obtained with reference solution (b) (0.05 per cent).

**Halides expressed as chlorides** (*2.4.4*): maximum 100 ppm.

To 5 mL of solution S add 10 mL of *distilled water R*.

**Sulfates** (*2.4.13*): maximum 100 ppm, determined on solution S.

**Loss on drying** (*2.2.32*): maximum 0.5 per cent, determined on 1.000 g by drying *in vacuo* at 60 °C.

**Sulfated ash** (*2.4.14*): maximum 0.1 per cent, determined on 1.0 g.

ASSAY

Liquid chromatography (*2.2.29*) as described in the test for related substances with the following modifications.

*Injection*: 5 µL of the test solution and reference solution (a).

*System suitability*: reference solution (a):

– *repeatability*: maximum relative standard deviation of 1.0 per cent determined on 6 injections.

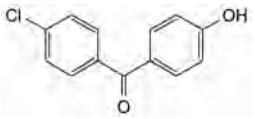
STORAGE

Protected from light.

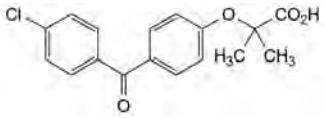
IMPURITIES

*Specified impurities: A, B, G.*

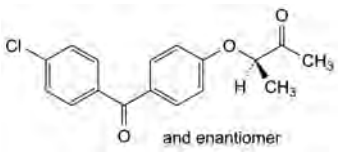
*Other detectable impurities* (the following substances would, if present at a sufficient level, be detected by one or other of the tests in the monograph. They are limited by the general acceptance criterion for other/unspecified impurities and/or by the general monograph *Substances for pharmaceutical use (2034)*. It is therefore not necessary to identify these impurities for demonstration of compliance. See also *5.10. Control of impurities in substances for pharmaceutical use*): *C, D, E, F.*



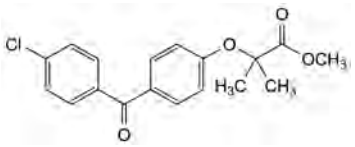
A. (4-chlorophenyl)(4-hydroxyphenyl)methanone,



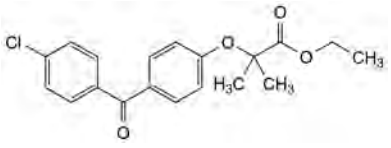
B. 2-[4-(4-chlorobenzoyl)phenoxy]-2-methylpropanoic acid (fenofibric acid),



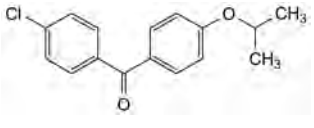
C. (3*RS*)-3-[4-(4-chlorobenzoyl)phenoxy]butan-2-one,



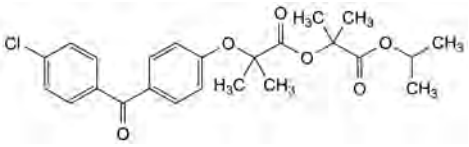
D. methyl 2-[4-(4-chlorobenzoyl)phenoxy]-2-methylpropanoate,



E. ethyl 2-[4-(4-chlorobenzoyl)phenoxy]-2-methylpropanoate,



F. (4-chlorophenyl)[4-(1-methylethoxy)phenyl]methanone,

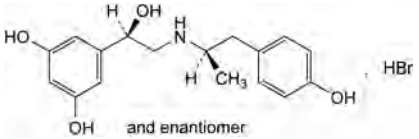


G. 1-methylethyl 2-[[2-[4-(4-chlorobenzoyl)phenoxy]-2-methylpropanoyl]oxy]-2-methylpropanoate.

**01/2020:0901**

# FENOTEROL HYDROBROMIDE

## Fenoteroli hydrobromidum



$C_{17}H_{22}BrNO_4$ $M_r$ 384.3

[1944-12-3]

DEFINITION

5-[(1*RS*)-2-[(1*RS*)-2-(4-Hydroxyphenyl)-1-methylethyl]-amino-1-hydroxyethyl]benzene-1,3-diol hydrobromide.

*Content*: 99.0 per cent to 101.0 per cent (dried substance).

CHARACTERS

*Appearance*: white or almost white, crystalline powder.

*Solubility*: soluble in water and in ethanol (96 per cent).

IDENTIFICATION

A. Infrared absorption spectrophotometry (*2.2.24*).
*Comparison*: *fenoterol hydrobromide CRS.*

B. It gives reaction (a) of bromides (*2.3.1*).

TESTS

**Solution S**. Dissolve 2.00 g in *carbon dioxide-free water R* and dilute to 50.0 mL with the same solvent.

**Appearance of solution**. Solution S is clear (*2.2.1*) and not more intensely coloured than reference solution $Y_7$ (*2.2.2, Method II*).

**pH** (*2.2.3*): 4.2 to 5.2 for solution S.

**Related substances**. Liquid chromatography (*2.2.29*). *Prepare the solutions immediately before use.*

*Test solution.* Dissolve 6.0 mg of the substance to be examined in *water R* and dilute to 5.0 mL with the same solvent.

*Reference solution (a).* Dilute 1.0 mL of the test solution to 25.0 mL with *water R.*

*Reference solution (b).* Dilute 2.5 mL of reference solution (a) to 100.0 mL with *water R.*

*Reference solution (c).* Dissolve the contents of a vial of *fenoterol for system suitability CRS* (containing impurities A, B and C) in 1 mL of *water R.*

*Column*:

– *size*: *l* = 0.15 m, Ø = 4.6 mm;
– *stationary phase*: *end-capped octadecylsilyl silica gel for chromatography R* (5 µm).

*Mobile phase.* Dissolve 24 g of *anhydrous disodium hydrogen phosphate R* in 1000 mL of *water for chromatography R*. Mix 69 volumes of the solution and 1 volume of a 9 g/L solution of *potassium dihydrogen phosphate R*, adjust to pH 8.5 with *phosphoric acid R* and add 35 volumes of *methanol R2.*

*Flow rate*: 1.0 mL/min.

*Detection*: spectrophotometer at 215 nm.

*Injection*: 20 µL.

*Run time*: 3 times the retention time of fenoterol.

*Identification of impurities*: use the chromatogram supplied with *fenoterol for system suitability CRS* and the chromatogram obtained with reference solution (c) to identify the peaks due to impurities A, B and C.

*Relative retention* with reference to fenoterol (retention time = about 7 min): impurity A = about 1.3; impurity B = about 2.0; impurity C = about 2.2.

*System suitability*: reference solution (c):

- *resolution*: minimum 3.0 between the peaks due to fenoterol and impurity A; minimum 1.5 between the peaks due to impurities B and C.

*Limits*:

- *correction factor*: for the calculation of content, multiply the peak area of impurity B by 0.6;
- *impurity A*: not more than the area of the principal peak in the chromatogram obtained with reference solution (a) (4.0 per cent);
- *impurity C*: not more than 3 times the area of the principal peak in the chromatogram obtained with reference solution (b) (0.3 per cent);
- *impurity B*: not more than twice the area of the principal peak in the chromatogram obtained with reference solution (b) (0.2 per cent);
- *unspecified impurities*: for each impurity, not more than the area of the principal peak in the chromatogram obtained with reference solution (b) (0.10 per cent);
- *sum of impurities other than A*: not more than 3 times the area of the principal peak in the chromatogram obtained with reference solution (b) (0.3 per cent);
- *disregard limit*: 0.5 times the area of the principal peak in the chromatogram obtained with reference solution (b) (0.05 per cent).

**Iron** (*2.4.9*): maximum 10 ppm.

Dissolve the residue obtained in the test for sulfated ash in 2.5 mL of *dilute hydrochloric acid R* and dilute to 10 mL with *water R*.

**Loss on drying** (*2.2.32*): maximum 0.5 per cent, determined on 1.000 g by drying in an oven at 105 °C.

**Sulfated ash** (*2.4.14*): maximum 0.1 per cent, determined on 1.0 g.

ASSAY

Dissolve 0.600 g in 50 mL of *water R* and add 5 mL of *dilute nitric acid R*, 25.0 mL of *0.1 M silver nitrate* and 2 mL of *ferric ammonium sulfate solution R2*. Shake and titrate with *0.1 M ammonium thiocyanate* until an orange colour is obtained. Carry out a blank titration.

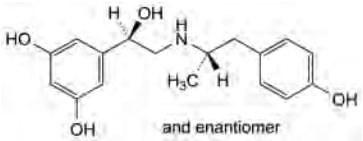
1 mL of *0.1 M silver nitrate* is equivalent to 38.43 mg of $C_{17}H_{22}BrNO_4$.

STORAGE

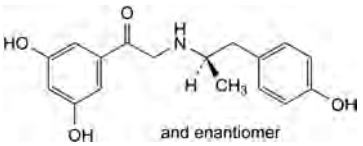
Protected from light.

IMPURITIES

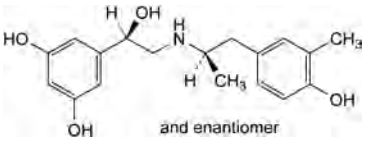
*Specified impurities: A, B, C.*



A. 5-[(1*RS*)-2-[(1*SR*)-2-(4-hydroxyphenyl)-1-methylethyl]amino-1-hydroxyethyl]benzene-1,3-diol,



B. 1-(3,5-dihydroxyphenyl)-2-[[(1*RS*)-2-(4-hydroxyphenyl)-1-methylethyl]amino]ethan-1-one,

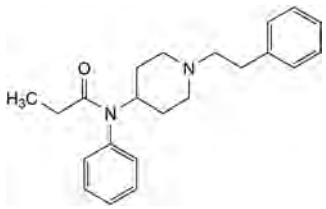


C. 5-[(1*RS*)-2-[(1*RS*)-2-(4-hydroxy-3-methylphenyl)-1-methylethyl]amino-1-hydroxyethyl]benzene-1,3-diol.

**04/2018:1210**

# FENTANYL

## Fentanylum



$C_{22}H_{28}N_2O$ $M_r$ 336.5

[437-38-7]

DEFINITION

*N*-Phenyl-*N*-[1-(2-phenylethyl)piperidin-4-yl]propanamide.

*Content*: 99.0 per cent to 101.0 per cent (dried substance).

CHARACTERS

*Appearance*: white or almost white powder.

*Solubility*: practically insoluble in water, freely soluble in ethanol (96 per cent), in methanol and in methylene chloride.

It shows polymorphism (*5.9*).

IDENTIFICATION

Infrared absorption spectrophotometry (*2.2.24*).

*Comparison*: *fentanyl CRS*.

If the spectra obtained in the solid state show differences, dissolve the substance to be examined and the reference substance separately in the minimum volume of *anhydrous ethanol R*, evaporate to dryness at room temperature in a current of air and record new spectra using the residues.

TESTS

**Related substances**. Liquid chromatography (*2.2.29*).

*Solvent mixture*: *methanol R*, *water R* (50:50 *V/V*).

*Test solution.* Dissolve 25 mg of the substance to be examined in 2.5 mL of *methanol R* and dilute to 5.0 mL with *water R*.

*Reference solution (a).* Dilute 1.0 mL of the test solution to 10.0 mL with the solvent mixture. Dissolve the contents of a vial of *fentanyl impurity mixture CRS* (impurities C and D) in 1.0 mL of this solution, using sonication for 1 min if necessary.

*Reference solution (b).* Dilute 1.0 mL of the test solution to 100.0 mL with the solvent mixture. Dilute 1.0 mL of this solution to 10.0 mL with the solvent mixture.

*Column*:

- *size*: *l* = 0.15 m, Ø = 2.1 mm;

– *stationary phase*: *end-capped ethylene-bridged phenylsilyl silica gel for chromatography (hybrid material) R* (1.7 µm);
– *temperature*: 45 °C.

*Mobile phase*:
– *mobile phase A*: dissolve 0.8 g of *ammonium acetate R* in *water for chromatography R*, add 2 mL of *trifluoroacetic acid R* and dilute to 1000.0 mL with *water for chromatography R*;
– *mobile phase B*: add 2 mL of *trifluoroacetic acid R* to 950 mL of *acetonitrile R1* and shake to homogenise; dissolve 0.8 g of *ammonium acetate R* in this solution and shake until complete dissolution, then dilute to 1000.0 mL with *acetonitrile R1*;

| Time (min) | Mobile phase A (per cent *V/V*) | Mobile phase B (per cent *V/V*) |
|---|---|---|
| 0 - 1 | 98 | 2 |
| 1 - 5 | 98 → 90 | 2 → 10 |
| 5 - 17 | 90 → 70 | 10 → 30 |
| 17 - 30 | 70 → 5 | 30 → 95 |
| 30 - 31 | 5 | 95 |

*Flow rate*: 0.35 mL/min.

*Detection*: spectrophotometer at 210 nm.

*Injection*: 5 µL.

*Identification of impurities*: use the chromatogram supplied with *fentanyl impurity mixture CRS* and the chromatogram obtained with reference solution (a) to identify the peaks due to impurities C and D.

*Relative retention* with reference to fentanyl (retention time = about 19 min): impurity D = about 0.8; impurity C = about 0.9.

*System suitability*: reference solution (a):
– *resolution*: minimum 5.0 between the peaks due to impurity C and fentanyl.

*Calculation of percentage contents*:
– for each impurity, use the concentration of fentanyl in reference solution (b).

*Limits*:
– *impurities C, D*: for each impurity, maximum 0.15 per cent;
– *unspecified impurities*: for each impurity, maximum 0.10 per cent;
– *total*: maximum 0.4 per cent;
– *reporting threshold*: 0.05 per cent.

**Loss on drying** (*2.2.32*): maximum 0.5 per cent, determined on 1.000 g by drying *in vacuo* at 50 °C.

ASSAY

Dissolve 0.200 g in 50 mL of a mixture of 1 volume of *anhydrous acetic acid R* and 7 volumes of *methyl ethyl ketone R*. Titrate with *0.1 M perchloric acid*, determining the end-point potentiometrically (*2.2.20*).

1 mL of *0.1 M perchloric acid* is equivalent to 33.65 mg of $C_{22}H_{28}N_2O$.

STORAGE

Protected from light.

IMPURITIES

*Specified impurities: C, D.*

*Other detectable impurities* (the following substances would, if present at a sufficient level, be detected by one or other of the tests in the monograph. They are limited by the general acceptance criterion for other/unspecified impurities and/or by the general monograph *Substances for pharmaceutical use (2034)*. It is therefore not necessary to identify these impurities for demonstration of compliance. See also *5.10. # FENTANYL CITRATE

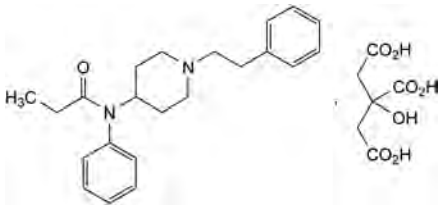
## Fentanyli citras



$C_{28}H_{36}N_2O_8$ $M_r$ 528.6
[990-73-8]

DEFINITION

*N*-Phenyl-*N*-[1-(2-phenylethyl)piperidin-4-yl]propanamide dihydrogen 2-hydroxypropane-1,2,3-tricarboxylate.

*Content*: 99.0 per cent to 101.0 per cent (dried substance).

CHARACTERS

*Appearance*: white or almost white powder.

*Solubility*: soluble in water, freely soluble in methanol, sparingly soluble in ethanol (96 per cent), very slightly soluble in methylene chloride.

mp: about 152 °C, with decomposition.

IDENTIFICATION

Infrared absorption spectrophotometry (*2.2.24*).

*Comparison*: *fentanyl citrate CRS*.

TESTS

**Appearance of solution**. The solution is clear (*2.2.1*) and colourless (*2.2.2, Method II*).

Dissolve 0.2 g of the substance to be examined in *water R* and dilute to 20 mL with the same solvent.

**Related substances**. Liquid chromatography (*2.2.29*).

*Solvent mixture*: *methanol R*, *water R* (50:50 *V/V*).

*Test solution*. Dissolve 39.3 mg of the substance to be examined in 2.5 mL of *methanol R* and dilute to 5.0 mL with *water R*.

*Reference solution (a)*. Dilute 1.0 mL of the test solution to 10.0 mL with the solvent mixture. Dissolve the contents of a vial of *fentanyl impurity mixture CRS* (impurities C and D) in 1.0 mL of this solution, using sonication for 1 min if necessary.

*Reference solution (b)*. Dilute 1.0 mL of the test solution to 100.0 mL with the solvent mixture. Dilute 1.0 mL of this solution to 10.0 mL with the solvent mixture.

*Column*:

- *size*: *l* = 0.15 m, Ø = 2.1 mm;
- *stationary phase*: *end-capped ethylene-bridged phenylsilyl silica gel for chromatography (hybrid material) R* (1.7 µm);
- *temperature*: 45 °C.

*Mobile phase*:

- *mobile phase A*: dissolve 0.8 g of *ammonium acetate R* in *water for chromatography R*, add 2 mL of *trifluoroacetic acid R* and dilute to 1000.0 mL with *water for chromatography R*;
- *mobile phase B*: add 2 mL of *trifluoroacetic acid R* to 950 mL of *acetonitrile R1* and shake to homogenise; dissolve 0.8 g of *ammonium acetate R* in this solution and shake until complete dissolution, then dilute to 1000.0 mL with *acetonitrile R1*;

| Time (min) | Mobile phase A (per cent *V/V*) | Mobile phase B (per cent *V/V*) |
|---|---|---|
| 0 - 1 | 98 | 2 |
| 1 - 5 | 98 → 90 | 2 → 10 |
| 5 - 17 | 90 → 70 | 10 → 30 |
| 17 - 30 | 70 → 5 | 30 → 95 |
| 30 - 31 | 5 | 95 |

*Flow rate*: 0.35 mL/min.

*Detection*: spectrophotometer at 210 nm.

*Injection*: 5 µL.

*Identification of impurities*: use the chromatogram supplied with *fentanyl impurity mixture CRS* and the chromatogram obtained with reference solution (a) to identify the peaks due to impurities C and D.

*Relative retention* with reference to fentanyl (retention time = about 19 min): impurity D = about 0.8; impurity C = about 0.9.

*System suitability*: reference solution (a):

- *resolution*: minimum 5.0 between the peaks due to impurity C and fentanyl.

*Calculation of percentage contents*:

- for each impurity, use the concentration of fentanyl citrate in reference solution (b).

*Limits*:

- *impurities C, D*: for each impurity, maximum 0.15 per cent;
- *unspecified impurities*: for each impurity, maximum 0.10 per cent;
- *total*: maximum 0.4 per cent;
- *reporting threshold*: 0.05 per cent.

**Loss on drying** (*2.2.32*): maximum 0.5 per cent, determined on 1.000 g by drying *in vacuo* at 60 °C.

Monographs F

ASSAY

Dissolve 0.300 g in 50 mL of a mixture of 1 volume of *anhydrous acetic acid R* and 7 volumes of *methyl ethyl ketone R*. Titrate with *0.1 M perchloric acid*, determining the end-point potentiometrically (*2.2.20*).

1 mL of *0.1 M perchloric acid* is equivalent to 52.86 mg of $C_{28}H_{36}N_2O_8$.

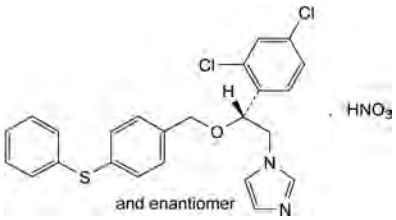
# FENTICONAZOLE NITRATE

## Fenticonazoli nitras



$C_{24}H_{21}Cl_2N_3O_4S$ $M_r$ 518.4
[73151-29-8]

DEFINITION

1-[(2*RS*)-2-(2,4-Dichlorophenyl)-2-[[4-(phenylsulfanyl)-benzyl]oxy]ethyl]-1*H*-imidazole nitrate.

*Content*: 99.0 per cent to 101.0 per cent (dried substance).

CHARACTERS

*Appearance*: white or almost white, crystalline powder.

*Solubility*: practically insoluble in water, freely soluble in dimethylformamide and in methanol, sparingly soluble in anhydrous ethanol.

IDENTIFICATION

*First identification: C, D.*

*Second identification: A, B, D.*

A. Melting point (*2.2.14*): 134 °C to 137 °C.

B. Ultraviolet and visible absorption spectrophotometry (*2.2.25*).

*Test solution.* Dissolve 20.0 mg in *anhydrous ethanol R* and dilute to 100.0 mL with the same solvent. Dilute 1.0 mL of this solution to 10.0 mL with *anhydrous ethanol R*.

*Spectral range*: 230-350 nm.

*Absorption maximum*: at 252 nm.

*Shoulder*: at about 270 nm.

*Absorption minimum*: at 236 nm.

*Specific absorbance at the absorption maximum*: 260 to 280.

C. Infrared absorption spectrophotometry (*2.2.24*).

*Comparison*: *fenticonazole nitrate CRS*.

D. It gives the reaction of nitrates (*2.3.1*).

TESTS

**Optical rotation** (*2.2.7*): – 0.10° to + 0.10°.

Dissolve 0.10 g in *methanol R* and dilute to 10.0 mL with the same solvent.

**Related substances**. Liquid chromatography (*2.2.29*).

*Test solution.* Dissolve 25.0 mg of the substance to be examined in the mobile phase and dilute to 25.0 mL with the mobile phase.

*Reference solution (a).* Dilute 1.0 mL of the test solution to 200.0 mL with the mobile phase.

*Reference solution (b).* Dilute 10.0 mL of reference solution (a) to 25.0 mL with the mobile phase.

*Reference solution (c).* Dilute 1.0 mL of reference solution (a) to 10.0 mL with the mobile phase.

*Reference solution (d).* Dilute 1.0 mL of the test solution to 100.0 mL with the mobile phase. Dissolve the contents of a vial of *fenticonazole impurity D CRS* in 1.0 mL of this solution.

*Column*:

– *size*: *l* = 0.25 m, Ø = 4 mm;

– *stationary phase*: *octadecylsilyl silica gel for chromatography R* (5-10 µm).

*Mobile phase*: mix 70 volumes of *acetonitrile R1* and 30 volumes of a phosphate buffer solution prepared by dissolving 3.4 g of *potassium dihydrogen phosphate R* in 900 mL of *water R*, adjusting to pH 3.0 with *phosphoric acid R* and diluting to 1000 mL with *water R*.

*Flow rate*: 1.0 mL/min.

*Detection*: spectrophotometer at 229 nm.

*Injection*: 10 µL.

*Run time*: 5.5 times the retention time of fenticonazole.

*System suitability*:

– *resolution*: minimum 2.0 between the peaks due to impurity D and fenticonazole in the chromatogram obtained with reference solution (d);

– *signal-to-noise ratio*: minimum 5 for the principal peak in the chromatogram obtained with reference solution (c).

*Limits*:

– *impurities A, B, C, D, E*: for each impurity, not more than the area of the principal peak in the chromatogram obtained with reference solution (b) (0.2 per cent);

– *total*: not more than the area of the principal peak in the chromatogram obtained with reference solution (a) (0.5 per cent);

– *disregard limit*: the area of the principal peak in the chromatogram obtained with reference solution (c) (0.05 per cent); disregard the peak due to the nitric ion (which corresponds to the dead volume of the column).

**Toluene**. Head-space gas chromatography (*2.2.28*): use the standard additions method.

*Test solution.* Disperse 0.2 g of the substance to be examined in a 10 mL vial with 5 mL of *water R*.

*Reference solution.* Mix 4 mg of *toluene R* with *water R* and dilute to 1000 mL with the same solvent. Place 5 mL of this solution in a 10 mL vial.

*Column*:

– *size*: *l* = 25 m, Ø = 0.32 mm;

– *stationary phase*: *cyanopropyl(7)phenyl(7)methyl(86)polysiloxane R* (film thickness 1.2 µm).

*Carrier gas*: *helium for chromatography R*.

*Split ratio*: 1:25.

*Column head pressure*: 40 kPa.

*Static head-space conditions which may be used*:

– *equilibration temperature*: 90 °C;

– *equilibration time*: 1 h.

*Temperature*:

– *column*: 80 °C;

– *injection port*: 180 °C;

– *detector*: 220 °C.

*Detection*: flame ionisation.

*Injection*: 1 mL of the gaseous phase.

*Limit*:

– *toluene*: maximum 100 ppm.

**Loss on drying** (*2.2.32*): maximum 0.5 per cent, determined on 1.000 g by drying *in vacuo* at 60 °C.

**Sulfated ash** (*2.4.14*): maximum 0.1 per cent, determined on 1.0 g.

ASSAY

Dissolve 0.450 g in 50 mL of a mixture of equal volumes of *anhydrous acetic acid R* and *methyl ethyl ketone R*. Titrate with *0.1 M perchloric acid*, determining the end-point potentiometrically (*2.2.20*).

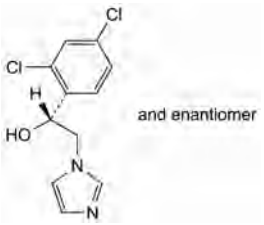
1 mL of *0.1 M perchloric acid* is equivalent to 51.84 mg of $C_{24}H_{21}Cl_2N_3O_4S$.

STORAGE

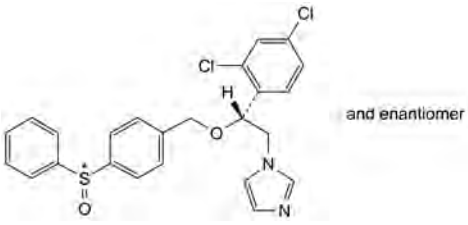
Protected from light.

IMPURITIES

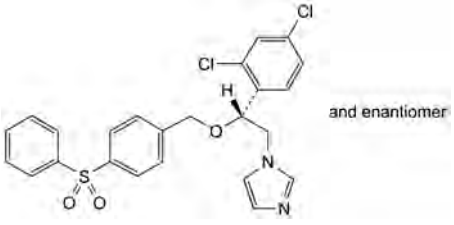
*Specified impurities*: *A, B, C, D, E.*



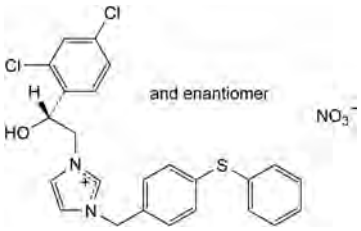
A. (*RS*)-1-(2,4-dichlorophenyl)-2-(1*H*-imidazol-1-yl)ethanol,



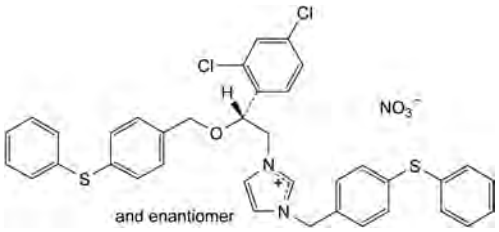
B. 1-[(2*RS*)-2-(2,4-dichlorophenyl)-2-[[4-(benzenesulfinyl)-benzyl]oxy]ethyl]-1*H*-imidazole,



C. 1-[(2*RS*)-2-(2,4-dichlorophenyl)-2-[[4-(benzenesulfonyl)-benzyl]oxy]ethyl]-1*H*-imidazole,



D. (*RS*)-1-[2-(2,4-dichlorophenyl)-2-hydroxyethyl]-3-[4-(phenylsulfanyl)benzyl]imidazolium nitrate,



E. (*RS*)-1-[2-(2,4-dichlorophenyl)-2-[4-(phenylsulfanyl)-benzyloxy]ethyl]-3-[4-(phenylsulfanyl)benzyl]imidazolium nitrate.

# FERRIC CHLORIDE HEXAHYDRATE

## Ferri chloridum hexahydricum

$FeCl_3,6H_2O$ $M_r$ 270.3
[10025-77-1]

DEFINITION

*Content*: 98.0 per cent to 102.0 per cent.

CHARACTERS

*Appearance*: crystalline mass or orange-yellow or brownish-yellow crystals, very hygroscopic.

*Solubility*: very soluble in water and in ethanol (96 per cent), freely soluble in glycerol.

IDENTIFICATION

A. It gives reaction (a) of chlorides (*2.3.1*).

B. It gives reaction (c) of iron (*2.3.1*).

TESTS

**Solution S**. Dissolve 10 g in *distilled water R* and dilute to 100 mL with the same solvent.

**Acidity**. In a suitable polyethylene container, dissolve 3.0 g of *potassium fluoride R* in 15 mL of *water R*. Titrate with *0.1 M sodium hydroxide* using 0.1 mL of *phenolphthalein solution R* as indicator until a pink colour is obtained. Add 10 mL of solution S and allow to stand for 3 h. Filter and use 12.5 mL of the filtrate. Not more than 0.30 mL of *0.1 M sodium hydroxide* is required to change the colour of the indicator to pink.

**Free chlorine**. Heat 5 mL of solution S. The vapour does not turn *starch iodide paper R* blue.

**Sulfates** (*2.4.13*): maximum 100 ppm.

Heat 15 mL of solution S on a water-bath and add 5 mL of *strong sodium hydroxide solution R*. Allow to cool and filter. Neutralise the filtrate to *blue litmus paper R* using *hydrochloric acid R1* and evaporate to 15 mL.

**Ferrous ions**: maximum 50 ppm.

To 10 mL of solution S, add 1 mL of *water R*, and 0.05 mL of *potassium ferricyanide solution R* followed by 4 mL of *phosphoric acid R*. After 10 min, any blue colour in the solution is not more intense than that in a standard prepared at the same time and in the same manner using 10 mL of *water R* and 1 mL of a freshly prepared 0.250 g/L solution of *ferrous sulfate R*.

ASSAY

In a conical flask with a ground-glass stopper, dissolve 0.200 g in 20 mL of *water R*. Add 10 mL of *dilute hydrochloric acid R* and 2 g of *potassium iodide R*. Allow the stoppered flask to stand for 1 h protected from light. Titrate with *0.1 M sodium thiosulfate*, adding 5 mL of *starch solution R* towards the end of the titration.

1 mL of *0.1 M sodium thiosulfate* is equivalent to 27.03 mg of $FeCl_3,6H_2O$.

STORAGE

In an airtight container, protected from light.

**01/2008:0902**
**corrected 7.0**

# FERROUS FUMARATE

## Ferrosi fumaras

$C_4H_2FeO_4$ $M_r$ 169.9
[141-01-5]

DEFINITION

Iron(II) (*E*)-butenedioate.

*Content*: 93.0 per cent to 101.0 per cent (dried substance).

CHARACTERS

*Appearance*: fine, reddish-orange or reddish-brown powder.

*Solubility*: slightly soluble in water, very slightly soluble in ethanol (96 per cent).

IDENTIFICATION

A. Thin-layer chromatography (*2.2.27*).

*Test solution.* To 1.0 g add 25 mL of a mixture of equal volumes of *hydrochloric acid R* and *water R* and heat on a water-bath for 15 min. Cool and filter. Use the filtrate for identification test C. Wash the residue with 50 mL of a mixture of 1 volume of *dilute hydrochloric acid R* and 9 volumes of *water R* and discard the washings. Dry the residue at 100-105 °C. Dissolve 20 mg of the residue in *acetone R* and dilute to 10 mL with the same solvent.

*Reference solution.* Dissolve 20 mg of *fumaric acid CRS* in *acetone R* and dilute to 10 mL with the same solvent.

*Plate*: *TLC silica gel $F_{254}$ plate R*.

*Mobile phase*: *anhydrous formic acid R*, *methylene chloride R*, *butanol R*, *heptane R* (12:16:32:44 *V/V/V/V*).

*Application*: 5 µL.

*Development*: in an unsaturated tank, over a path of 10 cm.

*Drying*: at 105 °C for 15 min.

*Detection*: examine in ultraviolet light at 254 nm.

*Results*: the principal spot in the chromatogram obtained with the test solution is similar in position and size to the principal spot in the chromatogram obtained with the reference solution.

B. Mix 0.5 g with 1 g of *resorcinol R*. To 0.5 g of the mixture in a crucible add 0.15 mL of *sulfuric acid R* and heat gently. A dark red semi-solid mass is formed. Add the mass, with care, to 100 mL of *water R*. An orange-yellow colour develops and the solution shows no fluorescence.

C. The filtrate obtained during preparation of the test solution in identification test A gives reaction (a) of iron (*2.3.1*).

TESTS

**Solution S**. Dissolve 2.0 g in a mixture of 10 mL of *lead-free hydrochloric acid R* and 80 mL of *water R*, heating slightly if necessary. Allow to cool, filter if necessary and dilute to 100 mL with *water R*.

**Sulfates** (*2.4.13*): maximum 0.2 per cent.

Heat 0.15 g with 8 mL of *dilute hydrochloric acid R* and 20 mL of *distilled water R*. Cool in iced water, filter and dilute to 30 mL with *distilled water R*.

**Arsenic** (*2.4.2, Method A*): maximum 5 ppm.

Mix 1.0 g with 15 mL of *water R* and 15 mL of *sulfuric acid R*. Warm to precipitate the fumaric acid completely. Cool and add 30 mL of *water R*. Filter. Wash the precipitate with *water R*. Dilute the combined filtrate and washings to 125 mL with *water R*. 25 mL of the solution complies with the test.

**Ferric ion**: maximum 2.0 per cent.

In a flask with a ground-glass stopper, dissolve 3.0 g in a mixture of 10 mL of *hydrochloric acid R* and 100 mL of *water R* by heating rapidly to boiling. Boil for 15 s. Cool rapidly, add 3 g of *potassium iodide R*, stopper the flask and allow to stand protected from light for 15 min. Add 2 mL of *starch solution R* as indicator. Titrate the liberated iodine with *0.1 M sodium thiosulfate*. Carry out a blank test. The difference between the volumes used in the 2 titrations corresponds to the amount of iodine liberated by ferric ion.

1 mL of *0.1 M sodium thiosulfate* is equivalent to 5.585 mg of ferric ion.

**Cadmium**: maximum 10 ppm.

Atomic absorption spectrometry (*2.2.23, Method I*).

*Test solution.* Solution S.

*Reference solutions.* Prepare the reference solutions using *cadmium standard solution (0.1 per cent Cd) R* and diluting with a 10 per cent *V/V* solution of *lead-free hydrochloric acid R*.

*Source*: cadmium hollow-cathode lamp.

*Wavelength*: 228.8 nm.

*Atomisation device*: air-acetylene flame.

**Chromium**: maximum 200 ppm.

Atomic absorption spectrometry (*2.2.23, Method I*).

*Test solution.* Solution S.

*Reference solutions.* Prepare the reference solutions using *chromium standard solution (0.1 per cent Cr) R* and diluting with a 10 per cent *V/V* solution of *lead-free hydrochloric acid R*.

*Source*: chromium hollow-cathode lamp.

*Wavelength*: 357.9 nm.

*Atomisation device*: air-acetylene flame.

**Lead**: maximum 20 ppm.

Atomic absorption spectrometry (*2.2.23, Method I*).

*Test solution.* Solution S.

*Reference solutions.* Prepare the reference solutions using *lead standard solution (10 ppm Pb) R* and diluting with a 10 per cent *V/V* solution of *lead-free hydrochloric acid R*.

*Source*: lead hollow-cathode lamp.

*Wavelength*: 283.3 nm.

*Atomisation device*: air-acetylene flame.

**Mercury**: maximum 1 ppm.

Atomic absorption spectrometry (*2.2.23, Method I*).

*Test solution.* Solution S.

*Reference solutions.* Prepare the reference solutions using *mercury standard solution (10 ppm Hg) R* and diluting with a 25 per cent *V/V* solution of *lead-free hydrochloric acid R*.

*Source*: mercury hollow-cathode lamp.

*Wavelength*: 253.7 nm.

Following the recommendations of the manufacturer, introduce 5 mL of solution S or 5 mL of the reference solutions into the reaction vessel of the cold-vapour mercury assay accessory, add 10 mL of *water R* and 1 mL of *stannous chloride solution R1*.

**Nickel**: maximum 200 ppm.

Atomic absorption spectrometry (*2.2.23, Method I*).

*Test solution.* Solution S.

*Reference solutions.* Prepare the reference solutions using *nickel standard solution (10 ppm Ni) R* and diluting with a 10 per cent *V/V* solution of *lead-free hydrochloric acid R*.

*Source*: nickel hollow-cathode lamp.

*Wavelength*: 232 nm.

*Atomisation device*: air-acetylene flame.

**Zinc**: maximum 500 ppm.

Atomic absorption spectrometry (*2.2.23, Method I*).

*Test solution.* Solution S diluted to 10 volumes.

*Reference solutions.* Prepare the reference solutions using *zinc standard solution (10 ppm Zn) R* and diluting with a 1 per cent *V/V* solution of *lead-free hydrochloric acid R*.

*Source*: zinc hollow-cathode lamp.

*Wavelength*: 213.9 nm.

*Atomisation device*: air-acetylene flame.

**Loss on drying** (*2.2.32*): maximum 1.0 per cent, determined on 1.000 g by drying in an oven at 105 °C.

ASSAY

Dissolve with slight heating 0.150 g in 7.5 mL of *dilute sulfuric acid R*. Cool and add 25 mL of *water R*. Add 0.1 mL of *ferroin R*. Titrate immediately with *0.1 M cerium sulfate* until the colour changes from orange to light bluish-green.

1 mL of *0.1 M cerium sulfate* is equivalent to 16.99 mg of $C_4H_2FeO_4$.

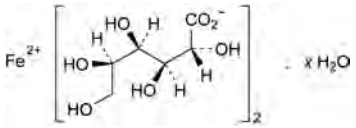
STORAGE

In an airtight container, protected from light.

