DISCOUNT SHEET

The following **Discounts** are subject to change without notice:

10 per cent on following goods, and an additional discount of **5** per cent when cash accompanies the order:

All Type, Borders, Ornaments and Metal Rule Corners of the **Inland Type Foundry**.

Benzine Cans (except
Golding)
Brass Type
Cabinets—Bookbinders',
Galley, Ink, Ink and Roll-
er, Mail-List, Specimen

Engravers' Tools
Cases—Harris Rule and all
Quarter Size
Composing Sticks, except
Rouse and Standard.
Mallets

Planers
Press Tape
Roller Cores and Stocks
Saws
Tablet Cement
Type Wash

15 per cent on Brass Circles, Ovals, Curves and Clamps, Wrought Iron and Steel Chases, and an additional discount of **5** per cent when cash accompanies the order.

25 per cent on following goods, and an additional discount of **5** per cent when cash accompanies the order:

Bellows
Brass Braces
Brass Corner Quads
Brass Corners
Brass Dashes
Brass Leaders
Brass Leads and Slugs
Brass Rule—all kinds
Brass Scoring and Perfor-
ating Rule
Cabinets—Wisconsin and
other regular styles
Cases—except Patent and
Quarter Size

Case Stands and Racks—
except the Autocrat
Galleys—Brass-Lined and
All-Brass; Challenge
Plate and Riveted Zinc
Imposing and Ink Stones
Inks—Job
Keys—Hempel Quoin
Lead and Slug Racks
Metal Furniture
Metal Leads and Slugs
Metal Rule—labor-saving
and in 18-inch strips.

Quoins—Genuine Hempel
Quoin Keys—All Kinds.
Side and Foot-Sticks
Steel Cutting, Scoring and
Perforating Rule
Proof Press—C. & P.
Stereotype Blocks
Wood Furniture and Reg-
let
Wood Quoins
Wood Rule
Wood Type Sorts

50 per cent on Challenge Hempel Quoins, END WOOD TYPE (except sorts) and Labor-Saving Wood Border, and an additional discount of **5** per cent when cash accompanies the order.

The following goods are **not**, subject only to the discount of **5** per cent when cash accompanies the order:

Addressing Machines and
Cabinets—Mercantile
Benzine Cans—Golding's
Blankets—Rubber and
Felt
Bodkins and Tweezers
Brushes—Benzine and Lye
Case Stands—Autocrat
Cast Iron and Job Chases
Composing Sticks—Stand-
ard and Rouse Job

Copper and Brass Thin
Spaces and Cases there-
for
Date-Lines
Gage Pins
Imprints
Inks—News
Lead and Rule Cutters
Mallets—Acme and Hor-
ton

Roller Felt
Staples—for Breech-Load-
er: 5000 lots 22c per 1000,
25,000 lots 18c per 1000,
50,000 lots 16c per 1000;
for Acme, Yarger and
other machines: 5000 lots
18c per 1000, 25,000 lots 15c
per 1000, 50,000 lots 14c,
100,000 lots 13c per 1000.

On all other goods we shall be pleased to quote special prices.

OUR TERMS—Cash with order. Customers having outstanding accounts will be allowed the spot cash discount, provided bills are paid on or **BEFORE** the 10th of the month following date of invoice.

Old Metal, delivered at our establishment, will be taken in exchange for new type of our own manufacture, at regular discount, and allowed for as follows: Old Type, 7 cents per pound; Old Leads, Slugs, Stereotypes, 4½ cents per pound, and Brass Rule, 7 cents per pound. Mixed metals will not be accepted at any price.

Pertinent Facts

• • •

The Question of Quality.....The keen competition which obtains in every branch of the printing industry has produced the unfortunate result that the printer, in purchasing material, too often looks only at the **first cost** when placing his order. Unfortunate, because there is as great a difference in the various **qualities** of type as in the various grades of paper, ink, or printing itself, and **low-priced** type is always the **dearest** in the end. While in the last decade great improvements have been made in the durability and accuracy of type, many of the foundries limit their competition to price alone, the result being an inferior article which is dear at any price. A few dollars saved by purchasing type which is not of the very best often involves a loss of many hundred times the amount. A large number of printers will testify that in accuracy, finish and improved wearing qualities alone, our products so far surpass all others as to justify a large increase in price, if we were disposed to make it. With the single exception of point bodies, until the Inland Type Foundry entered the field, little attention was given to the production of type which would economize the time of the compositor and pressman.

Labor-Saving.....The introduction of our new system of **Standard Line Unit Set Type**, with its many labor-saving features, is of vast importance to all printers, because by its use they can do **superior** work at a great **saving** of **time** and **labor**, as well as **saving** a large amount of **material**, and consequently its **first cost**.

Type and Wages.....In all offices the amount invested in type is small when compared with the yearly expenditure for **wages** in the composing-room. It therefore follows that type which accomplishes the saving of, say, only 10 per cent in labor will cost the proprietor *nothing*, as it will pay for itself in a year, and thereafter yield a large profit on the investment. The printers who have adopted our system will testify that the **saving** in **composition** is large; in some cases being fully **50 per cent**. Not only is this true of the composing-room, but it also applies in no small degree to the press-room. **Standard Line Unit Set Type**, being absolutely true and of uniform height, requires much less "patching up," and effects a consequent saving of much time in make-ready.

Point Bodies.....Not a single objection can be urged against this system. Being cast on point bodies, our type will work to **advantage** with that of other foundries. *It is unnecessary for an office to be entirely equipped with our material to derive benefit from Standard Line Type.* However, the larger the amount of our type, the greater

STANDARD TITLE LINE.....In some cases—such as “two-line” fonts having no lower-case—where casting faces on regular Standard Line would mean an unnecessary shoulder at the bottom, we cast them on Standard Title Line. This uniform line for each body will correspond with the Standard Line of the next larger body. Thus, any 10-point Title Gothic will line with any 12-point Gothic, or, for that matter, with any other 12-point face, if a 2-point lead be placed at the bottom of the 10-point face.

STANDARD SCRIPT LINE.....In some other cases—such as Scripts, which have descenders of unusual length, which would kern too much if cast on Standard Line—we cast faces on Standard Script Line, which corresponds with the Standard Line of the next smaller body. Thus, our 24-point Commercial Script will line with any of our regular 20-point job faces, if two 2-point leads are placed below the latter, and with any of our 18-point faces, if you place two 2-point leads below and one 2-point lead above the 18-Point.

Every Condition Considered.....The Standard Title Line and Standard Script Line meet every contingency that the regular Standard Line could not meet. They have all the advantages possessed by Standard Line, and all three lines work harmoniously together.

German Faces.....Our system also enables the compositor to use Roman and German together, as shown in the specimens of our German No. 1. In this case he needs but one set of figures, and the effect so frequently seen in job offices working in both these languages, using type of other makes—1888564724581327—cannot possibly occur.

Leaders.....Our STANDARD LINE LEADERS will line with any of our Roman or job letters (as illustrated after the side-heads of this preface). This means not only a great saving of time, but of first cost in material, and lessens the chances of mistakes and poor work. Leaders of one size can be made to line with type of any other body by using regular leads for justification.

Position of Line.....The line is placed in such a position that the different sizes of type faces will line with one another, if regular leads, slugs or quad lines are used to justify the difference between the bodies, as for instance the following lines:

BEST ^{GRAND STANDARD LINE} **TYPE**
SYSTEM OF LINING

This saves a great deal of labor where it is desired to use different sizes of a series in combination as caps and small caps. Not only will all sizes of the same series line, but also those of two or more series of different faces; a condensed or fancy capital can therefore be lined with wider letters.

Use of Rules.....Furthermore, the line is placed in such a position that it will justify with ordinary 2-point dotted.....or singlerule, justifying easily by the use of regular leads and slugs, as in the following example, in which the slugs and leads used for justification are shown black as tho type high:

New York, [REDACTED] 190 [REDACTED]

Saint Louis, [REDACTED] 190.....

This is of great importance in blank-work and headings, as experienced printers can readily understand.

THE SUBJECT OF WIDTH.....For many decades one of the most vexing problems for both printer and typesetter has been that of spacing and justification. It has always been recognized that if there **could** be devised a perfect system of widths for the spacing-material and the various characters in each font, this part of the compositor's work would be greatly simplified and lightened, and that in a given time he could set considerably more matter. At various earlier times studious craftsmen have devoted time and brains to the problem, but the working out of a satisfactory system was **extremely** difficult, if not impossible, before the day when the scale of point bodies was adopted, because the irregularity in the proportions of the various bodies to one another precluded the finding of a definite basis upon which to build a scheme of widths. Shortly before the general introduction of point bodies, a solution was attempted with a scheme of widths which was based, seemingly for want of a better unit, upon a fractional part of the width of a 13-em pica newspaper column. Obviously, this type would not do for a 12-em, a 14-em, or any measure not a multiple of 13-em pica. **This** proving unsatisfactory, the next step was to make the unit a fraction of a single pica. The system was called "self-spacing," but sadly belied its name in practice, as will readily be seen from the fact that the unit was made to vary, from 7-to-pica, with 8-to-pica, 9-to-pica, 10-to-pica and 11-to-pica, to 12-to-pica—hence, indefinite, and in truth, **no unit at all**. The spaces, quads, figures, fractions, references, dashes, braces, marks, etc., were peculiar to each face, and could not be used interchangeably with any other face on the same body. Any mixture of the **spacing-material** would cause endless confusion, and instantly destroy any possible advantages

the system might possess. Another scheme, luckily not put into practice, was to make the unit a fraction of the width of the lower-case m. As the m varies according to the fatness of each font, the units would have been as different as they are under the so-called self-spacing system, and the type, of course, every bit as much a disappointment. When the point bodies came into being, the idea of using the "point" as a unit in the systematization of the widths as well as the bodies of type was not long in finding birth. We may mention as pioneers in promulgating the point-set plan, Messrs. Nelson C. Hawks, of San Francisco, California, and F. Haller-Goldschach, of Berne, Switzerland, who had fonts cast in accordance with it. Later on, another house made a trial of point sets, and cast several Roman fonts on them, but rather discredited the system by the manner in which the application of it was made. For some unaccountable reason, the sets were divided into thirteen groups, of which those for the even bodies (6-point, 8-point, 10-point, 12-point) were cast on whole multiples of a point, while those for the uneven bodies (7-point, 9-point, 11-point) were cast on multiples ending in half-points. An arbitrary treatment like this could only result in many of the letters being cast on sets that were too thick, and many others on sets which were too thin. Added to this was the general slouchiness of the cutting and fitting, which gave these point-set fonts a most irregular and distasteful appearance, productive of uncomplimentary criticism and doubt as to the practicability of the point as a unit in solving the space and justification problem.

The Conditions.....The unit *must* be small enough for the most condensed faces on the smallest body. For larger and wider faces multiples of this unit can be used. That the unit of the smallest and narrowest face must justify perfectly with the largest and widest faces is absolutely necessary. It would be absurd to use the same unit for a 72-point extended as for a 6-point condensed face. The width is, of course, to a certain extent proportionate to the body, and on a very small and narrow face a small unit is an *absolute necessity*. The advantage of easy justification would be lost if this unit were taken for the larger sizes, on account of the number of different sets which it would necessitate.

The Solution.....The Inland Type Foundry has solved this problem in a very simple and sensible way. Its unit is one-eighth of a point, but this minimum unit is reserved for only the smallest and most condensed faces. Wherever it is possible, faces are put on multiples of quarter-point, half-point or one-point. **Over half** the fonts shown in this book are cast on multiples of half-point or one-point. As these units are all divisible by one-eighth point, it will be seen that all our type is cast on the same system. The

full advantage of easy justification is obtained in every individual case, and at the same time nothing has been sacrificed in the face, and no characters have been distorted. Appearance is, after all, the *most* important thing, and we believe we can be justly proud of the beauty and regularity of the faces shown in the following pages. Only within a comparatively short time have we been able to educate our workmen to cut the smaller sizes of body-letters on multiples of half-point set, and at the same time retain the beauty of face, on which we have *always* insisted. Still, our line of body-letter cast on multiples of half-point is very large, including in the Romans, Nos. 26, 27 and 28, and in the Old Styles, Nos. 11, 12, 13 and 14. To show that the adoption of a point as the smallest multiple is impractical thruout, it is only necessary to call attention to the fact that on such bodies as 7-point, 9-point and 11-point the en quad will not divide to even points, and in order to have such faces on multiples of even points, it would be necessary to have the figures and en characters cast on special sets, which would involve great confusion. Ordinarily, the figures and en quads on 5½-point body are cast on 2¼-point set. In our half-point body-letter series we have put these characters on 3-point set instead of the regular en, and it was only after taking into consideration that this size is seldom used in connection with other type that we determined upon this departure.

Auxiliary Material.....All our spaces and quads have from the *beginning* been cast on point widths, and it is but an extension of this principle when we apply it to the faces with which the spaces and quads are to be used. The figures and points of all faces, job-letter as well as Roman, and all references, dashes, fractions, marks, signs and other characters, have *always* been cast by us on point widths, so the extension of the principle to take in entire fonts is not so very great. The fact that this auxiliary material is already cast on the point-set system goes to show that the danger of mixtures and other inconveniences which attended the type erroneously called "self-spacing," is not to be met with in our point-set type. The auxiliary material can be used with all fonts.

EXAMPLES.....To give a clear insight into the point-set system of casting type, an illustration of 10-point Old Style No. 11, is shown on page 9. The characters making up the font are grouped according to their widths, and the sets on which they are cast are indicated under each group. In ~~some~~ point-set and other schemes of widths, attempts were made to limit the number of these groups, and to have each different group contain the same characters thruout the series of bodies, without regard to the appearance of the faces in print. Hence many letters were cut or fitted much too wide or too narrow, giving the series an irregular, repulsive aspect. There

being **no** reason why the groups should be **thus limited** or arranged, we have engraved and cast each character on the set that was most appropriate to it individually. Tho this increases the number of groups, the proper result is obtained, and the faces we show are found to be uniform and beautiful in the highest degree. In making a contrast between fonts cast according to the common system of irregular sets and those cast on the point-set

system adopted by the Inland Type Foundry, one will observe that the ordinary font has more than ninety different sets, while the latter has but **thirteen to twenty**, each one of which bears a distinct proportional relation to the body, a relation only held by the en-set figures, and occasionally the punctuation-marks, under the former system, or as would be more appropriately said, lack-o'-system. In our point-width body-letter faces, the figures, points and quads stay unchanged as regards set.

One Advantage.....One of the advantages of point-set which should not be overlooked, is its greater adaptability for time-tables and other tabular work, on the one hand harmonizing with point-body brass rules and leads, and on the other permitting tight and perfect justification in narrow columns, which was heretofore an *impossibility*. This not only saves time in the composing-room, but also, in the press-room, as it renders spaces and quads less liable to "work up." Consequently there are fewer "stops," to push down the rebellious quads and spaces, the output of the press-room is increased and there are fewer spoiled sheets. Casting-up tables by points, instead of ems, is productive of **quicker** and **better** results, and if point-set type is used the advantages are still greater. Occasionally, in narrow columns, spaces can be set sideways where it may be inconvenient to use leads, which makes point-set type still more advantageous.

Sorts.....To these great advantages may be added mention of another, to the effect that the printer can always rely on getting his sorts to match the original font *exactly* in width, as each character has a definite thickness or width, and is cast to steel standards in width as well as body. The use of steel dies in place of the old type-metal standards, for the purpose of gaging the type during the process of manufacture, gives assurance that the product will be at all times the same. In taking a thoro survey

of the point-set faces made by this foundry, the interested printer will note that every possible point of advantage has been considered. No special justifiers are required for tabular work, as the regular spaces can be used. Suppose, for instance, a customer wants to have inserted in the body of a price-list a line of display-type, you do not have to explain to him the difficulties in the way of justification, etc., incident to the old systems—with our type you

Year	Popula- tion	Increase	Increase Per cent.	Bonds
1860.....	2000		50	\$40,000
1870.....	3000	1500	100	\$30,000
1880.....	6000	3000	150	\$25,000

can easily meet his wishes. The above specimen shows an ordinary statistical table, in which 8-point Roman No. 20 (5-point set), 10-point Kelmscott and 12-point Condensed Gothic No. 1 figures are used, justifying perfectly by the use of regular spaces.

Widths of Figures.....We have paid particular attention to our figures. As has before been mentioned, both in job faces and Romans, these all justify to multiples of one point, except en-set figures, on 5-point, 5¼-point, 7-point, 9-point and 11-point bodies, and when other than en-set, need no special justifiers, as the regular spaces can be used with them in tabular work. Except in some faces where the figure 1 is made narrower, all figures are uniform in width. Even in these few cases it is of such thickness that the addition of a thin or other space on each side will make it justify with the other figures. Where the figure 1 is ordinarily cast on a narrower set than the others, we will, when specially ordered, cast it on the same set. See pages showing point-set figures.

Old Style Figures.....In the Old Styles the figures above and below the line have been abandoned, and while the Old Style design has been retained, these characters are made uniform in size and line, adapting them to all kinds of work, and making them more legible and beautiful. There are a few exceptions, but even in these cases, the faces being cast on *Standard Line*, any of our lining figures may be substituted—the printer having his choice.

SMALL CAPS AND NICKS.....All small-cap sorts likely to be confused with similar lower-case letters have an extra nick, and all Old Style body-letters have one more nick than the corresponding size of Modern Roman. In all **title faces**, such as Title Gothic and Brandon, where there are several sizes of face on one body, each size has a different nick, to distinguish it from the others.

Kerning Letters.....The f's and j's, except in Italics and Scripts, are made non-kerning, not only relieving the printer of the useless

expense of the combinations, but exempting him from the danger of type breaking, and insuring better electrotypes. Except in a very few larger sizes, where it will cause no inconvenience, none of the descending letters in the lower case overhang the body.

High-to-Paper.....On account of our improved methods of making and fitting matrices, and superior casting-machines, we are able to guarantee the perfectness of our type in respect to its height, a point which every pressman will appreciate when he notes the *saving in make-ready* resulting from the use of our products.

Our Metal.....This is of a new composition. We **guarantee** our type to wear longer, print better and to give finer results in electrotyping and stereotyping than any other. In finish and accuracy it is unapproachable.

Our Faces.....Particular attention is called to the regularity as well as the beauty of our productions. Our series are series in fact, and each size is an exact reproduction of the others. Other foundries have not paid such careful attention to this matter, and, in consequence, their faces—particularly the standard job faces—often vary in width, weight and design to such extent that when two or more sizes of a series are used in the same job, the effect is incongruous and offensive to good taste. Compare, for instance, our Gothic No. 8 series with a similar face of other make, as shown below :

This is only **one** example of the difference between our cutting and that of others.

Our Foundry.....Our equipment is the very best possible. We have endeavored to profit by our past experience, and have established a plant of the latest and most improved machinery, which is mostly of our own design and manufacture.

Leads, Slugs and Brass Goods.....Our Brass Rule department is complete in every detail, and in addition to the specimens shown herein, we can furnish special designs. We solicit jobbing in leads, slugs and all brass goods.

Machinery.....Having our own machine and wood-working shops, we can attend to press-repairing, as well as designing of special machinery. We make a complete line of machinery and supplies for **Electrotypers, Stereotypers and Photo-Engravers**. Special circulars sent on application.

Other Goods.....We keep everything required by the printer in the way of cases, cabinets, stands and other wood goods, leads, slugs, furniture, inks, tapes, quoins and all sorts of printers' supplies. We are agents for all makes of paper cutters, bookbinders'

machinery and printing-presses, including the best makes of Old Style Gordons, cylinder presses, etc. We buy and sell, and repair in our own shops, second-hand machinery, and from time to time issue lists, which may be had on application.

Our Relation to Trusts.....We desire to emphasize the fact that ours is the only typefoundry in the South, and west of the Mississippi (excepting San Francisco), that is *not* connected with the Type Trust. Having no connection with any combination, we are in position to make our prices as low as is consistent with the superiority of our goods. Terms and discounts sent on application.

