EUROPEAN PHARMACOPOEIA 6th EDITION

published 16 July 2007

replaces the 5th Edition on 1 January 2008

Volumes 1 and 2 of this publication 6.0 constitute the 6th Edition of the European Pharmacopoeia. They will be complemented by **non-cumulative supplements** that are to be kept for the duration of the 6th Edition. 2 supplements will be published in 2007 and 3 supplements in each of the years 2008 and 2009. A cumulative list of reagents will be published in supplements 6.4 and 6.7.

If you are using the 6th Edition at any time later than 1 April 2008, make sure that you have all the published supplements and consult the index of the most recent supplement to ensure that you use the latest versions of the monographs and general chapters.

EUROPEAN PHARMACOPOEIA - ELECTRONIC VERSION

The 6th Edition is also available in an electronic format (CD-ROM and online version) containing all of the monographs and general chapters found in the printed version. With the publication of each supplement the electronic version is replaced by a new, fully updated, cumulative version.

In addition to the official English and French online versions, a Spanish online version is also available for the convenience of users.

PHARMEUROPA

Quarterly Forum Publication

Pharmeuropa contains preliminary drafts of all new and revised monographs proposed for inclusion in the European Pharmacopoeia and gives an opportunity for all interested parties to comment on the specifications before they are finalised. Pharmeuropa also contains information on the work programme and on certificates of suitability to monographs of the European Pharmacopoeia issued by the EDQM, and articles of general interest. Pharmeuropa is available on subscription from the EDQM. The subscription also includes Pharmeuropa Bio and Pharmeuropa Scientific Notes (containing scientific articles on pharmacopoeial matters). Pharmeuropa Online is also available as a complementary service for subscribers to the printed version of Pharmeuropa.

INTERNATIONAL HARMONISATION

See the information given in chapter *5.8. Pharmacopoeial Harmonisation*.

HELPDESK

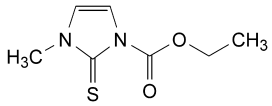
To send a question or to contact the EDQM, use the HELPDESK, accessible through the EDQM website (visit http://www.edqm.eu/site/page_521.php).

KNOWLEDGE

Consult KNOWLEDGE, the new free database at http://www.edqm.eu to obtain information on the work programme of the European Pharmacopoeia, the volume of Pharmeuropa and of the European Pharmacopoeia in which a text has been published, trade names of the reagents (for example, chromatography columns) that were used at the time of the elaboration of the monographs, the history of the revisions of a text since its publication in the 5th Edition, reference chromatograms, the list of reference standards used, and the list of certificates granted.

COMBISTATS

CombiStats is a computer program for the statistical analysis of data from biological assays in agreement with chapter *5.3* of the 6th Edition of the European Pharmacopoeia. For more information, visit the website (http://www.edqm.eu/combistats).



Version date of the text — **01/2008:0884** corrected 6.0

Text reference number

CARBIMAZOLE

Carbimazolum

Modification to be taken into account from the publication date of volume 6.0

CAS number — $C_7H_{10}N_2O_2S$ [22232-54-8] M_r 186.2

DEFINITION

Chemical name in accordance with IUPAC nomenclature rules — Ethyl 3-methyl-2-thioxo-2,3-dihydro-1*H*-imidazole-1-carboxylate.

Content: 98.0 per cent to 102.0 per cent (dried substance).

CHARACTERS

Appearance: white or yellowish-white, crystalline powder.

Solubility: slightly soluble in water, soluble in acetone and in ethanol (96 per cent).

Application of the first and second identification is defined in the General Notices (chapter 1)

IDENTIFICATION

First identification: B.

Second identification: A, C.

A. Melting point (*2.2.14*): 122 °C to 125 °C.

B. Infrared absorption spectrophotometry (*2.2.24*).

Preparation: discs.

Reference standard available from the Secretariat (see www.edqm.eu) — *Comparison*: *carbimazole CRS*.

C. Thin-layer chromatography (*2.2.27*).

Test solution. Dissolve 10 mg of the substance to be examined in *methylene chloride R* and dilute to 10 ml with the same solvent.

Reference solution. Dissolve 10 mg of *carbimazole CRS* in *methylene chloride R* and dilute to 10 ml with the same solvent.

Plate: *TLC silica gel GF$_{254}$ plate R*.

Reagents described in chapter 4 — *Mobile phase*: *acetone R*, *methylene chloride R* (20:80 *V/V*).

Application: 10 µl.

Development: over a path of 15 cm.

Drying: in air for 30 min.

Detection: examine in ultraviolet light at 254 nm.

Results: the principal spot in the chromatogram obtained with the test solution is similar in position and size to the principal spot in the chromatogram obtained with the reference solution.

Reference to a general chapter — TESTS

Related substances. Liquid chromatography (*2.2.29*).

Line in the margin indicating where part of the text has been modified (technical modification) — *Test solution*. Dissolve 5.0 mg of the substance to be examined in 10.0 ml of a mixture of 20 volumes of *acetonitrile R* and 80 volumes of *water R*. Use this solution within 5 min of preparation.

Reference solution (a). Dissolve 5 mg of *thiamazole R* and 0.10 g of *carbimazole CRS* in a mixture of 20 volumes of *acetonitrile R* and 80 volumes of *water R* and dilute to 100.0 ml with the same mixture of solvents. Dilute 1.0 ml of this solution to 10.0 ml with a mixture of 20 volumes of *acetonitrile R* and 80 volumes of *water R*.

Reference solution (b). Dissolve 5.0 mg of *thiamazole R* in a mixture of 20 volumes of *acetonitrile R* and 80 volumes of *water R* and dilute to 10.0 ml with the same mixture of solvents. Dilute 1.0 ml of this solution to 100.0 ml with a mixture of 20 volumes of *acetonitrile R* and 80 volumes of *water R*.

Column:

– *size*: *l* = 0.15 m, Ø = 3.9 mm,

Further information available on www.edqm.eu (KNOWLEDGE) — – *stationary phase*: *octadecylsilyl silica gel for chromatography R* (5 µm).

Mobile phase: *acetonitrile R*, *water R* (10:90 *V/V*).

Flow rate: 1 ml/min.

Detection: spectrophotometer at 254 nm.

Injection: 10 µl.

Run time: 1.5 times the retention time of carbimazole.

Retention time: carbimazole = about 6 min.

System suitability: reference solution (a):

– *resolution*: minimum 5.0 between the peaks due to impurity A and carbimazole.

Limits:

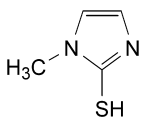
– *impurity A*: not more than 0.5 times the area of the principal peak in the chromatogram obtained with reference solution (b) (0.5 per cent),

– *unspecified impurities*: for each impurity, not more than 0.1 times the area of the principal peak in the chromatogram obtained with reference solution (b) (0.10 per cent).

Loss on drying (*2.2.32*): maximum 0.5 per cent, determined on 1.000 g by drying in a desiccator over *diphosphorus pentoxide R* at a pressure not exceeding 0.7 kPa for 24 h.

Sulphated ash (*2.4.14*): maximum 0.1 per cent, determined on 1.0 g.

ASSAY



Dissolve 50.0 mg in *water R* and dilute to 500.0 ml with the same solvent. To 10.0 ml add 10 ml of *dilute hydrochloric acid R* and dilute to 100.0 ml with *water R*. Measure the absorbance (*2.2.25*) at the absorption maximum at 291 nm.

Calculate the content of $C_7H_{10}N_2O_2S$ taking the specific absorbance to be 557.

IMPURITIES

Specified impurities: A.

Other detectable impurities (the following substances would, if present at a sufficient level, be detected by one or other of the tests in the monograph. They are limited by the general acceptance criterion for other/unspecified impurities and/or by the general monograph *Substances for pharmaceutical use (2034)*. It is therefore not necessary to identify these impurities for demonstration of compliance. See also *5.10. Control of impurities in substances for pharmaceutical use): B.*

A. 1-methyl-1*H*-imidazole-2-thiol (thiamazole),

SPECIMEN

IMPORTANT NOTICE

GENERAL MONOGRAPHS

The European Pharmacopoeia contains a number of general monographs covering classes of products. These general monographs give requirements that are applicable to all products in the given class or, in some cases, to any product in the given class for which there is a specific monograph in the Pharmacopoeia (see *1. General Notices*, General monographs). Where no restriction on scope of a general monograph is given in a preamble, it is applicable to all products in the class defined, irrespective of whether there is an individual monograph for the product in the Pharmacopoeia.

Whenever a monograph is used, it is essential to ascertain whether there is a general monograph applicable to the product in question. The general monographs listed below are published in the section General Monographs (unless otherwise stated). This list is updated where necessary and republished in each Supplement.

Allergen products (1063)

Dosage Forms monographs
(published in the Dosage Forms section)

Essential oils (2098)

Extracts (0765)

Herbal drug preparations (1434)

Herbal drugs (1433)

Herbal drugs for homoeopathic preparations (2045)
(published in the Homoeopathic Preparations section)

Herbal teas (1435)

Homoeopathic preparations (1038)
(published in the Homoeopathic Preparations section)

Immunosera for human use, animal (0084)

Immunosera for veterinary use (0030)

Methods of preparation of homoeopathic stocks and potentisation (2371)
(published in the Homoeopathic Preparations section)

Monoclonal antibodies for human use (2031)

Mother tinctures for homoeopathic preparations (2029)
(published in the Homoeopathic Preparations section)

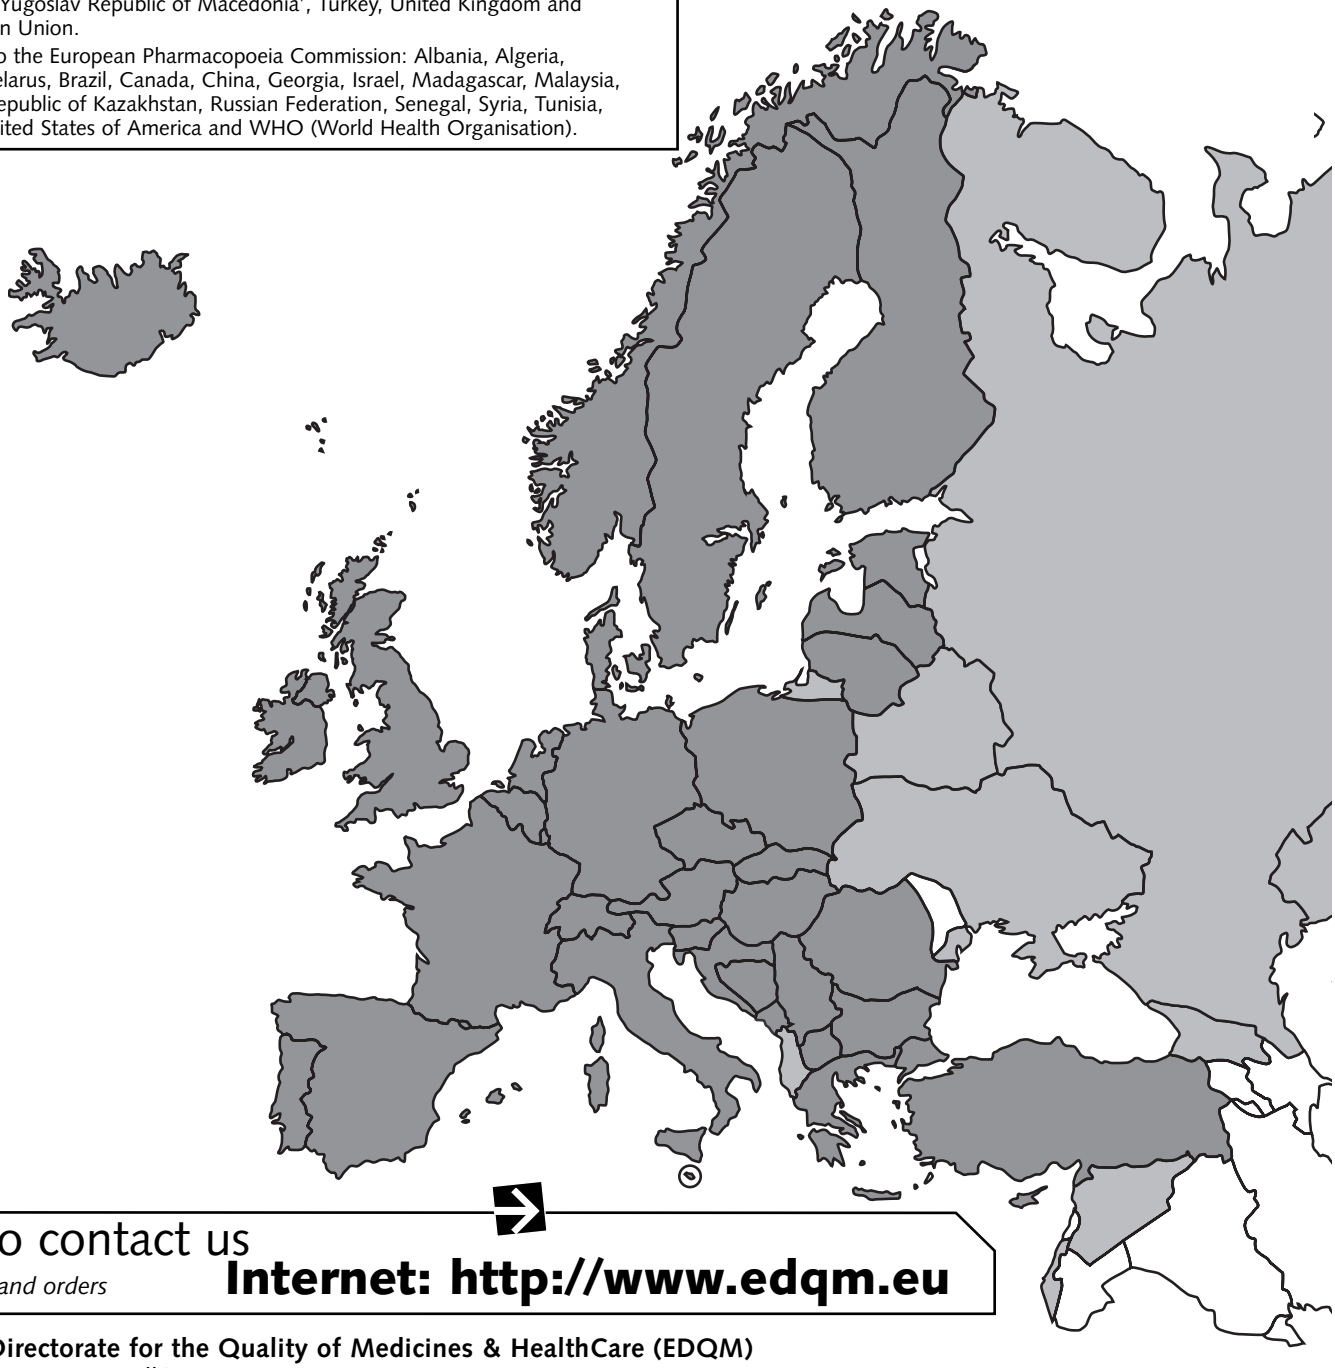
Products of fermentation (1468)

Products with risk of transmitting agents of animal spongiform encephalopathies (1483)

Radiopharmaceutical preparations (0125)

Recombinant DNA technology, products of (0784)

Substances for pharmaceutical use (2034)



Vaccines for human use (0153)

Vaccines for veterinary use (0062)

Vegetable fatty oils (1579)

Members of the European Pharmacopoeia Commission: Austria, Belgium, Bosnia and Herzegovina, Bulgaria, Croatia, Cyprus, Czech Republic, Denmark, Estonia, Finland, France, Germany, Greece, Hungary, Iceland, Ireland, Italy, Latvia, Lithuania, Luxembourg, Malta, Montenegro, Netherlands, Norway, Poland, Portugal, Romania, Serbia, Slovak Republic, Slovenia, Spain, Sweden, Switzerland, 'the former Yugoslav Republic of Macedonia', Turkey, United Kingdom and the European Union.

Observers to the European Pharmacopoeia Commission: Albania, Algeria, Australia, Belarus, Brazil, Canada, China, Georgia, Israel, Madagascar, Malaysia, Morocco, Republic of Kazakhstan, Russian Federation, Senegal, Syria, Tunisia, Ukraine, United States of America and WHO (World Health Organisation).

ACACIA

Acaciae gummi

DEFINITION

Acacia is the air-hardened, gummy exudate flowing naturally from or obtained by incision of the trunk and branches of *Acacia senegal* L. Willdenow, other species of *Acacia* of African origin and *Acacia seyal Del.*

CHARACTERS

Acacia is almost completely but very slowly soluble, after about 2 h, in twice its mass of water leaving only a very small residue of vegetable particles; the liquid obtained is colourless or yellowish, dense, viscous, adhesive, translucent and weakly acid to blue litmus paper. Acacia is practically insoluble in alcohol.

IDENTIFICATION

A. Acacia occurs as yellowish-white, yellow or pale amber, sometimes with a pinkish tint, friable, opaque, spheroidal, oval or reniform pieces (tears) of a diameter from about 1 cm to 3 cm, frequently with a cracked surface, easily broken into irregular, whitish or slightly yellowish angular fragments with conchoidal fracture and a glassy and transparent appearance. In the centre of an unbroken tear there is sometimes a small cavity.

B. Reduce to a powder (355) (*2.9.12*). The powder is white or yellowish-white. Examine under a microscope using *glycerol R* (50 per cent *V/V*). The powder presents angular, irregular, colourless, transparent fragments. Only traces of starch or vegetable tissues are visible. No stratified membrane is apparent.

C. Examine the chromatograms obtained in the test for glucose and fructose. The chromatogram obtained with the test solution shows three zones due to galactose, arabinose and rhamnose. No other important zones are visible, particularly in the upper part of the chromatogram.

D. Dissolve 1 g of the powdered drug (355) (*2.9.12*) in 2 ml of *water R* by stirring frequently for 2 h. Add 2 ml of *alcohol R*. After shaking, a white, gelatinous mucilage is formed which becomes fluid on adding 10 ml of *water R*.

TESTS

Solution S. Dissolve 3.0 g of the powdered drug (355) (*2.9.12*) in 25 ml of *water R* by stirring for 30 min. Allow to stand for 30 min and dilute to 30 ml with *water R*.

Insoluble matter. To 5.0 g of the powdered drug (355) (*2.9.12*) add 100 ml of *water R* and 14 ml of *dilute hydrochloric acid R*, boil gently for 15 min, shaking frequently, and filter while hot through a tared sintered-glass filter (*2.1.2*). Wash with hot *water R* and dry at 100-105 °C. The residue weighs not more than 25 mg (0.5 per cent).

Glucose and fructose. Examine by thin-layer chromatography (*2.2.27*), using a *TLC silica gel plate R*.

Test solution. To 0.100 g of the powdered drug (355) (*2.9.12*) in a thick-walled centrifuge tube add 2 ml of a 100 g/l solution of *trifluoroacetic acid R*, shake vigorously to dissolve the forming gel, stopper the tube and heat the mixture at 120 °C for 1 h. Centrifuge the hydrolysate, transfer the clear supernatant carefully into a 50 ml flask, add 10 ml of *water R* and evaporate the solution to dryness under reduced pressure. To the resulting clear film add 0.1 ml of *water R* and 0.9 ml of *methanol R*. Centrifuge to separate the amorphous precipitate. Dilute the supernatant, if necessary, to 1 ml with *methanol R*.

Reference solution. Dissolve 10 mg of *arabinose R*, 10 mg of *galactose R*, 10 mg of *glucose R*, 10 mg of *rhamnose R* and 10 mg of *xylose R* in 1 ml of *water R* and dilute to 10 ml with *methanol R*.

Apply to the plate as bands 10 µl of each solution. Develop over a path of 10 cm using a mixture of 10 volumes of a 16 g/l solution of *sodium dihydrogen phosphate R*, 40 volumes of *butanol R* and 50 volumes of *acetone R*. Dry the plate in a current of warm air for a few minutes and develop again over a path of 15 cm using the same mobile phase. Dry the plate at 110 °C for 10 min, spray with *anisaldehyde solution R* and heat again at 110 °C for 10 min. The chromatogram obtained with the reference solution shows five clearly separated coloured zones due to galactose (greyish-green to green), glucose (grey), arabinose (yellowish-green) xylose (greenish-grey to yellowish-grey) and rhamnose (yellowish-green), in order of increasing R_F value. The chromatogram obtained with the test solution shows no grey zone and no greyish-green zone between the zones corresponding to galactose and arabinose in the chromatogram obtained with the reference solution.

Starch, dextrin and agar. To 10 ml of solution S previously boiled and cooled add 0.1 ml of *0.05 M iodine*. No blue or reddish-brown colour develops.

Sterculia gum

A. Place 0.2 g of the powdered drug (355) (*2.9.12*) in a 10 ml ground-glass-stoppered cylinder graduated in 0.1 ml. Add 10 ml of *alcohol (60 per cent V/V) R* and shake. Any gel formed occupies not more than 1.5 ml.

B. To 1.0 g of the powdered drug (355) (*2.9.12*) add 100 ml of *water R* and shake. Add 0.1 ml of *methyl red solution R*. Not more than 5.0 ml of *0.01 M sodium hydroxide* is required to change the colour of the indicator.

Tannins. To 10 ml of solution S add 0.1 ml of *ferric chloride solution R1*. A gelatinous precipitate is formed, but neither the precipitate nor the liquid shows a dark blue colour.

Tragacantha. Examine the chromatograms obtained in the test for glucose and fructose. The chromatogram obtained with the test solution shows no greenish-grey to yellowish-grey zone corresponding to the zone of xylose in the chromatogram obtained with the reference solution.

Loss on drying (*2.2.32*). Not more than 15.0 per cent, determined on 1.000 g of the powdered drug (355) (*2.9.12*) by drying in an oven at 105 °C.

Total ash (*2.4.16*). Not more than 4.0 per cent.

Microbial contamination. Total viable aerobic count (*2.6.12*) not more than 10^4 micro-organisms per gram, determined by plate count. It complies with the test for *Escherichia coli* (*2.6.13*).

01/2008:0308
corrected 6.0

ACACIA, SPRAY-DRIED

Acaciae gummi dispersione desiccatum

DEFINITION

Spray-dried acacia is obtained from a solution of acacia.

CHARACTERS

It dissolves completely and rapidly, after about 20 min, in twice its mass of water. The liquid obtained is colourless or yellowish, dense, viscous, adhesive, translucent and weakly acid to blue litmus paper. Spray-dried acacia is practically insoluble in alcohol.

IDENTIFICATION

A. Examined under a microscope, in *alcohol R*, the powder is seen to consist predominantly of spheroidal particles about 4 µm to 40 µm in diameter, with a central cavity containing one or several air-bubbles; a few minute flat fragments are present. Only traces of starch granules are visible. No vegetable tissue is seen.

B. Examine the chromatograms obtained in the test for glucose and fructose. The chromatogram obtained with the test solution shows 3 zones due to galactose, arabinose and rhamnose. No other important zones are visible, particularly in the upper part of the chromatogram.

C. Dissolve 1 g of the drug to be examined in 2 ml of *water R* by stirring frequently for 20 min. Add 2 ml of *alcohol R*. After shaking a white gelatinous mucilage is formed which becomes fluid on adding 10 ml of *water R*.

TESTS

Solution S. Dissolve 3.0 g of the drug to be examined in 25 ml of *water R* by stirring for 10 min. Allow to stand for 20 min and dilute to 30 ml with *water R*.

Glucose and fructose. Examine by thin-layer chromatography (*2.2.27*), using a *TLC silica gel plate R*.

Test solution. To 0.100 g in a thick-walled centrifuge tube add 2 ml of a 100 g/l solution of *trifluoroacetic acid R*, shake vigorously to dissolve the forming gel, stopper the tube and heat the mixture at 120 °C for 1 h. Centrifuge the hydrolysate, transfer the clear supernatant carefully into a 50 ml flask, add 10 ml of *water R* and evaporate the solution to dryness under reduced pressure. To the resulting clear film add 0.1 ml of *water R* and 0.9 ml of *methanol R*. Centrifuge to separate the amorphous precipitate. Dilute the supernatant, if necessary, to 1 ml with *methanol R*.

Reference solution. Dissolve 10 mg of *arabinose R*, 10 mg of *galactose R*, 10 mg of *glucose R*, 10 mg of *rhamnose R* and 10 mg of *xylose R* in 1 ml of *water R* and dilute to 10 ml with *methanol R*.

Apply to the plate as bands 10 µl of each solution. Develop over a path of 10 cm using a mixture of 10 volumes of a 16 g/l solution of *sodium dihydrogen phosphate R*, 40 volumes of *butanol R* and 50 volumes of *acetone R*. Dry the plate in a current of warm air for a few minutes and develop again over a path of 15 cm using the same mobile phase. Dry the plate at 110 °C for 10 min, spray with *anisaldehyde solution R* and heat again at 110 °C for 10 min. The chromatogram obtained with the reference solution shows 5 clearly separated coloured zones due to galactose (greyish-green to green), glucose (grey), arabinose (yellowish-green) xylose (greenish-grey to yellowish-grey) and rhamnose (yellowish-green), in order of increasing R_F value. The chromatogram obtained with the test solution shows no grey zone and no greyish-green zone between the zones corresponding to galactose and arabinose in the chromatogram obtained with the reference solution.

Starch, dextrin and agar. To 10 ml of solution S previously boiled and cooled add 0.1 ml of *0.05 M iodine*. No blue or reddish-brown colour develops.

Sterculia gum

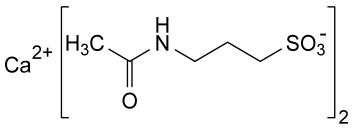
A. Place 0.2 g in a 10 ml ground-glass-stoppered cylinder graduated in 0.1 ml. Add 10 ml of *alcohol (60 per cent V/V) R* and shake. Any gel formed occupies not more than 1.5 ml.

B. To 1.0 g add 100 ml of *water R* and shake. Add 0.1 ml of *methyl red solution R*. Not more than 5.0 ml of *0.01 M sodium hydroxide* is required to change the colour of the indicator.

Tannins. To 10 ml of solution S add 0.1 ml of *ferric chloride solution R1*. A gelatinous precipitate is formed, but neither the precipitate nor the liquid shows a dark blue colour.

Tragacantha. Examine the chromatograms obtained in the test for Glucose and fructose. The chromatogram obtained with the test solution shows no greenish-grey to yellowish-grey zone corresponding to the zone of xylose in the chromatogram obtained with the reference solution.

Loss on drying (*2.2.32*). Not more than 10.0 per cent, determined on 1.000 g by drying in an oven at 105 °C.



Total ash (*2.4.16*). Not more than 4.0 per cent.

Microbial contamination. Total viable aerobic count (*2.6.12*) not more than 10^4 micro-organisms per gram, determined by plate count. It complies with the test for *Escherichia coli* (*2.6.13*).

ACAMPROSATE CALCIUM

Acamprosatum calcicum

$C_{10}H_{20}CaN_2O_8S_2$ M_r 400.5
[77337-73-6]

DEFINITION

Calcium bis[3-(acetylamino)propane-1-sulphonate].

Content: 98.0 per cent to 102.0 per cent (dried substance).

CHARACTERS

Appearance: white or almost white powder.

Solubility: freely soluble in water, practically insoluble in alcohol and in methylene chloride.

IDENTIFICATION

A. Infrared absorption spectrophotometry (*2.2.24*).

Comparison: *Ph. Eur. reference spectrum of acamprosate calcium*.

B. It gives reaction (a) of calcium (*2.3.1*).

TESTS

Solution S. Dissolve 5.0 g in *carbon dioxide-free water R* and dilute to 100 ml with the same solvent.

Appearance of solution. Solution S is clear (*2.2.1*) and colourless (*2.2.2, Method II*).

pH (*2.2.3*): 5.5 to 7.0 for solution S.

Impurity A. Liquid chromatography (*2.2.29*).

Test solution. Dissolve 0.40 g of the substance to be examined in *distilled water R* and dilute to 20.0 ml with the same solvent. Dilute 10.0 ml of this solution to 100.0 ml with *borate buffer solution pH 10.4 R*. Place 3.0 ml of the solution obtained in a 25 ml ground-glass-stoppered tube. Add 0.15 ml of a freshly prepared 5 g/l solution of *fluorescamine R* in *acetonitrile R*. Shake immediately and vigorously for 30 s. Place in a water-bath at 50 °C for 30 min. Cool under a stream of cold water. Centrifuge and filter the supernatant through a suitable membrane filter (0.45 µm), 25 mm in diameter.

Reference solution. Dissolve 50 mg of *acamprosate impurity A CRS* in *distilled water R* and dilute to 200.0 ml with the same solvent. Dilute 0.4 ml of the solution to 100.0 ml with *borate buffer solution pH 10.4 R*. Treat 3.0 ml of this solution in the same way as the test solution

Column:

– *size*: *l* = 0.15 m, Ø = 4.6 mm,
– *stationary phase*: *spherical octadecylsilyl silica gel for chromatography R* (5 µm) with a specific surface area of 170 m^2/g and a pore size of 12 nm.

Mobile phase: *acetonitrile R, methanol R, 0.1 M phosphate buffer solution pH 6.5 R* (10:10:80 *V/V/V*).

Flow rate: 1 ml/min.

Detection: spectrophotometer at 261 nm.

Injection: 20 µl.

Run time: 6 times the retention time of impurity A

Retention times: fluorescamine = about 4 min; impurity A = about 8 min; acamprosate is not detected by this system.

Limits:

– *impurity A*: not more than the area of the corresponding peak in the chromatogram obtained with the reference solution (0.05 per cent).

Heavy metals (*2.4.8*): maximum 10 ppm.

Dissolve 2.0 g in *distilled water R* and dilute to 20 ml with the same solvent. 12 ml of the solution complies with limit test A. Prepare the standard using 10 ml of *lead standard solution (1 ppm Pb) R*.

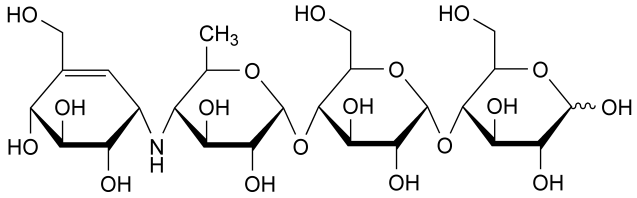
Loss on drying (*2.2.32*): maximum 0.4 per cent, determined on 1.000 g by drying in an oven at 105 °C.

ASSAY

To 4 g of *cation exchange resin R* (75-150 µm) add 20 ml of *distilled water R* and stir magnetically for 10 min. Introduce this suspension into a glass column, 45 cm long and 2.2 cm in internal diameter, equipped with a polytetrafluoroethylene flow cap covered by a glass-wool plug. Allow a few millilitres of this solution to flow, then place a plug of glass wool over the resin. Pass 50 ml of *1 M hydrochloric acid* through the column. The pH of the eluate is close to 1. Wash with 3 quantities, each of 200 ml, of *distilled water R* to obtain an eluate at pH 6. Dissolve 0.100 g of the substance to be examined in 15 ml of *distilled water R*. Pass through the column and wash with 3 quantities, each of 25 ml, of *distilled water R*, collecting the eluate. Allow to elute until an eluate at pH 6 is obtained. Titrate the solution obtained with *0.1 M sodium hydroxide*, determining the end-point potentiometrically (*2.2.20*).

1 ml of *0.1 M sodium hydroxide* corresponds to 20.02 mg of $C_{10}H_{20}CaN_2O_8S_2$.

IMPURITIES



A. 3-aminopropane-1-sulphonic acid (homotaurine).

01/2008:2089

ACARBOSE

Acarbosum

$C_{25}H_{43}NO_{18}$ M_r 646
[56180-94-0]

DEFINITION

O-4,6-Dideoxy-4-[[(1*S*,4*R*,5*S*,6*S*)-4,5,6-trihydroxy-3-(hydroxymethyl)cyclohex-2-enyl]amino]-α-D-glucopyranosyl-(1→4)-*O*-α-D-glucopyranosyl-(1→4)-D-glucopyranose, which is produced by certain strains of *Actinoplanes utahensis*.

Content: 95.0 per cent to 102.0 per cent (anhydrous substance).

CHARACTERS

Appearance: white or yellowish, amorphous powder, hygroscopic.

Solubility: very soluble in water, soluble in methanol, practically insoluble in methylene chloride.

IDENTIFICATION

A. Infrared absorption spectrophotometry (*2.2.24*).
Comparison: *acarbose for identification CRS*.

B. Examine the chromatograms obtained in the assay.
Results: the principal peak in the chromatogram obtained with the test solution is similar in retention time and size to the principal peak in the chromatogram obtained with reference solution (a).

TESTS

Solution S. Dissolve 1.00 g in *carbon dioxide-free water R* and dilute to 20.0 ml with the same solvent.

pH (*2.2.3*): 5.5 to 7.5 for solution S.

Specific optical rotation (*2.2.7*): + 168 to + 183 (anhydrous substance).

Dilute 2.0 ml of solution S to 10.0 ml with *water R*.

Absorbance (*2.2.25*): maximum 0.15 at 425 nm for solution S.

Related substances. Liquid chromatography (*2.2.29*).

Test solution. Dissolve 0.200 g of the substance to be examined in *water R* and dilute to 10.0 ml with the same solvent.

Reference solution (a). Dissolve the contents of a vial of *acarbose CRS* in 5.0 ml of *water R*.

Reference solution (b). Dissolve 20 mg of *acarbose for peak identification CRS* (acarbose containing impurities A, B, C, D, E, F, G and H) in 1 ml of *water R*.

Reference solution (c). Dilute 1.0 ml of the test solution to 100.0 ml with *water R*.

Column:

– *size*: *l* = 0.25 m, Ø = 4 mm,

– *stationary phase*: *aminopropylsilyl silica gel for chromatography R* (5 µm),

– *temperature*: 35 °C.

Mobile phase: mix 750 volumes of *acetonitrile R1* and 250 volumes of a solution containing 0.60 g/l of *potassium dihydrogen phosphate R* and 0.35 g/l of *disodium hydrogen phosphate dihydrate R*.

Flow rate: 2.0 ml/min.

Detection: spectrophotometer at 210 nm.

Injection: 10 µl of the test solution and reference solutions (b) and (c).

Run time: 2.5 times the retention time of acarbose.

Identification of impurities: use the chromatogram supplied with *acarbose for peak identification CRS* and the chromatogram obtained with reference solution (b) to identify the peaks due to impurities A, B, C, D, E, F, G and H.

Relative retention with reference to acarbose (retention time = about 16 min): impurity D = about 0.5; impurity H = about 0.6; impurity B = about 0.8; impurity A = about 0.9; impurity C = about 1.2; impurity E = about 1.7; impurity F = about 1.9; impurity G = about 2.2.

System suitability: reference solution (b):

– *peak-to-valley ratio*: minimum 1.2, where H_p = height above the baseline of the peak due to impurity A and H_v = height above the baseline of the lowest point of the curve separating this peak from the peak due to acarbose,

– the chromatogram obtained is similar to the chromatogram supplied with *acarbose for peak identification CRS*.

Limits:

– *correction factors*: for the calculation of contents, multiply the peak areas of the following impurities by the corresponding correction factor: impurity B = 0.63; impurity D = 0.75; impurity E = 1.25; impurity F = 1.25; impurity G = 1.25;

– *impurity A*: not more than 0.6 times the area of the principal peak in the chromatogram obtained with reference solution (c) (0.6 per cent);

– *impurity B*: not more than 0.5 times the area of the principal peak in the chromatogram obtained with reference solution (c) (0.5 per cent);

– *impurity C*: not more than 1.5 times the area of the principal peak in the chromatogram obtained with reference solution (c) (1.5 per cent);

– *impurity D*: not more than the area of the principal peak in the chromatogram obtained with reference solution (c) (1.0 per cent);

– *impurity E*: not more than 0.2 times the area of the principal peak in the chromatogram obtained with reference solution (c) (0.2 per cent);

– *impurities F, G*: for each impurity, not more than 0.3 times the area of the principal peak in the chromatogram obtained with reference solution (c) (0.3 per cent);

– *impurity H*: not more than 0.2 times the area of the principal peak in the chromatogram obtained with reference solution (c) (0.2 per cent);

– *any other impurities*: for each impurity, not more than 0.2 times the area of the principal peak in the chromatogram obtained with reference solution (c) (0.2 per cent);

– *total*: not more than 3 times the area of the principal peak in the chromatogram obtained with reference solution (c) (3.0 per cent);

– *disregard limit*: 0.1 times the area of the principal peak in the chromatogram obtained with reference solution (c) (0.1 per cent).

Heavy metals (*2.4.8*): maximum 20 ppm.

Dissolve 1.5 g in *water R* and dilute to 15 ml with the same solvent. If the solution is not clear, carry out prefiltration and use the filtrate. 10 ml complies with limit test E. Prepare the reference solution using 20 ml of *lead standard solution (1 ppm Pb) R*.

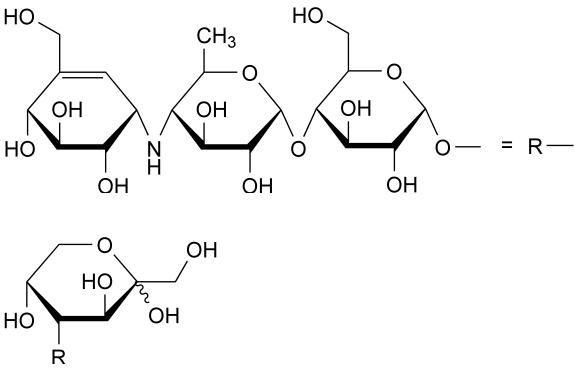
Water (*2.5.12*): maximum 4.0 per cent, determined on 0.300 g.

Sulphated ash (*2.4.14*): maximum 0.2 per cent, determined on 1.0 g.

ASSAY

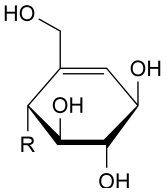
Liquid chromatography (*2.2.29*) as described in the test for related substances with the following modification.

Injection: test solution and reference solution (a).



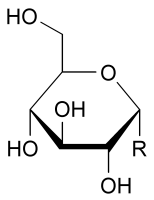
Calculate the percentage content of $C_{25}H_{43}NO_{18}$ from the areas of the peaks and the declared content of *acarbose CRS*.

STORAGE

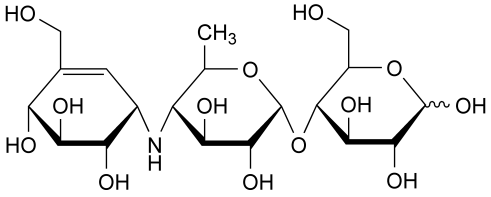


In an airtight container.

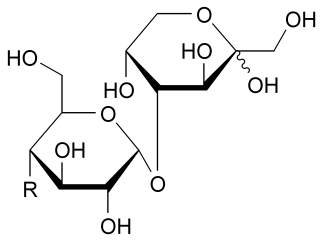
IMPURITIES



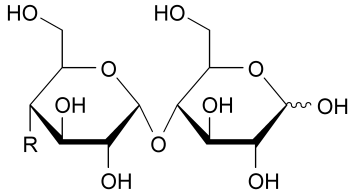
Specified impurities: *A, B, C, D, E, F, G, H.*



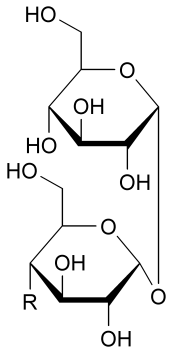
A. *O*-4,6-dideoxy-4-[[(1*S*,4*R*,5*S*,6*S*)-4,5,6-trihydroxy-3-(hydroxymethyl)cyclohex-2-enyl]amino]-α-D-glucopyranosyl-(1→4)-*O*-α-D-glucopyranosyl-(1→4)-D-*arabino*-hex-2-ulopyranose,



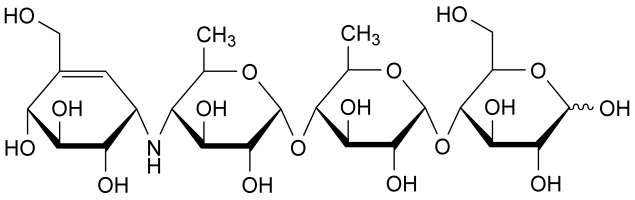
B. (1*R*,4*R*,5*S*,6*R*)-4,5,6-trihydroxy-2-(hydroxymethyl)cyclohex-2-enyl 4-*O*-[4,6-dideoxy-4-[[(1*S*,4*R*,5*S*,6*S*)-4,5,6-trihydroxy-3-(hydroxymethyl)cyclohex-2-enyl]amino]-α-D-glucopyranosyl]-α-D-glucopyranoside,



C. α-D-glucopyranosyl 4-*O*-[4,6-dideoxy-4-[[(1*S*,4*R*,5*S*,6*S*)-4,5,6-trihydroxy-3-(hydroxymethyl)cyclohex-2-enyl]amino]-α-D-glucopyranosyl]-α-D-glucopyranoside,



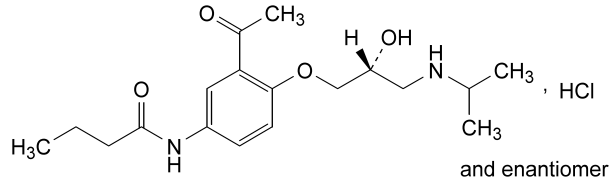
D. 4-*O*-[4,6-dideoxy-4-[[(1*S*,4*R*,5*S*,6*S*)-4,5,6-trihydroxy-3-(hydroxymethyl)cyclohex-2-enyl]amino]-α-D-glucopyranosyl]-D-glucopyranose,



E. *O*-4,6-dideoxy-4-[[(1*S*,4*R*,5*S*,6*S*)-4,5,6-trihydroxy-3-(hydroxymethyl)cyclohex-2-enyl]amino]-α-D-glucopyranosyl-(1→4)-*O*-α-D-glucopyranosyl-(1→4)-*O*-α-D-glucopyranosyl-(1→4)-D-*arabino*-hex-2-ulopyranose (4-*O*-α-acarbosyl-D-fructopyranose),

F. *O*-4,6-dideoxy-4-[[(1*S*,4*R*,5*S*,6*S*)-4,5,6-trihydroxy-3-(hydroxymethyl)cyclohex-2-enyl]amino]-α-D-glucopyranosyl-(1→4)-*O*-α-D-glucopyranosyl-(1→4)-*O*-α-D-glucopyranosyl-(1→4)-D-glucopyranose (4-*O*-α-acarbosyl-D-glucopyranose),

G. α-D-glucopyranosyl *O*-4,6-dideoxy-4-[[(1*S*,4*R*,5*S*,6*S*)-4,5,6-trihydroxy-3-(hydroxymethyl)cyclohex-2-enyl]amino]-α-D-glucopyranosyl-(1→4)-*O*-α-D-glucopyranosyl-(1→4)-*O*-α-D-glucopyranoside (α-D-glucopyranosyl α-acarboside),



H. *O*-4,6-dideoxy-4-[[(1*S*,4*R*,5*S*,6*S*)-4,5,6-trihydroxy-3-(hydroxymethyl)cyclohex-2-enyl]amino]-α-D-glucopyranosyl-(1→4)-*O*-6-deoxy-α-D-glucopyranosyl-(1→4)-D-glucopyranose.

ACEBUTOLOL HYDROCHLORIDE

Acebutololi hydrochloridum

and enantiomer

$C_{18}H_{29}ClN_2O_4$ M_r 372.9
[34381-68-5]

DEFINITION

N-[3-Acetyl-4-[(2*RS*)-2-hydroxy-3-[(1-methylethyl)amino]propoxy]phenyl]butanamide hydrochloride.

Content: 99.0 per cent to 101.0 per cent (dried substance).

CHARACTERS

Appearance: white or almost white, crystalline powder.

Solubility: freely soluble in water and in ethanol (96 per cent), very slightly soluble in acetone and in methylene chloride.

mp: about 143 °C.

IDENTIFICATION

First identification: B, D.

Second identification: A, C, D.

A. Ultraviolet and visible absorption spectrophotometry (*2.2.25*).

Test solution. Dissolve 20.0 mg in a 0.1 per cent *V/V* solution of *hydrochloric acid R* and dilute to 100.0 ml with the same acid solution. Dilute 5.0 ml of this solution to 100.0 ml with a 0.1 per cent *V/V* solution of *hydrochloric acid R*.

Spectral range: 220-350 nm.

Absorption maxima: at 233 nm and 322 nm.

Specific absorbance at the absorption maximum: 555 to 605 at 233 nm.

B. Infrared absorption spectrophotometry (*2.2.24*).

Preparation: discs.

Comparison: *acebutolol hydrochloride CRS*.

C. Thin-layer chromatography (*2.2.27*).

Test solution. Dissolve 20 mg of the substance to be examined in *methanol R* and dilute to 20 ml with the same solvent.

Reference solution (a). Dissolve 20 mg of *acebutolol hydrochloride CRS* in *methanol R* and dilute to 20 ml with the same solvent.

Reference solution (b). Dissolve 20 mg of *pindolol CRS* in *methanol R* and dilute to 20 ml with the same solvent. To 1 ml of this solution add 1 ml of reference solution (a).

Plate: *TLC silica gel F_{254} plate R.*

Mobile phase: *perchloric acid R, methanol R, water R* (5:395:600 *V/V/V*).

Application: 10 µl.

Development: over 3/4 of the plate.

Drying: in air.

Detection: examine in ultraviolet light at 254 nm.

System suitability: the chromatogram obtained with reference solution (b) shows 2 clearly separated principal spots.

Results: the principal spot in the chromatogram obtained with the test solution is similar in position and size to the principal spot in the chromatogram obtained with reference solution (a).

D. It gives reaction (a) of chlorides (*2.3.1*).

TESTS

Appearance of solution. The solution is not more opalescent than reference suspension II (*2.2.1*) and not more intensely coloured than reference solution BY_5 (*2.2.2, Method II*).

Dissolve 0.5 g in *water R* and dilute to 10 ml with the same solvent.

pH (*2.2.3*): 5.0 to 7.0.

Dissolve 0.20 g in *carbon dioxide-free water R* and dilute to 20 ml with the same solvent.

Related substances. Liquid chromatography (*2.2.29*).

Test solution. Dissolve 0.100 g of the substance to be examined in mobile phase A and dilute to 50.0 ml with mobile phase A.

Reference solution (a). Dissolve 20.0 mg of the substance to be examined in mobile phase A and dilute to 100.0 ml with mobile phase A. Dilute 0.5 ml of this solution to 50.0 ml with mobile phase A.

Reference solution (b). Dissolve the contents of a vial of *acebutolol impurity I CRS* in 1.0 ml of mobile phase A.

Reference solution (c). Mix 2.0 ml of reference solution (a) and 1.0 ml of reference solution (b) and dilute to 10.0 ml with mobile phase A.

Reference solution (d). Dissolve 5.0 mg of *acebutolol impurity C CRS* in 10 ml of *acetonitrile R* and dilute to 25.0 ml with mobile phase A. Dilute 0.5 ml of this solution to 50.0 ml with mobile phase A.

Reference solution (e). Dissolve 5.0 mg of *acebutolol impurity B CRS* in 10.0 ml of *acetonitrile R* and dilute to 25.0 ml with mobile phase A. Dilute 1.0 ml of this solution to 50.0 ml with mobile phase A.

Column:

- *size*: *l* = 0.125 m, Ø = 4 mm,
- *stationary phase*: *end-capped octadecylsilyl silica gel for chromatography R* (5 µm),
- *temperature*: 40 °C.

Mobile phase:

- *mobile phase A*: mix 2.0 ml of *phosphoric acid R*, and 3.0 ml of *triethylamine R* and dilute to 1000 ml with *water R*;
- *mobile phase B*: mix equal volumes of *acetonitrile R* and mobile phase A;

Time (min)	Mobile phase A (per cent *V/V*)	Mobile phase B (per cent *V/V*)
0 - 2	98	2
2 - 30.5	98 → 10	2 → 90
30.5 - 41	10	90
41 - 42	10 → 98	90 → 2
42 - 50	98	2

Flow rate: 1.2 ml/min.

Detection: spectrophotometer at 240 nm.

Injection: 25 µl.

System suitability: reference solution (c):

- *resolution*: minimum 7.0 between the peaks due to impurity I and acebutolol.

Limits:

- *impurity B*: not more than the area of the principal peak in the chromatogram obtained with reference solution (e) (0.2 per cent);
- *impurity C*: not more than the area of the principal peak in the chromatogram obtained with reference solution (d) (0.1 per cent);
- *impurity I*: not more than twice the area of the principal peak in the chromatogram obtained with reference solution (a) (0.2 per cent);
- *any other impurity*: for each impurity, not more than the area of the principal peak in the chromatogram obtained with reference solution (a) (0.1 per cent);
- *total*: not more than 5 times the area of the principal peak in the chromatogram obtained with reference solution (a) (0.5 per cent);
- *disregard limit*: 0.5 times the area of the principal peak in the chromatogram obtained with reference solution (a) (0.05 per cent).

Heavy metals (*2.4.8*): maximum 20 ppm.

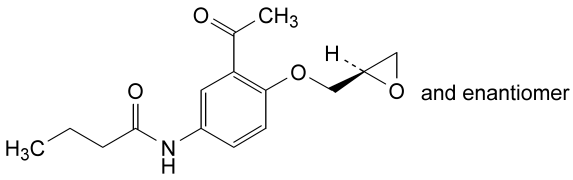
Dissolve 0.50 g in 20.0 ml of *water R*. The solution complies with test E. Prepare the reference solution by diluting 10.0 ml of *lead standard solution (1 ppm Pb) R* to 20.0 ml with *water R*.

Loss on drying (*2.2.32*): maximum 0.5 per cent, determined on 1.000 g by drying in an oven at 105 °C for 3 h.

Sulphated ash (*2.4.14*): maximum 0.1 per cent, determined on 1.0 g.

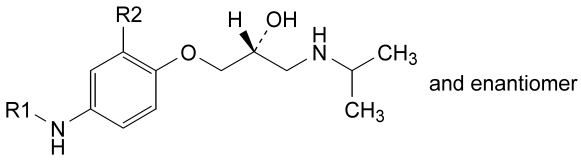
ASSAY

Dissolve 0.300 g in 50 ml of *ethanol (96 per cent) R* and add 1 ml of *0.1 M hydrochloric acid*. Carry out a potentiometric titration (*2.2.20*), using *0.1 M sodium hydroxide*. Read the volume added between the 2 points of inflexion.



1 ml of *0.1 M sodium hydroxide* is equivalent to 37.29 mg of $C_{18}H_{29}ClN_2O_4$.

STORAGE

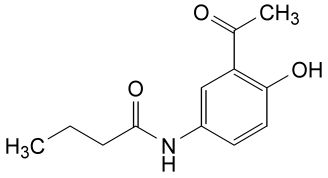


Protected from light.

IMPURITIES

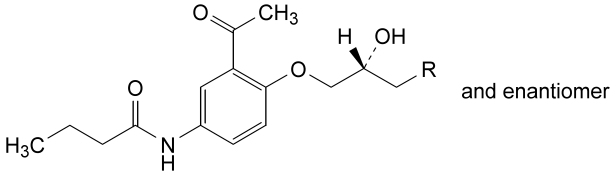
Specified impurities: A, B, C, D, E, F, G, H, I, J, K.

A. *N*-[3-acetyl-4-[(2*RS*)-oxiran-2-ylmethoxy]phenyl]butanamide,



B. R1 = R2 = CO-CH_3: *N*-[3-acetyl-4-[(2*RS*)-2-hydroxy-3-[(1-methylethyl)amino]propoxy]phenyl]acetamide (diacetolol),

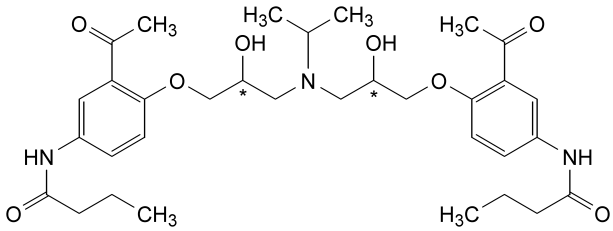
D. R1 = H, R2 = CO-CH_3: 1-[5-amino-2-[(2*RS*)-2-hydroxy-3-[(1-methylethyl)amino]propoxy]phenyl]ethanone,



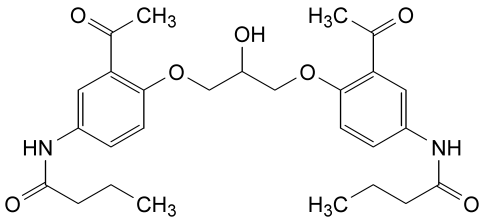
E. R1 = CO-CH_2-CH_2-CH_3, R2 = H: *N*-[4-[(2*RS*)-2-hydroxy-3-[(1-methylethyl)amino]propoxy]phenyl]butanamide,

J. R1 = CO-CH_2-CH_3, R2 = CO-CH_3: *N*-[3-acetyl-4-[(2*RS*)-2-hydroxy-3-[(1-methylethyl)amino]propoxy]phenyl]propanamide,

K. R1 = R2 = CO-CH_2-CH_2-CH_3: *N*-[3-butanoyl-4-[(2*RS*)-2-hydroxy-3-[(1-methylethyl)amino]propoxy]phenyl]butanamide,



C. *N*-(3-acetyl-4-hydroxyphenyl)butanamide,



F. R = OH: *N*-[3-acetyl-4-[(2*RS*)-2,3-dihydroxypropoxy]phenyl]butanamide,

I. R = NH-CH_2-CH_3: *N*-[3-acetyl-4-[(2*RS*)-3-(ethylamino)-2-hydroxypropoxy]phenyl]butanamide,

ACECLOFENAC

Aceclofenacum

$C_{16}H_{13}Cl_2NO_4$ M_r 354.2
[89796-99-6]

DEFINITION

[[[2-[(2,6-Dichlorophenyl)amino]phenyl]acetyl]oxy]acetic acid.

Content: 99.0 per cent to 101.0 per cent (dried substance).

CHARACTERS

Appearance: white or almost white, crystalline powder.

Solubility: practically insoluble in water, freely soluble in acetone, soluble in alcohol.

IDENTIFICATION

First identification: B.

Second identification: A, C.

A. Dissolve 50.0 mg in *methanol R* and dilute to 100.0 ml with the same solvent. Dilute 2.0 ml of the solution to 50.0 ml with *methanol R*. Examined between 220 nm and 370 nm (*2.2.25*), the solution shows an absorption maximum at 275 nm. The specific absorbance at the absorption maximum is 320 to 350.

B. Infrared absorption spectrophotometry (*2.2.24*).

Comparison: Ph. Eur. reference spectrum of aceclofenac.

C. Dissolve about 10 mg in 10 ml of *alcohol R*. To 1 ml of the solution, add 0.2 ml of a mixture, prepared immediately before use, of equal volumes of a 6 g/l solution of *potassium ferricyanide R* and a 9 g/l solution of *ferric chloride R*. Allow to stand protected from light for 5 min. Add 3 ml of a 10.0 g/l solution of *hydrochloric acid R*. Allow to stand protected from light for 15 min. A blue colour develops and a precipitate is formed.

TESTS

Related substances. Liquid chromatography (*2.2.29*). *Prepare the solutions immediately before use.*

Test solution. Dissolve 50.0 mg of the substance to be examined in a mixture of 30 volumes of mobile phase A and 70 volumes of mobile phase B and dilute to 25.0 ml with the same mixture of solvents.

Reference solution (a). Dissolve 21.6 mg of *diclofenac sodium CRS* in a mixture of 30 volumes of mobile phase A and 70 volumes of mobile phase B and dilute to 50.0 ml with the same mixture of solvents.

Reference solution (b). Dilute 2.0 ml of the test solution to 10.0 ml with a mixture of 30 volumes of mobile phase A and 70 volumes of mobile phase B.

Reference solution (c). Mix 1.0 ml of reference solution (a) and 1.0 ml of reference solution (b) and dilute to 100.0 ml with a mixture of 30 volumes of mobile phase A and 70 volumes of mobile phase B.

Reference solution (d). Dissolve 4.0 mg of *aceclofenac impurity F CRS*, 2.0 mg of *aceclofenac impurity H CRS* and 2.0 mg of *diclofenac impurity A CRS* (aceclofenac impurity I) in a mixture of 30 volumes of mobile phase A and 70 volumes of mobile phase B and dilute to 10.0 ml with the same mixture of solvents.

Reference solution (e). Mix 1.0 ml of reference solution (b) and 1.0 ml of reference solution (d) and dilute to 100.0 ml with a mixture of 30 volumes of mobile phase A and 70 volumes of mobile phase B.

Column:

- *size*: *l* = 0.25 m, Ø = 4.6 mm,
- *stationary phase*: spherical *end-capped octadecylsilyl silica gel for chromatography R* (5 µm) with a pore size of 10 nm and a carbon loading of 19 per cent,
- *temperature*: 40 °C.

Mobile phase:

- *mobile phase A*: 1.12 g/l solution of *phosphoric acid R* adjusted to pH 7.0 using a 42 g/l solution of *sodium hydroxide R*,
- *mobile phase B*: *water R, acetonitrile R* (1:9 *V/V*),

50 - 52	20 → 70	80 → 30
52 - 65	70	30

Flow rate: 1.0 ml/min.

Detection: spectrophotometer at 275 nm.

Injection: 10 µl; inject the test solution and reference solutions (c) and (e).

Relative retention with reference to aceclofenac (retention time = about 14 min): impurity A = about 0.8; impurity G = about 1.3; impurity H = about 1.5; impurity I = about 2.3; impurity D = about 2.6; impurity B = about 2.7; impurity E = about 2.8; impurity C = about 3.0; impurity F = about 3.2.

System suitability: reference solution (c):

- *resolution*: minimum 5.0 between the peaks due to aceclofenac and to impurity A.

Limits:

- *impurity A*: not more than the area of the corresponding peak in the chromatogram obtained with reference solution (c) (0.2 per cent),
- *impurities B, C, D, E, G*: for each impurity, not more than the area of the peak due to aceclofenac in the chromatogram obtained with reference solution (e) (0.2 per cent),
- *impurity F*: not more than the area of the corresponding peak in the chromatogram obtained with reference solution (e) (0.2 per cent),
- *impurity H*: not more than the area of the corresponding peak in the chromatogram obtained with reference solution (e) (0.1 per cent),
- *impurity I*: not more than the area of the corresponding peak in the chromatogram obtained with reference solution (e) (0.1 per cent),
- *any other impurity*: not more than half the area of the peak due to aceclofenac in the chromatogram obtained with reference solution (e) (0.1 per cent),
- *total*: not more than 0.7 per cent,
- *disregard limit*: 0.1 times the area of the peak due to aceclofenac in the chromatogram obtained with reference solution (e) (0.02 per cent).

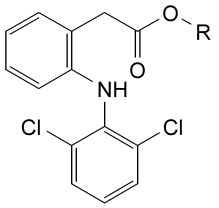
Heavy metals (*2.4.8*): maximum 10 ppm.

To 2.0 g in a silica crucible, add 2 ml of *sulphuric acid R* to wet the substance. Heat progressively to ignition and continue heating until an almost white or at most a greyish residue is obtained. Carry out the ignition at a temperature not exceeding 800 °C. Allow to cool. Add 3 ml of *hydrochloric acid R* and 1 ml of *nitric acid R*. Heat and evaporate slowly to dryness. Cool and add 1 ml of a 100 g/l solution of *hydrochloric acid R* and 10.0 ml of *distilled water R*. Neutralise with a 1.0 g/l solution of *ammonia R* using 0.1 ml of *phenolphthalein solution R* as indicator. Add 2.0 ml of a 60 g/l solution of *anhydrous acetic acid R* and dilute to 20 ml with *distilled water R*. 12 ml of the solution complies with limit test A. Prepare the standard using *lead standard solution (1 ppm Pb) R*.

Loss on drying (*2.2.32*): maximum 0.5 per cent, determined on 1.000 g by drying in an oven at 105 °C.

Sulphated ash (*2.4.14*): maximum 0.1 per cent, determined on 1.0 g.

ASSAY

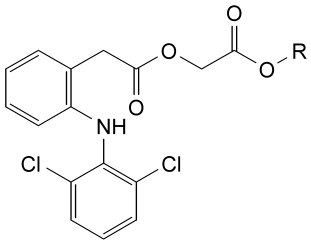


Dissolve 0.300 g in 40 ml of *methanol R*. Titrate with *0.1 M sodium hydroxide*, determining the end-point potentiometrically (*2.2.20*).

1 ml of *0.1 M sodium hydroxide* is equivalent to 35.42 mg of $C_{16}H_{13}Cl_2NO_4$.

STORAGE

In an airtight container, protected from light.

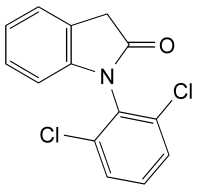


IMPURITIES

A. R = H: [2-[(2,6-dichlorophenyl)amino]phenyl]acetic acid (diclofenac),

B. R = CH_3: methyl [2-[(2,6-dichlorophenyl)amino]phenyl]acetate (methyl ester of diclofenac),

C. R = C_2H_5: ethyl [2-[(2,6-dichlorophenyl)amino]phenyl]acetate (ethyl ester of diclofenac),



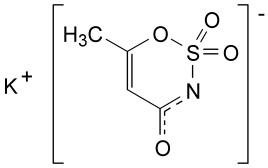
D. R = CH_3: methyl [[[2-[(2,6-dichlorophenyl)amino]phenyl]acetyl]oxy]acetate (methyl ester of aceclofenac),

E. R = C_2H_5: ethyl [[[2-[(2,6-dichlorophenyl)amino]phenyl]acetyl]oxy]acetate (ethyl ester of aceclofenac),

F. R = CH_2-C_6H_5: benzyl [[[2-[(2,6-dichlorophenyl)amino]phenyl]acetyl]oxy]acetate (benzyl ester of aceclofenac),

G. R = CH_2-CO_2H: [[[[[2-[(2,6-dichlorophenyl)amino]phenyl]acetyl]oxy]acetyl]oxy]acetic acid (acetic aceclofenac),

H. R = CH_2-CO-O-CH_2-CO_2H: [[[[[[[2-[(2,6-dichlorophenyl)amino]phenyl]acetyl]oxy]acetyl]oxy]acetyl]oxy]acetic acid (diacetic aceclofenac),



I. 1-(2,6-dichlorophenyl)-1,3-dihydro-2*H*-indol-2-one.

corrected 6.0

ACESULFAME POTASSIUM

Acesulfamum kalicum

$C_4H_4KNO_4S$ M_r 201.2
[55589-62-3]

DEFINITION

Potassium 6-methyl-1,2,3-oxathiazin-4-olate 2,2-dioxide.

Content: 99.0 per cent to 101.0 per cent (dried substance).

CHARACTERS

Appearance: white or almost white, crystalline powder or colourless crystals.

Solubility: soluble in water, very slightly soluble in acetone and in ethanol (96 per cent).

IDENTIFICATION

First identification: A, C.

Second identification: B, C.

A. Infrared absorption spectrophotometry (*2.2.24*).
Comparison: *acesulfame potassium CRS*.

B. Thin-layer chromatography (*2.2.27*).
Test solution. Dissolve 5 mg of the substance to be examined in *water R* and dilute to 5 ml with the same solvent.
Reference solution (a). Dissolve 5 mg of *acesulfame potassium CRS* in *water R* and dilute to 5 ml with the same solvent.
Reference solution (b). Dissolve 5 mg of *acesulfame potassium CRS* and 5 mg of *saccharin sodium R* in *water R* and dilute to 5 ml with the same solvent.
Plate: *cellulose for chromatography R* as the coating substance.
Mobile phase: *concentrated ammonia R, acetone R, ethyl acetate R* (10:60:60 *V/V/V*).
Application: 5 µl as bands.
Development: twice over a path of 15 cm.
Drying: in a current of warm air.
Detection: examine in ultraviolet light at 254 nm.
System suitability: reference solution (b):
– the chromatogram shows 2 clearly separated bands.
Results: the principal band in the chromatogram obtained with the test solution is similar in position and size to the principal band in the chromatogram obtained with reference solution (a).

C. 0.5 ml of solution S (see Tests) gives reaction (b) of potassium (*2.3.1*).

TESTS

Solution S. Dissolve 10.0 g in *carbon dioxide-free water R* and dilute to 50 ml with the same solvent.

Appearance of solution. Solution S is clear (*2.2.1*) and colourless (*2.2.2, Method II*).

Acidity or alkalinity. To 20 ml of solution S add 0.1 ml of *bromothymol blue solution R1*. Not more than 0.2 ml of *0.01 M hydrochloric acid* or *0.01 M sodium hydroxide* is required to change the colour of the indicator.

Impurity A. Thin-layer chromatography (*2.2.27*).
Test solution. Dissolve 0.80 g of the substance to be examined in *water R* and dilute to 10 ml with the same solvent.
Reference solution (a). Dissolve 50 mg of *acetylacetamide R* (impurity A) in *water R* and dilute to 25 ml with the same solvent. To 5 ml of the solution add 45 ml of *water R* and dilute to 100 ml with *methanol R*.
Reference solution (b). To 10 ml of reference solution (a) add 1 ml of the test solution and dilute to 20 ml with *methanol R*.
Plate: *TLC silica gel plate R*.
Mobile phase: *water R, ethanol (96 per cent) R, ethyl acetate R* (2:15:74 *V/V/V*).
Application: 5 µl.

Development: over a path of 15 cm.

Drying: in air until the solvents are completely removed.

Detection: spray with *phosphoric vanillin solution R* and heat at 120 °C for about 10 min; examine in daylight.

System suitability: the chromatogram obtained with reference solution (a) shows a clearly visible spot and the chromatogram obtained with reference solution (b) shows 2 clearly separated spots.

Limit:

– *impurity A*: any spot due to impurity A is not more intense than the spot in the chromatogram obtained with reference solution (a) (0.125 per cent).

Related substances. Liquid chromatography (*2.2.29*).

Test solution. Dissolve 0.100 g of the substance to be examined in *water R* and dilute to 10.0 ml with the same solvent.

Reference solution (a). Dissolve 4.0 mg of *acesulfame potassium impurity B CRS* in *water R* and dilute to 100.0 ml with the same solvent. Dilute 1.0 ml of this solution to 200.0 ml with *water R*.

Reference solution (b). Dissolve 0.100 g of the substance to be examined in reference solution (a) and dilute to 10.0 ml with the same solution.

Reference solution (c). Dilute 1.0 ml of the test solution to 100.0 ml with *water R*. Dilute 1.0 ml of this solution to 10.0 ml with *water R*.

Column:

– *size*: *l* = 0.25 m, Ø = 4.6 mm,

– *stationary phase*: *octadecylsilyl silica gel for chromatography R* (3 µm).

Mobile phase: mix 40 volumes of *acetonitrile R* and 60 volumes of a 3.3 g/l solution of *tetrabutylammonium hydrogen sulphate R*.

Flow rate: 1 ml/min.

Detection: spectrophotometer at 234 nm.

Injection: 20 µl.

Run time: 3 times the retention time of acesulfame.

Relative retention with reference to acesulfame (retention time = about 5.3 min): impurity B = about 1.6.

System suitability:

– *peak-to-valley ratio*: minimum 1.2, where H_p = height above the baseline of the peak due to impurity B and H_v = height above the baseline of the lowest point of the curve separating this peak from the peak due to acesulfame in the chromatogram obtained with reference solution (b).

Limits:

– *impurity B*: not more than the area of the principal peak in the chromatogram obtained with reference solution (a) (20 ppm),

– *unspecified impurities*: for each impurity, not more than the area of the principal peak in the chromatogram obtained with reference solution (c) (0.1 per cent),

– *total*: not more than the area of the principal peak in the chromatogram obtained with reference solution (c) (0.1 per cent),

– *disregard limit*: 0.5 times the area of the principal peak in the chromatogram obtained with reference solution (c) except for the peak due to impurity B (0.05 per cent).

Fluorides: maximum 3 ppm.

Potentiometry (*2.2.36, Method I*).

Test solution. Dissolve 3.000 g of the substance to be examined in *distilled water R*, add 15.0 ml of *total-ionic-strength-adjustment buffer R1* and dilute to 50.0 ml with *distilled water R*.

Reference solutions. To 0.5 ml, 1.0 ml, 1.5 ml and 3.0 ml of *fluoride standard solution (10 ppm F) R* add 15.0 ml of *total-ionic-strength-adjustment buffer R1* and dilute to 50.0 ml with *distilled water R*.

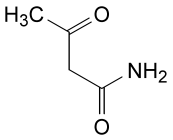
Indicator electrode: fluoride-selective.

Reference electrode: silver-silver chloride.

Heavy metals (*2.4.8*): maximum 5 ppm.

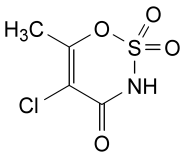
12 ml of solution S complies with test A. Prepare the reference solution using *lead standard solution (1 ppm Pb) R*.

Loss on drying (*2.2.32*): maximum 1.0 per cent, determined on 1.000 g by drying in an oven at 105 °C for 3 h.



ASSAY

Dissolve 0.150 g in 50 ml of *anhydrous acetic acid R*. Titrate with *0.1 M perchloric acid*, determining the end-point potentiometrically (*2.2.20*).

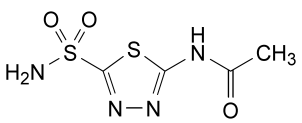


1 ml of *0.1 M perchloric acid* is equivalent to 20.12 mg of $C_4H_4KNO_4S$.

IMPURITIES

Specified impurities: A, B.

A. 3-oxobutanamide (acetylacetamide),



B. 5-chloro-6-methyl-1,2,3-oxathiazin-4(3*H*)-one 2,2-dioxide.

corrected 6.0

ACETAZOLAMIDE

Acetazolamidum

$C_4H_6N_4O_3S_2$ M_r 222.2
[59-66-5]

DEFINITION

Acetazolamide contains not less than 98.5 per cent and not more than the equivalent of 101.0 per cent of *N*-(5-sulphamoyl-1,3,4-thiadiazol-2-yl)acetamide, calculated with reference to the dried substance.

CHARACTERS

A white or almost white, crystalline powder, very slightly soluble in water, slightly soluble in alcohol. It dissolves in dilute solutions of alkali hydroxides.

IDENTIFICATION

First identification: A, B.

Second identification: A, C, D.

A. Dissolve 30.0 mg in *0.01 M sodium hydroxide* and dilute to 100.0 ml with the same solvent. Dilute 10.0 ml of the solution to 100.0 ml with *0.01 M sodium hydroxide* (solution A). Examined between 230 nm and 260 nm (*2.2.25*), solution A shows an absorption maximum at 240 nm. The specific absorbance at the maximum is 162 to 176. Dilute 25.0 ml of solution A to 100.0 ml with *0.01 M sodium hydroxide*. Examined between 260 nm and 350 nm, the solution shows an absorption maximum at 292 nm. The specific absorbance at the maximum is 570 to 620.

B. Examine by infrared absorption spectrophotometry (*2.2.24*), comparing with the spectrum obtained with *acetazolamide CRS*. If the spectra obtained in the solid state with the substance to be examined and the reference substance show differences, dissolve separately the substance to be examined and the reference substance in *alcohol R*, evaporate to dryness, prepare new discs and record the spectra.

C. Introduce about 20 mg into a test-tube and add 4 ml of *dilute hydrochloric acid R* and 0.2 g of *zinc powder R*. Immediately place a piece of *lead acetate paper R* over the mouth of the tube. The paper shows a brownish-black colour.

D. Dissolve about 25 mg in a mixture of 0.1 ml of *dilute sodium hydroxide solution R* and 5 ml of *water R*. Add 0.1 ml of *copper sulphate solution R*. A greenish-blue precipitate is formed.

TESTS

Appearance of solution. Dissolve 1.0 g in 10 ml of *1 M sodium hydroxide*. The solution is not more opalescent than reference suspension II (*2.2.1*) and not more intensely coloured than reference solution Y_5 or BY_5 (*2.2.2, Method II*).

Related substances. Examine by thin-layer chromatography (*2.2.27*), using *silica gel* GF_{254} *R* as the coating substance.

Test solution. Dissolve 50 mg of the substance to be examined in a mixture of equal volumes of *alcohol R* and *ethyl acetate R* and dilute to 10 ml with the same mixture of solvents.

Reference solution. Dilute 1 ml of the test solution to 100 ml with a mixture of equal volumes of *alcohol R* and *ethyl acetate R*.

Apply separately to the plate 20 µl of each solution. Use the tank without lining the walls and allow to saturate for 1 h before development. Develop over a path of 15 cm using a freshly prepared mixture of 20 volumes of *concentrated ammonia R*, 30 volumes of *ethyl acetate R* and 50 volumes of *2-propanol R*. Allow the plate to dry in air and examine in ultraviolet light at 254 nm. Any spot in the chromatogram obtained with the test solution, apart from the principal spot, is not more intense than the spot in the chromatogram obtained with the reference solution (1 per cent).

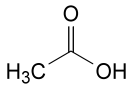
Sulphates (*2.4.13*). To 0.4 g add 20 ml of *distilled water R* and dissolve by heating to boiling. Allow to cool with frequent shaking and filter. 15 ml of the filtrate complies with the limit test for sulphates (500 ppm).

Heavy metals (*2.4.8*). 1.0 g complies with limit test C for heavy metals (20 ppm). Prepare the standard using 2 ml of *lead standard solution (10 ppm Pb) R*.

Loss on drying (*2.2.32*). Not more than 0.5 per cent, determined on 1.000 g by drying in an oven at 105 °C.

Sulphated ash (*2.4.14*). Not more than 0.1 per cent, determined on 1.0 g.

ASSAY



Dissolve 0.200 g in 25 ml of *dimethylformamide R*. Titrate with *0.1 M ethanolic sodium hydroxide*, determining the end-point potentiometrically (*2.2.20*).

1 ml of *0.1 M ethanolic sodium hydroxide* is equivalent to 22.22 mg of $C_4H_6N_4O_3S_2$.

01/2008:0590

ACETIC ACID, GLACIAL

Acidum aceticum glaciale

$C_2H_4O_2$ M_r 60.1
[64-19-7]

DEFINITION

Content: 99.0 per cent *m/m* to 100.5 per cent *m/m*.

CHARACTERS

Appearance: crystalline mass or clear, colourless, volatile liquid.

Solubility: miscible with water, with ethanol (96 per cent) and with methylene chloride.

IDENTIFICATION

A. A 100 g/l solution is strongly acid (*2.2.4*).

B. To 0.03 ml add 3 ml of *water R* and neutralise with *dilute sodium hydroxide solution R*. The solution gives reaction (b) of acetates (*2.3.1*).

TESTS

Solution S. Dilute 20 ml to 100 ml with *distilled water R*.

Appearance. The substance to be examined is clear (*2.2.1*) and colourless (*2.2.2, Method II*).

Freezing point (*2.2.18*): minimum 14.8 °C.

Reducing substances. To 5.0 ml add 10.0 ml of *water R* and mix. To 5.0 ml of this solution add 6 ml of *sulphuric acid R*, cool and add 2.0 ml of *0.0167 M potassium dichromate*. Allow to stand for 1 min and add 25 ml of *water R* and 1 ml of a freshly prepared 100 g/l solution of *potassium iodide R*. Titrate with *0.1 M sodium thiosulphate*, using 1.0 ml of *starch solution R* as indicator. Not less than 1.0 ml of *0.1 M sodium thiosulphate* solution is required.

Chlorides (*2.4.4*): maximum 25 mg/l.

Dilute 10 ml of solution S to 15 ml with *water R*.

Sulphates (*2.4.13*): maximum 50 mg/l, determined on solution S.

Iron (*2.4.9*): maximum 5 ppm.

Dilute 5.0 ml of solution A obtained in the test for heavy metals to 10.0 ml with *water R*.

Heavy metals (*2.4.8*): maximum 5 ppm.

Dissolve the residue obtained in the test for residue on evaporation by heating with 2 quantities, each of 15 ml, of *water R* and dilute to 50.0 ml (solution A). 12 ml of solution A complies with test A. Prepare the reference solution using *lead standard solution (2 ppm Pb) R*.

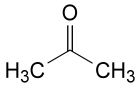
Residue on evaporation: maximum 0.01 per cent.

Evaporate 20 g to dryness on a water-bath and dry at 100-105 °C. The residue weighs a maximum of 2.0 mg.

ASSAY

Weigh accurately a conical flask with a ground-glass stopper containing 25 ml of *water R*. Add 1.0 ml of the substance to be examined and weigh again accurately. Add 0.5 ml of *phenolphthalein solution R* and titrate with *1 M sodium hydroxide*.

1 ml of *1 M sodium hydroxide* is equivalent to 60.1 mg of $C_2H_4O_2$.



STORAGE

In an airtight container.

01/2008:0872

ACETONE

Acetonum

C_3H_6O M_r 58.08
[67-64-1]

DEFINITION

Propanone.

CHARACTERS

Appearance: volatile, clear, colourless liquid.

Solubility: miscible with water and with ethanol (96 per cent).

The vapour is flammable.

IDENTIFICATION

A. It complies with the test for relative density (see Tests).

B. To 1 ml, add 3 ml of *dilute sodium hydroxide solution R* and 0.3 ml of a 25 g/l solution of *sodium nitroprusside R*. An intense red colour is produced which becomes violet with the addition of 3.5 ml of *acetic acid R*.

C. To 10 ml of a 0.1 per cent *V/V* solution of the substance to be examined in *ethanol (50 per cent V/V) R*, add 1 ml of a 10 g/l solution of *nitrobenzaldehyde R* in *ethanol (50 per cent V/V) R* and 0.5 ml of *strong sodium hydroxide solution R*. Allow to stand for about 2 min and acidify with *acetic acid R*. A greenish-blue colour is produced.

TESTS

Appearance of solution. To 10 ml add 10 ml of *water R*. The solution is clear (*2.2.1*) and colourless (*2.2.2, Method II*).

Acidity or alkalinity. To 5 ml add 5 ml of *carbon dioxide-free water R*, 0.15 ml of *phenolphthalein solution R* and 0.5 ml of *0.01 M sodium hydroxide*. The solution is pink. Add 0.7 ml of *0.01 M hydrochloric acid* and 0.05 ml of *methyl red solution R*. The solution is red or orange.

Relative density (*2.2.5*): 0.790 to 0.793.

Reducing substances. To 30 ml add 0.1 ml of *0.02 M potassium permanganate* and allow to stand in the dark for 2 h. The mixture is not completely decolourised.

Related substances. Gas chromatography (*2.2.28*).

Test solution. The substance to be examined.

Reference solution (a). To 0.5 ml of *methanol R* add 0.5 ml of *2-propanol R* and dilute to 100.0 ml with the test solution. Dilute 1.0 ml of this solution to 10.0 ml with the test solution.

Reference solution (b). Dilute 100 µl of *benzene R* to 100.0 ml with the test solution. Dilute 0.20 ml of this solution to 100.0 ml with the test solution.

Column:

- *material*: fused silica,
- *size*: *l* = 50 m, Ø = 0.3 mm,
- *stationary phase*: *macrogol 20 000 R* (film thickness 1 µm).

Carrier gas: *helium for chromatography R*.

Linear velocity: 21 cm/s.

Split ratio: 1:50.

Temperature:

	Time (min)	Temperature (°C)
Column	0 - 11	45 → 100
	11 - 20	100
Injection port		150
Detector		250

Detection: flame ionisation.

Injection: 1 µl.

Retention time: impurity C = about 7.5 min.

System suitability:

- *resolution*: minimum 5.0 between the peak due to impurity A (2nd peak) and the peak due to impurity B (3rd peak) in the chromatogram obtained with reference solution (a),
- *signal-to-noise ratio*: minimum 5 for the peak due to impurity C in the chromatogram obtained with reference solution (b).

Limits:

- *impurities A, B*: for each impurity, not more than the difference between the areas of the corresponding peaks in the chromatogram obtained with reference solution (a) and the areas of the corresponding peaks in the chromatogram obtained with the test solution (0.05 per cent *V/V*),
- *impurity C*: not more than the difference between the area of the peak due to impurity C in the chromatogram obtained with reference solution (b) and the area of the corresponding peak in the chromatogram obtained with the test solution (2 ppm *V/V*),
- *any other impurity*: for each impurity, not more than the difference between the area of the peak due to impurity A in the chromatogram obtained with reference solution (a) and the area of the corresponding peak in the chromatogram obtained with the test solution (0.05 per cent *V/V*).

Matter insoluble in water. Dilute 1.0 ml to 20 ml with *water R*. The solution is clear (*2.2.1*).

Residue on evaporation: maximum 50 ppm.

Evaporate 20.0 g to dryness on a water-bath and dry at 100-105 °C. The residue weighs a maximum of 1 mg.

Water (*2.5.12*): maximum 3 g/l, determined on 10.0 ml. Use 20 ml of *anhydrous pyridine R* as solvent.

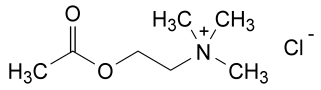
STORAGE

Protected from light.

IMPURITIES

Specified impurities: A, B, C.

A. CH_3-OH: methanol,



B. CH_3-CHOH-CH_3: propan-2-ol (isopropanol),

C. C_6H_6: benzene.

01/2008:1485
corrected 6.0

ACETYLCHOLINE CHLORIDE

Acetylcholini chloridum

$C_7H_{16}ClNO_2$ M_r 181.7
[60-31-1]

DEFINITION

2-(Acetyloxy)-*N*,*N*,*N*-trimethylethanaminium chloride.

Content: 98.5 per cent to 101.5 per cent (dried substance).

CHARACTERS

Appearance: white or almost white crystalline powder or colourless crystals, very hygroscopic.

Solubility: very soluble in water, freely soluble in alcohol, slightly soluble in methylene chloride.

IDENTIFICATION

First identification: B, E.

Second identification: A, C, D, E.

A. Melting point (*2.2.14*): 149 °C to 152 °C.

Introduce the substance to be examined into a capillary tube. Dry in an oven at 100-105 °C for 3 h. Seal the tube and determine the melting point.

B. Infrared absorption spectrophotometry (*2.2.24*).

Comparison: *acetylcholine chloride CRS*.

C. Examine the chromatograms obtained in the test for related substances.

Results: the principal band in the chromatogram obtained with test solution (b) is similar in position, colour and size to the principal band in the chromatogram obtained with reference solution (b).

D. To 15 mg add 10 ml of *dilute sodium hydroxide solution R*, 2 ml of *0.02 M potassium permanganate* and heat. The vapours formed change the colour of *red litmus paper R* to blue.

E. 0.5 ml of solution S (see Tests) gives reaction (a) of chlorides (*2.3.1*).

TESTS

Solution S. Dissolve 5.0 g in *carbon dioxide-free water R* and dilute to 50 ml with the same solvent.

Appearance of solution. Solution S is clear (*2.2.1*) and not more intensely coloured than reference solution Y_6 or BY_6 (*2.2.2, Method II*).

Acidity. Dilute 1 ml of solution S to 10 ml with *carbon dioxide-free water R*. Add 0.05 ml of *phenolphthalein solution R*. Not more than 0.4 ml of *0.01 M sodium hydroxide* is required to change the colour of the indicator to pink.

Related substances. Thin-layer chromatography (*2.2.27*). *Prepare the solutions immediately before use.*

Test solution (a). Dissolve 0.30 g of the substance to be examined in *methanol R* and dilute to 3.0 ml with the same solvent.

Test solution (b). Dilute 1 ml of test solution (a) to 10 ml with *methanol R*.

Reference solution (a). Dilute 1 ml of test solution (a) to 100 ml with *methanol R*.

Reference solution (b). Dissolve 20.0 mg of *acetylcholine chloride CRS* in *methanol R* and dilute to 2.0 ml with the same solvent.

Reference solution (c). Dissolve 20 mg of *choline chloride R* in *methanol R*, add 0.4 ml of test solution (a) and dilute to 2.0 ml with *methanol R*.

Plate: *TLC silica gel plate R*.

Mobile phase: mix 20 volumes of a 40 g/l solution of *ammonium nitrate R*, 20 volumes of *methanol R* and 60 volumes of *acetonitrile R*.

Application: 5 µl as bands of 10 mm by 2 mm.

Development: over 2/3 of the plate.

Detection: spray with *potassium iodobismuthate solution R3*.

System suitability: the chromatogram obtained with reference solution (c) shows 2 clearly separated bands.

Limits:

– *any impurity*: any bands in the chromatogram obtained with test solution (a), apart from the principal band, are not more intense than the principal band in the chromatogram obtained with reference solution (a) (1 per cent).

Trimethylamine. Dissolve 0.1 g in 10 ml of *sodium carbonate solution R* and heat to boiling. No vapours appear which turn *red litmus paper R* blue.

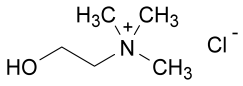
Heavy metals (*2.4.8*): maximum 10 ppm.

12 ml of solution S complies with limit test A. Prepare the standard using *lead standard solution (1 ppm Pb) R*.

Loss on drying (*2.2.32*): maximum 1.0 per cent, determined on 1.000 g by drying in an oven at 105 °C for 3 h.

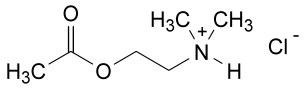
Sulphated ash (*2.4.14*): maximum 0.1 per cent, determined on the residue obtained in the test for loss on drying.

ASSAY



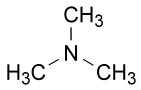
Dissolve 0.200 g in 20 ml of *carbon dioxide-free water R*. Neutralise with *0.01 M sodium hydroxide* using 0.15 ml of *phenolphthalein solution R* as indicator. Add 20.0 ml of *0.1 M sodium hydroxide* and allow to stand for 30 min. Titrate with *0.1 M hydrochloric acid*.

1 ml of *0.1 M sodium hydroxide* is equivalent to 18.17 mg of $C_7H_{16}ClNO_2$.



STORAGE

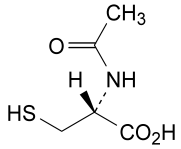
In ampoules, protected from light.



IMPURITIES

A. 2-hydroxy-*N*,*N*,*N*-trimethylethanaminium chloride (choline chloride),

B. 2-(acetyloxy)-*N*,*N*-dimethylethanaminium chloride,



C. *N*,*N*-dimethylmethanamine.

corrected 6.0

ACETYLCYSTEINE

Acetylcysteinum

$C_5H_9NO_3S$ M_r 163.2
[616-91-1]

DEFINITION

(2*R*)-2-(Acetylamino)-3-sulfanylpropanoic acid.

Content: 98.0 per cent to 101.0 per cent (dried substance).

CHARACTERS

Appearance: white or almost white, crystalline powder or colourless crystals.

Solubility: freely soluble in water and in ethanol (96 per cent), practically insoluble in methylene chloride.

IDENTIFICATION

First identification: A, C.

Second identification: A, B, D, E.

A. Specific optical rotation (see Tests).

B. Melting point (*2.2.14*): 104 °C to 110 °C.

C. Infrared absorption spectrophotometry (*2.2.24*).
Preparation: discs of *potassium bromide R*.
Comparison: *acetylcysteine CRS*.

D. Examine the chromatograms obtained in the test for related substances.
Results: the principal peak in the chromatogram obtained with test solution (b) is similar in retention time and size to the principal peak in the chromatogram obtained with reference solution (b).

E. To 0.5 ml of solution S (see Tests) add 0.05 ml of a 50 g/l solution of *sodium nitroprusside R* and 0.05 ml of *concentrated ammonia R*. A dark violet colour develops.

TESTS

Solution S. Dissolve 1.0 g in *carbon dioxide-free water R* and dilute to 20 ml with the same solvent.

Appearance of solution. Solution S is clear (*2.2.1*) and colourless (*2.2.2, Method II*).

pH (*2.2.3*): 2.0 to 2.8.

To 2 ml of solution S add 8 ml of *carbon dioxide-free water R* and mix.

Specific optical rotation (*2.2.7*): + 21.0 to + 27.0 (dried substance).

In a 25 ml volumetric flask, mix 1.25 g with 1 ml of a 10 g/l solution of *sodium edetate R*. Add 7.5 ml of a 40 g/l solution of *sodium hydroxide R*, mix and dissolve. Dilute to 25.0 ml with *phosphate buffer solution pH 7.0 R2*.

Related substances. Liquid chromatography (*2.2.29*). *Except where otherwise prescribed, prepare the solutions immediately before use.*

Test solution (a). Suspend 0.80 g of the substance to be examined in 1 ml of *1 M hydrochloric acid* and dilute to 100.0 ml with *water R*.

Test solution (b). Dilute 5.0 ml of test solution (a) to 100.0 ml with *water R*. Dilute 5.0 ml of this solution to 50.0 ml with *water R*.

Test solution (c). Use test solution (a) after storage for at least 1 h.

Reference solution (a). Suspend 4.0 mg of *acetylcysteine CRS*, 4.0 mg of *L-cystine R* (impurity A), 4.0 mg of *L-cysteine R* (impurity B), 4.0 mg of *acetylcysteine impurity C CRS* and 4.0 mg of *acetylcysteine impurity D CRS* in 1 ml of *1 M hydrochloric acid* and dilute to 100.0 ml with *water R*.

Reference solution (b). Suspend 4.0 mg of *acetylcysteine CRS* in 1 ml of *1 M hydrochloric acid* and dilute to 100.0 ml with *water R*.

Column:

– *size*: *l* = 0.25 m, Ø = 4 mm;
– *stationary phase*: *octadecylsilyl silica gel for chromatography R* (5 µm).

Mobile phase: stir 3 volumes of *acetonitrile R* and 97 volumes of *water R* in a beaker; adjust to pH 3.0 with *phosphoric acid R*.

Flow rate: 1.0 ml/min.

Detection: spectrophotometer at 220 nm.

Injection: 20 µl, 3 times; inject *0.01 M hydrochloric acid* as a blank.

Run time: 5 times the retention time of acetylcysteine (about 30 min).

Retention time: impurity A = about 2.2 min; impurity B = about 2.4 min; 2-methyl-2-thiazoline-4-carboxylic acid, originating in test solution (c) = about 3.3 min; acetylcysteine = about 6.4 min; impurity C = about 12 min; impurity D = about 14 min.

System suitability: reference solution (a):

– *resolution*: minimum 1.5 between the peaks due to impurities A and B and minimum 2.0 between the peaks due to impurities C and D.

From the chromatogram obtained with test solution (a), calculate the percentage content of the known impurities (T_1) and the unknown impurities (T_2) using the following equations:

$$T_1 = \frac{A_1 \times m_2 \times 100}{A_2 \times m_1}$$

$$T_2 = \frac{A_3 \times m_3 \times 100}{A_4 \times m_1}$$

A_1 = peak area of individual impurity (impurity A, impurity B, impurity C and impurity D) in the chromatogram obtained with test solution (a);

A_2 = peak area of the corresponding individual impurity (impurity A, impurity B, impurity C and impurity D) in the chromatogram obtained with reference solution (a);

A_3 = peak area of unknown impurity in the chromatogram obtained with test solution (a);

A_4 = peak area of acetylcysteine in the chromatogram obtained with reference solution (b);

m_1 = mass of the substance to be examined in test solution (a);

m_2 = mass of the individual impurity in reference solution (a);

m_3 = mass of acetylcysteine in reference solution (b).

Limits:

- *impurities A, B, C, D*: for each impurity, maximum 0.5 per cent;
- *any other impurity*: for each impurity, maximum 0.5 per cent;
- *total*: maximum 0.5 per cent;
- *disregard limit*: 0.1 times the area of the principal peak in the chromatogram obtained with reference solution (b) (0.05 per cent); disregard any peak with a retention time of about 3.3 min due to 2-methyl-2-thiazoline-4-carboxylic acid.

Heavy metals (*2.4.8*): maximum 10 ppm.

2.0 g complies with test C. Prepare the reference solution using 2 ml of *lead standard (10 ppm Pb) R*.

Zinc: maximum 10.0 ppm.

Atomic absorption spectrometry (*2.2.23, Method II*).

Test solution. Dissolve 1.00 g in *0.001 M hydrochloric acid* and dilute to 50.0 ml with the same acid.

Reference solutions. Prepare the reference solutions using *zinc standard solution (5 mg/ml Zn) R*, diluting with *0.001 M hydrochloric acid*.

Source: zinc hollow-cathode lamp.

Wavelength: 213.8 nm.

Atomisation device: air-acetylene flame.

Use a correction procedure for non-specific absorption.

Loss on drying (*2.2.32*): maximum 1.0 per cent, determined on 1.000 g by drying in an oven *in vacuo* at 70 °C for 3 h.

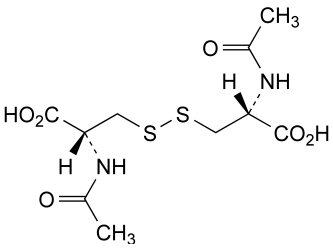
Sulphated ash (*2.4.14*): maximum 0.2 per cent, determined on 1.0 g.

ASSAY

Dissolve 0.140 g in 60 ml of *water R* and add 10 ml of *dilute hydrochloric acid R*. After cooling in iced water, add 10 ml of *potassium iodide solution R* and titrate with *0.05 M iodine*, using 1 ml of *starch solution R* as indicator.

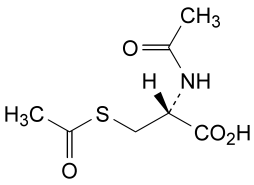
1 ml of *0.05 M iodine* is equivalent to 16.32 mg of $C_5H_9NO_3S$.

STORAGE



Protected from light.

IMPURITIES

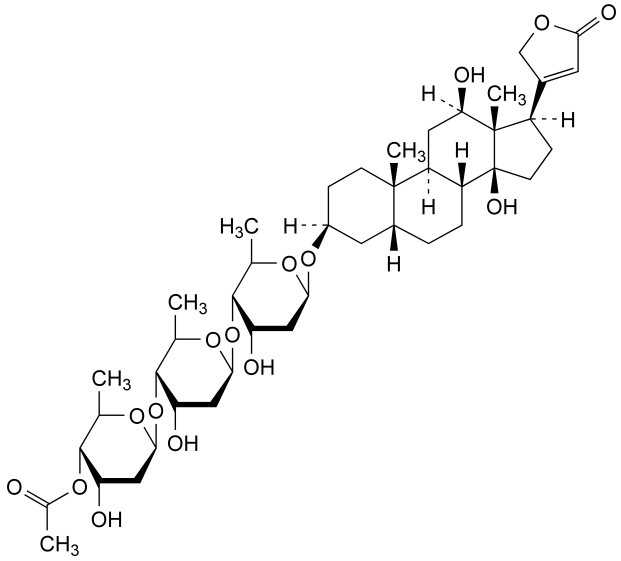


Specified impurities: *A, B, C, D.*

A. L-cystine,

B. L-cysteine,

C. *N,N'*-diacetyl-L-cystine,



D. *N,S*-diacetyl-L-cysteine.

corrected 6.0

β-ACETYLDIGOXIN

β-Acetyldigoxinum

$C_{43}H_{66}O_{15}$ M_r 823
[5355-48-6]

DEFINITION

3β-[(4-*O*-Acetyl-2,6-dideoxy-β-D-*ribo*-hexopyranosyl-(1→4)-2,6-dideoxy-β-D-*ribo*-hexopyranosyl-(1→4)-2,6-dideoxy-β-D-*ribo*-hexopyranosyl)oxy]-12β,14-dihydroxy-5β-card-20(22)-enolide.

Content: 97.0 per cent to 102.0 per cent (dried substance).

CHARACTERS

Appearance: white or almost white powder.

Solubility: practically insoluble in water, sparingly soluble in methylene chloride, slightly soluble in ethanol (96 per cent).

IDENTIFICATION

Infrared absorption spectrophotometry (*2.2.24*).

Comparison: *β-acetyldigoxin CRS*.

TESTS

Specific optical rotation (*2.2.7*): + 26.2 to + 28.2 (dried substance).

Dissolve 0.50 g in a mixture of equal volumes of *methanol R* and *methylene chloride R* and dilute to 25.0 ml with the same mixture of solvents.

Related substances. Liquid chromatography (*2.2.29*). *Prepare the solutions immediately before use.*

Solvent mixture. Mix equal volumes of *methanol R2* and *acetonitrile for chromatography R.*

Test solution. Dissolve 50.0 mg of the substance to be examined in the solvent mixture and dilute to 100.0 ml with the solvent mixture.

Reference solution (a). Dissolve 10.0 mg of *β-acetyldigoxin CRS* in the solvent mixture and dilute to 20.0 ml with the solvent mixture.

Reference solution (b). Dilute 1.0 ml of the test solution to 20.0 ml with the solvent mixture. Dilute 1.0 ml of this solution to 10.0 ml with the solvent mixture.

Reference solution (c). Dissolve 5 mg of *gitoxin CRS* (impurity D) in the solvent mixture and dilute to 100.0 ml with the solvent mixture. To 5.0 ml of this solution, add 0.5 ml of reference solution (a) and dilute to 100.0 ml with the solvent mixture.

Reference solution (d). Dissolve 5.0 mg of *β-acetyldigoxin for peak identification CRS* (containing impurities A and B) in 10.0 ml of the solvent mixture.

Column:

– *size*: *l* = 0.125 m, Ø = 4.0 mm;

– *stationary phase*: *octadecylsilyl silica gel for chromatography R* (4 µm).

Mobile phase:

– *mobile phase A*: *water for chromatography R*;

– *mobile phase B*: *acetonitrile for chromatography R*;

Time (min)	Mobile phase A (per cent *V/V*)	Mobile phase B (per cent *V/V*)
0 - 10	70	30
10 - 20	70 → 35	30 → 65
20 - 20.1	35 → 70	65 → 30
20.1 - 25	70	30

Flow rate: 1.5 ml/min.

Detection: spectrophotometer at 225 nm.

Injection: 10 µl of the test solution and reference solutions (b), (c) and (d).

Identification of impurities: use the chromatograms obtained with reference solutions (c) and (d) to identify the peaks due to impurities A, B and D.

Relative retention with reference to β-acetyldigoxin (retention time = about 9 min): impurity B = about 0.3; impurity A = about 0.7; impurity D = about 1.2.

System suitability: reference solution (c):

– *resolution*: minimum 1.5 between the peaks due to β-acetyldigoxin and impurity D;

– *symmetry factor*: maximum 2.5 for the peak due to β-acetyldigoxin.

Limits:

– *impurities A, B*: for each impurity, not more than the area of the principal peak in the chromatogram obtained with reference solution (b) (0.5 per cent);

– *impurity D*: not more than 0.6 times the area of the principal peak in the chromatogram obtained with reference solution (b) (0.3 per cent);

– *any other impurity*: for each impurity, not more than 0.4 times the area of the principal peak in the chromatogram obtained with reference solution (b) (0.2 per cent);

– *sum of impurities other than A, B and D*: not more than 1.2 times the area of the principal peak in the chromatogram obtained with reference solution (b) (0.6 per cent);

– *total*: not more than 3 times the area of the principal peak in the chromatogram obtained with reference solution (b) (1.5 per cent);

– *disregard limit*: 0.1 times the area of the principal peak in the chromatogram obtained with reference solution (b) (0.05 per cent).

The thresholds indicated under Related substances (Table 2034.-1) in the general monograph *Substances for pharmaceutical use (2034)* do not apply.

Loss on drying (*2.2.32*): maximum 1.5 per cent, determined on 1.000 g by drying in an oven at 105 °C.

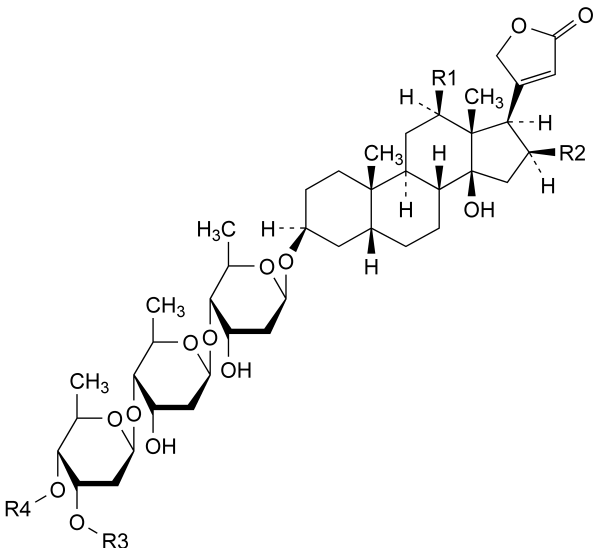
Sulphated ash (*2.4.14*): maximum 0.1 per cent, determined on the residue obtained in the test for loss on drying.

ASSAY

Liquid chromatography (*2.2.29*) as described in the test for related substances with the following modification.

Injection: test solution and reference solution (a).

Calculate the percentage content of $C_{43}H_{66}O_{15}$ from the declared content of *β-acetyldigoxin CRS*.



STORAGE

Protected from light.

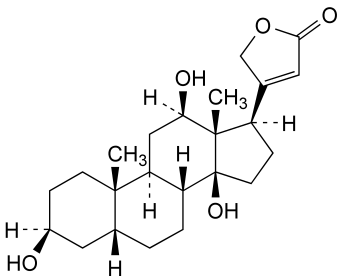
IMPURITIES

Specified impurities: *A, B, D.*

Other detectable impurities (the following substances would, if present at a sufficient level, be detected by one or other of the tests in the monograph. They are limited by the general acceptance criterion for other/unspecified impurities and/or by the general monograph *Substances for pharmaceutical use (2034).* It is therefore not necessary to identify these impurities for demonstration of compliance. See also *5.10. Control of impurities in substances for pharmaceutical use*): *C, E, F, G, H.*

A. R1 = OH, R2 = R4 = H, R3 = CO-CH_3: 3β-[(3-*O*-acetyl-2,6-dideoxy-β-D-*ribo*-hexopyranosyl-(1→4)-2,6-dideoxy-β-D-*ribo*-hexopyranosyl-(1→4)-2,6-dideoxy-β-D-*ribo*-hexopyranosyl)oxy]-12β,14-dihydroxy-5β-card-20(22)-enolide (α-acetyldigoxin),

B. R1 = OH, R2 = R3 = R4 = H: digoxin,



D. R1 = R3 = R4 = H, R2 = OH: 3β-[(2,6-dideoxy-β-D-*ribo*-hexopyranosyl-(1→4)-2,6-dideoxy-β-D-*ribo*-hexopyranosyl-(1→4)-2,6-dideoxy-β-D-*ribo*-hexopyranosyl)oxy]-14,16β-dihydroxy-5β-card-20(22)-enolide (gitoxin),

ACETYLSALICYLIC ACID

Acidum acetylsalicylicum

$C_9H_8O_4$ M_r 180.2
[50-78-2]

DEFINITION

2-(Acetyloxy)benzoic acid.

Content: 99.5 per cent to 101.0 per cent (dried substance).

CHARACTERS

Appearance: white or almost white, crystalline powder or colourless crystals.

Solubility: slightly soluble in water, freely soluble in ethanol (96 per cent).

mp: about 143 °C (instantaneous method).

IDENTIFICATION

First identification: A, B.

Second identification: B, C, D.

A. Infrared absorption spectrophotometry (*2.2.24*).

Comparison: *acetylsalicylic acid CRS.*

B. To 0.2 g add 4 ml of *dilute sodium hydroxide solution R* and boil for 3 min. Cool and add 5 ml of *dilute sulphuric acid R*. A crystalline precipitate is formed. Filter, wash the precipitate and dry at 100-105 °C. The melting point (*2.2.14*) is 156 °C to 161 °C.

C. In a test tube mix 0.1 g with 0.5 g of *calcium hydroxide R*. Heat the mixture and expose to the fumes produced a piece of filter paper impregnated with 0.05 ml of *nitrobenzaldehyde solution R*. A greenish-blue or greenish-yellow colour develops on the paper. Moisten the paper with *dilute hydrochloric acid R*. The colour becomes blue.

D. Dissolve with heating about 20 mg of the precipitate obtained in identification test B in 10 ml of *water R* and cool. The solution gives reaction (a) of salicylates (*2.3.1*).

TESTS

Appearance of solution. The solution is clear (*2.2.1*) and colourless (*2.2.2, Method II*).

Dissolve 1.0 g in 9 ml of *ethanol (96 per cent) R*.

Related substances. Liquid chromatography (*2.2.29*). *Prepare the solutions immediately before use.*

Test solution. Dissolve 0.10 g of the substance to be examined in *acetonitrile for chromatography R* and dilute to 10.0 ml with the same solvent.

Reference solution (a). Dissolve 50.0 mg of *salicylic acid R* in the mobile phase and dilute to 50.0 ml with the mobile phase. Dilute 1.0 ml of this solution to 100.0 ml with the mobile phase.

Reference solution (b). Dissolve 10.0 mg of *salicylic acid R* in the mobile phase and dilute to 10.0 ml with the mobile phase. To 1.0 ml of this solution add 0.2 ml of the test solution and dilute to 100.0 ml with the mobile phase.

Column:

– *size*: *l* = 0.25 m, Ø = 4.6 mm;

– *stationary phase*: *octadecylsilyl silica gel for chromatography R* (5 µm).

Mobile phase: *phosphoric acid R, acetonitrile for chromatography R, water R* (2:400:600 *V/V/V*).

Flow rate: 1 ml/min.

Detection: spectrophotometer at 237 nm.

Injection: 10 µl.

Run time: 7 times the retention time of acetylsalicylic acid.

System suitability: reference solution (b):

– *resolution*: minimum 6.0 between the 2 principal peaks.

Limits:

– *any impurity*: for each impurity, not more than the area of the principal peak in the chromatogram obtained with reference solution (a) (0.1 per cent);

– *total*: not more than 2.5 times the area of the principal peak in the chromatogram obtained with reference solution (a) (0.25 per cent);

– *disregard limit*: 0.25 times the area of the principal peak in the chromatogram obtained with reference solution (a) (0.025 per cent).

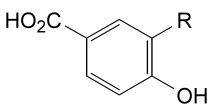
Heavy metals (*2.4.8*): maximum 20 ppm.

Dissolve 1.0 g in 12 ml of *acetone R* and dilute to 20 ml with *water R*. 12 ml of this solution complies with test B. Prepare the reference solution using lead standard solution (1 ppm Pb) obtained by diluting *lead standard solution (100 ppm Pb) R* with a mixture of 6 volumes of *water R* and 9 volumes of *acetone R*.

Loss on drying (*2.2.32*): maximum 0.5 per cent, determined on 1.000 g by drying *in vacuo*.

Sulphated ash (*2.4.14*): maximum 0.1 per cent, determined on 1.0 g.

ASSAY

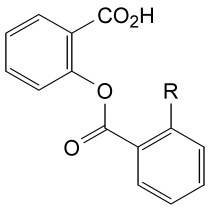


In a flask with a ground-glass stopper, dissolve 1.000 g in 10 ml of *ethanol (96 per cent) R*. Add 50.0 ml of *0.5 M sodium hydroxide*. Close the flask and allow to stand for 1 h. Using 0.2 ml of *phenolphthalein solution R* as indicator, titrate with *0.5 M hydrochloric acid*. Carry out a blank titration.

1 ml of *0.5 M sodium hydroxide* is equivalent to 45.04 mg of $C_9H_8O_4$.

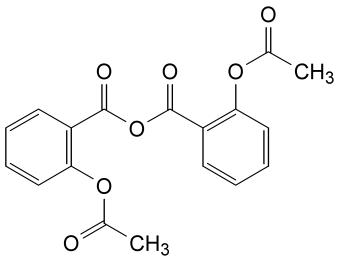
STORAGE

In an airtight container.



IMPURITIES

A. R = H: 4-hydroxybenzoic acid,

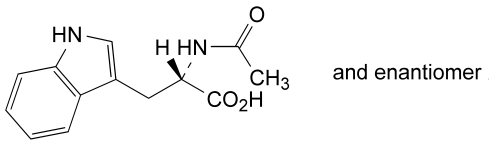


B. R = CO_2H: 4-hydroxybenzene-1,3-dicarboxylic acid (4-hydroxyisophthalic acid),

C. salicylic acid,

D. R = O-CO-CH_3: 2-[[2-(acetyloxy)benzoyl]oxy]benzoic acid (acetylsalicylsalicylic acid),

E. R = OH: 2-[(2-hydroxybenzoyl)oxy]benzoic acid (salicylsalicylic acid),



F. 2-(acetyloxy)benzoic anhydride (acetylsalicylic anhydride).

corrected 6.0

N-ACETYLTRYPTOPHAN

N-Acetyltryptophanum

$C_{13}H_{14}N_2O_3$ M_r 246.3
[87-32-1]

DEFINITION

(*RS*)-2-Acetylamino-3-(1*H*-indol-3-yl)propanoic acid.

Content: 99.0 per cent to 101.0 per cent (dried substance).

PRODUCTION

Tryptophan used for the production of *N*-acetyltryptophan complies with the test for impurity A and other related substances in the monograph on *Tryptophan (1272)*.

CHARACTERS

Appearance: white or almost white, crystalline powder, or colourless crystals.

Solubility: slightly soluble in water, very soluble in ethanol (96 per cent). It dissolves in dilute solutions of alkali hydroxides.

mp: about 205 °C.

IDENTIFICATION

First identification: A, B.

Second identification: A, C, D, E.

A. Optical rotation (see Tests).

B. Infrared absorption spectrophotometry (*2.2.24*).
Comparison: *N-acetyltryptophan CRS*.

C. Thin-layer chromatography (*2.2.27*).

Test solution. Dissolve 50 mg of the substance to be examined in 0.2 ml of *concentrated ammonia R* and dilute to 10 ml with *water R*.

Reference solution (a). Dissolve 50 mg of *N-acetyltryptophan CRS* in 0.2 ml of *concentrated ammonia R* and dilute to 10 ml with *water R*.

Reference solution (b). Dissolve 10 mg of *tryptophan R* in the test solution and dilute to 2 ml with the test solution.

Plate: *TLC silica gel F_{254} plate R*.

Mobile phase: *glacial acetic acid R, water R, butanol R* (25:25:40 *V/V/V*).

Application: 2 µl.

Development: over a path of 10 cm.

Drying: in an oven at 100-105 °C for 15 min.

Detection: examine in ultraviolet light at 254 nm.

System suitability: reference solution (b):

– the chromatogram shows 2 clearly separated spots.

Results: the principal spot in the chromatogram obtained with the test solution is similar in position and size to the principal spot in the chromatogram obtained with reference solution (a).

D. Dissolve about 2 mg in 2 ml of *water R*. Add 2 ml of *dimethylaminobenzaldehyde solution R6*. Heat on a water-bath. A blue or greenish-blue colour develops.

E. It gives the reaction of acetyl (*2.3.1*). Proceed as described for substances hydrolysable only with difficulty.

TESTS

Appearance of solution. The solution is clear (*2.2.1*) and not more intensely coloured than reference solution Y_7 or GY_7 (*2.2.2, Method II*).

Dissolve 1.0 g in a 40 g/l solution of *sodium hydroxide R* and dilute to 100 ml with the same alkaline solution.

Optical rotation (*2.2.7*): – 0.1° to + 0.1°.

Dissolve 2.50 g in a 40 g/l solution of *sodium hydroxide R* and dilute to 25.0 ml with the same alkaline solution.

Related substances. Liquid chromatography (*2.2.29*). *Prepare the test and reference solutions immediately before use.*

Buffer solution pH 2.3. Dissolve 3.90 g of *sodium dihydrogen phosphate R* in 1000 ml of *water R*. Add about 700 ml of a 2.9 g/l solution of *phosphoric acid R* and adjust to pH 2.3 with the same acidic solution.

Solvent mixture: *acetonitrile R, water R* (10:90 *V/V*).

Test solution. Dissolve 0.10 g of the substance to be examined in a mixture of 50 volumes of *acetonitrile R* and 50 volumes of *water R* and dilute to 20.0 ml with the same mixture of solvents.

Reference solution (a). Dilute 1.0 ml of the test solution to 100.0 ml with the solvent mixture.

Reference solution (b). Dissolve 1.0 mg of *1,1′-ethylidenebis(tryptophan) CRS* in the solvent mixture and dilute to 100.0 ml with the solvent mixture.

Reference solution (c). To 4.0 ml of reference solution (a), add 20.0 ml of reference solution (b) and dilute to 100.0 ml with the solvent mixture.

Column:

– *size*: *l* = 0.25 m, Ø = 4.6 mm;

– *stationary phase*: *octadecylsilyl silica gel for chromatography R* (5 µm);

– *temperature*: 40 °C.

Mobile phase:

– *mobile phase A*: *acetonitrile R*, buffer solution pH 2.3 (115:885 *V/V*);

– *mobile phase B*: *acetonitrile R*, buffer solution pH 2.3 (350:650 *V/V*);

Time (min)	Mobile phase A (per cent *V/V*)	Mobile phase B (per cent *V/V*)
0 - 10	100	0
10 - 45	100 → 0	0 → 100
45 - 65	0	100
65 - 66	0 → 100	100 → 0
66 - 80	100	0

Flow rate: 0.7 ml/min.

Detection: spectrophotometer at 220 nm.

Injection: 20 µl of the test solution and reference solutions (a) and (c).

Retention time: *N*-acetyltryptophan = about 29 min; 1,1′-ethylidenebis(tryptophan) = about 34 min.

System suitability: reference solution (c):

– *resolution*: minimum 8.0 between the peaks due to *N*-acetyltryptophan and 1,1′-ethylidenebis(tryptophan); if necessary, adjust the time programme for the elution gradient (an increase in the duration of elution with mobile phase A produces longer retention times and a better resolution).

Limits:

– *impurities A, B, C, D, E, F, G, H, I, J, K, L*: for each impurity, not more than 0.25 times the area of the principal peak in the chromatogram obtained with reference solution (a) (0.25 per cent);

– *total*: not more than 0.5 times the area of the principal peak in the chromatogram obtained with reference solution (a) (0.5 per cent);

– *disregard limit*: 0.01 times the area of the principal peak the chromatogram obtained with reference solution (a) (0.01 per cent).

Ammonium (*2.4.1, Method B*): maximum 200 ppm, determined on 0.10 g.

Prepare the standard using 0.2 ml of *ammonium standard solution (100 ppm NH_4) R*.

Iron (*2.4.9*): maximum 10 ppm.

Dissolve 1.0 g in 50 ml of *hydrochloric acid R1*, with heating at 50 °C. Allow to cool. In a separating funnel, shake with 3 quantities, each of 10 ml, of *methyl isobutyl ketone R1*, shaking for 3 min each time. To the combined organic layers add 10 ml of *water R* and shake for 3 min. Examine the aqueous layer.

Heavy metals (*2.4.8*): maximum 10 ppm.

2.0 g complies with test C. Prepare the reference solution using 2 ml of *lead standard solution (10 ppm Pb) R*.

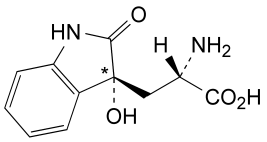
Loss on drying (*2.2.32*): maximum 0.5 per cent, determined on 1.000 g by drying in an oven at 105 °C.

Sulphated ash (*2.4.14*): maximum 0.1 per cent, determined on 1.0 g.

ASSAY

Dissolve 0.200 g in 5 ml of *methanol R*. Add 50 ml of *anhydrous ethanol R*. Titrate with *0.1 M sodium hydroxide*, determining the end-point potentiometrically (*2.2.20*).

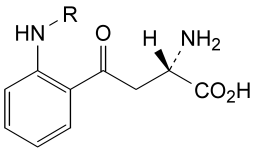
1 ml of *0.1 M sodium hydroxide* is equivalent to 24.63 mg of $C_{13}H_{14}N_2O_3$.



STORAGE

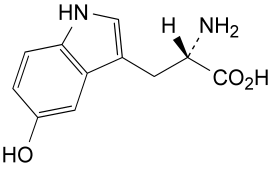
Protected from light.

IMPURITIES



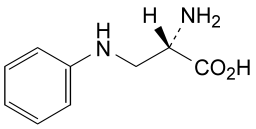
Specified impurities: *A, B, C, D, E, F, G, H, I, J, K, L.*

A. tryptophan,

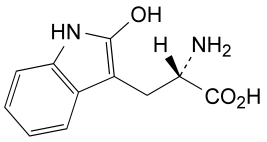


and epimer at C*

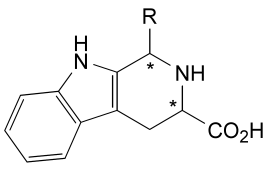
B. (*S*)-2-amino-3-[(3*RS*)-3-hydroxy-2-oxo-2,3-dihydro-1*H*-indol-3-yl]propanoic acid (dioxyindolylalanine),



C. R = H: (*S*)-2-amino-4-(2-aminophenyl)-4-oxobutanoic acid (kynurenine),

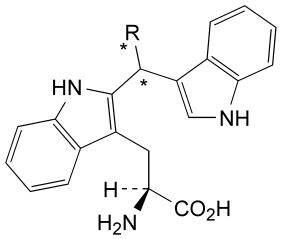


E. R = CHO: (*S*)-2-amino-4-[2-(formylamino)phenyl]-4-oxobutanoic acid (*N*-formylkynurenine),

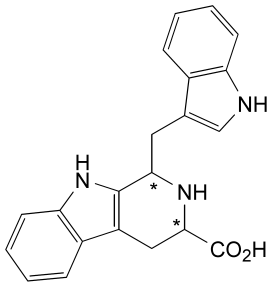


D. (*S*)-2-amino-3-(5-hydroxy-1*H*-indol-3-yl)propanoic acid (5-hydroxytryptophan),

F. (*S*)-2-amino-3-(phenylamino)propanoic acid (3-phenylaminoalanine),



G. (*S*)-2-amino-3-(2-hydroxy-1*H*-indol-3-yl)propanoic acid (2-hydroxytryptophan),

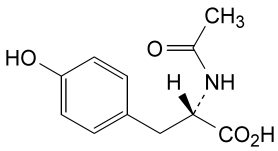


H. R = H: (3*RS*)-1,2,3,4-tetrahydro-9*H*-β-carboline-3-carboxylic acid,

I. R = CH_3: 1-methyl-1,2,3,4-tetrahydro-9*H*-β-carboline-3-carboxylic acid,

J. R = CHOH-CH_2-OH: (*S*)-2-amino-3-[2-[2,3-dihydroxy-1-(1*H*-indol-3-yl)propyl]-1*H*-indol-3-yl]propanoic acid,

K. R = H: (*S*)-2-amino-3-[2-(1*H*-indol-3-ylmethyl)-1*H*-indol-3-yl]propanoic acid,



L. 1-(1*H*-indol-3-ylmethyl)-1,2,3,4-tetrahydro-9*H*-β-carboline-3-carboxylic acid.

N-ACETYLTYROSINE

N-Acetyltyrosinum

$C_{11}H_{13}NO_4$ M_r 223.2
[537-55-3]

DEFINITION

N-Acetyltyrosine contains not less than 98.5 per cent and not more than the equivalent of 101.0 per cent of (2*S*)-2-(acetylamino)-3-(4-hydroxyphenyl)propanoic acid, calculated with reference to the dried substance.

CHARACTERS

A white or almost white, crystalline powder or colourless crystals, freely soluble in water, practically insoluble in cyclohexane.

IDENTIFICATION

First identification: A, B.

Second identification: A, C, D.

A. It complies with the test for specific optical rotation (see Tests).

B. Examine by infrared absorption spectrophotometry (*2.2.24*), comparing with the spectrum obtained with *N-acetyltyrosine CRS*. Examine the substances prepared as discs.

C. Examine the chromatograms obtained in the test for related substances in ultraviolet light at 254 nm. The principal spot obtained with test solution (b) is similar in position and size to the principal spot in the chromatogram obtained with reference solution (a).

D. Solution S (see Tests) is strongly acid (*2.2.4*).

TESTS

Solution S. Dissolve 2.50 g in *water R* and dilute to 100.0 ml with the same solvent.

Appearance of solution. Solution S is clear (*2.2.1*) and colourless (*2.2.2, Method II*).

Specific optical rotation (*2.2.7*). Dilute 10.0 ml of solution S to 25.0 ml with *water R*. The specific optical rotation is + 46 to + 49, calculated with reference to the dried substance.

Related substances. Examine by thin-layer chromatography (*2.2.27*), using a *TLC silica gel F_{254} plate R*.

Test solution (a). Dissolve 0.80 g of the substance to be examined in 6 ml of a mixture of equal volumes of *glacial acetic acid R* and *water R* and dilute to 10 ml with *ethanol R*.

Test solution (b). Dilute 1 ml of test solution (a) to 10 ml with *ethanol R*.

Reference solution (a). Dissolve 80 mg of *N-acetyltyrosine CRS* in a mixture of 3 volumes of *water R*, 3 volumes of *glacial acetic acid R* and 94 volumes of *ethanol R* and dilute to 10 ml with the same mixture of solvents.

Reference solution (b). Dilute 0.5 ml of test solution (b) to 10 ml with *ethanol R*.

Reference solution (c). Dissolve 40 mg of *tyrosine CRS* in 20 ml of a mixture of equal volumes of *water R* and *glacial acetic acid R* and dilute to 50 ml with *ethanol R*.

Apply separately to the plate 5 µl of each solution. Develop over a path of 10 cm using a mixture of 10 volumes of *water R*, 15 volumes of *glacial acetic acid R* and 75 volumes of *ethyl acetate R*. Allow the plate to dry in air. Examine in ultraviolet light at 254 nm. Any spot in the chromatogram obtained with test solution (a), apart from the principal spot, is not more intense than the spot in the chromatogram obtained with reference solution (b) (0.5 per cent). Spray with *ninhydrin solution R* and heat at 100 °C to 105 °C for 10 min. Examine in daylight. Any spot corresponding to tyrosine is not more intense that the spot in the chromatogram obtained with reference solution (c) (1 per cent).

Chlorides (*2.4.4*). Dilute 10 ml of solution S to 15 ml with *water R*. The solution complies with the limit test for chlorides (200 ppm).

Sulphates (*2.4.13*). Dissolve 1.0 g in *distilled water R* and dilute to 20 ml with the same solvent. The solution complies with the limit test for sulphates (200 ppm).

Ammonium. Prepare a cell consisting of two watch-glasses 60 mm in diameter placed edge to edge. To the inner wall of the upper watch-glass stick a piece of *red litmus paper R* 5 mm square and wetted with a few drops of *water R*. Finely powder the substance to be examined, place 50 mg in the lower watch-glass and dissolve in 0.5 ml of *water R*. To the solution add 0.30 g of *heavy magnesium oxide R*. Briefly triturate with a glass rod. Immediately close the cell by putting the two watch-glasses together. Heat at 40 °C for 15 min. The litmus paper is not more intensely blue coloured than a standard prepared at the same time and in the same manner using 0.1 ml of *ammonium standard solution (100 ppm NH_4) R*, 0.5 ml of *water R* and 0.30 g of *heavy magnesium oxide R* (200 ppm).

Iron (*2.4.9*). In a separating funnel, dissolve 0.5 g in 10 ml of *dilute hydrochloric acid R*. Shake with three quantities, each of 10 ml, of *methyl isobutyl ketone R1*, shaking for 3 min each time. To the combined organic layers add 10 ml of *water R* and shake for 3 min. The aqueous layer complies with the limit test for iron (20 ppm).

Heavy metals (*2.4.8*). Dissolve 2.0 g in *water R* and dilute to 20 ml with the same solvent. 12 ml of the solution complies with limit test A for heavy metals (10 ppm). Prepare the standard using *lead standard solution (1 ppm Pb) R*.

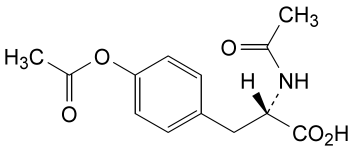
Loss on drying (*2.2.32*). Not more than 0.5 per cent, determined on 1.000 g by drying in an oven at 105 °C.

Sulphated ash (*2.4.14*). Not more than 0.1 per cent, determined on 1.0 g.

Pyrogens (*2.6.8*). If intended for use in the manufacture of parenteral dosage forms without a further appropriate procedure for the removal of pyrogens, it complies with the test for pyrogens. Inject per kilogram of the rabbit's mass 1.0 ml of a freshly prepared solution in *water for injections R* containing per millilitre 10.0 mg of the substance to be examined and 9.0 mg of pyrogen-free *sodium chloride R*.

ASSAY

Dissolve 0.180 g in 50 ml of *carbon dioxide-free water R*. Titrate with *0.1 M sodium hydroxide,* determining the end-point potentiometrically (*2.2.20*).



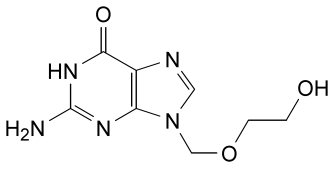
1 ml of *0.1 M sodium hydroxide* is equivalent to 22.32 mg of $C_{11}H_{13}NO_4$.

STORAGE

Store protected from light. If the substance is sterile, store in a sterile, airtight, tamper-proof container.

IMPURITIES

A. tyrosine,



B. (2*S*)-2-(acetylamino)-3-[4-(acetoxy)phenyl]propanoic acid (diacetyltyrosine).

01/2008:0968

ACICLOVIR

Aciclovirum

$C_8H_{11}N_5O_3$ M_r 225.2

[59277-89-3]

DEFINITION

Aciclovir contains not less than 98.5 per cent and not more than the equivalent of 101.0 per cent of 2-amino-9-[(2-hydroxyethoxy)methyl]-1,9-dihydro-6*H*-purin-6-one, calculated with reference to the anhydrous substance.

CHARACTERS

A white or almost white, crystalline powder, slightly soluble in water, freely soluble in dimethyl sulphoxide, very slightly soluble in ethanol (96 per cent). It dissolves in dilute solutions of mineral acids and alkali hydroxides.

IDENTIFICATION

Examine by infrared absorption spectrophotometry (*2.2.24*), comparing with the spectrum obtained with *aciclovir CRS*.

TESTS

Appearance of solution. Dissolve 0.25 g in *0.1 M sodium hydroxide* and dilute to 25 ml with the same solvent. The solution is clear (*2.2.1*) and not more intensely coloured than reference solution Y_7 (*2.2.2, Method II*).

Related substances

A. Examine by thin-layer chromatography (*2.2.27*), using *silica gel* GF_{254} *R* as the coating substance.

Prepare the solutions immediately before use.

Test solution. Dissolve 0.1 g of the substance to be examined in *dimethyl sulphoxide R* and dilute to 10 ml with the same solvent.

Reference solution. Dissolve 5 mg of *aciclovir impurity A CRS* in *dimethyl sulphoxide R* and dilute to 10 ml with the same solvent. Dilute 1 ml of the solution to 10 ml with *dimethyl sulphoxide R*.

Apply to the plate 10 µl of each solution. Keep the spots compact by drying in a current of warm air. Allow the plate to cool and develop over a path of 10 cm with a mixture of 2 volumes of *concentrated ammonia R*, 20 volumes of *methanol R* and 80 volumes of *methylene chloride R*. Allow the plate to dry in air and examine in ultraviolet light at 254 nm. In the chromatogram obtained with the test solution, any spot with an R_F value greater than that of the principal spot is not more intense than the spot in the chromatogram obtained with the reference solution (0.5 per cent).

B. Examine by liquid chromatography (*2.2.29*).

Test solution. Dissolve 50.0 mg of the substance to be examined in 10 ml of a mixture of 20 volumes of *glacial acetic acid R* and 80 volumes of *water R* and dilute to 100.0 ml with the mobile phase.

Reference solution (a). Dilute 1.0 ml of the test solution to 200.0 ml with the mobile phase.

Reference solution (b). Dissolve 5 mg of *aciclovir CRS* and 5 mg of *aciclovir impurity A CRS* in a mixture of 20 volumes of *glacial acetic acid R* and 80 volumes of *water R* and dilute to 25.0 ml with the same mixture of solvents. Dilute 1.0 ml of the solution to 10.0 ml with the mobile phase.

Reference solution (c). Dissolve 7 mg of *guanine R* in *0.1 M sodium hydroxide* and dilute to 100.0 ml with the same solution. Dilute 1.0 ml to 20.0 ml with the mobile phase.

The chromatographic procedure may be carried out using:

– a stainless steel column 0.10 m long and 4.6 mm in internal diameter packed with *octadecylsilyl silica gel for chromatography R* (3 µm),

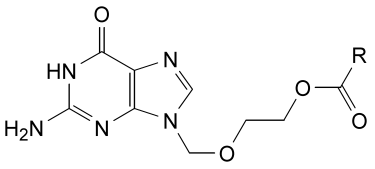
– as mobile phase at a flow rate of 2 ml/min a mixture prepared as follows: dissolve 6.0 g of *sodium dihydrogen phosphate R* and 1.0 g of *sodium decanesulphonate R* in 900 ml of *water R* and adjust to pH 3 ± 0.1 with *phosphoric acid R*; add 40 ml of *acetonitrile R* and dilute to 1 litre with *water R*,

– as detector a spectrophotometer set at 254 nm,

– a loop injector.

Inject 20 µl of each solution. Record the chromatograms for 7 times the retention time of aciclovir. The test is not valid unless in the chromatogram obtained with reference solution (b), the number of theoretical plates calculated for the peak due to impurity A is at least 1500 and its mass distribution ratio is at least 7 (V_0 can be calculated using *dimethyl sulphoxide R*). In the chromatogram obtained with the test solution: the area of any peak corresponding to guanine is not greater than that of the peak in the chromatogram obtained with reference solution (c) (0.7 per cent); the area of any peak apart from the principal peak and any peak corresponding to guanine is not greater than the area of the peak in the chromatogram obtained with reference solution (a) (0.5 per cent) and the sum of the areas of such peaks is not greater than twice the area of the peak in the chromatogram obtained with reference solution (a) (1 per cent). Disregard any peak with an area less than 0.05 times that of the principal peak in the chromatogram obtained with reference solution (a).

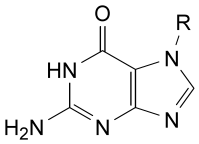
Water (*2.5.12*). Not more than 6.0 per cent, determined on 0.500 g.



Sulphated ash (*2.4.14*). Not more than 0.1 per cent, determined on 1.0 g.

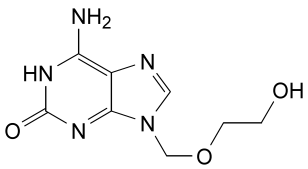
ASSAY

Dissolve 0.150 g in 60 ml of *anhydrous acetic acid R*. Titrate with *0.1 M perchloric acid*, determining the end-point potentiometrically (*2.2.20*). Carry out a blank titration.



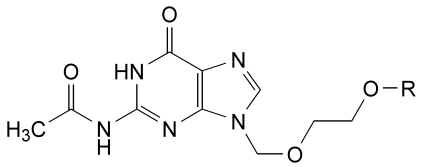
1 ml of *0.1 M perchloric acid* is equivalent to 22.52 mg of $C_8H_{11}N_5O_3$.

IMPURITIES



A. R = CH_3: 2-[(2-amino-6-oxo-1,6-dihydro-9*H*-purin-9-yl)methoxy]ethyl acetate,

D. R = C_6H_5: 2-[(2-amino-6-oxo-1,6-dihydro-9*H*-purin-9-yl)methoxy]ethyl benzoate,

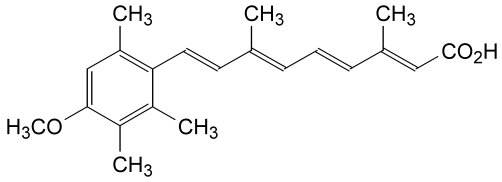


B. R = H: 2-amino-1,7-dihydro-6*H*-purin-6-one (guanine),

C. R = CH_2-O-CH_2-CH_2-OH: 2-amino-7-[(2-hydroxyethoxy)-methyl]-1,7-dihydro-6*H*-purin-6-one,

E. 6-amino-9-[(2-hydroxyethoxy)methyl]-1,9-dihydro-2*H*-purin-2-one,

F. R = H: *N*-[9-[(2-hydroxyethoxy)methyl]-6-oxo-6,9-dihydro-1*H*-purin-2-yl]acetamide,



G. R = CO-CH_3: 2-[[2-(acetylamino)-6-oxo-1,6-dihydro-9*H*-purin-9-yl]methoxy]ethyl acetate,

H. R = CO-C_6H_5: 2-[[2-(acetylamino)-6-oxo-1,6-dihydro-9*H*-purin-9-yl]methoxy]ethyl benzoate.

corrected 6.0

ACITRETIN

Acitretinum

$C_{21}H_{26}O_3$ M_r 326.4
[55079-83-9]

DEFINITION

(all-*E*)-9-(4-Methoxy-2,3,6-trimethylphenyl)-3,7-dimethylnona-2,4,6,8-tetraenoic acid.

Content: 98.0 per cent to 102.0 per cent (dried substance).

CHARACTERS

Appearance: yellow or greenish-yellow, crystalline powder.

Solubility: practically insoluble in water, sparingly soluble in tetrahydrofuran, slightly soluble in acetone and in ethanol (96 per cent), very slightly soluble in cyclohexane.

It is sensitive to air, heat and light, especially in solution.

Carry out all operations as rapidly as possible and avoid exposure to actinic light; use freshly prepared solutions.

IDENTIFICATION

First identification: B.

Second identification: A, C.

A. Ultraviolet and visible absorption spectrophotometry (*2.2.25*).

Test solution. Dissolve 15.0 mg in 10 ml of *tetrahydrofuran R* and dilute immediately to 100.0 ml with the same solvent. Dilute 2.5 ml of this solution to 100.0 ml with *tetrahydrofuran R*.

Spectral range: 300-400 nm.

Absorption maximum: at 358 nm.

Specific absorbance at the absorption maximum: 1350 to 1475.

B. Infrared absorption spectrophotometry (*2.2.24*).

Preparation: discs.

Comparison: *acitretin CRS*.

C. Examine the chromatograms obtained in the assay.

Results: the principal peak in the chromatogram obtained with test solution (b) is similar in retention time to the principal peak in the chromatogram obtained with reference solution (a).

TESTS

Related substances. Liquid chromatography (*2.2.29*). *Maintain the sampler at 4 °C.*

Test solution (a). Dissolve 25.0 mg of the substance to be examined in 5 ml of *tetrahydrofuran R* and dilute immediately to 100.0 ml with *anhydrous ethanol R*.

Test solution (b). Dilute 10.0 ml of test solution (a) to 25.0 ml with *anhydrous ethanol R*.

Reference solution (a). Dissolve 25.0 mg of *acitretin CRS* in 5 ml of *tetrahydrofuran R* and dilute immediately to 100.0 ml with *anhydrous ethanol R*. Dilute 10.0 ml of this solution to 25.0 ml with *anhydrous ethanol R*.

Reference solution (b). Dissolve 1.0 mg of *tretinoin CRS* in *anhydrous ethanol R* and dilute to 20.0 ml with the same solvent. Mix 5.0 ml of this solution with 2.5 ml of reference solution (a) and dilute to 100.0 ml with *anhydrous ethanol R*.

Reference solution (c). Dilute 2.5 ml of reference solution (a) to 50.0 ml with *anhydrous ethanol R*. Dilute 3.0 ml of this solution to 20.0 ml with *anhydrous ethanol R*.

Column:

– *size l* = 0.25 m, Ø = 4 mm;

– *stationary phase*: microparticulate *octadecylsilyl silica gel for chromatography R* (5 µm) with a specific surface area of 200 m^2/g, a pore size of 15 nm and a carbon loading of 20 per cent;

– *temperature*: 25 °C.

Mobile phase: a 0.3 per cent *V/V* solution of *glacial acetic acid R* in a mixture of 8 volumes of *water R* and 92 volumes of *anhydrous ethanol R*.

Flow rate: 0.6 ml/min.

Detection: spectrophotometer at 360 nm.

Injection: 10 µl of test solution (a) and reference solutions (b) and (c).

Run time: 2.5 times the retention time of acitretin.

Retention time: impurity A = about 4.8 min; tretinoin = about 5.2 min; acitretin = about 6.2 min; impurity B = about 10.2 min.

System suitability: reference solution (b):

– *resolution*: minimum 2.0 between the peaks due to acitretin and tretinoin; if necessary, adjust the concentration of *anhydrous ethanol R*.

Limits:

– *impurities A, B*: for each impurity, not more than the area of the peak due to acitretin in the chromatogram obtained with reference solution (c) (0.3 per cent);

– *total*: not more than the area of the peak due to acitretin in the chromatogram obtained with reference solution (b) (1.0 per cent);

– *disregard limit*: 0.1 times the area of the principal peak in the chromatogram obtained with reference solution (c).

Palladium: maximum 10.0 ppm.

Atomic absorption spectrometry (*2.2.23, Method I*).

Test solution. Introduce 2.0 g into a quartz beaker and add 3 ml of *magnesium nitrate solution R*. Heat in a muffle furnace to 350 °C at a rate of 40 °C/min to incinerate the content. Ignite at about 450 °C for 8 h and then at 550 ± 50 °C for a further hour. Dissolve the residue in a mixture of 0.75 ml of *hydrochloric acid R* and 0.25 ml of *nitric acid R*, warming gently. Cool, then transfer the solution into a volumetric flask containing *water R* and dilute to 50.0 ml with the same solvent.

Reference solution. Dissolve 0.163 g of *heavy magnesium oxide R* in a mixture of 0.5 ml of *nitric acid R*, 1.5 ml of *hydrochloric acid R* and 50 ml of *water R*, add 2.0 ml of *palladium standard solution (20 ppm Pd R)* and dilute to 100.0 ml with *water R*.

Source: palladium hollow-cathode lamp.

Wavelength: 247.6 nm.

Atomisation device: air-acetylene flame.

Heavy metals (*2.4.8*): maximum 20 ppm.

2.0 g complies with test C. Prepare the reference solution using 2 ml of *lead standard solution (10 ppm Pb) R*.

Loss on drying (*2.2.32*): maximum 0.5 per cent, determined on 1.000 g by drying *in vacuo* at 100 °C for 4 h.

Sulphated ash (*2.4.14*): maximum 0.1 per cent, determined on 1.0 g.

ASSAY

Carry out the assay protected from light, use amber volumetric flasks and prepare the solutions immediately before use.

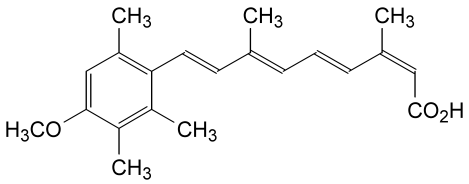
Liquid chromatography (*2.2.29*) as described in the test for related substances with the following modifications.

Injection: test solution (b) and reference solution (a).

System suitability:

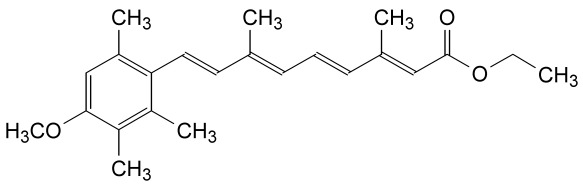
– *repeatability*: maximum relative standard deviation of 1.0 per cent after 6 injections of reference solution (a); if necessary, adjust the integration parameters.

Calculate the percentage content of $C_{21}H_{26}O_3$ from the declared content of *acitretin CRS*.



STORAGE

In an airtight container, protected from light, at a temperature of 2 °C to 8 °C.

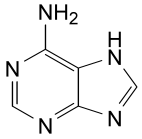


It is recommended that the contents of an opened container be used as soon as possible and any unused part be protected by an atmosphere of inert gas.

IMPURITIES

Specified impurities: *A, B.*

A. (2*Z*,4*E*,6*E*,8*E*)-9-(4-methoxy-2,3,6-trimethylphenyl)-3,7-dimethylnona-2,4,6,8-tetraenoic acid,



B. ethyl (all-*E*)-9-(4-methoxy-2,3,6-trimethylphenyl)-3,7-dimethylnona-2,4,6,8-tetraenoate.

corrected 6.0

ADENINE

Adeninum

$C_5H_5N_5$ M_r 135.1
[73-24-5]

DEFINITION

Adenine contains not less than 98.5 per cent and not more than the equivalent of 101.0 per cent of 7*H*-purin-6-amine, calculated with reference to the dried substance.

CHARACTERS

A white or almost white powder, very slightly soluble in water and in alcohol. It dissolves in dilute mineral acids and in dilute solutions of alkali hydroxides.

IDENTIFICATION

First identification: A.

Second identification: B, C.

A. Examine by infrared absorption spectrophotometry (*2.2.24*), comparing with the spectrum obtained with *adenine CRS*. Examine the substances prepared as discs.

B. Examine the chromatograms obtained in the test for related substances. The principal spot in the chromatogram obtained with test solution (b) is similar in position and size to the principal spot in the chromatogram obtained with reference solution (a).

C. To 1 g add 3.5 ml of *propionic anhydride R* and boil for 15 min with stirring. Cool. To the resulting crystalline mass add 15 ml of *light petroleum R* and heat to boiling with vigorous stirring. Cool and filter. Wash the precipitate with two quantities, each of 5 ml, of *light petroleum R*. Dissolve the precipitate in 10 ml of *water R* and boil for 1 min. Filter the mixture at 30 °C to 40 °C. Allow to cool. Filter, and dry the precipitate at 100 °C to 105 °C for 1 h. The melting point (*2.2.14*) of the precipitate is 237 °C to 241 °C.

TESTS

Solution S. Suspend 2.5 g in 50 ml of *distilled water R* and boil for 3 min. Cool and dilute to 50 ml with *distilled water R*. Filter. Use the filtrate as solution S.

Appearance of solution. Dissolve 0.5 g in *dilute hydrochloric acid R* and dilute to 50 ml with the same acid. The solution is clear (*2.2.1*) and colourless (*2.2.2, Method II*).

Acidity or alkalinity. To 10 ml of solution S add 0.1 ml of *bromothymol blue solution R1* and 0.2 ml of *0.01 M sodium hydroxide*. The solution is blue. Add 0.4 ml of *0.01 M hydrochloric acid*. The solution is yellow.

Related substances. Examine by thin-layer chromatography (*2.2.27*), using *silica gel* GF_{254} *R* as the coating substance.

Test solution (a). Dissolve 0.10 g of the substance to be examined in *dilute acetic acid R*, with heating if necessary, and dilute to 10 ml with the same acid.

Test solution (b). Dilute 1 ml of test solution (a) to 10 ml with *dilute acetic acid R*.

Reference solution (a). Dissolve 10 mg of *adenine CRS* in *dilute acetic acid R*, with heating if necessary, and dilute to 10 ml with the same acid.

Reference solution (b). Dilute 1 ml of test solution (b) to 20 ml with *dilute acetic acid R*.

Reference solution (c). Dissolve 10 mg of *adenine CRS* and 10 mg of *adenosine R* in *dilute acetic acid R*, with heating if necessary, and dilute to 10 ml with the same acid.

Apply to the plate 5 µl of each solution. Develop over a path of 12 cm using a mixture of 20 volumes of *concentrated ammonia R*, 40 volumes of *ethyl acetate R* and 40 volumes of *propanol R*. Dry the plate in a current of warm air and examine in ultraviolet light at 254 nm. Any spot in the chromatogram obtained with test solution (a), apart from the principal spot, is not more intense than the spot in the chromatogram obtained with reference solution (b) (0.5 per cent). The test is not valid unless the chromatogram obtained with reference solution (c) shows two clearly separated spots.

Chlorides (*2.4.4*). To 10 ml of solution S add 1 ml of *concentrated ammonia R* and 3 ml of *silver nitrate solution R2*. Filter. Wash the precipitate with a little *water R* and dilute the filtrate to 15 ml with *water R*. The solution complies with the limit test for chlorides (100 ppm). When carrying out the test, add 2 ml of *dilute nitric acid R* instead of 1 ml of *dilute nitric acid R*.

Sulphates (*2.4.13*). Dilute 10 ml of solution S to 15 ml with *distilled water R*. The solution complies with the limit test for sulphates (300 ppm).

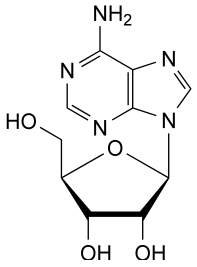
Ammonium. Prepare a cell consisting of two watch-glasses 60 mm in diameter placed edge to edge. To the inner wall of the upper watch-glass stick a piece of *red litmus paper R* 5 mm square and wetted with a few drops of *water R*. Finely powder the substance to be examined, place 0.5 g in the lower watch-glass and suspend in 0.5 ml of *water R*. To the suspension add 0.30 g of *heavy magnesium oxide R*. Briefly triturate with a glass rod. Immediately close the cell by putting the two watch-glasses together. Heat at 40 °C for 15 min. The litmus paper is not more intensely blue coloured than a standard prepared at the same time and in the same manner using 0.05 ml of *ammonium standard solution (100 ppm NH_4) R*, 0.5 ml of *water R* and 0.30 g of *heavy magnesium oxide R* (10 ppm).

Heavy metals (*2.4.8*). 1.0 g complies with limit test C for heavy metals (20 ppm). Prepare the standard using 2 ml of *lead standard solution (10 ppm Pb) R*.

Loss on drying (*2.2.32*). Not more than 0.5 per cent, determined on 1.000 g by drying in an oven at 105 °C.

Sulphated ash (*2.4.14*). Not more than 0.1 per cent, determined on 1.0 g.

ASSAY



Dissolve 0.100 g in a mixture of 20 ml of *acetic anhydride R* and 30 ml of *anhydrous acetic acid R*. Titrate with *0.1 M perchloric acid*, determining the end-point potentiometrically (*2.2.20*).

1 ml of *0.1 M perchloric acid* is equivalent to 13.51 mg of $C_5H_5N_5$.

01/2008:1486

ADENOSINE

Adenosinum

$C_{10}H_{13}N_5O_4$ M_r 267.2
[58-61-7]

DEFINITION

9-β-D-Ribofuranosyl-9*H*-purin-6-amine.

Content: 99.0 per cent to 101.0 per cent (dried substance).

CHARACTERS

Appearance: white or almost white, crystalline powder.

Solubility: slightly soluble in water, soluble in hot water, practically insoluble in ethanol (96 per cent) and in methylene chloride. It dissolves in dilute mineral acids.

mp: about 234 °C.

IDENTIFICATION

Infrared absorption spectrophotometry (*2.2.24*).

Comparison: *adenosine CRS*.

TESTS

Solution S. Suspend 5.0 g in 100 ml of *distilled water R* and heat to boiling. Allow to cool, filter with the aid of vacuum and dilute to 100 ml with *distilled water R*.

Appearance of solution. Solution S is colourless (*2.2.2, Method II*).

Acidity or alkalinity. To 10 ml of solution S, add 0.1 ml of *bromocresol purple solution R* and 0.1 ml of *0.01 M hydrochloric acid*. The solution is yellow. Add 0.4 ml of *0.01 M sodium hydroxide*. The solution is violet-blue.

Specific optical rotation (*2.2.7*): – 45 to – 49 (dried substance).

Dissolve 1.25 g in *1 M hydrochloric acid* and dilute to 50.0 ml with the same acid. Examine within 10 min of preparing the solution.

Related substances

A. Thin-layer chromatography (*2.2.27*).

Test solution. Dissolve 0.20 g of the substance to be examined in *dilute acetic acid R* with slight heating and dilute to 5 ml with the same acid.

Reference solution (a). Dilute 1 ml of the test solution to 100 ml with *water R*.

Reference solution (b). Dissolve 10 mg of *adenosine CRS* and 10 mg of *adenine CRS* in *dilute acetic acid R*, with heating if necessary, and dilute to 10 ml with the same acid.

Plate: *TLC silica gel F_{254} plate R*.

Mobile phase: *water R, concentrated ammonia R, propanol R* (10:30:60 *V/V/V*).

Application: 5 µl.

Development: over a path of 12 cm.

Drying: in a current of warm air.

System suitability: reference solution (b):

– the chromatogram shows 2 clearly separated spots.

Detection A: examine in ultraviolet light at 254 nm.

Results A: any spot, apart from the principal spot, is not more intense than the spot in the chromatogram obtained with reference solution (a) (1 per cent).

Detection B: spray with a 5 g/l solution of *potassium permanganate R* in *1 M sodium hydroxide*. Allow the plate to dry in a current of warm air and examine in daylight.

Results B: any spot, apart from the principal spot, is not more intense than the spot in the chromatogram obtained with reference solution (a) (1 per cent).

B. Liquid chromatography (*2.2.29*).

Solvent mixture. Dissolve 6.8 g of *potassium hydrogen sulphate R* and 3.4 g of *tetrabutylammonium hydrogen sulphate R* in *water R*, adjust to pH 6.5 with a 60 g/l solution of *potassium hydroxide R* and dilute to 1000 ml with the same solvent. Use freshly prepared solvent mixture.

Test solution. Dissolve 20 mg of the substance to be examined in the mobile phase and dilute to 20 ml with the mobile phase.

Reference solution (a). Dilute 1.0 ml of the test solution to 100.0 ml with the mobile phase. Dilute 1.0 ml of this solution to 10.0 ml with the mobile phase.

Reference solution (b). Dissolve 5 mg of *adenine R* (impurity A) and 5 mg of *inosine R* (impurity G) in the mobile phase and dilute to 50 ml with the mobile phase. Dilute 4 ml of this solution to 100 ml with the mobile phase.

Column:

– *size*: *l* = 0.25 m, Ø = 4.6 mm;

– *stationary phase*: *end-capped octadecylsilyl silica gel for chromatography R* (5 µm).

Mobile phase: *water R*, solvent mixture (40:60 *V/V*).

Flow rate: 1.5 ml/min.

Detection: spectrophotometer at 254 nm.

Injection: 20 µl.

Run time: 1.5 times the retention time of adenosine.

Relative retention with reference to adenosine (retention time = about 13 min): impurity A = about 0.3; impurity G = about 0.4.

System suitability: reference solution (b):

– *resolution*: minimum 1.5 between the peaks due to impurities A and G.

Limits:

– *correction factors*: for the calculation of content, multiply the peak areas of the following impurities by the corresponding correction factor: impurity A = 0.6; impurity G = 1.4;

– *impurity A*: not more than twice the area of the principal peak in the chromatogram obtained with reference solution (a) (0.2 per cent);

– *impurity G*: not more than the area of the principal peak in the chromatogram obtained with reference solution (a) (0.1 per cent);

– *unspecified impurities*: for each impurity, not more than the area of the principal peak in the chromatogram obtained with reference solution (a) (0.10 per cent);

– *total*: not more than 5 times the area of the principal peak in the chromatogram obtained with reference solution (a) (0.5 per cent);

– *disregard limit*: 0.5 times the area of the principal peak in the chromatogram obtained with reference solution (a) (0.05 per cent).

Chlorides (*2.4.4*): maximum 100 ppm.

Dilute 10 ml of solution S to 15 ml with *water R*.

Sulphates (*2.4.13*): maximum 200 ppm, determined on solution S.

Ammonium (*2.4.1, Method B*): maximum 10 ppm, determined on 0.5 g.

Prepare the standard using 5 ml of *ammonium standard solution (1 ppm NH_4) R*.

Loss on drying (*2.2.32*): maximum 0.5 per cent, determined on 1.000 g by drying in an oven at 105 °C.

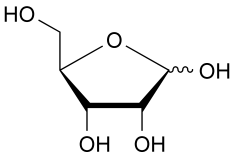
Sulphated ash (*2.4.14*): maximum 0.1 per cent, determined on 1.0 g.

ASSAY

Dissolve 0.200 g, warming slightly if necessary, in a mixture of 20 ml of *acetic anhydride R* and 30 ml of *anhydrous acetic acid R*. Titrate with *0.1 M perchloric acid*, determining the end-point potentiometrically (*2.2.20*).

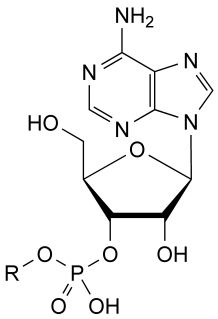
1 ml of *0.1 M perchloric acid* is equivalent to 26.72 mg of $C_{10}H_{13}N_5O_4$.

IMPURITIES



Specified impurities: *A, B, C, D, E, G.*

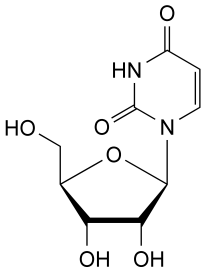
Other detectable impurities (the following substances would, if present at a sufficient level, be detected by one or other of the tests in the monograph. They are limited by the general acceptance criterion for other/unspecified impurities and/or by the general monograph *Substances for pharmaceutical use (2034)*. It is therefore not necessary to identify these impurities for demonstration of compliance. See also *5.10. Control of impurities in substances for pharmaceutical use*): *F, H.*



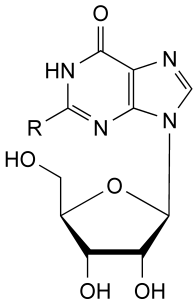
By thin-layer chromatography: B, C, D, E.

By liquid chromatography: A, F, G, H.

A. adenine,



B. D-ribose,



C. R = H: adenosine 3′-(dihydrogen phosphate),

D. R = PO_3H_2: adenosine 3′-(trihydrogen diphosphate),

E. R = PO_2H-O-PO_3H_2: adenosine 3′-(tetrahydrogen triphosphate),

F. 1-β-D-ribofuranosylpyrimidine-2,4(1*H*,3*H*)-dione (uridine),

G. R = H: 9-β-D-ribofuranosyl-1,9-dihydro-6*H*-purin-6-one (inosine),

H. R = NH_2: 2-amino-9-β-D-ribofuranosyl-1,9-dihydro-6*H*-purin-6-one (guanosine).

corrected 6.0

ADIPIC ACID

Acidum adipicum

$C_6H_{10}O_4$ M_r 146.1
[124-04-9]

DEFINITION

Hexanedioic acid.

Content: 99.0 per cent to 101.0 per cent (dried substance).

CHARACTERS

Appearance: white or almost white, crystalline powder.

Solubility: sparingly soluble in water, soluble in boiling water, freely soluble in alcohol and in methanol, soluble in acetone.

IDENTIFICATION

A. Melting point (*2.2.14*): 151 °C to 154 °C.

B. Infrared absorption spectrophotometry (*2.2.24*).
Comparison: *adipic acid CRS*.

TESTS

Solution S. Dissolve 5.0 g with heating in *distilled water R* and dilute to 50 ml with the same solvent. Allow to cool and to crystallise. Filter through a sintered-glass filter (40) (*2.1.2*). Wash the filter with *distilled water R*. Collect the filtrate and the washings until a volume of 50 ml is obtained.

Appearance of solution. The solution is clear (*2.2.1*) and colourless (*2.2.2, Method II*).

Dissolve 1.0 g in *methanol R* and dilute to 20 ml with the same solvent.

Related substances. Liquid chromatography (*2.2.29*).

Test solution. Dissolve 0.20 g of the substance to be examined in the mobile phase and dilute to 10.0 ml with the mobile phase.

Reference solution (a). Dissolve 20 mg of *glutaric acid R* in 1.0 ml of the test solution and dilute to 10.0 ml with the mobile phase.

Reference solution (b). Dilute 1.0 ml of the test solution to 100.0 ml with the mobile phase, dilute 1.0 ml of the solution to 10.0 ml with the mobile phase.

Column:

– *size*: *l* = 0.125 m, Ø = 4.0 mm,

– *stationary phase*: spherical *octadecylsilyl silica gel for chromatography R* (5 µm) with a specific surface area of 350 m^2/g and a pore size of 10 nm,

– *temperature*: 30 °C.

Mobile phase: mix 3 volumes of *acetonitrile R* and 97 volumes of a 24.5 g/l solution of *dilute phosphoric acid R*.

Flow rate: 1 ml/min.

Detection: spectrophotometer at 209 nm.

Injection: 20 µl.

Run time: 3 times the retention time of adipic acid.

System suitability: reference solution (a):

– *resolution*: minimum 9.0 between the peaks due to glutaric acid and adipic acid.

Limits:

– *any impurity*: not more than the area of the principal peak in the chromatogram obtained with reference solution (b) (0.1 per cent),

– *total*: not more than 5 times the area of the principal peak in the chromatogram obtained with reference solution (b) (0.5 per cent),

– *disregard limit*: 0.5 times the area of the principal peak in the chromatogram obtained with reference solution (b) (0.05 per cent).

Chlorides (*2.4.4*): maximum 200 ppm.

2.5 ml of solution S diluted to 15 ml with *water R* complies with the limit test for chlorides.

Nitrates: maximum 30 ppm.

To 1 ml of solution S add 2 ml of *concentrated ammonia R*, 0.5 ml of a 10 g/l solution of *manganese sulphate R*, 1 ml of a 10 g/l solution of *sulfanilamide R* and dilute to 20 ml with *water R*. Add 0.10 g of *zinc powder R* and cool in iced water for 30 min; shake from time to time. Filter and cool 10 ml of the filtrate in iced water. Add 2.5 ml of *hydrochloric acid R1* and 1 ml of a 10 g/l solution of *naphthylethylenediamine dihydrochloride R*. Allow to stand at room temperature. After 15 min the mixture is not more intensely coloured than a standard prepared at the same time and in the same manner, using 1.5 ml of *nitrate standard solution (2 ppm NO_3) R* instead of 1 ml of solution S. The test is invalid if a blank solution prepared at the same time and in the same manner, using 1 ml of *water R* instead of 1 ml of solution S, is more intensely coloured than a 2 mg/l solution of *potassium permanganate R*.

Sulphates (*2.4.13*): maximum 500 ppm.

3 ml of solution S diluted to 15 ml with *distilled water R* complies with the limit test for sulphates.

Iron (*2.4.9*): maximum 10 ppm.

10 ml of solution S complies with the limit test for iron.

Heavy metals (*2.4.8*): maximum 10 ppm.

12 ml of solution S complies with limit test A. Prepare the standard using *lead standard solution (1 ppm Pb) R*.

Loss on drying (*2.2.32*): maximum 0.2 per cent, determined on 1.000 g by drying in an oven at 105 °C.

Sulphated ash (*2.4.14*): maximum 0.1 per cent.

Melt 1.0 g completely over a gas burner, then ignite the melted substance with the burner. After ignition, lower or remove the flame in order to prevent the substance from boiling and keep it burning until completely carbonised. Carry out the test for sulphated ash using the residue.

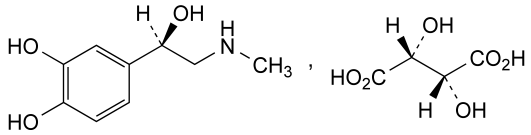
ASSAY

Dissolve 60.0 mg in 50 ml of *water R*. Add 0.2 ml of *phenolphthalein solution R* and titrate with *0.1 M sodium hydroxide*.

1 ml of *0.1 M sodium hydroxide* is equivalent to 7.31 mg of $C_6H_{10}O_4$.

IMPURITIES

A. R = CH_2-CO_2H: pentanedioic acid (glutaric acid),



B. R = CO_2H: butanedioic acid (succinic acid),

C. R = $[CH_2]_3$-CO_2H: heptanedioic acid (pimelic acid).

01/2008:0254

ADRENALINE TARTRATE

Adrenalini tartras

$C_{13}H_{19}NO_9$ M_r 333.3
[51-42-3]

DEFINITION

(1*R*)-1-(3,4-Dihydroxyphenyl)-2-(methylamino)ethanol hydrogen (2*R*,3*R*)-2,3-dihydroxybutanedioate.

Content: 98.5 per cent to 101.0 per cent (dried substance).

CHARACTERS

Appearance: white or greyish-white, crystalline powder.

Solubility: freely soluble in water, slightly soluble in ethanol (96 per cent).

IDENTIFICATION

A. Dissolve 5 g in 50 ml of a 5 g/l solution of *sodium metabisulphite R* and make alkaline by addition of *ammonia R*. Keep the mixture at room temperature for at least 15 min and filter. Reserve the filtrate for identification test C. Wash the precipitate with 3 quantities, each of 10 ml, of *methanol R*. Dry at 80 °C. The specific optical rotation (*2.2.7*) of the residue (adrenaline base) is – 50 to – 53.5, determined using a 20.0 g/l solution in *0.5 M hydrochloric acid*.

B. Infrared absorption spectrophotometry (*2.2.24*).

Preparation: discs of adrenaline base prepared as described under identification test A.

Comparison: use adrenaline base prepared as described under identification test A from 50 mg of *adrenaline tartrate CRS* dissolved in 5 ml of a 5 g/l solution of *sodium metabisulphite R*. Keep the mixture at room temperature for at least 30 min. Filter through a sintered-glass filter (*2.1.2*).

C. 0.2 ml of the filtrate obtained in identification test A gives reaction (b) of tartrates (*2.3.1*).

TESTS

Appearance of solution. The solution is not more opalescent than reference suspension II (*2.2.1*) and not more intensely coloured than reference solution BY_5 (*2.2.2, Method II*).

Dissolve 0.5 g in *water R* and dilute to 10 ml with the same solvent. Examine the solution immediately.

Related substances. Liquid chromatography (*2.2.29*). *Prepare the solutions protected from light.*

Solvent mixture A. Dissolve 5.0 g of *potassium dihydrogen phosphate R* and then 2.6 g of *sodium octanesulphonate R* in *water for chromatography R*, and dilute to 1000 ml with the same solvent (it is usually necessary to stir for at least 30 min to achieve complete dissolution). Adjust to pH 2.8 with *phosphoric acid R*.

Solvent mixture B: *acetonitrile R1*, solvent mixture A (130:870 *V/V*).

Test solution. Dissolve 75 mg of the substance to be examined in 5 ml of *0.1 M hydrochloric acid* and dilute to 50 ml with solvent mixture B.

Reference solution (a). Dilute 1.0 ml of the test solution to 100.0 ml with solvent mixture B. Dilute 1.0 ml of this solution to 10.0 ml with solvent mixture B.

Reference solution (b). Dissolve 1.5 mg of *noradrenaline tartrate CRS* (impurity B) and 1.5 mg of *adrenalone hydrochloride R* (impurity C) in solvent mixture B, add 1.0 ml of the test solution and dilute to 100.0 ml with solvent mixture B.

Reference solution (c). Dissolve the contents of a vial of *adrenaline impurity mixture CRS* (impurities D and E) in 0.1 ml of *0.1 M hydrochloric acid* and 0.9 ml of solvent mixture B.

Reference solution (d). Dissolve 7.5 mg of *adrenaline tartrate with impurity A CRS* in 0.5 ml of *0.1 M hydrochloric acid* and dilute to 5.0 ml with solvent mixture B.

Blank solution: *0.1 M hydrochloric acid,* solvent mixture B (1:9 *V/V*).

Column:

– *size*: *l* = 0.10 m, Ø = 4.6 mm;
– *stationary phase*: *end-capped octadecylsilyl silica gel for chromatography R* (3 µm);
– *temperature*: 50 °C.

Mobile phase:

– *mobile phase A*: *acetonitrile R1,* solvent mixture A (5:95 *V/V*);
– *mobile phase B*: *acetonitrile R1,* solvent mixture A (45:55 *V/V*);

Time (min)	Mobile phase A (per cent *V/V*)	Mobile phase B (per cent *V/V*)
0 - 15	92 → 50	8 → 50
15 - 20	50 → 92	50 → 8
20 - 25	92	8

Flow rate: 2.0 ml/min.

Detection: spectrophotometer at 210 nm.

Injection: 20 µl.

Identification of impurities: use the chromatogram supplied with *adrenaline impurity mixture CRS* and the chromatogram obtained with reference solution (c) to identify the peaks due to impurities D and E; use the chromatogram supplied with *adrenaline tartrate with impurity A CRS* and the chromatogram obtained with reference solution (d) to identify the peak due to impurity A.

Relative retention with reference to adrenaline (retention time = about 4 min): impurity B = about 0.8; impurity C = about 1.3; impurity A = about 3.2; impurity D = about 3.3; impurity E = about 3.7.

System suitability: reference solution (b):

– *resolution*: minimum 3.0 between the peaks due to impurity B and adrenaline.

Limits:

– *correction factors*: for the calculation of content, multiply the peak areas of the following impurities by the corresponding correction factor: impurity D = 0.7; impurity E = 0.6;
– *impurity A*: not more than 3 times the area of the principal peak in the chromatogram obtained with reference solution (a) (0.3 per cent);
– *impurities B, C*: for each impurity, not more than twice the area of the principal peak in the chromatogram obtained with reference solution (a) (0.2 per cent);
– *impurities D, E*: for each impurity, not more than the area of the principal peak in the chromatogram obtained with reference solution (a) (0.1 per cent);
– *unspecified impurities*: for each impurity, not more than the area of the principal peak in the chromatogram obtained with reference solution (a) (0.10 per cent);
– *total*: not more than 6 times the area of the principal peak in the chromatogram obtained with reference solution (a) (0.6 per cent);
– *disregard limit*: 0.5 times the area of the principal peak in the chromatogram obtained with reference solution (a) (0.05 per cent).

Loss on drying (*2.2.32*): maximum 0.5 per cent, determined on 1.000 g by drying *in vacuo* for 18 h.

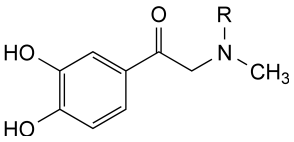
Sulphated ash (*2.4.14*): maximum 0.1 per cent, determined on 1.0 g.

ASSAY

Dissolve 0.300 g in 50 ml of *anhydrous acetic acid R,* heating gently if necessary. Titrate with *0.1 M perchloric acid* until a bluish-green colour is obtained, using 0.1 ml of *crystal violet solution R* as indicator.

1 ml of *0.1 M perchloric acid* is equivalent to 33.33 mg of $C_{13}H_{19}NO_9$.

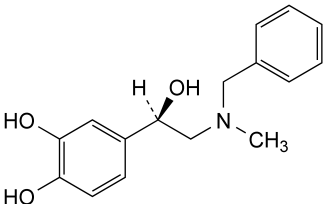
STORAGE



In an airtight container, or preferably in a sealed tube under vacuum or under an inert gas, protected from light.

IMPURITIES

Specified impurities: A, B, C, D, E.



A. unknown structure,

B. noradrenaline,

C. R = H: 1-(3,4-dihydroxyphenyl)-2-(methylamino)ethanone (adrenalone),

E. R = CH_2-C_6H_5: 2-(benzylmethylamino)-1-(3,4-dihydroxyphenyl)ethanone,

D. (1*R*)-2-(benzylmethylamino)-1-(3,4-dihydroxyphenyl)ethanol.

01/2008:0310
corrected 6.0

AGAR

Agar

DEFINITION

Agar consists of the polysaccharides from various species of Rhodophyceae mainly belonging to the genus *Gelidium*. It is prepared by treating the algae with boiling water; the extract is filtered whilst hot, concentrated and dried.

CHARACTERS

Agar has a mucilaginous taste.

It occurs in the form of a powder or in crumpled strips 2 mm to 5 mm wide or sometimes in flakes, colourless to pale yellow, translucent, somewhat tough and difficult to break, becoming more brittle on drying.

IDENTIFICATION

A. Examine under a microscope. When mounted in *0.005 M iodine*, the strips or flakes are partly stained brownish-violet. Magnified 100 times, they show numerous minute, colourless, ovoid or rounded grains on an amorphous background; occasional brown, round to ovoid spores with a reticulated surface, measuring up to 60 µm, may be present. Reduce to a powder, if

necessary. The powder is yellowish-white. Examine under a microscope using *0.005 M iodine*. The powder presents angular fragments with numerous grains similar to those seen in the strips and flakes; some of the fragments are stained brownish-violet.

B. Dissolve 0.1 g with heating in 50 ml of *water R*. Cool. To 1 ml of the mucilage carefully add 3 ml of *water R* so as to form two separate layers. Add 0.1 ml of *0.05 M iodine*. A dark brownish-violet colour appears at the interface. Mix. The liquid becomes pale yellow.

C. Heat 5 ml of the mucilage prepared for identification test B on a water-bath with 0.5 ml of *hydrochloric acid R* for 30 min. Add 1 ml of *barium chloride solution R1*. A white turbidity develops within 30 min.

D. Heat 0.5 g with 50 ml of *water R* on a water-bath until dissolved. Only a few fragments remain insoluble. During cooling, the solution gels between 35 °C and 30 °C. Heat the gel thus obtained on a water-bath; it does not liquefy below 80 °C.

TESTS

Swelling index (*2.8.4*). The swelling index, determined on the powdered drug (355) (*2.9.12*), is not less than 10 and is within 10 per cent of the value stated on the label.

Insoluble matter. To 5.00 g of the powdered drug (355) (*2.9.12*) add 100 ml of *water R* and 14 ml of *dilute hydrochloric acid R*. Boil gently for 15 min with frequent stirring. Filter the hot liquid through a tared, sintered-glass filter (160) (*2.1.2*), rinse the filter with hot *water R* and dry at 100 °C to 105 °C. The residue weighs not more than 50 mg (1.0 per cent).

Gelatin. To 1.00 g add 100 ml of *water R* and heat on a water-bath until dissolved. Allow to cool to 50 °C. To 5 ml of the solution add 5 ml of *picric acid solution R*. No turbidity appears within 10 min.

Loss on drying (*2.2.32*). Not more than 20.0 per cent, determined on 1.000 g of the powdered drug (355) (*2.9.12*) by drying in an oven at 105 °C.

Total ash (*2.4.16*). Not more than 5.0 per cent.

Microbial contamination. Total viable aerobic count (*2.6.12*) not more than 10^3 micro-organisms per gram, determined by plate-count. It complies with the tests for *Escherichia coli* and *Salmonella* (*2.6.13*).

LABELLING

The label states the swelling index.

01/2008:2147
corrected 6.0

AGNUS CASTUS FRUIT

Agni casti fructus

DEFINITION

Whole, ripe, dried fruit of *Vitex agnus-castus* L.

Content: minimum 0.08 per cent of casticin ($C_{19}H_{18}O_8$; M_r 374.3) (dried drug).

IDENTIFICATION

A. Agnus castus fruit is oval to almost globular, with a diameter of up to 5 mm. The persistent calyx is greenish-grey, finely pubescent, ends in 4-5 short teeth and envelops 2/3 to 3/4 of the surface of the fruit. The blackish-brown fruit consists of a pericarp that becomes progressively sclerous up to the endocarp. The style scar is often visible. Some of the fruits may retain a stalk, about 1 mm long. A transverse section of the fruit shows 4 locules, each containing an elongated seed.

B. Reduce to a powder (355) (*2.9.12*). Examine under a microscope using *chloral hydrate solution R*. The powder shows the following diagnostic characters: fragments of the outer epidermis of the calyx composed of polygonal cells densely covered with short, bent or undulate, uni-, bi- or tri-cellular uniseriate covering trichomes; cells of the epicarp with thick walls and well-marked, large pits; isolated glandular trichomes with a unicellular stalk and a uni- or multi-cellular head; layers of parenchyma from the outer part of the mesocarp, some containing brown pigment, others extending into septa; fragments from the inner part of the mesocarp composed of thin-walled, pitted, sclerenchymatous cells and of typical isodiametric sclerous cells with very thick, deeply grooved walls and a narrow, stellate lumen; small brown cells of the endocarp; fragments of the testa containing areas of fairly large, thin-walled lignified cells with reticulate bands of thickening; numerous fragments of the endosperm composed of thin-walled parenchymatous cells containing aleurone grains and oil droplets.

C. Thin-layer chromatography (*2.2.27*).

Test solution. To 1.0 g of the powdered drug (355) (*2.9.12*) add 10 ml of *methanol R*. Heat in a water-bath at 60 °C for 10 min. Allow to cool and filter.

Reference solution. Dissolve 0.5 mg of *aucubin R* and 1 mg of *agnuside R* in *methanol R* and dilute to 1.0 ml with the same solvent.

Plate: *TLC silica gel F_{254} plate R* (5-40 µm) [or *TLC silica gel F_{254} plate R* (2-10 µm)].

Mobile phase: *water R, methanol R, ethyl acetate R* (8:15:77 *V/V/V*).

Application: 10 µl [or 8 µl] as bands.

Development: over a path of 8 cm [or 5 cm].

Drying: in air.

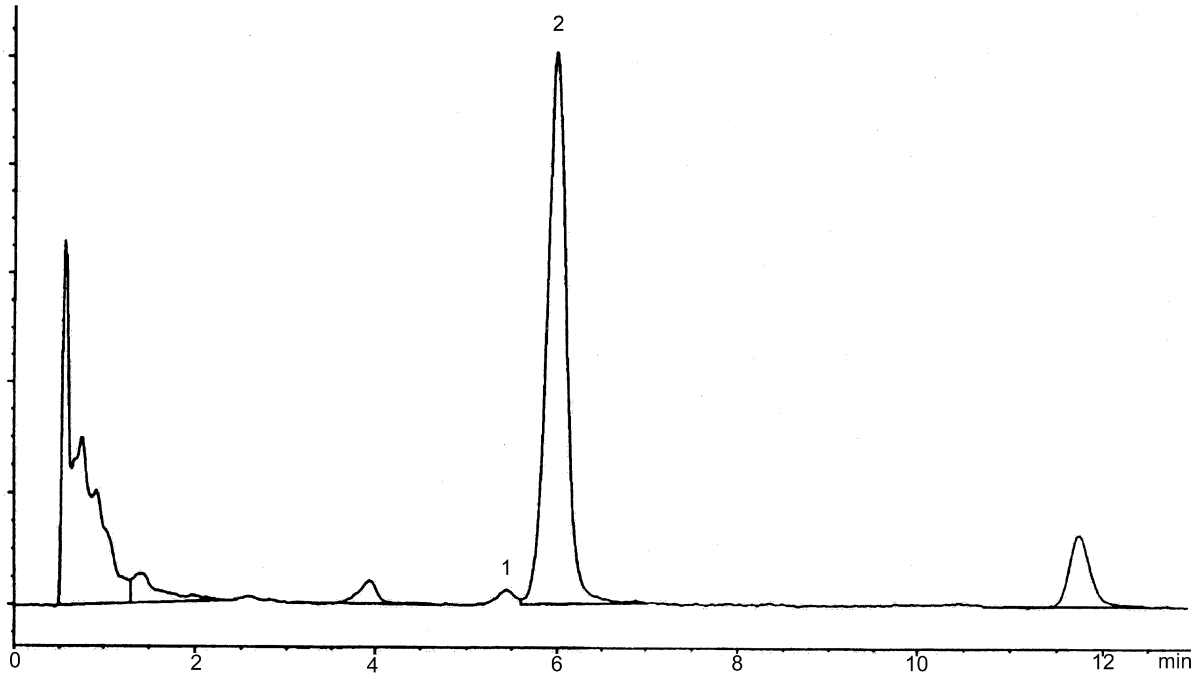
Detection: spray with *formic acid R* and heat at 120 °C for 10 min; examine in daylight.

Results: see below the sequence of zones present in the chromatograms obtained with the reference solution and the test solution. Furthermore, other zones may be present in the chromatogram obtained with the test solution.

Top of the plate	
———	———
Agnuside: a blue zone	A blue zone (agnuside)
———	———
Aucubin: a blue zone	A blue zone (aucubin)
Reference solution	**Test solution**

TESTS

Foreign matter (*2.8.2*): maximum 3.0 per cent.



Other species of *Vitex*, in particular *Vitex negundo*. No fruit of other species with a much greater diameter is present.

Total ash (*2.4.16*): maximum 5.0 per cent.

Loss on drying (*2.2.32*): maximum 10.0 per cent, determined on 1.000 g of the powdered drug (355) (*2.9.12*) by drying in an oven at 105 °C for 2 h.

ASSAY

Liquid chromatography (*2.2.29*).

1. penduletin 2. casticin

Figure 2147.-1. – *Chromatogram for the assay of casticin in Agnus castus fruit: test solution*

Test solution. Extract 1.000 g of the powdered drug (355) (*2.9.12*) with 40 ml of *methanol R* for 2 min using a suitable-speed homogeniser. Collect the supernatant liquid and filter into a 250 ml flask. Repeat the extraction with a further 40 ml of *methanol R*, collecting the supernatant liquid and filtering as before. Rinse the residue carefully with a small quantity of *methanol R*. Combine the methanol extracts and rinsings and evaporate to dryness *in vacuo* in a water-bath at not more than 30 °C. With the aid of ultrasound, dissolve the residue obtained in *methanol R* and dilute to 20.0 ml with the same solvent. Filter the solution through a membrane filter (0.45 µm). Dilute 1.0 ml to 10.0 ml with *methanol R*.

Reference solution. Dissolve 100.0 mg of *agnus castus fruit standardised dry extract CRS* in 20.0 ml of *methanol R* with the aid of ultrasound for 20 min.

Column:

– *size*: *l* = 0.125 m, Ø = 3.0 mm;
– *stationary phase*: *octadecylsilyl silica gel for chromatography R* (3 µm);
– *temperature*: 25 °C.

Mobile phase:

– *mobile phase A*: 5.88 g/l solution of *phosphoric acid R*;
– *mobile phase B*: *methanol R*;

Time (min)	Mobile phase A (per cent *V/V*)	Mobile phase B (per cent *V/V*)
0 - 13	50 → 35	50 → 65
13 - 18	35 → 0	65 → 100
18 - 23	0 → 50	100 → 50

Flow rate: 1.0 ml/min.

Detection: spectrophotometer at 348 nm.

Injection: 10 µl.

System suitability: test solution:

– *resolution*: minimum 1.5 between the peaks due to penduletin and casticin (see Figure 2147.-1).

Calculate the percentage content of casticin from the following expression:

$$\frac{F_1 \times m_2 \times p_1 \times 10}{F_2 \times m_1}$$

F_1 = area of the peak due to casticin in the chromatogram obtained with the test solution;

F_2 = area of the peak due to casticin in the chromatogram obtained with the reference solution;

m_1 = mass of the drug used to prepare the test solution, in grams;

m_2 = mass of *agnus castus fruit standardised dry extract CRS* used to prepare the reference solution, in grams;

p_1 = percentage content of casticin in *agnus castus fruit standardised dry extract CRS*.

01/2008:1587
corrected 6.0

AGRIMONY

Agrimoniae herba

DEFINITION

Dried flowering tops of *Agrimonia eupatoria* L.

Content: minimum 2.0 per cent of tannins, expressed as pyrogallol ($C_6H_6O_3$; M_r 126.1) (dried drug).

IDENTIFICATION

A. The stem is green or, more usually, reddish, cylindrical and infrequently branched. It is covered with long, erect or tangled hairs. The leaves are compound imparipennate with 3 or 6 opposite pairs of leaflets, with 2 or 3 smaller leaflets between. The leaflets are deeply dentate to serrate, dark green on the upper surface, greyish and densely tormentose on the lower face. The flowers are

small and form a terminal spike. They are pentamerous and borne in the axils of hairy bracts, the calyces closely surrounded by numerous terminal hooked spires, which occur on the rim of the hairy receptacle. The petals are free, yellow and deciduous. Fruit-bearing obconical receptacles, with deep furrows and hooked bristles, are usually present at the base of the inflorescence.

B. Reduce to a powder (355) (*2.9.12*). The powder is yellowish-green to grey. Examine under a microscope using *chloral hydrate solution R*. The powder shows numerous straight of bent, unicellular, long thick-walled (about 500 µm) trichomes finely warty and sometimes spiraly marked; fragments of parenchyma with prisms and cluster crystals of calcium oxalate; fragments of leaf epidermis with sinuous walls, those of the lower epidermis with abundant stomata, mostly anomocytic but occasionally anisocytic; ovoid to subspherical-pollen grains, with 3 pores and a smooth exine; fragments of glandular trichomes with a multicellular uniseriate stalk and a spherical unicellular or quadricellular head; groups of fibres and spiral and bardered-fitted vessels from the stem.

C. Thin-layer chromatography (*2.2.27*).

Test solution. To 2.0 g of the powdered drug (355) (*2.9.12*) add 20 ml of *methanol R*. Heat with shaking at 40 °C for 10 min. Filter.

Reference solution. Dissolve 1.0 mg of *rutin R* and 1.0 mg of *isoquercitroside R* in 2 ml of *methanol R*.

Plate: *TLC silica gel plate R*.

Mobile phase: *anhydrous formic acid R, water R, ethyl acetate R* (10:10:80 *V/V/V*).

Application: 10 µl, as bands.

Development: over a path of 12 cm.

Drying: at 100-105 °C.

Detection: spray the still warm plate with a 10 g/l solution of *diphenylboric acid aminoethyl ester R* in *methanol R* and then with a 50 g/l solution of *macrogol 400 R* in *methanol R*. Allow the plate to dry in air for 30 min. Examine in ultraviolet light at 365 nm

Results: see below the sequence of the zones present in the chromatograms obtained with the reference and test solutions.

Top of the plate	
	An orange fluorescent zone may be present (quercitroside)
Isoquercitroside: an orange fluorescent zone	An orange fluorescent zone (isoquercitroside)
	An orange fluorescent zone (hyperoside)
Rutin: an orange fluorescent zone	An orange fluorescent zone (rutin)
Reference solution	**Test solution**

TESTS

Loss on drying (*2.2.32*): maximum 10.0 per cent, determined on 1.000 g of the powdered drug (355) (*2.9.12*) by drying in an oven at 105 °C for 2 h.

Total ash (*2.4.16*): maximum 10.0 per cent.

ASSAY

Carry out the determination of tannins in herbal drugs (*2.8.14*). Use a 1.000 g of powdered drug (180) (*2.9.12*).

01/2008:1238

AIR, MEDICINAL

Aer medicinalis

DEFINITION

Compressed ambient air.

Content: 20.4 per cent *V/V* to 21.4 per cent *V/V* of oxygen (O_2).

CHARACTERS

A colourless, odourless gas.

Solubility: at a temperature of 20 °C and a pressure of 101 kPa, 1 volume dissolves in about 50 volumes of water.

PRODUCTION

Carbon dioxide: maximum 500 ppm *V/V*, determined using an infrared analyser (*2.5.24*).

Gas to be examined. Use the substance to be examined. It must be filtered to avoid stray light phenomena.

Reference gas (a). Use a mixture of 79 per cent *V/V* of *nitrogen R1* and 21 per cent *V/V* of *oxygen R* containing less than 1 ppm *V/V* of *carbon dioxide R1*.

Reference gas (b). Use a mixture of 79 per cent *V/V* of *nitrogen R1* and 21 per cent *V/V* of *oxygen R* containing 500 ppm *V/V* of *carbon dioxide R1*.

Calibrate the apparatus and set the sensitivity using reference gases (a) and (b). Measure the content of carbon dioxide in the gas to be examined.

Carbon monoxide: maximum 5 ppm *V/V*, determined using an infrared analyser (*2.5.25*).

Gas to be examined. Use the substance to be examined. It must be filtered to avoid stray light phenomena.

Reference gas (a). Use a mixture of 79 per cent *V/V* of *nitrogen R1* and 21 per cent *V/V* of *oxygen R* containing less than 1 ppm *V/V* of *carbon monoxide R*.

Reference gas (b). Use a mixture of 79 per cent *V/V* of *nitrogen R1* and 21 per cent *V/V* of *oxygen R* containing 5 ppm *V/V* of *carbon monoxide R*.

Calibrate the apparatus and set the sensitivity using reference gases (a) and (b). Measure the content of carbon monoxide in the gas to be examined.

Sulphur dioxide: maximum 1 ppm *V/V*, determined using an ultraviolet fluorescence analyser (Figure 1238.-1).

The apparatus consists of the following:

– a system generating ultraviolet radiation with a wavelength of 210 nm, made up of an ultraviolet lamp, a collimator, and a selective filter; the beam is blocked periodically by a chopper rotating at high speeds;

– a reaction chamber, through which flows the gas to be examined;

– a system that detects radiation emitted at a wavelength of 350 nm, made up of a selective filter, a photomultiplier tube and an amplifier.

Gas to be examined. Use the substance to be examined. It must be filtered.

Reference gas (a). Use a mixture of 79 per cent *V/V* of *nitrogen R1* and 21 per cent *V/V* of *oxygen R*.

Reference gas (b). Use a mixture of 79 per cent *V/V* of *nitrogen R1* and 21 per cent *V/V* of *oxygen R* containing 0.5 ppm *V/V* to 2 ppm *V/V* of *sulphur dioxide R1*.

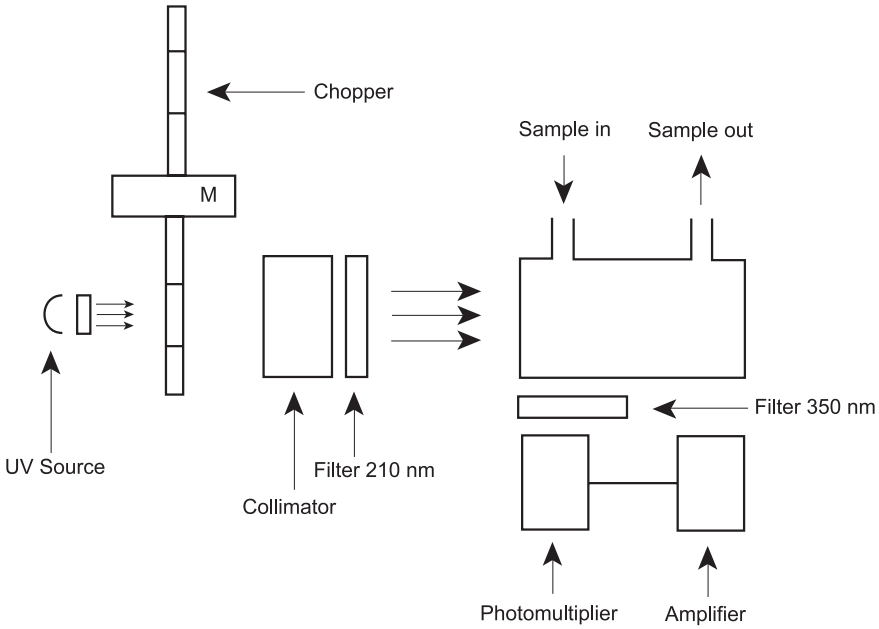


Figure 1238.-1. – *UV fluorescence analyser*

Calibrate the apparatus and set the sensitivity using reference gases (a) and (b). Measure the content of sulphur dioxide in the gas to be examined.

Oil: maximum 0.1 mg/m^3 calculated for atmospheric pressure and at 0 °C, determined using a measuring system such as described in Figure 1238.-2.

The apparatus consists of the following:

– an on-off valve (1),
– a three-way valve (2),
– an oil cone (3),
– a bypass line (4),
– a pressure-regulator (5),
– a flow-metering device (6).

All of the apparatus is cleaned beforehand, using trichlorotrifluoroethane R free from oil and grease.

Place a micro fibre-glass filter in the oil cone (3); this filter has the following characteristics: 100 per cent borosilicate glass without binder; resistant to heat treatment at 500 °C (to eliminate organic traces); 99.999 per cent retention efficiency for NaCl particles with a diameter of 0.6 µm. Close the on-off valve (1); the substance to be examined enters the bypass line (4) and purges the three-way valve (2), the pressure-regulator (5) and the flow-metering device (6). Close the inlet valve of the compression and filtration system: open the on-off valve (1) and set the three-way valve (2) to the position allowing passage between the oil cone and the pressure-regulator. Open the inlet valve and set the pressure-regulator (5) so that the flow indicated by the flow-metering device (6) is 20 litres/min. Pass 100.0 litres of the substance to be examined through the system.

Test solution. Remove the micro fibre-glass filter and place in an airtight container. Carefully cut up the micro fibre-glass filter and place the pieces in 25.0 ml of *trichlorotrifluoroethane R*.

Reference solutions. Prepare the reference solutions with quantities of oil (used for the lubrication of the compression system) ranging from 0.05 µg/ml to 0.5 µg/ml in *trichlorotrifluoroethane R*.

Measure the absorbance of the test solution and the reference solutions, using an appropriate infrared spectrophotometer, at 2960.3 cm^{-1}, 2927.7 cm^{-1} and 2855.0 cm^{-1}. The sum of the 3 absorbances gives the absorbance of the oil. Use potassium bromide cells with a pathlength of several centimetres.

Plot the calibration curve from the absorbances obtained with the reference solutions and determine the quantity of oil from this curve.

Nitrogen monoxide and nitrogen dioxide: maximum 2 ppm *V/V* in total, determined using a chemiluminescence analyser (*2.5.26*).

Gas to be examined. Use the substance to be examined.

Reference gas (a). Use a mixture of 79 per cent *V/V* of *nitrogen R1* and 21 per cent *V/V* of *oxygen R* containing less than 0.05 ppm *V/V* of nitrogen monoxide and nitrogen dioxide.

Reference gas (b). Use a mixture of 2 ppm *V/V* of *nitrogen monoxide R* in *nitrogen R1*.

Calibrate the apparatus and set the sensitivity using reference gases (a) and (b). Measure the content of nitrogen monoxide and nitrogen dioxide in the gas to be examined.

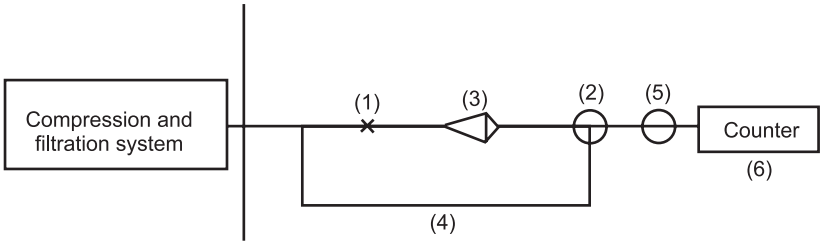

Figure 1238.-2. – *Measuring system for oil*

Water: maximum 67 ppm *V/V*, determined using an electrolytic hygrometer (*2.5.28*), except where the competent authority decides that the following limit applies to medicinal air generated on-site and distributed in pipe-line systems operating at a pressure not greater than 10 bars and a temperature not less than 5 °C: maximum 870 ppm *V/V*, determined using an electrolytic hygrometer (*2.5.28*).

Assay. Determine the concentration of oxygen in air using a paramagnetic analyser (*2.5.27*).

IDENTIFICATION

First identification: C.

Second identification: A, B.

A. In a conical flask containing the substance to be examined, place a glowing wood splinter. The splinter remains glowing.

B. Use a gas burette (Figure 1238.-3) of 25 ml capacity in the form of a chamber in the middle of which is a tube graduated in 0.2 per cent between 19.0 per cent and 23.0 per cent, and isolated at each end by a tap with a conical barrel. The lower tap is joined to a tube with an olive-shaped nozzle and is used to introduce the gas into the apparatus. A cylindrical funnel above the upper tap is used to introduce the absorbent solution. Wash the burette with *water R* and dry. Open the 2 taps. Connect the nozzle to the source of the substance to be examined and set the flow rate to 1 litre/min. Flush the burette by passing the substance to be examined through it for 1 min. Close the lower tap of the burette and immediately afterwards the upper tap. Rapidly disconnect the burette from the source of the substance to be examined. Rapidly give a half turn to the upper tap to eliminate any excess pressure in the burette. Keeping the burette vertical, fill the funnel with a freshly prepared mixture of 21 ml of a 560 g/l solution of *potassium hydroxide R* and 130 ml of a 200 g/l solution of *sodium dithionite R*. Open the upper tap slowly. The solution absorbs the oxygen and enters the burette. Allow to stand for 10 min without shaking. Read the level of the liquid meniscus on the graduated part of the burette. This figure represents the percentage *V/V* of oxygen. The value read is 20.4 to 21.4.

C. It complies with the limits of the assay.

TESTS

Carbon dioxide: maximum 500 ppm *V/V*, determined using a carbon dioxide detector tube (*2.1.6*).

Sulphur dioxide: maximum 1 ppm *V/V*, determined using a sulphur dioxide detector tube (*2.1.6*).

Oil: maximum 0.1 mg/m^3, determined using an oil detector tube (*2.1.6*).

Nitrogen monoxide and nitrogen dioxide: maximum 2 ppm *V/V*, determined using a nitrogen monoxide and nitrogen dioxide detector tube (*2.1.6*).

Carbon monoxide: maximum 5 ppm *V/V*, determined using a carbon monoxide detector tube (*2.1.6*).

Water vapour: maximum 67 ppm *V/V*, determined using a water vapour detector tube (*2.1.6*), except where the competent authority decides that the following limit applies to medicinal air generated on-site and distributed in pipe-line systems operating at a pressure not greater than 10 bars and a temperature not less than 5 °C: maximum 870 ppm *V/V*, determined using a water vapour detector tube (*2.1.6*).

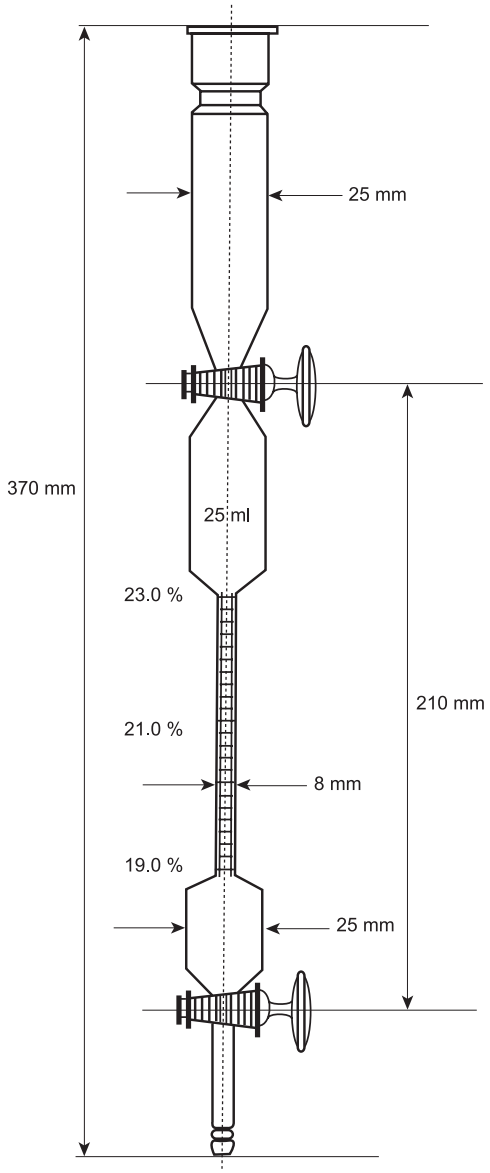

Figure 1238.-3. – *Gas burette*

STORAGE

As a gas, in suitable containers complying with the legal regulations or as a gas supplied by a pipe network.

IMPURITIES

A. carbon dioxide,

B. sulphur dioxide,

C. nitrogen monoxide,

D. nitrogen dioxide,

E. oil,

F. carbon monoxide,

G. water.

01/2008:1684

AIR, SYNTHETIC MEDICINAL

Aer medicinalis artificiosus

DEFINITION

Mixture of *Nitrogen (1247)* and *Oxygen (0417)*.

Content: 95.0 per cent to 105.0 per cent of the nominal value which is between 21.0 per cent *V/V* to 22.5 per cent *V/V* of oxygen (O_2).

CHARACTERS

Colourless and odourless gas.

Solubility: at a temperature of 20 °C and a pressure of 101 kPa, 1 volume dissolves in about 50 volumes of water.

PRODUCTION

Water (*2.5.28*): maximum 67 ppm *V/V*.

Assay (*2.5.27*). Carry out the determination of oxygen in gases.

IDENTIFICATION

First identification: C.

Second identification: A, B.

A. In a conical flask containing the substance to be examined, place a glowing splinter of wood. The splinter remains glowing.

B. Use a gas burette (Figure 1684.-1) of 25 ml capacity in the form of a chamber, in the middle of which is a tube graduated in 0.2 per cent between 19.0 per cent and 23.0 per cent, and isolated at each end by a tap with a conical barrel. The lower tap is joined to a tube with an olive-shaped nozzle and is used to introduce the gas into the apparatus. A cylindrical funnel above the upper tap is used to introduce the absorbent solution. Wash the burette with *water R* and dry. Open both taps. Connect the nozzle to the source of the substance to be examined and set the flow rate to 1 litre/min. Flush the burette by passing the substance to be examined through it for 1 min. Close the lower tap of the burette and immediately afterwards the upper tap. Rapidly disconnect the burette from the source of the substance to be examined. Rapidly give a half turn of the upper tap to eliminate any excess pressure in the burette. Keeping the burette vertical, fill the funnel with a freshly prepared mixture of 21 ml of a 560 g/l solution of *potassium hydroxide R* and 130 ml of a 200 g/l solution of *sodium dithionite R*. Open the upper tap slowly. The solution absorbs the oxygen and enters the burette. Allow to stand for 10 min without shaking. Read the level of the liquid meniscus on the graduated part of the burette. This figure represents the percentage *V/V* of oxygen. The value read is 95.0 per cent to 105.0 per cent of the nominal value.

C. It complies with the limits of the assay.

TESTS

Water vapour: maximum 67 ppm *V/V*, determined using a water vapour detector tube (*2.1.6*).

STORAGE

As a compressed gas in suitable containers complying with the legal regulations or as a compressed gas supplied by a pipe network, after mixing of the components.

LABELLING

The label states the nominal content of O_2 in per cent *V/V*.

IMPURITIES

A. water.

corrected 6.0

ALANINE

Alaninum

$C_3H_7NO_2$ M_r 89.1
[56-41-7]

DEFINITION

Alanine contains not less than 98.5 per cent and not more than the equivalent of 101.0 per cent of (*S*)-2-aminopropanoic acid, calculated with reference to the dried substance.

CHARACTERS

White or almost white, crystalline powder or colourless crystals, freely soluble in water, very slightly soluble in alcohol.

IDENTIFICATION

First identification: A, B.

Second identification: A, C, D.

A. It complies with the test for specific optical rotation (see Tests).

B. Examine by infrared absorption spectrophotometry (*2.2.24*), comparing with the spectrum obtained with *alanine CRS*. Examine the substances prepared as discs.

C. Examine the chromatograms obtained in the test for ninhydrin-positive substances. The principal spot in the chromatogram obtained with test solution (b) is similar in position, colour and size to the principal spot in the chromatogram obtained with reference solution (a).

D. Dissolve 0.5 g in a mixture of 1 ml of *water R*, 0.5 ml of a 100 g/l solution of *sodium nitrite R* and 0.25 ml of *hydrochloric acid R1*. Shake. Gas is given off. Add 2 ml of *dilute sodium hydroxide solution R*, followed by 0.25 ml of *iodinated potassium iodide solution R*. After about 30 min, a yellow precipitate with a characteristic odour is formed.

TESTS

Solution S. Dissolve 2.5 g in *distilled water R* and dilute to 50 ml with the same solvent.

Appearance of solution. Dilute 10 ml of solution S to 20 ml with *water R*. The solution is clear (*2.2.1*) and not more intensely coloured than reference solution BY_6 (*2.2.2, Method II*).

Specific optical rotation (*2.2.7*). Dissolve 2.50 g in *hydrochloric acid R1* and dilute to 25.0 ml with the same acid. The specific optical rotation is + 13.5 to + 15.5, calculated with reference to the dried substance.

Ninhydrin-positive substances. Examine by thin-layer chromatography (*2.2.27*), using a *TLC silica gel plate R*.

Test solution (a). Dissolve 0.10 g in *water R* and dilute to 10 ml with the same solvent.

Test solution (b). Dilute 1 ml of test solution (a) to 50 ml with *water R*.

Reference solution (a). Dissolve 10 mg of *alanine CRS* in *water R* and dilute to 50 ml with the same solvent.

Reference solution (b). Dilute 5 ml of test solution (b) to 20 ml with *water R*.

Reference solution (c). Dissolve 10 mg of *alanine CRS* and 10 mg of *glycine CRS* in *water R* and dilute to 25 ml with the same solvent.

Apply separately to the plate 5 µl of each solution. Allow the plate to dry in air. Develop over a path of 15 cm with a mixture of 20 volumes of *glacial acetic acid R*, 20 volumes of *water R* and 60 volumes of *butanol R*. Allow the plate to dry in air. Spray with *ninhydrin solution R*. Heat the plate at 100 °C to 105 °C for 15 min. Any spot in the chromatogram obtained with test solution (a), apart from the principal spot, is not more intense than the spot in the chromatogram obtained with reference solution (b) (0.5 per cent). The test is not valid unless the chromatogram obtained with reference solution (c) shows two clearly separated spots.

Chlorides (*2.4.4*). Dilute 5 ml of solution S to 15 ml with *water R*. The solution complies with the limit test for chlorides (200 ppm).

Sulphates (*2.4.13*). Dilute 10 ml of solution S to 15 ml with *distilled water R*. The solution complies with the limit test for sulphates (300 ppm).

Ammonium (*2.4.1*). 50 mg complies with limit test B for ammonium (200 ppm). Prepare the standard using 0.1 ml of *ammonium standard solution (100 ppm NH_4) R*.

Iron (*2.4.9*). In a separating funnel, dissolve 1.0 g in 10 ml of *dilute hydrochloric acid R*. Shake with three quantities, each of 10 ml, of *methyl isobutyl ketone R1*, shaking for 3 min each time. To the combined organic layers add 10 ml of *water R* and shake for 3 min. The aqueous layer complies with the limit test for iron (10 ppm).

Heavy metals (*2.4.8*). Dissolve 2.0 g in *water R* and dilute to 20 ml with the same solvent. 12 ml of the solution complies with limit test A for heavy metals (10 ppm). Prepare the standard using *lead standard solution (1 ppm Pb) R*.

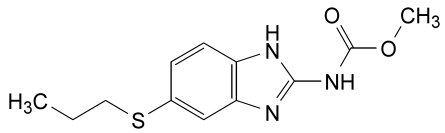
Loss on drying (*2.2.32*). Not more than 0.5 per cent, determined on 1.000 g by drying in an oven at 105 °C.

Sulphated ash (*2.4.14*). Not more than 0.1 per cent, determined on 1.0 g.

ASSAY

Dissolve 80.0 mg in 3 ml of *anhydrous formic acid R*. Add 30 ml of *anhydrous acetic acid R*. Using 0.1 ml of *naphtholbenzein solution R* as indicator, titrate with *0.1 M perchloric acid*, until the colour changes from brownish-yellow to green.

1 ml of *0.1 M perchloric acid* is equivalent to 8.91 mg of $C_3H_7NO_2$.



STORAGE

Store protected from light.

01/2008:1386
corrected 6.0

ALBENDAZOLE

Albendazolum

$C_{12}H_{15}N_3O_2S$ M_r 265.3
[54965-21-8]

DEFINITION

Methyl [5-(propylsulphanyl)-1*H*-benzimidazol-2-yl]carbamate.

Content: 98.0 per cent to 102.0 per cent (dried substance).

CHARACTERS

Appearance: white or slightly yellowish powder.

Solubility: practically insoluble in water, freely soluble in anhydrous formic acid, very slightly soluble in methylene chloride, practically insoluble in ethanol (96 per cent).

IDENTIFICATION

Infrared absorption spectrophotometry (*2.2.24*).

Preparation: discs.

Comparison: *albendazole CRS*.

TESTS

Appearance of solution. The solution is clear (*2.2.1*) and not more intensely coloured than reference solution BY_6 (*2.2.2, Method II*).

Dissolve 0.10 g in a mixture of 1 volume of *anhydrous formic acid R* and 9 volumes of *methylene chloride R* and dilute to 10 ml with the same mixture of solvents.

Related substances. Liquid chromatography (*2.2.29*).

Test solution. Dissolve 25.0 mg of the substance to be examined in 5 ml of *methanol R* containing 1 per cent *V/V* of *sulphuric acid R* and dilute to 50.0 ml with the mobile phase.

Reference solution (a). Dissolve 10.0 mg of the substance to be examined in 10 ml of *methanol R* containing 1 per cent *V/V* of *sulphuric acid R* and dilute to 100.0 ml with the mobile phase. Dilute 0.5 ml of this solution to 20.0 ml with the mobile phase.

Reference solution (b). Dissolve 50.0 mg of the substance to be examined and 50 mg of *oxibendazole CRS* in 5 ml of *methanol R* containing 1 per cent *V/V* of *sulphuric acid R* and dilute to 100.0 ml with the mobile phase.

Column:

– *size*: *l* = 0.25 m, Ø = 4.6 mm;
– *stationary phase*: spherical *end-capped octadecylsilyl silica gel for chromatography R* (5 µm) with a pore size of 10 nm and a carbon loading of 19 per cent.

Mobile phase: mix 300 volumes of a 1.67 g/l solution of *ammonium dihydrogen phosphate R* and 700 volumes of *methanol R*.

Flow rate: 0.7 ml/min.

Detection: spectrophotometer at 254 nm.

Injection: 20 µl.

Run time: 1.5 times the retention time of albendazole.

Relative retention with reference to albendazole: impurity D = about 0.40; impurities B and C = about 0.43; impurity E = about 0.47; impurity F = about 0.57; impurity A = about 0.80.

System suitability: reference solution (b):

– *resolution*: minimum 3.0 between the peaks due to albendazole and oxibendazole.

Limits:

– *impurities A, B, C, D, E, F*: for each impurity, not more than 1.5 times the area of the principal peak in the chromatogram obtained with reference solution (a) (0.75 per cent);
– *total*: not more than 3 times the area of the principal peak in the chromatogram obtained with reference solution (a) (1.5 per cent);
– *disregard limit*: 0.1 times the area of the principal peak in the chromatogram obtained with reference solution (a) (0.05 per cent).

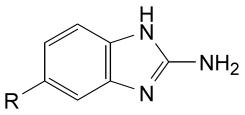
Loss on drying (*2.2.32*): maximum 0.5 per cent, determined on 1.000 g by drying in an oven at 105 °C for 4 h.

Sulphated ash (*2.4.14*): maximum 0.2 per cent, determined on 1.0 g.

ASSAY

In order to avoid overheating during the titration, mix thoroughly throughout and stop the titration immediately after the end-point has been reached.

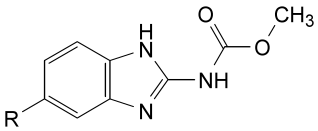
Dissolve 0.250 g in 3 ml of *anhydrous formic acid R* and add 40 ml of *anhydrous acetic acid R*. Titrate with *0.1 M perchloric acid*, determining the end-point potentiometrically (*2.2.20*).



1 ml of *0.1 M perchloric acid* is equivalent to 26.53 mg of $C_{12}H_{15}N_3O_2S$.

STORAGE

Protected from light.



IMPURITIES

Specified impurities: A, B, C, D, E, F.

A. R = S-CH_2-CH_2-CH_3: 5-(propylsulphanyl)-1*H*-benzimidazol-2-amine,

D. R = SO_2-CH_2-CH_2-CH_3: 5-(propylsulphonyl)-1*H*-benzimidazol-2-amine,

B. R = SO-CH_2-CH_2-CH_3: methyl [5-(propylsulphinyl)-1*H*-benzimidazol-2-yl]carbamate,

C. R = SO_2-CH_2-CH_2-CH_3: methyl [5-(propylsulphonyl)-1*H*-benzimidazol-2-yl]carbamate,

E. R = H: methyl (1*H*-benzimidazol-2-yl)carbamate,

F. R = S-CH_3: methyl [5-(methylsulphanyl)-1*H*-benzimidazol-2-yl]carbamate.

01/2008:1387
corrected 6.0

ALCHEMILLA

Alchemillae herba

DEFINITION

Whole or cut, dried, flowering, aerial parts of *Alchemilla vulgaris* L. *sensu latiore*.

Content: minimum 6.0 per cent of tannins, expressed as pyrogallol ($C_6H_6O_3$; M_r 126.1) (dried drug).

IDENTIFICATION

A. The greyish-green, partly brownish-green, radical leaves which are the main part of the drug are reniform or slightly semicircular with a diameter generally up to 8 cm, seldom up to 11 cm and have 7 to 9, or 11 lobes and a long petiole. The smaller, cauline leaves, which have a pair of large stipules at the base, have 5-9 lobes and a shorter petiole or they are sessile. The leaves are densely pubescent especially on the lower surface and have a coarsely serrated margin. Young leaves are folded with a whitish-silvery pubescence; older leaves are slightly pubescent and have a finely meshed venation, prominent on the lower surface. The greyish-green or yellowish-green petiole is pubescent, about 1 mm in diameter, with an adaxial groove. The apetalous flowers are yellowish-green or light green and about 3 mm in diameter. The calyx is double with 4 small segments of the epicalyx alternating with 4 larger sepals, subacute or triangular. They are 4 short stamens and a single carpel with a capitate stigma. The greyish-green or yellowish-green stem is pubescent, more or less longitudinally wrinkled and hollow.

B. Reduce to a powder (355) (*2.9.12*). The powder is greyish-green. Examine under a microscope using *chloral hydrate solution R*. The powder shows the following diagnostic characters: unicellular, narrow trichomes up to 1 mm long partly tortuous, acuminate, and bluntly pointed at the apex, with thick lignified walls, somewhat enlarged and pitted at the base; fragments of leaves with 2 layers of palisade parenchyma, the upper layer of which is 2-3 times longer than the lower layer and with spongy parenchyma, containing scattered cluster crystals of calcium oxalate, up to 25 µm in diameter; leaf fragments in surface view with sinuous or wavy epidermal cells, the anticlinal walls unevenly thickened and beaded, anomocytic stomata (*2.8.3*); groups of vascular tissue and lignified fibres from the petioles and stems, the vessels spirally thickened or with bordered pits; occasional thin-walled conical trichomes, about 300 µm long; thin-walled parenchyma containing cluster crystals of calcium oxalate; spherical pollen grains, about 15 µm in diameter, with 3 distinct pores and a granular exine; occasional fragments of the ovary wall with cells containing a single crystal of calcium oxalate.

C. Thin-layer chromatography (*2.2.27*).

Test solution. To 0.5 g of the powdered drug (355) (*2.9.12*) add 5 ml of *methanol R* and heat in a water-bath at 70 °C under a reflux condenser for 5 min. Cool and filter.

Reference solution. Dissolve 1.0 mg of *caffeic acid R* and 1.0 mg of *chlorogenic acid R* in 10 ml of *methanol R*.

Plate: *TLC silica gel plate R*.

Mobile phase: *anhydrous formic acid R, water R, ethyl acetate R* (8:8:84 *V/V/V*).

Application: 20 µl of the test solution and 10 µl of the reference solution, as bands.

Development: over a path of 10 cm.

Drying: at 100-105 °C for 5 min.

Detection: spray with a 10 g/l solution of *diphenylboric acid aminoethyl ester R* in *methanol R*. Subsequently spray with a 50 g/l solution of *macrogol 400 R* in *methanol R*. Allow to dry in air for about 30 min. Examine in ultraviolet light at 365 nm.

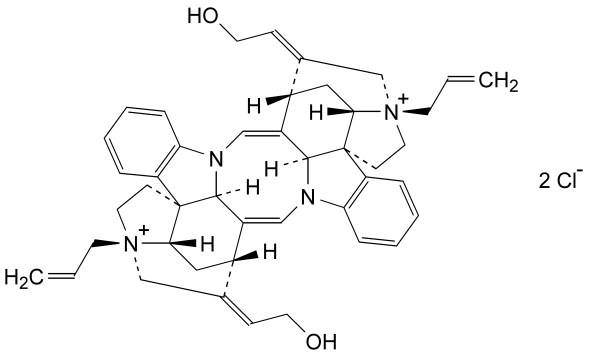
Results: see below the sequence of the zones present in the chromatograms obtained with the reference solution and the test solution. Furthermore, other fluorescent zones may be present in the chromatogram obtained with the test solution.

Top of the plate	
	2 red fluorescent zones (chlorophyll)
Caffeic acid: a light blue florescent zone	1 or 2 intense light blue fluorescent zones
	One or several intense green or greenish-yellow fluorescent zones
———	———
Chlorogenic acid: a light blue fluorescent zone	An intense yellow or orange fluorescent zone
———	———
Reference solution	**Test solution**

TESTS

Loss on drying (*2.2.32*): maximum 10.0 per cent, determined on 1.000 g of powdered drug (355) (*2.9.12*) by drying in an oven at 105 °C for 2 h.

Total ash (*2.4.16*): maximum 12.0 per cent.



ASSAY

Carry out the determination of tannins in herbal drugs (*2.8.14*). Use 0.50 g of the powdered drug (355) (*2.9.12*).

01/2008:1285

ALCURONIUM CHLORIDE

Alcuronii chloridum

$C_{44}H_{50}Cl_2N_4O_2$ M_r 738

[15180-03-7]

DEFINITION

(1*R*,3a*S*,10*S*,11a*S*,12*R*,14a*S*,19a*S*,20b*S*,21*S*,22a*S*,23*E*,26*E*)-23,26-bis(2-Hydroxyethylidene)-1,12-bis(prop-2-enyl)-2,3,11,11a,13,14,22,22a-octahydro-10*H*,21*H*-1,21:10,12-diethano-19a*H*,20b*H*-[1,5]diazocino[1,2,3-*lm*:5,6,7-*l'm'*]dipyrrolo[2',3'-*d*:2'',3''-*d'*]dicarbazolediium dichloride (4,4'-didesmethyl-4,4'-bis(prop-2-enyl)toxiferin I dichloride).

Content: 98.0 per cent to 102.0 per cent (anhydrous substance).

CHARACTERS

Appearance: white or slightly greyish-white, crystalline powder.

Solubility: freely soluble in water and in methanol, soluble in ethanol (96 per cent), practically insoluble in cyclohexane.

Carry out the identification, tests and assay as rapidly as possible avoiding exposure to actinic light.

IDENTIFICATION

First identification: A, C.

Second identification: B, C.

A. Infrared absorption spectrophotometry (*2.2.24*).

Comparison: *alcuronium chloride CRS*.

B. Thin-layer chromatography (*2.2.27*).

Test solution. Dissolve 10 mg of the substance to be examined in *methanol R* and dilute to 10 ml with the same solvent.

Reference solution. Dissolve 10 mg of *alcuronium chloride CRS* in *methanol R* and dilute to 10 ml with the same solvent.

Plate: *TLC silica gel plate R*.

Mobile phase: mix 15 volumes of a 58.4 g/l solution of *sodium chloride R*, 35 volumes of *dilute ammonia R2* and 50 volumes of *methanol R*.

Application: 10 µl.

Development: over a path of 15 cm.

Drying: in air for 10 min.

Detection: spray with *0.1 M ammonium and cerium nitrate.*

Results: the principal spot in the chromatogram obtained with the test solution is similar in position, colour and size to the principal spot in the chromatogram obtained with the reference solution.

C. It gives reaction (a) of chlorides (*2.3.1*).

TESTS

Solution S. Dissolve 0.250 g in *carbon dioxide-free water R* and dilute to 25.0 ml with the same solvent.

Appearance of solution. Solution S is clear (*2.2.1*) and not more intensely coloured than reference solution Y_6, BY_6 or B_6 (*2.2.2, Method I*).

Acidity or alkalinity. To 10 ml of solution S add 0.1 ml of *methyl red solution R* and 0.2 ml of *0.01 M hydrochloric acid*. The solution is red. Add 0.4 ml of *0.01 M sodium hydroxide*. The solution is yellow.

Specific optical rotation (*2.2.7*): – 430 to – 451 (anhydrous substance), determined on solution S.

Propan-2-ol (*2.4.24, System A*): maximum 1.0 per cent.

Related substances. Liquid chromatography (*2.2.29*).

Solvent mixture. Mix 100 ml of *methanol R*, 200 ml of *acetonitrile R* and 200 ml of a 6.82 g/l solution of *potassium dihydrogen phosphate R*. Dissolve 1.09 g of *sodium laurylsulphonate for chromatography R* in the mixture and adjust the apparent pH to 8.0 with a 100 g/l solution of *sodium hydroxide R*.

Test solution. Dissolve 0.20 g of the substance to be examined in the solvent mixture and dilute to 100.0 ml with the solvent mixture.

Reference solution (a). Dilute 0.5 ml of the test solution to 100.0 ml with the solvent mixture.

Reference solution (b). Dilute 4.0 ml of reference solution (a) to 10.0 ml with the solvent mixture.

Reference solution (c). Dilute 1.0 ml of reference solution (a) to 10.0 ml with the solvent mixture.

Reference solution (d). To 5.0 ml of the test solution add 5.0 mg of *allylstrychnine bromide CRS*, dissolve in the solvent mixture and dilute to 100.0 ml with the solvent mixture.

Column:

– *size*: *l* = 0.25 m, Ø = 4 mm;

– *stationary phase*: *octylsilyl silica gel for chromatography R* (5 µm).

Mobile phase: mix 200 ml of *methanol R*, 400 ml of *acetonitrile R* and 400 ml of a 6.82 g/l solution of *potassium dihydrogen phosphate R*. Dissolve 2.18 g of *sodium laurylsulphonate for chromatography R* in the mixture and adjust the apparent pH to 5.4 with a 100 g/l solution of *phosphoric acid R*.

Flow rate: 1.2 ml/min.

Detection: spectrophotometer at 254 nm.

Injection: 10 µl.

Run time: twice the retention time of alcuronium.

System suitability: reference solution (d):

– *resolution*: minimum 4.0 between the peaks due to *N*-allylstrychnine and alcuronium.

Limits:

– *impurities A, B*: for each impurity, not more than the area of the principal peak in the chromatogram obtained with reference solution (a) (0.5 per cent) and not more than one of the peaks has an area greater than the area of the principal peak in the chromatogram obtained with reference solution (b) (0.2 per cent);

– *total*: not more than twice the area of the principal peak in the chromatogram obtained with reference solution (a) (1 per cent);

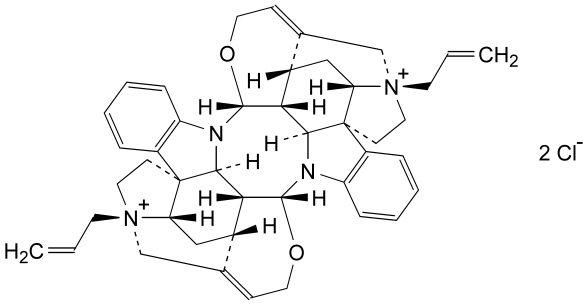
– *disregard limit*: the area of the principal peak in the chromatogram obtained with reference solution (c) (0.05 per cent).

Water (*2.5.12*): maximum 5.0 per cent, determined on 0.500 g.

Sulphated ash (*2.4.14*): maximum 0.1 per cent, determined on 1.0 g.

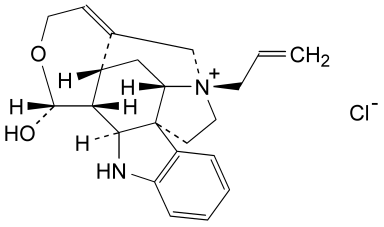
ASSAY

Dissolve 0.300 g by stirring in 70 ml of *acetic anhydride R* for 1 min. Titrate with *0.1 M perchloric acid* until the colour changes from violet-blue to greenish-blue, using 0.1 ml of *crystal violet solution R* as indicator.



1 ml of *0.1 M perchloric acid* is equivalent to 36.9 mg of $C_{44}H_{50}Cl_2N_4O_2$.

STORAGE

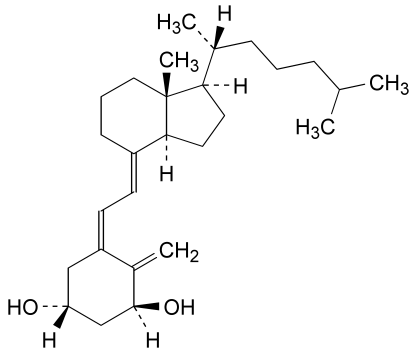


In an airtight container under nitrogen, protected from light, at a temperature of 2 °C to 8 °C.

IMPURITIES

Specified impurities: A, B.

A. (1*R*,3a*S*,9*R*,9a*R*,10*R*,11a*S*,12*R*,14a*S*,19a*S*,20*R*,20a*R*,20b*S*,21*R*,22a*S*)-1,12-bis(prop-2-enyl)-2,3,9a,11,11a,13,14,19a,20a,21,22,22a-dodecahydro-10*H*,20b*H*-1,23:12,27-dimethano-9,10:20,21-bis(epoxyprop[2]eno)-9*H*,20*H*-[1,5]diazocino[1,2,3-*lm*:5,6,7-*l'm'*]dipyrrolo[2',3'-*d*:2'',3'':*d'*]dicarbazolediium dichloride (4,4'-diallylcaracurin V dichloride),



B. (4b*S*,7*R*,7a*S*,8a*R*,13*R*,13a*R*,13b*S*)-13-hydroxy-7-(prop-2-enyl)-5,6,7a,8,8a,11,13,13a,13b,14-decahydro-7,9-methano-7*H*-oxepino[3,4-*a*]pyrrolo[2,3-*d*]carbazolium chloride ((4*R*,17*R*)-4-allyl-17,18-epoxy-17-hydroxy-19,20-didehydrocuranium chloride).

01/2008:1286

ALFACALCIDOL

Alfacalcidolum

$C_{27}H_{44}O_2$ M_r 400.6
[41294-56-8]

DEFINITION

(5*Z*,7*E*)-9,10-Secocholesta-5,7,10(19)-triene-1α,3β-diol.

Content: 97.0 per cent to 102.0 per cent.

CHARACTERS

Appearance: white or almost white crystals.

Solubility: practically insoluble in water, freely soluble in ethanol (96 per cent), soluble in fatty oils.

It is sensitive to air, heat and light.

A reversible isomerisation to pre-alfacalcidol takes place in solution, depending on temperature and time. The activity is due to both compounds.

IDENTIFICATION

A. Infrared absorption spectrophotometry (*2.2.24*).

Comparison: *Ph. Eur. reference spectrum of alfacalcidol.*

B. Examine the chromatograms obtained in the test for related substances.

Results: the principal peak in the chromatogram obtained with the test solution is similar in retention time and size to the principal peak in the chromatogram obtained with reference solution (a).

TESTS

Related substances. Liquid chromatography (*2.2.29*): use the normalisation procedure. *Carry out the test as rapidly as possible, avoiding exposure to actinic light and air.*

Test solution. Dissolve 1.0 mg of the substance to be examined without heating in 10.0 ml of the mobile phase.

Reference solution (a). Dissolve 1.0 mg of *alfacalcidol CRS* without heating in 10.0 ml of the mobile phase.

Reference solution (b). Dilute 1.0 ml of reference solution (a) to 100.0 ml with the mobile phase.

Reference solution (c). Heat 2 ml of reference solution (a) in a water-bath at 80 °C under a reflux condenser for 2 h and cool.

Column:

– *size*: *l* = 0.25 m, Ø = 4.0 mm;
– *stationary phase*: *octadecylsilyl silica gel for chromatography R2* (5 μm).

Mobile phase: *ammonia R, water R, acetonitrile R* (1:200:800 *V/V/V*).

Flow rate: 2.0 ml/min.

Detection: spectrophotometer at 265 nm.

Injection: 100 μl of the test solution and reference solutions (b) and (c).

Run time: twice the retention time of alfacalcidol.

Relative retention with reference to alfacalcidol: pre-alfacalcidol = about 1.3.

System suitability: reference solution (c):

– *resolution*: minimum 4.0 between the peaks due to pre-alfacalcidol and alfacalcidol; if necessary, adjust the proportions of the constituents of the mobile phase.

Limits:

– *impurities A, B, C*: for each impurity, maximum 0.5 per cent;
– *total*: maximum 1.0 per cent;
– *disregard limit*: 0.1 times the area of the principal peak in the chromatogram obtained with reference solution (b) (0.1 per cent); disregard the peak due to pre-alfacalcidol.

ASSAY

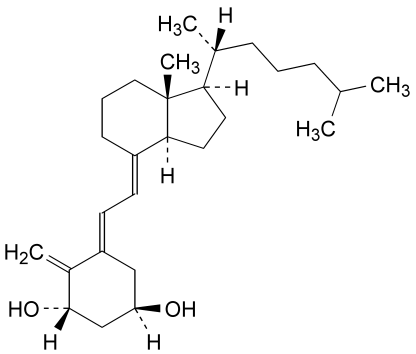
Liquid chromatography (*2.2.29*) as described in the test for related substances with the following modification.

Injection: the test solution and reference solutions (a) and (c).

System suitability: reference solution (c):

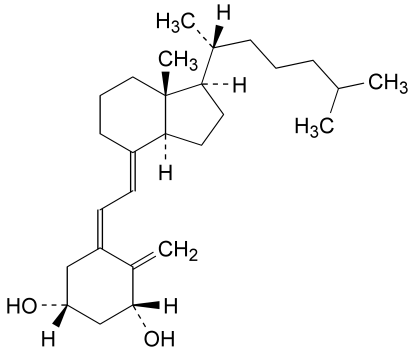
– *repeatability*: maximum relative standard deviation of 1 per cent for the peak due to alfacalcidol after 6 injections.

Calculate the percentage content of $C_{27}H_{44}O_2$ from the declared content of *alfacalcidol CRS*.



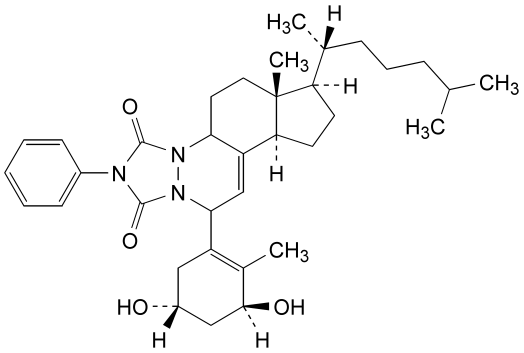
STORAGE

Under nitrogen, in an airtight container, protected from light, at a temperature of 2 °C to 8 °C.



The contents of an opened container are to be used immediately.

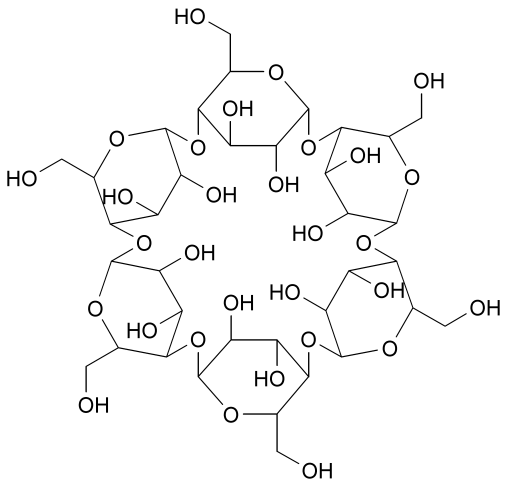
IMPURITIES



Specified impurities: *A, B, C.*

A. (5*E*,7*E*)-9,10-secocholesta-5,7,10(19)-triene-1α,3β-diol (*trans*-alfacalcidol),

B. (5*Z*,7*E*)-9,10-secocholesta-5,7,10(19)-triene-1β,3β-diol (1β-calcidol),



C. triazoline adduct of pre-alfacalcidol.

01/2008:1487

ALFADEX

Alfadexum

$[C_6H_{10}O_5]_6$ M_r 973
[10016-20-3]

DEFINITION

Cyclohexakis-(1→4)-(α-D-glucopyranosyl) (cyclomaltohexaose or α-cyclodextrin).

Content: 98.0 per cent to 101.0 per cent (dried substance).

CHARACTERS

Appearance: white or almost white, amorphous or crystalline powder.

Solubility: freely soluble in water and in propylene glycol, practically insoluble in anhydrous ethanol and in methylene chloride.

IDENTIFICATION

A. Specific optical rotation (see Tests).

B. Examine the chromatograms obtained in the assay.

Results: the principal peak in the chromatogram obtained with test solution (b) is similar in retention time and size to the principal peak in the chromatogram obtained with reference solution (c).

C. Dissolve 0.2 g in 2 ml of *iodine solution R4* by warming on a water-bath, and allow to stand at room temperature; a yellowish-brown precipitate is formed.

TESTS

Solution S. Dissolve 1.000 g in *carbon dioxide-free water R* and dilute to 100.0 ml with the same solvent.

Appearance of solution. Solution S is clear (*2.2.1*).

pH (*2.2.3*): 5.0 to 8.0.

Mix 1 ml of a 223.6 g/l solution of *potassium chloride R* and 30 ml of solution S.

Specific optical rotation (*2.2.7*): + 147 to + 152 (dried substance), determined on solution S.

Reducing sugars: maximum 0.2 per cent.

Test solution. To 1 ml of solution S add 1 ml of *cupri-tartaric solution R4*. Heat on a water-bath for 10 min, cool to room temperature. Add 10 ml of *ammonium molybdate reagent R1* and allow to stand for 15 min.

Reference solution. Prepare a reference solution at the same time and in the same manner as the test solution, using 1 ml of a 0.02 g/l solution of *glucose R*.

Measure the absorbance (*2.2.25*) of the test solution and the reference solution at the absorption maximum at 740 nm using *water R* as the compensation liquid. The absorbance of the test solution is not greater than that of the reference solution.

Light-absorbing impurities. Examine solution S between 230 nm and 750 nm. Between 230 nm and 350 nm, the absorbance (*2.2.25*) is not greater than 0.10. Between 350 nm and 750 nm, the absorbance (*2.2.25*) is not greater than 0.05.

Related substances. Liquid chromatography (*2.2.29*).

Test solution (a). Dissolve 0.25 g of the substance to be examined in *water R* with heating, cool and dilute to 25.0 ml with the same solvent.

Test solution (b). Dilute 5.0 ml of test solution (a) to 50.0 ml with *water R*.

Reference solution (a). Dissolve 25.0 mg of *betadex CRS* (impurity A), 25.0 mg of *gammacyclodextrin CRS* (impurity B) and 50.0 mg of *alfadex CRS* in *water R*, then dilute to 50.0 ml with the same solvent.

Reference solution (b). Dilute 5.0 ml of reference solution (a) to 50.0 ml with *water R*.

Reference solution (c). Dissolve 25.0 mg of *alfadex CRS* in *water R* and dilute to 25.0 ml with the same solvent.

Column:

– *size*: *l* = 0.25 m, Ø = 4.6 mm;

– *stationary phase*: *octadecylsilyl silica gel for chromatography R* (10 µm).

Mobile phase: *methanol R, water R* (10:90 *V/V*).

Flow rate: 1.5 ml/min.

Detection: differential refractometer.

Equilibration: with the mobile phase for about 3 h.

Injection: 50 µl of test solution (a) and reference solutions (a) and (b).

Run time: 3.5 times the retention time of alfadex.

Relative retention with reference to alfadex (retention time = about 10 min): impurity B = about 0.7; impurity A = about 2.2.

System suitability: reference solution (a):

– *resolution*: minimum 1.5 between the peaks due to impurity B and alfadex; if necessary, adjust the concentration of methanol in the mobile phase.

Limits:

– *impurities A, B*: for each impurity, not more than 0.5 times the area of the corresponding peak in the chromatogram obtained with reference solution (b) (0.25 per cent);

– *sum of impurities other than A and B*: not more than 0.5 times the area of the peak due to alfadex in the chromatogram obtained with reference solution (b) (0.5 per cent).

Heavy metals (*2.4.8*): maximum 10 ppm.

2.0 g complies with test C. Prepare the reference solution using 2 ml of *lead standard solution (10 ppm Pb) R*.

Loss on drying (*2.2.32*): maximum 11 per cent, determined on 1.000 g by drying in an oven at 120 °C for 2 h.

Sulphated ash (*2.4.14*): maximum 0.1 per cent, determined on 1.0 g.

ASSAY

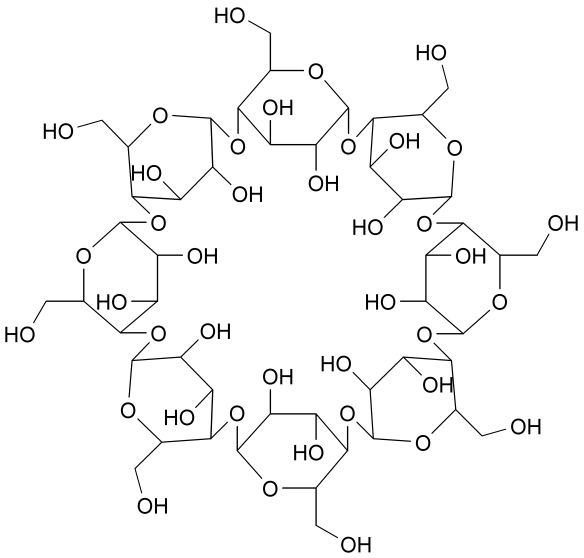
Liquid chromatography (*2.2.29*) as described in the test for related substances with the following modifications.

Injection: test solution (b) and reference solutions (a) and (c).

System suitability: reference solution (a):

– *repeatability*: maximum relative standard deviation of 2.0 per cent for the peak due to alfadex after 5 injections.

Calculate the percentage content of $[C_6H_{10}O_5]_6$ from the declared content of *alfadex CRS*.



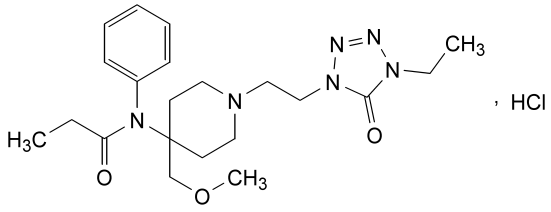
STORAGE

In an airtight container.

IMPURITIES

Specified impurities: A, B.

A. betadex,



B. cyclooctakis-(1→4)-(α-D-glucopyranosyl) (cyclomaltooctaose or γ-cyclodextrin).

01/2008:1062

ALFENTANIL HYDROCHLORIDE

Alfentanili hydrochloridum

$C_{21}H_{33}ClN_6O_3$ M_r 453.0
[69049-06-5]

DEFINITION

N-[1-[2-(4-Ethyl-4,5-dihydro-5-oxo-1*H*-tetrazol-1-yl)ethyl]-4-(methoxymethyl)piperidin-4-yl]-*N*-phenylpropanamide hydrochloride.

Content: 98.5 per cent to 101.5 per cent (anhydrous substance).

CHARACTERS

Appearance: white or almost white powder.

Solubility: freely soluble in water, in ethanol (96 per cent) and in methanol.

mp: about 140 °C, with decomposition.

IDENTIFICATION

A. Infrared absorption spectrophotometry (*2.2.24*).

Comparison: *Ph. Eur. reference spectrum of alfentanil hydrochloride.*

B. Dissolve 50 mg in a mixture of 0.4 ml of *ammonia R* and 2 ml of *water R*. Mix, allow to stand for 5 min and filter. Acidify the filtrate with *dilute nitric acid R*. It gives reaction (a) of chlorides (*2.3.1*).

TESTS

Appearance of solution. The solution is clear (*2.2.1*) and colourless (*2.2.2, Method II*).

Dissolve 0.2 g in *water R* and dilute to 20 ml with the same solvent.

Related substances. Liquid chromatography (*2.2.29*).

Test solution. Dissolve 0.100 g of the substance to be examined in *methanol R* and dilute to 10.0 ml with the same solvent.

Reference solution (a). In order to produce impurity E *in situ*, dissolve 10 mg of the substance to be examined in 10.0 ml of *dilute hydrochloric acid R*. Heat on a water-bath under a reflux condenser for 4 h. Neutralise with 10.0 ml of *dilute sodium hydroxide solution R*. Evaporate to dryness on a water-bath. Cool and take up the residue in 10 ml of *methanol R*. Filter.

Reference solution (b). Dilute 1.0 ml of the test solution to 100.0 ml with *methanol R*. Dilute 5.0 ml of this solution to 20.0 ml with *methanol R*.

Column:

– *size*: *l* = 0.1 m, Ø = 4.6 mm;
– *stationary phase*: *octadecylsilyl silica gel for chromatography R* (3 µm).

Mobile phase:

– *mobile phase A*: 5 g/l solution of *ammonium carbonate R* in a mixture of 10 volumes of *tetrahydrofuran R* and 90 volumes of *water R*;
– *mobile phase B*: *acetonitrile R*;

Time (min)	Mobile phase A (per cent *V/V*)	Mobile phase B (per cent *V/V*)
0 - 15	90 → 40	10 → 60
15 - 20	40	60
20 - 25	90	10

Flow rate: 1.5 ml/min.

Detection: spectrophotometer at 220 nm.

Equilibration: with *acetonitrile R* for at least 30 min and then with the mobile phase at the initial composition for at least 5 min.

Injection: 10 µl; inject *methanol R* as a blank.

Retention time: impurity E = about 6 min; alfentanil = about 7 min.

Identification of impurities: use the chromatogram obtained with reference solution (a) to identify the peak due to impurity E; disregard any other peak.

System suitability: reference solution (a):

– *resolution*: minimum 4.0 between the peaks due to alfentanil and impurity E; if necessary, adjust the concentration of acetonitrile in the mobile phase or adjust the time programme for the linear-gradient elution.

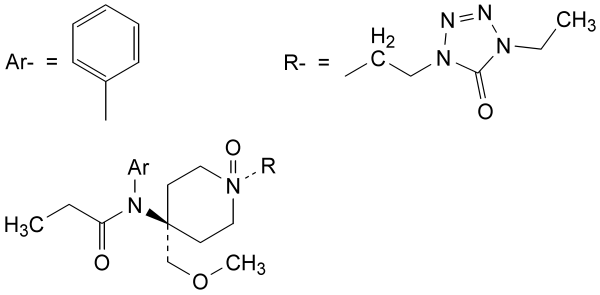
Limits:

– *impurities A, B, C, D, E, F, G, H*: for each impurity, not more than the area of the principal peak in the chromatogram obtained with reference solution (b) (0.25 per cent);
– *total*: not more than twice the area of the principal peak in the chromatogram obtained with reference solution (b) (0.5 per cent);
– *disregard limit*: 0.2 times the area of the principal peak in the chromatogram obtained with reference solution (b) (0.05 per cent); disregard any peak due to the blank.

Water (*2.5.12*): 3.0 per cent to 4.0 per cent, determined on 0.500 g.

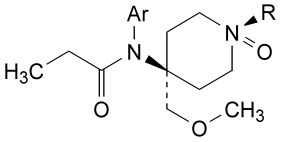
ASSAY

Dissolve 0.350 g in 50 ml of a mixture of 1 volume of *ethanol (96 per cent) R* and 4 volumes of *water R* and add 5.0 ml of *0.01 M hydrochloric acid*. Titrate with *0.1 M sodium hydroxide*, determining the end-point potentiometrically (*2.2.20*). Read the volume added between the 2 points of inflexion.



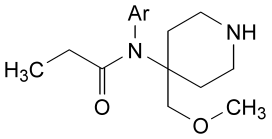
1 ml of *0.1 M sodium hydroxide* is equivalent to 45.30 mg of $C_{21}H_{33}ClN_6O_3$.

STORAGE

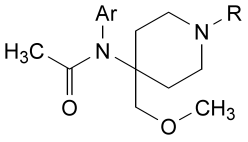


Protected from light.

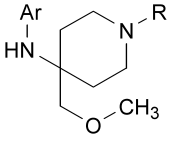
IMPURITIES



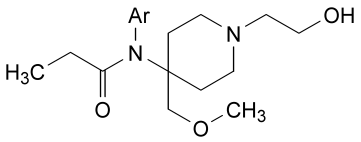
Specified impurities: A, B, C, D, E, F, G, H.



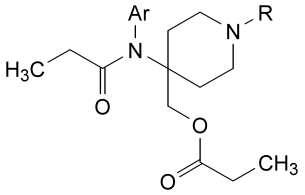
A. *cis-N*-[1-[2-(4-ethyl-4,5-dihydro-5-oxo-1*H*-tetrazol-1-yl)ethyl]-4-(methoxymethyl)piperidin-4-yl]-*N*-phenylpropanamide *N*-oxide,



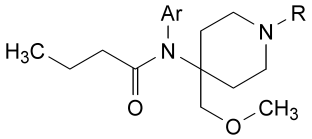
B. *trans-N*-[1-[2-(4-ethyl-4,5-dihydro-5-oxo-1*H*-tetrazol-1-yl)ethyl]-4-(methoxymethyl)piperidin-4-yl]-*N*-phenylpropanamide *N*-oxide,



C. *N*-[4-(methoxymethyl)piperidin-4-yl]-*N*-phenylpropanamide,



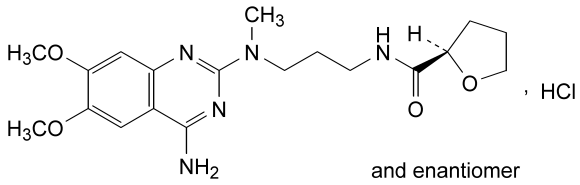
D. *N*-[1-[2-(4-ethyl-4,5-dihydro-5-oxo-1*H*-tetrazol-1-yl)ethyl]-4-(methoxymethyl)piperidin-4-yl]-*N*-phenylacetamide,



E. 1-ethyl-1,4-dihydro-4-[2-[[4-(methoxymethyl)-4-phenylamino]piperidin-1-yl]ethyl]-5*H*-tetrazol-5-one,

F. *N*-[1-(2-hydroxyethyl)-4-(methoxymethyl)piperidin-4-yl]-*N*-phenylpropanamide,

G. *N*-[1-[2-(4-ethyl-4,5-dihydro-5-oxo-1*H*-tetrazol-1-yl)ethyl]-4-(propanoyloxymethyl)piperidin-4-yl]-*N*-phenylpropanamide,



H. *N*-[1-[2-(4-ethyl-4,5-dihydro-5-oxo-1*H*-tetrazol-1-yl)ethyl]-4-(methoxymethyl)piperidin-4-yl]-*N*-phenylbutanamide.

01/2008:1287

ALFUZOSIN HYDROCHLORIDE

Alfuzosini hydrochloridum

and enantiomer

$C_{19}H_{28}ClN_5O_4$ M_r 425.9
[81403-68-1]

DEFINITION

Alfuzosin hydrochloride contains not less than 98.5 per cent and not more than the equivalent of 101.0 per cent of (*RS*)-*N*-[3-[(4-amino-6,7-dimethoxyquinazolin-2-yl)(methyl)amino]propyl]tetrahydrofuran-2-carboxamide hydrochloride, calculated with reference to the anhydrous substance.

CHARACTERS

A white or almost white, crystalline powder, slightly hygroscopic, freely soluble in water, sparingly soluble in alcohol, practically insoluble in methylene chloride.

IDENTIFICATION

A. Examine by infrared absorption spectrophotometry (*2.2.24*), comparing with the spectrum obtained with *alfuzosin hydrochloride CRS*. Examine the substances prepared as discs.

B. To 1 ml of solution S (see Tests) add 1 ml of *water R*. The solution gives reaction (a) of chlorides (*2.3.1*).

TESTS

Solution S. Dissolve 0.500 g in *carbon dioxide-free water R* and dilute to 25.0 ml with the same solvent.

pH (*2.2.3*). The pH of freshly prepared solution S is 4.0 to 6.0.

Optical rotation (*2.2.7*). The angle of optical rotation, determined on solution S, is – 0.10° to + 0.10°.

Related substances. Examine by liquid chromatography (*2.2.29*).

Test solution. Dissolve 20.0 mg of the substance to be examined in the mobile phase and dilute to 100.0 ml with the mobile phase.

Reference solution (a). Dilute 1.0 ml of the test solution to 50.0 ml with the mobile phase. Dilute 5.0 ml of the solution to 20.0 ml with the mobile phase.

Reference solution (b). Dissolve 5 mg of *alfuzosin impurity A CRS* in the mobile phase and dilute to 25 ml with the mobile phase. To 1 ml of the solution, add 1 ml of the test solution and dilute to 100 ml with the mobile phase.

The chromatographic procedure may be carried out using:

– a stainless steel column 0.15 m long and 4.6 mm in internal diameter packed with microparticulate *octadecylsilyl silica gel for chromatography R* (5 µm), with a carbon loading of 18.5 per cent, a specific surface area of 320 m^2/g, a pore size of 15 nm, and end-capped with hexamethyldisilane,

– as mobile phase at a flow rate of 1.5 ml/min a mixture of 1 volume of *tetrahydrofuran R*, 20 volumes of *acetonitrile R* and 80 volumes of a solution of sodium perchlorate prepared as follows: dilute 5.0 ml of *perchloric acid R* in 900 ml of *water R*, adjust to pH 3.5 with *dilute sodium hydroxide solution R* and dilute to 1000 ml with *water R*,

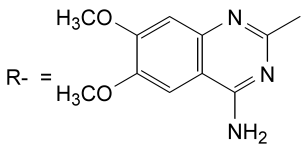
– as detector a spectrophotometer set at 254 nm.

Inject 20 µl of reference solution (b). Adjust the sensitivity of the system so that the height of the two peaks in the chromatogram obtained is at least 50 per cent of the full scale of the recorder. The test is not valid unless the resolution between the peaks corresponding to alfuzosin and alfuzosin impurity A is at least 3.0. Inject 20 µl of the test solution and 20 µl of reference solution (a). In the chromatogram obtained with the test solution: the area of any peak, apart from the principal peak, is not greater than 0.6 times the area of the principal peak in the chromatogram obtained with reference solution (a) (0.3 per cent); the sum of the areas of all the peaks, apart from the principal peak, is not greater than the area of the principal peak in the chromatogram obtained with reference solution (a) (0.5 per cent). Disregard any peak with an area less than 0.025 times that of the principal peak in the chromatogram obtained with reference solution (a).

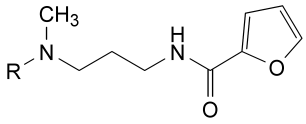
Water (*2.5.12*). Not more than 2.0 per cent, determined on 0.500 g by the semi-micro determination of water.

Sulphated ash (*2.4.14*). Not more than 0.1 per cent, determined on 1.0 g.

ASSAY



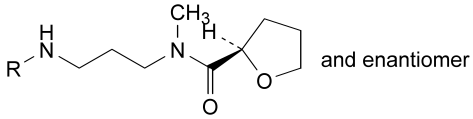
Dissolve 0.300 g in a mixture of 40 ml of *anhydrous acetic acid R* and 40 ml of *acetic anhydride R*. Titrate with *0.1 M perchloric acid,* determining the end-point potentiometrically (*2.2.20*).



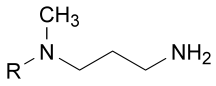
1 ml of *0.1 M perchloric acid* is equivalent to 42.59 mg of $C_{19}H_{28}ClN_5O_4$.

STORAGE

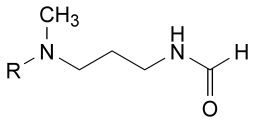
Store in an airtight container, protected from light.



IMPURITIES



A. *N*-[3-[(4-amino-6,7-dimethoxyquinazolin-2-yl)(methyl)amino]propyl]furan-2-carboxamide,



B. R-Cl: 2-chloro-6,7-dimethoxyquinazolin-4-amine,

C. (*RS*)-*N*-[3-[(4-amino-6,7-dimethoxyquinazolin-2-yl)amino]propyl]-*N*-methyltetrahydrofuran-2-carboxamide,

D. *N*-(4-amino-6,7-dimethoxyquinazolin-2-yl)-*N*-methylpropane-1,3-diamine,

E. *N*-[3-[(4-amino-6,7-dimethoxyquinazolin-2-yl)(methyl)amino]propyl]formamide.

IDENTIFICATION

A. To 0.2 g add 20 ml of *water R* and 0.5 ml of *sodium carbonate solution R*. Shake and filter. To 5 ml of the filtrate add 1 ml of *calcium chloride solution R*. A voluminous gelatinous mass is formed.

B. To 5 ml of the filtrate obtained in identification test A add 0.5 ml of a 123 g/l solution of *magnesium sulphate R*. No voluminous gelatinous mass is formed.

C. To 5 mg add 5 ml of *water R*, 1 ml of a freshly prepared 10 g/l solution of *1,3-dihydroxynaphthalene R* in *ethanol (96 per cent) R* and 5 ml of *hydrochloric acid R*. Boil gently for 3 min, cool, add 5 ml of *water R*, and shake with 15 ml of *di-isopropyl ether R*. Carry out a blank test. The upper layer obtained with the substance to be examined exhibits a deeper bluish-red colour than that obtained with the blank.

TESTS

Chlorides: maximum 1,0 per cent.

To 2.50 g add 50 ml of *dilute nitric acid R*, shake for 1 h and dilute to 100.0 ml with *dilute nitric acid R*. Filter. To 50.0 ml of the filtrate add 10.0 ml of *0.1 M silver nitrate* and 5 ml of *toluene R*. Titrate with *0.1 M ammonium thiocyanate*, using 2 ml of *ferric ammonium sulphate solution R2* as indicator and shaking vigorously towards the end-point.

1 ml of *0.1 M silver nitrate* is equivalent to 3.545 mg of Cl.

Heavy metals (*2.4.8*): maximum 20 ppm.

1.0 g complies with test F. Prepare the reference solution using 2 ml of *lead standard solution (10 ppm Pb) R*.

Loss on drying (*2.2.32*): maximum 15.0 per cent, determined on 0.1000 g by drying in an oven at 105 °C for 4 h.

Sulphated ash (*2.4.14*): maximum 8.0 per cent (dried substance), determined on 0.100 g.

Microbial contamination. Total viable aerobic count (*2.6.12*) not more than 10^2 micro-organisms per gram, determined by plate-count. It complies with the tests for *Escherichia coli* and *Salmonella* (*2.6.13*).

ASSAY

To 0.2500 g add 25 ml of *water R*, 25.0 ml of *0.1 M sodium hydroxide* and 0.2 ml of *phenolphthalein solution R*. Titrate with *0.1 M hydrochloric acid*.

1 ml of *0.1 M sodium hydroxide* is equivalent to 4.502 mg of carboxyl groups (COOH).

01/2008:0591
corrected 6.0

ALGINIC ACID

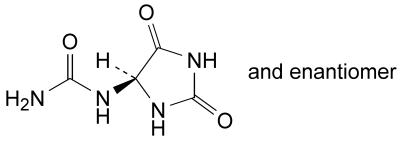
Acidum alginicum

DEFINITION

Mixture of polyuronic acids $[(C_6H_8O_6)_n]$ composed of residues of D-mannuronic and L-guluronic acids, obtained mainly from algae belonging to the Phaeophyceae. A small proportion of the carboxyl groups may be neutralised.

Content: 19.0 per cent to 25.0 per cent of carboxyl groups (COOH) (dried substance).

CHARACTERS



Appearance: white or pale yellowish-brown, crystalline or amorphous powder.

Solubility: very slightly soluble or practically insoluble in ethanol (96 per cent), practically insoluble in organic solvents. It swells in water but does not dissolve; it dissolves in solutions of alkali hydroxides.

01/2008:1288
corrected 6.0

ALLANTOIN

Allantoinum

$C_4H_6N_4O_3$ M_r 158.1
[97-59-6]

DEFINITION

Allantoin contains not less than 98.5 per cent and not more than the equivalent of 101.0 per cent of (*RS*)-(2,5-dioxoimidazolidin-4-yl)urea.

CHARACTERS

A white or almost white, crystalline powder, slightly soluble in water, very slightly soluble in alcohol.

It melts at about 225 °C, with decomposition.

IDENTIFICATION

First identification: A.

Second identification: B, C, D.

A. Examine by infrared absorption spectrophotometry (*2.2.24*), comparing with the spectrum obtained with *allantoin CRS*.

B. Examine the chromatograms obtained in the test for related substances. The principal spot in the chromatogram obtained with test solution (b) is similar in position, colour and size to the principal spot in the chromatogram obtained with reference solution (a).

C. Boil 20 mg with a mixture of 1 ml of *dilute sodium hydroxide solution R* and 1 ml of *water R*. Allow to cool. Add 1 ml of *dilute hydrochloric acid R*. To 0.1 ml of the solution add 0.1 ml of a 100 g/l solution of *potassium bromide R*, 0.1 ml of a 20 g/l solution of *resorcinol R* and 3 ml of *sulphuric acid R*. Heat for 5 min to 10 min on a water-bath. A dark blue colour develops, which becomes red after cooling and pouring into about 10 ml of *water R*.

D. Heat about 0.5 g. Ammonia vapour is evolved, which turns *red litmus paper R* blue.

TESTS

Solution S. Dissolve 0.5 g in *carbon dioxide-free water R*, with heating if necessary, and dilute to 100 ml with the same solvent.

Acidity or alkalinity. To 5 ml of solution S add 5 ml of *carbon dioxide-free water R*, 0.1 ml of *methyl red solution R* and 0.2 ml of *0.01 M sodium hydroxide*. The solution is yellow. Add 0.4 ml of *0.01 M hydrochloric acid*. The solution is red.

Optical rotation (*2.2.7*). The angle of optical rotation, determined on solution S, is – 0.10° to + 0.10°.

Reducing substances. Shake 1.0 g with 10 ml of *water R* for 2 min. Filter. Add 1.5 ml of *0.02 M potassium permanganate*. The solution must remain violet for at least 10 min.

Related substances. Examine by thin-layer chromatography (*2.2.27*), using a suitable *cellulose for chromatography R* as the coating substance.

Test solution (a). Dissolve 0.10 g of the substance to be examined in 5.0 ml of *water R* with heating. Allow to cool. Dilute to 10 ml with *methanol R*. *Use the solution immediately after preparation.*

Test solution (b). Dilute 1 ml of test solution (a) to 10 ml with a mixture of 1 volume of *methanol R* and 1 volume of *water R*.

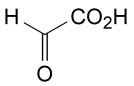
Reference solution (a). Dissolve 10 mg of *allantoin CRS* in a mixture of 1 volume of *methanol R* and 1 volume of *water R* and dilute to 10 ml with the same mixture of solvents.

Reference solution (b). Dissolve 10 mg of *urea R* in 10 ml of *water R*. Dilute 1 ml of this solution to 10 ml with *methanol R*.

Reference solution (c). Mix 1 ml of reference solution (a) and 1 ml of reference solution (b).

Apply to the plate 10 µl of test solution (a) and 5 µl each of test solution (b), reference solution (a), reference solution (b) and reference solution (c). Develop over a path of 10 cm using a mixture of 15 volumes of *glacial acetic acid R*, 25 volumes of *water R* and 60 volumes of *butanol R*. Allow the plate to dry in air. Spray the plate with a 5 g/l solution of *dimethylaminobenzaldehyde R* in a mixture of 1 volume of *hydrochloric acid R* and 3 volumes of *methanol R*. Dry the plate in a current of hot air. Examine in daylight after 30 min. Any spot in the chromatogram obtained with test solution (a), apart from the principal spot, is not more intense than the spot in the chromatogram obtained with reference solution (b) (0.5 per cent). The test is not valid unless the chromatogram obtained with reference solution (c) shows two clearly separated principal spots.

Loss on drying (*2.2.32*). Not more than 0.1 per cent, determined on 1.000 g by drying in an oven at 105 °C.



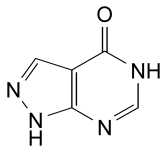
Sulphated ash (*2.4.14*). Not more than 0.1 per cent, determined on 1.0 g.

ASSAY

Dissolve 120.0 mg in 40 ml of *water R*. Titrate with *0.1 M sodium hydroxide*, determining the end-point potentiometrically (*2.2.20*).

1 ml of *0.1 M sodium hydroxide* is equivalent to 15.81 mg of $C_4H_6N_4O_3$.

IMPURITIES



A. glyoxylic acid,

B. urea.

01/2008:0576

ALLOPURINOL

Allopurinolum

$C_5H_4N_4O$ M_r 136.1

[315-30-0]

DEFINITION

1,5-Dihydro-4*H*-pyrazolo[3,4-*d*]pyrimidin-4-one.

Content: 97.0 per cent to 102.0 per cent (dried substance).

CHARACTERS

Appearance: white or almost white powder.

Solubility: very slightly soluble in water and in ethanol (96 per cent). It dissolves in dilute solutions of alkali hydroxides.

IDENTIFICATION

First identification: B.

Second identification: A, C, D.

A. Ultraviolet and visible absorption spectrophotometry (*2.2.25*).

Test solution. Dissolve 10 mg in 1 ml of a 4 g/l solution of *sodium hydroxide R* and dilute to 100.0 ml with a 10.3 g/l solution of *hydrochloric acid R*. Dilute 10.0 ml of this solution to 100.0 ml with a 10.3 g/l solution of *hydrochloric acid R*.

Spectral range: 220-350 nm.

Absorption maximum: at 250 nm.

Absorption minimum: at 231 nm.

Absorbance ratio: A_{231}/A_{250} = 0.52 to 0.62.

B. Infrared absorption spectrophotometry (*2.2.24*).

Comparison: *allopurinol CRS*.

C. Dissolve 0.3 g in 2.5 ml of *dilute sodium hydroxide solution R* and add 50 ml of *water R*. Add slowly and with shaking 5 ml of *silver nitrate solution R1*. A white precipitate is formed which does not dissolve on the addition of 5 ml of *ammonia R*.