**01/2017:0493**

# FERROUS GLUCONATE

## Ferrosi gluconas



$C_{12}H_{22}FeO_{14},xH_2O$ $M_r$ 446.1 (anhydrous substance)

DEFINITION

Iron(II) bis[(2*R*,3*S*,4*R*,5*R*)-2,3,4,5,6-pentahydroxyhexanoate] (iron(II) di(D-gluconate)).

*Content*: 11.8 per cent to 12.5 per cent of iron(II) (dried substance).

It contains a variable quantity of water.

CHARACTERS

*Appearance*: greenish-yellow or grey powder or granules.

*Solubility*: freely but slowly soluble in water giving a greenish-brown solution, more readily soluble in hot water, practically insoluble in ethanol (96 per cent).

IDENTIFICATION

A. Thin-layer chromatography (*2.2.27*).

*Test solution.* Dissolve 20 mg of the substance to be examined in 2 mL of *water R*, heating if necessary in a water-bath at 60 °C.

*Reference solution.* Dissolve 20 mg of *ferrous gluconate CRS* in 2 mL of *water R*, heating if necessary in a water-bath at 60 °C.

*Plate*: *TLC silica gel plate R* (5-40 µm) [or *TLC silica gel plate R* (2-10 µm)].

*Mobile phase*: *concentrated ammonia R*, *ethyl acetate R*, *water R*, *ethanol (96 per cent) R* (10:10:30:50 *V/V/V/V*).

*Application*: 1 µL.

*Development*: over 2/3 of the plate.

*Drying*: at 105 °C for 20 min; allow to cool.

*Detection*: spray with a solution containing 10 g/L of *cerium sulfate R* and 25 g/L of *ammonium molybdate R* in *dilute sulfuric acid R* and heat at 105 °C for about 10 min.

*Results*: after 5 min, the principal spot in the chromatogram obtained with the test solution is similar in position, colour and size to the principal spot in the chromatogram obtained with the reference solution.

B. 1 mL of solution S (see Tests) gives reaction (a) of iron (*2.3.1*).

TESTS

**Solution S**. Dissolve 5.0 g in *carbon dioxide-free water R* prepared from *distilled water R* and heated to about 60 °C, allow to cool and dilute to 50 mL with *carbon dioxide-free water R* prepared from *distilled water R*.

**Appearance of solution**. The solution is clear (*2.2.1*).

Dilute 2 mL of solution S to 10 mL with *water R*. Examine the solution against the light.

**pH** (*2.2.3*): 4.0 to 5.5 for solution S, measured 3-4 h after preparation.

**Sucrose and reducing sugars**. Dissolve 0.5 g in 10 mL of warm *water R* and add 1 mL of *dilute ammonia R1*. Pass *hydrogen sulfide R* through the solution and allow to stand for 30 min. Filter and wash the precipitate with 2 quantities, each of 5 mL, of *water R*. Acidify the combined filtrate and washings to *blue litmus paper R* with *dilute hydrochloric acid R* and add 2 mL in excess. Boil until the vapour no longer darkens *lead acetate paper R* and continue boiling, if necessary, until the volume is reduced to about 10 mL. Cool, add 15 mL of *sodium carbonate solution R*, allow to stand for 5 min and filter. Dilute the filtrate to 100 mL with *water R*. To 5 mL of this solution add 2 mL of *cupri-tartaric solution R* and boil for 1 min. Allow to stand for 1 min. No red precipitate is formed.

**Chlorides** (*2.4.4*): maximum 0.06 per cent.

Dilute 0.8 mL of solution S to 15 mL with *water R*.

**Oxalates**. Dissolve 5.0 g in a mixture of 10 mL of *dilute sulfuric acid R* and 40 mL of *water R*. Shake the solution with 50 mL of *ether R* for 5 min. Separate the aqueous layer and shake it with 20 mL of *ether R* for 5 min. Combine the ether layers, evaporate to dryness and dissolve the residue in 15 mL of *water R*. Filter, boil the filtrate until the volume is reduced to 5 mL and add 1 mL of *dilute acetic acid R* and 1.5 mL of *calcium chloride solution R*. Allow to stand for 30 min. No precipitate is formed.

**Sulfates** (*2.4.13*): maximum 500 ppm.

To 3.0 mL of solution S add 3 mL of *acetic acid R* and dilute to 15 mL with *distilled water R*. Examine the solutions against the light.

**Arsenic** (*2.4.2, Method A*): maximum 2 ppm, determined on 0.5 g.

**Barium**. Dilute 10 mL of solution S to 50 mL with *distilled water R* and add 5 mL of *dilute sulfuric acid R*. Allow to stand for 5 min. Any opalescence in the solution is not more intense than that in a mixture of 10 mL of solution S and 45 mL of *distilled water R*.

**Ferric ions**: maximum 1.0 per cent.

In a ground-glass-stoppered flask, dissolve 5.00 g in a mixture of 10 mL of *hydrochloric acid R* and 100 mL of *carbon dioxide-free water R*. Add 3 g of *potassium iodide R*, close the flask and allow to stand protected from light for 5 min. Titrate with *0.1 M sodium thiosulfate*, using 0.5 mL of *starch solution R*, added towards the end of the titration, as indicator. Carry out a blank titration. Not more than 9.0 mL of *0.1 M sodium thiosulfate* is used.

**Loss on drying** (*2.2.32*): 5.0 per cent to 10.5 per cent, determined on 0.500 g by drying in an oven at 105 °C for 5 h.

**Microbial contamination**

TAMC: acceptance criterion $10^3$ CFU/g (*2.6.12*).

TYMC: acceptance criterion $10^2$ CFU/g (*2.6.12*).

ASSAY

Dissolve 0.5 g of *sodium hydrogen carbonate R* in a mixture of 30 mL of *dilute sulfuric acid R* and 70 mL of *water R*. When the effervescence stops, dissolve 1.00 g of the substance to be examined with gentle shaking. Using 0.1 mL of *ferroin R* as indicator, titrate with *0.1 M ammonium and cerium nitrate* until the red colour disappears.

1 mL of *0.1 M ammonium and cerium nitrate* is equivalent to 5.585 mg of iron(II).

STORAGE

Protected from light.

**01/2008:2340**
**corrected 7.2**

# FERROUS SULFATE, DRIED

## Ferrosi sulfas desiccatus

$FeSO_4$ $M_r$ 151.9

DEFINITION

Hydrated ferrous sulfate from which part of the water of hydration has been removed by drying.

*Content*: 86.0 per cent to 90.0 per cent.

CHARACTERS

*Appearance*: greyish-white powder.

*Solubility*: slowly but freely soluble in water, very soluble in boiling water, practically insoluble in ethanol (96 per cent).

It is oxidised in moist air, becoming brown.

IDENTIFICATION

A. It gives the reactions of sulfates (*2.3.1*).

B. It gives reaction (a) of iron (*2.3.1*).

C. It complies with the limits of the assay.

TESTS

**Solution S**. Dissolve 2.00 g in a 5 per cent *V/V* solution of *lead-free nitric acid R* and dilute to 100.0 mL with the same acid.

**pH** (*2.2.3*): 3.0 to 4.0.

Dissolve 1.0 g in *carbon dioxide-free water R* and dilute to 20 mL with the same solvent.

**Chlorides** (*2.4.4*): maximum 300 ppm.

Dissolve 2.5 g in *water R*, add 0.5 mL of *dilute sulfuric acid R* and dilute to 50 mL with *water R*. Dilute 3.3 mL of this solution to 10 mL with *water R* and add 5 mL of *dilute nitric acid R*. Prepare the standard using a mixture of 10 mL of *chloride standard solution (5 ppm Cl) R* and 5 mL of *dilute nitric acid R*. Use 0.15 mL of *silver nitrate solution R2* in this test.

**Chromium**: maximum 100 ppm.

Atomic absorption spectrometry (*2.2.23, Method II*).

*Test solution.* Solution S.

*Reference solutions.* Prepare the reference solutions using *chromium standard solution (100 ppm Cr) R*, diluted as necessary with a 5 per cent *V/V* solution of *lead-free nitric acid R*.

*Source*: chromium hollow-cathode lamp using a transmission band preferably of 1 nm.

*Wavelength*: 357.9 nm.

*Atomisation device*: air-acetylene flame.

**Copper**: maximum 50 ppm.

Atomic absorption spectrometry (*2.2.23, Method II*).

*Test solution.* Solution S.

*Reference solutions.* Prepare the reference solutions using *copper standard solution (0.1 per cent Cu) R*, diluted as necessary with a 5 per cent *V/V* solution of *lead-free nitric acid R*.

*Source*: copper hollow-cathode lamp using a transmission band preferably of 1 nm.

*Wavelength*: 324.7 nm.

*Atomisation device*: air-acetylene flame.

**Ferric ions**: maximum 0.5 per cent.

In a ground-glass-stoppered flask, dissolve 5.00 g in a mixture of 10 mL of *hydrochloric acid R* and 100 mL of *carbon dioxide-free water R*. Add 3 g of *potassium iodide R*, close the flask and allow to stand in the dark for 5 min. Titrate the liberated iodine with *0.1 M sodium thiosulfate*, using 0.5 mL of *starch solution R*, added towards the end of titration, as indicator. Carry out a blank test in the same conditions. Not more than 4.5 mL of *0.1 M sodium thiosulfate* is used.

**Manganese**: maximum 0.1 per cent.

Atomic absorption spectrometry (*2.2.23, Method II*).

*Test solution.* Dilute 1.0 mL of solution S to 20.0 mL with a 5 per cent *V/V* solution of *lead-free nitric acid R*.

*Reference solutions.* Prepare the reference solutions using *manganese standard solution (1000 ppm Mn) R*, diluted as necessary with a 5 per cent *V/V* solution of *lead-free nitric acid R*.

*Source*: manganese hollow-cathode lamp using a transmission band preferably of 1 nm.

*Wavelength*: 279.5 nm.

*Atomisation device*: air-acetylene flame.

**Nickel**: maximum 100 ppm.

Atomic absorption spectrometry (*2.2.23, Method II*).

*Test solution.* Solution S.

*Reference solutions.* Prepare the reference solutions using *nickel standard solution (10 ppm Ni) R*, diluted as necessary with a 5 per cent *V/V* solution of *lead-free nitric acid R*.

*Source*: nickel hollow-cathode lamp using a transmission band preferably of 1 nm.

*Wavelength*: 232.0 nm.

*Atomisation device*: air-acetylene flame.

**Zinc**: maximum 100 ppm.

Atomic absorption spectrometry (*2.2.23, Method II*).

*Test solution.* Solution S.

*Reference solutions.* Prepare the reference solutions using *zinc standard solution (100 ppm Zn) R*, diluted as necessary with a 5 per cent *V/V* solution of *lead-free nitric acid R*.

*Source*: zinc hollow-cathode lamp using a transmission band preferably of 1 nm.

*Wavelength*: 213.9 nm.

*Atomisation device*: air-acetylene flame.

ASSAY

Dissolve 2.5 g of *sodium hydrogen carbonate R* in a mixture of 150 mL of *water R* and 10 mL of *sulfuric acid R*. When the effervescence ceases, add to the solution 0.140 g of the substance to be examined and dissolve with gentle shaking. Add 0.1 mL of *ferroin R* and titrate with *0.1 M ammonium and cerium nitrate* until the red colour disappears.

1 mL of *0.1 M ammonium and cerium nitrate* is equivalent to 15.19 mg of $FeSO_4$.

STORAGE

In an airtight container.

**01/2010:0083**
**corrected 7.2**

# FERROUS SULFATE HEPTAHYDRATE

## Ferrosi sulfas heptahydricus

$FeSO_4,7H_2O$ $M_r$ 278.0
[7782-63-0]

DEFINITION

*Content*: 98.0 per cent to 105.0 per cent.

CHARACTERS

*Appearance*: light green, crystalline powder or bluish-green crystals, efflorescent in air.

*Solubility*: freely soluble in water, very soluble in boiling water, practically insoluble in ethanol (96 per cent).

Ferrous sulfate heptahydrate is oxidised in moist air, becoming brown.

IDENTIFICATION

A. It gives the reactions of sulfates (*2.3.1*).

B. It gives reaction (a) of iron (*2.3.1*).

C. It complies with the limits of the assay.

TESTS

**Solution S**. Dissolve 4.0 g in a 5 per cent *V/V* solution of *lead-free nitric acid R* and dilute to 100.0 mL with the same solution.

**pH** (*2.2.3*): 3.0 to 4.0.

Dissolve 1.0 g in *carbon dioxide-free water R* and dilute to 20 mL with the same solvent.

**Chlorides** (*2.4.4*): maximum 200 ppm.

Dilute 5 mL of solution S to 10 mL with *water R* and add 5 mL of *dilute nitric acid R*. Prepare the standard with a mixture of 2 mL of *water R*, 5 mL of *dilute nitric acid R* and 8 mL of *chloride standard solution (5 ppm Cl) R*. Use 0.15 mL of *silver nitrate solution R2* in this test.

**Chromium**: maximum 50 ppm.

Atomic absorption spectrometry (*2.2.23, Method II*).

*Test solution.* Solution S.

*Reference solutions.* Prepare the reference solutions using *chromium standard solution (100 ppm Cr) R*, diluting with a 5 per cent *V/V* solution of *lead-free nitric acid R*.

*Source*: chromium hollow-cathode lamp using a transmission band preferably of 1 nm.

*Wavelength*: 357.9 nm.

*Atomisation device*: air-acetylene flame.

**Copper**: maximum 50 ppm.

Atomic absorption spectrometry (*2.2.23, Method II*).

*Test solution.* Solution S.

*Reference solutions.* Prepare the reference solutions using *copper standard solution (0.1 per cent Cu) R*, diluting with a 5 per cent *V/V* solution of *lead-free nitric acid R*.

*Source*: copper hollow-cathode lamp using a transmission band preferably of 1 nm.

*Wavelength*: 324.7 nm.

*Atomisation device*: air-acetylene flame.

**Ferric ions**: maximum 0.3 per cent.

In a ground-glass-stoppered flask, dissolve 5.00 g in a mixture of 10 mL of *hydrochloric acid R* and 100 mL of *carbon dioxide-free water R*. Add 3 g of *potassium iodide R*, close the flask and allow to stand in the dark for 5 min. Titrate the liberated iodine with *0.1 M sodium thiosulfate*, using 0.5 mL of *starch solution R*, added towards the end of the titration, as indicator. Carry out a blank test in the same conditions. Not more than 2.7 mL of *0.1 M sodium thiosulfate* is used, taking into account the blank titration.

**Manganese**: maximum 0.1 per cent.

Atomic absorption spectrometry (*2.2.23, Method II*).

*Test solution.* Dilute 1.0 mL of solution S to 20.0 mL with a 5 per cent *V/V* solution of *lead-free nitric acid R*.

*Reference solutions.* Prepare the reference solutions using *manganese standard solution (1000 ppm Mn) R*, diluting with a 5 per cent *V/V* solution of *lead-free nitric acid R*.

*Source*: manganese hollow-cathode lamp using a transmission band preferably of 1 nm.

*Wavelength*: 279.5 nm.

*Atomisation device*: air-acetylene flame.

**Nickel**: maximum 50 ppm.

Atomic absorption spectrometry (*2.2.23, Method II*).

*Test solution.* Solution S.

*Reference solutions.* Prepare the reference solutions using *nickel standard solution (10 ppm Ni) R*, diluting with a 5 per cent *V/V* solution of *lead-free nitric acid R*.

*Source*: nickel hollow-cathode lamp using a transmission band preferably of 1 nm.

*Wavelength*: 232.0 nm.

*Atomisation device*: air-acetylene flame.

**Zinc**: maximum 50 ppm.

Atomic absorption spectrometry (*2.2.23, Method II*).

*Test solution.* Solution S.

*Reference solutions.* Prepare the reference solutions using *zinc standard solution (100 ppm Zn) R*, diluting with a 5 per cent *V/V* solution of *lead-free nitric acid R*.

*Source*: zinc hollow-cathode lamp using a transmission band preferably of 1 nm.

*Wavelength*: 213.9 nm.

*Atomisation device*: air-acetylene flame.

ASSAY

Dissolve 2.5 g of *sodium hydrogen carbonate R* in a mixture of 150 mL of *water R* and 10 mL of *sulfuric acid R*. When the effervescence ceases add to the solution 0.500 g of the substance to be examined and dissolve with gentle swirling. Add 0.1 mL of *ferroin R* and titrate with *0.1 M ammonium and cerium nitrate* until the red colour disappears.

1 mL of *0.1 M ammonium and cerium nitrate* is equivalent to 27.80 mg of $FeSO_4,7H_2O$.

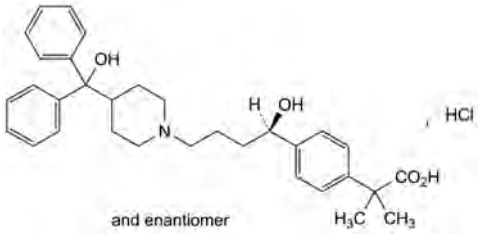
STORAGE

In an airtight container.

**01/2017:2280**

# FEXOFENADINE HYDROCHLORIDE

## Fexofenadini hydrochloridum



$C_{32}H_{40}ClNO_4$ $M_r$ 538.1

[153439-40-8]

DEFINITION

2-[4-[(1*RS*)-1-Hydroxy-4-[4-(hydroxydiphenylmethyl)-piperidin-1-yl]butyl]phenyl]-2-methylpropanoic acid hydrochloride.

*Content*: 98.0 per cent to 102.0 per cent (anhydrous substance).

CHARACTERS

*Appearance*: white or almost white powder.

*Solubility*: slightly soluble in water, freely soluble in methanol, very slightly soluble in acetone.

It shows polymorphism (*5.9*).

IDENTIFICATION

A. Infrared absorption spectrophotometry (*2.2.24*).
*Comparison*: *fexofenadine hydrochloride CRS*.
If the spectra obtained in the solid state show differences, dissolve the substance to be examined and the reference substance separately in *methanol R*, evaporate to dryness and record new spectra using the residues.

B. Dissolve 30 mg of the substance to be examined in a mixture of equal volumes of *methanol R* and *water R*; sonicate if necessary and dilute to 2 mL with the same mixture of solvents. The solution gives reaction (a) of chlorides (*2.3.1*).

TESTS

**Impurity B**. Liquid chromatography (*2.2.29*).

*Test solution.* Dissolve 50.0 mg of the substance to be examined in the mobile phase and dilute to 100.0 mL with the mobile phase.

*Reference solution (a).* Dissolve the contents of a vial of *fexofenadine impurity B CRS* in the test solution and dilute to 2.0 mL with the test solution.

*Reference solution (b).* Dilute 1.0 mL of the test solution to 100.0 mL with the mobile phase. Dilute 1.0 mL of this solution to 10.0 mL with the mobile phase.

*Column*:

– *size*: *l* = 0.25 m, Ø = 4.6 mm;
– *stationary phase*: *silica gel BC for chiral chromatography R* (5 µm).

*Mobile phase*: mix 20 volumes of *acetonitrile for chromatography R* and 80 volumes of a buffer solution prepared as follows: to 1.15 mL of *glacial acetic acid R* add *water for chromatography R*, adjust to pH 4.0 ± 0.1 with *dilute ammonia R1* and dilute to 1000 mL with *water for chromatography R*.

*Flow rate*: 0.5 mL/min.

*Detection*: spectrophotometer at 220 nm.

*Injection*: 20 µL.

*Run time*: 1.2 times the retention time of fexofenadine.

*Relative retention* with reference to fexofenadine (retention time = about 20 min): impurity B = about 0.7.

*System suitability*: reference solution (a):

– *resolution*: minimum 3.0 between the peaks due to fexofenadine and impurity B.

*Limits*:

– *correction factor*: for the calculation of content, multiply the peak area of impurity B by 1.3;

– *impurity B*: not more than the area of the principal peak in the chromatogram obtained with reference solution (b) (0.1 per cent).

**Related substances**. Liquid chromatography (*2.2.29*).

*Buffer solution*. Dissolve 6.64 g of *sodium dihydrogen phosphate monohydrate R* and 0.84 g of *sodium perchlorate R* in *water for chromatography R*, adjust to pH 2.0 ± 0.1 with *phosphoric acid R* and dilute to 1000 mL with *water for chromatography R*.

*Solvent mixture*. Mix equal volumes of *acetonitrile for chromatography R* and the buffer solution.

*Test solution (a)*. Dissolve 25.0 mg of the substance to be examined in 25.0 mL of the solvent mixture.

*Test solution (b)*. Dilute 3.0 mL of test solution (a) to 50.0 mL with the mobile phase.

*Reference solution (a)*. Dissolve 25.0 mg of *fexofenadine hydrochloride CRS* in the solvent mixture and dilute to 25.0 mL with the solvent mixture. Dilute 3.0 mL of this solution to 50.0 mL with the mobile phase.

*Reference solution (b)*. Dilute 1.0 mL of test solution (a) to 100.0 mL with the mobile phase. Dilute 1.0 mL of this solution to 10.0 mL with the mobile phase.

*Reference solution (c)*. Dissolve 1 mg each of *fexofenadine impurity A CRS* and *fexofenadine impurity C CRS* in 20 mL of reference solution (a) and dilute to 200.0 mL with the mobile phase.

*Column*:

– *size*: *l* = 0.25 m, Ø = 4.6 mm;

– *stationary phase*: *phenylsilyl silica gel for chromatography R* (5 µm).

*Mobile phase*: mix 350 volumes of *acetonitrile for chromatography R* and 650 volumes of the buffer solution; add 3 volumes of *triethylamine R* and mix.

*Flow rate*: 1.5 mL/min.

*Detection*: spectrophotometer at 220 nm.

*Injection*: 20 µL of test solution (a) and reference solutions (b) and (c).

*Relative retention* with reference to fexofenadine (retention time = about 9 min): impurity A = about 1.7; impurity D = about 2.3; impurity C = about 3.2.

*Run time*: 6 times the retention time of fexofenadine for test solution (a) and reference solution (c), twice the retention time of fexofenadine for reference solution (b).

*System suitability*: reference solution (c):

– *resolution*: minimum 10 between the peaks due to fexofenadine and impurity A.

*Limits*:

– *correction factor*: for the calculation of content, multiply the peak area of impurity A by 1.4;

– *impurities A, C, D*: not more than the area of the principal peak in the chromatogram obtained with reference solution (b) (0.1 per cent);

– *unspecified impurities*: for each impurity, not more than the area of the principal peak in the chromatogram obtained with reference solution (b) (0.10 per cent);

– *total*: not more than 3 times the area of the principal peak in the chromatogram obtained with reference solution (b) (0.3 per cent);

– *disregard limit*: 0.5 times the area of the principal peak in the chromatogram obtained with reference solution (b) (0.05 per cent).

**Water** (*2.5.32*): maximum 0.5 per cent.

Dissolve 1.000 g in *anhydrous methanol R* and dilute to 5.0 mL with the same solvent. Use 1.0 mL of this solution.

**Sulfated ash** (*2.4.14*): maximum 0.1 per cent, determined on 1.0 g.

ASSAY

Liquid chromatography (*2.2.29*) as described in the test for related substances with the following modifications.

*Injection*: test solution (b) and reference solution (a).

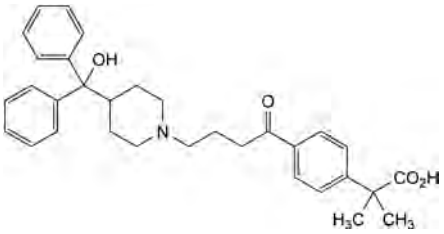
*Run time*: twice the retention time of fexofenadine.

Calculate the percentage content of fexofenadine hydrochloride from the declared content of *fexofenadine hydrochloride CRS*.

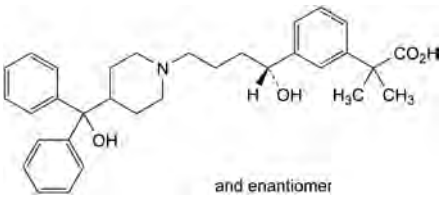
IMPURITIES

*Specified impurities: A, B, C, D.*

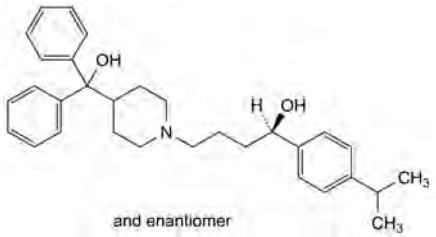
*Other detectable impurities* (the following substances would, if present at a sufficient level, be detected by one or other of the tests in the monograph. They are limited by the general acceptance criterion for other/unspecified impurities and/or by the general monograph *Substances for pharmaceutical use (2034)*. It is therefore not necessary to identify these impurities for demonstration of compliance. See also *5.10. Control of impurities in substances for pharmaceutical use*): *E, F, G.*



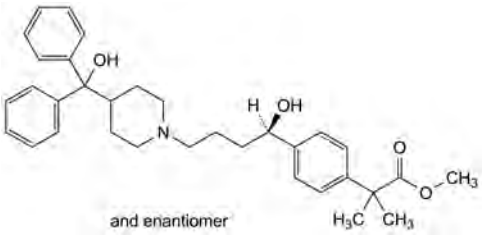
A. 2-[4-[4-[4-(hydroxydiphenylmethyl)piperidin-1-yl]butanoyl]phenyl]-2-methylpropanoic acid,



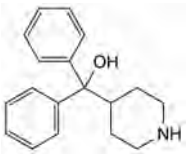
B. 2-[3-[(1*RS*)-1-hydroxy-4-[4-(hydroxydiphenylmethyl)-piperidin-1-yl]butyl]phenyl]-2-methylpropanoic acid,



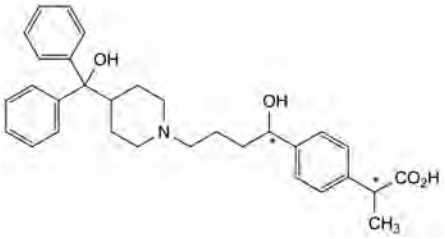
C. (1*RS*)-4-[4-(hydroxydiphenylmethyl)piperidin-1-yl]-1-[4-(1-methylethyl)phenyl]butan-1-ol,



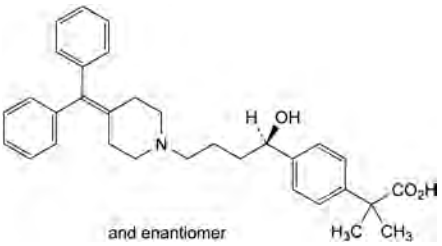
D. methyl 2-[4-[(1*RS*)-1-hydroxy-4-[4-(hydroxydiphenylmethyl)piperidin-1-yl]butyl]phenyl]-2-methylpropanoate,



E. diphenyl(piperidin-4-yl)methanol,



F. 2-[4-[1-hydroxy-4-[4-(hydroxydiphenylmethyl)piperidin-1-yl]butyl]phenyl]propanoic acid,



G. 2-[4-[(1*RS*)-4-[4-(diphenylmethylidene)piperidin-1-yl]-1-hydroxybutyl]phenyl]-2-methylpropanoic acid.

**04/2019:0903**

# FIBRIN SEALANT KIT

## Fibrini glutinum

DEFINITION

Sterile, freeze-dried, frozen or liquid preparation of plasma protein fractions containing essentially 2 components, namely fibrinogen concentrate (component 1), a protein fraction containing human fibrinogen, and a preparation containing human thrombin (component 2). A fibrin clot is rapidly formed when the 2 thawed or reconstituted components are mixed. Other ingredients (for example, human coagulation factor XIII, a fibrinolysis inhibitor or calcium ions) and stabilisers (for example, *Human albumin solution (0255)*) may be added.

Human constituents are obtained from plasma that complies with the monograph *Human plasma for fractionation (0853)*.

When thawed or reconstituted as stated on the label, component 1 contains not less than 40 g/L of clottable protein; the thrombin activity of component 2 varies over a wide range (approximately 4-1000 IU/mL).

PRODUCTION

The method of preparation is designed to maintain functional integrity of the components. It includes a step or steps that have been shown to remove or to inactivate known agents of infection; if substances are used for inactivation of viruses during production, the subsequent purification procedure must be validated to demonstrate that the concentration of these substances is reduced to a suitable level and any residues are such as not to compromise the safety of the preparation for patients.

The production method is shown to yield consistent levels of human coagulation factor XIII.

The constituents or mixtures of constituents are dissolved in a suitable liquid. No antimicrobial preservative or antibiotic is added. Constituents or mixtures of constituents are passed through a bacteria-retentive filter and distributed aseptically into sterile containers. Containers of freeze-dried constituents are closed under vacuum or filled with a suitable inert gas, such as oxygen-free nitrogen, before being closed.

If the label states that human coagulation factor XIII is an active substance in component 1, the assay of human coagulation factor XIII is carried out.

CHARACTERS

*Appearance*:

- *freeze-dried constituents*: white or pale yellow, hygroscopic powder or friable solid;
- *frozen constituents*: colourless or pale yellow, opaque solid;
- *liquid constituents*: colourless or pale yellow liquid.

*For the freeze-dried or frozen constituents, reconstitute or thaw as stated on the label immediately before carrying out the identification and the tests, except those for solubility and water.*

## Component 1 (fibrinogen concentrate)

IDENTIFICATION

A. It complies with the limits of the assay of fibrinogen.

B. It complies with the limits of the assay of human coagulation factor XIII (where its content is stated on the label).

TESTS

**Solubility**. Freeze-dried concentrates dissolve within 20 min in the volume of liquid and at the temperature stated on the label, forming an almost colourless, clear or slightly turbid solution.

**pH** (*2.2.3*): 6.5 to 8.0.

**Stability of solution**. No gel formation appears at room temperature during 120 min following thawing or reconstitution.

**Water**. Determined by a suitable method, such as semi-micro determination of water (*2.5.12*), loss on drying (*2.2.32*) or near-infrared spectroscopy (*2.2.40*), the water content is within the limits approved by the competent authority.

**Sterility** (*2.6.1*). It complies with the test.

ASSAY

**Fibrinogen (clottable protein)**. Mix 0.2 mL of the reconstituted concentrate with 2 mL of a suitable buffer solution (pH 6.6-7.4) containing sufficient *human thrombin R* (approximately 3 IU/mL) and calcium (0.05 mol/L). Maintain at 37 °C for 20 min, separate the precipitate by centrifugation at 5000 *g* for 20 min, wash thoroughly with a 9 g/L solution of *sodium chloride R* and determine the protein as nitrogen by sulfuric acid digestion (*2.5.9*). Calculate the clottable protein content by multiplying the result by 6.0. The estimated content in milligrams of clottable protein is not less than 70 per cent and not more than 130 per cent of the stated content. If for a particular preparation this method cannot be applied, use another validated method for determination of fibrinogen.

**Human coagulation factor XIII**. Use a reference plasma calibrated against the International Standard for blood coagulation factor XIII in plasma. If the label states that human coagulation factor XIII is present as an active substance, the estimated potency is not less than 80 per cent and not more than 120 per cent of the stated potency if the factor XIII potency is stated as a single value, or is within the stated range if the factor XIII potency is stated as a range.

Make at least 3 suitable dilutions of thawed or reconstituted concentrate and of the reference preparation using human coagulation factor XIII-deficient plasma or another suitable diluent. *Coagulation factors V, VIII, XI and XIII plasma BRP* is suitable for use as a reference preparation. Add to each dilution suitable amounts of the following reagents:

- activator reagent, containing bovine or human thrombin, a suitable buffer, calcium chloride and a suitable inhibitor such as Gly-Pro-Arg-Pro-Ala-$NH_2$ which inhibits clotting of the sample but does not prevent human coagulation factor XIII activation by thrombin;
- detection reagent, containing a suitable factor XIIIa-specific peptide substrate, such as Leu-Gly-Pro-Gly-Glu-Ser-Lys-Val-Ile-Gly-$NH_2$ and glycine ethyl ester as 2nd substrate in a suitable buffer solution;
- NADH reagent, containing glutamate dehydrogenase, α-ketoglutarate and NADH in a suitable buffer solution.

After mixing, the absorbance changes (Δ*A*/min) are measured at a wavelength of 340 nm, after the linear phase of the reaction is reached.

Calculate the potency of the test preparation by the usual statistical methods (*5.3*, for example). The confidence limits ($P$ = 0.95) are not less than 80 per cent and not more than 125 per cent of the estimated potency.

## Component 2 (thrombin preparation)

IDENTIFICATION

It complies with the limits of the assay of thrombin.

TESTS

**Solubility**. Freeze-dried preparations dissolve within 5 min in the volume of liquid stated on the label, forming a colourless, clear or slightly turbid solution.

**pH** (*2.2.3*): 5.0 to 8.0.

**Water**. Determined by a suitable method, such as semi-micro determination of water (*2.5.12*), loss on drying (*2.2.32*) or near-infrared spectroscopy (*2.2.40*), the water content is within the limits approved by the competent authority.

**Sterility** (*2.6.1*). It complies with the test.

ASSAY

**Thrombin**. If necessary, dilute the reconstituted preparation to be examined to approximately 2-20 IU of thrombin per millilitre using as diluent a suitable buffer solution (pH 7.3-7.5), such as *imidazole buffer solution pH 7.3 R* containing 10 g/L of *human albumin R* or *bovine albumin R*. To a suitable volume of the dilution, add a suitable volume of fibrinogen solution (1 g/L of clottable protein) warmed to 37 °C and start measurement of the clotting time immediately. Repeat the procedure with each of at least 3 dilutions, in the range stated above, of a reference preparation of thrombin, calibrated in International Units.

Calculate the activity of the test preparation by the usual statistical methods (*5.3*, for example). The estimated activity is not less than 80 per cent and not more than 125 per cent of the stated activity. For a component with a low thrombin concentration and a nominal value of approximately 4 IU/mL, the estimated activity is not less than 50 per cent and not more than 150 per cent of the stated activity. The confidence limits ($P$ = 0.95) are not less than 80 per cent and not more than 125 per cent of the estimated activity.

*The following sections apply to 2-component fibrin sealant.*

STORAGE

Protected from light and, for freeze-dried components, in an airtight container.

LABELLING

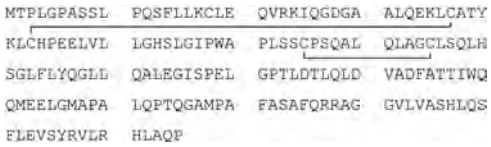
The label states:

- the amount of fibrinogen (milligrams of clottable protein) and thrombin (International Units) per container, and the content of human coagulation factor XIII (International Units per millilitre), if the latter is present as an active substance;
- where applicable, the name and volume of the liquid to be used to reconstitute the components.

**07/2019:2206**
**corrected 10.0**

# FILGRASTIM CONCENTRATED SOLUTION

## Filgrastimi solutio concentrata



$C_{845}H_{1339}N_{223}O_{243}S_9$ $M_r$ 18 799
[121181-53-1]

DEFINITION

Solution of a protein having the primary structure of the 174-amino-acid isoform of human granulocyte colony-stimulating factor (huG-CSF) plus 1 additional amino acid, an *N*-terminal methionine. In contrast to its natural counterpart, the protein is not glycosylated. huG-CSF is produced and secreted by endothelial cells, monocytes and other immune cells. The protein stimulates the differentiation and proliferation of leucocyte stem cells into mature granulocytes.

*Content*: minimum 0.9 mg of protein per millilitre.

*Potency*: minimum $0.9 \times 10^8$ IU per milligram of protein.

PRODUCTION

Filgrastim concentrated solution is produced by a method based on recombinant DNA (rDNA) technology, using bacteria as host cells.

Prior to release, the following tests are carried out on each batch of filgrastim concentrated solution, unless exemption has been granted by the competent authority.

**Host-cell-derived proteins**. The limit is approved by the competent authority.

**Host-cell- or vector-derived DNA**. The limit is approved by the competent authority.

CHARACTERS

*Appearance*: clear, colourless or slightly yellowish liquid.

IDENTIFICATION

A. It shows the expected biological activity (see Assay).

B. Examine the electropherograms obtained in the test for impurities with charges differing from that of filgrastim.

*Results*: the principal band in the electropherogram obtained with the test solution is similar in position to the principal band in the electropherogram obtained with reference solution (a).

C. Examine the chromatograms obtained in the test for impurities with molecular masses higher than that of filgrastim.

*Results*: the principal peak in the chromatogram obtained with the test solution is similar in retention time to the principal peak in the chromatogram obtained with the reference solution.

D. Examine the electropherograms obtained under both reducing and non-reducing conditions in the test for impurities with molecular masses differing from that of filgrastim.

*Results*: the principal band in the electropherogram obtained with test solution (a) is similar in position to the principal band in the electropherogram obtained with reference solution (b).

E. Examine the chromatograms obtained in the test for related proteins.

*Results*: the principal peak in the chromatogram obtained with the test solution is similar in retention time and shape to the principal peak in the chromatogram obtained with the reference solution.

F. Peptide mapping (*2.2.55*).

*SELECTIVE CLEAVAGE OF THE PEPTIDE BONDS*

*Test solution.* Introduce a volume of the preparation to be examined corresponding to 25 µg of protein into a polypropylene tube. Add 25 µL of a 0.1 mg/mL solution of *glutamyl endopeptidase for peptide mapping R*. Dilute to 100 µL with *0.02 M sodium phosphate buffer solution pH 8.0 R*, stopper the tube and incubate at about 37 °C for 17 h. Cool to 2-8 °C until analysis.

*Reference solution.* Prepare at the same time and in the same manner as for the test solution but using *filgrastim CRS* instead of the preparation to be examined.

*CHROMATOGRAPHIC SEPARATION.* Liquid chromatography (*2.2.29*).