In Conclusion..... We cannot but felicitate ourselves upon the advances we have made. This edition shows over 830 faces of type, all produced within eight years—an assortment extensive enough to enable any one to select a complete office, however large, and thus get the full benefit of Standard Line. When we started, our innovations were decried as being impractical, and our plans denounced as visionary. The large business we have built up in spite of the very keen competition and panicky times, shows how quick printers are to appreciate a really good thing. Several other foundries have, with our instruction and assistance, adopted the Standard Line system. *Some* other foundries claim that their type possesses advantages similar to those of our **Standard Line**, but we warn printers not to believe such statements. To carry out the system properly requires a thoro understanding of all the conditions that **Standard Line** has met; and, from tests we have made, we are prepared to demonstrate that these concerns are either ignorant of these conditions, or altogether incompetent to meet them.

Our Specimen Book.....In comparing this Specimen Book with others, do not lose sight of the fact that there has been no **padding** in order to produce a bulky volume. Open the book wherever you wish, and you will find something useful, while it is almost a certainty that if you pursue the same plan with one of the bulky books of our competitors you will open the page at some face which is obsolete, and which you would not purchase at any price. Such matter only confuses and distracts the prospective purchaser, and we have studiously avoided introducing it.

CORRESPONDENCE.....We solicit correspondence, and shall take pleasure in giving particulars about our manufactures, and those for which we are agents. Circulars and prices of special goods will be sent on request.

INLAND TYPE FOUNDRY.

SAINT LOUIS, December, 1901.

Read Carefully

• • •

THE **Prices** in this book are subject to **discount**. If you have no discount sheet, send for one and paste it inside the cover of this book.

PRICES and **DISCOUNTS** are subject to change without notice.

THIS book is issued to our patrons to aid them in making selections, and we would remind them that it is only necessary to give the **Size, Name** and **Number** (if any) of the **Type**, or **Number** of the **Rule** desired, to insure the accurate filling of their orders.

Do not cut this book under any circumstances.

TAKE a separate line or paragraph for each item in your order. If you desire to convey information regarding other matter than your order, please put it on another sheet.

WHEN ordering a font of **Type** or **Sorts**, remember that every foundry has its own **special numbers**, and that the number, name of type, and specimen book, should always be given. Our "10-point Roman No. 20," for instance, doesn't mean that the face is similar to one designated by the same number in any other foundry's specimen book.

WHEN you are ordering type for newspaper or book work, state whether or not you want the fonts to contain **Italics, Leaders, Fractions** or **Commercial Marks**, as none of these are sent unless **special** ordered. In ordering "lower-case" or "caps," mention whether you wish to include points and figures, otherwise we shall use our judgment.

STATE particularly what styles of **Fractions** you want to accompany your Roman fonts. Make your own selections from the specimens shown, as we prefer not to select for you.

JOB fonts, such as **Titles, Antiques, Ornamented**, etc. (except **Scripts**), are put up without **Spaces and Quads**, and if you want them for any size of body it will be necessary for you to order them separately.

In ordering fonts of job letter by **weight**, specify whether or not **spaces** and **quads** are to be included, otherwise we shall consider that we are authorized to use our own judgment.

In ordering **Sorts** to match type you already have, state the name and number of the face, as well as the size of body; or, if you cannot do this, send capital "H" and lower-case "m" (as little used as possible) of the fonts the sorts are to work with. Also state the number of pounds or ounces you want of each particular sort.

WE very often receive **samples** that are so much worn that it is an utter impossibility to determine the face. Send the very newest or

least worn that you can find, and so prevent trouble, delay and dissatisfaction on both sides.

WHEN you write "inclosed you will find samples," always give another look in the envelop to corroborate the assertion. We frequently look for the samples in vain. This omission causes the writing of two letters and the loss of some time in the filling of orders.

WHEN sending samples always wrap them so carefully that they will not be damaged or broken in the mails. The postmaster's dating- and cancelling-stamp causes the most damage and should be guarded against.

AN ordinary cap box holds about 6 ounces of type, the lower-case "e" about 3 pounds, the "a" about 2 pounds, the "b" about 15 ounces, and the "k" box about 6 ounces, when full.

Do not sort up your case because the boxes are not equally full. The proper proportion often requires that one box should not contain as much as another of equal size. Thus in a 50-pound font the lower-case "o" box should contain 30 ounces, while the lower-case "c" box should have but 14 ounces.

SORTS are cast to order, and are not returnable if filled according to order. So carefully read over your sort-order before sending it in.

OUR Borders, Ornaments and Cuts are numbered systematically. The first figures of each number indicate the body. Thus, Cut No. 7201 is cast on 72-point body, and border No. 1801 on 18-point body.

WHEN you want **Leads, Advertising Rules or Dashes**, send one of your leads; or, if you order them cut to certain ems long, be careful to state what particular ems you mean, whether 6-point, 8-point, 10-point or 12-point. Unless otherwise specified we shall understand 12-point ems.

SHOULD you order Brass Rule to be *mitered* to any size, give either the "inside" or "outside" measurement, and if it is to be cut from Double Rules, state whether you wish the *heavy* line *inside* or *outside*.

IN ordering **Column Rules**, be sure to give length over all, as well as length of face. Also length of shoulder, and length of shank, if they are to be provided with the latter. Better still, send a diagram. In ordering column rules *beveled* for linotype matter, give us dimension of body, or type and body, thus: 5×6 points or 6×7 points.

IN ordering **Printing Inks or Bronzes**, state the quantity and price per pound or ounce of each kind you want.

WHEN you want **Chases**, give the "INSIDE" or "OUTSIDE" measurement; or, better still, send a diagram.

Shipping Directions should not be neglected. State whether goods are to be sent by water or railway, freight or express, naming the route, otherwise we will assume that we are to use our own judgment.

THE weight of a single parcel by **mail** is limited to 4 pounds. Type lots weighing over 4 pounds can be divided as required to send by mail. The rate of postage is 1 cent per ounce. But it is safer and generally cheaper to forward over 2 pounds by express, and over 50 pounds by freight. We are not responsible for the goods after they leave our establishment.

WHEN small items are desired sent by mail, enough extra cash should be remitted for postage.

IF goods fail to arrive within a reasonable time, notify us and we will send a tracer after them. If freight charges seem too heavy, advise us of the rate and amount paid. On the arrival of goods, check them by the bill, and notify us at once of any errors.

IMMEDIATELY upon type being received, if it be a job or display font, *take a proof* of it, and examine carefully to see if every letter is in the font, before laying in the case. We furnish no sorts on any claim for shortage, unless a proof of the font as it appeared before being laid is sent with the claim. Every font is guaranteed complete.

THE regular paging-galley used by founders, which is about 5x6 inches inside, will be found of great advantage in laying type.

WHEN you ship **Old Type**, see that your name is on each box, as well as our address. Notify us by mail of the shipment, and pack **type, leads, electrotypes** and **brass**, in **separate parcels**. Do not melt them up, and do not include zinc-etchings, bottle-tops, or anything except printers' metal, otherwise the entire lot will be rejected. We do not purchase stereotype matter belonging to newspaper unions, or bases therefor.

Remit by post-office or express money orders, or draft on Saint Louis, Chicago or New York. On personal checks our banks make a charge for collection, which will be deducted from your remittance. Small amounts may be sent in postage stamps.

SHOULD you desire to open an account with a foundry where you have no acquaintance, send **references** from your paper and supply houses, or the **money**. Or, if you wish a cut or small package sent C. O. D., send enough money to pay at least charges, or you may suffer from delay while the founder writes you for a remittance, or for references as to your financial standing. Confidence is of special value in rendering business relations pleasant, and nothing else so tends to give confidence as ready and prompt payments.

BE SURE to read your order over before sending it out. Every day we are compelled to hold orders until we can write our customers, often to their great inconvenience, because they have neglected such important points as the body or number of the type.

STANDARD LINE JUSTIFICATION TABLE, showing how to justify any two different bodies with one another so that their faces will line accurately together.

Copies of this table suitable for hanging in compositors' alleys, free to our customers.

STANDARD TITLE LINE FACES

Explanation of the Table.—Each group of figures states the amount in points, either of leads, slugs or quad lines, to be placed above and below the smaller body, when justifying any two bodies together in order to make their faces match on the same line.

The proper justification-figures for the combination of any two bodies are ascertained by noting the group found where the horizontal line of groups of one body meets the vertical line of groups of the other body.

Thus, for instance, to combine a 30-Point face with a 24-Point face, as caps and small caps, take the group of figures found where the 30-Point line crosses the 24-Point line. For STANDARD LINE faces the group reads "4 above, 2 below," indicating the use of two 2-Point leads above and one 2-Point lead below the 24-Point body, to justify its face in line with that of the 30-Point. For Standard Title Line faces the group reads "6 above, 0 below."

The figures above the diagonal line of bodies are given for faces cast on our regular Standard Line, and those below this line are for all faces cast on Standard Title Line.

The groups following the figure 2 are for the justification of 2-Point Rule, either single or dotted, with every body, insuring accurate lining of such in blank work or date-lines.

PRICE LIST OF BODY TYPE

BODY	25 pounds to 500 pounds.	500 pounds to 1000 pounds.	1000 pounds and over.
5-Point..... per pound	\$1.20	\$1.15	\$1.10
5½-Point.....	.74	.72	.71
6-Point.....	.64	.62	.61
7-Point.....	.56	.54	.53
8-Point.....	.52	.50	.49
9-Point.....	.48	.46	.45
10-Point.....	.46	.44	.43
11-Point.....	.44	.42	.41
12-Point.....	.42	.40	.40
14-Point to 24-Point, inclusive.....	.40	.40	.40

30-Point and larger, at Job-type prices.

Special prices on quantities of 2,000 pounds or over.

1-em, 2-em and 3-em quads in large quantities at lower prices.

Roman and German body type is put up in founts of 25 pounds, and multiples of 25 pounds. In each 25 pounds are included 5 pounds of spaces and quads. Body letter without spaces and quads is charged at a higher rate. Italic, accents, leaders, fractions and commercial marks will not be sent with Roman fonts unless specially ordered. If ordered in connection with Roman fonts, in proportionate quantity, Italic will be furnished at the price of Roman; otherwise Italic is charged at Job-type prices. The smallest font of Italic weighs 5 pounds.

Weight Fonts of all Job Type except Italics, Scripts and Extra Condensed Faces

OF ONE BODY AND FACE, ORDERED AT ONE TIME—In founts of 25 pounds, per pound:

5-Point.....	\$1.80	9-Point.....	\$0.80	16-Point.....	\$0.60
5½-Point.....	1.44	10-Point.....	.74	18-Point.....	.60
6-Point.....	1.16	11-Point.....	.70	20-Point.....	.60
7-Point.....	1.00	12-Point.....	.66	24-Point.....	.56
8-Point.....	.90	14-Point.....	.62	30-Point.....	.56

Sizes larger than 30-Point, minimum quantity, 50 pounds; prices same as for 30-Point.

Scripts or other sloping faces cast in Script molds are not sold at less than third-class prices in any quantity.

Write for quotations on large quantities of job-face figures and job type in founts of 100 pounds and upwards.

We furnish no quantity of job or body type for less than 35 cents net.

Special accents and marked letters will be cut to order, the cost being from \$2.00 to \$3.00 for making each matrix.

PRICE LIST OF JOB TYPE

BODY	Second Class	Third Class	BODY	Second Class	Third Class
3-Point and 4-Point .. per pound	\$3.60		12-Point.....per pound	\$0.74	\$1.16
4½-Point.....	.320		14-Point.....	.70	1.12
5-Point.....	\$2.00	2.80	16-Point.....	.66	1.00
5½-Point.....	1.60	2.40	18-Point.....	.66	1.00

9-Point.....	.90	1.44	36-Point.....	.62	.82
10-Point.....	.82	1.30	42-Point.....	.60	.78
11-Point.....	.78	1.22	48-Point and larger.....	.60	.72

Extra Condensed faces and Italics not cast in script molds, in founts of 25 pounds or over of all bodies from 5-Point to 30-Point, and of 50 pounds and over of all bodies larger than 30-Point, are sold at second-class prices, as given above.

PRICE LIST OF SPACES AND QUADS

Spaces and Quads are put up in job fonts at the following prices per font:

5-Point..... per font	\$1.20	11-Point..... per font	\$0.55	30-Point..... per font	\$0.55
5½-Point..... per font	1.00	12-Point..... per font	.55	36-Point..... per font	.60
6-Point..... per font	.65	14-Point..... per font	.55	42-Point..... per font	.65
7-Point..... per font	.65	16-Point..... per font	.55	48-Point..... per font	.75
8-Point..... per font	.65	18-Point..... per font	.55	54-Point..... per font	.85
9-Point..... per font	.55	20-Point..... per font	.55	60-Point..... per font	.90
10-Point..... per font	.55	24-Point..... per font	.55	72-Point..... per font	1.10

Spaces and Quads are also put up in assorted founts of 5 pounds, at body-type prices.

Look in catalog at rear for prices of SYSTEMATIC THIN SPACES (brass and copper.)

HOW TO ESTIMATE

To ascertain the Quantity of Plain Type required for a newspaper, magazine, or other work, find the number of square inches in the matter, and divide the same by four; the quotient will be the approximate weight. As it is impossible to set the cases entirely clear, it is necessary to add 25 per cent to large fonts, and 40 per cent to small, to allow for dead matter.

TABLE OF WEIGHT OF 2-POINT LEADS IN MATTER

Per 1000 ems	To Lead Solid Matter Ounces	In Leaded Matter. Ounces	Per 1000 ems	To Lead Solid Matter Ounces	In Leaded Matter. Ounces

THE LAKESIDE UNIT SYSTEM OF WEIGHTS OF PAPER

Thru the courtesy of Mr. Thos. E. Donnelley we are enabled to publish the following table in use at the Lakeside Press, Chicago. It will be found extremely useful to those who have occasion to calculate the weight and prices of paper.

The idea of this system is to have a certain number designate a certain thickness of paper, no matter what size it may be. For instance: If you should speak of an 80-pound paper, you may mean 25×38—80, 28×42—80, 32×44—80, or some other special size. The "80-pound" does not in any way designate the weight of the paper, unless you know the dimensions of the sheet. According to the Lakeside system, however, an 80-unit-weight paper would be the same weight per inch whether it was 24×36, 25×38 or 32×44. Being calculated decimally, it is very easy, knowing the size, to find the weight, for all one has to do is to find the number of square inches in the sheet, multiply the same by the units of thickness, and point off three ciphers.

UNIT: One ream of paper, 500 sheets count, one inch square, weighing one thousandth of a pound.	20×25 (500)	22×28 (616)	24×36 (864)	25×38 (950)	28×42 (1176)	32×44 (1408)
	500	500	500	500	500	500

TABLE OF STANDARD SIZES OF NEWSPAPERS

The following are the regular sizes of newspapers adopted by the auxiliary printers. As a matter of convenience in the buying of printing material and paper, we would advise parties planning new newspapers to adopt one of these sizes. The width of column is 13 ems 12-pt.

	Size of Paper	Size of Form	Column Rule	Head Rule
5-Column Folio.....	20×26 inches	18 × 23¼ inches	17¼ inches	11¼ inches
6-Column Folio.....	22×31 inches	19¼ × 28¼ inches	19¼ inches	13¼ inches
7-Column Folio.....	24×35 inches	21¼ × 33 inches	21¼ inches	15½ inches
8-Column Folio.....	26×40 inches	23¼ × 37½ inches	23¼ inches	17½ inches
9-Column Folio.....	28×44 inches	25¼ × 42 inches	26 inches	20 inches
4-Column Quarto.....	22×31 inches	18¼ × 29 inches	13¼ inches	8½ inches
5-Column Quarto.....	26×40 inches	23¼ × 37 inches	17¼ inches	11½ inches
6-Column Quarto.....	30×44 inches	27¼ × 41 inches	19¼ inches	13½ inches
7-Column Quarto.....	35×48 inches	32¼ × 45 inches	21¼ inches	15½ inches

NUMBER OF EMS IN ONE POUND OF TYPE

Two by two inches (four square inches) of solid type weigh approximately one pound.

5-Point.....	829 ems	7-Point.....	423 ems	10-Point.....	207 ems
5½-Point.....	685 ems	8-Point.....	324 ems	11-Point.....	171 ems

NUMBER OF WORDS IN A SQUARE INCH

In calculating the number of pages a manuscript will occupy, these figures may be used:

	Words to Sqr. In.		Words to Sqr. In.		Words to Sqr. In.
18-Point, solid	7	10-Point, solid	21	7-Point, solid.....	38
14-Point, solid	11	10-Point, leaded.....	16	7-Point, leaded.....	27
12-Point, solid	14	9-Point, solid	28	6-Point, solid.....	47
12-Point, leaded.....	11	9-Point, leaded.....	21	6-Point, leaded.....	34
11-Point, solid	17	8-Point, solid	32	5-Point, solid.....	69
11-Point, leaded.....	14	8-Point, leaded.....	23	5-Point, leaded.....	50

"Leaded," as here used, means the opening of lines with 2-Point leads.

WIDTHS OF OUR SPACES AND QUADS CAST ON SYSTEMATIC POINT SETS

Instead of casting spaces on fractional parts of the em of each body we have ALWAYS cast them on multiples of 1-Point and ½-Point. In a few of the smaller bodies we have added a 1¼-Point space, but this size is omitted in our Point-Set series of Romans. This system is in every way preferable to the old, and is open to no objections whatsoever. It will be noted that the quads, including en quad, are identical with those made by other foundries, and only in a VERY FEW instances are the spaces changed. Thus, in 6-Point, not only the quads but the ¾-em justifier, the 3-em space, the 4-em space and the hair space are identical with the old system. The only change is in the 5-em space (omitted entirely in our Point-Set faces), which is now 1¼-Points instead of 1½-Points as formerly.

Body	"Hair"	"6-em"	"5-em"	"4-em"	"3-em"	en-set	"¾-em"	em-set	2-em	3-em	
5-Point...	1		*1¼	1½	2	2½	3½	5	10	15	
5½-Pt...	1		*1¼	1½	2	12½	3½	5½	11	16½	
6-Point...	1		*1¼	1½	2	3	4	6	12	18	
7-Point...	1		*1¼	1½	2	2½	3½	4½	7	14	21
8-Point...	1		*1¼	1½	2	3	4	5	8	16	24
9-Point...	1½		2	2½	3	4½	6	9	18	27	
10-Point...	1½		2	2½	3½	5	6½	10	20	30	
11-Point...	1½		2	3	4	5½	7	11	22	33	
12-Point...	1½		2	3	4	6	8	12	24	36

Five-column Quarto outfit amounts to about the same as an 8-column Folio.

IMPROVED DASHES AND SPECIAL DOUBLE AND SINGLE QUOTATION-MARKS

TO CARRY out suggestions made to us by a number of our most progressive customers, who were dissatisfied with the ordinary Em Dash (when used as a mark of punctuation) and the Single Commas and Apostrophes used for quoting, we have cut a new series each of Improved Em Dashes and Double and Single Quotation-Marks, and take pleasure in presenting specimens of them in the following matter. We have no doubt that they will be generally welcomed.

The Dashes are somewhat heavier in face than the old Dashes, and are cut slightly shorter in length, so that—while they are cast on em bodies—it is no longer necessary to set thin or hair spaces between them and adjoining words, a feature which every compositor will appreciate. They are provided with an extra nick, to more readily distinguish them from ordinary Dashes.

"Improved Em Dashes" are supplied in proportionate quantity with all our Modern and Old Style Romans fonts without extra charge—the quantity of ordinary Dashes in the fonts being reduced to that extent. These Dashes are also put up separately in 1-pound fonts, which are furnished at the same prices as the Romans. They will work with any face, whether this be of our make or not, and printers will find this a convenient way of procuring them.

The "Double Quotation-Marks" comprise those for beginning and ending a quotation. Those for the beginning differ from the turned Commas, having the "tails" descending instead of ascending, and matching in reverse those for ending—this being the form most approved by tasteful book printers. To obviate the necessity of setting thin spaces after them, the "Quotes" for beginning are cast with the appropriate space after each.

"Double Quotation-Marks" are put up in 1-pound fonts containing both characters, and are supplied at Roman prices. They are not furnished with the regular Romans, *unless specially ordered*. 'Single Quotations' to match these (') are also furnished if desired. They are nicked to distinguish them from the Apostrophe.