D. Thin-layer chromatography (*2.2.27*).

Test solution. Dissolve 20 mg of the substance to be examined in *concentrated ammonia R* and dilute to 10 ml with the same solvent.

Reference solution. Dissolve 20 mg of *allopurinol CRS* in *concentrated ammonia R* and dilute to 10 ml with the same solvent.

Plate: *TLC silica gel F_{254} plate R*.

Mobile phase: *anhydrous ethanol R, methylene chloride R* (40:60 *V/V*).

Application: 10 µl.

Development: over 2/3 of the plate.

Drying: in air.

Detection: examine in ultraviolet light at 254 nm.

Results: the principal spot in the chromatogram obtained with the test solution is similar in position and size to the principal spot in the chromatogram obtained with the reference solution.

TESTS

Related substances. Liquid chromatography (*2.2.29*). *Use freshly prepared solutions. Store and inject them at 8 °C, using a cooled autosampler.*

Test solution (a). Dissolve 25.0 mg of the substance to be examined in 2.5 ml of a 4 g/l solution of *sodium hydroxide R* and dilute immediately to 50.0 ml with the mobile phase.

Test solution (b). Dissolve 20.0 mg of the substance to be examined in 5.0 ml of a 4 g/l solution of *sodium hydroxide R* and dilute immediately to 250.0 ml with the mobile phase.

Reference solution (a). Dilute 2.0 ml of test solution (a) to 100.0 ml with the mobile phase. Dilute 5.0 ml of this solution to 100.0 ml with the mobile phase.

Reference solution (b). Dissolve 5 mg of *allopurinol impurity A CRS*, 5 mg of *allopurinol impurity B CRS* and 5.0 mg of *allopurinol impurity C CRS* in 5.0 ml of a 4 g/l solution of *sodium hydroxide R* and dilute immediately to 100.0 ml with the mobile phase. Dilute 1.0 ml of this solution to 100.0 ml with the mobile phase.

Reference solution (c). Dissolve 20.0 mg of *allopurinol CRS* in 5.0 ml of a 4 g/l solution of *sodium hydroxide R* and dilute immediately to 250.0 ml with the mobile phase.

Column:

– *size*: *l* = 0.25 m, Ø = 4.6 mm;
– *stationary phase*: *octadecylsilyl silica gel for chromatography R* (5 µm).

Mobile phase: 1.25 g/l solution of *potassium dihydrogen phosphate R*.

Flow rate: 1.4 ml/min.

Detection: spectrophotometer at 230 nm.

Injection: 20 µl of test solution (a) and reference solutions (a) and (b).

Run time: twice the retention time of allopurinol.

Elution order: impurity A, impurity B, impurity C, allopurinol.

Retention time: allopurinol = about 10 min.

System suitability: reference solution (b):

– *resolution*: minimum 1.1 between the peaks due to impurities B and C.

Limits:

– *impurity A*: not more than twice the area of the principal peak in the chromatogram obtained with reference solution (a) (0.2 per cent);
– *impurity B*: not more than the area of the principal peak in the chromatogram obtained with reference solution (a) (0.1 per cent);
– *impurity C*: not more than the area of the corresponding peak in the chromatogram obtained with reference solution (b) (0.1 per cent);
– *unspecified impurities*: for each impurity, not more than the area of the principal peak in the chromatogram obtained with reference solution (a) (0.10 per cent);
– *sum of impurities other than A, B and C*: not more than 3 times the area of the principal peak in the chromatogram obtained with reference solution (a) (0.3 per cent);
– *disregard limit*: 0.5 times the area of the principal peak in the chromatogram obtained with reference solution (a) (0.05 per cent).

Impurities D and E. Liquid chromatography (*2.2.29*). *Use freshly prepared solutions. Store and inject them at 8 °C, using a cooled autosampler.*

Solution A: 1.25 g/l solution of *potassium dihydrogen phosphate R*.

Test solution. Dissolve 50.0 mg of the substance to be examined in 5.0 ml of a 4 g/l solution of *sodium hydroxide R* and dilute immediately to 100.0 ml with solution A.

Reference solution. Dissolve 5.0 mg of *allopurinol impurity D CRS* and 5.0 mg of *allopurinol impurity E CRS* in 5.0 ml of a 4 g/l solution of *sodium hydroxide R* and dilute immediately to 100.0 ml with solution A. Dilute 1.0 ml of this solution to 100.0 ml with solution A.

Column:

– *size*: *l* = 0.05 m, Ø = 4.6 mm;
– *stationary phase*: *base-deactivated octadecylsilyl silica gel for chromatography R* (3 µm).

Mobile phase: *methanol R*, 1.25 g/l solution of *potassium dihydrogen phosphate R* (10:90 *V/V*).

Flow rate: 2 ml/min.

Detection: spectrophotometer at 230 nm.

Injection: 20 µl.

Run time: 1.5 times the retention time of impurity E.

Retention times: impurity D = about 3.6 min; impurity E = about 4.5 min.

System suitability: reference solution:

– *resolution*: minimum 2.0 between the peaks due to impurities D and E.

Limits:

– *impurity D*: not more than the area of the corresponding peak in the chromatogram obtained with the reference solution (0.1 per cent);

– *impurity E*: not more than the area of the corresponding peak in the chromatogram obtained with the reference solution (0.1 per cent).

Impurity F. Liquid chromatography (*2.2.29*).

Under the following conditions, any hydrazine in the sample reacts with benzaldehyde to give benzaldehyde azine.

Solvent mixture. Mix equal volumes of *dilute sodium hydroxide solution R* and *methanol R*.

Solution A. Dissolve 2.0 g of *benzaldehyde R* in the solvent mixture and dilute to 50.0 ml with the solvent mixture. Prepare immediately before use.

Test solution. Dissolve 250.0 mg of the substance to be examined in 5 ml of the solvent mixture. Add 4 ml of solution A, mix and allow to stand for 2.5 h at room temperature. Add 5.0 ml of *hexane R* and shake for 1 min. Allow the layers to separate and use the upper layer.

Reference solution. Dissolve 10.0 mg of *hydrazine sulphate R* in the solvent mixture by sonicating for about 2 min and dilute to 50.0 ml with the solvent mixture. Dilute 1.0 ml to 20.0 ml with the solvent mixture. Dilute 1.0 ml of this solution to 20.0 ml with the solvent mixture. To 5.0 ml of the solution obtained, add 4 ml of solution A, mix and allow to stand for 2.5 h at room temperature. Add 5.0 ml of *hexane R* and shake for 1 min. Allow the layers to separate and use the upper layer.

Blank solution. To 5 ml of the solvent mixture add 4 ml of solution A, mix and allow to stand for 2.5 h at room temperature. Add 5.0 ml of *hexane R* and shake for 1 min. Allow the layers to separate and use the upper layer.

Column:

– *size*: *l* = 0.25 m, Ø = 4.0 mm;

– *stationary phase*: *cyanosilyl silica gel for chromatography R* (5 µm) with a pore size of 100 nm;

– *temperature*: 30 °C.

Mobile phase: *2-propanol R, hexane R* (5:95 *V/V*).

Flow rate: 1.5 ml/min.

Detection: spectrophotometer at 310 nm.

Injection: 20 µl.

Relative retention with reference to benzaldehyde (retention time = about 2.8 min): benzaldehyde azine = about 0.8.

System suitability: reference solution:

– *resolution*: minimum 2 between the peaks due to benzaldehyde azine and benzaldehyde;

– *signal-to-noise ratio*: minimum 20 for the peak due to benzaldehyde azine.

Limit:

– *impurity F*: the area of the peak due to benzaldehyde azine in the chromatogram obtained with the test solution is not more than the area of the corresponding peak in the chromatogram obtained with the reference solution (10 ppm of hydrazine sulphate equivalent to 2.5 ppm of hydrazine).

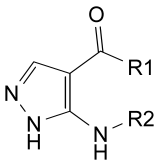
Heavy metals (*2.4.8*): maximum 20 ppm.

1.0 g complies with test C. Prepare the reference solution using 2 ml of *lead standard solution (10 ppm Pb) R*.

Loss on drying (*2.2.32*): maximum 0.5 per cent, determined on 1.000 g by drying in an oven at 105 °C.

Sulphated ash (*2.4.14*): maximum 0.1 per cent, determined on 1.0 g.

ASSAY



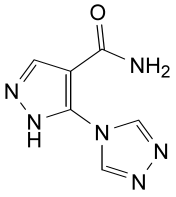
Liquid chromatography (*2.2.29*) as described in the test for related substances with the following modification.

Injection: test solution (b) and reference solution (c).

Calculate the percentage content of $C_5H_4N_4O$ from the declared content of *allopurinol CRS*.

IMPURITIES

Specified impurities: A, B, C, D, E, F.



A. R1 = NH_2, R2 = H: 5-amino-1*H*-pyrazole-4-carboxamide,

B. R1 = NH_2, R2 = CHO: 5-(formylamino)-1*H*-pyrazole-4-carboxamide,

D. R1 = O-C_2H_5, R2 = H: ethyl 5-amino-1*H*-pyrazole-4-carboxylate,

E. R1 = O-C_2H_5, R2 = CHO: ethyl 5-(formylamino)-1*H*-pyrazole-4-carboxylate,

C. 5-(4*H*-1,2,4-triazol-4-yl)-1*H*-pyrazole-4-carboxamide,

F. H_2N-NH_2: diazane (hydrazine).

01/2008:2010
corrected 6.0

ALMAGATE

Almagatum

$Al_2Mg_6C_2O_{20}H_{14},4H_2O$ M_r 630
[66827-12-1]

DEFINITION

Hydrated aluminium magnesium hydroxycarbonate.

Content:

– aluminium: 15.0 per cent to 17.0 per cent (calculated as Al_2O_3),

– magnesium: 36.0 per cent to 40.0 per cent (calculated as MgO),

– carbonic acid: 12.5 per cent to 14.5 per cent (calculated as CO_2).

CHARACTERS

Appearance: white or almost white, fine crystalline powder.

Solubility: practically insoluble in water, in ethanol (96 per cent) and in methylene chloride. It dissolves with effervescence and heating in dilute mineral acids.

IDENTIFICATION

A. Infrared absorption spectrophotometry (*2.2.24*).

Comparison: *Ph. Eur. reference spectrum of almagate*.

B. Dissolve 150 mg in *dilute hydrochloric acid R* and dilute to 20 ml with the same acid. 2 ml of the solution gives the reaction of aluminium (*2.3.1*).

C. 2 ml of the solution prepared under identification test B gives the reaction of magnesium (*2.3.1*).

TESTS

pH (*2.2.3*): 9.1 to 9.7.

Disperse 4.0 g in 100 ml of *carbon dioxide-free water R*, stir for 2 min and filter.

Neutralising capacity. *Carry out the test at 37 °C*. Disperse 0.5 g in 100 ml of *water R*, heat, add 100.0 ml of *0.1 M hydrochloric acid*, previously heated and stir continuously; the pH (*2.2.3*) of the solution between 5 min and 20 min is not less than 3.0 and not greater than 4.5. Add 10.0 ml of *0.5 M hydrochloric acid*, previously heated, stir continuously for 1 h and titrate with *0.1 M sodium hydroxide* to pH 3.5; not more than 20.0 ml of *0.1 M sodium hydroxide* is required.

Chlorides (*2.4.4*): maximum 0.1 per cent.

Dissolve 0.33 g in 5 ml of *dilute nitric acid R* and dilute to 100 ml with *water R*. 15 ml of the solution complies with the limit test for chlorides. Prepare simultaneously the standard by diluting 0.7 ml of *dilute nitric acid R* to 5 ml with *water R* and adding 10 ml of *chloride standard solution (5 ppm Cl) R*.

Sulphates (*2.4.13*): maximum 0.4 per cent.

Dissolve 0.25 g in 5 ml of *dilute hydrochloric acid R* and dilute to 100 ml with *distilled water R*. 15 ml of the solution complies with the limit test for sulphates. Prepare simultaneously the standard by adding 0.8 ml of *dilute hydrochloric acid R* to 15 ml of *sulphate standard solution (10 ppm SO_4) R*.

Sodium: maximum 1.50×10^2 ppm.

Atomic absorption spectrometry (*2.2.23, Method I*).

Test solution. Dissolve 0.25 g in 50 ml of a 103 g/l solution of *hydrochloric acid R*.

Reference solutions. Prepare the reference solutions using *sodium standard solution (200 ppm Na) R*, diluted as necessary with a 103 g/l solution of *hydrochloric acid R*.

Heavy metals (*2.4.8*): maximum 20 ppm.

Dissolve 1.0 g in *dilute hydrochloric acid R* and dilute to 20.0 ml with the same acid. 12 ml of the solution complies with limit test A. Prepare the reference solution using *lead standard solution (1 ppm Pb) R*.

Loss on ignition: 43.0 per cent to 49.0 per cent, determined on 1.000 g by ignition at 900 ± 50 °C.

Microbial contamination. Total viable aerobic count (*2.6.12*) not more than 10^3 micro-organisms per gram determined by plate count. It complies with the tests for *Escherichia coli* and *Pseudomonas aeruginosa* (*2.6.13*).

ASSAY

Aluminium. Dissolve 1.000 g in 5 ml of *hydrochloric acid R*, heating if necessary. Allow to cool to room temperature and dilute to 100.0 ml with *water R* (solution A). Introduce 10.0 ml of solution A into a 250 ml conical flask, add 25.0 ml of *0.05 M sodium edetate*, 20 ml of *buffer solution pH 3.5 R*, 40 ml of *ethanol R* and 2 ml of a freshly prepared 0.25 g/l solution of *dithizone R* in *ethanol R*. Titrate the excess of sodium edetate with *0.05 M zinc sulphate* until the colour changes from greenish-violet to pink.

1 ml of *0.05 M sodium edetate* is equivalent to 2.549 mg of Al_2O_3.

Magnesium. Introduce 10.0 ml of solution A prepared in the assay of aluminium into a 500 ml conical flask, add 200 ml of *water R*, 20 ml of *triethanolamine R* with shaking, 10 ml of *ammonium chloride buffer solution pH 10.0 R* and 50 mg of *mordant black 11 triturate R*. Titrate with *0.05 M sodium edetate* until the colour changes from violet to pure blue.

1 ml of *0.05 M sodium edetate* is equivalent to 2.015 mg of MgO.

Carbonic acid: 12.5 per cent to 14.5 per cent.

Test sample. Place 7.00 mg of the substance to be examined in a tin capsule. Seal the capsule.

Reference sample. Place 7.00 mg of *almagate CRS* in a tin capsule. Seal the capsule.

Introduce separately the test sample and the reference sample into a combustion chamber of a CHN analyser purged with *helium for chromatography R* and maintained at a temperature of 1020 °C. Simultaneously, introduce *oxygen R* at a pressure of 40 kPa and a flow rate of 20 ml/min and allow complete combustion of the sample. Sweep the combustion gases through a reduction reactor and separate the gases formed by gas chromatography (*2.2.28*).

Column:

– *size*: *l* = 2 m, Ø = 4 mm,

– *stationary phase*: *ethylvinylbenzene-divinylbenzene copolymer R1*.

Carrier gas: *helium for chromatography R*.

Flow rate: 100 ml/min.

Temperature:

– *column*: 65 °C,

– *detector*: 190 °C.

Detection: thermal conductivity.

Run time: 16 min.

System suitability:

– average percentage of carbon in 5 reference samples must be within ± 0.2 per cent of the value assigned to the CRS. The difference between the upper and the lower values of the percentage of carbon in these samples must be below 0.2 per cent.

Calculate the percentage content of carbonic acid in the test sample according to the following formula:

$$C \times K \times \frac{A}{m}$$

C = percentage content of carbonic acid in the reference sample,

K = mean value for the 5 reference samples of the ratio of the mass in milligrams to the area of the peak due to carbonic acid,

A = area of the peak due to carbonic acid in the chromatogram obtained with the test sample,

m = sample mass, in milligrams.

STORAGE

In an airtight container.

01/2008:1064

ALMOND OIL, REFINED

Amygdalae oleum raffinatum

DEFINITION

Fatty oil obtained from the ripe seeds of *Prunus dulcis* (Miller) D.A. Webb var. *dulcis* or *Prunus dulcis* (Miller) D.A. Webb var. *amara* (D.C.) Buchheim or a mixture of both varieties by cold expression. It is then refined. A suitable antioxidant may be added.

CHARACTERS

Appearance: pale yellow, clear liquid.

Solubility: slightly soluble in ethanol (96 per cent), miscible with light petroleum.

Relative density: about 0.916.

It solidifies at about – 18 °C.

IDENTIFICATION

A. Carry out the identification of fatty oils by thin-layer chromatography (*2.3.2*). The chromatogram obtained is similar to the type chromatogram for almond oil.

B. Composition of fatty acids (see Tests).

TESTS

Specific absorbance (*2.2.25*): 0.2 to 6.0, determined at the absorption maximum between 264 nm and 276 nm.

Dissolve 0.100 g in *cyclohexane R* and dilute to 10.0 ml with the same solvent.

Acid value (*2.5.1*): maximum 0.5, determined on 5.0 g.

Peroxide value (*2.5.5*): maximum 5.0.

Unsaponifiable matter (*2.5.7*): maximum 0.9 per cent, determined on 5.0 g.

Composition of fatty acids. Gas chromatography (*2.4.22, Method A*). Use the mixture of calibrating substances in Table 2.4.22.-3.

Composition of the fatty-acid fraction of the oil:

– *saturated fatty acids of chain length less than C_{16}*: maximum 0.1 per cent,
– *palmitic acid*: 4.0 per cent to 9.0 per cent,
– *palmitoleic acid* (equivalent chain length on polyethyleneglycol adipate 16.3): maximum 0.8 per cent,
– *margaric acid*: maximum 0.2 per cent,
– *stearic acid*: maximum 3.0 per cent,
– *oleic acid* (equivalent chain length on polyethyleneglycol adipate 18.3): 62.0 per cent to 86.0 per cent,
– *linoleic acid* (equivalent chain length on polyethyleneglycol adipate 18.9): 20.0 per cent to 30.0 per cent,
– *linolenic acid* (equivalent chain length on polyethyleneglycol adipate 19.7): maximum 0.4 per cent,
– *arachidic acid*: maximum 0.2 per cent,
– *eicosenoic acid* (equivalent chain length on polyethyleneglycol adipate 20.3): maximum 0.3 per cent,
– *behenic acid*: maximum 0.2 per cent,
– *erucic acid* (equivalent chain length on polyethyleneglycol adipate 22.3): maximum 0.1 per cent.

Sterols (*2.4.23*).

Composition of the sterol fraction of the oil:

– *cholesterol*: maximum 0.7 per cent,
– *campesterol*: maximum 5.0 per cent,
– *stigmasterol*: maximum 4.0 per cent,
– *β-sitosterol*: 73.0 per cent to 87.0 per cent,
– *Δ5-avenasterol*: minimum 5.0 per cent,
– *Δ7-stigmastenol*: maximum 3.0 per cent,
– *Δ7-avenasterol*: maximum 3.0 per cent,
– *brassicasterol*: maximum 0.3 per cent.

Water (*2.5.32*): maximum 0.1 per cent, determined on 5.000 g, if intended for use in the manufacture of parenteral dosage forms.

STORAGE

In a well-filled container, protected from light.

LABELLING

The label states, where applicable, that the substance is suitable for use in the manufacture of parenteral dosage forms.

01/2008:0261

ALMOND OIL, VIRGIN

Amygdalae oleum virginale

DEFINITION

Fatty oil obtained by cold expression from the ripe seeds of *Prunus dulcis* (Miller) D.A. Webb var. *dulcis* or *Prunus dulcis* (Miller) D.A. Webb var. *amara* (D.C.) Buchheim or a mixture of both varieties.

CHARACTERS

Appearance: yellow, clear liquid.

Solubility: slightly soluble in ethanol (96 per cent), miscible with light petroleum.

Relative density: about 0.916.

It solidifies at about – 18 °C.

IDENTIFICATION

First identification: A, C.

Second identification: A, B.

A. It complies with the test for absorbance (see Tests).

B. Carry out the identification of fatty oils by thin-layer chromatography (*2.3.2*). The chromatogram obtained is comparable with the typical chromatogram for almond oil.

C. It complies with the test for composition of fatty acids (see Tests).

TESTS

Absorbance (*2.2.25*): maximum 0.2 by measuring at the absorption maximum between 264 nm and 276 nm. The ratio of the absorbance measured at 232 nm to that measured at 270 nm is greater than 7.

Dissolve 0.100 g in *cyclohexane R* and dilute to 10.0 ml with the same solvent.

Acid value (*2.5.1*): maximum 2.0, determined on 5.0 g.

Peroxide value (*2.5.5*): maximum 15.0.

Unsaponifiable matter (*2.5.7*): maximum 0.9 per cent, determined on 5.0 g.

Composition of fatty acids. Gas chromatography (*2.4.22, Method A*). Use the mixture of calibrating substances in Table 2.4.22.-3.

Composition of the fatty-acid fraction of the oil:

- *saturated fatty acids of chain length less than C_{16}*: maximum 0.1 per cent,
- *palmitic acid*: 4.0 per cent to 9.0 per cent,
- *palmitoleic acid* (equivalent chain length on polyethyleneglycol adipate 16.3): maximum 0.8 per cent,
- *margaric acid*: maximum 0.2 per cent,
- *stearic acid*: maximum 3.0 per cent,
- *oleic acid* (equivalent chain length on polyethyleneglycol adipate 18.3): 62.0 per cent to 86.0 per cent,
- *linoleic acid* (equivalent chain length on polyethyleneglycol adipate 18.9): 20.0 per cent to 30.0 per cent,
- *linolenic acid* (equivalent chain length on polyethyleneglycol adipate 19.7): maximum 0.4 per cent,
- *arachidic acid*: maximum 0.2 per cent,
- *eicosenoic acid* (equivalent chain length on polyethyleneglycol adipate 20.3): maximum 0.3 per cent,
- *behenic acid*: maximum 0.2 per cent,
- *erucic acid* (equivalent chain length on polyethyleneglycol adipate 22.3): maximum 0.1 per cent.

Sterols (*2.4.23*).

Composition of sterol fraction of the oil:

- *cholesterol*: maximum 0.7 per cent,
- *campesterol*: maximum 4.0 per cent,
- *stigmasterol*: maximum 3.0 per cent,
- *β-sitosterol*: 73.0 per cent to 87.0 per cent,
- *Δ5-avenasterol*: minimum 10.0 per cent,
- *Δ7-stigmastenol*: maximum 3.0 per cent,
- *Δ7-avenasterol*: maximum 3.0 per cent,
- *brassicasterol*: maximum 0.3 per cent.

STORAGE

In a well-filled container, protected from light.

corrected 6.0

ALOES, BARBADOS

Aloe barbadensis

DEFINITION

Concentrated and dried juice of the leaves of *Aloe barbadensis* Miller.

Content: minimum 28.0 per cent of hydroxyanthracene derivatives, expressed as barbaloin ($C_{21}H_{22}O_9$; M_r 418.4) (dried drug).

CHARACTERS

Appearance: dark brown masses, slightly shiny or opaque with a conchoidal fracture, or brown powder.

Solubility: partly soluble in boiling water, soluble in hot ethanol (96 per cent).

IDENTIFICATION

A. Thin-layer chromatography (*2.2.27*).

Test solution. To 0.25 g of the powdered drug add 20 ml of *methanol R* and heat to boiling in a water-bath. Shake for a few minutes and decant the solution. Store at about 4 °C and use within 24 h.

Reference solution. Dissolve 25 mg of *barbaloin R* in *methanol R* and dilute to 10 ml with the same solvent.

Plate: *TLC silica gel G plate R*.

Mobile phase: *water R, methanol R, ethyl acetate R* (13:17:100 *V/V/V*).

Application: 10 µl, as bands of 20 mm by maximum 3 mm.

Development: over a path of 10 cm.

Drying: in air.

Detection A: spray with a 100 g/l solution of *potassium hydroxide R* in *methanol R* and examine in ultraviolet light at 365 nm.

Results A: the chromatogram obtained with the test solution shows in the central part a yellow fluorescent zone (barbaloin) similar in position to the zone due to barbaloin in the chromatogram obtained with the reference solution and in the lower part a light blue fluorescent zone (aloesine).

Detection B: heat at 110 °C for 5 min.

Results B: in the chromatogram obtained with the test solution, a violet fluorescent zone appears just below the zone due to barbaloin.

B. Shake 1 g of the powdered drug with 100 ml of boiling *water R*. Cool, add 1 g of *talc R* and filter. To 10 ml of the filtrate add 0.25 g of *disodium tetraborate R* and heat to dissolve. Pour 2 ml of this solution into 20 ml of *water R*. Yellowish-green fluorescence appears which is particularly marked in ultraviolet light at 365 nm.

C. To 5 ml of the filtrate obtained in identification test B add 1 ml of freshly prepared *bromine water R*. A brownish-yellow precipitate is formed and the supernatant liquid is violet.

TESTS

Loss on drying (*2.2.32*): maximum 12.0 per cent, determined on 1.000 g of the powdered drug by drying in an oven at 105 °C.

Total ash (*2.4.16*): maximum 2.0 per cent.

ASSAY

Carry out the assay protected from bright light.

Introduce 0.300 g of powdered drug (180) (*2.9.12*) into a 250 ml conical flask. Moisten with 2 ml of *methanol R*, add 5 ml of *water R* warmed to about 60 °C, mix, then add a further 75 ml of *water R* at about 60 °C and shake for 30 min. Cool, filter into a volumetric flask, rinse the conical flask and filter with 20 ml of *water R*, add the rinsings to the volumetric flask and dilute to 1000.0 ml with *water R*. Transfer 10.0 ml of this solution to a 100 ml round-bottomed flask containing 1 ml of a 600 g/l solution of *ferric chloride R* and 6 ml of *hydrochloric acid R*. Heat in a water-bath under a reflux condenser for 4 h, with the water level above that of the liquid in the flask. Allow to cool, transfer the solution to a separating funnel, rinse the flask successively with 4 ml of *water R*, 4 ml of *1 M sodium hydroxide* and 4 ml of *water R* and add the rinsings to the separating funnel. Shake the contents of the separating funnel with 3 quantities, each of 20 ml, of *ether R*. Wash the combined ether layers with 2 quantities, each of 10 ml, of *water R*. Discard the washings and dilute the organic phase to 100.0 ml with *ether R*. Evaporate 20.0 ml of the solution

carefully to dryness on a water-bath and dissolve the residue in 10.0 ml of a 5 g/l solution of *magnesium acetate R* in *methanol R*. Measure the absorbance (*2.2.25*) at 512 nm using *methanol R* as the compensation liquid.

Calculate the percentage content of hydroxyanthracene derivatives, as barbaloin, from the following expression:

$$\frac{A \times 19.6}{m}$$

i.e. taking the specific absorbance of barbaloin to be 255.

A = absorbance at 512 nm,

m = mass of the substance to be examined, in grams.

STORAGE

In an airtight container.

01/2008:0258
corrected 6.0

ALOES, CAPE

Aloe capensis

DEFINITION

Concentrated and dried juice of the leaves of various species of *Aloe*, mainly *Aloe ferox* Miller and its hybrids.

Content: minimum 18.0 per cent of hydroxyanthracene derivatives, expressed as barbaloin ($C_{21}H_{22}O_9$; M_r 418.4) (dried drug).

CHARACTERS

Appearance: dark brown masses tinged with green and having a shiny conchoidal fracture, or greenish-brown powder.

Solubility: partly soluble in boiling water, soluble in hot ethanol (96 per cent).

IDENTIFICATION

A. Examine the chromatograms obtained in the test for Barbados aloes.

Results: the chromatogram obtained with the test solution shows in the central part a yellow fluorescent zone (barbaloin) similar in position to the zone due to barbaloin in the chromatogram obtained with the reference solution and in the lower part 2 yellow fluorescent zones (aloinosides A and B) and 1 blue fluorescent zone (aloesine).

B. Shake 1 g of the powdered drug with 100 ml of boiling *water R*. Cool, add 1 g of *talc R* and filter. To 10 ml of the filtrate add 0.25 g of *disodium tetraborate R* and heat to dissolve. Pour 2 ml of the solution into 20 ml of *water R*. A yellowish-green fluorescence appears which is particularly marked in ultraviolet light at 365 nm.

C. To 5 ml of the filtrate obtained in identification test B add 1 ml of freshly prepared *bromine water R*. A yellow precipitate is formed. The supernatant liquid is not violet.

TESTS

Barbados aloes. Thin-layer chromatography (*2.2.27*).

Test solution. To 0.25 g of the powdered drug add 20 ml of *methanol R* and heat to boiling in a water-bath. Shake for a few minutes and decant the solution. Store at about 4 °C and use within 24 h.

Reference solution. Dissolve 25 mg of *barbaloin R* in *methanol R* and dilute to 10 ml with the same solvent.

Plate: *TLC silica gel G plate R*.

Mobile phase: *water R, methanol R, ethyl acetate R* (13:17:100 *V/V/V*).

Application: 10 µl, as bands of 20 mm by maximum 3 mm.

Development: over a path of 10 cm.

Drying: in air.

Detection: spray with a 100 g/l solution of *potassium hydroxide R* in *methanol R*. Heat at 110 °C for 5 min and examine in ultraviolet light at 365 nm.

Results: the chromatogram obtained with the test solution shows no violet fluorescent zone just below the zone due to barbaloin.

Loss on drying (*2.2.32*): maximum 10.0 per cent, determined on 1.000 g of the powdered drug by drying in an oven at 105 °C.

Total ash (*2.4.16*): maximum 2.0 per cent.

ASSAY

Carry out the assay protected from bright light.

Introduce 0.400 g of powdered drug (180) (*2.9.12*) into a 250 ml conical flask. Moisten with 2 ml of *methanol R*, add 5 ml of *water R* warmed to about 60 °C, mix, then add a further 75 ml of *water R* at about 60 °C and shake for 30 min. Cool, filter into a volumetric flask, rinse the conical flask and filter with 20 ml of *water R*, add the rinsings to the volumetric flask and dilute to 1000.0 ml with *water R*. Transfer 10.0 ml of this solution to a 100 ml round-bottomed flask containing 1 ml of a 600 g/l solution of *ferric chloride R* and 6 ml of *hydrochloric acid R*. Heat in a water-bath under a reflux condenser for 4 h, with the water level above that of the liquid in the flask. Allow to cool, transfer the solution to a separating funnel, rinse the flask successively with 4 ml of *water R*, 4 ml of *1 M sodium hydroxide* and 4 ml of *water R* and add the rinsings to the separating funnel. Shake the contents of the separating funnel with 3 quantities, each of 20 ml, of *ether R*. Wash the combined ether layers with 2 quantities, each of 10 ml, of *water R*. Discard the washings and dilute the organic phase to 100.0 ml with *ether R*. Evaporate 20.0 ml of the solution carefully to dryness on a water-bath and dissolve the residue in 10.0 ml of a 5 g/l solution of *magnesium acetate R* in *methanol R*. Measure the absorbance (*2.2.25*) at 512 nm using *methanol R* as the compensation liquid.

Calculate the percentage content of barbaloin from the following expression:

$$\frac{A \times 19.6}{m}$$

i.e. taking the specific absorbance of hydroxyanthracene derivatives, as barbaloin, to be 255.

A = absorbance at 512 nm,

m = mass of the substance to be examined in grams.

STORAGE

In an airtight container.

ALOES DRY EXTRACT, STANDARDISED

Aloes extractum siccum normatum

DEFINITION

Standardised aloes dry extract is prepared from Barbados aloes or Cape aloes, or a mixture of the two, by treatment with boiling water. It is adjusted, if necessary, to contain not less than 19.0 per cent and not more than 21.0 per cent of hydroxyanthracene derivatives, expressed as barbaloin ($C_{21}H_{22}O_9$; M_r 418.4) and calculated with reference to the dried extract.

CHARACTERS

A brown or yellowish-brown powder, sparingly soluble in boiling water.

IDENTIFICATION

A. Examine by thin-layer chromatography (*2.2.27*), using *silica gel G R* as the coating substance.

Test solution. To 0.25 g of the preparation to be examined add 20 ml of *methanol R* and heat to boiling in a water-bath. Shake for a few minutes and decant the solution. Store at about 4 °C and use within 24 h.

Reference solution. Dissolve 25 mg of *barbaloin R* in *methanol R* and dilute to 10 ml with the same solvent.

Apply separately to the plate as bands 20 mm by not more than 3 mm 10 µl of each solution. Develop over a path of 10 cm using a mixture of 13 volumes of *water R*, 17 volumes of *methanol R* and 100 volumes of *ethyl acetate R*. Allow the plate to dry in air, spray with a 100 g/l solution of *potassium hydroxide R* in *methanol R* and examine in ultraviolet light at 365 nm. The chromatogram obtained with the test solution shows in the central part a zone of yellow fluorescence (barbaloin) similar in position to the zone corresponding to barbaloin in the chromatogram obtained with the reference solution and in the lower part there is a zone of light blue fluorescence (aloesine). In the lower part of the chromatogram obtained with the test solution two zones of yellow fluorescence (aloinosides A and B)(Cape aloes) and one zone of violet fluorescence just below the zone corresponding to barbaloin (Barbados aloes) may be present.

B. Shake 1 g of the preparation to be examined with 100 ml of boiling *water R*. Cool, add 1 g of *talc R* and filter. To 10 ml of the filtrate add 0.25 g of *disodium tetraborate R* and heat to dissolve. Pour 2 ml of the solution into 20 ml of *water R*. A yellowish-green fluorescence appears which is particularly marked in ultraviolet light at 365 nm.

TESTS

Loss on drying (*2.8.17*): maximum 4.0 per cent *m/m*.

Total ash (*2.4.16*). Not more than 2.0 per cent.

ASSAY

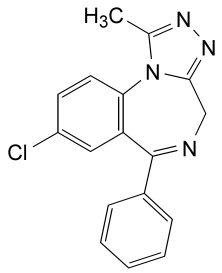
Carry out the assay protected from bright light.

Introduce 0.400 g into a 250 ml conical flask. Moisten with 2 ml of *methanol R*, add 5 ml of *water R* warmed to about 60 °C, mix, add a further 75 ml of *water R* at about 60 °C and shake for 30 min. Cool, filter into a volumetric flask, rinse the conical flask and filter with 20 ml of *water R*, add the rinsings to the volumetric flask and dilute to 1000.0 ml with *water R*. Transfer 10.0 ml of this solution to a 100 ml round-bottomed flask containing 1 ml of a 600 g/l solution of *ferric chloride R* and 6 ml of *hydrochloric acid R*. Heat in a water-bath under a reflux condenser for 4 h, with the water level above that of the liquid in the flask. Allow to cool, transfer the solution to a separating funnel, rinse the flask successively with 4 ml of *water R*, 4 ml of *1 M sodium hydroxide* and 4 ml of *water R*, and add the rinsings to the separating funnel. Shake the contents of the separating funnel with three quantities, each of 20 ml, of *ether R*. Wash the combined ether layers with two quantities, each of 10 ml, of *water R*. Discard the washings and dilute the organic phase to 100.0 ml with *ether R*. Evaporate 20.0 ml carefully to dryness on a water-bath and dissolve the residue in 10.0 ml of a 5 g/l solution of *magnesium acetate R* in *methanol R*. Measure the absorbance (*2.2.25*) at 512 nm using *methanol R* as the compensation liquid.

Calculate the percentage content of hydroxyanthracene derivatives, as barbaloin, from the expression:

$$\frac{A \times 19.6}{m}$$

i.e. taking the specific absorbance of barbaloin to be 255.



A = absorbance at 512 nm,

m = mass of the substance to be examined in grams.

corrected 6.0

ALPRAZOLAM

Alprazolamum

$C_{17}H_{13}ClN_4$ M_r 308.8
[28981-97-7]

DEFINITION

8-Chloro-1-methyl-6-phenyl-4*H*-[1,2,4]triazolo[4,3-*a*][1,4]-benzodiazepine.

Content: 99.0 per cent to 101.0 per cent (dried substance).

CHARACTERS

Appearance: white or almost white, crystalline powder.

Solubility: practically insoluble in water, freely soluble in methylene chloride, sparingly soluble in acetone and in ethanol (96 per cent).

It shows polymorphism (*5.9*).

IDENTIFICATION

First identification: B.

Second identification: A, C.

A. Dissolve the substance to be examined in the smallest necessary quantity of *ethyl acetate R* and evaporate to dryness on a water-bath. Thoroughly mix 5.0 mg of the substance to be examined with 5.0 mg of *alprazolam CRS*.

The melting point (*2.2.14*) of the mixture does not differ by more than 2 °C from the melting point of the substance to be examined.

B. Infrared absorption spectrophotometry (*2.2.24*).

Preparation: discs.

Comparison: *alprazolam CRS*.

If the spectra obtained in the solid state show differences, dissolve the substance to be examined and the reference substance separately in the minimum volume of *ethyl acetate R*, evaporate to dryness on a water-bath and record new spectra using the residues.

C. Thin-layer chromatography (*2.2.27*).

Test solution. Dissolve 10 mg of the substance to be examined in *methanol R* and dilute to 10 ml with the same solvent.

Reference solution (a). Dissolve 10 mg of *alprazolam CRS* in *methanol R* and dilute to 10 ml with the same solvent.

Reference solution (b). Dissolve 10 mg of *alprazolam CRS* and 10 mg of *midazolam CRS* in *methanol R* and dilute to 10 ml with the same solvent.

Plate: *TLC silica gel GF_{254} plate R*.

Mobile phase: *glacial acetic acid R, water R, methanol R, ethyl acetate R* (2:15:20:80 *V/V/V/V*).

Application: 5 µl.

Development: over a path of 12 cm.

Drying: in air.

Detection: examine in ultraviolet light at 254 nm.

System suitability: reference solution (b):

– the chromatogram shows 2 clearly separately spots.

Results: the principal spot in the chromatogram obtained with the test solution is similar in position and size to the principal spot in the chromatogram obtained with reference solution (a).

TESTS

Related substances. Liquid chromatography (*2.2.29*).

Buffer solution. Dissolve 7.7 g of *ammonium acetate R* in 1000 ml of *water R* and adjust to pH 4.2 with *glacial acetic acid R*.

Test solution. Dissolve 0.100 g of the substance to be examined in *dimethylformamide R* and dilute to 10.0 ml with the same solvent.

Reference solution (a). Dissolve 2 mg of *alprazolam CRS* and 2 mg of *triazolam CRS* in *dimethylformamide R* and dilute to 100.0 ml with the same solvent.

Reference solution (b). Dilute 5.0 ml of the test solution to 100.0 ml with *dimethylformamide R*. Dilute 0.5 ml of this solution to 10.0 ml with *dimethylformamide R*.

Column:

– *size*: *l* = 0.25 m, Ø = 4.6 mm;
– *stationary phase*: *phenylsilyl silica gel for chromatography R1* (5 µm).

Mobile phase:

– *mobile phase A*: buffer solution, *methanol R* (44:56 *V/V*);
– *mobile phase B*: buffer solution, *methanol R* (5:95 *V/V*);
– *temperature*: 40 °C;

Time (min)	Mobile phase A (per cent *V/V*)	Mobile phase B (per cent *V/V*)
0 - 15	98	2
15 - 35	98 → 1	2 → 99
35 - 40	1	99

Flow rate: 2 ml/min.

Detection: spectrophotometer at 254 nm.

Injection: 10 µl; inject *dimethylformamide R* as a blank.

Retention time: triazolam = about 9 min; alprazolam = about 10 min.

System suitability: reference solution (a):

– *resolution*: minimum 1.5 between the peaks due to triazolam and alprazolam.

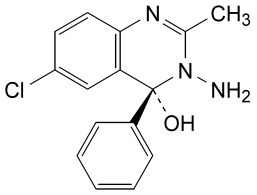
Limits:

– *total*: not more than the area of the principal peak in the chromatogram obtained with reference solution (b) (0.25 per cent);
– *disregard limit*: 0.2 times the area of the principal peak in the chromatogram obtained with reference solution (b) (0.05 per cent).

Loss on drying (*2.2.32*): maximum 0.5 per cent, determined on 1.000 g by drying in an oven at 105 °C.

Sulphated ash (*2.4.14*): maximum 0.1 per cent, determined on 1.0 g.

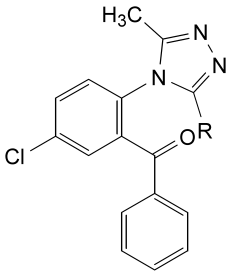
ASSAY



Dissolve 0.140 g in 50 ml of a mixture of 2 volumes of *acetic anhydride R* and 3 volumes of *anhydrous acetic acid R*. Titrate with *0.1 M perchloric acid*, determining the end-point potentiometrically (*2.2.20*). Titrate to the 2nd point of inflexion.

1 ml of *0.1 M perchloric acid* is equivalent to 15.44 mg of $C_{17}H_{13}ClN_4$.

STORAGE



Protected from light.

ALPRENOLOL HYDROCHLORIDE

Alprenololi hydrochloridum

$C_{15}H_{24}ClNO_2$ M_r 285.8
[13707-88-5]

DEFINITION

(2*RS*)-1-[(1-Methylethyl)amino]-3-[2-(prop-2-enyl)phenoxy]-propan-2-ol hydrochloride.

Content: 99.0 per cent to 101.0 per cent (dried substance).

CHARACTERS

Appearance: white or almost white, crystalline powder or colourless crystals.

Solubility: very soluble in water, freely soluble in ethanol (96 per cent) and in methylene chloride.

IDENTIFICATION

First identification: B, D.

Second identification: A, C, D.

A. Melting point (*2.2.14*): 108 °C to 112 °C.

B. Infrared absorption spectrophotometry (*2.2.24*).

Comparison: *alprenolol hydrochloride CRS.*

C. Examine the chromatograms obtained in test A for related substances.

Detection: examine in daylight, after exposure to iodine vapour for 30 min.

Results: the principal spot in the chromatogram obtained with test solution (b) is similar in position, colour and size to the principal spot in the chromatogram obtained with reference solution (a).

D. It gives reaction (a) of chlorides (*2.3.1*).

TESTS

Solution S. Dissolve 1.0 g in *carbon dioxide-free water R* and dilute to 50 ml with the same solvent.

Appearance of solution. Solution S is clear (*2.2.1*) and not more intensely coloured than reference solution B_9 (*2.2.2, Method II*).

Acidity or alkalinity. To 10 ml of solution S add 0.2 ml of *methyl red solution R* and 0.2 ml of *0.01 M hydrochloric acid*; the solution is red. Add 0.4 ml of *0.01 M sodium hydroxide*; the solution is yellow.

Impurity C: maximum 0.1 per cent.

Dissolve 0.25 g in *ethanol (96 per cent) R* and dilute to 25 ml with the same solvent. The absorbance (*2.2.25*) measured at 297 nm is not greater than 0.20.

Related substances

A. Thin-layer chromatography (*2.2.27*).

Test solution (a). Dissolve 0.50 g of the substance to be examined in *methanol R* and dilute to 10 ml with the same solvent.

Test solution (b). Dilute 1 ml of test solution (a) to 50 ml with *methanol R*.

Reference solution (a). Dissolve 10 mg of *alprenolol hydrochloride CRS* in *methanol R* and dilute to 10 ml with the same solvent.

Reference solution (b). Dissolve 10 mg of *alprenolol hydrochloride CRS* and 10 mg of *oxprenolol hydrochloride CRS* in *methanol R* and dilute to 10 ml with the same solvent.

Reference solution (c). Dilute 5 ml of test solution (b) to 50 ml with *methanol R*.

Plate: *TLC silica gel G plate R*.

Mobile phase: place 2 beakers each containing 30 ml of *ammonia R* at the bottom of the tank containing a mixture of 5 volumes of *methanol R* and 95 volumes of *ethyl acetate R*.

Application: 5 µl.

Development: over a path of 15 cm in a tank saturated for at least 1 h.

Drying: at 100 °C for 15 min.

Detection: expose to iodine vapour for up to 6 h.

System suitability: reference solution (b):

– the chromatogram shows 2 clearly separated spots.

Limits: test solution (a):

– *impurity D*: any spot with an R_F value greater than that of the principal spot is not more intense than the principal spot in the chromatogram obtained with reference solution (c) (0.2 per cent).

B. Liquid chromatography (*2.2.29*).

Test solution. Dissolve 20.0 mg of the substance to be examined in the mobile phase and dilute to 10.0 ml with the mobile phase.

Reference solution (a). Dissolve 4.0 mg of *alprenolol hydrochloride CRS* and 0.8 mg of *4-isopropylphenol R* in the mobile phase and dilute to 100.0 ml with the mobile phase.

Reference solution (b). Dilute 4.0 ml of the test solution to 100.0 ml with the mobile phase. Dilute 1.0 ml of this solution to 10.0 ml with the mobile phase.

Column:

– *size*: *l* = 0.15 m, Ø = 4 mm;

– *stationary phase*: *octylsilyl silica gel for chromatography R* (5 µm).

Mobile phase: mix 0.656 g of *sodium octanesulphonate R* with 150 ml of *acetonitrile R* and dilute to 500 ml with phosphate buffer pH 2.8 prepared as follows: mix 1.78 g of *phosphoric acid R* and 15.6 g of *sodium dihydrogen phosphate R* and dilute to 2000 ml with *water R*.

Flow rate: 1 ml/min.

Detection: spectrophotometer at 280 nm.

Equilibration: with the mobile phase for about 1 h.

Injection: 20 µl.

Run time: twice the retention time of alprenolol.

Retention time: alprenolol = about 11 min; 4-isopropylphenol = about 18 min.

System suitability: reference solution (a):

– *resolution*: minimum 5 between the peaks due to alprenolol and 4-isopropylphenol; if necessary, adjust the concentration of sodium octanesulphonate and/or acetonitrile in the mobile phase (increase the concentration of sodium octanesulphonate to increase the retention time of alprenolol and increase the concentration of acetonitrile to decrease the retention times of both compounds).

Limits:

– *total*: not more than the area of the principal peak in the chromatogram obtained with reference solution (b) (0.4 per cent);

– *disregard limit*: 0.1 times the area of the principal peak in the chromatogram obtained with reference solution (b) (0.04 per cent).

Heavy metals (*2.4.8*): maximum 10 ppm.

Dissolve 2.0 g in 20 ml of *water R*. 12 ml of the solution complies with test A. Prepare the reference solution using *lead standard solution (1 ppm Pb) R*.

Loss on drying (*2.2.32*): maximum 0.5 per cent, determined on 1.000 g by drying over *diphosphorus pentoxide R* at a pressure not exceeding 2.7 kPa.

Sulphated ash (*2.4.14*): maximum 0.1 per cent, determined on 1.0 g.

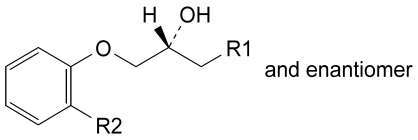
ASSAY

Dissolve 0.400 g in 25 ml of a mixture of equal volumes of *anhydrous ethanol R* and *water R*. Add 10 ml of *0.01 M hydrochloric acid*. Carry out a potentiometric titration (*2.2.20*), using *0.1 M sodium hydroxide*. Read the volume added between the 2 points of inflexion.

1 ml of *0.1 M sodium hydroxide* is equivalent to 28.58 mg of $C_{15}H_{24}ClNO_2$.

STORAGE

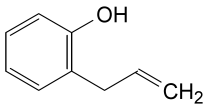
Protected from light.



IMPURITIES

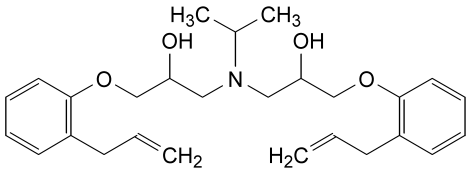
Specified impurities: C, D.

Other detectable impurities (the following substances would, if present at a sufficient level, be detected by one or other of the tests in the monograph. They are limited by the general acceptance criterion for other/unspecified impurities and/or by the general monograph *Substances for pharmaceutical use (2034)*. It is therefore not necessary to identify these impurities for demonstration of compliance. See also *5.10. Control of impurities in substances for pharmaceutical use*): *A, B.*



By thin-layer chromatography: D.

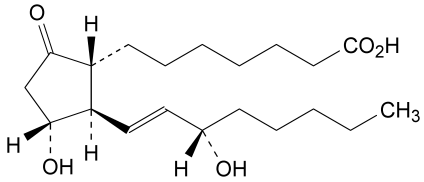
By liquid chromatography: A, B.



A. R1 = OH, R2 = CH_2-CH=CH_2: (2*RS*)-3-[2-(prop-2-enyl)phenoxy]propan-1,2-diol,

C. R1 = NH-CH(CH_3)$_2$, R2 = CH=CH-CH_3: (2*RS*)-1-[(1-methylethyl)amino]-3-[2-(prop-1-enyl)phenoxy]propan-2-ol,

B. 2-(prop-2-enyl)phenol,



D. 1,1′-[(1-methylethyl)imino]bis[3-[2-(prop-2-enyl)phenoxy]propan-2-ol].

ALPROSTADIL

Alprostadilum

$C_{20}H_{34}O_5$ M_r 354.5
[745-65-3]

DEFINITION

7-[(1*R*,2*R*,3*R*)-3-Hydroxy-2-[(1*E*,3*S*)-3-hydroxyoct-1-enyl]-5-oxocyclopentyl]heptanoic acid.

Content: 95.0 per cent to 102.5 per cent (anhydrous substance).

CHARACTERS

Appearance: white or slightly yellowish, crystalline powder.

Solubility: practically insoluble in water, freely soluble in alcohol, soluble in acetone, slightly soluble in ethyl acetate.

IDENTIFICATION

A. Specific optical rotation (*2.2.7*): – 60 to – 70 (anhydrous substance).

Immediately before use, dissolve 50 mg in *alcohol R* and dilute to 10.0 ml with the same solvent.

B. Infrared absorption spectrophotometry (*2.2.24*).

Preparation: discs.

Comparison: *alprostadil CRS*.

C. Examine the chromatograms obtained in the assay.

Results: the principal peak in the chromatogram obtained with the test solution is similar in retention time and size to the principal peak in the chromatogram obtained with the reference solution.

TESTS

Related substances. Liquid chromatography (*2.2.29*). *Prepare the solutions protected from light.*

Test solution. Dissolve 10.0 mg of the substance to be examined in a mixture of equal volumes of *acetonitrile R1* and *water R* and dilute to 10.0 ml with the same mixture of solvents.

Reference solution (a). Dilute 100 µl of the test solution to 20.0 ml with a mixture of equal volumes of *acetonitrile R1* and *water R*.

Reference solution (b). Dissolve 1.0 mg of *dinoprostone impurity C CRS* (alprostadil impurity H) and 1.0 mg of *alprostadil CRS* in a mixture of equal volumes of *acetonitrile R1* and *water R* and dilute to 20.0 ml with the same mixture of solvents.

Reference solution (c). In order to prepare *in situ* the degradation compounds (impurity A and impurity B), dissolve 1 mg of the substance to be examined in 100 µl of *1 M sodium hydroxide* (the solution becomes brownish-red), wait for 3 min and add 100 µl of *1 M phosphoric acid* (yellowish-white opalescent solution); dilute to 5.0 ml with a mixture of equal volumes of *acetonitrile R1* and *water R*.

System A

Column:

– *size*: *l* = 0.25 m, Ø = 4.0 mm,
– *stationary phase*: *octylsilyl base-deactivated silica gel for chromatography R* (4 µm) with a pore size of 6 nm,
– *temperature*: 35 °C.

Mobile phase:

– *mobile phase A*. Dissolve 3.9 g of *sodium dihydrogen phosphate R* in *water R* and dilute to 1000.0 ml with the same solvent; adjust to pH 2.5 with a 2.9 g/l solution of *phosphoric acid R* (approximately 600 ml is required); to 740 ml of the buffer solution add 260 ml of *acetonitrile R1*;
– *mobile phase B*. Dissolve 3.9 g of *sodium dihydrogen phosphate R* in *water R* and dilute to 1000.0 ml with the same solvent; adjust to pH 2.5 with a 2.9 g/l solution of *phosphoric acid R* (approximately 600 ml is required); to 200 ml of the buffer solution add 800 ml of *acetonitrile R1*;

Time (min)	Mobile phase A (per cent *V/V*)	Mobile phase B (per cent *V/V*)
0 - 75	100	0
75 - 76	100 → 0	0 → 100
76 - 86	0	100
86 - 87	0 → 100	100 → 0
87 - 102	100	0

Flow rate: 1 ml/min.

Detection: spectrophotometer at 200 nm.

Injection: 20 µl loop injector.

System suitability:

– *retention time*: alprostadil = about 63 min,
– *resolution*: minimum of 1.5 between the peaks due to impurity H and alprostadil in the chromatogram obtained with reference solution (b).

System B

Use the same conditions as for system A with the following mobile phase and elution programme:

– *mobile phase A*. Dissolve 3.9 g of *sodium dihydrogen phosphate R* in *water R* and dilute to 1000.0 ml with the same solvent; adjust to pH 2.5 with a 2.9 g/l

solution of *phosphoric acid R* (approximately 600 ml is required); to 600 ml of the buffer solution add 400 ml of *acetonitrile R1*;

– *mobile phase B*. Use mobile phase B as described under system A;

Time (min)	Mobile phase A (per cent *V/V*)	Mobile phase B (per cent *V/V*)
0 - 50	100	0
50 - 51	100 → 0	0 → 100
51 - 61	0	100
61 - 62	0 → 100	100 → 0
62 - 72	100	0

System suitability:

– *relative retentions* with reference to alprostadil (retention time = about 7 min): impurity A = about 2.4; impurity B = about 2.6,

– *resolution*: minimum of 1.5 between the peaks due to impurity A and impurity B in the chromatogram obtained with reference solution (c).

Carry out the test according to system A and B.

Limits:

– *correction factors*: multiply the areas of the corresponding peaks using the correction factors in Table 1488.-1 to obtain the corrected areas,

Table 1488.-1

Impurity	Relative retention (system A)	Relative retention (system B)	Correction factor
impurity G	0.80	-	0.7
impurity F	0.88	-	0.8
impurity D	0.90	-	1.0
impurity H	0.96	-	0.7
impurity E	1.10	-	0.7
impurity C	-	1.36	1.9
impurity K	-	1.85	0.06
impurity A	-	2.32	0.7
impurity B	-	2.45	1.5
impurity I	-	4.00	1.0
impurity J	-	5.89	1.0

– *impurity A (corrected area)*: not more than 3 times the area of the principal peak in the chromatogram obtained with reference solution (a) (1.5 per cent),

– *impurity B (corrected area)*: not more than the area of the principal peak in the chromatogram obtained with reference solution (a) (0.5 per cent),

– *any other impurity (corrected area)*: not more than 1.8 times the area of the principal peak in the chromatogram obtained with reference solution (a) (0.9 per cent), and not more than 1 such peak has an area greater than the area of the principal peak in the chromatogram obtained with reference solution (a) (0.5 per cent). Evaluate impurities appearing at relative retentions less than 1.2 by system A and impurities appearing at relative retentions greater than 1.2 by system B,

– *total (corrected area)*: not more than 3 times the area of the principal peak in the chromatogram obtained with reference solution (a) (1.5 per cent),

– *disregard limit*: 0.1 times the area of the principal peak in the chromatogram obtained with reference solution (a) (0.05 per cent).

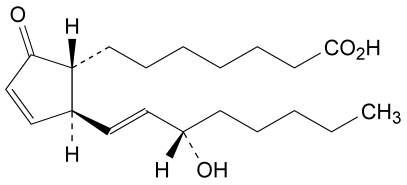
Water (*2.5.32*): maximum 0.5 per cent, determined on 50 mg.

ASSAY

Liquid chromatography (*2.2.29*) as described in the test for related substances, system A. *Prepare the solutions protected from light.*

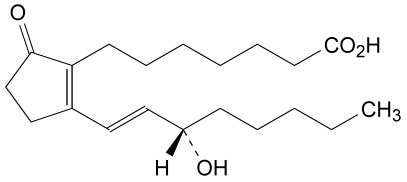
Test solution. Dissolve 10.0 mg of the substance to be examined in a mixture of equal volumes of *acetonitrile R1* and *water R* and dilute to 25.0 ml with the same mixture of solvents. Dilute 3.0 ml of the solution to 20.0 ml with a mixture of equal volumes of *acetonitrile R1* and *water R*.

Reference solution. Dissolve 10.0 mg of *alprostadil CRS* in a mixture of equal volumes of *acetonitrile R1* and *water R* and dilute to 25.0 ml with the same mixture of solvents. Dilute 3.0 ml of the solution to 20.0 ml with a mixture of equal volumes of *acetonitrile R1* and *water R*.



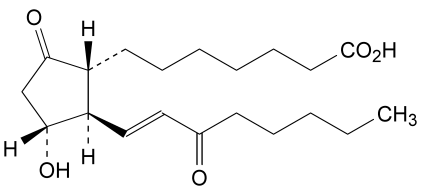
Injection: 20 µl.

Calculate the percentage content of $C_{20}H_{34}O_5$.

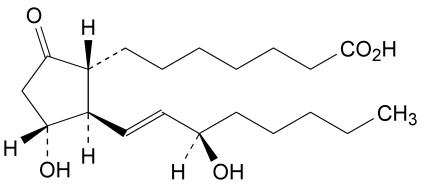


STORAGE

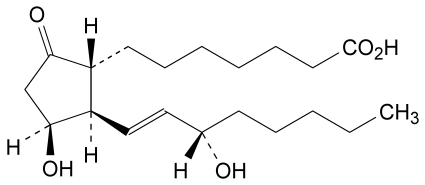
At a temperature of 2 °C to 8 °C.



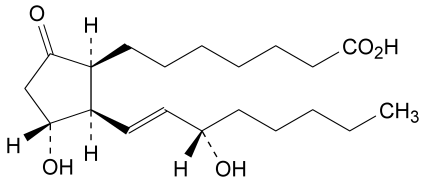
IMPURITIES



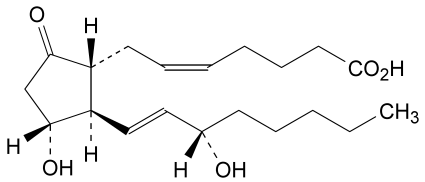
A. 7-[(1*R*,2*S*)-2-[(1*E*,3*S*)-3-hydroxyoct-1-enyl]-5-oxocyclopent-3-enyl]heptanoic acid (prostaglandin A_1),



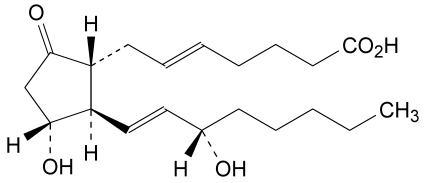
B. 7-[2-[(1*E*,3*S*)-3-hydroxyoct-1-enyl]-5-oxocyclopent-1-enyl]heptanoic acid (prostaglandin B_1),



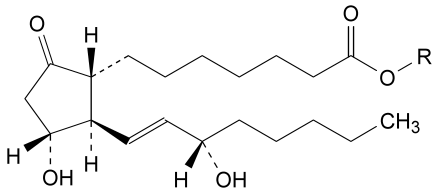
C. 7-[(1*R*,2*R*,3*R*)-3-hydroxy-2-[(1*E*)-3-oxooct-1-enyl]-5-oxocyclopentyl]heptanoic acid (15-oxoprostaglandin E_1),



D. 7-[(1*R*,2*R*,3*R*)-3-hydroxy-2-[(1*E*,3*R*)-3-hydroxyoct-1-enyl]-5-oxocyclopentyl]heptanoic acid (15-epiprostaglandin E_1),

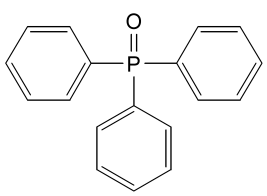


E. 7-[(1*R*,2*R*,3*S*)-3-hydroxy-2-[(1*E*,3*S*)-3-hydroxyoct-1-enyl]-5-oxocyclopentyl]heptanoic acid (11-epiprostaglandin E_1),



F. 7-[(1*S*,2*R*,3*R*)-3-hydroxy-2-[(1*E*,3*S*)-3-hydroxyoct-1-enyl]-5-oxocyclopentyl]heptanoic acid (8-epiprostaglandin E_1),

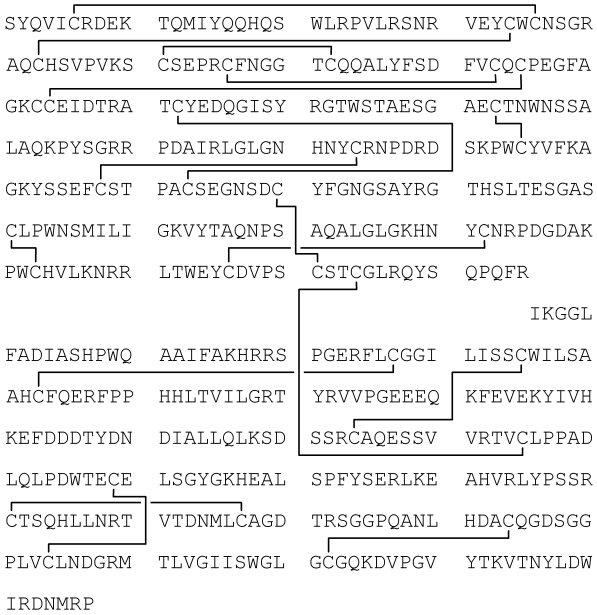
G. (5*Z*)-7-[(1*R*,2*R*,3*R*)-3-hydroxy-2-[(1*E*,3*S*)-3-hydroxyoct-1-enyl]-5-oxocyclopentyl]hept-5-enoic acid (dinoprostone),



H. (5*E*)-7-[(1*R*,2*R*,3*R*)-3-hydroxy-2-[(1*E*,3*S*)-3-hydroxyoct-1-enyl]-5-oxocyclopentyl]hept-5-enoic acid ((5*E*)-prostaglandin E_2),

I. R = CH_2-CH_3: ethyl 7-[(1*R*,2*R*,3*R*)-3-hydroxy-2-[(1*E*,3*S*)-3-hydroxyoct-1-enyl]-5-oxocyclopentyl]heptanoate (prostaglandin E_1, ethyl ester),

J. R = $CH(CH_3)_2$: 1-methylethyl 7-[(1*R*,2*R*,3*R*)-3-hydroxy-2-[(1*E*,3*S*)-3-hydroxyoct-1-enyl]-5-oxocyclopentyl]heptanoate (prostaglandin E_1, isopropyl ester),



K. triphenylphosphine oxide.

01/2008:1170

ALTEPLASE FOR INJECTION

Alteplasum ad iniectabile

DEFINITION

Alteplase for injection is a sterile, freeze-dried preparation of alteplase, a tissue plasminogen activator produced by recombinant DNA technology. It has a potency of not less than 500 000 IU per milligram of protein.

Tissue plasminogen activator binds to fibrin clots and activates plasminogen, leading to the generation of plasmin and to the degradation of fibrin clots or blood coagulates.

Alteplase consists of 527 amino acids with a calculated relative molecular mass of 59 050 without consideration of the carbohydrate moieties attached at positions Asn 117, Asn 184 and Asn 448. The total relative molecular mass is approximately 65 000. Alteplase is cleaved by plasmin between amino-acids 275 and 276 into a two-chain form (A chain and B chain) that are connected by a disulphide bridge between Cys 264 and Cys 395. The single-chain form and the two-chain form show comparable fibrinolytic activity *in vitro*.

PRODUCTION

Alteplase is produced by recombinant DNA synthesis in cell culture; the fermentation takes place in serum-free medium.

The purification process is designed to remove efficiently potential impurities, such as antibiotics, DNA and protein contaminants derived both from the host cell and from the production medium, and potential viral contaminants.

If alteplase is stored in bulk form, stability (maintenance of potency) in the intended storage conditions must be demonstrated.

The production, purification and product consistency are checked by a number of analytical methods described below, carried out routinely as in-process controls.

Protein content. The protein concentration of alteplase solutions is determined by measuring the absorbance (*2.2.25*) of the protein solution at 280 nm and at 320 nm, using formulation buffer as the compensation liquid. If dilution of alteplase samples is necessary, the samples are diluted in formulation buffer. For the calculation of the

alteplase concentration the absorbance value ($A_{280} - A_{320}$) is divided by the specific absorption coefficient for alteplase of 1.9.

Potency. The potency of alteplase is determined in an *in-vitro* clot-lysis assay as described under Assay. The specific activity of bulk alteplase is approximately 580 000 IU per milligram of alteplase.

***N*-terminal sequence**. *N*-terminal sequencing is applied to determine the correct *N*-terminal sequence and to determine semiquantitatively additional cleavage sites in the alteplase molecule, for example at position AA 275-276 or at position AA 27-28. The *N*-terminal sequence must conform with the sequence of human tissue plasminogen activator.

Isoelectric focusing. The consistency in the microheterogeneity of glycosylation of the alteplase molecule can be demonstrated by isoelectric focusing (IEF). A complex banding pattern with ten major and several minor bands in the pH range 6.5-8.5 is observed. Denaturing conditions are applied to achieve a good separation of differently charged variants of alteplase. The broad charge distribution observed is due to a population of molecules, which differ in the fine structure of biantenary and triantenary complex-type carbohydrate residues, with different degrees of substitution with sialic acids. The banding pattern of alteplase test samples must be consistent with the pattern of alteplase reference standard.

Single-chain alteplase content. The alteplase produced by CHO (Chinese hamster ovary) cells in serum-free medium is predominantly single-chain alteplase. The single-chain form can be separated from the two-chain form by gel-permeation liquid chromatography under reducing conditions as described under Single-chain content (see Tests). The single-chain alteplase content in bulk samples must be higher than 60 per cent.

Tryptic-peptide mapping. The primary structure of the alteplase molecule is verified by tryptic-peptide mapping as described under Identification B. The reduced and carboxymethylated molecule is cleaved by trypsin into about fifty peptides, which are separated by reverse-phase liquid chromatography. A characteristic chromatogram (fingerprint) is obtained. The identity of the tryptic-peptide map of a given alteplase sample with the profile of a well-characterised reference standard is an indirect confirmation of the amino-acid sequence, because even single amino-acid exchanges in individual peptides can be detected by this sensitive technique. In addition, complex peaks of the glycopeptides can be isolated from the tryptic-peptide map and separated in a second dimension, either by reverse-phase liquid chromatography under modified conditions or by capillary electrophoresis. By this two-dimensional separation of glycopeptide variants, lot-to-lot consistency of the microheterogeneity of glycosylation can be demonstrated.

The tryptic-peptide map of alteplase samples must be consistent with the tryptic-peptide map of alteplase reference standard.

Monomer content. The monomer content of alteplase is measured by gel-permeation liquid chromatography under non-reduced conditions as described under Monomer content (see Tests). The monomer content of alteplase bulk samples must be higher than 95 per cent.

Type I/Type II alteplase content. CHO cells produce two glycosylation variants of alteplase. Type I alteplase contains one polymannose-type glycosylation at position Asn 117 and two complex-type glycosylation sites at positions Asn 184 and Asn 448. Type II alteplase is only glycosylated at positions Asn 117 and Asn 448.

The ratio of Type I/Type II alteplase is constant in the range of 45 to 65 per cent of Type I and 35 to 55 per cent of Type II. The content of alteplase Type I and Type II can be determined by a densitometric scan of SDS-PAGE (sodium dodecyl sulphate polyacrylamide gel electrophoresis) gel. Plasmin-treated samples of alteplase, which are reduced and carboxymethylated before loading on the gel, are separated into three bands: Type I alteplase A-chain (AA 1-275), Type II alteplase A-chain (AA 1-275) and alteplase B-chain (AA 276-527). The ratio of Type I/Type II alteplase is determined from a calibration curve, which is obtained by a densitometric scan of defined mixtures of purified Type I alteplase and Type II alteplase standards.

SDS-PAGE. SDS-PAGE (silver staining) is used to demonstrate purity of the alteplase bulk material and the integrity of the alteplase molecule. For alteplase bulk samples, no additional protein bands compared to reference standard or degradation products must occur in SDS-PAGE gels at a loading amount of 2.5 µg alteplase protein per lane and a limit of detection of 5 ng per protein (BSA) band.

Bacterial endotoxins (*2.6.14*): less than 1 IU per milligram of alteplase.

Sialic acids. Dialyse samples and alteplase reference standard against enzyme buffer (8.9 g/l *sodium chloride R*, 4.1 g/l *sodium acetate R*, pH 5.5) using a membrane with a cut-off point corresponding to a relative molecular mass of 10 000 for globular proteins. After dialysis, determine the protein concentration. Add 5 µl of calcium chloride solution (19.98 per cent *m/m calcium chloride R*) to 1 ml of protein solution. Add 10 milliunits of neuraminidase per milligram of protein. Incubate this solution at 37 °C for about 17 h.

Prepare standard dilutions between 1.56 mg/ml and 25.0 mg/ml from an *N-acetylneuraminic acid R* reference stock solution with a concentration of 50 mg/ml. Pipette 0.2 ml of the sample and of the protein reference standard in duplicate into reagent tubes. Pipette also 0.2 ml of the standard dilutions into reagent tubes. Add 0.25 ml of periodate reagent (5.4 g/l solution of *sodium periodate R* in a 1.25 per cent *V/V* solution of *sulphuric acid R*), mix and incubate for 30 min at 37 °C. Add 0.2 ml of arsenite reagent (20 g/l solution of *sodium arsenite R* in a 1.55 per cent *V/V* solution of *hydrochloric acid R*) and mix. A yellowish-brown colour develops and disappears. Add 2.0 ml of a 28.9 g/l solution of *thiobarbituric acid R* and mix. Heat the closed tubes in boiling water for 7.5 min and then cool them in an ice-bath for 5 min. Add 2.0 ml of a mixture of *butanol R* and *hydrochloric acid R* (95:5) and mix. Centrifuge the tubes at 3000 *r*/min for 3 min. Measure the absorbance of the butanol-HCl layer at 552 nm within 30 min using the butanol-HCl mixture as the compensation solution. Perform a linear-regression analysis for the *N*-acetylneuraminic acid standard. The molar content of *N*-acetylneuraminic acid for the samples and for alteplase reference standard is calculated from the calibration curve. The sialic acids content for the test samples must be within the range 70 to 130 per cent of alteplase reference standard, which contains about 3 moles of sialic acids per mole of alteplase.

Neutral sugars. Dilute alteplase samples and the reference standard in the assay buffer, containing 34.8 g/l of *arginine R*, 0.1 g/l of *polysorbate 80 R* and adjusted to pH 7.4 with *phosphoric acid R*, to a protein concentration of 50 µg/ml. Prepare the following concentrations of mannose in the same assay buffer for a calibration curve: 20, 30, 40, 50 and 60 µg/ml. Pipette 2 ml of alteplase samples

and reference standard, as well as 2 ml of each mannose concentration in duplicate in reagent tubes. Add 50 µl of *phenol R*, followed by 5 ml of *sulphuric acid R* in each reagent tube. Incubate the mixture for 30 min at room temperature. Measure the absorbance at 492 nm for each tube. Read the content of neutral sugars from the mannose calibration curve. The neutral sugar content is expressed in moles of neutral sugar per mole of alteplase, taking into account the dilution factor for alteplase samples and reference standard and using a relative molecular mass of 180.2 for mannose and a relative molecular mass of 59 050 for the alteplase protein moiety. The neutral sugar content of the alteplase samples must be in the range of 70 to 130 per cent compared to alteplase reference standard, which contains about 12 moles of neutral sugar per mole of alteplase.

CHARACTERS

A white or slightly yellow powder or solid friable mass.

Reconstitute the preparation as stated on the label immediately before carrying out the Identification, Tests (except those for solubility and water) and Assay.

IDENTIFICATION

A. The assay serves also to identify the preparation.

B. Tryptic-peptide mapping. Examine by liquid chromatography (*2.2.29*).

Test solution. Dilute the preparation to be examined with *water R* to obtain a solution containing about 1 mg of alteplase per millilitre. Dialyse about 2.5 ml of the solution for at least 12 h into a solution containing 480 g/l of *urea R*, 44 g/l of *tris(hydroxymethyl)aminomethane R* and 1.5 g/l of *disodium edetate R* and adjusted to pH 8.6, using a membrane with a cut-off point corresponding to a relative molecular mass of 10 000 for globular proteins. Measure the volume of the solution, transfer it to a clean test-tube and add per millilitre 10 µl of a 156 g/l solution of *dithiothreitol R*. Allow to stand for 4 h, cool in iced water and add per millilitre of solution 25 µl of a freshly prepared 190 g/l solution of *iodoacetic acid R*. Allow to stand in the dark for 30 min. Add per millilitre 50 µl of dithiothreitol solution to stop the reaction. Dialyse for 24 h against an 8 g/l solution of *ammonium hydrogen carbonate R*. Add 1 part of *trypsin for peptide mapping R* to 100 parts of the protein and allow to stand for 6 h to 8 h. Repeat the addition of trypsin and allow to stand for a total of 24 h.

Reference solution. Prepare as for the test solution using a suitable reference standard instead of the preparation to be examined.

The chromatographic procedure may be carried out using:

– a column 0.1 m long and 4.6 mm in internal diameter packed with *octadecylsilyl silica gel for chromatography R* (5 µm to 10 µm);

Mobile phase A. A 8 g/l solution of *sodium dihydrogen phosphate R*, adjusted to pH 2.85 with *phosphoric acid R*, filtered and degassed;

Mobile phase B. Acetonitrile R 75 per cent *V/V* in mobile phase A;

– as detector a spectrophotometer set at 210 nm.

Equilibrate the system with mobile phase A at a flow rate of 1 ml/min. After injection of the solution, increase the proportion of mobile phase B at a rate of 0.44 per cent per minute until the ratio of mobile phase A to mobile phase B is 60:40, then increase the proportion of mobile phase B at a rate of 1.33 per cent per minute until the ratio of mobile phase A to mobile phase B is 20:80 and then continue elution with this mixture for a further 10 min. Record the chromatogram for the reference solution: the test is not valid unless the resolution of peaks 6 (peptides 268-275) and 7 (peptides 1-7) is at least 1.5; $b_{0.5a}$ and $b_{0.5b}$ are not more than 0.4 min. Inject about 100 µl of the test solution and record the chromatogram. Verify the identity of the peaks by comparison with the chromatograms of the reference solution. There should not be any additional significant peaks or shoulders, a significant peak or shoulder being defined as one with an area response equal to or greater than 5 per cent of peak 19 (peptides 278-296); no significant peak is missing. A type chromatogram for identification of the peaks cited is given at the end of the monograph (see Figure 1170.-1).

TESTS

Appearance of solution. The reconstituted preparation is clear (*2.2.1*) and not more intensely coloured than reference solution Y_7 (*2.2.2, Method II*).

pH (*2.2.3*): 7.1 to 7.5.

Solubility. Add the volume of the liquid stated on the label. The preparation dissolves completely within 2 min at 20 °C to 25 °C.

Protein content. Prepare a solution of the substance to be examined with an accurately known concentration of about 1 g/l. Using a 34.8 g/l solution of *arginine R* adjusted

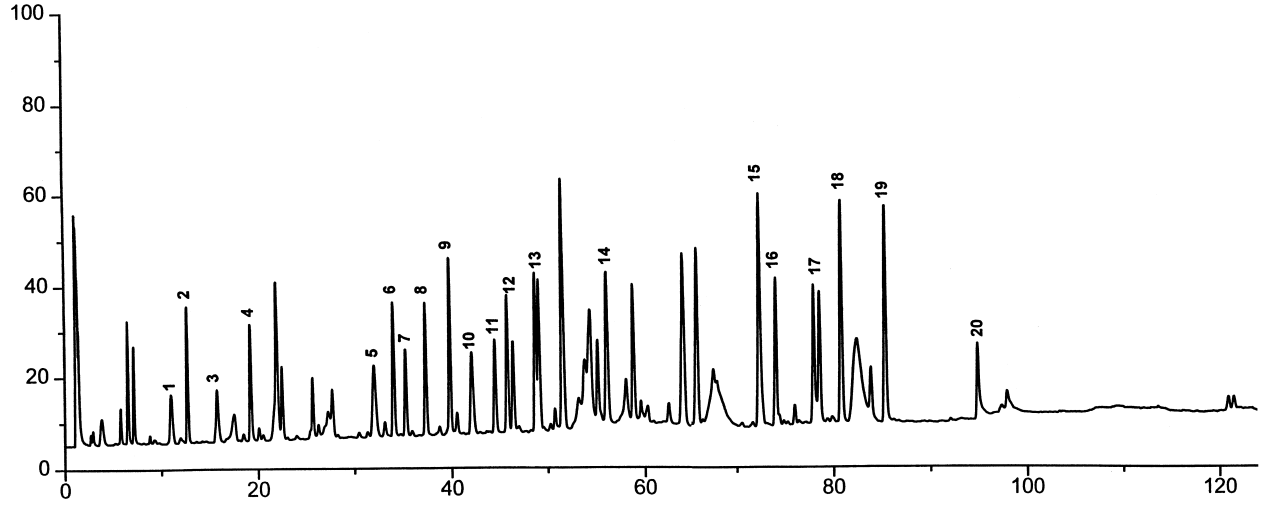


Figure 1170.-1. – *Chromatogram for tryptic-peptide mapping of alteplase*

to pH 7.3 with *phosphoric acid R*, dilute an accurately measured volume of the solution of the substance to be examined so that the absorbance measured at the maximum at about 280 nm is 0.5 to 1.0 (*test solution*). Measure the absorbance (*2.2.25*) of the solution at the maximum at about 280 nm and at 320 nm using the arginine solution as the compensation liquid. Calculate the protein content in the portion of alteplase taken from the following expression:

$$\frac{V\,(A_{280} - A_{320})}{1.9}$$

in which V is the volume of arginine solution required to prepare the test solution, A_{280} is the absorbance at the maximum at about 280 nm and A_{320} is the absorbance at 320 nm.

Single-chain content. Examine by liquid chromatography(*2.2.29*).

Test solution. Dissolve the preparation to be examined in *water R* to obtain a solution containing about 1 mg of alteplase per millilitre. Place about 1 ml of the solution in a tube, add 3 ml of a 3 g/l solution of *dithiothreitol R* in the mobile phase, place a cap on the tube and heat at about 80 °C for 3 min to 5 min.

The chromatographic procedure may be carried out using:

– a column 0.6 m long and 7.5 mm in internal diameter packed with silica-based rigid, hydrophilic gel with spherical particles 10 µm to 13 µm in diameter, suitable for size-exclusion chromatography;
– as mobile phase at a flow rate of 0.5 ml/min a solution containing 30 g/l of *sodium dihydrogen phosphate R* and 1 g/l of *sodium dodecyl sulphate R*, adjusted to pH 6.8 with *dilute sodium hydroxide solution R*;
– as detector a spectrophotometer set at 214 nm.

Inject about 50 µl of the test solution and record the chromatogram. The chromatogram shows two major peaks corresponding to single-chain and two-chain alteplase. Calculate the relative amount of single-chain alteplase from the peak area values.

The test is not valid unless: the number of theoretical plates calculated on the basis of the single-chain alteplase peak is at least 1000. The content of single-chain alteplase is not less than 60 per cent of the total amount of alteplase-related substances found.

Monomer content. Examine by liquid chromatography (*2.2.29*).

Test solution. Reconstitute the preparation to be examined to obtain a solution containing about 1 mg per millilitre.

The chromatographic procedure may be carried out using:

– a column 0.6 m long and 7.5 mm in internal diameter packed with silica-based rigid, hydrophilic gel with spherical particles 10 µm to 13 µm in diameter, suitable for size-exclusion chromatography;
– as mobile phase at a flow rate of 0.5 ml/min a solution containing 30 g/l of *sodium dihydrogen phosphate R* and 1 g/l of *sodium dodecyl sulphate R*, adjusted to pH 6.8 with *dilute sodium hydroxide solution R*;
– as detector a spectrophotometer set at 214 nm.

Inject the test solution and record the chromatogram. The test is not valid unless the number of theoretical plates calculated for the alteplase monomer peak is at least 1000. Measure the response for all peaks, i.e. peaks corresponding to alteplase species of different molecular masses. Calculate the relative content of monomer from the area values of these peaks. The monomer content for alteplase must be at least 95 per cent.

Water (*2.5.12*). Not more than 4.0 per cent, determined by the semi-micro determination of water.

Bacterial endotoxins (*2.6.14*): less than 1 IU per milligram of protein.

Sterility (*2.6.1*). It complies with the test for sterility.

ASSAY

The potency of alteplase is determined by comparing its ability to activate plasminogen to form plasmin with the same capacity of a reference preparation calibrated in International Units. The formation of plasmin is measured by the determination of the lysis time of a fibrin clot in given conditions.

The International Unit is the activity of a stated quantity of the International Standard of alteplase. The equivalence in International Units of the International Standard is stated by the World Health Organisation.

Solvent buffer. A solution containing 1.38 g/l of *sodium dihydrogen phosphate monohydrate R*, 7.10 g/l of *anhydrous disodium hydrogen phosphate R*, 0.20 g/l of *sodium azide R* and 0.10 g/l of *polysorbate 80 R*.

Human thrombin solution. A solution of *human thrombin R* containing 33 IU/ml in solvent buffer.

Human fibrinogen solution. A 2 g/l solution of *fibrinogen R* in solvent buffer.

Human plasminogen solution. A 1 g/l solution of *human plasminogen R* in solvent buffer.

Test solutions. Using a solution of the substance to be examined containing 1 g/l, prepare serial dilutions using solvent buffer, for example 1:5000, 1:10 000, 1:20 000.

Reference solutions. Using a solution of a suitable reference standard having an accurately known concentration of about 1 g/l (580 000 IU of alteplase per millilitre), prepare five serial dilutions using *water R* to obtain reference solutions having known concentrations in the range 9.0 IU/ml to 145 IU/ml.

To each of a set of labelled glass test-tubes, add 0.5 ml of human thrombin solution. Allocate each test and reference solution to a separate tube and add to each tube 0.5 ml of the solution allocated to it. To each of a second set of labelled glass tubes, add 20 µl of human plasminogen solution, and 1 ml of human fibrinogen solution, mix and store on ice. Beginning with the reference/thrombin mixture containing the lowest number of International Units per millilitre, record the time and separately add 200 µl of each of the thrombin mixtures to the test tubes containing the plasminogen-fibrinogen mixture. Using a vortex mixture, intermittently mix the contents of each tube for a total of 15 s and carefully place in a rack in a circulating water-bath at 37 °C. A visibly turbid clot forms within 30 s and bubbles subsequently form within the clot. Record the clot-lysis time as the time between the first addition of alteplase solution and the moment when the last bubble rises to the surface. Using a least-squares fit, determine the equation of the line using the logarithms of the concentrations of the reference preparation in International Units per millilitre versus the logarithms of the values of their clot-lysis times in seconds, according to the following equation:

$$\log t = a + b\,(\log U_s)$$

in which t is the clot-lysis time, U_S the activity in International Units per millilitre of the reference preparation, b is the slope and a the y-intercept of the line. The test is not valid unless the correlation coefficient is – 0.9900 to – 1.0000.

From the line equation and the clot-lysis time for the test solution, calculate the logarithm of the activity U_A from the following equation:

$$\log U_A = \frac{[(\log t) - a]}{b}$$

Calculate the alteplase activity in International Units per millilitre from the following expression:

$$D \times U_A$$

in which D is the dilution factor for the test solution. Calculate the specific activity in the portion of the substance to be examined from the following expression:

$$\frac{U_A}{P}$$

in which P is the concentration of protein obtained in the test for protein content.

The estimated potency is not less than 90 per cent and not more than 110 per cent of the stated potency.

STORAGE

Store in a colourless, glass container, under vacuum or under an inert gas, protected from light, at a temperature of 2 °C to 30 °C.

LABELLING

The label states:

– the number of International Units per container;
– the amount of protein per container.

01/2008:0006

ALUM

Alumen

$AlK(SO_4)_2,12H_2O$ M_r 474.4
[7784-24-9]

DEFINITION

Content: 99.0 per cent to 100.5 per cent of $AlK(SO_4)_2,12H_2O$.

CHARACTERS

Appearance: granular powder or colourless, transparent, crystalline masses.

Solubility: freely soluble in water, very soluble in boiling water, soluble in glycerol, practically insoluble in ethanol (96 per cent).

IDENTIFICATION

A. Solution S (see Tests) gives the reactions of sulphates (*2.3.1*).
B. Solution S gives the reaction of aluminium (*2.3.1*).
C. Shake 10 ml of solution S with 0.5 g of *sodium bicarbonate R* and filter. The filtrate gives reaction (a) of potassium (*2.3.1*).

TESTS

Solution S. Dissolve 2.5 g in *water R* and dilute to 50 ml with the same solvent.

Appearance of solution. Solution S is clear (*2.2.1*) and colourless (*2.2.2, Method II*).

pH (*2.2.3*): 3.0 to 3.5.

Dissolve 1.0 g in *carbon dioxide-free water R* and dilute to 10 ml with the same solvent.

Ammonium (*2.4.1*): maximum 0.2 per cent.

To 1 ml of solution S add 4 ml of *water R*. Dilute 0.5 ml of this solution to 14 ml with *water R*.

Iron (*2.4.9*): maximum 100 ppm.

Dilute 2 ml of solution S to 10 ml with *water R*. Use in this test 0.3 ml of *thioglycollic acid R*.

Heavy metals (*2.4.8*): maximum 20 ppm.

12 ml of solution S complies with test A. Prepare the reference solution using *lead standard solution (1 ppm Pb) R*.

ASSAY

Dissolve 0.900 g in 20 ml of *water R* and carry out the complexometric titration of aluminium (*2.5.11*).

1 ml of *0.1 M sodium edetate* is equivalent to 47.44 mg of $AlK(SO_4)_2,12H_2O$.

01/2008:0971

ALUMINIUM CHLORIDE HEXAHYDRATE

Aluminii chloridum hexahydricum

$AlCl_3,6H_2O$ M_r 241.4
[7784-13-6]

DEFINITION

Content: 95.0 per cent to 101.0 per cent.

CHARACTERS

Appearance: white or slightly yellow, crystalline powder or colourless crystals, deliquescent.

Solubility: very soluble in water, freely soluble in ethanol (96 per cent), soluble in glycerol.

IDENTIFICATION

A. Dilute 0.1 ml of solution S2 (see Tests) to 2 ml with *water R*. The solution gives reaction (a) of chlorides (*2.3.1*).
B. Dilute 0.3 ml of solution S2 to 2 ml with *water R*. The solution gives the reaction of aluminium (*2.3.1*).

TESTS

Solution S1. Dissolve 10.0 g in *distilled water R* and dilute to 100 ml with the same solvent.

Solution S2. Dilute 50 ml of solution S1 to 100 ml with *water R*.

Appearance of solution. Solution S2 is clear (*2.2.1*) and not more intensely coloured than reference solution B_7 (*2.2.2, Method II*).

Sulphates (*2.4.13*): maximum 100 ppm, determined on solution S1.

Iron (*2.4.9*): maximum 10 ppm, determined on solution S1.

Alkali and alkaline-earth metals: maximum 0.5 per cent.

To 20 ml of solution S2 add 100 ml of *water R* and heat to boiling. To the hot solution add 0.2 ml of *methyl red solution R*. Add *dilute ammonia R1* until the colour of the indicator changes to yellow and dilute to 150 ml with *water R*. Heat to boiling and filter. Evaporate 75 ml of the filtrate to dryness on a water-bath and ignite to constant mass. The residue weighs a maximum of 2.5 mg.

Heavy metals (*2.4.8*): maximum 20 ppm.

12 ml of solution S1 complies with test A. Prepare the reference solution using *lead standard solution (2 ppm Pb) R*.

Water (*2.5.12*): 42.0 per cent to 48.0 per cent, determined on 50.0 mg.

ASSAY

Dissolve 0.500 g in 25.0 ml of *water R*. Carry out the complexometric titration of aluminium (*2.5.11*). Titrate with *0.1 M zinc sulphate* until the colour of the indicator changes from greyish-green to pink. Carry out a blank titration.

1 ml of *0.1 M sodium edetate* is equivalent to 24.14 mg of $AlCl_3,6H_2O$.

STORAGE

In an airtight container.

01/2008:1664

ALUMINIUM HYDROXIDE, HYDRATED, FOR ADSORPTION

Aluminii hydroxidum hydricum ad adsorptionem

$[AlO(OH)],nH_2O$

DEFINITION

Content: 90.0 per cent to 110.0 per cent of the content of aluminium stated on the label.

NOTE: *shake the gel vigorously for at least 30 s immediately before examining.*

CHARACTERS

Appearance: white or almost white, translucent, viscous, colloidal gel. A supernatant may be formed upon standing.

Solubility: a clear or almost clear solution is obtained with alkali hydroxide solutions and mineral acids.

IDENTIFICATION

Solution S (see Tests) gives the reaction of aluminium.

To 10 ml of solution S add about 0.5 ml of *dilute hydrochloric acid R* and about 0.5 ml of *thioacetamide reagent R*. No precipitate is formed. Add dropwise 5 ml of *dilute sodium hydroxide solution R*. Allow to stand for 1 h. A gelatinous white precipitate is formed which dissolves upon addition of 5 ml of *dilute sodium hydroxide solution R*. Gradually add 5 ml of *ammonium chloride solution R* and allow to stand for 30 min. The gelatinous white precipitate is re-formed.

TESTS

Solution S. Add 1 g to 4 ml of *hydrochloric acid R*. Heat at 60 °C for 1 h, cool, dilute to 50 ml with *distilled water R* and filter if necessary.

pH (*2.2.3*): 5.5 to 8.5.

Adsorption power. Dilute the substance to be examined with *distilled water R* to obtain an aluminium concentration of 5 mg/ml. Prepare *bovine albumin R* solutions with the following concentrations of bovine albumin: 0.5 mg/ml, 1 mg/ml, 2 mg/ml, 3 mg/ml, 5 mg/ml and 10 mg/ml. If necessary, adjust the gel and the *bovine albumin R* solutions to pH 6.0 with *dilute hydrochloric acid R* or *dilute sodium hydroxide solution R*.

For adsorption, mix 1 part of the diluted gel with 4 parts of each of the solutions of *bovine albumin R* and allow to stand at room temperature for 1 h. During this time shake the mixture vigorously at least 5 times. Centrifuge or filter through a non-protein-retaining filter. Immediately determine the protein content (*2.5.33, Method 2*) of either the supernatant or the filtrate.

It complies with the test if no bovine albumin is detectable in the supernatant or filtrate of the 2 mg/ml *bovine albumin R* solution (maximum level of adsorption) and in the supernatant or filtrate of *bovine albumin R* solutions of lower concentrations. Those containing 3 mg/ml, 5 mg/ml and 10 mg/ml *bovine albumin R* solutions may show bovine albumin in the supernatant or filtrate, proportional to the amount of bovine albumin in the solutions.

Sedimentation. If necessary, adjust the substance to be examined to pH 6.0 using *dilute hydrochloric acid R* or dilute *sodium hydroxide solution R*. Dilute with *distilled water R* to obtain an aluminium concentration of approximately 5 mg/ml. If the aluminium content of the substance to be examined is lower than 5 mg/ml, adjust to pH 6.0 and dilute with a 9 g/l solution of *sodium chloride R* to obtain an aluminium concentration of about 1 mg/ml. After shaking for at least 30 s, place 25 ml of the preparation in a 25 ml graduated cylinder and allow to stand for 24 h.

It complies with the test if the volume of the clear supernatant is less than 5 ml for the gel with an aluminium content of about 5 mg/ml.

It complies with the test if the volume of the clear supernatant is less than 20 ml for the gel with an aluminium content of about 1 mg/ml.

Chlorides (*2.4.4*): maximum 0.33 per cent.

Dissolve 0.5 g in 10 ml of *dilute nitric acid R* and dilute to 500 ml with *water R*.

Nitrates: maximum 100 ppm.

Place 5 g in a test-tube immersed in ice-water, add 0.4 ml of a 100 g/l solution of *potassium chloride R*, 0.1 ml of *diphenylamine solution R* and, dropwise with shaking, 5 ml of *sulphuric acid R*. Transfer the tube to a water-bath at 50 °C. After 15 min, any blue colour in the solution is not more intense than that in a standard prepared at the same time and in the same manner using 5 ml of *nitrate standard solution (100 ppm NO_3) R*.

Sulphates (*2.4.13*): maximum 0.5 per cent.

Dilute 2 ml of solution S to 20 ml with *water R*.

Ammonium (*2.4.1, Method B*): maximum 50 ppm, determined on 1.0 g.

Prepare the standard using 0.5 ml of *ammonium standard solution (100 ppm NH_4) R*.

Arsenic (*2.4.2, Method A*): maximum 1 ppm, determined on 1 g.

Iron (*2.4.9*): maximum 15 ppm, determined on 0.67 g.

Heavy metals (*2.4.8*): maximum 20 ppm.

Dissolve 2.0 g in 10 ml of *dilute nitric acid R* and dilute to 20 ml with *water R*. The solution complies with test A. Prepare the reference solution using *lead standard solution (2 ppm Pb) R*.

Bacterial endotoxins (*2.6.14*): less than 5 IU of endotoxin per milligram of aluminium, if intended for use in the manufacture of an adsorbed product without a further appropriate procedure for the removal of bacterial endotoxins.

ASSAY

Dissolve 10.00 g in 10 ml of *hydrochloric acid R1*, heating on a water-bath. Cool and dilute to 20 ml with *water R*. To 10 ml of the solution, add *dilute ammonia R1* until a precipitate is obtained. Add the smallest quantity of *dilute hydrochloric acid R* needed to dissolve the precipitate and dilute to 20 ml with *water R*. Carry out the complexometric titration of aluminium (*2.5.11*). Carry out a blank titration.

STORAGE

At a temperature not exceeding 30 °C. Do not allow to freeze. If the substance is sterile, store in a sterile, airtight, tamper-proof container.

LABELLING

The label states the declared content of aluminium.

01/2008:1388
corrected 6.0

ALUMINIUM MAGNESIUM SILICATE

Aluminii magnesii silicas

DEFINITION

Mixture of particles with colloidal particle size of montmorillonite and saponite, free from grit and non-swellable ore.

Content:

– *aluminium* (Al; A_r 26.98): 95.0 per cent to 105.0 per cent of the value stated on the label;
– *magnesium* (Mg; A_r 24.30): 95.0 per cent to 105.0 per cent of the value stated on the label.

CHARACTERS

Appearance: almost white powder, granules or plates.

Solubility: practically insoluble in water and in organic solvents.

It swells in water to produce a colloidal dispersion.

IDENTIFICATION

A. Fuse 1 g with 2 g of *anhydrous sodium carbonate R*. Warm the residue with *water R* and filter. Acidify the filtrate with *hydrochloric acid R* and evaporate to dryness on a water-bath. 0.25 g of the residue gives the reaction of silicates (*2.3.1*).

B. Dissolve the remainder of the residue obtained in identification test A in a mixture of 5 ml of *dilute hydrochloric acid R* and 10 ml of *water R*. Filter and add *ammonium chloride buffer solution pH 10.0 R*. A white, gelatinous precipitate is formed. Centrifuge and keep the supernatant for identification C. Dissolve the remaining precipitate in *dilute hydrochloric acid R*. The solution gives the reaction of aluminium (*2.3.1*).

C. The supernatant liquid obtained after centrifugation in identification test B gives the reaction of magnesium (*2.3.1*).

TESTS

pH (*2.2.3*): 9.0 to 10.0.

Disperse 5.0 g in 100 ml of *carbon dioxide-free water R*.

Arsenic (*2.4.2, Method A*): maximum 3 ppm.

Transfer 16.6 g to a 250 ml beaker containing 100 ml of *dilute hydrochloric acid R*. Mix, cover with a watch glass and boil gently, with occasional stirring, for 15 min. Allow the insoluble matter to settle and decant the supernatant liquid through a rapid-flow filter paper into a 250 ml volumetric flask, retaining as much sediment as possible in the beaker. To the residue in the beaker add 25 ml of hot *dilute hydrochloric acid R*, stir, heat to boiling, allow the insoluble matter to settle and decant the supernatant liquid through the filter into the volumetric flask. Repeat the extraction with 4 additional quantities, each of 25 ml, of hot *dilute hydrochloric acid R*, decanting each supernatant liquid through the filter into the volumetric flask. At the last extraction, transfer as much of the insoluble matter as possible onto the filter. Allow the combined filtrates to cool to room temperature and dilute to 250.0 ml with *dilute hydrochloric acid R*. Dilute 5.0 ml of this solution to 25.0 ml with *dilute hydrochloric acid R*.

Lead: maximum 15.0 ppm.

Atomic absorption spectrometry (*2.2.23, Method I*).

Test solution. Transfer 10.0 g to a 250 ml beaker containing 100 ml of *dilute hydrochloric acid R*. Mix, cover with a watch glass and boil for 15 min. Allow to cool to room temperature and allow the insoluble matter to settle. Decant the supernatant liquid through a rapid-flow filter paper into a 400 ml beaker. To the insoluble matter in the 250 ml beaker add 25 ml of hot *water R*. Stir, allow the insoluble matter to settle and decant the supernatant liquid through the filter into the 400 ml beaker. Repeat the extraction with 2 additional quantities, each of 25 ml, of *water R*, decanting each time the supernatant liquid through the filter into the 400 ml beaker. Wash the filter with 25 ml of hot *water R*, collecting this filtrate in the 400 ml beaker. Concentrate the combined filtrates to about 20 ml by gently boiling. If a precipitate appears, add about 0.1 ml of *nitric acid R*, heat to boiling and allow to cool to room temperature. Filter the concentrated extracts through a rapid-flow filter paper into a 50 ml volumetric flask. Transfer the remaining contents of the 400 ml beaker through the filter paper and into the flask with *water R*. Dilute this solution to 50.0 ml with *water R*.

Reference solutions. Prepare the reference solutions using *lead standard solution (10 ppm Pb) R*, diluted as necessary with *water R*.

Source: lead hollow-cathode lamp.

Wavelength: 217 nm.

Atomisation device: oxidising air-acetylene flame.

Loss on drying (*2.2.32*): maximum 8.0 per cent, determined on 1.000 g by drying in an oven at 105 °C.

Microbial contamination. Total viable aerobic count (*2.6.12*) not more than 10^3 micro-organisms per gram, determined by plate count. It complies with the test for *Escherichia coli* (*2.6.13*).

ASSAY

Aluminium. Atomic absorption spectrometry (*2.2.23, Method I*).

Test solution. In a platinum crucible mix 0.200 g with 1.0 g of *lithium metaborate R*. Heat slowly at first and ignite at 1000-1200 °C for 15 min. Allow to cool, then place the crucible in a 100 ml beaker containing 25 ml of *dilute nitric acid R* and add an additional 50 ml of *dilute nitric acid R*, filling and submerging the crucible. Place a polytetrafluoroethylene-coated magnetic stirring bar in the crucible and stir gently with a magnetic stirrer until dissolution is complete. Pour the contents into a 250 ml beaker and remove the crucible. Warm the solution and transfer through a rapid-flow filter paper into a 250 ml volumetric flask, wash the filter and beaker with *water R* and dilute to 250.0 ml with *water R* (solution A). To 20.0 ml of solution A add 20 ml of a 10 g/l solution of *sodium chloride R* and dilute to 100.0 ml with *water R*.

Reference solutions. Dissolve, with gentle heating, 1.000 g of *aluminium R* in a mixture of 10 ml of *hydrochloric acid R* and 10 ml of *water R*. Allow to cool, then dilute to 1000.0 ml with *water R* (1 mg of aluminium per millilitre). Into 3

identical volumetric flasks, each containing 0.20 g of *sodium chloride R*, introduce 2.0 ml, 5.0 ml and 10.0 ml of this solution respectively, and dilute to 100.0 ml with *water R*.

Source: aluminium hollow-cathode lamp.

Wavelength: 309 nm.

Atomisation device: oxidising acetylene-nitrous oxide flame.

Magnesium. Atomic absorption spectrometry (*2.2.23, Method I*).

Test solution. Dilute 25.0 ml of solution A, prepared in the assay for aluminium, to 50.0 ml with *water R*. To 5.0 ml of this solution add 20.0 ml of *lanthanum nitrate solution R* and dilute to 100.0 ml with *water R*.

Reference solutions. Place 1.000 g of *magnesium R* in a 250 ml beaker containing 20 ml of *water R* and carefully add 20 ml of *hydrochloric acid R*, warming if necessary to dissolve. Transfer the solution to a volumetric flask and dilute to 1000.0 ml with *water R* (1 mg of magnesium per millilitre). Dilute 5.0 ml of this solution to 250.0 ml with *water R*. Into 4 identical volumetric flasks, introduce 5.0 ml, 10.0 ml, 15.0 ml and 20.0 ml of the solution respectively. To each flask add 20.0 ml of *lanthanum nitrate solution R* and dilute to 100.0 ml with *water R*.

Source: magnesium hollow-cathode lamp.

Wavelength: 285 nm.

Atomisation device: reducing air-acetylene flame.

LABELLING

The label states the content of aluminium and magnesium.

01/2008:0311
corrected 6.0

ALUMINIUM OXIDE, HYDRATED

Aluminii oxidum hydricum

DEFINITION

Content: 47.0 per cent to 60.0 per cent of Al_2O_3 (M_r 102.0).

CHARACTERS

Appearance: white or almost white, amorphous powder.

Solubility: practically insoluble in water. It dissolves in dilute mineral acids and in solutions of alkali hydroxides.

IDENTIFICATION

Solution S (see Tests) gives the reaction of aluminium (*2.3.1*).

TESTS

Solution S. Dissolve 2.5 g in 15 ml of *hydrochloric acid R*, heating on a water-bath. Dilute to 100 ml with *distilled water R*.

Appearance of solution. Solution S is not more opalescent than reference suspension II (*2.2.1*) and not more intensely coloured than reference solution GY_6 (*2.2.2, Method II*).

Alkaline impurities. Shake 1.0 g with 20 ml of *carbon dioxide-free water R* for 1 min and filter. To 10 ml of the filtrate add 0.1 ml of *phenolphthalein solution R*. Any pink colour disappears on the addition of 0.3 ml of *0.1 M hydrochloric acid*.

Neutralising capacity. *Carry out the test at 37 °C.* Disperse 0.5 g in 100 ml of *water R*, heat, add 100.0 ml of *0.1 M hydrochloric acid*, previously heated, and stir continuously; the pH (*2.2.3*) of the solution after 10 min, 15 min and 20 min is not less than 1.8, 2.3 and 3.0 respectively and is at no time greater than 4.5. Add 10.0 ml of *0.5 M hydrochloric acid*, previously heated, stir continuously for 1 h and titrate with *0.1 M sodium hydroxide* to pH 3.5; not more than 35.0 ml of *0.1 M sodium hydroxide* is required.

Chlorides (*2.4.4*): maximum 1 per cent.

Dissolve 0.1 g with heating in 10 ml of *dilute nitric acid R* and dilute to 100 ml with *water R*. Dilute 5 ml of the solution to 15 ml with *water R*.

Sulphates (*2.4.13*): maximum 1 per cent.

Dilute 4 ml of solution S to 100 ml with *distilled water R*.

Arsenic (*2.4.2, Method A*): maximum 4 ppm, determined on 10 ml of solution S.

Heavy metals (*2.4.8*): maximum 60 ppm.

Neutralise 20 ml of solution S with *concentrated ammonia R*, using *metanil yellow solution R* as an external indicator. Filter, if necessary, and dilute to 30 ml with *water R*. 12 ml of the solution complies with test A. Prepare the reference solution using 10 ml of *lead standard solution (1 ppm Pb) R*.

Microbial contamination. Total viable aerobic count (*2.6.12*) not more than 10^3 micro-organisms per gram, determined by plate count. It complies with the tests for enterobacteria and certain other gram-negative bacteria and with the test for *Escherichia coli* (*2.6.13*).

ASSAY

Dissolve 0.800 g in 10 ml of *hydrochloric acid R1*, heating on a water-bath. Cool and dilute to 50.0 ml with *water R*. To 10.0 ml of the solution, add *dilute ammonia R1* until a precipitate begins to appear. Add the smallest quantity of *dilute hydrochloric acid R* needed to dissolve the precipitate and dilute to 20 ml with *water R*. Carry out the complexometric titration of aluminium (*2.5.11*).

1 ml of *0.1 M sodium edetate* is equivalent to 5.098 mg of Al_2O_3.

STORAGE

In an airtight container, at a temperature not exceeding 30 °C.

01/2008:2166
corrected 6.0

ALUMINIUM PHOSPHATE GEL

Aluminii phosphatis liquamen

DEFINITION

Hydrated $AlPO_4$ in gel form.

Content: 19.0 per cent to 21.0 per cent of $AlPO_4$.

CHARACTERS

Appearance: gel.

Solubility: practically insoluble in water, in ethanol (96 per cent) and in methylene chloride. It dissolves in dilute solutions of mineral acids.

IDENTIFICATION

A. Solution S (see Tests) gives reaction (b) of phosphates (*2.3.1*).

B. Solution S gives the reaction of aluminium (*2.3.1*).

C. It complies with the assay.

TESTS

Solution S. Dissolve 2.00 g in *dilute hydrochloric acid R* and dilute to 100 ml with the same acid.

pH (*2.2.3*): 6.0 to 8.0.

Peroxides: maximum 150 ppm, expressed as hydrogen peroxide.

Test solution. Dissolve with heating 1.0 g of the substance to be examined in 5 ml of *dilute hydrochloric acid R*, then add 5 ml of *water R* and 2 ml of *divanadium pentoxide solution in sulphuric acid R*.

Reference solution. Dilute 1.0 ml of *dilute hydrogen peroxide solution R* to 200.0 ml with *water R*. To 1 ml of this solution add 9 ml of *water R* and 2 ml of *divanadium pentoxide solution in sulphuric acid R*.

The test solution is not more intensely coloured than the reference solution.

Chlorides (*2.4.4*): maximum 500 ppm.

Dissolve 1.3 g in 5 ml of *dilute nitric acid R* and dilute to 200 ml with *water R*.

Soluble phosphates: maximum 0.5 per cent, expressed as PO_4.

Test solution. Centrifuge 10.0 g until a clear supernatant is obtained. To 2.00 ml of the supernatant add 20.0 ml of a 10.3 g/l solution of *hydrochloric acid R* and dilute to 100.0 ml with *water R*. To 10.0 ml of this solution add 10.0 ml of *nitro-molybdovanadic reagent R* and dilute to 50.0 ml with *water R*. Allow to stand protected from light for 15 min.

Reference solution. Add 10.0 ml of *nitro-molybdovanadic reagent R* to 10.0 ml of a 143 mg/l solution of *potassium dihydrogen phosphate R* and dilute to 50.0 ml with *water R*. Allow to stand protected from light for 15 min.

Measure the absorbances (*2.2.25*) of the 2 solutions at 400 nm. The absorbance of the test solution is not greater than that of the reference solution.

Sulphates (*2.4.13*): maximum 0.2 per cent.

Dilute 25 ml of solution S to 100 ml with *distilled water R*.

Soluble aluminium: maximum 50 ppm.

To 16.0 g add 50 ml of *water R*. Heat to boiling for 5 min. Cool and centrifuge. Separate the supernatant. Wash the residue with 20 ml of *water R* and centrifuge. Separate the supernatant and add to the first supernatant. To the combined supernatants add 5 ml of *hydrochloric acid R* and 20 ml of *water R*. Introduce all of this solution into a 500 ml conical flask and carry out the complexometric titration of aluminium (*2.5.11*) using *0.01 M sodium edetate*.

Arsenic (*2.4.2, Method A*): maximum 1 ppm, determined on 1.0 g.

Heavy metals (*2.4.8*): maximum 10 ppm.

Dissolve 4.0 g in *dilute hydrochloric acid R* and dilute to 20 ml with the same acid. 12 ml of the solution complies with test A. Prepare the reference solution using *lead standard solution (2 ppm Pb) R*.

Acid neutralising capacity. Add 2.0 g to 30 ml of *0.1 M hydrochloric acid R* heated to 37 °C and maintain at 37 °C while shaking. Determine the pH after 15 min. The pH (*2.2.3*) of the mixture is 2.0 to 2.5.

Residue on ignition: 19.0 per cent to 23.0 per cent.

Heat 0.500 g at 50 °C for 5 hours, then ignite at 500 ± 50 °C until constant mass.

Microbial contamination. Total viable aerobic count (*2.6.12*) not more than 10^3 micro-organisms per gram, determined by plate count. It complies with the test for enterobacteria and certain other gram-negative bacteria and with the test for *Escherichia coli* (*2.6.13*).

ASSAY

Dissolve with heating 0.300 g in 5 ml of *dilute hydrochloric acid R*. Add 45 ml of *water R*, 10.0 ml of *0.1 M sodium edetate* and 30 ml of a mixture of equal volumes of *ammonium acetate solution R* and *dilute acetic acid R*. Heat to boiling and maintain boiling for 3 min. Cool, then add 25 ml of *ethanol (96 per cent) R*. Titrate with *0.1 M zinc sulphate*, determining the end-point potentiometrically (*2.2.20*).

1 ml of *0.1 M zinc sulphate* is equivalent to 12.2 mg of $AlPO_4$.

STORAGE

In an airtight container.

01/2008:1598
corrected 6.0

ALUMINIUM PHOSPHATE, HYDRATED

Aluminii phosphas hydricus

$AlPO_4,x\,H_2O$ M_r 122.0 (anhydrous substance)

DEFINITION

Content: 94.0 per cent to 102.0 per cent of $AlPO_4$ (M_r 122.0) (ignited substance).

CHARACTERS

Appearance: white or almost white powder.

Solubility: very slightly soluble in water, practically insoluble in alcohol. It dissolves in dilute solutions of mineral acids and alkali hydroxides.

IDENTIFICATION

A. Solution S (see Tests) gives reaction (b) of phosphates (*2.3.1*).

B. Solution S gives the reaction of aluminium (*2.3.1*).

TESTS

Solution S. Dissolve 2.00 g in *dilute hydrochloric acid R* and dilute to 100 ml with the same acid.

Appearance of solution. Solution S is clear (*2.2.1*) and colourless (*2.2.2, Method II*).

pH (*2.2.3*): 5.5 to 7.2

Shake 4.0 g with *carbon dioxide-free water R* and dilute to 100 ml with the same solvent.

Chlorides (*2.4.4*): maximum 1.3 per cent.

Dissolve 50.0 mg in 10 ml of *dilute nitric acid R* and dilute to 200 ml with *water R*. 15 ml of the solution complies with the limit test for chlorides.

Soluble phosphates: maximum 1.0 per cent, calculated as PO_4^{3-}.

Test solution. Stir 5.0 g with 150 ml of *water R* for 2 h. Filter and wash the filter with 50 ml of *water R*. Combine the filtrate and the washings and dilute to 250.0 ml with *water R*. Dilute 10.0 ml of this solution to 100.0 ml with *water R*.

Reference solution (a). Dissolve 2.86 g of *potassium dihydrogen phosphate R* in *water R* and dilute to 100 ml with the same solvent.

Reference solution (b). Dilute 1 ml of reference solution (a) to 5 ml with *water R*.

Reference solution (c). Dilute 3 ml of reference solution (a) to 5 ml with *water R*.

Treat each solution as follows. To 5.0 ml add 4 ml of *dilute sulphuric acid R*, 1 ml of *ammonium molybdate solution R*, 5 ml of *water R* and 2 ml of a solution containing 0.10 g of *4-methylaminophenol sulphate R*, 0.5 g of *anhydrous sodium sulphite R* and 20.0 g of *sodium metabisulphite R* in 100 ml of *water R*. Shake and allow to stand for 15 min. Dilute to 25.0 ml with *water R* and allow to stand for a further 15 min. Measure the absorbance (*2.2.25*) at 730 nm. Calculate the content of soluble phosphates from a calibration curve prepared using reference solutions (a), (b) and (c) after treatment.

Sulphates (*2.4.13*): maximum 0.6 per cent.

Dilute 8 ml of solution S to 100 ml with *distilled water R*. 15 ml of the solution complies with the limit test for sulphates.

Arsenic (*2.4.2*): maximum 1 ppm.

1.0 g complies with limit test A.

Heavy metals (*2.4.8*): maximum 20 ppm.

Dissolve 1.0 g in *dilute hydrochloric acid R* and dilute to 20 ml with the same acid. 12 ml of the solution complies with limit test A. Prepare the standard using *lead standard solution (1 ppm Pb) R*.

Loss on ignition. 10.0 per cent to 20.0 per cent, determined on 1.000 g at 800 ± 50 °C.

Neutralising capacity. Add 0.50 g to 30 ml of *0.1 M hydrochloric acid* previously heated to 37 °C and maintain at this temperature for 15 min while stirring. The pH (*2.2.3*) of the mixture after 15 min at 37 °C is 2.0 to 2.5.

ASSAY

Dissolve 0.400 g in 10 ml of *dilute hydrochloric acid R* and dilute to 100.0 ml with *water R*. To 10.0 ml of the solution, add 10.0 ml of *0.1 M sodium edetate* and 30 ml of a mixture of equal volumes of *ammonium acetate solution R* and *dilute acetic acid R*. Boil for 3 min, then cool. Add 25 ml of *alcohol R* and 1 ml of a freshly prepared 0.25 g/l solution of *dithizone R* in *alcohol R*. Titrate the excess of sodium edetate with *0.1 M zinc sulphate* until the colour changes to pink.

1 ml of *0.1 M sodium edetate* is equivalent to 12.20 mg of $AlPO_4$.

STORAGE

In an airtight container.

01/2008:0165

ALUMINIUM SULPHATE

Aluminii sulfas

$Al_2(SO_4)_3,xH_2O$ M_r 342.1 (anhydrous substance)

DEFINITION

Content: 51.0 per cent to 59.0 per cent of $Al_2(SO_4)_3$.

It contains a variable quantity of water of crystallisation.

CHARACTERS

Appearance: colourless, lustrous crystals or crystalline masses.

Solubility: soluble in cold water, freely soluble in hot water, practically insoluble in ethanol (96 per cent).

IDENTIFICATION

A. Solution S (see Tests) gives reaction (a) of sulphates (*2.3.1*).

B. Solution S gives the reaction of aluminium (*2.3.1*).

TESTS

Solution S. Dissolve 2.5 g in *water R* and dilute to 50 ml with the same solvent.

Appearance of solution. Solution S is not more opalescent than reference suspension III (*2.2.1*) and is colourless (*2.2.2, Method II*).

pH (*2.2.3*): 2.5 to 4.0.

Dissolve 0.5 g in *carbon dioxide-free water R* and dilute to 25 ml with the same solvent.

Alkali and alkaline-earth metals: maximum 0.4 per cent.

To 20 ml of solution S add 100 ml of *water R*, heat and add 0.1 ml of *methyl red solution R*. Add *dilute ammonia R1* until the colour of the indicator changes to yellow. Dilute to 150 ml with *water R*, heat to boiling and filter. Evaporate 75 ml of the filtrate to dryness on a water-bath and ignite. The residue weighs a maximum of 2 mg.

Ammonium (*2.4.1*): maximum 500 ppm.

Dilute 0.4 ml of solution S to 14 ml with *water R*.

Iron (*2.4.9*): maximum 100 ppm.

Dilute 2 ml of solution S to 10 ml with *water R*. Use 0.3 ml of *thioglycollic acid R* in this test.

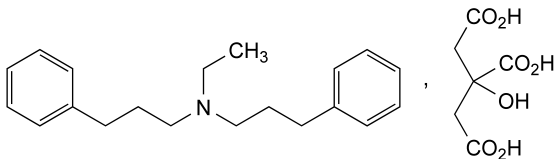
Heavy metals (*2.4.8*): maximum 50 ppm.

Dilute 8 ml of solution S to 20 ml with *water R*. 12 ml of the solution complies with test A. Prepare the reference solution using *lead standard solution (1 ppm Pb) R*.

ASSAY

Dissolve 0.500 g in 20 ml of *water R*. Carry out the complexometric titration of aluminium (*2.5.11*).

1 ml of *0.1 M sodium edetate* is equivalent to 17.11 mg of $Al_2(SO_4)_3$.



STORAGE

In an airtight container.

01/2008:2156

ALVERINE CITRATE

Alverini citras

$C_{26}H_{35}NO_7$ M_r 473.6
[5560-59-8]

DEFINITION

N-Ethyl-3-phenyl-*N*-(3-phenylpropyl)propan-1-amine dihydrogen 2-hydroxypropane-1,2,3-tricarboxylate.

Content: 99.0 per cent to 101.0 per cent (dried substance).

CHARACTERS

Appearance: white or almost white, crystalline powder.

Solubility: slightly soluble in water and in methylene chloride, sparingly soluble in ethanol (96 per cent).

mp: about 104 °C.

IDENTIFICATION

Infrared absorption spectrophotometry (*2.2.24*).

Comparison: *alverine citrate CRS*.

TESTS

pH (*2.2.3*): 3.5 to 4.5.

Dissolve 0.250 g in *carbon dioxide-free water R* and dilute to 50.0 ml with the same solvent.

Related substances. Gas chromatography (*2.2.28*): use the normalisation procedure. *Use freshly prepared solutions.*

Test solution. Dissolve 0.250 g of the substance to be examined in *water R* and dilute to 20 ml with the same solvent. Add 2 ml of *concentrated ammonia R* and shake with 3 quantities, each of 15 ml, of *methylene chloride R*. To the combined lower layers add *anhydrous sodium sulphate R*, shake, filter, and evaporate the filtrate at a temperature not exceeding 30 °C, using a rotary evaporator. Take up the residue with *methylene chloride R* and dilute to 10.0 ml with the same solvent.

Reference solution (a). Dissolve 5 mg of *alverine impurity D CRS* (impurity D citrate) in 5 ml of *water R*, add 1 ml of *concentrated ammonia R* and shake with 3 quantities, each of 5 ml, of *methylene chloride R*. To the combined lower layers add *anhydrous sodium sulphate R*, shake, filter, and evaporate the filtrate at a temperature not exceeding 30 °C, using a rotary evaporator. Take up the residue with *methylene chloride R*, add 0.2 ml of the test solution and dilute to 2 ml with *methylene chloride R*.

Reference solution (b). Dilute 1.0 ml of the test solution to 100.0 ml with *methylene chloride R*. Dilute 1.0 ml of this solution to 20.0 ml with *methylene chloride R*.

Reference solution (c). Dissolve the contents of a vial of *alverine for peak identification CRS* (containing impurities C and E) in 1 ml of *methylene chloride R*.

Column:

- *material*: fused silica;
- *size*: *l* = 25 m, Ø = 0.32 mm;
- *stationary phase*: *poly(dimethyl)(diphenyl)siloxane R* (film thickness 0.45 µm).

Carrier gas: *helium for chromatography R*.

Flow rate: 2.2 ml/min.

Split ratio: 1:11.

Temperature:

	Time (min)	Temperature (°C)
Column	0 - 7	120
	7 - 13	120 → 240
	13 - 21	240
	21 - 24	240 → 290
	24 - 39	290
Injection port		290
Detector		290

Detection: flame ionisation.

Injection: 1 µl.

Identification of impurities: use the chromatogram supplied with *alverine for peak identification CRS* and the chromatogram obtained with reference solution (c) to identify the peaks due to impurities C and E.

Relative retention with reference to alverine (retention time = about 16 min): impurity A = about 0.28; impurity B = about 0.29; impurity C = about 0.46; impurity D = about 0.97; impurity E = about 1.7.

System suitability: reference solution (a):

- *resolution*: minimum 3.0 between the peaks due to impurity D and alverine.

Limits:

- *impurities A, B*: for each impurity, maximum 0.1 per cent;
- *impurity C*: maximum 0.2 per cent;
- *impurities D, E*: for each impurity, maximum 0.3 per cent;
- *unspecified impurities*: for each impurity, maximum 0.10 per cent;
- *total*: maximum 1.0 per cent;
- *disregard limit*: the area of the principal peak in the chromatogram obtained with reference solution (b) (0.05 per cent).

Heavy metals (*2.4.8*): maximum 20 ppm.

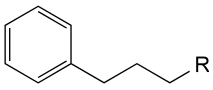
0.5 g complies with test G. Prepare the reference solution using 1 ml of *lead standard solution (10 ppm Pb) R*.

Loss on drying (*2.2.32*): maximum 0.5 per cent, determined on 1.000 g by drying in an oven at 80 °C for 2 h.

Sulphated ash (*2.4.14*): maximum 0.1 per cent, determined on 1.0 g.

ASSAY

Dissolve 0.375 g in 50 ml of *anhydrous acetic acid R*. Titrate with *0.1 M perchloric acid*, determining the end-point potentiometrically (*2.2.20*).

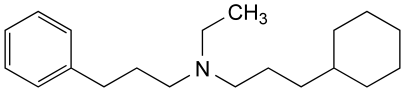


1 ml of *0.1 M perchloric acid* is equivalent to 47.36 mg of $C_{26}H_{35}NO_7$.

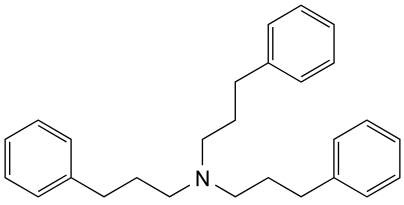
STORAGE

Protected from light.

IMPURITIES



Specified impurities: A, B, C, D, E.

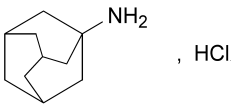


A. R = Cl: 1-chloro-3-phenylpropane,

B. R = OH: 3-phenylpropan-1-ol,

C. R = NH-C_2H_5: *N*-ethyl-3-phenylpropan-1-amine,

D. *N*-(3-cyclohexylpropyl)-*N*-ethyl-3-phenylpropan-1-amine,



E. 3-phenyl-*N*,*N*-bis(3-phenylpropyl)propan-1-amine.

01/2008:0463

AMANTADINE HYDROCHLORIDE

Amantadini hydrochloridum

$C_{10}H_{18}ClN$ M_r 187.7
[665-67-7]

DEFINITION

Tricyclo[3.3.1.1^{3,7}]decan-1-amine hydrochloride.

Content: 98.5 per cent to 101.0 per cent (anhydrous substance).

CHARACTERS

Appearance: white or almost white, crystalline powder.

Solubility: freely soluble in water and in ethanol (96 per cent).

It sublimes on heating.

IDENTIFICATION

First identification: A, D.

Second identification: B, C, D.

A. Infrared absorption spectrophotometry (*2.2.24*).
Preparation: discs.
Comparison: *amantadine hydrochloride CRS.*

B. To 0.1 g add 1 ml of *pyridine R*, mix and add 0.1 ml of *acetic anhydride R*. Heat to boiling for about 10 s. Pour the hot solution into 10 ml of *dilute hydrochloric acid R*, cool to 5 °C and filter. The precipitate, washed with *water R* and dried *in vacuo* at 60 °C for 1 h, melts (*2.2.14*) at 147 °C to 151 °C.

C. Dissolve 0.2 g in 1 ml of *0.1 M hydrochloric acid.* Add 1 ml of a 500 g/l solution of *sodium nitrite R*. A white precipitate is formed.

D. 1 ml of solution S (see Tests) gives reaction (a) of chlorides (*2.3.1*).

TESTS

Solution S. Dissolve 2.5 g in *carbon dioxide-free water R* and dilute to 25 ml with the same solvent.

Appearance of solution. Solution S is clear (*2.2.1*) and not more intensely coloured than reference solution Y_7 (*2.2.2, Method II*).

Acidity or alkalinity. Dilute 2 ml of solution S to 10 ml with *carbon dioxide-free water R*. Add 0.1 ml of *methyl red solution R* and 0.2 ml of *0.01 M sodium hydroxide.* The solution is yellow. Add 0.4 ml of *0.01 M hydrochloric acid.* The solution is red.

Related substances. Gas chromatography (*2.2.28*): use the normalisation procedure.

Test solution. Dissolve 0.10 g of the substance to be examined in 2 ml of *water R*. Add 2 ml of a 200 g/l solution of *sodium hydroxide R* and 2 ml of *chloroform R*. Shake for 10 min. Separate the chloroform layer, dry over *anhydrous sodium sulphate R* and filter.

Column:
– *material*: glass;
– *size*: *l* = 1.8 m, Ø = 2 mm;
– *stationary phase*: mix 19.5 g of *silanised diatomaceous earth for gas chromatography R* with 60 ml of a 3.3 g/l solution of *potassium hydroxide R* in *methanol R* and evaporate the solvent under reduced pressure while rotating the mixture slowly (support); dissolve 0.4 g of *low-vapour-pressure hydrocarbons (type L) R* in 60 ml of *toluene R* (dissolution requires up to 5 h), add this solution to the support and evaporate the solvent under reduced pressure while rotating the mixture slowly.

Carrier gas: *nitrogen for chromatography R.*

Flow rate: 30 ml/min.

Temperature:

	Time (min)	Temperature (°C)
Column	0 - 16.7	100 → 200
Injection port		220
Detector		300

Detection: flame ionisation.

Injection: 1 µl or the chosen volume.

Run time: at least 2.5 times the retention time of amantadine.

Limits:
– *any impurity*: for each impurity, maximum 0.3 per cent;
– *total*: maximum 1 per cent;
– *disregard limit*: disregard the peak due to the solvent.

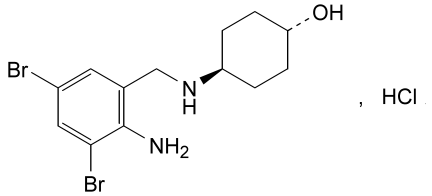
Heavy metals (*2.4.8*): maximum 20 ppm.

12 ml of solution S complies with test A. Prepare the reference solution using *lead standard solution (2 ppm Pb) R.*

Water (*2.5.12*): maximum 0.5 per cent, determined on 2.000 g.

Sulphated ash (*2.4.14*): maximum 0.1 per cent, determined on 1.0 g.

ASSAY



Dissolve 0.150 g in a mixture of 5.0 ml of *0.01 M hydrochloric acid* and 50 ml of *ethanol (96 per cent) R*. Carry out a potentiometric titration (*2.2.20*), using *0.1 M sodium hydroxide.* Read the volume added between the 2 points of inflexion.

1 ml of *0.1 M sodium hydroxide* is equivalent to 18.77 mg of $C_{10}H_{18}ClN$.

01/2008:1489
corrected 6.0

AMBROXOL HYDROCHLORIDE

Ambroxoli hydrochloridum

$C_{13}H_{19}Br_2ClN_2O$ M_r 414.6
[23828-92-4]

DEFINITION

trans-4-[(2-Amino-3,5-dibromobenzyl)amino]cyclohexanol hydrochloride.

Content: 99.0 per cent to 101.0 per cent (dried substance).

CHARACTERS

Appearance: white or yellowish crystalline powder.

Solubility: sparingly soluble in water, soluble in methanol, practically insoluble in methylene chloride.

IDENTIFICATION

First identification: B, D.

Second identification: A, C, D.

A. Dissolve 20.0 mg in *0.05 M sulphuric acid* and dilute to 100.0 ml with the same acid. Dilute 2.0 ml of the solution to 10.0 ml with *0.05 M sulphuric acid*. Examined between 200 nm and 350 nm (*2.2.25*), the solution shows two absorption maxima at 245 nm and 310 nm. The ratio of the absorbance measured at 245 nm to that measured at 310 nm is 3.2 to 3.4.

B. Infrared absorption spectrophotometry (*2.2.24*).

Comparison: *ambroxol hydrochloride CRS*.

C. Examine by thin-layer chromatography (*2.2.27*).

Test solution. Dissolve 50 mg of the substance to be examined in *methanol R* and dilute to 5 ml with the same solvent.

Reference solution. Dissolve 50 mg of *ambroxol hydrochloride CRS* in *methanol R* and dilute to 5 ml with the same solvent.

Plate: *TLC silica gel F_{254} plate R*.

Mobile phase: *concentrated ammonia R, 1-propanol R, ethyl acetate R, hexane R* (1:10:20:70 *V/V/V/V*).

Application: 10 µl.

Development: over 2/3 of the plate.

Drying: in air.

Detection: examine in ultraviolet light at 254 nm.

Results: the principal spot in the chromatogram obtained with the test solution is similar in position and size to the principal spot in the chromatogram obtained with the reference solution.

D. Dissolve 25 mg in 2.5 ml of *water R*, mix with 1.0 ml of *dilute ammonia R1* and allow to stand for 5 min. Filter and acidify the filtrate with *dilute nitric acid R*. The filtrate gives reaction (a) of chlorides (*2.3.1*).

TESTS

Solution S. Dissolve 0.75 g in *methanol R* and dilute to 15 ml with the same solvent.

Appearance of solution. Solution S is clear (*2.2.1*) and not more intensely coloured than reference solution Y_6 (*2.2.2, Method II*).

pH (*2.2.3*): 4.5 to 6.0.

Dissolve 0.2 g in *carbon dioxide-free water R* and dilute to 20 ml with the same solvent.

Related substances. Liquid chromatography (*2.2.29*). *Prepare the solutions immediately before use.*

Test solution. Dissolve 50.0 mg of the substance to be examined in *water R* and dilute to 50.0 ml with the same solvent.

Reference solution (a). Dilute 5.0 ml of the test solution to 250.0 ml with *water R*. Dilute 1.0 ml of this solution to 20.0 ml with the mobile phase.

Reference solution (b). Dissolve 5 mg of the substance to be examined in 0.2 ml of *methanol R* and add 0.04 ml of a mixture of 1 volume of *formaldehyde solution R* and 99 volumes of *water R*. Heat at 60 °C for 5 min. Evaporate to dryness under a current of nitrogen. Dissolve the residue in 5 ml of *water R* and dilute to 20 ml with the mobile phase.

Column:

– *size*: *l* = 0.25 m, Ø = 4.0 mm,
– *stationary phase*: *octadecylsilyl silica gel for chromatography R* (5 µm).

Mobile phase: a mixture of equal volumes of *acetonitrile R* and a solution prepared as follows: dissolve 1.32 g of *ammonium phosphate R* in 900 ml of *water R*, adjust to pH 7.0 with *phosphoric acid R* and dilute to 1000 ml with *water R*.

Flow rate: 1 ml/min.

Detection: spectrophotometer at 248 nm.

Injection: 20 µl.

Sensitivity: reference solution (a).

Run time: 3 times the retention time of the principal peak in the chromatogram obtained with the test solution.

System suitability:

– *resolution*: minimum of 4.0 between the peaks due to impurity B and ambroxol in the chromatogram obtained with reference solution (b).

Limits:

– *any impurity*: not more than the area of the principal peak in the chromatogram obtained with reference solution (a) (0.1 per cent),
– *total*: not more than 3 times the area of the principal peak in the chromatogram obtained with reference solution (a) (0.3 per cent),
– *disregard limit*: 0.1 times the area of the principal peak in the chromatogram obtained with reference solution (a).

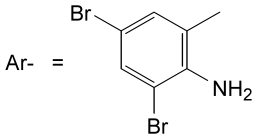
Heavy metals (*2.4.8*): maximum 20 ppm.

1.0 g complies with limit test C. Prepare the standard using 2 ml of *lead standard solution (10 ppm Pb) R*.

Loss on drying (*2.2.32*): maximum 0.5 per cent, determined on 1.000 g by drying in an oven at 105 °C.

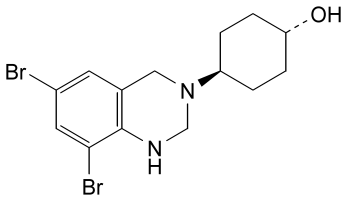
Sulphated ash (*2.4.14*): maximum 0.1 per cent, determined on 1.0 g.

ASSAY



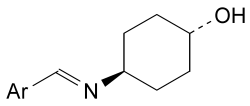
Dissolve 0.300 g in 70 ml of *alcohol R* and add 5 ml of *0.01 M hydrochloric acid*. Carry out a potentiometric titration (*2.2.20*), using *0.1 M sodium hydroxide*. Read the volume added between the two points of inflexion.

1 ml of *0.1 M sodium hydroxide* is equivalent to 41.46 mg of $C_{13}H_{19}Br_2ClN_2O$.

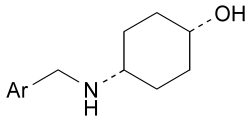


STORAGE

Store protected from light.



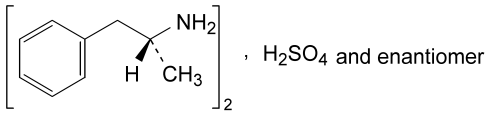
IMPURITIES



A. Ar-CH_2OH: (2-amino-3,5-dibromophenyl)methanol,

B. *trans*-4-(6,8-dibromo-1,4-dihydroquinazolin-3(2*H*)-yl)cyclohexanol,

C. *trans*-4-[[(*E*)-2-amino-3,5-dibromobenzyliden]amino]cyclohexanol,



D. *cis*-4-[(2-amino-3,5-dibromobenzyl)amino]cyclohexanol,

E. Ar-CH=O: 2-amino-3,5-dibromobenzaldehyde.

corrected 6.0

AMFETAMINE SULPHATE

Amfetamini sulfas

$C_{18}H_{28}N_2O_4S$ M_r 368.5
[60-13-9]

DEFINITION

Bis[(2*RS*)-1-phenylpropan-2-amine] sulphate.

Content: 99.0 per cent to 100.5 per cent (dried substance).

CHARACTERS

Appearance: white or almost white powder.

Solubility: freely soluble in water, slightly soluble in ethanol (96 per cent).

IDENTIFICATION

First identification: A, B, E.

Second identification: A, C, D, E.

A. Optical rotation (*2.2.7*): – 0.04° to + 0.04° (measured in a 2 dm tube), determined on solution S (see Tests).

B. Infrared absorption spectrophotometry (*2.2.24*).

Preparation: mulls in *liquid paraffin R*.

Comparison: *Ph. Eur. reference spectrum of amfetamine sulphate.*

C. To 50 ml of solution S add 5 ml of *strong sodium hydroxide solution R* and 0.5 ml of *benzoyl chloride R* and shake. Continue to add *benzoyl chloride R* in portions of 0.5 ml until no further precipitate is formed. Filter, wash the precipitate with *water R*, recrystallise twice from a mixture of equal volumes of *ethanol (96 per cent) R* and *water R*, then dry at 100-105 °C. The crystals melt (*2.2.14*) at 131 °C to 135 °C.

D. To about 2 mg add 1 ml of *sulphuric acid-formaldehyde reagent R*. An orange colour develops and quickly becomes dark-brown.

E. Solution S gives reaction (a) of sulphates (*2.3.1*).

TESTS

Solution S. Dissolve 2.0 g in *carbon dioxide-free water R* and dilute to 100 ml with the same solvent.

Appearance of solution. Solution S is clear (*2.2.1*) and colourless (*2.2.2, Method II*).

Acidity or alkalinity. To 25 ml of solution S add 0.1 ml of *methyl red solution R*. Not more than 0.1 ml of *0.01 M hydrochloric acid* or *0.01 M sodium hydroxide* is required to change the colour of the indicator.

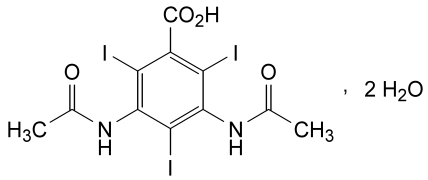
Loss on drying (*2.2.32*): maximum 1.0 per cent, determined on 1.00 g by drying in an oven at 105 °C.

Sulphated ash (*2.4.14*): maximum 0.1 per cent, determined on 1.0 g.

ASSAY

Dissolve 0.300 g in 30 ml of *anhydrous acetic acid R*. Titrate with *0.1 M perchloric acid*, determining the end-point potentiometrically (*2.2.20*).

1 ml of *0.1 M perchloric acid* is equivalent to 36.85 mg of $C_{18}H_{28}N_2O_4S$.



STORAGE

Protected from light.

corrected 6.0

AMIDOTRIZOIC ACID DIHYDRATE

Acidum amidotrizoicum dihydricum

$C_{11}H_9I_3N_2O_4,2H_2O$ M_r 650
[50978-11-5]

DEFINITION

Amidotrizoic acid dihydrate contains not less than 98.5 per cent and not more than the equivalent of 101.0 per cent of 3,5-bis(acetylamino)-2,4,6-triiodobenzoic acid, calculated with reference to the dried substance.

CHARACTERS

A white or almost white, crystalline powder, very slightly soluble in water and in alcohol. It dissolves in dilute solutions of alkali hydroxides.

IDENTIFICATION

First identification: A.

Second identification: B, C.

A. Examine by infrared absorption spectrophotometry (*2.2.24*), comparing with the spectrum obtained with *amidotrizoic acid dihydrate CRS*.

B. Examine the chromatograms obtained in the test for related substances (see Tests). The principal spot in the chromatogram obtained with test solution (b) is similar in position and size to the principal spot in the chromatogram obtained with reference solution (b).

C. Heat 50 mg gently in a small porcelain dish over a naked flame. Violet vapour is evolved.

TESTS

Appearance of solution. Dissolve 1.0 g in *dilute sodium hydroxide solution R* and dilute to 20 ml with the same solvent. The solution is clear (*2.2.1*) and colourless (*2.2.2, Method II*).

Related substances. Examine by thin-layer chromatography (*2.2.27*), using *silica gel* GF_{254} *R* as the coating substance.

Test solution (a). Dissolve 0.50 g of the substance to be examined in a 3 per cent *V/V* solution of *ammonia R* in *methanol R* and dilute to 10 ml with the same solvent.

Test solution (b). Dilute 1 ml of test solution (a) to 10 ml with a 3 per cent *V/V* solution of *ammonia R* in *methanol R*.

Reference solution (a). Dilute 1 ml of test solution (b) to 50 ml with a 3 per cent *V/V* solution of *ammonia R* in *methanol R*.

Reference solution (b). Dissolve 50 mg of *amidotrizoic acid dihydrate CRS* in a 3 per cent *V/V* solution of *ammonia R* in *methanol R* and dilute to 10 ml with the same solvent.

Apply separately to the plate 2 µl of each solution. Develop over a path of 15 cm using a mixture of 20 volumes of *anhydrous formic acid R*, 25 volumes of *methyl ethyl ketone R* and 60 volumes of *toluene R*. Allow the plate to dry until the solvents have evaporated and examine in ultraviolet light at 254 nm. Any spot in the chromatogram obtained with test solution (a), apart from the principal spot, is not more intense than the spot in the chromatogram obtained with reference solution (a) (0.2 per cent).

Halides. Dissolve 0.55 g in a mixture of 4 ml of *dilute sodium hydroxide solution R* and 15 ml of *water R*. Add 6 ml of *dilute nitric acid R* and filter. 15 ml of the filtrate complies with the limit test for chlorides (*2.4.4*) (150 ppm expressed as chloride).

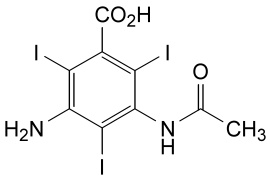
Free aromatic amines. *Maintain the solutions and reagents in iced water protected from bright light.* To 0.50 g in a 50 ml volumetric flask add 15 ml of *water R*. Shake and add 1 ml of *dilute sodium hydroxide solution R*. Cool in iced water, add 5 ml of a freshly prepared 5 g/l solution of *sodium nitrite R* and 12 ml of *dilute hydrochloric acid R*. Shake gently and allow to stand for exactly 2 min after adding the hydrochloric acid. Add 10 ml of a 20 g/l solution of *ammonium sulphamate R*. Allow to stand for 5 min, shaking frequently, and add 0.15 ml of a 100 g/l solution of *α-naphthol R* in *alcohol R*. Shake and allow to stand for 5 min. Add 3.5 ml of *buffer solution pH 10.9 R*, mix and dilute to 50.0 ml with *water R*. The absorbance (*2.2.25*), measured within 20 min at 485 nm using as the compensation liquid a solution prepared at the same time and in the same manner but omitting the substance to be examined, is not greater than 0.30.

Heavy metals (*2.4.8*). Dissolve 2.0 g in 4 ml of *dilute sodium hydroxide solution R* and dilute to 20 ml with *water R*. 12 ml of this solution complies with limit test A for heavy metals (20 ppm). Prepare the standard using *lead standard solution (2 ppm Pb) R*.

Loss on drying (*2.2.32*): 4.5 per cent to 7.0 per cent, determined on 0.500 g by drying in an oven at 105 °C.

Sulphated ash (*2.4.14*). Not more than 0.1 per cent, determined on 1.0 g.

ASSAY



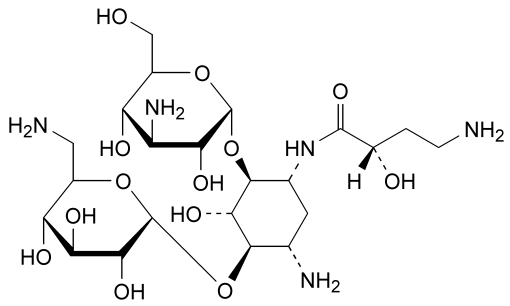
To 0.150 g in a 250 ml round-bottomed flask add 5 ml of *strong sodium hydroxide solution R*, 20 ml of *water R*, 1 g of *zinc powder R* and a few glass beads. Boil under a reflux condenser for 30 min. Allow to cool and rinse the condenser with 20 ml of *water R*, adding the rinsings to the flask. Filter through a sintered-glass filter (*2.1.2*) and wash the filter with several quantities of *water R*. Collect the filtrate and washings. Add 40 ml of *dilute sulphuric acid R* and titrate immediately with *0.1 M silver nitrate*. Determine the end-point potentiometrically (*2.2.20*), using a suitable electrode system such as silver-mercurous sulphate.

1 ml of *0.1 M silver nitrate* is equivalent to 20.47 mg of $C_{11}H_9I_3N_2O_4$.

STORAGE

Store protected from light.

IMPURITIES



A. 3-(acetylamino)-5-amino-2,4,6-triiodobenzoic acid.

01/2008:1289
corrected 6.0

AMIKACIN

Amikacinum

$C_{22}H_{43}N_5O_{13}$ M_r 585.6
[37517-28-5]

DEFINITION

6-*O*-(3-Amino-3-deoxy-α-D-glucopyranosyl)-4-*O*-(6-amino-6-deoxy-α-D-glucopyranosyl)-1-*N*-[(2*S*)-4-amino-2-hydroxybutanoyl]-2-deoxy-D-streptamine.

Antimicrobial substance obtained from kanamycin A.

Semi-synthetic product derived from a fermentation product.

Content: 96.5 per cent to 102.0 per cent (anhydrous substance).

CHARACTERS

Appearance: white or almost white powder.

Solubility: sparingly soluble in water, slightly soluble in methanol, practically insoluble in acetone and in ethanol (96 per cent).

IDENTIFICATION

A. Infrared absorption spectrophotometry (*2.2.24*).

Comparison: *amikacin CRS*.

B. Thin-layer chromatography (*2.2.27*).

Test solution. Dissolve 25 mg of the substance to be examined in *water R* and dilute to 10 ml with the same solvent.

Reference solution (a). Dissolve 25 mg of *amikacin CRS* in *water R* and dilute to 10 ml with the same solvent.

Reference solution (b). Dissolve 5 mg of *kanamycin monosulphate CRS* in 1 ml of the test solution and dilute to 10 ml with *water R*.

Plate: *TLC silica gel plate R*.

Mobile phase: the lower layer of a mixture of equal volumes of *concentrated ammonia R*, *methanol R* and *methylene chloride R*.

Application: 5 µl.

Development: over a path of 15 cm.

Drying: in air.

Detection: spray with *ninhydrin solution R1* and heat at 110 °C for 5 min.

System suitability: reference solution (b):

– the chromatogram shows 2 clearly separated spots.

Results: the principal spot in the chromatogram obtained with the test solution is similar in position, colour and size to the principal spot in the chromatogram obtained with the reference solution (a).

TESTS

pH (*2.2.3*): 9.5 to 11.5.

Dissolve 0.1 g in *carbon dioxide-free water R* and dilute to 10 ml with the same solvent.

Specific optical rotation (*2.2.7*): + 97 to + 105 (anhydrous substance).

Dissolve 0.50 g in *water R* and dilute to 25.0 ml with the same solvent.

Related substances. Liquid chromatography (*2.2.29*). *Maintain the solutions at 10 °C.*

Test solution (a). Dissolve 0.100 g of the substance to be examined in *water R* and dilute to 10.0 ml with the same solvent. In a ground-glass-stoppered vial, add 0.2 ml of this solution to 2.0 ml of a 10 g/l solution of *2,4,6-trinitrobenzene sulphonic acid R*. Then add 3.0 ml of *pyridine R* and close the vial tightly. Shake vigorously for 30 s and heat in a water-bath at 75 °C for 45 min. Cool in cold water for 2 min and add 2 ml of *glacial acetic acid R*. Shake vigorously for 30 s.

Test solution (b). Dissolve 50.0 mg of the substance to be examined in *water R* and dilute to 50.0 ml with the same solvent. Then prepare as prescribed for test solution (a).

Reference solution (a). Dissolve 10.0 mg of *amikacin impurity A CRS* in *water R* and dilute to 100.0 ml with the same solvent. Then prepare as prescribed for test solution (a).

Reference solution (b). Dissolve 50.0 mg of *amikacin CRS* in *water R* and dilute to 50.0 ml with the same solvent. Then prepare as prescribed for test solution (a).

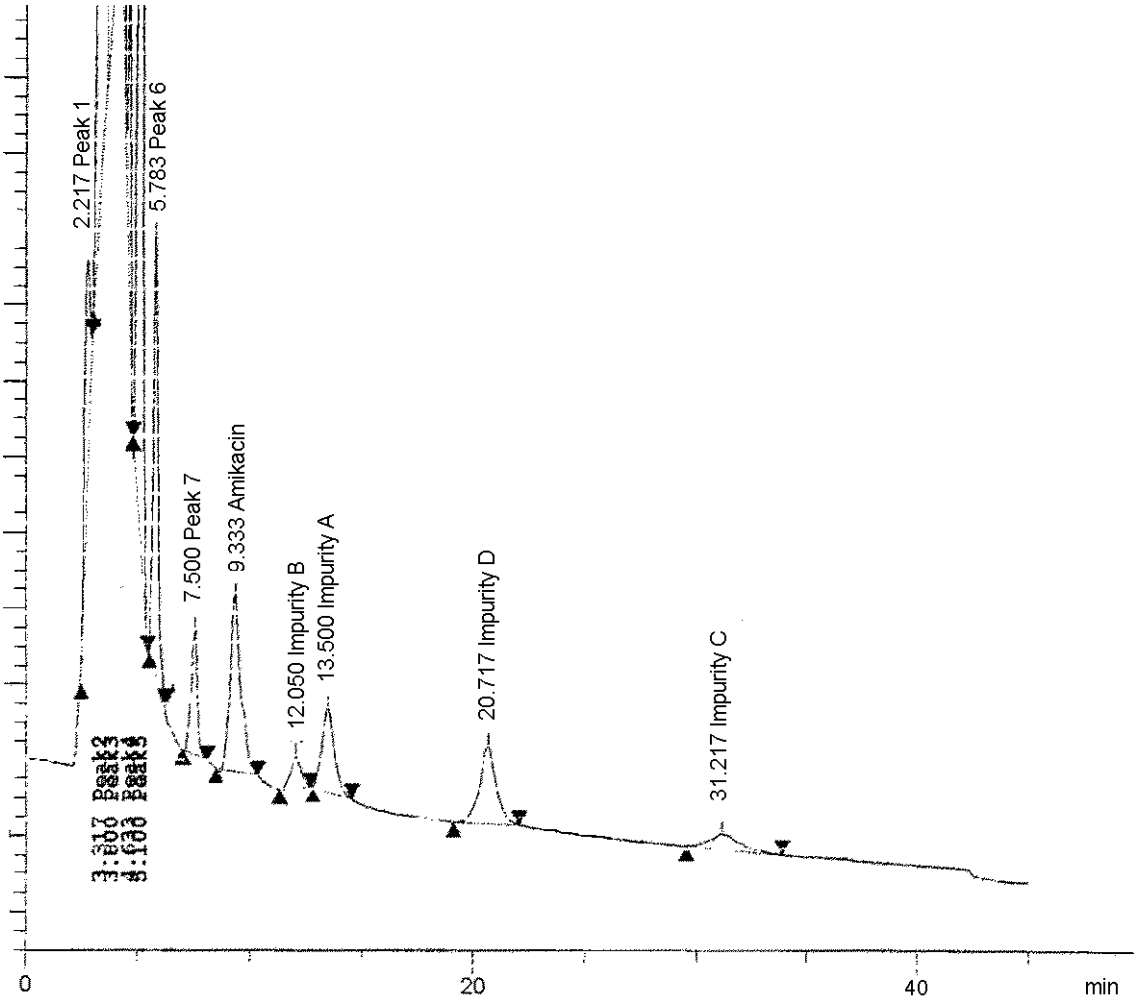


Figure 1289.-1. – *Chromatogram for the test for related substances of amikacin*

Reference solution (c). Dissolve 5 mg of *amikacin CRS* and 5 mg of *amikacin impurity A CRS* in *water R* and dilute to 50 ml with the same solvent. Then prepare as prescribed for test solution (a).

Blank solution. Prepare as described for test solution (a) using 0.2 ml of *water R*.

Column:

– *size*: *l* = 0.25 m, Ø = 4.6 mm;

– *stationary phase*: *octadecylsilyl silica gel for chromatography R* (5 µm);

– *temperature*: 30 °C.

Mobile phase: mix 30 volumes of a 2.7 g/l solution of *potassium dihydrogen phosphate R*, adjusted to pH 6.5 with a 22 g/l solution of *potassium hydroxide R*, and 70 volumes of *methanol R*.

Flow rate: 1 ml/min.

Detection: spectrophotometer at 340 nm.

Injection: 20 µl of test solution (a) and reference solutions (a) and (c).

Run time: 4 times the retention time of amikacin.

System suitability: reference solution (c):

– *resolution*: minimum 3.5 between the peaks due to amikacin and impurity A (see Figure 1289.-1).

Limits:

– *impurity A*: not more than the area of the principal peak in the chromatogram obtained with reference solution (a) (1 per cent);

– *any other impurity*: for each impurity, not more than 0.5 times the area of the principal peak in the chromatogram obtained with reference solution (a) (0.5 per cent);

– *sum of impurities other than A*: not more than 1.5 times the area of the principal peak in the chromatogram obtained with reference solution (a) (1.5 per cent);

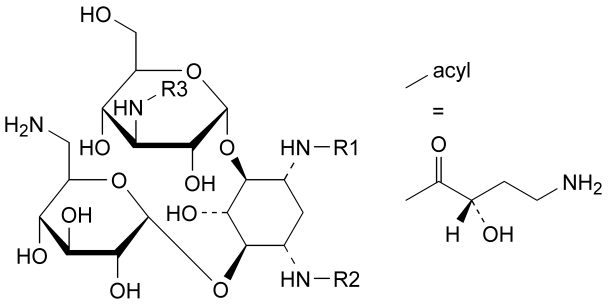
– *disregard limit*: 0.1 times the area of the principal peak in the chromatogram obtained with reference solution (a) (0.1 per cent); disregard any peak due to the blank.

Water (*2.5.12*): maximum 8.5 per cent, determined on 0.200 g.

Sulphated ash (*2.4.14*)): maximum 0.5 per cent, determined on 1.0 g.

ASSAY

Liquid chromatography (*2.2.29*) as described in the test for related substances with the following modifications.



Injection: test solution (b) and reference solution (b).

System suitability:

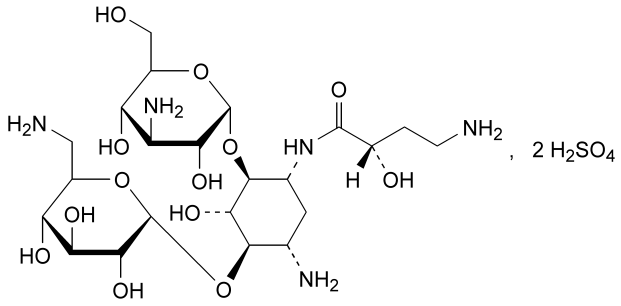
– *repeatability*: maximum relative standard deviation of 2.0 per cent after 6 injections of reference solution (b).

Calculate the percentage content of $C_{22}H_{43}N_5O_{13}$ from the declared content of *amikacin CRS*.

IMPURITIES

A. R1 = R3 = H, R2 = acyl: 4-*O*-(3-amino-3-deoxy-α-D-glucopyranosyl)-6-*O*-(6-amino-6-deoxy-α-D-glucopyranosyl)-1-*N*-[(2*S*)-4-amino-2-hydroxybutanoyl]-2-deoxy-L-streptamine,

B. R1 = R2 = acyl, R3 = H: 4-*O*-(3-amino-3-deoxy-α-D-glucopyranosyl)-6-*O*-(6-amino-6-deoxy-α-D-glucopyranosyl)-1,3-*N*-bis[(2*S*)-4-amino-2-hydroxybutanoyl]-2-deoxy-L-streptamine,



C. R1 = R2 = H, R3 = acyl: 4-*O*-(6-amino-6-deoxy-α-D-glucopyranosyl)-6-*O*-[3-[[(2*S*)-4-amino-2-hydroxybutanoyl]amino]-3-deoxy-α-D-glucopyranosyl]-2-deoxy-D-streptamine,

D. R1 = R2 = R3 = H: kanamycin.

System suitability: reference solution (b):

– the chromatogram shows 2 clearly separated spots.

Results: the principal spot in the chromatogram obtained with the test solution is similar in position, colour and size to the principal spot in the chromatogram obtained with the reference solution (a).

C. It gives reaction (a) of sulphates (*2.3.1*).

TESTS

pH (*2.2.3*): 2.0 to 4.0.

Dissolve 0.1 g in *carbon dioxide-free water R* and dilute to 10 ml with the same solvent.

Specific optical rotation (*2.2.7*): + 76 to + 84 (dried substance).

Dissolve 0.50 g in *water R* and dilute to 25.0 ml with the same solvent.

Related substances. Liquid chromatography (*2.2.29*). *Maintain the solutions at 10 °C.*

Test solution (a). Dissolve 0.100 g of the substance to be examined in *water R* and dilute to 10.0 ml with the same solvent. In a ground-glass-stoppered vial, add 0.2 ml of this solution to 2.0 ml of a 10 g/l solution of *2,4,6-trinitrobenzene sulphonic acid R*. Then add 3.0 ml of *pyridine R* and close the vial tightly. Shake vigorously for 30 s and heat on a water-bath at 75 °C for 2 h. Cool in cold water for 2 min and add 2 ml of *glacial acetic acid R*. Shake vigorously for 30 s.

Test solution (b). Dissolve 50.0 mg of the substance to be examined in *water R* and dilute to 50.0 ml with the same solvent. Then prepare as prescribed for test solution (a).

Reference solution (a). Dissolve 10.0 mg of *amikacin impurity A CRS* in *water R* and dilute to 100.0 ml with the same solvent. Then prepare as prescribed for test solution (a).

Reference solution (b). Dissolve 50.0 mg of *amikacin sulphate CRS* in *water R* and dilute to 50.0 ml with the same solvent. Then prepare as prescribed for test solution (a).

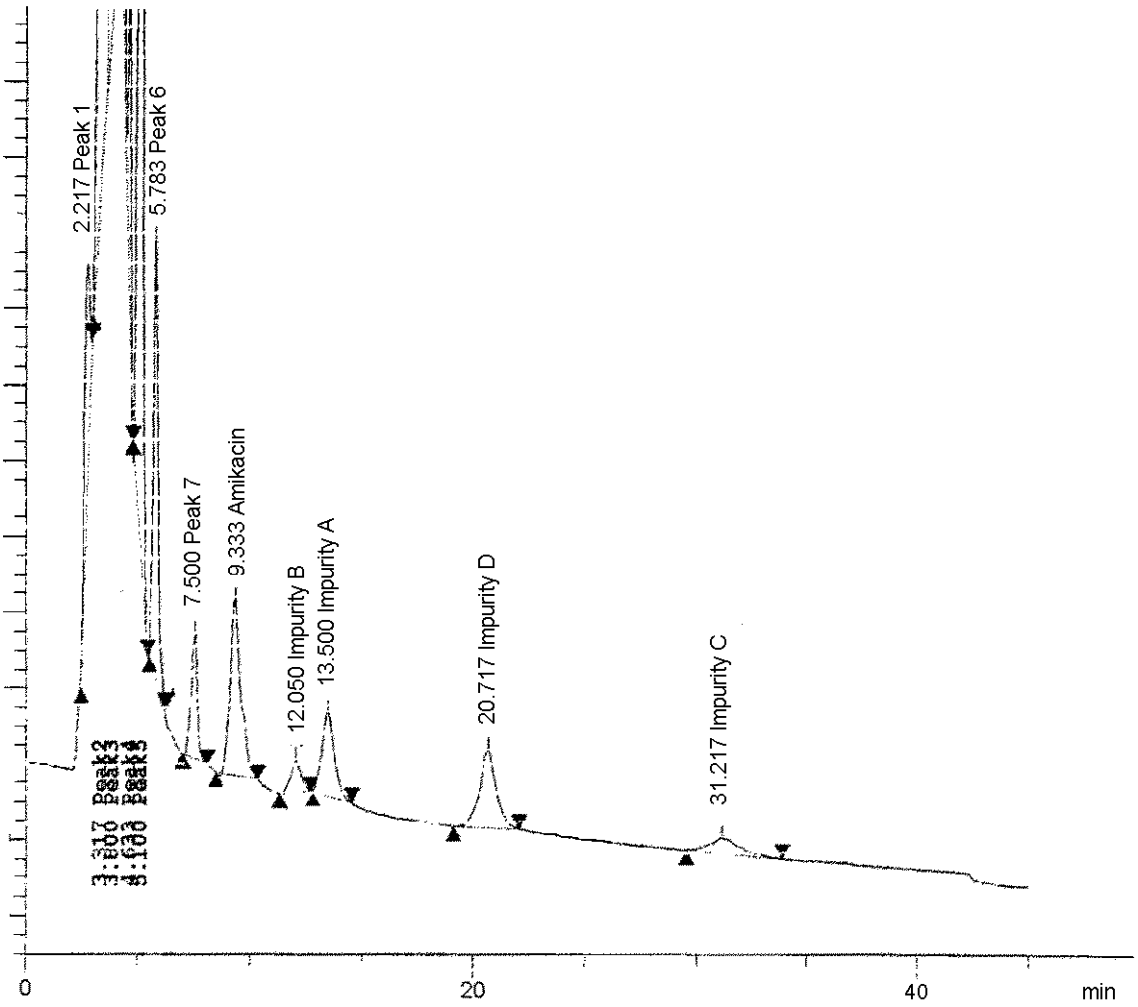

Figure 1290.-1. – *Chromatogram for the test for related substances of amikacin sulphate*

Reference solution (c). Dissolve 5 mg of *amikacin sulphate CRS* and 5 mg of *amikacin impurity A CRS* in *water R* and dilute to 50 ml with the same solvent. Then prepare as prescribed for test solution (a).

Blank solution. Prepare as described for test solution (a) using 0.2 ml of *water R*.

Column:

– *size*: *l* = 0.25 m, Ø = 4.6 mm;

– *stationary phase*: *octadecylsilyl silica gel for chromatography R* (5 µm);

– *temperature*: 30 °C.

Mobile phase: mix 30 volumes of a 2.7 g/l solution of *potassium dihydrogen phosphate R*, adjusted to pH 6.5 with a 22 g/l solution of *potassium hydroxide R*, and 70 volumes of *methanol R*.

Flow rate: 1 ml/min.

Detection: spectrophotometer at 340 nm.

Injection: 20 µl of test solution (a) and reference solutions (a) and (c).

Run time: 4 times the retention time of amikacin.

System suitability: reference solution (c):

– *resolution*: minimum 3.5 between the peaks due to amikacin and impurity A (see Figure 1290.-1).

Limits:

– *impurity A*: not more than the area of the principal peak in the chromatogram obtained with reference solution (a) (1.0 per cent);

– *any other impurity*: for each impurity, not more than 0.5 times the area of the principal peak in the chromatogram obtained with reference solution (a) (0.5 per cent);

– *sum of impurities other than A*: not more than 1.5 times the area of the area of the principal peak in the chromatogram obtained with reference solution (a) (1.5 per cent);

– *disregard limit*: 0.1 times the area of the principal peak in the chromatogram obtained with reference solution (a) (0.1 per cent); disregard any peak due to the blank and any peak eluting before the principal peak.

Sulphate: 23.3 per cent to 25.8 per cent (dried substance).

Dissolve 0.250 g in 100 ml of *water R* and adjust the solution to pH 11 using *concentrated ammonia R*. Add 10.0 ml of *0.1 M barium chloride* and about 0.5 mg of *phthalein purple R*. Titrate with *0.1 M sodium edetate* adding 50 ml of *ethanol (96 per cent) R* when the colour of the solution begins to change and continue the titration until the violet-blue colour disappears.

1 ml of *0.1 M barium chloride* is equivalent to 9.606 mg of sulphate (SO_4).

Loss on drying (*2.2.32*): maximum 13.0 per cent, determined on 0.500 g by drying in an oven at 105 °C at a pressure not exceeding 0.7 kPa for 3 h.

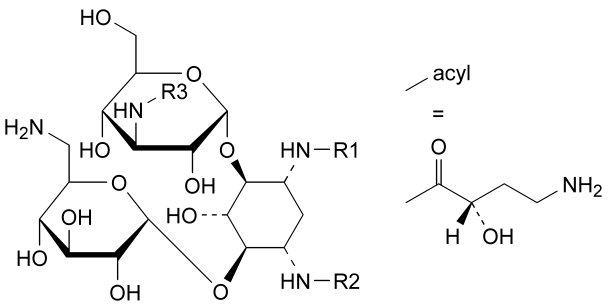
Pyrogens (*2.6.8*). If intended for use in the manufacture of parenteral dosage forms without a further appropriate procedure for the removal of pyrogens, it complies with the test for pyrogens. Inject per kilogram of the rabbit's mass 5 ml of a solution containing 25 mg of the substance to be examined in *water for injections R*.

ASSAY

Liquid chromatography (*2.2.29*) as described in the test for related substances with the following modifications.

Injection: test solution (b) and reference solution (b).

System suitability:



– *repeatability*: maximum relative standard deviation of 2.0 per cent after 6 injections of reference solution (b).

Calculate the percentage content of $C_{22}H_{47}N_5O_{21}S_2$ from the declared content of *amikacin sulphate CRS*.

STORAGE

If the substance is sterile, store in a sterile, airtight, tamper-proof container.

AMILORIDE HYDROCHLORIDE

Amiloridi hydrochloridum

$C_6H_9Cl_2N_7O,2H_2O$ M_r 302.1

[17440-83-4]

DEFINITION

3,5-Diamino-*N*-carbamimidoyl-6-chloropyrazine-2-carboxamide hydrochloride dihydrate.

Content: 98.0 per cent to 101.0 per cent (anhydrous substance).

CHARACTERS

Appearance: pale yellow or greenish-yellow powder.

Solubility: slightly soluble in water and in anhydrous ethanol.

IDENTIFICATION

First identification: A, D.

Second identification: B, C, D.

A. Infrared absorption spectrophotometry (*2.2.24*).

Comparison: *amiloride hydrochloride CRS.*

B. Thin-layer chromatography (*2.2.27*).

Test solution. Dissolve 40 mg of the substance to be examined in *methanol R* and dilute to 10 ml with the same solvent.

Reference solution. Dissolve 40 mg of *amiloride hydrochloride CRS* in *methanol R* and dilute to 10 ml with the same solvent.

Plate: *TLC silica gel plate R.*

Mobile phase: *dilute ammonia R1, water R, dioxan R* (6:6:88 *V/V/V*); freshly prepared mixture.

Application: 5 µl.

Development: over a path of 12 cm.

Drying: in air.

Detection: examine in ultraviolet light at 365 nm.

Results: the principal spot in the chromatogram obtained with the test solution is similar in position, fluorescence and size to the principal spot in the chromatogram obtained with the reference solution.

C. Dissolve about 10 mg in 10 ml of *water R*. Add 10 ml of a 200 g/l solution of *cetrimide R*, 0.25 ml of *dilute sodium hydroxide solution R* and 1 ml of *bromine water R*. A greenish-yellow colour is produced. Add 2 ml of *dilute hydrochloric acid R*. The solution becomes deep yellow and shows blue fluorescence in ultraviolet light at 365 nm.

D. It gives reaction (b) of chlorides (*2.3.1*).

TESTS

Free acid. Dissolve 1.0 g in a mixture of 50 ml of *methanol R* and 50 ml of *water R* and titrate with *0.1 M sodium hydroxide*, determining the end-point potentiometrically (*2.2.20*). Not more than 0.3 ml of *0.1 M sodium hydroxide* is required to reach the end-point.

Related substances. Liquid chromatography (*2.2.29*).

Test solution. Dissolve 20.0 mg of the substance to be examined in a mixture of 1 volume of *acetonitrile R* and 3 volumes of *water R* and dilute to 10.0 ml with the same mixture of solvents.

Reference solution (a). Dilute 1.0 ml of the test solution to 100.0 ml with a mixture of 1 volume of *acetonitrile R* and 3 volumes of *water R*.

Reference solution (b). Dilute 1.0 ml of reference solution (a) to 10.0 ml with a mixture of 1 volume of *acetonitrile R* and 3 volumes of *water R*.

Reference solution (c). Dissolve 5.0 mg of *amiloride impurity A CRS* in a mixture of 1 volume of *acetonitrile R* and 3 volumes of *water R* and dilute to 5.0 ml with the same mixture of solvents. Dilute 1.0 ml of this solution to 100.0 ml with a mixture of 1 volume of *acetonitrile R* and 3 volumes of *water R*.

Column:

– *size*: *l* = 0.25 m, Ø = 4.6 mm;

– *stationary phase*: *octadecylsilyl silica gel for chromatography R* (5 µm).

Mobile phase: mix 5 volumes of *tetramethylammonium hydroxide solution R*, 250 volumes of *acetonitrile R* and 745 volumes of *water R*; adjust to pH 7.0 with a mixture of 1 volume of *phosphoric acid R* and 9 volumes of *water R*. Adjust the concentration of acetonitrile in the mobile phase so that the retention time of impurity A is 5-6 min (an increase in the concentration of acetonitrile results in a shorter retention time). Adjust the concentration of tetramethylammonium hydroxide and of phosphoric acid keeping the pH at 7.0 so that the retention time of amiloride is 9-12 min (an increase in the concentration results in a shorter retention time for amiloride).

Flow rate: 1 ml/min.

Detection: spectrophotometer at 254 nm.

Injection: 20 µl.

Run time: 5 times the retention time of amiloride.

System suitability: reference solution (b):

– *signal-to-noise ratio*: minimum 5.0 for the peak due to amiloride.

Limits:

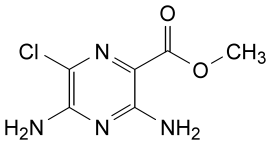
– *total*: not more than the area of the peak due to impurity A in the chromatogram obtained with reference solution (c) (0.5 per cent);

– *disregard limit*: 0.1 times the area of the peak due to impurity A in the chromatogram obtained with reference solution (c) (0.05 per cent).

Water (*2.5.12*): 11.0 per cent to 13.0 per cent, determined on 0.200 g.

Sulphated ash (*2.4.14*): maximum 0.1 per cent, determined on 1.0 g.

ASSAY



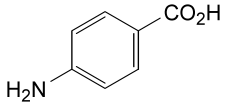
Dissolve 0.200 g in a mixture of 5.0 ml of *0.01 M hydrochloric acid* and 50 ml of *ethanol (96 per cent) R*. Carry out a potentiometric titration (*2.2.20*), using *0.1 M sodium hydroxide*. Read the volume added between the 2 points of inflexion.

1 ml of *0.1 M sodium hydroxide* is equivalent to 26.61 mg of $C_6H_9Cl_2N_7O$.

STORAGE

Protected from light.

IMPURITIES



A. methyl 3,5-diamino-6-chloropyrazine-2-carboxylate.

01/2008:1687

4-AMINOBENZOIC ACID

Acidum 4-aminobenzoicum

$C_7H_7NO_2$ M_r 137.1

[150-13-0]

DEFINITION

4-Aminobenzoic acid.

Content: 99.0 per cent to 101.0 per cent (anhydrous substance).

CHARACTERS

Appearance: white or slightly yellow, crystalline powder.

Solubility: slightly soluble in water, freely soluble in alcohol. It dissolves in dilute solutions of alkali hydroxides.

IDENTIFICATION

First identification: B.

Second identification: A, C.

A. Melting point (*2.2.14*): 186 °C to 189 °C.

B. Infrared absorption spectrophotometry (*2.2.24*).

Comparison: *4-aminobenzoic acid CRS.*

C. Thin-layer chromatography (*2.2.27*).

Test solution. Dissolve 20 mg of the substance to be examined in *methanol R* and dilute to 20 ml with the same solvent.

Reference solution (a). Dissolve 20 mg of *4-aminobenzoic acid CRS* in *methanol R* and dilute to 20 ml with the same solvent.

Reference solution (b). Dissolve 10 mg of *4-nitrobenzoic acid R* in 10 ml of reference solution (a).

Plate: suitable silica gel with a fluorescent indicator having an optimal intensity at 254 nm as the coating substance.

Mobile phase: *glacial acetic acid R, hexane R, methylene chloride R* (5:20:75 *V/V/V*).

Application: 1 µl.

Development: over a path of 10 cm.

Drying: in air.

Detection: examine in ultraviolet light at 254 nm.

System suitability: the chromatogram obtained with reference solution (b) shows 2 clearly separated spots.

Results: the principal spot in the chromatogram obtained with the test solution is similar in position and size to the principal spot in the chromatogram obtained with reference solution (a).

TESTS

Appearance of solution. The solution is clear (*2.2.1*) and not more intensely coloured than reference solution B_5 (*2.2.2, Method II*).

Dissolve 1.0 g in *alcohol R* and dilute to 20 ml with the same solvent.

Related substances. Liquid chromatography (*2.2.29*).

Test solution. Dissolve 25.0 mg of the substance to be examined in the mobile phase and dilute to 100.0 ml with the mobile phase.

Reference solution. Dissolve 25.0 mg of *4-nitrobenzoic acid R* and 25.0 mg of *benzocaine R* in *methanol R* and dilute to 100.0 ml with the same solvent. Dilute 1.0 ml to 50.0 ml with the mobile phase. Dilute 1.0 ml of this solution to 10.0 ml with the mobile phase.

Column:

– *size*: *l* = 0.12 m, Ø = 4.0 mm,
– *stationary phase*: *octylsilyl silica gel for chromatography R* (5 µm).

Mobile phase: mix 20 volumes of a mixture of 70 volumes of *acetonitrile R* and 80 volumes of *methanol R*, and 80 volumes of a solution containing 1.5 g/l of *potassium dihydrogen phosphate R* and 2.5 g/l of *sodium octanesulphonate R* adjusted to pH 2.2 with *phosphoric acid R*.

Flow rate: 1.0 ml/min.

Detection: spectrophotometer at 270 nm.

Injection: 20 µl.

Run time: 11 times the retention time of 4-aminobenzoic acid.

Relative retention with reference to 4-aminobenzoic acid (retention time = about 3 min): impurity A = about 4; impurity B = about 9.

Limits:

– *impurity A*: not more than the area of the corresponding peak in the chromatogram obtained with the reference solution (0.2 per cent),
– *impurity B*: not more than the area of the corresponding peak in the chromatogram obtained with the reference solution (0.2 per cent),
– *any other impurity*: not more than 0.5 times the area of the peak due to impurity A in the chromatogram obtained with the reference solution (0.1 per cent),
– *total*: not more than 2.5 times the area of the peak due to impurity A in the chromatogram obtained with the reference solution (0.5 per cent),
– *disregard limit*: 0.1 times the area of the peak due to impurity A in the chromatogram obtained with the reference solution (0.02 per cent).

Impurity C and impurity D. Gas chromatography (*2.2.28*).

Internal standard solution. Dissolve 20.0 mg of *lauric acid R* in *methylene chloride R* and dilute to 100.0 ml with the same solvent.

Test solution. Dissolve 1.000 g of the substance to be examined in 10.0 ml of an 84 g/l solution of *sodium hydroxide R* and extract with 2 quantities, each of 10 ml, of *methylene chloride R*. Combine and wash with 5 ml of *water R*; filter through *anhydrous sodium sulphate R*. Wash the filter with *methylene chloride R*. Evaporate in a water-bath at 50-60 °C to obtain a volume of about 1-5 ml. Add 1.0 ml of the internal standard solution and dilute to 10.0 ml with *methylene chloride R*.

Reference solution (a). Dissolve 20.0 mg of *aniline R* in *methylene chloride R* and dilute to 100.0 ml with the same solvent.

Reference solution (b). Dissolve 20.0 mg of *p-toluidine R* in *methylene chloride R* and dilute to 100.0 ml with the same solvent.

Reference solution (c). Dilute 0.50 ml of reference solution (a), 0.50 ml of reference solution (b) and 10.0 ml of the internal standard solution to 100.0 ml with *methylene chloride R*.

Column:

– *material*: fused silica,
– *size*: *l* = 30 m, Ø = 0.32 mm,
– *stationary phase*: *poly[methyl(95)phenyl(5)] siloxane R* (film thickness 0.5 µm).

Carrier gas: *helium for chromatography R.*

Flow rate: 1.0 ml/min.

Split ratio: 1:10.

Temperature:

	Time (min)	Temperature (°C)
Column	0 - 4	130
	4 - 6.5	130 → 180
	6.5 - 11.5	180
Injection port		280
Detector		300

Detection: flame ionisation.

Injection: 2 µl; inject the test solution and reference solution (c).

Retention time: internal standard = about 9.5 min.

Limits:

- *impurity C*: calculate the ratio (*R*) of the area of the peak due to impurity C to the area of the peak due to the internal standard from the chromatogram obtained with reference solution (c); calculate the ratio of the area of the peak due to impurity C to the area of the peak due to the internal standard from the chromatogram obtained with the test solution: this ratio is not greater than *R* (10 ppm),
- *impurity D*: calculate the ratio (*R*) of the area of the peak due to impurity D to the area of the peak due to the internal standard from the chromatogram obtained with reference solution (c); calculate the ratio of the area of the peak due to impurity D to the area of the peak due to the internal standard from the chromatogram obtained with the test solution: this ratio is not greater than *R* (10 ppm).

Iron (*2.4.9*): maximum 40 ppm.

Dissolve 0.250 g in 3 ml of *alcohol R* and dilute to 10.0 ml with *water R*.

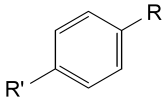
Heavy metals (*2.4.8*): maximum 20 ppm.

1.0 g complies with limit test C. Prepare the standard using 2 ml of *lead standard solution (10 ppm Pb) R*.

Water (*2.5.12*): maximum 0.2 per cent, determined on 1.00 g.

Sulphated ash (*2.4.14*): maximum 0.1 per cent, determined on 1.0 g.

ASSAY



Dissolve 0.100 g with heating in 50 ml of *carbon dioxide-free water R*. Titrate with *0.1 M sodium hydroxide* determining the end-point potentiometrically (*2.2.20*).

1 ml of *0.1 M sodium hydroxide* is equivalent to 13.71 mg of $C_7H_7NO_2$.

STORAGE

Protected from light.

IMPURITIES

A. R = CO_2H, R′ = NO_2: 4-nitrobenzoic acid,

B. R = CO-O-C_2H_5, R′ = NH_2: benzocaine,

C. R = H, R′ = NH_2: aniline,

D. R = CH_3, R′ = NH_2: 4-methylaniline (*p*-toluidine).

corrected 6.0

AMINOCAPROIC ACID

Acidum aminocaproicum

$C_6H_{13}NO_2$ M_r 131.2
[60-32-2]

DEFINITION

Aminocaproic acid contains not less than 98.5 per cent and not more than the equivalent of 101.0 per cent of 6-aminohexanoic acid, calculated with reference to the dried substance.

CHARACTERS

A white or almost white, crystalline powder or colourless crystals, freely soluble in water, slightly soluble in alcohol. It melts at about 205 °C with decomposition.

IDENTIFICATION

First identification: A.

Second identification: B, C, D.

A. Examine by infrared absorption spectrophotometry (*2.2.24*), comparing with the spectrum obtained with *aminocaproic acid CRS*. Examine the substances prepared as discs.

B. Examine the chromatograms obtained in the test for ninhydrin-positive substances. The principal spot in the chromatogram obtained with the test solution (b) is similar in position, colour and size to the principal spot in the chromatogram obtained with reference solution (a).

C. Dissolve 0.5 g in 4 ml of a mixture of equal volumes of *dilute hydrochloric acid R* and *water R*. Evaporate to dryness by heating on a water-bath. Dry the residue in a desiccator. Dissolve the residue in about 2 ml of boiling *ethanol R*. Allow to cool and maintain at 4 °C to 8 °C for 3 h. Filter under reduced pressure. The residue washed with about 10 ml of *acetone R* and dried at 60 °C for 30 min, melts (*2.2.14*) at 131 °C to 133 °C.

D. Dissolve about 5 mg in 0.5 ml of *distilled water R*. Add 3 ml of *dimethylformamide R* and 2 ml of *ascorbic acid solution R*. Heat on a water-bath. An orange colour develops.

TESTS

Solution S. dissolve 10.0 g in *carbon dioxide-free water R* and dilute to 50.0 ml with the same solvent.

Appearance of solution. Solution S is colourless (*2.2.2, Method II*) and remains clear (*2.2.1*) on standing for 24 h.

pH (*2.2.3*). The pH of solution S is 7.5 to 8.0.

Absorbance (*2.2.25*).

A. The absorbance of solution S at 287 nm is not more than 0.10 and at 450 nm is not more than 0.03.

B. Place 2.0 g in an even layer in a shallow dish 9 cm in diameter, cover and allow to stand at 98 °C to 102 °C for 72 h. Dissolve in *water R* and dilute to 10.0 ml with the same solvent. The absorbance of the solution at 287 nm is not more than 0.15 and at 450 nm is not more than 0.03.

Ninhydrin-positive substances. Examine by thin-layer chromatography (*2.2.27*), using a suitable silica gel as the coating substance.

Test solution (a). Dissolve 0.10 g of the substance to be examined in *water R* and dilute to 10 ml with the same solvent.

Test solution (b). Dilute 1 ml of test solution (a) to 50 ml with *water R*.

Reference solution (a). Dissolve 10 mg of *aminocaproic acid CRS* in *water R* and dilute to 50 ml with the same solvent.

Reference solution (b). Dilute 5 ml of test solution (b) to 20 ml with *water R*.

Reference solution (c). Dissolve 10 mg of *aminocaproic acid CRS* and 10 mg of *leucine CRS* in *water R* and dilute to 25 ml with the same solvent.

Apply separately to the plate 5 µl of each solution. Allow the plate to dry in air. Develop over a path of 15 cm using a mixture of 20 volumes of *glacial acetic acid R*, 20 volumes of *water R* and 60 volumes of *butanol R*. Dry the plate in a current of warm air. Spray with *ninhydrin solution R*

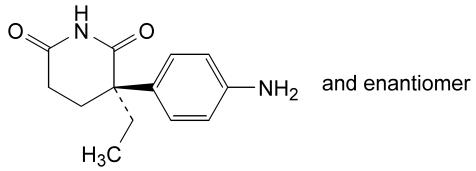
and heat at 100 °C to 105 °C for 15 min. Any spot in the chromatogram obtained with the test solution (a), apart from the principal spot, is not more intense than the spot in the chromatogram obtained with reference solution (b) (0.5 per cent). The test is not valid unless the chromatogram obtained with reference solution (c) shows two clearly separated principal spots.

Heavy metals (*2.4.8*). 12 ml of solution S complies with limit test A for heavy metals (10 ppm). Prepare the standard using *lead standard solution (2 ppm Pb) R*.

Loss on drying (*2.2.32*). Not more than 0.5 per cent, determined on 1.000 g by drying in an oven at 105 °C.

Sulphated ash (*2.4.14*). Not more than 0.1 per cent, determined on 1.0 g.

ASSAY



Dissolve 0.100 g in 20 ml of *anhydrous acetic acid R*. Using 0.1 ml of *crystal violet solution R* as indicator, titrate with *0.1 M perchloric acid* until the colour changes from bluish-violet to bluish-green.

1 ml of *0.1 M perchloric acid* is equivalent to 13.12 mg of $C_6H_{13}NO_2$.

01/2008:1291
corrected 6.0

AMINOGLUTETHIMIDE

Aminoglutethimidum

$C_{13}H_{16}N_2O_2$ M_r 232.3
[125-84-8]

DEFINITION

(3*RS*)-3-(4-Aminophenyl)-3-ethylpiperidine-2,6-dione.

Content: 98.0 per cent to 101.5 per cent (dried substance).

CHARACTERS

Appearance: white or slightly yellow, crystalline powder.

Solubility: practically insoluble in water, freely soluble in acetone, soluble in methanol.

IDENTIFICATION

First identification: B.

Second identification: A, C.

A. Melting point (*2.2.14*): 150 °C to 154 °C.

B. Infrared absorption spectrophotometry (*2.2.24*).

Preparation: discs.

Comparison: *aminoglutethimide CRS*.

C. Thin-layer chromatography (*2.2.27*).

Test solution. Dissolve 25 mg of the substance to be examined in *acetone R* and dilute to 5 ml with the same solvent.

Reference solution (a). Dissolve 25 mg of *aminoglutethimide CRS* in *acetone R* and dilute to 5 ml with the same solvent.

Reference solution (b). Dissolve 25 mg of *aminoglutethimide CRS* and 25 mg of *glutethimide CRS* in *acetone R* and dilute to 5 ml with the same solvent.

Plate: *TLC silica gel F_{254} plate R*.

Mobile phase: *glacial acetic acid R, methanol R, ethyl acetate R* (0.5:15:85 *V/V/V*).

Application: 5 µl.

Development: over a path of 15 cm.

Drying: in air.

Detection: examine in ultraviolet light at 254 nm.

System suitability: reference solution (b):

– the chromatogram shows 2 clearly separed spots.

Results: the principal spot in the chromatogram obtained with the test solution is similar in position and size to the principal spot in the chromatogram obtained with reference solution (a).

TESTS

Solution S. Dissolve 1.0 g in *methanol R* and dilute to 20.0 ml with the same solvent.

Appearance of solution. Solution S is clear (*2.2.1*) and not more intensely coloured than reference solution Y_7 (*2.2.2, Method II*).

Optical rotation (*2.2.7*): – 0.10° to + 0.10°, determined on solution S.

Related substances. Liquid chromatography (*2.2.29*).

Test solution. Dissolve 0.10 g of the substance to be examined in a mixture of equal volumes of *methanol R* and *acetate buffer solution pH 5.0 R* and dilute to 50.0 ml with the same mixture of solvents.

Reference solution (a). Dissolve 5.0 mg of *aminoglutethimide impurity A CRS* in a mixture of equal volumes of *methanol R* and *acetate buffer solution pH 5.0 R* and dilute to 25.0 ml with the same mixture of solvents.

Reference solution (b). Dilute 1.0 ml of reference solution (a) to 10.0 ml with a mixture of equal volumes of *methanol R* and *acetate buffer solution pH 5.0 R*.

Reference solution (c). Dilute 1.0 ml of the test solution to 100.0 ml with a mixture of equal volumes of *methanol R* and *acetate buffer solution pH 5.0 R*.

Reference solution (d). Dilute 1.0 ml of the test solution to 10.0 ml with reference solution (a).

Column:

– *size*: *l* = 0.15 m, Ø = 3.9 mm;

– *stationary phase*: *octadecylsilyl silica gel for chromatography R* (4 µm);

– *temperature*: 40 °C.

Mobile phase: mix 27 volumes of *methanol R* and 73 volumes of *acetate buffer solution pH 5.0 R*.

Flow rate: 1.3 ml/min.

Detection: spectrophotometer at 240 nm.

Injection: 10 µl of the test solution and reference solutions (b), (c) and (d).

Run time: 4 times the retention time of aminoglutethimide.

Retention time: aminoglutethimide = about 9 min; impurity A = about 12 min.

System suitability: reference solution (d):

– *resolution*: minimum 2.0 between the peaks due to aminoglutethimide and impurity A.

Limits:

- *impurity A*: not more than twice the area of the principal peak in the chromatogram obtained with reference solution (b) (2 per cent);
- *sum of impurities other than A*: not more than the area of the principal peak in the chromatogram obtained with reference solution (c) (1 per cent);
- *total*: maximum 2.0 per cent for the sum of the contents of all impurities;
- *disregard limit*: 0.05 times the area of the principal peak in the chromatogram obtained with reference solution (c) (0.05 per cent).

Impurity D. Liquid chromatography (*2.2.29*). *Carry out the test protected from light. Use shaking, not sonication or heat, to dissolve the reference substance and the substance to be examined.*

Test solution. Dissolve 0.100 g of the substance to be examined in *dimethyl sulphoxide R* and dilute to 100.0 ml with the same solvent.

Reference solution. Dissolve 3.0 mg of *aminoglutethimide impurity D CRS* in *dimethyl sulphoxide R* and dilute to 100.0 ml with the same solvent. Dilute 1.0 ml of this solution to 100.0 ml with *dimethyl sulphoxide R*.

Column:

- *size*: *l* = 0.12 m, Ø = 4 mm;
- *stationary phase*: *octadecylsilyl silica gel for chromatography R* (5 µm).

Mobile phase: dissolve 0.285 g of *sodium edetate R* in *water R*, add 7.5 ml of *dilute acetic acid R* and 50 ml of *0.1 M potassium hydroxide* and dilute to 1000 ml with *water R*; adjust to pH 5.0 with *glacial acetic acid R*; mix 350 ml of this solution with 650 ml of *methanol R*.

Flow rate: 1.0 ml/min.

Detection: spectrophotometer at 328 nm.

Injection: 10 µl.

System suitability: test solution:

- *number of theoretical plates*: minimum 3300, calculated for the principal peak;
- *mass distribution ratio*: 2.0 to 5.0 for the principal peak;
- *symmetry factor*: maximum 1.2 for the principal peak.

Limit:

- *impurity D*: not more than the area of the principal peak in the chromatogram obtained with the reference solution (300 ppm).

Sulphates (*2.4.13*): maximum 500 ppm.

Dilute 6 ml of solution S to 15 ml with *distilled water R*.

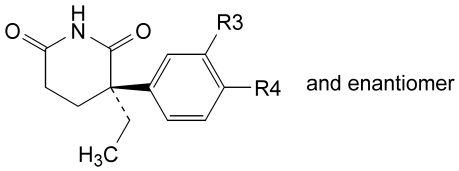
Heavy metals (*2.4.8*): maximum 10 ppm.

Dissolve 2.0 g in 15 ml of *acetone R* and dilute to 20 ml with *water R*. 12 ml of the solution complies with test B. Prepare the reference solution using lead standard solution (1 ppm Pb) obtained by diluting *lead standard solution (100 ppm Pb) R* with a mixture of 15 ml of *acetone R* and 5 ml of *water R*.

Loss on drying (*2.2.32*): maximum 0.5 per cent, determined on 1.000 g by drying in an oven at 105 °C.

Sulphated ash (*2.4.14*): maximum 0.1 per cent, determined on 1.0 g.

ASSAY

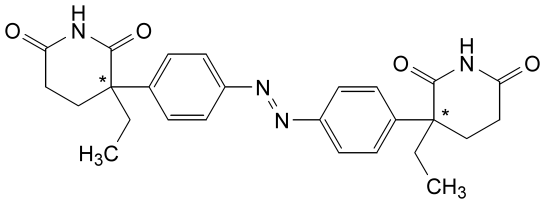


Dissolve 0.180 g in 50 ml of *anhydrous acetic acid R* and titrate with *0.1 M perchloric acid*, determining the end-point potentiometrically (*2.2.20*).

1 ml of *0.1 M perchloric acid* is equivalent to 23.23 mg of $C_{13}H_{16}N_2O_2$.

IMPURITIES

Specified impurities: A, D.

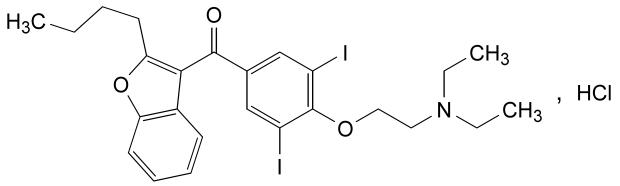


Other detectable impurities (the following substances would, if present at a sufficient level, be detected by one or other of the tests in the monograph. They are limited by the general acceptance criterion for other/unspecified impurities and/or by the general monograph *Substances for pharmaceutical use (2034)*. It is therefore not necessary to identify these impurities for demonstration of compliance. See also *5.10. Control of impurities in substances for pharmaceutical use*): *B, C.*

A. R3 = NH_2, R4 = H: (3*RS*)-3-(3-aminophenyl)-3-ethylpiperidine-2,6-dione (3-aminoglutethimide),

B. R3 = NO_2, R4 = H: (3*RS*)-3-ethyl-3-(3-nitrophenyl)-piperidine-2,6-dione,

C. R3 = H, R4 = NO_2: (3*RS*)-3-ethyl-3-(4-nitrophenyl)-piperidine-2,6-dione,



D. 3,3′-[diazenediylbis(4,1-phenylene)]bis(3-ethylpiperidine-2,6-dione) (azoglutethimide).

01/2008:0803

AMIODARONE HYDROCHLORIDE

Amiodaroni hydrochloridum

$C_{25}H_{30}ClI_2NO_3$ M_r 682

[199774-82-4]

DEFINITION

(2-Butylbenzofuran-3-yl)[4-[2-(diethylamino)ethoxy]-3,5-diiodophenyl]methanone hydrochloride.

Content: 98.5 per cent to 101.0 per cent (dried substance).

CHARACTERS

Appearance: white or almost white, fine, crystalline powder.

Solubility: very slightly soluble in water, freely soluble in methylene chloride, soluble in methanol, sparingly soluble in ethanol (96 per cent).

IDENTIFICATION

A. Infrared absorption spectrophotometry (*2.2.24*).

Comparison: *amiodarone hydrochloride CRS*.

B. It gives reaction (b) of chlorides (*2.3.1*).

TESTS

Appearance of solution. The solution is clear (*2.2.1*) and not more intensely coloured than reference solution GY_5 or BY_5 (*2.2.2, Method II*).

Dissolve 1.0 g in *methanol R* and dilute to 20 ml with the same solvent.

pH (*2.2.3*): 3.2 to 3.8.

Dissolve 1.0 g in *carbon dioxide-free water R*, heating at 80 °C, cool and dilute to 20 ml with the same solvent.

Impurity H. Thin-layer chromatography (*2.2.27*). *Prepare the solutions immediately before use and keep protected from bright light.*

Test solution. Dissolve 0.500 g of the substance to be examined in *methylene chloride R* and dilute to 5.0 ml with the same solvent.

Reference solution (a). Dissolve 10.0 mg of *(2-chloroethyl)diethylamine hydrochloride R* (impurity H) in *methylene chloride R* and dilute to 50.0 ml with the same solvent. Dilute 2.0 ml of this solution to 20.0 ml with *methylene chloride R*.

Reference solution (b). Mix 2.0 ml of the test solution and 2.0 ml of reference solution (a).

Plate: *TLC silica gel F_{254} plate R*.

Mobile phase: *anhydrous formic acid R, methanol R, methylene chloride R* (5:10:85 *V/V/V*).

Application: 50 µl of the test solution and reference solution (a); 100 µl of reference solution (b).

Development: over 2/3 of the plate.

Drying: in a current of cold air.

Detection: spray with *potassium iodobismuthate solution R1* and then with *dilute hydrogen peroxide solution R*; examine immediately in daylight.

System suitability: reference solution (b):

– the spot due to impurity H is clearly visible.

Limit:

– *impurity H*: any spot with the same R_F as the spot due to impurity H in the chromatogram obtained with reference solution (b), is not more intense than the spot in the chromatogram obtained with reference solution (a) (0.02 per cent).

Related substances. Liquid chromatography (*2.2.29*).

Buffer solution pH 4.9. To 800 ml of *water R* add 3.0 ml of *glacial acetic acid R*, adjust to pH 4.9 with *dilute ammonia R1* and dilute to 1000 ml with *water R*.

Test solution. Dissolve 0.125 g of the substance to be examined in a mixture of equal volumes of *acetonitrile R* and *water R* and dilute to 25.0 ml with the same mixture of solvents.

Reference solution. Dissolve 5 mg of *amiodarone impurity D CRS*, 5 mg of *amiodarone impurity E CRS* and 5.0 mg of *amiodarone hydrochloride CRS* in *methanol R* and dilute to 25.0 ml with the same solvent. Dilute 1.0 ml of this solution to 20.0 ml with a mixture of equal volumes of *acetonitrile R* and *water R*.

Column:

– *size*: *l* = 0.15 m, Ø = 4.6 mm;

– *stationary phase*: *octadecylsilyl silica gel for chromatography R* (5 µm);

– *temperature*: 30 °C.

Mobile phase: buffer solution pH 4.9, *methanol R, acetonitrile R* (30:30:40 *V/V/V*).

Flow rate: 1 ml/min.

Detection: spectrophotometer at 240 nm.

Injection: 10 µl.

Run time: twice the retention time of amiodarone.

Relative retention with reference to amiodarone (retention time = about 24 min): impurity A = about 0.26; impurity D = about 0.29; impurity E = about 0.37; impurity B = about 0.49; impurity C = about 0.55; impurity G = about 0.62; impurity F = about 0.69.

System suitability: reference solution:

– *resolution*: minimum 3.5 between the peaks due to impurities D and E.

Limits:

– *impurities A, B, C, D, E, F, G*: for each impurity, not more than the area of the peak due to amiodarone in the chromatogram obtained with the reference solution (0.2 per cent);

– *unspecified impurities*: for each impurity, not more than 0.5 times the area of the peak due to amiodarone in the chromatogram obtained with the reference solution (0.10 per cent);

– *total*: not more than 2.5 times the area of the peak due to amiodarone in the chromatogram obtained with the reference solution (0.5 per cent);

– *disregard limit*: 0.25 times the area of the peak due to amiodarone in the chromatogram obtained with the reference solution (0.05 per cent).

Iodides: maximum 150 ppm.

Prepare the test and reference solutions simultaneously.

Solution A. Add 1.50 g of the substance to be examined to 40 ml of *water R* at 80 °C and shake until completely dissolved. Cool and dilute to 50.0 ml with *water R*.

Test solution. To 15.0 ml of solution A add 1.0 ml of *0.1 M hydrochloric acid* and 1.0 ml of *0.05 M potassium iodate*. Dilute to 20.0 ml with *water R*. Allow to stand protected from light for 4 h.

Reference solution. To 15.0 ml of solution A add 1.0 ml of *0.1 M hydrochloric acid*, 1.0 ml of an 88.2 mg/l solution of *potassium iodide R* and 1.0 ml of *0.05 M potassium iodate*. Dilute to 20.0 ml with *water R*. Allow to stand protected from light for 4 h.

Measure the absorbances (*2.2.25*) of the solutions at 420 nm, using a mixture of 15.0 ml of solution A and 1.0 ml of *0.1 M hydrochloric acid* diluted to 20.0 ml with *water R* as the compensation liquid. The absorbance of the test solution is not greater than half the absorbance of the reference solution.

Heavy metals (*2.4.8*): maximum 20 ppm.

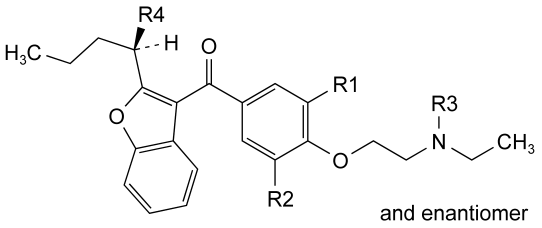
1.0 g complies with test C. Prepare the reference solution using 2 ml of *lead standard solution (10 ppm Pb) R*.

Loss on drying (*2.2.32*): maximum 0.5 per cent, determined on 1.000 g by drying at 50 °C at a pressure not exceeding 0.3 kPa for 4 h.

Sulphated ash (*2.4.14*): maximum 0.1 per cent, determined on 1.0 g.

ASSAY

Dissolve 0.600 g in a mixture of 5.0 ml of *0.01 M hydrochloric acid* and 75 ml of *ethanol (96 per cent) R*. Carry out a potentiometric titration (*2.2.20*), using *0.1 M sodium hydroxide*. Read the volume added between the 2 points of inflexion.



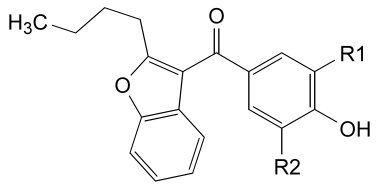
1 ml of *0.1 M sodium hydroxide* is equivalent to 68.18 mg of $C_{25}H_{30}ClI_2NO_3$.

STORAGE

Protected from light, at a temperature not exceeding 30 °C.

IMPURITIES

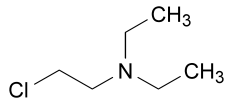
Specified impurities: A, B, C, D, E, F, G, H.



A. R1 = R2 = R4 = H, R3 = C_2H_5: (2-butylbenzofuran-3-yl)[4-[2-(diethylamino)ethoxy]phenyl]methanone,

B. R1 = R2 = I, R3 = R4 = H: (2-butylbenzofuran-3-yl)[4-[2-(ethylamino)ethoxy]-3,5-diiodophenyl]methanone,

C. R1 = I, R2 = R4 = H, R3 = C_2H_5: (2-butylbenzofuran-3-yl)[4-[2-(diethylamino)ethoxy]-3-iodophenyl]methanone,

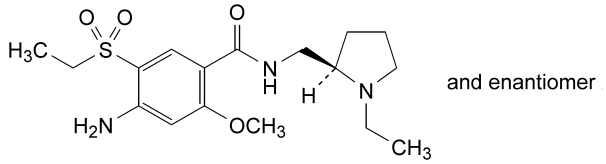


G. R1 = R2 = I, R3 = C_2H_5, R4 = OCH_3: [2-[(1*RS*)-1-methoxybutyl]benzofuran-3-yl][4-[2-(diethylamino)ethoxy]-3,5-diiodophenyl]methanone,

D. R1 = R2 = I: (2-butylbenzofuran-3-yl)(4-hydroxy-3,5-diiodophenyl)methanone,

E. R1 = R2 = H: (2-butylbenzofuran-3-yl)(4-hydroxyphenyl)methanone,

F. R1 = I, R2 = H: (2-butylbenzofuran-3-yl)(4-hydroxy-3-iodophenyl)methanone,



H. 2-chloro-*N*,*N*-diethylethanamine (2-chlorotriethylamine,(2-chloroethyl)diethylamine).

corrected 6.0

AMISULPRIDE

Amisulpridum

$C_{17}H_{27}N_3O_4S$ M_r 369.5
[71675-85-9]

DEFINITION

4-Amino-*N*-[[(2*RS*)-1-ethylpyrrolidin-2-yl]methyl]-5-(ethylsulphonyl)-2-methoxybenzamide.

Content: 99.0 per cent to 101.0 per cent (dried substance).

CHARACTERS

Appearance: white or almost white, crystalline powder.

Solubility: practically insoluble in water, freely soluble in methylene chloride, sparingly soluble in anhydrous ethanol.

mp: about 126 °C.

IDENTIFICATION

Infrared absorption spectrophotometry (*2.2.24*).

Comparison: *amisulpride CRS*.

TESTS

Appearance of solution. The solution is not more opalescent than reference suspension II (*2.2.1*) and not more intensely coloured than reference solution Y_6 (*2.2.2, Method II*).

Dissolve 1.0 g in 3 ml of a mixture of 1 volume of *acetic acid R* and 4 volumes of *water R* and dilute to 20 ml with *water R*.

Optical rotation (*2.2.7*): – 0.10° to + 0.10°.

Dissolve 5.0 g in *dimethylformamide R* and dilute to 50.0 ml with the same solvent.

Impurity A. Thin-layer chromatography (*2.2.27*).

Test solution. Dissolve 0.20 g in *methanol R* and dilute to 10 ml with the same solvent.

Reference solution (a). Dissolve 5 mg of *sulpiride impurity A CRS* (amisulpride impurity A) in *methanol R* and dilute to 25 ml with the same solvent. Dilute 2 ml of the solution to 20 ml with *methanol R*.

Reference solution (b). Dilute 1 ml of the test solution to 10 ml with reference solution (a).

Plate: *TLC silica gel G plate R*.

Mobile phase: the upper layer obtained after shaking a mixture of a 50 per cent *V/V* solution of *concentrated ammonia R, anhydrous ethanol R* and *di-isopropyl ether R* (10:25:65 *V/V/V*).

Application: 10 µl.

Development: over a path of 12 cm.

Drying: in air.

Detection: spray with *ninhydrin solution R* and heat at 100-105 °C for 15 min.

System suitability: the chromatogram obtained with reference solution (b) shows 2 clearly separated spots.

Limit:

– *impurity A*: any spot corresponding to impurity A is not more intense than the spot in the chromatogram obtained with reference solution (a) (0.1 per cent).

Related substances. Examine by liquid chromatography (*2.2.29*).

Test solution. Dissolve 0.10 g in 30 ml of *methanol R* and dilute to 100.0 ml with mobile phase B.

Reference solution (a). Dilute 5.0 ml of the test solution to 100.0 ml with a mixture of 30 volumes of mobile phase A and 70 volumes of mobile phase B. Dilute 1.0 ml of the solution to 25.0 ml with a mixture of 30 volumes of mobile phase A and 70 volumes of mobile phase B.

Reference solution (b). Dissolve 5 mg of *amisulpride impurity B CRS* in 5 ml of the test solution and dilute to 50 ml with a mixture of 30 volumes of mobile phase A and 70 volumes of mobile phase B. Dilute 1 ml of the solution to 10 ml with a mixture of 30 volumes of mobile phase A and 70 volumes of mobile phase B.

Column:

– *size*: *l* = 0.25 m, Ø = 4.6 mm,

– *stationary phase*: *octylsilyl silica gel for chromatography R* (5 µm) with a carbon loading of 16 per cent, a specific surface area of 330 m^2/g and a pore size of 7.5 nm.

Mobile phase:

– *mobile phase A*: *methanol R*,

– *mobile phase B*: 0.7 g/l solution of *sodium octanesulphonate R* in a 0.25 per cent *V/V* solution of *dilute sulphuric acid R*,

Time (min)	Mobile phase A (per cent *V/V*)	Mobile phase B (per cent *V/V*)
0 - 18	30 → 36	70 → 64
18 - 35	36 → 52	64 → 48
35 - 45	52	48
45 - 46	52 → 30	48 → 70
46 - 56	30	70

Flow rate: 1.5 ml/min.

Detection: spectrophotometer at 225 nm.

Injection: 10 µl.

System suitability: reference solution (b):

– *resolution*: minimum 2.0 between the peaks due to amisulpride and impurity B.

Limits:

– *any impurity*: not more than 0.5 times the area of the principal peak in the chromatogram obtained with reference solution (a) (0.1 per cent),

– *total*: not more than 1.5 times the area of the principal peak in the chromatogram obtained with reference solution (a) (0.3 per cent),

– *disregard limit*: 0.1 times the area of the principal peak in the chromatogram obtained with reference solution (a) (0.02 per cent).

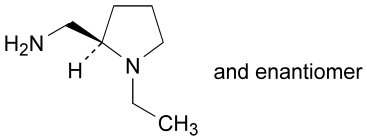
Chlorides (*2.4.4*): maximum 200 ppm.

Shake 0.5 g with 30 ml of *water R* for 10 min. Filter. 15 ml of the filtrate complies with the test.

Heavy metals (*2.4.8*): maximum 10 ppm.

Dissolve 4.0 g by gently heating in 5 ml of *dilute acetic acid R*. Allow to cool and dilute to 20 ml with *water R*. 12 ml of the solution complies with test A. Prepare the reference solution using *lead standard solution (2 ppm Pb) R*.

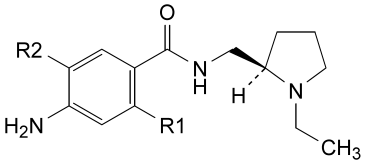
Loss on drying (*2.2.32*): maximum 0.5 per cent, determined on 1.000 g by drying in an oven at 105 °C for 3 h.



Sulphated ash (*2.4.14*): maximum 0.1 per cent, determined on 1.0 g.

ASSAY

Dissolve 0.300 g with shaking in a mixture of 5 ml of *acetic anhydride R* and 50 ml of *anhydrous acetic acid R*. Titrate with *0.1 M perchloric acid*, determining the end-point potentiometrically (*2.2.20*).

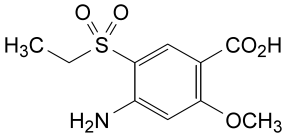


1 ml of *0.1 M perchloric acid* is equivalent to 36.95 mg of $C_{17}H_{27}N_3O_4S$.

IMPURITIES

and enantiomer

A. [(2*RS*)-1-ethylpyrrolidin-2-yl]methanamine,

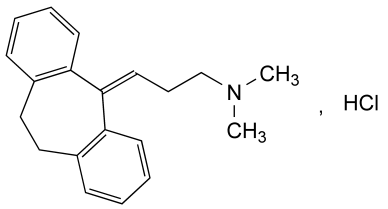


and enantiomer

B. R1 = OH, R2 = SO_2-CH_2-CH_3: 4-amino-*N*-[[(2*RS*)-1-ethylpyrrolidin-2-yl]methyl]-5-(ethylsulphonyl)-2-hydroxybenzamide,

C. R1 = OCH_3, R2 = I: 4-amino-*N*-[[(2*RS*)-1-ethylpyrrolidin-2-yl]methyl]-5-iodo-2-methoxybenzamide,

D. R1 = OCH_3, R2 = SO_2-CH_3: 4-amino-*N*-[[(2*RS*)-1-ethylpyrrolidin-2-yl]methyl]-2-methoxy-5-(methylsulphonyl)benzamide,



E. 4-amino-5-(ethylsulphonyl)-2-methoxybenzoic acid.

01/2008:0464

AMITRIPTYLINE HYDROCHLORIDE

Amitriptylini hydrochloridum

$C_{20}H_{24}ClN$ M_r 313.9
[549-18-8]

DEFINITION

3-(10,11-Dihydro-5*H*-dibenzo[*a*,*d*][7]annulen-5-ylidene)-*N*,*N*-dimethylpropan-1-amine hydrochloride.

Content: 99.0 per cent to 101.0 per cent (dried substance).

CHARACTERS

Appearance: white or almost white powder or colourless crystals.

Solubility: freely soluble in water, in ethanol (96 per cent) and in methylene chloride.

IDENTIFICATION

A. Infrared absorption spectrophotometry (*2.2.24*).
Comparison: *amitriptyline hydrochloride CRS*.

B. 50 mg gives reaction (a) of chlorides (*2.3.1*).

TESTS

Appearance of solution. The solution is clear (*2.2.1*) and not more intensely coloured than reference solution B_7 (*2.2.2, Method II*).

Dissolve 1.25 g in *water R* and dilute to 25 ml with the same solvent.

Acidity or alkalinity. Dissolve 0.20 g in *carbon dioxide-free water R* and dilute to 10 ml with the same solvent. Add 0.1 ml of *methyl red solution R* and 0.2 ml of *0.01 M sodium hydroxide*. The solution is yellow. Add 0.4 ml of *0.01 M hydrochloric acid*. The solution is red.

Related substances. Liquid chromatography (*2.2.29*).

Test solution. Dissolve 50.0 mg of the substance to be examined in the mobile phase and dilute to 50.0 ml with the mobile phase.

Reference solution (a). Dissolve 5.0 mg of *dibenzosuberone CRS* (impurity A) and 5.0 mg of *cyclobenzaprine hydrochloride CRS* (impurity B) in 5.0 ml of the test solution and dilute to 100.0 ml with the mobile phase.

Reference solution (b). Dilute 1.0 ml of reference solution (a) to 50.0 ml with the mobile phase.

Column:
- *size*: *l* = 0.15 m, Ø = 4.6 mm;
- *stationary phase*: *end-capped polar-embedded octadecylsilyl amorphous organosilica polymer R* (5 µm);
- *temperature*: 40 °C.

Mobile phase: mix 35 volumes of *acetonitrile R* and 65 volumes of a 5.23 g/l solution of *dipotassium hydrogen phosphate R* previously adjusted to pH 7.0 with *phosphoric acid R*.

Flow rate: 1.2 ml/min.

Detection: spectrophotometer at 220 nm.

Injection: 10 µl.

Run time: 3 times the retention time of amitriptyline.

Relative retention with reference to amitriptyline (retention time = about 14 min): impurity B = about 0.9; impurity A = about 2.2.

System suitability: reference solution (a):
- *resolution*: minimum 2.0 between the peaks due to impurity B and amitriptyline.

Limits:
- *impurity B*: not more than the area of the corresponding peak in the chromatogram obtained with reference solution (b) (0.1 per cent);
- *impurity A*: not more than 0.5 times the area of the corresponding peak in the chromatogram obtained with reference solution (b) (0.05 per cent);
- *unspecified impurities*: for each impurity, not more than the area of the peak due to amitriptyline in the chromatogram obtained with reference solution (b) (0.10 per cent);
- *total*: not more than 3 times the area of the peak due to amitriptyline in the chromatogram obtained with reference solution (b) (0.3 per cent);
- *disregard limit*: 0.5 times the area of the peak due to amitriptyline in the chromatogram obtained with reference solution (b) (0.05 per cent).

Heavy metals (*2.4.8*): maximum 20 ppm.

1.0 g complies with test F. Prepare the reference solution using 2 ml of *lead standard solution (10 ppm Pb) R*.

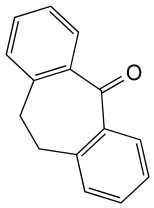
Loss on drying (*2.2.32*): maximum 0.5 per cent, determined on 1.000 g by drying in an oven at 105 °C for 2 h.

Sulphated ash (*2.4.14*): maximum 0.1 per cent, determined on 1.0 g.

ASSAY

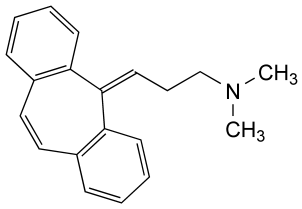
Dissolve 0.250 g in 30 ml of *ethanol (96 per cent) R*. Titrate with *0.1 M sodium hydroxide*, determining the end-point potentiometrically (*2.2.20*).

1 ml of *0.1 M sodium hydroxide* is equivalent to 31.39 mg of $C_{20}H_{24}ClN$.



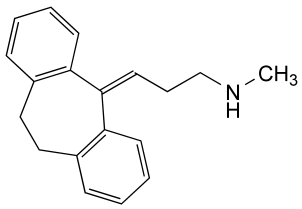
STORAGE

Protected from light.

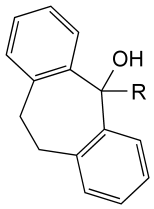


IMPURITIES

Specified impurities: *A, B*.

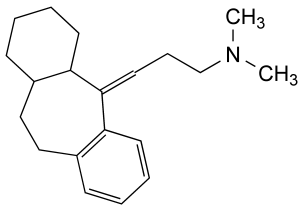


Other detectable impurities (the following substances would, if present at a sufficient level, be detected by one or other of the tests in the monograph. They are limited by the general acceptance criterion for other/unspecified impurities and/or by the general monograph *Substances for pharmaceutical use (2034)*. It is therefore not necessary to identify these impurities for demonstration of compliance. See also *5.10. Control of impurities in substances for pharmaceutical use*): *C, D, E, F, G*.

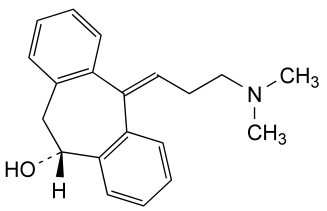


A. 10,11-dihydro-5*H*-dibenzo[*a*,*d*][7]annulen-5-one (dibenzosuberone),

B. 3-(5*H*-dibenzo[*a*,*d*][7]annulen-5-ylidene)-*N*,*N*-dimethylpropan-1-amine (cyclobenzaprine),



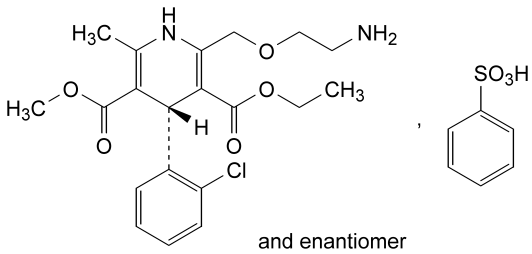
C. 3-(10,11-dihydro-5*H*-dibenzo[*a*,*d*][7]annulen-5-ylidene)-*N*-methylpropan-1-amine (nortriptyline),



D. R = CH_2-CH_2-CH_2-N(CH_3)$_2$: 5-[3-(dimethylamino)propyl]-10,11-dihydro-5*H*-dibenzo[*a*,*d*][7]annulen-5-ol,

G. R = H: 10,11-dihydro-5*H*-dibenzo[*a*,*d*][7]annulen-5-ol (dibenzosuberol),

E. *N*,*N*-dimethyl-3-(1,2,3,4,4a,10,11,11a-octahydro-5*H*-dibenzo[*a*,*d*][7]annulen-5-ylidene)propan-1-amine,



F. (5*EZ*,10*RS*)-5-[3-(dimethylamino)propylidene]-10,11-dihydro-5*H*-dibenzo[*a*,*d*][7]annulen-10-ol.

01/2008:1491

AMLODIPINE BESILATE

Amlodipini besilas

$C_{26}H_{31}ClN_2O_8S$ M_r 567.1
[111470-99-6]

DEFINITION

3-Ethyl 5-methyl (4*RS*)-2-[(2-aminoethoxy)methyl]-4-(2-chlorophenyl)-6-methyl-1,4-dihydropyridine-3,5-dicarboxylate benzenesulphonate.

Content: 97.0 per cent to 102.0 per cent (anhydrous substance).

CHARACTERS

Appearance: white or almost white powder.

Solubility: slightly soluble in water, freely soluble in methanol, sparingly soluble in ethanol, slightly soluble in 2-propanol.

IDENTIFICATION

First identification: A.

Second identification: B, C.

A. Infrared absorption spectrophotometry (*2.2.24*).

Comparison: *amlodipine besilate CRS.*

Preparation: mulls.

B. Examine the chromatograms obtained in test A for related substances in ultraviolet light at 366 nm.

Results: the principal spot in the chromatogram obtained with test solution (b) is similar in position, colour and size to the principal spot in the chromatogram obtained with reference solution (b).

C. Dissolve 5.0 mg in a 1 per cent *V/V* solution of *0.1 M hydrochloric acid* in *methanol R* and dilute to 100.0 ml with the same acid solution. Examined between 300 nm and 400 nm (*2.2.25*), the solution shows an absorption maximum at 360 nm. The specific absorbance at the maximum is 113 to 121.

TESTS

Optical rotation (*2.2.7*): – 0.10° to + 0.10°.

Dissolve 0.250 g in *methanol R* and dilute to 25.0 ml with the same solvent.

Related substances

A. Thin-layer chromatography (*2.2.27*).

Test solution (a). Dissolve 0.140 g of the substance to be examined in *methanol R* and dilute to 2.0 ml with the same solvent.

Test solution (b). Dilute 1.0 ml of test solution (a) to 10.0 ml with *methanol R.*

Reference solution (a). Dissolve 70.0 mg of *amlodipine besilate CRS* in 1.0 ml of *methanol R.*

Reference solution (b). Dilute 1 ml of reference solution (a) to 10 ml with *methanol R.*

Reference solution (c). Dilute 3.0 ml of test solution (b) to 100.0 ml with *methanol R*.

Reference solution (d). Dilute 1.0 ml of test solution (b) to 100.0 ml with *methanol R*.

Plate: *TLC silica gel F_{254} plate R*.

Mobile phase: the upper layer of a mixture of *glacial acetic acid R*, *water R* and *methyl isobutyl ketone R* (25:25:50 *V/V/V*).

Application: 10 µl.

Development: over a path of 15 cm.

Drying: for 15 min at 80 °C.

Detection: examine in ultraviolet light at 254 nm and 366 nm.

System suitability: the chromatogram obtained with reference solution (a) shows 2 clearly separated minor spots with R_F values of about 0.18 and 0.22.

Limits: in the chromatogram obtained with test solution (a):

– *any impurity*: any spot, apart from the principal spot, is not more intense than the spot in the chromatogram obtained with reference solution (c) (0.3 per cent) and at most 2 spots are more intense than the spot in the chromatogram obtained with reference solution (d) (0.1 per cent).

B. Liquid chromatography (*2.2.29*).

Test solution (a). Dissolve 50.0 mg of the substance to be examined in the mobile phase and dilute to 50.0 ml with the mobile phase.

Test solution (b). Dilute 5.0 ml of test solution (a) to 100.0 ml with the mobile phase.

Reference solution (a). Dissolve 50.0 mg of *amlodipine besilate CRS* in the mobile phase and dilute to 50.0 ml with the mobile phase. Dilute 5.0 ml of the solution to 100.0 ml with the mobile phase.

Reference solution (b). Dilute 3.0 ml of test solution (a) to 100.0 ml with the mobile phase and dilute 5.0 ml of the solution to 50.0 ml with the mobile phase.

Reference solution (c). Dissolve 5 mg of the substance to be examined in 5 ml of *strong hydrogen peroxide solution R*. Heat at 70 °C for 45 min.

Column:

– *size*: *l* = 0.15 m, Ø = 3.9 mm,

– *stationary phase*: *octadecylsilyl silica gel for chromatography R* (5 µm).

Mobile phase: mix 15 volumes of *acetonitrile R*, 35 volumes of *methanol R* and 50 volumes of a solution prepared as follows: dissolve 7.0 ml of *triethylamine R* in 1 litre of *water R* and adjust to pH 3.0 ± 0.1 with *phosphoric acid R*.

Flow rate: 1.0 ml/min.

Detection: spectrophotometer at 237 nm.

Injection: 10 µl; inject test solution (a) and reference solutions (b) and (c).

Run time: 3 times the retention time of amlodipine.

Relative retention with reference to amlodipine (retention time = about 7 min): impurity D = about 0.5.

System suitability: reference solution (c):

– *resolution*: minimum 4.5 between the peaks corresponding to amlodipine and impurity D.

Limits:

– *correction factor*: for the calculation of content, multiply the peak area of impurity D by 2,

– *impurity D*: not more than the area of the principal peak in the chromatogram obtained with reference solution (b) (0.3 per cent),

– *total of other impurities*: not more than the area of the principal peak in the chromatogram obtained with reference solution (b) (0.3 per cent); disregard any peak due to benzene sulphonate (relative retention = about 0.2),

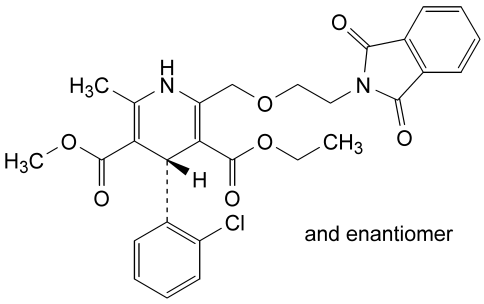
– *disregard limit*: 0.1 times the area of the principal peak in the chromatogram obtained with reference solution (b) (0.03 per cent).

Water (*2.5.12*): maximum 0.5 per cent, determined on 3.000 g.

Sulphated ash (*2.4.14*): maximum 0.2 per cent, determined on 1.0 g.

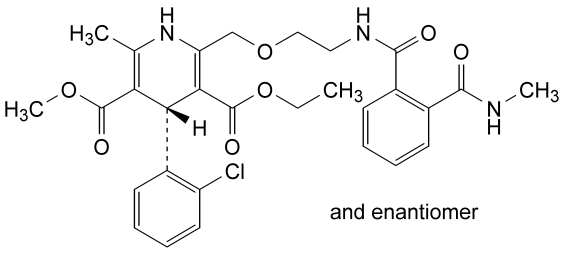
ASSAY

Liquid chromatography (*2.2.29*) as described in the test for related substances with the following modification.



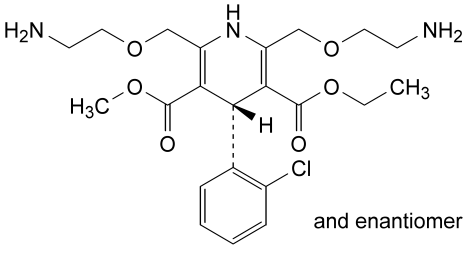
Injection: test solution (b), reference solution (a).

Calculate the percentage content of amlodipine besilate from the areas of the peaks and the declared content of $C_{26}H_{31}ClN_2O_8S$ in *amlodipine besilate CRS*.

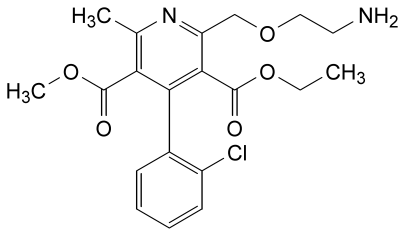


STORAGE

In an airtight container, protected from light.



IMPURITIES



A. 3-ethyl 5-methyl (4*RS*)-4-(2-chlorophenyl)-2-[[2-(1,3-dioxo-1,3-dihydro-2*H*-isoindol-2-yl)ethoxy]methyl]-6-methyl-1,4-dihydropyridine-3,5-dicarboxylate,

B. 3-ethyl 5-methyl (4*RS*)-4-(2-chlorophenyl)-6-methyl-2-[[2-[[2-(methylcarbamoyl)benzoyl]amino]ethoxy]methyl]-1,4-dihydropyridine-3,5-dicarboxylate,

C. ethyl methyl (4*RS*)-2,6-bis[(2-aminoethoxy)methyl]-4-(2-chlorophenyl)-1,4-dihydropyridine-3,5-dicarboxylate,

D. 3-ethyl 5-methyl 2-[(2-aminoethoxy)methyl]-4-(2-chlorophenyl)-6-methylpyridine-3,5-dicarboxylate.

01/2008:0877

AMMONIA SOLUTION, CONCENTRATED

Ammoniae solutio concentrata

NH_3 M_r 17.03

DEFINITION

Content: 25.0 per cent *m/m* to 30.0 per cent *m/m*.

CHARACTERS

Appearance: clear, colourless liquid, very caustic.

Solubility: miscible with water and with ethanol (96 per cent).

IDENTIFICATION

A. Relative density (*2.2.5*): 0.892 to 0.910.

B. It is strongly alkaline (*2.2.4*).

C. To 0.5 ml add 5 ml of *water R*. Bubble air through the solution and lead the gaseous mixture obtained over the surface of a solution containing 1 ml of *0.1 M hydrochloric acid* and 0.05 ml of *methyl red solution R*. The colour changes from red to yellow. Add 1 ml of *sodium cobaltinitrite solution R*. A yellow precipitate is formed.

TESTS

Solution S. Evaporate 220 ml almost to dryness on a water-bath. Cool, add 1 ml of *dilute acetic acid R* and dilute to 20 ml with *distilled water R*.

Appearance of solution. The solution is clear (*2.2.1*) and colourless (*2.2.2, Method II*).

To 2 ml add 8 ml of *water R*.

Oxidisable substances. Cautiously add, whilst cooling, 8.8 ml to 100 ml of *dilute sulphuric acid R*. Add 0.75 ml of *0.002 M potassium permanganate*. Allow to stand for 5 min. The solution remains faintly pink.

Pyridine and related substances: maximum 2 ppm, calculated as pyridine.

Measure the absorbance (*2.2.25*) at 252 nm using *water R* as the compensation liquid. The absorbance is not greater than 0.06.

Carbonates: maximum 60 ppm.

To 10 ml in a test-tube with a ground-glass neck add 10 ml of *calcium hydroxide solution R*. Stopper immediately and mix. Any opalescence in the solution is not more intense than that in a standard prepared at the same time and in the same manner using 10 ml of a 0.1 g/l solution of *anhydrous sodium carbonate R*.

Chlorides (*2.4.4*): maximum 1 ppm.

Dilute 5 ml of solution S to 15 ml with *water R*.

Sulphates (*2.4.13*): maximum 5 ppm.

Dilute 3 ml of solution S to 15 ml with *distilled water R*.

Iron (*2.4.9*): maximum 0.25 ppm.

Dilute 4 ml of solution S to 10 ml with *water R*.

Heavy metals (*2.4.8*): maximum 1 ppm.

Dilute 4 ml of solution S to 20 ml with *water R*. 12 ml of the solution complies with test A. Prepare the reference solution using *lead standard solution (2 ppm Pb) R*.

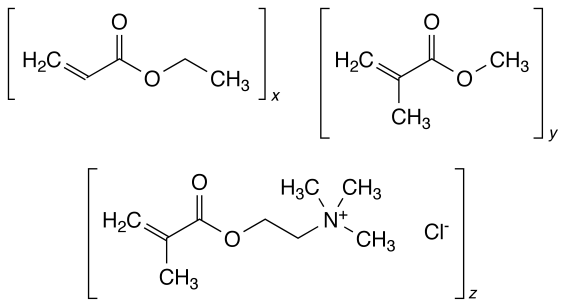
Residue on evaporation: maximum 20 mg/l.

Evaporate 50 ml to dryness on a water-bath and dry at 100-105 °C for 1 h. The residue weighs a maximum of 1 mg.

ASSAY

Weigh accurately a flask with a ground-glass neck containing 50.0 ml of *1 M hydrochloric acid*. Add 2 ml of the substance to be examined and re-weigh. Add 0.1 ml of *methyl red solution R* as indicator. Titrate with *1 M sodium hydroxide* until the colour changes from red to yellow.

1 ml of *1 M hydrochloric acid* is equivalent to 17.03 mg of NH_3.



STORAGE

Protected from air, at a temperature not exceeding 20 °C.

01/2008:2081

AMMONIO METHACRYLATE COPOLYMER (TYPE A)

Ammonio methacrylatis copolymerum A

DEFINITION

Poly(ethyl propenoate-co-methyl 2-methylpropenoate-co-2-(trimethylammonio)ethyl 2-methylpropenoate) chloride having a mean relative molecular mass of about 150 000.

The ratio of ethyl propenoate groups to methyl 2-methylpropenoate groups to 2-(trimethylammonio)ethyl 2-methylpropenoate groups is about 1:2:0.2.

Content of ammonio methacrylate groups: 8.9 per cent to 12.3 per cent (dried substance).

CHARACTERS

Appearance: colourless to white or almost white granules or powder.

Solubility: practically insoluble in water, freely soluble in anhydrous ethanol and in methylene chloride giving clear to cloudy solutions. Due to the polymeric nature of the substance, a stirring time of up to 5 h may be necessary.

IDENTIFICATION

A. Infrared absorption spectrophotometry (*2.2.24*).

Comparison: *Ph. Eur. reference spectrum of ammonio methacrylate copolymer (type A).*

B. Viscosity (see Tests).

C. It complies with the limits of the assay.

TESTS

Solution S. Dissolve a quantity of the substance to be examined corresponding to 12.5 g of the dried substance in a mixture of 35.0 g of *acetone R* and 52.5 g of *2-propanol R*.

Viscosity (*2.2.10*): maximum 15 mPa·s, determined on solution S.

Apparatus: rotating viscometer.

Dimensions:

– *spindle*: diameter = 25.15 mm; height = 90.74 mm; shaft diameter = 4.0 mm;

– *cylinder*: diameter = 27.62 mm; height = 0.135 m.

Stirring speed: 30 r/min.

Volume of solution: 16 ml of solution S.

Temperature: 20 °C.

Appearance of a film. Spread 2 ml of solution S evenly on a glass plate. Upon drying a clear film is formed.

Monomers. Liquid chromatography (*2.2.29*).

Solution A. Dissolve 3.5 g of *sodium perchlorate R* in *water for chromatography R* and dilute to 100 ml with the same solvent.

Test solution. Dissolve 5.00 g of the substance to be examined in *methanol R* and dilute to 50.0 ml with the same solvent. To 10.0 ml of this solution add 5.0 ml of solution A, dropwise, while continuously stirring. Remove the precipitated polymer by centrifugation. Use the clear supernatant solution.

Reference solution. Dissolve 50.0 mg of *ethyl acrylate R* and 10.0 mg of *methyl methacrylate R* in *methanol R* and dilute to 50.0 ml with the same solvent. Dilute 1.0 ml of the solution to 100.0 ml with *methanol R*. Add 10 ml of this solution to 5 ml of solution A.

Column:

– *size*: *l* = 0.12 m, Ø = 4.6 mm;

– *stationary phase*: *octadecylsilyl silica gel for chromatography R* (7 µm).

Mobile phase: dilute *phosphoric acid R* with *water for chromatography R* to obtain a solution at pH 2.0; mix 800 ml of this solution and 200 ml of *methanol R*, filter and degas.

Flow rate: 2.0 ml/min.

Detection: spectrophotometer at 202 nm.

Injection: 50 µl.

System suitability: reference solution:

– *resolution*: minimum 1.5 between the peaks due to impurity A and impurity B.

Limits:

– *impurity A*: not more than the area of the corresponding peak in the chromatogram obtained with the reference solution (100 ppm);

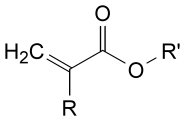
– *impurity B*: not more than 2.5 times the area of the corresponding peak in the chromatogram obtained with the reference solution (50 ppm).

Methanol (*2.4.24, System A*): maximum 1.5 per cent.

Heavy metals (*2.4.8*): maximum 20 ppm.

1.0 g complies with test C. Prepare the reference solution using 2.0 ml of *lead standard solution (10 ppm Pb) R*.

Loss on drying (*2.2.32*): maximum 3.0 per cent, determined on 1.000 g by drying *in vacuo* at 80 °C for 5 h.



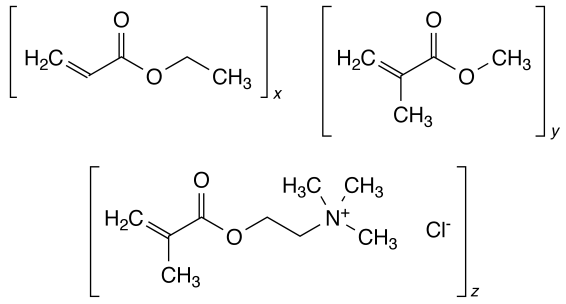
ASSAY

Dissolve 1.000 g in a mixture of 3 ml of *anhydrous formic acid R* and 30 ml of *anhydrous acetic acid R* and heat to dissolve. Add 20 ml of *acetic anhydride R*. Titrate with *0.1 M perchloric acid*, determining the end-point potentiometrically (*2.2.20*).

1 ml of *0.1 M perchloric acid* is equivalent to 20.77 mg of $C_9H_{18}O_2NCl$ (ammonio methacrylate groups).

IMPURITIES

Specified impurities: A, B.



A. R = H, R′ = C_2H_5: ethyl propenoate (ethyl acrylate),

B. R = R′ = CH_3: methyl 2-methylpropenoate (methyl methacrylate).

01/2008:2082

AMMONIO METHACRYLATE COPOLYMER (TYPE B)

Ammonio methacrylatis copolymerum B

DEFINITION

Poly(ethyl propenoate-co-methyl 2-methylpropenoate-co-2-(trimethylammonio)ethyl 2-methylpropenoate) chloride having a mean relative molecular mass of about 150 000.

The ratio of ethyl propenoate groups to methyl 2-methylpropenoate groups to 2-(trimethylammonio)ethyl 2-methylpropenoate groups is about 1:2:0.1.

Content of ammonio methacrylate groups: 4.5 per cent to 7.0 per cent (dried substance).

CHARACTERS

Appearance: colourless to white or almost white granules or powder.

Solubility: practically insoluble in water, freely soluble in anhydrous ethanol and in methylene chloride giving clear to cloudy solutions. Due to the polymeric nature of the substance, a stirring time of up to 5 h may be necessary.

IDENTIFICATION

A. Infrared absorption spectrophotometry (*2.2.24*).

Comparison: *Ph. Eur. reference spectrum of ammonio methacrylate copolymer (type B).*

B. Viscosity (see Tests).

C. It complies with the limits of the assay.

TESTS

Solution S. Dissolve a quantity of the substance to be examined corresponding to 12.5 g of the dried substance in a mixture of 35.0 g of *acetone R* and 52.5 g of *2-propanol R*.

Viscosity (*2.2.10*): maximum 15 mPa·s, determined on solution S.

Apparatus: rotating viscometer.

Dimensions:

AMMONIUM BROMIDE

Ammonii bromidum

NH_4Br M_r 97.9
[12124-97-9]

DEFINITION

Content: 98.5 per cent to 100.5 per cent (dried substance).

CHARACTERS

Appearance: white or almost white, crystalline powder or colourless crystals, hygroscopic.

Solubility: freely soluble in water, sparingly soluble in alcohol.

It becomes yellow when exposed to light or air.

IDENTIFICATION

A. It gives reaction (a) of bromides (*2.3.1*).

B. 10 ml of solution S (see Tests) gives the reaction of ammonium salts (*2.3.1*).

TESTS

Solution S. Dissolve 10.0 g in *carbon dioxide-free water R* prepared from *distilled water R* and dilute to 100 ml with the same solvent.

Appearance of solution. Solution S is clear (*2.2.1*) and colourless (*2.2.2, Method II*).

Acidity or alkalinity. To 10 ml of solution S add 0.05 ml of *methyl red solution R*. Not more than 0.5 ml of *0.01 M hydrochloric acid* or *0.01 M sodium hydroxide* is required to change the colour of the indicator.

Bromates. To 10 ml of solution S add 1 ml of *starch solution R*, 0.1 ml of a 100 g/l solution of *potassium iodide R* and 0.25 ml of *0.5 M sulphuric acid* and allow to stand protected from light for 5 min. No blue or violet colour develops.

Chlorides: maximum 0.6 per cent.

In a conical flask, dissolve 1.000 g in 20 ml of *dilute nitric acid R*. Add 5 ml of *strong hydrogen peroxide solution R* and heat on a water-bath until the solution is completely decolorised. Wash down the sides of the flask with a little *water R* and heat on a water-bath for 15 min. Allow to cool, dilute to 50 ml with *water R* and add 5.0 ml of *0.1 M silver nitrate* and 1 ml of *dibutyl phthalate R*. Shake and titrate with *0.1 M ammonium thiocyanate* using 5 ml of *ferric ammonium sulphate solution R2* as indicator. Not more than 1.7 ml of *0.1 M silver nitrate* is used. Note the volume of *0.1 M silver nitrate* used (see Assay). Carry out a blank test.

Iodides. To 5 ml of solution S add 0.15 ml of *ferric chloride solution R1* and 2 ml of *methylene chloride R*. Shake and allow to separate. The lower layer is colourless (*2.2.2, Method I*).

Sulphates (*2.4.13*): maximum 100 ppm.

15 ml of solution S complies with the limit test for sulphates.

Iron (*2.4.9*): maximum 20 ppm.

5 ml of solution S diluted to 10 ml with *water R* complies with the limit test for iron.

Magnesium and alkaline-earth metals (*2.4.7*): maximum 200 ppm, calculated as Ca.

10.0 g complies with the limit test for magnesium and alkaline-earth metals. The volume of *0.01 M sodium edetate* used does not exceed 5.0 ml.

Heavy metals (*2.4.8*): maximum 10 ppm.

12 ml of solution S complies with limit test A. Prepare the standard using *lead standard solution (1 ppm Pb) R*.

Loss on drying (*2.2.32*): maximum 1.0 per cent, determined on 1.000 g by drying in an oven at 105 °C.

Sulphated ash (*2.4.14*): maximum 0.1 per cent, determined on 1.0 g.

ASSAY

Dissolve 1.500 g in *water R* and dilute to 100.0 ml with the same solvent. To 10.0 ml of the solution add 50 ml of *water R*, 5 ml of *dilute nitric acid R*, 25.0 ml of *0.1 M silver nitrate* and 2 ml of *dibutyl phthalate R*. Shake. Titrate with *0.1 M ammonium thiocyanate* using 2 ml of *ferric ammonium sulphate solution R2* as indicator and shaking vigorously towards the end-point.

1 ml of *0.1 M silver nitrate* is equivalent to 9.794 mg of NH_4Br.

Calculate the percentage content of NH_4Br from the expression:

$$a - 2.763\,b$$

a = percentage content of NH_4Br and NH_4Cl obtained in the assay and calculated as NH_4Br,

b = percentage content of Cl obtained in the test for chlorides.

STORAGE

In an airtight container, protected from light.

01/2008:0007
corrected 6.0

AMMONIUM CHLORIDE

Ammonii chloridum

NH_4Cl M_r 53.49
[12125-02-9]

DEFINITION

Content: 99.0 per cent to 100.5 per cent (dried substance).

CHARACTERS

Appearance: white or almost white, crystalline powder or colourless crystals.

Solubility: freely soluble in water.

IDENTIFICATION

A. It gives the reactions of chlorides (*2.3.1*).

B. 10 ml of solution S (see Tests) gives the reaction of ammonium salts (*2.3.1*).

TESTS

Solution S. Dissolve 10.0 g in *carbon dioxide-free water R* prepared from *distilled water R* and dilute to 100 ml with the same solvent.

Appearance of solution. Solution S is clear (*2.2.1*) and colourless (*2.2.2, Method II*).

Acidity or alkalinity. To 10 ml of solution S add 0.05 ml of *methyl red solution R*. Not more than 0.5 ml of *0.01 M hydrochloric acid* or *0.01 M sodium hydroxide* is required to change the colour of the indicator.

Bromides and iodides. To 10 ml of solution S add 0.1 ml of *dilute hydrochloric acid R* and 0.05 ml of *chloramine solution R*. After 1 min, add 2 ml of *chloroform R* and shake vigorously. The chloroform layer remains colourless (*2.2.2, Method I*).

Sulphates (*2.4.13*): maximum 150 ppm.

Dilute 10 ml of solution S to 15 ml with *distilled water R*.

Calcium (*2.4.3*): maximum 200 ppm.

Dilute 5 ml of solution S to 15 ml with *distilled water R*.

Iron (*2.4.9*): maximum 20 ppm.

Dilute 5 ml of solution S to 10 ml with *water R*.

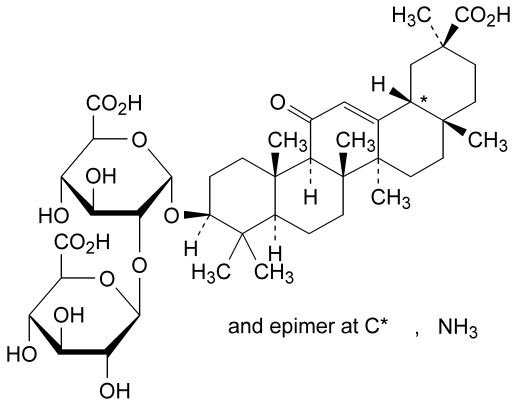
Heavy metals (*2.4.8*): maximum 10 ppm.

12 ml of solution S complies with test A. Prepare the reference solution using *lead standard solution (1 ppm Pb) R*.

Loss on drying (*2.2.32*): maximum 1.0 per cent, determined on 1.00 g by drying in an oven at 105 °C for 2 h.

Sulphated ash (*2.4.14*): maximum 0.1 per cent, determined on 2.0 g.

ASSAY



Dissolve 1.000 g in 20 ml of *water R* and add a mixture of 5 ml of *formaldehyde solution R*, previously neutralised to *phenolphthalein solution R*, and 20 ml of *water R*. After 1-2 min, titrate slowly with *1 M sodium hydroxide*, using a further 0.2 ml of the same indicator.

1 ml of *1 M sodium hydroxide* is equivalent to 53.49 mg of NH_4Cl.

01/2008:1772

AMMONIUM GLYCYRRHIZATE

Ammonii glycyrrhizas

$C_{42}H_{65}NO_{16}$ M_r 840

DEFINITION

Mixture of ammonium 18α- and 18β-glycyrrhizate (ammonium salt of (20β)-3β-[[2-*O*-(β-D-glucopyranosyluronic acid)-α-D-glucopyranosyluronic acid]oxy]-11-oxoolean-12-en-29-oic acid), the 18β-isomer being the main component.

Content: 98.0 per cent to 102.0 per cent (anhydrous substance).

CHARACTERS

Appearance: white or yellowish-white, hygroscopic powder.

Solubility: slightly soluble in water, very slightly soluble in anhydrous ethanol, practically insoluble in acetone. It dissolves in dilute solutions of acids and of alkali hydroxides.

IDENTIFICATION

A. Infrared absorption spectrophotometry (*2.2.24*).

Comparison: *ammonium glycyrrhizate CRS*.

B. Dissolve 0.1 g in 20 ml of *water R*, add 2 ml of *dilute sodium hydroxide solution R* and heat cautiously. On heating, the solution gives off vapours that may be identified by the alkaline reaction of wet litmus paper (*2.3.1*).

TESTS

Appearance of solution. The solution is clear (*2.2.1*) and not more intensely coloured than reference solution BY_7 (*2.2.2, Method I*).

Dissolve 1.0 g in *ethanol (20 per cent V/V) R* and dilute to 100.0 ml with the same solvent.

Specific optical rotation (*2.2.7*): + 49.0 to + 54.0 (anhydrous substance).

Dissolve 0.5 g in *ethanol (50 per cent V/V) R* and dilute to 50.0 ml with the same solvent.

Related substances. Liquid chromatography (*2.2.29*).

Test solution. Dissolve 0.100 g of the substance to be examined in the mobile phase and dilute to 100.0 ml with the mobile phase.

Reference solution (a). Dilute 1.0 ml of the test solution to 20.0 ml with the mobile phase.

Reference solution (b). Dissolve 50 mg of *ammonium glycyrrhizate CRS* in the mobile phase and dilute to 50.0 ml with the mobile phase. Dilute 1.0 ml of the solution to 20.0 ml with the mobile phase.

Column:

– *size*: *l* = 0.25 m, Ø = 4.0 mm,

– *stationary phase*: *octadecylsilyl silica gel for chromatography R* (5-10 μm).

Mobile phase: *glacial acetic acid R, acetonitrile R, water R* (6:380:614 *V/V/V*).

Flow rate: 1.2 ml/min.

Detection: spectrophotometer at 254 nm.

Injection: 10 μl.

Run time: 3 times the retention time of 18β-glycyrrhizic acid.

Relative retention with reference to 18β-glycyrrhizic acid (retention time = about 8 min): impurity A = about 0.8; 18α-glycyrrhizic acid = about 1.2.

System suitability: reference solution (b):

– *resolution*: minimum 2.0 between the peaks due to 18β-glycyrrhizic acid and 18α-glycyrrhizic acid.

Limits:

– *18α-glycyrrhizic acid*: not more than twice the sum of the areas of the peaks in the chromatogram obtained with reference solution (a) (10.0 per cent),

– *impurity A*: not more than the sum of the areas of the peaks in the chromatogram obtained with reference solution (a) (5.0 per cent),

– *any other impurity*: for each impurity, not more than 0.4 times the sum of the areas of the peaks in the chromatogram obtained with reference solution (a) (2.0 per cent),

– *sum of other impurities*: not more than 1.4 times the sum of the areas of the peaks in the chromatogram obtained with reference solution (a) (7.0 per cent),

– *disregard limit*: 0.04 times the sum of the areas of the peaks in the chromatogram obtained with reference solution (a) (0.2 per cent).

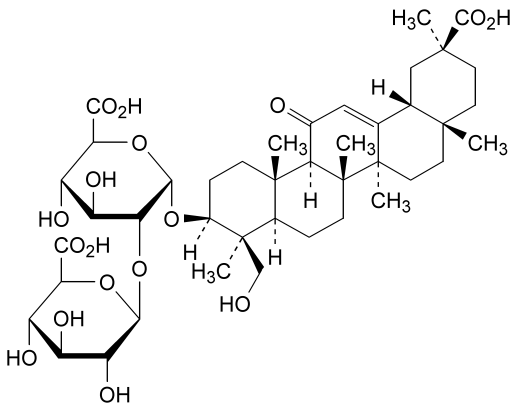
Heavy metals (*2.4.8*): maximum 20 ppm.

1.0 g complies with limit test C. Prepare the reference solution using 2 ml of *lead standard solution (10 ppm Pb) R*.

Water (*2.5.12*): maximum 6.0 per cent, determined on 0.250 g.

Sulphated ash (*2.4.14*): maximum 0.2 per cent, determined on 1.0 g.

ASSAY



Dissolve 0.600 g in 60 ml of *anhydrous acetic acid R* heating at 80 °C if necessary. Cool. Titrate with *0.1 M perchloric acid*, determining the end-point potentiometrically (*2.2.20*).

1 ml of *0.1 M perchloric acid* is equivalent to 84.0 mg of $C_{42}H_{65}NO_{16}$.

STORAGE

In an airtight container.

IMPURITIES

A. (4β,20β)-3β-[[2-*O*-(β-D-glucopyranosyluronic acid)-α-D-glucopyranosyluronic acid]oxy]-23-hydroxy-11-oxoolean-12-en-29-oic acid (24-hydroxyglycyrrhizinic acid).

corrected 6.0

AMMONIUM HYDROGEN CARBONATE

Ammonii hydrogenocarbonas

NH_4HCO_3 M_r 79.1
[1066-33-7]

DEFINITION

Content: 98.0 per cent to 101.0 per cent.

CHARACTERS

Appearance: fine, white or almost white, crystalline powder or white or almost white crystals, slightly hygroscopic.

Solubility: freely soluble in water, practically insoluble in ethanol (96 per cent).

It volatilises rapidly at 60 °C. The volatilisation takes place slowly at ambient temperatures if the substance is slightly moist. It is in a state of equilibrium with ammonium carbamate.

IDENTIFICATION

A. It gives the reaction of carbonates and bicarbonates (*2.3.1*).

B. Dissolve 50 mg in 2 ml of *water R*. The solution gives the reaction of ammonium salts (*2.3.1*).

TESTS

Solution S. Dissolve 14.0 g in 100 ml of *distilled water R*. Boil to remove the ammonia, allow to cool and dilute to 100.0 ml with *distilled water R*.

Chlorides (*2.4.4*): maximum 70 ppm.

Dilute 5 ml of solution S to 15 ml with *water R*.

Sulphates (*2.4.13*): maximum 70 ppm, determined on solution S.

Iron (*2.4.9*): maximum 40 ppm.

Dilute 1.8 ml of solution S to 10 ml with *water R*.

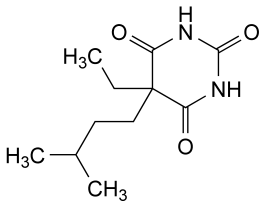
Heavy metals (*2.4.8*): maximum 10 ppm.

Dissolve cautiously 2.5 g in 25 ml of *1 M hydrochloric acid*. 12 ml of the solution complies with test A. Prepare the reference solution using *lead standard solution (1 ppm Pb) R*.

ASSAY

Dissolve cautiously 1.0 g in 20.0 ml of *0.5 M sulphuric acid* and dilute to 50 ml with *water R*. Boil, cool and titrate the excess of acid with *1 M sodium hydroxide*, using 0.1 ml of *methyl red solution R* as indicator.

1 ml of *0.5 M sulphuric acid* is equivalent to 79.1 mg of NH_4HCO_3.



STORAGE

In an airtight container.

01/2008:0594
corrected 6.0

AMOBARBITAL

Amobarbitalum

$C_{11}H_{18}N_2O_3$ M_r 226.3
[57-43-2]

DEFINITION

Amobarbital contains not less than 99.0 per cent and not more than the equivalent of 101.0 per cent of 5-ethyl-5-(3-methylbutyl)pyrimidin-2,4,6(1*H*,3*H*,5*H*)-trione, calculated with reference to the dried substance.

CHARACTERS

A white or almost white, crystalline powder, very slightly soluble in water, freely soluble in alcohol, soluble in methylene chloride. It forms water-soluble compounds with alkali hydroxides and carbonates and with ammonia.

IDENTIFICATION

First identification: A, B.

Second identification: A, C, D.

A. Determine the melting point (*2.2.14*) of the substance to be examined. Mix equal parts of the substance to be examined and *amobarbital CRS* and determine the melting point of the mixture. The difference between the melting points (which are about 157 °C) is not greater than 2 °C.

B. Examine by infrared absorption spectrophotometry (*2.2.24*), comparing with the spectrum obtained with *amobarbital CRS*.

C. Examine by thin-layer chromatography (*2.2.27*), using *silica gel* GF_{254} *R* as the coating substance.

Test solution. Dissolve 0.1 g of the substance to be examined in *alcohol R* and dilute to 100 ml with the same solvent.

Reference solution. Dissolve 0.1 g of *amobarbital CRS* in *alcohol R* and dilute to 100 ml with the same solvent.

Apply separately to the plate 10 µl of each solution. Develop over a path of 18 cm using the lower layer from a mixture of 5 volumes of *concentrated ammonia R*, 15 volumes of *alcohol R* and 80 volumes of *chloroform R*. Examine immediately in ultraviolet light at 254 nm. The principal spot in the chromatogram obtained with the test solution is similar in position and size to the principal spot in the chromatogram obtained with the reference solution.

D. It gives the reaction of non-nitrogen substituted barbiturates (*2.3.1*).

TESTS

Appearance of solution. Dissolve 1.0 g in a mixture of 4 ml of *dilute sodium hydroxide solution R* and 6 ml of *water R*. The solution is clear (*2.2.1*) and not more intensely coloured than reference solution Y_6 (*2.2.2, Method II*).

Acidity or alkalinity. To 1.0 g add 50 ml of *water R* and boil for 2 min. Allow to cool and filter. To 10 ml of the filtrate add 0.15 ml of *methyl red solution R* and 0.1 ml of *0.01 M sodium hydroxide*. The solution is yellow. Add 0.2 ml of *0.01 M hydrochloric acid*. The solution is red.

Related substances. Examine by thin-layer chromatography (*2.2.27*), using *silica gel GF_{254} R* as the coating substance.

Test solution. Dissolve 1.0 g of the substance to be examined in *alcohol R* and dilute to 100 ml with the same solvent.

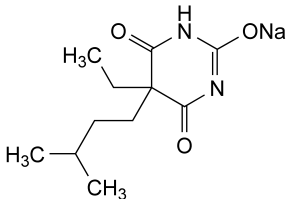
Reference solution. Dilute 0.5 ml of the test solution to 100 ml with *alcohol R*.

Apply separately to the plate 20 µl of each solution. Develop over a path of 15 cm using the lower layer from a mixture of 5 volumes of *concentrated ammonia R*, 15 volumes of *alcohol R* and 80 volumes of *chloroform R*. Examine the plate immediately in ultraviolet light at 254 nm. Any spot in the chromatogram obtained with the test solution, apart from the principal spot, is not more intense than the spot in the chromatogram obtained with the reference solution. Spray with *diphenylcarbazone mercuric reagent R*. Allow the plate to dry in air and spray with freshly prepared *alcoholic potassium hydroxide solution R* diluted 1 in 5 with *aldehyde-free alcohol R*. Heat at 100 °C to 105 °C for 5 min and examine immediately. Any spot in the chromatogram obtained with the test solution, apart from the principal spot, is not more intense than the spot in the chromatogram obtained with the reference solution (0.5 per cent).

Loss on drying (*2.2.32*). Not more than 0.5 per cent, determined on 1.000 g by drying in an oven at 105 °C.

Sulphated ash (*2.4.14*). Not more than 0.1 per cent, determined on 1.0 g.

ASSAY



Dissolve 0.100 g in 5 ml of *pyridine R*. Add 0.5 ml of *thymolphthalein solution R* and 10 ml of *silver nitrate solution in pyridine R*. Titrate with *0.1 M ethanolic sodium hydroxide* until a pure blue colour is obtained. Carry out a blank titration.

1 ml of *0.1 M ethanolic sodium hydroxide* is equivalent to 11.31 mg of $C_{11}H_{18}N_2O_3$.

01/2008:0166
corrected 6.0

AMOBARBITAL SODIUM

Amobarbitalum natricum

$C_{11}H_{17}N_2NaO_3$ M_r 248.3
[64-43-7]

DEFINITION

Amobarbital sodium contains not less than 98.5 per cent and not more than the equivalent of 102.0 per cent of sodium derivative of 5-ethyl-5-(3-methylbutyl)pyrimidin-2,4,6(1*H*,3*H*,5*H*)-trione, calculated with reference to the dried substance.

CHARACTERS

A white or almost white, granular powder, hygroscopic, very soluble in carbon dioxide-free water (a small fraction may be insoluble), freely soluble in alcohol.

IDENTIFICATION

First identification: A, B, E.

Second identification: A, C, D, E.

A. Acidify 10 ml of solution S (see Tests) with *dilute hydrochloric acid R* and shake with 20 ml of *ether R*. Separate the ether layer, wash with 10 ml of *water R*, dry over *anhydrous sodium sulphate R* and filter. Evaporate the filtrate to dryness and dry the residue at 100 °C to 105 °C (test residue). Repeat the operations using 0.1 g of *amobarbital sodium CRS* (reference residue). Determine the melting point (*2.2.14*) of the test residue. Mix equal parts of the test residue and the reference residue and determine the melting point of the mixture. The difference between the melting points (which are about 157 °C) is not greater than 2 °C.

B. Examine by infrared absorption spectrophotometry (*2.2.24*), comparing the spectrum obtained with the reference residue prepared from *amobarbital sodium CRS* with that obtained with the test residue (see identification test A).

C. Examine by thin-layer chromatography (*2.2.27*), using *silica gel GF_{254} R* as the coating substance.

Test solution. Dissolve 0.1 g of the substance to be examined in *alcohol R* and dilute to 100 ml with the same solvent.

Reference solution. Dissolve 0.1 g of *amobarbital sodium CRS* in *alcohol R* and dilute to 100 ml with the same solvent.

Apply separately to the plate 10 µl of each solution. Develop over a path of 18 cm using the lower layer of a mixture of 5 volumes of *concentrated ammonia R*, 15 volumes of *alcohol R* and 80 volumes of *chloroform R*. Examine immediately in ultraviolet light at 254 nm. The principal spot in the chromatogram obtained with the test solution is similar in position and size to the principal spot in the chromatogram obtained with the reference solution.

D. It gives the reaction of non-nitrogen substituted barbiturates (*2.3.1*).

E. It gives reaction (a) of sodium (*2.3.1*).

TESTS

Solution S. Dissolve 5.0 g in *alcohol (50 per cent V/V) R* and dilute to 50 ml with the same solvent.

Appearance of solution. Solution S is clear (*2.2.1*) and not more intensely coloured than reference solution Y_7 (*2.2.2, Method II*).

pH (*2.2.3*). Dissolve 5.0 g in *carbon dioxide-free water R* and dilute to 50 ml with the same solvent. Disregard any slight residue. The pH of the solution is not more than 11.0.

Related substances. Examine by thin-layer chromatography (*2.2.27*), using *silica gel* GF_{254} *R* as the coating substance.

Test solution. Dissolve 1.0 g of the substance to be examined in *alcohol R* and dilute to 100 ml with the same solvent.

Reference solution. Dilute 0.5 ml of the test solution to 100 ml with *alcohol R*.

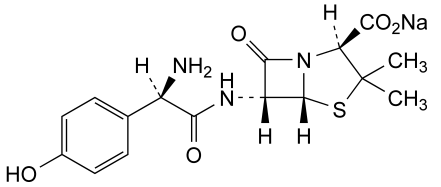
Apply separately to the plate 20 µl of each solution. Develop over a path of 15 cm using the lower layer of a mixture of 5 volumes of *concentrated ammonia R*, 15 volumes of *alcohol R* and 80 volumes of *chloroform R*. Examine the plate immediately in ultraviolet light at 254 nm. Spray with *diphenylcarbazone mercuric reagent R*. Allow the plate to dry in air and spray with freshly prepared *alcoholic potassium hydroxide solution R* diluted 1 in 5 with *aldehyde-free alcohol R*. Heat at 100 °C to 105 °C for 5 min and examine immediately. When examined in ultraviolet light and after spraying, any spot in the chromatogram obtained with the test solution, apart from the principal spot, is not more intense than the spot in the chromatogram obtained with the reference solution (0.5 per cent). Disregard any spot at the starting-point.

Loss on drying (*2.2.32*). Not more than 3.0 per cent, determined on 0.50 g by drying in an oven at 130 °C.