*Column*:

- *size*: *l* = 0.10 m, Ø = 2.1 mm;
- *stationary phase*: *end-capped octadecylsilyl silica gel for chromatography compatible with 100 per cent aqueous mobile phases R* (5 µm) with a pore size of 20 nm;
- *temperature*: 60 °C.

*Mobile phase*:

- *mobile phase A*: dilute 0.5 mL of *trifluoroacetic acid R* in 950 mL of *water for chromatography R*, add 50 mL of *acetonitrile for chromatography R* and mix;
- *mobile phase B*: dilute 0.5 mL of *trifluoroacetic acid R* in 50 mL of *water for chromatography R*, add 950 mL of *acetonitrile for chromatography R* and mix;

| Time (min) | Mobile phase A (per cent *V/V*) | Mobile phase B (per cent *V/V*) |
|---|---|---|
| 0 - 8 | 97 → 94 | 3 → 6 |
| 8 - 25 | 94 → 66 | 6 → 34 |
| 25 - 40 | 66 → 10 | 34 → 90 |
| 40 - 45 | 10 | 90 |

*Flow rate*: 0.2 mL/min.

*Detection*: spectrophotometer at 215 nm.

*Injection*: 10 µL.

*System suitability*: the chromatogram obtained with the reference solution is qualitatively similar to the chromatogram of filgrastim digest supplied with *filgrastim CRS*.

*Results*: the profile of the chromatogram obtained with the test solution corresponds to that of the chromatogram obtained with the reference solution.

TESTS

**Impurities with molecular masses higher than that of filgrastim**. Size-exclusion chromatography (*2.2.30*): use the normalisation procedure.

*Solution A*. Dissolve 4.1 g of *sodium acetate R* in 400 mL of *water R*, adjust to pH 4.0 with *acetic acid R* and dilute to 500 mL with *water R*.

*Test solution.* Dilute the preparation to be examined with solution A to obtain a concentration of 0.4 mg/mL.

*Reference solution.* Dilute *filgrastim CRS* with solution A to obtain a concentration of 0.4 mg/mL.

*Resolution solution.* Mix a sample of the reference solution for about 30 s using a vortex mixer.

*Column*:

- *size*: *l* = 0.3 m, Ø = 7.8 mm;
- *stationary phase*: *hydrophilic silica gel for chromatography R* (5 µm) of a grade suitable for fractionation of globular proteins in the relative molecular mass range of 10 000 to 500 000;
- *temperature*: 30 °C.

*Mobile phase*: dissolve 7.9 g of *ammonium hydrogen carbonate R* in 1000 mL of *water for chromatography R* and adjust to pH 7.0 with *phosphoric acid R*; dilute to 2000 mL with *water for chromatography R*.

*Flow rate*: 0.5 mL/min.

*Detection*: spectrophotometer at 215 nm.

*Injection*: 20 µL.

*Relative retention* with reference to the filgrastim monomer (retention time = about 19 min): aggregates = about 0.60; filgrastim oligomer 1 = about 0.75; filgrastim oligomer 2 = about 0.80; filgrastim dimer = about 0.85.

*System suitability*: resolution solution:

- *retention time*: filgrastim monomer = 17 min to 20 min;
- *resolution*: minimum 3 between the peaks due to the filgrastim dimer and the filgrastim monomer.

Calculate the percentage content of the dimer, oligomers and aggregates.

*Limits*:

- *impurities with molecular masses higher than that of filgrastim, other than the dimer*: maximum 0.5 per cent;
- *total of impurities with molecular masses higher than that of filgrastim*: maximum 2 per cent.

**Impurities with molecular masses differing from that of filgrastim**. Polyacrylamide gel electrophoresis (*2.2.31*) under both reducing and non-reducing conditions.

*Gel dimensions*: 1 mm thick.

*Resolving gel*: 13 per cent acrylamide.

*Sample buffer (non-reducing conditions).* Mix equal volumes of *water R* and *concentrated SDS-PAGE sample buffer R*.

*Sample buffer (reducing conditions).* Mix equal volumes of *water R* and *concentrated SDS-PAGE sample buffer for reducing conditions R* containing 2-mercaptoethanol as the reducing agent.

*Test solution (a).* Dilute the preparation to be examined with sample buffer to obtain a concentration of 100 µg/mL.

*Test solution (b).* To 0.20 mL of test solution (a) add 0.20 mL of sample buffer.

*Test solution (c).* Dilute 0.20 mL of test solution (b) to 1 mL with sample buffer.

*Test solution (d).* Dilute 0.20 mL of test solution (c) to 1 mL with sample buffer.

*Test solution (e).* To 0.20 mL of test solution (d) add 0.20 mL of sample buffer.

*Reference solution (a).* Solution of molecular mass markers suitable for calibrating SDS-polyacrylamide gels in the range of 14.4-94 kDa.

*Reference solution (b).* Dilute *filgrastim CRS* with sample buffer to obtain a concentration of 100 µg/mL.

*Sample treatment*: boil for 5 min.

*Application*: 20 µL.

*Detection*: by silver staining.

*System suitability*:

- reference solution (a): the validation criteria are met;
- a band is seen in the electropherogram obtained with test solution (e);
- a gradation of intensity of staining is seen in the electropherograms obtained with test solutions (a) to (e).

*Limit*: test solution (a):

- *impurities with molecular masses lower or higher than that of filgrastim*: no band is more intense than the principal band in the electropherogram obtained with test solution (d) (2.0 per cent).

**Impurities with charges differing from that of filgrastim**. Isoelectric focusing (*2.2.54*).

*Test solution.* Dilute the preparation to be examined with *water R* to obtain a concentration of 0.3 mg/mL.

*Reference solution (a).* Dilute *filgrastim CRS* with *water R* to obtain a concentration of 0.3 mg/mL.

*Reference solution (b).* Dilute *filgrastim CRS* with *water R* to obtain a concentration of 0.03 mg/mL.

*Reference solution (c).* Use an isoelectric point (pI) calibration solution, in the pI range of 2.5-6.5, prepared according to the manufacturer's instructions.

*Focusing*:

- *pH gradient*: 4.5-8.0;
- *catholyte*: 1 M solution of *sodium hydroxide R*;
- *anolyte*: 0.04 M solution of *glutamic acid R* in a 0.0025 per cent *V/V* solution of *phosphoric acid R*;
- *application*: 20 µL.

*Detection*: as described in *2.2.54*.

*System suitability*:

- in the electropherogram obtained with reference solution (c), the relevant isoelectric point markers are distributed along the entire length of the gel;
- in the electropherogram obtained with reference solution (a), the pI of the principal band is 5.7 to 6.3.

*Limit*:

- *any impurity*: no band is more intense than the principal band in the electropherogram obtained with reference solution (b) (10 per cent).

**Related proteins**. Liquid chromatography (*2.2.29*): use the normalisation procedure.

*Test solution.* Dilute the preparation to be examined with *water for chromatography R* to obtain a concentration of 0.5 mg/mL.

*Reference solution (a).* Dilute the content of a vial of *filgrastim CRS* with *water for chromatography R* to obtain a concentration of 0.5 mg/mL.

*Reference solution (b).* To 250 µL of reference solution (a), add 2.5 µL of a 4.5 g/L solution of hydrogen peroxide. Mix and incubate at 25 ± 2 °C for 30 min, then add 1.9 mg of *L-methionine R*.

*Reference solution (c).* To 250 µL of reference solution (a), add 0.25 mg of *dithiothreitol R*. Mix and incubate at 35 ± 2 °C for 60 min.

*Column*:

- *size*: *l* = 0.15 m, Ø = 4.6 mm;
- *stationary phase*: *end-capped butylsilyl silica gel for chromatography R* (5 µm) with a pore size of 30 nm;
- *temperature*: 60 °C.

*Mobile phase*:

- *mobile phase A*: dilute 1 mL of *trifluoroacetic acid R* in 1000 mL of *water for chromatography R*;
- *mobile phase B*: dilute 1 mL of *trifluoroacetic acid R* in 100 mL of *water for chromatography R*, then add 900 mL of *acetonitrile R*;

| Time (min) | Mobile phase A (per cent *V/V*) | Mobile phase B (per cent *V/V*) |
|---|---|---|
| 0 - 30 | 60 → 20 | 40 → 80 |
| 30 - 35 | 20 | 80 |
| 35 - 45 | 20 → 60 | 80 → 40 |

*Flow rate*: 0.8 mL/min.

*Detection*: spectrophotometer at 215 nm.

*Injection*: 50 µL of the test solution and reference solutions (b) and (c).

*Relative retention* with reference to filgrastim (retention time = about 23 min): oxidised filgrastim (form 1) = about 0.84; oxidised filgrastim (form 2) = about 0.98; reduced filgrastim = about 1.04.

*System suitability*: reference solution (b):

- *symmetry factor*: maximum 1.8 for the peak due to filgrastim;
- *peak-to-valley ratio*: minimum 2.0, where $H_p$ = height above the baseline of the peak due to oxidised filgrastim (form 2) and $H_v$ = height above the baseline of the lowest point of the curve separating this peak from the peak due to filgrastim.

*System suitability*: reference solution (c):

- *resolution*: minimum 1.5 between the peaks due to filgrastim and reduced filgrastim;
- *symmetry factor*: maximum 1.8 for the peak due to filgrastim.

*Limits*:

- *any impurity*: for each impurity, maximum 1.0 per cent;
- *total*: maximum 2.0 per cent.

**Bacterial endotoxins** (*2.6.14*): less than 2 IU in the volume that contains 1.0 mg of protein.

ASSAY

**Protein**. Liquid chromatography (*2.2.29*) as described in the test for related proteins with the following modification.

*Injection*: test solution and reference solution (a).

Calculate the content of filgrastim ($C_{845}H_{1339}N_{223}O_{243}S_9$) taking into account the assigned content of $C_{845}H_{1339}N_{223}O_{243}S_9$ in *filgrastim CRS*.

**Potency**. The potency of the preparation to be examined is determined by comparison of the dilutions of the test preparation with the dilutions of the International Standard of filgrastim or with a reference preparation calibrated in International Units.

The International Unit is the activity contained in a stated amount of the appropriate International Standard. The equivalence in International Units of the International Standard is stated by the World Health Organization.

Carry out the assay using a suitable method such as the following, which uses the conversion of a tetrazolium salt (MTS) as a staining method. Alternative methods of quantifying cell proliferation, such as measurement of intracellular ATP by luciferase bioluminescence, have also been found suitable, and may be used as the assay readout, subject to appropriate validation. The assay conditions (for example, cell concentration, incubation time and dilution steps) are then adapted accordingly.

Use an established cell line responsive to filgrastim. M-NFS-60 cells (ATCC No. CRL-1838) that have been made sensitive to G-CSF have been found suitable. Incubate with varying dilutions of test and reference preparations of filgrastim. Then incubate with a solution of *tetrazolium salt R*. This cytochemical stain is converted by cellular dehydrogenases to a coloured formazan product. The formazan is then measured spectrophotometrically.

Add 50 µL of dilution medium to all wells of a 96-well microtitre plate. Add an additional 50 µL of this solution to the wells designed for the blanks. Add 50 µL of each solution to be tested in triplicate (test preparation and reference preparation at a concentration of about 800 IU/mL, plus a series of 10 twofold dilutions to obtain a standard curve). Prepare a suspension of M-NFS-60 cells containing $7 \times 10^5$ cells per millilitre. Immediately before use, add 2-mercaptoethanol to a final concentration of 0.1 mM, and add 50 µL of the prepared cell suspension to each well, maintaining the cells in a uniform suspension during addition.

Incubate the plate at 36.0-38.0 °C for 44-48 h in a humidified incubator using 6 ± 1 per cent $CO_2$. Add 20 µL of a 5.0 g/L sterile solution of *tetrazolium salt R* to each well and reincubate for 4 h. Estimate the quantity of formazan produced using a microtitre well plate reader at 490 nm.

Calculate the potency of the preparation to be examined using a suitable statistical method, for example the parallel line assay (*5.3*).

The estimated potency is not less than 80 per cent and not more than 125 per cent of the stated potency. The confidence limits ($P$ = 0.95) are not less than 74 per cent and not more than 136 per cent of the estimated potency.

LABELLING

The label states:

- the content, in milligrams of protein per millilitre;
- the potency, in International Units per milligram of protein.

**07/2019:2848**
**corrected 10.0**

# FILGRASTIM INJECTION

## Filgrastimi solutio iniectabilis

DEFINITION

Sterile solution for injection of a protein having the primary structure of the 174-amino-acid isoform of human granulocyte colony-stimulating factor (huG-CSF) plus 1 additional amino acid, an *N*-terminal methionine. In contrast to its natural counterpart, the protein is not glycosylated.

*Content*: 90.0 per cent to 110.0 per cent of the amount of filgrastim stated on the label.

*Potency*: 80 per cent to 125 per cent of the potency stated on the label when determined using the conditions described under Assay.

PRODUCTION

Filgrastim injection is prepared from *Filgrastim concentrated solution (2206)*.

The concentrated solution is diluted with a formulation buffer (acetate or glutamate) containing sodium hydroxide, sorbitol, and polysorbate 80 as excipients. This preparation is passed through a bacteria-retentive filter and distributed aseptically into the final containers. Where excipients or formulation buffer other than those mentioned above are used, their compatibility with the tests described hereafter must be confirmed.

CHARACTERS

*Appearance*: clear, colourless or slightly yellowish liquid.

IDENTIFICATION

A. It shows the expected biological activity (see Assay).

B. Examine the chromatograms obtained in the test for related proteins.

*Results*: the principal peak in the chromatogram obtained with the test solution is similar in retention time and shape to the principal peak in the chromatogram obtained with reference solution (a).

TESTS

**pH** (*2.2.3*): as approved by the competent authority.

**Impurities with molecular masses higher than that of filgrastim**. Size-exclusion chromatography (*2.2.30*): use the normalisation procedure.

*Solution A*. Dissolve 4.1 g of *sodium acetate R* in 400 mL of *water R*, adjust to pH 4.0 with *acetic acid R* and dilute to 500 mL with *water R*.

*Test solution*. Dilute the preparation to be examined with solution A to obtain a concentration of 0.4 mg/mL.

*Reference solution*. Dilute *filgrastim CRS* with solution A to obtain a concentration of 0.4 mg/mL.

*Resolution solution*. Mix a sample of the reference solution for about 30 s using a vortex mixer.

*Column*:

- *size*: *l* = 0.3 m, Ø = 7.8 mm;
- *stationary phase*: *hydrophilic silica gel for chromatography R* (5 µm) of a grade suitable for fractionation of globular proteins in the relative molecular mass range of 10 000 to 500 000;
- *temperature*: 30 °C.

*Mobile phase*: dissolve 7.9 g of *ammonium hydrogen carbonate R* in 1000 mL of *water for chromatography R* and adjust to pH 7.0 with *phosphoric acid R*; dilute to 2000 mL with *water for chromatography R*.

*Flow rate*: 0.5 mL/min.

*Detection*: spectrophotometer at 215 nm.

*Injection*: 20 µL.

*Relative retention* with reference to the filgrastim monomer (retention time = about 19 min): aggregates = about 0.60; filgrastim oligomer 1 = about 0.75; filgrastim oligomer 2 = about 0.80; filgrastim dimer = about 0.85.

*System suitability*: resolution solution:

- *retention time*: filgrastim monomer = 17 min to 20 min;
- *resolution*: minimum 3.0 between the peaks due to the filgrastim dimer and the filgrastim monomer.

Calculate the percentage content of the dimer, oligomers and aggregates.

*Limits*:

- *impurities with molecular masses higher than that of filgrastim, other than the dimer*: maximum 0.5 per cent;
- *total of impurities with molecular masses higher than that of filgrastim*: maximum 1.0 per cent.

**Impurities with charges differing from that of filgrastim**. Isoelectric focusing (*2.2.54*) with the following modifications. *Prepare reference solutions (a), (b) and (c) immediately before loading on the gel.*

*Gel concentration*: 5 per cent; commercially available gels may be used.

*Test solution*. Dilute the preparation to be examined with *water R* to obtain a concentration of 0.6 mg/mL.

*Reference solution (a)*. Dilute *filgrastim CRS* with *water R* to obtain a concentration of 0.6 mg/mL.

*Reference solution (b)*. To 10 µL of reference solution (a) add 190 µL of *water R* to obtain a concentration of 0.03 mg/mL.

*Reference solution (c).* To 10 µL of reference solution (a) add 490 µL of *water R* to obtain a concentration of 0.012 mg/mL.

*Reference solution (d).* Use an isoelectric point (pI) calibration solution, in the pI range of 3-10, prepared according to the manufacturer's instructions.

*Focusing*:

- *pH gradient*: a combination of ampholytes giving a functional separation in the pI range of 5.0-7.0;
- *catholyte*: 20 g/L solution of *sodium hydroxide R*;
- *anolyte*: 30 g/L solution of *glacial acetic acid R*;
- *application*: 15 µL.

Proceed with the isoelectric focusing by applying the electrical parameters according to the manufacturer's instructions. The following parameters have been found suitable for gels of dimensions 250 mm × 110 mm × 0.43 mm:

- *pre-focusing*: 700 V, 12 mA, 8 W, 20 min;
- *post-application*: 500 V, 8 mA, 8 W, 20 min;
- *focusing*: 2000 V, 14 mA, 14 W, 90 min;
- *final focusing*: 2500 V, 14 mA, 14 W, 10 min.

*Detection*: silver staining.

*Fixing solution*: a solution containing 36 g/L of *sulfosalicylic acid R* and 116 g/L of *trichloroacetic acid R*.

*Sensitising solution.* Dissolve 17 g of *sodium acetate R* in about 100 mL of *water R*. Add 75 mL of *ethanol (96 per cent) R*, 10 mL of a 50 g/L solution of *anhydrous sodium thiosulfate R* and 1.25 mL of a 250 g/L solution of *glutaraldehyde R* and dilute to 250 mL with *water R*.

*Silver solution.* Mix 100 µL of *formaldehyde solution R1* and 25 mL of a 25 g/L solution of *silver nitrate R* and dilute to 250 mL with *water R*.

*Developing solution.* Dissolve 6.25 g of *sodium carbonate R* in about 200 mL of *water R*, add 50 µL of *formaldehyde solution R1* and dilute to 250 mL with *water R*.

*Stopping solution.* Dissolve 3.65 g of *sodium edetate R* in 250 mL of *water R*.

Alternatively, commercially available staining kits may be used.

*System suitability*:

- in the electropherogram obtained with reference solution (d), the relevant isoelectric point markers are distributed along the entire length of the gel;
- in the electropherogram obtained with reference solution (c), the principal band is clearly visible.

*Limits*:

- maximum 7 bands of an intensity between that of the principal band in the electropherogram obtained with reference solution (c) (2 per cent) and that of the principal band in the electropherogram obtained with reference solution (b) (5 per cent) are present;
- no band has an intensity greater than that of the principal band in the electropherogram obtained with reference solution (b) (5 per cent).

**Related proteins**. Liquid chromatography (*2.2.29*): use the normalisation procedure.

*Test solution.* Dilute the preparation to be examined with *water R* to obtain a concentration of 0.5 mg/mL.

*Reference solution (a).* Dilute the contents of a vial of *filgrastim CRS* with *water R* to obtain a concentration of 0.5 mg/mL.

*Reference solution (b).* To 250 µL of reference solution (a), add 2.5 µL of a 4.5 g/L solution of hydrogen peroxide. Mix and incubate at 25 ± 2 °C for 30 min, then add 1.9 mg of *L-methionine R*.

*Reference solution (c).* To 250 µL of reference solution (a), add 0.25 mg of *dithiothreitol R*. Mix and incubate at 35 ± 2 °C for 60 min.

*Column*:

- *size*: *l* = 0.15 m, Ø = 4.6 mm;
- *stationary phase*: *end-capped butylsilyl silica gel for chromatography R* (5 µm) with a pore size of 30 nm;
- *temperature*: 60 °C.

*Mobile phase*:

- *mobile phase A*: dilute 1 mL of *trifluoroacetic acid R* in 1000 mL of *water for chromatography R*;
- *mobile phase B*: dilute 1 mL of *trifluoroacetic acid R* in 100 mL of *water for chromatography R*, then add 900 mL of *acetonitrile R*;

| Time (min) | Mobile phase A (per cent *V/V*) | Mobile phase B (per cent *V/V*) |
|---|---|---|
| 0 - 30 | 60 → 20 | 40 → 80 |
| 30 - 35 | 20 | 80 |
| 35 - 45 | 20 → 60 | 80 → 40 |

*Flow rate*: 0.8 mL/min.

*Detection*: spectrophotometer at 215 nm.

*Injection*: 50 µL of the test solution and reference solutions (b) and (c).

*Relative retention* with reference to filgrastim (retention time = about 23 min): oxidised filgrastim (form 1) = about 0.84; oxidised filgrastim (form 2) = about 0.98; reduced filgrastim = about 1.04.

*System suitability*: reference solution (b):

- *symmetry factor*: maximum 1.8 for the peak due to filgrastim;
- *peak-to-valley ratio*: minimum 2.0, where $H_p$ = height above the baseline of the peak due to oxidised filgrastim (form 2) and $H_v$ = height above the baseline of the lowest point of the curve separating this peak from the peak due to filgrastim.

*System suitability*: reference solution (c):

- *resolution*: minimum 1.5 between the peaks due to filgrastim and reduced filgrastim;
- *symmetry factor*: maximum 1.8 for the peak due to filgrastim.

*Limits*:

- *any impurity*: for each impurity, maximum 3.0 per cent;
- *total*: maximum 6.5 per cent.

**Osmolality** (*2.2.35*): as approved by the competent authority.

**Bacterial endotoxins** (*2.6.14*): less than 10 IU in the volume that contains 1.0 mg of protein.

ASSAY

**Protein**. Liquid chromatography (*2.2.29*) as described in the test for related proteins with the following modification.

*Injection*: test solution and reference solution (a).

Calculate the content of filgrastim ($C_{845}H_{1339}N_{223}O_{243}S_9$) taking into account the assigned content of $C_{845}H_{1339}N_{223}O_{243}S_9$ in *filgrastim CRS*.

**Potency**. The potency of the preparation to be examined is determined by comparison of the dilutions of the test preparation with the dilutions of the International Standard of filgrastim or with a reference preparation calibrated in International Units.

The International Unit is the activity contained in a stated amount of the appropriate International Standard. The equivalence in International Units of the International Standard is stated by the World Health Organization.

Carry out the assay using a suitable method such as the following, which uses the conversion of a tetrazolium salt (MTS) as a staining method. Alternative methods of quantifying cell proliferation, such as measurement of intracellular ATP by luciferase bioluminescence, have also been found suitable, and may be used as the assay readout,

subject to appropriate validation. The assay conditions (for example, cell concentration, incubation time and dilution steps) are then adapted accordingly.

Use an established cell line responsive to filgrastim. M-NFS-60 cells (ATCC No. CRL-1838) that have been made sensitive to G-CSF have been found suitable. Incubate with varying dilutions of test and reference preparations of filgrastim. Then incubate with a solution of *tetrazolium salt R*. This cytochemical stain is converted by cellular dehydrogenases to a coloured formazan product. The formazan is then measured spectrophotometrically.

Add 50 µL of dilution medium to each well of a 96-well microtitre plate. Add an additional 50 µL of this solution to the wells designed for the blanks. Add 50 µL of each solution to be tested in triplicate (test preparation and reference preparation at a concentration of about 800 IU/mL, plus a series of 10 twofold dilutions to obtain a standard curve). Prepare a suspension of M-NFS-60 cells containing $7 \times 10^5$ cells per millilitre. Immediately before use, add 2-mercaptoethanol to a final concentration of 0.1 mM, and add 50 µL of the prepared cell suspension to each well, maintaining the cells in a uniform suspension during addition.

Incubate the plate at 36.0-38.0 °C for 44-48 h in a humidified incubator using 6 ± 1 per cent $CO_2$. Add 20 µL of a 5.0 g/L sterile solution of *tetrazolium salt R* to each well and reincubate for 4 h. Estimate the quantity of formazan produced using a microtitre well plate reader at 490 nm.

Calculate the potency of the preparation to be examined using a suitable statistical method, for example the parallel line assay (*5.3*).

The estimated potency is not less than 80 per cent and not more than 125 per cent of the stated potency. The confidence limits ($P$ = 0.95) are not less than 74 per cent and not more than 136 per cent of the estimated potency.

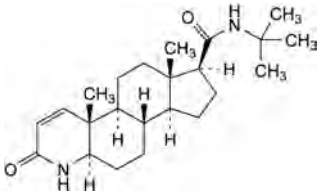
STORAGE

In a sterile, airtight, tamper-evident container, protected from light, at a temperature of 2 °C to 8 °C.

**01/2014:1615**

# FINASTERIDE

## Finasteridum



$C_{23}H_{36}N_2O_2$ $M_r$ 372.6

[98319-26-7]

DEFINITION

*N*-(1,1-Dimethylethyl)-3-oxo-4-aza-5α-androst-1-ene-17β-carboxamide.

*Content*: 98.0 per cent to 102.0 per cent (dried substance).

CHARACTERS

*Appearance*: white or almost white, crystalline powder.

*Solubility*: practically insoluble in water, freely soluble in ethanol and in methylene chloride.

It shows polymorphism (*5.9*).

IDENTIFICATION

Infrared absorption spectrophotometry (*2.2.24*).

*Comparison*: *finasteride CRS*.

If the spectra obtained in the solid state show differences, dissolve the substance to be examined and the reference substance separately in *methanol R*, evaporate to dryness and record new spectra using the residues.

TESTS

**Specific optical rotation** (*2.2.7*): + 12.0 to + 14.0 (dried substance).

Dissolve 0.250 g in *methanol R* and dilute to 25.0 mL with the same solvent.

**Related substances**. Liquid chromatography (*2.2.29*).

*Solvent mixture*: *acetonitrile R1*, *water for chromatography R* (50:50 *V/V*).

*Test solution (a)*. Dissolve 25.0 mg of the substance to be examined in the solvent mixture and dilute to 50.0 mL with the solvent mixture.

*Test solution (b)*. Dissolve 100.0 mg of the substance to be examined in the solvent mixture and dilute to 10.0 mL with the solvent mixture.

*Reference solution (a)*. Dissolve 25.0 mg of *finasteride CRS* in the solvent mixture and dilute to 50.0 mL with the solvent mixture.

*Reference solution (b)*. Dissolve 10 mg of *finasteride for peak identification CRS* (containing impurities A and C) in 1.0 mL of the solvent mixture.

*Reference solution (c)*. Dilute 1.0 mL of test solution (b) to 100.0 mL with the solvent mixture. Dilute 1.0 mL of this solution to 10.0 mL with the solvent mixture.

*Column*:

- *size*: *l* = 0.25 m, Ø = 4.0 mm;
- *stationary phase*: *base-deactivated end-capped octadecylsilyl silica gel for chromatography R* (5 µm);
- *temperature*: 60 °C.

*Mobile phase*: *acetonitrile R1*, *tetrahydrofuran R*, *water for chromatography R* (10:10:80 *V/V/V*).

*Flow rate*: 1.5 mL/min.

*Detection*: spectrophotometer at 210 nm.

*Injection*: 15 µL of test solution (b) and reference solutions (b) and (c).

*Run time*: twice the retention time of finasteride.

*Identification of impurities*: use the chromatogram supplied with *finasteride for peak identification CRS* and the chromatogram obtained with reference solution (b) to identify the peaks due to impurities A and C.

*Relative retention* with reference to finasteride (retention time = about 28 min): impurity A = about 0.9; impurity C = about 1.3.

*System suitability*:

- *signal-to-noise ratio*: minimum 40 for the principal peak in the chromatogram obtained with reference solution (c);
- *peak-to-valley ratio*: minimum 5, where $H_p$ = height above the baseline of the peak due to impurity A and $H_v$ = height above the baseline of the lowest point of the curve separating this peak from the peak due to finasteride in the chromatogram obtained with reference solution (b).

*Calculation of percentage contents*:

- *correction factor*: multiply the peak area of impurity A by 2.4;
- for each impurity, use the concentration of finasteride in reference solution (c).

*Limits*:

- *impurities A, C*: for each impurity, maximum 0.3 per cent;
- *unspecified impurities*: for each impurity, maximum 0.10 per cent;

– *total*: maximum 0.5 per cent;

– *reporting threshold*: 0.05 per cent.

**Loss on drying** (*2.2.32*): maximum 0.5 per cent, determined on 1.000 g by drying in an oven at 105 °C.

ASSAY

Liquid chromatography (*2.2.29*) as described in the test for related substances with the following modification.

*Injection*: test solution (a) and reference solution (a).

Calculate the percentage content of $C_{23}H_{36}N_2O_2$ taking into account the assigned content of *finasteride CRS*.

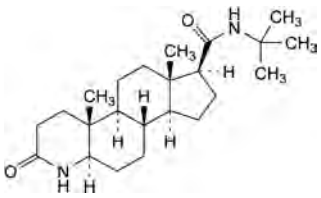
STORAGE

Protected from light.

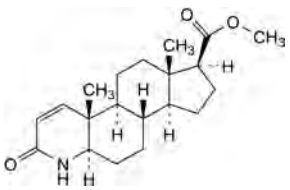
IMPURITIES

*Specified impurities: A, C.*

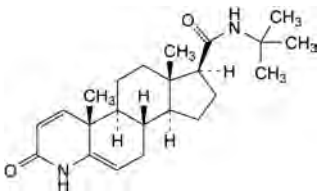
*Other detectable impurities* (the following substances would, if present at a sufficient level, be detected by one or other of the tests in the monograph. They are limited by the general acceptance criterion for other/unspecified impurities and/or by the general monograph *Substances for pharmaceutical use (2034)*. It is therefore not necessary to identify these impurities for demonstration of compliance. See also *5.10. Control of impurities in substances for pharmaceutical use*): *B.*



A. *N*-(1,1-dimethylethyl)-3-oxo-4-aza-5α-androstane-17β-carboxamide (dihydrofinasteride),



B. methyl 3-oxo-4-aza-5α-androst-1-ene-17β-carboxylate,

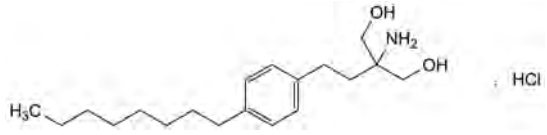


C. *N*-(1,1-dimethylethyl)-3-oxo-4-azaandrosta-1,5-diene-17β-carboxamide (Δ5-finasteride).

**07/2019:2988**

# FINGOLIMOD HYDROCHLORIDE

## Fingolimodi hydrochloridum



$C_{19}H_{34}ClNO_2$ $M_r$ 343.9
[162359-56-0]

DEFINITION

2-Amino-2-[2-(4-octylphenyl)ethyl]propane-1,3-diol hydrochloride.

*Content*: 98.0 per cent to 102.0 per cent (anhydrous substance).

CHARACTERS

*Appearance*: white or almost white powder.

*Solubility*: freely soluble in water and in ethanol (96 per cent), practically insoluble in heptane.

It shows polymorphism (*5.9*).

IDENTIFICATION

A. Infrared absorption spectrophotometry (*2.2.24*).

*Preparation*: mulls in *liquid paraffin R* if recording by transmission.

*Comparison*: *fingolimod hydrochloride CRS*.

If the spectra obtained show differences, dissolve the substance to be examined and the reference substance separately in *anhydrous ethanol R*, evaporate to dryness and record new spectra using the residues.

B. It gives reaction (a) of chlorides (*2.3.1*).

If precipitation is observed after addition of *dilute nitric acid R*, centrifuge and use the supernatant in the remainder of the test.

TESTS

**Related substances**. Liquid chromatography (*2.2.29*).

*Solvent mixture*: *acetonitrile R1*, 0.1 per cent *V/V* solution of *phosphoric acid R* (50:50 *V/V*).

*Test solution*. Dissolve 30.0 mg of the substance to be examined in the solvent mixture and dilute to 50.0 mL with the solvent mixture.

*Reference solution (a)*. Dissolve 30.0 mg of *fingolimod hydrochloride CRS* in the solvent mixture and dilute to 50.0 mL with the solvent mixture.

*Reference solution (b)*. Dilute 1.0 mL of the test solution to 100.0 mL with the solvent mixture. Dilute 1.0 mL of this solution to 10.0 mL with the solvent mixture.

*Reference solution (c)*. Dissolve 3 mg of *fingolimod for system suitability CRS* (containing impurities C and G) in the solvent mixture and dilute to 5 mL with the solvent mixture.

*Column*:

– *size*: *l* = 0.15 m, Ø = 3.0 mm;

– *stationary phase*: *end-capped octadecylsilyl silica gel for chromatography with embedded polar groups R* (3 µm);

– *temperature*: 40 °C.

*Mobile phase*:

– *mobile phase A*: 0.1 per cent *V/V* solution of *phosphoric acid R*;

– *mobile phase B*: *acetonitrile R1*;

| Time (min) | Mobile phase A (per cent *V/V*) | Mobile phase B (per cent *V/V*) |
|---|---|---|
| 0 - 2 | 80 | 20 |
| 2 - 22 | 80 → 5 | 20 → 95 |
| 22 - 25 | 5 | 95 |

*Flow rate*: 0.8 mL/min.

*Detection*: spectrophotometer at 215 nm.

*Injection*: 5 µL of the test solution and reference solutions (b) and (c).

*Identification of impurities*: use the chromatogram supplied with *fingolimod for system suitability CRS* and the chromatogram obtained with reference solution (c) to identify the peaks due to impurities C and G.

*Relative retention* with reference to fingolimod (retention time = about 6.5 min): impurity G = about 1.10; impurity C = about 1.13.

*System suitability*: reference solution (c):

– *resolution*: minimum 1.5 between the peaks due to impurities G and C.

*Calculation of percentage contents*:

– for each impurity, use the concentration of fingolimod hydrochloride in reference solution (b).

*Limits*:

– *unspecified impurities*: for each impurity, maximum 0.10 per cent;
– *total*: maximum 0.5 per cent;
– *reporting threshold*: 0.05 per cent.

**Water** (*2.5.32*): maximum 0.3 per cent, determined on 50.0 mg by direct sample introduction.

**Sulfated ash** (*2.4.14*): maximum 0.1 per cent, determined on 1.0 g.

ASSAY

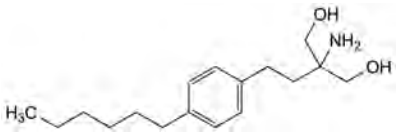
Liquid chromatography (*2.2.29*) as described in the test for related substances with the following modification.

*Injection*: test solution and reference solution (a).

Calculate the percentage content of $C_{19}H_{34}ClNO_2$ taking into account the assigned content of *fingolimod hydrochloride CRS*.

IMPURITIES

*Other detectable impurities* (the following substances would, if present at a sufficient level, be detected by one or other of the tests in the monograph. They are limited by the general acceptance criterion for other/unspecified impurities and/or by the general monograph *Substances for pharmaceutical use (2034)*. It is therefore not necessary to identify these impurities for demonstration of compliance. See also *5.10. Control of impurities in substances for pharmaceutical use*): *A, B, C, D, E, F, G, H, I.*



A. 2-amino-2-[2-(4-hexylphenyl)ethyl]propane-1,3-diol,

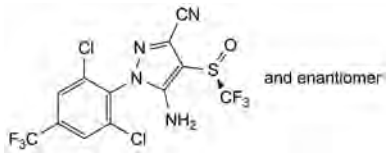
# FIPRONIL FOR VETERINARY USE

## Fipronilum ad usum veterinarium



$C_{12}H_4Cl_2F_6N_4OS$ $M_r$ 437.1
[120068-37-3]

DEFINITION

5-Amino-1-[2,6-dichloro-4-(trifluoromethyl)phenyl]-4-[(*RS*)-(trifluoromethyl)sulfinyl]-1*H*-pyrazole-3-carbonitrile.

*Content*: 95.5 per cent to 102.0 per cent (dried substance).

CHARACTERS

*Appearance*: white or almost white or yellowish powder.

*Solubility*: practically insoluble in water, soluble in anhydrous ethanol, practically insoluble in heptane.

It shows polymorphism (*5.9*).

IDENTIFICATION

Infrared absorption spectrophotometry (*2.2.24*).

*Comparison*: *fipronil CRS*.

If the spectra obtained in the solid state show differences, dissolve the substance to be examined and the reference substance separately in the minimum volume of *methylene chloride R*, evaporate to dryness and record new spectra using the residues.

TESTS

**Related substances**. Liquid chromatography (*2.2.29*). *Carry out the test protected from light.*

*Solvent mixture*: *methanol R*, *water R*, *acetonitrile R* (30:30:40 *V/V/V*).

*Test solution (a)*. Dissolve 35.0 mg of the substance to be examined in the solvent mixture and dilute to 50.0 mL with the solvent mixture.

*Test solution (b)*. Dilute 3.0 mL of test solution (a) to 20.0 mL with the solvent mixture.

*Reference solution (a)*. Dissolve 1.5 mg of *fipronil for system suitability CRS* (containing impurities A and B) in the solvent mixture and dilute to 2.0 mL with the solvent mixture.

*Reference solution (b)*. Dilute 1.0 mL of test solution (a) to 100.0 mL with the solvent mixture. Dilute 2.0 mL of this solution to 10.0 mL with the solvent mixture.

*Reference solution (c)*. Dissolve 35.0 mg of *fipronil CRS* in the solvent mixture and dilute to 50.0 mL with the solvent mixture. Dilute 3.0 mL of the solution to 20.0 mL with the solvent mixture.

*Column*:

- *size*: *l* = 0.15 m, Ø = 4.6 mm;
- *stationary phase*: *end-capped octadecylsilyl silica gel for chromatography R* (1.8 µm).

*Mobile phase*: *tetrahydrofuran R*, *methanol R2*, *water for chromatography R*, *acetonitrile R1* (0.5:30:30:40 *V/V/V/V*).