- 12-POINT Will. Eskew, Wellston, Ohio—"The more I learn of your system the better I like it."
- 11-POINT Albert W. Dennis, Lynn, Mass.—"I have often wondered why some one did not attempt it before."
- 10-POINT D. B. Landis, Lancaster, Pa.—"Your Standard Line idea is something 'printers' should have had years ago."
- 9-POINT Charles T. Henderson, Toulon, Ill.—"I am pleased with your faces, and am also 'greatly' taken with Standard Line."
- 8-POINT W. H. Bevis, Pawtucket, R. I.—"Your system of type-making is certainly a great improvement over the common way, and I have no doubt the type 'will pay' for itself in the time saved."
- 7-POINT Henry Hahn, foreman "Northwestern Miller," Minneapolis, Minn.—"We are eagerly watching your output and shall try to give you our business, putting in 'your type' as fast as the old wears out."
- 6-POINT E. L. Wepf, Denver, Colo.—"I like your type not only as to its lining feature, but the making of new figures with Old Style above the line and of the same height. When I need more type 'you will hear' from me."
- 5½-POINT W. E. Fleming, Belleville, Ill.—"I am highly elated over your Standard Line system, and wonder why founders who have devoted a life-time to the business have never catered to the printers' convenience in casting type."
- 5-POINT E. D. Wescott, Reading, Pa.—"You have made another step towards perfection. The point system was a long one, you have made another. I think the tests have all been made, and when I lay your type I will merely be putting a good thing into practical use."

No. 20 Series for Newspapers

5 1/2 POINT ROMAN No. 20

STANDARD LINING SYSTEM

One of the most important changes is our lining system. One glance at the specimen sheets issued during the past few years will show that a constant demand for something of this kind has led to ever recurrent attempts to solve the problem; but these efforts have been sporadic and inconsistent, and the failure to take into account all the conditions has rendered the results unsatisfactory. All our type is cast "Standard" Line, including Romans, Italics and all job faces; therefore, all faces on one body line with one another perfectly. The advantages of this system are so many that it would be difficult to enumerate all of them. Among those that could be mentioned are: That it is now possible to line any Italic or Title with any Roman; to use heavy job letter, figures or characters with different faces on the same body line with one another perfectly. The advantages of this system are many and it would be difficult to enumerate all of them. We could mention among other things, that: It is possible by this system to line any Italic or Title with any Roman; to use heavy job letter, figures or characters in conjunction with different faces on the same job, as railroad work; but one lot of leaders is required for each body, etc., etc. Not only are faces on each body on the same line, but faces of different sizes, as the spaces of all bodies are point set, fractions or multiples of the utmost importance in job work, enabling the compositor to use the caps of the next smaller size for small caps, thus resulting in a great saving

STANDARD LINING SYSTEM

One of the most important changes is our lining system. A glance at specimen sheets issued during the past few years shows that the constant demand for something of this kind has led to ever recurrent attempts to solve the problem; these efforts have been sporadic and inconsistent, however, failure to take into account all the conditions rendering the results unsatisfactory. All our type, including the Romans and Italics, Titles, Gothic, Antiques, and all job faces, are cast "Standard" Line; therefore, all faces on one body line with one another. The advantages of this system are so many it would be difficult to enumerate all of them. Among those which could be mentioned are: That it is possible now to line any Italic or Title with any Roman; to use heavy job letter, figures or characters with any set of leaders in German offices where Roman is also used; but one lot of leaders will be required for each body, etc., etc. Not only are all the faces on each body on the same line, but faces of different bodies justify in line with one another by the use of 2-Point or 1-Point leads, the latter being required only on the smaller bodies. As the spaces of all our bodies are point set, fractions or multiples of points, they can be used for justification equally as well. This feature is of the greatest importance in

7 POINT ROMAN No. 20

STANDARD LINING SYSTEM

One of the most important changes is our lining system. A glance at specimen sheets issued during the past few years will show that a constant demand for something of this character has led to ever recurrent attempts to solve the problem; but these efforts have been sporadic and inconsistent, and failure to take into consideration all the conditions has rendered the results unsatisfactory. All our type, including Romans, Italics, and all job faces, are cast "Standard" Line; therefore, all faces on the same body line with one another perfectly. The advantages of this system are many and it would be difficult to enumerate all of them. We could mention among other things, that: It is possible by this system to line any Italic or Title with any Roman; to use heavy job letter, figures or characters in conjunction with different faces on the same job, as railroad work; but one lot of leaders is required for each body, etc., etc. Not only are faces on each body on the same line, but faces of different bodies justify in line with

STANDARD LINING SYSTEM

One of the most important changes in our lining system. A glance at the specimen sheets issued during the past few years shows that a constant demand for something of this kind has led to ever recurrent attempts to solve the problem. These efforts have been sporadic and inconsistent, and failure to take into account all the conditions has rendered the results unsatisfactory. Our types are set on "Standard" Line, including Romans and Italics, and consequently all the characters of the job letter, consequently all the characters of the system with one another. The advantages of this system are many, and it would be difficult to enumerate all of them. We could, however, mention among other things, that: It is now possible to line any Italic or Title with any Roman; to use heavy job letter, figures or characters with different faces on the same job, as in railroad work; to have but one set of figures in German offices where Roman is also used, etc., etc. Not only are all the faces on each body on the same line, but faces of the other bodies justify in line with one another by the use of 2-Point or 1-Point leads, being necessary to use the Italic and Title with the Roman. The stages of all our bodies are point set, fractions, multiples of points, they can be used equally well for this justification. This feature is of greatest importance in job work, enabling the compositor to use the caps of the next smaller size of series

6-POINT ROMAN No. 27

STANDARD LINING SYSTEM

One of the most important changes is our lining system. One glance at the specimen sheets issued during the past few years will show that a constant demand for something of this kind has led to ever recurrent efforts to solve the problem; but these attempts have been sporadic, also inconsistent, and failure to take into account every condition has rendered the results unsatisfactory. All our type, including Romans and Italics, and Titles, Antiques, Gothics, and all other job faces, is cast on "Standard" Line; therefore all faces on one body line perfectly with one another. The advantages of this system are so many that it would be difficult to enumerate all of them. But among those which may be mentioned are: That it is now possible to line any Italic or Title with any character; to use heavy job letter, figures or characters with different faces on the same job, as in railroad work; to have but one set of figures in German offices where Roman is also used; that but one lot of leaders need be purchased for each body, etc. Not only are all the faces on each body on the same

STANDARD LINING SYSTEM

One of the most important changes in our new system of lining. One glance thru the specimen books issued during the past few years will show that a constant demand for something of this kind has led to ever recurrent attempts to solve the problem; but these efforts have been sporadic and inconsistent, and failure to take into account all the conditions has rendered the results most unsatisfactory. All our type, including Romans and Italics, Titles, Antiques, Gothics, and all job faces, is cast on "Standard" Line, and therefore all faces on one body line with one another. The advantages of this system are so abundant that it would be difficult to enumerate all of them. But among those that may be mentioned are: that it is Roman; that it is on "Standard" Line; that it is with different characters on the same job, as in railroad work; to have but one set of figures in German offices where Roman is also used; that but one lot of leaders is required for each body in an office, etc. Not only are all faces on each body on the same line, but faces of various bodies justify in line with one another by the means of 2-Point and 1-Point leads, the latter being needed only for the smaller bodies. As the spaces of all our bodies are point set, fractions or multiples of

THE STANDARD LINING SYSTEM

One of the most important changes in our lining system. Now a glance at the specimen sheets issued during the past few years shows that the constant demand for something of this kind has led to ever recurrent attempts to solve the problem; but these efforts have been sporadic and inconsistent, failure to take into account all the conditions rendering results unsatisfactory. All our type is cast on the improved "Standard" Line, including Romans and Italics, Titles, Antiques, Gothics, and all other faces; therefore all our type on one body line with one another. The advantages of this system are so many that it would be difficult to enumerate all of them. Amongst those which may be mentioned are: That it is now possible to line any *Italic* or *Title* with any Roman; to use heavy letter, figures or characters with different faces on the same job, as in railroad work; to have but one set of figures in German offices where Roman is also used; that but one lot of leaders need be purchased for each body, etc., etc. Not only are all the faces on each body on the same line, but faces of different bodies justify in line with one another accurately by the use of 2-Point or 1-Point leaders, the latter being necessary only on the smaller bodies. As the spaces of all the bodies are point set, fractions or multiples of points they may be introduced as well as made up of multiples of points. This is of the greatest importance in all job-work, by enabling the compositor to use the caps of the next smaller size of the series for small caps results in the saving of much material. Not only will all faces line with the standard leaders, but will line with 2-Point single or dotted rule perfectly by the use of 2-Point or 1-Point leads and standard quads. In spite of the general use of leaders it is often necessary to use rule, and this innovation, which enables the printer to have accurate lining without the use of carcards, will

THE STANDARD LINING SYSTEM

One of the most important changes is our system of lining. A glance at the specimen books issued during the past few years shows that a constant demand for something of this kind has led to ever recurrent attempts to solve the problem; but the various efforts have been sporadic and inconsistent, and failure to take into account all the conditions has rendered the results highly unsatisfactory. All our type, including Romans and Italics, as well as Titles, Antiques, Gothics, and all our other Job faces, is cast "Standard" Line; therefore all faces on one body line with one another. The advantages of this system are so many that it would be difficult to enumerate all of them. Among those which may be mentioned are: That it is now possible to line any Italian Title with any Roman; in German offices where Roman is also used to have but one set of figures; to use heavy letter, figures and our characters with different faces on the same body line for work; that not only are all the faces on each body on the same line, but faces of different bodies justify in line with one another accurately by the use of 2-Point and 1-Point leads, the latter size being necessary only with the smaller bodies. As the spaces of all bodies are point set, fractions or multiples of points, they can be used for this justification as well. This feature is of greatest importance in job work, and by enabling the compositor to use the caps of the next smaller size of the series for small caps results in the saving of much material. Not only will all faces line with the standard leaders, but they will justify on a 1-Point and 2-Point single leads for justification. In spite of the general use of leaders, it is very often necessary to use brass rule, and this innovation, which enables the printer to have perfect lining, will

5-POINT ROMAN NO. 23

THE STANDARD LINING SYSTEM

One of the most important changes is our lining system. Now a glance at specimen sheets issued during the past few years shows that a constant demand for something of this kind has led to ever recurrent attempts to solve the problem: these efforts have been sporadic and inconsistent, and failure to take into account all the conditions has rendered the results unsatisfactory. All our type is cast on the improved "Standard" Line, including Romans, Italics, Titles, Antiques, Gothics, and all other job faces; therefore all faces on one body line with one another. The advantages of this system are so many that it would be difficult to enumerate all of them. Amongst those which may be mentioned are: That it is possible now to line any Italic or Title with any Roman; to use heavy job letter, figures or characters with different faces on same job, as in railroad work; but one set of figures are required in German offices where Roman is also used; but one lot of leaders need be purchased for each body, etc., etc. Not only are all the faces on each body on the same line, but faces of different bodies justify in line with one another accurately by the use of 2-Point or 1-Point leads, the latter being necessary only on the smaller bodies. As the spaces of all bodies are point set, fractions of multiples of points they contain, the leading is uniform, and the spacing of all the characters of importance in job work, and by enabling the compositor to use the caps of the next smaller size of the series for small caps results in the saving of much material. Not only will all faces line with the standard leaders, but will line with 2-Point single or dotted rule perfectly by the use of 2-Point or 1-Point leads and our standard quads. In spite of this innovation, which enables the printer to have accurate lining without the use of cardboard, will be very highly appreciated. In the Old Styles the figures above and below the line have been abandoned, and while retaining the old style design these important characters have been made of uniform size and line, and

12345 abcdefghijklmnopqrstuvwxyz

THE STANDARD LINING SYSTEM.

One of the most important changes is our system of lining. A glance at the specimen sheets issued during the past few years will show that the demand for something of this kind has led to ever recurrent attempts to solve the problem; but these efforts have been sporadic and inconsistent, the failure to take into account every requirement having rendered the results unsatisfactory. All our type is made on the celebrated "Standard" Line, including Romans and all job faces; therefore all the faces on one body line with one another. The advantages of such a system are so many that it would be difficult to enumerate all of them. Among those which may be mentioned are: It is now possible to line any style of Full-Face with any Roman or Italic or with any job face; to use any heavy jobbing letter, figures or other characters with different faces on the same job, as in railroad printing; to have but one set of figures in German offices where Roman is also used; that but one lot of

5-1/2-POINT ROMAN No. 28

THE STANDARD LINING SYSTEM

One of the most important changes in our system of lining. A glance at the specimen books issued during the past few years shows that a constant demand for something of this kind has led to ever recurrent attempts to solve the problem; but the various efforts have been sporadic and inconsistent, and failure to take into account all the conditions has rendered the results highly unsatisfactory. All our type, including Romans and Italics, as well as Titles, Antiques, Gothics, and all other job faces, is cast "Standard" Line; therefore all faces on one body line with one another. The advantages of this system are so many that it would be difficult to enumerate all of them. Among those which make the lining of type so simple and accurate are: That it is now possible to line any Italic Title with any Roman; in German offices where Roman is also used to have but one set of figures; to use heavy letter, figures or characters with different faces on the same job, as in railroad work; that but one lot of leaders need be purchased for each body; etc. Not only are all the faces on each body on the same line, but faces on different bodies justify in line with one another accurately by the use of 2-Point and 1-Point leads, the latter size being necessary only with the smaller bodies. As the spaces of all bodies are point set, fractions or multiples of points, they can be used for this justification as well. This feature is of greatest importance in job work, and by enabling the compositor to use the caps of the next smaller size of the series for small caps results in the saving of much material. Not only will the caps line with the standard leaders, but the line will line accurately with 2-Point and 1-Point leads, and the use of 2-Point or 1-Point leads as standard standards for justification. In spite of the general use of leaders, it is very often necessary to use brass rule, and this innovation, which enables the printer to have perfect lining, will

5-POINT OLD STYLE No. 11

THE STANDARD LINING SYSTEM

One of the most important features is our new lining system. A glance at the specimen sheets issued during the past few years will show that the constant demand for something of this kind has led to ever recurrent attempts to solve the problem; but these attempts have been sporadic and inconsistent, the failure to take into account every requirement having rendered the results anything but satisfactory. All of our type, including Romans, Italics, Full-Faces, Antiques, Gothics and all job faces, is made on the celebrated "Standard" Lining system; therefore, all faces on one body line with one another. The advantages of this system are so many that it would be too difficult to enumerate them all. Among those which may be mentioned are: It is now possible to line any Italic or Full-Face with any Roman; to use heavy job letter, figures or any other characters with different faces on the same job, as in railroad work; to use heavy job set of figures for each body is required, etc. Not only are all the faces of each body on the same line, but also faces of different bodies justify in line with one another perfectly, by the use of 2-Point or 1-Point leads, the latter being necessary only on the smaller bodies. As the spaces on all the different bodies are point set, fractions of points, they can be used in this job, and by enabling the compositors to use the caps of the next smaller size of a series for small caps results in the saving of much material. Not only will all faces line with the standard leaders, but will line with 2-Point single or dotted rule perfectly by the use of 2-Point or 1-Point leads and standard quads. In spite of the general use of the printed matter, it is often necessary to use rules about the use of cardboards, will be highly appreciated. The 'i's and 'j's are in all cases, with exception of Italics and Scripts, made non-kerning, doing away not only with the useless expense of the f combinations, but securing absolute immunity from breakage after the type is locked up, and insuring better electrotypes. The same plan is followed with the descenders, making all non-kerning. Throughout Old Style the figures above and below the line have been abandoned, and these

THE STANDARD LINING SYSTEM

One of the most important changes is our lining system. A glance at specimen sheets issued during past few years shows that constant demand for something of this kind has led to ever recurrent attempts to solve the problem; but these efforts have been sporadic and inconsistent, and failure to take into account all the conditions has rendered the results anything but satisfactory. All our type is cast "Standard" Line, including Romans and Italics, Titles, Antiques, Gothics, and all other job faces; therefore all faces on one body line with one another. The advantages of this system are so many that it would be difficult to enumerate all of them. Amongst those which can be mentioned are: That it is now possible to line any Italic or Title with any Roman; to use heavy job letter, figures or characters with different faces on the same job, as in railroad work; to have but one set of figures in German offices where Roman is also used; that but one lot of leaders need be purchased for each body, etc., etc. Not only are all the faces of each body on the same line, but faces of different bodies justify in line with one another perfectly by the use of 2-Point or 1-Point leads, the latter being necessary only in the smaller bodies. As spaces of all bodies are point set, fractions or multiples of points, they can be used for this justification as well. This feature is of the greatest importance in all job work, and by enabling the compositor to use the caps of the next smaller size of series for small caps results in the saving of much material. Not only will all faces line with the standard leaders, but will line with 2-Point single or dotted rule perfectly by the use of 2-Point or 1-Point leads and standard quads. In spite of the general use of leaders it is often necessary to use rule, and this innovation, which enables the printer to have accurate lining without the use of cardboard, will be appreciated. The f's and j's are

IT FILLS A LONG FELT WANT AMONG PRINTERS

Do not be imposed upon by the representation of other concerns who intimate that the advantages of our system are not as great as we claim. The great saving accomplished by Standard Line can be demonstrated by a practical test. We will gladly extend to you every facility for making such a test, and are willing to abide by the results. In finish and accuracy our type is superior to others 78

55n 20A. \$2.00

20-POINT FRENCH OLD STYLE ITALIC

L. C. \$1.20; C. \$0.80

IT IS NOT THE NUMBER OF POUNDS OF TYPE YOU PURCHASE

Which counts, but the amount of material which is actually available. Look at the small amount of type you have set up in jobs and compare it with the large quantity which is lying idle in the cases. By adopting our system you can make the minimum quantity of type do the maximum amount of work, as it is available under any and all circumstances, while the old stuff can only be used for some particular purposes. Figure out the amount you pay yearly for labor. A saving of 5 or 10 per cent will go a long ways toward purchasing the type actually used in your shop. 492

INVITATION SCRIPT

Original

20a 8A. \$7.50

24-POINT INVITATION SCRIPT

L. C. \$3.75; C. \$3.75

Our Script faces are cast on systematic lines and unit sets, like all the other type made by the Inland Type Foundry, hence in their usefulness are far superior to the Scripts of the other foundries. \$84

CARD FONTS. 10a 4A. \$4.25 — L. C. \$2.15; C. \$2.10

25a 9A. \$6.00

18-POINT INVITATION SCRIPT

L. C. \$3.00; C. \$3.00

In addition to the adoption of Standard Line and Unit Set in the casting of these Scripts, other desirable features are worthy of special notice, such as joined apostrophe and s, i, the logotype, 'o' double beginning and ending strokes, '1, 2 one with hyphen added, which add considerably to its appearance, 3

CARD FONTS. 12a 4A. \$3.25 — L. C. \$1.65; C. \$1.60

35a 10A. \$5.00

12-POINT INVITATION SCRIPT

L. C. \$2.70; C. \$2.30

Another excellent feature in our Scripts may be noted in the Figures, which, instead of straggling above and below the lines, are cut uniform in size and cast regular in lines the same as our popular lining figures in Old Style fonts. Pages 96 to 100 of our book illustrate the use of the Invitation Script on samples of society work showing the latest usage of fashions which now stamps with its high approval this style of letter.

CARD FONTS. 18a 5A. \$2.80 — L. C. \$1.60; C. \$1.30

SPACES AND QUADS ARE INCLUDED IN ALL SCRIPT FONTS.

Mrs. T. C. Bernheim
announces the marriage of her daughter
Florence Isabell
to
Mr. Charles Lamonte
on Wednesday, August the fourth,
nineteen hundred and one,
Edwardsville, Illinois

The sample on page 97 is the correct form for a Wedding Invitation. It is set in 24-Point and 18-Point sizes of INVITATION SCRIPT, and should be printed on the first page of a folio sheet. It should be folded once and put into an envelop.