ASSAY

Dissolve 0.200 g in 5 ml of *ethanol R*. Add 0.5 ml of *thymolphthalein solution R* and 10 ml of *silver nitrate solution in pyridine R*. Titrate with *0.1 M ethanolic sodium hydroxide* until a pure blue colour is obtained. Carry out a blank titration.

1 ml of *0.1 M ethanolic sodium hydroxide* is equivalent to 24.83 mg of $C_{11}H_{17}N_2NaO_3$.



STORAGE

Store in an airtight container.

01/2008:0577
corrected 6.0

AMOXICILLIN SODIUM

Amoxicillinum natricum

$C_{16}H_{18}N_3NaO_5S$ M_r 387.4
[34642-77-8]

DEFINITION

Sodium (2*S*,5*R*,6*R*)-6-[[(2*R*)-2-amino-2-(4-hydroxyphenyl)-acetyl]amino]-3,3-dimethyl-7-oxo-4-thia-1-azabicyclo-[3.2.0]heptane-2-carboxylate.

Semi-synthetic product derived from a fermentation product.

Content: 89.0 per cent to 102.0 per cent (anhydrous substance).

CHARACTERS

Appearance: white or almost white, very hygroscopic, powder.

Solubility: very soluble in water, sparingly soluble in anhydrous ethanol, very slightly soluble in acetone.

IDENTIFICATION

First identification: A, D.

Second identification: B, C, D.

A. Infrared absorption spectrophotometry (*2.2.24*).

Preparation: dissolve 0.250 g in 5 ml of *water R*, add 0.5 ml of *dilute acetic acid R*, swirl and allow to stand for 10 min in iced water. Filter the crystals and wash with 2-3 ml of a mixture of 1 volume of *water R* and 9 volumes of *acetone R*, then dry in an oven at 60 °C for 30 min.

Comparison: *amoxicillin trihydrate CRS*.

B. Thin-layer chromatography (*2.2.27*).

Test solution. Dissolve 25 mg of the substance to be examined in 10 ml of *sodium hydrogen carbonate solution R*.

Reference solution (a). Dissolve 25 mg of *amoxicillin trihydrate CRS* in 10 ml of *sodium hydrogen carbonate solution R*.

Reference solution (b). Dissolve 25 mg of *amoxicillin trihydrate CRS* and 25 mg of *ampicillin trihydrate CRS* in 10 ml of *sodium hydrogen carbonate solution R*.

Plate: *TLC silanised silica gel plate R*.

Mobile phase: mix 10 volumes of *acetone R* and 90 volumes of a 154 g/l solution of *ammonium acetate R* previously adjusted to pH 5.0 with *glacial acetic acid R*.

Application: 1 µl.

Development: over a path of 15 cm.

Drying: in air.

Detection: expose to iodine vapour until the spots appear and examine in daylight.

System suitability: reference solution (b):

– the chromatogram shows 2 clearly separated spots.

Results: the principal spot in the chromatogram obtained with the test solution is similar in position, colour and size to the principal spot in the chromatogram obtained with reference solution (a).

C. Place about 2 mg in a test-tube about 150 mm long and about 15 mm in diameter. Moisten with 0.05 ml of *water R* and add 2 ml of *sulphuric acid-formaldehyde reagent R*. Mix the contents of the tube by swirling; the solution is practically colourless. Place the test-tube in a water-bath for 1 min; a dark yellow colour develops.

D. It gives reaction (a) of sodium (*2.3.1*).

TESTS

Appearance of solution. The solution is not more opalescent than reference suspension II (*2.2.1*), it may show an initial, but transient, pink colour, and after 5 min, its absorbance (*2.2.25*) at 430 nm is not greater than 0.20.

Dissolve 1.0 g in *water R* and dilute to 10.0 ml with the same solvent. Examine immediately after dissolution.

pH (*2.2.3*): 8.0 to 10.0.

Dissolve 2.0 g in *carbon dioxide-free water R* and dilute to 20 ml with the same solvent.

Specific optical rotation (*2.2.7*): + 240 to + 290 (anhydrous substance).

Dissolve 62.5 mg in a 4 g/l solution of *potassium hydrogen phthalate R* and dilute to 25.0 ml with the same solution.

Related substances. Liquid chromatography (*2.2.29*).

Test solution (a). Dissolve 30.0 mg of the substance to be examined in mobile phase A and dilute to 50.0 ml with mobile phase A.

Test solution (b). Dissolve 30.0 mg of the substance to be examined in mobile phase A and dilute to 20.0 ml with mobile phase A. *Prepare immediately before use.*

Reference solution (a). Dissolve 30.0 mg of *amoxicillin trihydrate CRS* in mobile phase A and dilute to 50.0 ml with mobile phase A.

Reference solution (b). Dissolve 4.0 mg of *cefadroxil CRS* in mobile phase A and dilute to 50 ml with mobile phase A. To 5.0 ml of this solution add 5.0 ml of reference solution (a) and dilute to 100 ml with mobile phase A.

Reference solution (c). Dilute 2.0 ml of reference solution (a) to 20.0 ml with mobile phase A. Dilute 5.0 ml of this solution to 20.0 ml with mobile phase A.

Reference solution (d). To 0.20 g of *amoxicillin trihydrate R* add 1.0 ml of *water R*. Shake and add dropwise *dilute sodium hydroxide solution R* to obtain a solution. The pH of the solution is about 8.5. Store the solution at room temperature for 4 h. Dilute 0.5 ml of this solution to 50.0 ml with mobile phase A.

Column:

– *size*: *l* = 0.25 m, Ø = 4.6 mm;
– *stationary phase*: *octadecylsilyl silica gel for chromatography R* (5 µm).

Mobile phase:

– *mobile phase A*: mix 1 volume of *acetonitrile R* and 99 volumes of a 25 per cent *V/V* solution of *0.2 M potassium dihydrogen phosphate R* adjusted to pH 5.0 with *dilute sodium hydroxide solution R*;
– *mobile phase B*: mix 20 volumes of *acetonitrile R* and 80 volumes of a 25 per cent *V/V* solution of *0.2 M potassium dihydrogen phosphate R* adjusted to pH 5.0 with *dilute sodium hydroxide solution R*;

Time (min)	Mobile phase A (per cent *V/V*)	Mobile phase B (per cent *V/V*)
0 - t_R	92	8
t_R - (t_R + 25)	92 → 0	8 → 100
(t_R + 25) - (t_R + 40)	0	100
(t_R + 40) - (t_R + 55)	92	8

t_R = retention time of amoxicillin determined with reference solution (c)

If the mobile phase has been adjusted to achieve the required resolution, the adjusted composition will apply at time zero in the gradient and in the assay.

Flow rate: 1.0 ml/min.

Detection: spectrophotometer at 254 nm.

Injection: 50 µl of reference solutions (b) and (c) with isocratic elution at the initial mobile phase composition and 50 µl of test solution (b) and reference solution (d) according to the elution gradient described under Mobile phase; inject mobile phase A as a blank according to the elution gradient described under Mobile phase.

Identification of impurities: use the chromatogram obtained with reference solution (d) to identify the 3 principal peaks eluted after the main peak corresponding to impurity C, amoxicillin dimer (impurity J; *n* = 1) and amoxicillin trimer (impurity J; *n* = 2).

Relative retention with reference to amoxicillin: impurity C = about 3.4; impurity J (*n* = 1) = about 4.1; impurity J (*n* = 2) = about 4.5.

System suitability: reference solution (b):

– *resolution*: minimum 2.0 between the peaks due to amoxicillin and cefadroxil; if necessary, adjust the ratio A:B of the mobile phase.

Limits:

– *impurity J* (*n* = 1): not more than 3 times the area of the principal peak in the chromatogram obtained with reference solution (c) (3 per cent);
– *any other impurity*: for each impurity, not more than twice the area of the principal peak in the chromatogram obtained with reference solution (c) (2 per cent);
– *total*: not more than 9 times the area of the principal peak in the chromatogram obtained with reference solution (c) (9 per cent);
– *disregard limit*: 0.1 times the area of the principal peak in the chromatogram obtained with reference solution (c) (0.1 per cent).

***N*,*N*-Dimethylaniline** (*2.4.26, Method A or B*): maximum 20 ppm.

2-Ethylhexanoic acid (*2.4.28*): maximum 0.8 per cent *m/m*.

Heavy metals (*2.4.8*): maximum 20 ppm.

1.0 g complies with test C. Prepare the reference solution using 2 ml of *lead standard solution (10 ppm Pb) R*.

Water (*2.5.12*): maximum 3.0 per cent, determined on 0.400 g.

Bacterial endotoxins (*2.6.14*): less than 0.25 IU/mg, if intended for use in the manufacture of parenteral dosage forms without a further appropriate procedure for the removal of bacterial endotoxins.

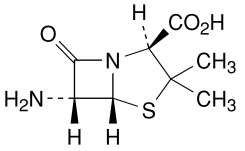
ASSAY

Liquid chromatography (*2.2.29*) as described in the test for related substances with the following modifications.

Mobile phase: initial composition of the mixture of mobile phases A and B, adjusted where applicable.

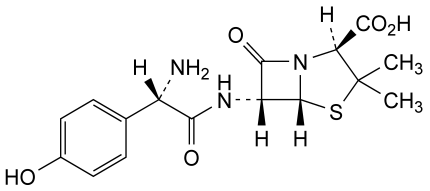
Injection: test solution (a) and reference solution (a).

System suitability: reference solution (a):



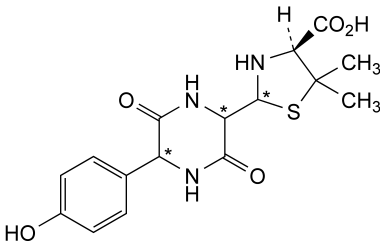
– *repeatability*: maximum relative standard deviation of 1.0 per cent after 6 injections.

Calculate the percentage content of amoxicillin sodium by multiplying the percentage content of amoxicillin by 1.060.

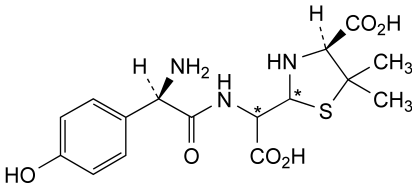


STORAGE

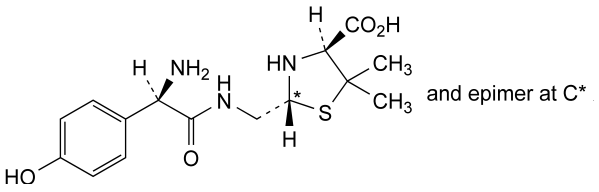
In an airtight container. If the substance is sterile, store in a sterile, airtight, tamper-proof container.



IMPURITIES



A. (2*S*,5*R*,6*R*)-6-amino-3,3-dimethyl-7-oxo-4-thia-1-azabicyclo[3.2.0]heptane-2-carboxylic acid (6-aminopenicillanic acid),



B. (2*S*,5*R*,6*R*)-6-[[(2*S*)-2-amino-2-(4-hydroxyphenyl)-acetyl]amino]-3,3-dimethyl-7-oxo-4-thia-1-azabicyclo-[3.2.0]heptane-2-carboxylic acid (L-amoxicillin),

AMOXICILLIN TRIHYDRATE

Amoxicillinum trihydricum

$C_{16}H_{19}N_3O_5S,3H_2O$ M_r 419.4
[61336-70-7]

DEFINITION

(2*S*,5*R*,6*R*)-6-[[(2*R*)-2-Amino-2-(4-hydroxyphenyl)acetyl]-amino]-3,3-dimethyl-7-oxo-4-thia-1-azabicyclo[3.2.0]heptane-2-carboxylic acid trihydrate.

Semi-synthetic product derived from a fermentation product.

Content: 95.0 per cent to 102.0 per cent (anhydrous substance).

CHARACTERS

Appearance: white or almost white, crystalline powder.

Solubility: slightly soluble in water, very slightly soluble in ethanol (96 per cent), practically insoluble in fatty oils. It dissolves in dilute acids and dilute solutions of alkali hydroxides.

IDENTIFICATION

First identification: A.

Second identification: B, C.

A. Infrared absorption spectrophotometry (*2.2.24*).

Comparison: *amoxicillin trihydrate CRS.*

B. Thin-layer chromatography (*2.2.27*).

Test solution. Dissolve 25 mg of the substance to be examined in 10 ml of *sodium hydrogen carbonate solution R.*

Reference solution (a). Dissolve 25 mg of *amoxicillin trihydrate CRS* in 10 ml of *sodium hydrogen carbonate solution R.*

Reference solution (b). Dissolve 25 mg of *amoxicillin trihydrate CRS* and 25 mg of *ampicillin trihydrate CRS* in 10 ml of *sodium hydrogen carbonate solution R.*

Plate: *TLC silanised silica gel plate R.*

Mobile phase: mix 10 volumes of *acetone R* and 90 volumes of a 154 g/l solution of *ammonium acetate R* previously adjusted to pH 5.0 with *glacial acetic acid R.*

Application: 1 µl.

Development: over a path of 15 cm.

Drying: in air.

Detection: expose to iodine vapour until the spots appear and examine in daylight.

System suitability: reference solution (b):

– the chromatogram shows 2 clearly separated spots.

Results: the principal spot in the chromatogram obtained with the test solution is similar in position, colour and size to the principal spot in the chromatogram obtained with reference solution (a).

C. Place about 2 mg in a test-tube about 150 mm long and about 15 mm in diameter. Moisten with 0.05 ml of *water R* and add 2 ml of *sulphuric acid-formaldehyde reagent R*. Mix the contents of the tube by swirling; the solution is practically colourless. Place the test-tube in a water-bath for 1 min; a dark yellow colour develops.

TESTS

Solution S. With the aid of ultrasound or gentle heating, dissolve 0.100 g in *carbon dioxide-free water R* and dilute to 50.0 ml with the same solvent.

Appearance of solution. The solutions are not more opalescent than reference suspension II (*2.2.1*).

Dissolve 1.0 g in 10 ml of *0.5 M hydrochloric acid.* Dissolve separately 1.0 g in 10 ml of *dilute ammonia R2.* Examine immediately after dissolution.

pH (*2.2.3*): 3.5 to 5.5 for solution S.

Specific optical rotation (*2.2.7*): + 290 to + 315 (anhydrous substance), determined on solution S.

Related substances. Liquid chromatography (*2.2.29*).

Buffer solution pH 5.0. To 250 ml of *0.2 M potassium dihydrogen phosphate R* add *dilute sodium hydroxide solution R* to pH 5.0 and dilute to 1000.0 ml with *water R.*

Test solution (a). Dissolve 30.0 mg of the substance to be examined in mobile phase A and dilute to 50.0 ml with mobile phase A.

Test solution (b). Dissolve 30.0 mg of the substance to be examined in mobile phase A and dilute to 20.0 ml with mobile phase A. *Prepare immediately before use.*

Reference solution (a). Dissolve 30.0 mg of *amoxicillin trihydrate CRS* in mobile phase A and dilute to 50.0 ml with mobile phase A.

Reference solution (b). Dissolve 4.0 mg of *cefadroxil CRS* in mobile phase A and dilute to 50 ml with mobile phase A. To 5.0 ml of this solution add 5.0 ml of reference solution (a) and dilute to 100 ml with mobile phase A.

Reference solution (c). Dilute 2.0 ml of reference solution (a) to 20.0 ml with mobile phase A. Dilute 5.0 ml of this solution to 20.0 ml with mobile phase A.

01/2008:1292

AMPHOTERICIN B

Amphotericinum B

$C_{47}H_{73}NO_{17}$ M_r 924

DEFINITION

Amphotericin B is a mixture of antifungal polyenes produced by the growth of certain strains of *Streptomyces nodosus* or by any other means.
It consists mainly of amphotericin B which is (1*R*,3*S*,5*R*,6*R*,9*R*,11*R*,15*S*,16*R*,17*R*,18*S*,19*E*,21*E*,23*E*, 25*E*, 27*E*,29*E*,31*E*,33*R*,35*S*,36*R*,37*S*)-33-[(3-amino-3,6-dideoxy-β-D-mannopyranosyl)oxy]-1,3,5,6,9,11,17,37-octahydroxy-15,16, 18-trimethyl-13-oxo-14,39-dioxabicyclo[33.3.1]nonatriaconta-19,21,23,25,27,29,31-heptaene-36-carboxylic acid. The potency is not less than 750 IU/mg, calculated with reference to the dried substance.

CHARACTERS

A yellow or orange powder, practically insoluble in water, soluble in dimethyl sulphoxide and in propylene glycol, slightly soluble in dimethylformamide, very slightly soluble in methanol, practically insoluble in alcohol.

It is sensitive to light in dilute solutions and is inactivated at low pH values.

IDENTIFICATION

A. Dissolve 25 mg in 5 ml of *dimethyl sulphoxide R* and dilute to 50 ml with *methanol R*. Dilute 2 ml of the solution to 200 ml with *methanol R*. Examined between 300 nm and 450 nm (*2.2.25*), the solution shows 3 absorption maxima at 362 nm, 381 nm and 405 nm. The ratio of the absorbance measured at 362 nm to that measured at 381 nm is 0.57 to 0.61. The ratio of the absorbance measured at 381 nm to that measured at 405 nm is 0.87 to 0.93.

B. Examine by infrared absorption spectrophotometry (*2.2.24*), comparing with the spectrum obtained with *amphotericin B CRS*. If the spectra obtained show differences dry the substance to be examined at 60 °C at a pressure not exceeding 0.7 kPa for 1 h and prepare a new spectrum.

C. To 1 ml of a 0.5 g/l solution in *dimethyl sulphoxide R*, add 5 ml of *phosphoric acid R* to form a lower layer, avoiding mixing the 2 liquids. A blue ring is immediately produced at the junction of the liquids. Mix, an intense blue colour is produced. Add 15 ml of *water R* and mix; the solution becomes pale yellow.

TESTS

Content of tetraenes. Not more than 10.0 per cent and not more than 5.0 per cent if intended for use in the manufacture of parenteral dosage forms, determined by the following method.

Test solution. Dissolve 50.0 mg in 5 ml of *dimethyl sulphoxide R* and dilute to 50.0 ml with *methanol R*. Dilute 4.0 ml of the solution to 50.0 ml with *methanol R*.

Reference solution (a). Dissolve 50.0 mg of *amphotericin B CRS* in 5 ml of *dimethyl sulphoxide R* and dilute to 50.0 ml with *methanol R*. Dilute 4.0 ml of the solution to 50.0 ml with *methanol R*.

Reference solution (b). Dissolve 25.0 mg of *nystatin CRS* in 25 ml of *dimethyl sulphoxide R* and dilute to 250.0 ml with *methanol R*. Dilute 4.0 ml of the solution to 50.0 ml with *methanol R*.

Measure the absorbances (*2.2.25*) of the test solution and of reference solutions (a) and (b) at the maxima at 282 nm and 304 nm respectively, using a 0.8 per cent *V/V* solution of *dimethyl sulphoxide R* in *methanol R* as the compensation liquid. Calculate the specific absorbance of the substance being examined, of *nystatin CRS* and of *amphotericin B CRS* at both wavelengths, each with reference to the dried substance, and calculate the percentage content of tetraenes using the following expression:

$$F + \frac{100\,(B_1S_2 - B_2S_1)}{(N_2B_1 - N_1B_2)}$$

S_1 and S_2 = specific absorbances of the substance to be examined at 282 nm and 304 nm respectively,

N_1 and N_2 = specific absorbance of *nystatin CRS* at 282 nm and 304 nm respectively,

B_1 and B_2 = specific absorbance of *amphotericin B CRS* at 282 nm and 304 nm respectively,

F = declared content of tetraenes in *amphotericin B CRS*.

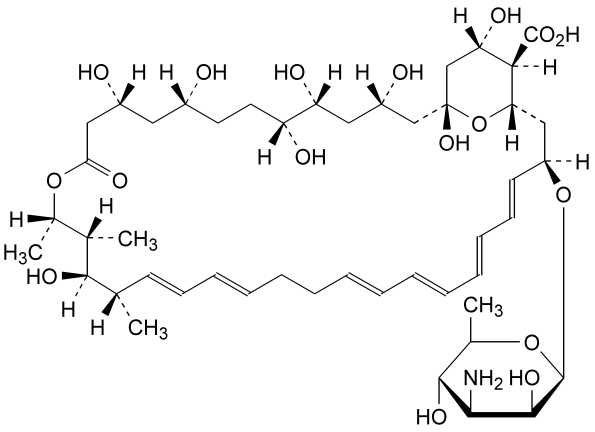
Loss on drying (*2.2.32*). Not more than 5.0 per cent, determined on 1.000 g by drying in an oven at 60 °C at a pressure not exceeding 0.7 kPa.

Sulphated ash (*2.4.14*). Not more than 3.0 per cent and not more than 0.5 per cent if intended for use in the manufacture of parenteral dosage forms, determined on 1.0 g.

Bacterial endotoxins (*2.6.14*): less than 1.0 IU/mg, if intended for use in the manufacture of parenteral dosage forms without a further appropriate procedure for the removal of bacterial endotoxins.

ASSAY

Protect all solutions from light throughout the assay. Dissolve 25.0 mg in *dimethyl sulphoxide R* and dilute, with shaking, to 25.0 ml with the same solvent. Under constant stirring of this stock solution, dilute with *dimethyl sulphoxide R* to obtain solutions of appropriate concentrations (the following concentrations have been found suitable: 44.4, 66.7 and 100 IU/ml). Final solutions are prepared by diluting 1 to 20 with 0.2 M phosphate buffer solution pH 10.5 so that they all contain 5 per cent *V/V* of dimethyl sulphoxide. Prepare the reference and the test solutions simultaneously. Carry out the microbiological assay of antibiotics (*2.7.2*).



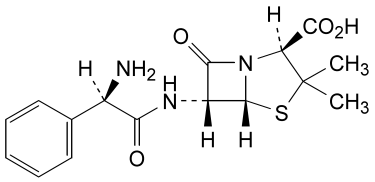
STORAGE

Store protected from light, at a temperature of 2 °C to 8 °C. If the substance is sterile, store in a sterile, airtight, tamper-proof container.

LABELLING

The label states, where applicable, that the substance is suitable for use in the manufacture of parenteral dosage forms.

IMPURITIES



A. amphotericin A (tetraene).

01/2008:0167
corrected 6.0

AMPICILLIN, ANHYDROUS

Ampicillinum anhydricum

$C_{16}H_{19}N_3O_4S$ M_r 349.4
[69-53-4]

DEFINITION

(2*S*,5*R*,6*R*)-6-[[(2*R*)-2-Amino-2-phenylacetyl]amino]-3,3-dimethyl-7-oxo-4-thia-1-azabicyclo[3.2.0]heptane-2-carboxylic acid.

Semi-synthetic product derived from a fermentation product.

Content: 96.0 per cent to 102.0 per cent (anhydrous substance).

CHARACTERS

Appearance: white or almost white, crystalline powder.

Solubility: sparingly soluble in water, practically insoluble in acetone, in ethanol (96 per cent) and in fatty oils. It dissolves in dilute solutions of acids and of alkali hydroxides.

It shows polymorphism (*5.9*).

IDENTIFICATION

First identification: A, D.

Second identification: B, C, D.

A. Infrared absorption spectrophotometry (*2.2.24*).

Preparation: discs of *potassium bromide R*.

Comparison: *anhydrous ampicillin CRS*.

B. Thin-layer chromatography (*2.2.27*).

Test solution. Dissolve 25 mg of the substance to be examined in 10 ml of *sodium hydrogen carbonate solution R*.

Reference solution (a). Dissolve 25 mg of *anhydrous ampicillin CRS* in 10 ml of *sodium hydrogen carbonate solution R*.

Reference solution (b). Dissolve 25 mg of *amoxicillin trihydrate CRS* and 25 mg of *anhydrous ampicillin CRS* in 10 ml of *sodium hydrogen carbonate solution R*.

Plate: *TLC silanised silica gel plate R*.

Mobile phase: mix 10 volumes of *acetone R* and 90 volumes of a 154 g/l solution of *ammonium acetate R* previously adjusted to pH 5.0 with *glacial acetic acid R*.

Application: 1 µl.

Development: over a path of 15 cm.

Drying: in air.

Detection: expose to iodine vapour until the spots appear and examine in daylight.

System suitability: reference solution (b):

– the chromatogram shows 2 clearly separated spots.

Results: the principal spot in the chromatogram obtained with the test solution is similar in position, colour and size to the principal spot in the chromatogram obtained with reference solution (a).

C. Place about 2 mg in a test-tube about 150 mm long and about 15 mm in diameter. Moisten with 0.05 ml of *water R* and add 2 ml of *sulphuric acid-formaldehyde reagent R*. Mix the contents of the tube by swirling; the solution is practically colourless. Place the test-tube in a water-bath for 1 min; a dark yellow colour develops.

D. Water (see Tests).

TESTS

Appearance of solution. The solutions are not more opalescent than reference suspension II (*2.2.1*).

Dissolve 1.0 g in 10 ml of *1 M hydrochloric acid*. Separately dissolve 1.0 g in 10 ml of *dilute ammonia R2*. Examine immediately after dissolution.

pH (*2.2.3*): 3.5 to 5.5.

Dissolve 0.1 g in *carbon dioxide-free water R* and dilute to 40 ml with the same solvent.

Specific optical rotation (*2.2.7*): + 280 to + 305 (anhydrous substance).

Dissolve 62.5 mg in *water R* and dilute to 25.0 ml with the same solvent.

Related substances. Liquid chromatography (*2.2.29*).

Test solution (a). Dissolve 27.0 mg of the substance to be examined in mobile phase A and dilute to 50.0 ml with mobile phase A.

Test solution (b). Dissolve 27.0 mg of the substance to be examined in mobile phase A and dilute to 10.0 ml with mobile phase A. *Prepare immediately before use.*

Reference solution (a). Dissolve 27.0 mg of *anhydrous ampicillin CRS* in mobile phase A and dilute to 50.0 ml with mobile phase A.

Reference solution (b). Dissolve 2.0 mg of *cefradine CRS* in mobile phase A and dilute to 50 ml with mobile phase A. To 5.0 ml of this solution add 5.0 ml of reference solution (a).

Reference solution (c). Dilute 1.0 ml of reference solution (a) to 20.0 ml with mobile phase A.

Column:

– *size*: *l* = 0.25 m, Ø = 4.6 mm;

– *stationary phase*: *octadecylsilyl silica gel for chromatography R* (5 µm).

Mobile phase:

– *mobile phase A*: mix 0.5 ml of *dilute acetic acid R*, 50 ml of *0.2 M potassium dihydrogen phosphate R* and 50 ml of *acetonitrile R*, then dilute to 1000 ml with *water R*;

– *mobile phase B*: mix 0.5 ml of *dilute acetic acid R*, 50 ml of *0.2 M potassium dihydrogen phosphate R* and 400 ml of *acetonitrile R*, then dilute to 1000 ml with *water R*;

Time (min)	Mobile phase A (per cent *V/V*)	Mobile phase B (per cent *V/V*)
0 - t_R	85	15
t_R - (t_R + 30)	85 → 0	15 → 100
(t_R + 30) - (t_R + 45)	0	100
(t_R + 45) - (t_R + 60)	85	15

t_R = retention time of ampicillin determined with reference solution (c)

If the mobile phase composition has been adjusted to achieve the required resolution, the adjusted composition will apply at time zero in the gradient and in the assay.

Flow rate: 1.0 ml/min.

Detection: spectrophotometer at 254 nm.

Injection: 50 µl of reference solutions (b) and (c) with isocratic elution at the initial mobile phase composition and 50 µl of test solution (b) according to the elution gradient described under Mobile phase; inject mobile phase A as a blank according to the elution gradient described under Mobile phase.

System suitability: reference solution (b):

– *resolution*: minimum 3.0 between the peaks due to ampicillin and cefradin; if necessary, adjust the ratio A:B of the mobile phase.

Limit:

– *any impurity*: for each impurity, not more than the area of the principal peak in the chromatogram obtained with reference solution (c) (1.0 per cent).

_N,N_-Dimethylaniline (*2.4.26, Method B*): maximum 20 ppm.

Water (*2.5.12*): maximum 2.0 per cent, determined on 0.300 g.

Sulphated ash (*2.4.14*): maximum 0.5 per cent, determined on 1.0 g.

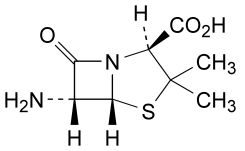
ASSAY

Liquid chromatography (*2.2.29*) as described in the test for related substances with the following modifications.

Mobile phase: initial composition of the mixture of mobile phases A and B, adjusted where applicable.

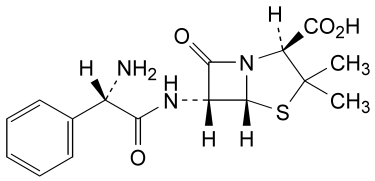
Injection: test solution (a) and reference solution (a).

System suitability: reference solution (a):



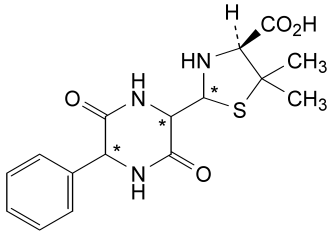
– *repeatability*: maximum relative standard deviation of 1.0 per cent after 6 injections.

Calculate the percentage content of $C_{16}H_{19}N_3O_4S$ from the declared content of *anhydrous ampicillin CRS*.

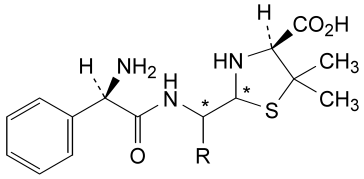


STORAGE

In an airtight container, at a temperature not exceeding 30 °C.

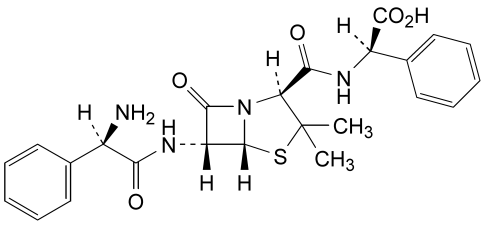


IMPURITIES

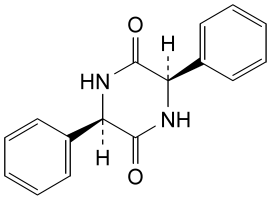


A. (2*S*,5*R*,6*R*)-6-amino-3,3-dimethyl-7-oxo-4-thia-1-azabicyclo[3.2.0]heptane-2-carboxylic acid (6-aminopenicillanic acid),

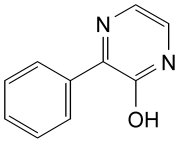
B. (2*S*,5*R*,6*R*)-6-[[(2*S*)-2-amino-2-phenylacetyl]amino]-3,3-dimethyl-7-oxo-4-thia-1-azabicyclo[3.2.0]heptane-2-carboxylic acid (L-ampicillin),



C. (4*S*)-2-(3,6-dioxo-5-phenylpiperazin-2-yl)-5,5-dimethylthiazolidine-4-carboxylic acid (diketopiperazines of ampicillin),



D. R = CO_2H: (4*S*)-2-[[[(2*R*)-2-amino-2-phenylacetyl]amino]-carboxymethyl]-5,5-dimethylthiazolidine-4-carboxylic acid (penicilloic acids of ampicillin),



F. R = H: (2*RS*,4*S*)-2-[[[(2*R*)-2-amino-2-phenylacetyl]amino]-methyl]-5,5-dimethylthiazolidine-4-carboxylic acid (penilloic acids of ampicillin),

AMPICILLIN SODIUM

Ampicillinum natricum

$C_{16}H_{18}N_3NaO_4S$ M_r 371.4
[69-52-3]

DEFINITION

Sodium (2*S*,5*R*,6*R*)-6-[[(2*R*)-2-amino-2-phenylacetyl]amino]-3,3-dimethyl-7-oxo-4-thia-1-azabicyclo[3.2.0]heptane-2-carboxylate.

Semi-synthetic product derived from a fermentation product.

Content: 91.0 per cent to 102.0 per cent (anhydrous substance).

CHARACTERS

Appearance: white or almost white powder, hygroscopic.

Solubility: freely soluble in water, sparingly soluble in acetone, practically insoluble in fatty oils and in liquid paraffin.

IDENTIFICATION

First identification: A, D.

Second identification: B, C, D.

A. Infrared absorption spectrophotometry (*2.2.24*).

Preparation: dissolve 0.250 g in 5 ml of *water R*, add 0.5 ml of *dilute acetic acid R*, swirl and allow to stand for 10 min in iced water. Filter the crystals through a small sintered-glass filter (40) (*2.1.2*), applying suction,

wash with 2-3 ml of a mixture of 1 volume of *water R* and 9 volumes of *acetone R*, then dry in an oven at 60 °C for 30 min.

Comparison: *ampicillin trihydrate CRS*.

B. Thin-layer chromatography (*2.2.27*).

Test solution. Dissolve 25 mg of the substance to be examined in 10 ml of *sodium hydrogen carbonate solution R*.

Reference solution (a). Dissolve 25 mg of *ampicillin trihydrate CRS* in 10 ml of *sodium hydrogen carbonate solution R*.

Reference solution (b). Dissolve 25 mg of *amoxicillin trihydrate CRS* and 25 mg of *ampicillin trihydrate CRS* in 10 ml of *sodium hydrogen carbonate solution R*.

Plate: *TLC silanised silica gel plate R*.

Mobile phase: mix 10 volumes of *acetone R* and 90 volumes of a 154 g/l solution of *ammonium acetate R* previously adjusted to pH 5.0 with *glacial acetic acid R*.

Application: 1 µl.

Development: over a path of 15 cm.

Drying: in air.

Detection: expose to iodine vapour until the spots appear and examine in daylight.

System suitability: reference solution (b):

– the chromatogram shows 2 clearly separated spots.

Results: the principal spot in the chromatogram obtained with the test solution is similar in position, colour and size to the principal spot in the chromatogram obtained with reference solution (a).

C. Place about 2 mg in a test-tube about 150 mm long and about 15 mm in diameter. Moisten with 0.05 ml of *water R* and add 2 ml of *sulphuric acid-formaldehyde reagent R*. Mix the contents of the tube by swirling; the solution is practically colourless. Place the test-tube in a water-bath for 1 min; a dark yellow colour develops.

D. It gives reaction (a) of sodium (*2.3.1*).

TESTS

Appearance of solution. Solutions A and B are not more opalescent than reference suspension II (*2.2.1*) and the absorbance (*2.2.25*) of solution B at 430 nm is not greater than 0.15.

Place 1.0 g in a conical flask and add slowly and with continuous swirling 10 ml of *1 M hydrochloric acid* (solution A). Separately dissolve 1.0 g in *water R* and dilute to 10.0 ml with the same solvent (solution B). Examine immediately after dissolution.

pH (*2.2.3*): 8.0 to 10.0.

Dissolve 2.0 g in *carbon dioxide-free water R* and dilute to 20 ml with the same solvent. Measure 10 min after dissolution.

Specific optical rotation (*2.2.7*): + 258 to + 287 (anhydrous substance).

Dissolve 62.5 mg in a 4 g/l solution of *potassium hydrogen phthalate R* and dilute to 25.0 ml with the same solvent.

Related substances. Liquid chromatography (*2.2.29*).

Test solution (a). Dissolve 31.0 mg of the substance to be examined in mobile phase A and dilute to 50.0 ml with mobile phase A.

Test solution (b). Dissolve 31.0 mg of the substance to be examined in mobile phase A and dilute to 10.0 ml with mobile phase A. *Prepare immediately before use*.

Reference solution (a). Dissolve 27.0 mg of *anhydrous ampicillin CRS* in mobile phase A and dilute to 50.0 ml with mobile phase A.

Reference solution (b). Dissolve 2.0 mg of *cefradine CRS* in mobile phase A and dilute to 50 ml with mobile phase A. To 5.0 ml of this solution add 5.0 ml of reference solution (a).

Reference solution (c). Dilute 1.0 ml of reference solution (a) to 20.0 ml with mobile phase A.

Reference solution (d). To 0.20 g of the substance to be examined add 1.0 ml of *water R*. Heat the solution at 60 °C for 1 h. Dilute 0.5 ml of this solution to 50.0 ml with mobile phase A.

Column:

– *size*: *l* = 0.25 m, Ø = 4.6 mm;

– *stationary phase*: *octadecylsilyl silica gel for chromatography R* (5 µm).

Mobile phase:

– *mobile phase A*: mix 0.5 ml of *dilute acetic acid R*, 50 ml of *0.2 M potassium dihydrogen phosphate R* and 50 ml of *acetonitrile R*, then dilute to 1000 ml with *water R*;

– *mobile phase B*: mix 0.5 ml of *dilute acetic acid R*, 50 ml of *0.2 M potassium dihydrogen phosphate R* and 400 ml of *acetonitrile R*, then dilute to 1000 ml with *water R*;

Time (min)	Mobile phase A (per cent *V/V*)	Mobile phase B (per cent *V/V*)
0 - t_R	85	15
t_R - (t_R + 30)	85 → 0	15 → 100
(t_R + 30) - (t_R + 45)	0	100
(t_R + 45) - (t_R + 60)	85	15

t_R = retention time of ampicillin determined with reference solution (c)

If the mobile phase composition has been adjusted to achieve the required resolution, the adjusted composition will apply at time zero in the gradient and in the assay.

Flow rate: 1.0 ml/min.

Detection: spectrophotometer at 254 nm.

Injection: 50 µl of reference solutions (b) and (c) with isocratic elution at the initial mobile phase composition and 50 µl of test solution (b) and reference solution (d) according to the elution gradient described under Mobile phase; inject mobile phase A as a blank according to the elution gradient described under Mobile phase.

Identification of peaks: use the chromatogram obtained with reference solution (d) to identify the peaks due to ampicillin and ampicillin dimer.

Relative retention with reference to ampicillin: ampicillin dimer = about 2.8.

System suitability: reference solution (b):

– *resolution*: minimum 3.0 between the peaks due to ampicillin and cefradin; if necessary adjust the ratio A:B of the mobile phase.

Limits:

– *ampicillin dimer*: not more than 4.5 times the area of the principal peak in the chromatogram obtained with reference solution (c) (4.5 per cent);

– *any other impurity*: for each impurity, not more than twice the area of the principal peak in the chromatogram obtained with reference solution (c) (2 per cent).

***N,N*-Dimethylaniline** (*2.4.26, Method B*): maximum 20 ppm.

2-Ethylhexanoic acid (*2.4.28*): maximum 0.8 per cent *m/m*.

Methylene chloride. Gas chromatography (*2.2.28*).

Internal standard solution. Dissolve 1.0 ml of *ethylene chloride R* in *water R* and dilute to 500.0 ml with the same solvent.

Test solution (a). Dissolve 1.0 g of the substance to be examined in *water R* and dilute to 10.0 ml with the same solvent.

Test solution (b). Dissolve 1.0 g of the substance to be examined in *water R*, add 1.0 ml of the internal standard solution and dilute to 10.0 ml with *water R*.

Reference solution. Dissolve 1.0 ml of *methylene chloride R* in *water R* and dilute to 500.0 ml with the same solvent. To 1.0 ml of this solution add 1.0 ml of the internal standard solution and dilute to 10.0 ml with *water R*.

Column:

– *material*: glass;

– *size*: *l* = 1.5 m, Ø = 4 mm;

– *stationary phase*: *diatomaceous earth for gas chromatography R* impregnated with 10 per cent *m/m* of *macrogol 1000 R*.

Carrier gas: *nitrogen for chromatography R*.

Flow rate: 40 ml/min.

Temperature:

– *column*: 60 °C;

– *injection port*: 100 °C;

– *detector*: 150 °C.

Detection: flame ionisation.

Calculate the content of methylene chloride taking its density at 20 °C to be 1.325 g/ml.

Limit:

– *methylene chloride*: maximum 0.2 per cent *m/m*.

Heavy metals (*2.4.8*): maximum 20 ppm.

1.0 g complies with test C. Prepare the reference solution using 2 ml of *lead standard solution (10 ppm Pb) R*.

Water (*2.5.12*): maximum 2.0 per cent, determined on 0.300 g.

Bacterial endotoxins (*2.6.14*): less than 0.15 IU/mg, if intended for use in the manufacture of parenteral dosage forms without a further appropriate procedure for the removal of bacterial endotoxins.

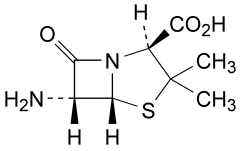
ASSAY

Liquid chromatography (*2.2.29*) as described in the test for related substances with the following modifications.

Mobile phase: initial composition of the mixture of mobile phases A and B, adjusted where applicable.

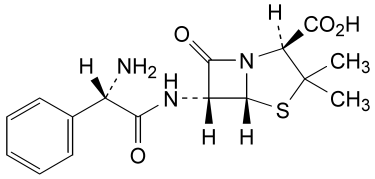
Injection: test solution (a) and reference solution (a).

System suitability: reference solution (a):



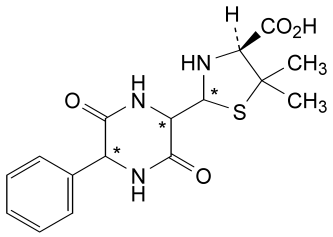
– *repeatability*: maximum relative standard deviation of 1.0 per cent after 6 injections.

Calculate the percentage content of ampicillin sodium by multiplying the percentage content of ampicillin by 1.063.

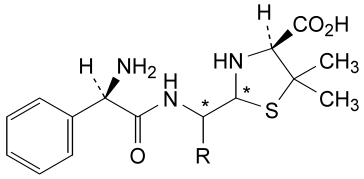


STORAGE

In an airtight container. If the substance is sterile, store in a sterile, airtight, tamper-proof container.



IMPURITIES



A. (2*S*,5*R*,6*R*)-6-amino-3,3-dimethyl-7-oxo-4-thia-1-azabicyclo[3.2.0]heptane-2-carboxylic acid (6-aminopenicillanic acid),

AMPICILLIN TRIHYDRATE

Ampicillinum trihydricum

$C_{16}H_{19}N_3O_4S,3H_2O$ M_r 403.5
[7177-48-2]

DEFINITION

(2*S*,5*R*,6*R*)-6-[[(2*R*)-2-Amino-2-phenylacetyl]amino]-3,3-dimethyl-7-oxo-4-thia-1-azabicyclo[3.2.0]heptane-2-carboxylic acid trihydrate.

Semi-synthetic product derived from a fermentation product.

Content: 96.0 per cent to 102.0 per cent (anhydrous substance).

CHARACTERS

Appearance: white or almost white, crystalline powder.

Solubility: slightly soluble in water, practically insoluble in ethanol (96 per cent) and in fatty oils. It dissolves in dilute solutions of acids and of alkali hydroxides.

IDENTIFICATION

First identification: A, D.

Second identification: B, C, D.

A. Infrared absorption spectrophotometry (*2.2.24*).
Comparison: *ampicillin trihydrate CRS.*

B. Thin-layer chromatography (*2.2.27*).

Test solution. Dissolve 25 mg of the substance to be examined in 10 ml of *sodium hydrogen carbonate solution R.*

Reference solution (a). Dissolve 25 mg of *ampicillin trihydrate CRS* in 10 ml of *sodium hydrogen carbonate solution R.*

Reference solution (b). Dissolve 25 mg of *amoxicillin trihydrate CRS* and 25 mg of *ampicillin trihydrate CRS* in 10 ml of *sodium hydrogen carbonate solution R.*

Plate: *TLC silanised silica gel plate R.*

Mobile phase: mix 10 volumes of *acetone R* and 90 volumes of a 154 g/l solution of *ammonium acetate R* previously adjusted to pH 5.0 with *glacial acetic acid R.*

Application: 1 µl.

Development: over a path of 15 cm.

Drying: in air.

Detection: expose to iodine vapour until the spots appear and examine in daylight.

System suitability: reference solution (b):

– the chromatogram shows 2 clearly separated spots.

Results: the principal spot in the chromatogram obtained with the test solution is similar in position, colour and size to the principal spot in the chromatogram obtained with reference solution (a).

C. Place about 2 mg in a test-tube about 150 mm long and about 15 mm in diameter. Moisten with 0.05 ml of *water R* and add 2 ml of *sulphuric acid-formaldehyde reagent R*. Mix the contents of the tube by swirling; the solution is practically colourless. Place the test-tube in a water-bath for 1 min; a dark yellow colour develops.

D. Water (see Tests).

TESTS

Appearance of solution. The solutions are not more opalescent than reference suspension II (*2.2.1*).

Dissolve 1.0 g in 10 ml of *1 M hydrochloric acid.* Separately dissolve 1.0 g in 10 ml of *dilute ammonia R2.* Examine immediately after dissolution.

pH (*2.2.3*): 3.5 to 5.5.

Dissolve 0.1 g in *carbon dioxide-free water R* and dilute to 40 ml with the same solvent.

Specific optical rotation (*2.2.7*): + 280 to + 305 (anhydrous substance).

Dissolve 62.5 mg in *water R* and dilute to 25.0 ml with the same solvent.

Related substances. Liquid chromatography (*2.2.29*).

Test solution (a). Dissolve 31.0 mg of the substance to be examined in mobile phase A and dilute to 50.0 ml with mobile phase A.

Test solution (b). Dissolve 31.0 mg of the substance to be examined in mobile phase A and dilute to 10.0 ml with mobile phase A. *Prepare immediately before use.*

Reference solution (a). Dissolve 27.0 mg of *anhydrous ampicillin CRS* in mobile phase A and dilute to 50.0 ml with mobile phase A.

Reference solution (b). Dissolve 2 mg of *cefradine CRS* in mobile phase A and dilute to 50 ml with mobile phase A. To 5 ml of this solution, add 5 ml of reference solution (a).

Reference solution (c). Dilute 1.0 ml of reference solution (a) to 20.0 ml with mobile phase A.

Column:

– *size*: *l* = 0.25 m, Ø = 4.6 mm;

– *stationary phase*: *octadecylsilyl silica gel for chromatography R* (5 µm).

Mobile phase:

– *mobile phase A*: mix 0.5 ml of *dilute acetic acid R,* 50 ml of *0.2 M potassium dihydrogen phosphate R* and 50 ml of *acetonitrile R,* then dilute to 1000 ml with *water R*;

– *mobile phase B*: mix 0.5 ml of *dilute acetic acid R,* 50 ml of *0.2 M potassium dihydrogen phosphate R* and 400 ml of *acetonitrile R,* then dilute to 1000 ml with *water R*;

Time (min)	Mobile phase A (per cent *V/V*)	Mobile phase B (per cent *V/V*)
0 - t_R	85	15

(t_R + 30) - (t_R + 45)	0	100
(t_R + 45) - (t_R + 60)	85	15

t_R = retention time of ampicillin determined with reference solution (c)

If the mobile phase composition has been adjusted to achieve the required resolution, the adjusted composition will apply at time zero in the gradient and in the assay.

Flow rate: 1.0 ml/min.

Detection: spectrophotometer at 254 nm.

Injection: 50 µl of reference solutions (b) and (c) with isocratic elution at the initial mobile phase composition and 50 µl of test solution (b) according to the elution gradient described under Mobile phase; inject mobile phase A as a blank according to the elution gradient described under Mobile phase.

System suitability: reference solution (b):

– *resolution*: minimum 3.0 between the peaks due to ampicillin and cefradin; if necessary, adjust the ratio A:B of the mobile phase.

Limit:

– *any impurity*: for each impurity, not more than the area of the principal peak in the chromatogram obtained with reference solution (c) (1.0 per cent).

***N,N*-Dimethylaniline** (*2.4.26, Method B*): maximum 20 ppm.

Water (*2.5.12*): 12.0 per cent to 15.0 per cent, determined on 0.100 g.

Sulphated ash (*2.4.14*): maximum 0.5 per cent, determined on 1.0 g.

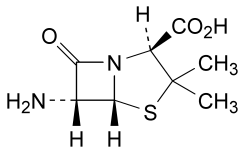
ASSAY

Liquid chromatography (*2.2.29*) as described in the test for related substances with the following modifications.

Mobile phase: initial composition of the mixture of mobile phases A and B, adjusted where applicable.

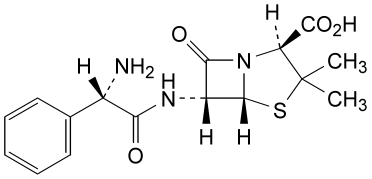
Injection: test solution (a) and reference solution (a).

System suitability: reference solution (a):



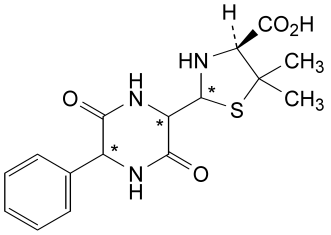
– *repeatability*: maximum relative standard deviation of 1.0 per cent after 6 injections.

Calculate the percentage content of ampicillin from the declared content of *anhydrous ampicillin CRS.*

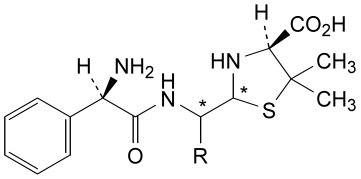


STORAGE

In an airtight container.

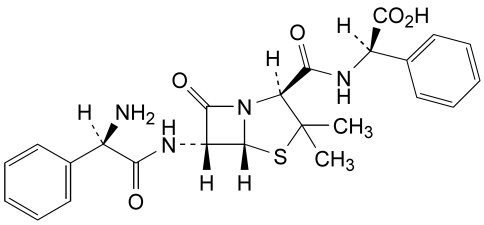


IMPURITIES

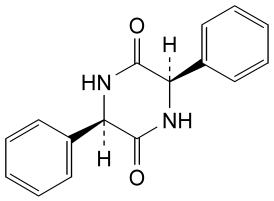


A. (2*S*,5*R*,6*R*)-6-amino-3,3-dimethyl-7-oxo-4-thia-1-azabicyclo[3.2.0]heptane-2-carboxylic acid (6-aminopenicillanic acid),

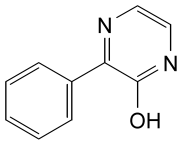
B. (2*S*,5*R*,6*R*)-6-[[(2*S*)-2-amino-2-phenylacetyl]amino]-3,3-dimethyl-7-oxo-4-thia-1-azabicyclo[3.2.0]heptane-2-carboxylic acid (L-ampicillin),



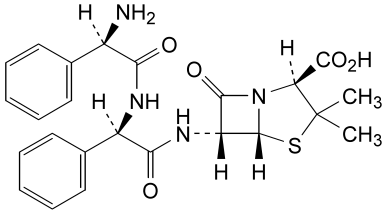
C. (4*S*)-2-(3,6-dioxo-5-phenylpiperazin-2-yl)-5,5-dimethylthiazolidine-4-carboxylic acid (diketopiperazines of ampicillin),



D. R = CO_2H: (4*S*)-2-[[[(2*R*)-2-amino-2-phenylacetyl]amino]-carboxymethyl]-5,5-dimethylthiazolidine-4-carboxylic acid (penicilloic acids of ampicillin),



F. R = H: (2*RS*,4*S*)-2-[[[(2*R*)-2-amino-2-phenylacetyl]amino]-methyl]-5,5-dimethylthiazolidine-4-carboxylic acid (penilloic acids of ampicillin),



E. (2*R*)-2-[[[(2*S*,5*R*,6*R*)-6-[[(2*R*)-2-amino-2-phenylacetyl]-amino]-3,3-dimethyl-7-oxo-4-thia-1-azabicyclo-[3.2.0]hept-2-yl]carbonyl]amino]-2-phenylacetic acid (ampicillinyl-D-phenylglycine),

corrected 6.0

ANGELICA ROOT

Angelicae radix

DEFINITION

Whole or cut, carefully dried rhizome and root of *Angelica archangelica* L. (*Archangelica officinalis Haffm.*).

Content: minimum 2.0 ml/kg of essential oil (dried drug).

CHARACTERS

Bitter taste.

IDENTIFICATION

A. The rhizome is greyish-brown or reddish-brown, with transversely annulated thickenings. The base bears greyish-brown or reddish-brown, cylindrical, longitudinally furrowed, occasionally branched roots often with incompletely encircling, transverse ridges. The apex sometimes shows remnants of stem and leaf bases. The fracture is uneven. The transversely cut surface shows a greyish-white, spongy, distinctly radiate bark, in which the secretory channels are visible as brown spots, and a bright yellow or greyish-yellow wood which, in the rhizome, surrounds the greyish or brownish-white pith.

B. Reduce to a powder (355) (*2.9.12*). The powder is brownish-white. Examine under a microscope using *chloral hydrate solution R*. The powder shows the following diagnostic characters: fragments of cork consisting of several layers of thin-walled greyish-brown or reddish-brown cells; fragments of large, yellowish-brown secretory channels; fragments of medullary rays 2 or 4 cells wide; fragments of xylem with medullary rays and radially arranged, lignified vessels with reticulate thickenings. Examine under a microscope using a 50 per cent *V/V* solution of *glycerol R*. The powder shows numerous, simple starch granules 2-4 µm in diameter.

C. Examine the chromatograms obtained in the test for lovage root.

Results: see below the sequence of the zones present in the chromatograms obtained with the reference solution and the test solution.

Top of the plate	
———	———
Eugenol: (marked at 254 nm)	
Coumarin: (marked at 254 nm)	
———	———
	An intense blue fluorescent zone
	Yellow fluorescent zones
	A blue fluorescent zone
	A yellow fluorescent zone
	An intense blue fluorescent zone
Reference solution	**Test solution**

TESTS

Lovage root. Thin-layer chromatography (*2.2.27*).

Test solution. To 1.0 g of the freshly powdered drug (355) (*2.9.12*) add 5 ml of *methanol R* and boil for 30 s. Cool and filter.

Reference solution. Dissolve 5 mg of *coumarin R* and 25 µl of *eugenol R* in 10 ml of *methanol R*.

Plate: *TLC silica gel F_{254} plate R*.

Mobile phase: *methylene chloride R, toluene R* (50:50 *V/V*).

Application: 20 µl, as bands.

Development: twice over a path of 10 cm.

Drying: in air.

Detection: examine in ultraviolet light at 254 nm. Mark the quenching zones due to coumarin and eugenol on the chromatogram obtained with the reference solution. Examine in ultraviolet light at 365 nm.

Results: the chromatogram obtained with the test solution shows no pale blue or white fluorescent zone between the zones of coumarin and eugenol in the chromatogram obtained with the reference solution.

Foreign matter (*2.8.2*): maximum 5 per cent of leaf bases and stem bases, maximum 5 per cent of discoloured pieces and maximum 1 per cent of other foreign matter.

Loss on drying (*2.2.32*): maximum 10.0 per cent, determined on 1.000 g of the powdered drug (355) (*2.9.12*) by drying in an oven at 105 °C for 2 h.

Total ash (*2.4.16*): maximum 10.0 per cent.

Ash insoluble in hydrochloric acid (*2.8.1*): maximum 2.0 per cent.

ASSAY

Carry out the determination of essential oils in herbal drugs (*2.8.12*). Reduce the drug to a powder (500) (*2.9.12*) and immediately use 40.0 g for the determination. Use a 2 litre round-bottomed flask, 10 drops of *liquid paraffin R*, 500 ml of *water R* as distillation liquid and 0.50 ml of *xylene R* in the graduated tube. Distil at a rate of 2-3 ml/min for 4 h.

01/2008:0804

ANISE OIL

Anisi aetheroleum

DEFINITION

Essential oil obtained by steam distillation from the dry ripe fruits of *Pimpinella anisum* L.

CHARACTERS

Appearance: clear, colourless or pale yellow liquid.

IDENTIFICATION

First identification: B.

Second identification: A.

A. Thin-layer chromatography (*2.2.27*).

Test solution. Dissolve 1 g of the substance to be examined in *toluene R* and dilute to 10 ml with the same solvent.

Reference solution. Dissolve 10 µl of *linalol R*, 30 µl of *anisaldehyde R* and 200 µl of *anethole R* in *toluene R* and dilute to 15 ml with the same solvent. Dilute 1 ml of this solution to 5 ml with *toluene R*.

Plate: *TLC silica gel F_{254} plate R.*

Mobile phase: *ethyl acetate R, toluene R* (7:93 *V/V*).

Application: 5 µl as bands of 10 mm (for normal TLC plates) or 2 µl as bands of 10 mm (for fine particle size plates).

Development: over a path of 15 cm (for normal TLC plates) or over a path of 6 cm (for fine particle size plates).

Drying: in air.

Detection A: examine in ultraviolet light at 254 nm.

Results A: see below the sequence of zones present in the chromatograms obtained with the reference solution and the test solution. Furthermore, other zones may be present in the chromatogram obtained with the test solution.

Top of the plate	
Anethole: a quenching zone	A very strong quenching zone (anethole)
———	———
	A quenching zone
Anisaldehyde: a quenching zone	A quenching zone (anisaldehyde)
———	———
Reference solution	**Test solution**

Detection B: spray with *methyl 4-acetylbenzoate reagent R* and heat at 100-105 °C for 10 min; examine the still hot plate in daylight within 5 min.

Results B: see below the sequence of zones present in the chromatograms obtained with the reference solution and the test solution. Furthermore, other zones may be present in the chromatogram obtained with the test solution.

Top of the plate	
	A violet-brown zone (monoterpene hydrocarbons) (solvent front)
Anethole: a brown zone	A very strong brown zone (anethole), distinctly separated
———	———
	A grey zone
Anisaldehyde: a yellow zone	A yellow zone (anisaldehyde)
———	———
Linalol: a grey zone	A grey zone (linalol)
	A grey zone
Reference solution	**Test solution**

B. Examine the chromatograms obtained in the test for chromatographic profile.

Results: the characteristic peaks in the chromatogram obtained with the test solution are similar in retention time to those in the chromatogram obtained with the reference solution.

TESTS

Relative density (*2.2.5*): 0.980 to 0.990.

Refractive index (*2.2.6*): 1.552 to 1.561.

Freezing point (*2.2.18*): 15 °C to 19 °C.

Fenchone. Gas chromatography (*2.2.28*) as described in the test for chromatographic profile with the following modifications.

Test solution. Dissolve 400 µl of the substance to be examined in 2.0 ml of *hexane R*.

Reference solution (a). Dilute 10 µl of *fenchone R* to 1.2 g with *hexane R*.

Reference solution (b). Dilute 100 µl of reference solution (a) to 100 ml with *hexane R*.

System suitability: reference solution (b):

– *signal-to-noise ratio*: minimum 10 for the principal peak.

Limit:

– *fenchone*: maximum 0.01 per cent.

Foeniculin. Gas chromatography (*2.2.28*) as described in the test for chromatographic profile with the following modifications.

Test solution. The substance to be examined.

Reference solution (a). Dilute 10 mg of the test solution to 1.000 g with *hexane R*. Dilute 0.5 ml of this solution to 100 ml with *hexane R*.

Reference solution (b). Foeniculin for peak identification CRS.

System suitability:

– the chromatogram obtained with reference solution (b) is similar to the chromatogram provided with *foeniculin for peak identification CRS,*

– *signal-to-noise ratio*: minimum 10 for the principal peak in the chromatogram obtained with reference solution (a).

Limit: locate the peak due to foeniculin by comparison with the chromatogram provided with *foeniculin for peak identification CRS.*

– *foeniculin*: maximum 0.01 per cent.

Fatty oils and resinified essential oils (*2.8.7*). It complies with the test for fatty oils and resinified essential oils.

Chromatographic profile. Gas chromatography (*2.2.28*): use the normalisation procedure.

Test solution. Dissolve 200 µl of the substance to be examined in 1.0 ml of *hexane R*.

Reference solution. To 1.0 ml of *hexane R*, add 20 µl of *linalol R*, 20 µl of *estragole R*, 20 µl of *α-terpineol R*, 60 µl of *anethole R* and 30 µl of *anisaldehyde R*.

Column:

- *material*: fused silica,
- *size*: *l* = 30 m, Ø = 0.25 mm,
- *stationary phase*: *macrogol 20 000 R* (film thickness 0.25 µm).

Carrier gas: *helium for chromatography R*.

Flow rate: 1.0 ml/min.

Split ratio: 1:100.

Temperature:

	Time (min)	Temperature (°C)
Column	0 – 5	60
	5 – 80	60 → 210
	80 – 95	210
Injection port		200
Detector		220

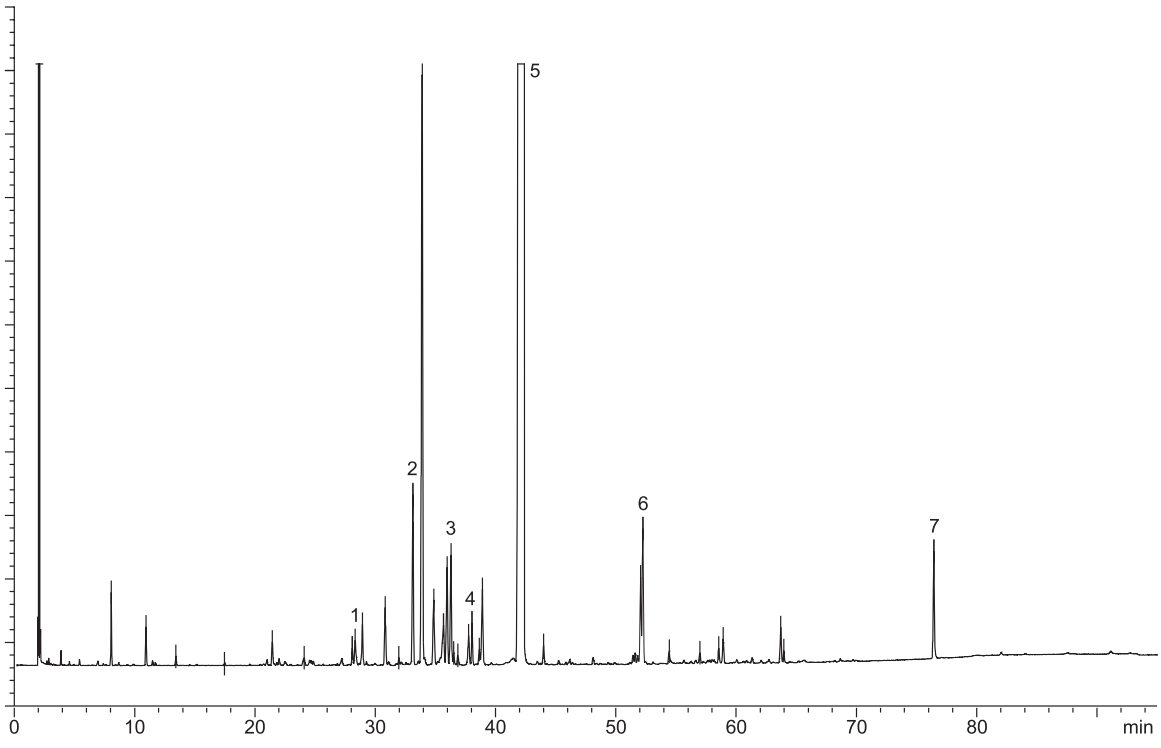
Detection: flame ionisation.

Injection: 0.2 µl.

Elution order: order indicated in the composition of the reference solution. Record the retention times of these substances.

System suitability: reference solution:

- *resolution*: minimum 1.5 between the peaks due to estragole and α-terpineol.



Using the retention times determined from the chromatogram obtained with the reference solution, locate the components of the reference solution in the chromatogram obtained with the test solution and locate *cis*-anethole and pseudoisoeugenyl 2-methylbutyrate using the chromatogram shown in Figure 0804.-1 (disregard any peak due to hexane).

Determine the percentage content of these components. The percentages are within the following ranges:

- *linalol*: less than 1.5 per cent,
- *estragole*: 0.5 per cent to 5.0 per cent,
- *α-terpineol*: less than 1.2 per cent,
- *cis-anethole*: 0.1 per cent to 0.4 per cent,
- *trans-anethole*: 87 per cent to 94 per cent,
- *anisaldehyde*: 0.1 per cent to 1.4 per cent,
- *pseudoisoeugenyl 2-methylbutyrate*: 0.3 per cent to 2.0 per cent.

STORAGE

In a well-filled, airtight container, protected from light and at a temperature not exceeding 25 °C.

1. linalol
2. estragole
3. α-terpineol
4. *cis*-anethole
5. *trans*-anethole
6. anisaldehyde
7. pseudoisoeugenyl 2-methylbutyrate

Figure 0804.-1. – *Chromatogram for the test for chromatographic profile of anise oil*

01/2008:0262

ANISEED

Anisi fructus

DEFINITION

Whole dry cremocarp of *Pimpinella anisum* L.

Content: minimum 20 ml/kg of essential oil.

CHARACTERS

Reminiscent odour of anethole.

The fruit is a cremocarp and generally entire; a small fragment of the thin, rigid, slightly curved pedicel is frequently attached.

IDENTIFICATION

A. The cremocarp is ovoid or pyriform and slightly compressed laterally, yellowish-green or greenish-grey, 3-5 mm long and up to 3 mm wide, surmounted by a stylopod with 2 short, reflexed stylar points. The mericarps are attached by their tops to the carpophore with a plane commissural surface and a convex dorsal surface, the latter being covered with short, warty trichomes visible using a lens; the fruit shows 5 primary ridges, running longitudinally, comprising 3 dorsal ridges and 2 lateral ridges, non-prominent, and lighter in colour.

B. Reduce to a powder (355) (*2.9.12*). The powder is greenish-yellow or brownish-green. Examine under a microscope using *chloral hydrate solution R*. The powder shows the following diagnostic characters: whole or broken trichomes, mostly unicellular, sometimes curved, with blunt apex and warty cuticle; fragments of epidermis with striated cuticle, occasional anomocytic stomata (*2.8.3*); fragments of numerous narrow, branched vittae, fragments of endosperm containing aleurone grains and micro-rosettes of calcium oxalate; oblong sclereids from the commissural zone and bundles of sclerenchymatous fibres from the carpophore and the pedicel. Starch is absent.

C. Thin-layer chromatography (*2.2.27*).

Test solution. Shake 0.10 g of the powdered drug (1500) with 2 ml of *methylene chloride R* for 15 min. Filter and carefully evaporate the filtrate to dryness on a water-bath at 60 °C. Dissolve the residue in 0.5 ml of *toluene R*.

Reference solution. Dissolve 3 µl of *anethole R* and 40 µl of *olive oil R* in 1 ml of *toluene R*.

Plate: *TLC silica gel GF_{254} plate R*.

Mobile phase: *toluene R*.

Application: 2 µl and 3 µl of the test solution and 1 µl, 2 µl and 3 µl of the reference solution, at 2 cm intervals.

Development: over a path of 10 cm.

Drying: in air.

Detection A: examine in ultraviolet light at 254 nm.

Results A: the chromatograms show a quenching zone (anethole) in the central part against a light background.

Detection B: spray with a freshly prepared 200 g/l solution of *phosphomolybdic acid R* in *ethanol (96 per cent) R*, using 10 ml for a plate 200 mm square, and heat at 120 °C for 5 min.

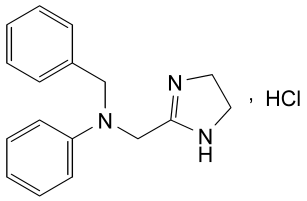
Results B: the spots due to anethole appear blue against a yellow background. In the chromatogram obtained with 2 µl of the test solution, the spot due to anethole is intermediate in size between the corresponding spots in the chromatograms obtained with 1 µl and 3 µl of the reference solution. The chromatograms obtained with the test solution show in the lower third a blue spot (triglycerides) similar in position to the spot in the lower third of the chromatograms obtained with the reference solution (triglycerides of olive oil).

TESTS

Water (*2.2.13*): maximum 70 ml/kg, determined on 20.0 g of the powdered drug.

Total ash (*2.4.16*): maximum 12.0 per cent.

Ash insoluble in hydrochloric acid (*2.8.1*): maximum 2.5 per cent.



ASSAY

Carry out the determination of essential oils in herbal drugs (*2.8.12*). Use 10.0 g of the drug reduced to a coarse powder immediately before determination, a 250 ml round-bottomed flask, 100 ml of *water R* as the distillation liquid and 0.50 ml of *xylene R* in the graduated tube. Distil at a rate of 2.5-3.5 ml/min for 2 h.

01/2008:0972
corrected 6.0

ANTAZOLINE HYDROCHLORIDE

Antazolini hydrochloridum

$C_{17}H_{20}ClN_3$ M_r 301.8
[2508-72-7]

DEFINITION

Antazoline hydrochloride contains not less than 99.0 per cent and not more than the equivalent of 101.0 per cent of *N*-benzyl-*N*-[(4,5-dihydro-1*H*-imidazol-2-yl)methyl]aniline hydrochloride, calculated with reference to the dried substance.

CHARACTERS

A white or almost white, crystalline powder, sparingly soluble in water, soluble in alcohol, slightly soluble in methylene chloride.

It melts at about 240 °C, with decomposition.

IDENTIFICATION

First identification: A, D.

Second identification: B, C, D.

A. Examine by infrared absorption spectrophotometry (*2.2.24*), comparing with the spectrum obtained with *antazoline hydrochloride CRS*. Examine the substances as discs prepared using *potassium chloride R*.

B. Examine the chromatograms obtained in the test for related substances in daylight after spraying. The principal spot in the chromatogram obtained with test solution (b) is similar in position, colour and size to the principal spot in the chromatogram obtained with reference solution (b).

C. To 5 ml of solution S (see Tests) add, drop by drop, *dilute sodium hydroxide solution R* until an alkaline reaction is produced. Filter. The precipitate, washed

with two quantities, each of 10 ml, of *water R* and dried in a desicator under reduced pressure, melts (*2.2.14*) at 119 °C to 123 °C.

D. It gives reaction (a) of chlorides (*2.3.1*).

TESTS

Solution S. Dissolve 2.0 g in *carbon dioxide-free water R* prepared from *distilled water R*, heating at 60 °C if necessary. Allow to cool and dilute to 100 ml with the same solvent.

Appearance of solution. Solution S is clear (*2.2.1*) and not more intensely coloured than reference solution Y_7 (*2.2.2, Method II*).

Acidity or alkalinity. To 10 ml of solution S add 0.2 ml of *methyl red solution R*. Not more than 0.1 ml of *0.01 M hydrochloric acid* or *0.01 M sodium hydroxide* is required to change the colour of the indicator.

Related substances. Examine by thin-layer chromatography (*2.2.27*), using *silica gel* GF_{254} *R* as the coating substance. Heat the plate at 110 °C for 15 min before using.

Test solution (a). Dissolve 0.10 g of the substance to be examined in *methanol R* and dilute to 5 ml with the same solvent.

Test solution (b). Dilute 1 ml of test solution (a) to 5 ml with *methanol R*.

Reference solution (a). Dilute 0.5 ml of test solution (a) to 100 ml with *methanol R*.

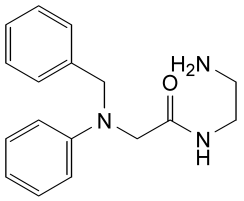
Reference solution (b). Dissolve 20 mg of *antazoline hydrochloride CRS* in *methanol R* and dilute to 5 ml with the same solvent.

Reference solution (c). Dissolve 20 mg of *xylometazoline hydrochloride CRS* in 1 ml of test solution (a) and dilute to 5 ml with *methanol R*.

Apply to the plate 5 µl of each solution. Develop over a path of 15 cm using a mixture of 5 volumes of *diethylamine R*, 10 volumes of *methanol R* and 85 volumes of *ethyl acetate R*. Dry the plate in a current of warm air for 15 min. Examine in ultraviolet light at 254 nm. The test is not valid unless the chromatogram obtained with reference solution (c) shows two clearly separated principal spots. Spray with a mixture of equal volumes of a 200 g/l solution of *ferric chloride R* and a 5 g/l solution of *potassium ferricyanide R*. Examine immediately in daylight. Any spot in the chromatogram obtained with test solution (a), apart from the principal spot, is not more intense than the spot in the chromatogram obtained with reference solution (a) (0.5 per cent).

Heavy metals (*2.4.8*). 1.0 g complies with limit test C for heavy metals (20 ppm). Prepare the standard using 2 ml of *lead standard solution (10 ppm Pb) R*.

Loss on drying (*2.2.32*). Not more than 0.5 per cent, determined on 1.000 g by drying in an oven at 105 °C for 3 h.



Sulphated ash (*2.4.14*). Not more than 0.1 per cent, determined on the residue obtained in the test for loss on drying.

ASSAY

Dissolve 0.250 g in 100 ml of *alcohol R*. Add 0.1 ml of *phenolphthalein solution R1*. Titrate with *0.1 M alcoholic potassium hydroxide*.

1 ml of *0.1 M alcoholic potassium hydroxide* is equivalent to 30.18 mg of $C_{17}H_{20}ClN_3$.

IMPURITIES

A. *N*-(2-aminoethyl)-2-(benzylphenylamino)acetamide.

01/2008:0209

ANTICOAGULANT AND PRESERVATIVE SOLUTIONS FOR HUMAN BLOOD

Solutiones anticoagulantes et sanguinem humanum conservantes

DEFINITION

Anticoagulant and preservative solutions for human blood are sterile and pyrogen-free solutions prepared with water for injections, filtered, distributed in the final containers and sterilised. The content of sodium citrate ($C_6H_5Na_3O_7,2H_2O$), glucose monohydrate ($C_6H_{12}O_6,H_2O$) or anhydrous glucose ($C_6H_{12}O_6$) and sodium dihydrogen phosphate dihydrate ($NaH_2PO_4,2H_2O$) is not less than 95.0 per cent and not more than 105.0 per cent of that stated in the formulae below. The content of citric acid monohydrate ($C_6H_8O_7,H_2O$) or anhydrous citric acid ($C_6H_8O_7$) is not less than 90.0 per cent and not more than 110.0 per cent of that stated in the formulae below. Subject to agreement by the competent authority, other substances, such as red-cell preservatives, may be included in the formula provided that their name and concentration are stated on the label.

Anticoagulant and preservative solutions for human blood are presented in airtight, tamper-proof containers of glass (*3.2.1*) or plastic (*3.2.3*).

Anticoagulant acid-citrate-glucose solutions (ACD)

	A	B
Sodium citrate (0412)	22.0 g	13.2 g
Citric acid monohydrate (0456)	8.0 g	4.8 g
or *Citric acid, anhydrous (0455)*	7.3 g	4.4 g
*Glucose monohydrate (0178)**	24.5 g	14.7 g
or *Glucose, anhydrous (0177)**	22.3 g	13.4 g
Water for injections (0169) to	1000.0 ml	1000.0 ml
Volume to be used per 100 ml of blood	15.0 ml	25.0 ml

*The competent authority may require that the substances comply with the test for pyrogens given in the monographs on *Glucose monohydrate (0178)* and *Glucose, anhydrous (0177)*, respectively.

CHARACTERS

A colourless or faintly yellow, clear liquid, practically free from particles.

IDENTIFICATION

A. Examine by thin-layer chromatography (*2.2.27*), using *silica gel G R* as the coating substance.

Test solution. Dilute 2 ml of the solution to be examined (for formula A) or 3 ml (for formula B) to 100 ml with a mixture of 2 volumes of *water R* and 3 volumes of *methanol R*.

Reference solution (a). Dissolve 10 mg of *glucose CRS* in a mixture of 2 volumes of *water R* and 3 volumes of *methanol R* and dilute to 20 ml with the same mixture of solvents.

Reference solution (b). Dissolve 10 mg each of *glucose CRS, lactose CRS, fructose CRS* and *sucrose CRS* in a mixture of 2 volumes of *water R* and 3 volumes of *methanol R* and dilute to 20 ml with the same mixture of solvents.

Apply separately to the plate 2 µl of each solution and thoroughly dry the starting points. Develop over a path of 15 cm using a mixture of 10 volumes of *water R*, 15 volumes of *methanol R*, 25 volumes of *anhydrous acetic acid R* and 50 volumes of *ethylene chloride R*. The volumes of solvents have to be measured accurately since a slight excess of water produces cloudiness. Dry the plate in a current of warm air. Repeat the development immediately, after renewing the mobile phase. Dry the plate in a current of warm air and spray evenly with a solution of 0.5 g of *thymol R* in a mixture of 5 ml of *sulphuric acid R* and 95 ml of *alcohol R*. Heat at 130 °C for 10 min. The principal spot in the chromatogram obtained with the test solution is similar in position, colour and size to the principal spot in the chromatogram obtained with reference solution (a). The test is not valid unless the chromatogram obtained with reference solution (b) shows 4 clearly separated spots.

B. To 2 ml add 5 ml of *cupri-citric solution R*. Heat to boiling. An orange precipitate is formed and the solution becomes yellow.

C. To 2 ml (for formula A) add 3 ml of *water R* or to 4 ml (for formula B) add 1 ml of *water R*. The solution gives the reaction of citrates (*2.3.1*).

D. 0.5 ml gives reaction (b) of sodium (*2.3.1*).

TESTS

pH (*2.2.3*). The pH of the solution to be examined is 4.7 to 5.3.

Hydroxymethylfurfural. To 2.0 ml add 5.0 ml of a 100 g/l solution of *p-toluidine R* in *2-propanol R* containing 10 per cent *V/V* of *glacial acetic acid R* and 1.0 ml of a 5 g/l solution of *barbituric acid R*. The absorbance (*2.2.25*), determined at 550 nm after allowing the mixture to stand for 2 min to 3 min, is not greater than that of a standard prepared at the same time in the same manner using 2.0 ml of a solution containing 5 ppm of *hydroxymethylfurfural R* for formula A or 3 ppm of *hydroxymethylfurfural R* for formula B.

Sterility (*2.6.1*). They comply with the test for sterility.

Pyrogens (*2.6.8*). They comply with the test for pyrogens. Dilute with a pyrogen-free, 9 g/l solution of *sodium chloride R* to obtain a solution containing approximately 5 g/l of sodium citrate. Inject 10 ml of the diluted solution per kilogram of the rabbit's mass.

ASSAY

Citric acid. To 10.0 ml (for formula A) or to 20.0 ml (for formula B) add 0.1 ml of *phenolphthalein solution R1*. Titrate with *0.2 M sodium hydroxide* until a pink colour is obtained.

1 ml of *0.2 M sodium hydroxide* is equivalent to 14.01 mg of $C_6H_8O_7,H_2O$ or to 12.81 mg of $C_6H_8O_7$.

Sodium citrate. Prepare a chromatography column 0.10 m long and 10 mm in internal diameter and filled with *strongly acidic ion-exchange resin R* (300 µm to 840 µm). Maintain a 1 cm layer of liquid above the resin at all times. Wash the column with 50 ml of de-ionised *water R* at a flow rate of 12-14 ml/min.

Dilute 10.0 ml of the solution to be examined (for formula A) or 15.0 ml (for formula B) to about 40 ml with de-ionised *water R* in a beaker and transfer to the column reservoir, washing the beaker 3 times with a few millilitres of de-ionised *water R*. Allow the solution to run through the column at a flow rate of 12-14 ml/min and collect the eluate. Wash the column with 2 quantities, each of 30 ml, and with one quantity of 50 ml, of de-ionised *water R*. The column can be used for 3 successive determinations before regeneration with 3 times its volume of *dilute hydrochloric acid R*. Titrate the combined eluate and washings (about 150 ml) with *0.2 M sodium hydroxide*, using 0.1 ml of *phenolphthalein solution R1* as indicator.

Calculate the content of sodium citrate in grams per litre from the following expressions:

For formula A: $1.961n - 1.40C$

or $1.961n - 1.53C'$

For formula B: $1.307n - 1.40C$

or $1.307n - 1.53C'$

n = number of millilitres of *0.2 M sodium hydroxide* used in the titration,

C = content of citric acid monohydrate in grams per litre determined as prescribed above,

C' = content of anhydrous citric acid in grams per litre determined as prescribed above.

Reducing sugars. Dilute 5.0 ml (for formula A) or 10.0 ml (for formula B) to 100.0 ml with *water R*. Introduce 25.0 ml of the solution into a 250 ml conical flask with ground-glass neck and add 25.0 ml of *cupri-citric solution R1*. Add a few pieces of porous material, attach a reflux condenser, heat so that boiling begins within 2 min and boil for exactly 10 min. Cool and add 3 g of *potassium iodide R* dissolved in 3 ml of *water R*. Add 25 ml of a 25 per cent *m/m* solution of *sulphuric acid R* with caution and in small quantities. Titrate with *0.1 M sodium thiosulphate* using 0.5 ml of *starch solution R*, added towards the end of the titration, as indicator (n_1 ml). Carry out a blank titration using 25.0 ml of *water R* (n_2 ml).

Calculate the content of reducing sugars as anhydrous glucose or as glucose monohydrate, as appropriate, from the Table 0209.-1.

Table 0209.-1

Volume of *0.1 M sodium thiosulphate* ($n_2 - n_1$ ml)	Anhydrous glucose in milligrams	Glucose monohydrate in milligrams
8	19.8	21.6
9	22.4	24.5
10	25.0	27.2
11	27.6	30.2
12	30.3	33.1
13	33.0	36.1
14	35.7	39.0
15	38.3	42.1
16	41.3	45.2

STORAGE

Store in an airtight, tamper-proof container, protected from light.

LABELLING

The label states:

– the composition and volume of the solution,

– the maximum amount of blood to be collected in the container.

Anticoagulant citrate-phosphate-glucose solution (CPD)

Sodium citrate (0412)	26.3 g
Citric acid monohydrate (0456)	3.27 g
or *Citric acid, anhydrous (0455)*	2.99 g
*Glucose monohydrate (0178)**	25.5 g
or *Glucose, anhydrous (0177)**	23.2 g
Sodium dihydrogen phosphate dihydrate (0194)	2.51 g
Water for injections (0169) to	1000.0 ml
Volume to be used per 100 ml of blood	14.0 ml

*The competent authority may require that the substances comply with the test for pyrogens given in the monographs on *Glucose monohydrate (0178)* and *Glucose, anhydrous (0177)*, respectively.

CHARACTERS

A colourless or faintly yellow, clear liquid, practically free from particles.

IDENTIFICATION

A. Examine by thin-layer chromatography (*2.2.27*), using *silica gel G R* as the coating substance.

Test solution. Dilute 2 ml of the solution to be examined to 100 ml with a mixture of 2 volumes of *water R* and 3 volumes of *methanol R*.

Reference solution (a). Dissolve 10 mg of *glucose CRS* in a mixture of 2 volumes of *water R* and 3 volumes of *methanol R* and dilute to 20 ml with the same mixture of solvents.

Reference solution (b). Dissolve 10 mg each of *glucose CRS, lactose CRS, fructose CRS* and *sucrose CRS* in a mixture of 2 volumes of *water R* and 3 volumes of *methanol R* and dilute to 20 ml with the same mixture of solvents.

Apply separately to the plate 2 µl of each solution and thoroughly dry the starting points. Develop over a path of 15 cm using a mixture of 10 volumes of *water R*, 15 volumes of *methanol R*, 25 volumes of *anhydrous acetic acid R* and 50 volumes of *ethylene chloride R*. The volumes of solvents have to be measured accurately since a slight excess of water produces cloudiness. Dry the plate in a current of warm air. Repeat the development immediately, after renewing the mobile phase. Dry the plate in a current of warm air and spray evenly with a solution of 0.5 g of *thymol R* in a mixture of 5 ml of *sulphuric acid R* and 95 ml of *alcohol R*. Heat at 130 °C for 10 min. The principal spot in the chromatogram obtained with the test solution is similar in position, colour and size to the principal spot in the chromatogram obtained with reference solution (a). The test is not valid unless the chromatogram obtained with reference solution (b) shows 4 clearly separated spots.

B. To 2 ml add 5 ml of *cupri-citric solution R*. Heat to boiling. An orange precipitate is formed and the solution becomes yellow.

C. To 2 ml add 3 ml of *water R*. The solution gives the reaction of citrates (*2.3.1*).

D. 1 ml gives reaction (b) of phosphates (*2.3.1*).

E. 0.5 ml gives reaction (b) of sodium (*2.3.1*).

TESTS

pH (*2.2.3*). The pH of the solution is 5.3 to 5.9.

Hydroxymethylfurfural. To 2.0 ml add 5.0 ml of a 100 g/l solution of *p-toluidine R* in *2-propanol R* containing 10 per cent *V/V* of *glacial acetic acid R* and 1.0 ml of a 5 g/l solution of *barbituric acid R*. The absorbance (*2.2.25*), determined at 550 nm after allowing the mixture to stand for 2 min to 3 min, is not greater than that of a standard prepared at the same time in the same manner using 2.0 ml of a solution containing 5 ppm of *hydroxymethylfurfural R*.

Sterility (*2.6.1*). They comply with the test for sterility.

Pyrogens (*2.6.8*). They comply with the test for pyrogens. Dilute with a pyrogen-free, 9 g/l solution of *sodium chloride R* to obtain a solution containing approximately 5 g/l of sodium citrate. Inject 10 ml of the diluted solution per kilogram of the rabbit's mass.

ASSAY

Sodium dihydrogen phosphate. Dilute 10.0 ml to 100.0 ml with *water R*. To 10.0 ml of this solution add 10.0 ml of *nitro-vanado-molybdic reagent R*. Mix and allow to stand at 20 °C to 25 °C for 30 min. At the same time and in the same manner, prepare a reference solution using 10.0 ml of a standard solution containing 0.219 g of *potassium dihydrogen phosphate R* per litre. Measure the absorbance (*2.2.25*) of the 2 solutions at 450 nm using as the compensation liquid a solution prepared in the same manner using 10 ml of *water R*. Calculate the content of sodium dihydrogen phosphate dihydrate (*P*) in grams per litre from the expression:

$$\frac{11.46 \times C \times A_1}{A_2}$$

C = concentration of *potassium dihydrogen phosphate R* in the standard solution in grams per litre,

A_1 = absorbance of the test solution,

A_2 = absorbance of the reference solution.

Citric acid. To 20.0 ml add 0.1 ml of *phenolphthalein solution R1* and titrate with *0.2 M sodium hydroxide*.

Calculate the content of citric acid monohydrate (*C*), or anhydrous citric acid (*C'*), in grams per litre from the equations:

$$C = 0.7005n - 0.4490P$$

$$C' = 0.6404n - 0.4105P$$

n = number of millilitres of *0.2 M sodium hydroxide* used in the titration,

P = content of sodium dihydrogen phosphate dihydrate in grams per litre determined as prescribed above.

Sodium citrate. Prepare a chromatography column 0.10 m long and 10 mm in internal diameter and filled with *strongly acidic ion-exchange resin R* (300 µm to 840 µm). Maintain a 1 cm layer of liquid above the resin at all times. Wash the column with 50 ml of de-ionised *water R* at a flow rate of 12-14 ml/min.

Dilute 10.0 ml of the solution to be examined to about 40 ml with de-ionised *water R* in a beaker and transfer to the column reservoir, washing the beaker 3 times with a few millilitres of de-ionised *water R*. Allow the solution to run through the column at a flow rate of 12-14 ml/min and collect the eluate. Wash the column with 2 quantities, each of 30 ml, and with one quantity of 50 ml, of de-ionised *water R*. The column can be used for 3 successive determinations before regeneration with 3 times its volume of *dilute hydrochloric acid R*. Titrate the combined eluate and washings (about 150 ml) with *0.2 M sodium hydroxide*, using 0.1 ml of *phenolphthalein solution R1* as indicator.

Calculate the content of sodium citrate in grams per litre from the following expressions:

$$1.961n - 1.257P - 1.40C$$

$$1.961n - 1.257P - 1.53C'$$

n = number of millilitres of *0.2 M sodium hydroxide* used in the titration,

P = content of sodium dihydrogen phosphate dihydrate in grams per litre determined as prescribed above,

C = content of citric acid monohydrate in grams per litre determined as prescribed above,

C' = content of anhydrous citric acid in grams per litre determined as prescribed above.

Reducing sugars. Dilute 5.0 ml to 100.0 ml with *water R*. Introduce 25.0 ml of the solution into a 250 ml conical flask with ground-glass neck and add 25.0 ml of *cupri-citric solution R1*. Add a few pieces of porous material, attach a reflux condenser, heat so that boiling begins within 2 min and boil for exactly 10 min. Cool and add 3 g of *potassium iodide R* dissolved in 3 ml of *water R*. Add 25 ml of a 25 per cent *m/m* solution of *sulphuric acid R* with caution and in small quantities. Titrate with *0.1 M sodium thiosulphate* using 0.5 ml of *starch solution R*, added towards the end of the titration, as indicator (n_1 ml). Carry out a blank titration using 25.0 ml of *water R* (n_2 ml).

Calculate the content of reducing sugars as anhydrous glucose or as glucose monohydrate, as appropriate, from the Table 0209.-1.

STORAGE

Store in an airtight, tamper-proof container, protected from light.

LABELLING

The label states:

- the composition and volume of the solution,
- the maximum amount of blood to be collected in the container.

01/2008:1928

ANTI-T LYMPHOCYTE IMMUNOGLOBULIN FOR HUMAN USE, ANIMAL

Immunoglobulinum anti-T lymphocytorum ex animale ad usum humanum

DEFINITION

Animal anti-T lymphocyte immunoglobulin for human use is a liquid or freeze-dried preparation containing immunoglobulins, obtained from serum or plasma of animals, mainly rabbits or horses, immunised with human lymphocytic antigens.

The immunoglobulin has the property of diminishing the number and function of immunocompetent cells, in particular T-lymphocytes. The preparation contains principally immunoglobulin G. It may contain antibodies against other lymphocyte subpopulations and against other cells. The preparation is intended for intravenous administration, after dilution with a suitable diluent where applicable.

Applicable provisions of the monograph on *Immunosera for human use, animal (0084)* are stated below.

PRODUCTION

GENERAL PROVISIONS

The production method has been shown to yield consistently immunoglobulins of acceptable safety, potency in man and stability.

Any reagent of biological origin used in production shall be free of contamination with bacteria, fungi and viruses. The method of preparation includes a step or steps that have been shown to remove or inactivate known agents of infection.

During development studies, it shall be demonstrated that the production method yields a product that:

- does not transmit infectious agents,
- is characterised by a defined pattern of immunological activity, notably: antigen binding, complement-dependent and independent cytotoxicity, cytokine release, induction of T-cell activation, cell death,
- does not contain antibodies that cross-react with human tissues to a degree that would impair clinical safety,
- has a defined maximum content of anti-thrombocyte antibody activity,
- has a defined maximum content of haemoglobin.

The product has been shown, by suitable tests in animals and evaluation during clinical trials, to be well tolerated.

Reference preparation. A batch shown to be suitable for checking the validity of the assay and whose efficacy has been demonstrated in clinical trials, or a batch representative thereof.

ANIMALS

The animals used are of a species approved by the competent authority, are healthy and exclusively reserved for production of anti-T lymphocyte immunoglobulin. They are tested and shown to be free from a defined list of infectious agents. The introduction of animals into a closed herd follows specified procedures, including definition of quarantine measures. Where appropriate, tests for additional specific agents are considered depending on the geographical localisation of the establishment used for the breeding and production of the animals. The feed originates from a controlled source and no animal proteins are added. The suppliers of animals are certified by the competent authority.

If the animals are treated with antibiotics, a suitable withdrawal period is allowed before collection of blood or plasma. The animals are not treated with penicillin antibiotics. If a live vaccine is administered, a suitable waiting period is imposed between vaccination and collection of serum or plasma for immunoglobulin production.

The species, origin and identification number of the animals are specified.

IMMUNISATION

The antigens used are identified and characterised, where appropriate. They are identified by their names and a batch number; information on the source and preparation are recorded.

The selected animals are isolated for at least 1 week before being immunised according to a defined schedule with booster injections at suitable intervals. Adjuvants may be used.

Animals are kept under general health surveillance and specific antibody production is controlled at each cycle of immunisation.

Animals are thoroughly examined before collection of blood or plasma. If an animal shows any pathological lesion not related to the immunisation process, it is not used, nor are any other of the animals in the group concerned, unless it is evident that their use will not impair the safety of the product.

Human antigens such as continuously growing T-lymphocyte cell lines or thymocytes are used to immunise the animals. Cells may be subjected to a sorting procedure. The immunising antigens are shown to be free from infectious agents by validated methods for relevant blood-borne pathogens, notably hepatitis B virus (HBV), hepatitis C virus (HCV) and human immunodeficiency virus (HIV) and other relevant adventitious agents originating from the preparation of the antigen. The cells used comply with defined requirements for purity of the cell population and freedom from adventitious agents.

COLLECTION OF BLOOD OR PLASMA

Collection of blood is made by venepuncture or plasmapheresis. The puncture area is shaved, cleaned and disinfected. The animals may be anaesthetised under conditions that do not influence the quality of the product.

No antimicrobial preservative is added to the plasma and serum samples. The blood or plasma is collected in such a manner as to maintain sterility of the product. The blood or plasma collection is conducted at a site separate from the area where the animals are kept or bred and the area where the immunoglobulin is purified. If the serum or plasma is stored before further processing, precautions are taken to avoid microbial contamination.

Several single plasma or serum samples may be pooled before purification. The single or pooled samples are tested before purification for the following tests.

Tests for contaminating viruses. Each pool is tested for contaminating viruses by suitable *in vitro* tests including inoculation to cell cultures capable of detecting a wide range of viruses relevant for the particular product. Where applicable, *in vitro* tests for contaminating viruses are carried out on the adsorbed pool, after the last production stage that may introduce viral contaminants.

PURIFICATION AND VIRAL INACTIVATION

The immunoglobulins are concentrated and purified by fractional precipitation, chromatography, immuno-adsorption or by other suitable chemical or physical methods. The methods are selected and validated to avoid contamination at all steps of processing and to avoid formation of protein aggregates that effect immunobiological characteristics of the product.

Unless otherwise justified and authorised, validated procedures are applied for removal and/or inactivation of viruses.

After purification and treatment for removal and/or inactivation of viruses, a stabiliser may be added to the intermediate product, which may be stored for a period defined in the light of stability data.

Only an intermediate product that complies with the following requirements may be used in the preparation of the final bulk.

If the method of preparation includes a step for adsorption of cross-reacting anti-human antibodies using material from human tissues and/or red blood cells, the human materials are submitted to a validated procedure for inactivation of infectious agents, unless otherwise justified and authorised. If erythrocytes are used for adsorption, the donors for such materials comply with the requirements for donors of blood and plasma of the monograph on *Human plasma for fractionation (0853)*. If other human material is used, it is shown by validated methods to be free from relevant blood-borne pathogens, notably HBV, HCV and HIV. If substances are used for inactivation or removal of viruses, it shall have been shown that any residues present in the final product have no adverse effects on the patients treated with the anti-T lymphocyte immunoglobulin.

FINAL BULK

The final bulk is prepared from a single intermediate product or from a pool of intermediate products obtained from animals of the same species. A stabiliser may be added. No antimicrobial preservative is added either during the manufacturing procedure or for preparation of the final bulk solution. During manufacturing, the solution is passed through a bacteria-retentive filter.

FINAL LOT

The final bulk of anti-T-lymphocyte immunoglobulin is distributed aseptically into sterile, tamper-proof containers. The containers are closed as to prevent contamination. Only a final lot that complies with the requirements prescribed below under Identification, Tests and Assay may be released for use.

CHARACTERS

The liquid preparation is clear or slightly opalescent and colourless or pale yellow. The freeze-dried preparation is a white or slightly yellow powder or solid friable mass, which after reconstitution gives a liquid preparation corresponding to the description above.

IDENTIFICATION

A. Using a suitable range of species-specific antisera, carry out precipitation tests on the preparation to be examined. It is recommended that the test be carried

out using antisera specific to the plasma proteins of each species of domestic animal commonly used in the preparation of materials of biological origin in the country concerned and antisera specific to human plasma proteins. The preparation is shown to contain proteins originating from the animal used for the anti-T lymphocyte immunoglobulin production.

B. Examine by a suitable immunoelectrophoresis technique. Using antiserum to normal serum of the animal used for production, compare this serum and the preparation to be examined, both diluted to a concentration that will allow a clear gammaglobulin precipitation arc to be obtained on the gel. The main component of the preparation to be examined corresponds to the IgG component of normal serum of the animal used for production.

C. The preparation complies with the assay.

TESTS

Solubility. To a container of the preparation to be examined, add the volume of the liquid for reconstitution stated on the label. The preparation dissolves completely within the time stated on the label.

Extractable volume (*2.9.17*). It complies with the requirement for extractable volume.

pH (*2.2.3*). The pH is within the limits approved for the particular product.

Osmolality (*2.2.35*): minimum 240 mosmol/kg after dilution, where applicable.

Proteins (*2.5.33*): 90 per cent to 110 per cent of the amount stated on the label.

Stabiliser. Determine the amount of stabiliser by a suitable physico-chemical method. The preparation contains not less than 80 per cent and not more than 120 per cent of the quantity stated on the label.

Distribution of molecular size. Size exclusion chromatography (*2.2.30*).

Test solution. Dilute the preparation to be examined with a 9 g/l solution of *sodium chloride R* to a concentration suitable for the chromatographic system used. A concentration in the range 2-20 g/l is usually suitable.

Reference solution. Dilute *human immunoglobulin (molecular size) BRP* with a 9 g/l solution of *sodium chloride R* to the same protein concentration as the test solution.

Column:

– *size*: *l* = 0.6 m, Ø = 7.5 mm,

– *stationary phase*: *silica gel for size-exclusion chromatography R*, a grade suitable for fractionation of globular proteins in the molecular mass range of 20 000 to 200 000.

Mobile phase: dissolve 4.873 g of *disodium hydrogen phosphate dihydrate R*, 1.741 g of *sodium dihydrogen phosphate monohydrate R* and 11.688 g of *sodium chloride R* in 1 litre of *water R*.

Flow rate: 0.5 ml/min.

Detection: spectrophotometer at 280 nm.

Injection: 50-600 µg of protein.

Retention time: identify the peaks in the chromatogram obtained with the test solution by comparison with the chromatogram obtained with the reference solution; any peak with a retention time shorter than that of dimer corresponds to polymers and aggregates.

System suitability:

– *reference solution*: the principal peak corresponds to IgG monomer and there is a peak corresponding to dimer with a retention time relative to monomer of 0.85 ± 0.05,

– *test solution*: the relative retentions of monomer and dimer are 1 ± 0.05 with reference to the corresponding peaks in the chromatogram obtained with the reference solution.

Limits:

– *total monomer and dimer*: at least 95 per cent of the total area of the peaks,

– *total polymers and aggregates*: maximum 5 per cent of the total area of the peaks.

Purity. Polyacrylamide gel electrophoresis (*2.2.31*), under non-reducing and reducing conditions.

Resolving gel. Non-reducing conditions: 8 per cent acrylamide; reducing conditions: 12 per cent acrylamide.

Test solution. Dilute the preparation to be examined to a protein concentration of 0.5-2 mg/ml.

Reference solution. Dilute the reference preparation to the same protein concentration as the test solution.

Application: 10 µl.

Detection: Coomassie staining.

Results: compared with the electropherogram of the reference solution, no additional bands are found in the electropherogram of the test solution.

Anti-A and anti-B haemagglutinins (*2.6.20*). The 1 to 64 dilution does not show agglutination.

Where applicable, dilute the preparation to be examined as prescribed for use before preparing the dilutions for the test.

Haemolysins. Prepare a 1 to 64 dilution of the preparation to be examined, diluted if necessary as stated on the label. Take 6 aliquots of the 1 to 64 dilution. To 1 volume of 3 of the aliquots, add 1 volume of a 10 per cent *V/V* suspension of group A1, group B and group O erythrocytes in a 9 g/l solution of *sodium chloride R*, respectively. To 1 volume of the remaining 3 aliquots, add 1 volume of a 10 per cent *V/V* suspension of group A1, group B and group O erythrocytes in a 9 g/l solution of *sodium chloride R*, respectively, and to each aliquot 1 volume of fresh group AB serum (as a source of complement). Mix and incubate at 37 °C for 1 h. Examine the supernatant liquids for haemolysis. No signs of haemolysis are present.

Thrombocyte antibodies. Examined by a suitable method, the level of thrombocyte antibodies is shown to be below that approved for the specific product.

Water (*2.5.12*): maximum 3 per cent.

Sterility (*2.6.1*). It complies with the test for sterility.

Pyrogens (*2.6.8*). Unless otherwise justified and authorised, it complies with the test for pyrogens. Unless otherwise prescribed, inject 1 ml per kilogram of the rabbit's body mass.

ASSAY

The biological activity is determined by measuring the complement-dependent cytotoxicity on target cells. Flow cytometry is performed with read-out of dead cells stained using propidium iodide. The activity is expressed as the concentration of anti-T lymphocyte immunoglobulin in milligrams per millilitre which mediates 50 per cent cytotoxicity.

Lymphocyte separation medium. Commercial separation media with low viscosity and a density of 1.077 g/ml.

Complement. Commercial complement is suitable.

Buffered salt solution pH 7.2. Dissolve 8.0 g of *sodium chloride R*, 0.2 g of *potassium chloride R*, 3.18 g of *disodium hydrogen phosphate R* and 0.2 g of *potassium dihydrogen phosphate R* in *water R* and dilute to 1000.0 ml with the same solvent.

Buffer solution for flow cytometry. Add 40 ml of 0.1 per cent *V/V sodium azide R* and 10 ml of foetal calf serum to 440 ml of buffered salt solution pH 7.2. The foetal calf serum is inactivated at 56 °C for 30 min prior to use. Store at 4 °C.

Propidium iodide solution. Dissolve *propidium iodide R* in buffered salt solution pH 7.2, to a concentration of 1 mg/ml. Store this stock solution at 2-8 °C and use within 1 month. For the assay, dilute this solution with buffer solution for flow cytometry, to obtain a concentration of 5 µg/ml. Store at 2-8 °C and use within 3 h.

Microtitre plates. Plates used to prepare immunoglobulin dilutions are U- or V-bottomed polystyrene or poly(vinyl chloride) plates without surface treatment.

Micronic tubes. Suitable for flow cytometry measurement.

Cell suspension. Collect blood in anticoagulant from at least one healthy donor. Immediately isolate the peripheral blood mononuclear cells (PBMC) by gradient centrifugation in lymphocyte separation medium so that the PBMC form a visible clean interface between the plasma and the separation medium. Collect the layer containing the cells and dispense into centrifuge tubes containing buffered salt solution pH 7.2. Centrifuge at 400 *g* at 2-8 °C for 10 min. Discard the supernatant. Suspend the cell pellet in buffer solution for flow cytometry. Repeat the centrifugation and resuspension procedure of the cells twice. After the third centrifugation, resuspend the cell pellet in 1 ml of buffer solution for flow cytometry. Determine the number and vitality of the cells using a haemocytometer. Cell viability of at least 90 per cent is required. Adjust the cell number to 7×10^6/ml by adding buffer solution for flow cytometry. Store the cell suspension at 4 °C and use within 12 h.

If necessary, the first PBMC pellet may be resuspended in buffered salt solution pH 7.2 containing 20 per cent fœtal calf serum and stored overnight at 2 °C. Centrifuge at 400 *g* at 2-8 °C for 10 min. Discard the supernatant. Suspend the cell pellet in buffer solution for flow cytometry. Determine the number and vitality of the cells using a haemocytometer. Cell viability of at least 90 per cent is required. Adjust the cell number to 7×10^6/ml by adding buffer solution for flow cytometry.

It is also possible for cells to be immediately frozen and stored in nitrogen using the following method.

Buffer solution for freezing. To 20 ml of cell culture medium, add 25 ml of fœtal calf serum and 5 ml of dimethyl sulphoxide (DMSO). Store this solution at 2-8 °C and use within 3 h.

20×10^6 cells per ampoule are frozen. These ampoules are stored in liquid nitrogen.

Buffer solution for thawing. To 450 ml of cell culture medium, add 50 ml of foetal calf serum. Store this solution at 2-8 °C and use within 3 h.

Each ampoule is thawed in a water-bath at 37 °C with shaking. Cell suspension is repeated in a buffer solution for thawing. Centrifuge at 200 *g* at 2-8 °C for 10 min. Discard the supernatant. Suspend the cell pellet in buffer solution for flow cytometry. Repeat the procedure for centrifugation and resuspension of cells once. After the second centrifugation, resuspend the cells pellet in 1 ml of buffer solution for flow cytometry. Determine the number and vitality of the cells using a haemocytometer. Cell viability of at least 90 per cent is required. Adjust the cell number to 7×10^6/ml by adding buffer solution for flow cytometry. Store the cell suspension at 4 °C and use within 3 h.

Test solutions. For freeze-dried preparations, reconstitute as stated on the label. Prepare 3 independent series of not fewer than 7 dilutions using buffer solution for flow cytometry as diluent.

Reference solutions. For freeze-dried preparations, reconstitute according to the instructions for use. Prepare 3 independent dilution series of not fewer than 7 dilutions using buffer solution for flow cytometry as diluent.

Distribute 75 µl of each of the dilutions of the test solution or reference solution to each of a series of wells of a microtitre plate. Add 25 µl of the cell suspension of PBMC into each well. Add 25 µl of rabbit complement to each of the wells. Incubate at 37 °C for 30 min.

Centrifuge the plates at 200 *g* at 4 °C for 8 min, discard the supernatant and keep the plate on ice. Preparation for flow cytometry measurement is done step-wise by using a certain number of wells in order to allow labelling with *propidium iodide R* solution and measurement within a defined time period. Resuspend carefully the cell pellet of a certain number of wells with 200 µl of propidium iodide solution. Transfer the suspension into tubes. Incubate at 25 °C for 10 min then place immediately on ice.

Proceed with fluorescence measurement in a flow cytometer. Define a region including all propidium iodide-positive cells on the basis of Forward-Scattered, light (FSC) and flourescence (FL2 or FL3 for propidium iodide). Measure the percentage of propidium iodide-positive cells, without gating but excluding debris. Analyse at least 3000 cells for each of the test and reference solutions.

Use the percentages of dead cells to estimate the potency as the concentration in milligrams per millilitre of the preparation to be examined necessary to induce 50 per cent of cytotoxicity by fitting a sigmoidal dose response curve to the data obtained with the test and the reference preparations and by using a 4-parameter logistic model (see, for example, chapter *5.3*) and suitable software. The test is not valid unless the percentage of propidium iodide-positive cells at the lower asymptote of the curve is less then 15 per cent and the percentage of propidium iodide-positive cells at the upper asymptote of the curve is at least 80 per cent.

The estimated activity is 70 per cent to 130 per cent of the activity approved for the particular product.

The confidence limits ($P = 0.95$) are not less than 80 per cent and not more than 125 per cent of the estimated potency.

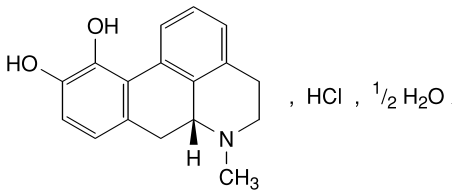
STORAGE

Protected from light at the temperature stated on the label.

Expiry date. The expiry date is calculated from the beginning of the assay.

LABELLING

The label states:



- for liquid preparations, the volume of the preparation in the container and the protein content,
- for freeze-dried preparations:
  - the name and the volume of the reconstitution liquid to be added,
  - the quantity of protein in the container,
  - that the immunoserum is to be used immediately after reconstitution,
  - the time required for complete dissolution,
- the animal species of origin,

– the name and amount of stabiliser, where applicable,
– the dilution to be made before use of the product.

APOMORPHINE HYDROCHLORIDE

Apomorphini hydrochloridum

$C_{17}H_{18}ClNO_2,1/2H_2O$ M_r 312.8
[41372-20-7]

DEFINITION

(6a*R*)-6-Methyl-5,6,6a,7-tetrahydro-4*H*-dibenzo[*de*, *g*]quinoline-10,11-diol hydrochloride hemihydrate.

Content: 99.0 per cent to 101.0 per cent (dried substance).

CHARACTERS

Appearance: white or slightly yellowish-brown or green-tinged greyish, crystalline powder or crystals; on exposure to air and light, the green tinge becomes more pronounced.

Solubility: sparingly soluble in water and in alcohol, practically insoluble in toluene.

IDENTIFICATION

First identification: B, D.

Second identification: A, C, D.

A. Dissolve 10.0 mg in *0.1 M hydrochloric acid* and dilute to 100.0 ml with the same acid. Dilute 10.0 ml of the solution to 100.0 ml with *0.1 M hydrochloric acid*. Examined between 230 nm and 350 nm (*2.2.25*), the solution shows an absorption maximum at 273 nm and a shoulder at 300 nm to 310 nm. The specific absorbance at the maximum is 530 to 570.

B. Infrared absorption spectrophotometry (*2.2.24*).
Comparison: *Ph. Eur. reference spectrum of apomorphine hydrochloride.*

C. To 5 ml of solution S (see Tests) add a few millilitres of *sodium hydrogen carbonate solution R* until a permanent, white precipitate is formed. The precipitate slowly becomes greenish. Add 0.25 ml of *0.05 M iodine* and shake. The precipitate becomes greyish-green. Collect the precipitate. The precipitate dissolves in *ether R* giving a purple solution, in *methylene chloride R* giving a violet-blue solution and in *alcohol R* giving a blue solution.

D. To 2 ml of solution S add 0.1 ml of *nitric acid R*. Mix and filter. The filtrate gives reaction (a) of chlorides (*2.3.1*).

TESTS

Solution S. Dissolve 0.25 g without heating in *carbon dioxide-free water R* and dilute to 25 ml with the same solvent.

Appearance of solution. Solution S is clear (*2.2.1*) and not more intensely coloured than reference solution BY_5 or GY_5(*2.2.2, Method II*).

pH (*2.2.3*): 4.0 to 5.0 for solution S.

Specific optical rotation (*2.2.7*): – 48 to – 52 (dried substance).

Dissolve 0.25 g in *0.02 M hydrochloric acid* and dilute to 25.0 ml with the same acid.

Related substances. Liquid chromatography (*2.2.29*).

Test solution. Dissolve 0.25 g of the substance to be examined in a 1 per cent *V/V* solution of *glacial acetic acid R* and dilute to 100.0 ml with the same solution.

Reference solution (a). Dilute 1.0 ml of the test solution to 10.0 ml with a 1 per cent *V/V* solution of *glacial acetic acid R*. Dilute 1.0 ml to 100.0 ml with a 1 per cent *V/V* solution of *glacial acetic acid R*.

Reference solution (b). Dissolve 25 mg of *boldine R* in a 1 per cent *V/V* solution of *glacial acetic acid R* and dilute to 10.0 ml with the same solvent. To 1 ml of this solution, add 1 ml of the test solution and dilute to 10.0 ml with a 1 per cent *V/V* solution of *glacial acetic acid R*.

Column:
– *size*: *l* = 0.15 m, Ø = 4.6 mm,
– *stationary phase*: *octadecylsilyl silica gel for chromatography R* (5 µm),
– *temperature*: 35 °C.

Mobile phase:
– *mobile phase A*: 1.1 g/l solution of *sodium octanesulphonate R*, adjusted to pH 2.2 using a 50 per cent *m/m* solution of *phosphoric acid R*,
– *mobile phase B*: *acetonitrile R*,

Time (min)	Mobile phase A (per cent *V/V*)	Mobile phase B (per cent *V/V*)
0 - 30	85 → 68	15 → 32
30 - 35	68	32
35 - 45	68 → 85	32 → 15

Flow rate: 1.5 ml/min.

Detection: spectrophotometer at 280 nm.

Injection: 10 µl.

System suitability: reference solution (b):
– *resolution*: minimum 2.5 between the peaks due to boldine and apomorphine.

Limits:
– *any impurity*: not more than twice the area of the principal peak in the chromatogram obtained with reference solution (a) (0.2 per cent),
– *total*: not more than 8 times the area of the principal peak in the chromatogram obtained with reference solution (a) (0.8 per cent),
– *disregard limit*: 0.2 times the area of the principal peak in the chromatogram obtained with reference solution (a) (0.02 per cent).

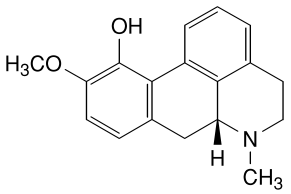
Heavy metals (*2.4.8*): maximum 20 ppm.

1.0 g complies with limit test C. Prepare the standard using 2 ml of *lead standard solution (10 ppm Pb) R*.

Loss on drying (*2.2.32*): 2.5 per cent to 4.2 per cent, determined on 1.000 g by drying in an oven at 105 °C.

Sulphated ash (*2.4.14*): maximum 0.1 per cent, determined on 1.0 g.

ASSAY



Dissolve 0.250 g in a mixture of 5.0 ml of *0.01 M hydrochloric acid* and 50 ml of *alcohol R*. Carry out a potentiometric titration (*2.2.20*), using *0.1 M sodium hydroxide*. Read the volume added between the first 2 points of inflexion.

1 ml of *0.1 M sodium hydroxide* is equivalent to 30.38 mg of $C_{17}H_{18}ClNO_2$.

STORAGE

In an airtight container, protected from light.

IMPURITIES

A. (6a*R*)-10-methoxy-6-methyl-5,6,6a,7-tetrahydro-4*H*-dibenzo[*de*,*g*]quinolin-11-ol (apocodeine),

B. morphine.

01/2008:0580

APROTININ

Aprotininum

DEFINITION

Aprotinin is a polypeptide consisting of a chain of 58 amino acids. It inhibits stoichiometrically the activity of several proteolytic enzymes such as chymotrypsin, kallikrein, plasmin and trypsin. It contains not less than 3.0 Ph. Eur. U. of aprotinin activity per milligram, calculated with reference to the dried substance.

PRODUCTION

The animals from which aprotinin is derived must fulfil the requirements for the health of animals suitable for human consumption to the satisfaction of the competent authority.

The manufacturing process is validated to demonstrate suitable inactivation or removal of any contamination by viruses or other infectious agents.

The method of manufacture is validated to demonstrate that the product, if tested, would comply with the following tests.

Abnormal toxicity (*2.6.9*). Inject into each mouse a quantity of the substance to be examined containing 2 Ph. Eur. U. dissolved in a sufficient quantity of *water for injections R* to give a volume of 0.5 ml.

Histamine (*2.6.10*): maximum 0.2 µg of histamine base per 3 Ph. Eur. U.

CHARACTERS

Appearance: almost white powder, hygroscopic.

Solubility: soluble in water and in isotonic solutions, practically insoluble in organic solvents.

IDENTIFICATION

A. Thin-layer chromatography (*2.2.27*).

Test solution. Solution S (see Tests).

Reference solution. *Aprotinin solution BRP*.

Plate: *TLC silica gel G plate R*.

Mobile phase: *water R, glacial acetic acid R* (80:100 *V/V*) containing 100 g/l of *sodium acetate R*.

Application: 10 µl.

Development: over a path of 12 cm.

Drying: in air.

Detection: spray with a solution of 0.1 g of *ninhydrin R* in a mixture of 6 ml of a 10 g/l solution of *cupric chloride R*, 21 ml of *glacial acetic acid R* and 70 ml of *ethanol R*. Dry the plate at 60 °C.

Results: the principal spot in the chromatogram obtained with the test solution is similar in position, colour and size to the principal spot in the chromatogram obtained with the reference solution.

B. Determine the ability of the substance to be examined to inhibit trypsin activity using the method described below.

Test solution. Dilute 1 ml of solution S to 50 ml with *buffer solution pH 7.2 R*.

Trypsin solution. Dissolve 10 mg of *trypsin BRP* in *0.002 M hydrochloric acid* and dilute to 100 ml with the same acid.

Casein solution. Dissolve 0.2 g of *casein R* in *buffer solution pH 7.2 R* and dilute to 100 ml with the same buffer solution.

Precipitating solution. Mix 1 volume of *glacial acetic acid R*, 49 volumes of *water R* and 50 volumes of *ethanol R*.

Mix 1 ml of the test solution with 1 ml of the trypsin solution. Allow to stand for 10 min and add 1 ml of the casein solution. Incubate at 35 °C for 30 min. Cool in iced water and add 0.5 ml of the precipitating solution. Shake and allow to stand at room temperature for 15 min. The solution is cloudy. Carry out a blank test under the same conditions using *buffer solution pH 7.2 R* instead of the test solution. The solution is not cloudy.

TESTS

Solution S. Prepare a solution of the substance to be examined containing 15 Ph. Eur. U./ml, calculated from the activity stated on the label.

Appearance of solution. Solution S is clear (*2.2.1*).

Absorbance (*2.2.25*): maximum 0.80 by measuring at the absorption maximum at 277 nm.

Prepare a solution of the substance to be examined containing 3.0 Ph. Eur. U./ml.

Protein impurities of higher molecular mass. Size-exclusion chromatography (*2.2.30*).

Use *cross-linked dextran for chromatography R2*. Use a 180 g/l solution of *anhydrous acetic acid R* to swell the gel and as the eluent. Prepare a column of gel 0.8 m to 1.0 m long and 25 mm in diameter, taking care to avoid the introduction of air bubbles. Place at the top of the column a quantity of the substance to be examined containing 300 Ph. Eur. U. dissolved in 1 ml of a 180 g/l solution of *anhydrous acetic acid R* and allow to elute. Collect the eluate in fractions of 2 ml. Measure the absorbance (*2.2.25*) of each fraction at the absorption maximum at 277 nm and plot the values on a graph. The chromatogram obtained does not present an absorption maximum before the elution of the aprotinin.

Loss on drying (*2.2.32*): maximum 6.0 per cent, determined on 0.100 g by drying *in vacuo*.

Bacterial endotoxins (*2.6.14*): less than 0.14 IU per European Pharmacopoeia Unit of aprotinin, if intended for use in the manufacture of parenteral dosage forms without a further appropriate procedure for the removal of bacterial endotoxins.

ASSAY

The activity of aprotinin is determined by measuring its inhibitory action on a solution of trypsin of known activity. The inhibiting activity of the aprotinin is calculated from the difference between the initial activity and the residual activity of the trypsin.

The inhibiting activity of aprotinin is expressed in European Pharmacopoeia Units. 1 Ph. Eur. U. inhibits 50 per cent of the enzymatic activity of 2 microkatals of trypsin.

Use a reaction vessel with a capacity of about 30 ml and provided with:

- a device that will maintain a temperature of 25 ± 0.1 °C;
- a stirring device, such as a magnetic stirrer;
- a lid with 5 holes for accommodating the electrodes, the tip of a burette, a tube for the admission of nitrogen and the introduction of the reagents.

An automatic or manual titration apparatus may be used. In the latter case the burette is graduated in 0.05 ml and the pH-meter is provided with a wide reading scale and glass and calomel electrodes.

Test solution. Prepare a solution of the substance to be examined in *0.0015 M borate buffer solution pH 8.0 R* expected to contain 1.67 Ph. Eur. U./ml (about 0.6 mg (*m* mg) per millilitre).

Trypsin solution. Prepare a solution of *trypsin BRP* containing about 0.8 microkatals per millilitre (about 1 mg/ml), using *0.001 M hydrochloric acid* as the solvent. Use a freshly prepared solution and keep in iced water.

Trypsin and aprotinin solution. To 4.0 ml of the trypsin solution add 1.0 ml of the test solution. Dilute immediately to 40.0 ml with *0.0015 M borate buffer solution pH 8.0 R*. Allow to stand at room temperature for 10 min and then keep in iced water. Use within 6 h of preparation.

Dilute trypsin solution. Dilute 0.5 ml of the trypsin solution to 10.0 ml with *0.0015 M borate buffer solution pH 8.0 R*. Allow to stand at room temperature for 10 min and then keep in iced water.

Maintain an atmosphere of nitrogen in the reaction flask and stir continuously; introduce 9.0 ml of *0.0015 M borate buffer solution pH 8.0 R* and 1.0 ml of a freshly prepared 6.9 g/l solution of *benzoylarginine ethyl ester hydrochloride R*. Adjust to pH 8.0 with *0.1 M sodium hydroxide*. When the temperature has reached equilibrium at 25 ± 0.1 °C, add 1.0 ml of the trypsin and aprotinin solution and start a timer. Maintain at pH 8.0 by the addition of *0.1 M sodium hydroxide* and note the volume added every 30 s. Continue the reaction for 6 min. Determine the number of millilitres of *0.1 M sodium hydroxide* used per second (n_1 ml). Carry out, under the same conditions, a titration using 1.0 ml of the dilute trypsin solution. Determine the number of millilitres of *0.1 M sodium hydroxide* used per second (n_2 ml).

Calculate the aprotinin activity in European Pharmacopoeia Units per milligram from the expression:

$$\frac{4000\,(2n_2 - n_1)}{m}$$

The estimated activity is not less than 90 per cent and not more than 110 per cent of the activity stated on the label.

STORAGE

In an airtight, tamper-proof container, protected from light.

LABELLING

The label states the number of European Pharmacopoeia Units of aprotinin activity per milligram.

01/2008:0579

APROTININ CONCENTRATED SOLUTION

Aprotinini solutio concentrata

[9087-70-1]

DEFINITION

Aprotinin concentrated solution is a solution of aprotinin, a polypeptide consisting of a chain of 58 amino acids, which inhibits stoichiometrically the activity of several proteolytic enzymes such as chymotrypsin, kallikrein, plasmin and trypsin. It contains not less than 15.0 Ph. Eur. U. of aprotinin activity per millilitre.

PRODUCTION

The animals from which aprotinin is derived must fulfil the requirements for the health of animals suitable for human consumption to the satisfaction of the competent authority.

The manufacturing process is validated to demonstrate suitable inactivation or removal of any contamination by viruses or other infectious agents.

The method of manufacture is validated to demonstrate that the product, if tested, would comply with the following tests.

Abnormal toxicity (*2.6.9*). Inject into each mouse a quantity of the preparation to be examined containing 2 Ph. Eur. U. diluted with a sufficient quantity of *water for injections R* to give a volume of 0.5 ml.

Histamine (*2.6.10*): maximum 0.2 µg of histamine base per 3 Ph. Eur. U.

CHARACTERS

Appearance: clear and colourless liquid.

IDENTIFICATION

A. Thin-layer chromatography (*2.2.27*).

Test solution. Solution S (see Tests).

Reference solution. Aprotinin solution BRP.

Plate: *TLC silica gel G plate R.*

Mobile phase: *water R, glacial acetic acid R* (80:100 *V/V*) containing 100 g/l of *sodium acetate R*).

Application: 10 µl.

Development: over a path of 12 cm.

Drying: in air.

Detection: spray with a solution of 0.1 g of *ninhydrin R* in a mixture of 6 ml of a 10 g/l solution of *cupric chloride R*, 21 ml of *glacial acetic acid R* and 70 ml of *ethanol R*. Dry the plate at 60 °C.

Results: the principal spot in the chromatogram obtained with the test solution is similar in position, colour and size to the principal spot in the chromatogram obtained with the reference solution.

B. Determine the ability of the preparation to be examined to inhibit trypsin activity using the method described below.

Test solution. Dilute 1 ml of solution S to 50 ml with *buffer solution pH 7.2 R*.

Trypsin solution. Dissolve 10 mg of *trypsin BRP* in *0.002 M hydrochloric acid* and dilute to 100 ml with the same acid.

Casein solution. Dissolve 0.2 g of *casein R* in *buffer solution pH 7.2 R* and dilute to 100 ml with the same buffer solution.

Precipitating solution. Mix 1 volume of *glacial acetic acid R*, 49 volumes of *water R* and 50 volumes of *ethanol R*.

Mix 1 ml of the test solution with 1 ml of the trypsin solution. Allow to stand for 10 min and add 1 ml of the casein solution. Incubate at 35 °C for 30 min. Cool in iced water and add 0.5 ml of the precipitating solution. Shake and allow to stand at room temperature for 15 min. The solution is cloudy. Carry out a blank test under the same conditions using *buffer solution pH 7.2 R* instead of the test solution. The solution is not cloudy.

TESTS

Solution S. Prepare a solution containing 15 Ph. Eur. U./ml, if necessary by dilution on the basis of the activity stated on the label.

Appearance of solution. Solution S is clear (*2.2.1*).

Absorbance (*2.2.25*): maximum 0.80 by measuring at the absorption maximum at 277 nm.

Prepare from the concentrated solution a dilution containing 3.0 Ph. Eur. U./ml.

Protein impurities of higher molecular mass. Size-exclusion chromatography (*2.2.30*).

Freeze-dry the preparation to be examined using a pressure of 2.7 Pa and a temperature of – 30 °C; the operation, including freeze-drying and a period of drying at 15-25 °C, takes 6-12 h.

Use *cross-linked dextran for chromatography R2*. Use a 180 g/l solution of *anhydrous acetic acid R* to swell the gel and as the eluent. Prepare a column of gel 0.8 m to 1.0 m long and 25 mm in diameter, taking care to avoid the introduction of air bubbles. Place at the top of the column a quantity of the preparation to be examined containing 300 Ph. Eur. U. dissolved in 1 ml of a 180 g/l solution of *anhydrous acetic acid R* and allow to elute. Collect the eluate in fractions of 2 ml. Measure the absorbance (*2.2.25*) of each fraction at the absorption maximum at 277 nm and plot the values on a graph. The chromatogram obtained does not present an absorption maximum before the elution of the aprotinin.

Specific activity of the dry residue: minimum 3.0 Ph. Eur. U. of aprotinin activity per milligram of dry residue.

Evaporate 25.0 ml to dryness in a water-bath, dry the residue at 110 °C for 15 h and weigh. From the mass of the residue and the activity determined as described below, calculate the number of European Pharmacopoeia Units per milligram of dry residue.

Bacterial endotoxins (*2.6.14*): less than 0.14 IU per European Pharmacopoeia Unit of aprotinin, if intended for use in the manufacture of parenteral dosage forms without a further appropriate procedure for the removal of bacterial endotoxins.

ASSAY

The activity of aprotinin is determined by measuring its inhibitory action on a solution of trypsin of known activity. The inhibiting activity of the aprotinin is calculated from the difference between the initial activity and the residual activity of the trypsin.

The inhibiting activity of aprotinin is expressed in European Pharmacopoeia Units. 1 Ph. Eur. U. inhibits 50 per cent of the enzymatic activity of 2 microkatals of trypsin.

Use a reaction vessel with a capacity of about 30 ml and provided with:

– a device that will maintain a temperature of 25 ± 0.1 °C;

– a stirring device, such as a magnetic stirrer;

– a lid with 5 holes for accommodating the electrodes, the tip of a burette, a tube for the admission of nitrogen and the introduction of the reagents.

An automatic or manual titration apparatus may be used. In the latter case the burette is graduated in 0.05 ml and the pH-meter is provided with a wide reading scale and glass and calomel electrodes.

Test solution. With *0.0015 M borate buffer solution pH 8.0 R* prepare an appropriate dilution (*D*) of the concentrated solution expected on the basis of the stated potency to contain 1.67 Ph. Eur. U./ml.

Trypsin solution. Prepare a solution of *trypsin BRP* containing about 0.8 microkatals per millilitre (about 1 mg/ml), using *0.001 M hydrochloric acid* as the solvent. Use a freshly prepared solution and keep in iced water.

Trypsin and aprotinin solution. To 4.0 ml of the trypsin solution add 1.0 ml of the test solution. Dilute immediately to 40.0 ml with *0.0015 M borate buffer solution pH 8.0 R*. Allow to stand at room temperature for 10 min and then keep in iced water. Use within 6 h of preparation.

Dilute trypsin solution. Dilute 0.5 ml of the trypsin solution to 10.0 ml with *0.0015 M borate buffer solution pH 8.0 R*. Allow to stand at room temperature for 10 min and then keep in iced water.

Maintain an atmosphere of nitrogen in the reaction flask and stir continuously; introduce 9.0 ml of *0.0015 M borate buffer solution pH 8.0 R* and 1.0 ml of a freshly prepared 6.9 g/l solution of *benzoylarginine ethyl ester hydrochloride R*. Adjust to pH 8.0 with *0.1 M sodium hydroxide*. When the temperature has reached equilibrium at 25 ± 0.1 °C, add 1.0 ml of the trypsin and aprotinin solution and start a timer. Maintain at pH 8.0 by the addition of *0.1 M sodium hydroxide* and note the volume added every 30 s. Continue the reaction for 6 min. Determine the number of millilitres of *0.1 M sodium hydroxide* used per second (n_1 ml). Carry out, under the same conditions, a titration using 1.0 ml of the dilute trypsin solution. Determine the number of millilitres of *0.1 M sodium hydroxide* used per second (n_2 ml).

Calculate the aprotinin activity in European Pharmacopoeia Units per millilitre from the expression:

$$4000\,(2n_2 - n_1) \times D$$

D = dilution factor of the aprotinin concentrated solution to be examined in order to obtain a solution containing 1.67 Ph. Eur. U./ml.

The estimated activity is not less than 90 per cent and not more than 110 per cent of the activity stated on the label.

STORAGE

In an airtight, tamper-proof container, protected from light.

LABELLING

The label states the number of European Pharmacopoeia Units of aprotinin activity per millilitre.

01/2008:1171 corrected 6.0

ARACHIS OIL, HYDROGENATED

Arachidis oleum hydrogenatum

DEFINITION

Hydrogenated arachis oil is the product obtained by refining, bleaching, hydrogenating and deodorising oil obtained from the shelled seeds of *Arachis hypogaea* L. Each type of hydrogenated arachis oil is characterised by its nominal drop point.

CHARACTERS

A white or faintly yellowish, soft mass which melts to a clear, pale yellow liquid when heated, practically insoluble in water, freely soluble in methylene chloride and in light petroleum (bp: 65 °C to 70 °C), very slightly soluble in alcohol.

IDENTIFICATION

First identification: A, B.

Second identification: A, C.

A. It complies with the test for drop point (see Tests).

B. Carry out the identification of fatty oils by thin-layer chromatography (*2.3.2*). The chromatogram obtained is similar to the typical chromatogram for arachis oil.

C. It complies with the test for composition of fatty acids.

TESTS

Drop point (*2.2.17*): 32 °C to 43 °C. Within this range the drop point does not differ by more than 3 °C from the nominal value.

Acid value (*2.5.1*). Not more than 0.5. Dissolve 10.0 g in 50 ml of the prescribed solvent by heating on a water-bath.

Peroxide value (*2.5.5*). Not more than 5.0. Dissolve 5.0 g in 30 ml of the prescribed solvent by heating on a water-bath.

Unsaponifiable matter (*2.5.7*). Not more than 1.0 per cent.

Alkaline impurities (*2.4.19*). It complies with the test for alkaline impurities in fatty oils.

Composition of fatty acids (*2.4.22, Method A*).

The chromatographic procedure may be carried out using:

– a capillary fused-silica column 25 m long and 0.25 mm in internal diameter coated with *poly(cyanopropyl)siloxane R* (film thickness 0.2 µm),

– *helium for chromatography R* as the carrier gas at a flow rate of 0.7 ml/min,

– a flame-ionisation detector,

– a split injector (1:100),

maintaining the temperature of the column at 180 °C for 20 min and that of the injection port and of the detector at 250 °C.

The fatty acid fraction of the oil has the following composition:

– *saturated fatty acids of chain length less than C_{14}*: not more than 0.5 per cent,

– *myristic acid*: not more than 0.5 per cent,

– *palmitic acid*: 7.0 per cent to 16.0 per cent,

– *stearic acid*: 3.0 per cent to 19.0 per cent,

– *oleic acid and isomers ($C_{18:1}$, equivalent chain length on poly(cyanopropyl)siloxane 18.5 to 18.8)*: 54.0 per cent to 78.0 per cent,

– *linoleic acid and isomers ($C_{18:2}$, equivalent chain length on poly(cyanopropyl)siloxane 19.4 to 19.8)*: not more than 10.0 per cent,

– *arachidic acid*: 1.0 per cent to 3.0 per cent,

– *eicosenoic acids ($C_{20:1}$, equivalent chain length on poly(cyanopropyl)siloxane 20.4 to 20.7)*: not more than 2.1 per cent,

– *behenic acid*: 1.0 per cent to 5.0 per cent,

– *erucic acid and isomers ($C_{22:1}$, equivalent chain length on poly(cyanopropyl)siloxane 22.4 to 22.6)*: not more than 0.5 per cent,

– *lignoceric acid*: 0.5 per cent to 3.0 per cent.

Nickel. Not more than 1.0 ppm of Ni, determined by atomic absorption spectrometry (*2.2.23, Method II*).

Test solution. Into a platinum or silica crucible previously tared after ignition introduce 5.0 g. Cautiously heat and introduce into the substance a wick formed from twisted ashless filter paper. Ignite the wick. When the substance has ignited stop heating. After combustion, ignite in a muffle furnace at about 600 ± 50 °C. Continue ignition until white ash is obtained. After cooling, take up the residue with two quantities, each of 2 ml, of *dilute hydrochloric acid R* and transfer into a 25 ml graduated flask. Add 0.3 ml of *nitric acid R* and dilute to 25.0 ml with *water R*.

Reference solutions. Prepare three reference solutions by adding 1.0 ml, 2.0 ml and 4.0 ml of *nickel standard solution (0.2 ppm Ni) R* to 2.0 ml of the test solution and diluting to 10.0 ml with *water R*.

Measure the absorbance at 232 nm using a nickel hollow-cathode lamp as a source of radiation, a graphite furnace as an atomic generator and *argon R* as the carrier gas.

Water (*2.5.12*). Not more than 0.3 per cent, determined on 1.000 g by the semi-micro determination of water.

STORAGE

Store protected from light.

LABELLING

The label states the nominal drop point.

01/2008:0263

ARACHIS OIL, REFINED

Arachidis oleum raffinatum

DEFINITION

The refined fatty oil obtained from the shelled seeds of *Arachis hypogaea* L. A suitable antioxidant may be added.

CHARACTERS

Appearance: clear, yellowish, viscous liquid.

Solubility: very slightly soluble in ethanol (96 per cent), miscible with light petroleum.

Relative density: about 0.915.

It solidifies at about 2 °C.

IDENTIFICATION

It complies with the identification test for fatty oils by thin-layer chromatography (*2.3.2*). The chromatogram obtained is similar to the typical chromatogram for arachis oil.

TESTS

Acid value (*2.5.1*): maximum 0.5, determined on 10.0 g.

Peroxide value (*2.5.5*): maximum 5.0.

Unsaponifiable matter (*2.5.7*): maximum 1.0 per cent, determined on 5.0 g.

Alkaline impurities (*2.4.19*). It complies with the test for alkaline impurities in fatty oils.

Composition of fatty acids. Gas chromatography (*2.4.22, Method A*). Use the mixture of calibrating substances in Table 2.4.22.-3.

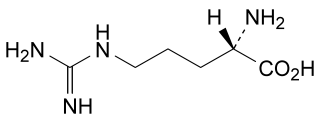
Composition of the fatty acid fraction of the oil:

- *saturated fatty acids of chain length less than* C_{16}: maximum 0.4 per cent,
- *palmitic acid*: 7.0 per cent to 16.0 per cent,
- *stearic acid*: 1.3 per cent to 6.5 per cent,
- *oleic acid* (equivalent chain length on polyethyleneglycol adipate 18.3): 35.0 per cent to 72.0 per cent,
- *linoleic acid* (equivalent chain length on polyethyleneglycol adipate 18.9): 13.0 per cent to 43.0 per cent,
- *linolenic acid* (equivalent chain length on polyethyleneglycol adipate 19.7): maximum 0.6 per cent,
- *arachidic acid*: 0.5 per cent to 3.0 per cent,
- *eicosenoic acid* (equivalent chain length on polyethyleneglycol adipate 20.3): 0.5 per cent to 2.1 per cent,
- *behenic acid*: 1.0 per cent to 5.0 per cent,
- *erucic acid* (equivalent chain length on polyethyleneglycol adipate 22.3): maximum 0.5 per cent,
- *lignoceric acid*: 0.5 per cent to 3.0 per cent.

Water (*2.5.12*): maximum 0.3 per cent, determined on 3.00 g, if intended for use in the manufacture of parenteral dosage forms.

STORAGE

In a well-filled container, protected from light.



LABELLING

The label states, where applicable, that the substance is suitable for use in the manufacture of parenteral dosage forms.

corrected 6.0

ARGININE

Argininum

$C_6H_{14}N_4O_2$ M_r 174.2
[74-79-3]

DEFINITION

Arginine contains not less than 98.5 per cent and not more than the equivalent of 101.0 per cent of (*S*)-2-amino-5-guanidinopentanoic acid, calculated with reference to the dried substance.

CHARACTERS

A white or almost white, crystalline powder or colourless crystals, freely soluble in water, very slightly soluble in alcohol.

IDENTIFICATION

First identification: A, C.

Second identification: A, B, D, E.

A. It complies with the test for specific optical rotation (see Tests).

B. Solution S (see Tests) is strongly alkaline (*2.2.4*).

C. Examine by infrared absorption spectrophotometry (*2.2.24*), comparing with the spectrum obtained with *arginine CRS*. Examine the substances prepared as discs.

D. Examine the chromatograms obtained in the test for ninhydrin-positive substances. The principal spot in the chromatogram obtained with test solution (b) is similar in position, colour and size to the principal spot in the chromatogram obtained with reference solution (a).

E. Dissolve about 25 mg in 2 ml of *water R*. Add 1 ml of *α-naphthol solution R* and 2 ml of a mixture of equal volumes of *strong sodium hypochlorite solution R* and water. A red colour develops.

TESTS

Solution S. Dissolve 2.5 g in *distilled water R* and dilute to 50 ml with the same solvent.

Appearance of solution. Solution S is clear (*2.2.1*) and not more intensely coloured than reference solution BY_6 (*2.2.2, Method II*).

Specific optical rotation (*2.2.7*). Dissolve 2.00 g in *hydrochloric acid R1* and dilute to 25.0 ml with the same acid. The specific optical rotation is + 25.5 to + 28.5, calculated with reference to the dried substance.

Ninhydrin-positive substances. Examine by thin-layer chromatography (*2.2.27*), using a *TLC silica gel plate R*.

Test solution (a). Dissolve 0.10 g of the substance to be examined in *dilute hydrochloric acid R* and dilute to 10 ml with the same acid.

Test solution (b). Dilute 1 ml of test solution (a) to 50 ml with *water R*.

Reference solution (a). Dissolve 10 mg of *arginine CRS* in *0.1 M hydrochloric acid* and dilute to 50 ml with the same acid.

Reference solution (b). Dilute 5 ml of test solution (b) to 20 ml with *water R*.

Reference solution (c). Dissolve 10 mg of *arginine CRS* and 10 mg of *lysine hydrochloride CRS* in *0.1 M hydrochloric acid* and dilute to 25 ml with the same acid.

Apply to the plate 5 µl of each solution. Allow the plate to dry in air. Develop over a path of 15 cm using a mixture of 30 volumes of *concentrated ammonia R* and 70 volumes of *2-propanol R*. Dry the plate at 100 °C to 105 °C until the ammonia disappears completely. Spray with *ninhydrin solution R* and heat at 100 °C to 105 °C for 15 min. Any spot in the chromatogram obtained with test solution (a), apart from the principal spot, is not more intense than the spot in the chromatogram obtained with reference solution (b)

(0.5 per cent). The test is not valid unless the chromatogram obtained with reference solution (c) shows two clearly separated spots.

Chlorides (*2.4.4*). To 5 ml of solution S add 0.5 ml of *dilute nitric acid R* and dilute to 15 ml with *water R*. The solution complies with the limit test for chlorides (200 ppm).

Sulphates (*2.4.13*). To 10 ml of solution S, add 1.7 ml of *dilute hydrochloric acid R* and dilute to 15 ml with *distilled water R*. The solution complies with the limit test for sulphates (300 ppm).

Ammonium (*2.4.1*). 50 mg complies with limit test B for ammonium (200 ppm). Prepare the standard using 0.1 ml of *ammonium standard solution (100 ppm NH_4) R*.

Iron (*2.4.9*). In a separating funnel, dissolve 1.0 g in 10 ml of *dilute hydrochloric acid R*. Shake with three quantities, each of 10 ml, of *methyl isobutyl ketone R1*, shaking for 3 min each time. To the combined organic layers add 10 ml of *water R* and shake for 3 min. The aqueous layer complies with the limit test for iron (10 ppm).

Heavy metals (*2.4.8*). Dissolve 2.0 g in *water R* and dilute to 20 ml with the same solvent. 12 ml of the solution complies with limit test A for heavy metals (10 ppm). Prepare the standard using *lead standard solution (1 ppm Pb) R*.

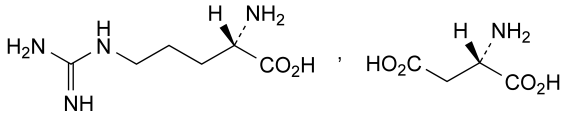
Loss on drying (*2.2.32*). Not more than 0.5 per cent, determined on 1.000 g by drying in an oven at 105 °C.

Sulphated ash (*2.4.14*). Not more than 0.1 per cent, determined on 1.0 g.

ASSAY

Dissolve 0.150 g in 50 ml of *water R*. Using 0.2 ml of *methyl red mixed solution R* as indicator, titrate with *0.1 M hydrochloric acid* until the colour changes from green to violet-red.

1 ml of *0.1 M hydrochloric acid* is equivalent to 17.42 mg of $C_6H_{14}N_4O_2$.



STORAGE

Store protected from light.

corrected 6.0

ARGININE ASPARTATE

Arginini aspartas

$C_{10}H_{21}N_5O_6$ M_r 307.3
[7675-83-4]

DEFINITION

(2*S*)-2-Amino-5-guanidinopentanoic acid (2*S*)-2-aminobutanedioate.

Content: 99.0 per cent to 101.0 per cent (dried substance).

CHARACTERS

Appearance: white or almost white granules or powder.

Solubility: very soluble in water, practically insoluble in alcohol and in methylene chloride.

IDENTIFICATION

A. It complies with the test for specific optical rotation (see Tests).

B. Infrared absorption spectrophotometry (*2.2.24*).

Comparison: *arginine aspartate CRS*.

C. Examine the chromatograms obtained in the test for ninhydrin-positive substances.

Results: the 2 principal spots in the chromatogram obtained with test solution (b) are similar in position, colour and size to the 2 principal spots in the chromatogram obtained with reference solution (a).

TESTS

Solution S. Dissolve 5.0 g in *carbon dioxide-free water R* and dilute to 50 ml with the same solvent.

Appearance of solution. Solution S is clear (*2.2.1*) and not more intensely coloured than reference solution Y_7 (*2.2.2, Method II*).

pH (*2.2.3*): 6.0 to 7.0 for solution S.

Specific optical rotation (*2.2.7*): + 25 to + 27 (dried substance).

Dissolve 2.50 g in *dilute hydrochloric acid R* and dilute to 25.0 ml with the same acid.

Ninhydrin-positive substances. Thin-layer chromatography (*2.2.27*).

Test solution (a). Dissolve 0.20 g of the substance to be examined in *water R* and dilute to 10 ml with the same solvent.

Test solution (b). Dilute 1 ml of test solution (a) to 10 ml with *water R*.

Reference solution (a). Dissolve 25 mg of *arginine R* and 25 mg of *aspartic acid R* in *water R* and dilute to 25 ml with the same solvent.

Reference solution (b). Dilute 2 ml of reference solution (a) to 50 ml with *water R*.

Plate: *TLC silica gel G plate R*.

Mobile phase: *ammonia R, propanol R* (36:64 *V/V*).

Application: 5 µl.

Development: over 2/3 of the plate.

Drying: at 100-105 °C for 10 min.

Detection: spray with *ninhydrin solution R* and heat at 100-105 °C for 10 min.

System suitability: reference solution (b):

– the chromatogram shows 2 clearly separated principal spots.

Limit: test solution (a):

– *any impurity*: any spots, apart from the 2 principal spots, are not more intense than each of the 2 principal spots in the chromatogram obtained with reference solution (b) (0.2 per cent).

Chlorides (*2.4.4*): maximum 200 ppm.

Dilute 2.5 ml of solution S to 15 ml with *water R*.

Sulphates (*2.4.13*): maximum 300 ppm.

To 0.5 g add 2.5 ml of *dilute hydrochloric acid R* and dilute to 15 ml with *distilled water R*. Examine after 30 min.

Ammonium (*2.4.1*): maximum 100 ppm, determined on 100 mg.

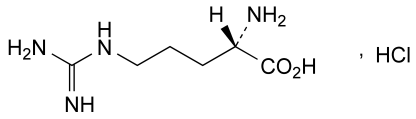
Heavy metals (*2.4.8*): maximum 20 ppm.

12 ml of solution S complies with limit test A. Prepare the standard using *lead standard solution (2 ppm Pb) R*.

Loss on drying (*2.2.32*): maximum 0.5 per cent, determined on 1.000 g by drying in an oven at 60 °C for 24 h.

Sulphated ash (*2.4.14*): maximum 0.1 per cent, determined on 1.0 g.

ASSAY



Dissolve 80.0 mg in 2 ml of *anhydrous formic acid R*. Add 50 ml of *anhydrous acetic acid R*. Titrate with *0.1 M perchloric acid*, determining the end-point potentiometrically (*2.2.20*).

1 ml of *0.1 M perchloric acid* is equivalent to 10.24 mg of $C_{10}H_{21}N_5O_6$.

01/2008:0805
corrected 6.0

ARGININE HYDROCHLORIDE

Arginini hydrochloridum

$C_6H_{15}ClN_4O_2$ M_r 210.7
[1119-34-2]

DEFINITION

Arginine hydrochloride contains not less than 98.5 per cent and not more than the equivalent of 101.0 per cent of the hydrochloride of (*S*)-2-amino-5-guanidinopentanoic acid, calculated with reference to the dried substance.

CHARACTERS

A white or almost white, crystalline powder or colourless crystals, freely soluble in water, very slightly soluble in alcohol.

IDENTIFICATION

First identification: A, B, E.

Second identification: A, C, D, E.

A. It complies with the test for specific optical rotation (see Tests).

B. Examine by infrared absorption spectrophotometry (*2.2.24*), comparing with the spectrum obtained with *arginine hydrochloride CRS*. Examine the substances prepared as discs.

C. Examine the chromatograms obtained in the test for ninhydrin-positive substances. The principal spot in the chromatogram obtained with test solution (b) is similar in position, colour and size to the principal spot in the chromatogram obtained with reference solution (a).

D. Dissolve about 25 mg in 2 ml of *water R*. Add 1 ml of *α-naphthol solution R* and 2 ml of a mixture of equal volumes of *strong sodium hypochlorite solution R* and *water R*. A red colour develops.

E. It gives reaction (a) of chlorides (*2.3.1*).

TESTS

Solution S. Dissolve 2.5 g in *distilled water R* and dilute to 50 ml with the same solvent.

Appearance of solution. Solution S is clear (*2.2.1*) and not more intensely coloured than reference solution BY_6 (*2.2.2, Method II*).

Specific optical rotation (*2.2.7*). Dissolve 2.00 g in *hydrochloric acid R1* and dilute to 25.0 ml with the same acid. The specific optical rotation is + 21.0 to + 23.5, calculated with reference to the dried substance.

Ninhydrin-positive substances. Examine by thin-layer chromatography (*2.2.27*), using a *TLC silica gel plate R*.

Test solution (a). Dissolve 0.10 g of the substance to be examined in *water R* and dilute to 10 ml with the same solvent.

Test solution (b). Dilute 1 ml of test solution (a) to 50 ml with *water R*.

Reference solution (a). Dissolve 10 mg of *arginine hydrochloride CRS* in *water R* and dilute to 50 ml with the same solvent.

Reference solution (b). Dilute 5 ml of test solution (b) to 20 ml with *water R*.

Reference solution (c). Dissolve 10 mg of *arginine hydrochloride CRS* and 10 mg of *lysine hydrochloride CRS* in *water R* and dilute to 25 ml with the same solvent.

Apply to the plate 5 µl of each solution. Allow the plate to dry in air. Develop over a path of 15 cm using a mixture of 30 volumes of *concentrated ammonia R* and 70 volumes of *2-propanol R*. Dry the plate at 100 °C to 105 °C until the ammonia disappears completely. Spray with *ninhydrin solution R* and heat at 100 °C to 105 °C for 15 min. Any spot in the chromatogram obtained with test solution (a), apart from the principal spot, is not more intense than the spot in the chromatogram obtained with reference solution (b) (0.5 per cent). The test is not valid unless the chromatogram obtained with reference solution (c) shows two clearly separated spots.

Sulphates (*2.4.13*). Dilute 10 ml of solution S to 15 ml with *distilled water R*. The solution complies with the limit test for sulphates (300 ppm).

Ammonium (*2.4.1*). 50 mg complies with limit test B for ammonium (200 ppm). Prepare the standard using 0.1 ml of *ammonium standard solution (100 ppm NH_4) R*.

Iron (*2.4.9*). In a separating funnel, dissolve 1.0 g in 10 ml of *dilute hydrochloric acid R*. Shake with three quantities, each of 10 ml, of *methyl isobutyl ketone R1*, shaking for 3 min each time. To the combined organic layers add 10 ml of *water R* and shake for 3 min. The aqueous layer complies with the limit test for iron (10 ppm).

Heavy metals (*2.4.8*). Dissolve 2.0 g in *water R* and dilute to 20 ml with the same solvent. 12 ml of the solution complies with limit test A for heavy metals (10 ppm). Prepare the standard using *lead standard solution (1 ppm Pb) R*.

Loss on drying (*2.2.32*). Not more than 0.5 per cent, determined on 1.000 g by drying in an oven at 105 °C.

Sulphated ash (*2.4.14*). Not more than 0.1 per cent, determined on 1.0 g.

ASSAY

Dissolve 0.180 g in 3 ml of *anhydrous formic acid R*. Add 30 ml of *anhydrous acetic acid R*. Using 0.1 ml of *naphtholbenzein solution R* as indicator, titrate with *0.1 M perchloric acid* until the colour changes from brownish-yellow to green.

1 ml of *0.1 M perchloric acid* is equivalent to 21.07 mg of $C_6H_{15}ClN_4O_2$.

STORAGE

Store protected from light.

corrected 6.0

ARNICA FLOWER

Arnicae flos

DEFINITION

Whole or partially broken, dried flower-heads of *Arnica montana* L.

Content: minimum 0.40 per cent *m/m* of total sesquiterpene lactones, expressed as dihydrohelenalin tiglate (dried drug).

CHARACTERS

Aromatic odour.

The capitulum, when spread out, is about 20 mm in diameter and about 15 mm deep, and has a peduncle 2-3 cm long. The involucre consists of 18-24 elongated lanceolate bracts, with acute apices, arranged in 1-2 rows: the bracts, about 8-10 mm long, are green with yellowish-green external hairs visible under a lens. The receptacle, about 6 mm in diameter, is convex, alveolate and covered with hairs. Its periphery bears about 20 ligulate florets 20-30 mm long; the disc bears a greater number of tubular florets about 15 mm long. The ovary, 4-8 mm long, is crowned by a pappus of whitish bristles 4-8 mm long. Some brown achenes, crowned or not by a pappus, may be present.

IDENTIFICATION

A. The involucre consists of elongated oval bracts with acute apices; the margin is ciliated. The ligulate floret has a reduced calyx crowned by fine, shiny, whitish bristles, bearing small coarse trichomes. The orange-yellow corolla bears 7-10 parallel veins and ends in 3 small lobes. The stamens, with free anthers, are incompletely developed. The narrow, brown ovary bears a stigma divided into 2 branches curving outwards. The tubular floret is actinomorphic. The ovary and the calyx are similar to those of the ligulate floret. The short corolla has 5 reflexed triangular lobes; the 5 fertile stamens are fused at the anthers.

B. Separate the capitulum into its different parts. Examine under a microscope using *chloral hydrate solution R*. The powder shows the following diagnostic characters: the epidermises of the bracts of the involucre have stomata and trichomes, more abundant on the outer (abaxial) surface. There are several different types of trichomes: uniseriate multicellular covering trichomes, varying in length from 50-500 µm, particularly abundant on the margins of the bract; secretory trichomes with uni- or biseriate multicellular stalks and with multicellular, globular heads, about 300 µm long, abundant on the outer surface of the bract; secretory trichomes with uniseriate multicellular stalks and with multicellular, globular heads, about 80 µm long, abundant on the inner surface of the bract. The epidermis of the ligulate corolla consists of lobed or elongated cells, a few stomata and trichomes of different types: covering trichomes, with very sharp ends, whose length may exceed 500 µm, consisting of 1-3 proximal cells with thickened walls and 2-4 distal cells with thin walls; secretory trichomes with biseriate multicellular heads; secretory trichomes with multicellular stalks and multicellular globular heads. The ligule ends in rounded papillose cells. The epidermis of the ovary is covered with trichomes: secretory trichomes with short stalks and multicellular globular heads; twinned covering trichomes usually consisting of 2 longitudinally united cells, with common punctuated walls; their ends are sharp and sometimes bifid. The epidermises of the calyx consist of elongated cells bearing short, unicellular, covering trichomes pointing towards the upper end of the bristle. The pollen grains have a diameter of about 30 µm, are rounded, with a spiny exine, and have 3 germinal pores.

C. Examine the chromatograms obtained in the test for *Calendula officinalis* L. - *Heterotheca inuloides*.

Results: the chromatogram obtained with the test solution shows, in the middle, a fluorescent blue zone corresponding to the zone due to chlorogenic acid in the chromatogram obtained with the reference solution; it shows, above this zone, 3 fluorescent yellowish-brown or orange-yellow zones, and above these 3 zones a fluorescent greenish-yellow zone due to astragalin. The zone located below the astragalin zone is due to isoquercitroside; the zone located just below this zone is due to luteolin-7-glucoside. It also shows a fluorescent greenish-blue zone below the zone due to caffeic acid in the chromatogram obtained with the reference solution.

TESTS

Foreign matter (*2.8.2*): maximum 5.0 per cent.

Calendula officinalis* L. - *Heterotheca inuloides. Thin-layer chromatography (*2.2.27*).

Test solution. To 2.00 g of the powdered drug (710) (*2.9.12*) add 10 ml of *methanol R*. Heat in a water-bath at 60 °C for 5 min with shaking. Cool and filter.

Reference solution. Dissolve 2.0 mg of *caffeic acid R*, 2.0 mg of *chlorogenic acid R* and 5.0 mg of *rutin R* in *methanol R* and dilute to 30 ml with the same solvent.

Plate: *TLC silica gel plate R*.

Mobile phase: *anhydrous formic acid R, water R, methyl ethyl ketone R, ethyl acetate R* (10:10:30:50 *V/V/V/V*).

Application: 15 µl, as bands.

Development: over a path of 15 cm.

Drying: in air for a few minutes.

Detection: spray with a 10 g/l solution of *diphenylboric acid aminoethyl ester R* in *methanol R*, and then with a 50 g/l solution of *macrogol 400 R* in *methanol R*. Heat at 100-105 °C for 5 min. Allow to dry in air and examine in ultraviolet light at 365 nm.

Results: the chromatogram obtained with the reference solution shows in the lower part an orange-yellow fluorescent zone due to rutin, in the middle part a fluorescent zone due to chlorogenic acid and in the upper part a light bluish fluorescent zone due to caffeic acid. The chromatogram obtained with the test solution does not show a fluorescent orange-yellow zone corresponding to the zone due to rutin in the chromatogram obtained with the reference solution, nor does it show a zone below this.

Loss on drying (*2.2.32*): maximum 10.0 per cent, determined on 1.000 g of the powdered drug (355) (*2.9.12*) by drying in an oven at 105 °C for 2 h.

Total ash (*2.4.16*): maximum 10.0 per cent.

ASSAY

Liquid chromatography (*2.2.29*).

Internal standard solution. Dissolve immediately before use 0.010 g of *santonin R* accurately weighed in 10.0 ml of *methanol R*.

Test solution. Introduce 1.00 g of the powdered drug (355) (*2.9.12*) into a 250 ml round-bottomed flask, add 50 ml of a mixture of equal volumes of *methanol R* and *water R* and heat under a reflux condenser in a water-bath at 50-60 °C for 30 min, shaking frequently. Allow to cool and filter

through a paper filter. Add the paper filter, cut into pieces, to the residue in the round-bottomed flask, add 50 ml of a mixture of equal volumes of *methanol R* and *water R* and heat under a reflux condenser in a water-bath at 50-60 °C for 30 min, shaking frequently. Repeat this procedure twice. To the combined filtrate add 3.00 ml of the internal standard solution and evaporate to 18 ml under reduced pressure. Rinse the round-bottomed flask with *water R* and dilute, with the washings, to 20.0 ml. Transfer the solution to a chromatography column about 0.15 m long and about 30 mm in internal diameter containing 15 g of *kieselguhr for chromatography R*. Allow to stand for 20 min. Elute with 200 ml of a mixture of equal volumes of *ethyl acetate R* and *methylene chloride R*. Evaporate the eluate to dryness in a 250 ml round-bottomed flask. Dissolve the residue in 10.0 ml of *methanol R* and add 10.0 ml of *water R*. Add 7.0 g of *neutral aluminium oxide R*, shake for 120 s, centrifuge at 5000 *g* for 10 min and filter through a paper filter. Evaporate 10.0 ml of the filtrate to dryness. Dissolve the residue in 3.0 ml of a mixture of equal volumes of *methanol R* and *water R* and filter.

Column:

– *size*: *l* = 0.12 m, Ø = 4 mm;

– *stationary phase*: *octadecylsilyl silica gel for chromatography R* (4 µm).

Mobile phase:

– *mobile phase A*: *water R*;

– *mobile phase B*: *methanol R*;

Time (min)	Mobile phase A (per cent *V/V*)	Mobile phase B (per cent *V/V*)
0 - 3	62	38
3 - 20	62 → 55	38 → 45
20 - 30	55	45
30 - 55	55 → 45	45 → 55
55 - 57	45 → 0	55 → 100
57 - 70	0	100
70 - 90	62	38

Flow rate: 1.2 ml/min.

Detection: spectrophotometer at 225 nm.

Injection: a 20 µl loop injector.

Calculate the percentage content of total sesquiterpene lactones, expressed as dihydrohelenalin tiglate, using the following expression:

$$\frac{S_{LS} \times C \times V \times 1.187 \times 100}{S_S \times m \times 1000}$$

S_{LS} = area of all peaks due to sesquiterpene lactones appearing after the santonin peak in the chromatogram obtained with the test solution;

S_S = area of the peak due to santonin in the chromatogram obtained with the test solution;

m = mass of the drug to be examined, in grams;

C = concentration of santonin in the internal standard solution used for the test solution, in milligrams per millilitre;

V = volume of the internal standard solution used for the test solution, in millilitres;

1.187 = peak correlation factor between dihydrohelenalin tiglate and santonin.

01/2008:1809

ARNICA TINCTURE

Arnicae tinctura

DEFINITION

Tincture produced from *Arnica flower (1391)*.

Content: minimum 0.04 per cent of sesquiterpene lactones expressed as dihydrohelenalin tiglate ($C_{20}H_{26}O_5$; M_r 346.42).

PRODUCTION

The tincture is produced from 1 part of the drug and 10 parts of ethanol (60 per cent *V/V* to 70 per cent *V/V*) by an appropriate procedure.

CHARACTERS

Appearance: yellowish-brown liquid.

IDENTIFICATION

Examine the chromatograms obtained in the test for *Calendula officinalis- Heterotheca inuloides*.

Chromatogram obtained with the test solution:

– in the middle, a fluorescent blue zone corresponding to the zone due to chlorogenic acid in the chromatogram obtained with the reference solution;

– above this zone, 3 fluorescent yellowish-brown to orange-yellow zones, and above these 3 zones a fluorescent greenish-yellow zone corresponding to astragalin; the zone located below the astragalin zone corresponds to isoquercitrin; the zone located just below this zone corresponds to luteolin-7-glucoside;

– a fluorescent greenish-blue zone below the zone due to caffeic acid in the chromatogram obtained with the reference solution.

TESTS

Calendula officinalis - Heterotheca inuloides. Thin-layer chromatography (*2.2.27*).

Test solution. The tincture to be examined.

Reference solution. Dissolve 2.0 mg of *caffeic acid R*, 2.0 mg of *chlorogenic acid R* and 5.0 mg of *rutin R* in *methanol R* and dilute to 30.0 ml with the same solvent.

Plate: *TLC silica gel plate R* (5-40 µm) [or *TLC silica gel plate R* (2-10 µm)].

Mobile phase: *anhydrous formic acid R, water R, methyl ethyl ketone R, ethyl acetate R* (10:10:30:50 *V/V/V/V*).

Application: 30 µl [or 8 µl] as bands.

Development: over a path of 15 cm [or 8 cm].

Drying: at 80-105 °C.

Detection: spray the plate whilst still hot with a 10 g/l solution of *diphenylboric acid aminoethyl ester R* in *methanol R* and then with a 50 g/l solution of *macrogol 400 R* in *methanol R*. Heat 5 min at 100 - 105 °C. Allow the plate to dry in air and examine in ultraviolet light at 365 nm.

Results: the chromatogram obtained with the reference solution shows in the lower part an orange-yellow fluorescent zone (rutin), in the middle part a fluorescent zone due to chlorogenic acid and in the upper part a light bluish fluorescent zone (caffeic acid). The chromatogram obtained with the test solution does not show any fluorescent orange-yellow zone corresponding to rutin in the chromatogram obtained with the reference solution and no zone below the zone corresponding to rutin.

Ethanol (*2.9.10*): the final alcohol concentration is not less than 90 per cent of that of the initial extraction solvent.

Methanol and 2-propanol (*2.9.11*): maximum 0.05 per cent *V/V* of methanol and maximum 0.05 per cent *V/V* of 2-propanol.

Dry residue (*2.8.16*): minimum of 1.7 per cent.

ASSAY

Liquid chromatography (*2.2.29*).

Internal standard solution. Dissolve immediately before use 0.010 g accurately weighed of *santonin R* and 0.02 g of *butyl 4-hydroxybenzoate R* in 10.0 ml of *methanol R*.

Test solution. In a round-bottomed flask introduce 5.00 g of the tincture to be examined, add 2.00 ml of internal standard solution and 3 g of *anhydrous aluminium oxide R*, shake for 120 s and filter through a paper filter. Rinse the round-bottomed flask and filter with 5 ml of a mixture of equal volumes of *methanol R* and *water R* and filter. Evaporate the filtrate to dryness. Dissolve the residue in 2.0 ml of a mixture of 20 volumes of *water R* and 80 volumes of *methanol R* and filter by a membrane filter (porosity: 0.45 µm).

Reference solution. Dissolve 0.02 g of *methyl 4-hydroxybenzoate R* and 0.02 g of *ethyl 4-hydroxybenzoate R* in *methanol R* and dilute to 10.0 ml with the same solvent.

Column:

– *size*: *l* = 0.12 m, Ø = 4 mm,

– *stationary phase*: *end-capped octadecylsilyl silica gel for chromatography R* (5 µm),

– *temperature*: 20 °C.

Mobile phase:

– *mobile phase A*: *water R*;

– *mobile phase B*: *methanol R*;

Time (min)	Mobile phase A (per cent *V/V*)	Mobile phase B (per cent *V/V*)
0 - 3	62	38
3 - 20	62 → 55	38 → 45
20 - 30	55	45
30 - 55	55 → 45	45 → 55

Flow rate: 1.2 ml/min.

Detector: spectrophotometer at 225 nm.

Injection: 20 µl.

Relative retention with reference to santonin (retention time = about 9.5 min): butyl 4-hydroxybenzoate = about 4.6.

System suitability: reference solution:

– *resolution*: minimum 5 between the peaks due to methyl 4-hydroxybenzoate and ethyl 4-hydroxybenzoate.

Calculate the percentage of lactone sesquiterpenes, expressed as dihydrohelenalin tiglate from the expression:

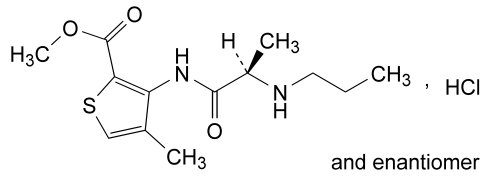
$$\frac{F_1 \times C \times V \times 1.187}{F_2 \times m \times 10}$$

F_1 = area of all peaks appearing between the peaks due to santonin and butyl 4-hydroxybenzoate in the chromatogram obtained with the test solution,

F_2 = area of the peak due to santonin in the chromatogram obtained with the test solution,

m = mass of the tincture to be examined, in grams,

C = concentration of santonin in the internal standard solution used for the test solution in milligrams per millilitre,



V = volume of internal standard solution used for the test solution, in millilitres,

1.187 = peak correlation factor between dihydrohelenalin tiglate and santonin.

ARTICAINE HYDROCHLORIDE

Articaini hydrochloridum

$C_{13}H_{21}ClN_2O_3S$ M_r 320.8
[23964-57-0]

DEFINITION

Methyl 4-methyl-3-[[(2*RS*)-2-(propylamino)propanoyl]amino]thiophene-2-carboxylate hydrochloride.

Content: 98.5 per cent to 101.0 per cent (dried substance).

CHARACTERS

Appearance: white or almost white, crystalline powder.

Solubility: freely soluble in water and in alcohol.

IDENTIFICATION

First identification: B, D.

Second identification: A, C, D.

A. Dissolve 50.0 mg in a 1 g/l solution of *hydrochloric acid R* and dilute to 100.0 ml with the same acid. Dilute 5.0 ml of the solution to 100.0 ml with a 1 g/l solution of *hydrochloric acid R*. Examined between 200 nm and 350 nm (*2.2.25*), the solution shows an absorption maximum at 272 nm. The specific absorbance at the maximum is 290 to 320.

B. Infrared absorption spectrophotometry (*2.2.24*).

Preparation: place dropwise 20 µl of the test solution on 300 mg discs.

Test solution. Dissolve 0.1 g in 5 ml of *water R*, add 3 ml of a saturated solution of *sodium hydrogen carbonate R* and shake twice with 2 ml of *methylene chloride R*. Combine the methylene chloride layers, dilute to 5.0 ml with *methylene chloride R* and dry over *anhydrous sodium sulphate R*.

Comparison: *articaine hydrochloride CRS*.

C. Thin-layer chromatography (*2.2.27*).

Test solution. Dissolve 20 mg of the substance to be examined in 5 ml of *alcohol R*.

Reference solution. Dissolve 20 mg of *articaine hydrochloride CRS* in 5 ml of *alcohol R*.

Plate: *TLC silica gel F_{254} plate R*.

Mobile phase: *triethylamine R, ethyl acetate R, heptane R* (10:35:65 *V/V/V*).

Application: 5 µl.

Development: over a path of 15 cm.

Drying: in air.

Detection: examine in ultraviolet light at 254 nm.

Results: the principal spot in the chromatogram obtained with the test solution is similar in position and size to the principal spot in the chromatogram obtained with the reference solution.

D. It gives reaction (a) of chlorides (*2.3.1*).

TESTS

Solution S. Dissolve 0.50 g in *water R* and dilute to 10 ml with the same solvent.

Appearance of solution. Solution S is clear (*2.2.1*) and not more intensely coloured than reference solution BY_6 (*2.2.2, Method I*).

pH (*2.2.3*): 4.2 to 5.2.

Dissolve 0.20 g in *carbon dioxide-free water R* and dilute to 20.0 ml with the same solvent.

Related substances. Liquid chromatography (*2.2.29*).

Test solution. Dissolve 10.0 mg of the substance to be examined in the mobile phase and dilute to 10.0 ml with the mobile phase.

Reference solution (a). Dilute 1.0 ml of the test solution to 100.0 ml with the mobile phase. Dilute 1.0 ml of this solution to 10.0 ml with the mobile phase.

Reference solution (b). Dissolve 10.0 mg of *articaine impurity A CRS* and 5.0 mg of *articaine impurity E CRS* in the mobile phase and dilute to 100.0 ml with the mobile phase.

Reference solution (c). Add 1.0 ml of reference solution (b) to 50.0 mg of *articaine hydrochloride CRS* and dilute to 50 ml with the mobile phase.

Reference solution (d). Dilute 1.0 ml of reference solution (b) to 50.0 ml with the mobile phase.

Column:

- *size*: *l* = 0.25 m, Ø = 4.6 mm,
- *stationary phase*: spherical *end-capped octadecylsilyl silica gel for chromatography R* (5 µm) with a specific surface area of 335 m^2/g and a carbon loading of 19 per cent,
- *temperature*: 45 °C.

Mobile phase: mix 25 volumes of *acetonitrile R* and 75 volumes of a solution prepared as follows: dissolve 2.02 g of *sodium heptanesulphonate R* and 4.08 g of *potassium dihydrogen phosphate R* in *water R* and dilute to 1000 ml with the same solvent. Adjust to pH 2.0 with *phosphoric acid R*.

Flow rate: 1 ml/min.

Detection: spectrophotometer at 276 nm.

Injection: 10 µl; inject the test solution and reference solutions (a), (c) and (d).

Run time: 5 times the retention time of articaine.

Relative retentions with reference to articaine (retention time = about 9.3 min): impurity B = about 0.6; impurity D = about 0.7; impurity A = about 0.8; impurity E = about 0.86; impurity F = about 0.9; impurity G = about 1.7; impurity H = about 2.1; impurity I = about 2.6; impurity C = about 3.6; impurity J = about 4.0.

System suitability: reference solution (c):

- *resolution*: minimum 1.2 between the peaks due to impurity A and impurity E.

Limits:

- *impurity A*: not more than the area of the corresponding peak in the chromatogram obtained with reference solution (d) (0.2 per cent),
- *any other impurity*: not more than the area of the principal peak in the chromatogram obtained with reference solution (a) (0.1 per cent),
- *total of other impurities*: not more than 5 times the area of the principal peak in the chromatogram obtained with reference solution (a) (0.5 per cent),
- *disregard limit*: half the area of the principal peak in the chromatogram obtained with reference solution (a) (0.05 per cent).

Heavy metals (*2.4.8*): maximum 5 ppm.

Dissolve 4.0 g in 20.0 ml of *water R*. 12 ml of the solution complies with limit test A. Prepare the standard using *lead standard solution (1 ppm Pb) R*.

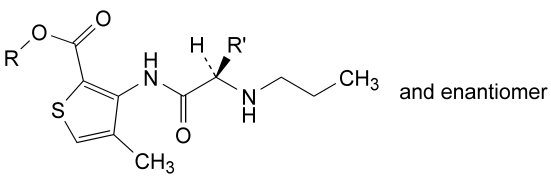
Loss on drying (*2.2.32*): maximum 0.5 per cent, determined on 1.000 g by drying in an oven at 105 °C for 5 h.

Sulphated ash (*2.4.14*): maximum 0.1 per cent, determined on 1.0 g.

ASSAY

Dissolve 0.250 g in a mixture of 5.0 ml of *0.01 M hydrochloric acid* and 50 ml of *alcohol R*. Carry out a potentiometric titration (*2.2.20*) using *0.1 M sodium hydroxide*. Read the volume added between the 2 points of inflexion.

1 ml of *0.1 M sodium hydroxide* is equivalent to 32.08 mg of $C_{13}H_{21}ClN_2O_3S$.



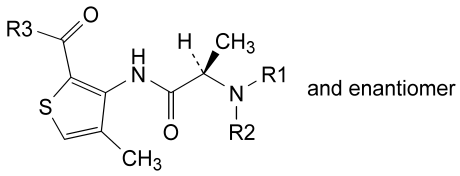
STORAGE

Protected from light.

IMPURITIES

Specified impurities: A, B, C.

Other detectable impurities: D, E, F, G, H, I, J.



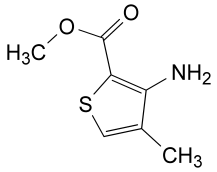
and enantiomer

A. R = CH_3, R′ = H: methyl 3-[[2-(propylamino)acetyl]amino]-4-methylthiophene-2-carboxylate (acetamidoarticaine),

B. R = H, R′ = CH_3: 4-methyl-3-[[(2*RS*)-2-(propylamino)propanoyl]amino]thiophene-2-carboxylic acid (articaine acid),

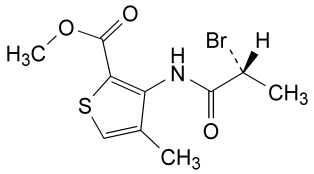
C. R = $CH(CH_3)_2$, R′ = CH_3: 1-methylethyl 4-methyl-3-[[(2*RS*)-2-(propylamino)propanoyl]amino]thiophene-2-carboxylate (articaine isopropyl ester),

and enantiomer



D. R1 = CH_2-CH_3, R2 = H, R3 = OCH_3: methyl 3-[[(2*RS*)-2-(ethylamino)propanoyl]amino]-4-methylthiophene-2-carboxylate (ethylarticaine),

E. R1 = $CH(CH_3)_2$, R2 = H, R3 = OCH_3: methyl 4-methyl-3-[[(2*RS*)-2-[(1-methylethyl)amino]propanoyl]amino]thiophene-2-carboxylate (isopropylarticaine),



F. R1 = CH_2-CH_2-CH_3, R2 = H, R3 = NH-CH_2-CH_2-CH_3: 4-methyl-*N*-propyl-3-[[(2*RS*)-2-(propylamino)propanoyl]amino]thiophene-2-carboxamide (articaine acid propionamide),

G. R1 = $(CH_2)_3$-CH_3, R2 = H, R3 = OCH_3: methyl 3-[[(2*RS*)-2-(butylamino)propanoyl]amino]-4-methylthiophene-2-carboxylate (butylarticaine),

H. R1 = R2 = CH_2-CH_2-CH_3, R3 = OCH_3: methyl 3-[[(2*RS*)-2-(dipropylamino)propanoyl]amino]-4-methylthiophene-2-carboxylate (dipropylarticaine),

I. methyl 3-amino-4-methylthiophene-2-carboxylate (3-aminoarticaine),

and enantiomer

J. methyl 3-[[(2*RS*)-2-bromopropanoyl]amino]-4-methylthiophene-2-carboxylate (bromo compound).

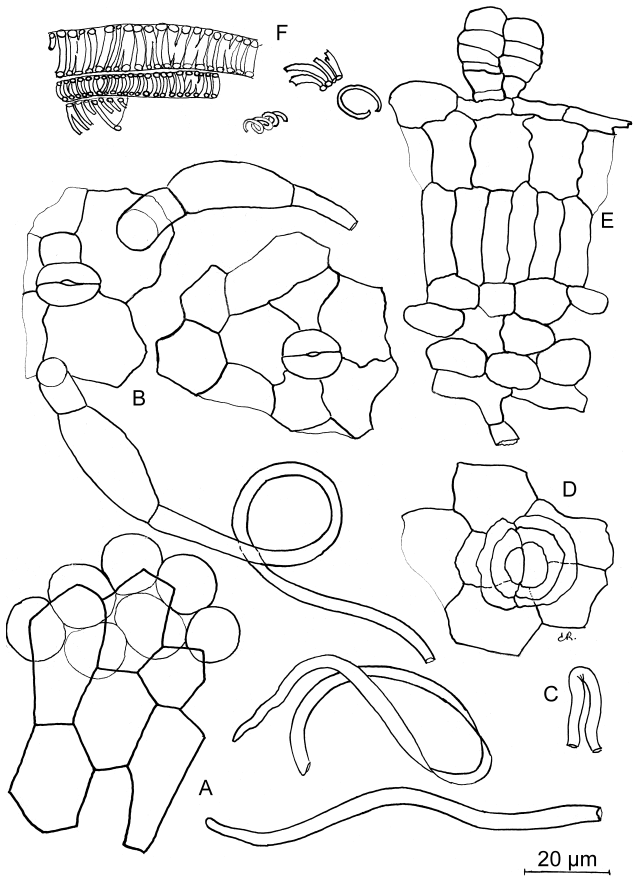
corrected 6.0

ARTICHOKE LEAF

Cynarae folium

DEFINITION



Whole or cut, dried leaf of *Cynara scolymus* L.

Content: minimum 0.8 per cent of chlorogenic acid ($C_{16}H_{18}O_9$; M_r 354.3) (dried drug).

IDENTIFICATION

A. The entire leaf may be up to 70 cm long and 30 cm wide. The lamina is deeply lobed in the upper part to within 1-2 cm of the petiole on either side, in the lower part the leaf becomes pinnate; all the segments have markedly dentate margins and taper at the apex. Spines are absent. The upper surface of the lamina is green with a fine covering of whitish hairs, the lower surface is pale green or white and densely tomentose with long, tangled hairs. The petiole and main veins are flat on the upper surface, prominently raised and longitudinally ridged on the lower surface, with conspicuous hairs on both surfaces.

B. Reduce to a powder (1000) (*2.9.12*). The powder is greenish-grey. Examine under a microscope using *chloral hydrate solution R*. The powder shows fragments of the epidermis of the lamina, those of the upper epidermis composed of cells with straight or slightly sinuous walls, those of the lower epidermis more sinuous-walled; abundant anomocytic stomata (*2.8.3*) on both surfaces; multicellular, uniseriate covering trichomes in felted masses, the majority with a short stalk composed of several cells and a very long, narrow and frequently curled terminal cell, others consisting of 4-6 cylindrical cells; very occasional glandular trichomes with a short stalk and a biseriate or uniseriate head; abundant fragments of vascular tissue from the petiole and veins.

A. Upper epidermis of lamina in surface view

B. Lower epidermis of lamina in surface view showing stomata and covering trichomes

C. Fragment of covering trichomes

D. Multicelluar, biseriate, glandular trichome in surface view

E. Section view of lamina showing a glandular trichome

F. Fragments of vascular tissue

Figure 1866.-1. – *Illustration for the identification of artichoke leaf (see Identification B)*

C. Thin-layer chromatography (*2.2.27*).

Test solution. To 2.0 g of the powdered drug (1000) (*2.9.12*) add 20 ml of *ethanol (60 per cent V/V) R*. Allow to stand for 2 h with occasional stirring. Filter.

Reference solution. Dissolve 5 mg of *luteolin-7-glucoside R* and 5 mg of *chlorogenic acid CRS* in *methanol R* and dilute to 10 ml with the same solvent.

Plate: *TLC silica gel plate R* (5-40 µm) [or *TLC silica gel plate R* (2-10 µm)].

Mobile phase: *acetic acid R, anhydrous formic acid R, water R, ethyl acetate R* (11:11:27:100 *V/V/V/V*).

Application: 10 µl [or 2 µl] as bands.

Development: over a path of 13 cm [or 6 cm].

Drying: in air.

Detection: heat the plate at 100 °C for 5 min; spray the warm plate with a 10 g/l solution of *diphenylboric acid aminoethyl ester R* in *methanol R* followed by a 50 g/l solution of *macrogol 400 R* in *methanol R*; examine in ultraviolet light at 365 nm.

Results: see below the sequence of zones present in the chromatograms obtained with the reference solution and the test solution. Furthermore, other zones may be present in the chromatogram obtained with the test solution.

Top of the plate	
	A light blue fluorescent zone
———	———
Luteolin-7-glucoside: a yellow or orange fluorescent zone	A yellow or orange fluorescent zone (luteolin-7-glucoside)
Chlorogenic acid: a light blue fluorescent zone	A light blue fluorescent zone (chlorogenic acid)
———	———
Reference solution	**Test solution**

TESTS

Total ash (*2.4.16*): maximum 20.0 per cent.

Loss on drying (*2.2.32*): maximum 12.0 per cent, determined on 1.000 g of the powdered drug (710) (*2.9.12*) by drying in an oven at 105 °C for 2 h.

ASSAY

Liquid chromatography (*2.2.29*).

Test solution. To 0.500 g of the powdered drug (1000) (*2.9.12*) add 50.0 ml of *methanol R* and heat under a reflux condenser on a water-bath at 70 °C for 1 h. Centrifuge and transfer the supernatant to a 200 ml volumetric flask. Repeat the procedure and dilute to 200.0 ml with *water R*.

Reference solution. Dissolve 5.0 mg of *chlorogenic acid CRS* in 50.0 ml of *methanol R*. Transfer 5.0 ml of this solution to a volumetric flask, add 5 ml of *methanol R* and dilute to 20.0 ml with *water R*.

Column:

- *size*: *l* = 0.25 m, Ø = 4.6 mm;
- *stationary phase*: *octadecylsilyl silica gel for chromatography R* (5 µm);
- *temperature*: 40 °C.

Mobile phase:

- *mobile phase A*: *phosphoric acid R, water R* (0.5:99.5 *V/V*);
- *mobile phase B*: *phosphoric acid R, acetonitrile R* (0.5:99.5 *V/V*);

Time (min)	Mobile phase A (per cent *V/V*)	Mobile phase B (per cent *V/V*)
0 - 1	92	8
1 - 20	92 → 75	8 → 25
20 - 33	75	25
33 - 35	75 → 0	25 → 100
35 - 37	0 → 92	100 → 8
37 - 47	92	8

Flow rate: 1.2 ml/min.

Detection: spectrophotometer at 330 nm.

Injection: 25 µl.

System suitability: test solution:

- the chromatogram obtained is similar to the chromatogram shown in Figure 1866.-2;
- *resolution*: minimum 2.0 between the peak due to chlorogenic acid and the subsequent peak (peak 2).

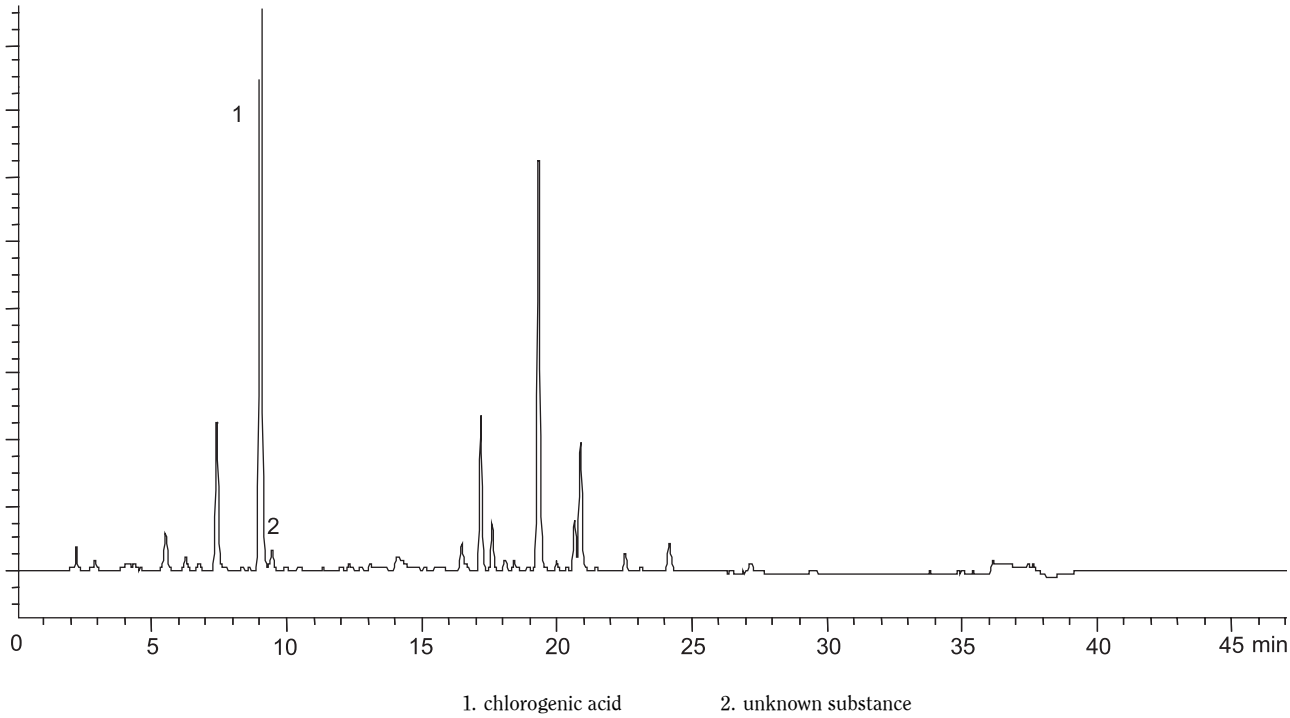


Figure 1866.-2. — *Chromatogram for the assay of artichoke leaf: test solution*

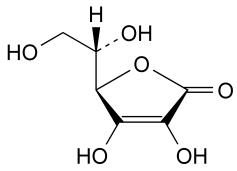
Calculate the percentage content of chlorogenic acid using the following expression:

$$\frac{A_1 \times m_2 \times p}{A_2 \times m_1}$$

A_1 = area of the peak due to chlorogenic acid in the chromatogram obtained with the test solution;

A_2 = area of the peak due to chlorogenic acid in the chromatogram obtained with the reference solution;

m_1 = mass of the drug to be examined in the test solution, in grams;



m_2 = mass of *chlorogenic acid CRS* in the reference solution, in grams;

p = percentage content of chlorogenic acid in *chlorogenic acid CRS*.

01/2008:0253

ASCORBIC ACID

Acidum ascorbicum

$C_6H_8O_6$ M_r 176.1
[50-81-7]

DEFINITION

Ascorbic acid contains not less than 99.0 per cent and not more than the equivalent of 100.5 per cent of (5*R*)-5-[(1*S*)-1,2-dihydroxyethyl]-3,4-dihydroxyfuran-2(5*H*)-one.

CHARACTERS

A white or almost white, crystalline powder or colourless crystals, becoming discoloured on exposure to air and moisture, freely soluble in water, soluble in ethanol (96 per cent).

It melts at about 190 °C, with decomposition.

IDENTIFICATION

First identification: B, C.

Second identification: A, C, D.

A. Dissolve 0.10 g in *water R* and dilute immediately to 100.0 ml with the same solvent. To 10 ml of *0.1 M hydrochloric acid* add 1.0 ml of the solution and dilute to 100.0 ml with *water R*. Measure the absorbance (*2.2.25*) at the maximum at 243 nm immediately after dissolution. The specific absorbance at the maximum is 545 to 585.

B. Examine by infrared absorption spectrophotometry (*2.2.24*), comparing with the spectrum obtained with *ascorbic acid CRS*. Examine the substance prepared as discs containing 1 mg.

C. The pH (*2.2.3*) of solution S (see Tests) is 2.1 to 2.6.

D. To 1 ml of solution S add 0.2 ml of *dilute nitric acid R* and 0.2 ml of *silver nitrate solution R2*. A grey precipitate is formed.

TESTS

Solution S. Dissolve 1.0 g in *carbon dioxide-free water R* and dilute to 20 ml with the same solvent.

Appearance of solution. Solution S is clear (*2.2.1*) and not more intensely coloured than reference solution BY_7 (*2.2.2, Method II*).

Specific optical rotation (*2.2.7*). Dissolve 2.50 g in *water R* and dilute to 25.0 ml with the same solvent. The specific optical rotation is + 20.5 to + 21.5.

Oxalic acid. Dissolve 0.25 g in 5 ml of *water R*. Neutralise to *red litmus paper R* using *dilute sodium hydroxide solution R* and add 1 ml of *dilute acetic acid R* and 0.5 ml of *calcium chloride solution R* (test solution). Prepare a reference solution as follows: dissolve 70 mg of *oxalic acid R* in *water R* and dilute to 500 ml with the same solvent; to 5 ml of this solution add 1 ml of *dilute acetic acid R* and 0.5 ml of *calcium chloride solution R* (reference solution). Allow the solutions to stand for 1 h. Any opalescence in the test solution is not more intense than that in the reference solution (0.2 per cent).

Related substances. The thresholds indicated under Related substances (Table 2034.-1) in the general monograph *Substances for pharmaceutical use (2034)* do not apply.

Copper. Not more than 5.0 ppm of Cu, determined by atomic absorption spectrometry (*2.2.23, Method I*).

Test solution. Dissolve 2.0 g of the substance to be examined in *0.1 M nitric acid* and dilute to 25.0 ml with the same acid.

Reference solutions. Prepare reference solutions containing 0.2 ppm, 0.4 ppm and 0.6 ppm of Cu by diluting *copper standard solution (10 ppm Cu) R* with *0.1 M nitric acid*.

Measure the absorbance at 324.8 nm using a copper hollow-cathode lamp as a source of radiation and an air-acetylene flame. Adjust the zero of the apparatus using *0.1 M nitric acid*.

Iron. Not more than 2.0 ppm of Fe, determined by atomic absorption spectrometry (*2.2.23, Method I*).

Test solution. Dissolve 5.0 g of the substance to be examined in *0.1 M nitric acid* and dilute to 25.0 ml with the same acid.

Reference solutions. Prepare reference solutions containing 0.2 ppm, 0.4 ppm and 0.6 ppm of Fe by diluting *iron standard solution (20 ppm Fe) R* with *0.1 M nitric acid*.

Measure the absorbance at 248.3 nm using an iron hollow-cathode lamp as a source of radiation and an air-acetylene flame. Adjust the zero of the apparatus using *0.1 M nitric acid*.

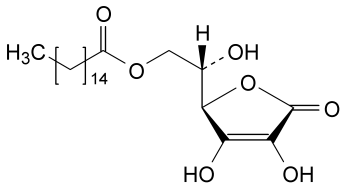
Heavy metals (*2.4.8*). Dissolve 2.0 g in *water R* and dilute to 20 ml with the same solvent. 12 ml of the solution complies with test A (10 ppm). Prepare the reference solution using *lead standard solution (1 ppm Pb) R*.

Sulphated ash (*2.4.14*). Not more than 0.1 per cent, determined on 1.0 g.

ASSAY

Dissolve 0.150 g in a mixture of 10 ml of *dilute sulphuric acid R* and 80 ml of *carbon dioxide-free water R*. Add 1 ml of *starch solution R*. Titrate with *0.05 M iodine* until a persistent violet-blue colour is obtained.

1 ml of *0.05 M iodine* is equivalent to 8.81 mg of $C_6H_8O_6$.



STORAGE

Store in a non-metallic container, protected from light.

01/2008:0807

ASCORBYL PALMITATE

Ascorbylis palmitas

$C_{22}H_{38}O_7$ M_r 414.5
[137-66-6]

DEFINITION

(2*S*)-2-[(5*R*)-3,4-Dihydroxy-5-oxo-2,5-dihydrofuran-2-yl]-2-hydroxyethyl hexadecanoate.

Content: 98.0 per cent to 100.5 per cent (dried substance).

CHARACTERS

Appearance: white or yellowish-white powder.

Solubility: practically insoluble in water, freely soluble in ethanol (96 per cent) and in methanol, practically insoluble in methylene chloride and in fatty oils.

IDENTIFICATION

A. Specific optical rotation (see Tests).

B. Infrared absorption spectrophotometry (*2.2.24*).
Comparison: *ascorbyl palmitate CRS*.

C. Dissolve about 10 mg in 5 ml of *methanol R*. The solution decolourises *dichlorophenolindophenol standard solution R*.

TESTS

Solution S. Dissolve 2.50 g in *methanol R* and dilute to 25.0 ml with the same solvent.

Appearance of solution. Solution S is clear (*2.2.1*) and not more intensely coloured than reference solution BY_4 (*2.2.2, Method I*).

Specific optical rotation (*2.2.7*): + 21 to + 24 (dried substance), determined on solution S.

Related substances. The thresholds indicated under Related substances (Table 2034.-1) in the general monograph *Substances for pharmaceutical use (2034)* do not apply.

Heavy metals (*2.4.8*): maximum 10 ppm.

2.0 g complies with test C. Prepare the reference solution using 2 ml of *lead standard solution (10 ppm Pb) R*.

Loss on drying (*2.2.32*): maximum 1.0 per cent, determined on 1.000 g by drying *in vacuo* at 60 °C for 5 h.

Sulphated ash (*2.4.14*): maximum 0.1 per cent, determined on 1.0 g.

ASSAY

Dissolve 0.160 g in 50 ml of *methanol R*. Add 30 ml of *water R* and 1 ml of *starch solution R*. Titrate with *0.05 M iodine* until a persistent violet-blue colour is obtained.

1 ml of *0.05 M iodine* is equivalent to 20.73 mg of $C_{22}H_{38}O_7$.

STORAGE

In an airtight container, protected from light.

01/2008:1600
corrected 6.0

ASH LEAF

Fraxini folium

DEFINITION

Dried leaf of *Fraxinus excelsior* L. or *Fraxinus oxyphylla* M. Bieb.

Content: minimum 2.5 per cent of total hydroxycinnamic acid derivatives, expressed as chlorogenic acid ($C_{16}H_{18}O_9$; M_r 354.3) (dried drug).

IDENTIFICATION

A. The leaf consists of leaflets which are sometimes detached and separated from the rachis. The leaflet is about 6 cm long and 3 cm wide. Each leaflet is subsessile or shortly petiolate, oblong, lanceolate, somewhat unequal at the base, acuminate at the apex, with fine acute teeth on the margins, the upper surface is dark green and the lower surface is greyish-green. The midrib and secondary veins are whitish and prominent on the lower surface.

B. Reduce to a powder (355) (*2.9.12*). The powder is greyish-green. Examined under a microscope, using *chloral hydrate solution R*. The powder shows the following diagnostic characters: fragments of the lamina in surface view, with the lower epidermis showing numerous anomocytic stomata (*2.8.3.*) and some of the cells of the upper epidermis with cuticular striations; occasional uniseriate, conical covering trichomes composed of 1 or 2 cells with thick walls and a striated cuticle; rare peltate glands with a unicellular stalk and a shield-like glandular head composed of 8 radiating cells; groups of fibres and fragments of vascular tissue from the veins.

C. Examine the chromatograms obtained in the test for *Fraxinus ornus* L.

Results: see below the sequence of the zones present in the chromatograms obtained with the reference solution and the test solution. Furthermore, other fluorescent zones are present in the chromatogram obtained with the test solution.

Top of the plate	
	A light blue fluorescence zone
	An intense blue fluorescent zone (acteoside)
Chlorogenic acid: a blue fluorescent zone	A blue fluorescent zone (chlorogenic acid)
Rutin: an orange fluorescent zone	An orange fluorescent zone (rutin)
Reference solution	**Test solution**

TESTS

Foreign matter (*2.8.2*): maximum 3.0 per cent of stems and maximum 2.0 per cent of other foreign matter.

***Fraxinus ornus* L.** Thin-layer chromatography (*2.2.27*).

Test solution. To 1 g of the powdered drug (355) (*2.9.12*) add 20 ml of *methanol R*. Heat with shaking at 40 °C for 10 min. Filter.

Reference solution. Dissolve 5.0 mg of *rutin R* and 5.0 mg of *chlorogenic acid R* in 10 ml of *methanol R*.

Plate: *TLC silica gel plate R*.

Mobile phase: *anhydrous formic acid R, water R, ethyl acetate R* (10:10:80 *V/V/V*).

Application: 10 µl, as bands.

Development: over a path of 10 cm.

Drying: in air.

Detection: spray with a solution containing 10 g/l of *diphenylboric acid aminoethyl ester R* and 50 g/l of *macrogol 400 R* in *methanol R*. Examine in ultraviolet light at 365 nm.

Results: in the case of a substitution by F. *ornus*, the chromatogram obtained with the test solution does not show the zones of acteoside, chlorogenic acid and rutin.

Loss on drying (*2.2.32*): maximum 10.0 per cent, determined on 1.000 g of the powdered drug (355) (*2.9.12*) by drying in an oven at 105 °C for 2 h.

Total ash (*2.4.16*): maximum 12.0 per cent.

ASSAY

Test solution (a). To 0.300 g of the powdered drug (355) (*2.9.12*) add 95 ml of *ethanol (50 per cent V/V) R*. Boil in a water-bath under a reflux condenser for 30 min. Allow to cool and filter. Rinse the filter with 5 ml of *ethanol (50 per cent V/V) R*. Combine the filtrate and the rinsings in a volumetric flask and dilute to 100.0 ml with *ethanol (50 per cent V/V) R*.

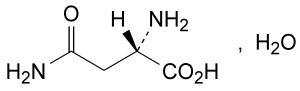
Test solution (b). To 1.0 ml of test solution (a) in a test tube, add 2 ml of *0.5 M hydrochloric acid*, 2 ml of a solution prepared by dissolving 10 g of *sodium nitrite R* and 10 g of *sodium molybdate R* in 100 ml of *water R*, then add 2 ml of *dilute sodium hydroxide solution R* and dilute to 10.0 ml with *water R*; mix.

Immediately measure the absorbance (*2.2.25*) of test solution (b) at 525 nm, using as compensation liquid a solution prepared as follows: mix 1.0 ml of test solution (a), 2 ml of *0.5 M hydrochloric acid*, 2 ml of *dilute sodium hydroxide solution R* and dilute to 10.0 ml with *water R*.

Calculate the percentage content of total hydroxycinnamic acid derivatives, expressed as chlorogenic acid, from the following expression:

$$\frac{A \times 5.3}{m}$$

taking the specific absorbance of chlorogenic acid to be 188.



A = absorbance at 525 nm,

m = mass of the substance to be examined, in grams.

corrected 6.0

ASPARAGINE MONOHYDRATE

Asparaginum monohydricum

$C_4H_8N_2O_3,H_2O$ M_r 150.1
[5794-13-8]

DEFINITION

(2*S*)-2,4-Diamino-4-oxobutanoic acid monohydrate.

Content: 99.0 per cent to 101.0 per cent (dried substance).

CHARACTERS

Appearance: white or almost white, crystalline powder or colourless crystals.

Solubility: slightly soluble in water, practically insoluble in alcohol and in methylene chloride.

IDENTIFICATION

First identification: A, B.

Second identification: A, C.

A. It complies with the test for specific optical rotation (see Tests).

B. Infrared absorption spectrophotometry (*2.2.24*).

Comparison: *asparagine monohydrate CRS.*

C. Examine the chromatograms obtained in the test for ninhydrin-positive substances.

Results: the principal spot in the chromatogram obtained with test solution (b) is similar in position, colour and size to the principal spot in the chromatogram obtained with reference solution (c).

TESTS

Solution S. Dissolve with heating 2.0 g in *carbon dioxide-free water R* and dilute to 100 ml with the same solvent.

Appearance of solution. Solution S is clear (*2.2.1*) and colourless (*2.2.2, Method II*).

pH (*2.2.3*): 4.0 to 6.0 for solution S.

Specific optical rotation (*2.2.7*): + 33.7 to + 36.0 (dried substance).

Dissolve 2.50 g in a 309.0 g/l solution of *hydrochloric acid R* and dilute to 25.0 ml with the same acid.

Ninhydrin-positive substances. Thin-layer chromatography (*2.2.27*).

Test solution (a). Dissolve 0.25 g of the substance to be examined in *water R*, heating to not more than 40 °C, and dilute to 10 ml with the same solvent.

Test solution (b). Dilute 1 ml of test solution (a) to 10 ml with *water R*.

Reference solution (a). Dilute 1.0 ml of test solution (a) to 200 ml with *water R*.

Reference solution (b). Dissolve 25 mg of *glutamic acid R* in *water R*, add 1 ml of test solution (a) and dilute to 10 ml with *water R*.

Reference solution (c). Dissolve 25 mg of *asparagine monohydrate CRS* in *water R* and dilute to 10 ml with the same solvent.

Plate: *TLC silica gel G plate R.*

Mobile phase: *glacial acetic acid R, water R, butanol R* (25:25:50 *V/V/V*).

Application: 5 µl.

Development: over half of the plate.

Drying: at 110 °C for 15 min.

Detection: spray with *ninhydrin solution R* and heat at 110 °C for 10 min.

System suitability: reference solution (b):

– the chromatogram shows 2 clearly separated principal spots.

Limit: test solution (a):

– *any impurity*: any spot, apart from the principal spot, is not more intense than the principal spot in the chromatogram obtained with reference solution (a) (0.5 per cent).

Chlorides (*2.4.4*): maximum 200 ppm.

Dilute 12.5 ml of solution S to 15 ml with *water R*.

Sulphates (*2.4.13*): maximum 200 ppm.

To 0.75 g add 2.5 ml of *dilute hydrochloric acid R* and dilute to 15 ml with *distilled water R*. Examine after 30 min.

Ammonium (*2.4.1, Method B*): maximum 0.1 per cent, determined on 10 mg.

Iron (*2.4.9*): maximum 10 ppm.

Dissolve 1.0 g in *dilute hydrochloric acid R* and dilute to 10 ml with the same acid. Shake 3 times with 10 ml of *methyl isobutyl ketone R1* for 3 min. Wash the combined organic phases with 10 ml of *water R* for 3 min. The aqueous phase complies with the limit test for iron.

Heavy metals (*2.4.8*): maximum 10 ppm.

Dissolve 2.0 g in a mixture of 3 ml of *dilute hydrochloric acid R* and 15 ml of *water R* with gentle warming if necessary. Dilute to 20 ml with *water R*. 12 ml of the solution complies with limit test A. Prepare the standard using *lead standard solution (1 ppm Pb) R*.

Loss on drying (*2.2.32*): 10.5 per cent to 12.5 per cent, determined on 1.000 g by drying in an oven at 60 °C for 24 h.

Sulphated ash (*2.4.14*): maximum 0.1 per cent, determined on 1.0 g.

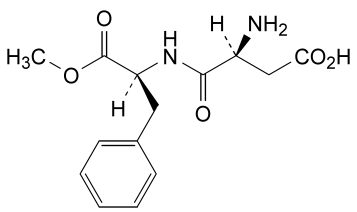
ASSAY

Dissolve 0.110 g in 5 ml of *anhydrous formic acid R*. Add 50 ml of *anhydrous acetic acid R*. Titrate with *0.1 M perchloric acid*, determining the end-point potentiometrically (*2.2.20*).

1 ml of *0.1 M perchloric acid* is equivalent to 13.21 mg of $C_4H_8N_2O_3$.

IMPURITIES

Specified impurities: A, B.



A. aspartic acid,

B. glutamic acid.

01/2008:0973
corrected 6.0

ASPARTAME

Aspartamum

$C_{14}H_{18}N_2O_5$ M_r 294.3
[22839-47-0]

DEFINITION

(3*S*)-3-Amino-4-[[(1*S*)-1-benzyl-2-methoxy-2-oxoethyl]amino]-4-oxobutanoic acid.

Content: 98.0 per cent to 102.0 per cent (dried substance).

CHARACTERS

Appearance: white or almost white, slightly hygroscopic, crystalline powder.

Solubility: sparingly soluble or slightly soluble in water and in ethanol (96 per cent), practically insoluble in hexane and in methylene chloride.

IDENTIFICATION

First identification: B.

Second identification: A, C, D.

A. Ultraviolet and visible absorption spectrophotometry (*2.2.25*).

Test solution. Dissolve 0.1 g in *ethanol (96 per cent) R* and dilute to 100 ml with the same solvent.

Spectral range: 230-300 nm.

Absorption maxima: at 247 nm, 252 nm, 258 nm and 264 nm.

B. Infrared absorption spectrophotometry (*2.2.24*).

Preparation: discs.

Comparison: *aspartame CRS*.

C. Thin-layer chromatography (*2.2.27*).

Test solution. Dissolve 15 mg of the substance to be examined in 2.5 ml of *water R* and dilute to 10 ml with *acetic acid R*.

Reference solution. Dissolve 15 mg of *aspartame CRS* in 2.5 ml of *water R* and dilute to 10 ml with *acetic acid R*.

Plate: *TLC silica gel G plate R*.

Mobile phase: *water R, anhydrous formic acid R, methanol R, methylene chloride R* (2:4:30:64 *V/V/V/V*).

Application: 20 µl.

Development: over a path of 15 cm.

Drying: in air.

Detection: spray with *ninhydrin solution R* and heat at 100-105 °C for 15 min.

Results: the spot in the chromatogram obtained with the test solution is similar in position, colour and size to the spot in the chromatogram obtained with the reference solution.

D. Dissolve about 20 mg in 5 ml of *methanol R* and add 1 ml of *alkaline hydroxylamine solution R1*. Heat on a water-bath for 15 min. Allow to cool and adjust to about pH 2 with *dilute hydrochloric acid R*. Add 0.1 ml of *ferric chloride solution R1*. A brownish-red colour is produced.

TESTS

Solution S. Dissolve 0.8 g in *carbon dioxide-free water R* and dilute to 100 ml with the same solvent.

Appearance of solution. Solution S is clear (*2.2.1*) and not more intensely coloured than reference solution GY_6 (*2.2.2, Method II*).

Conductivity (*2.2.38*): maximum 30 µS·cm^{-1}.

Dissolve 0.80 g in *carbon dioxide-free water R* prepared from *distilled water R* and dilute to 100.0 ml with the same solvent. Measure the conductivity of the solution (C_1) and that of the water used for preparing the solution (C_2). The readings must be stable within 1 per cent over a period of 30 s.

Calculate the conductivity of the solution of the substance to be examined using the following expression:

$$C_1 - 0.992\,C_2$$

Specific optical rotation (*2.2.7*): + 14.5 to + 16.5 (dried substance).

Dissolve 2.00 g in a 690 g/l solution of *anhydrous formic acid R* and dilute to 50.0 ml with the same solution. Measure within 30 min of preparation.

Related substances. Liquid chromatography (*2.2.29*).

Test solution. Dissolve 0.60 g of the substance to be examined in a mixture of 1.5 volumes of *glacial acetic acid R* and 98.5 volumes of *water R* and dilute to 100.0 ml with the same mixture of solvents.

Reference solution (a). Dissolve 4.5 mg of *aspartame impurity A CRS* in a mixture of 1.5 volumes of *glacial acetic acid R* and 98.5 volumes of *water R* and dilute to 50.0 ml with the same mixture of solvents.

Reference solution (b). Dissolve 30.0 mg of *phenylalanine R* (impurity C) in a mixture of 15 volumes of *glacial acetic acid R* and 85 volumes of *water R* and dilute to 100.0 ml with the same mixture of solvents. Dilute 1.0 ml of this solution to 10.0 ml with *water R*.

Reference solution (c). Dilute 5.0 ml of the test solution to 10.0 ml with *water R*. Dilute 3.0 ml of this solution to 100.0 ml with *water R*.

Reference solution (d). Dissolve 30.0 mg of *L-aspartyl-L-phenylalanine R* (impurity B) in a mixture of 15 volumes of *glacial acetic acid R* and 85 volumes of *water R* and dilute to 100.0 ml with the same mixture of solvents. Dilute 1.0 ml of the solution to 10.0 ml with *water R*. Mix 1.0 ml of this solution with 1.0 ml of reference solution (b).

Column

– *size*: *l* = 0.25 m, Ø = 4.0 mm;
– *stationary phase*: *octadecylsilyl silica gel for chromatography R* (5-10 µm).

Mobile phase: mix 10 volumes of *acetonitrile R* and 90 volumes of a 6.8 g/l solution of *potassium dihydrogen phosphate R* previously adjusted to pH 3.7 with *phosphoric acid R*.

Flow rate: 1 ml/min.

Detection: spectrophotometer at 220 nm.

Injection: 20 µl.

Run time: twice the retention time of aspartame.

System suitability: reference solution (d):

– *resolution*: minimum 3.5 between the peaks due to impurities B and C.

Limits:

– *impurity A*: not more than the area of the principal peak in the chromatogram obtained with reference solution (a) (1.5 per cent);
– *impurity C*: not more than the area of the principal peak in the chromatogram obtained with reference solution (b) (0.5 per cent);
– *sum of impurities other than A and C*: not more than the area of the principal peak in the chromatogram obtained with reference solution (c) (1.5 per cent);
– *disregard limit*: disregard any peak due to the solvent.

Heavy metals (*2.4.8*): maximum 10 ppm.

1.0 g complies with test C. Prepare the reference solution using 1 ml of *lead standard solution (10 ppm Pb) R*.

Loss on drying (*2.2.32*): maximum 4.5 per cent, determined on 1.000 g by drying in an oven at 105 °C.

Sulphated ash (*2.4.14*): maximum 0.2 per cent, determined on 1.0 g.

ASSAY

Dissolve 0.250 g in 1.5 ml of *anhydrous formic acid R* and 60 ml of *anhydrous acetic acid R*. Titrate immediately with *0.1 M perchloric acid*, determining the end-point potentiometrically (*2.2.20*).

1 ml of *0.1 M perchloric acid* is equivalent to 29.43 mg of $C_{14}H_{18}N_2O_5$.

STORAGE

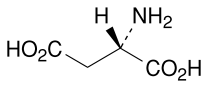
In an airtight container.

IMPURITIES

Specified impurities: *A, C.*

Other detectable impurities (the following substances would, if present at a sufficient level, be detected by one or other of the tests in the monograph. They are limited by the general acceptance criterion for other/unspecified impurities and/or by the general monograph *Substances for pharmaceutical use (2034)*. It is therefore not necessary to identify these impurities for demonstration of compliance. See also *5.10. Control of impurities in substances for pharmaceutical use*): *B.*

A. 2-(5-benzyl-3,6-dioxopiperazin-2-yl)acetic acid (diketopiperazine),



B. L-aspartyl-L-phenylalanine,

C. phenylalanine.

01/2008:0797
corrected 6.0

ASPARTIC ACID

Acidum asparticum

$C_4H_7NO_4$ M_r 133.1
[56-84-8]

DEFINITION

Aspartic acid contains not less than 98.5 per cent and not more than the equivalent of 101.5 per cent of (2*S*)-2-aminobutanedioic acid, calculated with reference to the dried substance.

CHARACTERS

A white or almost white, crystalline powder or colourless crystals, slightly soluble in water, practically insoluble in alcohol. It dissolves in dilute mineral acids and in dilute solutions of alkali hydroxides.

IDENTIFICATION

First identification: A, C.

Second identification: A, B, D.

A. It complies with the test for specific optical rotation (see Tests).

B. A suspension of 1 g in 10 ml of *water R* is strongly acid (*2.2.4*).

C. Examine by infrared absorption spectrophotometry (*2.2.24*), comparing with the spectrum obtained with *aspartic acid CRS*. Examine the substances prepared as discs.

D. Examine the chromatograms obtained in the test for ninhydrin-positive substances. The principal spot in the chromatogram obtained with test solution (b) is similar in position, colour and size to the principal spot in the chromatogram obtained with reference solution (a).

TESTS

Appearance of solution. Dissolve 0.5 g in *1 M hydrochloric acid* and dilute to 10 ml with the same acid. The solution is clear (*2.2.1*) and not more intensely coloured than reference solution BY_6 (*2.2.2, Method II*).

Specific optical rotation (*2.2.7*). Dissolve 2.000 g in *hydrochloric acid R1* and dilute to 25.0 ml with the same acid. The specific optical rotation is + 24.0 to + 26.0, calculated with reference to the dried substance.

Ninhydrin-positive substances. Examine by thin-layer chromatography (*2.2.27*), using a *TLC silica gel plate R*.

Test solution (a). Dissolve 0.10 g of the substance to be examined in 2 ml of *ammonia R* and dilute to 10 ml with *water R*.

Test solution (b). Dilute 1 ml of test solution (a) to 50 ml with *water R*.

Reference solution (a). Dissolve 10 mg of *aspartic acid CRS* in 2 ml of *dilute ammonia R1* and dilute to 50 ml with *water R*.

Reference solution (b). Dilute 5 ml of test solution (b) to 20 ml with *water R*.

Reference solution (c). Dissolve 10 mg of *aspartic acid CRS* and 10 mg of *glutamic acid CRS* in 2 ml of *dilute ammonia R1* and dilute to 25 ml with *water R*.

Apply separately to the plate 5 µl of each solution. Allow the plate to dry in air. Develop over a path of 15 cm using a mixture of 20 volumes of *glacial acetic acid R*, 20 volumes of *water R* and 60 volumes of *butanol R*. Allow the plate to dry in air, spray with *ninhydrin solution R*. Heat at 100-105 °C for 15 min. Any spot in the chromatogram obtained with test solution (a), apart from the principal spot, is not more intense than the spot in the chromatogram obtained with reference solution (b) (0.5 per cent). The test is not valid unless the chromatogram obtained with reference solution (c) shows 2 clearly separated principal spots.

Chlorides (*2.4.4*). Dissolve 0.25 g in 3 ml of *dilute nitric acid R* and dilute to 15 ml with *water R*. The solution, to which 1 ml of *water R* is added instead of *dilute nitric acid R*, complies with the limit test for chlorides (200 ppm).

Sulphates (*2.4.13*). Dissolve 0.5 g in 4 ml of *hydrochloric acid R* and dilute to 15 ml with *distilled water R*. The solution complies with the limit test for sulphates (300 ppm). Carry out the evaluation of the test after 30 min.

Ammonium.(*2.4.1*) 50 mg complies with limit test B (200 ppm). Prepare the standard using 0.1 ml of *ammonium standard solution (100 ppm NH_4) R*.

Iron (*2.4.9*). In a separating funnel, dissolve 1.0 g in 10 ml of *dilute hydrochloric acid R*. Shake with 3 quantities, each of 10 ml, of *methyl isobutyl ketone R1*, shaking for 3 min each time. To the combined organic layers add 10 ml of *water R* and shake for 3 min. The aqueous layer complies with the limit test for iron (10 ppm).

Heavy metals (*2.4.8*). 2.0 g complies with limit test D (10 ppm). Prepare the standard using 2 ml of *lead standard solution (10 ppm Pb) R*.

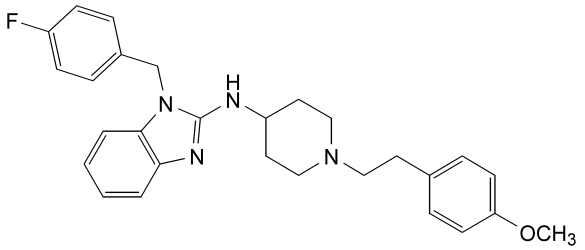
Loss on drying (*2.2.32*). Not more than 0.5 per cent, determined on 1.000 g by drying in an oven at 105 °C.

Sulphated ash (*2.4.14*). Not more than 0.1 per cent, determined on 1.0 g.

ASSAY

Dissolve 0.100 g in 50 ml of *carbon dioxide-free water R*, with slight heating if necessary. Cool and add 0.1 ml of *bromothymol blue solution R1*. Titrate with *0.1 M sodium hydroxide* until the colour changes from yellow to blue.

1 ml of *0.1 M sodium hydroxide* is equivalent to 13.31 mg of $C_4H_7NO_4$.



STORAGE

Protected from light.

01/2008:1067
corrected 6.0

ASTEMIZOLE

Astemizolum

$C_{28}H_{31}FN_4O$ M_r 458.6
[68844-77-9]

DEFINITION

1-(4-Fluorobenzyl)-*N*-[1-[2-(4-methoxyphenyl)ethyl]piperidin-4-yl]-1*H*-benzimidazol-2-amine.

Content: 99.0 per cent to 101.0 per cent (dried substance).

CHARACTERS

Appearance: white or almost white powder.

Solubility: practically insoluble in water, freely soluble in methylene chloride and in methanol, soluble in ethanol (96 per cent).

IDENTIFICATION

First identification: A, B.

Second identification: A, C, D.

A. Melting point (*2.2.14*): 175 °C to 178 °C.

B. Infrared absorption spectrophotometry (*2.2.24*).

Preparation: discs.

Comparison: *astemizole CRS*.

C. Thin layer chromatography (*2.2.27*).

Test solution. Dissolve 30 mg of the substance to be examined in *methanol R* and dilute to 5 ml with the same solvent.

Reference solution (a). Dissolve 30 mg of *astemizole CRS* in *methanol R* and dilute to 5 ml with the same solvent.

Reference solution (b). Dissolve 30 mg of *astemizole CRS* and 30 mg of *ketoconazole CRS* in *methanol R* and dilute to 5 ml with the same solvent.

Plate: *TLC octadecylsilyl silica gel plate R*.

Mobile phase: *ammonium acetate solution R, dioxan R, methanol R* (20:40:40 *V/V/V*).

Application: 5 µl.

Development: over a path of 15 cm.

Drying: in a current of warm air for 15 min.

Detection: expose the plate to iodine vapour until the spots appear and examine in daylight.

System suitability: reference solution (b):

– the chromatogram shows 2 clearly separated spots.

Results: the principal spot in the chromatogram obtained with the test solution is similar in position and size to the principal spot in the chromatogram obtained with reference solution (a).

D. Mix about 5 mg with 45 mg of *heavy magnesium oxide R* and ignite in a crucible until an almost white residue is obtained (usually less than 5 min). Allow to cool, add 1 ml of *water R*, 0.05 ml of *phenolphthalein solution R1* and about 1 ml of *dilute hydrochloric acid R* to render the solution colourless. Filter. To a freshly prepared mixture of 0.1 ml of *alizarin S solution R* and 0.1 ml of *zirconyl nitrate solution R*, add 1 ml of the filtrate. Mix, allow to stand for 5 min and compare the colour of the solution with that of a blank solution prepared in the same manner. The test solution is yellow and the blank solution is red.

TESTS

Appearance of solution. The solution is clear (*2.2.1*) and is not more intensely coloured than reference solution Y_7 (*2.2.2, Method II*).

Dissolve 0.2 g in *methanol R* and dilute to 20 ml with the same solvent.

Related substances. Liquid chromatography (*2.2.29*). *Prepare the solutions immediately before use.*

Test solution. Dissolve 0.100 g of the substance to be examined in *methanol R* and dilute to 10.0 ml with the same solvent.

Reference solution (a). Dissolve 2.5 mg of *astemizole CRS* and 25 mg of *ketoconazole CRS* in *methanol R* and dilute to 100.0 ml with the same solvent.

Reference solution (b). Dilute 1.0 ml of the test solution to 100.0 ml with *methanol R*. Dilute 5.0 ml of this solution to 20.0 ml with *methanol R*.

Column:

– *size*: *l* = 0.1 m, Ø = 4.6 mm;
– *stationary phase*: *base-deactivated octadecylsilyl silica gel for chromatography R* (3 µm).

Mobile phase:

– *mobile phase A*: a 17 g/l solution of *tetrabutylammonium hydrogen sulphate R*;
– *mobile phase B*: *acetonitrile R*;

Time (min)	Mobile phase A (per cent *V/V*)	Mobile phase B (per cent *V/V*)
0 - 15	95 → 80	5 → 20
15 - 18	80 → 0	20 → 100
18 - 23	0 → 95	100 → 5
23 - 28	95	5

Flow rate: 1.5 ml/min.

Detection: spectrophotometer at 278 nm.

Equilibration: with *acetonitrile R* for at least 30 min then with the mobile phase at the initial composition for at least 5 min.

Injection: 10 µl; inject *methanol R* as a blank.

Retention time: ketoconazole = about 8 min; astemizole = about 9 min.

System suitability: reference solution (a):

– *resolution*: minimum 1.5 between the peaks due to ketoconazole and astemizole; if necessary, adjust the final concentration of acetonitrile or the percentage of tetrabutylammonium hydrogen sulphate in the mobile phase or adjust the time programme for the linear gradient elution.

Limits:

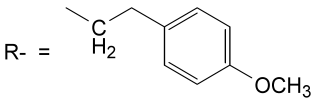
– *impurities A, B, C, D, E, F, G, H*: for each impurity, not more than the area of the principal peak in the chromatogram obtained with reference solution (b) (0.25 per cent);
– *total*: not more than twice the area of the principal peak in the chromatogram obtained with reference solution (b) (0.5 per cent);
– *disregard limit*: 0.2 times the area of the principal peak in the chromatogram obtained with reference solution (b) (0.05 per cent); disregard any peak obtained with the blank.

Loss on drying (*2.2.32*): maximum 0.5 per cent, determined on 1.000 g by drying in an oven at 105 °C.

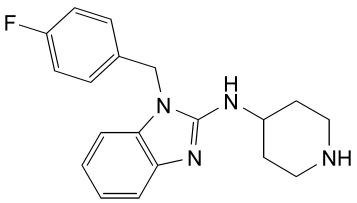
Sulphated ash (*2.4.14*): maximum 0.1 per cent, determined on 1.0 g.

ASSAY

Dissolve 0.200 g in 50 ml of a mixture of 1 volume of *anhydrous acetic acid R* and 7 volumes of *methyl ethyl ketone R*. Titrate with *0.1 M perchloric acid*, using 0.2 ml of *naphtholbenzein solution R* as indicator.

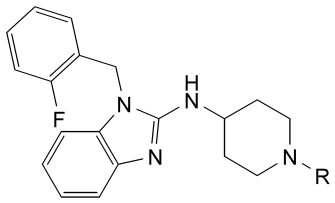


1 ml of *0.1 M perchloric acid* is equivalent to 22.93 mg of $C_{28}H_{31}FN_4O$.



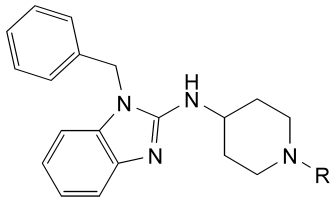
STORAGE

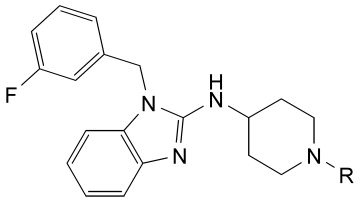
Protected from light.



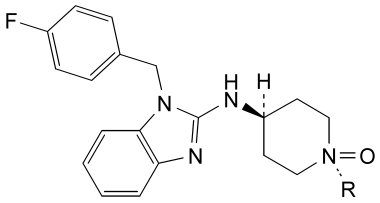
IMPURITIES

Specified impurities: A, B, C, D, E, F, G, H.

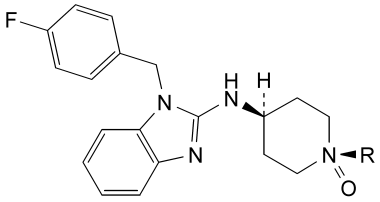




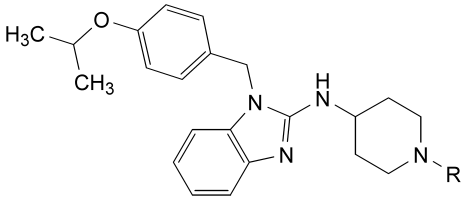
A. 1-(4-fluorobenzyl)-*N*-(piperidin-4-yl)-1*H*-benzimidazol-2-amine,



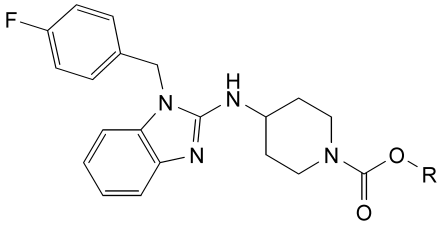
B. 1-(2-fluorobenzyl)-*N*-[1-[2-(4-methoxyphenyl)ethyl]-piperidin-4-yl]-1*H*-benzimidazol-2-amine,



C. 1-benzyl-*N*-[1-[2-(4-methoxyphenyl)ethyl]piperidin-4-yl]-1*H*-benzimidazol-2-amine,



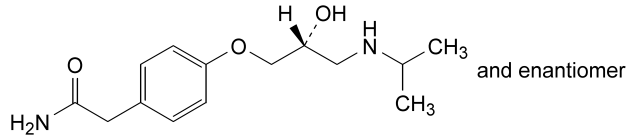
D. 1-(3-fluorobenzyl)-*N*-[1-[2-(4-methoxyphenyl)ethyl]-piperidin-4-yl]-1*H*-benzimidazol-2-amine,



E. 1-(4-fluorobenzyl)-*N*-[*cis*-1-[2-(4-methoxyphenyl)ethyl]-piperidin-4-yl 1-oxide]-1*H*-benzimidazol-2-amine,

F. 1-(4-fluorobenzyl)-*N*-[*trans*-1-[2-(4-methoxyphenyl)ethyl]-piperidin-4-yl 1-oxide]-1*H*-benzimidazol-2-amine,

G. *N*-[1-[2-(4-methoxyphenyl)ethyl]piperidin-4-yl]-1-[4-(1-methylethoxy)benzyl]-1*H*-benzimidazol-2-amine,



H. 2-(4-methoxyphenyl)ethyl 4-[[1-(4-fluorobenzyl)-1*H*-benzimidazol-2-yl]amino]piperidin-1-carboxylate.

corrected 6.0

ATENOLOL

Atenololum

and enantiomer

$C_{14}H_{22}N_2O_3$ M_r 266.3
[29122-68-7]

DEFINITION

Atenolol contains not less than 99.0 per cent and not more than the equivalent of 101.0 per cent of 2-[4-[(2*RS*)-2-hydroxy-3-[(1-methylethyl)amino]propoxy]phenyl]acetamide, calculated with reference to the dried substance.

CHARACTERS

A white or almost white powder, sparingly soluble in water, soluble in ethanol, slightly soluble in methylene chloride.

IDENTIFICATION

First identification: C.

Second identification: A, B, D.

A. Melting point (*2.2.14*): 152 °C to 155 °C.

B. Dissolve 0.100 g in *methanol R* and dilute to 100 ml with the same solvent. Dilute 10.0 ml of this solution to 100 ml with *methanol R*. Examined between 230 nm and 350 nm (*2.2.25*), the solution shows two absorption maxima, at 275 nm and 282 nm. The ratio of the absorbance measured at the maximum at 275 nm to that measured at the maximum at 282 nm is 1.15 to 1.20.

C. Examine by infrared absorption spectrophotometry (*2.2.24*), comparing with the spectrum obtained with *atenolol CRS*.

D. Examine by thin-layer chromatography (*2.2.27*), using *silica gel* GF_{254} *R* as the coating substance.

Test solution. Dissolve 10 mg of the substance to be examined in 1 ml of *methanol R*.

Reference solution. Dissolve 10 mg of *atenolol CRS* in 1 ml of *methanol R*.

Apply separately to the plate 10 µl of each solution. Develop over a path of 15 cm using a mixture of 1 volume of *concentrated ammonia R1* and 99 volumes of *methanol R*. Allow the plate to dry in air and examine in ultraviolet light at 254 nm. The principal spot in the chromatogram obtained with the test solution is similar in position and size to the principal spot in the chromatogram obtained with the reference solution.

TESTS

Solution S. Dissolve 0.10 g in *water R* and dilute to 10 ml with the same solvent.

Appearance of solution. Solution S is clear (*2.2.1*) and not more intensely coloured than degree 6 of the range of reference solutions of the most appropriate colour (*2.2.2, Method II*).

Optical rotation (*2.2.7*). Determined on solution S, the angle of optical rotation is + 0.10° to – 0.10°.

Related substances. Examine by liquid chromatography (*2.2.29*).

Test solution (a). Dissolve 50.0 mg of the substance to be examined in 20 ml of the mobile phase and dilute to 25.0 ml with the mobile phase.

Test solution (b). Dissolve 50.0 mg of the substance to be examined in 0.1 ml of *dimethyl sulphoxide R*, if necessary applying gentle heat by placing the containing vessel in a water-bath for a few seconds, and dilute to 25.0 ml with the mobile phase.

Reference solution (a). Dilute 0.5 ml of test solution (a) to 100.0 ml with the mobile phase.

Reference solution (b). Dissolve 50.0 mg of *atenolol for column validation CRS* in 0.1 ml of *dimethyl sulphoxide R*, if necessary applying gentle heat by placing the containing vessel in a water-bath for a few seconds, and dilute to 25.0 ml with the mobile phase.

The chromatographic procedure may be carried out using:

– a stainless steel column 0.15 m long and 4.6 mm in internal diameter packed with *octadecylsilyl silica gel for chromatography R* (5 µm),

– as mobile phase at a flow rate of 1.0 ml/min a mixture prepared as follows: dissolve 1.0 g of *sodium octanesulphonate R* and 0.4 g of *tetrabutylammonium hydrogen sulphate R* in 1 litre of a mixture of 20 volumes of *tetrahydrofuran R*, 180 volumes of *methanol R* and 800 volumes of a 3.4 g/l solution of *potassium dihydrogen phosphate R*; adjust to pH 3.0 with *phosphoric acid R*,

– as detector a spectrophotometer set at 226 nm.

Equilibrate the column with the mobile phase at a flow rate of 1.0 ml/min for about 30 min.

Adjust the sensitivity of the system so that the height of the principal peak in the chromatogram obtained with 10 µl of reference solution (a) is at least 50 per cent of the full scale of the recorder.

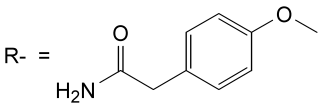
Inject 10 µl of reference solution (b). The resulting chromatogram is similar to that of the specimen chromatogram provided with *atenolol for column validation CRS* in that the peak due to bis-ether precedes and is separated from that due to tertiary amine which normally appears as a doublet. If necessary, adjust the concentration of sodium octanesulphonate in the mobile phase. Increasing the concentration of sodium octanesulphonate increases the retention time of the tertiary amine.

Inject separately 10 µl of test solution (a) and reference solution (a). Continue the chromatography for four times the retention time of the principal peak. In the chromatogram obtained with test solution (a): the area of any peak apart from the principal peak is not greater than half the area of the principal peak in the chromatogram obtained with reference solution (a) (0.25 per cent); the sum of the areas of all the peaks, apart from the principal peak, is not greater than the area of the principal peak in the chromatogram obtained with reference solution (a) (0.5 per cent). Disregard any peak with an area less than 0.1 times of that of the principal peak in the chromatogram obtained with reference solution (a).

If the substance to be examined is found to contain more than 0.15 per cent of bis-ether, its compliance is confirmed by repeating the chromatography using 10 µl of test solution (b).

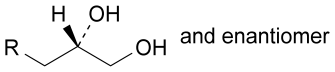
Chlorides (*2.4.4*). Dissolve 50 mg in a mixture of 1 ml of *dilute nitric acid R* and 15 ml of *water R*. The solution, without further addition of *dilute nitric acid R*, complies with the limit test for chlorides (0.1 per cent).

Loss on drying (*2.2.32*). Not more than 0.5 per cent, determined on 1.000 g by drying in an oven at 105 °C.



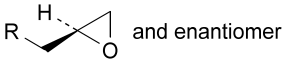
Sulphated ash (*2.4.14*). Not more than 0.1 per cent, determined on 1.0 g.

ASSAY

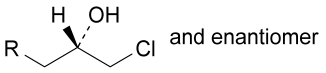


Dissolve 0.200 g in 80 ml of *anhydrous acetic acid R*. Titrate with *0.1 M perchloric acid*, determining the end-point potentiometrically (*2.2.20*).

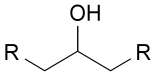
1 ml of *0.1 M perchloric acid* is equivalent to 26.63 mg of $C_{14}H_{22}N_2O_3$.



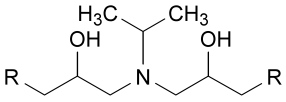
IMPURITIES



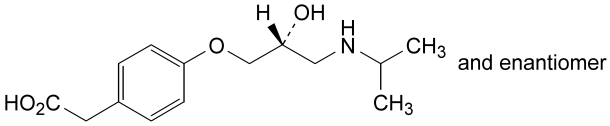
A. R-H: 2-(4-hydroxyphenyl)acetamide,



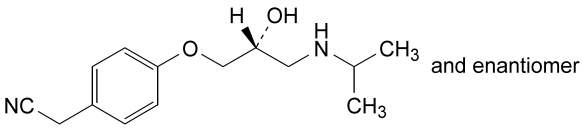
B. 2-[4-[(2*RS*)-2,3-dihydroxypropoxy]phenyl]acetamide,



C. 2-[4-[[(2*RS*)-oxiran-2-yl]methoxy]phenyl]acetamide,



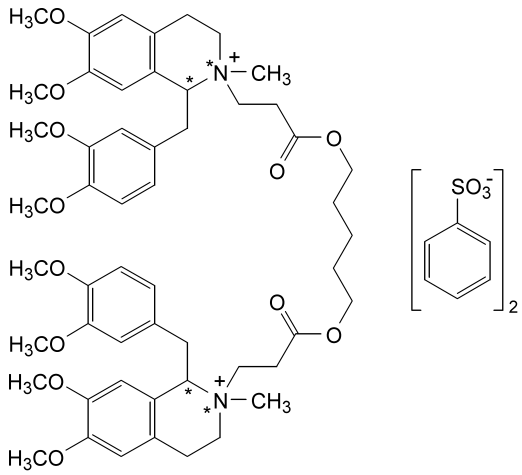
D. 2-[4-[(2*RS*)-3-chloro-2-hydroxypropoxy]phenyl]acetamide,



E. 2,2′-[2-hydroxypropan-1,3-diylbis(oxy-4,1-phenylene)]diacetamide,

F. 2,2′-[(1-methylethyl)iminobis(2-hydroxypropan-3,1-diyloxy-4,1-phenylene)]diacetamide,

G. 2-[4-[(2*RS*)-2-hydroxy-3-[(1-methylethyl)amino]propoxy]phenyl]acetic acid,



H. 2-[4-[(2*RS*)-2-hydroxy-3-[(1-methylethyl)amino]propoxy]phenyl]acetonitrile.

01/2008:1970

ATRACURIUM BESILATE

Atracurii besilas

$C_{65}H_{82}N_2O_{18}S_2$ M_r 1243
[64228-81-5]

DEFINITION

Mixture of the *cis-cis, cis-trans* and *trans-trans* isomers of 2,2′-[pentane-1,5-diylbis[oxy(3-oxopropane-1,3-diyl)]]bis[1-(3,4-dimethoxybenzyl)-6,7-dimethoxy-2-methyl-1,2,3,4-tetrahydroisoquinolinium] dibenzenesulphonate.

Content: 96.0 per cent to 102.0 per cent (anhydrous substance).

CHARACTERS

Appearance: white to yellowish-white powder, slightly hygroscopic.

Solubility: soluble in water, very soluble in acetonitrile, in ethanol (96 per cent) and in methylene chloride.

IDENTIFICATION

A. Infrared absorption spectrophotometry (*2.2.24*).
Comparison: *atracurium besilate CRS*.

B. Examine the chromatograms obtained in the assay.
Results: the 3 principal isomeric peaks in the chromatogram obtained with test solution (a) are similar in retention time to those in the chromatogram obtained with reference solution (a).

TESTS

Solution S. Dissolve 1.00 g in *water R* and dilute to 100 ml with the same solvent.

Appearance of solution. Solution S is clear (*2.2.1*) and not more intensely coloured than reference solution Y_7 (*2.2.2, Method II*).

Related substances. Liquid chromatography (*2.2.29*).

Test solution (a). Dissolve 50.0 mg of the substance to be examined in mobile phase A and dilute to 50.0 ml with mobile phase A.

Test solution (b). Dissolve 0.100 g of the substance to be examined in mobile phase A and dilute to 10.0 ml with mobile phase A.

Reference solution (a). Dissolve 50.0 mg of *atracurium besilate CRS* in mobile phase A and dilute to 50.0 ml with mobile phase A.

Reference solution (b). Dilute 1.0 ml of test solution (a) to 100.0 ml with mobile phase A.

Reference solution (c). Dissolve 20.0 mg of *methyl benzenesulphonate R* in *acetonitrile R* and dilute to 100.0 ml with the same solvent. Dilute 50 µl of the solution to 100.0 ml with mobile phase A.

Reference solution (d). Dissolve 2.0 mg of *atracurium for peak identification CRS* (containing impurities A1, A2, B, C1, C2, D1, D2, E, G and K) in 2.0 ml of mobile phase A.

Reference solution (e). Dissolve 2.0 mg of *atracurium for impurity F identification CRS* in 2.0 ml of mobile phase A.

Column:

– *size*: *l* = 0.25 m, Ø = 4.6 mm,
– *stationary phase*: *base-deactivated octadecylsilyl silica gel for chromatography R* (5 µm).

Mobile phase:

– *mobile phase A*: mix 5 volumes of *methanol R*, 20 volumes of *acetonitrile R* and 75 volumes of a 10.2 g/l solution of *potassium dihydrogen phosphate R* previously adjusted to pH 3.1 with *phosphoric acid R*,
– *mobile phase B*: mix 20 volumes of *acetonitrile R*, 30 volumes of *methanol R* and 50 volumes of a 10.2 g/l solution of *potassium dihydrogen phosphate R* previously adjusted to pH 3.1 with *phosphoric acid R*,

Time (min)	Mobile phase A (per cent *V/V*)	Mobile phase B (per cent *V/V*)
0 - 5	80	20
5 - 15	80 → 40	20 → 60
15 - 25	40	60
25 - 30	40 → 0	60 → 100
30 - 45	0	100
45 - 50	0 → 80	100 → 20

Flow rate: 1 ml/min.

Detection: spectrophotometer at 280 nm.

Injection: 20 µl of test solution (a) and reference solutions (a), (b), (d) and (e).

Relative retention with reference to the atracurium *cis-cis* isomer (retention time = about 30 min): impurity E = about 0.2; impurity F = about 0.25; impurity G = about 0.3; impurity D1 = about 0.45; impurity D2 = about 0.5; atracurium *trans-trans* isomer = about 0.8; atracurium *cis-trans* isomer = about 0.9; impurity A1 = about 1.04; impurity I1 = about 1.07; impurity H1 = about 1.07 (shoulder on the front of peak A2); impurity A2 (major isomer) = about 1.08; impurity K1 = about 1.09 (shoulder on the tail of peak A2); impurity I2 (major isomer) = about 1.12; impurity H2 (major isomer) = about 1.12; impurity K2 (major isomer) = about 1.12; impurity B = about 1.15; impurity C1 = about 1.2; impurity C2 (major isomer) = about 1.3.

Identification of impurities:

– use the chromatogram obtained with reference solution (d) and the chromatogram supplied with *atracurium for peak identification CRS* to identify the peaks due to impurities A1, A2, B, C1, C2, D1, D2, E, G and K;
– use the chromatogram obtained with reference solution (e) and the chromatogram supplied with *atracurium for impurity F identification CRS* to identify the peak due to impurity F.

System suitability: reference solution (a):

– *resolution*: minimum 1.5 between the peaks due to the atracurium *trans-trans* isomer and the atracurium *cis-trans* isomer, and minimum 1.5 between the peaks due to the atracurium *cis-trans* isomer and the atracurium *cis-cis* isomer.

Limits:

– *correction factor*: for the calculation of content, multiply the peak area of impurity G by 0.5,

– *impurity E*: not more than 1.5 times the sum of the areas of the peaks due to the atracurium *cis-cis*, *trans-trans* and *cis-trans* isomers in the chromatogram obtained with reference solution (b) (1.5 per cent),

– *impurities A, D*: for each impurity, for the sum of the areas of the 2 isomer peaks, not more than 1.5 times the sum of the areas of the peaks due to the atracurium *cis-cis*, *trans-trans* and *cis-trans* isomers in the chromatogram obtained with reference solution (b) (1.5 per cent),

– *impurity C*: for the sum of the areas of the 2 isomer peaks, not more than the sum of the areas of the peaks due to the atracurium *cis-cis*, *trans-trans* and *cis-trans* isomers in the chromatogram obtained with reference solution (b) (1.0 per cent),

– *impurities F, G*: for each impurity, not more than the sum of the areas of the peaks due to the atracurium *cis-cis*, *trans-trans* and *cis-trans* isomers in the chromatogram obtained with reference solution (b) (1.0 per cent),

– *impurities H, I, K*: for the sum of the areas of the isomer peaks of these impurities, not more than the sum of the areas of the peaks due to the atracurium *cis-cis*, *trans-trans* and *cis-trans* isomers in the chromatogram obtained with reference solution (b) (1.0 per cent),

– *any other impurity*: for each impurity, not more than 0.1 times the sum of the areas of the peaks due to the atracurium *cis-cis*, *trans-trans* and *cis-trans* isomers in the chromatogram obtained with reference solution (b) (0.1 per cent),

– *total*: not more than 3.5 times the sum of the areas of the peaks due to the atracurium *cis-cis*, *trans-trans* and *cis-trans* isomers in the chromatogram obtained with reference solution (b) (3.5 per cent),

– *disregard limit*: 0.05 times the sum of the areas of the peaks due to the atracurium *cis-cis*, *trans-trans* and *cis-trans* isomers in the chromatogram obtained with reference solution (b) (0.05 per cent).

Impurity J. Liquid chromatography (*2.2.29*) as described in the test for related substances with the following modifications.

Mobile phase:

Time (min)	Mobile phase A (per cent *V/V*)	Mobile phase B (per cent *V/V*)
0 - 5	80	20
5 - 15	80 → 75	20 → 25
15 - 25	75	25
25 - 30	75 → 55	25 → 45
30 - 38	55 → 0	45 → 100
38 - 45	0	100
45 - 50	0 → 80	100 → 20

Detection: spectrophotometer at 217 nm.

Injection: 100 µl of test solution (b) and reference solution (c).

Retention time: impurity J = about 25 min; atracurium *trans-trans* isomer = about 38 min.

Limit:

– *impurity J*: not more than the area of the principal peak in the chromatogram obtained with reference solution (c) (10 ppm).

Isomer composition. Liquid chromatography (*2.2.29*) as described in the test for related substances with the following modifications. Use the normalisation procedure.

Injection: test solution (a).

Limits:

– *atracurium cis-cis isomer*: 55.0 per cent to 60.0 per cent,

– *atracurium cis-trans isomer*: 34.5 per cent to 38.5 per cent,

– *atracurium trans-trans isomer*: 5.0 per cent to 6.5 per cent.

Water (*2.5.12*): maximum 5.0 per cent, determined on 1.000 g.

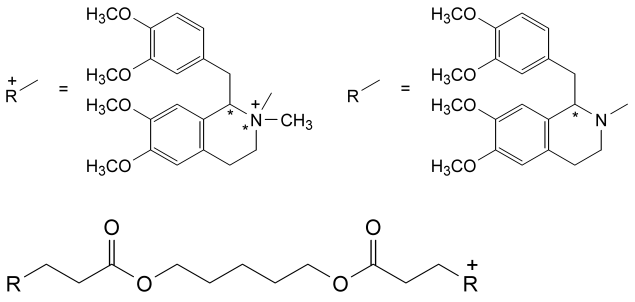
Sulphated ash (*2.4.14*): maximum 0.1 per cent, determined on 1.0 g.

ASSAY

Liquid chromatography (*2.2.29*) as described in the test for related substances with the following modification.

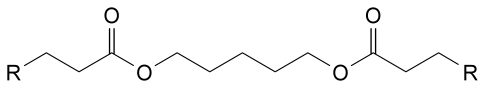
Injection: test solution (a) and reference solution (a).

Calculate the percentage content of $C_{65}H_{82}N_2O_{18}S_2$ from the sum of the areas of the peaks due to the 3 isomers in test solution (a) and reference solution (a).



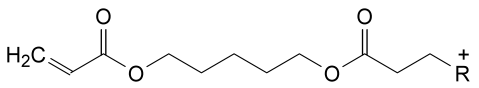
STORAGE

In an airtight container, protected from light, at a temperature of 2 °C to 8 °C.

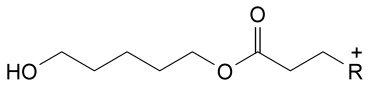


IMPURITIES

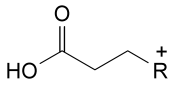
Specified impurities: A, C, D, E, F, G, H, I, J, K.



Other detectable impurities (the following substances would, if present at a sufficient level, be detected by one or other of the tests in the monograph. They are limited by the general acceptance criterion for other/unspecified impurities and/or by the general monograph *Substances for pharmaceutical use (2034)*. It is therefore not necessary to identify these impurities for demonstration of compliance. See also *5.10. Control of impurities in substances for pharmaceutical use*): *B.*

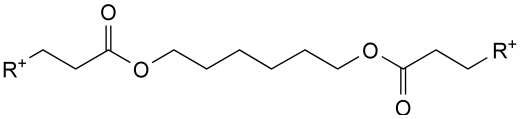


A. 1-(3,4-dimethoxybenzyl)-2-[13-[1-(3,4-dimethoxybenzyl)-6,7-dimethoxy-3,4-dihydroisoquinolin-2(1*H*)-yl]-3,11-dioxo-4,10-dioxatridecyl]-6,7-dimethoxy-2-methyl-1,2,3,4-tetrahydroisoquinolinium (A1 = *cis-trans* isomer, A2 = *cis-cis* isomer),

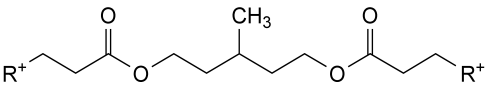


B. pentane-1,5-diyl bis[3-[1-(3,4-dimethoxybenzyl)-6,7-dimethoxy-3,4-dihydroisoquinolin-2(1*H*)-yl]propanoate],

C. 1-(3,4-dimethoxybenzyl)-2-(3,11-dioxo-4,10-dioxatridec-12-enyl)-6,7-dimethoxy-2-methyl-1,2,3,4-tetrahydroisoquinolinium (C1 = *trans* isomer, C2 = *cis* isomer),

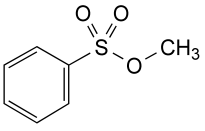


D. 1-(3,4-dimethoxybenzyl)-2-[3-[(5-hydroxypentyl)oxy]-3-oxopropyl]-6,7-dimethoxy-2-methyl-1,2,3,4-tetrahydroisoquinolinium (D1 = *trans* isomer, D2 = *cis* isomer),

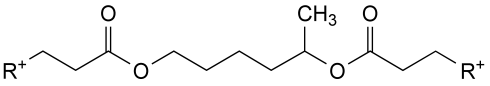


E. 3-[1-(3,4-dimethoxybenzyl)-6,7-dimethoxy-2-methyl-1,2,3,4-tetrahydroisoquinolinio]propanoate,

F. R^+-CH_3: 1-(3,4-dimethoxybenzyl)-6,7-dimethoxy-2,2-dimethyl-1,2,3,4-tetrahydroisoquinolinium,



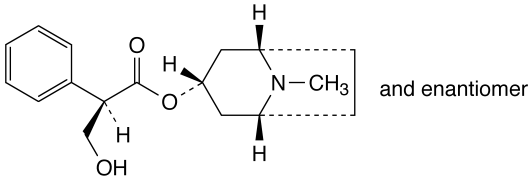
G. R-CH_3: 1-(3,4-dimethoxybenzyl)-6,7-dimethoxy-2-methyl-1,2,3,4-tetrahydroisoquinoline,



H. 2,2′-[hexane-1,6-diylbis[oxy(3-oxopropane-1,3-diyl)]]bis[1-(3,4-dimethoxybenzyl)-6,7-dimethoxy-2-methyl-1,2,3,4-tetrahydroisoquinolinium] (H1 = *cis-trans* isomer, H2 = *cis-cis* isomer),

I. 2,2′-[(3-methylpentane-1,5)-diylbis[oxy(3-oxopropane-1,3-diyl)]]bis[1-(3,4-dimethoxybenzyl)-6,7-dimethoxy-2-methyl-1,2,3,4-tetrahydroisoquinolinium] (I1 = *cis-trans* isomer, I2 = *cis-cis* isomer),

J. methyl benzenesulphonate,



K. 2,2′-[(hexane-1,5)-diylbis[oxy(3-oxopropane-1,3-diyl)]]bis[1-(3,4-dimethoxybenzyl)-6,7-dimethoxy-2-methyl-1,2,3,4-tetrahydroisoquinolinium]).

01/2008:2056
corrected 6.0

ATROPINE

Atropinum

$C_{17}H_{23}NO_3$ M_r 289.4
[51-55-8]

DEFINITION

(1*R*,3*r*,5*S*)-8-Methyl-8-azabicyclo[3.2.1]oct-3-yl (2*RS*)-3-hydroxy-2-phenylpropanoate.

Content: 99.0 per cent to 101.0 per cent (dried substance).

CHARACTERS

Appearance: white or almost white, crystalline powder or colourless crystals.

Solubility: very slightly soluble in water, freely soluble in alcohol and in methylene chloride.

IDENTIFICATION

First identification: A, B, E.

Second identification: A, C, D, E.

A. Melting point (*2.2.14*): 115 °C to 119 °C.

B. Infrared absorption spectrophotometry (*2.2.24*).

Comparison: *Ph. Eur. reference spectrum of atropine.*

C. Thin-layer chromatography (*2.2.27*).

Test solution. Dissolve 10 mg of the substance to be examined in *methanol R* and dilute to 10 ml with the same solvent.

Reference solution. Dissolve 10 mg of *atropine sulphate CRS* in *methanol R* and dilute to 10 ml with the same solvent.

Plate: *TLC silica gel plate R.*

Mobile phase: *concentrated ammonia R, water R, acetone R* (3:7:90 *V/V/V*).

Application: 10 µl.

Development: over half of the plate.

Drying: at 100-105 °C for 15 min.

Detection: after cooling, spray with *dilute potassium iodobismuthate solution R.*

Results: the principal spot in the chromatogram obtained with the test solution is similar in position, colour and size to the principal spot in the chromatogram obtained with the reference solution.

D. Place about 3 mg in a porcelain crucible and add 0.2 ml of *fuming nitric acid R*. Evaporate to dryness on a water-bath. Dissolve the residue in 0.5 ml of a 30 g/l solution of *potassium hydroxide R* in *methanol R*. A violet colour develops.

E. It complies with the test for optical rotation (see Tests).

TESTS

Optical rotation (*2.2.7*): – 0.70° to + 0.05°.

Dissolve 1.25 g in *alcohol R* and dilute to 25.0 ml with the same solvent. Measure in a 2 dm tube.

Related substances. Liquid chromatography (*2.2.29*).

Test solution. Dissolve 50 mg of the substance to be examined in mobile phase A and dilute to 50 ml with mobile phase A. Dilute 10 ml of the solution to 50 ml with mobile phase A.

Reference solution (a). Dilute 1.0 ml of the test solution to 100.0 ml with mobile phase A. Dilute 1.0 ml of this solution to 10.0 ml with mobile phase A.

Reference solution (b). Dissolve 5 mg of *atropine for system suitability CRS* in mobile phase A and dilute to 25 ml with mobile phase A.

Column:

– *size*: *l* = 0.125 m, Ø = 4 mm,

– *stationary phase*: *octylsilyl silica gel for chromatography R* (4 µm).

Mobile phase:

– *mobile phase A*: to 606 ml of a 7.0 g/l solution of *potassium dihydrogen phosphate R* adjusted to pH 3.3 with *0.05 M phosphoric acid*, add 3.5 g of *sodium dodecyl sulphate R* and 320 ml of *acetonitrile R*,

– *mobile phase B*: *acetonitrile R*,

Time (min)	Mobile phase A (per cent *V/V*)	Mobile phase B (per cent *V/V*)
0 - 12	100	0
12 - 25	100 → 70	0 → 30
25 - 26	70 → 100	30 → 0
26 - 30	100	0

Flow rate: 1 ml/min.

Detection: spectrophotometer at 210 nm.

Injection: 10 µl.

System suitability: reference solution (b):

– the chromatogram obtained is similar to the chromatogram supplied with *atropine for system suitability CRS*,

– *peak-to-valley ratio*: minimum 20, where H_p = height above the baseline of the peak due to impurity B and H_v = height above the baseline of the lowest point of the curve separating this peak from the peak due to atropine.

Limits: locate the impurities by comparing with the chromatogram obtained with reference solution (b) and with the chromatogram supplied with *atropine for system suitability CRS*:

– *impurity B*: not more than 3 times the area of the principal peak in the chromatogram obtained with reference solution (a) (0.3 per cent),

– *impurity A*: not more than 4 times the area of the principal peak in the chromatogram obtained with reference solution (a) (0.4 per cent),

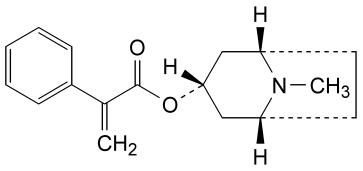
– *any other impurity*: not more than twice the area of the principal peak in the chromatogram obtained with reference solution (a) (0.2 per cent),

– *total*: not more than 15 times the area of the principal peak in the chromatogram obtained with reference solution (a) (1.5 per cent),

– *disregard limit*: the area of the principal peak in the chromatogram obtained with reference solution (a) (0.1 per cent); disregard peaks due to the blank.

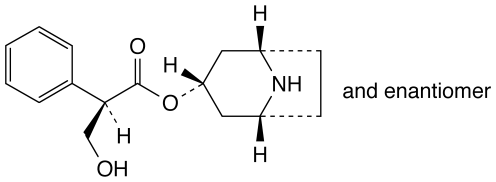
Loss on drying (*2.2.32*): maximum 0.2 per cent, determined on 1.000 g by drying in an oven at 105 °C for 2 h.

ASSAY



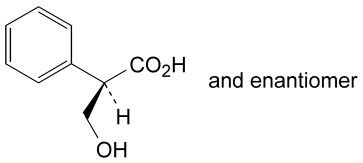
Dissolve 0.250 g in 40 ml of *anhydrous acetic acid R* and heat if necessary. Allow the solution to cool. Titrate with *0.1 M perchloric acid*, determining the end-point potentiometrically (*2.2.20*).

1 ml of *0.1 M perchloric acid* is equivalent to 28.94 mg of $C_{17}H_{23}NO_3$.

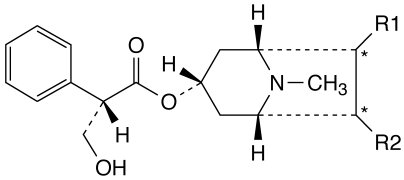


STORAGE

Protected from light.

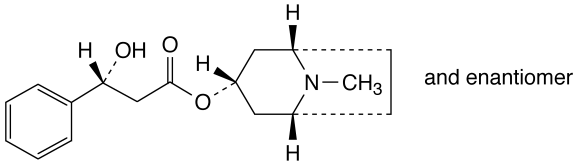


IMPURITIES



A. (1*R*,3*r*,5*S*)-8-methyl-8-azabicyclo[3.2.1]oct-3-yl 2-phenylpropenoate (apoatropine),

B. (1*R*,3*r*,5*S*)-8-azabicyclo[3.2.1]oct-3-yl (2*RS*)-3-hydroxy-2-phenylpropanoate (noratropine),

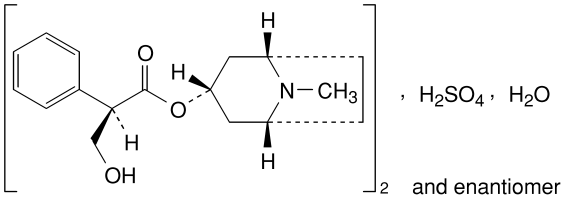


C. (2*RS*)-3-hydroxy-2-phenylpropanoic acid (tropic acid),

D. R1 = OH, R2 = H: (1*R*,3*S*,5*R*,6*RS*)-6-hydroxy-8-methyl-8-azabicyclo[3.2.1]oct-3-yl (2*S*)-3-hydroxy-2-phenylpropanoate (6-hydroxyhyoscyamine),

E. R1 = H, R2 = OH: (1*S*,3*R*,5*S*,6*RS*)-6-hydroxy-8-methyl-8-azabicyclo[3.2.1]oct-3-yl (2*S*)-3-hydroxy-2-phenylpropanoate (7-hydroxyhyoscyamine),

F. hyoscine,



G. (1*R*,3*r*,5*S*)-8-methyl-8-azabicyclo[3.2.1]oct-3-yl (3*RS*)-3-hydroxy-3-phenylpropanoate (isolittorine).

corrected 6.0

ATROPINE SULPHATE

Atropini sulfas

$C_{34}H_{48}N_2O_{10}S,H_2O$ M_r 695
[5908-99-6]

DEFINITION

Atropine sulphate contains not less than 99.0 per cent and not more than the equivalent of 101.0 per cent of bis[(1*R*,3*r*,5*S*)-8-methyl-8-azabicyclo[3.2.1]oct-3-yl (2*RS*)-3-hydroxy-2-phenylpropanoate] sulphate, calculated with reference to the anhydrous substance.

CHARACTERS

A white or almost white, crystalline powder or colourless crystals, very soluble in water, freely soluble in alcohol.

It melts at about 190 °C with decomposition, determined on the substance dried at 135 °C for 15 min.

IDENTIFICATION

First identification: A, B, E.

Second identification: C, D, E, F.

A. An aqueous solution shows almost no optical rotation (see Tests).

B. Examine by infrared absorption spectrophotometry (*2.2.24*), comparing with the spectrum obtained with *atropine sulphate CRS*.

C. Dissolve about 50 mg in 5 ml of *water R* and add 5 ml of *picric acid solution R*. The precipitate, washed with *water R* and dried at 100 °C to 105 °C for 2 h, melts (*2.2.14*) at 174 °C to 179 °C.

D. To about 1 mg add 0.2 ml of *fuming nitric acid R* and evaporate to dryness in a water-bath. Dissolve the residue in 2 ml of *acetone R* and add 0.1 ml of a 30 g/l solution of *potassium hydroxide R* in *methanol R*. A violet colour develops.

E. It gives the reactions of sulphates (*2.3.1*).

F. It gives the reaction of alkaloids (*2.3.1*).

TESTS

pH (*2.2.3*). Dissolve 0.6 g in *carbon dioxide-free water R* and dilute to 30 ml with the same solvent. The pH of the solution is 4.5 to 6.2.