*Flow rate*: 1.0 mL/min.

*Detection*: spectrophotometer at 210 nm.

*Injection*: 5 µL of test solution (a) and reference solutions (a) and (b).

*Run time*: twice the retention time of fipronil.

*Identification of impurities*: use the chromatogram supplied with *fipronil for system suitability CRS* and the chromatogram obtained with reference solution (a) to identify the peaks due to impurities A and B.

*Relative retention* with reference to fipronil (retention time = about 6 min): impurity A = about 1.3; impurity B = about 1.4.

*System suitability*: reference solution (a):

- *resolution*: minimum 2.5 between the peaks due to impurities A and B.

*Calculation of percentage contents*:

- for each impurity, use the concentration of fipronil in reference solution (b).

*Limits*:

- *impurity B*: maximum 3.5 per cent;
- *impurity A*: maximum 1.5 per cent;
- *unspecified impurities*: for each impurity, maximum 0.20 per cent;
- *total*: maximum 4.5 per cent;
- *reporting threshold*: 0.10 per cent.

**Loss on drying** (*2.2.32*): maximum 0.5 per cent, determined on 1.000 g by drying in an oven at 105 °C.

**Sulfated ash** (*2.4.14*): maximum 0.1 per cent, determined on 1.0 g in a platinum crucible.

ASSAY

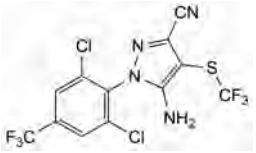
Liquid chromatography (*2.2.29*) as described in the test for related substances with the following modification.

*Injection*: test solution (b) and reference solution (c).

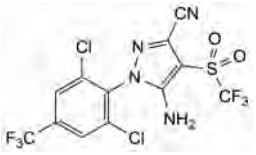
Calculate the percentage content of $C_{12}H_4Cl_2F_6N_4OS$ taking into account the assigned content of *fipronil CRS*.

IMPURITIES

*Specified impurities: A, B.*



A. 5-amino-1-[2,6-dichloro-4-(trifluoromethyl)phenyl]-4-[(trifluoromethyl)sulfanyl]-1*H*-pyrazole-3-carbonitrile,



B. 5-amino-1-[2,6-dichloro-4-(trifluoromethyl)phenyl]-4-[(trifluoromethyl)sulfonyl]-1*H*-pyrazole-3-carbonitrile.

**01/2020:1912**

# FISH OIL, RICH IN OMEGA-3 ACIDS

## Piscis oleum omega-3 acidis abundans

DEFINITION

Purified, winterised and deodorised fatty oil obtained from fish of families such as *Engraulidae*, *Carangidae*, *Clupeidae*, *Osmeridae*, *Scombridae* (except the genera *Thunnus* and *Sarda*) and *Ammodytidae* (type I), or from the genera *Thunnus* and *Sarda* within the family *Scombridae* (type II). The omega-3

acids are defined as the following acids: *alpha*-linolenic acid (C18:3 n-3), moroctic acid (C18:4 n-3), eicosatetraenoic acid (C20:4 n-3), timnodonic (eicosapentaenoic) acid (C20:5 n-3; EPA), heneicosapentaenoic acid (C21:5 n-3), clupanodonic acid (C22:5 n-3) and cervonic (docosahexaenoic) acid (C22:6 n-3; DHA).

*Content*:

| | Type I | Type II |
|---|---|---|
| *EPA, expressed as triglycerides* | minimum 13 per cent | 4 per cent to 12 per cent |
| *DHA, expressed as triglycerides* | minimum 9 per cent | minimum 20 per cent |
| *Total omega-3 acids, expressed as triglycerides* | minimum 28 per cent | minimum 28 per cent |

A suitable antioxidant may be added.

PRODUCTION

The content of dioxins and dioxin-like PCBs (polychlorinated biphenyls) is controlled using methods and limits in accordance with the requirements set in the European Union or other applicable regulations.

CHARACTERS

*Appearance*: pale yellow liquid.

*Solubility*: practically insoluble in water, very soluble in acetone and in heptane, slightly soluble in anhydrous ethanol.

IDENTIFICATION

A. Examine the chromatograms obtained in the assay for EPA and DHA.

*Results*: the peaks due to eicosapentaenoic acid methyl ester and docosahexaenoic acid methyl ester in the chromatogram obtained with test solution (b) are similar in retention time to the corresponding peaks in the chromatogram obtained with reference solutions ($a_1$) and ($a_2$).

B. It complies with the limits of the assay for EPA (type I or II).

TESTS

**Appearance**. The substance to be examined is not more intensely coloured than a reference solution prepared as follows: to 3.0 mL of red primary solution add 25.0 mL of yellow primary solution and dilute to 50.0 mL with a 10 g/L solution of *hydrochloric acid R* (*2.2.2, Method II*).

**Absorbance** (*2.2.25*): maximum 0.70 (type I) or maximum 0.50 (type II), at 233 nm.

Dilute 0.300 g of the substance to be examined to 50.0 mL with *trimethylpentane R*. Dilute 2.0 mL of the solution to 50.0 mL with *trimethylpentane R*.

**Acid value** (*2.5.1*): maximum 0.5, determined on 20.0 g.

**Anisidine value** (*2.5.36*): maximum 30.0 (type I) or maximum 15.0 (type II).

**Peroxide value** (*2.5.5, Method A*): maximum 10.0 (type I) or maximum 5.0 (type II).

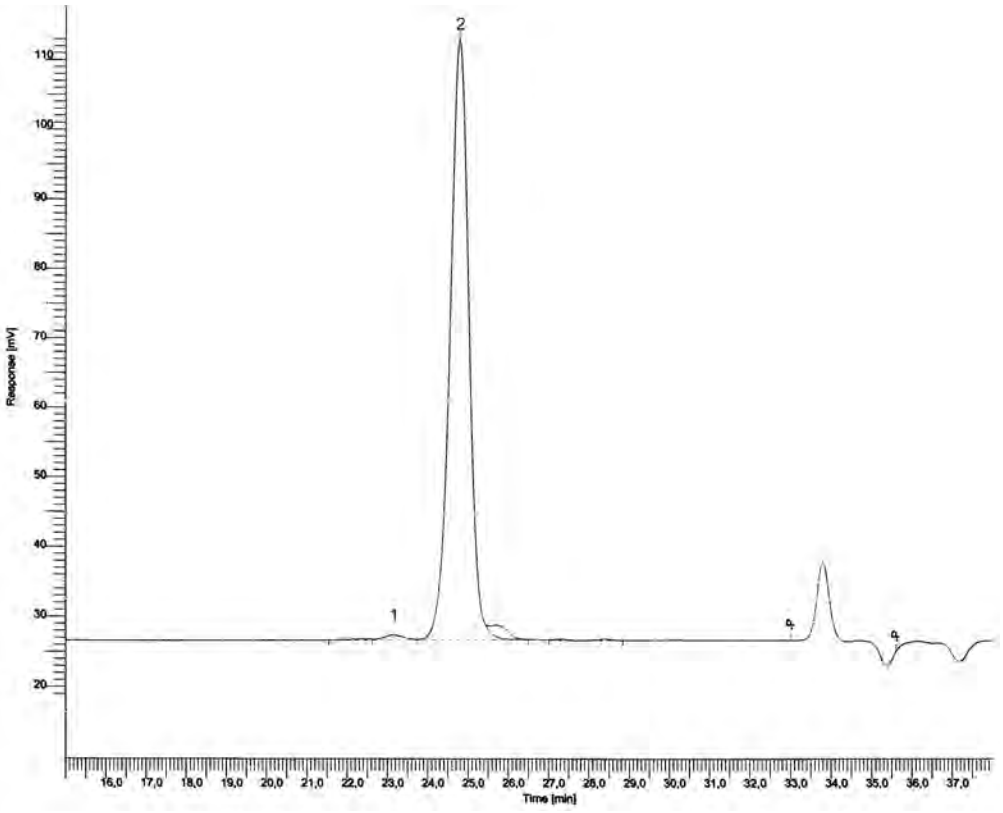
**Unsaponifiable matter** (*2.5.7*): maximum 1.5 per cent, determined on 5.0 g.

**Stearin**. Immerse at least 10 mL of the substance to be examined previously at room temperature, for 3 h in a bath of iced water or a thermostatically controlled bath at 0 ± 0.5 °C. The sample remains clear.

**Oligomers**. Size-exclusion chromatography (*2.2.30*).

*Test solution*. Dilute 50.0 mg of the substance to be examined to 10.0 mL with *tetrahydrofuran R*.

*Reference solution*. In a 100 mL volumetric flask dissolve 50 mg of *monodocosahexaenoin R*, 30 mg of *didocosahexaenoin R* and 20 mg of *tridocosahexaenoin R* in *tetrahydrofuran R* and dilute to 100.0 mL with the same solvent.



1. oligomers 2. triglycerides

Figure 1912.-1. – *Chromatogram for the test for oligomers in fish oil rich in omega-3 acids*

*Column*: 3 columns to be connected in series:

- *size*: *l* = 0.3 m, Ø = 7.8 mm;
- *stationary phase*: *styrene-divinylbenzene copolymer R* (5 µm) with the following pore sizes:
  - *column 1*: 50 nm;
  - *column 2*: 10 nm;
  - *column 3*: 5 nm;
- *connection sequence*: injector – column 1 – column 2 – column 3 – detector.

*Mobile phase*: *tetrahydrofuran R*.

*Flow rate*: 0.8 mL/min.

*Detection*: differential refractometer.

*Injection*: 40 µL.

*System suitability*: reference solution:

- *elution order*: tridocosahexaenoin, didocosahexaenoin, monodocosahexaenoin;
- *resolution*: minimum 2.0 between the peaks due to didocosahexaenoin and monodocosahexaenoin and minimum 1.0 between the peaks due to tridocosahexaenoin and didocosahexaenoin.

Identify the peaks from the chromatogram (Figure 1912.-1). Calculate the percentage content of oligomers using the following expression:

$$\frac{B}{A} \times 100$$

*A* = sum of the areas of all the peaks in the chromatogram;

*B* = area of the peak with a retention time less than the retention time of the triglyceride peak.

*Limit*:

- *oligomers*: maximum 1.5 per cent.

ASSAY

**EPA and DHA** (*2.4.29*). For identification of the peaks, see Figure 1912.-2.

**Total omega-3 acids** (*2.4.29*). See Figure 1912.-2.

STORAGE

Under an inert gas, in a well-filled, airtight container, protected from light.

LABELLING

The label states:

- the concentration of EPA, DHA and total omega-3 acids, expressed as triglycerides;
- the type of fish oil rich in omega-3 acids (type I or II).

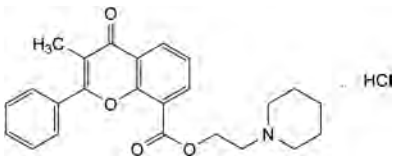
# FLAVOXATE HYDROCHLORIDE

## Flavoxati hydrochloridum



$C_{24}H_{26}ClNO_4$ $M_r$ 427.9
[3717-88-2]

DEFINITION

2-(Piperidin-1-yl)ethyl 3-methyl-4-oxo-2-phenyl-4*H*-1-benzopyran-8-carboxylate hydrochloride.

*Content*: 99.0 per cent to 101.0 per cent (dried substance).

CHARACTERS

*Appearance*: white or almost white, crystalline powder.

*Solubility*: slightly soluble in water, sparingly soluble in methylene chloride, slightly soluble in ethanol (96 per cent).

IDENTIFICATION

A. Infrared absorption spectrophotometry (*2.2.24*).
*Comparison*: *flavoxate hydrochloride CRS*.

B. It gives reaction (a) of chlorides (*2.3.1*).

TESTS

**Related substances**. Liquid chromatography (*2.2.29*). *Use freshly prepared solutions.*

*Solvent mixture.* Mix 20 volumes of a 0.4 g/L solution of *potassium dihydrogen phosphate R* adjusted to pH 3.0 with *phosphoric acid R* and 80 volumes of *acetonitrile R*.

*Test solution.* Dissolve 10.0 mg of the substance to be examined in the solvent mixture and dilute to 10.0 mL with the solvent mixture.

*Reference solution (a).* Dilute 1.0 mL of the test solution to 100.0 mL with the solvent mixture.

*Reference solution (b).* Dilute 1.0 mL of reference solution (a) to 10.0 mL with the solvent mixture.

*Reference solution (c).* Dissolve 6.0 mg of *flavoxate impurity A CRS* and 3.0 mg of *flavoxate impurity B CRS* in the solvent mixture, add 2.0 mL of the test solution and dilute to 100.0 mL with the solvent mixture. Dilute 1.0 mL of this solution to 20.0 mL with the solvent mixture.

*Column*:
- *size*: *l* = 0.25 m, Ø = 4.6 mm;
- *stationary phase*: spherical *end-capped octadecylsilyl silica gel for chromatography R* (5 µm).

*Mobile phase*:
- *mobile phase A*: 0.435 g/L solution of *dipotassium hydrogen phosphate R* adjusted to pH 7.5 with *phosphoric acid R*;
- *mobile phase B*: *acetonitrile R*;

| Time (min) | Mobile phase A (per cent *V/V*) | Mobile phase B (per cent *V/V*) |
|---|---|---|
| 0 - 10 | 20 | 80 |
| 10 - 20 | 20 → 10 | 80 → 90 |
| 20 - 25 | 10 | 90 |

*Flow rate*: 0.8 mL/min.

*Detection*: spectrophotometer at 254 nm.

*Injection*: 10 µL.

*Relative retention* with reference to flavoxate (retention time = about 10 min): impurity A = about 0.2; impurity B = about 0.8.

*System suitability*: reference solution (c):
- *resolution*: minimum 4.0 between the peaks due to impurity B and flavoxate.

*Limits*:
- *impurity A*: not more than the area of the corresponding peak in the chromatogram obtained with reference solution (c) (0.3 per cent);
- *impurity B*: not more than the area of the corresponding peak in the chromatogram obtained with reference solution (c) (0.15 per cent);
- *unspecified impurities*: for each impurity, not more than the area of the principal peak in the chromatogram obtained with reference solution (b) (0.10 per cent);
- *total of unspecified impurities*: not more than 0.5 times the area of the principal peak in the chromatogram obtained with reference solution (a) (0.5 per cent);
- *disregard limit*: 0.5 times the area of the principal peak in the chromatogram obtained with reference solution (b) (0.05 per cent).

**Loss on drying** (*2.2.32*): maximum 0.5 per cent, determined on 1.000 g by drying in an oven at 105 °C.

**Sulfated ash** (*2.4.14*): maximum 0.1 per cent, determined on 1.0 g.

ASSAY

*In order to avoid overheating in the reaction medium, mix thoroughly throughout and stop the titration immediately after the end-point has been reached.*

Dissolve 0.350 g in 10 mL of *anhydrous formic acid R* and add 40 mL of *acetic anhydride R*. Titrate with *0.1 M perchloric acid*, determining the end-point potentiometrically (*2.2.20*).

1 mL of *0.1 M perchloric acid* is equivalent to 42.79 mg of $C_{24}H_{26}ClNO_4$.

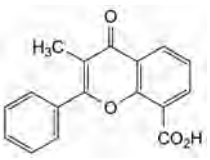
STORAGE

Protected from light.

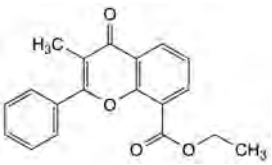
IMPURITIES

*Specified impurities*: *A, B.*

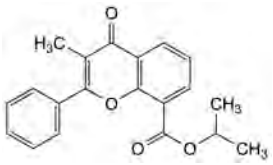
*Other detectable impurities* (the following substances would, if present at a sufficient level, be detected by one or other of the tests in the monograph. They are limited by the general acceptance criterion for other/unspecified impurities and/or by the general monograph *Substances for pharmaceutical use (2034)*. It is therefore not necessary to identify these impurities for demonstration of compliance. See also *5.10. Control of impurities in substances for pharmaceutical use*): *C.*



A. 3-methyl-4-oxo-2-phenyl-4*H*-1-benzopyran-8-carboxylic acid,



B. ethyl 3-methyl-4-oxo-2-phenyl-4*H*-1-benzopyran-8-carboxylate,

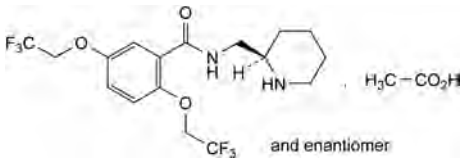


C. 1-methylethyl 3-methyl-4-oxo-2-phenyl-4*H*-1-benzopyran-8-carboxylate.

**01/2017:1324**

# FLECAINIDE ACETATE

## Flecainidi acetas



$C_{19}H_{24}F_6N_2O_5$ $M_r$ 474.4
[54143-56-5]

DEFINITION

*N*-[(*RS*)-(Piperidin-2-ylmethyl)]-2,5-bis(2,2,2-trifluoroethoxy)benzamide acetate.

*Content*: 98.0 per cent to 101.0 per cent (dried substance).

CHARACTERS

*Appearance*: white or almost white, very hygroscopic, crystalline powder.

*Solubility*: soluble in water and in anhydrous ethanol. It is freely soluble in dilute acetic acid and practically insoluble in dilute hydrochloric acid.

IDENTIFICATION

*First identification*: *A, C.*

*Second identification*: *A, B, D.*

A. Melting point (*2.2.14*): 146 °C to 152 °C, with a melting range not greater than 3 °C.

B. Ultraviolet and visible absorption spectrophotometry (*2.2.25*).

*Test solution.* Dissolve 50 mg in *ethanol (96 per cent) R* and dilute to 50.0 mL with the same solvent. Dilute 5.0 mL of the solution to 50.0 mL with *ethanol (96 per cent) R*.

*Spectral range*: 230-350 nm.

*Absorption maximum*: at 298 nm.

*Specific absorbance at the absorption maximum*: 61 to 65.

C. Infrared absorption spectrophotometry (*2.2.24*).

*Comparison*: *flecainide acetate CRS*.

D. It gives reaction (b) of acetates (*2.3.1*).

TESTS

**Appearance of solution**. The solution is clear (*2.2.1*) and colourless (*2.2.2, Method II*).

Dissolve 0.50 g in *water R*, add 0.1 mL of *glacial acetic acid R* and dilute to 20 mL with *water R*.

**pH** (*2.2.3*): 6.7 to 7.1.

Dissolve 0.25 g in *carbon dioxide-free water R* and dilute to 10 mL with the same solvent.

**Impurity B**. Thin-layer chromatography (*2.2.27*).

*Test solution.* Dissolve 0.10 g of the substance to be examined in *methanol R* and dilute to 2.0 mL with the same solvent.

*Reference solution (a).* Dissolve 10.0 mg of *flecainide impurity B CRS* in *methanol R* and dilute to 100.0 mL with the same solvent.

*Reference solution (b).* Dissolve 0.10 g of the substance to be examined in reference solution (a) and dilute to 2.0 mL with reference solution (a).

*Plate*: *TLC silica gel $F_{254}$ plate R.*

*Mobile phase*: freshly prepared mixture of 5 volumes of *concentrated ammonia R* and 95 volumes of *acetone R*.

*Application*: 5 µL.

*Development*: over 1/2 of the plate.

*Drying*: at 100-105 °C until the ammonia has evaporated.

*Detection*: examine in ultraviolet light at 254 nm to establish the position of the flecainide spot, then spray with a freshly prepared 2 g/L solution of *ninhydrin R* in *methanol R* and heat at 100-110 °C for 2-5 min; examine in daylight.

*System suitability*: reference solution (b):

– the chromatogram shows 2 clearly separated spots.

*Limit*:

– *impurity B*: any spot due to impurity B is not more intense than the corresponding spot in the chromatogram obtained with reference solution (a) (0.2 per cent).

**Related substances**. Liquid chromatography (*2.2.29*).

*Test solution.* Dissolve 0.25 g of the substance to be examined in *methanol R* and dilute to 25.0 mL with the same solvent.

*Reference solution (a).* Dilute 1.0 mL of the test solution to 100.0 mL with *methanol R*. Dilute 1.0 mL of this solution to 10.0 mL with *methanol R*.

*Reference solution (b).* Dissolve 5 mg of *flecainide impurity A CRS* in *methanol R* and dilute to 5.0 mL with the same solvent.

*Reference solution (c).* Dissolve 5 mg of *flecainide for system suitability CRS* (containing impurities C, D and E) in 1.0 mL of *methanol R*.

*Column*:

– *size*: *l* = 0.15 m, Ø = 4.6 mm;

– *stationary phase*: *end-capped octylsilyl silica gel for chromatography R* (5 µm).

*Mobile phase*:

– *mobile phase A*: mix 2 mL of *concentrated ammonia R*, 4 mL of *triethylamine R* and 985 mL of *water R*; add 6 mL of *phosphoric acid R* and adjust to pH 2.8 with *concentrated ammonia R*;

– *mobile phase B*: *acetonitrile R*;

| Time (min) | Mobile phase A (per cent *V/V*) | Mobile phase B (per cent *V/V*) |
|---|---|---|
| 0 - 5 | 90 | 10 |
| 5 - 17 | 90 → 30 | 10 → 70 |
| 17 - 22 | 30 | 70 |

If a suitable baseline cannot be obtained, use another grade of triethylamine.

*Flow rate*: 2 mL/min.

*Detection*: spectrophotometer at 300 nm.

*Injection*: 20 µL.

*Identification of impurities*: use the chromatogram supplied with *flecainide for system suitability CRS* and the chromatogram obtained with reference solution (c) to identify the peaks due to impurities C, D, and E; use the chromatogram obtained with reference solution (b) to identify the peak due to impurity A.

*Relative retention* with reference to flecainide (retention time = about 11 min): impurity C = about 0.9; impurity A = about 1.1; impurity E = about 1.28; impurity D = about 1.32.

*System suitability*: reference solution (c):

– *resolution*: minimum 1.5 between the peaks due to impurities E and D.

*Limits*:

– *impurities A, C, D, E*: for each impurity, not more than twice the area of the principal peak in the chromatogram obtained with reference solution (a) (0.2 per cent);
– *unspecified impurities*: for each impurity, not more than the area of the principal peak in the chromatogram obtained with reference solution (a) (0.10 per cent);
– *total*: not more than 5 times the area of the principal peak in the chromatogram obtained with reference solution (a) (0.5 per cent);
– *disregard limit*: 0.5 times the area of the principal peak in the chromatogram obtained with reference solution (a) (0.05 per cent).

**Loss on drying** (*2.2.32*): maximum 0.5 per cent, determined on 1.000 g by drying in an oven at 60 °C at a pressure not exceeding 0.6 kPa for 2 h.

**Sulfated ash** (*2.4.14*): maximum 0.1 per cent, determined on 1.0 g in a platinum crucible.

ASSAY

Dissolve 0.400 g in 25 mL of *anhydrous acetic acid R*. Titrate with *0.1 M perchloric acid*, determining the end-point potentiometrically (*2.2.20*).

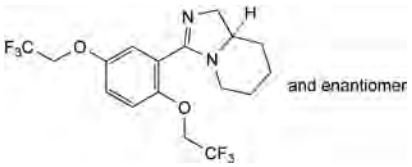
1 mL of *0.1 M perchloric acid* is equivalent to 47.44 mg of $C_{19}H_{24}F_6N_2O_5$.

STORAGE

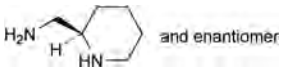
In an airtight container, protected from light.

IMPURITIES

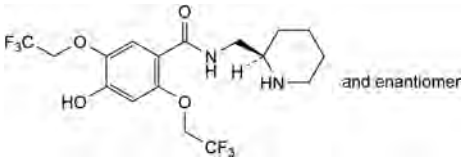
*Specified impurities: A, B, C, D, E.*



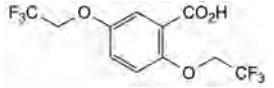
A. (8a*RS*)-3-[2,5-bis(2,2,2-trifluoroethoxy)phenyl]-1,5,6,7,8,8a-hexahydroimidazo[1,5-*a*]pyridine,



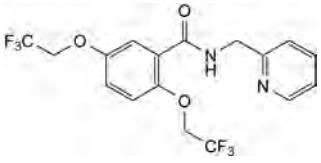
B. (*RS*)-(piperidin-2-yl)methanamine,



C. (*RS*)-4-hydroxy-*N*-(piperidin-2-ylmethyl)-2,5-bis(2,2,2-trifluoroethoxy)benzamide,



D. 2,5-bis(2,2,2-trifluoroethoxy)benzoic acid,

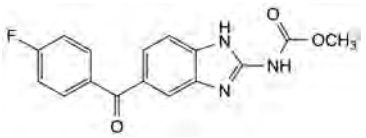


E. *N*-(pyridin-2-ylmethyl)-2,5-bis(2,2,2-trifluoroethoxy) benzamide.

**01/2008:1721**
**corrected 7.0**

# FLUBENDAZOLE

## Flubendazolum



$C_{16}H_{12}FN_3O_3$ $M_r$ 313.3
[31430-15-6]

DEFINITION

Methyl [5-(4-fluorobenzoyl)-1*H*-benzimidazol-2-yl]carbamate.

*Content*: 99.0 per cent to 101.0 per cent (dried substance).

CHARACTERS

*Appearance*: white or almost white powder.

*Solubility*: practically insoluble in water, in alcohol and in methylene chloride.

It shows polymorphism (*5.9*).

IDENTIFICATION

Infrared absorption spectrophotometry (*2.2.24*), without recrystallisation.

*Comparison*: *flubendazole CRS*.

TESTS

**Related substances**. Liquid chromatography (*2.2.29*).

*Test solution*. Dissolve 0.100 g of the substance to be examined in *dimethylformamide R* and dilute to 100.0 mL with the same solvent.

*Reference solution (a)*. Dissolve 5 mg of *flubendazole for system suitability CRS* in *dimethylformamide R* and dilute to 5.0 mL with the same solvent.

*Reference solution (b)*. Dilute 1.0 mL of the test solution to 100.0 mL with *dimethylformamide R*. Dilute 5.0 mL of this solution to 20.0 mL with *dimethylformamide R*.

*Column*:

– *size*: *l* = 0.10 m, Ø = 4.6 mm,
– *stationary phase*: *base-deactivated octadecylsilyl silica gel for chromatography R* (3 µm),
– *temperature*: 40 °C.

*Mobile phase*:

– *mobile phase A*: 7.5 g/L solution of *ammonium acetate R*,
– *mobile phase B*: *acetonitrile R*,

| Time (min) | Mobile phase A (per cent *V/V*) | Mobile phase B (per cent *V/V*) |
|---|---|---|
| 0 - 15 | 90 → 75 | 10 → 25 |
| 15 - 30 | 75 → 45 | 25 → 55 |
| 30 - 32 | 45 → 10 | 55 → 90 |
| 32 - 37 | 10 | 90 |

*Flow rate*: 1.2 mL/min.

*Detection*: spectrophotometer at 250 nm.

*Injection*: 10 µL.

*System suitability*: reference solution (a):

– the chromatogram obtained is similar to the chromatogram supplied with *flubendazole for system suitability CRS*.

*Limits*:

– *correction factors*: for the calculation of contents, multiply the peak areas of the following impurities by the corresponding correction factor: impurity A = 1.4; impurity C = 1.3; impurity D = 1.3; impurity G = 1.4,
– *impurities A, B, C, D, E, G*: for each impurity, not more than the area of the principal peak in the chromatogram obtained with reference solution (b) (0.25 per cent),
– *impurity F*: not more than twice the area of the principal peak in the chromatogram obtained with reference solution (b) (0.5 per cent),
– *any other impurity with a relative retention between 1.2 and 1.3*: not more than the area of the principal peak in the chromatogram obtained with reference solution (b) (0.25 per cent),
– *total*: not more than 6 times the area of the principal peak in the chromatogram obtained with reference solution (b) (1.5 per cent),
– *disregard limit*: 0.2 times the area of the principal peak in the chromatogram obtained with reference solution (b) (0.05 per cent).

**Loss on drying** (*2.2.32*): maximum 0.5 per cent, determined on 1.000 g by drying in an oven at 105 °C, for 4 h.

**Sulfated ash** (*2.4.14*): maximum 0.1 per cent, determined on 1.0 g.

ASSAY

Dissolve 0.250 g in 3 mL of *anhydrous formic acid R* and add 50 mL of a mixture of 1 volume of *anhydrous acetic acid R* and 7 volumes of *methyl ethyl ketone R*. Titrate with *0.1 M perchloric acid*, determining the end-point potentiometrically (*2.2.20*).

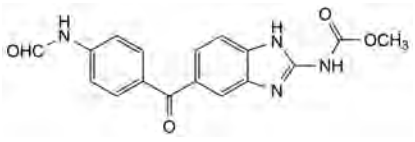
1 mL of *0.1 M perchloric acid* is equivalent to 31.33 mg of $C_{16}H_{12}FN_3O_3$.

STORAGE

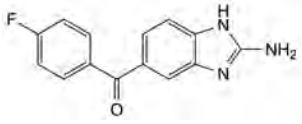
Protected from light.

IMPURITIES

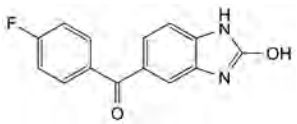
*Specified impurities: A, B, C, D, E, F, G.*



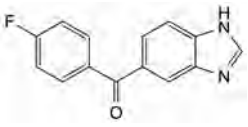
A. methyl [5-[4-(formylamino)benzoyl]-1*H*-benzimidazol-2-yl]carbamate,



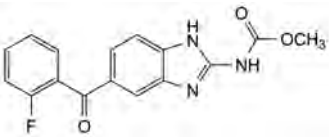
B. (2-amino-1*H*-benzimidazol-5-yl)(4-fluorophenyl)-methanone,



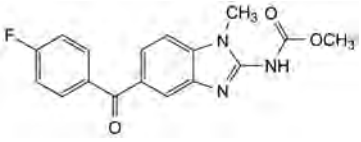
C. (4-fluorophenyl)(2-hydroxy-1*H*-benzimidazol-5-yl)methanone,



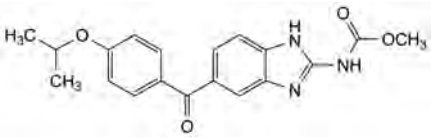
D. (1*H*-benzimidazol-5-yl)(4-fluorophenyl)methanone,



E. methyl [5-(2-fluorobenzoyl)-1*H*-benzimidazol-2-yl]carbamate,



F. methyl [5-(4-fluorobenzoyl)-1-methyl-1*H*-benzimidazol-2-yl]carbamate,

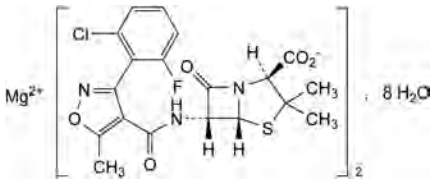


G. methyl [5-[4-(1-methylethoxy)benzoyl]-1*H*-benzimidazol-2-yl]carbamate.

**07/2008:2346**

# FLUCLOXACILLIN MAGNESIUM OCTAHYDRATE

## Flucloxacillinum magnesicum octahydricum



$C_{38}H_{32}Cl_2F_2MgN_6O_{10}S_2,8H_2O$ $M_r$ 1074

[58486-36-5]

DEFINITION

Magnesium bis[(2*S*,5*R*,6*R*)-6-[[[3-(2-chloro-6-fluorophenyl)-5-methylisoxazol-4-yl]carbonyl]amino]-3,3-dimethyl-7-oxo-4-thia-1-azabicyclo[3.2.0]heptane-2-carboxylate] octahydrate.

Semi-synthetic product derived from a fermentation product.

*Content*: 95.0 per cent to 102.0 per cent (anhydrous substance).

CHARACTERS

*Appearance*: white or almost white, crystalline powder.

*Solubility*: slightly soluble in water, freely soluble in methanol.

IDENTIFICATION

*First identification: A, C.*

*Second identification: B, C.*

A. Infrared absorption spectrophotometry (*2.2.24*).
*Comparison*: *flucloxacillin magnesium octahydrate CRS*.

B. Thin-layer chromatography (*2.2.27*).
*Test solution*. Dissolve 25 mg of the substance to be examined in 5 mL of *water R*.

*Reference solution (a).* Dissolve 25 mg of *flucloxacillin sodium CRS* in 5 mL of *water R*.

*Reference solution (b).* Dissolve 25 mg of *cloxacillin sodium CRS*, 25 mg of *dicloxacillin sodium CRS* and 25 mg of *flucloxacillin sodium CRS* in 5 mL of *water R*.

*Plate*: *TLC silanised silica gel plate R*.

*Mobile phase*: mix 30 volumes of *acetone R* and 70 volumes of a 154 g/L solution of *ammonium acetate R* previously adjusted to pH 5.0 with *glacial acetic acid R*.

*Application*: 1 µL.

*Development*: over 2/3 of the plate.

*Drying*: in air.

*Detection*: expose the plate to iodine vapour until the spots appear.

*System suitability*: reference solution (b):

– the chromatogram shows 3 clearly separated spots.

*Results*: the principal spot in the chromatogram obtained with the test solution is similar in position, colour and size to the principal spot in the chromatogram obtained with reference solution (a).

C. It gives the reaction of magnesium (*2.3.1*).

TESTS

**pH** (*2.2.3*): 4.5 to 6.5.

Dissolve 0.25 g in *carbon dioxide-free water R* and dilute to 50 mL with the same solvent.

**Specific optical rotation** (*2.2.7*): + 163 to + 175 (anhydrous substance).

Dissolve 0.250 g in *water R* and dilute to 50.0 mL with the same solvent.

**Related substances**. Liquid chromatography (*2.2.29*). *Prepare the solutions immediately before use.*

*Test solution (a).* Dissolve 50.0 mg of the substance to be examined in the mobile phase and dilute to 50.0 mL with the mobile phase.

*Test solution (b).* Dilute 5.0 mL of test solution (a) to 50.0 mL with the mobile phase.

*Reference solution (a).* Dissolve 50.0 mg of *flucloxacillin sodium CRS* in the mobile phase and dilute to 50.0 mL with the mobile phase. Dilute 5.0 mL of this solution to 50.0 mL with the mobile phase.

*Reference solution (b).* Dilute 5.0 mL of test solution (b) to 50.0 mL with the mobile phase.

*Reference solution (c).* In order to prepare impurity A *in situ*, add 1 mL of *sodium carbonate solution R* to 10 mg of the substance to be examined, dilute to 25 mL with *water R* and place in an oven at 70 °C for 20 min.

*Reference solution (d).* Dilute 1 mL of reference solution (c) to 10 mL with a 27 g/L solution of *dipotassium hydrogen phosphate R* previously adjusted to pH 3.5 with *dilute phosphoric acid R*.

*Reference solution (e).* In order to prepare impurity B *in situ*, add 5 mL of *dilute hydrochloric acid R* to 10 mL of reference solution (c), dilute to 25 mL with *water R* and place in an oven at 70 °C for 1 h. Dilute 1 mL of this solution to 5 mL with a 27 g/L solution of *dipotassium hydrogen phosphate R* previously adjusted to pH 7.0 with *phosphoric acid R*.

*Reference solution (f).* Dilute 2 mL of reference solution (a) to 10 mL with reference solution (e).

*Reference solution (g).* Dissolve 1.5 mg of *flucloxacillin impurity C CRS* in 1 mL of the mobile phase and dilute to 50 mL with the mobile phase.

*Reference solution (h).* Dissolve 1 mg of *flucloxacillin impurity D CRS* in 100 mL of the mobile phase.

*Reference solution (i).* Dissolve 1 mg of *flucloxacillin impurity E CRS* in 100 mL of the mobile phase.

*Column*:

– *size*: *l* = 0.25 m, Ø = 4 mm;

– *stationary phase*: *octadecylsilyl silica gel for chromatography R* (5 µm);

– *temperature*: 40 °C.

*Mobile phase*: mix 25 volumes of *acetonitrile R1* and 75 volumes of a 2.7 g/L solution of *potassium dihydrogen phosphate R* previously adjusted to pH 5.0 with *dilute sodium hydroxide solution R*.

*Flow rate*: 1 mL/min.

*Detection*: spectrophotometer at 225 nm.

*Injection*: 20 µL of test solution (a) and reference solutions (b), (d), (e), (f), (g), (h) and (i).

*Run time*: 7 times the retention time of flucloxacillin.

*Identification of impurities*: use the chromatograms obtained with reference solutions (d), (e), (g), (h) and (i) to identify the peaks due to impurities A, B, C, D and E respectively.

*Relative retention* with reference to flucloxacillin (retention time = about 8 min): impurity C = about 0.2; impurity A (isomer 1) = about 0.3; impurity A (isomer 2) = about 0.5; impurity D = about 0.6; impurity B (isomer 1) = about 0.8; impurity B (isomer 2) = about 0.9; impurity E = about 6.

*System suitability*: reference solution (f):

– *resolution*: minimum 2.0 between the 2nd peak due to impurity B (isomer 2) and the peak due to flucloxacillin.

*Limits*:

– *correction factor*: for the calculation of content, multiply the peak area of impurity C by 3.3;

– *impurity A* (sum of the 2 isomers): the sum of the areas of the 2 peaks is not more than twice the area of the principal peak in the chromatogram obtained with reference solution (b) (2.0 per cent);

– *impurity B* (sum of the 2 isomers): the sum of the areas of the 2 peaks is not more than the area of the principal peak in the chromatogram obtained with reference solution (b) (1.0 per cent);

– *impurity C*: not more than the area of the principal peak in the chromatogram obtained with reference solution (b) (1.0 per cent);

– *impurities D, E*: for each impurity, not more than 0.3 times the area of the principal peak in the chromatogram obtained with reference solution (b) (0.3 per cent);

– *any other impurity*: for each impurity, not more than 0.3 times the area of the principal peak in the chromatogram obtained with reference solution (b) (0.3 per cent);

– *total*: not more than 3 times the area of the principal peak in the chromatogram obtained with reference solution (b) (3.0 per cent);

– *disregard limit*: 0.05 times the area of the principal peak in the chromatogram obtained with reference solution (b) (0.05 per cent).