If it is a church wedding, an Admission Card, size 2 by 3½ inches, bearing in the centre the line "Please present this card at the Church," printed in 18-Point Invitation Script, may be enclosed.

The hour of ceremony is often announced on a separate card, size 2 3-8 by 3 1-4 inches, the word "Ceremony" being set in 24-Point, and the line "at five o'clock" in 18-Point Invitation Script, immediately below it, separated by a 6-Point slug; printed in the centre of the card.

For those whose presence is desired at the reception after the ceremony the card at the bottom of page 98 is enclosed.

The Announcement should be printed, folded and enveloped the same as a wedding invitation. With it should be enclosed an At Home Card, set in style of the one on page 100.

At Home
Thursdays in October;
3970 Cleveland Avenue;
Tyler Place.

Mrs. Harney B. Dickens;

Miss Frances S. Coulter;

Mrs. James W. Easton;

Fridays

4699 Wilmington Avenue

The card at the top of page 98 shows the correct size and form of an invitation to a dance at a private residence.

The smaller cards on this page are the correct sizes for gentlemen, married and single ladies.

The 11-Point, of which this is a specimen, and the 7-Point,
printed below, make the MacFarland the largest and most
complete series ever made for book and job printing.

The 7-Point and 11-Point sizes of the MacFarland Series are supplied only in fonts of 25
pounds and over, at weight font prices. All other sizes, from 6-Point to 30-Point, may
also be had in multiples of the same quantity, and larger sizes in multiples of 50 pounds,
at the same prices. German, French, Spanish and Swedish accents are made for all
sizes of this series.

SMALL CAPS SUPPLIED TO ORDER FOR THE 6-POINT, 7-POINT AND 8-POINT WEIGHT FONTS.

LANCASTER, PA., Dec. 23. 1901.

Inland Type Foundry,
Saint Louis, Mo.

Dear Sirs:

Herewith I take pleasure in remitting check covering amount of latest invoice of your valuable products.

As evidence of the superiority of your Standard Line type, kindly examine the printing of this check, all of the type being Inland; also this packet-note heading.

Your latest move in going to a much larger foundry is only one of the many signs indicating to the "trust" founders that, unless they adopt the entire Inland idea of type-making, they will have to "shut up shop" in less than a decade hence. This decay and decline has been rapid, and nothing will save these old-style people except a systematic and uniform standard for all their product. Will they do it? I wish you renewed success in all your efforts to lighten the labor of the jobber of this country.

D. B. LANDIS.

The Jefferson County Advocate

R. R. Bryant, Publisher

FINE JOB PRINTING DEPARTMENT
ADVERTISING RATES LOW
PROMPT SERVICE

Kingo Junction, Ohio, 8/9/99.

The Inland Type Foundry,
Saint Louis, Mo.
Gentlemen.

We have been using Standard Line Type in our job department for nearly three years, and think that we can state, without fear of successful contradiction, that we have more Standard Line Type than any other office in eastern Ohio; in fact, we are now using it exclusively on job printing.

It is but just to say that your type has given us the best of satisfaction both in the time saved us in composition and also in the wearing qualities of the metal from which it is cast.

Our experience justifies your statement, "Type that is not Standard Line is dear at any price," and no matter how fast our business shall increase, we will not purchase one solitary pound of type that is not Standard Line. It saves its cost in lessening the cost of composition, and we shall use no other.

JEFFERSON COUNTY ADVOCATE,

Per R. A. Bryant, Publisher.

Feb. 27, 1902.

Received all of my material ordered from the Inland Type Foundry and am highly pleased with everything, and think my satisfaction is due to your conservativeness in helping me to select my outfit. I have handled all of the material ordered and fail to find a single thing that I could have easily been deprived of. On the other hand I have everything that goes to make a modern down-to-the-minute job-office. Then, too, there is a peculiar satisfaction when I am setting a job, that when I go to put it together it will be in perfect alignment, and all rules will fit like "de paper on de wall," because it's from the Inland.

LEROY M. ANDERSON.

STANDARD LINE TYPEWRITER

Saint Louis, Mo., U. S. A.

December 1, 1901

TO THE PROGRESSIVE PRINTER:

Dear Sir--We Call your especial attention to our Type Metal, the result of years of careful research and experiment. This new composition we GUARANTEE to be harder, tougher and to wear longer than any other. Our equipment is the finest and most complete in the country, enabling us to turn out type, brass rule, etc., most accurately and promptly. All our tools are of our own design and built in our own shops, our casting machines being of an entirely new model capable of producing harder and more accurate type than those of other concerns. Remember ours is the only type foundry in the South and West of the Mississippi outside of the Trust.

Very truly yours,

RADTOLT INITIALS

Original

WE have copied these
Initials from books
printed by Radtolt
who is said to have
been the first to print Initials

THESE Initials are useful
not only in connection
with the Kelmscott, but
may with equally fine
effect be used to embellish pages
set in other old style body letter

Per Single Letter, 50c.

60-POINT RADTOLT INITIALS

Font of 26 Letters, \$10.00

9-POINT GERMAN No. 1

THE STANDARD LINING SYSTEM

Eine in der Schriftgießerei höchst wichtige Neuerung ist das von uns erfundene und zuerst in der Inland Type Foundry unter dem obigen Namen eingeführte System derselben Linie aller verschiedenen Schriften einer Größe gegenseitig unter einander. Eine flüchtige Uebersicht der verschiedenen Schriftproben letzter Jahre zeigt, daß von allen Seiten die Nothwendigkeit für eine Uebereinstimmung der verschiedenen Schriften in Linie erkannt, und viele dahin zielende Versuche gemacht worden sind, die aber leider sämmtlich als nicht ausreichend sich erwiesen haben. Alle unsere Schriften sind auf Standard Line gegossen und deshalb halten alle Schriften auf selben Regel sowohl Fraktur wie Antiqua, ebenso Kursive und alle fetten, halbfetten sowie auch Zierschriften mit einander genaue Linie. Die Vorzüge des neuen Systems sind so mannigfaltig, daß es unmöglich ist, sie alle anzuführen, und wollen wir nur die folgenden erwähnen: Man kann alle Schriften der verschiedenen Gattungen, ebenso verschiedene Ziffern ohne alle Mühe verwenden und deshalb

STANDARD LINE LEADERS

Our **Standard Line Leaders** are cast from a new, hard and tough composition. We guarantee that the dots will not break off and that they wear longer than any others. They are made in four styles, as shown below, and are supplied in 2-pound and 5-pound fonts, at the following prices per pound:

5-Point.....	\$1.20	10-Point.....	\$0.46
5½-Point.....	.74	11-Point.....	.44
6-Point.....	.64	12-Point.....	.42
7-Point.....	.56	14-Point.....	.40
8-Point.....	.52	16-Point.....	.40
9-Point.....	.48	18-Point.....	.40

Standard Line Round-Dot Leaders No. 1, (two dots to em), cast on all bodies from 5-Point to 18-Point, in en, em, 1½-em, 2-em and 3-em widths.

.....

Standard Line Fine-Dot Leaders No. 2, cast on all bodies from 6-Point to 14-Point, in en, em, 1½-em, 2-em and 3-em widths.

.....

Standard Line Round-Dot Leaders No. 3, (one dot to em), cast on all bodies from 6-Point to 12-Point, in em, 2-em and 3-em widths.

.....

Standard Line Hyphen Leaders No. 4, cast on all bodies from 5-Point to 12-Point, in en, em, 1½-em, 2-em and 3-em widths.

Standard Line Leaders on any body will line with every Roman or display face cast by us on that body. Any Standard Line Leader, no matter what body, may be made to line accurately with all faces on larger or smaller bodies by means of simple justification with leads and slugs; this makes them specially available for large-face date-lines, etc.

The following specimen illustrates how our four styles of 10-Point Standard Line Leaders line with various faces cast on 10-Point body:

Roman No. 20.....**Ext. Old Style**.....Old Style No. 9
 Roman No. 23.....**Woodward**.....Old Style No. 10

Every character of this face is cast on en-set, and as the spacing is done solely with en quads, it may be readily seen that mailing-lists are set up very quickly and changes and corrections easily made with this type. It runs no wider than ordinary 10-Point Romans. Measure of composing-sticks should be a multiple of 10-Point.

MAILING-LIST LOGOTYPES

Supplied in any quantity, and assorted according to purchaser's desire, at the prices given.

We also supply other fonts assorted to order for mailing-lists. Mailing galleys, slugs and reglets supplied on short notice. We are agents for all makes of mailing-machines, and will furnish them at the manufacturer's terms.

TIME-TABLE FIGURES

Being cast on Standard Line, these Figures will line with all our Roman and Job faces cast on the same bodies, consequently the printer is enabled to use any one or more faces he may select for station names or other reading-matter. All our styles of Leaders also line with these figures.

Light-Face Figures are ordinarily used for A. M., and the Heavy-Face for P. M. time.

Cast to order—minimum quantity, 5-Point and 5½-Point, 1 pound; 6-Point and 8-Point, 2 pounds—at the following prices per pound. Special prices for quantities of 25 pounds and over.

Being cast on Point-sets and to multiples of spaces, the figures of every one of our Roman and Job faces are available with easy justification for all classes of tabular matter. See pages 293 to 304.

POINT-SET FIGURES

For Time-Tables, Tariffs, Etc.

The following specimens of tabular matter show the superiority of our system of casting Figures and Punctuation-Marks on Point Sets, or widths, and also give the printer a large variety from which to select.

These figures are cast to order only. The smallest font of assorted figures which we put up of 5-Point and 5½-Point is 1 pound; 6-Point to 12-Point, inclusive, 2 pounds; 14-Point to 24-Point, inclusive, 3 pounds; and in larger sizes, 5 pounds.

The \$ mark, c and period will not be included unless specially ordered.

FIGURE 1—COMMA AND PERIOD—LEADERS

In a number of fonts the Figure 1 is ordinarily cast thinner than the other Figures, being easily justified by means of our spaces to occupy the same space as the other figures, if necessary. When a large quantity of Figures is ordered the 1, IF REQUESTED, will be cast the same width as the others.

The Comma in all fonts is cast the same set or thickness as the Period.

Being cast on Standard Line, our Leaders can be used on tabular work in connection with every style of face and figure shown in these specimens. We make Standard Line Leaders in four styles:

No. 1, Round, 9 dots to em, from 5-Point to 16-Point, in em, 1½-em, 2-em and 3-em widths.

No. 2, Fine-dot, from 6-Point to 14-Point, in em, 1½-em, 2-em and 3-em widths.

No. 3, Round, 1 dot to em, from 6-Point to 19-Point, in em, 2-em and 3-em widths.

No. 4, Hyphen, from 5-Point to 12-Point, in em, 1½-em, 2-em and 3-em widths.

Leaders of special styles and widths made to order.

We furnish no quantity for less than 35c. net.

TELEPHONE SIGNALS

Put up in fonts containing fifty-four of each character.
Per font, \$1.25.

- 10 S. Courts —————
- 11 T. U. Faust ————
- 12 V. Becker ————
- 13 W. Caslon ————
- 14 Z. Preetorius ————

The growing use of the telephone in country neighborhoods, and the need of cards giving the calls of the subscribers, has induced us to cast the necessary signals for use on such cards. The specimen here printed shows clearly the way they are used. We furnish them on 12-point body, and they can, of course, be used in connection with every one of our 12-point faces. With easy justification they can also be used with faces on other bodies.

The Check-Marks indicate the Accents for which we have matrices on hand at present, and sorts of which we can furnish promptly. Other special accents are noted elsewhere.

EXPLANATION OF CHECK-MARKS: X means lower case only. Y means lower case and caps.

[illegible]

EXPLANATION OF CHECK-MARKS: X means lower case only; V means lower case and caps; P means lower case, caps and small caps; ± lower case and small caps; ^ small caps only.

(OO [[]])

GUILLEMETS, OR FRENCH QUOTATION MARKS

The following style of Guillemets, for use with heavy job faces, will be furnished for all bodies.
Sold at second-class prices.

[illegible]

NEW IDEAL QUOTATION MARKS

The following is another style of Quotation Mark, intended to meet the ideas of many printers who do not like the customary method of quoting used in English typography and yet are not satisfied to adopt the French marks. These may be likened to the German marks, yet will be found to be quite different. They are made for all bodies in addition to the following. Sold at second-class prices.

Either of these styles of Quotation Marks will be cut and cast to order for Roman fonts.

SPACE RULES

Metal, cast on 2-Point set, on all bodies from 6-Point to 24-Point; per pound, \$1.60.
Brass Space Rules are supplied on any body and any length.

Brass, 2-Point.....per pound, \$2.00
Brass, 1½-Point.....per pound, 2.75
Brass, 1-Point.....per pound, 3.50

6 7 8 9 10 11 12 16 18 20 24 30 36

METAL RULES

For some purposes metal rule is much preferable to brass. It is softer, and, while it will not wear as long, it can readily be roughened by running a knife or similar instrument along the edge, so as to produce the effects at present so popular. In body and hight it is just as accurate as our brass rule. It is furnished in 18-inch strips in the following sizes, and the prices appended below are per foot:

2-POINT	5 cents
3-POINT	7½ cents
4-POINT	10 cents
5-POINT	12½ cents
6-POINT	15 cents
8-POINT	20 cents
10-POINT	25 cents
12-POINT	30 cents

The rules in the right-hand column have been roughened by lightly running a pen-knife along the edges.

Please be careful to note that quantities must be multiples of one and one-half feet; otherwise there is sure to be delay in filling your orders.

Also put up in labor-saving fonts of one and five pounds at the following prices per pound:

2-Point.....	90 cents	6-Point.....	75 cents
3-Point.....	80 cents	8-Point.....	75 cents
4-Point.....	80 cents	10-Point.....	70 cents
5-Point.....	80 cents	12-Point.....	70 cents

For Metal Rule Corners, to work with above, see pages 348 and 349.

Labor-Saving Brass Rules

Labor-Saving fonts are cut from any style of Brass Rules shown in our specimens, excepting Nos. 120 to 133.

PRICES OF LABOR-SAVING RULES ARE AS FOLLOWS:

Body	1 Pound	5 Pounds	10 Pounds	Body	1 Pound	5 Pounds	10 Pounds
1-Point.....	\$2.50	\$2.40	\$2.30	7-Point.....	\$1.50	\$1.40	\$1.30
1½-Point.....	2.00	1.90	1.80	8-Point.....	1.50	1.40	1.30
2-Point.....	1.75	1.65	1.55	9-Point.....	1.50	1.40	1.30
3-Point.....	1.60	1.50	1.40	10-Point.....	1.40	1.30	1.20
4-Point.....	1.50	1.40	1.30	11-Point.....	1.40	1.30	1.20
5-Point.....	1.50	1.40	1.30	12-Point.....	1.40	1.30	1.20
6-Point.....	1.50	1.40	1.30				

Special prices for larger quantities.

SIZES: 1-Point, \$3.00 per pound. Other sizes, same as 1-pound prices above.

Labor-Saving Brass Rule

The 2-Point Single, Dotted and Hyphen Rules — Nos. 27, 111, 113, 115 and 117 — line with all our STANDARD LINE Type Faces with easy justification by means of point system leads and slugs. The following Labor-Saving Rules are in stock in 1-pound, 2-pound, 3-pound and 5-pound fonts. For prices, see page 355.

No. 27—2-POINT

No. 46—4-POINT

No. 73—4-POINT

No. 75—6-POINT

Labor-Saving fonts of any other Rules, excepting Nos. 120 to 133, cut to order.

Labor-Saving Brass Rule

The Rules shown on this page have no shoulders, thus facilitating snug fitting of Rules in panel work. See page 354 for examples of such use. Rules Nos. 170 to 193, and 241 to 276, shown on pages 352 and 353, have no shoulders, while Rules Nos. 140 to 165 have the shoulder on one side.

The following Labor-Saving Rules are in stock in 1-pound, 2-pound, 3-pound and 5-pound fonts. For prices, see page 355.

No. 171—3-POINT

No. 241—4-POINT

No. 252—6-POINT

No. 260—6-POINT

Labor-Saving fonts of any other Rules, excepting Nos. 120 to 133, cut to order.

Labor-Saving Brass Rule

The 2-Point Single, Dotted and Hyphen Rules—Nos. 27, 111, 113, 116 and 117—line with all our STANDARD LINE Type Faces with easy justification by means of point system leads and slugs.
The following Labor-Saving Rules are in stock in 1-pound, 2-pound, 3-pound and 5-pound fonts.
For prices, see page 355.

Has no shoulder.

No. 170—2-POINT

Has shoulder all on one side.

No. 160—2-POINT

No. 39—2-POINT

No. 100—2-POINT

No. 115—2-POINT

Labor-Saving fonts of any other Rules, excepting Nos. 120 to 133, cut to order.

Labor-Saving Brass Rule

The 2-Point Single, Dotted and Hyphen Rules—Nos. 27, 111, 113, 115 and 117—line with all our STANDARD LINE Type Faces with easy justification by means of point system leads and slugs.

The following Labor-Saving Rules are in stock in 1-pound, 2-pound, 3-pound and 5-pound fonts. For prices, see page 355.

No. 111—2-POINT

No. 113—2-POINT

Labor-Saving fonts of any other Rules, excepting Nos. 120 to 123, cut to order.

For prices, see page 373

1. The first step is to identify the variables that are being measured. In this case, the variables are the number of hours spent on each activity (reading, writing, and thinking) and the total number of hours spent on all activities.

2. The second step is to determine the units of measurement for each variable. The units for the number of hours spent on each activity are hours, and the units for the total number of hours spent on all activities are also hours.

3. The third step is to collect data for each variable. This can be done by asking participants to report the number of hours they spent on each activity over a period of time.

4. The fourth step is to analyze the data. This can be done by calculating the mean, standard deviation, and other statistical measures for each variable.

5. The fifth step is to interpret the results. This can be done by comparing the results to previous studies and drawing conclusions about the relationship between the variables.

WHAT THEY SAY OF US AND OUR PRODUCTS

ITHACA, N. Y., Mar. 24, 1900.

I am a convert to your system, and have made up my mind that future orders for type will go to your foundry, unless someone else nearer me shall adopt the same system. I feel that I am doing myself a favor (as well as you) by sending your house the inclosed order, and I am sure it will not be the last.

ALLEN L. SMITH.

ROCHESTER, N. Y., May 21, 1900.

We beg to advise you that the MacFarland type arrived in good order, and thank you for your promptness in sending it. We have had difficulty with other foundries in getting type promptly, and it is refreshing to have an order filled the same day as received.

BAUSCH & LOMB OPTICAL COMPANY,
Publication Department.

BATAVIA, N. Y., Dec. 3, 1900.

STANDARD LINE is the only type to have in the case and stick—the "hellbox" is the place for all mossback and card-board-justification type.

J. F. LAWTON.

LYNN, MASS., Feb. 22, 1899.

The advertising you have sent us had the result of compelling us to buy your type for our protection, as it is evident to us that should we hope to sell our plant at any future date, it must contain STANDARD LINE type to bring a reasonable price. None but "old-timers" are in the market for any other kind of a plant, and even they are realizing the advantages of an office equipped with one-line faces. Every font of type purchased since last May has been on STANDARD LINE.

CHAS. S. BIRD.

PRICE LIST

ACCENTS

We furnish German, French, Spanish and Swedish Accents for the lower case of nearly all our Roman fonts; also German and Spanish Accents for the lower case of a majority of our job faces. See pages 317 to 321 for lists of the Roman and Italic accents we now make.

ADDRESSING MACHINES

ANNEX TYPE BOX

This is a brass box which can be attached to the boxes of the lower case.

It can be used for holding leaders, fractions, and other sorts which may be required in setting special jobs.

For musical and mathematical work especially it will be found very useful.

In distributing it is a handy receptacle for odd sorts and Italics until convenient to place them in their proper cases.

BENZINE BRUSHES

(See Brushes.)

BENZINE CANS

GOLDING'S BENZINE CAN

POOLE'S PATENT CAN

This can is beyond question equal to any other in the market. Its simplicity, economy and entire safety strongly recommend it to those who want a perfect benzine can. When the can is at rest the contents cannot evaporate. When held in a horizontal position, or when held at an angle of forty-five degrees, with the mouth pointed downward, the contents cannot escape. The can must be held perpendicularly before the stopper will allow the contents to flow out. It has no springs. The stopper works automatically, and it allows the contents of the can to be kept in control of the operator. It may be used for benzine, turpentine, or any other liquid.