Optical rotation (*2.2.7*). Dissolve 2.50 g in *water R* and dilute to 25.0 ml with the same solvent. The angle of optical rotation measured in a 2 dm tube is – 0.50° to + 0.05°.

Foreign alkaloids and decomposition products. Examine by thin-layer chromatography (*2.2.27*), using *silica gel G R* as the coating substance.

Test solution. Dissolve 0.2 g of the substance to be examined in *methanol R* and dilute to 10 ml with the same solvent.

Reference solution (a). Dilute 1 ml of the test solution to 100 ml with *methanol R*.

Reference solution (b). Dilute 5 ml of reference solution (a) to 10 ml with *methanol R*.

Apply separately to the plate 10 µl of each solution. Develop over a path of 10 cm using a mixture of 90 volumes of *acetone R*, 7 volumes of *water R* and 3 volumes of *concentrated ammonia R*. Dry the plate at 100 °C to 105 °C for 15 min. Allow to cool and spray with *dilute potassium iodobismuthate solution R* until the spots appear. Any spot in the chromatogram obtained with the test solution, apart from the principal spot, is not more intense than the spot in the chromatogram obtained with reference solution (a) (1.0 per cent) and not more than one such spot is more intense than the spot in the chromatogram obtained with reference solution (b) (0.5 per cent).

Apoatropine. Dissolve 0.10 g in *0.01 M hydrochloric acid* and dilute to 100.0 ml with the same acid. Determine the absorbance (*2.2.25*) at 245 nm. The specific absorbance is not greater than 4.0, calculated with reference to the anhydrous substance (about 0.5 per cent).

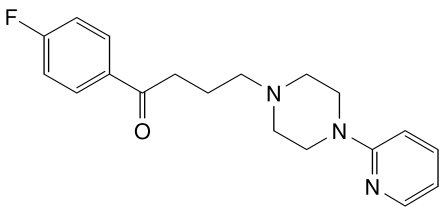
Water (*2.5.12*). 2.0 per cent to 4.0 per cent, determined on 0.50 g by the semi-micro determination of water.

Sulphated ash (*2.4.14*). Not more than 0.1 per cent, determined on 1.0 g.

ASSAY

Dissolve 0.500 g in 30 ml of *anhydrous acetic acid R*, warming if necessary. Cool the solution. Titrate with *0.1 M perchloric acid* and determining the end-point potentiometrically (*2.2.20*).

1 ml of *0.1 M perchloric acid* is equivalent to 67.68 mg of $C_{34}H_{48}N_2O_{10}S$.



STORAGE

Store protected from light.

AZAPERONE FOR VETERINARY USE

Azaperonum ad usum veterinarium

$C_{19}H_{22}FN_3O$ M_r 327.4
[1649-18-9]

DEFINITION

1-(4-Fluorophenyl)-4-[4-(pyridin-2-yl)piperazin-1-yl]butan-1-one.

Content: 99.0 per cent to 101.0 per cent (dried substance).

CHARACTERS

Appearance: white or almost white powder.

Solubility: practically insoluble in water, freely soluble in acetone and in methylene chloride, soluble in alcohol.

It shows polymorphism (*5.9*).

IDENTIFICATION

Infrared absorption spectrophotometry (*2.2.24*).

Preparation: discs.

Comparison: *azaperone CRS*.

If the spectra obtained show differences, dissolve the substance to be examined and the reference substance separately in *acetone R*, evaporate to dryness and record new spectra using the residues.

TESTS

Appearance of solution. The solution is clear (*2.2.1*) and not more intensely coloured than reference solution Y_6 (*2.2.2, Method II*).

Dissolve 1.0 g in 25 ml of a 14 g/l solution of *tartaric acid R*.

Related substances. Liquid chromatography (*2.2.29*).

Test solution. Dissolve 0.100 g of the substance to be examined in *methanol R* and dilute to 10.0 ml with the same solvent.

Reference solution (a). Dissolve 5.0 mg of *azaperone CRS* and 6.0 mg of *benperidol CRS* in *methanol R* and dilute to 200.0 ml with the same solvent.

Reference solution (b). Dilute 1.0 ml of the test solution to 100.0 ml with *methanol R*. Dilute 5.0 ml of the solution to 20.0 ml with *methanol R*.

Column:

- *size*: *l* = 0.10 m, Ø = 4.6 mm,
- *stationary phase*: *base-deactivated octadecylsilyl silica gel for chromatography R* (3 µm),
- *temperature*: 25 °C.

Mobile phase:

- *mobile phase A*: dissolve 1.4 g of *anhydrous sodium sulphate R* in 900 ml of *water R*, add 16.0 ml of *0.01 M sulphuric acid* and dilute to 1000 ml with *water R*,
- *mobile phase B*: *methanol R*.

Time (min)	Mobile phase A (per cent *V/V*)	Mobile phase B (per cent *V/V*)
0 - 15	95 → 20	5 → 80
15 - 20	20	80
20 - 21	20 → 95	80 → 5

Flow rate: 1.5 ml/min.

Detection: spectrophotometer at 230 nm.

Equilibration: at least 4 min with the mobile phase at the initial composition.

Injection: 10 µl.

Relative retention with reference to azaperone (retention time = about 9 min): impurity A = about 0.9; impurity B = about 1.1; impurity C = about 1.15.

System suitability: reference solution (a):

- *resolution*: minimum 8.0 between the peaks due to azaperone and to benperidol.

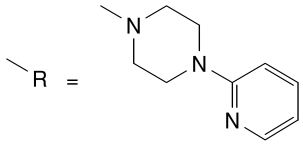
Limits:

- *impurity A*: not more than the area of the principal peak in the chromatogram obtained with reference solution (b) (0.25 per cent),
- *total of impurities B and C*: not more than 3 times the area of the principal peak in the chromatogram obtained with reference solution (b) (0.75 per cent),
- *total*: not more than 4 times the area of the principal peak in the chromatogram obtained with reference solution (b) (1.0 per cent),
- *disregard limit*: 0.2 times the area of the principal peak in the chromatogram obtained with reference solution (b) (0.05 per cent).

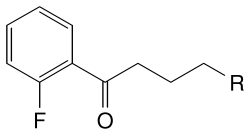
Loss on drying (*2.2.32*): maximum 0.5 per cent, determined on 1.000 g by drying *in vacuo* at 60 °C for 4 h.

Sulphated ash (*2.4.14*): maximum 0.1 per cent, determined on 1.0 g.

ASSAY

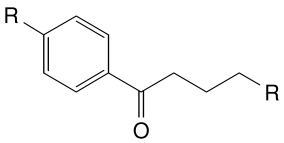


Dissolve 0.130 g in 70 ml of a mixture of 1 volume of *anhydrous acetic acid R* and 7 volumes of *methyl ethyl ketone R*. Titrate with *0.1 M perchloric acid*, using 0.2 ml of *naphtholbenzein solution R* as indicator.



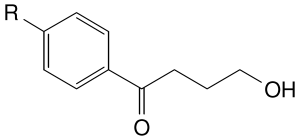
1 ml of *0.1 M perchloric acid* is equivalent to 16.37 mg of $C_{19}H_{22}FN_3O$.

STORAGE



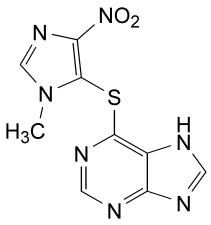
Protected from light.

IMPURITIES



A. 1-(2-fluorophenyl)-4-[4-(pyridin-2-yl)piperazin-1-yl]butan-1-one,

B. 4-[4-(pyridin-2-yl)piperazin-1-yl]-1-[4-[4-(pyridin-2-yl)piperazin-1-yl]phenyl]butan-1-one,



C. 4-hydroxy-1-[4-[4-(pyridin-2-yl)piperazin-1-yl]phenyl]butan-1-one.

01/2008:0369
corrected 6.0

AZATHIOPRINE

Azathioprinum

$C_9H_7N_7O_2S$ M_r 277.3
[446-86-6]

DEFINITION

6-[(1-Methyl-4-nitro-1*H*-imidazol-5-yl)sulfanyl]-7*H*-purine.

Content: 98.5 per cent to 101.0 per cent (dried substance).

CHARACTERS

Appearance: pale yellow powder.

Solubility: practically insoluble in water and in ethanol (96 per cent). It is soluble in dilute solutions of alkali hydroxides and sparingly soluble in dilute mineral acids.

IDENTIFICATION

A. Ultraviolet and visible absorption spectrophotometry (*2.2.25*).

Test solution. Dissolve 0.150 g in 30 ml of *dimethyl sulphoxide R* and dilute to 500.0 ml with *0.1 M hydrochloric acid*. Dilute 25.0 ml of the solution to 1000.0 ml with *0.1 M hydrochloric acid*.

Spectral range: 230-350 nm.

Absorption maximum: at 280 nm.

Specific absorbance at the absorption maximum: 600 to 660.

B. Infrared absorption spectrophotometry (*2.2.24*).

Comparison: *azathioprine CRS*.

C. To about 20 mg add 100 ml of *water R*, heat and filter. To 5 ml of the filtrate add 1 ml of *hydrochloric acid R* and about 10 mg of *zinc powder R*. Allow to stand for 5 min. The solution becomes yellow. Filter, cool in iced water, add 0.1 ml of *sodium nitrite solution R* and 0.1 g of *sulphamic acid R* and shake until the bubbles disappear. Add 1 ml of *β-naphthol solution R*. A pale pink precipitate is formed.

TESTS

Acidity or alkalinity. To 0.5 g add 25 ml of *carbon dioxide-free water R*, shake for 15 min and filter. To 20 ml of the filtrate add 0.1 ml of *methyl red solution R*. Not more than 0.2 ml of *0.01 M hydrochloric acid* or *0.01 M sodium hydroxide* is required to change the colour of the indicator.

Chloromethylnitroimidazole and mercaptopurine. Thin-layer chromatography (*2.2.27*). *Prepare the solutions immediately before use.*

Test solution. Dissolve 0.2 g of the substance to be examined in *dilute ammonia R1* and dilute to 10 ml with the same solvent.

Reference solution (a). Dissolve 10 mg of *chloromethylnitroimidazole CRS* in *dilute ammonia R1* and dilute to 50 ml with the same solvent.

Reference solution (b). Dissolve 10 mg of *mercaptopurine R* in *dilute ammonia R1* and dilute to 50 ml with the same solvent.

Plate: *cellulose for chromatography F_{254} R* as the coating substance.

Mobile phase: *butanol R* saturated with *dilute ammonia R1*.

Application: 5 µl.

Development: over a path of 15 cm.

Drying: at 50 °C.

Detection: examine in ultraviolet light at 254 nm.

Limits:

– *chloromethylnitroimidazole*: any spot due to chloromethylnitroimidazole is not more intense than the spot in the chromatogram obtained with reference solution (a) (1.0 per cent);

– *mercaptopurine*: any spot due to mercaptopurine is not more intense than the spot in the chromatogram obtained with reference solution (b) (1.0 per cent).

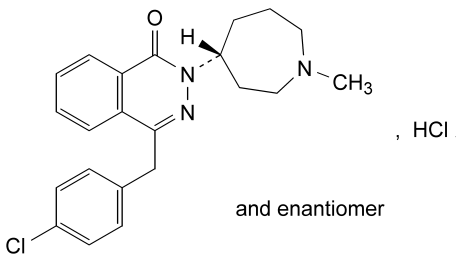
Loss on drying (*2.2.32*): maximum 1.0 per cent, determined on 0.50 g by drying in an oven at 105 °C.

Sulphated ash (*2.4.14*): maximum 0.1 per cent, determined on 1.0 g.

ASSAY

Dissolve 0.250 g in 25 ml of *dimethylformamide R*. Titrate with *0.1 M tetrabutylammonium hydroxide*, determining the end-point potentiometrically (*2.2.20*).

1 ml of *0.1 M tetrabutylammonium hydroxide* is equivalent to 27.73 mg of $C_9H_7N_7O_2S$.



STORAGE

Protected from light.

01/2008:1633
corrected 6.0

AZELASTINE HYDROCHLORIDE

Azelastini hydrochloridum

$C_{22}H_{25}Cl_2N_3O$ M_r 418.4
[79307-93-0]

DEFINITION

4-(4-Chlorobenzyl)-2-[(4*RS*)-1-methylhexahydro-1*H*-azepin-4-yl]phthalazin-1(2*H*)-one hydrochloride.

Content: 99.0 per cent to 101.0 per cent (dried substance).

CHARACTERS

Appearance: white or almost white, crystalline powder.

Solubility: sparingly soluble in water, soluble in ethanol and in methylene chloride.

IDENTIFICATION

A. Infrared absorption spectrophotometry (*2.2.24*).

Comparison: *azelastine hydrochloride CRS*.

B. Solution S (see Tests) gives reaction (a) of chlorides (*2.3.1*).

TESTS

Solution S. Dissolve 1.0 g in *carbon dioxide-free water R* and dilute to 100 ml with the same solvent.

Appearance of solution. Solution S is clear (*2.2.1*) and colourless (*2.2.2, Method II*).

Acidity or alkalinity. To 10 ml of solution S add 0.2 ml of *bromothymol blue solution R1*. Not more than 0.1 ml of *0.01 M hydrochloric acid* or *0.01 M sodium hydroxide* is required to change the colour of the solution.

Related substances. Liquid chromatography (*2.2.29*).

Solvent mixture: *acetonitrile for chromatography R, water R* (45:55 *V/V*).

Test solution. Dissolve 0.125 g of the substance to be examined in the solvent mixture and dilute to 50.0 ml with the solvent mixture.

Reference solution (a). Dilute 1.0 ml of the test solution to 100.0 ml with the solvent mixture. Dilute 1.0 ml of this solution to 10.0 ml with the solvent mixture.

Reference solution (b). Dissolve 1 mg of *azelastine impurity B CRS*, 1 mg of *azelastine impurity D CRS* and 1 mg of *azelastine impurity E CRS* in the test solution and dilute to 20 ml with the test solution.

Column:

– *size*: *l* = 0.25 m, Ø = 4.6 mm,
– *stationary phase*: *nitrile silica gel for chromatography R* (10 µm),
– *temperature*: 30 °C.

Mobile phase: dissolve 2.16 g of *sodium octanesulphonate R* and 0.68 g of *potassium dihydrogen phosphate R* in 740 ml of *water for chromatography R*, adjust to pH 3.0-3.1 with *dilute phosphoric acid R*, add 260 ml of *acetonitrile for chromatography R* and mix.

Flow rate: 2.0 ml/min.

Detection: spectrophotometer at 210 nm.

Injection: 10 µl.

Run time: twice the retention time of azelastine.

Relative retention with reference to azelastine (retention time = about 8-9 min): impurity A = about 0.2; impurity B = about 0.3; impurity C = about 0.4; impurity D = about 0.6; impurity E = about 1.4.

System suitability: reference solution (b):

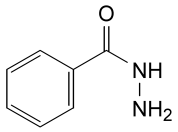
– *resolution*: minimum 4.0 between the peaks due to impurity B and impurity D,
– the peaks due to impurity D and impurity E are baseline separated from the principal peak.

Limits:

– *correction factors*: for the calculation of contents, multiply the peak areas of the following impurities by the corresponding correction factor: impurity B = 3.6; impurity D = 0.7; impurity E = 2.1;
– *impurities A, B, C, D, E*: for each impurity, not more than the area of the principal peak in the chromatogram obtained with reference solution (a) (0.1 per cent);
– *any other impurity*: for each impurity, not more than the area of the principal peak in the chromatogram obtained with reference solution (a) (0.1 per cent);
– *total*: not more than twice the area of the principal peak in the chromatogram obtained with reference solution (a) (0.2 per cent);
– *disregard limit*: 0.5 times the area of the principal peak in the chromatogram obtained with reference solution (a) (0.05 per cent).

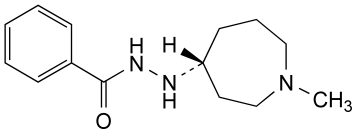
Loss on drying (*2.2.32*): maximum 0.5 per cent, determined on 1.000 g by drying in an oven at 105 °C.

ASSAY



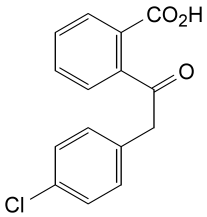
In order to avoid overheating in the reaction medium, mix thoroughly throughout and stop the titration immediately after the end-point has been reached.

Dissolve 0.300 g in 5 ml of *anhydrous formic acid R*. Add 30 ml of *acetic anhydride R*. Titrate quickly with *0.1 M perchloric acid*, determining the end-point potentiometrically (*2.2.20*).

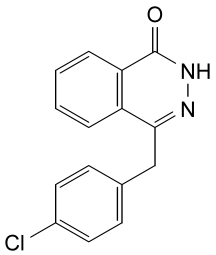


1.0 ml of *0.1 M perchloric acid* is equivalent to 41.84 mg of $C_{22}H_{25}Cl_2N_3O$.

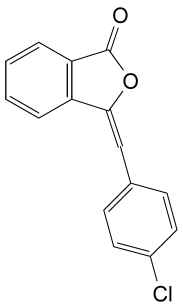
IMPURITIES



Specified impurities: A, B, C, D, E.



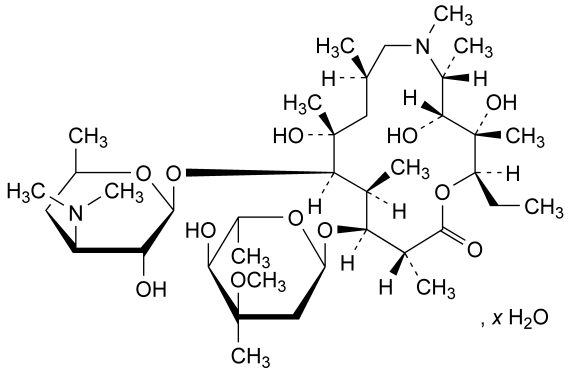
A. benzoyldiazane (benzohydrazide),



B. 1-benzoyl-2-[(4*RS*)-1-methylhexahydro-1*H*-azepin-4-yl]diazane,

C. 2-[(4-chlorophenyl)acetyl]benzoic acid,

D. 4-(4-chlorobenzyl)phthalazin-1(2*H*)-one,



E. 3-(4-chlorobenzylidene)isobenzofuran-1(3*H*)-one.

01/2008:1649

AZITHROMYCIN

Azithromycinum

$C_{38}H_{72}N_2O_{12}$,xH_2O M_r 749 (anhydrous substance)
with x = 1 or 2
[83905-01-5]

DEFINITION

(2*R*,3*S*,4*R*,5*R*,8*R*,10*R*,11*R*,12*S*,13*S*,14*R*)-13-[(2,6-Dideoxy-3-*C*-methyl-3-*O*-methyl-α-L-*ribo*-hexopyranosyl)oxy]-2-ethyl-3,4,10-trihydroxy-3,5,6,8,10,12,14-heptamethyl-11-[[3,4,6-trideoxy-3-(dimethylamino)-β-D-*xylo*-hexopyranosyl]oxy]-1-oxa-6-azacyclopentadecan-15-one. The degree of hydration is 1 or 2.

Semi-synthetic product derived from a fermentation product.

Content: 96.0 per cent to 102.0 per cent (anhydrous substance).

CHARACTERS

Appearance: white or almost white powder.

Solubility: practically insoluble in water, freely soluble in anhydrous ethanol and in methylene chloride.

IDENTIFICATION

Infrared absorption spectrophotometry (*2.2.24*).

Comparison: *azithromycin CRS*.

If the spectra obtained in the solid state show differences, prepare further spectra using 90 g/l solutions in *methylene chloride R*.

TESTS

Solution S. Dissolve 0.500 g in *anhydrous ethanol R* and dilute to 50.0 ml with the same solvent.

Appearance of solution. Solution S is clear (*2.2.1*) and colourless (*2.2.2, Method II*).

pH (*2.2.3*): 9.0 to 11.0.

Dissolve 0.100 g in 25.0 ml of *methanol R* and dilute to 50.0 ml with *carbon dioxide-free water R*.

Specific optical rotation (*2.2.7*): – 45 to – 49 (anhydrous substance), determined on solution S.

Related substances. Liquid chromatography (*2.2.29*).

Solvent mixture. Prepare a 1.73 g/l solution of *ammonium dihydrogen phosphate R* adjusted to pH 10.0 with *ammonia R*. Transfer 350 ml of this solution to a suitable container. Add 300 ml of *acetonitrile R1* and 350 ml of *methanol R1*. Mix well.

Test solution. Dissolve 0.200 g of the substance to be examined in the solvent mixture and dilute to 25.0 ml with the solvent mixture.

Reference solution (a). Dilute 1.0 ml of the test solution to 100.0 ml with the solvent mixture.

Reference solution (b). Dissolve the contents of a vial of *azithromycin for system suitability CRS* (containing impurities F, H and J) in 1.0 ml of the solvent mixture and sonicate for 5 min.

Reference solution (c). Dissolve 8.0 mg of *azithromycin for peak identification CRS* (containing impurities A, B, C, E, F, G, I, J, L, M, N, O, P) in 1.0 ml of the solvent mixture.

Reference solution (d). Dissolve the contents of a vial of *azithromycin impurity B CRS* in 1.0 ml of the solvent mixture.

Column:

– *size*: *l* = 0.25 m, Ø = 4.6 mm;

– *stationary phase*: *end-capped octadecylsilyl amorphous organosilica polymer for mass spectrometry R* (5 µm);

– *temperature*: 60 °C.

Mobile phase:

– *mobile phase A*: 1.80 g/l solution of *anhydrous disodium hydrogen phosphate R* adjusted to pH 8.9 with *dilute phosphoric acid R* or with *dilute sodium hydroxide solution R*;

– *mobile phase B*: *methanol R1, acetonitrile R1* (250:750 *V/V*);

Time (min)	Mobile phase A (per cent *V/V*)	Mobile phase B (per cent *V/V*)
0 - 25	50 → 45	50 → 55
25 - 30	45 → 40	55 → 60
30 - 80	40 → 25	60 → 75
80 - 81	25 → 50	75 → 50
81 - 93	50	50

Flow rate: 1.0 ml/min.

Detection: spectrophotometer at 210 nm.

Injection: 50 µl.

Relative retention with reference to azithromycin (retention time = 45-50 min): impurity L = about 0.29; impurity M = about 0.37; impurity E = about 0.43; impurity F = about 0.51; impurity D = about 0.54; impurity J = about 0.54; impurity I = about 0.61; impurity C = about 0.73; impurity N = about 0.76; impurity H = about 0.79; impurity A = about 0.83; impurity P = about 0.92; impurity O = about 1.23; impurity G = about 1.26; impurity B = about 1.31.

Identification of impurities: use the chromatogram supplied with *azithromycin for peak identification CRS* and the chromatogram obtained with reference solution (c) to identify the peaks due to impurities A, C, E, F, G, I, J, L, M, N, O and P, the chromatogram obtained with reference solution (d) to identify the peak due to impurity B and the chromatogram obtained with reference solution (b) to identify the peak due to impurity H.

System suitability: reference solution (b):

– *peak-to-valley ratio*: minimum 1.4, where H_p = height above the baseline of the peak due to impurity J and H_v = height above the baseline of the lowest point of the curve separating this peak from the peak due to impurity F.

Limits:

– *correction factors*: for the calculation of content, multiply the peak areas of the following impurities by the corresponding correction factor: impurity F = 0.3; impurity H = 0.1; impurity L = 2.3; impurity M = 0.6; impurity N = 0.7;

– *impurity B*: not more than twice the area of the principal peak in the chromatogram obtained with reference solution (a) (2.0 per cent);

– *impurities A, C, E, F, G, H, I, L, M, N, O, P*: for each impurity, not more than 0.5 times the area of the principal peak in the chromatogram obtained with reference solution (a) (0.5 per cent);

– *sum of impurities D and J*: not more than 0.5 times the area of the principal peak in the chromatogram obtained with reference solution (a) (0.5 per cent);

– *any other impurity*: for each impurity, not more than 0.2 times the area of the principal peak in the chromatogram obtained with reference solution (a) (0.2 per cent);

– *total*: not more than 3 times the area of the principal peak in the chromatogram obtained with reference solution (a) (3.0 per cent);

– *disregard limit*: 0.1 times the area of the principal peak in the chromatogram obtained with reference solution (a) (0.1 per cent); disregard the peaks eluting before impurity L and after impurity B.

Heavy metals (*2.4.8*): maximum 25 ppm.

Dissolve 2.0 g in a mixture of 15 volumes of *water R* and 85 volumes of *anhydrous ethanol R* and dilute to 20 ml with the same mixture of solvents. 12 ml of the solution complies with test B. Prepare the reference solution using lead standard solution (2.5 ppm Pb) obtained by diluting *lead standard solution (100 ppm Pb) R* with a mixture of 15 volumes of *water R* and 85 volumes of *anhydrous ethanol R*.

Water (*2.5.12*): 1.8 per cent to 6.5 per cent, determined on 0.200 g.

Sulphated ash (*2.4.14*): maximum 0.2 per cent, determined on 1.0 g.

ASSAY

Liquid chromatography (*2.2.29*).

Solution A. Mix 60 volumes of *acetonitrile R1* and 40 volumes of a 6.7 g/l solution of *dipotassium hydrogen phosphate R* adjusted to pH 8.0 with *phosphoric acid R*.

Test solution. Dissolve 53.0 mg of the substance to be examined in 2 ml of *acetonitrile R1* and dilute to 100.0 ml with solution A.

Reference solution (a). Dissolve 53.0 mg of *azithromycin CRS* in 2 ml of *acetonitrile R1* and dilute to 100.0 ml with solution A.

Reference solution (b). Dissolve 5 mg of the substance to be examined and 5 mg of *azithromycin impurity A CRS* in 0.5 ml of *acetonitrile R1* and dilute to 10 ml with solution A.

Column:

– *size*: *l* = 0.25 m, Ø = 4.6 mm;

– *stationary phase*: *octadecylsilyl vinyl polymer for chromatography R* (5 µm);

– *temperature*: 40 °C.

Mobile phase: mix 60 volumes of *acetonitrile R1* and 40 volumes of a 6.7 g/l solution of *dipotassium hydrogen phosphate R* adjusted to pH 11.0 with a 560 g/l solution of *potassium hydroxide R*.

Flow rate: 1.0 ml/min.

Detection: spectrophotometer at 210 nm.

Injection: 10 µl.

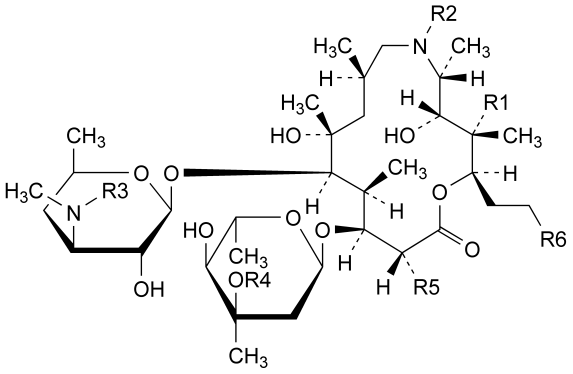
Run time: 1.5 times the retention time of azithromycin.

Retention time: azithromycin = about 10 min.

System suitability: reference solution (b):

– *resolution*: minimum 3.0 between the peaks due to impurity A and azithromycin.

Calculate the percentage content of $C_{38}H_{72}N_2O_{12}$ from the declared content of *azithromycin CRS*.



STORAGE

In an airtight container.

IMPURITIES

Specified impurities: *A, B, C, D, E, F, G, H, I, J, L, M, N, O, P.*

Other detectable impurities (the following substances would, if present at a sufficient level, be detected by one or other of the tests in the monograph. They are limited by the general acceptance criterion for other/unspecified impurities and/or by the general monograph *Substances for pharmaceutical use (2034)*. It is therefore not necessary to identify these impurities for demonstration of compliance. See also *5.10. Control of impurities in substances for pharmaceutical use*): *K.*

BACAMPICILLIN HYDROCHLORIDE

Bacampicillini hydrochloridum

$C_{21}H_{28}ClN_3O_7S$ M_r 502.0
[37661-08-8]

DEFINITION

(1*RS*)-1-[(Ethoxycarbonyl)oxy]ethyl (2*S*,5*R*,6*R*)-6-[[(2*R*)-2-amino-2-phenylacetyl]amino]-3,3-dimethyl-7-oxo-4-thia-1-azabicyclo[3.2.0]heptane-2-carboxylate hydrochloride.

Semi-synthetic product derived from a fermentation product.

Content: 95.0 per cent to 102.0 per cent (anhydrous substance).

CHARACTERS

Appearance: white or almost white powder or granules, hygroscopic.

Solubility: soluble in water, freely soluble in ethanol (96 per cent), soluble in methylene chloride.

IDENTIFICATION

First identification: A, D.

Second identification: B, C, D.

A. Infrared absorption spectrophotometry (*2.2.24*).
Comparison: *bacampicillin hydrochloride CRS.*

B. Thin-layer chromatography (*2.2.27*).
Test solution. Dissolve 10 mg of the substance to be examined in 2 ml of *methanol R.*
Reference solution (a). Dissolve 10 mg of *bacampicillin hydrochloride CRS* in 2 ml of *methanol R.*
Reference solution (b). Dissolve 10 mg of *bacampicillin hydrochloride CRS*, 10 mg of *talampicillin hydrochloride CRS* and 10 mg of *pivampicillin CRS* in 2 ml of *methanol R.*
Plate: *TLC silanised silica gel plate R.*
Mobile phase: mix 10 volumes of a 272 g/l solution of *sodium acetate R* adjusted to pH 5.0 with *glacial acetic acid R*, 40 volumes of *water R* and 50 volumes of *ethanol (96 per cent) R.*
Application: 1 µl.
Development: over a path of 15 cm.
Drying: in a current of warm air.
Detection: spray with *ninhydrin solution R1* and heat at 60 °C for 10 min.
System suitability: reference solution (b):
– the chromatogram shows 3 clearly separated spots.
Results: the principal spot in the chromatogram obtained with the test solution is similar in position, colour and size to the principal spot in the chromatogram obtained with reference solution (a).

C. Place about 2 mg in a test-tube about 150 mm long and 15 mm in diameter. Moisten with 0.05 ml of *water R* and add 2 ml of *sulphuric acid-formaldehyde reagent R.* Mix the contents of the tube by swirling; the solution is practically colourless. Place the test-tube on a water-bath for 1 min; a dark yellow colour develops.

D. Dissolve about 25 mg in 2 ml of *water R.* Add 2 ml of *dilute sodium hydroxide solution R* and shake. Wait a few minutes and add 3 ml of *dilute nitric acid R* and 0.5 ml of *silver nitrate solution R1.* A white precipitate is formed. Add 0.5 ml of *concentrated ammonia R.* The precipitate dissolves.

TESTS

Appearance of solution. Dissolve 0.200 g in 20 ml of *water R*; the solution is not more opalescent than reference suspension II (*2.2.1*). Dissolve 0.500 g in 10 ml of *water R*; the absorbance (*2.2.25*) of the solution at 430 nm is not greater than 0.10.

pH (*2.2.3*): 3.0 to 4.5.

Dissolve 1.0 g in *carbon dioxide-free water R* and dilute to 50 ml with the same solvent.

Specific optical rotation (*2.2.7*): + 175 to + 195 (anhydrous substance).

Dissolve 0.250 g in *water R* and dilute to 25.0 ml with the same solvent.

Related substances. Liquid chromatography (*2.2.29*).
Prepare the test solution and reference solutions (a), (b) and (d) immediately before use.

Phosphate buffer A. Dissolve 1.4 g of *sodium dihydrogen phosphate monohydrate R* in *water R* and dilute to about 800 ml with the same solvent. Adjust to pH 3.0 with *dilute phosphoric acid R* and dilute to 1000.0 ml with *water R.*

Phosphate buffer B. Dissolve 2.75 g of *sodium dihydrogen phosphate monohydrate R* and 2.3 g of *disodium hydrogen phosphate dihydrate R* in *water R* and dilute to about 1800 ml with the same solvent. Adjust to pH 6.8, if necessary, using *dilute phosphoric acid R* or *dilute sodium hydroxide solution R* and dilute to 2000.0 ml with *water R.*

Test solution. Dissolve 30.0 mg of the substance to be examined in phosphate buffer A and dilute to 100.0 ml with phosphate buffer A.

Reference solution (a). Dissolve 30.0 mg of *bacampicillin hydrochloride CRS* in phosphate buffer A and dilute to 100.0 ml with phosphate buffer A.

Reference solution (b). Dilute 1.0 ml of reference solution (a) to 100.0 ml with phosphate buffer A.

Reference solution (c). Dissolve 30 mg of the substance to be examined in phosphate buffer B and dilute to 100 ml with phosphate buffer B. Heat at 80 °C for about 30 min.

Reference solution (d). Dissolve 20 mg of *ampicillin trihydrate CRS* (impurity I) in phosphate buffer A and dilute to 250 ml with phosphate buffer A. Dilute 5 ml of this solution to 100 ml with phosphate buffer A.

Column:
– *size*: *l* = 0.05 m, Ø = 3.9 mm;
– *stationary phase*: *octadecylsilyl silica gel for chromatography R* (5 µm).

Mobile phase: mix 30 volumes of *acetonitrile R* and 70 volumes of a 0.06 per cent *m/m* solution of *tetrahexylammonium hydrogen sulphate R* in phosphate buffer B.

Flow rate: 1.0 ml/min.

Detection: spectrophotometer at 220 nm.

Injection: 20 µl of the test solution and reference solutions (b), (c) and (d).

Run time: 3.5 times the retention time of bacampicillin.

System suitability:

– the peak due to impurity I is separated from the peaks due to the solvent in the chromatogram obtained with reference solution (d);

– *relative retention* with reference to bacampicillin: degradation product eluting just after bacampicillin = 1.12 to 1.38 in the chromatogram obtained with reference solution (c); if necessary, adjust the concentration of tetrahexylammonium hydrogen sulphate in the mobile phase.

Limits:

– *any impurity*: for each impurity, not more than 1.5 times the area of the principal peak in the chromatogram obtained with reference solution (b) (1.5 per cent);

– *total*: not more than 3 times the area of the principal peak in the chromatogram obtained with reference solution (b) (3 per cent);

– *disregard limit*: 0.1 times the area of the principal peak in the chromatogram obtained with reference solution (b) (0.1 per cent).

Butyl acetate and ethyl acetate (*2.4.24, System A*): maximum 2.0 per cent of butyl acetate, maximum 4.0 per cent of ethyl acetate and maximum 5.0 per cent for the sum of the contents.

Sample solution. Dissolve 50.0 mg of the substance to be examined in *water R* and dilute to 10.0 ml with the same solvent.

Use the method of standard additions.

Static head-space conditions that may be used:

– *equilibration temperature*: 60 °C;

– *equilibration time*: 20 min.

***N*,*N*-Dimethylaniline** (*2.4.26, Method A*): maximum 20 ppm.

Water (*2.5.12*): maximum 0.8 per cent, determined on 0.300 g.

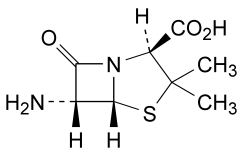
Sulphated ash (*2.4.14*): maximum 1.5 per cent, determined on 1.0 g.

ASSAY

Liquid chromatography (*2.2.29*) as described in the test for related substances with the following modifications.

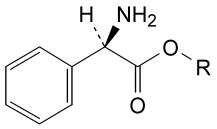
Injection: test solution and reference solution (a).

System suitability: reference solution (a):



– *repeatability*: maximum relative standard deviation of 1.0 per cent after 6 injections.

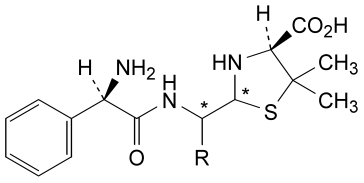
Calculate the percentage content of $C_{21}H_{28}ClN_3O_7S$ from the declared content of *bacampicillin hydrochloride CRS*.



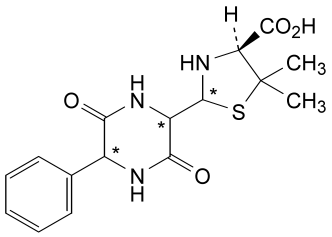
STORAGE

In an airtight container.

IMPURITIES

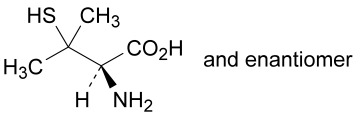


A. (2*S*,5*R*,6*R*)-6-amino-3,3-dimethyl-7-oxo-4-thia-1-azabicyclo-[3.2.0]heptane-2-carboxylic acid (6-aminopenicillanic acid),

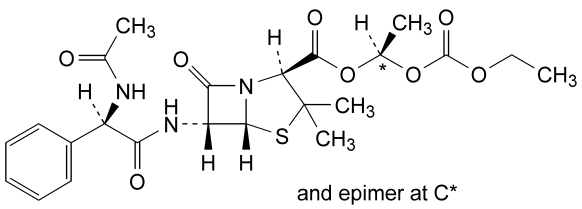


B. R = H: (2*R*)-2-amino-2-phenylacetic acid (D-phenylglycine),

G. R = CH_3: methyl (2*R*)-2-amino-2-phenylacetate (methyl D-phenylglycinate),



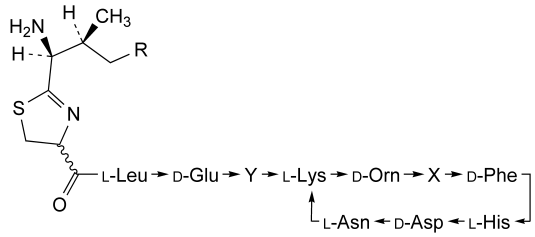
C. R = H: (2*RS*,4*S*)-2-[[[(2*R*)-2-amino-2-phenylacetyl]amino]-methyl]-5,5-dimethylthiazolidine-4-carboxylic acid (penilloic acids of ampicillin),



D. R = CO_2H: (4*S*)-2-[[[(2*R*)-2-amino-2-phenylacetyl]amino]-carboxymethyl]-5,5-dimethylthiazolidine-4-carboxylic acid (penicilloic acids of ampicillin),

E. (4*S*)-2-(3,6-dioxo-5-phenylpiperazin-2-yl)-5,5-dimethylthiazolidine-4-carboxylic acid (diketopiperazines of ampicillin),

F. (2*RS*)-2-amino-3-methyl-3-sulphanylbutanoic acid (DL-penicillamine),



H. (1*RS*)-1-[(ethoxycarbonyl)oxy]ethyl (2*S*,5*R*,6*R*)-6-[[(2*R*)-2-(acetylamino)-2-phenylacetyl]amino]-3,3-dimethyl-7-oxo-4-thia-1-azabicyclo[3.2.0]heptane-2-carboxylate (*N*-acetylbacampicillin),

I. ampicillin.

BACITRACIN

Bacitracinum

Name	Mol. Formula	X	Y	R
Bacitracin A	$C_{66}H_{103}N_{17}O_{16}S$	L-Ile	L-Ile	CH_3
Bacitracin B1	$C_{65}H_{101}N_{17}O_{16}S$	L-Ile	L-Ile	H
Bacitracin B2	$C_{65}H_{101}N_{17}O_{16}S$	L-Val	L-Ile	CH_3
Bacitracin B3	$C_{65}H_{101}N_{17}O_{16}S$	L-Ile	L-Val	CH_3

DEFINITION

Mixture of antimicrobial polypeptides produced by certain strains of *Bacillus licheniformis* or *Bacillus subtilis*, the main components being bacitracins A, B1, B2 and B3.

Content: minimum 60 IU/mg (dried substance).

CHARACTERS

Appearance: white or almost white powder, hygroscopic.

Solubility: freely soluble in water and in alcohol.

IDENTIFICATION

First identification: B, C.

Second identification: A, C.

A. Thin-layer chromatography (*2.2.27*).

Test solution. Dissolve 10 mg of the substance to be examined in a 3.4 g/l solution of *hydrochloric acid R* and dilute to 1.0 ml with the same solution.

Reference solution. Dissolve 10 mg of *bacitracin zinc CRS* in a 3.4 g/l solution of *hydrochloric acid R* and dilute to 1.0 ml with the same solution.

Plate: *TLC silica gel plate R*.

Mobile phase: *glacial acetic acid R, water R, butanol R* (1:2:4 *V/V/V*).

Application: 10 µl.

Development: over half of the plate.

Drying: at 100-105 °C.

Detection: spray with *ninhydrin solution R1* and heat at 110 °C for 5 min.

Results: the spots in the chromatogram obtained with the test solution are similar in position, size and colour to the spots in the chromatogram obtained with the reference solution.

B. It complies with the test for composition (see Tests).

C. Ignite 0.2 g. An insignificant residue remains which is not yellow at high temperature. Allow to cool. Dissolve the residue in 0.1 ml of *dilute hydrochloric acid R*. Add 5 ml of *water R* and 0.2 ml of *strong sodium hydroxide solution R*. No white precipitate is formed.

TESTS

Solution S. Dissolve 0.25 g in *carbon dioxide-free water R* and dilute to 25 ml with the same solvent.

Appearance of solution. Solution S is clear (*2.2.1*).

pH (*2.2.3*): 6.0 to 7.0 for solution S.

Composition. Liquid chromatography (*2.2.29*): use the normalisation procedure. *Prepare the solutions immediately before use.*

Test solution. Dissolve 0.100 g of the substance to be examined in 50.0 ml of the mobile phase.

Reference solution (a). Suspend 20.0 mg of *bacitracin zinc CRS* in *water R*, add 0.2 ml of *dilute hydrochloric acid R* and dilute to 10.0 ml with *water R*.

Reference solution (b). Dilute 5.0 ml of the test solution to 100.0 ml with the mobile phase.

Reference solution (c). Dilute 1.0 ml of reference solution (b) to 10.0 ml with the mobile phase.

Reference solution (d). Dissolve 50.0 mg of the substance to be examined in 25.0 ml of a 40 g/l solution of *sodium edetate R* adjusted to pH 7.0 with *dilute sodium hydroxide R*. Heat in a boiling water-bath for 30 min. Cool to room temperature.

Blank solution. A 40 g/l solution of *sodium edetate R* adjusted to pH 7.0 with *dilute sodium hydroxide R*.

Column:

– *size*: *l* = 0.25 m, Ø = 4.6 mm,

– *stationary phase*: *end-capped octadecylsilyl silica gel for chromatography R* (5 µm).

Mobile phase: add 520 volumes of *methanol R1*, 40 volumes of *acetonitrile R* and 300 volumes of *water R* to 100 volumes of a 34.8 g/l solution of *dipotassium hydrogen phosphate R* adjusted to pH 6.0 with a 27.2 g/l solution of *potassium dihydrogen phosphate R*.

Flow rate: 1.0 ml/min.

Detection: spectrophotometer at 254 nm.

Injection: 100 µl; inject the blank, the test solution and reference solutions (a) and (c).

Run time: 3 times the retention time of bacitracin A.

Relative retention with reference to bacitracin A (retention time = 15 min to 25 min): bacitracin B1 = about 0.6; bacitracin B3 = about 0.8; impurity E = about 2.5.

If necessary, adjust the composition of the mobile phase by changing the amount of organic modifier whilst keeping the ratio constant between methanol and acetonitrile.

System suitability: reference solution (a):

– *peak-to-valley ratio*: minimum of 1.2, where H_p = height above the baseline of the peak due to bacitracin B1 and H_v = height above the baseline of the lowest point of the curve separating this peak from the peak due to bacitracin B2.

Limits:

– *bacitracin A*: minimum 40.0 per cent,

– *sum of bacitracins A, B1, B2 and B3*: minimum 70.0 per cent,

– *disregard limit*: the area of the peak due to bacitracin A in the chromatogram obtained with reference solution (c) (0.5 per cent); disregard any peak observed in the blank run.

Related peptides. Liquid chromatography (*2.2.29*) as described in the test for composition.

See Figure 0465.-1.

Limit:

– *sum of the areas of all peaks eluting before the peak due to bacitracin B1*: maximum 20.0 per cent.

Impurity E. Liquid chromatography (*2.2.29*) as described in the test for composition.

See Figure 0465.-2.

Detection: spectrophotometer at 254 nm; spectrophotometer at 300 nm for reference solution (d).

Injection: test solution and reference solutions (b) and (d).

Limit:

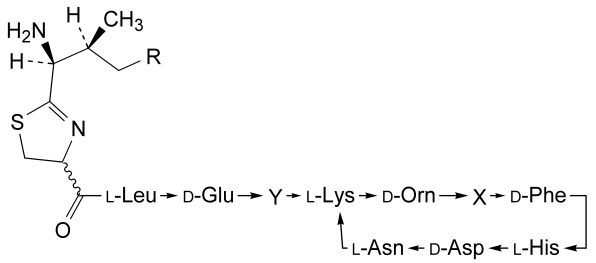
– *impurity E*: not more than 1.2 times the area of the principal peak in the chromatogram obtained with reference solution (b) (6.0 per cent).

Loss on drying (*2.2.32*): maximum 5.0 per cent, determined on 1.000 g by drying at 60 °C over *diphosphorus pentoxide R* at a pressure not exceeding 0.1 kPa for 3 h.

Sulphated ash (*2.4.14*): maximum 1.0 per cent, determined on 1.0 g.

Sterility *(2.6.1)*. If intended for the preparation of ophthalmic dosage forms without a further appropriate sterilisation procedure, it complies with the test for sterility.

Bacterial endotoxins (*2.6.14*): less than 0.8 IU/mg, if intended for use in the manufacture of ophthalmic dosage forms without a further appropriate procedure for the removal of bacterial endotoxins.



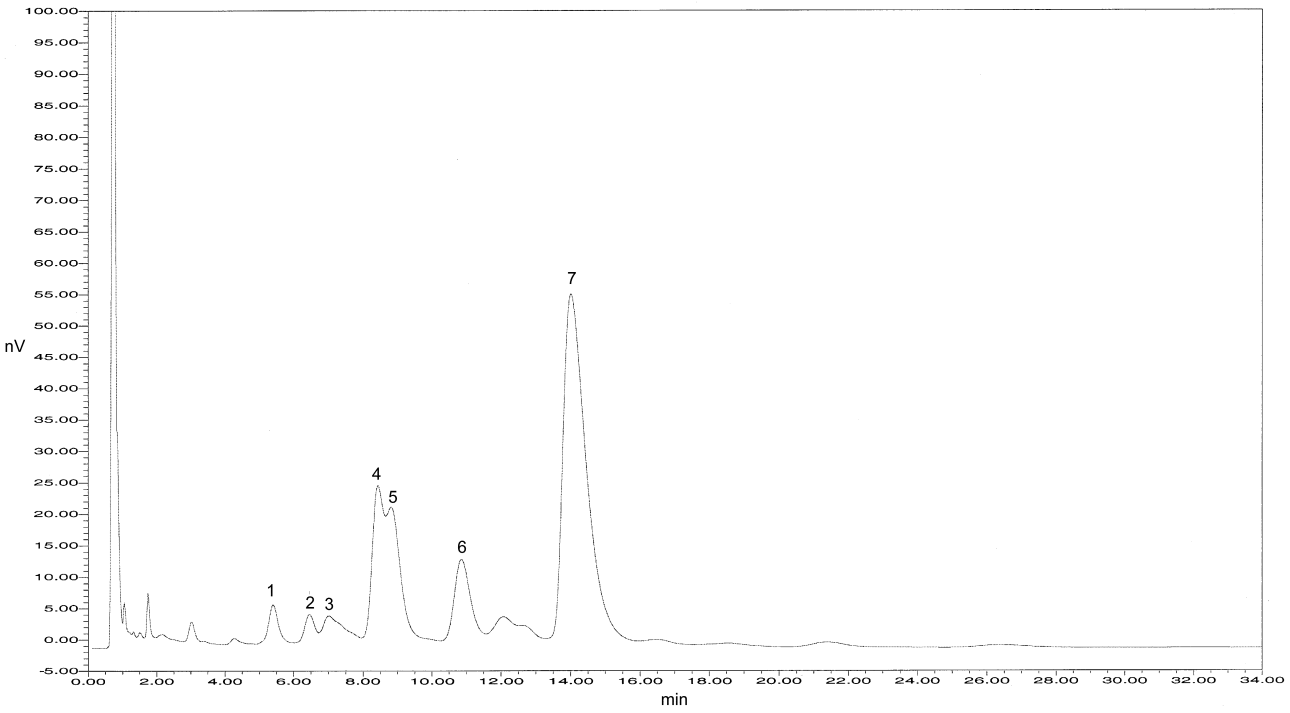
ASSAY

Carry out the microbiological assay of antibiotics (*2.7.2*). Use *bacitracin zinc CRS* as the reference substance.

STORAGE

In an airtight container at 2 °C to 8 °C. If the substance is sterile, store in a sterile, airtight, tamper-proof container.

IMPURITIES



A. X = L-Val, Y = L-Ile, R = H: bacitracin C1,

BACITRACIN ZINC

Bacitracinum zincum

DEFINITION

Zinc complex of bacitracin, which consists of a mixture of antimicrobial polypeptides produced by certain strains of *Bacillus licheniformis* or *Bacillus subtilis*, the main components being bacitracins A, B1, B2 and B3.

Content: minimum 60 IU/mg (dried substance).

CHARACTERS

Appearance: white or light yellowish-grey powder, hygroscopic.

Solubility: slightly soluble in water and in alcohol.

IDENTIFICATION

First identification: B, C.

Second identification: A, C.

A. Thin-layer chromatography (*2.2.27*).

Test solution. Dissolve 10 mg of the substance to be examined in 0.5 ml of *dilute hydrochloride acid R* and dilute to 1.0 ml with *water R.*

Reference solution. Dissolve 10 mg of *bacitracin zinc CRS* in 0.5 ml of *dilute hydrochloric acid R* and dilute to 1.0 ml with *water R.*

Plate: *TLC silica gel plate R.*

Mobile phase: *glacial acetic acid R, water R, butanol R* (1:2:4 *V/V/V*).

Application: 10 µl.

Development: over half of the plate.

Drying: at 100-105 °C.

Detection: spray with *ninhydrin solution R1* and heat at 110 °C for 5 min.

Results: the spots in the chromatogram obtained with the test solution are similar in position, size and colour to the spots in the chromatogram obtained with the reference solution.

B. It complies with the test for composition (see Tests).

C. Ignite about 0.15 g, allow to cool and dissolve the residue in 1 ml of *dilute hydrochloric acid R.* Add 4 ml of *water R.* The solution gives the reaction of zinc (*2.3.1*).

TESTS

pH (*2.2.3*): 6.0 to 7.5.

Shake 1.0 g for about 1 min with 10 ml of *carbon dioxide-free water R* and filter.

Composition. Liquid chromatography (*2.2.29*): use the normalisation procedure. *Prepare the solutions immediately before use.*

Test solution. Dissolve 0.100 g of the substance to be examined in 50.0 ml of a 40 g/l solution of *sodium edetate R* adjusted to pH 7.0 with *dilute sodium hydroxide R.*

Reference solution (a). Dissolve 20.0 mg of *bacitracin zinc CRS* in 10.0 ml of a 40 g/l solution of *sodium edetate R* adjusted to pH 7.0 with *dilute sodium hydroxide R.*

Reference solution (b). Dilute 5.0 ml of the test solution to 100.0 ml with *water R.*

Reference solution (c). Dilute 1.0 ml of reference solution (b) to 10.0 ml with *water R.*

Reference solution (d). Dissolve 50.0 mg of the substance to be examined in 25.0 ml of a 40 g/l solution of *sodium edetate R* adjusted to pH 7.0 with *dilute sodium hydroxide R.* Heat in a boiling water-bath for 30 min. Cool to room temperature.

Blank solution. A 40 g/l solution of *sodium edetate R* adjusted to pH 7.0 with dilute *sodium hydroxide R.*

Column:

– *size*: *l* = 0.25 m, Ø = 4.6 mm,
– *stationary phase*: *end-capped octadecylsilyl silica gel for chromatography R* (5 µm).

Mobile phase: add 520 volumes of *methanol R1*, 40 volumes of *acetonitrile R* and 300 volumes of *water R* to 100 volumes of a 34.8 g/l solution of *dipotassium hydrogen phosphate R*, adjusted to pH 6.0 with a 27.2 g/l solution of *potassium dihydrogen phosphate R.*

Flow rate: 1.0 ml/min.

Detection: spectrophotometer at 254 nm.

Injection: 100 µl; inject the blank, the test solution and reference solutions (a) and (c).

Run time: 3 times the retention time of bacitracin A.

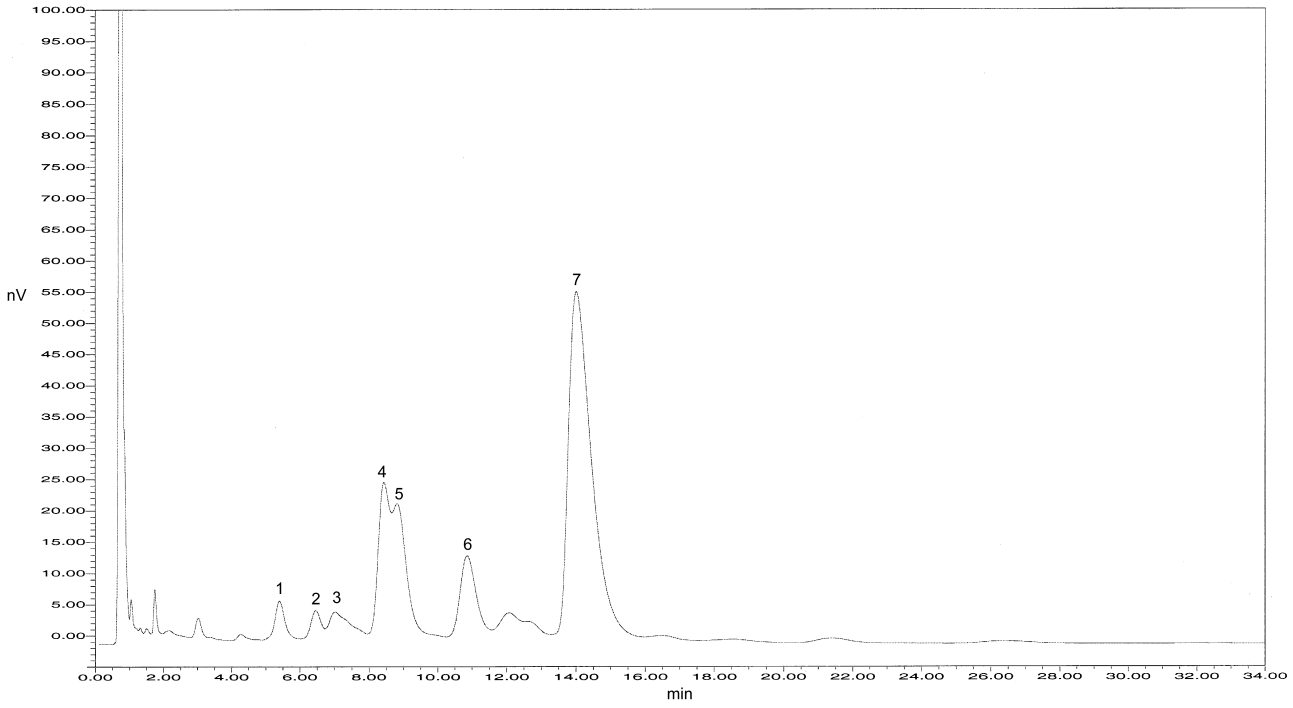
Relative retention with reference to bacitracin A (retention time = 15 min to 25 min): bacitracin B1 = about 0.6; bacitracin B3 = about 0.8; impurity E = about 2.5.

If necessary, adjust the composition of the mobile phase by changing the amount of organic modifier whilst keeping the ratio constant between methanol and acetonitrile.

System suitability: reference solution (a):

– *peak-to-valley ratio*: minimum of 1.2, where H_p = height above the baseline of the peak due to bacitracin B1 and H_v = height above the baseline of the lowest point of the curve separating this peak from the peak due to bacitracin B2.

Limits:



– *bacitracin A*: minimum 40.0 per cent,
– *sum of bacitracins A, B1, B2 and B3*: minimum 70.0 per cent.
– *disregard limit*: the area of the peak due to bacitracin A in the chromatogram obtained with reference solution (c) (0.5 per cent); disregard any peak observed in the blank run.

Related peptides. Liquid chromatography (*2.2.29*) as described in the test for composition.

See Figure 0466.-1.

Limit:

– *sum of the areas of all peaks eluting before the peak due to bacitracin B1*: maximum 20.0 per cent.

1. impurity A
2. impurity B
3. impurity C
4. bacitracin B1
5. bacitracin B2
6. bacitracin B3
7. bacitracin A

Figure 0466.-1. – *Chromatogram of the test for composition in bacitracin zinc obtained with the test solution at 254 nm*

Impurity E. Liquid chromatography (*2.2.29*) as described in the test for composition.

See Figure 0466.-2.

Detection: spectrophotometer at 254 nm; spectrophotometer at 300 nm for reference solution (d).

Injection: test solution and reference solutions (b) and (d).

Limit:

– *impurity E*: not more than 1.2 times the area of the principal peak in the chromatogram obtained with reference solution (b) (6.0 per cent).

Zinc: 4.0 per cent to 6.0 per cent (dried substance).

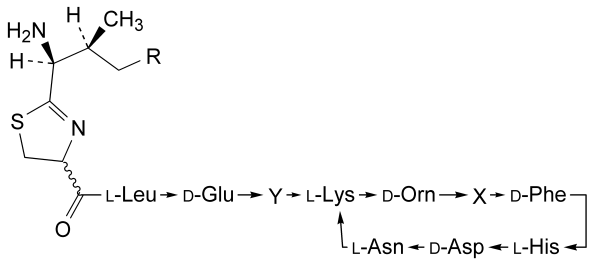
Dissolve 0.200 g in a mixture of 2.5 ml of *dilute acetic acid R* and 2.5 ml of water. Add 50 ml of *water R*, 50 mg of *xylenol orange triturate R* and sufficient *hexamethylenetetramine R* to produce a red colour. Add 2 g of *hexamethylenetetramine R* in excess. Titrate with *0.01 M sodium edetate* until a yellow colour is obtained.

1 ml of *0.01 M sodium edetate* is equivalent to 0.654 mg of Zn.

Loss on drying (*2.2.32*): maximum 5.0 per cent, determined on 1.000 g by drying at 60 °C over *diphosphorus pentoxide R* at a pressure not exceeding 0.1 kPa for 3 h.

Sterility (*2.6.1*). If intended for administration by spraying into internal body cavities without a further appropriate sterilisation procedure, it complies with the test for sterility.

Pyrogens (*2.6.8*). If intended for administration by spraying into internal body cavities without a further appropriate procedure for the removal of pyrogens, it complies with the test for pyrogens. Inject per kilogram of the rabbit's mass 1 ml of the supernatant liquid obtained by centrifuging a suspension containing 11 mg per millilitre in a 9 g/l solution of *sodium chloride R*.



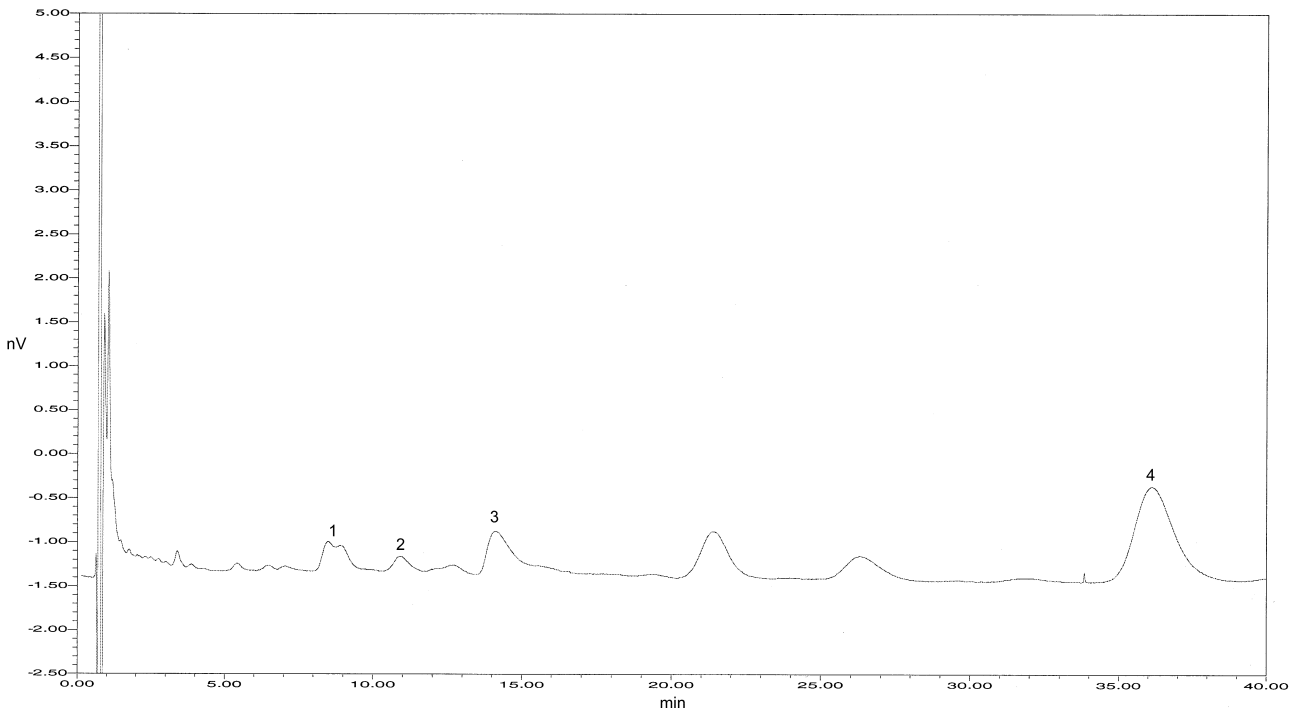
ASSAY

Suspend 50.0 mg in 5 ml of *water R*, add 0.5 ml of *dilute hydrochloric acid R* and dilute to 100.0 ml with *water R*. Allow the solution to stand for 30 min. Carry out the microbiological assay of antibiotics (*2.7.2*).

STORAGE

In an airtight container. If the substance is sterile, store in a sterile, airtight, tamper-proof container.

IMPURITIES



A. X = L-Val, Y = L-Ile, R = H: bacitracin C1,

BACLOFEN

Baclofenum

$C_{10}H_{12}ClNO_2$ M_r 213.7
[1134-47-0]

DEFINITION

(3*RS*)-4-Amino-3-(4-chlorophenyl)butanoic acid.

Content: 98.0 per cent to 101.0 per cent (anhydrous substance).

CHARACTERS

Appearance: white or almost white powder.

Solubility: slightly soluble in water, very slightly soluble in ethanol (96 per cent), practically insoluble in acetone. It dissolves in dilute mineral acids and in dilute solutions of alkali hydroxides.

It shows polymorphism (*5.9*).

IDENTIFICATION

First identification: B.

Second identification: A, C.

A. Ultraviolet and visible absorption spectrophotometry (*2.2.25*).

Test solution. Dissolve 70 mg in *water R* and dilute to 100.0 ml with the same solvent.

Spectral range: 220-320 nm.

Absorption maxima: at 259 nm, 266 nm and 275 nm.

Resolution (*2.2.25*): minimum 1.5 for the absorbance ratio.

Specific absorbance at the absorption maxima:

– at 259 nm: 9.8 to 10.8;
– at 266 nm: 11.5 to 12.7;
– at 275 nm: 8.4 to 9.3.

B. Infrared absorption spectrophotometry (*2.2.24*).

Preparation: discs prepared using 3 mg of substance and 300 mg of *potassium bromide R*.

Comparison: *baclofen CRS*.

If the spectra obtained in the solid state show differences, dissolve 0.1 g of each of the substances separately in 1 ml of *dilute sodium hydroxide solution R* and add 10 ml of *ethanol (96 per cent) R* and 1 ml of *dilute acetic acid R*. Allow to stand for 1 h. Filter, wash the precipitate with *ethanol (96 per cent) R* and dry *in vacuo*. Prepare new discs and record the spectra.

C. Thin-layer chromatography (*2.2.27*).

Test solution. Dissolve 10 mg of the substance to be examined in the mobile phase and dilute to 10 ml with the mobile phase.

Reference solution. Dissolve 10 mg of *baclofen CRS* in the mobile phase and dilute to 10 ml with the mobile phase.

Plate: *TLC silica gel G plate R.*

Mobile phase: *anhydrous formic acid R, water R, methanol R, chloroform R, ethyl acetate R* (5:5:20:30:40 *V/V/V/V/V*).

Application: 5 µl.

Development: over a path of 12 cm.

Drying: allow the solvents to evaporate.

Detection: spray with *ninhydrin solution R3* until the plate is slightly wet. Place in an oven maintained at 100 °C for 10 min. Examine in daylight.

Results: the principal spot in the chromatogram obtained with the test solution is similar in position, colour and size to the principal spot in the chromatogram obtained with the reference solution.

TESTS

Appearance of solution. The solution is not more opalescent than reference suspension II (*2.2.1*) and not more intensely coloured than reference solution BY_5 (*2.2.2, Method II*).

Dissolve 0.50 g in *1 M sodium hydroxide* and dilute to 25 ml with the same solvent.

Related substances. Liquid chromatography (*2.2.29*).

Test solution. Dissolve 25.0 mg of the substance to be examined in the mobile phase and dilute to 10.0 ml with the mobile phase.

Reference solution (a). Dissolve 25.0 mg of *baclofen impurity A CRS* in the mobile phase and dilute to 10.0 ml with the mobile phase.

Reference solution (b). Dilute 1.0 ml of reference solution (a) to 100.0 ml with the mobile phase.

Reference solution (c). Dilute 2.0 ml of the test solution to 100.0 ml with the mobile phase.

Reference solution (d). Dilute 2.0 ml of the test solution and 2.0 ml of reference solution (a) to 100.0 ml with the mobile phase.

Column:

– *size*: *l* = 0.25 m, Ø = 4.0 mm;
– *stationary phase*: *octadecylsilyl silica gel for chromatography R* (10 µm).

Mobile phase: dissolve 1.822 g of *sodium hexanesulphonate R* in 1 litre of a mixture of 560 volumes of *water R*, 440 volumes of *methanol R* and 5 volumes of *glacial acetic acid R*.

Flow rate: 2.0 ml/min.

Detection: spectrophotometer at 266 nm.

Injection: 20 µl of the test solution and reference solutions (b), (c) and (d).

Run time: 5 times the retention time of baclofen.

System suitability: reference solution (d):

– *resolution*: minimum 2.0 between the peaks due to baclofen and impurity A.

Limits:

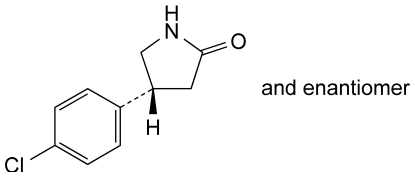
– *impurity A*: not more than the area of the principal peak in the chromatogram obtained with reference solution (b) (1.0 per cent);

– *total*: not more than the area of the principal peak in the chromatogram obtained with reference solution (c) (2.0 per cent).

Water (*2.5.12*): maximum 1.0 per cent, determined on 1.000 g.

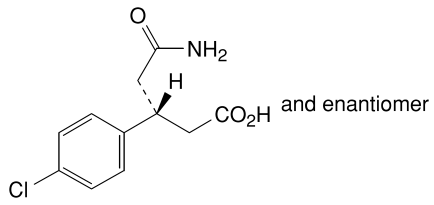
Sulphated ash (*2.4.14*): maximum 0.1 per cent, determined on 1.0 g.

ASSAY



Dissolve 0.1500 g in 50 ml of *anhydrous acetic acid R*. Titrate with *0.1 M perchloric acid*, determining the end-point potentiometrically (*2.2.20*).

1 ml of *0.1 M perchloric acid* is equivalent to 21.37 mg of $C_{10}H_{12}ClNO_2$.

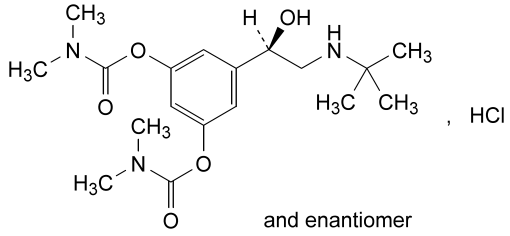


IMPURITIES

Specified impurities: A.

Other detectable impurities (the following substances would, if present at a sufficient level, be detected by one or other of the tests in the monograph. They are limited by the general acceptance criterion for other/unspecified impurities and/or by the general monograph *Substances for pharmaceutical use (2034)*. It is therefore not necessary to identify these impurities for demonstration of compliance. See also *5.10. Control of impurities in substances for pharmaceutical use*): *B.*

A. (4*RS*)-4-(4-chlorophenyl)pyrrolidin-2-one,



B. (3*RS*)-5-amino-3-(4-chlorophenyl)-5-oxopentanoic acid.

01/2008:1293

BAMBUTEROL HYDROCHLORIDE

Bambuteroli hydrochloridum

$C_{18}H_{30}ClN_3O_5$ M_r 403.9

[81732-46-9]

DEFINITION

5-[(1*RS*)-2-[(1,1-Dimethylethyl)amino]-1-hydroxyethyl]-1,3-phenylene bis(dimethylcarbamate) hydrochloride.

Content: 98.5 per cent to 101.5 per cent (anhydrous substance).

CHARACTERS

Appearance: white or almost white, crystalline powder.

Solubility: freely soluble in water, soluble in ethanol (96 per cent).

It shows polymorphism (*5.9*).

IDENTIFICATION

A. Infrared absorption spectrophotometry (*2.2.24*).

Preparation: discs.

Comparison: *bambuterol hydrochloride CRS*.

If the spectra obtained show differences, dissolve the substance to be examined and the reference substance separately in a mixture of 1 volume of *water R* and 6 volumes of *acetone R*, cool in ice to precipitate and dry both precipitates *in vacuo* at 50 °C to constant weight. Record new spectra using the residues.

B. It gives reaction (a) of chlorides (*2.3.1*).

TESTS

Solution S. Dissolve 4.0 g in *carbon dioxide-free water R* and dilute to 20.0 ml with the same solvent.

Acidity or alkalinity. To 10 ml of solution S add 0.2 ml of *methyl red solution R* and 0.2 ml of *0.01 M hydrochloric acid*. The solution is red. Add 0.4 ml of *0.01 M sodium hydroxide*. The solution is yellow.

Optical rotation (*2.2.7*): – 0.10° to + 0.10°.

Dilute 1 ml of solution S to 10 ml with *carbon dioxide-free water R*.

Related substances. Liquid chromatography (*2.2.29*).

Test solution. Dissolve 5.0 mg of the substance to be examined in the mobile phase and dilute to 10.0 ml with the mobile phase.

Reference solution (a). Dissolve 1.0 mg of *formoterol fumarate dihydrate CRS* in the mobile phase and dilute to 10.0 ml with the mobile phase. Mix 0.8 ml of this solution with 0.4 ml of the test solution and dilute to 100.0 ml with the mobile phase.

Reference solution (b). Dilute 1.0 ml of the test solution to 50.0 ml with the mobile phase. Dilute 2.0 ml of this solution to 20.0 ml with the mobile phase.

Column:

– *size*: *l* = 0.15 m, Ø = 4.6 mm;

– *stationary phase*: *base-deactivated octadecylsilyl silica gel for chromatography R* (5 µm).

Mobile phase: dissolve 1.3 g of *sodium octanesulphonate R* in 430 ml of a mixture of 25 volumes of *acetonitrile R1* and 75 volumes of *methanol R*; then mix this solution with 570 ml of 0.050 M phosphate buffer pH 3.0 prepared as follows: dissolve 6.90 g of *sodium dihydrogen phosphate monohydrate R* in *water R* and dilute to 1000 ml with *water R*, adjust to pH 3.0 with a 50 g/l solution of *dilute phosphoric acid R*.

Flow rate: 1.5 ml/min.

Detection: spectrophotometer at 214 nm.

Injection: 20 µl; inject the mobile phase as a blank.

Run time: 1.5 times the retention time of bambuterol.

Retention time: formoterol = about 7 min; bambuterol = about 9 min. If necessary, adjust the composition of the mobile phase; increase the content of phosphate buffer to increase the retention time.

System suitability: reference solution (a):

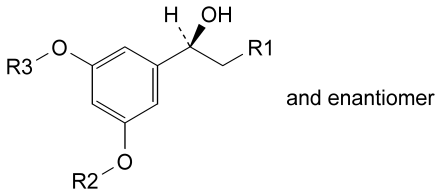
– *resolution*: minimum 5.0 between the peaks due to bambuterol and formoterol.

Limits:

– *impurities A, B, C, D, E, F*: for each impurity, not more than the area of the principal peak in the chromatogram obtained with reference solution (b) (0.2 per cent);
– *total*: not more than 3 times the area of the principal peak in the chromatogram obtained with reference solution (b) (0.6 per cent);
– *disregard limit*: 0.25 times the area of the principal peak in the chromatogram obtained with reference solution (b) (0.05 per cent); disregard any peak due to the mobile phase.

Water (*2.5.12*): maximum 0.5 per cent, determined on 0.500 g.

Sulphated ash (*2.4.14*): maximum 0.1 per cent, determined on 1.0 g.



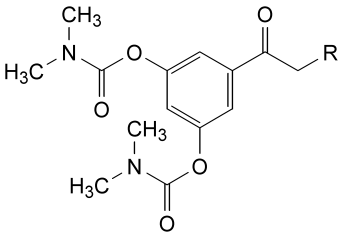
ASSAY

Dissolve 0.320 g in 50 ml of *ethanol (96 per cent) R* and add 5 ml of *0.01 M hydrochloric acid*. Carry out a potentiometric titration (*2.2.20*), using *0.1 M sodium hydroxide*. Read the volume added between the 2 points of inflexion.

1 ml of *0.1 M sodium hydroxide* is equivalent to 40.39 mg of $C_{18}H_{30}ClN_3O_5$.

IMPURITIES

Specified impurities: A, B, C, D, E, F.

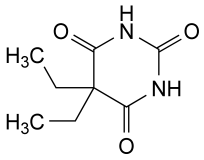


A. R1 = NH-C(CH_3)$_3$, R2 = R3 = H: (1*RS*)-1-(3,5-dihydroxyphenyl)-2-[(1,1-dimethylethyl)amino]ethanol (terbutaline),

B. R1 = OH, R2 = R3 = CO-N(CH_3)$_2$: 5-[(1*RS*)-1,2-dihydroxyethyl]-1,3-phenylene bis(dimethylcarbamate),

C. R1 = NH-C(CH_3)$_3$, R2 = H, R3 = CO-N(CH_3)$_2$: 3-[(1*RS*)-2-[(1,1-dimethylethyl)amino]-1-hydroxyethyl]-5-hydroxyphenyl dimethylcarbamate,

D. R1 = H, R2 = R3 = CO-N(CH_3)$_2$: 5-[(1*RS*)-1-hydroxyethyl]-1,3-phenylene bis(dimethylcarbamate),



E. R = H: 5-acetyl-1,3-phenylene bis(dimethylcarbamate),

F. R = NH-C(CH_3)$_3$: 5-[[(1,1-dimethylethyl)amino]acetyl]-1,3-phenylene bis(dimethylcarbamate).

corrected 6.0

BARBITAL

Barbitalum

$C_8H_{12}N_2O_3$ M_r 184.2
[57-44-3]

DEFINITION

Barbital contains not less than 99.0 per cent and not more than the equivalent of 101.0 per cent of 5,5-diethylpyrimidine-2,4,6(1*H*,3*H*,5*H*)-trione, calculated with reference to the dried substance.

CHARACTERS

A white or almost white, crystalline powder or colourless crystals, slightly soluble in water, soluble in boiling water and in alcohol. It forms water-soluble compounds with alkali hydroxides and carbonates and with ammonia.

IDENTIFICATION

First identification: A, B.

Second identification: A, C, D.

A. Determine the melting point (*2.2.14*) of the substance to be examined. Mix equal parts of the substance to be examined and *barbital CRS* and determine the melting point of the mixture. The difference between the melting points (which are about 190 °C) is not greater than 2 °C.

B. Examine by infrared absorption spectrophotometry (*2.2.24*), comparing with the spectrum obtained with *barbital CRS*.

C. Examine by thin-layer chromatography (*2.2.27*), using *silica gel* GF_{254} *R* as the coating substance.

Test solution. Dissolve 75 mg of the substance to be examined in *alcohol R* and dilute to 25 ml with the same solvent.

Reference solution. Dissolve 75 mg of *barbital CRS* in *alcohol R* and dilute to 25 ml with the same solvent.

Apply separately to the plate 10 µl of each solution. Develop over a path of 18 cm using the lower layer of a mixture of 5 volumes of *concentrated ammonia R*, 15 volumes of *alcohol R* and 80 volumes of *chloroform R*. Examine immediately in ultraviolet light at 254 nm. The principal spot in the chromatogram obtained with the test solution is similar in position and size to the principal spot in the chromatogram obtained with the reference solution.

D. It gives the reaction of non-nitrogen substituted barbiturates (*2.3.1*).

TESTS

Appearance of solution. Dissolve 1.0 g in a mixture of 4 ml of *dilute sodium hydroxide solution R* and 6 ml of *water R*. The solution is clear (*2.2.1*) and not more intensely coloured than reference solution Y_6 (*2.2.2, Method II*).

Acidity. Boil 1.0 g with 50 ml of *water R* for 2 min, allow to cool and filter. To 10 ml of the filtrate add 0.15 ml of *methyl red solution R*. The solution is orange-yellow. Not more than 0.1 ml of *0.1 M sodium hydroxide* is required to produce a pure yellow colour.

Related substances. Examine by thin-layer chromatography (*2.2.27*), using *silica gel* GF_{254} *R* as the coating substance.

Test solution. Dissolve 1.0 g of the substance to be examined in *alcohol R* and dilute to 100 ml with the same solvent.

Reference solution. Dilute 0.5 ml of the test solution to 100 ml with *alcohol R*.

Apply separately to the plate 20 µl of each solution. Develop over a path of 15 cm using the lower layer of a mixture of 5 volumes of *concentrated ammonia R*, 15 volumes of *alcohol R* and 80 volumes of *chloroform R*. Examine immediately in ultraviolet light at 254 nm. Spray with *diphenylcarbazone mercuric reagent R*. Allow the plate to dry in air and spray with freshly prepared *alcoholic potassium hydroxide solution R* diluted 1 in 5 with *aldehyde-free alcohol R*. Heat at 100 °C to 105 °C for 5 min and examine immediately. When examined in ultraviolet light and after spraying, any spot in the chromatogram obtained with the test solution, apart from the principal spot, is not more intense than the spot in the chromatogram obtained with the reference solution (0.5 per cent).

Loss on drying (*2.2.32*). Not more than 0.5 per cent, determined on 1.00 g by drying in an oven at 105 °C.

Sulphated ash (*2.4.14*). Not more than 0.1 per cent, determined on 1.0 g.

ASSAY

Dissolve 85.0 mg in 5 ml of *pyridine R*. Add 0.5 ml of *thymolphthalein solution R* and 10 ml of *silver nitrate solution in pyridine R*. Titrate with *0.1 M ethanolic sodium hydroxide* until a pure blue colour is obtained. Carry out a blank titration.

1 ml of *0.1 M ethanolic sodium hydroxide* is equivalent to 9.21 mg of $C_8H_{12}N_2O_3$.

01/2008:0010

BARIUM SULPHATE

Barii sulfas

$BaSO_4$ M_r 233.4
[7727-43-7]

CHARACTERS

Appearance: fine, white or almost white powder, free from gritty particles.

Solubility: practically insoluble in water and in organic solvents. It is very slightly soluble in acids and in solutions of alkali hydroxides.

IDENTIFICATION

A. Boil a suspension of 0.2 g with 5 ml of a 500 g/l solution of *sodium carbonate R* for 5 min, add 10 ml of *water R*, filter and acidify a part of the filtrate with *dilute hydrochloric acid R*. The solution gives the reactions of sulphates (*2.3.1*).

B. Wash the residue collected in the preceding test with 3 successive small quantities of *water R*. To the residue add 5 ml of *dilute hydrochloric acid R*, filter and add to the filtrate 0.3 ml of *dilute sulphuric acid R*. A white precipitate is formed that is insoluble in *dilute sodium hydroxide solution R*.

TESTS

Solution S. To 20.0 g add 40 ml of *distilled water R* and 60 ml of *dilute acetic acid R*. Boil for 5 min, filter and dilute the cooled filtrate to 100 ml with *distilled water R*.

Acidity or alkalinity. Heat 5.0 g with 20 ml of *carbon dioxide-free water R* on a water-bath for 5 min and filter. To 10 ml of the filtrate add 0.05 ml of *bromothymol blue solution R1*. Not more than 0.5 ml of *0.01 M hydrochloric acid* or *0.01 M sodium hydroxide* is required to change the colour of the indicator.

Acid-soluble substances: maximum 0.3 per cent.

Evaporate 25 ml of solution S to dryness on a water-bath and dry to constant mass at 100-105 °C. The residue weighs a maximum of 15 mg.

Oxidisable sulphur compounds. Shake 1.0 g with 5 ml of *water R* for 30 s and filter. To the filtrate add 0.1 ml of *starch solution R*, dissolve 0.1 g of *potassium iodide R* in the mixture, add 1.0 ml of a freshly prepared 3.6 mg/l solution of *potassium iodate R* and 1 ml of *1 M hydrochloric acid* and shake well. The colour of the solution is more intense than that of a standard prepared at the same time and in the same manner, but omitting the potassium iodate.

Soluble barium salts: maximum 10 ppm.

To 2.5 ml of a 0.2 mg/l solution of *barium nitrate R* in a mixture of 30 volumes of *ethanol (96 per cent) R* and 70 ml of *water R*, add 10 ml of *dilute sulphuric acid R*. Shake and allow to stand for 5 min. To 1 ml of this solution, add 10 ml of solution S. Prepare a standard in the same manner using 10 ml of *barium standard solution (2 ppm Ba) R* instead of solution S.

After 10 min, any opalescence in the test solution is not more intense than that in the standard.

Heavy metals (*2.4.8*): maximum 10 ppm.

Dilute 10 ml of solution S to 20 ml with *water R*. 12 ml of the solution complies with test A. Prepare the reference solution using *lead standard solution (1 ppm Pb) R*.

Loss on ignition: maximum 2.0 per cent, determined on 1.0 g at 600 ± 50 °C.

01/2008:1975
corrected 6.0

BASIC BUTYLATED METHACRYLATE COPOLYMER

Copolymerum methacrylatis butylati basicum

DEFINITION

Copolymer of 2-(dimethylamino)ethyl methacrylate, butyl methacrylate and methyl methacrylate having a mean relative molecular mass of about 150 000. The ratio of 2-dimethylaminoethyl methacrylate groups to butyl methacrylate and methyl methacrylate groups is about 2:1:1.

Content of dimethylaminoethyl groups: 20.8 per cent to 25.5 per cent (dried substance).

CHARACTERS

Appearance: colourless or yellowish granules or white or almost white powder, slightly hygroscopic.

Solubility: practically insoluble in water, freely soluble in methylene chloride. It dissolves slowly in alcohol.

IDENTIFICATION

A. Infrared absorption spectrophotometry (*2.2.24*).

Comparison: *Ph. Eur. reference spectrum of basic butylated methacrylate copolymer*.

B. It complies with the limits of the assay.

TESTS

Solution S. Dissolve 12.5 g in a mixture of 35.0 g of *acetone R* and 52.5 g of *2-propanol R*.

Viscosity (*2.2.10*): 3 mPa·s to 6 mPa·s, determined on solution S.

Apparatus: rotating viscosimeter.

Dimensions:

– *spindle*: diameter = 25.15 mm, height = 90.74 mm, shaft diameter = 4 mm,

– *cylinder*: diameter = 27.62 mm, height = 0.135 m.

Stirring speed: 30 r/min.

Volume of solution: 16 ml of solution S.

Temperature: 20 °C.

Absorbance (*2.2.25*): maximum 0.30 at 420 nm, determined on solution S.

Appearance of film. Spread evenly 1.0 ml of solution S on a glass plate. Upon drying a clear film is formed.

Monomers: maximum 0.3 per cent, for the sum of contents of butyl methacrylate, methyl methacrylate and 2-dimethylaminoethyl methacrylate calculated by procedures A and B.

A. Butyl methacrylate and methyl methacrylate. Liquid chromatography (*2.2.29*).

Test solution. Dissolve 1.00 g of the substance to be examined in *phosphate buffer solution pH 2.0 R* and dilute to 50.0 ml with the same buffer solution.

Reference solution. Dissolve 10.0 mg of *butyl methacrylate R* and 10.0 mg of *methyl methacrylate R* in 10.0 ml of *acetonitrile R* and dilute to 50.0 ml with *water R*. Dilute 1.0 ml of the solution to 50.0 ml with *water R*.

Column:

– *size*: *l* = 0.125 m, Ø = 4.6 mm,

– *stationary phase*: *octadecylsilyl silica gel for chromatography R* (7 µm).

Mobile phase: *phosphate buffer solution pH 2.0 R*, *methanol R* (45:55 *V/V*).

Flow rate: 2.0 ml/min.

Detection: spectrophotometer at 205 nm.

Injection: 50 µl.

B. 2-Dimethylaminoethyl methacrylate. Liquid chromatography (*2.2.29*).

Test solution. Dissolve 1.00 g of the substance to be examined in *tetrahydrofuran R* and dilute to 50.0 ml with the same solvent.

Reference solution. Dissolve 10.0 mg of *2-(dimethylamino)ethyl methacrylate R* in *tetrahydrofuran R* and dilute to 50.0 ml with the same solvent. Dilute 2.0 ml of the solution to 50.0 ml with *tetrahydrofuran R*.

Column:

– *size*: *l* = 0.125 m, Ø = 4.6 mm,

– *stationary phase*: *aminopropylsilyl silica gel for chromatography R* (10 µm).

Mobile phase: mix 25 volumes of a 3.404 g/l solution of *potassium dihydrogen phosphate R* and 75 volumes of *tetrahydrofuran R*.

Flow rate: 2.0 ml/min.

Detection: spectrophotometer at 215 nm.

Injection: 50 µl.

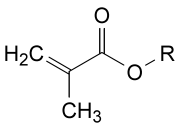
Heavy metals (*2.4.8*): maximum 20 ppm.

2.0 g complies with limit test C. Prepare the standard using 4.0 ml of *lead standard solution (10 ppm Pb) R*.

Loss on drying (*2.2.32*): maximum 2.0 per cent, determined on 1.000 g by drying in an oven at 110 °C for 3 h.

Sulphated ash (*2.4.14*): maximum 0.1 per cent, determined on 1.0 g.

ASSAY



Dissolve 0.200 g in a mixture of 4 ml of *water R* and 96 ml of *anhydrous acetic acid R*. Titrate with *0.1 M perchloric acid*, determining the end-point potentiometrically (*2.2.20*).

1 ml of *0.1 M perchloric acid* is equivalent to 7.21 mg of $C_4H_{10}N$.

STORAGE

In an airtight container.

IMPURITIES

A. R = $[CH_2]_3$-CH_3: butyl methacrylate,

B. R = CH_3: methyl methacrylate,

C. R = CH_2-CH_2-$N(CH_3)_2$: 2-(dimethylamino)ethyl methacrylate.

01/2008:1054
corrected 6.0

BEARBERRY LEAF

Uvae ursi folium

DEFINITION

Whole or cut, dried leaf of *Arctostaphylos uva-ursi* (L.) Spreng.

Content: minimum 7.0 per cent of anhydrous arbutin ($C_{12}H_{16}O_7$; M_r 272.3) (dried drug).

IDENTIFICATION

A. The leaf, shiny and dark green on the adaxial surface, lighter on the abaxial surface, is normally 7 mm to 30 mm long and 5 mm to 12 mm wide. The entire leaf is obovate with smooth margins, somewhat reflexed downwards, narrowing at the base into a short petiole. The leaf is obtuse or retuse at its apex. The lamina is thick and coriaceous. The venation, pinnate and finely reticulate, is clearly visible on both surfaces. The adaxial surface is marked with sunken veinlets, giving it a characteristic grainy appearance. Only the young leaf has ciliated margins. Old leaves are glabrous.

B. Reduce to a powder (355) (*2.9.12*). The powder is green to greenish-grey or yellowish-green. Examine under a microscope using *chloral hydrate solution R*. The powder consists of fragments of epidermises which, seen in surface view, show polygonal cells covered by a thick smooth cuticle, and with straight, thick and irregularly pitted walls; anomocytic stomata (*2.8.3*), surrounded by 5 to 11 subsidiary cells and scars of hair bases only on the abaxial epidermis; fragments of palisade parenchyma, with 3 or 4 layers of cells of unequal lengths, and spongy parenchyma; groups of lignified fibres from the pericycle, with rows of cells containing prisms of calcium oxalate; occasional conical, unicellular covering trichomes.

C. Thin-layer chromatography (*2.2.27*).

Test solution. To 0.5 g of the powdered drug (355) (*2.9.12*) add 5 ml of a mixture of equal volumes of *methanol R* and *water R*, and heat under a reflux condenser for 10 min. Filter whilst hot. Wash the flask and the filter with a mixture of equal volumes of *methanol R* and *water R* and dilute to 5 ml with the same mixture of solvents.

Reference solution. Dissolve 25 mg of *arbutin R*, 25 mg of *gallic acid R* and 25 mg of *hydroquinone R* in *methanol R* and dilute to 10.0 ml with the same solvent.

Plate: *TLC silica gel G plate R.*

Mobile phase: *anhydrous formic acid R, water R, ethyl acetate R* (6:6:88 *V/V/V*).

Application: 10 µl of the reference solution and 20 µl of the test solution, as bands.

Development: over a path of 15 cm.

Drying: at 105-110 °C until the mobile phase has evaporated.

Detection: spray with a 10 g/l solution of *dichloroquinonechlorimide R* in *methanol R*. Next spray with a 20 g/l solution of *anhydrous sodium carbonate R*.

Results: see below the sequence of the zones present in the chromatograms obtained with the reference solution and the test solution. Furthermore, 2 or 3 blue bands and several brown or brownish-grey bands may be present in the chromatogram obtained with the test solution.

Top of the plate	
Hydroquinone: a blue zone	A blue zone
Gallic acid: a brownish zone	A brownish zone
———	———
———	———
Arbutin: a light blue zone	A light blue zone (arbutin)
Reference solution	**Test solution**

TESTS

Foreign matter (*2.8.2*): maximum 5 per cent of stems and maximum 3 per cent of other foreign matter.

Leaves of different colour: maximum 10 per cent, determined in the same manner as foreign matter (*2.8.2*).

Loss on drying (*2.2.32*): maximum 10.0 per cent, determined on 1.000 g of the powdered drug (355) (*2.9.12*) by drying in an oven at 105 °C for 2 h.

Total ash (*2.4.16*): maximum 5.0 per cent.

ASSAY

Liquid chromatography (*2.2.29*).

Test solution. In a 100 ml flask with a ground-glass neck, place 0.800 g of the powdered drug (250) (*2.9.12*). Add 20 ml of *water R* and heat under a reflux condenser on a water-bath for 30 min. Allow to cool and filter the liquid through a plug of absorbent cotton. Add the absorbent cotton to the residue in the 100 ml flask and extract with 20 ml of *water R* under a reflux condenser on a water-bath for 30 min. Allow to cool and filter through a paper filter. Combine the filtrates and dilute to 50.0 ml with *water R*. Filter the liquid through a paper filter. Discard the first 10 ml of the filtrate.

Reference solution. Dissolve 50.0 mg of *arbutin R* in the mobile phase and dilute to 50.0 ml with the mobile phase.

Column:

– *size*: *l* = 0.25 m, Ø = 4 mm,

– *stationary phase*: *base-deactivated octadecylsilyl silica gel for chromatography R* (5 µm).

Mobile phase: *methanol R, water R* (10:90 *V/V*).

Flow rate: 1.2 ml/min.

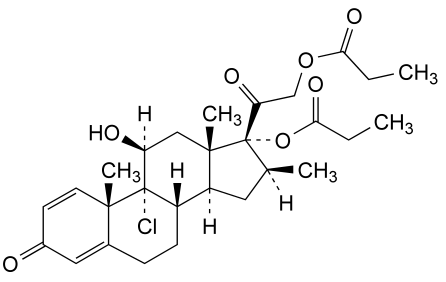
Detection: spectrophotometer at 280 nm.

Calculate the percentage content of arbutin using the following expression:

$$\frac{F_1 \times m_2 \times 100}{F_2 \times m_1}$$

F_1 = area of the peak due to arbutin in the chromatogram obtained with the test solution,

F_2 = area of the peak due to arbutin in the chromatogram obtained with the reference solution,



m_1 = mass of the drug to be examined, in grams,

m_2 = mass of *arbutin R* in the reference solution, in grams.

BECLOMETASONE DIPROPIONATE, ANHYDROUS

Beclometasoni dipropionas anhydricus

$C_{28}H_{37}ClO_7$ M_r 521.1
[5534-09-8]

DEFINITION

9-Chloro-11β-hydroxy-16β-methyl-3,20-dioxopregna-1,4-diene-17,21-diyl dipropanoate.

Content: 96.0 per cent to 102.0 per cent (dried substance).

CHARACTERS

Appearance: white or almost white, crystalline powder.

Solubility: practically insoluble in water, freely soluble in acetone, sparingly soluble in ethanol (96 per cent).

IDENTIFICATION

A. Infrared absorption spectrophotometry (*2.2.24*).

Comparison: *anhydrous beclometasone dipropionate CRS*.

B. Treat 25 mg by the oxygen-flask method (*2.5.10*). Use a mixture of 1 ml of *1 M sodium hydroxide* and 20 ml of *water R* to absorb the combustion products. The solution gives reaction (a) of chlorides (*2.3.1*).

C. Loss on drying (see Tests).

TESTS

Specific optical rotation (*2.2.7*): + 108 to + 115 (dried substance).

Dissolve 0.100 g in *ethanol (96 per cent) R* and dilute to 10.0 ml with the same solvent.

Related substances. Liquid chromatography (*2.2.29*).

Test solution (a). Dissolve 50.0 mg of the substance to be examined in *acetonitrile R* and dilute to 50.0 ml with the same solvent.

Test solution (b). Dilute 1.0 ml of test solution (a) to 50.0 ml with *acetonitrile R*.

Reference solution (a). Dilute 5.0 ml of test solution (b) to 100.0 ml with *acetonitrile R*.

Reference solution (b). Dissolve 5 mg of *beclometasone dipropionate for system suitability CRS* (containing impurity D) in *acetonitrile R* and dilute to 5 ml with the same solvent.

Reference solution (c). Dissolve 5 mg of *beclometasone dipropionate for peak identification CRS* (containing impurities A, B, C, L and M) in *acetonitrile R* and dilute to 5 ml with the same solvent.

Reference solution (d). Dissolve 50.0 mg of *anhydrous beclometasone dipropionate CRS* in *acetonitrile R* and dilute to 50.0 ml with the same solvent. Dilute 1.0 ml to 50.0 ml with *acetonitrile R*.

Column:

– *size*: *l* = 0.25 m, Ø = 4.0 mm;
– *stationary phase*: *end-capped octadecylsilyl silica gel for chromatography R* (5 µm);
– *temperature*: 30 °C.

Mobile phase: *acetonitrile R, water R* (45:55 *V/V*).

Flow rate: 1.5 ml/min.

Detection: spectrophotometer at 238 nm.

Injection: 20 µl of test solution (a) and reference solutions (a), (b) and (c).

Run time: 2.5 times the retention time of beclometasone dipropionate.

Identification of impurities: use the chromatogram supplied with *beclometasone dipropionate for peak identification CRS* and the chromatogram obtained with reference solution (c) to identify the peaks due to impurities A, B, C, L and M; use the chromatogram supplied with *beclometasone dipropionate for system suitability CRS* and the chromatogram obtained with reference solution (b) to identify the peak due to impurity D; if necessary, use the responses of impurities D and M detected at 284 nm to distinguish the 2 impurities: the response of impurity D decreases and that of impurity M increases.

Relative retention with reference to beclometasone dipropionate (retention time = about 29 min): impurity A = about 0.3; impurity B = about 0.6; impurity D = about 1.1; impurity M = about 1.1; impurity L = about 1.3; impurity C = about 1.6.

System suitability: reference solution (b):

– *peak-to-valley ratio*: minimum 2.0, where H_p = height above the baseline of the peak due to impurity D and H_v = height above the baseline of the lowest point of the curve separating this peak from the peak due to beclometasone dipropionate.

Limits:

– *correction factor*: for the calculation of content, multiply the peak area of impurity D by 1.3;
– *impurities B, L*: for each impurity, not more than 8 times the area of the principal peak in the chromatogram obtained with reference solution (a) (0.8 per cent);
– *impurity M*: not more than 5 times the area of the principal peak in the chromatogram obtained with reference solution (a) (0.5 per cent);
– *impurities A, D*: for each impurity, not more than 3 times the area of the principal peak in the chromatogram obtained with reference solution (a) (0.3 per cent);
– *impurity C*: not more than the area of the principal peak in the chromatogram obtained with reference solution (a) (0.1 per cent);
– *unspecified impurities*: for each impurity, not more than the area of the principal peak in the chromatogram obtained with reference solution (a) (0.10 per cent);
– *total*: not more than 15 times the area of the principal peak in the chromatogram obtained with reference solution (a) (1.5 per cent);
– *disregard limit*: 0.5 times the area of the principal peak in the chromatogram obtained with reference solution (a) (0.05 per cent).

Loss on drying (*2.2.32*): maximum 0.5 per cent, determined on 1.000 g by drying in an oven at 105 °C for 3 h.

ASSAY

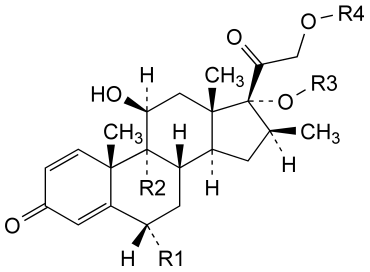
Liquid chromatography (*2.2.29*) as described in the test for related substances with the following modifications.

Mobile phase: *water R, acetonitrile R* (40:60 *V/V*).

Flow rate: 1.0 ml/min.

Injection: test solution (b) and reference solution (d).

Calculate the percentage content of $C_{28}H_{37}ClO_7$.



STORAGE

Protected from light.

BECLOMETASONE DIPROPIONATE MONOHYDRATE

Beclometasoni dipropionas monohydricus

$C_{28}H_{37}ClO_7,H_2O$ M_r 539.1

DEFINITION

9-Chloro-11β-hydroxy-16β-methyl-3,20-dioxopregna-1,4-diene-17,21-diyl dipropanoate monohydrate.

Content: 97.0 per cent to 102.0 per cent (dried substance).

CHARACTERS

Appearance: white or almost white powder.

Solubility: practically insoluble in water, freely soluble in acetone, sparingly soluble in ethanol (96 per cent).

IDENTIFICATION

A. Infrared absorption spectrophotometry (*2.2.24*).
Comparison: *beclometasone dipropionate monohydrate CRS*.

B. Treat 25 mg by the oxygen-flask method (*2.5.10*). Use a mixture of 1 ml of *1 M sodium hydroxide* and 20 ml of *water R* to absorb the combustion products. The solution gives reaction (a) of chlorides (*2.3.1*).

C. Loss on drying (see Tests).

TESTS

Specific optical rotation (*2.2.7*): + 108 to + 115 (dried substance).

Dissolve 0.100 g in *ethanol (96 per cent) R* and dilute to 10.0 ml with the same solvent.

Related substances. Liquid chromatography (*2.2.29*).

Test solution (a). Dissolve 50.0 mg of the substance to be examined in *acetonitrile R* and dilute to 50.0 ml with the same solvent.

Test solution (b). Dilute 1.0 ml of test solution (a) to 50.0 ml with *acetonitrile R*.

Reference solution (a). Dilute 5.0 ml of test solution (b) to 100.0 ml with *acetonitrile R*.

Reference solution (b). Dissolve 5 mg of *beclometasone dipropionate for system suitability CRS* (containing impurity D) in *acetonitrile R* and dilute to 5 ml with the same solvent.

Reference solution (c). Dissolve 5 mg of *beclometasone dipropionate for peak identification CRS* (containing impurities A, B, C, L and M) in *acetonitrile R* and dilute to 5 ml with the same solvent.

Reference solution (d). Dissolve 50.0 mg of *beclometasone dipropionate anhydrous CRS* in *acetonitrile R* and dilute to 50.0 ml with the same solvent. Dilute 1.0 ml to 50.0 ml with *acetonitrile R*.

Column:
- *size*: *l* = 0.25 m, Ø = 4.0 mm;
- *stationary phase*: *end-capped octadecylsilyl silica gel for chromatography R* (5 µm);

01/2008:0069

BEESWAX, WHITE

Cera alba

DEFINITION

Wax obtained by bleaching yellow beeswax.

CHARACTERS

Appearance: white or yellowish-white pieces or plates, translucent when thin, with a fine-grained, matt and non-crystalline fracture; when warmed in the hand they become soft and malleable.

It has an odour similar to that of yellow beeswax, though fainter and never rancid. It is tasteless and does not stick to the teeth.

Solubility: practically insoluble in water, partially soluble in hot ethanol (90 per cent *V/V*) and completely soluble in fatty and essential oils.

Relative density: about 0.960.

TESTS

Drop point (*2.2.17*): 61 °C to 66 °C.

Melt the beeswax by heating on a water-bath, pour onto a glass plate and allow to cool to a semi-solid mass. Fill the metal cup by inserting the wider end into the beeswax and repeating the procedure until beeswax extrudes from the narrow opening. Remove the excess with a spatula and insert the thermometer immediately. Remove the beeswax displaced. Allow to stand at room temperature for at least 12 h before determining the drop point.

Acid value: 17.0 to 24.0.

To 2.00 g (*m* g), in a 250 ml conical flask fitted with a reflux condenser, add 40 ml of *xylene R* and a few glass beads. Heat until the substance is dissolved. Add 20 ml of *ethanol (96 per cent) R* and 0.5 ml of *phenolphthalein solution R1* and titrate the hot solution with *0.5 M alcoholic potassium hydroxide* until a red colour persists for at least 10 s (n_1 ml). Carry out a blank test (n_2 ml).

$$\text{Acid value} = \frac{28.05\,(n_1 - n_2)}{m}$$

Ester value (*2.5.2*): 70 to 80.

Saponification value: 87 to 104.

To 2.00 g (*m* g), in a 250 ml conical flask fitted with a reflux condenser, add 30 ml of a mixture of equal volumes of *ethanol (96 per cent) R* and *xylene R* and a few glass beads. Heat until the substance is dissolved. Add 25.0 ml of *0.5 M alcoholic potassium hydroxide* and heat under a reflux condenser for 3 h. Titrate the hot solution immediately with *0.5 M hydrochloric acid*, using 1 ml of *phenolphthalein solution R1* as indicator (n_1 ml). Reheat the solution to boiling several times during the course of the titration. Carry out a blank test (n_2 ml).

$$\text{Saponification value} = \frac{28.05\,(n_2 - n_1)}{m}$$

Ceresin, paraffins and certain other waxes. To 3.0 g, in a 100 ml round-bottomed flask, add 30 ml of a 40 g/l solution of *potassium hydroxide R* in *aldehyde-free alcohol R* and boil gently under a reflux condenser for 2 h. Remove the condenser and immediately insert a thermometer. Place the flask in a water-bath at 80 °C and allow to cool, swirling the solution continuously. No precipitate is formed until 65 °C, although the solution may be slightly opalescent. Beginning at 65 °C, the solution may become cloudy and precipitates may be formed. At 59 °C, the solution is cloudy.

Glycerol and other polyols: maximum 0.5 per cent *m/m*, calculated as glycerol.

To 0.20 g add 10 ml of *alcoholic potassium hydroxide solution R* and heat on a water-bath under a reflux condenser for 30 min. Add 50 ml of *dilute sulphuric acid R*, cool and filter. Rinse the flask and the filter with *dilute sulphuric acid R*. Combine the filtrate and washings and dilute to 100.0 ml with *dilute sulphuric acid R*. Place 1.0 ml of the solution in a test-tube, add 0.5 ml of a 10.7 g/l solution of *sodium periodate R*, mix and allow to stand for 5 min. Add 1.0 ml of *decolorised fuchsin solution R* and mix. Any precipitate disappears. Place the tube in a beaker containing water at 40 °C. During cooling observe for 10-15 min. Any violet-blue colour in the solution is not more intense than that in a standard prepared at the same time and in the same manner using 1.0 ml of a 10 mg/l solution of *glycerol R* in *dilute sulphuric acid R*.

01/2008:0070

BEESWAX, YELLOW

Cera flava

DEFINITION

Wax obtained by melting the walls of the honeycomb made by the honey-bee, *Apis mellifera* L., with hot water and removing foreign matter.

CHARACTERS

Appearance: yellow or light brown pieces or plates with a fine-grained, matt and non-crystalline fracture; when warmed in the hand they become soft and malleable.

It has a faint odour, characteristic of honey. It is tasteless and does not stick to the teeth.

Solubility: practically insoluble in water, partially soluble in hot ethanol (90 per cent *V/V*) and completely soluble in fatty and essential oils.

Relative density: about 0.960.

TESTS

Drop point (*2.2.17*): 61 °C to 66 °C.

Melt the beeswax by heating on a water-bath, pour onto a glass plate and allow to cool to a semi-solid mass. Fill the metal cup by inserting the wider end into the beeswax and repeating the procedure until beeswax extrudes from the narrow opening. Remove the excess with a spatula and insert the thermometer immediately. Remove the beeswax displaced. Allow to stand at room temperature for at least 12 h before determining the drop point.

Acid value: 17.0 to 22.0.

To 2.00 g (*m* g), in a 250 ml conical flask fitted with a reflux condenser, add 40 ml of *xylene R* and a few glass beads. Heat until the substance is dissolved. Add 20 ml of *ethanol (96 per cent) R* and 0.5 ml of *phenolphthalein solution R1* and titrate the hot solution with *0.5 M alcoholic potassium hydroxide* until a red colour persists for at least 10 s (n_1 ml). Carry out a blank test (n_2 ml).

$$\text{Acid value} = \frac{28.05\,(n_1 - n_2)}{m}$$

Ester value (*2.5.2*): 70 to 80.

Saponification value: 87 to 102.

To 2.00 g (*m* g), in a 250 ml conical flask fitted with a reflux condenser, add 30 ml of a mixture of equal volumes of *ethanol (96 per cent) R* and *xylene R* and a few glass beads. Heat until the substance is dissolved. Add 25.0 ml of *0.5 M alcoholic potassium hydroxide* and heat under a reflux condenser for 3 h. Titrate the hot solution immediately with *0.5 M hydrochloric acid*, using 1 ml of *phenolphthalein solution R1* as indicator (n_1 ml). Reheat the solution to boiling several times during the course of the titration. Carry out a blank test (n_2 ml).

$$\text{Saponification value} = \frac{28.05\,(n_2 - n_1)}{m}$$

Ceresin, paraffins and certain other waxes. To 3.0 g, in a 100 ml round-bottomed flask, add 30 ml of a 40 g/l solution of *potassium hydroxide R* in *aldehyde-free alcohol R* and boil gently under a reflux condenser for 2 h. Remove the condenser and immediately insert a thermometer. Place the flask in a water-bath at 80 °C and allow to cool, swirling the solution continuously. No precipitate is formed until 65 °C, although the solution may be slightly opalescent. Beginning at 65 °C, the solution may become cloudy and precipitates may be formed. At 59 °C, the solution is cloudy.

Glycerol and other polyols: maximum 0.5 per cent *m/m*, calculated as glycerol.

To 0.20 g add 10 ml of *alcoholic potassium hydroxide solution R* and heat on a water-bath under a reflux condenser for 30 min. Add 50 ml of *dilute sulphuric acid R*, cool and filter. Rinse the flask and the filter with *dilute sulphuric acid R*. Combine the filtrate and washings and dilute to 100.0 ml with *dilute sulphuric acid R*. Place 1.0 ml of the solution in a test-tube, add 0.5 ml of a 10.7 g/l solution of *sodium periodate R*, mix and allow to stand for 5 min. Add 1.0 ml of *decolorised fuchsin solution R* and mix. Any precipitate disappears. Place the tube in a beaker containing water at 40 °C. During cooling observe for 10-15 min. Any violet-blue colour in the solution is not more intense than that in a standard prepared at the same time and in the same manner using 1.0 ml of a 10 mg/l solution of *glycerol R* in *dilute sulphuric acid R*.

corrected 6.0

BELLADONNA LEAF

Belladonnae folium

DEFINITION

Dried leaf or dried leaf and flowering, and occasionally fruit-bearing tops of *Atropa belladonna* L.

Content: minimum 0.30 per cent of total alkaloids, expressed as hyoscyamine ($C_{17}H_{23}NO_3$; M_r 289.4) (dried drug). The alkaloids consist mainly of hyoscyamine together with small quantities of hyoscine (scopolamine).

CHARACTERS

Slightly nauseous odour.

IDENTIFICATION

A. The leaves are green or brownish-green, slightly darker on the upper surface, often crumpled and rolled and partly matted together in the drug. The leaf is petiolate and the base of the lamina is acute and decurrent and the margin entire. The flowering stems are flattened and bear at each node a pair of leaves unequal in size, in the axils of which occur singly the flowers or occasionally fruits. The flowers have a gamosepalous calyx and campanulate corolla. The fruits are globular berries, green or brownish-black and surrounded by the persistent calyx with widely spread lobes.

B. Reduce to a powder (355) (*2.9.12*). The powder is dark green. Examine under a microscope, using *chloral hydrate solution R*. The powder shows the following diagnostic characters: fragments of leaf lamina showing sinuous-walled epidermal cells, a striated cuticle; stomata more frequent on the lower epidermis (anisocytic and also some anomocytic) (*2.8.3*); multicellular uniseriate covering trichomes with smooth cuticle, glandular trichomes with unicellular heads and multicellular, uniseriate stalks or with multicellular heads and unicellular stalks; parenchyma cells including rounded cells containing microsphenoidal crystals of calcium oxalate; annular and spirally thickened vessels. The powdered drug may also show: fibres and reticulately thickened vessels from the stems; subspherical pollen grains, 40-50 µm in diameter, with 3 germinal pores, 3 furrows and an extensively pitted exine; fragments

of the corolla, with a papillose epidermis or bearing numerous covering or glandular trichomes of the types previously described; brownish-yellow seed fragments containing irregularly sclerified and pitted cells of the testa.

C. Shake 1 g of powdered drug (180) (*2.9.12*) with 10 ml of *0.05 M sulphuric acid* for 2 min. Filter and add to the filtrate 1 ml of *concentrated ammonia R* and 5 ml of *water R*. Shake cautiously with 15 ml of *ether R*, avoiding formation of an emulsion. Separate the ether layer and dry over *anhydrous sodium sulphate R*. Filter and evaporate the ether in a porcelain dish. Add 0.5 ml of *fuming nitric acid R* and evaporate to dryness on a water-bath. Add 10 ml of *acetone R* and, dropwise, a 30 g/l solution of *potassium hydroxide R* in *ethanol (96 per cent) R*. A deep violet colour develops.

D. Examine the chromatograms obtained in the chromatography test.

Results: the principal zones in the chromatograms obtained with the test solution are similar in position, colour and size to the principal zones in the chromatograms obtained with the same volume of the reference solution.

TESTS

Chromatography. Thin-layer chromatography (*2.2.27*).

Test solution. To 0.6 g of powdered drug (180) (*2.9.12*) add 15 ml of *0.05 M sulphuric acid*, shake for 15 min and filter. Wash the filter with *0.05 M sulphuric acid* until 20 ml of filtrate is obtained. To the filtrate add 1 ml of *concentrated ammonia R* and shake with 2 quantities, each of 10 ml, of *peroxide-free ether R*. If necessary, separate by centrifugation. Dry the combined ether layers over *anhydrous sodium sulphate R*, filter and evaporate to dryness on a water-bath. Dissolve the residue in 0.5 ml of *methanol R*.

Reference solution. Dissolve 50 mg of *hyoscyamine sulphate R* in 9 ml of *methanol R*. Dissolve 15 mg of *hyoscine hydrobromide R* in 10 ml of *methanol R*. Mix 1.8 ml of the hyoscine hydrobromide solution and 8 ml of the hyoscyamine sulphate solution.

Plate: *TLC silica gel G plate R*.

Mobile phase: *concentrated ammonia R, water R, acetone R* (3:7:90 *V/V/V*).

Application: 10 µl and 20 µl, as bands of 20 mm by 3 mm leaving 1 cm between the bands.

Development: over a path of 10 cm.

Drying: at 100-105 °C for 15 min, allow to cool.

Detection A: spray with *potassium iodobismuthate solution R2*, using about 10 ml for a plate 200 mm square, until the orange or brown zones become visible against a yellow background.

Results A: the zones in the chromatograms obtained with the test solution are similar in position (hyoscyamine in the lower third, hyoscine in the upper third of the chromatogram) and colour to the bands in the chromatograms obtained with the reference solution. The zones in the chromatograms obtained with the test solution are at least equal in size to the corresponding zones in the chromatogram obtained with the same volume of the reference solution. Faint secondary zones may appear, particularly in the middle of the chromatogram obtained with 20 µl of the test solution or near the starting point in the chromatogram obtained with 10 µl of the test solution.

Detection B: spray with *sodium nitrite solution R* until the coating is transparent and examine after 15 min.

Results B: the zones due to hyoscyamine in the chromatograms obtained with the test solution and the reference solution change from brown to reddish-brown but not to greyish-blue (atropine) and any secondary zones disappear.

Foreign matter (*2.8.2*): maximum 3 per cent of stems with a diameter greater than 5 mm.

Total ash (*2.4.16*): maximum 16.0 per cent.

Ash insoluble in hydrochloric acid (*2.8.1*): maximum 4.0 per cent

ASSAY

a) Determine the loss on drying (*2.2.32*) on 2.000 g of powdered drug (180) (*2.9.12*), by drying in an oven at 105 °C.

b) Moisten 10.00 g of powdered drug (180) (*2.9.12*) with a mixture of 5 ml of *ammonia R*, 10 ml of *ethanol (96 per cent) R* and 30 ml of *peroxide-free ether R* and mix thoroughly. Transfer the mixture to a suitable percolator, if necessary with the aid of the extracting mixture. Allow to macerate for 4 h and percolate with a mixture of 1 volume of *chloroform R* and 3 volumes of *peroxide-free ether R* until the alkaloids are completely extracted. Evaporate to dryness a few millilitres of the liquid flowing from the percolator, dissolve the residue in *0.25 M sulphuric acid* and verify the absence of alkaloids using *potassium tetraiodomercurate solution R*. Concentrate the percolate to about 50 ml by distilling on a water-bath and transfer it to a separating funnel, rinsing with *peroxide-free ether R*. Add a quantity of *peroxide-free ether R* equal to at least 2.1 times the volume of the percolate to produce a liquid of a density well below that of water. Shake the solution with no fewer than 3 quantities, each of 20 ml, of *0.25 M sulphuric acid*, separate the 2 layers by centrifugation if necessary and transfer the acid layers to a 2nd separating funnel. Make the acid layer alkaline with *ammonia R* and shake with 3 quantities, each of 30 ml, of *chloroform R*. Combine the chloroform layers, add 4 g of *anhydrous sodium sulphate R* and allow to stand for 30 min with occasional shaking. Decant the chloroform and wash the sodium sulphate with 3 quantities, each of 10 ml, of *chloroform R*. Add the washings to the chloroform extract, evaporate to dryness on a water-bath and heat in an oven at 100-105 °C for 15 min. Dissolve the residue in a few millilitres of *chloroform R*, add 20.0 ml of *0.01 M sulphuric acid* and remove the chloroform by evaporation on a water-bath. Titrate the excess of acid with *0.02 M sodium hydroxide* using *methyl red mixed solution R* as indicator.

Calculate the percentage content of total alkaloids, expressed as hyoscyamine, using the following expression:

$$\frac{57.88 \times (20 - n)}{(100 - d) \times m}$$

d = loss on drying as a percentage;

n = volume of *0.02 M sodium hydroxide*, in millilitres;

m = mass of drug, in grams.

01/2008:1294

BELLADONNA LEAF DRY EXTRACT, STANDARDISED

Belladonnae folii extractum siccum normatum

DEFINITION

Standardised belladonna leaf dry extract is produced from *Belladonna leaf (0221)*. It contains not less than 0.95 per cent and not more than 1.05 per cent of total alkaloids, calculated as hyoscyamine ($C_{17}H_{23}NO_3$, M_r 289.4), with reference to the dried extract.

PRODUCTION

The extract is produced from the drug and ethanol (70 per cent *V/V*) using an appropriate procedure.

CHARACTERS

A hygroscopic brown or greenish powder.

IDENTIFICATION

A. Examine by thin-layer chromatography (*2.2.27*), using a suitable silica gel as the coating substance.

Test solution. To 1 g of the extract to be examined add 5.0 ml of *methanol R*. Shake for 2 min and filter.

Reference solution. Dissolve 1.0 mg of *chlorogenic acid R* and 2.5 mg of *rutin R* in 10 ml of *methanol R*.

Apply to the plate, as bands, 20 µl of each solution. Develop over a path of 15 cm using a mixture of 10 volumes of *anhydrous formic acid R*, 10 volumes of *water R*, 30 volumes of *methyl ethyl ketone R* and 50 volumes of *ethyl acetate R*. Dry the plate at 100 °C to 105 °C and spray the warm plate with a 10 g/l solution of *diphenylboric acid aminoethyl ester R* in *methanol R*. Subsequently spray the plate with a 50 g/l solution of *macrogol 400 R* in *methanol R*. Allow the plate to dry in air for 30 min and examine in ultraviolet light at 365 nm. The chromatograms obtained with the reference solution and the test solution show in the central part a light blue fluorescent zone (chlorogenic acid) and in the lower part a yellowish-brown fluorescent zone (rutin). Furthermore, the chromatogram obtained with the test solution shows a little above the start a yellowish-brown fluorescent zone and directly above a yellow fluorescent zone, a yellow or yellowish-brown fluorescent zone between the zone due to rutin and the zone due to chlorogenic acid. Further zones may be present.

B. Examine the chromatogram obtained in the test for atropine. The principal zones in the chromatogram obtained with the test solution are similar in position and colour to the principal zones in the chromatogram obtained with the reference solution.

TESTS

Atropine. Examine by thin-layer chromatography (*2.2.27*), using a suitable silica gel as the coating substance.

Test solution. To 0.20 g of the extract to be examined add 10.0 ml of *0.05 M sulphuric acid*, shake for 2 min and filter. Add 1.0 ml of *concentrated ammonia R* and shake with two quantities, each of 10 ml, of *peroxide-free ether R*. If necessary, separate by centrifugation. Dry the combined ether layers over about 2 g of *anhydrous sodium sulphate R*, filter and evaporate to dryness on a water-bath. Dissolve the residue in 0.5 ml of *methanol R*.

Reference solution. Dissolve 50 mg of *hyoscyamine sulphate R* in 9 ml of *methanol R*. Dissolve 15 mg of *hyoscine hydrobromide R* in 10 ml of *methanol R*. Mix 1.8 ml of the hyoscine hydrobromide solution and 8 ml of the hyoscyamine sulphate solution.

Apply to the plate, as bands, 20 µl of each solution. Develop over a path of 10 cm using a mixture of 3 volumes of *concentrated ammonia R*, 7 volumes of *water R* and 90 volumes of *acetone R*. Dry the plate at 100 °C to 105 °C for 15 min, allow to cool and spray with *potassium iodobismuthate solution R2*, until the orange or brown zones become visible against a yellow background. The zones in the chromatogram obtained with the test solution are similar to those in the chromatogram obtained with the reference solution with respect to their position (hyoscyamine in the lower third, hyoscine in the upper third of the chromatogram) and their colour. Other faint zones may be present in the chromatogram obtained with the test solution. Spray the plate with *sodium nitrite solution R* until the coating is transparent. Examine after 15 min. The zones corresponding to hyoscyamine in the chromatograms obtained with the test solution and the reference solution change from orange or brown to reddish-brown but not to greyish-blue (atropine).

Loss on drying (*2.8.17*): maximum 5.0 per cent.

Microbial contamination. Total viable aerobic count (*2.6.12*) not more than 10^4 micro-organisms per gram of which not more than 10^2 fungi per gram, determined by plate count. It complies with the tests for *Escherichia coli* and for *Salmonella* (*2.6.13*).

ASSAY

At each extraction stage it is necessary to check that the alkaloids have been completely extracted. If the extraction is into the organic phase this is done by evaporating to dryness a few millilitres of the last organic layer, dissolving the residue in *0.25 M sulphuric acid* and verifying the absence of alkaloids using *potassium tetraiodomercurate solution R*. If the extraction is into the acid aqueous phase, this is done by taking a few millilitres of the last acid aqueous phase and verifying the absence of alkaloids using *potassium tetraiodomercurate solution R*.

Disperse 3.00 g in a mixture of 5 ml of *ammonia R* and 15 ml of *water R*. Shake with no fewer than three quantities, each of 40 ml of a mixture of 1 volume of *methylene chloride R* and 3 volumes of *peroxide-free ether R* until the alkaloids are completely extracted. Concentrate the combined organic layers to about 50 ml by distilling on a water-bath and transfer the resulting liquid to a separating funnel, rinsing with *peroxide-free ether R*. Add a quantity of *peroxide-free ether R* equal to at least 2.1 times the volume of the liquid to produce a layer having a density well below that of water. Shake the resulting solution with no fewer than three quantities, each of 20 ml, of *0.25 M sulphuric acid* until the alkaloids are completely extracted. Separate the layers by centrifugation, if necessary and transfer the acid layers to a second separating funnel. Make the combined acid layers alkaline with *ammonia R* and shake with no fewer than three quantities, each of 30 ml, of *methylene chloride R* until the alkaloids are completely extracted. Combine the organic layers, add 4 g of *anhydrous sodium sulphate R* and allow to stand for 30 min with occasional shaking. Decant the methylene chloride and wash the sodium sulphate with three quantities, each of 10 ml, of *methylene chloride R*. Combine the organic extracts, evaporate to dryness on a water-bath. Heat the residue in an oven at 100 °C to 105 °C for 15 min. Dissolve the residue in a few millilitres of *methylene chloride R*, evaporate to dryness on a water-bath

and again heat the residue in an oven at 100 °C to 105 °C for 15 min. Dissolve the residue in a few millilitres of *methylene chloride R*, add 20.0 ml of *0.01 M sulphuric acid* and remove the methylene chloride by evaporation on a water-bath. Titrate the excess of acid with *0.02 M sodium hydroxide* using *methyl red mixed solution R* as indicator.

Calculate the percentage content of total alkaloids, expressed as hyoscyamine, from the expression:

$$\frac{57.88 \times (20 - n)}{100 \times m}$$

n = volume of *0.02 M sodium hydroxide* used, in millilitres,

m = mass of the substance to be examined, in grams.

STORAGE

Store in an airtight container.

01/2008:1812

BELLADONNA LEAF TINCTURE, STANDARDISED

Belladonnae folii tinctura normata

DEFINITION

Tincture produced from *Belladonna leaf (0221)*.

Content: 0.027 per cent to 0.033 per cent of total alkaloids, calculated as hyoscyamine ($C_{17}H_{23}NO_3$; M_r 289.4). The alkaloids consist mainly of hyoscyamine together with small quantities of hyoscine.

PRODUCTION

The tincture is produced from 1 part of the powdered drug (355) (*2.9.12*) and 10 parts of ethanol (70 per cent *V/V*) by a suitable procedure.

IDENTIFICATION

A. Thin-layer chromatography (*2.2.27*).

Test solution. Evaporate to dryness 10.0 ml of the tincture to be examined in a water-bath at 40 °C under reduced pressure. Dissolve the residue in 1.0 ml of *methanol R*.

Reference solution. Dissolve 1.0 mg of *chlorogenic acid R* and 2.5 mg of *rutin R* in 10 ml of *methanol R*.

Plate: *TLC silica gel plate R*.

Mobile phase: *anhydrous formic acid R, water R, methyl ethyl ketone R, ethyl acetate R* (10:10:30:50 *V/V/V/V*).

Application: 40 µl, as bands.

Development: over a path of 15 cm.

Drying: at 100-105 °C.

Detection: spray the warm plate with a 10 g/l solution of *diphenylboric acid aminoethyl ester R* in *methanol R*; subsequently spray the plate with a 50 g/l solution of *macrogol 400 R* in *methanol R*; allow the plate to dry in air for 30 min and examine in ultraviolet light at 365 nm.

Results: see below the sequence of zones present in the chromatograms obtained with the reference solution and the test solution. Furthermore, other fluorescent zones may be present in the chromatogram obtained with the test solution.

Top of the plate	
———	———
Chlorogenic acid: a light blue fluorescent zone	A light blue fluorescent zone (chlorogenic acid)
	A yellow or yellowish-brown fluorescent zone
———	———
Rutin: a yellowish-brown fluorescent zone	A bluish-grey fluorescent zone
	A yellow fluorescent zone
	A yellowish-brown fluorescent zone
Reference solution	**Test solution**

B. Examine the chromatograms obtained in the test for atropine, detection A.

Results A: see below the sequence of zones present in the chromatograms obtained with the reference solution and the test solution. Faint secondary zones may appear, particularly in the middle of the chromatogram obtained with 40 µl of the test solution or near the starting point in the chromatogram obtained with 20 µl of the test solution.

Top of the plate	
Hyoscine: a brownish-orange zone	A brownish-orange zone (hyoscine)
———	———
	Faint secondary zones
———	———
Hyoscyamine: a brownish-orange zone	A brownish-orange zone (hyoscyamine)
	Faint secondary zones
Reference solution	**Test solution**

TESTS

Atropine. Thin-layer chromatography (*2.2.27*).

Test solution. To 15.0 ml of the tincture to be examined add 15 ml of *0.05 M sulphuric acid*. Filter. Add 1 ml of *concentrated ammonia R* to the filtrate and shake with 2 quantities, each of 10 ml, of *peroxide-free ether R*. Separate by centrifugation if necessary. Dry the combined ether layers over *anhydrous sodium sulphate R*. Filter and evaporate to dryness on a water-bath. Dissolve the residue in 0.5 ml of *methanol R*.

Reference solution. Dissolve 50 mg of *hyoscyamine sulphate R* in 9 ml of *methanol R*. Dissolve 15 mg of *hyoscine hydrobromide R* in 10 ml of *methanol R*. Mix 1.8 ml of the hyoscine hydrobromide solution and 8 ml of the hyoscyamine sulphate solution.

Plate: *TLC silica gel plate R*.

Mobile phase: *concentrated ammonia R, water R, acetone R* (3:7:90 *V/V/V*).

Application: 20 µl and 40 µl of each solution, as bands.

Development: over a path of 10 cm.

Drying: at 100-105 °C for 15 min.

Detection A: spray with *potassium iodobismuthate solution R2*.

Detection B: spray with *sodium nitrite solution R* until the plate is transparent. Examine after 15 min.

Results B: the zones due to hyoscyamine in the chromatograms obtained with the test solution and the reference solution change from brownish-orange to reddish-brown but not to greyish-blue (atropine) and any secondary zones disappear.

Ethanol (*2.9.10*): 64 per cent *V/V* to 69 per cent *V/V*.

ASSAY

Evaporate 50.0 g of the tincture to be examined to a volume of about 10 ml. Transfer quantitatively to a separating funnel, with the minimum volume of *alcohol (70 per cent V/V) R*. Add 5 ml of *ammonia R* and 15 ml of *water R*. Shake with not fewer than 3 quantities each of 40 ml of a mixture of 1 volume of *methylene chloride R* and 3 volumes of *peroxide-free ether R*, carefully to avoid emulsion, until the alkaloids are completely extracted. Combine the organic layers and concentrate the solution to a volume of about 50 ml by distilling on a water-bath. Transfer the resulting solution quantitatively to a separating funnel, rinsing with *peroxide-free ether R*. Add a quantity of *peroxide-free ether R* equal to at least 2.1 times the volume of the solution to produce a layer having a density well below that of water. Shake the resulting solution with not fewer than 3 quantities each of 20 ml of *0.25 M sulphuric acid* until the alkaloids are completely extracted. Separate the layers by centrifugation if necessary and transfer the layers to a separating funnel. Make the combined layers alkaline with *ammonia R* and shake with not fewer than 3 quantities each of 30 ml of *methylene chloride R* until the alkaloids are completely extracted. Combine the organic layers, add 4 g of *anhydrous sodium sulphate R* and allow to stand for 30 min with occasional shaking. Decant the methylene chloride and filter. Wash the sodium sulphate with 3 quantities each of 10 ml of *methylene chloride R*. Combine the organic extracts, evaporate to dryness on a water-bath. Heat the residue in an oven at 100-105 °C for 15 min. Dissolve the residue in a few millilitres of *methylene chloride R*, evaporate to dryness on a water-bath and heat the residue in an oven at 100-105 °C for 15 min again. Dissolve the residue in a few millilitres of *methylene chloride R*. Add 20.0 ml of *0.01 M sulphuric acid* and remove the methylene chloride by evaporation on a water-bath. Titrate the excess of acid with *0.02 M sodium hydroxide* using *methyl red mixed solution R* as indicator.

Calculate the percentage content of total alkaloids, expressed as hyoscyamine, from the expression:

$$\frac{57.88 \times (20 - n)}{100 \times m}$$

n = volume of *0.02 M sodium hydroxide* used, in millilitres,

m = mass of drug used, in grams.

01/2008:0222
corrected 6.0

BELLADONNA, PREPARED

Belladonnae pulvis normatus

DEFINITION

Prepared belladonna is belladonna leaf powder (180) (*2.9.12*) adjusted if necessary by adding powdered lactose or belladonna leaf powder with a lower alkaloidal content to contain 0.28 per cent to 0.32 per cent of total alkaloids, calculated as hyoscyamine (M_r 289.4) with reference to the dried drug.

CHARACTERS

Slightly nauseous odour.

IDENTIFICATION

A. The powder is dark green. Examine under a microscope, using *chloral hydrate solution R*. The powder shows the following diagnostic characters: fragments of leaf lamina showing sinuous-walled epidermal cells, a striated cuticle and numerous stomata predominantly present on the lower epidermis (anisocytic and also some anomocytic); multicellular uniseriate covering trichomes with smooth cuticle, glandular trichomes with unicellular heads and multicellular, uniseriate stalks or with multicellular heads and unicellular stalks; parenchyma cells including rounded cells containing microsphenoidal crystals of calcium oxalate; annular and spirally thickened vessels. The powdered drug may also show the following: fibres and reticulately thickened vessels from the stems; subspherical pollen grains, 40 µm to 50 µm in diameter, with three germinal pores, three furrows and an extensively pitted exine; fragments of the corolla, with a papillose epidermis or bearing numerous covering or glandular trichomes of the types previously described; brownish-yellow seed fragments containing irregularly sclerified and pitted cells of the testa. Examined in *glycerol (85 per cent) R*, it may be seen to contain lactose crystals.

B. Shake 1 g with 10 ml of *0.05 M sulphuric acid* for 2 min. Filter and add to the filtrate 1 ml of *concentrated ammonia R* and 5 ml of *water R*. Shake cautiously with 15 ml of *ether R*, avoiding formation of an emulsion. Separate the ether layer and dry over *anhydrous sodium sulphate R*. Filter and evaporate the ether in a porcelain dish. Add 0.5 ml of *fuming nitric acid R* and evaporate to dryness on a water-bath. Add 10 ml of *acetone R* and, dropwise, a 30 g/l solution of *potassium hydroxide R* in *alcohol R*. A deep violet colour develops.

C. Examine the chromatogram obtained in the chromatography test. The principal zones in the chromatogram obtained with the test solution are similar in position, colour and size to the principal zones in the chromatogram obtained with the same volume of the reference solution.

TESTS

Chromatography. Examine by thin-layer chromatography (*2.2.27*), using *silica gel G R* as the coating substance.

Test solution. To 0.6 g add 15 ml of *0.05 M sulphuric acid*, shake for 15 min and filter. Wash the filter with *0.05 M sulphuric acid* until 20 ml of filtrate is obtained. To the filtrate add 1 ml of *concentrated ammonia R* and shake with two quantities, each of 10 ml, of *peroxide-free ether R*. If necessary, separate by centrifugation. Dry the combined ether layers over *anhydrous sodium sulphate R*, filter and evaporate to dryness on a water-bath. Dissolve the residue in 0.5 ml of *methanol R*.

Reference solution. Dissolve 50 mg of *hyoscyamine sulphate R* in 9 ml of *methanol R*. Dissolve 15 mg of *hyoscine hydrobromide R* in 10 ml of *methanol R*. Mix 1.8 ml of the hyoscine hydrobromide solution and 8 ml of the hyoscyamine sulphate solution.

Apply separately to the plate as bands 20 mm by 3 mm 10 µl and 20 µl of each solution, leaving 1 cm between the bands. Develop over a path of 10 cm using a mixture of 3 volumes of *concentrated ammonia R*, 7 volumes of *water R* and 90 volumes of *acetone R*. Dry the plate at 100 °C to 105 °C for 15 min, allow to cool and spray with *potassium iodobismuthate solution R2*, using about 10 ml for a plate 200 mm square, until the orange or brown zones become visible against a yellow background. The zones in the chromatograms obtained with the test solution are similar to those in the chromatograms obtained with the reference solution with respect to their position (hyoscyamine in the lower third, hyoscine in the upper third of the chromatogram) and their colour. The zones in the chromatograms obtained with the test solution are at least equal in size to the corresponding zones in the chromatogram obtained with the same volume of the reference solution. Faint secondary zones may appear, particularly in the middle of the chromatogram obtained with 20 µl of the test solution or near the starting-point in the chromatogram obtained with 10 µl of the test solution. Spray the plate with *sodium nitrite solution R* until the coating is transparent. Examine after 15 min. The zones corresponding to hyoscyamine in the chromatograms obtained with the test solution and the reference solution change from brown to reddish-brown but not to greyish-blue (atropine) and any secondary zones disappear.

Loss on drying (*2.2.32*). Not more than 5.0 per cent, determined on 1.000 g by drying in an oven at 105 °C.

Total ash (*2.4.16*). Not more than 16.0 per cent.

Ash insoluble in hydrochloric acid (*2.8.1*). Not more than 4.0 per cent.

ASSAY

a) Determine the loss on drying (*2.2.32*) on 2.000 g, by drying in an oven at 100 °C to 105 °C.

b) Moisten 10.00 g with a mixture of 5 ml of *ammonia R*, 10 ml of *alcohol R* and 30 ml of *peroxide-free ether R* and mix thoroughly. Transfer the mixture to a suitable percolator, if necessary with the aid of the extracting mixture. Allow to macerate for 4 h and percolate with a mixture of 1 volume of *chloroform R* and 3 volumes of *peroxide-free ether R* until the alkaloids are completely extracted. Evaporate to dryness a few millilitres of the liquid flowing from the percolator, dissolve the residue in *0.25 M sulphuric acid* and verify the absence of alkaloids using *potassium tetraiodomercurate solution R*. Concentrate the percolate to about 50 ml by distilling on a water-bath and transfer it to a separating funnel, rinsing with *peroxide-free ether R*. Add a quantity of *peroxide-free ether R* equal to at least 2.1 times the volume of the percolate to produce a liquid of a density well below that of water. Shake the solution with no fewer than three quantities, each of 20 ml, of *0.25 M sulphuric acid*, separate the two layers by centrifugation if necessary and transfer the acid layers to a second separating funnel. Make the acid layer alkaline with *ammonia R* and shake with three quantities, each of 30 ml, of *chloroform R*. Combine the chloroform layers, add 4 g of *anhydrous sodium sulphate R* and allow to stand for 30 min with occasional shaking. Decant the chloroform and wash the sodium sulphate with three quantities, each of 10 ml, of *chloroform R*. Add the washings to the chloroform extract, evaporate to dryness on a water-bath and heat in an oven at 100 °C to 105 °C for 15 min. Dissolve the residue in a few millilitres of *chloroform R*, add 20.0 ml of *0.01 M sulphuric acid* and remove the chloroform by evaporation on a water-bath. Titrate the excess of acid with *0.02 M sodium hydroxide* using *methyl red mixed solution R* as indicator.

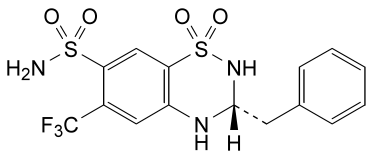
Calculate the percentage content of total alkaloids, expressed as hyoscyamine, from the expression:

$$\frac{57.88 \times (20 - n)}{(100 - d) \times m}$$

d = loss on drying as a percentage,

n = volume of *0.02 M sodium hydroxide* used in millilitres,

m = mass of drug used in grams.



STORAGE

Store in an airtight container.

BENDROFLUMETHIAZIDE

Bendroflumethiazidum

and enantiomer

$C_{15}H_{14}F_3N_3O_4S_2$ M_r 421.4
[73-48-3]

DEFINITION

(3*RS*)-3-Benzyl-6-(trifluoromethyl)-3,4-dihydro-2*H*-1,2,4-benzothiadiazine-7-sulphonamide 1,1-dioxide.

Content: 98.0 per cent to 102.0 per cent (dried substance).

CHARACTERS

Appearance: white or almost white, crystalline powder.

Solubility: practically insoluble in water, freely soluble in acetone, soluble in ethanol (96 per cent).

IDENTIFICATION

Infrared absorption spectrophotometry (*2.2.24*).

Comparison: *bendroflumethiazide CRS*.

TESTS

Related substances. Liquid chromatography (*2.2.29*). *Prepare the solutions immediately before use.*

Solvent mixture. Mix 40 volumes of *methanol R* and 60 volumes of a 2.0 g/l solution of *citric acid R*.

Test solution. Dissolve 10.0 mg of the substance to be examined in the solvent mixture and dilute to 50.0 ml with the solvent mixture.

Reference solution (a). Dissolve 2 mg of *bendroflumethiazide impurity A CRS* and 2.5 mg of *altizide CRS* in the solvent mixture and dilute to 10 ml with the solvent mixture. Mix 1 ml of this solution with 1 ml of the test solution and dilute to 100 ml with the solvent mixture.

Reference solution (b). Dilute 1.0 ml of the test solution to 100.0 ml with the solvent mixture. Dilute 1.0 ml of this solution to 10.0 ml with the solvent mixture.

Column:

– *size*: *l* = 0.15 m, Ø = 3.0 mm;

– *stationary phase*: *end-capped octadecylsilyl silica gel for chromatography R* (5 µm);

– *temperature*: 40 °C.

Mobile phase: mix 15 volumes of *tetrahydrofuran R*, 25 volumes of *methanol R* and 60 volumes of a 2.0 g/l solution of *citric acid R*.

Flow rate: 0.8 ml/min.

Detection: spectrophotometer at 273 nm.

Injection: 20 µl.

Run time: twice the retention time of bendroflumethiazide.

Relative retention with reference to bendroflumethiazide (retention time = about 8 min): impurity A = about 0.2; altizide = about 0.5.

System suitability: reference solution (a):

– *resolution*: minimum 10 between the peaks due to altizide and bendroflumethiazide.

Limits:

– *impurity A*: not more than the area of the principal peak in the chromatogram obtained with reference solution (b) (0.1 per cent);

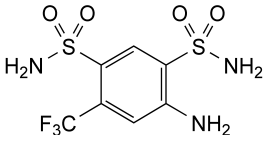
– *unspecified impurities*: for each impurity, not more than the area of the principal peak in the chromatogram obtained with reference solution (b) (0.10 per cent);

– *total*: not more than twice the area of the principal peak in the chromatogram obtained with reference solution (b) (0.2 per cent);

– *disregard limit*: 0.5 times the area of the principal peak in the chromatogram obtained with reference solution (b) (0.05 per cent).

Loss on drying (*2.2.32*): maximum 0.5 per cent, determined on 1.000 g by drying in an oven at 105 °C.

Sulphated ash (*2.4.14*): maximum 0.1 per cent, determined on 1.0 g.



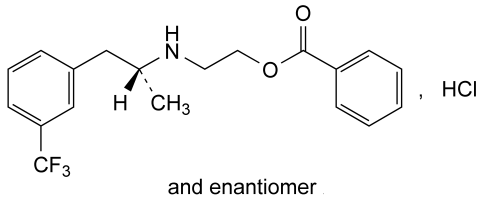
ASSAY

Dissolve 0.150 g in 50 ml of *dimethyl sulphoxide R*. Titrate to the 2nd point of inflexion with *0.1 M tetrabutylammonium hydroxide in 2-propanol*, determining the end-point potentiometrically (*2.2.20*). Carry out a blank titration.

1 ml of *0.1 M tetrabutylammonium hydroxide in 2-propanol* is equivalent to 21.07 mg of $C_{15}H_{14}F_3N_3O_4S_2$.

IMPURITIES

Specified impurities: A.



A. 4-amino-6-(trifluoromethyl)benzene-1,3-disulphonamide.

corrected 6.0

BENFLUOREX HYDROCHLORIDE

Benfluorexi hydrochloridum

and enantiomer

$C_{19}H_{21}ClF_3NO_2$ M_r 387.8
[23642-66-2]

DEFINITION

2-[[(1*RS*)-1-Methyl-2-[3-(trifluoromethyl)phenyl]ethyl]amino]ethyl benzoate hydrochloride.

Content: 98.5 per cent to 101.0 per cent (dried substance).

CHARACTERS

Appearance: white or almost white powder.

Solubility: slightly soluble in water, freely soluble in methanol, soluble in methylene chloride, sparingly soluble or soluble in alcohol.

It shows polymorphism (*5.9*).

IDENTIFICATION

A. Infrared absorption spectrophotometry (*2.2.24*).
Preparation: mulls in *liquid paraffin R*.
Comparison: *benfluorex hydrochloride CRS*.
If the spectra obtained show differences, heat the substance to be examined and the reference substance separately in an oven at 150 °C for 3 h and record new spectra.

B. It gives reaction (a) of chlorides (*2.3.1*).

TESTS

Optical rotation (*2.2.7*): – 0.10° to + 0.10°.
Dissolve 0.2 g in *ethanol R* and dilute to 20.0 ml with the same solvent.

Impurity B. Gas chromatography (*2.2.28*): use the normalisation procedure.

Test solution. Dissolve 0.30 g of the substance to be examined in *methylene chloride R* and dilute to 20 ml with the same solvent. Transfer to a separating funnel, add 10 ml of a 40 g/l solution of *sodium hydroxide R*. Shake the flask vigorously and allow the phases to separate. Collect the organic layer.

Reference solution. Dissolve 0.30 g of *benfluorex hydrochloride for system suitability CRS* in *methylene chloride R* and dilute to 20 ml with the same solvent. Transfer to a separating funnel and add 10 ml of a 40 g/l solution of *sodium hydroxide R*. Shake the flask vigorously and allow the phases to separate. Collect the organic layer.

Column:

– *material*: fused silica,

– *size*: *l* = 25 m, Ø = 0.32 mm,

– *stationary phase*: macrogol 20 000 R (film thickness 0.2 µm).

Carrier gas: *hydrogen for chromatography R*.

Linear velocity: 75 cm/s.

Split ratio: 1:35.

Temperature:

– *column*: 220 °C,

– *injection port and detector*: 250 °C.

Detection: flame ionisation.

Injection: 1 µl.

Run time: 1.5 times the retention time of benfluorex.

Relative retention with reference to benfluorex (retention time = about 4.5 min): impurity B = about 1.1.

System suitability:

– *peak-to-valley ratio*: minimum 2.5, where H_p = height above the baseline of the peak due to impurity B, and H_v = height above the baseline of the lowest point of the curve separating this peak from the peak due to benfluorex.

Limit:

– *impurity B*: maximum 0.1 per cent.

Related substances, other than impurity B. Liquid chromatography (*2.2.29*).

Test solution. Dissolve 60.0 mg of the substance to be examined in 50 ml of *acetonitrile R* and dilute to 100.0 ml with *water R*.

Reference solution (a). Dissolve 60.0 mg of *benfluorex hydrochloride for system suitability CRS* in 50 ml of *acetonitrile R* and dilute to 100.0 ml with *water R*.

Reference solution (b). Dilute 1.0 ml of the test solution to 100.0 ml with a mixture of equal volumes of *acetonitrile R* and *water R*. Dilute 5.0 ml of this solution to 50.0 ml with the same mixture of solvents.

Column:

– *size*: *l* = 0.15 m, Ø = 4.6 mm,

– *stationary phase*: silica gel bonded with alkylamide groups (5 µm),

– *temperature*: 60 °C.

Mobile phase: a mixture of equal volumes of *acetonitrile R* and a solution containing 2.18 g/l of *potassium dihydrogen phosphate R* adjusted to pH 2.5 with *phosphoric acid R* and 6.5 g/l of *sodium decyl sulphate R*.

Flow rate: 1.4 ml/min.

Detection: spectrophotometer at 210 nm.

Injection: 10 µl.

Run time: 3 times the retention time of benfluorex.

Relative retention with reference to benfluorex (retention time = about 5 min): impurity A = about 0.9.

System suitability:

– *signal-to-noise ratio*: minimum 20 for the principal peak in the chromatogram obtained with reference solution (b),

– *peak-to-valley ratio*: minimum 2.5, where H_p = height above the baseline of the peak due to impurity A, and H_v = height above the baseline of the lowest point of the curve separating this peak from the peak due to benfluorex in the chromatogram obtained with reference solution (a).

Limits:

– *any impurity*: not more than the area of the principal peak in the chromatogram obtained with reference solution (b) (0.1 per cent),

– *total*: not more than twice the area of the principal peak in the chromatogram obtained with reference solution (b) (0.2 per cent),

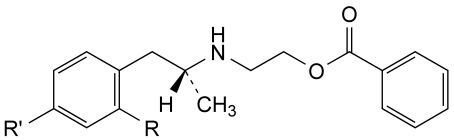
– *disregard limit*: 0.5 times the area of the principal peak in the chromatogram obtained with reference solution (b) (0.05 per cent).

Heavy metals (*2.4.8*): maximum 20 ppm.

1.0 g complies with limit test C. Prepare the standard using 2 ml of *lead standard solution (10 ppm Pb) R*.

Loss on drying (*2.2.32*): maximum 0.5 per cent, determined on 1.000 g by drying in an oven at 105 °C.

Sulphated ash (*2.4.14*): maximum 0.1 per cent, determined on 1.0 g.



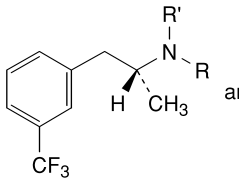
ASSAY

In order to avoid overheating in the reaction medium, mix thoroughly throughout and stop the titration immediately after the end-point has been reached.

Dissolve 0.250 g rapidly in 2.0 ml of *anhydrous formic acid R* and add 50.0 ml of *acetic anhydride R*. Titrate immediately with *0.1 M perchloric acid*, determining the end-point potentiometrically (*2.2.20*).

1 ml of *0.1 M perchloric acid* is equivalent to 38.78 mg of $C_{19}H_{21}ClF_3NO_2$.

IMPURITIES



and enantiomer

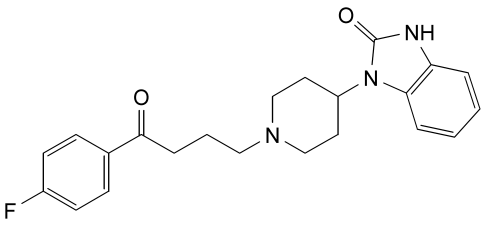
A. R = CF_3, R′ = H: 2-[[(1*RS*)-1-methyl-2-[2-(trifluoromethyl)phenyl]ethyl]amino]ethyl benzoate,

B. R = H, R′ = CF_3: 2-[[(1*RS*)-1-methyl-2-[4-(trifluoromethyl)phenyl]ethyl]amino]ethyl benzoate,

C. benzoic acid,

and enantiomer

D. R = CH_2-CH_2-OH, R′ = H: 2-[[(1*RS*)-1-methyl-2-[3-(trifluoromethyl)phenyl]ethyl]amino]ethanol,



E. R = CH_2-CH_2-OH, R′ = CO-C_6H_5: *N*-(2-hydroxyethyl)-*N*-[(1*RS*)-1-methyl-2-[3-(trifluoromethyl)phenyl]ethyl]benzamide,

F. R = CH_2-CH_2-O-CO-C_6H_5, R′ = CO-C_6H_5: 2-[benzoyl[(1*RS*)-1-methyl-2-[3-(trifluoromethyl)phenyl]ethyl]amino]ethyl benzoate.

corrected 6.0

BENPERIDOL

Benperidolum

$C_{22}H_{24}FN_3O_2$ M_r 381.4
[2062-84-2]

DEFINITION

1-[1-[4-(4-Fluorophenyl)-4-oxobutyl]piperidin-4-yl]-1,3-dihydro-2*H*-benzimidazol-2-one.

Content: 99.0 per cent to 101.0 per cent (dried substance).

CHARACTERS

Appearance: white or almost white powder.

Solubility: practically insoluble in water, freely soluble in dimethylformamide, soluble in methylene chloride, slightly soluble in ethanol (96 per cent).

It shows polymorphism (*5.9*).

IDENTIFICATION

First identification: A.

Second identification: B, C, D.

A. Infrared absorption spectrophotometry (*2.2.24*).

Preparation: discs.

Comparison: *benperidol CRS*.

If the spectra obtained in the solid state show differences, dissolve the substance to be examined and the reference substance separately in the minimum volume of *methyl isobutyl ketone R*, evaporate to dryness and record new spectra using the residues.

B. Thin-layer chromatography (*2.2.27*).

Test solution. Dissolve 30 mg of the substance to be examined in the mobile phase and dilute to 10 ml with the mobile phase.

Reference solution (a). Dissolve 30 mg of *benperidol CRS* in the mobile phase and dilute to 10 ml with the mobile phase.

Reference solution (b). Dissolve 30 mg of *benperidol CRS* and 30 mg of *droperidol CRS* in the mobile phase and dilute to 10 ml with the mobile phase.

Plate: *TLC silica gel F_{254} plate R*.

Mobile phase: *acetone R, methanol R* (1:9 *V/V*).

Application: 10 µl.

Development: over a path of 15 cm.

Drying: in air.

Detection: examine in ultraviolet light at 254 nm.

System suitability: reference solution (b):

– the chromatogram shows 2 clearly separated spots.

Results: the principal spot in the chromatogram obtained with the test solution is similar in position and size to the principal spot in the chromatogram obtained with reference solution (a).

C. Dissolve about 10 mg in 5 ml of *anhydrous ethanol R*. Add 0.5 ml of *dinitrobenzene solution R* and 0.5 ml of *2 M alcoholic potassium hydroxide R*. A violet colour is produced which becomes brownish-red after 20 min.

D. Mix about 5 mg with 45 mg of *heavy magnesium oxide R* and ignite in a crucible until an almost white residue is obtained (usually less than 5 min). Allow to cool, add 1 ml of *water R*, 0.05 ml of *phenolphthalein solution R1* and about 1 ml of *dilute hydrochloric acid R* to render the solution colourless. Filter. To a freshly prepared mixture of 0.1 ml of *alizarin S solution R* and 0.1 ml of *zirconyl nitrate solution R*, add 1.0 ml of the filtrate. Mix, allow to stand for 5 min and compare the colour of the solution with that of a blank prepared in the same manner. The test solution is yellow and the blank is red.

TESTS

Related substances. Liquid chromatography (*2.2.29*). *Prepare the solutions immediately before use.*

Test solution. Dissolve 0.10 g of the substance to be examined in *dimethylformamide R* and dilute to 10.0 ml with the same solvent.

Reference solution (a). Dissolve 2.5 mg of *benperidol CRS* and 2.5 mg of *droperidol CRS* in *dimethylformamide R* and dilute to 100.0 ml with the same solvent.

Reference solution (b). Dilute 1.0 ml of the test solution to 100.0 ml with *dimethylformamide R*. Dilute 5.0 ml of this solution to 20.0 ml with *dimethylformamide R*.

Column:

– *size*: *l* = 0.1 m, Ø = 4.6 mm;

– *stationary phase*: *base-deactivated octadecylsilyl silica gel for chromatography R* (3 µm).

Mobile phase:

– *mobile phase A*: 10 g/l solution of *tetrabutylammonium hydrogen sulphate R*;

– *mobile phase B*: *acetonitrile R*;

Time (min)	Mobile phase A (per cent *V/V*)	Mobile phase B (per cent *V/V*)
0 - 15	100 → 60	0 → 40
15 - 20	60	40
20 - 25	100	0

Flow rate: 1.5 ml/min.

Detection: spectrophotometer at 275 nm.

Equilibration: with *acetonitrile R* for at least 30 min and then with the mobile phase at the initial composition for at least 5 min.

Injection: 10 µl; inject *dimethylformamide R* as a blank.

Retention time: benperidol = about 6.5 min; droperidol = about 7 min.

System suitability: reference solution (a):

– *resolution*: minimum 2.0 between the peaks due to benperidol and droperidol; if necessary, adjust the concentration of acetonitrile in the mobile phase or adjust the time programme for the linear gradient.

Limits:

– *impurities A, B, C, D, E*: for each impurity, not more than the area of the principal peak in the chromatogram obtained with reference solution (b) (0.25 per cent);

– *total*: not more than twice the area of the principal peak in the chromatogram obtained with reference solution (b) (0.5 per cent);

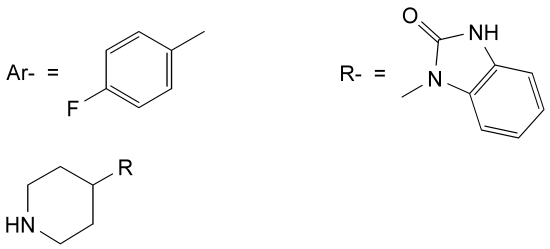
– *disregard limit*: 0.2 times the area of the principal peak in the chromatogram obtained with reference solution (b) (0.05 per cent); disregard any peak due to the blank.

Loss on drying (*2.2.32*): maximum 0.5 per cent, determined on 1.000 g by drying in an oven at 105 °C.

Sulphated ash (*2.4.14*): maximum 0.1 per cent, determined on 1.0 g in a platinum crucible.

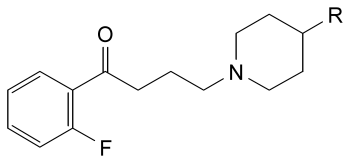
ASSAY

Dissolve 0.300 g in 50 ml of a mixture of 1 volume of *anhydrous acetic acid R* and 7 volumes of *methyl ethyl ketone R* and titrate with *0.1 M perchloric acid*, using 0.2 ml of *naphtholbenzein solution R* as indicator.



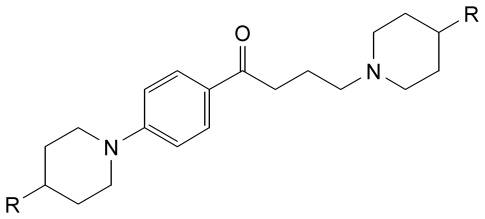
1 ml of *0.1 M perchloric acid* is equivalent to 38.14 mg of $C_{22}H_{24}FN_3O_2$.

STORAGE

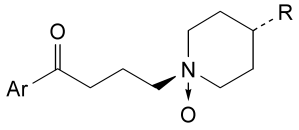


Protected from light.

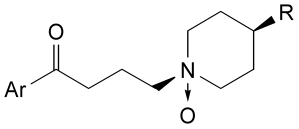
IMPURITIES



Specified impurities: A, B, C, D, E.



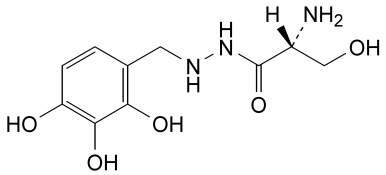
A. 1-(piperidin-4-yl)-1,3-dihydro-2*H*-benzimidazol-2-one,



B. 1-[1-[4-(2-fluorophenyl)-4-oxobutyl]piperidin-4-yl]-1,3-dihydro-2*H*-benzimidazol-2-one,

C. 1-[1-[4-oxo-4-[4-[4-(2-oxo-2,3-dihydro-1*H*-benzimidazol-1-yl)piperidin-1-yl]phenyl]butyl]piperidin-4-yl]-1,3-dihydro-2*H*-benzimidazol-2-one,

D. *cis*-1-[1-[4-(4-fluorophenyl)-4-oxobutyl]piperidin-4-yl 1-oxide]-1,3-dihydro-2*H*-benzimidazol-2-one,



E. *trans*-1-[1-[4-(4-fluorophenyl)-4-oxobutyl]piperidin-4-yl 1-oxide]-1,3-dihydro-2*H*-benzimidazol-2-one.

01/2008:1173

BENSERAZIDE HYDROCHLORIDE

Benserazidi hydrochloridum

and enantiomer , HCl

$C_{10}H_{16}ClN_3O_5$ M_r 293.7
[14919-77-8]

DEFINITION

Benserazide hydrochloride contains not less than 98.5 per cent and not more than the equivalent of 101.0 per cent of (*RS*)-2-amino-3-hydroxy-2′-(2,3,4-trihydroxybenzyl)propanohydrazide hydrochloride, calculated with reference to the anhydrous substance.

CHARACTERS

A white or yellowish-white or orange-white, crystalline powder, freely soluble in water, very slightly soluble in ethanol, practically insoluble in acetone.

It shows polymorphism.

IDENTIFICATION

A. Examine by infrared absorption spectrophotometry (*2.2.24*), comparing with the spectrum obtained with *benserazide hydrochloride CRS*. Examine the substances prepared as discs. If the spectra obtained show differences, dissolve the substance to be examined and the reference substance separately in hot *methanol R*, evaporate to dryness and record new spectra using the residues.

B. Solution S (see Tests) gives reaction (b) of chlorides (*2.3.1*).

TESTS

Solution S. Dissolve 1.0 g in *carbon dioxide-free water R* and dilute to 100 ml with the same solvent.

Appearance of solution. Solution S is clear (*2.2.1*) and not more intensely coloured than reference solution BY_6 (*2.2.2, Method II*).

pH (*2.2.3*). The pH of solution S is 4.0 to 5.0.

Optical rotation (*2.2.7*). The angle of optical rotation, determined on solution S, is – 0.05 to + 0.05.

Related substances. Examine by liquid chromatography (*2.2.29*).

Prepare the solutions using the mobile phase cooled to 4 °C and inject immediately.

Test solution. Dissolve 0.10 g of the substance to be examined in the mobile phase and dilute to 100.0 ml with the mobile phase.

Reference solution. Dissolve 5.0 mg of *benserazide impurity A CRS* and 5.0 mg of *benserazide hydrochloride CRS* in the mobile phase and dilute to 50.0 ml with the mobile phase. Dilute 5.0 ml of the solution to 100.0 ml with the mobile phase.

The chromatographic procedure may be carried out using:

– a stainless steel column 0.125 m long and4 mm in internal diameter packed with *octylsilyl silica gel for chromatography R* (5 µm),

– as mobile phase at a flow rate of 1.2 ml/min a mixture prepared as follows: dissolve 4.76 g of *potassium dihydrogen phosphate R* in 800 ml of *water R*; add 200 ml of *acetonitrile R* and 1.22 g of *sodium decanesulphonate R*; adjust to pH 3.5 with *phosphoric acid R*,

– as detector a spectrophotometer set at 220 nm.

Inject 20 µl of the reference solution. The test is not valid unless the resolution between the peaks corresponding to impurity A (first peak) and benserazide (second peak) is at least 2.0.

Inject 20 µl of the test solution. Continue the chromatography for nine times the retention time of benserazide. In the chromatogram obtained with the test solution: the area of any peak due to impurity A is not greater than the area of the corresponding peak in the chromatogram obtained with the reference solution (0.5 per cent); the area of any peak, apart from the principal peak and any peak due to impurity A, is not greater than the area of the peak due to benserazide in the chromatogram obtained with the reference solution (0.5 per cent); the sum of the areas of any such peaks is not greater than twice the area of the peak due to benserazide in the chromatogram obtained with the reference solution (1 per cent). Disregard any peak with an area less than 0.1 times that of the peak due to benserazide in the chromatogram obtained with the reference solution.

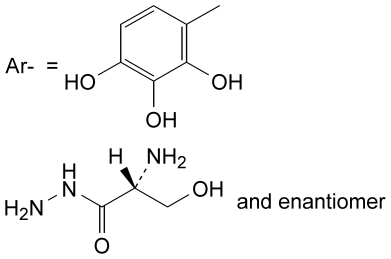
Heavy metals (*2.4.8*). 1.0 g complies with limit test C for heavy metals (20 ppm). Prepare the standard using 2 ml of *lead standard solution (10 ppm Pb) R*.

Water (*2.5.12*). Not more than 1.0 per cent, determined on 0.500 g by the semi-micro determination of water.

Sulphated ash (*2.4.14*). Not more than 0.1 per cent, determined on 1.0 g.

ASSAY

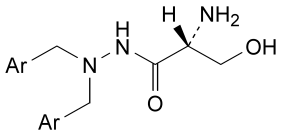
In order to avoid overheating during the titration, mix thoroughly throughout and stop the titration immediately after the end-point has been reached.



Dissolve 0.250 g in 5 ml of *anhydrous formic acid R*. Add 70 ml of *anhydrous acetic acid R*. Titrate immediately with *0.1 M perchloric acid*, determining the end-point potentiometrically (*2.2.20*).

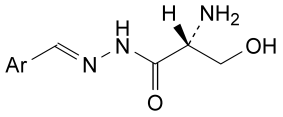
1 ml of *0.1 M perchloric acid* is equivalent to 29.37 mg of $C_{10}H_{16}ClN_3O_5$.

STORAGE



Store protected from light.

IMPURITIES



and enantiomer

A. (*RS*)-2-amino-3-hydroxypropanohydrazide,

and enantiomer

B. (*RS*)-2-amino-3-hydroxy-2′,2′-bis(2,3,4-trihydroxybenzyl)propanohydrazide,

and enantiomer

C. (*RS*)-2-amino-3-hydroxy-2′-(2,3,4-trihydroxybenzylidene)propanohydrazide.

corrected 6.0

BENTONITE

Bentonitum

[1302-78-9]

DEFINITION

Natural clay containing a high proportion of montmorillonite, a native hydrated aluminium silicate in which some aluminium and silicon atoms may be replaced by other atoms such as magnesium and iron.

CHARACTERS

Appearance: very fine, homogeneous, greyish-white powder with a more or less yellowish or pinkish tint.

Solubility: practically insoluble in water and in aqueous solutions.

It swells with a little water forming a malleable mass.

IDENTIFICATION

A. To 0.5 g in a metal crucible add 1 g of *potassium nitrate R* and 3 g of *sodium carbonate R* and heat until the mixture melts. Allow to cool. To this residue add 20 ml of boiling *water R*, mix and filter. Wash the insoluble residue with 50 ml of *water R*. To this residue add 1 ml of *hydrochloric acid R* and 5 ml of *water R*. Filter. To the filtrate add 1 ml of *strong sodium hydroxide solution R* and filter. To this filtrate add 3 ml of *ammonium chloride solution R*. A gelatinous white precipitate is formed.

B. Swelling power with water (see Tests).

C. 0.25 g gives the reaction of silicates (*2.3.1*).

TESTS

Alkalinity. To 2 g add 100 ml of *carbon dioxide-free water R* and shake for 5 min. To 5 ml of this suspension add 0.1 ml of *thymolphthalein solution R*. The liquid becomes bluish. Add 0.1 ml of *0.1 M hydrochloric acid*. The liquid is decolourised within 5 min.

Coarse particles: maximum 0.5 per cent.

To 20 g add 1000 ml of *water R* and mix for 15 min using a high-speed mixer capable of operating at not less than 5000 r/min. Transfer the suspension to a wet sieve (75), tared after drying at 100-105 °C. Wash with 3 quantities, each of 500 ml, of *water R*, ensuring that any agglomerates have been dispersed. Dry the sieve at 100-105 °C and weigh. The particles on the sieve weigh a maximum of 0.1 g.

Sedimentation volume. To 6.0 g add 200 ml of *water R* and mix for 20 min using a high-speed mixer capable of operating at 10 000 r/min. Transfer 100 ml of this suspension to a graduated cylinder. Allow to stand for 24 h. The volume of the clear supernatant liquid is not greater than 2 ml.

Swelling power with water. Add 2.0 g in 20 portions to 100 ml of a 10 g/l solution of *sodium laurilsulfate R* in a 100 ml graduated cylinder about 30 mm in diameter. Allow 2 min between additions for each portion to settle. Allow to stand for 2 h. The apparent volume of the sediment is not less than 22 ml.

Heavy metals (*2.4.8*): maximum 50 ppm.

To 5.0 g add 7.5 ml of *dilute hydrochloric acid R* and 27.5 ml of *water R*. Boil for 5 min. Centrifuge and filter the supernatant liquid. Wash the centrifugation residue with *water R* and filter. Dilute the combined filtrates to 50.0 ml with *water R*. To 5 ml of this solution add 5 ml of *water R*, 10 ml of *hydrochloric acid R* and 25 ml of *methyl isobutyl ketone R* and shake for 2 min. Separate the layers. Evaporate the aqueous layer to dryness on a water-bath. Dissolve the residue in 1 ml of *acetic acid R*, dilute to 25 ml with *water R* and filter. 12 ml of the filtrate complies with test A. Prepare the reference solution using *lead standard solution (1 ppm Pb) R*.

Loss on drying (*2.2.32*): maximum 15 per cent, determined on 1.000 g by drying in an oven at 105 °C.

Microbial contamination. Total viable aerobic count (*2.6.12*) not more than 10^3 micro-organisms per gram, determined by plate-count.

01/2008:0372

BENZALKONIUM CHLORIDE

Benzalkonii chloridum

DEFINITION

Benzalkonium chloride is a mixture of alkylbenzyldimethylammonium chlorides, the alkyl groups having chain lengths of C_8 to C_{18}. It contains not less than 95.0 per cent and not more than the equivalent of 104.0 per cent of alkylbenzyldimethylammonium chlorides, calculated as $C_{22}H_{40}ClN$ (M_r 354.0) with reference to the anhydrous substance.

CHARACTERS

A white or yellowish-white powder or gelatinous, yellowish-white fragments, hygroscopic, soapy to the touch, very soluble in water and in alcohol. On heating it forms a clear molten mass. An aqueous solution froths copiously when shaken.

IDENTIFICATION

A. Dissolve 80 mg in *water R* and dilute to 100 ml with the same solvent. Examined between 220 nm and 350 nm (*2.2.25*), the solution shows three absorption maxima, at 257 nm, 263 nm and 269 nm, and a shoulder at about 250 nm.

B. To 2 ml of solution S (see Tests) add 0.1 ml of *glacial acetic acid R* and, dropwise, 1 ml of *sodium tetraphenylborate solution R*. A white precipitate is formed. Filter. Dissolve the precipitate in a mixture of 1 ml of *acetone R* and 5 ml of *alcohol R*, heating to not more than 70 °C. Add *water R* dropwise to the warm solution until a slight opalescence forms. Heat gently until the solution is clear and allow to cool. White crystals separate. Filter, wash with three quantities, each of 10 ml, of *water R* and dry *in vacuo* over *diphosphorus pentoxide R* or *anhydrous silica gel R* at a temperature not exceeding 50 °C. The crystals melt (*2.2.14*) at 127 °C to 133 °C.

C. To 5 ml of *dilute sodium hydroxide solution R* add 0.1 ml of *bromophenol blue solution R1* and 5 ml of *chloroform R* and shake. The chloroform layer is colourless. Add 0.1 ml of solution S and shake. The chloroform layer becomes blue.

D. To 2 ml of solution S add 1 ml of *dilute nitric acid R*. A white precipitate is formed which dissolves on the addition of 5 ml of *alcohol R*. The solution gives reaction (a) of chlorides (*2.3.1*).

TESTS

Solution S. Dissolve 1.0 g in *carbon dioxide-free water R* and dilute to 100 ml with the same solvent.

Appearance of solution. Solution S is clear (*2.2.1*) and not more intensely coloured than reference solution Y_6 (*2.2.2, Method II*).

Acidity or alkalinity. To 50 ml of solution S add 0.1 ml of *bromocresol purple solution R*. Not more than 0.1 ml of *0.1 M hydrochloric acid* or *0.1 M sodium hydroxide* is required to change the colour of the indicator.

Amines and amine salts. Dissolve 5.0 g with heating in 20 ml of a mixture of 3 volumes of *1 M hydrochloric acid* and 97 volumes of *methanol R* and add 100 ml of *2-propanol R*. Pass a stream of *nitrogen R* slowly through the solution. Gradually add 12.0 ml of *0.1 M tetrabutylammonium hydroxide* and record the potentiometric titration curve (*2.2.20*). If the curve shows two points of inflexion, the volume of titrant added between the two points is not greater than 5.0 ml. If the curve shows no point of inflexion, the substance to be examined does not comply with the test. If the curve shows one point of inflexion, repeat the test but add 3.0 ml of a 25.0 g/l solution of *dimethyldecylamine R* in *2-propanol R* before the titration. If the titration curve after addition of 12.0 ml of the titrant shows only one point of inflexion, the substance to be examined does not comply with the test.

Water (*2.5.12*). Not more than 10 per cent, determined on 0.300 g by the semi-micro determination of water.

Sulphated ash (*2.4.14*). Not more than 0.1 per cent, determined on 1.0 g.

ASSAY

Dissolve 2.00 g in *water R* and dilute to 100.0 ml with the same solvent. Transfer 25.0 ml of the solution to a separating funnel, add 25 ml of *chloroform R*, 10 ml of *0.1 M sodium hydroxide* and 10.0 ml of a freshly prepared 50 g/l solution of *potassium iodide R*. Shake well, allow to separate and discard the chloroform layer. Shake the aqueous layer with three quantities, each of 10 ml, of *chloroform R* and discard

the chloroform layers. To the aqueous layer add 40 ml of *hydrochloric acid R*, allow to cool and titrate with *0.05 M potassium iodate* until the deep-brown colour is almost discharged. Add 2 ml of *chloroform R* and continue the titration, shaking vigorously, until the chloroform layer no longer changes colour. Carry out a blank titration on a mixture of 10.0 ml of the freshly prepared 50 g/l solution of *potassium iodide R*, 20 ml of *water R* and 40 ml of *hydrochloric acid R*.

1 ml of *0.05 M potassium iodate* is equivalent to 35.4 mg of $C_{22}H_{40}ClN$.

01/2008:0371

BENZALKONIUM CHLORIDE SOLUTION

Benzalkonii chloridi solutio

DEFINITION

Benzalkonium chloride solution is an aqueous solution of a mixture of alkylbenzyldimethylammonium chlorides, the alkyl groups having chain lengths of C_8 to C_{18}. Benzalkonium chloride solution contains not less than 475 g/l and not more than 525 g/l of alkylbenzyldimethylammonium chlorides, calculated as $C_{22}H_{40}ClN$ (M_r 354.0). The solution may contain alcohol.

CHARACTERS

A clear, colourless or slightly yellowish liquid, miscible with water and with alcohol. It froths copiously when shaken.

IDENTIFICATION

A. Dilute 0.3 ml to 100 ml with *water R*. Examined between 220 nm and 350 nm (*2.2.25*), the solution shows three absorption maxima, at 257 nm, 263 nm and 269 nm, and a shoulder at about 250 nm.

B. To 0.05 ml add 2 ml of *water R*, 0.1 ml of *glacial acetic acid R* and, dropwise, 1 ml of *sodium tetraphenylborate solution R*. A white precipitate is formed. Filter. Dissolve the precipitate in a mixture of 1 ml of *acetone R* and 5 ml of *alcohol R*, heating to not more than 70 °C. Add *water R* dropwise to the warm solution until a slight opalescence forms. Heat gently until the solution is clear and allow to cool. White crystals separate. Filter, wash with three quantities, each of 10 ml, of *water R* and dry *in vacuo* over *diphosphorus pentoxide R* or *anhydrous silica gel R* at a temperature not exceeding 50 °C. The crystals melt (*2.2.14*) at 127 °C to 133 °C.

C. To 5 ml of *dilute sodium hydroxide solution R* add 0.1 ml of *bromophenol blue solution R1* and 5 ml of *chloroform R* and shake. The chloroform layer is colourless. Add 0.05 ml of the solution to be examined and shake. The chloroform layer becomes blue.

D. To 0.05 ml add 1 ml of *dilute nitric acid R*. A white precipitate is formed which dissolves on the addition of 5 ml of *alcohol R*. The solution gives reaction (a) of chlorides (*2.3.1*).

TESTS

Solution S. Dilute 2.0 g to 100 ml with *carbon dioxide-free water R*.

Appearance of solution. Solution S is clear (*2.2.1*) and not more intensely coloured than reference solution Y_6 (*2.2.2, Method II*).

Acidity or alkalinity. To 50 ml of solution S add 0.1 ml of *bromocresol purple solution R*. Not more than 0.1 ml of *0.1 M hydrochloric acid* or *0.1 M sodium hydroxide* is required to change the colour of the indicator.

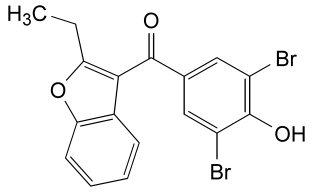
Amines and amine salts. Mix 10.0 g, while heating, with 20 ml of a mixture of 3 volumes of *1 M hydrochloric acid* and 97 volumes of *methanol R* and add 100 ml of *2-propanol R*. Pass a stream of *nitrogen R* slowly through the solution. Gradually add 12.0 ml of *0.1 M tetrabutylammonium hydroxide* and record the potentiometric titration curve (*2.2.20*). If the curve shows two points of inflexion, the volume of titrant added between the two points is not greater than 5.0 ml. If the curve shows no point of inflexion, the solution to be examined does not comply with the test. If the curve shows one point of inflexion, repeat the test but add 3.0 ml of a 25.0 g/l solution of *dimethyldecylamine R* in *2-propanol R* before the titration. If the titration curve after the addition of 12.0 ml of the titrant shows only one point of inflexion, the solution to be examined does not comply with the test.

Sulphated ash (*2.4.14*). Not more than 0.1 per cent, determined on 1.0 g.

ASSAY

Determine the density (*2.2.5*) of the solution to be examined. Dilute 4.00 g to 100.0 ml with *water R*. Transfer 25.0 ml of the solution to a separating funnel, add 25 ml of *chloroform R*, 10 ml of *0.1 M sodium hydroxide* and 10.0 ml of a freshly prepared 50 g/l solution of *potassium iodide R*. Shake well, allow to separate and discard the chloroform layer. Shake the aqueous layer with three quantities, each of 10 ml, of *chloroform R* and discard the chloroform layers. To the aqueous layer add 40 ml of *hydrochloric acid R*, allow to cool and titrate with *0.05 M potassium iodate* until the deep-brown colour is almost discharged. Add 2 ml of *chloroform R* and continue the titration, shaking vigorously, until the chloroform layer no longer changes colour. Carry out a blank titration on a mixture of 10.0 ml of the freshly prepared 50 g/l solution of *potassium iodide R*, 20 ml of *water R* and 40 ml of *hydrochloric acid R*.

1 ml of *0.05 M potassium iodate* is equivalent to 35.4 mg of $C_{22}H_{40}ClN$.



LABELLING

The label states the content of alcohol, if any.

01/2008:1393

BENZBROMARONE

Benzbromaronum

$C_{17}H_{12}Br_2O_3$ M_r 424.1
[3562-84-3]

DEFINITION

(3,5-Dibromo-4-hydroxyphenyl)(2-ethylbenzofuran-3-yl)-methanone.

Content: 98.0 per cent to 101.0 per cent (dried substance).

CHARACTERS

Appearance: white or almost white, crystalline powder.

Solubility: practically insoluble in water, freely soluble in acetone and in methylene chloride, sparingly soluble in ethanol (96 per cent).

mp: about 152 °C.

IDENTIFICATION

A. Infrared absorption spectrophotometry (*2.2.24*).

Comparison: *benzbromarone CRS*.

B. By means of a copper wire, previously ignited, introduce a small amount of the substance to be examined into the non-luminous part of a flame. The colour of the flame becomes green.

TESTS

Appearance of solution. The solution is clear (*2.2.1*) and not more intensely coloured than reference solution Y_5 (*2.2.2, Method II*).

Dissolve 1.25 g in *dimethylformamide R* and dilute to 25 ml with the same solvent.

Acidity or alkalinity. Shake 0.5 g with 10 ml of *carbon dioxide-free water R* for 1 min and filter. To 2.0 ml of the filtrate add 0.1 ml of *methyl red solution R* and 0.1 ml of *0.01 M hydrochloric acid*. The solution is red. Add 0.3 ml of *0.01 M sodium hydroxide*. The solution is yellow.

Related substances. Liquid chromatography (*2.2.29*).

Test solution. Dissolve 0.125 g of the substance to be examined in 30 ml of *methanol R* and dilute to 50.0 ml with the mobile phase.

Reference solution (a). Dilute 1.0 ml of the test solution to 100.0 ml with the mobile phase. Dilute 1.0 ml of this solution to 10.0 ml with the mobile phase.

Reference solution (b). Dissolve 10 mg of *benzarone CRS* (impurity C) in the mobile phase and dilute to 20 ml with the mobile phase. To 5 ml of this solution add 1 ml of the test solution and dilute to 100 ml with the mobile phase.

Column:

– *size*: *l* = 0.25 m, Ø = 4.6 mm;

– *stationary phase*: *octadecylsilyl silica gel for chromatography R* (5 µm).

Mobile phase: *glacial acetic acid R, acetonitrile R, water R, methanol R* (5:25:300:990 *V/V/V/V*).

Flow rate: 1.5 ml/min.

Detection: spectrophotometer at 231 nm.

Injection: 20 µl.

Run time: 2.5 times the retention time of benzbromarone.

Relative retention with reference to benzbromarone: impurity A = about 0.6; impurity B = about 2.

System suitability: reference solution (b):

– *resolution*: minimum 10.0 between the peaks due to impurity C (1st peak) and benzbromarone (2nd peak).

Limits:

– *impurity A*: not more than 4 times the area of the principal peak in the chromatogram obtained with reference solution (a) (0.4 per cent);

– *impurity B*: not more than 10 times the area of the principal peak in the chromatogram obtained with reference solution (a) (1.0 per cent);

– *unspecified impurities*: for each impurity, not more than the area of the principal peak in the chromatogram obtained with reference solution (a) (0.10 per cent);

– *sum of impurities other than A and B*: not more than twice the area of the principal peak in the chromatogram obtained with reference solution (a) (0.2 per cent);

– *disregard limit*: 0.2 times the area of the principal peak in the chromatogram obtained with reference solution (a) (0.02 per cent).

Halides expressed as chlorides (*2.4.4*): maximum 400 ppm.

Shake 1.25 g with a mixture of 5 ml of *dilute nitric acid R* and 15 ml of *water R*. Filter. Rinse the filter with *water R* and dilute the filtrate to 25 ml with the same solvent. Dilute 2.5 ml of this solution to 15 ml with *water R*.

Iron (*2.4.9*): maximum 125 ppm.

Moisten the residue obtained in the test for sulphated ash with 2 ml of *hydrochloric acid R* and evaporate to dryness on a water-bath. Add 0.05 ml of *hydrochloric acid R* and 10 ml of *water R*, heat to boiling and maintain boiling for 1 min. Allow to cool. Rinse the crucible with *water R*, collect the rinsings and dilute to 25 ml with *water R*. Dilute 2 ml of this solution to 10 ml with *water R*.

Heavy metals (*2.4.8*): maximum 20 ppm.

0.5 g complies with test C. Prepare the reference solution using 1 ml of *lead standard solution (10 ppm Pb) R*.

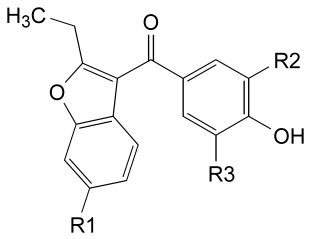
Loss on drying (*2.2.32*): maximum 0.5 per cent, determined on 1.000 g by drying *in vacuo* at 50 °C for 4 h.

Sulphated ash (*2.4.14*): maximum 0.1 per cent, determined on 1.0 g.

ASSAY

Dissolve 0.300 g in 60 ml of *methanol R*. Stir until completely dissolved and add 10 ml of *water R*. Titrate with *0.1 M sodium hydroxide*, determining the end-point potentiometrically (*2.2.20*).

1 ml of *0.1 M sodium hydroxide* is equivalent to 42.41 mg of $C_{17}H_{12}Br_2O_3$.



STORAGE

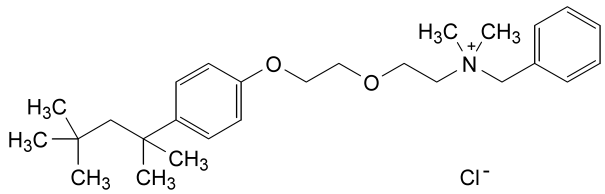
Protected from light.

IMPURITIES

Specified impurities: *A, B*.

Other detectable impurities (the following substances would, if present at a sufficient level, be detected by one or other of the tests in the monograph. They are limited by the general acceptance criterion for other/unspecified impurities and/or by the general monograph *Substances for pharmaceutical use (2034)*. It is therefore not necessary to identify these impurities for demonstration of compliance. See also *5.10. Control of impurities in substances for pharmaceutical use*): *C*.

A. R1 = R2 = H, R3 = Br: (3-bromo-4-hydroxyphenyl)(2-ethylbenzofuran-3-yl)methanone,



B. R1 = R2 = R3 = Br: (6-bromo-2-ethylbenzofuran-3-yl)(3,5-dibromo-4-hydroxyphenyl)methanone,

C. R1 = R2 = R3 = H: (2-ethylbenzofuran-3-yl)(4-hydroxyphenyl)methanone (benzarone).

corrected 6.0

BENZETHONIUM CHLORIDE

Benzethonii chloridum

$C_{27}H_{42}ClNO_2$ M_r 448.1
[121-54-0]

DEFINITION

N-Benzyl-*N*,*N*-dimethyl-2-[2-[4-(1,1,3,3-tetramethylbutyl)phenoxy]ethoxy]ethanaminium chloride.

Content: 97.0 per cent to 103.0 per cent (dried substance).

CHARACTERS

Appearance: white or yellowish-white powder.

Solubility: very soluble in water and in ethanol (96 per cent), freely soluble in methylene chloride.

An aqueous solution froths copiously when shaken.

IDENTIFICATION

A. Melting point (*2.2.14*): 158 °C to 164 °C, after drying at 105 °C for 4 h.

B. Thin-layer chromatography (*2.2.27*).

Test solution. Dissolve 25 mg of the substance to be examined in *water R* and dilute to 5 ml with the same solvent.

Reference solution. Dissolve 25 mg of *benzethonium chloride CRS* in *water R* and dilute to 5 ml with the same solvent.

Plate: *TLC silica gel F_{254} plate R*.

Mobile phase: *glacial acetic acid R, water R, methanol R* (5:5:100 *V/V/V*).

Application: 20 µl.

Development: over a path of 12 cm.

Drying: in a current of warm air.

Detection: examine in ultraviolet light at 254 nm.

Results: the principal spot in the chromatogram obtained with the test solution is similar in position and size to the principal spot in the chromatogram obtained with the reference solution.

C. To 5 ml of *dilute sodium hydroxide solution R* add 0.1 ml of *bromophenol blue solution R1* and 5 ml of *methylene chloride R* and shake. The lower layer is colourless. Add 0.1 ml of solution S (see Tests) and shake. A blue colour develops in the lower layer.

D. To 2 ml of solution S add 1 ml of *dilute nitric acid R*. A white precipitate is formed which dissolves upon addition of 5 ml of *ethanol (96 per cent) R*. The solution gives reaction (a) of chlorides (*2.3.1*).

TESTS

Solution S. Dissolve 5.0 g in *carbon dioxide-free water R* and dilute to 50 ml with the same solvent.

Appearance of solution. Solution S is clear (*2.2.1*) and not more intensely coloured than reference solution Y_6 (*2.2.2, Method II*).

Acidity or alkalinity. To 25 ml of solution S add 0.1 ml of *phenolphthalein solution R*. The solution is colourless. Add 0.3 ml of *0.01 M sodium hydroxide*. The solution is pink. Add 0.1 ml of *methyl red solution R* and 0.5 ml of *0.01 M hydrochloric acid*. The solution is orange-red.

Volatile bases and salts of volatile bases (*2.4.1, Method B*): maximum 50 ppm, determined on 0.20 g.

Prepare the standard using 0.1 ml of *ammonium standard solution (100 ppm NH_4) R*. Replace heavy magnesium oxide by 2.0 ml of *strong sodium hydroxide solution R*.

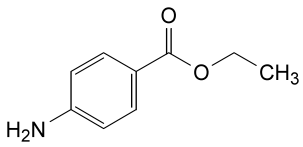
Loss on drying (*2.2.32*): maximum 5.0 per cent, determined on 1.000 g by drying in an oven at 105 °C for 4 h.

Sulphated ash (*2.4.14*): maximum 0.1 per cent, determined on 1.0 g.

ASSAY

Dissolve 2.000 g in *water R* and dilute to 100.0 ml with the same solvent. Transfer 25.0 ml of the solution to a separating funnel, add 10 ml of a 4 g/l solution of *sodium hydroxide R*, 10.0 ml of a freshly prepared 50 g/l solution of *potassium iodide R* and 25 ml of *methylene chloride R*. Shake vigorously, allow to separate and discard the lower layer. Shake the upper layer with 3 quantities, each of 10 ml, of *methylene chloride R* and discard the lower layers. To the upper layer add 40 ml of *hydrochloric acid R*, allow to cool and titrate with *0.05 M potassium iodate* until the deep brown colour is almost discharged. Add 4 ml of *methylene chloride R* and continue the titration, shaking vigorously, until the lower layer is no longer brown. Carry out a blank titration using a mixture of 10.0 ml of a freshly prepared 50 g/l solution of *potassium iodide R*, 20 ml of *water R* and 40 ml of *hydrochloric acid R*.

1 ml of *0.05 M potassium iodate* is equivalent to 44.81 mg of $C_{27}H_{42}ClNO_2$.



STORAGE

Protected from light.

01/2008:0011 corrected 6.0

BENZOCAINE

Benzocainum

$C_9H_{11}NO_2$ M_r 165.2
[94-09-7]

DEFINITION

Ethyl 4-aminobenzoate.

Content: 99.0 per cent to 101.0 per cent (dried substance).

CHARACTERS

Appearance: white or almost white, crystalline powder or colourless crystals.

Solubility: very slightly soluble in water, freely soluble in ethanol (96 per cent).

IDENTIFICATION

First identification: A, B.

Second identification: A, C, D.

A. Melting point (*2.2.14*): 89 °C to 92 °C.

B. Infrared absorption spectrophotometry (*2.2.24*).
Comparison: *benzocaine CRS*.

C. To about 50 mg in a test tube add 0.2 ml of a 500 g/l solution of *chromium trioxide R*. Cover the mouth of the tube with a piece of filter paper moistened with a freshly prepared mixture of equal volumes of a 50 g/l solution of *sodium nitroprusside R* and a 200 g/l solution of *piperazine hydrate R*. Boil gently for at least 30 s. A blue colour develops on the filter paper.

D. Dissolve about 50 mg in *ethanol (96 per cent) R* and dilute to 100 ml with the same solvent. 2 ml of the solution gives the reaction of primary aromatic amines (*2.3.1*).

TESTS

Appearance of solution. The solution is clear (*2.2.1*) and colourless (*2.2.2, Method II*).

Dissolve 1.0 g in *ethanol (96 per cent) R* and dilute to 20 ml with the same solvent.

Acidity or alkalinity. Dissolve 0.5 g in 10 ml of *ethanol (96 per cent) R* previously neutralised to 0.05 ml of *phenolphthalein solution R*. Add 10 ml of *carbon dioxide-free water R*. The solution remains colourless and not more than 0.5 ml of *0.01 M sodium hydroxide* is required to change the colour of the indicator.

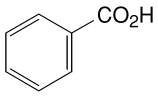
Loss on drying (*2.2.32*): maximum 0.5 per cent, determined on 1.00 g by drying *in vacuo*.

Sulphated ash (*2.4.14*): maximum 0.1 per cent, determined on 1.0 g.

ASSAY

Carry out the determination of primary aromatic amino-nitrogen (*2.5.8*), using 0.400 g dissolved in a mixture of 25 ml of *hydrochloric acid R* and 50 ml of *water R*.

1 ml of *0.1 M sodium nitrite* is equivalent to 16.52 mg of $C_9H_{11}NO_2$.



STORAGE

Protected from light.

01/2008:0066 corrected 6.0

BENZOIC ACID

Acidum benzoicum

$C_7H_6O_2$ M_r 122.1
[65-95-0]

DEFINITION

Benzenecarboxylic acid.

Content: 99.0 per cent to 100.5 per cent.

CHARACTERS

Appearance: white or almost white, crystalline powder or colourless crystals.

Solubility: slightly soluble in water, soluble in boiling water, freely soluble in ethanol (96 per cent) and in fatty oils.

IDENTIFICATION

A. Melting point (*2.2.14*): 121 °C to 124 °C.

B. Solution S (see Tests) gives reaction (a) of benzoates (*2.3.1*).

TESTS

Solution S. Dissolve 5.0 g in *ethanol (96 per cent) R* and dilute to 100 ml with the same solvent.

Appearance of solution. Solution S is clear (*2.2.1*) and colourless (*2.2.2, Method II*).

Carbonisable substances. Dissolve 0.5 g with shaking in 5 ml of *sulphuric acid R*. After 5 min, the solution is not more intensely coloured than reference solution Y_5 (*2.2.2, Method I*).

Oxidisable substances. Dissolve 0.2 g in 10 ml of boiling *water R*. Cool, shake and filter. To the filtrate add 1 ml of *dilute sulphuric acid R* and 0.2 ml of *0.02 M potassium permanganate*. After 5 min, the solution is still coloured pink.

Halogenated compounds and halides: maximum 300 ppm.

All glassware used must be chloride-free and may be prepared by soaking overnight in a 500 g/l solution of nitric acid R, rinsed with water R and stored full of water R. It is recommended that glassware be reserved for this test.

Solution (a). Dissolve 6.7 g in a mixture of 40 ml of *1 M sodium hydroxide* and 50 ml of *ethanol (96 per cent) R* and dilute to 100.0 ml with *water R*. To 10.0 ml of this solution add 7.5 ml of *dilute sodium hydroxide solution R* and 0.125 g of *nickel-aluminium alloy R* and heat on a water-bath for 10 min. Allow to cool to room temperature, filter into a 25 ml volumetric flask and wash with 3 quantities, each of 2 ml, of *ethanol (96 per cent) R*. Dilute the filtrate and washings to 25.0 ml with *water R*. This solution is used to prepare solution A.

Solution (b). In the same manner, prepare a similar solution without the substance to be examined. This solution is used to prepare solution B.

In four 25 ml volumetric flasks, place separately 10 ml of solution (a), 10 ml of solution (b), 10 ml of *chloride standard solution (8 ppm Cl) R* (used to prepare solution C) and 10 ml of *water R*. To each flask add 5 ml of *ferric ammonium sulphate solution R5,* mix and add dropwise and with swirling 2 ml of *nitric acid R* and 5 ml of *mercuric thiocyanate solution R*. Shake. Dilute the contents of each flask to 25.0 ml with *water R* and allow the solutions to stand in a water-bath at 20 °C for 15 min. Measure at 460 nm the absorbance (*2.2.25*) of solution A using solution B as the compensation liquid, and the absorbance of solution C using the solution obtained with 10 ml of *water R* as the compensation liquid. The absorbance of solution A is not greater than that of solution C.

Heavy metals (*2.4.8*): maximum 10 ppm.

12 ml of solution S complies with test B. Prepare the reference solution using a mixture of 5 ml of *lead standard solution (1 ppm Pb) R* and 5 ml of *ethanol (96 per cent) R*.

Sulphated ash (*2.4.14*): maximum 0.1 per cent, determined on 1.0 g.

ASSAY

Dissolve 0.200 g in 20 ml of *ethanol (96 per cent) R* and titrate with *0.1 M sodium hydroxide,* using 0.1 ml of *phenol red solution R* as indicator, until the colour changes from yellow to violet-red.

1 ml of *0.1 M sodium hydroxide* is equivalent to 12.21 mg of $C_7H_6O_2$.

01/2008:2158

BENZOIN, SIAM

Benzoe tonkinensis

DEFINITION

Resin obtained by incising the trunk of *Styrax tonkinensis* (Pierre) Craib ex Hartwich.

Content: 45.0 per cent to 55.0 per cent of total acids, calculated as benzoic acid ($C_7H_6O_2$; M_r 122.1) (dried drug).

CHARACTERS

Characteristic odour of vanillin.

IDENTIFICATION

A. Siam benzoin occurs as opaque, granular, rounded or ovoid masses (tears), varying in size from a few millimeters up to 3 cm, separated or sometimes agglomerated together by a reddish-brown, transparent resin. Individual tears are yellowish-white to reddish externally with a waxy, whitish fracture which becomes reddish on exposure to air.

B. Examine the chromatograms obtained in test B for *Styrax benzoin*.

Results: see below the sequence of the zones present in the chromatograms obtained with the reference solution and the test solution. Furthermore, other faint fluorescent zones may be present in the chromatogram obtained with the test solution.

Top of the plate

	A very prominent quenching zone
Vanillin: a quenching zone	A quenching zone (vanillin)
	Series of unresolved zones including a quenching zone
Reference solution	**Test solution**

TESTS

Styrax benzoin

A. To 0.2 g of the finely powdered drug add 10 ml of *ethanol (96 per cent) R*. Shake vigorously until almost completely dissolved and filter. Place 5 ml of the filtrate in a test-tube and add 0.5 ml of a 50 g/l solution of *ferric chloride R* in *ethanol (96 per cent) R*. A green colour is produced. No yellow colour is produced.

B. Thin-layer chromatography (*2.2.27*).

Test solution. Sonicate 0.2 g of the finely powdered drug in 5 ml of *ethanol (96 per cent) R* and filter. Collect the filtrate.

Reference solution. Dissolve 20 mg of *benzoic acid R*, 10 mg of *trans-cinnamic acid R*, 4 mg of *vanillin R* and 20 mg of *methyl cinnamate R* in 10 ml of *ethanol (96 per cent) R*.

Plate: *TLC silica gel F_{254} plate R*.

Mobile phase: *glacial acetic acid R, di-isopropyl ether R, hexane R* (10:40:60 *V/V/V*).

Application: 10 µl as bands.

Development: over a path of 12 cm.

Drying: in air.

Detection: examine in ultraviolet light at 254 nm.

Results: the chromatogram obtained with the test solution shows no zone in the same position as the zone due to cinnamic acid in the chromatogram obtained with the reference solution.

Matter insoluble in ethanol: maximum 5 per cent.

To 2 g of the powdered drug add 25 ml of *ethanol (90 per cent V/V) R*. Boil until almost completely dissolved. Filter through a previously tared sintered-glass filter (16) (*2.1.2*) and wash with 3 quantities, each of 5 ml, of boiling *ethanol (90 per cent V/V) R*. Heat the glass filter and its contents in an oven at 100-105 °C for 2 h. Weigh after cooling.

Loss on drying (*2.2.32*): maximum 5.0 per cent, determined on 2.00 g of the coarsely powdered drug by drying *in vacuo* for 4 h.

Total ash (*2.4.16*): maximum 2.0 per cent.

ASSAY

Place 0.750 g of the finely powdered drug in a 250 ml borosilicate glass flask and add 15.0 ml of *0.5 M alcoholic potassium hydroxide*. Boil under a reflux condenser on a water-bath for 30 min. Allow to cool and rinse the condenser with 20 ml of *ethanol (96 per cent) R*. Titrate the excess

of potassium hydroxide with *0.5 M hydrochloric acid*. Determine the end-point potentiometrically (*2.2.20*). Carry out a blank titration.

1 ml of *0.5 M alcoholic potassium hydroxide* is equivalent to 61.05 mg of benzoic acid ($C_7H_6O_2$).

01/2008:1814

BENZOIN, SUMATRA

Benzoe sumatranus

DEFINITION

Resin obtained by incising the trunk of *Styrax benzoin* Dryander.

Content: 25.0 per cent to 50.0 per cent of total acids, calculated as benzoic acid ($C_7H_6O_2$; M_r 122.1) (dried drug).

IDENTIFICATION

A. Sumatra benzoin occurs as creamy white, rounded to ovoid tears, which may be embedded in a dull greyish-brown or reddish-brown matrix. It is hard and brittle and the fractured surface is dull and uneven.

B. Examine the chromatograms obtained in test B for *Styrax tonkinensis*.

Results: see below the sequence of quenching zones present in the chromatograms obtained with the reference solution and the test solution. Furthermore, other faint quenching zones may be present in the chromatogram obtained with the test solution.

Reference solution	**Test solution**

TESTS

Dammar gum. Thin-layer chromatography (*2.2.27*).

Test solution. Dissolve 0.2 g of the drug to be examined with gentle heating in 10 ml of *ethanol (90 per cent V/V) R* and centrifuge.

Plate: *TLC aluminium oxide G plate R*.

Mobile phase: *light petroleum R4, ether R* (40:60 *V/V*).

Application: 5 µl.

Development: over a path of 10 cm.

Drying: in air.

Detection: spray with *anisaldehyde solution R* and heat at 100-105 °C for 5 min.

Results: the chromatogram obtained does not show any prominent spot with an R_F between 0.4 and 1.0.

Styrax tonkinensis

A. To 0.2 g of the finely powdered drug add 10 ml of *ethanol (96 per cent) R*. Shake vigorously until almost completely dissolved and filter. Place 5 ml of the filtrate in a test-tube and add 0.5 ml of a 50 g/l solution of *ferric chloride R* in *ethanol (96 per cent) R*. A yellowish, slightly green colour is produced.

B. Thin-layer chromatography (*2.2.27*).

Test solution. Sonicate 0.2 g of the finely powdered drug in 5 ml of *ethanol (96 per cent) R* and filter. Collect the filtrate.

Reference solution. Dissolve 20 mg of *benzoic acid R*, 10 mg of *trans-cinnamic acid R*, 4 mg of *vanillin R* and 20 mg of *methyl cinnamate R* in 10 ml of *ethanol (96 per cent) R*.

Plate: *TLC silica gel F_{254} plate R* (5-40 µm) [or *TLC silica gel F_{254} plate R* (2-10 µm)].

Mobile phase: *glacial acetic acid R, di-isopropyl ether R, hexane R* (10:40:60 *V/V/V*).

Application: 10 µl [or 2 µl] as bands.

Development: over a path of 12 cm [or 5 cm].

Drying: in air.

Detection: examine in ultraviolet light at 254 nm.

Results: the chromatogram obtained with the test solution shows 2 faint zones in the same positions as the dark zones due to benzoic acid and vanillin in the chromatogram obtained with the reference solution.

Matter insoluble in ethanol: maximum 20.0 per cent.

To 2.0 g of the powdered drug add 25 ml of *ethanol (90 per cent V/V) R*. Boil until almost completely dissolved. Filter through a tared sintered-glass filter (16) (*2.1.2*) and wash with 3 quantities, each of 5 ml, of boiling *ethanol (90 per cent V/V) R*. Heat the glass filter and its contents in an oven at 100-105 °C for 2 h. Allow to cool and weigh.

Loss on drying (*2.2.32*): maximum 5.0 per cent, determined on 2.000 g of the coarsely powdered drug by drying *in vacuo* for 4 h.

Total ash (*2.4.16*): maximum 2.0 per cent.

ASSAY

Place 0.750 g of the finely powdered drug in a 250 ml borosilicate glass flask and add 15.0 ml of *0.5 M alcoholic potassium hydroxide*. Boil under a reflux condenser on a water-bath for 30 min. Allow to cool and rinse the condenser with 20 ml of *ethanol (96 per cent) R*. Titrate the excess of potassium hydroxide with *0.5 M hydrochloric acid*, determining the end-point potentiometrically (*2.2.20*). Carry out a blank titration.

1 ml of *0.5 M alcoholic potassium hydroxide* is equivalent to 61.05 mg of benzoic acid ($C_7H_6O_2$).

01/2008:2157

BENZOIN TINCTURE, SIAM

Benzois tonkinensis tinctura

DEFINITION

Tincture produced from *Siam benzoin (2158)*.

Content: minimum 5.0 per cent *m/m* of total acids, calculated as benzoic acid ($C_7H_6O_2$; M_r 122.1).

PRODUCTION

The tincture is produced from 1 part of the drug and 5 parts of ethanol (75 per cent *V/V* to 96 per cent *V/V*) by a suitable procedure.

CHARACTERS

Appearance: orange-yellow liquid.

It has a characteristic odour of vanillin.

IDENTIFICATION

A. Place 10 ml in a test tube; add 0.5 ml of a 50 g/l solution of *ferric chloride R* in *ethanol (96 per cent) R*. A green colour is produced.

B. Examine the chromatograms obtained in the test for Sumatra benzoin tincture.

Results: see below the sequence of the zones present in the chromatograms obtained with the reference solution and the test solution. Furthermore, other faint fluorescent zones may be present in the chromatogram obtained with the test solution.

Vanillin: a quenching zone	A quenching zone (vanillin)
	Series of unresolved zones including a quenching zone
Reference solution	**Test solution**

TESTS

Sumatra benzoin tincture. Thin-layer chromatography (*2.2.27*).

Test solution. The tincture to be examined.

Reference solution. Dissolve 20 mg of *benzoic acid R*, 10 mg of *trans-cinnamic acid R*, 4 mg of *vanillin R* and 20 mg of *methyl cinnamate R* in 20 ml of ethanol of the same concentration as that used for the production of the tincture.

Plate: *TLC silica gel F_{254} plate R* (5-40 µm) [or *TLC silica gel F_{254} plate R* (2-10 µm)].

Mobile phase: *glacial acetic acid R, di-isopropyl ether R, hexane R* (10:40:60 *V/V/V*).

Application: 20 µl [or 8 µl] as bands.

Development: over a path of 12 cm [or 6 cm].

Drying: in air.

Detection: examine in ultraviolet light at 254 nm.

Results: the chromatogram obtained with the test solution does not show any zone in the same position as the zones due to cinnamic acid and methyl cinnamate in the chromatogram obtained with the reference solution.

Ethanol (*2.9.10*): 95 per cent to 105 per cent of the content stated on the label.

ASSAY

Place 3.50 g in a 250 ml borosilicate glass flask and add 15.0 ml of *0.5 M alcoholic potassium hydroxide*. Boil under a reflux condenser on a water-bath for 30 min. Allow to cool and rinse the condenser with 20 ml of *ethanol (96 per cent) R*. Titrate the excess of potassium hydroxide with *1 M hydrochloric acid*, determining the end-point potentiometrically (*2.2.20*). Carry out a blank titration.

1 ml of *0.5 M alcoholic potassium hydroxide* is equivalent to 61.05 mg of benzoic acid ($C_7H_6O_2$).

01/2008:1813

BENZOIN TINCTURE, SUMATRA

Benzois sumatrani tinctura

DEFINITION

Tincture produced from *Sumatra benzoin (1814)*.

Content: minimum 4.0 per cent *m/m* of total acids, calculated as benzoic acid ($C_7H_6O_2$; M_r 122.1).

PRODUCTION

The tincture is produced from 1 part of the drug and 5 parts of ethanol (75 per cent *V/V* to 96 per cent *V/V*) by a suitable procedure.

CHARACTERS

Appearance: orange-yellow liquid.

IDENTIFICATION

Examine the chromatograms obtained in the test for Siam benzoin tincture.

Results: see below the sequence of quenching zones present in the chromatograms obtained with the reference solution and the test solution. Furthermore, other faint quenching zones may be present in the chromatogram obtained with the test solution.

Top of the plate

Reference solution	**Test solution**

TESTS

Siam benzoin tincture. Thin-layer chromatography (*2.2.27*).

Test solution. The tincture to be examined.

Reference solution. Dissolve 20 mg of *benzoic acid R*, 10 mg of *trans-cinnamic acid R*, 4 mg of *vanillin R* and 20 mg of *methyl cinnamate R* in 20 ml of ethanol of the same concentration as that used for the production of the tincture.

Plate: *TLC silica gel F_{254} plate R* (5-40 µm) [or *TLC silica gel F_{254} plate R* (2-10 µm)].

Mobile phase: *glacial acetic acid R, di-isopropyl ether R, hexane R* (10:40:60 *V/V/V*).

Application: 20 µl [or 8 µl] as bands.

Development: over a path of 12 cm [or 6 cm].

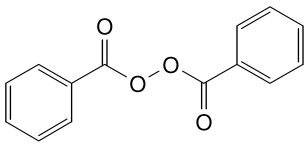
Drying: in air.

Detection: examine in ultraviolet light at 254 nm.

Results: the chromatogram obtained with the test solution does not show zones due to benzoic acid and vanillin that are more intense than the corresponding zones in the chromatogram obtained with the reference solution.

Ethanol (*2.9.10*): 95 per cent to 105 per cent of the content stated on the label.

ASSAY



Place 3.50 g in a 250 ml borosilicate glass flask and add 15.0 ml of *0.5 M alcoholic potassium hydroxide*. Boil under a reflux condenser on a water-bath for 30 min. Allow to cool and rinse the condenser with 20 ml of *ethanol (96 per cent) R*. Titrate the excess of potassium hydroxide with *1 M hydrochloric acid*, determining the end-point potentiometrically (*2.2.20*). Carry out a blank titration.

1 ml of *0.5 M alcoholic potassium hydroxide* is equivalent to 61.05 mg of benzoic acid ($C_7H_6O_2$).

BENZOYL PEROXIDE, HYDROUS

Benzoylis peroxidum cum aqua

$C_{14}H_{10}O_4$ M_r 242.2
[94-36-0]

DEFINITION

Content:

– dibenzoyl peroxide: 70.0 per cent to 77.0 per cent,

– water: minimum 20.0 per cent.

CHARACTERS

Appearance: white or almost white, amorphous or granular powder.

Solubility: practically insoluble in water, soluble in acetone, soluble in methylene chloride with the separation of water, slightly soluble in alcohol.

It loses water rapidly on exposure to air with a risk of explosion.

Mix the entire sample thoroughly before carrying out the following tests.

IDENTIFICATION

First identification: B

Second identification: A, C, D.

A. Dissolve 80.0 mg in *alcohol R* and dilute to 100.0 ml with the same solvent. Dilute 10.0 ml of the solution to 100.0 ml with *alcohol R* (solution A). Dilute 10.0 ml of solution A to 100.0 ml with *alcohol R* (solution B). Examined between 250 nm and 300 nm (*2.2.25*), solution A shows an absorption maximum at 274 nm and a shoulder at about 282 nm. Examined between 220 nm and 250 nm, solution B shows an absorption maximum at 235 nm. The ratio of the absorbance at the maximum at 235 nm (solution B) to that at the maximum at 274 nm (solution A) is 1.17 to 1.21.

B. Infrared absorption spectrophotometry (*2.2.24*).

Comparison: *Ph. Eur. reference spectrum of hydrous benzoyl peroxide.*

C. Dissolve about 25 mg in 2 ml of *acetone R*. Add 1 ml of a 10 g/l solution of *diethylphenylenediamine sulphate R* and mix. A red colour develops which quickly darkens and becomes dark violet within 5 min.

D. To 1 g add 5 ml of *alcohol R*, 5 ml of *dilute sodium hydroxide solution R* and 10 ml of *water R*. Boil the mixture under reflux for 20 min. Cool. The solution gives reaction (c) of benzoates (*2.3.1*).

TESTS

Acidity. Dissolve a quantity of the substance to be examined containing the equivalent of 1.0 g of dibenzoyl peroxide in 25 ml of *acetone R*, add 75 ml of *water R* and filter. Wash the residue with two quantities, each of 10 ml, of *water R*. Combine the filtrate and the washings and add 0.25 ml of *phenolphthalein solution R1*. Not more than 1.25 ml of *0.1 M sodium hydroxide* is required to change the colour of the indicator. Carry out a blank test.

Related substances. Liquid chromatography (*2.2.29*). *Prepare the solutions immediately before use.*

Test solution. Dissolve a quantity of the substance to be examined containing the equivalent of 0.10 g of dibenzoyl peroxide in *acetonitrile R* and dilute to 50 ml with the same solvent.

Reference solution (a). Dilute 1.0 ml of the test solution to 100.0 ml with *acetonitrile R*. Dilute 1.0 ml of this solution to 10.0 ml with *acetonitrile R*.

Reference solution (b). Dissolve 30.0 mg of *benzoic acid R* in the mobile phase and dilute to 100.0 ml with the mobile phase. Dilute 1.0 ml of the solution to 10.0 ml with the mobile phase.

Reference solution (c). Dissolve 50.0 mg of *ethyl benzoate R* in the mobile phase and dilute to 100.0 ml with the mobile phase. Dilute 1.0 ml of the solution to 100.0 ml with the mobile phase.

Reference solution (d). Dissolve 50.0 mg of *benzaldehyde R* in the mobile phase and dilute to 100.0 ml with the mobile phase. Dilute 1.0 ml of the solution to 100.0 ml with the mobile phase.

Reference solution (e). Dissolve 30.0 mg of *benzoic acid R* and 30.0 mg of *benzaldehyde R* in the mobile phase and dilute to 100.0 ml with the mobile phase. Dilute 1.0 ml of the solution to 10.0 ml with the mobile phase.

Column:

– *size*: *l* = 0.25 m, Ø = 4.6 mm,

– *stationary phase*: *octadecylsilyl silica gel for chromatography R* (10 µm),

Mobile phase: *glacial acetic acid R, acetonitrile R, water R* (1:500:500 *V/V/V*).

Flow rate: 1 ml/min.

Detection: spectrophotometer at 235 nm.

Injection: 20 µl loop injector.

Run time: 2 times the retention time of dibenzoyl peroxide.

Relative retention with reference to dibenzoyl peroxide (retention time = about 28.4 min): impurity B = about 0.15; impurity A = about 0.2; impurity C = about 0.4.

System suitability: reference solution (e):

– *resolution*: minimum 6 between the peaks corresponding to benzoic acid and benzaldehyde.

Limits:

– *impurity A*: not more than the area of the principal peak in the chromatogram obtained with reference solution (d) (0.25 per cent),

– *impurity B*: not more than the area of the principal peak in the chromatogram obtained with reference solution (b) (1.5 per cent),

– *impurity C*: not more than the area of the principal peak in the chromatogram obtained with reference solution (c) (0.25 per cent),

– *any other impurity*: not more than the area of the principal peak in the chromatogram obtained with reference solution (a) (0.1 per cent),

– *disregard limit*: 0.2 times the area of the principal peak in the chromatogram obtained with reference solution (a) (0.02 per cent).

Chlorides (*2.4.4*): maximum 0.4 per cent.

Dissolve a quantity of the substance to be examined containing the equivalent of 0.5 g of dibenzoyl peroxide in 15 ml of *acetone R*. Add, while stirring, 50 ml of *0.05 M nitric acid*. Allow to stand for 10 min and filter. Wash the residue with 2 quantities, each of 10 ml, of *0.05 M nitric acid*. Combine the filtrate and the washings and dilute to 100 ml with *0.05 M nitric acid*. 2.5 ml of the solution diluted to 15.0 ml with *water R* complies with the limit test for chlorides.

ASSAY

Solution (a). Dissolve 2.500 g immediately before use in 75 ml of *dimethylformamide R* and dilute to 100.0 ml with the same solvent.

Dibenzoyl peroxide. To 5.0 ml of solution (a) add 20 ml of *acetone R* and 3 ml of a 500 g/l solution of *potassium iodide R* and mix. Allow to stand for 1 min. Titrate with *0.1 M sodium thiosulphate* using 1 ml of *starch solution R*, added towards the end of the titration, as indicator. Carry out a blank titration.

1 ml of *0.1 M sodium thiosulphate* is equivalent to 12.11 mg of $C_{14}H_{10}O_4$.

Water (*2.5.12*). Carry out the semi-micro determination of water, using 5.0 ml of solution (a). Use as the solvent a mixture of 20.0 ml of *anhydrous methanol R* and 3.0 ml of a 100 g/l solution of *potassium iodide R* in *dimethylformamide R*. After adding solution (a), stir for 5 min before starting the titration. Carry out a blank determination.

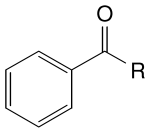
Calculate the percentage content of water using the expression:

$$\frac{(n_1 - n_2) \times w \times 2}{m} + (p \times 0.0744)$$

n_1 = number of millilitres of *iodosulphurous reagent R* used in the sample determination,

n_2 = number of millilitres of *iodosulphurous reagent R* used in the blank determination,

w = water equivalent of *iodosulphurous reagent R* in milligrams of water per millilitre of reagent,



m = mass of the substance to be examined used for the preparation of solution (a) in grams,

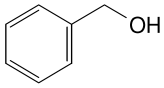
p = percentage content of dibenzoyl peroxide.

STORAGE

In a container that has been treated to reduce static discharge and that has a device for release of excess pressure, at a temperature of 2 °C to 8 °C, protected from light.

IMPURITIES

A. R = H: benzaldehyde,



B. R = OH: benzoic acid,

C. R = O-CH_2-CH_3: ethyl benzoate.

01/2008:0256

BENZYL ALCOHOL

Alcohol benzylicus

C_7H_8O M_r 108.1

[100-51-6]

DEFINITION

Phenylmethanol.

Content: 98.0 per cent to 100.5 per cent.

CHARACTERS

Appearance: clear, colourless, oily liquid.

Solubility: soluble in water, miscible with ethanol (96 per cent) and with fatty and essential oils.

Relative density: 1.043 to 1.049.

IDENTIFICATION

Infrared absorption spectrophotometry (*2.2.24*).

Comparison: *benzyl alcohol CRS*.

TESTS

Appearance of solution. Shake 2.0 ml with 60 ml of *water R*. It dissolves completely. The solution is clear (*2.2.1*) and colourless (*2.2.2, Method II*).

Acidity. To 10 ml add 10 ml of *ethanol (96 per cent) R* and 1 ml of *phenolphthalein solution R*. Not more than 1 ml of *0.1 M sodium hydroxide* is required to change the colour of the indicator to pink.

Refractive index (*2.2.6*): 1.538 to 1.541.

Peroxide value (*2.5.5*): maximum 5.

Related substances. Gas chromatography (*2.2.28*).

Test solution. The substance to be examined.

Standard solution (a). Dissolve 0.100 g of *ethylbenzene R* in the test solution and dilute to 10.0 ml with the same solution. Dilute 2.0 ml of this solution to 20.0 ml with the test solution.

Standard solution (b). Dissolve 2.000 g of *dicyclohexyl R* in the test solution and dilute to 10.0 ml with the same solution. Dilute 2.0 ml of this solution to 20.0 ml with the test solution.

Reference solution (a). Dissolve 0.750 g of *benzaldehyde R* and 0.500 g of *cyclohexylmethanol R* in the test solution and dilute to 25.0 ml with the test solution. Add 1.0 ml of

this solution to a mixture of 2.0 ml of standard solution (a) and 3.0 ml of standard solution (b) and dilute to 20.0 ml with the test solution.

Reference solution (b). Dissolve 0.250 g of *benzaldehyde R* and 0.500 g of *cyclohexylmethanol R* in the test solution and dilute to 25.0 ml with the test solution. Add 1.0 ml of this solution to a mixture of 2.0 ml of standard solution (a) and 2.0 ml of standard solution (b) and dilute to 20.0 ml with the test solution.

Column:

- *material*: fused silica;
- *size*: *l* = 30 m, Ø = 0.32 mm;
- *stationary phase*: *macrogol 20 000 R* (film thickness 0.5 µm).

Carrier gas: *helium for chromatography R.*

Linear velocity: 25 cm/s.

Temperature:

	Time (min)	Temperature (°C)
Column	0 - 34	50 → 220
	34 - 69	220
Injection port		200
Detector		310

Detection: flame ionisation.

Benzyl alcohol not intended for parenteral use

Injection: without air-plug, 0.1 µl of the test solution and reference solution (a).

Relative retention with reference to benzyl alcohol (retention time = about 26 min): ethylbenzene = about 0.28; dicyclohexyl = about 0.59; impurity A = about 0.68; impurity B = about 0.71.

System suitability: reference solution (a):

- *resolution*: minimum 3.0 between the peaks due to impurity A and impurity B.

In the chromatogram obtained with the test solution, verify that there are no peaks with the same retention time as ethylbenzene and dicyclohexyl.

Limits:

- *impurity A*: not more than the difference between the area of the peak due to impurity A in the chromatogram obtained with reference solution (a) and the area of the peak due to impurity A in the chromatogram obtained with the test solution (0.15 per cent);
- *impurity B*: not more than the difference between the area of the peak due to impurity B in the chromatogram obtained with reference solution (a) and the area of the peak due to impurity B in the chromatogram obtained with the test solution (0.10 per cent);
- *sum of other peaks with a relative retention less than that of benzyl alcohol*: not more than 4 times the area of the peak due to ethylbenzene in the chromatogram obtained with reference solution (a) (0.04 per cent);
- *sum of peaks with a relative retention greater than that of benzyl alcohol*: not more than the area of the peak due to dicyclohexyl in the chromatogram obtained with reference solution (a) (0.3 per cent);
- *disregard limit*: 0.01 times the area of the peak due to ethylbenzene in the chromatogram obtained with reference solution (a) (0.0001 per cent).

Benzyl alcohol intended for parenteral use

Injection: without air-plug, 0.1 µl of the test solution and reference solution (b).

Relative retention with reference to benzyl alcohol (retention time = about 26 min): ethylbenzene = about 0.28; dicyclohexyl = about 0.59; impurity A = about 0.68; impurity B = about 0.71.

System suitability: reference solution (b):

- *resolution*: minimum 3.0 between the peaks due to impurity A and impurity B.

In the chromatogram obtained with the test solution, verify that there are no peaks with the same retention time as the standards.

Limits:

- *impurity A*: not more than the difference between the area of the peak due to impurity A in the chromatogram obtained with reference solution (b) and the area of the peak due to impurity A in the chromatogram obtained with the test solution (0.05 per cent);
- *impurity B*: not more than the difference between the area of the peak due to impurity B in the chromatogram obtained with reference solution (b) and the area of the peak due to impurity B in the chromatogram obtained with the test solution (0.10 per cent);
- *sum of other peaks with a relative retention less than that of benzyl alcohol*: not more than twice the area of the peak due to ethylbenzene in the chromatogram obtained with reference solution (b) (0.02 per cent);
- *sum of peaks with a relative retention greater than that of benzyl alcohol*: not more than the area of the peak due to dicyclohexyl in the chromatogram obtained with reference solution (b) (0.2 per cent);
- *disregard limit*: 0.01 times the area of the peak due to ethylbenzene in the chromatogram obtained with reference solution (b) (0.0001 per cent).

Residue on evaporation: maximum 0.05 per cent.

After ensuring that the substance to be examined complies with the test for peroxide value, evaporate 10.0 g to dryness in a tared quartz or porcelain crucible or platinum dish on a hot plate at a temperature not exceeding 200 °C. Ensure that the substance to be examined does not boil during evaporation. Dry the residue on the hot plate for 1 h and allow to cool in a desiccator. The residue weighs a maximum of 5 mg.

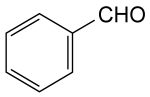
ASSAY

To 0.900 g (*m* g) add 15.0 ml of a freshly prepared mixture of 1 volume of *acetic anhydride R* and 7 volumes of *pyridine R* and boil under a reflux condenser on a water-bath for 30 min. Cool and add 25 ml of *water R*. Using 0.25 ml of *phenolphthalein solution R* as indicator, titrate with *1 M sodium hydroxide* (n_1 ml). Carry out a blank titration (n_2 ml).

Calculate the percentage content of C_7H_8O using the following expression:

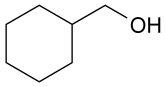
$$\frac{10.81\left(n_2 - n_1\right)}{m}$$

STORAGE



In an airtight container, under nitrogen, protected from light and at a temperature between 2 °C and 8 °C.

LABELLING

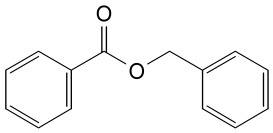


The label states, where applicable, that the substance is suitable for use in the manufacture of parenteral dosage forms.

IMPURITIES

Specified impurities: A, B.

A. benzaldehyde,



B. cyclohexylmethanol.

01/2008:0705

BENZYL BENZOATE

Benzylis benzoas

$C_{14}H_{12}O_2$ M_r 212.2
[120-51-4]

DEFINITION

Phenylmethyl benzoate.

Content: 99.0 per cent to 100.5 per cent.

CHARACTERS

Appearance: colourless or almost colourless crystals or colourless or almost colourless, oily liquid.

Solubility: practically insoluble in water, miscible with ethanol (96 per cent), with methylene chloride and with fatty and essential oils.

Eb: about 320 °C.

IDENTIFICATION

First identification: A.

Second identification: B, C.

A. Infrared absorption spectrophotometry (*2.2.24*).
Comparison: *Ph. Eur. reference spectrum of benzyl benzoate.*

B. To 2 g add 25 ml of *alcoholic potassium hydroxide solution R* and boil under a reflux condenser for 2 h. Remove the ethanol on a water-bath, add 50 ml of *water R* and distill. Collect about 25 ml of distillate and use it for identification test C. Acidify the liquid remaining in the distillation flask with *dilute hydrochloric acid R*. A white precipitate is formed that, when washed with *water R* and dried *in vacuo* melts (*2.2.14*) at 121 °C to 124 °C.

C. To the distillate obtained in identification test B add 2.5 g of *potassium permanganate R* and 5 ml of *dilute sodium hydroxide solution R*. Boil under a reflux condenser for 15 min, cool and filter. Acidify the filtrate with *dilute hydrochloric acid R*. A white precipitate is formed that, when washed with *water R* and dried *in vacuo*, melts (*2.2.14*) at 121 °C to 124 °C.

TESTS

Acidity. Dissolve 2.0 g in *ethanol (96 per cent) R* and dilute to 10 ml with the same solvent. Titrate with *0.1 M sodium hydroxide* using *phenolphthalein solution R* as indicator. Not more than 0.2 ml is required to change the colour of the indicator to pink.

Relative density (*2.2.5*): 1.118 to 1.122.

Refractive index (*2.2.6*): 1.568 to 1.570.

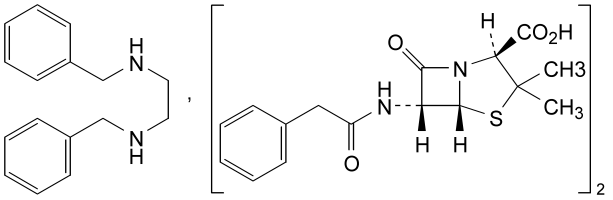
Freezing point (*2.2.18*): minimum 17.0 °C.

Sulphated ash (*2.4.14*): maximum 0.1 per cent, determined on 1.0 g.

ASSAY

To 2.000 g add 50.0 ml of *0.5 M alcoholic potassium hydroxide* and boil gently under a reflux condenser for 1 h. Titrate the hot solution with *0.5 M hydrochloric acid* using 1 ml of *phenolphthalein solution R* as indicator. Carry out a blank determination.

1 ml of *0.5 M alcoholic potassium hydroxide* is equivalent to 106.1 mg of $C_{14}H_{12}O_2$.



STORAGE

In an airtight, well-filled container, protected from light.

01/2008:0373
corrected 6.0

BENZYLPENICILLIN, BENZATHINE

Benzylpenicillinum benzathinum

$C_{48}H_{56}N_6O_8S_2$ M_r 909
[1538-09-6]

DEFINITION

N,N'-Dibenzylethane-1,2-diamine compound (1:2) with (2*S*,5*R*,6*R*)-3,3-dimethyl-7-oxo-6-[(phenylacetyl)amino]-4-thia-1-azabicyclo[3.2.0]heptane-2-carboxylic acid.

Substance produced by the growth of certain strains of *Penicillium notatum* or related organisms, or obtained by any other means.

Content:

– *benzathine benzylpenicillin*: 96.0 per cent to 102.0 per cent (anhydrous substance);
– *N,N'-dibenzylethylenediamine* (benzathine $C_{16}H_{20}N_2$; M_r 240.3): 24.0 per cent to 27.0 per cent (anhydrous substance).

It contains a variable quantity of water. Dispersing or suspending agents may be added.

CHARACTERS

Appearance: white or almost white powder.

Solubility: very slightly soluble in water, freely soluble in dimethylformamide and in formamide, slightly soluble in ethanol (96 per cent).

IDENTIFICATION

First identification: A.

Second identification: B, C, D.

A. Infrared absorption spectrophotometry (*2.2.24*).
Comparison: *benzathine benzylpenicillin CRS.*

B. Thin-layer chromatography (*2.2.27*).
Test solution. Dissolve 25 mg of the substance to be examined in 5 ml of *methanol R.*
Reference solution. Dissolve 25 mg of *benzathine benzylpenicillin CRS* in 5 ml of *methanol R.*

Plate: *TLC silanised silica gel plate R.*

Mobile phase: mix 30 volumes of *acetone R* and 70 volumes of a 154 g/l solution of *ammonium acetate R* adjusted to pH 7.0 with *ammonia R*.

Application: 1 µl.

Development: over a path of 15 cm.

Drying: in air.

Detection: expose to iodine vapour until the spots appear and examine in daylight.

System suitability: reference solution:

– the chromatogram shows 2 clearly separated spots.

Results: the 2 principal spots in the chromatogram obtained with the test solution are similar in position, colour and size to the 2 principal spots in the chromatogram obtained with the reference solution.

C. Place about 2 mg in a test-tube about 150 mm long and 15 mm in diameter. Moisten with 0.05 ml of *water R* and add 2 ml of *sulphuric acid-formaldehyde reagent R*. Mix the contents of the tube by swirling; the solution is practically colourless. Place the test-tube on a water-bath for 1 min; a reddish-brown colour develops.

D. To 0.1 g add 2 ml of *1 M sodium hydroxide* and shake for 2 min. Shake the mixture with 2 quantities, each of 3 ml, of *ether R*. Evaporate the combined ether layers to dryness and dissolve the residue in 1 ml of *ethanol (50 per cent V/V) R*. Add 5 ml of *picric acid solution R*, heat at 90 °C for 5 min and allow to cool slowly. Separate the crystals and recrystallise from *ethanol (25 per cent V/V) R* containing 10 g/l of *picric acid R*. The crystals melt (*2.2.14*) at about 214 °C.

TESTS

Acidity or alkalinity. To 0.50 g add 100 ml of *carbon dioxide-free water R* and shake for 5 min. Filter through a sintered-glass filter (*2.1.2*). To 20 ml of the filtrate add 0.1 ml of *bromothymol blue solution R1*. The solution is green or yellow. Not more than 0.2 ml of *0.02 M sodium hydroxide* is required to change the colour of the indicator to blue.

Related substances. Liquid chromatography (*2.2.29*). *Prepare the solutions immediately before use, using sonication (for about 2 min) to dissolve the samples. Avoid any overheating during the sample preparation.*

Test solution. Dissolve 70.0 mg of the substance to be examined in 25 ml of *methanol R* and dilute to 50.0 ml with a solution containing 6.8 g/l of *potassium dihydrogen phosphate R* and 1.02 g/l of *disodium hydrogen phosphate R*.

Reference solution (a). Dissolve 70.0 mg of *benzathine benzylpenicillin CRS* in 25 ml of *methanol R* and dilute to 50.0 ml with a solution containing 6.8 g/l of *potassium dihydrogen phosphate R* and 1.02 g/l of *disodium hydrogen phosphate R*.

Reference solution (b). Dilute 1.0 ml of reference solution (a) to 100.0 ml with mobile phase A.

Column:

– *size*: *l* = 0.25 m, Ø = 4.0 mm;

– *stationary phase*: *end-capped octadecylsilyl silica gel for chromatography R* (5 µm);

– *temperature*: 40 °C.

Mobile phase:

– *mobile phase A*: mix 10 volumes of a 34 g/l solution of *potassium dihydrogen phosphate R* adjusted to pH 3.5 with *phosphoric acid R*, 30 volumes of *methanol R* and 60 volumes of *water R*;

– *mobile phase B*: mix 10 volumes of a 34 g/l solution of *potassium dihydrogen phosphate R* adjusted to pH 3.5 with *phosphoric acid R*, 30 volumes of *water R* and 60 volumes of *methanol R*;

Time (min)	Mobile phase A (per cent *V/V*)	Mobile phase B (per cent *V/V*)
0 - 10	75	25
10 - 20	75 → 0	25 → 100
20 - 55	0	100
55 - 70	75	25

Flow rate: 1 ml/min.

Detection: spectrophotometer at 220 nm.

Injection: 20 µl.

System suitability: reference solution (a):

– *relative retention* with reference to benzylpenicillin: benzathine = 0.3 to 0.4; impurity C = about 2.4; if necessary, adjust the concentration of methanol in the mobile phase.

Limits:

– *impurity C*: not more than twice the sum of the areas of the 2 principal peaks in the chromatogram obtained with reference solution (b) (2 per cent);

– *any other impurity*: for each impurity, not more than the sum of the areas of the 2 principal peaks in the chromatogram obtained with reference solution (b) (1 per cent);

– *disregard limit*: 0.05 times the sum of the areas of the 2 principal peaks in the chromatogram obtained with reference solution (b) (0.05 per cent).

Water (*2.5.12*): 5.0 per cent to 8.0 per cent, determined on 0.300 g.

Bacterial endotoxins (*2.6.14, Method E*): less than 0.13 IU/ml, if intended for use in the manufacture of parenteral dosage forms without a further appropriate procedure for the removal of bacterial endotoxins.

Suspend 20 mg in 20 ml of a solution of *0.1 M sodium hydroxide* diluted 1 to 100, shake thoroughly and centrifuge. Examine the supernatant.

ASSAY

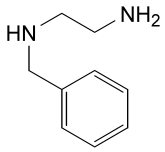
Liquid chromatography (*2.2.29*) as described in the test for related substances with the following modifications.

Mobile phase: *phosphate buffer solution pH 3.5 R, methanol R, water R* (10:35:55 *V/V/V*).

Injection: test solution and reference solution (a).

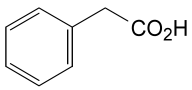
Calculate the percentage contents of benzathine and benzathine benzylpenicillin. Calculate the percentage content of benzathine benzylpenicillin by multiplying the percentage content of benzylpenicillin by 1.36.

STORAGE



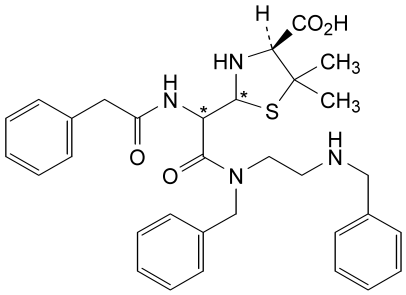
In an airtight container. If the substance is sterile, store in a sterile, airtight, tamper-proof container.

IMPURITIES

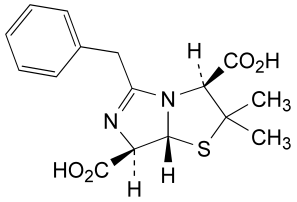


Specified impurities: *C*.

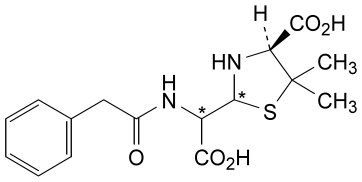
Other detectable impurities (the following substances would, if present at a sufficient level, be detected by one or other of the tests in the monograph. They are limited by the general acceptance criterion for other/unspecified impurities and/or by the general monograph *Substances for pharmaceutical use (2034)*. It is therefore not necessary to



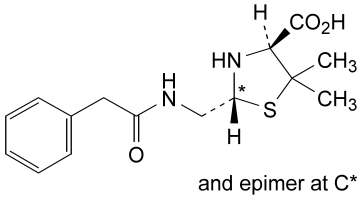
identify these impurities for demonstration of compliance. See also *5.10. Control of impurities in substances for pharmaceutical use*): *A, B, D, E, F.*



A. monobenzylethylenediamine,



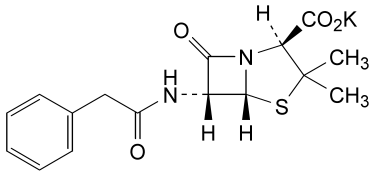
B. phenylacetic acid,



C. benzylpenicilloic acids benzathide,

D. (3*S*,7*R*,7a*R*)-5-benzyl-2,2-dimethyl-2,3,7,7a-tetrahydroimidazo[5,1-*b*]thiazole-3,7-dicarboxylic acid (penillic acid of benzylpenicillin),

E. (4*S*)-2-[carboxy[(phenylacetyl)amino]methyl]-5,5-dimethylthiazolidine-4-carboxylic acid (penicilloic acids of benzylpenicillin),



F. (2*RS*,4*S*)-2-[[(phenylacetyl)amino]methyl]-5,5-dimethylthiazolidine-4-carboxylic acid (penilloic acids of benzylpenicillin).

BENZYLPENICILLIN POTASSIUM

Benzylpenicillinum kalicum

$C_{16}H_{17}KN_2O_4S$ M_r 372.5
[113-98-4]

DEFINITION

Potassium (2*S*,5*R*,6*R*)-3,3-dimethyl-7-oxo-6-[(phenylacetyl)-amino]-4-thia-1-azabicyclo[3.2.0]heptane-2-carboxylate.

Substance produced by the growth of certain strains of *Penicillium notatum* or related organisms, or obtained by any other means.

Content: 96.0 per cent to 102.0 per cent (dried substance).

CHARACTERS

Appearance: white or almost white, crystalline powder.

Solubility: very soluble in water, practically insoluble in fatty oils and in liquid paraffin.

IDENTIFICATION

First identification: A, D.

Second identification: B, C, D.

A. Infrared absorption spectrophotometry (*2.2.24*).

Comparison: *benzylpenicillin potassium CRS.*

B. Thin-layer chromatography (*2.2.27*).

Test solution. Dissolve 25 mg of the substance to be examined in 5 ml of *water R.*

Reference solution (a). Dissolve 25 mg of *benzylpenicillin potassium CRS* in 5 ml of *water R.*

Reference solution (b). Dissolve 25 mg of *benzylpenicillin potassium CRS* and 25 mg of *phenoxymethylpenicillin potassium CRS* in 5 ml of *water R.*

Plate: *TLC silanised silica gel plate R.*

Mobile phase: mix 30 volumes of *acetone R* and 70 volumes of a 154 g/l solution of *ammonium acetate R* previously adjusted to pH 5.0 with *glacial acetic acid R.*

Application: 1 µl.

Development: over a path of 15 cm.

Drying: in air.

Detection: expose to iodine vapour until the spots appear and examine in daylight.

System suitability: reference solution (b):

– the chromatogram shows 2 clearly separated spots.

Results: the principal spot in the chromatogram obtained with the test solution is similar in position, colour and size to the principal spot in obtained with reference solution (a).

C. Place about 2 mg in a test-tube about 150 mm long and 15 mm in diameter. Moisten with 0.05 ml of *water R* and add 2 ml of *sulphuric acid-formaldehyde reagent R.*

Mix the contents of the tube by swirling; the solution is practically colourless. Place the test-tube on a water-bath for 1 min; a reddish-brown colour develops.

D. It gives reaction (a) of potassium (*2.3.1*).

TESTS

pH (*2.2.3*): 5.5 to 7.5.

Dissolve 2.0 g in *carbon dioxide-free water R* and dilute to 20 ml with the same solvent.

Specific optical rotation (*2.2.7*): + 270 to + 300 (dried substance).

Dissolve 0.500 g in *carbon dioxide-free water R* and dilute to 25.0 ml with the same solvent.

Absorbance (*2.2.25*). Dissolve 94.0 mg in *water R* and dilute to 50.0 ml with the same solvent. Measure the absorbance of the solution at 325 nm, 280 nm and at the absorption maximum at 264 nm, diluting the solution, if necessary, for the measurement at 264 nm. The absorbances at 325 nm and 280 nm do not exceed 0.10 and that at the absorption maximum at 264 nm is 0.80 to 0.88, calculated on the basis of the undiluted (1.88 g/l) solution. Verify the resolution of the apparatus (*2.2.25*); the ratio of the absorbances is at least 1.7.

Related substances. Liquid chromatography (*2.2.29*). *Prepare the solutions immediately before use.*

Test solution (a). Dissolve 50.0 mg of the substance to be examined in *water R* and dilute to 50.0 ml with the same solvent.

Test solution (b). Dissolve 80.0 mg of the substance to be examined in *water R* and dilute to 20.0 ml with the same solvent.

Reference solution (a). Dissolve 50.0 mg of *benzylpenicillin sodium CRS* in *water R* and dilute to 50.0 ml with the same solvent.

Reference solution (b). Dissolve 10 mg of *benzylpenicillin sodium CRS* and 10 mg of *phenylacetic acid R* (impurity B) in *water R*, then dilute to 50 ml with the same solvent.

Reference solution (c). Dilute 4.0 ml of reference solution (a) to 100.0 ml with *water R*.

Column:

– *size*: *l* = 0.25 m, Ø = 4.6 mm;
– *stationary phase*: *octadecylsilyl silica gel for chromatography R* (5 µm).

Mobile phase:

– *mobile phase A*: mix 10 volumes of a 68 g/l solution of *potassium dihydrogen phosphate R* adjusted to pH 3.5 with a 500 g/l solution of *dilute phosphoric acid R*, 30 volumes of *methanol R* and 60 volumes of *water R*;
– *mobile phase B*: mix 10 volumes of a 68 g/l solution of *potassium dihydrogen phosphate R* adjusted to pH 3.5 with a 500 g/l solution of *dilute phosphoric acid R*, 40 volumes of *water R* and 50 volumes of *methanol R*;

Time (min)	Mobile phase A (per cent *V/V*)	Mobile phase B (per cent *V/V*)
0 - t_R	70	30
t_R - (t_R + 20)	70 → 0	30 → 100
(t_R + 20) - (t_R + 35)	0	100
(t_R + 35) - (t_R + 50)	70	30

t_R = retention time of benzylpenicillin determined with reference solution (c)

If the mobile phase composition has been adjusted to achieve the required resolution, the adjusted composition will apply at time zero in the gradient and in the assay.

Flow rate: 1.0 ml/min.

Detection: spectrophotometer at 225 nm.

Injection: 20 µl of reference solutions (b) and (c) with isocratic elution at the initial mobile phase composition and 20 µl of test solution (b) according to the elution gradient described under Mobile phase; inject *water R* as a blank according to the elution gradient described under Mobile phase.

System suitability: reference solution (b):

– *resolution*: minimum 6.0 between the peaks due to impurity B and benzylpenicillin; if necessary, adjust the ratio A:B of the mobile phase.

Limit:

– *any impurity*: for each impurity, not more than the area of the principal peak in the chromatogram obtained with reference solution (c) (1 per cent).

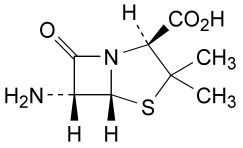
Loss on drying (*2.2.32*): maximum 1.0 per cent, determined on 1.000 g by drying in an oven at 105 °C.

Bacterial endotoxins (*2.6.14, Method E*): less than 0.16 IU/mg, if intended for use in the manufacture of parenteral dosage forms without a further appropriate procedure for the removal of bacterial endotoxins.

ASSAY

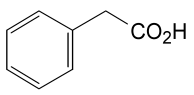
Liquid chromatography (*2.2.29*) as described in the test for related substances with the following modifications.

Mobile phase: initial composition of the mixture of mobile phases A and B, adjusted where applicable.



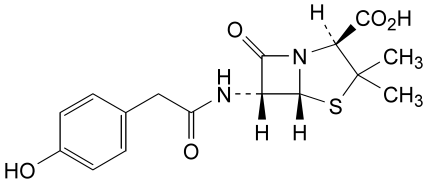
Injection: test solution (a) and reference solution (a).

Calculate the percentage content of $C_{16}H_{17}KN_2O_4S$ by multiplying the percentage content of benzylpenicillin sodium by 1.045.

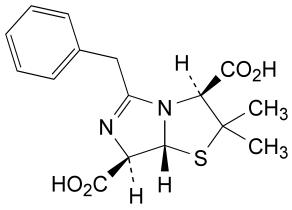


STORAGE

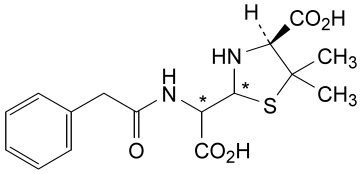
In an airtight container. If the substance is sterile, store in a sterile, airtight, tamper-proof container.



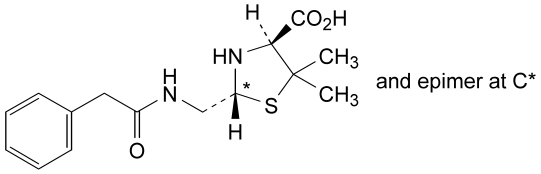
IMPURITIES



A. (2*S*,5*R*,6*R*)-6-amino-3,3-dimethyl-7-oxo-4-thia-1-azabicyclo[3.2.0]heptane-2-carboxylic acid (6-aminopenicillanic acid),



B. phenylacetic acid,



C. (2*S*,5*R*,6*R*)-6-[[(4-hydroxyphenyl)acetyl]amino]-3,3-dimethyl-7-oxo-4-thia-1-azabicyclo[3.2.0]heptane-2-carboxylic acid,

D. (3*S*,7*R*,7a*R*)-5-benzyl-2,2-dimethyl-2,3,7,7a-tetrahydroimidazo[5,1-*b*]thiazole-3,7-dicarboxylic acid (penillic acid of benzylpenicillin),

BENZYLPENICILLIN, PROCAINE

Benzylpenicillinum procainum

$C_{29}H_{38}N_4O_6S,H_2O$ M_r 588.7
[6130-64-9]

DEFINITION

(2*S*,5*R*,6*R*)-3,3-Dimethyl-7-oxo-6-[(phenylacetyl)amino]-4-thia-1-azabicyclo[3.2.0]heptane-2-carboxylic acid compound with 2-(diethylamino)ethyl 4-aminobenzoate monohydrate.

Substance produced by the growth of certain strains of *Penicillium notatum* or related organisms, or obtained by any other means.

Content:

– *procaine benzylpenicillin*: 96.0 per cent to 102.0 per cent (anhydrous substance);
– *procaine* ($C_{13}H_{20}N_2O_2$; M_r 236.3): 39.0 per cent to 42.0 per cent (anhydrous substance).

Dispersing or suspending agents (for example, lecithin and polysorbate 80) may be added.

CHARACTERS

Appearance: white or almost white, crystalline powder.

Solubility: slightly soluble in water, sparingly soluble in ethanol (96 per cent).

IDENTIFICATION

First identification: A.

Second identification: B, C, D.

A. Infrared absorption spectrophotometry (*2.2.24*).

Comparison: *procaine benzylpenicillin CRS.*

B. Thin-layer chromatography (*2.2.27*).

Test solution. Dissolve 25 mg of the substance to be examined in 5 ml of *acetone R.*

Reference solution. Dissolve 25 mg of *procaine benzylpenicillin CRS* in 5 ml of *acetone R.*

Plate: *TLC silanised silica gel plate R.*

Mobile phase: mix 30 volumes of *acetone R* and 70 volumes of a 154 g/l solution of *ammonium acetate R* previously adjusted to pH 7.0 with *ammonia R.*

Application: 1 µl.

Development: over a path of 15 cm.

Drying: in air.

Detection: expose to iodine vapour until the spots appear and examine in daylight.

System suitability: reference solution:

– the chromatogram shows 2 clearly separated spots.

Results: the 2 principal spots in the chromatogram obtained with the test solution are similar in position, colour and size to the 2 principal spots in the chromatogram obtained with the reference solution.

C. Place about 2 mg in a test-tube about 150 mm long and 15 mm in diameter. Moisten with 0.05 ml of *water R* and add 2 ml of *sulphuric acid-formaldehyde reagent R.* Mix the contents of the tube by swirling; the solution is practically colourless. Place the test-tube on a water-bath for 1 min; a reddish-brown colour develops.

D. Dissolve 0.1 g in 2 ml of *dilute hydrochloric acid R* and use the solution which may be turbid. The solution gives the reaction of primary aromatic amines (*2.3.1*).

TESTS

pH (*2.2.3*): 5.0 to 7.5.

Dissolve 50 mg in *carbon dioxide-free water R* and dilute to 15 ml with the same solvent. Shake until dissolution is complete.

Specific optical rotation (*2.2.7*): + 165 to + 180 (anhydrous substance).

Dissolve 0.250 g in a mixture of 2 volumes of *water R* and 3 volumes of *acetone R*, then dilute to 25.0 ml with the same mixture of solvents.

Related substances. Liquid chromatography (*2.2.29*). *Prepare the solutions immediately before use.*

Test solution (a). Dissolve 70.0 mg of the substance to be examined in the mobile phase and dilute to 50.0 ml with the mobile phase.

Test solution (b). Dissolve 70.0 mg of the substance to be examined in the mobile phase and dilute to 100.0 ml with the mobile phase.

Reference solution (a). Dissolve 70.0 mg of *procaine benzylpenicillin CRS* in the mobile phase and dilute to 100.0 ml with the mobile phase.

Reference solution (b). Dissolve 4 mg of *4-aminobenzoic acid R* (impurity A) in reference solution (a) and dilute to 25 ml with reference solution (a).

Reference solution (c). Dissolve 16.8 mg of *4-aminobenzoic acid R* (impurity A) in *water R* and dilute to 50.0 ml with the same solvent. Dilute 1.0 ml of the solution to 10.0 ml with *water R*. To 1.0 ml of this solution, add 1.0 ml of test solution (a) and dilute to 100.0 ml with the mobile phase.

Column:

– *size*: *l* = 0.25 m, Ø = 4.6 mm;
– *stationary phase*: *octadecylsilyl silica gel for chromatography R* (5 µm).

Mobile phase: mix 250 ml of *acetonitrile R1*, 250 ml of *water R* and 500 ml of a solution containing 14 g/l of *potassium dihydrogen phosphate R* and 6.5 g/l of *tetrabutylammonium hydroxide solution (400 g/l) R* adjusted to pH 7.0 with *1 M potassium hydroxide*; if necessary, adjust the mixture to pH 7.2 with *dilute phosphoric acid R*.

Flow rate: 1.75 ml/min.

Detection: spectrophotometer at 225 nm.

Injection: 10 µl of test solution (a) and reference solutions (b) and (c).

Run time: 1.5 time the retention time of benzylpenicillin.

Elution order: impurity A, procaine, benzylpenicillin.

System suitability: reference solution (b):

– *resolution*: minimum 2.0 between the peaks due to impurity A and procaine; if necessary, adjust the concentration of acetonitrile in the mobile phase.

Limits:

– *impurity A*: not more than the area of the corresponding peak in the chromatogram obtained with reference solution (c) (0.024 per cent);
– *any other impurity*: for each impurity, not more than the area of the peak due to benzylpenicillin in the chromatogram obtained with reference solution (c) (1 per cent).

Water (*2.5.12*): 2.8 per cent to 4.2 per cent, determined on 0.500 g.

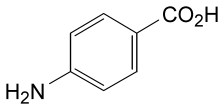
Bacterial endotoxins (*2.6.14, Method E*): less than 0.10 IU/mg, if intended for use in the manufacture of parenteral dosage forms without a further appropriate procedure for the removal of bacterial endotoxins.

ASSAY

Liquid chromatography (*2.2.29*) as described in the test for related substances with the following modifications.

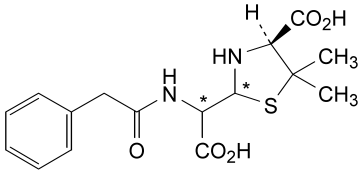
Injection: test solution (b) and reference solution (a).

System suitability: reference solution (a):



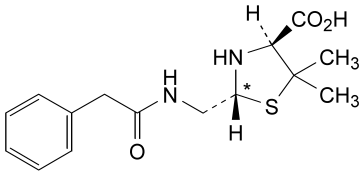
– *repeatability*: maximum relative standard deviation of 1.0 per cent for the 2 principal peaks after 6 injections.

Calculate the percentage contents of procaine and procaine benzylpenicillin.



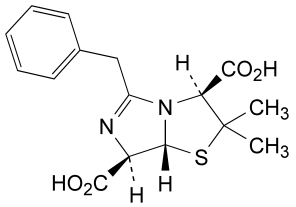
STORAGE

In an airtight container. If the substance is sterile, store in a sterile, airtight, tamper-proof container.



IMPURITIES

A. 4-aminobenzoic acid,



B. (4*S*)-2-[carboxy[(phenylacetyl)amino]methyl]-5,5-dimethylthiazolidine-4-carboxylic acid (penicilloic acids of benzylpenicillin),

BENZYLPENICILLIN SODIUM

Benzylpenicillinum natricum

$C_{16}H_{17}N_2NaO_4S$ M_r 356.4
[69-57-8]

DEFINITION

Sodium (2*S*,5*R*,6*R*)-3,3-dimethyl-7-oxo-6-[(phenylacetyl)-amino]-4-thia-1-azabicyclo[3.2.0]heptane-2-carboxylate.

Substance produced by the growth of certain strains of *Penicillium notatum* or related organisms, or obtained by any other means.

Content: 96.0 per cent to 102.0 per cent (dried substance).

CHARACTERS

Appearance: white or almost white, crystalline powder.

Solubility: very soluble in water, practically insoluble in fatty oils and in liquid paraffin.

IDENTIFICATION

First identification: A, D.

Second identification: B, C, D.

A. Infrared absorption spectrophotometry (*2.2.24*).

Comparison: *benzylpenicillin sodium CRS.*

B. Thin-layer chromatography (*2.2.27*).

Test solution. Dissolve 25 mg of the substance to be examined in 5 ml of *water R.*

Reference solution (a). Dissolve 25 mg of *benzylpenicillin sodium CRS* in 5 ml of *water R.*

Reference solution (b). Dissolve 25 mg of *benzylpenicillin sodium CRS* and 25 mg of *phenoxymethylpenicillin potassium CRS* in 5 ml of *water R.*

Plate: *TLC silanised silica gel plate R.*

Mobile phase: mix 30 volumes of *acetone R* and 70 volumes of a 154 g/l solution of *ammonium acetate R* previously adjusted to pH 5.0 with *glacial acetic acid R.*

Application: 1 µl.

Development: over a path of 15 cm.

Drying: in air.

Detection: expose to iodine vapour until the spots appear and examine in daylight.

System suitability: reference solution (b):

– the chromatogram shows 2 clearly separated spots.

Results: the principal spot in the chromatogram obtained with the test solution is similar in position, colour and size to the principal spot in the chromatogram obtained with reference solution (a).

C. Place about 2 mg in a test-tube about 150 mm long and 15 mm in diameter. Moisten with 0.05 ml of *water R* and add 2 ml of *sulphuric acid-formaldehyde reagent R.* Mix the contents of the tube by swirling; the solution is practically colourless. Place the test-tube on a water-bath for 1 min; a reddish-brown colour develops.

D. It gives reaction (a) of sodium (*2.3.1*).

TESTS

pH (*2.2.3*): 5.5 to 7.5.

Dissolve 2.0 g in *carbon dioxide-free water R* and dilute to 20 ml with the same solvent.

Specific optical rotation (*2.2.7*): + 285 to + 310 (dried substance).

Dissolve 0.500 g in *carbon dioxide-free water R* and dilute to 25.0 ml with the same solvent.

Absorbance (*2.2.25*). Dissolve 90.0 mg in *water R* and dilute to 50.0 ml with the same solvent. Measure the absorbance of the solution at 325 nm, at 280 nm and at the absorption maximum at 264 nm, diluting the solution, if necessary, for the measurement at 264 nm. The absorbances at 325 nm and 280 nm are not greater than 0.10 and the absorbance at the absorption maximum at 264 nm is 0.80 to 0.88, calculated on the basis of the undiluted (1.80 g/l) solution. Verify the resolution of the apparatus (*2.2.25*); the ratio of the absorbances is at least 1.7.

Related substances. Liquid chromatography (*2.2.29*). *Prepare the solutions immediately before use.*

Test solution (a). Dissolve 50.0 mg of the substance to be examined in *water R* and dilute to 50.0 ml with the same solvent.

Test solution (b). Dissolve 80.0 mg of the substance to be examined in *water R* and dilute to 20.0 ml with the same solvent.

Reference solution (a). Dissolve 50.0 mg of *benzylpenicillin sodium CRS* in *water R* and dilute to 50.0 ml with the same solvent.

Reference solution (b). Dissolve 10 mg of *benzylpenicillin sodium CRS* and 10 mg of *phenylacetic acid R* (impurity B) in *water R*, then dilute to 50 ml with the same solvent.

Reference solution (c). Dilute 4.0 ml of reference solution (a) to 100.0 ml with *water R.*

Column:

– *size*: *l* = 0.25 m, Ø = 4.6 mm;

– *stationary phase*: *octadecylsilyl silica gel for chromatography R* (5 µm).

Mobile phase:

– *mobile phase A*: mix 10 volumes of a 68 g/l solution of *potassium dihydrogen phosphate R* adjusted to pH 3.5 with a 500 g/l solution of *dilute phosphoric acid R*, 30 volumes of *methanol R* and 60 volumes of *water R*;

– *mobile phase B*: mix 10 volumes of a 68 g/l solution of *potassium dihydrogen phosphate R* adjusted to pH 3.5 with a 500 g/l solution of *dilute phosphoric acid R*, 40 volumes of *water R* and 50 volumes of *methanol R*;

Time (min)	Mobile phase A (per cent *V/V*)	Mobile phase B (per cent *V/V*)
0 - t_R	70	30
t_R - (t_R + 20)	70 → 0	30 → 100
(t_R + 20) - (t_R + 35)	0	100
(t_R + 35) - (t_R + 50)	70	30

t_R = retention time of benzylpenicillin determined with reference solution (c)

If the mobile phase composition has been adjusted to achieve the required resolution, the adjusted composition will apply at time zero in the gradient and in the assay.

Flow rate: 1.0 ml/min.

Detection: spectrophotometer at 225 nm.

Injection: 20 µl of reference solutions (b) and (c) with isocratic elution at the initial mobile phase composition and 20 µl of test solution (b) according to the elution gradient described under Mobile phase; inject *water R* as a blank according to the elution gradient described under Mobile phase.

System suitability: reference solution (b):

– *resolution*: minimum 6.0 between the peaks due to impurity B and benzylpenicillin; if necessary, adjust the ratio A:B of the mobile phase.

Limit:

– *any impurity*: for each impurity, not more than the area of the principal peak in the chromatogram obtained with reference solution (c) (1 per cent).

2-Ethylhexanoic acid (*2.4.28*): maximum 0.5 per cent *m/m*.

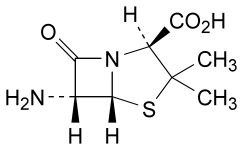
Loss on drying (*2.2.32*): maximum 1.0 per cent, determined on 1.000 g by drying in an oven at 105 °C.

Bacterial endotoxins (*2.6.14, Method E*): less than 0.16 IU/mg, if intended for use in the manufacture of parenteral dosage forms without a further appropriate procedure for the removal of bacterial endotoxins.

ASSAY

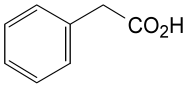
Liquid chromatography (*2.2.29*) as described in the test for related substances with the following modifications.

Mobile phase: initial composition of the mixture of mobile phases A and B, adjusted where applicable.



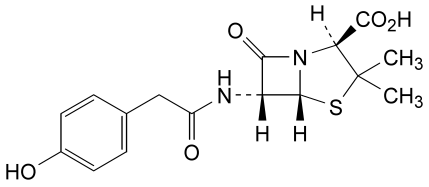
Injection: test solution (a) and reference solution (a).

Calculate the percentage content of $C_{16}H_{17}N_2NaO_4S$ from the declared content of *benzylpenicillin sodium CRS*.

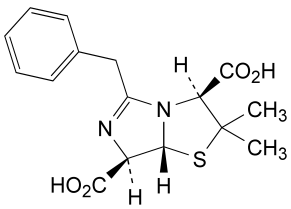


STORAGE

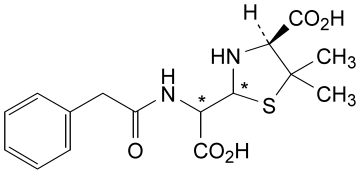
In an airtight container. If the substance is sterile, store in a sterile, airtight, tamper-proof container.