**2-Ethylhexanoic acid** (*2.4.28*): maximum 0.8 per cent *m/m*.

**Water** (*2.5.12*): 12.0 per cent to 15.0 per cent, determined on 0.100 g.

ASSAY

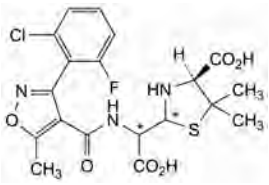
Liquid chromatography (*2.2.29*) as described in the test for related substances with the following modifications.

*Injection*: test solution (b) and reference solution (a).

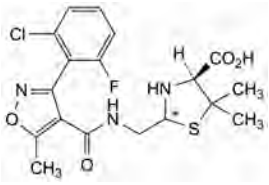
Calculate the percentage content of $C_{38}H_{32}Cl_2F_2MgN_6O_{10}S_2$ from the declared content of *flucloxacillin sodium CRS*, multiplying by 0.9773.

IMPURITIES

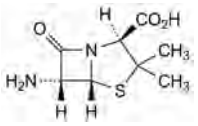
*Specified impurities: A, B, C, D, E.*



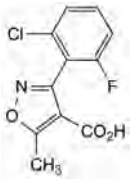
A. (4*S*)-2-[carboxy[[[3-(2-chloro-6-fluorophenyl)-5-methylisoxazol-4-yl]carbonyl]amino]methyl]-5,5-dimethylthiazolidine-4-carboxylic acid (penicilloic acids of flucloxacillin),



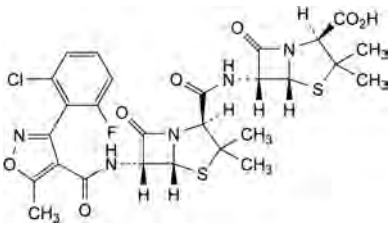
B. (2*RS*,4*S*)-2-[[[[3-(2-chloro-6-fluorophenyl)-5-methylisoxazol-4-yl]carbonyl]amino]methyl]-5,5-dimethylthiazolidine-4-carboxylic acid (penilloic acids of flucloxacillin),



C. (2*S*,5*R*,6*R*)-6-amino-3,3-dimethyl-7-oxo-4-thia-1-azabicyclo[3.2.0]heptane-2-carboxylic acid (6-aminopenicillanic acid),



D. 3-(2-chloro-6-fluorophenyl)-5-methylisoxazole-4-carboxylic acid,



E. (2*S*,5*R*,6*R*)-6-[[[(2*S*,5*R*,6*R*)-6-[[[3-(2-chloro-6-fluorophenyl)-5-methylisoxazol-4-yl]carbonyl]amino]-3,3-dimethyl-7-oxo-4-thia-1-azabicyclo[3.2.0]hept-2-yl]carbonyl]amino]-3,3-dimethyl-7-oxo-4-thia-1-azabicyclo[3.2.0]heptane-2-carboxylic acid (6-APA flucloxacillin amide).

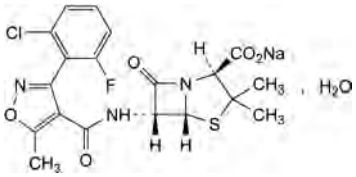
**corrected 10.0**

# FLUCLOXACILLIN SODIUM

## Flucloxacillinum natricum



$C_{19}H_{16}ClFN_3NaO_5S,H_2O$ $M_r$ 493.9

DEFINITION

Sodium (2*S*,5*R*,6*R*)-6-[[[3-(2-chloro-6-fluorophenyl)-5-methyl-1,2-oxazol-4-yl]carbonyl]amino]-3,3-dimethyl-7-oxo-4-thia-1-azabicyclo[3.2.0]heptane-2-carboxylate monohydrate.

Semi-synthetic product derived from a fermentation product.

*Content*: 95.0 per cent to 102.0 per cent (anhydrous substance).

CHARACTERS

*Appearance*: white or almost white, hygroscopic, crystalline powder.

*Solubility*: freely soluble in water and in methanol, soluble in ethanol (96 per cent).

IDENTIFICATION

*First identification: A, D.*

*Second identification: B, C, D.*

A. Infrared absorption spectrophotometry (*2.2.24*).

*Comparison*: *flucloxacillin sodium CRS.*

B. Thin-layer chromatography (*2.2.27*).

*Test solution.* Dissolve 25 mg of the substance to be examined in 5 mL of *water R.*

*Reference solution (a).* Dissolve 25 mg of *flucloxacillin sodium CRS* in 5 mL of *water R.*

*Reference solution (b).* Dissolve 25 mg of *cloxacillin sodium CRS*, 25 mg of *dicloxacillin sodium CRS* and 25 mg of *flucloxacillin sodium CRS* in 5 mL of *water R.*

*Plate*: *TLC silanised silica gel plate R.*

*Mobile phase*: mix 30 volumes of *acetone R* and 70 volumes of a 154 g/L solution of *ammonium acetate R* adjusted to pH 5.0 with *glacial acetic acid R.*

*Application*: 1 µL.

*Development*: over a path of 15 cm.

*Drying*: in air.

*Detection*: expose to iodine vapour until the spots appear and examine in daylight.

*System suitability*: reference solution (b):

– the chromatogram shows 3 clearly separated spots.

*Results*: the principal spot in the chromatogram obtained with the test solution is similar in position, colour and size to the principal spot in the chromatogram obtained with reference solution (a).

C. Place about 2 mg in a test-tube about 150 mm long and 15 mm in diameter. Moisten with 0.05 mL of *water R* and add 2 mL of *sulfuric acid-formaldehyde reagent R.* Mix the contents of the tube by swirling; the colour of the solution is slightly greenish-yellow. Place the test-tube in a water-bath for 1 min; the solution becomes yellow.

D. It gives reaction (a) of sodium (*2.3.1*).

TESTS

**Solution S**. Dissolve 2.50 g in *carbon dioxide-free water R* and dilute to 25.0 mL with the same solvent.

**Appearance of solution**. Solution S is clear (*2.2.1*) and its absorbance (*2.2.25*) at 430 nm is not greater than 0.04.

**pH** (*2.2.3*): 5.0 to 7.0 for solution S.

**Specific optical rotation** (*2.2.7*): + 158 to + 168 (anhydrous substance).

Dissolve 0.250 g in *water R* and dilute to 25.0 mL with the same solvent.

**Related substances**. Liquid chromatography (*2.2.29*).

*Test solution (a).* Dissolve 50.0 mg of the substance to be examined in the mobile phase and dilute to 50.0 mL with the mobile phase.

*Test solution (b).* Dilute 5.0 mL of test solution (a) to 50.0 mL with the mobile phase.

*Reference solution (a).* Dissolve 50.0 mg of *flucloxacillin sodium CRS* in the mobile phase and dilute to 50.0 mL with the mobile phase. Dilute 5.0 mL of this solution to 50.0 mL with the mobile phase.

*Reference solution (b).* Dilute 5.0 mL of reference solution (a) to 50.0 mL with the mobile phase.

*Reference solution (c).* Dissolve 5 mg of *flucloxacillin sodium CRS* and 5 mg of *cloxacillin sodium CRS* in the mobile phase, then dilute to 50.0 mL with the mobile phase.

*Column*:

- *size*: *l* = 0.25 m, Ø = 4 mm;
- *stationary phase*: *octadecylsilyl silica gel for chromatography R* (5 µm).

*Mobile phase*: mix 25 volumes of *acetonitrile R1* and 75 volumes of a 2.7 g/L solution of *potassium dihydrogen phosphate R* adjusted to pH 5.0 with *dilute sodium hydroxide solution R*.

*Flow rate*: 1 mL/min.

*Detection*: spectrophotometer at 225 nm.

*Injection*: 20 µL of test solution (a) and reference solutions (b) and (c).

*Run time*: 6 times the retention time of flucloxacillin.

*System suitability*: reference solution (c):

- *resolution*: minimum 2.5 between the peaks due to cloxacillin (1st peak) and flucloxacillin (2nd peak).

*Limits*:

- *impurities A, B, C, D, E*: for each impurity, not more than the area of the principal peak in the chromatogram obtained with reference solution (b) (1 per cent);
- *total*: not more than 5 times the area of the principal peak in the chromatogram obtained with reference solution (b) (5 per cent);
- *disregard limit*: 0.05 times the area of the principal peak in the chromatogram obtained with reference solution (b) (0.05 per cent).

***N,N*-Dimethylaniline** (*2.4.26, Method B*): maximum 20 ppm.

**2-Ethylhexanoic acid** (*2.4.28*): maximum 0.8 per cent *m/m*.

**Water** (*2.5.12*): 3.0 per cent to 4.5 per cent, determined on 0.300 g.

**Pyrogens** (*2.6.8*). If intended for use in the manufacture of parenteral preparations without a further appropriate procedure for the removal of pyrogens, it complies with the test. Inject per kilogram of the rabbit's mass 1 mL of a solution in *water for injections R* containing 20 mg of the substance to be examined per millilitre.

ASSAY

Liquid chromatography (*2.2.29*) as described in the test for related substances with the following modifications.

*Injection*: test solution (b) and reference solution (a).

*System suitability*: reference solution (a):

- *repeatability*: maximum relative standard deviation of 1.0 per cent after 6 injections.

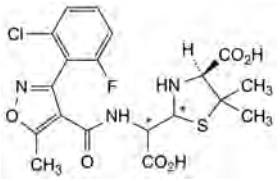
Calculate the percentage content of $C_{19}H_{16}ClFN_3NaO_5S$ from the declared content of *flucloxacillin sodium CRS*.

STORAGE

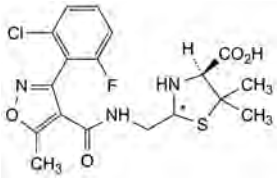
In an airtight container, at a temperature not exceeding 25 °C. If the substance is sterile, store in a sterile, airtight, tamper-evident container.

IMPURITIES

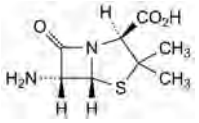
*Specified impurities: A, B, C, D, E.*



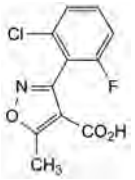
A. (4*S*)-2-[carboxy[[[3-(2-chloro-6-fluorophenyl)-5-methyl-1,2-oxazol-4-yl]carbonyl]amino]methyl]-5,5-dimethyl-1,3-thiazolidine-4-carboxylic acid (penicilloic acids of flucloxacillin),



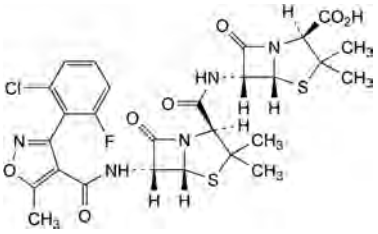
B. (2*RS*,4*S*)-2-[[[[3-(2-chloro-6-fluorophenyl)-5-methyl-1,2-oxazol-4-yl]carbonyl]amino]methyl]-5,5-dimethyl-1,3-thiazolidine-4-carboxylic acid (penilloic acids of flucloxacillin),



C. (2*S*,5*R*,6*R*)-6-amino-3,3-dimethyl-7-oxo-4-thia-1-azabicyclo[3.2.0]heptane-2-carboxylic acid (6-aminopenicillanic acid),



D. 3-(2-chloro-6-fluorophenyl)-5-methyl-1,2-oxazole-4-carboxylic acid,

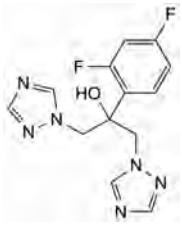


E. (2*S*,5*R*,6*R*)-6-[[[(2*S*,5*R*,6*R*)-6-[[[3-(2-chloro-6-fluorophenyl)-5-methyl-1,2-oxazol-4-yl]carbonyl]amino]-3,3-dimethyl-7-oxo-4-thia-1-azabicyclo[3.2.0]hept-2-yl]carbonyl]amino]-3,3-dimethyl-7-oxo-4-thia-1-azabicyclo[3.2.0]heptane-2-carboxylic acid.

**01/2017:2287**

# FLUCONAZOLE

## Fluconazolum



$C_{13}H_{12}F_2N_6O$ $M_r$ 306.3
[86386-73-4]

DEFINITION

2-(2,4-Difluorophenyl)-1,3-bis(1*H*-1,2,4-triazol-1-yl)propan-2-ol.

*Content*: 99.0 per cent to 101.0 per cent (dried substance).

CHARACTERS

*Appearance*: white or almost white, hygroscopic, crystalline powder.

*Solubility*: slightly soluble in water, freely soluble in methanol, soluble in acetone.

It shows polymorphism (*5.9*).

IDENTIFICATION

Infrared absorption spectrophotometry (*2.2.24*).

*Comparison*: *fluconazole CRS*.

If the spectra obtained in the solid state show differences, dissolve the substance to be examined and the reference substance separately in the minimum volume of *methylene chloride R*, evaporate to dryness on a water-bath and record new spectra using the residues.

TESTS

**Appearance of solution**. The solution is clear (*2.2.1*) and colourless (*2.2.2, Method II*).

Dissolve 1.0 g in *methanol R* and dilute to 20 mL with the same solvent.

**Related substances**. Liquid chromatography (*2.2.29*).

*Test solution*. Dissolve 0.100 g of the substance to be examined in the mobile phase, sonicate if necessary, and dilute to 10.0 mL with the mobile phase.

*Reference solution (a)*. Dilute 5.0 mL of the test solution to 100.0 mL with the mobile phase. Dilute 1.0 mL of this solution to 10.0 mL with the mobile phase.

*Reference solution (b)*. Dissolve 5 mg of *fluconazole for peak identification CRS* (containing impurity A) in the mobile phase, sonicate if necessary, and dilute to 10 mL with the mobile phase.

*Reference solution (c)*. Dissolve 3.0 mg of *fluconazole impurity B CRS* in the mobile phase, sonicate if necessary, and dilute to 100.0 mL with the mobile phase.

*Reference solution (d)*. Dissolve 3.0 mg of *fluconazole impurity C CRS* in the mobile phase and dilute to 20.0 mL with the mobile phase.

*Reference solution (e)*. To 1.0 mL of reference solution (d) add 1.0 mL of the test solution and dilute to 10.0 mL with the mobile phase.

*Reference solution (f)*. Dilute 1.0 mL of reference solution (d) to 10.0 mL with the mobile phase.

*Column*:
- *size*: *l* = 0.15 m, Ø = 4.6 mm;
- *stationary phase*: *octadecylsilyl silica gel for chromatography R1* (5 µm);
- *temperature*: 40 °C.

*Mobile phase*: *acetonitrile R*, 0.63 g/L solution of *ammonium formate R* (14:86 *V/V*).

*Flow rate*: 1.0 mL/min.

*Detection*: spectrophotometer at 260 nm.

*Injection*: 20 µL of the test solution and reference solutions (a), (b), (c), (e) and (f).

*Run time*: 3.5 times the retention time of fluconazole.

*Identification of impurities*: use the chromatogram supplied with *fluconazole for peak identification CRS* and the chromatogram obtained with reference solution (b) to identify the peak due to impurity A; use the chromatogram obtained with reference solution (c) to identify the peak due to impurity B and the chromatogram obtained with reference solution (f) to identify the peak due to impurity C.

*Relative retention* with reference to fluconazole (retention time = about 11 min): impurity B = about 0.4; impurity A = about 0.5; impurity C = about 0.8.

*System suitability*: reference solution (e):
- *resolution*: minimum 3.0 between the peaks due to impurity C and fluconazole.

*Limits*:
- *impurity A*: not more than 0.8 times the area of the principal peak in the chromatogram obtained with reference solution (a) (0.4 per cent);
- *impurity B*: not more than the area of the principal peak in the chromatogram obtained with reference solution (c) (0.3 per cent);
- *impurity C*: not more than the area of the principal peak in the chromatogram obtained with reference solution (f) (0.15 per cent);
- *unspecified impurities*: for each impurity, not more than 0.2 times the area of the principal peak in the chromatogram obtained with reference solution (a) (0.10 per cent);
- *total*: maximum 0.6 per cent;
- *disregard limit*: 0.1 times the area of the principal peak in the chromatogram obtained with reference solution (a) (0.05 per cent).

**Loss on drying** (*2.2.32*): maximum 0.5 per cent, determined on 1.000 g by drying in an oven at 105 °C.

**Sulfated ash** (*2.4.14*): maximum 0.1 per cent, determined on 1.0 g.

ASSAY

Dissolve 0.125 g in 60 mL of *anhydrous acetic acid R*. Titrate with *0.1 M perchloric acid*, determining the end-point potentiometrically (*2.2.20*).

1 mL of *0.1 M perchloric acid* is equivalent to 15.32 mg of $C_{13}H_{12}F_2N_6O$.

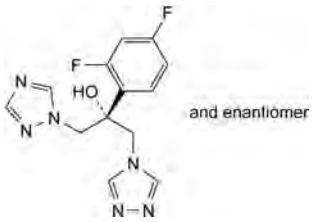
STORAGE

In an airtight container.

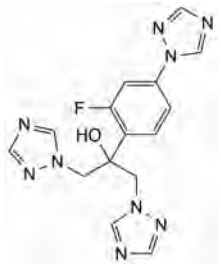
IMPURITIES

*Specified impurities*: *A, B, C.*

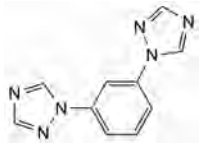
*Other detectable impurities* (the following substances would, if present at a sufficient level, be detected by one or other of the tests in the monograph. They are limited by the general acceptance criterion for other/unspecified impurities and/or by the general monograph *Substances for pharmaceutical use (2034)*. It is therefore not necessary to identify these impurities for demonstration of compliance. See also *5.10. Control of impurities in substances for pharmaceutical use*): *D, E, F, G, H, I.*



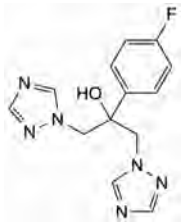
A. (2*RS*)-2-(2,4-difluorophenyl)-1-(1*H*-1,2,4-triazol-1-yl)-3-(4*H*-1,2,4-triazol-4-yl)propan-2-ol,



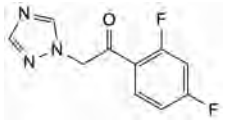
B. 2-[2-fluoro-4-(1*H*-1,2,4-triazol-1-yl)phenyl]-1,3-bis(1*H*-1,2,4-triazol-1-yl)propan-2-ol,



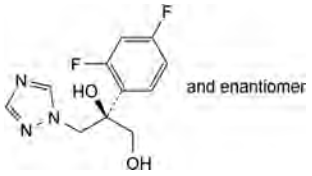
C. 1,1′-(1,3-phenylene)di-1*H*-1,2,4-triazole,



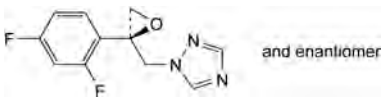
D. 2-(4-fluorophenyl)-1,3-bis(1*H*-1,2,4-triazol-1-yl)propan-2-ol,



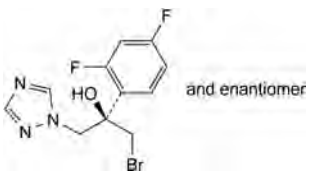
E. 1-(2,4-difluorophenyl)-2-(1*H*-1,2,4-triazol-1-yl)ethanone,



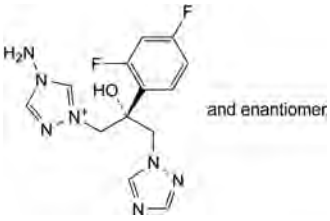
F. (2*RS*)-2-(2,4-difluorophenyl)-3-(1*H*-1,2,4-triazol-1-yl)propane-1,2-diol,



G. 1-[[(2*RS*)-2-(2,4-difluorophenyl)oxiran-2-yl]methyl]-1*H*-1,2,4-triazole,



H. (2*RS*)-1-bromo-2-(2,4-difluorophenyl)-3-(1*H*-1,2,4-triazol-1-yl)propan-2-ol,

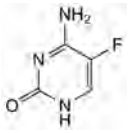


I. 4-amino-1-[(2*RS*)-2-(2,4-difluorophenyl)-2-hydroxy-3(1*H*-1,2,4-triazol-1-yl)propyl]-4*H*-1,2,4-triazolium.

**01/2017:0766**

# FLUCYTOSINE

## Flucytosinum



$C_4H_4FN_3O$ $M_r$ 129.1
[2022-85-7]

DEFINITION

4-Amino-5-fluoropyrimidin-2(1*H*)-one.

*Content*: 99.0 per cent to 101.0 per cent (dried substance).

CHARACTERS

*Appearance*: white or almost white, crystalline powder.

*Solubility*: sparingly soluble in water, slightly soluble in ethanol (96 per cent).

IDENTIFICATION

*First identification: A.*

*Second identification: B, C, D.*

A. Infrared absorption spectrophotometry (*2.2.24*).

*Comparison*: *flucytosine CRS.*

B. Thin-layer chromatography (*2.2.27*).

*Solvent mixture*: *water R*, *methanol R* (10:15 *V/V*).

*Test solution.* Dissolve 10 mg of the substance to be examined in the solvent mixture and dilute to 10 mL with the solvent mixture.

*Reference solution.* Dissolve 10 mg of *flucytosine CRS* in the solvent mixture and dilute to 10 mL with the solvent mixture.

*Plate*: *TLC silica gel* $F_{254}$ *plate R.*

*Mobile phase*: *anhydrous formic acid R*, *water R*, *methanol R*, *ethyl acetate R* (1:15:25:60 *V/V/V/V*).

*Application*: 10 µL.

*Development*: over 2/3 of the plate in an unsaturated tank with the mobile phase. Then allow the solvents to evaporate.

*Detection*: at the bottom of a chromatography tank place an evaporating dish containing a mixture of 1 volume of *hydrochloric acid R1*, 1 volume of *water R* and 2 volumes of a 15 g/L solution of *potassium permanganate R*. Close the tank and allow to stand for 15 min. Place the dried plate in the tank and close the tank. Leave the plate in contact with the chlorine vapour for 5 min. Withdraw the plate and place it in a current of cold air until the excess of chlorine is removed and an area of the coating below the points of application does not give a blue colour with a drop of *potassium iodide and starch solution R*. Spray with *potassium iodide and starch solution R*. Examine in daylight.

*Results*: the principal spot in the chromatogram obtained with the test solution is similar in position and size to the principal spot in the chromatogram obtained with the reference solution.

C. Mix about 5 mg with 45 mg of *heavy magnesium oxide R* and ignite in a crucible until an almost white residue is obtained (usually less than 5 min). Allow to cool, add 1 mL of *water R*, 0.05 mL of *phenolphthalein solution R1* and about 1 mL of *dilute hydrochloric acid R* to render the solution colourless. Filter and add to the filtrate a freshly prepared mixture of 0.1 mL of *alizarin S solution R* and 0.1 mL of *zirconyl nitrate solution R*. Mix, allow to stand for 5 min and compare the colour of the solution with that of a blank prepared in the same manner. The colour of the solution changes from red to yellow.

D. To 5 mL of solution S (see Tests) add 0.15 mL of *bromine water R* and shake. The colour of the solution is discharged.

TESTS

**Solution S**. Dissolve 0.5 g in *carbon dioxide-free water R* and dilute to 50 mL with the same solvent.

**Appearance of solution**. Solution S is clear (*2.2.1*) and not more intensely coloured than reference solution $BY_7$ or $Y_7$ (*2.2.2, Method II*).

**Related substances**. Liquid chromatography (*2.2.29*).

*Solvent mixture*. Dissolve 13.6 g of *potassium dihydrogen phosphate R* in 950 mL of *water R*. Add 50 mL of *methanol R*. Mix thoroughly.

*Test solution*. Dissolve 15.0 mg of the substance to be examined in the solvent mixture and dilute to 50.0 mL with the solvent mixture. Mix well. Sonicate for 5 min. Mix thoroughly. Sonicate the solution for 5 min. Mix thoroughly.

*Reference solution (a)*. Dilute 1.0 mL of the test solution to 100.0 mL with the solvent mixture. Dilute 1.0 mL of this solution to 10.0 mL with the solvent mixture.

*Reference solution (b)*. Dissolve 15.0 mg of *fluorouracil CRS* (impurity A) in the solvent mixture and dilute to 50.0 mL with the solvent mixture. Mix well. Sonicate for 5 min. Mix thoroughly. Sonicate the solution for 5 min. Mix thoroughly. Dilute 1.0 mL of this solution to 10.0 mL with the solvent mixture. Dilute 2.0 mL of this solution to 100.0 mL with the solvent mixture.

*Reference solution (c)*. Dissolve the contents of a vial of *flucytosine for system suitability CRS* (containing impurity B) in 0.5 mL of the solvent mixture and add 0.5 mL of reference solution (b).

*Column*:

- *size*: *l* = 0.25 m, Ø = 4.0 mm;
- *stationary phase*: *end-capped octadecylsilyl silica gel for chromatography R* (5 µm).

*Mobile phase*: dissolve 13.6 g of *potassium dihydrogen phosphate R* in 950 mL of *water R*. Filter through a membrane filter (nominal pore size 0.45 µm). Adjust to pH 2.0 by adding *phosphoric acid R* and add 50 mL of *methanol R*. Mix thoroughly.

*Flow rate*: 1.1 mL/min.

*Detection*: spectrophotometer at 260 nm.

*Injection*: 20 µL of the test solution and reference solutions (a) and (c).

*Run time*: 15 times the retention time of flucytosine.

*Identification of impurities*: use the chromatogram obtained with reference solution (c) to identify the peaks due to impurities A and B.

*Relative retention* with reference to flucytosine (retention time = about 2 min): impurity A = about 1.7; impurity B = about 13.3.

*System suitability*:

- *resolution*: minimum 5.0 between the peaks due to flucytosine and impurity A in the chromatogram obtained with reference solution (c);
- *signal-to-noise ratio*: minimum 50 for the peak due to impurity B in the chromatogram obtained with reference solution (c);
- *symmetry factor*: maximum 2.0 for the peak due to flucytosine in the chromatogram obtained with reference solution (a).

*Limits*:

- *correction factor*: for the calculation of content, multiply the peak area of impurity B by 0.6;
- *impurity A*: not more than 1.5 times the area of the corresponding peak in the chromatogram obtained with reference solution (c) (0.15 per cent);
- *impurity B*: not more than 1.5 times the area of the principal peak in the chromatogram obtained with reference solution (a) (0.15 per cent);
- *unspecified impurities*: for each impurity, not more than 0.5 times the area of the principal peak in the chromatogram obtained with reference solution (a) (0.05 per cent);
- *total*: not more than 3 times the area of the principal peak in the chromatogram obtained with reference solution (a) (0.3 per cent);
- *disregard limit*: 0.3 times the area of the principal peak in the chromatogram obtained with reference solution (a) (0.03 per cent).

**Fluorides**: maximum 200 ppm.

Potentiometry (*2.2.36, Method I*). *Prepare and store all solutions in plastic containers.*

*Buffer solution*. Dissolve 58 g of *sodium chloride R* in 500 mL of *water R*. Add 57 mL of *glacial acetic acid R* and 200 mL of a 100 g/L solution of *cyclohexylenedinitrilotetra-acetic acid R* in *1 M sodium hydroxide*. Adjust the pH to 5.0-5.5 with a 200 g/L solution of *sodium hydroxide R* and dilute to 1000.0 mL with *water R*.

*Test solution*. Dissolve 1.00 g of the substance to be examined in *water R* and dilute to 100.0 mL with the same solvent.

*Reference solutions*. Dissolve 4.42 g of *sodium fluoride R*, previously dried at 120 °C for 2 h, in 300 mL of *water R* and dilute to 1000.0 mL with the same solvent (solution (a): 1.9 g/L of fluoride). Prepare 3 reference solutions by dilution of solution (a) 1 in 100, 1 in 1000 and 1 in 10 000 respectively.

*Indicator electrode*: fluoride selective.

*Reference electrode*: silver-silver chloride.

To 20.0 mL of the test solution and each reference solution, add 10.0 mL of the buffer solution and stir with a magnetic stirrer. Introduce the electrodes into the solution and allow to stand for 5 min with constant stirring.

Calculate the concentration of fluorides using the calibration curve.

**Loss on drying** (*2.2.32*): maximum 1.0 per cent, determined on 1.000 g by drying in an oven at 105 °C.

**Sulfated ash** (*2.4.14*): maximum 0.1 per cent, determined on 1.0 g in a platinum crucible.

ASSAY

Dissolve 0.100 g in 40 mL of *anhydrous acetic acid R* and add 100 mL of *acetic anhydride R*. Titrate with *0.1 M perchloric acid* determining the end-point potentiometrically (*2.2.20*).

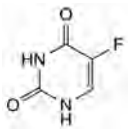
1 mL of *0.1 M perchloric acid* is equivalent to 12.91 mg of $C_4H_4FN_3O$.

STORAGE

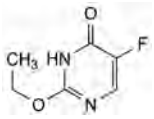
Protected from light.

IMPURITIES

*Specified impurities: A, B.*



A. 5-fluoropyrimidine-2,4(1*H*,3*H*)-dione (fluorouracil),

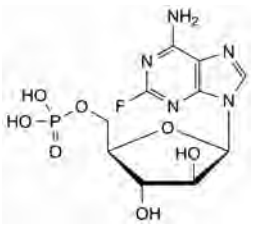


B. 2-ethoxy-5-fluoropyrimidin-4(3*H*)-one.

**01/2017:1781**

# FLUDARABINE PHOSPHATE

## Fludarabini phosphas



$C_{10}H_{13}FN_5O_7P$ $M_r$ 365.2
[75607-67-9]

DEFINITION

2-Fluoro-9-(5-*O*-phosphono-β-D-arabinofuranosyl)-9*H*-purin-6-amine.

*Content*: 97.0 per cent to 102.0 per cent (anhydrous substance).

CHARACTERS

*Appearance*: white or almost white, hygroscopic, crystalline powder.

*Solubility*: slightly soluble in water, freely soluble in dimethylformamide, very slightly soluble in anhydrous ethanol.

IDENTIFICATION

Infrared absorption spectrophotometry (*2.2.24*).

*Comparison*: *fludarabine phosphate CRS*.

TESTS

**Appearance of solution**. The solution is clear (*2.2.1*) and not more intensely coloured than reference solution $BY_5$ (*2.2.2, Method II*).

Dissolve 50 mg in 5.0 mL of *dimethylformamide R* with the aid of ultrasound.

**Specific optical rotation** (*2.2.7*): + 10.0 to + 14.0 (anhydrous substance).

Dissolve 0.100 g in *water R* with the aid of ultrasound and dilute to 20.0 mL with the same solvent.

**Related substances**. Liquid chromatography (*2.2.29*): use the normalisation procedure. *Prepare the solutions immediately before use.*

*Test solution.* Dissolve 20 mg of the substance to be examined in 50 mL of *water R* with the aid of ultrasound and dilute to 100.0 mL with the same solvent.

*Reference solution (a).* Dissolve 20 mg of *fludarabine phosphate CRS* in 50 mL of *water R* with the aid of ultrasound and dilute to 100.0 mL with the same solvent.

*Reference solution (b).* Dissolve 20 mg of the substance to be examined in 20 mL of *0.1 M hydrochloric acid* with the aid of ultrasound. Heat in a water-bath at 80 °C for 15 min, cool to room temperature, mix and dilute to 100.0 mL with *water R*.

*Reference solution (c).* Dilute 1.0 mL of reference solution (a) to 100.0 mL with *water R*. Dilute 1.0 mL of this solution to 20.0 mL with *water R*.

*Reference solution (d).* Dissolve 5 mg of *fludarabine for system suitability CRS* (containing impurities D, E and F) in 10 mL of *water R* with the aid of ultrasound and dilute to 25.0 mL with the same solvent.

*Blank solution*: *0.02 M hydrochloric acid*.

A. Early eluting impurities.

*Column*:

- *size*: *l* = 0.15 m, Ø = 4.6 mm;
- *stationary phase*: *end-capped octadecylsilyl silica gel for chromatography R* (5 µm).

*Mobile phase*: mix 60 volumes of *methanol R* and 940 volumes of a 1.36 g/L solution of *potassium dihydrogen phosphate R*.

*Flow rate*: 1 mL/min.

*Detection*: spectrophotometer at 260 nm and at 292 nm.

*Injection*: 10 µL of the test solution and reference solutions (a), (b) and (c).

*Run time*: 4.5 times the retention time of the principal peak in the chromatogram obtained with the test solution.

*Identification of impurities*: use the chromatogram obtained with reference solution (b) at 292 nm to identify the peaks due to impurities A and B, the response at 292 nm being much higher than at 260 nm; use the chromatogram supplied with *fludarabine phosphate CRS* and the chromatogram obtained with reference solution (a) at 260 nm to identify impurity C.

*Relative retention* with reference to fludarabine phosphate (retention time = about 9 min): impurity A = about 0.26; impurity B = about 0.34; impurity C = about 0.42.

*System suitability*: reference solution (b) at 292 nm:

- *resolution*: minimum 2.0 between the peaks due to impurities A and B.

*Limits*: at 260 nm:

- *correction factors*: for the calculation of content, multiply the peak areas of the following impurities by the corresponding correction factor: impurity A = 4.0; impurity B = 2.5; impurity C = 1.9;
- *impurity A*: maximum 0.8 per cent;
- *impurity C*: maximum 0.4 per cent;
- *impurity B*: maximum 0.2 per cent;
- *unspecified impurities eluting before fludarabine phosphate*: for each impurity, maximum 0.10 per cent;
- *disregard limit*: the area of the principal peak in the chromatogram obtained with reference solution (c) (0.05 per cent); disregard any peak eluting after fludarabine phosphate.

B. Late eluting impurities.

Conditions as described under Test A with the following modifications.

*Mobile phase*: mix 200 volumes of *methanol R* and 800 volumes of a 1.36 g/L solution of *potassium dihydrogen phosphate R*.

*Detection*: spectrophotometer at 260 nm.

*Injection*: 10 µL of the test solution and reference solutions (c) and (d).

*Run time*: 8 times the retention time of the principal peak in the chromatogram obtained with the test solution.

*Identification of impurities*: use the chromatogram supplied with *fludarabine for system suitability CRS* and the chromatogram obtained with reference solution (d) to identify the peaks due to impurities D, E and F.

*Relative retention* with reference to fludarabine phosphate (retention time = about 2.5 min): impurity D = about 1.5; impurity E = about 1.9; impurity F = about 2.5.

*System suitability*: reference solution (d):

– *resolution*: minimum 5.0 between the peaks due to fludarabine phosphate and impurity D.

*Limits*:

– *correction factors*: for the calculation of content, multiply the peak areas of the following impurities by the corresponding correction factor: impurity D = 0.5; impurity E = 0.6; impurity F = 1.8;
– *impurity E*: maximum 0.2 per cent;
– *impurity F*: maximum 0.2 per cent;
– *impurity D*: maximum 0.15 per cent;
– *unspecified impurities eluting after fludarabine phosphate*: for each impurity, maximum 0.10 per cent;
– *disregard limit*: the area of the principal peak in the chromatogram obtained with reference solution (c) (0.05 per cent); disregard any peak eluting before fludarabine phosphate.

*Total of impurities eluting before fludarabine phosphate in test A, apart from impurities A, B and C, and after fludarabine phosphate in test B, apart from impurities D, E and F*: maximum 0.5 per cent.

*Total of all impurities eluting before fludarabine phosphate in test A and after fludarabine phosphate in test B*: maximum 2.0 per cent.

**Ethanol** (*2.4.24, System A*): maximum 1.0 per cent.

**Water** (*2.5.12*): maximum 3.0 per cent, determined on 0.200 g (ground to a very fine powder). Stir the substance in 15 mL of *anhydrous methanol R* for about 15 s before titrating.

ASSAY

Liquid chromatography (*2.2.29*) as described in test A for related substances with the following modifications.

*Test solution*. Dissolve 24.0 mg of the substance to be examined in 50 mL of *water R* with the aid of ultrasound and dilute to 100.0 mL with the same solvent. Dilute 25.0 mL of the solution to 100.0 mL with the mobile phase.

*Reference solution*. Dissolve 24.0 mg of *fludarabine phosphate CRS* in 50 mL of *water R* with the aid of ultrasound and dilute to 100.0 mL with the same solvent. Dilute 25.0 mL of the solution to 100.0 mL with the mobile phase.

*Detection*: spectrophotometer at 260 nm.

*Injection*: 10 µL.

Calculate the percentage content of $C_{10}H_{13}FN_5O_7P$ taking into account the assigned content of *fludarabine phosphate CRS*.

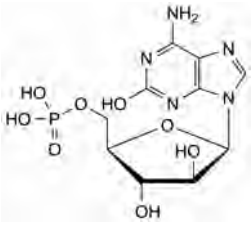
STORAGE

In an airtight container, protected from light, at a temperature of 2 °C to 8 °C.