Quart size only..... \$0.50

GOLDING'S BENZINE CAN

This can is made of cold-drawn steel in two segments brazed together in a manner that gives it additional strength at the center. It is proportioned so that the base is extra large. It is easily handled, and will stand any amount of kicking about. The valve is solid brass and is practically indestructible. Each valve is tested before it goes out of the factory, and the can is guaranteed air-tight.

Pint size, coppered.....	\$0.90
Pint size, nickeled.....	1.10
Quart size, coppered.....	1.20
Quart size, nickeled.....	1.50

UNION SAFETY FLUID CAN

On this can the flow is regulated by depressing the circular finger-plate which forms part of the patent stopper. The fingers need never come in contact with the contents of the can. The stopper is attached by a chain, which prevents it being separated from the can, and yet admits of the can being filled without interference. The stopper is made of heavy stamped sheet brass, and is very durable and handsome in appearance. The can itself is made of heavy tinned steel. It is japanned a brilliant red, which makes it conspicuous and easily found.

CABINETS

SPECIMEN CABINET

This cabinet is designed for preserving specimens of printing. A specimen cabinet is as necessary a part of a printing office as is a specimen book to a typefoundry.

The drawers in this cabinet have movable partitions and are made in two depths, 2½ and 5 inches. No. 1 is of the proper height for placing a letter-copying press on. This cabinet is handsomely made in ash, and will be an ornament to any office.

No. 1, 8 drawers, 26 x 37 x 19 inches over all.....\$14.00

No. 2, 12 drawers, 26 x 53 x 19 inches over all..... 20.00

Other sizes at proportionate prices.

CABINETS

There are so many styles of cabinets that it is impracticable to show all. If you are not suited by what we have listed, send for special cabinet circular.

20-CASE WISCONSIN CABINET WITH GALLEY TOP

30-CASE WISCONSIN CABINET WITH STEEL RUNS

The 50-case and 60-case cabinets are furnished in one or two tiers as desired.

CABINETS

PORTER'S EXTENSION-FRONT STEEL-RUN CABINET

No. 2 PORTER STEEL-RUN CABINET

Combined with all the excellent features of other steel-run cabinets, the Porter Cabinet has the extension-front, which allows any case to be drawn and placed at any convenient height, without using another case as a rest. The depth of the extension-front is 4 inches. As these cabinets are fitted in the 23-case and 46-case sizes with the patented tilting brackets, they can be attached so that the news cases on top are on the opposite side from the job cases, thus acquiring the distinctive and valuable feature of the Polhemus cabinets. The option is given purchasers of having cabinets filled with the regular job case or the California job case. See illustration of the California job case. *Unless otherwise ordered, all cabinets are filled with California job cases.* The dimensions of Porter Extension-Front Steel-Run Cabinets are as follows:

High. Wide. Deep.

23-case	43	35½	22
25-case	46	35½	22

CABINETS

POLHEMUS CABINET

In construction this cabinet is unsurpassed in solidity, appearance and finish. It is made of hardwood, nicely polished.

The two accompanying cuts show front and back views of Polhemus double cabinet. Front showing sort drawers, galley top, and job cases. We also furnish this cabinet with galley cabinet instead of sort drawers, if it be preferred, at the same price.

Back of cabinet, showing the arrangement of news cases on patent tilting brackets, allowing compositor to set type without interruption, and to empty his stick without leaving the case.

No. 1, double cabinet, with wood runs, containing 18 full-size cases in one tier and 20 two-thirds cases in one tier, 2 pairs of news cases and 2 pairs of tilting brackets on top, full-length galley dump, sort drawers or galley cabinet. \$75.00

No. 2, single cabinet, with wood runs, containing 18 full-size cases in one tier, 1 pair of news cases and 1 pair of tilting brackets on top, full-length galley dump. \$35.00

No. 3, triple cabinet, with wood runs, containing 40 two-thirds cases, 20 in each tier, and 18 full-size cases in center tier, 3 pairs of news cases and 3 pairs of tilting brackets on top, full-length galley dump, sort drawers and galley cabinet. \$110.00

No. 4, triple cabinet, with steel runs, containing 50 two-thirds cases, 25 in each tier, and 25 full-size cases in center tier, 3 pairs of news cases and 3 pairs of tilting brackets on top, full-length galley dump, sort drawers and galley cabinet. \$140.00

No. 5, double cabinet, with steel runs, containing 25 full-size cases in one tier and 25 two-thirds cases in one tier, 2 pairs of news cases and 2 pairs of tilting brackets on top, full-length galley dump, sort drawers or galley cabinet. \$95.00

No. 6, double cabinet, with steel runs, containing 50 full-size cases, 25 in each of the two tiers, 2 pair of news cases and two pairs of tilting brackets on top, full-length galley dump, without sort drawers or galley cabinet. \$95.00

No. 7, single cabinet, with steel runs, containing 25 full-size cases in one tier, 1 pair of news cases and 1 pair of tilting brackets on top, full-length galley dump. \$47.00

Options.—In ordering, customers will please be particular to state their choice of the following options:

1. Cabinet to be constructed of ash or birch.
2. Regular job cases or California job cases.
3. Sort drawers or galley cabinet in center of double cabinet.

BOOKBINDERS' CABINET

Made with bronze pulls on each case, and highly finished. The cases are the same size and style as printers' cases, and are proportioned like one-half of the regular cap case. These cabinets occupy a space of 20 x 20 inches.

No. 1 cabinet, with 6 cases. \$ 8.00
 No. 2 cabinet, with 10 cases. 12.00
 No. 3 cabinet, with 15 cases. 16.50

CABINETS

TWENTIETH CENTURY UNIT TYPE CABINETS

THIRTEEN STYLE A UNITS. OCCUPY FLOOR SPACE OF $103\frac{1}{2} \times 20\frac{1}{2}$ INCHES.
130 CASES. HEIGHT, 64 INCHES.

A SINGLE UNIT, STYLE A, WITH TOP AND BASE. OCCUPIES
FLOOR SPACE OF $34\frac{1}{2} \times 20\frac{1}{2}$ INCHES; HEIGHT, WITH
TOP AND BASE, $18\frac{1}{2}$ INCHES

The Style A unit has 10 cases of five different depths. The three top cases have an outside depth of $\frac{3}{4}$ inch; the next two, $\frac{1}{2}$ inch; the next one, 1 inch; and the next three, $1\frac{1}{4}$ inches, which is the regular case, and the bottom case has an outside depth of $1\frac{1}{2}$ inches. This case is very convenient to put large poster fonts in.

The Style B unit has 8 cases, 7 of which are of the standard depth as put in all regular cabinets. The top case is shallower and has an outside depth of 1 inch.

Style B cap-piece is 3 inches in depth, the same as the Style A cap, but in the Style B the space inside the cap is utilized by a blank drawer 30 inches long and 18 inches wide and 2 inches deep, inside measure. This drawer is filled with small wooden sort-boxes, 3×3 inches—six rows in depth and ten rows in width—a total

CABINETS

sixty boxes. They have a depth inside of $1\frac{1}{2}$ inches. These sort-boxes are removable and any sort-unit can be taken from the drawer and carried to the stone or type-case.

When ordering, care should be taken to specify cap-pieces and base-pieces, as they are not included with order for units unless specially mentioned.

CABINETS

HANDY SORT
CABINET

These handy Sort Drawers, with ten compartments, at a moderate price, should supplant the various cigar-box, tin-can arrangements which disgrace so many offices. These drawers are 8x20 inches over all and are 2½ inches deep inside. Each drawer is divided into 10 compartments. The compartments are ¾x3x2½ inches inside. Sold separately or in cabinets.

ELECTRO AND CUT
CABINET

This neat cabinet is filled with blank cases, and it is very handsomely made of polished ash, antique oak finish, with bronze case pulls. The cases have extension-backs. In addition to the ordinary uses of the printer, this cabinet can also be recommended to advertisers for keeping their wood cuts, etc. Height of cabinets: 12-case, 34½ inches; 16-case, 43 inches; 20-case, 43 inches. Size of cases: two-thirds size, 15¼x20½ inches; three-quarter size, 14½x24½ inches; full size, 14½x30½ inches.

 No. 2, double, with racks for 30 full-size cases..... 8.00

POLHEMUS STAND

BACK VIEW OF DOUBLE POLHEMUS STAND

This is in every respect the most sensible, convenient and time-saving stand for job offices ever offered to printers, for the following reasons: The compositor stands behind the job cases, where he works without interruption from those who have to use the job cases, and he can empty his sticks, without leaving the stand, on a galley kept under the lower case, as the top cases are held on Hamilton's patent tilting brackets. The top of the stand is a flat hardwood board, on which tied-up matter may be stored conveniently. Over the job cases there is a hardwood bank or galley top for keeping live and dead matter. Between the case racks on the No. 3 stand there is a galley cabinet (cost \$8.00). The double stand holds 22 cases and 2 pairs on top. Taking into consideration the case room, galley top, galley cabinet, storage room, and patent case brackets with galley rest, this is not only the best but the most economical stand ever designed.

THE PRACTICAL SPACE CASE

1. This new space case is designed as an improvement
2. upon the old style case, the arrangement of which was
3. always unsatisfactory, because it did not contain enough
4. boxes for holding thin spaces, which consequently were
5. mixed up in boxes where they did not belong, and for the reason that there was not sufficient

room for the large bodies to hold an adequate quantity, while the proportioning of the boxes for the various spaces and quads was not properly considered. Since the advent of point-set spaces and the introduction of brass and copper thin spaces there is a greater need than ever for an improvement in the space case.

The illustration shows clearly the divisional arrangement of the Practical Space Case, which is the same size as the ordinary job case. Under the cut we give the

5.	72	54	42	28	14 & 21	22 & 33	11 & 16½

lay (as used in the office of THE PRACTICAL PRINTER, published by the Inland Type Foundry) of a set of three of these cases, which hold all the bodies from 5-point up to 72-point. As will be noted, this arrangement gives the larger bodies large boxes and the smaller bodies the small ones. The best plan that suggests itself is to put the 48-, 36-, 24-, 18-, 12-, 9- and 6-point spaces and quads in one case (as indicated in the illustration), the 60-, 30-, 20-, 10-, 5-, 16- and 8-point in another, and the 72-, 54-, 42-, 14-, 7-, 11- and 5½-point in the third. In the table the figures opposite the number of each row give the width in points of the spaces and quads that are to go in the boxes of that row. See page 20 for explanation of our point-set spaces and quads.

RULE CASES

Labor-Saving Rule Case.....	\$1.15
Two-thirds size.....	.90

COMPACT RULE CASE

The New Compact (shown in cut at side) is a graduated case for brass rule, and four of them will go into a full-size blank case. The case will hold about 20 pounds of labor-saving brass rule, and has a separate place for every length by 6-point multiples from 1 to 9½ ems 12-point, and by 12-point multiples from 10 to 36 ems 12-point. Each box is accurately spaced, and no box will admit a longer length than marked.

Harris Ornament or Border Case, No. 5	1.00
Harris Full Size Blank Case, to hold any four of above cases	.65

INLAND JUSTIFYING LEAD CASE

To meet the necessity of having a place to put short lengths of 1-point and 2-point leads, so much required for justifying together two sizes of type to bring their faces into line, we have designed a convenient case to hold such material. This case is $3\frac{3}{4} \times 7\frac{1}{4}$ inches, and is divided into compartments to contain certain lengths, varying from $\frac{1}{2}$ em to 16 ems of 12-point (by 6-point steps up to 6-ems 12-point), including also the intermediate lengths of 8, 10, 14, 16 and 20 points. The length of the lead is stamped in bold black figures above each compartment. The compartments are of such width and depth that the leads cannot fall down within them or be difficult to get at. A single case holds about 3 pounds 6 ounces of 2-point metal or 2 pounds 11 ounces of 1-point brass leads. A pair of these cases will fit nicely in the space between the two upper cases of a double stand, or if preferred, their small size permits their being deposited in other convenient places.

See next page for price of this case.

INLAND THIN SPACE CASE

Thin or hair spaces made of copper and brass are now coming more and more into use as a welcome substitute for the old troublesome cardboard or paper slips as a spacing material, but so far there has appeared no suitable case to hold such spaces conveniently. For this desir-

CASES

able purpose we have designed the Inland Thin Space Case. This case is $2\frac{1}{2} \times 7\frac{1}{2}$ inches, and is divided into two sections: one for $\frac{1}{2}$ -point copper spaces and one for 1-point brass spaces. Each half section has compartments for the bodies from 6-point to 72-point, including without exception every intermediate body. The spaces are easily accessible and the compartments are so constructed that no space can fall down out of reach. The various bodies are stamped above each compartment in bold black figures. Each half section of the case will hold 11 ounces of $\frac{1}{2}$ -point copper spaces, 12 ounces of 1-point brass spaces, or 15 ounces of 2-point metal spaces. Like the Justifying Lead Case, this Space Case can be placed on the board between the upper cases on an ordinary double stand.

For price of this case see below.

INLAND LEAD AND SPACE CASES—IN SETS

The space between the upper cases on a common double stand will conveniently hold a "set" of these cases, as shown in the cut, consisting of one Thin Space Case (for $\frac{1}{2}$ -point and 1-point spaces) and two Justifying Lead Cases (one for 1-point, the other for 2-point leads). If desired, an extra Thin Space Case (for holding 2-point spaces) can be added, the four not taking more than $7\frac{1}{2} \times 12$ inches of room.

Inland Justifying Lead Cases, each.....	\$0.60
Inland Justifying Lead Cases, per pair.....	1.15
Inland Space Cases, each.....	.50
Per set of 3 (2 Justifying Lead Cases and 1 Thin Space Case).....	1.60
Per set of 4 (2 Justifying Lead Cases and 2 Thin Space Cases).....	2.10

JUSTIFYING LEADS AND THIN SPACES

If desired, these cases will be furnished filled with Leads and Thin Spaces, at following prices, in addition to cost of cases. Sorts or larger quantities supplied at prices quoted on page 443.

1-Point Brass Justifying Leads, case-lot of 2 pounds 11 ounces.....	\$4.00
2-Point Metal Justifying Leads, case-lot of 3 pounds 6 ounces.....	1.25
$\frac{1}{2}$ -Point Copper Thin Spaces, half-case or section-lot of 11 ounces.....	1.40
1-Point Brass Thin Spaces, half-case or section-lot of 10 ounces.....	1.25
2-Point Metal Thin Spaces, full case-lot of 30 ounces.....	1.00

Copper, brass and metal are used for these leads and spaces to enable the compositor to readily distinguish the three thicknesses by their color.

CASES

WISCONSIN QUARTER CASES

Signs, borders, accents piece fractions, altho most expensive, are usually stored away in odd boxes of cap cases, and are rarely to be found when needed. These quarter cases supply a means of keeping these valuable sorts where they can be readily found. They can be placed on a cap case, on a stand or on the stone, convenient to the hand of the compositor. In setting mathematical work, foreign languages, dictionaries, special catalogs, these quarter cases will prove invaluable. We show a few schemes for laying signs, fractions, etc., above, but various other uses for special purposes will suggest themselves.

Quarter Case No. A, for figures, etc.	\$0.65
Quarter Case No. B, for accents, piece fractions, etc.	.65
Quarter Case No. C, for figures and fractions, etc.	.65
Quarter Case No. D, for signs, borders, etc.	.65
Per set of four, in regular full-size blank case	3.00

CASTING ROLLERS

(See Rollers.)

CARD CUTTERS

BOSTON CARD CUTTER

No clamp is required with this cutter, as it has a drawing cut, which keeps the sheet straight.

Sheets or strips of any length can be cut, as the standard holding the upper knife has an offset, allowing the inside strip to pass over it and the outside strip under it.

Outside and inside measurements.

For folio chases give width of back bars.

For quarto chases give width of back bars and cross-bars.

For quadruplex chases give width of back bars and inside end bars.

For poster chases with bars, heading chases with bars, and book chases, give size of cross-bars.

Scale for Estimating Prices of Chases**FOLIO CHASES.**—Add length and breadth of pair over all in inches, and multiply this sum by 19 cents per inch.**QUARTO CHASES.**—Add length and breadth of pair over all in inches, and multiply this sum by 22 cents per inch.**QUADRUPLE CHASES.**—Add length and breadth over all, and multiply by 28 cents per inch.**POSTER CHASES.**—Add length and breadth to obtain measure; multiply this by 11 cents per inch.**NEWS CHASES, or Poster with Bar.**—Add \$2.00 to price of poster without bar. For extra bar only, add \$1.00; for extra dovetails, add \$1.00; for both, add \$2.00.**BOOK CHASES.**—Find price of same size Poster chase, and add \$4.00 if solid bars only are wanted; add \$5.00 if only one bar is to be shifted, and \$6.00 if both bars are to be shifted.**HEADING CHASES.**—Compute as in case of Poster chases. For bar and pair of dovetails, add \$2.00. Unless otherwise ordered, Heading chases will be furnished with cross-bar.**ELECTROTYPE CHASES.**—Compute as in case of Poster chases, adding for extra stock.**BEARER CHASES.**—Add 50 per cent to price of regular chases.**Charges for Extra Stock in all Chases**For each $\frac{1}{8}$ -inch wider than regular, add for measurement, length and breadth, 40 inches and smaller, 40 cents; 41 to 60 inches, 61 cents; 61 to 80 inches, 90 cents; 81 to 100 inches, \$1.15; 101 inches and larger, \$1.40.For $\frac{1}{4}$ -inch thick stock, add for measurement, length and breadth, 40 inches and smaller, 60 cents; 41 to 60 inches, \$1.00; 61 to 80 inches, \$1.40; 81 to 100 inches, \$1.80; 101 inches and larger, \$2.20.For extra width and $\frac{1}{4}$ -inch stock, add both of the above advanced charges.

Measurements ending in fractions to be figured as next full figure.

In figuring extra stock charges, consider each chase separately.

---	--------

HARRISON "COMPLETE" SET OF COMPOSING RULES

These rules are made of finest tempered steel, highly polished, in the following em lengths: 4, 4½, 5, 5½, 6, 6½, 7, 7½, 8, 8½, 9, 9½, 10, 11, 12, 13, 14, 15, 16, 17, 18, 19, 20, 21, 22, 23, 24, 25, 26, 26½, 27, 28, 29, 30, 32, 35, 38, 40, 42, 45—forty rules in all.

This case is constructed in a durable style of hard wood, finely finished, with a lining of velvet. Every rule is held separately, the figures denoting the length in ems are in plain view, and the rules are easily removed from the case.

THE GRIFFIN NONPAREIL STICK

This is the only two-piece self-adjusting stick on the market. A slotted bar on the knee engages slots on the back of the rim of the stick, thus securing absolute accuracy in adjustment to different 6-point widths. The mere placing of the bar at the measure desired securely locks the stick, there being no troublesome clamps or screws to handle. Made in four sizes, 2½ inches deep.

CORNERING AND PUNCHING MACHINE

(See also Punching Presses.)

STERLING CORNERING AND PUNCH-
ING MACHINE

This machine is designed to meet the requirements of printers and bookbinders. It is simple in construction and very rapid. Every part is made with the utmost care, and nothing but the very best material is used in its construction.

A round cornering machine is particularly desirable in shops which aim to be progressive. It costs very little to round corner a thousand catalogs or booklets. A boy of average intelligence can do the job in ten or fifteen minutes, or he can take a thousand ordinary business cards and round corner them in less than five minutes.

This little machine embraces two in one. The illustration shows the machine ready for round cornering. By adding a table and changing the knife for a punch, which can be done in two minutes, it is transformed into a punching-machine. Four sizes of corner-knives are made and three sizes of punches.