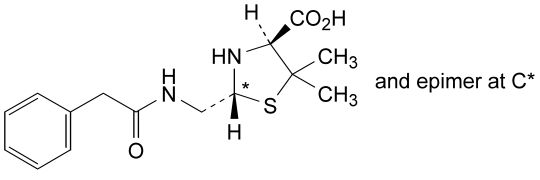
IMPURITIES



A. (2*S*,5*R*,6*R*)-6-amino-3,3-dimethyl-7-oxo-4-thia-1-azabicyclo[3.2.0]heptane-2-carboxylic acid (6-aminopenicillanic acid),



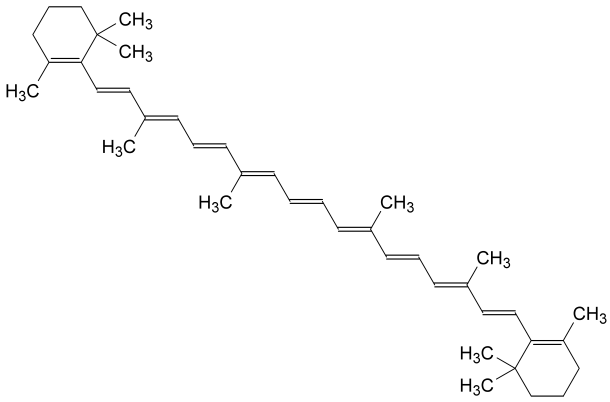
B. phenylacetic acid,



C. (2*S*,5*R*,6*R*)-6-[[(4-hydroxyphenyl)acetyl]amino]-3,3-dimethyl-7-oxo-4-thia- 1-azabicyclo[3.2.0]heptane-2-carboxylic acid,

D. (3*S*,7*R*,7a*R*)-5-benzyl-2,2-dimethyl-2,3,7,7a-tetrahydroimidazo[5,1-*b*]thiazole-3,7-dicarboxylic acid (penillic acid of benzylpenicillin),

E. (4*S*)-2-[carboxy[(phenylacetyl)amino]methyl]-5,5-dimethylthiazolidine-4-carboxylic acid (penicilloic acids of benzylpenicillin),



F. (2*RS*,4*S*)-2-[[(phenylacetyl)amino]methyl]-5,5-dimethylthiazolidine-4-carboxylic acid (penilloic acids of benzylpenicillin).

01/2008:1069

BETACAROTENE

Betacarotenum

$C_{40}H_{56}$ M_r 536.9

[7235-40-7]

DEFINITION

(all-*E*)-3,7,12,16-Tetramethyl-1,18-bis(2,6,6-trimethylcyclohex-1-enyl)octadeca-1,3,5,7,9,11,13,15,17-nonaene.

Content: 96.0 per cent to 101.0 per cent (dried substance).

CHARACTERS

Appearance: brown-red or brownish-red, crystalline powder.

Solubility: practically insoluble in water, slightly soluble in cyclohexane, practically insoluble in anhydrous ethanol.

It is sensitive to air, heat and light, especially in solution.

Carry out all operations as rapidly as possible avoiding exposure to actinic light; use freshly prepared solutions.

IDENTIFICATION

Ultraviolet and visible absorption spectrophotometry (*2.2.25*).

Test solution (a). Dissolve 50.0 mg in 10 ml of *chloroform R* and dilute immediately to 100.0 ml with *cyclohexane R*. Dilute 5.0 ml of this solution to 100.0 ml with *cyclohexane R*.

Test solution (b). Dilute 5.0 ml of test solution (a) to 50.0 ml with *cyclohexane R*.

Absorption maximum: at 455 nm for test solution (b).

Absorbance ratio: A_{455} / A_{483} = 1.14 to 1.18 for test solution (b).

TESTS

Related substances. Determine the absorbance (*2.2.25*) of test solutions (b) and (a) used in Identification, at 455 nm and at 340 nm respectively.

Absorbance ratio: A_{455} / A_{340}: minimum 1.5.

The thresholds indicated under Related substances (Table 2034.-1) in the general monograph *Substances for pharmaceutical use (2034)* do not apply.

Heavy metals (*2.4.8*): maximum 10 ppm.

2.0 g complies with test D. Prepare the reference solution using 2 ml of *lead standard solution (10 ppm Pb) R*.

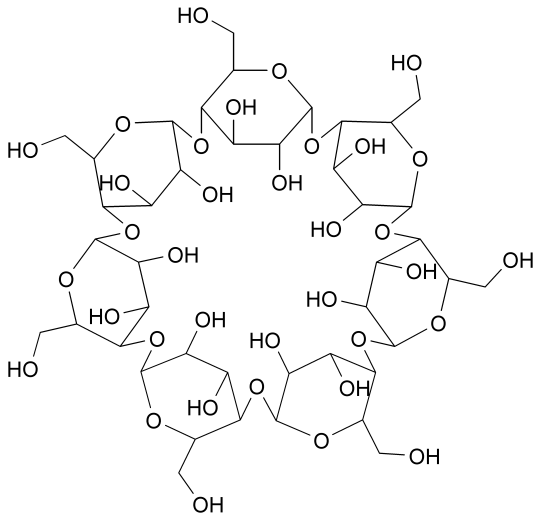
Loss on drying (*2.2.32*): maximum 0.2 per cent, determined on 1.000 g by drying *in vacuo* over *diphosphorus pentoxide R* at 40 °C for 4 h.

Sulphated ash (*2.4.14*): maximum 0.2 per cent, determined on 1.0 g, moistened with a mixture of 2 ml of *dilute sulphuric acid R* and 5 ml of *ethanol (96 per cent) R*.

ASSAY

Measure the absorbance (*2.2.25*) of test solution (b) used in Identification at the absorption maximum at 455 nm, using *cyclohexane R* as the compensation liquid.

Calculate the content of $C_{40}H_{56}$ taking the specific absorbance to be 2500.



STORAGE

In an airtight container, protected from light, at a temperature not exceeding 25 °C.

01/2008:1070

BETADEX

Betadexum

$[C_6H_{10}O_5]_7$ M_r 1135

DEFINITION

Cyclo-α-(1→4)-D-heptaglucopyranoside (betacyclodextrin).

Content: 98.0 per cent to 101.0 per cent (dried substance).

CHARACTERS

Appearance: white or almost white, amorphous or crystalline powder.

Solubility: sparingly soluble in water, freely soluble in propylene glycol, practically insoluble in anhydrous ethanol and in methylene chloride.

IDENTIFICATION

A. Specific optical rotation (see Tests).

B. Examine the chromatograms obtained in the assay.

Results: the principal peak in the chromatogram obtained with test solution (b) is similar in retention time and size to the principal peak in the chromatogram obtained with reference solution (c).

C. Dissolve 0.2 g in 2 ml of *iodine solution R4* by warming on a water-bath, and allow to stand at room temperature. A yellowish-brown precipitate is formed.

TESTS

Solution S. Dissolve 1.000 g in *carbon dioxide-free water R* with heating, allow to cool and dilute to 100.0 ml with the same solvent.

Appearance of solution. Solution S is clear (*2.2.1*).

pH (*2.2.3*): 5.0 to 8.0.

To 10 ml of solution S add 0.1 ml of a saturated solution of *potassium chloride R*.

Specific optical rotation (*2.2.7*): + 160 to + 164 (dried substance), determined on solution S.

Reducing sugars: maximum 0.2 per cent.

Test solution. To 1 ml of solution S add 1 ml of *cupri-tartaric solution R4*. Heat on a water-bath for 10 min, cool to room temperature. Add 10 ml of *ammonium molybdate reagent R1* and allow to stand for 15 min.

Reference solution. Prepare a reference solution at the same time and in the same manner as the test solution, using 1 ml of a 0.02 g/l solution of *glucose R*.

Measure the absorbance (*2.2.25*) of the test solution and the reference solution at the absorption maximum at 740 nm using *water R* as the compensation liquid. The absorbance of the test solution is not greater than that of the reference solution.

Light-absorbing impurities. Examine solution S between 230 nm and 750 nm. Between 230 nm and 350 nm, the absorbance (*2.2.25*) is not greater than 0.10. Between 350 nm and 750 nm, the absorbance (*2.2.25*) is not greater than 0.05.

Related substances. Liquid chromatography (*2.2.29*).

Test solution (a). Dissolve 0.25 g of the substance to be examined in *water R* with heating, cool and dilute to 25.0 ml with the same solvent.

Test solution (b). Dilute 5.0 ml of test solution (a) to 50.0 ml with *water R*.

Reference solution (a). Dissolve 25.0 mg of *alfadex CRS* (impurity A), 25.0 mg of *gammacyclodextrin CRS* (impurity B) and 50.0 mg of *betadex CRS* in *water R*, then dilute to 50.0 ml with the same solvent.

Reference solution (b). Dilute 5.0 ml of reference solution (a) to 50.0 ml with *water R*.

Reference solution (c). Dissolve 25.0 mg of *betadex CRS* in *water R* and dilute to 25.0 ml with the same solvent.

Column:

– *size*: *l* = 0.25 m, Ø = 4.6 mm;

– *stationary phase*: *octadecylsilyl silica gel for chromatography R* (10 µm).

Mobile phase: *methanol R, water R* (10:90 *V/V*).

Flow rate: 1.5 ml/min.

Detection: differential refractometer.

Equilibration: with the mobile phase for about 3 h.

Injection: 50 µl of test solution (a) and reference solutions (a) and (b).

Run time: 1.5 times the retention time of betadex.

Relative retention with reference to betadex (retention time = about 10 min): impurity B = about 0.3; impurity A = about 0.45.

System suitability: reference solution (a):

– *resolution*: minimum 1.5 between the peaks due to impurities B and A; if necessary, adjust the concentration of methanol in the mobile phase.

Limits:

– *impurities A, B*: for each impurity, not more than 0.5 times the area of the corresponding peak in the chromatogram obtained with reference solution (b) (0.25 per cent);

– *sum of impurities other than A and B*: not more than 0.5 times the area of the peak due to betadex in the chromatogram obtained with reference solution (b) (0.5 per cent).

Residual solvents. Head-space gas chromatography (*2.2.28*): use the standard additions method.

Internal standard: *ethylene chloride R*.

Test solutions. In each of 4 identical 20 ml flasks, dissolve 0.5 g of the substance to be examined in *water R* and add 0.10 g of *calcium chloride R* and 30 µl of *α-amylase solution R*. Add 1 ml of reference solutions (a), (b), (c) and (d), adding a different solution to each flask. Dilute to 10 ml with *water R*.

Reference solutions. Prepare a 10 µl/l solution of *ethylene chloride R* (reference solution (a)). Prepare reference solutions (b), (c) and (d) from reference solution (a) to contain respectively, per litre, 5 µl, 10 µl and 15 µl of both *trichloroethylene R* and *toluene R*.

Column:

– *material*: fused silica;
– *size*: *l* = 25 m, Ø = 0.32 mm;
– *stationary phase*: *macrogol 20 000 R* (film thickness 1 µm).

Carrier gas: *helium for chromatography R*.

Static head-space conditions which may be used:

– *equilibration temperature*: 45 °C;
– *equilibration time*: 2 h.

Temperature:

– *column*: 50 °C;
– *injection port*: 140 °C;
– *detector*: 280 °C.

Detection: flame ionisation.

Injection: 200 µl of the head space, at least 3 times.

Retention time: toluene = about 10 min.

System suitability:

– *resolution*: minimum 1.1 between the peaks due to trichloroethylene and toluene; minimum 1.1 between the peaks due to toluene and ethylene chloride;
– *repeatability*: maximum relative standard deviations of the ratios of the areas of the peaks due to trichloroethylene and toluene to that of the peak due to ethylene chloride of 5 per cent.

Calculate the content of trichloroethylene and of toluene taking their relative densities to be 1.46 and 0.87, respectively.

Limits:

– *trichloroethylene*: maximum 10 ppm;
– *toluene*: maximum 10 ppm.

Heavy metals (*2.4.8*): maximum 10 ppm.

1.0 g complies with test C. Prepare the reference solution using 1 ml of *lead standard solution (10 ppm Pb) R*.

Loss on drying (*2.2.32*): maximum 16.0 per cent, determined on 1.000 g by drying in an oven at 120 °C for 2 h.

Sulphated ash (*2.4.14*): maximum 0.1 per cent, determined on 1.0 g.

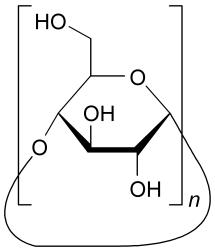
ASSAY

Liquid chromatography (*2.2.29*) as described in the test for related substances with the following modifications.

Injection: test solution (b) and reference solutions (a) and (c).

System suitability: reference solution (a):

– *repeatability*: maximum relative standard deviation of the area of the peak due to betadex of 2.0 per cent.



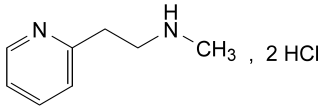
Calculate the percentage content of $[C_6H_{10}O_5]_7$ from the declared content of *betadex CRS*.

STORAGE

In an airtight container.

IMPURITIES

Specified impurities: A, B.



A. *n* = 6: alfadex,

B. *n* = 8: gammacyclodextrin.

corrected 6.0

BETAHISTINE DIHYDROCHLORIDE

Betahistini dihydrochloridum

$C_8H_{14}Cl_2N_2$ M_r 209.1
[5579-84-0]

DEFINITION

N-Methyl-2-(pyridin-2-yl)ethanamine dihydrochloride.

Content: 99.0 per cent to 101.0 per cent (dried substance).

CHARACTERS

Appearance: white to slightly yellow powder, very hygroscopic.

Solubility: very soluble in water, soluble in ethanol (96 per cent), practically insoluble in 2-propanol.

IDENTIFICATION

First identification: B, D.

Second identification: A, C, D.

A. Melting point (*2.2.14*): 150 °C to 154 °C.

B. Infrared absorption spectrophotometry (*2.2.24*).
Comparison: *betahistine dihydrochloride CRS.*

C. Thin-layer chromatography (*2.2.27*).
Test solution. Dissolve 10 mg of the substance to be examined in 2 ml of *ethanol (96 per cent) R.*
Reference solution. Dissolve 10 mg of *betahistine dihydrochloride CRS* in 2 ml of *ethanol (96 per cent) R.*
Plate: *TLC silica gel GF_{254} plate R.*

Mobile phase: *concentrated ammonia R, ethyl acetate R, methanol R* (0.75:15:30 *V/V/V*).

Application: 2 µl.

Development: over 2/3 of the plate.

Drying: at 110 °C for 10 min.

Detection: examine in ultraviolet light at 254 nm.

Results: the principal spot in the chromatogram obtained with the test solution is similar in position and size to the principal spot in the chromatogram obtained with the reference solution.

D. It gives reaction (a) of chlorides (*2.3.1*).

TESTS

Solution S. Dissolve 5.0 g in *carbon dioxide-free water R*, and dilute to 50 ml with the same solvent.

Appearance of solution. Solution S is clear (*2.2.1*) and not more intensely coloured than reference solution B_8 (*2.2.2, Method II*).

pH (*2.2.3*): 2.0 to 3.0 for solution S.

Related substances. Liquid chromatography (*2.2.29*).

Test solution. Dissolve 25 mg of the substance to be examined in the mobile phase and dilute to 25.0 ml with the mobile phase.

Reference solution (a). Dissolve 10 mg of *betahistine dihydrochloride CRS* and 10 mg of *2-vinylpyridine R* in the mobile phase and dilute to 50.0 ml with the mobile phase. Dilute 2.0 ml of the solution to 50.0 ml with the mobile phase.

Reference solution (b). Dilute 1.0 ml of the test solution to 100.0 ml with the mobile phase.

Reference solution (c). Dilute 2.0 ml of reference solution (b) to 10.0 ml with the mobile phase.

Column:

– *size*: *l* = 0.15 m, Ø = 3.0 mm,

– *stationary phase*: *end-capped octadecylsilyl base deactivated silica gel for chromatography R* (5 µm).

Mobile phase: dissolve 2.0 g of *sodium dodecyl sulphate R* in a mixture of 15 ml of a 10 per cent *V/V* solution of *sulphuric acid R*, 35 ml of a 17 g/l solution of *tetrabutylammonium hydrogen sulphate R* and 650 ml of *water R*; adjust to pH 3.3 using *dilute sodium hydroxide solution R* and mix with 300 ml of *acetonitrile R*.

Flow rate: 1 ml/min.

Detection: spectrophotometer at 260 nm.

Injection: 20 µl.

Run time: 4 times the retention time of betahistine.

Relative retention with reference to betahistine (retention time = about 7 min): impurity B = about 0.2; impurity A = about 0.3; impurity C = about 3.

System suitability: reference solution (a):

– *resolution*: minimum 3.5 between the peaks due to 2-vinylpyridine and betahistine.

Limits:

– *correction factor*: for the calculation of content, multiply the peak area of impurity B by 0.4;

– *impurities A, B, C*: for each impurity, not more than the area of the principal peak in the chromatogram obtained with reference solution (c) (0.2 per cent);

– *any other impurity*: for each impurity, not more than 0.5 times of the area of the principal peak in the chromatogram obtained with reference solution (c) (0.1 per cent);

– *total*: not more than 0.5 times the area of the principal peak in the chromatogram obtained with reference solution (b) (0.5 per cent);

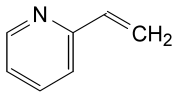
– *disregard limit*: 0.25 times the area of the principal peak in the chromatogram obtained with reference solution (c) (0.05 per cent).

Loss on drying (*2.2.32*): maximum 1.0 per cent, determined on 1.000 g by drying in an oven at 105 °C.

Sulphated ash (*2.4.14*): maximum 0.1 per cent, determined on 1.0 g.

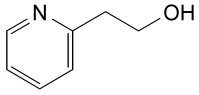
ASSAY

Dissolve 80.0 mg in 50 ml of *ethanol (96 per cent) R*. Titrate with *0.1 M sodium hydroxide*, determining the end-point potentiometrically (*2.2.20*). Read the volume added to reach the second point of inflexion.



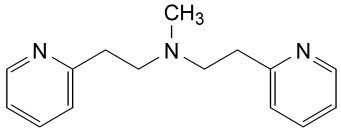
1 ml of *0.1 M sodium hydroxide* is equivalent to 10.46 mg of $C_8H_{14}Cl_2N_2$.

STORAGE



In an airtight container.

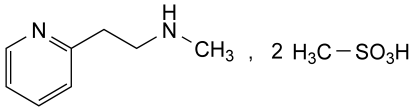
IMPURITIES



Specified impurities: A, B, C.

A. 2-ethenylpyridine (2-vinylpyridine),

B. 2-(pyridin-2-yl)ethanol,



C. *N*-methyl-2-(pyridin-2-yl)-*N*-[2-(pyridin-2-yl)ethyl]ethanamine.

01/2008:1071
corrected 6.0

BETAHISTINE MESILATE

Betahistini mesilas

$C_{10}H_{20}N_2O_6S_2$ M_r 328.4
[54856-23-4]

DEFINITION

N-Methyl-2-(pyridin-2-yl)ethanamine bis(methanesulphonate).

Content: 98.0 per cent to 101.0 per cent (anhydrous substance).

PRODUCTION

The production method must be evaluated to determine the potential for formation of alkyl mesilates, which is particularly likely to occur if the reaction medium contains

lower alcohols. Where necessary, the production method is validated to demonstrate that alkyl mesilates are not detectable in the final product.

CHARACTERS

Appearance: white or almost white, crystalline powder, very hygroscopic.

Solubility: very soluble in water, freely soluble in ethanol (96 per cent), very slightly soluble in 2-propanol.

IDENTIFICATION

First identification: B.

Second identification: A, C, D.

A. Melting point (*2.2.14*): 108 °C to 112 °C.

B. Infrared absorption spectrophotometry (*2.2.24*).

Preparation: discs.

Comparison: *betahistine mesilate CRS.*

C. Thin-layer chromatography (*2.2.27*).

Test solution. Dissolve 10 mg of the substance to be examined in *ethanol (96 per cent) R* and dilute to 2 ml with the same solvent.

Reference solution. Dissolve 10 mg of *betahistine mesilate CRS,* in *ethanol (96 per cent) R* and dilute to 2 ml with the same solvent.

Plate: *TLC silica gel F_{254} plate R.*

Mobile phase: *concentrated ammonia R, ethyl acetate R, methanol R* (0.75:15:30 *V/V/V*).

Application: 2 µl.

Development: over a path of 15 cm.

Drying: at 110 °C for 10 min.

Detection: examine in ultraviolet light at 254 nm.

Results: the principal spot in the chromatogram obtained with the test solution is similar in position and size to the principal spot in the chromatogram obtained with the reference solution.

D. To 0.1 g add 5 ml of *dilute hydrochloric acid R* and shake for about 5 min. Add 1 ml of *barium chloride solution R1.* The solution remains clear. To a further 0.1 g add 0.5 g of *anhydrous sodium carbonate R,* mix and ignite until a white residue is obtained. Allow to cool and dissolve the residue in 7 ml of *water R.* The solution gives reaction (a) of sulphates (*2.3.1*).

TESTS

Solution S. Dissolve 5.0 g in *carbon dioxide-free water R* prepared from *distilled water R,* and dilute to 50 ml with the same solvent.

Appearance of solution. Solution S is clear (*2.2.1*) and colourless (*2.2.2, Method II*).

pH (*2.2.3*): 2.0 to 3.0 for solution S.

Related substances. Liquid chromatography (*2.2.29*).

Test solution. Dissolve 50 mg of the substance to be examined in the mobile phase and dilute to 10.0 ml with the mobile phase.

Reference solution (a). Dissolve 10 mg of *betahistine mesilate CRS* and 10 mg of *2-vinylpyridine R* (impurity A) in the mobile phase and dilute to 50.0 ml with the mobile phase. Dilute 2.0 ml of this solution to 50.0 ml with the mobile phase.

Reference solution (b). Dilute 1.0 ml of the test solution to 100.0 ml with the mobile phase.

Reference solution (c). Dilute 2.0 ml of reference solution (b) to 10.0 ml with the mobile phase.

Column:

– *size*: *l* = 0.25 m, Ø = 4.6 mm;

– *stationary phase*: *octadecylsilyl silica gel for chromatography R* (5 µm).

Mobile phase: dissolve 2.0 g of *sodium dodecyl sulphate R* in a mixture of 15 volumes of a 10 per cent *V/V* solution of *sulphuric acid R,* 35 volumes of a 17 g/l solution of *tetrabutylammoniumhydrogen sulphate R* and 650 volumes of *water R*; adjust to pH 3.3 using *dilute sodium hydroxide solution R* and mix with 300 volumes of *acetonitrile R.*

Flow rate: 1 ml/min.

Detection: spectrophotometer at 260 nm.

Injection: 20 µl.

Run time: 3 times the retention time of betahistine mesilate.

Retention time: betahistine mesilate = about 8 min.

System suitability: reference solution (a):

– *resolution*: minimum 3.5 between the peaks due to impurity A and betahistine mesilate.

Limits:

– *impurity A*: not more than the area of the principal peak in the chromatogram obtained with reference solution (c) (0.2 per cent);

– *total*: not more than 0.5 times the area of the principal peak in the chromatogram obtained with reference solution (b) (0.5 per cent);

– *disregard limit*: 0.025 times the area of the principal peak in the chromatogram obtained with reference solution (b) (0.025 per cent).

2-Propanol (*2.4.24*): maximum 0.5 per cent.

Chlorides (*2.4.4*): maximum 35 ppm.

To 14 ml of solution S add 1 ml of *water R.*

Sulphates (*2.4.13*): maximum 250 ppm.

Dilute 6 ml of solution S to 15 ml with *distilled water R.*

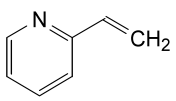
Heavy metals (*2.4.8*): maximum 20 ppm.

12 ml of solution S complies with test A. Prepare the reference solution using *lead standard solution (2 ppm Pb) R.*

Water (*2.5.12*): maximum 2.0 per cent, determined on 0.50 g.

ASSAY

Dissolve 0.140 g in 50 ml of a mixture of 1 volume of *anhydrous acetic acid R* and 7 volumes of *acetic anhydride R.* Titrate with *0.1 M perchloric acid,* determining the end-point potentiometrically (*2.2.20*).



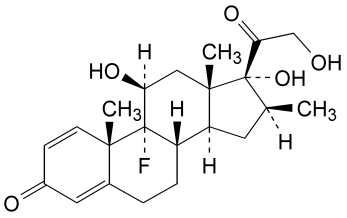
1 ml of *0.1 M perchloric acid* is equivalent to 16.42 mg of $C_{10}H_{20}N_2O_6S_2$.

STORAGE

In an airtight container.

IMPURITIES

Specified impurities: *A.*



A. 2-ethenylpyridine.

corrected 6.0

BETAMETHASONE

Betamethasonum

$C_{22}H_{29}FO_5$ M_r 392.5
[378-44-9]

DEFINITION

9-Fluoro-11β,17,21-trihydroxy-16β-methylpregna-1,4-diene-3,20-dione.

Content: 97.0 per cent to 103.0 per cent (dried substance).

CHARACTERS

Appearance: white or almost white, crystalline powder.

Solubility: practically insoluble in water, sparingly soluble in anhydrous ethanol, very slightly soluble in methylene chloride.

IDENTIFICATION

First identification: B, C.

Second identification: A, C, D, E.

A. Dissolve 10.0 mg in *anhydrous ethanol R* and dilute to 100.0 ml with the same solvent. Place 2.0 ml of this solution in a stoppered tube, add 10.0 ml of *phenylhydrazine-sulphuric acid solution R*, mix and heat in a water-bath at 60 °C for 20 min. Cool immediately. The absorbance (*2.2.25*) measured at 419 nm is not greater than 0.10.

B. Infrared absorption spectrophotometry (*2.2.24*).

Comparison: *betamethasone CRS*.

If the spectra obtained in the solid state show differences, dissolve the substance to be examined and the reference substance separately in the minimum volume of *methylene chloride R*, evaporate to dryness on a water-bath and record new spectra using the residues.

C. Thin-layer chromatography (*2.2.27*).

Solvent mixture: *methanol R, methylene chloride R* (1:9 *V/V*).

Test solution. Dissolve 10 mg of the substance to be examined in the solvent mixture and dilute to 10 ml with the solvent mixture.

Reference solution (a). Dissolve 20 mg of *betamethasone CRS* in the solvent mixture and dilute to 20 ml with the solvent mixture.

Reference solution (b). Dissolve 10 mg of *dexamethasone CRS* in reference solution (a) and dilute to 10 ml with reference solution (a).

Plate: *TLC silica gel F_{254} plate R*.

Mobile phase: *butanol R* saturated with *water R*, *toluene R*, *ether R* (5:10:85 *V/V/V*).

Application: 5 µl.

Development: over a path of 15 cm.

Drying: in air.

Detection A: examine in ultraviolet light at 254 nm.

Results A: the principal spot in the chromatogram obtained with the test solution is similar in position and size to the principal spot in the chromatogram obtained with reference solution (a).

Detection B: spray with *alcoholic solution of sulphuric acid R*. Heat at 120 °C for 10 min or until the spots appear. Allow to cool. Examine in daylight and in ultraviolet light at 365 nm.

Results: the principal spot in the chromatogram obtained with the test solution is similar in position, colour in daylight, fluorescence in ultraviolet light at 365 nm and size to the principal spot in the chromatogram obtained with reference solution (a).

System suitability: reference solution (b):

– the chromatogram shows 2 spots which may, however, not be completely separated.

D. Mix about 5 mg with 45 mg of *heavy magnesium oxide R* and ignite in a crucible until an almost white residue is obtained (usually less than 5 min). Allow to cool, add 1 ml of *water R*, 0.05 ml of *phenolphthalein solution R1* and about 1 ml of *dilute hydrochloric acid R* to render the solution colourless. Filter. Add 1.0 ml of the filtrate to a freshly prepared mixture of 0.1 ml of *alizarin S solution R* and 0.1 ml of *zirconyl nitrate solution R*. Mix, allow to stand for 5 min and compare the colour of the solution with that of a blank prepared in the same manner. The test solution is yellow and the blank is red.

E. Add about 2 mg to 2 ml of *sulphuric acid R* and shake to dissolve. Within 5 min, a deep reddish-brown colour develops. Add this solution to 10 ml of *water R* and mix. The colour is discharged and a clear solution remains.

TESTS

Specific optical rotation (*2.2.7*): + 118 to + 126 (dried substance).

Dissolve 0.125 g in *methanol R* and dilute to 25.0 ml with the same solvent.

Related substances. Liquid chromatography (*2.2.29*).

Test solution. Dissolve 25.0 mg of the substance to be examined in a mixture of equal volumes of *acetonitrile R* and *methanol R* and dilute to 10.0 ml with the same mixture of solvents.

Reference solution (a). Dissolve 2 mg of *betamethasone CRS* and 2 mg of *methylprednisolone CRS* in mobile phase A, then dilute to 100.0 ml with mobile phase A.

Reference solution (b). Dilute 1.0 ml of the test solution to 100.0 ml with mobile phase A.

Column:

– *size*: *l* = 0.25 m, Ø = 4.6 mm;

– *stationary phase*: *octadecylsilyl silica gel for chromatography R* (5 µm);

– *temperature*: 45 °C.

Mobile phase:

– *mobile phase A*: in a 1000 ml volumetric flask mix 250 ml of *acetonitrile R* with 700 ml of *water R* and allow to equilibrate; dilute to 1000 ml with *water R* and mix again;

– *mobile phase B*: *acetonitrile R*;

Time (min)	Mobile phase A (per cent *V/V*)	Mobile phase B (per cent *V/V*)
0 - 15	100	0
15 - 40	100 → 0	0 → 100
40 - 41	0 → 100	100 → 0
41 - 46	100	0

Flow rate: 2.5 ml/min.

Detection: spectrophotometer at 254 nm.

Equilibration: with mobile phase B for at least 30 min and then with mobile phase A for 5 min. For subsequent chromatograms, use the conditions described from 40 min to 46 min.

Injection: 20 µl; inject the mixture of equal volumes of *acetonitrile R* and *methanol R* as a blank.

Retention time: methylprednisolone = about 11.5 min; betamethasone = about 12.5 min.

System suitability: reference solution (a):

– *resolution*: minimum 1.5 between the peaks due to methylprednisolone and betamethasone; if necessary, adjust the concentration of acetonitrile in mobile phase A.

Limits:

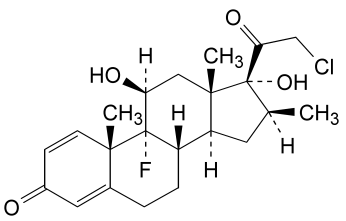
– *impurities A, B, C, D, E, F, G, H, I, J*: for each impurity, not more than the area of the principal peak in the chromatogram obtained with reference solution (b) (1.0 per cent), and not more than 1 such peak has an area greater than 0.5 times the area of the principal peak in the chromatogram obtained with reference solution (b) (0.5 per cent);
– *total*: not more than twice the area of the principal peak in the chromatogram obtained with reference solution (b) (2.0 per cent);
– *disregard limit*: 0.05 times the area of the principal peak in the chromatogram obtained with reference solution (b) (0.05 per cent).

Loss on drying (*2.2.32*): maximum 0.5 per cent, determined on 0.500 g by drying in an oven at 105 °C.

ASSAY

Dissolve 0.100 g in *ethanol (96 per cent) R* and dilute to 100.0 ml with the same solvent. Dilute 2.0 ml of this solution to 100.0 ml with *ethanol (96 per cent) R*. Measure the absorbance (*2.2.25*) at the absorption maximum at 238.5 nm.

Calculate the content of $C_{22}H_{29}FO_5$ taking the specific absorbance to be 395.



STORAGE

Protected from light.

BETAMETHASONE ACETATE

Betamethasoni acetas

$C_{24}H_{31}FO_6$ M_r 434.5
[987-24-6]

DEFINITION

9-Fluoro-11β,17-dihydroxy-16β-methyl-3,20-dioxopregna-1,4-diene-21-yl acetate.

Content: 97.0 per cent to 103.0 per cent (anhydrous substance).

CHARACTERS

Appearance: white or almost white, crystalline powder.

Solubility: practically insoluble in water, freely soluble in acetone, soluble in ethanol (96 per cent) and in methylene chloride.

It shows polymorphism (*5.9*).

IDENTIFICATION

First identification: B, C.

Second identification: A, C, D, E, F.

A. Dissolve 10.0 mg in *anhydrous ethanol R* and dilute to 100.0 ml with the same solvent. Place 2.0 ml of this solution in a ground-glass-stoppered tube, add 10.0 ml of *phenylhydrazine-sulphuric acid solution R*, mix and heat in a water-bath at 60 °C for 20 min. Cool immediately. The absorbance (*2.2.25*) measured at 419 nm is not greater than 0.10.

B. Infrared absorption spectrophotometry (*2.2.24*).

Comparison: *betamethasone acetate CRS.*

If the spectra obtained in the solid state show differences, dissolve the substance to be examined and the reference substance separately in the minimum volume of *methanol R*, evaporate to dryness on a water-bath and record new spectra using the residues.

C. Thin-layer chromatography (*2.2.27*).

Solvent mixture: *methanol R, methylene chloride R* (1:9 *V/V*).

Test solution. Dissolve 10 mg of the substance to be examined in the solvent mixture and dilute to 10 ml with the solvent mixture.

Reference solution (a). Dissolve 20 mg of *betamethasone acetate CRS* in the solvent mixture and dilute to 20 ml with the solvent mixture.

Reference solution (b). Dissolve 10 mg of *prednisolone acetate CRS* in reference solution (a) and dilute to 10 ml with reference solution (a).

Plate: *TLC silica gel F_{254} plate R.*

Mobile phase: add a mixture of 1.2 volumes of *water R* and 8 volumes of *methanol R* to a mixture of 15 volumes of *ether R* and 77 volumes of *methylene chloride R.*

Application: 5 µl.

Development: over a path of 15 cm.

Drying: in air.

Detection A: examine in ultraviolet light at 254 nm.

Results A: the principal spot in the chromatogram obtained with the test solution is similar in position and size to the principal spot in the chromatogram obtained with reference solution (a).

Detection B: spray with *alcoholic solution of sulphuric acid R*. Heat at 120 °C for 10 min or until the spots appear. Allow to cool. Examine in daylight and in ultraviolet light at 365 nm.

Results B: the principal spot in the chromatogram obtained with the test solution is similar in position, colour in daylight, fluorescence in ultraviolet light at 365 nm and size to the principal spot in the chromatogram obtained with reference solution (a).

System suitability: reference solution (b):

– the chromatogram shows 2 clearly separated spots.

D. Add about 2 mg to 2 ml of *sulphuric acid R* and shake to dissolve. Within 5 min, a deep reddish-brown colour develops. Add this solution to 10 ml of *water R* and mix. The colour is discharged and a clear solution remains.

E. Mix about 5 mg with 45 mg of *heavy magnesium oxide R* and ignite in a crucible until an almost white residue is obtained (usually less than 5 min). Allow to cool, add 1 ml of *water R*, 0.05 ml of *phenolphthalein solution R1* and about 1 ml of *dilute hydrochloric acid R* to render the solution colourless. Filter. To a freshly prepared mixture of 0.1 ml of *alizarin S solution R* and 0.1 ml of *zirconyl nitrate solution R*, add 1.0 ml of the filtrate. Mix, allow to stand for 5 min and compare the colour of the solution with that of a blank prepared in the same manner. The test solution is yellow and the blank is red.

F. About 10 mg gives the reaction of acetyl (*2.3.1*).

TESTS

Specific optical rotation (*2.2.7*): + 120 to + 128 (anhydrous substance).

Dissolve 0.250 g in *dioxan R* and dilute to 25.0 ml with the same solvent.

Related substances. Liquid chromatography (*2.2.29*).

Test solution. Dissolve 25.0 mg of the substance to be examined in 4 ml of *acetonitrile R* and dilute to 10.0 ml with the same solvent.

Reference solution (a). Dissolve 2 mg of *betamethasone acetate CRS* and 2 mg of *dexamethasone acetate CRS* (impurity B) in the mobile phase, then dilute to 100.0 ml with the mobile phase.

Reference solution (b). Dilute 1.0 ml of the test solution to 100.0 ml with the mobile phase.

Column:

– *size*: *l* = 0.25 m, Ø = 4.6 mm;
– *stationary phase*: *octadecylsilyl silica gel for chromatography R* (5 µm).

Mobile phase: in a 1000 ml volumetric flask mix 380 ml of *acetonitrile R* with 550 ml of *water R* and allow to equilibrate; dilute to 1000 ml with *water R* and mix again.

Flow rate: 1 ml/min.

Detection: spectrophotometer at 254 nm.

Equilibration: with the mobile phase for about 30 min.

Injection: 20 µl.

Run time: 2.5 times the retention time of betamethasone acetate.

Retention time: betamethasone acetate = about 19 min; impurity B = about 22 min.

System suitability: reference solution (a):

– *resolution*: minimum 3.3 between the peaks due to betamethasone acetate and impurity B; if necessary, adjust slightly the concentration of acetonitrile in the mobile phase.

Limits:

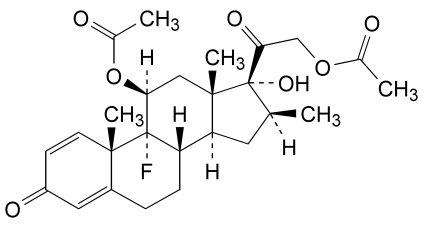
– *impurities A, B, C, D*: for each impurity, not more than 0.5 times the area of the principal peak in the chromatogram obtained with reference solution (b) (0.5 per cent);
– *total*: not more than 1.25 times the area of the principal peak in the chromatogram obtained with reference solution (b) (1.25 per cent);
– *disregard limit*: 0.05 times the area of the principal peak in the chromatogram obtained with reference solution (b) (0.05 per cent).

Water (*2.5.12*): maximum 4.0 per cent, determined on 0.100 g.

ASSAY

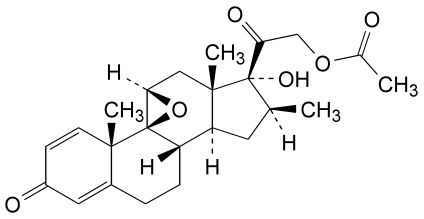
Dissolve 0.100 g in *ethanol (96 per cent) R* and dilute to 100.0 ml with the same solvent. Dilute 2.0 ml of this solution to 100.0 ml with *ethanol (96 per cent) R*. Measure the absorbance (*2.2.25*) at the absorption maximum at 240 nm.

Calculate the content of $C_{24}H_{31}FO_6$ taking the specific absorbance to be 350.



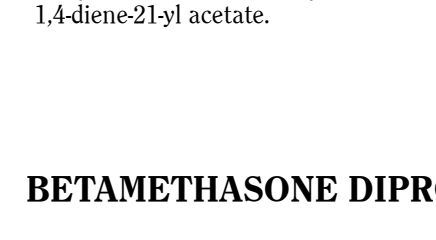
STORAGE

Protected from light.



IMPURITIES

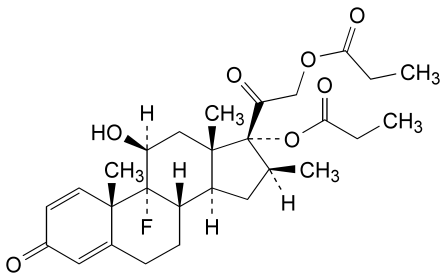
Specified impurities: *A, B, C, D.*



A. betamethasone,

B. dexamethasone acetate,

C. betamethasone 11,21-diacetate,



D. 9,11β-epoxy-17-hydroxy-16β-methyl-3,20-dioxo-9β-pregna-1,4-diene-21-yl acetate.

BETAMETHASONE DIPROPIONATE

Betamethasoni dipropionas

$C_{28}H_{37}FO_7$ M_r 504.6
[5593-20-4]

DEFINITION

9-Fluoro-11β-hydroxy-16β-methyl-3,20-dioxopregna-1,4-diene-17,21-diyl dipropanoate.

Content: 97.0 per cent to 103.0 per cent (dried substance).

CHARACTERS

Appearance: white or almost white, crystalline powder.

Solubility: practically insoluble in water, freely soluble in acetone and in methylene chloride, sparingly soluble in ethanol (96 per cent).

IDENTIFICATION

First identification: B, C.

Second identification: A, D, E, F.

A. Dissolve 10.0 mg in *anhydrous ethanol R* and dilute to 100.0 ml with the same solvent. Place 2.0 ml of this solution in a ground-glass-stoppered tube, add 10.0 ml of *phenylhydrazine-sulphuric acid solution R*, mix and heat in a water-bath at 60 °C for 20 min. Cool immediately. The absorbance (*2.2.25*) measured at 419 nm is not more than 0.10.

B. Infrared absorption spectrophotometry (*2.2.24*).
Comparison: *betamethasone dipropionate CRS.*

C. Thin-layer chromatography (*2.2.27*).

Solvent mixture: *methanol R, methylene chloride R* (1:9 *V/V*).

Test solution. Dissolve 10 mg of the substance to be examined in the solvent mixture and dilute to 10 ml with the solvent mixture.

Reference solution (a). Dissolve 10 mg of *betamethasone dipropionate CRS* in the solvent mixture and dilute to 10 ml with the solvent mixture.

Reference solution (b). Dissolve 10 mg of *desoxycortone acetate CRS* in the solvent mixture and dilute to 10 ml with the solvent mixture. Dilute 5 ml of this solution to 10 ml with reference solution (a).

Plate: *TLC silica gel F_{254} plate R.*

Mobile phase: add a mixture of 1.2 volumes of *water R* and 8 volumes of *methanol R* to a mixture of 15 volumes of *ether R* and 77 volumes of *methylene chloride R.*

Application: 5 µl.

Development: over a path of 15 cm.

Drying: in air.

Detection A: examine in ultraviolet light at 254 nm.

Results A: the principal spot in the chromatogram obtained with the test solution is similar in position and size to the principal spot in the chromatogram obtained with reference solution (a).

Detection B: spray with *alcoholic solution of sulphuric acid R.* Heat at 120 °C for 10 min or until the spots appear. Allow to cool. Examine in daylight and in ultraviolet light at 365 nm.

Results B: the principal spot in the chromatogram obtained with the test solution is similar in position, colour in daylight, fluorescence in ultraviolet light at 365 nm and size to the principal spot in the chromatogram obtained with reference solution (a).

System suitability: reference solution (b):

– the chromatogram shows 2 clearly separated spots.

D. Thin-layer chromatography (*2.2.27*).

Test solution (a). Dissolve 25 mg of the substance to be examined in *methanol R* with gentle heating and dilute to 5 ml with the same solvent (solution A). Dilute 2 ml of this solution to 10 ml with *methylene chloride R.*

Test solution (b). Transfer 2 ml of solution A to a 15 ml glass tube with a ground-glass stopper or a polytetrafluoroethylene cap. Add 10 ml of *saturated methanolic potassium hydrogen carbonate solution R* and immediately pass a current of *nitrogen R* briskly through the solution for 5 min. Stopper the tube. Heat in a water-bath at 45 °C, protected from light, for 2 h. Allow to cool.

Reference solution (a). Dissolve 25 mg of *betamethasone dipropionate CRS* in *methanol R* with gentle heating and dilute to 5 ml with the same solvent (solution B). Dilute 2 ml of this solution to 10 ml with *methylene chloride R.*

Reference solution (b). Transfer 2 ml of solution B to a 15 ml glass tube with a ground-glass stopper or a polytetrafluoroethylene cap. Add 10 ml of *saturated methanolic potassium hydrogen carbonate solution R* and immediately pass a current of *nitrogen R* briskly through the solution for 5 min. Stopper the tube. Heat in a water-bath at 45 °C, protected from light, for 2 h. Allow to cool.

Plate: *TLC silica gel F_{254} plate R.*

Mobile phase: add a mixture of 1.2 volumes of *water R* and 8 volumes of *methanol R* to a mixture of 15 volumes of *ether R* and 77 volumes of *methylene chloride R.*

Application: 5 µl.

Development: over a path of 15 cm.

Drying: in air.

Detection A: examine in ultraviolet light at 254 nm.

Results A: the principal spot in each of the chromatograms obtained with the test solutions is similar in position and size to the principal spot in the chromatogram obtained with the corresponding reference solution.

Detection B: spray with *alcoholic solution of sulphuric acid R.* Heat at 120 °C for 10 min or until the spots appear. Allow to cool. Examine in daylight and in ultraviolet light at 365 nm.

Results B: the principal spot in each of the chromatograms obtained with the test solutions is similar in position, colour in daylight, fluorescence in ultraviolet light at 365 nm and size to the principal spot in the chromatogram obtained with the corresponding reference solution. The principal spot in each of the chromatograms obtained with test solution (b) and reference solution (b) has an R_F value distinctly lower than that of the principal spots in each of the chromatograms obtained with test solution (a) and reference solution (a).

E. Add about 2 mg to 2 ml of *sulphuric acid R* and shake to dissolve. Within 5 min, a deep reddish-brown colour develops. Add this solution to 10 ml of *water R* and mix. The colour is discharged and a clear solution remains.

F. Mix about 5 mg with 45 mg of *heavy magnesium oxide R* and ignite in a crucible until an almost white residue is obtained (usually less than 5 min). Allow to cool, add 1 ml of *water R*, 0.05 ml of *phenolphthalein solution R1* and about 1 ml of *dilute hydrochloric acid R* to render the solution colourless. Filter. Add 1.0 ml of the filtrate to a freshly prepared mixture of 0.1 ml of *alizarin S solution R* and 0.1 ml of *zirconyl nitrate solution R.* Mix, allow to stand for 5 min and compare the colour of the solution with that of a blank prepared in the same manner. The test solution is yellow and the blank is red.

TESTS

Specific optical rotation (*2.2.7*): + 63 to + 70 (dried substance).

Dissolve 0.250 g in *dioxan R* and dilute to 25.0 ml with the same solvent.

Related substances. Liquid chromatography (*2.2.29*).

Test solution. Dissolve 62.5 mg of the substance to be examined in the mobile phase and dilute to 25.0 ml with the mobile phase.

Reference solution (a). Dissolve 2.5 mg of *betamethasone dipropionate CRS* and 2.5 mg of *anhydrous beclometasone dipropionate CRS* in the mobile phase and dilute to 50.0 ml with the same solvent.

Reference solution (b). Dilute 1.0 ml of the test solution to 50.0 ml with the mobile phase.

Column:

– *size*: *l* = 0.25 m, Ø = 4.6 mm;

– *stationary phase*: *octadecylsilyl silica gel for chromatography R* (5 µm).

Mobile phase: mix carefully 350 ml of *water R* with 600 ml of *acetonitrile R* and allow to equilibrate; dilute to 1000 ml with *water R* and mix again.

Flow rate: 1 ml/min.

Detection: spectrophotometer at 254 nm.

Equilibration: with the mobile phase for about 45 min.

Injection: 20 µl.

Run time: 2.5 times the retention time of betamethasone dipropionate.

Retention time: betamethasone diproponiate = about 9 min; beclometasone dipropionate = about 10.7 min.

System suitability: reference solution (a):

– *resolution*: minimum 2.5 between the peaks due to betamethasone dipropionate and beclometasone dipropionate; if necessary, adjust the concentration of acetonitrile in the mobile phase.

Limits:

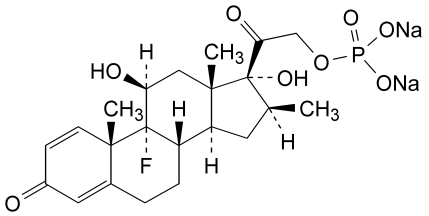
– *any impurity*: for each impurity, not more than 0.75 times the area of the principal peak in the chromatogram obtained with reference solution (b) (1.5 per cent), and not more than 1 such peak has an area greater than 0.5 times the area of the principal peak in the chromatogram obtained with reference solution (b) (1 per cent);
– *total*: not more than 1.25 times the area of the principal peak in the chromatogram obtained with reference solution (b) (2.5 per cent);
– *disregard limit*: 0.025 times the area of the principal peak in the chromatogram obtained with reference solution (b) (0.05 per cent).

Loss on drying (*2.2.32*): maximum 1.0 per cent, determined on 0.500 g by drying in an oven at 105 °C.

ASSAY

Dissolve 50.0 mg in *ethanol (96 per cent) R* and dilute to 100.0 ml with the same solvent. Dilute 2.0 ml of this solution to 50.0 ml with *ethanol (96 per cent) R*. Measure the absorbance (*2.2.25*) at the absorption maximum at 240 nm.

Calculate the content of $C_{28}H_{37}FO_7$ taking the specific absorbance to be 305.



STORAGE

Protected from light.

BETAMETHASONE SODIUM PHOSPHATE

Betamethasoni natrii phosphas

$C_{22}H_{28}FNa_2O_8P$ M_r 516.4
[151-73-5]

DEFINITION

9-Fluoro-11β,17-dihydroxy-16β-methyl-3,20-dioxopregna-1,4-diene-21-yl disodium phosphate.

Content: 96.0 per cent to 103.0 per cent (anhydrous substance).

CHARACTERS

Appearance: white or almost white powder, very hygroscopic.

Solubility: freely soluble in water, slightly soluble in ethanol (96 per cent), practically insoluble in methylene chloride.

IDENTIFICATION

First identification: B, C.

Second identification: A, C, D, E, F.

A. Dissolve 10.0 mg in 5 ml of *water R* and dilute to 100.0 ml with *anhydrous ethanol R*. Place 2.0 ml of this solution in a ground-glass-stoppered tube, add 10.0 ml of *phenylhydrazine-sulphuric acid solution R*, mix and heat in a water-bath at 60 °C for 20 min. Cool immediately. The absorbance (*2.2.25*) measured at the absorption maximum at 450 nm is not more than 0.10.

B. Infrared absorption spectrophotometry (*2.2.24*).

Comparison: *betamethasone sodium phosphate CRS*.

If the spectra obtained in the solid state show differences, dissolve the substance to be examined and the reference substance separately in the minimum volume of *ethanol (96 per cent) R*, evaporate to dryness on a water-bath and record new spectra using the residues.

C. Thin-layer chromatography (*2.2.27*).

Test solution. Dissolve 10 mg of the substance to be examined in *methanol R* and dilute to 10 ml with the same solvent.

Reference solution (a). Dissolve 10 mg of *betamethasone sodium phosphate CRS* in *methanol R* and dilute to 10 ml with the same solvent.

Reference solution (b). Dissolve 10 mg of *prednisolone sodium phosphate CRS* in *methanol R* and dilute to 10 ml with the same solvent. Dilute 5 ml of this solution to 10 ml with reference solution (a).

Plate: *TLC silica gel F_{254} plate R*.

Mobile phase: *glacial acetic acid R, water R, butanol R* (20:20:60 *V/V/V*).

Application: 5 µl.

Development: over a path of 15 cm.

Drying: in air.

Detection A: examine in ultraviolet light at 254 nm.

Results A: the principal spot in the chromatogram obtained with the test solution is similar in position and size to the principal spot in the chromatogram obtained with reference solution (a).

Detection B: spray with *alcoholic solution of sulphuric acid R*. Heat at 120 °C for 10 min or until the spots appear. Allow to cool. Examine in daylight and in ultraviolet light at 365 nm.

Results B: the principal spot in the chromatogram obtained with the test solution is similar in position, colour in daylight, fluorescence in ultraviolet light at 365 nm and size to the principal spot in the chromatogram obtained with reference solution (a).

System suitability: reference solution (b):

– the chromatogram shows 2 spots which may, however, not be completely separated.

D. Add about 2 mg to 2 ml of *sulphuric acid R* and shake to dissolve. Within 5 min, an intense reddish-brown colour develops. Add the solution to 10 ml of *water R* and mix. The colour is discharged and a clear solution remains.

E. Mix about 5 mg with 45 mg of *heavy magnesium oxide R* and ignite in a crucible until an almost white residue is obtained (usually less than 5 min). Allow to cool, add 1 ml of *water R*, 0.05 ml of *phenolphthalein solution R1* and about 1 ml of *dilute hydrochloric acid R* to render the solution colourless. Filter. Add 1.0 ml of the filtrate to a freshly prepared mixture of 0.1 ml of *alizarin S solution R* and 0.1 ml of *zirconyl nitrate solution R*. Mix, allow to stand for 5 min and compare the colour of the solution with that of a blank prepared in the same manner. The test solution is yellow and the blank is red.

F. To about 40 mg add 2 ml of *sulphuric acid R* and heat gently until white fumes are evolved. Add *nitric acid R* dropwise, continue the heating until the solution is almost colourless and cool. Add 2 ml of *water R*, heat until white fumes are again evolved, cool, add 10 ml of *water R* and neutralise to *red litmus paper R* with *dilute ammonia R1*. The solution gives reaction (a) of sodium (*2.3.1*) and reaction (b) of phosphates (*2.3.1*).

TESTS

Solution S. Dissolve 1.0 g in *carbon dioxide-free water R* and dilute to 20 ml with the same solvent.

Appearance of solution. Solution S is clear (*2.2.1*) and not more intensely coloured than reference solution B_7 (*2.2.2, Method II*).

pH (*2.2.3*): 7.5 to 9.0.

Dilute 1 ml of solution S to 5 ml with *carbon dioxide-free water R*.

Specific optical rotation (*2.2.7*): + 98 to + 104 (anhydrous substance).

Dissolve 0.250 g in *water R* and dilute to 25.0 ml with the same solvent.

Related substances. Liquid chromatography (*2.2.29*).

Test solution. Dissolve 62.5 mg of the substance to be examined in the mobile phase and dilute to 25.0 ml with the mobile phase.

Reference solution (a). Dissolve 25 mg of *betamethasone sodium phosphate CRS* and 25 mg of *dexamethasone sodium phosphate CRS* in the mobile phase and dilute to 25.0 ml with the mobile phase. Dilute 1.0 ml of this solution to 25.0 ml with the mobile phase.

Reference solution (b). Dilute 1.0 ml of the test solution to 50.0 ml with the mobile phase.

Column:

– *size*: *l* = 0.25 m, Ø = 4.6 mm;

– *stationary phase*: *octadecylsilyl silica gel for chromatography R* (5 µm).

Mobile phase: in a 250 ml conical flask, weigh 1.360 g of *potassium dihydrogen phosphate R* and 0.600 g of *hexylamine R*, mix and allow to stand for 10 min and then dissolve in 185 ml of *water R*; add 65 ml of *acetonitrile R*, mix and filter (0.45 µm).

Flow rate: 1 ml/min.

Detection: spectrophotometer at 254 nm.

Equilibration: with the mobile phase for about 45 min.

Injection: 20 µl.

Run time: twice the retention time of betamethasone sodium phosphate.

Retention time: betamethasone sodium phosphate = about 14 min; dexamethasone sodium phosphate = about 15.5 min.

System suitability: reference solution (a):

– *resolution*: minimum 2.0 between the peaks due to betamethasone sodium phosphate and dexamethasone sodium phosphate; if necessary, increase the concentration of acetonitrile or increase the concentration of water in the mobile phase.

Limits:

– *any impurity*: for each impurity, not more than the area of the principal peak in the chromatogram obtained with reference solution (b) (2 per cent), and not more than 1 such peak has an area greater than 0.5 times the area of the principal peak in the chromatogram obtained with reference solution (b) (1 per cent);

– *total*: not more than 1.5 times the area of the principal peak in the chromatogram obtained with reference solution (b) (3 per cent);

– *disregard limit*: 0.025 times the area of the principal peak in the chromatogram obtained with reference solution (b) (0.05 per cent).

Inorganic phosphate: maximum 1 per cent.

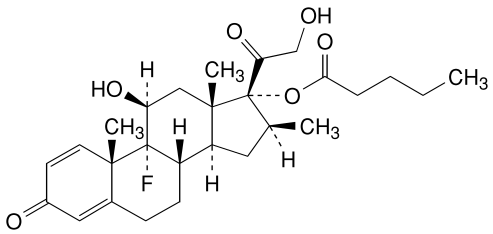
Dissolve 50 mg in *water R* and dilute to 100 ml with the same solvent. To 10 ml of this solution add 5 ml of *molybdovanadic reagent R*, mix and allow to stand for 5 min. Any yellow colour in the solution is not more intense than that in a standard prepared at the same time and in the same manner using 10 ml of *phosphate standard solution (5 ppm PO_4) R*.

Water (*2.5.12*): maximum 8.0 per cent, determined on 0.200 g.

ASSAY

Dissolve 0.100 g in *water R* and dilute to 100.0 ml with the same solvent. Dilute 5.0 ml of this solution to 250.0 ml with *water R*. Measure the absorbance (*2.2.25*) at the absorption maximum at 241 nm.

Calculate the content of $C_{22}H_{28}FNa_2O_8P$ taking the specific absorbance to be 297.



STORAGE

In an airtight container, protected from light.

corrected 6.0

BETAMETHASONE VALERATE

Betamethasoni valeras

$C_{27}H_{37}FO_6$ M_r 476.6
[2152-44-5]

DEFINITION

Betamethasone valerate contains not less than 97.0 per cent and not more than the equivalent of 103.0 per cent of 9-fluoro-11β,21-dihydroxy-16β-methyl-3,20-dioxopregna-1,4-dien-17-yl pentanoate, calculated with reference to the dried substance.

CHARACTERS

A white or almost white, crystalline powder, practically insoluble in water, freely soluble in acetone and in methylene chloride, soluble in ethanol (96 per cent).

It melts at about 192 °C, with decomposition.

IDENTIFICATION

First identification: C, D.

Second identification: A, B, E, F, G.

A. It complies with the test for specific optical rotation (see Tests).

B. Dissolve 10.0 mg in *anhydrous ethanol R* and dilute to 100.0 ml with the same solvent. Place 2.0 ml of this solution in a ground-glass-stoppered tube, add 10.0 ml of *phenylhydrazine-sulphuric acid solution R*, mix and heat in a water-bath at 60 °C for 20 min. Cool immediately. The absorbance (*2.2.25*) of the solution measured at 419 nm is not more than 0.10.

C. Examine by infrared absorption spectrophotometry (*2.2.24*), comparing with the spectrum obtained with *betamethasone 17-valerate CRS*. If the spectra obtained in the solid state show differences, dissolve the substance to be examined and the reference substance separately in the minimum volume of *chloroform R*, evaporate to dryness on a water-bath and record new spectra using the residues.

D. Examine by thin-layer chromatography (*2.2.27*), using as the coating substance a suitable silica gel with a fluorescent indicator having an optimal intensity at 254 nm.

Test solution. Dissolve 10 mg of the substance to be examined in a mixture of 1 volume of *methanol R* and 9 volumes of *methylene chloride R* and dilute to 10 ml with the same mixture of solvents.

Reference solution (a). Dissolve 10 mg of *betamethasone 17-valerate CRS* in a mixture of 1 volume of *methanol R* and 9 volumes of *methylene chloride R* and dilute to 10 ml with the same mixture of solvents.

Reference solution (b). Dissolve 5 mg of *betamethasone 21-valerate CRS* in a mixture of 1 volume of *methanol R* and 9 volumes of *methylene chloride R* and dilute to 5 ml with the same mixture of solvents, then dilute to 10 ml with reference solution (a).

Apply to the plate 5 µl of each solution. Prepare the mobile phase by adding a mixture of 1.2 volumes of *water R* and 8 volumes of *methanol R* to a mixture of 15 volumes of *ether R* and 77 volumes of *methylene chloride R*. Develop over a path of 15 cm. Allow the plate to dry in air and examine in ultraviolet light at 254 nm. The principal spot in the chromatogram obtained with the test solution is similar in position and size to the principal spot in the chromatogram obtained with reference solution (a). Spray the plate with *alcoholic solution of sulphuric acid R*. Heat at 120 °C for 10 min or until the spots appear. Allow to cool. Examine in daylight and in ultraviolet light at 365 nm. The principal spot in the chromatogram obtained with the test solution is similar in position, colour in daylight, fluorescence in ultraviolet light at 365 nm and size to the principal spot in the chromatogram obtained with reference solution (a). The test is not valid unless the chromatogram obtained with reference solution (b) shows 2 clearly separated spots.

E. Examine by thin-layer chromatography (*2.2.27*), using as the coating substance a suitable silica gel with a fluorescent indicator having an optimal intensity at 254 nm.

Test solution (a). Dissolve 25 mg of the substance to be examined in *methanol R* with gentle heating and dilute to 5 ml with the same solvent. This solution is also used to prepare test solution (b). Dilute 2 ml of the solution to 10 ml with *methylene chloride R*.

Test solution (b). Transfer 2 ml of the solution obtained during preparation of test solution (a) to a 15 ml glass tube with a ground-glass stopper or a polytetrafluoroethylene cap. Add 10 ml of *saturated methanolic potassium hydrogen carbonate solution R* and immediately pass a current of *nitrogen R* briskly through the solution for 5 min. Stopper the tube. Heat in a water-bath at 45 °C, protected from light, for 3 h. Allow to cool.

Reference solution (a). Dissolve 25 mg of *betamethasone 17-valerate CRS* in *methanol R* with gentle heating and dilute to 5 ml with the same solvent. This solution is also used to prepare reference solution (b). Dilute 2 ml of the solution to 10 ml with *methylene chloride R*.

Reference solution (b). Transfer 2 ml of the solution obtained during preparation of reference solution (a) to a 15 ml glass tube with a ground glass-stopper or a polytetrafluoroethylene cap. Add 10 ml of *saturated methanolic potassium hydrogen carbonate solution R* and immediately pass a current of *nitrogen R* briskly through the solution for 5 min. Stopper the tube. Heat in a water-bath at 45 °C, protected from light, for 3 h. Allow to cool.

Apply to the plate 5 µl of each solution. Prepare the mobile phase by adding a mixture of 1.2 volumes of *water R* and 8 volumes of *methanol R* to a mixture of 15 volumes of *ether R* and 77 volumes of *methylene chloride R*. Develop over a path of 15 cm. Allow the plate to dry in air and examine under ultraviolet light at 254 nm. The principal spot in each of the chromatograms obtained with the test solutions is similar in position and size to the principal spot in the chromatogram obtained with the corresponding reference solution. Spray with *alcoholic solution of sulphuric acid R*. Heat at 120 °C for 10 min or until the spots appear. Allow to cool. Examine in daylight and in ultraviolet light at 365 nm. The principal spot in each of the chromatograms obtained with the test solutions is similar in position, colour in daylight, fluorescence in ultraviolet light at 365 nm and size to the principal spot in the chromatograms obtained with the corresponding reference solution. The principal spot in each of the chromatograms obtained with test solution (b) and reference solution (b) has an R_F value distinctly lower than that of the principal spots in each of the chromatograms obtained with test solution (a) and reference solution (a).

F. Add about 2 mg to 2 ml of *sulphuric acid R* and shake to dissolve. Within 5 min, a deep reddish-brown colour develops. Add the solution to 10 ml of *water R* and mix. The colour is discharged and a clear solution remains.

G. Mix about 5 mg with 45 mg of *heavy magnesium oxide R* and ignite in a crucible until an almost white residue is obtained (usually less than 5 min). Allow to cool, add 1 ml of *water R*, 0.05 ml of *phenolphthalein solution R1* and about 1 ml of *dilute hydrochloric acid R* to render the solution colourless. Filter. Add 1.0 ml of the filtrate to a freshly prepared mixture of 0.1 ml of *alizarin S solution R* and 0.1 ml of *zirconyl nitrate solution R*. Mix, allow to stand for 5 min and compare the colour of the solution with that of a blank prepared in the same manner. The test solution is yellow and the blank solution is red.

TESTS

Specific optical rotation (*2.2.7*). Dissolve 0.250 g in *dioxan R* and dilute to 25.0 ml with the same solvent. The specific optical rotation is + 75 to + 82, calculated with reference to the dried substance.

Related substances. Examine by liquid chromatography (*2.2.29*).

Solution A. To 1000 ml of the mobile phase add 1 ml of *glacial acetic acid R* and mix carefully.

Test solution. Dissolve 62.5 mg of the substance to be examined in solution A and dilute to 25.0 ml with solution A.

Reference solution (a). Dissolve 2 mg of *betamethasone 17-valerate CRS* and 2 mg of *betamethasone 21-valerate CRS* in solution A and dilute to 50.0 ml with solution A.

Reference solution (b). Dilute 1.0 ml of the test solution to 50.0 ml with solution A.

The chromatographic procedure may be carried out using:

– a stainless steel column 0.25 m long and 4.6 mm in internal diameter packed with *octadecylsilyl silica gel for chromatography R* (5 µm);

– as mobile phase at a flow rate of 1 ml/min a mixture prepared as follows: mix 350 ml of *water R* with 600 ml of *acetonitrile R* and allow to equilibrate; adjust the volume to 1000 ml with *water R* and mix again;

– as detector a spectrophotometer set at 254 nm.

Equilibrate the column with the mobile phase for about 45 min.

Adjust the sensitivity so that the height of the principal peak in the chromatogram obtained with reference solution (b) is 70 per cent to 90 per cent of the full scale of the recorder.

Inject 20 µl of reference solution (a). When the chromatograms are recorded in the prescribed conditions, the retention times are: betamethasone 17-valerate, about 7 min; betamethasone 21-valerate, about 9 min. The test is not valid unless the resolution between the peaks due to betamethasone 17-valerate and betamethasone 21-valerate is at least 5.0; if necessary, adjust the concentration of acetonitrile in the mobile phase.

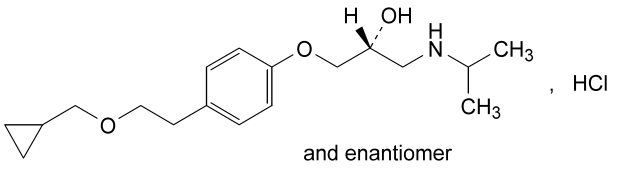
Inject 20 µl of the test solution and 20 µl of reference solution (b). Continue the chromatography for 2.5 times the retention time of the principal peak. In the chromatogram obtained with the test solution: the area of any peak apart from the principal peak is not greater than 0.75 times the area of the principal peak in the chromatogram obtained with reference solution (b) (1.5 per cent) and not more than one such peak has an area greater than half the area of the principal peak in the chromatogram obtained with reference solution (b) (1.0 per cent); the sum of the areas of all the peaks, apart from the principal peak, is not greater than 1.5 times the area of the principal peak in the chromatogram obtained with reference solution (b) (3.0 per cent). Disregard any peak with an area less than 0.025 times the area of the principal peak in the chromatogram obtained with reference solution (b).

Loss on drying (*2.2.32*). Not more than 0.5 per cent, determined on 1.000 g by drying in an oven at 105 °C.

ASSAY

Dissolve 50.0 mg in *ethanol (96 per cent) R* and dilute to 100.0 ml with the same solvent. Dilute 2.0 ml of the solution to 50.0 ml with *ethanol (96 per cent) R* . Measure the absorbance (*2.2.25*) at the maximum at 240 nm.

Calculate the content of $C_{27}H_{37}FO_6$ taking the specific absorbance to be 325.



STORAGE

Protected from light.

BETAXOLOL HYDROCHLORIDE

Betaxololi hydrochloridum

$C_{18}H_{30}ClNO_3$ M_r 343.9
[63659-19-8]

DEFINITION

(2*RS*)-1-[4-[2-(Cyclopropylmethoxy)ethyl]phenoxy]-3-[(1-methylethyl)amino]propan-2-ol hydrochloride.

Content: 98.5 per cent to 101.5 per cent (dried substance).

CHARACTERS

Appearance: white or almost white, crystalline powder.

Solubility: very soluble in water, freely soluble in ethanol (96 per cent), soluble in methylene chloride.

IDENTIFICATION

First identification: B, D.

Second identification: A, C, D.

A. Melting point (*2.2.14*): 113 °C to 117 °C.

B. Infrared absorption spectrophotometry (*2.2.24*).
Comparison: *betaxolol hydrochloride CRS.*

C. Thin-layer chromatography (*2.2.27*).
Test solution. Dissolve 10 mg of the substance to be examined in 1 ml of *methanol R.*
Reference solution (a). Dissolve 20 mg of *betaxolol hydrochloride CRS* in 2 ml of *methanol R.*
Reference solution (b). Dissolve 10 mg of *oxprenolol hydrochloride CRS* in 1 ml of reference solution (a).
Plate: *TLC octadecylsilyl silica gel F_{254} plate R.*
Mobile phase: *perchloric acid R, methanol R, water R* (0.5:50:50 *V/V/V*).
Application: 2 µl.
Development: over a path of 10 cm.
Drying: in air.
System suitability: reference solution (b):
– the chromatogram shows 2 clearly separated spots.
Detection A: examine in ultraviolet light at 254 nm.
Results A: the principal spot in the chromatogram obtained with the test solution is similar in position and size to the principal spot in the chromatogram obtained with reference solution (a).
Detection B: spray with a 50 g/l solution of *vanillin R* in a mixture of 5 volumes of *sulphuric acid R,* 10 volumes of *glacial acetic acid R* and 85 volumes of *methanol R.* Heat at 100-105 °C until the colour of the spots reaches maximum intensity (10-15 min). Examine in daylight.
Results B: the principal spot in the chromatogram obtained with the test solution is similar in position, colour and size to the principal spot in the chromatogram obtained with reference solution (a).

D. It gives reaction (a) of chlorides (*2.3.1*).

TESTS

Appearance of solution. The solution is clear (*2.2.1*) and colourless (*2.2.2, Method II*).

Dissolve 0.5 g in *water R* and dilute to 25 ml with the same solvent.

Acidity or alkalinity. Dissolve 0.20 g in *carbon dioxide-free water R* and dilute to 20 ml with the same solvent. Add 0.2 ml of *methyl red solution R* and 0.2 ml of *0.01 M hydrochloric acid*. The solution is red. Add 0.4 ml of *0.01 M sodium hydroxide*. The solution is yellow.

Related substances. Liquid chromatography (*2.2.29*).

Test solution. Dissolve 10.0 mg of the substance to be examined in the mobile phase and dilute to 5.0 ml with the mobile phase.

Reference solution (a). Dissolve 8 mg of the substance to be examined and 4 mg of *betaxolol impurity A CRS* in 20.0 ml of the mobile phase.

Reference solution (b). Dilute 1.0 ml of the test solution to 100.0 ml with the mobile phase.

Column:

– *size*: *l* = 0.25 m, Ø = 4 mm;
– *stationary phase*: *octylsilyl silica gel for chromatography R* (5 µm).

Mobile phase: mix 175 ml of *acetonitrile R* with 175 ml of *methanol R* and dilute the mixture to 1 litre with a 3.4 g/l solution of *potassium dihydrogen phosphate R*, previously adjusted to pH 3.0 with *phosphoric acid R*.

Flow rate: 1.5 ml/min.

Detection: spectrophotometer at 273 nm.

Injection: 20 µl.

Run time: 4 times the retention time of betaxolol.

System suitability: reference solution (a):

– *resolution*: minimum 2.0 between the peaks due to impurity A and betaxolol.

Limits:

– *impurities A, B, C, D, E*: for each impurity, not more than 0.3 times the area of the peak in the chromatogram obtained with reference solution (b) (0.3 per cent);
– *total*: not more than the area of the peak in the chromatogram obtained with reference solution (b) (1.0 per cent);
– *disregard limit*: 0.025 times the area of the peak in the chromatogram obtained with reference solution (b) (0.025 per cent).

Heavy metals (*2.4.8*): maximum 10 ppm.

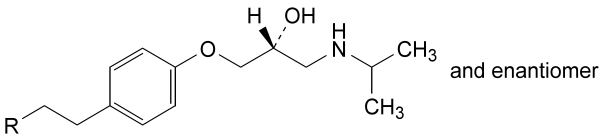
Dissolve 2.0 g in 20 ml of *water R*. 12 ml of the solution complies with test A. Prepare the reference solution using 10 ml of *lead standard solution (1 ppm Pb) R*.

Loss on drying (*2.2.32*): maximum 0.5 per cent, determined on 1.000 g by drying in an oven at 105 °C.

Sulphated ash (*2.4.14*): maximum 0.1 per cent, determined on 1.0 g.

ASSAY

Dissolve 0.300 g in a mixture of 10.0 ml of *0.01 M hydrochloric acid* and 50 ml of *ethanol (96 per cent) R*. Carry out a potentiometric titration (*2.2.20*), using *0.1 M sodium hydroxide*. Read the volume added between the 2 points of inflexion.

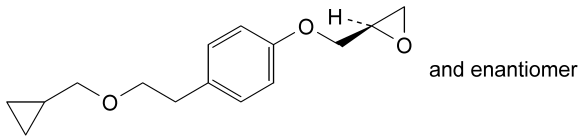


1 ml of *0.1 M sodium hydroxide* is equivalent to 34.39 mg of $C_{18}H_{30}ClNO_3$.

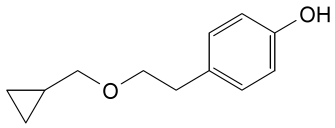
STORAGE

Protected from light.

IMPURITIES



Specified impurities: *A, B, C, D, E.*

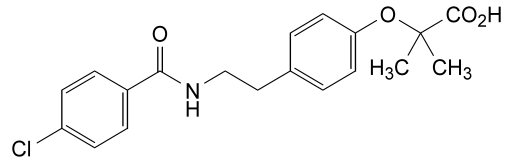


A. R = H: (2*RS*)-1-(4-ethylphenoxy)-3-[(1-methylethyl)-amino]propan-2-ol,

B. R = OH: (2*RS*)-1-[4-(2-hydroxyethyl)phenoxy]-3-[(1-methylethyl)amino]propan-2-ol,

E. R = O-CH_2-CH_2-CH_2-CH_3: (2*RS*)-1-[4-(2-butoxyethyl)-phenoxy]-3-[(1-methylethyl)amino]propan-2-ol,

C. 2-[[4-[2-(cyclopropylmethoxy)ethyl]phenoxy]methyl]-oxirane,



D. 4-[2-(cyclopropylmethoxy)ethyl]phenol.

corrected 6.0

BEZAFIBRATE

Bezafibratum

$C_{19}H_{20}ClNO_4$ M_r 361.8

[41859-67-0]

DEFINITION

2-[4-[2-[(4-Chlorobenzoyl)amino]ethyl]phenoxy]-2-methylpropanoic acid.

Content: 98.0 per cent to 102.0 per cent (dried substance).

CHARACTERS

Appearance: white or almost white crystalline powder.

Solubility: practically insoluble in water, freely soluble in dimethylformamide, sparingly soluble in acetone and in ethanol (96 per cent). It dissolves in dilute solutions of alkali hydroxides.

It shows polymorphism (*5.9*).

IDENTIFICATION

First identification: A, B.

Second identification: A, C.

A. Melting point (*2.2.14*): 181 °C to 185 °C.

B. Infrared absorption spectrophotometry (*2.2.24*).

Preparation: discs.

Comparison: *bezafibrate CRS*.

If the spectra obtained show differences, dissolve the substance to be examined and the reference substance separately in *methanol R* and evaporate to dryness. Dry the residues *in vacuo* at 80 °C for 1 h and record new spectra using the residues.

C. Thin-layer chromatography (*2.2.27*).

Test solution. Dissolve 10 mg of the substance to be examined in *methanol R* and dilute to 5 ml with the same solvent.

Reference solution. Dissolve 10 mg of *bezafibrate CRS* in *methanol R* and dilute to 5 ml with the same solvent.

Plate: *TLC silica gel F_{254} plate R*.

Mobile phase: *glacial acetic acid R, methyl ethyl ketone R, xylene R* (2.7:30:60 *V/V/V*).

Application: 5 µl.

Development: over a path of 10 cm.

Drying: at 120 °C for at least 15 min.

Detection: examine in ultraviolet light at 254 nm.

Results: the principal spot in the chromatogram obtained with the test solution is similar in position and size to the principal spot in the chromatogram obtained with the reference solution.

TESTS

Solution S. Dissolve 1.0 g in *dimethylformamide R* and dilute to 20 ml with the same solvent.

Appearance of solution. Solution S is clear (*2.2.1*) and not more intensely coloured than reference solution BY_5 (*2.2.2, Method II*).

Related substances. Liquid chromatography (*2.2.29*).

Test solution. Dissolve 50.0 mg of the substance to be examined in the mobile phase and dilute to 100.0 ml with the mobile phase.

Reference solution (a). Dilute 10.0 ml of the test solution to 100.0 ml with the mobile phase. Dilute 5.0 ml of this solution to 100.0 ml with the mobile phase.

Reference solution (b). Dilute 5.0 ml of reference solution (a) to 50.0 ml with the mobile phase.

Reference solution (c). To 1 ml of the test solution, add 1 ml of *0.1 M hydrochloric acid* and evaporate to dryness on a hot plate. Dissolve the residue in 20 ml of the mobile phase.

Column:

– *size*: *l* = 0.125 m, Ø = 4 mm;
– *stationary phase*: *octadecylsilyl silica gel for chromatography R* (5 µm).

Mobile phase: mix 40 volumes of a 2.72 g/l solution of *potassium dihydrogen phosphate R* adjusted to pH 2.3 with *phosphoric acid R*, and 60 volumes of *methanol R*.

Flow rate: 1 ml/min.

Detection: spectrophotometer at 228 nm.

Injection: 20 µl.

Run time: the time necessary to detect the ester, which, depending on the route of synthesis, may be impurity C, D or E.

Retention time: impurity A = about 3 min; impurity B = about 3.5 min; bezafibrate = about 6.0 min; impurity C = about 9 min; impurity D = about 14 min; impurity E = about 37 min.

System suitability:

– *resolution*: minimum 5.0 between the 2 principal peaks in the chromatogram obtained with reference solution (c);
– *signal-to-noise ratio*: minimum 5 for the principal peak in the chromatogram obtained with reference solution (b).

Limits:

– *impurities A, B, C, D, E*: for each impurity, not more than the area of the principal peak in the chromatogram obtained with reference solution (a) (0.5 per cent);
– *total*: not more than 1.5 times the area of the principal peak in the chromatogram obtained with reference solution (a) (0.75 per cent);
– *disregard limit*: 0.1 times the area of the principal peak in the chromatogram obtained with reference solution (a) (0.05 per cent).

Chlorides (*2.4.4*): maximum 300 ppm.

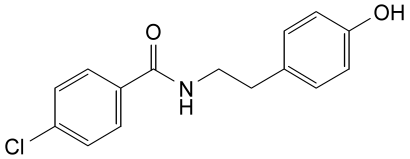
Dilute 10 ml of solution S to 50 ml with *water R*. Filter the resultant suspension through a wet filter previously washed with *water R* until free from chlorides. Prepare the standard using 9 ml of *chloride standard solution (5 ppm Cl) R* and 6 ml of *water R*.

Heavy metals (*2.4.8*): maximum 10 ppm.

2.0 g complies with test C. Prepare the reference solution using 2 ml of *lead standard solution (10 ppm Pb) R*.

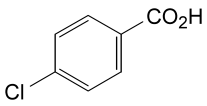
Loss on drying (*2.2.32*): maximum 0.5 per cent, determined on 1.000 g by drying in an oven at 105 °C.

Sulphated ash (*2.4.14*): maximum 0.1 per cent, determined on 1.0 g.



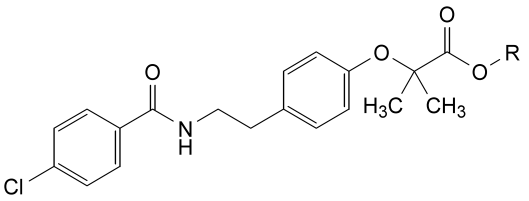
ASSAY

Dissolve 0.300 g in 50 ml of a mixture of 25 volumes of *water R* and 75 volumes of *ethanol (96 per cent) R*. Using 0.1 ml of *phenolphthalein solution R* as indicator, titrate with *0.1 M sodium hydroxide* until a pink colour is obtained. Carry out a blank titration.



1 ml of *0.1 M sodium hydroxide* is equivalent to 36.18 mg of $C_{19}H_{20}ClNO_4$.

IMPURITIES

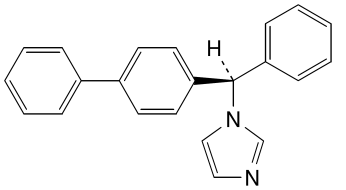


Specified impurities: *A, B, C, D, E*.

A. 4-chloro-*N*-[2-(4-hydroxyphenyl)ethyl]benzamide (chlorobenzoyltyramine),

B. 4-chlorobenzoic acid,

C. R = CH_3: methyl 2-[4-[2-[(4-chlorobenzoyl)amino]-ethyl]phenoxy]-2 methylpropanoate,



D. R = CH_2-CH_3: ethyl 2-[4-[2-[(4-chlorobenzoyl)amino]-ethyl]phenoxy]-2-methylpropanoate,

E. R = CH_2-CH_2-CH_2-CH_3: butyl 2-[4-[2-[(4-chlorobenzoyl)-amino]ethyl]phenoxy]-2-methylpropanoate.

01/2008:1395
corrected 6.0

BIFONAZOLE

Bifonazolum

and enantiomer

$C_{22}H_{18}N_2$ M_r 310.4
[60628-96-8]

DEFINITION

1-[(*RS*)-(Biphenyl-4-yl)phenylmethyl]-1*H*-imidazole.

Content: 98.0 per cent to 100.5 per cent (dried substance).

CHARACTERS

Appearance: white or almost white, crystalline powder.

Solubility: practically insoluble in water, sparingly soluble in anhydrous ethanol.

It shows polymorphism (*5.9*).

IDENTIFICATION

Infrared absorption spectrophotometry (*2.2.24*).

Comparison: *bifonazole CRS*.

If the spectra obtained in the solid state show differences, dissolve the substance to be examined and the reference substance separately in the minimum volume of *2-propanol R*, evaporate to dryness and record new spectra using the residues.

TESTS

Optical rotation (*2.2.7*): – 0.10° to + 0.10°.

Dissolve 0.20 g in 20.0 ml of *methanol R*.

Related substances. Liquid chromatography (*2.2.29*).

Buffer solution pH 3.2. Mix 2.0 ml of *phosphoric acid R* with *water R* and dilute to 1000.0 ml with the same solvent. Adjust to pH 3.2 (*2.2.3*) with *triethylamine R*.

Test solution. Dissolve 50.0 mg of the substance to be examined in 25 ml of *acetonitrile R* and dilute to 50.0 ml with buffer solution pH 3.2.

Reference solution (a). Dilute 0.25 ml of the test solution to 50.0 ml with buffer solution pH 3.2.

Reference solution (b). Dissolve 25.0 mg of *imidazole R* (impurity C) in *acetonitrile R* and dilute to 25.0 ml with the same solvent. Dilute 0.25 ml of this solution to 100.0 ml with buffer solution pH 3.2.

Reference solution (c). Dissolve 5.0 mg of *bifonazole impurity B CRS* in *acetonitrile R* and dilute to 5.0 ml with the same solvent.

Reference solution (d). Mix 0.25 ml of the test solution and 0.25 ml of reference solution (c) and dilute to 50.0 ml with buffer solution pH 3.2.

Column:

– *size*: *l* = 0.125 m, Ø = 4.6 mm;
– *stationary phase*: *octadecylsilyl silica gel for chromatography R* (5 µm);
– *temperature*: 40 °C.

Mobile phase:

– *mobile phase A*: *acetonitrile R1*, buffer solution pH 3.2 (20:80 *V/V*);
– *mobile phase B*: buffer solution pH 3.2, *acetonitrile R1* (20:80 *V/V*);

Time (min)	Mobile phase A (per cent *V/V*)	Mobile phase B (per cent *V/V*)
0 - 8	60	40
8 - 12	60 → 10	40 → 90
12 - 30	10	90

Flow rate: 1 ml/min.

Detection: spectrophotometer at 210 nm.

Injection: 50 µl of the test solution and reference solutions (a), (b) and (d).

Retention time: impurity B = about 4 min; bifonazole = about 4.5 min.

System suitability: reference solution (d):

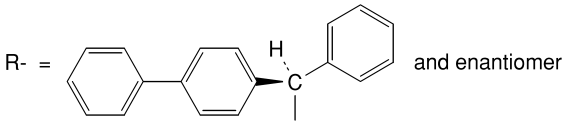
– *resolution*: minimum 2.5 between the peaks due to impurity B and bifonazole.

Limits:

– *impurity B*: not more than 3 times the area of the corresponding peak in the chromatogram obtained with reference solution (a) (1.5 per cent);
– *impurity C*: not more than the area of the corresponding peak in the chromatogram obtained with reference solution (b) (0.25 per cent);
– *impurities A, D*: for each impurity, not more than the area of the principal peak in the chromatogram obtained with reference solution (a) (0.5 per cent);
– *total*: not more than 4 times the area of the principal peak in the chromatogram obtained with reference solution (a) (2 per cent);
– *disregard limit*: 0.1 times the area of the principal peak in the chromatogram obtained with reference solution (a) (0.05 per cent).

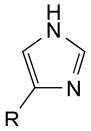
Loss on drying (*2.2.32*): maximum 0.5 per cent, determined on 1.000 g by drying in an oven at 105 °C.

Sulphated ash (*2.4.14*): maximum 0.1 per cent, determined on 1.0 g.



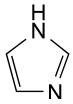
ASSAY

Dissolve 0.250 g in 80 ml of *anhydrous acetic acid R*. Titrate with *0.1 M perchloric acid*, determining the end-point potentiometrically (*2.2.20*).

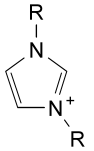


1 ml of *0.1 M perchloric acid* is equivalent to 31.04 mg of $C_{22}H_{18}N_2$.

IMPURITIES



Specified impurities: *A, B, C, D.*



A. R-OH: (*RS*)-(biphenyl-4-yl)phenylmethanol,

B. 4-[(*RS*)-(biphenyl-4-yl)phenylmethyl]-1*H*-imidazole,

C. 1*H*-imidazole,

D. 1,3-bis[(biphenyl-4-yl)phenylmethyl]-1*H*-imidazolium ion.

corrected 6.0

BILBERRY FRUIT, DRIED

Myrtilli fructus siccus

DEFINITION

Dried ripe fruit of *Vaccinium myrtillus* L.

Content: minimum 1.0 per cent of tannins, expressed as pyrogallol ($C_6H_6O_3$; M_r 126.1) (dried drug).

CHARACTERS

Sweet and slightly astringent taste.

IDENTIFICATION

A. Dried bilberry is a dark blue, subglobular, shrunken berry about 5 mm in diameter, with a scar at the lower end and surmounted by the persistent calyx, which appears as a circular fold and the remains of the style. The deep violet, fleshy mesocarp contains numerous small, brown, ovoid seeds.

B. Reduce to a powder (355) (*2.9.12*). The powder is violet-brown. Examine under a microscope using *chloral hydrate solution R*. The powder shows: violet-pink sclereids from the endocarp and the mesocarp, usually aggregated, with thick, channelled walls; reddish-brown fragments of the epicarp consisting of polygonal cells with moderately thickened walls; brownish-yellow fragments of the outer seed testa made up of elongated cells with U-shaped thickened walls; clusters and prisms crystals of various size of calcium oxalate.

C. Thin-layer chromatography (*2.2.27*)

Test solution. To 2 g of the powdered drug (355) (*2.9.12*) add 20 ml of *methanol R*. Shake for 15 min and filter.

Reference solution. Dissolve 5 mg of *chrysanthemin R* in 10 ml of *methanol R*.

Plate: *TLC silica gel plate R.*

Mobile phase: *anhydrous formic acid R, water R, butanol R* (16:19:65 *V/V/V*).

Application: 10 µl, as bands.

Development: over a path of 10 cm.

Drying: in air.

Detection: examine in daylight.

Results: see below the sequence of the zones present in the chromatograms obtained with the reference and test solutions.

Top of the plate	
Chrysanthemin: a violet-red zone	A violet-red zone of low intensity A principal violet-red zone A compact set of other principal zones: – a violet-red zone – several violet-blue zones
Reference solution	**Test solution**

TESTS

Loss on drying (*2.2.32*): maximum 12.0 per cent, determined on 1.000 g of the powdered drug by drying in an oven at 105 °C for 2 h.

Total ash (*2.4.16*): maximum 5.0 per cent.

ASSAY

Carry out the determination of tannins in herbal drugs (*2.8.14*). Use 1.500 g of the powdered drug (355) (*2.9.12*).

01/2008:1602
corrected 6.0

BILBERRY FRUIT, FRESH

Myrtilli fructus recens

DEFINITION

Fresh or frozen ripe fruit of *Vaccinium myrtillus* L.

Content: minimum 0.30 per cent of anthocyanins, expressed as cyanidin-3-glucoside chloride (chrysanthemin, $C_{21}H_{21}ClO_{11}$; M_r 485.5) (dried drug).

CHARACTERS

Sweet and slightly astringent taste.

IDENTIFICATION

A. The fresh fruit is a blackish-blue globular berry about 5 mm in diameter. Its lower end shows a scar or, rarely, a fragment of the pedicel. The upper end is flattened and surmounted by the remains of the persistent style and of the calyx, which appears as a circular fold. The violet, fleshy mesocarp includes 4 to 5 locules containing numerous small, brown, ovoid seeds.

B. The crushed fresh fruit is violet-red. Examine under a microscope using *chloral hydrate solution R*. It shows violet-pink sclereids from the endocarp and the mesocarp, usually aggregated, with thick, channelled walls; reddish-brown fragments of the epicarp consisting of polygonal cells with moderately thickened walls; brownish-yellow fragments of the outer layer of the testa composed of elongated cells with U-shaped thickened walls; cluster crystals of calcium oxalate.

C. Thin-layer chromatography (*2.2.27*).

Test solution. To 5 g of the freshly crushed drug, add 20 ml of *methanol R*. Stir for 15 min and filter.

Reference solution. Dissolve 5 mg of *chrysanthemin R* in 10 ml of *methanol R*.

Plate: *TLC silica gel plate R*.

Mobile phase: *anhydrous formic acid R, water R, butanol R* (16:19:65 *V/V/V*).

Application: 10 µl, as bands.

Development: over a path of 10 cm.

Drying: in air.

Detection: examine in daylight.

Results: see below the sequence of the zones present in the chromatograms obtained with the reference solution and the test solution.

Top of the plate	
Chrysanthemin: a violet-red zone	A violet-red zone A principal violet-red zone A compact set of other principal zones: – a violet-red zone – several violet-blue zones
Reference solution	**Test solution**

TESTS

Total ash (*2.4.16*): maximum 0.6 per cent.

Loss on drying (*2.2.32*): 80.0 per cent to 90.0 per cent, determined on 5.000 g of the freshly crushed drug by drying in an oven at 105 °C.

ASSAY

Crush 50 g extemporaneously. To about 5.00 g of the crushed, accurately weighed drug, add 95 ml of *methanol R*. Stir mechanically for 30 min. Filter into a 100.0 ml volumetric flask. Rinse the filter and dilute to 100.0 ml with *methanol R*. Prepare a 50-fold dilution of this solution in a 0.1 per cent *V/V* solution of *hydrochloric acid R* in *methanol R*.

Measure the absorbance (*2.2.25*) of the solution at 528 nm, using a 0.1 per cent *V/V* solution of *hydrochloric acid R* in *methanol R* as the compensation liquid.

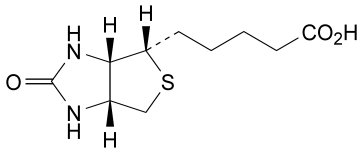
Calculate the percentage content of anthocyanins, expressed as cyanidin-3-glucoside chloride, from the expression:

$$\frac{A \times 5000}{718 \times m}$$

718 = specific absorbance of cyanidin-3-glucoside chloride at 528 nm,

A = absorbance at 528 nm,

m = mass of the substance to be examined in grams.



STORAGE

When frozen, store at or below – 18 °C.

01/2008:1073
corrected 6.0

BIOTIN

Biotinum

$C_{10}H_{16}N_2O_3S$ M_r 244.3
[58-85-5]

DEFINITION

Biotin contains not less than 98.5 per cent and not more than the equivalent of 101.0 per cent of 5-[(3a*S*,4*S*,6a*R*)-2-oxohexahydrothieno[3,4-*d*]imidazol-4-yl]pentanoic acid, calculated with reference to the dried substance.

CHARACTERS

A white or almost white, crystalline powder or colourless crystals, very slightly soluble in water and in alcohol, practically insoluble in acetone. It dissolves in dilute solutions of alkali hydroxides.

IDENTIFICATION

First identification: A.

Second identification: B, C.

A. Examine by infrared absorption spectrophotometry (*2.2.24*), comparing with the spectrum obtained with *biotin CRS*.

B. Examine the chromatograms obtained in the test for related substances (see Tests). The principal spot in the chromatogram obtained with test solution (b) is similar in position and size to the principal spot in the chromatogram obtained with reference solution (a).

C. Dissolve about 10 mg in 20 ml of *water R* with heating. Allow to cool. Add 0.1 ml of *bromine water R*. The bromine water is decolourised.

TESTS

Solution S. Dissolve 0.250 g in a 4 g/l solution of *sodium hydroxide R* and dilute to 25.0 ml with the same alkaline solution.

Appearance of solution. Solution S is clear (*2.2.1*) and colourless (*2.2.2, Method II*).

Specific optical rotation (*2.2.7*). The specific optical rotation is + 89 to + 93, determined on solution S and calculated with reference to the dried substance.

Related substances. Examine by thin-layer chromatography (*2.2.27*), using as the coating substance a suitable silica gel (5 µm). *Prepare the solutions immediately before use and keep protected from bright light.*

Test solution (a). Dissolve 50 mg of the substance to be examined in *glacial acetic acid R* and dilute to 10 ml with the same solvent.

Test solution (b). Dilute 1 ml of test solution (a) to 10 ml with *glacial acetic acid R*.

Reference solution (a). Dissolve 5 mg of *biotin CRS* in *glacial acetic acid R* and dilute to 10 ml with the same solvent.

Reference solution (b). Dilute 1 ml of test solution (b) to 20 ml with *glacial acetic acid R*.

Reference solution (c). Dilute 1 ml of test solution (b) to 40 ml with *glacial acetic acid R*.

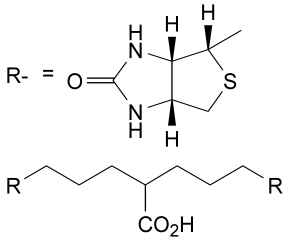
Apply to the plate 10 µl of each solution. Develop over a path of 15 cm using a mixture of 5 volumes of *methanol R*, 25 volumes of *glacial acetic acid R* and 75 volumes of *toluene R*. Dry the plate in a current of warm air. Allow to cool and spray with *4-dimethylaminocinnamaldehyde solution R*. Examine immediately in daylight. Any spot in the chromatogram obtained with test solution (a), apart from the principal spot, is not more intense than the spot in the chromatogram obtained with reference solution (b) (0.5 per cent) and at most one such spot is more intense than the spot in the chromatogram obtained with reference solution (c) (0.25 per cent).

Heavy metals (*2.4.8*). 1.0 g complies with limit test C for heavy metals (10 ppm). Prepare the standard using 10 ml of *lead standard solution (1 ppm Pb) R*.

Loss on drying (*2.2.32*). Not more than 1.0 per cent, determined on 1.000 g by drying in an oven at 105 °C.

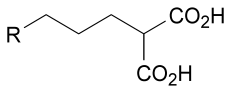
Sulphated ash (*2.4.14*). Not more than 0.1 per cent, determined on 1.0 g.

ASSAY



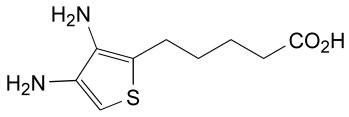
Suspend 0.200 g in 5 ml of *dimethylformamide R*. Heat until the substance has dissolved completely. Add 50 ml of *ethanol R* and titrate with *0.1 M tetrabutylammonium hydroxide*, determining the end-point potentiometrically (*2.2.20*).

1 ml of *0.1 M tetrabutylammonium hydroxide* is equivalent to 24.43 mg of $C_{10}H_{16}N_2O_3S$.

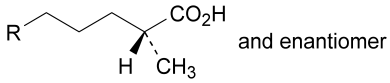


STORAGE

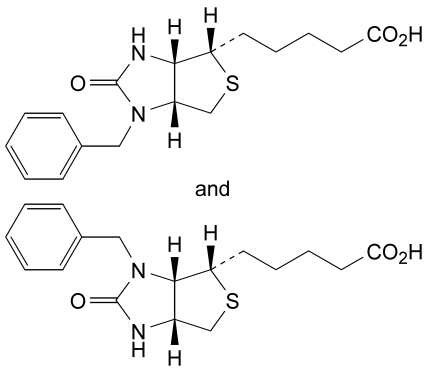
Store protected from light.



IMPURITIES



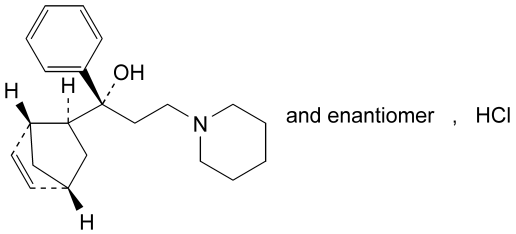
A. di[3-[(3a*S*,4*S*,6a*R*)-2-oxohexahydrothieno[3,4-*d*]imidazol-4-yl]propyl]acetic acid,



B. 4-[(3a*S*,4*S*,6a*R*)-2-oxohexahydrothieno[3,4-*d*]imidazol-4-yl]butane-1,1-dicarboxylic acid,

C. 5-(3,4-diamino-2-thienyl)pentanoic acid,

D. 2-methyl-5-[(3a*S*,4*S*,6a*R*)-2-oxohexahydrothieno[3,4-*d*]imidazol-4-yl]pentanoic acid,



E. 5-[(3a*S*,4*S*,6a*R*)-3-benzyl-2-oxohexahydrothieno[3,4-*d*]imidazol-4-yl]pentanoic acid and 5-[(3a*S*,4*S*,6a*R*)-1-benzyl-2-oxohexahydrothieno[3,4-*d*]imidazol-4-yl]pentanoic acid.

BIPERIDEN HYDROCHLORIDE

Biperideni hydrochloridum

$C_{21}H_{30}ClNO$ M_r 347.9
[1235-82-1]

DEFINITION

(1*RS*)-1-[(1*RS*,2*SR*,4*RS*)-Bicyclo[2.2.1]hept-5-en-2-yl]-1-phenyl-3-(piperidin-1-yl)propan-1-ol hydrochloride.

Content: 99.0 per cent to 101.0 per cent (dried substance).

CHARACTERS

Appearance: white or almost white, crystalline powder.

Solubility: slightly soluble in water and in alcohol, very slightly soluble in methylene chloride.

mp: about 280 °C, with decomposition.

IDENTIFICATION

First identification: A, D.

Second identification: B, C, D.

A. Infrared absorption spectrophotometry (*2.2.24*).

Comparison: *biperiden hydrochloride CRS*.

B. Thin-layer chromatography (*2.2.27*).

Test solution. Dissolve 25 mg of the substance to be examined in *methanol R* and dilute to 5 ml with the same solvent.

Reference solution (a). Dissolve 25 mg of *biperiden hydrochloride CRS* in *methanol R* and dilute to 5 ml with the same solvent.

Reference solution (b). Dissolve 5 mg of *biperiden impurity A CRS* in reference solution (a) and dilute to 2 ml with the same solution.

Plate: *TLC silica gel F_{254} plate R*.

Mobile phase: *diethylamine R, methanol R, toluene R* (1:1:20 *V/V/V*).

Application: 5 µl.

Development: over a path of 15 cm.

Drying: in air.

Detection A: examine in ultraviolet light at 254 nm.

Results A: the principal spot in the chromatogram obtained with the test solution is similar in position and size to the principal spot in the chromatogram obtained with reference solution (a).

Detection B: spray with *dilute potassium iodobismuthate solution R* and then with *sodium nitrite solution R* and examine in daylight.

Results B: the principal spot in the chromatogram obtained with the test solution is similar in position, colour and size to the principal spot in the chromatogram obtained with reference solution (a).

System suitability: reference solution (b):

– the chromatogram shows 2 clearly separated spots.

C. To about 20 mg add 5 ml of *phosphoric acid R*. A green colour develops.

D. It gives reaction (a) of chlorides (*2.3.1*).

TESTS

Solution S. Dissolve 0.10 g in *carbon dioxide-free water R*, heating gently if necessary, and dilute to 50 ml with the same solvent.

Appearance of solution. Solution S is not more opalescent than reference suspension II (*2.2.1*) and is colourless (*2.2.2, Method II*).

pH (*2.2.3*): 5.0 to 6.5 for solution S.

Related substances. Gas chromatography (*2.2.28*).

Test solution. Dissolve 0.10 g of the substance to be examined in *methanol R* and dilute to 10 ml with the same solvent.

Reference solution (a). Dilute 0.5 ml of the test solution to 100 ml with *methanol R*. Dilute 10 ml of this solution to 50 ml with *methanol R*.

Reference solution (b). Dissolve 5 mg of the substance to be examined and 5 mg of *biperiden impurity A CRS* in *methanol R* and dilute to 5 ml with the same solvent. Dilute 1 ml of the solution to 10 ml with *methanol R*.

Column:

– *material*: fused silica,

– *size*: *l* = 50 m, Ø = 0.25 mm,

– *stationary phase*: *poly(dimethyl)(diphenyl)(divinyl)siloxane R* (film thickness 0.25 µm).

Carrier gas: *nitrogen for chromatography R*.

Flow rate: 0.4 ml/min.

Split ratio: 1:250.

Temperature:

	Time (min)	Temperature (°C)
Column	0 - 5	200
	5 - 40	200 → 270
Injection port		250
Detector		300

Detection: flame ionisation.

Injection: 2 µl.

Run time: twice the retention time of biperiden.

Relative retention with reference to biperiden: impurities A, B and C = between 0.95 and 1.05.

System suitability:

– *resolution*: minimum 2.5 between the peak due to biperiden (1st peak) and the peak due to impurity A (2nd peak) in the chromatogram obtained with reference solution (b),

– *signal-to-noise ratio*: minimum 6 for the principal peak in the chromatogram obtained with reference solution (a).

Limits:

– *impurities A, B, C*: for each impurity, maximum 0.50 per cent of the area of the principal peak,

– *any other impurity*: for each impurity, maximum 0.10 per cent of the area of the principal peak,

– *total of impurities A, B and C*: maximum 1.0 per cent of the area of the principal peak,

– *total of impurities other than A, B and C*: maximum 0.50 per cent of the area of the principal peak,

– *disregard limit*: 0.05 per cent of the area of the principal peak.

Impurity F (*2.4.24*): maximum 2 ppm.

Heavy metals (*2.4.8*): maximum 20 ppm.

1.0 g complies with limit test D. Prepare the standard using 2 ml of *lead standard solution (10 ppm Pb) R*.

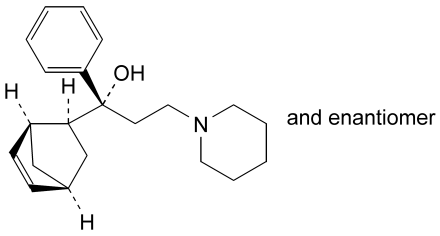
Loss on drying (*2.2.32*): maximum 0.5 per cent, determined on 1.000 g by drying in an oven at 105 °C for 2 h.

Sulphated ash (*2.4.14*): maximum 0.1 per cent, determined on 1.0 g.

ASSAY

Dissolve 0.200 g in 60 ml of *alcohol R*. In a closed vessel, titrate with *0.1 M alcoholic potassium hydroxide*, determining the end-point potentiometrically (*2.2.20*).

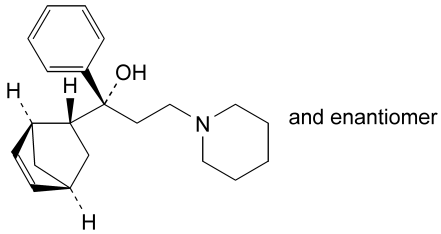
1 ml of *0.1 M alcoholic potassium hydroxide* is equivalent to 34.79 mg of $C_{21}H_{30}ClNO$.



STORAGE

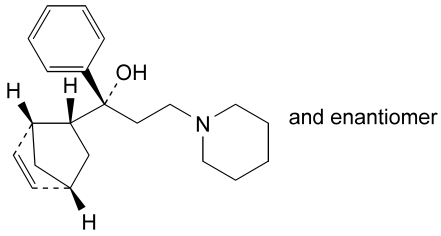
In an airtight container, protected from light.

IMPURITIES

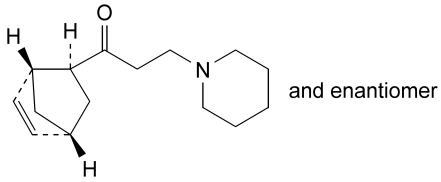


Specified impurities: A, B, C, F.

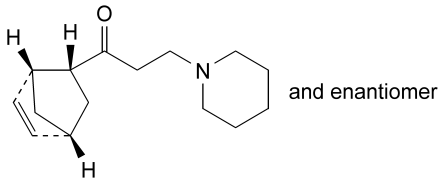
Other detectable impurities: D, E.



and enantiomer



A. (1*RS*)-1-[(1*SR*,2*SR*,4*SR*)-bicyclo[2.2.1]hept-5-en-2-yl]-1-phenyl-3-(piperidin-1-yl)propan-1-ol (*endo* form),



B. (1*RS*)-1-[(1*SR*,2*RS*,4*SR*)-bicyclo[2.2.1]hept-5-en-2-yl]-1-phenyl-3-(piperidin-1-yl)propan-1-ol,

C. (1*RS*)-1-[(1*RS*,2*RS*,4*RS*)-bicyclo[2.2.1]hept-5-en-2-yl]-1-phenyl-3-(piperidin-1-yl)propan-1-ol,

D. 1-[(1*RS*,2*SR*,4*RS*)-bicyclo[2.2.1]hept-5-en-2-yl]-3-(piperidin-1-yl)propan-1-one,

E. 1-[(1*RS*,2*RS*,4*RS*)-bicyclo[2.2.1]hept-5-en-2-yl]-3-(piperidin-1-yl)propan-1-one,

F. benzene.

corrected 6.0

BIRCH LEAF

Betulae folium

DEFINITION

Whole or fragmented dried leaves of *Betula pendula* Roth and/or *Betula pubescens* Ehrh. as well as hybrids of both species.

Content: minimum 1.5 per cent of flavonoids, expressed as hyperoside ($C_{21}H_{20}O_{12}$; M_r 464.4) (dried drug).

IDENTIFICATION

A. The leaves of both species are dark green on the adaxial surface and lighter greenish-grey on the abaxial surface; they show a characteristic dense reticulate venation. The veins are light brown or almost white.

The leaves of *Betula pendula* are glabrous and show closely spaced glandular pits on both surfaces. The leaves of *Betula pendula* are 3-7 cm long and 2-5 cm wide; the petiole is long and the doubly dentate lamina is triangular or rhomboid and broadly cuneate or truncate at the base. The angle on each side is unrounded or slightly rounded, and the apex is long and acuminate.

The leaves of *Betula pubescens* show few glandular trichomes and are slightly pubescent on both surfaces. The abaxial surface shows small bundles of yellowish-grey trichomes at the branch points of the veins. The leaves of *Betula pubescens* are slightly smaller, oval or rhomboid and more rounded. They are more roughly and more regularly dentate. The apex is neither long nor acuminate.

B. Reduce to a powder (355) (*2.9.12*). The powder is greenish-grey. Examine under a microscope using *chloral hydrate solution R*. The powder shows the following diagnostic characters: numerous fragments of lamina with straight-walled epidermal cells and cells of the lower epidermis surrounding anomocytic stomata (*2.8.3*). Peltate large glands usually measuring 100-120 µm are found on the upper and lower epidermises. The mesophyll fragments contain calcium oxalate crystals. Fragments of radial vascular bundles and sclerenchyma fibres are accompanied by crystal sheaths. If *Betula pubescens* is present, the powder also contains unicellular covering trichomes with very thick walls, about 80-600 µm long, usually 100-200 µm.

C. Thin-layer chromatography (*2.2.27*).

Test solution. To 1 g of the powdered drug (355) (*2.9.12*) add 10 ml of *methanol R*. Heat in a water-bath at 60 °C for 5 min. Cool and filter the solution.

Reference solution. Dissolve 1 mg of *caffeic acid R* and 1 mg of *chlorogenic acid R*, 2.5 mg of *hyperoside R* and 2.5 mg of *rutin R* in 10 ml of *methanol R*.

Plate: *TLC silica gel plate R*.

Mobile phase: *anhydrous formic acid R, water R, methyl ethyl ketone R, ethyl acetate R* (10:10:30:50 *V/V/V/V*).

Application: 10 µl, as bands.

Development: over a path of 10 cm.

Drying: in a current of warm air.

Detection: spray with a 10 g/l solution of *diphenylboric acid aminoethyl ester R* in *methanol R*; subsequently spray with a 50 g/l solution of *macrogol 400 R* in *methanol R*; allow to dry in air for 30 min and examine in ultraviolet light at 365 nm.

Results: the chromatogram obtained with the reference solution shows 3 zones in its lower half: in increasing order of R_F a yellowish-brown fluorescent zone (rutin), a light blue fluorescent zone (chlorogenic acid) and a yellowish-brown fluorescent zone (hyperoside), and in its upper third, a light blue fluorescent zone (caffeic acid). The chromatogram obtained with the test solution shows 3 zones similar in position and fluorescence to the zones due to rutin, chlorogenic acid and hyperoside in the chromatogram obtained with the reference solution. The zone due to rutin is very faint and the zone due to hyperoside is intense. It also shows other yellowish-brown faint fluorescence zones between the zones due to caffeic acid and chlorogenic acid in the chromatogram obtained with the reference solution. Near the solvent front, the red fluorescent zone due to chlorophylls is visible. In the chromatogram obtained with the test solution, between this zone and the zone due to caffeic acid in the chromatogram obtained with the reference solution, there is a brownish-yellow zone due to quercetin.

TESTS

Foreign matter (*2.8.2*): maximum 3 per cent of fragments of female catkins and maximum 3 per cent of other foreign matter.

Loss on drying (*2.2.32*): maximum 10.0 per cent, determined on 1.000 g of powered drug (355) by drying in an oven at 105 °C for 2 h.

Total ash (*2.4.16*): maximum 5.0 per cent.

ASSAY

Stock solution. In a 100 ml round-bottomed flask introduce 0.200 g of the powdered drug (355) (*2.9.12*), 1 ml of a 5 g/l solution of *hexamethylenetetramine R*, 20 ml of *acetone R* and 2 ml of *hydrochloric acid R1*. Boil the mixture under a reflux condenser for 30 min. Filter the liquid through a plug of absorbent cotton in a 100 ml flask. Add the absorbent cotton to the residue in the round-bottomed flask and extract with 2 quantities, each of 20 ml, of *acetone R*, each time boiling under a reflux condenser for 10 min. Allow to cool to room temperature, filter the liquid through a plug of absorbent cotton then through a filter-paper in the volumetric flask, and dilute to 100.0 ml with *acetone R* by rinsing of the flask and filter. Introduce 20.0 ml of the solution into a separating funnel, add 20 ml of *water R* and extract the mixture with 1 quantity of 15 ml and then 3 quantities, each of 10 ml, of *ethyl acetate R*. Combine the ethyl acetate extracts in a separating funnel, rinse with 2 quantities, each of 50 ml, of *water R*, and filter the extract over 10 g of *anhydrous sodium sulphate R* into a 50 ml volumetric flask and dilute to 50.0 ml with *ethyl acetate R*.

Test solution. To 10.0 ml of the stock solution add 1 ml of *aluminium chloride reagent R* and dilute to 25.0 ml with a 5 per cent *V/V* solution of *glacial acetic acid R* in *methanol R*.

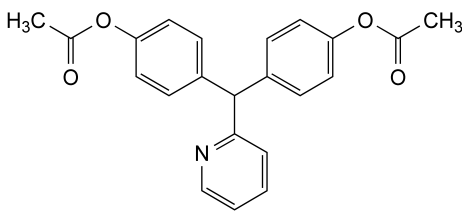
Compensation liquid. Dilute 10.0 ml of the stock solution to 25.0 ml with a 5 per cent *V/V* solution of *glacial acetic acid R* in *methanol R*.

Measure the absorbance (*2.2.25*) of the test solution after 30 min, by comparison with the compensation liquid at 425 nm.

Calculate the percentage content of flavonoids, expressed as hyperoside, using the following expression:

$$\frac{A \times 1.25}{m}$$

i.e. taking the specific absorbance of hyperoside to be 500.



A = absorbance at 425 nm,

m = mass of the substance to be examined, in grams.

corrected 6.0

BISACODYL

Bisacodylum

$C_{22}H_{19}NO_4$ M_r 361.4
[603-50-9]

DEFINITION

4,4′-(Pyridin-2-ylmethylene)diphenyl diacetate.

Content: 98.0 per cent to 101.0 per cent (dried substance).

CHARACTERS

Appearance: white or almost white, crystalline powder.

Solubility: practically insoluble in water, soluble in acetone, sparingly soluble in ethanol (96 per cent). It dissolves in dilute mineral acids.

IDENTIFICATION

First identification: C.

Second identification: A, B, D.

A. Melting point (*2.2.14*): 131 °C to 135 °C.

B. Ultraviolet and visible absorption spectrophotometry (*2.2.25*).

Test solution. Dissolve 10.0 mg in a 6 g/l solution of *potassium hydroxide R* in *methanol R* and dilute to 100.0 ml with the same solution. Dilute 10.0 ml of this solution to 100.0 ml with a 6 g/l solution of *potassium hydroxide R* in *methanol R*.

Spectral range: 220-350 nm.

Absorption maximum: at 248 nm.

Shoulder: at 290 nm.

Specific absorbance at the absorption maximum: 632 to 672.

C. Infrared absorption spectrophotometry (*2.2.24*).

Comparison: *bisacodyl CRS*.

If the spectra obtained in the solid state show differences, dissolve the substance to be examined and the reference substance separately in *chloroform R*, evaporate to dryness and record new spectra using the residues.

D. Thin-layer chromatography (*2.2.27*).

Test solution. Dissolve 20 mg of the substance to be examined in *acetone R* and dilute to 10 ml with the same solvent.

Reference solution. Dissolve 20 mg of *bisacodyl CRS* in *acetone R* and dilute to 10 ml with the same solvent.

Plate: *TLC silica gel GF_{254} plate R*.

Mobile phase: *methyl ethyl ketone R, xylene R* (50:50 *V/V*).

Application: 10 µl.

Development: over a path of 10 cm.

Drying: in air, if necessary heating at 100-105 °C.

Detection: spray with a mixture of equal volumes of *0.05 M iodine* and *dilute sulphuric acid R*.

Results: the principal spot in the chromatogram obtained with the test solution is similar in position and size to the principal spot in the chromatogram obtained with the reference solution.

TESTS

Acidity or alkalinity. To 1.0 g add 20 ml of *carbon dioxide-free water R*, shake, heat to boiling, cool and filter. Add 0.2 ml of *0.01 M sodium hydroxide* and 0.1 ml of *methyl red solution R*. The solution is yellow. Not more than 0.4 ml of *0.01 M hydrochloric acid* is required to change the colour of the indicator to red.

Related substances. Liquid chromatography (*2.2.29*). *Prepare the solutions immediately before use.*

Solvent mixture: *glacial acetic acid R, acetonitrile R, water R* (4:30:66 *V/V/V*).

Test solution. Dissolve 50 mg of the substance to be examined in 25 ml of *acetonitrile R* and dilute to 50.0 ml with the solvent mixture.

Reference solution (a). Dilute 1.0 ml of the test solution to 100.0 ml with the solvent mixture. Dilute 1.0 ml of this solution to 10.0 ml with the solvent mixture.

Reference solution (b). Dissolve 2.0 mg of *bisacodyl for system suitability CRS* (containing impurities A, B, C, D and E) in 1.0 ml of *acetonitrile R* and dilute to 2.0 ml with the solvent mixture.

Reference solution (c). Dissolve 5.0 mg of *bisacodyl for peak identification CRS* (containing impurity F) in 2.5 ml of *acetonitrile R* and dilute to 5.0 ml with the solvent mixture.

Column:

– *size*: *l* = 0.25 m, Ø = 4.6 mm;

– *stationary phase*: *end-capped octadecylsilyl silica gel for chromatography R* (5 µm).

Mobile phase: mix 45 volumes of *acetonitrile R* and 55 volumes of a 1.58 g/l solution of *ammonium formate R* previously adjusted to pH 5.0 with *anhydrous formic acid R*.

Flow rate: 1.5 ml/min.

Detection: spectrophotometer at 265 nm.

Injection: 20 µl.

Run time: 3.5 times the retention time of bisacodyl.

Identification of impurities: use the chromatogram supplied with *bisacodyl for system suitability CRS* and the chromatogram obtained with reference solution (b) to identify the peaks due to impurities A, B, C, D and E.

Relative retention with reference to bisacodyl (retention time = about 13 min): impurity A = about 0.2; impurity B = about 0.4; impurity C = about 0.45; impurity D = about 0.8; impurity E = about 0.9; impurity F = about 2.6.

System suitability: reference solution (b):

– *peak-to-valley ratio*: minimum 1.5, where H_p = height above the baseline of the peak due to impurity E and H_v = height above the baseline of the lowest point of the curve separating this peak from the peak due to bisacodyl.

Limits:

– *correction factor*: for the calculation of content, multiply the peak area of impurity A by 0.7;

– *impurities A, B*: for each impurity, not more than the area of the principal peak in the chromatogram obtained with reference solution (a) (0.1 per cent);

– *impurities C, E*: for each impurity, not more than 5 times the area of the principal peak in the chromatogram obtained with reference solution (a) (0.5 per cent);

– *impurity D*: not more than twice the area of the principal peak in the chromatogram obtained with reference solution (a) (0.2 per cent);

– *impurity F*: not more than 3 times the area of the principal peak in the chromatogram obtained with reference solution (a) (0.3 per cent);

– *unspecified impurities*: for each impurity, not more than the area of the principal peak in the chromatogram obtained with reference solution (a) (0.10 per cent);

– *total*: not more than 10 times the area of the principal peak in the chromatogram obtained with reference solution (a) (1.0 per cent);

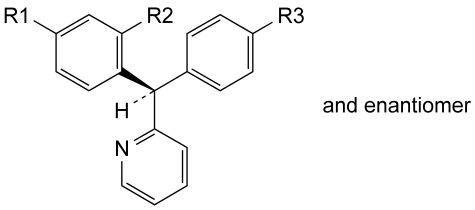
– *disregard limit*: 0.5 times the area of the principal peak in the chromatogram obtained with reference solution (a) (0.05 per cent).

Loss on drying (*2.2.32*): maximum 0.5 per cent, determined on 0.500 g by drying in an oven at 105 °C.

Sulphated ash (*2.4.14*): maximum 0.1 per cent, determined on 1.0 g.

ASSAY

Dissolve 0.300 g in 60 ml of *anhydrous acetic acid R*. Titrate with *0.1 M perchloric acid* determining the end-point potentiometrically (*2.2.20*).



1 ml of *0.1 M perchloric acid* is equivalent to 36.14 mg of $C_{22}H_{19}NO_4$.

STORAGE

Protected from light.

IMPURITIES

Specified impurities: A, B, C, D, E, F.

and enantiomer

A. R1 = R3 = OH, R2 = H: 4,4′-(pyridin-2-ylmethylene)diphenol,

B. R1 = H, R2 = R3 = OH: 2-[(*RS*)-(4-hydroxyphenyl)(pyridin-2-yl)methyl]phenol,

C. R1 = OH, R2 = H, R3 = O-CO-CH_3: 4-[(*RS*)-(4-hydroxyphenyl)(pyridin-2-yl)methyl]phenyl acetate,

E. R1 = H, R2 = R3 = O-CO-CH_3: 2-[(*RS*)-[4-(acetyloxy)-phenyl](pyridin-2-yl)methyl]phenyl acetate,

D. unknown structure,

F. unknown structure.

corrected 6.0

BISMUTH SUBCARBONATE

Bismuthi subcarbonas

DEFINITION

Content: 80.0 per cent to 82.5 per cent of Bi (A_r 209.0) (dried substance).

CHARACTERS

Appearance: white or almost white powder.

Solubility: practically insoluble in water and in ethanol (96 per cent). It dissolves with effervescence in mineral acids.

IDENTIFICATION

A. It gives the reaction of carbonates (*2.3.1*).

B. It gives the reactions of bismuth (*2.3.1*).

TESTS

Solution S. Shake 5.0 g with 10 ml of *water R* and add 20 ml of *nitric acid R*. Heat to dissolve, cool and dilute to 100 ml with *water R*.

Appearance of solution. Solution S is not more opalescent than reference suspension II (*2.2.1*) and is colourless (*2.2.2, Method II*).

Chlorides (*2.4.4*): maximum 500 ppm.

To 6.6 ml of solution S add 4 ml of *nitric acid R* and dilute to 50 ml with *water R*.

Nitrates: maximum 0.4 per cent.

To 0.25 g in a 125 ml conical flask, add 20 ml of *water R*, 0.05 ml of *indigo carmine solution R1* and then, as a single addition but with caution, 30 ml of *sulphuric acid R*. Titrate immediately with *indigo carmine solution R1* until a stable blue colour is obtained. Not more than *n* ml of the titrant is required, *n* being the volume corresponding to 1 mg of NO_3.

Alkali and alkaline-earth metals: maximum 1.0 per cent.

To 1.0 g add 10 ml of *water R* and 10 ml of *acetic acid R*. Boil for 2 min, cool and filter. Wash the residue with 20 ml of *water R*. To the combined filtrate and washings add 2 ml of *dilute hydrochloric acid R* and 20 ml of *water R*. Boil and pass *hydrogen sulphide R* through the boiling solution until no further precipitate is formed. Filter, wash the residue with *water R*, evaporate the combined filtrate and washings to dryness on a water-bath and add 0.5 ml of *sulphuric acid R*. Ignite gently and allow to cool. The residue weighs a maximum of 10 mg.

Arsenic (*2.4.2, Method A*): maximum 5 ppm.

To 0.5 g in a distillation flask add 5 ml of *water R* and 7 ml of *sulphuric acid R*, allow to cool and add 5 g of *reducing mixture R* and 10 ml of *hydrochloric acid R*. Heat the contents of the flask to boiling gradually over 15-30 min and continue heating at such a rate that the distillation proceeds steadily until the volume in the flask is reduced by half or until 5 min after the air-condenser has become full of steam. It is important that distillation be discontinued before fumes of sulphur trioxide appear. Collect the distillate in a tube containing 15 ml of *water R* cooled in ice-water. Wash down the condenser with *water R* and dilute the distillate to 25 ml with the same solvent. Prepare the standard using a mixture of 2.5 ml of *arsenic standard solution (1 ppm As) R* and 22.5 ml of *water R*.

Copper: maximum 50 ppm.

To 5 ml of solution S, add 2 ml of *ammonia R* and dilute to 50 ml with *water R*. Filter. To 10 ml of the filtrate add 1 ml of a 1 g/l solution of *sodium diethyldithiocarbamate R*. The solution is not more intensely coloured than a standard prepared at the same time in the same manner using a mixture of 0.25 ml of *copper standard solution (10 ppm Cu) R* and 9.75 ml of *water R* instead of 10 ml of the filtrate.

Lead: maximum 20.0 ppm.

Atomic absorption spectrometry (*2.2.23, Method II*).

Test solution. Dissolve 12.5 g in 75 ml of a mixture of equal volumes of *lead-free nitric acid R* and *water R*. Boil for 1 min, cool and dilute to 100.0 ml with *water R*.

Reference solutions. Prepare the reference solutions using appropriate quantities of lead standard solution and a 37 per cent *V/V* solution of *lead-free nitric acid R*.

Source: lead hollow-cathode lamp.

Wavelength: 283.3 nm (depending on the apparatus, the line at 217.0 nm may be used).

Atomisation device: air-acetylene flame.

Silver: maximum 25 ppm.

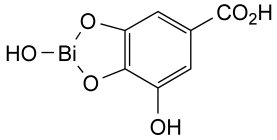
To 2.0 g add 1 ml of *water R* and 4 ml of *nitric acid R*. Heat gently until dissolved and dilute to 11 ml with *water R*. Cool and add 2 ml of *1 M hydrochloric acid*. Allow to stand protected from light for 5 min. Any opalescence in the solution is not more intense than that in a standard prepared at the same time in the same manner using a mixture of 10 ml of *silver standard solution (5 ppm Ag) R*, 1 ml of *nitric acid R* and 2 ml of *1 M hydrochloric acid*.

Loss on drying (*2.2.32*): maximum 1.0 per cent, determined on 1.000 g by drying in an oven at 105 °C.

ASSAY

Dissolve 0.500 g in 3 ml of *nitric acid R* and dilute to 250 ml with *water R*. Carry out the complexometric titration of bismuth (*2.5.11*).

1 ml of *0.1 M sodium edetate* is equivalent to 20.90 mg of Bi.



STORAGE

Protected from light.

corrected 6.0

BISMUTH SUBGALLATE

Bismuthi subgallas

$C_7H_5BiO_6$ M_r 394.1
[149-91-7]

DEFINITION

Complex of bismuth and gallic acid.

Content: 48.0 per cent to 51.0 per cent of Bi (A_r 209.0) (dried substance).

CHARACTERS

Appearance: yellow powder.

Solubility: practically insoluble in water and in alcohol. It dissolves in mineral acids with decomposition and in solutions of alkali hydroxides, producing a reddish-brown liquid.

IDENTIFICATION

A. Mix 0.1 g with 5 ml of *water R* and 0.1 ml of *phosphoric acid R*. Heat to boiling and maintain boiling for 2 min. Cool and filter. To the filtrate, add 1.5 ml of *ferric chloride solution R1*, a blackish-blue colour develops.

B. It gives reaction (b) of bismuth (*2.3.1*).

TESTS

Solution S. In a porcelain or quartz dish, ignite 1.0 g, increasing the temperature very gradually. Heat in a muffle furnace at 600 ± 50 °C for 2 h. Cool and dissolve the residue with warming in 4 ml of a mixture of equal volumes of *lead-free nitric acid R* and *water R* and dilute to 20 ml with *water R*.

Acidity. Shake 1.0 g with 20 ml of *water R* for 1 min and filter. To the filtrate add 0.1 ml of *methyl red solution R*. Not more than 0.15 ml of *0.1 M sodium hydroxide* is required to change the colour of the indicator to yellow.

Chlorides (*2.4.4*): maximum 200 ppm.

To 0.5 g add 10 ml of *dilute nitric acid R*. Heat on a water-bath for 5 min and filter. Dilute 5 ml of the filtrate to 15 ml with *water R*.

Nitrates: maximum 0.2 per cent.

To 1.0 g add 25 ml of *water R* then 25 ml of a mixture of 2 volumes of *sulphuric acid R* and 9 volumes of *water R*. Heat at about 50 °C for 1 min with stirring and filter. To 10 ml of the filtrate, carefully add 30 ml of *sulphuric acid R*. The solution is not more intensely brownish-yellow coloured than a reference solution prepared at the same time as follows: to 0.4 g of *gallic acid R*, add 20 ml of *nitrate standard solution (100 ppm NO_3) R* and 30 ml of a mixture of 2 volumes of *sulphuric acid R* and 9 volumes of *water R*, then filter; to 10 ml of the filtrate, carefully add 30 ml of *sulphuric acid R*.

Copper: maximum 50.0 ppm.

Atomic absorption spectrometry (*2.2.23, Method I*).

Test solution. Solution S.

Reference solutions. Prepare the reference solutions using *copper standard solution (10 ppm Cu) R* and diluting with a 6.5 per cent *V/V* solution of *lead-free nitric acid R*.

Source: copper hollow-cathode lamp.

Wavelength: 324.7 nm.

Atomisation device: air-acetylene flame.

Lead: maximum 20.0 ppm.

Atomic absorption spectrometry (*2.2.23, Method II*).

Test solution. Solution S.

Reference solutions. Prepare the reference solutions using *lead standard solution (10 ppm Pb) R* and diluting with a 6.5 per cent *V/V* solution of *lead-free nitric acid R*.

Source: lead hollow-cathode lamp.

Wavelength: 283.3 nm (depending on the apparatus, the line at 217.0 nm may be used).

Atomisation device: air-acetylene flame.

Silver: maximum 25.0 ppm.

Atomic absorption spectrometry (*2.2.23, Method I*).

Test solution. Solution S.

Reference solutions. Prepare the reference solutions using *silver standard solution (5 ppm Ag) R* and diluting with a 6.5 per cent *V/V* solution of *lead-free nitric acid R*.

Source: silver hollow-cathode lamp.

Wavelength: 328.1 nm.

Atomisation device: air-acetylene flame.

Substances not precipitated by ammonia: maximum 1.0 per cent.

In a porcelain or quartz dish, ignite 2.0 g, increasing the temperature very gradually to 600 ± 50 °C; allow to cool. Moisten the residue with 2 ml of *nitric acid R*, evaporate to dryness on a water-bath and carefully heat and ignite once more at 600 ± 50 °C. After cooling, dissolve the residue in 5 ml of *nitric acid R* and dilute to 20 ml with *water R*. To 10 ml of this solution, add *concentrated ammonia R* until alkaline and filter. Wash the residue with *water R*, evaporate the combined filtrate and washings to dryness on a water-bath and add 0.3 ml of *dilute sulphuric acid R*. Ignite, the residue weighs a maximum of 10 mg.

Loss on drying (*2.2.32*): maximum 7.0 per cent, determined on 1.000 g by drying in an oven at 105 °C for 3 h.

ASSAY

To 0.300 g add 10 ml of a mixture of equal volumes of *nitric acid R* and *water R*, heat to boiling and maintain boiling for 2 min. Add 0.1 g of *potassium chlorate R*, heat to boiling and maintain boiling for 1 min. Add 10 ml of *water R* and heat until the solution becomes colourless. To the hot solution, add 200 ml of *water R* and 50 mg of *xylenol orange triturate R*. Titrate with *0.1 M sodium edetate* until a yellow colour is obtained.

1 ml of *0.1 M sodium edetate* is equivalent to 20.90 mg of Bi.

STORAGE

Protected from light.

BISMUTH SUBNITRATE, HEAVY

Bismuthi subnitras ponderosus

$4[BiNO_3(OH)_2],BiO(OH)$ M_r 1462
[1304-85-4]

DEFINITION

Content: 71.0 per cent to 74.0 per cent of Bi (A_r 209.0) (dried substance).

CHARACTERS

Appearance: white or almost white powder.

Solubility: practically insoluble in water and in ethanol (96 per cent). It dissolves in mineral acids with decomposition.

IDENTIFICATION

A. Dilute 1 ml of solution S1 (see Tests) to 5 ml with *water R* and add 0.3 ml of *potassium iodide solution R*. A black precipitate is formed which dissolves into an orange solution with the addition of 2 ml of *potassium iodide solution R*.

B. It gives reaction (b) of bismuth (*2.3.1*).

C. It gives the reaction of nitrates (*2.3.1*).

D. pH (*2.2.3*): maximum 2.0 for solution S2 (see Tests).

TESTS

Solution S1. Shake 5.0 g by gently heating in 10 ml of *water R* and add 20 ml of *nitric acid R*. Heat until dissolution, cool and dilute to 100 ml with *water R*.

Solution S2. Place 1.00 g in a 20 ml volumetric flask and add 2.0 ml of *lead-free nitric acid R*. Allow acid attack to take place without heating and if necessary warm slightly at the end to completely dissolve the test sample. Add 10 ml of *water R*, shake and add, in small fractions, 4.5 ml of *lead-free ammonia R*; shake and allow to cool. Dilute to 20.0 ml with *water R*, shake again and allow the solids to settle. The clear supernatant solution is solution S2.

Acidity. Suspend 1.0 g in 15 ml of *water R* and shake several times. Allow to stand for 5 min and filter. To 10 ml of the filtrate, add 0.5 ml of *phenolphthalein solution R1*. Not more than 0.5 ml of *0.1 M sodium hydroxide* is required to change the colour of the indicator to pink.

Chlorides (*2.4.4*): maximum 200 ppm.

To 5.0 ml of solution S1, add 3 ml of *nitric acid R* and dilute to 15 ml with *water R*.

Copper: maximum 50.0 ppm.

Atomic absorption spectrometry (*2.2.23, Method I*).

Test solution. Solution S2.

Reference solutions. Prepare the reference solutions using *copper standard solution (10 ppm Cu) R* and diluting with a 37 per cent *V/V* solution of *lead-free nitric acid R*.

Source: copper hollow-cathode lamp.

Wavelength: 324.7 nm.

Atomisation device: air-acetylene flame.

Lead: maximum 20.0 ppm.

Atomic absorption spectrometry (*2.2.23, Method II*).

Test solution. Solution S2.

Reference solutions. Prepare the reference solutions using *lead standard solution (10 ppm Pb) R* and diluting with a 37 per cent *V/V* solution of *lead-free nitric acid R*.

Source: lead hollow-cathode lamp.

Wavelength: 283.3 nm (depending on the apparatus, the line at 217.0 nm may be used).

Atomisation device: air-acetylene flame.

Silver: maximum 25.0 ppm.

Atomic absorption spectrometry (*2.2.23, Method I*).

Test solution. Solution S2.

Reference solutions. Prepare the reference solutions using *silver standard solution (5 ppm Ag) R* and diluting with a 37 per cent *V/V* solution of *lead-free nitric acid R*.

Source: silver hollow-cathode lamp.

Wavelength: 328.1 nm.

Atomisation device: air-acetylene flame.

Substances not precipitated by ammonia: maximum 1.0 per cent.

To 20 ml of solution S1, add *concentrated ammonia R* until an alkaline reaction is produced and filter. Wash the residue with *water R*, and evaporate the combined filtrate and washings to dryness on a water-bath. To the residue, add 0.3 ml of *dilute sulphuric acid R* and ignite. The residue weighs a maximum of 10 mg.

Loss on drying (*2.2.32*): maximum 3.0 per cent, determined on 1.000 g by drying in an oven at 105 °C.

ASSAY

Dissolve with heating 0.250 g in 10 ml of a mixture of 2 volumes of *perchloric acid R* and 5 volumes of *water R*. To the hot solution, add 200 ml of *water R* and 50 mg of *xylenol orange triturate R*. Titrate with *0.1 M sodium edetate* until a yellow colour is obtained.

1 ml of *0.1 M sodium edetate* is equivalent to 20.90 mg of Bi.

01/2008:1495
corrected 6.0

BISMUTH SUBSALICYLATE

Bismuthi subsalicylas

$C_7H_5BiO_4$ M_r 362.1
[14882-18-9]

DEFINITION

Complex of bismuth and salicylic acid.

Content: 56.0 per cent to 59.4 per cent of Bi (A_r 209.0) (dried substance).

CHARACTERS

Appearance: white or almost white powder.

Solubility: practically insoluble in water and in alcohol. It dissolves in mineral acids with decomposition.

IDENTIFICATION

A. To 0.5 g add 10 ml of *hydrochloric acid R1*. Heat on a boiling water-bath for 5 min. Cool and filter. Retain the filtrate for identification test B. Wash the residue with *dilute hydrochloric acid R* and then with *water R*. Dissolve the residue in 0.5-1 ml of *dilute sodium hydroxide solution R*. Add 15 ml of *water R*. Neutralise with *dilute hydrochloric acid R*. The solution gives reaction (a) of salicylates (*2.3.1*).

B. The filtrate obtained in identification test A gives reaction (b) of bismuth (*2.3.1*).

TESTS

Solution S. In a porcelain or quartz dish, ignite 1.0 g, increasing the temperature very gradually. Heat in a muffle furnace at 600 ± 25 °C for 2 h. Cool and dissolve the residue with warming in 4 ml of a mixture of equal volumes of *lead-free nitric acid R* and *water R* and dilute to 20 ml with *water R*.

Acidity. Shake 2.0 g with 30 ml of *ether R* for 1 min and filter. To the filtrate add 30 ml of *alcohol R* and 0.1 ml of *thymol blue solution R*. Not more than 0.35 ml of *0.1 M sodium hydroxide* is required to change the colour of the indicator to blue.

Chlorides (*2.4.4*): maximum 200 ppm.

Dissolve 0.250 g in a mixture of 2 ml of *nitric acid R*, 5 ml of *water R* and 8 ml of *methanol R*.

Nitrates: maximum 0.4 per cent.

To 0.1 g add 10 ml of *water R* and, with caution, 20 ml of *sulphuric acid R* and stir. The solution is not more intensely yellow coloured than a reference solution prepared at the same time using 0.1 g of *salicylic acid R*, 6 ml of *water R*, 4 ml of *nitrate standard solution (100 ppm NO_3) R* and 20 ml of *sulphuric acid R*.

Copper: maximum 50.0 ppm.

Atomic absorption spectrometry (*2.2.23, Method I*).

Test solution. Solution S.

Reference solutions. Prepare the reference solutions using *copper standard solution (10 ppm Cu) R* and diluting with a 6.5 per cent *V/V* solution of *lead-free nitric acid R*.

Source: copper hollow-cathode lamp.

Wavelength: 324.7 nm.

Atomisation device: air-acetylene flame.

Lead: maximum 20.0 ppm.

Atomic absorption spectrometry (*2.2.23, Method II*).

Test solution. Solution S.

Reference solutions. Prepare the reference solutions using *lead standard solution (10 ppm Pb) R* and diluting with a 6.5 per cent *V/V* solution of *lead-free nitric acid R*.

Source: lead hollow-cathode lamp.

Wavelength: 283.3 nm (depending on the apparatus, the line at 217.0 nm may be used).

Atomisation device: air-acetylene flame.

Silver: maximum 25.0 ppm.

Atomic absorption spectrometry (*2.2.23, Method I*).

Test solution. Solution S.

Reference solutions. Prepare the reference solutions using *silver standard solution (5 ppm Ag) R* and diluting with a 6.5 per cent *V/V* solution of *lead-free nitric acid R*.

Source: silver hollow-cathode lamp.

Wavelength: 328.1 nm.

Atomisation device: air-acetylene flame.

Soluble bismuth: maximum 40.0 ppm.

Atomic absorption spectrometry (*2.2.23, Method I*).

Test solution. Suspend 5.0 g in 100 ml of *water R*. Stir constantly for 2 h at 20-23 °C. Filter through filter paper (slow filtration) then through a cellulose micropore membrane filter (0.1 µm). To 10.0 ml of clear filtrate, add 0.1 ml of *nitric acid R*.

Reference solutions. Prepare the reference solutions using *bismuth standard solution (100 ppm Bi) R* and diluting with a mixture of equal volumes of *dilute nitric acid R* and *water R*.

Source: bismuth hollow-cathode lamp.

Wavelength: 223.06 nm.

Atomisation device: air-acetylene flame.

Loss on drying (*2.2.32*): maximum 1.0 per cent, determined on 1.000 g by drying in an oven at 105 °C.

ASSAY

Dissolve with heating 0.300 g in 10 ml of a mixture of 2 volumes of *perchloric acid R* and 5 volumes of *water R*. To the hot solution, add 200 ml of *water R* and 50 mg of *xylenol orange triturate R*. Titrate with *0.1 M sodium edetate* until a yellow colour is obtained.

1 ml of *0.1 M sodium edetate* is equivalent to 20.90 mg of Bi.

STORAGE

Protected from light.

01/2008:2384

BISTORT RHIZOME

Bistortae rhizoma

DEFINITION

Whole or fragmented, dried rhizome of *Persicaria bistorta* (L.) Samp. (syn. *Polygonum bistorta* L.) without adventitious roots.

Content: minimum 3.0 per cent of tannins, expressed as pyrogallol ($C_6H_6O_3$; M_r 126.1) (dried drug).

CHARACTERS

The whole rhizome is up to 13 cm long and 2.5 cm in diameter. The remnants of the roots are not longer than 1 cm and are about 1 mm in diameter.

IDENTIFICATION

A. The whole rhizome, reddish-brown or blackish-brown, is thick, twisted, and turned back on itself. Its outer surface shows transverse striations and blackish spots. It is flattened and somewhat depressed on the upper surface, convex on the lower surface. It shows adventitious root scars on the surface. The fracture, pinkish-beige, shows an elliptical zone of whitish pits corresponding to the vessels. The drug may also be obtained as more-or-less cylindrical fragments about 0.3 cm in diameter and up to 1 cm long, with a reddish-brown outer surface, marked by adventitious root scars and a pinkish-beige fracture.

B. Reduce to a powder (355) (*2.9.12*). The powder is reddish-brown. Examine under a microscope using *chloral hydrate solution R*. The powder shows the following diagnostic characters: fragments of parenchyma; very numerous calcium oxalate cluster crystals either free or inside parenchyma cells; a few reticulate lignified vessels; rare cork fragments. Examine under a microscope using a 50 per cent *V/V* solution of *glycerol R*. The powder shows rounded to ovoid starch granules, simple, about 10 µm in diameter.

C. Thin-layer chromatography (*2.2.27*).

Test solution. To 1.0 g of the powdered drug (355) (*2.9.12*) add 10 ml of a mixture of equal volumes of *water R* and *methanol R*, heat on a water-bath at about 65 °C for 30 min and filter.

Reference solution. Dissolve 5 mg of *fructose R* and 5 mg of *catechin R* in 5 ml of *methanol R*.

Plate: *TLC silica gel plate R* (2-10 µm).

Mobile phase: *water R, anhydrous formic acid R, ethyl acetate R* (5:10:85 *V/V/V*).

Application: 2 µl as bands.

Development: over a path of 7 cm.

Drying: in air.

Detection: spray with *anisaldehyde solution R* and heat at 100-105 °C for 5 min; examine in daylight.

Results: see below the sequence of zones present in the chromatograms obtained with the reference solution and the test solution. Furthermore, other faint zones may be present in the chromatogram obtained with the test solution.

Top of the plate	
Catechin: a brown zone	A brown zone (catechin)

Fructose: a green zone	A green zone (fructose)
Reference solution	**Test solution**

TESTS

Paris polyphylla* or *Paris quadrifolia. Examine the powdered drug (355) (*2.9.12*) under a microscope using *chloral hydrate solution R*. The presence of raphides of calcium oxalate, free or in bundles, indicates adulteration by the rhizome of *Paris polyphylla* Smith var. *yunnanensis* (Franch.) Hand.-Mazz or *Paris polyphylla* Smith var. *chinensis* (Franch.) Hara or *Paris quadrifolia* L.

Loss on drying (*2.2.32*): maximum 12.0 per cent, determined on 1.000 g of the powdered drug (355) (*2.9.12*) by drying in an oven at 105 °C.

Total ash (*2.4.16*): maximum 9.0 per cent.

Ash insoluble in hydrochloric acid (*2.8.1*): maximum 1.0 per cent.

ASSAY

Carry out the determination of tannins in herbal drugs (*2.8.14*). Use 1.000 g of the powdered drug (180) (*2.9.12*).

01/2008:1826

BITTER-FENNEL FRUIT OIL

Foeniculi amari fructus aetheroleum

DEFINITION

Essential oil obtained by steam distillation from the ripe fruits of *Foeniculum vulgare* Miller, ssp. *vulgare* var. *vulgare*.

Content:

– fenchone: 12.0 per cent to 25.0 per cent,

– *trans*-anethole: 55.0 per cent to 75.0 per cent.

CHARACTERS

Appearance: clear, colourless or pale yellow liquid.

It has a characteristic odour.

IDENTIFICATION

First identification: B.

Second identification: A.

A. Thin-layer chromatography (*2.2.27*).

Test solution. Dissolve 0.1 ml of the oil to be examined in 5 ml of *toluene R*.

Reference solution. Dissolve 10 µl of *fenchone R* and 80 µl of *anethole R* in 5 ml of *toluene R*.

Plate: *TLC silica gel plate R*.

Mobile phase: *ethyl acetate R, toluene R* (5:95 *V/V*).

Application: 10 µl as bands.

Development: over a path of 15 cm.

Drying: in air.

Detection: spray with a freshly prepared 200 g/l solution of *phosphomolybdic acid R* in *ethanol (96 per cent) R* and heat at 150 °C for 15 min; examine in daylight.

Results: see below the sequence of the zones present in the chromatograms obtained with the reference solution and the test solution. Furthermore, other zones may be present in the chromatogram obtained with the test solution.

Top of the plate	
Anethole: a dark blue to dark violet zone	A dark blue to dark violet zone (anethole)
Fenchone: a blue or bluish-grey zone	A blue or bluish-grey zone (fenchone)
Reference solution	**Test solution**

B. Examine the chromatograms obtained in the test for chromatographic profile.

Results: the characteristic peaks in the chromatogram obtained with the test solution are similar in retention time to those in the chromatogram obtained with the reference solution.

TESTS

Relative density (*2.2.5*): 0.961 to 0.975.

Refractive index (*2.2.6*): 1.528 to 1.539.

Optical rotation (*2.2.7*): + 10.0° to + 24.0°.

Chromatographic profile. Gas chromatography (*2.2.28*): use the normalisation procedure.

Test solution. Dissolve 0.20 ml of the oil to be examined in *heptane R* and dilute to 10.0 ml with the same solvent.

Reference solution. Dissolve 20 µl of *α-pinene R*, 20 µl of *limonene R*, 50 µl of *fenchone R*, 20 µl of *estragole R*, 100 µl of *anethole R* and 20 µl of *anisaldehyde R* in *heptane R* and dilute to 10.0 ml with the same solvent.

Column:

– *material*: fused silica,

– *size*: *l* = 60 m, Ø = 0.25 mm,

– *stationary phase*: *macrogol 20 000 R* (film thickness 0.25 µm).

Carrier gas: *helium for chromatography R*.

Flow rate: 1 ml/min.

Split ratio: 1:200.

Temperature:

	Time (min)	Temperature (°C)
Column	0 – 4	60
	4 – 26	60 → 170
	26 – 41	170
Injection port		220
Detector		270

Detection: flame ionisation.

Injection: 1.0 µl.

Elution order: order indicated in the composition of the reference solution. Record the retention times of these substances.

System suitability: reference solution:

– *resolution*: minimum 5.0 between the peaks due to estragole and *trans*-anethole.

Using the retention times determined from the chromatogram obtained with the reference solution, locate the components of the reference solution on the chromatogram obtained with the test solution and locate *cis*-anethole using Figure 1826.-1. (Disregard the peak due to heptane).

Determine the percentage content of each of these components. The percentages are within the following ranges:

– *α-pinene*: 1.0 per cent to 10.0 per cent,

– *limonene*: 0.9 per cent to 5.0 per cent,

– *fenchone*: 12.0 per cent to 25.0 per cent,

– *estragole*: maximum 6.0 per cent,

– *cis-anethole*: maximum 0.5 per cent,

– *trans-anethole*: 55.0 per cent to 75.0 per cent,

– *anisaldehyde*: maximum 2.0 per cent.

The ratio of α-pinene content to limonene content is greater than 1.0.

STORAGE

In a well-filled, airtight container, protected from light and at a temperature not exceeding 25 °C.

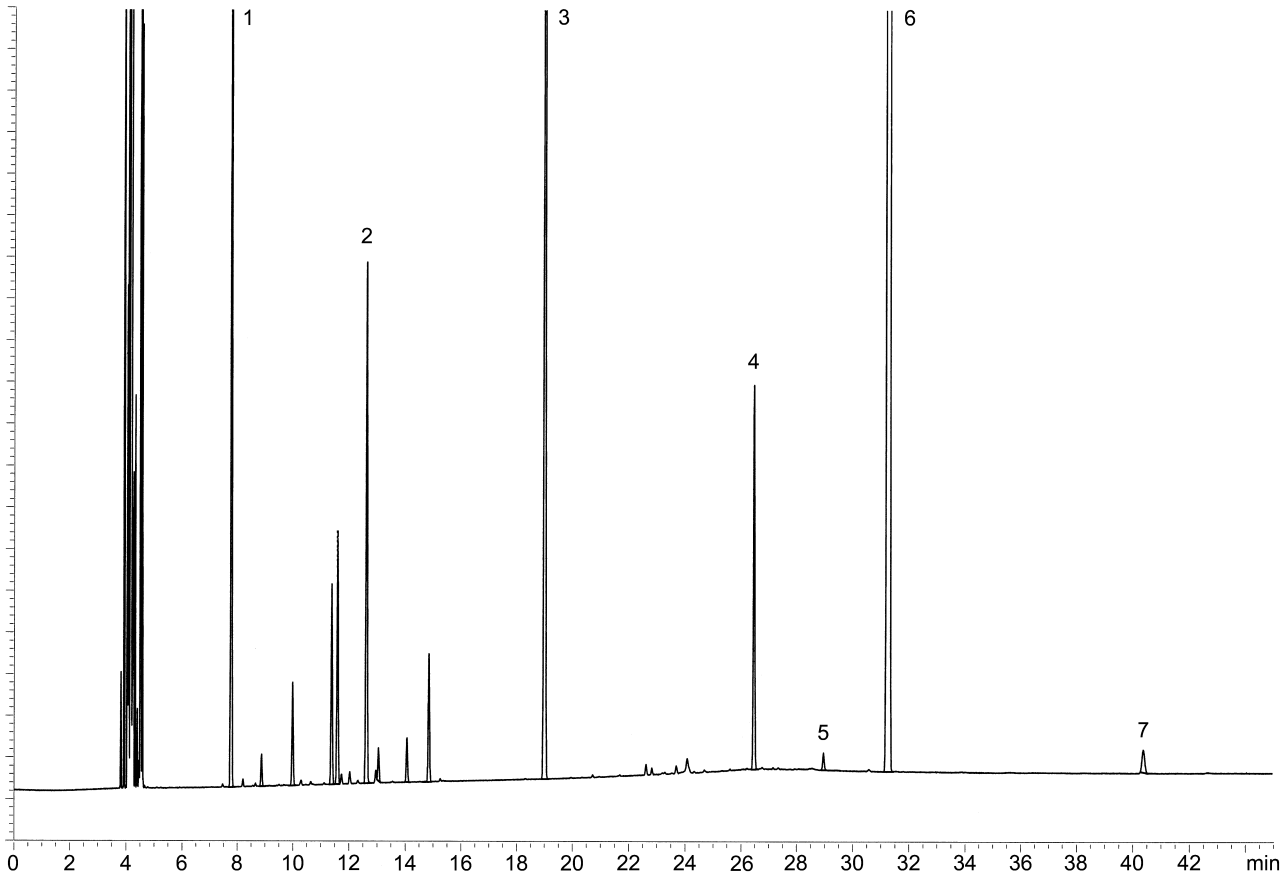

Figure 1826.-1. – *Chromatogram for the test for chromatographic profile of bitter-fennel fruit oil*

01/2008:1603

BITTER-ORANGE EPICARP AND MESOCARP

Aurantii amari epicarpium et mesocarpium

DEFINITION

Dried epicarp and mesocarp of the ripe fruit of *Citrus aurantium* L. ssp. *aurantium* (*C. aurantium* L. ssp. *amara* Engl.) partly freed from the white spongy tissue of the mesocarp and endocarp.

Content: minimum 20 ml/kg of essential oil (anhydrous drug).

CHARACTERS

Aromatic odour and spicy bitter taste.

IDENTIFICATION

A. The drug consists of elliptical to irregular pieces 5 cm to 8 cm long, 3 cm to 5 cm broad and about 3 mm thick. The outer surface is yellowish to reddish-brown and distinctly punctate, the inner surface is yellowish to brownish-white.

B. Reduce to a powder (355) (*2.9.12*). The powder is light brown. Examine under a microscope using *chloral hydrate solution R*. The powder shows small polygonal cells with slightly thickened anticlinal walls, filled with orange-red chromatophores, and very occasional anomocytic stomata (*2.8.3*); fragments of the hypodermis showing collenchymatous thickening; groups of parenchyma with each cell containing a prism crystal of calcium oxalate; fragments of lysigenous oil glands; parenchyma containing crystals of hesperidin which dissolve in a 20 g/l *potassium hydroxide R* solution giving a yellow colour.

C. Thin-layer chromatography (*2.2.27*).

Test solution. To 1.0 g of the powdered drug (710) (*2.9.12*) add 10 ml of *methanol R* and heat in a water-bath at 65 °C for 5 min shaking frequently. Allow to cool and filter.

Reference solution. Dissolve 1.0 mg of *naringin R* and 1.0 mg of *caffeic acid R* in 1 ml of *methanol R*.

Plate: *TLC silica gel plate R*.

Mobile phase: *water R, anhydrous formic acid R, ethyl acetate R* (10:15:75 *V/V/V*).

Application: 20 µl, as bands.

Development: over a path of 10 cm.

Drying: in air, and heat in an oven at 110-120 °C for 5 min.

Detection: spray the warm plate with a 10 g/l solution of *diphenylboric acid aminoethyl ester R* in *methanol R* and then with a 50 g/l solution of *macrogol 400 R* in *methanol R*. After at least 1 h, examine in ultraviolet light at 365 nm.

Results: see below the sequence of the zones present in the chromatograms obtained with the reference and test solutions. Furthermore, other fluorescent zones are present in the chromatogram obtained with the test solution.

Top of the plate	
	A light blue fluorescent zone
	A light blue fluorescent zone
Caffeic acid: a light blue fluorescent zone	
	A light blue fluorescent zone
	A light blue fluorescent zone
Naringin: a dark green fluorescent zone	A dark green fluorescent zone (naringin)
	A red fluorescent zone (neoeriocitrin)
	An orange fluorescent zone
Reference solution	**Test solution**

TESTS

Water (*2.2.13*): maximum 10.0 per cent, determined on 20.0 g of powdered drug (355) (*2.9.12*) by distillation.

Total ash (*2.4.16*): maximum 7.0 per cent

Extractable matter: minimum 6.0 per cent.

To 2.000 g of the powdered drug (250) (*2.9.12*) add a mixture of 3 ml of *water R* and 7 ml of *alcohol R* and extract for 2 h, shaking frequently. Filter, evaporate 2.000 g of the filtrate to dryness on a water-bath and dry in an oven at 100-105 °C for 3 h. Allow to cool in a dessicator over *diphosphorus pentoxide R* and weigh. The residue weighs a minimum of 120 mg.

ASSAY

Carry out the determination of essential oil in herbal drugs (*2.8.12*). Use a 500 ml round-bottomed flask, 200 ml of *water R* as the distillation liquid and 0.5 ml of *xylene R* in the graduated tube. Reduce the drug to a powder (710) (*2.9.12*) and immediately use 15.0 g for the determination. Distil at a rate of 2-3 ml/min for 90 min.

01/2008:1604

BITTER-ORANGE-EPICARP AND MESOCARP TINCTURE

Aurantii amari epicarpii et mesocarpii tinctura

DEFINITION

Tincture produced from *Bitter-orange epicarp and mesocarp (1603).*

PRODUCTION

The tincture is produced from 1 part of the freshly powdered drug (2000) (*2.9.12*) and 5 parts of *alcohol (70 per cent V/V/V)* by an appropriate procedure.

CHARACTERS

Liquid with a bitter taste.

IDENTIFICATION

Examine by thin-layer chromatography (*2.2.27*).

Test solution. The tincture to be examined.

Reference solution. Dissolve 1.0 mg of *naringin R* and 1.0 mg of *caffeic acid R* in 1 ml of *methanol R.*

Plate: *TLC silica gel plate R.*

Mobile phase: *water R, anhydrous formic acid R, ethyl acetate R* (10:15:75 *V/V/V*).

Application: 20 µl, as bands.

Development: over a path of 10 cm.

Drying: in air, and heat in an oven at 110-120 °C for 5 min.

Detection: spray the warm plate with a 10 g/l solution of *diphenylboric acid aminoethyl ester R* in *methanol R* and then with a 50 g/l solution of *macrogol 400 R* in *methanol R*. After 1 h, examine in ultraviolet light at 365 nm.

Results: see below the sequence of the zones present in the chromatograms obtained with the reference and test solutions. Furthermore, other zones are present in the chromatogram obtained with the test solution.

Top of the plate	
	A light blue fluorescent zone
	A light blue fluorescent zone
Caffeic acid: a light blue fluorescent zone	
	A light blue fluorescent zone
	A light blue fluorescent zone
Naringin: a dark green fluorescent zone	A dark green fluorescent zone (naringin)
	A red fluorescent zone (neoeriocitrin)
	An orange fluorescent zone
Reference solution	**Test solution**

TESTS

Ethanol content (*2.9.10*): 63 per cent to 67 per cent *V/V*.

Methanol and 2-propanol (*2.9.11*): maximum 0.05 per cent *V/V* of methanol and maximum 0.05 per cent *V/V* of 2-propanol.

Dry residue: minimum 6.0 per cent *m/m*, determined on 2.00 g of tincture to be examined.

01/2008:1810
corrected 6.0

BITTER-ORANGE FLOWER

Aurantii amari flos

DEFINITION

Whole, dried, unopened flower of *Citrus aurantium* L. ssp. *aurantium* (*C. aurantium* L. ssp. *amara* Engl.).

Content: minimum 8.0 per cent of total flavonoids, expressed as naringin ($C_{27}H_{32}O_{14}$; M_r 580.5) (dried drug).

IDENTIFICATION

A. The flower buds are white or yellowish-white and may reach up to 25 mm in length. The dialypetalous corolla is composed of 5 thick, oblong and concave petals dotted with oil glands visible under a hand lens; the short, yellowish-green persistent gamosepalous calyx has 5 spreading sepals, connate at the base and forming a star-shaped structure attached to the yellowish-green peduncle which is about 5 mm to 10 mm long. The flower buds contain at least 20 stamens with yellow anthers and with filaments fused at the base into groups of 4 or 5; the ovary is superior, brownish-black and spherical, consists of 8 to 10 multi-ovular loculi and is surrounded at the base by an annular granular hypogynous disc; the thick, cylindrical style ends in a capitate stigma.

B. Reduce to a powder (355) (*2.9.12*). The powder is brownish-yellow. Examine under a microscope using *chloral hydrate solution R*. The powder shows numerous

spherical pollen grains, with a finely pitted exine and 3 to 5 germinal pores; fragments of the epidermis of the sepals with unicellular trichomes and with large prism crystals of calcium oxalate in the underlying mesophyll; fragments of the epidermis of the petals with a distinctly striated cuticle; fragments of large schizolysigenous oil glands which measure up to 100 µm in diameter, numerous anomocytic stomata (*2.8.3*). Examine under a microscope using a 300 g/l solution of *potassium hydroxide R*. The powder shows yellow crystals of hesperidin.

C. Examine the chromatograms obtained in the test for sweet-orange flower.

Results: see below the sequence of the zones present in the chromatograms obtained with the reference solution and the test solution.

Top of the plate	
	A weak yellow fluorescent zone
	A weak yellow fluorescent zone
Hesperidin: a greenish-yellow fluorescent zone	A greenish-yellow fluorescent zone (hesperidin)
Naringin: a yellow fluorescent zone	A yellow fluorescent zone (naringin)
	A red fluorescent zone (neoeriocitrin)
	A yellow fluorescent zone (diosmin and neodiosmin)
Reference solution	**Test solution**

TESTS

Sweet-orange flower. Thin-layer chromatography (*2.2.27*).

Test solution. To 0.5 g of the powdered drug (355) (*2.9.12*), add 5 ml of *methanol R*. Heat with stirring at 40 °C for 10 min. Filter.

Reference solution. Dissolve 3.0 mg of *naringin R* and 3.0 mg of *hesperidin R* in 10 ml of *methanol R*.

Plate: *TLC silica gel plate R*.

Mobile phase: *water R, anhydrous formic acid R, ethyl acetate R* (10:15:75 *V/V/V*).

Application: 10 µl, as bands.

Development: over a path of 10 cm.

Drying: in air, then heat in an oven at 110-120 °C for 5 min.

Detection: spray the hot plate with a 10 g/l solution of *diphenylboric acid aminoethyl ester R* in *methanol R* and then with a 50 g/l solution of *macrogol 400 R* in *methanol R*. After at least 1 h, examine in ultraviolet light at 365 nm.

Results: the chromatogram obtained with the test solution shows a yellow zone similar in position to the zone of naringin in the chromatogram obtained with the reference solution and immediately below it a red zone (neoeriocitrin).

Loss on drying (*2.2.32*): maximum 11.0 per cent, determined on 1.000 g of the powdered drug (355) (*2.9.12*) by drying in an oven at 105 °C.

Total ash (*2.4.16*): maximum 10.0 per cent.

ASSAY

Stock solution. To 0.175 g of the powdered drug (355) (*2.9.12*) add 95 ml of *alcohol (50 per cent V/V) R*. Heat on a water-bath under a reflux condenser for 30 min. Allow to cool and filter through a sintered-glass filter (*2.1.2*). Rinse the filter with 5 ml of *alcohol (50 per cent V/V) R*. Combine the filtrate and the rinsings in a volumetric flask and dilute to 100.0 ml with *alcohol (50 per cent V/V) R*.

Test solution. Into a test tube (10 mm × 180 mm) introduce 0.150 g of powdered (250) (*2.9.12*) *magnesium R*, a magnetic stirring bar 25 mm long and 2.00 ml of the stock solution. Maintain the test tube upright, centrifuge at 125 *g* and carefully add dropwise, especially at the beginning, 2.0 ml of *hydrochloric acid R*, and then 6.0 ml of *alcohol (50 per cent V/V) R*. Stopper the tube and mix by inverting.

Compensation solution. Into a second tube, introduce 2.00 ml of the stock solution and carefully add dropwise, especially at the beginning, 2.0 ml of *hydrochloric acid R* and then 6.0 ml of *alcohol (50 per cent V/V) R*.

After 10 min, measure the absorbance (*2.2.25*) of the test solution at 530 nm.

Calculate the percentage content of total flavonoids, expressed as naringin, from the expression:

$$\frac{A \times 9.62}{m}$$

i.e. taking the value of the specific absorbance of the reaction product of naringin to be 52.

A = absorbance at 530 nm,

m = mass of the substance to be examined, in grams.

01/2008:1858
corrected 6.0

BLACK HOREHOUND

Ballotae nigrae herba

DEFINITION

Dried flowering tops of *Ballota nigra* L.

Content: minimum 1.5 per cent of total *ortho*-dihydroxycinnamic acid derivatives, expressed as acteoside ($C_{29}H_{36}O_{15}$; M_r 624.6) (dried drug).

IDENTIFICATION

A. The stems are conspicuously four-angled, longitudinally striated, dark green or reddish-brown and more or less pubescent. The leaves are greyish-green, petiolate, the lamina ovate or orbicular, 2-4 cm wide, the margin irregularly crenate, and cuneate or cordate at the base; both surfaces are covered with abundant whitish hairs; the venation is pinnate, prominent on the lower surface, slightly depressed on the upper. The flowers are sessile or very shortly pedicellate, the calyx is infundibuliform, densely pubescent, with 10 prominent ribs and 5 subequal, broadly ovate teeth; the corolla, with a tube slightly shorter than the calyx tube, is purple and bilabiate, the upper lip pubescent on the outer surface and the lower lip with 3 lobes, the middle of which is notched.

B. Reduce to a powder (355) (*2.9.12*). The powder is greyish-green and slightly flocculent. Examine under a microscope using *chloral hydrate solution R*. The powder shows the following diagnostic characters: numerous long, uniseriate, multicellular covering trichomes consisting of 4 or more cells, thickened and swollen at the junctions, with slightly lignified and pitted walls; fewer glandular trichomes, some with a unicellular or multicellular stalk and a globose, uni- or bicellular head, others with a unicellular stalk and a multicellular head; fragments of the leaf epidermis with sinuous walls, those from the lower epidermis with numerous stomata, some diacytic (*2.8.3*) but the majority anomocytic; epidermis of the corolla composed of polygonal cells, those of the inner epidermis papillose; pollen grains subspherical with

3 pores and a smooth exine; groups of collenchyma and lignified, spirally thickened and bordered pitted vessels, from the stem.

C. Thin-layer chromatography (*2.2.27*).

Test solution. To 2 g of the powdered drug (355) (*2.9.12*) add 100 ml of *methanol R*. Heat on a water-bath under a reflux condenser for 30 min. Allow to cool. Filter. Evaporate the filtrate under reduced pressure until a volume of about 10 ml is obtained.

Reference solution. Dissolve 2.5 mg of *rutin R* and 1 mg of *chlorogenic acid R* in 10 ml of *methanol R*.

Plate: *TLC silica gel plate R*.

Mobile phase: *anhydrous formic acid R, glacial acetic acid R, water R, ethyl acetate R* (7.5:7.5:18:67 *V/V/V/V*).

Application: 20 µl, as bands.

Development: over a path of 15 cm.

Drying: in air.

Detection: spray with a solution containing 10 g/l of *diphenylboric acid aminoethyl ester R* and 50 g/l of *macrogol 400 R* in *methanol R*. Allow to dry in a current of warm air. Examine in ultraviolet light at 365 nm after 30 min.

Results: see below the sequence of the zones present in the chromatograms obtained with the reference solution and the test solution. Furthermore, other fluorescent zones may be present in the chromatogram obtained with the test solution.

Top of the plate	
	A reddish fluorescent zone
	A faint yellow fluorescent zone
	A light blue fluorescent zone (caffeoylmalic acid)
	A greenish-blue fluorescent zone (acteoside)
	A yellowish-brown fluorescent zone (luteolin 7-lactate)
Chlorogenic acid: a light blue fluorescent zone	
	A greenish-blue fluorescent zone (forsythoside B)
Rutin: an orange-yellow fluorescent zone	2 greenish-blue fluorescent zones (arenarioside)
	A yellow fluorescent zone (luteolin 7-lactate glucoside).
	A faint greenish-blue fluorescent zone (ballotetroside).
Reference solution	**Test solution**

TESTS

Loss on drying (*2.2.32*): maximum 12.0 per cent, determined on 1.000 g of the powdered drug (355) (*2.9.12*) in an oven at 105 °C for 2 h.

Total ash (*2.4.16*): maximum 13.0 per cent.

ASSAY

Stock solution. Place 1.000 g of the powdered drug (355) (*2.9.12*) in a flask. Add 90 ml of *ethanol (50 per cent V/V) R*. Heat under a reflux condenser on a water-bath for 30 min. Allow to cool and filter, collecting the filtrate in a 100 ml volumetric flask. Rinse the flask and the filter with 10 ml of *ethanol (50 per cent V/V) R*. Add the rinsings to the filtrate and dilute to 100.0 ml with *ethanol (50 per cent V/V) R*.

Test solution. Into a 10 ml volumetric flask, introduce successively, with shaking after each addition, 1.0 ml of the stock solution, 2 ml of *0.5 M hydrochloric acid*, 2 ml of a solution containing 100 g/l of *sodium nitrite R* and 100 g/l of *sodium molybdate R*, 2 ml of *dilute sodium hydroxide solution R* and dilute to 10.0 ml with *water R*.

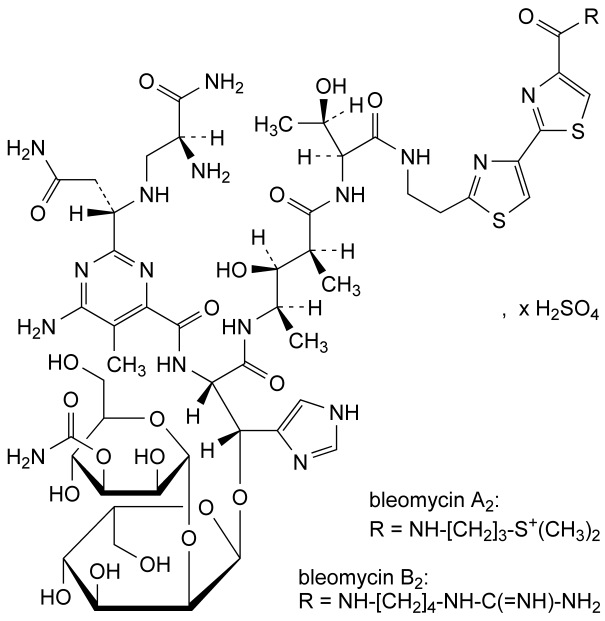
Compensation liquid. Into a 10 ml volumetric flask, introduce 1.0 ml of the stock solution, 2 ml of *0.5 M hydrochloric acid* and 2 ml of *dilute sodium hydroxide solution R*, and dilute to 10.0 ml with *water R*.

Measure immediately the absorbance (*2.2.25*) of the test solution at 525 nm, by comparison with the compensation liquid.

Calculate the percentage content of total *ortho*-dihydroxycinnamic acid derivatives, expressed as acteoside, using the following expression:

$$\frac{A \times 1000}{185 \times m}$$

i.e. taking the specific absorbance of acteoside to be 185.



A = absorbance at 525 nm,

m = mass of the substance to be examined, in grams.

01/2008:0976
corrected 6.0

BLEOMYCIN SULPHATE

Bleomycini sulfas

[9041-93-4]

DEFINITION

Sulphate of a mixture of glycopeptides produced by *Streptomyces verticillus* or by any other means; the 2 principal components of the mixture are *N*-[3-(dimethylsulphonio)propyl]bleomycinamide (bleomycin A_2) and *N*-[4-(carbamimidoylamino)butyl]bleomycinamide (bleomycin B_2).

Potency: minimum 1500 IU/mg (dried substance).

CHARACTERS

Appearance: white or yellowish-white, very hygroscopic powder.

Solubility: very soluble in water, slightly soluble in anhydrous ethanol, practically insoluble in acetone.

IDENTIFICATION

A. Examine the chromatograms obtained in the test for composition.

Results: the 2 principal peaks in the chromatogram obtained with the test solution are similar in retention time and size to the 2 principal peaks in the chromatogram obtained with reference solution (a).

B. It gives the reactions of sulphates (*2.3.1*).

TESTS

Appearance of solution. The solution is clear (*2.2.1*) and its absorbance (*2.2.25*) at 430 nm is not greater than 0.10.

Dissolve 0.200 g in *water R* and dilute to 10.0 ml with the same solvent.

pH (*2.2.3*): 4.5 to 6.0.

Dissolve 50 mg in *carbon dioxide-free water R* and dilute to 10 ml with the same solvent.

Composition. Liquid chromatography (*2.2.29*): use the normalisation procedure.

Test solution. Dissolve 25.0 mg of the substance to be examined in *water R* and dilute to 50.0 ml with the same solvent.

Reference solution (a). Dissolve 25.0 mg of *bleomycin sulphate CRS* in *water R* and dilute to 50.0 ml with the same solvent.

Reference solution (b). Dilute 1.5 ml of reference solution (a) to 100.0 ml with *water R*.

Column:

– *size*: *l* = 0.25 m, Ø = 4.6 mm;
– *stationary phase*: *octadecylsilyl silica gel for chromatography R* (7 µm).

Mobile phase:

– *mobile phase A*: *methanol R*;
– *mobile phase B*: dissolve 0.960 g of *sodium pentanesulphonate R* in 900 ml of acetic acid (4.8 g/l $C_2H_4O_2$), add 1.86 g of *sodium edetate R*, dilute to 1000 ml with the same solvent and adjust to pH 4.3 with *ammonia R;*

Time (min)	Mobile phase A (per cent *V/V*)	Mobile phase B (per cent *V/V*)
0 - 60	10 → 40	90 → 60
60 - end	40	60

Flow rate: 1.2 ml/min.

Detection: spectrophotometer at 254 nm.

Injection: 20 µl.

Run time: until impurity D is eluted (about 80 min).

Relative retention with reference to bleomycin A_2: impurity D = 1.5 to 2.5.

System suitability:

– *resolution*: minimum 5 between the peaks due to bleomycin A_2 (1st principal peak) and bleomycin B_2 (2nd principal peak) in the chromatogram obtained with reference solution (a);
– *signal-to-noise ratio*: minimum 20 for the principal peak in the chromatogram obtained with reference solution (b);
– *repeatability*: maximum relative standard deviation of 2 per cent for the principal peak after 6 injections of reference solution (a).

Limits:

– *bleomycin A_2*: 55 per cent to 70 per cent;
– *bleomycin B_2*: 25 per cent to 32 per cent;
– *sum of bleomycin A_2 and B_2*: minimum 85 per cent;
– *impurity D*: maximum 5.5 per cent;
– *sum of impurities other than D*: maximum 9.5 per cent;
– *disregard limit*: 0.1 per cent of the total.

Copper: maximum 2.00×10^2 ppm.

Atomic absorption spectrometry (*2.2.23, Method I*).

Test solution. Dissolve 50 mg in *water R* and dilute to 10.0 ml with the same solvent.

Reference solution. Dilute 1.0 ml of *copper standard solution (10 ppm Cu) R* to 10.0 ml with *water R*.

Source: copper hollow-cathode lamp.

Wavelength: 324.7 nm.

Atomisation device: air-acetylene flame.

Loss on drying (*2.2.32*): maximum 3.0 per cent, determined on 50 mg by drying at 60 °C at a pressure not exceeding 0.67 kPa for 3 h.

Bacterial endotoxins (*2.6.14*): less than 5 IU/mg, if intended for use in the manufacture of parenteral dosage forms without a further appropriate procedure for the removal of bacterial endotoxins.

ASSAY

Carry out the microbiological assay of antibiotics (*2.7.2*), using the diffusion method. Use *bleomycin sulphate CRS* as the chemical reference substance.

STORAGE

In an airtight container, at a temperature of 2 °C to 8 °C. If the substance is sterile, store in a sterile, airtight, tamper-proof container.

IMPURITIES

Specified impurities: *D*.

Other detectable impurities (the following substances would, if present at a sufficient level, be detected by one or other of the tests in the monograph. They are limited by the general acceptance criterion for other/unspecified impurities and/or by the general monograph *Substances for pharmaceutical use (2034)*. It is therefore not necessary to identify these impurities for demonstration of compliance. See also *5.10. Control of impurities in substances for pharmaceutical use*): *A, B, C*.

A. R = OH: bleomycinic acid,

B. R = NH-$[CH_2]_3$-NH-$[CH_2]_4$-NH_2: bleomycin A_5,

C. R = NH-$[CH_2]_4$-NH-C(=NH)-NH-$[CH_2]_4$-NH-C(=NH)-NH_2: bleomycin B_4,

D. R = NH-$[CH_2]_3$-S-CH_3: demethylbleomycin A_2.

corrected 6.0

BOGBEAN LEAF

Menyanthidis trifoliatae folium

DEFINITION

Dried, entire or fragmented leaf of *Menyanthes trifoliata* L.

CHARACTERS

Very bitter and persistant taste.

IDENTIFICATION

A. The leaf is long-petiolated, trifoliate, with long sheaths from the base; the petiole is up to 5 mm in diameter and strongly striated longitudinally. The lamina is divided into equal leaflets, sessile, obovate up to 10 cm long and up to 5 cm wide, with an entire, occasionally sinuous margin with brownish or reddish hydathodes and a spathulate base; it is glabrous, dark green on the upper surface and paler green on the lower surface, with a wide, whitish, finely striated prominent midrib.

B. Reduce to a powder (355) (*2.9.12*). The powder is yellowish-green. Examine under a microscope using *chloral hydrate solution R*. The powder shows fragments of upper epidermis with polyhedral cells and thin wavy walls; fragments of lower epidermis with sinuous walls; anomocytic stomata (*2.8.3*), on both surfaces, with the subsidiary cells showing radiating striations; epidermal cells from the veins straight walled and papillose; fragments of mesophyll parenchyma with large intercellular spaces (aerenchyma); irregular cells with rare sclereids; fragments of spiral or annular vessels.

C. Thin-layer chromatography (*2.2.27*).

Test solution. To 1.0 g of the powdered drug (355) (*2.9.12*) add 10 ml of *methanol R*. Heat, with stirring, in a water-bath at 60 °C for 5 min. Allow to cool and filter. Evaporate to dryness under reduced pressure in a water-bath at 60 °C. Dissolve the residue in 2.0 ml of *methanol R*.

Reference solution. Dissolve 5 mg of *loganin R* in 15 ml of *methanol R*.

Plate: *TLC silica gel plate R*.

Mobile phase: *water R, methanol R, ethyl acetate R* (8:15:77 *V/V/V*).

Application: 30 µl, as bands.

Development: over a path of 15 cm.

Drying: in air.

Detection: spray with *vanillin reagent R*. Heat in an oven at 100-105 °C for 10 min. Examine in daylight.

Results: see below the sequence of the zones present in the chromatograms obtained with the reference and test solutions. Furthermore, other zones are present in the chromatogram obtained with the test solution.

Top of the plate	
Loganine: a greyish-violet zone	A violet zone An intense blue zone A violet to greyish-violet zone A grey to greyish-blue zone A brownish zone
Reference solution	**Test solution**

TESTS

Loss on drying (*2.2.32*): maximum 10.0 per cent, determined on 1.000 g of the powdered drug (355) (*2.9.12*) by drying in an oven at 105 °C for 2 h.

Total ash (*2.4.16*): maximum 10.0 per cent.

Bitterness value (*2.8.15*): minimum 3000.

01/2008:1396

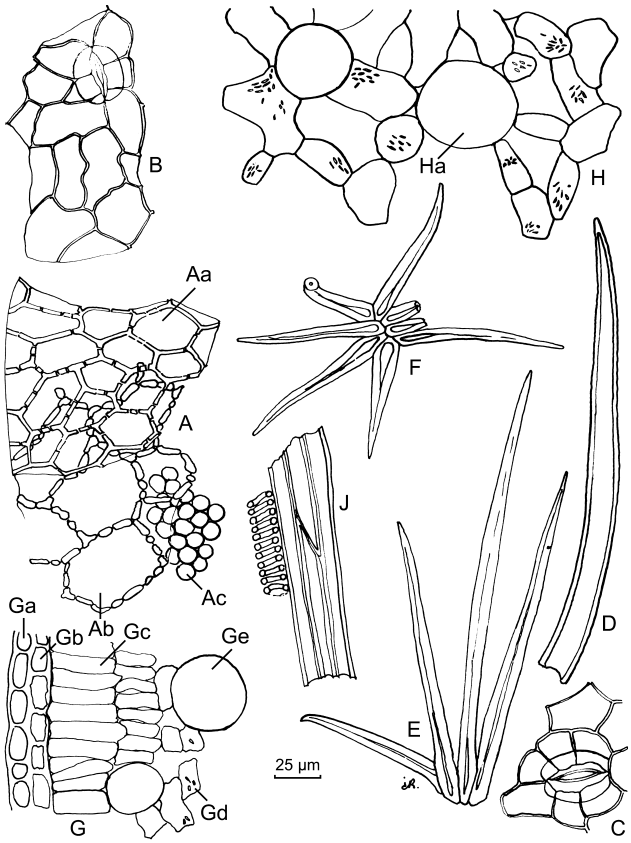
BOLDO LEAF

Boldi folium

DEFINITION

Whole or fragmented dried leaf of *Peumus boldus* Molina.

Content: minimum 0.1 per cent of total alkaloids, expressed as boldine ($C_{19}H_{21}NO_4$; M_r 327.4) (anhydrous drug).



CHARACTERS

Characteristic odour, especially when rubbed.

IDENTIFICATION

A. The leaf is oval or elliptical usually 5 cm long with a short petiole, an obtuse or slightly emarginate or mucronate apex and an equal and rounded base; the margin is entire and slightly undulate and the thickened edges are more or less revolute. The lamina is greyish-green, thick, tough and brittle. The upper surface is rough with numerous prominent small protuberances and a depressed venation. The lower surface is finely pubescent, with the protuberances less well-marked, and a prominent, pinnate venation.

B. Reduce to a powder (355) (*2.9.12*). The powder is greyish-green. Examine under a microscope using *chloral hydrate solution R*. The powder shows fragments of the upper epidermis and underlying hypodermis with straight or slightly sinuous thickened and beaded walls, those of the lower epidermis with numerous stomata surrounded by 4-7 subsidiary cells; solitary, bifurcated or stellate clustered unicellular covering trichomes with more or less thickened and lignified walls; fragments of the lamina showing a two-layered palisade; debris of the spongy mesophyll including numerous large, rounded oil cells and parenchyma containing fine needle-shaped crystals; thick-walled fibres and lignified, pitted parenchymatous cells associated with vascular tissue from the veins.

A. Fragment of the lamina, in surface view, showing the upper epidermis (Aa), hypodermis with thickened and beaded walls (Ab), and palisade parenchyma (Ac)

B and C. Lower epidermis with stomata surrounded by 4-7 subsidiary cells

D. Unicellular covering trichome, solitary

E and F. Unicellular covering trichomes, stellate clustered

G. Fragment of the lamina, in transverse section, showing the upper epidermis (Ga), hypodermis (Gb), palisade parenchyma (Gc) and spongy parenchyma (Gd) containing oil cells (Ge)

H. Spongy parenchyma containing fine needle-shaped crystals and oil cells (Ha)

J. Vascular tissue with fibres

Figure 1396.-1. — *Illustration of powdered herbal drug of boldo leaf (see Identification B)*

C. Thin-layer chromatography (*2.2.27*).

Test solution. Mix 1.5 g of the powdered drug (355) (*2.9.12*) and 5 ml of *methanol R* and sonicate for 10 min. Filter the supernatant through a 3 cm × 0.5 cm column of *cellulose for chromatography R1*. Use the first 1 ml of the eluate as the test solution.

Reference solution. Dissolve 2 mg of *boldine R* and 10 mg of *hyoscine hydrobromide R* in 5 ml of *methanol R*.

Plate: *TLC silica gel plate R* (5-40 µm) [or *TLC silica gel plate R* (2-10 µm)].

Mobile phase: *diethylamine R, methanol R, toluene R* (10:10:80 *V/V/V*).

Application: 40 µl [or 6 µl] of the test solution and 20 µl [or 2 µl] of the reference solution, as bands of 15 mm [or 8 mm].

Development: over a path of 15 cm [or 6 cm].

Drying: in air.

Detection: spray with *potassium iodobismuthate solution R2*, dry for 5 min in air and spray with *sodium nitrite solution R*; examine in daylight after 30 min.

Results: see below the sequence of zones present in the chromatograms obtained with the reference solution and the test solution.

Top of the plate	
———	———
	A yellowish-brown zone
Hyoscine: a pale brown zone	
	A yellow zone
	A brown zone
	A brown zone
———	———
Boldine: a brown zone	A brown zone (boldine)
	Several zones
Reference solution	**Test solution**

TESTS

Essential oil (*2.8.12*): maximum 40 ml/kg (anhydrous drug).

Use 10.0 g of the freshly fragmented drug, a 1000 ml flask and 300 ml of *water R* as the distillation liquid. Distil at a rate of 2-3 ml/min for 3 h.

Foreign matter (*2.8.2*): maximum 4 per cent of twigs and maximum 2 per cent of other foreign matter.

Water (*2.2.13*): maximum 100 ml/kg, determined by distillation of 20.0 g of the powdered drug (355) (*2.9.12*).

Total ash (*2.4.16*): maximum 13.0 per cent.

ASSAY

Alkaloids. Liquid chromatography (*2.2.29*).

Test solution. To 1.000 g of the powdered drug (355) (*2.9.12*) add 50 ml of *dilute hydrochloric acid R*. Shake in a water-bath at 80 °C for 30 min. Filter, take up the residue with 50 ml of *dilute hydrochloric acid R* and shake in a water-bath at 80 °C for 30 min. Filter and repeat the operation once on the residue obtained. Filter. Combine the cooled filtrates and shake with 100 ml of a mixture of equal volumes of *ethyl acetate R* and *hexane R*. Discard the organic layer. Adjust the aqueous layer to pH 9.5 with *dilute ammonia R1*. Shake successively with 100 ml, 50 ml and 50 ml of *methylene chloride R*. Combine the lower layers and evaporate to dryness under reduced pressure. Dissolve the residue in the mobile phase and dilute to 10.0 ml with the mobile phase.

Reference solution. Dissolve 12 mg of *boldine CRS* in the mobile phase and dilute to 100.0 ml with the mobile phase. Dilute 1.0 ml of this solution to 10.0 ml with the mobile phase.

Column:

– *size*: *l* = 0.25 m, Ø = 4.6 mm;

– *stationary phase*: *octadecylsilyl silica gel for chromatography R* (5 µm).

Solution A. Mix 0.2 ml of *diethylamine R* and 99.8 ml of *acetonitrile R*.

Solution B. Mix 0.2 ml of *diethylamine R* and 99.8 ml of *water R* and adjust to pH 3 with *anhydrous formic acid R*.

Mobile phase: solution A, solution B (16:84 *V/V*).

Flow rate: 1.5 ml/min.

Detection: spectrophotometer at 304 nm.

Injection: 20 µl.

Relative retention with reference to boldine (retention time = about 6 min): isoboldine = about 0.9; isocorydine *N*-oxide = about 1.8; laurotetanine = about 2.2; isocorydine = about 2.8; *N*-methyllaurotetanine = about 3.2. Additional peaks may be present.

System suitability: test solution:

– *resolution*: minimum 1 between the peaks due to isoboldine and boldine.

Calculate the percentage content of total alkaloids expressed as boldine using the following expression:

$$\frac{(\sum A_1) \times m_2 \times p}{A_2 \times m_1 \times 100}$$

m_1 = mass of the drug to be examined, in grams;

m_2 = mass of *boldine CRS* in the reference solution, in grams;

ΣA_1 = sum of the areas of the peaks due to the 6 alkaloids identified in the chromatogram obtained with the test solution;

A_2 = area of the peak due to boldine in the chromatogram obtained with the reference solution;

p = percentage content of boldine in *boldine CRS*.

01/2008:2105

BORAGE (STARFLOWER) OIL, REFINED

Boragonis officinalis oleum raffinatum

DEFINITION

Fatty oil obtained from seeds of *Borago officinalis* L. by extraction and/or expression. It is then refined. A suitable antioxidant may be added.

CHARACTERS

Appearance: clear, light yellow or yellow liquid.

Solubility: practically insoluble in water and in ethanol (96 per cent), miscible with light petroleum.

Relative density: about 0.921.

Refractive index: about 1.476.

IDENTIFICATION

First identification: B.

Second identification: A.

A. Carry out the identification of fatty oils by thin-layer chromatography (*2.3.2*). The chromatogram obtained is similar to the type chromatogram for refined borage oil.

B. It complies with the test for the composition of fatty acids (see Tests).

TESTS

Acid value (*2.5.1*): maximum 0.5. If intended for use in the manufacture of parenteral dosage forms: maximum 0.3.

Peroxide value (*2.5.5, Method A*): maximum 10.0. If intended for use in the manufacture of parenteral dosage forms: maximum 5.0.

Unsaponifiable matter (*2.5.7*): maximum 2.0 per cent, determined on 5.0 g.

Alkaline impurities (*2.4.19*). It complies with the test for alkaline impurities in fatty oils.

Composition of fatty acids (*2.4.22, Method A*). Use the mixture of calibrating substances in Table 2.4.22.-3.

Composition of the fatty-acid fraction of the oil:

– *saturated fatty acids of chain length less than C_{16}*: maximum 0.3 per cent,

– *palmitic acid*: 9.0 per cent to 12.0 per cent,

– *palmitoleic acid*: maximum 0.6 per cent,

– *stearic acid*: 2.0 per cent to 6.0 per cent,

– *oleic acid*: 12.0 per cent to 22.0 per cent,

– *linoleic acid*: 30.0 per cent to 41.0 per cent,

– *gamma-linolenic acid* (equivalent chain length on macrogol 20 000: 19.0): 17.0 per cent to 27.0 per cent,

– *alpha-linolenic acid*: maximum 0.5 per cent,

– *arachidic acid*: maximum 0.5 per cent,

– *eicosenoic acid*: 2.8 per cent to 4.4 per cent,

– *erucic acid* (equivalent chain length on macrogol 20 000: 22.2): maximum 3.0 per cent,

– *nervonic acid* (equivalent chain length on macrogol 20 000: 24.2): maximum 4.5 per cent.

Brassicasterol (*2.4.23*): maximum 0.3 per cent in the sterol fraction of the oil.

Water (*2.5.32*): maximum 0.1 per cent, if intended for use in the manufacture of parenteral dosage forms, determined on 5.00 g.

STORAGE

Under an inert gas, in a well-filled, airtight container, protected from light.

LABELLING

The label states, where applicable, that the oil is suitable for use in the manufacture of parenteral dosage forms.

01/2008:0013
corrected 6.0

BORAX

Borax

$Na_2B_4O_7,10H_2O$ M_r 381.4
[1303-96-4]

DEFINITION

Disodium tetraborate decahydrate.

Content: 99.0 per cent to 103.0 per cent of $Na_2B_4O_7,10H_2O$.

CHARACTERS

Appearance: white or almost white, crystalline powder, colourless crystals or crystalline masses, efflorescent.

Solubility: soluble in water, very soluble in boiling water, freely soluble in glycerol.

IDENTIFICATION

A. To 1 ml of solution S (see Tests) add 0.1 ml of *sulphuric acid R* and 5 ml of *methanol R* and ignite. The flame has a green border.

B. To 5 ml of solution S add 0.1 ml of *phenolphthalein solution R*. The solution is red. On the addition of 5 ml of *glycerol (85 per cent) R* the colour disappears.

C. Solution S gives the reactions of sodium (*2.3.1*).

TESTS

Solution S. Dissolve 4.0 g in *carbon dioxide-free water R* prepared from *distilled water R* and dilute to 100 ml with the same solvent.

Appearance of solution. Solution S is clear (*2.2.1*) and colourless (*2.2.2, Method II*).

pH (*2.2.3*): 9.0 to 9.6 for solution S.

Sulphates (*2.4.13*): maximum 50 ppm, determined on solution S.

Use in this test 1.0 ml of *acetic acid R*. Prepare the standard using a mixture of 3 ml of *sulphate standard solution (10 ppm SO_4) R* and 12 ml of *distilled water R*.

Ammonium (*2.4.1*): maximum 10 ppm.

Dilute 6 ml of solution S to 14 ml with *water R*. Prepare the standard using a mixture of 2.5 ml of *ammonium standard solution (1 ppm NH_4) R* and 7.5 ml of *water R*.

Arsenic (*2.4.2, Method A*): maximum 5 ppm, determined on 5 ml of solution S.

Calcium (*2.4.3*): maximum 100 ppm, determined on solution S.

Prepare the standard using a mixture of 6 ml of *calcium standard solution (10 ppm Ca) R* and 9 ml of *distilled water R*.

Heavy metals (*2.4.8*): maximum 25 ppm.

12 ml of solution S complies with test A. Prepare the reference solution using *lead standard solution (1 ppm Pb) R*.

ASSAY

Dissolve 20 g of *mannitol R* in 100 ml of *water R*, heating if necessary, cool and add 0.5 ml of *phenolphthalein solution R* and neutralise with *0.1 M sodium hydroxide* until a pink colour is obtained. Add 3.00 g of the substance to be examined, heat until dissolution is complete, cool, and titrate with *1 M sodium hydroxide* until the pink colour reappears.

1 ml of *1 M sodium hydroxide* is equivalent to 0.1907 g of $Na_2B_4O_7,10H_2O$.

01/2008:0001
corrected 6.0

BORIC ACID

Acidum boricum

H_3BO_3 M_r 61.8
[10043-35-3]

DEFINITION

Content: 99.0 per cent to 100.5 per cent.

CHARACTERS

Appearance: white or almost white, crystalline powder, colourless, shiny plates greasy to the touch, or white or almost white crystals.

Solubility: soluble in water and in ethanol (96 per cent), freely soluble in boiling water and in glycerol (85 per cent).

IDENTIFICATION

A. Dissolve 0.1 g by gently heating in 5 ml of *methanol R*, add 0.1 ml of *sulphuric acid R* and ignite the solution. The flame has a green border.

B. Solution S (see Tests) is acid (*2.2.4*).

TESTS

Solution S. Dissolve 3.3 g in 80 ml of boiling *distilled water R*, cool and dilute to 100 ml with *carbon dioxide-free water R* prepared from *distilled water R*.

Appearance of solution. Solution S is clear (*2.2.1*) and colourless (*2.2.2, Method II*).

pH (*2.2.3*): 3.8 to 4.8 for solution S.

Solubility in ethanol (96 per cent). The solution is not more opalescent than reference suspension II (*2.2.1*) and is colourless (*2.2.2, Method II*).

Dissolve 1.0 g in 10 ml of boiling *ethanol (96 per cent) R*.

Organic matter. It does not darken on progressive heating to dull redness.

Sulphates (*2.4.13*): maximum 450 ppm.

Dilute 10 ml of solution S to 15 ml with *distilled water R*.

Heavy metals (*2.4.8*): maximum 15 ppm.

12 ml of solution S complies with test A. Prepare the reference solution using a mixture of 2.5 ml of *lead standard solution (2 ppm Pb) R* and 7.5 ml of *water R*.

ASSAY

Dissolve 1.000 g with heating in 100 ml of *water R* containing 15 g of *mannitol R*. Titrate with *1 M sodium hydroxide*, using 0.5 ml of *phenolphthalein solution R* as indicator, until a pink colour is obtained.

1 ml of *1 M sodium hydroxide* is equivalent to 61.8 mg of H_3BO_3.

01/2008:2113

BOTULINUM TOXIN TYPE A FOR INJECTION

Toxinum botulinicum typum A ad iniectabile

DEFINITION

Botulinum toxin type A for injection is a dried preparation containing purified botulinum neurotoxin type A which may be present in the form of a complex with haemagglutinins and non-toxic proteins. Botulinum neurotoxin type A or its haemagglutinin complex is prepared by a suitable purification process of the liquid supernatant from a broth-culture of a suitable strain of *Clostridium botulinum* type A.

The purified complexes consist of several proteins and can be of various sizes. The largest complex (relative molecular mass of about 900 000) consists of a 150 000 relative molecular mass neurotoxin, a 130 000 relative molecular mass non-toxic protein and various haemagglutinins ranging between relative molecular mass 14 000 and 43 000. The purified toxin moiety is composed of only the same 150 000 relative molecular mass neurotoxin as is found in the 900 000 relative molecular mass neurotoxin complex, which is initially produced as a single chain and further cleaved (nicked) by endogenous proteases into a fully active, disulphide-linked, 54 000 relative molecular mass light chain and a 97 000 relative molecular mass heavy chain.

The preparation is reconstituted before use, as stated on the label.

PRODUCTION

GENERAL PROVISIONS

Production of the toxin is based on seed cultures, managed in a defined seed-lot system in which the ability to produce toxin is conserved. The production method must be shown to yield consistently product of activity and profile comparable to that of lots shown in clinical studies to be of adequate safety and efficacy.

The production method is validated to demonstrate that the product, if tested, would comply with the general test of abnormal toxicity (*2.6.9*) using not less than the maximum human clinical dose, in the presence of a suitable amount of specific botulinum type A antitoxin used for neutralisation.

The production method and stability of the finished product and relevant intermediates are evaluated using the tests below. Such tests include the specific toxin activity per milligram of protein of purified toxin in an appropriate functional model of toxin activity and may be supported by tests confirming the presence of botulinum toxin type A, and, if appropriate, associated non-toxic proteins.

BACTERIAL SEED LOTS

A highly toxigenic strain of *C. botulinum* of known toxin type A and confirmed absence of genes encoding other botulinum toxins (particularly botulinum toxin type B), with known origin and history, is grown using suitable media. The bacterial strain, used for the master seed lot, shall be identified by historical records that include information on its origin and the tests used to characterise the strain. These will include morphological, cultural, biochemical, genetic and serological properties of the strain. The master seed lot and the working seed lot, where applicable, must be demonstrated to have identical profiles. Only a seed lot that complies with the following requirements may be used.

Identification. Each seed lot is identified as containing pure cultures of *C. botulinum* type A bacteria with no extraneous bacterial or fungal contamination.

Microbial purity. Each seed lot complies with the requirements for absence of contaminating micro-organisms. The purity of bacterial cultures is verified by methods of suitable sensitivity. These may include inoculation into suitable media and examination of colony morphology.

Phenotypic parameters. Each seed lot must have a known fatty acid profile, sugar fermentation profile (glucose, lactose, mannose, etc.) and proteolytic activity and must demonstrate relevant lipase, lecithinase and gelatinase activity.

Genetic purity. Each seed lot must have information on the toxin gene sequence and comply with requirements for the absence of other genes encoding other toxin serotypes.

Production of active toxin. A bacterial strain producing a high yield of active toxin, as determined by an acute toxicity assay, is suitable. Seed lots should demonstrate a capability of producing at least a minimum toxicity level appropriate for the manufacturing process and scale.

MANUFACTURER'S REFERENCE PREPARATIONS

During development, reference preparations are established for subsequent verification of batch consistency during production and for control of the bulk purified toxin and finished product. They are derived from representative batches of botulinum toxin type A that are characterised as described under Bulk Purified Toxin.

The reference preparations are suitably characterised for their intended purpose and are stored in suitably sized aliquots under conditions ensuring their suitability.

BULK PURIFIED TOXIN

C. botulinum type A strain is grown anaerobically, in suitable media, from which cultures are selected for step-up incubations under a suitably controlled anaerobic atmosphere through the seed culture and bulk fermentation stages to allow maximum production of toxin. The toxin is purified by suitable methods to remove nucleic acids and components likely to cause adverse reactions.

Only a purified toxin that complies with the following requirements may be used in the preparation of the final bulk. For each test and for each product, limits of acceptance are established and each new purified toxin must comply with these limits.

Residual reagents. Removal of residual reagents used in purification steps is confirmed by suitable limit tests or by validation of the process.

Nucleic acids. Removal of nucleic acids is confirmed by suitable limit tests or by validation of the process.

Immunological identity. The presence of specific type A toxin is confirmed by a suitable immunochemical method (*2.7.1*).

Specific activity. The specific activity is confirmed in a mouse model of toxicity or by *in vivo/ex vivo* methods validated with respect to the LD50 assay and expressed in mouse LD50 units per milligram of protein. Specific activity must not be less than 1×10^8 mouse LD50 units per milligram of protein for the 150 000 relative molecular mass neurotoxin and must not be less than 1×10^7 mouse LD50 units per milligram of protein for the 900 000 relative molecular mass neurotoxin complex.

Protein. The total protein concentration is determined by a suitable method. An acceptable value is established for the product and each batch must be shown to comply with the limits.

Protein profile. Identity and protein composition are determined by polyacrylamide gel electrophoresis (*2.2.31*) under reducing or non-reducing conditions or by other suitable physicochemical methods such as size-exclusion chromatography (*2.2.30*), comparing with suitable reference standards.

Total viable count. It complies with the limits approved for the particular product.

FINAL BULK

The final bulk is prepared by adding approved excipients to the bulk purified toxin. The solution is filtered through a bacteria-retentive filter. If human albumin is added, it complies with the monograph on *Human albumin solution (0255)*.

FINAL LOT

The final bulk is distributed aseptically into sterile, tamper-proof containers. Uniformity of fill is verified during filling and the test for uniformity of content (*2.9.6*) is not required. The containers are closed so as to prevent contamination.

Only a final lot that is within the limits approved for the particular product and is satisfactory with respect to each of the requirements given below under Identification, Tests and Assay may be released for use.

pH (*2.2.3*). The pH of the reconstituted product is within ± 0.5 pH units of the limit approved for the particular product.

Water: not more than the limit approved for the particular product.

IDENTIFICATION

The presence of botulinum toxin type A is confirmed by a suitable immunochemical method (*2.7.1*).

TESTS

Sterility (*2.6.1*). It complies with the test for sterility.

Bacterial endotoxins (*2.6.14*): less than 10 IU per vial.

ASSAY

The potency of the reconstituted product is determined by an LD50 assay in mice or by a method validated with respect to the LD50 assay. The potency is expressed in terms of the LD50 for mice or relative to the reference preparation.

For determination of the LD50, graded doses of the product are injected intraperitoneally into groups of mice and the LD50 is calculated by the usual statistical methods (*5.3*) from the mouse lethality in each group. A suitable reference preparation is assayed in parallel; the potency of the toxin is expressed relative to the reference or the value found for the reference is within suitable limits defined in terms of the assigned potency.

After validation with respect to the LD50 assay (reference method), the product may also be assayed by other methods that are preferable in terms of animal welfare, including 1 of the following:

1. endopeptidase assay *in vitro*;
2. *ex vivo* assay using the mouse phrenic nerve diaphragm;
3. mouse bioassay using paralysis as the end-point.

For these other methods, the potency is calculated with respect to a suitable reference preparation calibrated in mouse LD50 units.

The estimated potency is not less than 80 per cent and not more than 125 per cent of the stated potency. The confidence limits (P = 0.95) are not less than 80 per cent and not more than 125 per cent of the estimated potency.

The test may be repeated but when more than 1 test is performed, the results of all valid tests must be combined in the estimate of potency.

LABELLING

The label states:

- the number of units of toxin per vial with a statement that units are product specific and not applicable to other preparations containing botulinum toxin type A,
- the name and the volume of the diluent to be added for reconstitution of a dried product.

01/2008:2262

BOVINE SERUM

Serum bovinum

DEFINITION

Liquid fraction of blood obtained from the ox (*Bos taurus* L.) and from which cells, fibrin and clotting factors have been removed.

Different types of bovine serum are used:

- *adult bovine serum* obtained at slaughter from cattle that are declared fit for human consumption;
- *calf serum* obtained at slaughter from animals, fit for human consumption, before the age of 12 months;
- *new-born calf serum* obtained at slaughter from animals before the age of 20 days;
- *foetal bovine serum* obtained from normal foetuses from dams fit for human consumption;
- *donor bovine serum* obtained by repeated bleeding of donor animals from controlled donor herds.

This monograph provides a general quality specification for bovine serum. Various measures are applied during the production of bovine serum aimed at obtaining a product that is acceptable as regards viral safety. No single measure, nor the combination of measures outlined below can guarantee complete viral safety but they rather reduce the risk involved in the use of serum in the manufacture of medicinal products. It is therefore necessary for the manufacturer of a medicinal product to take account of this when choosing the serum for a particular use by making a risk assessment.

PRODUCTION

All stages of serum production are submitted to a suitable quality assurance system.

Traceability of serum is maintained from the final container to the abattoir of origin (for blood collected from slaughtered animals) or to the herd of origin (for blood collected from donor animals).

Further guarantee of the safety and quality of serum may be ensured by the use of a controlled donor herd. Where serum is obtained from such a herd, the animals are subjected to regular veterinary examination to ascertain their health status. Animals introduced into the herd are traceable as regards source, breeding and rearing history. The introduction of animals into the herd follows specified procedures, including defined quarantine measures. During the quarantine period the animals are observed and tested to establish that they are free from all agents and antibodies from which the donor herd is claimed to be free. It may be necessary to test the animals in quarantine for freedom from additional agents, depending on factors such as information available on their breeding and rearing history. It is recommended that animals in the herd should not be vaccinated against bovine viral diarrhoea virus. Tests are carried out for any agent and/or antibody from which the herd is claimed to be free.

Serum is obtained by separation of the serum from blood cells and clot under conditions designed to minimise microbial contamination. Serum from a number of animals is pooled and a batch number is allocated to the pool. Appropriate steps are taken to ensure homogeneity of the harvested material, intermediate pools and the final batch. Suitable measures (for example filtration) are taken to ensure sterility or a low bioburden. Before further processing, the serum is tested for sterility or bioburden. General and specific tests for viral contaminants are carried out as described below.

A step or steps for virus inactivation/removal are applied to serum intended for production of immunological veterinary medicinal products. Unless otherwise justified and authorised for a particular medicinal product, a step or steps for virus inactivation/removal are applied to serum intended for production of human and non-immunological veterinary medicinal products.

INACTIVATION

The inactivation procedure applied is validated with respect to a suitable representative range of viruses covering different types (enveloped, non-enveloped, DNA, RNA viruses). The optimal choice of relevant and model viruses depends strongly on the specific inactivation/removal procedure; representative viruses with different degrees of resistance to the type of treatment must be included. Bovine viral diarrhoea virus must be included in the viruses used for validation. Serum free from antibodies against bovine viral diarrhoea virus is used in part or all of the validation studies.

For bovine serum intended for use in immunological veterinary medicinal products, for inactivation by gamma irradiation a minimum dose of 30 kGy is applied, unless otherwise justified and authorised.

Critical parameters for the method of virus inactivation/removal are established and the parameters used in the validation study are strictly adhered to during subsequent application of the procedures to each batch of serum.

For inactivation by gamma irradiation, critical parameters include:

– the temperature;

– packaging configuration;

– distribution of dosimeters to assess the effective dose received by the product whatever its position;

– the minimum and maximum dose received.

QUALITY CONTROL TESTS APPLIED TO EACH BATCH

A suitable sample size for each batch is established. Specific tests for viral contaminants are validated with respect to sensitivity and specificity. The cell cultures used for general tests for viral contaminants are shown to be sensitive to a suitable range of potential contaminants. Control cells used in the tests are cultivated, where relevant, with a bovine serum controlled and inactivated as described in this monograph. Serum free from antibodies to bovine viral diarrhoea virus is required for validation of the effect of antibodies on the detection limits for bovine viral diarrhoea virus.

Tests carried out on the batch prior to treatment

The following tests are carried out on the serum (before any virus inactivation/removal steps, where applicable).

Tests for viral contaminants. General tests supplemented by specific tests are carried out.

General tests. Validated tests are carried out by inoculation of the serum on at least 2 distinct cell lines, one of which is of bovine origin. The cell lines used are suitable for detecting haemadsorbing viruses such as bovine parainfluenza virus 3 and cytopathic agents such as bovine herpesvirus 1.

Specific tests for viral contaminants (if not detected by general tests), where relevant in view of the country of origin of the serum: bluetongue virus, bovine adenovirus, bovine parvovirus, bovine respiratory syncytial virus, bovine viral diarrhoea virus, rabies virus and reovirus. Depending on the country of origin, specific tests for other viruses may be needed. The animal health status of countries is defined by the 'Office International des Epizooties' (OIE).

For serum to be subjected to a virus inactivation/removal procedure, if evidence of viral contamination is found in any of the tests described above, the serum is acceptable only if the virus is identified and shown to be present in an amount that has been shown in a validation study to be effectively inactivated.

For serum that is not to be subjected to a virus inactivation/removal procedure, if evidence of viral contamination is found in any of the tests described above, the serum is not acceptable.

A test for bovine viral diarrhoea virus antibodies is carried out; an acceptance criterion for the titre is established taking account of the risk assessment.

Composition. The content of a suitable selection of the following components is determined and shown to be within the expected range for the type of serum: cholesterol, α-, β- and γ-globulin, albumin, creatinine, bilirubin, glucose, serum aspartate transaminase (SAST, formerly SGOT - serum glutamic-oxaloacetic transaminase), serum alanine transaminase (SALT, formerly SGPT - glutamic-pyruvic transaminase), phosphorus, potassium, calcium, sodium and pH.

Tests carried out on the batch post-treatment

If bovine viral diarrhoea virus was detected before virus inactivation/removal, the following test for bovine viral diarrhoea virus is carried out after virus inactivation/removal.

Test for bovine viral diarrhoea virus. A validated test for bovine viral diarrhoea virus is carried out, for example by inoculation into susceptible cell cultures, followed by not fewer than 3 subcultures and detection by immunostaining. No evidence of the presence of bovine viral diarrhoea virus is found.

IDENTIFICATION

A. The electrophoretic pattern corresponds to that for serum and is consistent with the type (foetal or other) of bovine serum.

B. Bovine origin is confirmed by a suitable immunochemical method (*2.7.1*).

TESTS

Osmolality (*2.2.35*): 280 mosmol/kg to 365 mosmol/kg for foetal bovine serum and 240 mosmol/kg to 340 mosmol/kg for other types.

Total protein (*2.5.33*): 30 mg/ml to 45 mg/ml for foetal bovine serum and minimum 35 mg/ml for other types.

Haemoglobin: maximum 4 mg/ml, determined by a validated method, such as spectrophotometry.

Bacterial endotoxins (*2.6.14*): less than 10 IU/ml for donor bovine serum, less than 25 IU/ml for foetal bovine serum, less than 100 IU/ml for other types.

Sterility (*2.6.1*). It complies with the test. Use 10 ml for each medium.

Mycoplasmas (*2.6.7*). It complies with the test.

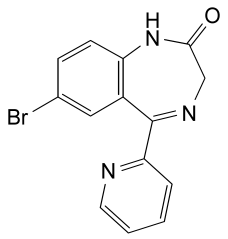
STORAGE

Frozen at – 10 °C or below.

LABELLING

The label states:

– the type of serum;



– where applicable, that the serum has been inactivated and the inactivation method;

– where the serum has been inactivated by gamma irradiation, the target minimum dose of the irradiation procedure.

01/2008:0879

BROMAZEPAM

Bromazepamum

$C_{14}H_{10}BrN_3O$ M_r 316.2
[1812-30-2]

DEFINITION

7-Bromo-5-(pyridin-2-yl)-1,3-dihydro-2*H*-1,4-benzodiazepin-2-one.

Content: 99.0 per cent to 101.0 per cent (dried substance).

CHARACTERS

Appearance: white or yellowish, crystalline powder.

Solubility: practically insoluble in water, slightly soluble or sparingly soluble in ethanol (96 per cent) and in methylene chloride.

IDENTIFICATION

Infrared absorption spectrophotometry (*2.2.24*).

Comparison: *bromazepam CRS*.

TESTS

Related substances. Liquid chromatography (*2.2.29*). *Prepare the solutions immediately before use.*

Test solution. Dissolve 10.0 mg of the substance to be examined in 9 ml of a mixture of 1 volume of *acetonitrile R* and 8 volumes of *methanol R*. Dilute to 20.0 ml with an 11.33 g/l solution of *potassium dihydrogen phosphate R* previously adjusted to pH 7.0 with a 100 g/l solution of *potassium hydroxide R*.

Reference solution (a). Dilute 1.0 ml of the test solution to 100.0 ml with the mobile phase. Dilute 1.0 ml of this solution to 10.0 ml with the mobile phase.

Reference solution (b). Dissolve 5 mg of *bromazepam for system suitability CRS* (containing impurities A, B, C, D and E) in 5 ml of a mixture of 1 volume of *acetonitrile R* and 8 volumes of *methanol R*. Dilute to 10.0 ml with an 11.33 g/l solution of *potassium dihydrogen phosphate R* previously adjusted to pH 7.0 with a 100 g/l solution of *potassium hydroxide R*.

Column:

- *size*: *l* = 0.15 m, Ø = 4.6 mm;
- *stationary phase*: *end-capped octadecylsilyl silica gel for chromatography R* (3.5 µm);
- *temperature*: 50 °C.

Mobile phase: mix 5 volumes of *acetonitrile R*, 45 volumes of *methanol R* and 50 volumes of an 11.33 g/l solution of *potassium dihydrogen phosphate R* previously adjusted to pH 7.0 with a 100 g/l solution of *potassium hydroxide R*.

Flow rate: 1.0 ml/min.

Detection: spectrophotometer at 235 nm.

Injection: 20 µl.

Run time: 4 times the retention time of bromazepam.

Identification of impurities: use the chromatogram supplied with *bromazepam for system suitability CRS* and the chromatogram obtained with reference solution (b) to identify the peaks due to impurities A, B, C, D and E.

Relative retention with reference to bromazepam (retention time = about 5 min): impurity D = about 1.4; impurity A = about 1.5; impurity C = about 1.6; impurity E = about 2.1; impurity B = about 2.2.

System suitability: reference solution (b):

- *resolution*: minimum 4.0 between the peaks due to bromazepam and impurity D and minimum 1.2 between the peaks due to impurities A and C.

Limits:

- *correction factors*: for the calculation of content, multiply the peak areas of the following impurities by the corresponding correction factor: impurity A = 1.3; impurity B = 1.8; impurity E = 2.1;
- *impurities A, B, E*: for each impurity, not more than the area of the principal peak in the chromatogram obtained with reference solution (a) (0.1 per cent);
- *unspecified impurities*: for each impurity, not more than the area of the principal peak in the chromatogram obtained with reference solution (a) (0.10 per cent);
- *total*: not more than twice the area of the principal peak in the chromatogram obtained with reference solution (a) (0.2 per cent);
- *disregard limit*: 0.5 times the area of the principal peak in the chromatogram obtained with reference solution (a) (0.05 per cent).

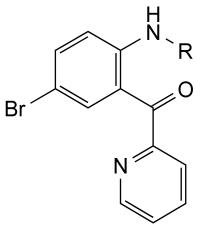
Loss on drying (*2.2.32*): maximum 0.2 per cent, determined on 1.000 g by drying at 80 °C at a pressure not exceeding 2.7 kPa for 4 h.

Sulphated ash (*2.4.14*): maximum 0.1 per cent, determined on 1.0 g.

ASSAY

Dissolve 0.250 g in 20 ml of *anhydrous acetic acid R*. Add 50 ml of *acetic anhydride R*. Titrate with *0.1 M perchloric acid*, determining the end-point potentiometrically (*2.2.20*).

1 ml of *0.1 M perchloric acid* is equivalent to 31.62 mg of $C_{14}H_{10}BrN_3O$.

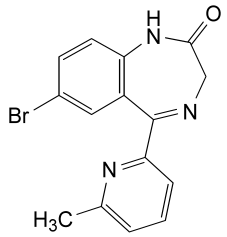


STORAGE

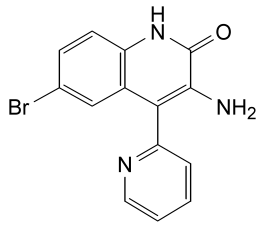
Protected from light.

IMPURITIES

Specified impurities: *A, B, E*.



Other detectable impurities (the following substances would, if present at a sufficient level, be detected by one or other of the tests in the monograph. They are limited by the general acceptance criterion for other/unspecified impurities and/or by the general monograph *Substances for pharmaceutical use (2034)*. It is therefore not necessary to identify these impurities for demonstration of compliance. See also *5.10. Control of impurities in substances for pharmaceutical use*): *C, D*.

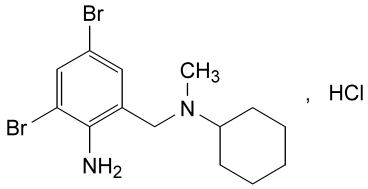


A. R = H: (2-amino-5-bromophenyl)(pyridin-2-yl)methanone,

B. R = CO-CH_2-Cl: *N*-[4-bromo-2-(pyridin-2-ylcarbonyl)phenyl]-2-chloroacetamide,

E. R = CO-CH_2-Br: 2-bromo-*N*-[4-bromo-2-(pyridin-2-ylcarbonyl)phenyl]acetamide,

C. 7-bromo-5-(6-methylpyridin-2-yl)-1,3-dihydro-2*H*-1,4-benzodiazepin-2-one,



D. 3-amino-6-bromo-4-(pyridin-2-yl)quinolin-2(1*H*)-one.

corrected 6.0

BROMHEXINE HYDROCHLORIDE

Bromhexini hydrochloridum

$C_{14}H_{21}Br_2ClN_2$ M_r 412.6
[611-75-6]

DEFINITION

N-(2-Amino-3,5-dibromobenzyl)-*N*-methylcyclohexanamine hydrochloride.

Content: 98.5 per cent to 101.5 per cent (dried substance).

CHARACTERS

Appearance: white or almost white, crystalline powder.

Solubility: very slightly soluble in water, slightly soluble in alcohol and in methylene chloride.

It shows polymorphism (*5.9*).

IDENTIFICATION

First identification: A, E.

Second identification: B, C, D, E.

A. Infrared absorption spectrophotometry (*2.2.24*).

Comparison: *bromhexine hydrochloride CRS.*

If the spectra obtained in the solid state show differences, dissolve the substance to be examined and the reference substance separately in *methanol R*, evaporate to dryness and record new spectra using the residues.

B. Thin-layer chromatography (*2.2.27*).

Test solution. Dissolve 20 mg of the substance to be examined in *methanol R* and dilute to 10 ml with the same solvent.

Reference solution. Dissolve 20 mg of *bromhexine hydrochloride CRS* in *methanol R* and dilute to 10 ml with the same solvent.

Plate: *TLC silica gel F_{254} plate R.*

Mobile phase: *glacial acetic acid R, water R, butanol R* (17:17:66 *V/V/V*).

Application: 20 µl.

Development: over 3/4 of the plate.

Drying: in air.

Detection: examine in ultraviolet light at 254 nm.

Results: the principal spot in the chromatogram obtained with the test solution is similar in position and size to the principal spot in the chromatogram obtained with the reference solution.

C. Dissolve about 25 mg in a mixture of 1 ml of *dilute sulphuric acid R* and 50 ml of *water R*. Add 2 ml of *methylene chloride R* and 5 ml of *chloramine solution R* and shake. A brownish-yellow colour develops in the lower layer.

D. Dissolve about 1 mg in 3 ml of *0.1 M hydrochloric acid.* The solution gives the reaction of primary aromatic amines (*2.3.1*).

E. Dissolve about 20 mg in 1 ml of *methanol R* and add 1 ml of *water R*. The solution gives reaction (a) of chlorides (*2.3.1*).

TESTS

Appearance of solution. The solution is clear (*2.2.1*) and not more intensely coloured than reference solution Y_6 (*2.2.2, Method II*).

Dissolve 0.6 g in *methanol R* and dilute to 20 ml with the same solvent.

Related substances. Liquid chromatography (*2.2.29*).

Test solution. Dissolve 50 mg of the substance to be examined in *methanol R* and dilute to 10.0 ml with the same solvent.

Reference solution (a). Dissolve 5 mg of *bromhexine impurity C CRS* in *methanol R*, add 1.0 ml of the test solution and dilute to 10.0 ml with the same solvent.

Reference solution (b). Dilute 1.0 ml of the test solution to 100.0 ml with *methanol R*. Dilute 1.0 ml of this solution to 10.0 ml with *methanol R*.

Column:

– *size*: *l* = 0.12 m, Ø = 4.6 mm,

– *stationary phase*: *end-capped octadecylsilyl silica gel for chromatography R* (3 µm).

Mobile phase: mix 0.50 ml of *phosphoric acid R* in 950 ml of *water R*, adjust to pH 7.0 with *triethylamine R* (about 1.5 ml) and dilute to 1000 ml with *water R*; mix 20 volumes of this solution with 80 volumes of *acetonitrile R*.

Flow rate: 1.0 ml/min.

Detection: spectrophotometer at 248 nm.

Injection: 10 µl.

Run time: 2.5 times the retention time of bromhexine.

Relative retention with reference to bromhexine (retention time = about 11 min): impurity A = about 0.1; impurity B = about 0.2; impurity C = about 0.4; impurity D = about 0.5.

System suitability: reference solution (a):

– *resolution*: minimum 12.0 between the peaks due to impurity C and bromhexine.

Limits:

– *any impurity*: not more than twice the area of the principal peak in the chromatogram obtained with reference solution (b) (0.2 per cent), and not more than 1 such peak has an area greater than the area of the principal peak in the chromatogram obtained with reference solution (b) (0.1 per cent),
– *total*: not more than 3 times the area of the principal peak in the chromatogram obtained with reference solution (b) (0.3 per cent),
– *disregard limit*: 0.5 times the area of the principal peak in the chromatogram obtained with reference solution (b) (0.05 per cent).

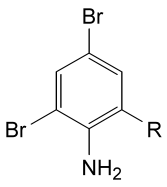
Loss on drying (*2.2.32*): maximum 1.0 per cent, determined on 1.000 g by drying in an oven at 105 °C.

Sulphated ash (*2.4.14*): maximum 0.1 per cent, determined on 1.0 g.

ASSAY

Dissolve 0.300 g in 70 ml of *alcohol R* and add 1 ml of *0.1 M hydrochloric acid*. Carry out a potentiometric titration (*2.2.20*), using *0.1 M sodium hydroxide*. Read the volume between the 2 points of inflexion.

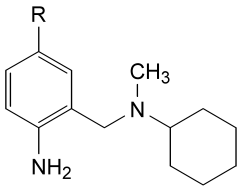
1 ml of *0.1 M sodium hydroxide* is equivalent to 41.26 mg of $C_{14}H_{21}Br_2ClN_2$.



STORAGE

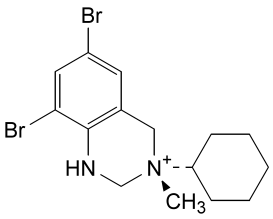
Protected from light.

IMPURITIES



Specified impurities: A, B, C, D.

Other detectable impurities (the following substances would, if present at a sufficient level, be detected by one or other of the tests in the monograph. They are limited by the general acceptance criterion for other/unspecified impurities and/or by the general monograph *Substances for pharmaceutical use (2034)*. It is therefore not necessary to identify these impurities for demonstration of compliance. See also *5.10. Control of impurities in substances for pharmaceutical use*): *E.*

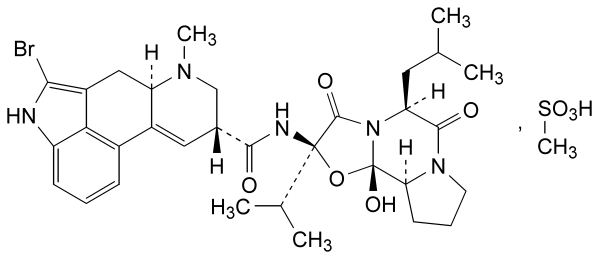


A. R = CH_2OH: (2-amino-3,5-dibromophenyl)methanol,

B. R = CHO: 2-amino-3,5-dibromobenzaldehyde,

C. R = H: *N*-(2-aminobenzyl)-*N*-methylcyclohexanamine,

D. R = Br: *N*-(2-amino-5-bromobenzyl)-*N*-methylcyclohexanamine,



and enantiomer

E. (3*RS*)-6,8-dibromo-3-cyclohexyl-3-methyl-1,2,3,4-tetrahydroquinazolin-3-ium.

BROMOCRIPTINE MESILATE

Bromocriptini mesilas

$C_{33}H_{44}BrN_5O_8S$ M_r 751

[22260-51-1]

DEFINITION

(6a*R*,9*R*)-5-Bromo-*N*-[(2*R*,5*S*,10a*S*,10b*S*)-10b-hydroxy-2-(1-methylethyl)-5-(2-methylpropyl)-3,6-dioxooctahydro-8*H*-oxazolo[3,2-*a*]pyrrolo[2,1-*c*]pyrazin-2-yl]-7-methyl-4,6,6a,7,8,9-hexahydroindolo[4,3-*fg*]quinoline-9-carboxamide monomethanesulphonate.

Content: 98.0 per cent to 101.0 per cent (dried substance).

PRODUCTION

The production method must be evaluated to determine the potential for formation of alkyl mesilates, which is particularly likely to occur if the reaction medium contains lower alcohols. Where necessary, the production method is validated to demonstrate that alkyl mesilates are not detectable in the final product.

CHARACTERS

Appearance: white or slightly coloured, fine crystalline powder.

Solubility: practically insoluble in water, freely soluble in methanol, soluble in ethanol (96 per cent), sparingly soluble in methylene chloride.

It is very sensitive to light.

The identification, tests and assay are to be carried out as rapidly as possible, protected from light.

IDENTIFICATION

First identification: B.

Second identification: A, C, D, E.

A. Ultraviolet and visible absorption spectrophotometry (*2.2.25*).

Test solution. Dissolve 10.0 mg in 10 ml of *methanol R* and dilute to 200.0 ml with *0.01 M hydrochloric acid.*

Spectral range: 250-380 nm.

Absorption maximum: at 305 nm.

Absorption minimum: at 270 nm.

Specific absorbance at the absorption maximum: 120 to 135 (dried substance).

B. Infrared absorption spectrophotometry (*2.2.24*).

Comparison: *bromocriptine mesilate CRS.*

C. Thin-layer chromatography (*2.2.27*). *Prepare the solutions immediately before use.*

Solvent mixture: *ethanol (96 per cent) R, methanol R, methylene chloride R* (30:30:40 *V/V/V*).

Test solution. Dissolve 10 mg of the substance to be examined in the solvent mixture and dilute to 10 ml with the solvent mixture.

Reference solution. Dissolve 10 mg of *bromocriptine mesilate CRS* in the solvent mixture and dilute to 10 ml with the solvent mixture.

Plate: *TLC silica gel G plate R.*

Mobile phase: *concentrated ammonia R, water R, 2-propanol R, methylene chloride R, ether R* (0.1:1.5:3:88:100 *V/V/V/V/V*).

Application: 10 µl.

Development: immediately in an unsaturated tank, over a path of 15 cm.

Drying: in a current of cold air for 2 min.

Detection: spray with *ammonium molybdate solution R3* and dry at 100 °C until the spots appear (about 10 min).

Results: the principal spot in the chromatogram obtained with the test solution is similar in position, colour and size to the principal spot in the chromatogram obtained with the reference solution.

D. To 0.1 g add 5 ml of *dilute hydrochloric acid R* and shake for about 5 min. Filter and add 1 ml of *barium chloride solution R1.* The filtrate remains clear. To a further 0.1 g add 0.5 g of *anhydrous sodium carbonate R,* mix and ignite until a white residue is obtained. Allow to cool and dissolve the residue in 7 ml of *water R* (solution A). Solution A gives reaction (a) of sulphates (*2.3.1*).

E. Solution A obtained in identification test D gives reaction (a) of bromides (*2.3.1*).

TESTS

Appearance of solution. The solution is clear (*2.2.1*) and not more intensely coloured than reference solution B_5, BY_5 or Y_5 (*2.2.2, Method II*).

Dissolve 0.25 g in *methanol R* and dilute to 25 ml with the same solvent.

pH (*2.2.3*): 3.1 to 3.8.

Dissolve 0.2 g in a mixture of 2 volumes of *methanol R* and 8 volumes of *carbon dioxide-free water R* and dilute to 20 ml with the same mixture of solvents.

Specific optical rotation (*2.2.7*): + 95 to + 105 (dried substance).

Dissolve 0.100 g in a mixture of equal volumes of *methanol R* and *methylene chloride R* and dilute to 10.0 ml with the same mixture of solvents.

Related substances. Liquid chromatography (*2.2.29*).

Solvent mixture: *buffer solution pH 2.0 R, methanol R* (50:50 *V/V*).

Test solution. Dissolve 0.500 g of the substance to be examined in 5.0 ml of *methanol R* and dilute to 10.0 ml with *buffer solution pH 2.0 R.*

Reference solution (a). Dilute 1.0 ml of the test solution to 100.0 ml with the solvent mixture.

Reference solution (b). Dilute 1.0 ml of reference solution (a) to 10.0 ml with the solvent mixture.

Reference solution (c). Dissolve the contents of a vial of *bromocriptine mesilate for system suitability CRS* (containing impurities A and B) in 1.0 ml of the solvent mixture.

Column:

– *size*: *l* = 0.12 m, Ø = 4 mm;
– *stationary phase*: *octadecylsilyl silica gel for chromatography R* (5 µm).

Mobile phase:

– *mobile phase A*: 0.791 g/l solution of *ammonium carbonate R*;
– *mobile phase B*: *acetonitrile R*;

Time (min)	Mobile phase A (per cent *V/V*)	Mobile phase B (per cent *V/V*)
0 - 30	90 → 40	10 → 60
30 - 45	40	60

Flow rate: 2 ml/min.

Detection: spectrophotometer at 300 nm.

Injection: 20 µl.

Identification of impurities: use the chromatogram supplied with *bromocriptine mesilate for system suitability CRS* and the chromatogram obtained with reference solution (c) to identify the peaks due to impurities A and B.

Relative retention with reference to bromocriptine: impurity C = about 1.2.

System suitability: reference solution (c):

– *resolution*: minimum 1.1 between the peaks due to impurities A and B.

Limits:

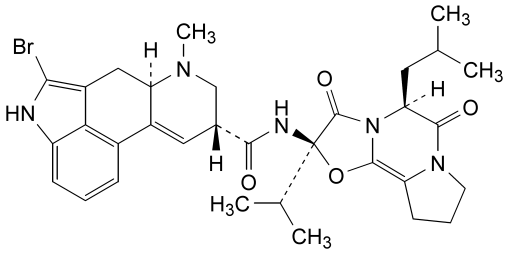
– *impurity A*: not more than 0.2 times the area of the principal peak in the chromatogram obtained with reference solution (b) (0.02 per cent);
– *impurity C*: not more than 4 times the area of the principal peak in the chromatogram obtained with reference solution (b) (0.4 per cent);
– *impurities B, D, E, F, G*: for each impurity, not more than twice the area of the principal peak in the chromatogram obtained with reference solution (b) (0.2 per cent) and not more than 1 such peak has an area greater than the area of the principal peak in the chromatogram obtained with reference solution (b) (0.1 per cent);
– *total*: not more than 1.5 times the area of the principal peak in the chromatogram obtained with reference solution (a) (1.5 per cent);

– *disregard limit*: 0.5 times the area of the principal peak in the chromatogram obtained with reference solution (b) (0.05 per cent), apart from the peak due to impurity A.

Loss on drying (*2.2.32*): maximum 3.0 per cent, determined on 0.500 g by drying *in vacuo* at 80 °C for 5 h.

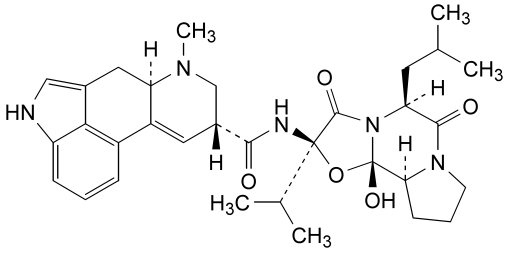
ASSAY

Dissolve 0.500 g in 80 ml of a mixture of 10 volumes of *anhydrous acetic acid R* and 70 volumes of *acetic anhydride R*. Titrate with *0.1 M perchloric acid,* determining the end-point potentiometrically (*2.2.20*).



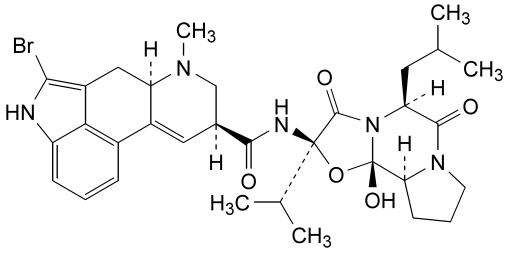
1 ml of *0.1 M perchloric acid* is equivalent to 75.1 mg of $C_{33}H_{44}BrN_5O_8S$.

STORAGE

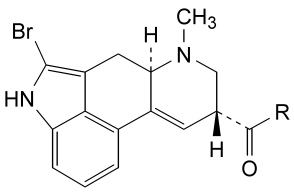


In an airtight container, protected from light, at a temperature not exceeding – 15 °C.

IMPURITIES

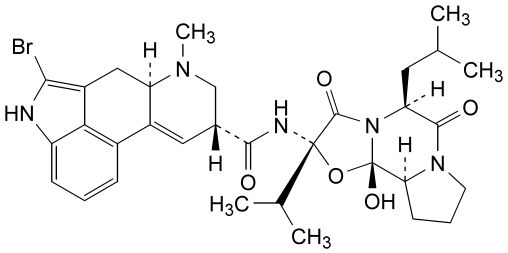


Specified impurities: *A, B, C, D, E, F, G.*

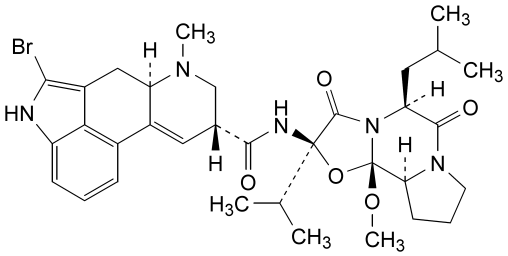


A. (6a*R*,9*R*)-5-bromo-*N*-[(2*R*,5*S*)-2-(1-methylethyl)-5-(2-methylpropyl)-3,6-dioxo-2,3,5,6,9,10-hexahydro-8*H*-oxazolo[3,2-*a*]pyrrolo[2,1-*c*]pyrazin-2-yl]-7-methyl-4,6,6a,7,8,9-hexahydroindolo[4,3-*fg*]quinoline-9-carboxamide (2-bromodehydro-α-ergocriptine),

B. (6a*R*,9*R*)-*N*-[(2*R*,5*S*,10a*S*,10b*S*)-10b-hydroxy-2-(1-methylethyl)-5-(2-methylpropyl)-3,6-dioxooctahydro-8*H*-oxazolo[3,2-*a*]pyrrolo[2,1-*c*]pyrazin-2-yl]-7-methyl-4,6,6a,7,8,9-hexahydroindolo[4,3-*fg*]quinoline-9-carboxamide (α-ergocriptine),



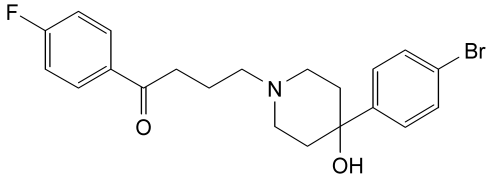
C. (6a*R*,9*S*)-5-bromo-*N*-[(2*R*,5*S*,10a*S*,10b*S*)-10b-hydroxy-2-(1-methylethyl)-5-(2-methylpropyl)-3,6-dioxooctahydro-8*H*-oxazolo[3,2-*a*]pyrrolo[2,1-*c*]pyrazin-2-yl]-7-methyl-4,6,6a,7,8,9-hexahydroindolo[4,3-*fg*]quinoline-9-carboxamide ((9*S*)-2-bromo-α-ergocriptine),



D. R = OH: (6a*R*,9*R*)-5-bromo-7-methyl-4,6,6a,7,8,9-hexahydroindolo[4,3-*fg*]quinoline-9-carboxylic acid,

E. R = NH_2: (6a*R*,9*R*)-5-bromo-7-methyl-4,6,6a,7,8,9-hexahydroindolo[4,3-*fg*]quinoline-9-carboxamide,

F. (6a*R*,9*R*)-5-bromo-*N*-[(2*S*,5*S*,10a*S*,10b*S*)-10b-hydroxy-2-(1-methylethyl)-5-(2-methylpropyl)-3,6-dioxooctahydro-8*H*-oxazolo[3,2-*a*]pyrrolo[2,1-*c*]pyrazin-2-yl]-7-methyl-4,6,6a,7,8,9-hexahydroindolo[4,3-*fg*]quinoline-9-carboxamide ((2′*S*)-2-bromo-α-ergocriptine),



G. (6a*R*,9*R*)-5-bromo-*N*-[(2*R*,5*S*,10a*S*,10b*S*)-10b-methoxy-2-(1-methylethyl)-5-(2-methylpropyl)-3,6-dioxooctahydro-8*H*-oxazolo[3,2-*a*]pyrrolo[2,1-*c*]pyrazin-2-yl]-7-methyl-4,6,6a,7,8,9-hexahydroindolo[4,3-*fg*]quinoline-9-carboxamide (2-bromo-10′b-*O*-methyl-α-ergocriptine).

BROMPERIDOL

Bromperidolum

$C_{21}H_{23}BrFNO_2$ M_r 420.3
[10457-90-6]

DEFINITION

4-[4-(4-Bromophenyl)-4-hydroxypiperidin-1-yl]-1-(4-fluorophenyl)butan-1-one.

Content: 99.0 per cent to 101.0 per cent (dried substance).

CHARACTERS

Appearance: white or almost white powder.

Solubility: practically insoluble in water, sparingly soluble in methanol and in methylene chloride, slightly soluble in ethanol (96 per cent).

IDENTIFICATION

First identification: B, E.

Second identification: A, C, D, E.

A. Melting point (*2.2.14*): 156 °C to 159 °C.

B. Infrared absorption spectrophotometry (*2.2.24*).

Preparation: discs.

Comparison: *bromperidol CRS*.

C. Thin layer chromatography (*2.2.27*).

Test solution. Dissolve 10 mg of the substance to be examined in *methanol R* and dilute to 10 ml with the same solvent.

Reference solution (a). Dissolve 10 mg of *bromperidol CRS* in *methanol R* and dilute to 10 ml with the same solvent.

Reference solution (b). Dissolve 10 mg of *bromperidol CRS* and 10 mg of *haloperidol CRS* in *methanol R* and dilute to 10 ml with the same solvent.

Plate: *TLC octadecylsilyl silica gel plate R.*

Mobile phase: *tetrahydrofuran R, methanol R,* 58 g/l solution of *sodium chloride R* (10:45:45 *V/V/V*).

Application: 1 µl.

Development: in an unsaturated tank over a path of 15 cm.

Drying: in air.

Detection: examine in ultraviolet light at 254 nm.

System suitability: reference solution (b):

– the chromatogram shows 2 spots which may, however, not be completely separated.

Results: the principal spot in the chromatogram obtained with the test solution is similar in position and size to the principal spot in the chromatogram obtained with reference solution (a).

D. Dissolve about 10 mg in 5 ml of *anhydrous ethanol R*. Add 0.5 ml of *dinitrobenzene solution R* and 0.5 ml of *2 M alcoholic potassium hydroxide solution R*. A violet colour is produced that becomes brownish-red after 20 min.

E. To 0.1 g in a porcelain crucible add 0.5 g of *anhydrous sodium carbonate R*. Heat over an open flame for 10 min. Allow to cool. Take up the residue with 5 ml of *dilute nitric acid R* and filter. To 1 ml of the filtrate add 1 ml of *water R*. The solution gives reaction (a) of bromides (*2.3.1*).

TESTS

Appearance of solution. The solution is clear (*2.2.1*) and not more intensely coloured than reference solution Y_7 (*2.2.2, Method II*).

Dissolve 0.2 g in 20 ml of a 1 per cent *V/V* solution of *lactic acid R*.

Related substances. Liquid chromatography (*2.2.29*).

Test solution. Dissolve 0.100 g of the substance to be examined in *methanol R* and dilute to 10.0 ml with the same solvent.

Reference solution (a). Dissolve 2.5 mg of *bromperidol CRS* and 5.0 mg of *haloperidol CRS* in *methanol R* and dilute to 50.0 ml with the same solvent.

Reference solution (b). Dilute 5.0 ml of the test solution to 100.0 ml with *methanol R*. Dilute 1.0 ml of this solution to 10.0 ml with *methanol R*.

Column:

– *size*: *l* = 0.1 m, Ø = 4.0 mm;

– *stationary phase*: *base-deactivated octadecylsilyl silica gel for chromatography R* (3 µm).

Mobile phase:

– *mobile phase A*: 17 g/l solution of *tetrabutylammonium hydrogen sulphate R*;

– *mobile phase B*: *acetonitrile R*;

Time (min)	Mobile phase A (per cent *V/V*)	Mobile phase B (per cent *V/V*)
0 - 15	90 → 50	10 → 50
15 - 20	50	50
20 - 25	90	10

Flow rate: 1.5 ml/min.

Detection: spectrophotometer at 230 nm.

Equilibration: with *acetonitrile R* for at least 30 min and then with the mobile phase at the initial composition for at least 5 min.

Injection: 10 µl; inject *methanol R* as a blank.

Retention time: haloperidol = about 5.5 min; bromperidol = about 6 min.

System suitability: reference solution (a):

– *resolution*: minimum 3.0 between the peaks due to haloperidol and bromperidol; if necessary, adjust the concentration of acetonitrile in the mobile phase or adjust the time programme for the linear gradient elution.

Limits:

– *impurities A, B, C, D, E, F*: for each impurity, not more than the area of the principal peak in the chromatogram obtained with reference solution (b) (0.5 per cent);

– *total*: not more than twice the area of the principal peak in the chromatogram obtained with reference solution (b) (1 per cent);

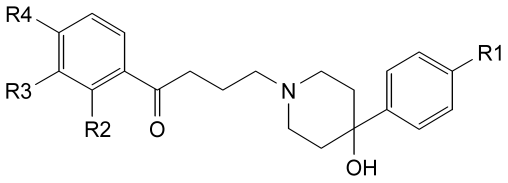
– *disregard limit*: 0.1 times the area of the principal peak in the chromatogram obtained with reference solution (b) (0.05 per cent); disregard any peak due to the blank.

Loss on drying (*2.2.32*): maximum 0.5 per cent, determined on 1.000 g by drying in an oven at 105 °C.

Sulphated ash (*2.4.14*): maximum 0.1 per cent, determined on 1.0 g in a platinum crucible.

ASSAY

Dissolve 0.300 g in 50 ml of a mixture of 1 volume of *anhydrous acetic acid R* and 7 volumes of *methyl ethyl ketone R*. Titrate with *0.1 M perchloric acid*, using 0.2 ml of *naphtholbenzein solution R* as indicator.



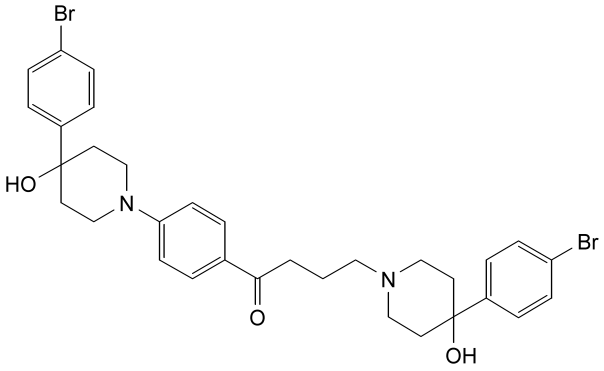
1 ml of *0.1 M perchloric acid* is equivalent to 42.03 mg of $C_{21}H_{23}BrFNO_2$.

STORAGE

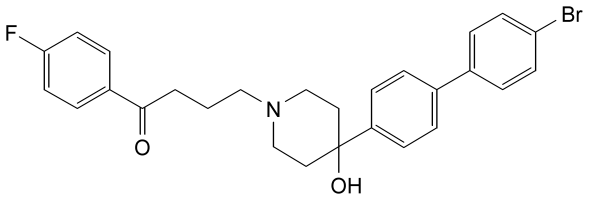
Protected from light.

IMPURITIES

Specified impurities: A, B, C, D, E, F.



A. R1 = R2 = R3 = H, R4 = F: 1-(4-fluorophenyl)-4-(4-hydroxy-4-phenylpiperidin-1-yl)butan-1-one,

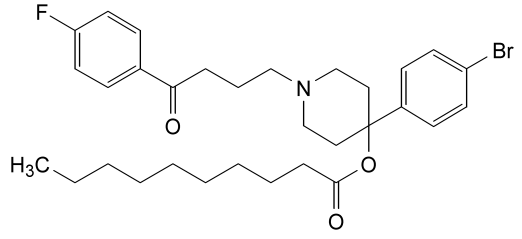


B. R1 = Br, R2 = F, R3 = R4 = H: 4-[4-(4-bromophenyl)-4-hydroxypiperidin-1-yl]-1-(2-fluorophenyl)butan-1-one,

C. R1 = C_6H_5, R2 = R3 = H, R4 = F: 4-[4-(biphenyl-4-yl)-4-hydroxypiperidin-1-yl]-1-(4-fluorophenyl)butan-1-one,

D. R1 = Br, R2 = H, R3 = C_2H_5, R4 = F: 4-[4-(4-bromophenyl)-4-hydroxypiperidin-1-yl]-1-(3-ethyl-4-fluorophenyl)butan-1-one,

E. 4-[4-(4-bromophenyl)-4-hydroxypiperidin-1-yl]-1-[4-[4-(4-bromophenyl)-4-hydroxypiperidin-1-yl]phenyl]butan-1-one,



F. 4-[4-(4′-bromobiphenyl-4-yl)-4-hydroxypiperidin-1-yl]-1-(4-fluorophenyl)butan-1-one.

01/2008:1397

BROMPERIDOL DECANOATE

Bromperidoli decanoas

$C_{31}H_{41}BrFNO_3$ M_r 574.6
[75067-66-2]

DEFINITION

4-(4-Bromophenyl)-1-[4-(4-fluorophenyl)-4-oxobutyl]piperidin-4-yl decanoate.

Content: 98.5 per cent to 101.0 per cent (dried substance).

CHARACTERS

Appearance: white or almost white powder.

Solubility: practically insoluble in water, very soluble in methylene chloride, soluble in ethanol (96 per cent).

mp: about 60 °C.

IDENTIFICATION

A. Infrared absorption spectrophotometry (*2.2.24*).
Preparation: mulls in *liquid paraffin R*.
Comparison: *bromperidol decanoate CRS*.

B. To 0.1 g in a porcelain crucible add 0.5 g of *anhydrous sodium carbonate R*. Heat over an open flame for 10 min. Allow to cool. Take up the residue with 5 ml of *dilute nitric acid R* and filter. To 1 ml of the filtrate add 1 ml of *water R*. The solution gives reaction (a) of bromides (*2.3.1*).

TESTS

Appearance of solution. The solution is clear (*2.2.1*) and not more intensely coloured than reference solution B_5 (*2.2.2, Method II*).

Dissolve 2.0 g in *methylene chloride R* and dilute to 20 ml with the same solvent.

Related substances. Liquid chromatography (*2.2.29*). *Prepare the solutions immediately before use and protect from light.*

Test solution. Dissolve 0.100 g of the substance to be examined in *methanol R* and dilute to 10.0 ml with the same solvent.

Reference solution (a). Dissolve 2.5 mg of *bromperidol decanoate CRS* and 2.5 mg of *haloperidol decanoate CRS* in *methanol R* and dilute to 50.0 ml with the same solvent.

Reference solution (b). Dilute 5.0 ml of the test solution to 100.0 ml with *methanol R*. Dilute 1.0 ml of this solution to 10.0 ml with *methanol R*.

Column:
- *size*: *l* = 0.1 m, Ø = 4.0 mm;
- *stationary phase*: *base-deactivated octadecylsilyl silica gel for chromatography R* (3 µm).

Mobile phase:
- *mobile phase A*: 27 g/l solution of *tetrabutylammonium hydrogen sulphate R*;
- *mobile phase B*: *acetonitrile R*;

Time (min)	Mobile phase A (per cent *V/V*)	Mobile phase B (per cent *V/V*)
0 - 30	80 → 40	20 → 60
30 - 35	40	60
35 - 40	40 → 80	60 → 20

Flow rate: 1.5 ml/min.

Detection: spectrophotometer at 230 nm.

Equilibration: with *acetonitrile R* for at least 30 min and then with the mobile phase at the initial composition for at least 5 min.

Injection: 10 µl; inject *methanol R* as a blank.

Retention time: haloperidol decanoate = about 24 min; bromperidol decanoate = about 24.5 min.

System suitability: reference solution (a):
- *resolution*: minimum 1.5 between the peaks due to haloperidol decanoate and bromperidol decanoate; if necessary, adjust the gradient or the time programme for the linear gradient elution.

Limits:

- *impurities A, B, C, D, E, F, G, H, I, J, K*: for each impurity, not more than the area of the principal peak in the chromatogram obtained with reference solution (b) (0.5 per cent);
- *total*: not more than 3 times the area of the principal peak in the chromatogram obtained with reference solution (b) (1.5 per cent);
- *disregard limit*: 0.1 times the area of the principal peak in the chromatogram obtained with reference solution (b) (0.05 per cent); disregard any peak due to the blank.

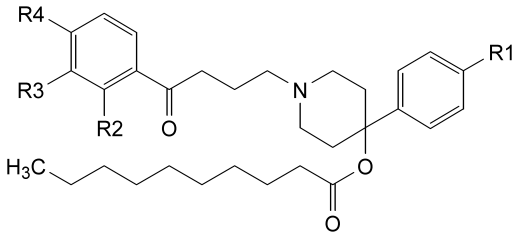
Loss on drying (*2.2.32*): maximum 0.5 per cent, determined on 1.000 g by drying *in vacuo* at 30 °C.

Sulphated ash (*2.4.14*): maximum 0.1 per cent, determined on 1.0 g in a platinum crucible.

ASSAY

Dissolve 0.450 g in 50 ml of a mixture of 1 volume of *anhydrous acetic acid R* and 7 volumes of *methyl ethyl ketone R*. Titrate with *0.1 M perchloric acid* using 0.2 ml of *naphtholbenzein solution R* as indicator.

1 ml of *0.1 M perchloric acid* is equivalent to 57.46 mg of $C_{31}H_{41}BrFNO_3$.



STORAGE

At a temperature below 25 °C, protected from light.

IMPURITIES

Specified impurities: A, B, C, D, E, F, G, H, I, J, K.

Other detectable impurities (the following substances would, if present at a sufficient level, be detected by one or other of the tests in the monograph. They are limited by the general acceptance criterion for other/unspecified impurities and/or by the general monograph *Substances for pharmaceutical use (2034)*. It is therefore not necessary to identify these impurities for demonstration of compliance. See also *5.10. Control of impurities in substances for pharmaceutical use*): *L.*

BROMPHENIRAMINE MALEATE

Brompheniramini maleas

$C_{20}H_{23}BrN_2O_4$ M_r 435.3
[980-71-2]

DEFINITION

(3*RS*)-3-(4-Bromophenyl)-*N*,*N*-dimethyl-3-(pyridin-2-yl)propan-1-amine (*Z*)-butenedioate.

Content: 98.0 per cent to 101.0 per cent (dried substance).

CHARACTERS

Appearance: white or almost white, crystalline powder.

Solubility: soluble in water, freely soluble in ethanol (96 per cent), in methanol and in methylene chloride.

IDENTIFICATION

First identification: A, B, C, D, E.

Second identification: A, B, E, F.

A. Melting point (*2.2.14*): 130 °C to 135 °C.

B. Ultraviolet and visible absorption spectrophotometry (*2.2.25*).

Test solution. Dissolve 65 mg in *0.1 M hydrochloric acid* and dilute to 100.0 ml with the same acid. Dilute 5.0 ml of this solution to 100.0 ml with *0.1 M hydrochloric acid.*

Spectral range: 220-320 nm.

Absorption maximum: at 265 nm.

Specific absorbance at the absorption maximum: 190 to 210.

C. Infrared absorption spectrophotometry (*2.2.24*).

Preparation: discs of *potassium bromide R.*

Comparison: *brompheniramine maleate CRS.*

D. Examine the chromatograms obtained in the test for related substances.

System suitability: reference solution (c):

– the chromatogram shows 2 principal peaks with retention times corresponding to the retention times of the peaks obtained with reference solutions (a) and (b).

Results: the principal peak in the chromatogram obtained with the test solution is similar in retention time and size to the principal peak in the chromatogram obtained with reference solution (a).

E. Thin-layer chromatography (*2.2.27*).

Test solution. Dissolve 0.10 g of the substance to be examined in *methanol R* and dilute to 5.0 ml with the same solvent.

Reference solution. Dissolve 56 mg of *maleic acid R* in *methanol R* and dilute to 10 ml with the same solvent.

Plate: *TLC silica gel F_{254} plate R.*

Mobile phase: *water R, anhydrous formic acid R, methanol R, di-isopropyl ether R* (3:7:20:70 *V/V/V/V*).

Application: 5 µl.

Development: over a path of 12 cm.

Drying: in a current of air for a few minutes.

Detection: examine in ultraviolet light at 254 nm.

Results: the chromatogram obtained with the test solution shows 2 clearly separated spots. The upper spot is similar in position and size to the spot in the chromatogram obtained with the reference solution.

F. To 0.15 g in a porcelain crucible add 0.5 g of *anhydrous sodium carbonate R*. Heat over an open flame for 10 min. Allow to cool. Take up the residue in 10 ml of *dilute nitric acid R* and filter. To 1 ml of the filtrate add 1 ml of *water R*. The solution gives reaction (a) of bromides (*2.3.1*).

TESTS

Appearance of solution. The solution is clear (*2.2.1*) and not more intensely coloured than reference solution BY_6 (*2.2.2, Method II*).

Dissolve 2.0 g in *methanol R* and dilute to 20 ml with the same solvent.

pH (*2.2.3*): 4.0 to 5.0.

Dissolve 0.20 g in 20 ml of *carbon dioxide-free water R.*

Optical rotation (*2.2.7*): – 0.2° to + 0.2° (measured in a 2 dm tube).

Dissolve 2.5 g in *water R* and dilute to 25.0 ml with the same solvent.

Related substances. Gas chromatography (*2.2.28*).

Test solution. Dissolve 0.10 g of the substance to be examined in 10 ml of *methylene chloride R.*

Reference solution (a). Dissolve 10 mg of *brompheniramine maleate CRS* in *methylene chloride R* and dilute to 1 ml with the same solvent.

Reference solution (b). Dissolve 5 mg of *chlorphenamine maleate CRS* (impurity A) in *methylene chloride R* and dilute to 1 ml with the same solvent.

Reference solution (c). To 0.5 ml of the test solution add 0.5 ml of reference solution (b).

Column:

– *material*: glass;
– *size*: *l* = 2.3 m, Ø = 2 mm;
– *stationary phase*: acid- and base-washed *silanised diatomaceous earth for gas chromatography R* (135-175 µm) impregnated with 3 per cent *m/m* of *polymethylphenylsiloxane R.*

Carrier gas: *nitrogen for chromatography R.*

Flow rate: 20 ml/min.

Temperature:

– *column*: 205 °C;
– *injection port and detector*: 250 °C.

Detection: flame ionisation.

Injection: 1 µl.

Run time: 2.5 times the retention time of brompheniramine.

System suitability: reference solution (c):

– *resolution*: minimum 1.5 between the peaks due to brompheniramine and impurity A.

Limits:

– *impurities A, B, C*: for each impurity, maximum 0.4 per cent of the area of the principal peak;
– *total*: maximum 1 per cent of the area of the principal peak;

– *disregard limit*: 0.1 per cent of the area of the principal peak.

Heavy metals (*2.4.8*): maximum 20 ppm.

1.0 g complies with test C. Prepare the reference solution using 2 ml of *lead standard solution (10 ppm Pb) R*.

Loss on drying (*2.2.32*): maximum 0.5 per cent, determined on 1.000 g by drying in an oven at 105 °C for 3 h.

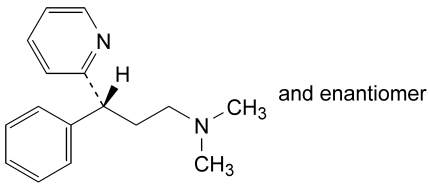
Sulphated ash (*2.4.14*): maximum 0.1 per cent, determined on 1.0 g.

ASSAY

Dissolve 0.260 g in 50 ml of *anhydrous acetic acid R*. Titrate with *0.1 M perchloric acid*, determining the end-point potentiometrically (*2.2.20*).

1 ml of *0.1 M perchloric acid* is equivalent to 21.77 mg of $C_{20}H_{23}BrN_2O_4$.

STORAGE



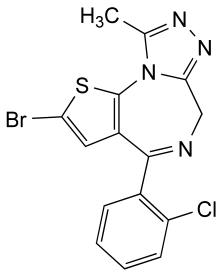
Protected from light.

IMPURITIES

Specified impurities: A, B, C.

A. chlorphenamine,

B. dexchlorpheniramine,



C. (3*RS*)-*N*,*N*-dimethyl-3-phenyl-3-(pyridin-2-yl)propan-1-amine (pheniramine).

BROTIZOLAM

Brotizolamum

$C_{15}H_{10}BrClN_4S$ M_r 393.7
[57801-81-7]

DEFINITION

2-Bromo-4-(2-chlorophenyl)-9-methyl-6*H*-thieno-[3,2-*f*][1,2,4]-triazolo[4,3-*a*][1,4]diazepine.

Content: 99.0 per cent to 101.0 per cent (dried substance).

CHARACTERS

Appearance: white or yellowish powder.

Solubility: practically insoluble in water, sparingly soluble or slightly soluble in methanol, slightly soluble in ethanol (96 per cent).

IDENTIFICATION

Infrared absorption spectrophotometry (*2.2.24*).

Comparison: *brotizolam CRS*.

TESTS

Related substances. Liquid chromatography (*2.2.29*). *Carry out the test protected from light and prepare the solutions immediately before use.*

Test solution. Dissolve 50.0 mg of the substance to be examined in *acetonitrile R* and dilute to 50.0 ml with the same solvent.

Reference solution (a). Dilute 1.0 ml of the test solution to 100.0 ml of *acetonitrile R*. Dilute 1.0 ml of this solution to 10.0 ml with *acetonitrile R*.

Reference solution (b). Dissolve 5 mg of the substance to be examined and 5 mg of *brotizolam impurity B CRS* in 50 ml of *acetonitrile R*. Dilute 2 ml of this solution to 20 ml with *acetonitrile R*.

Column:

– *size*: *l* = 0.15 m, Ø = 4.6 mm;
– *stationary phase*: *octylsilyl silica gel for chromatography R* (5 µm);
– *temperature*: 40 °C.