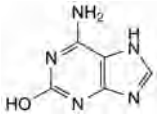
IMPURITIES

*Specified impurities: A, B, C, D, E, F.*

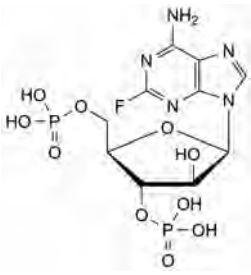
*Other detectable impurities* (the following substances would, if present at a sufficient level, be detected by one or other of the tests in the monograph. They are limited by the general acceptance criterion for other/unspecified impurities and/or by the general monograph *Substances for pharmaceutical use (2034)*. It is therefore not necessary to identify these impurities for demonstration of compliance. See also *5.10. Control of impurities in substances for pharmaceutical use*): *G, H, I, J.*



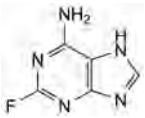
A. 6-amino-9-(5-*O*-phosphono-β-D-arabinofuranosyl)-9*H*-purin-2-ol,



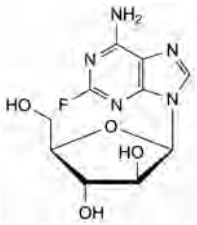
B. 6-amino-7*H*-purin-2-ol,



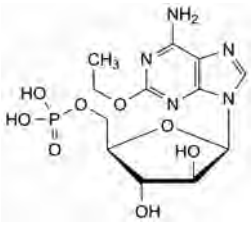
C. 9-(3,5-di-*O*-phosphono-β-D-arabinofuranosyl)-2-fluoro-9*H*-purin-6-amine,



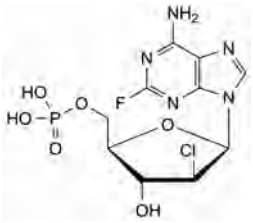
D. 2-fluoro-7*H*-purin-6-amine,



E. 9-β-D-arabinofuranosyl-2-fluoro-9*H*-purin-6-amine,

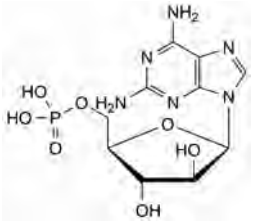


F. 2-ethoxy-9-(5-*O*-phosphono-β-D-arabinofuranosyl)-9*H*-purin-6-amine,

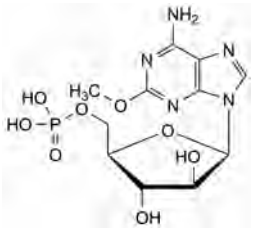


G. 9-(2-chloro-2-deoxy-5-*O*-phosphono-β-D-arabinofuranosyl)-2-fluoro-9*H*-purin-6-amine,

H. 9-(2,5-anhydro-β-D-arabinofuranosyl)-2-fluoro-9*H*-purin-6-amine,



I. 9-(5-*O*-phosphono-β-D-arabinofuranosyl)-9*H*-purine-2,6-diamine,



J. 2-methoxy-9-(5-*O*-phosphono-β-D-arabinofuranosyl)-9*H*-purin-6-amine.

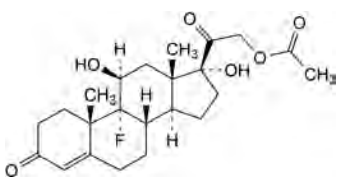
# FLUDROCORTISONE ACETATE

## Fludrocortisoni acetas



$C_{23}H_{31}FO_6$ $M_r$ 422.5
[514-36-3]

DEFINITION

9-Fluoro-11β,17-dihydroxy-3,20-dioxopregn-4-en-21-yl acetate.

*Content*: 97.0 per cent to 103.0 per cent (dried substance).

CHARACTERS

*Appearance*: white or almost white, crystalline powder.

*Solubility*: practically insoluble in water, sparingly soluble in anhydrous ethanol.

IDENTIFICATION

*First identification: A, B.*

*Second identification: C, D, E.*

A. Infrared absorption spectrophotometry (*2.2.24*).

*Comparison*: *fludrocortisone acetate CRS*.

If the spectra obtained in the solid state show differences, dissolve the substance to be examined and the reference substance separately in the minimum volume of *acetone R*, evaporate to dryness and record new spectra using the residues.

B. Thin-layer chromatography (*2.2.27*).

*Solvent mixture*: *methanol R*, *methylene chloride R* (1:9 *V/V*).

*Test solution.* Dissolve 10 mg of the substance to be examined in the solvent mixture and dilute to 10 mL with the solvent mixture.

*Reference solution (a).* Dissolve 10 mg of *fludrocortisone acetate CRS* in the solvent mixture and dilute to 10 mL with the solvent mixture.

*Reference solution (b).* Dissolve 5 mg of *cortisone acetate CRS* in 5 mL of reference solution (a).

*Plate*: *TLC silica gel $F_{254}$ plate R*.

*Mobile phase*: add a mixture of 1.2 volumes of *water R* and 8 volumes of *methanol R* to a mixture of 15 volumes of *ether R* and 77 volumes of *methylene chloride R*.

*Application*: 5 µL.

*Development*: over a path of 15 cm.

*Drying*: in air.

*Detection A*: examine in ultraviolet light at 254 nm.

*Results A*: the principal spot in the chromatogram obtained with the test solution is similar in position and size to the principal spot in the chromatogram obtained with reference solution (a).

*Detection B*: spray with *alcoholic solution of sulfuric acid R*. Heat at 120 °C for 10 min or until the spots appear. Allow to cool. Examine in daylight and in ultraviolet light at 365 nm.

*Results B*: the principal spot in the chromatogram obtained with the test solution is similar in position, colour in daylight, fluorescence in ultraviolet light at 365 nm and size to the principal spot in the chromatogram obtained with reference solution (a).

*System suitability*: reference solution (b):

– the chromatogram shows 2 clearly separated spots.

C. Thin-layer chromatography (*2.2.27*).

*Test solution (a).* Dissolve 25 mg of the substance to be examined in *methanol R* and dilute to 5 mL with the same solvent (solution A). Dilute 2 mL of the solution to 10 mL with *methylene chloride R*.

*Test solution (b).* Transfer 2 mL of solution A to a 15 mL glass tube with a ground-glass stopper or a polytetrafluoroethylene cap. Add 10 mL of *saturated methanolic potassium hydrogen carbonate solution R* and immediately pass a stream of *nitrogen R* through the solution for 5 min. Stopper the tube. Heat on a water-bath at 45 °C protected from light for 2.5 h. Allow to cool.

*Reference solution (a).* Dissolve 25 mg of *fludrocortisone acetate CRS* in *methanol R* and dilute to 5 mL with the same solvent (solution B). Dilute 2 mL of the solution to 10 mL with *methylene chloride R*.

*Reference solution (b).* Transfer 2 mL of solution B to a 15 mL glass tube with a ground-glass stopper or a polytetrafluoroethylene cap. Add 10 mL of *saturated methanolic potassium hydrogen carbonate solution R* and

immediately pass a stream of *nitrogen R* through the solution for 5 min. Stopper the tube. Heat on a water bath at 45 °C protected from light for 2.5 h. Allow to cool.

*Plate*: *TLC silica gel $F_{254}$ plate R.*

*Mobile phase*: add a mixture of 1.2 volumes of *water R* and 8 volumes of *methanol R* to a mixture of 15 volumes of *ether R* and 77 volumes of *methylene chloride R.*

*Application*: 5 µL.

*Development*: over a path of 15 cm.

*Drying*: in air.

*Detection A*: examine in ultraviolet light at 254 nm.

*Results A*: the principal spot in each of the chromatograms obtained with the test solutions is similar in position and size to the principal spot in the chromatogram obtained with the corresponding reference solution.

*Detection B*: spray with *alcoholic solution of sulfuric acid R*. Heat at 120 °C for 10 min or until the spots appear. Allow to cool. Examine in daylight and in ultraviolet light at 365 nm.

*Results B*: the principal spot in each of the chromatograms obtained with the test solutions is similar in position, colour in daylight, fluorescence in ultraviolet light at 365 nm and size to the principal spot in the chromatogram obtained with the corresponding reference solution. The principal spots in the chromatograms obtained with test solution (b) and reference solution (b) have $R_F$ values distinctly lower than those of the principal spots in the chromatograms obtained with test solution (a) and reference solution (a).

D. Mix about 5 mg with 45 mg of *heavy magnesium oxide R* and ignite in a crucible until an almost white residue is obtained (usually less than 5 min). Allow to cool, add 1 mL of *water R*, 0.05 mL of *phenolphthalein solution R1* and about 1 mL of *dilute hydrochloric acid R* to render the solution colourless. Filter and add to the filtrate a freshly prepared mixture of 0.1 mL of *alizarin S solution R* and 0.1 mL of *zirconyl nitrate solution R*. Mix, allow to stand for 5 min and compare the colour of the solution with that of a blank prepared in the same manner. The colour of the solution to be examined changes from red to yellow.

E. About 10 mg gives the reaction of acetyl (*2.3.1*).

TESTS

**Specific optical rotation** (*2.2.7*): + 148 to + 156 (dried substance).

Dissolve 0.250 g in *dioxan R* and dilute to 25.0 mL with the same solvent.

**Related substances**. Liquid chromatography (*2.2.29*).

*Test solution.* Dissolve 20.0 mg of the substance to be examined in the mobile phase and dilute to 10.0 mL with the mobile phase.

*Reference solution (a).* Dissolve 2.0 mg of *fludrocortisone acetate CRS* and 2.0 mg of *hydrocortisone acetate CRS* in the mobile phase, then dilute to 50.0 mL with the mobile phase.

*Reference solution (b).* Dilute 1.0 mL of the test solution to 50.0 mL with the mobile phase.

*Column*:

- *size*: *l* = 0.2 m, Ø = 4.6 mm;
- *stationary phase*: *end-capped octadecylsilyl silica gel for chromatography R* (5 µm).

*Mobile phase*: *tetrahydrofuran R*, *water R* (35:65 *V/V*).

*Flow rate*: 1 mL/min.

*Detection*: spectrophotometer at 254 nm.

*Equilibration*: with the mobile phase for about 30 min.

*Injection*: 20 µL.

*Run time*: twice the retention time of fludrocortisone acetate.

*Retention time*: hydrocortisone acetate = about 8.5 min; fludrocortisone acetate = about 10 min.

*System suitability*: reference solution (a):

- *resolution*: minimum 1.0 between the peaks due to hydrocortisone acetate and fludrocortisone acetate; if necessary, adjust slightly the concentration of tetrahydrofuran in the mobile phase (an increase in the concentration of tetrahydrofuran reduces the retention times).

*Limits*:

- *any impurity*: for each impurity, not more than 0.5 times the area of the principal peak in the chromatogram obtained with reference solution (b) (1.0 per cent);
- *total*: not more than 0.75 times the area of the principal peak in the chromatogram obtained with reference solution (b) (1.5 per cent);
- *disregard limit*: 0.025 times the area of the principal peak in the chromatogram obtained with reference solution (b) (0.05 per cent).

**Loss on drying** (*2.2.32*): maximum 1.0 per cent, determined on 0.500 g by drying in an oven at 105 °C.

ASSAY

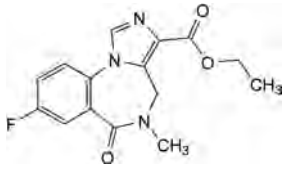
Dissolve 10.0 mg in *ethanol (96 per cent) R* and dilute to 100.0 mL with the same solvent. Dilute 5.0 mL of the solution to 50.0 mL with *ethanol (96 per cent) R*. Measure the absorbance (*2.2.25*) at the absorption maximum at 238 nm.

Calculate the content of $C_{23}H_{31}FO_6$ taking the specific absorbance to be 405.

**01/2008:1326**
**corrected 6.0**

# FLUMAZENIL

## Flumazenilum



$C_{15}H_{14}FN_3O_3$ $M_r$ 303.3
[78755-81-4]

DEFINITION

Ethyl 8-fluoro-5-methyl-6-oxo-5,6-dihydro-4*H*-imidazo-[1,5-*a*][1,4]benzodiazepine-3-carboxylate.

*Content*: 99.0 per cent to 101.0 per cent (dried substance).

CHARACTERS

*Appearance*: white or almost white, crystalline powder.

*Solubility*: very slightly soluble in water, freely soluble in methylene chloride, sparingly soluble in methanol.

mp: 198 °C to 202 °C.

IDENTIFICATION

Infrared absorption spectrophotometry (*2.2.24*).

*Comparison*: *Ph. Eur. reference spectrum of flumazenil.*

TESTS

**Appearance of solution**. The solution is clear (*2.2.1*) and is not more intensely coloured than reference solution $BY_7$ (*2.2.2, Method II*).

Dissolve 0.10 g in *methanol R* and dilute to 10 mL with the same solvent.

**Impurity C**: maximum 1 per cent.

Dissolve 0.10 g in 0.5 mL of *methylene chloride R* and dilute to 10 mL with *butanol R*. To 5.0 mL of this solution add 2.0 mL of *ninhydrin solution R* and heat in a water-bath at 95 °C for 15 min. Any blue-purple colour in the solution is not more intense than that in a standard prepared at the same time and in the same manner using 5.0 mL of a 0.1 g/L solution of *dimethylformamide diethylacetal R* in *butanol R*.

**Related substances**. Liquid chromatography (*2.2.29*).

*Test solution.* Dissolve 50.0 mg of the substance to be examined in 5 mL of *methanol R* and dilute to 25.0 mL with the mobile phase.

*Reference solution (a).* Dissolve 2.0 mg of *flumazenil impurity B CRS* and 2.0 mg of the substance to be examined in the mobile phase and dilute to 25.0 mL with the mobile phase. Dilute 2.0 mL of this solution to 25.0 mL with the mobile phase.

*Reference solution (b).* Dilute 10.0 mL of the test solution to 100.0 mL with the mobile phase. Dilute 1.0 mL of this solution to 100.0 mL with the mobile phase.

*Column*:

– *size*: *l* = 0.25 m, Ø = 4.6 mm,

– *stationary phase*: *end-capped octadecylsilyl silica gel for chromatography R* (5 µm).

*Mobile phase*: to 800 mL of *water R* adjusted to pH 2.0 with *phosphoric acid R*, add 130 mL of *methanol R* and 70 mL of *tetrahydrofuran R* and mix.

*Flow rate*: 1 mL/min.

*Detection*: spectrophotometer at 230 nm.

*Injection*: 20 µL.

*Run time*: 3 times the retention time of flumazenil.

*Relative retention* with reference to flumazenil (retention time = about 14 min): impurity A = about 0.4; impurity D = about 0.5; impurity E = about 0.6; impurity B = about 0.7; impurity F = about 2.4.

*System suitability*: reference solution (a):

– *resolution*: minimum 3.0 between the peaks due to impurity B and flumazenil.

*Limits*:

– *impurity B*: not more than twice the area of the principal peak in the chromatogram obtained with reference solution (b) (0.2 per cent),

– *unspecified impurities*: for each impurity, not more than the area of the principal peak in the chromatogram obtained with reference solution (b) (0.10 per cent),

– *total*: not more than twice the area of the principal peak in the chromatogram obtained with reference solution (b) (0.2 per cent),

– *disregard limit*: 0.5 times the area of the principal peak in the chromatogram obtained with reference solution (b) (0.05 per cent).

**Loss on drying** (*2.2.32*): maximum 0.5 per cent, determined on 1.000 g by drying in an oven at 105 °C.

**Sulfated ash** (*2.4.14*): maximum 0.1 per cent, determined on 1.0 g in a platinum crucible.

ASSAY

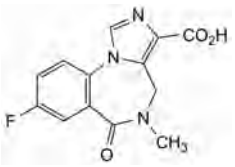
Dissolve 0.250 g in 50 mL of a mixture of 2 volumes of *acetic anhydride R* and 3 volumes of *anhydrous acetic acid R*. Titrate with *0.1 M perchloric acid*, determining the end-point potentiometrically (*2.2.20*).

1 mL of *0.1 M perchloric acid* is equivalent to 30.33 mg of $C_{15}H_{14}FN_3O_3$.

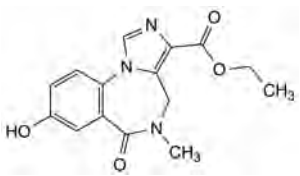
IMPURITIES

*Specified impurities*: *B, C.*

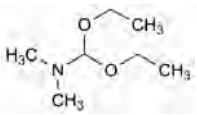
*Other detectable impurities* (the following substances would, if present at a sufficient level, be detected by one or other of the tests in the monograph. They are limited by the general acceptance criterion for other/unspecified impurities and/or by the general monograph *Substances for pharmaceutical use (2034)*. It is therefore not necessary to identify these impurities for demonstration of compliance. See also *5.10. Control of impurities in substances for pharmaceutical use*): *A, D, E, F.*



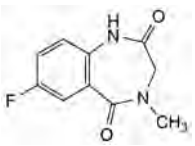
A. 8-fluoro-5-methyl-6-oxo-5,6-dihydro-4*H*-imidazo[1,5-*a*][1,4]benzodiazepine-3-carboxylic acid,



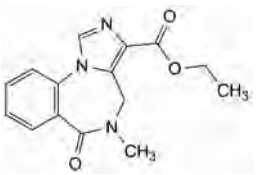
B. ethyl 8-hydroxy-5-methyl-6-oxo-5,6-dihydro-4*H*-imidazo[1,5-*a*][1,4]benzodiazepine-3-carboxylate,



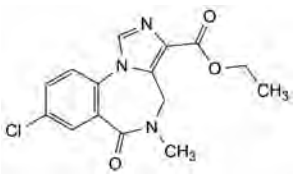
C. diethoxy-*N*,*N*-dimethylmethanamine,



D. 7-fluoro-4-methyl-3,4-dihydro-1*H*-1,4-benzodiazepine-2,5-dione,



E. ethyl 5-methyl-6-oxo-5,6-dihydro-4*H*-imidazo[1,5-*a*][1,4]benzodiazepine-3-carboxylate,

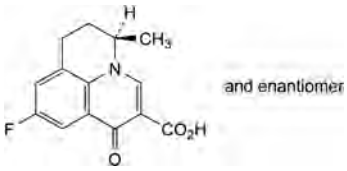


F. ethyl 8-chloro-5-methyl-6-oxo-5,6-dihydro-4*H*-imidazo[1,5-*a*][1,4]benzodiazepine-3-carboxylate.

**01/2017:1517**

# FLUMEQUINE

## Flumequinum



$C_{14}H_{12}FNO_3$ $M_r$ 261.3
[42835-25-6]

DEFINITION

(*RS*)-9-Fluoro-5-methyl-1-oxo-6,7-dihydro-1*H*,5*H*-benzo[*i,j*]-quinolizine-2-carboxylic acid.

*Content*: 99.0 per cent to 101.0 per cent (dried substance).

CHARACTERS

*Appearance*: white or almost white, microcrystalline powder.

*Solubility*: practically insoluble in water, sparingly soluble in methylene chloride, very slightly soluble in methanol. It is freely soluble in dilute solutions of alkali hydroxides.

IDENTIFICATION

*First identification: A, B.*

*Second identification: B, C, D.*

A. Infrared absorption spectrophotometry (*2.2.24*).
*Comparison*: *flumequine CRS.*

B. Optical rotation (see Tests).

C. Thin-layer chromatography (*2.2.27*).
*Test solution.* Dissolve 5 mg of the substance to be examined in 10 mL of *methylene chloride R.*
*Reference solution.* Dissolve 5 mg of *flumequine CRS* in 10 mL of *methylene chloride R.*
*Plate*: *TLC silica gel $F_{254}$ plate R.*
*Mobile phase*: *ammonia R, water R, ethanol (96 per cent) R* (10:10:90 *V/V/V*).
*Application*: 5 µL.
*Development*: over 2/3 of the plate.
*Drying*: in air.
*Detection*: examine in ultraviolet light at 254 nm.
*Results*: the principal spot in the chromatogram obtained with the test solution is similar in position and size to the principal spot in the chromatogram obtained with the reference solution.

D. Mix about 5 mg with 45 mg of *heavy magnesium oxide R* and ignite in a crucible until an almost white residue is obtained (usually less than 5 min). Allow to cool, add 1 mL of *water R*, 0.05 mL of *phenolphthalein solution R1* and about 2 mL of *dilute hydrochloric acid R* to render the solution colourless. Filter and add to the filtrate a freshly prepared mixture of 0.1 mL of *alizarin S solution R* and 0.1 mL of *zirconyl nitrate solution R*. Mix, allow to stand for 5 min and compare the colour of the solution with that of a blank prepared in the same manner. The test solution changes from red to yellow and the blank remains red.

TESTS

**Solution S**. Dissolve 5.00 g in *0.5 M sodium hydroxide* and dilute to 50.0 mL with the same solvent.

**Appearance of solution**. Solution S is clear (*2.2.1*) and not more intensely coloured than reference solution $BY_5$ (*2.2.2, Method II*).

**Optical rotation** (*2.2.7*): − 0.10° to + 0.10°, determined on solution S.

**Related substances**. Liquid chromatography (*2.2.29*).

*Test solution.* Dissolve 35.0 mg of the substance to be examined in *dimethylformamide R* and dilute to 100.0 mL with the same solvent.

*Reference solution (a).* Dissolve the contents of a vial of *flumequine impurity B CRS* in 2.0 mL of a 50 µg/mL solution of *flumequine CRS* in *dimethylformamide R.*

*Reference solution (b).* Dilute 1.0 mL of the test solution to 200.0 mL with *dimethylformamide R.*

*Column*:
- *size*: *l* = 0.15 m, Ø = 4.6 mm;
- *stationary phase*: *octadecylsilyl silica gel for chromatography R* (5 µm).

*Mobile phase*: *methanol R*, 1.36 g/L solution of *potassium dihydrogen phosphate R* (49:51 *V/V*).

*Flow rate*: 0.8 mL/min.

*Detection*: spectrophotometer at 313 nm.

*Injection*: 10 µL; inject *dimethylformamide R* as a blank.

*Run time*: 3 times the retention time of flumequine.

*Relative retention* with reference to flumequine (retention time = about 13 min): impurity A = about 0.67; impurity B = about 0.85.

*System suitability*: reference solution (a):
- *resolution*: minimum 2.0 between the peaks due to impurity B and flumequine.

*Limits*:
- *impurities A, B*: for each impurity, not more than the area of the principal peak in the chromatogram obtained with reference solution (b) (0.5 per cent);
- *unspecified impurities*: for each impurity, not more than 0.2 times the area of the principal peak in the chromatogram obtained with reference solution (b) (0.10 per cent);
- *total*: not more than twice the area of the principal peak in the chromatogram obtained with reference solution (b) (1.0 per cent);
- *disregard limit*: 0.1 times the area of the principal peak in the chromatogram obtained with reference solution (b) (0.05 per cent).

**Loss on drying** (*2.2.32*): maximum 0.5 per cent, determined on 1.000 g by drying in an oven at 105 °C for 3 h.

**Sulfated ash** (*2.4.14*): maximum 0.1 per cent, determined on 1.0 g in a platinum crucible.

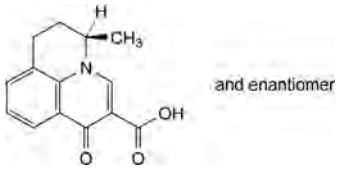
ASSAY

Dissolve 0.500 g in 50 mL of *dimethylformamide R*. Titrate with *0.1 M tetrabutylammonium hydroxide*, determining the end-point potentiometrically (*2.2.20*).

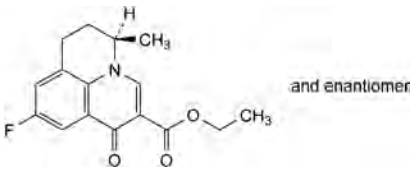
1 mL of *0.1 M tetrabutylammonium hydroxide* is equivalent to 26.13 mg of $C_{14}H_{12}FNO_3$.

IMPURITIES

*Specified impurities: A, B.*



A. (*RS*)-5-methyl-1-oxo-6,7-dihydro-1*H*,5*H*-benzo-[*i,j*]quinolizine-2-carboxylic acid (defluoroflumequine),

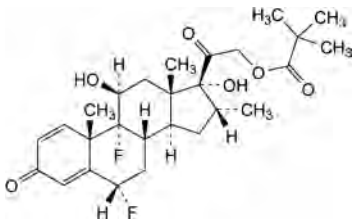


B. ethyl (*RS*)-9-fluoro-5-methyl-1-oxo-6,7-dihydro-1*H*,5*H*-benzo[*i,j*]quinolizine-2-carboxylate (flumequine ethyl ester).

**01/2008:1327**
**corrected 6.0**

# FLUMETASONE PIVALATE

## Flumetasoni pivalas



$C_{27}H_{36}F_2O_6$ $M_r$ 494.6
[2002-29-1]

DEFINITION

6α,9-Difluoro-11β,17-dihydroxy-16α-methyl-3,20-dioxopregna-1,4-dien-21-yl 2,2-dimethylpropanoate.

*Content*: 97.0 per cent to 103.0 per cent (dried substance).

CHARACTERS

*Appearance*: white or almost white, crystalline powder.

*Solubility*: practically insoluble in water, sparingly soluble in acetone, slightly soluble in ethanol (96 per cent) and in methylene chloride.

It shows polymorphism (*5.9*).

IDENTIFICATION

*First identification*: *A, B.*

*Second identification*: *B, C, D.*

A. Infrared absorption spectrophotometry (*2.2.24*).

*Comparison*: *flumetasone pivalate CRS*.

If the spectra obtained in the solid state show differences, dissolve the substance to be examined and the reference substance separately in *acetone R*, evaporate to dryness on a water-bath and record new spectra using the residues.

B. Thin-layer chromatography (*2.2.27*).

*Test solution*. Dissolve 10 mg of the substance to be examined in *acetone R* and dilute to 10 mL with the same solvent.

*Reference solution (a)*. Dissolve 10 mg of *flumetasone pivalate CRS* in *acetone R* and dilute to 10 mL with the same solvent.

*Reference solution (b)*. Dissolve 10 mg of *desoxycortone acetate CRS* in *acetone R* and dilute to 10 mL with the same solvent. Dilute 5 mL of this solution to 10 mL with reference solution (a).

*Plate*: *TLC silica gel $F_{254}$ plate R*.

*Mobile phase*: add a mixture of 1.2 volumes of *water R* and 8 volumes of *methanol R* to a mixture of 15 volumes of *ether R* and 77 volumes of *methylene chloride R*.

*Application*: 5 µL.

*Development*: over a path of 15 cm.

*Drying*: in air.

*Detection A*: examine in ultraviolet light at 254 nm.

*Results A*: the principal spot in the chromatogram obtained with the test solution is similar in position and size to the principal spot in the chromatogram obtained with reference solution (a).

*Detection B*: spray with *alcoholic solution of sulfuric acid R*. Heat at 120 °C for 10 min or until the spots appear. Allow to cool. Examine in daylight and in ultraviolet light at 365 nm.

*Results B*: the principal spot in the chromatogram obtained with the test solution is similar in position, colour in daylight, fluorescence in ultraviolet light at 365 nm and size to the principal spot in the chromatogram obtained with reference solution (a).

*System suitability*: reference solution (b):

– the chromatogram shows 2 clearly separated spots.

C. Add about 2 mg to 2 mL of a mixture of 0.5 mL of *water R* and 1.5 mL of *sulfuric acid R* and shake to dissolve. Within 5 min, a pink colour develops. Add this solution to 10 mL of *water R* and mix. The colour fades and a clear solution remains.

D. Mix about 5 mg with 45 mg of *heavy magnesium oxide R* and ignite in a crucible until an almost white residue is obtained (usually less than 5 min). Allow to cool, add 1 mL of *water R*, 0.05 mL of *phenolphthalein solution R1* and about 1 mL of *dilute hydrochloric acid R* to render the solution colourless. Filter. To a freshly prepared mixture of 0.1 mL of *alizarin S solution R* and 0.1 mL of *zirconyl nitrate solution R* add 1.0 mL of the filtrate. Mix, allow to stand for 5 min and compare the colour of the solution with that of a blank prepared in the same manner. The test solution is yellow and the blank is red.

TESTS

**Solution S**. Dissolve 0.50 g in *acetone R* and dilute to 25.0 mL with the same solvent.

**Appearance of solution**. Solution S is clear (*2.2.1*) and not more intensely coloured than reference solution $BY_6$ (*2.2.2, Method II*).

**Specific optical rotation** (*2.2.7*): + 69 to + 77 (dried substance), determined on solution S.

**Related substances**. Liquid chromatography (*2.2.29*).

*Test solution*. Dissolve 25.0 mg of the substance to be examined in the mobile phase and dilute to 25.0 mL with the mobile phase. Dilute 5.0 mL of this solution to 50.0 mL with the mobile phase.

*Reference solution (a)*. Dissolve 10 mg of *dexamethasone pivalate CRS* in the mobile phase and dilute to 100.0 mL with the mobile phase. To 5.0 mL of this solution, add 5.0 mL of the test solution, mix and dilute to 50.0 mL with the mobile phase.

*Reference solution (b)*. Dilute 2.0 mL of the test solution to 100.0 mL with the mobile phase.

*Column*:

– *size*: *l* = 0.25 m, Ø = 4.6 mm;
– *stationary phase*: *octadecylsilyl silica gel for chromatography R* (5 µm).

*Mobile phase*: *tetrahydrofuran R, acetonitrile R, water R, methanol R* (5:30:30:35 *V/V/V/V*).

*Flow rate*: 0.6 mL/min.

*Detection*: spectrophotometer at 254 nm.

*Injection*: 20 µL.

*Run time*: 1.5 times the retention time of flumetasone pivalate.

*Relative retention* with reference to flumetasone pivalate: impurity C = about 1.1.

*System suitability*: reference solution (a):

– *resolution*: minimum 2.8 between the peaks due to flumetasone pivalate and impurity C; if necessary, adjust the concentration of tetrahydrofuran in the mobile phase.

*Limits*:

– *impurities A, B, C, D*: for each impurity, not more than 0.75 times the area of the principal peak in the chromatogram obtained with reference solution (b) (1.5 per cent);

– *total*: not more than the area of the principal peak in the chromatogram obtained with reference solution (b) (2 per cent);

– *disregard limit*: 0.025 times the area of the principal peak in the chromatogram obtained with reference solution (b) (0.05 per cent).

**Loss on drying** (*2.2.32*): maximum 1.0 per cent, determined on 0.500 g by drying in an oven at 105 °C for 4 h.

ASSAY

Dissolve 50.0 mg in *ethanol (96 per cent) R* and dilute to 100.0 mL with the same solvent. Dilute 2.0 mL of this solution to 100.0 mL with *ethanol (96 per cent) R*. Measure the absorbance (*2.2.25*) at the absorption maximum at 239 nm.

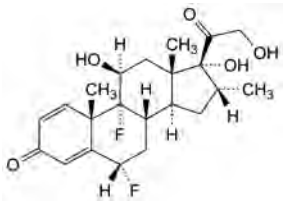
Calculate the content of $C_{27}H_{36}F_2O_6$ taking the specific absorbance to be 336.

STORAGE

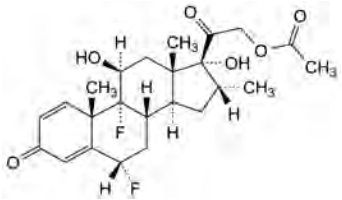
Protected from light.

IMPURITIES

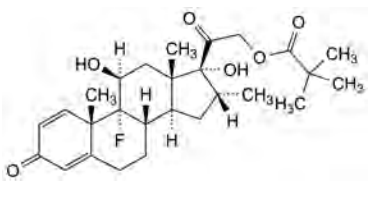
*Specified impurities*: *A, B, C, D*.



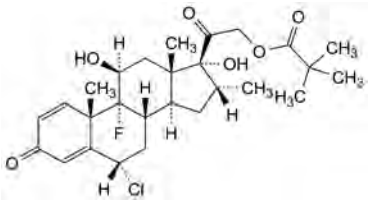
A. 6α,9-difluoro-11β,17,21-trihydroxy-16α-methylpregna-1,4-diene-3,20-dione (flumetasone),



B. 6α,9-difluoro-11β,17-dihydroxy-16α-methyl-3,20-dioxopregna-1,4-dien-21-yl acetate (flumetasone acetate),



C. 9-fluoro-11β,17-dihydroxy-16α-methyl-3,20-dioxopregna-1,4-dien-21-yl 2,2-dimethylpropanoate (dexamethasone pivalate),



D. 6α-chloro-9-fluoro-11β,17-dihydroxy-16α-methyl-3,20-dioxopregna-1,4-dien-21-yl 2,2-dimethylpropanoate (chlordexamethasone pivalate).

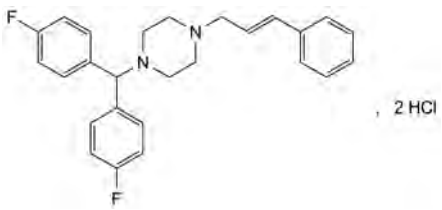
**corrected 7.0**

# FLUNARIZINE DIHYDROCHLORIDE

## Flunarizini dihydrochloridum



$C_{26}H_{28}Cl_2F_2N_2$ $M_r$ 477.4
[30484-77-6]

DEFINITION

1-[Bis(4-fluorophenyl)methyl]-4-[(2*E*)-3-phenylprop-2-enyl]piperazine dihydrochloride.

*Content*: 99.0 per cent to 101.5 per cent (dried substance).

CHARACTERS

*Appearance*: white or almost white powder, hygroscopic.

*Solubility*: slightly soluble in water, sparingly soluble in methanol, slightly soluble in alcohol and in methylene chloride.

mp: about 208 °C, with decomposition.

IDENTIFICATION

A. Infrared absorption spectrophotometry (*2.2.24*).
*Comparison*: *Ph. Eur. reference spectrum of flunarizine dihydrochloride.*

B. Dissolve 25 mg in 2 mL of *methanol R* and add 0.5 mL of *water R*. The solution gives reaction (a) of chlorides (*2.3.1*).

TESTS

**Related substances**. Liquid chromatography (*2.2.29*). *Prepare the solutions immediately before use and protect from light.*

*Test solution.* Dissolve 0.100 g of the substance to be examined in *methanol R* and dilute to 10.0 mL with the same solvent.

*Reference solution (a).* Dissolve 10 mg of *flunarizine dihydrochloride for system suitability CRS* in *methanol R* and dilute to 1.0 mL with the same solvent.

*Reference solution (b).* Dilute 1.0 mL of the test solution to 100.0 mL with *methanol R*. Dilute 5.0 mL of this solution to 20.0 mL with *methanol R*.

*Column*:

– *size*: *l* = 0.10 m, Ø = 4.6 mm,

– *stationary phase*: *base-deactivated octadecylsilyl silica gel for chromatography R* (3 µm).

*Mobile phase*:

– *mobile phase A*: solution containing 23.8 g/L of *tetrabutylammonium hydrogen sulfate R* and 7 g/L of *ammonium acetate R*,

– *mobile phase B*: *acetonitrile R*,

| Time (min) | Mobile phase A (per cent *V/V*) | Mobile phase B (per cent *V/V*) |
|---|---|---|
| 0 - 12 | 80 → 40 | 20 → 60 |
| 12 - 15 | 40 | 60 |

*Flow rate*: 1.5 mL/min.

*Detection*: spectrophotometer at 230 nm.

*Injection*: 10 µL.

*System suitability*: reference solution (a):

– *peak-to-valley ratio*: minimum 1.5, where $H_p$ = height above the baseline of the peak due to impurity C and $H_v$ = height above the baseline of the lowest point of the curve separating this peak from the peak due to flunarizine,

– the chromatogram obtained is concordant with the chromatogram supplied with *flunarizine dihydrochloride for system suitability CRS*.

*Limits*:

– *correction factor*: for the calculation of content, multiply the peak area of impurity A by 1.5,

– *impurities A, D*: for each impurity, not more than 0.4 times the area of the principal peak in the chromatogram obtained with reference solution (b) (0.1 per cent),

– *impurity B*: not more than twice the area of the principal peak in the chromatogram obtained with reference solution (b) (0.5 per cent),

– *impurity C*: not more than the area of the principal peak in the chromatogram obtained with reference solution (b) (0.25 per cent),

– *any other impurity*: for each impurity, not more than 0.4 times the area of the principal peak in the chromatogram obtained with reference solution (b) (0.1 per cent),

– *total*: not more than 4 times the area of the principal peak in the chromatogram obtained with reference solution (b) (1.0 per cent),

– *disregard limit*: 0.2 times the area of the principal peak in the chromatogram obtained with reference solution (b) (0.05 per cent).

**Loss on drying** (*2.2.32*): maximum 5.0 per cent, determined on 1.000 g by drying in an oven at 105 °C for 4 h.

**Sulfated ash** (*2.4.14*): maximum 0.1 per cent, determined on 1.0 g in a platinum crucible.

ASSAY

Dissolve 0.200 g in 70 mL of *alcohol R*. Carry out a potentiometric titration (*2.2.20*), using *0.1 M sodium hydroxide*. Read the volume added at the second point of inflexion. Carry out a blank titration.

1 mL of *0.1 M sodium hydroxide* is equivalent to 23.87 mg of $C_{26}H_{28}Cl_2F_2N_2$.

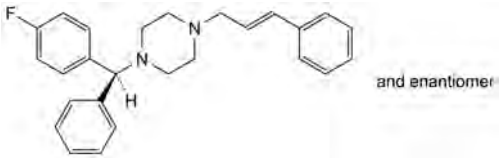
STORAGE

In an airtight container, protected from light.