Size $1\frac{1}{2} \times 5$ inches, registering
100,000 3.25
Throw-off, each50

There has been a great desire on the part of the up-to-date printer for a good, reliable counter for the job press at a reasonable price. Many have equipped their presses with counters connected with the throw-off at an expense of \$10 or more. We are now able to offer to the trade one of the best little counters ever made. Every part is first-class and nicked. Gears and dogs are stamped from steel and case-hardened, making them very durable. We have an attachment by which the counter can be put

on in connection with the throw-off to get an absolute record only of every printed sheet. The clamp to hold the bracket on the fountain-arm, and pulley with clamp to fasten to roller-arm, are all included with throw-off device.

Instructions.—When clamped on, as shown in cut, bend arm up so counter is perpendicular. Put the cord thru roller and around the eccentric shaft and fasten to set screw. When the impression is on, counter will register, and when off, cord will be loose and not register. These are for Chandler & Price presses, and all Gordons and others working that way.

For the Universal and those working that way, the counter is fastened under the throw-off, and when the press moves up it will register just before the impression. We send a device to reverse handle-movement.

DURANT'S COUNTER

Is especially adapted for use on printing presses. It is made entirely of iron, steel and brass. The dials have large black figures that are easy to read at a distance. They can be instantly reset to 0, or any other number required. A bracket is furnished with each machine for convenience in securing it to the feed-board of a press. Counter is nicely finished—cover, lever, dials, springs, etc., being nickel-plated.

Prices on round or octagonal sticks on application.

HAMILTON'S PATENT CUTTING STICK

This stick consists of a main body piece (A), made to fit the body of the paper cutter. The body piece has a groove or recess in it, which holds a small strip (B), one quarter of an inch square. This removable stick is the cutting surface, and is held in place by a steel clamp (C), which is drawn up by the bolts (D). The cutting strips, being square, can be used on four sides. The steel strip or clamp (C), running the extreme length of the main body piece and firmly screwed thereto, effectively prevents springing and warping. There is no wear on the body piece and as it is fitted exactly to the body of the cutter, troubles from ill-fitting sticks (necessitating packing, etc.) cease. The cutting strips are all made to a uniform standard and are interchangeable. When ordering, give size square main body piece is to be. Give length of stick. State how far from front edge of stick the knife strikes. State whether knife cuts from right to left or left to right.

Main Body Piece, under 38 inches long.....	\$5.00—Cutting Strips, per dozen.....	\$0.25
Main Body Piece, from 38 to 54 inches.....	6.00—Cutting Strips, per dozen.....	.40

FORM RACKS

FORM RACK No. 2

There has always been a demand for a chase or form rack, but the difficulty has been in designing this much-needed article of modern printing-office furniture in such a way as to economize space and at the same time maintain the required capacity. The new form racks here illustrated seem to meet all the requirements. They are strong and substantially built, and varnished the same as the regular line of cabinets.

The lower compartments in all racks are 36 inches in the clear, middle compartments 24 inches, and upper compartments 13½ inches.

WOLVEN'S PATENT ADJUSTABLE GUIDES

These guides can be attached in less time than any other adjustable guides. They will not buckle nor draw tympan sheet—holding sheet tight to platen. Make unnecessary the use of strips to keep sheet from slipping over top of guides. Are adjustable in every respect, and can be moved in every direction, making them especially desirable for work requiring a close register. Cannot slip or move after being set. No pasting nor lifting clamps necessary when attaching. Can be firmly attached to a single sheet of tympan. Can also be used as extension guides. Applied to tympan without removing clamp-button—lower side of button sliding sideways in slot.

Per set of three.....\$1.00

HIGHT GAGES

PRACTICAL HIGHT GAGE

This hight gage requires no recommendation to the electrotyper, stereotyper and photo-engraver, but is even more valuable to the job printer. If, before locking blocks in the form, they are first passed thru this gage, face downward, all discrepancies in hight are at once made apparent and can be quickly corrected. High spots can be sandpapered down or shaved off. After being made up, the form need not again be unlocked or removed from the press, avoiding all danger of pried forms, shifted rules and loose type. It is neatly finished and occupies but little space. Admits block 12 inches wide and any length.

Practical Hight Gage.....\$7.50

TYPE-HIGH HAND GAGE

Each.....\$2.50

Coffins, 75 cents per running foot the long way.

IMPOSING TABLES WITH LETTER-BOARDS

These imposing tables are strongly constructed to sustain the great weight to which they will be subjected. The frames and coffins as well as the letter-boards are made of hardwood, and all the material entering into them is carefully selected and free from imperfections. No better disposition of the space underneath an imposing table can be made than to use it for letter-boards. If the type is dead it is shifted from the stone to the board without any loss of time; if the matter is alive it is handy for imposition.

INK FOUNTAINS

Ink Fountains for all makes of presses furnished at lowest market prices.

CHANDLER & PRICE LONG FOUNTAIN

For work which requires greater capacity than can be obtained with the Buckeye, we offer this fountain, which is so made as to permit contact with the rollers the whole length, and will thus furnish a greater supply of ink than the Buckeye. Especially adapted to the Chandler & Price Old Style Gordon.

Chandler & Price
Long Fountain...\$20.00

BUCKEYE FOUNTAIN

For any size of Chandler & Price Gordon presses.

The roller is so adjusted as to supply ink uniformly on either a large or a small job. Its size also makes it practical to use expensive ink without waste, only a small amount being required to supply the fountain.

Buckeye Ink Fountain.....\$10.00

UTILITY INK FOUNTAIN

The most practical and perfect working pony size ink fountain ever offered to the printer. Can be attached to almost any job press with disk distribution.

FULL-WIDTH CHALLENGE FOUNTAIN

CHALLENGE FULL-WIDTH
FOUNTAINCHALLENGE DIRECT FULL-WIDTH
FOUNTAIN

The Challenge Fountain was designed for the Challenge-Gordon press. It is constructed with a flexible blade, operated by numerous screws underneath, by which the flow of ink may be easily regulated. The iron fountain-roller is turned by a ratchet-dog, and this is operated by the lever and connecting rod, which are automatically worked by the action of the roller-carriage. A ductor composition-roller is held against the fountain-roller by a spring at each end, while the fountain-roller is turning. It is then depressed to meet the form-rollers, and remains in contact with them while all three pass under it and return, each one receiving ink on passing up and on returning, when the ductor-roller again meets the fountain-roller and turns in contact with it. By means of the thumbscrews the fountain may be raised or lowered easily, and locknuts on the thumbscrews hold it firmly in the desired position, from which no jar nor long run can work it loose.

KNIFE SHARPENER

HOERNER'S KNIFE SHARPENER

Knives can be instantly sharpened without removal from the machines and without danger of the workman cutting his hands. By having one of these sharpeners with every machine, the workman can instantly give the knife a whetting as often as required; or he will also find it handy to remove the sticky stuff occasionally adhering to the knives and dulling the edge when cutting certain stock. This device is as much a necessity as a strap is to the barber for keeping razors in proper condition. The sharpener can be adjusted to be used for either upper or under cutters. It is very substantially made, with all metal parts nickelplated.

Will last as long as the cutter, there being nothing to wear out but the material used for sharpening, which can be renewed at trifling cost. Full directions are sent with every tool.

Hoerner's Knife Sharpener, each.....\$3.00

LABOR-SAVING METAL FURNITURE

INLAND FURNITURE

This furniture consists of a wooden core around which metal is cast in such a way that the wood cannot become loose, warp, twist or bend. We guarantee it to be accurate, and that it will neither shrink nor swell. Its great advantage over ordinary furniture is that it combines lightness with absolute rigidity. No amount of pressure that can be applied will make it give way as will all other furniture.

LEAD AND SLUG CASES

(See Cases.)

LEAD CUTTERS

LITTLE GIANT LEAD AND RULE CUTTER

THE OLD FAVORITE, NOS. 1 AND 3

THE NEW FAVORITE, NOS. 12 AND 18

The Little Giant will cut 6-point brass rules easily and for cutting leads it has no superior. It has a front gage for cutting narrow strips or spaces, and the back gage is reversible, so that, altho it occupies a space of nine inches only, it will cut to gage twelve inches long. It has a balanced handle, large bearings, and is held at the head when cutting, so that it is impossible for the cutter to spring from the work.

No. 1, will gage 12 inches. \$ 8.00
No. 3, will gage 18 inches. 12.00

In the Improved Little Giant Lead and Rule Cutter, here shown, are two cutting beds, one on the frame of the machine, the other extending outward from the knives.

The slots in the raised section along the center of the bed are exactly 12 points apart; marked opposite each sixth slot is its number. In cutting long measures on the front bed the bearing surface is sufficient to hold the lead in a horizontal position. The gage is adjustable, so as to cut odd as well as regular measures; slipping is rendered impossible; gage is reversible for extra lengths.

No. 12, gages 12½ inches back, 11½ inches front, graduated to multiples of 12-point.....\$10.00
No. 18, gages 18 inches back, 14 inches front, graduated to multiples of 12-point..... 14.00

LEAD AND RULE CUTTERS

AMERICAN LEAD AND RULE CUTTER NO. 1

This machine is very strong and compact. Provided with a reversible bed gage, which is held in position as in a vise. The posts thru which the gage-rod passes have a narrow slit in the top and a thumb screw, by means of which the rod is clamped quickly and securely. This cutter also has a grooved bed, which, with corresponding projections on gage-head, precludes the possibility of thin material getting under the gage. Capacity of bed gage, $13\frac{1}{2}$ inches; capacity of front gage, $6\frac{1}{2}$ inches.

American Lead and Rule Cutter No. 1 \$ 8.00
 American Lead and Rule Cutter No. 2, same as No. 3, except that front gage
 sets to 6-points only, instead of to points..... 10.00

AMERICAN LEAD AND RULE CUTTER NO. 3

The gages can be set instantly. They are absolutely positive. They are correct and guaranteed to remain so. They can be set to 6-points as well as 12-points. The front gage can also be set quickly and positively from 1 point to 576 points. It is impossible for either gage to slip, or for material, however thin, to get under the bed gage. The bed- and gage-rods are graduated to picas and numbered every five 12-point ems, the back gage-rod to indicate the measure when extended beyond the end of the bed. The cutting arrangement is operated by a combined lever and provided with a shear-cut for brass, and a straight-cut for leads. The support to the right prevents any sag in the material between the front gage and the back knives. In cutting very short pieces, it may be turned back out of the way. The machine rests on three feet, which insures a steady support. Capacity of bed-gage up to 1260 points by 6-points. Capacity of front gage up to 576 points by points.

American Lead and Rule Cutter No. 3..... \$12.00

LEAD CUTTERS

CHANDLER & PRICE LEAD AND RULE CUTTER

Being a radical departure from old styles, this cutter embodies several valuable features. The bed is nearly vertical, but inclined slightly backward, with a raised guide along its lower edge. The lead or rule rests on edge and assumes its position by gravity, assuring a square cut. The guide is accurately graduated to 12-point ems and numbered to 5-em lengths. The gage is reversible for cutting leads longer than the bed, and fitted with a latch to engage the slots of the guide. A thumbscrew holds the gage for odd lengths. Gages 14 inches, 0 to 85 ems.

Chandler & Price Lead and Rule Cutter.....\$8.00

NONPAREIL LEAD CUTTER

Has a long adjustable bearing for the lever, and both front and back gages. Leads can be cut very rapidly and easily on this cutter by grasping both handles in one hand, as in operating hand-shears. By pushing the lever, 3-point brass rule can be cut. The lever is held up by a strong spring.

No. 1.....\$4.00
No. 2, graduated to multiples of 12-point..... 5.00

UTILITY LEAD CUTTER

10-inch bed.....\$2.00

LEADERS—ROUND AND FINE-DOT AND HYPHEN

Standard Line Leaders will line with all our Romans, Old Styles and Job faces. We cast them in metal in four styles—round-dot, one and two dots to em; fine-dot, and hyphen. We also cast them to order to match other than Standard Line type. See specimens on page 290. Prices same as for Roman type. See prices given on page 17.

For Brass Leaders see pages 362-365.

LEADER BOXES

Just the thing for holding leaders. The size is 5x8x1½ inches. You will require one for every size of body type in your office.

Each.....\$0.25
Per dozen..... 2.50

LEADER BOXES**MAY'S PATENT LEADER BOX**

Each\$0.50 Per dozen.....\$5.00

LEAD RACKS**EUREKA LEAD RACK**

This lead rack is made in a neat, strong and durable manner, having a series of graduated spaces, with bottoms inclining backward, and also laterally, into which the different sizes of leads and slugs can be readily placed so that they will incline inward to prevent them from falling out, and also incline against each other to be retained in their respective places, whence they can be readily lifted out with the thumb and forefinger. Figures indicating the different sizes of leads and slugs are fixed upon the front edges of the upright pieces, to aid the compositor in using them. The first apartment is intended to be used for leads and the second for slugs.

This rack will hold 180 pounds of leads and slugs, cut from 4 to 28 ems long, enough to do the job work of any ordinary office.

Eureka Lead Rack.....\$2.50

**LETTER-BOARDS AND LETTER-BOARD CABINETS**

(Prices sent on application. See also Imposing Tables with Letter-Boards.)

LINOTYPE FURNACES

We make a great many different sizes and styles of furnaces for gas or coal, holding from 100 pounds up, and at \$10 and up. Circulars and prices on application.

LINOTYPE GALLEYS

We make special low-priced wooden galleys for holding linotype matter. Circulars and prices on application. (See also Challenge Plate-Zinc Galleys, page 403.)

LINOTYPE METAL

Prices on application.

LINOTYPE RULE

Samples and prices on application.

LINOTYPE SAW

This is the most perfect linotype saw on the market. If there is anything necessary in a linotype saw that this one hasn't got, we would like to know it. It is stoutly built of the best materials, and is neatly and accurately finished. There is nothing about it that is likely to get out of order or become inaccurate by wear. It is so simple that a child can operate it. It will cut from 1 to 30 ems and leave the slug *right*. It can be used for other purposes that will suggest themselves in a printing office. From one line up to four inches of solid matter can be clamped tightly against the front jaw in one second. Both jaws of the clamp always pass close to the saw-blade. There is a guide which shows the path of the saw-blade, enabling the operator to cut off a slug at any point in the line. The back gage is absolutely square and remains true despite any wear that may occur. Another gage can be set so as to guide the cutting off of any desired number of 12-point ems. Still another gage is arranged to hold a cut or initial together with the slugs that are to be cut so that the cut and slugs fill a column measure. There is also an attachment for sawing 6-point ems. The table is 18x36 inches, and there is a screw to raise and lower it. The price includes a chip-guard and countershaft, which latter can be fastened to the floor or to the ceiling. Diameter of tight and loose pulleys, 5 inches. Width of belt, 3 inches. Revolutions of countershaft, 500 per minute.

Linotype Saw, f. o. b. Saint Louis.....\$150.00

MAILING-LIST MATERIAL

We supply mailing-list type of every description, in any quantity, and assorted according to purchaser's desire. See prices of Roman type, page 17.

We also manufacture a special Mailing-List Type, of which every character is cast on en-set, which greatly facilitates the work of setting up mailing-lists. See specimens on page 291.

For various styles of Mailing-List Logotypes see page 291.

We are agents for all makes of mailing machines, and will furnish them at the manufacturers' terms.

Reglets, slugs, galleys, etc., furnished to order at short notice.

MAILING MACHINES

THE HORTON MAILER

The Horton Mailer is easy to learn to operate; is held naturally, does not cramp the muscles of the hand or arm, and can be operated equally well with either hand; perfectly guides and thoroughly pastes the slips, scrapes off all surplus paste and the papers or wrappers are not stuck together; has reversible knives, with two cutting edges, and by means of the adjusting mechanism the knives can be kept so perfectly adjusted that they will remain sharp much longer than those of other mailers. The paste is supplied by a simple wooden roll, which is easy to clean and will last for years. This mailer is 12 inches long, 3 inches wide, 5 inches high, and weighs 2½ pounds. It is packed in a strong box. Slip guides are furnished from 1½ to 1¾ inches long, taking all widths of mailing-lists not exceeding 10½ ems.—[Circular.

Horton Mailer, with paste strainer, extra knives, screw-driver, and oil can, net.....\$20.00

ACME STANDARD MAILER

This mailer has been simplified, strengthened and improved without materially altering its shape. Anyone who has used others will at once be able to handle this with increased facility, because it is much lighter and more convenient. The machine was designed by a practical mailer, for years employed by one of Chicago's largest dailies, and he has produced something that will do the greatest amount of work in the smallest space of time and with the least labor to the operator. No royalty is charged for its use. Acme Standard Mailer, net.....\$15.00

MAILING MACHINES

THE MERCANTILE ADDRESSING MACHINE

Nos.
1, 2 and 3.

This machine is built in the most substantial manner, very simple in all its parts and not liable to get out of order, and will last a lifetime. Line-type slugs or type of any size from 8-point to 12-point may be used. Being operated by a treadle, both hands are free for handling papers. At end

of each post-office list it rings a bell for wrapper and prints it, or will print the address on the margin of the last paper. It is so simple that a boy or girl can operate it. This machine is also built with a ribbon inking attachment.

MAILING MACHINES

THE MUSTANG MAILER

The Mustang Mailer occupies a space 37 inches in length and 4½ inches in width, is made wholly of iron, without springs or complications of any kind to get out of order. It is capable of printing addresses at the rate of 1500 to 2000 per hour, according to the expertness of the operator. The mailing-list is made up on galleys either 10 ems or 13 ems 12-point in width on the inside. Each galley will contain 75 addresses, is easily accessible for making corrections and convenient for handling.

NEWSPAPER FILES

HAMILTON'S NEWSPAPER FILE

These files are made of cherry, nicely finished in oil. The fastenings are brass, with steel thumbscrew, having polished heads. The clasp end of the file has a flat-headed thumbscrew, which is passed thru a slot, and by giving the screw one-quarter of a turn the file is securely locked. They are made in the following regular sizes; other sizes furnished if desired.

To hold sheets 20 inches wide.
To hold sheets 22 inches wide.
To hold sheets 24 inches wide.
To hold sheets 26 inches wide.
To hold sheets 28 inches wide.
To hold sheets 30 inches wide.
To hold sheets 34 inches wide.

NUMBERING MACHINES

BETTER WETTER NUMBERING MACHINE

This is the only typographic numberer that prints nothing but the figures, without "No.", a period or any other affix or suffix intended to act as a plunger or to prevent the printed sheet from being smeared by the revolving figures. The pressure of the platen or cylinder on the figures operates the mechanism which changes the numbers and also an ingenious bearer, which raises automatically and holds the printed sheet off the figures while they are changing. The bearer does not print or indent the paper. The machine is $\frac{1}{4}$ of an inch wide, the length depending on the style and number of figures. Type can be set close to the machine on all sides.

STYLE K.

they were before, and to reproduce them in sharper, bolder lines. Interchangeable letters or characters—in the place of the prefix "No"—can be made in the machine without unlocking the form, thus often making a great saving in time, and enabling the printer to continue different lines of work with scarcely a halt. It is easily taken apart, cleaned and refixed in a very few moments. These machines can be arranged to skip any number from 1 to 10, for numbering checks and stubs or other documents with 1 to 10 to the page at one impression. This machine is made with the above sizes and styles of figures in 5, 6 and 7 wheels. Any special design of figure can be duplicated at a slight advance over the following prices:

PARAGON NUMBERER

The Paragon Numberer, weighing about fifteen ounces, is built upon a new principle, making it small and light to handle, insuring speed and ease of operation. Every wearing part is of steel, including the figure wheels, and all parts receive the finest finish and are interchangeable. It is simple in construction, embracing fewer parts than any other machine on the market. Numbers consecutively, duplicates and repeats, the changes being made by inserting a pin in the holes opposite the indicators. See illustration on next page.

PAPER CUTTERS

UTILITY PAPER CUTTER

This cutter is intended for small work, but is built as well as the larger machines. Is fitted with a reversible clamp, allowing back gage to come within $\frac{3}{4}$ inch of knife.

No. 1, cuts 16 inches.....\$50.00
No. 2, cuts 18 inches.....60.00

CLIPPER PAPER CUTTER

WITH REVERSIBLE CLAMP

This cutter has been designed for use in offices where small job work, such as labels, circulars, etc., is chiefly executed. It is simple in construction, strong and durable, has an iron bed, with an adjustable back gage, also a new reversible clamp, which has a solid face, leaving no marks on the paper. It is easily understood and handled, and will give entire satisfaction in every particular.