Mobile phase:

– *mobile phase A*: 2 g/l solution of *sodium heptanesulphonate monohydrate R*;
– *mobile phase B*: mix 25 volumes of a 2 g/l solution of *sodium heptanesulphonate R* and 75 volumes of *acetonitrile R*;

Time (min)	Mobile phase A (per cent *V/V*)	Mobile phase B (per cent *V/V*)
0 - 4	63	37
4 - 15	63 → 12	37 → 88
15 - 16	12 → 63	88 → 37
16 - 20	63	37

Flow rate: 2.0 ml/min.

Detection: spectrophotometer at 242 nm.

Injection: 5 µl.

Relative retention with reference to brotizolam (retention time = about 7.4 min): impurity A = about 0.5; impurity B = about 0.9.

System suitability: reference solution (b):

– *resolution*: minimum 5.0 between the peaks due to impurity B and brotizolam.

Limits:

– *impurity B*: not more than the area of the principal peak in the chromatogram obtained with reference solution (a) (0.1 per cent);
– *unspecified impurities*: for each impurity, not more than the area of the principal peak in the chromatogram obtained with reference solution (a) (0.10 per cent);
– *total*: not more than twice the area of the principal peak in the chromatogram obtained with reference solution (a) (0.2 per cent);
– *disregard limit*: 0.5 times the area of the principal peak in the chromatogram obtained with reference solution (a) (0.05 per cent).

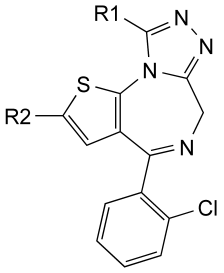
Chlorides (*2.4.4*): maximum 100 ppm.

Dissolve 0.67 g in 20.0 ml of *methanol R*, mix and filter.

Loss on drying (*2.2.32*): maximum 0.5 per cent, determined on 1.000 g by drying in an oven at 105 °C.

Sulphated ash (*2.4.14*): maximum 0.1 per cent, determined on 1.0 g.

ASSAY



Dissolve 0.150 g in a mixture of 25 ml of *glacial acetic acid R* and 50 ml of *acetic anhydride R*. Titrate to the second point of inflexion with *0.1 M perchloric acid*, determining the end-point potentiometrically (*2.2.20*).

1 ml of *0.1 M perchloric acid* is equivalent to 19.68 mg of $C_{15}H_{10}BrClN_4S$.

IMPURITIES

Specified impurities: B.

Other detectable impurities (the following substances would, if present at a sufficient level, be detected by one or other of the tests in the monograph. BUCKWHEAT HERB

Fagopyri herba

DEFINITION

Whole or cut aerial parts of *Fagopyrum esculentum* Moench, collected in the early flowering period prior to fruiting and dried immediately.

Content: minimum 4.0 per cent of rutin ($C_{27}H_{30}O_{16}$, $3H_2O$; M_r 665) (dried drug).

IDENTIFICATION

A. The stem is cylindrical, hollow, finely ridged longitudinally, about 2-6 mm in diameter, brownish-green or reddish, with few branches and thickened at the internodes; the leaves are arranged spirally and have membranous, sheathing stipules; the surface is glabrous except in the region of the stipules, where short, white hairs may occur. The leaves are dark green, paler on the lower surface, up to 7 cm wide and 11 cm long, saggitate or cordate, almost pentagonal with 2 widely rounded lobes; the lower leaves are petiolate, the upper leaves sessile or amplexicaul; the lamina is glabrous and the margin finely sinuate and fringed with minute, reddish-brown projections; similar projections occur on the veins on the upper surface. The inflorescence is a cymose panicle, the individual flowers 1-2 mm long and 6 mm in diameter with 5 free, white or reddish petals.

B. Reduce to a powder (355) (*2.9.12*). The powder is dark green with a few brown, pink or whitish particles. Examine under a microscope using *chloral hydrate solution R*. The powder shows the following diagnostic characters: fragments of the epidermis of the stem and leaf lamina in surface view, those of the stem composed of elongated cells showing striations on the outer walls, those of the lamina polygonal with numerous anomocytic stomata; occasional fragments of the leaf margins and the epidermis over the veins with ovoid to rounded papilla-like projections, often reddish, with thickened and striated walls; abundant cluster crystals of calcium oxalate, 25-100 µm in diameter, and smaller prismatic crystals, occurring scattered and in the mesophyll of the leaf, also in longitudinal files in the parenchyma of the stem; fragments of lignified tissue with bordered pitted or reticulate vessels and thin-walled, pitted fibres; occasional fragments of the corolla with papillose epidermis; pollen spherical, about 50 µm in diameter, with a pitted exine and 3 furrows.

C. Thin-layer chromatography (*2.2.27*).

Test solution. To 0.5 g of the powdered drug (355) (*2.9.12*) add 5.0 ml of *methanol R* and heat in a water-bath at 60 °C under a reflux condenser for 10 min. Cool and filter.

Reference solution. Dissolve 10 mg of *hyperoside R* and 10 mg of *rutin R* in 10 ml of *methanol R*.

Plate: *TLC silica gel plate R* (5-40 µm) [or *TLC silica gel plate R* (2-10 µm)].

Mobile phase: *anhydrous formic acid R, water R, ethyl acetate R* (1:1:8 *V/V/V*).

Application: 20 µl [or 5 µl] as bands.

Development: over a path of 10 cm [or 6 cm].

Drying: at 100-105 °C.

Detection: spray with a 10 g/l solution of *diphenylboric acid aminoethyl ester R* in *methanol R*. Subsequently spray with a 50 g/l solution of *macrogol 400 R* in *methanol R*. Allow the plate to dry in air for about 30 min. Examine in ultraviolet light at 365 nm.

Results: see below the sequence of zones present in the chromatograms obtained with the reference solution and the test solution. Furthermore, other fluorescent zones may be present in the chromatogram obtained with the test solution.

Top of the plate	
	2 red zones
	1-2 light blue zones
———	———
	An orange zone
	An orange zone
Hyperoside: an orange zone	2 blue zones
———	———
Rutin: an orange-yellow zone	Orange-yellow zone (rutin)
Reference solution	**Test solution**

TESTS

Loss on drying (*2.2.32*): maximum 10.0 per cent, determined on 1.000 g of the powdered drug (355) (*2.9.12*) by drying in an oven at 105 °C for 2 h.

Total ash (*2.4.16*): maximum 15.0 per cent.

ASSAY

Liquid chromatography (*2.2.29*).

Test solution. To 0.500 g of the powdered drug (355) (*2.9.12*), add 30 ml of an 80 per cent *V/V* solution of *methanol R*. Heat the mixture under a reflux condenser in a water-bath at 60 °C for 30 min, then extract the mixture in an ultrasonic bath for 15 min. Allow to cool, dilute to 50.0 ml with an 80 per cent *V/V* solution of *methanol R* and filter.

Reference solution (a). Dissolve 25.0 mg of *rutoside trihydrate CRS* in an 80 per cent *V/V* solution of *methanol R* and dilute to 50.0 ml with the same solvent.

Reference solution (b). Dissolve 20.0 mg of *troxerutin R* and 5.0 mg of *quercitrin R* in an 80 per cent *V/V* solution of *methanol R* and dilute to 50.0 ml with the same solvent.

Column:

- *size*: *l* = 0.125 m, Ø = 4 mm;
- *stationary phase*: *octadecylsilyl silica gel for chromatography R* (5 µm);
- *temperature*: 30 °C.

Mobile phase:

- *mobile phase A*: mix 50 volumes of *acetonitrile R* and 950 volumes of *water R* adjusted to pH 2 with *phosphoric acid R*;
- *mobile phase B*: mix 95 volumes of *water R* adjusted to pH 2 with *phosphoric acid R* and 905 volumes of *acetonitrile R*;

Time (min)	Mobile phase A (per cent *V/V*)	Mobile phase B (per cent *V/V*)
0 - 6	94	6
6 - 16.5	94 → 85	6 → 15
16.5 - 22	85 → 76	15 → 24
22 - 25	76 → 59	24 → 41
25 - 27	59 → 94	41 → 6

Flow rate: 1.0 ml/min.

Detection: spectrophotometer at 350 nm.

Injection: 10 µl.

System suitability: reference solution (b):

- *elution order*: when the chromatogram is recorded in the prescribed conditions, the components elute in the order indicated in the composition of reference solution (b);
- *resolution*: minimum 3 between the peaks due to troxerutin and quercitrin.

Using the retention time from the chromatogram obtained with reference solution (a), locate rutin on the chromatogram obtained with the test solution.

Calculate the percentage content of rutin from the following expression:

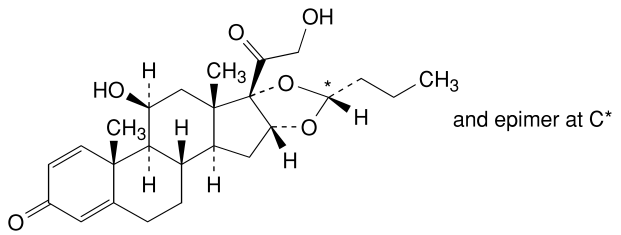
$$\frac{A_1 \times m_2 \times p}{A_2 \times m_1} \times \frac{100}{100 - d}$$

A_1 = area of the peak due to rutin in the chromatogram obtained with the test solution;

A_2 = area of the peak due to rutoside trihydrate in the chromatogram obtained with reference solution (a);

m_1 = mass of the drug to be examined, in grams;

m_2 = mass of *rutoside trihydrate CRS*, in grams;



p = purity of *rutoside trihydrate CRS*, in per cent;

d = loss on drying, in per cent.

corrected 6.0

BUDESONIDE

Budesonidum

and epimer at C*

$C_{25}H_{34}O_6$ M_r 430.5
[51333-22-3]

DEFINITION

Budesonide contains not less than 98.0 per cent and not more than the equivalent of 102.0 per cent of a mixture of the C-22*S* (epimer A) and the C-22*R* (epimer B) epimers of 16α,17-[(1*RS*)-butylidenebis(oxy)]-11β,21-dihydroxypregna-1,4-diene-3,20-dione, calculated with reference to the dried substance.

CHARACTERS

A white or almost white, crystalline powder, practically insoluble in water, freely soluble in methylene chloride, sparingly soluble in alcohol.

IDENTIFICATION

First identification: A.

Second identification: B, C, D.

A. Examine by infrared absorption spectrophotometry (*2.2.24*), comparing with the spectrum obtained with *budesonide CRS*. Examine the substances prepared as discs.

B. Examine by thin-layer chromatography (*2.2.27*), using as the coating substance a suitable silica gel with a fluorescent indicator having an optimal intensity at 254 nm.

Test solution. Dissolve 25 mg of the substance to be examined in a mixture of 1 volume of *methanol R* and 9 volumes of *methylene chloride R* and dilute to 10 ml with the same mixture of solvents.

Reference solution (a). Dissolve 25 mg *budesonide CRS* in a mixture of 1 volume of *methanol R* and 9 volumes of *methylene chloride R* and dilute to 10 ml with the same mixture of solvents.

Reference solution (b). Dissolve 12.5 mg *triamcinolone acetonide CRS* in reference solution (a) and dilute to 5 ml with the same solution.

Apply separately to the plate 5 µl of each solution. Prepare the mobile phase by adding a mixture of 1.2 volumes of *water R* and 8 volumes of *methanol R* to a mixture of 15 volumes of *ether R* and 77 volumes of *methylene chloride R*. Develop over a path of 15 cm. Allow the plate to dry in air and examine in ultraviolet light at 254 nm. The principal spot in the chromatogram obtained with the test solution is similar in position and size to the principal spot in the chromatogram obtained with reference solution (a). Spray with *alcoholic solution of sulphuric acid R*. Heat at 120 °C for 10 min or until spots appear. Allow to cool. Examine in daylight and in ultraviolet light at 365 nm. The principal spot in the chromatogram obtained with the test solution is similar in position, colour in daylight, fluorescence in ultraviolet light at 365 nm and size to the principal spot in the chromatogram obtained with the reference solution (a). The test is not valid unless the chromatogram obtained with reference solution (b) shows two clearly separated spots.

C. Dissolve about 2 mg in 2 ml of *sulphuric acid R*. Within 5 min, a yellow colour develops. Within 30 min, the colour changes to brown or reddish-brown. Add cautiously the solution to 10 ml of *water R* and mix. The colour fades and a clear solution remains.

D. Dissolve about 1 mg in 2 ml of a solution containing 2 g of *phosphomolybdic acid R* dissolved in a mixture of 10 ml of *dilute sodium hydroxide solution R*, 15 ml of *water R* and 25 ml of *glacial acetic acid R*. Heat for 5 min on a water-bath. Cool in iced water for 10 min and add 3 ml of *dilute sodium hydroxide solution R*. The solution is blue.

TESTS

Related substances. Examine by liquid chromatography (*2.2.29*) as described under Assay.

Inject 20 µl of reference solution (a). Adjust the sensitivity of the system so that the height of the peak corresponding to epimer B (the first of the two principal peaks) in the chromatogram obtained is not less than 50 per cent of the full scale of the recorder. Inject 20 µl of the test solution, 20 µl of reference solution (a) and 20 µl of reference solution (b). Continue the chromatography for 1.5 times the retention time of epimer B. In the chromatogram obtained with the test solution: the area of any peak, apart from the peaks corresponding to epimer A and epimer B, is not greater than the sum of the areas of the epimer peaks in the chromatogram obtained with reference solution (b) (0.5 per cent); the sum of the areas of any such peaks is not greater than the sum of the areas of the epimer peaks in the chromatogram obtained with reference solution (a) (1.5 per cent). Disregard any peak with an area less than 0.1 times the sum of the areas of the epimer peaks in the chromatogram obtained with reference solution (b).

Epimer A. Examine by liquid chromatography (*2.2.29*) as described under Assay.

Inject 20 µl of the test solution. The content of epimer A (second peak) is 40.0 per cent to 51.0 per cent of the sum of the areas of the two epimer peaks of budesonide.

Methanol. Not more than 0.1 per cent, determined by head-space gas chromatography using the standard addition method (*2.2.28*).

Test solution. Dissolve 2.000 g of the substance to be examined in *dimethylacetamide R* and dilute to 20.0 ml with the same solvent.

Reference solution. Dilute 0.500 g of *methanol R* in *dimethylacetamide R* and dilute to 100.0 ml with the same solvent.

The following head-space conditions may be used:

– equilibration temperature: 80 °C,
– equilibration time: 30 min,
– transfer-line temperature: 85 °C,
– pressurisation time: 10 s,
– injection time: 10 s.

The chromatographic procedure may be carried out using:

– a fused-silica capillary column 30 m long and 0.32 mm in internal diameter coated with *macrogol 20 000 R* (film thickness 1 µm),
– *nitrogen for chromatography R* as the carrier gas at a pressure of 55 kPa,
– a flame-ionisation detector,

maintaining the temperature of the column at 50 °C for 5 min, then raising the temperature at a rate of 30 °C per minute to 220 °C and maintaining at 220 °C for 2 min, and maintaining the temperature of the injection port at 250 °C and that of the detector at 300 °C.

Loss on drying (*2.2.32*). Not more than 0.5 per cent, determined on 1.000 g by drying in an oven at 105 °C.

ASSAY

Examine by liquid chromatography (*2.2.29*). *Protect the solutions from light throughout the assay.*

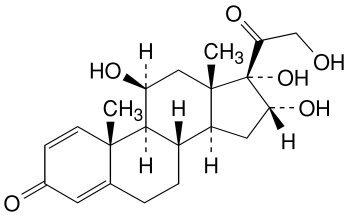
Test solution. Dissolve 25.0 mg of the substance to be examined in 15 ml of *acetonitrile R* and dilute to 50.0 ml with *phosphate buffer solution pH 3.2 R*. Allow to stand for at least 15 min before use.

Reference solution (a). Dilute 15.0 ml of the test solution to 100.0 ml with the mobile phase. Dilute 1.0 ml of the solution to 10.0 ml with the mobile phase.

Reference solution (b). Dilute 5.0 ml of the test solution to 100.0 ml with the mobile phase. Dilute 1.0 ml of the solution to 10.0 ml with the mobile phase.

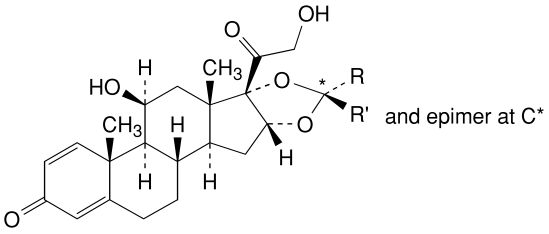
Reference solution (c). Dissolve 25.0 mg of *budesonide CRS* in 15 ml of *acetonitrile R* and dilute to 50.0 ml with *phosphate buffer solution pH 3.2 R*.

The chromatographic procedure may be carried out using:



– a stainless steel column 0.12 m long and 4.6 mm in internal diameter packed with *octadecylsilyl silica gel for chromatography R* (5 µm),
– as mobile phase at a flow rate of 1.5 ml/min a mixture of 32 volumes of *acetonitrile R* and 68 volumes of *phosphate buffer solution pH 3.2 R*,
– as detector a spectrophotometer set at 240 nm.

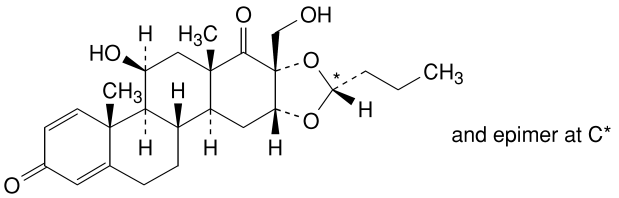
Inject 20 µl of reference solution (c). Adjust the sensitivity of the system so that the height of the peak corresponding to epimer B (the first of the two principal peaks) in the chromatogram obtained is not less than 50 per cent of the full scale of the recorder. When the chromatograms are recorded in the prescribed conditions, the retention time for epimer B is about 16 min. If necessary, adjust the concentration of acetonitrile in the mobile phase (increasing the concentration to decrease the retention time). The test is not valid unless: in the chromatogram obtained with reference solution (c), the resolution between the peaks corresponding to epimer A and epimer B is not less than 1.5; the number of theoretical plates determined from the epimer B peak is at least 4000; the symmetry factor for the same peak is less than 1.5.



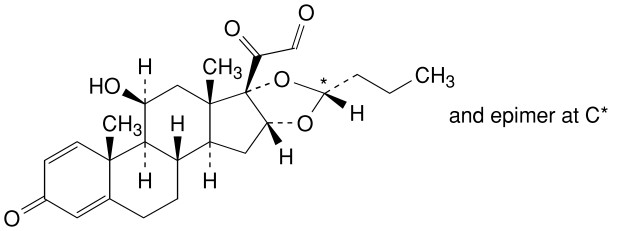
Inject 20 µl of reference solution (c) six times. The assay is not valid unless the relative standard deviation of the sum of the peak areas of the two epimers is at most 1.0 per cent. Inject alternatively the test solution and reference solution (c).

Calculate the percentage content of $C_{25}H_{34}O_6$ from the sum of the areas of the two epimer peaks.

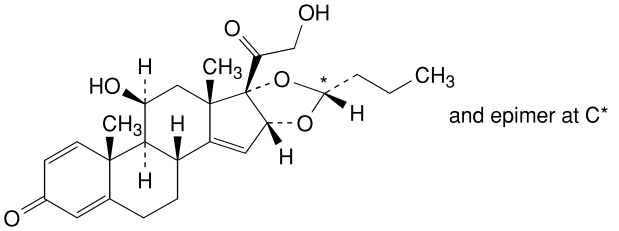
IMPURITIES



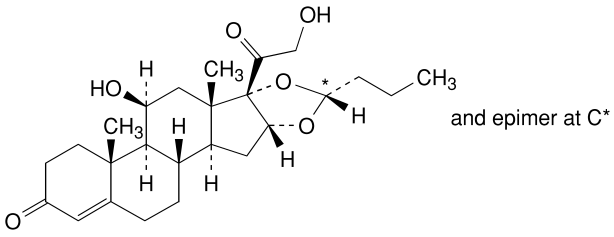
A. 11β,16α,17,21-tetrahydroxypregna-1,4-diene-3,20-dione,



B. R = CH_3, R′ = H: 16α,17-[(1*RS*)-ethylidenebis(oxy)]-11β,21-dihydroxypregna-1,4-diene-3,20-dione,



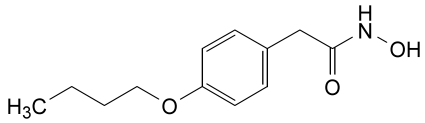
F. R = R′ = CH_3: 16α,17-[1-methylethylidenebis(oxy)]-11β,21-dihydroxypregna-1,4-diene-3,20-dione,



C. 16α,17-[(1*RS*)-butylidenebis(oxy)]-11β-hydroxy-17-(hydroxymethyl)-*D*-homoandrosta-1,4-diene-3,17a-dione,

D. 16α,17-[(1*RS*)-butylidenebis(oxy)]-11β-hydroxy-3,20-dioxopregna-1,4-dien-21-al,

E. 16α,17-[(1*RS*)-butylidenebis(oxy)]-11β,21-dihydroxypregna-1,4,14-triene-3,20-dione,



G. 16α,17-[(1*RS*)-butylidenebis(oxy)]-11β,21-dihydroxypregn-4-ene-3,20-dione.

BUFEXAMAC

Bufexamacum

$C_{12}H_{17}NO_3$ M_r 223.3
[2438-72-4]

DEFINITION

2-(4-Butoxyphenyl)-*N*-hydroxyacetamide.

Content: 98.5 per cent to 101.5 per cent (dried substance).

CHARACTERS

Appearance: white or almost white, crystalline powder.

Solubility: practically insoluble in water, soluble in dimethylformamide, slightly soluble in ethyl acetate and in methanol.

IDENTIFICATION

First identification: B.

Second identification: A, C.

A. Ultraviolet and visible absorption spectrophotometry (*2.2.25*).

Test solution. Dissolve 20 mg in *methanol R* and dilute to 20 ml with the same solvent. Dilute 1 ml of this solution to 50 ml with *methanol R*.

Spectral range: 210-360 nm.

Absorption maxima: at 228 nm, 277 nm and 284 nm.

B. Infrared absorption spectrophotometry (*2.2.24*).

Preparation: discs.

Comparison: *bufexamac CRS*.

C. Thin-layer chromatography (*2.2.27*).

Test solution. Dissolve 10 mg of the substance to be examined in *methanol R* and dilute to 5 ml with the same solvent.

Reference solution (a). Dissolve 20 mg of *bufexamac CRS* in *methanol R* and dilute to 10 ml with the same solvent.

Reference solution (b). Dissolve 10 mg of *salicylic acid R* in reference solution (a) and dilute to 5 ml with the same solution.

Plate: *TLC silica gel F_{254} plate R.*

Mobile phase: *glacial acetic acid R, dioxan R, toluene R* (4:20:90 *V/V/V*).

Application: 10 µl.

Development: over a path of 15 cm.

Drying: in a current of warm air.

Detection: examine in ultraviolet light at 254 nm.

System suitability: reference solution (b):

– the chromatogram shows 2 clearly separated spots.

Results: the principal spot in the chromatogram obtained with the test solution is similar in position and size to the principal spot in the chromatogram obtained with reference solution (a).

TESTS

Related substances. Liquid chromatography (*2.2.29*).

Test solution. Dissolve 50.0 mg of the substance to be examined in the mobile phase and dilute to 20.0 ml with the mobile phase.

Reference solution (a). Dilute 5.0 ml of the test solution to 25.0 ml with the mobile phase. Dilute 1.0 ml of this solution to 100.0 ml with the mobile phase.

Reference solution (b). Dissolve 5 mg of *bufexamac CRS* and 5 mg of *salicylic acid R* in the mobile phase and dilute to 10 ml with the mobile phase. Dilute 1 ml of this solution to 10 ml with the mobile phase.

Column:

– *size*: *l* = 0.25 m, Ø = 4.6 mm;

– *stationary phase*: *octadecylsilyl silica gel for chromatography R* (5 µm) with a specific surface area of 350 m^2/g and a pore size of 10 nm.

Mobile phase: mix 30 volumes of a 1.4 g/l solution of *dipotassium hydrogen phosphate R* and 70 volumes of *methanol R*, then adjust to pH 3.6 with *dilute phosphoric acid R*.

Flow rate: 1 ml/min.

Detection: spectrophotometer at 275 nm.

Injection: 20 µl.

Run time: 4 times the retention time of bufexamac.

System suitability: reference solution (b):

– *resolution*: minimum 2.0 between the peaks due to salicylic acid and bufexamac.

Limits:

– *impurities A, B, C, D*: for each impurity, not more than the area of the principal peak in the chromatogram obtained with reference solution (a) (0.2 per cent);

– *total*: not more than 2.5 times the area of the principal peak in the chromatogram obtained with reference solution (a) (0.5 per cent);

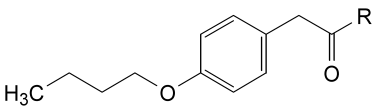
– *disregard limit*: 0.05 times the area of the principal peak in the chromatogram obtained with reference solution (a) (0.01 per cent).

Loss on drying (*2.2.32*): maximum 0.5 per cent, determined on 1.000 g by drying *in vacuo* at 80 °C for 3 h.

Sulphated ash (*2.4.14*): maximum 0.1 per cent, determined on 1.0 g.

ASSAY

Dissolve 0.200 g in 50 ml of *dimethylformamide R*. Titrate with *0.1 M lithium methoxide*, determining the end-point potentiometrically (*2.2.20*).



1 ml of *0.1 M lithium methoxide* is equivalent to 22.33 mg of $C_{12}H_{17}NO_3$.

STORAGE

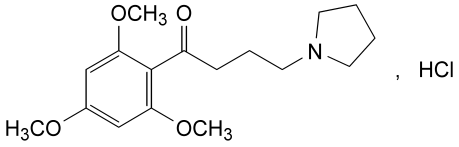
Protected from light.

IMPURITIES

Specified impurities: A, B, C, D.

A. R = OH: 2-(4-butoxyphenyl)acetic acid,

B. R = OCH_3: methyl 2-(4-butoxyphenyl)acetate,



C. R = OC_4H_9: butyl 2-(4-butoxyphenyl)acetate,

D. R = NH_2: 2-(4-butoxyphenyl)acetamide.

BUFLOMEDIL HYDROCHLORIDE

Buflomedili hydrochloridum

$C_{17}H_{26}ClNO_4$ M_r 343.9
[35543-24-9]

DEFINITION

4-(Pyrrolidin-1-yl)-1-(2,4,6-trimethoxyphenyl)butan-1-one hydrochloride.

Content: 98.5 per cent to 101.5 per cent (dried substance).

CHARACTERS

Appearance: white or almost white, microcrystalline powder.

Solubility: freely soluble in water, soluble in alcohol, very slightly soluble in acetone.

mp: about 195 °C, with decomposition.

IDENTIFICATION

First identification: B, D.

Second identification: A, C, D.

A. Dissolve 25.0 mg in *alcohol R* and dilute to 50.0 ml with the same solvent. Dilute 2.0 ml to 20.0 ml with *alcohol R*. Examined between 220 nm and 350 nm (*2.2.25*), the solution shows an absorption maximum at 275 nm. The specific absorbance at the maximum is 143 to 149.

B. Infrared absorption spectrophotometry (*2.2.24*).

Preparation: discs.

Comparison: *buflomedil hydrochloride CRS*.

C. Thin-layer chromatography (*2.2.27*).

Test solution. Dissolve 40 mg of the substance to be examined in *methanol R* and dilute to 2 ml with the same solvent.

Reference solution. Dissolve 40 mg of *buflomedil hydrochloride CRS* in *methanol R* and dilute to 2 ml with the same solvent.

Plate: *TLC silica gel F_{254} plate R*.

Mobile phase: *triethylamine R, 2-propanol R, toluene R* (5:50:50 *V/V/V*).

Application: 10 µl.

Development: over a path of 15 cm.

Drying: in air.

Detection: examine in ultraviolet light at 254 nm.

Results: the principal spot in the chromatogram obtained with the test solution is similar in position and size to the principal spot in the chromatogram obtained with the reference solution.

D. It gives reaction (a) of chlorides (*2.3.1*).

TESTS

Solution S. Dissolve 2.5 g in *carbon dioxide-free water R* and dilute to 50 ml with the same solvent.

Appearance of solution. Solution S is clear (*2.2.1*) and colourless (*2.2.2, Method II*).

pH (*2.2.3*): 5.0 to 6.5 for solution S.

Related substances. Liquid chromatography (*2.2.29*).

Test solution. Dissolve 0.10 g of the substance to be examined in the mobile phase and dilute to 10.0 ml with the mobile phase.

Reference solution (a). Dilute 0.5 ml of the test solution to 100.0 ml with the mobile phase. Dilute 5.0 ml of this solution to 10.0 ml with the mobile phase.

Reference solution (b). Dissolve 2 mg of *buflomedil impurity B CRS* in the mobile phase. Add 0.5 ml of the test solution and dilute to 100 ml with the mobile phase.

Column:

– *size*: *l* = 0.25 m, Ø = 4.6 mm,

– *stationary phase*: *end-capped octadecylsilyl silica gel for chromatography R* (5 µm),

– *temperature*: 40 °C.

Mobile phase: mix 45 volumes of *acetonitrile R* and 55 volumes of a 9.25 g/l solution of *potassium dihydrogen phosphate R* adjusted to pH 2.5 with *phosphoric acid R*.

Flow rate: 1 ml/min.

Detection: spectrophotometer at 210 nm.

Injection: 10 µl.

Run time: twice the retention time of buflomedil.

Retention time: buflomedil = about 5 min.

System suitability: reference solution (b):

– *resolution*: minimum 5.0 between the peaks due to buflomedil and impurity B.

Limits:

– *any impurity*: not more than the area of the principal peak in the chromatogram obtained with reference solution (a) (0.25 per cent),

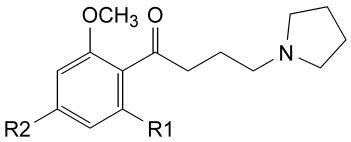
– *total*: not more than twice the area of the principal peak in the chromatogram obtained with reference solution (a) (0.5 per cent),

– *disregard limit*: 0.2 times the area of the principal peak in the chromatogram obtained with reference solution (a) (0.05 per cent).

Heavy metals (*2.4.8*): maximum 10 ppm.

2.0 g complies with limit test C. Prepare the standard using 2 ml of *lead standard solution (10 ppm Pb) R*.

Loss on drying (*2.2.32*): maximum 0.5 per cent, determined on 1.000 g by drying in an oven at 105 °C for 2 h.



Sulphated ash (*2.4.14*): maximum 0.1 per cent, determined on 1.0 g.

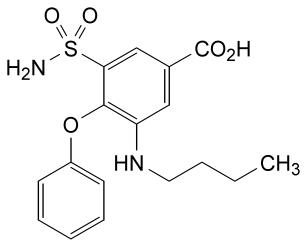
ASSAY

Dissolve 0.300 g in 15 ml of *anhydrous acetic acid R* and add 35 ml of *acetic anhydride R*. Titrate with *0.1 M perchloric acid*, determining the end-point potentiometrically (*2.2.20*).

1 ml of *0.1 M perchloric acid* is equivalent to 34.39 mg of $C_{17}H_{26}ClNO_4$.

IMPURITIES

A. R1 = OH, R2 = OCH_3: 4-(pyrrolidin-1-yl)-1-(2-hydroxy-4,6-dimethoxyphenyl)butan-1-one,



B. R1 = OCH_3, R2 = OH: 4-(pyrrolidin-1-yl)-1-(4-hydroxy-2,6-dimethoxyphenyl)butan-1-one,

C. R1 = R2 = OH: 4-(pyrrolidin-1-yl)-1-(2,4-dihydroxy-6-methoxyphenyl)butan-1-one.

corrected 6.0

BUMETANIDE

Bumetanidum

$C_{17}H_{20}N_2O_5S$ M_r 364.4
[28395-03-1]

DEFINITION

3-(Butylamino)-4-phenoxy-5-sulphamoylbenzoic acid.

Content: 99.0 per cent to 101.0 per cent (dried substance).

CHARACTERS

Appearance: white or almost white, crystalline powder.

Solubility: practically insoluble in water, soluble in acetone and in alcohol, slightly soluble in methylene chloride. It dissolves in dilute solutions of alkali hydroxides.

It shows polymorphism (*5.9*).

mp: about 233 °C.

IDENTIFICATION

Infrared absorption spectrophotometry (*2.2.24*).

Comparison: *bumetanide CRS*.

If the spectra obtained in the solid state show differences, dissolve the substance to be examined and the reference substance separately in *acetone R*, evaporate to dryness and record new spectra using the residues.

TESTS

Appearance of solution. The solution is clear (*2.2.1*) and colourless (*2.2.2, Method II*).

Dissolve 0.1 g in a 6 g/l solution of *potassium hydroxide R* and dilute to 20 ml with the same solution.

Related substances. Liquid chromatography (*2.2.29*).

Test solution. Dissolve 50 mg of the substance to be examined in the mobile phase and dilute to 25.0 ml with the mobile phase.

Reference solution (a). Dilute 1.0 ml of the test solution to 100.0 ml with the mobile phase. Dilute 1.0 ml of this solution to 10.0 ml with the mobile phase.

Reference solution (b). Dissolve 2 mg of *bumetanide impurity A CRS* and 2 mg of *bumetanide impurity B CRS* in the mobile phase and dilute to 10.0 ml with the mobile phase. Dilute 1.0 ml of this solution to 100.0 ml with the mobile phase.

Column:

– *size*: *l* = 0.15 m, Ø = 4.6 mm,
– *stationary phase*: *end-capped octylsilyl silica gel for chromatography R* (3.5 µm).

Mobile phase: mix 70 volumes of *methanol R*, 25 volumes of *water for chromatography R* and 5 volumes of a 27.2 g/l solution of *potassium dihydrogen phosphate R* previously adjusted to pH 7.0 with a 280 g/l solution of *potassium hydroxide R*; add *tetrahexylammonium bromide R* to this mixture to obtain a concentration of 2.17 g/l.

Flow rate: 1.0 ml/min.

Detection: spectrophotometer at 254 nm.

Injection: 10 µl.

Run time: 5 times the retention time of bumetanide.

Relative retention with reference to bumetanide (retention time = about 6 min): impurity B = about 0.4; impurity A = about 0.6; impurity D = about 2.5; impurity C = about 4.4.

System suitability: reference solution (b):

– *resolution*: minimum 2.0 between the peaks due to impurity A and impurity B.

Limits:

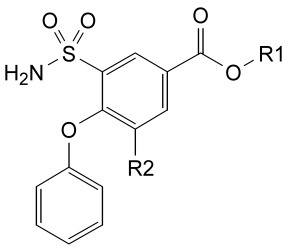
– *impurities A, B, C, D*: for each impurity, not more than the area of the principal peak in the chromatogram obtained with reference solution (a) (0.1 per cent),
– *other impurities*: for each impurity, not more than the area of the principal peak in the chromatogram obtained with reference solution (a) (0.1 per cent),
– *total*: not more than twice the area of the principal peak in the chromatogram obtained with reference solution (a) (0.2 per cent),
– *disregard limit*: 0.5 times the area of the principal peak in the chromatogram obtained with reference solution (a) (0.05 per cent).

Loss on drying (*2.2.32*): maximum 0.5 per cent, determined on 1.000 g by drying in an oven at 105 °C for 4 h.

Sulphated ash (*2.4.14*): maximum 0.1 per cent, determined on 1.0 g.

ASSAY

Dissolve 0.300 g in 50 ml of *alcohol R*. Add 0.1 ml of *phenol red solution R*. Titrate with *0.1 M sodium hydroxide* until a violet-red colour is obtained. Carry out a blank titration.

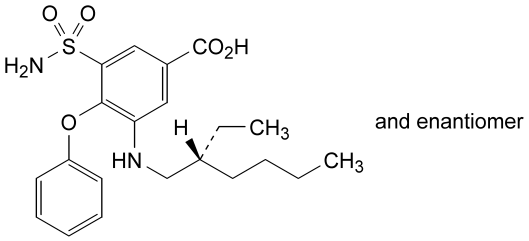


1 ml of *0.1 M sodium hydroxide* is equivalent to 36.44 mg of $C_{17}H_{20}N_2O_5S$.

STORAGE

Protected from light.

IMPURITIES

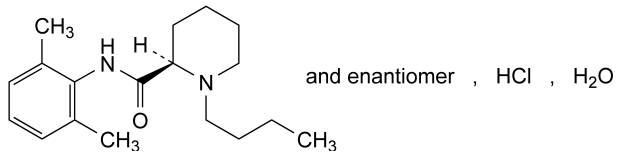


Specified impurities: A, B, C, D.

A. R1 = H, R2 = NO_2: 3-nitro-4-phenoxy-5-sulphamoylbenzoic acid,

B. R1 = H, R2 = NH_2: 3-amino-4-phenoxy-5-sulphamoylbenzoic acid,

C. R1 = C_4H_9, R2 = NH-C_4H_9: butyl 3-(butylamino)-4-phenoxy-5-sulphamoylbenzoate,



D. 3-[[(2*RS*)-2-ethylhexyl]amino]-4-phenoxy-5-sulphamoylbenzoic acid.

corrected 6.0

BUPIVACAINE HYDROCHLORIDE

Bupivacaini hydrochloridum

$C_{18}H_{29}ClN_2O,H_2O$ M_r 342.9
[14252-80-3]

DEFINITION

(2*RS*)-1-Butyl-*N*-(2,6-dimethylphenyl)piperidine-2-carboxamide hydrochloride monohydrate.

Content: 98.5 per cent to 101.0 per cent (dried substance).

CHARACTERS

Appearance: white or almost white, crystalline powder or colourless crystals.

Solubility: soluble in water, freely soluble in alcohol.

mp: about 254 °C, with decomposition.

IDENTIFICATION

First identification: A, D.

Second identification: B, C, D.

A. Infrared absorption spectrophotometry (*2.2.24*).

Preparation: discs of *potassium bromide R*.

Comparison: *bupivacaine hydrochloride CRS*.

B. Thin-layer chromatography (*2.2.27*).

Test solution. Dissolve 25 mg of the substance to be examined in *methanol R* and dilute to 5 ml with the same solvent.

Reference solution. Dissolve 25 mg of *bupivacaine hydrochloride CRS* in *methanol R* and dilute to 5 ml with the same solvent.

Plate: *TLC silica gel G plate R.*

Mobile phase: *concentrated ammonia R, methanol R* (0.1:100 *V/V*).

Application: 5 µl.

Development: over a path of 10 cm.

Drying: in air.

Detection: spray with *dilute potassium iodobismuthate solution R.*

Results: the principal spot in the chromatogram obtained with the test solution is similar in position, colour and size to the principal spot in the chromatogram obtained with the reference solution.

C. Dissolve 0.1 g in 10 ml of *water R*, add 2 ml of *dilute sodium hydroxide solution R* and shake with 2 quantities, each of 15 ml, of *ether R*. Dry the combined ether layers over *anhydrous sodium sulphate R* and filter. Evaporate the ether, recrystallise the residue from *alcohol (90 per cent V/V) R* and dry under reduced pressure. The crystals melt (*2.2.14*) at 105 °C to 108 °C.

D. It gives reaction (a) of chlorides (*2.3.1*).

TESTS

Solution S. Dissolve 1.0 g in *carbon dioxide-free water R* and dilute to 50 ml with the same solvent.

Appearance of solution. Solution S is clear (*2.2.1*) and colourless (*2.2.2, Method II*).

Acidity or alkalinity. To 10 ml of solution S add 0.2 ml of *0.01 M sodium hydroxide*; the pH (*2.2.3*) is not less than 4.7. Add 0.4 ml of *0.01 M hydrochloric acid*; the pH is not greater than 4.7.

Related substances. Gas chromatography (*2.2.28*).

Internal standard solution. Dissolve 25 mg of *methyl behenate R* in *methylene chloride R* and dilute to 500 ml with the same solvent.

Test solution. Dissolve 50.0 mg of the substance to be examined in 2.5 ml of *water R*, add 2.5 ml of *dilute sodium hydroxide solution R* and extract with 2 quantities, each of 5 ml, of the internal standard solution. Filter the lower layer.

Reference solution (a). Dissolve 10 mg of the substance to be examined, 10 mg of *bupivacaine impurity B CRS* and 10 mg of *bupivacaine impurity E CRS* in 2.5 ml of *water R*, add 2.5 ml of *dilute sodium hydroxide solution R* and extract with 2 quantities, each of 5 ml, of the internal standard solution. Filter the lower layer and dilute to 20 ml with the internal standard solution.

Reference solution (b). Dilute 1.0 ml of the test solution to 100.0 ml with the internal standard solution.

Reference solution (c). Dilute 5.0 ml of reference solution (b) to 10.0 ml with the internal standard solution.

Reference solution (d). Dilute 1.0 ml of reference solution (b) to 10.0 ml with the internal standard solution.

Column:

- *material*: fused silica,
- *size*: *l* = 30 m, Ø = 0.32 mm,
- *stationary phase*: *poly(dimethyl)(diphenyl)siloxane R* (film thickness 0.25 µm).

Carrier gas: *helium for chromatography R.*

Flow rate: 2.5 ml/min.

Split ratio: 1:12.

Temperature:

	Time (min)	Temperature (°C)
	0	180
Column	0 - 10	180 → 230
	10 - 15	230
Injection port		250
Detector		250

Detection: flame ionisation.

Injection: 1 µl.

Relative retention with reference to bupivacaine (retention time = about 10 min): impurity C = about 0.5; impurity A = about 0.6; impurity B = about 0.7; impurity D = about 0.8; impurity E = about 1.1; internal standard = about 1.4.

System suitability: reference solution (a):

- *resolution*: minimum 3.0 between the peaks due to bupivacaine and impurity E.

Limits:

- *impurity B*: calculate the ratio (*R*) of the area of the principal peak to the area of the peak due to the internal standard from the chromatogram obtained with reference solution (c); from the chromatogram obtained with the test solution, calculate the ratio of the area of the peak due to impurity B to the area of the peak due to the internal standard: this ratio is not greater than *R* (0.5 per cent),
- *any other impurity*: calculate the ratio (*R*) of the area of the principal peak to the area of the peak due to the internal standard from the chromatogram obtained with reference solution (d); from the chromatogram obtained with the test solution, calculate the ratio of the area of any peak, apart from the principal peak, the peak due to impurity B and the peak due to the internal standard, to the area of the peak due to the internal standard: this ratio is not greater than *R* (0.1 per cent),
- *total*: calculate the ratio (*R*) of the area of the principal peak to the area of the peak due to the internal standard from the chromatogram obtained with reference solution (b); from the chromatogram obtained with the test solution, calculate the ratio of the sum of the areas of any peaks, apart from the principal peak and the peak due to the internal standard, to the area of the peak due to the internal standard: this ratio is not greater than *R* (1.0 per cent),
- *disregard limit*: ratio less than 0.01 times *R* (0.01 per cent).

2,6-Dimethylaniline: maximum 100 ppm.

Dissolve 0.50 g in *methanol R* and dilute to 10 ml with the same solvent. To 2 ml of the solution add 1 ml of a freshly prepared 10 g/l solution of *dimethylaminobenzaldehyde R* in *methanol R* and 2 ml of *glacial acetic acid R* and allow to stand for 10 min. Any yellow colour in the solution is not more intense than that in a standard prepared at the same time and in the same manner using 2 ml of a 5 mg/l solution of *2,6-dimethylaniline R* in *methanol R.*

Heavy metals (*2.4.8*): maximum 10 ppm.

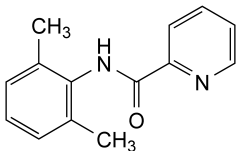
Dissolve 2.0 g in a mixture of 15 volumes of *water R* and 85 volumes of *methanol R* and dilute to 20 ml with the same mixture of solvents. 12 ml of the solution complies with limit test B. Prepare the standard using lead standard solution

(1 ppm Pb) obtained by diluting *lead standard solution (100 ppm Pb) R* with a mixture of 15 volumes of *water R* and 85 volumes of *methanol R*.

Loss on drying (*2.2.32*): 4.5 per cent to 6.0 per cent, determined on 1.000 g by drying in an oven at 105 °C.

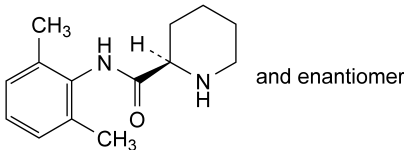
Sulphated ash (*2.4.14*): maximum 0.1 per cent, determined on 1.0 g.

ASSAY



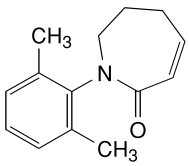
Dissolve 0.250 g in a mixture of 20 ml of *water R* and 25 ml of *alcohol R*. Add 5.0 ml of *0.01 M hydrochloric acid*. Carry out a potentiometric titration (*2.2.20*), using *0.1 M ethanolic sodium hydroxide*. Read the volume added between the 2 points of inflexion.

1 ml of *0.1 M ethanolic sodium hydroxide* is equivalent to 32.49 mg of $C_{18}H_{29}ClN_2O$.

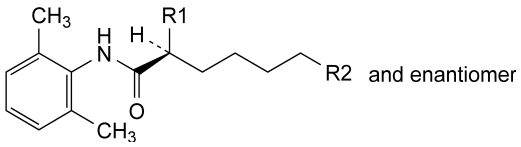


STORAGE

Protected from light.

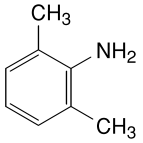


IMPURITIES



A. *N*-(2,6-dimethylphenyl)pyridine-2-carboxamide,

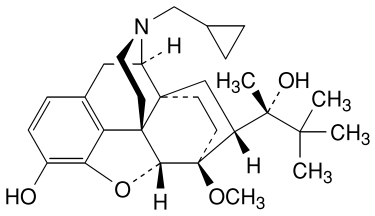
B. (2*RS*)-*N*-(2,6-dimethylphenyl)piperidine-2-carboxamide,



C. 1-(2,6-dimethylphenyl)-1,5,6,7-tetrahydro-2*H*-azepin-2-one,

D. R1 = R2 = Cl: (2*RS*)-2,6-dichloro-*N*-(2,6-dimethylphenyl)hexanamide,

E. R1 = H, R2 = NH-$(CH_2)_3$-CH_3: 6-(butylamino)-*N*-(2,6-dimethylphenyl)hexanamide,



F. 2,6-dimethylaniline.

corrected 6.0

BUPRENORPHINE

Buprenorphinum

$C_{29}H_{41}NO_4$ M_r 467.6
[52485-79-7]

DEFINITION

Buprenorphine contains not less than 98.5 per cent and not more than the equivalent of 101.0 per cent of (2*S*)-2-[17-(cyclopropylmethyl)-4,5α-epoxy-3-hydroxy-6-methoxy-6α,14-ethano-14α-morphinan-7α-yl]-3,3-dimethylbutan-2-ol, calculated with reference to the dried substance.

CHARACTERS

A white or almost white, crystalline powder, very slightly soluble in water, freely soluble in acetone, soluble in methanol, slightly soluble in cyclohexane. It dissolves in dilute solutions of acids.

It melts at about 217 °C.

IDENTIFICATION

Examine by infrared absorption spectrophotometry (*2.2.24*), comparing with the *Ph. Eur. reference spectrum of buprenorphine*.

TESTS

Solution S. Dissolve 0.250 g in *ethanol R* and dilute to 25.0 ml with the same solvent.

Appearance of solution. Solution S is clear (*2.2.1*) and colourless (*2.2.2, Method II*).

Specific optical rotation (*2.2.7*): – 103 to – 107, determined on and calculated with reference to the dried substance.

Related substances. Examine by liquid chromatography (*2.2.29*).

Test solution. Dissolve 25.0 mg of the substance to be examined in the mobile phase and dilute to 10.0 ml with the mobile phase.

Reference solution (a). Dissolve 5.0 mg of the substance to be examined in 2.0 ml of *methanol R*. Add 0.25 ml of *2 M hydrochloric acid R*.

Reference solution (b). Dilute 0.5 ml of the test solution to 200.0 ml with the mobile phase.

Reference solution (c). Dilute 0.65 ml of the test solution to 100.0 ml with the mobile phase.

Reference solution (d). Dilute 4.0 ml of reference solution (b) to 10.0 ml with the mobile phase.

The chromatographic procedure may be carried out using:

– a stainless steel column 0.25 m long and 4.6 mm in internal diameter packed with *octadecylsilyl silica gel for chromatography R* (5 µm),

– as mobile phase at a flow rate of about 1 ml/min, a mixture of 10 volumes of a 10 g/l solution of *ammonium acetate R* and 60 volumes of *methanol R*,

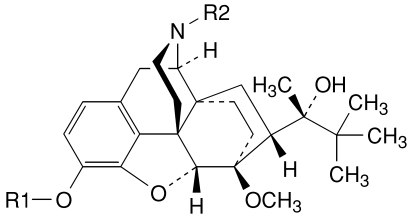
– as detector a spectrophotometer set at 288 nm,

maintaining the temperature of the column at 40 °C.

Inject 20 µl of reference solution (a). Adjust the flow rate so that the retention time of the peak corresponding to buprenorphine is about 15 min. The test is not valid unless the chromatogram obtained with reference solution (a) presents 2 peaks, the first having a retention time of 0.93 relative to the second peak (buprenorphine). Inject 20 µl of each solution. Record the chromatogram of the test solution for 2.5 times the retention time of the principal peak. In the chromatogram obtained with the test solution: the area of any peak, apart from the principal peak, is not greater than the area of the principal peak in the chromatogram obtained with reference solution (b) (0.25 per cent); the sum of the areas of such peaks is not greater than the area of the peak in the chromatogram obtained with reference solution (c) (0.65 per cent). Disregard any peak with an area less than that of the principal peak in the chromatogram obtained with reference solution (d).

Loss on drying (*2.2.32*). Not more than 1.0 per cent, determined on 1.000 g by drying in an oven at 105 °C.

ASSAY

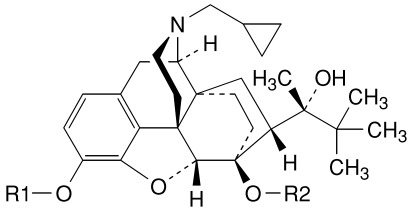


Dissolve 0.400 g in 40 ml of *anhydrous acetic acid R*. Titrate with *0.1 M perchloric acid* until the colour changes from violet-blue to green, using 0.1 ml of *crystal violet solution R* as indicator.

1 ml of *0.1 M perchloric acid* is equivalent to 46.76 mg of $C_{29}H_{41}NO_4$.

STORAGE

Store protected from light.

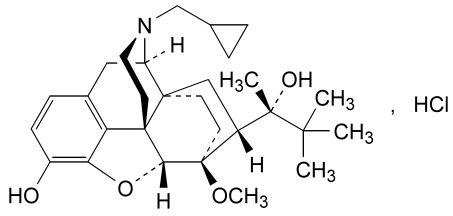


IMPURITIES

A. R1 = H, R2 = CH_2-CH_2-CH=CH_2: (2*S*)-2-[17-(but-3-enyl)-4,5α-epoxy-3-hydroxy-6-methoxy-6α,14-ethano-14α-morphinan-7α-yl]-3,3-dimethylbutan-2-ol,

B. R1 = R2 = H: (2*S*)-2-(4,5α-epoxy-3-hydroxy-6-methoxy-6α,14-ethano-14α-morphinan-7α-yl)-3,3-dimethylbutan-2-ol,

C. R1 = CH_3, R2 = CN: 4,5α-epoxy-7α-[(1*S*)-1-hydroxy-1,2,2-trimethylpropyl]-3,6-dimethoxy-6α,14-ethano-14α-morphinan-17-carbonitrile,



D. R1 = R2 = CH_3: (2*S*)-2-[17-(cyclopropylmethyl)-4,5α-epoxy-3,6-dimethoxy-6α,14-ethano-14α-morphinan-7α-yl]-3,3-dimethylbutan-2-ol (3-*O*-methylbuprenorphine),

E. R1 = R2 = H: (2*S*)-2-[17-(cyclopropylmethyl)-4,5α-epoxy-3,6-dihydroxy-6α,14-ethano-14α-morphinan-7α-yl]-3,3-dimethylbutan-2-ol (6-*O*-desmethylbuprenorphine).

01/2008:1181

BUPRENORPHINE HYDROCHLORIDE

Buprenorphini hydrochloridum

$C_{29}H_{42}ClNO_4$ M_r 504.1

[53152-21-9]

DEFINITION

Buprenorphine hydrochloride contains not less than 98.5 per cent and not more than the equivalent of 101.0 per cent of (2*S*)-2-[17-(cyclopropylmethyl)-4,5α-epoxy-3-hydroxy-6-methoxy-6α,14-ethano-14α-morphinan-7α-yl]-3,3-dimethylbutan-2-ol hydrochloride, calculated with reference to the dried substance.

CHARACTERS

A white or almost white, crystalline powder, sparingly soluble in water, freely soluble in methanol, soluble in alcohol, practically insoluble in cyclohexane.

IDENTIFICATION

A. Examine by infrared absorption spectrophotometry (*2.2.24*), comparing with the *Ph. Eur. reference spectrum of buprenorphine hydrochloride*.

B. 3 ml of (see Tests) gives reaction (a) of chlorides (*2.3.1*).

TESTS

Solution S. Dissolve 0.250 g in 5.0 ml of *methanol R* and while stirring dilute to 25.0 ml with *carbon dioxide-free water R*.

Appearance of solution. Solution S is clear (*2.2.1*) and colourless (*2.2.2, Method II*).

Acidity or alkalinity. To 10.0 ml of add 0.05 ml of *methyl red solution R*. Not more than 0.2 ml of *0.02 M sodium hydroxide* or *0.02 M hydrochloric acid* is required to change the colour of the indicator.

Specific optical rotation (*2.2.7*). Dissolve 0.100 g in *methanol R* and dilute to 10.0 ml with the same solvent. The specific optical rotation is – 92 to – 98, calculated with reference to the dried substance.

Related substances. Examine by liquid chromatography (*2.2.29*).

Test solution. Dissolve 25.0 mg of the substance to be examined in the mobile phase and dilute to 10.0 ml with the mobile phase.

Reference solution (a). Dissolve 5 mg of the substance to be examined in 2.0 ml of *methanol R*. Add 0.25 ml of *2 M hydrochloric acid R*.

Reference solution (b). Dilute 0.5 ml of the test solution to 200.0 ml with the mobile phase.

Reference solution (c). Dilute 0.65 ml of the test solution to 100.0 ml with the mobile phase.

Reference solution (d). Dilute 4.0 ml of reference solution (b) to 10.0 ml with the mobile phase.

The chromatographic procedure may be carried out using:

– a stainless steel column 0.25 m long and 4.6 mm in internal diameter packed with *octadecylsilyl silica gel for chromatography R* (5 µm),

– as the mobile phase at a flow rate of about 1 ml/min, a mixture of 10 volumes of a 10 g/l solution of *ammonium acetate R* and 60 volumes of *methanol R*,

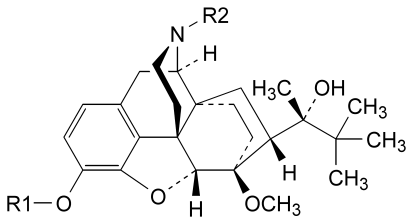
– as detector a spectrophotometer set at 288 nm,

maintaining the temperature of the column at 40 °C.

Inject 20 µl of reference solution (a). Adjust the flow rate so that the retention time of the peak corresponding to buprenorphine is about 15 min. The test is not valid unless the chromatogram obtained with reference solution (a) presents two peaks, the first having a retention time of 0.93 relative to the second peak (buprenorphine). Inject separately 20 µl of each solution. Record the chromatogram of the test solution for 2.5 times the retention time of the main peak. In the chromatogram obtained with the test solution: the area of any peak, apart from the principal peak, is not greater than the area of the principal peak in the chromatogram obtained with reference solution (b) (0.25 per cent) and the sum of the areas of such peaks is not greater than the area of the peak in the chromatogram obtained with reference solution (c) (0.65 per cent). Disregard any peak with an area less than that of the principal peak in the chromatogram obtained with reference solution (d).

Loss on drying (*2.2.32*). Not more than 1.0 per cent, determined on 1.000 g by heating in an oven at 115-120 °C.

ASSAY



Dissolve 0.400 g in 40 ml of *anhydrous acetic acid R* and add 10 ml of *acetic anhydride R*. Titrate with *0.1 M perchloric acid*, determining the end-point potentiometrically (*2.2.20*).

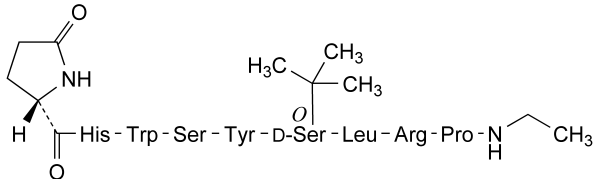
1 ml of *0.1 M perchloric acid* is equivalent to 50.41 mg of $C_{29}H_{42}ClNO_4$.

STORAGE

Store protected from light.

IMPURITIES

A. R1 = H, R2 = CH_2-CH_2-CH=CH_2: (2*S*)-2-[17-(but-3-enyl)-4,5α-epoxy-3-hydroxy-6-methoxy-6α,14-ethano-14α-morphinan-7α-yl]-3,3-dimethylbutan-2-ol,



B. R1 = H, R2 = H: (2*S*)-2-(4,5α-epoxy-3-hydroxy-6-methoxy-6α,14-ethano-14α-morphinan-7α-yl)-3,3-dimethylbutan-2-ol,

C. R1 = CH_3, R2 = CN: 4,5α-epoxy-7α-[(1*S*)-1-hydroxy-1,2,2-trimethylpropyl]-3,6-dimethoxy-6α,14-ethano-14α-morphinan-17-carbonitrile.

01/2008:1077

BUSERELIN

Buserelinum

$C_{60}H_{86}N_{16}O_{13}$ M_r 1239
[68630-75-1]

DEFINITION

5-Oxo-L-prolyl-L-histidyl-L-tryptophyl-L-seryl-L-tyrosyl-*O*-(1,1-dimethylethyl)-D-seryl-L-leucyl-L-arginyl-L-prolylethylamide.

Synthetic nonapeptide analogue of human gonadotrophin-releasing hormone GnRH with agonistic activity to gonadorelin. It is obtained by chemical synthesis and is available as an acetate.

Content: 95.0 per cent to 102.0 per cent (anhydrous, acetic acid-free substance).

CHARACTERS

Appearance: white or slightly yellowish powder, hygroscopic.

Solubility: sparingly soluble in water and in dilute acids.

IDENTIFICATION

A. Examine the chromatograms obtained in the assay.

Results: the principal peak in the chromatogram obtained with the test solution is similar in retention time and size to the principal peak in the chromatogram obtained with reference solution (b).

B. Nuclear magnetic resonance spectrometry (*2.2.33*).

Preparation: 4 mg/ml solution in a mixture of 20 volumes of *deuterated acetic acid R* and 80 volumes of *deuterium oxide R*.

Comparison: 4 mg/ml solution of *buserelin CRS* in a mixture of 20 volumes of *deuterated acetic acid R* and 80 volumes of *deuterium oxide R* (dissolve the contents of a vial of *buserelin CRS* in this solvent mixture to obtain the desired concentration).

Operating conditions: field strength: minimum 300 MHz.

Results: the ^{1}H NMR spectrum obtained is qualitatively similar to the ^{1}H NMR spectrum obtained with *buserelin CRS*.

C. Amino acid analysis (*2.2.56*). For protein hydrolysis use Method 1 and for analysis use Method 1.

Express the content of each amino acid in moles. Calculate the relative proportions of the amino acids, taking 1/6 of the sum of the number of moles of glutamic acid, histidine, tyrosine, leucine, arginine and proline as equal to one. The values fall within the following limits: serine 1.4 to 2.0; proline 0.8 to 1.2; glutamic acid 0.9 to 1.1; leucine 0.9 to 1.1; tyrosine 0.9 to 1.1; histidine 0.9 to 1.1; arginine 0.9 to 1.1. Not more than traces of other amino acids are present, with the exception of tryptophan.

TESTS

Appearance of solution. A 10 g/l solution is clear (*2.2.1*) and not more intensely coloured than reference solution Y_7 (*2.2.2, Method II*).

Specific optical rotation (*2.2.7*): – 49 to – 58 (anhydrous, acetic acid-free substance), determined on a 10 g/l solution.

Specific absorbance (*2.2.25*): 49 to 56, measured at the absorption maximum at 278 nm (anhydrous, acetic acid-free substance).

Dissolve 10.0 mg in 100.0 ml of *0.01 M hydrochloric acid*.

Related substances. Liquid chromatography (*2.2.29*).

Test solution. Dissolve 5.0 mg of the substance to be examined in 5.0 ml of the mobile phase.

Reference solution (a). Dissolve the contents of a vial of *D-His-buserelin CRS* in the mobile phase. Dilute an appropriate volume of this solution in the mobile phase to obtain a final concentration of 1 mg/ml. Add 1.0 ml of the test solution to 1.0 ml of this solution.

Reference solution (b). Dissolve the contents of a vial of *buserelin CRS* in the mobile phase. Dilute an appropriate volume of this solution in the mobile phase to obtain a final concentration of 1.0 mg/ml.

Reference solution (c). Dilute 1.0 ml of the test solution to 100.0 ml with the mobile phase.

Column:

– *size*: *l* = 0.25 m, Ø = 4 mm;

– *stationary phase*: *octadecylsilyl silica gel for chromatography R* (5 µm).

Mobile phase: mix 200 ml of *acetonitrile R* and 700 ml of an 11.2 g/l solution of *phosphoric acid R* and adjust to pH 2.5 with *triethylamine R*.

Flow rate: 0.8 ml/min.

Detection: spectrophotometer at 220 nm.

Injection: 10 µl of the test solution, reference solution (a) and reference solution (c).

Relative retention with reference to buserelin (retention time = about 36 min): impurity B = about 0.76; impurity C = about 0.83; impurity A = about 0.90; impurity D = about 0.94; impurity E = about 0.94.

System suitability: reference solution (a):

– *resolution*: minimum 1.5 between the peaks due to impurity A and buserelin.

Limits:

– *sum of impurities D and E*: not more than 3 times the area of the principal peak in the chromatogram obtained with reference solution (c) (3 per cent);

– *any other impurity*: for each impurity, not more than 3 times the area of the principal peak in the chromatogram obtained with reference solution (c) (3 per cent);

– *total*: not more than 5 times the area of the principal peak in the chromatogram obtained with reference solution (c) (5 per cent);

– *disregard limit*: 0.1 times the area of the principal peak in the chromatogram obtained with reference solution (c) (0.1 per cent).

Acetic acid (*2.5.34*): 3.0 per cent to 7.0 per cent.

Test solution. Dissolve 20.0 mg of the substance to be examined in a mixture of 5 volumes of mobile phase B and 95 volumes of mobile phase A and dilute to 10.0 ml with the same mixture of solvents.

Water (*2.5.12*): maximum 4.0 per cent, determined on 80.0 mg.

Bacterial endotoxins (*2.6.14*): less than 55.5 IU/mg, if intended for use in the manufacture of parenteral dosage forms without a further appropriate procedure for the removal of bacterial endotoxins.

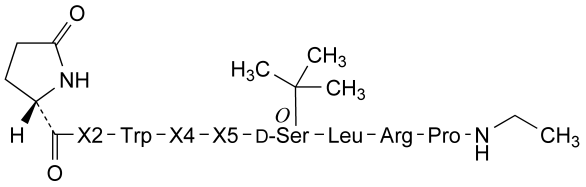
ASSAY

Liquid chromatography (*2.2.29*) as described in the test for related substances with the following modification.

Injection: 10 µl of the test solution and reference solution (b).

Calculate the content of buserelin ($C_{60}H_{86}N_{16}O_{13}$) using the areas of the peaks in the chromatograms obtained and the declared content of $C_{60}H_{86}N_{16}O_{13}$ in *buserelin CRS*.

STORAGE

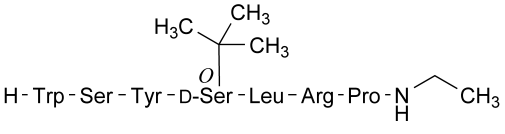


In an airtight container, protected from light, at a temperature of 2 °C to 8 °C. If the substance is sterile, store in an airtight, sterile, tamper-proof container.

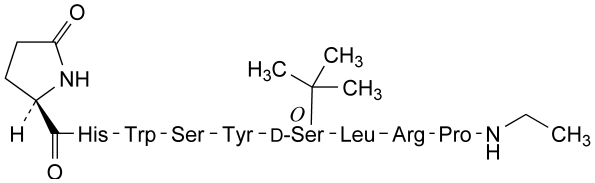
LABELLING

The label states the mass of peptide in the container.

IMPURITIES



Specified impurities: A, B, C, D, E.

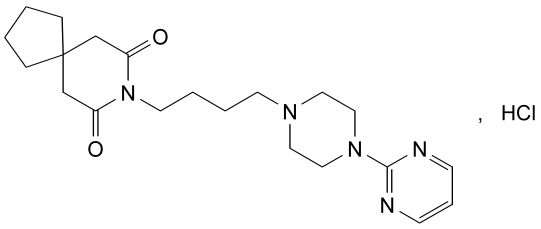


A. X2 = D-His, X4 = L-Ser, X5 = L-Tyr: [2-D-histidine]buserelin,

B. X2 = L-His, X4 = D-Ser, X5 = L-Tyr: [4-D-serine]buserelin,

D. X2 = L-His, X4 = L-Ser, X5 = D-Tyr: [5-D-tyrosine]buserelin,

C. buserelin-(3-9)-peptide,



E. [1-(5-oxo-D-proline)]buserelin.

corrected 6.0

BUSPIRONE HYDROCHLORIDE

Buspironi hydrochloridum

, HCl

$C_{21}H_{32}ClN_5O_2$ M_r 422.0
[33386-08-2]

DEFINITION

8-[4-[4-(Pyrimidin-2-yl)piperazin-1-yl]butyl]-8-azaspiro[4.5]decane-7,9-dione hydrochloride.

Content: 99.0 per cent to 101.0 per cent (dried substance).

CHARACTERS

Appearance: white or almost white, crystalline powder.

Solubility: freely soluble in water and in methanol, practically insoluble in acetone.

It shows polymorphism (*5.9*).

IDENTIFICATION

A. Infrared absorption spectrophotometry (*2.2.24*).

Comparison: *buspirone hydrochloride CRS*.

If the spectra obtained in the solid state show differences, dissolve the substance to be examined and the reference substance separately in *methanol R*, evaporate to dryness on a water-bath and record new spectra using the residues.

B. It gives reaction (a) of chlorides (*2.3.1*).

TESTS

Related substances. Liquid chromatography (*2.2.29*).

Test solution. Dissolve 25.0 mg of the substance to be examined in mobile phase A and dilute to 25.0 ml with mobile phase A.

Reference solution (a). Dilute 1.0 ml of the test solution to 100.0 ml with mobile phase A. Dilute 1.0 ml of this solution to 10.0 ml with mobile phase A.

Reference solution (b). Dissolve the contents of a vial of *buspirone for system suitability CRS* (containing impurities E, G, J, L and N) in 2.0 ml of mobile phase A and sonicate for 10 min.

Column:

– *size*: *l* = 0.15 m, Ø = 4.6 mm,
– *stationary phase*: *octadecylsilyl silica gel for chromatography R* (5 µm),
– *temperature*: 40 °C.

Mobile phase:

– *mobile phase A*: mix 950 volumes of a solution containing 6.8 g/l of *potassium dihydrogen phosphate R* and 0.93 g/l of *sodium hexanesulphonate monohydrate R*, previously adjusted to pH 3.4 with *phosphoric acid R* and 50 volumes of *acetonitrile R1*;
– *mobile phase B*: mix 250 volumes of a solution containing 3.4 g/l of *potassium dihydrogen phosphate R* and 3.52 g/l of *sodium hexanesulphonate monohydrate R*, previously adjusted to pH 2.2 with *phosphoric acid R* and 750 volumes of *acetonitrile R1*,

Time (min)	Mobile phase A (per cent *V/V*)	Mobile phase B (per cent *V/V*)
0 - 6	90	10
6 - 34	90 → 42	10 → 58
34 - 45	42	58
45 - 55	42 → 0	58 → 100
55 - 56	0 → 100	100 → 0
56 - 60	100	0
60 - 61	100 → 90	0 → 10

Flow rate: 1 ml/min.

Detection: variable wavelength spectrophotometer capable of operating at 240 nm and at 210 nm.

Injection: 20 µl.

Identification of impurities: use the chromatogram supplied with *buspirone for system suitability CRS* and the chromatogram obtained with reference solution (b) to identify the peaks due to impurities E, G, J, L and N.

Relative retention at 240 nm with reference to buspirone (retention time = about 25 min): impurity A = about 0.2; impurity B = about 0.3; impurity C = about 0.6; impurity D = about 0.7; impurity E = about 0.8; impurity F = about 0.9; impurity G = about 1.05; impurity H = about 1.1; impurity I = about 1.2; impurity J = about 1.5.

Relative retention at 210 nm with reference to buspirone (retention time = about 25 min): impurity K = about 0.6; impurity L = about 1.7; impurity M = about 1.8; impurity N = about 1.9.

System suitability: reference solution (b):

– *peak-to-valley ratio at 240 nm*: minimum 5.0, where H_p = height above the baseline of the peak due to impurity G and H_v = height above the baseline of the lowest point of the curve separating this peak from the peak due to buspirone;
– *resolution at 210 nm*: minimum 4.0 between the peaks due to impurity L and impurity N;
– the chromatograms obtained are similar to the chromatograms supplied with *buspirone for system suitability CRS*.

Limits: spectrophotometer at 240 nm:

– *correction factor*: for the calculation of content, multiply the peak area of impurity J by 2,
– *impurity E*: not more than 3 times the area of the principal peak in the chromatogram obtained with reference solution (a) (0.3 per cent),
– *impurity J*: not more than twice the area of the principal peak in the chromatogram obtained with reference solution (a) (0.2 per cent),
– *any other impurity*: for each impurity, not more than the area of the principal peak in the chromatogram obtained with reference solution (a) (0.1 per cent),
– *total*: not more than 4 times the area of the principal peak in the chromatogram obtained with reference solution (a) (0.4 per cent),

– *disregard limit*: 0.5 times the area of the principal peak in the chromatogram obtained with reference solution (a) (0.05 per cent).

Limits: spectrophotometer at 210 nm:

– *impurity K*: not more than the area of the principal peak in the chromatogram obtained with reference solution (a) (0.1 per cent),
– *any other impurity eluting with a relative retention greater than 1.6*: for each impurity, not more than the area of the principal peak in the chromatogram obtained with reference solution (a) (0.1 per cent),
– *total*: not more than twice the area of the principal peak in the chromatogram obtained with reference solution (a) (0.2 per cent),
– *disregard limit*: 0.5 times the area of the principal peak in the chromatogram obtained with reference solution (a) (0.05 per cent).

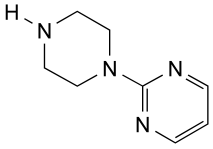
Loss on drying (*2.2.32*): maximum 0.5 per cent, determined on 1.000 g by drying at 105 °C.

Sulphated ash (*2.4.14*): maximum 0.1 per cent, determined on 1.0 g.

ASSAY

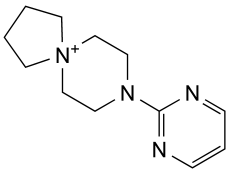
Dissolve 0.150 g in 10 ml of *glacial acetic acid R* and add 50 ml of *acetic anhydride R*. Titrate with *0.1 M perchloric acid*, determining the end-point potentiometrically (*2.2.20*).

1 ml of *0.1 M perchloric acid* is equivalent to 21.10 mg of $C_{21}H_{32}ClN_5O_2$.



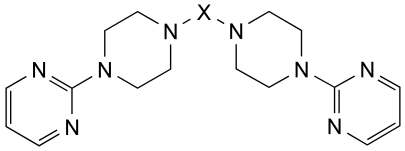
STORAGE

Protected from light.



IMPURITIES

Specified impurities: E, J, K.



Other detectable impurities (the following substances would, if present at a sufficient level, be detected by one or other of the tests in the monograph. They are limited by the general acceptance criterion for other/unspecified impurities and/or by the general monograph *Substances for pharmaceutical use (2034)*. It is therefore not necessary to identify these impurities for demonstration of compliance. See also *5.10. Control of impurities in substances for pharmaceutical use*): *A, B, C, D, F, G, H, I, L, M, N.*

BUSULFAN

Busulfanum

$C_6H_{14}O_6S_2$ M_r 246.3
[55-98-1]

DEFINITION

Butane-1,4-diyl di(methanesulphonate).

Content: 99.0 per cent to 100.5 per cent (dried substance).

CHARACTERS

Appearance: white or almost white, crystalline powder.

Solubility: very slightly soluble in water, freely soluble in acetone and in acetonitrile, very slightly soluble in ethanol (96 per cent).

mp: about 116 °C.

IDENTIFICATION

First identification: A.

Second identification: B, C, D.

A. Infrared absorption spectrophotometry (*2.2.24*).
Comparison: *busulfan CRS.*

B. Thin-layer chromatography (*2.2.27*).
Test solution. Dissolve 20 mg of the substance to be examined in 2 ml of *acetone R.*
Reference solution. Dissolve 20 mg of *busulfan CRS* in 2 ml of *acetone R.*
Plate: *TLC silica gel G plate R.*
Mobile phase: *acetone R, toluene R* (50:50 *V/V*).
Application: 5 µl.
Development: over a path of 15 cm.
Drying: in a current of warm air.
Detection: spray with *anisaldehyde solution R* and heat at 120 °C.
Results: the principal spot in the chromatogram obtained with the test solution is similar in position, colour and size to the principal spot in the chromatogram obtained with the reference solution.

C. To 0.1 g add 5 ml of *1 M sodium hydroxide.* Heat until a clear solution is obtained. Allow to cool. To 2 ml of the solution add 0.1 ml of *potassium permanganate solution R.* The colour changes from purple through violet to blue and finally to green. Filter and add 1 ml of *ammoniacal silver nitrate solution R.* A precipitate is formed.

D. To 0.1 g add 0.1 g of *potassium nitrate R* and 0.25 g of *sodium hydroxide R,* mix and heat to fusion. Allow to cool and dissolve the residue in 5 ml of *water R.* Adjust to pH 1-2 using *dilute hydrochloric acid R.* The solution gives reaction (a) of sulphates (*2.3.1*).

TESTS

Appearance of solution. The solution is clear (*2.2.1*) and not more intensely coloured than reference solution B_7 (*2.2.2, Method II*).

Dissolve 0.25 g in 20 ml of *acetonitrile R,* dilute to 25 ml with *water R* and examine immediately.

Acidity. Dissolve 0.20 g with heating in 50 ml of *anhydrous ethanol R.* Add 0.1 ml of *methyl red solution R.* Not more than 0.05 ml of *0.1 M sodium hydroxide* is required to change the colour of the indicator.

Loss on drying (*2.2.32*): maximum 2.0 per cent, determined on 1.000 g by drying *in vacuo* at 60 °C.

Sulphated ash (*2.4.14*): maximum 0.1 per cent, determined on 1.0 g.

ASSAY

To 0.250 g add 50 ml of *water R.* Shake. Boil under a reflux condenser for 30 min and, if necessary, make up to the initial volume with *water R.* Allow to cool. Using 0.3 ml of *phenolphthalein solution R* as indicator, titrate with *0.1 M sodium hydroxide* until a pink colour is obtained.

1 ml of *0.1 M sodium hydroxide* is equivalent to 12.32 mg of $C_6H_{14}O_6S_2$.

STORAGE

In an airtight container, protected from light.

01/2008:1847
corrected 6.0

BUTCHER'S BROOM

Rusci rhizoma

DEFINITION

Dried, whole or fragmented underground parts of *Ruscus aculeatus* L.

Content: minimum 1.0 per cent of total sapogenins, expressed as ruscogenins [mixture of neoruscogenin ($C_{27}H_{40}O_4$; M_r 428.6) and ruscogenin ($C_{27}H_{42}O_4$; M_r 430.6)] (dried drug).

IDENTIFICATION

A. The rhizome consists of yellowish, branched, articulated, somewhat knotty pieces, cylindrical or subconical, about 5-10 cm long and about 5 mm thick. The surface is marked with thin annulations about 1-3 mm wide, separated from one another; rounded scars of the aerial stems are present on the upper surface. On the lower surface numerous roots, or their scars, occur; the roots

are about 2 mm in diameter and similar in colour to the rhizome. The outer layer is easily detached, revealing a yellowish-white, very hard central cylinder.

B. Reduce to a powder (355) (*2.9.12*). The powder is yellowish. Examine under a microscope using *chloral hydrate solution R*. The powder shows groups of sclereids of the rhizome, variously-shaped cells, ranging from rounded to elongated or rectangular; the walls are moderately thickened and distinctly beaded, with large, rounded to oval pits. Fragments of the endodermis composed of a single layer of irregularly-thickened cells. Groups of rounded parenchymatous cells, thickened at the corners, with small, triangular intercellular spaces; thin-walled parenchyma containing raphides of calcium oxalate. Groups of thick-walled fibres and small vessels, up to about 50 µm in diameter, the walls showing numerous small, slit-shaped pits.

C. Thin-layer chromatography (*2.2.27*)

Test solution. Introduce 1.0 g of the powdered drug (355) (*2.9.12*) and 50 ml of *dilute hydrochloric acid R* into a 100 ml flask with a ground-glass neck. Heat on a water-bath under a reflux condenser for 40 min. Allow to cool and extract the unfiltered mixture with 3 quantities, each of 25 ml, of *methylene chloride R*. Combine the organic solutions and dry over *anhydrous sodium sulphate R*. Filter and evaporate to dryness. Dissolve the residue in 5 ml of *methanol R*.

Reference solution. Dissolve 1 mg of *ruscogenins CRS* and 1 mg of *stigmasterol R* in *methanol R* and dilute to 5 ml with the same solvent.

Plate: *TLC silica gel plate R*.

Mobile phase: *methanol R, methylene chloride R* (7:93 *V/V*).

Application: 10 µl as bands.

Development: over a path of 15 cm.

Drying: in air.

Detection: spray with *vanillin reagent R*, dry the plate in an oven at 100-105 °C for 1 min and examine in daylight.

Results: see below the sequence of the zones present in the chromatograms obtained with the reference solution and the test solution. Furthermore, other weak zones may be present in the chromatogram obtained with the test solution.

Top of the plate	
	Several zones of various colours
Stigmasterol: a violet zone	A violet zone
_____	_____
	A violet zone
Ruscogenins: a yellow zone	A yellow zone (ruscogenins)
	Several zones of various colours
_____	_____
Reference solution	**Test solution**

TESTS

Foreign matter (*2.8.2*): maximum 5 per cent.

Loss on drying (*2.2.32*): maximum 12.0 per cent, determined on 1.000 g of the powdered drug (355) (*2.9.12*) by drying in an oven at 105 °C for 2 h.

Total ash (*2.4.16*): maximum 12.0 per cent.

Ash insoluble in hydrochloric acid (*2.8.1*): maximum 5.0 per cent.

ASSAY

Liquid chromatography (*2.2.29*).

Test solution. To 2.000 g of the powdered drug (355) (*2.9.12*), add 60 ml of *anhydrous ethanol R*, 15 ml of *water R* and 0.2 g of *potassium hydroxide R*. Extract under reflux on a water-bath for 4 h. Allow to cool and filter into a 100 ml volumetric flask. Rinse the extraction flask and the residue in the filter with 3 quantities, each of 10 ml, of *anhydrous ethanol R* and add the rinsings to the volumetric flask. Dilute to 100.0 ml with *anhydrous ethanol R*. Introduce 25.0 ml of the solution into a round-bottomed flask fitted to a rotary evaporator and evaporate to dryness. Dissolve the residue in 10 ml of *butanol R*, add 3 ml of *hydrochloric acid R1* and 8 ml of *water R*. Heat under reflux on a water-bath for 1 h. Allow to cool and transfer the liquid into a separating funnel, rinse the round-bottomed flask with 2 quantities, each of 10 ml, of *butanol R*. Add the rinsings to the separating funnel. Extract with 3 quantities, each of 20 ml, of *butanol R* saturated with *water R*. Combine the butanolic extracts and evaporate to dryness using a rotary evaporator. Dissolve the residue in 20 ml of *methanol R* and transfer to a 100 ml volumetric flask. Rinse the extraction flask with 2 quantities, each of 20 ml then 10 ml of *methanol R* and add the rinsings to the volumetric flask. Dilute to 100 ml with *methanol R*.

Reference solution. Dissolve 5.0 mg of *ruscogenins CRS* in 100 ml of *methanol R*.

Column:

– *size*: *l* = 0.25 m, Ø = 4.6 mm,

– *stationary phase*: *octadecylsilyl silica gel for chromatography R* (5 µm).

Mobile phase:

– *mobile phase A*: *water R*,

– *mobile phase B*: *acetonitrile for chromatography R*,

Time (min)	Mobile phase A (per cent *V/V*)	Mobile phase B (per cent *V/V*)
0 - 25	40	60
25 - 27	40 → 0	60 → 100
27 - 37	0	100
37 - 39	0 → 40	100 → 60
39 - 42	40	60

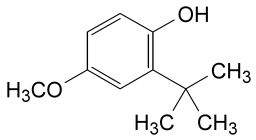
Flow rate: 1.2 ml/min.

Detection: spectrophotometer at 203 nm.

Injection: 20 µl.

Retention time with reference to neoruscogenin (retention time = about 16 min): ruscogenin = about 1.2.

System suitability: reference solution:



– *resolution*: minimum 1.5 between the peaks due to neoruscogenin and ruscogenin.

Calculate the percentage content of sapogenins expressed as ruscogenins (neoruscogenin and ruscogenin) in the test solution by comparing the areas of the peaks in the chromatograms obtained with the test solution and the reference solution.

01/2008:0880

BUTYLHYDROXYANISOLE

Butylhydroxyanisolum

$C_{11}H_{16}O_2$ M_r 180.3
[25013-16-5]

DEFINITION

Butylhydroxyanisole is 2-(1,1-dimethylethyl)-4-methoxyphenol containing not more than 10 per cent of 3-(1,1-dimethylethyl)-4-methoxyphenol.

CHARACTERS

A white, yellowish or slightly pinkish, crystalline powder, practically insoluble in water, very soluble in methylene chloride, freely soluble in alcohol and in fatty oils. It dissolves in dilute solutions of alkali hydroxides.

IDENTIFICATION

A. Examine the chromatograms obtained in the test for related substances. The principal spot in the chromatogram obtained with test solution (b) is similar in position, colour and size to the principal spot in the chromatogram obtained with reference solution (a).

B. To 0.5 ml of solution S (see Tests) add 10 ml of *aminopyrazolone solution R* and 1 ml of *potassium ferricyanide solution R*. Mix and add 10 ml of *methylene chloride R*. Shake vigorously. After separation, the organic layer is red.

C. Dissolve about 10 mg in 2 ml of *alcohol R*. Add 1 ml of a 1 g/l solution of *testosterone propionate R* in *alcohol R* and 2 ml of *dilute sodium hydroxide solution R*. Heat in a water-bath at 80 °C for 10 min and allow to cool. A red colour develops.

TESTS

Solution S. Dissolve 2.5 g in *alcohol R* and dilute to 25 ml with the same solvent.

Appearance of solution. Solution S is clear (*2.2.1*) and not more intensely coloured than intensity 5 of the range of reference solutions of the most appropriate colour (*2.2.2, Method II*).

Related substances. Examine by thin-layer chromatography (*2.2.27*), using *silica gel G R* as the coating substance.

Test solution (a). Dissolve 0.25 g of the substance to be examined in *methylene chloride R* and dilute to 10 ml with the same solvent.

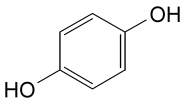
Test solution (b). Dilute 1 ml of test solution (a) to 10 ml with *methylene chloride R*.

Reference solution (a). Dissolve 25 mg of *butylhydroxyanisole CRS* in *methylene chloride R* and dilute to 10 ml with the same solvent.

Reference solution (b). Dilute 1 ml of reference solution (a) to 20 ml with *methylene chloride R*.

Reference solution (c). Dissolve 50 mg of *hydroquinone R* in 5 ml of *alcohol R* and dilute to 100 ml with *methylene chloride R*. Dilute 1 ml of this solution to 10 ml with *methylene chloride R*.

Apply separately to the plate 5 µl of each solution. Develop over a path of 10 cm using *methylene chloride R*. Allow the plate to dry in air and spray with a freshly prepared mixture of 10 volumes of *potassium ferricyanide solution R*, 20 volumes of *ferric chloride solution R1* and 70 volumes of *water R*. In the chromatogram obtained with test solution (a): any violet-blue spot with an R_F value of about 0.35 (corresponding to 3-(1,1-dimethylethyl)-4-methoxyphenol) is not more intense than the principal spot in the chromatogram obtained with reference solution (a) (10 per cent); any spot corresponding to hydroquinone is not more intense than the principal spot in the chromatogram obtained with reference solution (c) (0.2 per cent); any spot, apart from the principal spot and any spots corresponding to 3-(1,1-dimethylethyl)-4-methoxyphenol and hydroquinone, is not more intense than the principal spot in the chromatogram obtained with reference solution (b) (0.5 per cent).



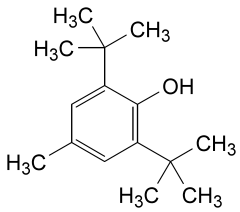
Heavy metals (*2.4.8*). 1.0 g complies with limit test C for heavy metals (10 ppm). Prepare the standard using 1 ml of *lead standard solution (10 ppm Pb) R*.

Sulphated ash (*2.4.14*). Not more than 0.1 per cent, determined on 1.0 g.

STORAGE

Store protected from light.

IMPURITIES



A. benzene-1,4-diol (hydroquinone).

01/2008:0581

BUTYLHYDROXYTOLUENE

Butylhydroxytoluenum

$C_{15}H_{24}O$ M_r 220.4
[128-37-0]

DEFINITION

Butylhydroxytoluene is 2,6-bis(1,1-dimethylethyl)-4-methylphenol.

CHARACTERS

A white or yellowish-white, crystalline powder, practically insoluble in water, very soluble in acetone, freely soluble in alcohol and in vegetable oils.

IDENTIFICATION

First identification: A, C.

Second identification: A, B, D.

A. It complies with the test for the freezing-point (see Tests).

B. Dissolve 0.500 g in *ethanol R* and dilute to 100.0 ml with the same solvent. Dilute 1.0 ml of this solution to 100.0 ml with *ethanol R*. Examined between 230 nm

and 300 nm (*2.2.25*), the solution shows an absorption maximum at 278 nm. The specific absorbance at the maximum is 80 to 90.

C. Examine by infrared absorption spectrophotometry (*2.2.24*), comparing with the spectrum obtained with *butylhydroxytoluene CRS*.

D. Dissolve about 10 mg in 2 ml of *alcohol R*. Add 1 ml of a 1 g/l solution of *testosterone propionate R* in *alcohol R* and 2 ml of *dilute sodium hydroxide solution R*. Heat in a water-bath at 80 °C for 10 min and allow to cool. A blue colour develops.

TESTS

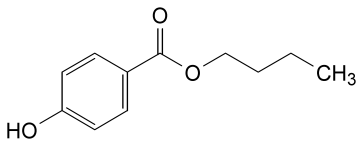
Appearance of solution. Dissolve 1.0 g in *methanol R* and dilute to 10 ml with the same solvent. The solution is clear (*2.2.1*) and not more intensely coloured than reference solution Y_5 or BY_5 (*2.2.2, Method II*).

Freezing-point (*2.2.18*): 69 °C to 70 °C.

Related substances. Examine by thin-layer chromatography (*2.2.27*), using *silica gel G R* as the coating substance.

Test solution. Dissolve 0.2 g of the substance to be examined in *methanol R* and dilute to 10.0 ml with the same solvent.

Reference solution. Dilute 1 ml of the test solution to 200 ml with *methanol R*.



Apply separately to the plate 10 µl of each solution. Develop over a path of 15 cm using *methylene chloride R*. Dry the plate in air and spray with a freshly prepared mixture of 10 volumes of *potassium ferricyanide solution R*, 20 volumes of *ferric chloride solution R1* and 70 volumes of *water R*. Any spot in the chromatogram obtained with the test solution, apart from the principal spot, is not more intense than the spot in the chromatogram obtained with the reference solution (0.5 per cent).

Sulphated ash (*2.4.14*). Not more than 0.1 per cent, determined on 1.0 g.

01/2008:0881

BUTYL PARAHYDROXYBENZOATE

Butylis parahydroxybenzoas

$C_{11}H_{14}O_3$ M_r 194.2
[94-26-8]

DEFINITION

Butyl 4-hydroxybenzoate.

Content: 98.0 per cent to 102.0 per cent.

CHARACTERS

Appearance: white or almost white, crystalline powder or colourless crystals.

Solubility: very slightly soluble in water, freely soluble in alcohol and in methanol.

IDENTIFICATION

First identification: A, B.

Second identification: A, C, D.

A. Melting point (*2.2.14*): 68 °C to 71 °C.

B. Infrared absorption spectrophotometry (*2.2.24*).

Comparison: *butyl parahydroxybenzoate CRS*.

C. Examine the chromatograms obtained in the test for related substances.

Results: the principal spot in the chromatogram obtained with test solution (b) is similar in position and size to the principal spot in the chromatogram obtained with reference solution (b).

D. To about 10 mg in a test-tube add 1 ml of *sodium carbonate solution R*, boil for 30 s and cool (solution A). To a further 10 mg in a similar test-tube add 1 ml of *sodium carbonate solution R*; the substance partly dissolves (solution B). Add at the same time to solution A and solution B 5 ml of *aminopyrazolone solution R* and 1 ml of *potassium ferricyanide solution R* and mix. Solution B is yellow to orange-brown. Solution A is orange to red, the colour being clearly more intense than any similar colour which may be obtained with solution B.

TESTS

Solution S. Dissolve 1.0 g in *alcohol R* and dilute to 10 ml with the same solvent.

Appearance of solution. Solution S is clear (*2.2.1*) and not more intensely coloured than reference solution BY_6 (*2.2.2, Method II*).

Acidity. To 2 ml of solution S add 3 ml of *alcohol R*, 5 ml of *carbon dioxide-free water R* and 0.1 ml of *bromocresol green solution R*. Not more than 0.1 ml of *0.1 M sodium hydroxide* is required to change the colour of the indicator to blue.

Related substances. Thin-layer chromatography (*2.2.27*).

Test solution (a). Dissolve 0.10 g of the substance to be examined in *acetone R* and dilute to 10 ml with the same solvent.

Test solution (b). Dilute 1 ml of test solution (a) to 10 ml with *acetone R*.

Reference solution (a). Dilute 0.5 ml of test solution (a) to 100 ml with *acetone R*.

Reference solution (b). Dissolve 10 mg of *butyl parahydroxybenzoate CRS* in *acetone R* and dilute to 10 ml with the same solvent.

Reference solution (c). Dissolve 10 mg of *propyl parahydroxybenzoate R* in 1 ml of test solution (a) and dilute to 10 ml with *acetone R*.

Plate: suitable octadecylsilyl silica gel with a fluorescent indicator having an optimal intensity at 254 nm as the coating substance.

Mobile phase: *glacial acetic acid R, water R, methanol R* (1:30:70 *V/V/V*).

Application: 2 µl.

Development: over a path of 15 cm.

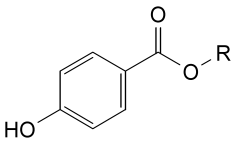
Drying: in air.

Detection: examine in ultraviolet light at 254 nm.

System suitability: the chromatogram obtained with reference solution (c) shows 2 clearly separated principal spots.

Limits:

– *any impurity*: any spot in the chromatogram obtained with test solution (a), apart from the principal spot, is not more intense than the spot in the chromatogram obtained with reference solution (a) (0.5 per cent).



Sulphated ash (*2.4.14*): maximum 0.1 per cent, determined on 1.0 g.

ASSAY

To 1.000 g add 20.0 ml of *1 M sodium hydroxide*. Heat at about 70 °C for 1 h. Cool rapidly in an ice bath. Prepare a blank in the same manner. Carry out the titration on the solutions at room temperature. Titrate the excess sodium hydroxide with *0.5 M sulphuric acid*, continuing the titration until the second point of inflexion and determining the end-point potentiometrically (*2.2.20*).

1 ml of *1 M sodium hydroxide* is equivalent to 194.2 mg of $C_{11}H_{14}O_3$.

IMPURITIES

A. R = H: 4-hydroxybenzoic acid,

B. R = CH_3: methyl 4-hydroxybenzoate,

C. R = CH_2-CH_3: ethyl 4-hydroxybenzoate,

D. R = CH_2-CH_2-CH_3: propyl 4-hydroxybenzoate.

CABERGOLINE

Cabergolinum

$C_{26}H_{37}N_5O_2$ M_r 451.6
[81409-90-7]

DEFINITION

1-Ethyl-3-[3-(dimethylamino)propyl]-3-[[(6a*R*,9*R*,10a*R*)-7-(prop-2-enyl)-4,6,6a,7,8,9,10,10a-octahydroindolo[4,3-*fg*]quinolin-9-yl]carbonyl]urea.

Content: 98.0 per cent to 102.0 per cent (anhydrous substance).

CHARACTERS

Appearance: white or almost white, crystalline powder.

Solubility: practically insoluble in water, freely soluble in ethanol (96 per cent), very slightly soluble in hexane. It is slightly soluble in 0.1 M hydrochloric acid.

It shows polymorphism (*5.9*).

IDENTIFICATION

A. Specific optical rotation (see Tests).

B. Infrared absorption spectrophotometry (*2.2.24*).

Comparison: *cabergoline CRS*.

If the spectra obtained in the solid state show differences, dissolve 50 mg of the substance to be examined and 50 mg of the reference substance separately in 1 ml of *ethanol (96 per cent) R*, evaporate to dryness and record new spectra using the residues.

TESTS

Specific optical rotation (*2.2.7*): – 77 to – 83 (anhydrous substance).

Dissolve 0.100 g in *ethanol (96 per cent) R* and dilute to 50.0 ml with the same solvent.

Related substances. Liquid chromatography (*2.2.29*). *Prepare the solutions immediately before use and protected from light.*

Test solution. Dissolve 30.0 mg of the substance to be examined in the mobile phase and dilute to 25.0 ml with the mobile phase.

Reference solution (a). Dissolve 30.0 mg of *cabergoline CRS* in the mobile phase and dilute to 25.0 ml with the mobile phase.

Reference solution (b). Dilute 1.0 ml of the test solution to 100.0 ml with the mobile phase. Dilute 10.0 ml of this solution to 50.0 ml with the mobile phase.

Reference solution (c). Suspend 50 mg of the substance to be examined in 10 ml of *0.1 M sodium hydroxide*. Stir for about 15 min. To 1 ml of the suspension add 1 ml of *0.1 M hydrochloric acid* and dilute to 10 ml with the mobile phase. Sonicate until dissolution is complete. The main degradation product obtained is impurity A.

Column:

– *size*: *l* = 0.25 m, Ø = 4.6 mm,

– *stationary phase*: *octadecylsilyl silica gel for chromatography R* (10 µm).

Mobile phase: mix 16 volumes of *acetonitrile R* and 84 volumes of a freshly prepared 6.8 g/l solution of *potassium dihydrogen phosphate R* previously adjusted to pH 2.0 with *phosphoric acid R*. Add 0.2 volumes of *triethylamine R*.

Flow rate: 1.2 ml/min.

Detection: spectrophotometer at 280 nm.

Injection: 20 µl of the test solution and reference solutions (b) and (c).

Run time: 4 times the retention time of cabergoline.

Relative retention with reference to cabergoline (retention time = about 12 min): impurity D = about 0.3; impurity B = about 0.6; impurity A = about 0.8; impurity C = about 2.9.

System suitability: reference solution (c):

– *resolution*: minimum 3.0 between the peaks due to cabergoline and impurity A.

Limits:

– *impurities A, C*: for each impurity, not more than 1.5 times the area of the principal peak in the chromatogram obtained with reference solution (b) (0.3 per cent);

– *impurities B, D*: for each impurity, not more than 0.5 times the area of the principal peak in the chromatogram obtained with reference solution (b) (0.1 per cent);

– *any other impurity*: for each impurity, not more than 0.5 times the area of the principal peak in the chromatogram obtained with reference solution (b) (0.1 per cent);

– *total*: not more than 4 times the area of the principal peak in the chromatogram obtained with reference solution (b) (0.8 per cent);

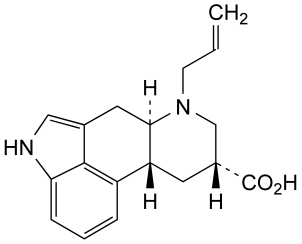
– *disregard limit*: 0.25 times the area of the principal peak in the chromatogram obtained with reference solution (b) (0.05 per cent).

Water (*2.5.12*): maximum 0.5 per cent, determined on 1.000 g.

ASSAY

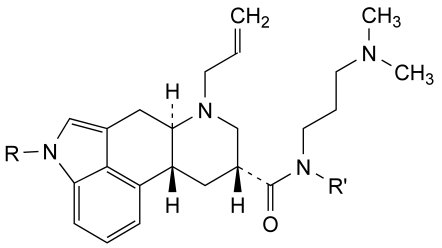
Liquid chromatography (*2.2.29*) as described in the test for related substances with the following modification.

Injection: test solution and reference solution (a).



Calculate the percentage content of $C_{26}H_{37}N_5O_2$ from the areas of the peaks and the declared content of *cabergoline CRS*.

STORAGE



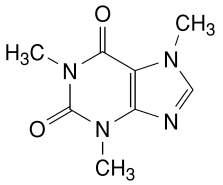
Protected from light.

IMPURITIES

Specified impurities: A, B, C, D.

A. (6a*R*,9*R*,10a*R*)-7-(prop-2-enyl)-4,6,6a,7,8,9,10,10a-octahydroindolo[4,3-*fg*]quinoline-9-carboxylic acid,

B. R = CO-NH-C_2H_5, R′ = H: (6a*R*,9*R*,10a*R*)-N^9-[3-(dimethylamino)propyl]-N^4-ethyl-7-(prop-2-enyl)-6a,7,8,9,10,10a-hexahydroindolo[4,3-*fg*]quinoline-4,9(6*H*)-dicarboxamide,



C. R = R' = CO-NH-C_2H_5: (6a*R*,9*R*,10a*R*)-N^9-[3-(dimethylamino)propyl]-N^4-ethyl-N^9-(ethylcarbamoyl)-7-(prop-2-enyl)-6a,7,8,9,10,10a-hexahydroindolo[4,3-*fg*]quinoline-4,9(6*H*)-dicarboxamide,

D. R = R′ = H: (6a*R*,9*R*,10a*R*)-*N*-[3-(dimethylamino)propyl]-7-(prop-2-enyl)-4,6,6a,7,8,9,10,10a-octahydroindolo[4,3-*fg*]quinoline-9-carboxamide.

CAFFEINE

Coffeinum

$C_8H_{10}N_4O_2$ M_r 194.2
[56-08-2]

DEFINITION

Caffeine contains not less than 98.5 per cent and not more than the equivalent of 101.5 per cent of 1,3,7-trimethyl-3,7-dihydro-1*H*-purine-2,6-dione, calculated with reference to the dried substance.

CHARACTERS

White or almost white, crystalline powder or silky crystals, sublimes readily, sparingly soluble in water, freely soluble in boiling water, slightly soluble in ethanol. It dissolves in concentrated solutions of alkali benzoates or salicylates.

IDENTIFICATION

First identification: A, B, E.

Second identification: A, C, D, E, F.

A. Melting point (*2.2.14*): 234 °C to 239 °C.

B. Examine by infrared absorption spectrophotometry (*2.2.24*), comparing with the spectrum obtained with *caffeine CRS*.

C. To 2 ml of a saturated solution add 0.05 ml of *iodinated potassium iodide solution R*. The solution remains clear. Add 0.1 ml of *dilute hydrochloric acid R*. A brown precipitate is formed. Neutralise with *dilute sodium hydroxide solution R*. The precipitate dissolves.

D. In a glass-stoppered tube, dissolve about 10 mg in 0.25 ml of a mixture of 0.5 ml of *acetylacetone R* and 5 ml of *dilute sodium hydroxide solution R*. Heat in a water-bath at 80 °C for 7 min. Cool and add 0.5 ml of *dimethylaminobenzaldehyde solution R2*. Heat again in a water-bath at 80 °C for 7 min. Allow to cool and add 10 ml of *water R*. An intense blue colour develops.

E. It complies with the test for loss on drying (see Tests).

F. It gives the reaction of xanthines (*2.3.1*).

TESTS

Solution S. Dissolve 0.5 g with heating in 50 ml of *carbon dioxide-free water R* prepared from *distilled water R*, cool and dilute to 50 ml with the same solvent.

Appearance of solution. Solution S is clear (*2.2.1*) and colourless (*2.2.2, Method II*).

Acidity. To 10 ml of solution S add 0.05 ml of *bromothymol blue solution R1*. The solution is green or yellow. Not more than 0.2 ml of *0.01 M sodium hydroxide* is required to change the colour of the indicator to blue.

Related substances. Examine by thin-layer chromatography (*2.2.27*) using *silica gel* GF_{254} *R* as the coating substance.

Test solution. Dissolve 0.2 g of the substance to be examined in a mixture of 4 volumes of *methanol R* and 6 volumes of *methylene chloride R* and dilute to 10 ml with the same mixture of solvents.

Reference solution. Dilute 0.5 ml of the test solution to 100 ml with a mixture of 4 volumes of *methanol R* and 6 volumes of *methylene chloride R*.

Apply to the plate 10 µl of each solution. Develop over a path of 15 cm using a mixture of 10 volumes of *concentrated ammonia R*, 30 volumes of *acetone R*, 30 volumes of *methylene chloride R* and 40 volumes of *butanol R*. Allow the plate to dry in air and examine in ultraviolet light at 254 nm. Any spot in the chromatogram obtained with the test solution, apart from the principal spot, is not more intense than the spot in the chromatogram obtained with the reference solution (0.5 per cent).

Sulphates (*2.4.13*). 15 ml of solution S complies with the limit test for sulphates (500 ppm). Prepare the standard using a mixture of 7.5 ml of *sulphate standard solution (10 ppm* SO_4*) R* and 7.5 ml of *distilled water R*.

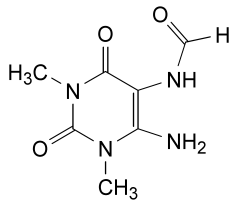
Heavy metals (*2.4.8*). 1.0 g complies with limit test C for heavy metals (20 ppm). Prepare the standard using 2 ml of *lead standard solution (10 ppm Pb) R*.

Loss on drying (*2.2.32*). Not more than 0.5 per cent, determined on 1.000 g by drying in an oven at 105 °C for 1 h.

Sulphated ash (*2.4.14*). Not more than 0.1 per cent, determined on 1.0 g.

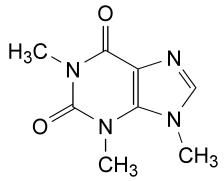
ASSAY

Dissolve 0.170 g with heating in 5 ml of *anhydrous acetic acid R*. Allow to cool, add 10 ml of *acetic anhydride R* and 20 ml of *toluene R*. Titrate with *0.1 M perchloric acid*, determining the end-point potentiometrically (*2.2.20*).



1 ml of *0.1 M perchloric acid* is equivalent to 19.42 mg of $C_8H_{10}N_4O_2$.

IMPURITIES

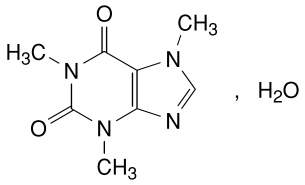


Specified impurities: A.

Other detectable impurities: B, C.

A. theophylline,

B. *N*-[6-amino-1,3-dimethyl-2,4(1*H*,3*H*)-dioxopyrimidin-5-yl]formamide,



C. 1,3,9-trimethyl-3,9-dihydro-1*H*-purine-2,6-dione (isocaffeine).

corrected 6.0

CAFFEINE MONOHYDRATE

Coffeinum monohydricum

$C_8H_{10}N_4O_2,H_2O$ M_r 212.2
[5743-12-4]

DEFINITION

Caffeine monohydrate contains not less than 98.5 per cent and not more than the equivalent of 101.5 per cent of 1,3,7-trimethyl-3,7-dihydro-1*H*-purine-2,6-dione, calculated with reference to the dried substance.

CHARACTERS

White or almost white, crystalline powder or silky crystals, sublimes readily, sparingly soluble in water, freely soluble in boiling water, slightly soluble in ethanol. It dissolves in concentrated solutions of alkali benzoates or salicylates.

IDENTIFICATION

First identification: A, B, E.

Second identification: A, C, D, E, F.

A. Melting point (*2.2.14*): 234 °C to 239 °C, determined after drying at 100-105 °C.

B. Dry the substance to be examined at 100-105 °C. Examine by infrared absorption spectrophotometry (*2.2.24*), comparing with the spectrum obtained with *caffeine CRS*.

C. To 2 ml of a saturated solution add 0.05 ml of *iodinated potassium iodide solution R*. The solution remains clear. Add 0.1 ml of *dilute hydrochloric acid R*. A brown precipitate is formed. Neutralise with *dilute sodium hydroxide solution R*. The precipitate dissolves.

D. In a glass-stoppered tube, dissolve about 10 mg in 0.25 ml of a mixture of 0.5 ml of *acetylacetone R* and 5 ml of *dilute sodium hydroxide solution R*. Heat in a water-bath at 80 °C for 7 min. Cool and add 0.5 ml of *dimethylaminobenzaldehyde solution R2*. Heat again in a water-bath at 80 °C for 7 min. Allow to cool and add 10 ml of *water R*. An intense blue colour develops.

E. It complies with the test for loss on drying (see Tests).

F. It gives the reaction of xanthines (*2.3.1*).

TESTS

Solution S. Dissolve 0.5 g with heating in 50 ml of *carbon dioxide-free water R* prepared from *distilled water R*, cool and dilute to 50 ml with the same solvent.

Appearance of solution. Solution S is clear (*2.2.1*) and colourless (*2.2.2, Method II*).

corrected 6.0

CALCIFEDIOL

Calcifediolum

$C_{27}H_{44}O_2,H_2O$ M_r 418.7
[63283-36-3]

DEFINITION

(5*Z*,7*E*)-9,10-Secocholesta-5,7,10(19)-triene-3β,25-diol monohydrate.

Content: 97.0 per cent to 102.0 per cent (anhydrous substance).

CHARACTERS

Appearance: white or almost white crystals.

Solubility: practically insoluble in water, freely soluble in ethanol (96 per cent), soluble in fatty oils.

It is sensitive to air, heat and light.

A reversible isomerisation to pre-calcifediol takes place in solution, depending on temperature and time. The activity is due to both compounds.

IDENTIFICATION

A. Infrared absorption spectrophotometry (*2.2.24*).

Preparation: mix 2 mg of the substance to be examined and 225 mg of *potassium bromide R*.

Comparison: *Ph. Eur. reference spectrum of calcifediol.*

B. Examine the chromatograms obtained in the assay.

Results: the principal peak in the chromatogram obtained with the test solution is similar in retention time and size to the principal peak in the chromatogram obtained with reference solution (a).

TESTS

Related substances. Liquid chromatography (*2.2.29*): use the normalisation procedure. *Carry out the test as rapidly as possible, avoiding exposure to actinic light and air.*

Test solution. Dissolve 1.0 mg of the substance to be examined without heating in 10.0 ml of the mobile phase.

Reference solution (a). Dissolve 1.0 mg of *calcifediol CRS* without heating in 10.0 ml of the mobile phase.

Reference solution (b). Dilute 1.0 ml of reference solution (a) to 100.0 ml with the mobile phase.

Reference solution (c). Heat 2 ml of reference solution (a) in a water-bath at 80 °C under a reflux condenser for 2 h and cool.

Column:

– *size*: *l* = 0.15 m, Ø = 4.6 mm;
– *stationary phase*: *octylsilyl silica gel for chromatography R1* (5 µm).

Mobile phase: *water R, methanol R* (200:800 *V/V*).

Flow rate: 1.5 ml/min.

Detection: spectrophotometer at 265 nm.

Injection: 50 µl of the test solution and reference solutions (b) and (c).

Run time: twice the retention time of calcifediol.

Relative retention with reference to calcifediol (retention time = about 11 min): pre-calcifediol = about 1.3.

System suitability: reference solution (c):

– *resolution*: minimum 5.0 between the peaks due to pre-calcifediol and calcifediol; if necessary, adjust the proportions of the constituents in the mobile phase.

Limits:

– *impurities A, B, C, D*: for each impurity, maximum 0.5 per cent;
– *total*: maximum 1.0 per cent;
– *disregard limit*: 0.1 times the area of the principal peak in the chromatogram obtained with reference solution (b) (0.1 per cent); disregard the peak due to pre-alfacalcidiol.

Water (*2.5.32*): 3.8 per cent to 5.0 per cent, determined on 10.0 mg.

ASSAY

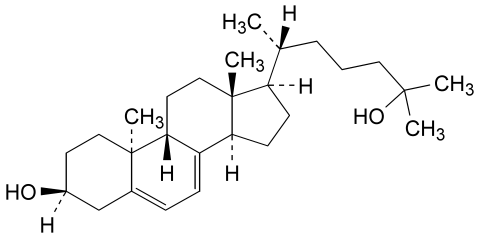
Liquid chromatography (*2.2.29*) as described in the test for related substances with the following modifications.

Injection: the test solution and reference solutions (a) and (c).

System suitability: reference solution (c):

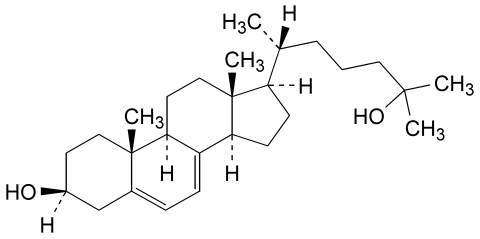
– *repeatability*: maximum relative standard deviation of 1 per cent for the peak due to calcifediol after 6 injections.

Calculate the percentage content of $C_{27}H_{44}O_2$ from the declared content of *calcifediol CRS*.



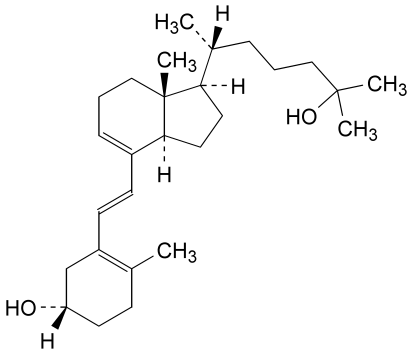
STORAGE

Under nitrogen, in an airtight container, protected from light, at a temperature of 2 °C to 8 °C.

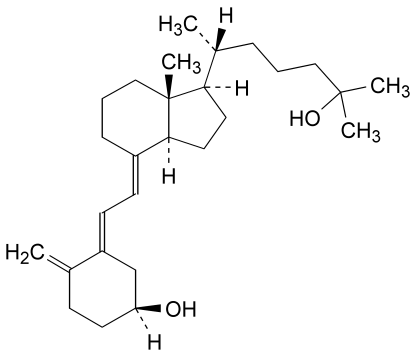


The contents of an opened container are to be used immediately.

IMPURITIES



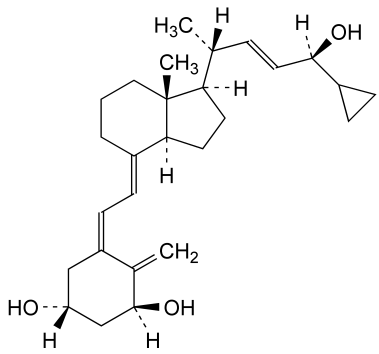
Specified impurities: *A, B, C, D.*



A. 9β,10α-cholesta-5,7-diene-3β,25-diol,

B. cholesta-5,7-diene-3β,25-diol,

C. (6*E*)-9,10-secocholesta-5(10),6,8-triene-3β,25-diol,



D. (5*E*,7*E*)-9,10-secocholesta-5,7,10(19)-triene-3β,25-diol.

01/2008:2011

CALCIPOTRIOL, ANHYDROUS

Calcipotriolum anhydricum

$C_{27}H_{40}O_3$ M_r 412.6

DEFINITION

(5*Z*,7*E*,22*E*,24*S*)-24-Cyclopropyl-9,10-secochola-5,7,10(19),22-tetraene-1α,3β,24-triol.

Content: 95.5 per cent to 102.0 per cent (dried substance).

CHARACTERS

Appearance: white or almost white, crystalline powder.

Solubility: practically insoluble in water, freely soluble in ethanol (96 per cent), slightly soluble in methylene chloride.

It is sensitive to heat and light.

A reversible isomerisation to pre-calcipotriol takes place in solution, depending on temperature and time. The activity is due to both compounds.

IDENTIFICATION

A. Infrared absorption spectrophotometry (*2.2.24*).

Comparison: *Ph. Eur. reference spectrum of anhydrous calcipotriol.*

B. Loss on drying (see Tests).

Carry out the tests for related substances and the assay as rapidly as possible and protected from actinic light and air.

TESTS

Related substances

A. Thin-layer chromatography (*2.2.27*).

Solution A. To 1 ml of *triethylamine R* add 9 ml of *chloroform R*.

Test solution. Dissolve 1 mg of the substance to be examined in 100 µl of solution A.

Reference solution (a). To 10 µl of the test solution add 990 µl of solution A.

Reference solution (b). To 250 µl of reference solution (a) add 750 µl of solution A.

Reference solution (c). To 100 µl of reference solution (a) add 900 µl of solution A.

Reference solution (d). Place 2 mg of the substance to be examined in a vial and dissolve in 200 µl of solution A. Close the vial and keep it in a water bath at 60 °C for 2 h.

Plate: *TLC silica gel F_{254} plate R.*

Mobile phase: *2-methylpropanol R, methylene chloride R* (20:80 *V/V*).

Application: 10 µl of the test solution and reference solutions (b), (c) and (d).

Development: over 2/3 of the plate.

Drying: in air, then at 140 °C for 10 min.

Detection: spray the hot plate with an *alcoholic solution of sulphuric acid R*, dry at 140 °C for not more than 1 min and examine in ultraviolet light at 366 nm.

Relative retention with reference to calcipotriol (R_F = about 0.4): impurity G = about 0.4; impurity H = about 0.4; pre-calcipotriol = about 0.9; impurity A = about 1.2.

System suitability: reference solution (d):

– the chromatogram shows a secondary spot due to pre-calcipotriol.

Limits:

– *impurity A*: any spot due to impurity A is not more intense than the spot in the chromatogram obtained with reference solution (b) (0.25 per cent),

– *impurities G, H*: any spot due to impurity G or H is not more intense than the spot in the chromatogram obtained with reference solution (b) (0.25 per cent for the sum),

– *any other impurity*: any other spot is not more intense than the spot in the chromatogram obtained with reference solution (c) (0.1 per cent).

B. Liquid chromatography (*2.2.29*).

Solution A. Dissolve 1.32 g of *ammonium phosphate R* in *water R* and dilute to 10.0 ml with the same solvent.

Solvent mixture: solution A, *water R, methanol R* (3:297:700 *V/V/V*).

Test solution (a). Dissolve 2.00 mg of the substance to be examined in the solvent mixture and dilute to 5.0 ml with the solvent mixture.

Test solution (b). Dissolve 2.00 mg of the substance to be examined in the solvent mixture and dilute to 20.0 ml with the same solvent mixture.

Reference solution (a). Dilute 1.0 ml of test solution (a) to 100.0 ml with the solvent mixture.

Reference solution (b). Dilute 1.0 ml of reference solution (a) to 10.0 ml with the solvent mixture.

Reference solution (c). Dissolve 1.0 mg of *calcipotriol monohydrate CRS* (containing impurities B, C and D) in the solvent mixture and dilute to 2.5 ml with the solvent mixture.

Reference solution (d). Dissolve 2.00 mg of *calcipotriol monohydrate CRS* in the solvent mixture and dilute to 20.0 ml with the solvent mixture.

Column:

– *size*: *l* = 0.10 m, Ø = 4.0 mm,

– *stationary phase*: *octadecylsilyl silica gel for chromatography R* (3 µm).

Mobile phase: *water R, methanol R* (30:70 *V/V*).

Flow rate: 1.0 ml/min.

Detection: spectrophotometer at 264 nm.

Injection: 20 µl of test solution (a) and reference solutions (a), (b) and (c).

Run time: twice the retention time of calcipotriol.

Relative retention with reference to calcipotriol (retention time = about 13.5 min): impurity B = about 0.86; impurity C = about 0.92; impurity D = about 1.3.

System suitability: reference solution (c):

– *peak-to-valley ratio*: minimum 1.5, where H_p = height above the baseline of the peak due to impurity C and H_v = height above the baseline of the lowest point of the curve separating this peak from the peak due to calcipotriol,

– the chromatogram obtained is similar to the chromatogram supplied with *calcipotriol monohydrate CRS*.

Limits:

– *impurity B*: not more than 0.5 times the area of the principal peak in the chromatogram obtained with reference solution (a) (0.5 per cent),

– *impurities C, D*: for each impurity, not more than the area of the principal peak in the chromatogram obtained with reference solution (a) (1.0 per cent),

– *any other impurity*: for each impurity, not more than the area of the principal peak in the chromatogram obtained with reference solution (b) (0.1 per cent),

– *total*: not more than 2.5 times the area of the principal peak in the chromatogram obtained with reference solution (a) (2.5 per cent),

– *disregard limit*: 0.5 times the area of the principal peak in the chromatogram obtained with reference solution (b) (0.05 per cent).

Loss on drying: maximum 1.0 per cent, determined on 5 mg by thermogravimetry (*2.2.34*). Heat to 105 °C at a rate of 10 °C/min and maintain at 105 °C for 60 min.

ASSAY

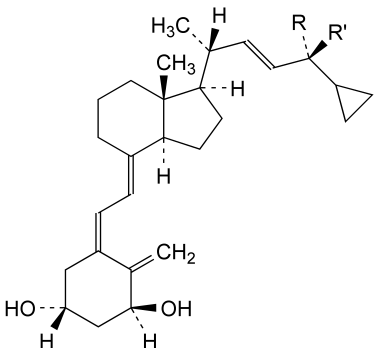
Liquid chromatography (*2.2.29*) as described in the test for related substances with the following modification.

Injection: test solution (b) and reference solution (d).

Calculate the percentage content of $C_{27}H_{40}O_3$ from the areas of the peaks and the declared content of *calcipotriol monohydrate CRS*.

STORAGE

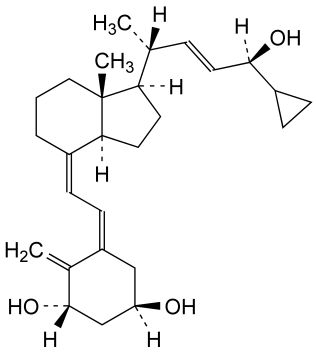
In an airtight container, protected from light at – 20 °C or below.



IMPURITIES

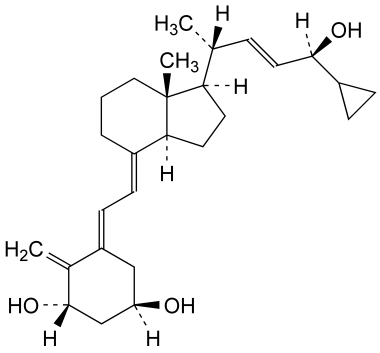
Specified impurities: A, B, C, D, G, H.

Other detectable impurities (the following substances would, if present at a sufficient level, be detected by one or other of the tests in the monograph. They are limited by the general acceptance criterion for other/unspecified impurities and/or by the general monograph *Substances for pharmaceutical use (2034)*. It is therefore not necessary to identify these impurities for demonstration of compliance. See also *5.10. Control of impurities in substances for pharmaceutical use*): *E, F, I.*

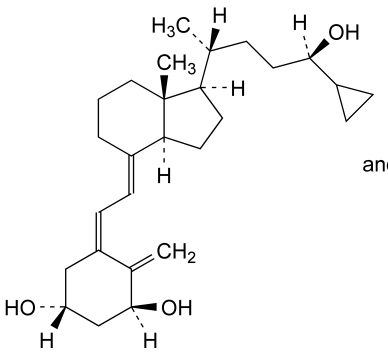


By thin-layer chromatography: A, G, H, I.

By liquid chromatography: B, C, D, E, F.

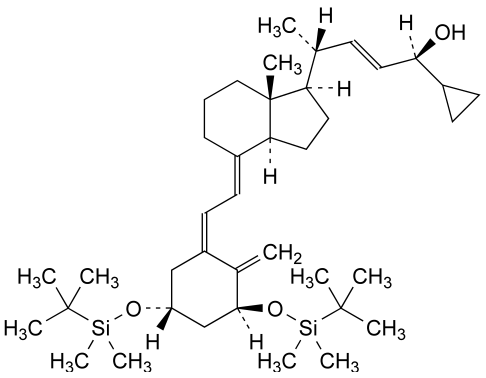


A. R + R′ = O: (5*Z*,7*E*,22*E*)-24-cyclopropyl-1α,3β-dihydroxy-9,10-secochola-5,7,10(19),22-tetraen-24-one,

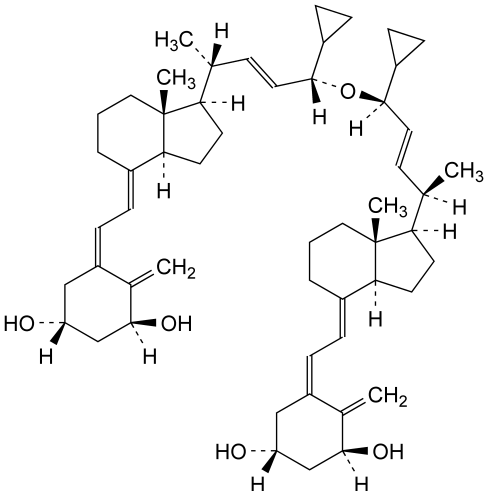


D. R = OH, R′ = H: (5*Z*,7*E*,22*E*,24*R*)-24-cyclopropyl-9,10-secochola-5,7,10(19),22-tetraene-1α,3β,24-triol (24-*epi*-calcipotriol),

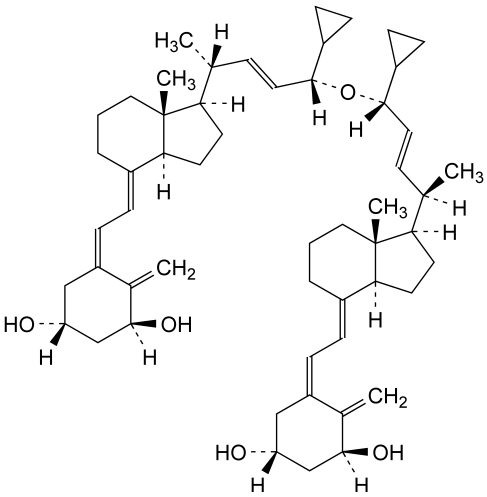
B. (5*Z*,7*Z*,22*E*,24*S*)-24-cyclopropyl-9,10-secochola-5,7,10(19),22-tetraene-1α,3β,24-triol ((7*Z*)-calcipotriol),



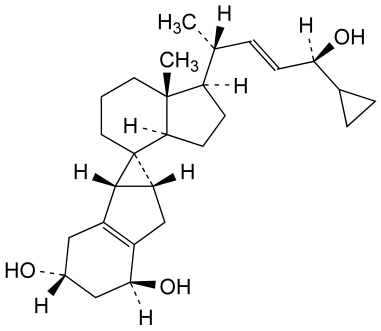
C. (5*E*,7*E*,22*E*,24*S*)-24-cyclopropyl-9,10-secochola-5,7,10(19),22-tetraene-1α,3β,24-triol ((5*E*)-calcipotriol),



and enantiomer



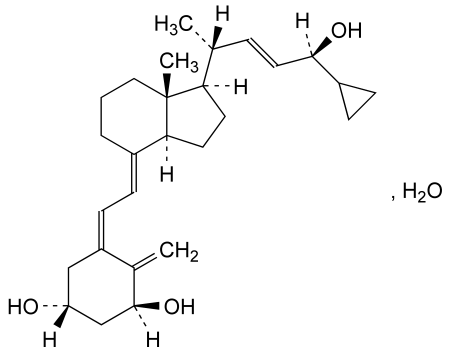
E. *rac*-(5*Z*,7*E*,22*E*,24*S*)-24-cyclopropyl-9,10-secochola-5,7,10(19)-triene-1α,3β,24-triol,



F. (5*Z*,7*E*,22*E*,24*S*)-24-cyclopropyl-1α,3β-bis[[(1,1-dimethylethyl)dimethylsilyl]oxy]-9,10-secochola-5,7,10(19),22-tetraen-24-ol,

G. 24,24′-oxybis[(5*Z*,7*E*,22*E*,24*S*)-24-cyclopropyl-9,10-secochola-5,7,10(19),22-tetraene-1α,3β-diol],

H. (5*Z*,7*E*,22*E*,24*R*)-24-cyclopropyl-24-[[(5*Z*,7*E*,22*E*,24*S*)-24-cyclopropyl-1α,3β-dihydroxy-9,10-secochola-5,7,10(19),22-tetraen-24-yl]oxy]-9,10-secochola-5,7,10(19),22-tetraene-1α,3β-diol,



I. (6*S*,7*R*,8*R*,22*E*,24*S*)-24-cyclopropyl-6,8:7,19-dicyclo-9,10-secochola-5(10),22-diene-1α,3β,24-triol (suprasterol of calcipotriol).

01/2008:2284

CALCIPOTRIOL MONOHYDRATE

Calcipotriolum monohydricum

$C_{27}H_{40}O_3,H_2O$ M_r 430.6
[147657-22-5]

DEFINITION

(5*Z*,7*E*,22*E*,24*S*)-24-Cyclopropyl-9,10-secochola-5,7,10(19),22-tetraene-1α,3β,24-triol monohydrate.

Content: 95.5 per cent to 102.0 per cent (anhydrous substance).

CHARACTERS

Appearance: white or almost white, crystalline powder.

Solubility: practically insoluble in water, freely soluble in ethanol (96 per cent), slightly soluble in methylene chloride.

It is sensitive to light.

A reversible isomerisation to pre-calcipotriol takes place in solution, depending on temperature and time. The activity is due to both compounds.

IDENTIFICATION

A. Infrared absorption spectrophotometry (*2.2.24*).

Comparison: *Ph. Eur. reference spectrum of calcipotriol monohydrate.*

B. Water (see Tests).

Carry out the tests for related substances and the assay as rapidly as possible and protected from actinic light and air.

TESTS

Related substances

A. Thin-layer chromatography (*2.2.27*).

Solution A. To 1 ml of *triethylamine R* add 9 ml of *chloroform R.*

Test solution. Dissolve 1 mg of the substance to be examined in 100 µl of solution A.

Reference solution (a). To 10 µl of the test solution add 990 µl of solution A.

Reference solution (b). To 250 µl of reference solution (a) add 750 µl of solution A.

Reference solution (c). To 100 µl of reference solution (a) add 900 µl of solution A.

Reference solution (d). Place 2 mg of the substance to be examined in a vial and dissolve in 200 µl of solution A. Close the vial and keep it in a water bath at 60 °C for 2 h.

Plate: *TLC silica gel F_{254} plate R.*

Mobile phase: *2-methylpropanol R, methylene chloride R* (20:80 *V/V*).

Application: 10 µl of the test solution and reference solutions (b), (c) and (d).

Development: over 2/3 of the plate.

Drying: in air, then at 140 °C for 10 min.

Detection: spray the hot plate with an *alcoholic solution of sulphuric acid R*, dry at 140 °C for not more than 1 min and examine in ultraviolet light at 366 nm.

Relative retention with reference to calcipotriol (R_F = about 0.4): impurity G = about 0.4; impurity H = about 0.4; pre-calcipotriol = about 0.9; impurity A = about 1.2.

System suitability: reference solution (d):

– the chromatogram shows a secondary spot due to pre-calcipotriol.

Limits:

– *impurity A*: any spot due to impurity A is not more intense than the spot in the chromatogram obtained with reference solution (b) (0.25 per cent),

– *impurities G, H*: any spot due to impurity G or H is not more intense than the spot in the chromatogram obtained with reference solution (b) (0.25 per cent for the sum),

– *any other impurity*: any other spot is not more intense than the spot in the chromatogram obtained with reference solution (c) (0.1 per cent).

B. Liquid chromatography (*2.2.29*).

Solution A. Dissolve 1.32 g of *ammonium phosphate R* in *water R* and dilute to 10.0 ml with the same solvent.

Solvent mixture: solution A, *water R, methanol R* (3:297:700 *V/V/V*).

Test solution (a). Dissolve 2.00 mg of the substance to be examined in the solvent mixture and dilute to 5.0 ml with the solvent mixture.

Test solution (b). Dissolve 2.00 mg of the substance to be examined in the solvent mixture and dilute to 20.0 ml with the same solvent mixture.

Reference solution (a). Dilute 1.0 ml of test solution (a) to 100.0 ml with the solvent mixture.

Reference solution (b). Dilute 1.0 ml of reference solution (a) to 10.0 ml with the solvent mixture.

Reference solution (c). Dissolve 1.0 mg of *calcipotriol monohydrate CRS* (containing impurities B, C and D) in the solvent mixture and dilute to 2.5 ml with the solvent mixture.

Reference solution (d). Dissolve 2.00 mg of *calcipotriol monohydrate CRS* in the solvent mixture and dilute to 20.0 ml with the solvent mixture.

Column:

01/2008:0471

CALCITONIN (SALMON)

Calcitoninum salmonis

$C_{145}H_{240}N_{44}O_{48}S_2$ M_r 3432

DEFINITION

Polypeptide having the structure determined for salmon calcitonin I. It lowers the calcium concentration in plasma of mammals by diminishing the rate of bone resorption. It is obtained by chemical synthesis or by a method based on recombinant DNA (rDNA) technology. It is available as an acetate.

Content: 90.0 per cent to 105.0 per cent of the peptide $C_{145}H_{240}N_{44}O_{48}S_2$ (anhydrous and acetic acid-free substance).

By convention, for the purpose of labelling calcitonin (salmon) preparations, 1 mg of calcitonin (salmon) ($C_{145}H_{240}N_{44}O_{48}S_2$) is equivalent to 6000 IU of biological activity.

PRODUCTION

The following requirements apply only to calcitonin (salmon) produced by a method based on rDNA technology.

Prior to release the following tests are carried out on each batch of final bulk product unless exemption has been granted by the competent authority.

Host-cell-derived proteins. The limit is approved by the competent authority.

Host-cell or vector-derived DNA. The limit is approved by the competent authority.

CHARACTERS

Appearance: white or almost white powder.

Solubility: freely soluble in water.

IDENTIFICATION

A. Examine the chromatograms obtained in the assay.

Results: the principal peak in the chromatogram obtained with the test solution is similar in retention time and size to the principal peak in the chromatogram obtained with the reference solution.

The following requirement applies only to calcitonin (salmon) obtained by chemical synthesis.

B. Amino acid analysis (*2.2.56*).

Express the content of each amino acid in moles. Calculate the relative proportions of the amino acids taking as equivalent to 1 the sum, divided by 20, of the number of moles of aspartic acid, glutamic acid, proline, glycine, valine, leucine, histidine, arginine and lysine. The values fall within the following limits: aspartic acid: 1.8 to 2.2; glutamic acid: 2.7 to 3.3; proline: 1.7 to 2.3; glycine: 2.7 to 3.3; valine: 0.9 to 1.1; leucine: 4.5 to 5.3; histidine: 0.9 to 1.1; arginine: 0.9 to 1.1; lysine: 1.8 to 2.2; serine: 3.2 to 4.2; threonine: 4.2 to 5.2; tyrosine: 0.7 to 1.1; half-cystine: 1.4 to 2.1.

The following requirement applies only to calcitonin (salmon) produced by a method based on rDNA technology.

C. Peptide mapping (*2.2.55*).

SELECTIVE CLEAVAGE OF THE PEPTIDE BONDS

Test solution. Prepare a 1 mg/ml solution of the substance to be examined. Transfer 1.0 ml to a clean tube. Add 100 µl of *1 M tris-hydrochloride buffer solution pH 8.0 R* and 20 µl of a freshly prepared 1.0 mg/ml solution of *trypsin for peptide mapping R*. Allow to stand at 2-8 °C for 16-20 h. Stop the reaction by adding 10 µl of a 50 per cent *V/V* solution of *trifluoroacetic acid R*. Cap the vial and mix. Centrifuge the vials to remove air bubbles.

Reference solution. Prepare at the same time and in the same manner as for the test solution but using *calcitonin (salmon) CRS* instead of the substance to be examined.

CHROMATOGRAPHIC SEPARATION. Liquid chromatography (*2.2.29*).

Column:

– *size*: *l* = 0.25 m, Ø = 4.6 mm;
– *stationary phase*: *octadecylsilyl silica gel for chromatography R* (5 µm) with a pore size of 30 nm.

Mobile phase:

– *mobile phase A*: mix 1 ml of *trifluoroacetic acid R* and 1000 ml of *water R*; filter and degas;
– *mobile phase B*: mix 0.850 ml of *trifluoroacetic acid R*, 200 ml of *water R* and 800 ml of *acetonitrile for chromatography R*; filter and degas;

Time (min)	Mobile phase A (per cent *V/V*)	Mobile phase B (per cent *V/V*)
0 - 50	100 → 65	0 → 35
50 - 60	65 → 40	35 → 60
60 - 60.1	40 → 0	60 → 100
60.1 - 65.1	0	100
65.1 - 65.2	0 → 100	100 → 0
65.2 - 80.2	100	0

Flow rate: 1.2 ml/min.

Detection: spectrophotometer at 214 nm.

Equilibration: at initial conditions for at least 15 min. Carry out a blank run using the above-mentioned gradient.

Injection: 20 µl.

System suitability: the chromatograms obtained with the test solution and the reference solution are qualitatively similar to the chromatogram of calcitonin (salmon) digest supplied with *calcitonin (salmon) CRS*.

Results: the profile of the chromatogram obtained with the test solution corresponds to that of the chromatogram obtained with the reference solution: the retention times of the fragment peaks in the chromatogram obtained with the test solution are within 5 per cent of the retention times of the fragments obtained with the reference solution; the peak area ratios of the fragment peaks in the chromatogram obtained with the test solution, normalised to the area of peak T_2, are within 5 per cent of the corresponding peak ratios in the chromatogram obtained with the reference solution.

TESTS

Acetic acid (*2.5.34*): 4.0 per cent to 15.0 per cent.

Test solution. Dissolve 10.0 mg of the substance to be examined in a mixture of 5 volumes of mobile phase B and 95 volumes of mobile phase A and dilute to 10.0 ml with the same mixture of mobile phases.

Related substances. Liquid chromatography (*2.2.29*): use the normalisation procedure.

The following requirement applies to calcitonin (salmon), whether obtained by chemical synthesis or by a method based on rDNA technology.

A. *Test solution.* Prepare a 1.0 mg/ml solution of the substance to be examined in mobile phase A.

Reference solution. Dissolve the contents of a vial of *calcitonin (salmon) CRS* in mobile phase A to obtain a concentration of 1.0 mg/ml.

Resolution solution. Dissolve the contents of a vial of *N-acetyl-Cys[1]-calcitonin CRS* in 400 µl of mobile phase A and add 100 µl of the test solution.

Column:

– *size*: *l* = 0.25 m, Ø = 4.6 mm;
– *stationary phase*: *octadecylsilyl silica gel for chromatography R* (5 µm);
– *temperature*: 65 °C.

Mobile phase:

– *mobile phase A*: dissolve 3.26 g of *tetramethylammonium hydroxide R* in 900 ml of *water R*, adjust to pH 2.5 with *phosphoric acid R* and mix with 100 ml of *acetonitrile for chromatography R*; filter and degas;
– *mobile phase B*: dissolve 1.45 g of *tetramethylammonium hydroxide R* in 400 ml of *water R*, adjust to pH 2.5 with *phosphoric acid R* and mix with 600 ml of *acetonitrile for chromatography R*; filter and degas;

Time (min)	Mobile phase A (per cent *V/V*)	Mobile phase B (per cent *V/V*)
0 - 30	72 → 48	28 → 52
30 - 32	48 → 72	52 → 28
32 - 55	72	28

Flow rate: 1.0 ml/min.

Detection: spectrophotometer at 220 nm.

Injection: 20 µl.

Relative retention with reference to calcitonin (salmon) (retention time = about 20 min): impurity B = about 0.8; impurity C = about 0.9; impurity D = about 1.05; impurity A = about 1.15.

System suitability: resolution solution:

– *resolution*: minimum 5.0 between the peaks due to calcitonin (salmon) and impurity A,

– *symmetry factor*: maximum 2.5 for the peak due to impurity A .

Limits:

– *impurities A, B, C, D*: for each impurity, maximum 3.0 per cent; other unidentified, specified impurities may occur that co-elute with impurities A, B, C and D; the acceptance criterion applies irrespective of whether these impurities co-elute;

– *total*: maximum 5.0 per cent;

– *disregard limit*: 0.1 per cent.

The following requirement applies only to calcitonin (salmon) produced by a method based on rDNA technology.

B. *Test solution*. Prepare a 0.5 mg/ml solution of the substance to be examined. To 1.0 ml of this solution add 100 µl of *0.25 M citrate buffer solution pH 3.0 R*.

Resolution solution. Prepare a 1 mg/ml solution of the substance to be examined. Mix 1 volume of the solution and 1 volume of *calcitonin-Gly CRS*. To 1.0 ml of this mixture add 100 µl of *0.25 M citrate buffer solution pH 3.0 R*.

Column:

– *size*: *l* = 0.20 m, Ø = 4.6 mm;

– *stationary phase*: a suitable polysulphoethylaspartamide ion-exchange gel (5 µm).

Mobile phase:

– *mobile phase A*: mix 15 volumes of *acetonitrile for chromatography R* and 85 volumes of a 2.72 g/l solution of *potassium dihydrogen phosphate R* adjusted to pH 5.0 with a 600 g/l solution of *potassium hydroxide R*;

– *mobile phase B*: mix 15 volumes of *acetonitrile for chromatography R* and 85 volumes of a solution containing 2.72 g/l of *potassium dihydrogen phosphate R* and 29.22 g/l of *sodium chloride R* adjusted to pH 4.6 with a 600 g/l solution of *potassium hydroxide R*;

Time (min)	Mobile phase A (per cent *V/V*)	Mobile phase B (per cent *V/V*)
0 - 10	100 → 0	0 → 100
10 - 15	0	100
15 - 15.1	0 → 100	100 → 0
15.1 - 22.1	100	0

Flow rate: 1.2 ml/min.

Detection: spectrophotometer at 220 nm.

Injection: 50 µl; rinse the injector with a 40 per cent *V/V* solution of *acetonitrile for chromatography R*.

Relative retention with reference to calcitonin (salmon) (retention time = about 9 min): impurity G = about 0.4; impurity F = about 0.6; impurity E = about 0.9.

System suitability: resolution solution:

– *resolution*: minimum 3.0 between the peaks due to impurity E and calcitonin (salmon).

Limits:

– *impurity E*: maximum 0.6 per cent;

– *impurities F, G*: for each impurity, maximum 0.2 per cent.

Water (*2.5.32*): maximum 10.0 per cent.

Acetic acid and water: maximum 20 per cent, calculated by adding together the percentage contents of acetic acid and water determined by the methods described above.

Bacterial endotoxins (*2.6.14*): less than 25 IU/mg, if intended for use in the manufacture of parenteral dosage forms without a further appropriate procedure for the removal of bacterial endotoxins.

ASSAY

Liquid chromatography (*2.2.29*) as described in the test for related substances. Use method A for calcitonin (salmon) obtained by chemical synthesis and method B for calcitonin (salmon) obtained by a method based on rDNA technology.

Calculate the content of calcitonin (salmon) ($C_{145}H_{240}N_{44}O_{48}S_2$) from the area of the principal peak in each of the chromatograms obtained with the test solution and the reference solution and the declared content of $C_{145}H_{240}N_{44}O_{48}S_2$ in *calcitonin (salmon) CRS*. Proceed with tangential integration of the peak areas.

STORAGE

Protected from light at a temperature between 2 °C and 8 °C. If the substance is sterile, store in a sterile, airtight, tamper-proof container.

LABELLING

The label states:

– the calcitonin peptide content ($C_{145}H_{240}N_{44}O_{48}S_2$);

– the origin: synthetic or rDNA technology.

IMPURITIES

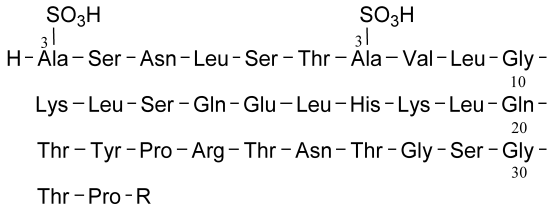
Specified impurities: A, B, C, D, E, F, G.

R1-Cys-Ser-Asn-Leu-Ser-Thr-Cys-Val-X-Gly-Lys-Leu-Ser-Gln-Glu-Leu-His-Lys-Leu-Gln-Thr-Tyr-Pro-Arg-Thr-Asn-Thr-Gly-Ser-Gly-Thr-Pro-R2

(Cys … Cys: 1 – 10; Gly: 10; Gln: 20; Gly: 30)

A. R1 = CO-CH_3, R2 = NH_2, X = L-Leu: acetylcalcitonin (salmon),

B. R1 = H, R2 = NH_2, X = D-Leu: [9-D-leucine]calcitonin (salmon),



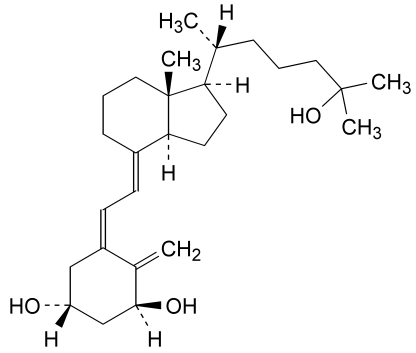
E. R1 = H, R2 = NH-CH_2-CO_2H, X = L-Leu: salmon calcitoninylglycine,

H-Cys-Ser-Asn-Leu-Ser-Thr-Cys-Val-Leu-Gly-Lys-Leu-Ser-Gln-Glu-Leu-His-Lys-Leu-Gln-Thr-Pro-Arg-Thr-Asn-Thr-Gly-Ser-Gly-Thr-Pro-NH_2

(Cys … Cys: 1 – 10; Gly: 10; Gln: 20; Thr: 30)

C. des-22-tyrosine-calcitonin (salmon),

D. *O*-acetylated calcitonin (salmon),



F. R = NH_2: [1,7-bis(3-sulpho-L-alanine)]calcitonin (salmon),

G. R = $NH\text{-}CH_2\text{-}CO_2H$: [1,7-bis(3-sulpho-L-alanine)]calcitoninylglycine (salmon).

corrected 6.0

CALCITRIOL

Calcitriolum

$C_{27}H_{44}O_3$ M_r 416.6
[32222-06-3]

DEFINITION

(5*Z*,7*E*)-9,10-Secocholesta-5,7,10(19)-triene-1α,3β,25-triol.

Content: 97.0 per cent to 103.0 per cent.

CHARACTERS

Appearance: white or almost white crystals.

Solubility: practically insoluble in water, freely soluble in ethanol (96 per cent), soluble in fatty oils.

It is sensitive to air, heat and light.

A reversible isomerisation to pre-calcitriol takes place in solution, depending on temperature and time. The activity is due to both compounds.

IDENTIFICATION

A. Infrared absorption spectrophotometry (*2.2.24*).

Comparison: *Ph. Eur. reference spectrum of calcitriol.*

B. Examine the chromatograms obtained in the assay.

Results: the principal peak in the chromatogram obtained with the test solution is similar in retention time and size to the principal peak in the chromatogram obtained with reference solution (a).

TESTS

Related substances. Liquid chromatography (*2.2.29*): use the normalisation procedure. *Carry out the test as rapidly as possible, avoiding exposure to actinic light and air.*

Test solution. Dissolve 1.000 mg of the substance to be examined without heating in 10.0 ml of the mobile phase.

Reference solution (a). Dissolve 1.000 mg of *calcitriol CRS* without heating in 10.0 ml of the mobile phase.

Reference solution (b). Dilute 1.0 ml of reference solution (a) to 100.0 ml with the mobile phase.

Reference solution (c). Heat 2 ml of reference solution (a) at 80 °C for 30 min.

Column:

– *size*: *l* = 0.25 m, Ø = 4.6 mm;
– *stationary phase*: *octylsilyl silica gel for chromatography R1* (5 μm);
– *temperature*: 40 °C.

Mobile phase: mix 450 volumes of a 1.0 g/l solution of *tris(hydroxymethyl)aminomethane R* adjusted to pH 7.0-7.5 with *phosphoric acid R*, and 550 volumes of *acetonitrile R*.

Flow rate: 1.0 ml/min.

Detection: spectrophotometer at 230 nm.

Injection: 50 μl.

Run time: twice the retention time of calcitriol.

Relative retention with reference to calcitriol (retention time = about 14 min): pre-calcitriol = about 0.9.

System suitability:

– *resolution*: minimum 3.5 between the peaks due to calcitriol and pre-calcitriol in the chromatogram obtained with reference solution (c);
– *number of theoretical plates*: minimum 10 0000, calculated for the peak due to calcitriol in the chromatogram obtained with reference solution (a).

Limits:

– *impurities A, B, C*: for each impurity, maximum 0.5 per cent;
– *total*: maximum 1.0 per cent;
– *disregard limit*: 0.1 times the area of the principal peak in the chromatogram obtained with reference solution (b) (0.1 per cent); disregard the peak due to pre-calcitriol.

ASSAY

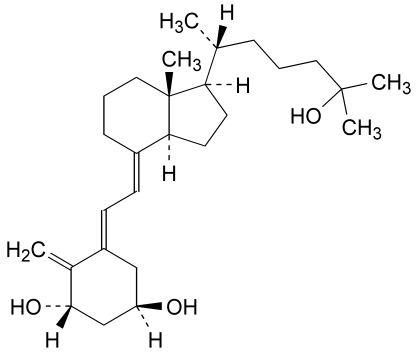
Liquid chromatography (*2.2.29*) as described in the test for related substances with the following modifications.

Injection: the test solution and reference solution (a).

System suitability: reference solution (a):

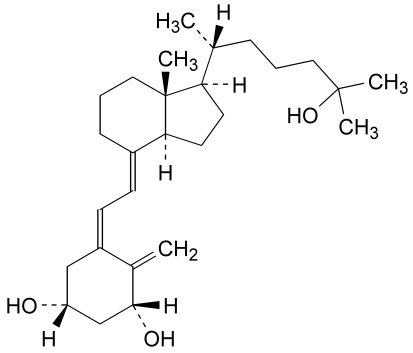
– *repeatability*: maximum relative standard deviation of 1 per cent for the peak due to calcitriol after 6 injections.

Calculate the percentage content of $C_{27}H_{44}O_3$ from the declared content of *calcitriol CRS*.



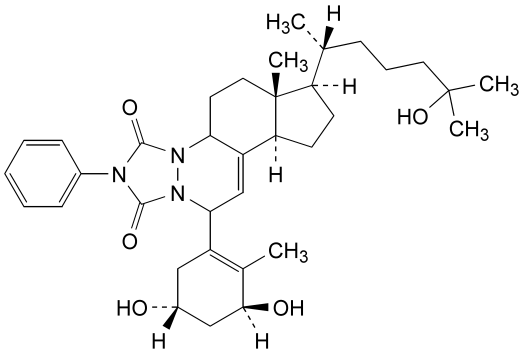
STORAGE

Under nitrogen, in an airtight container, protected from light, at a temperature of 2 °C to 8 °C.



The contents of an opened container are to be used immediately.

IMPURITIES



Specified impurities: *A, B, C.*

A. (5*E*,7*E*)-9,10-secocholesta-5,7,10(19)-triene-1α,3β,25-triol (*trans*-calcitriol),

B. (5*Z*,7*E*)-9,10-secocholesta-5,7,10(19)-triene-1β,3β,25-triol (1β-calcitriol),

C. (6a*R*,7*R*,9a*R*)-11-[(3*S*,5*R*)-3,5-dihydroxy-2-methylcyclohex-1-enyl]-7-[(1*R*)-5-hydroxy-1,5-dimethylhexyl]-6a-methyl-2-phenyl-5,6,6a,7,8,9,9a,11-octahydro-1*H*,4a*H*-cyclopenta[*f*]1,2,4]triazolo[1,2-*a*]cinnoline-1,3(2*H*)-dione (triazoline adduct of pre-calcitriol).

corrected 6.0

CALCIUM ACETATE

Calcii acetas

$C_4H_6CaO_4$ M_r 158.2

DEFINITION

Calcium diacetate.

Content: 98.0 per cent to 102.0 per cent (anhydrous substance).

CHARACTERS

Appearance: white or almost white, hygroscopic powder.

Solubility: freely soluble in water, slightly soluble in ethanol (96 per cent).

IDENTIFICATION

A. It gives reaction (b) of calcium (*2.3.1*).

B. It gives reaction (b) of acetates (*2.3.1*).

TESTS

pH (*2.2.3*): 7.2 to 8.2.

Dissolve 0.50 g in 10.0 ml of *carbon dioxide-free water R*.

Readily oxidisable substances. Dissolve 2.0 g in boiling *water R* and dilute to 100 ml with boiling *water R*, add a few glass beads, 6 ml of *5 M sulphuric acid* and 0.3 ml of *0.02 M potassium permanganate*, mix, boil gently for 5 min and allow the precipitate to settle. The pink colour in the supernatant is not completely discharged.

Chlorides (*2.4.4*): maximum 330 ppm.

Dissolve 0.15 g in *water R* and dilute to 15 ml with the same solvent.

Nitrates. Dissolve 1.0 g in *water R* and dilute to 10 ml with the same solvent. Add 5 mg of *sodium chloride R*, 0.05 ml of *indigo carmine solution R* and add with stirring, 10 ml of *nitrogen-free sulphuric acid R*. The blue colour remains for at least 10 min.

Sulphates (*2.4.13*): maximum 600 ppm.

Dissolve 0.25 g in *distilled water R* and dilute to 15 ml with the same solvent.

Aluminium (*2.4.17*): maximum 1 ppm.

Test solution. Dissolve 4.0 g of the substance to be examined in 100 ml of *water R* and add 10 ml of *acetate buffer solution pH 6.0 R*.

Reference solution. Mix 2 ml of *aluminium standard solution (2 ppm Al) R*, 10 ml of *acetate buffer solution pH 6.0 R* and 98 ml of *water R*.

Blank solution. Mix 10 ml of *acetate buffer solution pH 6.0 R* and 100 ml of *water R*.

Arsenic (*2.4.2*): maximum 2 ppm.

0.5 g complies with limit test A.

Barium: maximum 50.0 ppm.

Atomic emission spectrometry (*2.2.22, Method II*).

Test solution. Dissolve 5.00 g of the substance to be examined in *water R* and dilute to 100.0 ml with the same solvent.

Reference solutions. Prepare the reference solutions using *barium standard solution (0.1 per cent Ba) R*, diluted as necessary with *water R*.

Wavelength: 455.4 nm.

Magnesium: maximum 5.00 × 10^2 ppm.

Atomic absorption spectrometry (*2.2.23, Method II*).

Test solution. Dissolve 50.0 mg of the substance to be examined in *water R* and dilute to 100.0 ml with the same solvent.

Reference solutions. Prepare the reference solutions using *magnesium standard solution (0.1 per cent Mg) R*, diluted as necessary with *water R*.

Source: magnesium hollow-cathode lamp.

Wavelength: 285.2 nm.

Atomisation device: air-acetylene flame.

Potassium: maximum 0.10 per cent.

Atomic emission spectrometry (*2.2.22, Method II*).

Test solution. Dissolve 1.00 g of the substance to be examined in *water R* and dilute to 25.0 ml with the same solvent.

Reference solutions. Prepare the reference solutions using *potassium standard solution (0.2 per cent K) R*, diluted as necessary with *water R*.

Wavelength: 766.7 nm.

Sodium: maximum 0.50 per cent.

Atomic emission spectrometry (*2.2.22, Method II*).

Test solution. Dissolve 1.00 g of the substance to be examined in *water R* and dilute to 100.0 ml with the same solvent.

Reference solutions. Prepare the reference solutions using *sodium standard solution (200 ppm Na) R*, diluted as necessary with *water R*.

Wavelength: 589.0 nm.

Strontium: maximum 5.00×10^2 ppm.

Atomic emission spectrometry (*2.2.22, Method II*).

Test solution. Dissolve 2.00 g of the substance to be examined in *water R* and dilute to 100.0 ml with the same solvent.

Reference solutions. Prepare the reference solutions using *strontium standard solution (1.0 per cent Sr) R*, diluted as necessary with *water R*.

Wavelength: 460.7 nm.

Heavy metals (*2.4.8*): maximum 20 ppm.

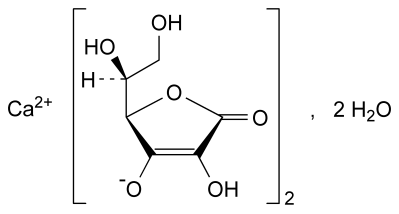
Dissolve 2.0 g in *water R* and dilute to 20 ml with the same solvent. 12 ml of the solution complies with limit test A. Prepare the reference solution using *lead standard solution (2 ppm Pb) R*.

Water (*2.5.12*): maximum 7.0 per cent, determined on 0.100 g. Add 2 ml of *anhydrous acetic acid R* to the titration vessel in addition to the methanol. Clean the titration vessel after each determination.

ASSAY

Dissolve 0.150 g in 15 ml of *water R*, add 5 ml of *diethylamine R*. Titrate with *0.1 M sodium edetate*, determining the end-point using *methylthymol blue mixture R*.

1 ml of *0.1 M sodium edetate* is equivalent to 15.82 mg of $C_4H_6CaO_4$.



STORAGE

In an airtight container.

01/2008:1182
corrected 6.0

CALCIUM ASCORBATE

Calcii ascorbas

$C_{12}H_{14}CaO_{12},2H_2O$ M_r 426.3
[5743-28-2]

DEFINITION

Calcium di[(*R*)-2-[(*S*)-1,2-dihydroxyethyl]-4-hydroxy-5-oxo-2*H*-furan-3-olate] dihydrate.

Content: 99.0 per cent to 100.5 per cent of $C_{12}H_{14}CaO_{12},2H_2O$.

CHARACTERS

Appearance: white or slightly yellowish, crystalline powder.

Solubility: freely soluble in water, practically insoluble in ethanol (96 per cent).

IDENTIFICATION

First identification: A, B, E.

Second identification: A, C, D, E.

A. Specific optical rotation (see Tests).

B. Infrared absorption spectrophotometry (*2.2.24*).
Comparison: *Ph. Eur. reference spectrum of calcium ascorbate.*

C. Dilute 1 ml of solution S (see Tests) to 10 ml with *water R*. To 2 ml of the solution add 0.2 ml of a 100 g/l solution of *ferrous sulphate R*. A deep violet colour develops.

D. To 1 ml of solution S add 0.2 ml of *dilute nitric acid R* and 0.2 ml of *silver nitrate solution R2*. A grey precipitate is formed.

E. The substance gives reaction (b) of calcium (*2.3.1*).

TESTS

Solution S. Dissolve 5.00 g in *carbon dioxide-free water R* and dilute to 50.0 ml with the same solvent.

Appearance of solution. Solution S is clear (*2.2.1*) and not more intensely coloured than reference solution Y_6 (*2.2.2, Method II*). Examine the colour of the solution immediately after preparation of the solution.

pH (*2.2.3*): 6.8 to 7.4 for solution S.

Specific optical rotation (*2.2.7*): + 95 to + 97 (dried substance), determined using freshly prepared solution S.

Related substances. The thresholds indicated under Related substances (Table 2034.-1) in the general monograph *Substances for pharmaceutical use (2034)* do not apply.

Fluorides: maximum 10.0 ppm.

Potentiometry (*2.2.36, Method I*).

Test solution. In a 50 ml volumetric flask, dissolve 1.000 g in a 10.3 g/l solution of *hydrochloric acid R*, add 5.0 ml of *fluoride standard solution (1 ppm F) R* and dilute to 50.0 ml with a 10.3 g/l solution of *hydrochloric acid R*. To 20.0 ml of the solution add 20.0 ml of *total-ionic-strength-adjustment buffer R* and 3 ml of an 82 g/l solution of *anhydrous sodium acetate R*. Adjust to pH 5.2 with *ammonia R* and dilute to 50.0 ml with *distilled water R*.

Reference solutions. To 0.25 ml, 0.5 ml, 1.0 ml, 2.0 ml and 5.0 ml of *fluoride standard solution (10 ppm F) R* add 20.0 ml of *total-ionic-strength-adjustment buffer R* and dilute to 50.0 ml with *distilled water R*.

Indicator electrode: fluoride selective.

Reference electrode: silver-silver chloride.

Take into account the addition of fluoride to the test solution for the calculation.

Copper: maximum 5.0 ppm.

Atomic absorption spectrometry (*2.2.23, Method I*).

Test solution. Dissolve 2.0 g in a 9.7 g/l solution of *nitric acid R* and dilute to 25.0 ml with the same acid solution.

Reference solutions. Prepare the reference solutions using *copper standard solution (10 ppm Cu) R*, diluting with a 9.7 g/l solution of *nitric acid R*.

Source: copper hollow-cathode lamp.

Wavelength: 324.8 nm.

Atomisation device: air-acetylene flame.

Iron: maximum 2.0 ppm.

Atomic absorption spectrometry (*2.2.23, Method I*).

Test solution. Dissolve 5.0 g in a 9.7 g/l solution of *nitric acid R* and dilute to 25.0 ml with the same acid solution.

Reference solutions. Prepare the reference solutions using *iron standard solution (10 ppm Fe) R*, diluting with a 9.7 g/l solution of *nitric acid R*.

Source: iron hollow-cathode lamp.

Wavelength: 248.3 nm.

Atomisation device: air-acetylene flame.

Heavy metals (*2.4.8*): maximum 10 ppm.

2.0 g complies with test D. Prepare the reference solution using 2.0 ml of *lead standard solution (10 ppm Pb) R*.

Loss on drying (*2.2.32*): maximum 0.1 per cent, determined on 1.000 g by drying in an oven at 105 °C for 2 h.

ASSAY

Dissolve 80.0 mg in a mixture of 10 ml of *dilute sulphuric acid R* and 80 ml of *carbon dioxide-free water R*. Add 1 ml of *starch solution R*. Titrate with *0.05 M iodine* until a persistent violet-blue colour is obtained.

1 ml of *0.05 M iodine* is equivalent to 10.66 mg of $C_{12}H_{14}CaO_{12},2H_2O$.

STORAGE

In a non-metallic container, protected from light.

01/2008:0014
corrected 6.0

CALCIUM CARBONATE

Calcii carbonas

$CaCO_3$ M_r 100.1
[471-34-1]

DEFINITION

Content: 98.5 per cent to 100.5 per cent (dried substance).

CHARACTERS

Appearance: white or almost white powder.

Solubility: practically insoluble in water.

IDENTIFICATION

A. It gives the reaction of carbonates (*2.3.1*).

B. 0.2 ml of solution S (see Tests) gives the reactions of calcium (*2.3.1*).

TESTS

Solution S. Dissolve 5.0 g in 80 ml of *dilute acetic acid R*. When the effervescence ceases, boil for 2 min. Allow to cool, dilute to 100 ml with *dilute acetic acid R* and filter, if necessary, through a sintered-glass filter (*2.1.2*).

Substances insoluble in acetic acid: maximum 0.2 per cent.

Wash any residue obtained during the preparation of solution S with 4 quantities, each of 5 ml, of hot *water R* and dry at 100-105 °C for 1 h. The residue weighs a maximum of 10 mg.

Chlorides (*2.4.4*): maximum 330 ppm.

Dilute 3 ml of solution S to 15 ml with *water R*.

Sulphates (*2.4.13*): maximum 0.25 per cent.

Dilute 1.2 ml of solution S to 15 ml with *distilled water R*.

Arsenic (*2.4.2, Method A*): maximum 4 ppm, determined on 5 ml of solution S.

Barium. To 10 ml of solution S add 10 ml of *calcium sulphate solution R*. After at least 15 min, any opalescence in the solution is not more intense than that in a mixture of 10 ml of solution S and 10 ml of *distilled water R*.

Iron (*2.4.9*): maximum 200 ppm.

Dissolve 50 mg in 5 ml of *dilute hydrochloric acid R* and dilute to 10 ml with *water R*.

Magnesium and alkali metals: maximum 1.5 per cent.

Dissolve 1.0 g in 12 ml of *dilute hydrochloric acid R*. Boil the solution for about 2 min and add 20 ml of *water R*, 1 g of *ammonium chloride R* and 0.1 ml of *methyl red solution R*. Add *dilute ammonia R1* until the colour of the indicator changes and then 2 ml in excess. Heat to boiling and add 50 ml of hot *ammonium oxalate solution R*. Allow to stand for 4 h, dilute to 100 ml with *water R* and filter through a suitable filter. To 50 ml of the filtrate add 0.25 ml of *sulphuric acid R*. Evaporate to dryness on a water-bath and ignite to constant mass at 600 ± 50 °C. The residue weighs a maximum of 7.5 mg.

Heavy metals (*2.4.8*): maximum 20 ppm.

12 ml of solution S complies with test A. Prepare the reference solution using *lead standard solution (1 ppm Pb) R*.

Loss on drying (*2.2.32*): maximum 2.0 per cent, determined on 1.000 g by drying in an oven at 200 ± 10 °C.

ASSAY

Dissolve 0.150 g in a mixture of 3 ml of *dilute hydrochloric acid R* and 20 ml of *water R*. Boil for 2 min, allow to cool and dilute to 50 ml with *water R*. Carry out the complexometric titration of calcium (*2.5.11*).

1 ml of *0.1 M sodium edetate* is equivalent to 10.01 mg of $CaCO_3$.

01/2008:0015
corrected 6.0

CALCIUM CHLORIDE DIHYDRATE

Calcii chloridum dihydricum

$CaCl_2,2H_2O$ M_r 147.0
[10035-04-8]

DEFINITION

Content: 97.0 per cent to 103.0 per cent of $CaCl_2,2H_2O$.

CHARACTERS

Appearance: white or almost white, crystalline powder, hygroscopic.

Solubility: freely soluble in water, soluble in ethanol (96 per cent).

IDENTIFICATION

A. Solution S (see Tests) gives reaction (a) of chlorides (*2.3.1*).

B. It gives the reactions of calcium (*2.3.1*).

C. It complies with the limits of the assay.

TESTS

Solution S. Dissolve 10.0 g in *carbon dioxide-free water R* prepared from *distilled water R* and dilute to 100 ml with the same solvent.

Appearance of solution. Solution S is clear (*2.2.1*) and not more intensely coloured than reference solution Y_6 (*2.2.2, Method II*).

Acidity or alkalinity. To 10 ml of freshly prepared solution S add 0.1 ml of *phenolphthalein solution R*. If the solution is red, not more than 0.2 ml of *0.01 M hydrochloric acid* is required to discharge the colour and if the solution is colourless, not more than 0.2 ml of *0.01 M sodium hydroxide* is required to turn it red.

Sulphates (*2.4.13*): maximum 300 ppm.

Dilute 5 ml of solution S to 15 ml with *distilled water R*.

Aluminium. To 10 ml of solution S add 2 ml of *ammonium chloride solution R* and 1 ml of *dilute ammonia R1* and boil the solution. No turbidity or precipitate is formed.

If intended for use in the manufacture of dialysis solutions, the above test is replaced by the following test for aluminium (*2.4.17*): maximum 1 ppm.

Prescribed solution. Dissolve 4 g in 100 ml of *water R* and add 10 ml of *acetate buffer solution pH 6.0 R*.

Reference solution. Mix 2 ml of *aluminium standard solution (2 ppm Al) R*, 10 ml of *acetate buffer solution pH 6.0 R* and 98 ml of *water R*.

Blank solution. Mix 10 ml of *acetate buffer solution pH 6.0 R* and 100 ml of *water R*.

Barium. To 10 ml of solution S add 1 ml of *calcium sulphate solution R*. After at least 15 min, any opalescence in the solution is not more intense than that in a mixture of 1 ml of *distilled water R* and 10 ml of solution S.

Iron (*2.4.9*): maximum 10 ppm, determined on solution S.

Magnesium and alkali metals: maximum 0.5 per cent.

To a mixture of 20 ml of solution S and 80 ml of *water R* add 2 g of *ammonium chloride R* and 2 ml of *dilute ammonia R1*, heat to boiling and pour into the boiling solution a hot solution of 5 g of *ammonium oxalate R* in 75 ml of *water R*. Allow to stand for 4 h, dilute to 200 ml with *water R* and filter through a suitable filter. To 100 ml of the filtrate add 0.5 ml of *sulphuric acid R*. Evaporate to dryness on a water-bath and ignite to constant mass at 600 ± 50 °C. The residue weighs a maximum of 5 mg.

Heavy metals (*2.4.8*): maximum 20 ppm.

12 ml of solution S complies with test A. Prepare the reference solution using *lead standard solution (2 ppm Pb) R*.

ASSAY

Dissolve 0.280 g in 100 ml of *water R* and carry out the complexometric titration of calcium (*2.5.11*).

1 ml of *0.1 M sodium edetate* is equivalent to 14.70 mg of $CaCl_2,2H_2O$.

LABELLING

The label states, where applicable, that the substance is suitable for use in the manufacture of dialysis solutions.

STORAGE

In an airtight container.

corrected 6.0

CALCIUM CHLORIDE HEXAHYDRATE

Calcii chloridum hexahydricum

$CaCl_2,6H_2O$ M_r 219.1
[7774-34-7]

DEFINITION

Content: 97.0 per cent to 103.0 per cent of $CaCl_2,6H_2O$.

CHARACTERS

Appearance: white or almost white, crystalline mass or colourless crystals.

Solubility: very soluble in water, freely soluble in ethanol (96 per cent).

It solidifies at about 29 °C.

IDENTIFICATION

A. Solution S (see Tests) gives reaction (a) of chlorides (*2.3.1*).

B. It gives the reactions of calcium (*2.3.1*).

C. It complies with the limits of the assay.

TESTS

Solution S. Dissolve 15.0 g in *carbon dioxide-free water R* prepared from *distilled water R* and dilute to 100 ml with the same solvent.

Appearance of solution. Solution S is clear (*2.2.1*) and not more intensely coloured than reference solution Y_6 (*2.2.2, Method II*).

Acidity or alkalinity. To 10 ml of freshly prepared solution S add 0.1 ml of *phenolphthalein solution R*. If the solution is red, not more than 0.2 ml of *0.01 M hydrochloric acid* is required to discharge the colour and if the solution is colourless, not more than 0.2 ml of *0.01 M sodium hydroxide* is required to turn it red.

Sulphates (*2.4.13*): maximum 200 ppm.

Dilute 5 ml of solution S to 15 ml with *distilled water R*.

Aluminium. To 10 ml of solution S add 2 ml of *ammonium chloride solution R* and 1 ml of *dilute ammonia R1*. Heat to boiling. No turbidity or precipitate is formed.

If intended for use in the manufacture of dialysis solutions, the above test is replaced by the following test for aluminium (*2.4.17*): maximum 1 ppm.

Prescribed solution. Dissolve 6 g in 100 ml of *water R* and add 10 ml of *acetate buffer solution pH 6.0 R*.

Reference solution. Mix 2 ml of *aluminium standard solution (2 ppm Al) R*, 10 ml of *acetate buffer solution pH 6.0 R* and 98 ml of *water R*.

Blank solution. Mix 10 ml of *acetate buffer solution pH 6.0 R* and 100 ml of *water R*.

Barium. To 10 ml of solution S add 1 ml of *calcium sulphate solution R*. After at least 15 min, any opalescence in the solution is not more intense than that in a mixture of 1 ml of *distilled water R* and 10 ml of solution S.

Iron (*2.4.9*): maximum 7 ppm, determined on solution S.

Magnesium and alkali metals: maximum 0.3 per cent.

To a mixture of 20 ml of solution S and 80 ml of *water R* add 2 g of *ammonium chloride R* and 2 ml of *dilute ammonia R1*, heat to boiling and pour into the boiling solution a hot solution of 5 g of *ammonium oxalate R* in

75 ml of *water R*. Allow to stand for 4 h, dilute to 200 ml with *water R* and filter through a suitable filter. To 100 ml of the filtrate add 0.5 ml of *sulphuric acid R*. Evaporate to dryness on a water-bath and ignite to constant mass at 600 ± 50 °C. The residue weighs a maximum of 5 mg.

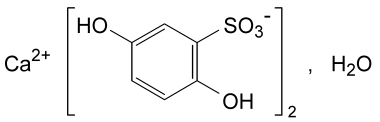
Heavy metals (*2.4.8*): maximum 15 ppm.

12 ml of solution S complies with test A. Prepare the reference solution using *lead standard solution (2 ppm Pb) R*.

ASSAY

Dissolve 0.200 g in 100 ml of *water R*. Carry out the complexometric titration of calcium (*2.5.11*).

1 ml of *0.1 M sodium edetate* is equivalent to 21.91 mg of $CaCl_2,6H_2O$.



LABELLING

The label states, where applicable, that the substance is suitable for use in the manufacture of dialysis solutions.

01/2008:1183

CALCIUM DOBESILATE MONOHYDRATE

Calcii dobesilas monohydricus

$C_{12}H_{10}CaO_{10}S_2,H_2O$ M_r 436.4

DEFINITION

Calcium dobesilate monohydrate contains not less than 99.0 per cent and not more than the equivalent of 102.0 per cent of calcium di(2,5-dihydroxybenzenesulphonate), calculated with reference to the anhydrous substance.

CHARACTERS

A white or almost white, hygroscopic powder, very soluble in water, freely soluble in ethanol, very slightly soluble in 2-propanol, practically insoluble in methylene chloride.

IDENTIFICATION

A. Dissolve 0.100 g in *water R* and dilute to 200.0 ml with the same solvent. Dilute 5.0 ml of the solution to 100.0 ml with *water R*. Examined between 210 nm and 350 nm (*2.2.25*), the solution shows two absorption maxima, at 221 nm and 301 nm. The specific absorbance at the maximum at 301 nm is 174 to 181.

B. Mix 1 ml of *ferric chloride solution R2*, 1 ml of a freshly prepared 10 g/l solution of *potassium ferricyanide R* and 0.1 ml of *nitric acid R*. To this mixture add 5 ml of freshly prepared solution S (see Tests): a blue colour and a precipitate are immediately produced.

C. 2 ml of freshly prepared solution S (see Tests) gives reaction (b) of calcium (*2.3.1*).

TESTS

Solution S. Dissolve 10.0 g in *carbon dioxide-free water R* and dilute to 100 ml with the same solvent.

Appearance of solution. Solution S, when freshly prepared, is clear (*2.2.1*) and colourless (*2.2.2, Method II*).

pH (*2.2.3*). The pH of solution S is 4.5 to 6.0.

Hydroquinone. Examine by thin-layer chromatography (*2.2.27*), using as the coating substance a suitable silica gel with a fluorescent indicator having an optimal intensity at 254 nm.

Test solution. Dissolve 2.0 g of the substance to be examined in *water R* and dilute to 10 ml with the same solvent.

Reference solution. Dissolve 10 mg of *hydroquinone R* in *water R* and dilute to 50 ml with the same solvent.

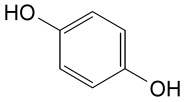
Apply to the plate 10 µl of each solution and dry the starting points in a current of cool air. Develop over a path of 15 cm using a mixture of 20 volumes of *methylene chloride R*, 30 volumes of *methyl acetate R* and 50 volumes of *ethyl acetate R*. Dry the plate in a current of hot air and examine in ultraviolet light at 254 nm. Any spot corresponding to hydroquinone in the chromatogram obtained with the test solution is not more intense than the principal spot in the chromatogram obtained with the reference solution (0.1 per cent).

Heavy metals (*2.4.8*). 1.0 g complies with limit test C for heavy metals (15 ppm). Prepare the standard using 1.5 ml of *lead standard solution (10 ppm Pb) R*.

Iron (*2.4.9*). 10 ml of solution S complies with the limit test for iron (10 ppm).

Water (*2.5.12*): 4.0 per cent to 6.0 per cent, determined on 0.500 g by the semi-micro determination of water.

ASSAY



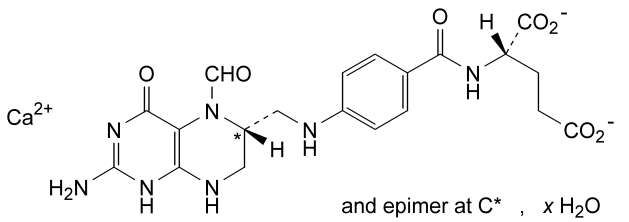
Dissolve 0.200 g in a mixture of 10 ml of *water R* and40 ml of *dilute sulphuric acid R*. Titrate with *0.1 M cerium sulphate*, determining the end-point potentiometrically (*2.2.20*).

1 ml of *0.1 M cerium sulphate* is equivalent to 10.45 mg of $C_{12}H_{10}CaO_{10}S_2$.

STORAGE

Store in an airtight container, protected from light.

IMPURITIES



A. benzene-1,4-diol (hydroquinone).

01/2008:0978
corrected 6.0

CALCIUM FOLINATE

Calcii folinas

$C_{20}H_{21}CaN_7O_7,xH_2O$ M_r 511.5 (anhydrous substance)

DEFINITION

Calcium (2*S*)-2-[[4-[[[(6*RS*)-2-amino-5-formyl-4-oxo-1,4,5,6,7,8-hexahydropteridin-6-yl]methyl]amino]-benzoyl]amino]pentanedioate.

Content:
– *calcium folinate* ($C_{20}H_{21}CaN_7O_7$): 97.0 per cent to 102.0 per cent (anhydrous substance);
– *calcium* (Ca; A_r 40.08): 7.54 per cent to 8.14 per cent (anhydrous substance).

It contains a variable amount of water.

CHARACTERS

Appearance: white or light yellow, amorphous or crystalline powder.

Solubility: sparingly soluble in water, practically insoluble in acetone and in ethanol (96 per cent).

The amorphous form may produce supersaturated solutions in water.

IDENTIFICATION

First identification: A, B, D.

Second identification: A, C, D.

A. Specific optical rotation (see Tests).

B. Infrared absorption spectrophotometry (*2.2.24*).

Preparation: discs.

Comparison: *calcium folinate CRS*.

If the spectra obtained show differences, dissolve the substance to be examined and the reference substance separately in the minimum volume of *water R* and add dropwise sufficient *acetone R* to produce a precipitate. Allow to stand for 15 min, collect the precipitate by centrifugation, wash the precipitate with 2 small quantities of *acetone R* and dry. Record new spectra using the residues.

C. Thin-layer chromatography (*2.2.27*).

Test solution. Dissolve 15 mg of the substance to be examined in a 3 per cent *V/V* solution of *ammonia R* and dilute to 5 ml with the same solvent.

Reference solution. Dissolve 15 mg of *calcium folinate CRS* in a 3 per cent *V/V* solution of *ammonia R* and dilute to 5 ml with the same solvent.

Plate: *cellulose for chromatography F_{254} R* as the coating substance.

Mobile phase: the lower layer of a mixture of 1 volume of *isoamyl alcohol R* and 10 volumes of a 50 g/l solution of *citric acid R* previously adjusted to pH 8 with *ammonia R*.

Application: 5 µl.

Development: over a path of 15 cm.

Drying: in air.

Detection: examine in ultraviolet light at 254 nm.

Results: the principal spot in the chromatogram obtained with the test solution is similar in position and size to the principal spot in the chromatogram obtained with the reference solution.

D. It gives reaction (b) of calcium (*2.3.1*).

Carry out the tests and the assay as rapidly as possible, protected from actinic light.

TESTS

Solution S. Dissolve 1.25 g in *carbon dioxide-free water R*, heating at 40 °C if necessary, and dilute to 50.0 ml with the same solvent.

Appearance of solution. Solution S is clear (*2.2.1*) and its absorbance (*2.2.25*) at 420 nm is not greater than 0.60. Use *water R* as the compensation liquid.

pH (*2.2.3*): 6.8 to 8.0 for solution S.

Specific optical rotation (*2.2.7*): + 14.4 to + 18.0 (anhydrous substance), determined on solution S.

Acetone, ethanol and methanol. Head-space gas chromatography (*2.2.28*): use the standard additions method.

Test solution. Dissolve 0.25 g of the substance to be examined in *water R* and dilute to 10.0 ml with the same solvent.

Reference solution. Dilute 0.125 g of *acetone R*, 0.750 g of *anhydrous ethanol R* and 0.125 g of *methanol R* in *water R* and dilute to 1000.0 ml with *water R*.

Column:
– *material*: fused silica;
– *size*: *l* = 10 m, Ø = 0.32 mm;
– *stationary phase*: *styrene-divinylbenzene copolymer R*.

Carrier gas: *nitrogen for chromatography R*.

Flow rate: 4 ml/min.

Static head-space conditions that may be used:
– *equilibration temperature*: 80 °C;
– *equilibration time*: 20 min;
– *pressurisation time*: 30 s.

Temperature:

	Time (min)	Temperature (°C)
Column	0 - 6	125 → 185
	6 - 15	185
Injection port		250
Detector		250

Detection: flame ionisation.

Injection: at least 3 times.

Limits:
– *acetone*: maximum 0.5 per cent;
– *ethanol*: maximum 3.0 per cent;
– *methanol*: maximum 0.5 per cent.

Related substances. Liquid chromatography (*2.2.29*).

Test solution. Dissolve 10.0 mg of the substance to be examined in *water R* and dilute to 10.0 ml with the same solvent.

Reference solution (a). Dissolve 10.0 mg of *calcium folinate CRS* in *water R* and dilute to 10.0 ml with the same solvent.

Reference solution (b). Dilute 1.0 ml of reference solution (a) to 100.0 ml with *water R*.

Reference solution (c). Dissolve 10.0 mg of *formylfolic acid CRS* (impurity D) in the mobile phase and dilute to 100.0 ml with the mobile phase. Dilute 1.0 ml of this solution to 10.0 ml with *water R*.

Reference solution (d). Dilute 1.0 ml of reference solution (b) to 10.0 ml with *water R*.

Reference solution (e). Dilute 5.0 ml of reference solution (c) to 10.0 ml with reference solution (b).

Column:
– *size*: *l* = 0.25 m, Ø = 4 mm;
– *stationary phase*: *octadecylsilyl silica gel for chromatography R* (5 µm);
– *temperature*: 40 °C.

Mobile phase: mix 220 ml of *methanol R* and 780 ml of a solution containing 2.0 ml of *tetrabutylammonium hydroxide solution (400 g/l) R* and 2.2 g of *disodium hydrogen phosphate R*, previously adjusted to pH 7.8 with *phosphoric acid R*.

Flow rate: 1 ml/min.

Detection: spectrophotometer at 280 nm.

Injection: 10 µl of the test solution and reference solutions (b), (c), (d) and (e).

Run time: 2.5 times the retention time of folinate.

System suitability: reference solution (e):

– *resolution*: minimum 2.2 between the peaks due to folinate and impurity D.

Limits:

– *impurity D*: not more than the area of the principal peak in the chromatogram obtained with reference solution (c) (1 per cent);

– *impurities A, B, C, E, F, G*: for each impurity, not more than the area of the principal peak in the chromatogram obtained with reference solution (b) (1 per cent);

– *sum of impurities other than D*: not more than 2.5 times the area of the principal peak in the chromatogram obtained with reference solution (b) (2.5 per cent);

– *disregard limit*: the area of the principal peak in the chromatogram obtained with reference solution (d) (0.1 per cent).

Chlorides (*2.4.4*): maximum 0.5 per cent.

Dissolve 67 mg in 10 ml of *water R* and add 3 ml of *acetic acid R*. Filter and wash the precipitate with 5 quantities, each of 5 ml, of *water R*. Collect the filtrate and washings and dilute to 100 ml with *water R*.

Heavy metals (*2.4.8*): maximum 50 ppm.

1.0 g complies with test F. Prepare the reference solution using 5 ml of *lead standard solution (10 ppm Pb) R*.

Platinum: maximum 20.0 ppm.

Atomic absorption spectrometry (*2.2.23, Method II*).

Test solution. Dissolve 1.00 g in *water R* and dilute to 100.0 ml with the same solvent.

Reference solutions. Prepare the reference solutions using *platinum standard solution (30 ppm Pt) R*, diluted as necessary with a mixture of 1 volume of *nitric acid R* and 99 volumes of *water R*.

Source: platinum hollow-cathode lamp.

Wavelength: 265.9 nm.

Water (*2.5.12*): maximum 17.0 per cent, determined on 0.200 g (ground to a very fine powder). Stir the substance to be examined in the titration solvent for about 6 min before titrating and use a suitable titrant that does not contain pyridine.

Bacterial endotoxins (*2.6.14*): less than 0.5 IU/mg, if intended for use in the manufacture of parenteral dosage forms without a further appropriate procedure for the removal of bacterial endotoxins.

ASSAY

Calcium. Dissolve 0.400 g in 150 ml of *water R* and dilute to 300 ml with the same solvent. Carry out the complexometric titration of calcium (*2.5.11*).

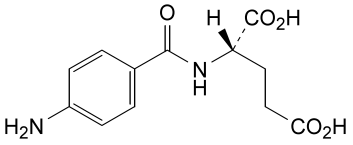
1 ml of *0.1 M sodium edetate* is equivalent to 4.008 mg of Ca.

Calcium folinate. Liquid chromatography (*2.2.29*) as described in the test for related substances with the following modifications.

Injection: test solution and reference solution (a).

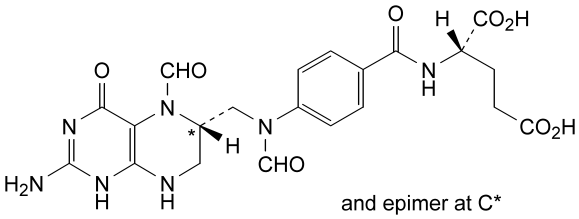
System suitability:

– *repeatability*: maximum relative standard deviation of 2.0 per cent after 6 injections of reference solution (a).



Calculate the percentage content of $C_{20}H_{21}CaN_7O_7$ from the declared content of *calcium folinate CRS*.

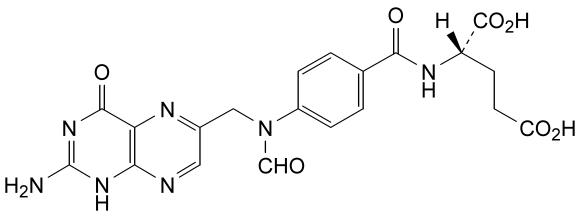
STORAGE



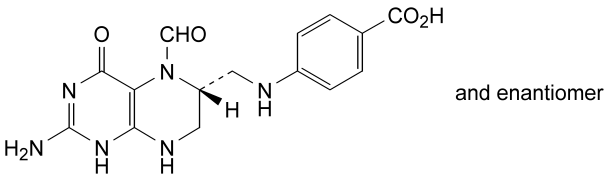
In an airtight container, protected from light. If the substance is sterile, store in a sterile, airtight, tamper-proof container.

IMPURITIES

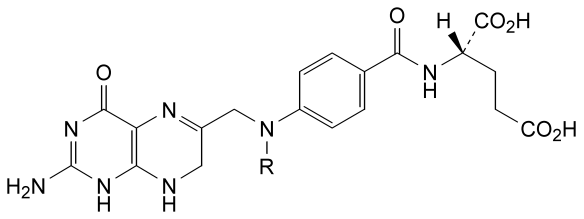
Specified impurities: *A, B, C, D, E, F, G*.



A. (2*S*)-2[(4-aminobenzoyl)amino]pentanedioic acid,



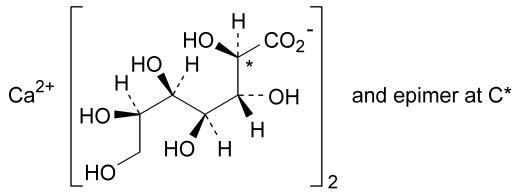
B. (2*S*)-2-[[4-[[[(6*RS*)-2-amino-5-formyl-4-oxo-1,4,5,6,7,8-hexahydropteridin-6-yl]methyl]formylamino]benzoyl]-amino]pentanedioic acid (5,10-diformyltetrahydrofolic acid),



C. folic acid,

D. (2*S*)-2-[[4-[[(2-amino-4-oxo-1,4-dihydropteridin-6-yl)methyl]formylamino]benzoyl]amino]pentanedioic acid (10-formylfolic acid),

E. 4-[[[(6*RS*)-2-amino-5-formyl-4-oxo-1,4,5,6,7,8-hexahydropteridin-6-yl]methyl]amino]benzoic acid (5-formyltetrahydropteroic acid),



F. R = CHO: (2*S*)-2-[[4-[[(2-amino-4-oxo-1,4,7,8-tetrahydropteridin-6-yl)methyl]formylamino]benzoyl]amino]pentanedioic acid (10-formyldihydrofolic acid),

G. R = H: (2*S*)-2-[[4-[[(2-amino-4-oxo-1,4,7,8-tetrahydropteridin-6-yl)methyl]amino]benzoyl]amino]pentanedioic acid (dihydrofolic acid).

01/2008:1399
corrected 6.0

CALCIUM GLUCOHEPTONATE

Calcii glucoheptonas

$C_{14}H_{26}CaO_{16}$ M_r 490.4

DEFINITION

Mixture in variable proportions, of calcium di(D-*glycero*-D-*gulo*-heptonate) and calcium di(D-*glycero*-D-*ido*-heptonate).

Content: 98.0 per cent to 102.0 per cent of calcium 2,3,4,5,6,7-hexahydroxyheptanoate (dried substance).

CHARACTERS

Appearance: white or very slightly yellow, amorphous powder, hygroscopic.

Solubility: very soluble in water, practically insoluble in acetone and in ethanol (96 per cent).

IDENTIFICATION

A. Thin-layer chromatography (*2.2.27*).

Test solution. Dissolve 20 mg of the substance to be examined in 1 ml of *water R*.

Reference solution (a). Dissolve 20 mg of *calcium glucoheptonate CRS* in 1 ml of *water R*.

Reference solution (b). Dissolve 10 mg of *calcium gluconate CRS* in 0.5 ml of the test solution and dilute to 1 ml with *water R*.

Plate: *cellulose for chromatography R1* as the coating substance.

Mobile phase: a freshly prepared mixture of 20 volumes of *anhydrous formic acid R*, 20 volumes of *water R*, 30 volumes of *acetone R* and 30 volumes of *butanol R*.

Application: 10 µl as bands of 20 mm by 2 mm.

Development: in a tank previously allowed to saturate for 10 min, over a path of 12 cm.

Drying: in air.

Detection: spray with *0.02 M potassium permanganate*.

System suitability: reference solution (b):

– the chromatogram shows 2 clearly separated spots.

Results: the principal spot in the chromatogram obtained with the test solution is similar in position and size to the principal spot in the chromatogram obtained with reference solution (a).

B. 0.2 ml of (see Tests) gives reaction (b) of calcium (*2.3.1*).

TESTS

Solution S. Dissolve 10.0 g in *carbon dioxide-free water R* prepared from *distilled water R* and dilute to 100 ml with the same solvent.

Appearance of solution. Solution S is clear (*2.2.1*) and not more intensely coloured than reference solution Y_6 (*2.2.2, Method II*).

pH (*2.2.3*): 6.0 to 8.0 for solution S.

Reducing sugars: maximum 1 per cent, expressed as glucose.

Dissolve 1.0 g in 5 ml of *water R* with the aid of gentle heat. Cool and add 20 ml of *cupri-citric solution R* and a few glass beads. Heat so that boiling begins after 4 min and maintain boiling for 3 min. Cool rapidly and add 100 ml of a 2.4 per cent *V/V* solution of *glacial acetic acid R* and 20.0 ml of *0.025 M iodine*. With continuous shaking, add 25 ml of a mixture of 6 volumes of *hydrochloric acid R* and 94 volumes of *water R* until the precipitate dissolves, titrate the excess of iodine with *0.05 M sodium thiosulphate* using 1 ml of *starch solution R* added towards the end of the titration, as indicator. Not less than 12.6 ml of *0.05 M sodium thiosulphate* is required.

Cyanide. Dissolve 5.0 g in 50 ml of *water R* and add 2.0 g of *tartaric acid R*. Place this solution in a distillation apparatus (*2.2.11*). The plain bend adapter attached to the end of the condenser has a vertical part that is long enough to extend to 1 cm from the bottom of a 50 ml test-tube used as a receiver. Place 10 ml of *water R* and 2 ml of *0.1 M sodium hydroxide* into the receiver. Distil, collect 25 ml of distillate and dilute to 50 ml with *water R*. To 25 ml of this solution add 25 mg of *ferrous sulphate R* and boil for a short time. After cooling to about 70 °C add 10 ml of *hydrochloric acid R1*. After 30 min, filter the solution and wash the filter. A yellow spot appears on the filter; there is no blue or green spot.

Chlorides (*2.4.4*): maximum 100 ppm.

To 5 ml of solution S, add 10 ml of *water R*.

Sulphates (*2.4.13*): maximum 100 ppm, determined on solution S.

Iron (*2.4.9*): maximum 40 ppm.

Dilute 2.5 ml of to 10 ml with *water R*.

Heavy metals (*2.4.8*): maximum 10 ppm.

Dissolve 2.0 g in 10 ml of *buffer solution pH 3.5 R* and dilute to 20 ml with *water R*. 12 ml of the solution complies with test A. Prepare the reference solution using *lead standard solution (1 ppm Pb) R*.

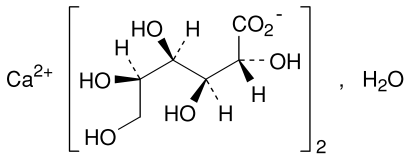
Loss on drying (*2.2.32*): maximum 5.0 per cent, determined on 1.000 g by drying in an oven at 105 °C for 3 h.

Bacterial endotoxins (*2.6.14*): less than 167 IU/g, if intended for use in the manufacture of parenteral dosage forms without a further appropriate procedure for the removal of bacterial endotoxins.

ASSAY

Dissolve 0.800 g in a mixture of 150 ml of *water R* and 2 ml of *3 M hydrochloric acid R*. While stirring, add 12.5 ml of *0.1 M sodium edetate*, 15 ml of *1 M sodium hydroxide* and 0.3 g of *hydroxynaphthol blue, sodium salt R*. Titrate with *0.1 M sodium edetate* until the colour changes from violet to pure blue.

1 ml of *0.1 M sodium edetate* is equivalent to 49.04 mg of $C_{14}H_{26}CaO_{16}$.



STORAGE

In an airtight container. If the substance is sterile, store in a sterile, airtight, tamper-proof container.

01/2008:0172
corrected 6.0

CALCIUM GLUCONATE

Calcii gluconas

$C_{12}H_{22}CaO_{14},H_2O$ M_r 448.4

DEFINITION

Calcium D-gluconate monohydrate.

Content: 98.5 per cent to 102.0 per cent of $C_{12}H_{22}CaO_{14},H_2O$.

CHARACTERS

Appearance: white or almost white, crystalline or granular powder.

Solubility: sparingly soluble in water, freely soluble in boiling water.

IDENTIFICATION

A. Thin-layer chromatography (*2.2.27*).

Test solution. Dissolve 20 mg of the substance to be examined in 1 ml of *water R*, heating if necessary in a water-bath at 60 °C.

Reference solution. Dissolve 20 mg of *calcium gluconate CRS* in 1 ml of *water R*, heating if necessary in a water-bath at 60 °C.

Plate: *TLC silica gel G plate R*.

Mobile phase: *ethyl acetate R, concentrated ammonia R, water R, ethanol (96 per cent) R* (10:10:30:50 *V/V/V/V*).

Application: 5 µl.

Development: over a path of 10 cm.

Drying: at 100 °C for 20 min. Allow to cool.

Detection: spray with a 50 g/l solution of *potassium dichromate R* in a 40 per cent *m/m* solution of *sulphuric acid R*.

Results: after 5 min, the principal spot in the chromatogram obtained with the test solution is similar in position, colour and size to the principal spot in the chromatogram obtained with the reference solution.

B. Solution S (see Tests) gives the reactions of calcium (*2.3.1*).

TESTS

Solution S. Dissolve 1.0 g in *water R* heated to 60 °C and dilute to 50 ml with the same solvent.

Appearance of solution. At 60 °C, solution S is not more intensely coloured than reference solution Y_6 (*2.2.2, Method II*). After cooling, it is not more opalescent than reference suspension II (*2.2.1*).

Organic impurities and boric acid. Introduce 0.5 g into a porcelain dish previously rinsed with *sulphuric acid R* and placed in a bath of iced water. Add 2 ml of cooled *sulphuric acid R* and mix. No yellow or brown colour develops. Add 1 ml of *chromotrope II B solution R*. A violet colour develops and does not become dark blue. The solution is not more intensely coloured than that of a mixture of 1 ml of *chromotrope II B solution R* and 2 ml of cooled *sulphuric acid R*.

Sucrose and reducing sugars. Dissolve 0.5 g in a mixture of 2 ml of *hydrochloric acid R1* and 10 ml of *water R*. Boil for 5 min, allow to cool, add 10 ml of *sodium carbonate solution R* and allow to stand. Dilute to 25 ml with *water R* and filter. To 5 ml of the filtrate add 2 ml of *cupri-tartaric solution R* and boil for 1 min. Allow to stand for 2 min. No red precipitate is formed.

Chlorides (*2.4.4*): maximum 200 ppm.

Dilute 12.5 ml of solution S to 15 ml with *water R*.

Sulphates (*2.4.13*): maximum 100 ppm.

Dissolve 10.0 g with heating in a mixture of 10 ml of *acetic acid R* and 90 ml of *distilled water R*.

Magnesium and alkali metals: maximum 0.4 per cent.

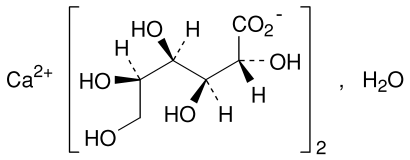
Dissolve 1.00 g in 100 ml of boiling *water R*, add 10 ml of *ammonium chloride solution R*, 1 ml of *ammonia R* and, dropwise, 50 ml of hot *ammonium oxalate solution R*. Allow to stand for 4 h, dilute to 200 ml with *water R* and filter. Evaporate 100 ml of the filtrate to dryness and ignite. The residue weighs a maximum of 2 mg.

Heavy metals (*2.4.8*): maximum 10 ppm.

2.0 g complies with test D. Heat the substance to be examined gradually and with care until it is almost completely transformed into a white mass and then ignite. Prepare the reference solution using 2 ml of *lead standard solution (10 ppm Pb) R*.

Microbial contamination. Total viable aerobic count (*2.6.12*) not more than 10^3 micro-organisms per gram, determined by plate count.

ASSAY



Dissolve 0.8000 g in 20 ml of hot *water R*, allow to cool and dilute to 300 ml with *water R*. Carry out the complexometric titration of calcium (*2.5.11*).

1 ml of *0.1 M sodium edetate* is equivalent to 44.84 mg of $C_{12}H_{22}CaO_{14},H_2O$.

corrected 6.0

CALCIUM GLUCONATE FOR INJECTION

Calcii gluconas ad iniectabile

$C_{12}H_{22}CaO_{14},H_2O$ M_r 448.4

DEFINITION

Calcium D-gluconate monohydrate.

Content: 99.0 per cent to 101.0 per cent of $C_{12}H_{22}CaO_{14},H_2O$.

CHARACTERS

Appearance: white or almost white, crystalline or granular powder.

Solubility: sparingly soluble in water, freely soluble in boiling water.

IDENTIFICATION

A. Thin-layer chromatography (*2.2.27*).

Test solution. Dissolve 20 mg of the substance to be examined in 1 ml of *water R*, heating if necessary in a water-bath at 60 °C.

Reference solution. Dissolve 20 mg of *calcium gluconate CRS* in 1 ml of *water R*, heating if necessary in a water-bath at 60 °C.

Plate: *TLC silica gel G plate R*.

Mobile phase: *concentrated ammonia R, ethyl acetate R, water R, ethanol (96 per cent) R* (10:10:30:50 *V/V/V/V*).

Application: 5 µl.

Development: over a path of 10 cm.

Drying: at 100 °C for 20 min and allow to cool.

Detection: spray with a 50 g/l solution of *potassium dichromate R* in a 40 per cent *m/m* solution of *sulphuric acid R*.

Results: after 5 min, the principal spot in the chromatogram obtained with the test solution is similar in position, colour and size to the principal spot in the chromatogram obtained with the reference solution.

B. About 20 mg gives reaction (b) of calcium (*2.3.1*).

TESTS

Solution S. To 10.0 g add 90 ml of boiling *distilled water R* and boil with stirring, for not more than 10 s, until completely dissolved, then dilute to 100.0 ml with the same solvent.

Appearance of solution. At 60 °C, solution S is not more intensely coloured than reference solution B_7 (*2.2.2, Method II*). After cooling to 20 °C, it is not more opalescent than reference suspension II (*2.2.1*).

pH (*2.2.3*): 6.4 to 8.3.

Dissolve 1.0 g in 20 ml of *carbon dioxide-free water R*, heating on a water-bath.

Organic impurities and boric acid. Introduce 0.5 g into a porcelain dish previously rinsed with *sulphuric acid R* and placed in a bath of iced water. Add 2 ml of cooled *sulphuric acid R* and mix. No yellow or brown colour develops. Add 1 ml of *chromotrope II B solution R*. A violet colour develops and does not become dark blue. The solution is not more intensely coloured than that of a mixture of 1 ml of *chromotrope II B solution R* and 2 ml of cooled *sulphuric acid R*.

Oxalates. Liquid chromatography (*2.2.29*).

Test solution. Dissolve 1.00 g of the substance to be examined in *water for chromatography R* and dilute to 100.0 ml with the same solvent.

Reference solution. Dissolve 1.00 g of the substance to be examined in *water for chromatography R*, add 0.5 ml of a 0.152 g/l solution of *sodium oxalate R* in *water for chromatography R* and dilute to 100.0 ml with the same solvent.

Guard column:

– *size*: *l* = 30 mm, Ø = 4 mm;

– *stationary phase*: suitable strong anion exchange resin (30-50 µm).

Columns 1 and 2:

– *size*: *l* = 0.25 m, Ø = 4 mm;

– *stationary phase*: suitable strong anion exchange resin (30-50 µm).

Anion-suppresser column: connected in series with the guard and analytical columns and equipped with a micromembrane that separates the mobile phase from the suppressor regeneration solution, flowing countercurrent to the mobile phase.

Mobile phase: dissolve 0.212 g of *anhydrous sodium carbonate R* and 63 mg of *sodium hydrogen carbonate R* in *water for chromatography R* and dilute to 1000.0 ml with the same solvent.

Flow rate of the mobile phase: 2 ml/min.

Suppressor regeneration solution: 1.23 g/l solution of *sulphuric acid R* in *water for chromatography R*.

Flow rate of the suppressor regeneration solution: 4 ml/min.

Detection: conductance.

Injection: 50 µl.

System suitability: reference solution:

– *repeatability*: maximum relative standard deviation of the area of the peak due to oxalate of 2.0 per cent after 5 injections.

Inject 50 µl of each solution 3 times. Calculate the content of oxalates in parts per million using the following expression:

$$\frac{S_T \times 50}{S_R - S_T}$$

S_T = area of the peak due to oxalate in the chromatogram obtained with the test solution;

S_R = area of the peak due to oxalate in the chromatogram obtained with the reference solution.

Limit:

– *oxalates*: maximum 100 ppm.

Sucrose and reducing sugars. Dissolve 0.5 g in a mixture of 2 ml of *hydrochloric acid R1* and 10 ml of *water R*. Boil for 5 min, allow to cool, add 10 ml of *sodium carbonate solution R* and allow to stand for 10 min. Dilute to 25 ml with *water R* and filter. To 5 ml of the filtrate add 2 ml of *cupri-tartaric solution R* and boil for 1 min. Allow to stand for 2 min. No red precipitate is formed.

Chlorides (*2.4.4*): maximum 50 ppm.

To 10 ml of previously filtered solution S add 5 ml of *water R*.

Phosphates (*2.4.11*): maximum 100 ppm.

Dilute 1 ml of solution S to 100 ml with *water R*.

Sulphates (*2.4.13*): maximum 50 ppm, determined on previously filtered solution S.

Prepare the standard using a mixture of 7.5 ml of *sulphate standard solution (10 ppm SO_4) R* and 7.5 ml of *distilled water R*.

Iron: maximum 5.0 ppm.

Atomic absorption spectrometry (*2.2.23, Method I*).

Test solution. Introduce 2.0 g into a 100 ml polytetrafluoroethylene beaker and add 5 ml of *nitric acid R*. Boil, evaporating almost to dryness. Add 1 ml of *strong hydrogen peroxide solution R* and evaporate again almost to dryness. Repeat the hydrogen peroxide treatment until a clear solution is obtained. Using 2 ml of *nitric acid R*, transfer the solution into a 25 ml volumetric flask. Dilute to 25.0 ml with *dilute hydrochloric acid R*. In the same manner, prepare a compensation solution using 0.65 g of *calcium chloride R1* instead of the substance to be examined.

Reference solutions. Prepare the reference solutions from *iron solution (20 ppm Fe) R* diluted with *dilute hydrochloric acid R*.

Source: iron hollow-cathode lamp.

Wavelength: 248.3 nm.

Atomisation device: air-acetylene flame.

Carry out a basic correction using a deuterium lamp.

Magnesium and alkali metals: maximum 0.4 per cent.

To 0.50 g add a mixture of 1.0 ml of *dilute acetic acid R* and 10.0 ml of *water R* and rapidly boil, whilst shaking, until completely dissolved. To the boiling solution add 5.0 ml of *ammonium oxalate solution R* and allow to stand for at least 6 h. Filter through a sintered-glass filter (1.6) (*2.1.2*) into a porcelain crucible. Carefully evaporate the filtrate to dryness and ignite. The residue weighs not more than 2 mg.

Heavy metals (*2.4.8*): maximum 10 ppm.

12 ml of solution S complies with test A. Prepare the reference solution using *lead standard solution (1 ppm Pb) R*.

Bacterial endotoxins (*2.6.14*): less than 167 IU/g.

Microbial contamination. Total viable aerobic count (*2.6.12*) not more than 10^2 micro-organisms per gram, determined by plate count. It complies with the tests for *Escherichia coli, Pseudomonas aeruginosa* and *Staphylococcus aureus* (*2.6.13*).

ASSAY

Dissolve 0.350 g in 20 ml of hot *water R*, allow to cool and dilute to 300 ml with *water R*. Carry out the complexometric titration of calcium (*2.5.11*). Use 50 mg of *calconecarboxylic acid triturate R*.

1 ml of *0.1 M sodium edetate* is equivalent to 44.84 mg of $C_{12}H_{22}CaO_{14},H_2O$.

corrected 6.0

CALCIUM GLYCEROPHOSPHATE

Calcii glycerophosphas

$C_3H_7CaO_6P$ M_r 210.1

DEFINITION

Mixture in variable proportions of the calcium salt of (*RS*)-2,3-dihydroxypropyl phosphate and of 2-hydroxy-1-(hydroxymethyl)ethyl phosphate which may be hydrated.

Content: 18.6 per cent to 19.4 per cent of Ca (dried substance).

CHARACTERS

Appearance: white or almost white powder, hygroscopic.

Solubility: sparingly soluble in water, practically insoluble in ethanol (96 per cent).

IDENTIFICATION

A. Mix 1 g with 1 g of *potassium hydrogen sulphate R* in a test tube fitted with a glass tube. Heat strongly and direct the white vapour towards a piece of filter paper impregnated with a freshly prepared 10 g/l solution of *sodium nitroprusside R*. The filter paper develops a blue colour in contact with *piperidine R*.

B. Ignite 0.1 g in a crucible. Take up the residue with 5 ml of *nitric acid R* and heat on a water-bath for 1 min. Filter. The filtrate gives reaction (b) of phosphates (*2.3.1*).

C. It gives reaction (b) of calcium (*2.3.1*).

TESTS

Solution S. Dissolve 1.5 g at room temperature in *carbon dioxide-free water R* prepared from *distilled water R* and dilute to 150 ml with the same solvent.

Appearance of solution. Solution S is not more opalescent than reference suspension III (*2.2.1*).

Acidity or alkalinity. To 100 ml of solution S add 0.1 ml of *phenolphthalein solution R*. Not more than 1.5 ml of *0.1 M hydrochloric acid* or 0.5 ml of *0.1 M sodium hydroxide* is required to change the colour of the indicator.

Citric acid. Shake 5.0 g with 20 ml of *carbon dioxide-free water R* and filter. To the filtrate add 0.15 ml of *sulphuric acid R* and filter again. To the filtrate add 5 ml of *mercuric sulphate solution R* and heat to boiling. Add 0.5 ml of a 3.2 g/l solution of *potassium permanganate R* and again heat to boiling. No precipitate is formed.

Glycerol and ethanol (96 per cent)-soluble substances: maximum 0.5 per cent.

Shake 1.000 g with 25 ml of *ethanol (96 per cent) R* for 1 min. Filter. Evaporate the filtrate on a water-bath and dry the residue at 70 °C for 1 h. The residue weighs a maximum of 5 mg.

Chlorides (*2.4.4*): maximum 500 ppm.

Dissolve 0.1 g in a mixture of 2 ml of *acetic acid R* and 8 ml of *water R* and dilute to 15 ml with *water R*.

Phosphates (*2.4.11*): maximum 400 ppm.

Dilute 2.5 ml of solution S to 100 ml with *water R*.

Sulphates (*2.4.13*): maximum 0.1 per cent, determined on solution S.

Arsenic (*2.4.2, Method A*): maximum 3 ppm.

Dissolve 0.33 g in *water R* and dilute to 25 ml with the same solvent.

Iron (*2.4.9*): maximum 50 ppm, detemined on 0.20 g.

Heavy metals (*2.4.8*): maximum 20 ppm.

Dissolve 2.0 g in 10 ml of *buffer solution pH 3.5 R* and dilute to 20 ml with *water R*. 12 ml of the solution complies with test A. Prepare the reference solution using *lead standard solution (2 ppm Pb) R*.

Loss on drying (*2.2.32*): maximum 12.0 per cent, determined on 1.000 g by drying in an oven at 150 °C for 4 h.

ASSAY

Dissolve 0.200 g in *water R*. Carry out the complexometric titration of calcium (*2.5.11*).

1 ml of *0.1 M sodium edetate* is equivalent to 4.008 mg of Ca.

01/2008:0981
corrected 6.0

CALCIUM HYDROGEN PHOSPHATE, ANHYDROUS

Calcii hydrogenophosphas anhydricus

$CaHPO_4$ M_r 136.1
[7757-93-9]

DEFINITION

Content: 98.0 per cent to 103.0 per cent.

CHARACTERS

Appearance: white or almost white, crystalline powder, or colourless crystals.

Solubility: practically insoluble in water and in ethanol (96 per cent). It dissolves in dilute hydrochloric acid and in dilute nitric acid.

IDENTIFICATION

A. Dissolve with heating 0.1 g in 10 ml of *dilute hydrochloric acid R*. Add 2.5 ml of *dilute ammonia R1*, shake, and add 5 ml of a 35 g/l solution of *ammonium oxalate R*. A white precipitate is produced.

B. Dissolve 0.1 g in 5 ml of *dilute nitric acid R*, add 2 ml of *ammonium molybdate solution R* and heat at 70 °C for 2 min. A yellow precipitate is produced.

C. It complies with the limits of the assay.

TESTS

Solution S. Dissolve 2.5 g in 20 ml of *dilute hydrochloric acid R*, filter if necessary and add *dilute ammonia R1* until a precipitate is formed. Add just sufficient *dilute hydrochloric acid R* to dissolve the precipitate and dilute to 50 ml with *distilled water R*.

Acid-insoluble substances: maximum 0.2 per cent.

Dissolve 5.0 g in 40 ml of *water R*, add 10 ml of *hydrochloric acid R* and heat to boiling for 5 min. Cool, then collect the insoluble substances using ashless filter paper. Wash with *water R* until turbidity is no longer produced when *silver nitrate solution R2* is added. Ignite at 600 ± 50 °C. The residue weighs not more than 10 mg.

Carbonates. Shake 0.5 g with 5 ml of *carbon dioxide-free water R* and add 1 ml of *hydrochloric acid R*. No effervescence is produced.

Chlorides: maximum 0.25 per cent.

Test solution. Dissolve 0.20 g in a mixture of 20 ml of *water R* and 13 ml of *dilute nitric acid R*, dilute to 100 ml with *water R* and filter if necessary. Use 50 ml of this solution.

Reference solution. To 0.70 ml of *0.01 M hydrochloric acid*, add 6 ml of *dilute nitric acid R* and dilute to 50 ml with *water R*.

Add 1 ml of *silver nitrate solution R2* to the test solution and to the reference solution and mix. After standing for 5 min protected from light, any opalescence in the test solution is not more intense than that in the reference solution.

Fluorides: maximum 100 ppm.

Potentiometry (*2.2.36, Method II*).

Chelating solution. Dissolve 45 g of *cyclohexylenedinitrilotetra-acetic acid R* in 75 ml of *sodium hydroxide solution R* and dilute to 250 ml with *water R*.

Test solution. Dissolve 1.000 g in 4 ml of *hydrochloric acid R1*, add 20 ml of chelating solution, 2.7 ml of *glacial acetic acid R* and 2.8 g of *sodium chloride R*, adjust to pH 5-6 with *sodium hydroxide solution R* and dilute to 50.0 ml with *water R*.

Reference solution. Dissolve 4.42 g of *sodium fluoride R*, previously dried at 300 °C for 12 h, in *water R* and dilute to 1000.0 ml with the same solvent. Dilute 50.0 ml of this solution to 500.0 ml with *total-ionic-strength-adjustment buffer R* (200 ppm F).

Indicator electrode: fluoride-selective.

Reference electrode: silver-silver chloride.

Carry out the measurement on 20.0 ml of the test solution. Add at least 3 times 0.10 ml of the reference solution and carry out the measurement after each addition. Calculate the concentration of fluorides using the calibration curve.

Sulphates: maximum 0.5 per cent.

Test solution. Dissolve 0.5 g in a mixture of 5 ml of *water R* and 5 ml of *dilute hydrochloric acid R* and dilute to 100 ml with *water R*. Filter if necessary. To 20 ml of this solution, add 1 ml of *dilute hydrochloric acid R* and dilute to 50 ml with *water R*.

Reference solution. To 1.0 ml of *0.005 M sulphuric acid*, add 1 ml of *dilute hydrochloric acid R* and dilute to 50 ml with *water R*. Filter if necessary.

To the test solution and to the reference solution, add 2 ml of a 120 g/l solution of *barium chloride R* and allow to stand for 10 min. Any opalescence in the test solution is not more intense than that in the reference solution.

Arsenic (*2.4.2, Method A*): maximum 10 ppm, determined on 2 ml of solution S.

Barium. To 0.5 g, add 10 ml of *water R* and heat to boiling. While stirring, add 1 ml of *hydrochloric acid R* dropwise. Allow to cool and filter if necessary. Add 2 ml of a 10 g/l solution of *dipotassium sulphate R* and allow to stand for 10 min. No turbidity is produced.

Iron (*2.4.9*): maximum 400 ppm.

Dilute 0.5 ml of solution S to 10 ml with *water R*.

Heavy metals (*2.4.8*): maximum 40 ppm.

Dilute 10 ml of solution S to 20 ml with *water R*. 12 ml of the solution complies with test A. Prepare the reference solution using *lead standard solution (1 ppm Pb) R*.

Loss on ignition: 6.6 per cent to 8.5 per cent, determined on 1.000 g to constant mass at 800-825 °C.

ASSAY

Dissolve 0.4 g in 12 ml of *dilute hydrochloric acid R* and dilute to 200 ml with *water R*. To 20.0 ml of this solution add 25.0 ml of *0.02 M sodium edetate*, 50 ml of *water R*, 5 ml of *ammonium chloride buffer solution pH 10.7 R* and about 25 mg of *mordant black 11 triturate R*. Titrate the excess of sodium edetate with *0.02 M zinc sulphate*. Carry out a blank titration.

1 ml of *0.02 M sodium edetate* is equivalent to 2.72 mg of $CaHPO_4$.

01/2008:0116
corrected 6.0

CALCIUM HYDROGEN PHOSPHATE DIHYDRATE

Calcii hydrogenophosphas dihydricus

$CaHPO_4,2H_2O$ M_r 172.1
[7789-77-7]

DEFINITION

Content: 98.0 per cent to 105.0 per cent.

CHARACTERS

Appearance: white or almost white, crystalline powder.

Solubility: practically insoluble in cold water and in ethanol (96 per cent). It dissolves in dilute hydrochloric acid and in dilute nitric acid.

IDENTIFICATION

A. Dissolve with heating 0.1 g in 10 ml of *dilute hydrochloric acid R*. Add 2.5 ml of *dilute ammonia R1*, shake, and add 5 ml of a 35 g/l solution of *ammonium oxalate R*. A white precipitate is produced.

B. Dissolve 0.1 g in 5 ml of *dilute nitric acid R*, add 2 ml of *ammonium molybdate solution R* and heat at 70 °C for 2 min. A yellow precipitate is produced.

C. It complies with the limits of the assay.

TESTS

Solution S. Dissolve 2.5 g in 20 ml of *dilute hydrochloric acid R*, filter if necessary and add *dilute ammonia R1* until a precipitate is formed. Add just sufficient *dilute hydrochloric acid R* to dissolve the precipitate and dilute to 50 ml with *distilled water R*.

Acid-insoluble substances: maximum 0.2 per cent.

Dissolve 5.0 g in 40 ml of *water R*, add 10 ml of *hydrochloric acid R* and heat to boiling for 5 min. Cool, then collect the insoluble substances using ashless filter paper. Wash with *water R* until turbidity is no longer produced when *silver nitrate solution R2* is added to the filtrate. Ignite at 600 ± 50 °C. The residue weighs not more than 10 mg.

Carbonates. Shake 0.5 g with 5 ml of *carbon dioxide-free water R* and add 1 ml of *hydrochloric acid R*. No effervescence is produced.

Chlorides: maximum 0.25 per cent.

Test solution. Dissolve 0.20 g in a mixture of 20 ml of *water R* and 13 ml of *dilute nitric acid R*, dilute to 100 ml with *water R* and filter if necessary. Use 50 ml of this solution.

Reference solution. To 0.70 ml of *0.01 M hydrochloric acid*, add 6 ml of *dilute nitric acid R* and dilute to 50 ml with *water R*.

Add 1 ml of *silver nitrate solution R2* to the test solution and to the reference solution and mix. After standing for 5 min protected from light, any opalescence in the test solution is not more intense than that in the reference solution.

Fluorides: maximum 100 ppm.

Potentiometry (*2.2.36, Method II*).

Chelating solution. Dissolve 45 g of *cyclohexylenedinitrilotetra-acetic acid R* in 75 ml of *sodium hydroxide solution R* and dilute to 250 ml with *water R*.

Test solution. Dissolve 1.000 g in 4 ml of *hydrochloric acid R1*, add 20 ml of chelating solution, 2.7 ml of *glacial acetic acid R* and 2.8 g of *sodium chloride R*, adjust to pH 5-6 with *sodium hydroxide solution R* and dilute to 50.0 ml with *water R*.

Reference solution. Dissolve 4.42 g of *sodium fluoride R*, previously dried at 300 °C for 12 h, in *water R* and dilute to 1000.0 ml with the same solvent. Dilute 50.0 ml of this solution to 500.0 ml with *total-ionic-strength-adjustment buffer R* (200 ppm F).

Indicator electrode: fluoride-selective.

Reference electrode: silver-silver chloride.

Carry out the measurement on 20.0 ml of the test solution. Add at least 3 times 0.10 ml of the reference solution and carry out the measurement after each addition. Calculate the concentration of fluorides using the calibration curve.

Sulphates: maximum 0.5 per cent.

Test solution. Dissolve 0.5 g in a mixture of 5 ml of *water R* and 5 ml of *dilute hydrochloric acid R* and dilute to 100 ml with *water R*. Filter if necessary. To 20 ml of this solution, add 1 ml of *dilute hydrochloric acid R* and dilute to 50 ml with *water R*.

Reference solution. To 1.0 ml of *0.005 M sulphuric acid*, add 1 ml of *dilute hydrochloric acid R* and dilute to 50 ml with *water R*. Filter if necessary.

To the test solution and to the reference solution, add 2 ml of a 120 g/l solution of *barium chloride R* and allow to stand for 10 min. Any opalescence in the test solution is not more intense than that in the reference solution.

Arsenic (*2.4.2, Method A*): maximum 10 ppm, determined on 2 ml of solution S.

Barium. To 0.5 g, add 10 ml of *water R* and heat to boiling. While stirring, add 1 ml of *hydrochloric acid R* dropwise. Allow to cool and filter if necessary. Add 2 ml of a 10 g/l solution of *dipotassium sulphate R* and allow to stand for 10 min. No turbidity is produced.

Iron (*2.4.9*): maximum 400 ppm.

Dilute 0.5 ml of solution S to 10 ml with *water R*.

Heavy metals (*2.4.8*): maximum 40 ppm.

Dilute 10 ml of solution S to 20 ml with *water R*. 12 ml of the solution complies with test A. Prepare the reference solution using *lead standard solution (1 ppm Pb) R*.

Loss on ignition: 24.5 per cent to 26.5 per cent, determined on 1.000 g by ignition to constant mass at 800-825 °C.

ASSAY

Dissolve 0.4 g in 12 ml of *dilute hydrochloric acid R* and dilute to 200 ml with *water R*. To 20.0 ml of this solution add 25.0 ml of *0.02 M sodium edetate*, 50 ml of *water R*, 5 ml of *ammonium chloride buffer solution pH 10.7 R* and

about 25 mg of *mordant black 11 triturate R*. Titrate the excess of sodium edetate with *0.02 M zinc sulphate*. Carry out a blank titration.

1 ml of *0.02 M sodium edetate* is equivalent to 3.44 mg of $CaHPO_4,2H_2O$.

01/2008:1078

CALCIUM HYDROXIDE

Calcii hydroxidum

$Ca(OH)_2$ M_r 74.1
[1305-62-0]

DEFINITION

Content: 95.0 per cent to 100.5 per cent.

CHARACTERS

Appearance: white or almost white, fine powder.

Solubility: practically insoluble in water.

IDENTIFICATION

A. To 0.80 g in a mortar, add 10 ml of *water R* and 0.5 ml of *phenolphthalein solution R* and mix. The suspension turns red. On addition of 17.5 ml of *1 M hydrochloric acid*, the suspension becomes colourless without effervescing. The red colour occurs again when the mixture is triturated for 1 min. On addition of a further 6 ml of *1 M hydrochloric acid* and triturating, the solution becomes colourless.

B. Dissolve about 0.1 g in *dilute hydrochloric acid R* and dilute to 10 ml with *water R*. 5 ml of the solution give reaction (b) of calcium (*2.3.1*).

TESTS

Matter insoluble in hydrochloric acid: maximum 0.5 per cent.

Dissolve 2.0 g in 30 ml of *hydrochloric acid R*. Boil the solution and filter. Wash the residue with hot *water R*. The residue weighs a maximum of 10 mg.

Carbonates: maximum 5.0 per cent of $CaCO_3$.

Add 5.0 ml of *1 M hydrochloric acid* to the titrated solution obtained under Assay and titrate with *1 M sodium hydroxide* using 0.5 ml of *methyl orange solution R* as indicator.

1 ml of *1 M hydrochloric acid* is equivalent to 50.05 mg of $CaCO_3$.

Chlorides (*2.4.4*): maximum 330 ppm.

Dissolve 0.30 g in a mixture of 2 ml of *nitric acid R* and 10 ml of *water R* and dilute to 30 ml with *water R*.

Sulphates (*2.4.13*): maximum 0.4 per cent.

Dissolve 0.15 g in a mixture of 5 ml of *dilute hydrochloric acid R* and 10 ml of *distilled water R* and dilute to 60 ml with *distilled water R*.

Arsenic (*2.4.2, Method A*): maximum 4 ppm.

Dissolve 0.50 g in 5 ml of *brominated hydrochloric acid R* and dilute to 50 ml with *water R*. Use 25 ml of this solution.

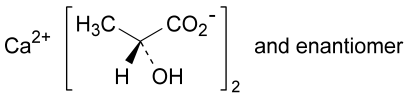
Magnesium and alkali metals: maximum 4.0 per cent calculated as sulphates.

Dissolve 1.0 g in a mixture of 10 ml of *hydrochloric acid R* and 40 ml of *water R*. Boil and add 50 ml of a 63 g/l solution of *oxalic acid R*. Neutralise with *ammonia R* and dilute to 200 ml with *water R*. Allow to stand for 1 h and filter through a suitable filter. To 100 ml of the filtrate, add 0.5 ml of *sulphuric acid R*. Cautiously evaporate to dryness and ignite. The residue weighs a maximum of 20 mg.

Heavy metals (*2.4.8*): maximum 20 ppm.

Dissolve 1.0 g in 10 ml of *hydrochloric acid R1* and evaporate to dryness on a water-bath. Dissolve the residue in 20 ml of *water R* and filter. 12 ml of the filtrate complies with test A. Prepare the reference solution using *lead standard solution (1 ppm Pb) R*.

ASSAY



To 1.500 g in a mortar, add 20-30 ml of *water R* and 0.5 ml of *phenolphthalein solution R*. Titrate with *1 M hydrochloric acid* by triturating the substance until the red colour disappears. The final solution is used in the tests for carbonates.

1 ml of *1 M hydrochloric acid* is equivalent to 37.05 mg of $Ca(OH)_2$.

01/2008:2118
corrected 6.0

CALCIUM LACTATE, ANHYDROUS

Calcii lactas anhydricus

$C_6H_{10}CaO_6$ M_r 218.2

DEFINITION

Calcium bis(2-hydroxypropanoate) or mixture of calcium (2*R*)-, (2*S*)- and (2*RS*)-2-hydroxypropanoates.

Content: 98.0 per cent to 102.0 per cent (dried substance).

CHARACTERS

Appearance: white or almost white, crystalline or granular powder.

Solubility: soluble in water, freely soluble in boiling water, very slightly soluble in ethanol (96 per cent).

IDENTIFICATION

A. It complies with the test for loss on drying (see Tests).

B. It gives the reaction of lactates (*2.3.1*).

C. It gives reaction (b) of calcium (*2.3.1*).

TESTS

Solution S. Dissolve 5.0 g with heating in *carbon dioxide-free water R* prepared from *distilled water R*, allow to cool and dilute to 100 ml with the same solvent.

Appearance of solution. Solution S is not more opalescent than reference suspension II (*2.2.1*) and not more intensely coloured than reference solution BY_6 (*2.2.2, Method II*).

Acidity or alkalinity. To 10 ml of solution S add 0.1 ml of *phenolphthalein solution R* and 0.5 ml of *0.01 M hydrochloric acid*. The solution is colourless. Not more than 2.0 ml of *0.01 M sodium hydroxide* is required to change the colour of the indicator to pink.

Chlorides (*2.4.4*): maximum 200 ppm.

Dilute 5 ml of solution S to 15 ml with *water R*.

Sulphates (*2.4.13*): maximum 400 ppm.

Dilute 7.5 ml of solution S to 15 ml with *distilled water R*.

Barium. To 10 ml of solution S add 1 ml of *calcium sulphate solution R*. Allow to stand for 15 min. Any opalescence in the solution is not more intense than that in a mixture of 1 ml of *distilled water R* and 10 ml of solution S.

Iron (*2.4.9*): maximum 50 ppm.

Dilute 4 ml of solution S to 10 ml with *water R*.

Magnesium and alkali salts: maximum 1 per cent.

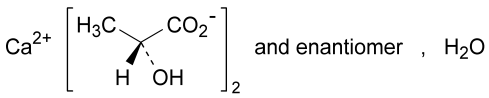
To 20 ml of solution S add 20 ml of *water R*, 2 g of *ammonium chloride R* and 2 ml of *dilute ammonia R1*. Heat to boiling and rapidly add 40 ml of hot *ammonium oxalate solution R*. Allow to stand for 4 h, dilute to 100.0 ml with *water R* and filter. To 50.0 ml of the filtrate add 0.5 ml of *sulphuric acid R*. Evaporate to dryness and ignite the residue to constant mass at 600 ± 50 °C. The residue weighs a maximum of 5 mg.

Heavy metals (*2.4.8*): maximum 10 ppm.

Dissolve 2.0 g in *water R* and dilute to 20 ml with the same solvent. 12 ml of the solution complies with test A. Prepare the reference solution using *lead standard solution (1 ppm Pb) R*.

Loss on drying (*2.2.32*): maximum 3.0 per cent, determined on 0.500 g by drying in an oven at 125 °C.

ASSAY



Dissolve 0.200 g in *water R* and dilute to 300 ml with the same solvent. Carry out the complexometric titration of calcium (*2.5.11*).

1 ml of *0.1 M sodium edetate* is equivalent to 21.82 mg of $C_6H_{10}CaO_6$.

corrected 6.0

CALCIUM LACTATE MONOHYDRATE

Calcii lactas monohydricus

$C_6H_{10}CaO_6,H_2O$ M_r 236.0

DEFINITION

Calcium bis(2-hydroxypropanoate) or mixture of calcium (2*R*)-, (2*S*)- and (2*RS*)-2-hydroxypropanoates monohydrates.

Content: 98.0 per cent to 102.0 per cent (dried substance).

CHARACTERS

Appearance: white or almost white, crystalline or granular powder.

Solubility: soluble in water, freely soluble in boiling water, very slightly soluble in ethanol (96 per cent).

IDENTIFICATION

A. It complies with the test for loss on drying (see Tests).

B. It gives the reaction of lactates (*2.3.1*).

C. It gives reaction (b) of calcium (*2.3.1*).

TESTS

Solution S. Dissolve 5.4 g (equivalent to 5.0 g of the dried substance) with heating in *carbon dioxide-free water R* prepared from *distilled water R*, allow to cool and dilute to 100 ml with the same solvent.

Appearance of solution. Solution S is not more opalescent than reference suspension II (*2.2.1*) and not more intensely coloured than reference solution BY_6 (*2.2.2, Method II*).

Acidity or alkalinity. To 10 ml of solution S add 0.1 ml of *phenolphthalein solution R* and 0.5 ml of *0.01 M hydrochloric acid*. The solution is colourless. Not more than 2.0 ml of *0.01 M sodium hydroxide* is required to change the colour of the indicator to pink.

Chlorides (*2.4.4*): maximum 200 ppm.

Dilute 5 ml of solution S to 15 ml with *water R*.

Sulphates (*2.4.13*): maximum 400 ppm.

Dilute 7.5 ml of solution S to 15 ml with *distilled water R*.

Barium. To 10 ml of solution S add 1 ml of *calcium sulphate solution R*. Allow to stand for 15 min. Any opalescence in the solution is not more intense than that in a mixture of 1 ml of *distilled water R* and 10 ml of solution S.

Iron (*2.4.9*): maximum 50 ppm.

Dilute 4 ml of solution S to 10 ml with *water R*.

Magnesium and alkali salts: maximum 1 per cent.

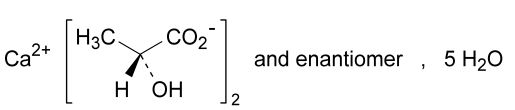
To 20 ml of solution S add 20 ml of *water R*, 2 g of *ammonium chloride R* and 2 ml of *dilute ammonia R1*. Heat to boiling and rapidly add 40 ml of hot *ammonium oxalate solution R*. Allow to stand for 4 h, dilute to 100.0 ml with *water R* and filter. To 50.0 ml of the filtrate add 0.5 ml of *sulphuric acid R*. Evaporate to dryness and ignite the residue to constant mass at 600 ± 50 °C. The residue weighs a maximum of 5 mg.

Heavy metals (*2.4.8*): maximum 10 ppm.

Dissolve a quantity equivalent to 2.0 g of the dried substance in *water R* and dilute to 20 ml with the same solvent. 12 ml of the solution complies with test A. Prepare the reference solution using *lead standard solution (1 ppm Pb) R*.

Loss on drying (*2.2.32*): 5.0 per cent to 8.0 per cent, determined on 0.500 g by drying in an oven at 125 °C.

ASSAY



Dissolve a quantity equivalent to 0.200 g of the dried substance in *water R* and dilute to 300 ml with the same solvent. Carry out the complexometric titration of calcium (*2.5.11*).

1 ml of *0.1 M sodium edetate* is equivalent to 21.82 mg of $C_6H_{10}CaO_6$.

corrected 6.0

CALCIUM LACTATE PENTAHYDRATE

Calcii lactas pentahydricus

$C_6H_{10}CaO_6,5H_2O$ M_r 308.3

DEFINITION

Calcium bis(2-hydroxypropanoate) or mixture of calcium (2*R*)-, (2*S*)- and (2*RS*)-2-hydroxypropanoates pentahydrates.

Content: 98.0 per cent to 102.0 per cent (dried substance).

CHARACTERS

Appearance: white or almost white, crystalline or granular powder, slightly efflorescent.

Solubility: soluble in water, freely soluble in boiling water, very slightly soluble in ethanol (96 per cent).

IDENTIFICATION

A. It complies with the test for loss on drying (see Tests).

B. It gives the reaction of lactates (*2.3.1*).

C. It gives reaction (b) of calcium (*2.3.1*).

TESTS

Solution S. Dissolve 7.1 g (equivalent to 5.0 g of the dried substance) with heating in *carbon dioxide-free water R* prepared from *distilled water R*, allow to cool and dilute to 100 ml with the same solvent.

Appearance of solution. Solution S is not more opalescent than reference suspension II (*2.2.1*) and not more intensely coloured than reference solution BY_6 (*2.2.2, Method II*).

Acidity or alkalinity. To 10 ml of solution S add 0.1 ml of *phenolphthalein solution R* and 0.5 ml of *0.01 M hydrochloric acid*. The solution is colourless. Not more than 2.0 ml of *0.01 M sodium hydroxide* is required to change the colour of the indicator to pink.

Chlorides (*2.4.4*): maximum 200 ppm.

Dilute 5 ml of solution S to 15 ml with *water R*.

Sulphates (*2.4.13*): maximum 400 ppm.

Dilute 7.5 ml of solution S to 15 ml with *distilled water R*.

Barium. To 10 ml of solution S add 1 ml of *calcium sulphate solution R*. Allow to stand for 15 min. Any opalescence in the solution is not more intense than that in a mixture of 1 ml of *distilled water R* and 10 ml of solution S.

Iron (*2.4.9*): maximum 50 ppm.

Dilute 4 ml of solution S to 10 ml with *water R*.

Magnesium and alkali salts: maximum 1 per cent.

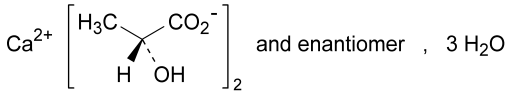
To 20 ml of solution S add 20 ml of *water R*, 2 g of *ammonium chloride R* and 2 ml of *dilute ammonia R1*. Heat to boiling and rapidly add 40 ml of hot *ammonium oxalate solution R*. Allow to stand for 4 h, dilute to 100.0 ml with *water R* and filter. To 50.0 ml of the filtrate add 0.5 ml of *sulphuric acid R*. Evaporate to dryness and ignite the residue to constant mass at 600 ± 50 °C. The residue weighs a maximum of 5 mg.

Heavy metals (*2.4.8*): maximum 10 ppm.

Dissolve a quantity equivalent to 2.0 g of the dried substance in *water R* and dilute to 20 ml with the same solvent. 12 ml of the solution complies with test A. Prepare the reference solution using *lead standard solution (1 ppm Pb) R*.

Loss on drying (*2.2.32*): 22.0 per cent to 27.0 per cent, determined on 0.500 g by drying in an oven at 125 °C.

ASSAY



Dissolve a quantity equivalent to 0.200 g of the dried substance in *water R* and dilute to 300 ml with the same solvent. Carry out the complexometric titration of calcium (*2.5.11*).

1 ml of *0.1 M sodium edetate* is equivalent to 21.82 mg of $C_6H_{10}CaO_6$.

CALCIUM LACTATE TRIHYDRATE

Calcii lactas trihydricus

$C_6H_{10}CaO_6,3H_2O$ M_r 272.3

DEFINITION

Calcium bis(2-hydroxypropanoate) or mixture of calcium (2*R*)-, (2*S*)- and (2*RS*)-2-hydroxypropanoates trihydrates.

Content: 98.0 per cent to 102.0 per cent (dried substance).

CHARACTERS

Appearance: white or almost white, crystalline or granular powder.

Solubility: soluble in water, freely soluble in boiling water, very slightly soluble in ethanol (96 per cent).

IDENTIFICATION

A. It complies with the test for loss on drying (see Tests).

B. It gives the reaction of lactates (*2.3.1*).

C. It gives reaction (b) of calcium (*2.3.1*).

TESTS

Solution S. Dissolve 6.2 g (equivalent to 5.0 g of the dried substance) with heating in *carbon dioxide-free water R* prepared from *distilled water R*, allow to cool and dilute to 100 ml with the same solvent.

Appearance of solution. Solution S is not more opalescent than reference suspension II (*2.2.1*) and not more intensely coloured than reference solution BY_6 (*2.2.2, Method II*).

Acidity or alkalinity. To 10 ml of solution S add 0.1 ml of *phenolphthalein solution R* and 0.5 ml of *0.01 M hydrochloric acid*. The solution is colourless. Not more than 2.0 ml of *0.01 M sodium hydroxide* is required to change the colour of the indicator to pink.

Chlorides (*2.4.4*): maximum 200 ppm.

Dilute 5 ml of solution S to 15 ml with *water R*.

Sulphates (*2.4.13*): maximum 400 ppm.

Dilute 7.5 ml of solution S to 15 ml with *distilled water R*.

Barium. To 10 ml of solution S add 1 ml of *calcium sulphate solution R*. Allow to stand for 15 min. Any opalescence in the solution is not more intense than that in a mixture of 1 ml of *distilled water R* and 10 ml of solution S.

Iron (*2.4.9*): maximum 50 ppm.

Dilute 4 ml of solution S to 10 ml with *water R*.

Magnesium and alkali salts: maximum 1 per cent.

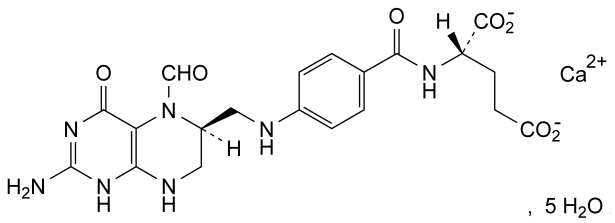
To 20 ml of solution S add 20 ml of *water R*, 2 g of *ammonium chloride R* and 2 ml of *dilute ammonia R1*. Heat to boiling and rapidly add 40 ml of hot *ammonium oxalate solution R*. Allow to stand for 4 h, dilute to 100.0 ml with *water R* and filter. To 50.0 ml of the filtrate add 0.5 ml of *sulphuric acid R*. Evaporate to dryness and ignite the residue to constant mass at 600 ± 50 °C. The residue weighs a maximum of 5 mg.

Heavy metals (*2.4.8*): maximum 10 ppm.

Dissolve a quantity equivalent to 2.0 g of the dried substance in *water R* and dilute to 20 ml with the same solvent. 12 ml of the solution complies with test A. Prepare the reference solution using *lead standard solution (1 ppm Pb) R*.

Loss on drying (*2.2.32*): 15.0 per cent to 20.0 per cent, determined on 0.500 g by drying in an oven at 125 °C.

ASSAY



Dissolve a quantity equivalent to 0.200 g of the dried substance in *water R* and dilute to 300 ml with the same solvent. Carry out the complexometric titration of calcium (*2.5.11*).

1 ml of *0.1 M sodium edetate* is equivalent to 21.82 mg of $C_6H_{10}CaO_6$.

01/2008:1606

CALCIUM LEVOFOLINATE PENTAHYDRATE

Calcii levofolinas pentahydricus

$C_{20}H_{21}CaN_7O_7,5H_2O$ M_r 511.5 (anhydrous substance)
[80433-71-2]

DEFINITION

Calcium (2*S*)-2-[[4-[[[(6*S*)-2-amino-5-formyl-4-oxo-1,4,5,6,7,8-hexahydropteridin-6-yl]methyl]amino]benzoyl]amino]pentanedioate pentahydrate.

Content:

– *calcium levofolinate* ($C_{20}H_{21}CaN_7O_7$; M_r 511.5): 97.0 per cent to 102.0 per cent (anhydrous substance);
– *calcium* (Ca; A_r 40.08): 7.54 per cent to 8.14 per cent (anhydrous substance).

CHARACTERS

Appearance: white or light yellow, amorphous or crystalline powder, hygroscopic.

Solubility: slightly soluble in water, practically insoluble in acetone and in ethanol (96 per cent).

IDENTIFICATION

First identification: A, B, D.

Second identification: A, C, D.

A. Specific optical rotation (see Tests).

B. Infrared absorption spectrophotometry (*2.2.24*).

Preparation: discs.

Comparison: calcium folinate CRS.

If the spectra obtained show differences, dissolve the substance to be examined and the reference substance separately in the minimum quantity of *water R* and add dropwise sufficient *acetone R* to produce a precipitate. Allow to stand for 15 min, collect the precipitate by centrifugation, wash the precipitate twice with a minimum quantity of *acetone R* and dry. Record new spectra using the residues.

C. Thin-layer chromatography (*2.2.27*).

Test solution. Dissolve 15 mg of the substance to be examined in a 3 per cent *V/V* solution of *ammonia R* and dilute to 5 ml with the same solvent.

Reference solution. Dissolve 15 mg of *calcium folinate CRS* in a 3 per cent *V/V* solution of *ammonia R* and dilute to 5 ml with the same solvent.

Plate: *cellulose for chromatography F_{254} R* as the coating substance.

Mobile phase: the lower layer of a mixture of 1 volume of *isoamyl alcohol R* and 10 volumes of a 50 g/l solution of *citric acid R* previously adjusted to pH 8 with *ammonia R*.

Application: 5 µl.

Development: over a path of 15 cm.

Drying: in air.

Detection: examine in ultraviolet light at 254 nm.

Results: the principal spot in the chromatogram obtained with the test solution is similar in position and size to the principal spot in the chromatogram obtained with the reference solution.

D. It gives reaction (b) of calcium (*2.3.1*).

Carry out the tests and the assay as rapidly as possible, protected from bright light.

TESTS

Solution S. Dissolve 0.40 g in *carbon dioxide-free water R*, heating at 40 °C if necessary, and dilute to 50.0 ml with the same solvent.

Appearance of solution. Solution S is clear (*2.2.1*) and its absorbance (*2.2.25*) at 420 nm has a maximum of 0.25.

pH (*2.2.3*): 7.5 to 8.5 for solution S.

Specific optical rotation (*2.2.7*): – 10 to – 15 (anhydrous substance), measured at 25 °C.

Dissolve 0.200 g in *tris(hydroxymethyl)aminomethane solution R* previously adjusted to pH 8.1 with *sodium hydroxide solution R* or *hydrochloric acid R1* and dilute to 20.0 ml with the same solvent.

Acetone and ethanol. Head-space gas chromatography (*2.2.28*): use the standard additions method.

Test solution. Dissolve 0.25 g of the substance to be examined in *water R* and dilute to 10.0 ml with the same solvent.

Reference solution. Dissolve 0.125 g of *acetone R* and 0.750 g of *anhydrous ethanol R* in *water R* and dilute to 1000.0 ml with *water R*.

Column:

– *material*: fused silica;
– *size*: *l* = 10 m, Ø = 0.32 mm;
– *stationary phase*: *styrene-divinylbenzene copolymer R.*

Carrier gas: *nitrogen for chromatography R.*

Flow rate: 4 ml/min.

Static head-space conditions which may be used:

– *equilibration temperature*: 80 °C;
– *equilibration time*: 20 min;
– *pressurisation time*: 30 s.

Temperature:

	Time (min)	Temperature (°C)
Column	0 - 14	80 → 220
Injection port		110
Detector		270

Detection: flame ionisation.

Injection: at least 3 times.

Limits:

– *acetone*: maximum 0.5 per cent,

– *ethanol*: maximum 3.0 per cent.

Related substances. Liquid chromatography (*2.2.29*).

Test solution. Dissolve 10.0 mg of the substance to be examined in *water R* and dilute to 10.0 ml with the same solvent.

Reference solution (a). Dissolve 10.0 mg of *calcium folinate CRS* in *water R* and dilute to 10.0 ml with the same solvent.

Reference solution (b). Dilute 1.0 ml of reference solution (a) to 100.0 ml with *water R*.

Reference solution (c). Dissolve 10.0 mg of *formylfolic acid CRS* in the mobile phase and dilute to 100.0 ml with the mobile phase. Dilute 1.0 ml of this solution to 10.0 ml with *water R*.

Reference solution (d). Dilute 1.0 ml of reference solution (b) to 20.0 ml with *water R*.

Reference solution (e). Dilute 5.0 ml of reference solution (c) to 10.0 ml with reference solution (b).

Column:

– *size*: *l* = 0.25 m, Ø = 4 mm;

– *stationary phase*: *octadecylsilyl silica gel for chromatography R* (5 µm);

– *temperature*: 40 °C.

Mobile phase: mix 220 ml of *methanol R* and 780 ml of a solution containing 2.0 ml of *tetrabutylammonium hydroxide solution (400 g/l) R* and 2.2 g of *disodium hydrogen phosphate R* previously adjusted to pH 7.8 with *phosphoric acid R*. If necessary adjust the concentration of *methanol R* to achieve the prescribed resolution.

Flow rate: 1 ml/min.

Detection: spectrophotometer at 280 nm.

Injection: 10 µl.

Run time: 2.5 times the retention time of the principal peak in the chromatogram obtained with the test solution.

System suitability: reference solution (e):

– *resolution*: minimum of 2.2 between the peaks due to folinate and to impurity D.

Limits:

– *impurity D*: not more than 0.8 times the area of the principal peak in the chromatogram obtained with reference solution (c) (0.8 per cent);

– *any other impurity*: not more than 0.8 times the area of the principal peak in the chromatogram obtained with reference solution (b) (0.8 per cent);

– *sum of other impurities*: not more than twice the area of the principal peak in the chromatogram obtained with reference solution (b) (2.0 per cent);

– *disregard limit*: area of the principal peak in the chromatogram obtained with reference solution (d) (0.05 per cent).

Impurity H. Liquid chromatography (*2.2.29*): use the normalisation procedure.

Test solution. Dissolve 50.0 mg of the substance to be examined in *water R* and dilute to 100.0 ml with the same solvent.

Reference solution (a). Dissolve 10.0 mg of *calcium folinate CRS* in *water R* and dilute to 20.0 ml with the same solvent.

Reference solution (b). Dilute 1.0 ml of reference solution (a) to 100.0 ml with *water R*.

Column:

– *size*: *l* = 0.15 m, Ø = 4 mm;

– *stationary phase*: *human albumin coated silica gel for chromatography R* (5 µm);

– *temperature*: 40 °C.

Mobile phase: dissolve 9.72 g of *sodium dihydrogen phosphate R* in 890 ml of *water R* and adjust to pH 5.0 with *sodium hydroxide solution R*; add 100 ml of *2-propanol R* and 10 ml of *acetonitrile R*.

Flow rate: 1 ml/min.

Detection: spectrophotometer at 286 nm.

Injection: 10 µl.

Retention times: levofolinate = about 9 min; impurity H = about 19 min.

System suitability:

– *resolution*: minimum of 5.0 between the peaks due to levofolinate and to impurity H in the chromatogram obtained with reference solution (a). The sum of the areas of the 2 peaks is 100 per cent. The peak area of impurity H is 48 per cent to 52 per cent. In the chromatogram obtained with reference solution (b) 2 clearly visible peaks are obtained.

Limit:

– *impurity H*: maximum 0.5 per cent.

Chlorides: maximum 0.5 per cent.

Dissolve 0.300 g in 50 ml of *water R* heating at 40 °C if necessary. Add 10 ml of *2 M nitric acid* and titrate with *0.005 M silver nitrate* determining the end-point potentiometrically (*2.2.20*).

1 ml of *0.005 M silver nitrate* is equivalent to 0.177 mg of Cl.

Platinum: maximum 10.0 ppm.

Atomic absorption spectrometry (*2.2.23, Method II*).

Test solution. Dissolve 1.0 g in *water R* and dilute to 100.0 ml with the same solvent.

Reference solutions. Prepare the reference solutions using *platinum standard solution (30 ppm Pt) R*, diluted as necessary with a mixture of 1 volume of *nitric acid R* and 99 volumes of *water R*.

Source: platinum hollow-cathode lamp.

Wavelength: 265.9 nm.

Heavy metals (*2.4.8*): maximum 50 ppm.

1.0 g complies with test F. Prepare the reference solution using 5 ml of *lead standard solution (10 ppm Pb) R*.

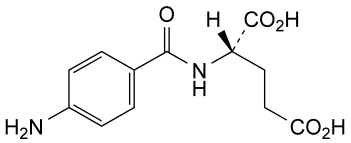
Water (*2.5.12*): 10.0 per cent to 17.0 per cent, determined on 0.200 g (ground to a very fine powder). Stir the substance to be examined in the titration solvent for about 15 min before titrating and use *iodosulphurous reagent R* as titrant.

Bacterial endotoxins (*2.6.14*): less than 0.5 IU/mg, if intended for use in the manufacture of parenteral dosage forms without a further appropriate procedure for the removal of bacterial endotoxins.

ASSAY

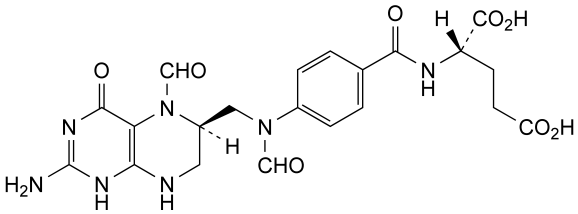
Calcium. Dissolve 0.400 g in 150 ml of *water R* and dilute to 300 ml with the same solvent. Carry out the complexometric titration of calcium (*2.5.11*).

1 ml of *0.1 M sodium edetate* is equivalent to 4.008 mg of Ca.



Calcium folinate. Liquid chromatography (*2.2.29*) as described in the test for related substances.

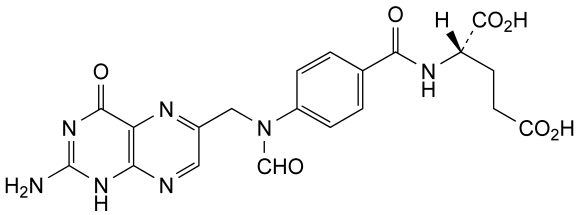
Calculate the percentage content of $C_{20}H_{21}CaN_7O_7$ from the areas of the peaks in the chromatograms obtained with the test solution and reference solution (a) and the declared content of *calcium folinate CRS*.



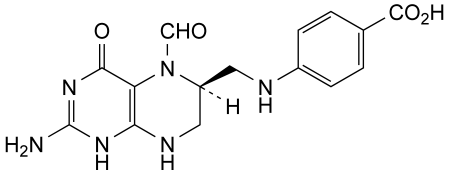
STORAGE

In an airtight container, protected from light. If the substance is sterile, store in a sterile, airtight, tamper-proof container.

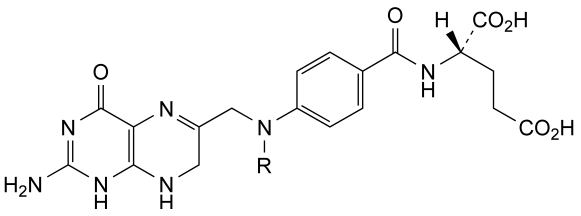
IMPURITIES



A. (2*S*)-2-[(4-aminobenzoyl)amino]pentanedioic acid,

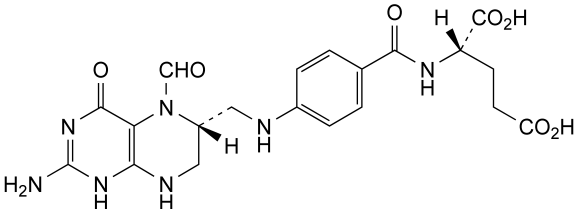


B. (2*S*)-2-[[4-[[[(6*R*)-2-amino-5-formyl-4-oxo-1,4,5,6,7,8-hexahydropteridin-6-yl]methyl]formylamino]benzoyl]amino]pentanedioic acid (5,10-diformyltetrahydrofolic acid),



C. folic acid,

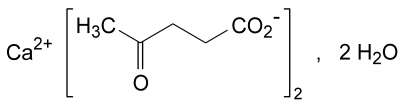
D. (2*S*)-2-[[4-[[(2-amino-4-oxo-1,4-dihydropteridin-6-yl)methyl]formylamino]benzoyl]amino]pentanedioic acid (10-formylfolic acid),



E. 4-[[[(6*S*)-2-amino-5-formyl-4-oxo-1,4,5,6,7,8-hexahydropteridin-6-yl]methyl]amino]benzoic acid (5-formyltetrahydropteroic acid),

F. R = CHO: (2*S*)-2-[[4-[[(2-amino-4-oxo-1,4,7,8-tetrahydropteridin-6-yl)methyl]formylamino]benzoyl]amino]pentanedioic acid (10-formyldihydrofolic acid),

G. R = H: (2*S*)-2-[[4-[[(2-amino-4-oxo-1,4,7,8-tetrahydropteridin-6-yl)methyl]amino]benzoyl]amino]pentanedioic acid (dihydrofolic acid),



H. (2*S*)-2-[[4-[[[(6*R*)-2-amino-5-formyl-4-oxo-1,4,5,6,7,8-hexahydropteridin-6-yl]methyl]amino]benzoyl]amino]pentanedioic acid.

CALCIUM LEVULINATE DIHYDRATE

Calcii laevulinas dihydricus

$C_{10}H_{14}CaO_6,2H_2O$ M_r 306.3
[5743-49-7]

DEFINITION

Calcium di(4-oxopentanoate) dihydrate.

Content: 98.0 per cent to 101.0 per cent (dried substance).

CHARACTERS

Appearance: white or almost white, crystalline powder.

Solubility: freely soluble in water, very slightly soluble in ethanol (96 per cent), practically insoluble in methylene chloride.

IDENTIFICATION

First identification: A, D, E.

Second identification: B, C, D, E.

A. Infrared absorption spectrophotometry (*2.2.24*).

Comparison: *calcium levulinate dihydrate CRS*.

B. Thin-layer chromatography (*2.2.27*).

Test solution. Dissolve 60 mg of the substance to be examined in *water R* and dilute to 1 ml with the same solvent.

Reference solution. Dissolve 60 mg of *calcium levulinate dihydrate CRS* in *water R* and dilute to 1 ml with the same solvent.

Plate: *TLC silica gel plate R*.

Mobile phase: *concentrated ammonia R, ethyl acetate R, water R, ethanol (96 per cent) R* (10:10:30:50 *V/V/V/V*).

Application: 10 µl.

Development: over a path of 10 cm.

Drying: at 100-105 °C for 20 min and allow to cool.

Detection: spray with a 30 g/l solution of *potassium permanganate R*. Dry in a current of warm air for about 5 min or until the spots become yellow. Examine in daylight.

Results: the principal spot in the chromatogram obtained with the test solution is similar in position, colour and size to the principal spot in the chromatogram obtained with the reference solution.

C. To 1 ml of solution S (see Tests), add 20 ml of a 2.5 g/l solution of *dinitrophenylhydrazine R* in *dilute hydrochloric acid R*. Allow to stand for 15 min. Filter, wash the precipitate with *water R*. Dry the precipitate in an oven at 100-105 °C. The melting point (*2.2.14*) is 203 °C to 210 °C.

D. It gives reaction (b) of calcium (*2.3.1*).

E. Loss on drying (see Tests).

TESTS

Solution S. Dissolve 10.0 g in *carbon dioxide-free water R* prepared from *distilled water R* and dilute to 100.0 ml with the same solvent.

Appearance of solution. Solution S is clear (*2.2.1*) and not more intensely coloured than reference solution Y_6 (*2.2.2, Method II*).

pH (*2.2.3*): 6.8 to 7.8 for solution S.

Oxidisable substances. To 1 ml of solution S, add 10 ml of *water R*, 1 ml of *dilute sulphuric acid R* and 0.25 ml of a 3.0 g/l solution of *potassium permanganate R*. Mix. After 5 min, the violet colour of the mixture is still visible.

Sucrose and reducing sugars. To 5 ml of solution S add 2 ml of *hydrochloric acid R1* and dilute to 10 ml with *water R*. Heat to boiling for 5 min and allow to cool. Add 10 ml of *sodium carbonate solution R*. Allow to stand for 5 min, dilute to 25 ml with *water R* and filter. To 5 ml of the filtrate add 2 ml of *cupri-tartaric solution R* and heat to boiling for 1 min. No red precipitate is formed.

Chlorides (*2.4.4*): maximum 50 ppm.

Dilute 10 ml of solution S to 15 ml with *water R*.

Sulphates (*2.4.13*): maximum 200 ppm.

Dilute 7.5 ml of solution S to 15 ml with *distilled water R*.

Magnesium and alkali metals: maximum 1.0 per cent.

To 10 ml of solution S, add 80 ml of *water R*, 10 ml of *ammonium chloride solution R* and 1 ml of *ammonia R*. Heat to boiling. To the boiling solution, add dropwise 50 ml of warm *ammonium oxalate solution R*. Allow to stand for 4 h, then dilute to 200 ml with *water R* and filter. To 100 ml of the filtrate, add 0.5 ml of *sulphuric acid R*. Evaporate to dryness on a water-bath and ignite to constant mass at 600 ± 50 °C. The residue weighs a maximum of 5.0 mg.

Heavy metals (*2.4.8*): maximum 10 ppm.

12 ml of solution S complies with test A. Prepare the reference solution using *lead standard solution (1 ppm Pb) R*.

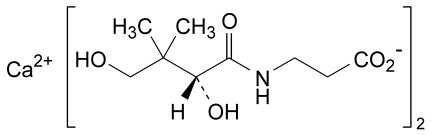
Loss on drying (*2.2.32*): 11.0 per cent to 12.5 per cent, determined on 0.200 g by drying at 105 °C.

Pyrogens (*2.6.8*). If intended for use in the manufacture of parenteral dosage forms without a further appropriate procedure for the removal of pyrogens, it complies with the test for pyrogens. Inject per kilogram of the rabbit's mass 4 ml of a solution containing per millilitre 50 mg of the substance to be examined.

ASSAY

Dissolve 0.240 g in 50 ml of *water R*. Carry out the complexometric titration of calcium (*2.5.11*).

1 ml of *0.1 M sodium edetate* is equivalent to 27.03 mg of $C_{10}H_{14}CaO_6$.



STORAGE

Protected from light.

corrected 6.0

CALCIUM PANTOTHENATE

Calcii pantothenas

$C_{18}H_{32}CaN_2O_{10}$ M_r 476.5
[137-08-6]

DEFINITION

Calcium pantothenate contains not less than 98.0 per cent and not more than the equivalent of 101.0 per cent of calcium bis[3-[[(2*R*)-2,4-dihydroxy-3,3-dimethylbutanoyl]amino]propanoate], calculated with reference to the dried substance.

CHARACTERS

A white or almost white powder, slightly hygroscopic, freely soluble in water, slightly soluble in alcohol.

IDENTIFICATION

A. It complies with the test for specific optical rotation (see Tests).

B. Examine the chromatograms obtained in the test for 3-aminopropionic acid. The principal spot in the chromatogram obtained with test solution (b) is similar in position, colour and size to the principal spot in the chromatogram obtained with reference solution (a).

C. To 1 ml of solution S (see Tests) add 1 ml of *dilute sodium hydroxide solution R* and 0.1 ml of *copper sulphate solution R*. A blue colour develops.