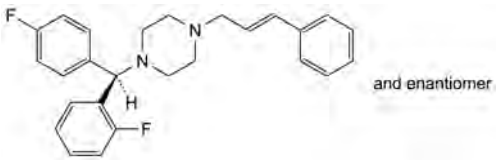
IMPURITIES

*Specified impurities: A, B, C, D.*

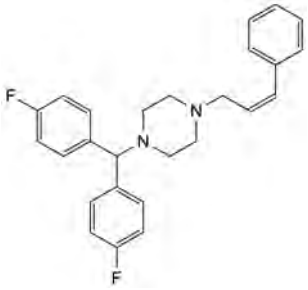
A. 1-[bis(4-fluorophenyl)methyl]piperazine,



B. 1-[(*RS*)-(4-fluorophenyl)phenylmethyl]-4-[(2*E*)-3-phenylprop-2-enyl]piperazine,



C. 1-[(*RS*)-(2-fluorophenyl)(4-fluorophenyl)methyl]-4-[(2*E*)-3-phenylprop-2-enyl]piperazine,

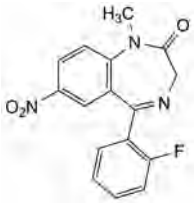


D. 1-[bis(4-fluorophenyl)methyl]-4-[(2*Z*)-3-phenylprop-2-enyl]piperazine.

**01/2008:0717**
**corrected 6.0**

# FLUNITRAZEPAM

## Flunitrazepamum



$C_{16}H_{12}FN_3O_3$ $M_r$ 313.3
[1622-62-4]

DEFINITION

5-(2-Fluorophenyl)-1-methyl-7-nitro-1,3-dihydro-2*H*-1,4-benzodiazepin-2-one.

*Content*: 99.0 per cent to 101.0 per cent (dried substance).

CHARACTERS

*Appearance*: white or yellowish, crystalline powder.

*Solubility*: practically insoluble in water, soluble in acetone, slightly soluble in alcohol.

IDENTIFICATION

Infrared absorption spectrophotometry (*2.2.24*).

*Comparison*: *Ph. Eur. reference spectrum of flunitrazepam*.

TESTS

**Related substances**. Liquid chromatography (*2.2.29*). *Prepare the solutions immediately before use*.

*Test solution*. Dissolve 100.0 mg of the substance to be examined in 10 mL of *acetonitrile R* and dilute to 50.0 mL with the mobile phase.

*Reference solution (a)*. Dilute 1.0 mL of the test solution to 100.0 mL with the mobile phase. Dilute 5.0 mL of this solution to 50.0 mL with the mobile phase.

*Reference solution (b)*. Dissolve 4 mg of the substance to be examined and 4 mg of *nitrazepam R* in 5 mL of *acetonitrile R* and dilute to 20.0 mL with the mobile phase. Dilute 1.0 mL of the solution to 20.0 mL with the mobile phase.

*Column*:

– *size*: *l* = 0.15 m, Ø = 4.6 mm,

– *stationary phase*: *octadecylsilyl silica gel for chromatography R* (5 µm).

*Mobile phase*: *methanol R*, *acetonitrile R*, *water R* (50:305:645 *V/V/V*).

*Flow rate*: 1.0 mL/min.

*Detection*: spectrophotometer at 254 nm.

*Injection*: 20 µL.

*Run time*: 6 times the retention time of flunitrazepam.

*Relative retention* with reference to flunitrazepam (retention time = about 11 min): impurity A = about 0.2; impurity B = about 0.6; impurity C = about 2.3; impurity D = about 4.0.

*System suitability*: reference solution (b):

– *resolution*: minimum 4.0 between the peaks due to nitrazepam and flunitrazepam.

*Limits*:

– *correction factor*: for the calculation of content, multiply the peak area of impurity C by 2.44,

– *any impurity*: not more than the area of the principal peak in the chromatogram obtained with reference solution (a) (0.1 per cent),

– *total*: not more than 3 times the area of the principal peak in the chromatogram obtained with reference solution (a) (0.3 per cent),

– *disregard limit*: 0.5 times the area of the principal peak in the chromatogram obtained with reference solution (a) (0.05 per cent).

**Loss on drying** (*2.2.32*): maximum 0.5 per cent, determined on 1.000 g by drying in an oven at 105 °C.

**Sulfated ash** (*2.4.14*): maximum 0.1 per cent, determined on 1.0 g.

ASSAY

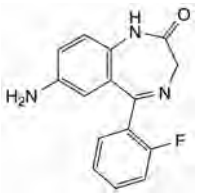
Dissolve 0.250 g in 20 mL of *anhydrous acetic acid R* and add 50 mL of *acetic anhydride R*. Titrate with *0.1 M perchloric acid*, determining the end-point potentiometrically (*2.2.20*).

1 mL of *0.1 M perchloric acid* is equivalent to 31.33 mg of $C_{16}H_{12}FN_3O_3$.

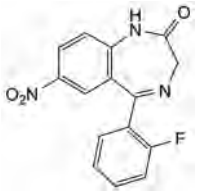
STORAGE

Protected from light.

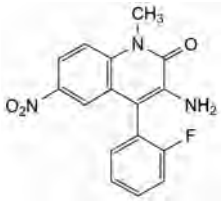
IMPURITIES



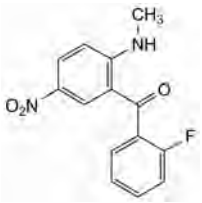
A. 7-amino-5-(2-fluorophenyl)-1,3-dihydro-2*H*-1,4-benzodiazepin-2-one (7-aminodemethylflunitrazepam),



B. 5-(2-fluorophenyl)-7-nitro-1,3-dihydro-2*H*-1,4-benzodiazepin-2-one (demethylflunitrazepam),



C. 3-amino-4-(2-fluorophenyl)-1-methyl-6-nitroquinolin-2(1*H*)-one,

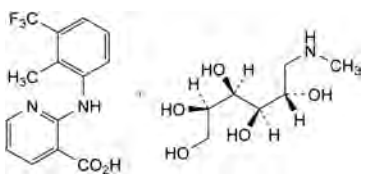


D. (2-fluorophenyl)[2-(methylamino)-5-nitrophenyl]-methanone.

**01/2008:1696**
**corrected 6.0**

# FLUNIXIN MEGLUMINE FOR VETERINARY USE

## Flunixini megluminum ad usum veterinarium



$C_{21}H_{28}F_3N_3O_7$ $M_r$ 491.5
[42461-84-7]

DEFINITION

2-[[2-Methyl-3-(trifluoromethyl)phenyl]amino]pyridine-3-carboxylic acid, 1-deoxy-1-(methylamino)-D-glucitol.

*Content*: 99.0 per cent to 101.0 per cent (dried substance).

CHARACTERS

*Appearance*: white or almost white, crystalline powder.

*Solubility*: freely soluble in water and in methanol, practically insoluble in acetone.

IDENTIFICATION

A. Specific optical rotation (*2.2.7*): − 12.0 to − 9.0 (dried substance), determined on solution S (see Tests).

B. Infrared absorption spectrophotometry (*2.2.24*).
*Comparison*: *flunixin meglumine CRS*.

TESTS

**Solution S**. Dissolve 2.50 g in *carbon dioxide-free water R* and dilute to 50.0 mL with the same solvent.

**Appearance of solution**. Solution S is clear (*2.2.1*) and not more intensely coloured than reference solution $Y_7$ (*2.2.2, Method II*).

**pH** (*2.2.3*): 7.0 to 9.0 for solution S.

**Related substances**. Liquid chromatography (*2.2.29*).

*Test solution*. Dissolve 50.0 mg of the substance to be examined in the mobile phase and dilute to 10.0 mL with the mobile phase.

*Reference solution (a)*. Dissolve 5.0 mg of *flunixin impurity B CRS* in 1.0 mL of the test solution and dilute to 50.0 mL with the mobile phase.

*Reference solution (b)*. Dissolve 5.0 mg of *2-chloronicotinic acid R* (impurity A) in the mobile phase and dilute to 50.0 mL with the mobile phase. To 2.0 mL of this solution add 2.0 mL of reference solution (a) and dilute to 20.0 mL with the mobile phase.

*Reference solution (c)*. Dissolve 50 mg of *flunixin impurity C CRS* in the mobile phase and dilute to 100 mL with the mobile phase.

*Column*:
- *size*: *l* = 0.125 m, Ø = 4.0 mm,
- *stationary phase*: *octadecylsilyl silica gel for chromatography R* (5 µm).

*Mobile phase*: mix 300 volumes of *water R* and 700 volumes of *acetonitrile R*, and add 0.25 volumes of *phosphoric acid R*.

*Flow rate*: 1.0 mL/min.

*Detection*: spectrophotometer at 254 nm.

*Injection*: 10 µL.

*Run time*: 5 times the retention time of flunixin.

*Relative retention* with reference to flunixin (retention time = about 3.1 min): impurity A = about 0.4; impurity C = about 0.6; impurity B = about 0.7; impurity D = about 4.2.

*System suitability*: reference solution (a):
- *resolution*: minimum 3.5 between the peaks due to impurity B and flunixin.

*Limits*:
- *correction factor*: for the calculation of content, multiply the peak area of impurity C by 1.9,
- *impurity A*: not more than the area of the corresponding peak in the chromatogram obtained with reference solution (b) (0.2 per cent),
- *impurity B*: not more than the area of the corresponding peak in the chromatogram obtained with reference solution (b) (0.2 per cent),
- *impurities C, D*: for each impurity, not more than the area of the peak due to flunixin in the chromatogram obtained with reference solution (b) (0.2 per cent),
- *any other impurity*: for each impurity, not more than the area of the peak due to flunixin in the chromatogram obtained with reference solution (b) (0.2 per cent),
- *total*: not more than 2.5 times the area of the peak due to flunixin in the chromatogram obtained with reference solution (b) (0.5 per cent),
- *disregard limit*: 0.25 times the area of the peak due to flunixin in the chromatogram obtained with reference solution (b) (0.05 per cent).

**Loss on drying** (*2.2.32*): maximum 0.5 per cent, determined on 1.000 g by drying in an oven at 105 °C for 4 h.

**Sulfated ash** (*2.4.14*): maximum 0.1 per cent, determined on 1.0 g.

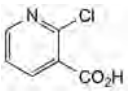
ASSAY

Dissolve 0.175 g in 50 mL of *anhydrous acetic acid R*. Titrate with *0.1 M perchloric acid*, determining the end-point potentiometrically (*2.2.20*).

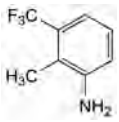
1 mL of *0.1 M perchloric acid* is equivalent to 24.57 mg of $C_{21}H_{28}F_3N_3O_7$.

IMPURITIES

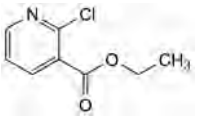
*Specified impurities: A, B, C, D.*



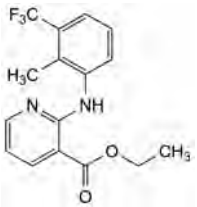
A. 2-chloropyridine-3-carboxylic acid,



B. 2-methyl-3-(trifluoromethyl)aniline,



C. ethyl 2-chloropyridine-3-carboxylate,

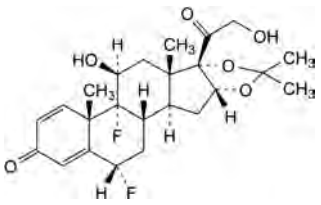


D. ethyl 2-[[2-methyl-3-(trifluoromethyl)phenyl]amino]-pyridine-3-carboxylate.

**04/2015:0494**

# FLUOCINOLONE ACETONIDE

## Fluocinoloni acetonidum



$C_{24}H_{30}F_2O_6$ $M_r$ 452.5
[67-73-2]

DEFINITION

6α,9-Difluoro-11β,21-dihydroxy-16α,17-(1-methylethylidenedioxy)pregna-1,4-diene-3,20-dione.

*Content*: 97.5 per cent to 102.0 per cent (dried substance).

CHARACTERS

*Appearance*: white or almost white, crystalline powder.

*Solubility*: practically insoluble in water, soluble in acetone and in anhydrous ethanol, practically insoluble in heptane.

It shows polymorphism (*5.9*).

IDENTIFICATION

A. Infrared absorption spectrophotometry (*2.2.24*).

*Comparison*: *fluocinolone acetonide CRS*.

If the spectra obtained in the solid state show differences, dissolve the substance to be examined and the reference substance separately in *anhydrous ethanol R*, evaporate to dryness and record new spectra using the residues.

B. Examine the chromatograms obtained in the assay.

*Results*: the principal peak in the chromatogram obtained with test solution (b) is similar in retention time and size to the principal peak in the chromatogram obtained with reference solution (d).

TESTS

**Specific optical rotation** (*2.2.7*): + 100 to + 104 (dried substance).

Dissolve 0.100 g in *anhydrous ethanol R* and dilute to 10.0 mL with the same solvent.

**Related substances**. Liquid chromatography (*2.2.29*). *Carry out the test protected from light and prepare the solutions immediately before use.*

*Solvent mixture*: *acetonitrile R*, *water R* (20:80 *V/V*).

*Buffer solution*. Dissolve 5.68 g of *anhydrous disodium hydrogen phosphate R* and 3.63 g of *potassium dihydrogen phosphate R* in *water R* and dilute to 1000.0 mL with the same solvent.

*Test solution (a)*. Dissolve 20.0 mg of the substance to be examined in 20 mL of *acetonitrile R* and dilute to 100.0 mL with *water R*.

*Test solution (b)*. Dilute 1.0 mL of test solution (a) to 10.0 mL with the solvent mixture.

*Reference solution (a)*. Dissolve 2 mg of *fluocinolone acetonide for system suitability CRS* (containing impurities H, J and K) in 2 mL of *acetonitrile R* and dilute to 10.0 mL with *water R*.

*Reference solution (b)*. Dissolve 2 mg of *fluocinolone acetonide for peak identification CRS* (containing impurities D and I) in 2 mL of *acetonitrile R* and dilute to 10.0 mL with *water R*.

*Reference solution (c)*. Dilute 1.0 mL of test solution (a) to 100.0 mL with the solvent mixture. Dilute 1.0 mL of this solution to 10.0 mL with the solvent mixture.

*Reference solution (d)*. Dissolve 20.0 mg of *fluocinolone acetonide CRS* in 20 mL of *acetonitrile R* and dilute to 100.0 mL with *water R*. Dilute 1.0 mL of the solution to 10.0 mL with the solvent mixture.

*Column*:

- *size*: *l* = 0.25 m, Ø = 4.6 mm;
- *stationary phase*: *end-capped octadecylsilyl silica gel for chromatography R* (5 µm).

*Mobile phase*:

- *mobile phase A*: *acetonitrile R*, buffer solution (28:72 *V/V*);
- *mobile phase B*: *water R*, *acetonitrile R* (40:60 *V/V*);

| Time (min) | Mobile phase A (per cent *V/V*) | Mobile phase B (per cent *V/V*) |
|---|---|---|
| 0 - 2 | 100 | 0 |
| 2 - 42 | 100 → 0 | 0 → 100 |

*Flow rate*: 1.0 mL/min.

*Detection*: spectrophotometer at 238 nm.

*Injection*: 40 µL of test solution (a) and reference solutions (a), (b) and (c).

*Identification of impurities*: use the chromatogram supplied with *fluocinolone acetonide for system suitability CRS* and the chromatogram obtained with reference solution (a) to identify the peaks due to impurities H, J and K; use the chromatogram supplied with *fluocinolone acetonide for peak identification CRS* and the chromatogram obtained with reference solution (b) to identify the peaks due to impurities D and I.

*Relative retention* with reference to fluocinolone acetonide (retention time = about 18 min): impurity D = about 0.8; impurity H = about 0.90; impurity I = about 0.94; impurity J = about 1.05; impurity K = about 1.2.

*System suitability*: reference solution (a):

- *peak-to-valley ratio*: minimum 5.0, where $H_p$ = height above the baseline of the peak due to impurity J and $H_v$ = height above the baseline of the lowest point of the curve separating this peak from the peak due to fluocinolone acetonide.

*Calculation of percentage contents*:

- *correction factor*: multiply the peak area of impurity K by 1.3;
- for each impurity, use the concentration of fluocinolone acetonide in reference solution (c).

*Limits*:

- *impurity K*: maximum 0.3 per cent;
- *impurities D, J*: for each impurity, maximum 0.2 per cent;
- *impurities H, I*: for each impurity, maximum 0.15 per cent;
- *unspecified impurities*: for each impurity, maximum 0.10 per cent;
- *total*: maximum 0.7 per cent;
- *reporting threshold*: 0.05 per cent.

**Loss on drying** (*2.2.32*): maximum 1.0 per cent, determined on 1.000 g by drying in an oven at 105 °C for 3 h.

ASSAY

Liquid chromatography (*2.2.29*) as described in the test for related substances with the following modification.

*Injection*: 20 µL of test solution (b) and reference solution (d).

Calculate the percentage content of $C_{24}H_{30}F_2O_6$ taking into account the assigned content of *fluocinolone acetonide CRS*.

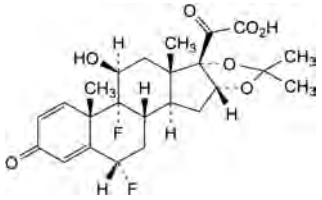
STORAGE

Protected from light.

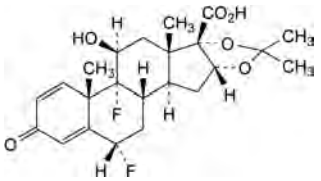
IMPURITIES

*Specified impurities: D, H, I, J, K.*

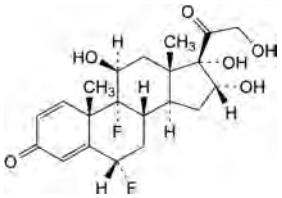
*Other detectable impurities* (the following substances would, if present at a sufficient level, be detected by one or other of the tests in the monograph. They are limited by the general acceptance criterion for other/unspecified impurities and/or by the general monograph *Substances for pharmaceutical use (2034)*. It is therefore not necessary to identify these impurities for demonstration of compliance. See also *5.10. Control of impurities in substances for pharmaceutical use*): *A, B, C, E, F, G, L, M.*



A. 6α,9-difluoro-11β-hydroxy-16α,17-(1-methylethylidenedioxy)-3,20-dioxopregna-1,4-dien-21-oic acid,



B. 6α,9-difluoro-11β-hydroxy-16α,17-(1-methylethylidenedioxy)-3-oxoandrosta-1,4-diene-17β-carboxylic acid,



C. 6α,9-difluoro-11β,16α,17,21-tetrahydroxypregna-1,4-diene-3,20-dione (fluocinolone),

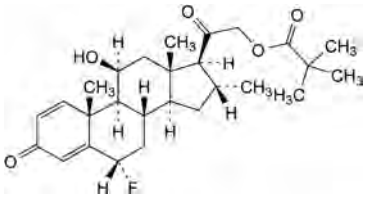
# FLUOCORTOLONE PIVALATE

## Fluocortoloni pivalas



$C_{27}H_{37}FO_5$ $M_r$ 460.6
[29205-06-9]

DEFINITION

6α-Fluoro-11β-hydroxy-16α-methyl-3,20-dioxopregna-1,4-dien-21-yl 2,2-dimethylpropanoate.

*Content*: 97.0 per cent to 103.0 per cent (dried substance).

CHARACTERS

*Appearance*: white or almost white, crystalline powder.

*Solubility*: practically insoluble in water, freely soluble in methylene chloride and in dioxan, sparingly soluble in ethanol (96 per cent).

IDENTIFICATION

*First identification*: *A, B.*

*Second identification*: *B, C, D.*

A. Infrared absorption spectrophotometry (*2.2.24*).
*Comparison*: *fluocortolone pivalate CRS.*

B. Thin-layer chromatography (*2.2.27*).
*Solvent mixture*: *methanol R, methylene chloride R* (1:9 *V/V*).
*Test solution.* Dissolve 10 mg of the substance to be examined in the solvent mixture and dilute to 10 mL with the solvent mixture.
*Reference solution (a).* Dissolve 20 mg of *fluocortolone pivalate CRS* in the solvent mixture and dilute to 20 mL with the solvent mixture.
*Reference solution (b).* Dissolve 10 mg of *norethisterone CRS* in reference solution (a) and dilute to 10 mL with reference solution (a).
*Plate*: *TLC silica gel $F_{254}$ plate R.*
*Mobile phase*: add a mixture of 1.2 volumes of *water R* and 8 volumes of *methanol R* to a mixture of 15 volumes of *ether R* and 77 volumes of *methylene chloride R.*
*Application*: 5 µL.
*Development*: over a path of 15 cm.
*Drying*: in air.
*Detection A*: examine in ultraviolet light at 254 nm.
*Results A*: the principal spot in the chromatogram obtained with the test solution is similar in position and size to the principal spot in the chromatogram obtained with reference solution (a).
*Detection B*: spray with *alcoholic solution of sulfuric acid R.* Heat at 120 °C for 10 min or until the spots appear. Allow to cool. Examine in daylight and in ultraviolet light at 365 nm.
*Results B*: the principal spot in the chromatogram obtained with the test solution is similar in position, colour in daylight, fluorescence in ultraviolet light at 365 nm and size to the principal spot in the chromatogram obtained with reference solution (a).
*System suitability*: reference solution (b):
– the chromatogram shows 2 clearly separated spots.

C. To about 1 mg add 2 mL of a mixture of 2 volumes of *glacial acetic acid R* and 3 volumes of *sulfuric acid R* and heat for 1 min on a water-bath. A red colour is produced. Add 5 mL of *water R*, the colour changes to violet-red.

D. Mix about 5 mg with 45 mg of *heavy magnesium oxide R* and ignite in a crucible until an almost white residue is obtained (usually less than 5 min). Allow to cool, add 1 mL of *water R*, 0.05 mL of *phenolphthalein solution R1* and about 1 mL of *dilute hydrochloric acid R* to render the solution colourless. Filter and add to the filtrate a freshly prepared mixture of 0.1 mL of *alizarin S solution R* and 0.1 mL of *zirconyl nitrate solution R*. Mix, allow to stand for 5 min and compare the colour of the solution with that of a blank prepared in the same manner. The test solution is yellow and the blank is red.

TESTS

**Specific optical rotation** (*2.2.7*): + 100 to + 105 (dried substance).

Dissolve 0.25 g in *dioxan R* and dilute to 25.0 mL with the same solvent.

**Related substances**. Liquid chromatography (*2.2.29*).

*Test solution.* Dissolve 10.0 mg of the substance to be examined in *acetonitrile R* and dilute to 10.0 mL with the same solvent.

*Reference solution (a).* Dilute 1.0 mL of the test solution to 100.0 mL with *acetonitrile R.*

*Reference solution (b).* Dissolve 2 mg of *fluocortolone pivalate CRS* and 2 mg of *prednisolone hexanoate CRS* in *acetonitrile R*, then dilute to 100 mL with the same solvent.

*Column*:
– *size*: *l* = 0.25 m, Ø = 4.6 mm;
– *stationary phase*: *octadecylsilyl silica gel for chromatography R* (5 µm).

*Mobile phase*: *methanol R*, *acetonitrile R*, *water R* (25:30:32 *V/V/V*).

*Flow rate*: 1.5 mL/min.

*Detection*: spectrophotometer at 243 nm.

*Injection*: 20 µL.

*Run time*: twice the retention time of fluocortolone pivalate.

*System suitability*: reference solution (b):
– *resolution*: minimum 5.0 between the peaks due to fluocortolone pivalate and prednisolone hexanoate.

*Limits*:
– *impurities A, B, C, D*: for each impurity, not more than the area of the principal peak in the chromatogram obtained with reference solution (a) (1 per cent);
– *total*: not more than twice the area of the principal peak in the chromatogram obtained with reference solution (a) (2 per cent);
– *disregard limit*: 0.025 times the area of the principal peak in the chromatogram obtained with reference solution (a) (0.025 per cent).

**Loss on drying** (*2.2.32*): maximum 1.0 per cent, determined on 1.000 g by drying in an oven at 105 °C.

**Sulfated ash** (*2.4.14*): maximum 0.1 per cent, determined on 1.0 g.

ASSAY

Dissolve 30.0 mg in *anhydrous ethanol R* and dilute to 100.0 mL with the same solvent. Dilute 5.0 mL of this solution to 100.0 mL with *anhydrous ethanol R*. Measure the absorbance (*2.2.25*) at the absorption maximum at 242 nm.

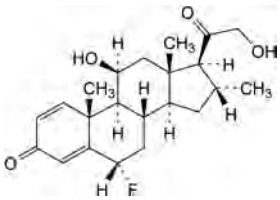
Calculate the content of $C_{27}H_{37}FO_5$ taking the specific absorbance to be 350.

STORAGE

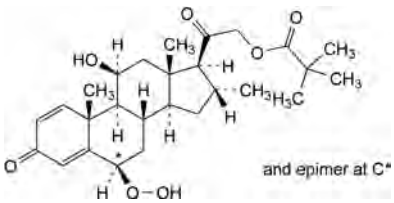
Protected from light.

IMPURITIES

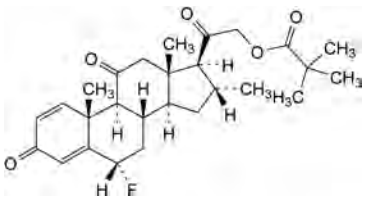
*Specified impurities*: *A, B, C, D.*



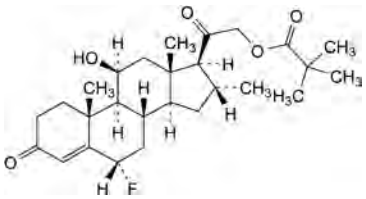
A. 6α-fluoro-11β,21-dihydroxy-16α-methylpregna-1,4-diene-3,20-dione (fluocortolone),



B. 6-hydroperoxy-11β-hydroxy-16α-methyl-3,20-dioxopregna-1,4-dien-21-yl 2,2-dimethylpropanoate,



C. 6α-fluoro-16α-methyl-3,11,20-trioxopregna-1,4-dien-21-yl 2,2-dimethylpropanoate,

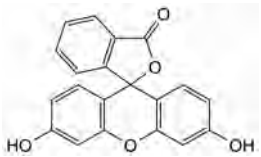


D. 6α-fluoro-11β-hydroxy-16α-methyl-3,20-dioxopregna-4-en-21-yl 2,2-dimethylpropanoate.

**07/2012:2348**

# FLUORESCEIN

## Fluoresceinum



$C_{20}H_{12}O_5$ $M_r$ 332.3

[2321-07-5]

DEFINITION

3′,6′-Dihydroxy-3*H*-spiro[isobenzofuran-1,9′-xanthen]-3-one.

*Content*: 97.0 per cent to 102.0 per cent (dried substance).

CHARACTERS

*Appearance*: orange-red, fine powder.

*Solubility*: practically insoluble in water, soluble in hot ethanol (96 per cent). It dissolves in dilute solutions of alkali hydroxides.

IDENTIFICATION

*First identification: A, D.*

*Second identification: B, C, D.*

A. Infrared absorption spectrophotometry (*2.2.24*).

*Comparison*: *fluorescein CRS*.

Dissolve the substance to be examined and the reference substance separately in the minimum volume of *ethanol (96 per cent) R*, evaporate to dryness and record the spectra using the residues.

B. Dilute 0.1 mL of solution S (see Tests) to 10 mL with *water R*. The solution shows a yellowish-green fluorescence. The fluorescence disappears on addition of 0.1 mL of *dilute hydrochloric acid R* and reappears on addition of 0.2 mL of *dilute sodium hydroxide solution R*.

C. The absorption by a piece of filter paper of 0.05 mL of the solution prepared for identification B (before the addition of *dilute hydrochloric acid R*) colours the paper yellow. On exposing the moist paper to bromine vapour for 1 min and then to ammonia vapour, the colour becomes deep pink.

D. Suspend 0.5 g in 50 mL of *water R* and shake for 10 min. The substance does not completely dissolve.

TESTS

**Solution S**. Suspend 1.0 g in 35.0 mL of *water R* and add dropwise with shaking 4.5 mL of *1 M sodium hydroxide*. Adjust to pH 8.5-9.0 with *1 M sodium hydroxide* and dilute to 50.0 mL with *water R* to obtain a clear solution.

**Appearance of solution**. Solution S is clear (*2.2.1*) and orange-yellow with yellowish-green fluorescence.

**Related substances**. Liquid chromatography (*2.2.29*).

*Solvent mixture*: *acetonitrile for chromatography R*, mobile phase A (30:70 *V/V*).

*Test solution (a).* Disperse 50.0 mg of the substance to be examined in 15.0 mL of *ethanol (96 per cent) R*. Sonicate and dilute to 50.0 mL with the solvent mixture.

*Test solution (b).* Dilute 5.0 mL of test solution (a) to 250.0 mL with the solvent mixture.

*Reference solution (a).* Disperse 50.0 mg of *fluorescein CRS* in 15.0 mL of *ethanol (96 per cent) R*. Sonicate and dilute to 50.0 mL with the solvent mixture. Dilute 5.0 mL of this solution to 250.0 mL with the solvent mixture.

*Reference solution (b).* Dissolve 10.0 mg of *phthalic acid CRS* (impurity B) and 10.0 mg of *resorcinol CRS* (impurity A) in the solvent mixture and dilute to 100.0 mL with the solvent mixture. Dilute 1.0 mL of this solution to 100.0 mL with the solvent mixture.

*Reference solution (c).* Dilute 5.0 mL of test solution (b) to 20.0 mL with the solvent mixture.

*Reference solution (d).* Dilute 10.0 mL of reference solution (c) to 100.0 mL with the solvent mixture.

*Reference solution (e).* Dissolve the contents of a vial of *fluorescein impurity C CRS* in 1 mL of the solvent mixture.

*Column*:

- *size*: *l* = 0.25 m, Ø = 4.6 mm;
- *stationary phase*: *octylsilyl silica gel for chromatography R3* (5 µm);
- *temperature*: 35 °C.

*Mobile phase*:

- *mobile phase A*: dissolve 0.610 g of *potassium dihydrogen phosphate R* in *water for chromatography R*, adjust to pH 2.0 with *phosphoric acid R* and dilute to 1000.0 mL with *water for chromatography R*;
- *mobile phase B*: *acetonitrile for chromatography R*;

| Time (min) | Mobile phase A (per cent *V/V*) | Mobile phase B (per cent *V/V*) |
|---|---|---|
| 0 - 20 | 85 → 20 | 15 → 80 |
| 20 - 29 | 20 | 80 |

*Flow rate*: 1.0 mL/min.

*Detection*: spectrophotometer at 220 nm.

*Injection*: 20 µL of test solution (a) and reference solutions (b), (c), (d) and (e).

*Identification of impurity C*: use the chromatogram obtained with reference solution (e) to identify the peak due to impurity C.

*Relative retention* with reference to fluorescein (retention time = about 15 min): impurity A = about 0.42; impurity B = about 0.48; impurity C = about 0.86.

*System suitability*: reference solution (b):

– *resolution*: minimum 2.0 between the peaks due to impurities A and B.

*Limits*:

– *correction factor*: for the calculation of content, multiply the peak area of impurity C by 1.9;
– *impurity C*: not more than 1.2 times the area of the principal peak in the chromatogram obtained with reference solution (c) (0.6 per cent);
– *impurities A, B*: for each impurity, not more than the area of the corresponding peak in the chromatogram obtained with reference solution (b) (0.1 per cent);
– *unspecified impurities*: for each impurity, not more than 0.2 times the area of the principal peak in the chromatogram obtained with reference solution (c) (0.10 per cent);
– *sum of impurities other than A, B and C*: not more than 0.4 times the area of the principal peak in the chromatogram obtained with reference solution (c) (0.2 per cent);
– *disregard limit*: the area of the principal peak in the chromatogram obtained with reference solution (d) (0.05 per cent).

**Chlorides** (*2.4.4*): maximum 0.25 per cent.

To 10.0 mL of solution S add 90.0 mL of *water R* and 3.0 mL of *dilute nitric acid R*, wait for at least 30 min and filter. Dilute 10.0 mL of the filtrate to 15.0 mL with *water R*.

**Loss on drying** (*2.2.32*): maximum 1.0 per cent, determined on 1.000 g by drying in an oven at 105 °C.

ASSAY

Liquid chromatography (*2.2.29*) as described in the test for related substances with the following modification.

*Injection*: test solution (b) and reference solution (a).

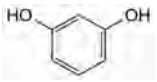
Calculate the percentage content of $C_{20}H_{12}O_5$ taking into account the assigned content of *fluorescein CRS*.

STORAGE

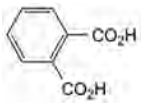
Protected from light.

IMPURITIES

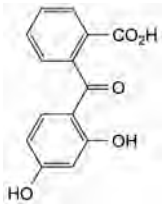
*Specified impurities*: *A, B, C.*



A. benzene-1,3-diol (resorcinol),



B. benzene-1,2-dicarboxylic acid (phthalic acid),

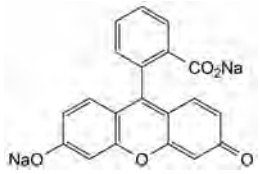


C. 2-(2,4-dihydroxybenzoyl)benzoic acid.

**01/2008:1213**
**corrected 6.0**

# FLUORESCEIN SODIUM

## Fluoresceinum natricum



$C_{20}H_{10}Na_2O_5$ $M_r$ 376.3
[518-47-8]

DEFINITION

Disodium 2-(6-oxido-3-oxo-3*H*-xanthen-9-yl)benzoate.

*Content*: 95.0 per cent to 103.0 per cent (dried substance).

CHARACTERS

*Appearance*: orange-red, fine powder, hygroscopic.

*Solubility*: freely soluble in water, soluble in ethanol (96 per cent), practically insoluble in hexane and in methylene chloride.

IDENTIFICATION

*First identification*: *B, D.*

*Second identification*: *A, C, D.*

A. Dilute 0.1 mL of solution S (see Tests) to 10 mL with *water R*. The solution shows yellowish-green fluorescence. The fluorescence disappears on addition of 0.1 mL of *dilute hydrochloric acid R* and reappears on addition of 0.2 mL of *dilute sodium hydroxide solution R*.

B. Infrared absorption spectrophotometry (*2.2.24*).

*Preparation*: discs.

*Comparison*: *Ph. Eur. reference spectrum of fluorescein sodium*.

C. The absorption by a piece of filter paper of 0.05 mL of the solution prepared for identification A (before the addition of *dilute hydrochloric acid R*) colours the paper yellow. On exposing the moist paper to bromine vapour for 1 min and then to ammonia vapour, the colour becomes deep pink.

D. Ignite 0.1 g in a porcelain crucible. Dissolve the residue in 5 mL of *water R* and filter. 2 mL of the filtrate gives reaction (a) of sodium (*2.3.1*).

TESTS

**Solution S**. Dissolve 1.0 g in *carbon dioxide-free water R* prepared from *distilled water R* and dilute to 50 mL with the same solvent.

**Appearance of solution**. Solution S is clear (*2.2.1*) and orange-yellow with yellowish-green fluorescence.

**pH** (*2.2.3*): 7.0 to 9.0 for solution S.

**Related substances**. Liquid chromatography (*2.2.29*).

*Test solution (a).* Dissolve 0.100 g of the substance to be examined in a mixture of 30 volumes of *acetonitrile R* and 70 volumes of mobile phase A and dilute to 100.0 mL with the same mixture of solvents.

*Test solution (b).* Dilute 5.0 mL of test solution (a) to 250.0 mL with a mixture of 30 volumes of *acetonitrile R* and 70 volumes of mobile phase A.

*Reference solution (a).* Dissolve 55.0 mg of *diacetylfluorescein CRS* in a mixture of 1 mL of *2.5 M sodium hydroxide* and 5 mL of *ethanol (96 per cent) R*, heat on a water-bath for 20 min mixing frequently, cool and dilute to 50.0 mL with *water R*. Dilute 5.0 mL of the solution to 250.0 mL with a mixture of 30 volumes of *acetonitrile R* and 70 volumes of mobile phase A.

*Reference solution (b).* Dissolve 10.0 mg of *phthalic acid R* (impurity B) and 10.0 mg of *resorcinol R* (impurity A) in a mixture of 30 volumes of *acetonitrile R* and 70 volumes of mobile phase A and dilute to 100.0 mL with the same mixture of solvents. Dilute 5.0 mL of the solution to 100.0 mL with a mixture of 30 volumes of *acetonitrile R* and 70 volumes of mobile phase A.

*Reference solution (c).* Dilute 5.0 mL of test solution (b) to 20.0 mL with a mixture of 30 volumes of *acetonitrile R* and 70 volumes of mobile phase A.

*Column*:

- *size*: *l* = 0.25 m, Ø = 4.6 mm;
- *stationary phase*: *octylsilyl silica gel for chromatography R* (5 µm);
- *temperature*: 35 °C.

*Mobile phase*:

- *mobile phase A*: dissolve 0.610 g of *potassium dihydrogen phosphate R* in *water R* and dilute to 1000 mL with the same solvent; adjust to pH 2.0 with *phosphoric acid R*;
- *mobile phase B*: *acetonitrile for chromatography R*;

| Time (min) | Mobile phase A (per cent *V/V*) | Mobile phase B (per cent *V/V*) |
|---|---|---|
| 0 - 20 | 85 → 20 | 15 → 80 |
| 20 - 29 | 20 | 80 |
| 29 - 30 | 20 → 85 | 80 → 15 |
| 30 - 35 | 85 | 15 |

*Flow rate*: 1.0 mL/min.

*Detection*: spectrophotometer at 220 nm.

*Injection*: 20 µL of test solution (a) and reference solutions (b) and (c).

*Relative retention* with reference to fluorescein (retention time = about 15 min): impurity A = about 0.4; impurity B = about 0.5; impurity C = about 0.9.

*System suitability*: reference solution (b):

- *resolution*: minimum 1.5 between the peaks due to impurity A and impurity B.