Cuts 12 inches.

Clipper Paper Cutter.....\$40.00
Extra knives, each.....2.50

PAPER CUTTERS

16-INCH AND 19-INCH CHALLENGE CUTTER

Intended for cutting and trimming small work. Stock may be gaged to within $\frac{1}{4}$ inch of knife. The back gage is made extra long, bringing it close to side gage.

Cuts 16 inches, squares 16 inches.....	\$50.00
Cuts 19 inches, squares 19 inches.....	65.00

CHALLENGE LEVER CUTTER

The 25-inch Challenge lever cutter is provided with front and back stationary side gages, which are cast on the frame and accurately squared with the knife and back gage. The 30-inch and 32-inch cutters have, in addition to these, an extra side gage in front, adjustable to either side; also a split back gage, for use in trimming pamphlets. The knives are made of the best toughened steel.

The interlocking back gage and clamp, for cutting narrow widths, is furnished without extra cost.

25-inch, squares 25 inches.....	\$130.00
30-inch, squares 30 inches.....	175.00
32-inch, squares 32 inches.....	200.00

CHANDLER & PRICE PAPER CUTTER

This cutter has great strength, and works quickly and with the minimum of effort. The back gage and the clamp interlock, clamping as narrow as $\frac{1}{4}$ inch. The fingers of the clamp have a broad surface to avoid creasing the stock. All gages are exactly squared with the knife. The back gage extends to within 1 inch of the side gage, and is divided and adjustable for book trimming or squaring small work. All parts are strictly interchangeable, and accurately fitting replacements may be ordered by number.

23-inch	\$100.00
26-inch	130.00
30-inch	175.00

PAPER CUTTERS

ADVANCE CUTTER

The 22½-inch cutter cuts 22½ inches by 3½ inches deep. The back-gage is 17 inches long, gages within 1¼ inches of the knife, and runs back 23½ inches. The front table extends 12 inches from the knife, and is provided with an accurate brass scale or measuring rule, 12 inches long, divided into eighths of an inch, by which the paper can be gaged to within ¼ inch of the knife. The 25-inch cutter cuts 25 inches by 3½ inches deep. The back-gage is 20 inches long; it gages to within 1¼ inches of the knife, and runs back 27 inches. The front table extends 12 inches, and is provided with a measuring rule like the other size. Each cuts ¼ inch more than the stated width, so as to allow free handling of stock.

16-inch.....	\$ 50.00
19-inch.....	65.00
22½-inch.....	90.00
25-inch.....	110.00
30-inch.....	165.00

THE ADVANCE POWER CUTTER

The Advance power paper cutter is fitted with tight and loose pulleys for steam power, and has a special handle furnished for running by hand power. The throw-off stops the knife at the highest point of the stroke automatically. It may be thrown off at any point by hand, in case of error, and backed up to save stock. The clutch, clutch pinion and intermediate gear are cut out of solid steel. The clamp and gage screws and all shafts and studs are steel. It has gibs and setscrews to take up wear of knifebar; brass figured rules in bed, back and front; interlocking back gage and clamp for trimming narrow work.—[Circular.

PAPER CUTTERS

THE CHALLENGE POWER CUTTER

The Challenge power paper cutter is built in the most substantial manner. It occupies less space than any power cutter of similar capacity. The clamp, back-up, gage-wheels and clutch-lever are all so conveniently placed that the operator can control the actuating parts without moving from his position. It is provided with side gages, back and front; an extra reversible side gage for front-table; split back gage; interlocking back gage and clamp for cutting narrow widths; brass figured rules in bed, back and front. The clamp and gage screws and all shafts and studs are steel. Clutches and driving gears are cut out of solid steel. The knife may be stopped at any point and backed up by a hand-wheel provided for that purpose. The wheel which operates the back gage is graduated to fractions of an inch for convenience in setting same.—[Circular.

PAPER CUTTERS

THE RELIANCE LEVER CUTTER

In the Reliance, so far as mechanical design, first-class material and workmanship and experience can assure, is produced a cutter of great strength, accuracy and long life. It is amply braced to insure strength and rigidity. The bed is cross-ribbed underneath, with an extra wide brace or flange on the outer edge, and it is additionally strengthened by the heavy center brace. The top arch, which receives the strain of the clamp, is well formed and extra heavy, as is also the knife-bar and clamp. The knife, when elevated, is about three-fourths of an inch higher on the right end than on the left. This gives to the descending knife the desirable shear-like motion, cutting smoother and much easier than is the case with cutters having little or no shear-cut.

The cutter has the interlocking back gage and clamp, and gages and clamps as narrow as one-half inch; and the back gage extends to within one inch of side gage, so that the two gages can be used together in squaring small work. The gages are perfectly squared with the knife.—[Circular.

PERFORATING AND SCORING MACHINE

DAMON PERFORATOR AND SCORER

The Damon perforator and scorer, shown below, consists of a depressible interchangeable steel blade, either with perforating or scoring surface, acting in connection with a base-plate and lever, all secured within a steel casing and operated by a rubber pressure quad glued to the tympan, which presses against the lever, bringing the blade into position, just before taking impression. It locks into the form, is 12 points wide, and saves rollers as well as money, by perforating (or scoring) and printing at one impression.

1. Creasing blade. 2. Perforating blade in position to take impression. 3. Perforator with blade depressed. 5. Presser quad. 6. Presser quad glued to tympan.

No. 1, total length, 5 inches; perforates and scores 4½ inches	\$3.00
No. 2, total length, 7 inches; perforates and scores 6½ inches	4.00
No. 3, total length, 10 inches; perforates and scores 9½ inches	5.00
No. 4, total length, 12 inches; perforates and scores 11½ inches	6.00

PERFORATORS

FRANKLIN PERFORATOR

This perforator is made of the very best material, is perfect in all its parts, and is the only one that has hardened and tempered steel dies. The perforations are round, as on postage stamps. The size of the space between punches (15 holes to the inch) is such as has been dictated by careful inquiry. The stripper is flanged cast-steel, which renders it firm and solid, and it cannot get out of order. A needle accidentally bent or broken can be readily removed and another inserted in its place. One hundred extra needles sent with each perforator.

10-inch Franklin Perforator.....	\$25.00
Needles, per 100.....	.50

IMPROVED FRANKLIN FOOT PERFORATOR

This machine is built upon the same principle as the Franklin hand perforator. Like that, it is perfect in all its parts, and is made of the best material. Perforates 15 holes to the inch. Needles bent by accident or otherwise can be removed very easily and others inserted, as the needles are all independent and are not soldered together, a notable fault with other perforators now in use. One hundred extra needles, one pair of pliers, one screw-driver, one file for sharpening needles, and directions for operating, are sent with each perforator.

15-inch Franklin Foot Perforator.....	\$40.00
20-inch Franklin Foot Perforator.....	50.00

No. 2, 7-column foliosize of bed $27 \times 38\frac{1}{4}$	450.00

Above prices are f. o. b. Chicago.

NEW MONONA LEVERLESS PRESS

There is no oscillation of the bed. It is automatically locked and absolutely rigid during impression. The impression is perfect, and can be quickly changed at either corner of the bed. The press is a self-inker and has fine distribution, the distributing rollers vibrating on the ink table, and in the book press the form rollers and grippers are both geared. The press delivers the printed paper automatically, without tapes, pulleys or flyers. Every press has a throw-off by which the impression can be thrown off at any point. The ink fountain is under the feed table, and is the regular well-fountain in use on nearly all drum cylinder presses, and can be easily and perfectly regulated and readily cleaned. The rollers ink the forms in both directions. The two form rollers are three inches in diameter and the three distributors are two inches. The feeder is absolutely safe, as there is no gearing on the feeder's side of the press.

For prices see next page.

NEW MONONA LEVERLESS PRESS

		News.	Book.
No. 7, 7-column folio.....	bed 27 x 37 inches inside bearers...	\$ 700.00...	\$ 750.00
No. 8, 8-column folio.....	bed 28 x 43½ inches inside bearers...	800.00...	850.00
No. 9, 6-column quarto, bed 32½ x 46½ inches inside bearers...		900.00...	950.00
No. 10, 7-column quarto.....		1,050.00...	1,100.00

Each press is complete with full set of cast ink rollers, blanket on cylinder, boxed and on board cars.

Steam fixtures for press, extra, \$15.00.

Screw vibrators on top of the two form rollers can be had at a net extra cost of \$15.00.

The book and job presses can each be made a four-roller press with top screw vibrators at a net extra expense of \$50.00.

THE SCOTT NEWS AND JOB PRESS—CLASS C

CLASS C

This is the best low-priced drum cylinder press on the market, and should not be confounded with the so-called "country" grade of presses of other makes. The six-column quarto size weighs 4½ tons, and its improvements and substantial construction render it the equal in many respects of the higher-priced machines. It is designed to take the place of such machines at much less cost, and to do job—as well as news-work. It is built on a heavy bed-plate and the wearing parts are made ample with a view to durability and solidity, giving a solid and unyielding impression. The bed is supported by steel-shod tracks. Has improved bed-driving mechanism, no universal joint being

used, giving a uniform motion to bed and cylinder, and the cylinder is geared to the bed during the impression, insuring perfect register. It has improved ink-distribution, with two large polished vibrating rollers—no cloth-covered rollers (which are a nuisance when colored work is done) being used. The ink-fountain is high, giving easy access to the form, and is easily cleaned and adjusted. The form-rollers are large, and may be thrown out of contact with both the form and distributors without removing them, and can be removed without changing the "set." It is equipped with tapeless delivery, the sheets being delivered to the fly by a gripper-cylinder constructed of rings. It has feeder's platform with step and strong delivery table. The fly cam surface is continuous and the fly easily adjusted. The feed-gages are adjustable. In fact, this machine is thoroly constructed in a factory equipped for the highest grade of press-building, and is built with the same attention to detail and workmanship as their higher grade machines. Made in three sizes as follows:

No.	Size of Bed Inside Bearers.	Matter Covered by Both Rollers.	Working Speed up to.	Weight
No. 5	29 x 42	24 x 38	1,800	about 4 tons
No. 6	33 x 47	28½ x 43	1,600	about 4½ tons
No. 7	37 x 51	33 x 47	1,400	about 6 tons

With the machine are included rubber blanket, countershaft and hangers, driving pulleys, two cone pulleys (one of them in halves), eight roller-stocks (two sets—one set cast), wrenches, boxing and shipping. Unless otherwise ordered, countershaft, etc., will be furnished for main shaft 1½ inches in diameter.

Descriptive circular and prices on application.

SCOTT TWO-REVOLUTION PRESSES

These machines embrace special features, such as continuous register-rack; geared vibrators; bed-motion geared to center of bed; back-up mechanism; adjustable air-cushions, that can be regulated to suit speed of machine while in motion; either printed side up or regular front fly delivery; impression-trip; interchangeable form and table rollers; new system of ink-distribution; sheet-jogger. Made with four form rollers, in seven sizes, from 26 x 36 to 48 x 66; with two form rollers, in five sizes, from 25 x 31 to 38 x 51.

Send for descriptive circular and prices.

PRESS POINTS AND WRENCH

These points are for printing bookwork that is to be folded on a point folder. They screw

into the marginal wooden furniture, the cross-pin near the point fitting into the wrench. The shape of the point is calculated to produce the proper impression in the paper.

Press Points, per dozen.....\$0.75
Wrenches, each......75

PRESS PUNCHES

This punch is about $\frac{1}{4}$ inch lower than type, and can be locked up in a type form, thus enabling printers to punch holes in the stock at the same time it is printed, without extra expense. A piece of 2-point rule should be cemented to the tympan sheet for the punch to strike on, and an opening left in the form opposite opening in base of punch to prevent it from becoming clogged. Made of best tool steel, tempered.

$\frac{1}{4}$, $\frac{1}{8}$ or $\frac{1}{16}$ -inch hole, each.....\$1.00

EJECTOR PRESS PUNCH

This punch is made 2 points lower than type-high and one or more can be locked up in a type-form, and will cut a round, clean hole one-eighth, three-sixteenths or one-quarter inch in paper or cardboard at the same time the job is printed. It will not clog, as each piece cut is ejected by a plunger and falls to the floor as soon as the impression is taken from it. The cutters are all mounted on the same size body.

COMPLETE
PUNCH

CUTTER

EJECTOR

SPRING

and all parts are interchangeable. Brass rule should be used under the outer sheet of the tympan, as it has been found to cut a much clearer hole than the hardest fiber. In case of accident new cutters can be fitted at slight expense.

PRINTERS' VISE

Printers' Vise, each.....\$1.50

PRINTERS' WORK BENCH

We illustrate here a new printers' work bench. There is a demand for this useful piece of printing-office furniture, and every up-to-date office should have one. It is 6 feet long, and 26 inches wide. Two drawers are $16\frac{1}{2} \times 21 \times 3\frac{3}{4}$ inches, two are $10\frac{1}{2} \times 21 \times 3\frac{3}{4}$ inches, and two $10\frac{1}{2} \times 21 \times 6\frac{1}{4}$ inches, all inside measurements. The height from floor to top is $33\frac{1}{2}$ inches. The top is made of $2\frac{1}{2}$ -inch rock maple, with dove-tailed ends. Balance of ash finished antique.

Printers' Work Bench.....Digitized by Google \$32.00

PROOF PRESSES

This proof press is extremely strong and durable. A thoroly braced iron frame supports the bed and encloses the walnut closet for ink and paper. The extra large and heavy roller is covered with the best felt blanket.

No. 1, 10x31 in., with frame.....	\$30.00
No. 1, 10x31 in., without frame....	22.50
No. 2, 16x31 in., with frame.....	42.00

ELECTRIC PROOF PRESS

This machine is self-inking, and is for newspaper offices. It is equipped with an electric motor and run by drop-cord connection with an incandescent circuit, or may be operated by hand. Made in two sizes:

10x29 bed.....	\$210.00
13½x29 bed.....	265.00

PUNCHING PRESSES

(See also Corner Cutters.)

SIEBER & TRUSSELL PUNCHING PRESS

NO. 16, HAND AND FOOT POWER

This is the best low-priced machine on the market for punching one or more holes in sheets to be filed in price-books, loose-leaf books, post-binders and other loose-leaf binding devices. It can also be equipped with round-cornering knives, and will round-corner two ends at once, up to 16 inches apart on the No. 16 press, and up to 12 inches apart on the No. 12 press, thus giving it double the capacity of other round-cornering machines. Especial attention is directed to the fact that the punch-heads are removable and adjustable. This allows the punching of holes at any distance apart that may be desired up to the width of the press. Heads and dies for punching irregular or special shaped holes can be furnished to order. This press is strongly built, being of cast iron, neatly finished in nickel and enamel, and is designed for convenience and long service. Has a graduated scale for spacing punches, and adjustable side stop for the paper. This press is made in two sizes. The punch-heads will fit either size.

(For prices see next page.)

PUNCHING PRESSES**SIEBER & TRUSSELL PUNCHING PRESS****No. 12. HAND POWER**

The following prices are for presses without punches:

No. 12, hand power only, will punch holes to 12 inches apart	\$25.00
No. 16, hand and foot power, will punch holes to 16 inches apart	50.00
Punch-heads, each	3.00

Special punch-heads and round-corner knives to order.

SHAFTING

Furnished to order at low prices. Prices given on application.

SHOOTBOARDS**INLAND SHOOTBOARD AND PLANE**

The shootboard is made entirely of iron and steel, in the most thoro and workmanlike manner. It measures $13\frac{1}{2} \times 21\frac{1}{2}$ inches, the bed for the stereotype being $11 \times 16\frac{1}{2}$ inches. The planes are of iron, with steel blades and pins and wooden handles, and are provided with a device for squaring the blade. We guarantee these tools to give satisfaction, and to be equal to the best made.

Shootboard, with one plane \$16.00
 Extra beveling plane for book plates 4.00

HOERNER'S COMBINATION SHOOTBOARD AND TYPE-HIGH MACHINE

This device combines three machines in one—shootboard, type-high machine and miterer. It will take in blocks 10 inches wide and of any length. The carriage or guide frame for the plane being movable from side to side while operating, blocks of the full width of the bed can be shaved at one locking. The cuts or plates are laid facedownward on the bed, locked, and then shaved until the knife or file cuts no more, when they will be even type-high. If

blocks are too low, lay sheets of paper or cardboard below them, to raise high enough for shaving, then glue the sheets to the bottom of the cut. Slugs, rules and furniture (wood or metal) can be trimmed with it. Miterers can be cut at any angle and blocks squared with it. It can also be used as a bench vise, being handy when you want to take off or put on an electrotype plate.

Horner's Combination Shootboard and Type-High Machine, complete with one file-plane and one knife-plane \$25.00
 Extra files and knives, each75

(See also Type-High Machine.)

SPACES AND QUADS

See description of our spaces and quads on page 20; prices on page 17.

SYSTEMATIC THIN SPACES

Thin and "hair" spaces have always been a source of annoyance to printers. Compositors generally cut up leads and cardboard for use as thin spaces. But as every one is permitted to cut these to sizes and lengths to suit himself, carelessly and without regard to any system, the cases are soon littered up with an unattractive mess of non-productive material. The quad boxes are often a sight repulsive to behold. The chopped leads never have the appearance of spaces, hence the compositors feel indifferent toward them, and treat them in a wasteful manner. To remedy such a money-losing state of things, and to do away with all the bother and dirt connected with it, we have devised a series of Systematic Thin Spaces.

These spaces are made by us in three thicknesses, ½-point, 1-point and 2-point, for all bodies from 6-point to 72-point. To enable the compositor to easily distinguish them, the ½-point thickness is made of copper, the 1-point of brass and the 2-point of metal. They are finished in the most accurate manner.

The 1-point and 2-point spaces are also very desirable for use in justifying one size of Standard Line type with another when used as caps and small caps, where the words are short, obviating the necessity of cutting up leads for lining the smaller with the larger face.

Systematic Thin Spaces, per font as follows:

	½-Point, Copper.	1-Point, Brass.	2-Point, Metal.
6-point, 7-point 8-point, 9-point, 10-point, 11-point and 12-point bodies, assorted in one font.....	\$1.00*	\$1.00*	\$1.00*
12-point, 14-point, 16-point, 18-point, 20-point, 24-point, 30-point, 36-point, 42-point and 48-point bodies, assorted in one font.....	1.00*	1.00*	1.00*
54-point, 60-point and 72-point, assorted in one font.....	1.00	1.00	1.00

*These fonts are put up in small wooden cases, suitable for constant use.

Also put up in fonts of any one body, from 6-point to 72-point, containing three thicknesses at 25c. per font.

INLAND THIN SPACE CASE

A special case made to hold our systematic thin spaces. See description and prices on pages 387, 388.

STABBERS

CHALLENGE BOOK-STABBER

There is probably no job office in the country that does not have considerable stitching to do. With this stabber at least four times as much work can be done in a given length of time as is usually done in the old-fashioned way. It is especially handy in binding pamphlets of all kinds, check-books, note-books, memorandum tablets, etc. It will soon pay for itself. It is easily attached to the clamp of any paper cutter, and the needles can be set at any distance apart, within a space of 7½ inches, and will stab any thickness up to three-fourths of an inch.

Challenge Book-Stabber, complete \$4.00

STAPLING MACHINES

**BREECH-LOADER BINDER**

Adapted to binding small pamphlets of any thickness under 100 pages.

Breech-Loader Binder	\$3.00
Staples (C. $\frac{1}{8}$ long; D. $\frac{1}{4}$ long; E. $\frac{1}{2}$ long) per 1000	.50

ACME STAPLE BINDER No 1

The Acme Binder No. 1 is designed for work in small printing offices where the occasional job of binding sent out takes away most of the profit on the job. The great points about this machine are its strength and simplicity. It holds 100 staples at a charge, and binds to $\frac{1}{4}$ inch. It requires no adjusting at all. It is equipped with the anti-clogging device and flat table.