D. It gives reaction (a) of calcium (*2.3.1*).

TESTS

Solution S. Dissolve 2.50 g in *carbon dioxide-free water R* and dilute to 50.0 ml with the same solvent.

Appearance of solution. Solution S is clear (*2.2.1*) and colourless (*2.2.2, Method II*).

pH (*2.2.3*). The pH of solution S is 6.8 to 8.0.

Specific optical rotation (*2.2.7*): + 25.5 to + 27.5, determined on solution S and calculated with reference to the dried substance.

3-Aminopropionic acid. Examine by thin-layer chromatography (*2.2.27*), using *silica gel G R* as the coating substance.

Test solution (a). Dissolve 0.2 g of the substance to be examined in *water R* and dilute to 5 ml with the same solvent.

Test solution (b). Dilute 1 ml of test solution (a) to 10 ml with *water R*.

Reference solution (a). Dissolve 20 mg of *calcium pantothenate CRS* in *water R* and dilute to 5 ml with the same solvent.

Reference solution (b). Dissolve 10 mg of *3-aminopropionic acid R* in *water R* and dilute to 50 ml with the same solvent.

Apply separately to the plate 5 µl of each solution. Develop over a path of 12 cm using a mixture of 35 volumes of *water R* and 65 volumes of *ethanol R*. Dry the plate in a current of air and spray with *ninhydrin solution R1*. Heat at 110 °C for 10 min. Any spot corresponding to 3-aminopropionic acid in the chromatogram obtained with test solution (a) is not more intense than the spot in the chromatogram obtained with reference solution (b) (0.5 per cent).

Chlorides (*2.4.4*). 5 ml of solution S diluted to 15 ml with *water R* complies with the limit test for chlorides (200 ppm).

Heavy metals (*2.4.8*). 12 ml of solution S complies with limit test A for heavy metals (20 ppm). Prepare the standard using *lead standard solution (1 ppm Pb) R*.

Loss on drying (*2.2.32*). Not more than 3.0 per cent, determined on 1.000 g by drying in an oven at 105 °C.

ASSAY

Dissolve 0.180 g in 50 ml of *anhydrous acetic acid R*. Titrate with *0.1 M perchloric acid* determining the end-point potentiometrically (*2.2.20*).

1 ml of *0.1 M perchloric acid* is equivalent to 23.83 mg of $C_{18}H_{32}CaN_2O_{10}$.

STORAGE

Store in an airtight container.

01/2008:1052
corrected 6.0

CALCIUM PHOSPHATE

Tricalcii phosphas

DEFINITION

Mixture of calcium phosphates.

Content: 35.0 per cent to 40.0 per cent of Ca (A_r 40.08).

CHARACTERS

Appearance: white or almost white powder.

Solubility: practically insoluble in water. It dissolves in dilute hydrochloric acid and in dilute nitric acid.

IDENTIFICATION

A. Dissolve 0.1 g in 5 ml of a 25 per cent *V/V* solution of *nitric acid R*. The solution gives reaction (b) of phosphates (*2.3.1*).

B. It gives reaction (b) of calcium (*2.3.1*). Filter before adding *potassium ferrocyanide solution R*.

C. It complies with the limits of the assay.

TESTS

Solution S. Dissolve 2.50 g in 20 ml of *dilute hydrochloric acid R*. If the solution is not clear, filter it. Add *dilute ammonia R1* dropwise until a precipitate is formed. Dissolve the precipitate by adding *dilute hydrochloric acid R* and dilute to 50 ml with *distilled water R*.

Chlorides (*2.4.4*): maximum 0.15 per cent.

Dissolve 0.22 g in a mixture of 1 ml of *nitric acid R* and 10 ml of *water R* and dilute to 100 ml with *water R*.

Fluorides: maximum 75 ppm.

Potentiometry (*2.2.36, Method II*).

Test solution. Dissolve 0.250 g in *0.1 M hydrochloric acid,* add 5.0 ml of *fluoride standard solution (1 ppm F) R* and dilute to 50.0 ml with *0.1 M hydrochloric acid.* To 20.0 ml of this solution add 20.0 ml of *total-ionic-strength-adjustment buffer R* and 3 ml of an 82 g/l solution of *anhydrous sodium acetate R*. Adjust to pH 5.2 with *ammonia R* and dilute to 50.0 ml with *distilled water R*.

Reference solution. Fluoride standard solution (10 ppm F) R.

Indicator electrode: fluoride-selective.

Reference electrode: silver-silver chloride.

Carry out the measurements on the test solution, then add at least 3 quantities, each of 0.5 ml, of the reference solution, carrying out a measurement after each addition. Calculate the concentration of fluorides using the calibration curve, taking into account the addition of fluoride to the test solution.

Sulphates (*2.4.13*): maximum 0.5 per cent.

Dilute 1 ml of solution S to 25 ml with *distilled water R*.

Arsenic (*2.4.2, Method A*): maximum 4 ppm, determined on 5 ml of solution S.

Iron (*2.4.9*): maximum 400 ppm.

Dilute 0.5 ml of solution S to 10 ml with *water R*.

Heavy metals (*2.4.8*): maximum 30 ppm.

Dilute 13 ml of solution S to 20 ml with *water R*. 12 ml of the solution complies with test A. Prepare the reference solution using *lead standard solution (1 ppm Pb) R*.

Acid-insoluble matter: maximum 0.2 per cent.

Dissolve 5.0 g in a mixture of 10 ml of *hydrochloric acid R* and 30 ml of *water R*. Filter, wash the residue with *water R* and dry to constant mass at 100-105 °C. The residue weighs a maximum of 10 mg.

Loss on ignition: maximum 8.0 per cent, determined on 1.000 g by ignition at 800 ± 50 °C for 30 min.

ASSAY

Dissolve 0.200 g in a mixture of 1 ml of *hydrochloric acid R1* and 5 ml of *water R*. Add 25.0 ml of *0.1 M sodium edetate* and dilute to 200 ml with *water R*. Adjust to about pH 10 with *concentrated ammonia R*. Add 10 ml of *ammonium chloride buffer solution pH 10.0 R* and a few milligrams of *mordant black 11 triturate R*. Titrate the excess sodium edetate with *0.1 M zinc sulphate* until the colour changes from blue to violet.

1 ml of *0.1 M sodium edetate* is equivalent to 4.008 mg of Ca.

01/2008:0882
corrected 6.0

CALCIUM STEARATE

Calcii stearas

DEFINITION

Mixture of calcium salts of different fatty acids consisting mainly of stearic (octadecanoic) acid [$(C_{17}H_{35}COO)_2Ca$; M_r 607] and palmitic (hexadecanoic) acid [$(C_{15}H_{31}COO)_2Ca$; M_r 550.9] with minor proportions of other fatty acids.

Content:

– *calcium*: 6.4 per cent to 7.4 per cent (A_r 40.08) (dried substance),
– *stearic acid in the fatty acid fraction*: minimum 40.0 per cent,
– *sum of stearic acid and palmitic acid in the fatty acid fraction*: minimum 90.0 per cent.

CHARACTERS

Appearance: fine, white or almost white, crystalline powder.

Solubility: practically insoluble in water and in ethanol (96 per cent).

IDENTIFICATION

First identification: C, D.

Second identification: A, B, D.

A. Freezing point (*2.2.18*): minimum 53 °C, for the residue obtained in the preparation of solution S (see Tests).

B. Acid value (*2.5.1*): 195 to 210.
Dissolve 0.200 g of the residue obtained in the preparation of solution S in 25 ml of the prescribed mixture of solvents.

C. Examine the chromatograms obtained in the test for fatty acid composition.
Results: the retention times of the principal peaks in the chromatogram obtained with the test solution are approximately the same as those of the principal peaks in the chromatogram obtained with the reference solution.

D. Neutralise 5 ml of solution S to *red litmus paper R* using *strong sodium hydroxide solution R*. The solution gives reaction (b) of calcium (*2.3.1*).

TESTS

Solution S. To 5.0 g add 50 ml of *peroxide-free ether R*, 20 ml of *dilute nitric acid R* and 20 ml of *distilled water R*. Boil under a reflux condenser until dissolution is complete. Allow to cool. In a separating funnel, separate the aqueous layer and shake the ether layer with 2 quantities, each of 5 ml, of *distilled water R*. Combine the aqueous layers, wash with 15 ml of *peroxide-free ether R* and dilute the aqueous layer to 50 ml with *distilled water R* (solution S). Evaporate the ether layer to dryness and dry the residue at 100-105 °C. Keep the residue for identification tests A and B.

Acidity or alkalinity. To 1.0 g add 20 ml of *carbon dioxide-free water R* and boil for 1 min with continuous shaking. Cool and filter. To 10 ml of the filtrate add 0.05 ml of *bromothymol blue solution R1*. Not more than 0.5 ml of *0.01 M hydrochloric acid* or *0.01 M sodium hydroxide* is required to change the colour of the indicator.

Chlorides (*2.4.4*): maximum 0.1 per cent.

Dilute 0.5 ml of solution S to 15 ml with *water R*.

Sulphates (*2.4.13*): maximum 0.3 per cent.

Dilute 0.5 ml of solution S to 15 ml with *distilled water R*.

Cadmium: maximum 3.0 ppm.

Atomic absorption spectrometry (*2.2.23, Method II*).

Test solution. Place 50.0 mg in a polytetrafluoroethylene digestion bomb and add 0.5 ml of a mixture of 1 volume of *hydrochloric acid R* and 5 volumes of *cadmium- and lead-free nitric acid R*. Allow to digest at 170 °C for 5 h. Allow to cool. Dissolve the residue in *water R* and dilute to 5.0 ml with the same solvent.

Reference solutions. Prepare the reference solutions using *cadmium standard solution (10 ppm Cd) R*, diluted if necessary with a 1 per cent *V/V* solution of *hydrochloric acid R*.

Source: cadmium hollow-cathode lamp.

Wavelength: 228.8 nm.

Atomisation device: graphite furnace.

Lead: maximum 10.0 ppm.

Atomic absorption spectrometry (*2.2.23, Method II*).

Test solution. Use the solution described in the test for cadmium.

Reference solutions. Prepare the reference solutions using *lead standard solution (10 ppm Pb) R*, diluted if necessary with *water R*.

Source: lead hollow-cathode lamp.

Wavelength: 283.3 nm; 217.0 nm may be used depending on the apparatus.

Atomisation device: graphite furnace.

Nickel: maximum 5.0 ppm.

Atomic absorption spectrometry (*2.2.23, Method II*).

Test solution. Use the solution described in the test for cadmium.

Reference solutions. Prepare the reference solutions using *nickel standard solution (10 ppm Ni) R*, diluted if necessary with *water R*.

Source: nickel hollow-cathode lamp.

Wavelength: 232.0 nm.

Atomisation device: graphite furnace.

Loss on drying (*2.2.32*): maximum 6.0 per cent, determined on 1.000 g by drying in an oven at 105 °C.

Microbial contamination. Total viable aerobic count (*2.6.12*) not more than 10^3 micro-organisms per gram, determined by plate count. It complies with the test for *Escherichia coli* (*2.6.13*).

ASSAY

Calcium. To 0.500 g in a 250 ml conical flask add 50 ml of a mixture of equal volumes of *butanol R* and *anhydrous ethanol R*, 5 ml of *concentrated ammonia R*, 3 ml of *ammonium chloride buffer solution pH 10.0 R*, 30.0 ml of *0.1 M sodium edetate* and 15 mg of *mordant black 11 triturate R*. Heat to 45-50 °C until the solution is clear. Cool and titrate with *0.1 M zinc sulphate* until the colour changes from blue to violet. Carry out a blank titration.

1 ml of *0.1 M sodium edetate* is equivalent to 4.008 mg of Ca.

Composition of fatty acids. Gas chromatography (*2.2.28*): use the normalisation procedure.

Test solution. In a conical flask fitted with a reflux condenser, dissolve 0.10 g of the substance to be examined in 5 ml of *boron trifluoride-methanol solution R*. Boil under a reflux condenser for 10 min. Add 4 ml of *heptane R* through the condenser. Boil under a reflux condenser for 10 min. Allow to cool. Add 20 ml of a *saturated sodium chloride solution R*. Shake and allow the layers to separate. Remove about 2 ml of the organic layer and dry over 0.2 g of

anhydrous sodium sulphate R. Dilute 1.0 ml of the solution to 10.0 ml with *heptane R*.

Reference solution. Prepare the reference solution in the same manner as the test solution using 50.0 mg of *palmitic acid CRS* and 50.0 mg of *stearic acid CRS* instead of calcium stearate.

Column:

– *material*: fused silica,
– *size*: *l* = 30 m, Ø = 0.32 mm,
– *stationary phase*: *macrogol 20 000 R* (film thickness 0.5 µm).

Carrier gas: *helium for chromatography R*.

Flow rate: 2.4 ml/min.

Temperature:

	Time (min)	Temperature (°C)
Column	0 - 2	70
	2 - 36	70 → 240
	36 - 41	240
Injection port		220
Detector		260

Detection: flame ionisation.

Injection: 1 µl.

Relative retention with reference to methyl stearate: methyl palmitate = about 0.88.

System suitability: reference solution:

– *resolution*: minimum 5.0 between the peaks due to methyl stearate and methyl palmitate.

Calculate the content of palmitic acid and stearic acid. Disregard the peak due to the solvent.

Acidity or alkalinity. Shake 1.5 g with 15 ml of *carbon dioxide-free water R* for 5 min. Allow to stand for 5 min and filter. To 10 ml of the filtrate add 0.1 ml of *phenolphthalein solution R* and 0.25 ml of *0.01 M sodium hydroxide*. The solution is red. Add 0.30 ml of *0.01 M hydrochloric acid*. The solution is colourless. Add 0.2 ml of *methyl red solution R*. The solution is reddish-orange.

Chlorides (*2.4.4*): maximum 300 ppm.

Shake 0.5 g with 15 ml of *water R* for 5 min. Allow to stand for 15 min and filter. Dilute 5 ml of the filtrate to 15 ml with *water R*.

Arsenic (*2.4.2, Method A*): maximum 10 ppm, determined on 5 ml of solution S.

Iron (*2.4.9*): maximum 100 ppm.

To 0.25 g add a mixture of 5 ml of *hydrochloric acid R* and 20 ml of *water R*. Heat to boiling, cool and filter.

Heavy metals (*2.4.8*): maximum 20 ppm.

To 2.5 g add a mixture of 2 ml of *hydrochloric acid R* and 15 ml of *water R*. Heat to boiling. Cool and then add 0.5 ml of *phenolphthalein solution R*. Cautiously add *concentrated ammonia R* until the colour changes to pink. Add 0.5 ml of *glacial acetic acid R* and dilute to 25 ml with *water R*. Filter. 12 ml of the filtrate complies with test A. Prepare the reference solution using *lead standard solution (2 ppm Pb) R*.

Loss on ignition: 18.0 per cent to 22.0 per cent, determined on 1.000 g by ignition to constant mass at 800 ± 50 °C.

ASSAY

Dissolve 0.150 g in 120 ml of *water R*. Carry out the complexometric titration of calcium (*2.5.11*).

1 ml of *0.1 M sodium edetate* is equivalent to 17.22 mg of $CaSO_4,2H_2O$.

01/2008:0982
corrected 6.0

CALCIUM SULPHATE DIHYDRATE

Calcii sulfas dihydricus

$CaSO_4,2H_2O$ M_r 172.2
[10101-41-4]

DEFINITION

Content: 98.0 per cent to 102.0 per cent of $CaSO_4,2H_2O$.

CHARACTERS

Appearance: white or almost white fine powder.

Solubility: very slightly soluble in water, practically insoluble in ethanol (96 per cent).

IDENTIFICATION

A. Loss on ignition (see Tests).
B. Solution S (see Tests) gives reaction (a) of sulphates (*2.3.1*).
C. Solution S gives reaction (a) of calcium (*2.3.1*).

TESTS

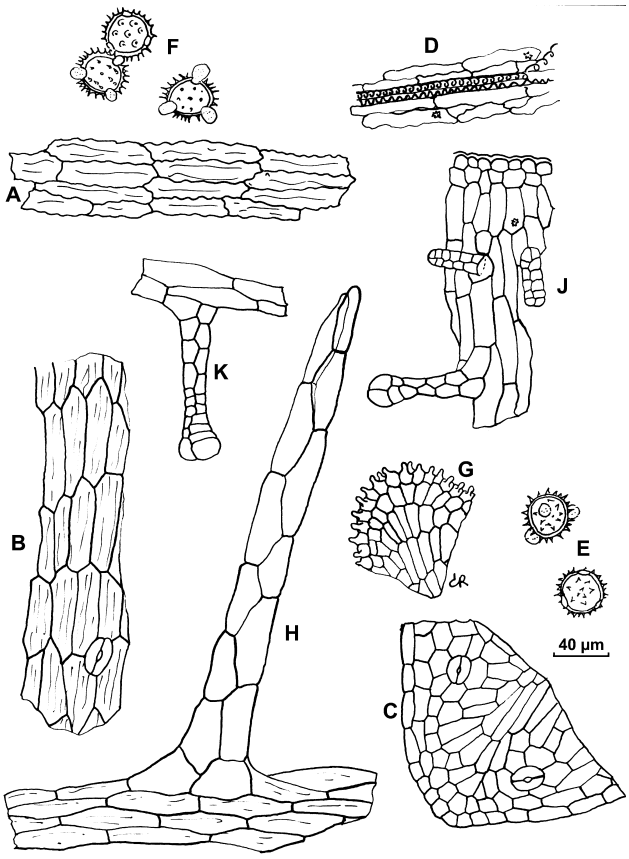
Solution S. Dissolve 1.0 g in 50 ml of a 10 per cent *V/V* solution of *hydrochloric acid R* by heating at 50 °C for 5 min. Allow to cool.

01/2008:1297

CALENDULA FLOWER

Calendulae flos

DEFINITION



Whole or cut, dried, and fully opened flowers that have been detached from the receptacle of the cultivated, double-flowered varieties of *Calendula officinalis* L.

Content: minimum 0.4 per cent of flavonoids, expressed as hyperoside ($C_{21}H_{20}O_{12}$; M_r 464.4) (dried drug).

IDENTIFICATION

A. The ligulate florets consist of a yellow or orange-yellow ligule, about 3-5 mm wide and about 7 mm in the middle part, with a 3-toothed apex and a hairy, partly sickle-shaped, yellowish-brown or orange-brown tube with a projecting style and a bifid stigma occasionally with a partly bent yellowish-brown or orange-brown ovary. The tubular florets, about 5 mm long, are present and consist of the yellow, orange-red or reddish-violet 5-lobed corolla and the yellowish-brown or orange-brown tube, hairy in its lower part, mostly with a partly bent yellowish-brown or orange-brown ovary.
B. Reduce to a powder (355) (*2.9.12*). The powder is yellowish-brown. Examine under a microscope using *chloral hydrate solution R*. The powder shows the following diagnostic characters: fragments of the corollas containing light yellow oil droplets, some with fairly

large anomocytic stomata (*2.8.3*), others containing prisms and very small cluster crystals of calcium oxalate; covering trichomes biseriate, multicellular and conical, and glandular trichomes with a uniseriate or biseriate, multicellular stalk and a large, ovoid, biseriate and multicellular head; spherical pollen grains up to about 40 µm in diameter with a sharply spiny exine and 3 germinal pores; occasional fragments of the stigmas with short, bulbous papillae.

A and B. Epidermis of the corolla	G. Fragment of the stigma
C. Epidermis at the apex of the corolla showing anomocytic stomata	H. Covering trichome (usually only fragments observed)
D. Fragments of vessel tissue attached to parenchyma cells containing cluster crystals of calcium oxalate	J. Cells from the base of the corolla and glandular trichomes
E and F. Pollen grains	K. Glandular trichome

Figure 1297.-1. – *Illustration of powdered herbal drug of calendula flower (see Identification B)*

C. Thin-layer chromatography (*2.2.27*).

Test solution. Mix 1.0 g of the powdered drug (500) (*2.9.12*) and 10 ml of *methanol R* and heat on a water-bath under a reflux condenser for 10 min. Cool and filter.

Reference solution. Dissolve 1.0 mg of *caffeic acid R*, 1.0 mg of *chlorogenic acid R* and 2.5 mg of *rutin R* in 10 ml of *methanol R*.

Plate: *TLC silica gel plate R*.

Mobile phase: *anhydrous formic acid R, water R, ethyl acetate R* (10:10:80 *V/V/V*).

Application: 20 µl of the test solution and 10 µl of the reference solution, as bands.

Development: over a path of 10 cm.

Drying: at 100-105 °C.

Detection: spray the still-warm plate with a 10 g/l solution of *diphenylboric acid aminoethyl ester R* in *methanol R* and then spray with a 50 g/l solution of *macrogol 400 R* in *methanol R*; allow to dry in air for 30 min and examine in ultraviolet light at 365 nm.

Results: the chromatogram obtained with the reference solution shows in the lower part a yellowish-brown fluorescent zone (rutin), in the middle part a light bluish fluorescent zone (chlorogenic acid) and in the upper part a light bluish fluorescent zone (caffeic acid). The chromatogram obtained with the test solution shows a yellowish-brown fluorescent zone corresponding in position to the zone due to rutin in the chromatogram obtained with the reference solution, below and directly above it, it shows a yellowish-green fluorescent zone and a light bluish fluorescent zone corresponding to the zone due to chlorogenic acid in the chromatogram obtained with the reference solution, a yellowish-green fluorescent zone above it and a light bluish fluorescent zone shortly below the zone due to caffeic acid in the chromatogram obtained with the reference solution. Further zones are present.

TESTS

Foreign matter (*2.8.2*): maximum 5 per cent of bracts and maximum 2 per cent of other foreign matter.

Loss on drying (*2.2.32*): maximum 12.0 per cent, determined on 1.000 g of the powdered drug (500) (*2.9.12*) by drying in an oven at 105 °C for 2 h.

Total ash (*2.4.16*): maximum 10.0 per cent.

ASSAY

Stock solution. Into a 100 ml round-bottomed flask introduce 0.800 g of the powdered drug (500) (*2.9.12*), 1 ml of a 5 g/l solution of *hexamethylenetetramine R*, 20 ml of *acetone R* and 7 ml of *hydrochloric acid R1*. Boil the mixture under a reflux condenser for 30 min. Filter the liquid through a plug of absorbent cotton into a 100 ml volumetric flask. Add the absorbent cotton to the residue in the round-bottomed flask and extract with 2 quantities, each of 20 ml, of *acetone R*, each time boiling under a reflux condenser for 10 min. Allow to cool to room temperature, filter the liquid through a plug of absorbent cotton, then filter the combined acetone solution through a filter-paper into the volumetric flask, and dilute to 100.0 ml with *acetone R* by rinsing the flask and filter. Introduce 20.0 ml of this solution into a separating funnel, add 20 ml of *water R* and extract the mixture with 1 quantity of 15 ml and then with 3 quantities, each of 10 ml, of *ethyl acetate R*. Combine the ethyl acetate extracts in a separating funnel, rinse with 2 quantities, each of 50 ml, of *water R*, filter the extract over 10 g of *anhydrous sodium sulphate R* into a 50 ml volumetric flask and dilute to 50.0 ml with *ethyl acetate R*.

Test solution. To 10.0 ml of the stock solution add 1 ml of *aluminium chloride reagent R* and dilute to 25.0 ml with a 5 per cent *V/V* solution of *glacial acetic acid R* in *methanol R*.

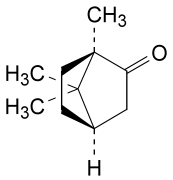
Compensation liquid. Dilute 10.0 ml of the stock solution to 25.0 ml with a 5 per cent *V/V* solution of *glacial acetic acid R* in *methanol R*.

After 30 min, measure the absorbance (*2.2.25*) of the test solution at 425 nm, by comparison with the compensation liquid.

Calculate the percentage content of flavonoids, expressed as hyperoside, using the following expression:

$$\frac{A \times 1.25}{m}$$

i.e. taking the specific absorbance of hyperoside to be 500.



A = absorbance at 425 nm;

m = mass of the drug to be examined, in grams.

01/2008:1400
corrected 6.0

D-CAMPHOR

D-Camphora

$C_{10}H_{16}O$ M_r 152.2
[464-49-3]

DEFINITION

(1*R*,4*R*)-1,7,7-Trimethylbicyclo[2.2.1]heptan-2-one.

CHARACTERS

Appearance: white or almost white, crystalline powder or friable, crystalline masses.

Highly volatile even at room temperature.

Solubility: slightly soluble in water, very soluble in alcohol and in light petroleum, freely soluble in fatty oils, very slightly soluble in glycerol.

IDENTIFICATION

First identification: A, C.

Second identification: A, B, D.

A. Specific optical rotation (see Tests).

B. Melting point (*2.2.14*): 175 °C to 179 °C.

C. Infrared absorption spectrophotometry (*2.2.24*).
Comparison: *racemic camphor CRS.*

D. Dissolve 1.0 g in 30 ml of *methanol R*. Add 1.0 g of *hydroxylamine hydrochloride R* and 1.0 g of *anhydrous sodium acetate R*. Boil under a reflux condenser for 2 h. Allow to cool and add 100 ml of *water R*. Filter, wash the precipitate obtained with 10 ml of *water R* and recrystallise from 10 ml of a mixture of 4 volumes of *alcohol R* and 6 volumes of *water R*. The crystals, dried *in vacuo*, melt (*2.2.14*) at 118 °C to 121 °C.

TESTS

Carry out the weighings and dissolution rapidly.

Solution S. Dissolve 2.50 g in 10 ml of *alcohol R* and dilute to 25.0 ml with the same solvent.

Appearance of solution. Solution S is clear (*2.2.1*) and colourless (*2.2.2, Method II*).

Acidity or alkalinity. To 10 ml of solution S add 0.1 ml of *phenolphthalein solution R1*. The solution is colourless. Not more than 0.2 ml of *0.1 M sodium hydroxide* is required to change the colour of the indicator.

Specific optical rotation (*2.2.7*): + 40.0 to + 43.0, determined on solution S.

Related substances. Gas chromatography (*2.2.28*).

Test solution. Dissolve 2.50 g of the substance to be examined in *heptane R* and dilute to 25.0 ml with the same solvent.

Reference solution (a). Dilute 1.0 ml of the test solution to 100.0 ml with *heptane R*.

Reference solution (b). Dilute 10.0 ml of reference solution (a) to 20.0 ml with *heptane R*.

Reference solution (c). Dissolve 0.50 g of *borneol R* in *heptane R* and dilute to 25.0 ml with the same solvent. Dilute 5.0 ml of the solution to 50.0 ml with *heptane R*.

Reference solution (d). Dissolve 50 mg of *linalol R* and 50 mg of *bornyl acetate R* in *heptane R* and dilute to 100.0 ml with the same solvent.

Column:
- *size*: *l* = 30 m, Ø = 0.25 mm,
- *stationary phase*: *macrogol 20 000 R* (0.25 µm).

Carrier gas: *helium for chromatography R.*

Split ratio: 1:70.

Flow rate: 45 cm/s.

Temperature:

	Time (min)	Temperature (°C)
Column	0 - 10	50
	10 - 35	50 → 100
	35 - 45	100 → 200
	45 - 55	200
Injection port		220
Detector		250

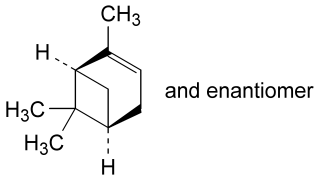
Detection: flame ionisation.

Injection: 1 µl.

System suitability: reference solution (d).
- *resolution*: minimum 3.0 between the peaks due to bornyl acetate and to linalol.

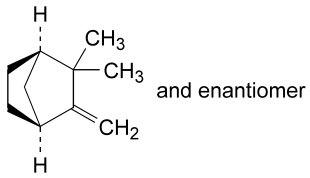
Limits:
- *borneol*: not more than the area of the principal peak in the chromatogram obtained with reference solution (c) (2.0 per cent),
- *any other impurity*: not more than half of the area of the principal peak in the chromatogram obtained with reference solution (a) (0.5 per cent),
- *total of other impurities*: not more than 4 times the area of the principal peak in the chromatogram obtained with reference solution (a) (4.0 per cent),
- *disregard limit*: 0.1 times the area of the principal peak in the chromatogram obtained with reference solution (b) (0.05 per cent).

Halogens: maximum 100 ppm.



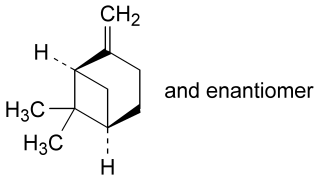
Dissolve 1.0 g in 10 ml of *2-propanol R* in a distillation flask. Add 1.5 ml of *dilute sodium hydroxide solution R* and 50 mg of *nickel-aluminium alloy R*. Heat on a water-bath until the *2-propanol R* has evaporated. Allow to cool and add 5 ml of *water R*. Mix and filter through a wet filter previously washed with *water R* until free from chlorides. Dilute the filtrate to 10.0 ml with *water R*. To 5.0 ml of the solution, add *nitric acid R* dropwise until the precipitate which forms is redissolved and dilute to 15 ml with *water R*. The solution complies with the limit test for chlorides (*2.4.4*).

Residue on evaporation (*2.8.9*): maximum 0.05 per cent.

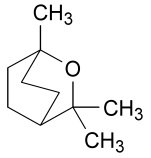


Evaporate 2.0 g on a water-bath and dry in an oven at 100-105 °C for 1 h. The residue weighs a maximum of 1 mg.

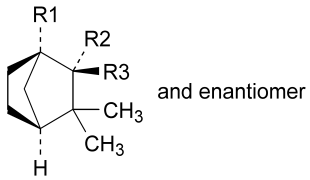
Water. Dissolve 1 g in 10 ml of *light petroleum R*. The solution is clear (*2.2.1*).



IMPURITIES



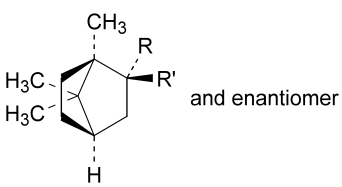
A. 2,6,6-trimethylbicyclo[3.1.1]hept-2-ene (α-pinene),



B. 2,2-dimethyl-3-methylenebicyclo[2.2.1]heptane (camphene),

C. 6,6-dimethyl-2-methylenebicyclo[3.1.1]heptane (β-pinene),

D. 3,3-dimethyl-2-oxabicyclo[2.2.2]octane (cineole),



E. R1 = CH_3, R2 + R3 = O: 1,3,3-trimethylbicyclo[2.2.1]heptan-2-one (fenchone),

F. R1 = CH_3, R2 = OH, R3 = H: *exo*-1,3,3-trimethylbicyclo[2.2.1]heptan-2-ol (fenchol),

G. R1 = H, R2 = OH, R3 = CH_3: *exo*-2,3,3-trimethylbicyclo[2.2.1]heptan-2-ol (camphene hydrate),

H. R1 = H, R2 = CH_3, R3 = OH: *endo*-2,3,3-trimethylbicyclo[2.2.1]heptan-2-ol (methylcamphenilol),

CAMPHOR, RACEMIC

Camphora racemica

$C_{10}H_{16}O$ M_r 152.2
[76-22-2]

DEFINITION

(1*RS*,4*RS*)-1,7,7-Trimethylbicyclo[2.2.1]heptan-2-one.

CHARACTERS

Appearance: white or almost white, crystalline powder or friable, crystalline masses, highly volatile even at room temperature.

Solubility: slightly soluble in water, very soluble in ethanol (96 per cent) and in light petroleum, freely soluble in fatty oils, very slightly soluble in glycerol.

IDENTIFICATION

First identification: A, C.

Second identification: A, B, D.

A. Optical rotation (see Tests).

B. Melting point (*2.2.14*): 172 °C to 180 °C.

C. Infrared absorption spectrophotometry (*2.2.24*).

Preparation: mulls in *liquid paraffin R*.

Comparison: *racemic camphor CRS*.

D. Dissolve 1.0 g in 30 ml of *methanol R*. Add 1.0 g of *hydroxylamine hydrochloride R* and 1.0 g of *anhydrous sodium acetate R*. Boil under a reflux condenser for 2 h. Allow to cool and add 100 ml of *water R*. A precipitate is formed. Filter, wash with 10 ml of *water R* and recrystallize from 10 ml of a mixture of 4 volumes of *ethanol (96 per cent) R* and 6 volumes of *water R*. The crystals, dried *in vacuo*, melt (*2.2.14*) at 118 °C to 121 °C.

TESTS

Carry out the weighings rapidly.

Solution S. Dissolve 2.50 g in 10 ml of *ethanol (96 per cent) R* and dilute to 25.0 ml with the same solvent.

Appearance of solution. Solution S is clear (*2.2.1*) and colourless (*2.2.2, Method II*).

Acidity or alkalinity. Dissolve 1.0 g in 10 ml of *ethanol (96 per cent) R* and add 0.1 ml of *phenolphthalein solution R1*. The solution is colourless. Not more than 0.2 ml of *0.1 M sodium hydroxide* is required to change the colour of the indicator.

Optical rotation (*2.2.7*): – 0.15° to + 0.15°, determined on solution S.

Related substances. Gas chromatography (*2.2.28*).

Test solution. Dissolve 50 mg of the substance to be examined in *hexane R* and dilute to 50.0 ml with the same solvent.

Reference solution (a). Dissolve 50 mg of the substance to be examined and 50 mg of *bornyl acetate R* in *hexane R* and dilute to 50.0 ml with the same solvent.

Reference solution (b). Dilute 1.0 ml of the test solution to 200.0 ml with *hexane R*.

Column:

– *size*: *l* = 2 m, Ø = 2 mm;
– *stationary phase*: *diatomaceous earth for gas chromatography R* impregnated with 10 per cent *m/m* of *macrogol 20 000 R*.

Carrier gas: *nitrogen for chromatography R*.

Flow rate: 30 ml/min.

Temperature:

– *column*: 130 °C;
– *injection port and detector*: 200 °C.

Detection: flame ionisation.

Injection: 1 µl.

Run time: 3 times the retention time of camphor.

System suitability:

– *resolution*: minimum 1.5 between the peaks due to camphor and bornyl acetate in the chromatogram obtained with reference solution (a);
– *signal-to-noise ratio*: minimum 5 for the principal peak in the chromatogram obtained with reference solution (b).

Limits:

– *any impurity*: for each impurity, not more than 2 per cent of the area of the principal peak;
– *total*: not more than 4 per cent of the area of the principal peak;
– *disregard limit*: the area of the principal peak in the chromatogram obtained with reference solution (b).

Halogens: maximum 100 ppm.

Dissolve 1.0 g in 10 ml of *2-propanol R* in a distillation flask. Add 1.5 ml of *dilute sodium hydroxide solution R* and 50 mg of *nickel-aluminium alloy R*. Heat on a water-bath until the *2-propanol R* has evaporated. Allow to cool and add 5 ml of *water R*. Mix and filter through a wet filter previously washed with *water R* until free from chlorides. Dilute the filtrate to 10.0 ml with *water R*. To 5.0 ml of this solution, add *nitric acid R* dropwise until the precipitate which forms is redissolved and dilute to 15 ml with *water R*. The solution complies with the limit test for chlorides (*2.4.4*).

Water. Dissolve 1 g in 10 ml of *light petroleum R*. The solution is clear (*2.2.1*).

Residue on evaporation: maximum 0.05 per cent.

Evaporate 2.0 g on a water-bath and dry at 100-105 °C for 1 h. The residue weighs not more than 1 mg.

01/2008:1401

CAPRYLIC ACID

Acidum caprylicum

$C_8H_{16}O_2$ M_r 144.2
[124-07-2]

DEFINITION

Octanoic acid.

Content: 99.0 per cent to 100.5 per cent (anhydrous substance).

CHARACTERS

Appearance: clear, colourless or slightly yellowish, oily liquid.

Solubility: very slightly soluble in water, very soluble in acetone and in ethanol (96 per cent). It dissolves in dilute solutions of alkali hydroxides.

IDENTIFICATION

A. Relative density (see Tests).
B. Examine the chromatograms obtained in the test for related substances.
   Results: the principal peak in the chromatogram obtained with the test solution is similar in retention time and size to the principal peak in the chromatogram obtained with reference solution (a).

TESTS

Appearance. The substance to be examined is clear (*2.2.1*) and not more intensely coloured than reference solution Y_5 (*2.2.2, Method II*).

Relative density (*2.2.5*): 0.909 to 0.912.

Related substances. Gas chromatography (*2.2.28*): use the normalisation procedure.

Test solution. Dissolve 0.10 g of the substance to be examined in *ethyl acetate R* and dilute to 10.0 ml with the same solvent.

Reference solution (a). Dissolve 0.10 g of *caprylic acid CRS* in *ethyl acetate R* and dilute to 10.0 ml with the same solvent.

Reference solution (b). Dilute 1.0 ml of the test solution to 100.0 ml with *ethyl acetate R*. Dilute 5.0 ml of this solution to 50.0 ml with *ethyl acetate R*.

Column:

– *material*: fused silica;
– *size*: *l* = 30 m, Ø = 0.25 mm;
– *stationary phase*: *macrogol 20 000 2-nitroterephthalate R* (film thickness 0.25 µm).

Carrier gas: *helium for chromatography R*.

Flow rate: 1.5 ml/min.

Split ratio: 1:100.

Temperature:

	Time (min)	Temperature (°C)
Column	0 - 1	100
	1 - 25	100 → 220
	25 - 35	220
Injection port		250
Detector		250

Detection: flame ionisation.

Injection: 1 µl.

System suitability: reference solution (b):

– *signal-to-noise ratio*: minimum 5 for the principal peak.

Limits:

– *any impurity*: for each impurity, maximum 0.3 per cent;
– *total*: maximum 0.5 per cent;
– *disregard limit*: 0.5 times the area of the principal peak in the chromatogram obtained with reference solution (b) (0.05 per cent).

Heavy metals (*2.4.8*): maximum 10 ppm.

Dissolve 2.0 g in *ethanol (96 per cent) R* and dilute to 20 ml with the same solvent. 12 ml of the solution complies with test B. Prepare the reference solution using 1 ml of

lead standard solution (10 ppm Pb) R and 9 ml of *ethanol (96 per cent) R*.

Water (*2.5.12*): maximum 0.7 per cent, determined on 1.000 g.

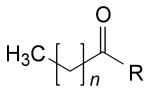
Sulphated ash (*2.4.14*): maximum 0.1 per cent, determined on 1.0 g.

ASSAY

Dissolve 0.125 g in 25 ml of *ethanol (96 per cent) R*. Titrate with *0.1 M sodium hydroxide*, determining the end-point potentiometrically (*2.2.20*).

1 ml of *0.1 M sodium hydroxide* is equivalent to 14.42 mg of $C_8H_{16}O_2$.

IMPURITIES



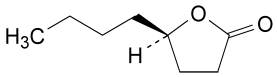
A. n = 4: hexanoic acid,

B. n = 5: heptanoic acid,

C. n = 7: nonanoic acid,

D. n = 8: decanoic acid,

E. valproic acid,



F. R = OCH_3, n = 6: methyl octanoate,

CAPRYLOCAPROYL MACROGOLGLYCERIDES

Macrogolglyceridorum caprylocaprates

DEFINITION

Mixtures of monoesters, diesters and triesters of glycerol and monoesters and diesters of macrogols with a mean relative molecular mass between 200 and 400.

They are obtained by partial alcoholysis of medium-chain triglycerides using macrogol or by esterification of glycerol and macrogol with caprylic (octanoic) acid and capric (decanoic) acid or a mixture of glycerol esters and condensates of ethylene oxide with caprylic acid and capric acid. They may contain free macrogols.

CHARACTERS

Appearance: pale-yellow, oily liquid.

Solubility: dispersible in hot water, freely soluble in methylene chloride.

Density: about 1.0 at 20 °C.

Refractive index: about 1.4 at 20 °C.

IDENTIFICATION

A. Thin-layer chromatography (*2.2.27*).

Test solution. Dissolve 1.0 g of the substance to be examined in *methylene chloride R* and dilute to 20 ml with the same solvent.

Plate: *TLC silica gel plate R*.

Mobile phase: *hexane R, ether R* (30:70 *V/V*).

Application: 50 µl.

Development: over a path of 15 cm.

Drying: in air.

Detection: spray with a 0.1 g/l solution of *rhodamine B R* in *ethanol (96 per cent) R* and examine in ultraviolet light at 365 nm.

Results: the chromatogram shows a spot due to triglycerides with an R_F value of about 0.9 (R_{st} 1) and spots due to 1,3-diglycerides (R_{st} 0.7), to 1,2-diglycerides (R_{st} 0.6), to monoglycerides (R_{st} 0.1) and to esters of macrogol (R_{st} 0).

B. Hydroxyl value (see Tests).

C. Saponification value (see Tests).

D. Composition of fatty acids (see Tests).

TESTS

Viscosity (*2.2.9*). Carry out the determination at 20 ± 0.5 °C.

Ethylene oxide units per molecule (nominal value)	Type of macrogol	Viscosity (mPa·s)
4	200	30 to 50
6	300	60 to 80
8	400	80 to 110

Acid value (*2.5.1*): maximum 2.0, determined on 2.0 g.

Hydroxyl value (*2.5.3, Method A*). Use 1.0 g.

Ethylene oxide units per molecule (nominal value)	Type of macrogol	Hydroxyl value
4	200	80 to 120
6	300	140 to 180
8	400	170 to 205

Peroxide value (*2.5.5, Method A*): maximum 6.0, determined on 2.0 g.

Saponification value (*2.5.6*). Use 2.0 g.

Ethylene oxide units per molecule (nominal value)	Type of macrogol	Saponification value
4	200	265 to 285
6	300	170 to 190
8	400	85 to 105

Alkaline impurities. Introduce 5.0 g into a test-tube and carefully add a mixture, neutralised if necessary with *0.01 M hydrochloric acid* or with *0.01 M sodium hydroxide*, of 0.05 ml of a 0.4 g/l solution of *bromophenol blue R* in *ethanol (96 per cent) R*, 0.3 ml of *water R* and 10 ml of

ethanol (96 per cent) R. Shake and allow to stand. Not more than 1.0 ml of *0.01 M hydrochloric acid* is required to change the colour of the upper layer to yellow.

Free glycerol: maximum 5.0 per cent.

Dissolve 1.20 g in 25.0 ml of *methylene chloride R*. Heat if necessary. After cooling, add 100 ml of *water R*. Shake and add 25.0 ml of *periodic acetic acid solution R*. Shake and allow to stand for 30 min. Add 40 ml of a 75 g/l solution of *potassium iodide R*. Allow to stand for 1 min. Add 1 ml of *starch solution R*. Titrate the iodine with *0.1 M sodium thiosulphate*. Carry out a blank titration.

1 ml of *0.1 M sodium thiosulphate* is equivalent to 2.3 mg of glycerol.

Composition of fatty acids (*2.4.22, Method A*).

Composition of the fatty-acid fraction of the substance:

- *caproic acid*: maximum 2.0 per cent;
- *caprylic acid*: 50.0 per cent to 80.0 per cent;
- *capric acid*: 20.0 per cent to 50.0 per cent;
- *lauric acid*: maximum 3.0 per cent;
- *myristic acid*: maximum 1.0 per cent.

Ethylene oxide and dioxan (*2.4.25*): maximum 1 ppm of ethylene oxide and maximum 10 ppm of dioxan.

Heavy metals (*2.4.8*): maximum 10 ppm.

2.0 g complies with test C. Prepare the reference solution using 2 ml of *lead standard solution (10 ppm Pb) R*.

Water (*2.5.12*): maximum 1.0 per cent, determined on 1.0 g. Use a mixture of 30 volumes of *anhydrous methanol R* and 70 volumes of *methylene chloride R* as solvent.

Total ash (*2.4.16*): maximum 0.1 per cent.

LABELLING

The label states the type of macrogol used (mean relative molecular mass) or the number of ethylene oxide units per molecule (nominal value).

01/2008:1859
corrected 6.0

CAPSICUM

Capsici fructus

DEFINITION

Dried ripe fruits of *Capsicum annuum* L. var. *minimum* (Miller) Heiser and small-fruited varieties of *Capsicum frutescens* L.

Content: minimum 0.4 per cent of total capsaicinoids expressed as capsaicin ($C_{18}H_{27}NO_3$; M_r 305.4) (dried drug).

CHARACTERS

Extremely pungent taste.

IDENTIFICATION

A. The fruit is yellowish-orange to reddish-brown, oblong conical with an obtuse apex, about 1-3 cm long and up to 1 cm in diameter at the widest part, occasionally attached to a 5-toothed inferior calyx and a straight pedicel. Pericarp somewhat shrivelled, glabrous, enclosing about 10-20 flat, reniform seeds 3-4 mm long, either loose or attached to a reddish dissepiment.

B. Reduce to a powder (355) (*2.9.12*). The powder is orange. Examine under a microscope using *chloral hydrate solution R*. The powder shows the following diagnostic characters: fragments of the pericarp having an outer epicarp with cells often arranged in rows of 5 to 7, cuticle uniformly striated, parenchymatous cells frequently containing droplets of red oil, occasionally containing microsphenoidal crystals of calcium oxalate, endocarp with characteristic island groups of sclerenchymatous cells, the groups being separated by thin-walled parenchymatous cells; fragments of the seeds having an episperm composed of large, greenish-yellow, sinuous-walled sclereids with thin outer walls and strongly and unevenly thickened radial and inner walls which are conspicuously pitted, endosperm parenchymatous cells with drops of fixed oil and aleurone grains 3 µm to 6 µm in diameter; occasional fragments from the calyx having an outer epidermis with anisocytic stomata (*2.8.3*), inner epidermis with many trichomes but no stomata, trichomes glandular, with uniseriate stalks and multicellular heads, mesophyll with many idioblasts containing microsphenoidal crystals of calcium oxalate.

C. Thin-layer chromatography (*2.2.27*).

Test solution. To 0.50 g of the powdered drug (500) (*2.9.12*) add 5.0 ml of *ether R*, shake for 5 min and filter.

Reference solution. Dissolve 2 mg of *capsaicin R* and 2 mg of *dihydrocapsaicin R* in 5.0 ml of *ether R*.

Plate: *TLC octadecylsilyl silica gel plate R*.

Mobile phase: *water R, methanol R* (20:80 *V/V*).

Application: 20 µl, as bands.

Development: over a path of 12 cm.

Drying: in air.

Detection: spray with a 5 g/l solution of *dichloroquinonechlorimide R* in *methanol R*. Expose the plate to ammonia vapour until blue zones appear. Examine in daylight.

Results: see below the sequence of zones present in the chromatograms obtained with the reference solution and the test solution. Furthermore, other zones may be present in the chromatogram obtained with the test solution.

Top of the plate	
_____	_____
Capsaicin: a blue zone	A blue zone (capsaicin)
Dihydrocapsaicin: a blue zone	A blue zone (dihydrocapsaicin)

Reference solution	**Test solution**

TESTS

Nonivamide. Liquid chromatography (*2.2.29*).

Test solution. To 2.5 g of the powdered drug (500) (*2.9.12*) add 100 ml of *methanol R*. Allow to macerate for 30 min. Place in an ultrasonic bath for 15 min. Filter into a 100 ml volumetric flask, rinse the flask and filter with *methanol R*. Dilute to 100.0 ml with *methanol R*.

Reference solution. Dissolve 20.0 mg of *capsaicin CRS* and 4.0 mg of *nonivamide CRS* in *methanol R* and dilute to 100.0 ml with the same solvent.

Column:

- *size*: *l* = 0.25 m, Ø = 4.6 mm;
- *stationary phase*: *phenylsilyl silica gel for chromatography R* (5 µm);
- *temperature*: 30 °C.

Mobile phase: mix 40 volumes of *acetonitrile R* and 60 volumes of a 1 g/l solution of *phosphoric acid R*.

Flow rate: 1.0 ml/min.

Detection: spectrophotometer at 225 nm.

Injection: 10 µl.

Elution order: nordihydrocapsaicin, nonivamide, capsaicin, dihydrocapsaicin.

System suitability: reference solution:

– *resolution*: minimum 1.5 between the peaks due to capsaicin and nonivamide.

Calculate the percentage content of nonivamide using the following expression:

$$\frac{F_1 \times m_2 \times p_1}{F_2 \times m_1}$$

F_1 = area of the peak corresponding to nonivamide in the chromatogram obtained with the test solution;

F_2 = area of the peak corresponding to nonivamide in the chromatogram obtained with the reference solution;

m_1 = mass of the drug to be examined, in grams;

m_2 = mass of *nonivamide CRS* used to prepare the reference solution, in grams;

p_1 = percentage content of nonivamide in *nonivamide CRS*.

Limit:

– *nonivamide*: maximum 5.0 per cent of the total capsaicinoid content.

Foreign matter (*2.8.2*): maximum 2 per cent *m/m*. Fruits of *C. annuum* L. var. *longum* (Sendtn.) are absent.

Loss on drying (*2.2.32*): maximum 11.0 per cent, determined on 1.000 g of the powdered drug (500) (*2.9.12*) by drying in an oven at 105 °C for 2 h.

Total ash (*2.4.16*): maximum 10.0 per cent.

ASSAY

Liquid chromatography (*2.2.29*) as described in the test for nonivamide.

Calculate the percentage content of total capsaicinoids, expressed as capsaicin, using the following expression:

$$\frac{(F_3 + F_5 + F_6) \times m_4 \times p_2}{F_4 \times m_3}$$

F_3 = area of the peak corresponding to capsaicin in the chromatogram obtained with the test solution;

F_4 = area of the peak corresponding to capsaicin in the chromatogram obtained with the reference solution;

F_5 = area of the peak corresponding to dihydrocapsaicin in the chromatogram obtained with the test solution;

F_6 = area of the peak corresponding to nordihydrocapsaicin in the chromatogram obtained with the test solution;

m_3 = mass of the drug to be examined, in grams;

m_4 = mass of *capsaicin CRS* used to prepare the reference solution, in grams;

p_2 = percentage content of capsaicin in *capsaicin CRS*.

01/2008:2336

CAPSICUM OLEORESIN, REFINED AND QUANTIFIED

Capsici oleoresina raffinata et quantificata

DEFINITION

Refined and quantified oleoresin produced from *Capsicum (1859)*.

Content: 6.5 per cent to 8.0 per cent *m/m* of total capsaicinoids, expressed as capsaicin ($C_{18}H_{27}NO_3$; M_r 305.4).

PRODUCTION

The oleoresin is produced from the herbal drug and ethanol (minimum 90 per cent *V/V*) or methanol (minimum 90 per cent *V/V*), by an appropriate procedure.

CHARACTERS

Appearance: red or brown mobile extract.

IDENTIFICATION

Thin-layer chromatography (*2.2.27*).

Test solution. Dissolve 50 mg of the oleoresin to be examined in 5 ml of *ether R*.

Reference solution. Dissolve 2 mg of *capsaicin R* and 2 mg of *dihydrocapsaicin R* in 5 ml of *ether R*.

Plate: *TLC octadecylsilyl silica gel plate R* (5-40 µm) [or *TLC octadecylsilyl silica gel plate R* (2-10 µm)].

Mobile phase: *water R, methanol R* (20:80 *V/V*).

Application: 20 µl [or 2 µl] as bands of 15 mm [or 8 mm].

Development: over a path of 12 cm [or 6 cm].

Drying: in air.

Detection: spray with a 0.25 g/l solution of *dichloroquinonechlorimide R* in *ethyl acetate R*, expose to ammonia vapour until blue zones appear, then examine in daylight.

Results: see below the sequence of zones present in the chromatograms obtained with the reference solution and the test solution. Furthermore, other zones may be present in the chromatogram obtained with the test solution.

TESTS

Nonivamide. Liquid chromatography (*2.2.29*).

Test solution. Dissolve 0.300 g of the oleoresin to be examined in 60 ml of *methanol R* and dilute to 100.0 ml with the same solvent.

Reference solution. Dissolve 20.0 mg of *capsaicin CRS* and 4.0 mg of *nonivamide CRS* in 100.0 ml of *methanol R*.

Column:

– *size*: *l* = 0.25 m, Ø = 4.6 mm;

– *stationary phase*: *phenylsilyl silica gel for chromatography R* (5 µm);

– *temperature*: 30 °C.

Mobile phase: *acetonitrile R*, 1 g/l solution of *phosphoric acid R* (40:60 *V/V*).

Flow rate: 1.0 ml/min.

Detection: spectrophotometer at 225 nm.

Injection: 10 µl.

Elution order: nordihydrocapsaicin, nonivamide, capsaicin, dihydrocapsaicin.

System suitability: reference solution:

– *resolution*: minimum 1.5 between the peaks due to nonivamide and capsaicin.

Calculate the percentage content of nonivamide using the following expression:

$$\frac{F_1 \times m_2 \times p_1}{F_2 \times m_1}$$

F_1 = area of the peak due to nonivamide in the chromatogram obtained with the test solution;

F_2 = area of the peak due to nonivamide in the chromatogram obtained with the reference solution;

m_1 = mass of the oleoresin to be examined, in grams;

m_2 = mass of *nonivamide CRS* in the reference solution, in grams;

p_1 = percentage content of nonivamide in *nonivamide CRS*.

Limit:

– *nonivamide:* maximum 5.0 per cent of the total capsaicinoid content.

Water (*2.5.12*): maximum 8.0 per cent, determined on 5.00 g.

ASSAY

Liquid chromatography (*2.2.29*) as described in the test for nonivamide.

Calculate the percentage content of total capsaicinoids, expressed as capsaicin, using the following expression:

$$\frac{(F_3 + F_5 + F_6) \times m_4 \times p_2}{F_4 \times m_3}$$

F_3 = area of the peak due to capsaicin in the chromatogram obtained with the test solution;

F_4 = area of the peak due to capsaicin in the chromatogram obtained with the reference solution;

F_5 = area of the peak due to dihydrocapsaicin in the chromatogram obtained with the test solution;

F_6 = area of the peak due to nordihydrocapsaicin in the chromatogram obtained with the test solution;

m_3 = mass of the oleoresin to be examined, in grams;

m_4 = mass of *capsaicin CRS* in the reference solution, in grams;

p_2 = percentage content of capsaicin in *capsaicin CRS*.

01/2008:2337

CAPSICUM TINCTURE, STANDARDISED

Capsici tinctura normata

DEFINITION

Standardised tincture produced from *Capsicum (1859)* or *Refined and quantified capsicum oleoresin (2336).*

Content: 90 per cent to 110 per cent of the nominal content of total capsaicinoids, expressed as capsaicin ($C_{18}H_{27}NO_3$; M_r 305.4), stated on the label, which is between 0.020 per cent *m/m* and 0.060 per cent *m/m*.

PRODUCTION

The tincture is produced from the herbal drug or oleoresin and ethanol (70 per cent *V/V* to 85 per cent *V/V*) by an appropriate procedure.

CHARACTERS

Appearance: yellowish-orange or reddish-orange liquid.

IDENTIFICATION

Thin-layer chromatography (*2.2.27*).

Test solution. Shake 10 ml of the tincture to be examined with 10 ml of *hexane R*. Allow to separate and use the lower layer.

Reference solution. Dissolve 1 mg of *capsaicin R* and 1 mg of *dihydrocapsaicin R* in 5 ml of *ether R*.

Plate: *TLC octadecylsilyl silica gel plate R* (5-40 µm) [or *TLC octadecylsilyl silica gel plate R* (2-10 µm)].

Mobile phase: *water R, methanol R* (20:80 *V/V*).

Application: 20 µl [or 2 µl] as bands of 15 mm [or 8 mm].

Development: over a path of 12 cm [or 6 cm].

Drying: in air.

Detection: spray with a 0.25 g/l solution of *dichloroquinonechlorimide R* in *ethyl acetate R,* expose to ammonia vapour until blue zones appear, then examine in daylight.

Results: see below the sequence of zones present in the chromatograms obtained with the reference solution and the test solution. Furthermore, other zones may be present in the chromatogram obtained with the test solution.

Top of the plate	
_____	_____
Capsaicin: a blue zone	A blue zone (capsaicin)
Dihydrocapsaicin: a blue zone	A faint blue zone (dihydrocapsaicin)
_____	_____
Reference solution	**Test solution**

TESTS

Nonivamide. Liquid chromatography (*2.2.29*).

Test solution. Dilute 50.0 g of the tincture to be examined to 100.0 ml with *methanol R*.

Reference solution. Dissolve 20.0 mg of *capsaicin CRS* and 4.0 mg of *nonivamide CRS* in 100.0 ml of *methanol R*.

Column:

– *size*: *l* = 0.25 m, Ø = 4.6 mm;

– *stationary phase*: *phenylsilyl silica gel for chromatography R* (5 µm);

– *temperature*: 30 °C.

Mobile phase: *acetonitrile R,* 1 g/l solution of *phosphoric acid R* (40:60 *V/V*).

Flow rate: 1.0 ml/min.

Detection: spectrophotometer at 225 nm.

Injection: 10 µl.

Elution order: nordihydrocapsaicin, nonivamide, capsaicin, dihydrocapsaicin.

System suitability: reference solution:

– *resolution*: minimum 1.5 between the peaks due to nonivamide and capsaicin.

Calculate the percentage content of nonivamide using the following expression:

$$\frac{F_1 \times m_2 \times p_1}{F_2 \times m_1}$$

F_1 = area of the peak due to nonivamide in the chromatogram obtained with the test solution;

F_2 = area of the peak due to nonivamide in the chromatogram obtained with the reference solution;

m_1 = mass of the tincture to be examined, in grams;

m_2 = mass of *nonivamide CRS* in the reference solution, in grams;

p_1 = percentage content of nonivamide in *nonivamide CRS*.

Limit:

– *nonivamide*: maximum 5.0 per cent of the total capsaicinoid content.

Ethanol (*2.9.10*): 95 per cent to 105 per cent of the content stated on the label.

Methanol and 2-propanol (*2.9.11*): maximum 0.05 per cent *V/V* of methanol and maximum 0.05 per cent *V/V* of 2-propanol.

ASSAY

Liquid chromatography (*2.2.29*) as described in the test for nonivamide.

Calculate the percentage content of total capsaicinoids, expressed as capsaicin, using the following expression:

$$\frac{(F_3 + F_5 + F_6) \times m_4 \times p_2}{F_4 \times m_3}$$

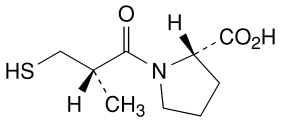
F_3 = area of the peak due to capsaicin in the chromatogram obtained with the test solution;

F_4 = area of the peak due to capsaicin in the chromatogram obtained with the reference solution;

F_5 = area of the peak due to dihydrocapsaicin in the chromatogram obtained with the test solution;

F_6 = area of the peak due to nordihydrocapsaicin in the chromatogram obtained with the test solution;

m_3 = mass of the tincture to be examined, in grams;



m_4 = mass of *capsaicin CRS* in the reference solution, in grams;

p_2 = percentage content of capsaicin in *capsaicin CRS*.

01/2008:1079

CAPTOPRIL

Captoprilum

$C_9H_{15}NO_3S$ M_r 217.3

[62571-86-2]

DEFINITION

(2*S*)-1-[(2*S*)-2-Methyl-3-sulphanylpropanoyl]pyrrolidine-2-carboxylic acid.

Content: 98.0 per cent to 101.5 per cent (dried substance).

CHARACTERS

Appearance: white or almost white, crystalline powder.

Solubility: freely soluble in water, in methylene chloride and in methanol. It dissolves in dilute solutions of alkali hydroxides.

IDENTIFICATION

Infrared absorption spectrophotometry (*2.2.24*).

Comparison: *captopril CRS*.

TESTS

Solution S. Dissolve 0.5 g in *carbon dioxide-free water R* and dilute to 25.0 ml with the same solvent.

Appearance of solution. Solution S is clear (*2.2.1*) and colourless (*2.2.2, Method II*).

pH (*2.2.3*): 2.0 to 2.6 for solution S.

Specific optical rotation (*2.2.7*): – 127 to – 132 (dried substance).

Dissolve 0.250 g in *anhydrous ethanol R* and dilute to 25.0 ml with the same solvent.

Related substances. Liquid chromatography (*2.2.29*).

Test solution. Dissolve 50 mg of the substance to be examined in the mobile phase and dilute to 100.0 ml with the mobile phase.

Reference solution (a). Dilute 2.0 ml of the test solution to 100.0 ml with the mobile phase.

Reference solution (b). Dissolve 10 mg of the substance to be examined in the mobile phase, add 0.25 ml of *0.05 M iodine* and dilute to 100.0 ml with the mobile phase. Dilute 10.0 ml of the solution to 100.0 ml with the mobile phase.

Column:

– *size*: *l* = 0.125 m, Ø = 4 mm,

– *stationary phase*: *octylsilyl silica gel for chromatography R* (5 µm).

Mobile phase: *phosphoric acid R, methanol R, water R* (0.05:50:50 *V/V/V*).

Flow rate: 1 ml/min.

Detection: spectrophotometer at 220 nm.

Injection: 20 µl.

Run time: 3 times the retention time of captopril.

System suitability: reference solution (b):

– the chromatogram shows 3 peaks,

– *resolution*: minimum 2.0 between the last 2 eluting principal peaks.

Limits:

– *any impurity*: for each impurity, not more than 0.5 times the area of the principal peak in the chromatogram obtained with reference solution (a) (1.0 per cent),

– *total*: not more than the area of the principal peak in the chromatogram obtained with reference solution (a) (2.0 per cent),

– *disregard limit*: 0.1 times the area of the principal peak in the chromatogram obtained with reference solution (a) (0.2 per cent). Disregard any peak with a retention time less than 1.4 min.

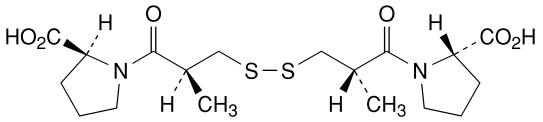
Heavy metals (*2.4.8*): maximum 20 ppm.

1.0 g complies with limit test C. Prepare the reference solution using 2 ml of *lead standard solution (10 ppm Pb) R*.

Loss on drying (*2.2.32*): maximum 1.0 per cent, determined on 1.000 g by drying under high vacuum at 60 °C for 3 h.

Sulphated ash (*2.4.14*): maximum 0.2 per cent, determined on 1.0 g.

ASSAY



Dissolve 0.150 g in 30 ml of *water R*. Titrate with *0.05 M iodine*, determining the end-point potentiometrically (*2.2.20*). Use a combined platinum electrode.

1 ml of *0.05 M iodine* is equivalent to 21.73 mg of $C_9H_{15}NO_3S$.

STORAGE

In an airtight container.

IMPURITIES

A. (2*S*,2′*S*)-1,1′-[disulphanediylbis[(2*S*)-2-methyl-1-oxopropane-3,1-diyl]-bis[pyrrolidine-2-carboxylic] acid (captopril-disulphide).

01/2008:1080

CARAWAY FRUIT

Carvi fructus

DEFINITION

Whole, dry mericarp of *Carum carvi* L.

Content: minimum 30 ml/kg of essential oil (anhydrous drug).

CHARACTERS

Odour reminiscent of carvone.

IDENTIFICATION

A. The fruit is a cremocarp of almost cylindrical shape. It is generally 3-6.5 mm long and 1-1.5 mm wide. The mericarps, usually free, are greyish-brown or brown, glabrous, mostly sickle-shaped, with both ends sharply terminated. Each bears 5 prominent narrow ridges. When cut transversely the profile shows an almost regular pentagon and 4 vittae on the dorsal surface and 2 on the commissural surface may be seen with a lens.

B. Reduce to a powder (355) (*2.9.12*). The powder is yellowish-brown. Examine under a microscope using *chloral hydrate solution R*. The powder shows the following diagnostic characters: fragments of the secretory cells composed of yellowish-brown or brown, thin-walled, polygonal secretory cells, frequently associated with a layer of thin-walled, transversely elongated cells, 8-12 µm wide; fragments of the epicarp with thick-walled cells and occasional anomocytic stomata (*2.8.3*); numerous endosperm fragments containing aleurone grains, droplets of fatty oil and microcrystals of calcium oxalate in rosette formation; spiral vessels accompanied by sclerenchymatous fibres; rarely some fibre bundles from the carpophore; groups of rectangular to sub-rectangular sclereids from the mesocarp with moderately thickened and pitted walls may be present.

C. Thin-layer chromatography (*2.2.27*).

Test solution. Shake 0.5 g of the powdered drug (710) (*2.9.12*) with 5.0 ml of *ethyl acetate R* for 2-3 min. Filter over 2 g of *anhydrous sodium sulphate R*.

Reference solution. Dissolve 2 µl of *carvone R* and 5 µl of *olive oil R* in 1.0 ml of *ethyl acetate R*.

Plate: *TLC silica gel plate R*.

Mobile phase: *ethyl acetate R*, *toluene R* (5:95 *V/V*).

Application: 20 µl of the test solution and 10 µl of the reference solution, as bands.

Development: over a path of 10 cm.

Drying: in air.

Detection A: examine in ultraviolet light at 254 nm.

Results A: the chromatograms obtained with the test solution and with the reference solution show a quenching zone (carvone) in the central part against a light background.

Detection B: spray with *anisaldehyde solution R* and, while observing, heat at 100-105 °C for 2-4 min; examine in daylight.

Results B: the zones due to carvone are dark orange-brown; the chromatogram obtained with the test solution shows above the zone due to carvone a violet zone similar in position and colour to the zone due to triglycerides of olive oil in the chromatogram obtained with the reference solution; the chromatogram obtained with the test solution shows close to the solvent front a weak violet zone due to terpene hydrocarbons and in the lower part some weak, mostly violet-greyish and brownish zones.

TESTS

Water (*2.2.13*): maximum 100 ml/kg, determined on 10.0 g of powdered drug.

Total ash (*2.4.16*): maximum 7.0 per cent.

ASSAY

Carry out the determination of essential oils in herbal drugs (*2.8.12*). Use 10.0 g of drug reduced to a powder (710) (*2.9.12*) immediately before the determination, a 500 ml round-bottomed flask, 200 ml of *water R* as the distillation liquid, and 0.50 ml of *xylene R* in the graduated tube. Distil at a rate of 2-3 ml/min for 90 min.

01/2008:1817

CARAWAY OIL

Carvi aetheroleum

DEFINITION

Oil obtained by steam distillation from the dry fruits of *Carum carvi* L.

CHARACTERS

Appearance: clear, colourless or yellow liquid.

IDENTIFICATION

First identification: *B*.

Second identification: *A*.

A. Thin-layer chromatography (*2.2.27*).

Test solution. Dissolve 40 µl of the substance to be examined in 1.0 ml of *toluene R*.

Reference solution. Dissolve 10 µl of *carvone R* and 5 µl of *carveol R* in 1.0 ml of *toluene R*.

Plate: *TLC silica gel F_{254} plate R* (5-40 µm) [or *TLC silica gel plate R* (2-10 µm)].

Mobile phase: *ethyl acetate R, toluene R* (5:95 *V/V*).

Application: 10 µl [or 2 µl] as bands.

Development: over a path of 10 cm [or 5 cm].

Drying: in air.

Detection A: examine in ultraviolet light at 254 nm.

Results A: see below the sequence of zones present in the chromatograms obtained with the reference solution and the test solution. Furthermore, other zones may be present in the chromatogram obtained with the test solution.

Top of the plate	
———	———
Carvone: a quenching zone	A quenching zone (carvone)
———	———
Reference solution	**Test solution**

Detection B: spray with *anisaldehyde solution R* and heat at 100-105 °C for 5-10 min. Examine immediately in daylight.

Results B: see below the sequence of zones present in the chromatograms obtained with the reference solution and the test solution. Furthermore, several zones of weak intensity are present, particularly in the lower third, in the chromatogram obtained with the test solution.

Top of the plate	
	A reddish-violet zone
———	———
	A reddish-violet zone
Carvone: a red to orange-brown zone	An intense red to orange-brown zone (carvone)
———	———
Carveol: a reddish-violet zone	A reddish-violet zone (carveol)
	A violet-blue zone
Reference solution	**Test solution**

B. Examine the chromatograms obtained in the test for chromatographic profile.

Results: the characteristic peaks in the chromatogram obtained with the test solution are similar in retention time to those in the chromatogram obtained with the reference solution.

TESTS

Relative density (*2.2.5*): 0.904 to 0.920.

Refractive index (*2.2.6*): 1.484 to 1.490.

Optical rotation (*2.2.7*): + 65° to + 81°.

Acid value (*2.5.1*): maximum 1.0, determined on 5.00 g.

Chromatographic profile. Gas chromatography (*2.2.28*): use the normalisation procedure.

Test solution. Dissolve 0.200 g of the substance to be examined in *heptane R* and dilute to 10.0 ml with the same solvent.

Reference solution (a). Dissolve 5 µl of *β-myrcene R*, 80 µl of *limonene R*, 5 µl of *dihydrocarvone R*, 100 µl of *carvone R* and 5 µl of *carveol R* in *heptane R* and dilute to 10.0 ml with the same solvent.

Reference solution (b). Dissolve 10 µl of *carvone R* in *heptane R* and dilute to 10 ml with the same solvent. Dilute 0.1 ml of this solution to 10 ml with *heptane R*.

Column:

– *material*: fused silica,
– *size*: *l* = 30 m, Ø = 0.53 mm,
– *stationary phase*: *macrogol 20 000 R*, (film thickness 1 µm).

Carrier gas: *helium for chromatography R*.

Flow rate: 1.5 ml/min.

Split ratio: 1:50.

Temperature:

	Time (min)	Temperature (°C)
Column	0 - 5	60
	5 - 68	60 → 250
	68 - 75	250
Injection port		250
Detector		260

Detection: flame ionisation.

Injection: 1.0 µl.

Elution order: order indicated in the composition of reference solution (a). Record the retention times of these substances.

System suitability: reference solution (a):

– *resolution*: minimum 4.5 between the peaks due to β-myrcene and limonene.

Using the retention times determined from the chromatogram obtained with the reference solution, locate the components of the reference solution in the chromatogram obtained with the test solution.

Limits:

– *β-myrcene*: 0.1 per cent to 1.0 per cent,
– *limonene*: 30.0 per cent to 45.0 per cent,
– *trans-dihydrocarvone*: maximum 2.5 per cent,
– *carvone*: 50.0 per cent to 65.0 per cent,
– *trans-carveol*: maximum 2.5 per cent.
– *disregard limit*: the area of the peak in the chromatogram obtained with reference solution (b).

Chiral purity. Gas chromatography (*2.2.28*).

Test solution. Dissolve 20 mg of the substance to be examined in *heptane R* and dilute to 10.0 ml with the same solvent.

Reference solution. Dissolve 10 mg of *(–)-carvone R* and 10 mg of *carvone R1* in *heptane R* and dilute to 10.0 ml with the same solvent.

Column:

– *material*: fused silica,
– *size*: *l* = 30 m, Ø = 0.25 mm,
– *stationary phase*: *modified β-cyclodextrine for chiral chromatography R1* (film thickness 0.25 µm).

Carrier gas: *helium for chromatography R*.

Flow rate: 2.0 ml/min.

Split ratio: 1:30.

Temperature:

	Time (min)	Temperature (°C)
Column	0 - 80	50 → 170
Injection port		230
Detector		230

Detection: flame ionisation.

Injection: 1 µl.

System suitability: reference solution:

– *resolution*: minimum 2.4 between the peaks due to (–)-carvone (1st peak) and carvone R1 (2nd peak).

Calculate the percentage content of the (–)-carvone from the following expression:

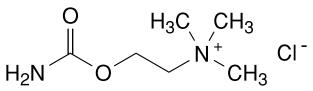
$$\frac{A_1}{A_1 + A_2} \times 100$$

A_1 = area of the peak due to (–)-carvone,

A_2 = area of the peak due to carvone R1.

Limit:

– *(–)-carvone*: maximum 1 per cent.



STORAGE

In a well-filled, airtight container, protected from light, at a temperature not exceeding 25 °C.

01/2008:1971
corrected 6.0

CARBACHOL

Carbacholum

$C_6H_{15}ClN_2O_2$ M_r 182.7
[51-83-2]

DEFINITION

2-(Carbamoyloxy)-*N,N,N*-trimethylethanaminium chloride.

Content: 99.0 per cent to 101.5 per cent (dried substance).

CHARACTERS

Appearance: white or almost white, crystalline, hygroscopic powder.

Solubility: very soluble in water, sparingly soluble in alcohol, practically insoluble in acetone.

IDENTIFICATION

First identification: A, C.

Second identification: B, C.

A. Infrared absorption spectrophotometry (*2.2.24*).
Comparison: *carbachol CRS*.

B. Examine the chromatograms obtained in the test for related substances.
Results: the principal spot in the chromatogram obtained with test solution (b) is similar in position, colour and size to the principal spot in the chromatogram obtained with reference solution (a).

C. 0.5 ml of solution S (see Tests) gives reaction (a) of chlorides (*2.3.1*).

TESTS

Solution S. Dissolve 2.5 g in *carbon dioxide-free water R* and dilute to 25 ml with the same solvent.

Appearance of solution. Solution S is clear (*2.2.1*) and colourless (*2.2.2, Method II*).

Acidity or alkalinity. To 2.0 ml of solution S, add 0.05 ml of *methyl red mixed solution R*. Not more than 0.2 ml of *0.01 M hydrochloric acid* or *0.01 M sodium hydroxide* is required to change the colour of the indicator.

Related substances. Thin-layer chromatography (*2.2.27*).

Prepare the solutions immediately before use.

Test solution (a). Dissolve 0.20 g of the substance to be examined in *methanol R* and dilute to 5.0 ml with the same solvent.

Test solution (b). Dilute 2.0 ml of test solution (a) to 20.0 ml with *methanol R*.

Reference solution (a). Dissolve 20 mg of *carbachol CRS* in *methanol R* and dilute to 5.0 ml with the same solvent.

Reference solution (b). Dissolve 8 mg of *choline chloride R* and 8 mg of *acetylcholine chloride CRS* in *methanol R* and dilute to 10.0 ml with the same solvent. Dilute 5.0 ml to 10.0 ml with *methanol R*.

Plate: *cellulose for chromatography R* as the coating substance.

Mobile phase: *water R, methanol R* (10:90 *V/V*).

Application: 10 µl.

Development: over 2/3 of the plate.

Detection: spray with *potassium iodobismuthate solution R3*.

System suitability: the chromatogram obtained with reference solution (b) shows 2 clearly separated spots.

Limits: in the chromatogram obtained with test solution (a):

– *any impurity*: any spot, apart from the principal spot, is not more intense than one or other of the 2 principal spots in the chromatogram obtained with reference solution (b) (1 per cent). Compare the spots with the spot of the most appropriate colour in the chromatogram obtained with reference solution (b).

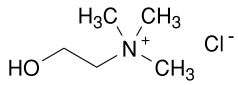
Heavy metals (*2.4.8*): maximum 20 ppm.

12 ml of solution S complies with limit test A. Prepare the standard using *lead standard solution (2 ppm Pb) R*.

Loss on drying (*2.2.32*): maximum 1.0 per cent, determined on 1.000 g by drying in an oven at 105 °C for 2 h.

Sulphated ash (*2.4.14*): maximum 0.1 per cent, determined on 1.0 g of the residue obtained in the test for loss on drying.

ASSAY



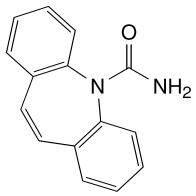
Dissolve 0.150 g in a mixture of 10 ml of *anhydrous acetic acid R* and 40 ml of *acetic anhydride R*. Titrate with *0.1 M perchloric acid*. Determine the end-point potentiometrically (*2.2.20*).

1 ml of *0.1 M perchloric acid* is equivalent to 18.27 mg of $C_6H_{15}ClN_2O_2$.

STORAGE

In an airtight container, protected from light.

IMPURITIES



A. 2-hydroxy-*N,N,N*-trimethylethanaminium chloride (choline chloride).

01/2008:0543
corrected 6.0

CARBAMAZEPINE

Carbamazepinum

$C_{15}H_{12}N_2O$ M_r 236.3
[298-46-4]

DEFINITION

5*H*-Dibenzo[*b,f*]azepine-5-carboxamide.

Content: 98.0 per cent to 102.0 per cent (dried substance).

CHARACTERS

Appearance: white or almost white, crystalline powder.

Solubility: very slightly soluble in water, freely soluble in methylene chloride, sparingly soluble in acetone and in ethanol (96 per cent).

It shows polymorphism (*5.9*). The acceptable crystalline form corresponds to *carbamazepine CRS*.

IDENTIFICATION

A. Melting point (*2.2.14*): 189 °C to 193 °C.

B. Infrared absorption spectrophotometry (*2.2.24*).

Comparison: *carbamazepine CRS*.

Preparation: examine the substances as discs without prior treatment.

TESTS

Acidity or alkalinity. To 1.0 g add 20 ml of *carbon dioxide-free water R*, shake for 15 min and filter. To 10 ml of the filtrate add 0.05 ml of *phenolphthalein solution R1* and 0.5 ml of *0.01 M sodium hydroxide*; the solution is red. Add 1.0 ml of *0.01 M hydrochloric acid*; the solution is colourless. Add 0.15 ml of *methyl red solution R*; the solution is red.

Related substances. Liquid chromatography (*2.2.29*).

Test solution (a). Dissolve 60.0 mg of the substance to be examined in *methanol R2* and dilute to 20.0 ml with the same solvent. Sonicate. Dilute 10.0 ml of this solution to 20.0 ml with *water R*.

Test solution (b). Dilute 10.0 ml of test solution (a) to 50.0 ml with a mixture of equal volumes of *methanol R2* and *water R*.

Reference solution (a). Dissolve 7.5 mg of *carbamazepine CRS*, 7.5 mg of *carbamazepine impurity A CRS* and 7.5 mg of *iminodibenzyl R* (impurity E) in *methanol R2* and dilute to 100.0 ml with the same solvent. Dilute 1.0 ml of this solution to 50.0 ml with a mixture of equal volumes of *methanol R2* and *water R*.

Reference solution (b). Dissolve 60.0 mg of *carbamazepine CRS* in *methanol R2* and dilute to 20.0 ml with the same solvent. Sonicate. Dilute 5.0 ml of this solution to 50.0 ml with a mixture of equal volumes of *methanol R2* and *water R*.

Column:

– *size*: *l* = 0.25 m, Ø = 4.6 mm;
– *stationary phase*: *nitrile silica gel for chromatography R1* (10 µm).

Mobile phase: *tetrahydrofuran R, methanol R2, water R* (3:12:85 *V/V/V*); to 1000 ml of this solution add 0.2 ml of *anhydrous formic acid R* and 0.5 ml of *triethylamine R*.

Flow rate: 2.0 ml/min.

Detection: a spectrophotometer at 230 nm.

Injection: 20 µl of test solution (a) and reference solution (a).

Run time: 6 times the retention time of carbamazepine.

Relative retention with reference to carbamazepine (retention time = about 10 min): impurity A = about 0.9; impurity E = about 5.1.

System suitability:

– *resolution*: minimum 1.7 between the peaks due to carbamazepine and impurity A in the chromatogram obtained with reference solution (a).

Limits:

– *impurities A, E*: for each impurity, not more than the area of the corresponding peak in the chromatogram obtained with reference solution (a) (0.1 per cent);
– *unspecified impurities*: not more than the area of the peak due to carbamazepine in the chromatogram obtained with reference solution (a) (0.10 per cent);
– *total*: not more than 5 times the area of the peak due to carbamazepine in the chromatogram obtained with reference solution (a) (0.5 per cent);
– *disregard limit*: 0.5 times the area of the peak due to carbamazepine in the chromatogram obtained with reference solution (a) (0.05 per cent).

Chlorides (*2.4.4*): maximum 140 ppm.

Suspend 0.715 g in 20 ml of *water R* and boil for 10 min. Cool and dilute to 20 ml with *water R*. Filter through a membrane filter (nominal pore size: 0.8 µm). Dilute 10 ml of the filtrate to 15 ml with *water R*. This solution complies with the limit test for chlorides.

Heavy metals (*2.4.8*): maximum 20 ppm.

1.0 g complies with test C. Prepare the reference solution using 2 ml of *lead standard solution (10 ppm Pb) R*.

Loss on drying (*2.2.32*): maximum 0.5 per cent, determined on 1.000 g by drying in an oven at 105 °C for 2h.

Sulphated ash (*2.4.14*): maximum 0.1 per cent, determined on 1.0 g.

ASSAY

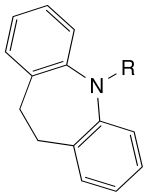
Liquid chromatography (*2.2.29*) as described in the test for related substances.

Injection: test solution (b) and reference solution (b).

System suitability:

– *repeatability*: reference solution (b).

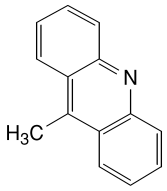
Calculate the percentage content *m/m* of dried substance.



STORAGE

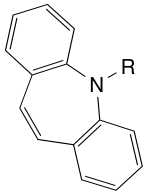
In an airtight container.

IMPURITIES



Specified impurities: *A, E.*

Other detectable impurities (the following substances would, if present at a sufficient level, be detected by one or other of the tests in the monograph. They are limited by the general acceptance criterion for other/unspecified impurities and/or by the general monograph *Substances for pharmaceutical use (2034)*. It is therefore not necessary to identify these impurities for demonstration of compliance. See also *5.10. Control of impurities in substances for pharmaceutical use*): *B, C, D, F.*

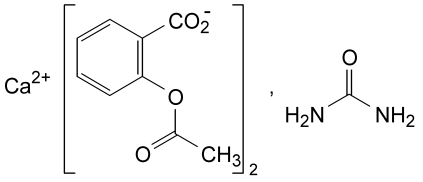


A. R = CO-NH_2: 10,11-dihydro-5*H*-dibenzo[*b,f*]azepine-5-carboxamide (10,11-dihydrocarbamazepine),

E. R = H: 10,11-dihydro-5*H*-dibenzo[*b,f*]azepine (iminodibenzyl),

B. 9-methylacridine,

C. R = CO-NH-CO-NH_2: (5*H*-dibenzo[*b,f*]azepin-5-ylcarbonyl)urea (*N*-carbamoylcarbamazepine),



D. R = H: 5*H*-dibenzo[*b,f*]azepine (iminostilbene),

F. R = CO-Cl: 5*H*-dibenzo[*b,f*]azepine-5-carbonyl chloride (5-chlorocarbonyliminostilbene).

CARBASALATE CALCIUM

Carbasalatum calcicum

$C_{19}H_{18}CaN_2O_9$ M_r 458.4
[5749-67-7]

DEFINITION

Equimolecular compound of calcium di[2-(acetyloxy)benzoate] and urea.

Content: 99.0 per cent to 101.0 per cent (anhydrous substance).

CHARACTERS

Appearance: white or almost white, crystalline powder.

Solubility: freely soluble in water and in dimethylformamide, practically insoluble in acetone and in anhydrous methanol.

Protect the substance from moisture during handling. Examination in aqueous solutions has to be performed immediately after preparation.

IDENTIFICATION

First identification: B, E.

Second identification: A, C, D, E.

A. Ultraviolet and visible absorption spectrophotometry (*2.2.25*).

Test solution. Dissolve 0.250 g in *water R* and dilute to 100.0 ml with the same solvent. To 1.0 ml of the solution add 75 ml of *water R* and 5 ml of *dilute hydrochloric acid R*, mix and dilute to 100.0 ml with *water R*. Examine immediately.

Spectral range: 220-350 nm.

Absorption maxima: at 228 nm and 276 nm.

Specific absorbances at the absorption maxima:

– at 228 nm: 363 to 379,

– at 276 nm: 49 to 53.

B. Infrared absorption spectrophotometry (*2.2.24*).

Comparison: *Ph. Eur. reference spectrum of carbasalate calcium*.

C. Dissolve 0.1 g in 10 ml of *water R*, boil for 2 min and cool. The solution gives reaction (a) of salicylates (*2.3.1*).

D. Heat 0.2 g with 0.2 g of *sodium hydroxide R*; a yellow or yellowish-brown colour is produced and the vapour turns *red litmus paper R* blue.

E. It gives reaction (a) of calcium (*2.3.1*).

TESTS

Appearance of solution. The solution is not more opalescent than reference suspension II (*2.2.1*) and is colourless (*2.2.2, Method II*).

Dissolve 2.5 g in 50 ml of *water R*.

Related substances: maximum 0.1 per cent, expressed as acetylsalicylsalicylic acid.

In a 100 ml volumetric flask, dissolve 0.150 g in 10 ml of *0.1 M tetrabutylammonium hydroxide in 2-propanol*. Allow to stand for 10 min shaking occasionally. Add 8.0 ml of *0.1 M hydrochloric acid* and 20.0 ml of a 19 g/l solution of *disodium tetraborate R* and mix. While swirling continuously, add 2.0 ml of a 10 g/l solution of *aminopyrazolone R* and 2.0 ml of a 10 g/l solution of *potassium ferricyanide R*. Allow to stand for 2 min, dilute to 100.0 ml with *water R*, mix and allow to stand for 20 min. Measure the absorbance (*2.2.25*) of the solution at the absorption maximum at 505 nm using *water R* as the compensation liquid. The absorbance is not greater than 0.125.

Impurity C: maximum 0.5 per cent.

In a 100 ml volumetric flask, dissolve 0.200 g in 80 ml of *water R* and add 10 ml of a 10 g/l solution of *ferric nitrate R* in a 80 g/l solution of *dilute nitric acid R*. Dilute to 100.0 ml with *water R*. Immediately after preparation, measure the absorbance (*2.2.25*) of the solution at the absorption

maximum of 525 nm using *water R* as the compensation liquid. The absorbance is not greater than 0.115.

Sodium: maximum 0.10 per cent.

Atomic emission spectrometry (*2.2.22, Method I*).

Test solution. Dissolve 1.0 g in 500.0 ml of *water R*.

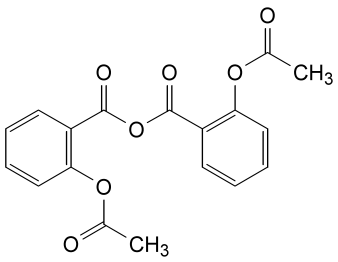
Heavy metals (*2.4.8*): maximum 10 ppm.

Dissolve 2.0 g in 8 ml of *water R* with heating, cool and add 12 ml of *acetone R*. 12 ml of the solution complies with test B. Prepare the reference solution using 10 ml of *lead standard solution (1 ppm Pb) R*.

Water (*2.5.12*): maximum 0.1 per cent, determined on 1.000 g. Use a mixture of 15 ml of *anhydrous methanol R* and 15 ml of *dimethylformamide R* as the solvent.

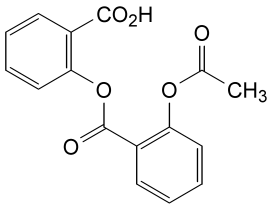
ASSAY

In a flask with a ground-glass stopper, dissolve 0.400 g in 25 ml of *water R*. Add 25.0 ml of *0.1 M sodium hydroxide*. Close the flask and allow to stand for 2 h. Titrate the excess of alkali with *0.1 M hydrochloric acid,* using 0.2 ml of *phenolphthalein solution R*. Carry out a blank titration.



1 ml of *0.1 M sodium hydroxide* is equivalent to 22.92 mg of $C_{19}H_{18}CaN_2O_9$.

STORAGE

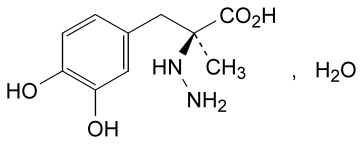


In an airtight container.

IMPURITIES

Specified impurities: *A, B, C.*

A. 2-(acetyloxy)benzoic anhydride,



B. 2-[[2-(acetyloxy)benzoyl]oxy]benzoic acid (acetylsalicylsalicylic acid),

C. 2-hydroxybenzoic acid (salicylic acid).

corrected 6.0

CARBIDOPA

Carbidopum

$C_{10}H_{14}N_2O_4,H_2O$ M_r 244.2

[38821-49-7]

DEFINITION

(2*S*)-3-(3,4-Dihydroxyphenyl)-2-hydrazino-2-methylpropanoic acid monohydrate.

Content: 98.5 per cent to 101.0 per cent (dried substance).

CHARACTERS

Appearance: white or yellowish-white powder.

Solubility: slightly soluble in water, very slightly soluble in ethanol (96 per cent), practically insoluble in methylene chloride. It dissolves in dilute solutions of mineral acids.

IDENTIFICATION

First identification: A, C.

Second identification: A, B, D, E.

A. Specific optical rotation (see Tests).

B. Ultraviolet and visible absorption spectrophotometry (*2.2.25*).

Test solution. Dissolve 50.0 mg in a 8.5 g/l solution of *hydrochloric acid R* in *methanol R* and dilute to 100.0 ml with the same solution. Dilute 10.0 ml of this solution to 100.0 ml with a 8.5 g/l solution of *hydrochloric acid R* in *methanol R*.

Spectral range: 230-350 nm.

Absorption maximum: at 283 nm.

Specific absorbance at the absorption maximum: 135 to 150 (dried substance).

C. Infrared absorption spectrophotometry (*2.2.24*).

Preparation: discs.

Comparison: *carbidopa CRS*.

D. Shake vigorously about 5 mg with 10 ml of *water R* for 1 min and add 0.3 ml of *ferric chloride solution R2*. An intense green colour is produced, which quickly turns to reddish-brown.

E. Suspend about 20 mg in 5 ml of *water R* and add 5 ml of *cupri-tartaric solution R*. On heating, the colour of the solution changes to dark brown and a red precipitate is formed.

TESTS

Appearance of solution. The solution is clear (*2.2.1*) and not more intensely coloured than reference solution BY_6 or B_6 (*2.2.2, Method II*).

Dissolve 0.25 g in 25 ml of *1 M hydrochloric acid*.

Specific optical rotation (*2.2.7*): – 22.5 to – 26.5 (dried substance).

With the aid of an ultrasonic bath, dissolve completely 0.250 g in *aluminium chloride solution R* and dilute to 25.0 ml with the same solution.

Hydrazine. Thin-layer chromatography (*2.2.27*).

Test solution (a). Dissolve 0.50 g in *dilute hydrochloric acid R* and dilute to 2.0 ml with the same acid.

Test solution (b). Place 25 g of *strongly basic anion exchange resin R* into each of 2 conical flasks with ground-glass stoppers. To each, add 150 ml of *carbon dioxide-free water R* and shake from time to time during 30 min. Decant the liquid from both flasks and repeat the process with further quantities, each of 150 ml, of *carbon dioxide-free water R*.

Take two 100 ml measuring cylinders 3.5-4.5 cm in internal diameter and label these A and B. Into cylinder A, transfer as completely as possible the resin from 1 conical flask using 60 ml of *carbon dioxide-free water R*; into cylinder B, transfer the 2nd quantity of resin, this time using 20 ml of *carbon dioxide-free water R*.

Into each cylinder, insert a gas-inlet tube, the end of which has an internal diameter of 2-3 mm and which reaches almost to the bottom of the cylinder. Pass a rapid stream of *nitrogen for chromatography R* through each mixture so that homogeneous suspensions are formed. After 30 min, without interrupting the gas flow, add 1.0 ml of test solution (a) to cylinder A; after 1 min stop the gas flow into cylinder A and transfer the contents, through a moistened filter paper, into cylinder B. After 1 min, stop the gas flow to cylinder B and pour the solution immediately through a moistened filter paper into a freshly prepared mixture of 1 ml of a 200 g/l solution of *salicylaldehyde R* in *methanol R* and 20 ml of *phosphate buffer solution pH 5.5 R* in a conical flask; shake thoroughly for 1 min and heat in a water-bath at 60 °C for 15 min. The liquid becomes clear. Allow to cool, add 2.0 ml of *toluene R* and shake vigorously for 2 min. Transfer the mixture into a centrifuge tube and centrifuge.

Separate the toluene layer in a 100 ml separating funnel and shake vigorously with 2 quantities, each of 20 ml, of a 200 g/l solution of *sodium metabisulphite R* and finally with 2 quantities, each of 50 ml, of *water R*. Separate the toluene layer.

Reference solution (a). Dissolve 10 mg of *hydrazine sulphate R* in *dilute hydrochloric acid R* and dilute to 50 ml with the same acid. Dilute 1.0 ml of this solution to 10.0 ml with *dilute hydrochloric acid R*.

Reference solution (b). Prepare the solution at the same time and in the same manner as described for test solution (b) using 1.0 ml of reference solution (a) instead of 1.0 ml of test solution (a).

Plate: *TLC silanised silica gel plate R*.

Mobile phase: *water R, methanol R* (10:20 *V/V*).

Application: 10 µl of test solution (b) and reference solution (b).

Development: over a path of 10 cm.

Drying: in air.

Detection: examine in ultraviolet light at 365 nm.

Limit:

– *hydrazine*: any spot showing a yellow fluorescence is not more intense than the corresponding spot in the chromatogram obtained with reference solution (b) (20 ppm).

Methyldopa and methylcarbidopa. Liquid chromatography (*2.2.29*).

Test solution. Dissolve 0.100 g of the substance to be examined in *0.1 M hydrochloric acid* and dilute to 10.0 ml with the same acid.

Reference solution (a). Dissolve the contents of a vial of *methylcarbidopa CRS* in *0.1 M hydrochloric acid*, add 1 mg of *methyldopa CRS* and dilute to 20.0 ml with the same acid.

Reference solution (b). Dissolve 5 mg of *carbidopa CRS* and 5 mg of *methyldopa CRS* in *0.1 M hydrochloric acid* and dilute to 10.0 ml with the same acid.

Column:

– *size*: *l* = 0.25 m, Ø = 4.6 mm;

– *stationary phase*: *octylsilyl silica gel for chromatography R* (5 µm).

Mobile phase: *methanol R,* 14 g/l solution of *potassium dihydrogen phosphate R* (2:98 *V/V*).

Flow rate: 1 ml/min.

Detection: spectrophotometer at 282 nm.

Injection: 20 µl.

System suitability: reference solution (b):

– *resolution*: minimum 4.0 between the peaks due to methyldopa and carbidopa.

Limits:

– *methyldopa and methylcarbidopa*: for each impurity, not more than the area of the corresponding peak in the chromatogram obtained with reference solution (a) (0.5 per cent).

Heavy metals (*2.4.8*): maximum 20 ppm.

1.0 g complies with test C. Prepare the reference solution using 2 ml of *lead standard solution (10 ppm Pb) R*.

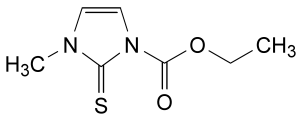
Loss on drying (*2.2.32*): 6.9 per cent to 7.9 per cent, determined on 1.000 g by drying in an oven at 105 °C.

Sulphated ash (*2.4.14*): maximum 0.1 per cent, determined on 1.0 g.

ASSAY

Dissolve 0.150 g with gentle heating in 75 ml of *anhydrous acetic acid R*. Titrate with *0.1 M perchloric acid*, determining the end-point potentiometrically (*2.2.20*).

1 ml of *0.1 M perchloric acid* is equivalent to 22.62 mg of $C_{10}H_{14}N_2O_4$.



STORAGE

Protected from light.

01/2008:0884

CARBIMAZOLE

Carbimazolum

$C_7H_{10}N_2O_2S$ M_r 186.2
[22232-54-8]

DEFINITION

Ethyl 3-methyl-2-thioxo-2,3-dihydro-1*H*-imidazole-1-carboxylate.

Content: 98.0 per cent to 102.0 per cent (dried substance).

CHARACTERS

Appearance: white or yellowish-white, crystalline powder.

Solubility: slightly soluble in water, soluble in acetone and in alcohol.

IDENTIFICATION

First identification: B.

Second identification: A, C, D.

A. Melting point (*2.2.14*): 122 °C to 125 °C.

B. Infrared absorption spectrophotometry (*2.2.24*).

Preparation: discs.

Comparison: *carbimazole CRS*.

C. Thin-layer chromatography (*2.2.27*).

Test solution. Dissolve 10 mg of the substance to be examined in *methylene chloride R* and dilute to 10 ml with the same solvent.

Reference solution. Dissolve 10 mg of *carbimazole CRS* in *methylene chloride R* and dilute to 10 ml with the same solvent.

Plate: *TLC silica gel GF_{254} plate R*.

Mobile phase: *acetone R, methylene chloride R* (20:80 *V/V*).

Application: 10 µl.

Development: over a path of 15 cm.

Drying: in air for 30 min.

Detection: examine in ultraviolet light at 254 nm.

Results: the principal spot in the chromatogram obtained with the test solution is similar in position and size to the principal spot in the chromatogram obtained with the reference solution.

D. Dissolve about 10 mg in a mixture of 50 ml of *water R* and 0.05 ml of *dilute hydrochloric acid R*. Add 1 ml of *potassium iodobismuthate solution R*. A red precipitate is formed.

TESTS

Impurity A and other related substances. Liquid chromatography (*2.2.29*).

Test solution. Dissolve 5.0 mg of the substance to be examined in 10.0 ml of a mixture of 20 volumes of *acetonitrile R* and 80 volumes of *water R*. Use this solution within 5 min of preparation.

Reference solution (a). Dissolve 5 mg of *thiamazole R* and 0.10 g of *carbimazole CRS* in a mixture of 20 volumes of *acetonitrile R* and 80 volumes of *water R* and dilute to 100.0 ml with the same mixture of solvents. Dilute 1.0 ml of this solution to 10.0 ml with a mixture of 20 volumes of *acetonitrile R* and 80 volumes of *water R*.

Reference solution (b). Dissolve 5.0 mg of *thiamazole R* in a mixture of 20 volumes of *acetonitrile R* and 80 volumes of *water R* and dilute to 10.0 ml with the same mixture of solvents. Dilute 1.0 ml of this solution to 100.0 ml with a mixture of 20 volumes of *acetonitrile R* and 80 volumes of *water R*.

Column:

– *size*: *l* = 0.15 m, Ø = 3.9 mm,
– *stationary phase*: *octadecylsilyl silica gel for chromatography R* (5 µm).

Mobile phase: *acetonitrile R, water R* (10:90 *V/V*).

Flow rate: 1 ml/min.

Detection: spectrophotometer at 254 nm.

Injection: 10 µl.

Run time: 1.5 times the retention time of carbimazole.

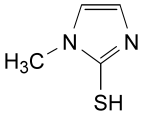
Retention time: carbimazole = about 6 min.

System suitability: reference solution (a):

– *resolution*: minimum 5.0 between the peaks due to impurity A and carbimazole.

Limits:

– *impurity A*: not more than half the area of the principal peak in the chromatogram obtained with reference solution (b) (0.5 per cent),
– *any other impurity*: not more than 0.1 times the area of the principal peak in the chromatogram obtained with reference solution (b) (0.1 per cent).



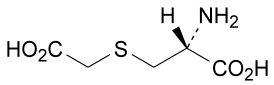
Loss on drying (*2.2.32*): maximum 0.5 per cent, determined on 1.000 g by drying in a desiccator over *diphosphorus pentoxide R* at a pressure not exceeding 0.7 kPa for 24 h.

Sulphated ash (*2.4.14*): maximum 0.1 per cent, determined on 1.0 g.

ASSAY

Dissolve 50.0 mg in *water R* and dilute to 500.0 ml with the same solvent. To 10.0 ml add 10 ml of *dilute hydrochloric acid R* and dilute to 100.0 ml with *water R*. Measure the absorbance (*2.2.25*) at the maximum at 291 nm. Calculate the content of $C_7H_{10}N_2O_2S$ taking the specific absorbance to be 557.

IMPURITIES



A. 1-methyl-1*H*-imidazole-2-thiol (thiamazole).

01/2008:0885
corrected 6.0

CARBOCISTEINE

Carbocisteinum

$C_5H_9NO_4S$ M_r 179.2
[638-23-3]

DEFINITION

Carbocisteine contains not less than 98.5 per cent and not more than the equivalent of 101.0 per cent of (2*R*)-2-amino-3-[(carboxymethyl)sulphanyl]propanoic acid, calculated with reference to the dried substance.

CHARACTERS

A white or almost white, crystalline powder, practically insoluble in water and in alcohol. It dissolves in dilute mineral acids and in dilute solutions of alkali hydroxides.

IDENTIFICATION

First identification: A, B.

Second identification: A, C, D.

A. It complies with the test for specific optical rotation (see Tests).

B. Examine by infrared absorption spectrophotometry (*2.2.24*), comparing with the spectrum obtained with *carbocisteine CRS*. Examine the substances prepared as discs.

C. Examine the chromatograms obtained in the test for ninhydrin-positive substances. The principal spot in the chromatogram obtained with test solution (b) is similar in position, colour and size to the principal spot in the chromatogram obtained with reference solution (a).

D. Dissolve 0.1 g in 4.5 ml of *dilute sodium hydroxide solution R*. Heat on a water-bath for 10 min. Cool and add 1 ml of a 25 g/l solution of *sodium nitroprusside R*. A dark red colour is produced, which changes to brown and then to yellow within a few minutes.

TESTS

Solution S. Disperse 5.00 g in 20 ml of *water R* and add dropwise with shaking 2.5 ml of *strong sodium hydroxide solution R*. Adjust to pH 6.3 with *1 M sodium hydroxide* and dilute to 50.0 ml with *water R*.

Appearance of solution. Solution S is clear (*2.2.1*) and colourless (*2.2.2, Method II*).

pH (*2.2.3*). Shake 0.2 g with 20 ml of *carbon dioxide-free water R*. The pH of the suspension is 2.8 to 3.0.

Specific optical rotation (*2.2.7*): – 32.5 to – 35.5, determined on solution S and calculated with reference to the dried substance.

Ninhydrin-positive substances. Examine by thin-layer chromatography (*2.2.27*), using a suitable silica gel as the coating substance.

Test solution (a). Dissolve 0.10 g of the substance to be examined in *dilute ammonia R2* and dilute to 10 ml with the same solvent.

Test solution (b). Dilute 1 ml of test solution (a) to 50 ml with *water R*.

Reference solution (a). Dissolve 10 mg of *carbocisteine CRS* in *dilute ammonia R2* and dilute to 50 ml with the same solvent.

Reference solution (b). Dilute 5 ml of test solution (b) to 20 ml with *water R*.

Reference solution (c). Dissolve 10 mg of *carbocisteine CRS* and 10 mg of *arginine hydrochloride CRS* in 5 ml of *dilute ammonia R2* and dilute to 25 ml with *water R*.

Apply separately to the plate 5 µl of each solution. Allow the plate to dry in air. Develop over a path of 15 cm using a mixture of 20 volumes of *glacial acetic acid R*, 20 volumes of *water R* and 60 volumes of *butanol R*. Dry the plate in a current of warm air. Spray with *ninhydrin solution R* and heat at 100 °C to 105 °C for 15 min. Any spot in the chromatogram obtained with test solution (a), apart from the principal spot, is not more intense than the spot in the chromatogram obtained with reference solution (b) (0.5 per cent). The test is not valid unless the chromatogram obtained with reference solution (c) shows two clearly separated principal spots.

Chlorides (*2.4.4*). Dissolve 33 mg in 5 ml of *dilute nitric acid R* and dilute to 15 ml with *water R*. The solution, without further addition of nitric acid, complies with the limit test for chlorides (0.15 per cent).

Sulphates (*2.4.13*). Dissolve 0.5 g in 5 ml of *dilute hydrochloric acid R* and dilute to 15 ml with *distilled water R*. The solution complies with the limit test for sulphates (300 ppm).

Heavy metals (*2.4.8*). 2.0 g complies with limit test D for heavy metals (10 ppm). Prepare the standard using 2 ml of *lead standard solution (10 ppm Pb) R*.

Loss on drying (*2.2.32*). Not more than 0.5 per cent, determined on 1.000 g by drying in an oven at 105 °C for 2 h.

Sulphated ash (*2.4.14*). Not more than 0.3 per cent, determined on 1.0 g.

ASSAY

Dissolve 0.150 g in 10 ml of *anhydrous formic acid R* with slight heating and shake until dissolution is complete. Add 50 ml of *anhydrous acetic acid R*. Titrate with *0.1 M perchloric acid,* determining the end-point potentiometrically (*2.2.20*).

1 ml of *0.1 M perchloric acid* is equivalent to 17.92 mg of $C_5H_9NO_4S$.

STORAGE

Store protected from light.

01/2008:1299
corrected 6.0

CARBOMERS

Carbomera

DEFINITION

High molecular mass polymers of acrylic acid cross-linked with polyalkenyl ethers of sugars or polyalcohols.

Content: 56.0 per cent to 68.0 per cent of carboxylic acid (-COOH) groups (dried substance).

CHARACTERS

Appearance: white or almost white, fluffy powder, hygroscopic.

Solubility: swells in water and in other polar solvents after dispersion and neutralisation with sodium hydroxide solution.

IDENTIFICATION

First identification: A, E.

Second identification: B, C, D, E.

A. Infrared absorption spectrophotometry (*2.2.24*).
Main bands: at 2960 cm^{-1}, 1720 cm^{-1}, 1455 cm^{-1}, 1415 cm^{-1}, 1250 cm^{-1}, 1175 cm^{-1} and 800 cm^{-1}, with the strongest band at 1720 cm^{-1}.

B. Adjust a 10 g/l dispersion to about pH 7.5 with *1 M sodium hydroxide*. A highly viscous gel is formed.

C. Add 2 ml of a 100 g/l solution of *calcium chloride R* with continuous stirring to 10 ml of the gel from test B. A white precipitate is immediately produced.

D. Add 0.5 ml of *thymol blue solution R* to 10 ml of a 10 g/l dispersion. An orange colour is produced. Add 0.5 ml of *cresol red solution R* to 10 ml of a 10 g/l dispersion. A yellow colour is produced.

E. It complies with the apparent nominal viscosity indicated on the label.

TESTS

Apparent viscosity: the nominal apparent viscosity is in the range 300 mPa·s to 115 000 mPa·s. For a product with a nominal apparent viscosity of 20 000 mPa·s or greater, the apparent viscosity is 70.0 per cent to 130.0 per cent of the value stated on the label; for a product with a nominal apparent viscosity less than 20 000 mPa·s, the apparent viscosity is 50.0 per cent to 150.0 per cent of the value stated on the label.

Dry the substance to be examined *in vacuo* at 80 °C for 1 h. Carefully add 2.50 g of the previously dried substance to be examined to 500 ml of *water R* in a 1000 ml beaker while stirring continuously at 1000 ± 50 r/min, with the stirrer shaft set at an angle of 60° to one side of the beaker. Add the previously dried substance over a period of 45-90 s, at a uniform rate, ensuring that loose aggregates of powder are broken up and continue stirring at 1000 ± 50 r/min for 15 min. Remove the stirrer, and place the beaker containing the dispersion in a water-bath at 25 ± 0.2 °C for 30 min. Insert the stirrer to a depth necessary to ensure that air is not drawn into the dispersion, and while stirring at 300 ± 25 r/min, titrate with a glass-calomel electrode system to pH 7.3-7.8 by adding a 180 g/l solution of *sodium hydroxide R* below the surface, determining the end-point potentiometrically (*2.2.20*). The total volume of the 180 g/l solution of *sodium hydroxide R* used is about 6.2 ml. Allow 2-3 min before the final pH determination. If the final pH exceeds 7.8, discard the preparation, and prepare another

using a smaller amount of sodium hydroxide for titration. Return the neutralised preparation to the water-bath at 25 °C for 1 h, then perform the viscosity determination without delay to avoid slight viscosity changes that occur 75 min after neutralisation. Determine the viscosity (*2.2.10*) with a rotating viscometer with a spindle rotating at 20 r/min, using a spindle suitable for the expected apparent viscosity.

Free acrylic acid. Liquid chromatography (*2.2.29*).

Test solution. Mix 0.125 g of the substance to be examined with a 25 g/l solution of *aluminium potassium sulphate R* and dilute to 25.0 ml with the same solution. Heat the suspension at 50 °C for 20 min with shaking. Then shake the suspension at room temperature for 60 min. Centrifuge and use the clear supernatant solution as the test solution.

Reference solution. Dissolve 62.5 mg of *acrylic acid R* in a 25 g/l solution of *aluminium potassium sulphate R* and dilute to 100.0 ml with the same solution. Dilute 1.0 ml of this solution to 50.0 ml with a 25 g/l solution of *aluminium potassium sulphate R*.

Column:

– *size*: *l* = 0.12 m, Ø = 4.6 mm,
– *stationary phase*: *octadecylsilyl silica gel for chromatography R* (5 µm).

Mobile phase:

– *mobile phase A*: a 1.361 g/l solution of *potassium dihydrogen phosphate R*, adjusted to pH 2.5 using *dilute phosphoric acid R*,
– *mobile phase B*: equal volumes of a 1.361 g/l solution of *potassium dihydrogen phosphate R* and *acetonitrile for chromatography R*.

Time (min)	Mobile phase A (per cent *V/V*)	Mobile phase B (per cent *V/V*)
0 - 8	100	0
8 - 9	100 → 0	0 → 100
9 - 20	0	100
20 - 21	0 → 100	100 → 0
21 - 30	100	0

Flow rate: 1 ml/min.

Detection: spectrophotometer at 205 nm.

Injection: 20 µl.

Retention time: acrylic acid = about 6.0 min.

Limit:

– *acrylic acid*: not more than the area of the corresponding peak in the chromatogram obtained with the reference solution (0.25 per cent).

Benzene. Gas chromatography (*2.4.24, System A*).

Solvent solution. Dissolve 0.100 g of *benzene R* in *dimethyl sulphoxide R* and dilute to 100.0 ml with the same solvent. Dilute 1.0 ml of the solution to 100.0 ml with *water R*. Dilute 1.0 ml of this solution to 100.0 ml with *water R*.

Test solution. Weigh 50.0 mg of the substance to be examined into an injection vial and add 5.0 ml of *water R* and 1.0 ml of *dimethyl sulphoxide R*.

Reference solution. Weigh 50.0 mg of the substance to be examined into an injection vial and add 4.0 ml of *water R*, 1.0 ml of *dimethyl sulphoxide R* and 1.0 ml of the solvent solution.

Close the vials with a tight rubber membrane stopper coated with polytetrafluoroethylene and secure with an aluminium crimped cap. Shake to obtain a homogeneous dispersion.

Stratic head-space conditions which may be used:

– *equilibration temperature*: 80 °C,
– *equilibration time*: 60 min,
– *transfer line temperature*: 90 °C.

Injection: 1 ml of the gaseous phase of the test solution and 1 ml of the gaseous phase of the reference solution; repeat these injections twice more.

System suitability:

– *repeatability*: maximum relative standard deviation of the differences in area between the analyte peaks obtained from the 3 replicate pair injections of the reference solution and the test solution is 15 per cent.

Limit:

– *benzene*: the mean area of the peak corresponding to benzene in the chromatograms obtained with the test solution is not greater than half the mean area of the peak corresponding to benzene in the chromatograms obtained with the reference solution (2 ppm).

Heavy metals (*2.4.8*): maximum 20 ppm.

1.0 g complies with limit test C. Prepare the standard using 2 ml of *lead standard solution (10 ppm Pb) R*.

Loss on drying (*2.2.32*): maximum 3.0 per cent, determined on 1.000 g by drying *in vacuo* at 80 °C for 60 min.

Sulphated ash (*2.4.14*): maximum 4.0 per cent, determined on 1.0 g.

ASSAY

Slowly add 50 ml of *water R* to 0.120 g whilst stirring and heating at 60 °C for 15 min. Stop heating, add 150 ml of *water R* and continue stirring for 30 min. Add 2 g of *potassium chloride R* and titrate with *0.2 M sodium hydroxide*, determining the end-point potentiometrically (*2.2.20*).

1 ml of *0.2 M sodium hydroxide* is equivalent to 9.0 mg of carboxylic acid (-COOH) groups.

STORAGE

In an airtight container.

LABELLING

The label states the nominal apparent viscosity.

01/2008:0375

CARBON DIOXIDE

Carbonei dioxidum

CO_2 M_r 44.01

[124-38-9]

DEFINITION

Content: minimum 99.5 per cent *V/V* of CO_2 in the gaseous phase.

This monograph applies to carbon dioxide for medicinal use.

CHARACTERS

Appearance: colourless gas.

Solubility: at 20 °C and at a pressure of 101 kPa, 1 volume dissolves in about 1 volume of water.

PRODUCTION

Examine the gaseous phase.

If the test is performed on a cylinder of gas, keep the cylinder of the substance to be examined at room temperature for not less than 6 h before carrying out the tests. Keep the cylinder in the vertical position with the outlet valve uppermost.

Carbon monoxide. Gas chromatography (*2.2.28*).

Gas to be examined. The substance to be examined.

Reference gas. A mixture containing 5 ppm *V/V* of *carbon monoxide R* in *nitrogen R1*.

Column:

- *material*: stainless steel,
- *size*: *l* = 2 m, Ø = 4 mm,
- *stationary phase*: an appropriate molecular sieve for chromatography (0.5 nm).

Carrier gas: *helium for chromatography R*.

Flow rate: 60 ml/min.

Temperature:

- *column*: 50 °C,
- *injection port and detector*: 130 °C.

Detection: flame ionisation with methaniser.

Injection: loop injector.

Adjust the injected volumes and the operating conditions so that the height of the peak due to carbon monoxide in the chromatogram obtained with the reference gas is at least 35 per cent of the full scale of the recorder.

Limit:

- *carbon monoxide*: not more than the area of the corresponding peak in the chromatogram obtained with the reference gas (5 ppm *V/V*).

Nitrogen monoxide and nitrogen dioxide: maximum 2 ppm *V/V* in total, determined using a chemiluminescence analyser (*2.5.26*).

Gas to be examined. The substance to be examined.

Reference gas (a). Carbon dioxide R1.

Reference gas (b). A mixture containing 2 ppm *V/V* of *nitrogen monoxide R* in *carbon dioxide R1* or in *nitrogen R1*.

Calibrate the apparatus and set the sensitivity using reference gases (a) and (b). Measure the content of nitrogen monoxide and nitrogen dioxide in the gas to be examined.

If nitrogen is used instead of carbon dioxide in reference gas (b), multiply the result obtained by the quenching correction factor in order to correct the quenching effect on the analyser response caused by the carbon dioxide matrix effect.

The quenching correction factor is determined by applying a known reference mixture of nitrogen monoxide in carbon dioxide and comparing the actual content with the content indicated by the analyser which has been calibrated with a NO/N_2 reference mixture.

$$\text{Quenching correction factor} = \frac{\text{actual nitrogen monoxide content}}{\text{indicated nitrogen monoxide content}}$$

Total sulphur: maximum 1 ppm *V/V*, determined using an ultraviolet fluorescence analyser after oxidation of the sulphur compounds by heating at 1000 °C (Figure 0375.-1).

The apparatus consists of the following:

- a system generating ultraviolet radiation with a wavelength of 210 nm, made up of an ultraviolet lamp, a collimator, and a selective filter; the beam is blocked periodically by a chopper rotating at high speed,
- a reaction chamber through which flows the previously filtered gas to be examined,
- a system that detects radiation emitted at a wavelength of 350 nm, made up of a selective filter, a photomultiplier tube and an amplifier.

Gas to be examined. The substance to be examined.

Reference gas (a). Carbon dioxide R1.

Reference gas (b). A mixture containing between 0.5 ppm *V/V* and 2 ppm *V/V* of *hydrogen sulphide R1* in *carbon dioxide R1*.

Calibrate the apparatus and set the sensitivity using reference gases (a) and (b). Pass the gas to be examined through a quartz oven heated to 1000 °C. *Oxygen R* is circulated in the oven at a tenth of the flow rate of the gas to be examined. Measure the sulphur dioxide content in the gaseous mixture leaving the oven.

Water: maximum 67 ppm *V/V*, determined using an electrolytic hygrometer (*2.5.28*).

Assay. Infrared analyser (*2.5.24*).

Gas to be examined. The substance to be examined. It must be filtered to avoid stray light phenomena.

Reference gas (a). Carbon dioxide R1.

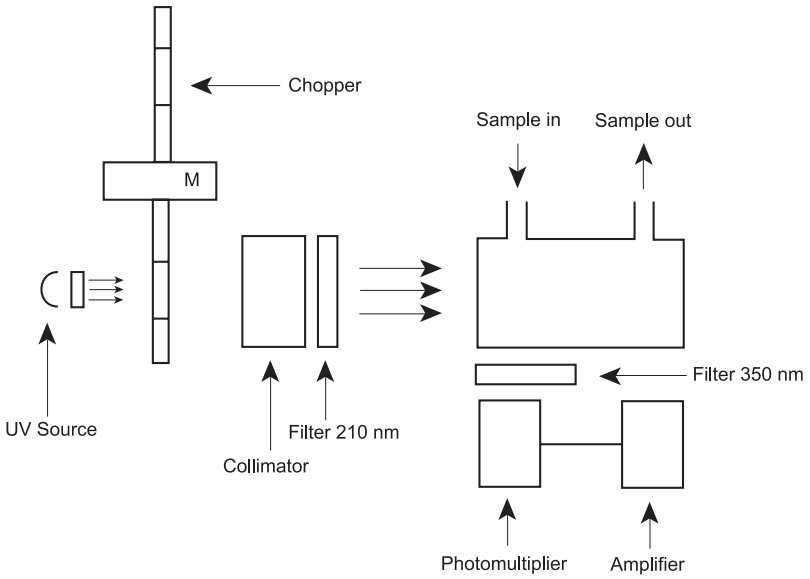


Figure 0375.-1.– *UV Fluorescence Analyser*

Reference gas (b). A mixture containing 95.0 per cent *V/V* of *carbon dioxide R1* and 5.0 per cent *V/V* of *nitrogen R1*.

Calibrate the apparatus and set the sensitivity using reference gases (a) and (b). Measure the content of carbon dioxide in the gas to be examined.

IDENTIFICATION

First identification: A.

Second identification: B, C.

A. Infrared absorption spectrophotometry (*2.2.24*).
Comparison: *Ph. Eur. reference spectrum of carbon dioxide.*

B. Place a glowing splinter of wood in an atmosphere of the substance to be examined. It is extinguished.

C. Pass a stream of the substance to be examined through *barium hydroxide solution R*. A white precipitate is formed which dissolves with effervescence in *dilute acetic acid R*.

TESTS

Examine the gaseous phase.

If the test is performed on a cylinder of gas, keep the cylinder of the substance to be examined at room temperature for not less than 6 h before carrying out the tests. Keep the cylinder in the vertical position with the outlet valve uppermost.

Carbon monoxide: maximum 5 ppm *V/V*, determined using a carbon monoxide detector tube (*2.1.6*).

Hydrogen sulphide: maximum 1 ppm *V/V*, determined using a hydrogen sulphide detector tube (*2.1.6*).

Nitrogen monoxide and nitrogen dioxide: maximum 2 ppm *V/V* in total, determined using a nitrogen monoxide and nitrogen dioxide detector tube (*2.1.6*).

Sulphur dioxide: maximum 2 ppm *V/V*, determined using a sulphur dioxide detector tube (*2.1.6*).

Water vapour: maximum 67 ppm *V/V*, determined using a water vapour detector tube (*2.1.6*).

STORAGE

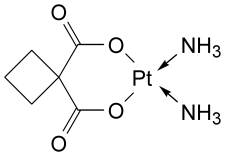
Store liquefied under pressure in suitable containers complying with the legal regulations.

IMPURITIES

A. nitrogen monoxide,

B. nitrogen dioxide,

C. carbon monoxide,



D. total sulphur,

E. water.

corrected 6.0

CARBOPLATIN

Carboplatinum

$C_6H_{12}N_2O_4Pt$ M_r 371.3
[41575-94-4]

DEFINITION

(*SP*-4-2)-Diammine[cyclobutan-1,1-dicarboxylato(2-)-*O,O'*]-platin.

Content: 98.0 per cent to 102.0 per cent (dried substance).

CHARACTERS

Appearance: colourless, crystalline powder.

Solubility: sparingly soluble in water, very slightly soluble in acetone and in ethanol (96 per cent).

mp: about 200 °C, with decomposition.

IDENTIFICATION

Infrared absorption spectrophotometry (*2.2.24*).

Comparison: *Ph. Eur. reference spectrum of carboplatin*.

TESTS

Solution S1. Dissolve 0.25 g in *carbon dioxide-free water R* and dilute to 25 ml with the same solvent.

Solution S2. Dissolve 1.0 g in *water R*, heating slightly if necessary, and dilute to 40 ml with the same solvent; filter if necessary.

Appearance of solution. Solution S1 is clear (*2.2.1*) and colourless (*2.2.2, Method II*).

Impurity B and acidity: maximum 0.5 per cent, calculated as impurity B.

To 10 ml of solution S1 add 0.1 ml of *phenolphthalein solution R1*. The solution is colourless. Not more than 0.7 ml of *0.01 M sodium hydroxide* is required to change the colour of the indicator to pink.

Related substances. Liquid chromatography (*2.2.29*).

Test solution. Dissolve 20.0 mg of the substance to be examined in a mixture of equal volumes of *acetonitrile R* and *water R*, then dilute to 20.0 ml with the same mixture of solvents.

Reference solution. Dilute 0.5 ml of the test solution to 200.0 ml with the mobile phase.

Column:

– *size*: *l* = 0.25 m, Ø = 4.6 mm;
– *stationary phase*: *aminopropylsilyl silica gel for chromatography R* (5 µm).

Mobile phase: *water R, acetonitrile R* (13:87 *V/V*).

Flow rate: 2 ml/min.

Detection: spectrophotometer at 230 nm.

Injection: 10 µl.

Run time: 2.5 times the retention time of carboplatin.

System suitability: test solution:

– *number of theoretical plates*: minimum 5000; if necessary, adjust the concentration of acetonitrile in the mobile phase;
– *mass distribution ratio*: minimum 4.0; if necessary, adjust the concentration of acetonitrile in the mobile phase;
– *symmetry factor*: maximum 2.0; if necessary, adjust the concentration of acetonitrile in the mobile phase.

Limits:

– *impurity A*: not more than the area of the principal peak in the chromatogram obtained with the reference solution (0.25 per cent);
– *total*: not more than twice the area of the principal peak in the chromatogram obtained with the reference solution (0.5 per cent);

– *disregard limit*: 0.2 times the area of the principal peak in the chromatogram obtained with the reference solution (0.05 per cent).

Chlorides (*2.4.4*): maximum 100 ppm.

Dilute 10 ml of solution S2 to 15 ml with *water R*. Prepare the standard using 5 ml of *chloride standard solution (5 ppm Cl) R*.

Ammonium (*2.4.1, Method B*): maximum 100 ppm, determined on 0.20 g.

Prepare the standard using 0.2 ml of *ammonium standard solution (100 ppm NH_4) R*.

Silver: maximum 10.0 ppm.

Atomic emission spectrometry (*2.2.22, Method I*).

Test solution. Dissolve 0.50 g in a 1 per cent *V/V* solution of *nitric acid R* and dilute to 50.0 ml with the same solution.

Reference solutions. Prepare the reference solutions using *silver standard solution (5 ppm Ag) R*, diluting with a 1 per cent *V/V* solution of *nitric acid R*.

Wavelength: 328.1 nm.

Soluble barium: maximum 10.0 ppm.

Atomic emission spectrometry (*2.2.22, Method I*).

Test solution. Use the solution described in the test for silver.

Reference solutions. Prepare the reference solutions using *barium standard solution (50 ppm Ba) R*, diluting with a 1 per cent *V/V* solution of *nitric acid R*.

Wavelength: 455.4 nm.

Heavy metals (*2.4.8*): maximum 20 ppm.

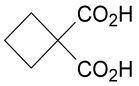
12 ml of solution S2 complies with test A. Prepare the reference solution using 5 ml of *lead standard solution (1 ppm Pb R)*.

Loss on drying (*2.2.32*): maximum 0.5 per cent, determined on 1.000 g by drying in an oven at 105 °C.

ASSAY

Use the residue obtained in the test for loss on drying.

Ignite 0.200 g of the residue to constant mass at 800 ± 50 °C. 1 mg of the residue is equivalent to 1.903 mg of $C_6H_{12}N_2O_4Pt$.



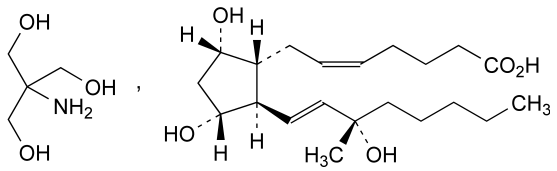
STORAGE

Protected from light.

IMPURITIES

Specified impurities: A, B.

A. cisplatin,



B. cyclobutane-1,1-dicarboxylic acid.

01/2008:1712

CARBOPROST TROMETAMOL

Carboprostum trometamolum

$C_{25}H_{47}NO_8$ M_r 489.7

[58551-69-2]

DEFINITION

2-Amino-2-(hydroxymethyl)propane-1,3-diol (5*Z*)-7-[(1*R*,2*R*,3*R*,5*S*)-3,5-dihydroxy-2-[(1*E*,3*S*)-3-hydroxy-3-methyloct-1-enyl]cyclopentyl]hept-5-enoate ((15*S*)-15-methyl-PGF_2).

Content: 94.0 per cent to 102.0 per cent (anhydrous substance).

CHARACTERS

Appearance: white or almost white powder.

Solubility: soluble in water.

IDENTIFICATION

A. Specific optical rotation (see Tests).

B. Infrared absorption spectrophotometry (*2.2.24*).

Comparison: *Ph. Eur. reference spectrum of carboprost trometamol.*

TESTS

Specific optical rotation (*2.2.7*): + 18 to + 24 (anhydrous substance).

Dissolve 0.100 g in *ethanol (96 per cent) R* and dilute to 10.0 ml with the same solvent.

Related substances. Liquid chromatography (*2.2.29*).

Test solution. Dissolve 15.0 mg of the substance to be examined in a mixture of 23 volumes of *acetonitrile R* and 77 volumes of *water for chromatography R* and dilute to 10.0 ml with the same mixture of solvents.

Reference solution (a). Dissolve 15.0 mg of *carboprost trometamol CRS* (containing impurity A) in a mixture of 23 volumes of *acetonitrile R* and 77 volumes of *water for chromatography R* and dilute to 10.0 ml with the same mixture of solvents.

Reference solution (b). Dilute 1.0 ml of reference solution (a) and 0.15 ml of *(15R)-15-methylprostaglandin $F_{2\alpha}$ R* (impurity B) to 100.0 ml with a mixture of 23 volumes of *acetonitrile R* and 77 volumes of *water for chromatography R*.

Reference solution (c). Dilute 2.0 ml of the test solution to 20.0 ml with a mixture of 23 volumes of *acetonitrile R* and 77 volumes of *water for chromatography R*. Dilute 2.0 ml of this solution to 20.0 ml with a mixture of 23 volumes of *acetonitrile R* and 77 volumes of *water for chromatography R*.

Column:

– *size*: *l* = 0.15 m, Ø = 4.6 mm,

– *stationary phase*: *octadecylsilyl silica gel for chromatography R1* (5 µm) with a pore size of 8-10 nm and a carbon loading of 12-19 per cent.

Mobile phase: mix 23 volumes of *acetonitrile R1* and 77 volumes of a 2.44 g/l solution of *sodium dihydrogen phosphate R* in *water for chromatography R* previously adjusted to pH 2.5 with *phosphoric acid R*.

Flow rate: 1.0 ml/min.

Detection: spectrophotometer at 200 nm.

Injection: 20 µl.

Run time: 1.3 times the retention time of carboprost.

Relative retention with reference to carboprost (retention time = about 80 min): impurity B = about 0.85; impurity A = about 0.9.

Identification of impurities: use the chromatogram obtained with reference solution (a) and the chromatogram supplied with *carboprost trometamol CRS* to identify the peak due to impurity A.

System suitability:

– *resolution*: minimum 3.4 between the peaks due to impurity B and carboprost in the chromatogram obtained with reference solution (b);

– *peak-to-valley ratio*: minimum 3.0, where H_p = height above the baseline of the peak due to impurity A and H_v = height above the baseline of the lowest point of the curve separating this peak from the peak due to impurity B in the chromatogram obtained with reference solution (a).

Limits:

– *impurity A*: not more than 3 times the area of the principal peak in the chromatogram obtained with reference solution (c) (3.0 per cent),

– *impurity B*: not more than the area of the principal peak in the chromatogram obtained with reference solution (c) (1.0 per cent),

– *any other impurity*: for each impurity, not more than 0.1 times the area of the principal peak in the chromatogram obtained with reference solution (c) (0.1 per cent),

– *total*: not more than 4 times the area of the principal peak in the chromatogram obtained with reference solution (c) (4.0 per cent),

– *disregard limit*: 0.05 times the area of the principal peak in the chromatogram obtained with reference solution (c) (0.05 per cent).

Water (*2.5.32*): maximum 0.5 per cent, determined on 50 mg.

ASSAY

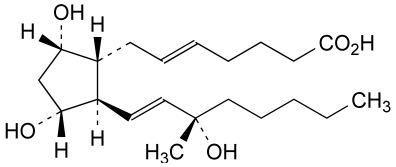
Liquid chromatography (*2.2.29*) as described in the test for related substances with the following modifications.

Mobile phase: mix 27 volumes of *acetonitrile R1* and 73 volumes of a 2.44 g/l solution of *sodium dihydrogen phosphate R* in *water for chromatography R* previously adjusted to pH 2.5 with *phosphoric acid R*.

Injection: test solution and reference solution (a).

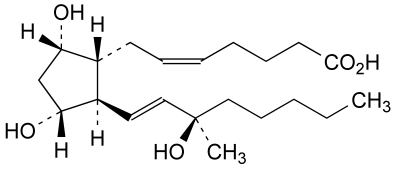
Run time: 1.2 times the retention time of carboprost.

Retention time: carboprost = about 29 min.



Calculate the percentage content of $C_{25}H_{47}NO_8$ using the declared content of *carboprost trometamol CRS*.

STORAGE

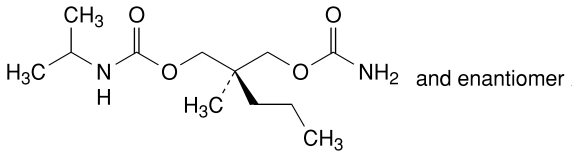


At a temperature below – 15 ° C.

IMPURITIES

Specified impurities: A, B.

A. (5*E*)-7-[(1*R*,2*R*,3*R*,5*S*)-3,5-dihydroxy-2-[(1*E*,3*S*)-3-hydroxy-3-methyloct-1-enyl]cyclopentyl]hept-5-enoic acid,



B. (5*Z*)-7-[(1*R*,2*R*,3*R*,5*S*)-3,5-dihydroxy-2-[(1*E*,3*R*)-3-hydroxy-3-methyloct-1-enyl]cyclopentyl]hept-5-enoic acid.

01/2008:1689

CARISOPRODOL

Carisoprodolum

$C_{12}H_{24}N_2O_4$ M_r 260.3

[78-44-4]

DEFINITION

(2*RS*)-2-[(Carbamoyloxy)methyl]-2-methylpentyl (1-methylethyl)carbamate.

Content: 98.0 per cent to 102.0 per cent (dried substance).

CHARACTERS

Appearance: white or almost white, fine powder.

Solubility: very slightly soluble in water, freely soluble in acetone, in alcohol and in methylene chloride.

IDENTIFICATION

First identification: A, B.

Second identification: A, C, D.

A. Melting point (*2.2.14*): 92 °C to 95 °C.

B. Infrared absorption spectrophotometry (*2.2.24*).

Comparison: *carisoprodol CRS*.

C. Examine the chromatograms obtained in the test for related substances.

Results: the principal spot in the chromatogram obtained with test solution (b) is similar in position, colour and size to the principal spot in the chromatogram obtained with reference solution (d).

D. Dissolve 0.2 g in 15 ml of a 28 g/l solution of *potassium hydroxide R* in *alcohol R* and boil under a reflux condenser for 15 min. Add 0.5 ml of *glacial acetic acid R* and 1 ml of a 50 g/l solution of *cobalt nitrate R* in *ethanol R*. An intense blue colour develops.

TESTS

Optical rotation (*2.2.7*): – 0.10° to + 0.10°.

Dissolve 2.5 g in *alcohol R* and dilute to 25.0 ml with the same solvent.

Related substances. Thin-layer chromatography (*2.2.27*).

Test solution (a). Dissolve 0.20 g of the substance to be examined in *methylene chloride R* and dilute to 10 ml with the same solvent.

Test solution (b). Dilute 1 ml of test solution (a) to 10 ml with *methylene chloride R*.

Reference solution (a). Dissolve 5.0 mg of *meprobamate CRS* in *methylene chloride R* and dilute to 50 ml with the same solvent.

Reference solution (b). Dilute 1 ml of test solution (b) to 50 ml with *methylene chloride R*.

Reference solution (c). Dilute 5 ml of reference solution (b) to 10 ml with *methylene chloride R*.

Reference solution (d). Dissolve 20 mg of *carisoprodol CRS* in *methylene chloride R* and dilute to 10 ml with the same solvent.

Reference solution (e). Dissolve 10 mg of *carisoprodol impurity A CRS* in 5 ml of reference solution (d) and dilute to 50 ml with *methylene chloride R*.

Plate: *TLC silica gel plate R*.

Mobile phase: *acetone R, methylene chloride R* (20:80 *V/V*).

Application: 5 µl.

Development: over a path of 15 cm.

Drying: in air for 15 min.

Detection: spray with a solution prepared as follows: dissolve 5 g of *phosphomolybdic acid R* in a mixture of 50 ml of *glacial acetic acid R* and 10 ml of *sulphuric acid R*, and dilute to 100 ml with *glacial acetic acid R*. Heat the plate at 100-105 °C for 30 min.

System suitability:

- the chromatogram obtained with reference solution (c) shows 1 clearly visible spot,
- the chromatogram obtained with reference solution (e) shows 2 clearly separated spots.

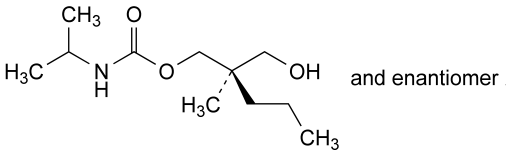
Limits: in the chromatogram obtained with test solution (a):

- *impurity D*: any spot due to impurity D is not more intense than the spot in the chromatogram obtained with reference solution (a) (0.5 per cent),
- *any other impurity*: any spot, apart from the principal spot and any spot due to impurity D, is not more intense than the spot in the chromatogram obtained with reference solution (b) (0.2 per cent).

Heavy metals (*2.4.8*): maximum 10 ppm.

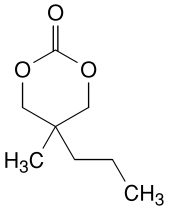
2.0 g complies with limit test C. Prepare the standard using 2 ml of *lead standard solution (10 ppm Pb) R*.

Loss on drying (*2.2.32*): maximum 0.5 per cent, determined on 1.000 g *in vacuo* at 60 °C for 3 h.



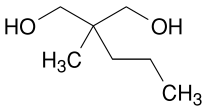
Sulphated ash (*2.4.14*): maximum 0.1 per cent, determined on 1.0 g.

ASSAY



Dissolve 0.100 g in 15 ml of a 25 per cent *V/V* solution of *sulphuric acid R* and boil under a reflux condenser for 3 h. Cool, dissolve by cautiously adding 30 ml of *water R*, cool again and place in a steam-distillation apparatus. Add 40 ml of *strong sodium hydroxide solution R* and distil immediately by passing steam through the mixture. Collect the distillate into 40 ml of a 40 g/l solution of *boric acid R* until the total volume in the receiver reaches about 200 ml. Add 0.25 ml of *methyl red mixed solution R*. Titrate with *0.1 M hydrochloric acid*, until the colour changes from green to violet. Carry out a blank titration.

1 ml of *0.1 M hydrochloric acid* is equivalent to 13.02 mg of $C_{12}H_{24}N_2O_4$.



IMPURITIES

A. (2*RS*)-2-(hydroxymethyl)-2-methylpentyl (1-methylethyl)carbamate,

B. 5-methyl-5-propyl-1,3-dioxan-2-one,

C. 2-methyl-2-propylpropane-1,3-diol,

D. meprobamate.

01/2008:0886
corrected 6.0

CARMELLOSE CALCIUM

Carmellosum calcicum

[9050-04-8]

DEFINITION

Calcium salt of a partly *O*-carboxymethylated cellulose.

CHARACTERS

Appearance: white or yellowish-white powder, hygroscopic after drying.

Solubility: practically insoluble in acetone, in alcohol and in toluene. It swells with water to form a suspension.

IDENTIFICATION

A. Shake 0.1 g thoroughly with 10 ml of *water R*. Add 2 ml of *dilute sodium hydroxide solution R* and allow to stand for 10 min (solution A). Dilute 1 ml of solution A to 5 ml with *water R*. To 0.05 ml add 0.5 ml of a 0.5 g/l solution of *chromotropic acid, sodium salt R* in a 75 per cent *m/m* solution of *sulphuric acid R* and heat on a water-bath for 10 min. A reddish-violet colour develops.

B. Shake 5 ml of solution A obtained in identification test A with 10 ml of *acetone R*. A white, flocculent precipitate is produced.

C. Shake 5 ml of solution A obtained in identification test A with 1 ml of *ferric chloride solution R1*. A brown, flocculent precipitate is formed.

D. Ignite 1 g and dissolve the residue in a mixture of 5 ml of *acetic acid R* and 10 ml of *water R*. Filter if necessary and boil the filtrate for a few minutes. Cool and neutralise with *dilute ammonia R1*. The solution gives reaction (a) of calcium (*2.3.1*).

TESTS

Solution S. Shake 1.0 g with 50 ml of *distilled water R*, add 5 ml of *dilute sodium hydroxide solution R* and dilute to 100 ml with *distilled water R*.

Alkalinity. Shake 1.0 g thoroughly with 50 ml of *carbon dioxide-free water R* and add 0.05 ml of *phenolphthalein solution R*. No red colour develops.

Chlorides (*2.4.4*): maximum 0.36 per cent.

Heat 28 ml of solution S with 10 ml of *dilute nitric acid R* on a water-bath until a flocculent precipitate is produced. Cool, centrifuge and separate the supernatant liquid. Wash the precipitate with 3 quantities, each of 10 ml, of *water R*, centrifuging each time. Combine the supernatant liquid and the washings and dilute to 100 ml with *water R*. To 25 ml add 6 ml of *dilute nitric acid R* and dilute to 50 ml with *water R*. Dilute 10 ml of the solution to 15 ml with *water R*.

Sulphates (*2.4.13*): maximum 1 per cent.

Heat 20 ml of solution S with 1 ml of *hydrochloric acid R* on a water-bath until a flocculent precipitate is produced. Cool, centrifuge and separate the supernatant liquid. Wash the precipitate with 3 quantities, each of 10 ml, of *distilled water R*, centrifuging each time. Combine the supernatant liquid and the washings and dilute to 100 ml with *distilled water R*. To 25 ml add 1 ml of *dilute hydrochloric acid R* and dilute to 50 ml with *distilled water R*.

Heavy metals (*2.4.8*): maximum 20 ppm.

1.0 g complies with limit test D. Prepare the standard using 2 ml of *lead standard solution (10 ppm Pb) R*.

Loss on drying (*2.2.32*): maximum 10.0 per cent, determined on 1.000 g by drying in an oven at 105 °C for 4 h.

Sulphated ash (*2.4.14*): 10.0 per cent to 20.0 per cent, determined on 1.0 g in a platinum crucible.

STORAGE

In an airtight container.

01/2008:0472
corrected 6.0

CARMELLOSE SODIUM

Carmellosum natricum

[9004-32-4]

DEFINITION

Carmellose sodium (carboxymethylcellulose sodium) is the sodium salt of a partly *O*-carboxymethylated cellulose. It contains not less than 6.5 per cent and not more than 10.8 per cent of sodium (Na), calculated with reference to the dried substance.

CHARACTERS

A white or almost white, granular powder, hygroscopic after drying, practically insoluble in acetone, in ethanol and in toluene. It is easily dispersed in water giving colloidal solutions.

IDENTIFICATION

A. To 10 ml of solution S (see Tests) add 1 ml of *copper sulphate solution R*. A blue, cotton-like precipitate is formed.

B. Boil 5 ml of solution S for a few minutes. No precipitate is formed.

C. The solution prepared from the sulphated ash in the test for heavy metals gives the reactions of sodium (*2.3.1*).

TESTS

Solution S. Sprinkle a quantity of the substance to be examined equivalent to 1.0 g of the dried substance onto 90 ml of *carbon dioxide-free water R* at 40 °C to 50 °C stirring vigorously. Continue stirring until a colloidal solution is obtained, cool and dilute to 100 ml with *carbon dioxide-free water R*.

Appearance of solution. Solution S is not more opalescent than reference suspension III (*2.2.1*) and not more intensely coloured than reference solution Y_6 (*2.2.2, Method II*).

pH (*2.2.3*). The pH of solution S is 6.0 to 8.0.

Apparent viscosity. While stirring, introduce a quantity of the substance to be examined equivalent to 2.00 g of the dried substance into 50 ml of *water R* heated to 90 °C. For a product of low viscosity, use if necessary, the quantity required to give the concentration indicated on the label. Allow to cool, dilute to 100.0 ml with *water R* and stir until dissolution is complete. Determine the viscosity (*2.2.10*) using a rotating viscometer at 20 °C and a shear rate of 10 s^{-1}. If it is impossible to obtain a shear rate of exactly 10 s^{-1}, use a shear rate slightly higher and a rate slightly lower and interpolate. The apparent viscosity is not less than 75 per cent and not more than 140 per cent of the value stated on the label.

Sodium glycollate. Place a quantity of the substance to be examined equivalent to 0.500 g of dried substance in a beaker. Add 5 ml of *acetic acid R* and 5 ml of *water R*. Stir until dissolution is complete (about 30 min). Add 80 ml of *acetone R* and 2 g of *sodium chloride R*. Filter through a fast filter paper impregnated with *acetone R* into a volumetric flask, rinse the beaker and filter with *acetone R* and dilute the filtrate to 100.0 ml with the same solvent. Allow to stand for 24 h without shaking. Use the clear supernatant liquid to prepare the test solution.

In a volumetric flask, dissolve 0.310 g of *glycollic acid R*, previously dried *in vacuo* over *diphosphorus pentoxide R*, in *water R* and dilute to 1000.0 ml with the same solvent. Place 5.0 ml of this solution in a volumetric flask, add 5 ml of *acetic acid R* and allow to stand for about 30 min. Add 80 ml of *acetone R* and 2 g of *sodium chloride R* and dilute to 100.0 ml with *acetone R*. Use this solution to prepare the reference solution.

Place 2.0 ml of each solution in a separate 25 ml volumetric flask. Heat on a water-bath to eliminate acetone. Cool to room temperature and add 5.0 ml of *2,7-dihydroxynaphthalene solution R* to each flask. Shake and add 15.0 ml of *2,7-dihydroxynaphthalene solution R*. Close the flasks with aluminium foil and heat on a water-bath for 20 min. Cool under running water and dilute to 25.0 ml with *sulphuric acid R*. Within 10 min, transfer 10.0 ml of each solution to a flat-bottomed tube. Examine the solutions viewing vertically. The test solution is not more intensely coloured than the reference solution (0.4 per cent).

Chlorides (*2.4.4*). Dilute 2 ml of solution S to 15 ml with *water R*. The solution complies with the limit test for chlorides (0.25 per cent).

Heavy metals (*2.4.8*). To the residue obtained in the determination of the sulphated ash, add 1 ml of *hydrochloric acid R* and evaporate on a water-bath. Take up the residue in 20 ml of *water R*. 12 ml of the solution complies with limit test A for heavy metals (20 ppm). Prepare the standard using *lead standard solution (1 ppm Pb) R*.

Loss on drying (*2.2.32*). Not more than 10.0 per cent, determined on 1.000 g by drying in an oven at 105 °C.

Sulphated ash (*2.4.14*): 20.0 per cent to 33.3 per cent, determined on 1.0 g using a mixture of equal volumes of *sulphuric acid R* and *water R* and calculated with reference to the dried substance. These limits correspond to a content of 6.5 per cent to 10.8 per cent of sodium (Na).

LABELLING

The label states the apparent viscosity in millipascal seconds for a 20 g/l solution; for a product of low viscosity, the label states the concentration of the solution to be used and the apparent viscosity in millipascal seconds.

01/2008:1186
corrected 6.0

CARMELLOSE SODIUM, LOW-SUBSTITUTED

Carmellosum natricum, substitutum humile

[9050-32-4]

DEFINITION

Low-substituted sodium carboxymethylcellulose. Sodium salt of a partly *O*-(carboxymethylated) cellulose.

Content: 2.0 per cent to 4.5 per cent of sodium (Na) (dried substance).

CHARACTERS

Appearance: white or almost white powder or short fibres.

Solubility: practically insoluble in acetone, in anhydrous ethanol and in toluene. It swells in water to form a gel.

IDENTIFICATION

A. Shake 1 g with 100 ml of a 100 g/l solution of *sodium hydroxide R*. A suspension is produced.

B. Shake 1 g with 50 ml of *water R*. Transfer 1 ml of the mixture to a test tube, add 1 ml of *water R* and 0.05 ml of a freshly prepared 40 g/l solution of *α-naphthol R* in *methanol R*. Incline the test tube and add carefully 2 ml of *sulphuric acid R* down the side so that it forms a lower layer. A reddish-purple colour develops at the interface.

C. Sulphated ash (*2.4.14*) (see Tests).

D. The solution prepared for the test for heavy metals gives reaction (a) of sodium (*2.3.1*).

TESTS

pH (*2.2.3*): 6.0 to 8.5.

Shake 1 g with 100 ml of *carbon dioxide-free water R* for 5 min. Centrifuge.

Sodium chloride and sodium glycollate: maximum 0.5 per cent (dried substance) for the sum of the percentage contents.

Sodium chloride. Place 5.00 g in a 250 ml conical flask, add 50 ml of *water R* and 5 ml of *strong hydrogen peroxide solution R* and heat on a water bath for 20 min, stirring occasionally to ensure total hydration. Cool, add 100 ml of *water R* and 10 ml of *nitric acid R*. Titrate with *0.05 M silver nitrate* determining the end-point potentiometrically (*2.2.20*) using a silver-based indicator electrode and a double-junction reference electrode containing a 100 g/l solution of *potassium nitrate R* in the outer jacket and a standard filling solution in the inner jacket.

1 ml of *0.05 M silver nitrate* is equivalent to 2.922 mg of NaCl.

Sodium glycollate. Place a quantity of the substance to be examined equivalent to 0.500 g of the dried substance in a beaker. Add 5 ml of *glacial acetic acid R* and 5 ml of *water R* and stir to ensure total hydration (about 30 min). Add 80 ml of *acetone R* and 2 g of *sodium chloride R*. Stir for several minutes to ensure complete precipitation of the carboxymethylcellulose. Filter through a fast filter paper impregnated with *acetone R* into a volumetric flask, rinse the beaker and filter with *acetone R* and dilute the filtrate to 100.0 ml with the same solvent. Allow to stand for 24 h without shaking. Use the clear supernatant as the test solution.

Prepare the reference solutions as follows: in a 100 ml volumetric flask, dissolve 0.100 g of *glycollic acid R*, previously dried *in vacuo* over *diphosphorus pentoxide R*, in *water R* and dilute to 100.0 ml with the same solvent. Transfer 0.5 ml, 1.0 ml, 1.5 ml and 2.0 ml of the solution to separate volumetric flasks; dilute the contents of each flask to 5.0 ml with *water R*, add 5 ml of *glacial acetic acid R*, dilute to 100.0 ml with *acetone R* and mix.

Transfer 2.0 ml of the test solution and 2.0 ml of each of the reference solutions to separate 25 ml volumetric flasks. Heat the uncovered flasks in a water-bath to eliminate the acetone. Allow to cool and add 5.0 ml of *2,7-dihydroxynaphthalene solution R* to each flask. Mix, add a further 15.0 ml of *2,7-dihydroxynaphthalene solution R* and mix again. Close the flasks with aluminium foil and heat in a water-bath for 20 min. Cool and dilute to 25.0 ml with *sulphuric acid R*.

Measure the absorbance (*2.2.25*) of each solution at 540 nm. Prepare a blank using 2.0 ml of a solution containing 5 per cent *V/V* each of *glacial acetic acid R* and *water R* in *acetone R*. Prepare a standard curve using the absorbances obtained with the reference solutions. From the standard curve and the absorbance of the test solution, determine the mass *a*, in milligrams, of glycollic acid in the substance to be examined and calculate the content of sodium glycollate from the following expression:

$$\frac{10 \times 1.29 \times a}{(100 - b)\, m}$$

1.29 = the factor converting glycollic acid to sodium glycollate,

b = the loss on drying as a percentage,

m = the mass of the substance to be examined, in grams.

Water-soluble substances: maximum 70.0 per cent.

Disperse 5.00 g in 400.0 ml of *water R* and stir for 1 min every 10 min during the first 30 min. Allow to stand for 1 h and centrifuge, if necessary. Decant 100.0 ml of the supernatant liquid onto a fast filter paper in a vacuum filtration funnel, apply vacuum and collect 75.0 ml of the filtrate. Evaporate to dryness and dry the residue at 100-105 °C for 4 h.

Heavy metals (*2.4.8*): maximum 20 ppm.

To the residue obtained in the determination of the sulphated ash add 1 ml of *hydrochloric acid R* and evaporate on a water-bath. Take up the residue in 20 ml of *water R* (this solution is used for identification test D). 12 ml of the solution complies with test A. Prepare the reference solution using *lead standard solution (1 ppm Pb) R*.

Loss on drying (*2.2.32*): maximum 10.0 per cent, determined on 1.000 g by drying in an oven at 105 °C.

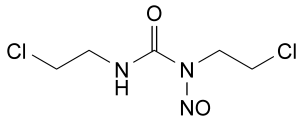
Sulphated ash (*2.4.14*): 6.5 per cent to 13.5 per cent (dried substance), corresponding to a content of 2.0 per cent to 4.5 per cent of Na.

Use 1.0 g with a mixture of equal volumes of *sulphuric acid R* and *water R*.

FUNCTIONALITY-RELATED CHARACTERISTICS

This section provides information on characteristics that are recognised as being relevant control parameters for one or more functions of the substance when used as an excipient. This section is a non-mandatory part of the monograph and it is not necessary to verify the characteristics to demonstrate compliance. Control of these characteristics can however contribute to the quality of a medicinal product by improving the consistency of the manufacturing process and the performance of the medicinal product during use. Where control methods are cited, they are recognised as being suitable for the purpose, but other methods can also be used. Wherever results for a particular characteristic are reported, the control method must be indicated.

The following characteristic may be relevant for low-substituted carmellose sodium used as disintegrant.



Settling volume: 15.0 ml to 35.0 ml.

In a 100 ml graduated cylinder, place 20 ml of *2-propanol R*, add 5.0 g of the substance to be examined and shake vigorously. Dilute to 30 ml with *2-propanol R* then to 50 ml with *water R* and shake vigorously. Within 15 min, repeat the shaking 3 times. Allow to stand for 4 h and determine the volume of the settled mass.

01/2008:1187

CARMUSTINE

Carmustinum

$C_5H_9Cl_2N_3O_2$ M_r 214.1
[154-93-8]

DEFINITION

Carmustine contains not less than 98.0 per cent and not more than the equivalent of 102.0 per cent of 1,3-bis(2-chloroethyl)-1-nitrosourea, calculated with reference to the anhydrous substance.

CHARACTERS

A yellowish, granular powder, very slightly soluble in water, very soluble in methylene chloride, freely soluble in ethanol.

It melts at about 31 °C with decomposition.

IDENTIFICATION

Examine by infrared absorption spectrophotometry(*2.2.24*), comparing with the *Ph. Eur. reference spectrum of carmustine*. Examine the melted substances prepared as films.

TESTS

1,3-bis(2-chloroethyl)urea (impurity A). Examine by thin-layer chromatography (*2.2.27*), using a suitable silica gel as the coating substance.

Test solution. Dissolve 0.10 g of the substance to be examined in *methylene chloride R* and dilute to 5 ml with the same solvent.

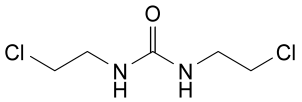
Reference solution (a). Dissolve 2 mg of *carmustine impurity A CRS* in *methylene chloride R* and dilute to 10 ml with the same solvent.

Reference solution (b). Dilute 1 ml of the test solution to 10 ml with *methylene chloride R*. To 5 ml of this solution, add 5 ml of reference solution (a).

Apply separately to the plate 2 µl of each solution. Develop over a path of 10 cm using a mixture of 10 volumes of *methanol R* and 90 volumes of *methylene chloride R*. Allow the plate to dry in air. Spray with *diethylamine R* and heat at 125 °C for 10 min. Allow to cool and spray with *silver nitrate solution R2*. Expose to ultraviolet light at 365 nm until brown to black spots appear. Any spot corresponding to carmustine impurity A in the chromatogram obtained with the test solution is not more intense than the spot in the chromatogram obtained with reference solution (a) (1 per cent). The test is not valid unless the chromatogram obtained with reference solution (b) shows two clearly separated spots.

Water (*2.5.12*). Not more than 1.0 per cent, determined on 0.50 g by the semi-micro determination of water.

ASSAY



Dissolve 0.100 g in 30 ml of *ethanol R* and dilute to 100.0 ml with *water R*. Dilute 3.0 ml of the solution to 100.0 ml with *water R*. Measure the absorbance (*2.2.25*) at the maximum at 230 nm.

Calculate the content of $C_5H_9Cl_2N_3O_2$ taking the specific absorbance to be 270.

STORAGE

Store in an airtight container, protected from light, at a temperature of 2 °C to 8 °C.

IMPURITIES

A. 1,3-bis(2-chloroethyl)urea.

01/2008:0597

CARNAUBA WAX

Cera carnauba

DEFINITION

Purified wax obtained from the leaves of *Copernicia cerifera* Mart.

CHARACTERS

Appearance: pale yellow or yellow powder, flakes or hard masses.

Solubility: practically insoluble in water, soluble on heating in ethyl acetate and in xylene, practically insoluble in alcohol.

Relative density: about 0.97.

IDENTIFICATION

Thin-layer chromatography (*2.2.27*).

Test solution. Dissolve 0.10 g of the substance to be examined with heating in 5 ml of *chloroform R*. Use the warm solution.

Reference solution. Dissolve 5 mg of *menthol R*, 5 µl of *menthyl acetate R* and 5 mg of *thymol R* in 10 ml of *toluene R*.

Plate: *TLC silica gel plate R*.

Mobile phase: *ethyl acetate R, chloroform R* (2:98 *V/V*).

Application: 30 µl of the test solution and 10 µl of the reference solution as bands 20 mm by 3 mm.

Development: over half of the plate.

Drying: in air.

Detection: spray with a freshly prepared 200 g/l solution of *phosphomolybdic acid R* in *alcohol R* (about 10 ml for a 20 cm plate). Heat at 100-105 °C for 10-15 min.

Results: the chromatogram obtained with the reference solution shows in the lower part a dark blue zone (menthol), above this zone a reddish zone (thymol) and in the upper part a dark blue zone (menthyl acetate). The chromatogram obtained with the test solution shows a large blue zone (triacontanol = melissyl alcohol) at a level between the thymol and menthol zones in the chromatogram obtained with the reference solution. Further blue zones are visible in the upper part of the chromatogram obtained with the test solution, at levels between those of the menthyl acetate and thymol zones in the chromatogram obtained with the reference solution; above these zones further zones are visible in the chromatogram obtained with the test solution; the zone with the highest R_F value is very pronounced. A number of faint zones are visible below the triacontanol zone and the starting point is coloured blue.

TESTS

Appearance of solution. The solution is clear (*2.2.1*) and not more intensely coloured than a 50 mg/l solution of *potassium dichromate R* (*2.2.2, Method II*).

Dissolve 0.10 g with heating in *chloroform R* and dilute to 10 ml with the same solvent.

Melting point (*2.2.15*): 80 °C to 88 °C.

Melt the substance to be examined carefully on a water-bath before introduction into the capillary tubes. Allow the tubes to stand in the refrigerator for 24 h or at 0 °C for 2 h.

Acid value: 2 to 7.

To 2.000 g (*m* g) in a 250 ml conical flask fitted with a reflux condenser add 40 ml of *xylene R* and a few glass beads. Heat with stirring until the substance is completely dissolved. Add 20 ml of *alcohol R* and 1 ml of *bromothymol blue solution R3* and titrate the hot solution with *0.5 M alcoholic potassium hydroxide* until a green colour persisting for at least 10 s is obtained (n_1 ml). Carry out a blank test (n_2 ml). Calculate the acid value from the expression:

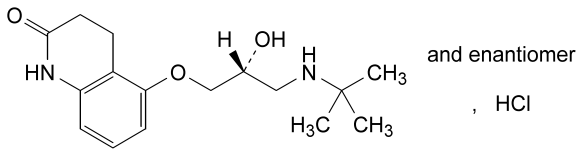
$$\frac{28.05\,(n_1 - n_2)}{m}$$

Saponification value: 78 to 95.

To 2.000 g (*m* g) in a 250 ml conical flask fitted with a reflux condenser add 40 ml of *xylene R* and a few glass beads. Heat with stirring until the substance is completely dissolved. Add 20 ml of *alcohol R* and 20.0 ml of *0.5 M alcoholic potassium hydroxide*. Boil under a reflux condenser for 3 h. Add 1 ml of *phenolphthalein solution R1* and titrate the hot solution immediately with *0.5 M hydrochloric acid* until the red colour disappears. Repeat the heating and titration until the colour no longer reappears on heating (n_3 ml). Carry out a blank test (n_4 ml). Calculate the saponification value from the expression:

$$\frac{28.05\,(n_4 - n_3)}{m}$$

Total ash (*2.4.16*): maximum 0.25 per cent, determined on 2.0 g.



STORAGE

Protected from light.

corrected 6.0

CARTEOLOL HYDROCHLORIDE

Carteololi hydrochloridum

$C_{16}H_{25}N_2O_3Cl$ M_r 328.8
[51781-21-6]

DEFINITION

5-[(2*RS*)-3-[(1,1-Dimethylethyl)amino]-2-hydroxypropoxy]-3,4-dihydroquinolin-2(1*H*)-one hydrochloride.

Content: 99.0 per cent to 101.0 per cent (dried substance).

CHARACTERS

Appearance: white or almost white crystals or crystalline powder.

Solubility: soluble in water, sparingly soluble in methanol, slightly soluble in alcohol, practically insoluble in methylene chloride.

IDENTIFICATION

A. Infrared absorption spectrophotometry (*2.2.24*).
Comparison: *Ph. Eur. reference spectrum of carteolol hydrochloride.*

B. It gives reaction (a) of chlorides (*2.3.1*).

TESTS

Appearance of solution. The solution is clear (*2.2.1*) and colourless (*2.2.2, Method II*).

Dissolve 0.300 g in *water R* and dilute to 10 ml with the same solvent.

pH (*2.2.3*): 5.0 to 6.0.

Dissolve 0.250 g in *carbon dioxide-free water R* and dilute to 25 ml with the same solvent.

Related substances. Liquid chromatography (*2.2.29*).

Test solution. Dissolve 20.0 mg of the substance to be examined in the mobile phase and dilute to 10.0 ml with the mobile phase.

Reference solution (a). Dilute 1.0 ml of the test solution to 100.0 ml with the mobile phase.

Reference solution (b). Dilute 1.0 ml of reference solution (a) to 10.0 ml with the mobile phase.

Reference solution (c). Dissolve 10 mg of *carteolol for system suitability CRS* in the mobile phase and dilute to 5 ml with the mobile phase.

Reference solution (d). Dilute 5.0 ml of reference solution (b) to 10.0 ml with the mobile phase.

Column:

– *size*: *l* = 0.25 m, Ø = 4.6 mm,
– *stationary phase*: *octadecylsilyl silica gel for chromatography R* (5 µm).

Mobile phase: mix 1 volume of *methanol R2*, 20 volumes of *acetonitrile R* and 79 volumes of a 2.82 g/l solution of *sodium hexanesulphonate R*.

Flow rate: 1 ml/min.

Detection: spectrophotometer at 252 nm.

Injection: 20 µl.

System suitability:

- the chromatogram obtained with reference solution (c) is similar to the chromatogram provided with *carteolol for system suitability CRS*; the peaks due to impurity H and carteolol show base-line separation,
- *signal-to-noise ratio*: minimum 10 for the principal peak in the chromatogram obtained with reference solution (d),
- *number of theoretical plates*: minimum 6000, calculated for the principal peak in the chromatogram obtained with reference solution (a).

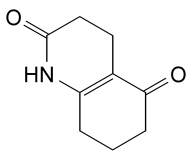
Limits: locate impurity H by comparison with the chromatogram provided with *carteolol for system suitability CRS*,

- *impurity H*: not more than twice the area of the principal peak in the chromatogram obtained with reference solution (b) (0.2 per cent),
- *any other impurity*: not more than the area of the principal peak in the chromatogram obtained with reference solution (b) (0.1 per cent),
- *total*: not more than half the area of the principal peak in the chromatogram obtained with reference solution (a) (0.5 per cent),
- *disregard limit*: 0.2 times the area of the principal peak in the chromatogram obtained with reference solution (b) (0.02 per cent).

Loss on drying (*2.2.32*): maximum 0.5 per cent, determined on 1.000 g by drying in an oven at 105 °C for 3 h.

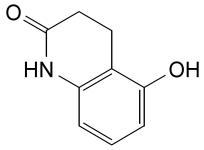
Sulphated ash (*2.4.14*): maximum 0.1 per cent, determined on 1.0 g.

ASSAY



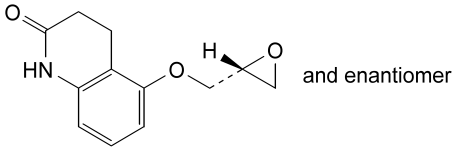
Dissolve 0.250 g in 60 ml of *alcohol R*. Add 5.0 ml of *0.01 M hydrochloric acid*. Carry out a potentiometric titration (*2.2.20*), using *0.1 M sodium hydroxide*. Read the volume added between the 2 points of inflexion.

1 ml of *0.1 M sodium hydroxide* is equivalent to 32.88 mg of $C_{16}H_{25}N_2O_3Cl$.

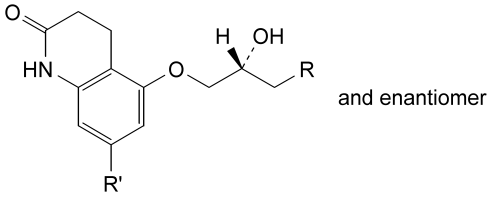


STORAGE

In an airtight container.



IMPURITIES



A. 4,6,7,8-tetrahydroquinoline-2,5(1*H*,3*H*)-dione,

B. 5-hydroxy-3,4-dihydroquinolin-2(1*H*)-one,

corrected 6.0

CARVEDILOL

Carvedilolum

$C_{24}H_{26}N_2O_4$ M_r 406.5
[72956-09-3]

DEFINITION

(2*RS*)-1-(9*H*-Carbazol-4-yloxy)-3-[[2-(2-methoxyphenoxy)ethyl]amino]propan-2-ol.

Content: 99.0 per cent to 101.0 per cent (dried substance).

CHARACTERS

Appearance: white or almost white, crystalline powder.

Solubility: practically insoluble in water, slightly soluble in alcohol, practically insoluble in dilute acids.

It shows polymorphism (*5.9*).

IDENTIFICATION

Infrared absorption spectrophotometry (*2.2.24*).

Comparison: *Ph. Eur. reference spectrum of carvedilol.*

If the spectrum obtained shows differences, dissolve the substance to be examined in *2-propanol R*, evaporate to dryness and record a new spectrum using the residue.

TESTS

Related substances. Liquid chromatography (*2.2.29*).

Test solution. Dissolve 25.0 mg of the substance to be examined in the mobile phase and dilute to 25.0 ml with the mobile phase.

Reference solution (a). Dilute 1.0 ml of the test solution to 100.0 ml with the mobile phase. Dilute 1.0 ml of this solution to 10.0 ml with the mobile phase.

Reference solution (b). Dissolve 5.0 mg of *carvedilol impurity C CRS* in 5.0 ml of the test solution and dilute to 100.0 ml with the mobile phase.

Reference solution (c). Dilute 1.0 ml of reference solution (b) to 100.0 ml with the mobile phase. Dilute 2.0 ml of this solution to 10.0 ml with the mobile phase.

Column:

- *size*: *l* = 0.125 m, Ø = 4.6 mm,
- *stationary phase*: *octylsilyl silica gel for chromatography R* (5 µm),
- *temperature*: 55 °C.

Mobile phase: dissolve 1.77 g of *potassium dihydrogen phosphate R* in *water R* and dilute to 650 ml with the same solvent; adjust to pH 2.0 with *phosphoric acid R* and add 350 ml of *acetonitrile R*.

Flow rate: 1.0 ml/min.

Detection: spectrophotometer at 240 nm.

Injection: 20 µl.

Run time: 8 times the retention time of carvedilol.

Relative retention with reference to carvedilol (retention time = about 4 min): impurity A = about 0.6; impurity C = about 3.5; impurity B = about 6.7.

System suitability: reference solution (b):

- *resolution*: minimum 17 between the peaks due to carvedilol and to impurity C.

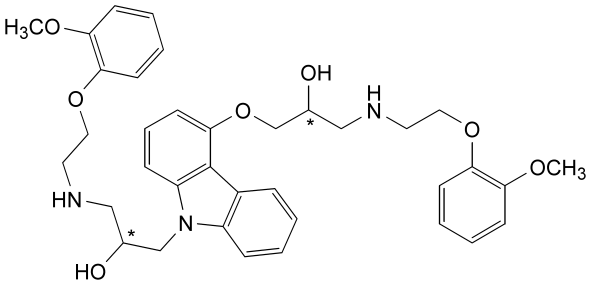
Limits:

- *correction factor*: for the calculation of content, multiply the peak area of impurity A by 2,
- *impurity A*: not more than twice the area of the principal peak in the chromatogram obtained with reference solution (a) (0.2 per cent),
- *impurity C*: not more than twice the area of the corresponding peak in the chromatogram obtained with reference solution (c) (0.02 per cent),
- *any other impurity*: not more than the area of the principal peak in the chromatogram obtained with reference solution (a) (0.1 per cent),
- *total*: not more than 5 times the area of the principal peak in the chromatogram obtained with reference solution (a) (0.5 per cent),
- *disregard limit*: the area of the principal peak in the chromatogram obtained with reference solution (c) (0.01 per cent).

Heavy metals (*2.4.8*): maximum 10 ppm.

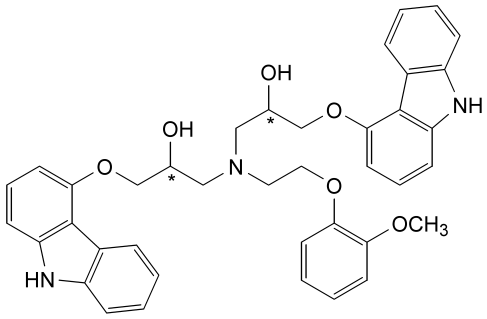
2.0 g complies with limit test C. Prepare the standard using 2.0 ml of *lead standard solution (10 ppm Pb) R*.

Loss on drying (*2.2.32*): maximum 0.5 per cent, determined on 1.000 g by drying in an oven at 105 °C.



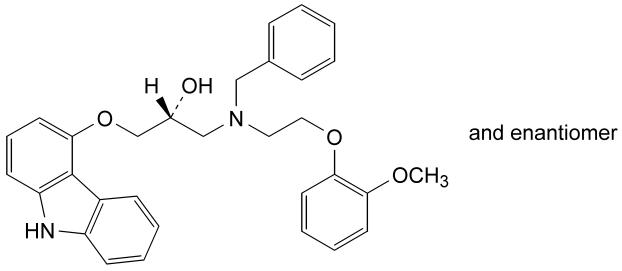
Sulphated ash (*2.4.14*): maximum 0.1 per cent, determined on 1.0 g.

ASSAY



Dissolve 0.350 g in 60 ml of *anhydrous acetic acid R*. Titrate with *0.1 M perchloric acid*, determining the end-point potentiometrically (*2.2.20*).

1 ml of *0.1 M perchloric acid* is equivalent to 40.65 mg of $C_{24}H_{26}N_2O_4$.



IMPURITIES

A. 1-[[9-[2-hydroxy-3-[[2-(2-methoxyphenoxy)ethyl]amino]propyl]-9*H*-carbazol-4-yl]oxy]-3-[[2-(2-methoxyphenoxy)ethyl]amino]propan-2-ol,

B. 1,1′-[[2-(2-methoxyphenoxy)ethyl]nitrilo]bis[3-(9*H*-carbazol-4-yloxy)propan-2-ol],

C. (2*RS*)-1-[benzyl[2-(2-methoxyphenoxy)ethyl]amino]-3-(9*H*-carbazol-4-yloxy)propan-2-ol.

CASCARA

Rhamni purshianae cortex

DEFINITION

Dried, whole or fragmented bark of *Rhamnus purshianus* D.C. (*Frangula purshiana* (D.C.) A. Gray ex J. C. Cooper).

Content: minimum 8.0 per cent of hydroxyanthracene glycosides of which minimum 60 per cent consists of cascarosides, both expressed as cascaroside A ($C_{27}H_{32}O_{14}$; M_r 580.5) (dried drug).

IDENTIFICATION

A. The bark occurs in slightly channelled or nearly flat pieces, usually 1-5 mm in thickness, usually varying greatly in length and width. The outer surface is grey or dark greyish-brown and shows occasional lenticels that are orientated transversally. It is usually more or less completely covered by a whitish coat of lichens, epiphytic moss and foliaceous liverwort. The inner surface is yellow or reddish-brown or almost black with fine longitudinal striations; it turns red when treated with alkali. The yellow fracture is short and granular in the outer part and somewhat fibrous at the inner part.

B. Reduce to a powder (355) (*2.9.12*). The powder is yellowish-brown. Examine under a microscope using *chloral hydrate solution R*. The powder shows the following diagnostic characters: bundles of partly lignified phloem fibres accompanied by crystal sheaths containing prisms of calcium oxalate; groups of sclereids accompanied by crystal sheaths; cluster crystals of calcium oxalate; some parenchymatous cells contain a yellow substance which becomes deep red when treated with alkali; cork cells and, frequently, epiphytes; the latter may be liverworts, entire or in fragments, having a lamina one-cell thick without a midrib and composed of isodiametric cells, or leaves of mosses, having a lamina one-cell thick composed of elongated cells and possessing a midrib several cells thick.

C. Examine the chromatograms obtained in test A for "Other species of *Rhamnus*; anthrones".

Results: the chromatogram obtained with the test solution shows several reddish-brown zones with different intensities: there are 4 faint zones, 3 being situated at about the mid-point of the chromatogram and 1 in the lower third and there is a strong zone in the upper third of the chromatogram. Examine in ultraviolet light at 365 nm. The chromatogram obtained with the test solution shows several zones with the same fluorescence, situated above and particularly below (cascarosides) that due to barbaloin in the chromatogram obtained with the reference solution.

D. Heat 0.2 g of the powdered drug (180) (*2.9.12*) with 50 ml of *water R* on a water-bath for 15 min. Allow to cool and filter. To 10 ml of the filtrate add 20 ml of *hydrochloric acid R1* and heat on a water-bath for 15 min. Allow to cool, transfer to a separating funnel and shake with 3 quantities, each of 20 ml, of *ether R*. Reserve the aqueous layer (solution A). Combine the 3 ether extracts and shake with 10 ml of *dilute ammonia R2*. The aqueous layer becomes reddish-violet. Transfer solution A to a small flask, add 5 g of *ferric chloride R* and heat on a water-bath for 30 min. Allow to cool, transfer to a separating funnel and shake with 15 ml of *ether R*. Wash the ether layer with 10 ml of *water R*, discard the water and shake the ether layer with 5 ml of *dilute ammonia R2*. A red colour develops in the aqueous layer.

TESTS

Other species of *Rhamnus*; anthrones. Thin-layer chromatography (*2.2.27*).

Test solution. To 0.5 g of the powdered drug (180) (*2.9.12*) add 5 ml of *ethanol (70 per cent V/V) R* and heat to boiling. Cool and centrifuge. Decant the supernatant solution immediately and use within 30 min.

Reference solution. Dissolve 20 mg of *barbaloin R* in *ethanol (70 per cent V/V) R* and dilute to 10 ml with the same solvent.

Plates: *TLC silica gel plate R* (2 plates).

Mobile phase: *water R, methanol R, ethyl acetate R* (13:17:100 *V/V/V*).

A. *Application*: 10 µl, as bands.

Development: over a path of 10 cm.

Drying: in air for 5 min.

Detection: spray with about 10 ml of a 50 g/l solution of *potassium hydroxide R* in *ethanol (50 per cent V/V) R* and heat at 100-105 °C for 15 min. Examine immediately after heating.

Results: the chromatogram obtained with the reference solution shows, in the central part, a reddish-brown zone due to barbaloin. Examine in ultraviolet light at 365 nm. The zone due to barbaloin shows intense yellowish-brown fluorescence. In the chromatogram obtained with the test solution, no zone with orange-brown fluorescence is seen between the zone due to barbaloin and the zones due to cascarosides.

B. *Application*: 10 µl of the test solution, as a band.

Development: over a path of 10 cm.

Drying: in air for maximum 5 min.

Detection: spray immediately with a 5 g/l solution of *nitrotetrazolium blue R* in *methanol R*. Examine immediately.

Results: no violet or greyish-blue zones appear.

Foreign matter (*2.8.2*): maximum 1 per cent.

Loss on drying (*2.2.32*): maximum 10.0 per cent, determined on 1.000 g of the powdered drug (180) (*2.9.12*) by drying in an oven at 105 °C for 2 h.

Total ash (*2.4.16*): maximum 7.0 per cent.

ASSAY

Carry out the assay protected from bright light in 24 h.

Stir 1.00 g of the powdered drug (180) (*2.9.12*) into 100 ml of boiling *water R* and continue boiling and stirring for 5 min. Allow to cool, dilute to 100.0 ml with *water R*, shake, filter and discard the first 20 ml of filtrate. Transfer 10.0 ml of the filtrate to a separating funnel, add 0.1 ml of *1 M hydrochloric acid* and shake with 2 quantities, each of 20 ml, of a mixture of 1 volume of *ether R* and 3 volumes of *hexane R*. Wash the combined organic extracts with 5 ml of *water R*, discard the organic layer and return the rinsings to the aqueous layer. Shake the combined aqueous layers with 4 quantities, each of 30 ml, of *ethyl acetate R* freshly saturated with *water R* (to 150 ml of *ethyl acetate R* add 15 ml of *water R*, shake for 3 min and allow to stand) on each occasion allowing separation to take place until the organic layer is clear. Combine the ethyl acetate extracts. Use the aqueous layer for the assay for cascarosides and the organic layer for the assay for hydroxyanthracene glycosides other than cascarosides.

Hydroxyanthracene glycosides other than cascarosides. Transfer the organic layer to a suitable flask and remove the solvent by distillation, evaporating almost to dryness. Dissolve the residue in 0.3-0.5 ml of *methanol R* and transfer to a volumetric flask, rinsing the 1st flask with warm *water R* and adding the rinsings to the methanolic solution. Allow to cool and dilute to 50.0 ml with *water R*. Transfer 20.0 ml of this solution to a 100 ml round-bottomed flask with a ground-glass neck and containing 2 g of *ferric chloride R* and 12 ml of *hydrochloric acid R*. Attach a reflux condenser and place the flask in a water-bath so that the level of the water is above that of the liquid in the flask and heat for 4 h. Allow to cool, transfer the solution to a separating funnel and rinse the flask successively with 3-4 ml of *1 M sodium hydroxide* and 3-4 ml of *water R*, adding the rinsings to the separating funnel. Shake the contents of the separating funnel with 3 quantities, each of 30 ml, of a mixture of 1 volume of *ether R* and 3 volumes of *hexane R*. Wash the combined organic layers with 2 quantities, each of 10 ml, of *water R* and discard the rinsings. Dilute the organic phase to 100.0 ml with the mixture of ether and hexane. Take 20.0 ml, evaporate carefully to dryness on a water-bath and dissolve the residue in 10.0 ml of a 5 g/l solution of *magnesium acetate R* in *methanol R*. Measure the absorbance (*2.2.25*) at 440 nm and 515 nm using *methanol R* as the compensation liquid. If the ratio of the absorbance at 515 nm to that at 440 nm is less than 2.4, the assay is invalid.

Calculate the percentage content of hydroxyanthracene glycosides other than cascarosides, expressed as cascaroside A, using the following expression:

$$\frac{A \times 6.95}{m}$$

i.e. taking the specific absorbance to be 180.

A = absorbance at 515 nm,

m = mass of the substance to be examined, in grams.

Cascarosides. Dilute the aqueous layer to 50.0 ml with *water R*. Treat 20.0 ml of this solution as described above in the assay of hydroxyanthracene glycosides other than cascarosides. Measure the absorbance (*2.2.25*) of the test solution at 440 nm and 515 nm. If the ratio of the absorbance at 515 nm to that at 440 nm is less than 2.4, the assay is invalid.

Calculate the percentage content of cascarosides, expressed as cascaroside A, using the following expression:

$$\frac{A \times 6.95}{m}$$

i.e. taking the specific absorbance to be 180.

A = absorbance at 515 nm,

m = mass of the substance to be examined, in grams.

01/2008:1844

CASCARA DRY EXTRACT, STANDARDISED

Rhamni purshianae extractum siccum normatum

DEFINITION

Standardised dry extract obtained from *Cascara (0105)*.

Content: 90 per cent to 110 per cent of the nominal content of hydroxyanthracene glycosides, expressed as cascaroside A ($C_{27}H_{32}O_{14}$; M_r 580.5), stated on the label; minimum 60 per cent of the hydroxyanthracene glycosides are cascarosides, expressed as cascaroside A. The nominal content of hydroxyanthracene glycosides is within the range 8.0 per cent to 25.0 per cent *m/m* (dried extract).

PRODUCTION

The extract is produced from the herbal drug by an appropriate procedure using either boiling water or a hydroalcoholic solvent at least equivalent in strength to ethanol (60 per cent *V/V*).

CHARACTERS

Appearance: brown, free-flowing powder.

IDENTIFICATION

Thin-layer chromatography (*2.2.27*).

Test solution. To 0.2 g of the extract to be examined add 5 ml of *ethanol (70 per cent V/V) R* and heat to boiling. Cool and centrifuge. Decant the supernatant solution immediately and use within 30 min.

Reference solution. Dissolve 20 mg of *barbaloin R* and 2 mg of *emodin R* in *ethanol (70 per cent V/V) R* and dilute to 10 ml with the same solvent.

Plate: *TLC silica gel plate R* (5-40 µm) [or *TLC silica gel plate R* (2-10 µm)].

Mobile phase: *water R, methanol R, ethyl acetate R* (13:17:100 *V/V/V*).

Application: 10 µl [or 2 µl] as bands.

Development: over a path of 10 cm [or 6 cm].

Drying: in air for 5 min.

Detection: spray with a 50 g/l solution of *potassium hydroxide R* in *ethanol (50 per cent V/V) R* and heat to 100-105 °C for 15 min; examine in ultraviolet light at 365 nm.

Results: see below the sequence of zones present in the chromatograms obtained with the reference solution and the test solution. Furthermore, other zones may be present in the chromatogram obtained with the test solution.

Top of the plate	
Emodin: a red fluorescent zone	A faint red fluorescent zone
———	———
Barbaloin: a yellowish-brown fluorescent zone	A yellowish-brown fluorescent zone A blue fluorescent zone
———	———
	An intense yellowish-brown fluorescent zone 3 yellowish-brown fluorescent zones
Reference solution	**Test solution**

TESTS

Loss on drying (*2.8.17*): maximum 5.0 per cent.

ASSAY

Carry out the assay within 24 h, protected from bright light.

To 0.500 g of the extract to be examined add 80 ml of *ethanol (70 per cent V/V) R*. Shake, and allow to stand in the dark for at least 8 h. Dilute to 100.0 ml with *ethanol (70 per cent V/V) R*. Shake and filter, discarding the first 20 ml of filtrate. Transfer 10.0 ml of the filtrate to a separating funnel, add 0.1 ml of *1 M hydrochloric acid* and shake with 2 quantities, each of 20 ml, of a mixture of 1 volume of *ether R* and 3 volumes of *hexane R*. Wash the combined organic extracts with 5 ml of *water R*. Discard the organic layer and return the rinsings to the hydroalcoholic layer. Shake with 4 quantities, each of 30 ml, of *ethyl acetate R* freshly saturated with *water R* (prepared as follows: to 150 ml of *ethyl acetate R* add 15 ml of *water R*, shake for 3 min and allow to stand), on each occasion allowing the layers to separate until the organic layer is clear. Combine the ethyl acetate extracts. Use the aqueous layer for the assay of cascarosides and the organic layer for the assay of hydroxyanthracene glycosides other than cascarosides.

Hydroxyanthracene glycosides other than cascarosides. Transfer the organic layer to a round-bottomed flask and remove the solvent by distillation, evaporating almost to dryness. Dissolve the residue in 0.5 ml of *methanol R*, add 10 ml of *water R* at 40 °C and transfer to a 50 ml volumetric flask, rinsing the round-bottomed flask with *water R* at 40 °C and adding the rinsings to the hydromethanolic solution. Allow to cool and dilute to 50.0 ml with *water R*. Transfer 20.0 ml of the solution to a 100 ml round-bottomed flask with a ground-glass neck containing 2 g of *ferric chloride R* and 12 ml of *hydrochloric acid R*. Attach a reflux condenser and place the flask in a water-bath so that the level of the water is above that of the liquid in the flask and heat for 4 h. Allow to cool, transfer the solution to a separating funnel and rinse the flask successively with 4 ml of *1 M sodium hydroxide* and 4 ml of *water R*, adding the rinsings to the separating funnel. Shake the contents of the separating funnel with 3 quantities, each of 30 ml, of a mixture of 1 volume of *ether R* and 3 volumes of *hexane R*. Wash the combined organic layers with 2 quantities, each of 10 ml, of *water R* and discard the rinsings. Dilute the organic layer to 100.0 ml with a mixture of 1 volume of *ether R* and 3 volumes of *hexane R*. Take 20.0 ml of the solution, evaporate carefully to dryness on a water-bath and dissolve the residue in 10.0 ml of a 5 g/l solution of *magnesium acetate R* in *methanol R*. Measure the absorbance (*2.2.25*) at 440 nm and 515 nm, using *methanol R* as the compensation liquid. If the ratio of the absorbance at 515 nm to that at 440 nm is less than 2.4, the assay is invalid.

Calculate the percentage content of hydroxyanthracene glycosides other than cascarosides, expressed as cascaroside A, using the following expression:

$$\frac{A \times 6.95}{m}$$

i.e. taking the specific absorbance to be 180.

A = absorbance at 515 nm;

m = mass of the substance to be examined, in grams.

Cascarosides. Dilute the aqueous layer to 50.0 ml with *water R*. Treat 20.0 ml of this solution as described above in the assay of hydroxyanthracene glycosides other than cascarosides. Measure the absorbance (*2.2.25*) at 440 nm and 515 nm. If the ratio of the absorbance at 515 nm to that at 440 nm is less than 2.7, the assay is invalid.

Calculate the percentage content of cascarosides, expressed as cascaroside A, using the following expression:

$$\frac{A \times 6.95}{m}$$

i.e. taking the specific absorbance to be 180.

A = absorbance at 515 nm;

m = mass of the substance to be examined, in grams.

LABELLING

The label states the nominal content of hydroxyanthracene glycosides, expressed as cascaroside A.

01/2008:1496

CASSIA OIL

Cinnamomi cassiae aetheroleum

[8007-80-5]

DEFINITION

Cassia oil is obtained by steam distillation of the leaves and young branches of *Cinnamomum cassia* Blume (*C. aromaticum* Nees).

CHARACTERS

A clear, mobile, yellow to reddish-brown liquid, with a characteristic odour reminiscent of cinnamic aldehyde.

IDENTIFICATION

First identification: B.

Second identification: A.

A. Examine by thin-layer chromatography (*2.2.27*), using a *TLC silica gel plate R*.

Test solution. Dissolve 0.5 ml of the substance to be examined in *acetone R* and dilute to 10 ml with the same solvent.

Reference solution. Dissolve 50 µl of *trans-cinnamic aldehyde R*, 10 µl of *eugenol R* and 50 mg of *coumarin R* in *acetone R* and dilute to 10 ml with the same solvent.

Apply to the plate, as bands, 10 µl of each solution. Develop over a path of 15 cm using a mixture of 10 volumes of *methanol R* and 90 volumes of *toluene R*. Allow the plate to dry in air and examine in ultraviolet light at 365 nm. The zone of blue fluorescence in the chromatogram obtained with the test solution is similar in position and colour to the zone in the chromatogram obtained with the reference solution (coumarin). Spray the plate with *anisaldehyde solution R*. Examine in daylight while heating at 100-105 °C for 5-10 min. The chromatogram obtained with the reference solution shows in its upper part a violet zone (eugenol) and above this zone a greenish-blue zone (*trans*-cinnamic aldehyde). The chromatogram obtained with the test solution shows a zone similar in position and colour to the zone due to *trans*-cinnamic aldehyde in the chromatogram obtained with the reference solution and may show a very faint zone corresponding to eugenol. Other faint zones are present.

B. Examine the chromatograms obtained in the test for chromatographic profile. The retention times of the principal peaks in the chromatogram obtained with the test solution are similar to those in the chromatogram obtained with the reference solution. Eugenol may be absent from the chromatogram obtained with the test solution.

TESTS

Relative density (*2.2.5*): 1.052 to 1.070.

Refractive index (*2.2.6*): 1.600 to 1.614.

Optical rotation (*2.2.7*): – 1° to + 1°.

Chromatographic profile. Examine by gas chromatography (*2.2.28*).

Test solution. The substance to be examined.

Reference solution. Dissolve 100 µl of *trans-cinnamic aldehyde R*, 10 µl of *cinnamyl acetate R*, 10 µl of *eugenol R*, 20 mg of *coumarin R* and 10 µl of *trans-2-methoxycinnamaldehyde R* in 1 ml of *acetone R*.

The chromatographic procedure may be carried out using:

- a fused-silica column 60 m long and about 0.25 mm in internal diameter coated with *macrogol 20 000 R* as the bonded phase,
- *helium for chromatography R* as the carrier gas at a flow rate of 1.5 ml/min,
- a flame-ionisation detector,
- a split ratio of 1:100,

with the following temperature programme:

	Time (min)	Temperature (°C)	Rate (°C/min)	Comment
Column	0 - 10	60	–	isothermal
	10 - 75	60 → 190	2	linear gradient
	75 - 160	190		isothermal
Injection port		200		
Detector		240		

Inject 0.2 µl of the reference solution. When the chromatogram is recorded in the prescribed conditions, the components elute in the order indicated in the composition of the reference solution. Depending on the operating conditions and the state of the column, coumarin may elute before or after *trans*-2-methoxycinnamaldehyde. Record the retention times of these substances.

The test is not valid unless the resolution between the peaks corresponding to coumarin and *trans*-2-methoxycinnamaldehyde is at least 1.5.

Inject 0.2 µl of the test solution. Using the retention times determined from the chromatogram obtained with the reference solution, locate the components of the reference solution in the chromatogram obtained with the test solution. Determine the percentage content of each of these components by the normalisation procedure.

The percentages are within the following ranges:

- *trans-cinnamic aldehyde*: 70 per cent to 90 per cent,
- *cinnamyl acetate*: 1.0 per cent to 6.0 per cent,
- *eugenol*: less than 0.5 per cent,
- *coumarin*: 1.5 per cent to 4.0 per cent,
- *trans-2-methoxycinnamaldehyde*: 3.0 per cent to 15 per cent.

STORAGE

Store in a well-filled, airtight container, protected from light and heat.

01/2008:1497

CASTOR OIL, HYDROGENATED

Ricini oleum hydrogenatum

DEFINITION

Fatty oil obtained by hydrogenation of *Virgin Castor oil (0051)*. It consists mainly of the triglyceride of 12-hydroxystearic (12-hydroxyoctadecanoic) acid.

CHARACTERS

Appearance: fine, almost white or pale yellow powder or almost white or pale yellow masses or flakes.

Solubility: practically insoluble in water, slightly soluble in methylene chloride, very slightly soluble in anhydrous ethanol, practically insoluble in light petroleum.

IDENTIFICATION

A. Melting point (*2.2.14*): 83 °C to 88 °C.

B. Hydroxyl value (see Tests).

C. Composition of fatty acids (see Tests).

TESTS

Acid value (*2.5.1*): maximum 4.0, determined on 10.0 g dissolved in 75 ml of hot *ethanol (96) per cent R*.

Hydroxyl value (*2.5.3, Method A*): 145 to 165, determined on a warm solution.

Iodine value (*2.5.4, Method A*): maximum 5.0.

Alkaline impurities. Dissolve 1.0 g by gentle heating in a mixture of 1.5 ml of *ethanol (96) per cent R* and 3 ml of *toluene R*. Add 0.05 ml of a 0.4 g/l solution of *bromophenol blue R* in *ethanol (96) per cent R*. Not more than 0.2 ml of *0.01 M hydrochloric acid* is required to change the colour of the indicator to yellow.

Composition of fatty acids (*2.4.22*). Use the mixture of calibrating substances in Table 2.4.22.-3.

Test solution. Introduce 75 mg of the substance to be examined into a 10 ml centrifuge tube with a screw cap. Dissolve in 2 ml of *1,1-dimethylethyl methyl ether R1* by shaking and heat gently (50-60 °C). Add, when still warm, 1 ml of a 12 g/l solution of *sodium R* in *anhydrous methanol R*, prepared with the necessary precautions, and mix vigorously for at least 5 min. Add 5 ml of *distilled water R* and mix vigorously for about 30 s. Centrifuge for 15 min at 1500 *g*. Use the upper layer.

Reference solution. Dissolve 50 mg of *methyl 12-hydroxystearate CRS* and 50 mg of *methyl stearate CRS* in 10.0 ml of *1,1-dimethylethyl methyl ether R1*.

Column:

- *material*: fused silica;
- *size*: *l* = 30 m; Ø = 0.25 mm;
- *stationary phase*: *macrogol 20 000 R* (film thickness 0.25 µm).

Carrier gas: *helium for chromatography R*.

Flow rate: 0.9 ml/min.

Split ratio: 1:100.

Temperature:

	Time (min)	Temperature (°C)
Column	0 - 55	215
Injection port		250
Detector		250

Detection: flame ionisation.

Injection: 1 µl.

Calculate the fraction of each fatty-acid using the following expression:

$$A_{x,s,c} / \sum A_{x,s,c} \times 100 \text{ per cent } m/m$$

$A_{x,s,c}$ = corrected peak area of the fatty acid in the test solution:

$$A_{x,s,c} = A_{x,s} \times R_c$$

R_c = relative correction factor for the peak due to methyl 12-hydroxystearate:

$$R_c = \frac{m_{1,r} \times A_{2,r}}{A_{1,r} \times m_{2,r}}$$

R_c = 1 for peaks corresponding to each of the other specified fatty acids or any unspecified fatty acid;

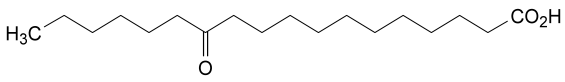
$m_{1,r}$ = mass of methyl 12-hydroxystearate in the reference solution;

$m_{2,r}$ = mass of methyl stearate in the reference solution;

$A_{1,r}$ = area of any peak due to methyl 12-hydroxystearate in the chromatogram obtained with the reference solution;

$A_{2,r}$ = area of any peak due to methyl stearate in the chromatogram obtained with the reference solution;

$A_{x,s}$ = area of the peaks due to any specified or unspecified fatty acid methyl esters.



Composition of the fatty acid fraction of the oil:
- *palmitic acid*: not more than 2.0 per cent;
- *stearic acid*: 7.0 per cent to 14.0 per cent;
- *arachidic acid*: not more than 1.0 per cent;
- *12-oxostearic acid*: not more than 5.0 per cent;
- *12-hydroxystearic acid*: 78.0 per cent to 91.0 per cent;
- *any other fatty acid*: not more than 3.0 per cent.

Nickel (*2.4.31*): maximum 1 ppm.

STORAGE

In a well-filled container.

IMPURITIES

A. 12-oxostearic acid.

01/2008:2367

CASTOR OIL, REFINED

Ricini oleum raffinatum

DEFINITION

Fatty oil obtained from the seeds of *Ricinus communis* L. by cold expression. It is then refined. A suitable antioxidant may be added.

PRODUCTION

During the expression step, the temperature of the oil must not exceed 50 °C.

CHARACTERS

Appearance: clear, almost colourless or slightly yellow, viscous, hygroscopic liquid.

Solubility: slightly soluble in light petroleum, miscible with ethanol (96 per cent) and with glacial acetic acid.

Relative density: about 0.958.

Refractive index: about 1.479.

Viscosity: about 1000 mPa·s.

IDENTIFICATION

First identification: B.

Second identification: A.

A. A mixture of 2 ml of the substance to be examined and 8 ml of *ethanol (96 per cent) R* is clear (*2.2.1*).

B. Composition of fatty acids (see Tests).

TESTS

Appearance. The substance to be examined is clear (*2.2.1*) and not more intensely coloured (*2.2.2, Method II*) than 20 ml of a mixture of 0.25 ml of blue primary solution, 0.25 ml of red primary solution, 0.8 ml of yellow primary solution, and 18.7 ml of a solution prepared by diluting 4.0 ml of *hydrochloric acid R1* to 100.0 ml with *water R*.

Optical rotation (*2.2.7*): + 3.5° to + 6.0°.

Specific absorbance (*2.2.25*): maximum 1.5, determined in *ethanol (96 per cent) R* at the absorption maximum between 268 nm and 270 nm.

Acid value (*2.5.1*): maximum 0.8.

Dissolve 5.00 g in 25 ml of the prescribed mixture of solvents.

Hydroxyl value (*2.5.3, Method A*): minimum 150.

Peroxide value (*2.5.5, Method A*): maximum 5.0.

Unsaponifiable matter (*2.5.7*): maximum 0.8 per cent, determined on 5.0 g.

Oil obtained by extraction and adulteration. In a ground-glass-stoppered tube about 125 mm long and 18 mm in internal diameter, thoroughly mix 3 ml of the substance to be examined with 3 ml of *carbon disulphide R*. Shake for 3 min with 1 ml of *sulphuric acid R*. The mixture is less intensely coloured than a freshly prepared mixture of 3.2 ml of *ferric chloride solution R1*, 2.3 ml of *water R* and 0.5 ml of *dilute ammonia R1*.

Composition of fatty acids. Gas chromatography (*2.4.22*) with the following modifications.

Use the mixture of calibrating substances in Table 2.4.22.-3.

Test solution. Introduce 75 mg of the substance to be examined into a 10 ml centrifuge tube with a screw cap. Dissolve in 2 ml of *1,1-dimethylethyl methyl ether R1* with shaking and heat gently (50-60 °C). To the still-warm solution, add 1 ml of a 12 g/l solution of *sodium R* in *anhydrous methanol R*, prepared with the necessary precautions, and shake vigorously for at least 5 min. Add 5 ml of *distilled water R* and shake vigorously for about 30 s. Centrifuge for 15 min at 1500 *g*. Use the upper layer.

Reference solution. Dissolve 50 mg of *methyl ricinoleate CRS* and 50 mg of *methyl stearate CRS* in 10.0 ml of *1,1-dimethylethyl methyl ether R1*.

Column:
- *material*: fused silica;
- *size*: *l* = 30 m, Ø = 0.25 mm;
- *stationary phase*: *macrogol 20 000 R* (film thickness 0.25 µm).

Carrier gas: *helium for chromatography R*.

Flow rate: 0.9 ml/min.

Split ratio: 1:100.

Temperature:

	Time (min)	Temperature (°C)
Column	0 - 55	215
Injection port		250
Detector		250

Detection: flame ionisation.

Injection: 1 µl.

Calculate the percentage content of each fatty acid by the normalisation procedure.

Correct the area of the peak due to methyl ricinoleate, multiplying by a factor (R) calculated using the following expression:

$$\frac{m_1 \times A_2}{A_1 \times m_2}$$

m_1 = mass of methyl ricinoleate in the reference solution;

m_2 = mass of methyl stearate in the reference solution;

A_1 = area of the peak due to methyl ricinoleate in the chromatogram obtained with the reference solution;

A_2 = area of the peak due to methyl stearate in the chromatogram obtained with the reference solution.

Composition of the fatty-acid fraction of the oil:

– *palmitic acid*: maximum 2.0 per cent;
– *stearic acid*: maximum 2.5 per cent;
– *oleic acid and isomers*: 2.5 per cent to 6.0 per cent;
– *linoleic acid*: 2.5 per cent to 7.0 per cent;
– *linolenic acid*: maximum 1.0 per cent;
– *eicosenoic acid*: maximum 1.0 per cent;
– *ricinoleic acid*: 85.0 per cent to 92.0 per cent;
– *any other fatty acid*: maximum 1.0 per cent.

Water (*2.5.32*): maximum 0.2 per cent, determined on 5.00 g, if intended for use in the manufacture of parenteral dosage forms.

STORAGE

In an airtight, well-filled container, protected from light.

LABELLING

The label states, where applicable, that the substance is suitable for use in the manufacture of parenteral dosage forms.

01/2008:0051

CASTOR OIL, VIRGIN

Ricini oleum virginale

DEFINITION

Fatty oil obtained by cold expression from the seeds of *Ricinus communis* L. A suitable antioxidant may be added.

CHARACTERS

Appearance: clear, almost colourless or slightly yellow, viscous, hygroscopic liquid.

Solubility: slightly soluble in light petroleum, miscible with alcohol and with glacial acetic acid.

Relative density: about 0.958.

Refractive index: about 1.479.

IDENTIFICATION

First identification: D.

Second identification: A, B, C.

A. It complies with the test for optical rotation (see Tests).

B. It complies with the test for hydroxyl value (see Tests).

C. Iodine value (*2.5.4*): 82 to 90.

D. It complies with the test for composition of fatty acids (see Tests).

TESTS

Optical rotation (*2.2.7*): + 3.5° to + 6.0°.

Specific absorbance (*2.2.25*): maximum 1.0, determined at the absorption maximum at 269 nm ± 1 nm.

To 1.0 g add *alcohol R* and dilute to 100.0 ml with the same solvent.

Acid value (*2.5.1*): maximum 2.0.

Dissolve 5.0 g in 25 ml of the prescribed mixture of solvents.

Hydroxyl value (*2.5.3, Method A*): minimum 150.

Peroxide value (*2.5.5*): maximum 10.0.

Unsaponifiable matter (*2.5.7*): maximum 0.8 per cent, determined on 5.0 g.

Composition of fatty acids. Gas chromatography (*2.4.22*) with the following modifications.

Use the mixture of calibrating substances in Table 2.4.22.-3.

Test solution. Introduce 75 mg of the substance to be examined into a 10 ml centrifuge tube with a screw cap. Dissolve in 2 ml of *1,1-dimethylethyl methyl ether R1* with shaking and heat gently (50-60 °C). Add, when still warm, 1 ml of a 12 g/l solution of *sodium R* in *anhydrous methanol R*, prepared with the necessary precautions, and mix vigorously for at least 5 min. Add 5 ml of *distilled water R* and mix vigorously for about 30 s. Centrifuge for 15 min at 1500 *g*. Use the upper layer.

Reference solution. Dissolve 50 mg of *methyl ricinoleate CRS* and 50 mg of *methyl stearate CRS* in 10.0 ml of *1,1-dimethylethyl methyl ether R1*.

Column:

– *material*: fused silica,
– *size*: *l* = 30 m, Ø = 0.25 mm,
– *stationary phase*: *macrogol 20 000 R* (film thickness 0.25 µm).

Carrier gas: *helium for chromatography R*.

Flow rate: 0.9 ml/min.

Split ratio: 1:100.

Temperature:

	Time (min)	Temperature (°C)
Column	0 - 55	215
Injection port		250
Detector		250

Detection: flame ionisation.

Injection: 1 µl.

Calculate the percentage content of each fatty acid by normalisation.

Correct the area of the peak due to methyl ricinoleate, multiplying by a factor R calculated using the following expression:

$$R = \frac{m_1 \times A_2}{A_1 \times m_2}$$

m_1 = mass of methyl ricinoleate in the reference solution,

m_2 = mass of methyl stearate in the reference solution,

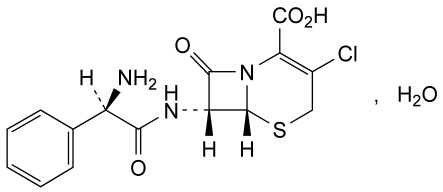
A_1 = area of the peak due to methyl ricinoleate in the chromatogram obtained with the reference solution,

A_2 = area of the peak due to methyl stearate in the chromatogram obtained with the reference solution.

Composition of the fatty-acid fraction of the oil:

- *palmitic acid*: maximum 2.0 per cent,
- *stearic acid*: maximum 2.5 per cent,
- *oleic acid and isomers* (C18:1 equivalent chain length on macrogol 20 000: 18.3): 2.5 per cent to 6.0 per cent,
- *linoleic acid* (C18:2 equivalent chain length on macrogol 20 000: 18.8): 2.5 per cent to 7.0 per cent,
- *linolenic acid* (C18:3 equivalent chain length on macrogol 20 000: 19.2): maximum 1.0 per cent,
- *eicosenoic acid* (C20:1 equivalent chain length on macrogol 20 000: 20.2): maximum 1.0 per cent,
- *ricinoleic acid* (equivalent chain length on macrogol 20 000: 23.9): 85.0 per cent to 92.0 per cent,
- *any other fatty acid*: maximum 1.0 per cent.

Water (*2.5.12*): maximum 0.3 per cent, determined on 5.0 g.



STORAGE

In an airtight, well-filled container, protected from light.

CEFACLOR

Cefaclorum

$C_{15}H_{14}ClN_3O_4S,H_2O$ M_r 385.8
[53994-73-3]

DEFINITION

(6*R*,7*R*)-7-[[(2*R*)-2-Amino-2-phenylacetyl]amino]-3-chloro-8-oxo-5-thia-1-azabicyclo[4.2.0]oct-2-ene-2-carboxylic acid monohydrate.

Semi-synthetic product derived from a fermentation product.

Content: 96.0 per cent to 102.0 per cent of $C_{15}H_{14}ClN_3O_4S$ (anhydrous substance).

CHARACTERS

Appearance: white or slightly yellow powder.

Solubility: slightly soluble in water, practically insoluble in methanol and in methylene chloride.

IDENTIFICATION

Infrared absorption spectrophotometry (*2.2.24*).

Comparison: *cefaclor CRS*.

TESTS

pH (*2.2.3*): 3.0 to 4.5.

Suspend 0.250 g in *carbon dioxide-free water R* and dilute to 10 ml with the same solvent.

Specific optical rotation (*2.2.7*): + 101 to + 111 (anhydrous substance).

Dissolve 0.250 g in a 10 g/l solution of *hydrochloric acid R* and dilute to 25.0 ml with the same solution.

Related substances. Liquid chromatography (*2.2.29*).

Test solution. Dissolve 50.0 mg of the substance to be examined in 10.0 ml of a 2.7 g/l solution of *sodium dihydrogen phosphate R* adjusted to pH 2.5 with *phosphoric acid R*.

Reference solution (a). Dissolve 2.5 mg of *cefaclor CRS* and 5.0 mg of *delta-3-cefaclor CRS* (impurity D) in 100.0 ml of a 2.7 g/l solution of *sodium dihydrogen phosphate R* adjusted to pH 2.5 with *phosphoric acid R*.

Reference solution (b). Dilute 1.0 ml of the test solution to 100.0 ml with a 2.7 g/l solution of *sodium dihydrogen phosphate R* adjusted to pH 2.5 with *phosphoric acid R*.

Column:

- *size*: *l* = 0.25 m, Ø = 4.6 mm;
- *stationary phase*: *end-capped octadecylsilyl silica gel for chromatography R* (5 µm).

Mobile phase:

- *mobile phase A*: 7.8 g/l solution of *sodium dihydrogen phosphate R* adjusted to pH 4.0 with *phosphoric acid R*;
- *mobile phase B*: mix 450 ml of *acetonitrile R* with 550 ml of mobile phase A;

Time (min)	Mobile phase A (per cent *V/V*)	Mobile phase B (per cent *V/V*)
0 - 30	95 → 75	5 → 25
30 - 45	75 → 0	25 → 100
45 - 55	0	100

Flow rate: 1.0 ml/min.

Detection: spectrophotometer at 220 nm.

Injection: 20 µl.

System suitability: reference solution (a):

- *resolution*: minimum 2 between the peaks due to cefaclor and impurity D; if necessary, adjust the acetonitrile content in the mobile phase;
- *symmetry factor*: maximum 1.2 for the peak due to cefaclor; if necessary, adjust the acetonitrile content in the mobile phase.

Limits:

- *any impurity*: for each impurity, not more than 0.5 times the area of the principal peak in the chromatogram obtained with reference solution (b) (0.5 per cent);
- *total*: not more than twice the area of the principal peak in the chromatogram obtained with reference solution (b) (2 per cent);
- *disregard limit*: 0.1 times the area of the principal peak in the chromatogram obtained with reference solution (b) (0.1 per cent).

Heavy metals (*2.4.8*): maximum 30 ppm.

1.0 g complies with test C. Prepare the reference solution using 3 ml of *lead standard solution (10 ppm Pb) R*.

Water (*2.5.12*): 3.0 per cent to 6.5 per cent, determined on 0.200 g.

ASSAY

Liquid chromatography (*2.2.29*).

Test solution. Dissolve 15.0 mg of the substance to be examined in the mobile phase and dilute to 50.0 ml with the mobile phase.

Reference solution (a). Dissolve 15.0 mg of *cefaclor CRS* in the mobile phase and dilute to 50.0 ml with the mobile phase.

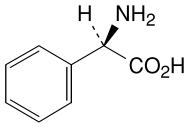
Reference solution (b). Dissolve 3.0 mg of *cefaclor CRS* and 3.0 mg of *delta-3-cefaclor CRS* (impurity D) in the mobile phase and dilute to 10.0 ml with the mobile phase.

Column:

- *size*: *l* = 0.25 m, Ø = 4.6 mm;
- *stationary phase*: *octadecylsilyl silica gel for chromatography R* (5 µm).

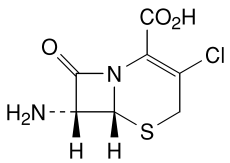
Mobile phase: add 220 ml of *methanol R* to a mixture of 780 ml of *water R*, 10 ml of *triethylamine R* and 1 g of *sodium pentanesulphonate R*, then adjust to pH 2.5 with *phosphoric acid R*.

Flow rate: 1.5 ml/min.



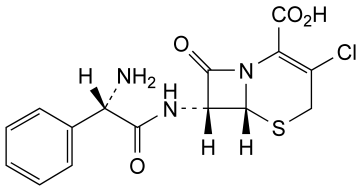
Detection: spectrophotometer at 265 nm.

Injection: 20 µl.

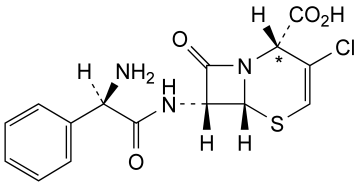


System suitability:

- *resolution*: minimum 2.5 between the peaks due to cefaclor and impurity D in the chromatogram obtained with reference solution (b); if necessary, adjust the concentration of methanol in the mobile phase;
- *symmetry factor*: maximum 1.5 for the peak due to cefaclor in the chromatogram obtained with reference solution (b);
- *repeatability*: maximum relative standard deviation of 1.0 per cent after 6 injections of reference solution (a).

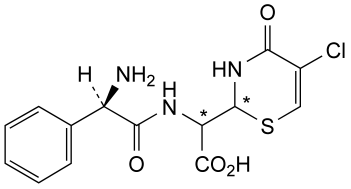


IMPURITIES

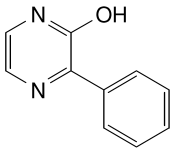


A. (2*R*)-2-amino-2-phenylacetic acid (phenylglycine),

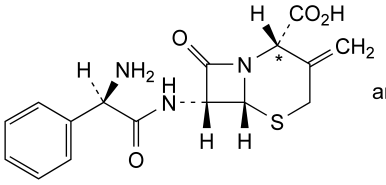
B. (6*R*,7*R*)-7-amino-3-chloro-8-oxo-5-thia-1-azabicyclo-[4.2.0]oct-2-ene-2-carboxylic acid,



C. (6*R*,7*R*)-7-[[(2*S*)-2-amino-2-phenylacetyl]amino]-3-chloro-8-oxo-5-thia-1-azabicyclo[4.2.0]oct-2-ene-2-carboxylic acid,

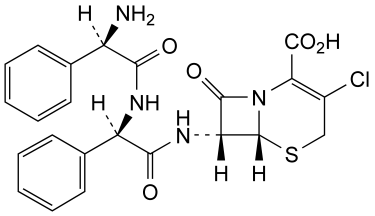


and epimer at C*



D. (2*R*,6*R*,7*R*)- and (2*S*,6*R*,7*R*)-7-[[(2*R*)-2-amino-2-phenylacetyl]amino]-3-chloro-8-oxo-5-thia-1-azabicyclo[4.2.0]oct-3-ene-2-carboxylic acid (delta-3-cefaclor),

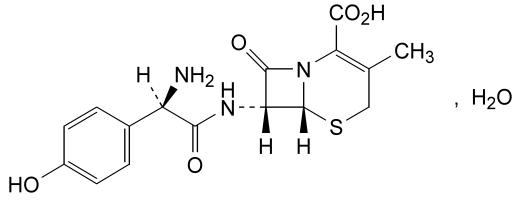
E. 2-[[(2*R*)-2-amino-2-phenylacetyl]amino]-2-(5-chloro-4-oxo-3,4-dihydro-2*H*-1,3-thiazin-2-yl)acetic acid,



F. 3-phenylpyrazin-2-ol.

and epimer at C*

G. (2*R*,6*R*,7*R*)- and (2*S*,6*R*,7*R*)-7-[[(2*R*)-2-amino-2-phenylacetyl]amino]-3-methylene-8-oxo-5-thia-1-azabicyclo[4.2.0]octane-2-carboxylic acid (isocefalexine),



H. (6*R*,7*R*)-7-[[(2*R*)-2-[[(2*R*)-2-amino-2-phenylacetyl]amino]-2-phenylacetyl]amino]-3-chloro-8-oxo-5-thia-1-azabicyclo[4.2.0]oct-2-ene-2-carboxylic acid (*N*-phenylglycyl cefaclor).

CEFADROXIL MONOHYDRATE

Cefadroxilum monohydricum

$C_{16}H_{17}N_3O_5S,H_2O$ M_r 381.4

DEFINITION

(6*R*,7*R*)-7-[[(2*R*)-2-Amino-2-(4-hydroxyphenyl)acetyl]amino]-3-methyl-8-oxo-5-thia-1-azabicyclo[4.2.0]oct-2-ene-2-carboxylic acid monohydrate.

Semi-synthetic product derived from a fermentation product.

Content: 95.0 per cent to 102.0 per cent (anhydrous substance).

CHARACTERS

Appearance: white or almost white powder.

Solubility: slightly soluble in water, very slightly soluble in ethanol (96 per cent).

IDENTIFICATION

Infrared absorption spectrophotometry (*2.2.24*).

Comparison: *cefadroxil CRS*.

TESTS

pH (*2.2.3*): 4.0 to 6.0.

Suspend 1.0 g in *carbon dioxide-free water R* and dilute to 20 ml with the same solvent.

Specific optical rotation (*2.2.7*): + 165 to + 178 (anhydrous substance).

Dissolve 0.500 g in *water R* and dilute to 50.0 ml with the same solvent.

Absorbance (*2.2.25*). Dissolve 20.0 mg in *phosphate buffer solution pH 6.0 R* and dilute to 100.0 ml with the same solvent. The absorbance of the solution determined at 330 nm is not greater than 0.05. Dilute 10.0 ml of the solution to 100.0 ml with *phosphate buffer solution pH 6.0 R*. Examined between 235 nm and 340 nm, the diluted solution shows an absorption maximum at 264 nm. The specific absorbance at this maximum is 225 to 250 (anhydrous substance).

Related substances. Liquid chromatography (*2.2.29*).

Test solution. Dissolve 50.0 mg of the substance to be examined in mobile phase A and dilute to 50.0 ml with mobile phase A.

Reference solution (a). Dissolve 10.0 mg of *D-α-(4-hydroxyphenyl)glycine CRS* (impurity A) in mobile phase A and dilute to 10.0 ml with mobile phase A.

Reference solution (b). Dissolve 10.0 mg of *7-aminodesacetoxycephalosporanic acid CRS* (impurity B) in *phosphate buffer solution pH 7.0 R5* and dilute to 10.0 ml with the same buffer solution.

Reference solution (c). Dilute 1.0 ml of reference solution (a) and 1.0 ml of reference solution (b) to 100.0 ml with mobile phase A.

Reference solution (d). Dissolve 10 mg of *dimethylformamide R* and 10 mg of *dimethylacetamide R* in mobile phase A and dilute to 10.0 ml with mobile phase A. Dilute 1.0 ml to 100.0 ml with mobile phase A.

Reference solution (e). Dilute 1.0 ml of reference solution (c) to 25.0 ml with mobile phase A.

Column:

– *size*: *l* = 0.10 m, Ø = 4.6 mm,
– *stationary phase*: spherical *octadecylsilyl silica gel for chromatography R* (5 µm).

Mobile phase:

– *mobile phase A*: *phosphate buffer solution pH 5.0 R*,
– *mobile phase B*: *methanol R2*,

Time (min)	Mobile phase A (per cent *V/V*)	Mobile phase B (per cent *V/V*)
0 - 1	98	2
1 - 20	98 → 70	2 → 30
20 - 23	70 → 98	30 → 2
23 - 30	98	2

Flow rate: 1.5 ml/min.

Detection: spectrophotometer at 220 nm.

Injection: 20 µl; inject the test solution and reference solutions (c), (d) and (e).

Relative retention with reference to cefadroxil (retention time = about 6 min): dimethylformamide = about 0.4; dimethylacetamide = about 0.75.

System suitability:

– *resolution*: minimum 5.0 between the peaks due to impurity A and to impurity B in the chromatogram obtained with reference solution (c),
– *signal-to-noise ratio*: minimum 10 for the second peak in the chromatogram obtained with reference solution (e).

Limits:

– *impurity A*: not more than the area of the first peak in the chromatogram obtained with reference solution (c) (1.0 per cent),
– *any other impurity*: for each impurity, not more than the area of the second peak in the chromatogram obtained with reference solution (c) (1.0 per cent),
– *total*: not more than 3 times the area of the second peak in the chromatogram obtained with reference solution (c) (3.0 per cent),
– *disregard limit*: 0.05 times the area of the second peak in the chromatogram obtained with reference solution (c) (0.05 per cent); disregard the peaks due to dimethylformamide and dimethylacetamide.

***N,N*-Dimethylaniline** (*2.4.26, Method B*): maximum 20 ppm.

Water (*2.5.12*): 4.0 per cent to 6.0 per cent, determined on 0.200 g.

Sulphated ash (*2.4.14*): maximum 0.5 per cent, determined on 1.0 g.

ASSAY

Liquid chromatography (*2.2.29*).

Test solution. Dissolve 50.0 mg of the substance to be examined in the mobile phase and dilute to 100.0 ml with the mobile phase.

Reference solution (a). Dissolve 50.0 mg of *cefadroxil CRS* in the mobile phase and dilute to 100.0 ml with the mobile phase.

Reference solution (b). Dissolve 5 mg of *cefadroxil CRS* and 50 mg of *amoxicillin trihydrate CRS* in the mobile phase and dilute to 100 ml with the mobile phase.

Column:

– *size*: *l* = 0.25 m, Ø = 4.6 mm,
– *stationary phase*: *octadecylsilyl silica gel for chromatography R* (5 µm).

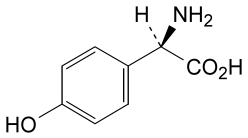
Mobile phase: *acetonitrile R*, a 2.72 g/l solution of *potassium dihydrogen phosphate R* (4:96 *V/V*).

Flow rate: 1 ml/min.

Detection: spectrophotometer at 254 nm.

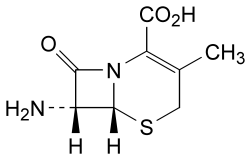
Injection: 20 µl.

System suitability: reference solution (b):



– *resolution*: minimum 5.0 between the peaks due to cefadroxil and to amoxicillin.

Calculate the percentage content of cefadroxil.



STORAGE

CEFALEXIN MONOHYDRATE

Cefalexinum monohydricum

$C_{16}H_{17}N_3O_4S,H_2O$ M_r 365.4
[23325-78-2]

DEFINITION

(6*R*,7*R*)-7-[[(2*R*)-2-Amino-2-phenylacetyl]amino]-3-methyl-8-oxo-5-thia-1-azabicyclo[4.2.0]oct-2-ene-2-carboxylic acid monohydrate.

Semi-synthetic product derived from a fermentation product.

Content: 95.0 per cent to 102.0 per cent (anhydrous substance).

CHARACTERS

Appearance: white or almost white, crystalline powder.

Solubility: sparingly soluble in water, practically insoluble in alcohol.

IDENTIFICATION

Infrared absorption spectrophotometry (*2.2.24*).

Comparison: *cefalexin monohydrate CRS*.

TESTS

pH (*2.2.3*): 4.0 to 5.5.

Dissolve 50 mg in *carbon dioxide-free water R* and dilute to 10 ml with the same solvent.

Specific optical rotation (*2.2.7*): + 149 to + 158 (anhydrous substance).

Dissolve 0.125 g in *phthalate buffer solution pH 4.4 R* and dilute to 25.0 ml with the same solvent.

Absorbance (*2.2.25*). Dissolve 50 mg in *water R* and dilute to 100.0 ml with the same solvent. The absorbance of the solution determined at 330 nm is not greater than 0.05. Dilute 2.0 ml of the solution to 50.0 ml with *water R*. Examined between 220 nm and 300 nm, the diluted solution

shows an absorption maximum at 262 nm. The specific absorbance at this maximum is 220 to 245, calculated with reference to the anhydrous substance.

Related substances. Liquid chromatography (*2.2.29*).

Test solution. Dissolve 50.0 mg of the substance to be examined in mobile phase A and dilute to 50.0 ml with mobile phase A.

Reference solution (a). Dissolve 10.0 mg of *D-phenylglycine R* in mobile phase A and dilute to 10.0 ml with mobile phase A.

Reference solution (b). Dissolve 10.0 mg of *7-aminodesacetoxycephalosporanic acid CRS* in *phosphate buffer solution pH 7.0 R5* and dilute to 10.0 ml with mobile phase A.

Reference solution (c). Dilute 1.0 ml of reference solution (a) and 1.0 ml of reference solution (b) to 100.0 ml with mobile phase A.

Reference solution (d). Dissolve 10 mg of *dimethylformamide R* and 10 mg of *dimethylacetamide R* in mobile phase A and dilute to 10.0 ml with mobile phase A. Dilute 1.0 ml to 100.0 ml with mobile phase A.

Reference solution (e). Dilute 1.0 ml of reference solution (c) to 20.0 ml with mobile phase A.

Reference solution (f). Dissolve 10 mg of *cefotaxime sodium CRS* in mobile phase A and dilute to 10.0 ml with mobile phase A. To 1.0 ml of the solution add 1.0 ml of the test solution and dilute to 100 ml with mobile phase A.

Column:

– *size*: *l* = 0.10 m, Ø = 4.6 mm,

– *stationary phase*: spherical *octadecylsilyl silica gel for chromatography R* (5 µm).

CEFALOTIN SODIUM

Cefalotinum natricum

$C_{16}H_{15}N_2NaO_6S_2$ M_r 418.4
[58-71-9]

DEFINITION

Sodium (6*R*,7*R*)-3-[(acetyloxy)methyl]-8-oxo-7-[(thiophen-2-ylacetyl)amino]-5-thia-1-azabicyclo[4.2.0]oct-2-ene-2-carboxylate.

Semi-synthetic product derived from a fermentation product.

Content: 96.0 per cent to 102.0 per cent (anhydrous substance).

CHARACTERS

Appearance: white or almost white powder.

Solubility: freely soluble in water, slightly soluble in anhydrous ethanol.

IDENTIFICATION

A. Infrared absorption spectrophotometry (*2.2.24*).
Comparison: *cefalotin sodium CRS*.

B. It gives reaction (a) of sodium (*2.3.1*).

TESTS

Solution S. Dissolve 2.50 g in *carbon dioxide-free water R* and dilute to 25.0 ml with the same solvent.

Appearance of solution. Solution S is clear (*2.2.1*) and its absorbance (*2.2.25*) at 450 nm is not greater than 0.20.

pH (*2.2.3*): 4.5 to 7.0 for solution S.

Specific optical rotation (*2.2.7*): + 124 to + 134 (anhydrous substance).

Dissolve 1.25 g in *water R* and dilute to 25.0 ml with the same solvent.

Related substances. Liquid chromatography (*2.2.29*).
Prepare the solutions immediately before use.

Test solution (a). Dissolve 75.0 mg of the substance to be examined in *water R* and dilute to 25.0 ml with the same solvent.

Test solution (b). Dilute 5.0 ml of test solution (a) to 50.0 ml with *water R*.

Reference solution (a). Dissolve 75.0 mg of *cefalotin sodium CRS* in *water R* and dilute to 25.0 ml with the same solvent. Dilute 5.0 ml of this solution to 50.0 ml with *water R*.

Reference solution (b). Dilute 1.0 ml of test solution (a) to 100.0 ml with *water R*.

Reference solution (c). Mix 1 ml of test solution (a), 1 ml of *hydrochloric acid R1* and 8 ml of *water R*. Heat at 60 °C for 12 min and cool to room temperature in iced water. Inject immediately.

Reference solution (d). Dissolve 5 mg of *cefalotin for impurity B identification CRS* in *water R* and dilute to 5 ml with the same solvent.

Column:
- *size*: *l* = 0.25 m, Ø = 4.6 mm;
- *stationary phase*: *end-capped octadecylsilyl silica gel for chromatography R* (5 µm);
- *temperature*: 40 °C.

Mobile phase:
- *mobile phase A*: mix 3 volumes of *acetonitrile R1* and 97 volumes of a 1.742 g/l solution of *dipotassium hydrogen phosphate R* previously adjusted to pH 2.5 with *phosphoric acid R*;
- *mobile phase B*: mix 40 volumes of *acetonitrile R1* and 60 volumes of a 1.742 g/l solution of *dipotassium hydrogen phosphate R* previously adjusted to pH 2.5 with *phosphoric acid R*;

Time (min)	Mobile phase A (per cent *V/V*)	Mobile phase B (per cent *V/V*)
0 - 30	100 → 0	0 → 100
30 - 35	0	100
35 - 36	0 → 100	100 → 0
36 - 41	100	0

Flow rate: 1.0 ml/min.

Detection: spectrophotometer at 220 nm.

Injection: 20 µl of test solution (a) and reference solutions (b), (c) and (d).

Relative retention with reference to cefalotin (retention time = about 26 min): impurity C = about 0.2; impurity B = about 0.7; impurity A = about 0.8; impurity D = about 0.9.

System suitability: reference solution (c):

– *resolution*: minimum 7.0 between the peaks due to impurity D and cefalotin.

Limits:

– *impurity B*: not more than the area of the principal peak in the chromatogram obtained with reference solution (b) (1.0 per cent);

– *impurity D*: not more than 0.5 times the area of the principal peak in the chromatogram obtained with reference solution (b) (0.5 per cent);

– *any other impurity*: for each impurity, not more than 0.25 times the area of the principal peak in the chromatogram obtained with reference solution (b) (0.25 per cent);

– *total*: not more than 3 times the area of the principal peak in the chromatogram obtained with reference solution (b) (3.0 per cent);

– *disregard limit*: 0.05 times the area of the principal peak in the chromatogram obtained with reference solution (b) (0.05 per cent).

***N*,*N*-Dimethylaniline** (*2.4.26, Method B*): maximum 20 ppm.

2-Ethylhexanoic acid (*2.4.28*): maximum 0.5 per cent.

Water (*2.5.12*): maximum 1.5 per cent, determined on 0.500 g.

Bacterial endotoxins (*2.6.14*): less than 0.13 IU/mg, if intended for use in the manufacture of parenteral dosage forms without a further appropriate procedure for the removal of bacterial endotoxins.

ASSAY

Liquid chromatography (*2.2.29*) as described in the test for related substances with the following modifications.

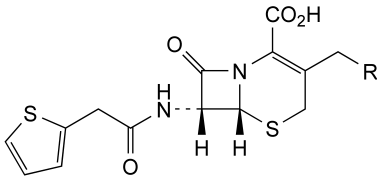
Mobile phase: mix 14 volumes of *acetonitrile R* and 86 volumes of a 6.967 g/l solution of *dipotassium hydrogen phosphate R* previously adjusted to pH 6.0 with *phosphoric acid R*.

Detection: spectrophotometer at 260 nm.

Injection: 5 µl of test solution (b) and reference solution (a).

Run time: 1.5 times the retention time of cefalotin (retention time = about 10 min).

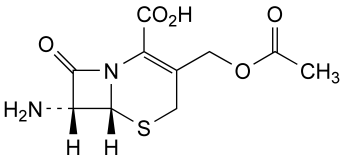
Calculate the percentage content of $C_{16}H_{15}N_2NaO_6S_2$ using the chromatogram obtained with reference solution (a) and the declared content of *cefalotin sodium CRS*.



STORAGE

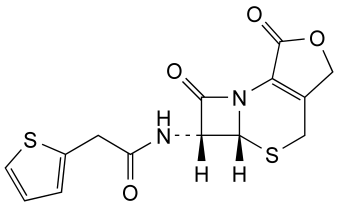
Protected from light. If the substance is sterile, store in a sterile, airtight, tamper-proof container.

IMPURITIES



Specified impurities: *B, D*.

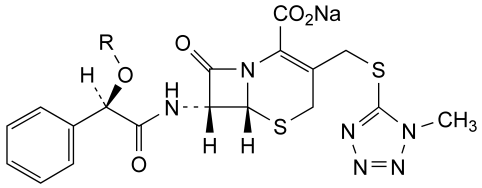
Other detectable impurities (the following substances would, if present at a sufficient level, be detected by one or other of the tests in the monograph. They are limited by the general acceptance criterion for other/unspecified impurities and/or by the general monograph *Substances for pharmaceutical use (2034)*. It is therefore not necessary to identify these impurities for demonstration of compliance. See also *5.10. Control of impurities in substances for pharmaceutical use*): *A, C*.



A. R = H: (6*R*,7*R*)-3-methyl-8-oxo-7-[(thiophen-2-ylacetyl)amino]-5-thia-1-azabicyclo[4.2.0]oct-2-ene-2-carboxylic acid (deacetoxycefalotin),

B. R = OH: (6*R*,7*R*)-3-(hydroxymethyl)-8-oxo-7-[(thiophen-2-ylacetyl)amino]-5-thia-1-azabicyclo[4.2.0]oct-2-ene-2-carboxylic acid (deacetylcefalotin),

C. (6*R*,7*R*)-3-[(acetyloxy)methyl]-7-amino-8-oxo-5-thia-1-azabicyclo[4.2.0]oct-2-ene-2-carboxylic acid (7-ACA),



D. (5a*R*,6*R*)-6-[(thiophen-2-ylacetyl)amino]-5a,6-dihydro-3*H*,7*H*-azeto[2,1-*b*]furo[3,4-*d*][1,3]thiazine-1,7(4*H*)-dione (cefalotin lactone).

CEFAMANDOLE NAFATE

Cefamandoli nafas

Compound	R	Molecular Formula	M_r
Cefamandole nafate	CHO	$C_{19}H_{17}N_6NaO_6S_2$	512.5
Cefamandole sodium	H	$C_{18}H_{17}N_6NaO_5S_2$	484.5

Cefamandole nafate: [42540-40-9]
Cefamandole sodium: [30034-03-8]

DEFINITION

Mixture of sodium (6*R*,7*R*)-7-[[(2*R*)-2-(formyloxy)-2-phenylacetyl]amino]-3-[[(1-methyl-1*H*-tetrazol-5-yl)sulphanyl]methyl]-8-oxo-5-thia-1-azabicyclo[4.2.0]oct-2-ene-2-carboxylate and sodium (6*R*,7*R*)-7-[[(2*R*)-2-hydroxy-2-phenylacetyl]amino]-3-[[(1-methyl-1*H*-tetrazol-5-yl)sulphanyl]methyl]-8-oxo-5-thia-1-azabicyclo[4.2.0]oct-2-ene-2-carboxylate (cefamandole sodium), with sodium carbonate.

Semi-synthetic product derived from a fermentation product.

Content:

– *cefamandole nafate* ($C_{19}H_{17}N_6NaO_6S_2$): 93.0 per cent to 102.0 per cent (anhydrous and sodium carbonate-free substance), for the sum of the content of cefamandole nafate and cefamandole sodium expressed as cefamandole nafate;

– *cefamandole sodium* ($C_{18}H_{17}N_6NaO_5S_2$): maximum 10.0 per cent (anhydrous and sodium carbonate-free substance);

– *sodium carbonate* (Na_2CO_3): 4.8 per cent to 6.4 per cent.

CHARACTERS

Appearance: white or almost white powder.

Solubility: freely soluble in water, sparingly soluble in methanol.

IDENTIFICATION

A. Infrared absorption spectrophotometry (*2.2.24*).

Comparison: *cefamandole nafate CRS*.

B. It gives reaction (a) of sodium (*2.3.1*).

TESTS

Solution S. Dissolve 2.5 g in *carbon dioxide-free water R* and dilute to 25 ml with the same solvent.

Appearance of solution. Solution S is clear (*2.2.1*) and its absorbance (*2.2.25*) at 475 nm is not greater than 0.03.

pH: 6.0 to 8.0 for solution S, measured after 30 min.

Specific optical rotation (*2.2.7*): – 35.0 to – 45.0 (anhydrous and sodium carbonate-free substance).

Dissolve 1.00 g in *acetate buffer solution pH 4.7 R* and dilute to 10.0 ml with the same solvent.

Related substances. Liquid chromatography (*2.2.29*).

Prepare the solutions immediately before use.

Solvent mixture. Mix 18 volumes of *acetonitrile R* and 75 volumes of a 10 per cent *V/V* solution of *triethylamine R* previously adjusted to pH 2.5 with *phosphoric acid R*.

Test solution. Dissolve 0.100 g of the substance to be examined in the solvent mixture and dilute to 10.0 ml with the solvent mixture.

Reference solution (a). Dilute 1 ml of the test solution to 10 ml with the solvent mixture, then heat at 60 °C for 30 min.

Reference solution (b). Dilute 1.0 ml of the test solution to 100.0 ml with the solvent mixture.

Column:

– *size*: *l* = 0.25 m, Ø = 4.6 mm;

– *stationary phase: octadecylsilyl silica gel for chromatography R* (5 µm).

Mobile phase:

– *triethylamine phosphate solution*: dissolve 2.0 g of *sodium pentanesulphonate R* in 350 ml of *water R*, add 40 ml of *triethylamine R*, adjust to pH 2.5 with *phosphoric acid R* and dilute to 700 ml with *water R*;

– *mobile phase A:* mix 1 volume of the triethylamine phosphate solution and 2 volumes of *water R*;

– *mobile phase B*: mix equal volumes of the triethylamine phosphate solution, *methanol R* and *acetonitrile R*;

Time (min)	Mobile phase A (per cent *V/V*)	Mobile phase B (per cent *V/V*)
0 - 1	100	0
1 - 35	100 → 0	0 → 100
35 - 45	0	100
45 - 50	0 → 100	100 → 0

Flow rate: 1.5 ml/min.

Detection: spectrophotometer at 254 nm.

Injection: 20 µl loop injector.

Relative retention with reference to cefamandole nafate (retention time = about 24 min): cefamandole = about 0.8.

System suitability: reference solution (a):

– *resolution*: minimum 5.0 between the peaks due to cefamandole and cefamandole nafate.

Limits:

– *any impurity*: for each impurity, not more than the area of the principal peak in the chromatogram obtained with reference solution (b) (1.0 per cent);

– *total*: not more than 5 times the area of the principal peak in the chromatogram obtained with reference solution (b) (5.0 per cent);

– *disregard limit*: 0.1 times the area of the principal peak in the chromatogram obtained with reference solution (b) (0.1 per cent).

2-Ethylhexanoic acid (*2.4.28*): maximum 0.3 per cent *m/m*.

Heavy metals (*2.4.8*): maximum 20 ppm.

1.0 g complies with test C. Prepare the reference solution using 2 ml of *lead standard solution (10 ppm Pb) R*.

Water (*2.5.12*): maximum 2.0 per cent, determined on 0.500 g.

Bacterial endotoxins (*2.6.14*): less than 0.15 IU/mg, if intended for use in the manufacture of parenteral dosage forms without a further appropriate procedure for the removal of bacterial endotoxins.

ASSAY

Cefamandole nafate. Liquid chromatography (*2.2.29*).

Prepare the solutions immediately before use.

Test solution. Dissolve 50.0 mg of the substance to be examined in the mobile phase and dilute to 100.0 ml with the mobile phase.

Reference solution (a). Dissolve 50.0 mg of *cefamandole nafate CRS* in the mobile phase and dilute to 100.0 ml with the mobile phase.

Reference solution (b). Dilute 1 ml of the test solution to 10 ml with the mobile phase, then heat at 60 °C for 30 min.

Column:

– *size*: *l* = 0.25 m, Ø = 4.6 mm;

– *stationary phase*: *octadecylsilyl silica gel for chromatography R* (5 µm).

Mobile phase: mix 25 volumes of *acetonitrile R* and 75 volumes of a 10 per cent *V/V* solution of *triethylamine R* previously adjusted to pH 2.5 with *phosphoric acid R*.

Flow rate: 1.0 ml/min.

Detection: spectrophotometer at 254 nm.

Injection: 20 µl loop injector.

System suitability:

– *resolution*: minimum 7.0 between the 2 principal peaks in the chromatogram obtained with reference solution (b);

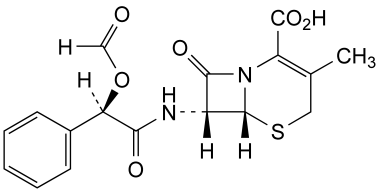
– *repeatability*: maximum relative standard deviation of 0.8 per cent after a series of single injections of not less than 3 freshly prepared reference solutions (a).

Calculate the percentage content of cefamandole nafate ($C_{19}H_{17}N_6NaO_6S_2$) from the sum of the contents of cefamandole nafate and cefamandole sodium expressed as cefamandole nafate, using the declared content of *cefamandole nafate CRS*.

1 mg of cefamandole sodium is equivalent to 1.0578 mg of cefamandole nafate

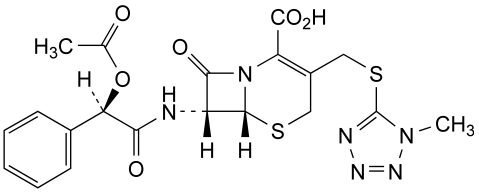
Sodium carbonate. Dissolve 0.500 g in 50 ml of *water R*. Titrate with *0.1 M hydrochloric acid*, determining the end-point potentiometrically (*2.2.20*).

1 ml of *0.1 M hydrochloric acid* is equivalent to 5.3 mg of Na_2CO_3.



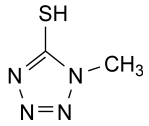
STORAGE

In an airtight container, protected from light. If the substance is sterile, store in a sterile, airtight, tamper-proof container.

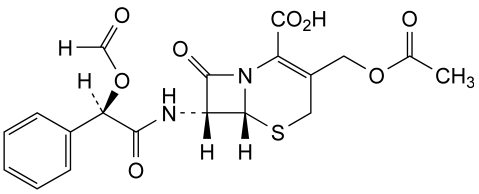


LABELLING

The label states that the substance contains sodium carbonate.



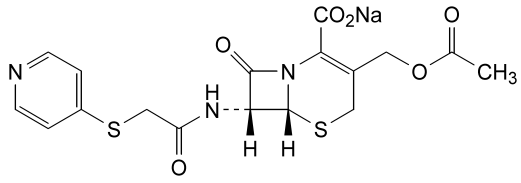
IMPURITIES



A. (6*R*,7*R*)-7-[[(2*R*)-2-(formyloxy)-2-phenylacetyl]amino]-3-methyl-8-oxo-5-thia-1-azabicyclo[4.2.0]oct-2-ene-2-carboxylic acid (formylmandeloyl-7-amino-desacetoxycephalosporanic acid),

C. (6*R*,7*R*)-7-[[(2*R*)-2-(acetyloxy)-2-phenylacetyl]amino]-3-[[(1-methyl-1*H*-tetrazol-5-yl)sulphanyl]methyl]-8-oxo-5-thia-1-azabicyclo[4.2.0]oct-2-ene-2-carboxylic acid (*O*-acetylcefamandole),

D. 1-methyl-1*H*-tetrazole-5-thiol,



E. (6*R*,7*R*)-7-[[(2*R*)-2-(formyloxy)-2-phenylacetyl]amino]-3-[(acetyloxy)methyl]-8-oxo-5-thia-1-azabicyclo[4.2.0]oct-2-ene-2-carboxylic acid (formylmandeloyl-7-ACA).

corrected 6.0

CEFAPIRIN SODIUM

Cefapirinum natricum

$C_{17}H_{16}N_3NaO_6S_2$ M_r 445.5
[24356-60-3]

DEFINITION

Sodium (6*R*,7*R*)-3-[(acetyloxy)methyl]-8-oxo-7-[[[(pyridin-4-yl)sulphanyl]acetyl]amino]-5-thia-1-azabicyclo[4.2.0]oct-2-ene-2-carboxylate.

Semi-synthetic product derived from a fermentation product.

Content: 96.0 per cent to 102.0 per cent (anhydrous substance).

CHARACTERS

Appearance: white or pale yellow powder.

Solubility: soluble in water, practically insoluble in methylene chloride.

IDENTIFICATION

A. Infrared absorption spectrophotometry (*2.2.24*).
Comparison: *cefapirin sodium CRS*.

B. It gives reaction (a) of sodium (*2.3.1*).

TESTS

Appearance of solution. Dissolve 2.0 g in *water R* and dilute to 10.0 ml with the same solvent. The solution is clear (*2.2.1*). Dilute 5.0 ml to 10.0 ml with *water R*. The absorbance (*2.2.25*) of this solution at 450 nm is not greater than 0.25.

pH (*2.2.3*): 6.5 to 8.5.

Dissolve 0.100 g in *carbon dioxide-free water R* and dilute to 10.0 ml with the same solvent.

Specific optical rotation (*2.2.7*): + 150 to + 165 (anhydrous substance).

Dissolve 0.500 g in *water R* and dilute to 25.0 ml with the same solvent.

Related substances. Liquid chromatography (*2.2.29*). *Prepare the solutions immediately before use.*

Test solution. Dissolve 42 mg of the substance to be examined in the mobile phase and dilute to 200.0 ml with the mobile phase.

Reference solution (a). Dissolve 42 mg of *cefapirin sodium CRS* in the mobile phase and dilute to 200.0 ml with the mobile phase.

Reference solution (b). Dilute 1.0 ml of the test solution to 100.0 ml with the mobile phase.

Reference solution (c). Dilute 1.0 ml of reference solution (b) to 20.0 ml with the mobile phase.

Reference solution (d). Mix 1 ml of the test solution, 8 ml of the mobile phase and 1 ml of *hydrochloric acid R1*. Heat at 60 °C for 10 min.

Column:

– *size*: *l* = 0.30 m, Ø = 4 mm,

– *stationary phase*: *octadecylsilyl silica gel for chromatography R* (10 µm).

Mobile phase: mix 80 ml of *dimethylformamide R*, 4.0 ml of *glacial acetic acid R* and 20 ml of a 4.5 per cent (*m/m*) solution of *potassium hydroxide R*. Dilute to 2 litres with *water R*.

Flow rate: 2.0 ml/min.

Detection: spectrophotometer at 254 nm.

Injection: 20 µl of the test solution and reference solutions (b), (c) and (d).

Run time: twice the retention time of cefapirin.

Relative retention with reference to cefapirin (retention time = about 13 min): impurity B = about 0.3; impurity C = about 0.5; impurity A = about 0.75.

System suitability: reference solution (d):

– *resolution*: minimum 2.0 between the peaks due to cefapirin and impurity A.

Limits:

– *any impurity*: for each impurity, not more than the area of the principal peak in the chromatogram obtained with reference solution (b) (1.0 per cent), and not more than 1 such peak has an area greater than 0.3 times the area of the principal peak in the chromatogram obtained with reference solution (b) (0.3 per cent),

– *total*: not more than twice the area of the principal peak in the chromatogram obtained with reference solution (b) (2.0 per cent),

– *disregard limit*: area of the principal peak in the chromatogram obtained with reference solution (c) (0.05 per cent).

***N,N*-Dimethylaniline** (*2.4.26, Method B*): maximum 20 ppm.

2-Ethylhexanoic acid (*2.4.28*): maximum 0.5 per cent.

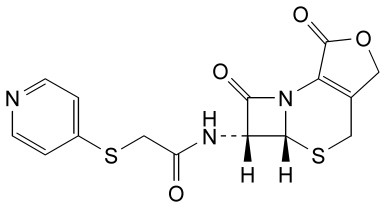
Water (*2.5.12*): maximum 2.0 per cent, determined on 0.300 g.

Bacterial endotoxins (*2.6.14*): less than 0.17 IU/mg, if intended for use in the manufacture of parenteral dosage forms without a further appropriate procedure for the removal of bacterial endotoxins.

ASSAY

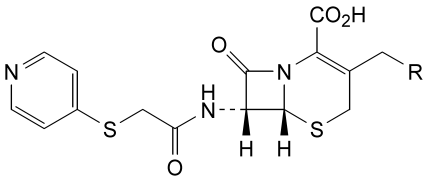
Liquid chromatography (*2.2.29*) as described in the test for related substances with the following modification.

Injection: test solution and reference solution (a).



Calculate the percentage content of $C_{17}H_{16}N_3NaO_6S_2$.

STORAGE

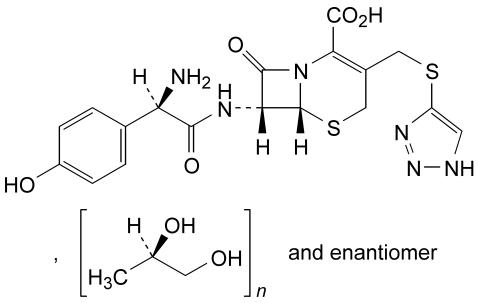


Protected from light. If the substance is sterile, store in a sterile, tamper-proof container.

IMPURITIES

Specified impurities: A, B, C.

A. (5a*R*,6*R*)-6-[[[(pyridin-4-yl)sulphanyl]acetyl]amino]-5a,6-dihydro-3*H*,7*H*-azeto[2,1-*b*]furo[3,4-*d*][1,3]thiazine-1,7(4*H*)-dione (deacetylcefapirin lactone),



B. R = OH: (6*R*,7*R*)-3-(hydroxymethyl)-8-oxo-7-[[[(pyridin-4-yl)sulphanyl]acetyl]amino]-5-thia-1-azabicyclo[4.2.0]oct-2-ene-2-carboxylic acid (deacetylcefapirin),

C. R = H: (6*R*,7*R*)-3-methyl-8-oxo-7-[[[(pyridin-4-yl)sulphanyl]acetyl]amino]-5-thia-1-azabicyclo[4.2.0]oct-2-ene-2-carboxylic acid (deacetoxycefapirin).

CEFATRIZINE PROPYLENE GLYCOL

Cefatrizinum propylen glycolum

$C_{18}H_{18}N_6O_5S_2,(C_3H_8O_2)_n$ M_r 462.5 (base)

DEFINITION

Mixture of (6*R*,7*R*)-7-[[(2*R*)-2-amino-2-(4-hydroxyphenyl)-acetyl]amino]-8-oxo-3-[[(1*H*-1,2,3-triazol-4-yl)sulphanyl]-methyl]-5-thia-1-azabicyclo[4.2.0]oct-2-ene-2-carboxylic acid and propane-1,2-diol in molecular proportions of about 1:1.

Content: 95.0 per cent to 102.0 per cent of $C_{18}H_{18}N_6O_5S_2$ (anhydrous substance).

CHARACTERS

Appearance: white or almost white powder.

Solubility: slightly soluble in water, practically insoluble in ethanol (96 per cent) and in methylene chloride.

IDENTIFICATION

A. Infrared absorption spectrophotometry (*2.2.24*).
Comparison: *cefatrizine propylene glycol CRS*.

B. Examine the chromatograms obtained in the test for propylene glycol.
Results: the principal peak in the chromatogram obtained with the test solution is similar in retention time and size to the principal peak in the chromatogram obtained with reference solution (b).

TESTS

Specific optical rotation (*2.2.7*): + 63 to + 69 (anhydrous substance).

Dissolve 0.400 g in *1 M hydrochloric acid* and dilute to 20.0 ml with the same acid.

Propylene glycol. Gas chromatography (*2.2.28*).

Solvent mixture: *acetone R, water R* (20:80 *V/V*).

Internal standard solution. Dissolve 1.0 g of *dimethylacetamide R* in the solvent mixture and dilute to 50.0 ml with the solvent mixture.

Test solution. Introduce 0.40 g of the substance to be examined into a ground-glass-stoppered test-tube. Add 3.0 ml of the internal standard solution, 1.0 ml of the solvent mixture and 2.0 ml of *hydrochloric acid R*. Seal the test-tube and shake.

Reference solution (a). Dissolve 2.0 g of *propylene glycol R* in the solvent mixture and dilute to 100.0 ml with the solvent mixture.

Reference solution (b). Introduce into a ground-glass-stoppered test-tube 1.0 ml of reference solution (a) and 1.0 ml of the internal standard solution.

Column:

– *material*: stainless steel;
– *size*: *l* = 2 m, Ø = 2 mm;
– *stationary phase*: *ethylvinylbenzene-divinylbenzene copolymer R* (150-180 µm).

Carrier gas: *nitrogen for chromatography R*.

Flow rate: 30 ml/min.

Temperature:

– *column*: 200 °C;
– *injection port and detector*: 250 °C.

Detection: flame ionisation.

Injection: 1 µl of the test solution and reference solution (b).

Limit:

– *propylene glycol*: 13.0 per cent to 18.0 per cent.

Related substances. Liquid chromatography (*2.2.29*).

Test solution. Dissolve 60.0 mg of the substance to be examined in the mobile phase and dilute to 100.0 ml with the mobile phase.

Reference solution (a). Dissolve 60.0 mg of *cefatrizine propylene glycol CRS* in the mobile phase and dilute to 100.0 ml with the mobile phase.

Reference solution (b). Dissolve 30.0 mg of *cefatrizine impurity A CRS* in *buffer solution pH 7.0 R* and dilute to 100.0 ml with the same buffer solution.

Reference solution (c). Dilute 0.6 ml of reference solution (a) to 100.0 ml with the mobile phase.

Reference solution (d). Dilute 1.0 ml of reference solution (b) to 100.0 ml with *buffer solution pH 7.0 R*.

Reference solution (e). To 1.0 ml of reference solution (a) add 1.0 ml of reference solution (b) and dilute to 10.0 ml with the mobile phase.

Column:

– *size*: *l* = 0.25 m, Ø = 4 mm;
– *stationary phase*: *octadecylsilyl silica gel for chromatography R* (5 µm).

Mobile phase: mix 5 volumes of *acetonitrile R* and 95 volumes of a 2.72 g/l solution of *potassium dihydrogen phosphate R* in *water R*.

Flow rate: 2 ml/min.

Detection: spectrophotometer at 272 nm.

Injection: 20 µl of the test solution and reference solutions (c), (d) and (e).

Run time: at least twice the retention time of cefatrizine.

System suitability: reference solution (e):

– *resolution*: minimum 5.0 between the peaks due to cefatrizine and impurity A.

Limits:

– *impurity A*: not more than the area of the corresponding peak in the chromatogram obtained with reference solution (d) (0.5 per cent);
– *any other impurity*: for each impurity, not more than the area of the principal peak in the chromatogram obtained with reference solution (c) (0.6 per cent);
– *sum of impurities other than A*: not more than 3.5 times the area of the principal peak in the chromatogram obtained with reference solution (c) (2.1 per cent);
– *disregard limit*: 0.05 times the area of the principal peak in the chromatogram obtained with reference solution (c) (0.03 per cent).

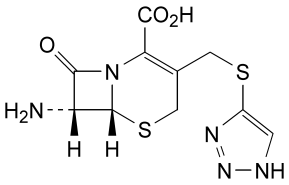
Water (*2.5.12*): maximum 1.5 per cent, determined on 0.500 g.

Sulphated ash (*2.4.14*): maximum 0.1 per cent, determined on 1.0 g.

ASSAY

Liquid chromatography (*2.2.29*) as described in the test for related substances with the following modifications.

Injection: test solution and reference solution (a).



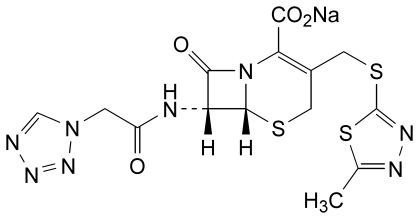
System suitability: reference solution (a):

– *repeatability*: maximum relative standard deviation of 1.0 per cent after 6 injections.

Calculate the percentage content of $C_{18}H_{18}N_6O_5S_2$ from the declared content of $C_{18}H_{18}N_6O_5S_2$ in *cefatrizine propylene glycol CRS*.

IMPURITIES

Specified impurities: A.



A. (6*R*,7*R*)-7-amino-8-oxo-3-[[(1*H*-1,2,3-triazol-4-yl)sulphanyl]-methyl]-5-thia-1-azabicyclo[4.2.0]oct-2-ene-2-carboxylic acid (7-ACA triazole).

corrected 6.0

CEFAZOLIN SODIUM

Cefazolinum natricum

$C_{14}H_{13}N_8NaO_4S_3$ M_r 476.5
[27164-46-1]

DEFINITION

Sodium (6*R*,7*R*)-3-[[(5-methyl-1,3,4-thiadiazol-2-yl)sulphanyl]methyl]-8-oxo-7-[(1*H*-tetrazol-1-ylacetyl)amino]-5-thia-1-azabicyclo[4.2.0]oct-2-ene-2-carboxylate.

Semi-synthetic product derived from a fermentation product.

Content: 95.0 per cent to 102.0 per cent (anhydrous substance).

CHARACTERS

Appearance: white or almost white powder, very hygroscopic.

Solubility: freely soluble in water, very slightly soluble in ethanol (96 per cent).

It shows polymorphism (*5.9*).

IDENTIFICATION

A. Infrared absorption spectrophotometry (*2.2.24*).

Preparation: dissolve 0.150 g in 5 ml of *water R*, add 0.5 ml of *dilute acetic acid R*, swirl and allow to stand for 10 min in iced water. Filter the precipitate and rinse with 1-2 ml of *water R*. Dissolve in a mixture of 1 volume of *water R* and 9 volumes of *acetone R*. Evaporate the solvent almost to dryness, then dry in an oven at 60 °C for 30 min.

Comparison: *cefazolin CRS*.

B. It gives reaction (a) of sodium (*2.3.1*).

TESTS

Solution S. Dissolve 2.50 g in *carbon dioxide-free water R* and dilute to 25.0 ml with the same solvent.

Appearance of solution. Solution S is clear (*2.2.1*) and its absorbance (*2.2.25*) at 430 nm is not greater than 0.15.

pH (*2.2.3*): 4.0 to 6.0 for solution S.

Specific optical rotation (*2.2.7*): – 15 to – 24 (anhydrous substance).

Dissolve 1.25 g in *water R* and dilute to 25.0 ml with the same solvent.

Absorbance (*2.2.25*). Dissolve 0.100 g in *water R* and dilute to 100.0 ml with the same solvent. Dilute 2.0 ml of the solution to 100.0 ml with *sodium hydrogen carbonate solution R*. Examined between 220 nm and 350 nm, the solution shows an absorption maximum at 272 nm. The specific absorbance at the maximum is 260 to 300 (anhydrous substance).

Related substances. Liquid chromatography (*2.2.29*).

Test solution. Dissolve 50.0 mg of the substance to be examined in mobile phase A and dilute to 20.0 ml with the same mobile phase.

Reference solution (a). Dilute 1.0 ml of the test solution to 100.0 ml with mobile phase A.

Reference solution (b). Dissolve 20 mg of the substance to be examined in 10 ml of a 2 g/l solution of *sodium hydroxide R*. Allow to stand for 15-30 min. Dilute 1.0 ml of the solution to 20 ml with mobile phase A.

Column:

– *size*: *l* = 0.125 m, Ø = 4.0 mm;
– *stationary phase*: *octadecylsilyl silica gel for chromatography R* (3 µm);
– *temperature*: 45 °C.

Mobile phase:

– *mobile phase A*: solution containing 14.54 g/l of *disodium hydrogen phosphate R* and 3.53 g/l of *potassium dihydrogen phosphate R*;
– *mobile phase B*: *acetonitrile for chromatography R*;

Time (min)	Mobile phase A (per cent *V/V*)	Mobile phase B (per cent *V/V*)
0 - 2	98	2
2 - 4	98 → 85	2 → 15
4 - 10	85 → 60	15 → 40
10 - 11.5	60 → 35	40 → 65
11.5 - 12	35	65
12 - 15	35 → 98	65 → 2
15 - 21	98	2

Flow rate: 1.2 ml/min.

Detection: spectrophotometer at 254 nm.

Injection: 5 µl.

System suitability: reference solution (b):

– *resolution*: minimum 2.0 between the peaks due to cefazolin and impurity L (see Figure 0988.-1).

Limits:

– *any impurity*: for each impurity, not more than the area of the principal peak in the chromatogram obtained with reference solution (a) (1.0 per cent);
– *total*: not more than 3.5 times the area of the principal peak in the chromatogram obtained with reference solution (a) (3.5 per cent);
– *disregard limit*: 0.05 times the area of the principal peak in the chromatogram obtained with reference solution (a) (0.05 per cent).

***N,N*-Dimethylaniline** (*2.4.26, Method B*): maximum 20 ppm.

Water (*2.5.12*): maximum 6.0 per cent, determined on 0.300 g.

Bacterial endotoxins (*2.6.14*): less than 0.15 IU/mg, if intended for use in the manufacture of parenteral dosage forms without a further appropriate procedure for the removal of bacterial endotoxins.

ASSAY

Liquid chromatography (*2.2.29*).

Test solution. Dissolve 50.0 mg of the substance to be examined in the mobile phase and dilute to 50.0 ml with the mobile phase.

Reference solution (a). Dissolve 50.0 mg of *cefazolin CRS* in the mobile phase and dilute to 50.0 ml with the mobile phase.

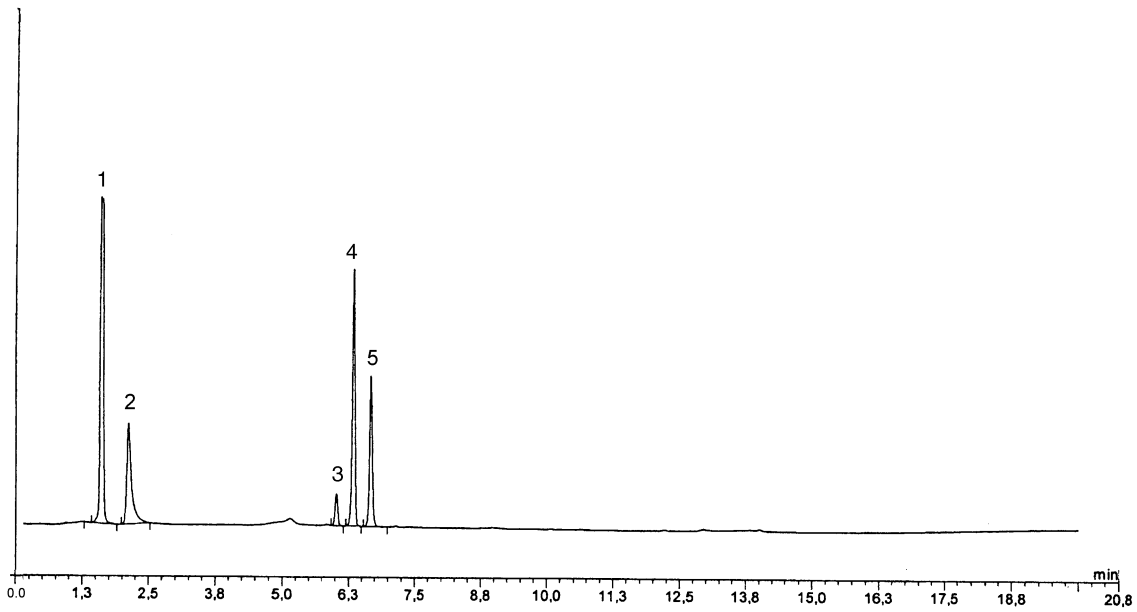
Reference solution (b). Dissolve 5.0 mg of *cefuroxime sodium CRS* in 10.0 ml of reference solution (a) and dilute to 100.0 ml with the mobile phase.