*Limits*:

- *correction factor*: for the calculation of content, multiply the peak area of impurity C by 1.6;
- *impurities A, B*: for each impurity, not more than the area of the corresponding peak in the chromatogram obtained with reference solution (b) (0.5 per cent);
- *impurity C*: not more than the area of the principal peak in the chromatogram obtained with reference solution (c) (0.5 per cent);
- *unspecified impurities*: for each impurity, not more than 0.2 times the area of the principal peak in the chromatogram obtained with reference solution (c) (0.10 per cent);
- *sum of impurities other than A, B, C*: not more than the area of the principal peak in the chromatogram obtained with reference solution (c) (0.5 per cent);
- *disregard limit*: 0.1 times the area of the principal peak in the chromatogram obtained with reference solution (c) (0.05 per cent).

**Chlorides** (*2.4.4*): maximum 0.25 per cent.

To 10 mL of solution S add 90 mL of *water R* and 1 mL of *dilute nitric acid R*, wait for at least 10 min and filter. Dilute 10 mL of the filtrate to 15 mL with *water R*.

**Sulfates** (*2.4.13*): maximum 1.0 per cent.

To 5 mL of solution S add 90 mL of *distilled water R*, 2.5 mL of *dilute hydrochloric acid R* and dilute to 100 mL with *distilled water R*. Filter.

**Zinc**. Dilute 5 mL of solution S to 10 mL with *water R*. Add 2 mL of *hydrochloric acid R1*, filter and add 0.1 mL of *potassium ferrocyanide solution R*. No turbidity or precipitate is formed immediately.

**Loss on drying** (*2.2.32*): maximum 10.0 per cent, determined on 1.000 g by drying in an oven at 105 °C.

ASSAY

Liquid chromatography (*2.2.29*) as described in the test for related substances with the following modification.

*Injection*: test solution (b) and reference solution (a).

Calculate the percentage content of $C_{20}H_{10}Na_2O_5$ using the chromatogram obtained with reference solution (a) and the declared content of *diacetylfluorescein CRS*.

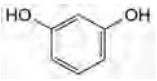
1 mg of *diacetylfluorescein CRS* is equivalent to 0.9037 mg of $C_{20}H_{10}Na_2O_5$.

STORAGE

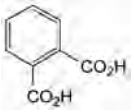
In an airtight container, protected from light.

IMPURITIES

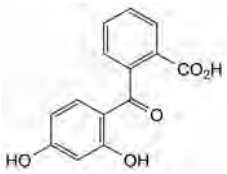
*Specified impurities: A, B, C.*



A. benzene-1,3-diol (resorcinol),



B. benzene-1,2-dicarboxylic acid (phthalic acid),

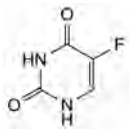


C. 2-(2,4-dihydroxybenzoyl)benzoic acid.

**01/2017:0611**
**corrected 9.2**

# FLUOROURACIL

## Fluorouracilum



$C_4H_3FN_2O_2$ $M_r$ 130.1
[51-21-8]

DEFINITION

5-Fluoropyrimidine-2,4(1*H*,3*H*)-dione.

*Content*: 98.5 per cent to 101.0 per cent (dried substance).

CHARACTERS

*Appearance*: white or almost white, crystalline powder.

*Solubility*: sparingly soluble in water, slightly soluble in ethanol (96 per cent).

IDENTIFICATION

Infrared absorption spectrophotometry (*2.2.24*).

*Comparison*: *fluorouracil CRS*.

TESTS

**Solution S**. Dissolve 0.5 g in *carbon dioxide-free water R* and dilute to 50 mL with the same solvent.

**Appearance of solution**. Solution S is clear (*2.2.1*) and not more intensely coloured than reference solution $BY_7$ or $Y_7$ (*2.2.2, Method II*).

**pH** (*2.2.3*): 4.5 to 5.0 for solution S.

**Impurities F and G**. Thin-layer chromatography (*2.2.27*).

*Test solution.* Dissolve 0.10 g of the substance to be examined in a mixture of equal volumes of *methanol R* and *water R* and dilute to 10.0 mL with the same mixture of solvents.

*Reference solution (a).* Dissolve 5.0 mg of *fluorouracil impurity F CRS* in a mixture of equal volumes of *methanol R* and *water R* and dilute to 200.0 mL with the same mixture of solvents.

*Reference solution (b).* Dissolve 20.0 mg of *urea R* (impurity G) in *methanol R* and dilute to 10.0 mL with the same solvent. Dilute 1.0 mL of this solution to 100.0 mL with *methanol R*.

*Plate*: *TLC silica gel $F_{254}$ plate R*.

*Mobile phase*: *methanol R*, *water R*, *ethyl acetate R* (15:15:70 *V/V/V*).

*Application*: 10 µL.

*Development*: over a path of 2/3 of the plate.

*Drying*: in air.

*Detection*:

- *impurity F*: examine in ultraviolet light at 254 nm;
- *impurity G*: spray with a mixture of 200 mL of a 10 g/L solution of *dimethylaminobenzaldehyde R* in *anhydrous ethanol R* and 20 mL of *hydrochloric acid R*; dry in an oven at 80 °C for 3-4 min, then examine in daylight (impurity G produces a yellow spot and fluorouracil is not detected by the spray).

*System suitability*: the chromatogram shows 2 clearly separated spots after both detections.

*Limits*:

- *impurity F*: any spot due to impurity F is not more intense than the spot in the chromatogram obtained with reference solution (a) (0.25 per cent);
- *impurity G*: any spot due to impurity G is not more intense than the spot in the chromatogram obtained with reference solution (b) (0.2 per cent).

**Related substances**. Liquid chromatography (*2.2.29*). *Carry out the test protected from light.*

*Test solution.* Dissolve 50.0 mg of the substance to be examined in the mobile phase and dilute to 50.0 mL with the mobile phase. Dilute 5.0 mL of this solution to 50.0 mL with the mobile phase.

*Reference solution (a).* Dissolve 5.0 mg of *fluorouracil impurity C CRS* in the mobile phase and dilute to 50.0 mL with the mobile phase.

*Reference solution (b).* Dilute 1.0 mL of reference solution (a) to 100.0 mL with the mobile phase. Dilute 1.0 mL of this solution to 10.0 mL with the mobile phase.

*Reference solution (c).* Dissolve 5.0 mg of *fluorouracil impurity A CRS* in the mobile phase and dilute to 50.0 mL with the mobile phase. Dilute 1.0 mL of the solution to 100.0 mL with the mobile phase. Dilute 1.0 mL of this solution to 10.0 mL with the mobile phase.

*Reference solution (d).* Dissolve 5.0 mg of *fluorouracil impurity B CRS* in the mobile phase and dilute to 50.0 mL with the mobile phase. Dilute 1.0 mL of the solution to 100.0 mL with the mobile phase. Dilute 1.0 mL of this solution to 10.0 mL with the mobile phase.

*Reference solution (e).* Dilute 1.0 mL of the test solution to 100.0 mL with the mobile phase. Dilute 1.0 mL of this solution to 10.0 mL with the mobile phase.

*Reference solution (f).* To 1 mL of reference solution (a) add 1 mL of the test solution and dilute to 10 mL with the mobile phase.

*Reference solution (g).* Dissolve the contents of a vial of *fluorouracil impurity mixture CRS* (containing impurities D and E) in 1.0 mL of the mobile phase.

*Column*:

- *size*: *l* = 0.25 m, Ø = 4.6 mm;
- *stationary phase*: *octadecylsilyl silica gel for chromatography R* (5 µm).

*Mobile phase*: 6.805 g/L solution of *potassium dihydrogen phosphate R* adjusted to pH 5.7 ± 0.1 with a 5 M potassium hydroxide solution prepared from *potassium hydroxide R*.

*Flow rate*: 1.0 mL/min.

*Detection*: spectrophotometer at 266 nm.

*Injection*: 20 µL.

*Run time*: 3 times the retention time of fluorouracil.

*Identification of impurities*: use the chromatogram supplied with *fluorouracil impurity mixture CRS* and the chromatogram obtained with reference solution (g) to identify the peaks due to impurities D and E.

*Relative retention* with reference to fluorouracil (retention time = about 6 min): impurity A = about 0.5; impurity B = about 0.7; impurity C = about 0.9; impurity D = about 1.6; impurity E = about 1.9.

*System suitability*: reference solution (f):

- *resolution*: minimum 2 between the peaks due to impurity C and fluorouracil.

*Limits*:

- *correction factors*: for the calculation of content, multiply the peak areas of the following impurities by the corresponding correction factor: impurity D = 1.5; impurity E = 1.3;

- *impurity A*: not more than the area of the corresponding peak in the chromatogram obtained with reference solution (c) (0.1 per cent);
- *impurity B*: not more than the area of the corresponding peak in the chromatogram obtained with reference solution (d) (0.1 per cent);
- *impurity C*: not more than the area of the corresponding peak in the chromatogram obtained with reference solution (b) (0.1 per cent);
- *impurities D, E*: for each impurity, not more than the area of the principal peak in the chromatogram obtained with reference solution (e) (0.1 per cent);
- *unspecified impurities*: for each impurity, not more than the area of the principal peak in the chromatogram obtained with reference solution (e) (0.10 per cent);
- *total*: not more than 5 times the area of the principal peak in the chromatogram obtained with reference solution (e) (0.5 per cent);
- *disregard limit*: 0.5 times the area of the principal peak in the chromatogram obtained with reference solution (e) (0.05 per cent).

**Loss on drying** (*2.2.32*): maximum 0.5 per cent, determined on 1.000 g by drying *in vacuo* at 80 °C for 4 h.

**Sulfated ash** (*2.4.14*): maximum 0.1 per cent, determined on 1.0 g in a platinum crucible.

ASSAY

Dissolve 0.100 g in 80 mL of *dimethylformamide R*, warming gently. Cool and titrate with *0.1 M tetrabutylammonium hydroxide*, using 0.25 mL of a 10 g/L solution of *thymol blue R* in *dimethylformamide R* as indicator. Carry out a blank titration.

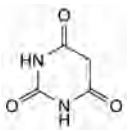
1 mL of *0.1 M tetrabutylammonium hydroxide* is equivalent to 13.01 mg of $C_4H_3FN_2O_2$.

STORAGE

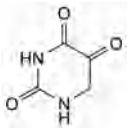
Protected from light.

IMPURITIES

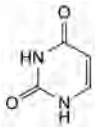
*Specified impurities: A, B, C, D, E, F, G.*



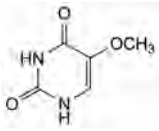
A. pyrimidine-2,4,6(1*H*,3*H*,5*H*)-trione (barbituric acid),



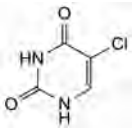
B. dihydropyrimidine-2,4,5(3*H*)-trione (isobarbituric acid or 5-hydroxyuracil),



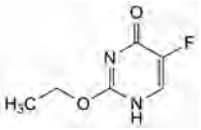
C. pyrimidine-2,4(1*H*,3*H*)-dione (uracil),



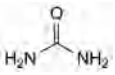
D. 5-methoxypyrimidine-2,4(1*H*,3*H*)-dione (5-methoxyuracil),



E. 5-chloropyrimidine-2,4(1*H*,3*H*)-dione (5-chlorouracil),



F. 2-ethoxy-5-fluoropyrimidin-4(1*H*)-one (2-ethoxy-5-fluorouracil),

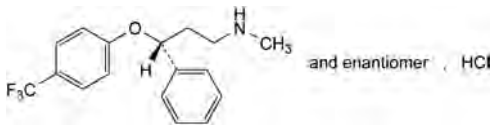


G. carbamide (urea).

**01/2017:1104**

# FLUOXETINE HYDROCHLORIDE

## Fluoxetini hydrochloridum



$C_{17}H_{19}ClF_3NO$ $M_r$ 345.8
[56296-78-7]

DEFINITION

(3*RS*)-*N*-Methyl-3-phenyl-3-[4-(trifluoromethyl)phenoxy]-propan-1-amine hydrochloride.

*Content*: 98.0 per cent to 102.0 per cent (anhydrous substance).

CHARACTERS

*Appearance*: white or almost white, crystalline powder.

*Solubility*: sparingly soluble in water, freely soluble in methanol, sparingly soluble in methylene chloride.

IDENTIFICATION

A. Infrared absorption spectrophotometry (*2.2.24*).
*Comparison*: *fluoxetine hydrochloride CRS*.

B. It gives reaction (a) of chlorides (*2.3.1*).

TESTS

**Solution S**. Dissolve 2.0 g in a mixture of 15 volumes of *water R* and 85 volumes of *methanol R*, then dilute to 100.0 mL with the same mixture of solvents.

**Appearance of solution**. Solution S is clear (*2.2.1*) and colourless (*2.2.2, Method II*).

**pH** (*2.2.3*): 4.5 to 6.5.

Dissolve 0.20 g in *carbon dioxide-free water R* and dilute to 20 mL with the same solvent.

**Optical rotation** (*2.2.7*): − 0.05° to + 0.05°, determined on solution S.

**Related substances**. Liquid chromatography (*2.2.29*).

*Test solution (a)*. Dissolve 55 mg of the substance to be examined in the mobile phase and dilute to 10.0 mL with the mobile phase.

*Test solution (b)*. Dilute 2.0 mL of test solution (a) to 10.0 mL with the mobile phase.

*Reference solution.* Dissolve 22 mg of *fluoxetine hydrochloride CRS* in 10.0 mL of *0.5 M sulfuric acid*. Heat at about 85 °C for 3 h. Allow to cool. The resulting solution contains considerable quantities of impurity A and usually also contains 4-trifluoromethylphenol. To 0.4 mL of this solution add 28.0 mg of *fluoxetine hydrochloride CRS*, about 1 mg of *fluoxetine impurity B CRS* and about 1 mg of *fluoxetine impurity C CRS*, then dilute to 25.0 mL with the mobile phase.

*Column*:

– *size*: *l* = 0.25 m, Ø = 4.6 mm;
– *stationary phase*: *octylsilyl silica gel for chromatography R* (5 µm).

*Mobile phase*: mix 8 volumes of *methanol R*, 30 volumes of *tetrahydrofuran R* and 62 volumes of a solution of *triethylamine R* prepared as follows: to 10 mL of *triethylamine R*, add 980 mL of *water R*, mix and adjust to pH 6.0 with *phosphoric acid R* (about 4.5 mL) and dilute to 1000 mL with *water R*.

*Flow rate*: 1 mL/min.

*Detection*: spectrophotometer at 215 nm.

*Injection*: 10 µL.

*Run time*: 3 times the retention time of fluoxetine.

*Identification of impurities*: use the chromatogram obtained with the reference solution to identify the peaks due to impurities A, B and C.

*Relative retention* with reference to fluoxetine: impurity A = about 0.24; impurity B = about 0.27; impurity C = about 0.9.

*System suitability*: reference solution:

– *retention time*: fluoxetine = 10 min to 18 min; 4-trifluoromethylphenol: maximum 35 min; if no peak due to 4-trifluoromethylphenol is observed, inject a 0.02 per cent solution of *4-trifluoromethylphenol R* in the mobile phase;
– *peak-to-valley ratio*: minimum 11, where $H_p$ = height above the baseline of the peak due to impurity C and $H_v$ = height above the baseline of the lowest point of the curve separating this peak from the peak due to fluoxetine. If necessary, reduce the volume of methanol and increase the volume of the solution of triethylamine in the mobile phase.

*Limit*: test solution (b):

– *impurity C*: not more than 0.0015 times the area of the principal peak (0.15 per cent).

*Limits*: test solution (a):

– *impurities A, B*: for each impurity, not more than 0.0125 times the area of the principal peak in the chromatogram obtained with test solution (b) (0.25 per cent);
– *unspecified impurities*: for each impurity, not more than 0.005 times the area of the principal peak in the chromatogram obtained with test solution (b) (0.10 per cent);
– *total*: not more than 0.025 times the area of the principal peak in the chromatogram obtained with test solution (b) (0.5 per cent);
– *disregard limit*: 0.0025 times the area of the principal peak in the chromatogram obtained with test solution (b) (0.05 per cent).

**Acetonitrile**. Gas chromatography (*2.2.28*).

*Test solution.* Dissolve 50 mg of the substance to be examined in *dimethylformamide R* and dilute to 5.0 mL with the same solvent.

*Reference solution.* To 1.0 g of *acetonitrile R*, add *dimethylformamide R*, mix and dilute to 100.0 mL with the same solvent. Dilute 1.0 mL of this solution to 1000.0 mL with *dimethylformamide R*.

*Column*:

– *material*: fused silica;
– *size*: *l* = 30 m, Ø = 0.53 mm;
– *stationary phase*: *macrogol 20 000 R* (film thickness 1 µm).

*Carrier gas*: *helium for chromatography R*.

*Flow rate*: 10 mL/min.

*Temperature*:

| | Time (min) | Temperature (°C) |
|---|---|---|
| Column | 0 - 2 | 35 |
| | 2 - 14.33 | 35 → 220 |
| | 14.33 - 24.33 | 220 |
| Injection port | | 250 |
| Detector | | 250 |

*Detection*: flame ionisation.

*Injection*: 1 µL; inject *dimethylformamide R* as a blank.

In the chromatogram obtained with *dimethylformamide R*, verify that there is no peak with the same retention time as acetonitrile.

*Limit*:

– *acetonitrile*: not more than the area of the corresponding peak in the chromatogram obtained with the reference solution (0.1 per cent).

**Water** (*2.5.12*): maximum 0.5 per cent, determined on 1.00 g.

**Sulfated ash** (*2.4.14*): maximum 0.1 per cent, determined on 1.0 g.

ASSAY

Liquid chromatography (*2.2.29*) as described in the test for related substances with the following modifications.

*Test solution.* Dissolve 55.0 mg of the substance to be examined in the mobile phase and dilute to 50.0 mL with the mobile phase. Dilute 10.0 mL of this solution to 100.0 mL with the mobile phase.

*Reference solution.* Dissolve 55.0 mg of *fluoxetine hydrochloride CRS* in the mobile phase and dilute to 50.0 mL with the mobile phase. Dilute 10.0 mL of this solution to 100.0 mL with the mobile phase.

*Detection*: spectrophotometer at 227 nm.

*Retention time*: fluoxetine = 10 min to 18 min; if necessary, adjust the volumes of methanol and of the solution of triethylamine in the mobile phase.

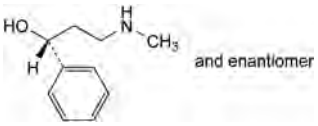
*System suitability*: reference solution:

– *symmetry factor*: maximum 2.0 calculated at 10 per cent of the height of the peak due to fluoxetine.

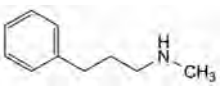
Calculate the content of $C_{17}H_{19}ClF_3NO$ from the declared content of *fluoxetine hydrochloride CRS*.

IMPURITIES

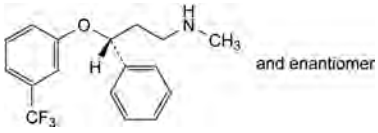
*Specified impurities: A, B, C.*



A. (1*RS*)-3-(methylamino)-1-phenylpropan-1-ol,



B. *N*-methyl-3-phenylpropan-1-amine,

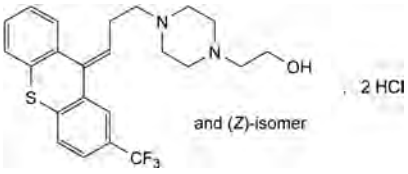


C. (3*RS*)-*N*-methyl-3-phenyl-3-[3-(trifluoromethyl)phenoxy]-propan-1-amine.

**07/2019:1693**

# FLUPENTIXOL DIHYDROCHLORIDE

## Flupentixoli dihydrochloridum



$C_{23}H_{27}Cl_2F_3N_2OS$ $M_r$ 507.4
[2413-38-9]

DEFINITION

2-[4-[3-[(*EZ*)-2-(Trifluoromethyl)-9*H*-thioxanthen-9-ylidene]propyl]piperazin-1-yl]ethan-1-ol dihydrochloride.

*Content*:

– *flupentixol dihydrochloride*: 99.0 per cent to 101.0 per cent (dried substance);
– *(Z)-isomer*: 42.0 per cent to 52.0 per cent.

CHARACTERS

*Appearance*: white or almost white powder.

*Solubility*: very soluble in water, soluble in ethanol (96 per cent), practically insoluble in methylene chloride.

IDENTIFICATION

*First identification: A, D.*

*Second identification: B, C, D.*

A. Infrared absorption spectrophotometry (*2.2.24*).
*Comparison*: *flupentixol dihydrochloride CRS*.

B. Thin-layer chromatography (*2.2.27*).
*Test solution*. Dissolve 20 mg of the substance to be examined in *methanol R* and dilute to 10 mL with the same solvent.
*Reference solution*. Dissolve 20 mg of *flupentixol dihydrochloride CRS* in *methanol R* and dilute to 10 mL with the same solvent.
*Plate*: *TLC silica gel $F_{254}$ plate R*.
*Mobile phase*: *water R*, *diethylamine R*, *methyl ethyl ketone R* (1:4:95 *V/V/V*).
*Application*: 2 µL.
*Development*: twice over 3/4 of the plate.
*Drying*: in air.
*Detection A*: examine in ultraviolet light at 254 nm.
*Results A*: the principal spot in the chromatogram obtained with the test solution is similar in position and size to the principal spot in the chromatogram obtained with the reference solution. Doubling of the spot may be observed in both chromatograms.
*Detection B*: spray with *alcoholic solution of sulfuric acid R*; heat at 110 °C for 5 min and allow to cool; examine in ultraviolet light at 365 nm.
*Results B*: the principal spot in the chromatogram obtained with the test solution is similar in position and size to the principal spot in the chromatogram obtained with the reference solution. Doubling of the spot may be observed in both chromatograms.

C. Mix about 5 mg with 45 mg of *heavy magnesium oxide R* and ignite in a crucible until an almost white residue is obtained (usually less than 5 min). Allow to cool, add 1 mL of *water R*, 0.05 mL of *phenolphthalein solution R1* and about 1 mL of *dilute hydrochloric acid R* to render the solution colourless. Filter and add to the filtrate a freshly prepared mixture of 0.1 mL of *alizarin S solution R* and 0.1 mL of *zirconyl nitrate solution R*. Mix, allow to stand for 5 min and compare the colour of the solution with that of a blank prepared in the same manner. The test solution is yellow. The blank is red.

D. It gives reaction (a) of chlorides (*2.3.1*).

TESTS

**Appearance of solution**. The solution is clear (*2.2.1*) and its absorbance (*2.2.25*) at 410 nm is not greater than 0.125.

Dissolve 0.500 g in 5.0 mL of *water R*.

**pH** (*2.2.3*): 2.0 to 3.0.

Dissolve 0.5 g in *carbon dioxide-free water R* and dilute to 50 mL with the same solvent.

**Related substances**. Liquid chromatography (*2.2.29*). *Carry out the test protected from light and prepare the solutions immediately before use.*

*Buffer solution*. Dissolve 6.3 g of *ammonium formate R* in about 900 mL of *water for chromatography R*, adjust to pH 8.2 with *concentrated ammonia R* and dilute to 1000 mL with *water for chromatography R*.

*Test solution*. Dissolve 58.0 mg of the substance to be examined in mobile phase A and dilute to 50.0 mL with mobile phase A.

*Reference solution (a)*. Dilute 1.0 mL of the test solution to 100.0 mL with mobile phase A. Dilute 1.0 mL of this solution to 10.0 mL with mobile phase A.

*Reference solution (b)*. Dissolve the contents of a vial of *flupentixol for system suitability CRS* (containing impurities A, C, H and I) in 1 mL of mobile phase A.

*Column*:

– *size*: *l* = 0.15 m, Ø = 4.6 mm;
– *stationary phase*: *end-capped octadecylsilyl silica gel for chromatography R* (3 µm);
– *temperature*: 40 °C.

*Mobile phase*:

– *mobile phase A*: buffer solution, *acetonitrile for chromatography R*, *water for chromatography R* (58:420:522 *V/V/V*);
– *mobile phase B*: buffer solution, *acetonitrile for chromatography R* (100:900 *V/V*);

| Time (min) | Mobile phase A (per cent *V/V*) | Mobile phase B (per cent *V/V*) |
|---|---|---|
| 0 - 40 | 90 → 5 | 10 → 95 |

*Flow rate*: 0.8 mL/min.

*Detection*: spectrophotometer at 230 nm.

*Injection*: 20 µL.

*Identification of peaks*: use the chromatogram supplied with *flupentixol for system suitability CRS* and the chromatogram obtained with reference solution (b) to identify the peaks due to both isomers of flupentixol and impurities A, C + I, and H.

*Relative retention* with reference to flupentixol (*Z*)-isomer (retention time = about 11 min): impurity A = about 0.83; impurity H = about 0.90; impurities C and I = about 0.97; flupentixol (*E*)-isomer = about 1.04.

*System suitability*: reference solution (b):

- *resolution*: minimum 2.5 between the peaks due to impurities A and H;
- *peak-to-valley ratio*: minimum 10.0, where $H_p$ = height above the baseline of the peak due to impurities C+I and $H_v$ = height above the baseline of the lowest point of the curve separating this peak from the peak due to flupentixol (*Z*)-isomer.

*Calculation of percentage contents*:

- *correction factors*: multiply the peak areas of the following impurities by the corresponding correction factor: impurities C and I = 2.0; impurity H = 2.0;
- for each impurity, use the concentration of flupentixol dihydrochloride (both isomers) in reference solution (a).

*Limits*:

- *impurity H*: maximum 0.5 per cent;
- *sum of impurities C and I*: maximum 0.3 per cent;
- *unspecified impurities*: for each impurity, maximum 0.10 per cent;
- *total*: maximum 1.0 per cent;
- *reporting threshold*: 0.05 per cent.

**Loss on drying** (*2.2.32*): maximum 2.0 per cent, determined on 1.000 g by drying in an oven at 105 °C.

**Sulfated ash** (*2.4.14*): maximum 0.1 per cent, determined on 1.0 g in a platinum crucible.

ASSAY

**Flupentixol dihydrochloride**. Dissolve 0.200 g in 30 mL of *ethanol (96 per cent) R*. Carry out a potentiometric titration (*2.2.20*), using *0.1 M sodium hydroxide*. Read the volume added between the 2 points of inflexion.

1 mL of *0.1 M sodium hydroxide* is equivalent to 50.74 mg of $C_{23}H_{27}Cl_2F_3N_2OS$.

**(*Z*)-Isomer**. Liquid chromatography (*2.2.29*).

*Test solution*. Dissolve 20.0 mg of the substance to be examined in the mobile phase and dilute to 50.0 mL with the mobile phase.

*Reference solution*. Dissolve 20.0 mg of *flupentixol dihydrochloride CRS* in the mobile phase and dilute to 50.0 mL with the mobile phase.

*Column*:

- *size*: *l* = 0.25 m, Ø = 4.0 mm;
- *stationary phase*: *silica gel for chromatography R* (5 µm).

*Mobile phase*: *water for chromatography R*, *concentrated ammonia R*, *2-propanol R*, *heptane R* (2:4:150:850 *V/V/V/V*).

*Flow rate*: 1.5 mL/min.

*Detection*: spectrophotometer at 254 nm.

*Injection*: 20 µL.

*Run time*: 1.5 times the retention time of flupentixol (*Z*)-isomer.

*Identification of peaks*: use the chromatogram supplied with *flupentixol dihydrochloride CRS* and the chromatogram obtained with the reference solution to identify the peaks due to both isomers of flupentixol.

*Relative retention* with reference to flupentixol (*Z*)-isomer (retention time = about 6 min): flupentixol (*E*)-isomer = about 1.2.

*System suitability*: reference solution:

- *resolution*: minimum 3.0 between the peaks due to flupentixol (*Z*)-isomer and flupentixol (*E*)-isomer.

Calculate the percentage content of the (*Z*)-isomer of $C_{23}H_{27}Cl_2F_3N_2OS$ taking into account the assigned content of flupentixol (*Z*)-isomer in *flupentixol dihydrochloride CRS*.

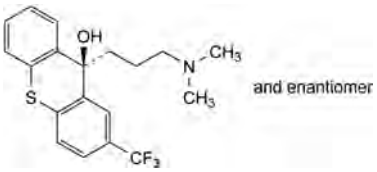
STORAGE

Protected from light.

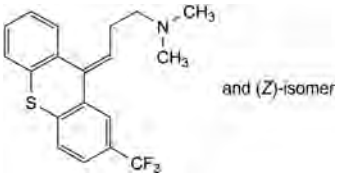
IMPURITIES

*Specified impurities: C, H, I.*

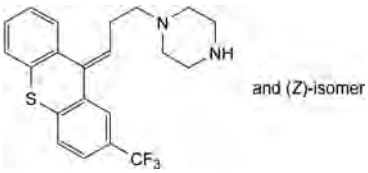
*Other detectable impurities* (the following substances would, if present at a sufficient level, be detected by one or other of the tests in the monograph. They are limited by the general acceptance criterion for other/unspecified impurities and/or by the general monograph *Substances for pharmaceutical use (2034)*. It is therefore not necessary to identify these impurities for demonstration of compliance. See also *5.10. Control of impurities in substances for pharmaceutical use*): *A, B, E, G.*



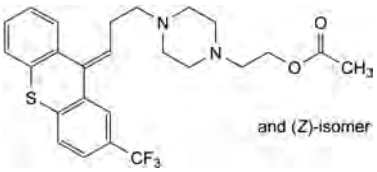
A. (9*RS*)-9-[3-(dimethylamino)propyl]-2-(trifluoromethyl)-9*H*-thioxanthen-9-ol,



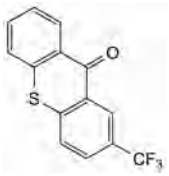
B. *N*,*N*-dimethyl-3-[(*EZ*)-2-(trifluoromethyl)-9*H*-thioxanthen-9-ylidene]propan-1-amine,



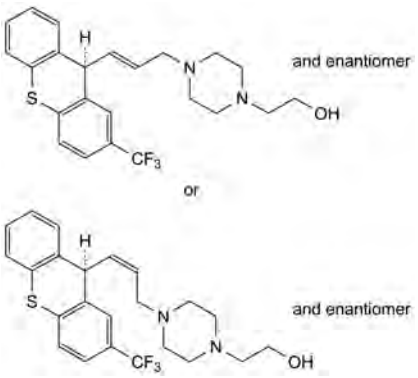
C. 1-[3-[(*EZ*)-2-(trifluoromethyl)-9*H*-thioxanthen-9-ylidene]propyl]piperazine,



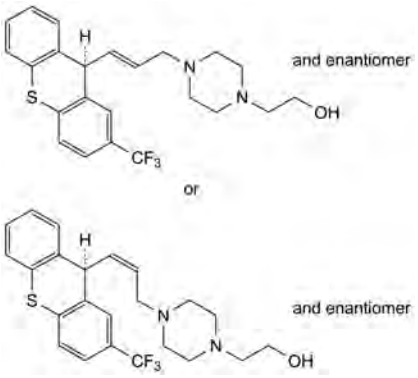
E. 2-[4-[3-[(*EZ*)-2-(trifluoromethyl)-9*H*-thioxanthen-9-ylidene]propyl]piperazin-1-yl]ethyl acetate,



G. 2-(trifluoromethyl)-9*H*-thioxanthen-9-one,



H. either 2-[4-[(*E*)-3-[(9*RS*)-2-(trifluoromethyl)-9*H*-thioxanthen-9-yl]prop-2-en-1-yl]piperazin-1-yl]ethan-1-ol or 2-[4-[(*Z*)-3-[(9*RS*)-2-(trifluoromethyl)-9*H*-thioxanthen-9-yl]prop-2-en-1-yl]piperazin-1-yl]ethan-1-ol,

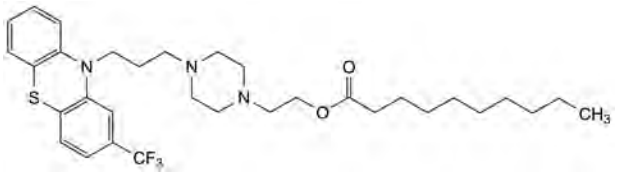


I. either 2-[4-[(*E*)-3-[(9*RS*)-2-(trifluoromethyl)-9*H*-thioxanthen-9-yl]prop-2-en-1-yl]piperazin-1-yl]ethan-1-ol or 2-[4-[(*Z*)-3-[(9*RS*)-2-(trifluoromethyl)-9*H*-thioxanthen-9-yl]prop-2-en-1-yl]piperazin-1-yl]ethan-1-ol.

**01/2017:1014**

# FLUPHENAZINE DECANOATE

## Fluphenazini decanoas



$C_{32}H_{44}F_3N_3O_2S$ $M_r$ 591.8
[5002-47-1]

DEFINITION

2-[4-[3-[2-(Trifluoromethyl)-10*H*-phenothiazin-10-yl]propyl]piperazin-1-yl]ethyl decanoate.

*Content*: 98.5 per cent to 101.5 per cent (dried substance).

CHARACTERS

*Appearance*: pale yellow, viscous liquid or yellow solid.

*Solubility*: practically insoluble in water, very soluble in ethanol and in methylene chloride, freely soluble in methanol.

IDENTIFICATION

*First identification: B, C.*

*Second identification: A, C.*

A. Dissolve 50.0 mg in *methanol R* and dilute to 100.0 mL with the same solvent. Dilute 1.0 mL to 50.0 mL with *methanol R*. Examined between 230 nm and 350 nm (*2.2.25*), the solution shows an absorption maximum at 260 nm and a broad absorption maximum at about 310 nm. The specific absorbance at the maximum at 260 nm is 570 to 630.

B. Infrared absorption spectrophotometry (*2.2.24*).

*Preparation*: apply 50 µL of a 25 g/L solution in *methylene chloride R* to a disc of *potassium bromide R*. Dry the discs at 60 °C for 1 h before use.

*Comparison*: *fluphenazine decanoate CRS*.

C. Thin-layer chromatography (*2.2.27*).

*Test solution*. Dissolve 10 mg of the substance to be examined in *methanol R* and dilute to 10 mL with the same solvent.

*Reference solution (a)*. Dissolve 10 mg of *fluphenazine decanoate CRS* in *methanol R* and dilute to 10 mL with the same solvent.

*Reference solution (b)*. Dissolve 5 mg of *fluphenazine enantate CRS* in reference solution (a) and dilute to 5 mL with the same solution.

*Plate*: *TLC octadecylsilyl silica gel $F_{254}$ plate R*.

*Mobile phase*: *concentrated ammonia R1*, *water R*, *methanol R* (1:4:95 *V/V/V*).

*Application*: 2 µL.

*Development*: over a path of 8 cm.

*Detection*: examine in ultraviolet light at 254 nm.

*System suitability*: the chromatogram obtained with reference solution (b) shows 2 clearly separated spots.

*Results*: the principal spot in the chromatogram obtained with the test solution is similar in position and size to the principal spot in the chromatogram obtained with reference solution (a).

TESTS

**Related substances**. Liquid chromatography (*2.2.29*). *Carry out the test protected from light and prepare the solutions immediately before use.*

*Test solution*. Dissolve 10.0 mg of the substance to be examined in *acetonitrile R* and dilute to 50.0 mL with the same solvent.

*Reference solution (a)*. Dissolve 5 mg of *fluphenazine octanoate CRS* and 5 mg of *fluphenazine enantate CRS* in *acetonitrile R* and dilute to 50 mL with the same solvent.

*Reference solution (b)*. Dilute 5.0 mL of the test solution to 100.0 mL with a mixture of 5 volumes of mobile phase A and 95 volumes of mobile phase B. Dilute 1.0 mL of this solution to 10.0 mL with a mixture of 5 volumes of mobile phase A and 95 volumes of mobile phase B.

*Reference solution (c)*. Dissolve 11.7 mg of *fluphenazine dihydrochloride CRS* and 5.0 mg of *fluphenazine sulfoxide CRS* in a mixture of 5 volumes of *water R* and 95 volumes of *acetonitrile R* and dilute to 100.0 mL with the same mixture of solvents. Dilute 1.0 mL to 50.0 mL with a mixture of 5 volumes of *water R* and 95 volumes of *acetonitrile R*.

*Column*:

– *size*: *l* = 0.25 m, Ø = 4.6 mm,
– *stationary phase*: spherical *octadecylsilyl silica gel for chromatography R* (5 µm).

*Mobile phase*:

– *mobile phase A*: 10 g/L solution of *ammonium carbonate R* adjusted to pH 7.5 with *dilute hydrochloric acid R*,
– *mobile phase B*: mobile phase A, *acetonitrile R*, *methanol R* (7.5:45:45 *V/V/V*),

| Time (min) | Mobile phase A (per cent *V/V*) | Mobile phase B (per cent *V/V*) |
|---|---|---|
| 0 - 7 | 20 | 80 |
| 7 - 17 | 20 → 0 | 80 → 100 |
| 17 - 80 | 0 | 100 |

*Flow rate*: 1.0 mL/min.

*Detection*: spectrophotometer at 260 nm.

*Injection*: 10 µL.

*Relative retention* with reference to fluphenazine decanoate (retention time = about 34 min): impurity A = about 0.13; impurity B = about 0.33; impurity C = about 0.76; impurity D = about 0.82.

*System suitability*: reference solution (a):

– *resolution*: minimum 6 between the peaks due to impurity C and impurity D.

*Limits*:

– *impurity A*: not more than the area of the corresponding peak in the chromatogram obtained with reference solution (c) (0.5 per cent),
– *impurity B*: not more than the area of the corresponding peak in the chromatogram obtained with reference solution (c) (1.0 per cent),
– *any other impurity*: not more than the area of the principal peak in the chromatogram obtained with reference solution (b) (0.5 per cent),
– *total*: not more than 2.0 per cent,