Acme Staple Binder No. 1	\$6.00
--------------------------	--------

This machine uses wire staples numbered as follows:

No. X, length of leg $\frac{1}{4}$ inch, per box of 5000	\$1.25
No. XX, length of leg $\frac{1}{2}$ inch, per box of 5000	1.25

STAPLING MACHINES

ACME STAPLE BINDER

No. 6

Uses both fine and heavy wire staples. No change of adjustment for varying thicknesses. Binds from one sheet to 1/4-inch thickness. Is equipped with a non-clogging device, and uses flat and round wire.

Acme Staple Binder No. 6 \$40.00

STAPLES, PER BOX OF 5000

No. 20, 1/4-inch, round \$1.25

No. 21, 1/4-inch, round (fine) 1.25

No. 22, 1/4-inch, round (fine) 1.25

No. 23, 1/2-inch, flat (heavy) 1.25

No. 24, 1/2-inch, flat (heavy) 1.25

Order staples by number, to prevent mistakes.

THE YARGER STAPLE BINDERS

No. 8

(See prices on next page.)

No. 9

STAPLING MACHINES

THE YARGER STAPLE BINDERS

(See illustrations on preceding page.)

The No. 8 machine is designed to stitch thru the fold, being provided with a saddle-back table, as well as a flat table. It binds pamphlets, calendars, etc., up to a thickness of 100 pages thru the fold, 12 inches from margin. Price includes stand.

Saddle-Back Binder No. 8, with saddle-back and flat table \$28.00
Wire Staples, No. 1, $\frac{3}{4}$ inch, per box of 5000 1.25

The No. 9 is the best of this series of machines, working on the same principle, but with great improvements. The new clinching device perfects the clinch equally as well as most of the high-cost steam-power machines. It stitches thru the fold or thru the back, and drives staples 9 inches from margin, and thru a thickness of $\frac{1}{4}$ of an inch.

Saddle-Back Binder No. 9, with flat and saddle-back table \$36.00
Wire Staples, No. 1 $\frac{1}{2}$, $\frac{3}{4}$ inch, per box of 5000 1.25
Wire Staples, No. 2, $\frac{1}{2}$ inch, per box of 5000 1.25
Wire Staples, No. 3, $\frac{1}{4}$ inch, per box of 5000 1.25

O.W.B. & CO.

STEREOTYPE OUTFITS

We carry in stock outfits of all sizes and descriptions, including the largest sized plant, complete with steam drying press. But with the casting-box shown in the cut first-class stereotypicals can be made without a steam-table, as the matrices can be dried by the gas or gasoline drying attachment.

This is the lowest-priced reliable outfit in the market.

An outfit consists of casting-box, furnace, melting-pot, ladle, miter-box and saw, blankets, beating and oil brushes, tools, paper, paste, material, chisels, etc., as well as complete instructions which will enable the printer to do first-class work.

Save your type and composition on repeat orders.

Send for special circular and price list.

STEREOTYPE BLOCKS

PATENT STEREOTYPE BLOCKS

In ordering stereotype blocks, give the size of the block over all, and the size of the largest and smallest plates to be worked, measuring the back of the plate, or add $\frac{1}{4}$ of an inch each way to the printed matter, viz.: if the page is 3x5 inches the block should be 3 $\frac{1}{4}$ x 5 $\frac{1}{4}$ inches outside.

Also state whether you wish blocks with or without end hooks, or if additional hooks are wanted.

Stereotype blocks are made to order in all sizes. The following list is merely of the most generally used dimensions. All blocks are made $\frac{1}{4}$ of an inch high unless otherwise ordered.

	Outside dimensions of blocks.	Sizes of plates, including bevel.	No. of hooks.	Wood. Price. each.	Iron. Price. each.

SUPERIORS AND INFERIORS

(See pages 309, 311.)

TABLET PRESSES

COTT'S IMPROVED TABLET PRESS

For straightening up and clamping sheets of paper while being glued for tablets. Will hold any quantity up to 3000 sheets of paper and any size from $2\frac{1}{2} \times \frac{1}{4}$ to $8\frac{1}{2} \times 14$ inches. With an additional clamp and larger press-boards, almost any size of work can be easily handled. Accommodates all sizes of commercial stationery, and admits of work being glued on one or both sides.

Tablet-holder and clamp, with set of four press-boards.....	\$3.25
Extra clamp and set of four press-boards.....	1.60
Extra clamp, without boards.....	1.25

No. 1, will hold 2000 sheets any size up to 6×12 inches.....	\$ 6.00
No. 2, will hold 5000 sheets any size up to 8×16 inches.....	12.00

TABLET GLUE AND GUM

INLAND ELASTIC TABLET GLUE

The Inland Tablet Glue is made of the very best materials and in the most brilliant colors. Always ready for use, dries rapidly, and gives an elastic coating, firmly holding the sheets.

DIRECTIONS FOR TABLET WORK.—Pile up the blocks evenly and secure by a weight, or preferably in a tableting press. To hold the paper so that it can be removed without tearing, apply the cement thickly, using a flat varnish brush. To hold firmly, apply very thin. In the latter case, two coats may be required to give it a glossy finish. Blocks may be cut apart with a thin, sharp knife as soon as the glue has set. If allowed to remain until the cement has hardened, cracking may be prevented by passing over the edge with a damp sponge before cutting apart. If too thick, thin with vinegar. Do not use water unless glue is to be used at once, as the unused portion will sour in a short time. Can also be used for cementing paper, leather, wood, rubber and any other similar material.

TYPE-HIGH MACHINE

CHALLENGE TYPE-HIGH MACHINE

The only device, at a moderate price, that will reduce cuts to type-high or make them true and even when they have become warped. Passing all cuts or plates on wood bases thru this machine before forms are sent to press saves one-half the time usually spent in making-ready. Any one can operate it successfully. The cut is placed face downward on the galley which goes with every machine; sheets of paper are placed under the cut as may be required to reduce it to the desired height. For squaring sides, the plane is placed in the groove in front of the machine, the cut placed face upwards on the galley, and squared as usual on an ordinary shootboard. Size of galley, 8×12 inches. Challenge Type-High Machine.....

Challenge Type-High Machine.....\$12.00

(See also Shootboard and Plane.)

TYPE MEASURES

INLAND TYPE MEASURE

Made of wood, having four sides with brass edges. Marked off for agate, 5½-point, 6-point, 7-point, 8-point, 9-point, 10-point, 11-point and 12-point bodies, and also inches.

Price, each.....\$0.25

Brass Type Measures made to order.

TYPE-SETTING MACHINES

Send for special circulars and prices.

We will nick type for composing machines at a nominal cost.

TYPE WASH

INLAND TYPE WASH

This wash is a perfect detergent for type and rollers. No matter how hard the ink has become it will remove it quickly. Unlike lye, which attacks everything it touches, this preparation will not harm the hands, rollers, brush or type, and at the same time it is much cheaper. Being unflammable, it is not dangerous like benzine. One pound will make eight gallons of wash. Apply with an ordinary lye brush, afterwards rinsing with clean water.

WOOD TYPE

Wood type of different manufacturers furnished to order.
Special Specimen Book on application.

Instructions for Ordering Wood Type.—In ordering do not mutilate the specimen books, but write plainly the full title or number of the letter, stating the size of the font (whether it is 3a, 4a or 5a), and whether it is caps, caps and figures, or caps, lower case and figures, that are wanted. It will prevent the possibility of mistakes if the total number of characters and the list price of the font are stated.

Always state from what specimen book you are ordering.

In ordering **Serts** send, if possible, a perfect proof of each letter wanted. This will insure exact copies. Serts are not carried in stock, but are sent from the factory.

WHAT THEY SAY OF US AND OUR PRODUCTS

KANE, PA., Aug. 21, 1899.

I am studying your specimen book very closely with the intention of sending you a fair-size order in the future. I have very little of other makes but yours. I value Inland type more and more every day, and I cannot say too much for it to others in the business. F. J. BLOOMQUIST.

BIG TIMBER, MONT., Sept. 16, 1899.

After laying the type and placing our machinery in position, we find the goods which we have just received from your house to be perfectly satisfactory in every respect. We look forward to a newspaper dress such as has not been seen in this section of the State.

W. J. HANNAH.

MILWAUKEE, WIS., Apr. 21, 1899.

We must say that for accuracy, finish and apparent wearing qualities, with its many labor-saving features, your type is superior to any we have ever used so far. It is certainly an economizer of the compositor's time.

RIVERSIDE PRINTING COMPANY.

WEST PLAINS, MO., Oct. 23, 1899.

For the past ten months I have been using your make of type—the first type that I have run across of STANDARD LINE faces. Must say your make is most superior. I want Inland type for fine job-work, because its faces line, no matter what body is used.

ALLEN D. STRAINS.

WHAT THEY SAY OF US AND OUR PRODUCTS

♦♦♦♦

The following testimonials are unsolicited, and we have, therefore, to save space, in most cases omitted extraneous matter. The originals, and hundreds of similar letters, are on file in our office.

KEY WEST, FLA., Jan. 2, 1899.
All my type in the future will be on
STANDARD LINE. H. C. CANTWELL.

CRIDERSVILLE, O., Nov. 19, 1900.
We are highly pleased with your system.
BI-COUNTY REVIEW,
F. E. BURKHARDT, Manager.

OXFORD, MASS., April 27, 1899.
I have nothing but praise for STANDARD
LINE type, and intend adding considerable more of it this fall.
GEO. E. CHAFFEE.

WICHITA, KAN., July 9, 1901.
I have everything Inland in my office
and want to keep *in line*. Inland type can
not be praised too much.
A. G. MCCORMICK.

CHICAGO, ILL., March 10, 1899.
Your lining system is a grand success,
and your material is worth more than any
other makers', as you claim.
CHARLES H. GOULD.

GALVESTON, TEX., July 9, 1901.
Your type is highly satisfactory,
and you will hear from us again when we are
in need of any thing in your line.
KNAPP BROS.

PINNACLE, N. C., Oct. 29, 1901.
Nothing but STANDARD LINE invades
our sanctum. We make money by using
only "the best." Yours for STANDARD
LINE. W. C. PHILLIPS.

TORONTO, CAN., June 29, 1900.
We are very much pleased with the lot
of type that we received from you, and
hope to be able to favor you with some
more business in the future.
THE COPELAND-CHATTERSON Co., Ltd.

OMAHA, NEB., Dec. 6, 1897.
For symmetrical cutting and beauty of
design your faces are unsurpassed, and
no doubt the fine effects produced in your
specimens are due in a great degree to
these facts.
A. E. DAVIS,

With REES PRINTING COMPANY.

PORTSMOUTH, OHIO, May 11, 1901.
All my new purchases will be nothing
but STANDARD LINE faces, because this
is the only correct system, and all my
orders will go to the Inland.

WILLIAM ESKEW.

MILWAUKEE, WIS., Apr. 21, 1900.
We are convinced that the lining system
of your foundry is a great time-saver,
and it is seldom that the modern
printer has the pleasure of handling type
as finely and accurately finished.

OWEN & WEIHRRECHT COMPANY,
Per GEO. H. OWEN.

DALLAS, TEX., July 19, 1899.
We want to thank you for the promptness
with which you have filled our order
of the 15th inst. for type. It is quite a
pleasure for us to send business to you
and have it come back in such a prompt
and satisfactory manner.

DORSEY PRINTING COMPANY.

NEWTON, MASS., Nov. 30, 1898.
I have studied your specimen book
until I am convinced you have the best
system of any typefoundry in the country,
and every letter I buy hereafter will
be your make, even if it is a little unhandy
to get it in a case of hurry.

A. W. FARR.

SCRANTON, PA., Oct. 11, 1899.
We take off our hat to you. The prompt
manner and uniform finish to the brass
rule of our last order meets our hearty
and sincere thanks, and we have decided
that all future orders for the job department
shall be placed with the Inland.

A. DE FOLLETT.

CAIRO, ILL., July 28, 1898.
The STANDARD LINE is "the thing." If
I were selecting a new outfit, I would have
no other. No practical printer can fail to
recognize its merits. It should, in my
opinion, be made universal, as the point
system was some time ago.

D. A. CONNELL,
Foreman Telegram Job Office.

WHAT THEY SAY OF US AND OUR PRODUCTS

WILKESBARRE, PA., June 2, 1898.

I can say from my experience with your type and that of other foundries, that it is the best type I have ever used. It is the favorite type of the office and is used in nearly every job. HARRY DEMUN.

MINGO JUNCTION, O., Nov. 3, 1898.

I have been using STANDARD LINE type for the past three years and feel confident that nearly every printing-house in the Ohio Valley would use it if they understood its advantages.

R. A. BRYANT.

HARRIMAN, TENN., Aug. 16, 1899.

This is what I think of you—that your foundry is the most enterprising concern of the kind in the country. Your type is so well and carefully made that it is a pleasure to work with it. The composing and pressroom necessities which you handle are good and practical.

W. RANDOLPH MUIR.

HUNTINGTON, IND., Nov. 21, 1900.

The advertising matter sent out by you is prized more than that of any other concern, and we desire you to continue sending it to us. We know full well the advantage of your system over that of other concerns, and our future orders will be placed with you or one of your branch houses.

ENOS G. CONNER.

COLUMBUS, IND., Aug. 10, 1899.

We are buying STANDARD LINE type altogether now. We buy it because of the economy of the system in composition, the increased variety it gives with little trouble, and because of its symmetrical designs. Last, but not least, is the superior tough metal with which it is cast. L. C. SEAL PRINTING COMPANY.

SAN DIEGO, CALA., July 23, 1900.

We have only praise for the products of your foundry. The exact and systematic justification and lining of your type cannot be too highly commended. The durability of your type-metal surpasses in comparison with any foundry products that we have heretofore used. We shall need more type soon, and the Inland Type Foundry has proven worthy of our orders.

CUMMINGS BROS.

HANNIBAL, MO., June 26, 1898.

I am very much pleased with your STANDARD LINE system and the prompt manner in which you fill my orders.

ALBERT J. AYERS.

MILWAUKEE, WIS., April 21, 1899.

Having used Inland type quite freely of late, I must say it has given complete satisfaction, and therefore pronounce it all right.

J. S. BLETCHER.

GARDNER, MASS., July 28, 1901.

Please send us printed labels, for the cases, for fonts of your type lately purchased. We have decided to purchase several fonts of your type in the near future. It is the best type on earth, without any exception, the lining system being perfect.

W. E. HARTWELL COMPANY.

LOGAN, O., Dec. 22, 1899.

I shall try to prevail upon my "boss" to invest some of his lucre in STANDARD LINE type. Have been a "print" for about twelve years, and I certainly appreciate the merits of STANDARD LINE and Point Set type, and have often wondered why such type was not made, even before the advent of the self-spacing type and other movements in the direction of what I now believe to be perfection—or near perfection—Inland type.

A. E. HULB.

WASHINGTON, D. C., Aug. 10, 1899.

We have several series of your type and bodies, and they do yeoman service in our display work, with great satisfaction to ourselves and customers. The agents of other foundries say that your type is no good, they usually pay you a "Reed" compliment by saying that they sell lining type, and are watching you closely (for ideas). There is not an obsolete face in your specimen book, or a face that could not be used for every-day service, and if I had the opportunity I would adopt your system "in toto," adding only such outside faces from other foundries as were absolutely necessary to please customers. As we know the practical side of your products, and reap the benefits, we shall always keep you in mind.

Digitized by R. J. SCAMMELL.

WHAT THEY SAY OF US AND OUR PRODUCTS

♦ ♦ ♦ ♦

CHICAGO, ILL., Nov. 22, 1900.

If I were still in the job-printing business you people would have me broke, as you get out so many new faces that are so neat and serviceable that I imagine I would be continually placing orders with you.

W. E. COOPER.

AUBURN, N. J., Jan. 23, 1901.

If you had stood by me yesterday and looked over six galleys of 8-point Old Style No. 11, point set, you would have been proud. I had the sidesticks taken out, and it was a sight to gladden the eyes of the sons of men. Such absolute accuracy. With every line spaced to *exactly* the same measure, it makes the old mode of casting seem very crude. You have made a mighty stride forward and as far as I can judge are keeping up the pace. As soon as I can afford it I shall add to my stock of this face.

JAS. W. BURROUGHS.

SALT LAKE CITY, UTAH, }
Nov. 3, 1900. }

We have received the sample pages which you set for us, and have submitted the same to our customer, with the result that he has selected your 11-point and 7-point Roman No. 20. Kindly forward us 600 pounds of the 11-point with Italic and 5 pounds extra small caps, and 100 pounds of 7-point with Italic. We congratulate you on securing this order, as we had specimens from four leading type-foundries of America, which we submitted in competition with yours.

THE DESERT NEWS.

BATTLE CREEK, MICH., }
Feb. 23, 1899. }

I have used your material, but not as much as I hope to be able to in the future. Am well pleased with the faces you put out, and your idea of specimens is certainly original, and they harmonize as nearly perfect as it is possible with the use of type. Type that does not line as it should and requires the aid of a carpenter is dear at any price, and should not be allowed case-room in any well-regulated office, job-office especially. The days of "everything goes" have gone by; but occasionally we find that kind of printers,

but I think that they, like the "back-number" type, will soon go the way of Rider Haggard's subjects—they will pass into oblivion. Your STANDARD LINE is all right.

GEO. W. FLOWERS.

RICHMOND, VA., April 30, 1901.

I beg to acknowledge receipt of your type specimen book. When I first wrote for same, I had decided to start out in business for myself, and the coming of your book was just in time to induce me to select the complete outfit—rather "the starter"—from its pages.

An experience covering some ten years as foreman and manager of a printing-plant has, I believe, fitted me to recognize the superior merits of your STANDARD LINE type. I am also an engraver and designer of letter and ornaments, and the faces of your products in most instances represent my ideals in letter—there's a finish, a grace and symmetry about them which I have found in the faces of few series of other foundries.

AUG. DIETZ.

AN ACKNOWLEDGEMENT.—The new advertising dress on the *Gazette* is the product of the Inland Type Foundry, of Saint Louis, being the second we have bought from that house. In simple justice to this young and growing foundry, we desire to state that its goods have given us much better satisfaction than those from any other house, and we have used dresses from all the leading manufacturers. The dress we recently discarded gave us far better wearing service than any we ever had, and our employees freely admit that the standard lining feature is the greatest labor-saving contrivance of modern printing type. Furthermore, the styles furnished by this foundry are clean cut, strictly up to date and universally satisfying to our advertising patrons. We are proud of the typographical appearance of the *Gazette*, and while our composing-room employees are to be commended for artistic skill shown, the credit for furnishing its best and cleanest dress is due to the Inland Type Foundry.—[*Gazette*, Cedar Rapids, Iowa, Nov. 13, 1899.]

NEW YORK, Oct. 11, 1899.

Your last circular, regarding size of type faces in relation to the body, strikes a responsive chord here. If all our Law Italics were on the proper body, what a blessing it would be! We could say the same thing about a number of other faces. In fact, we wish all our type was made on the plan you advertise yours to be.

CLARK & ZUGALLA.

Iroquois, Ont., Aug. 2, 1901.

Am placing an order for all of my type, that I am putting into a little job-office in a neighboring town, with Miller & Richard, Toronto, who handle your goods. Altho but a modest order, I can assure you, if the new business succeeds, it will be but the beginning of larger demands on your material in the future. Have studied the books and circulars that you have been sending from time to time, and am now convinced that your system is all right. I believe I am starting right with nothing but Inland material in my print-shop.

D. E. WHITNEY.

RENVILLE, MINN., May 13, 1899.

I can say this much in regard to your type. I have had the pleasure of using it just one month and have found it the finest type I ever placed in a stick. Your faces are fine and the casting cannot be excelled.

E. F. COLLINS.

HARTFORD, CONN., March 14, 1901.

I have to acknowledge the receipt of your new specimen book, which came to-day. I have spent a most enjoyable evening in its perusal, and I congratulate you most heartily upon the publication of so complete and concise a volume. Every page seems to teem with genuine labor-saving good things, and the compositor who is fortunate enough to handle Inland type entirely ought surely to congratulate himself. His work is half done before he begins. The book is strictly Inland in all the word implies and, like your products, is 365 days ahead of them all. I hope to have the pleasure of ordering some of your products before long.

FREDERICK W. CLOUGH.

The above system of laying cases is the one generally used in this country, and is probably as convenient as, if not more so, than any other.