Column:

– *size*: *l* = 0.25 m, Ø = 4.6 mm;
– *stationary phase*: *octadecylsilyl silica gel for chromatography R* (5 µm).

Mobile phase: mix 10 volumes of *acetonitrile R* and 90 volumes of a solution containing 2.77 g/l of *disodium hydrogen phosphate R* and 1.86 g/l of *citric acid R*.

Flow rate: 1.0 ml/min.



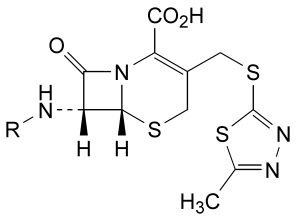
Detection: spectrophotometer at 270 nm.

Injection: 20 µl.

System suitability: reference solution (b):

– *resolution*: minimum 2.0 between the peaks due to cefazolin and cefuroxime.

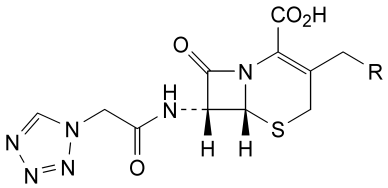
Calculate the percentage content of cefazolin sodium by multiplying the percentage content of cefazolin by 1.048.



1. impurity J
2. impurity E
3. unknown
4. cefazolin
5. impurity L

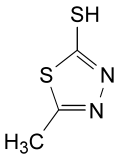
Figure 0988.-1. – *Chromatogram for the test for related substances of cefazolin sodium: reference solution (b) (in situ degradation)*

STORAGE



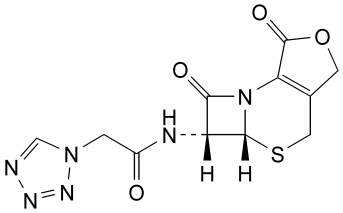
In an airtight container, protected from light. If the substance is sterile, store in a sterile, airtight, tamper-proof container.

IMPURITIES

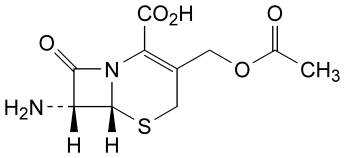


A. R = H: (6*R*,7*R*)-7-amino-3-[[(5-methyl-1,3,4-thiadiazol-2-yl)sulphanyl]methyl]-8-oxo-5-thia-1-azabicyclo[4.2.0]oct-2-ene-2-carboxylic acid,

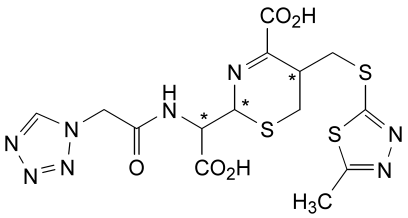
B. R = CO-C(CH_3)$_3$: (6*R*,7*R*)-7-[(2,2-dimethylpropanoyl)amino]-3-[[(5-methyl-1,3,4-thiadiazol-2-yl)sulphanyl]methyl]-8-oxo-5-thia-1-azabicyclo[4.2.0]oct-2-ene-2-carboxylic acid,



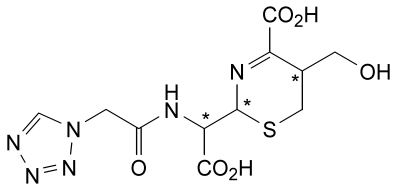
C. R = H: (6*R*,7*R*)-3-methyl-8-oxo-7-[(1*H*-tetrazol-1-ylacetyl)amino]-5-thia-1-azabicyclo[4.2.0]oct-2-ene-2-carboxylic acid,



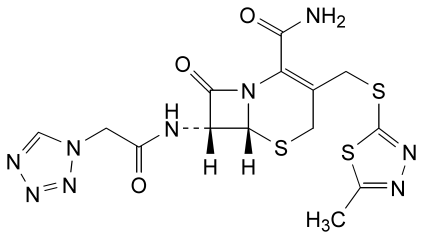
D. R = O-CO-CH_3: (6*R*,7*R*)-3-[(acetyloxy)methyl]-8-oxo-7-[(1*H*-tetrazol-1-ylacetyl)amino]-5-thia-1-azabicyclo[4.2.0]oct-2-ene-2-carboxylic acid,



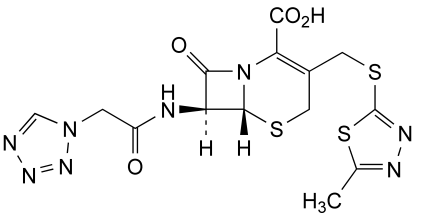
E. 5-methyl-1,3,4-thiadiazol-2-thiol (MMTD),



G. (5a*R*,6*R*)-6-[(1*H*-tetrazol-1-ylacetyl)amino]-5a,6-dihydro-3*H*,7*H*-azeto[2,1-*b*]furo[3,4-*d*][1,3]thiazine-1,7(4*H*)-dione,



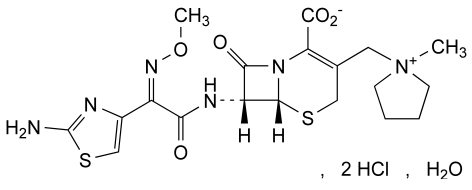
H. (6*R*,7*R*)-3-[(acetyloxy)methyl]-7-amino-8-oxo-5-thia-1-azabicyclo[4.2.0]oct-2-ene-2-carboxylic acid (7-ACA),



I. 2-[carboxy[(1*H*-tetrazol-1-ylacetyl)amino]methyl]-5-[[(5-methyl-1,3,4-thiadiazol-2-yl)sulphanyl]methyl]-5,6-dihydro-2*H*-1,3-thiazine-4-carboxylic acid (cefazoloic acid),

J. 2-[carboxy[(1*H*-tetrazol-1-ylacetyl)amino]methyl]-5-(hydroxymethyl)-5,6-dihydro-2*H*-1,3-thiazine-4-carboxylic acid (hydrolysed cefazoloic acid),

K. (6*R*,7*R*)-3-[[(5-methyl-1,3,4-thiadiazol-2-yl)sulphanyl]methyl]-8-oxo-7-[(1*H*-tetrazol-1-ylacetyl)amino]-5-thia-1-azabicyclo[4.2.0]oct-2-ene-2-carboxamide (cefazolinamide),



L. (6*R*,7*S*)-3-[[(5-methyl-1,3,4-thiadiazol-2-yl)sulphanyl]methyl]-8-oxo-7-[(1*H*-tetrazol-1-ylacetyl)amino]-5-thia-1-azabicyclo[4.2.0]oct-2-ene-2-carboxylic acid.

01/2008:2126

CEFEPIME DIHYDROCHLORIDE MONOHYDRATE

Cefepimi dihydrochloridum monohydricum

$C_{19}H_{26}Cl_2N_6O_5S_2,H_2O$ M_r 571.5
[123171-59-5]

DEFINITION

(6*R*,7*R*)-7-[[(2*Z*)-(2-Aminothiazol-4-yl)(methoxyimino)acetyl]amino]-3-[(1-methylpyrrolidinio)methyl]-8-oxo-5-thia-1-azabicyclo[4.2.0]oct-2-ene-2-carboxylate dihydrochloride monohydrate. Semi-synthetic product derived from a fermentation product.

Content: 97.0 per cent to 102.0 per cent (anhydrous substance).

CHARACTERS

Appearance: white or almost white, crystalline powder.

Solubility: freely soluble in water and in methanol, practically insoluble in methylene chloride.

IDENTIFICATION

A. Infrared absorption spectrophotometry (*2.2.24*).
Comparison: *cefepime dihydrochloride monohydrate CRS*.

B. It gives reaction (a) of chlorides (*2.3.1*).

TESTS

Appearance of solution. The solution is clear (*2.2.1*) and not more intensely coloured than reference solution Y_3 (*2.2.2, Method II*).

Dissolve 2.0 g in *water R* and dilute to 20 ml with the same solvent.

Specific optical rotation (*2.2.7*): + 40 to + 45 (anhydrous substance).

Dissolve 0.250 g in *water R* and dilute to 25.0 ml with the same solvent.

Impurity G. Liquid chromatography (*2.2.29*). *Prepare the solutions immediately before use.*

Test solution. Dissolve 0.100 g of the substance to be examined in *0.01 M nitric acid* and dilute to 10.0 ml with the same acid.

Reference solution (a). Dilute 0.250 g of *N-methylpyrrolidine R* (impurity G) to 100.0 ml with *water R*. Dilute 2.0 ml of this solution to 100.0 ml with *0.01 M nitric acid*.

Reference solution (b). Dilute 0.250 g of *pyrrolidine R* to 100 ml with *0.01 M nitric acid*. Dilute 2 ml of the solution to 100 ml with *0.01 M nitric acid*. Mix 5 ml of this solution with 5 ml of reference solution (a).

Column:
– *size*: *l* = 0.05 m, Ø = 4.6 mm;
– *stationary phase*: *strong cation-exchange resin R* (5 µm).

Mobile phase: mix 1 volume of *acetonitrile R* and 100 volumes of *0.01 M nitric acid*; filter through a 0.2 µm filter.

Flow rate: 1 ml/min.

Detection: conductivity detector.

Injection: 100 µl.

Run time: 1.1 times the retention time of cefepime (retention time = about 50 min, eluting as a broadened peak).

System suitability:
– *symmetry factor*: maximum 2.5 for the peak due to impurity G in the chromatogram obtained with reference solution (a);
– *repeatability*: maximum relative standard deviation of 5.0 per cent after 6 injections of reference solution (a);
– *peak-to-valley ratio*: minimum 3 between the peaks due to pyrrolidine and impurity G in the chromatogram obtained with reference solution (b).

Calculate the percentage content of impurity G in the test solution using reference solution (a).

Limit:
– *impurity G*: maximum 0.5 per cent.

Related substances. Liquid chromatography (*2.2.29*). *Prepare the solutions immediately before use or keep refrigerated at 4-8 °C for not more than 12 h.*

Test solution. Dissolve 70.0 mg of the substance to be examined in mobile phase A and dilute to 50.0 ml with mobile phase A. Sonicate for 30 s and stir for about 5 min.

Reference solution (a). Dissolve 70.0 mg of *cefepime dihydrochloride monohydrate CRS* in mobile phase A and dilute to 50.0 ml with mobile phase A. Sonicate for 30 s and stir for about 5 min.

Reference solution (b). Dilute 1.0 ml of the test solution to 10.0 ml with mobile phase A. Dilute 2.0 ml of this solution to 100.0 ml with mobile phase A.

Reference solution (c). Dissolve 7 mg of *cefepime dihydrochloride monohydrate for system suitability CRS* (containing impurities A, B, E and F) in mobile phase A and dilute to 5 ml with mobile phase A.

Column:

– *size*: *l* = 0.25 m, Ø = 4.6 mm;

– *stationary phase*: *end-capped octadecylsilyl silica gel for chromatography R* (5 µm).

Mobile phase:

– *mobile phase A*: mix 10 volumes of *acetonitrile R* and 90 volumes of a 0.68 g/l solution of *potassium dihydrogen phosphate R* previously adjusted to pH 5.0 with *0.5 M potassium hydroxide*;

– *mobile phase B*: mix equal volumes of *acetonitrile R* and a 0.68 g/l solution of *potassium dihydrogen phosphate R* previously adjusted to pH 5.0 with *0.5 M potassium hydroxide*;

Time (min)	Mobile phase A (per cent *V/V*)	Mobile phase B (per cent *V/V*)
0 - 10	100	0
10 - 30	100 → 50	0 → 50
30 - 35	50	50
35 - 36	50 → 100	50 → 0
36 - 45	100	0

Flow rate: 1 ml/min.

Detection: spectrophotometer at 254 nm.

Injection: 10 µl of the test solution and reference solutions (b) and (c).

Identification of impurities: use the chromatogram supplied with *cefepime dihydrochloride monohydrate for system suitability CRS* and the chromatogram obtained with reference solution (c) to identify the peaks due to impurities A, B, E and F.

Relative retention with reference to cefepime (retention time = about 7 min): impurity E = about 0.4; impurity F = about 0.8; impurity A = about 2.5; impurity B = about 4.1.

System suitability: reference solution (c):

– *resolution*: minimum 1.5 between the peaks due to impurity F and cefepime.

Limits:

– *correction factors*: for the calculation of content, multiply the peak areas of the following impurities by the corresponding correction factor: impurity A = 1.4; impurity B = 1.4; impurity E = 1.8;

– *impurity A*: not more than 1.5 times the area of the principal peak in the chromatogram obtained with reference solution (b) (0.3 per cent);

– *impurities B, F*: for each impurity, not more than the area of the principal peak in the chromatogram obtained with reference solution (b) (0.2 per cent);

– *impurity E*: not more than 0.5 times the area of the principal peak in the chromatogram obtained with reference solution (b) (0.1 per cent);

– *unspecified impurities*: for each impurity, not more than 0.5 times the area of the principal peak in the chromatogram obtained with reference solution (b) (0.10 per cent);

– *total*: not more than 5 times the area of the principal peak in the chromatogram obtained with reference solution (b) (1.0 per cent);

– *disregard limit*: 0.25 times the area of the principal peak in the chromatogram obtained with reference solution (b) (0.05 per cent).

Water (*2.5.12*): 3.0 per cent to 4.5 per cent, determined on 0.400 g.

Bacterial endotoxins (*2.6.14*): less than 0.04 IU/mg, if intended for use in the manufacture of parenteral dosage forms without a further appropriate procedure for the removal of bacterial endotoxins.

ASSAY

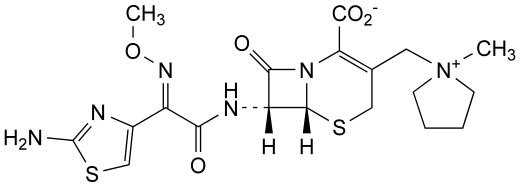
Liquid chromatography (*2.2.29*) as described in the test for related substances with the following modifications.

Mobile phase: mobile phase A.

Injection: test solution and reference solution (a).

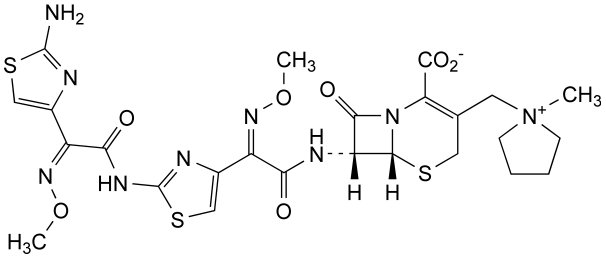
Run time: 1.4 times the retention time of cefepime.

Calculate the percentage content of $C_{19}H_{26}Cl_2N_6O_5S_2$ from the declared content of *cefepime dihydrochloride monohydrate CRS*.



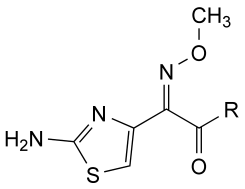
STORAGE

Protected from light. If the substance is sterile, store in a sterile, airtight, tamper-proof container.



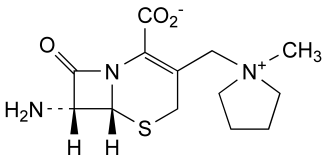
IMPURITIES

Specified impurities: A, B, E, F, G.

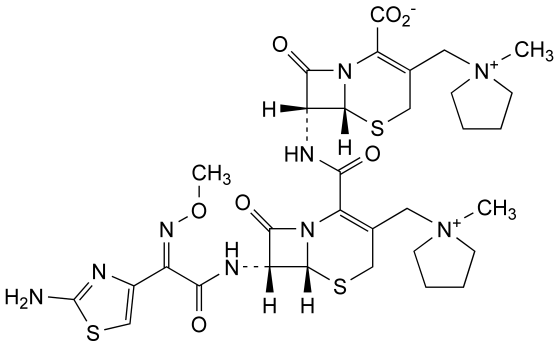


Other detectable impurities (the following substances would, if present at a sufficient level, be detected by one or other of the tests in the monograph. They are limited by the general acceptance criterion for other/unspecified impurities and/or by the general monograph *Substances for pharmaceutical use (2034)*. It is therefore not necessary to identify these impurities for demonstration of compliance. See also *5.10. Control of impurities in substances for pharmaceutical use): C, D.*

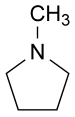
A. (6*R*,7*R*)-7-[[(2*E*)-(2-aminothiazol-4-yl)(methoxyimino)acetyl]amino]-3-[(1-methylpyrrolidinio)methyl]-8-oxo-5-thia-1-azabicyclo[4.2.0]oct-2-ene-2-carboxylate (*anti*-cefepime),



B. (6*R*,7*R*)-7-[[(2*Z*)-[2-[[(2*Z*)-(2-aminothiazol-4-yl)(methoxyimino)acetyl]amino]thiazol-4-yl](methoxyimino)acetyl]amino]-3-[(1-methylpyrrolidinio)methyl]-8-oxo-5-thia-1-azabicyclo[4.2.0]oct-2-ene-2-carboxylate,



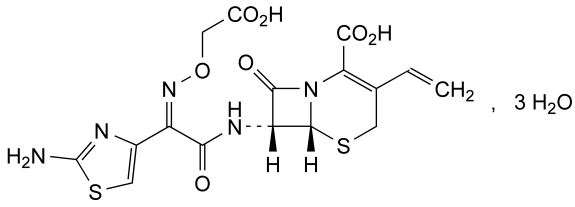
C. R = NH-CH_2-CHO: (2*Z*)-2-(2-aminothiazol-4-yl)-*N*-(formylmethyl)-2-(methoxyimino)acetamide,



D. R = OH: (2*Z*)-(2-aminothiazol-4-yl)(methoxyimino)acetic acid,

E. (6*R*,7*R*)-7-amino-3-[(1-methylpyrrolidinio)methyl]-8-oxo-5-thia-1-azabicyclo[4.2.0]oct-2-ene-2-carboxylate,

F. (6*R*,7*R*)-7-[[[(6*R*,7*R*)-7-[[(2*Z*)-(2-aminothiazol-4-yl)(methoxyimino)acetyl]amino]-3-[(1-methylpyrrolidinio)methyl]-8-oxo-5-thia-1-azabicyclo[4.2.0]oct-2-en-2-yl]carbonyl]amino]-3-[(1-methylpyrrolidinio)methyl]-8-oxo-5-thia-1-azabicyclo[4.2.0]oct-2-ene-2-carboxylate,



G. *N*-methylpyrrolidine.

corrected 6.0

CEFIXIME

Cefiximum

$C_{16}H_{15}N_5O_7S_2,3H_2O$ M_r 507.5

DEFINITION

(6*R*,7*R*)-7-[[(*Z*)-2-(2-Aminothiazol-4-yl)-2-[(carboxymethoxy)-imino]acetyl]amino]-3-ethenyl-8-oxo-5-thia-1-azabicyclo-[4.2.0]oct-2-ene-2-carboxylic acid trihydrate.

Semi-synthetic product derived from a fermentation product.

Content: 95.0 per cent to 102.0 per cent (anhydrous substance).

CHARACTERS

Appearance: white or almost white, slightly hygroscopic powder.

Solubility: slightly soluble in water, soluble in methanol, sparingly soluble in anhydrous ethanol, practically insoluble in ethyl acetate.

IDENTIFICATION

Infrared absorption spectrophotometry (*2.2.24*).

Comparison: *cefixime CRS*.

If the spectra obtained show differences, dissolve the substance to be examined and the reference substance separately in *methanol R*, evaporate to dryness and record new spectra using the residues.

TESTS

pH (*2.2.3*): 2.6 to 4.1.

Suspend 0.5 g in *carbon dioxide-free water R* and dilute to 10 ml with the same solvent.

Related substances. Liquid chromatography (*2.2.29*).

Test solution. Dissolve 25.0 mg of the substance to be examined in the mobile phase and dilute to 25.0 ml with the mobile phase.

Reference solution (a). Dissolve 25.0 mg of *cefixime CRS* in the mobile phase and dilute to 25.0 ml with the mobile phase.

Reference solution (b). Dilute 1.0 ml of reference solution (a) to 100.0 ml with the mobile phase.

Reference solution (c). Dissolve 10 mg of *cefixime CRS* in 10 ml of *water R*. Heat on a water-bath for 45 min and cool (*in situ* preparation of impurity D). Inject immediately.

Column:

- *size*: *l* = 0.125 m, Ø = 4 mm;
- *stationary phase*: *octadecylsilyl silica gel for chromatography R* (5 µm);
- *temperature*: 40 °C.
- *Mobile phase*: mix 250 volumes of *acetonitrile R* and 750 volumes of a tetrabutylammonium hydroxide solution prepared as follows: dissolve 8.2 g of *tetrabutylammonium hydroxide R* in *water R* and dilute to 800 ml with the same solvent; adjust to pH 6.5 with *dilute phosphoric acid R* and dilute to 1000 ml with *water R*.

Flow rate: 1.0 ml/min.

Detection: spectrophotometer at 254 nm.

Injection: 10 µl of the test solution and reference solutions (b) and (c).

Run time: 3 times the retention time of cefixime.

System suitability: reference solution (c):

- *resolution*: minimum 2.0 between the peaks due to cefixime and impurity D; if necessary, adjust the concentration of acetonitrile in the mobile phase.

Limits:

- *any impurity*: for each impurity, not more than 0.5 times the area of the principal peak in the chromatogram obtained with reference solution (b) (0.5 per cent);
- *total*: not more than 3 times the area of the principal peak in the chromatogram obtained with reference solution (b) (3 per cent);

– *disregard limit*: 0.1 times the area of the principal peak in the chromatogram obtained with reference solution (b) (0.1 per cent).

Ethanol (*2.4.24*). Head-space gas chromatography (*2.2.28*): use the standard additions method.

Sample solution. Dissolve 0.250 g of the substance to be examined in a mixture of 1 volume of *dimethylacetamide R* and 4 volumes of *water R* and dilute to 25.0 ml with the same mixture of solvents.

Limit:

– *ethanol*: maximum 1.0 per cent *m/m*.

Water (*2.5.12*): 9.0 per cent to 12.0 per cent, determined on 0.200 g.

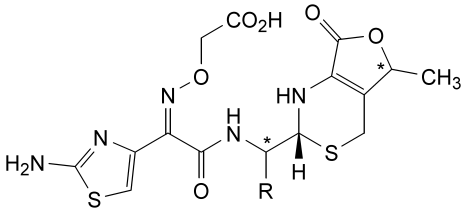
Sulphated ash (*2.4.14*): maximum 0.2 per cent, determined on 1.0 g.

ASSAY

Liquid chromatography (*2.2.29*) as described in the test for related substances with the following modifications.

Injection: the test solution and reference solution (a).

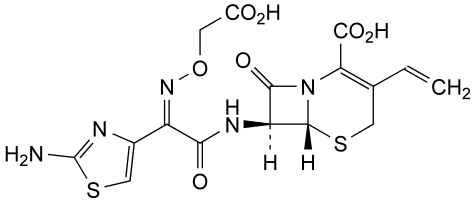
System suitability: reference solution (a):



– *repeatability*: maximum relative standard deviation of 1.0 per cent after 6 injections.

Calculate the percentage content of $C_{16}H_{15}N_5O_7S_2$ from the declared content of *cefixime CRS*.

STORAGE



In an airtight container, protected from light.

CEFOPERAZONE SODIUM

Cefoperazonum natricum

$C_{25}H_{26}N_9NaO_8S_2$ M_r 668

[62893-19-0]

DEFINITION

Sodium (6*R*,7*R*)-7-[[(2*R*)-2-[[(4-ethyl-2,3-dioxopiperazin-1-yl)carbonyl]amino]-2-(4-hydroxyphenyl)acetyl]amino]-3-[[(1-methyl-1*H*-tetrazol-5-yl)sulphanyl]methyl]-8-oxo-5-thia-1-azabicyclo[4.2.0]oct-2-ene-2-carboxylate.

Semi-synthetic product derived from a fermentation product.

Content: 95.0 per cent to 102.0 per cent (anhydrous substance).

CHARACTERS

Appearance: white or slightly yellow, hygroscopic powder.

Solubility: freely soluble in water, soluble in methanol, slightly soluble in ethanol (96 per cent).

If crystalline, it shows polymorphism (*5.9*).

IDENTIFICATION

A. Infrared absorption spectrophotometry (*2.2.24*).

Preparation: dissolve the substance to be examined in *methanol R* and evaporate to dryness. Examine the residue.

Comparison: *Ph. Eur. reference spectrum of cefoperazone sodium.*

B. Examine the chromatograms obtained in the assay.

Results: the principal peak in the chromatogram obtained with test solution (a) is similar in retention time and size to the principal peak in the chromatogram obtained with reference solution (a).

C. It gives reaction (a) of sodium (*2.3.1*).

TESTS

Appearance of solution. The solution is clear (*2.2.1*) and its absorbance (*2.2.25*) at 430 nm is not greater than 0.15.

Dissolve 2.5 g in *water R* and dilute to 25.0 ml with the same solvent.

pH (*2.2.3*): 4.5 to 6.5.

Dissolve 2.5 g in *carbon dioxide-free water R* and dilute to 10 ml with the same solvent.

Related substances. Liquid chromatography (*2.2.29*). *Prepare the solutions immediately before use.*

Test solution (a). Dissolve 25.0 mg of the substance to be examined in the mobile phase and dilute to 250.0 ml with the mobile phase.

Test solution (b). Dissolve 25.0 mg of the substance to be examined in the mobile phase and dilute to 50.0 ml with the mobile phase.

Reference solution (a). Dissolve 25.0 mg of *cefoperazone dihydrate CRS* in the mobile phase and dilute to 250.0 ml with the mobile phase.

Reference solution (b). Dilute 5.0 ml of reference solution (a) to 100.0 ml with the mobile phase.

Column:

– *size*: *l* = 0.15 m, Ø = 4.6 mm;
– *stationary phase*: *end-capped octadecylsilyl silica gel for chromatography R* (5 µm).

Mobile phase: mix 884 volumes of *water R*, 110 volumes of *acetonitrile R*, 3.5 volumes of a 60 g/l solution of *acetic acid R* and 2.5 volumes of a triethylammonium acetate solution prepared as follows: dilute 14 ml of *triethylamine R* and 5.7 ml of *glacial acetic acid R* to 100 ml with *water R*.

Flow rate: 1 ml/min.

Detection: spectrophotometer at 254 nm.

Injection: 20 µl of test solution (b) and reference solutions (a) and (b).

Run time: 2.5 times the retention time of cefoperazone.

Retention time: cefoperazone = about 15 min.

System suitability: reference solution (a):

– *number of theoretical plates*: minimum 5000, calculated for the principal peak; if necessary, adjust the content of *acetonitrile R* in the mobile phase;
– *symmetry factor*: maximum 1.6 for the principal peak; if necessary, adjust the content of *acetonitrile R* in the mobile phase.

Limits:

– *any impurity*: for each impurity, not more than 1.5 times the area of the principal peak in the chromatogram obtained with reference solution (b) (1.5 per cent);
– *total*: 4.5 times the area of the principal peak in the chromatogram obtained with reference solution (b) (4.5 per cent);
– *disregard limit*: 0.1 times the area of the principal peak in the chromatogram obtained with reference solution (b) (0.1 per cent).

Acetone (*2.4.24, System B*): maximum 2.0 per cent.

Sample solution. Dissolve 0.500 g of the substance to be examined in *water R* and dilute to 10.0 ml with the same solvent.

Solvent solution. Dissolve 0.350 g of *acetone R* in *water R* and dilute to 100.0 ml with the same solvent. Dilute 10.0 ml of this solution to 100.0 ml with *water R*.

Prepare each of 4 injection vials as shown in the table below:

Vial No.	Sample solution (ml)	Solvent solution (ml)	*Water R* (ml)
1	1.0	0	4.0
2	1.0	1.0	3.0
3	1.0	2.0	2.0
4	1.0	3.0	1.0

Static head-space conditions which may be used:

– *equilibration time*: 15 min;
– *transfer-line temperature*: 110 °C.

Temperature:

– *Column*: 40 °C for 10 min.

Heavy metals (*2.4.8*): maximum 5 ppm.

2.0 g complies with test C. Prepare the reference solution using 1 ml of *lead standard solution (10 ppm Pb) R*.

Water (*2.5.12*): maximum 5.0 per cent, determined on 0.200 g.

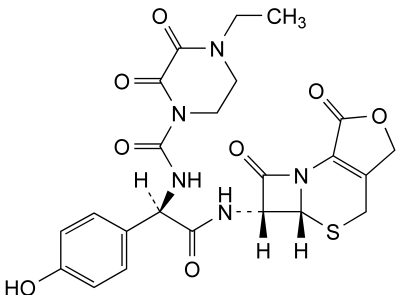
Bacterial endotoxins (*2.6.14*): less than 0.20 IU/mg, if intended for use in the manufacture of parenteral dosage forms without a further appropriate procedure for the removal of bacterial endotoxins.

ASSAY

Liquid chromatography (*2.2.29*) as described in the test for related substances with the following modifications.

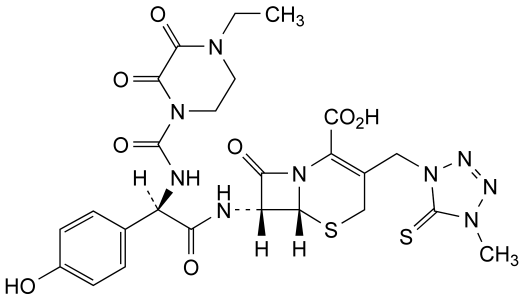
Injection: test solution (a) and reference solution (a).

System suitability: reference solution (a):



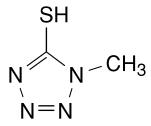
– *repeatability*: maximum relative standard deviation of 1.0 per cent after 6 injections.

Calculate the percentage content of cefoperazone sodium by multiplying the percentage content of cefoperazone by 1.034.

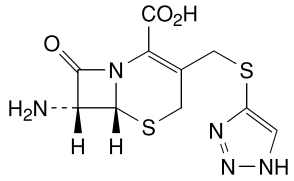


STORAGE

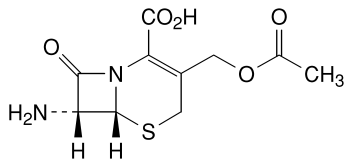
In an airtight container, protected from light, at a temperature of 2 °C to 8 °C. If the substance is sterile, store in a sterile, airtight, tamper-proof container.



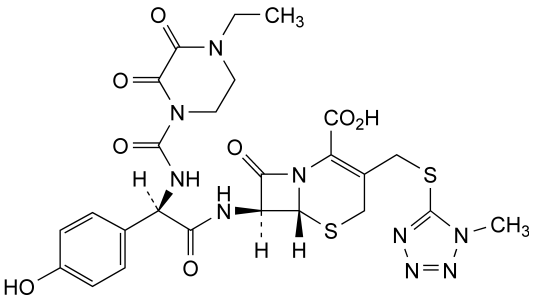
IMPURITIES



A. (5a*R*,6*R*)-6-[[(2*R*)-2-[[(4-ethyl-2,3-dioxopiperazin-1-yl)-carbonyl]amino]-2-(4-hydroxyphenyl)acetyl]amino]-5a,6-dihydro-3*H*,7*H*-azeto[2,1-*b*]furo[3,4-*d*][1,3]thiazine-1,7(4*H*)-dione,



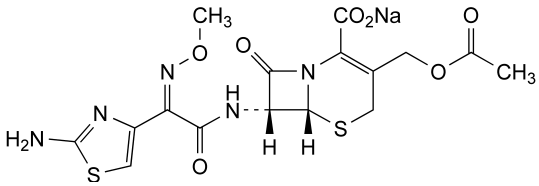
B. (6*R*,7*R*)-7-[[(2*R*)-2-[[(4-ethyl-2,3-dioxopiperazin-1-yl)-carbonyl]amino]-2-(4-hydroxyphenyl)acetyl]amino]-3-[(4-methyl-5-thioxo-4,5-dihydro-1*H*-tetrazol-1-yl)methyl]-8-oxo-5-thia-1-azabicyclo[4.2.0]oct-2-ene-2-carboxylic acid,



C. 1-methyl-1*H*-tetrazole-5-thiol,

D. (6*R*,7*R*)-7-amino-8-oxo-3-[(1*H*-1,2,3-triazol-4-yl-sulphanyl)methyl]-5-thia-1-azabicyclo[4.2.0]oct-2-ene-2-carboxylic acid (7-TACA),

E. (6*R*,7*R*)-3-[(acetyloxy)methyl]-7-amino-8-oxo-5-thia-1-azabicyclo[4.2.0]oct-2-ene-2-carboxylic acid (7-ACA),



F. (6*R*,7*S*)-7-[[(2*R*)-2-[[(4-ethyl-2,3-dioxopiperazine-1-yl)-carbonyl]amino]-2-(4-hydroxyphenyl)acetyl]amino]-3-[[(1-methyl-1*H*-tetrazol-5-yl)sulphanyl]methyl]-8-oxo-5-thia-1-azabicyclo[4.2.0]oct-2-ene-2-carboxylic acid.

01/2008:0989

CEFOTAXIME SODIUM

Cefotaximum natricum

$C_{16}H_{16}N_5NaO_7S_2$ M_r 477.4

[64485-93-4]

DEFINITION

Sodium (6*R*,7*R*)-3-[(acetyloxy)methyl]-7-[[(2*Z*)-2-(2-aminothiazol-4-yl)-2-(methoxyimino)acetyl]amino]-8-oxo-5-thia-1-azabicyclo[4.2.0]oct-2-ene-2-carboxylate.

Semi-synthetic product derived from a fermentation product.

Content: 96.0 per cent to 102.0 per cent (anhydrous substance).

CHARACTERS

Appearance: white or slightly yellow powder, hygroscopic.

Solubility: freely soluble in water, sparingly soluble in methanol.

IDENTIFICATION

A. Infrared absorption spectrophotometry (*2.2.24*).

Comparison: *cefotaxime sodium CRS*.

B. It gives reaction (a) of sodium (*2.3.1*).

TESTS

Solution S. Dissolve 2.5 g in *carbon dioxide-free water R* and dilute to 25.0 ml with the same solvent.

Appearance of solution. Solution S is clear (*2.2.1*). Add 1 ml of *glacial acetic acid R* to 10 ml of solution S. The solution, examined immediately, is clear.

pH (*2.2.3*): 4.5 to 6.5 for solution S.

Specific optical rotation (*2.2.7*): + 58.0 to + 64.0 (anhydrous substance).

Dissolve 0.100 g in *water R* and dilute to 10.0 ml with the same solvent.

Absorbance (*2.2.25*): maximum 0.40 at 430 nm for solution S.

Specific absorbance (*2.2.25*): 360 to 390, determined at the absorption maximum at 235 nm (anhydrous substance).

Dissolve 20.0 mg in *water R* and dilute to 100.0 ml with the same solvent. Dilute 10.0 ml of the solution to 100.0 ml with *water R*.

Related substances. Liquid chromatography (*2.2.29*). *Prepare the solutions immediately before use.*

Solution A: mobile phase B, mobile phase A (14:86 *V/V*).

Test solution. Dissolve 40.0 mg of the substance to be examined in solution A and dilute to 50.0 ml with the same solution.

Reference solution (a). Dissolve 8.0 mg of *cefotaxime acid CRS* in solution A and dilute to 10.0 ml with the same solution.

Reference solution (b). Dilute 1.0 ml of the test solution to 100.0 ml with solution A.

Reference solution (c). Add 1.0 ml of *dilute hydrochloric acid R* to 4.0 ml of the test solution. Heat the solution at 40 °C for 2 h. Add 5.0 ml of *buffer solution pH 6.6 R* and 1.0 ml of *dilute sodium hydroxide solution R*.

Reference solution (d). Dissolve 4 mg of *cefotaxime for peak identification CRS* (containing impurities A, B, C, E and F) in 5 ml of solution A.

Column:

- *size*: *l* = 0.15 m, Ø = 3.9 mm,
- *stationary phase*: *octadecylsilyl silica gel for chromatography R* (5 µm),
- *temperature*: 30 °C.

Mobile phase:

- *mobile phase A*: 7.1 g/l solution of *disodium hydrogen phosphate R* adjusted to pH 6.25 using *phosphoric acid R*;
- *mobile phase B*: *methanol R*;

Time (min)	Mobile phase A (per cent *V/V*)	Mobile phase B (per cent *V/V*)
0 - 7	86	14
7 - 9	86 → 82	14 → 18
9 - 16	82	18
16 - 45	82 → 60	18 → 40
45 - 50	60	40
50 - 55	60 → 86	40 → 14
55 - 60	86	14

Flow rate: 1.0 ml/min.

Detection: spectrophotometer at 235 nm.

Injection: 10 µl of the test solution and reference solutions (b), (c) and (d).

Identification of impurities: use the chromatogram supplied with *cefotaxime for peak identification CRS* and the chromatogram obtained with reference solution (d) to identify the peaks due to impurities A, B, C, E and F.

Relative retention with reference to cefotaxime (retention time = about 13 min): impurity B = about 0.3; impurity A = about 0.5; impurity E = about 0.6; impurity C = about 1.9; impurity D = about 2.3; impurity F = about 2.4; impurity G = about 3.1.

System suitability: reference solution (c):

- *resolution*: minimum 3.5 between the peaks due to impurity E and cefotaxime;
- *symmetry factor*: maximum 2.0 for the peak due to cefotaxime.

Limits:

- *impurities A, B, C, D, E, F*: for each impurity, not more than the area of the principal peak in the chromatogram obtained with reference solution (b) (1.0 per cent);
- *any other impurity*: for each impurity, not more than 0.2 times the area of the principal peak in the chromatogram obtained with reference solution (b) (0.2 per cent);
- *total*: not more than 3 times the area of the principal peak in the chromatogram obtained with reference solution (b) (3.0 per cent);
- *disregard limit*: 0.05 times the area of the principal peak in the chromatogram obtained with reference solution (b) (0.05 per cent).

Ethanol (*2.4.24, System A*): maximum 1.0 per cent.

***N,N*-Dimethylaniline** (*2.4.26, Method B*): maximum 20 ppm.

2-Ethylhexanoic acid (*2.4.28*): maximum 0.5 per cent *m/m*.

Water (*2.5.12*): maximum 3.0 per cent, determined on 0.300 g.

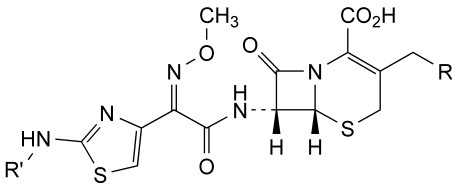
Bacterial endotoxins (*2.6.14*): less than 0.05 IU/mg, if intended for use in the manufacture of parenteral dosage forms without a further appropriate procedure for the removal of bacterial endotoxins.

ASSAY

Liquid chromatography (*2.2.29*) as described in the test for related substances with the following modification.

Injection: test solution and reference solution (a).

Calculate the percentage content of $C_{16}H_{16}N_5NaO_7S_2$ by multiplying the percentage content of cefotaxime by 1.048.

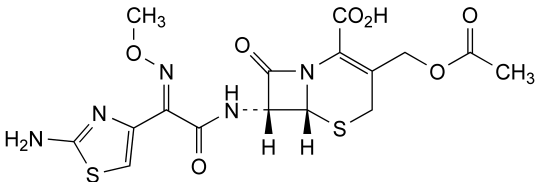


STORAGE

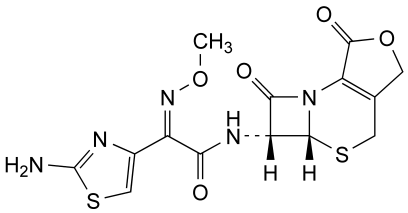
In an airtight container, protected from light. If the substance is sterile, store in a sterile, airtight, tamper-proof container.

IMPURITIES

Specified impurities: A, B, C, D, E, F.



Other detectable impurities (the following substances would, if present at a sufficient level, be detected by one or other of the tests in the monograph. They are limited by the general acceptance criterion for other/unspecified impurities and/or by the general monograph *Substances for pharmaceutical use (2034)*. It is therefore not necessary to identify these impurities for demonstration of compliance. See also *5.10. Control of impurities in substances for pharmaceutical use*): *G.*



A. R = R′ = H: (6*R*,7*R*)-7-[[(2*Z*)-2-(2-aminothiazol-4-yl)-2-(methoxyimino)acetyl]amino]-3-methyl-8-oxo-5-thia-1-azabicyclo[4.2.0]oct-2-ene-2-carboxylic acid (deacetoxycefotaxime),

B. R = OH, R′ = H: (6*R*,7*R*)-7-[[(2*Z*)-2-(2-aminothiazol-4-yl)-2-(methoxyimino)acetyl]amino]-3-(hydroxymethyl)-8-oxo-5-thia-1-azabicyclo[4.2.0]oct-2-ene-2-carboxylic acid (deacetylcefotaxime),

CEFOXITIN SODIUM

Cefoxitinum natricum

$C_{16}H_{16}N_3NaO_7S_2$ M_r 449.4
[33564-30-6]

DEFINITION

Sodium (6*R*,7*S*)-3-[(carbamoyloxy)methyl]-7-methoxy-8-oxo-7-[[(thiophen-2-yl)acetyl]amino]-5-thia-1-azabicyclo[4.2.0]oct-2-ene-2-carboxylate.

Semi-synthetic product derived from a fermentation product.

Content: 95.0 per cent to 102.0 per cent (anhydrous substance).

CHARACTERS

Appearance: white or almost white powder, very hygroscopic.

Solubility: very soluble in water, sparingly soluble in alcohol.

IDENTIFICATION

A. Infrared absorption spectrophotometry (*2.2.24*).
Comparison: *cefoxitin sodium CRS*.

B. It gives reaction (a) of sodium (*2.3.1*).

TESTS

Solution S. Dissolve 2.50 g in *carbon dioxide-free water R* and dilute to 25 ml with the same solvent.

Appearance of solution. Solution S is clear (*2.2.1*) and not more intensely coloured than intensity 5 of the range of reference solutions of the most appropriate colour (*2.2.2, Method II*).

pH (*2.2.3*): 4.2 to 7.0.

Dilute 2 ml of solution S to 20 ml with *carbon dioxide-free water R*.

Specific optical rotation (*2.2.7*): + 206 to + 214 (anhydrous substance).

Dissolve 0.250 g in *methanol R* and dilute to 25.0 ml with the same solvent.

Absorbance (*2.2.25*). Dissolve 0.100 g in *water R* and dilute to 100.0 ml with the same solvent. Dilute 2.0 ml of the solution to 100.0 ml with *sodium hydrogen carbonate solution R*. Examined between 220 nm and 350 nm, the solution shows an absorption maximum at 236 nm and a broad absorption maximum at about 262 nm. The specific absorbance at this broad maximum is 190 to 210 (anhydrous substance).

Related substances. Liquid chromatography (*2.2.29*). *Prepare the solutions immediately before use.*

Solution A. Dilute 20 ml of a 34.8 g/l solution of *dipotassium hydrogen phosphate R* adjusted to pH 6.8 with *phosphoric acid R* to 1000 ml with *water R*.

Test solution. Dissolve 50.0 mg of the substance to be examined in solution A and dilute to 10.0 ml with the same solution.

Reference solution (a). Dilute 1.0 ml of the test solution to 100.0 ml with solution A.

Reference solution (b). To 1.0 ml of the test solution add 7.0 ml of *water R* and 2.0 ml of *methanol R*. Add 25 mg of *sodium carbonate R*, stir for 10 min at room temperature, then heat in a water-bath at 70 °C for 30 min. Allow to cool. Add 3 drops of *glacial acetic acid R* and 1 ml of the test solution and mix.

Column:

– *size*: *l* = 0.25 m, Ø = 4.6 mm,

– *stationary phase*: *phenylsilyl silica gel for chromatography R* (5 µm) with a specific surface area of 300 m^2/g and a pore size of 7 nm.

Mobile phase:

– *mobile phase A*: *water R* adjusted to pH 2.7 with *anhydrous formic acid R*,

– *mobile phase B*: *acetonitrile R*,

Time (min)	Mobile phase A (per cent *V/V*)	Mobile phase B (per cent *V/V*)
0 - 12	90	10
12 - 37	90 → 80	10 → 20
37 - 50	80 → 60	20 → 40
50 - 55	60 → 20	40 → 80
55 - 60	20	80
60 - 62	20 → 90	80 → 10
62 - 70	90	10

Flow rate: 1 ml/min.

Detection: spectrophotometer at 235 nm.

Injection: 50 µl.

Relative retentions with reference to cefoxitin (retention time = about 34 min): impurity A = about 0.82; impurity B = about 1.16; impurity C = about 1.27; impurity D = about 1.31.

System suitability: reference solution (b):

– *resolution*: minimum 5.0 between the 2 principal peaks.

Limits:

– *any impurity*: not more than half the area of the principal peak in the chromatogram obtained with reference solution (a) (0.5 per cent),

– *total*: not more than 4 times the area of the principal peak in the chromatogram obtained with reference solution (a) (4.0 per cent),

– *disregard limit*: 0.05 times the area of the principal peak in the chromatogram obtained with reference solution (a) (0.05 per cent).

Water (*2.5.12*): maximum 1.0 per cent, determined on 0.500 g.

Bacterial endotoxins (*2.6.14*): less than 0.13 IU/mg, if intended for use in the manufacture of parenteral dosage forms without a further appropriate procedure for the removal of bacterial endotoxins.

ASSAY

Liquid chromatography (*2.2.29*).

Test solution. Dissolve 25.0 mg of the substance to be examined in *water R* and dilute to 25.0 ml with the same solvent.

Reference solution (a). Dissolve 25.0 mg of *cefoxitin sodium CRS* in *water R* and dilute to 25.0 ml with the same solvent.

Reference solution (b). Dissolve 20.0 mg of *2-(2-thienyl)acetic acid R* in *water R* and dilute to 25.0 ml with the same solvent.

Reference solution (c). Mix 1.0 ml of reference solution (a) and 5.0 ml of reference solution (b).

Column:

– *size*: *l* = 0.25 m, Ø = 4.6 mm,

– *stationary phase*: *octadecylsilyl silica gel for chromatography R* (5 µm).

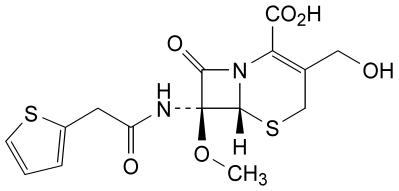
Mobile phase: *acetic acid R, acetonitrile R, water R* (1:19:81 *V/V/V*).

Flow rate: 1 ml/min.

Detection: spectrophotometer at 254 nm.

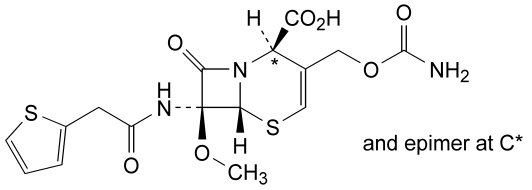
Injection: 20 µl; inject the test solution and reference solutions (a) and (c).

System suitability: reference solution (c):



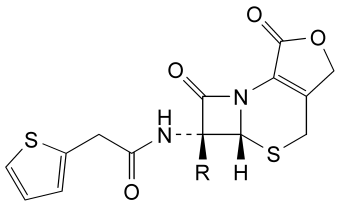
– *resolution*: minimum 3.5 between the 2 principal peaks.

Calculate the percentage content of cefoxitin sodium.



STORAGE

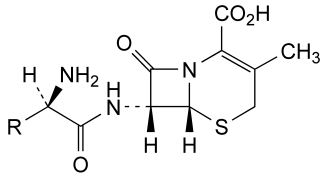
In an airtight container. If the substance is sterile, store in a sterile, airtight, tamper-proof container.



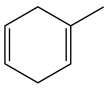
IMPURITIES

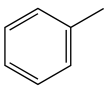
A. (6*R*,7*S*)-3-(hydroxymethyl)-7-methoxy-8-oxo-7-[[(thiophen-2-yl)acetyl]amino]-5-thia-1-azabicyclo[4.2.0]oct-2-ene-2-carboxylic acid (decarbamoylcefoxitin),

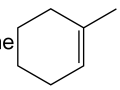
B. (2*RS*,6*R*,7*S*)-3-[(carbamoyloxy)methyl]-7-methoxy-8-oxo-7-[[(thiophen-2-yl)acetyl]amino]-5-thia-1-azabicyclo[4.2.0]oct-3-ene-2-carboxylic acid (delta-3-cefoxitin),



C. R = H: (5a*R*,6*R*)-6-[[(thiophen-2-yl)acetyl]amino]-5a,6-dihydro-3*H*,7*H*-azeto[2,1-*b*]furo[3,4-*d*][1,3]thiazine-1,7(4*H*)-dione (cefalotin lactone),







D. R = OCH_3: (5a*R*,6*S*)-6-methoxy-6-[[(thiophen-2-yl)acetyl]amino]-5a,6-dihydro-3*H*,7*H*-azeto[2,1-*b*]furo[3,4-*d*][1,3]thiazine-1,7(4*H*)-dione (cefoxitin lactone).

CEFRADINE

Cefradinum

Compound	R	Mol. Formula	M_r
cefradine		$C_{16}H_{19}N_3O_4S$	349.4
cefalexin		$C_{16}H_{17}N_3O_4S$	347.4
4',5'-dihydrocefradine		$C_{16}H_{21}N_3O_4S$	351.4

Cefradine: [38821-53-3]

DEFINITION

Main component: (6*R*,7*R*)-7-[[(2*R*)-amino(cyclohexa-1,4-dienyl)acetyl]amino]-3-methyl-8-oxo-5-thia-1-azabicyclo[4.2.0]oct-2-ene-2-carboxylic acid (cefradine).

Semi-synthetic product derived from a fermentation product.

Content:

– *cefradine*: minimum 90.0 per cent (anhydrous substance),
– *cefalexin*: maximum 5.0 per cent (anhydrous substance),
– *4',5'-dihydrocefradine*: maximum 2.0 per cent (anhydrous substance).
– *sum of the percentage contents of cefradine, cefalexin and 4',5'-dihydrocefradine*: 96.0 per cent to 102.0 per cent (anhydrous substance).

CHARACTERS

Appearance: white or slightly yellow, hygroscopic powder.

Solubility: sparingly soluble in water, practically insoluble in ethanol 96 per cent and in hexane.

IDENTIFICATION

Infrared absorption spectrophotometry (*2.2.24*).

Comparison: *cefradine CRS*.

If the spectra obtained in the solid state show differences, dissolve 30 mg of the substance to be examined and of the reference substance separately in 10 ml of *methanol R*, evaporate to dryness at 40 °C at a pressure less than 2 kPa and record new spectra using the residues.

TESTS

Solution S. Dissolve 2.50 g in *sodium carbonate solution R* and dilute to 25.0 ml with the same solvent.

Appearance of solution. Solution S is not more opalescent than reference suspension II (*2.2.1*). Allow solution S to stand for 5 min. The absorbance of solution S measured at 450 nm (*2.2.25*) is not greater than 0.60.

pH (*2.2.3*): 3.5 to 6.0.

Dissolve 0.100 g in *carbon dioxide-free water R* and dilute to 10 ml with the same solvent.

Specific optical rotation (*2.2.7*): + 80.0 to + 90.0 (anhydrous substance).

Dissolve 0.250 g in *acetate buffer solution pH 4.6 R* and dilute to 25.0 ml with the same solvent.

Related substances. Liquid chromatography (*2.2.29*).

Test solution. Dissolve 0.300 g of the substance to be examined in mobile phase A and dilute to 50.0 ml with mobile phase A.

Reference solution (a). Dissolve 3.0 mg of *cyclohexa-1,4-dienylglycine CRS* (impurity B) in mobile phase A and dilute to 100.0 ml with mobile phase A.

Reference solution (b). Dissolve 3 mg of the substance to be examined and 3 mg of *cefalexin CRS* in mobile phase A and dilute to 25 ml with mobile phase A.

Reference solution (c). Dilute 1.0 ml of test solution to 100.0 ml with mobile phase A.

Reference solution (d). Dissolve the contents of a vial of *cefradine for peak identification CRS* (containing impurities A, C, D, E and G) in 1 ml of *water for chromatography R*.

Column:

– *size*: *l* = 0.15 m, Ø = 4.6 mm,
– *stationary phase*: *octadecylsilyl silica gel for chromatography R* (5 µm),
– *temperature*: 30 °C.

Mobile phase:

– *mobile phase A*: 2.72 g/l solution of *potassium dihydrogen phosphate R* adjusted to pH 3.0 with *dilute phosphoric acid R*;
– *mobile phase B*: *methanol R2*;

Time (min)	Mobile phase A (per cent *V/V*)	Mobile phase B (per cent *V/V*)
0 - 2.5	99.5 → 97	0.5 → 3
2.5 - 11	97 → 75	3 → 25
11 - 13	75 → 60	25 → 40
13 - 16	60	40
16 - 19	60 → 20	40 → 80
19 - 19.1	20 → 99.5	80 → 0.5
19.1 - 25	99.5	0.5

Flow rate: 1.0 ml/min.

Detection: spectrophotometer at 220 nm.

Injection: 25 µl.

Identification of impurities: use the chromatogram obtained with reference solution (d) and the chromatogram supplied with *cefradine for peak identification CRS* to identify the peaks due to impurities A, C, D, E and G.

Relative retention with reference to cefradine (retention time = about 15 min): impurity A = about 0.27; impurity B = about 0.32; impurity C = about 0.53; impurity D = about 0.63; impurity E = about 0.80; impurity F = about 0.92; cefalexin = about 0.95; 4′,5′-dihydrocefradine = about 1.06; impurity G = about 1.32.

System suitability: reference solution (b):

– *resolution*: minimum 4.0 between the peaks due to cefalexin and cefradine.

Limits:

– *impurity B*: not more than 0.5 times the area of the principal peak in the chromatogram obtained with reference solution (a) (0.25 per cent);

– *impurities A, C, D, E, F, G*: for each impurity, not more than 0.25 times the area of the principal peak in the chromatogram obtained with reference solution (c) (0.25 per cent);

– *any other impurity*: for each impurity, not more than 0.25 times the area of the principal peak in the chromatogram obtained with reference solution (c) (0.25 per cent);

– *total*: not more than twice the area of the principal peak in the chromatogram obtained with reference solution (c) (2.0 per cent);

– *disregard limit*: 0.05 times the area of the principal peak in the chromatogram obtained with reference solution (c) (0.05 per cent); disregard the peaks due to cefalexin and 4′,5′-dihydrocefradine.

***N*,*N*-Dimethylaniline** (*2.4.26, Method B*): maximum 20 ppm.

Water (*2.5.12*): maximum 6.0 per cent, determined on 0.300 g.

Sulphated ash (*2.4.14*): maximum 0.2 per cent, determined on 1.0 g.

ASSAY

Liquid chromatography (*2.2.29*).

Test solution. Dissolve 50.0 mg of the substance to be examined in *phosphate buffer solution pH 5.0 R* and dilute to 100.0 ml with the same solution.

Reference solution (a). Dissolve 50.0 mg of *cefradine CRS* (containing 4′,5′-dihydrocefradine) in *phosphate buffer solution pH 5.0 R* and dilute to 100.0 ml with the same solution.

Reference solution (b). Dissolve 5.0 mg of *cefalexin CRS* in *phosphate buffer solution pH 5.0 R* and dilute to 100.0 ml with the same solution.

Reference solution (c). Dilute 1 ml of reference solution (a) to 10 ml with *phosphate buffer solution pH 5.0 R*. Mix 5 ml of this solution with 5 ml of reference solution (b).

Column:

– *size*: *l* = 0.10 m, Ø = 4.6 mm,

– *stationary phase*: *octadecylsilyl silica gel for chromatography R* (5 µm).

Mobile phase: *methanol R, phosphate buffer solution pH 5.0 R* (25:75 *V/V*).

Flow rate: 1.5 ml/min.

Detection: spectrophotometer at 254 nm.

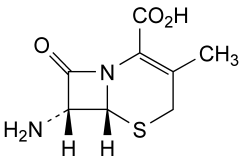
Injection: 5 µl.

Run time: twice the retention time of cefradine.

Relative retention with reference to cefradine (retention time = about 3 min): cefalexin = about 0.7; 4′,5′-dihydrocefradine = about 1.5.

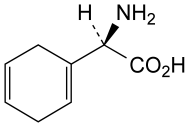
System suitability: reference solution (c):

– *resolution*: minimum 4.0 between the peaks due to cefalexin and cefradine.



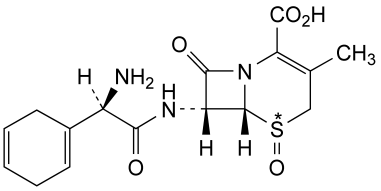
Calculate the percentage content of cefradine using the chromatogram obtained with reference solution (a) and the declared content of *cefradine CRS*. Calculate the percentage content of cefalexin using the chromatogram obtained with reference solution (b) and the declared content of *cefalexin CRS*. Calculate the percentage content of 4′,5′-dihydrocefradine using the chromatogram obtained with reference solution (b) and multiplying the area of the peak due to 4′,5′-dihydrocefradine by a correction factor of 1.6.

STORAGE



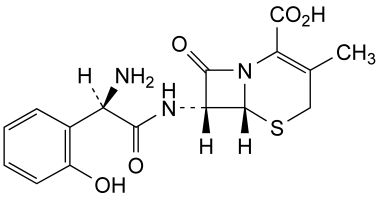
In an airtight container, protected from light, at a temperature of 2 °C to 8 °C.

IMPURITIES

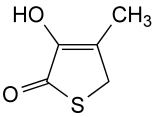


Specified impurities: A, B, C, D, E, F, G.

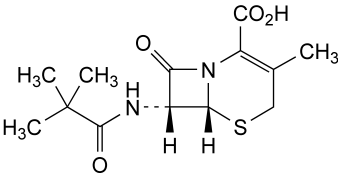
A. (6*R*,7*R*)-7-amino-3-methyl-8-oxo-5-thia-1-azabicyclo[4.2.0]oct-2-ene-2-carboxylic acid (7-aminodeacetoxycephalosporanic acid, 7-ADCA),



B. (2*R*)-amino(cyclohexa-1,4-dienyl)acetic acid (D-dihydrophenylglycine),



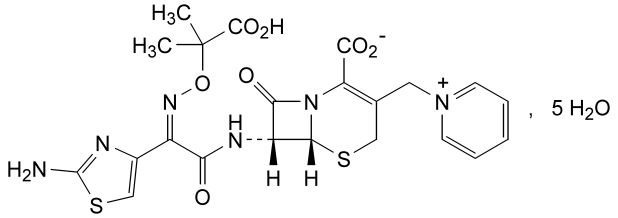
C. (6*R*,7*R*)-7-[[(2*R*)-amino(cyclohexa-1,4-dienyl)acetyl]amino]-3-methyl-8-oxo-5-thia-1-azabicyclo[4.2.0]oct-2-ene-2-carboxylic acid 5-oxide (isomer 1),



D. (6*R*,7*R*)-7-[[(2*R*)-amino(cyclohexa-1,4-dienyl)acetyl]amino]-3-methyl-8-oxo-5-thia-1-azabicyclo[4.2.0]oct-2-ene-2-carboxylic acid 5-oxide (isomer 2),

E. ((6*R*,7*R*)-7-[[(2*R*)-amino(2-hydroxyphenyl)acetyl]amino]-3-methyl-8-oxo-5-thia-1-azabicyclo[4.2.0]oct-2-ene-2-carboxylic acid,

F. 3-hydroxy-4-methylthiophen-2(5*H*)-one,



G. (6*R*,7*R*)-7-[(2,2-dimethylpropanoyl)amino]-3-methyl-8-oxo-5-thia-1-azabicyclo[4.2.0]oct-2-ene-2-carboxylic acid (7-ADCA pivalamide).

01/2008:1405

CEFTAZIDIME

Ceftazidimum

$C_{22}H_{22}N_6O_7S_2,5H_2O$ M_r 637

[78439-06-2]

DEFINITION

Ceftazidime is (6*R*,7*R*)-7-[[(*Z*)-2-(2-aminothiazol-4-yl)-2-[(1-carboxy-1-methylethoxy)imino]acetyl]amino]-8-oxo-3-[(1-pyridinio)methyl]-5-thia-1-azabicyclo[4.2.0]oct-2-ene-2-carboxylate pentahydrate. It contains not less than 95.0 per cent and not more than 102.0 per cent of $C_{22}H_{22}N_6O_7S_2$, calculated with reference to the anhydrous substance.

CHARACTERS

A white or almost white, crystalline powder, slightly soluble in water and in methanol, practically insoluble in acetone and in alcohol. It dissolves in acid and alkali solutions.

IDENTIFICATION

Examine by infrared absorption spectrophotometry (*2.2.24*), comparing with the spectrum obtained with *ceftazidime CRS*.

TESTS

Solution S. Dissolve 0.25 g in *carbon dioxide-free water R* and dilute to 50 ml with the same solvent.

Appearance of solution. Solution S is clear (*2.2.1*) and colourless (*2.2.2, Method II*).

pH (*2.2.3*). The pH of solution S is 3.0 to 4.0.

Related substances

A. Examine by thin-layer chromatography (*2.2.27*), using a *TLC silica gel F_{254} plate R*.

Test solution. Dissolve 0.100 g of the substance to be examined in a 36 g/l solution of *disodium hydrogen phosphate R* and dilute to 2.0 ml with the same solution.

Reference solution. Dilute 1 ml of the test solution to 200 ml with a 36 g/l solution of *disodium hydrogen phosphate R*.

Apply to the plate 2 µl of each solution. Develop over a path of 15 cm using a mixture of 6 volumes of *butanol R*, 26 volumes of *sodium acetate buffer solution pH 4.5 R*, 32 volumes of *butyl acetate R* and 32 volumes of *glacial acetic acid R*. Dry the plate in a current of warm air and examine in ultraviolet light at 254 nm. Any spot with an R_F value greater than that of the principal spot in the chromatogram obtained with the test solution is not more intense than the spot in the chromatogram obtained with the reference solution (0.5 per cent).

B. Examine by liquid chromatography (*2.2.29*).

Test solution. Dissolve 0.100 g of the substance to be examined in the mobile phase and dilute to 20.0 ml with the mobile phase. Dilute 5.0 ml of the solution to 20.0 ml with the mobile phase.

Reference solution (a). Dissolve 5.0 mg of *ceftazidime impurity A CRS* in the mobile phase and dilute to 20.0 ml with the mobile phase. Dilute 1.0 ml of the solution to 20.0 ml with the mobile phase.

Reference solution (b). Dissolve 5 mg of *ceftazidime impurity A CRS* and 5 mg of *ceftazidime CRS* in the mobile phase and dilute to 20.0 ml with the mobile phase. Dilute 1.0 ml of the solution to 20.0 ml with the mobile phase.

The chromatographic procedure may be carried out using:

– a stainless steel column 0.25 m long and 4.6 mm in internal diameter packed with *octadecylsilyl silica gel for chromatography R* (5 µm),

– as mobile phase at a flow rate of 1.3 ml/min a mixture of 7 volumes of *acetonitrile R* and 93 volumes of a 22.6 g/l solution of *ammonium dihydrogen phosphate R*, adjusted to pH 3.9 with a 10 per cent *V/V* solution of *phosphoric acid R*,

– as detector a spectrophotometer set at 255 nm,

maintaining the temperature of the column at 35 °C.

Inject 20 µl of reference solution (b). Adjust the sensitivity of the system so that the heights of the 2 peaks in the chromatogram obtained are at least 50 per cent of the full scale of the recorder. The test is not valid unless in

the chromatogram obtained, the resolution between the peaks corresponding to ceftazidime and impurity A is at least 5.9. Inject 20 µl of the test solution and 20 µl of reference solution (a). Continue the chromatography of the test solution for 3 times the retention time of ceftazidime. In the chromatogram obtained with the test solution: the area of any peak, apart from the principal peak, is not greater than half the area of the principal peak in the chromatogram obtained with reference solution (a) (0.5 per cent); the sum of the areas of all the peaks, apart from the principal peak, is not greater than twice the area of the principal peak in the chromatogram obtained with reference solution (a) (2 per cent). Disregard any peak with an area less than 0.1 times the area of the principal peak in the chromatogram obtained with reference solution (a).

Impurity F. Not more than 500 ppm, determined by liquid chromatography (*2.2.29*). *Prepare the solutions immediately before use.*

Test solution. Dissolve 0.500 g of the substance to be examined in a 10 per cent *V/V* solution of *phosphate buffer solution pH 7.0 R4* and dilute to 100.0 ml with the same solvent.

Reference solution (a). Dissolve 1.00 g of *pyridine R* in *water R* and dilute to 100.0 ml with the same solvent. Dilute 5.0 ml of the solution to 200.0 ml with *water R*. To 1.0 ml of the solution, add 10 ml of *phosphate buffer solution pH 7.0 R4* and dilute to 100.0 ml with *water R*.

Reference solution (b). Dilute 1.0 ml of the test solution to 200.0 ml with a 10 per cent *V/V* solution of *phosphate buffer solution pH 7.0 R4*. To 1.0 ml of the solution add 20 ml of reference solution (a) and dilute to 200 ml with a 10 per cent *V/V* solution of *phosphate buffer solution pH 7.0 R4*.

The chromatographic procedure may be carried out using:

– a stainless steel column 0.25 m long and 4.6 mm in internal diameter packed with *octadecylsilyl silica gel for chromatography R* (5 µm),

– as mobile phase at a flow rate of 1.0 ml/min a mixture of 8 volumes of a 28.8 g/l solution of *ammonium dihydrogen phosphate R* previously adjusted to pH 7.0 with *ammonia R*, 24 volumes of *acetonitrile R* and 68 volumes of *water R*,

– as detector a spectrophotometer set at 255 nm,

Inject 20 µl of reference solution (b). The test is not valid unless in the chromatogram obtained, the resolution between the peaks due to ceftazidime and to impurity F is at least 7.0.

Inject 20 µl of reference solution (a). Adjust the sensitivity of the system so that the height of the principal peak in the chromatogram obtained is at least 50 per cent of the full scale of the recorder. Inject reference solution (a) 6 times. The test is not valid unless the relative standard deviation of the area of the principal peak is at most 1.0 per cent. Inject alternately 20 µl of the test solution and 20 µl of reference solution (a).

Water (*2.5.12*): 13.0 per cent to 15.0 per cent, determined on 0.200 g by the semi-micro determination of water.

Bacterial endotoxins (*2.6.14*): less than 0.10 IU/mg, if intended for use in the manufacture of parenteral dosage forms without a further appropriate procedure for the removal of bacterial endotoxins.

ASSAY

Examine by liquid chromatography (*2.2.29*).

Test solution. Dissolve 25.0 mg of the substance to be examined in the mobile phase and dilute to 25.0 ml with the mobile phase.

Reference solution (a). Dissolve 25.0 mg of *ceftazidime CRS* in the mobile phase and dilute to 25.0 ml with the mobile phase.

Reference solution (b). Dissolve 5 mg of *ceftazidime impurity A CRS* in 5.0 ml of reference solution (a).

The chromatographic procedure may be carried out using:

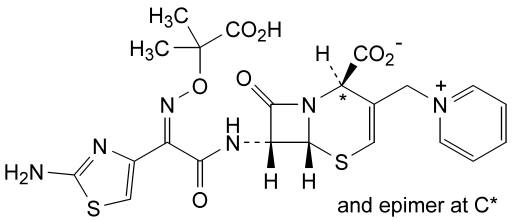
– a column 0.15 m long and 4.6 mm in internal diameter packed with *hexylsilyl silica gel for chromatography R* (5 µm),

– as mobile phase at a flow rate of 2 ml/min a mixture prepared as follows: dissolve 4.26 g of *disodium hydrogen phosphate R* and 2.73 g of *potassium dihydrogen phosphate R* in 980 ml of *water R*, then add 20 ml of *acetonitrile R*,

– as detector a spectrophotometer set at 245 nm.

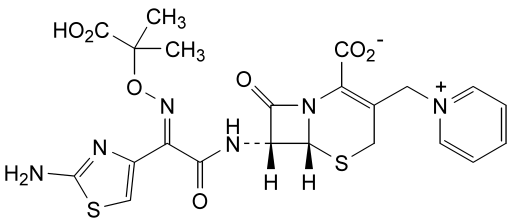
Inject 20 µl of reference solution (b). Adjust the sensitivity of the system so that the heights of the 2 principal peaks in the chromatogram obtained are at least 50 per cent of the full scale of the recorder. The test is not valid unless, in the chromatogram obtained, the resolution between the peaks corresponding to ceftazidime and impurity A is at least 1.0. Inject alternately the test solution and reference solution (a). Calculate the percentage content of ceftazidime.

STORAGE



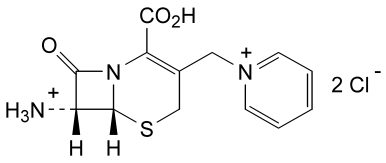
Store in an airtight container. If the substance is sterile, store in a sterile, airtight, tamper-proof container.

IMPURITIES

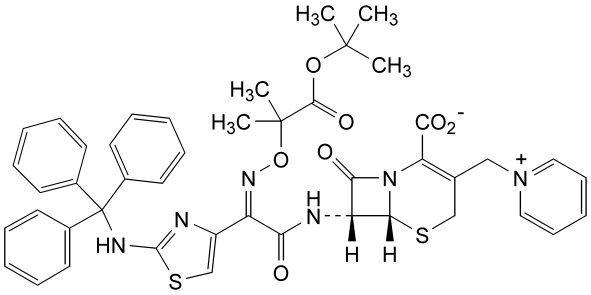


By liquid chromatography (related substances test): A, B, C.

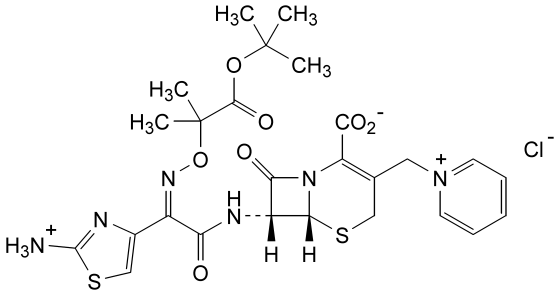
By thin-layer chromatography (related substances test): D, E.



By liquid chromatography (impurity F test): F.



A. (2*RS*,6*R*,7*R*)-7-[[(*Z*)-2-(2-aminothiazol-4-yl)-2-[(1-carboxy-1-methylethoxy)imino]acetyl]amino]-8-oxo-3-[(1-pyridinio)methyl]-5-thia-1-azabicyclo[4.2.0]oct-3-ene-2-carboxylate (Δ-2-ceftazidime),

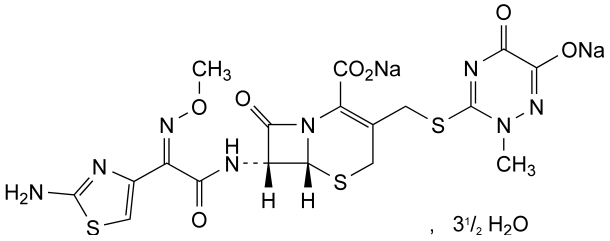


B. (6*R*,7*R*)-7-[[(*E*)-2-(2-aminothiazol-4-yl)-2-[(1-carboxy-1-methylethoxy)imino]acetyl]amino]-8-oxo-3-[(1-pyridinio)methyl]-5-thia-1-azabicyclo[4.2.0]oct-2-ene-2-carboxylate,

C. (6*R*,7*R*)-2-carboxy-8-oxo-3-(pyridiniomethyl)-5-thia-1-azabicyclo[4.2.0]oct-2-en-7-aminium dichloride,

D. (6*R*,7*R*)-7-[[(*Z*)-2-[[2-(1,1-dimethylethoxy)-1,1-dimethyl-2-oxoethoxy]imino]-2-[2-[(triphenylmethyl)amino]thiazol-4-yl]acetyl]amino]-8-oxo-3-(pyridiniomethyl)-5-thia-1-azabicyclo[4.2.0]oct-2-ene-2-carboxylate,

E. (6*R*,7*R*)-7-[[(*Z*)-2-(2-ammoniothiazol-4-yl)-2-[[2-(1,1-dimethylethoxy)-1,1-dimethyl-2-oxoethoxy]imino]acetyl]amino]-8-oxo-3-(pyridiniomethyl)-5-thia-1-azabicyclo[4.2.0]oct-2-ene-2-carboxylate chloride,



F. pyridine.

01/2008:0991

CEFTRIAXONE SODIUM

Ceftriaxonum natricum

$C_{18}H_{16}N_8Na_2O_7S_3,3^1/_2H_2O$ M_r 662

[104376-79-6]

DEFINITION

Disodium (6*R*,7*R*)-7-[[(*2Z*)-(2-aminothiazol-4-yl)(methoxyimino)acetyl]amino]-3-[[(2-methyl-6-oxido-5-oxo-2,5-dihydro-1,2,4-triazin-3-yl)sulphanyl]methyl]-8-oxo-5-thia-1-azabicyclo[4.2.0]oct-2-ene-2-carboxylate 3.5 hydrate.

Semi-synthetic product derived from a fermentation product.

Content: 96.0 per cent to 102.0 per cent (anhydrous substance).

CHARACTERS

Appearance: almost white or yellowish, slightly hygroscopic, crystalline powder.

Solubility: freely soluble in water, sparingly soluble in methanol, very slightly soluble in anhydrous ethanol.

IDENTIFICATION

A. Infrared absorption spectrophotometry (*2.2.24*).

Comparison: *ceftriaxone sodium CRS*.

B. It gives reaction (a) of sodium (*2.3.1*).

TESTS

Solution S. Dissolve 2.40 g in *carbon dioxide-free water R* and dilute to 20.0 ml with the same solvent.

Appearance of solution. The solution is clear (*2.2.1*) and not more intensely coloured than reference solution Y_5 or BY_5 (*2.2.2*).

Dilute 2 ml of solution S to 20 ml with *water R*.

pH (*2.2.3*): 6.0 to 8.0 for solution S.

Specific optical rotation (*2.2.7*): – 155 to – 170 (anhydrous substance).

Dissolve 0.250 g in *water R* and dilute to 25.0 ml with the same solvent.

Related substances. Liquid chromatography (*2.2.29*).

Test solution. Dissolve 30.0 mg of the substance to be examined in the mobile phase and dilute to 100.0 ml with the mobile phase.

Reference solution (a). Dissolve 30.0 mg of *ceftriaxone sodium CRS* in the mobile phase and dilute to 100.0 ml with the mobile phase.

Reference solution (b). Dissolve 5.0 mg of *ceftriaxone sodium CRS* and 5.0 mg of *ceftriaxone impurity A CRS* in the mobile phase and dilute to 100.0 ml with the mobile phase.

Reference solution (c). Dilute 1.0 ml of the test solution to 100.0 ml with the mobile phase.

Column:

– *size*: *l* = 0.25 m, Ø = 4.6 mm;
– *stationary phase*: *octadecylsilyl silica gel for chromatography R* (5 µm).

Mobile phase: dissolve 2.0 g of *tetradecylammonium bromide R* and 2.0 g of *tetraheptylammonium bromide R* in a mixture of 440 ml of *water R*, 55 ml of *0.067 M phosphate buffer solution pH 7.0 R*, 5.0 ml of citrate buffer solution pH 5.0 prepared by dissolving 20.17 g of *citric acid R* in 800 ml of *water R*, adjusting to pH 5.0 with *strong sodium hydroxide solution R* and diluting to 1000.0 ml with *water R*, and 500 ml of *acetonitrile R*.

Flow rate: 1.5 ml/min.

Detection: spectrophotometer at 254 nm.

Injection: 20 µl of the test solution and reference solutions (b) and (c).

Run time: twice the retention time of ceftriaxone.

System suitability: reference solution (b):

– *resolution*: minimum 3.0 between the peaks due to ceftriaxone and impurity A.

Limits:

– *any impurity*: not more than the area of the principal peak in the chromatogram obtained with reference solution (c) (1.0 per cent);

– *total*: not more than 4 times the area of the principal peak in the chromatogram obtained with reference solution (c) (4.0 per cent);

– *disregard limit*: 0.1 times the area of the principal peak in the chromatogram obtained with reference solution (c) (0.1 per cent).

***N,N*-Dimethylaniline** (*2.4.26, Method B*): maximum 20 ppm.

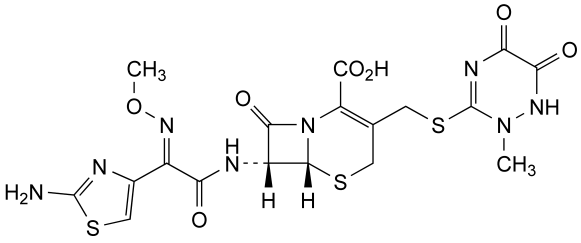
2-Ethylhexanoic acid (*2.4.28*): maximum 0.8 per cent *m/m*.

Water (*2.5.12*): 8.0 per cent to 11.0 per cent, determined on 0.100 g.

Bacterial endotoxins (*2.6.14*): less than 0.08 IU/mg, if intended for use in the manufacture of parenteral dosage forms without a further appropriate procedure for the removal of bacterial endotoxins.

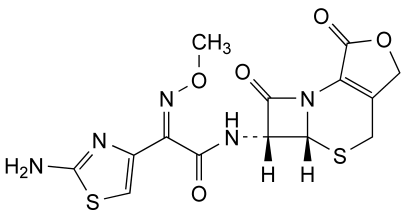
ASSAY

Liquid chromatography (*2.2.29*) as described in the test for related substances with the following modification.



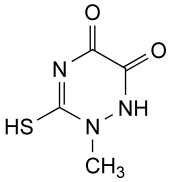
Injection: test solution and reference solution (a).

Calculate the percentage content of $C_{18}H_{16}N_8Na_2O_7S_3$ from the declared content of *ceftriaxone sodium CRS*.

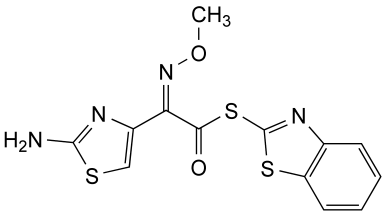


STORAGE

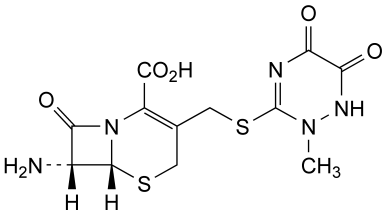
In an airtight container protected from light. If the substance is sterile, store in a sterile, airtight, tamper-proof container.



IMPURITIES



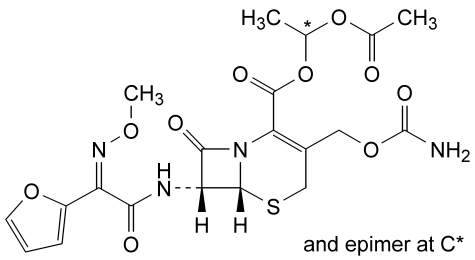
A. (6*R*,7*R*)-7-[[(2*E*)-(2-aminothiazol-4-yl)(methoxyimino)acetyl]amino]-3-[[(2-methyl-5,6-dioxo-1,2,5,6-tetrahydro-1,2,4-triazin-3-yl)sulphanyl]methyl]-8-oxo-5-thia-1-azabicyclo[4.2.0]oct-2-ene-2-carboxylic acid (*(E)*-isomer),



B. (5a*R*,6*R*)-6-[[(2*Z*)-(2-aminothiazol-4-yl)(methoxyimino)acetyl]amino]-5a,6-dihydro-3*H*,7*H*-azeto[2,1-*b*]furo[3,4-*d*][1,3]thiazine-1,7(4*H*)-dione,

C. 2-methyl-3-sulphanyl-1,2-dihydro-1,2,4-triazine-5,6-dione,

D. *S*-benzothiazol-2-yl (2*Z*)-(2-aminothiazol-4-yl)(methoxyimino)thioacetate,



E. (6*R*,7*R*)-7-amino-3-[[(2-methyl-5,6-dioxo-1,2,5,6-tetrahydro-1,2,4-triazin-3-yl)sulphanyl]methyl]-8-oxo-5-thia-1-azabicyclo[4.2.0]oct-2-ene-2-carboxylic acid.

CEFUROXIME AXETIL

Cefuroximum axetili

$C_{20}H_{22}N_4O_{10}S$ M_r 510.5
[64544-07-6]

DEFINITION

Mixture of the 2 diastereoisomers of (1*RS*)-1-(acetyloxy)ethyl (6*R*,7*R*)-3-[(carbamoyloxy)methyl]-7-[[(*Z*)-2-(furan-2-yl)-2-(methoxyimino)acetyl]amino]-8-oxo-5-thia-1-azabicyclo[4.2.0]-oct-2-ene-2-carboxylate.

Semi-synthetic product derived from a fermentation product.

Content: 96.0 per cent to 102.0 per cent (anhydrous substance).

CHARACTERS

Appearance: white or almost white powder.

Solubility: slightly soluble in water, soluble in acetone, in ethyl acetate and in methanol, slightly soluble in ethanol (96 per cent).

IDENTIFICATION

A. Infrared absorption spectrophotometry (*2.2.24*).
Comparison: *cefuroxime axetil CRS*.

B. Examine the chromatograms obtained in the assay.

Results: the principal peaks in the chromatogram obtained with the test solution are similar in retention time and size to the peaks due to cefuroxime axetil diastereoisomers A and B in the chromatogram obtained with reference solution (d).

TESTS

Related substances. Liquid chromatography (*2.2.29*): use the normalisation procedure. *Prepare the test solution and reference solution (d) immediately before use.*

Test solution. Dissolve 10.0 mg of the substance to be examined in the mobile phase and dilute to 50.0 ml with the mobile phase.

Reference solution (a). Dilute 1.0 ml of the test solution to 100.0 ml with the mobile phase.

Reference solution (b). In order to prepare *in situ* impurity A, heat 5 ml of the test solution at 60 °C for 1 h.

Reference solution (c). In order to prepare *in situ* impurity B, expose 5 ml of the test solution to ultraviolet light at 254 nm for 24 h.

Reference solution (d). Dissolve 10.0 mg of *cefuroxime axetil CRS* in the mobile phase and dilute to 50.0 ml with the mobile phase.

Column:

– *size*: *l* = 0.25 m, Ø = 4.6 mm;
– *stationary phase*: *trimethylsilyl silica gel for chromatography R* (5 µm).

Mobile phase: *methanol R*, 23 g/l solution of *ammonium dihydrogen phosphate R* (38:62 *V/V*).

Flow rate: 1.0 ml/min.

Detection: spectrophotometer at 278 nm.

Injection: 20 µl of the test solution and reference solutions (a), (b) and (c).

Identification of impurities: use the chromatogram obtained with reference solution (b) to identify the pair of peaks due to impurity A and use the chromatogram obtained with reference solution (c) to identify the pair of peaks due to impurity B.

Relative retention with reference to cefuroxime axetil diastereoisomer A: cefuroxime axetil diastereoisomer B = about 0.9, impurity A = about 1.2; impurity B = 1.7 and 2.1.

System suitability: reference solution (b):

– *resolution*: minimum 1.5 between the peaks due to cefuroxime axetil diastereoisomer A and impurity A.

Limits:

– *impurity A*: maximum 1.5 per cent for the sum of the pair of peaks;
– *impurity B*: maximum 1.0 per cent for the sum of the pair of peaks;
– *impurity E*: maximum 0.5 per cent;
– *any other impurity*: for each impurity, maximum 0.5 per cent;
– *total*: maximum 3.0 per cent;
– *disregard limit*: 0.05 times the area of the 2 principal peaks in the chromatogram obtained with reference solution (a) (0.05 per cent).

Diastereoisomer ratio. Liquid chromatography (*2.2.29*) as described in the test for related substances.

Limit: test solution:

– the ratio of the area of the peak due to cefuroxime axetil diastereoisomer A to the sum of the areas of the peaks due to cefuroxime axetil diastereoisomers A and B is between 0.48 and 0.55.

Acetone (*2.4.24*): maximum 1.1 per cent.

Water (*2.5.12*): maximum 1.5 per cent, determined on 0.400 g.

ASSAY

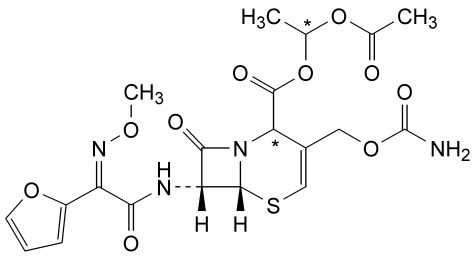
Liquid chromatography (*2.2.29*) as described in the test for related substances with the following modifications.

Injection: test solution and reference solution (d).

System suitability: reference solution (d):

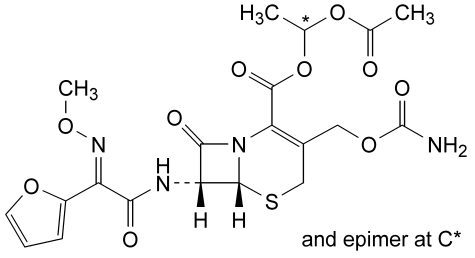
– *resolution*: minimum 1.5 between the peaks due to cefuroxime axetil diastereoisomers A and B;
– *repeatability*: maximum relative standard deviation of 2.0 per cent for the sum of the peaks due to cefuroxime axetil diastereoisomers A and B after 6 injections.

Calculate the percentage content of $C_{20}H_{22}N_4O_{10}S$ from the sum of the areas of the 2 diastereoisomer peaks and the declared content of $C_{20}H_{22}N_4O_{10}S$ in *cefuroxime axetil CRS*.



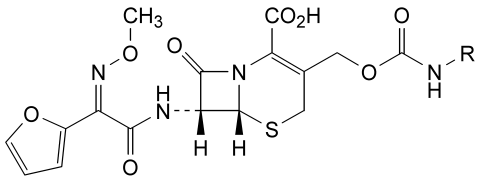
STORAGE

In an airtight container, protected from light.



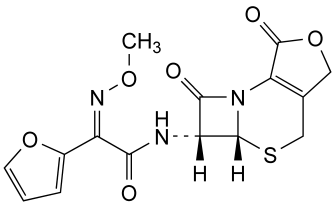
IMPURITIES

Specified impurities: *A, B, E.*



Other detectable impurities (the following substances would, if present at a sufficient level, be detected by one or other of the tests in the monograph. They are limited by the general acceptance criterion for other/unspecified impurities and/or by the general monograph *Substances for pharmaceutical use (2034)*. It is therefore not necessary to identify these impurities for demonstration of compliance. See also *5.10. Control of impurities in substances for pharmaceutical use*): *C, D.*

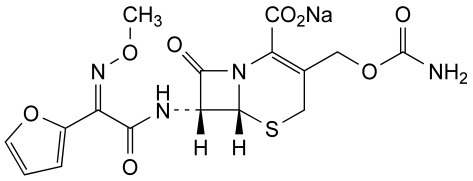
A. 1-(acetyloxy)ethyl (6R,7R)-3-[(carbamoyloxy)methyl]-7-[[(*Z*)-2-(furan-2-yl)-2-(methoxyimino)acetyl]amino]-8-oxo-5-thia-1-azabicyclo[4.2.0]oct-3-ene-2-carboxylate (Δ^3-isomers),



B. (1*RS*)-1-(acetyloxy)ethyl (6*R*,7*R*)-3-[(carbamoyloxy)-methyl]-7-[[(*E*)-2-(furan-2-yl)-2-(methoxyimino)acetyl]-amino]-8-oxo-5-thia-1-azabicyclo[4.2.0]oct-2-ene-2-carboxylate ((*E*)-isomers),

C. R = CO-CCl_3: (6*R*,7*R*)-7-[[(*Z*)-2-(furan-2-yl)-2-(methoxyimino)acetyl]amino]-8-oxo-3-[[[(trichloroacetyl)carbamoyl]oxy]methyl]-5-thia-1-azabicyclo[4.2.0]oct-2-ene-2-carboxylic acid,

D. R = H: cefuroxime.



E. (5a*R*,6*R*)-6-[[(2*Z*)-2-(furan-2-yl)-2-(methoxyimino)acetyl]amino]-5a,6-dihydro-3*H*,7*H*-azeto[2,1-*b*]furo[3,4-*d*][1,3]thiazine-1,7(4*H*)-dione (descarbamoylcefuroxime lactone).

CEFUROXIME SODIUM

Cefuroximum natricum

$C_{16}H_{15}N_4NaO_8S$ M_r 446.4
[56238-63-2]

DEFINITION

Sodium (6*R*,7*R*)-3-[(carbamoyloxy)methyl]-7-[[(*Z*)-(furan-2-yl)(methoxyimino)acetyl]amino]-8-oxo-5-thia-1-azabicyclo[4.2.0]oct-2-ene-2-carboxylate.

Semi-synthetic product derived from a fermentation product.

Content: 96.0 per cent to 102.0 per cent (anhydrous substance).

CHARACTERS

Appearance: white or almost white, slightly hygroscopic powder.

Solubility: freely soluble in water, very slightly soluble in ethanol (96 per cent).

IDENTIFICATION

A. Infrared absorption spectrophotometry (*2.2.24*).
Comparison: *cefuroxime sodium CRS*.

B. It gives reaction (a) of sodium (*2.3.1*).

TESTS

Solution S. Dissolve 2.0 g in *carbon dioxide-free water R* and dilute to 20.0 ml with the same solvent.

Appearance of solution. Solution S is not more opalescent than reference suspension II (*2.2.1*). The absorbance (*2.2.25*) of solution S measured at 450 nm is not greater than 0.25.

pH (*2.2.3*): 5.5 to 8.5.

Dilute 2 ml of solution S to 20 ml with *carbon dioxide-free water R*.

Specific optical rotation (*2.2.7*): + 59 to + 66 (anhydrous substance).

Dissolve 0.500 g in *acetate buffer solution pH 4.6 R* and dilute to 25.0 ml with the same buffer solution.

Related substances. Liquid chromatography (*2.2.29*). *Prepare the solutions immediately before use or keep at 2-8 °C.*

Test solution (a). Dissolve 25.0 mg of the substance to be examined in *water R* and dilute to 25.0 ml with the same solvent.

Test solution (b). Dilute 5.0 ml of test solution (a) to 50.0 ml with *water R*.

Reference solution (a). Dissolve 25.0 mg of *cefuroxime sodium CRS* in *water R* and dilute to 25.0 ml with the same solvent. Dilute 5.0 ml to 50.0 ml with *water R*.

Reference solution (b). Place 20 ml of reference solution (a) in a water-bath at 80 °C for 15 min. Cool and inject immediately.

Reference solution (c). Dilute 1.0 ml of test solution (a) to 100.0 ml with *water R*.

Column:

– *size*: *l* = 0.125 m, Ø = 4.6 mm;
– *stationary phase*: *hexylsilyl silica gel for chromatography R* (5 µm).

Mobile phase: mix 1 volume of *acetonitrile R* and 99 volumes of an acetate buffer solution pH 3.4, prepared by dissolving 6.01 g of *glacial acetic acid R* and 0.68 g of *sodium acetate R* in *water R* and diluting to 1000 ml with the same solvent.

Flow rate: 1.5 ml/min.

Detection: spectrophotometer at 273 nm.

Injection: 20 µl loop injector; inject test solution (a) and reference solutions (b) and (c).

Run time: 4 times the retention time of cefuroxime.

System suitability: reference solution (b):

– *resolution*: minimum 2.0 between the peaks due to cefuroxime and impurity A.

Limits:

– *impurity A*: not more than the area of the principal peak in the chromatogram obtained with reference solution (c) (1.0 per cent);
– *any other impurity*: not more than the area of the principal peak in the chromatogram obtained with reference solution (c) (1.0 per cent);
– *total*: not more than 3 times the area of the principal peak in the chromatogram obtained with reference solution (c) (3.0 per cent);
– *disregard limit*: 0.05 times the area of the principal peak in the chromatogram obtained with reference solution (c) (0.05 per cent).

***N*,*N*-Dimethylaniline** (*2.4.26, Method B*): maximum 20 ppm.

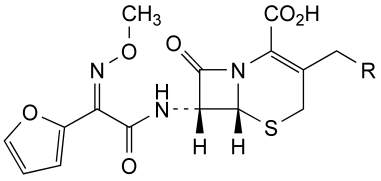
2-Ethylhexanoic acid (*2.4.28*): maximum 0.5 per cent *m/m*.

Water (*2.5.12*): maximum 3.5 per cent, determined on 0.400 g.

Bacterial endotoxins (*2.6.14*): less than 0.10 IU/mg, if intended for use in the manufacture of parenteral dosage forms without a further appropriate procedure for the removal of bacterial endotoxins.

ASSAY

Liquid chromatography (*2.2.29*) as described in the test for related substances with the following modification.



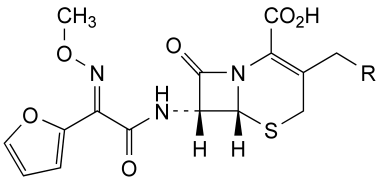
Injection: test solution (b) and reference solution (a).

Calculate the percentage content of cefuroxime sodium.

STORAGE

In an airtight container. If the substance is sterile, store in a sterile, airtight, tamper-proof container.

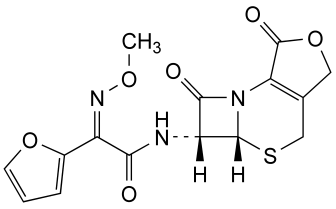
IMPURITIES



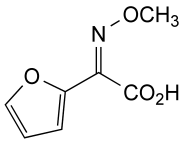
A. R = OH: (6*R*,7*R*)-7-[[(*Z*)-(furan-2-yl)(methoxyimino)acetyl]amino]-3-(hydroxymethyl)-8-oxo-5-thia-1-azabicyclo[4.2.0]oct-2-ene-2-carboxylic acid (descarbamoylcefuroxime),

B. R = O-CO-CH_3: (6*R*,7*R*)-3-[(acetyloxy)methyl]-7-[[(*Z*)-(furan-2-yl)(methoxyimino)acetyl]amino]-8-oxo-5-thia-1-azabicyclo[4.2.0]oct-2-ene-2-carboxylic acid,

C. R = H: (6*R*,7*R*)-7-[[(*Z*)-(furan-2-yl)(methoxyimino)acetyl]amino]-3-methyl-8-oxo-5-thia-1-azabicyclo[4.2.0]oct-2-ene-2-carboxylic acid,



D. R = O-CO-NH-CO-CCl_3: (6*R*,7*R*)-7-[[(*Z*)-(furan-2-yl)(methoxyimino)acetyl]amino]-8-oxo-3-[[[(trichloroacetyl)carbamoyl]oxy]methyl]-5-thia-1-azabicyclo[4.2.0]oct-2-ene-2-carboxylic acid,

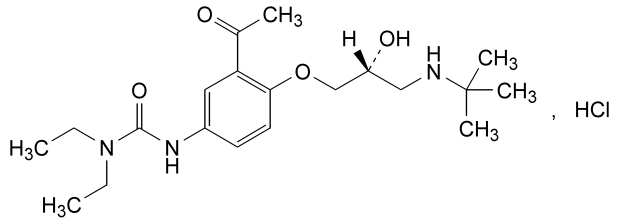


E. R = O-CO-NH_2: (6*R*,7*R*)-3-[(carbamoyloxy)methyl]-7-[[(*E*)-(furan-2-yl)(methoxyimino)acetyl]amino]-8-oxo-5-thia-1-azabicyclo[4.2.0]oct-2-ene-2-carboxylic acid (*trans*-cefuroxime),

F. R = OH: (6*R*,7*R*)-7-[[(*E*)-(furan-2-yl)(methoxyimino)acetyl]amino]-3-(hydroxymethyl)-8-oxo-5-thia-1-azabicyclo[4.2.0]oct-2-ene-2-carboxylic acid,

G. R = O-CO-CH_3: (6*R*,7*R*)-3-[(acetyloxy)methyl]-7-[[(*E*)-(furan-2-yl)(methoxyimino)acetyl]amino]-8-oxo-5-thia-1-azabicyclo[4.2.0]oct-2-ene-2-carboxylic acid,

H. (5a*R*,6*R*)-6-[[(*Z*)-(furan-2-yl)(methoxyimino)acetyl]amino]-5a,6-dihydro-3*H*,7*H*-azeto[2,1-*b*]furo[3,4-*d*][1,3]thiazine-1,7(4*H*)-dione,



I. (*Z*)-(furan-2-yl)(methoxyimino)acetic acid.

CELIPROLOL HYDROCHLORIDE

Celiprololi hydrochloridum

and enantiomer

$C_{20}H_{34}ClN_3O_4$ M_r 416.0
[57470-78-7]

DEFINITION

3-[3-Acetyl-4-[(2*RS*)-3-[(1,1-dimethylethyl)amino]-2-hydroxypropoxy]phenyl]-1,1-diethylurea hydrochloride.

Content: 99.0 per cent to 101.0 per cent (dried substance).

CHARACTERS

Appearance: white or very slightly yellow, crystalline powder.

Solubility: freely soluble in water and in methanol, soluble in ethanol (96 per cent), very slightly soluble in methylene chloride.

It shows polymorphism (*5.9*).

IDENTIFICATION

A. Infrared absorption spectrophotometry (*2.2.24*).

Comparison: *celiprolol hydrochloride CRS*.

If the spectra obtained in the solid state show differences, dissolve the substance to be examined and the reference substance separately in *methanol R*, evaporate to dryness and record new spectra using the residues.

B. It gives reaction (a) of chlorides (*2.3.1*).

TESTS

Optical rotation (*2.2.7*): – 0.10° to + 0.10°.

Dissolve 1.0 g in *water R* and dilute to 10.0 ml with the same solvent.

Related substances. Liquid chromatography (*2.2.29*). *Prepare the solutions immediately before use.*

Test solution. Dissolve 0.100 g of the substance to be examined in mobile phase A and dilute to 20.0 ml with mobile phase A.

Reference solution (a). Dissolve 2 mg of the substance to be examined and 2 mg of *acebutolol hydrochloride R* in mobile phase A and dilute to 50.0 ml with mobile phase A.

Reference solution (b). Dissolve 10 mg of the substance to be examined in 2 ml of mobile phase A and allow to stand for 24 h (for identification of impurity A).

Reference solution (c). Dilute 1.0 ml of the test solution to 100.0 ml with mobile phase A. Dilute 1.0 ml of this solution to 10.0 ml with mobile phase A.

Reference solution (d). Dissolve 10 mg of *celiprolol for peak identification CRS* in mobile phase A and dilute to 2 ml with mobile phase A.

Reference solution (e). This solution is only prepared if required (see below) and is used to determine the identity of impurity I which co-elutes with impurity H (the 2 impurities originate from different routes of synthesis). Dissolve the contents of a vial of *celiprolol impurity I CRS* in mobile phase A and dilute to 2.0 ml with mobile phase A.

Column:

– *size*: *l* = 0.15 m, Ø = 4.6 mm,
– *stationary phase*: *octylsilyl silica gel for chromatography R* (5 µm),
– *temperature*: 30 °C.

Mobile phase:

– *mobile phase A*: mix 91 ml of *tetrahydrofuran R*, 63 ml of *acetonitrile R1*, 0.6 ml of *pentafluoropropanoic acid R* and 0.2 ml of *trifluoroacetic acid R*; dilute to 1000 ml with *water R*;
– *mobile phase B*: *acetonitrile R1*;

Time (min)	Mobile phase A (per cent *V/V*)	Mobile phase B (per cent *V/V*)
0 - 50	100 → 80	0 → 20
50 - 51	80 → 100	20 → 0
51 - 65	100	0

Flow rate: 1.4 ml/min.

Detection: spectrophotometer at 232 nm.

Injection: 10 µl.

Identification of impurities: use the chromatogram supplied with *celiprolol for peak identification CRS* and the chromatogram obtained with reference solution (d) to identify the peaks due to impurities B, E and F.

Relative retention with reference to celiprolol (retention time = about 10 min): impurity A = about 0.3; impurity D = about 0.7; impurity G = about 1.2; impurity B = about 1.4; impurity F = about 1.6; impurity C = about 2.2; impurity H or I = about 2.5; impurity E = about 3.9.

System suitability: reference solution (a):

– *resolution*: minimum 4.0 between the peaks due to celiprolol and acebutolol.

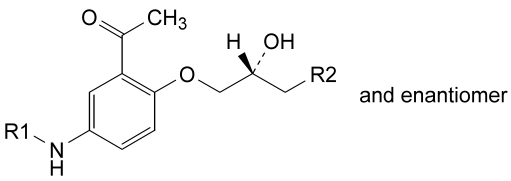
Limits:

– *correction factors*: for the calculation of content, multiply the peak areas of the following impurities by the corresponding correction factor: impurity A = 4.0; impurity B = 1.5; impurity E = 2.3; impurity F = 0.5; impurity I = 1.7;
– *any impurity*: for each impurity, not more than twice the area of the principal peak in the chromatogram obtained with reference solution (c) (0.2 per cent), and not more than 1 such peak has an area greater than the area of the principal peak in the chromatogram obtained with reference solution (c) (0.1 per cent);
– *total*: not more than 5 times the area of the principal peak in the chromatogram obtained with reference solution (c) (0.5 per cent);
– if any of the above limits are exceeded and if a peak occurs with a relative retention of about 2.5 (impurity H or I), the identity of this peak has to be clarified by use of a UV spectrum recorded with a diode array detector; if this spectrum is different from the one obtained with reference solution (e), no correction factor is applied;
– *disregard limit*: 0.5 times the area of the principal peak in the chromatogram obtained with reference solution (c) (0.05 per cent).

Loss on drying (*2.2.32*): maximum 0.5 per cent, determined on 1.000 g by drying in an oven at 105 °C for 3 h.

ASSAY

Dissolve 0.350 g under an atmosphere of nitrogen in 50 ml of *ethanol (96 per cent) R* and add 1.0 ml of *0.1 M hydrochloric acid*. Carry out a potentiometric titration (*2.2.20*), using *0.1 M sodium hydroxide*. Read the volume added between the 2 points of inflexion.



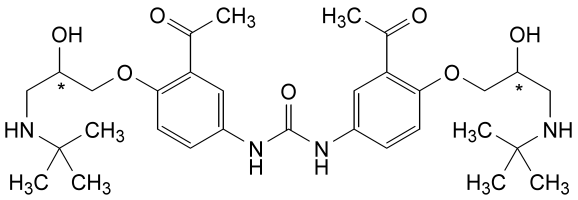
1 ml of *0.1 M sodium hydroxide* is equivalent to 41.60 mg of $C_{20}H_{34}ClN_3O_4$.

STORAGE

Protected from light.

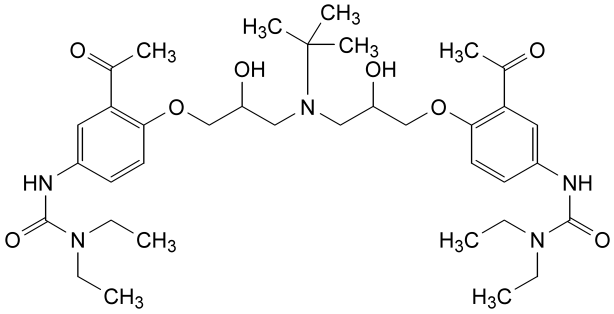
IMPURITIES

Specified impurities: A, B, C, D, E, F, G, H, I.



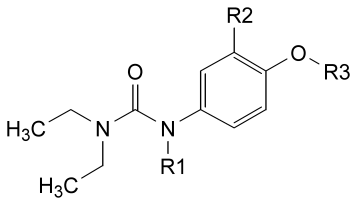
and enantiomer

A. R1 = H, R2 = NH-C(CH_3)$_3$: 1-[5-amino-2-[(2*RS*)-3-[(1,1-dimethylethyl)amino]-2-hydroxypropoxy]phenyl]ethanone,



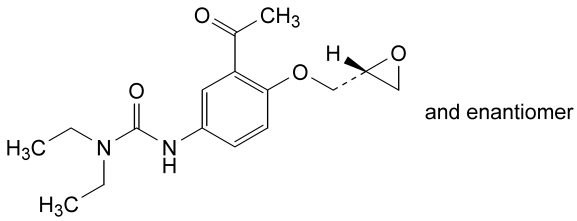
C. R1 = CO-NH-C(CH_3)$_3$, R2 = NH-C(CH_3)$_3$: 1-[3-acetyl-4-[(2*RS*)-3-[(1,1-dimethylethyl)amino]-2-hydroxypropoxy]phenyl]-3-(1,1-dimethylethyl)urea,

D. R1 = CO-N(C_2H_5)$_2$, R2 = N(C_2H_5)$_2$: 3-[3-acetyl-4-[(2*RS*)-3-(diethylamino)-2-hydroxypropoxy]phenyl]-1,1-diethylurea,



H. R1 = CO-N(C_2H_5)$_2$, R2 = Br: 3-[3-acetyl-4-[(2*RS*)-3-bromo-2-hydroxypropoxy]phenyl]-1,1-diethylurea (bromhydrin compound),

B. 1,3-bis[3-acetyl-4-[3-[(1,1-dimethylethyl)amino]-2-hydroxypropoxy]phenyl]urea,



E. 1,1′-[[(1,1-dimethylethyl)imino]bis[(2-hydroxypropane-1,3-diyl)oxy(3-acetyl-1,4-phenylene)]]bis(3,3-diethylurea),

F. R1 = R3 = H, R2 = CO-CH_3: 3-(3-acetyl-4-hydroxyphenyl)-1,1-diethylurea,

I. R1 = CO-CH_3, R2 = H, R3 = C_2H_5: 1-acetyl-1-(4-ethoxyphenyl)-3,3-diethylurea,

and enantiomer

G. 3-[3-acetyl-4-[[(*RS*)-oxiranyl]methoxy]phenyl]-1,1-diethylurea.

01/2008:0887
corrected 6.0

CELLULOSE ACETATE

Cellulosi acetas

DEFINITION

Partly or completely *O*-acetylated cellulose.

Content: 29.0 per cent to 44.8 per cent of acetyl groups (C_2H_3O) (dried substance) and 90.0 per cent to 110.0 per cent of the acetyl content stated on the label (dried substance).

CHARACTERS

Appearance: white, yellowish-white or greyish-white powder or granules, hygroscopic.

Solubility: practically insoluble in water, soluble in acetone, in formic acid and in a mixture of equal volumes of methanol and methylene chloride, practically insoluble in alcohol.

IDENTIFICATION

Infrared absorption spectrophotometry (*2.2.24*).

Comparison: *Ph. Eur. reference spectrum of cellulose acetate.*

TESTS

Free acid: maximum 0.1 per cent, calculated as acetic acid (dried substance).

To 5.00 g in a 250 ml conical flask, add 150 ml of *carbon dioxide-free water R*, insert the stopper, swirl the suspension gently and allow to stand for 3 h. Filter, wash the flask and the filter with *carbon dioxide-free water R*. Combine the filtrate and washings. Add 0.1 ml of *phenolphthalein solution R1*. Titrate with *0.01 M sodium hydroxide* until a faint pink colour is obtained.

1 ml of *0.01 M sodium hydroxide* is equivalent to 0.6005 mg of free acid, calculated as acetic acid.

Heavy metals (*2.4.8*): maximum 10 ppm.

2.0 g complies with limit test D. Prepare the standard using 2 ml of *lead standard solution (10 ppm Pb) R*.

Loss on drying (*2.2.32*): maximum 5.0 per cent, determined on 1.000 g by drying in an oven at 105 °C for 3 h.

Sulphated ash (*2.4.14*): maximum 0.1 per cent, determined on 1.0 g.

Microbial contamination. Total viable aerobic count (*2.6.12*) not more than 10^3 micro-organisms per gram of which not more than 10^2 fungi per gram determined by plate count. It complies with the tests for *Escherichia coli* and *Salmonella* (*2.6.13*).

ASSAY

Cellulose acetate containing not more than 42.0 per cent of acetyl groups

To 2.000 g in a 500 ml conical flask add 100 ml of *acetone R* and 10 ml of *water R*. Close the flask and stir with a magnetic stirrer until dissolution is complete. Add 30.0 ml of *1 M sodium hydroxide* with constant stirring. Close the flask and stir with a magnetic stirrer for 30 min. Add 100 ml of *water R* at 80 °C, washing down the sides of the flask, stir for 2 min and cool to room temperature. Titrate with *0.5 M sulphuric acid*, using 0.1 ml of *phenolphthalein solution R* as indicator. Carry out a blank titration.

Calculate the percentage content of acetyl groups from the expression:

$$\frac{4.305\,(n_2 - n_1)}{(100 - d) \times m} \times 100$$

d = loss on drying as a percentage,

m = mass of the substance to be examined, in grams,

n_1 = number of millilitres of *0.5 M sulphuric acid* used in the test,

n_2 = number of millilitres of *0.5 M sulphuric acid* used in the blank titration.

Cellulose acetate containing more than 42.0 per cent of acetyl groups

To 2.000 g in a 500 ml conical flask add 30 ml of *dimethyl sulphoxide R* and 100 ml of *acetone R*. Close the flask and stir with a magnetic stirrer for 16 h. Add 30.0 ml of *1 M sodium hydroxide* with constant stirring. Close the flask and stir with a magnetic stirrer for 6 min. Allow to stand without stirring for 60 min. Add 100 ml of *water R* at 80 °C, washing down the sides of the flask, stir for 2 min and cool to room temperature. Titrate with *0.5 M hydrochloric acid*, using 0.1 ml of *phenolphthalein solution R*. Add 0.5 ml of *0.5 M hydrochloric acid* in excess, stir for 5 min and allow to stand for 30 min. Titrate with *0.5 M sodium hydroxide*, until a persistent pink colour is obtained, stirring with a magnetic stirrer. Calculate the net number of millimoles of *0.5 M sodium hydroxide* consumed, taking the mean of 2 blank titrations into consideration.

Calculate the percentage content of acetyl groups from the expression:

$$\frac{4.305 \times n}{(100 - d) \times m} \times 100$$

d = loss on drying as a percentage,

m = mass of the substance to be examined, in grams,

n = net number of millimoles of *0.5 M sodium hydroxide*.

STORAGE

In an airtight container.

LABELLING

The label states the nominal percentage content of acetyl groups.

01/2008:1406
corrected 6.0

CELLULOSE ACETATE BUTYRATE

Cellulosi acetas butyras

DEFINITION

Partly or completely *O*-acetylated and *O*-butyrated cellulose.

Content:

– *acetyl groups* (C_2H_3O): 2.0 per cent to 30.0 per cent (dried substance); 90.0 per cent to 110.0 per cent of that stated on the label (dried substance);
– *butyryl groups* (C_4H_7O): 16.0 per cent to 53.0 per cent (dried substance); 90.0 per cent to 110.0 per cent of that stated on the label (dried substance).

CHARACTERS

Appearance: white, yellowish-white or greyish-white powder or granules, slightly hygroscopic.

Solubility: practically insoluble in water, soluble in acetone, in formic acid and in a mixture of equal volumes of methanol and methylene chloride, practically insoluble in ethanol (96 per cent).

IDENTIFICATION

A. Infrared absorption spectrophotometry (*2.2.24*).
Comparison: *Ph. Eur. reference spectrum of cellulose acetate butyrate.*
The intensity of the bands may vary according to the degree of substitution.
B. It complies with the limits of the assay.

TESTS

Acidity. To 5.00 g in a 250 ml conical flask, add 150 ml of *carbon dioxide-free water R*, insert the stopper, swirl the suspension gently and allow to stand for 3 h. Filter, wash the flask and the filter with *carbon dioxide-free water R*. Combine the filtrate and washings. Add 0.1 ml of *phenolphthalein solution R1*. Not more than 3.0 ml of *0.01 M sodium hydroxide* is required to change the colour of the indicator.

Heavy metals (*2.4.8*): maximum 20 ppm.

1.0 g complies with test F. Prepare the reference solution using 2 ml of *lead standard solution (10 ppm Pb) R*.

Loss on drying (*2.2.32*): maximum 2.0 per cent, determined on 1.000 g by drying in an oven at 105 °C for 3 h.

Total ash (*2.4.16*): maximum 0.1 per cent.

ASSAY

Liquid chromatography (*2.2.29*).

Test solution. To 1.000 g of the substance to be examined in a 500 ml conical flask, add 100 ml of *acetone R* and 10 ml of *water R*. Close the flask and stir with a magnetic stirrer until dissolution is complete. Add 30.0 ml of *1 M sodium hydroxide* with constant stirring. Close the flask and stir with a magnetic stirrer for 30 min. Add 100 ml of hot *water R* at 80 °C, washing down the sides of the flask and stir for 2 min. Cool, centrifuge or filter the suspension and wash the residue with *water R*. Combine the filtrate and washings, adjust to pH 3 (*2.2.3*) with *dilute phosphoric acid R* and dilute to 500.0 ml with *water R*.

Reference solution. Dissolve 0.200 g of *glacial acetic acid R* and 0.400 g of *butyric acid R* in *water R*, adjust to pH 3 (*2.2.3*) with *dilute phosphoric acid R* and dilute to 500.0 ml with *water R*.

Column:

– *dimensions*: *l* = 0.25 m, Ø = 4.6 mm;
– *stationary phase*: *octadecylsilyl silica gel for chromatography R* (5 µm).

Mobile phase:

– *mobile phase A*: *methanol R*;
– *mobile phase B*: *phosphate buffer solution pH 3.0 R1*;

Time (min)	Mobile phase A (per cent *V/V*)	Mobile phase B (per cent *V/V*)
0 - 30	5	95
30 - 35	5 → 20	95 → 80
35 - 60	20	80
60 - 61	5	95

Flow rate: 1.2 ml/min.

Detection: spectrophotometer at 210 nm.

Injection: 20 µl.

Calculate the percentage content of acetic acid and butyric acid using the chromatograms obtained with the 2 solutions. To calculate the percentage content of acetyl (C_2H_3O) and of butyryl (C_4H_7O) groups, multiply the percentage content of acetic acid and butyric acid by 0.717 and 0.807, respectively.

STORAGE

In an airtight container.

LABELLING

The label states the nominal percentage content of acetyl and butyryl groups.

01/2008:0314
corrected 6.0

CELLULOSE ACETATE PHTHALATE

Cellulosi acetas phthalas

DEFINITION

Partly *O*-acetylated and *O*-phthalylated cellulose.

Content:

– phthaloyl groups ($C_8H_5O_3$, relative mass of the group 149.1): 30.0 per cent to 36.0 per cent (anhydrous and acid-free substance).
– acetyl groups (C_2H_3O, relative mass of the group 43.05): 21.5 per cent to 26.0 per cent (anhydrous and acid-free substance).

CHARACTERS

Appearance: white or almost white, free-flowing powder or colourless flakes, hygroscopic.

Solubility: practically insoluble in water, freely soluble in acetone, soluble in diethylene glycol, practically insoluble in ethanol and in methylene chloride. It dissolves in dilute solutions of alkalis.

IDENTIFICATION

Infrared absorption spectrophotometry (*2.2.24*).

Comparison: *Ph. Eur. reference spectrum of cellulose acetate phthalate.*

TESTS

Viscosity (*2.2.9*): 45 mPa·s to 90 mPa·s for the apparent viscosity determined at 25 °C.

Dissolve 15 g, calculated with reference to the anhydrous substance, in 85 g of a mixture of 1 part of *water R* and 249 parts of *acetone R*.

Free acid: maximum 3.0 per cent, calculated as phthalic acid (anhydrous substance).

Shake 3.0 g for 2 h with 100 ml of a 50 per cent *V/V* solution of *methanol R* and filter. Wash the flask and the filter with 2 quantities, each of 10 ml, of a mixture of a 50 per cent *V/V* solution of *methanol R*. Combine the filtrate and washings, add *phenolphthalein solution R* and titrate with *0.1 M sodium hydroxide* until a faint pink colour is obtained. Carry out a blank titration.

1 ml of *0.1 M sodium hydroxide* is equivalent to 8.3 mg of free acid, calculated as phthalic acid.

Heavy metals (*2.4.8*): maximum 10 ppm.

2.0 g complies with limit test C. Prepare the standard using 2 ml of *lead standard solution (10 ppm Pb) R*.

Water (*2.5.12*): maximum 5.0 per cent, determined on 0.500 g.

Carry out the test using a mixture of 2 volumes of *methylene chloride R* and 3 volumes of *ethanol R*.

Sulphated ash (*2.4.14*): maximum 0.1 per cent, determined on 1.0 g.

ASSAY

Phthaloyl groups. Dissolve 1.000 g in 50 ml of a mixture of 2 volumes of *acetone R* and 3 volumes of *alcohol R*. Add 0.1 ml of *phenolphthalein solution R* and titrate with *0.1 M sodium hydroxide* until a faint pink colour is obtained. Carry out a blank titration.

Calculate the percentage content of phthaloyl groups (*P*) from the expression:

$$\frac{14\,900n}{(100-a)(100-S)m} - \frac{179.5S}{(100-S)}$$

a = percentage content of water,

m = mass of the substance to be examined, in grams,

n = number of millilitres of *0.1 M sodium hydroxide* used,

S = percentage content of free acid (see Tests).

Acetyl groups. To 0.100 g add 25.0 ml of *0.1 M sodium hydroxide* and heat on a water-bath under a reflux condenser for 30 min. Cool, add 0.1 ml of *phenolphthalein solution R* and titrate with *0.1 M hydrochloric acid* until the colour is discharged. Carry out a blank titration.

Calculate the percentage content of acetyl groups from the expression:

$$\left[\frac{4300(n_2-n_1)}{(100-a)(100-S)m} - \frac{51.8S}{(100-S)}\right] - 0.578P$$

a = percentage content of water,

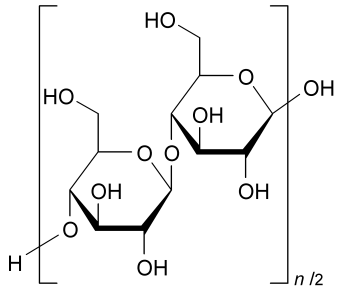
m = mass of the substance to be examined, in grams,

n_1 = number of millilitres of *0.1 M hydrochloric acid* used in the test,

n_2 = number of millilitres of *0.1 M hydrochloric acid* used in the blank titration,

P = percentage content of phthaloyl groups,

S = percentage content of free acid (see Tests).



STORAGE

In an airtight container.

corrected 6.0

CELLULOSE, MICROCRYSTALLINE

Cellulosum microcristallinum

$C_{6n}H_{10n+2}O_{5n+1}$
[9004-34-6]

DEFINITION

Purified, partly depolymerised cellulose prepared by treating alpha-cellulose, obtained as a pulp from fibrous plant material, with mineral acids.

CHARACTERS

Appearance: white or almost white, fine or granular powder.

Solubility: practically insoluble in water, in acetone, in anhydrous ethanol, in toluene, in dilute acids and in a 50 g/l solution of sodium hydroxide.

IDENTIFICATION

A. Place about 10 mg on a watch-glass and disperse in 2 ml of *iodinated zinc chloride solution R*. The substance becomes violet-blue.

B. The degree of polymerisation is not more than 350.

Transfer 1.300 g to a 125 ml conical flask. Add 25.0 ml of *water R* and 25.0 ml of *cupriethylenediamine hydroxide solution R*. Immediately purge the solution with *nitrogen R*, insert the stopper and shake until completely dissolved. Transfer an appropriate volume of the solution to a suitable capillary viscometer (*2.2.9*). Equilibrate the solution at 25 ± 0.1 °C for at least 5 min. Record the flow time (t_1) in seconds between the 2 marks on the viscometer. Calculate the kinematic viscosity (ν_1) of the solution using the following formula:

$$t_1\,(k_1)$$

where k_1 is the viscometer constant.

Dilute a suitable volume of *cupriethylenediamine hydroxide solution R* with an equal volume of *water R* and measure the flow time (t_2) using a suitable capillary viscometer. Calculate the kinematic viscosity (ν_2) of the solvent using the following formula:

$$t_2\,(k_2)$$

where k_2 is the viscometer constant.

Determine the relative viscosity (η_{rel}) of the substance to be examined using the following formula:

$$\nu_1/\nu_2$$

Determine the intrinsic viscosity ($[\eta]_c$) by interpolation, using the intrinsic viscosity table (Table 0316.-1).

Calculate the degree of polymerisation (P) using the following formula:

$$\frac{95\,[\eta]_c}{m\,[(100-b)/100]}$$

where m is the mass in grams of the substance to be examined and b is the loss on drying as a percentage.

TESTS

Solubility. Dissolve 50 mg in 10 ml of *ammoniacal solution of copper tetrammine R*. It dissolves completely, leaving no residue.

pH (*2.2.3*): 5.0 to 7.5 for the supernatant liquid.

Shake 5 g with 40 ml of *carbon dioxide-free water R* for 20 min and centrifuge.

Conductivity (*2.2.38*). The conductivity of the test solution does not exceed the conductivity of the water by more than 75 $\mu S \cdot cm^{-1}$.

Use as test solution the supernatant liquid obtained in the test for pH. Measure the conductivity of the supernatant liquid after a stable reading has been obtained and measure the conductivity of the water used to prepare the test solution.

Ether-soluble substances: maximum 0.05 per cent (5 mg) for the difference between the weight of the residue and the weight obtained from a blank determination.

Place 10.0 g in a chromatography column about 20 mm in internal diameter and pass 50 ml of *peroxide-free ether R* through the column. Evaporate the eluate to dryness. Dry the residue at 105 °C for 30 min, allow to cool in a dessicator and weigh. Carry out a blank determination.

Water-soluble substances: maximum 0.25 per cent (12.5 mg) for the difference between the mass of the residue and the mass obtained from a blank determination.

Shake 5.0 g with 80 ml of *water R* for 10 min. Filter through a filter paper with the aid of vacuum into a tared flask. Evaporate to dryness on a water-bath avoiding charring. Dry at 105 °C for 1 h and weigh. Carry out a blank determination.

Heavy metals (*2.4.8*): maximum 10 ppm.

2.0 g complies with test C. Prepare the reference solution using 2 ml of *lead standard solution (10 ppm Pb) R*.

Loss on drying (*2.2.32*): maximum 7.0 per cent, determined on 1.000 g by drying in an oven at 105 °C for 3 h.

Sulphated ash (*2.4.14*): maximum 0.1 per cent, determined on 1.0 g.

Microbial contamination. Total viable aerobic count (*2.6.12*) not more than 10^3 micro-organisms per gram and with a limit for fungi of 10^2 per gram, determined by plate count. It complies with the tests for *Escherichia coli*, for *Pseudomonas aeruginosa*, for *Staphylococcus aureus* and for *Salmonella* (*2.6.13*).

FUNCTIONALITY-RELATED CHARACTERISTICS

This section provides information on characteristics that are recognised as being relevant control parameters for one or more functions of the substance when used as an excipient. This section is a non-mandatory part of the monograph and it is not necessary to verify the characteristics to demonstrate compliance. Control of these characteristics can however contribute to the quality of a medicinal product by improving the consistency of the manufacturing process and the performance of the medicinal product during use. Where control methods are cited, they are recognised as being suitable for the purpose, but other methods can also be used. Wherever results for a particular characteristic are reported, the control method must be indicated.

The following characteristics may be relevant for microcrystalline cellulose used as binder, diluent or disintegrant.

Degree of polymerisation: see Identification B.

Crystallinity (*2.9.33*).

Particle-size distribution (*2.9.31* or *2.9.38*).

Powder flow (*2.9.36*).

CELLULOSE, POWDERED

Cellulosi pulvis

$C_{6n}H_{10n+2}O_{5n+1}$

DEFINITION

Purified, mechanically disintegrated cellulose prepared by processing alpha-cellulose obtained as a pulp from fibrous plant material.

CHARACTERS

Appearance: white or almost white, fine or granular powder.

Solubility: practically insoluble in water, slightly soluble in a 50 g/l solution of sodium hydroxide, practically insoluble in acetone, in anhydrous ethanol, in toluene, in dilute acids and in most organic solvents.

IDENTIFICATION

A. Place about 10 mg on a watch-glass and disperse in 2 ml of *iodinated zinc chloride solution R*. The substance becomes violet-blue.

B. The degree of polymerisation is greater than 440.

Transfer 0.250 g to a 125 ml conical flask. Add 25.0 ml of *water R* and 25.0 ml of *cupriethylenediamine hydroxide solution R*. Immediately purge the solution with *nitrogen R*, insert the stopper and shake until completely dissolved. Transfer an appropriate volume of the solution to a suitable capillary viscometer (*2.2.9*). Equilibrate the solution at 25 ± 0.1 °C for at least 5 min. Record the flow time (t_1) in seconds between the 2 marks on the viscometer. Calculate the kinematic viscosity (ν_1) of the solution using the following formula:

$$t_1 \, (k_1)$$

where k_1 is the viscometer constant.

Dilute a suitable volume of *cupriethylenediamine hydroxide solution R* with an equal volume of *water R* and measure the flow time (t_2) using a suitable capillary viscometer. Calculate the kinematic viscosity (ν_2) of the solvent using the following formula:

$$t_2 \, (k_2)$$

where k_2 is the viscometer constant.

Determine the relative viscosity (η_{rel}) of the substance to be examined using the following formula:

$$\nu_1 / \nu_2$$

Determine the intrinsic viscosity ($[\eta]_c$) by interpolation, using the intrinsic viscosity table (Table 0315.-1).

Calculate the degree of polymerisation (P) using the following formula:

$$\frac{95 \, [\eta]_c}{m \, [(100 - b) / 100]}$$

where m is the mass in grams of the substance to be examined and b is the loss on drying as a percentage.

TESTS

Solubility. Dissolve 50 mg in 10 ml of *ammoniacal solution of copper tetrammine R*. It dissolves completely, leaving no residue.

pH (*2.2.3*): 5.0 to 7.5 for the supernatant liquid.

Mix 10 g with 90 ml of *carbon dioxide-free water R* and allow to stand with occasional stirring for 1 h.

Ether-soluble substances: maximum 0.15 per cent (15 mg) for the difference between the mass of the residue and the mass obtained from a blank determination.

Place 10.0 g in a chromatography column about 20 mm in internal diameter and pass 50 ml of *peroxide-free ether R* through the column. Evaporate the eluate to dryness in a previously dried and tared evaporating dish, with the aid of a current of air in a fume hood. After all the ether has evaporated, dry the residue at 105 °C for 30 min, allow to cool in a dessiccator and weigh. Carry out a blank determination.

Water-soluble substances: maximum 1.5 per cent (15.0 mg) for the difference between the mass of the residue and the mass obtained from a blank determination.

Shake 6.0 g with 90 ml of *carbon dioxide-free water R* for 10 min. Filter with the aid of vacuum into a tared flask. Discard the first 10 ml of the filtrate and pass the filtrate through the same filter a second time, if necessary, to obtain a clear filtrate. Evaporate a 15.0 ml portion of the filtrate to dryness in a tared evaporating dish without charring. Dry at 105 °C for 1 h, allow to cool in a desiccator and weigh. Carry out a blank determination.

Heavy metals (*2.4.8*): maximum 10 ppm.

2.0 g complies with test C. Prepare the reference solution using 2 ml of *lead standard solution (10 ppm Pb) R*.

Loss on drying (*2.2.32*): maximum 6.5 per cent, determined on 1.000 g by drying in an oven at 105 °C for 3 h.

Sulphated ash (*2.4.14*): maximum 0.3 per cent, determined on 1.0 g (dried substance).

Microbial contamination. Total viable aerobic count (*2.6.12*) not more than 10^3 micro-organisms per gram and with a limit for fungi of 10^2 per gram, determined by plate count. It complies with the tests for *Escherichia coli*, for *Pseudomonas aeruginosa*, for *Staphylococcus aureus* and for *Salmonella* (*2.6.13*).

FUNCTIONALITY-RELATED CHARACTERISTICS

This section provides information on characteristics that are recognised as being relevant control parameters for one or more functions of the substance when used as an excipient. This section is a non-mandatory part of the monograph and it is not necessary to verify the characteristics to demonstrate compliance. Control of these characteristics can however contribute to the quality of a medicinal product by improving the consistency of the manufacturing process and the performance of the medicinal product during use. Where control methods are cited they are recognised as being suitable for the purpose but other methods can also be used. Wherever results for a particular characteristic are reported, the control method must be indicated.

The following characteristics may be relevant for powdered cellulose used as diluent or disintegrant.

Degree of polymerisation: see Identification B.

Crystallinity (*2.9.33*).

Particle-size distribution (*2.9.31* or *2.9.38*).

Powder flow (*2.9.36*).

CENTAURY

Centaurii herba

DEFINITION

Whole or fragmented dried flowering aerial parts of *Centaurium erythraea* Rafn s. l. including *C. majus* (H. et L.) Zeltner and *C. suffruticosum* (Griseb.) Ronn. (syn.: *Erythraea centaurium* Persoon; *C. umbellatum* Gilibert; *C. minus* Gars.).

CHARACTERS

Bitter taste.

IDENTIFICATION

A. The hollow cylindrical, light green to dark brown stem has longitudinal ridges, and is branched only in its upper part. The sessile leaves are entire, decussately arranged, and have an ovate to lanceolate lamina, up to about 3 cm long. Both surfaces are glabrous and green to brownish-green. The inflorescence is diaxially branched. The tubular calyx is green and has 5 lanceolate, acuminate teeth. The corolla consists of a whitish tube divided into 5 elongated lanceolate pink to reddish lobes, about 5-8 mm long. 5 stamens are present attached to the top of the corolla tube. The ovary is superior and has a short style, a broad bifid stigma and numerous ovules. Cylindrical capsules, about 7-10 mm long, with small brown markedly rough seeds are frequently present.

B. Reduce to a powder (355) (*2.9.12*). The powder is greenish-yellow or brownish. Examine under a microscope, using *chloral hydrate solution R*. The powder shows the following diagnostic characters: fragments from the stem with lignified groups of fibres associated with narrow vessels, tracheidal vessels occasional vessels with spiral thickening; pitted parenchyma of the pith and medullary rays; fragments of leaf lamina with sinuous epidermal cells and striated cuticle, especially over the margins and surrounding the stomata; numerous stomata, mainly anisocytic (*2.8.3*); fragments of the palisade mesophyll, each cell containing a single prism crystal or, less frequently, a cluster crystal of calcium oxalate; fragments of calyx and corolla, those of the calyx with straight-walled epidermal cells, those of the inner epidermis of the corolla with obtuse papillae and radially striated cuticle; parts of the endothecium with reticulate or ridge-shaped wall thickenings; triangularly rounded or elliptical, yellow pollen grains, about 30 µm in diameter, with a distinctly pitted exine and 3 germinal pores; fragments of the wall of the fruit capsule composed of crossed layers of fusiform cells; oil droplets from the seeds, fragments of the epidermis of the testa showing large, brown reticulations and a pitted surface.

C. Thin-layer chromatography (*2.2.27*).

Test solution. To 1.0 g of the powdered drug (355) (*2.9.12*) add 25 ml of *methanol R*, shake for 15 min and filter. Evaporate the filtrate to dryness under reduced pressure and at a temperature not exceeding 50 °C. Take up the residue with small quantities of *methanol R* so as to obtain 5 ml of solution, which may contain a sediment.

Reference solution. Dissolve 1 mg of *rutin R* and 1 mg of *swertiamarin R* in *methanol R* and dilute to 1 ml with the same solvent.

Plate: *TLC silica gel F_{254} plate R* (5-40 µm) [or *TLC silica gel F_{254} plate R* (2-10 µm)].

Mobile phase: *water R, anhydrous formic acid R, ethyl formate R* (4:8:88 *V/V/V*).

Application: 10 µl [or 5 µl] as bands.

Development: in an unsaturated tank over a path of 12 cm [or 6 cm].

Drying: in air.

Detection A: examine in ultraviolet light at 254 nm.

Results A: see below the sequence of the zones present in the chromatograms obtained with the reference solution and the test solution. Furthermore, other less intense quenching zones may be present in the chromatogram obtained with the test solution.

Top of the plate	
———	———
———	———
Swertiamarin: a quenching zone	A prominent quenching zone (swertiamarin)
Rutin: a quenching zone	
Reference solution	**Test solution**

Detection B: spray with *anisaldehyde solution R* and heat at 100-105 °C for 5-10 min. Examine in daylight.

Results B: see below the sequence of the zones present in the chromatograms obtained with the reference solution and the test solution. Furthermore, other less intense coloured zones may be present in the chromatogram obtained with the test solution.

TESTS

Foreign matter (*2.8.2*): maximum 3 per cent.

Bitterness value (*2.8.15*): minimum 2000.

Loss on drying (*2.2.32*): maximum 10.0 per cent, determined on 1.000 g of powdered drug (355) (*2.9.12*) by drying in an oven at 105 °C for 2 h.

Total ash (*2.4.16*): maximum 6.0 per cent.

corrected 6.0

CENTELLA

Centellae asiaticae herba

DEFINITION

Dried, fragmented aerial parts of *Centella asiatica* (L.) Urban.

Content: minimum 6.0 per cent of total triterpenoid derivatives, expressed as asiaticoside ($C_{48}H_{78}O_{19}$; M_r 959.15) (dried drug).

CHARACTERS

The leaves are very variable in size; the petiole is usually 5-10, sometimes 15, times longer than the lamina, which is 10-40 mm long and 20-40 mm, sometimes up to 70 mm, wide.

IDENTIFICATION

A. The leaves are alternate, sometimes grouped together at the nodes, reniform or orbicular or oblong-elliptic and have palmate nervation, usually with 7 veins, and a crenate margin. Young leaves show a few trichomes on the lower surface while adult leaves are glabrous. The inflorescence, if present, is a single umbel which usually consists of 3 flowers, rarely 2 or 4; the flowers are very small (about 2 mm) pentamerous and have an inferior ovary; the fruit, a brownish-grey, orbicular cremocarp, up to 5 mm long, is very flattened laterally and has 7-9 prominent curved ridges.

B. Reduce the drug to a powder (355) (*2.9.12*). The powder is greenish-grey. Examine under a microscope using *chloral hydrate solution R*. The powder shows the following diagnostic characters: numerous fragments of leaf epidermis with polygonal cells having an irregularly striated cuticle, and paracytic stomata (*2.8.3*) that are more numerous in the lower epidermis; fragments of petiole epidermis with elongated cells; uniseriate, long, flexuous unicellular covering trichomes, occasionally multicellular; young leaves; spiral vessels; resiniferous canals; calcium oxalate prisms and macles up to 40 µm in diameter; bundles of narrow septate fibres from the stem; fragments of the fruit: layers of wide cells in a parquetry arrangement, annular vessels, parenchyma cells containing simple or compound starch granules.

C. Thin-layer chromatography (*2.2.27*).

Test solution. To 5.0 g of the powdered drug (355) (*2.9.12*) add 50 ml of *ethanol (30 per cent V/V) R*; heat to boiling under a reflux condenser and centrifuge.

Reference solution. Dissolve 5 mg of *asiaticoside R* in *methanol R* and dilute to 10 ml with the same solvent.

Plate: *TLC silica gel G plate R*.

Mobile phase: *acetic acid R, formic acid R, water R, ethyl acetate R* (11:11:27:100 *V/V/V/V*).

Application: 10 µl, as bands.

Development: over a path of 15 cm.

Drying: in air.

Detection: spray with *anisaldehyde solution R* and heat at 100-105 °C; examine in daylight.

Results: the chromatograms obtained with the reference solution and the test solution show in the lower third a greenish-blue zone (asiaticoside). The chromatogram obtained with the test solution shows also below this zone a violet zone (madecassoside); near the solvent front it shows a light blue zone (asiatic acid) and just below a pinkish-violet zone (madecassic acid); in the lower half it shows brown, grey and brownish-green zones between the starting point and the zone due to madecassoside, and other brownish-yellow or light yellow zones above the zone due to asiaticoside.

TESTS

Foreign matter (*2.8.2*): maximum 7 per cent, of which maximum 5 per cent of underground organs and maximum 2 per cent of other foreign matter.

Loss on drying (*2.2.32*): maximum 10.0 per cent, determined on 1.000 g of the powdered drug (355) (*2.9.12*) by drying in an oven at 105 °C for 2 h.

Total ash (*2.4.16*): maximum 12.0 per cent.

ASSAY

Liquid chromatography (*2.2.29*).

Test solution. Place 5.0 g of the powdered drug (355) (*2.9.12*) in a cellulose fingerstall in a continuous extraction apparatus (Soxhlet type). Add 100 ml of *methanol R* and heat for 8 h. Cool and dilute the extract to 100.0 ml with *methanol R*. Filter through a 0.45 µm filter. Dilute 2.0 ml of the filtrate to 20.0 ml with *methanol R*.

Reference solution. Dissolve 20.0 mg of *asiaticoside R* in *methanol R*, if necessary using sonication, and dilute to 20.0 ml with the same solvent. Dilute 2.0 ml of this solution to 100.0 ml with *methanol R*.

Column:

– *size*: *l* = 0.25 m, Ø = 4 mm;
– *stationary phase*: *octadecylsilyl silica gel for chromatography R* (5 µm).

Phase mobile:

– *mobile phase A*: *acetonitrile for chromatography R*;
– *mobile phase B*: dilute 3 ml of *phosphoric acid R* to 1000 ml with *water R*;

Time (min)	Mobile phase A (per cent *V/V*)	Mobile phase B (per cent *V/V*)
0 - 65	22	78
65 - 66	55	45
66 - 76	95	5
76 - 85	22	78

Flow rate: 1.0 ml/min.

Detection: spectrophotometer at 200 nm.

Injection: 20 µl.

Relative retention with reference to the solvent: madecassoside = about 5.8; asiaticoside = about 8.1; madecassic acid = about 17.6; asiatic acid = about 21.7.

Calculate the response factor R_F of asiaticoside using the following expression:

$$\frac{A_1 \times V_1 \times 100}{m_1 \times HPLC_P}$$

A_1 = area of the peak due to asiaticoside in the chromatogram obtained with the reference solution;

V_1 = volume of the reference solution, in millilitres;

m_1 = mass of asiaticoside in the reference solution, in milligrams;

$HPLC_P$ = purity determined for asiaticoside.

Calculate the mean response factor ($\overline{RF}$) for asiaticoside using the following expression:

$$\frac{\sum_{i=1}^{N} RF_i}{N}$$

$\sum_{i=1}^{N} RF_i$ = sum of response factors of asiaticoside for the chromatograms obtained with the reference solution;

N = number of injections of reference solution (N = 4, at least).

Calculate the percentage content of total triterpenoid derivatives, expressed as asiaticoside, using the following expression:

$$\frac{V}{m}\left[\frac{A+(B\times 1.017)+(C\times 0.526)+(D\times 0.509)}{\overline{\mathrm{RF}}}\right]$$

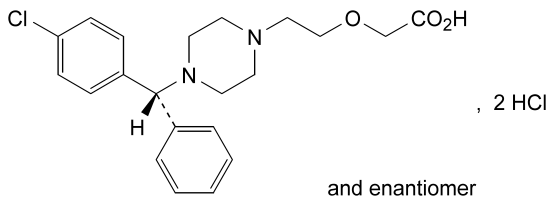
V = volume of the test solution, in millilitres;

m = mass of the substance to be examined in the test solution, in milligrams;

A = area of the peak due to asiaticoside in the chromatogram obtained with the test solution;

B = area of the peak due to madecassoside in the chromatogram obtained with the test solution;

C = area of the peak due to madecassic acid in the chromatogram obtained with the test solution;



D = area of the peak due to asiatic acid in the chromatogram obtained with the test solution;

$\overline{\mathrm{RF}}$ = mean response factor of asiaticoside.

CETIRIZINE DIHYDROCHLORIDE

Cetirizini dihydrochloridum

$C_{21}H_{27}Cl_3N_2O_3$ M_r 461.8
[83881-52-1]

DEFINITION

(*RS*)-2-[2-[4-[(4-Chlorophenyl)phenylmethyl]piperazin-1-yl]ethoxy]acetic acid dihydrochloride.

Content: 99.0 per cent to 100.5 per cent (dried substance).

CHARACTERS

Appearance: white or almost white powder.

Solubility: freely soluble in water, practically insoluble in acetone and in methylene chloride.

IDENTIFICATION

First identification: B, D.

Second identification: A, C, D.

A. Ultraviolet and visible absorption spectrophotometry (*2.2.25*).

Test solution. Dissolve 20.0 mg in 50 ml of a 10.3 g/l solution of *hydrochloric acid R* and dilute to 100.0 ml with the same acid. Dilute 10.0 ml of the solution to 100.0 ml with a 10.3 g/l solution of *hydrochloric acid R*.

Spectral range: 210-350 nm.

Absorption maximum: at 231 nm.

Specific absorbance at the absorption maximum: 359 to 381.

B. Infrared absorption spectrophotometry (*2.2.24*).

Preparation: discs.

Comparison: *cetirizine dihydrochloride CRS*.

C. Thin-layer chromatography (*2.2.27*).

Test solution. Dissolve 10 mg of the substance to be examined in *water R* and dilute to 5 ml with the same solvent.

Reference solution (a). Dissolve 10 mg of *cetirizine dihydrochloride CRS* in *water R* and dilute to 5 ml with the same solvent.

Reference solution (b). Dissolve 10 mg of *chlorphenamine maleate CRS* in *water R* and dilute to 5 ml with the same solvent. To 1 ml of the solution add 1 ml of reference solution (a).

Plate: *TLC silica gel GF_{254} plate R.*

Mobile phase: *ammonia R, methanol R, methylene chloride R* (1:10:90 *V/V/V*).

Application: 5 µl.

Development: over 2/3 of the plate.

Drying: in a current of cold air.

Detection: examine in ultraviolet light at 254 nm.

System suitability: reference solution (b):

– the chromatogram obtained shows 2 clearly separated spots.

Results: the principal spot in the chromatogram obtained with the test solution is similar in position and size to the principal spot in the chromatogram obtained with reference solution (a).

D. It gives reaction (a) of chlorides (*2.3.1*).

TESTS

Solution S. Dissolve 1.0 g in *carbon dioxide-free water R* and dilute to 20 ml with the same solvent.

Appearance of solution. Solution S is clear (*2.2.1*) and not more intensely coloured than reference solution BY_7 (*2.2.2, Method II*).

pH (*2.2.3*): 1.2 to 1.8 for solution S.

Related substances. Liquid chromatography (*2.2.29*).

Test solution. Dissolve 20.0 mg of the substance to be examined in the mobile phase and dilute to 100.0 ml with the mobile phase.

Reference solution (a). Dissolve 5.0 mg of *cetirizine dihydrochloride CRS* and 5.0 mg of *cetirizine impurity A CRS* in the mobile phase and dilute to 25.0 ml with the mobile phase. Dilute 1.0 ml of the solution to 100.0 ml with the mobile phase.

Reference solution (b). Dilute 2.0 ml of the test solution to 50.0 ml with the mobile phase. Dilute 5.0 ml of this solution to 100.0 ml with the mobile phase.

Column:

– *size*: *l* = 0.25 m, Ø = 4.6 mm,

– *stationary phase*: *silica gel for chromatography R* (5 µm).

Mobile phase: *dilute sulphuric acid R, water R, acetonitrile R* (0.4:6.6:93 *V/V/V*).

Flow rate: 1 ml/min.

Detection: spectrophotometer at 230 nm.

Injection: 20 µl.

Run time: 3 times the retention time of cetirizine.

System suitability: reference solution (a):

– *resolution*: minimum 3 between the peaks due to cetirizine and impurity A,

– *symmetry factors*: maximum 2.0.

Limits:

- *impurities A, B, C, D, E, F*: for each impurity, not more than 0.5 times the area of the principal peak in the chromatogram obtained with reference solution (b) (0.1 per cent),
- *unspecified impurities*: for each impurity, not more than 0.5 times the area of the principal peak in the chromatogram obtained with reference solution (b) (0.1 per cent),
- *total*: not more than 1.5 times the area of the principal peak in the chromatogram obtained with reference solution (b) (0.3 per cent),
- *disregard limit*: 0.1 times the area of the principal peak in the chromatogram obtained with reference solution (b) (0.02 per cent).

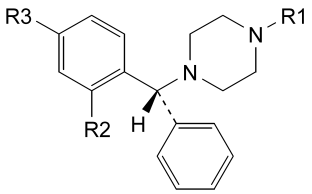
Loss on drying (*2.2.32*): maximum 0.5 per cent, determined on 1.000 g by drying in an oven at 105 °C.

Sulphated ash (*2.4.14*): maximum 0.2 per cent, determined on 1.0 g.

ASSAY

Dissolve 0.100 g in 70 ml of a mixture of 30 volumes of *water R* and 70 volumes of *acetone R*. Titrate with *0.1 M sodium hydroxide* to the second point of inflexion. Determine the end-point potentiometrically (*2.2.20*). Carry out a blank titration.

1 ml of *0.1 M sodium hydroxide* is equivalent to 15.39 mg of $C_{21}H_{27}Cl_3N_2O_3$.



STORAGE

Protected from light.

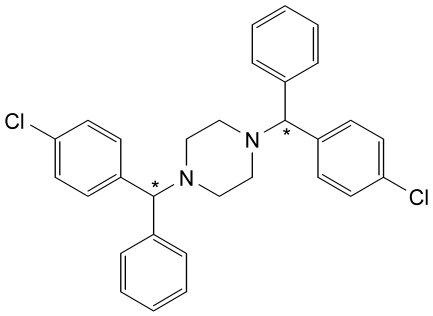
IMPURITIES

Specified impurities: A, B, C, D, E, F.

Other detectable impurities (the following substances would, if present at a sufficient level, be detected by one or other of the tests in the monograph. They are limited by the general acceptance criterion for other/unspecified impurities and/or by the general monograph *Substances for pharmaceutical use (2034)*. It is therefore not necessary to identify these impurities for demonstration of compliance. See also *5.10. Control of impurities in substances for pharmaceutical use*): *G.*

and enantiomer

A. R1 = R2 = H, R3 = Cl: (*RS*)-1-[(4-chlorophenyl)phenylmethyl]piperazine,



B. R1 = CH_2-CO_2H, R2 = H, R3 = Cl: (*RS*)-2-[4-[(4-chlorophenyl)phenylmethyl]piperazin-1-yl]acetic acid,

C. R1 = CH_2-CH_2-O-CH_2-CO_2H, R2 = Cl, R3 = H: (*RS*)-2-[2-[4-[(2-chlorophenyl)phenylmethyl]piperazin-1-yl]ethoxy]acetic acid,

E. R1 = CH_2-[CH_2-O-CH_2]$_2$-CO_2H, R2 = H, R3 = Cl: (*RS*)-2-[2-[2-[4-[(4-chlorophenyl)phenylmethyl]piperazin-1-yl]ethoxy]ethoxy]acetic acid (ethoxycetirizine),

F. R1 = CH_2-CH_2-O-CH_2-CO_2H, R2 = R3 = H: [2-[4-(diphenylmethyl)piperazin-1-yl]ethoxy]acetic acid,

G. R1 = CH_2-CH_2-OH, R2 = H, R3 = Cl: 2-[4-[(*RS*)-(4-chlorophenyl)phenylmethyl]piperazin-1-yl]ethanol,

D. 1,4-bis[(4-chlorophenyl)phenylmethyl]piperazine.

01/2008:0702

CETOSTEARYL ALCOHOL

Alcohol cetylicus et stearylicus

DEFINITION

Mixture of solid aliphatic alcohols, mainly octadecan-1-ol (stearyl alcohol; $C_{18}H_{38}O$; M_r 270.5) and hexadecan-1-ol (cetyl alcohol; $C_{16}H_{34}O$; M_r 242.4), of animal or vegetable origin.

Content:

- *stearyl alcohol*: minimum 40.0 per cent,
- *sum of the contents of stearyl alcohol and cetyl alcohol*: minimum 90.0 per cent.

CHARACTERS

Appearance: white or pale yellow, wax-like mass, plates, flakes or granules.

Solubility: practically insoluble in water, soluble in ethanol (96 per cent) and in light petroleum. When melted, it is miscible with fatty oils, with liquid paraffin and with melted wool fat.

IDENTIFICATION

Examine the chromatograms obtained in the assay.

Results: the 2 principal peaks in the chromatogram obtained with the test solution are similar in retention time to the principal peaks in the chromatogram obtained with the reference solution.

TESTS

Appearance of solution. The solution is clear (*2.2.1*) and not more intensely coloured than reference solution B_6 (*2.2.2, Method II*).

Dissolve 0.50 g in 20 ml of boiling *ethanol (96 per cent) R*. Allow to cool.

Melting point (*2.2.14*): 49 °C to 56 °C.

Acid value (*2.5.1*): maximum 1.0.

Hydroxyl value (*2.5.3, Method A*): 208 to 228.

Iodine value (*2.5.4, Method A*): maximum 2.0.

Dissolve 2.00 g in *methylene chloride R* and dilute to 25 ml with the same solvent.

Saponification value (*2.5.6*): maximum 2.0.

ASSAY

Gas chromatography (*2.2.28*): use the normalisation procedure.

Test solution. Dissolve 0.100 g of the substance to be examined in *ethanol (96 per cent) R* and dilute to 10.0 ml with the same solvent.

Reference solution. Dissolve 60 mg of *cetyl alcohol CRS* and 40 mg of *stearyl alcohol CRS* in *ethanol (96 per cent) R* and dilute to 10 ml with the same solvent. Dilute 1 ml of this solution to 10 ml with *ethanol (96 per cent) R*.

Column:

– *size*: *l* = 30 m, Ø = 0.32 mm,

– *stationary phase*: *poly(dimethyl)siloxane R* (1 µm).

Carrier gas: *helium for chromatography R*.

Flow rate: 1 ml/min.

Split ratio: 1:100.

Temperature:

	Time (min)	Temperature (°C)
Column	0 - 20	150 → 250
	20 - 40	250
Injection port		250
Detector		250

Detection: flame ionisation.

Injection: 1 µl.

System suitability: reference solution:

– *resolution*: minimum 5.0 between the peaks due to cetyl alcohol and stearyl alcohol.

Calculate the percentage contents of $C_{16}H_{34}O$ and $C_{18}H_{38}O$.

corrected 6.0

CETOSTEARYL ALCOHOL (TYPE A), EMULSIFYING

Alcohol cetylicus et stearylicus emulsificans A

DEFINITION

Mixture of cetostearyl alcohol and sodium cetostearyl sulphate. A suitable buffer may be added.

Content:

– *cetostearyl alcohol*: minimum 80.0 per cent (anhydrous substance),

– *sodium cetostearyl sulphate*: minimum 7.0 per cent (anhydrous substance).

CHARACTERS

Appearance: white or pale yellow, waxy mass, plates, flakes or granules.

Solubility: soluble in hot water giving an opalescent solution, practically insoluble in cold water, slightly soluble in ethanol (96 per cent).

IDENTIFICATION

First identification: B, C, D.

Second identification: A, C.

A. Thin-layer chromatography (*2.2.27*).

Test solution (a). Dissolve 0.1 g of the substance to be examined in 10 ml of *trimethylpentane R*, heating on a water-bath. Shake with 2 ml of *ethanol (70 per cent V/V) R* and allow to separate. Use the lower layer as test solution (b). Dilute 1 ml of the upper layer to 8 ml with *trimethylpentane R*.

Test solution (b). Use the lower layer obtained in the preparation of test solution (a).

Reference solution (a). Dissolve 40 mg of *cetostearyl alcohol R* in 10 ml of *trimethylpentane R*.

Reference solution (b). Dissolve 20 mg of *sodium cetostearyl sulphate R* in 10 ml of *ethanol (70 per cent V/V) R*, heating on a water-bath.

Plate: *TLC silanised silica gel plate R*.

Mobile phase: *water R, acetone R, methanol R* (20:40:40 *V/V/V*).

Application: 2 µl.

Development: over a path of 12 cm.

Drying: in air.

Detection: spray with a 50 g/l solution of *phosphomolybdic acid R* in *ethanol (96 per cent) R*. Heat at 120 °C until spots appear (about 3 h).

Results:

– the 2 principal spots in the chromatogram obtained with test solution (a) are similar in position and colour to the principal spots in the chromatogram obtained with reference solution (a),

– 2 of the spots in the chromatogram obtained with test solution (b) are similar in position and colour to the principal spots in the chromatogram obtained with reference solution (b).

B. Examine the chromatograms obtained in the assay.

Results: the 2 principal peaks in the chromatogram obtained with test solution (b) are similar in retention time to the 2 principal peaks in the chromatogram obtained with the reference solution.

C. It gives a yellow colour to a non-luminous flame.

D. To 0.3 g add 20 ml of *anhydrous ethanol R* and heat to boiling on a water-bath with shaking. Filter the mixture immediately, evaporate to dryness and take up the residue in 7 ml of *water R*. To 1 ml of the solution add 0.1 ml of a 1 g/l solution of *methylene blue R*, 2 ml of *dilute sulphuric acid R* and 2 ml of *methylene chloride R* and shake. A blue colour develops in the lower layer.

TESTS

Acid value (*2.5.1*): maximum 2.0.

Iodine value (*2.5.4, Method A*): maximum 3.0.

Dissolve 2.00 g in 25 ml of *methylene chloride R*.

Saponification value (*2.5.6*): maximum 2.0.

Water (*2.5.12*): maximum 3.0 per cent, determined on 2.50 g.

ASSAY

Cetostearyl alcohol. Gas chromatography (*2.2.28*).

Internal standard solution. Dissolve 0.60 g of *heptadecanol CRS* in *anhydrous ethanol R* and dilute to 150 ml with the same solvent.

Test solution (a). Dissolve 0.300 g of the substance to be examined in 50 ml of the internal standard solution, add 50 ml of *water R* and shake with 4 quantities, each of 25 ml, of *pentane R*, adding *sodium chloride R*, if necessary, to facilitate the separation of the layers. Combine the organic layers. Wash with 2 quantities, each of 30 ml, of *water R*, dry over *anhydrous sodium sulphate R* and filter.

Test solution (b). Dissolve 0.300 g of the substance to be examined in 50 ml of *anhydrous ethanol R*, add 50 ml of *water R* and shake with 4 quantities, each of 25 ml, of *pentane R*, adding *sodium chloride R*, if necessary, to facilitate the separation of the layers. Combine the organic layers. Wash with 2 quantities, each of 30 ml, of *water R*, dry over *anhydrous sodium sulphate R* and filter.

Reference solution. Dissolve 50 mg of *cetyl alcohol CRS* and 50 mg of *stearyl alcohol CRS* in *anhydrous ethanol R* and dilute to 10 ml with the same solvent.

Column:

– *material*: fused silica,

– *size*: *l* = 25 m, Ø = 0.25 mm,

– *stationary phase*: *poly(dimethyl)siloxane R*.

Carrier gas: *nitrogen for chromatography R*.

Flow rate: 1 ml/min.

Split ratio: 1:100.

Temperature:

	Time (min)	Temperature (°C)
Column	0 - 20	150 → 250
Injection port		250
Detector		250

Detection: flame ionisation.

Elution order: cetyl alcohol, heptadecanol, stearyl alcohol.

Inject 1 µl of test solution (a) and 1 µl of test solution (b). If the chromatogram obtained with test solution (b) shows a peak with the same retention time as the peak due to the internal standard in the chromatogram obtained with test solution (a), calculate the ratio *r* using the following expression:

$$\frac{S_{ci}}{S_i}$$

S_{ci} = area of the peak due to cetyl alcohol in the chromatogram obtained with test solution (b),

S_i = area of the peak with the same retention time as the peak due to the internal standard in the chromatogram obtained with test solution (a).

If *r* is less than 300, calculate the corrected area $S_{Ha(corr)}$ of the peak due to the internal standard in the chromatogram obtained with test solution (a) using the following expression:

$$S'_{Ha} - \frac{S_i \times S_c}{S_{ci}}$$

S'_{Ha} = area of the peak due to the internal standard in the chromatogram obtained with test solution (a),

S_c = area of the peak due to cetyl alcohol in the chromatogram obtained with test solution (a).

Inject, under the same conditions, equal volumes of the reference solution and of test solution (a). Identify the peaks in the chromatogram obtained with test solution (a) by comparing their retention times with those of the peaks in the chromatogram obtained with the reference solution and determine the area of each peak.

Calculate the percentage content of cetyl alcohol using the following expression:

$$S_A \frac{100 \times m_H}{S_{Ha(corr)} \times m}$$

S_A = area of the peak due to cetyl alcohol in the chromatogram obtained with test solution (a),

m_H = mass of the internal standard in test solution (a), in milligrams,

$S_{Ha(corr)}$ = corrected area of the peak due to the internal standard in the chromatogram obtained with test solution (a),

m = mass of the substance to be examined in test solution (a), in milligrams.

Calculate the percentage content of stearyl alcohol using the following expression:

$$S_B \frac{100 \times m_H}{S_{Ha(corr)} \times m}$$

S_B = area of the peak due to stearyl alcohol in the chromatogram obtained with test solution (a).

The percentage content of cetostearyl alcohol corresponds to the sum of the percentage content of cetyl alcohol and of stearyl alcohol.

Sodium cetostearyl sulphate. Disperse 0.300 g in 25 ml of *methylene chloride R*. Add 50 ml of *water R* and 10 ml of *dimidium bromide-sulphan blue mixed solution R*. Titrate with *0.004 M benzethonium chloride*, using sonication, heating and allowing the layers to separate before each addition, until the colour of the lower layer changes from pink to grey.

1 ml of *0.004 M benzethonium chloride* is equivalent to 1.434 mg of sodium cetostearyl sulphate.

LABELLING

The label states, where applicable, the name and concentration of any added buffer.

01/2008:0802

CETOSTEARYL ALCOHOL (TYPE B), EMULSIFYING

Alcohol cetylicus et stearylicus emulsificans B

DEFINITION

Mixture of cetostearyl alcohol and sodium laurilsulfate. A suitable buffer may be added.

Content:

– *cetostearyl alcohol*: minimum 80.0 per cent (anhydrous substance),

– *sodium laurilsulfate*: minimum 7.0 per cent (anhydrous substance).

CHARACTERS

Appearance: white or pale yellow, waxy mass, plates, flakes or granules.

Solubility: soluble in hot water giving an opalescent solution, practically insoluble in cold water, slightly soluble in ethanol (96 per cent).

IDENTIFICATION

First identification: B, C, D.

Second identification: A, C.

A. Thin-layer chromatography (*2.2.27*).

Test solution (a). Dissolve 0.1 g of the substance to be examined in 10 ml of *trimethylpentane R*, heating on a water-bath. Shake with 2 ml of *ethanol (70 per cent V/V) R* and allow to separate. Use the lower layer as test solution (b). Dilute 1 ml of the upper layer to 8 ml with *trimethylpentane R*.

Test solution (b). Use the lower layer obtained in the preparation of test solution (a).

Reference solution (a). Dissolve 40 mg of *cetostearyl alcohol R* in 10 ml of *trimethylpentane R*.

Reference solution (b). Dissolve 20 mg of *sodium laurilsulfate R* in 10 ml of *ethanol (70 per cent V/V) R*, heating on a water-bath.

Plate: *TLC silanised silica gel plate R*.

Mobile phase: *water R, acetone R, methanol R* (20:40:40 *V/V/V*).

Application: 2 µl.

Development: over a path of 12 cm.

Drying: in air.

Detection: spray with a 50 g/l solution of *phosphomolybdic acid R* in *ethanol (96 per cent) R*. Heat at 120 °C until spots appear (about 3 h).

Results:

- the 2 principal spots in the chromatogram obtained with test solution (a) are similar in position and colour to the principal spots in the chromatogram obtained with reference solution (a),
- 1 of the spots in the chromatogram obtained with test solution (b) is similar in position and colour to the principal spot in the chromatogram obtained with reference solution (b).

B. Examine the chromatograms obtained in the assay.

Results: the 2 principal peaks in the chromatogram obtained with test solution (b) are similar in retention time to the 2 principal peaks in the chromatogram obtained with the reference solution.

C. It gives a yellow colour to a non-luminous flame.

D. To 0.3 g add 20 ml of *anhydrous ethanol R* and heat to boiling on a water-bath with shaking. Filter the mixture immediately, evaporate to dryness and take up the residue in 7 ml of *water R*. To 1 ml of the solution add 0.1 ml of a 1 g/l solution of *methylene blue R*, 2 ml of *dilute sulphuric acid R* and 2 ml of *methylene chloride R* and shake. A blue colour develops in the lower layer.

TESTS

Acid value (*2.5.1*): maximum 2.0.

Iodine value (*2.5.4, Method A*): maximum 3.0.

Dissolve 2.00 g in 25 ml of *methylene chloride R*.

Saponification value (*2.5.6*): maximum 2.0.

Water (*2.5.12*): maximum 3.0 per cent, determined on 2.50 g.

ASSAY

Cetostearyl alcohol. Gas chromatography (*2.2.28*).

Internal standard solution. Dissolve 0.60 g of *heptadecanol CRS* in *anhydrous ethanol R* and dilute to 150 ml with the same solvent.

Test solution (a). Dissolve 0.300 g of the substance to be examined in 50 ml of the internal standard solution, add 50 ml of *water R* and shake with 4 quantities, each of 25 ml, of *pentane R*, adding *sodium chloride R*, if necessary, to facilitate the separation of the layers. Combine the organic layers. Wash with 2 quantities, each of 30 ml, of *water R*, dry over *anhydrous sodium sulphate R* and filter.

Test solution (b). Dissolve 0.300 g of the substance to be examined in 50 ml of *anhydrous ethanol R*, add 50 ml of *water R* and shake with 4 quantities, each of 25 ml, of *pentane R*, adding *sodium chloride R*, if necessary, to facilitate the separation of the layers. Combine the organic layers. Wash with 2 quantities, each of 30 ml, of *water R*, dry over *anhydrous sodium sulphate R* and filter.

Reference solution. Dissolve 50 mg of *cetyl alcohol CRS* and 50 mg of *stearyl alcohol CRS* in *anhydrous ethanol R* and dilute to 10 ml with the same solvent.

Column:

- *material*: fused silica,
- *size*: *l* = 25 m, Ø = 0.25 mm,
- *stationary phase*: *poly(dimethyl)siloxane R*.

Carrier gas: *nitrogen for chromatography R*.

Flow rate: 1 ml/min.

Split ratio: 1:100.

Temperature:

	Time (min)	Temperature (°C)
Column	0 - 20	150 → 250
Injection port		250
Detector		250

Detection: flame ionisation.

Elution order: cetyl alcohol, heptadecanol, stearyl alcohol.

Inject 1 µl of test solution (a) and 1 µl of test solution (b). If the chromatogram obtained with test solution (b) shows a peak with the same retention time as the peak due to the internal standard in the chromatogram obtained with test solution (a), calculate the ratio *r* using the following expression:

$$\frac{S_{ci}}{S_i}$$

S_{ci} = area of the peak due to cetyl alcohol in the chromatogram obtained with test solution (b),

S_i = area of the peak with the same retention time as the peak due to the internal standard in the chromatogram obtained with test solution (a).

If *r* is less than 300, calculate the corrected area $S_{Ha(corr)}$ of the peak due to the internal standard in the chromatogram obtained with test solution (a) using the following expression:

$$S'_{Ha} - \frac{S_i \times S_c}{S_{ci}}$$

S'_{Ha} = area of the peak due to the internal standard in the chromatogram obtained with test solution (a),

S_c = area of the peak due to cetyl alcohol in the chromatogram obtained with test solution (a).

Inject, under the same conditions, equal volumes of the reference solution and of test solution (a). Identify the peaks in the chromatogram obtained with test solution (a) by comparing their retention times with those of the peaks in the chromatogram obtained with the reference solution and determine the area of each peak.

Calculate the percentage content of cetyl alcohol using the following expression:

$$S_A \frac{100 \times m_H}{S_{Ha(corr)} \times m}$$

S_A = area of the peak due to cetyl alcohol in the chromatogram obtained with test solution (a),

m_H = mass of the internal standard in test solution (a), in milligrams,

$S_{Ha(corr)}$ = corrected area of the peak due to the internal standard in the chromatogram obtained with test solution (a),

m = mass of the substance to be examined in test solution (a), in milligrams.

Calculate the percentage content of stearyl alcohol using the following expression:

$$S_B \frac{100 \times m_H}{S_{Ha(corr)} \times m}$$

S_B = area of the peak due to stearyl alcohol in the chromatogram obtained with test solution (a).

The percentage content of cetostearyl alcohol corresponds to the sum of the percentage content of cetyl alcohol and of stearyl alcohol.

Sodium laurilsulfate. Disperse 0.300 g in 25 ml of *methylene chloride R*. Add 50 ml of *water R* and 10 ml of *dimidium bromide-sulphan blue mixed solution R*. Titrate with *0.004 M benzethonium chloride*, using sonication, heating, and allowing the layers to separate before each addition, until the colour of the lower layer changes from pink to grey.

1 ml of *0.004 M benzethonium chloride* is equivalent to 1.154 mg of sodium laurilsulfate.

LABELLING

The label states, where applicable, the name and concentration of any added buffer.

01/2008:1085

CETOSTEARYL ISONONANOATE

Cetostearylis isononanoas

DEFINITION

Mixture of esters of cetostearyl alcohol with isononanoic acid, mainly 3,5,5-trimethylhexanoic acid.

CHARACTERS

Appearance: clear, colourless or slightly yellowish liquid.

Solubility: practically insoluble in water, soluble in ethanol (96 per cent) and in light petroleum, miscible with fatty oils and with liquid paraffins.

Viscosity: 15 mPa·s to 30 mPa·s.

Relative density: 0.85 to 0.86.

Refractive index: 1.44 to 1.45.

IDENTIFICATION

A. On cooling, turbidity occurs below 15 °C.

B. Saponification value (see Tests).

C. Infrared absorption spectrophotometry (*2.2.24*).

Comparison: *Ph. Eur. reference spectrum of cetostearyl isononanoate.*

TESTS

Appearance. The substance to be examined is clear (*2.2.1*) and not more intensely coloured than reference solution Y_6 (*2.2.2, Method I*).

Acid value (*2.5.1*): maximum 1.0, determined on 5.0 g.

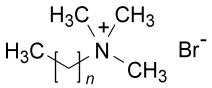
Hydroxyl value (*2.5.3, Method A*): maximum 5.0.

Iodine value (*2.5.4, Method A*): maximum 1.0.

Saponification value (*2.5.6*): 135 to 148, determined on 1.0 g.

Heavy metals (*2.4.8*): maximum 10 ppm.

2.0 g complies with test D. Prepare the reference solution using 2 ml of *lead standard solution (10 ppm Pb) R*.



Water (*2.5.12*): maximum 0.2 per cent, determined on 10.0 g.

Total ash (*2.4.16*): maximum 0.2 per cent, determined on 2.0 g.

01/2008:0378
corrected 6.0

CETRIMIDE

Cetrimidum

DEFINITION

Cetrimide consists of trimethyltetradecylammonium bromide and may contain smaller amounts of dodecyl- and hexadecyl-trimethylammonium bromides.

Content: 96.0 per cent to 101.0 per cent of alkyltrimethylammonium bromides, calculated as $C_{17}H_{38}BrN$ (M_r 336.4) (dried substance).

CHARACTERS

Appearance: white or almost white, voluminous, free-flowing powder.

Solubility: freely soluble in water and in alcohol.

IDENTIFICATION

A. Dissolve 0.25 g in *alcohol R* and dilute to 25.0 ml with the same solvent. At wavelengths from 260 nm to 280 nm, the absorbance (*2.2.25*) of the solution has a maximum of 0.05.

B. Dissolve about 5 mg in 5 ml of *buffer solution pH 8.0 R*. Add about 10 mg of *potassium ferricyanide R*. A yellow precipitate is formed. Prepare a blank in the same manner but omitting the substance to be examined: a yellow solution is observed but no precipitate is formed.

C. Solution S (see Tests) froths copiously when shaken.

D. Thin-layer chromatography (*2.2.27*).

Test solution. Dissolve 0.10 g of the substance to be examined in *water R* and dilute to 5 ml with the same solvent.

Reference solution. Dissolve 0.10 g of *trimethyltetradecylammonium bromide CRS* in *water R* and dilute to 5 ml with the same solvent.

Plate: *TLC silica gel F_{254} silanised plate R*.

Mobile phase: *acetone R*, 270 g/l solution of *sodium acetate R*, *methanol R* (20:35:45 *V/V/V*).

Application: 1 µl.

Development: over a path of 12 cm.

Drying: in a current of hot air.

Detection: allow to cool; expose the plate to iodine vapour and examine in daylight.

Result: the principal spot in the chromatogram obtained with the test solution is similar in position, colour and size to the principal spot in the chromatogram obtained with the reference solution.

E. It gives reaction (a) of bromides (*2.3.1*).

TESTS

Solution S. Dissolve 2.0 g in *carbon dioxide-free water R* and dilute to 100 ml with the same solvent.

Appearance of solution. Solution S is clear (*2.2.1*) and colourless (*2.2.2, Method II*).

Acidity or alkalinity. To 50 ml of solution S add 0.1 ml of *bromocresol purple solution R*. Not more than 0.1 ml of *0.1 M hydrochloric acid* or *0.1 M sodium hydroxide* is required to change the colour of the indicator.

Amines and amine salts. Dissolve 5.0 g in 30 ml of a mixture of 1 volume of *1 M hydrochloric acid* and 99 volumes of *methanol R* and add 100 ml of *2-propanol R*. Pass a stream of *nitrogen R* slowly through the solution. Gradually add 15.0 ml of *0.1 M tetrabutylammonium hydroxide* and record the potentiometric titration curve (*2.2.20*). If the curve shows 2 points of inflexion, the volume of titrant added between the 2 points is not greater than 2.0 ml.

Loss on drying (*2.2.32*): maximum 2.0 per cent, determined on 1.000 g by drying in an oven at 105 °C for 2 h.

Sulphated ash (*2.4.14*): maximum 0.5 per cent, determined on 1.0 g.

ASSAY

Dissolve 2.000 g in *water R* and dilute to 100.0 ml with the same solvent. Transfer 25.0 ml of the solution to a separating funnel, add 25 ml of *chloroform R*, 10 ml of *0.1 M sodium hydroxide* and 10.0 ml of a freshly prepared 50 g/l solution of *potassium iodide R*. Shake, allow to separate and discard the chloroform layer. Shake the aqueous layer with 3 quantities, each of 10 ml, of *chloroform R* and discard the chloroform layers. Add 40 ml of *hydrochloric acid R*, allow to cool and titrate with *0.05 M potassium iodate* until the deep brown colour is almost discharged. Add 2 ml of *chloroform R* and continue the titration, shaking vigorously, until the colour of the chloroform layer no longer changes. Carry out a blank titration on a mixture of 10.0 ml of the freshly prepared 50 g/l solution of *potassium iodide R*, 20 ml of *water R* and 40 ml of *hydrochloric acid R*.

1 ml of *0.05 M potassium iodate* is equivalent to 33.64 mg of $C_{17}H_{38}BrN$.

01/2008:0540

CETYL ALCOHOL

Alcohol cetylicus

DEFINITION

Mixture of solid alcohols, mainly hexadecan-1-ol ($C_{16}H_{34}O$; M_r 242.4), of animal or vegetable origin.

Content: minimum 95.0 per cent of $C_{16}H_{34}O$.

CHARACTERS

Appearance: white or almost white, unctuous mass, powder, flakes or granules.

Solubility: practically insoluble in water, freely soluble or sparingly soluble in ethanol (96 per cent). When melted, it is miscible with vegetable and animal oils, with liquid paraffin and with melted wool fat.

IDENTIFICATION

Examine the chromatograms obtained in the assay.

Results: the principal peak in the chromatogram obtained with the test solution is similar in retention time to the principal peak in the chromatogram obtained with reference solution (a).

TESTS

Appearance of solution. The solution is clear (*2.2.1*) and not more intensely coloured than reference solution B_6 (*2.2.2, Method II*).

Dissolve 0.50 g in 20 ml of boiling *ethanol (96 per cent) R*. Allow to cool.

Melting point (*2.2.14*): 46 °C to 52 °C.

Acid value (*2.5.1*): maximum 1.0.

Hydroxyl value (*2.5.3, Method A*): 218 to 238.

Iodine value (*2.5.4, Method A*): maximum 2.0.

Dissolve 2.00 g in *methylene chloride R* and dilute to 25 ml with the same solvent.

Saponification value (*2.5.6*): maximum 2.0.

ASSAY

Gas chromatography (*2.2.28*): use the normalisation procedure.

Test solution. Dissolve 0.100 g of the substance to be examined in *ethanol (96 per cent) R* and dilute to 10.0 ml with the same solvent.

Reference solution (a). Dissolve 50 mg of *cetyl alcohol CRS* in *ethanol (96 per cent) R* and dilute to 5 ml with the same solvent.

Reference solution (b). Dissolve 50 mg of *stearyl alcohol R* in *ethanol (96 per cent) R* and dilute to 10 ml with the same solvent.

Reference solution (c). Mix 1 ml of reference solution (a) and 1 ml of reference solution (b) and dilute to 10 ml with *ethanol (96 per cent) R*.

Column:

– *size*: *l* = 30 m, Ø = 0.32 mm,

– *stationary phase*: *poly(dimethyl)siloxane R* (1 µm).

Carrier gas: *helium for chromatography R*.

Flow rate: 1 ml/min.

Split ratio: 1:100.

Temperature:

	Time (min)	Temperature (°C)
Column	0 - 20	150 → 250
	20 - 40	250
Injection port		250
Detector		250

Detection: flame ionisation.

Injection: 1 µl of the test solution and reference solutions (a) and (c).

System suitability: reference solution (c):

– *resolution*: minimum 5.0 between the peaks due to cetyl alcohol and stearyl alcohol.

Calculate the percentage content of $C_{16}H_{34}O$.

01/2008:1906

CETYL PALMITATE

Cetylis palmitas

DEFINITION

Mixture of C_{14}-C_{18} esters of lauric (dodecanoic), myristic (tetradecanoic), palmitic (hexadecanoic) and stearic (octadecanoic) acids ('Cetyl esters wax').

Content (expressed as hexadecyl hexadecanoate): 10.0 per cent to 20.0 per cent for Cetyl palmitate 15, 60.0 per cent to 70.0 per cent for Cetyl palmitate 65 and minimum 90.0 per cent for Cetyl palmitate 95.

CHARACTERS

Appearance: white or almost white, waxy plates, flakes or powder.

Solubility: practically insoluble in water, soluble in boiling anhydrous ethanol and in methylene chloride, slightly soluble in light petroleum, practically insoluble in anhydrous ethanol.

mp: about 45 °C for Cetyl palmitate 15 and Cetyl palmitate 65 and about 52 °C for Cetyl palmitate 95.

IDENTIFICATION

A. It complies with the limits of the assay and the chromatogram obtained with the test solution shows the typical main peak(s).

B. Saponification value (see Tests).

TESTS

Appearance of solution. The solution is not more intensely coloured than reference solution Y_6 (*2.2.2, Method II*).

Dissolve 4.0 g in *methylene chloride R* and dilute to 20 ml with the same solvent.

Acid value (*2.5.1*): maximum 4.0.

Dissolve 10.0 g in 50 ml of the solvent mixture described by heating under reflux on a water-bath for 5 min.

Hydroxyl value (*2.5.3, Method A*): maximum 20.0.

Iodine value (*2.5.4, Method A*): maximum 2.0.

Saponification value (*2.5.6*): 105 to 120.

Heat under reflux for 2 h.

Alkaline impurities. Dissolve 2.0 g 'with gentle heating' in a mixture of 1.5 ml of *ethanol (96 per cent) R* and 3 ml of *toluene R*. Add 0.05 ml of a 0.4 g/l solution of *bromophenol blue R* in *ethanol (96 per cent) R*. Not more than 0.4 ml of *0.01 M hydrochloric acid* is required to change the colour of the solution to yellow.

Nickel (*2.4.31*): maximum 1 ppm.

Water (*2.5.12*): maximum 0.3 per cent, determined on 1.0 g using a mixture of equal volumes of *anhydrous methanol R* and *methylene chloride R* as solvent.

Total ash (*2.4.16*): maximum 0.2 per cent, determined on 1.0 g.

ASSAY

Gas chromatography (*2.2.28*): use the normalisation procedure.

Test solution. Dissolve 20.0 mg of the substance to be examined in *hexane R* and dilute to 20.0 ml with the same solvent.

Reference solution (a). Dissolve 20.0 mg of *cetyl palmitate 95 CRS* in *hexane R* and dilute to 20.0 ml with the same solvent.

Reference solution (b). Dissolve 20.0 mg of *cetyl palmitate 15 CRS* in *hexane R* and dilute to 20.0 ml with the same solvent.

Column:

- *material*: stainless steel;
- *size*: *l* = 10 m, Ø = 0.53 mm;
- *stationary phase*: *poly(dimethyl)siloxane R* (film thickness 2.65 µm).

Carrier gas: *helium for chromatography R*.

Flow rate: 6.5 ml/min.

Split ratio: 1:10.

Temperature:

	Time (min)	Temperature (°C)
Column	0 - 10	100 → 300
	10 - 15	300
Injection port		350
Detector		350

Detection: flame ionisation.

Injection: 1 µl.

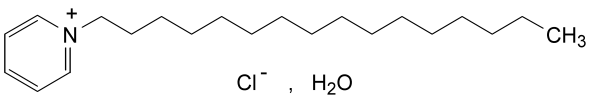
Relative retention with reference to cetyl palmitate (retention time = about 9 min): cetyl alcohol = about 0.3; palmitic acid = about 0.4; lauric ester = about 0.8; myristic ester = about 0.9; stearic ester = about 1.1.

System suitability: reference solution (b):

- *resolution*: minimum of 1.5 between the peaks due to cetyl palmitate and cetyl stearate.

STORAGE

At a temperature not exceeding 25 °C.



LABELLING

The label states the type of cetyl palmitate.

01/2008:0379
corrected 6.0

CETYLPYRIDINIUM CHLORIDE

Cetylpyridinii chloridum

$C_{21}H_{38}ClN,H_2O$ M_r 358.0
[6004-24-6]

DEFINITION

Cetylpyridinium chloride contains not less than 96.0 per cent and not more than the equivalent of 101.0 per cent of 1-hexadecylpyridinium chloride, calculated with reference to the anhydrous substance.

CHARACTERS

A white or almost white powder, slightly soapy to the touch, soluble in water and in alcohol. An aqueous solution froths copiously when shaken.

IDENTIFICATION

First identification: B, D.

Second identification: A, C, D.

A. Dissolve 0.10 g in *water R* and dilute to 100.0 ml with the same solvent. Dilute 5.0 ml of this solution to 100.0 ml with *water R*. Examined between 240 nm and 300 nm (*2.2.25*), the solution shows an absorption maximum at 259 nm and 2 shoulders at about 254 nm and at about 265 nm. The specific absorbance at the maximum is 126 to 134, calculated with reference to the anhydrous substance.

B. Examine by infrared absorption spectrophotometry (*2.2.24*), comparing with the spectrum obtained with *cetylpyridinium chloride CRS*. Examine the substances in the solid state.

C. To 5 ml of *dilute sodium hydroxide solution R* add 0.1 ml of *bromophenol blue solution R1* and 5 ml of *chloroform R* and shake. The chloroform layer is colourless. Add 0.1 ml of solution S (see Tests) and shake. The chloroform layer becomes blue.

D. Solution S gives reaction (a) of chlorides (*2.3.1*).

TESTS

Solution S. Dissolve 1.0 g in *carbon dioxide-free water R* and dilute to 100 ml with the same solvent.

Appearance of solution. Solution S is not more opalescent than reference suspension II (*2.2.1*) and is colourless (*2.2.2, Method II*).

Acidity. To 50 ml of solution S add 0.1 ml of *phenolphthalein solution R*. Not more than 2.5 ml of *0.02 M sodium hydroxide* is required to change the colour of the indicator.

Amines and amine salts. Dissolve 5.0 g with heating in 20 ml of a mixture of 3 volumes of *1 M hydrochloric acid* and 97 volumes of *methanol R* and add 100 ml of *2-propanol R*. Pass a stream of *nitrogen R* slowly through the solution. Gradually add 12.0 ml of *0.1 M tetrabutylammonium hydroxide* and record the potentiometric titration curve (*2.2.20*). If the curve shows 2 points of inflexion, the volume of titrant added between the two points is not greater than 5.0 ml. If the curve shows no point of inflexion, the substance to be examined does not comply with the test. If the curve shows one point of inflexion, repeat the test but add 3.0 ml of a 25.0 g/l solution of *dimethyldecylamine R* in *2-propanol R* before the titration. If the titration curve after the addition of 12.0 ml of the titrant shows only one point of inflexion, the substance to be examined does not comply with the test.

Water (*2.5.12*): 4.5 per cent to 5.5 per cent, determined on 0.300 g by the semi-micro determination of water.

Sulphated ash (*2.4.14*). Not more than 0.2 per cent, determined on 1.0 g.

ASSAY

Dissolve 2.00 g in *water R* and dilute to 100.0 ml with the same solvent. Transfer 25.0 ml of the solution to a separating funnel, add 25 ml of *chloroform R*, 10 ml of *0.1 M sodium hydroxide* and 10.0 ml of a freshly prepared 50 g/l solution of *potassium iodide R*. Shake well, allow to separate and discard the chloroform layer. Shake the aqueous layer with three quantities, each of 10 ml, of *chloroform R* and discard the chloroform layers. To the aqueous layer add 40 ml of *hydrochloric acid R*, allow to cool and titrate with *0.05 M potassium iodate* until the deep-brown colour is almost discharged. Add 2 ml of *chloroform R* and continue the titration, shaking vigorously, until the chloroform layer no longer changes colour. Carry out a blank titration on a mixture of 10.0 ml of the freshly prepared 50 g/l solution of *potassium iodide R*, 20 ml of *water R* and 40 ml of *hydrochloric acid R*.

1 ml of *0.05 M potassium iodate* is equivalent to 34.0 mg of $C_{21}H_{38}ClN$.

01/2008:0380
corrected 6.0

CHAMOMILE FLOWER, ROMAN

Chamomillae romanae flos

DEFINITION

Dried flower-heads of the cultivated double variety of *Chamaemelum nobile* (L.) All. (*Anthemis nobilis* L.).

Content: minimum 7 ml/kg of essential oil (dried drug).

CHARACTERS

The flower-heads are white or yellowish-grey, composed of solitary hemispherical capitula, made up of a solid conical receptacle bearing the florets, each subtended by a transparent small palea.

Strong and characteristic odour.

IDENTIFICATION

A. The capitula have a diameter of 8-20 mm; the receptacle is solid; the base of the receptacle is surrounded by an involucre consisting of 2-3 rows of compact and imbricated bracts with scarious margins. Most florets are ligulate, but a few pale yellow tubular florets occur in the central region. Ligulate florets are white, dull, lanceolate and reflexed with a dark brown, inferior ovary, a filiform style and a bifid stigma; tubular florets have a five-toothed corolla tube, 5 syngenesious, epipetalous stamens and a gynoecium similar to that of the ligulate florets.

B. Separate the capitulum into its different parts. Examine under a microscope using *chloral hydrate solution R*. All parts of the flower-heads are covered with numerous small yellow glistening glandular trichomes. The involucral bracts and paleae have epidermal cells in longitudinal rows, sclerified at the base and they are covered with conical trichomes, about 500 µm long, each composed of 3-4 very short base cells and a long, bent, terminal cell about 20 µm wide. The corolla of the ligulate flowers consists of papillary cells with cuticular striations. The ovaries of both kinds of florets have at their base a sclerous ring consisting of a single row of cells. The receptacle and the ovaries contain small clusters of calcium oxalate. The pollen grains have a diameter of about 35 µm and are rounded or triangular with 3 germinal pores and a spiny exine.

C. Thin-layer chromatography (*2.2.27*).

Test solution. To 0.5 g of the powdered drug (710) (*2.9.12*) add 10 ml of *methanol R* and heat with shaking in a water-bath at 60 °C for 5 min. Allow to cool and filter.

Reference solution. Dissolve 2.5 mg of *apigenin R* and 2.5 mg of *apigenin-7-glucoside R* in 10 ml of *methanol R*.

Plate: *TLC silica gel plate R*.

Mobile phase: *glacial acetic acid R, water R, butanol R* (17:17:66 *V/V/V*).

Application: 10 µl, as bands.

Development: over a path of 10 cm.

Drying: at 100-105 °C for 5 min.

Detection: spray the warm plate with a 10 g/l solution of *diphenylboric acid aminoethyl ester R* in *methanol R*, using about 10 ml for a plate 200 mm square; subsequently spray with the same volume of a 50 g/l solution of *macrogol 400 R* in *methanol R*; allow to stand for about 30 min and examine in ultraviolet light at 365 nm.

Results: the chromatogram obtained with the reference solution shows in the upper third a yellowish-green fluorescent zone (apigenin) and in the middle third a yellowish fluorescent zone (apigenin-7-glucoside). The chromatogram obtained with the test solution shows a yellowish-green fluorescent zone and a yellowish fluorescent zone similar in position and fluorescence to the zones due to apigenin and apigenin-7-glucoside in the chromatogram obtained with the reference solution; above the apigenin-7-glucoside zone there is a brownish fluorescent zone (luteolin); immediately below the apigenin-7-glucoside zone there is a light brownish fluorescent zone (apiin); immediately below the apiin zone there is a bright blue fluorescent zone and below this zone a bright blue fluorescent zone; other faint zones may be present.

TESTS

Diameter of the flower-heads: maximum 3 per cent of flower-heads have a diameter smaller than 8 mm.

Deteriorated flower-heads: brown or darkened flower-heads are absent.

Loss on drying (*2.2.32*): maximum 11.0 per cent, determined on 1.000 g of the powdered drug (355) (*2.9.12*) by drying in an oven at 105 °C for 2 h.

Total ash (*2.4.16*): maximum 8.0 per cent.

ASSAY

Carry out the determination of essential oils in herbal drugs (*2.8.12*). Use 20.0 g of whole drug, a 500 ml round-bottomed flask, 250 ml of *water R* as the distillation liquid and 0.50 ml of *xylene R* in the graduated tube. Distil at a rate of 3-3.5 ml/min for 3 h.

corrected 6.0

CHARCOAL, ACTIVATED

Carbo activatus

DEFINITION

Obtained from vegetable matter by suitable carbonisation processes intended to confer a high adsorption power.

CHARACTERS

Appearance: black, light powder free from grittiness.

Solubility: practically insoluble in all usual solvents.

IDENTIFICATION

A. When heated to redness it burns slowly without a flame.

B. Adsorption power (see Tests).

TESTS

Solution S. To 2.0 g in a conical flask with a ground-glass neck add 50 ml of *dilute hydrochloric acid R*. Boil gently under a reflux condenser for 1 h, filter and wash the filter with *dilute hydrochloric acid R*. Evaporate the combined filtrate and washings to dryness on a water-bath, dissolve the residue in *0.1 M hydrochloric acid* and dilute to 50.0 ml with the same acid.

Acidity or alkalinity. To 2.0 g add 40 ml of *water R* and boil for 5 min. Cool, restore to the original mass with *carbon dioxide-free water R* and filter. Reject the first 20 ml of the filtrate. To 10 ml of the filtrate add 0.25 ml of *bromothymol blue solution R1* and 0.25 ml of *0.02 M sodium hydroxide*. The solution is blue. Not more than 0.75 ml of *0.02 M hydrochloric acid* is required to change the colour of the indicator to yellow.

Acid-soluble substances: maximum 3 per cent.

To 1.0 g add 25 ml of *dilute nitric acid R* and boil for 5 min. Filter whilst hot through a sintered-glass filter (10) (*2.1.2*) and wash with 10 ml of hot *water R*. Evaporate the combined filtrate and washings to dryness on a water-bath, add to the residue 1 ml of *hydrochloric acid R*, evaporate to dryness again and dry the residue to constant mass at 100-105 °C. The residue weighs a maximum of 30 mg.

Alkali-soluble coloured substances. To 0.25 g add 10 ml of *dilute sodium hydroxide solution R* and boil for 1 min. Cool, filter and dilute the filtrate to 10 ml with *water R*. The solution is not more intensely coloured than reference solution GY_4 (*2.2.2, Method II*).

Ethanol (96 per cent) soluble substances: maximum 0.5 per cent.

To 2.0 g add 50 ml of *ethanol (96 per cent) R* and boil under a reflux condenser for 10 min. Filter immediately, cool, and dilute to 50 ml with *ethanol (96 per cent) R*. The filtrate is not more intensely coloured than reference solution Y_6 or BY_6 (*2.2.2, Method II*). Evaporate 40 ml of the filtrate to dryness and dry to constant mass at 100-105 °C. The residue weighs a maximum of 8 mg.

Fluorescent substances. In an intermittent-extraction apparatus, treat 10.0 g with 100 ml of *cyclohexane R1* for 2 h. Collect the liquid and dilute to 100 ml with *cyclohexane R1*. Examine in ultraviolet light at 365 nm. The fluorescence of the solution is not more intense than that of a solution of 83 µg of *quinine R* in 1000 ml of *0.005 M sulphuric acid* examined under the same conditions.

Sulphides. To 1.0 g in a conical flask add 5 ml of *hydrochloric acid R1* and 20 ml of *water R*. Heat to boiling. The fumes released do not turn *lead acetate paper R* brown.

Copper: maximum 25.0 ppm.

Atomic absorption spectrometry (*2.2.23, Method I*).

Test solution. Use solution S.

Reference solutions. Prepare the reference solutions using *copper standard solution (0.1 per cent Cu) R* and diluting with *0.1 M hydrochloric acid*.

Source: copper hollow-cathode lamp.

Wavelength: 325.0 nm.

Atomisation device: air-acetylene flame.

Lead: maximum 10.0 ppm.

Atomic absorption spectrometry (*2.2.23, Method I*).

Test solution. Use solution S.

Reference solutions. Prepare the reference solutions using *lead standard solution (100 ppm Pb) R* and diluting with *0.1 M hydrochloric acid*.

Source: lead hollow-cathode lamp.

Wavelength: 283.3 nm; 217.0 nm may be used depending on the apparatus.

Atomisation device: air-acetylene flame.

Zinc: maximum 25.0 ppm.

Atomic absorption spectrometry (*2.2.23, Method I*).

Test solution. Use solution S.

Reference solutions. Prepare the reference solutions using *zinc standard solution (100 ppm Zn) R* and diluting with *0.1 M hydrochloric acid*.

Source: zinc hollow-cathode lamp.

Wavelength: 214.0 nm.

Atomisation device: air-acetylene flame.

Loss on drying (*2.2.32*): maximum 15 per cent, determined on 1.00 g by drying in an oven at 120 °C for 4 h.

Sulphated ash (*2.4.14*): maximum 5.0 per cent, determined on 1.0 g.

Adsorption power. To 0.300 g in a 100 ml ground-glass-stoppered conical flask add 25.0 ml of a freshly prepared solution of 0.5 g of *phenazone R* in 50 ml of *water R*. Shake thoroughly for 15 min. Filter and reject the first 5 ml of filtrate. To 10.0 ml of the filtrate add 1.0 g of *potassium bromide R* and 20 ml of *dilute hydrochloric acid R*. Using 0.1 ml of *methyl red solution R* as indicator, titrate with *0.0167 M potassium bromate* until the red colour is discharged. Titrate slowly (1 drop every 15 s) towards the end of the titration. Carry out a blank titration using 10.0 ml of the phenazone solution.

Calculate the quantity of phenazone adsorbed per 100 g of activated charcoal from the following expression:

$$\frac{2.353\,(a-b)}{m}$$

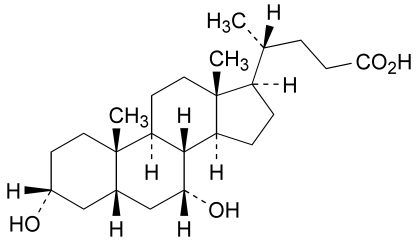
a = number of millilitres of *0.0167 M potassium bromate* used for the blank,

b = number of millilitres of *0.0167 M potassium bromate* used for the test,

m = mass in grams of the substance to be examined.

Minimum 40 g of phenazone is adsorbed per 100 g of activated charcoal, calculated with reference to the dried substance.

Microbial contamination. Total viable aerobic count (*2.6.12*) not more than 10^3 micro-organisms per gram, determined by plate count.



STORAGE

In an airtight container.

corrected 6.0

CHENODEOXYCHOLIC ACID

Acidum chenodeoxycholicum

$C_{24}H_{40}O_4$ M_r 392.6

[474-25-9]

DEFINITION

Chenodeoxycholic acid contains not less than 99.0 per cent and not more than the equivalent of 101.0 per cent of 3α,7α-dihydroxy-5β-cholan-24-oic acid, calculated with reference to the dried substance.

CHARACTERS

A white or almost white powder, very slightly soluble in water, freely soluble in alcohol, soluble in acetone, slightly soluble in methylene chloride.

IDENTIFICATION

First identification: A.

Second identification: B, C.

A. Examine by infrared absorption spectrophotometry (*2.2.24*), comparing with the spectrum obtained with *chenodeoxycholic acid CRS*. Examine the substances prepared as discs using *potassium bromide R*.

B. Examine the chromatograms obtained in the test for related substances. The principal spot in the chromatogram obtained with test solution (b) is similar in position, colour and size to the principal spot in the chromatogram obtained with reference solution (a).

C. Dissolve about 10 mg in 1 ml of *sulphuric acid R*. Add 0.1 ml of *formaldehyde solution R* and allow to stand for 5 min. Add 5 ml of *water R*. The suspension obtained is greenish-blue.

TESTS

Specific optical rotation (*2.2.7*). Dissolve 0.500 g in *methanol R* and dilute to 25.0 ml with the same solvent. The specific optical rotation is + 11.0 to + 13.0, calculated with reference to the dried substance.

Related substances. Examine by thin-layer chromatography (*2.2.27*), using a suitable silica gel as the coating substance.

Test solution (a). Dissolve 0.40 g of the substance to be examined in a mixture of 1 volume of *water R* and 9 volumes of *acetone R* and dilute to 10 ml with the same mixture of solvents.

Test solution (b). Dilute 1 ml of test solution (a) to 10 ml with a mixture of 1 volume of *water R* and 9 volumes of *acetone R*.

Reference solution (a). Dissolve 40 mg of *chenodeoxycholic acid CRS* in a mixture of 1 volume of *water R* and 9 volumes of *acetone R* and dilute to 10 ml with the same mixture of solvents.

Reference solution (b). Dissolve 20 mg of *lithocholic acid CRS* in a mixture of 1 volume of *water R* and 9 volumes of *acetone R* and dilute to 10 ml with the same mixture of solvents. Dilute 2 ml of the solution to 100 ml with a mixture of 1 volume of *water R* and 9 volumes of *acetone R*.

Reference solution (c). Dissolve 20 mg of *ursodeoxycholic acid CRS* in a mixture of 1 volume of *water R* and 9 volumes of *acetone R* and dilute to 50 ml with the same mixture of solvents.

Reference solution (d). Dissolve 20 mg of *cholic acid CRS* in a mixture of 1 volume of *water R* and 9 volumes of *acetone R* and dilute to 100 ml with the same mixture of solvents.

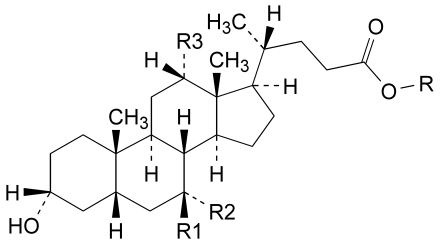
Reference solution (e). Dilute 0.5 ml of test solution (a) to 20 ml with a mixture of 1 volume of *water R* and 9 volumes of *acetone R*. Dilute 1 ml of the solution to 10 ml with a mixture of 1 volume of *water R* and 9 volumes of *acetone R*.

Reference solution (f). Dissolve 10 mg of *chenodeoxycholic acid CRS* in reference solution (c) and dilute to 25 ml with the same solution.

Apply separately to the plate 5 µl of each solution. Develop in an unsaturated tank over a path of 15 cm using a mixture of 1 volume of *glacial acetic acid R*, 30 volumes of *acetone R* and 60 volumes of *methylene chloride R*. Dry the plate at 120 °C for 10 min. Spray the plate immediately with a 47.6 g/l solution of *phosphomolybdic acid R* in a mixture of 1 volume of *sulphuric acid R* and 20 volumes of *glacial acetic acid R* and heat again at 120 °C until blue spots appear on a lighter background. In the chromatogram obtained with test solution (a): any spot corresponding to lithocholic acid is not more intense than the principal spot in the chromatogram obtained with reference solution (b) (0.1 per cent); any spot corresponding to ursodeoxycholic acid is not more intense than the principal spot in the chromatogram obtained with reference solution (c) (1 per cent); any spot corresponding to cholic acid is not more intense than the principal spot in the chromatogram obtained with reference solution (d) (0.5 per cent); any spot apart from the principal spot and any spots corresponding to lithocholic acid, ursodeoxycholic acid and cholic acid, is not more intense than the principal spot in the chromatogram obtained with reference solution (e) (0.25 per cent). The test is not valid unless the chromatogram obtained with reference solution (f) shows two clearly separated principal spots.

Heavy metals (*2.4.8*). 1.0 g complies with limit test C for heavy metals (20 ppm). Prepare the standard using 2 ml of *lead standard solution (10 ppm Pb) R*.

Loss on drying (*2.2.32*). Not more than 1.5 per cent, determined on 1.000 g by drying in an oven at 105 °C.



Sulphated ash (*2.4.14*). Not more than 0.1 per cent, determined on 1.0 g.

ASSAY

Dissolve 0.350 g in 50 ml of *alcohol R*, previously neutralised to 0.2 ml of *phenolphthalein solution R*. Add 50 ml of *water R* and titrate with *0.1 M sodium hydroxide* until a pink colour is obtained.

1 ml of *0.1 M sodium hydroxide* is equivalent to 39.26 mg of $C_{24}H_{40}O_4$.

IMPURITIES

A. R = H, R1 = OH, R2 = H, R3 = H: ursodeoxycholic acid,

B. R = H, R1 = H, R2 = OH, R3 = OH: 3α,7α,12α-trihydroxy-5β-cholan-24-oic acid (cholic acid),

C. R = H, R1 = H, R2 = H, R3 = H: 3α-hydroxy-5β-cholan-24-oic acid (lithocholic acid),

D. R = H, R1 = OH, R2 = H, R3 = OH: 3α,7β,12α-trihydroxy-5β-cholan-24-oic acid (ursocholic acid),

E. R = H, R1 = H, R2 = H, R3 = OH: 3α,12α-dihydroxy-5β-cholan-24-oic acid (deoxycholic acid),

F. R = H, R1+R2 = = O, R3 = H: 3α-hydroxy-7-oxo-5β-cholan-24-oic acid,

G. R = CH_3, R1 = OH, R2 = H, R3 = H: methyl 3α,7β-dihydroxy-5β-cholan-24-oate.

01/2008:1774
corrected 6.0

CHITOSAN HYDROCHLORIDE

Chitosani hydrochloridum

[9012-76-4]

DEFINITION

Chitosan hydrochloride is the chloride salt of an unbranched binary heteropolysaccharide consisting of the two units *N*-acetyl-D-glucosamine and D-glucosamine, obtained by partial deacetylation of chitin normally leading to a degree of deacetylation of 70.0 per cent to 95.0 per cent. Chitin is extracted from the shells of shrimp and crab.

PRODUCTION

The animals from which chitosan hydrochloride is derived must fulfil the requirements for the health of animals suitable for human consumption to the satisfaction of the competent authority. It must have been shown to what extent the method of production allows inactivation or removal of any contamination by viruses or other infectious agents.

CHARACTERS

Appearance: white or almost white fine powder.

Solubility: sparingly soluble in water, practically insoluble in ethanol.

IDENTIFICATION

A. Infrared absorption spectrophotometry (*2.2.24*).
Preparation: discs.
Comparison: *chitosan hydrochloride CRS*.

B. It gives reaction (a) of chlorides (*2.3.1*).

C. Dilute 50 ml of solution S (see Tests) to 250 ml with a 25 per cent *V/V* solution of *ammonia R*. A voluminous gelatinous mass is formed.

D. To 10 ml of solution S add 90 ml of *acetone R*. A voluminous gelatinous mass is formed.

TESTS

Solution S. Dissolve 1.0 g in 100 ml of *water R* and stir vigorously for 20 min with a mechanical stirrer.

Appearance of solution. Solution S is not more opalescent than reference suspension II (*2.2.1*) and not more intensely coloured than reference solution BY_5 (*2.2.2, Method II*).

Matter insoluble in water: maximum 0.5 per cent.

Add 2.00 g to 400.0 ml of *water R* while stirring until no further dissolution takes place. Transfer the solution to a 2 litre beaker, add 200 ml of *water R*. Boil the solution gently for 2 h, covering the beaker during the operation. Filter through a sintered-glass filter (40) (*2.1.2*) wash the residue with water and dry to constant weight in an oven at 100-105 °C. The residue weighs a maximum of 10 mg.

pH (*2.2.3*): 4.0 to 6.0 for solution S.

Viscosity (*2.2.10*): 80 per cent to 120 per cent of the value stated on the label, determined on solution S.

Determine the viscosity using a rotating viscometer at 20 °C with a spindle rotating at 20 r/min, using a suitable spindle for the range of the expected viscosity.

Degree of deacetylation

Test solution. Dissolve 0.250 g in *water R* and dilute to 50.0 ml with the same solvent stirring vigorously. Dilute 1.0 ml of the solution to 100.0 ml with *water R*. Measure

the absorbance (*2.2.25*) from 200 nm to 205 nm as the first derivative of the absorbance curve. Determine the pH of the solution.

Reference solutions. Prepare solutions of 1.0 µg/ml, 5.0 µg/ml, 15.0 µg/ml and 35.0 µg/ml of *N-acetylglucosamine R* in *water R*. Measure the absorbance (*2.2.25*) from 200 nm to 205 nm of each solution as first derivative of the absorption curve. Make a standard curve by plotting the first derivative at 202 nm as a function of the concentration of *N*-acetylglucosamine, and calculate the slope of the curve by least squares linear regression. Use the standard curve to determine the equivalent amount of *N*-acetylglucosamine for the substance to be examined.

Calculate the degree of deacetylation (molar) using the expression:

$$\frac{100 \times M_1 \times (C_1 - C_2)}{(M_1 \times C_1) - [(M_1 - M_3) \times C_2]}$$

C_1 = concentration of chitosan hydrochloride in the test solution in micrograms per millilitre,

C_2 = concentration of *N*-acetylglucosamine in the test solution, as determined from the standard curve prepared using the reference solution in micrograms per millilitre,

M_1 = 203 (relative molecular mass of *N*-acetylglucosamine unit ($C_8H_{13}NO_5$) in polymer),

M_3 = relative molecular mass of chitosan hydrochloride.

M_3 is calculated from the pH in solution, assuming a pKa value of 6.8, using the following expressions:

$$M_3 = f \times M_2 + (1 - f) \times (M_2 + 36.5)$$

$$f = \frac{p}{1 + p}$$

$$p = 10^{(\mathrm{pH} - \mathrm{pKa})}$$

M_2 = 161 (relative molecular mass of deacetylated unit (glucosamine) ($C_6H_{11}NO_4$) in polymer).

Chlorides: 10.0 per cent to 20.0 per cent.

Introduce 0.200 g into a 250 ml borosilicate flask fitted with a reflux condenser. Add 40 ml of a mixture of 1 volume of *nitric acid R* and 2 volumes of *water R*. Boil gently under a reflux condenser for 5 min. Cool and add 25 ml of *water R* through the condenser. Add 16.0 ml of *0.1 M silver nitrate*, shake vigorously and titrate with *0.1 M ammonium thiocyanate*, using 1 ml of *ferric ammonium sulphate solution R2* as indicator, and shaking vigorously towards the end-point. Carry out a blank titration.

1 ml of *0.1 M silver nitrate* is equivalent to 3.55 mg of Cl.

Heavy metals (*2.4.8*): maximum 40 ppm.

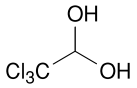
1.0 g complies with limit test F. Prepare the standard using 4 ml of *lead standard solution (10 ppm Pb) R*.

Loss on drying (*2.2.32*): maximum 10 per cent, determined on 1.000 g by drying in an oven at 105 °C.

Sulphated ash (*2.4.14*): maximum 1.0 per cent, determined on 1.0 g.

STORAGE

At a temperature of 2-8 °C, protected from moisture and light.



LABELLING

The label states the nominal viscosity in millipascal seconds for a 10 g/l solution in *water R*.

01/2008:0265

CHLORAL HYDRATE

Chlorali hydras

$C_2H_3Cl_3O_2$ M_r 165.4
[302-17-0]

DEFINITION

2,2,2-Trichloroethane-1,1-diol.

Content: 98.5 per cent to 101.0 per cent.

CHARACTERS

Appearance: colourless, transparent crystals.

Solubility: very soluble in water, freely soluble in ethanol (96 per cent).

IDENTIFICATION

A. To 10 ml of solution S (see Tests) add 2 ml of *dilute sodium hydroxide solution R*. The mixture becomes cloudy and, when heated, gives off an odour of chloroform.

B. To 1 ml of solution S add 2 ml of *sodium sulphide solution R*. A yellow colour develops which quickly becomes reddish-brown. On standing for a short time, a red precipitate may be formed.

TESTS

Solution S. Dissolve 3.0 g in *carbon dioxide-free water R* and dilute to 30 ml with the same solvent.

Appearance of solution. Solution S is clear (*2.2.1*) and colourless (*2.2.2, Method II*).

pH (*2.2.3*): 3.5 to 5.5 for solution S.

Chloral alcoholate. Warm 1.0 g with 10 ml of *dilute sodium hydroxide solution R*, filter the supernatant solution and add *0.05 M iodine* dropwise until a yellow colour is obtained. Allow to stand for 1 h. No precipitate is formed.

Chlorides (*2.4.4*): maximum 100 ppm.

Dilute 5 ml of solution S to 15 ml with *water R*.

Heavy metals (*2.4.8*): maximum 20 ppm.

10 ml of solution S diluted to 20 ml with *water R* complies with test A. Prepare the reference solution using *lead standard solution (1 ppm Pb) R*.

Non-volatile residue: maximum 0.1 per cent.

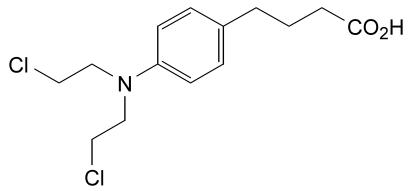
Evaporate 2.000 g on a water-bath. The residue weighs a maximum of 2 mg.

ASSAY

Dissolve 4.000 g in 10 ml of *water R* and add 40.0 ml of *1 M sodium hydroxide*. Allow to stand for exactly 2 min and titrate with *0.5 M sulphuric acid*, using 0.1 ml of *phenolphthalein solution R* as indicator. Titrate the neutralised solution with *0.1 M silver nitrate*, using 0.2 ml of *potassium chromate solution R* as indicator. Calculate the number of millilitres of *1 M sodium hydroxide* used by deducting from the volume of *1 M sodium hydroxide*,

added at the beginning of the titration, the volume of *0.5 M sulphuric acid* used in the 1st titration and two-fifteenths of the volume of *0.1 M silver nitrate* used in the 2nd titration.

1 ml of *1 M sodium hydroxide* is equivalent to 0.1654 g of $C_2H_3Cl_3O_2$.



STORAGE

In an airtight container.

01/2008:0137
corrected 6.0

CHLORAMBUCIL

Chlorambucilum

$C_{14}H_{19}Cl_2NO_2$ M_r 304.2
[305-03-3]

DEFINITION

Chlorambucil contains not less than 98.5 per cent and not more than the equivalent of 101.0 per cent of 4-4-[di(2-chloroethyl)amino]phenylbutyric acid, calculated with reference to the anhydrous substance.

CHARACTERS

A white or almost white, crystalline powder, practically insoluble in water, freely soluble in acetone and in alcohol.

IDENTIFICATION

First identification: A, B.

Second identification: A, C, D.

A. Melting point (*2.2.14*): 64 °C to 67 °C.

B. Examine by infrared absorption spectrophotometry (*2.2.24*), comparing with the spectrum obtained with *chlorambucil CRS*.

C. To 0.4 g add 10 ml of *dilute hydrochloric acid R*, mix and allow to stand for 30 min, shaking from time to time. Filter and wash the precipitate with 2 quantities, each of 10 ml, of *water R*. To 10 ml of the combined filtrate and washings add 0.5 ml of *potassium tetraiodomercurate solution R*. A pale-brown precipitate is formed. To another 10 ml of the combined filtrate and washings add 0.2 ml of *potassium permanganate solution R*. The colour of the latter is discharged immediately.

D. Dissolve 50 mg in 5 ml of *acetone R* and dilute to 10 ml with *water R*. Add 0.05 ml of *dilute nitric acid R* and 0.2 ml of *silver nitrate solution R2*. No opalescence is produced immediately. Heat the solution on a water-bath; an opalescence develops.

TESTS

Related substances. Examine by thin-layer chromatography (*2.2.27*), using *silica gel* GF_{254} *R* as the coating substance. *Carry out all operations as rapidly as possible protected from light. Prepare the solutions immediately before use.*

Test solution. Dissolve 0.2 g of the substance to be examined in *acetone R* and dilute to 10 ml with the same solvent.

Reference solution (a). Dilute 1 ml of the test solution to 50 ml with *acetone R*.

Reference solution (b). Dilute 25 ml of reference solution (a) to 100 ml with *acetone R*.

Apply separately to the plate 5 µl of each solution. Develop over a path of 10 cm using a mixture of 20 volumes of *methyl ethyl ketone R*, 20 volumes of *heptane R*, 25 volumes of *methanol R* and 40 volumes of *toluene R*. Examine in ultraviolet light at 254 nm. Any spot in the chromatogram obtained with the test solution, apart from the principal spot, is not more intense than the spot in the chromatogram obtained with reference solution (a) (2.0 per cent) and at most 1 such spot is more intense than the spot in the chromatogram obtained with reference solution (b) (0.5 per cent).

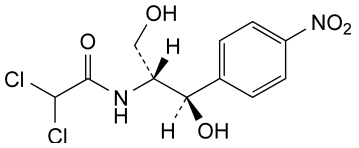
Water (*2.5.12*). Not more than 0.5 per cent, determined on 1.000 g by the semi-micro determination of water.

Sulphated ash (*2.4.14*). Not more than 0.1 per cent, determined on 1.0 g.

ASSAY

Dissolve 0.200 g in 10 ml of *acetone R* and add 10 ml of *water R*. Titrate with *0.1 M sodium hydroxide*, using 0.1 ml of *phenolphthalein solution R* as indicator.

1 ml of *0.1 M sodium hydroxide* is equivalent to 30.42 mg of $C_{14}H_{19}Cl_2NO_2$.



STORAGE

Store protected from light.

01/2008:0071
corrected 6.0

CHLORAMPHENICOL

Chloramphenicolum

$C_{11}H_{12}Cl_2N_2O_5$ M_r 323.1
[56-75-7]

DEFINITION

Chloramphenicol is 2,2-dichloro-*N*-[(1*R*,2*R*)-2-hydroxy-1-(hydroxymethyl)-2-(4-nitrophenyl)ethyl]acetamide, produced by the growth of certain strains of *Streptomyces venezuelae* in a suitable medium. It is normally prepared by synthesis. It contains not less than 98.0 per cent and not more than the equivalent of 102.0 per cent of $C_{11}H_{12}Cl_2N_2O_5$, calculated with reference to the dried substance.

CHARACTERS

A white, greyish-white or yellowish-white, fine, crystalline powder or fine crystals, needles or elongated plates, slightly soluble in water, freely soluble in alcohol and in propylene glycol.

A solution in ethanol is dextrorotatory and a solution in ethyl acetate is laevorotatory.

IDENTIFICATION

First identification: A, B.

Second identification: A, C, D, E.

A. Melting point (*2.2.14*): 149 °C to 153 °C.

B. Examine by infrared absorption spectrophotometry (*2.2.24*), comparing with the spectrum obtained with *chloramphenicol CRS*.

C. Examine the chromatograms obtained in the test for related substances. The principal spot in the chromatogram obtained with 1 µl of the test solution is similar in position and size to the principal spot in the chromatogram obtained with reference solution (a).

D. Dissolve about 10 mg in 1 ml of *alcohol (50 per cent V/V) R*, add 3 ml of a 10 g/l solution of *calcium chloride R* and 50 mg of *zinc powder R* and heat on a water-bath for 10 min. Filter the hot solution and allow to cool. Add 0.1 ml of *benzoyl chloride R* and shake for 1 min. Add 0.5 ml of *ferric chloride solution R1* and 2 ml of *chloroform R* and shake. The aqueous layer is coloured light violet-red to purple.

E. To 50 mg in a porcelain crucible add 0.5 g of *anhydrous sodium carbonate R*. Heat over an open flame for 10 min. Allow to cool. Take up the residue with 5 ml of *dilute nitric acid R* and filter. To 1 ml of the filtrate add 1 ml of *water R*. The solution gives reaction (a) of chlorides (*2.3.1*).

TESTS

Acidity or alkalinity. To 0.1 g add 20 ml of *carbon dioxide-free water R*, shake and add 0.1 ml of *bromothymol blue solution R1*. Not more than 0.1 ml of *0.02 M hydrochloric acid* or *0.02 M sodium hydroxide* is required to change the colour of the indicator.

Specific optical rotation (*2.2.7*). Dissolve 1.50 g in *ethanol R* and dilute to 25.0 ml with the same solvent. The specific optical rotation is + 18.5 to + 20.5.

Related substances. Examine by thin-layer chromatography (*2.2.27*), using *silica gel* GF_{254} *R* as the coating substance.

Test solution. Dissolve 0.10 g of the substance to be examined in *acetone R* and dilute to 10 ml with the same solvent.

Reference solution (a). Dissolve 0.10 g of *chloramphenicol CRS* in *acetone R* and dilute to 10 ml with the same solvent.

Reference solution (b). Dilute 0.5 ml of reference solution (a) to 100 ml with *acetone R*.

Apply separately to the plate 1 µl and 20 µl of the test solution, 1 µl of reference solution (a) and 20 µl of reference solution (b). Develop over a path of 15 cm using a mixture of 1 volume of *water R*, 10 volumes of *methanol R* and 90 volumes of *chloroform R*. Allow the plate to dry in air and examine in ultraviolet light at 254 nm. Any spot in the chromatogram obtained with 20 µl of the test solution, apart from the principal spot, is not more intense than the spot in the chromatogram obtained with reference solution (b) (0.5 per cent).

Chlorides (*2.4.4*). To 1.00 g add 20 ml of *water R* and 10 ml of *nitric acid R* and shake for 5 min. Filter through a filter paper previously washed by filtering 5 ml portions of *water R* until 5 ml of filtrate no longer becomes opalescent on addition of 0.1 ml of *nitric acid R* and 0.1 ml of *silver nitrate solution R1*. 15 ml of the filtrate complies with the limit test for chlorides (100 ppm).

Loss on drying (*2.2.32*). Not more than 0.5 per cent, determined on 1.000 g by drying in an oven at 105 °C.

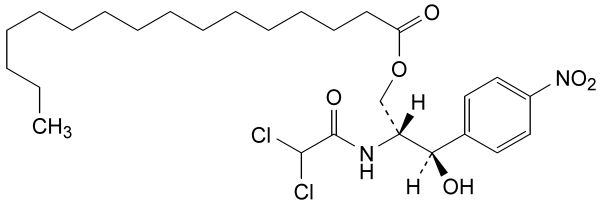
Sulphated ash (*2.4.14*). Not more than 0.1 per cent, determined on 2.0 g.

Pyrogens (*2.6.8*). If intended for use in the manufacture of a parenteral dosage form without a further appropriate procedure for the removal of pyrogens, it complies with the test for pyrogens. Inject per kilogram of the rabbit's mass 2.5 ml of a solution containing per millilitre 2 mg of the substance to be examined.

ASSAY

Dissolve 0.100 g in *water R* and dilute to 500.0 ml with the same solvent. Dilute 10.0 ml of this solution to 100.0 ml with *water R*. Measure the absorbance (*2.2.25*) at the maximum at 278 nm.

Calculate the content of $C_{11}H_{12}Cl_2N_2O_5$ taking the specific absorbance to be 297.



STORAGE

Store protected from light. If the substance is sterile, store in a sterile, airtight, tamper-proof container.

corrected 6.0

CHLORAMPHENICOL PALMITATE

Chloramphenicoli palmitas

$C_{27}H_{42}Cl_2N_2O_6$ M_r 561.6
[530-43-8]

DEFINITION

Chloramphenicol palmitate contains not less than 98.0 per cent and not more than the equivalent of 102.0 per cent of (2*R*,3*R*)-2-[(dichloroacetyl)amino]-3-hydroxy-3-(4-nitrophenyl)propyl hexadecanoate, calculated with reference to the dried substance.

Semi-synthetic product derived from a fermentation product.

CHARACTERS

A white or almost white, fine, unctuous powder, practically insoluble in water, freely soluble in acetone, sparingly soluble in ethanol (96 per cent), very slightly soluble in hexane.

It melts at 87 °C to 95 °C.

It shows polymorphism (*5.9*). The thermodynamically stable form has low bioavailability following oral administration.

IDENTIFICATION

A. Examine by thin-layer chromatography (*2.2.27*), using *TLC silanised silica gel plate R*.

Test solution. Dissolve 50 mg of the substance to be examined in a mixture of 1 ml of *1 M sodium hydroxide* and 5 ml of *acetone R* and allow to stand for 30 min. Add 1.1 ml of *1 M hydrochloric acid* and 3 ml of *acetone R*.

Reference solution (a). Dissolve 10 mg of *chloramphenicol CRS* in *acetone R* and dilute to 5 ml with the same solvent.

Reference solution (b). Dissolve 10 mg of *palmitic acid R* in *acetone R* and dilute to 5 ml with the same solvent.

Reference solution (c). Dissolve 10 mg of the substance to be examined in *acetone R* and dilute to 5 ml with the same solvent.

Apply to the plate 4 µl of each solution. Develop over a path of 15 cm using a mixture of 30 volumes of a 100 g/l solution of *ammonium acetate R* and 70 volumes of *ethanol (96 per cent) R*. Allow the plate to dry in air and spray with a solution containing 0.2 g/l of *dichlorofluorescein R* and 0.1 g/l of *rhodamine B R* in *ethanol (96 per cent) R*. Allow the plate to dry in air and examine in ultraviolet light at 254 nm. The chromatogram obtained with the test solution shows 3 spots corresponding in position to the principal spots in the chromatograms obtained with reference solutions (a), (b) and (c).

B. Dissolve 0.2 g in 2 ml of *pyridine R*, add 2 ml of a 100 g/l solution of *potassium hydroxide R* and heat on a water-bath. A red colour is produced.

C. Dissolve about 10 mg in 5 ml of *ethanol (96 per cent) R* and add 4.5 ml of *dilute sulphuric acid R* and 50 mg of *zinc powder R*. Allow to stand for 10 min and if necessary decant the supernatant liquid or filter. Cool the solution in iced water and add 0.5 ml of *sodium nitrite solution R*. Allow to stand for 2 min and add 1 g of *urea R*, 2 ml of *strong sodium hydroxide solution R* and 1 ml of *β-naphthol solution R*. A red colour develops.

TESTS

Acidity. Dissolve 1.0 g in 5 ml of a mixture of equal volumes of *ethanol (96 per cent) R* and *ether R*, warming to 35 °C. Add 0.2 ml of *phenolphthalein solution R*. Not more than 0.4 ml of *0.1 M sodium hydroxide* is required to produce a pink colour persisting for 30 s.

Specific optical rotation (*2.2.7*). Dissolve 1.25 g in *anhydrous ethanol R* and dilute to 25.0 ml with the same solvent. The specific optical rotation is + 22.5 to + 25.5.

Free chloramphenicol: maximum 450 ppm. Dissolve 1.0 g, with gentle heating, in 80 ml of *xylene R*. Cool and shake with 3 quantities, each of 15 ml, of *water R*. Dilute the combined aqueous extracts to 50 ml with *water R* and shake with 10 ml of *toluene R*. Allow to separate and discard the toluene layer. Centrifuge a portion of the aqueous layer and measure the absorbance (*A*) (*2.2.25*) at the maximum at 278 nm using as the compensation liquid a blank solution having an absorbance not greater than 0.05.

Calculate the content of free chloramphenicol in parts per million from the expression:

$$\frac{A \times 10^4}{5.96}$$

Related substances. Examine by thin-layer chromatography (*2.2.27*), using *silica gel GF_{254} R* as the coating substance.

Test solution. Dissolve 0.1 g of the substance to be examined in *acetone R* and dilute to 10 ml with the same solvent.

Reference solution (a). Dissolve 20 mg of *chloramphenicol palmitate isomer CRS* in *acetone R* and dilute to 10 ml with the same solvent. Dilute 1 ml of this solution to 10 ml with *acetone R*.

Reference solution (b). Dissolve 20 mg of *chloramphenicol dipalmitate CRS* in *acetone R* and dilute to 10 ml with the same solvent. Dilute 1 ml of this solution to 10 ml with *acetone R*.

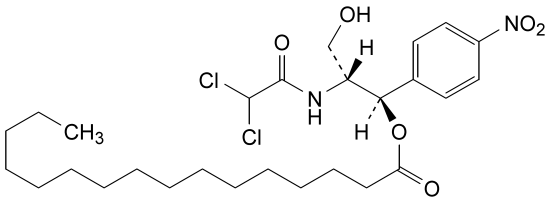
Reference solution (c). Dissolve 5 mg of *chloramphenicol CRS* in *acetone R* and dilute to 10 ml with the same solvent. Dilute 1 ml of this solution to 10 ml with *acetone R*.

Apply to the plate 10 µl of each solution. Develop over a path of 15 cm using a mixture of 10 volumes of *methanol R*, 40 volumes of *chloroform R* and 50 volumes of *cyclohexane R*. Allow the plate to dry in air and examine in ultraviolet light at 254 nm. In the chromatogram obtained with the test solution, any spots due to chloramphenicol palmitate isomer and chloramphenicol dipalmitate are not more intense than the corresponding spots in the chromatograms obtained with reference solutions (a) and (b) respectively (2.0 per cent) and any spot, apart from the principal spot and the spots due to chloramphenicol palmitate isomer and chloramphenicol dipalmitate, is not more intense than the principal spot in the chromatogram obtained with reference solution (c) (0.5 per cent).

Loss on drying (*2.2.32*): maximum 0.5 per cent, determined on 1.000 g by heating at 80 °C over *diphosphorus pentoxide R* at a pressure not exceeding 0.1 kPa for 3 h.

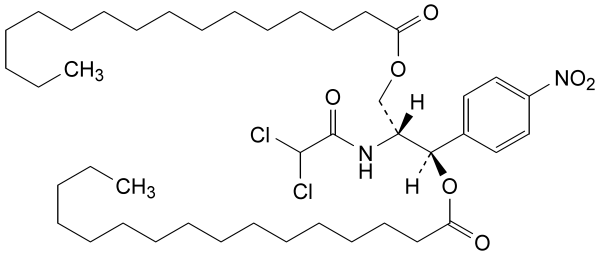
Sulphated ash (*2.4.14*): maximum 0.1 per cent, determined on 1.0 g.

ASSAY



Dissolve 90.0 mg in *ethanol (96 per cent) R* and dilute to 100.0 ml with the same solvent. Dilute 10.0 ml of this solution to 250.0 ml with *ethanol (96 per cent) R*. Measure the absorbance (*2.2.25*) of the solution at the maximum at 271 nm.

Calculate the content of $C_{27}H_{42}Cl_2N_2O_6$ taking the specific absorbance to be 178.

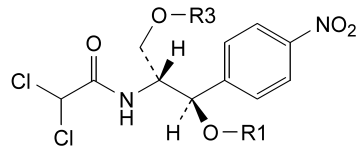


STORAGE

Protected from light.

IMPURITIES

A. (1*R*,2*R*)-2-[(dichloroacetyl)amino]-3-hydroxy-1-(4-nitrophenyl)propyl hexadecanoate (chloramphenicol palmitate isomer),



B. (1*R*,2*R*)-2-[(dichloroacetyl)amino]-1-(4-nitrophenyl)propane-1,3-diyl bishexadecanoate (chloramphenicol dipalmitate).

01/2008:0709
corrected 6.0

CHLORAMPHENICOL SODIUM SUCCINATE

Chloramphenicoli natrii succinas

1 isomer : R1 = CO-CH_2-CH_2-CO_2Na, R3 = H

3 isomer : R1 = H, R3 = CO-CH_2-CH_2-CO_2Na

$C_{15}H_{15}Cl_2N_2NaO_8$ M_r 445.2

DEFINITION

Mixture in variable proportions of sodium (2*R*,3*R*)-2-[(dichloroacetyl)amino]-3-hydroxy-3-(4-nitrophenyl)propyl butanedioate (3 isomer) and of sodium (1*R*,2*R*)-2-[(dichloroacetyl)amino]-3-hydroxy-1-(4-nitrophenyl)propyl butanedioate (1 isomer).

Semi-synthetic product derived from a fermentation product.

Content: 98.0 per cent to 102.0 per cent (anhydrous substance).

CHARACTERS

Appearance: white or yellowish-white powder, hygroscopic.

Solubility: very soluble in water, freely soluble in ethanol (96 per cent).

IDENTIFICATION

A. Thin-layer chromatography (*2.2.27*).

Test solution. Dissolve 20 mg of the substance to be examined in 2 ml of *acetone R*.

Reference solution (a). Dissolve 20 mg of *chloramphenicol sodium succinate CRS* in 2 ml of *acetone R*.

Reference solution (b). Dissolve 20 mg of *chloramphenicol CRS* in 2 ml of *acetone R*.

Plate: *TLC silica gel GF_{254} plate R*.

Mobile phase: *dilute acetic acid R, methanol R, chloroform R* (1:14:85 *V/V/V*).

Application: 2 µl.

Development: over a path of 15 cm.

Drying: in air.

Detection: examine in ultraviolet light at 254 nm.

Results: the 2 principal spots in the chromatogram obtained with the test solution are similar in position and size to the 2 principal spots in the chromatogram obtained with reference solution (a); their positions are different from that of the principal spot in the chromatogram obtained with reference solution (b).

B. Dissolve about 10 mg in 1 ml of *ethanol (50 per cent V/V) R*, add 3 ml of a 10 g/l solution of *calcium chloride R* and 50 mg of *zinc powder R* and heat on a water-bath for 10 min. Filter the hot solution and allow to cool. Add 0.1 ml of *benzoyl chloride R* and shake for 1 min. Add 0.5 ml of *ferric chloride solution R1* and 2 ml of *chloroform R* and shake. The upper layer is light violet-red or purple.

C. Dissolve 50 mg in 1 ml of *pyridine R*. Add 0.5 ml of *dilute sodium hydroxide solution R* and 1.5 ml of *water R*. Heat in a water-bath for 3 min. A red colour develops. Add 2 ml of *nitric acid R* and cool under running water. Add 1 ml of *0.1 M silver nitrate*. A white precipitate is formed slowly.

D. It gives reaction (a) of sodium (*2.3.1*).

TESTS

pH (*2.2.3*): 6.4 to 7.0.

Dissolve 2.50 g in *carbon dioxide-free water R* and dilute to 10 ml with the same solvent.

Specific optical rotation (*2.2.7*): + 5.0 to + 8.0 (anhydrous substance).

Dissolve 0.50 g in *water R* and dilute to 10.0 ml with the same solvent.

Chloramphenicol and chloramphenicol disodium disuccinate. Liquid chromatography (*2.2.29*).

Test solution. Dissolve 25.0 mg of the substance to be examined in the mobile phase and dilute to 100.0 ml with the mobile phase.

Reference solution (a). Dissolve 10.0 mg of *chloramphenicol CRS* in the mobile phase and dilute to 100.0 ml with the mobile phase (solution A). Dilute 5.0 ml of this solution to 100.0 ml with the mobile phase.

Reference solution (b). Dissolve 10.0 mg of *chloramphenicol disodium disuccinate CRS* in the mobile phase and dilute to 100.0 ml with the mobile phase (solution B). Dilute 5.0 ml of this solution to 100.0 ml with the mobile phase.

Reference solution (c). Dissolve 25 mg of the substance to be examined in the mobile phase, add 5 ml of solution A and 5 ml of solution B and dilute to 100 ml with the mobile phase.

Column:

– *size*: *l* = 0.25 m, Ø = 4.6 mm;
– *stationary phase*: *octadecylsilyl silica gel for chromatography R* (5 µm).

Mobile phase: 20 g/l solution of *phosphoric acid R, methanol R, water R* (5:40:55 *V/V/V*).

Flow rate: 1.0 ml/min.

Detection: spectrophotometer at 275 nm.

Injection: 20 µl.

System suitability: reference solution (c):

– the 2 peaks corresponding to those in the chromatograms obtained with reference solutions (a) and (b) are clearly separated from the peaks corresponding to the 2 principal peaks in the chromatogram obtained with the test solution; if necessary, adjust the methanol content of the mobile phase.

Limits:

– *chloramphenicol*: not more than the area of the principal peak in the chromatogram obtained with reference solution (a) (2.0 per cent);
– *chloramphenicol disodium disuccinate*: not more than the area of the principal peak in the chromatogram obtained with reference solution (b) (2.0 per cent).

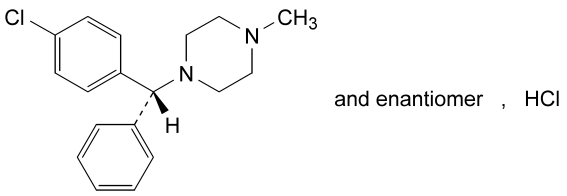
Water (*2.5.12*): maximum 2.0 per cent, determined on 0.500 g.

Pyrogens (*2.6.8*). If intended for use in the manufacture of a parenteral dosage form without a further appropriate procedure for removal of pyrogens, it complies with the test for pyrogens. Inject per kilogram of the rabbit's mass 2.5 ml of a solution in *water for injections R* containing 2 mg of the substance to be examined per millilitre.

ASSAY

Dissolve 0.200 g in *water R* and dilute to 500.0 ml with the same solvent. Dilute 5.0 ml of this solution to 100.0 ml with *water R*. Measure the absorbance (*2.2.25*) at the absorption maximum at 276 nm.

Calculate the content of $C_{15}H_{15}Cl_2N_2NaO_8$, taking the specific absorbance to be 220.



STORAGE

In an airtight container, protected from light. If the substance is sterile, store in a sterile, airtight, tamper-proof container, protected from light.

corrected 6.0

CHLORCYCLIZINE HYDROCHLORIDE

Chlorcyclizini hydrochloridum

$C_{18}H_{22}Cl_2N_2$ M_r 337.3
[1620-21-9]

DEFINITION

Chlorcyclizine hydrochloride contains not less than 99.0 per cent and not more than the equivalent of 101.0 per cent of (*RS*)-1-[(4-chlorophenyl)phenylmethyl]-4-methylpiperazine hydrochloride, calculated with reference to the dried substance.

CHARACTERS

A white or almost white, crystalline powder, freely soluble in water and in methylene chloride, soluble in alcohol.

IDENTIFICATION

First identification: B, D.

Second identification: A, C, D.

A. Dissolve 10.0 mg in a 5 g/l solution of *sulphuric acid R* and dilute to 100.0 ml with the same acid. Dilute 10.0 ml of the solution to 100.0 ml with a 5 g/l solution of *sulphuric acid R*. Examined between 215 nm and 300 nm (*2.2.25*), the solution shows an absorption maximum at 231 nm. The specific absorbance at the maximum is 475 to 525, calculated with reference to the dried substance.

B. Examine by infrared absorption spectrophotometry (*2.2.24*), comparing with the spectrum obtained with *chlorcyclizine hydrochloride CRS*. Examine the substances prepared as discs.

C. Examine the chromatograms obtained in the test for related substances (see Tests). The principal spot in the chromatogram obtained with test solution (b) is similar in position and size to the principal spot in the chromatogram obtained with reference solution (a).

D. It gives reaction (a) of chlorides (*2.3.1*).

TESTS

Appearance of solution. Dissolve 0.5 g in *water R* and dilute to 10 ml with the same solvent. The solution is clear (*2.2.1*) and colourless (*2.2.2, Method II*).

pH (*2.2.3*). Dissolve 0.10 g in *carbon dioxide-free water R* and dilute to 10 ml with the same solvent. The pH of the solution is 5.0 to 6.0.

Related substances. Examine by thin-layer chromatography (*2.2.27*), using a plate coated with a suitable silica gel.

Test solution (a). Dissolve 0.20 g of the substance to be examined in *methanol R* and dilute to 10 ml with the same solvent.

Test solution (b). Dilute 5 ml of test solution (a) to 100 ml with *methanol R*.

Reference solution (a). Dissolve 10 mg of *chlorcyclizine hydrochloride CRS* in *methanol R* and dilute to 10 ml with the same solvent.

Reference solution (b). Dissolve 5 mg of *methylpiperazine R* in *methanol R* and dilute to 50 ml with the same solvent.

Reference solution (c). Dilute 1 ml of test solution (b) to 25 ml with *methanol R*.

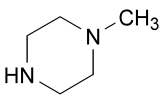
Reference solution (d). Dissolve 10 mg of *hydroxyzine hydrochloride CRS* and 10 mg of *chlorcyclizine hydrochloride CRS* in *methanol R* and dilute to 10 ml with the same solvent.

Apply separately to the plate 10 µl of each solution and develop over a path of 15 cm using a mixture of 2 volumes of *concentrated ammonia R*, 13 volumes of *methanol R* and 85 volumes of *methylene chloride R*. Allow the plate to dry in air and expose it to iodine vapour for 10 min. In the chromatogram obtained with test solution (a): any spot corresponding to methylpiperazine is not more intense than the spot in the chromatogram obtained with reference solution (b) (0.5 per cent); any spot, apart from the principal spot and any spot corresponding to methylpiperazine, is not more intense than the spot in the chromatogram obtained with reference solution (c) (0.2 per cent). The test is not valid unless the chromatogram obtained with reference solution (d) shows two clearly separated spots.

Loss on drying (*2.2.32*). Not more than 1.0 per cent, determined on 1.000 g by drying in an oven at 130 °C.

Sulphated ash (*2.4.14*). Not more than 0.1 per cent, determined on 1.0 g.

ASSAY



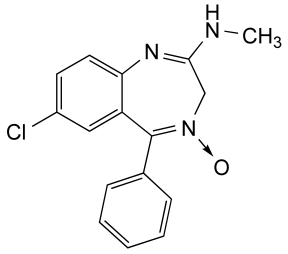
Dissolve 0.200 g in a mixture of 1 ml of *0.1 M hydrochloric acid* and 50 ml of *methanol R*. Carry out a potentiometric titration (*2.2.20*), using *0.1 M sodium hydroxide*. Read the volume added between the two points of inflexion.

1 ml of *0.1 M sodium hydroxide* is equivalent to 33.73 mg of $C_{18}H_{22}Cl_2N_2$.

STORAGE

Store protected from light.

IMPURITIES



A. *N*-methylpiperazine.

01/2008:0656
corrected 6.0

CHLORDIAZEPOXIDE

Chlordiazepoxidum

$C_{16}H_{14}ClN_3O$ M_r 299.8
[58-25-3]

DEFINITION

7-Chloro-*N*-methyl-5-phenyl-3*H*-1,4-benzodiazepin-2-amine 4-oxide.

Content: 99.0 per cent to 101.0 per cent (dried substance).

CHARACTERS

Appearance: almost white or light yellow, crystalline powder.

Solubility: practically insoluble in water, sparingly soluble in ethanol (96 per cent).

It shows polymorphism (*5.9*).

IDENTIFICATION

Infrared absorption spectrophotometry (*2.2.24*).

Comparison: *chlordiazepoxide CRS*.

If the spectra obtained in the solid state show differences, dissolve the substance to be examined and the reference substance separately in *methylene chloride R*, evaporate to dryness and record new spectra using the residues.

TESTS

Related substances. Liquid chromatography (*2.2.29*). *Carry out the test protected from bright light and prepare the solutions immediately before use.*

Test solution. Dissolve 20.0 mg of the substance to be examined in the mobile phase and dilute to 100.0 ml with the mobile phase.

Reference solution (a). Dilute 1.0 ml of the test solution to 100.0 ml with the mobile phase. Dilute 2.0 ml of this solution to 10.0 ml with the mobile phase.

Reference solution (b). Dissolve 5 mg of *chlordiazepoxide impurity A CRS* in the mobile phase, add 25.0 ml of the test solution and dilute to 100.0 ml with the mobile phase. Dilute 2.0 ml of this solution to 50.0 ml with the mobile phase.

Reference solution (c). Dissolve 4.0 mg of *aminochlorobenzophenone R* in the mobile phase and dilute to 100.0 ml with the mobile phase. Dilute 1.0 ml of this solution to 100.0 ml with the mobile phase.

Column:

– *size*: *l* = 0.15 m, Ø = 4.6 mm,
– *stationary phase*: *octadecylsilyl silica gel for chromatography R* (5 µm).

Mobile phase: *acetonitrile R, water R* (50:50 *V/V*).

Flow rate: 1.0 ml/min.

Detection: spectrophotometer at 254 nm.

Injection: 10 µl.

Run time: 6 times the retention time of chlordiazepoxide.

Relative retention with reference to chlordiazepoxide (retention time = about 3.6 min): impurity A = about 0.7; impurity B = about 2.3; impurity C = about 3.9.

System suitability: reference solution (b):

– *resolution*: minimum 5.0 between the peaks due to impurity A and chlordiazepoxide.

Limits:

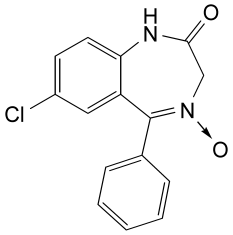
– *impurities A, B*: for each impurity, not more than the area of the principal peak in the chromatogram obtained with reference solution (a) (0.2 per cent),
– *impurity C*: not more than the area of the principal peak in the chromatogram obtained with reference solution (c) (0.2 per cent),
– *any other impurity*: for each impurity, not more than 0.5 times the area of the principal peak in the chromatogram obtained with reference solution (a) (0.1 per cent),
– *total*: not more than 2.5 times the area of the principal peak in the chromatogram obtained with reference solution (a) (0.5 per cent),
– *disregard limit*: 0.25 times the area of the principal peak in the chromatogram obtained with reference solution (a) (0.05 per cent).

Loss on drying (*2.2.32*): maximum 0.5 per cent, determined on 1.000 g by drying in an oven at 105 °C.

Sulphated ash (*2.4.14*): maximum 0.1 per cent, determined on 1.0 g.

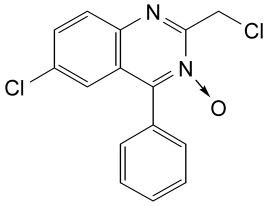
ASSAY

Dissolve 0.250 g, with heating if necessary, in 80 ml of *anhydrous acetic acid R*. Titrate with *0.1 M perchloric acid* determining the end-point potentiometrically (*2.2.20*).



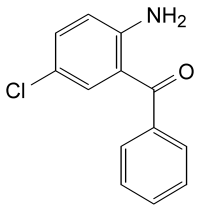
1 ml of *0.1 M perchloric acid* is equivalent to 29.98 mg of $C_{16}H_{14}ClN_3O$.

STORAGE



Protected from light.

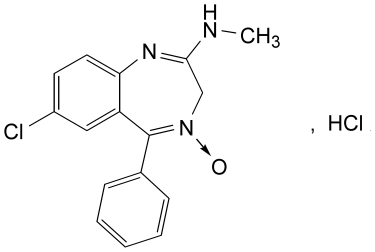
IMPURITIES



Specified impurities: *A, B, C.*

A. 7-chloro-5-phenyl-1,3-dihydro-2*H*-1,4-benzodiazepin-2-one 4-oxide,

B. 6-chloro-2-(chloromethyl)-4-phenylquinazoline 3-oxide,



C. (2-amino-5-chlorophenyl)phenylmethanone (aminochlorobenzophenone).

01/2008:0474

CHLORDIAZEPOXIDE HYDROCHLORIDE

Chlordiazepoxidi hydrochloridum

$C_{16}H_{15}Cl_2N_3O$ M_r 336.2
[438-41-5]

DEFINITION

7-Chloro-*N*-methyl-5-phenyl-3*H*-1,4-benzodiazepin-2-amine 4-oxide hydrochloride.

Content: 99.0 per cent to 101.0 per cent (dried substance).

CHARACTERS

Appearance: white or slightly yellow, crystalline powder.

Solubility: soluble in water, sparingly soluble in ethanol (96 per cent).

It shows polymorphism (*5.9*).

IDENTIFICATION

A. Infrared absorption spectrophotometry (*2.2.24*).

Comparison: *chlordiazepoxide hydrochloride CRS*.

If the spectra obtained in the solid state show differences, dissolve 100 mg in 9 ml of *water R* and add 1 ml of *dilute sodium hydroxide solution R*. Extract with 10 ml of *methylene chloride R* in a separating funnel. Evaporate the organic layer and dry the residue obtained at 100-105 °C. Proceed in the same way with the reference substance. Record new spectra using the residues.

B. Dissolve 50 mg in 5 ml of *water R*, add 1 ml of *dilute ammonia R1*, mix, allow to stand for 5 min and filter. Acidify the filtrate with *dilute nitric acid R*. The solution gives reaction (a) of chlorides (*2.3.1*).

TESTS

Appearance of solution. The solution is clear (*2.2.1*) and not more intensely coloured than reference solution GY_6 (*2.2.2, Method II*).

Dissolve 2.5 g in *water R* and dilute to 25 ml with the same solvent.

Related substances. Liquid chromatography (*2.2.29*). *Carry out the following operations protected from bright light and prepare the solutions immediately before use.*

Test solution. Dissolve 20.0 mg of the substance to be examined in the mobile phase and dilute to 100.0 ml with the mobile phase.

Reference solution (a). Dilute 1.0 ml of the test solution to 100.0 ml with the mobile phase. Dilute 2.0 ml of this solution to 10.0 ml with the mobile phase.

Reference solution (b). Dissolve 5 mg of *chlordiazepoxide impurity A CRS* in the mobile phase, add 25.0 ml of the test solution and dilute to 100.0 ml with the mobile phase. Dilute 2.0 ml of this solution to 50.0 ml with the mobile phase.

Reference solution (c). Dissolve 4.0 mg of *aminochlorobenzophenone R* in the mobile phase and dilute to 100.0 ml with the mobile phase. Dilute 1.0 ml of this solution to 100.0 ml with the mobile phase.

Column:

– *size*: *l* = 0.15 m, Ø = 4.6 mm,
– *stationary phase*: *octadecylsilyl silica gel for chromatography R* (5 µm).

Mobile phase: *acetonitrile R, water R* (50:50 *V/V*).

Flow rate: 1.0 ml/min.

Detection: spectrophotometer at 254 nm.

Injection: 10 µl.

Run time: 6 times the retention time of chlordiazepoxide.

Relative retention with reference to chlordiazepoxide (retention time = about 3.6 min): impurity A = about 0.7; impurity B = about 2.3; impurity C = about 3.9.

System suitability: reference solution (b):

– *resolution*: minimum 5.0 between the peaks due to impurity A and chlordiazepoxide.

Limits:

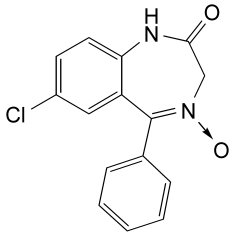
– *impurities A, B*: for each impurity, not more than the area of the principal peak in the chromatogram obtained with reference solution (a) (0.2 per cent),
– *impurity C*: not more than the area of the principal peak in the chromatogram obtained with reference solution (c) (0.2 per cent),
– *any other impurity*: for each impurity, not more than 0.5 times the area of the principal peak in the chromatogram obtained with reference solution (a) (0.1 per cent),
– *total*: not more than 2.5 times the area of the principal peak in the chromatogram obtained with reference solution (a) (0.5 per cent),
– *disregard limit*: 0.25 times the area of the principal peak in the chromatogram obtained with reference solution (a) (0.05 per cent).

Loss on drying (*2.2.32*): maximum 0.5 per cent, determined on 1.000 g by drying *in vacuo* at 60 °C for 4 h.

Sulphated ash (*2.4.14*): maximum 0.1 per cent, determined on 1.0 g.

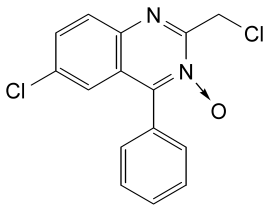
ASSAY

Dissolve 0.250 g in 50 ml of *water R*. Titrate with *0.1 M silver nitrate*, determining the end-point potentiometrically (*2.2.20*).



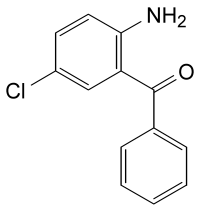
1 ml of *0.1 M silver nitrate* is equivalent to 33.62 mg of $C_{16}H_{15}Cl_2N_3O$.

STORAGE



Protected from light.

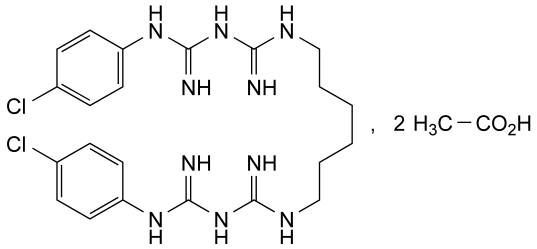
IMPURITIES



Specified impurities: A, B, C.

A. 7-chloro-5-phenyl-1,3-dihydro-2*H*-1,4-benzodiazepin-2-one 4-oxide,

B. 6-chloro-2-(chloromethyl)-4-phenylquinazoline 3-oxide,



C. (2-amino-5-chlorophenyl)phenylmethanone (aminochlorobenzophenone).

corrected 6.0

CHLORHEXIDINE DIACETATE

Chlorhexidini diacetas

$C_{26}H_{38}Cl_2N_{10}O_4$ M_r 625.6
[56-95-1]

DEFINITION

1,1′-(Hexane-1,6-diyl)bis[5-(4-chlorophenyl)biguanide] diacetate.

Content: 98.0 per cent to 101.0 per cent (dried substance).

CHARACTERS

Appearance: white or almost white, microcrystalline powder.

Solubility: sparingly soluble in water, soluble in ethanol (96 per cent), slightly soluble in glycerol and in propylene glycol.

IDENTIFICATION

First identification: A.

Second identification: B, C, D.

A. Infrared absorption spectrophotometry (*2.2.24*).

Comparison: *chlorhexidine diacetate CRS.*

B. Dissolve about 5 mg in 5 ml of a warm 10 g/l solution of *cetrimide R* and add 1 ml of *strong sodium hydroxide solution R* and 1 ml of *bromine water R*. A deep red colour is produced.

C. Dissolve 0.3 g in 10 ml of a mixture of equal volumes of *hydrochloric acid R* and *water R*. Add 40 ml of *water R*, filter if necessary and cool in iced water. Make alkaline to *titan yellow paper R* by adding dropwise, and with stirring, *strong sodium hydroxide solution R* and add 1 ml in excess. Filter, wash the precipitate with *water R* until the washings are free from alkali and recrystallise from *ethanol (70 per cent V/V) R*. Dry at 100-105 °C. The residue melts (*2.2.14*) at 132 °C to 136 °C.

D. It gives reaction (a) of acetates (*2.3.1*).

TESTS

Chloroaniline: maximum 500 ppm.

Dissolve 0.20 g in 25 ml of *water R* with shaking if necessary. Add 1 ml of *hydrochloric acid R* and dilute to 30 ml with *water R*. Add rapidly and with thorough mixing after each addition: 2.5 ml of *dilute hydrochloric acid R*, 0.35 ml of *sodium nitrite solution R*, 2 ml of a 50 g/l solution of *ammonium sulphamate R*, 5 ml of a 1.0 g/l solution of *naphthylethylenediamine dihydrochloride R* and 1 ml of *ethanol (96 per cent) R*, dilute to 50.0 ml with *water R* and allow to stand for 30 min. Any reddish-blue colour in the solution is not more intense than that in a standard prepared at the same time and in the same manner, using a mixture of 10.0 ml of a 0.010 g/l solution of *chloroaniline R* in *dilute hydrochloric acid R* and 20 ml of *dilute hydrochloric acid R* instead of the solution of the substance to be examined.

Related substances. Liquid chromatography (*2.2.29*).

Test solution. Dissolve 0.200 g of the substance to be examined in the mobile phase and dilute to 100 ml with the mobile phase.

Reference solution (a). Dissolve 15 mg of *chlorhexidine for performance test CRS* in the mobile phase and dilute to 10.0 ml with the mobile phase.

Reference solution (b). Dilute 2.5 ml of the test solution to 100 ml with the mobile phase.

Reference solution (c). Dilute 2.0 ml of reference solution (b) to 10 ml with the mobile phase. Dilute 1.0 ml of this solution to 10 ml with the mobile phase.

Column:

– *size*: *l* = 0.2 m, Ø = 4 mm;
– *stationary phase*: *octadecylsilyl silica gel for chromatography R* (5 µm).

Mobile phase: solution of 2.0 g of *sodium octanesulphonate R* in a mixture of 120 ml of *glacial acetic acid R*, 270 ml of *water R* and 730 ml of *methanol R*.

Flow rate: 1.0 ml/min.

Detection: spectrophotometer at 254 nm.

Equilibration: with the mobile phase for at least 1 h.

Injection: 10 µl.

Run time: 6 times the retention time of chlorhexidine.

System suitability: reference solution (a):

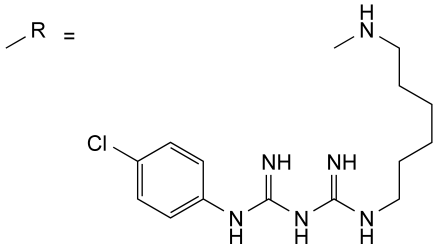
– the chromatogram obtained is similar to the chromatogram supplied with *chlorhexidine for performance test CRS* in that the peaks due to impurity A and impurity B precede that due to chlorhexidine; if necessary, adjust the concentration of acetic acid in the mobile phase (increasing the concentration decreases the retention times).

Limits:

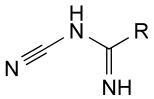
– *total*: not more than the area of the principal peak in the chromatogram obtained with reference solution (b) (2.5 per cent);

– *disregard limit*: the area of the principal peak in the chromatogram obtained with reference solution (c) (0.05 per cent); disregard any peak with a relative retention time with reference to chlorhexidine of 0.25 or less.

Loss on drying (*2.2.32*): maximum 3.5 per cent, determined on 1.000 g by drying in an oven at 105 °C.

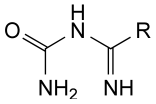


Sulphated ash (*2.4.14*): maximum 0.15 per cent, determined on 1.0 g.



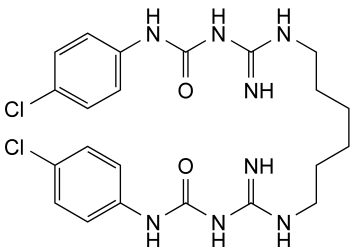
ASSAY

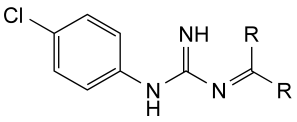
Dissolve 0.140 g in 100 ml of *anhydrous acetic acid R* and titrate with *0.1 M perchloric acid*. Determine the end-point potentiometrically (*2.2.20*).



1 ml of *0.1 M perchloric acid* is equivalent to 15.64 mg of $C_{26}H_{38}Cl_2N_{10}O_4$.

IMPURITIES

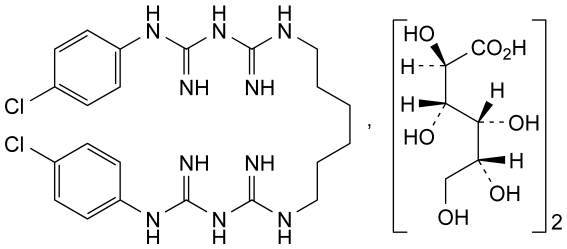




A. 1-(4-chlorophenyl)-5-[6-(3-cyanoguanidino)hexyl]-biguanide,

B. [[[6-[5-(4-chlorophenyl)guanidino]hexyl]amino]imino-methyl]urea,

C. 1,1′-[hexane-1,6-diylbis[imino(iminocarbonyl)]]bis[3-(4-chlorophenyl)urea],



D. 1,1′-[[[[[(4-chlorophenyl)amino]iminomethyl]imino]-methylene]bis[imino(hexane-1,6-diyl)]]bis[5-(4-chlorophenyl)biguanide].

CHLORHEXIDINE DIGLUCONATE SOLUTION

Chlorhexidini digluconatis solutio

$C_{34}H_{54}Cl_2N_{10}O_{14}$ M_r 898

[18472-51-0]

DEFINITION

Aqueous solution of 1,1′-(hexane-1,6-diyl)bis[5-(4-chlorophenyl)biguanide] di-D-gluconate.

Content: 190 g/l to 210 g/l.

CHARACTERS

Appearance: almost colourless or pale-yellowish liquid.

Solubility: miscible with water, with not more than 3 parts of acetone and with not more than 5 parts of ethanol (96 per cent).

IDENTIFICATION

First identification: A, B.

Second identification: B, C, D.

A. Infrared absorption spectrophotometry (*2.2.24*).

Preparation: to 1 ml add 40 ml of *water R*, cool in iced water, make alkaline to *titan yellow paper R* by adding dropwise, and with stirring, *strong sodium hydroxide solution R* and add 1 ml in excess. Filter, wash the precipitate with *water R* until the washings are free from alkali and recrystallise from *ethanol (70 per cent V/V) R*. Dry at 100-105 °C. Examine the residue.

Comparison: *chlorhexidine CRS*.

B. Thin-layer chromatography (*2.2.27*).

Test solution. Dilute 10.0 ml of the preparation to be examined to 50 ml with *water R*.

Reference solution. Dissolve 25 mg of *calcium gluconate CRS* in 1 ml of *water R*.

Plate: *TLC silica gel G plate R*.

Mobile phase: *concentrated ammonia R, ethyl acetate R, water R, ethanol (96 per cent) R* (10:10:30:50 *V/V/V/V*).

Application: 5 µl.

Development: over a path of 10 cm.

Drying: at 100 °C for 20 min and allow to cool.

Detection: spray with a 50 g/l solution of *potassium dichromate R* in a 40 per cent *m/m* solution of *sulphuric acid R*.

Results: after 5 min, the principal spot in the chromatogram obtained with the test solution is similar in position, colour and size to the principal spot in the chromatogram obtained with the reference solution.

C. To 1 ml add 40 ml of *water R*, cool in iced water, make alkaline to *titan yellow paper R* by adding dropwise, and with stirring, *strong sodium hydroxide solution R* and add 1 ml in excess. Filter, wash the precipitate with *water R* until the washings are free from alkali and recrystallise from *ethanol (70 per cent V/V) R*. Dry at 100-105 °C. The residue melts (*2.2.14*) at 132 °C to 136 °C.

D. To 0.05 ml add 5 ml of a 10 g/l solution of *cetrimide R*, 1 ml of *strong sodium hydroxide solution R* and 1 ml of *bromine water R*; a deep red colour is produced.

TESTS

Relative density (*2.2.5*): 1.06 to 1.07.

pH (*2.2.3*): 5.5 to 7.0.

Dilute 5.0 ml to 100 ml with *carbon dioxide-free water R*.

Chloroaniline: maximum 0.25 per cent, calculated with reference to chlorhexidine digluconate at a nominal concentration of 200 g/l.
